INTERNATIONAL CONFERENCE ON EURASIAN ECONOMIES 2013

St. Petersburg - Russia
17-18 September 2013

FOREWORD

We are very proud to welcome you to the International Conference on Eurasian Economies 2013, the fourth conference in this series. We want to express our happiness in seeing that this conference became a traditional international academic event with increasing interest and continued support by international institutions, academicians and researchers in Eurasia. Specifically, we want to express our gratitude to you, since most of you have attended all four conferences in the series, and every year we see new faces added to our community.

We are delighted to organize the International Conference on Eurasian Economies 2013 in St. Petersburg, a city that's both beautiful and rich in history. Undoubtedly, Russia has played and continues to play a huge role in Eurasian economics and politics. St. Petersburg has been the capital of imperial Russia for many centuries (1713-1918). Renamed to Leningrad during the Soviet era, St. Petersburg today is one of the major European cultural centers with countless world-class museums, including the Hermitage Museum.

As always, the topics presented at the conference cover a wide variety of subjects with vital impact on the region such as globalization and its impact on Eurasia, integration of Eurasian economies to the world economy, economic growth and development strategies in Eurasian economies, international trade, financial markets, institutions and public policies as well as sector-specific issues such as tourism, energy, natural resources and agriculture. New topics presented this year include entrepreneurship and environment economics.

This year, we received a new record of 228 abstracts and 218 full papers from 20 countries. You will find 142 selected papers in this proceedings book, which have been presented at the conference. We would like to thank the advisory board and the scientific board for their dedicated efforts throughout the paper review process.

We are grateful to the Turkish International Cooperation and Development Agency (TIKA) and to the governors and experts of the Central Bank of Turkey for their continued support in organizing this conference. We also want to thank the Board of Trustees and the administrative personnel of Beykent University.

We are indebted to all the researchers and academicians who participated at the conference by submitting their distinguished work for presentation. We believe that their contributions will be greatly beneficial to the economies of Eurasian countries. We are looking forward to meeting you in another Eurasian country at the International Conference on Eurasian Economies 2014.

Prof. Dr. Selahattin Sarı
Conference Chair

ÖNSÖZ

Sizleri dördüncüsünü organize ettiğimiz Uluslararası Avrasya Ekonomileri Konferansı 2013'te aramızda görmekten gurur duyuyoruz. Konferansın geleneksel bir uluslararası konferansa dönüştüğünü, ve Avrasya akademisyenleri, araştırmacıları ve çeşitli kurumlarca artan ilgi ve destekle karşılandığını görmekten duyduğumuz mutluluğu sizlerle paylaşmak istiyoruz. Özellikle, serimizdeki dört konferansın tümüne katılan ve her sene aramıza yeni yüzler kazandıran sizlere sonsuz teşekkürlerimizi sunarız.

Uluslararası Avrasya Ekonomileri Konferansı 2013'ü dünyanın en güzel ve tarihi açıdan en zengin şehirlerinden biri olan St. Petersburg'da organize etmekten mutluluk duyuyoruz. Şüphesiz ki, Rusya tarih boyunca Avrasya ekonomisi ve politikası üzerinde büyük rol oynamış ve günümüzde de bu etkisine devam etmektedir. St. Petersburg, çarlık Rusya'sının yüzyıllarca (1713-1918) başkenti olmuş, Sovyet döneminde ismi Leningrad olarak değiştirilmiş, günümüzde ise sayısız müzeleriyle Avrupa'nın önemli bir kültür merkezi konumuna gelmiştir.

Her zamanki gibi, konferans çerçevesinde sunulan çalışmaların başlıkları geniş bir çeşitliliğe sahip ve bölge açısından hayati önem taşıyan konularda toplanmaktadır: Küreselleşme ve Avrasya ekonomileri üzerine etkileri, Avrasya ekonomilerinin dünya ekonomisine entegrasyonu, Avrasya ekonomileri için iktisadi büyüme ve kalkınma stratejileri, uluslararası ticaret, finans piyasaları, kamu politikaları ve turizm, enerji, tabii kaynaklar ve tarım gibi sektörlerin sorunlarından oluşmaktadır. Bu sene konferansa dahil edilen yeni konular ise girişimcilik ve çevre ekonomisidir.

2013 konferansına 20 ülkeden yeni bir rekor olan 228 özet ve 218 tam metin gelmiştir. Bu kitapta bunların arasından özenle seçilen ve konferansta sunulmuş olan 142 çalışmanın tam metnini bulacaksınız. Bu bağlamda, danışma kurulunun ve bilim kurulunun değerli üyelerine çalışmaların değerlendirilmesinde gösterdikleri özveri ve verdikleri emek için teşekkürlerimizi sunmak isteriz.

Türkiye İşbirliği ve Kalkınma İdaresi Başkanlığı (TİKA) üye ve bürokratlarına ve Türkiye Cumhuriyeti Merkez Bankası yöneticileri ve uzmanlarına konferansın sponsorluğu ve hazırlanma aşamasında değerli desteklerinin devamı için teşekkürlerimizi sunarız. Beykent Üniversitesi Mütevelli Heyetine ve konferansın düzenlenmesinde ve yürütülmesinde her türlü desteği veren idari personele katkılarından dolayı teşekkür ederiz.

Konferansa ilgi gösteren araştırmacı, akademisyen ve katılımcılara içten teşekkürlerimizi sunarız. Konferansda sunulan değerli bildiri ve çalışmaların Avrasya ülkeleri için yararlı olacağı inancını bir kez daha paylaşmak isteriz. Uluslararası Avrasya Ekonomileri Konferansı 2014 için bir başka Avrasya ülkesinde buluşmak dileğiyle.

Capital Flows and Growth in Emerging Market Economies: The Case of Turkey

Prof. Dr. Ercan Uygur (Turkish Economic Association, Turkey)

Abstract

Since May 2013, we have witnessed sudden stops and large reversals in the flow of capital to the emerging market economies (EMEs). What we have witnessed is the reversal of the surge of capital that started in 2009 from the advanced economies to the emerging ones, as has been expected. The episodes of capital surges and retrenchments have been observed repeatedly in the last three decades. In this period, capital flows across countries have increased dramatically, but their fluctuations and volatility have been even more dramatic. Furthermore, these flows have played an increasingly important role in the business cycles of both advanced economies and EMEs and during episodes of crises. Why then, in spite of cycles and crises, there is free flow of capital to EMEs? One answer is that these flows might be used to finance investments and to contribute to the long run growth of the EMEs. The basic aim of this paper is to examine the validity of this assertion. Thus, the paper attempts to establish the effect of capital flows on the growth performance of the EMEs, with special reference to Turkey. After a survey of research on the subject, the paper first provides an account of the recent developments in international capital flows. The paper concentrates more on capital flows to Turkey in terms of categories, namely, foreign direct investment, portfolio investment and credit flows. The paper then empirically investigates the effect of these three categories and total capital inflows on the growth of the EMEs. Policy implications of the findings are also discussed.

Ценностные Ориентиры Определения Гуманизированной Экономики

Value Determination Landmarks of Humanized Economy

Prof. Dr. Turar Koychuev (National Academy of Sciences, Kyrgyzstan)

Abstract

The report characterized valuable indicators for evaluating the processes of humanization of social development, revealed the interdependence and interaction of processes of socio-economic structure and development of the productive forces of scientific and technological achievements, highlighted the fundamental and crucial stages in their development trends. The humanized society is seen as a special stage of economic development and public relations.

Научно-технические и технологические достижения, используемые в экономике, делают экономику более производительной и эффективной, труд становится физически и психологически более облегченным и менее напряженным, умственно и интеллектуально более содержательным, процесс производства – более комфортным и безопасным, как для жизни людей, так и для экологии.

Потребуются и в экономику придут специалисты и работники образованные, высокой квалификации, новых специальностей и профессий в соответствии с новыми требованиями. Новый технический и технологический уровень производства предъявляет требования и духовному развитию, интеллекту, нравственным качествам работников, что важно для создания психологически благоприятной атмосферы в коллективах.

Более техновооруженная, технологично лучшая экономика будет производить продукты и оказывать услуги несравнимо выше по качеству и это в интересах людей.

В связи с цивилизационными изменениями меняются и возвышаются материальные потребности людей и потребности в услугах, что обуславливает отраслевые структурные изменения, ориентированные на удовлетворение запросов населения.

С ростом производительности труда и финансовой самодостаточности повысятся доходы работающих в экономической сфере.

С обеспечением надежности пополнения и устойчивости роста госбюджета за счет экономического динамичного развития государство будет иметь возможность усилить финансирование социальной сферы и целенаправленно формировать полноценный социальноориентированный госбюджет.

С инновационным ростом экономики и соответствующим расширением финансов государство будет в состоянии не просто законодательно регулировать, но и предметно содействовать увеличению доходов малоимущего населения, чтобы постепенно исчезло понятие «малоимущее население». Важно достигнуть такого положения, чтобы не было сильного расслоения населения по доходам и имущественному положению. Это – основа возникновения социальных конфликтов.

Предметом особой заботы сильной экономики должны стать материальная помощь людям преклонного возраста и больным, а также материальная поддержка семьям в воспитании детей. Нужно создавать частные целевые фонды поддержки. Бизнес должен не только «зарабатывать» прибыль, но и оказывать благотворительность. В конце концов, извлечение прибыли и наращивание капитала не конечная цель в бизнесе. Всех денег не унесешь туда, откуда не возвращаются. Много ли надо одному даже со всеми домочадцами. Делать добро не только себе, а окружающим тебя людям, народу – вот такой должна быть конечная цель каждого человека, кем бы он ни был. Кем бы он ни был – он человек, в этом его естественная сущность.

Одним из признаков гуманизации экономики является создание экологически безопасной экономики, чтобы горы не разрушались, почвы не истощались, естественные, биологические ресурсы варварски не уничтожались, ледники «техногенно» не таяли и водные источники не иссыхали, воздух не загрязнялся. Человек должен дышать чистым воздухом, пить чистую воду, жить в незагрязненной, неопустошенной, дышащей и цветущей благодатной природной среде.

Процесс гуманизации экономики не может осуществляться изолированно, не соприкасаясь с внешним миром. Развитые страны, в которых уже проглядываются «черты» гуманизации, объективно передают свой опыт в этом направлении другим странам. Такая тенденция объективно будет расширяться по мере экономического процветания большинства стран мира. Она не будет связана только с извлечением для себя выгоды, а больше будет носить благотворительный, гуманитарный характер.

Теоретический анализ того, что может быть привнесено в жизнь общества процессом гуманизации экономики, показывает, что гуманизация не как единичное, а целостное явление может быть достигнута только в развитых странах, переживших этапы индустриального, информационного, инновационного развития. На этих этапах возможны проявления отдельных признаков процесса гуманизации, но до проявления всей экономики как гуманизированной еще не дошли. Гуманизация сейчас, когда не дошли до полной гуманизации экономики, может рассматриваться только как процесс идущий, как одно из свойств того или иного, в данном случае скажем инновационного развития, но не отражает сущность этапа, сопровождаемого им.

Когда же гуманизация будет отражать в целостности сущность всей экономики, то это будет ознаменовать наступление нового этапа экономического, шире общественного развития – этапа гуманизации развития. Категория «гуманизация экономики», как и категории «индустриальное общество», «информационное общество», «инновационное общество» будет характеризовать очередной достигнутый переломный этап в цивилизационном развитии.

Цивилизационное развитие можно рассматривать в двух аспектах: 1) выделяя этапы изменения общественно-экономического устройства общества; 2) раскрывая этапы развития и качественных изменений производительных сил, технико-технологических переломных прорывов. Первый аспект блестяще показан К. Марксом, а второй – У. Ростоу и Дж. Гэлбрейтом.

Масштабные и принципиально качественные изменения производительных сил, научно-технические достижения и их использование в экономике объективно приводили к изменениям в общественно-экономических укладах, в экономических, социальных, политических и правовых отношениях.

Общественно-экономические уклады (формации) К. Маркс выделял по формам (частным) собственности, из наличия классов с антагонистическими интересами и власть в государстве рассматривалась как выражение господства имущего класса и защитница ее положения. Он теоретически обосновывал существование в будущем новой общественно-экономической формации (коммунистической) с общественной собственностью на средства производства и с наличием социальных слоев населения без антагонистических противоречий.

На цивилизационном пути человеческого общества, основанные на частной собственности, общественно-экономические уклады менялись в связи с изменениями в положениях классов, когда один имущий господствующий класс «приходит» на смену другому, «оттесняя» от авансцены. Государство как власть, действительно выражало приоритетно интересы господствующего класса.

Советский опыт утверждения общественной формы собственности на средства производства, проделанного, якобы, по марксистскому «рецепту», а на самом деле искаженному догматическим пониманием, не доказал, к сожалению, преимущество коммунистической формации. Сравнительно экономическое отставание от капитализма привело к отказу от «советского опыта».

Классовое общество, основанное на частной собственности на средства производства, последним прообразом которого является капитализм, добилось высокого уровня развития производительных сил. Высокоразвитая экономика не позволила обеспечить высокий уровень жизни всего населения, но социальное расслоение по имущественному положению не резко растет, а сглаживается, сокращается бедность как явление, политическая жизнь все более демократизируется и государство как власть все больше становится исполнительницей воли всего общества. Конечно, нельзя полностью исключить влияние «имущих» на политику, но оно не абсолютно, не ненаказуемо. Политическая демократия «уравняла» участие всех социальных слоев в управлении государством и в выработке социально-экономической политики.

Общественно-экономические уклады не различаются по формам собственности на средства производства. Они становятся многоукладными, сочетая частную и общественную формы собственности.

«Классовый» формационный подход к общественно-экономическим укладам исчерпал себя. Наступает эра социально солидарного общества. С дальнейшим цивилизационным развитием социальная солидарность должна «укрепляться». Высокий уровень развития производительных сил, жизни населения, научно-технических достижений, демократических принципов в общественной жизни приводят ко все более глубокой гуманизации экономического и всего общественного развития. Вслед за индустриальными, информационными, инновационными развитиями наступит этап гуманизированного общества.

Гуманизированное общество – это: высокий уровень развития производительных сил, способный полноценно удовлетворять потребности людей; высокое качество жизни населения и полноценный уровень потребления; социальная солидарность, высокая духовность и нравственность, пресекающая и исключающая общественные негативные явления, такие как коррупция, насилие, грабеж и т.д.; социально-психологическая комфортная, притягательная атмосфера в человеческих отношениях и общениях, когда «правят балом» теплота и сердечность, любовь и доброта душ; экологическая

безопасность, позволяющая «развивать» в здоровом теле здоровый дух; технологическая безопасность, когда научно-технический и технологический прогресс прежде всего не нанесет вреда физическому, умственному и психическому здоровью человека.

Гуманизированное общество – это социально солидарное, нравственное и доброизлучающее, сердечное человеческое общество, излучающее ум и добро, тепло и свет!

Перспективы Создания ЕЭС

Prospects for a Common Economic Union

Prof. Dr. Jusup Pirimbaev (Kyrgyzstan-Turkey Manas University, Kyrgyzstan)

Prof. Dr. Anara Kamalova (Academy of Public Administration, Kyrgyzstan)

Abstract

This article discusses the current situation and the future of the integration process of the CIS countries. The main problems include a small number of active participating countries and regional imbalance distribution of productive forces. In this regard, all members of the Eurasian union must understand that the implementation of the idea of "union" is unattainable within the currently existing members only. The main issues in the integration - it is a professional job in order to protect the interests of the majority of the residents of the participating countries that will awaken a general interest in the idea of the Union.

1 На повестке дня Кыргызстана

решение проблемы вхождения в Таможенный союз и дальнейшей интеграции в Евразийский экономический союз, который берет свое начало с 1 января 2015 года. Споры идут нешуточные. Сражаются «не на жизнь, а на смерть». Причин много, о них немало и говорили, и писали, но главной остается одна - отношение к обеспечению суверенитета. Одни считают, что вхождение Кыргызстана в этот интеграционный процесс вызовет потерю суверенитета, другие, наоборот, уверены в его последующем укреплении. Однако никто не задумывается, что термин «суверенитет государства», содержит в себе не только понятие независимости и самостоятельности, но и взаимодействия с другими суверенитетами, без ущемления собственного. Загляните в глубину веков. Исторически кыргызы, где только не расселялись, с кем только вместе не жили, в каких только государственных образованиях не состояли на огромной Евразийской территории. И тем не менее умели сохранять свою исконную самостоятельность, культуру и идентификацию, при этом оставаясь полноценными гражданами тех государственных образований, к которым они относились. И когда кыргызы в результате длительных исторических испытаний получили в 20 веке свое суверенное государство, то говорить о его утрате вследствие наблюдаемых интеграционных процессов - это несомненная глупость. Да, есть другие факторы, вызывающие тревогу о его возможном разрушении, поскольку есть заинтересованные силы, еще не исчезло намерение сильных государств подмять под себя более слабые. Но существуют и факторы, сводящие к минимуму влияние разрушающих сил.

Сегодня нас должны интересовать именно созидающие факторы, способствующие тому, чтобы сделать государство сильным и процветающим, обеспечивающие стабильность, перспективы существования и развития суверенного Кыргызского государства. Безусловно, в этом огромную роль играло и будет играть обеспечение самодостаточной и динамично развивающейся экономики страны.

Экономическую деятельность республики на сегодняшний день трудно тесно связывать с экономической политикой. Ибо экономическая политика связана с выбором стратегической эконономической цели страны и координацией всех сил и ресурсов на достижение конечной цели. Определена ли такая цель на сегодня? Ответ на этот вопрос еще предстоит найти.

Было бы несправедливым считать, что экономическая деятельность государства осталась вне политики и были проявлены радикальные меры в отношении экономики. Республика после получения независимости столкнулась с необходимостью самостоятельно решать экономические проблемы, разрабатывать программы экономических действий. Гиперинфляция на всей территории постсоветского периода, экономический хаос, породивший глубокий кризис, а также неуклонно падающий уровень жизни населения объективно требовали принятия радикальных экономических мер. Нужен был хотя бы механизм сдерживания и контроля неуправляемого экономического процесса. И этим механизмом явилось введение на территории республики национальной валюты. Убеждать высшее руководство страны в необходимости решения таких проблем было непросто, но возможно. Реализация выпуска национальной валюты автоматически поставила вопросы, требовавшие пересмотра в срочном порядке многих экономических задач в контексте твердого укрепления позиции сома на рынке Кыргызстана. И хотя ввод национальной валюты создал кратковременную видимость стабильности экономических отношений, однако он показал, насколько «хрупка» судьба самой валюты в действующей системе хозяйственных отношений. Рыночные отношения, ради которых отказались от социалистического экономического уклада, требовали активных действий, чтобы не создавать атмосферу недееспособности власти.

Осуществили приватизацию, которая не дала желаемого результата, более того, создала больше проблем, что вызывает у многих желание ревизировать результаты приватизации и повернуть «колесо

истории» вспять. Реформы, проведенные в социальной сфере, больше похожи на «бомбу замедленного действия», нежели на решение проблем. Независимо от уровня экономического развития подобные проблемы существуют почти во всех государствах постсоветского периода. Приведем один пример из экономической истории Кыргызской Республики (см. таблицу).

	1960	1970	1980	1985	1986
Общий объем промышленной продукции	6,2	19	37	46	49
Валовая продукция с/х-ва	1,8	2,9	3,7	3,9	4,3

Таблица 1. *Темпы роста экономики Кыргызской Республики за период 1940-1987 гг. (1940 =1)[2], %*

По данным таблицы, темпы роста в двух реальных секторах экономики Кыргызстана являются характерными и для других союзных республик, демонстрируя тенденцию к постоянному росту. За 26 лет хозяйствования в условиях социалистического уклада промышленность республики выросла в 42,8 раза, сельское хозяйство – в 2,5 раза, а капитальные вложения за 15 лет (с 1970 по 1985 г.) - в 1,4 раза и составили 6249 млн. руб. (можно сделать сравнение с 20-летней экономической историей независимого Кыргызстана, борющегося за демократию и лучшую форму общественного развития). Мы взяли этот период Кыргызстана осознанно, ибо именно на него приходится наивысший рост производительных сил в республике (хотя явного несоответствия развития производительных сил уровню и характеру производственных отношений в последующем – до развала Советского Союза – практически нет, по сравнению с более развитыми союзными республиками). Анализ урожайности сельскохозяйственных культур выявил явное отставание показателей, достигнутых за 20 лет существования республики в условиях независимости, от показателей в советского периода.

Это результат тесной экономической интеграции советского периода. Не надо здесь, подобно «Фоме неверующему», отвергать действительное. Развалили все вместе эту экономическую интеграцию, так, давайте, создадим альтернативную, не трогая незыблемости суверенитета каждого. Такая интеграция является объективной экономической необходимостью, требующей от всех трезвого расчета. Здесь не должно быть места для политической спекуляции, проявления политического шарлатанства. Даже в условиях тоталитарного Советского Союза идея обновления экономических взаимоотношений, при условии укрепления самостоятельности и независимости отдельных союзных республик под названием Евразийского союза, постоянно существовала. Реализуй мы эту идею вовремя, была бы совершенно другая действительность постсоветского пространства. А так она оказалась в плену демагогий самостоятельного достижения современного прогресса, игнорирующих идею рационального использования производительных сил огромной территории для созидания общего блага.

Поэтому в середине 90-х годов «евразийство» получило новое распространение с точки зрения создания единого экономического пространства. Активным сторонником такой идеи был Президент РК Нурсултан Назарбаев, который получил неподдельную поддержку со стороны Президента РФ Владимира Путина и Президента Беларуси Александра Лукошенко. Идеологами этого движения были, конечно, философы, экономисты и политологи: Александр Дугин, Александр Панарин, Сергей Глазьев, Сергей Гавров и др. Особую лепту внес в идею Евразийского объединения кыргызский писатель Чингиз Айтматов.

Евразийский экономический союз как интеграционная организация включал три этапа осуществления интеграционного процесса:

Таможенный союз;

Единое экономическое пространство (Евразийская экономическая комиссия);

Евразийский экономический союз.

В 2010 году начал работу Таможенный союз трех стран: Россия, Казахстан и Беларусь. С 1 января 2012 года осуществлен переход ко второму этапу интеграционного процесса, и территория участников Таможенного союза объявлена единым экономическим пространством. Этому предшествовало подписание 18 ноября 2011 года Декларации о Евразийской интеграции лидерами стран Таможенного союза, на основе которой была создана Евразийская экономическая комиссия, контролирующая около 170 функций союза. Встреча лидеров стран Таможенного союза в Астане определила действия Евразийского экономического союза с 1 января 2015 года.

С самого начала реализация этого объединительного процесса носила название Евразийский союз, который охватывал более широкие процессы интеграции, намного превышающие пределы экономической интеграции, включая создание единого Евразийского парламента. Такой подход был очень спорным, поскольку все страны постсоветского периода больше беспокоил вопрос их суверенитета в любых интеграционных процессах, хотя само понятие «суверенитет» больше вызывает риторических вопросов. В данном случае такое беспокойство носит объективный характер из-за болезненного восприятия молодыми суверенными странами исторического опыта взаимодействия центра и отдельных

республик. Поэтому всегда берет верх категоричность в оценке объединительных процессов, нежели скрупулезный анализ, поиск оптимальных решений взаимодействия.

В этой связи ясна реакция мажилиса Казахстана, который 18 сентября 2012 года отвергал идею создания единого Евразийского парламента. Свое принципиальное несогласие мажилис видит в невозможности создания наднациональной политической структуры, затрагивающей суверенитет страны. В действительности, создание Евразийского союза в начале больше носило декларативный характер и было воспринято большинством как амбициозный политический фарс. Об этом свидетельствуют многочисленные публикации и выступления экспертов не только Казахстана и Беларуси, но и России - главного действующего игрока.

Последующие действия лидеров РФ, РК и Беларуси потребовали корректировки понятия «союз». В результате родилась окончательная его трактовка не как Евразийский союз, а как Евразийский экономический союз, что помогло бы очистить понятие «союз» от политической шелухи. И даже такая трактовка вызвала невосприятие со стороны лидеров США. Госсекретарь Хиллари Клинтон заявила о намерении всесторонне помешать созданию «новой версии Советского Союза» под видом экономической интеграции. Налицо факт спорности понимания демократических ценностей в мире, страны-лидеры которого озабочены сохранением незыблемости системы несправедливых экономических взаимоотношений с развивающимися странами. Безусловно, позиция США больше исходит из гегемонических интересов, хотя нас интересует больше позиция экспертов стран-участниц объединительного процесса.

И здесь позиции разные даже среди противников создания подобного союза, которых достаточно в самом союзе: одни «пугают» реанимацией Советского Союза, где главенствующая роль отдается Российской Федерации, другие считают невозможным нормальное функционирование экономики союза при наличии большого разрыва в уровнях экономического развития отдельных стран, третьи опасаются потери самостоятельности национальных экономик, четвертые – возможной неуправляемости цен на рынках, зависимости от принимаемых решений и т.д. Все эти утверждения в условиях глобализации мировой экономики беспочвенны по причине того, что данный союз создается между независимыми странами, а не регионами одного государства, между странами с различным экономическим уровнем развития, что нужно принимать в расчет, а также в условиях наличия высокого уровня трудовой миграции, оказывающей реальное влияние на экономику каждой из стран. И, наконец, создание союза на равных правах, на взаимовыгодных условиях, с приемлемыми обязательствами, ответственностью за нарушение условий союза, делегированием полномочий в различных международных организациях является внутренним делом членов союза. Следует принимать во внимание, что самоизоляция национальной экономики - это самый неперспективный путь развития экономики в современном мире.

Реализация на практике амбициозной идеи Евразийского экономического союза возложена на Евразийский банк развития, созданный в рамках Евразии в 2010 году, где организован Центр интеграционных исследований, который осуществляет СВОП-анализы деятельности всех участников интеграционного процесса и сторон, желающих участвовать в этом процессе. В аспекте этих исследований разработаны условия вхождения в Евразийский экономический союз, которые в какой-то мере отражают основные цели данного союза:

единые тарифы;

единые технические регламенты;

гармонизация трудового законодательства;

гармонизация миграционного законодательства;

единая банковская система;

единая валюта;

укрепление внешних границ.

Конечно, создание полноценного Евразийского экономического союза в пределах трех стран без привлечения объективно интегрированных соседних стран, отвечающих условиям вхождения, маловероятно. Тем более, если учесть перспективу создания большого Евразийского экономического союза, включающего в себя Китай, Индию и Иран. Поэтому в ближайших стратегических планах авторов этой идеи может быть вовлечение в процесс ярых сторонников из бывших соотечественников. Таковыми выступают пока Кыргызстан и Таджикистан. Однако последний саммит в Астане лидеров стран Единого экономического пространства внес свои коррективы, признавая статус наблюдателя со стороны Кыргызстана и Украины. Чем закончится такая перспектива для общего Союза трудно прогнозировать, но бесспорно то, что этот факт широко резонирует по всей территории постсоветского пространства.

В определении перспектив Евразийского экономического союза важно не столько вхождение Кыргызстана, Таджикистана или Украины, сколько признание объективности и необходимости их вхождения в данный союз. Не распространяясь об условиях вхождения наших партнеров, хотелось бы

показать обоснованность поддержки перспективы создания Евразийского экономического союза со стороны Кыргызской Республики.

Сбрасывая со счетов политический и экономический мотивы данного вопроса в широком смысле, хотелось бы подчеркнуть важность и безальтернативность двух проблем воспроизводства, вынуждающих поддерживать идею интеграции кыргызской экономики. Это:

проблемы текущего воспроизводства, касающиеся сугубо потенциала внутренней экономики;

проблемы перспективного воспроизводства, которые не могут найти своего решения без учета достижений мировой экономики. Кстати, возможность самостоятельного решения обеих проблем воспроизводства в Кыргызстане вызывает глубокие сомнения. Обращаемся к фактам текущего возпроизводства страны: реальный рост ВВП в разрезе отраслей характеризуется данными таблицы.

	2007	2008	2009	2010	2011	2012
ВВП, всего	108,5	108,4	102,9	99,5	106,0	99,1
в том числе:						
Сельское хозяйство, охота и лесное хозяйство	101,6	100,9	106,7	97,4	101,8	101,2
Рыболовство, рыбоводство	150,0	111,1	96,2	95,7	108,6	100,0
Горнодобывающая промышленность	96,8	109,1	107,7	96,4	119,5	122,5
Обрабатывающая промышленность	106,3	121,2	90,7	111,3	105,2	72,8
Производство и распределение электроэнергии, газа и воды	107,5	92,6	97,4	111,2	121,9	105,2
Строительство	132,3	110,8	122,1	81,5	102,5	117,3
Торговля; ремонт автомобилей, бытовых изделий и предметов личного пользования	110,9	109,6	102,3	94,4	110,2	110,5
Гостиницы и рестораны	113,0	113,3	104,2	90,5	116,9	111,7
Транспорт и связь	144,4	131,1	105,1	104,2	109,5	108,9
Финансовая деятельность	111,0	105,5	106,0	95,1	110,9	101,0
Операции с недвижимым имуществом, аренда и предоставление услуг потребителям	105,0	110,2	101,1	104,9	101,6	98,1
Государственное управление	101,8	102,9	102,5	99,7	105,2	101,8
Образование	100,1	101,4	101,4	99,7	101,3	105,1
Здравоохранение и предоставление социальных услуг	101,5	99,6	99,7	101,7	100,9	102,4
Предоставление коммунальных, социальных и персональных услуг	101,7	99,2	93,7	97,8	101,3	96,7
Налоги на продукты	108,5	108,4	102,9	99,5	106,0	99,1

Таблица 2. *Реальный рост ВВП в разрезе отраслей (в процентах к соответствующему периоду предыдущего года)*

Как видно, рост ВВП в общем не характеризуется реальным сектором экономики, за исключением деятельности компании «Кумтор». Это связано со многими факторами: отсутствием бюджетной поддержки со стороны государства, инвестиционных вливаний, конкурентной ревности соседних братских стран, четкой экономической политики государства, иждивенческой позицией в отношении производительных сил и т. д.

Самое слабое положение участников в удовлетворении потребностей текущего воспроизводства наблюдается в Кыргызстане. Оценить вклад регионов КР в решение задач текущего воспроизводства можно по данным рис. 1.

Как видно, даже прогнозные показатели не удовлетворяют запросы Министерства экономики страны. Региональная диспропорция размещения производительных сил, раскритикованная еще во времена СССР, имеет свое продолжение в процессе обретения «независимости». А реальная возможность регионов Кыргызстана отдана на откуп внешним консультантам и внутренним «всезнающим» горлопанам, которые оказывают реальное влияние на общественное сознание в вот уже течение более 20 лет.

В плане перспективного воспроизводства в Кыргызской Республике необходимо стремиться хотя бы приблизиться к показателям стран Таможенного союза, которые представлены на рис. 2.
Рис. 1. *Вклад регионов в производство ВВП в 2013 г. (прогноз)*

Рис. 2. *Структура ВВП таможенного союза в 2011 г.*

Данные рис. 2 показывают соответствие структуры ВВП стандарту мировых государств по обеспечению экономического прогресса, поскольку за основу принят реальный сектор экономики. В то же время эти показатели ярко свидетельствуют о том, насколько уязвима оценка реального сектора стран постсоветского периода на соответствие международному стандарту. Конечно, в соответствии с цифрами можно констатировать, что Казахстан ближе к стандарту, но его положение, по оценке казахстанских экспертов, этому не соответствует.

Рис. 3. Внешняя торговля КР с странами ТС, 2011 г.

Эти данные подтверждают объективность Кыргызстана как молодого суверенного государства интегрироваться со странами, которые определяют его внутреннюю потребность решения насущных экономических проблем. Нужно здесь принять в расчет, что внешняя торговля связана больше с внутренней возможностью технологической реалией, основанной на признании внутри «Союза».

Большой спор в основном происходит в выравнивании таможенных тарифов. Если посмотреть с точки исследования ЦИИ ЕАБР, они выглядят на следующем рисунке и вполне решаемый вопрос.

241, 2%
3288; 30%
4696; 46,6%
2284; 21%

■Совпадают с ЕТТ ТС

■Можно приравнять к ЕТТ ТС, не нарушая обязательств перед ВТО

■Не совпадают с ЕТТ ТС

■Несравнимы из-за различных видов ставок
Рис. 4. Сопоставление таможенного тарифа КР и ЕТТ ТС

Для нас важно, чтобы все члены Евразийского объединения вполне осозновали, что реализация идеи «союза» недостижима в пределах только ныне существующих участников. Ведь перспективы создания Евразийского союза сводятся к следующему:

Этот союз создает прецедент в мировой практике появления нового крупного объединения по интересам.

Появляется экспериментальная площадка познания теории действия глобальной экономики.

Создаются условия для проявления противоречий региональных взаимоотношений.

Осуществляется тезис: лучше вместе, чем врозь; поддерживается ценность общечеловеческих отношений.

Главное в интеграционных вопросах - не участие в этом процессе, а осознание, что это не воображение сторонников или не сторонников, а профессиональная работа с целью защиты интересов большинства жителей стран-участниц, что пробудит общий интерес к идее Союза.

Impact of Globalization on Entrepreneurship in Developing Countries

Prof. Dr. Ahmet Incekara (Istanbul University, Turkey)

Ph.D. Candidate Mesut Savrul (Çanakkale Onsekiz Mart University, Turkey)

Abstract

Contemporarily, globalization is regarded as one of the most comprehensive forces that shape the modern world. It led to major increases in worldwide trade and exchanges in an increasingly open, integrated, and borderless international economy. The participation of developing countries in the globalization process created an opportunity for them to better utilize their comparative advantages through entrepreneurs. Entrepreneurship is often associated with job creation, wealth creation, innovation and its related welfare effects. Thus it is generally credited with economic development instrument especially for developing countries. In this regard, impact of globalization on entrepreneurship in developing countries is investigated in the study. Entrepreneurship and globalization data is collected from KOF Index of Globalization and Global Entrepreneurship Monitor. The data of the countries classified by UNDP Country Classification System. Comparison of the data has shown that globalization has a positive impact on entrepreneurial activities and although entrepreneurship levels are rising all over the world it is more effective in developing countries than developed ones and emerging markets in the last decade due to the increase in the globalization process.

1 Introduction

Globalization is the result of increasing integration of economies around the world, particularly through the movement of goods, services, and capital across borders which also led to the movement of labour and technology across international borders. The term became more common in the 1980s, reflecting technological advances that made it easier and quicker to complete international transactions both trade and financial flows. Globalization refers to an extension beyond national borders of the same market forces that have operated for centuries at all levels of human economic activity, village markets, urban industries, or financial centres.

Globalization is the tendency of investment funds and businesses to move beyond domestic and national markets to other markets around the globe, allowing them to become interconnected with different markets. Accordingly globalization provides organizations a superior competitive position with lower operating costs, to gain greater numbers of products, services and consumers. This approach to competition is gained via diversification of resources, the creation and development of new investment opportunities by opening up additional markets, and accessing new raw materials and resources(İncekara and Savrul, 2012).

Globalization has begun to dismantle the barriers that traditionally segregated local business opportunities and local firms from their international counterparts. Local markets are becoming integral parts of broader, global markets. Consequently, internationally oriented entrepreneurs can now view a much broader range of opportunities and competitive modes, unrestricted by national boundaries. In this integrating global environment, entrepreneurs and emerging businesses face both new opportunities, and formidable new challenges (Etemad and Wright, 2003).

Entrepreneurship is often regarded as an important component in stimulating economic growth, innovation, competitiveness, and alleviating poverty in developing countries. In this framework whether globalization phase has any impacts on level of entrepreneurship come into question.

2 Globalization

The advancement of science and technologies has greatly reduced the cost of transportation and communication, making economic globalization possible. Nowadays, ocean shipping cost is only a half of that in the year 1930, the current airfreight one-sixth, and telecommunication cost one percent. The price level of computers in 1990 was only about one percent of that in 1960, and this price level in 1998 reduced again by about eighty percent. This kind of time and space compression effect of technological advancement greatly reduced the cost of international trade and investment, thus making it possible to organize and coordinate global production (Shangquan, 2000:1).

Clearly, globalization has something to do with increased integration of the world society, with an emphasis on increased economic integration. It also involved with businesses changing their reference point thinking globally rather than locally and technological change. However despite the concept's being new none of these elements have existed since, at least the Second World War. The economic integration of world economies has been ongoing over the last fifty years, as countries have worked through GATT and the WTO to reduce trade restrictions. In the 1960s and 1970s there was major discussion of the growth of the multinational corporation as businesses changed their reference point from domestic to international (Colander, 2002:1).

By the 1980s, the dynamics of globalization can be explained by broader and interacting movements such as innovation and institutional change which are both internal and external to the economies. Since 2000, the arrival of new players has amplified the trends at work and caused them to converge defining a new phase of globalization (Miotti and Sachwald, 2006 :9). Today globalization is seen as one of the most comprehensive force that shape the modern world. The concept is increasing its presence due to the weakening of the economic and national structures of societies. As it is defined by the concepts such as "new economy" and "post-industrial production", globalization created a radical transformation in the world economy by focusing on the production of services rather than goods. This development led qualified human resources to turn into the most important factor of production (İncekara and Savrul, 2011:6). This transformation resulted in globalization to boost its strength and potency in the world.

Globalization led to major increases in worldwide trade and exchanges in an increasingly open, integrated, and borderless international economy. There has been remarkable growth in such trade and exchanges, not only in traditional international trade in goods and services, but also in exchanges of currencies, in capital movements, in technology transfer, in people moving through international travel and migration, and in international flows of information and ideas (Intriligator, 2003:2). Financial and industrial globalization is increasing substantially and is creating new opportunities for both developed and developing countries. However developed and developing countries basically have different expectations in this process. While integration and globalization of the developing countries mean of initiating industrialization, it means increase of the rate of industrialization for the developed countries (İncekara and Savrul, 2012:24). For developing countries, this has led to both positive and negative effects such as increased standard of living, access to new markets, widening disparity in incomes, decreased employment.

The concept of globalization received attention from researchers because of its generally recognized importance as an economic factor, but seemingly also due to of the lack of a generally accepted definition. Although globalization has become a widely used term, equally widespread is its related misconception. An aim for academic research on globalization should be describing the relationship between visible elements and the broad term globalization, as this will lead to awareness (Vinig and Kluijver 2007:6). In this framework, when the economic channels that the globalization penetrate the economy questioned the concepts such as innovation and entrepreneurship come forward.

3 Entrepreneurship in Globalization Phase

Although entrepreneurship isn't a new term for the developed countries, economical infrastructure of most of them formed due to it and at least in practice, it can be said to be rather new in developing countries. Due to lack of capital accumulation, qualified human resources and social and political substructure, the term remained a theatrical concept until recently and it can be accepted that globalization phase launched the golden era of entrepreneurship especially in developing countries.

The participation of developing countries in the globalization process created an opportunity for them to better utilize their comparative advantages, introduce advanced technologies, foreign capital and management experience. It is also favourable for eliminating monopolistic behaviours and strengthening market competition (Shangquan, 2000:4-5) and entrepreneurs have played a major role in initiating the process.

4 Entrepreneurship and Economic Development

The role of entrepreneurship in economic development is the subject of much interest to academic and policy circles alike. Entrepreneurship is often credited with many positive changes in developing countries. At the very least, it is associated with job creation, wealth creation, innovation and its related welfare effects. A strong small business sector and entrepreneurship are generally linked to a strong economy (Desai, 2009:1). Developing countries are beginning to focus on their business environments and creating an economic space which is conducive to private enterprise, after failed attempts at development through import substitution and infant industry protection programs and somewhat mixed results from export promotion strategies. Indeed, the promotion of entrepreneurship and the promulgation of small and medium sized enterprise policy has become an important development prescription in recent years. Entrepreneurship policy, then, joins a list which includes reforms to countries' macro-economic, exchange rate, trade and industrial policies and improvements in governance (Acs and Virgill, 2009:2-3).

Development economists distinguish three major stages of development in which entrepreneurship play a crucial role (Acs, 2006:99-100).

The First State	The Second State	The Third State
the economy specializes in the production of agricultural products and small-scale manufacturing	In the second stage, the economy shifts from small-scale production toward manufacturing	with increasing wealth the economy shifts away from manufacturing toward services
marked by high rates of non-agricultural self-employment	marked by decreasing rates of self-employment, entrepreneurial activity will decrease as economies become more developed	marked by an increase in entrepreneurial activity, for over a century there has been a trend in economic activity, away from small firms and toward larger organizations

Fostering entrepreneurship is widely perceived to be a critical policy agenda to expand employment and earning opportunities and to reduce poverty. Sound macroeconomic conditions and business environment including infrastructure, regulation, and legal environment have typically been emphasized to increase entrepreneurial activities and create jobs. While these remain relevant, in developing countries, increasing attention is being paid to the role of labour policies that aim to reduce constraints and enhance productivity among the self employed and small scale entrepreneurs. This is particularly pressing in developing countries where wage and salary employment is limited and the majority of jobs are created and operated in self employment (Cho and Honorati 2013:1).

5 Entrepreneurship in Developing Countries

While providing more development opportunities for developing countries, the globalization process is also posing enormous risks. Economic globalization has developing countries' risks of being concussed by unfavourable external factors. Under open economic conditions, the conflict between the realization of external economic equilibrium and that of internal economic equilibrium is a great constraint on the macroeconomic policies of developing countries, weakening their capacity of macroeconomic control and regulation (Shangquan, 2000:4-5). In this respect although entrepreneurship is not a precise cure for economic development for developing countries, it can boost economic development when practiced conveniently.

Kirzner (1973) distinguishes his view of entrepreneurship, which he envisions as equilibrating, with Schumpeter's (1934), which he depicts as disequilibrating. Schumpeter's entrepreneur acts to disturb an existing equilibrium situation. The entrepreneur is pictured as initiating change and generating new opportunities. More recent studies have confirmed this result for most developing countries in the 1970 and 1980s. The empirical evidence clearly showed that the firm-size distribution in developed countries began to shift away from larger corporations and toward entrepreneurial activity (Acs, 2006:99-100).

Some distinctive attributes of entrepreneurship in developing countries appear to improve the probability of success for growth-oriented firms, while others appear to hold back these firms (Lingelbach et al, 2005:3-6);

- Opportunity
  - Opportunities for entrepreneurs in developing countries are broader in scope than in developed markets, allowing firms to pursue a portfolio approach to strategy that can efficiently manage the higher levels of business and market risk.
  - Entrepreneurs in developing countries face a different set of circumstances than their counterparts in developed economies.
  - Emerging markets lack a stable of mature markets and the consistency that such markets offer. Consequently, the opportunity for entrepreneurship in emerging markets is pervasive.
- Financial Resources
  - While entrepreneurial opportunities are broader and resultant strategies are naturally self-hedging in developing countries, limited personal and family savings and an absence of financial innovation severely limits the growth prospects of promising start-ups in developing countries.

- Apprenticeship and Human Resources
  - o Technical, industry-specific training is an important component in the creation of globally competitive firms.
  - o These firms often form into geographically focused industrial clusters which led to emergence of globally competitive industries in developing countries.

6 Does Globalization Impact Entrepreneurship?

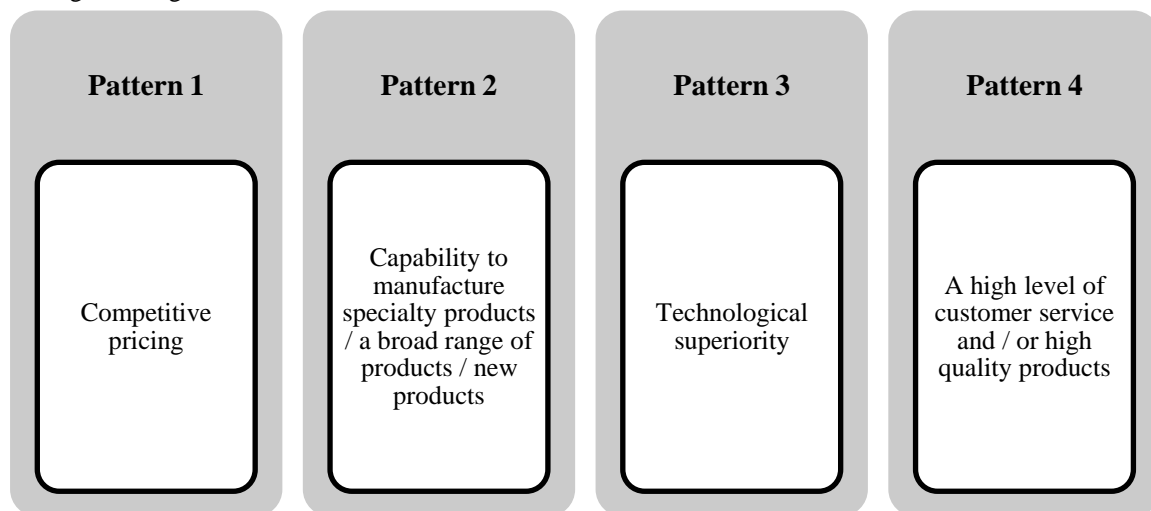
The globalization of economies has heightened the importance of entrepreneurial action for creating wealth. Demographic shifts, liberalization of national economies and attendant markets, institutional and state failures, and technological advances have combined to increase the calls for more social consciousness within businesses (Zahra et al, 2008:118). Audretsch (2007) argues that globalization has led to a shift from an industrial to an entrepreneurial model of production. Globalization is interpreted as a level shock in the supply of unskilled labour to the world economy, a decrease in the level of political risk associated with foreign direct investment, and the widespread diffusion of ICT. References to the impact of country's level of globalization on its level of entrepreneurship can be found in based on comparing data measuring entrepreneurship and globalization.

The global business environment is changing dramatically. Traditionally, competition in international markets has been the realm of large companies, while smaller businesses remained local or regional in scope. However, the removal of government-imposed barriers that segregated and protected domestic markets and recent technological advances in manufacturing, transportation and telecommunications allows even the smallest firms access to customers, suppliers and collaborators around the world. Economic growth and innovation, both domestically and internationally, are fuelled increasingly by small companies and/or entrepreneurial enterprises (Etemad and Wright, 2003:3).

Macroeconomical alterations in a country due to globalization are likely to be experienced differently by SMEs than large companies. SMEs have to operate within the macroeconomic environment of domestic and international markets, and as such are affected by changes in this environment. Among others, two social-economic results of an increased level of globalization in a country are enlarged inequality enhanced consumer demand for variety. Both of these have been marked as determinants for higher levels of entrepreneurship in a country (Vinig and Kluijver 2007:12).

6.1 Competitive patterns

McKinnon (2003) cited Namiki's four competitive patterns illustrate how firms can maintain competitive advantage under globalisation as follows;

Pattern 1	**Pattern 2**	**Pattern 3**	**Pattern 4**
Competitive pricing	Capability to manufacture specialty products / a broad range of products / new products	Technological superiority	A high level of customer service and / or high quality products


The most important factors in the globalization of entrepreneurs are technology and the falling costs of communications. The success of entrepreneurship is driven by technological changes. These changes have democratized entrepreneurship and entrepreneurs can come from anywhere in the world and can reach customers anywhere from the day they open their doors (Haar, 2012:2). In this regard the patterns can provide insights for the current situation of developing countries. Although developed countries precede in technological superiority and high level of customer service and / or high quality products patterns since most of their production facilities have been settled in developing countries by entrepreneurship and technological spillovers, developed countries gained too much competitive advantage in the last decade.

6.2 Development Level Comparison of Globalization and Entrepreneurship

Before glancing at how globalization affected entrepreneurship levels of the countries, it would be beneficial to check out the comparison of entrepreneurship figures of developed, developing and emerging economies using Global Entrepreneurship Monitor data.
Figure 1. *Established Business Ownership 2001-2012 **Source:** Global Entrepreneurship Research Association (2013), "Global Entrepreneurship Monitor", London Business School, UK.*
Figure 2. *Informal Investors Rate 2001-2012   **Source:** Global Entrepreneurship Research Association (2013), "Global Entrepreneurship Monitor", London Business School, UK.*
Figure 3. *Nascent Entrepreneurship Rate 2001-2012* ***Source:*** *Global Entrepreneurship Research Association (2013), "Global Entrepreneurship Monitor", London Business School, UK.*
Figure 4. *Necessity-Driven Entrepreneurial Activity 2001-2012* ***Source:*** *Global Entrepreneurship Research Association (2013), "Global Entrepreneurship Monitor", London Business School, UK.*
Figure 5. New Business Ownership Rate 2001-2012   Source: Global Entrepreneurship Research Association (2013), "Global Entrepreneurship Monitor", London Business School, UK.
Figure 6. Total Early-Stage Entrepreneurial Activity (TEA) 2001-2012   Source: Global Entrepreneurship Research Association (2013), "Global Entrepreneurship Monitor", London Business School, UK.

The figures visualize that entrepreneurial activities are in a rising trend all over the world. However it is apparent that entrepreneurship levels of developing countries are far more active than both emerging markets and developed countries. Developing countries have established business ownership values more than 200% of developed ones; they have 500% more informal investors rate; 600% more nascent entrepreneurship rate; 350% more necessity-driven entrepreneurial activity rate; 400% more new business ownership rate and 400% more total early-stage entrepreneurial activity on the average. It also can be seen that emerging markets is the second in the list in all of the figures. Another remarkable issue is that the Global Economic Crisis of 2008-2009 had negative impact on entrepreneurial activities of all the countries but the Crisis hit the activities of developing countries worse.
Figure 7. *Development Level Comparison of Globalization & Entrepreneurship 2001-2010   **Source:** Global Entrepreneurship Research Association (2013), "Global Entrepreneurship Monitor" , London Business School, UK; KOF Swiss Economic Institute, (2013), "KOF Index of Globalization", Zurich.*

When overall Global Entrepreneurship Monitor score of the countries compared with the globalization index, it can be said that the values almost overlap. In the last decade globalization index of the developed countries had no change at all and their entrepreneurship level had a little rise. On the other hand emerging markets and particularly developing countries gained too much from globalization phase in terms of entrepreneurship. While their globalization index increased 34%, their entrepreneurship approximately increased 238%.

7   Conclusion and Suggestions

Globalization led to major increases in worldwide trade and exchanges in an increasingly open, integrated, and borderless international economy. Developing countries have left no stone unturned to achieve economic development and growth and globalization process have created an opportunity for them to utilize their comparative advantages, introduce advanced technologies, foreign capital and management experience. It is also favourable for eliminating monopolistic behaviours and strengthening market competition.

With the rise of globalization, entrepreneurial global start-ups have emerged in developing countries which is associated with job creation, wealth creation, innovation and its related welfare effects. Indeed, the promotion of entrepreneurship and the promulgation of small and medium sized enterprise policy has become an important development prescription in recent years in this countries.

In this study we questioned how globalization process diversify the development of entrepreneurship at a development level classification. Global Entrepreneurship Monitor and KOF Index of Globalization data is used to investigate the query. The figures displayed that entrepreneurial activities are for more operative in developing countries than both emerging markets and developed economies. Also a positive relationship between the development of a country's level of globalization and the rate of entrepreneurship.

It can be concluded that the distinctive economic nature of developing countries and developed ones provide broader opportunities for the entrepreneurs and they are currently at the centre of attention for both local and global enterprises. The limitation of the study is the lack of observations about the subject. Since many of the developing countries and even some of developed ones don't have sufficient entrepreneurship information at the moment the study can't be expanded further but it can be broadened with quantitative analyses when sufficient observations are obtained in the future.

Avrasya'da Enerji Ekonomileri Pontansiyeli Üzerine Bir Değerlendirme

An Evaluation of the Potential of Energy Economies in Eurasia

Prof. Dr. Recep Kök (Dokuz Eylül University, Turkey)

Abstract

The basic hypothesis of this evaluation is how efficient the natural resource-rich countries use rents they can create so much sustainable welfare; how inefficient they use the rents, they will be subject to a welfare loss. When we consider the case of energy profile in the case of Eurasia in the scale of inventory, fossil oil, natural gas, coal and water reserves should be examined primarily. Shortly after, examining the distribution of the natural resource will be beneficial. In fact, it would be possible to develop more efficient policy propositions than the potential situation if we take into account the caring of the transportation/trade infrastructure and the infrastructure that enables a larger scale production through the current production and distribution channels. In this study, the results of different experiences acquaired till today will be elaborated. Some indicators will be given place with reference to the importance of R/P ratio. The priority condition for Eurasian countries to catch the contemporary civilization is directly related with the efficiently sustainable and steadily utilization of natural resources. Briefly, the evaluation of all propositions which are parts of the responsibilities of making projections for the future, especially with the historical mission of Turkey, will make contribution to the social peace as well as the welfare of people living in this region.

The Causes of Electricity Theft: An Econometric Analysis for the Case of Turkey

Asst. Prof. Dr. Çağlar Yurtseven (Bahçeşehir University, Turkey)

Abstract

Every year, especially in developing countries, electricity theft causes billions of dollars of loss. Since the consumers who pay their bills legally, bear the burden of this loss, it disturbs the social justice. In addition by affecting the investment decisions, it distorts the economic growth hence the future of the nations as well. Authorities try to prevent electricity theft with different engineering techniques and devices designed especially for detecting purposes. However, there are ways to prevent this behavior before it took place. For this reason, energy theft equation is estimated with different techniques to understand the socio-economic background of this illegal behavior. Education, income and political ideologies are found to be the important electricity theft determinants. Policy suggestions, to prevent this illegal behavior before it took place, are discussed.

The Relationship between International Oil Prices and Current Account Deficit: The Case of Turkey

Assoc. Prof. Dr. Mehmet Mucuk (Selçuk University, Turkey)

Mr. Mustafa Gerçeker (Selçuk University, Turkey)

Prof. Dr. Ahmet Ay (Selçuk University, Turkey)

Abstract

In developing countries such as Turkey, the current account deficit, occuring due to the lack of national savings, is considered to be one of the determinants of economic crisis. At the same time owing to Turkey is dependent on foreign countries for energy resources, current account deficit is highly sensitive to fluctuations in the prices of these resources. This paper, investigates the causal relationship between international oil prices and current account deficit for Turkey using Johansen cointegration and causality tests. The empirical findings show that there is a relationship between two variables in the long term.

1 Introduction

Economical growth plays a core part for the developing countries to join the developed countries. Because being able to carry out this process successfully depends on use of the income generated as a result of the growth effectively and efficiently in all fields. At the same time, it is required to canalize the said income to such investments that will reduce external dependency. Integrated to the global economical system by the Decisions of January 24, 1980, Turkey also needs a healthy and sustainable growth to achieve the social and economical targets set as soon as possible. In this respect, it is important to reduce external dependency and mobilize domestic resources in economy. However, the current deficit emerging as a result of the fact that national savings are not much enough to cover the investments and the problematic form of the deficit threatens the development course of the country. While the development structure that is based mainly on domestic consumption and external resource input generates income increase at high rate, marked stimulation of importation by the income increase leads to sacrifice on growth from time to time by increasing the current deficit risk. On the other hand, basic determinants of the current deficit include domestic consumption as well as energy importation. As a matter of fact, current account balance is highly vulnerable to the fluctuations in the prices of energy resources as Turkey, with its external dependency by 70% in energy, procures 93 percent of the oil, 97 of the natural gas needed from outside the country. This study aims to determine the actions to be taken in Turkey particularly in regard to the field of energy in line with the long term targets regarding the changing energy balances and basic macro dimensions by testing impact of the movements in the international oil market on the current account in respect of Turkey's economy deficit using econometric methods. With respect to this aim, first, the present status of international oil prices and the current account deficit in Turkey is addressed, then the association between the said variables is analyzed using VAR technique. In the last section, the measures required to be taken in the field of energy are mentioned of based on the findings attained.

2 International Oil Prices and Its Economical Impacts

Oil prices, which have always been a controversial matter, is addressed as an important variable in the process of planning economical activities of a country (Kiani, 2011). However, as formation of the oil prices cannot be explained solely by the supply-demand conditions, they have a very volatile structure compared to other commodity prices. Australian Institute of Petroleum (AIP) lists the key factors determining the international oil prices as in Table 1.

According to US Energy Information Administration (EIA), 7 key factors influencing crude oil price include production, oil discoveries in global scale, financial markets, demand, demand of non-OECD member countries like China, India and Saudi Arabia, and spot markets (Fessler, 2011). Depending on the said factors, oil prices have from time to time exhibited very critical deviations in the historical process. The trend followed by the oil prices from the 1970s to today is shown in Graph 1.

The 1973 Arab oil embargo had a major price impact as Arabian Light prices surged from USD 1.84/barrel in 1972 to USD 10.98 in 1974. The next spike after 1973 came in 1981, in the wake of the Iranian revolution, when prices rose to a high of nearly USD 40. Prices declined gradually after this crisis. They dropped considerably in 1986 when Saudi Arabia increased its oil production substantially. The first Gulf crisis in 1990 brought a new peak. In 1997, crude oil prices started to decline due to the impact of the Asian financial crisis. Prices started to increase again in 1999 with OPEC target reductions and tightening stocks. A dip occurred in 2001 and 2002, but the expectation of war in Iraq raised prices to over USD 30 in the first quarter of 2003. Prices remained high in the latter part of 2003 and in 2004. Crude oil prices increased dramatically in late August 2005 after Hurricane Katrina hit the US coast of the Gulf of Mexico. Prices continued to increase throughout 2006 as the demand for

oil in emerging economies, especially China, put pressure on the supply/demand balance, averaging 24 per cent higher than the previous year. In 2007, the increase continued with Dubai hitting USD 88.82/barrel at the beginning of November and WTI climbing to USD 96.50/barrel. In early 2008, prices crossed the symbolic USD 100/barrel threshold and reached a new peak just under USD 150/barrel in July 2008; this brought the real price of oil in 2008 to an all time high. At the beginning of 2009, prices fell to USD 40/barrel as the impact of high prices and the onset of the global financial crisis sharply curbed oil demand. Later in the year, prices ranged between USD 70 and 80/barrel. Crude oil prices increased steadily throughout 2010and 2011 with the post-recession demand rebound, tightening stocks and low spare capacity. In 2012, prices continued to increase at the beginning of the year, averaging USD 122.40/barrel in March, before declining to under USD 100/barrel in June. (OECD, 2011).

Changes in regional and global supply balances in both the short & longer term	Changes in economic conditions/sentiment in both the short and longer term
Major supply disruptions from natural disasters, war, civil unrest and strikes	New oil discoveries
Seasonal demand and demand spikes	Investment in new oil production/refining capacity
Inventory management	Future global demand and supply balances
Shipping availability and freight rates	Global economic growth and conditions
Market trading activities and strategies	Costs of oil production and refining
Short term decisions of oil producing countries, National Oil Companies (NOCs) and nations holding strategic reserves	Technological progress
Alternative fuel developments	Long term policies of NOCs and oil producing nations
Population growth	Regulation and government policy

Table 1. *Key Factors Influencing International Crude Oil Prices. Source: Australian Institute of Petroleum (AIP), "Facts About the International Fuels Market & Prices", www.aip.com.au 01.02.2013.*
Figure 1. *Crude Oil Spot Prices (US dollars per barrel). Source: OECD (2011), OECD Factbook 2011-2012: Economic, Environmental and Social Statistics*

Various estimations are made within the framework of Hubbert Curve about the trend to be followed by the oil prices in the upcoming terms. According to the Hubber Curve reflecting the course of production over time for the resources with limited reservoir, once a natural resource is discovered, its production increases rapidly in the beginning and peaks at a certain point of the time. Expressing that price of the old energy resource will stand high for the new energy resource to become more attractive in the regions where production decreases, Ediger (2007) draws the attention to the fact that oil importation cost will increase henceforward. This is expected to be reflected on the energy bills of the countries such as Turkey, which are highly external dependent in respect of basic energy resources, particularly oil.

Along with the economies' beginning to recover following the 2008 global crisis, the balances involving production and consumption also strengthen the expectations that the oil prices may increase. However, when

considered along with other factors, there is an uncertainty about the exact trend to be followed by the oil prices in the future.
Figure 2. Hubbert Curve. Source: www.hiram-caton.com 05/05/2013; Hubbert, M. King (1956), "Nuclear Energy and The Fossil Fuels", Shell Development Company Exploration and Research Division, Publication 95.
Figure 3. World Oil Production and Consumption(thousands barrels daily) Source: BP Statistical Review of World Energy 2012

Like with other developing countries, as the energy demand of Turkey at production phase is high, the increase in oil prices could lead to cost inflation. On the other hand, persistency and scale of the shock in the oil markets as well as the money and finance policies to be implemented by the central bank and government in this course are of great importance as well. Moreover, the increase in oil prices contribute to growth of the current account deficit by increasing the energy bill (Yetkiner and Berk, 2008). As a matter of fact, the current account deficit of 77 billion dollars, corresponding to 10 percent of the national income in 2011, consisted of energy importation by around 70 percent with 54 billion dollars. In 2012 when oil prices stood high in average, a resource of around 60 billion dollars was allocated for importation of energy resources. This figure amounts to 25 percent of the total importation. Share of the energy importation that stood around 10 percent until 2005 within the total importation raised to over 20 percent recently as a result of increase of the international energy prices and high growth performance (Yıldırım, 2013). In parallel to this, for struggling with current deficit, increasing the share of the domestic and renewable resources in energy, reducing the dependency on importation by supporting the efforts providing energy efficiency are also presented as a measure in the Medium Term Development Programme for 2013-2015, prepared by the Ministry of Development.

3 Literature Survey

Relationship of the energy factor that is among the most important inputs of almost all sectors of the economy with the basic macro dimensions in the external dependent countries particularly in terms of this resource is increasingly gaining importance. As the most consumed energy resource among the fossil fuels is oil, changes in

the oil prices are closely followed and their impacts are tested econometrically. In this study, it was sought to analyze the relationship between the movements in the oil prices and the current account deficit that poses a great problem for Turkey's economy. Information on the studies conducted previously to test the impact of the oil prices on the current account deficit are given in Table 2.

Authors	Country	Period	Empirical Method	Results
Baclajanschi et al. (2006)	Moldova	1997-2004	Arithmetic Index and Geometric Index	Energy price changes could dampen economic growth while putting additional strains on the current account deficit.
Demirbaş et al. (2009)	Turkey	1984-2008	Error Correction Model	An increase in oil prices would led tor is in cureent account deficit.
Demirci and Er (2007)	Turkey	1991-2006	ARMA-VAR	Turkish economy is getting more dependent on the prices of crude oil and natural gas which makes the current account deficit grow faster.
Bildirici et al. (2010)	USA	1968-2008	TVAR and Granger Causality Analysis	There is a bidirectional relationship between oil prices and current acoount deficit.
Özlale and Pekkurnaz (2010)	Turkey	1999-2008	Structural VAR	A significant effect of oil price shocks on the current account ratio in the short-run.
Anam and Zaman (2012)	Pakistan	1975-2010	ARDL Approach	There is a unidirectional causality running from oil prices to trade imbalance.

Table 2. *Overview of Previous Studies*

A substantial portion of the studies conducted both on Turkey's economy and other countries' economies points out presence of a strong correlation between the international oil prices and current account deficit. However, while oil prices reflect positively on the current account balance in the oil exporter countries, exactly opposite results attained in the importer countries.

4   Data and Methodology

The monthly current account deficit (CD) data for the period 1992:01-2013.02 as used in the study were obtained from Electronic Data Distribution System of Central Bank of Turkey, and international oil prices (OP) were obtained from official website of BP.

In this study addressing impact of the international oil prices on the current account deficit in the context of Turkey's economy, the correlation between the said variables were analyzed through the following econometric methods:

- Unit Root Test
- Johansen's Cointegration Test
- Vector Error Correction Model

5   Results

In this study examining impact of the international oil prices on the current account deficit, first, stability tests of the series were conducted in order to establish significant relationships between the variables. Results of the Expanded Dickey-Fuller (ADF), Phillips-Perron (PP) and Kwiatkowski Phillips Schmidt Shin (KPSS) unit root tests used to test the stability are presented in Table 3.

While assuming that null hypothesis (H_0) series contain unit root in ADF and PP tests, it is suggested that alternative hypothesis (H_1) series contain unit root in KPSS test. In this context, ADF, PP and KPSS unit root tests show that current account deficit and international oil prices series are not stable at level, but both become stable at their first difference. As a matter of fact, the t statistics calculated for ADF and PP tests are, as absolute value, smaller than the MacKinnon's critical value at original level. In KPSS test, as LM statistics is bigger than the critical value, not the H_0 hypothesis but its alternative is valid. At their first difference, the unit root problem disappears, the series become stable.

The fact that the series are stable at the same level points out that it is probable for the current account deficit and international oil prices to move in parallel in the long term. In order to clearly determine whether there is a long term relationship between the variables, the optimal lag length was selected and VAR model was predicted

in the first stage. According to the Table 4 containing the LR (Consecutive Modified Likelihood Ratio Test Statistics), FPE (Final Prediction Error), AIC (Akaike Information Criterion) and HQ (Hannan-Quinn Information Criterion), SC and HQ criteria show that the optimal lag length is 2.

* Shows the lag length selected by the criterion.

Table 4. VAR Model Lag Length Determination Criterion Results

Number of cointegrated vectors in the system is required to be found in order to determine the long term relationship between the series seen to be stable at the same level. For this purpose, trace and maximum eigenvalue statistics were used in the study within the scope of Johansen's cointegration test. In maximum eigenvalue test, existence of maximum r cointegrated vectors is tested against the alternative hypothesis expressing that r+1 cointegrated vectors exist. In trace eigenvalue test, existence of maximum r conintegrated vectors is tested against the alternative hypothesis expressing that minimum r+1 cointegrated vectors exist (Üçdoğruk, 1996).

Number of Assumed Cointegration Equalities	Trace Test			Maximum Eigenvalue Test		
	Eigenvalue	Trace Statistics	5% Critical Values	Eigenvalue	Maximum Eigenvalue Statistics	5% Critical Values
0	0.162177	46.82078	15.49471	0.162177	44.41400	14.26460
Maximum 1	0.009543	2.406783	3.841466	0.009543	2.406783	3.841466

Table 5. Johansen's Cointegration Test Results

According to Table 5, both trace test and maximum eigenvalue test show that 1 cointegrated vector exists among the international oil prices and current account deficit at the significance level of 5%. Because for the zero hypothesis assuming that cointegrated vector does not exist, maximum eigenvalue was calculated as 44.4 and trace statistics was calculated as 46.2. As the calculated test values were higher than the critical values at 5% significance level (14.2 for maximum eigenvalue test, 15.4 for trace test), the zero hypothesis suggesting the cointegrated does not exist was rejected by both tests. This result reflecting existence of long term balance

relationship shows a substantial parallelism with the results of the studies conducted previously for Turkey and other countries.

Existence of a long term relationship between the current account deficit and the international oil prices shows that the behaviors of the variables in the short term may be addressed within the framework of error correction model. Results of the error correction model and Wald test conducted to determine the causal relationship between the variables in the short and long term are presented in Table 6.

Dependent Variable	t test				t test	Wald test	
	ΔCA_{t-1}	ΔCA_{t-2}	ΔPF_{t-1}	ΔPF_{t-2}	ECT_{-1}		
ΔCA	-0.110766 [-1.49025]	0.058178 [0.86485]	-6.997350 [-0.49019]	0.013418 [0.00094]	-0.287848 [-4.60101]	(ΔPF_{t-1}; ECT_{-1})	$\chi^2 (2) =$ 21.82895

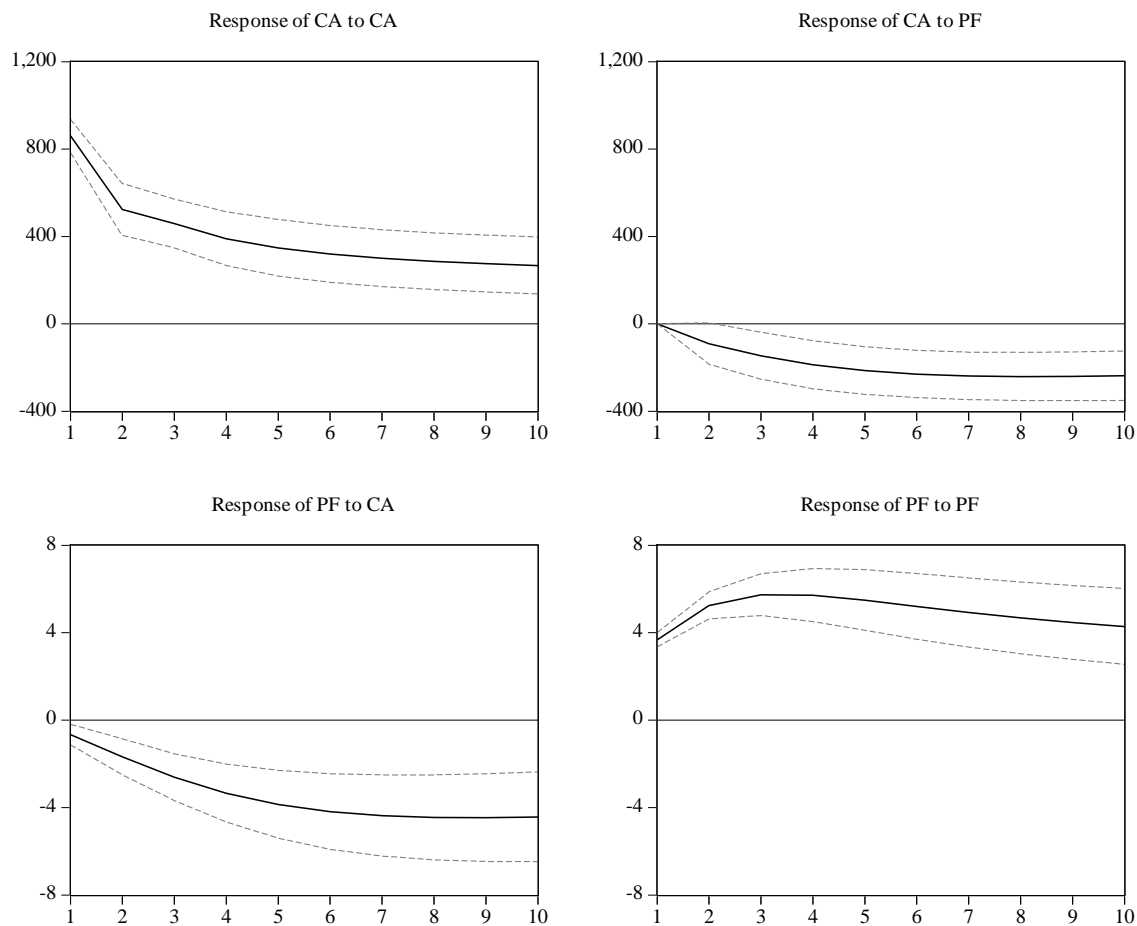
Response to Cholesky One S.D. Innovations ± 2 S.E.


***Figure 4.** Impulse - Response Functions*

While Wald test results confirm that a causality relationship from international oil prices to current account deficit exists in the long term, t test results show that oil prices are not an explanatory variable on the current account deficit in the short term.

Whether any variable is effective on a macroeconomical structure is determined initially with the causality tests used above. Whether the effective variable can be used as a policy instrument is analyzed with the impulse-response functions (Sarı, 2008). The impulse-response functions reflecting the response given by a variable against the shock applied to another variable in the system was plotted taking into account 10 period. The horizontal axis on the graphs shows duration of the response as monthly periods and vertical axis show the magnitude of the response as standard error. While the continuous lines demonstrate response of the shock-dependent variable for 1 standard error occurring in the error terms of the model over time, dashed lines

represent the confidence intervals attained for ± 2 standard error. Presence of the dashed lines in the positive and negative area at the same time means that the response is statistically significant (Yamak and Korkmaz, 2005; Erkılıç, 2006).

As shown in the Figure 4 with the straight line, one standard deviation shock to an oil price change results in a decline in the change in current account balance. Therefore, we can say that oil price shocks have the expected impact on the current account deficit.

Another method used for dynamic characteristics of the system is variance decomposition. By variance decomposition, sources of the change in variance of the variables in the models can be decomposed, it can be seen to what extent the change in variance of a variable is attributable to itself and to what extent the same is attributable to the other variable (Pekkaya and Tosuner, 2004).

Period	Standard Error	Current Account Deficit (CD)	International Oil Prices (OP)
1	860.1016	100.0000	0.000000
2	1010.861	99.19331	0.806685
3	1119.928	97.63576	2.364237
4	1200.355	95.49397	4.506034
5	1267.971	93.10195	6.898054
6	1327.690	90.69978	9.300220
7	1381.890	88.43814	11.56186
8	1431.678	86.38762	13.61238
9	1477.684	84.56781	15.43219
10	1520.327	82.97020	17.02980

Table 8. Variance Decomposition Results

According to variance decomposition results, the whole change in the current account deficit in the period can be explained by itself. But beginning from the second period, explanatoriness of the international oil prices begin to increase, and in the tenth period, around 17% of the change in the current account deficit is explained by the international oil prices.

6   Conclusion and Evaluation

The international oil prices determined by the supply&demand conditions as well as social factors can influence the macro dimensions such as current account balance particularly in developing countries that are external dependent in energy. In this study, the relationship between international oil prices and current account deficit was tested with the aid of the monthly data for the period 1992:01-2013:02 for Turkey's economy using VAR analysis. The data obtained showed existence of a causal relationship from international oil prices to current account deficit. Hence, very critical steps are required to be taken in the field of energy in order to reduce to a certain extent the current account deficit that has reached very high levels due to reasons attributable to both domestic demand increase and production structure. In this respect, it is required to support the efforts aimed at determining domestic energy resources and mobilizing the said resources, modernize the existing energy sites, reduce the demand for fossil fuels by supporting the private and public investments in renewable energy resources, and minimize the losses and illicit uses on energy lines.

Evolution of Comovement between Commodity Futures: Do Biofuels Matter?

Ph.D. Candidate Dinçer Dedeoğlu (Bahçeşehir University, Turkey)

Abstract

In this study we investigate the commodity futures linkages for the period 1988:M1-2012:M4. We use monthly futures prices for nine commodities. We employ wavelet analysis to investigate the comovement of commodity futures. By using wavelet based measure of correlation we investigate correlation between commodity futures in both time and frequency domain. The results indicate that correlations are low for short, medium and long-run. We also find evidence of a tendency towards an increase in correlations after 2008. This can be the result of the global crises which has an effect on feedstock costs and the price of energy inputs by putting front a channel through biofuels that links energy and agricultural commodities by increasing the correlation between these commodities after 2008.

The Relationship between Oil Prices and Exchange Rate: The Case of Romania

Asst. Prof. Dr. Ahmet Şahbaz (Gaziantep University, Turkey)
Asst. Prof. Dr. Uğur Adıgüzel (Cumhuriyet University, Turkey)
Asst. Prof. Dr. Tayfur Bayat (İnönü University, Turkey)
Asst. Prof. Dr. Selim Kayhan (Bozok University, Turkey)

Abstract

This study investigates to causality between crude oil prices and exchange rates in Romania employing monthly data from the beginning of floating exchange regime for November 2004 to December 2011. The study benefits from the recent advance in the time series econometric analysis and carries out non-linear causality and frequency domain causality tests. According to nonlinear causality test results there is no causality between the variables. Results show that frequency domain causality results slightly differentiate from the nonlinear causality analysis and imply that there is a causality running from real exchange rate to real oil price on the mediun and long run.

1 Introduction

The term of transition economy includes the countries located in Central and Eastern Europe. The common point of these countries is strong change in their economic structure. The defining characteristic of the transition countries is their decision to abandon central planning as the principal mode of organizing their economies and to move to market-oriented economies with significant private ownership of the means of production (IMF, 2000). Romania was included in the list of transition countries in 1989.

The country experienced different stages of development in the period including years between years 1989 and 2011. After the economic decline and recovery periods, Romania participated to European Union in 2007. International Money Fund, World Trade Organization and European Bank for Reconstruction and Development are the other institutions which Romania joined in the last sub-period of the transition process.

By the beginning of transition period in Romania, a number of major reforms were made in the fields of privatization, price liberalization, banking and commercial law and regulations in financial system and financial institutions in order to participate global economic system. Another important reform was made in trade and foreign exchange rate system of Romania. Similar to other transition countries, Romania has started with a fixed exchange rate regime and moved gradually from an intermediate (soft peg) regime to a managed floating regime (Marcu, 2008). The National Bank of Romania started to apply controlled (managed) floating regime in 1999 (Dobrota, 2007). Finally the Bank has started to implement floating regime by the beginning of inflation targeting regime in November 2004. Transition to floating exchange rate regime allows to external factors to induce exchange rate fluctuations.

By the beginning of transition period, the Romanian economy has grown remarkably. The growing economy has induced to increase energy demand. According to Eurostat database, the primary energy demand was 34 million tonnes of oil equivalent (MTOE) in 1999, it was more than 38 MTOE in 2008. Although a contraction occured in energy consumption because of global crisis in 2008, it has increased again by the end of crisis.

Romania meets its energy demand mainly from its own sources. In this regard, its energy import dependency is lower than European Union avarage. On the other hand, a quarter of total primary energy supply is met by oil. Romania is a significant producer of oil. Domestic oil production covers a large percentage of oil needs. Oil dominates the primary energy supply of Romania with gas and solid fuels. Romania imported oil more than 4.8 MTOE, while it produced 6 MTOE in 2004 (EC, 2007). 40 % of imported energy is in the form of crude oil imported mainly from the Russian Federation and Kazakhstan.

In addition to transition to floating exchange rate regime in November 2004, increasing energy demand parallel to economic growth brings to question that "Do oil price fluctuations induce exchange rate fluctuations in Romania?". In the light of these explanations, we examine the causation linkage between real exchange rate and oil price in Romania. We employ monthly data from the beginning of floating exchange rate regime in November 2004 to December 2011. The causal relationship is identified by employing multiple testing approaches. In that respect we employ linear causality test developed by Hatemi-J (2006) and frequency domain causality test developed by Breitung and Candelon (2006).

The contribution of this study is two fold. First, the determination of causation linkage has important policy implications. The fluctuations in exchange rate impairs on economic growth (Rickne, 2009). In this regard, reducing price volatility of oil also proves exchange rate stability and hence economic growth. On the other hand, the information about possible interaction between oil prices and exchange rate plays crucial role in

making long term energy policies. By determining the causation linkage, policymakers might tend to alternative energy sources in order to reduce oil dependency and oil demand. In the light of results, we also provide information for global investors in investment decisions. By monitoring oil prices, investors may forecast exchange rate movements. Besides, financial market actors and speculators could be able to identify portfolio diversification options in exchange rate markets. Secondly, this study also attempts to compare time domain and frequency domain causality analyses approach which generates test statistics at different frequencies across spectra. By doing so, we examine the existence of causality between variables in different time frequencies. This would give opportunity to test Coudert et al.'s (2008) findings about the differences in price elasticity of oil demand and supply in different time periods.

The rest of paper is organized as follows. The next section devoted to summarize theoretical interpretations about the linkages between variables. The third section summarizes the existing literature investigating the relationship between variables. In the fourth and fifth sections, econometric methodology and the data are described. In the section six, empirical results are presented. We summarize and conclude empirical findings in the last section.

2 Theoretical Background

Theoretically there is a number of variables affect exchange rates in floating exchange rate regime. The economists have investigated the effects of possible variables on exchange rates. In this regard, real factors as well as nominal factors are examined. While Branson (1981) attributes an important role to monetarial factors, Dornbusch (1980), Bergstrand (1991), Faruquee (1995), Clarida and Gali (1994), Mark and Choi (1997) find the significant effects of real variables.

On the other hand, Golub (1983) and Krugman (1983a and 1983b) attributes an important role to oil price shocks in definition of exchange rate fluctuations. While Golub (1983) explains the relationship via wealth transfer channels, Krugman (1983a and 1983b) argues that exchange rates differentiate due to import preferences and investment decisions of oil exporting countries in the case of oil price increases.

On the other hand, Coudert et al. (2008) suggest that a shock in U.S. dollar exchange rate also affects oil prices. They explain the relationship as follows: oil pruchases are paid in dollars. Demand depends on the domestic price for consumer countries which changes with the dollar fluctuations. Depreciation in dollar reduces the oil price in domestic currencies for countries with a floating currency (Coudert et al., 2008). This leads to an increase in real income of consumer countries and increases oil demand. So, dollar depreciation increases oil demand and this would increase oil price. Similarly, a U.S. dollar depreciation has effects on oil supply. The depreciation in U.S. dollar can also trigger inflation and reduce the income in oil producer countries, the currencies of which are linked to the dollar. The increase in inflation and the decrease in purchasing power reduce the real disposable income and therefore the income available for drilling, everything else equals (Coudert et al., 2008). As a result, dollar depreciation may result in a reduction in oil supply, henceforth oil price. But the effects of exchange rate shocks on oil demand and supply can be observable on the long run. Because the price elasticity of both demand and supply are inelastic on the short run. So the effect of exchange rate on oil price occurs on the long run.

3 Literature Review

In this section we focus on the literature analyzing exchange rate and oil price relation. We classify the literature into four groups. The first group of studies supports evidence of causality running from oil price to exchange rate. Amano and van Norden (1998) for the U.S.A. and Chaudhuri and Daniel (1998) for sixteen OECD countries support evidence for this argument. In latter studies, Aleisa and Dibooglu (2002) for Saudi Arabia, Akram (2004) for Norway, Kutan and Wyzan (2005) for Kazakhstan, Zalduendo (2006) for Venezuela, Issa et al. (2006) for Canada, Olomo and Adejumo (2006) for Nigeria, Chen and Chen (2007) for G7 countries, Coudert et al. (2008) for U.S.A., Narayan et al. (2008) for Fiji Islands, Korhonen and Juurikkala (2009) for nine OPEC countries, Nikbakht (2010) for seven OPEC countries, Hasanov (2010) for Azerbaijan, Dawson (2003) and Mendez-Carbajo (2011) for Dominic Republic and Lizardo and Mollick (2010) for Canada, Mexico, Norway and Russia as oil exporting countries and for Denmark, Japan, Sweden, the United Kingdom and the Euro area countries as exporting countries reach similar results with Amano and van Norden (1998).

Second group of studies implies that real exchange rate shocks induce oil price fluctuations and indicates a causality runing from real exchange rates to oil prices. Indjehagopian et al. (2000) find that variation in exchange rates has an instantaneous impact on the variations in oil prices for Holland, Germany and France. In another study for developed country context, Sadorsky (2000) analyzes U.S.A. and obtains that exchange rate induces crude oil future prices. This view is supported by Schmidbauer and Rösch (2008) and Zhang et al. (2008), Yousefi and Wirjanto (2004) for Indonesia, Iran, Nigeria and Saudi Arabia; Yousefi and Wirjanto (2005) for Iraq, Kuwait and Venezuela.

The third group of studies finds evidence of two way causality (the feedback relation) between oil price and real exchange rates. In their initial studies Usama and Normee (2009) imply that there is a bi-directional causality between variables in the short run in United Arabic Emirates. Huang and Tseng (2010) investigate the relationship between oil price and nominal exchange rate by using different kind of oil types and find bi-directional causality for U.S.A.Yanagisawa (2010) examines the relationship for U.S.A. and implies that bi-directional casuality is valid previously, but casuality running from exchange rate to oil price dissappears in the last year of analysis. Mohammadi and Jahan-Parvar (2008) find bi-directional causality for Gabon, Indonesia, Nigeria and Saudi Arabia.

The fourth group of studies indicates that there is no causal relationship (the neutrality) between variables, implying that oil price and exchange rates do not provide a predictive power with respect to each other. The empirical evindece on the neutrality between oil prices and exchange rates is supported by Bjorvik et al. (1998), Habib and Kalamova (2007) and Bjornland and Hungnes (2008) for Norway, Habib and Kalamova (2007) for Saudi Arabia, Wu et al. (2011) for U.S.A; Mohammadi and Jahan Parvar (2010) for thirteen oil exporting countries; and Jahan-Parvar and Mohammadi (2008) for Algeria, Bahrain, Kuwait and Mexico.

4 Econometric Methods

4.1 Hatemi-J (2006) Bootstrap Process-Based Toda-Yamamoto (1995) Linear Granger Causality Type

In a standard Granger causality analysis, zero restrictions based on the Wald principle are imposed on the lagged coefficients obtained from the estimation of Vector Autoregressive (VAR) model. However, the Wald statistic may lead to nonstandard limiting distributions depending upon the co-integration properties of the VAR system that these nonstandard asymptotic properties stem from the singularity of the asymptotic distributions of the estimators (Lütkepohl, 2004). The Toda and Yamamoto (1995) (TY, hereafter) procedure overcomes this singularity problem by augmenting VAR model with the maximum integration degree of the variables. In addition to this advantage, the TY approach does not require testing for co-integration relationships and estimating the vector error correction model and is robust to the unit root and co-integration properties of the series.

The standard Granger (1969) causality analysis requires estimating a VAR (p) model in which p is the optimal lag length(s). In the TY procedure, the following VAR ($p+d$) model is estimated that d is the maximum integration degree of the variables.

$$y_t = v + A_1 y_{t-1} + \cdots + A_p y_{t-p} + \cdots + A_{p+d} y_{t-(p+d)} + \mu_t. \qquad (1)$$

where y_t is vector of k variables, v is a vector of intercepts, μ_t is a vector of error terms and A is the matrix of parameters. The null hypothesis of no-Granger causality against the alternative hypothesis of Granger causality is tested by imposing zero restriction on the first p parameters. The so-called modified Wald (MWALD) statistic has asymptotic chi-square distribution with p degrees of freedom irrespective of the number of unit roots and of the co-integration relations.

Hacker and Hatemi-J (2006) investigate the size properties of the MWALD test and find that the test statistic with asymptotic distribution poorly performs in small samples. $\otimes$ the Kronecker product, $C = p \times n(1 + n(p+d))$ a selector matrix, S_U variance-covariance matrix of residuals, $\hat{\beta} = vec(\hat{D})$ and vec is the column-stacking operator as the MWALD test statistics;

$$MWALD = (C\hat{\beta})'[C((Z'Z)^{-1} \otimes S_U)C']^{-1}(C\hat{\beta}) \ \square \ \chi_p^2$$

Monte Carlo simulation of Hacker and Hatemi-J (2006) shows that the MWALD test based on the bootstrap distribution has much smaller size distortions than those of the asymptotic distribution. Hacker and Hatemi-J (2006) extends the TY approach based on the bootstrapping method developed by Efron (1979). In this new approach that is so-called the leveraged bootstrap Granger causality test, the MWALD statistic is compared with the bootstrap critical value instead of the asymptotic critical value.

4.2 Frequency domain causality test

While conventional time domain causality tests produce a single test statistic for the interaction between variables in concern, frequency domain methodology generates tests statistics at different frequencies across spectra. This is contrary to the implicit assumption of the conventional causality analysis that a single test statistic summarizes the relation between variables, which is expected to be valid at all points in the frequency distribution. Frequency domain approach to causality thereby permits to investigate causality dynamics at different frequencies rather than relying on a single statistics as is the case with the conventional time domain analysis (Ciner, 2011). Hence, it seems to be very meaningful to carry out frequency domain causality to better understand temporary and permanent linkages between oil prices and exchange rates in the Romania. Details of frequency domain approach are given in the appendix A.

5 Data

The exchange rate is defined as the foreign currency price of the U.S. dollar, concluding that the dollar appreciates as the nominal value of exchange rate rises. Real exchange rates (RER) are constructed using consumer price indices. The world price of oil, quoted in U.S. dollars, is chosen as representative of the general movement in oil prices over the period. To obtain the real oil price (ROP), the U.S. dollar price of oil was converted to domestic prices using the U.S. dollar exchange rate and then deflated by the domestic consumer price index. We employ monthly data belonging o period between November 2004 and December 2011. All the data is obtained from the International Financial Statistics published by IMF. The descriptive statistics are reported in table 1. It seems that data characteristics are slightly different in each series. First of all, as expected, the mean of the real exchange rate is higher than real oil price. According to the standard deviation and coefficient of variation of the real oil price is higher than real exchange rate. However, kurtosis value of real exchange rate is smaller than real oil price.

Time Span	Variable	Mean	Std. Dev.	Coef. of var.	Skewness	Kurtosis
November 2004-	RER	4.665	0.057	0.012	-0.062	3.675
December 2011	ROP	0.538	0.202	0.375	-0.28	2.737

Table 1. Descriptive Statistics **Notes:** *Coefficient of variation is the ratio of standard deviation to mean. Descriptive statistics are for log series. ROP: real oil prices, RER: real exchange rates.*

6 Empirical Findings

Prior to the identification of possible causality between the real exchange rates and the real oil prices, it is necessary to determine integration degree of variables. In that respect, we employ a battery of the unit root tests developed by Dickey and Fuller (1978 and 1981) (henceforth ADF), Phillips and Perron (1988) (henceforth PP), Elliot et al. (1996) (henceforth DF-GLS), and Kwaitkowski et al. (1992) (henceforth KPSS). The results from the unit root tests in table 2 show that ADF, PP and DF-GLS test do not reject the null of a unit root for the levels of real exchange rate and real oil price. When the ADF, PP and DF-GLS tests are applied to the first differences of the variables, the results indicate that all variables are stationary. Consistent with these results, the KPSS test for the null hypothesis also shows that the variables are stationary in their first differences. The unit root analyses thereby imply that the variables are integrated of order one. Accordingly, the maximum integration order (d) of the variables equal to one in the Toda Yamamoto linear Granger causality analysis.

		ADF	DF-GLS	PP	KPSS
Levels					
Intercept	RER	-2.800 (1)*	-0.803 (1)	-3.205 (3)**	0.223*
	ROP	-3.039 (2)**	-2.236 (2)**	-2.247 (4)	0.416
Intercept and Trend	RER	-2.690 (1)	-1.340 (1)	-2.961 (1)	0.222
	ROP	-3.508 (2)**	-3.489 (2)**	-2.661 (4)	0.078**
First-differences					
Intercept	RERR	-6.701 (0)***	-3.873 (0)***	-6.618(4)***	0.373***
	ROPR	-7.557 (0)***	-2.351 (1)***	-7.710(3)***	0.043***
Intercept and Trend	RERR	-6.832 (0)***	-5.886 (0)***	-6.741(4)***	0.115***
	ROPR	-7.505 (0)***	-3.588 (1)***	-7.662(3)***	0.039***

Table 2. *Results of the Unit Root Test* **Notes:** *For the KPSS test: * The asymptotic critical values of LM statistic for intercept 0.739, 0.463 at the %1 and %5 levels, ** the asymptotic critical values of LM statistic for trend and intercept 0.216, 0.146 at the %1 and %5 levels.*

For the DF-GLS test: *The asymtotic critical values for without trend -2.591, -1.944 at the %1 and %5 levels. ** The asymtotic critical values for with trend -3.602, -3.177 at the %1 and %5 levels. The figures in parenthesis denote the number of lags in the tests that ensure white noise residuals. They were estimated through the Schwarz criterion.

For the ADF test: * shows the results of Dickey Fuller test in the case of zero lag length and lag length choosen due to SIC criteria.** For the ADF test, the Mac Kinnon(1996) critical values for with constant -.3.485, -2.885, -2.579 at the 1 %, 5 % and 10 % levels. The critical values for with constant and trend -4.035, -3.447 ve -3.148 at the 1 %, 5 % and 10 % levels, respectively.

For the PP test: *Values in the paranthesis show bandwiths obtained according to Newey-West using Bartlett Kernel criteria. ** For the PP test Mac Kinnon(1996) critical values for with constant -3.483, -2.884, -2.579 at the 1 %, 5 % and 10 % levels.the critical values for with constant and trend -4.033, -3.446 and -3.148 at the 1 % 5 % and 10 % levels, respectively.

In the first step we employ bootstrap process based Toda Yamamoto (1995) linear causality (TY hereafter) test. Table 2 shows the results of bootstrap process based linear TY Granger type causality test results. As indicated in the table 2 statistics for both tests are higher than critical values obtained by replication for 10.000 times. According to test results, there is a uni-directional causality running from real oil price to real exchange rate.

Real oil prices to real exchange rates

		Bootstrap critical values		
MWALD	p-value	1%	5%	10%
11.369	0.000	12.499	8.240	6.444

Real exchange rates to real oil prices

		Bootstrap critical values		
MWALD	p-value	1%	5%	10%
0.743	0.862	12.265	8.335	6. 674

Table 3. *Results of Linear Granger Causality Test* **Note***: p-value denotes asmptotic chi-sqaure distribution. The AIC was used to determine the optimal lag lengths for VAR(p+d) models. Numbers in brackets are p-values. The number of replication is 10000.*

In the second step, we employ Breitung and Candelon's (2006) analysis which permits to decompose the causality test statistic into different frequencies. We calculate the test statistics at a high frequency of $\omega_i = 2.5$ and $\omega_i = 2.0$ to examine short term causality, $\omega_i = 1.00$ and $\omega_i = 1.50$ to examine medium term causality and finally $\omega_i = .01$ and $\omega_i = .05$ to investigate long term causality. By doing so, we are able to learn both temporary and permanent relations between variables. According to results of frequency domain causality test, we imply that there is no effect of real oil prices on real exchange rate in any time period. Results show that the causal relationship running from real exchange rate to real oil price is valid for long and medium term.

Real exchange rate to real oil price						
	Long Term		Medium Term		Short Term	
ω_i	0.01	0.05	1.00	1.50	2.0	2.50
	8.311*	15.474*	2.703	8.159*	5.864*	4.503*
Real oil price to real oil price						
	Long Term		Medium Term		Short Term	
ω_i	0.01	0.05	1.00	1.50	2.00	2.50
	1.563	3.089	0.391	0.380	1.273	0.157

Table 4. *Results for frequency domain causality test* **Notes:** *The lag lengths for the VAR models are determined by SIC. F- distribution with (2, T-2p) degrees of freedom equals 5.99.*

While linear causality analysis results imply existence of causality running from real oil price to real exchange rate in Romania, frequency domain causality results find evidence the causality running from real exchange rate to real oil price on the longer periods. As can been, both the time domain and frequency domain causality tests imply different results.

7   Conclusions

In this study, we examine monthly data belonging November 2004- December 2011 period in order to find whether there is an interaction between oil price fluctuations and exchange rate volatilities in the Romanian economy. In this regard, we employ linear causality test developed by Hatemi-J (2006) and frequency domain causality test developed by Candelon and Breitung (2006).

The results imply that time domain and frequency domain causality approaches imply different results. While time domain causality analysis indicates causality running from real oil price to real exchange rate, frequency domain causality analysis implies reverse causality in all time frequencies.

According to frequency domain causality analysis results, it is clear that oil price shocks do not affect exchange rate in the Romanian economy. This result is consistent with Romanian's energy dependency level. Low energy dependency prevents the effects of oil price shocks. Also relatively low share of oil in total energy consumption helps to explain the absence of the relationship running from oil price to exchange rate. On the other hand, existence of causality running from exchange rate to oil price on the medium and long run supports the Coudert et al.'s (2008) implications about the price elasticity of oil demand and oil supply. The effect of exchange rate fluctuations appears on the longer periods due to inelasticity of oil demand and supply on the short run.

Appendix

To test for causality based on frequency domain, Geweke (1982) and Hosoya (1991) defined causality;

$$M_{y \to x}(\omega) = \log \left[\frac{2\pi f_x(\omega)}{|\psi_{11}(e^{-i\omega})|^2} \right] = \log \left[1 + \frac{|\psi_{12}(e^{-i\omega})|^2}{|\psi_{11}(e^{-i\omega})|^2} \right] \tag{12}$$

if $|\psi_{12}(e^{-i\omega})|^2 = 0$ that y does not cause x at frequency ω. If components of z_t are I(1)

and cointegrated, $\Theta(L)$ has a unit root. Breitung and Candelon (2006) investigate the causal effect of

$M_{y \to x}(\omega) = 0$ if $|\psi_{12}(e^{-i\omega})|^2 = 0$. The null hypothesis is equivalent to a linear restriction on the VAR

coefficients. $\psi(L) = \Theta(L)^{-1} G^{-1}$ and $\psi_{12}(L) = -\frac{g^{22}\Theta_{12}(L)}{|\Theta(L)|}$, with g^{22} as the lower diagonal element of

G^{-1} and $|\Theta(L)|$ as the determinant of $\Theta(L)$, it follows y does not cause at frequency ω if

$$|\Theta_{12}(e^{-i\omega})| = \left| \sum_{k=1}^{p} \theta_{12,k} \cos(k\omega) - \sum_{k=1}^{p} \theta_{12,k} \sin(k\omega)i \right| = 0 \tag{13}$$

with $\theta_{12,k}$ denoting the (1,2)-element of Θ_k. Thus for $|\Theta_{12}(e^{-i\omega})| = 0$,

$$\sum_{k=1}^{p} \theta_{12,k} \cos(k\omega) = 0 \tag{14}$$

$$\sum_{k=1}^{p} \theta_{12,k} \sin(k\omega) = 0 \tag{15}$$

Breitung and Condelon's (2006) applied to linear restrictions (14) and (15) for $\alpha_j = \theta_{11,j}$ and $\beta_j = \theta_{12,j}$.

Then the VAR equation for x_t can be implied as

$$x_t = \alpha_1 x_{t-1} + ... + \alpha_p x_{t-p} + \beta_1 y_{t-1} + ... + \beta_p y_{t-p} + \varepsilon_{1t} \tag{16}$$

and the null hypothesis $M_{y \to x}(\omega) = 0$ is equivalent to the linear restriction with $\beta = [\beta_1, ..., \beta_p]'$

$$H_0: \quad R(\omega)\beta = 0 \tag{17}$$

and

$$R(\omega) = \begin{bmatrix} \cos(\omega) & \cos(2\omega) & ... & \cos(p\omega) \\ \sin(\omega) & \sin(2\omega) & ... & \sin(p\omega) \end{bmatrix} \tag{18}$$

The causality measure for $\omega \in (0, \pi)$ can be tested a Standard F-test for the linear restrictions imposed by Eq.(14) and Eq. (15). The test procedure follows an F- distribution with (2, T-2p) degrees of freedom.

Analysis of Competitiveness of Turkey and Commonwealth of Independent States in their Automotive Market

Dr. Emre Güneşer Bozdağ (Gazi University, Turkey)
Ph.D. Candidate Sıtkıcan Saraçoğlu (Gazi University, Turkey)

Abstract

Automotive sector is a driving sector for countries due to forward and backward linkages and employment and value added it creates. Starting from this point, this study aims to analyze the competitiveness of CIS and Turkey automotive sector in their market. The competitiveness of the countries should be assessed with their production potential. The countries subject to the study are thirteen Eurasian countries, Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyz Republic, Republic of Moldova, Russian Federation, Tajikistan, Turkey, Turkmenistan, Ukraine and Uzbekistan. The data from UNCTAD for 1995-2011 period for these countries and Liesner Index (RCAL), Balassa Index (RCA), Relative Trade Advantage Index (RTA) and Relative Competitiveness Index (RC) are used and the rank correlation between the outcomes are checked via Spearman Rank Correlation coefficient. According to the outcomes, Belarus, Turkey and Uzbekistan have higher comparative advantage compared to the other countries. The cooperation of these countries with Russia and Ukraine on production and trade of automotive sector will enhance their comparative advantage against third countries.

1 Introduction

After 1980, the acceleration of globalization in line with the changing world order, increased the importance of international competitiveness. Countries taking the opportunities and threats in the global market into consideration, focused on increasing their competitiveness to participate or increase their share in the global market. According to Deppreu and Cerrato (2005), increasing or conserving the competitiveness of a country depends on the competitiveness level of the firm and related industry on the micro level; and competitiveness level of the country on the macro level. The strategies applied by a firm effect the competitiveness initially of the firm and spillover to the industry it belongs, and determine the competitive power of the country in the global markets. Within this context, automotive sector, which had an increasing importance in line with globalization, became a key sector to push competitiveness of a country in the global markets. Automotive sector is a driving sector for both developed, and developing countries due to forward, and backward linkages and employment and value added it creates and its potential for export revenues. For Commonwealth of Independent States (CIS) and Turkey which have the same development path, belong to the same geography and possess a certain level of industrial accumulation, automotive sector supplies the opportunity to earn momentum for economic development with the effect of internalizing technology and upgrading in dynamic comparative advantage. It is important to know whether Eurasian countries as Turkey and CIS countries reached a certain level of trade in this sector, namely their trade potential and competitiveness. This gives some idea about the competitiveness against the other exporting countries in their own markets. Starting from this point, this study aims to analyze the competitiveness of Turkey and CIS countries automotive sector in their market. The competitiveness of the countries should be assessed with their production potential. In the second section of the study, the indices used to measure competitiveness are defined and their characteristics are expressed. In the third section, the literature on the international competitiveness of the automotive sector is briefed. In the fourth section, the foreign trade volumes of the CIS countries and Turkey is analyzed. In the fifth section, the competitiveness of the related countries on the sub groups of automotive sector is analyzed. The outcomes and policy recommendations are given in the conclusion.

2 Methods of Measuring International Competitiveness

2.1 Liesner Index

In Liesner (1958), the competitiveness of United Kingdom was questioned for 60 products exported to Western Europe for the period 1953-1956. The aim of Liesner was to find out the sectors which United Kingdom was competitive against European Common Market (Liesner, 1958). The formula Liesner developed for this aim is the following (Utkulu and Seymen, 2004):

$$RCA = \frac{X_{ij}}{X_{nj}}$$

In the formula, "X" refers to exports; "i" refers to the country subject to the analysis; "n" refers to the competing country and "j" refers to the product subject to the analysis.

2.2 Balassa Index

In Balassa (1965) the competitiveness of 74 commodities produced by the developed economies such as Canada, France, Italy, Japan, United Kingdom, Germany and United States of America was calculated (Balassa, 1965). The index developed by Balassa is the following (Balassa, 1989):

$$RCA = \frac{X_{ij} / \sum X_i}{X_{wj} / \sum X_w}$$

In the equation, "X_{ij}" refers to the export volume of commodity j by country i; "X_i" refers to the total volume of country i; "X_{wj}" referes to the total world export of commodity j. The index value is greater than '1' indicates the comparative advantage and the value is less than '1' refers to the comparative disadvantage in the related commodity(Aynagöz Çakmak, 2005).

2.3 Vollrath Index

According to Vollrath, the competitiveness calculations of Liesner and Balassa were constrained on the country and commodity axes and were concentrated on the commodities produced and on the developed countries. These researches ignored the low or middle income countries and agricultural products. Furthermore the previous indices take into consideration only the exports but not the imports (Vollrath, 1991). Vollrath (1991) developed the Relative Trade Advantage (RTA) index involving export and import volumes and net trade effect. This index was defined as the difference between Relative Export Advantage (RXA) index and Relative Import Penetration (RMP) index.

The Relative Export Advantage (RXA) index was calculated by the export share of a country on a specific commodity in international markets divided by the total export share of that country in all exported commodities. With this formula, the countries and commodities subjected to the analysis were not included in the total volume of the world export in order to avoid double counting and the Relative Export Advantage (RXA) index is defined as below (Frohberg and Hartmann, 1997):

$$RXA_{ij} = \frac{\sum X_{ij} / \sum_{l,l \neq j} X_{il}}{\sum_{k,k \neq i} X_{kj} / \sum_{k,k \neq i} \sum_{l,l \neq j} X_{kl}}$$

In the formula, "X" refers to the export, "i" and "k" refers to the commodity categories, "j" and "l" refers to the countries subject to the analysis. The index value is greater than '1' indicates that the country in the related commodity owns the comparative advantage and the index value is less than '1' indicates comparative disadvantage.

Relative Import Penetration (RMP) index is formulated in a similar way with the relative export advantage, but the main difference is, export is replaced with import and it is interpreted as export's as in an opposite way. Consequently, a value greater than '1' refers to a relative disadvantage while the value less than '1' refers to relative advantage. (Aktan and Vural, 2004). Relative Import Penetration (RMP) index is formulated as below (Frohberg and Hartmann, 1997):

$$RMP_{ij} = \frac{\sum M_{ij} / \sum_{l,l \neq j} M_{il}}{\sum_{k,k \neq i} M_{kj} / \sum_{k,k \neq i} \sum_{l,l \neq j} M_{kl}}$$

Relative Trade Advantage (RTA) index is defined as the difference between Relative Export Advantage (RXA) index and Relative Import Penetration (RMP) index. Because of the Relative Export and Relative Import values being weighted in this index, marginal values of export and import levels do not make an important effect on the index, and the index is formulated as the following (Frohberg and Hartmann, 1997:8):

$$RTA_{ij} = RXA_{ij} - RMP_{ij}$$

The positive value of the index refers to comparative advantage, and negative value refers to comparative disadvantage (Aktan and Vural, 2004).

Relative Competitiveness (RC) index is defined as below, and the negative value of RC refers to comparative disadvantage and positive value of RC refers to comparative advantage (Utkulu and Seymen, 2004:11):

$$RC = In\, RXA - In\, RMP$$

3   Literature Survey

Utkulu and Seymen (2004), Erlat and Erlat (2005), and Küçükkiremitçi (2006) calculated the competitiveness of Turkey in different sectors and automotive sector was among these sectors. Utkulu and Seymen (2004) calculated the competitiveness of Turkey against European Union (EU) within the international trade and bilateral trade contexts for before and after the customs union agreement between Turkey and EU, using EUROSTAT and Undersecretariat of Foreign Trade statistics via Relative Trade Advantage (RTA) index, Relative Export Advantage (RXA) index and Relative Competitiveness (RC) index. Automotive sector was not competitive in either periods. Erlat and Erlat (2005) calculated the international competitiveness of Turkey and EU-15 for 1990-2000 period using UNCTAD-ITC and OECD statistics via Revealed Comparative Advantage (RCA) index. The Revealed Comparative Advantage (RCA) index for the "road vehicles" was 1.60 for the whole period; 1.39 for the first eight years and 2.15 for the last three years. According to the outcomes, after 1997 an important progress in "road vehicles" was earned. Küçükkiremitçi (2006) calculated the competitiveness in 130 sectors subject to foreign trade was calculated for the period 1995-2005 using Turkey Statistical Institute via Revealed Comparative Advantage (RCA) index. The outcomes indicated that the "Road Vehicles and Motors" sector competitiveness index increased both in the whole period and the last three years.

Bekmez and Komut (2006), Kaya and Altın (2008), Başkol (2011), and Özdamar and Albeni (2011) in their researches calculated the competitiveness of Turkish Automotive Sector. Bekmez and Komut (2006) calculated Turkish Automotive Sector competitiveness against EU-15 for the period 1995-2004 using OECD and WTO data via Revealed Comparative Advantage (RCA) index. For the period 1995-2000, Turkish Automotive Industry was net importer while in 2001 and 2002 the index signaled that Turkey increases her competitiveness against EU-15 countries. Although in 2003 and in 2004 the value of the index decreased, still kept on marginal level. Kaya and Altın (2008) calculated the competitiveness of Turkish Machine and Transportation Equipment sector in EU market and international markets using UN-COMTRADE data and Balassa index for the period 1994-2005. In global markets, the index value for the sub commodity group with SITC code 78 (Road Vehicles) moved from 0.28 in 1994 to 1.55 in 2005 and stayed greater than '1' after 2003. In EU market, the index value for the mentioned sector moved from 0.25 in 1994 to 1.15 in 2005 and stayed greater than '1' after 2004. Başkol (2011) calculated the competitiveness of Turkish Automotive Sector in global markets via several indices including Revealed Comparative Advantages (RCA) index for the period 1996-2010 using the data from Chamber of Automotive Manufacturers and Turkish Statistics Institute. According to the index values, automotive sector did not have comparative advantage between 1996 and 1998, and index value increased after 1999 except for 2009 and 2010. For the period 2003-2010 the index value was greater than '1' and it referred to the comparative advantage. The index value moved from 0.39 in 1996 to 1.77 in 2010. Özdamar and Albeni (2011), calculated the competitiveness of Turkish Automotive Sector in global markets via several indexes developed on the Balassa index and using UN-COMTRADE data for the period 1990-2008. The research included the passenger car sector with 781 code in SITC Rev.3, goods and specialised vehicles with 782 code in SITC Rev.3, and road motor vehicles n.e.s. with 783 code in SITC Rev.3. Turkish Automotive Sector achieved comparative advantage in group 781 after 2002, in group 782 after 2000 and in group 783 after 1994.

Freinkman et al. (2004), Ahrend (2006), Cooper (2006), Shelburne and Pidufala (2006), Garanina (2008), and Khatibi (2008) were among the researches measuring the international competitiveness of different countries and different sectors for the Commonwealth of Independent Countries. Freinkman et al. (2004) calculated the competitiveness of the CIS countries within the CIS market and global market using WITS and COMTRADE data for the year 2000 via Revealed Comparative Advantage (RCA) index. For the "road vehicles", Belarus with 3.1 index value, Uzbekistan with 1.1 index value, and Kyrgyz Republic with 1.0 index value, had comparative advantage against other CIS countries. Russia and Ukraine followed these countries with 0.5 index value. However in the global markets, none of the CIS countries were competitive. Ahrend (2006) calculated the competitiveness of Russia for the period 1997-2004 using UN-COMTRADE data and Revealed Comparative Advantage (RCA) index. The Revealed Comparative Advantage (RCA) index in this study was Balassa Index multiplied by 100. According to the outcome, in "Road Vehicles" main group Russia did not have comparative advantage with the index value moving from -3.7 in 1997 to -9.6 in 2004. Furthermore, "Road Vehicles" was among the sectors in which Russia had the highest comparative disadvantage. Cooper (2006), calculated the competitiveness of Russia against the selected countries and in the global markets for the period 2000-2004 using UN-COMTRADE data and Balassa index. For the "the passenger car" sector with SITC 781 code the index values of 2004 were 0.06 for Russia, 0.01 for China, 0.17 for India, 0.48 for USA, 0.66 for Brazil and 1.16 for Turkey. According to these values, Turkey had comparative advantage compared to the other countries. In 2004, index values of Russia in global markets were 0.057 for group 781, 0.313 for group 782 and 0.240 for group 783. The index values for sectors with group 782 and 783 increased compared to their 2000 level (0.142 and 0.140 respectively) and the index value for the sector with group 781 decreased compared to the 2000 value (0.070). Shelburne and Pidufala (2006), calculated the comparative advantage of the CIS countries within the CIS market and in global markets using 2004 UN-COMTRADE data and Balassa Index in manufacturing industry. In the group 783 Belarus had comparative advantage with 10.9 index value against CIS countries and

5.3 in the global markets. Garanina (2008), calculated the comparative advantage of Russia for the 1998-2006 period using UN-COMTRADE data and Revealed Comparative Advantage (RCA) index. Although the index value for "Road Vehicles" main commodity group moved from -0.14 in 1998 to 0.26 in 2006, it indicated that Russia could not have comparative advantage in this commodity group against CIS countries. Khatibi (2008), calculated the comparative advantage of Kazakhstan against EU-27 in several sectors using EUROSTAT data and Revealed Comparative Advantage (RCA) index. The index value for "Road Vehicles" main commodity group moved from 0.01 in 1999 to 0.00 between 2000-2006 and indicated that Kazakhstan did not have comparative advantage in this commodity group against EU-27.

Country	781 Average	781 Growth	782 Average	782 Growth	783 Average	783 Growth	Total (781+ 782+783) Average	Total (781+ 782+783) Growth

Table 1. *Average and Growth Rate of Automotive Sectors Exports of the Countries to Global Markets in thousand dollars, in the Period of 1995-2011, annually.* **Source**: *Calculated by authors from unctadstat.unctad.org.*

Filiztekin and Karaata (2010) and Karaalp (2011) calculated the comparative advantage of Turkey against CIS market. Filiztekin and Karaata (2010) calculated comparative advantage of Turkey on different sectors and automotive sector was among these sectors and "Motor road vehicles" commodity group was analyzed through Relative Export Advantage (RXA) index. Turkey and Russia were involved in the analysis. The Relative Export Advantage (RXA) index of Turkey was volatile for 1995-1997 but continuously increased for 1998-2008 and reached over the average of the other countries. The index value of Turkey moved from 0.37 in 1995 to 1.09 in 2003 and to 1.68 in 2008. Namely, Turkey had comparative advantage in "Motor Road Vehicles" commodity group in 2003 and after. The index value of Russia was 0.10 for the period 2004-2008 and this indicated that Russia did not have comparative advantage in this sector. Karaalp (2011), calculated the comparative advantage of Turkey against CIS and in global markets for several sectors using 1996-2008 WTO data and several indices including Balassa Index. The Balassa Index indicating the comparative advantage of Turkish Automotive Industry in the global markets moved from 0.37 in 1996 to 1.76 in 2008. Balassa Index value showed that comparative advantage of Turkish Automotive Industry accelerated from 1999 on and after 2003 this movement was more apparent. Furthermore Turkey was more competitive against CIS. The Balassa index of Turkish Automotive Industry against CIS was greater than 2.00 after 2000.

 Automotive Trade between Turkey and Commonwealth of Independent States

For the 1995-2011 period among Turkey and CIS countries exporting group 781 to the global markets, Turkey ($ 3,153,722 thousand), Russia ($ 474, 946 thousand) and Uzbekistan ($ 441,243 thousand) were the first three countries. Uzbekistan increased its group781 export rapidly. Within the same period, the export of Russia declined. Turkey had a stable increase in export volume (23 %) although not as high as Uzbekistan (64 %) and Georgia (108 %) (Table 1).

Within the same period, the first three countries exporting group 782 such as trucks and pickups were Turkey ($ 1,762,669 thousand), Belarus ($ 597,587 thousand) and Russia ($ 500,960 thousand) (Table 1).

Turkey had the highest level of increase in group 782 exports within this period (33 %). Kyrgyz Republic (29 %) and Turkmenistan (26 %) were the second and the third. The export volume growth of Belarus (20 %) for the group 782 seems to be reasonable but the export volume growth of Russia (8 %) was not satisfactory for such an important producer (Table 1).

Within the same period, the first three countries exporting group 783 to the global markets were Turkey ($ 686,814 thousand), Belarus ($ 207,259 thousand) and Russia ($ 123,643 thousand) as in the group 782 exports. When the growth of exports in group 783 was analyzed, Georgia (51 %), Belarus (37 %) and Uzbekistan (19 %) had highest growth rates. Although Turkey (14 %) and Russia (9 %) increased their volume of exports, were

falling behind the average export growth of the total of Turkey and CIS countries (Table 1).

Within the same period, the first three countries exporting road vehicles (781+782+783) to the global markets were Turkey ($ 5,603,204 thousand), Russia ($ 1,099,548 thousand) and Belarus ($ 818,530 thousand). The leading countries in intra industry export volume increased among the mentioned countries in road vehicles (781+782+783) were Uzbekistan (60 %), Georgia (42 %) and Kyrgyz Republic (25 %). Turkey (23 %) and Belarus (22 %) increased their volume of exports above the average of the total of Turkey and CIS countries (15 %) in road vehicles (781+782+783). Russian export in road vehicles(781+782+783) increased by (8%) and this ratio was under the average (Table 1).

For the 1995-2011 period, when the share of the related Turkey and CIS countries' export in total world export to Turkey and CIS countries for the group 781 was analyzed (781 CXW), the first three countries with the highest share were Uzbekistan (2.7 %), Russia (2.5 %) and Turkey (1.3 %). The share of the total exports of Turkey and CIS countries to their market, to the world total exports to their market in group 781 was 7.4 %. The first three countries with the highest export volume, the share of their exports to Turkey and CIS countries to their world export in group 781 were, Uzbekistan 99%, Russia 54 % and Turkey 8% (Table 2).

Within the same period in group 782 exports, the share of the related Turkey and CIS countries' exports to all Turkey and CIS countries (782 CXW), Belarus (18.3 %), Ukraine (2.3 %) and Russia (8.8 %) had the highest shares (Table 2).

Turkey (1.4 %) was the fourth in group 782 exports within Turkey and CIS countries. The share of group 782 exports among Turkey and CIS countries to the total exports to their countries was 31.7 %. For the first four countries with the highest export volume of 782 exports, the shares of their Turkey and CIS countries exports of their total exports were for Belarus 89 %, for Ukraine 67 %, for Russia 54 % and for Turkey 7% (Table 2).

Within the same period, in group 783 exports, the share of the related Turkey and CIS countries' exports to all Turkey and CIS countries (783 CXW), Belarus (11.2 %), Russia (4.5 %) and Turkey (3.7 %) had highest share rates. Ukraine (1.8 %) was the fourth in group 782 exports in Turkey and CIS countries. The ratio of group 783 exports of Turkey and CIS countries to each other to the world export to Turkey and CIS countries was 21.8 %. For the first four countries with the highest export volume of group 783 exports, the shares of their Turkey and CIS countries exports to their total exports were for Belarus 86 %, for Russia 63 %, for Turkey 13 % and for Ukraine 86 % (Table 2).

Table 2. *Averages Shares of the Countries' Automotive Exports in the World Total Automotive Exports to Turkey and the CIS Countries (CXW) and Shares of the Countries Exports in Turkey and the CIS Countries to the all over the World of Automotive Sectors (Shares) in the Period of 1995-2011, annually.* ***Source:*** *Calculated by authors from unctadstat.unctad.org.*

For the 1995-2011 period, in total road vehicles (781+782+783) exports, the share of the related Turkey and CIS countries' exports to all Turkey and CIS countries (780 CXW), Belarus (5.1 %), Russia (3.9 %) and Uzbekistan (1.9 %) had the highest shares. Turkey (1.6 %) is the fourth after them. The ratio of 783 group exports of Turkey and CIS countries to each other to the world export to themselves was 14.1 %. For the first

four countries with the highest export volume of 783 exports, the shares of their Turkey and CIS countries exports to their total exports were for Belarus 89 %, for Russia 52 %, for Uzbekistan 99 % and for Turkey 9 %. (Table 2).

Table 3. *Average Ranks and Comparative Advantage Indices of Turkey and CIS Countries in the Period of 1995-2011 in Automotive Sector* **Source:** *Calculated by authors from unctadstat.unctad.org.*

4 The Comparative Advantages of Turkey and Commonwealth of Independent States in their Automotive Market

In order to assess the international competitiveness of Turkey and CIS countries in their automotive market, the four main indices Liesner (RCAL), Balassa (RCA), Relative Trade Advantage Index (RTA) and Relative Competitiveness Index (RC) are calculated. The average (Avr) of these indices for the 1995-2011 period and for the same period the annual average growth rates (Gwt) of these countries are summarized in Table 3. Automotive sector is analyzed in line with the Standard International Trade Code (SITC) Revision 3 with the codes 781, 782, 783 and Road Vehicles (781+782+783). In table 3 the countries are ranked according to their competitiveness in a descending order. The point of focus in the analysis is the share of the countries' exports in Turkey and CIS automotive market. The main automotive manufacturing countries are Russia, Turkey, Belarus, Ukraine, Uzbekistan (Table 3).

In group 781, Uzbekistan has the highest values in all four indices. Georgia follows Uzbekistan. For Georgia, only the RC value is negative but even it increased highly within the period. This continuous increase may take the country to a higher position in RC as well. Turkey is the third country following Georgia in all four indices. The RCAL and RCA values of Russia are high but the RTA and RC values indicate comparative disadvantage. Ukraine has similar values with Russia but all values are increasing which gives an opportunity to increase competitiveness. RCAL and RCA values for Belarus indicate a moderate competitiveness. RTA is high but the decline in RTA indicates a losing comparative advantage (Table 3).

In group 782, Belarus has the highest values in all four indices. Turkey is the second when all four indices are taken into consideration. Russia holds the highest RCAL and RCA values but they are declining and instable. Moreover, Russia has lower values in RTA and RC. Ukraine is parallel with Russia as in 781 group (Table 3).

In group 783, Belarus has the highest values in all four indices. Turkey is the second when all four indices are taken into consideration. Russia has the highest RCAL and RCA values but has comparative disadvantage in RTA and RC. The level of comparative advantage of Ukraine is higher than Russia in group 783. However, RCAL and RCA values of Ukraine are in a decreasing trend (Table 3).

In road vehicles (781+782+783), Uzbekistan has the highest values in all four indices. The main reason of this result for Uzbekistan is the highest comparative advantage in group 781. Due to the increasing automotive production, Uzbekistan achieved a high performance in automotive industry between 1995-2011 and became an exporter rapidly while Uzbekistan previously was an importer. Belarus is the second after Uzbekistan. Turkey is close to Belarus in all four indices. Russia has positive values except RTA and has values in the other three indices indicating moderate comparative advantage. Ukraine is parallel with Russia (Table 3).

The relation of four indices with each other, average Spearman rank correlation coefficient is shown in Table 4. The relation rank correlation coefficient averages for all four indices group 781, group 782, group 783 and Road Vehicles (781+782+783) (RV) are as follows:

Under each coefficient, the number of significant coefficients of 17 years for 1 % and 5 % significance levels are indicated. For example in 781 group, the relation between RCA and RCAL is 16 out of 17. As seen in the table, there is high rank correlation between RCAL and RCA for all four groups. Neither RCAL nor RCA has a rank correlation with RTA except for Road Vehicles. RC has a significant and high rank correlation with the three other indices for each sectors.

For 781	RCAL	RCA	RTA	RC	For 782	RCAL	RCA	RTA	RC
RCAL	1,000				RCAL	1,000			
RCA	0,826 16/17	1,000			RCA	0,825 17/17	1,000		
RTA	0,290 0/17	0,284 0/17	1,000		RTA	0,319 1/17	0,513 5/17	1,000	
RC	0,763 17/17	0,817 17/17	0,639 13/17	1,000	RC	0,689 14/17	0,834 17/17	0,808 17/17	1,000
For 783	RCAL	RCA783	RTA783	RC783	For RV	RCAL	RCA	RTA	RC
RCAL	1,000				RCAL	1,000			
RCA	0,884 17/17	1,000			RCA	0,820 17/17	1,000		
RTA	0,340 1/17	0,494 5/17	1,000		RTA	0,416 3/17	0,635 12/17	1,000

5 Conclusion

   Commonwealth of Independent States and Turkey have a certain level of industrial potential. The shift of the trade between these economies with the above mentioned industrial potential from the sector of low level technology to high technology leads to increase level of growth in the long term. According to the results of this study which aims to measure the competitiveness of automotive sector, one of the industrial branches to enhance technologic opportunities, Uzbekistan has the most comparative advantage in the passenger cars (group 781). Georgia, Turkey, Belarus, Russia and Ukraine follow Uzbekistan. Belarus has the most comparative advantage in goods and specialised vehicles (group 782) and is followed by Turkey, Ukraine and Russia. Belarus has the most comparative advantage in road motor vehicles n.e.s. (group 783) and is followed by Turkey, Ukraine and Russia. For total road vehicles (781+782+783) sector, competitiveness, Uzbekistan has the most comparative advantage and is followed by Belarus, Turkey, Russia and Ukraine respectively. The relationship between the four comparative advantage indices shows that, there are high rank correlations between Liesner (RCAL), Balassa (RCA) and RC. RTA index is only correlated with RC. According to these outcomes of RCAL, RCA and partially of RC indices, the countries which have high production potential and competitive advantage are Uzbekistan, Belarus and Turkey. On the other hand, the countries with high production potential but volatile comparative advantage are Ukraine and Russian Federation. To develop a new strategy against the third party exporters to Turkey and CIS countries markets, the cooperation among the three countries with high comparative advantage and two relatively low comparative advantage is important. Either bilateral or multilateral cooperation of these countries on automotive production policies and trade strategies will be an important step for the development of Turkey and CIS countries markets.

The Role of Economic Integration in Trade Openness: The Black Sea Economic Cooperation Organization Case

Prof. Dr. Sedat Murat (Istanbul University, Turkey)

Assoc. Prof. Dr. Sefer Şener (Istanbul University, Turkey)

Dr. Burcu Kılınç Savrul (Canakkale Onsekiz Mart University, Turkey)

Abstract

Trade liberalization is one of the greatest economic arguments of the economics and it is claimed that trade openness is a crucial phenomenon for the well-being of nations since Adam Smith. Although various practices have been seen in different parts of the world in the history, from 1980s trade liberalization movements have been the dominant trend. However liberalization of trade in developing countries brought debates in economic literature and it is argued that open trade can have catastrophic effects instead of providing growth and welfare to the practitioner countries. In this study if The Black Sea Economic Cooperation Organization had contributed the member states to liberalize their trade has been investigated. The changes in the rates of inward and outward investment, import, export, population and labour force of the member countries during the establishment period of the Organization has been evaluated. The data is collected from Worldbank National Accounts Database, IMF World Economic Outlook and Balance of Payments Database and UNCTAD. The results of the study has shown that although the establishment of the organization had positive effect on investment and trade flows of the countries, it had no effect on labour flows of the member states.

1 Introduction

All economies are increasingly open in today's economic environment of globalization. International trade plays a vital role in shaping economic and social performance and prospects of countries around the world, especially those of developing countries. Without trade, the economic and social condition of the country cannot progress. However, the contribution of trade to development depends a great deal with the context in which it works and the objectives it serves. In recent years, many developing countries, have stepped upon unilateral trade liberalization, with very limited results at best in terms of increased growth and development (UNCTAD, 2004).

Although general consensus argue that free trade has benefits, in 1980s many developing country had economic instability and had to struggle with financial and economic crises due to structural unemployment caused by the removal of trade barriers, domestic economic instability from international trade cycles and pressures created by global economic competition. Today the global economic competition continues through economic integrations in commercial sense. In this perspective, these integrations can help developing countries liberalize the trade without facing the issues mentioned above alone.

Although the countries in Black Sea region had strategic advantages such as having mass raw materials and oil resources, being settled on crossroads between Asia and Europe and having relatively young and ample labour force; social and political conflicts, cold war and impact of planned economic system keep the region from bring its strength out. Just as the rest of the developing world many countries of the region gave emphasis on open trade in 1980s and 1990s. In this framework the study investigates whether or how the Black Sea Economic Co-operation established in the same period had affected the member countries opening their trade and investment to global markets.

2 Trade Openness

Economic theory propose that international trade improves resource allocation, lowers prices for consumers, and leads to a more efficient production. An open trade regime is also believed to encourage the integration of the economy into the global system and imports of modern technology, which results in productivity improvements (Montalbano, 2011: 1489).

Trying to ease to exchange goods and services, capital, labour, information, and ideas across the borders is known as trade openness. The main goal of these efforts is to integrate economies and societies at global level. Openness is known to help movement of resources from developed to developing economies and contributed to technological advancement. Today economies are reaping fruits of openness due to the diffusion and absorption of technology. Improvement of transportation and communication has helped rediscover the opportunities at global level and identify new international markets for exchange of goods and services. Openness allows foreign direct investment in host country which contributes to economic growth by supplementing domestic capital, redefining the concept of economic efficiency, boosting productivity and bringing the world together (Shahbaz, 2012: 2325).

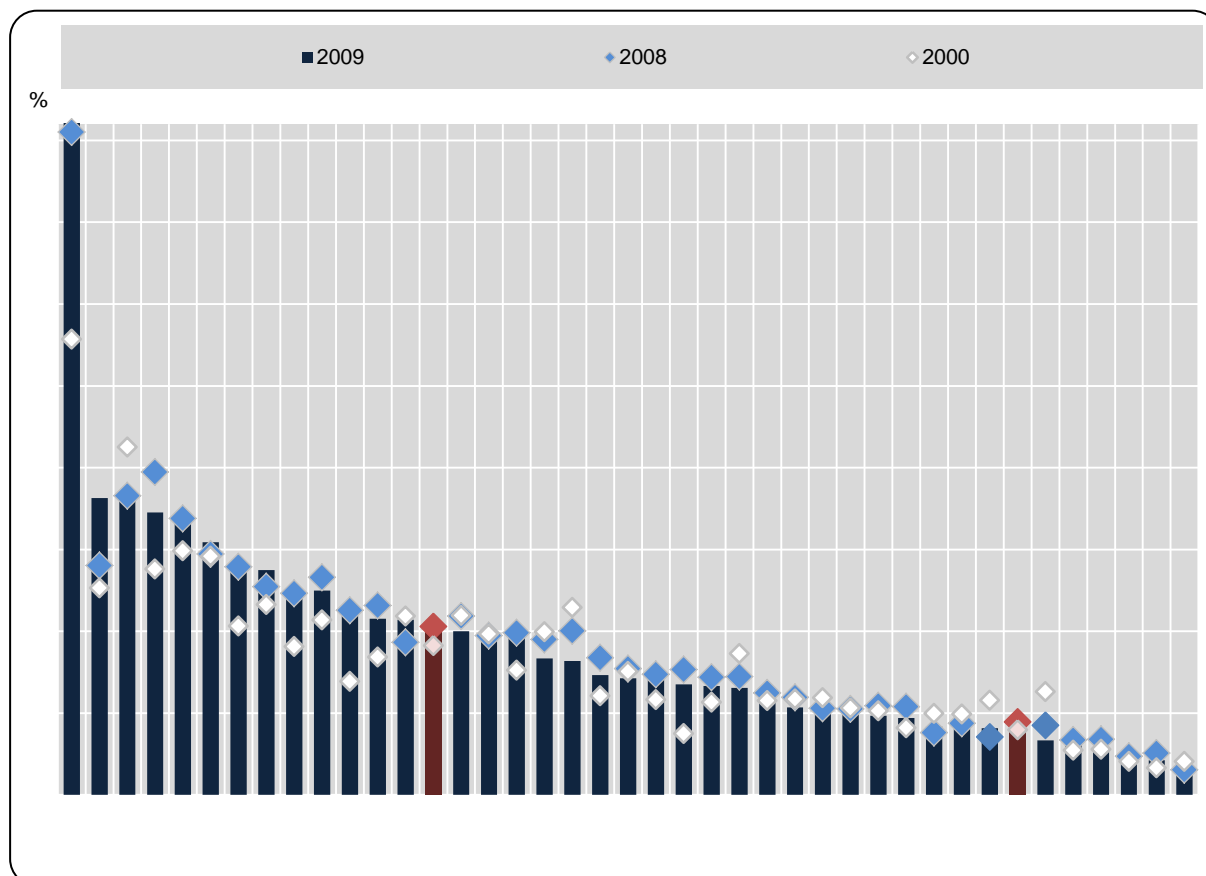
Trade openness has emerged as the main argument among economists and policy makers in explaining the growth phenomena in developing countries. Besides, due to continuous interest on the issue, new methods were also proposed. The positive contribution of trade openness towards growth stemmed from the notion that liberalization increases specialization and division of labour thus improving productivity and export capability as well as economic performance (Chandran and Munusamy, 2009: 638). In addition, with greater efficiency as a result of trade openness, many of the developing countries followed suit with the export-led strategies. It is widely recognized that trade openness has a positive effect towards economic growth. It is found that countries with more trade openness relatively outperformed the countries, with less openness (World Bank, 1993). Accordingly the dimensions that trade openness can contribute an economy can be seen in Figure 1.


Figure 1: Average of Exports and Imports of Services as a Percentage of GDP, 2000, 2008 and 2009 Source: OECD, National Accounts Database, June 2011; International Monetary Fund, World Economic Outlook and Balance of Payments Databases, May 2011

The OECD and IMF figures displaying trade flows as a percentage of GDP between 2000 and 2009 show that the relative importance of trade. Trade flow of OECD average has increased 10 percent from 2000 to 2008 and more in some countries. After widespread increases in the trade-to-GDP ratio between 2000 and 2008, all OECD countries and the BRIICS (Brazil, the Russian Federation, India, Indonesia, China, South Africa) saw a drop in this ratio between 2008 and 2009, mostly owing to significant drops in trade in goods due to the Economic and Financial Crisis of 2008. In many countries it fell below the ratio recorded at the -beginning of the decade. In 2009, the average trade-to-GDP ratio of OECD countries was about 41%, nearly double that of the BRIICS. In part, this is because the OECD includes many relatively small economies. Considering the OECD as a single aggregate, with high weights for Japan and the United States, would give a ratio closer to 20%, similar to that of the BRIICS.

Despite significant falls in 2009, trade in goods remains the principal channel for economic integration for many countries. It represents, on average, three times the value of trade in services in OECD countries and more than four times in the BRIICS. However, the crisis had a much smaller impact on trade in services than in goods; few countries experienced significant falls in the ratio of trade in services to GDP.

Free and open markets may influence long-run economic growth in many different specific ways in a dynamic world. One path comes from the expanding the opportunities of firms to realize more fully scale economies and greater efficiency in investment. Increased competition, resulting from reduced barriers for foreign competitors, serves to limit the market power of domestic imperfectly competitive markets, mandates efficiency, and delivers

a greater variety of both finished products and intermediate inputs to consumers and industry, respectively. A different path for growth through trade liberalization stems from the transfer of ideas and the ability of domestic industries to utilize imported intermediate inputs that benefit from new technologies in the world economy. Repeated and sustained interaction through international trade facilitates the ability of domestic producers to adopt foreign knowledge in their own production (Skipton, 2007).

The economic well being of a country is associated closely to the availability of resources and the productivity of its workforce. Trade operates in a diversify ways to sustain the economic development process. It enhances competition and the linked thrust to innovation and specialization, and it provides a significant channel for international technology transfer (Mazumder, 2008: 9). In this respect, opening up their economies to the global economy has been essential in enabling many developing countries to develop competitive advantages in the manufacture of certain products.

Although general consensus argue that free trade has benefits, there are a number of arguments put forward by lobby groups and protestors who oppose free trade and trade liberalisation. These can be listed as follows (HSC, 1999):

- With the removal of trade barriers, structural unemployment may occur in the short term. This can impact upon large numbers of workers, their families and local economies.
- Increased domestic economic instability from international trade cycles, as economies become dependent on global markets. This means that businesses, employees and consumers are more vulnerable to downturns in the economies of trading partners.
- International markets are not a level playing field as countries with surplus products may dump them on world markets at below cost. Some efficient industries may find it difficult to compete for long periods under such conditions.
- Developing or new industries may find it difficult to become established in a competitive environment with no short-term protection policies by governments, according to the infant industries argument. It is difficult to develop economies of scale in the face of competition from large foreign TNCs.

1980s witnessed many cases that various developing country had economic instability and had to struggle with financial and economic crises after they liberalized their markets before they consolidated their economic system. In this context it is questionable whether instead of confronting global competition alone, accessing an economic integration may protect developing countries from global pressure.

3   Economic Integrations and Trade Openness

The elimination of barriers to global trade also meant the removal of barriers to global competition. Although unfavourable impacts of getting into global competition are obvious, inclination towards global trade is questionable. Despite the negative experiences, the reasons countries have a positive look on the global trade can be summed as (Gürak, 2006: 285-286);
In this respect sooner or later liberalization case came to agenda of any country which seek for economic development and stability. Liberalization of trade has been one of the most important economic arguments of the economics and it has been suggested that free trade would increase the well-being of nations since Adam Smith. In this context, the ultimate goal of developing countries is to outsource. Trade liberalization movements which accelerated through the activities of The General Agreement on Tariffs and Trade (GATT) and the its modern-

day equivalent World Trade Organization (WTO), continues with the recent activities of accelerating economic integration trend (İncekara and Savrul, 2011: 11-12).

International economic integrations emerge often based on liberalization of trade between the countries in the same geographical area. Although they are discussed at a theoretical level for a long time, after the Second World War, practice opportunities came out for economic integrations and many of them have been established in different areas of the world between both developed and less developed countries (Güran, 1997: 12). The resulting integration of the world economy has raised living standards around the world. Most developing countries have shared in this prosperity; in some, incomes have risen dramatically. As a group, developing countries have become much more important in world trade, they now account for one-third of world trade, up from about a quarter in the early 1970s. Many developing countries have substantially increased their exports of manufactures and services relative to traditional commodity exports: manufactures have risen to 80 percent of developing country exports. Moreover, trade between developing countries has grown rapidly, with 40 percent of their exports now going to other developing countries (IMF, 2001)

In this perspective, since the emergence of the concept of economic integration, the reasons the countries find economic integration movements appealing can be summarized as follows (İncekara, 1995: 266);

- Increasing economic potential of a country by expanding the production capacity of the country, increasing efficiency and consequently maximizing social well-being. These objectives can be reached through joining economic integrations which can expand market volume.

- In recent years developed countries' imparting momentum to free trade has led to an increase in regional trade integrations. Trying to achieve greater competitiveness against non-regional countries or blocks and strategies such as taking part in international policy are the major causes of the emergence of economic integrations.

- Another reason of emergence of economic integrations is to eliminate the potential disputes between the neighbouring countries that have to live together. Instead of having conflicts, countries involved in integration can eliminate potential conflicts and establish political stability by uniting their capabilities.

Economic integrations between developing countries can also stimulate foreign trade by constituting some cross-border investment projects. Starting an industrial joint venture in a country which has the most favourable position in the integration to produce any property can meet the needs of all member states which in result solving the issue of scale (Sabır, 2010) which bring out social cooperation possibilities besides the economic ones which is essential for a sound economic integration.

4   Organization of the Black Sea Economic Cooperation

The Black Sea area between the crossroads of Asia and Europe where people of different nationalities, trades, cultures and religions blended to each other, has been the cradle of different civilizations since ancient times. It witnessed periods of peace and tranquillity were followed by protracted conflicts and wars. But even in that climate the Black Sea area was well known for its developed trade relations and contacts. Attempts were undertaken to build bridges of rapprochement. It is sufficient to mention the famous Silk Road which linked the countries of Europe and Asia. A valuable experience of contact among the peoples of the two continents as well as of the cohabitation and mutual enrichment of different cultures has been accumulated (Photius Coutsoukis, 2013).

Only in the last decade of the twentieth century however, when the atmosphere of the cold war, suspicion and mistrust has receded, have the countries of the Black Sea area been able to undertake bold steps in that direction. They could come together and decide how, in the age of the globalization of economies, valuable assets in their possession, such as geographical proximity, common history, cultural bonds and the interdependence of their national economies could be efficiently employed for mutual benefit and prosperity (Lupu, 2006: 134) and decided to start a regular dialogue leading them to launch the Black Sea Economic Co-operation (BSEC) in 1992 in Istanbul. BSEC permanent members are the three EU MS (Bulgaria, Greece and Romania), Black Sea Synergy's countries (Armenia, Azerbaijan, Georgia, Republic of Moldova, Russia, Turkey and Ukraine) plus Albania and Serbia (European Commission, 2013). BSEC received the status of full international organization in 1999. BSEC promotes and coordinates regional cooperation in a wide range of areas - tourism, trade, banking, communications, energy, transport, agriculture, health, environmental protection, combating organized crime and others (Ministry of Economy and Energy of the Republic of Bulgaria, 2013).

BSEC is found as a unique and promising model of multilateral political and economic initiative aimed at fostering interaction and harmony among the Member States, as well as to ensure peace, stability and prosperity encouraging friendly and good-neighbourly relations in the Black Sea region which covers a geography encompassing the territories of the Black Sea littoral States, the Balkans and the Caucasus with an area of nearly 20 million square kilometres. BSEC region is located on two continents and it represents a region of some 350

million people with a foreign trade capacity of over USD 300 billion annually (Republic of Turkey Ministry of Foreign Affairs, 2011).

The BSEC has undoubtedly succeeded in creating a framework for multilateral co-operation in an area with different geopolitical and economic realities and hence affected by great turmoil. In a region representing not only an area rich in oil and gas, but also a strategic corridor for the passage of raw materials between Asia and Europe, the organisation has especially committed itself to ensuring political stability and promoting the growth of trade. To this end, priority has been given to sectors such as energy, transport and telecommunications. However, acting according to perspectives of sustainable development, special attention has also been given to issues concerning environmental protection and especially the marine ecosystem. The presence within the organisation of EU Member States and candidates has contributed to turning the objectives of good governance, democracy and protection of human rights into topics for debate and exchange of opinions improving the regional political climate (International Democracy Watch, 2013; RhodesMRC, 2010).

4.1 The Effect of BSEC on Trade Openness of The Member Countries

A remarkable issue about the BSEC is that its establishment coincide with the economic liberalization movements of developing countries including the BSEC members. In this regard how the establishment of BSEC has affected the liberalization process of the member countries is a subject of matter.

Before looking into the BSEC it would be useful to query in what channels an economic integration basically affect member countries. Although many reasons lie behind the activities of economic integrations, officially recognized key objectives can be summed up as (Schiff and Winters, 2003: 6-10);

- promote domestic and foreign investments,
- increase their competitiveness through access to broader markets
- provide stable access to foreign technology and investments

In this perspective it would be meaningful to compare the changes in trade investment and labour figures of the member countries to evaluate the effect of establishment of BSEC.

4.2 Trade, Foreign Direct Investment and Labour Force Trends in BSEC

The advantages enjoyed by countries engaged in mutual free trades can be summarized as follows (EconomyWatch, 2010):

- Considerable reduction in the cost of transportation, especially with the development of containerization with respect to overseas ocean shipments,
- Decrease or abolition of control over capital and the capital market,
- Formation of free zones for carrying out commercial activities, against payment of little or no tariffs at all,
- Decrease, abolition or synchronization of subsidies in domestic trades,
- Decrease or abolition of every kind of tariffs.

Consequently although it isn't the sole goal, mutual free trade is one of the leading purposes of the Cooperation. The changes in the import and export flows of the BSEC is shown in Figure 2.

Goods and Services Trade Openness data show that both import and export volume of BSEC countries were about 20 % of their GDP on the average in 1980s and the figures fell below 15 % in the beginning of 1990s. The period after 1990 they had a sharp increase in their trade volume and the figures doubled in the following ten years. The period after 2000 was a recession period almost for the whole world and the region has been affected from the process. Although the Crisis slightly affected trade in the region in 2008, it quickly recovered and returned to the level of pre-crisis period.

Evaluating the figures although it is hard to say the establishment of the BSEC is the sole reason of the increase in the trade volume of the member countries after 1990, it can be concluded that the organization has contributed development of trade of the member countries and provided a steady increase for a period.

Capital accumulation is regarded as the basic dynamic of economic development by economists. In other words, failure of capital accumulation is the biggest cause of economic lag in some countries. It is apparent that developing countries need too much capital for, transforming their economic structure to be able to reach the level of developed countries (Kar and Tatlısöz, 2008: 437). Another aspect that economic integrations promote member countries is rise in their capital accumulation through foreign investment.

Foreign direct investment helps developing countries to confront the international competition by boosting their economy, increasing productivity and export capacity. For developing countries, one of the most important benefits of foreign investment is the contributions to eliminate deficits. Foreign direct investments reflect positively to one-time balance sheet of the host country. Another positive effect is that they contribute to development of exports of the host country via operations of the companies with foreign investment in foreign markets (Candemir, 2007). The figures of foreign direct investment flows of BSEC countries before and after the establishment of the Organization is as follows;
Figure 2: *Goods and Services Trade Openness in BSEC, Percentage of Gross Domestic Product, 1980-2012*
Source: *UNCTAD. (2013), UNCTADstat.*
Figure 3: *Inward and Outward Foreign Direct Investment Flows in BSEC, % of GDP, 1980-2012* ***Source:***
UNCTAD. (2013), UNCTADstat.

Since the beginning of 1990 the foreign direct investment flows of region were at insignificant levels. Between 1980 and 1990 incoming investment flows were below 0,5% of GDP and outgoing flows had negative figures. Distinct from trade figures, foreign direct investment figures display that the establishment of BSEC had a direct positive impact on the investment flows the member countries. The establishment of the organization accelerated both incoming and outgoing investment flows. Incoming investment ratio reached to %1 in 1996, 2,5 in 2003 and went behind 4% in 2006. Since the BSEC is formed of developing countries the outgoing investment level stayed fairly low compared to the incoming one. However the BSEC contributed the outgoing investment flows in a manner too and the outgoing investment rate changed to positive by the establishment of the organization and reached to %1 of GDP in 2003 and %2 in 2006.

It is apparent that the impact of Financial and Economic Crisis of 2008 on direct foreign investment flows of the BSEC has been more severe than trade. The BSEC members lost almost half of their incoming investment

flows because most of the investors were the western European countries which were badly affected by the crisis. On the other hand the effect of the crisis weren't so intense on outgoing capital flows and it almost maintained the pre-crisis condition.

Integrations are also expected to flourish the member countries with labour flows. When markets are open and are free from all barriers then private investors get better opportunity with reduced uncertainty whereas previous barriers might have restricted their business. Private investment brings intellectual capital and technology, and can also push other aspect of social infrastructure in a positive direction. The change in population and labour force of the BSEC countries is summed up in Figure 4.

Figure 4: Total Population and Labour Force in BSEC, Million, 1980- 2012 Source: UNCTAD. (2013), UNCTADstat.

Total population of the member states of BSEC has been about 100 million and total labour force has been below 50 million between 1980 and 1991. In 1992 due to the collapse of Soviet Union the population tripled and rose to 322 million people. Same way the labour force exceeded 150 million. The figures increased not insignificantly in the following period and the population reached only 335 million while the total labour force reaching 161 million people. Evaluating the figures it can be said that the establishment of the BSEC had no impact on the increase of population and labour force of the member countries. Since the Organization hasn't reached to level of full economic union, free movement of people within the Organization. As a result establishment of BSEC had no or little influence on labour or population movements. Moreover, although BSEC had helped job creation in the Organization through direct investment flows its extend is away from attracting exterritorial labour to the region.

5   Conclusion

The evidences are clear that opening economies to trade and investment with the rest of the world are necessary for sustained economic growth. The experiences has shown that without being open to the rest of the world no country in recent decades has achieved economic success and provided acceptable living standards to its people. In contrast, opening trade and foreign direct investment have been an important element in the economic success of many countries. Integration into the world economy has proven a powerful means for countries to promote economic growth, development, and poverty reduction. Over the past 20 years, the growth of world trade has averaged 6 percent per year, twice as fast as world output. But trade has been an engine of growth for much longer.

Although general consensus argue that free trade has benefits, in 1980s many developing country had economic instability and had to struggle with financial and economic crises due to structural unemployment caused by the removal of trade barriers, domestic economic instability from international trade cycles and pressures created by global economic competition. Today the global economic competition continues through economic integrations in commercial sense. In this perspective, these integrations can help developing countries liberalize the trade without facing the issues mentioned above alone.

In this study the effect of establishment of the Black Sea Economic Cooperation on trade and investment liberalization process of the member countries has been examined. According as the primary effects of the economic integrations on member countries, changes in import, export, inward and outward foreign direct investment flows and labour force movements of the Organization have been evaluated. The results of the study has shown that although the establishment of the Organization slightly contributed development of trade of the member countries and provided a steady increase for a period, it has been fairly effective in development of foreign direct investment flows in the region however because the Organization doesn't allow free movement of people within the Organization such as EU BSEC had no or little influence on labour or population movements in the region.

Burgeoning Sino-Russian Economic Relations and the Russian Far East: Prospects and Challenges

Asst. Prof. Dr. Çağrı Erdem (Doğuş University, Turkey)

Abstract

The colossal economic transformations and political intrusions had been affecting brutally China and the Soviet Union in the final decades of the twentieth century. Currently, Russia is a gigantic power, struggling to rebuild its economic base in an era of globalization. There are a number of significant difficulties of guaranteeing a stable domestic order due to demographic shifts, economic changes, and institutional weaknesses. On the other hand, the economic rise of China has attracted a great deal of attention and labeled as a success story by the Western world. The current growth of the Chinese economy is of immense importance for the global economy. Both nations are part of the world's largest and fastest-growing emerging markets—member of the BRIC. Their respective GDPs are growing at an impressive rate by any global standards. Relations between China and Russia have evolved dramatically throughout the twentieth century. However, it would be fair to argue that during the past decade China and Russia have made a number of efforts to strengthen bilateral ties and improve cooperation on a number of economic/political/diplomatic fronts. The People's Republic of China and the Russian Federation maintain exceptionally close and friendly relations, strong geopolitical and regional cooperation, and significant levels of trade. This paper will explore the burgeoning economic and political relationships between the two nations and place the Russian Far East in the context of Russia's bilateral relations with China in order to examine the political, economic, and security significance of the region for both sides.

1   Introduction

The Russian Far East (RFE) is considered as a region in crisis due to troubled economic conditions, corrupt governance, and problem-ridden cross-border relations with China, Japan, and both Koreas (Rozman, 2008). Due to the some fears that the Russian Far East might disengage itself from the center and other regional/global powers may end up having a major grip in the region, Moscow started to show some genuine interest in those eastern border provinces.

The region in question covers a large geographical area from Siberia to Russia's Pacific coast, forming the northeastern corner of Asia. Although the Far East constitutes one-third of Russia's total landmass, it has only 6.6 million residents—4.7 percent of the total population. The low population density, just over one person per square kilometer, makes the region one of the most sparsely populated places in the world. The scarcity of residents exists alongside a wealth of natural resources that have attracted the interest of the Russian central government as well as foreign investors. Evidently, Russian politicians, bureaucrats/technocrats are all concerned about the level of socioeconomic development in that region (Troyakova, 2007).

However, it would be fair to assert that the developmental troubles of the RFE partly related to the region's history and location. Moreover, the USSR did also neglect socio-economically the region until its collapse in 1991. After the disintegration of the Union, the RFE, like many other regions, was to a great extent abandoned by the financially struggling central government in Moscow Moscow's extended negligence to the region has left the RFE provinces economically underdeveloped, demographically challenged, and geographically exposed. Yet Moscow has recently begun to focus specifically on revitalizing the RFE, as years of dynamic economic growth and surging global trade in neighboring China have pulled the international community's attention to developments in the Pacific Rim. This change in the international political and economic climate, especially in light of the RFE's rich supplies of natural resources and strategic location in the North Pacific, has brought about a rethinking of Moscow's policy in Russia's Far East (Alexeeva, 2008; Blank, 2011).

2   Historical Background

For centuries, the territories of the Russian empire located to the east of the Ural Mountains were considered as places of promise and natural resource wealth (Kangas, 2007). Over the last three centuries, imperial Russia expanded both northward and southward across Siberia. After the Treaty of Peking was signed in 1689, Russia directed its energy toward the Sea of Okhotsk, Kamchatka, Chukotka, the Kuril Islands, and Alaska. Russia entered the Amur region in the mid-nineteenth century. In 1856 and 1857, Russia seized Chinese territory north of the Amur River. In 1860, all land east of the Ussuri River was ceded to Russia, thus extending the Russian empire from the Baltic to the Pacific (Troyakova, 2007).

After the disastrous Crimean War of 1854–56, Russia's priorities shifted away from the Northeast Pacific. Alaska was sold to the United States in 1867. The central and northern Kurils were handed over to Japan in exchange for Sakhalin in 1875. Soon a combination of external and internal developments forced the Russian government to upgrade the Far East to accommodate imperial priorities. In 1884 the Transbaikal, Amur,

Primorye, and Sakhalin districts were united under a new Priamurskii governor-generalship. This established an institutional framework for the regional identity of the Far East (Troyakova, 2007).

As the Trans-Siberian Railroad extended steadily eastward, it brought European and Asian Russia together. Ethnic Russians, Ukrainians, and Tatars moved to the Far East, where they discovered thousands of Chinese, Koreans, and Japanese residing within the Priamurskii governor-generalship. This ethnic mix shaped regional development and added a cosmopolitan shade to Russian life.

From the end of the nineteenth century through the years leading up to World War I, the region played an important economic role in East Asia. It attracted loans and investments that supported its industrialization. Although economic interaction between the region and the rest of Russia was limited, the Far East was open for relations with Asian countries. Labor resources were satisfied by migration not only from the European part of Russia but also from China, Korea, and Japan. In general, the region was seen as a place for agriculture, exile, and a base for the Russian Pacific Fleet at Vladivostok (Bliakher & Vasil'Eva, 2010).

During the early Soviet period, the region, now known as the Far Eastern Republic, developed as a relatively autonomous economic area. However, in the 1930s Moscow adopted a model of centralized state control and support. The Soviet system imposed a centrally planned economy, limiting the region's economic ties with the outside world. The central government provided substantial economic support because of the geostrategic significance of the region, but it paid little attention to the long-term economic viability of the Far Eastern economy. Moscow stressed the development of mining and defense industries, eventually turning the region into a fortress (Kuhrt, 2012).

The massive Soviet arms buildup in the Far East and the Pacific was a source of considerable concern for China, Japan, and South Korea. By the 1960s, the Sino-Soviet border was closed, and Mao Zedong, the Chinese leader, openly spoke of China's legitimate claim to the southern part of the Far East. This hostile environment was not conductive to economic contacts.

Moscow later eased its grip, however, and the Far East became one of the few regions in the Soviet Union where the central authorities encouraged an export-based development strategy. In the 1970s and 1980s the region was supposed to benefit from expanded trade with Asian countries, particularly through a number of compensation agreements between the Soviet Union and Japan. The region's natural resources were offered in order to finance purchases of machinery and equipment for further resource development. As a result of these agreements, several projects were implemented, including the Vostochnyi port near Nakhodka, and the South Yakutia coal complex. Initial work to develop the oil and gas deposits offshore of Sakhalin Island also began. The region also has reserves of iron, lead, zinc, silver, gold, lumber, farmland, and fish (Sullivan & Renz, 2010; Zausaev, 2012).

By the mid-1980s the Far East began to reorient from a military outpost to an economic player. The successful development of China's growing economy improved the chances for greater trade and joint projects between the two countries. Indeed, over the past twenty years, Russia and China have sought new points of agreement for broader and more institutionalized cooperation.

In 1986 and again in 1988, Mikhail Gorbachev called for the integration of the Soviet Union into the Asia-Pacific region. He stressed that the cold war era was ending and the Soviet government would like to open the Far or adopts a more diversified economic profile.

3   Economic development

It would be fair to argue that the Russian Far East has three essential characteristics that make it worthy of attention. Together with eastern and western Siberia, the region is well-endowed with an abundance of variety of natural resources. Particularly, fossil fuels of the region may play a pivotal role vis-à-vis energy hungry countries of East Asia. At the same time, as seen from the European part of the country, the regional bloc qualifies Russia as a rightful member of the Asia-Pacific and Northeast Asia regions, extending its geopolitical influence. Finally, the long coastline and the Amur River boundary of the Russian Far East allow cross-border relations that are a significant component in bilateral ties and key to efforts to establish infrastructure that could jump-start Northeast Asian integration (Rozman, 2008).

4   Economic challenge

The developmental troubles of the RFE, which stem in part from the area's history and location, are not new. The legacy of socio-economic neglect of the RFE by the central government in Moscow dates back to the Soviet era. The RFE, like many regions, was to a great extent abandoned by the struggling central government following the 1991 collapse of the Soviet Union. Moscow's prolonged inattention to the region has left the RFE provinces "seriously underdeveloped, demographically challenged, and geographically vulnerable," stated Lee. Yet Moscow has recently begun to focus specifically on revitalizing the RFE, as years of dynamic economic growth and surging global trade in neighboring China have pulled the international community's attention to

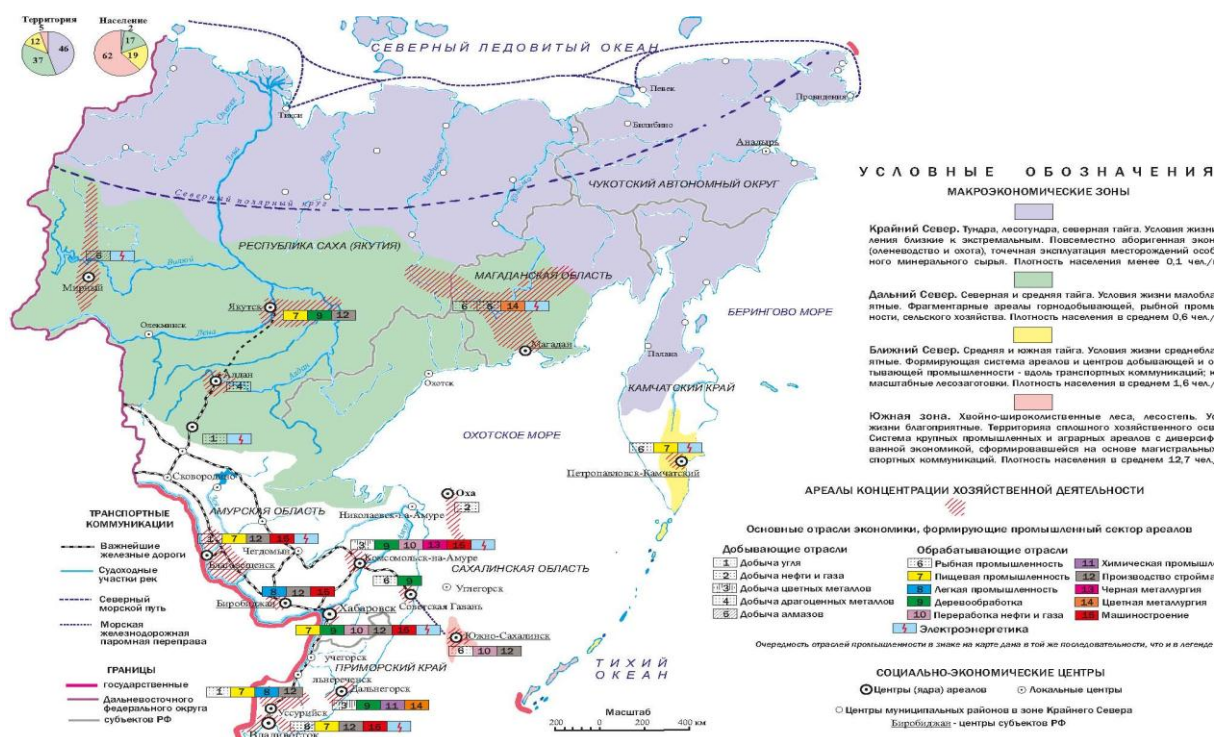
developments in the Pacific Rim. This change in the international political and economic climate, especially in light of the RFE's abundant supplies of natural resources and strategic location in the North Pacific, has brought about a rethinking of Moscow's policy in Russia's Far East.


Figure 1. *Macroeconomic Zones of the Far East* **Source***: Vishnevskiy, Demyanenko, 2010*

5 China's Role

From historical point of view, China's role and presence in the region is complex and are linked to energy needs, as well as political, cultural, and historical points of potential tension between itself and Russia. Indeed, the history of the RFE is tightly bound to the history of northern and northeastern China, dating back to the early Russian exploration of the region in the sixteenth and seventeenth centuries. The "unequal treaties" signed by the Russian and Chinese imperial courts in the subsequent centuries formed the basis of relationships mired in mutual suspicion, periodic cooperation, and basic needs. As the Chinese Communist Party began its campaign to defeat the Goumindang, the leadership in Moscow vigorously debated the extent to which they should support these forces under the control of Mao Zedong. Periodically, Stalin opted to not offer substantial support, which created a rift between the sides. Indeed, after the 1949 victory, Mao and his colleagues were repeatedly slighted by the Soviet leadership in bilateral meetings and were unsure as to how deep the relationship would ever be. There was a strong sense that the Soviet leadership condescended to their Chinese counterparts, in sort of an "elder brother-younger brother" relation-ship. This upset Mao and his colleagues, who looked upon their own culture and civilization as being much older and more developed than the Russian/Soviet one (Alexeeva, 2008; Sullivan & Renz, 2010).

However, currently, China is one of leading trading partners of the Russian Federation. Due to the important economic role played in the global economy by China, Moscow took some important steps to strengthen its political and economic outlook in the Northeast of Asia vis-à-vis China. However, it would be fair to assert that the economic interaction between Russia and China as trading partners is not only resulting from their geographical proximity, but also from an excellent level of bilateral interstate political relations.

6 Conclusion

There is no doubt that the Russian Far East has many barriers to economic development. It is very important, for China and Russia, to establish a friendly and mutually beneficial relationship by following the converging interests of the two countries. While discussing long term prospects of cooperation in the Russian Far East with China, it is possible to envisage some scenarios of economic development that may be useful to policymakers. An active involvement of China in the economy of the Russian Far East seems to be the best way to accelerate

the economic development of the region. It is possible to generate powerful arguments for such a policy regarding the region.

First, the Chinese economy is very dynamic and shows remarkable strength not only in the region but also all over the world. According to some estimations done by the Russian Academy of Sciences, Gross National Product (GNP) of China will be more than twice the size of Japanese economy—another economic giant of the region— by 2015.

Secondly, the length of territorial border between Russia and China in the Russian Far East makes possible the development of joint production facilities by creating *"frontier zones"* of economic interaction. Thirdly, this economic interaction could make the region more attractive for Chinese labor, which in turn would promote stable/friendly interstate and inter-regional Russian-Chinese relations.

Moreover, the relationship between China and Russia can also be a role model for a new type of relationship between great powers, characterized by mutual security, cooperation and mutual economic development. There is no doubt that those two countries in question have different political/economic systems and social structures. Consequently, there are often misapprehensions regarding a number of issues. But, both sides by getting familiar with these situations may circumvent misreading each other. The strategic partnership between China and Russia should be forged on interests, rationality and rule of law by avoiding the sentiments of fantasizing or idealizing each other. The Russian Far East can present a good opportunity to create that environment where the mutual interests for both sides would come together.

Economy and National Security

Asst. Prof. Dr. Ramazan Kurtoğlu (Istanbul Aydın University, Turkey)

Abstract

After the Great Depression in 1929, "economic security" which was in litterateur after World War II developed and in Cold War period it gained a meaning with neoliberalism which was put into effect with 1978 Washington Consensus. During this period, Soviet Bloc collapsed in early 1990s and a new term emerged in New World Order which is "economic security" equals "national security" or vice versa. Now, these two terms interwined and with a religion – politics philosophy – finance / economics formatted transformation international political economy – mapping and security terms filled.

1 Introduction: The Effect of Economy on Domestic and International Security Perception

It is known by politics, economics and military that in March 2009, USA did a practice for the Global Finance War with President Obama's permission. Pentagon imposed duty to financial economy experts both from Wall Street and academia during this finance war practice and it is pointed out that the currency wars that started in 2010 will soon turn into a global financial war. It is understood that, the economic national security concept which emerged with the great depression in 1929 and tested in every way with World War II, is becoming more important for today's world. As a matter of fact, Pentagon's economy-finance consultant Rickards's statements are very meaningful: "Upholding U.S. national security interests cannot be done without knowing the dynamics of global capital markets. U.S. dependence on traditional rivalsto finance its debt constrains not only fiscal policy but U.S. national security and military options... The nexus of unrestrained global capital andunstable geopolitics is a beast that has begun to show its claws." At the present time, world economy is at this point.

"Our nation's program of social and economic reform is therefore a part of defense, as basic as armaments themselves."(Roosevelt 1941:5)

What the president of the US tries to imply with this sentence is that the security of America depends upon the national power, especially the unity of American people. On the other hand, "social and economic security" was the tool of empowering the nation and the President Roosevelt emphasized that the internal and external policies of the US were inseparable and interconnected.

Economical security, as can easily be observed in such departments as social security and especially unemployment, has very important impacts upon external affairs.(Earle 1941: 186-189-193) In this sense, social and economic security is the basis of peace and domestic safety and thus, the programs about this issue are accepted as the first step of national security and national defense. This view first appeared with the Great Depression of 1929 and formed the vision of New Deal program started by President Roosevelt in June 8, 1934. That is to say, national safety is an inseparable part of economic and social security.

President Roosevelt said in his public speech on January 1944 that: "The one supreme objective for the future, which we discussed for each Nation individually, and for all the United Nations, can be summed up in one word: Security. And that means not only physical security which provides safety from attacks by aggressors. It means also economic security, social security, moral security—in a family of Nations." (Roosevelt 1944)

According to Roosevelt the rights that already existed in American and was brought with the New Deal, the safety of sheltering, education, health and economy all form the domestic security and only this kind of security is the basis of peace. New Deal not only brought economic and social security to the USA, it also was supposed to bring "political security" to the world through the USA as a member of family of nations. Just like New Deal required free (unlimited) expenditure for the great US government's security and progress, international security of post-war also required free expenditure to overcome the chaos created by the war (Schurman 1974:42) . Although we can name this process as imperialism, this world was supposed to become a "liberal world" and was to be formed upon the concept of certain economic order.

Right after the Great Depression, Keynes had proposed a complex, regulated economic New Deal and a reform of public policy that forms a this kind of change all over the world. what he proposed was exactly the system that consists of compromises, controls and balances; which started by Friedman's systemized counter-revolution's state-by-state-refinement. Today, in this respect, Chicago school type of capitalism does not need to have anything in common with the other dangerous ideologies, which means those who believe in the shocking doctrine of neo-liberalism believe that only a great break, disasters, wars or terrorist attacks can create the big, empty plates that they need.

2 International Politic Economy-Map and Security

These theologic-politic-financial "artists" keen on those dangerous opportunities in their hands, start forming a new frame for the world in its most reshapable times/moments when we all can be distorted psychologically and physically disconnected from our roots. The reason why the neo-liberal market economy ideologues assume crises and disasters as appealing is exactly the desire for the holy might for massive creation (Klein 2010: 26) As the issue of fear was forced upon external enemies gradually with neo-liberal globalization, the issue of security began to seem to indicate international dimensions. In other words, the sides of the medallion were economic and national safety. These were the required tools of a political society's security. (Virilio 2005: 170)

According to Robert Pollard, the conception of "economic security" is an economic system idea that is supposed to contribute to the profits of the USA, and that is open and integrated in contrast to a big and systemized army in peace-time. This concept has been powerfully established during the war-time. (Pollard 1985:13)

Actually, the concept of "economic security" is the strategic weapon of liberal capitalism during and post-WW2, and as a basic political tool from 1945, is in a close relationship with the security issue. (Pollard 1985:13) In 1943, President Roosevelt was still saying that: "…We must plan for, and help to bring about, an expanded economy which will result in more security" (Roosevelt 1950: 574) Hence, what the Marshall Plan which the US carried out after WW2 was planned on was basically the political purposes (Leffler 1992) Here, it should be emphasized that Marshall Plan was not just a "political intention". It is obvious that this plan is multi-dimensioned and to separate economic reasons from political reasons prevents us from realizing the fact that economic, political and military reasons are all interconnected. The main idea is that this was a project that is carried out with the ideology of security. In this sense, what forms a basis of security is economic system, in other words capital system.(Neocleous 2012: 72) Marshal Plan and Truman Doctrines are not only a project for "economic security", but also a theological –political intention to re-regulate the global-central capital. This program was of course carried on under the name of national safety. It is quite possible to see this fact in the behind-the-lines of NSC-68. (Etzold, Gaddis 1978:401) To emphasize; the most important document of the US that belongs to the Cold War era is NSC-68. And its basic purpose it still to "shape a world in which US system can survive and grow".

The "New World Order" that has been spoken out since 1990s, and the "Great/Expanded Middle East Project" that has become outspoken especially after 9/11 are nothing but a national security project established with purposes such as "economic security", "political security", "theological security" etc. that seems to "fight against terrorism", frankly "fight with Islamic terrorism". The basic motivation of the project is for Terence Corcoran "untethered neo-liberalism." (Corcoran, 17 Kasım 2006) The economic part of the "government" device, whose theological basis was formed by Messianic Ibn-Meymun (meimonides 1135-1204) and political philosophical basis based on this theological basis was formed by Leo Strauss (1877-1973), has been established by Milton Friedman (- 2006) and his friends in Chicago University Economy and Business Faculty. Friedman advocates that "shock therapy method" is the best model for economy and for this, natural disasters or wars are perfect occasions, just like Meimonides and Strauss. Everything is for the national safety of the state under the control of the "elected".

Hence, according to Yergin, "this new security doctrine of the US is developed to explain America's relationships with the rest of the world." (Yergin 1980: 194) "The historical side of these themes should not be ignored about all the claims about the US's new security assumption." (Dalby 2002: 7)

Such discourses as the invasion of Afghanistan or Iraq, Wikileaks issue, military attacks against Libya with the mask of "Arabian Spring", civil war in Syria, intentional Turkish plain crash by Syria; the spoken or alive-on-internet war against Iran centered on nuclear power plant , Israel's military attack against Mavi Marmara, the enforcement upon Turkey about "negotiating with PKK" and the rumors about "the change in the maps in the Middle East and North Africa" spoken by secretary of state Rise especially after the invasion of Iraq.

In addition to all, Turkey and its great oil areas on its hinterlands. Boron, thorium, monatomic substance (like gold and platinum) reserves. On the other side, American Evangelist Christian's complete support for Israeli policy because of their belief of Messiah which they were waiting at the first quarter of the 21th century. (Kurtoğlu 2012) Another issue is the politic attractions of Israeli government based on Kabala-Old Testament. The region is like a petrol tank waiting for a spark to blow up.

It is constantly reminded that the borders of the countries, in other words the maps are going to change.

Maps, homogenizes the people on a land through myths about union and artlessness, focuses the political images around the nation state. As an example, a broadcast map which has nothing to do with politics at first sight, bases itself on politic agency. In other words, maps reminds about the collectivism of national area. (Black 1997: 12-17)

Neocleous states that if the governmental and statistic enumeration of population census shows that national population is full of separate subjects, maps first promulgates domestic politic agents, makes these subjects a re-

united political community and thus builds the national identity. (Neocleous 2003) Second, what maps help is the naturalization of what is possible to happen historically by deleting some important political issues. Every settled order … tends to produce the naturalization of its own arbitrariness. (Bourdieu 1977: 164)

Now, especially after Iraq's invasion, the USA announced its own map in newspapers, military magazines etc. "by accident" by drawing such maps as "Turkey maps", "Kurdistan maps"; and even Greece announced its own Exclusive Economic Zone in "To Vima" paper, (January, 2013). According to the map, Aegean and Mediterranean Sea have become a Greek lake. If the map were valid, according to it, one seems to transgress the borders of Exclusive Economic Zone and Greek continental shelf if s/he even swims in the sea.

Isn't it obvious that these maps are supposed to contain Turkey in "economic" and "security" manner?

Without maps, the existence of states is under risk. Mapping proposes the expression of "territorial"; to delete a state from a map is to ignore its existence. … a state without the acknowledgment of the other states is not accepted as a state; it is "out of the map" just like a pirate, mercenary or a terrorist. As a significant political technology of place, maps spontaneously picture the territoriality policy that forms a state and provides it with continuity, but at the same time, masks the ideological and violent nature of the project. By governing the political vision in this way, maps validate the great territoryalization movement thanks to which all the world tends to posses a state. A different form of policy is generally accepted as invalid and out of date. (Neocleous 2012: 282)

The constitution and political/economic regulations in Iraq, as stated by The Economist "the national yard sale" (Economist, 27 September 2003), which is supposed to be performed in the region, especially in Iraq after the invasion, indicates that "military neo-liberalism" and "economic neo-liberalism" match and what is actually being done is nothing but capturing. (Robert 2005: 11, 43, 75)

Winston Churchill, one of the politicians of England and the inventor of Middle East and North Africa at the beginning of the 20th century, says in 1936, in Palestine Royal Commission while talking about the probable Jewish state meant to be established in Palestine: "You all saw the sets on those hills that used to be cultivated but have become deserts with the Arabian government. Those areas should be cultivated and planted for the profit of all the world, Arabians are never going to cultivate, this is unfair." (Gilbert 1978: 176-177) Chaim Weizmann, the chair of World Zionist Organization said for the same issue that: "Palestine rebellion is nothing but a stand of a desert against civilization." (Gregory 2004: 81-82) Today we call it "Clash of Civilizations" in the Divine Empire or in a more secular discourse "New World Order" project. (Huntington 2002)

We witness the argument that proposes that "the reason for the destruction of the difference between war and peace is the impact of the war machine upon the daily culture" and "that a long lasting epistemic shift that blurs the old separation of war and peace has occurred" (Debrix 2008:97)

3   What is Political about "Economic Security" and "Military Security"?

Carl Schmitt says that "what is political is the most violent and excessive adversity." , and the closer this concrete adversity gets to its peak, which is the separation of friend-enemy, the more political it gets. The nature of friendship lies behind a couple of common values that separates friend from "the other and alien". (Scmitt 1996: 29) When we take a look at the relations between Turkey-US and Turkey-Israel, especially from the 1st Gulf War to today, we see that it exhibits an improvement that proves what Carl Schmitt says. According to Schmitt, the entity of the adversity of friend-enemy is the political one. In this process, what decides this particular adversity is the dominant one." (Schmitt 1985: 5)

At this point, the review of Serdar Turgut is quite significant: "there is this global profound power that prevents governments from breaking the rules that themselves establish to regulate the global world, makes the conflicts fixed up in a safe way and that looks out for the economic benefits of capitalist world system. It is obvious that this profound power is constantly messing with Turkey recently. .. What I see personally is that Turkey is now the target of this profound power. This is also quite normal, expected situation as the keepers of this global system have been dealing with the new geo-strategy that has occurred upon the fall of the Ottoman Empire since the middle of the 20th century. And the question of what Turkey is going to do is the most important issue in these global system-creators. (Turgut, 10 January 2013)

There is more than "economic privatization" that neo-liberalism is dealing with. First, the security fetish has been proposed. Then, "the privatization of security" has come into play under the name of security. In the international market, the income of global security got up to $56 billion in 1990, and got more than $200 billion in 2000. Now, the stock certificates of security companies are traded.

The conceptual consistency between economic security and the construction of new world order meant that "economic security" can be shown right by putting the economic, thus "humane" needs on an upper place than military needs on neo-liberal base. The global central capital's production process of the New World Order supported by media and Hollywood seemed more humane in this way. This outlook helped taking liberal left into the sub-constructors of neo-liberalism. Of course it also brought such ideas as "individual liberty", "social

equality" etc. into question by emptying them. As a result it came to the desire for "individual" and "social" security. (Neocleous 2012: 75)

Neo-liberal global power launched the connection between economic and national security as a dependence on capital security. This meant a dependence on national security. For the past 40 years, the US aimed to re-shape the international society by governing the global order according to a security doctrine that has loyalty on capital stock rather than being "reactive" or "against" under the cover of national security. (Neocleous 2012: 76) Rather, economic security became very important for the theory and practice of both social and national security by connecting local with international, domestic with foreign issues, and became the cornerstone of the security project. (Neocleous 2012: 77)

We should also emphasize that the US is the Economic Security Committee that has been on execution since June 1934 with the 6557 act.

It is important to state that today national security operations and/or strategies and (international) politic economies are considered together, because it is quite apparent that there is an obvious connection between national security and economy issues. For these reasons, the main actors of the global politics could never separate security from politic economy. (Neocleous 2012: 52) Already in the 1940s, many important academicians emphasized the supplementary relationship between economy and security. (Hirschman 1945)

Recently, it has been observed that this economic security issue is dealt with more religious discourses, Messiah, Armageddon, Gog and Magog, Apocalypse War, Third World War etc. In this sense, "now, in both East and West religion is more of a political issue… It is getting more and more secular while getting more politic and becoming the main element of every kind of policy." (Kahraman, 20 June 2010)

4 Perception of Economic - Political Security in a Theological Format in Turkey and its Hinterland

The fact that my evaluations and foreseeing In my book named *Evangelism* are getting true since 2006, scares me in the matter of not only my own country Turkey, but also Turkish people, Islam world and humanity.

"Although in the post-modern world religion seems as poor as a scrappy cottage, it should not be forgotten that whatever is not under the roof of academia is presented to them in the sanctuaries. Prophecy, which is hope, which is miracle… human beings find themselves in sanctuaries. In poverty." (Cündioğlu 2012: 92)

Messiah/Mahdi phenomena can take Turkish/Islam geography into exactly a nuclear, biological and chemical war. For the first time in history, with various belief and estimations; the "messiah that the Jews coming from King David wait for", "Jesus Messiah that especially Evangelist Christians wait for", "Mahdi (Çağlayan 2012), who is the lost 12th imam that Shiite Islamic Muslims headed by Iran wait for" and Mahdi, for whom some of the Sunni Muslim sects or societies wait, and the speculative political attractions and the "strong belief" for the coming of Jesus at the first quarter of the 21st century can all overlap in a surprising level. We do not judge people for what they believe. But what is surprising is that these believers with different beliefs have things in common with one another about the expectation about Messiah. Another desperate and concerning part of this issue is getting more and more serious. The expectation of Messiah/Mahdi that I mentioned above is becoming such a social hysteria that all of the sides "call God for Apocalypse" for the Messiah/Mahdi to come.

The Kabalist celebrity Madonna who is famous for drinking Kabala water knows no bounds about the "cleansing from sins theology" on which the expectation of Jewish Messiah is based. She masturbated in front of thousands and especially her 12-year-old son, during one of her concerts. (Türk, 14 November 2012) The Kabalist celebrity Madonna showed her breasts to the audience in her concert in Istanbul in September, 2012, and in another, her hips. On the other hand, Evangelists, Zionist Israelis and the top directors of Iran, keep on with the "cold war" that announces a probable nuclear, biological or chemical war for the Messiah/Mahdi. Especially in the Western Israel, around the Israel supporters, a doomsday scenario has been composed. According to this, Ahmedinejad who is a member of a secret sect that believes that beyond the classical Shiite Mahdi expectation, Mahdi's return could be fastened with a big war, is planning to attack Israel with the weapons that he would get from the nuclear programs that he keeps and fasten the return of Mahdi." (Çağlayan 2012: 310-311) With a similar plan, an Armageddon War is being foreseen, which is planned to quicken the return of Jewish Messiah from King David's roots and Evangelists' Jesus Messiah. (Hallsell 2003) Similarly, some sects and societies from the Sunni Islamic district publish books, essays and make TV/radio programs with the same view. Besides, Directorate of Religious Affairs of Turkey has placed a fetwa that supports them. According to the fetwa, apocalypse has "small signs" and "big signs". The big signs include: "It has been informed in this hadith that without the ten signs, the doomsday will not come. Coming of Anti-Christ (deccal), return of Jesus Christ, coming of Gog and Magog, coming of Dabbetül Arz,…"(Hürriyet, 16 December 2012) It is quite enough to mention that such a fetwa displays that the council of Directorate of Religious Affairs is full of simple minded and uneducated people, because Qoran says nothing about the return of Jesus Christ. Those sentences that they call "hadith" is nothing but rubbish that is only spoken around. In this matter such a question

can arouse in minds: "Is the issue of Messiah/Mahdi a phenomena that is achieved through the same center, with a simple saying a phenomena abused for a world war?" we leave it without critique because of the respect for our readers. However, for the Religious Studies Professor Bayraktar Bayraklı, "All these beliefs (Deccal will come, Jesus will return etc) are pure superstitions." (Bayraklı, 21 December 2012)

Those legitimate global elites that control the central capital and form the supernational clan canalize with the reward mechanism in fields like spiritual world, business world, politics, arts (especially cinema and music), culture and science through plenty of non-governmental organizations and groups. The two most important ones of these is the Nobel and Oscar awards. It may sound weird but two favorite names of weapon companies, David Trimbel and John Hume were nominated for Nobel Peace Prize in 1999.

English Chatham House, dozens of "international" institutions from Tavistock Enstitute to US Council of Foreign Relations are controlled and canalized from one center. The aim is to establish an esoteric globe state that they named as "Divine Empire" under the Secular definition of New World Order. In fact, it has nothing to do with any of those divinities and religion, they only "appeal to religion" to persuade masses and armies. In conclusion, what they want to achieve is:

- To prove the complete sovereignty of global central capital all around the globe,
- To leave the control of the earth to a bunch of elite under any circumstances,
- To turn celestial religions into one only syntretic religion, thus for this, to melt Islam in the pot of "Abrahamic Religions" by leaving it without Mohammad,
- To impose an elitist, fascist/company socialism model to humanity under the name of "neo-liberal democracy"

The clan of elites can apply to every single way to achieve their aims. This clan, which is called "the Sect of New World Order" (Alatlı 2005) by Alev Alatlı, are preparing for the Third World War by generating regional fixation wars and "global shocks from tiny probabilities". (Kurtoğlu 2012:1) Hence, 9/11 and after, 2008 financial crisis and the process after it, Wikileaks issue, Arabian Spring and worthless attacks against the Islamic prophet Mohammad and Qoran are only some of the operations of the same center.

Mine G. Kırkkanat, in her assay named "From Prophecy to Apocalypse" refers to the Evangelist Messiahs and prophecies about the Armageddon War. (Kırıkkanat, 1 July 2012)

Kırkkanat states in the same essay on September 27, 2002, that she touched upon the same issue with the title "Prophecy of Daniel" and emphasizes that "Daniel Prophecies" have focused on Turkey again.

"the Rumor is quite large and diverse, but Daniel starts the apocalypse that he divides into seven steps from Turkey's basin of Fırat River and finishes with the world war that is supposed to take place in Great Palestine (not Today's Palestine), and in the Armageddon region that is a great part of the Middle East. As I understood from Daniel's poetic mysteries, out of seven cavaliers of the great crowd, the sixth one is going to finish. First, the waters of Fırat is going to dry, Anatolian lands are going to burn under the burning sun. Then, God knows where(!) an earthquake will take place. The conditions will force the kings (or armies) in the East to come down to Armageddon. And right there, in the Middle East, a war will break out with the Western armies. The reviews about these prophecies also not only show Turkey as the starter of the doomsday, but also they foresee that its borders will get smaller, a disaster will sweep away the Turkish nation, the end of Turkish government on the region and the beginning of armageddon war!

There is for gravestones that are assumed to be Daniel's: Uzbekistan, Iran, Kirkuk and Turkey (Tarsus).

Strangely, in the year 2012, when Turkey sent masses of soldiers to the border of Syria, Daniel prophecies again focused on Turkey in the websites. And there is a new prophecy, says Kırkkanat, no comment… here is the prophecy:

"23/after the sinners conflagrate and their impacts fade out, an insolent and trickster emperor will come out. 24/ his power will grow but it will be someone else's; will give incredible harm, will succeed in his attempts, will cut off the competents and saints. 25/ the abundance and his gains with his tricks will surround his heart with hubris, will ruin many peaceful lives and will fight with the leaders of leaders but will defeat himself without anyone's interventions."

Tom Schelling is an economist with a Nobel prize. His profession and under cover is terrorism, to prepare "counter-attack/anti-terror" scenarios by foreseeing the worst. As a result of the analysis that he come up from the intelligence reports coming from CIA, MOSSAD, NSA and many others, he came up with the idea that now the enemy – especially the "Islamic terrorists" have started considering about using nuclear weapons and from him, every day can be the last day of all humanity. Schelling, the 90-year –old game theory economist, is "renewing" his kitchen in his house in Bethesda Maryland, around Washington DC by spending thousands of dollars. Actually this is what he wants others to know. What he actually does is a nuclear refuge in case of a probable nuclear attack against the US. (Turgut, 25 November 2012) How about this? Hollywood came up with these movies in regular periods: Arlington Road, Under Siege and Swordfish… then here comes the 9/11 attacks in accordance with the scenarios of the movies. Just like in three of these movies, all the criminals were "Muslim

Arabian terrorists". Remember, now those preparing for a "nuclear attack" in such TV series as "24" are all "Muslim Turkish terrorists". What do you think? Can Turkey be the target this time?

5 2030 Report of "Global Tendencies" Published by NIC

The National Intelligence Council (NIC), which is the top intelligence organization of the USA, published the last "search of global tendencies" made every four years on December 10, 2012. The report proposes the "predictions" and dynamics of 2030. the most important "prediction" about Turkey is on "the impact of an independent Kurdistan on Turkey's powers". The report states that Turkey's territorial integrity is in danger and in 18 years, until 2030, a division of land is expected. Matthew Burrows, authority of NIC, states that Turkey will be the first country to be effected from what is going on in Syria by reminding that the war in Syria was the outcome of the expansion.

One of the cases in the "Global Tendencies 2030: Alternative Worlds" report, depicted as "game transformer" , are arranged as:

- Global economy open to crisis
- Fondness of governability
- Increasing working potential, both within and international
- Tendency of increase in local inconsistencies
- Effects of the new technology
- Role of the US

While the US is becoming an exporter of gas and petrol, the increase in such important issues as expenses of education to prevent a decrease of quality, and health. According to the report, 60% of the world population is going to be living in the city centers in 2030 for the first time since 2006. Another issue is that Asia is going to be the center of world economy. According to this report, which talks about the four great tendencies towards 2030:

- The middle class is to increase in the world population. The world population which is today 7.1 billion, will be 8.3 billion in 2030.
- Separation of powers, China is to outreach the USA, but will look for a local partner.
- The population will get older especially in Europe, Russia, China and Japan; Pakistan, Afghanistan and Africa will be out of this process.
- Food and water will be harder to reach.

"In short, the NK report has a great significance to read the perspectives of the US deciders about Turkey for the coming period." (Ergin, 21 December 2012)

Let's get back to the lines of the "Global Tendencies 2030" report concerning Turkey and the region.

Condoleezza Rice, the National Security Consultant and Foreign Affairs Minister during the term of Son Bush said that in 2004, the borders of 22 countries are supposed to change in the Middle East. Rice implied that Turkey can disintegrate referring to Egypt, Iran, Turkey Syria short before the publication of the report. More or less in the same period, American Ambassador of Ankara, Morton Isaac Abromowitz also said that 2014 is a critic year for Turkey. (Abromowitz, 20 September 2012)

The former editor of National Interest magazine and US Marine Forces Academia lecturer Nikolas K. Guasdev stated in February 2012 that "Syria issue" is an understanding that is called "Syria norm", which limits the rights of the state to have counter force for the rebels, and he said that the understanding of government in the international system whose sovereignty rights have been determined with the Montevido Treaty is no more valid. According to the American academic, in a short period, "Syria norm" will make the counter-attacks against PKK in Turkey, FARC in Columbia, Marxist and Islamic rebellions in Philippines more questionable, and as a result, the countries in question will have more restrictions in their sovereignty on certain regions of their own land.

It is obvious that the decision of formation of Turkey and its hinterland on an ethnic and religious sect base since the mid-1970s. and that the project was initiated by American National Security Consultant Henry Kissinger, and that the project carried on successfully in Lebanon.

In June 1978, headed by Bernard Lewis and sponsored by Kissinger, a meeting was held in Princeton University to which well-known experts in concern with Orientals and modern Arabian countries attended. One of the calculations of the meeting was the redrawing of the borders according to the religious sects and beliefs of the 19th century.

Similar perspectives were included in Kivunim (Directions) magazine which was made the media organ of World Zionist Sect by Oded Yinon more clearly. (Yinon, February 1982: 14)

In his "1980s Strategies for Israel" essay Yinon states that the ethnic and sect structure of all Middle East including Iran and Turkey poses great occasions for Israel. According to him, Iraq should be divided into three, Syria to six different states.

Jewish General Wesley K. Clark who commanded NATO's European Unions (1997-2000) and who carried out the operation that was planned against the David Koresh Sect in Wako Mountain, Texas; which was bloody, had ended up with the death of many women and children; explains the ideas parallel with the ideas above with the name "fight with terrorism" in his book" Winning the Modern Wars-Iraq, Terrorism and American Empire" written after the invasion of Iraq in more detail.

It is clear that the map of the region which includes Turkey, as well, is apt to change. This is not a prophecy, it has already started. Actually the US announced that the maps are to be redrawn in our own region short time ago. Also, Condoleezza Rice, Foreign Affairs Minister of Bush has already emphasized this fact clearly. (Turgut, 27 November 2012)

6   Geography- Economy-"Fate"

Robert D. Kaplan is a familiar name for Turkey. The name of his last book is "the Revenge of Geography: What the Map Tells Us about Coming Conflicts and the Battle against Fate"

Kaplan says in his 19 paged essay "On the Coming Anarchy on Our Planet" , he asks the question "why should Turkey have built the dams in the Southeast Anatolia Project, which would go out of its possession?" in 1994. (Kaplan, Şubat 1994) This essay was one of the 80 essays written in the Balkans which was the hot spot of Europe, and it was included in his book "Balkan Ghosts", one of the most important 14 books that he wrote. As Serdar Turgut states, "his manner is surprisingly like John Reed, which was the author of the books Ten Days and Insurgent Mexico. He observes and reads the countries that he visits. This kinds of people release the strategic facts that even the secret services cannot."

Kaplan works as the head geo-politic analyst in Straford referred to as open CIA.

Today, to understand the politics that Israel and USA carry on in the Middle East, one should closely examine the prophecies that Kabala+Old and New Testaments say, and study Batıni/esoteric interpretations that especially the Evangelist Christians have out of holy texts. About this issue what Serdar Turgut has to say is that "… Whereas what motivates Israel and their supporters in America is the beliefs and ideas which would sound totally irrational and non-sense. We can explain neither Israel nor America without understanding this situation."

To be able to do this, we should be aware of the secret histories of these countries and esoteric sciences. I, out of curiosity, examined the secret beliefs and superstitions that motivate Israel. So, none of their crime against humanity seems surprising to me. I was expecting these, because they believe that they were fulfilling a great mission that they were assigned by divine beings. Their supporters in Israel and America –Evangelists RK- believe that fighting is their destiny, moreover these wars were written in their religious sources and they were ordered to do so." (Turgut, 22 November 2012)

According to Serdar Turgut, the people under the control of Israel, which believes that their country is preparing for a war that will bring the end of the world according to the "Israel war calendar", are planning every aspect of their daily life according to the Sabbath calendar. This calendar indicates that Israel's new war is supposed to blow up nowadays. And now guess what! There are many that believe this war is going to be with Turkey. There are also those in Israel and America who believe that this is written in the religious sources about the end of the world. According to this story which is not only told but also believed in, this war with Turkey will not directly lead the world to the final destination, but it will lead it to armageddon, the war that is supposed to directly end up the world. These people believe that the process towards Armageddon must be triggered with some provocations and attacks, because Armageddon is going to take place on the day that Jesus Messiah is supposed to come down to earth. With this belief, the Evangelist Christian communities in the US plump for Israel… Armageddon is going to take place in the Megido Hill on the north of Israel. On the day of Armageddon, it is supposed that some enemy countries will come up to Megido and establish coalitions in this region. This coalition, which would definitely include Turkey and Iran, will go to war with Israel, which would be bloody and include nuclear weapons. (Turgut, 22 November 2012)

On the other hand, the Judeo-Christian perceptions about Turks being a sign of doomsday in the West date back to the ancient times. "thanks to the massive communication devices a famous Turkish enemy outlook was formed using the religion and government war propagandas." (Coşan 2012: 11) For example, as a result of Martin Luther's naming Papacy and Turks as Deccal; this idea was obtained by both Protestantism and Catholic Christianity. (Coşan 2012:161)

During the construction of the New World Order, the last country to be conquered is EDOM. According to Kabala, the holy texts that underlies the Jewish mysticism, "Edom" was the ancient name of Anatolia that covers most of the Turkish land. (Nirun 2006: 9-208) Anatolia is within the promised land. After all, Edom was the name of the country to be conquered with the last victory. We need to say that what we live through now and the

Middle East paradox is way beyond the surface on which such covers as Saddam, petrol, water and Iran's nuclear power are held as any human being can realize. It is not wrong to think that the world is seriously going towards the Armageddon, which is the last war in the Middle East based on the Apocalyps symbolism. Now we should think more universal and understand why and how one serves the other. We are running out of time and our only solution is Ataturk's worldview and regional policy. God knows, maybe he foresaw all these in Seljuk in 1933 and emphasized today." (Nirun 2006: 208)

The hegemonic aims called New World Order are not only supported by the divine/holy texts. The military expenses of the US –so do Israel- in total is same with the 15 forces' budgets in total that comes after America, and more than twice as much as the EU and NATO expenses in total, and close to Russia's GSMH. Of course the unilateralist policy of the US is not a policy that is started by son George W. Bush, but it has earlier roots (Clinton, as well). (Huntington, Nisan 1999) But this unilateralist policy with Evangelist and neo-con supported Bush caused US' closest supporters to blaze. (Nye, National Interest 2001/2) However, the powerful, rich and strong elites that risk everything for the world hegemony and God Empire both in Israel and in America are still around and "the Islamic terrorists" are remarked with such an observation: "… but if some of them are determined enough to attack you for the sake of their creator, they are probable to succeed. In short, if you want a world hegemony, you should be ready to pay for it." (Isenberg, 30 October 2000)

An example to indicate that they can do very dangerous things to attract the American people and army and "to make global shocks on weak probabilities" (Kurtoğlu 2012) as an indication of the seriousness of the danger that Turkey and Islamic world face: author Christopher Bollyn tracked 9/11 issue for years. In conclusion he published his "Solving 9/11 the Deception that Changed the World". According to the book, Bollyn traced the people whose names were involved in the attacks just like an intelligence agent. He followed the indications to the last and searched if there was a control plan in the 9/11 attacks. What he reached was that behind these attacks there were Jewish/Evangelist Zionists and this business could go even to the corridors of some institutions of the shadow government of the US.

"End of Times", "Armageddon War" are basically American-centered. The belief that Israel was in a holy war and the Armageddon War will show up eventually started within small communities in America, however, it spread throughout the country thanks to some films and book series like "Left Behind" , and ultimately the idea reached to a great deal of supporter masses. The novels gathered under the title "End of Times" are written on the basis of the Kabala, Old and New Testament texts, although they seem to be products of science fiction. Americans read these type of novels with a great interest and emotions. This type of literature is called "Apocalyptic Literature" and the most famous author of this genre is Tim La Haye. the civil staff and supporters in the security and intelligence communities in Washington of this idea, especially that of Pentagon are highly abundant. (Turgut, 23 November 2012) For most of these people, Israel is as important as the US and most of them have Israel passport. The power that Israel has to be this reckless is coming from these supports. These powers are determined to get into a holy war with Israel. And they are ready to get rid of any person or power that prevents them from getting into action for their goal. (Turgut, 23 November 2012)

It should not be an overestimation that these irrational stories actually determine the policies of the US Israel. "using nuclear weapons, killing women and kids, sacrificing thousands of people for their non-sense goals is not for rational people; but as these people are the blind captives of the stories told in those holy texts, many people cannot understand the attitudes of America and Israel. (Turgut, 22 November 2012)

The Israeli government has such a faith in this process that the signs of these religious sources can be seen in everything they do. A short time ago Israel secret service sent a computer virus to sabotage Iran's nuclear system. Even in the program texts of these viruses named STUXNET there are references to the part that is about the victory of Jews against the Persians in Torah. These insane people believe that a third Solomon Temple should be built before the return of Messiah. They believe that the Third Solomon Temple is on the sky and that the new temple should be built exactly under the shadow of that temple on the sky. Now, on the spot that this shadow is believed to be, there are two Islam temples, Al-aqsa Mosque and the Dome of the Rock. They say that for the construction of this third temple, those two Islam temples have to be collapsed. (Turgut, 22 November 2012) All these may sound weird, but it is good to remember Italian thinker Umberto Eco's words: "Do not debate over a belief's wrongness and rightness, think about what they could/can challenge for what they believe." It is obvious that "great catastrophes are expected for the world and all the humanity." (Eygi, 27 April 2006)   According to the "Alternative Worlds" report that is prepared for the 2030 global tendencies by National Intelligence Council-NIC, which includes all the intelligence agencies in America, the Islamic parties will be more ECONOMIC, in other words, it will turn into a neo-liberal "market Islam". Again, the report emphasizes that the political Islam is taking over the control in the Sunni Islamic world by showing Turkey, Tunis and Egypt as examples.

Mehmet Şevket Eygi says: "I do not know where, when or how but a great bloody war named Armageddon will break out. I can hear the bells. The bells of the war are not like those of humans. Those who can hear can, and who cannot, cannot… Iran is a big deal. They cannot deal with it by themselves. The best way is to crash them with another Islamic country. Thus, they could do two things at the same time. Iran can disintegrate and become slave, so can those countries with American supports... those Arabian originated and Sefarad Jews in

Israel are the second-class Jews in America. There is a black panthers movement that fights against racism and Zionism in Israel… on the other hand, there are crypto-Jews in every Islamic country. These people can go to the mosques, pray, fast and go on pilgrimage. They seem to be more or less Muslim from outside, but they still have the Jewish identity in themselves. Bi-identity, bi-religion is acceptable for their religion… just like this, they want to assign seemingly Muslim, actually Jewish governors for the US/Israel and Islamic countries. And they call all these issues the war of good and evil. (Eygi, 27 April 2006)

The 114-paged study "Study on a possible Israeli strike on Iran's nuclear development facilities" carried on by Center for Strategic and International Studies-CSIS, centered in Washington DC indicates that right after such an attack, thousands of people will die, and the radiation clouds will endanger the lives of hundreds of thousands of people in countries such as Bahrain, Qatar, the united Arab Emirates, Turkey, Azerbaijan, Georgia, Armenia and many others. Thus, US president Obama and a group around him are debating over the need for a cyber attack against Iran at first. According to the facts that we obtained from open sources, they have been working on this issue since 2010. And the US passed a document named national cyber policy for the first time in its history and a cyber commander was appointed to National Security Council.

In these "cyber war" plans, it is very significant to collapse the target country's economy. It is frequently mentioned that this system based on the collapse of economic substructure would attack the neighboring countries of Iran and subsequently cause a global financial crisis.

It is known that a successful attack against Iran's nuclear facilities was carried on with a computer virus named STUXNET in 2010-2011 and it could stop the work in the facilities. What is strange is that it is predicted that Israel was supported not only by the US, but also China with this attack. Apparently in a short time, Israel and the US will break out a cyber war that will effect every single country in the territory especially Iran.

The prophecies about the 12.12.12 of Mayans have passed. There was no apocalypse, but it should not be an overestimation that in the coming 30 years, we will have a period in which moral values, religious issues will effect humanity more and at the same time the holy texts will be abused with esoteric/Batıni interpretations.

7   An Inefficient Economy Theory: Neo-liberalism

The economic model of neoliberalism which was started officially with Washington Consensus in 1978, collapsed with the financial crisis of 2008. "the financial and debt crisis revealed that economy discipline was in a crisis, as well. The models that the main currency economy has improved are no more efficient to reflect reality and make true analysis. What kind of a solution can be found for financial and debt crisis? Will the inflation disvalue our money? We had never needed the comments and analysis of the economy experts as much as now before. But the thesis that both the main currency economists and Marxist economists have reached have started to be criticized densely. Now nobody believes that the free market can heal itself anymore." (Ulrich 15 September-November 2012)

Prof Thomas Straubhaar, who is the director of the research center named World Economy Institute in Hamburg in Germany says that: "Even the basic rules of the economy discipline must be questioned. Economy discipline does not have such unquestionably valid rules that can be foreseen and followed like in physics. Thus, we should not attempt to come up with standard recipes for extremely complicated issues." But from the middle of 1970s IMF and WB and from the middle of 1990 WTO imposed the standard recipe for the countries all over the world. Fund manager and author Prof. Max Otte is one of the true-predictor of the global financial crisis in 2006. But on the other hand he admits that neither the main currency economy models nor academic economy knowledge is enough for the solution of the crisis. Today's economy can only provoke and increase the crisis. Otte is the first of those who claim that economy is inefficient to explain the current crisis scenarios of the modern economy. While advocating that behavior economy as a new branch of science does not have the deserved interest, Otte continues: "the impact of prejudice and emotions upon behaviors is getting more attention. Thus, the number of those who demand economy to combine with religion, sociology, philosophy, history and even biology is increasing." Because it should not be forgotten that the issue is the human being and its social progress. The importance of imbalance and power distribution and the importance of the distorted knowledge should be considered. There is not only one market that the main currency economists applause and tried to be continued for 20-40 years, there are, instead, many markets.

What has gone bankrupt with the financial crisis of 2008 is not only neo-liberalism but also the "prophecies" that formed the theological basis of neo-liberalism. Here are some of them: a- a one world state-government will be established. (Vahiy 13:7; Daniel 7:23) B- a one world economy management will be established. (Vahiy 13: 16-17), c- a one world-syntretic religion, belief government will be instituted. (Vahiy 13: 3,4,8) When we take a look at the process from the past to the present, Holy Scripture is the basic element of Judeo-Christian consciousness, a basis that cannot be underestimated. Again, from the past to the present, the military and economic gains of the West have always been bloody. So, while searching the policies of TOMORROW of the Judeo-Christian Western world, we should not forget that the things having happened from the past have been "suspended and blessed with the obedience of prophets" as it is not a prophecy to say that tomorrow will be the

same. We have to see the danger before it happens. The 9/11 "operation", invasion of Afghanistan and Iraq in 2003, financial crisis of 2008, Wikileaks and Arab spring… All these are the operations based on "the global shocks on weak probabilities" (Kurtoğlu 2012) of New World Order project. In this case, the code name of Syria crisis is "Leviathan". (Turgut, 23 July 2012)

Leviathan is an expression with Kabalan roots that is a Jewish mysticism, and a reference to "God Empire" that owns exact power and might. Thomas Hobbes's book published in 1651 named Leviathan, is the code name of the operation against the territory that includes Turkey and its hinterland today.

Turkey's land governs a great area that has boron, thorium that is the new generation nuclear energy fuel, gold and platinum that are the monatomic elements and 453 billion cubic meter of natural gas reserves that are found in East Mediterranean Sea and Cyprus. "today there is a great probability that this struggle carried on secretly for a long time would turn out to be a great war."(Turgut, 23 July 2012)

The biggest world powers are carrying on military exercises in the Eastern Mediterranean Sea. There is an unusual increase in the number of the Russian war ships passing from Turkish channels arriving at Mediterranean Sea.

"The Israeli submarines loaded with nuclear weapons are running around in the Eastern Mediterranean. It also turned the Greek Islands into military bases. These Greek Islands loaded with weapons have become Israeli airplane carriers. We also need to remember that 100 Israeli airplanes are used in the military exercises carried out in Crete Island and also 2-300 missiles are used, as well." (Turgut, 23 July 2012) Besides, it is not a hidden information that China also shows its navy East Mediterranean as target.

As academician and columnist Serdar Turgut writes: "some people pushed the button somewhere again and the massacres started in Gaza. It is for sure that the crisis of Mavi Marmara and break of Israel-Turkey relationships are the tools that these "some people that pushes the button" use to create an inconsistency in the region. Getting Turkey into a war is required by the destabilization policies of these power who seeks for the inconsistency. We should consider the fall of our planes and not only exterior, but also interior war calls after the incident in this respect. One of the best ways to fasten the inconsistency is to make a disinformation operation. This kind of operations including cyber attacks war is already being practiced against Lebanon, Iran and Syria. It is quite obvious that they aim at Turkey, as well."

8 Conclusion

Turkey now has to practice those short-medium-long term precautions needed more in two occasions, while taking increasing deterrence of Turkish army, which Ozdag calls HARD POWER: (Özdağ 2012: 1) first, as Sait Yılmaz explains in "Smart Power", "Turkish Armed Forces should establish a cyber war command according to the examples of those in the West for cyber war and information war… the danger in social media should be seen; the national versions of microblogs, facebook and twitter accounts should be promoted and used. Our intelligence system should be encouraged to use social media more." (Yılmaz 2002: 439) Second thing that should be done is to take lesson from 1838-1914 period of the Ottoman Turkey. As we know in this period, the liberal economy formed of judicial-economic-politic regulations in 1838-1839-1854-1856-1881-1908, has quickened the fall of Muslim Turkish traditional trades lacking an equal competition, and increased the activity of the foreign capital and non-Muslim elements in economic area." (Toprak 2012: 557)

When we compare Republic of Turkey's 1950-80 period in which it practices "Complex Economy-Import Substitution" with the period from January 24, 1980, on which it started to practice neo-liberal policies to today, we unfortunately see that the latter period is more pessimistic than the former and reminds about the 1838-1914 period of Ottoman Turkey.

The progress after the 2008 global financial crisis shows that, the financial sector of economy at the first place especially the strategic sectors' being "national economy" formats is quite important. It is obvious that in the coming period more protective policies will become prominent in the international economy field, which means national economy will never lose its importance in any period.

Turkey should not estimate its national security separate from "economic security" and should take necessary precautions about the "maps" issues without losing time. In other words, Turkey should also be "strengthened with independence and economic independence" as Gazi Paşa says.

The most apparent quality that postmodernism and neo-liberal globalization brought to the present humanity in the last 40 years is "wastage" for Zygmunt Bauman. Just like the weeds being the waste of the garden, "unqualified streets are the waste of city planning, contrasting ideas are against ideological entity, rebelling ideas are waste for orthodoxy and foreignness is the waste of nation state construction" (Bauman 1991: 15)

The most important issue here is that many "common areas" of "nation state" and "national society", time, recovery and solution are all wasted with unnecessary arguments and separations. And Turkey cannot continue this and this kind of luxury any more.

Effects of Russia's Economic Growth on Turkey's Tourism Sector

Asst. Prof. Dr. Levent Şahin (Çankırı Karatekin University, Turkey)
Assoc. Prof. Dr. Hasan Akça (Çankırı Karatekin University, Turkey)

Abstract

The aim of this study is to analyse whether there is a relation between economic growth in Russia and Turkey's tourism sector or not. Data (GDP in Russia and Russian tourists who prefer Turkey as tourist destination) cover the period 2001-2011. According to results of regression analysis, there is no effect of GDP increase in Russia on number of Russian tourists visiting Turkey. It can be said that most of the Russian tourists visiting Turkey have medium income level. They prefer Turkey due to cheap holiday opportunity (everything inclusive system), closer to Russia and qualitative service. Russian tourists having high income level travel to Far East Countries for holiday.

1 Introduction

Start of travelling backs to old ages. Human being moved one place to another one due to reasons such as war, migration, trade, etc. Travel started with learning willing of unknown things. For example, in the 19th Century, European Aristocrats having high income organised travel activities towards Greece, Antique Egypt and Italy (Kızılırmak & Kurtuldu, 2005).

Especially after Second World, tourism activities have extended in Europe. For example, Europeans had visited Mediterranean countries in terms of account cultural values, natural beauties, climate, etc. in second half of 1940s. As parallel to increase opportunity of travelling by plane in 1970s, intercontinental tourism activities started. Today tourism became a sector contributing many countries economy at important level (Öztürk & Yazıcıoğlu, 2002).

Tourism leads to reduce unemployment due to being a labour-intensive sector, increase foreign Exchange earnings, contribute to balance of payments in positive way, and create new tax areas for governments. In addition, it has significant impacts in the development of many sectors such as construction and food. Adding positive value to economy of the region and country has increased the importance of tourism sector.

Turkey had more than 29.343 million international visitors in 2011, making it the 6th top destination in the world. May 2013 data from the Ministry of Tourism (General directorate of investment and enterprises, Department of research and evaluation) show a substantial increase for the whole year to reach 35.7 million in 2012 (Lanquar, 2013).

Although Russia takes second place in number of international visitors travelling to Turkey, number of studies focusing effects of economic growth in Russia on Turkey's tourism sector is very limited in the literature. Therefore this study has an importance in order to know the level of relation between GDP in Russia and number of Russian visitors travelling to Turkey.

2 Economic Development of Russian Federation

Rapid development in the key economic indicators was achieved by Russia as a result of reforms such as restructuring and openness in the last period of Union of Soviet Socialist Republics (USSR) and also liberalization and openness of the country in the period of Russian Federation Russia (Duman & Samadov, 2003).

After collapse of SSCB, in risk environment Russian economy had face to face economic collapse. In 1992, Russian Federation made important economic reforms in order to move from centrally planned economic system to market economy. Some of them are as follows (Duman & Samadov, 2003):

- Left prices free
- Partial abolishment of trade constrains and supports
- Achievement of financial balance
- Open economy
- Privatisation and abolishment of state economic organisations

Between 1992 and 1996, privatisation of small and medium sized state organisations was achieved. In the first stage of the privatisation process, in the period 1992-1995, SMEs in the sectors of industry, service and agriculture were sold to private entrepreneurs, but in second stage (in 1996) big enterprises under control of the state were sold to banks in order to pay credits gotten by government to reduce budget deficit. In the third stage (in 1997), enterprises under control of the state were privatised after some pre working states. Generally it can be

said that most of the enterprises in the sectors of construction, agriculture, food industry, etc were privatised (Duman & Samadov, 2003).

According to results of the year 2012, Russia had the highest economic growth ratio with 3.4% within the Group of Eight. In the reports of comparative economic performance with foreign countries published by Russian State Statistical Organisation, Russia is the leader point of view increase in consumer price with 6.6%. Within the Group of Eight, except for Russia, USA and Japan achieved the highest economic growth with 2.2% and 1.9%, respectively. In 2011, the highest unemployment ratios were 11.2% in Italy and 10.6% in France. The figures were 7.8% in England and USA, 7.1% in Canada, 5.3% in Germany, and 4.2% in Japan (Rusya'nın sesi radyosu, 2013a).

3   Russia-Turkey Tourism Sector

Tourism has an important role in economic relations between Turkey and Russia. After the crisis of 1998 the number of Russian tourists visiting Turkey has experienced a significant decline. However, the number of Russian tourists visiting Turkey has started to rise again as parallel to start of the recovery in the Russian economy and overcoming effects of the economic crisis (Dış Ekonomik İlişkiler Kurulu, 2005). According to data of the Russian Federal Tourism Agency (Rosturizm), 47.813 million Russian citizens went abroad in 2012 and the number of those who went abroad for touristic purposes was 15.332 million (Turizm Güncel, 2013). Turkey is the most preferred country by citizens of Russia. Tourist flow from Russia to Turkey is increasing year by year. It is a fact that 2008 global crisis had very little effect on Turkey's tourism sector. Even there was an increase in the number of tourist arrivals from Lebanon, Kazakhstan and Russia to Turkey. Especially Russian tourists prefer Antalya and Belek resorts located on the Mediterranean coast of Turkey (Hürriyet Daily News, 2012). Therefore, Rostourizm decided to open first abroad agency in Turkey in 2014. About 3.6 million Russian visitors went to Turkey in 2012. This means 3.8% increase compared to 2011 (Rusya'nın sesi radyosu, 2013b). Russian government has made substantial investments in introducing Russian tourist products in Turkey. The competent authority in the implementation of these investments was determined as Rosturizm. Advantages of the tourism activity in Russia are introduced Turkish people through brochures and advertising films. The purpose of this activity is to provide Turkish tourists visit Russia more intensive manner. Today tourism potential of Russia consist of 12 thousand hotels, 477 historical settlement units, more than 144 thousand historical and cultural monuments, 108 unit park-museums and 142 national parks. Number of active mountain sports centers is 150 (Rusya'nın sesi radyosu, 2013b). Turkey, Egypt, and China are three top tourism destinations in Turkey. In 2012 the biggest jump in the number of Russian tourist and Russian tourism market was experienced by Tunisia. Other countries attracting tourists from Russia are Germany, Greece, Italy, Finland, Thailand and Spain (Turizm Güncel, 2013).

The number of tourists visiting Russia in 2012 was 2.570 million with 10% increase. The most tourists come from Germany. The number of tourists visiting Russia from the top five countries were 375 thousand from Germany, 136 thousand from England, 101 thousand from Turkey, 100 thousand from France and 86 thousand from Israel in 2012 (Graph 1) (Rusya'nın sesi radyosu, 2013c).
Graph 1: *Ratios of First Five Countries Sending Tourists to Russia in 2012*

4 Analysis of Effect of Economic Growth in Russia on Turkey's Tourism Sector

The study analyses whether GDP increase in Russia has increased number of Russian tourists visiting Turkey. Due to finding data (GDP in Russia and number of Russian tourists visiting Turkey) easily and more, the year 2001-2011 was determined analysis period. In regression analysis, number of Russian tourists visiting Turkey was used dependent variable, GDP in Russia as independent variable. Results of regression analysis were given in Table 1.

Variable	Coefficient	Std. Error	t-Statistic	Prob.
C	449943.2	132603.7	3.393142	0.0080
GDP	1.65E-06	1.18E-07	13.99888	0.0000
R-squared	0.956091			
F-statistic	195.9687			
Prob (F-statistic)	0.000000			

Table 1: Results of Regression Analysis

R-squared is 95%. F statistics was found as 0,00000. Parameters of C constant and GDP in Russia were statistically significant (0,05 significant level). Prob. values of C constant and GDP in Russia were 0,0080 and 0,0000, respectively.

According to regression analysis, there is no effect of GDP increase in Russia on number of Russian tourists visiting Turkey because GDP value is 1.65E-06. This result shows that one unit increase in GDP of Russia leads to zero unit increase in the number of Russian tourists visiting Turkey. This result is expected because most of the Russian tourists visiting Turkey have medium income level. They prefer Turkey due to cheap holiday opportunity (everything inclusive system), closer to Russia and qualitative service. Russian tourists having high income level travel to Far East Countries for holiday.

5 Conclusion

Tourism is all the works done to attract people in order to rest, fun, know each other and a country. Tourism helps people realise beauties in both other countries and outside the region they live in their own countries. Tourists contribute to local people's budget financially as a result of seeing different cultural values, natural beauties, and authentic places. For this reason, Turkey as all countries give importance to tourism sector point of view foreign exchange.

Many people from different countries come to Turkey as tourist every year. Russian Federation is one of the countries sending more tourists to Turkey. Today, tourism is one of the most important economic sectors in the context of Russia-Turkey relations. Contribution of Turkish tourism firms activating in Moscow is very important in this development.

Exchange rate adjustment after financial crisis in Russia in 1998 decreased income level of Russian people. Therefore number of Russian tourist travelling to Turkey decreased at important level. As starting 2005, negative effects of 1998 financial crisis in Russia decreased. This resulted in increase in number of Russian tourists travelling to Turkey again.

As a result of exchange regulation after financial crises in 2001, cost of holiday in Turkey decreased and Turkey became a cheap/suitable holiday country for Russian tourists. Therefore, in 2005 Russian Federation followed Germany point of view number of tourists visiting Turkey.

According to results of regression analyses, economic growth achieved in Russian Federation in the period 2001-2011 has no effect on number of Russian tourists visiting to Turkey. That is number of tourists coming from Russia to Turkey was not affected by one unit increase in GDP of Russia. Number of tourists coming from Russia to Turkey could be increased if following recommendations were taken into practice:

- Collective tour packages should be organised towards different regions in the world.
- Cooperation among firms engaged in tourism sectors in both countries should be developed.
- Cost of holiday in Turkey should be decreased in order to attract Russian tourists or vice versa.
- Tourism enterprises should be supported via tax reduction to present more qualitative service.
- Tourism Year Activities should be organised effectively in Russia and Turkey.
- Tourism centres in Turkey should be introduced in Russia via advertisement on TV channels, newspaper, internet, social media, fair, etc.

Investigating Existence of Tourism-Led Growth Hypothesis in Cental Asian Republics: A Bootstrap Panel Causality Analysis

Prof. Dr. Ekrem Erdem (Erciyes University, Turkey)
Asst. Prof. Dr. Can Tansel Tuğcu (Nevşehir University, Turkey)

Abstract

The contribution of tourism to economic growth can be analyzed under the hypothesis of tourism-led growth. In this sense, this study aims at investigating the existence of the tourism-led growth hypothesis in the Turkic republics for the period 1995-2011. To this end, a bootstrap panel Granger causality analysis which was recently developed by Konya (2006) was employed. Results showed that, in a panel context, the tourism-led growth hypothesis is valid for the Turkic republics. However, the validity of this hypothesis is country specific.

1 Introduction

Tourism is a sector whichsupplies foreign exchange that can be used for importing capital goods for production, leading in turn to economic growth. In addition, this sector also causes convergence across countries by transferring income from developed nations to developing ones. Thus, the tourism sector can be utilizedby the policy makers either for increasing economic growth performance or reducing welfare inequalities.

The contribution of tourism to economic growth is considered under*the tourism-led growth hypothesis*.According to this hypothesis, tourism can promote or cause long-run growth via its effects on the construction, transportation, accommodation, and food/beverage sectors. *The tourism-led growth hypothesis* is supported, if auni-directional causal relationship existsfrom tourism to economic growth. In this regard, the aim of this study is to test the existence of *the tourism-led growth hypothesis* in the Turkic republics (i.e. Turkey, Azerbaijan, Kazakhstan, Kyrgyz Republic and Uzbekistan)for the period 1995-2011 by employing a bootstrap panel Granger causality analysis developed by Kónya (2006).

In 2011, total international tourism receipts in the World are 1.3 trillion dollars, and 552.4 billion dollars in Europe and Central Asia. The share of international tourism receipts gained by the Turkic republics to total receipts of the World, and Europe and Central Asia are 2.53% and 5.77% respectively. Besides, the ratio of international tourism receipts to trade balance of the Turkic republics in 1995, 2000, 2005 and 2011 are 57.1%, 131.3%, 214.4% and 953.4% respectively. These statistics show that tourism is so important for the economic structure of the Turkic republics in terms of income generation and financing international trade.

The rest of the paper is organized as follows: The next section reviews the literature and describes novelty. Section 3 presents the data, methodology and results. Finally, Section 4 concludes.

2 Literature Review

It is possible to classify the studies testing *the tourism-led growth hypothesis*under two strands. The first strand is composed of the studieswhich investigate the existence of *the tourism-led growth hypothesis*by employing Granger causality test with time series data. Among these studies, Balaguer and Cantavella-Jorda (2002), Durbarry (2002), Dritsakis (2004), Gunduz and Hatemi-J (2005), Kim et al. (2006), Lee and Chien (2008), Brida et al. (2008), Chen and Chiou-Wei (2009), Akinboade and Braimoh (2010), Belloumi (2010), Tang and Abosedra (2012), Tang and Tan (2013) support the existence of *the tourism-led growth hypothesis*; whereas Oh (2005), Tang and Jang (2009), Ozturk and Acaravci (2009), and Payne and Mervar (2010)found no evidence for the validity of*the tourism-led growth hypothesis*.

Po and Huang (2008) state that time series data is not capable of reflecting the long-run relationship between tourism and economic growth in terms of coping with some diagnostic problems that arise from business cycles and structural changes, and capturing countries' characteristics. Thus, the second strand of the literature includes studies which test*the tourism-led growth hypothesis* by using cross-section or panel data. In this sense, Sequeira and Campos (2005), Lee and Chang (2008), Po and Huang (2008), Proenca and Soukiazis (2008), Sequeira and Nunes (2008), Falk (2010), Holzner (2011), and Lee and Brahmasrene (2013) show that there can be confusing results about the existence of *the tourism-led growth hypothesis*that are sensitive to the cross-section units in consideration.

The present study as a complement to the second strand of the literature differs from the previous studies in twoaspects. First, in order to consider the possible cross-sectional dependence and heterogeneity of the sample, the panel causality analysis being employed in this study is a bootstrap panel Granger causality test recently developed by Kónya (2006). The second, to the best of our knowledge, validity of *the tourism-led growth hypothesis*in the Turkic republics has never been analyzed in a panel context before. Thus, the study aims to fulfill this gap and contribute to the empirical literature.

3 Data, Methodology and Results

3.1 Data

Data set includes GDP per capita in current US\$ (GDP) and international tourism receipts in current US\$ (RCPT) for the period 1995-2011 in the Turkic republics in consideration. All the panel series were attained from World Bank, World Development Indicators database.

3.2 Cross-Sectional Dependence

A possible cross-sectional dependency problem in a panel analysis generally causes inconsistent and upward-biased estimation results(Bai and Kao, 2006). Thus, it should be tested before the analysis.

This study adopts the Pesaran (2004) methodology in order to investigate the existence of the cross-sectional dependency. Pesaran (2004)proposed a cross-sectional dependency (CD) test, under the null of no cross-sectional dependence, which is asymptotically distributed as standard normal and efficient even in the panels with small sample size. This test statistic can be written in the following manner:

$$CD = \sqrt{\frac{2T}{N(N-1)} \left(\sum_{i=1}^{N-1} \sum_{j=i+1}^{N} \hat{p}_{ij} \right)} \tag{1}$$

where T is time interval, N is the number of cross-section units, and $\hat{p}_{ij}$ is pair-wise correlation between cross-sections.

According to test result presented in Table 1, the null hypothesis is accepted even at 1% level of significance, indicating no cross-sectional dependence.

Test	Statistic
CD	3.298 (0.00)

Table 1. *Cross-sectional dependence test result. (Number in parenthesis is p-value)*

3.3 Causality

The possibility of cross-sectional dependency and heterogeneity requires a causality analysis which is capable of considering these diagnostic problems. In this regard, this study employs a bootstrap panel Granger causality analysis developed by Kónya (2006) which gives efficient results even in the panels having the cross-sectional dependency and heterogeneity problems. In the light of *the tourism-led growth hypothesis*, causality analysis is based on a functional relationship which can be simply formulated in the following manner:

$$Economic \ Growth = f(Tourism) \tag{2}$$

where economic growth and tourism are proxied by GDP per capita and international tourism receipts (RCPT), respectively.

The causality analysis is built on a system that contains two sets of equations which are presented below (Kónya, 2006: 981):

$$y_{1,t} = \alpha_{1,1} + \sum_{l=1}^{mly_1} \beta_{1,1,l} y_{1,t-1} + \sum_{l=1}^{mlx_1} \gamma_{1,1,l} x_{1,t-1} + \varepsilon_{1,1,t}$$

$$y_{2,t} = \alpha_{1,2} + \sum_{l=1}^{mly_1} \beta_{1,2,l} y_{2,t-1} + \sum_{l=1}^{mlx_1} \gamma_{1,2,l} x_{2,t-1} + \varepsilon_{1,2,t} \tag{3}$$

$$\vdots$$

$$y_{N,t} = \alpha_{1,N} + \sum_{l=1}^{mly_1} \beta_{1,N,l} y_{N,t-1} + \sum_{l=1}^{mlx_1} \gamma_{1,N,l} x_{N,t-1} + \varepsilon_{1,N,t}$$

and

$$x_{1,t} = \alpha_{2,1} + \sum_{l=1}^{mly_2} \beta_{2,1,l} y_{1,t-1} + \sum_{l=1}^{mlx_2} \gamma_{2,1,l} x_{1,t-1} + \varepsilon_{2,1,t}$$

$$x_{2,t} = \alpha_{2,2} + \sum_{l=1}^{mly_2} \beta_{2,2,l} y_{2,t-1} + \sum_{l=1}^{mlx_2} \gamma_{2,2,l} x_{2,t-1} + \varepsilon_{2,2,t} \tag{4}$$

$\vdots$

$$x_{N,t} = \alpha_{2,N} + \sum_{l=1}^{mly_2} \beta_{2,N,l} y_{N,t-1} + \sum_{l=1}^{mlx_2} \gamma_{2,N,l} x_{N,t-1} + \varepsilon_{2,N,t}$$

where y is real income, x is international tourism receipts, N is the number of cross-section units, t is time interval and l is the lag length. According to Kónya (2006: 981), this specification has two distinctive features. Firstly, each equation in (3), and also in (4), has different predetermined variables. The only possible link among individual regressions is contemporaneous correlation within the systems. Hence, these sets of equations are SUR systems. Secondly, since country specific bootstrap critical values are used, y_t and x_t are not supposed to be stationary, they denote the levels of economic growth and tourism, irrespectively of the time-series properties of these variables.

In terms of mentioned SUR systems, in country i there is one-way Granger causality running from x to y if in (3) not all $\gamma_{1,i}$'s are zero but in (4) all $\beta_{2,i}$'s are zero, there is one-way Granger causality from y to x if in (3) all $\gamma_{1,i}$'s are zero but in (4) not all $\beta_{2,i}$'s are zero, there is two-way Granger causality between y and x if neither all $\beta_{2,i}$'s nor all $\gamma_{1,i}$'s are zero, and there is no Granger causality between y and x if all $\beta_{2,i}$'s and $\gamma_{1,i}$'s are zero (Kónya, 2006: 981).

Konya (2006) states that, since the causality test results rely critically on the lag structure, one should determine the optimal lag length. However, there is no simple rule for this purpose. Thus, as offered by Kónya (2006: 982), the present study allows different maximal lags for y and x, but do not allow them to vary across countries. This means that altogether there are four maximal lag parameters. Assuming that their range is 1–4, Eq. (3) and (4) were estimated for each possible pair of ly_1, lx_1 and ly_2, lx_2, respectively, and the combinations which minimize the Akaike Information Criterion (AIC) were chosen.

Table 2 shows the panel causality test results. Accordingly, there exists a uni-directional and/or bi-directional causal relationships between tourism and economic growth in some of the Turkic republics. This means that, although the existence of *the tourism-led growth hypothesis* is proved in a panel context, it is country specific.

Cross-Section Units	Null hypotheses			
	H_0: RCPT does not cause EG		H_0: EG does not cause RCPT	
	Wald	*Decision*	*Wald*	*Decision*
Turkey	*11.622	Reject	1.800	Accept
Azerbaijan	**5.358	Reject	*11.528	Reject
Kazakhstan	**4.339	Reject	*9.612	Reject
Kyrgyz Republic	**5.227	Reject	1.550	Accept
Uzbekistan	2.478	Accept	1.395	Accept

***Table 2.** Panel causality test results.   *, **, and *** indicate rejection of the null hypothesis at the 1, 5, and 10 percent levels of significance, respectively.*

4   Conclusion

This study investigates the existence of *the tourism-led growth hypothesis* in the Turkic republics by using annual panel data covering the period 1995-2011. *The tourism-led growth hypothesis* was tested by a bootstrap panel Granger causality analysis developed by Kónya (2006).

Although findings support evidence for the existence of *the tourism-led growth hypothesis*, it is clearly seen that the direction of causality between tourism and economic growth is found to be country specific. This result is consistent with Sequeira and Campos (2005), Lee and Chang (2008), Po and Huang (2008), Proenca and Soukiazis (2008), Sequeira and Nunes (2008), Falk (2010), Holzner (2011), and Lee and Brahmasrene (2013) who state that the validity of *the tourism-led growth hypothesis* is sensitive to the cross-section units in consideration.

Finally, the panel causality test results imply that investing in tourism contributes to economic growth performance of the sample in consideration. In this sense, policy makers should implement policies that subsidize tourism in order to benefit its impact on income growth.

The Effects of Destination Personality Items on Destination Brand Image

Ph.D. Candidate Çiğdem Unurlu (Trakya University, Turkey)
Asst. Prof. Dr. Selin Küçükkancabaş (Trakya University, Turkey)

Abstract

The purpose of this research is to investigate the perceived destination brand personality of Istanbul and to examine the relationships among destination brand personality and destination brand image. A convenience sample of 200 visitors to Istanbul was surveyedvia face-to-face interviews. Initially, a series of exploratory factor analyses (EFA) were conducted for each measurement scales (brand personality and destination brand image) in order to identify the potential underlying factor structure of the data. Then multiple regression analysis was used to investigate the relationship between variables using PASW 18. The findings of this study indicate that destination brand personality has a positive impact on destination brand image. However, the results are not fully represent all personality traits associated with tourism destinations.While four dimensions of the destination brand personality scales (vibrancy, competence, contemporary and sincerity) are found to be significantly related to the destination brand image, sophistication dimension is not significant in predicting destination brand image.

1   Introduction

It is generally accepted that a brand is a powerful means of differentiation, and that differentiation is a significant competitive marketing strategy (Boo et. al., 2009: 221).Ever since the brand literature commenced in the 1940s, there has been consistent recognition that branding offers organisations a means for differentiation in markets crowded with similar offerings. For destinations, effective differentiation is critical given the increasingly competitive nature of tourism markets, where many places offering similar features are becoming substitutable (Pike, 2009: 861). A tourism destination can also be seen as a product or perceived as a brand since it consists of a bundle of tangible and intangible attributes. Destination branding has become a popular and powerful marketing tool because of increasing competition, product similarity, and substitutability in tourism markets (Uşaklı and Baloğlu, 2011: 117).

As the tourism marketplace is becoming more highly competitive, destination marketers are adopting branding techniques to craft an identity which focuses on the uniqueness of their products, namely destinations. Similar to those marketing consumer products, destination marketers have had to turn to branding to distinguish their destinations to convey a positive message that will motivate tourists to visit them. However, evidence to support the successful implementation of destination branding is mixed. A combination of destination image and destination personality has thus been used as a strategy by destination marketers to differentiate their brands from other competing ones (Chen and Phou, 2013:271).

At the theoretical level, brand image has been defined in terms of brand personality and in some cases, the terms brand image and brand personality have been used interchangeably to gauge consumer perceptions of brands. Past studies have attempted to provide some explanations to the brand image–brand personality relationship debate, but most discussions have remained only theoretical (Hosany et. al., 2006: 640).

2   Destination Personality

Personality is viewed as one part of a person's self-concept. In order to grasp the attributes and associations linked to a brand, the concept of brand personality can be employed (Nicola and Sauer, 2011: 1283). In theoretical terms, product/brand personality reflects the "set of human characteristics associated with a brand". It evokes emotional links between brands and consumers, and gives the latter a tangible reference point, which is vivid, alive, and more complete than the sense conveyed by a generic offering. At the practical level, brands can be characterized by personality descriptors, such as youthful, energetic, extrovert, or sophisticated. For example, one may use the word masculine to describe Marlboro cigarettes,rugged to describe Levi's jeans, feminine to describe Chanel perfumes, and intelligent to describe IBM computers. Similarly, destinations can be described 6using human personality traits, such as Europe is traditional and sophisticated; Walesis honest, welcoming, romantic, down to earth; Spain is friendly and family oriented; London is open-minded, unorthodox, vibrant, creative; Paris is romantic. Accordingly, in this paper, destination personality is defined as: "the set of human characteristics associated with a destination" as perceived from a tourist rather than a local resident viewpoint (Ekinci and Hosany, 2006:128).

Destination image and destination personality are different but related concepts, with both being cognitive constructs. Destination image involves subjective knowledge of a destination (i.e., whether it is expensive, exotic, urban, cold, or developed), while destination personality refers to brand personality in the tourism

context, and uses human personality traits to describe a destination (e.g., whether it is original, interesting, exciting, or friendly) (Chen and Phou, 2013: 272).

Destination brand personality scale developed by Uşaklı and Baloğlu (2011: 119) consisted of five dimensions namely (1) vibrancy, (2) sophisticated, (3) competence, (4) contemporary, (5) sincerity in this study.

3   Destination Brand Image

Studies on destination image began in the early 1970s, when Hunt's influential work examined the role of image in tourism development. Since then, destination image has become one of the dominant areas of tourism research (Hosany et. al., 2006: 641).

The image of a destination is a key concept related to understanding tourists' destination selection processes. Destination image can be facilitated by the strengths of a destination in the eyes of potential visitors. Many studies have defined tourism image as an individual's overall perception of a destination and it has been identified as an important element in travel decision-making. Destination image is a key determinant influencing tourists' attitudes toward the destination (Veasna et. al., 2013: 513).

Brand image has been considered as the reasoned or emotional perceptions consumers attach to specific brands. Brand image has also been identified as an important source of brand equity. Blain et al. suggested that destination image should be included in the definition of destination brands (Boo et. al., 2009: 222).

Brand image plays a significant role in building brand identity, whereas brand image is also a reflection of brand identity, that is, consumers build a destination image in their minds based on the brand identity projected by the destination marketers. Then, destination marketers establish and enhance brand identity based on their knowledge about consumer's brand image on the particular destination (Qu et. al., 2011: 466).

4   The Relationship Between Destination Brand Image and Destination Brand Personality

Brand image and brand personality are key components of brand loyalty and brand positioning (Plummer, 1985). Patterson's review of the branding literature identified 27 definitions of brand image and 12 definitions of brand personality. In some instances, brand image has beendefined in terms of brand personality. The terms brand image and brand personality have also been used interchangeably in the literature (Hosany, Ekinci and Uysal, 2006). Patterson (1999)concluded that most studies fail to distinguish between theconcepts of brand image, brand personality, brand identity anduser image. Kapferer (1997) argues that personality and self-image are antecedents of brand identity. Aaker and Biel (1993) views brand image as a cluster of attributes and associations that a consumer attach to a brand, and brand personality is perceived as the emotional side of brand image. An emergent research strand (Hosany *et.al.*, 2006, 2007; Ekinci & Hosany, 2006; Murphy *et al.*, 2007) has established that the two constructs are distinct,but related concepts, and that an attractive destination personality can effectively leverage the perceived image of a place and thereby influences tourist choice behavior. Since the relationship between brand personality and brand image need further research in order to extend the theoretical link between them the aim of this study is to explore variations in brand perceptions in a different destination namely Istanbul.

5   Research Model

Based on the literature review a model on destination brand image is proposed. In this model there are five categories of brand personlity, namely vibrancy, sophistication, competence, contemporary and sincerity. Model predicts that brand personlatiy dimanesions are expected to determine destination brand image. The following hypotheses are developed based on the literature and proposed model.

H_1: Vibrancy is positively related to destination brand image

H_2: Sophistication is positively related to destination brand image

H_3: Competence is positively related to destination brand image

H_4: Contemporary is positively related to destination brand image

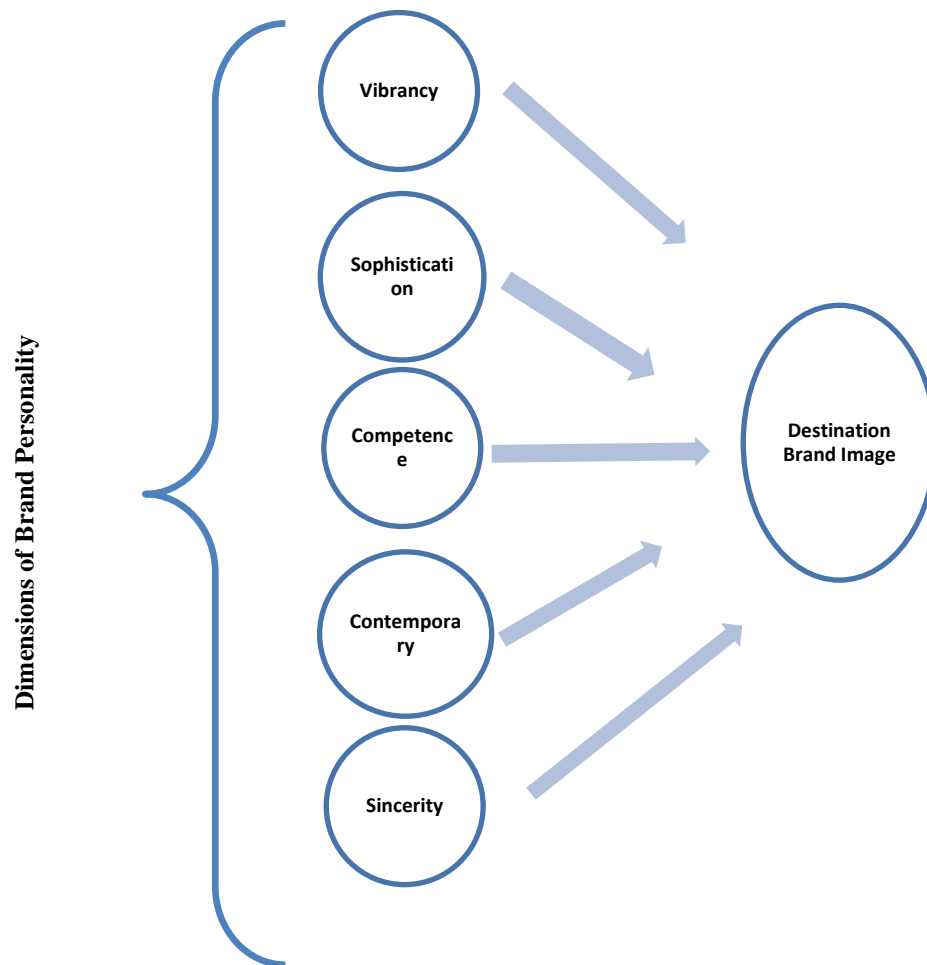
H_5: Sincerity is positively related to destination brand image


Figure 1: *Research Model*

6 Methodology

This article documents a study of the dimensions of destination brand personality associated with destination brand image. In particular, the research objective is to examine empirically and investigate variations in destination brand image which may be related to destination brand personality.

In order to explore the relationship between destination personality items and destination brand image, descriptive research design was adopted and conducted. Multiple items adopted from Uşaklı and Baloglu (2011) and Boo et all (2009) scales were used to compile the measurement instrument fort his study. Destination brand image was measured using by Boo et. al. (2009)'s four items destination brand image scale.Destination personality was measured using Uşaklı and Baloğlu's destination personality scale which is adapted from Aaker's (1997) five dimensional BPS. The BPS is the most comprehensive instrument for measuring brand/product personality and numerous studies (Siguaw et al., 1999) adopt this scale to capture consumers' perception of brand personality. The multidimensional operationalisation of destination personality items allowed the testing of the relationship between the items of destination personality and destination brand image. The questionnaire items were scored on a 5 point Likert scale, ranging from "strongly disagree" to "strongly agree". Destination brand personality comprimised five dimensions and included 24 items in total. Destination brand image included 4 items.

The data were collected via face-to-face interviews with multiple informants (tourists in Istanbul). To participate in the survey, respondents were approached randomly around touristic places of Istanbul. In general, respondents were responsive and willing to participate, and refusal rates were predominantly low (around 20 percent). A total of 200 usable questionnaires were obtained.A total of 51 percent of the sample is female, the mean age of the sample is less than 29 years, respondents are highly educated (47 per cent holding university degrees), and mainly earning up to 2000-3000 Turkish Lira a month (25 per cent).

6.1 Exploratory Factor Analysis

A series of exploratory factor analyses (EFA) were conducted for each measurement scales (brand personality and destination brand image) used in this study in order to identify the potential underlying factor structure of the data. Factor analyses were conducted without constraining factor which means based on factor's eigenvalue that represents the variance explained by each factor. In EFA 1 (destination personality scale) item loadings less than 0.40 were dropped to enhance reliablity. 8 items were eliminated from destination personality scale. In the first EFA as expected items that loaded higly on the first factor reflected vibrancy, the second factor reflected contemporary, the third factor reflected competence, the fourth factor reflected sincerity and the fifth factor reflected sophistication. A single factor was extracted for destination brand image scale in EFA 2, using an eigenvalue of 1 as the cut-off point (which indicates that the measurement scale used in this study was unidimensional). The Bartlett test of sphericity showed overall significance of the correlation matrix of the 24 items (brand personality) and 4 itmes (destination brand image), indicating the appropriateness for factor analyses. In addition, Kaiser-Meyer-Olkin Measure of Sampling Adequacy was 0.83 for EFA 1 and .79 for EFA 2, confirming the appropriateness for factor analyses.

The reliability of each scale was examined using Cronbach's coefficient alpha which is the most widely used measure for internal consistency in cross-sectional studies (Netemeyer, Bearden, and Sharma, 2003). Cronbach's alpha coefficients are all higher than .40 (ranging from X to Y) indicating good internal consistency for each factor.

6.2 Test of Hypotheses

Multiple regression analysis is used to investigate the relationship between the dependent variable (brand destination image) and the five independent variables (brand personaltiy) (Cohen et al., 2003). The overall model using simultaneous estimation showed statistical significance ($p<0.05$), indicating acceptable model fit. The beta coefficient is used to assess each independent variable's relative explanatory power on the dependent variable. The results of multiple regression analysis, including the standardized beta coefficients and the coefficient of determination, are tabulated in Table 1 and Table 2.

Multicollinearity is assessed by the variance inflation factor (VIF) value of each independent variable. As shown in Table 2 each of the independent variables have a variance inflation factor value far less than the suggested threshold of 10, and thus, each one have sufficient variability not explained by the others (Mason and Perreault, 1991; Cohen et al., 2003).

Model	Sum of Squares	df	Mean Square	F	Sig.
Regression	51.460	5	10.292	22.017	.000[a]
Residuals	90.689	194	.467		
Total	142.149	199			

a. Predictors: (Constant), sincerity, competence, vibrancy, contemporary, sophistication,
b. Dependent Variable: destimage

Table 1. Multiple regression analysis results – analysis of variance[b]

Standardized Coefficients	Beta	t	Significance	VIF
Vibrancy	.129	1,988	,048	1.27
Sophistication	.071	,946	,345	1.73
Competence	.208	2,917	,004	1.55
Contemporary	.139	1,957	,052	1.54
Sincerity	.270	3,960	,000	1.41

Table 2. Multiple regression analysis results – independent variables

The brand personality antecedents jointly established an explanatory power (R^2) of 36,2 percent for the variance in tourists' evaluation of destination brand image. Results showed that sincerity (β=0.27, $p<0.05$), competence (β=0.20, $p<0.05$), contemporary (β=0.13, $p<0.05$) and vibrancy (β=−0.12, $p<0.05$). have positive effects on destination brand image, respectively. Therefore, *H1, H3, H4, H5* are all supported. However, the non-significant beta coefficient indicated that sophistication does not always have a "true" impact on destination brand image. Thus *H2* is not supported.

7 Conclusion

The purpose of this study is to investigate the perceived destination personality of Istanbul and to empirically examine the relationships among destination brand personality and destination brand image. The results of the present study make important theoretical and practical contributions to the underdstanding of destination brand personality and destination brand image in the context of tourism destinations.

The findings of this study indicate that destination brand personality has a positive impact on destination brand image, consistent with previous research (Uşaklı and Baloğlu, 2011; Ekinci, Hosany and Uysal, 2006). However, the results are not fully represent all personality traits associated with tourism destinations. The four dimensions of the destination brand personality scales (vibrancy, competence, contemporary and sincerity) are significantly related to the destination brand image. Only the sophisticaiton dimension is not significant in predicting destination brand image.

From a practical standpoint, the findings of the study provide important implications for destination marketers. Today, destinations are faced with increasingly tough competititon than they ever faced before. The findings of this study provide evidence that four dimensions of destination brand personality (vibrancy, competence, contemporary, sincerity) are crucial understanding the complex nature of traveller perception who visited Istanbul. Thus, destination marketers should focus on developing marketing strategies that emphasize the distinctive personality items of their destinations.

The study has also specific practical implications for the destination marketer of Istanbul. Although all the four personality dimensions of Istanbul are found to be significant predictors of destination brand image, the vibrancy is found to be the most influential personality dimension affecting Istanbul's destination brand image. The second and third most influential dimensions on destination brand image are competence and contemporary respectively. The destination marketers of Istanbul should concetrate more on these three dimensions (competence, contemporary and sincerity) in their marketing efforts.

An additional practical implication is that tourist who experience a match between how they see the destination and themself or how they would like to see themselves are more likely to have favorable attitudes toward those destination, resulting in more favorable destination brand image of Istanbul. Therefore, destination marketers should concetrate on developing promotional campaings that emphasize the distinctive personality of tourism destination based on destination brand image. Destination marketers should also capitalize on these findings, be devising an appropriate branding strategy that encompasses these four components in order to create a favourable desination brand image.

Although this study makes important theoritical cantributions to the understanding of the relationship between destination brand personality and destination brand image, it entails several limitations and must be acknowledged. Destination personality is measured using the BPS originally developed for consumer goods. As such, the personality traits used in this study may not fully reflect all the personality characteristics of destination. Furthermore, the sample size is small, and so the findings cannot be generalized to the wider tourist population and to other destinations. Further studies should investigate the nature of this relationship using different destinations across different countries.

The Relationships between Destination Brand Image, Destination Brand Loyalty and Word of Mouth Behaviour

Ph.D. Candidate Çiğdem Unurlu (Trakya University, Turkey)
Prof. Dr. Ayşe Akyol (Trakya University, Turkey)
Assoc. Prof. Dr. Dilek Altaş (Marmara University, Turkey)

Abstract

This article documents a study and model of the destination brand image, destination brand loyalty and word-of-mouth behaviour (WOM). Therefore, the literature review consists of three parts namely destination brand image, destination brand loyalty and word-of-mouth behaviour. Destination brand image can be defined as the reasoned perceptions consumers attach to specific brands. Destination brand loyalty can be defined as the main source of customer-based brand equity. Brand loyalty was defined as the attachment a customer has to a brand. Lassar et. al. noted that brand equity stems from the grater confidence that consumers place in a brand than they do in its competitors. This confidence translates into consumers' loyalty and their willingness to pay a premium price for the brand. Word of mouth behaviour can be defined as informal communications directed at other consumers about the ownership or characteristic of particular goods and services and/or their sellers. In order to explore the relationship between destination brand image, destination brand loyalty and word-of-mouth behaviour, a two phase research design (exploratory and descriptive) was adopted and conducted. This study was based on the measures of Boo et all (2009), and Kim et all (2011) because their instruments had been developed, tested, refined and yielded reliable results. The questionnaire items were scored on a 5 point Likert scale, ranging from "strongly disagree" to "strongly agree". A cross sectional design was used for the data collection. Data is analysed by using SPSS.

1 Introduction

The evaluation of destination image has been the subject of much attention in social science literature. Previous studies showed that destination image will influence tourists in the process of choosing a destination, the subsequent evaluation of the trip and in their future intentions. Furthermore, past research across fields has emphasized the importance of understanding the forces, which influence image development. Goodall noted that knowing the factors influencing image would help identify target markets (Jalilvand et. al., 2012:137). Gitelson and Crompton notes that numerous attractions and destination areas, such as beaches or resorts, are heavily reliant on repeat visitation. Petrick finds that loyal visitors were more likely to return in the future, spread positive word of mouth, and hence offer a lower risk and more profitable target market. Thus, many destinations have adopted a business strategy focused on encouraging tourists to become repeat visitors (Liu et. al., 2012: 119).

2 Destination Brand Image

The concept of "image" that has been studied for several decades in such disciplines as social and environmental psychology, marketing, and consumer behavior, was introduced into tourism studies in the early 1970s by Hunt, Mayo, and Gunn and has since become one of the most researched topics in the field (Stepchenkova and Morrison, 2008: 549).

Brand image has been considered as the reasoned or emotional perceptions consumers attach to specific brands (Boo et. al., 2009: 221). Destination image is defined as an individual's overall perception or the total set of impressions of a place. It is regarded as the mental portrayal of a destination. A destination's image can be developed based on the estimation or understanding of a region's characteristics (Jalilvand et. al., 2012: 138).

Destination image in tourism research is an overall representation of beliefs, ideas, and impressions of a travel destination (Lee and Locshin, 2011: 11). Destination image can be defined as the expression of all knowledge, impressions, prejudices and emotional thoughts an individual or group has of a particular object or place (Sun et. al., 2013: 13).

Destination image is associated with a subjective interpretation of tourists' feelings and beliefs toward a specific destination. Destination image is a key determinant influencing tourists' attitudes toward the destination (Veasna et. al., 2013: 513).

Destination brand image was measured using by Boo et. al. (2009: 233)'s four items destination brand image scale anchored with strongly disagree (1) and strongly agree (5).

3 Destination Brand Loyalty

Even though the examination of loyalty started in 1923 with Copeland's study of "brand insistence" it is still one of the most frequently examined topics. The concept of brand loyalty has been recognized as a major driving force and one of the most important indicators of success in the marketing and tourism literature (Sun et. al., 2013: 3). Consumer loyalty is defined as the commitment to re-buy a product or service in the future. Scholars have incorporated loyalty into their analyses of tourism/leisure products, destinations (Lee and Shen, 2013: 77).

The concept of brand loyalty has been recognized as a major driving force and one of the most important indicators of success in the marketing and tourism literature. As suggested by Assael, "success depends not on the first purchase but on repurchase. It is unlikely that any brand can survive over time without some degree of loyalty" (Sun et. al., 2013: 3). Brand loyalty is defined as "a deeply held predisposition to re-patronize a preferred brand or service consistently in the future, causing repetitive same brand purchasing, despite situational influences and marketing efforts having the potential to cause switching behavior". Aaker views loyalty as "the attachment that a customer has to a brand" (Pike and Bianchi, 2011: 3).

Repeat purchases or recommendations to other people are most usually referred to as consumer loyalty in the marketing literature. The concept and degree of loyalty is one of the critical indicators used to measure the success of marketing strategy (Yoon and Uysal, 2005: 48).

This study limited brand loyalty to the attitudinal and behavioral elements and proposes a significant relationship between brand value and brand loyalty. Destination brand loyalty was measured using by Boo et. al. (2011)'s four items destination brand loyalty scale anchored with strongly disagree (1) and strongly agree (5).

4 Word-of-Mouth Behaviour

Word of mouth (WOM) is informal advice passed between consumers. It is usually interactive, swift, and lacking in commercial bias. WOM is a powerful influence on consumer behavior (East et. al., 2008: 216). Word-of-mouth communications have received extensive attention from both academics and practitioners for decades. Since the early 1950s, researchers have demonstrated that personal conversations and informal exchange of information among acquaintances not only influence consumers' choices and purchase decisions, but also shape consumer expectations, pre-usage attitudes, and even post-usage perceptions of a product or service. Some research has reported WOM influence as greater than print ads, personal selling, and radio advertising (Bruyn and Lilien, 2008: 152).

In marketing, word of mouth (WOM) is normally used to describe advice from other consumers. The interactivity, speed, and lack of commercial bias of WOM make it a very effective source of information about prospective consumer choices, particularly with regard to services for which pre-purchase experience may be limited (East et. al., 2007: 176).

Word-of-mouth behaviour was measured using by Kim et. al. (2011)'s three items positive word-of-mouth scale anchored with strongly disagree (1) and strongly agree (5).

5 Methodology

This article documents a study of the destination brand image and destination brand loyalty associated with word of mouth behaviour. In particular, the research objective is to examine empirically and investigate variations in word-of-mouth behaviour which may be related to destination brand image and destination brand loyalty.

In order to explore the relationship between destination brand image, destination brand loyalty and word-of-mouth behaviour, a two phase research design (exploratory and descriptive) was adopted and conducted. To be able to explore the link between destination brand image, destination brand loyalty and word-of-mouth behaviour three measurement instruments were utilised. The questionnaire items were scored on a 5 point Likert scale, ranging from "strongly disagree" to "strongly agree". A cross sectional design was used for the data collection. Data was analysed by using SPSS.

6 Research Model

The research objective is to examine empirically and investigate variations in word-of-mouth behaviour which may be related to destination brand image and destination brand loyalty. Therefore, this study was based on the measures of Boo et. al. (2009), and Kim et. al. (2011) because their instruments had been developed, tested, refined and yielded reliable results.

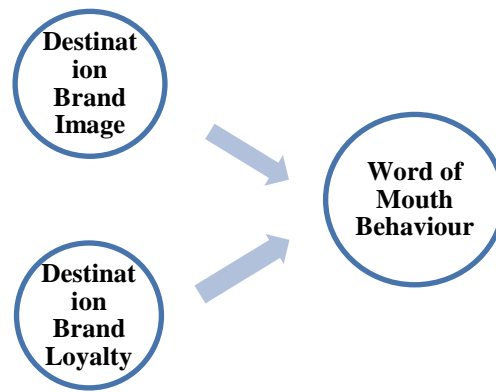
These independant and dependant variables can be seen in the below figure.


Figure 1: Research Model

Destination brand image included 4 items. Destination brand loyalty included 4 items and word-of-mouth behaviour comprimised 3 items. There were 11 items in total.

H_1 The destination brand image and destination brand loyalty are positively related to word of mouth behaviour.

7   Analysis

The Multiple Regression Analysis was performed in order to examine the relationship between destination brand image, destination brand loyalty and WOM behaviour.

Main assumptions of Multiple Regression Analysis as error term normality, autocorrelation and multicollinearity was checked before the analysis. Error-term normality was checked by Kolmogorov-Smirnov. Error-term distributed normally (sig.=0,259).

Autocorrelation was checked by Durbin-Watson test. Durbin-Watson (D-W)=1,979. Since it is close to 2, it can be considered that there is no autocorrelation in model. Multicollinearity was checked by VIF. Since the VIF values are less than 5, it can be considered that there is no multicollinearity between the independent variables.

The Multiple Regression Analysis results are below:

| Model | R | R Square | Adjusted R Square | Std. Error of the Estimate | Change Statistics | | | | | Durbin-Watson |
					R Square Change	F Change	df1	df2	Sig. F Change	
1	,697[a]	,486	,481	1,83364	,486	93,052	2	197	,000	1,979

a. Predictors: (Constant), destination brand loyalty, destination brand image
b. Dependent Variable: wom behaviour

Table 1: Model Summary[b]

The R^2 is 0,486, which means WOM can be explained by %48,6 with destination brand image and destination brand loyalty.

Model		Sum of Squares	Df	Mean Square	F	Sig.
1	Regression	625,722	2	312,861	93,052	,000[a]
	Residual	662,358	197	3,362		
	Total	1288,080	199			

a. Predictors: (Constant), destination brand loyalty, destination brand image
b. Dependent Variable: wom behaviour

Table 2: ANOVA[b]

As can be seen in the above table, Sig. value is 0,00 which shows the model is generally significant.

Model	Unstandardized Coefficients		Standardized Coefficients			95,0% Confidence Interval for B		Correlations			Collinearity Statistics	
	B	Std. Error	Beta	t	Sig.	Lower Bound	Upper Bound	Zero-order	Partial	Part	Tolerance	VIF
1 (Constant)	3,706	,640		5,793	,000	2,444	4,968					
destination brand image	,185	,051	,246	3,592	,000	,083	,286	,584	,248	,184	,558	1,791
destination brand loyalty	,369	,050	,509	7,447	,000	,272	,467	,672	,469	,380	,558	1,791

a. Dependent Variable: WOM Behaviour

Table 3: *Coefficients[a]*

The Multiple Regression Equation is below:

Word of Mouth Behaviour (WOM)= 3,706 + 0,185 Destination Brand Image + 0,369 Destination Brand Loyalty.

This equation shows that 1 unit increase in image will effect 0,185 unit increase in wom; 1 unit increase in loyalty will effect 0,369 unit increase in wom. Also, significancy of coefficients was examined by t-test. As a result of t- test, sig.values are equivalent to zero. Therefore, coefficients are significant.

8   Conclusion

The findings of this study indicate that destination brand image and destination brand loyalty have a positive impact on destination word of mouth behaviour. Therefore, this study has a practical implications for destination and tourism marketers. These managers should try to increase destination brand image and destination brand loyalty to increase word of mouth behaviour.

Although this study makes contributions to the understanding of the relationship between destination brand image, destination brand personality, and word of mouth marketing, it entails several limitations. This presentation is actually a part of a broder research which is in progress. The data is cross sectional in nature. Sample is limited to tourists visited Istanbul, this research will continue using different destinations in Turkey.

An Evaluation of Electronic Commerce in Terms of Accounting Information System in the Global Competitive Environment

Prof. Dr. Naim Ata Atabey (Selçuk University, Turkey)

Ph.D. Candidate Fatma Özlem Yılmaz (Selçuk University, Turkey)

Assoc. Prof. Dr. Baki Yılmaz (Selçuk University, Turkey)

Abstract

The gradually increasing of the competition among the managements that operate in the present-day global competitive environments leads to the speedily and continuously development of the information technologies in the managements. The electronic commerce (e-commerce), which is one of the most dynamic ways of the competition and emerges as a result of the speedily and continuously developments in the information technologies, starts the process of increasing the competition, the flexibility, the quality and the speed among the managements by providing that all sorts of operations, which belong to the commercial activities and interest in both organizations and individuals, are made on the electronic environment. E-commerce makes some changes in the management processes and their operations, and these changes affect on the assets and the sources of the managements, and it causes to incomes and expenses and brings the events and the operations, which had to be explained in the financial tables, into the forefront. E-commerce, therefore, shows itself up as a part of Accounting Information System with its way affecting on the processes and the operations in the managements. E-commerce, in this Study, has been tried to assess by the perspective of Accounting Information System in the global competitive environment.

1 Introduction

By the passing in the information society, the developments in the information and communication technologies have transformed the world into, with the word of McLuhan, *"a big village."* This transformation has encountered the managements, which operate across the world, with the new opportunities, particularly. These opportunities have been affected in the structure of economic activities, especially.

The globalization discussions bring with many economical, political, cultural, and social openings. The most important concept coming to the forefront with these discussions is "the phenomenon of *competition*." *Competition* is the concept that clearly expresses the change in the present day (Sevim, 2009).

The structure of economic activities in the global competitive environment has been changed radically in parallel to the development process of information technologies. This process of change has increased the use of electronic technologies in the birth of information and in its transferring and producing.

At the present day, by the removal of the usages based on the face-to-face and written recording system and of the trade barriers put forward by the concepts of *distance-time*, it leaves its place to the process of the electronic/web-based data processing in increasing gradually. By the effect of technological developments, a great number of serious changes, from the forms of production to the forms of distribution and from the forms of usage to the methods of reaching the customers, are lived in the fields that managements operate. E-commerce, in this process, has come to be the form of a new and great trade channel in the commerce by providing a possibility to the trading (buying and selling) of both many imaginary goods and traditional physical goods, especially with the using of Internet in the international commercial operations. The activities of traditional marketing and customer relations almost in all the sectors at the present day have been rearranged as it will be benefitted from some conveniences like marketing, reaching the information, and decreasing the cost that Internet provides (Seyidoglu, 2000).

The electronic commerce has become a powerful instrument of distribution and trade, increasing progressively in the present times. That the distributional and commercial operations are made in an electronic environment leads to the necessity that the electronic commerce is evaluated with the perspective of accounting by affecting especially on the accounting applications together with other managerial processes.

In our Study, firstly it has been given the general information concerning with the electronic commerce and then evaluated the electronic commerce in terms of Accounting Information System.

2 Electronic Commerce and its Scope

The technological developments lived by the increasing of global competition and the changing of the understanding structure of information system management of managements have forced the managements to be more innovator, more productive, more flexible, and more dynamic, affecting on them considerably. These developments have made the electronic commerce an important instrument of trade by enabling that information,

documents, data, and records, which are necessary for commercial activities, are transferred into an electronic environment and that the operations can be made in this environment.

E-commerce, which can be defined as the purchase and sale of goods and services and realized by a medium of exchange between two sides and emerges as a result of being made by an instrument in an electronic environment, can be described in many ways.

Electronic Commerce (WTO, 1998; Carter, 2002; ETicaret 2009);

- *World Trade Organization (WTO):* "The producing, advertising, selling, and distributing of goods and services by the telecommunication networks."

- *Organization for Economic Cooperation and Development (OECD)*: "All commercial operations, which interest in persons and establishments and base on processing and conveying a written text got numerical, a voice, and an image."

- *United Nations Centre for the Facilitation of Procedures and Practices for Administration, Commerce and Transport (UN-CEFACT)*: "The business information, which is structured and unstructured to be directed the activities of business, management and consumption, is shared on electronic instruments between producers, consumers, public establishments, and other organizations."

- *Wurman and et al.* have defined the electronic commerce as the unity of activities that uses the electronic communication channels in the stock, exchange, advertisement, distribution, and payment of services and products and as a system that the steps of meeting, agreeing, and realizing among the ones concerned are automatized (Wurman and et al., 1998).

- Electronic commerce is the making of producing, advertising, selling, paying, and distributing of the products by computer networks (Schoop, 2005). By the electronic commerce, trading of goods and services, designing of product, producing, marketing, advertising, presenting, ordering, making an agreement, banking operations, fund transferring, engineering services, public acquisition, coining electronic money (imaginary money), (stock) exchange operations, e-notaryship, transferring of intellectual property rights, and renting operations etc. are made (Bozkurt, 2000).

- *The Electronic Commerce Coordination Commission in Turkey* has defined the electronic trade as "the whole of the commercial operations, which bases on the processing, conveying, and keeping of the numerical information in the form of writing, voice, and image in the environments of the open network (Internet) of individuals and establishments or the closed-network that can be reached by a limited number of users and which aims at constituting a value" (ETKK, 1998; Parlakkaya, 2005).

- Electronic commerce is to use systematically the developments in the link networks and communication technology to develop the ways of interaction with suppliers, customers, shareholders, investors, and all the concerned persons and people of a company (Alagoz, 2007).

By the development of the concept of '*electronic commerce'*, computer systems, databases, and various electronic systems have led that the electronic commercial applications have become widespread and that a lot of changes have occurred in these ways by these applications have also contained some cultural, social, and economical fields.

Electronic commerce can be defined as plying a trade with an instrument or as a form of trade in an electronic environment. Any electronic operations resulting commercially are included in the scope of e-commerce. Electronic commerce contains all the activities concerning with the designing, producing, advertising of product, commercial transactions, and the paying on the account by all sorts of computer networks (ETicaret, 2009). Electronic commerce, by its dimension in this point, has a wide scope such the purchasing of goods and services, the instantly distributing of numerical content, the electronic fund transfer, the commerce of electronic share, the electronic bill of lading, the electronic auction, the joint designing and engineering, the instantly presentation from the source, the public acquisitions, the direct marketing to consumer, the services after sale, and the making of payments digitally (Ozbay and Devrim, 2000; Parlakkaya, 2005).

Electronic commerce, in an organizational and individual level, includes the operations related to all commercial activities. All the numerical data produced, processed, and conveyed in this field bases on the processing and conveying of texts, voices, and visual images. Among some important matters in this field, there are protection of consumers; competition; systems of finance and payment; taxation; the intellectual, industrial, and commercial property rights; security; legal regulations; and the mechanism of settling disputes (Canpolat, 2001).

Such every kind of information in electronic commerce is transferred from any place to another place of the world in seconds in an electronic environment is a revolution by itself, it has also a different importance because it has a potential to be able to accelerate other revolutions and to change every dimension of humanity's life fast (Sahin, 2008).

3   Instruments and Models of Electronic Commerce

The instruments, which provide that electronic commerce can be made, can be lined up like this:

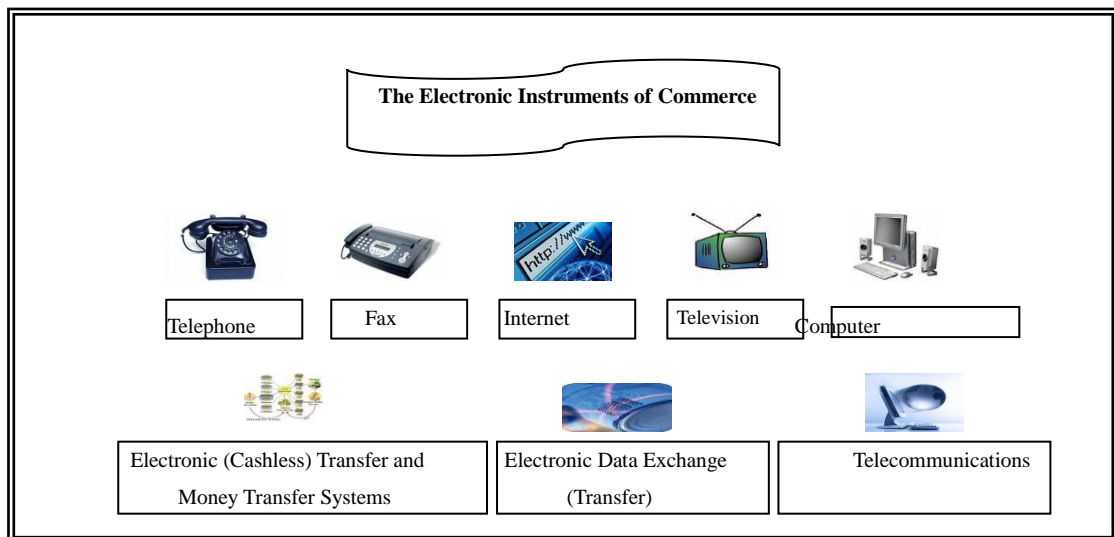
- Telephone
- Fax
- Internet
- Television
- Computer
- Electronic (Cashless) Transfer and Money Transfer Systems
- Electronic Data Exchange (Transfer)
- Telecommunications


Figure 1. *The Electronic Instruments of Commerce*

- Telephone, fax, and television are the traditional electronic instruments of commerce. Telephone is used to provide intercom unication between a buyer and a seller; fax to transfer a document; and television to advertise and present the products (Parlakkaya, 2005). By television connects to Internet, the user starts to be able to ply an electronic trade (Ozbay and Akyazı, 2004).

- Because Electronic (cashless) transfer and money transfer systems are used in the electronic commerce, they make the electronic commerce easier significantly and become an inseparable part of it. However, because Automated Teller Machines (ATM) and credit, bank, and smart cards are used only in money transfers, these have a limited function in the trade (Yenigun, 2003).

- Electronic data transfer, as a system that provides documents, information, and data exchange by computer networks between two commercial managements, is one of the instruments of electronic commerce.

- Internet becoming an inseparable and a basic instrument, which develops speedily in the present day, of e-commerce is a commercial instrument providing a multi-directional communication, and the transactions (and operations) can be performed so fast in the computer environment thanks to Internet (Canbolat, 2001).

- Telecommunication setting up the substructure of electronic commerce is one of the classical but important instruments, which raises the information sharing upmost and provide its extensity.

The electronic commercial instruments, which make the transactions of the sides that ply a trade in an electronic environment easier and speedier, are continuously renewed as tied to the development of technology in the present day.

The models of electronic commerce can be lined up like this (Zerenler, 2007):

- *Management-to-Management Electronic Commerce*
- *Customer-to-Customer Electronic Commerce*
- *Internal Electronic Commerce*
- *Consumer-to-Consumer Electronic Commerce*
- *Electronic Commerce from State to Consumer and Management*
- *Interstate Electronic Commerce*
- *Electronic Commerce According to the Attribute of a Product*

Management-to-management electronic commerce is a commercial model that is done as an information exchange, which the managements develop on Internet together with buyers, suppliers, and other concerned persons for their buying and selling operations (Trepper, 2000).

Customer-to-customer electronic commerce is a commercial model that contains the operations of directly selling various products to customers by using some electronic instruments.

Internal electronic commerce is a commercial model that is done among management units and that includes a workflow application.

Consumer-to-consumer electronic commerce is a commercial model that consumers buy and sell some their own products among themselves under some conditions and by a management instrument.

Electronic commerce from State to consumer and management is a commercial model that includes the realization of the aim at "reaching" all the relations between public establishments and citizens to "a more management" (Torres and at al., 2005) with information and communication technologies.

Interstate electronic commerce is a commercial model that is done in an electronic environment for importing and exporting between public establishments and other public establishments in other countries.

Electronic commerce according to the attribute of a product can be evaluated in two groups as directly and indirectly (Zerenler, 2007). While the ordering and advertising of a product in the indirect commerce are made in an electronic environment, the delivery of product is done via cargo and post in harmony with traditional ways. As for the delivery of product in the direct commerce is completely realized in an electronic environment.

4 Accounting Information System and Electronic Commerce

Accounting Information System is the most important and the oldest of the basic managerial information systems (Surmeli, 1994). Accounting Information System is a system that produces information, which explains the formation of sources of an organization, the form of using of these sources, the increases and the decreases occurring in these sources in consequence of the activities of the organization, and the condition of the organization in terms of finance, and that conveys them to the concerned persons and establishments. This process operates towards the objective of providing on the time the true and reliable information related to assets, sources, and results of activity with the aim of those in the position of decision-making are able to take consistent decisions (Atabey and et al., 2006).

INPUT	PROCESS		OUTPUT
Information and Documents	Commercial Books	Balances	Financial Statements

Figure 2. The Flow of Accounting Information–Financial-Qualified Event and Operations   Source: Surmeli, 1994.

As seen in Figure 2, the Flow of Accounting Information that is related to the activities of a management follows the flow of *input, process*, and *output* as is in every system.

The financial-qualified events occurring in the managements lead to be lived a change on the structure of assets and sources and on the activity results of the management. In this way, the field of interest of Accounting Information System consists of financial-qualified events and operations that emerge in the management. In Account Information System, that information becomes reliable, well-timed, neutral, understandable, and consistent makes it more useful and beneficial (Karasioglu, 2001).

It is indisputable that Account Information System, which is the most important in terms of managements, has to accord with economical and technological developments. The electronic volume of trade, in the present day, speedily spills over the whole world in the leading of multinational American companies (Karatas and Yilmazsoy, 2001). The firms plying electronic trade use the basic principles and the rules of accounting that the firms trading in traditional ways will use. In this way, the accounting order used in the traditional trade will be valid also for electronic commerce, and it will be used (Semerci, 2007).

The management processes of electronic commerce and the changes that they make in their operations will affect on the accounting systems, inevitably. E-commerce has not only changed the form of trade but also constituted some concepts like *electronic billing* and *electronic archiving* that affect on Accounting Information System in the managements (Parlakkaya, 2005). The making of commercial books and the constituting of

financial statements in the electronic environments enable to be lived a change for things like fastness of business, highness of rate of truthiness, and savings of paper and stationery (Yukcu and Gonen, 2009).

The important problem, which electronic commercial applications lead in terms of Accounting Information System, is that the order of document in the input process of the system is electronic and that some legal regulations concerning with it are not done adequately and that in this way it is seen different applications are done (Yıldız and Canbaz, 2008).

By the perspective of Accounting Information System in the managements, it is possible to sum up the effects of electronic commercial applications like this:

- The presentation in digital environments of financial-qualified events and operations, the base of Accounting Information System, will broaden the effects of electronic commercial applications more.
- In a management, in the case of the broadening of electronic commercial applications, managers will be able to obtain the information that they need, at the right time and at will, because all financial information related to a management is more regular and easily accessible.
- In the degree of accuracy and consistency of the decisions on which the future financial informational predictions and managerial plans of managers of managements base, an increase will be lived.
- The financial structures of the managements plying an electronic commerce will be more effective in comparison to other managements.
- Because information is conveyed very speedily, the flow of accounting information will be reached more effectively and fruitfully to the concerned sides.
- The forms of delivery and payment in an electronic commercial operation and the computer programs used in a management will make the applications of Accounting Information System easier.
- Electronic commercial applications will lead to a considerable decrease in the number of accounting documents and in the costs.
- For the order of document(s) and record(s), it will be provided new programs are developed.
- The demand for the accountants using electronic commerce will increase (Akkas, 2000).
- The goal of providing true and reliable information related to assets, sources, and results of activity at the right time will increase the reliability of electronic commerce.

5 Conclusion

The dynamic power of globalization is the fast developments in that information and communication technologies. These developments determine the form of trade, the understanding, and the application of the digital era, especially with electronic commercial applications. The phenomenon of competition, together with the phenomenon of globalization lived in the world, increases (its weight) as days pass; the demand periods of products gradually decrease because the products, which are presented in proper to the consumers' personal needs and expectations, are demanded; and the kind of product grows speedily. Managements, as a result of these developments, are in the position of supplying a great variety of products to the market with speed, with a relevant cost and with a level of quality at will, to be able to provide a competitive advantage. The electronic commercial applications providing this state are an important operation instrument of the new models of economy and management. The electronic commercial applications, which continuously renew with information and communication technologies, enable that the good-quality, continuous, simultaneous, and reliable services are provided and presented.

In the global competitive environment, as long as the possibilities of utilization from the information and communication technologies for the applications of Accounting Information System, the function and also the importance of accountancy towards the business managements increase. That Accounting Information System, which provides the production of financial information from the managements, presents the financial-qualified information, which a business management needs in the global competitive environment, inside the digital accounting organization, completely, clearly, timely, and reliably, will enable that the activities of management have a faster, flexible, innovator (reformist), and planned structure.

Poverty Alleviation and Microfinance in post-Soviet Central Asia

Assoc. Prof. Dr. Heiko Fritz (Linnaeus University Växjö, Sweden)

Abstract

Microfinance has played an important role in poverty alleviation throughout the developing world. Though some Central Asian countries are blessed with abundant natural resources, uneven income distribution and poverty are prevalent. Microfinance, however, has not been much in the public discussion in the region. The aim of this paper is to take stock of microfinance in Central Asia; to review recent developments in the context of the global development in the sector; to assess the regulatory and supervisory environment; and to identify untapped potential with respect to the future development of the industry.

1 Introduction

Microfinance has become a major pillar of strategies for global poverty reduction since Muhammad Yunus pioneered joint liability group lending in the early 1980s in Bangladesh, an innovative institutional setting to reduce transaction cost in small scale lending. In the meantime microfinance has become a mature industry. International donors and commercial investors channel significant funds to microfinance institutions (MFI) in developing countries. The scope of financial services supplied by MFI has broadened beyond microcredit including savings products, microinsurance and leasing. An increasing number of MFI operate profitably. Initially an informal activity, the growth of the industry has brought about a growing body of regulatory and supervisory provisions in many countries often implemented and enforced by the central bank or the banking supervisory authorities. Whilst commercialization allowed raising funds for the growth of microfinance, critiques argue that a mission drift has occurred from the social aim of poverty alleviation to the commercial aim of profit maximization (Armendáriz and Szafarz, 2011).

The causality from microfinance to poverty alleviation is based on the assumption of credit market imperfection. Asymmetric information require lenders to perform costly screening and monitoring of borrowers to reduce the problems of adverse selection and moral hazard. Being fixed cost, these transaction costs of conventional banks are prohibitive in small scale lending. Poor persons, who are likely to demand only small amounts of credit, face rationing in the loan market. Hence, in developing countries characterized by high poverty ratios, the majority of people is excluded from financial services and the financial system suffers low outreach. Microfinance thus can help build a more inclusive financial system. Small scale credit can allow the poor to enhance their earning potential in an environment where self-employment is often the only possibility to be economically active and, ideally, to escape poverty (see Duvendack et al., 2011 for a recent review of the empirical evidence).

Given this backdrop the aim of this paper is to examine the trajectories of microfinance in post-Soviet Central Asia, i.e. Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan, henceforth CA4. Turkmenistan will only occasionally be touched upon as the availability of information and data is very limited. Though according to the World Bank only Tajikistan and Kyrgyzstan are classified low income countries, poverty is an issue in the other Central Asian countries as well. The trickle-down effect of revenues from exporting primary products is limited and income inequality is high. Likewise outreach of the formal financial system in all countries is low.

Given the prevalence of both poverty and financial exclusion one should expect Central Asia to be a fertile ground for microfinance. The paper thus continues examining closely the microfinance industry in the region. On the country level, the development of various indicators will be studied on the size of the microfinance sector (number of MFI, number of borrowers, size of the loan portfolio), concentration and market power on the supply side, profitability, the quality of the loan portfolio etc. This allows drawing a detailed picture of microfinance in each country as well as comparing the industry between the countries.

2 Microfinance in Central Asia

This chapter provides some general socio-economic information about the Central Asian countries, poverty and simple indicators of financial development. The poverty-financial access nexus is then represented in an international setting to support the case for microfinance as a supplement to the formal financial system. The section then provides an overview of microfinance in Central Asia. The development of microfinance in each of the CA4 is reviewed and some key indicators of the demand and the supply side in the market for microcredit will be provided. Moreover the trajectory of the industry in CA4 is put into the context of global trends in microfinance.

In terms of population size post-Soviet Central Asia comprises three small countries, Kyrgyzstan, Tajikistan and Turkmenistan, and two medium-sized countries, Kazakhstan and Uzbekistan (see table 1). Given that the territory of both Kazakhstan and Uzbekistan is huge the population density in all Central Asia is rather low. A

large share of the population lives in rural areas with limited access to urban infrastructure. The economies are very heterogenous. Kazakhstan is rich in oil and experienced significant economic growth since independence driven by export revenues of oil, minerals and wheat. Turkmenistan, though otherwise a rather closed economy, strongly benefits from export revenues of natural gas. The smaller countries are less blessed with natural ressources. Uzbekistan is a major exporter of cotton the production of which has required giant irrigation projects that are ecologically not sustainable. Kyrgyzstan and Tajikistan have the production and export structure of developing countries lacking natural resources. About one third of the Tajik GNI is earned abroad and enters the country in the form of remittances.

	Population	GNI / cap	Average annual GDP growth[c]	Poverty headcount ratio
	(million)	(USD-PPP)	(%, 2002-12)	(1.25 USD/day)
Kazakhstan	16.6	11,250	7.2	0.1[a]
Kyrgyzstan	5.3	2,200	4.1	5.0
Tajikistan	6.7	2,300	7.5	6.6[a]
Turkmenistan	4.9	8,690	12.2	24.8[b]
Uzbekistan	27.3	3,420	7.7	---

Table 1: *Selected socio-economic and financial indicators of Central Asia* **Source:** *Worldbank – World Development Indicators database.* **Notes:** *a 2009; b estimation by the Asian Development Bank; c data from the IMF WEO database, own calculations.*

The income distribution in all Central Asian countries is hugely uneven. This is most pronounced in Turkmenistan which has a fairly high average income whereas at the same time one fourth of the population lives in extreme poverty. Extreme poverty seems less of an issue in the other four countries though there is a large share of poor people when the national poverty line is considered. In terms of financial development, Kazakhstan, and there most notably the city of Almaty, is often praised the financial center of the region. Indeed the ratio of bank assets to GDP in Kazakhstan reaches the level of some of the Central and East European EU member states that joined in 2004 and 2007 respectively. However the function of the Kazakh banking system has largely been to channel funds borrowed in international capital markets to sectors in need to finance investment, most notably the oil extraction industry and construction. Accordingly, Kazakh banks faced refinancing problems in 2008-09 when the capital markets dried up in the course of the global financial crisis. This and the drop in oil prices was the main spill-over mechanism of the crisis into Kazakhstan. The banking sector of the other Central Asian countries is only to a limited extent developed. Bank assets to GDP ratios are very low. In Kyrgyzstan and Uzbekistan in particular, Kazakh banks own large stakes in the larger commercial banks.

Given the lopsided development of Kazakh banks, financial outreach in the country has been low. Only slightly more than 40 percent of the adult population own a bank account. In the other Central Asian countries these figures are even dramatically lower. Hence both poverty and low financial outreach are problems in Central Asia and the region can be assumed to be fertile ground for the development of microfinance structures. Drawing on a set of 130 countries figure 1 below confirms the assumed poverty-financial access nexus and highlights the location of Central Asian countries. Note that the headcount poverty ratio in this figure relates to the national poverty line which is significantly above USD 1.25 per day. Hence poverty appears to be more of a problem than the figures in table 1 above suggest.

Figure 1 indeed strongly supports the idea that better outreach of the financial system is associated with lower poverty rates. However, it is subject to discussion in which direction the causality works. Proponents of microfinance argue that building more inclusive financial systems causes poverty to decrease as credit allows the poor to become economically active through self-employment, to increase their earnings and ultimately to escape poverty. However, the causality may well work the other way round. A reduction in poverty may increase demand for financial services so that profit maximizing suppliers of financial services ultimately improve outreach to cater the formerly poor. A third possibility is that there is actually no causal link between financial development and poverty but that both variables are driven by the overall level of economic development. The argument would then be that economic growth stimulates financial development and brings down poverty, for instance through the trickle down effect.
Figure 1: Poverty and financial inclusion (2011)   Source: World Bank – World Development Indicators dataset; Asian Development Bank; CGAP – Global FinDex dataset; own calculations.

Microfinance emerged in Central Asia in the mid-1990s when international donors, most notably the UNDP and USAID, made funds available in the region to finance equity of microfinance institutes.

In Uzbekistan, commercial banks, NGOs and credit unions supply microcredits. More recently pawn shops added to the supply side in the market. Whilst loans extended by commercial banks have the largest share in terms of assets of microcredit providers, credit unions and NGOs account for the largest share of borrowers and thus improve the outreach of the sector. Since its inception in 2006, the state-owned Microcreditbank dominates the sector issuing loans at negative real interest rates.

In Kazakhstan, commercial banks, microlending organisations, NGOs and credit unions offer microloans. Both joint liability group loans and individual loans are supplied. The concentration in the sector is high where the five largest MFIs account for about two third of the aggregate loan portfolio. At the same time there is a relatively large number of registered microcredit suppliers many of which are not operating anymore. When compared to their large populous neighbours, outreach of microfinance in Tajikistan and Kyrgyzstan is much better as indicated by the relatively large numbers of borrowers. These are served by large MFIs and credit unions. Commercial banks play less of a role than in Uzbekistan or Kazakhstan.

	Number of MFI			Number of borrowers			Loan portfolio (mill USD)		
	2007	*2010*	*2013*	*2007*	*2010*	*2013*	*2007*	*2010*	*2013*
Kazakhstan	745	1712	1747	95,000	n.a.	n.a.	291.0	369.0	502.0
Kyrgyzstan	n.a.	397	n.a.	188,000	485,000	n.a	112.4	195.4	n.a
Tajikistan	n.a.	123	142	n.a.	150,000	220,000	39.0	110.0	120.0
Uzbekistan	92	209	n.a.	21,000	104,700	n.a.	33.7	185.6	n.a.

Table 2: Indicators of microfinance in Central Asia   Source: Author's compilation from National Associations of Microfinance Institutes.

In addition to individual countries, the paper looks at microfinance in the entire region as compared to developments in other regions such as South-East Asia, Latin America, and sub-Saharan Africa. A helpful tool to do this is to compare the structure of the aggregate balance sheet of the microfinance industry in Central Asia with other regions. Drawing on a comprehensive database provided by Mixmarket, an international NGO funded by a large number of government bodies and foundations, figure 2 below provides the structure of the aggregate balance sheet of CA4 in 2005 and 2010 respectively.

Assets continue to be dominated by loans. Hence MFI in Central Asia have not diversified into microinsurance. If there are any microinsurance products available, these are supplied through other firms such as insurance companies or state organizations. The structure of the liabilities side changed in the period from 2005 to 2010. In 2010 the leverage of MFI was higher though equity continues to be the most important source of funds. Yet the share of borrowing, largely loans from commercial banks and subsidized loans from international development banks such as the IFC or the KfW, increased to almost 30 percent. Likewise the share

of deposits tripled although it is still at a meager 10 percent. In particular with respect to the funding structure microfinance in Central Asia differs much from other regions where much of the growth of the sector has been funded by raising additional deposits from microsavers.
Figure 2: Stylised aggregate balance sheet of MFI in CA4 (2005-2010)   ***Source:*** *Mixmarket; own calculations.*

3   Supervision and regulation of microfinance in Central Asia

Financial services are among the most strongly regulated industries in the world (Goodhart et al., 1998). The recent global financial crisis sparked a discussion about the quality and the specific nature of the regulatory and supervisory framework (Brunnermeier et al., 2009). As microfinance is an integral yet peculiar part of the financial services industry in developing countries it is reasonable to ask whether the same rationale for regulating MFI applies as for conventional financial intermediaries (see also BSBS, 2010). This section reviews the main arguments for the regulation and supervision of financial services. The rationale behind each argument will be discussed before the transferability to microfinance will be assessed.

Economic arguments for banking regulation and supervision largely rest in market imperfections. Three types of market imperfections are typically emphasized: (i) imperfect competition; (ii) asymmetric or incomplete information; and (iii) externalities.

3.1 Market power due to imperfect competition

One of the fundamental insights of welfare economics is that a market in perfect competition maximizes the welfare that accrues from transactions in the market to the society. A deviation from perfect competition and marginal cost pricing is a market imperfection reducing social welfare. Under certain circumstances such as high market entry barriers, the abuse of a dominant position or collusion between different suppliers interventions by a state agency are justified to restore the competitive order or to make the actors in imperfect competition behave as if there were facing competition. In this respect financial markets are not different from goods markets. This is the main argument why it does not require an institutional setting or a specific approach peculiar to the financial services industry. Banks and other intermediaries are subject to the same competition regime as firms operating in other markets. Anti-competitive behaviour is subject to intervention by the authority in charge to implement and enforce competition policy.

In most countries there is an explicit division of power between a banking regulator or supervisor on the one hand and the competition authority on the other hand. While regulators rather tend to restrict competition and to create market entry barriers by means of licensing requirements, competition authorities typically try to remove or reduce this kind of barriers. In general the aim of banking regulation and supervision is to promote financial stability whereas the one of the competition authority is to promote competition. As there may be a trade off between these aims the division of labour between two agencies independent of each other is necessary to avoid a conflict of interest within an agency.

Adverse effects of imperfect competition in microfinance is not an issue. In fact, concentration in the market for microloans is much lower than in the formal financial sector. Severe competition, however, involves risks as well. A recent survey among more than 500 stakeholders in microfinance worldwide identifies challenges from increasing competition among the three major risks the industry is facing (CSFI, 2011). More specifically

increasing competition may lead to unethical and irresponsible lending practices including usury, deceptive advertising, loan pushing etc. In addition to destabilizing the microfinance industry this puts the main aim of microfinance at risk as the poor could get exploited and overindebted. Indeed, as it will be argued below, concerns related to consumer protection should play a more important role in the regulation of MFI than of commercial banks.

3.2 Asymmetric information

In financial transactions at least one party usually possesses information about characteristics of him/herself or of the service provided that are relevant for the transaction and at the same time unknown to the other party. Due to asymmetric information lenders face, first, the problem of adverse selection, i.e. they systematically select borrowers with unfavourable characteristics without getting a fair compensation for the risk associated with those characteristics. Second, asymmetric information may generate moral hazard when the borrower conducts actions that change the risk of the transaction ex post in an undesirable way from the perspective of the lender.

In the loan market the lender is a financial intermediary, say a bank. The bank makes use of a wide array of screening methods to mitigate adverse selection. Moreover collateral, restrictive covenants and other elements of the loan contract aim at aligning the interest of the borrower and the lender. All this obviously incurs transaction costs which financial intermediaries help to reduce due to their expertise, economies of scale and scope. One could even argue that the comparative advantage that financial intermediaries have over markets with respect to transaction costs is the only justification for intermediaries to exist. The crucial aspect here is that neither regulation nor supervision is required to protect the lender from the risks associated with adverse selection and moral hazard.

However, in relation to poor clients conventional mechanisms of screening, monitoring, and contract enforcement fail to bring down transaction costs sufficiently. This is why the poor are considered unbankable. Various mechanisms of microfinance (for details see Armendáriz and Morduch, 2010; Morduch, 1999) provide a more efficient set of institutions in this respect. The most important one is joint liability group lending (JLGL). JLGL has two main effects: (i) it moves, at least partly, transaction costs from the lender to the borrower; and (ii) it reduces transaction costs. Ghatak (2000) shows that JLGL leads to self-selection of borrowers in groups the members of which share similar characteristics with respect to risk. This reduces screening costs of the lender. Stiglitz (1990) demonstrates that JLGL creates incentives for peer monitoring which reduces moral hazard. This reduces monitoring costs of the lender. Besley and Coate (1995) show that peer pressure in JLGL helps enforce the loan contract. This reduces enforcement costs of the lender. The combination of these mechanisms implies that the problems asymmetric information may cause for the lender can be solved without any regulation or supervision. The innovative design of loan contracts provided by microfinance itself is the solution of the problem.

In conventional loan markets the borrower is typically considered the informed party whereas the lender faces the aforementioned problems of adverse selection and moral hazard due to asymmetric information. However, it may be argued that in microfinance there is an additional problem regarding the level of information of the borrower. The vast majority of borrowers in microfinance schemes must be considered financially illiterate largely because of their poor level of education. That means even though information about the nature of the loan or other financial products are available, the borrower does not have sufficient knowledge to fully grasp the implications of the transaction for his or her economic well-being. This makes the poor particularly vulnerable to extortionate behaviour of lenders. Educating the poor to improve their financial literacy would be a measure targeting the roots of the problem most directly. However, there are severe limitations to this when it comes to the practical implementation. This is why a more indirect solution to the problem has been proposed namely the regulation and supervision of MFI to minimize the level of exploitation of the poor (Christen et al., 2003; Davel, 2013).

In the deposit market the individual depositor has imperfect information about the use of his/her funds by the depository institution. However, the rational depositor will not screen and monitor the depository institution for two reasons. First, for small-scale depositors screening and monitoring cost are prohibitive relative to the amount deposited. Second, supervision of the depository institute has the character of a public good for the group of depositors. Other depositors can not be excluded from the discipline imposed on the depository institution due to the supervision of an individual depositor. Thus free riding is rational so that the social level of supervision will be too low. Only a single large depositor could have a sufficiently large incentive to supervise the depository institution individually. In the absence of a single large depositor the government should provide for a regulatory and supervisory framework that makes sure that the depository institution does not engage in excessively risky activities in which the informed depositor would not like to see his funds invested. Accordingly prudential banking regulation largely aims at reducing excessive risk taking and deposit insurance reduces the loss that depositors suffer when the depository institution becomes insolvent.

Indeed one could argue that deposits of the poor require even more protection as they typically constitute the entire wealth of the household which cannot be diversified due to its small size. However, many MFI who accept

deposits have a dominant depositor typically an international donor such as USAID, KfW etc. These donors have a strong incentive to monitor the behaviour of the MFI. In addition they have the expertise to interpret the information provided by the MFI and the possibility to enforce discipline on the MFI as the donor could threat to withdraw the funds. Thus neither the incentive problem nor the free rider problem of monitoring the depository institution seem to be particularly relevant with respect to MFI.

While the existence of a dominant depositor makes the MFI avoid excessive risk taking it does not set sufficient incentives for the MFI for a sound liquidity management. Once the MFI accepts deposits it is important that the MFI keeps some liquid reserves to make sure smooth conversion of deposits in cash if the depositors wished so. Illiquidity would trigger a domino effect leading to a run of depositors on this bank. Thus the arguments put forward for prudential supervision of banks addressing liquid reserves apply in the same way to MFI.

3.3 Externalities

In financial services, it is commonly argued, the failure of an individual institute causes negative externalities on the financial system. If this is true an individual institute tends to accept more risk than desirable from the systemic point of view as part of the cost of failure is external cost to the institute. This would then require some form of regulation which internalizes the external cost. In this respect it is important to think of the spill over mechanism. In which way could the failure of an individual institute be detrimental for other institutes? Generally two spill-over mechanisms are invoked: entanglement of financial intermediaries and demand side network effects. Each of these mechanisms will be briefly described and tested with respect to its transferability to microfinance.

Financial intermediaries operating in the formal financial sector are closely entangled with each other largely via the interbank money market of the economy. Accordingly a critical share of the assets of a bank may be liabilities of another bank. Depending on the size of a bank its insolvency may cause trouble to other banks as well if significant loans in the interbank money market need to be written off. Note that this partly accounts for the too big to fail problem as banks that have a dominant position in the financial system of a country know they will be bailed out by the government because their failure would tear down all the banking system. Thus they tend to accept higher risks than banks that can not count on a bailout.

Obviously this spill over mechanism does not apply to microfinance. First, not being part of the formal financial system MFI do not participate in the interbank money market. And no market exists in the system of microfinance in which liquidity balances are traded. Second, MFI are generally not the counterpart of a claim of any MFI. This is not in line with the underlying idea of microfinance and it is also not common practice.

However, demand side network effects may be a significant source of spill over as some instances of MFI failure proof. Demand side network effects typically root in incomplete information. For instance when a bank faces liquidity or solvency problems, depositors with other banks may be inclined to withdraw their deposits as they do not have sufficient information to assess whether the problem is confined to the individual bank or whether it reflects a problem of the entire banking system. In the worst case this could aggravate to a large scale bank run. There are some arguments for demand side network effects to be particularly severe in microfinance. First, the structure of the balance sheets and the type of risk exposure of different MFI is nearly the same. Hence clients may be even more tempted to interpret trouble in one MFI as a structural problem of the entire sector. This is even more so when MFI do business in the same geographical area where risks of borrowers are closely correlated. For instance a flood or a draught destroying the harvest of farmers in a particular area leads to a surge in loan delinquency or default of all MFI operating in that area. Second, it is reasonable to argue that the assumption of incomplete information applies to clients of MFI even more than to clients of formal banks. Many poor households do not have access to mass media. Depending on the cultural context the main source of information are neighbours, relatives, the assembly of village elders, spiritual leaders of the community etc. This is fruitful ground for rumors to spread.

3.4 Regulation and supervision of microfinance in Central Asia

In Uzbekistan, the Law on Credit Unions dates back to mid-2002, the Law on Microfinancing and on Microfinance Organisations to mid-2006 respectively. The Kazakh government of passed the Law on Microlending Organisations in 2006. This law was replaced in December 2012 by the Law on Microfinance Organisations. In Tajikistan the Law on Microfinance Organisations dates back to mid-2012. In Kyrgyzstan the Law on Microfinance Organisations has been in place since 2002. Table 3 below (next page) summarises regulatory and supervisory provisions of the laws and regulations based on these laws that have been in place at the time of writing.

	Kazakhstan		Kyrgyz Republic			Tajikistan		Uzbekistan
	Microfinance organisation	Microfinance company	Microcredit company	Microcredit agency	Microcredit organisation	Microcredit fund	Microcredit deposit organisation	Microfinance companies
Activities	Loans, leasing, insurance agency	Loans, leasing	Loans; leasing (if mentioned in the licence)	Loans; leasing (if mentioned in the licence)	Loans, leasing	Loans, leasing	Loans, deposits, payments services	Loans, leasing
Funding	Own funds, domestic and inernational borrowing, acceptance of grants from domestic and internatonal donors	Own funds; accept time deposits (if MFC exists more than 2 yrs); issue of debt securities	Own funds, funds from donor organisations and local or international financial organisations	Own funds, funds from donor organisations and local or international financial organisations	Borrowing from domestic and foreign sources	Borrowing from domestic and foreign sources	Borrowing from domestic and foreign sources, deposits	Own resources; funds from domestic and foreign invesotrs; (domestic) bank credits; grants and loans of foreign non-commercial lenders
Minimum capital	USD 194,000	Determined by the central bank	Determined by the central bank	n.a.	Determined by the central bank	300 base amounts for national currency calculations	Determined by the central bank	n.a.
Reporting	Information on borrowers need to be reported to credit bureau; quarterly balance sheets to CB	Balance sheets: quarterly in mass media; financial statements annually	As determined by the CB	As determined by the CB	As determined by the CB	As determined by the CB	As determined by the CB	As determined by the CB
Profits	Yes	Yes	Yes	No	Yes	No	Yes	Yes
Loan duration	No specification	No specification	No specification	No specification	≤ 5 years	≤ 5 years	≤ 5 years	No specification
Loan size	USD 89,600 (as of 1 July 2013)	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Not specified
Interest rate	Maximum interest rate specifified by the CB	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Max loan size see regulation by Central Bank	Not specified
Legal form	Limited partnership	Open or close JSC	Any legal form of a commercial organisations	Non-commercial organisation	Close JSC or LLC		Close JSC or LLC	Commercial firm
Supervisor	Central bank	Central bank	Central bank	Central bank	Central bank	Central bank	Central bank	Central bank
Prudential regulation	Capital adequacy (currently 10 percent of total assets), exposure to a single borrower, leverage ratio (currently total liablties over equity < 10)	Minimum capital requirement; structure and composition of capital; asset classification and loan loss reserves; capital adequacy; liquidity; max loan size per borrower; limitations for deposit activities as set by CB	Capital adequacy	Capital adequacy	None	None	Capital adequacy requirement; liquidity requirement; maximum risk expsure to individual borrowers; FOREX risk; maximum rate of deposit and savings interest	Capital adequacy,
External audit	Annual	Annual	Annual	Annual	Annual	Annual	Annual	Annual

4 Non-economic approaches to microfinance in Central Asia

Whilst poverty is prevalent in Central Asia, though the magnitude of the problem varies regionally, and outreach of the financial system in the region is poor, microfinance does not have the same level of development as in other regions that share the same set of problems. This section briefly discusses three potential non-

economic reasons for this. These are (i) the political system; (ii) informal institutions; and (iii) religion in Central Asia. Without being exhaustive, the logic behind each factor shall be sketched out below.

4.1 Autocracy and political economic constraints

When the Soviet Union demised in 1991, 15 independent and sovereign states emerged. While the Central and East European countries, with the exception of Belarus, adopted democratic political systems characterised by different levels of presidentialism or parliamentiarism, all Central Asian countries ended up being autocratic regimes led by strong presidents (Pomfret, 2006). Arguably the system in Kyrgyzstan is more liberal and more democratic than the other four, not least because the US was more involved in state building. Tajikistan may be considered slightly different either because the way to independence led through a bloody civil war in which different clans battled for control over the state which was at the verge of becoming a failed state during the armed conflict.

Nonetheless in all Central Asian states the presidents managed to install family members, cronies and other loyal persons in nearly all influential positions in politics and business. Political elites and business elites became increasingly congruent. It seems that the main aim of setting policies was to maximize influence and personal wealth of the elites. Constitutional reality has not much limited the possibilities of the political actors to pursue this aim. On the other hand, policies that did not come at the immediate benefit of the elites were procrastinated or not pursued at all. Examples include policies on education, the public system of health care, and social security.

Following this line of reasoning it can be argued that microfinance is less well developed in Central Asia than in most other regions of the world because the ruling elite has not been much interested in developing this sector. Policies to alleviate poverty and to mitigate inequality have not been top of the political agenda. In addition autocratic regimes typically consider the operations international organisations - many of which such as UNDP, GIZ, USAID, are active in providing financial and technical support to MFI - on their territory illegitimate interference with domestic affairs. Likewise non-government organisations are often met with suspicion. Hence, lacking support from the state and from international organisations, grassroot actors were left at their own devices to set up microfinance structures.

4.2 Peculiar social capital and informal institutions in Central Asia

Much research on microfinance focuses on the relationship between social capital in a society and microfinance. Two distinct perspectives can be distinguished. On the one hand it has been argued that social capital is an exogenous determinant of the success of microfinance schemes (Karlan, 2007; Karlan et al, 2009). Social capital comes in the form of networks of interpersonal relations generating, for instance, mutual trust. Social capital is a particularly important success factor in joint liability group lending where group members screen and monitor their peers. On the other hand Feigenberg et al. (2010) argue that social capital in endogenous in microfinance as the various institutionalizations of lending schemes foster interpersonal relations and, hence, produce social capital. This argument is occasionally used to justify subsidization of microfinance programs as social capital is a positive externality.

With respect to social capital in Central Asia Collins (2006; 2004) emphasizes the role of clans. Clans are informal organisations based on kinship comprising 500 to 20,000 members. They are often formed on blood relations and ethnicity and have a regional core which may or may not branch out. Whilst clan structures are not unique to Central Asia, Collins (2006; 2004) argues that clans gained a particular role in the dynamics of regime change and the formation of new regimes. The benefits of clan membership vary depending on the position in the clan. Clan elites benefit from a loyal network, non-elite members from patronage. In an environment of missing or inefficient formal and informal institutions, the clan potentially fills an institutional vacuum in many areas. With respect to missing or inefficient economic institution, the clans compensate for the missing or malfunctioning labour or capital market. Clans may crowd out alternative political or economic institutions. This crowding out may explain why microfinance is underdeveloped. Even in other countries where clans are not prevalent, research demonstrates that microfinance cannot fully succumb over informal forms of credit allocation such as moneylenders. Clans may have filled the gap of credit allocation in Central Asia impeding the development of alternative, potentially more efficient forms of credit allocation.

4.3 Islam in Central Asia and microfinance

Another distinct element of the CA-4 is the distinct role of Islam and religion in general. Microfinance products that are attractive to Muslim believers are still being developed and there seems to be a lack. If this is the case in Central Asia, this may form a demand side constraint for the development of microfinance.

5 Conclusions

This paper provided an overview of microfinance in Central Asia. It has been argued that Central Asia, in particular in the southern countries where the outreach of the financial system is low and poverty is a severe problem, is the environment where microfinance can be expected to assume a prominent role. However, a

detailed overview demonstrated that microfinance in the region has been lagging significantly behind other regions such South Asia or Latin America. Based on a comparative review of the institutional framework, it has been demonstrated that regulatory and supervisory provisions are in place in Central Asia that impede the growth of the sector, whether intended or not. Most notably the prohibition of accepting deposit, microcredit deposit organization in Uzbekistan being the only exception, excludes MFI in Central Asia from a source of funding that developed particularly dynamically in other parts of the developing world. Given the limited scope of financial services that MFI are allowed to supply, reporting requirements and prudential regulation seem overly restrictive in Central Asia. Asking for potential reasons for this, the paper argued that non-economic determinants need to be given particular attention. These may include informal institutions such as the role of clans that can be considered competitors to the development of microfinance structures. Moreover, political economic reasons as well as religious restrictions of Islamic finance have been invoked as potential reasons. More research is needed to substantiate this.

Features of Business Cycles across the Middle East and North Africa: A Nonparametric Analysis

Prof. Dr. Mehmet Balcılar (Eastern Mediterranean University, Cyprus)
Dr. Nezahat Küçük (Eastern Mediterranean University, Cyprus)

Abstract

In this paper, we provide a compressive analysis of business cycle characteristics across a large set of countries in the MENA region. Contrary to the majority of the papers on business cycles synchronization across the MENA region countries, we concentrate on the appearance of the cycle, not on its synchronization. We use robust methods that are not based on ad hoc filtering or parametric methods. Our findings suggest that important differences exist in the business cycle characteristics of the MENA region economies. We find evidence against a common reference cycle for a group of countries. Although the business cycle characteristics show some similarities among some small number of countries, overall the business cycle characteristics across the MENA countries are dissimilar.

1 Introduction

Increasing number of countries in the Middle East and North Africa (MENA) region are opting for increased regional economic integration in the future. Increased cross-border trade, partly provided through the lifting of trade barriers within the frameworks of the Gulf Cooperation Council (GCC) and the Greater Arab Free Trade Area (GAFTA), is an important part of the economic integration. A recent UN (2000) report notes that because of the unstable monetary, macroeconomic, and financial environments in certain parts of the MENA region, it is doubtful that macroeconomic policy coordination will benefit the member countries. The UN report examines the implications of policy coordination and, ultimately, the adoption of a common single currency and comments that such adoption is likely to succeed if optimum currency area (OCA) conditions are fulfilled. A key requirement in the OCA theory is the business cycle symmetry among currency union members. The report assesses the degree of business cycle synchronization in the Middle East region and finds that business cycles have not become highly synchronized with one another but the degree of business cycle synchronization is related to trade intensity. Predicting that trade links would increase in the future the UN report suggests that member countries would benefit from macroeconomic policy coordination and formation of an OCR. Hirata et al. (2007) assumes a common synchronized business cycle for MENA and examines the implications of an aggregate dynamic stochastic general equilibrium model. They state that the model captures some important structural characteristics of the MENA economies and is able to replicate the main properties of their common business cycles. However, there has been no study thoroughly examining the characteristics of business cycles in the MENA region. A common MENA business cycle is not demonstrated by empirical evidence rather it is assumed, except the examination of cycle synchronization in UN (2005) and Gallagati et al. (2004), which is limited to a few countries in the MENA . The main objective of this paper is to fill this gap by a through examination of business cycle characteristics using the methods of modern business cycle theory.

The recent growing macroeconomic research interest on the MENA economies concentrated on sources of business cycle and business cycle synchronization. The volatile changes in the MENA region economies during the last three decades created controversies about the relative importance of potential sources of business cycle movements. Several studies attribute a significant role to terms of trade shocks and external linkages (Makdisi et al. 2003; Diboglu and Alesia, 2004; Hirata et al. 2004 and 2007). Mehrara and Oskoui (2007) used a structural vector autoregressive (SVAR) model to examine the sources of business cycle movements in five oil-exporter MENA countries. They found that the oil price shocks are the main source of output fluctuations in Saudi Arabia and Iran, but not in Kuwait and Indonesia. Some other studies pointed out the significant role played by real demand shocks—fiscal imbalances and real exchange rate misalignments—in the MANE region

In this paper we go behind the assumptions made in the previous literature. We use a nonparametric business cycle turning point determination method based on the Bry-Boschan algorithm and estimate business cycle characteristics using the measures proposed in Harding and Pagan (2002). In this way, we analyze the comovements across economies without initially assuming that they should or should not move together. That is we let the "data speak" without imposing any kind of a priori restrictions. Using these robust statistical methods we are able to check which economies are close and which are further away from each other. This approach will also allow us to answer the leading question about the existence of a common MENA region business cycle.

Specifically, the study describes the business cycle characteristics of a group of 22 MENA countries. The business cycle characteristics are examined using the real GDP series. These include average business durations, amplitude, accumulations, and excess (see Harding and Pagan 2002a,2002b, 2003). Rather than calculating pairwise business cycle synchronization indexes between countries, we determine how close are these countries to each other in terms of their business cycle characteristics. In the study, we use quarterly (annual data is used if

quarterly data is not available for a country in a particular period) over the period 1960-2012 to analyze business cycle movements in the following countries: Algeria, Bahrain, Bangladesh, Egypt, Iran, Iraq, Israel, Kuwait, Lebanon, Libya, Malta, Mauritania, Morocco, Oman, Pakistan, Qatar, Saudi Arabia, Sudan, Syria, Tunisia, Turkey, and United Arab Emirates.

In this study we find statistical evidence in contrast to the existence of a common MENA region business cycle whose characteristics would be shared by all or a group of countries. Although there is some evidence of a group of countries clustering close to each other, once the effect of two outlier observations are taken into account all countries are spread on a single map with one big cluster, which is no grouping at all since the measure of distance between distant countries is too large. But, there is some little evidence of closeness among some countries based on geographic proximity or trade links. Finally, we find that the evidence is not related to sample period we used. We split our data set into two subsets at 1985. We observe same characteristics in both samples, although there is some evidence that business cycles for the period 1986-2006 are more volatile.

The rest of the paper is organized as follows. In Section 2, se describe the data and present our methodology. Section 3 presents characteristics of the business cycle in the MENA economies based on the empirical analysis. Section 4 concludes the paper.

2   Data and Methodology

In any study of business cycle the foremost and most important question is to define and detect cycles. In their classic work, Burns and Mitchell (BM) (1946) define specific cycles in a series y_t, $y_t = \log(GDP_t)$ in this study, in terms of turning points in its sample path. This tradition has been central to work at the NBER and other institutions such as the IMF (2002) and OECD. The best-known algorithm for performing these tasks is that associated with the NBER and set out in Bry and Boschan (BB) (1971). An issue for using the BB algorithm for other countries is that there is no widely accepted reference chronology of the classical business cycle for other countries. In order deal with this problem, we use dating algorithm of Harding and Pagan (2002) that isolates the local minima and maxima subject to reasonable constraints on both the length and amplitude of expansions and contractions. The BB algorithm is applied to the level, mostly after taking logarithms, of the series. Mintz (1969, 1972) applied the BB algorithm to the level of economic time of some surging economies, such as the former West Germany, and failed to find turning points. This led researchers to consider detrending the variables and apply the BB algorithm to the detrended series. In this study, we also determine the cycles from the log differenced series resulting in *growth cycles*. Although differencing may also be considered as a detrending filter it is not subject to the critics directed to filters such as the HP. Such filters, although commonly used, distorts the cyclical properties of the data and leads to biased estimates of turning points. Pagan (1997) showed that removing the stochastic trend with a HP filter resulted in series with cycles that were around 3 years long and, hence, almost half that of the business cycle. Previous studies found growth cycles to be more useful for analyzing business cycle in countries that experience sharp contractions and expansions in growth rates. In a growth cycle, a recession is defined as a phase when output is below its trend. Analogously, an expansion is defines as a phase when output is above its trend.

Recently, amongst the business cycle researchers, the summaries of characteristics of business cycle changed from a graphical orientation towards quantitative measures involving the moments of selected variables (Cooley and Prescott, 1995; Harding and Pagan 2002a, 2002b, 2003). Based on BM study Harding and Pagan (2002a) suggested that there are four characteristics of interest: The duration of the cycle and its phases, the amplitude of the cycle and its phases, any asymmetric behavior of the phases, and cumulative movements within phases.

The *duration* refers to the length of an expansion or recession. The duration of an expansion corresponds to the time spent from a trough to following peak. Analogously, the duration of a recession is the time from a peak to the following trough. The second classical feature of a business cycle is its *amplitude*. The amplitude entails some ambiguity. Based on an argument put forward by Moore (1967) that a decline may not be considered as a trough until it reaches certain depth, the concept of amplitude refers to the depth of the decline or rise in the economic activity in terms of gains or losses in production. Therefore, the amplitude is not related to the timing of the cycle in any way. Harding and Pagan (2002a) proposed two measures of the depth of expansions and recessions in cycles, the *amplitude* and the *cumulation* of expansions and recessions. For an expansion phase, the amplitude represents the percentage gained in terms of production during the period of expansion relative to the level of output in the first period of the phase, and in case of recessions, the measure may be interpreted as the percentage lost. So the amplitude, in case of an expansion, is the percentage gain for a jump from a through to peak. The cumulation corresponds to the cumulated gain or loss and consists of the sum of the amplitudes for each period of the phase. We can interpret this measure as the loss in wealth in that economy. The cumulation is a measure that combines duration, amplitude and the shape of expansions or recessions. It approximates the effect of the business cycle phase on the wealth. Harding and Pagan (2002a) use a triangle approximation to calculate the cumulation. In practice the actual cumulative movements may differ from the triangular approximation since the actual path through the phase may not be well approximated by a triangle. In order the

remove move this bias Harding and Pagan (2002a) proposes an index of the *excess* cumulated movements. The excess is a bias corrected measure of percentage gain or loss per period of a phase.

3   Empirical Results

We estimated each of the measures of cycle characteristics for the 22 MENA countries for which the data is available. The data is obtained from the World Development Indicators published by the World Bank and the International Financial Statistics published by the IMF. For several countries quarterly data were not available for the full period and the estimations are obtained using annual data for these periods. Our data sample covers the 1960-2006 period and includes the real GDP series for each country measured in US dollars. In addition to full sample period we consider periods 1960-1985 and 1986-2012 as two distinct sub-periods (Kose et al. 2004 and Hirata et al. 2004 also split their data at 1985). The first period, 1960–1985, corresponds to the fixed exchange rate regime for the major industrial countries during the Bretton Woods (BW). This period also consist of global shocks associated with sharp fluctuations in the price of oil, and it is also a period of contractionary monetary policies in major industrial countries. The second period, 1986-2006 represents a period with dramatic increases in the volume of trade and financial flows (Prasad et al. 2003). We can isolate the impact of globalization by splitting the sample at 1985. Another reason, as pointed out by Hirata et al. (2004), to choose the mid-1980s as the break point is because it corresponds to a "structural policy break" in both the MENA and Asian emerging market economies. During the mid-1980s, the MENA countries undertook comprehensive reform and stabilization policies.

Table 1 gives estimates of four business cycle characteristics for the full sample period 1960-2012. The recessions are designated as peak-to-trough (PT) and expansions as trough-to-peak (TP). With the exception of duration statistics, all measurements are in terms of percentage changes. The cumulation is measured as the percentage of GDP in the first period of phase. The average duration of recessions (displayed in Figure 1) is 1.27 years while the average duration of expansions is 3.82 years. The average duration estimates are close to those observed in developed countries (see the estimates in Harding and Pagan, 2001). However, there are large differences among countries (see Figure 1). The range for the duration of recessions is about one year, while it is about three years for expansions. Algeria, Bahrain, Bangladesh, Egypt, and Morocco stand out with long periods of expansions, while Kuwait, Pakistan, and Turkey are marked with very short periods of expansions. The countries with longer (shorter) periods of expansions are not the countries with longer (shorter) periods of recessions. Iraq and Oman stand out with shortest duration of recessions while Saudi Arabia has the longest recession duration. The reported coefficients of variation indicate that expansions are more variable than recessions.
Figure 1. *Duration of Expansions and Recessions (Years in recession and expansion)*
Figure 2. *Aplitude of Expansions and Recessions (Percentage of GDP in first year of phase)*

Country	Recession (peak-to-trough)				Expansion (trough-to-peak)			
	Duration	Amplitude	Cumulation	Excess	Duration	Amplitude	Cumulation	Excess
Algeria	1.25	-13.72	-47.19	-0.25	4.58	63.60	1915.33	6.36
Bahrain	1.25	-11.43	-35.44	0.48	6.63	52.02	1039.84	2.85
Bangladesh	1.25	-27.18	-76.76	1.01	4.70	64.88	636.60	2.76

Notes: Reported estimates are the averages on all phases over the sample period. Duration is calculated as the average of all phases (recession or expansion) over the sample. Amplitude and excess are in terms of percentage changes, and cumulation is calculated as the percent of GDP in first year of the phase.

Table 3. Business Cycle Statistics for Period: 1986-2012

In terms of amplitude, cumulation, and excess we observe even higher differences across countries as seen from (Figure 2, 3, and 4). First of all, these loss measures are much larger than those observed in industrialized countries, when compared with the estimates in Harding and Pagan (2001). The recessions and expansions in MENA countries are deeper than those in industrialized countries, although their durations are comparable. There are countries with tremendous losses occurring. The average cumulation in Sudan reaches an average of -218.23 percent for recessions. Even the amplitude for a recession in Sudan reaches an extreme level of -56.44. The gains as measured by amplitude (Figure 2) and cumulation (Figure 3) are less variable than losses. However, the excess gain is more variable than excess loss across countries (see Figure 4). This points out that the bias in cumulation is more likely to be larger for expansion phases. The cumulation ranges from 178.30 percent (Lebanon) to 1915.33 percent (Algeria). Further, we note that the countries with large losses during recessions do not have large gains during expansions. The coefficients of variation point out that excess vary more than amplitude and cumulation across the countries.

Business cycle characteristics for the sub-samples 1960-1985 and 1986-2012 are given in Table 2 and Table 3, respectively. A general implication from these sub-sample estimates is that the large differences among the countries are preserved in both sub-samples as in the full sample. However, the 1986-2012 period is more volatile than the 1960-1985 period except the duration, which seems equally varying across the countries in both sub-samples. Although the duration of recessions are 1.22 years in both sub-sample the duration of expansions is much shorter in the 1986-2006 period (2.85 years in the 1986-2012 period and 4.47 years in the 1960-1985 period). The coefficients of variation indicate that in general the variability is about 50 percent higher in the 1986-2012 period.

Figure 4. *Business Cycle Excess during Expansions and Recessions (Percentage of GDP in first year of phase)*

4   Conclusion

In this paper, we provided a compressive analysis of business cycle characteristics across a large set of countries in the MENA region. We estimate several numerical measures of their business cycle characteristics. These measures offer a complete description of the cycle. In doing so, we avoided any a priori assumption about the existence of certain business cycle characteristics. The paper also does not assume existence of any common business cycle across some or all countries of the region. We also did not use any parametric model to describe the business cycle movements of individual countries and comovements between pairs (or groups) of countries. These parametric models are extensively used to analyze the business cycle synchronization of major industrialized countries. The results from these models are by now are mixed, inconclusive, and sensitive to various parameterizations. None of the filter-based business cycle synchronizations measures are used either, since the results obtained from this approach are shown to depend on the particular filter used. We adopt robust statistical methods from other scientific disciplines in order to investigate whether some countries can be classified into the same group in terms of their business cycle characteristics. We used multidimensional scaling and cluster analysis to shed some light on the question about the existence of a cycle that might be representative of the MENA region.

Our results bring a different lesson to the previous research that assumed existence of some kind of a common cycle across the MENA region countries. These papers usually attributed this common cycle to increased trade links and/or to similar economic structures. Using the robust classification methods we fail to classify MENA countries into groups based on their business cycle characteristics. We are not able to obtain convincing evidence that there is a common reference cycle for all or groups of countries in the MENA region either. Our findings suggest that the results of those papers assuming a common cycle should be reconsidered.

On the Source of Macroeconomic Fluctuations in the Middle Eastern and North African Countries: A Structural Vector Autoregression Analysis

Ph.D. Candidate Evrim Toren (Eastern Mediterranean University, Cyprus)

Abstract

This study investigates the relative importance of various shocks in accounting for output fluctuations in the Middle East and North Africa (MENA) countries. The macroeconomic shocks are decomposed into country-specific, regional, and global sources by using a small open economy structural vector autoregression (SVAR) model. In order to explain output volatility in Middle East and North Africa, the relative importance of each shock in 15 MENA countries is identified in this study. The results show that country-specific factors account for most of the output volatility in the region. For less than half of the countries in the region, global shocks play a significant role in explaining output volatility. Contrary to some findings in the empirical literature, especially on Sub-Saharan Africa, the regional factor does not seem to have a statistically significant impact in any of the countries under consideration. The results are uniform and no statistically significant difference is observed for the countries in the MENA region. Furthermore, oil-exporting and oil-poor countries in the sample do not show any noticeable difference.

1   Introduction

Until recently, the impact of output fluctuations on economic growth and welfare was generally assumed to be negligible and therefore not a major concern. However, more recent macroeconomic literature, especially following the East Asian crisis of the late 1990s, suggests that high output volatility could have significant adverse effects on long-term growth and welfare (Aizernman and Pinto, 2000; Kose, et al., 2005). The transmission mechanisms between output volatility and long-term economic performance are complex, varied, and not sufficiently understood (Hakura, 2007). One theory argues that, output volatility, by increasing the uncertainty about future returns, could significantly reduce investment and therefore growth. On the other hand, there are those that argue that, volatility could have beneficial effects on growth (Blackburn, 1999; Tornell, et al., 2004).

Output volatility could also adversely affect poverty in developing countries like those in Middle East and North Africa, MENA. Given that fiscal policy is pro-cyclical in most developing countries, this magnifies the negative impact of volatility on poverty especially during crisis. Recent empirical research finds that volatility has significantly negative and causal impact on poverty (Laursen and Mahajan, 2005). The adverse effect of volatility seems to be more pronounced in low-income MENA countries and Sub-Saharan Africa. Periods of extreme volatility have been associated with increased poverty and a concomitant worsening of income distribution in emerging markets. In addition, the poor often lack necessary education and skills, limiting their ability to move across sectors to adjust to changes in economic conditions.

A central concern of this study is whether the source of volatility matters for growth. It is generally recognized in the macroeconomic literature that shocks play a crucial role in predicting national and international business cycles and output volatility. A growing area of research is the relative role played by global, regional, and country specific shocks in accounting for domestic output fluctuations. In recent years, understanding and decomposing the various factors affecting the short and long run behaviour of output volatility in the MENA region has become a rapidly growing area of research. Some studies have focused on the determinants of economic growth (Abed and Davoodi, 2003; Makdisi, et al., 2003, Hakura, 2004; Tamberi, 2005) while others consider how increasing trade and financial linkages affect various economic outcomes in the region (Abed and Davoodi, 2003; Hirata, et al., 2004). More recent studies document the main features of business cycles in the MENA countries (Hirata, et al., 2004; Süssmuth and Woitek, 2004; Lucke, 2004; Al Zoubi and Meghyereh, 2005; Hirata, et al., 2007). Shafik (1998) focuses on the dynamics of economic growth, transitional issues, poverty, and environment in the MENA region. Iqbal (2001) focuses on a range of issues from demographic transition to financial liberalization in the region.The volatile changes in the MENA region during the last three decades have lead to controversies on the relative importance of potential sources of macroeconomic fluctuations. Several studies attribute a significant role to terms of trade shock and external linkages (Makdisi et al., 2003; Diboglu and Alesia, 2004; Hirata et al., 2004, 2007). Using a similar structural vector autoregressive (SVAR) model approach as in this study, Hoffmaisterand Roldos (1997), and Ahmed and Loungani (1998) examine the sources of macroeconomic fluctuations in developing countries and find that terms of trade and world output shocks play a significant role. Mehrara and Oskoui (2007)used a SVAR model to examine the sources of macroeconomic fluctuations in five oil-exporting MENA countries. They found that oil price shocks were the main source of output fluctuations in Saudi Arabia and Iran but not in Kuwait and Indonesia. Some

other studies point to the significant role played by real demand shocks such as fiscal imbalances and real exchange rate misalignments, in countries of the MENA region (Domac and Shabsigh, 2001; Nashashibi, et al., 2001; Jalali-Naini, 2000).

This study primarily focuses on investigating the sources of output volatility in the MENA region. There is a growing view in the literature that external shocks play a crucial role in accounting for business cycle in the region. Monetary policy is also assumed to have been destabilizing for a long time. Using a small open-economy model appropriate to the MENA region, this study examines the relative importance of external shocks (regional and global) as well as domestic shocks in accounting for output volatility. The rest of the paper is organised as follows. Section 2 outlines the approach used to investigate the sources of output volatility in the MENA countries. Section 3 presents the empirical results derived from the impulse response analysis of shocks and their variance decompositions. Section 4 concludes the discussion.

2   A SVAR Model of Business Cycle with Global and Regional Shocks

In order to study the sources of business cycle in the MENA region, this study includes the structural vector autoregression (SVAR) approach proposed by Blanchard and Quah (1989) and extended to open economies by Ahmed et al. (1993), Bjørnland (1998), and Hoffmaister and Roldós (2001). The output volatility is decomposed into three sources, namely; country-specific, regional, and global shocks. Since all variables used in this study are found to be nonstationary, a SVAR model is specified in the first differences. Due to data limitations, 15 countries are included in this study. These include 10 countries (Bahrain, Iran, Israel, Jordan, Kuwait, Libya, Oman, Saudi Arabia, Syria, United Arab Emirates) in the Middle East and 5 countries (Algeria, Egypt, Malta, Morocco, Tunisia) in North Africa. The model incorporates three sources of business cycle: effects of shocks from world output, regional output, and domestic output. To be consistent with the assumption of a small open economy, domestic shocks are not allowed to affect the global and regional variables.

As noted above, the model identifies three structural shocks. The external shocks are the shocks in the global output growth and the regional output growth. Phillips (1991), an extension of Hamilton (1989), gives an example of what can be interpreted as a global shock. Particularly in the Middle East, there might be regional shocks due to past wars. There is a long debate in the literature for an African factor. The African factor may be interpreted as one example of a regional shock. The model identifies one country specific shock, which is productivity shock in the home country. It may be difficult to identify the country specific shocks as either supply or demand shocks. Glick and Rogoff (1995), identify country specific shocks as deviation of Solow residual from world aggregate productivity measure; thus Glick and Rogoff's view is adopted in this study. In the model, country specific shocks include supply shocks possibly including structural reforms such as tariff and trade reforms, relative demand shocks arising from changes in public spending/debt and relative preferences, and aggregate demand shock. The latter captures the effects of nominal variables.

Ordinary least squares (OLS) is used not only to estimate a finite order vector autoregression (VAR) but also to obtain the moving average representation. It is assumed that the global supply and regional shocks have no long run effect on the differential of output level of a country from the world and regional output, respectively. Additionally, the study requires that the global supply shocks have no long-run impact on the deviation of a country's output from the regional output. It is reasonable to assume that in the long-run global shocks will have the same impact across the region. With the just identification of the structural shocks, the SVAR model is used to evaluate the impulse responses and variance decompositions.

3   Empirical Findings

In this study, data set contains annual data from 1960 to 2007, but the sample period varies for some countries depending on data availability. Descriptive statistics, sample period and number of observations are given in Table 1. All data, except the crude oil price, were obtained from the World Development Indicators (WDI). The crude oil price data were taken from the British Petroleum Statistical Review of World Energy Workbook. The data set includes 15 countries, 10 countries (Bahrain, Iran, Israil, Jordan, Kuwait, Libya, Oman, Saudi Arabia, Syria, United Arab Emirates) in the Middle East and 5 countries (Algeria, Egypt, Malta, Morocco, Tunisia) in North Africa. The selection of these countries was based on data availability. All variables are measured in a logarithmic scale. The unit root test shows that all the variables are nonstationary in levels and stationary in first differences. Therefore, the SVAR is estimated in first difference form for all countries. For each country, a trivariate SVAR model is estimated as specified in Section 2.

This study determines the appropriate lag length by usingthe reduced form VAR model. The model is estimated by restricting the lag length between one and four. On the basis of the Bayesian (BIC) and the Hannan-Quinn (HQ) Information Criteria (HQ), the sample evidence for the entire reduced form VAR system suggested a lag length of 1 for all countries, except Malta and Saudi Arabia for which a lag length of 2 is selected. A series of sequential likelihood ratio tests for a shorter lag length versus a longer lag length, suggested also a lag length of

one. The *p*-value of the Portmanteau test for residual autocorrelation ranges from 0.06 to 0.56 for a lag length of 8 and 0.04 to 0.42 for a lag length of 16. The normality of the residuals is not rejected using the multivariate normality test of Doornik and Hansen (1994). Given that the evidence for residual autocorrelation is weak and sample sizes were mostly around 48; the VAR models are estimated with a lag length of one for all countries.

Given the potential for structural breaks in the sample, conditional on constant variances, the parameter stability of each equation in the VAR models is tested. When a series of Wald-tests are performed, this study shows that these tests, conditional on constant variances, do not suggest evidence of parameter instability in general. The Chow break point test does not also suggest parameter instability. However, parameter stability is rejected for Libya and Jordan.

In order to show the validity of the structure of the SVAR model, the impulse response functions are estimated (Hamilton, 1994). Each variable in this model is expressed as a combination of current and all past errors. Thedynamic response of domestic real GDP to a one standard deviation innovation is examined in the three structural shocks. The cumulative impulse responses of domestic output to a one-standard-deviation positive innovation in each structural shock are given in Figure 1. The impulse response functions are normalized such that zero represents the steady-state value of the response variable. Several observations are in order. Consider first the impulse response to a positive country-specific shock. A positive country specific productivity shock raises the domestic output permanently in all countries. Responses to country specific shock are relatively much larger than responses to regional and global shocks. In terms of the response to country specific shock there is no difference between the oil-rich and oil-poor countries. It is also observed that the Middle East and North African countries are also analogous.

***Table 2.** Forecast error variance decomposition of domestic real GDP*

Cumulative impulse responses to a one standard deviation positive regional shock are given in the second column of Figure 2. The responses to regional shocks are surprisingly small at all horizons uniformly across all countries. Although responses to regional shock are insignificant for all countries some show a little insignificant negative response while others have positive but insignificant response. Thus regional factors seem to play no role in accounting for output volatility in the MENA region. In terms of responses toregional shocks, oil-rich, oil-poor, Middle East, and North Africa countries are highly similar. Our findings indicate that the regional factor play almost no role in explaining macroeconomic volatility in the MENA region. Our result further confirms the findings by Kose et al. (2003) and Berument et al. (2007) for countries from all regions of the world, although their study is based on a different approach.

Impulse responses to global shocks in the MENA region are shown in the third column of Figure 1. The result indicates that the responses are not significant for most countries. However, the result is not so uniform as in the case of country-specific and regional shocks. Among the oil-rich countries, Algeria, Syria, and United Arab Emirates show some mild positive permanent response to positive global shock. However, these are relatively much smaller than the responses to country-specific shocks. Thus, majority of oil-exporting countries do not show significant response to global shocks. In contrast to oil-rich countries, almost all oil poor countries show significant response to global shocks. Positive global productivity shocks permanently raise the output in these countries. Among these countries Egypt, Israel, Morocco, and Tunisia show quite large responses. The responses in Tunisia are almost as large as the response to country specific shocks. Thus, global shocks seem to play some role for oil poor countries, mostly for those in North Africa. Some of these economies are more integrated to world economies than those who done show significant response.

In order to measure the quantitative importance of the relative contributions of the world, regional, and country-specific factors to variations in output fluctuations in each country are estimated. The variance of domestic output at different horizons is decomposed into the fraction that is due to each of the three factors. The forecast error variance decompositions of domestic output are given in Table 2 along with their standard errors. The forecast error variance decompositions show the variance of domestic output attributable to country-specific, regional, and global shocks at horizons 1-6, 10, 20, and 40. The variance components add up to 100 percent so that all volatility in domestic output can be attributed to country-specific, regional and global factors.

The variance decompositions show that the country-specific factors play a much larger role in accounting for output dynamics than the world and region factors. The country-specific factors explain more than 70 percent of output fluctuations for 10 countries, and the global shocks account for more than 50 percent of output volatility for 4 countries. The world and regional factors combined account for less than 40 percent of output volatility in 9 countries. For Bahrain, Egypt, Israel, Morocco, and Syria regional factors account for 16 percent of output volatility, while for the corresponding figure for Bahrain is 40 percent. Global shocks account for a significant fraction of output volatility in Egypt (27%), Israel (13%), Morocco (34%), Syria (40%), and Tunisia (62%). In summary, the variance decompositions show that that the regional factors play a minor role in explaining output volatility in the MENA region with the exception of Bahrain. Global factors play the second important role after country-specific factors. However, only for one country global shocks dominate the country-specific shocks, which is Tunisia. Overall, country-specific factors account for more than 50% percent of the output fluctuations at all horizons for 14 countries out of the 15 countries in the region. Further, the results show no significant difference for the Middle East and North Africa. There is also no noticeable difference between oil-rich and oil-poor countries.

4   Conclusion

This study attempts to assess the relative importance of country-specific, regional, and global shocks in output fluctuations for the MENA countries. A small open economy SVAR model is used to show that business-cycle fluctuations are driven by country-specific, regional, and global shocks. The model uncovers valuable information about the response of domestic output to country-specific, regional, and global factors. Some of the results contradict the conventional wisdom in the region. In accordance with the small open economy assumption, and to disentangle the effects of external shocks from domestic shocks, it is assumed that the global shocks are not affected by regional and country-specific shocks. Regional shocks are also assumed to be unaffected by country specific shocks. One of the virtues of this approach is that it identifies and measures the effect of different types of shocks in a unified framework.

The research findings show that for all countries under consideration, domestic output volatility is mostly accounted for by country-specific factors. In about one-third of the countries, global shocks play a significant role in output fluctuations. Regional factors do not play a significant role for any of the countries. Although several studies found that regional factors might be an important factor in output volatility, the results found no statistical evidence in support of these studies. Thus, regional business cycles do not play a significant role in explaining output volatility in the MENA region.

A Summary of the Developments Regarding the Economic Regime Implemented in Developed and Developing Countries

Asst. Prof. Dr. Özlen Hiç Birol (Istanbul University, Turkey)

Abstract

Since the developments regarding the economic regime in developed countries follow a different path as opposed to those in developing countries, in this article, these two groups of countries will be examined separately. Priority will be given to investigating the economic regime in developed countries due to historical and theoretical reasons. Today, both in developed and developing countries the economic activities basically are taken up by the private sector; nevertheless the government contributes to these activities through intervention, guidance, protectionism, and investment. Still the level of government intervention, protection and public investments in developed countries appears to be at the minimum. The role of government in developing countries, on the other hand, seems to be more significant; the gravity of the government's role depends on the degree of development for the countries concerned. In the countries where the level of development is low, the role of government increases, that is to say, the improvement in development decreases the role government.

1 Outlines of the Economic Regime

What is meant by the economic regime or the economic system is to identify whether fundamental economic and social activities such as production, allocation of resources, and distribution of income are conducted by the government or the private sector and to what extent. One of the major subjects of the economic regime has to do with the issues of foreign trade and economic relations, and the existence of market economy or government restrictions and protectionism.

As it is well understood by the definition given above, there are two extremes in this topic. First one requires that all economic and social activities are conducted by the private sector through price and market mechanism and profit maximization principle based on the free interaction. In this economic regime, private ownership is essential. Considering their own interests, the owners of land and capital decide which goods to produce and how much to produce, which type of technologies they will use, and how much labor they will employ according to the market conditions, supply and demand, and prices and wages. It is claimed that in the end, the optimal point, in other words, full employment equilibrium and at the same time, balance of payments are reached automatically. Under these circumstances, the government should only carry on its classical functions such as external and internal security, the judiciary and health and education. Although this economic regime, first introduced in the 18th century, is called the "liberal economic regime" as a result of the inspiration from the Marxist publications, it has come to be named as "capitalism".

The second extreme or the opposite end of the spectrum would refer to all economic and social activities that are carried out by government. K. Marx and Marxists call this economic system as "socialism"; but the term generally used and accepted is "communism". In the communist system, the ownership of the land and capital which are the main factors of production is in the hands of the government. The government conducts all economic and social activities by means of central planning.

At this stage, it is necessary to touch upon the interaction between these different economic regimes with the political regime. The political regime which is commensurate with the liberal economic regime seems to be democracy which upholds individual freedoms up to the maximum level. Although in autocracies, private sector also plays an important role in economic activities as it was the case with Hitler and Nationalist Socialism, Mussolini and Fascism, the private sector has to be compliant with government's restraints and directions. Similarly, in the countries where democratic regime is not fully implemented, there again private sector is subjected to various pressures coming from the government. On the other hand, the communist regime essentially emerged as a dictatorship regime; government ownership and central planning hence government conducting all economic and social activities cannot exist side by side with any multi-party system or true "democratic" political system.

At the very outset it should be stated that, these two extreme regimes are not practically enforced. The implementation of private sector conducting all economic activities had begun in the developed countries, yet since they had caused various problems government started to take part in many economic and social activities by means of macroeconomic and social interventions, and government aids. At present this economic regime is identified as "mixed economy" in many standard economics books; here the main point is to emphasize the existence of both the private and the public sector together. Still the term of "mixed economy" would not give away the fact whether the role of government or private enterprise is more important, and it can sometimes even be misleading. That is why both international economic institutions and economics literature mostly make use of the term of "market economy".

The alternative to it as a second extreme or the opposite end of the spectrum which is government conducting all activities disappeared in practice since the collapse of the Union Of Soviet Socialist Republics (the USSR) and China's transformation into a mixed economy with private enterprise. All these developments will be dealt more thoroughly in the following sections.

2   Evolution of the Economic Regime in the Developed Countries

2.1 The Birth of Liberal Economic Regime

Before the advent of the science of economics, throughout the $16^{th} - 18^{th}$ centuries, European countries, in other words, the developed countries at that time, implemented a very heavy interventionist and protectionist economic regime which was dubbed by Adam Smith as "Mercantilism". In Mercantilism each county was cutting down on its imports as much as possible whereas promoting its exports. But these countries could not issue the gold which was entering the country as the result of their foreign trade surpluses into the market as money; the gold was accumulating in the vaults of the Central Bank. The countries believed that this was the only way their countries' wealth would increase. Eventually, Mercantilism was restraining the volume of foreign trade among developed countries on one hand, and on the other hand it was reducing their rate of growth. Additionally, Mercantilism led these countries to colonialism (imperialism). The rational behind possessing a colony was to have cheap raw material and to be able to sell their goods at high prices.

However, the "industrial revolution" brought about significant changes in these countries. With the invention of steam engine, boat and train transportation expanded to a great extent, factories emerged as a result of mechanization of the weaving looms. According to Arnold Toynbee, the industrial revolution evolved through 1760-1840; first started in England and then it spread throughout other European countries. The industrial revolution created rather a large group of entrepreneurs. The most significant of all is the fact that these entrepreneurs started to realize that heavy interventionism and protectionism of the government, in fact, were restraining their economic activities and decreasing their profits. In his work written in 1776, Adam Smith identified this important development; when he was establishing the science of economics, he claimed that through the liberal economic system he developed, the government taking off his hands from all the economic activities would result in the most optimal economic and social outcome for the whole society. Adam Smith assumes that in all markets including the labor market, perfect competition prevails. In an economy under these conditions, the "invisible hand", that is the price mechanism, will solve all economic problems at an optimum point for the whole society. Full employment equilibrium will be reached automatically, and the balance of payments will restore itself so that the trade balance will be reached automatically via the automatic gold standard theorem (Hiç, 1994). In this case, any intervention or protection coming from government would disrupt the equilibrium, and the welfare of the society would decrease. In perfectly competitive markets, the profits of the firms would fall down to their "normal" levels under. However, if monopolies arise, the government should abolish the monopoly. The government should not intervene on wages. However, if labor union (labor monopoly) emerges, the government should intervene again; as the monopolist wage rises of the unions would prevent the economy from reaching the full employment equilibrium automatically.

Free foreign trade based on Adam Smith's absolute advantage theory has gained validity and universality through David Ricardo's (1817) comparative advantage theory; this theory is still valid in our times.

The classical model based on Adam Smith the following classical economists developed further by Alfred Marshall in 1890. For detailed information about the economic model mentioned in the macroeconomic literature as the classical system or the simple classical system (not containing the Keynesian self-correcting features), one can refer to macro economy books such as Hiç (1994), Paya (1997), Ackley (1961), Branson (1989). In this article, though, there is no need to go into the details of the classical system, as for a collective information about classical economists, please refer to Hiç (1974, ps. 1-9)

We can safely assume Adam Smith as the starting point of the science of economics and the implementation of economic policies based on this science. As mentioned before, Smith's system is called "liberal economic regime" or *laissez-faire*. The very same economic regime had been named by Marx and Marxist writers as "capitalism" or "wild capitalism".

In practice, the implementation of "*Laissez-faire*" has caused two main problems. Firstly, through its implementation in the early years, the conditions of the workers got worsened, that is the "labor problem" or "social problem". Secondly, economies did not grow at the full employment equilibrium. On the contrary, there had been continuous cyclical fluctuations, and the problem of unemployment in the depression period remained unsolved

2.2 The Birth of the Communist System

In 1848, Karl Marx, with F.G. Engels introduced the second extreme regime with their work the "Communist Manifesto" during the first period these serious labor problem and cyclical fluctuations, depression and unemployment encountered by the European countries. Marx, later on, developed his thoughts in Das Kapital (Vol. 1: 1867, Vol. 2: 1885, Vol. 3: 1884 after his death).

According to Marx, the capitalist system was dynamic but it would give rise to exploitation of workers, monopolies and increased poverty of the workers; the business cycles stem from the nature of the capitalist system, and they are inevitable. Marx argued that the governments in the capitalist system had become the powns (true owners) of the capitalists and could not prevent this doom; on the contrary, the problem will become more serious. In fact, he derided all efforts such as establishing a social security system or wage-legislation. Marx also argued against the religion thought that the religion was there only to calm down and make the workers accept their poor plight.

Marx prophesized that the capitalist system would eventually be destroyed after a severe depression by a "bloody" revolution of workers who had nothing to lose but their chains. After capitalism is destroyed, Marx noted that the production of factors would be owned by the government or the community, free enterprise system would stop and the government would take up all economic activities including investment and production and would implement central planning. According to Marx, in such a system, exploitation of workers and business cycles would be eliminated, and we should have a prosperity, equality, true democracy and full-employment.

The Communist Manifesto had been adopted by all labor unions of the European countries, especially by the German labor unions. However the de facto developments had taken place very differently from Marx's arguments.

2.3 De Facto Developments, Evolution of *Laissez-Faire* or Liberal System into the Market Economy

Contrary to Marx's arguments, the governments of developed countries did not stay indifferent to problems of workers. Affected by the views of intellectuals on one hand and the voting potential of the workers in democracies on the other hand, as well as for humane reasons, almost all governments prioritized the issue of betterment of the conditions of the workers. In these early periods, the workers were given the fundamental rights such as prevention of child labor, limits of the working hours, provision of work safety by regulating working conditions, determination of the minimum wage. Even one more step further, the social security system was institutionalized and at the same time, the labor unions were granted the right to go on strike, the employer was given the right for lockout as opposed to the right to go on strike. By doing this, social objectives were first introduced in the liberal economic regime (*laissez-faire*) as public policy for the first time, meaning "rightist" standpoint heading towards "center-right". Thus, the conditions of the workers had started getting better.

The business cycles, however, could not be prevented until the Great Depression of 1929-1934. After the Great Depression, Keynes introduced his macroeconomic system through his work (1936) showing that the automatic full-employment equilibrium in the classical system was not a true assumption and that the economy will settle at a less-than-full-employment equilibrium if the government does not increase the level of aggregate demand. According to Keynes' macroeconomic system, in order to ensure the full-employment equilibrium and to prevent unemployment, the total expenditures should be increased up to the level which will bring about full employment; so the government would be implementing monetary policy (money, credit, interest rate) and fiscal policy (government expenditures, taxes). The central banks in charge of determining the amount of money and credit as well the interest rates, later on, have been made independent from governments; obviously, it is always possible for the central bank to consult with the government. The same macro policies would be implemented in the opposite direction to prevent inflationist periods. As for more detailed information about Keynes' macroeconomic system and monetary and fiscal policies, refer to Hiç (1994).

Keynes' ideas and policy recommendations were embraced by all European countries and implemented during the World War II (to decrease inflation) and after the war (to prevent the business cycles). The government interventions in the economy on a macro level (through monetary and fiscal policies) to avoid cyclical fluctuations and to ensure a full-employment has become and inseparable part of the economic regime.

After the Second World War II (1939-1945), the world had split into two parts as the Western World and the Communist Bloc. Since the European governments made again use of trade restrictions and protectionism before the World War I (1914-1915), in order to prevent this tendency, the liberalization of the free foreign trade was initialized through GATT (*General Agreement on Tariffs and Trade*) signed in 1947. The World Bank established in 1944 (with its first period name and function, IBRD: *International Bank for Reconstruction and Development*) as well and the IMF provided the implementation of the market economy in the Western World including the developing countries. Instead of liberal economy or *laissez-faire*, the economic regime comprising of social and Keynesian macroeconomic interventions has started to be called as "market economy".

In the 70s, stagflation aroused as a result of the increase in oil prices by the OPEC, consequently, conservatism in the general public in the US and in Europe increased, and the views against the Keynesian system, namely, Monetarism and Neo-Classical School became widespread. Nevertheless, the implementation of these policies (especially during R. Reagan in the United States through 1980-1988 and M. Thatcher in Britain through 1979-1988) did not bring about positive results, and on the contrary, unemployment increased. Upon this development, Keynesian macroeconomic system was inclined in the academic circles in the 80s. Alongside with the main Keynesian macroeconomic system, Post-Keynesian and New-Keynesian schools gained some momentum. The

90s had seen the return to Keynesian macroeconomic policy implementations. As for more detailed information about these new macroeconomic schools, refer to Birol (2001).

The global financial crisis and recession started in September 2008 in the United States, and then spread to the whole world with serious dimensions (for details please refer to Hiç, 2010), resulted in very important outcomes in terms of macroeconomic policies and the market economy. Firstly, especially Reagan in the United States and Thatcher in Britain decreased the size of the government control over the financial sector, and this decrease in oversight was an important factor in the break out of the financial crisis. When the crisis arose, the financial sector was put under severe government control. Thus, the control of the financial sector was accepted as a requirement of the market economy. Secondly, alongside with the financial aid by government against the global crisis, intensive Keynesian macroeconomic policies such as decreasing the interest rates (monetary policy), changes in public investment programs and taxing system (fiscal policy) were implemented. Thus, the requirement for Keynesian macroeconomic policy implementation was confirmed. Thirdly, international cooperation was sought through G-20 instead of G-7, nevertheless though, in the essence, market economy and globalization process which started in the 90s were not abandoned (Hiç, 2010).

The fundamental element in market economy is the private sector; investment and production are delivered by private enterprise. Government, though, invests only in social and productive infra-structure fields; private investment is also allowed in these same areas. The sectoral and regional distribution of income is merely intervened on an exceptional basis. Government interventions are made on the grounds of Keynesian recommendations as well as for social objectives and they are limited only for those areas. Foreign trade is liberalized, restrictions on quotas are eliminated, and customs duties are at their minimum levels. The trade balance is reached by the exchange rates determined in foreign exchange market. Beside the free foreign trade, the entry of foreign private capital is also free. In the process of globalization, international flow of the financial funds plays the most significant role.

The market economy with its guidelines given above is being implemented in the freest fashion in the countries such as United States, Britain, Canada and Germany. On the other hand, in France, government control is traditionally and relatively more intense.

2.4 Heading towards Social Democracy in Developed Countries

Marx's Communist Manifesto of 1848 had been published by the German labor unions, and especially in Germany, labor unions in all European countries had embraced communism. Yet, the labor unions noticed the fact that, in time, the governments were dealing with social issues and progressively the conditions of workers were getting better. They also realized that they played an efficient role in these improvements, and eventually they moved away from communism and headed towards democratic socialism or, in short, towards socialism.

When the Marxist-Leninist communist revolution had broken out in Russia in 1917/1918, the majority of the labor unions in the European countries had left communism completely adopting democratic left movement. Only the minority groups had to be faithful to the communist system, and they had supported communist parties.

Following the communist revolution, the USSR had founded "Comintern" (an international association of communist parties) in 1919; however, this organization had been abolished in 1942. After the World War II, this time, the USSR established Cominform, and this organization, too, was disbanded in 1956.

After the World War II, the democratic leftist parties in Europe came together and founded the "Socialist International" in 1951. The Socialist International accepted democracy and market economy as a their principle. Within this framework, the promotion of democracy, human rights and equal opportunities were targeted and acknowledged. The Socialist International supported NATO, opposed the USSR and was pro-disarmament. The British Labor Party, the French Socialist Party and the German Democratic Party took part in the Socialist International as democratic leftist parties.

The developments in the field of social policy starting from the World War II up until today have improved relatively compared to the past. Those improvements including minority rights, women's rights, freedom of the media freedom of justice unemployment insurance health services and tax system taking into account the income distribution are among the fields where social democrats succeeded.

In relatively recent times, the democratic leftist parties headed towards the center-left. The British Labor Party and Tony Blair were the pioneers in this inclination. Today, the conditions of the workers in Europe and certainly in the United States have improved; many of them own their houses and cars, and they go to different countries on holiday.

The fundamental reason for the democracy functioning relatively well in the European countries seems to be the high level of education and the long standing democracy experience. As a result of this fact, the central-right and center-left (social democrat) parties share the majority of the votes whereas the liberals stand in between and in the middle. Both communist parties and anti-workers, racist, radical rightist parties are generally compose the minority. Moreover, the voters may vote differently depending on the time and conditions. This way, the central-left presents a powerful alternative, and in many occasions, come into power and govern competently. The fact

that the general principle of the both the central-right and the central-left happens to be democracy and the market economy plays an essential role in this outcome, because the difference between these two parties does not lie in the economic or political regime change, rather in their priorities and focus on the social targets. It should be kept in mind, however, that the economic growth and the employment as the social objectives are their common and most important targets they seek to accomplish.

2.5 The Expansion and the Collapse of Communism

According to Marx, to bring about a revolution by the working class and the establishment of socialism (communism) would only be happening in the "mature" industrialized countries; like in England and in Germany at his time. Yet, his expectation never materialized. Later on, the Marxist writers tried to explain this delay. For instance Rosa Luxemburg (1912) claimed that European countries turned to imperialism, and exploiting the colonies alleviated temporarily the exploitation of the workers; for a detailed information about Marxism and communism, refer to Hiç 1974, ps. 44-79.

Contrary to Marx's assumptions, in Tsarist Russia which was relatively less developed in terms of industrialization compared to the European countries at that time, in 1917 a minor militant group, but not the working class, staged a communist revolution taking advantage of the economic and political gap created by the World War II; and thus, Lenin established communism (bolshevism). The second wave of communism had been created, again not as a result of the revolution by the working class, but as an outcome of 1945 Yalta Conference attended by Churchill, Roosevelt and Stalin right after the World War II. In the conference, Northeastern and Balkan countries were left under the influence of the USSR, and eventually the USSR had brought communist dictatorship to these countries. The third important wave was China's becoming a communist country. After a long standing struggle with Chiang Kai-Shek and Japan, Mao Zedong founded People's Republic of China in 1949. Additionally, after serious internal and external problems and wars, North Korea, Cuba and two Indochina countries Vietnam and Laos had chosen the communist regime.

After the World War II, the USSR prioritized to bring communism to the developing countries as part of its expansionist policy, making use of her finances and propaganda towards this goal. Stalin, most probably, saw the fact that, virtually, there was no likelihood for the expansion of communism in the developed Western countries. Developing countries, though, were not yet industrialized, and many of them had a feudal structure. There were new departments established in universities to study and research on how these countries could become communist step by step. As a matter of fact, Şevket Süreyya Aydemir, the leader of cadre movement during Atatürk period, had studied this subject at Moscow University. This propaganda of the USSR, in general, had not been successful, and no country had chosen communism just because of such propagandas. On the other hand, the NEP (The New Economic Policy) implemented during Stalin era, based on the closed economy, import-substitution, development strategy relying on public investments and central planning created an opinion that these elements were the reasons why the USSR achieved a very high growth rate; hence the NEP was taken as an example by many developing countries. Essentially, although the low level of development in these countries could not be compared to the one in the USSR, these countries generally required an economic regime featuring these strategies. Following this perspective, in India, even a Marxist model (Mahalanobis model) was put into practice; nevertheless, since it failed, in a year's time, it was abolished.

In time, it was realized that the central planning depending solely on public ownership and public enterprise brings about a restriction on the growth rate and technological progress, and public enterprise lacks the dynamism of that of the private enterprise. Eventually, the Soviet system, namely the communism, let alone to provide prosperity for the workers, it transformed into an oppression and police state. The communist regime caused setback to the development and industrialization of Russia and the countries part of the USSR states. The burden of the countries within the USSR on the Russian budget accompanied by the intensive military spending to compete with the United States incurred serious economic problems.

In the years when the communications facilities were limited, the Soviet propaganda was emphasizing freely that the conditions of the workers in Europe were very bad. However, in the following years, as the communications technologies have improved and the difficulty of restricting communications has become a reality, the people in Russia and in other member countries realized that the welfare of the working class in the European countries were much higher contrary what the propaganda was asserting; and that gave rise to discontent. In the end, let alone the claims of the USSR and Krushev to excel over the United States, even the *glasnost* efforts of Gorbachov did not prove fruitful. In 1990, the Berlin wall fell, and the East Germany broke its ties with Russia and acceded to the West Germany. In 1991 the USSR disintegrated and communism collapsed. Russia and all the now independent countries have chosen democracy and the market economy. Majority of the Northeastern European and Balkan countries have been accepted as a member of the EU (Karluk 2007). The others, though, have established the Commonwealth of Independent States with Russia, and all of them have forsaken communism. Both in Russia and in these countries, problems in the application of democracy and market economy pose a distinct challenge, yet none of them seem to be likely to return again to communism.

With the collapse of the USSR, there are only five communist countries left in the world: China, Cuba, North Korea, Vietnam and Laos. However, a very significant development in China did occur though. After the death of Mao in 1976 and during the 80s, under the guidance of Deng Xiaoping, rather than following merely the doctrine, China opted for pragmatic economic policy. Being accepted as a member of the World Trade Organization in 2001, Chinese economic policy not only encouraged the private enterprise but started to encourage foreign private investment flow radically as well. At the same time, with this economic strategy based on the foreign private capital, China has occupied an important place in the globalization process of the 90s. Eventually, with its very high growth rate secured for a long time, in terms of the level of gross national product, she has reached the second position just right after the United States; but the per capita income level is still lagging behind. Today, what China implements as an economic regime is not a central planning which is peculiar to the communist system; the new regime which is open the external world could be considered as a mixed economy model based on encouragement of the private enterprise and private foreign capital. Thus, in practice, there are only four countries left that implement the actual central planning, and therefore they can be called communist countries: Cuba, North Korea, Vietnam and Laos. Cuba and Vietnam could leave communism if appropriate external and domestic opportunities arise, and eventually they may forsake the central planning in terms of economic regime, despite the fact that they may maintain their dictatorship structure. In short, from the point of the economic regime, communism and central planning which represent the second extreme have been dwarfed with no possibility of revival, getting close to the zero point. On the other hand, global economic and political problems are still handful, and new challenges are in the waiting.

3   Evolution of the Economic Regime in the Developing Countries

As to the problem of development and economic regime in the developing countries, this issue could be traced back to the aftermath of the World War II. The IMF and the World Bank set up after of the war had advocated the market economy as the economic regime for the developing countries in the Western world. Nevertheless, in the early stages of their development process, in the developing countries there were not enough private enterprises and private investment, and generally speaking, this led to very heavy interventionism, protectionism and public investment based, closed and import-substituted industrialization; the governments intervening the sectoral and regional distribution of income. In fact, the great majority of the economists and economic advisors of the developed countries during those years, actually advocated government interventionism and public investments due to lack of competitiveness in the markets of this countries and the existing price mechanism's not being a good indicator in terms of their productivity. Detailed information can be found in references of Hiç (2001), Toye (1993) and this paper.

As their development progressed, the intensity of the public investments, government interventions and protectionism has decreased gradually as a result of this development. Therefore, developing countries have proceeded in the opposite direction compared to the developed countries. Developed countries had started with *laissez-faire*, and then, they allowed government interventions to a certain degree. Developing countries, though, have started with statism, after the private sector and the market economy expanded over time, the role of the government diminished; meaning that the developing countries also headed for the market economy; however, they cannot be considered implementing the market economy yet. On the other hand, for these developing countries we can safely state that they prioritize the encouragement of the private enterprise and foreign private capital, and they are open to outward-oriented industrialization, and implement a mixed economic regime with a strong private sector.

In the first stages of their development, developing countries used to employ a closed economy and fixed exchange rate system. However, the governments were increasing their expenditures in order to raise the growth rate and to address the social issues; the necessary finances were provided by the central bank which was not independent from the government. This rise in inflation caused by the increase in the volume of money because the exchange rates were fixed was giving rise to an increase in the volume of imports and decrease in the volume of exports, even though they were trying to restrict imports via high rates of customs and import quotas and encourage exports via export incentives. Eventually, the deficits in their balance of payments were forcing these countries to apply to the IMF. On the other hand, the IMF was stipulating devaluation and stability measures, namely, to eliminate their budget deficits, and additionally, instead of public investments, to encourage the private sector and the flow of foreign private capital. The developing country complied with these recommendations in accordance with the *stand-by* agreement, after a while, was again pursuing the wrong development strategies, and eventually it had to end up applying to the IMF one more time.

From the very outset, as an exception, Hong Kong, Singapore, Taiwan and South Korea succeeded implementing a development strategy based on the open economy, encouragement of private sector and foreign private capital flow and as export-oriented industrialization. Yet, these countries had different traits compared to other developing countries. Hong Kong, for instance, was an international trade center and Singapore was an international finance center they were both city-states. Taiwan and South Korea on the other hand, were appropriate places in terms of political objectives and from the economic point of view, thus, they benefited

greatly from the flow of intensive American capital. American companies have been importing the goods they manufacturing in Taiwan and South Korea at very low prices. None of the other developing and newly industrializing country, including Turkey, was never subject to such intense foreign capital flow to this extent. Nevertheless, the economic regime implemented in these countries cannot be defined as a pure "market economy" because of the practice of intensive government interventions and protectionism (Toye, 1993).

In the 70s, many development economists draw the attention to the shortcomings of the closed economy implemented generally in the developing countries, and they advocated development strategies based on open economy and export-oriented industrialization (Hiç, 2001 and Toye, 1993).

In fact, many developing countries which were applying the closed economy model were increasing their public investments and consumption expenditures; they could not collect taxes, eventually ending up with high rates inflation. In some Latin American countries the inflation rate reached over 1000 %s. Due to the fixed exchange policy, the demand for imports was increasing while the exports were falling, and despite the IMF's aid, the deficit in the balance of payments was reducing the growth rate for a long time; resulting in an economic frustration in terms of growth and social welfare. Many of governments of developing countries that became aware of the situation tried maintain the same principles even after the *stand-by* agreements with the IMF throughout the 70s. That means, they tried to minimize the budget deficit and encourage the private sector and foreign capital flow, and they returned to the market exchange rate system by forsaking the fixed exchange rate system. Since the market exchange rate system will enable the balance of payments equilibrium, it facilitated the liberalization of imports. On the other hand, because the existing state economic enterprises were not profitable and productive, privatization programs were carried out within the framework of the IMF's recommendations. Following a series of unsuccessful and inadequate devaluations in the 70s, Turkey, through 24 January austerity measures, has accomplished a very successful economic policy change in this direction (Hiç, 1980, 2008, ps. 82-83). After 1983, serious economic measures were taken in many areas including the implementation of open economy, liberalization of imports, adopting market exchange rate regime, providing incentives for foreign private capital (Hiç, 2008, ps. 21-129). The last significant revision was successfully implemented during the 1999 and 2001 economic crises (Hiç, 2008, ps.191-198; and Yeni Türkiye (2001).

4 Conclusion

As it was explained before, the economic regime applied in the developing countries cannot be characterized as "market economy". Since the level of development in these countries are lower compared to the developed countries, there need of the level of government interventions, protections and public investments is higher. For this reason, as we mentioned earlier, what is implemented in these countries is not the market economy but a "mixed economy" heading for the market economy which is based on the encouragement of the private sector and foreign private capital. Moreover, democracies of these countries have some difficulties not allowing the market economy to function properly and effectively; and partisanship, nepotism and level of corruption as well as off-the-record sector are much higher than the developed countries. The whole issue here is to have fewer problems in time as the level of education and economic development rises.

In Latin America, though, a limited number of countries such as Venezuela, Argentina and Bolivia have turned into dictatorship and heavy socialist statism because of many failures. These countries make up a very narrow island on the world map.

On the other hand, many countries, including Turkey, have entered the globalization process started in the 90s. China, India and Brazil have taken much advantage from the globalization by conducting pragmatic and successful economic policies, eventually positioning themselves as economically very powerful BRIC (Brazil, Russia, India and China) countries alongside with the developed countries. Despite the negative impact of the 2008 economic crisis, Turkey has recovered very rapidly and today she is among the "*emerging markets*" group (Hiç, 2010 b). In conclusion, in spite of the 2008 global economic crisis, heading for the market economy and globalization in general will go on in the majority of the developing countries.

Trade Openness, Financial Development, and Economic Growth in Turkey: Linear and Nonlinear Causality Analysis

Prof. Dr. Muhsin Kar (Necmettin Erbakan University, Turkey)
Assoc. Prof. Dr. Şaban Nazlıoğlu (Pamukkale University, Turkey)
Asst. Prof. Dr. Hüseyin Ağır (Sütçü İmam University, Turkey)

Abstract

This paper aims at empirically investigating the direction of causality among trade liberalization, financial development, and economic growth in Turkey. By employing monthly data for the period January, 1989- November, 2007, both linear and nonlinear causality approaches indicate that (i) there is bi-directional causality between economic growth and trade openness, (ii) economic growth causes financial development, and (iii) financial development leads to trade liberalization. Thereby, linear and nonlinear approaches confirm strong causal linkages among financial development, trade openness, and economic growth in Turkey. These results partially imply that economic growth depends upon trade liberalization through external finance in Turkey which has been experiencing capital account liberalization since 1989.

1 Introduction

It has been theoretically argued that both trade liberalization and financial development may play a crucial role in economic development. Trade liberalization reduces inefficiency in the production process and financial development facilitates the intermediation between savers and investors. Thus, they have a great deal of potential to positively influence economic growth in the developing countries. The theoretical and empirical studies mainly concentrate on either the relationship between trade and growth or the association between finance and growth. However, until recently, the empirical linkages between trade liberalization and financial development have not received sufficient attention in the literature.

Turkey has been implementing trade oriented development strategy since 1980 and has been experiencing financial liberalization process since 1989. Nevertheless, even though Turkey had faced to serious economic turbulences in 1994 and in the early 2000, she has recorded an impressive growth performance during the last decade. These dynamics of the Turkish economy provide us room to examine the nature of causal linkages between trade openness, financial development, and economic growth. To best of our knowledge, there is not any study on this subject for Turkey and thereby identifying the causal linkages among the variables of interest is timely and important to design financial system and trade policies for sustainable development.

The aim of this paper, therefore, is to econometrically investigate direct linkages among trade liberalization, financial development and economic growth for Turkey by employing monthly data for the period January, 1989- November, 2007. In particular, this work tries to empirically find an answer for the question of whether financial development leads trade liberalization or of whether trade liberalization leads financial development in Turkey in a trivariate framework by including economic growth which is interrelated with both trade openness and financial development. In addition to linear causality analysis, we carried out the nonlinear causality test in order to see whether the causal linkages among the variables of interest is sensitive the structural shifts and asymmetries in the series. In brief, we find from both linear and nonlinear approaches that financial development is the cause of trade liberalization and there is bi-directional causality between economic growth and trade openness and between economic growth and financial development. Thereby, linear and nonlinear approaches confirm strong causal linkages among financial development, trade openness, and economic growth in Turkey.

The novelty of this study is three-fold. First, this paper is the first that employs monthly income data in the literature on the finance-growth nexus for Turkey. Second, we conduct the financial development index -that is good able to capture of different dimensions of financial development- by means of principal component analysis. Third, in addition to linear causality analysis, we conduct nonlinear causality tests in order to determine whether there are asymmetric causal linkages between trade openness, financial development, and economic growth in Turkey.

2 Theoretical Framework and Empirical Evidence

The impacts of trade liberalization and financial development on economic growth have increasingly obtained a significant attraction in the literature. It is argued that both policy instruments fasten economic growth in the developing economies through various channels. Trade liberalization by allowing the allocation of factors of production across sectors (Grossman and Helpman, 1992; Redding, 1997), by increasing the competition in the domestic economy and hence improving productivity (Greenaway and Milner, 1993; Aghion, Dewatripont and Rey, 1997), by enlarging the market for domestic producers and leading to take advantage of the economies of scale (Taylor, 1994; Grossman and Helpman, 1991), by increasing number of inputs that have no domestic

substitutes and thus leading to a higher capacity utilization (Nishimizu and Robinson, 1986; Quah and Rauch, 1990; Grossman and Helpman, 1992) and, finally by letting the flow of knowledge across sectors and countries (Feder, 1982; Grossman and Helpman, 1992) might positively influence economic growth.

In fact, the role of financial sector on economic growth has long debated in the literature. Schumpeter (1912), one of the earliest pioneers, emphasized the importance of finance for growth. In the same line, Patrick (1966) introduced two new concepts which highlight the demand and supply side conditions, namely demand–following and supply-leading hypothesis. While the former states that demand in the real sector is the engine for creation of financial services, the latter emphasizes that supply in the financial sector is the driving force behind the development of real sector. Patrick's (1966) argument brought about the discussion whether the direction of causality from finance to growth or *vice versa*.

The literature moved to highlight the importance of mobilization of domestic resources in the early 1970s. Specifically, McKinnon (1973) and Shaw (1973) suggested the liberalization in the financial sector in terms of lifting any sort of restrictions in the sector. They argued that lack of saving is a widespread phenomenon rather than lack of investment in the developing countries. Therefore policies should focus on increase in saving through a positive real interest rate policy.

With the emergence of endogenous growth theory (Romer, 1986) in the mid-1980s, it is argued that financial development might be one of the sources for the increase rate of return (Renelt, 1991). Financial development by increasing the possibility of choosing more productive investments through improved management of liquidity risks (Bencivenga and Smith 1991), by collecting information on the efficiency of various investment projects and/or investors' abilities (Greenwood and Jovanovic, 1990; King and Levine 1993) and by diversifying more efficiently investors' portfolios (Levine, 1991; Saint-Paul, 1992) might positively contribute to economic growth (Levine, 1997). These arguments based on endogenous growth theories *implicitly* assume that financial development promotes economic growth (Hermes, 1994).

The literature, in the 2000s, started to focus on the determinants of financial development. In order to understand the dynamics of the differences in the level of financial development, several factors are proposed for this purpose: Legal origin (La Porta et.al., 1997; Demetriades, 2008), public bank ownership (La Porta et.al., 2002; Andrianova et.al., 2008; Demetriades, 2008), initial conditions and institutional structure (Acemoglu et.al., 2001, 2004; Demetriades, 2008), trade liberalization (Rajan and Zingales, 2003; Do and Levchenko, 2006; Huang, 2006; Demetriades, 2008; Law, 2008, 2009), capital account liberalization (Chinn and Ito, 2002, 2006; Law and Demetriades, 2006; Klein and Olivei, 2008), prudential supervision and effective regulation (Cuadro et.al., 2003; Brownbridge et.al., 2005), deposit insurance (Cull et.al., 2001), required reserves (Di Giorgio, 1999; Arestis et.al., 2002) and macroeconomic policies (i.e. Inflation, exchange rate) (Montiel, 2003; Cuadro et.al., 2003; Bittencourt, 2008; Ben Naceur et.al., 2008).

Although the theoretical literature assumes linkages both between trade liberalization and economic growth and between finance and growth, the multi causal linkages *between* economic growth, financial development, and international trade has recently attracted attention. Rajan and Zingales (2003) emphasize the role of the supply-side factors and the resistance of incumbent industrialists and domestic financial intermediaries who have a vested interest in a closed financial sector and therefore oppose the developments in the financial market. It is argued that these incentives may be weakened with the opening domestic financial sector to foreign competition and to international flows of capital.

On the contrary, Svaleyrd and Vlachos (2000, 2002) highlight the importance of the demand-side factors and the possibility of risk diversification with the trade liberalization which creates new demands for external finance. This external resource for firms is a necessity to overcome short-term cashflow problems and adverse shocks.

In order to fill the theoretical gap for the linkages among trade openness, financial development, and economic growth in a multi causal conceptual framework, Blackburn and Hung (1998) suggest that trade liberalization by leading new product development may contribute to economic growth. Financial development may be resulted from trade liberalization which encourages the number of new producers who need access to finance their activities. Similarly, Feeney (1994) argues that integration in the financial sector may enhance the probability for risk sharing that allows product specialization and, in turn, benefits trade. These studies imply an *indirect* theoretical link between trade liberalization and financial development via new products.

In sum, the above reviewed studies fall short of establishing direct linkages between trade liberalization and financial development. Ginebri *et. al.* (2001) emphasize the issue of complementarity between trade and finance and propose a *direct* relationship between trade liberalization and financial development. In particular, the complementarity is theoretically based upon the fact that trade liberalization enhances entrepreneurial development which in turn increases a need of new instrument from the financial system.

The relationship between trade liberalization and financial development has been a subject matter for a limited number of empirical works which provide evidences for the argument that trade liberalization is a crucial step to enhance financial development and/or *vice versa* in a single country or a group of countries (Beck, 2002;

Svaleyrd and Vlachos, 2000, 2002; Rajan and Zingales, 2003; Do and Levchenko, 2004; Huang and Temple, 2005; Hur, Raj and Riyanto, 2006; Bao and Yang, 2007; Law, 2008, 2009; Baltagi *et.al.*, 2009; Das and Rishi, 2010). In contrast, Gries, Kraft and Meierrieks (2009) find a limited support for the finance-led growth and financial deepening and trade openness have swayed economic development rather marginally.

As far as the empirical works for Turkey are concerned, there is not any consensus on the direction of causality not only between trade and growth (Ghatak, Milner and Utkulu, 1995; Bahmani-Oskooee and Domac, 1995; Yiğidim and Köse, 1997; Özmen and Furtun, 1998; Doğanlar and Fisunoğlu, 1999; Özmen et. al, 1999; Hatemi-J ve Irandoust, 2000; Tuncer, 2002; Şimşek, 2003; Bilgin and Şahbaz, 2009) but also between finance and growth (Şıklar, 1992; Akçoraoğlu, 2000; Kar and Pentecost, 2000; Doğan, 2002; Ünalmış, 2002; Aslan and Korap, 2006; Aslan and Küçükaksoy, 2006; Kar and Ağır, 2006; Acaravcı, 2007; Halıcıoğlu, 2007; Öztürk, 2008; Yücel and Altıntaş, 2009). The results imply that the selection of both variables and the methodology determines the direction of causality between the concerned variables in these empirical works.

There is a limited work which concentrates on the relationship between finance and trade for Turkey. Utkulu ve Kahyaoğlu (2005) examines the impacts of both financial and trade openness on economic growth and find that while financial openness negatively contributes to economic growth, trade liberalization has a positive effect on growth in Turkey. Açıkgöz, Balcılar and Saraçoğlu (2009) also investigate the causal linkages among financial development, financial openness and trade openness by employing bounds test developed by Pesaran et.al. (2001) and Pesaran and Shin (1999) for the period 1989:Q1-2007:Q2 and provide empirical evidence that both financial and trade openness have a positive impact on financial development for Turkey. Kar, Peker and Kaplan (2008) examines a long-run relationship between trade liberalization, financial development and economic growth for the period 1963-2005 in Turkey and concludes that openness and finance has a positive impact on growth in the long-run. Yücel (2009) finds a bi-directional causality between each pair of the variables, namely financial development (measured by the broad money to GDP ratio), trade and economic growth, for the period 1989M1-2007M11 in Turkey. Ağır (2010) provides empirical evidence that trade, among other variables, plays a significant role in explaining financial development in Turkey.

3   Econometric Methodology

3.1 Linear Granger Causality Test
The standard Granger causality test requires carrying out zero restrictions on coefficients in Vector Autoregressive (VAR) model based on the Wald principle. Wald test for Granger causality may result in nonstandard limiting distributions based on the cointegration properties of the system and possibly on nuisance parameters. These nonstandard asymptotic properties are due to the singularity of the asymptotic distributions of the estimators (Lütkepohl, 2004: 148). Toda and Yamamoto (TY) (1995) developed the modified Wald (MWALD) test for Granger causality which overcomes this singularity problem.

The standard Granger causality analysis is based on estimating a VAR (p) model. In order to correct the singularity problem TY (1995) suggest using a VAR ($p+d$) model in which d is the maximum integration degree of the variables. The following VAR model is therefore estimated in the TY procedure:

$$y_t = v + A_1 y_{t-1} + \cdots + A_p y_{t-p} + \cdots + A_{p+1} y_{t-p-d} + \mu_t. \qquad (1)$$

where y_t is vector of k variables, v is a vector of intercepts, μ_t is a vector of error terms and A is the matrix of parameters. To test for the null of no-Granger causality against the alternative hypothesis is tested by imposing zero restriction on the first p parameters in equation (1). The MWALD statistic has asymptotic chi-square distribution with p degrees of freedom irrespective of the number of unit roots and the cointegrating properties.

Hacker and Hatemi-J (2006) investigate the size properties of the MWALD test and find that the test statistic with asymptotic distribution poorly performs in small samples. Monte Carlo simulation of Hacker and Hatemi-J (2006) shows that the MWALD test based on the bootstrap distribution has much smaller size distortions than those of the asymptotic distribution. Hacker and Hatemi-J (2006:1492-1493) extends the TY approach based on the bootstrapping method developed by Efron (1997). In this new approach that is so-called the leveraged bootstrap Granger causality test, the MWALD statistic are compared with the bootstrap critical value instead of the asymptotic critical value.

3.2 Nonlinear Granger Causality Test
The linear Granger causality test does not account for nonlinear causal relationships among the variables. The Monte Carlo study of Baek and Brock (1992) demonstrates that in the presence of nonlinearity, the forecasting performance of nonlinear approach is better than that of linear modelling. In order to test for the null of nonlinear non-Granger causality, the nonparametric test of Hiemstra and Jones (HJ) (1994) is widely employed. However, the HJ test may over rejects the null hypothesis in the case of increasing sample size, which is stemming from ignoring the possible variations in conditional distributions (Diks and Panchenko, 2005). The nonlinear causality test recently developed by Diks and Panchenko (DP) (2006) overcomes this drawback of the HJ test.

DP (2006) offer the following statistic to test for nonlinear Granger causality.

$$T_n(\varepsilon_n) = \frac{n-1}{n(n-2)} \sum_i (\hat{f}_{X,Y,Z}(X_i,Y_i,Z_i)\hat{f}_Y(Y_i) - \hat{f}_{X,Y}(X_i,Y_i)\hat{f}_{Y,Z}(Y_i,Z_i)) \qquad (2)$$

where $\hat{f}_W(W_i)$ is a local density estimator of a d_w – variate random vector W at W_i defined by $\hat{f}w(W_i) = (2\varepsilon_n)^{-d_w}(n-1)^{-1}\sum_{j\ j\neq i}I_{ij}^w$ that $I_{ij}^w = I(\|W_i - W_j\| < \varepsilon_n)$ with the indicator function $I(.)$ and the bandwidth ε_n. For one lag (i.e. lx=ly=1), if $\varepsilon_n = Cn^{-\beta}(C > 0, \frac{1}{4} < \beta < \frac{1}{3})$, the test statistic is asymptotically distributed as standard normal. Since the statistic diverges to positive infinity under the alternative hypothesis, the calculated statistic greater than 1.28 implies the rejection of the null hypothesis at 10 percent level of significance.

In the DP test, value of the bandwidth plays an important role in making a decision on nonlinear causality. Since the bandwidth value smaller (larger) than one generally results in larger (smaller) p-value (Bekiros and Diks, 2008: 1646), the bandwidth value is equal to one in this study.

4 Data

This paper employs monthly observation for the variables for the period 1989:M1-2007:M11 in Turkey. In particular, the Turkish Statistical Institute has provided a quarterly GDP series since 1986 and there is not a monthly data for this variable. The monthly real GDP series used in the analysis is generated by Taşdemir (2008) by utilizing steady-space approach. The time span for income series (monthly real GDP) restricts the range of other series employed in the analysis.

Trade openness (TO) is measured as the ratio of total trade (exports plus imports) to the GDP as a proxy for trade liberalization. Data for trade openness and financial development indicators are respectively collected from the on-line database of TurkStat (Turkish Statistical Institute) and of the Central Bank of Turkish Republic.

Financial development is a multifaceted issue and has not a direct measurement. Instead, a number of proxies to catch up various dimensions of financial development have been used in the literature. This paper develops a financial development index by utilizing principle component analysis that is a statistical tool to transform a number of correlated variables into a smaller number of uncorrelated variables (Creane et al., 2003; Saci and Holden, 2008; Jalli et al., 2010). The financial development index (FD) is constructed from the ratio of M2 to income (M2Y), the ratio of domestic credit to income (DCY), the ratio of private sector credit to income (PSCY), and the market capitalization ratio (MCR). The market capitalization ratio is measured as the ratio of stock market index to income. FD carries information not only about the monetary and credit aggregates but also capital markets.

Eigenvalues: (Sum = 4, Average = 1)					
				Cumulative	Cumulative
Number	Value	Difference	Proportion	Value	Proportion
1	2.251237	1.205801	0.5628	2.251237	0.5628
2	1.045436	0.384093	0.2614	3.296673	0.8242
3	0.661343	0.619359	0.1653	3.958016	0.9895
4	0.041984	---	0.0105	4.000000	1.0000
Eigenvectors (loadings):					
Variable	PC 1	PC 2	PC 3	PC 4	
PCSY	0.648129	-0.039295	0.214224	-0.729721	
DCY	0.557986	-0.451445	0.325603	0.615493	
M2Y	0.464323	0.162880	-0.857189	0.151990	
MCR	0.230184	0.876427	0.336627	0.256074	

Table 1: Results from principal component analysis

Table 1 reports the results from principal component analysis. The eigenvalues for three principal components show that the first principal component (PC1) explains the highest proportion of variance by accounting 56.28 percent of the standardized variance. Accordingly, the financial development index is constructed by using the factor loadings based on the first principal component.

5 Empirical Findings

Before proceeding with the TY and the DP procedures, the maximum integration degree (d) of the variables – that are expressed in logarithmic form- are determined by three unit root tests developed by Dickey and Fuller (1979) and Phillips and Perron (1988) which test for the null of a unit root and Kwiatkowski et al. (1992) that tests for the null hypothesis of stationary. The results reported in Table 2 indicate that while the series in log-levels appear to be non-stationary and they are stationary in first-differences. The results accordingly imply that d will be equal to one in the TY procedure, and the series in first-differences will be used in the DP test.

Levels		ADF		PP		KPSS	
Constant	FD	-0.68		-0.69		0.67	***
	TO	-0.91		-3.43	**	1.67	***
	GDP	-0.63		-0.68		1.88

Notes: The optimal lags for ADF test were selected based on Schwarz information (SBC); the bandwidth for PP test was selected with Newey-West using Bartlett kernel. ***, **, and ** denote statistical significance at the 1, 5, and 10 percent level of significance, respectively.							

Table 2: Results for unit root tests

The results for linear causality analysis are illustrated in Table 3. Since the TY procedure is based on ordinary least squares estimator, one need to justify the validity of assumption of that estimator. In that respect, we carry out a diagnostic checking procedure. The Breusch-Godfrey's serial correlation test implies that the residual of the estimated models are free from auto correlation problem. The Ramsey's model miss-specification test clearly shows that the functional forms of the models are appropriately specified. The White's heteroscedasticity and Engel's autoregressive conditional heteroscedasticity (ARCH) tests indicate the validity of homoscedasticity assumption.

			Critical Value		
	MWALD		1%	5%	10%
FD ≠> TO	**11.92**	***	9.58	6.35	4.73

≠> implies non Granger causality. The optimal lags in VAR(p) model was determined based on SBC. The bootstrap critical values were calculated based on 10,000 replications. *** indicates statistical significance at 1 percent..					

Table 3: Linear causality analysis

The findings indicate uni-directional causality from trade openness to financial development. With respect to causal linkages between economic growth and financial development, the results show that the causality runs from economic growth to financial development. Thereby, the nature of causation between economic growth and financial development support evidence on the demand-following hypothesis. As regards to causality between trade openness and economic growth, there is bi-directional causality between economic growth and trade openness, which proves support on the feedback hypothesis.

One drawback of linear causality methods is the possibility of overlooking nonlinear relations. It is thereby important to investigate nonlinear causal linkages among the variables of interest. In that respect, we conduct the DP nonlinear causality analysis. The nonlinear Granger causality analysis is carried out in two steps (Bekiros and Diks, 2008). In the first, the DP test is applied to the stationary series to detect nonlinear interrelationships. In the second step, the DP test is reapplied to the filtered VAR residuals to see whether the nature of causation is strictly nonlinear. After removing linear causality with a VAR model, any causal linkage from one residual series

to another can be considered as nonlinear predictive power (Hiemstra and Jones, 1994: 1648). Note that the results for the DP test are discussed for one lag.

Table 4 present the results from the nonlinear causality test. The DP test on raw data indicates that there is a nonlinear causality from financial development to trade openness, which is consistent with linear causality analysis. Even though the nonlinear causality test implies a nonlinear feedback from financial development to trade openness, the DP test should be reapplied to filtered VAR residuals to see whether this causality is strictly nonlinear in nature (Bekiros and Diks, 2008: 1647). The results for the DP test on the VAR residuals substantiate the findings from raw data. Hence, the nonlinear analysis provides evidence on significant and persistent nonlinear causal linkage from financial development to trade openness in Turkey.

	Raw data[a]			VAR residuals[b]		
FD $\neq>$ TO	1.97	**	[0.0240]	1.74	**	[0.0402]
TO $\neq>$ FD	1.04		[0.1480]	-0.29		[0.6160]
FD $\neq>$ GDP	-0.44		[0.6733]	-2.01		[0.9779]
GDP $\neq>$ FD	1.34	***	[0.0899]	1.62	**	[0.0521]
GDP $\neq>$ TO	1.22		[0.1128]	1.57	*	[0.0570]
TO $\neq>$ GDP	1.72	**	[0.0431]	-1.15		[0.8769]
$\neq>$ implies nonlinear non Granger causality [a]: the series in first differences [b]: the residuals of VAR(p+d) model. $lx=ly=1$. Numbers in brackets are *p*-values. ***, **, and * indicates statistical significance at 10, 5 and 1 percent, respectively.						

Table 4: Nonlinear causality analysis

When we look at nonlinear causal linkages between economic growth and financial development, it seems that there is bi-directional nonlinear causality from economic growth to financial development. Furthermore, this nonlinear causality appears to be strict due to the fact that the nonlinear causality based on the VAR residuals rejects the null hypothesis of nonlinear non-causality. The finding from nonlinear causality analysis between economic growth and financial development is thereby consistent with that from the linear causality test, implying the demand-following hypothesis. The nonlinear causal linkages between trade openness and economic growth analysis show that there is nonlinear causality from trade openness to economic growth. However, this causal linkage does not seem to be strictly nonlinear since the causality test from the VAR residuals does not show any causal linkage from trade openness to economic growth. Thereby, the nonlinear causality analysis provides weak evidence on the validity of the export-led growth hypothesis. This finding hence is particularly consistent with that from linear causality analysis. On the other hand, the nonlinear causality test supports evidence on the strict nonlinear causal linkage from economic growth to trade openness.

6 Summary and Discussion

This paper has empirically tested the causal linkages among trade liberalization, financial development and economic growth for Turkey. To this end, both linear and nonlinear approaches have been employed to detect the direction causality among the concerned variables by employing monthly data for the period January, 1989-November, 2007.Empirical findings methodologically show that the nonlinear causality analysis captures all information provided by linear approach and furthermore it provides important information on whether the causal linkages among trade openness, financial development, and economic growth are in nature strictly nonlinear.

The non-linear analysis shows that trade liberalization causes economic growth (export-led growth), economic growth leads to financial development (demand-following) and financial development causes trade liberalization. These results provide empirical support for both the export-led growth and demand-following hypotheses. In addition, there is evidence on that financial development mobilizes resources to meet the need of trade sector. The results from the linear approach indicate that the relationship between trade and economic growth is rather bi-directional. In addition, the causality between both economic growth and financial development and financial development and openness is as in both nonlinear models. Specifically, economic growth causes financial development and financial development leads to trade liberalization.

Furthermore, keeping the analysis period (1989:M1-2007:M11) in mind, these findings partly support the view that economic growth depends upon trade through external finance in Turkey which has been experiencing capital account liberalization since 1989. Financial sector play a key role in this process. Sources of financial deepening may be both domestic as well as external. Whatever the sources, development in the financial markets seems to mobilize resources for the utilization of both import and export. The results imply that economic growth dependent upon trade seems to be sensitive financial development which may resulted from domestic and external sources. Although this paper does not focus on the sources of financial development whether domestic

or external factors are dominant, it highlights the risk for sustainable economic growth if there is a lack or reverse of capital inflows which expand the domestic credit in Turkey.

The Influence of Corporate Governance Mechanism to Earnings Management on Indonesia and China Industrial Banking

Prof. Dr. Euphrasia Susy Suhendra (Gunadarma University, Indonesia)

Dini Tri Wardani (Gunadarma University, Indonesia)

Abstract

The goal of this research is to evaluate the influence of managerial ownership structure, independent board of commissioners proportion, independent commissioner size, and audit committee size on earnings management in banking industry in China and Indonesia. The data used is secondary data with discretionary accrual as earnings management proxy. Data is processed and analyzed by independent samples t-test and multiple linear regression The results of this research show that there is a difference between earnings management, managerial ownership structure, proportion independent board of commissioners, board of commissioners size in banking industry in Indonesia and China, however there is no difference between Audit Committee size. The variable of managerial ownership structure in Indonesian's banking industry is negatively significant influence on earnings management, whereas in China has no influence. The variable of independent board of commissioners proportion in banking industry in Indonesia has no influence on earnings management, while negatively significant influence on China's. The variable of Board of Commissioners size in Indonesia banking industry positively significant influence on earnings management, while negatively significant influence in China. Then, the variable of Audit Committee size in Indonesia banking industry negatively significant influence on earnings management, whereas positively significant influence in China.

1 Introduction

Earning management is an intervention conducted by management on financial statement process to external parties, to obtain personal benefit (Rahmawati, 2006). Recently, earning management is a common phenomenon that occurs in several companies. The objective of this practice is to affect the profit rate which can occur legally and illegally. Financial statement scandals occurred in almost all areas including banking area. Financial statement scandals case in Indonesia, for example happenedd in PT Bank Lippo Tbk. The actions of lowering profit in the case of Lippo Bank financial statement double-scandal, proving that the practice of earnings management has begun to enter the banking industry. This makes the banking industry has become interesting to study because the banking industry has more stringent rules than other industries, such as banks must meet the criteria of minimum CAR. Therefore, managers have an incentive to manage earnings so that their companies can meet criteria required by the BI (Setiawati and Na'im, 2001).

Earning management also much happened in China's company. China's economic growth has attracted international investments significantly. In order to protect their investment interests on China's companies, investors institutions apply a transparent and efficient corporate governance system. However, in the past, China received criticism because of corporate governance that is less effective (Shi and Drake, 2002). To respond investor's criticism, China Securities Regulatory Commission (CSRC) has made rules and recommendations for Corporate Governance. CSRC provide conditions for listed companies to deal with Return on Equity (ROE) report on 6% for three years respectively, and the average of ROE for three years it should be not less than 10%, and the most important criteria for delisted companies is to give the net loss report for three years respectively (Liu and Lu, 2007). Since China joined WTO in 2001, significant steps have been taken to improve corporate governance, especially through the amendment of corporations and securities law. Although China has made improvements to the corporate governance system in recent years, there is still much work to do in order to improve international standards.

Some related research done in China so far has focused on a particular mechanism of corporate governance. For example, Lai and Tam (2005) had researched only on influencing of the Independent Board Commissioners on earning management. Research on the effectiveness of corporate governance in protecting investors in Indonesia has also been a lot done, such as a research which is conducted by Ujiyanto and Pramuka (2007) that evaluate the influence mechanism of corporate governance: the composition of the Independent Board Commissioners, the size of the Board Commissioners and the size of the audit committee on earning management.

2 Research Objectives

These paper objective is evaluate the influence mechanism of corporate governance: the composition of the Independent Board Commissioners, the size of the Board Commissioners and the size of the audit committee on earning management.

3 Research Methodology

The population in this research is banking companies in China at 2008-2010 which are listed on the Hong Kong Stock Exchange, and the public banking companies in Indonesia at 2007-2009 periods which is listed in Indonesia Stock Exchange (IDX).

In this research, earnings management measured through the discretionary accruals by disaccording the total accruals (TACC) and nondiscretionary accruals (NDACC). In calculating the DACC, Modified Jones model is used accordance with the results of Dechow et al.'s research (1995).

Following calculation model:

$$TACC_{it} = NI_{it} - OCF_{it} \quad \text{................(1)}$$

$$TACC_{it}/TA_{i,t-1} = \beta_1(1/TA_{i,t-1}) + \beta_2 (\Delta REV_{it}/TA_{i,t-1}) + \beta_3(PPE_{it}/TA_{i,t-1}) \quad \text{.................(2)}$$

From the regression equation above, NDACC can be calculated by entering the return coefficient β.

$$NDACC_{it} = \beta_1(1/TA_{i,t-1}) + \beta_2 ((\Delta REV_{it} - \Delta REC_{it})/TA_{i,t-1}) + \beta_3(PPE_{it}/TA_{i,t-1}) \quad \text{............(3)}$$

$$DACC_{it} = (TACC_{it}/TA_{i,t-1}) - NDACC_{it} \quad \text{.................(4)}$$

Where:

$DACC_{it}$: *Discretionary accruals* for firm in industry i in year t;

$NDACC_{it}$: *Nondiscretionary accruals* for firm in industry i in year t;

$TACC_{it}$: Total Accruals for firm in industry i in year t;

NI_{it} : *Net Income* for firm in industry i in year t;

OCF_{it} : *Operating Cash Flow* for firm in industry i in year t;

$TA_{1,t-1}$: Total Assets for firm in industry i at the end of year t-1

ΔREV_{it} : Change Revenue for firm in industry i between year t-1 and t;

ΔREC_{it} : Change Receivable for firm in industry i between year t-1 and t;

PPE_{it} : Gross property, plant and equipment for firm i in year t;

I   : 1,….N *bank*;

T   : 1,….T estimation year;

$\beta_1, \beta_2, \beta_3$: Regression coefficient;

From the formula above, can be found in the absence of earnings management, then the TACC = NDACC, or in other words the number of DACC = 0.

Indicator that is used to measure the managerial ownership is percentage of the owned shares number by the management of the entire outstanding company's capital stock (Gideon, 2005).

This variable is measured using indicator of the Independent Board of Commissioners number percentage on Board of Commissioners total number of its members which is available in Company's Board of Commissioners structure (Chtourou, 2001).

Board of Commissioners size is measured using indicator of the Board of Commissioners members' number in a company (Ujiyanto & Pramuka, 2007).

Audit Committee (AC) size is measured using indicator i.e. the total number of audit committee members, both originating from internal and from external companies.

4 Literature And Theoretical Background

Scott (2000) divided understanding of the earnings management into two. First, see it as opportunistic behavior of managers to maximize utility in dealing with compensation contracts, debt contracts and political costs (Profit Opportunistic Management). Second, by looking at earnings management from the perspective of efficient contracting (Efficient Profit Management), where earnings management give managers a flexibility to protect themselves and the company in order to anticipate unexpected events for the parties' benefit that get involved in the contract.

According to SFAS No. 1 accrual concept of discretionary and accrual nondiscretionary. Discretionary Accruals (DA) is an accrual that can be controlled or determined by management in which management can freely choose policies in selecting methods and estimates of accounting that will be used. Meanwhile, the Non-Discretionary accruals (NDA) is an accrual that can not be controlled or determined by management, but is determined based on economic conditions.

The separation of ownership by principal and control by agent in a company is inclined because agency conflict between principal and agents (Watts and Zimmerman, 1989). In this such conditions, required a control

mechanism to align the differentiation between the management and principal's interest. Hence, good corporate governance is considered necessary. Komite Nasional Kebijakan Governance (KNKG, 2006) defines *corporate governance* as a process and structure that is used by the company in order to give add value to the company on going in the long term for shareholders, while paying attention to the stakeholders interests, based on the legislation rules and norms.

Since China joined the WTO in 2001, significant steps have been taken to improve corporate governance, especially through corporate law amendment and securities. Improvements have also given to minority shareholders positions that have been granted the authorization to organize, make movement and led the shareholders meeting. Significant progress has been done particularly to improve the governance structure in banking and equity markets. Then the hypothesis research as follows:

H1: Earnings Management in banking industry in Indonesia is different with banking industry in China.

One of the corporate governance mechanisms which are used to reduce agency cost is by increasing the ownership by management. The separation of ownership by principal and control by agents in an organization give agency conflicts between principal and agent. To minimize this conflict is by enhancing the managerial ownership in company (Siallagan and Machfoedz, 2006). From the explanation above then the hypothesis research as follows:

 H2 : Managerial Ownership Structure in banking industry in Indonesia is different with banking industries' in China.

The Board Commissioners is enterprise component who are responsible collectively monitoring and providing advice to the Board Directors and ensure that enterprises carry out GCG (KNKG, 2006). To implement good corporate governance, registered companies should have mandatory independent Commissioner and the size is proportional to the number of stokes that is not owned by shareholder controller with a provision that Independent Commissioner is at least 30% of the total number of Commissioner Members. From the explanation above then the hypothesis as follow:

H3: Independent Board Commissioners' proportion in banking industry in Indonesia is different with banking industries' in China.

H4: The size of the Board Commissioners in banking industry in Indonesia is different with banking industries' in China.

The audit committee is one of the essential elements in realizing the implementation of good corporate governance. Based on Circulars IDX, SE-008/BEJ/12-2001, the membership of Audit Committee (AC) at least consists of 3 members including a Chairman of audit committee. On respect to the audit committee functions, indicated that the company that owns the audit committee has intensity of earning management activity lower than in companies that does not have audit committee. From the explanation above then the hypothesis research as follows:

H5: The size of Audit Committee in banking industry in Indonesia is different with banking industries' in China.

A wide research on corporate governance has been done with inconsistent results. One of those is research done by Midiastuty and Machfoedz (2003) the result of this research is managerial ownership and institutional ownership negatively influence on earnings management, whereas the size of Board Directors positively influence on earnings management. The analysis result Ujiyantho and Pramuka (2007) show that only managerial ownership which influence significantly to earnings management. Ding et al. (2004) analyzes show that there is no relationship between ownership shares concentration to the earnings management calculation in private enterprise, but instead in the national enterprise there is significant relationships.

Research Siallagan and Machfoedz (2006) the results prove that managerial ownership positively influence to the earnings quality, Board Commissioners negatively influence to the earnings quality, and audit committee positively influence to the earnings quality. Nasution and Setiawan (2007) was found that the proportion of independent Board Commissioners has negative influence on earnings management, size of the Board Commissioners has positive influence on earnings management, and the existence of audit committee negatively influence on earnings management.

Xie et al. (2003) the results of his research shows that audit committee from outside are able to protect the shareholders' interests from earnings management practice. The study result also found a negative relationship between the proportions of Independent Management Board Commissioner on earnings management and found a positive relationship between sizes of Board Commissioners on earnings management. Beasley (1996) concluded that the proportion of the Board Commissioners from outside can reduce financial statement fraud. The study also shows that the size of Council and characteristic of Independent Commissioner has influence in financial statement fraud. Chtourou et al (2001) found that the Board Commissioners and audit committee are significantly related to earnings management practice.

From the view of management accounting theory, earnings management highly determined by company's manager motivation. Jensen and Meckling (1976) show that earnings management can be minimalized by enlarging the stock ownership by the company management (managerial ownership). From the explanation above then the hypothesis research as follows.

H6a: Managerial ownership Structure significant influence on earnings management in banking industry in Indonesia.

H6b: Managerial ownership Structure significant influence on earnings management in banking industries' in China.

The Board Commissioners as a top company's internal control system has the role as supervisory activities (Siallagan and Machfoedz, 2006). In general the Board Commissioners was commissioned and given responsibility for monitoring the information quality contained in financial statements. Research Beasley (1996) concluded that the proportion of Independent Board Commissioners can reduce financial statement fraud. From the explanation above then the hypothesis as follows:

H7a: Proportion of Independent Board Commissioners significantly influence on earnings management in banking industry in Indonesia.

H7b: Proportion of Independent Board Commissioners significantly influences on earnings management in banking industry in China.

Board Commissioners size are able to give the influence on company's performance. Yu (2006) found that the size of Board Commissioners has negatively influence on earnings management. This signifies that fewer Board Commissioners then make the earnings management practice higher because of few Board Commissioners. It makes possibility for organizations to be dominated by the management to bring their roles. From the explanation the hypothesis as follows:

H8a: Size of the Board Commissioners significantly influence on earnings   management in banking industry in Indonesia.

H8b: Size of the Board Commissioners significantly influence on earnings management in banking industry in China.

The audit committee will be able to reduce the earnings managements practice. Siallagan and Machfoedz (2006) found that the audit committee has positively influence to earnings and value quality of the company. From the explanation above then the hypothesis research as follows:

H9a: Size of audit committee significantly influences on earnings management in banking industry in Indonesia.

H9b: Size of audit committee significantly influences on earnings management in banking industry in China.

5   Analysis and Discussion

Based on the discussion of theory, research data, research variables, and previous studies, this research form the regression equation using the following model:

Model 1: $DACC = \alpha + \beta_1 MSO + \beta_2 PBOC + \beta_3 SBOC + \beta_4 SAC$

Model 2: $DACC = \alpha + \beta_1 MSO + \beta_2 PBOC + \beta_3 SBOC + \beta_4 SAC$

Based on the analysis H1 is accepted, i.e. there is differentiation between earnings management in banking industry in Indonesia and China. If it is viewed from average of earnings managements two group, China's banking industry has higher earnings management than banking in Indonesia. The high of earnings management in banking industry in China due to the China Securities Regulatory Commission (CSRC) has made the rules and recommendations on Corporate Governance. CSRC presuppose to companies listed to meet the criteria for Return on Equity (ROE) reported is 6% for three consecutive years, and the average ROE over the these years must be not less than 10%, and the criteria that are most important to de-listings of registered company is reporting a net loss for three consecutive years (Liu and Lu, 2007). It is not an easy thing for Chinese companies to comply the regulation. Therefore, the managers will do everything that is able to avoid a net loss for these three years respectively by doing earnings management. Whereas in Indonesia during the global crisis (observation period), the banking industry is precisely able to increase revenues significantly (Colin, 2009). It has made banking industry in Indonesia do not do earnings management extremely.

H2 is acceptable where there is difference between managerial ownership structure on banking industry in Indonesia and China. If it is viewed from average of managerial ownership structure two groups, China's banking industry has higher managerial ownership structure than banking in Indonesia.The high of managerial ownership struc ture in China's banking basically is caused of all the companies in China adopt managerial ownership governance. The manager has a large stock in company because of China's Government issued regulations management stock incentive to set rules and encourage companies to provide stock for top management in order to reduce the agency conflict (Andy, 2012). Similarly in Indonesia, managerial ownership

structure is utilized to reduce the agency conflict, increasing the proportion managerial stock ownership then company performance will be better. Greater stock ownership in economic terms has incentive to monitor management. Theoretically, when managerial ownership is lower, then the incentive on possibility of opportunistic management will increase. Managerial ownership on company's stock can be seen aligning potential interest differentiation between shareholders and management (Ujiyanto & Pramuka, 2007). But in fact, managerial ownership structure in banking industry is very low so the agency conflict in company is inevitable.

H3 is acceptable where there is difference between Independent Board of Commissioners in banking industry in Indonesia and China. If viewed from the average of two proportion independent Board of Commissioners groups in banking industry in Indonesia is higher than banking in China. This is caused by the existence of independent Commissioner in Indonesia have been regulated in Decree of Jakarta Stock Exchange (JSX) directors, Number: Kep 315/JSE/06-2000 which declare that in order to make a good corporate governance, companies listed on the JSE must have an independent Commissioner which the number of proportion equal to the number of ownership by shareholder that does not have control with concern on total number of Independent Commissioner at least 30% from total number of Commissioners members.

Meanwhile, the China Securities Regulatory Commission (CSRC) in 2001 issued a regulation that Chinese companies that are listed have at least 2 Board of Commissioners which is independent and must have a basic knowledge in law and regulations in capital market field (Lai et al., 2005). The Independent Board of Commissioners should be honest and responsible, with the experience is more than 5 years working in related fields. However, it is not easy for China's enterprises to get independent Board of Commissioners in accordance with the regulations of the CSRC. Therefore the proportion independent Board of Commissioners in banking industry in Indonesia is higher than banking industry in China.

H4 is acceptable where there is difference between Board of Commissioners size on the banking industry in Indonesia and in China. If viewed from the average of two sizes of the Board of Commissioners groups in banking industry in China is higher than banking in Indonesia. This is caused by number of Board of Commissioners will influence on work efficiency. The number of Board of Commissioners that regulated by law firm in China is 5-7 people. The specific number must be determined within the framework of budget based and should be revised in the shareholders meeting. The number of Board of Commissioners is determined by company size. To be larger of the company the number of Board of Commissioners will be greater (Zhong, 2002). While in Indonesia, the number of Board of Commissioners depend on the industry in which the company will contribute to determine the type of competence that should be owned by the Board of Commissioners as a whole. Therefore the number of Board of Commissioners member is determined by the number of expertise types which is needed in the industry. The number of Board of Commissioners which is too large will make the process of searching an agreement and the process of making decisions becomes difficult (Rony, 2006). This limitation becomes the consideration in determining the number of company's Board of Commissioners members.

H5 is rejected, meaning that there is no difference between Audit Committee size in banking industry in Indonesia and China. If viewed from the average of two groups audit Committee size in banking industry in Indonesia is almost same with banking in China. The size of Audit Committee in a company has a limited effectiveness. The number of audit committee members may not exceed the number of Board of Commissioners, because the optimum effectiveness can be obtained only with a proportional Audit committee number. A small number makes weak monitoring on corporate financial statements conducted by management, while if too large causing weakness in coordinating in the Committee and less effective monitoring. In addition, the audit Committee also has consequences such as, audit opinion, restatements, and earnings management. These will become considerations for Indonesia and China's company to decide the number of audit committee number.

Regression analysis shows that managerial ownership structure in banking industry in Indonesia has negative significantly influence on earnings management, so in this research H6a can be accepted. While in China's banking data, do not influence significantly on earnings management, so in this research H6b can be rejected. Independent Board of Commissioners proportion in banking industry in Indonesia do not significantly influence on earnings management, so in this research H7a can be rejected. While in China's banking data, negative significantly influence on earnings management, so in this research H7b can be accepted. Board of Commissioners size in banking industry in Indonesia positive significantly influence on earnings management, so in this research H8a can be accepted. While in China's banking data, negative significantly influence on earnings management, so in this research H8b can be accepted. Audit committee size in banking industry in Indonesia negative significantly influence on earnings management, so in this research H9a can be accepted. While in China's banking data, positive significantly influence on earnings management, so in this research H9b can be accepted.

The regression calculation result for banking industry data in Indonesia indicate that managerial ownership structure variables, independent Board of Commissioners, Board of Commissioners size and audit Committee size in banking industry in Indonesia and China simultaneously or together has influence on earnings management.

6 Conclusion

Based on the research results and discussion in previous chapter can be concluded:

There is a difference between earnings management in banking industry in Indonesia and China. The average of earnings management in banking industry in China is higher than in Indonesia.

There is a difference between managerial ownership structure in banking industry in Indonesia and China. The average of managerial ownership structure in banking industry in China is higher than in Indonesia. However, based on hypothesis managerial ownership structure test result in banking in China negative significantly influence on earnings management, while in banking in Indonesia shows that managerial ownership structure has no significantly influence on management.

There is a difference between proportion independent Board of Commissioners in banking industry in Indonesia and China. The average proportion independent Board of Commissioners in banking industry in Indonesia is higher than in China. However, based on the hypothesis test result, showed that the proportion independent Board of Commissioners in banking industry in Indonesia has no significantly influence on earnings management practices, while in China's banking, proportion independent Board of Commissioners variable has negative significantly influence on earnings management.

There is a difference between Board of Commissioners size in banking industry in Indonesia and China. The average of Board of Commissioners size in banking industry in China is higher than in Indonesia. However, based on hypothesis test result is showed that Board of Commissioners size in banking industry in Indonesia is positive significantly influence on earnings management, while in China's banking shows that Board of Commissioners size has negative significantly influence on earnings management.

There is no difference between Audit Committee size in banking industry in Indonesia and China. The average of Audit Committee size in banking industry in Indonesia is almost same with China's banking. Based on hypothesis test result is showed that Audit Committee size in banking industry in Indonesia negative significantly influence on earnings management, while in China's banking data is showed that audit committee size is positive significantly influence on earnings management.

On the Predictive Power of the Yield Spread for Future Growth and Recession: The Turkish Case

Asst. Prof. Dr. Hüseyin Kaya (Bahçeşehir University, Turkey)

Abstract

This paper investigates the predictive power of the yield spread on future industrial production growth and recession in Turkey. Employing the linear regression model we find that the yield spread has predictive power when forecasting industrial production growth. The results also suggest that in the inflation targeting monetary policy period, predictive power of the yield spread has increased. Furthermore, we investigate whether the yield spread predicts recession by employing a probit model. Since no official recessions are available in Turkey, we determine the recessions using the BBQ methodology. The findings suggest that the yield spread predicts the recessions about one year ahead.

The Impact of the US Dollar and the Euro on Currencies in Europe and Asia

Prof. Dr. Malgorzata Doman (Poznan University of Economics, Poland)

Prof. Dr. Ryszard Doman (Adam Mickiewicz University, Poland)

Abstract

In this paper, we analyze dependencies between the currencies of chosen emerging countries and the major (global) currencies – the euro and the American dollar. The idea is taken from a paper by Eun and Lai proposing a method to verify an opinion that currencies systematically co-move and the pattern of co-movement is significantly driven by the relative influence of the two global currencies. The observation by Eun and Lai is that in the case when a minor currency XYZ is driven by the US dollar, the exchange rates XYZ/EUR and USD/EUR co-move very closely. In the opposite case, i.e. when the XYZ is influenced by the euro, the exchange rates XYZ/USD and EUR/USD show strong interdependence. In our approach, the dynamics of dependencies is modeled by means of 3-regime Markov regime switching copula models, and the considered measures of the strength of the linkages are dynamic Spearman's rho and tail dependence coefficients. Applying the Markov regime switching copula models allows us to capture temporal changes in the impact of the global currencies on the analyzed minor ones. Our results show that the euro area of influence is widening, and that during the considered period some of the analyzed currencies are releasing from the US dollar impact.

1 Introduction

In the paper, we analyze dependencies between the currencies of chosen emerging countries and the major (global) currencies – the euro and the American dollar. The idea of the investigation is taken from a paper by Eun and Lai (2004) describing the pattern of currency co-movement. The shortage of their approach is that it captures only linear dependencies between the analyzed exchange rates. In our investigation, currency linkages are described by using dynamic copula models. This allows us to apply dependence measures which are better suited to quantify dependence in the case of nonelliptical joint conditional distributions and take into account dependencies between extremes.

Practitioners working in financial markets express very often an opinion that currency co-move and the pattern of this co-movement is significantly driven by the competitive influence of the two global currencies, i.e. the US dollar and the euro. This pattern is a crucial factor of the FX market risk because it determines the possibilities of international portfolio diversification. Moreover, the knowledge about the way in which currencies co-move is very important for understanding many macroeconomic phenomena. The investigation of currency market linkages is more complicated than it is in the capital market case. The reason for this is that the analysis of co-movement between two currencies requires the consideration of exchange rates which are always calculated against a third currency. The choice of this third currency certainly influences the results of comparison. Despite this difficulty and the fact that the exchange rate fluctuations are subject to different shocks, it is possible to find some pattern of dependencies suggesting that some currencies can co-move in a predictable manner. A special situation occurs when the third currency involved in the analysis is one of the global currencies: the US dollar or the euro. Eun and Lai (2004) confirm the above mentioned opinion that currency co-movement is significantly driven by the competitive influences of major currencies on minor ones. Their analysis is based on the fact that in the case when a minor currency XYZ is driven by the US dollar, the exchange rates XYZ/EUR and USD/EUR co-move very closely (XYZ/EUR means the price of 1 XYZ in euros). In the opposite case i.e. when the XYZ is influenced by the euro, the exchange rates XYZ/USD and EUR/USD show strong interdependence. Eun and Lai (2004) propose to measure the degree to which a currency is exposed to the influence of a major currency, using the so-called "currency beta". Their idea is obviously taken from the notion of the Sharpe beta. The currency beta is a measure of sensitivity of a currency's exchange rate movements to those of a major currency. The disadvantage of their approach is that it only captures the linear part of dependencies. We propose a different description based on very flexible Markov regime switching copula models that allow for a deeper analysis of the currency market linkages. In this framework, the measure of "normal" dependence is dynamic Spearman's rho. Additionally, we obtain information about the pattern of tail dependencies i.e. the dependencies between extremes.

In the paper, we attempt to discover the nature and dynamics of linkages between the Czech koruna (CZK), Indian rupiah (INR), Polish zloty (PLN), Russian ruble (RUB), Turkish lira (TRY), and the global currencies: the US dollar and the euro. The aim of the investigation is to describe the possible changes in the impact of the two major currencies on the considered currencies of the emerging countries during last 16 years. Our results confirm that CZK and PLN are in the euro area of influence. They also suggest that the currencies INR, RUB and TRY seem to be connected with the US dollar. However, the increasing impact of the euro on those currencies is observed.

2   Copulas and Dependence Measures

The usual Pearson linear correlation still plays a significant role in financial econometrics, yet it should be realized that this tool for measuring dependence between financial returns is appropriate only in the case of elliptical distributions (e.g. multivariate normal or multivariate Student's t distributions). Outside this class of distributions a more adequate measure of dependence is provided by the concept of copula. A bivariate copula can be defined as a mapping $C:[0,1]\times[01]\to[0,1]$ from the unit square into the unit interval which is a distribution function with standard uniform marginal distributions.

Assume that (X,Y) is a 2-dimensional random vector with joint distribution H and marginal distributions F and G. Then by a theorem by Sklar (1959) H can be written as

$$H(x,y) = C(F(x),G(y)). \tag{1}$$

If F and G are continuous, the function C is unique and is given by

$$C(u,v) = H(F^{\leftarrow}(u),G^{\leftarrow}(v)), \tag{2}$$

for $u,v \in [0,1]$, where $F^{\leftarrow}(u) = \inf\{x:\ F(x) \ge u\}$. In this case, C is called the copula of H or of (X,Y). Since by means of the copula C the marginals and the dependence structure can be separated, it makes sense to interpret the copula as the dependence structure of the vector (X,Y).

The simplest copula is defined by $C^{\Pi}(u,v) = uv$ and it corresponds to independence of marginal distributions. In the empirical part of this paper we will also use the Gaussian, Joe-Clayton, and rotated Joe-Clayton copulas. They are defined as follows:

$$C_\rho^{Gauss}(u,v) = \Phi_\rho\left(\Phi^{-1}(u),\Phi^{-1}(v)\right), \tag{3}$$

$$C_{\kappa,\gamma}^{J\text{-}C}(u,v) = 1 - \left(1 - ([1-(1-u)^\kappa]^{-\gamma} + [1-(1-v)^\kappa]^{-\gamma} - 1)^{-1/\gamma}\right)^{1/\kappa}, \tag{4}$$

$$C_{\kappa,\gamma}^{J\text{-}C\text{-}r90}(u,v) = v - C_{\kappa,\gamma}^{J\text{-}C}(1-u,v)\ . \tag{5}$$

In formula (3), Φ_ρ denotes the distribution function of standard 2-dimensional normal vector with the linear correlation coefficient ρ, and Φ stands for the standard normal distribution function. The parameters in the Joe-Clayton copula (4) are assumed to satisfy the conditions: $\kappa \ge 1$, $\gamma > 0$. For $\kappa = 1$, the Joe-Clayton copula becomes the Clayton copula $C_\gamma^{Clayton}$. In the limit case $\gamma = 0$, the Clayton copula approaches the independent copula C^{Π} (Nelsen 2006). The rotated version of the Joe-Clayton copula, $C_{\kappa,\gamma}^{J\text{-}C\text{-}r90}$, allows for the modeling of negative dependence, which is not possible using the copula $C_{\kappa,\gamma}^{J\text{-}C}$.

The density associated to a copula C is a function c defined by

$$c(u,v) = \frac{\partial^2 C(u,v)}{\partial u \partial v}\ . \tag{6}$$

In the case of continuous random vector, the copula density c is related to joint density function h by the following canonical representation:

$$h(x,y) = c(F(x),G(y))f(x)g(y), \tag{7}$$

where F and G are the marginal distribution functions, and f and g are the marginal density functions.

If the joint distribution of a random vector (X,Y) is nonelliptical, measures of dependence, which are more appropriate than the linear correlation coefficient, are copula-based ones. An example of such a measure, used in the empirical part of this paper, is Spearman's rho. It can be defined as

$$\rho_S(X,Y) = \rho(F(X),G(Y)), \tag{8}$$

where F and G are the distribution functions of the variables X and Y, respectively (McNeil et al. 2005). If (X,Y) is a vector of continuous random variables with copula C, then

$$\rho_S(X,Y) = \rho_C = 12 \iint_{[0,1]^2} C(u,v)dudv - 3 \tag{9}$$

(Nelsen 2006). For the Gaussian copula, C_ρ^{Gauss}, Spearman's rho equals $\frac{6}{\pi}\arcsin\frac{1}{2}\rho$. For the Clayton and Joe-Clayton copulas, it can be computed numerically using (9). Spearman's rhos for the copula $C_{\kappa,\gamma}^{J\text{-}C\text{-}r90}$ and $C_{\kappa,\gamma}^{J\text{-}C}$ are equal in magnitude and have opposite signs.

A very important concept relevant to dependence in extreme values is tail dependence (see Joe 1997). If X and Y are random variables with distribution functions F and G then the coefficient of upper tail dependence is defined as follows

$$\lambda_{U,U} = \lim_{q \to 1^-} P(Y > G^{\leftarrow}(q) \mid X > F^{\leftarrow}(q)), \tag{10}$$

provided a limit $\lambda_{U,U} \in [0,1]$ exists. Analogously, the coefficient of lower tail dependence is defined

$$\lambda_{L,L} = \lim_{q \to 0^+} P(Y \leq G^{\leftarrow}(q) \mid X \leq F^{\leftarrow}(q)), \tag{11}$$

provided that a limit $\lambda_{L,L} \in [0,1]$ exists. If $\lambda_{U,U} \in (0,1]$ ($\lambda_{L,L} \in (0,1]$), then X and Y are said to exhibit upper (lower) tail dependence. Upper (lower) tail dependence quantifies the likelihood to observe a large (low) value of Y given a large (low) value of X. The coefficients of tail dependence depend only on the copula C of X and Y:

$$\lambda_{L,L} = \lim_{q \to 0^+} \frac{C(q,q)}{q}, \tag{12}$$

$$\lambda_{U,U} = \lim_{q \to 0^+} \frac{\hat{C}(q,q)}{q}. \tag{13}$$

where $\hat{C}(u,v) = u + v - 1 + C(1-u, 1-v)$. For the Gaussian copula it holds $\lambda_{U,U} = \lambda_{L,L} = 0$ (McNeil et al. 2005), meaning asymptotic independence in the tails. In the case of the Joe-Clayton copula, $\lambda_{U,U} = 2 - 2^{1/\kappa}$ and $\lambda_{L,L} = 2^{-1/\gamma}$ (Patton 2006). Thus upper and lower tail dependence can change freely of each other.

When the components of the random vector (X, Y) display negative dependence it is convenient to consider negative tail dependence. We define the coefficients of negative tail dependence, $\lambda_{U,L}$ and $\lambda_{L,U}$, as follows

$$\lambda_{U,L} = \lim_{q \to 0^+} P(Y \leq G^{\leftarrow}(q) \mid X > F^{\leftarrow}(1-q)), \tag{14}$$

$$\lambda_{L,U} = \lim_{q \to 1^-} P(Y > G^{\leftarrow}(q) \mid X \leq F^{\leftarrow}(1-q)), \tag{15}$$

provided that the limits exist. It can be directly shown that the coefficients of negative tail dependence are invariants of the copula C of the random vector (X, Y):

$$\lambda_{U,L} = \lim_{q \to 0^+} \frac{q - C(1-q, q)}{q}, \tag{16}$$

$$\lambda_{L,U} = \lim_{q \to 0^+} \frac{q - C(q, 1-q)}{q}. \tag{17}$$

It follows from (16) and (17) that for the rotated Joe-Clayton copula $C_{\kappa,\gamma}^{\text{J-C\_r90}}$ the following holds:

$$\lambda_{U,L}(C_{\kappa,\gamma}^{J-C\_r90}) = \lambda_{L,L}(C_{\kappa,\gamma}^{J-C}) = 2^{-1/\gamma}, \tag{18}$$

$$\lambda_{L,U}(C_{\kappa,\gamma}^{J-C\_r90}) = \lambda_{U,U}(C_{\kappa,\gamma}^{J-C}) = 2 - 2^{1/\kappa}. \tag{19}$$

3 Markov Regime Switching Copula Models

We model the joint conditional distributions of bivariate returns using copulas, so the evolution of the conditional copula C_t has to be specified. In such approach, usually the functional form of the conditional copula is fixed, but its parameters evolve through time (Patton 2004, 2006). In this paper, however, similarly to we assume that there are three regimes in each of which a fixed copula prevails, and they switch according to some Markov chain. Thus the joint conditional distribution of the vector $r_t = (r_{1,t}, r_{2,t})$ in the applied Markov regime switching copula model (MRSC model) has the following form

$$r_t \mid \Omega_{t-1} \sim C_{S_t}(F_{1,t}(\cdot), F_{2,t}(\cdot) \mid \Omega_{t-1}) \tag{20}$$

where S_t is a homogeneous Markov chain with state space $\{1, 2, 3\}$. The parameters of the MRSC model are the parameters of univariate models for marginal distributions (ARMA-GARCH), the parameters of copulas C_1, C_2 and C_3, and the transition probabilities, $p_{ij} = P(S_t = j \mid S_{t-1} = i)$, $(i, j) \in \{(1,1), (2,2), (3,3), (1,2), (2,1), (3,2)\}$.

The parameters have been estimated by the maximum likelihood method. The main by-product the estimation are the conditional probabilities $P(S_t = j \mid \Omega_{t-1})$ and $P(S_t = j \mid \Omega_t)$, $j = 1, 2, 3$. They are calculated by means of Hamilton's filter (Hamilton, 1994):

$$P(S_t = j \mid \Omega_{t-1}) = \sum_{i=1}^{3} p_{ij} P(S_{t-1} = i \mid \Omega_{t-1}) \, , \tag{21}$$

$$P(S_t = j \mid \Omega_t) = \frac{c_j(u_t \mid S_t = j, \Omega_{t-1}) P(S_t = j \mid \Omega_{t-1})}{\sum_{i=1}^{3} c_i(u_t \mid S_t = i, \Omega_{t-1}) P(S_t = i \mid \Omega_{t-1})} \, , \tag{22}$$

where $p_{13} = 1 - p_{11} - p_{12}$, $p_{23} = 1 - p_{21} - p_{22}$, $p_{31} = 1 - p_{32} - p_{33}$, $u_t = (u_{1,t}, u_{2,t})'$,

$$u_{1,t} = F_{1,t}(r_{1,t}) \, , \quad u_{2,t} = F_{2,t}(r_{2,t}) \, , \tag{23}$$

and $c_j(\cdot \mid S_t = j, \Omega_{t-1})$ is the density of the conditional copula coupling the conditional marginal distributions in regime j, $j = 1, 2, 3$. The maximized log-likelihood function has of the form

$$L = \sum_{t=1}^{T} \ln\left(\sum_{j=1}^{3} c_j(u_t \mid S_t = j, \Omega_{t-1}; \tilde{\theta}_j) P(S_t = j \mid \Omega_{t-1}; \tilde{\theta}_j) \right)$$
$$+ \sum_{t=1}^{T} \ln\left(f_{1,t}(r_{1,t} \mid \Omega_{t-1}; \theta_1) \right) + \sum_{t=1}^{T} \ln\left(f_{2,t}(r_{2,t} \mid \Omega_{t-1}; \theta_2) \right) \tag{24}$$

where $f_{1,t}$ and $f_{2,t}$ are the density functions corresponding to $F_{1,t}$ and $F_{2,t}$, fitted using the AR-GARCH models.

Presenting our empirical results, we use the so-called smoothed probabilities which can be obtained from the predicted and filtered probabilities by using the backward recursion:

$$P(S_t = j \mid \Omega_T) = P(S_t = j \mid \Omega_t) \sum_{i=1}^{3} \frac{p_{ji} P(S_{t+1} = i \mid \Omega_T)}{P(S_{t+1} = i \mid \Omega_t)} \, , \quad t = T-1, \ldots, 1 \, , \tag{25}$$

where T denotes the length of the sample.

The models are estimated by the two-step maximum likelihood method. First we fit univariate ARMA-GARCH models to the return data. The obtained standardized residuals are transformed to uniform variates, using the theoretical cumulative distribution functions. After that copula models are fitted and estimates of dynamic Spearman's rho and the lower and upper tail coefficients and the coefficients of negative tail dependence are calculated using the smoothed probabilities.

4   The Data, Analysis, and Results

As it was mentioned before, our investigations follows the idea proposed by Eun and Lai (2004). This idea is that in the case when a minor currency XYZ is driven by the US dollar, the exchange rates XYZ/EUR and USD/EUR co-move very closely. In the opposite case, i.e. when the XYZ is influenced by the euro, the exchange rates XYZ/USD and EUR/USD show strong interdependence. Applying very flexible 3-regime Markov switching copula models, allows us to describe different types of dependence and capture temporal changes in the impact of the global currencies on the analyzed minor ones.

The analysis is based on the percentage daily logarithmic returns of the exchange rates of chosen currencies against the USD and euro. The considered currencies are CZK, TRY, RUB, PLN, INR, and the period under scrutiny is from January 3, 1997 to May 24, 2013 (about 4200 observations). For the period before 1999, exchange rates against the ecu are applied. The exception is the Russian ruble, for which the sample begins from January 3, 2002.

The steps of the presented analysis were as follows. First, to each of the investigated return series we fitted a univariate ARMA-GARCH model. Because the data under scrutiny come from a long period, the fitted models are usually the asymmetric GARCH (EGARCH, APARCH or GJR-GARCH) ones with a Student's t or skewed Student's t distribution for the innovations (Lambert and Laurent 2001). The obtained standardized residuals were routinely examined for the presence of desirable distributional and serial properties. Next, the standardized residuals from the ARMA-GARCH models were transformed by means of the corresponding distribution functions into the series of the form (23), and the MRSC models were fitted by the maximum likelihood method, using the first summand in (24). We tried to apply copulas from various families, and our final choice is the effect of taking into account the obtained values of the information criteria, and the results of the performed likelihood ratio tests where it was applicable. All the calculations were done using G@RCH 6.0 package (Laurent 2009) and the Matlab software. Due to space limit, we do not present here the estimates of univariate models, and focus only on the results concerning estimation of the MRSC models.

In Tables 1-5 we present the parameter estimates for the fitted MRSC models. The plots in Figures 1-10 show the dynamics of the applied dependence measures. A general observation is that CZK, PLN are in the euro area of influence, whereas INR, RUB and TRY seem to be connected with the USD dollar.

The linkages of the Czech koruna with the euro, measured by means of Spearman's rho, oscillate from 0.6 to 0.9 (Figure 1), what indicates the stable level of dependence. They are described by 2-regime copula model with the Gaussian copula in each regime, what indicates no tail dependence. Dependence between the CZK/EUR and USD/EUR is very weak or even, sometimes, negative (Figures 2, 3).

CZK/USD EUR/USD	Regime 1	Regime 2	CZK/EUR USD/EUR	Regime 1	Regime 2	Regime 3

Figure 3. *Linkages between CZK and USD. Dependence in tails for (CZK/EUR, USD/EUR)*

The dependence between the Indian rupiah and the euro is described by means of 2-regime MRSC model. In regime 1, the Gaussian copula with the correlation coefficient 0.2274 is applied, and in regime 2, the independence copula fits. This means that the dependence between INR and EUR is very weak. Figure 6 shows, however, that the level of dependence jumped in 2004 from negative values to 0.2. The linkages with the USD are stable with strong dependence in tails (Table 2, Figure 4).

Figure 6. *Linkages between INR and EUR. Spearman's rho for (INR/USD, EUR/USD)*

In the case of the Polish zloty, we observe a spectacular decrease in the linkages (from 0.4 to negative values, even -0.4) with US dollar after Poland's EU joining in 2004. The connections with the euro are described by means 3- regime MRSC model with the Gaussian copula in regimes 1 and 2, and the Joe-Clayton copula in regime 3. In the case of the dependence with the US dollar, the applied copulas are the independence, the Joe-Clayton, and the rotated Joe-Clayton.

Figure 7. Linkages between PLN and USD. Spearman's rho for (PLN/EUR, USD/EUR)

In the case of the Russian ruble, we analyze shorter time series – from 2002 to 2013. Our results show that during this period the RUB is switching between the areas of influence of the major currencies (Figures 8, 9). In the case of linkages with the euro, tail dependence appears (the Joe-Clayton copula in regime 3). There is no dependence in tails with the USD against the euro.

RUB/USD EUR/USD	Regime 1	Regime 2	Regime 3	RUB/EUR USD/EUR	Regime 1	Regime 2	Regime 3

Regime 3	0.0000	0.0026	0.009973	Regime 3	0.0372	0.0042	0.9585

Table 4. RUB. Parameter estimates for MRSC models.
Figure 8. Linkages between RUB and USD. Spearman's rho for (RUB/EUR, USD/ EUR)
Figure 9. *Linkages between the RUB and the EUR. Spearman's rho for (RUB/USD, EUR/USD)*

The linkages between the Turkish lira and US dollar, against the euro, oscillate from negative values to even 0.75, exhibiting very strong dynamics (Figure 10). From 2001, the periods with Spearman's rho lower than 0.45 prevail. The fitted MRSC model is 3-regime with the Gaussian, Joe-Clayton and rotated Joe-Clayton copulas (Table 5). A rather surprising result is that the dependence between the TRY and EUR, against the USD, are described by a static Joe-Clayton copula model, showing stable, non sensitive on market situation pattern of dependence. The value of Spearman's rho is 0.3172 and tail dependence coefficients are 0.0915 for lower tail and 0.2490 for upper one. This means that extreme increases of the EUR/USD impacts stronger on the TRY/USD than extreme decreases.

5 Conclusions

The aim of the analysis presented in this paper was to describe the pattern of dynamic linkages between the chosen currencies (the Czech koruna, Indian rupiah, Polish zloty, Russian ruble and Turkish lira) and two global currencies – the American dollar and the euro. The applied approach follows the idea by Eun and Lai (2004) that in the case when a minor currency XYZ is driven by the US dollar, the exchange rates XYZ/EUR and USD/EUR co-move very closely. In the opposite case, i.e. when the XYZ is influenced by the euro, the exchange rates XYZ/USD and EUR/USD show strong interdependence. To describe the strength and dynamics of dependence between the returns of the analyzed exchange rates we apply very flexible 3-regime Markov switching copula models. The considered dependence measures are dynamic Spearman's rho and dynamic coefficients of dependence tails. A general observation is that the impact of the US dollar and the euro is changing due to globalization process and is sensitive on the market situation. Our results confirm that CZK and PLN are in the euro area of influence. They also indicate that INR, RUB and TRY seem to be connected with the US dollar, even though the increasing impact of the euro on these currencies is observed.

Monetary Response to Exchange Rate Dynamics: Regime Switching – Chartists and Fundamentalists Application to Australia

Ph.D. Candidate Ferry Syarifuddin (Bank Indonesia, Indonesia)

Abstract

In this paper we study the effect of central bank intervention within a heterogeneous expectations exchange rate model. The empirical evidence is conducted by applying a Markov switching approach to daily AUD/USD exchange rate, intervention data of the Reserve Bank of Australia from 2006 to 2012. Our results are supporting both chartists and fundamentalist regimes. It is shown that the two regimes are persistent. However, Reserve Bank of Australia efforts to exert a stabilizing effect of foreign exhange interventions, the result is inconclusive.

1 Introduction

According with the postulate trilemna, freely floating exchange rate will be adapted by a country which adapts freely foreign exchange system and independent monetary policy. Australia is one of the country that adapts it. By freely floating exchange rate and position as an advanced open economy, Australia's exchange rate movements is strongly influenced by capital flows. Hence, existence of central bank optimal monetary response (i.e.foreign exchange intervention) needed to control the exchange rate for the long-term equilibrium exchange rate.

An intervention (non-sterilized) occurs when a monetary authority buys (sells) foreign exchange. This action will affect the monetary base, interest rates, market expectations and intimately the exchange rate. Intervention is said sterilized if the monetary authority offsets or sterilizes the effect of the foreign exchange operation on the monetary base by selling or buying domestic bonds in order to keep the monetary policy unchanged. The main results in the empirical literature (Almekinders et al., 1996; Frenkel et al., 2004; Ito and Yabu, 2007; Jun, 2008 and in papers of surveys Neely, 2001) suggest that interventions tend to be conducted in order to reduce exchange rate misalignment or to reduce foreign exchange undesired fluctuations.

Relying on the efforts of monetary authorities to maintain exchange rate stability, economic actors usually are actively hedging the exchange rate in order to avoid losses due to exchange rate fluctuations. Rothig, Semmler, and Flaschel (2005) argued that the negative effect of exchange rate on the balance sheet can be removed by the practice of company risk management. Risk management of exchange rate fluctuations will be conducted by hedging. Hedging generally conducts by forward transactions, swaps, NDF etc.

The effectiveness of sterilized interventions was usually evaluated on the basis of traditional macro-economic channels: the portfolio balance channel and the signaling channel. With the emergence of microstructure approach of exchange rate (Lyons, 2006) and the failure of numerous empirical studies (based on the asset market approach of exchange rate) to explain short term movements of exchange rate (Lewis, 1995 and Taylor, 1995) many other studies have used to introduce microstructure based channels and microstructure variables. These studies suggested two new channels through which sterilized intervention may be transmitted: the noise trading channel (Hung, 1997) and the coordination channel (Reitz and Taylor, 2008, Taylor, 2004, 2005). Microstructure specification like order flow, Bid-ask spread, market makers, heterogeneity of traders, was also taken into account for studying the effectiveness of intervention (Beine et al., 2009, Chari, 2007, Scalia, 2008).

The noise trading channel have been pioneered by Hung (1997) and is based on the functioning and the microstructure of the foreign exchange market. This channel assumes two hypotheses: noise traders must prevail the foreign exchange market and the exchange rate is determined by flow market equilibrium. Once these hypotheses are satisfied, the central bank should intervene in highly volatile market periods and keep its interventions secret.

This study contributes to the noise trading channel by allowing intervention to influence the both forecasting rules of chartists and fundamentalists, thereby altering the proportion of the two groups in the foreign exchange market. We define a new criterion for the effectiveness of interventions. To allow for different forecasting strategies, the impact of central bank intervention is investigated applying a heterogeneous expectations exchange rate model. A central bank intervening in the foreign exchange market is considered effective if the exchange rate is driving closer to its fundamental value. Apart from providing the rationale for the application of trading rules, intervention may as well improve the performance of expectations based on fundamentals, especially when central banks try to correct current exchange rate misalignments.

Following Frankel &Froot (1986), the excess demand for foreign currency is assumed to be a function of the relative success of chartist and fundamentalist forecasting techniques. As is stated above the performance of

chartist or fundamentalist predictions is expected to be temporarily improved by central bank intervention – thereby altering the time series properties of exchange rates.

This article presents a new and improved data series on interventions by RBA in the foreign exchange market. These data allow a documentation of the evolution in the approach to foreign exchange market intervention after the float of the exchange rate. This evolution reflects a recognition that when foreign exchange markets are deep and liquid (and the capital account is open), the effects of intervention on the level of the exchange rate are generally short-lived. Moreover, under these 'normal' circumstances, the practical difficulties involved in determining what the 'fair value' of an exchange rate should be suggest that it is difficult for policymakers to systematically improve on market outcomes, particularly in real time. Nevertheless, in instances of severe market dysfunction, intervention can exert an important stabilising influence on the foreign exchange market.

The article uses the new data to reassess previous empirical assessments of the effectiveness of foreign exchange market intervention. It shows that it is not possible to draw strong conclusions, notwithstanding the use of an improved measure of RBA interventions. The well-known limitations of this type of analysis suggest that the estimates of the effect of intervention on the exchange rate are expected to be understated, and may even be perverse. Moreover, as the goal of intervention has evolved toward addressing instances of extreme market dysfunction, it has become less clear that such specifications are still well-suited for assessing the effectiveness of foreign exchange market intervention.

The empirical examination of the hypothesis is done by applying the Markov regime-switching approach originally proposed by Hamilton (1989) to daily RBA intervention data from 2006 to 2012. Considering the results of Neely and Weller (2001) intervention data is used only to construct a dummy variable distinguishing between intervention and no-intervention periods. Statistically significant estimates of dummy coefficients lead to the conclusion that an impact of central bank intervention on exchange rate expectation cannot be rejected.

Furthermore, we re-examine the effects of intervention on exchange rate volatility, where empirical work has reported quite mixed results. The parameter estimates of the Markov switching model suggest that the inconclusive evidence is due to a regime dependent correlation between the intervention and volatility. Dominguez (1998) estimates GARCH(1,1) models and shows that overt intervention was able to reduce volatility in certain periods. But in general, intervention seemed to have an increasing effect on the conditional variance of exchange rate changes (Baillie and Osterberg, 1997b).

The remainder of the paper is organized as follow. Section 2 describes the problem formulation, followed by Research Objectives in section3. Research methodology is presented in section 4. Section 5 describe literature and Theoretical Background. Then in section 6 we explain the econometric model used. Our main empirical results concerning intervention effectiveness are reported in Section 7 before the final section (8) concludes.

2   Problem Formulation

How to get a model that could explain exchange rate dynamics built by FX traders (fundamentalist and chartist) as well as the relationship between changes in exchange rateand foreign exchange intervention (monetary policy)? How to estimate the volatility of the exchange rate using by the model?

3   Research Objectives

These paper objectives are as follow:

- To get a model that could explain exchange rate dynamics built by FX traders (fundamentalist and chartist) in the case of Australia
- To expand the model that could explain the relationship between changes in exchange rate, and foreign exchange intervention (monetary policy)?
- To estimate the volatility of the exchange rate using the model?

4   Research Methodology

This study contributes to the noise trading channel by allowing intervention to influence the exchange rate both forecasting rules of chartists and fundamentalists, thereby altering the proportion of the two groups in the foreign exchange market. We define a new criterion for the effectiveness of interventions. A central bank intervening in the foreign exchange market is considered effective if the exchange rate is driving closer to its fundamental value. The models are estimated by maximum likelihood. Estimated parameters obtained by using the BFGS algorithm (Broyden-Fletcher-Goldfarb-Shanno), a method of solving nonlinear optimization problems, and t-statistics   which reported by the heteroscedasticity-consistent standard errors based (White, 1982). For data processing, the software used is RATS 6.0

5 Literature and Theoretical Background

In the literature of financial markets, participants are classified in two groups according to different approaches of expectations; the fundamental analysis and the chartist analysis. The classification was introduced by Frankel and Froot (1986, 1990), and has been enhanced among others by Ahrens and Reitz (2004), Reitz (2005), Westerhoff (2003), De Grauwe and Grimaldi (2005), Wieland and Westerhoff (2005).

Beine et al. (2009) investigated the effect of sterilized intervention in a noise trading channel with two states Markov switching model. Using biweekly data, they found that interventions increase the weight of fundamentalists in the foreign exchange market and therefore exert stabilizing influence on the exchange rate. The fundamentalists behavior tends to stabilize the market while the presence of chartists may cause destabilization.

There are many economists are interested to see the effectiveness of exchange rate intervention which conducted by central bank due to stabilize the exchange rate. However, there are also the differences about the view of exchange rate intervention affectivity to stabilize the exchange rate. Taylor (2004) examines the effectiveness of exchange rate intervention by using Markov switching model for the real exchange rates. The probability of switching between stable and unstable regimes depends nonlinearly upon the amount of intervention, the degree of misalignment and the duration of the regime. Taylor applied this to dollar-mark data for the period 1985-98. Markov switching models can have also been used recently to study the effectiveness of intervention (Taylor 2004). In conclusion, Taylor shows that the intervention increase the probability of stability when the rate is misaligned, and that its influence grows with the degree of misalignment. However, intervention within a small neighborhood of equilibrium will result in a greater probability of instability.

Dominguez (1998) tried to analyze whether intervention operations generally increase exchange rate volatility. Dominguez explored the effect of foreign exchange intervention by the G-3 central banks (US, German, and Japanese) on the behavior of exchange rates over the 1977-1994 period. The G-3 central banks have undertaken an unprecedented number of both coordinated and unilateral intervention operations in the last 10 years.

Existing empirical evidence on the effectiveness of intervention is mixed. Dominguez examines the effect of US, German, and Japanese monetary and foreign exchange intervention on dollar-mark and dollar-yen exchange rate volatility over the 1977-1994 period. The results indicate that intervention operations generally increase exchange rate volatility. Besides the effectiveness, economists are also interested to analyze the expectations from the businesses on the exchange rate movements after the existing of exchange intervention by central bank. Cited by Messe (1990) from Vigfusson (1996), models based on economic fundamentals have been poor at explaining the movements in the exchange rate since the early 1980s.

The effectiveness of sterilized interventions was usually evaluated on the basis of traditional macro economic channels:

- The portfolio balance channel
- The signaling channel

With the emergence of microstructure approach of exchange rate (Lyons, 2006) and the failure of numerous empirical studies to explain short term movements of exchange rate (Lewis, 1995 and Taylor, 1995) many other studies have used to introduce microstructure based channels and microstructure variables. These microstructure approach of exchange rate studies suggested two new channels through which sterilized intervention may be transmitted. The noise trading channel (Hung, 1997) is based on the functioning and the microstructure of the foreign exchange market. This channel assumes two hypotheses: noise traders must prevail the foreign exchange market and the exchange rate is determined by flow market equilibrium. Microstructure specification like order flow, Bid-ask spread, market makers, heterogeneity of traders, was also taken into account for studying the effectiveness of intervention (Beine et al., 2009, Chari, 2007, Scalia, 2008).

For example, the high appreciation of dollar (US) in the beginning of 1980-an have been poor at explaining by the fundamental perspective. In response to this problem, Frankel and Froot (1988) developed a model where two approaches are used to forecast the exchange rate, chartist and fundamentalists (C&F). The fundamentalist approach, where the forecast is based upon economic fundamentals, continues to be used. This models innovation is that the chartist approach, where the forecast is based upon the past behavior of the exchange rate, is also used.

Although the model C&F looks well-satisfied, there's still no direct empirical test. The main problem lies on the relative importance of each market players which has various kind and unobservable. This condition makes the difficultly to estimate this model with the general statistical methods. Vigfusson (1996) tried to solve this problem by using the Markov regime-switching model. Markov switching model explains the C&F model within two concerns. First, C&F model has two forecasting equations of both chartist and fundamentalist. Second, C&F model placed the time-varying weight on each forecasting equations. Vigfusson explains about the response of the financial market players to influence the exchange rates expectation by observe the switching contribution between chartist and fundamentalist. By defining the two groups different methods of forecasting as regimes,

Vigfusson rewrite the C&F model as a regime-switching model. This approach is used to test for chartist and fundamentalist behavior in the Canada-US daily exchange rate between 1983 and 1992. Vigfusson found favorable though inconclusive evidence for the C&F model because the difference of regime variance assessed more important than the other variables. Ideally, this model could aside the switching that caused by the differences of variance and made both of the regime used the ARCH effect. Therefore, he suggest to do the further research.

The further research from Reitz (2002) is about the usage of C&F model to analyze the exchange rate behavior which connected to the foreign exchange intervention by central bank. Reitz propose a generalization of the noise trader transmission mechanism to examine the impact of central bank intervention on exchange rates. Within a heterogeneous expectations exchange rate model intervention operations are supposed to provide support to either chartist or fundamentalist forecasts, which forces portfolio managers to adjust their foreign currency positions.

The empirical examination of the hypothesis is done by applying a Markov regime-switching approach to daily US-dollar/DEM forward rates and intervention data of the Deutsche Bundesbank and the Federal Reserve from 1979 to 1992. It is shown that the performance of simple chartist trading rules was strong whenever these central banks intervened on the foreign exchange market. Instead, the fundamentalists which used the fundamentalist technique has a worse estimation results.

Jonathan Kearns and Roberto Rigobon (2003) argued that the endogeneity of exchange rates and intervention has long plagued studies of the effectiveness of central banks' actions in foreign exchange markets. Researchers have either excluded contemporaneous intervention so that their explanators are predetermined, or obtained a small, and typically incorrectly signed, coefficient on contemporaneous intervention. Failing to account for the endogeneity, when central banks lean against the wind and trade strategically, will likely result in a large downward bias to the coefficient on contemporaneous intervention – explaining the negative coefficient frequently obtained.

The RBA researchers use an alternative identification assumption – a change in the intervention policy of the Reserve Bank of Australia – that allows them to estimate, using simulated Generalised Method of Moments (GMM), a model that includes the contemporaneous impact of intervention. There are three main results. Their point estimates suggest that central bank intervention has an economically significant contemporaneous effect. A US$100 million purchase of the domestic currency will appreciate the exchange rate by 1.3 to 1.8 per cent. This estimate is remarkably similar to the calibration conducted by Dominguez and Frankel (1993c), who themselves noted their estimate was larger than previous empirical findings. Secondly, the vast majority of the effect of an intervention on the exchange rate is found to occur during the day in which it is conducted, with only a smaller impact on subsequent days. Finally, they confirm findings that Australian central bank intervention policy can be characterized as leaning against the wind.

The Reserve Bank's approach to foreign exchange market intervention has evolved since the float of the Australian dollar in 1983, as the Australian foreign exchange market has developed and market participants have become better equipped to manage their foreign exchange risk. Over time, foreign exchange market intervention has become much less frequent and more targeted towards addressing periods of market dysfunction. This article presents a new dataset and summarises the key characteristics of major intervention episodes since the late 2000s. Some simple regression analysis is undertaken to gauge the effectiveness of these interventions, but the results mainly illustrate the inherent limitations of such exercises.

6 The Econometric Model

In the literature of financial markets, participants are classified in two groups according to different approaches of expectations; the fundamental analysis and the chartist analysis. The classification was introduced by Frankel and Froot (1986, 1990), and has been enhanced among others by Ahrens and Reitz (2004), Reitz (2005), Westerhoff (2003), De Grauwe and Grimaldi (2005), Wieland and Westerhoff (2005). Beine et al. (2009) investigated the effect of sterilized intervention in a noise trading channel with two states Markov switching model. Using biweekly data, they found that interventions increase the weight of fundamentalists in the foreign exchange market and therefore exert stabilizing influence on the exchange rate. The fundamentalists behavior tends to stabilize the market while the presence of chartists may cause destabilization.

6.1 A Basic Chartist-Fundamentalist Model for The Exchange Rate

As discussed in the last section, we consider heterogeneous traders in our model: fundamentalists and chartists. Fundamentalists, using fundamentalist rule, base their forecasts on the fundamental exchange rate; they expect that exchange rate converge to its fundamental value. While chartists, using technical analysis rules, explore paste movements of exchange rate in the future. Fundamentalists forecasting rules and chartists forecasting rules can be expressed, respectively, as follow:

$$r_{f,t} = -\psi(e_{t-1} - f_{t-1}) + \epsilon_{f,t}$$

<div align="right">(1)</div>

$$r_{c,t} = C(r_{t\,i}) + \epsilon_{c,t} r_{c,t} = C(r_{t\,i}) + \epsilon_{c,t}$$

(2)

Fundamentalists consider exchange rate as a reaction function to misalignments of exchange rate level with the fundamental value. $r_{f,t}$ is the forecasted value of the exchange rate return r_t by fundamentalists, $-\psi$ ψ is speed of adjustment parameter , ft−1 is the fundamental exchange rate, $\mathfrak{C}_{f,t}$ is the error term of fundamentalists. $r_{c,t}$ is the forecasted value of the exchange rate return rt by chartists, C the chartists forecasting rule, $\mathfrak{C}_{c,t}$ is the error term of chartists.

In order the characterize the exchange rate behavior of exchange rate, we choose the Markov regime-switching model. It was initially introduced by Hamilton (1989) and developed further by, among others, Engel (1994) and Dewachter (1996). In Markov switching model, dynamics of the exchange rate is governed by an unobserved state variable or a latent variable lt (lt = c for chartist regime lt = f for fundamentalists one). The indicator regime lt is parametrized as a first order Markov process and is driven by first-order transition probabilities. These transitions probabilities, in the case of two regimes, could be expressed as:

$$p = prob(l_t = f | l_{t-1} = f) \qquad \textbf{(3)}$$
$$q = prob(l_t = c | l_{t-1} = c) \qquad \textbf{(4)}$$

These probabilities are constant over time. In this specification, p is the probability of remaining in the fundamentalist regime, and q for the chartist

$$\boldsymbol{p = 1 - (1 - exp(\pi_0))^{-1}} \qquad \textbf{(5)}$$
$$\boldsymbol{q = 1 - 1 - (1 - exp(\kappa_0))^{-1}} \qquad \textbf{(6)}$$

6.2 Model Specification

As used by Reitz (2002), in the standard chartist and fundamentalist (C&F) model originally suggested by Frankel and Froot (1986) the (log of the) exchange rate e_t $\widetilde{e}_t$ is driven by the decisions of portfolio managers. They buy and sell foreign currency in response to changes in the expected rate of appreciation and a set of contemporaneous variables included in a vector zt. Thus, the exchange rate can be written as:

$$\boldsymbol{e_t = a\, E_t[\Delta e_{t+1}] + bz_t\, e_t = a\, E_t[\Delta e_{t+1}] + bz_t}$$

(1)

Where the vector of elasticities of the contemporaneous variables (b) and the elasticity of exchange rate expectation (a) should be constant overtime. Under the rational expectations hypothesis equation (1) has the well known forward looking solution that et is the weighted sum of current and expected future market fundamentals. In contrast to this, Frankel and Froot (1986) assumed that portfolio managers generate their exchange rate expectations using a mixture of chartist $E_t^c[[\Delta e_{t+1}]]\, E_t^c[[\Delta e_{t+1}]]$ and fundamentalist $E_t^c[[\Delta e_{t+1}]]$ forecasts:

$$E_t^c[[\Delta e_{t+1}]] = \omega_t E_t^f[\Delta e_{t+1}] + (1 - \omega)E_t^c[\Delta e_{t+1}]$$
$$E_t^c[[\Delta e_{t+1}]] = \omega_t E_t^f[\Delta e_{t+1}] + (1 - \omega)E_t^c[\Delta e_{t+1}]$$

(2)

The parameter E_t, denoting the weight given to fundamentalist views at date t, is dynamically updated by the portfolio managers in a rational Bayesian manner:

$$\Delta\omega_t = \delta(\omega_{t-1}^* - \omega_{t-1})\, \Delta\omega_t = \delta(\omega_{t-1}^* - \omega_{t-1})$$

(3)

With :

$$\omega_{t-1}^* = \frac{\Delta e_t - E_t^c(\Delta e_t)}{E_{t-1}^f[\Delta e_t] - E_{t-1}^c[\Delta e_t]} \quad \omega_{t-1}^* = \frac{\Delta e_t - E_t^c(\Delta e_t)}{E_{t-1}^f[\Delta e_t] - E_{t-1}^c[\Delta e_t]}$$

Where $\omega_{t-1}^* \, \omega_{t-1}^*$ is the expost calculated weight that must have been assigned to fundamentalist forecast in order to predict the current exchange rate change accurately. The value of reflects the extent to which portfolio managers enclose new information in this adaptive process and proves responsible for the exchange rate dynamics. Since portfolio managers always maintain a positive weight for both chartist and fundamentalist forecasts, has to be restricted so that stays in the range between 0 and 1. To makesure that the empirical analysis remain stractable, another feedback rule is introduced. Similar to Lewis(1989), portfolio managers are supposed to optimize the weight assigned to fundamentalist forecasts by means of a Bayesian learning process:

$$\omega_t = \frac{\omega_{t-1} \cdot \varphi_f\left(\Delta e_t \middle| E_{t-1}^f[\Delta e_t]\right)}{\omega_{t-1} \cdot \varphi_f\left(\Delta e_t \middle| E_{t-1}^f[\Delta e_t]\right) + \omega_{t-1} \cdot \varphi_c\left(\Delta e_t \middle| E_{t-1}^c[\Delta e_t]\right)}$$

$$\omega_t = \frac{\omega_{t-1} \cdot \varphi_f\left(\Delta e_t \middle| E_{t-1}^f[\Delta e_t]\right)}{\omega_{t-1} \cdot \varphi_f\left(\Delta e_t \middle| E_{t-1}^f[\Delta e_t]\right) + \omega_{t-1} \cdot \varphi_c\left(\Delta e_t \middle| E_{t-1}^c[\Delta e_t]\right)} \tag{3'}$$

Where $\varphi_c(\Delta e_t | E_{t-1}^c[\Delta e_t])$ $\varphi_c(\Delta e_t | E_{t-1}^c[\Delta e_t])$ and $\varphi_f(\Delta e_t | E_{t-1}^f[\Delta e_t])$ $\varphi_f(\Delta e_t | E_{t-1}^f[\Delta e_t])$ is density function of Δe_t Δe_t conditional on conditional on the forecasts of chartists and fundamentalists, respectively.

6.3 Fundamentalist Rule

Concerning **the expectation formation fundamentalists** have in mind some kind of long-run equilibrium , to which the exchange rate reverts with a given speed over time, i.e.:

$$E_t^f[\Delta e_{t+1}] = \theta(\tilde{e}_t - e_t) \quad E_t^f[\Delta e_{t+1}] = \theta(\tilde{e}_t - e_t) \tag{4}$$

This can be explained by the fact that agents have different beliefs about the equilibrium value of the exchange rate, which is certainly not observable. Kilian and Taylor (2001) conclude that the heterogeneity of beliefs will diminish when the exchange rate becomes increasingly overvalued and the supply of foreign exchange should rise. According to (4) fundamentalist expectation can be viewed as distributed symmetrically around . We assume that the fundamental value can be described by purchasing power parity (PPP) or uncovered interest parity (UIP). PPP states that exchange rates between any two currencies will adjust to reflect changes in the price levels of the two countries. The theory of PPP is simply an application of the law of one price to national price levels rather than to individual price. Takagi (1991) provides evidence from survey data that foreign exchange market participants accept PPP as a valid relationship only in the long run implying low values for . This view is recently supported by Taylor and Peel (2000) and Taylor et al. (2001) showing that due to its nonlinear dynamics the exchange rate reverts to the PPP level, but only in the long run. Furthermore, PPP as a measure of the fundamental exchange rate seems to be suitable for the investigation of central bank intervention, because monetary authorities have used it as a target level (Dominguez and Frankel, 1993b). However, in many cases, the Theory of Purchasing Power Parity cannot fully explain exchange rates. The PPP conclusion that exchange rates are determined solely by changes in relative price levels rests on the assumption that all goods are identical in both countries and that transportation costs and trade barriers are very low. When this assumption is true, the law of one price states that the relative prices of all these goods (that is, the relative price level between the two countries) will determine the exchange rate. PPP theory furthermore does not take into account that many goods and services (whose prices are included in a measure of a country's price level) are not traded across borders. Housing, land, and services such as restaurant meals, haircuts, and golf lessons are not traded goods. So even though the prices of these items might rise and lead to a higher price level relative to another country's, there would be little direct effect on the exchange rate. Therefore, we use uncovered interest parity (UIP) as an approach to long-run exchange rate expectation within fundamentalist rule. Within this framework, central bank operations on foreign exchange markets can be called effective, if the adjustment of the exchange rate to its long run equilibrium is accelerated. This implies that the observed reversion of the exchange rate to uncovered interest parity (UIP) condition – denoted by - is driven by both fundamentalist speculation and central bank intervention. Denoting **the influence of intervention by ,** we can formulate as a function of a 0,1-intervention dummy I_t I_t as follows:

$$\zeta_t = \theta + \delta_\theta I_t, \qquad \theta, \delta_\theta > 0 \tag{5}$$

6.4 Chartist Rule

Chartists are defined as market participants who believe that exchange rate time series exhibit regularities which can be detected by a wide range of so-called technical trading rules. To reduce the impact of data snooping biases brought on by searching for the best performer, we employ a very simple type of trading rule following common practice (Takagi,1991). Excess returns of moving average (MA) trading rules of daily U.S. dollar quotes for the DM, yen, poundsterling and swiss francis reported in Neely(1997) and LeBaron (1999). Leeetal (2001) found MA trading rule profitability for Latin American currencies applying out of sample-tests. These studies show that the length of the short run and long run moving average don't have much influence on the trading rule profitability. To be concrete, chartists are supposed to expect that a future exchange rate increase is predicted by the proportion of the positive difference between the 14 day moving average (ma_{14}) and 200 day moving average (ma_{200}) and vice versa. Hence, their exchange rate expectation at date t is:

$$E_t^c[\Delta e_{t+1}] = \psi\,(ma_{14,t} - ma_{200,t})\, E_t^c[\Delta e_{t+1}] = \psi\,(ma_{14,t} - ma_{200,t})$$

As is stated in the noise trader hypothesis of intervention (Hung,1997), a leaning against the wind-strategy of central banks may introduce trends into exchange rate dynamics. Subsequent changes in noise trader's positions magnify the initial impact of intervention operations. We assume that this kind of trend establishing intervention can be formalized by means of a moving average specification very similar to speculation based on chartist analysis. This implies that a given trend in the exchange rate () is due to both chartist speculation and central bank intervention. Denoting the influence of intervention by , we can formulate as a function of the intervention dummy I_t as follows:

$$\eta_t = \psi + \delta_\psi I_t \qquad \psi, \delta_\psi > 0 \tag{6}$$

Of course, neither the chartists, the fundamentalists, nor the portfolio managers have rational expectations about the future exchange rates. Within the model, agents could do a better job in expected value terms, if they knew the complete model. But as long as market participants try to compensate the lack of a verified exchange rate model with different forecasting techniques, the imposed informational restrictions are a realistic description of the foreign exchange market.

In order to confront the C&F-model with exchange rate data, the econometric approach should be able to describe the conditional distribution of the exchange rate change by a mixture of (normal) distributions. As is stated in Clarida et al.(2001) the Markov regime- switching model suggested by Engel and Hamilton (1990) and developed further by, among others, Engel (1994), Vigfusson (1997) and Dewachter (2001) is a natural candidate to characterize exchange rate behavior. In our model, the conditional mean t and the conditional variance ht of exchange rate changes et are allowed to follow two different regimes–a chartist and a fundamentalist regime- indicated by an unobservable state variable St. The regime indicator St is parameterized as a first-order Markov process and the switching or transition probabilities P and Q have the typical Markov structure:

$$\Pr[S_t = 0 \mid S_{t-1} = 0] = P$$
$$\Pr[S_t = 1 \mid S_{t-1} = 0] = (1 - P)$$
$$\Pr[S_t = 1 \mid S_{t-1} = 1] = Q$$
$$\Pr[S_t = 0 \mid S_{t-1} = 1] = (1 - Q)$$

Thus, under conditional normality, an observed realization $\Delta e_t\,\Delta e_t$ is presumed to be drawn from a

$N(\mu_{0t}, h_{0\,t})$ distribution if $S_t = 0$, whereas $\Delta e_t\,\Delta e_t$ is distributed $N(\mu_{1t}, h_{1t})$ The evolution of the log first differences of exchange rates can therefore be written as:

$$\Delta e_t = \mu_{0\,t}\,(1 - S_t) + \mu_{1t} S_t + \sqrt{h_{0\,t}(1 - S_t) + h_{1\,t} S_t}$$
$$\Delta e_t = \mu_{0\,t}\,(1 - S_t) + \mu_{1t} S_t + \sqrt{h_{0\,t}(1 - S_t) + h_{1\,t} S_t} \cdot \varepsilon_t \tag{8}$$

Where t is an i.i.d. standard normal variable. The parameter estimation of the mean (t) and variance (ht) equation since the regime switching model are derived from maximization of the log-likelihood function

$$L = \log p_{1t} \frac{1}{\sqrt{2\pi h_{1t}}} \exp \frac{-(\Delta e_t - \mu_{1t})}{2h_{1t}} + (1 - p_{1t}) \frac{1}{\sqrt{2\pi h_{2t}}} \exp \frac{-(\Delta e_t - \mu_{1t})}{2h_{2t}}$$
$$L = \log p_{1t} \frac{1}{\sqrt{2\pi h_{1t}}} \exp \frac{-(\Delta e_t - \mu_{1t})}{2h_{1t}} + (1 - p_{1t}) \frac{1}{\sqrt{2\pi h_{2t}}} \exp \frac{-(\Delta e_t - \mu_{1t})}{2h_{2t}} \tag{9}$$

$p_{1t}\,p_{1t} = \Pr(S_t = 1 \mid \Phi_{t-1})$ is the probability that the analyzed process is in regime 1 at time t and is updated by means of Bayesian inference using information available at time t-1. Therefore, p_{1t} and $(1-p_{1t})$ can be regarded as weights assigned to regime dependent forecasts resulting from a rational learning process as outlined in the theoretical exchange rate model. For comparison purposes, we first specify the mean equations without taking into account foreign exchange market activities of central banks. However, the important results of the study are derived from mean equations that include intervention dummies as it is done in the second specification.

(1)The standard regime-switching-c&f model: RS-CF

The mean equation of the first regime represent the fundamentalist regime including the deviation of the exchange rate from its fundamental value e_t describe by Uncovered Interest Parity (UIP) as outlined above. The second regime's mean equation contains chartist expectation, i.e the moving average trading consisting of the differences between ma_{14} and ma_{200} :

$$\mu_{0t} = \theta(ppp_{t-1} - e_{t-1})$$

$$\mu_{1t} = \psi(ma_{14,t-1} - ma_{200,t-1})$$

The variance of et,i.e.the volatility of e_t is assumed to be constant within regimes, $h_{0t} = \sigma_F^2 \sigma_F^2$ and $h_{1t} = \sigma_c^2 \sigma_c^2$ so that the only source of conditional heteroscedasticity is the regime switching behavior.

(2)The intervention augmented regime-switching-c&f model: RS-CF-Int

To introduce intervention operations into the regime-switching framework,we define that the dummy variable It = 1, if the central bank intervenes at time t and It = 0, otherwise and rewrite the mean equations of the standard C&F model as follows:

Fundamentalist Rule without FX intervention Specification

With FX intervention

Chartist Rule without intervention Specification

With FX Intervention

As long as interventions do not occur, i.e. It =0, this more general formulation boils down to the standard RS-CF model. More interestingly, if the foreign exchange intervention of the central bank had an impact on the forecasting performance of chartists and fundamentalists, a change of coefficients represented by significant estimates of the various s should be observed. By introducing intervention dummies in the specification of second Moments $h_{0t} = \sigma_F^2 + \delta_{\sigma_F^2}\sigma_F^2 + \delta_{\sigma_F^2}$. It and $h_{1t} = \sigma_c^2 + \delta_{\sigma_c^2}\sigma_c^2 + \delta_{\sigma_c^2}$.It we are able to re-examine the relationship between central bank intervention and exchange rate volatility, where the existing literature provided mixed evidence (Baillie and Osterberg, 1997b and Dominguez, 1998).
Figure 1. *AUD/USD Spot, UIP, MA200 & the RBA Intervention*

7   Empirical Results

The models described above were estimated by maximum likelihood. Parameter estimates were obtained using the BFGS algorithm, and the reported t-statistics are based on heteroskedastic-consistent standard errors (White,1982). The estimates are derived from the daily AUD/US-Dollar spot exchange rate series kindly supplied by the RBA. The UIP was constructed using daily O/N Interbank rate of AUD and USD. The intervention dummy series is based on intervention data from the RBA. The foreign exchange intervention series only includes active trades made by the RBA for reasons of influencing foreign exchange rates. Purchases and sales of the RBA are reported whenever they changed their net foreign assets. The sample extends from January 2006 to June 2012. The series of the spot exchange rate, the UIP relation and the 200 day moving average are presented in upper graph, the RBA purchases and sales of Dollars against AUD can be found in the middle graph.

Table 1 contains the estimates of both the RS-CF, and the RS-CF-Int models for Australian Case. As regards the transition probabilities, the models differ slightly at best. P and Q range above 0.95 thereby indicating high persistence of regimes. The unconditional probability of the fundamentalist regimes P is lower (0.4) than the one assigned to chartist regimes (0.6). This is also reflected in the expected duration of regimes. The (first) fundamentalist regimes are expected to last up to 21 trading days whereas the (second) chartist regimes have a longer duration of at least 32 trading days. Significant estimates of variances point to regime dependent heteroskedasticity capturing periods of high and low volatility: The second moment in the second regimes is

lower than the variance in the first regimes. The estimates of chartist and fundamentalist coefficients and are statistically significant and of the correct sign

8   Conclusion

Although there is evidence that monetary authorities tried to avoid misalignments and counter 'disorderly markets', the impact of central bank intervention on foreign exchange rates repeatedly turned out to be low when assessed by means of conventional single regime approaches. It becomes even more difficult to imagine a rational expectations model capable of explaining these results, when taking into account that intervention seems to increase the profitability of technical trading rules (LeBaron,1999). On the basis of the theoretical heterogeneous expectation framework, a generalization of Hung's (1997) noise trading channel is estimated by means of an intervention augmented two state Markov regime-switching model. We show that the predictive power of sophisticated fundamentalist forecasting techniques approximated by the deviation of the current exchange rate from the UIP level, was enhanced whenever the RBA intervened on the foreign exchange market, whereas simple chartist approach was not strengthened in these periods. However, intervention seems to have small influence on the weight assigned to either forecasting strategy.

If chartist analysis tends to be destabilizing as is widely accepted in the literature, a volatility enhancing impact of central bank intervention on exchange rates, can not be ruled out. However, this is little proof by the finding that the intervention dummy identified periods in which the volatility is a bit increasing especially within fundamentalist rule. Of course, we have to address a serious causality problem. Before quickly concluding that exchange rate volatility is due to intervention operations, 'disorderly markets', i.e. high volatility, may have challenged central bank activities. But as long as this reverse causality is not confirmed, central bank intervention remains an ambiguous policy tool in influencing exchange rates.

Analysis of Capital Flight in Developing Countries: A Study on Turkey between 1980 and 2010

Asst. Prof. Dr. Ali Özer (Erzincan University, Turkey)

Ph.D. Candidate Aslı Cansın Doker (Erzincan University, Turkey)

Ph.D. Candidate Adem Türkmen (Erzincan University, Turkey)

Abstract

The aim of this study is to determine whether there is a relationship between Capital flight and some macroeconomic variables by using anual data between 1980 and 2010 in Turkey. Capital flight measured by World Bank (1985) method, was used as dependent variable and external debt, foreign direct investment, uncertainty, real GDP growth, exchange rates, trade balance and consumer price index were used as independent variables. Ordinary Least squares estimation method, Johansen-Jeselius cointegration test, Granger causality test and variance decomposition results produced by VEC model were used in the study. After those econometrics and economics analysis, this paper put forward that there is a long run relationship between some macroeconomic variables and capital flight.The results show external debt, foreign direct investment inflows, and foreign reserves to be the major effector of capital flight.

1 Introduction

It is suggested to developing countries opening the capital outside for attract capital and finance their investment. These countries adapted to financial liberalazation policies and benefited from large amounts of capital input in accordance with these recommandations. Dependency on foreign capital is generally quite variable and exhibits an unstable structure, has made these countries more vulnerable to the financial crisis. The specified point, has affected developing countiries, including Turkey. These developments have led to discussions about importance capital flight in Turkey and how we could be back this capital from abroad.

There is no generally accepted definition of capital flight, even though its activities have been identified for periods dating back to the seventeenth century.The variety of capital flight definitions (Cuddington 1986; World Bank 1985; Morgan Guaranty Trust Company 1986; Cline 1987; Dooley 1986; Lessard and Williamson 1987) makes it diffucult to separate normal capital out flows and flight capital out flows. Although there is no generally accepted definition of capital flight, the literature has postulated three major reasons for its existence: (1) investment, (2) money laundering, and/or (3) tax evasion (Boyrie 2010).

Although capital flight has been a problem as early as the seventeenth century in Europe and in the early twentieth century in Europe and United States of America (see, e.g., Kindleberger, 1987), the subject matter in the contemporary world latter gained momentum again since the early 1980s.

Demirgil (2011) examined capital flight and instability for Turkey between 1970 and 2006 with using GARCH and EGARCH analysis and he founded that political instability affects on economic growth negatively and on inflation rate positively, additionally exchange rate does not have long run and strong effect on macroeconomic varibles.(Demirgil H., 2011)

2 Literature

There are many of studies and research papers examined the reasons and results/impacts of capital flight in developing countries. Most of them investigated relationship between macroeconomics variables, which can be classified such as foreign direct or indirect investment, infilation, external debt, and capital flights. In addition, there are many of studies related to measurement of capital flight. In this section, those indicators and findings will be discussed in respect of determinants of capital flights, measurements for capital flights and classification diffrences for analysing capital flight.

Ndikumana and Boyce (2003) examined with their seminar paper which way the relationship between capital flight and external borrowing has in African countries between 1970 and 1996. One of important result of their study is that external borrowing effects significant and positively to capital flight. Another important finding from their study is related to persistence of the value of capital flight which was found significant. This result shows that past data of capital flight can cause or effect future data of capital flight.

The impacts of capital flight in Indonesia, Malaysia and Thailand were examined with using the explanation of revolving door mechanism by Beja (2007). He put forward three type of risk as causes or explanaories of capital flights. Moreover, there are very importance finding from this paper such that large capital flows follow revoling door mechanism. This study also shows lost capital in these countries may well return as either foreign investment or debt hence following revolving door mechanism. One of econometric result of this paper is capital flight causes debt and high level of risk. From conclusion of this paper is an adequate amount of international

reserves and trustworthy indicator of economic growth could well cause decrease of external borrowing and capital flight.

About explation power of external borrowing for capital flight in China is analysed by Ljuingwall and Wall (2008). In their study, balance of payment data between 1993 and 2003 is used. In china external borrowing is significant, in other words external borrowing can be an explanation for capital flights. Another supportive study related to China is about external borrowing fuels findings are similar to Latin America except interest rate and exchange rate significancy which China does not have those indicators. Frank R. Gunter (2003) presented that capital policies in China between 1998 and 1999 did not change level of capital flights with using balance of payment and residuals measurements.

Another important research of capital flight with using portfilo choice model was conducted by Quan Vu Le and Paul J. Zak (2006). The inflences from this paper can be written such that firstly, the political stability is the most crucial factor to return capital flights. Secondly, with using three types of risk, which economic risk, political instability, and policy variability are, explains capital flights statistically significant. In 2011, Yasemin Yalta and A. Talha Yalta examined effects of financial liberalisation on magnitude of capital flight with using panel causality modelling in private sector. Their sample was 21 emerging market economies between 1980 and 2004 time period. This study showed that there is no significant proof of causal relationship and their result is that financial liberalasation could not be useful for reducing capital flight. Furhtermore, Maria E. de Boyrie (2010) examined determinants of capital flight and capital movement through trade missing including African Case between 1990 and 2005. In this study, 21 independent variables were used as a result of this capital flight could not explain all capital flows. Moreover, long-term relationship was found only for a few cases. They also concluded their paper with recommendation for African policymakers such as putting forward stronger and more specified trade policies to decrease capital flight. There is also another paper which is conducted for investigating the causes of capital flight on Zimbabwe between 1980 and 2005. (Makochekanwa A., 2007)

In econometrics aspect, capital flight is subject with several techniques which are causality, cointegration, panel analysis and unit root and simultaneous equations. For instance, Chipakatti and Rishi (2002), they applied utilized simitaneous equations to associate external debt and capital flight in Indian case during 1971-1997 and the study confirmed that this relationship is following same way with revolving door mechanism. Another econometric method was used for capital flight research is coingtegrtion technique which is developed by Pesaran et.al.(2001). The findings from this paper states that income taxes, higher real interest rate diffrentials are significant to identify capital flight. As a result of this findings and research political stability is the most effective factor to prevent from capital flight.(Alam, M, Quazi R., 2003)

3   Capital Flight Measurement

There is no concensus measure of capital flight. There are several methods used in the literature to measure capital flight. Some of them are direct, while others are indirect. The Residual measure introduced by the World Bank (1985) is the most popular measure and it relies on the indirect definition of capital flight. The World Bank (1985) estimates the capital flight as the difference between the sources of funds and uses of funds. According to World Bank definition, capital flight can be written as follows:

$$CFR = CXB + NFDI - CAD - COF \tag{1}$$

Where:

  CFR = Capital Flight (residual measure)

  CXB = Change in external borrowing

  NFDI = Net foreign direct investment

  CAD = Current account deficit

  COFR = Change in official foreign reserves

Dooley (1986) method distinguished between normal capital flows from abnormal capital flows. Based on this approach, the motive behind capital flight is the individual assumptions about the individuals' motives. Capital flight is therefore measured as the sum of externally held assets of the private sector that does not generate recorded income in the Country's balance of payments. Following Hermes et al (2002, p.2), the Dooley method of measuring capital flight can be derived as follows:

$$TCO = FB + FDI - CAD - \Delta FR - EO - \Delta WBIMF \tag{2}$$

Where;

  TCO is total capital outflows,

  FB is foreign borrowing as reported in the balance of payments,

  FDI is the net foreign investment inflows,

  FR is the stock of official foreign reserves,

CAD is the current account deficit/surplus,

EO is net errors and omissions (debit entry),

WBIMF is the difference between the change in the stock of external debt and foreign borrowing reported in the balance of payments

Another indirect measure introduced by Morgan Guaranty Trust Company (1986),

$$CFPC = CXB + NFDI - CAD - COFR - CBSFA \tag{3}$$

Where,

CFPC = Capital flight (private claim)

CBSFA = Change in short – term banking system foreign assets

The balance of payments measure introduced by Cudington (1986) defines capital flight as short-term capital outflow rather than total outflow of capital by the private sector. Cuddington measure can be calculated as follows:

$$CFC = NBSC + EO \tag{4}$$

Where,

CFC = Capital flight (Cuddington)

NBSC = Non-bank short-term capital outflow

EO = Balance of payments errors and omissions

Ajilore (2010) argues that countries that have strong capital flight proclivities, it is reasonable to assume that trade mis-invoicing may be utilized as a channel for capital flight. Trade mis-invoicing method equations are given as follow:

$MIS = MISX + MISM$

$MISX = DX/ X\_INDUS$

$MISM = DM/ M\_INDUS$

$DX = PX - CIF*X$

$DM = M - CIF*PM$

Where;

MIS = total trade mis-invoicing

MISX = trade mis-invoicing from the export

MISM = trade mis-invoicing from the import

DX= total export discrepancies with trade partners

DM = total import discrepancies with trade partners

X_INDUS = industrialized-country trading-partners in the country's total import

M_INDUS = industrialized-country trading-partners in the country's total export

PX = trading partner's import value

PM = trading partner's export value

M = reported imports

X = reported exports

CIF = cost of freight and insurance adjustment

4 Methodology

The theory does not offer a sharp way of determining a priori which independent variables should be included when we examine that factors that affect the variation in the capital flight. Therefore, we follow the literature and examine the most important variables that have been considered.

The following model is employed in the analysis of the determinants of capital flight in Turkey;

$$CF = \alpha_0 + +\alpha_1 ED + \alpha_2 INF + \alpha_3 FDI + \alpha_4 ER + \alpha_5 UNC + \alpha_6 TBAL + \alpha_7 GR + \varepsilon_t \tag{6}$$

Where,

Capital Flight (CF): We use the World Bank (1985) method .

External Debt (ED): is measured as change in external debt divided by GDP. A positive relationship between the external debt and capital flight is expected

Inflation (INF): is the rate of inflation in the domestic economy. We measure inflation as consumer price index.

Foreign Direct Investment (FDI): We include this variable in the model in order to see if FDI facilitate or reduce capital flight (see Le and Rishi, 2006)

Exchange Rate (ER): is the yearly average of exchange rate of one US dollar in Turkey.

Uncertainty (UNC): We measure the macroeconomic uncertainty by calculating the deviation of GDP from its three-year moving average.

Trade Balance (TBAL): is the trade balance in million US dollars.

Real GDP Growth (GR): Following Mikkelsen (1991), we use Real GDP growth rate as a measure for real rate of return of the economy. The higher the level of growth in the economy and hence the opportunities for domestic investments, the less the incentives to engage in capital flight. (Ajayi 1992) A negative relationship is expected between capital flight and Real GDP.

ε_t is the error term.

In the study, determinant of capital flight is investigated with both ordinary least squares and a Vector Error Correction model for mutual relationship between these variables. VEC model is introduced by Engle and Granger (1987) for examining cointegration i.e. for long-run relationship between variables in Vector Autoregression (VAR) model. A VEC model can be expressed as follow.

$$\Delta x_t = \alpha + B(L) \Delta x_{t-1} + d'(e_{t-1}) + \eta_t \tag{7}$$

Where;

$\Delta x_t = n \times t$ vectors of variables,

$\alpha = n \times 1$ vectors of constants,

$B(L) = n \times n$ matrices of the polynomial expression in the lag operator,

$d' = n \times 1$ vectors of constants,

$e_{t-1} = n \times t$ vectors of error correction terms,

$\eta_t = n \times t$ vectors of residuals.

In the study, Granger causality test is applied for investigating direction of relationship between variables. This test is fist applied in the literature by Granger (1969). Then, Hamilton (1994) developed this test. In Granger causality, the direction of relationship is investigated between variables like x and y. If the current y value is better estimated with past values of x rather than current value of x, we can say that there is Granger causality from x to y variable.

The data employed in this study are yearly macroeconomic variables which include, capital flight, interest rate, inflation, external debt stock, exchange rate, foreign direct investment, trade balance, uncertainity and real GDP growth. The sample period is from 1980 through 2010. All data were directly obtained from CBRT (Central Bank of the Republic of Turkey) Electronic Data Delivery System, International Financial Statistics (IFS) issued by International Monetary Fund and World Bank Data. Eviews 7.1 was used for analysis.

5 Empirical Analysis and Discussion

The regression of a nonstationary time series on another nonstationary time series may produce a spurious regression. In order to produce a meaningful estimate, it is important to conduct a unit root test. Testing for the existence of unit roots is a principal concern in the study of time series models and co-integration. The presence of a unit root implies that the time series under investigation is non-stationary; while the absence of a unit root shows that the stochastic process is stationary. The Augumented Dickey-Fuller test as presented in Dickey and Fuller (1979) is an important tool for doing this. To test the null hypothesis of a unit root, the t-statistic and the asymptotic critical values were taken from Davidson and MacKinnon (1993). This outcome is presented in Table 1.

Variables	Levels	First Difference	Second Difference
CF (0)	-2.493982	-4.757862*	-
ED (0)	-2.582605	-4.083576**	-
INF (1)	-2.564259	-4.334224*	-
FDI (1)	-1.974891	-7.354670*	-
ER (0)	-5.880260*	-	-
UNC (2)	-1.595645	-12.13160*	-
TBAL (0)	-4.498936*	-	-
GR (3)	-3.149052	-2.439746	-4.145467**

Table 1: *Result of Stationary Test (Augmented Dickey-Fuller Test)* (**Note:** ** significant at 10%; ** significant at 5%; *** significant at 1%)*

The table above shows that the stationarity of the variables at different levels of differencing. It could be seen that ER and TBAL are the variables that is stationary at level difference while other variables are stationary at first difference except GR which is stationary at second difference. Below is the presentation of the least square estimation results from the analysis conducted on the model.

Variables	Coefficient	T-Statistic
C	47.42254	8.344144*
ED	0.00914	19.63005*
INF	-0.163405	-1.605811

ER	-27.14612	-5.689021*
GR	-2.51E-08	-0.833179**
UNC	1.18E-07	1.065974*
TBAL	0.002213	2.665611**
R^2	0.9265	
DW	1.9361	
F	124.6686*	

Table 2: *The Least Square Estimation Results (* significant at 10%; ** significant at 5%; *** significant at 1%)*

According to regression model we use, the results for independent variables, except INF all the variables are significant which means that only inflation rate has no influence on the capital flight in Turkey during the study period. From the above results, it can be seen that the co-efficient of the constant parameter is positively related with the CF. This indicates that if all explanatory variables are held constant, CF will increase by 47.42254 units. The explanatory power of the model is estimated at 0.9265 which indicates that 92.65% variations or changes that occurs in the present state of CF is determined by the changes in the values of the independent variables while the remaining 7.35% is explained by the variation outside the model or captured by the error term. The F-test statistic of 124.66, significant at 1% indicates that conducted model is valid.

The coefficient UNC variable is positive and significant at the 1% level. Finding from analysis of relationship between uncertainty and capital flight is found positive and significant within 1 per cent level. In other words, uncertainty causes capital flight at per cent significance level. The content and the movement of recent and future public policies are indetermined and also it could well. Economic uncertainty is directly related to increase capital flight because of the characteristic of capital flight. From the theory, it is possible to say, if the economy has high level of uncertainty with using percentage of difference from previous value, this could be magnitude for capital flight. It is clear that policymakers should draw the way of the economy to prevent uncertainty level and relatively capital flight.

The results also indicate that the GR is negatively related to capital flight: higher growth leads to less capital flight. GDP growth rate is statistically significant at the 5% level. Countries unable to improve economic growth, because of weak macroeconomic policies or inefficient economic sectors, will discourage investors.

The impact of the ED on CF is positive and significant at the 1% level. In economic theory, one of important indicator for economic instability can be external debt. In this situation, it is had to estimate the position of debtor credit and also it can struggle to use taxes as a preventer for decreasing external debt. As expected from the theory, there is significant and positive relationship between external debt and capital flight at 1% level.

The impact of the FDI on CF is negative and significant at the 10% level. Foreign direct investment has sensitivity to economic stability; of course, the econometric results are negative and significant relationship at 1% level. The meaning of this relationship is to put forward the policies for attracting foreign direct investment can reduce capital flight.

The impact of the TBAL on CF is positive and significant at the 5% level. The impact of the trade balance is examined and relationship with capital flight is found significant and positive at %5 level. Increase in trade blance provides boost on exchange for the chosen county in other words the chosen country reaches the exchange surplus position. Consequently, this situation is resulted being exchange deficit position for another county. Based on that information, the foreign county aims to increase their investment rate for eliminating the exchange deficit position as a result of it, capital flight occurs.

The impact of the ER on CF is negative and significant at the 1% level. Another result from econometric analysis is related to exchange rate and capital flight which is found significant and negative with in 1%. Decrease in exchange rates as a result of foreign portfolio investors who invested in hot money in TL, TL increases in the value of assets denominated in foreign currencies. Wishing to benefit from the increase in the return on the exchange rate difference arising out of the interest of foreign investors, capital flight occurs. Moreover, the decrease in exchange rates of foreign currencies appreciated the owners of capital market orientation shifts towards developing countries.

There are various approaches to test for cointegration, say, Engle and Granger approach, Johansen approach and Gregory and Hansen approach. The bivariate approach of Engle and Granger is very restrictive because it can be applied only if there is one cointegrating relation. And the most commonly used method is the Johansen cointegration test based on the autoregressive representation discussed by Johansen (1988) and Johansen and Juselius (1990). This test determines the number of cointegrating equations for any normalization used. It provides two different likelihood ratio tests; one is based on the trace statistic and the other on the maximum eigenvalue. At this stage of the study, whether it is a long run relationship between the variables Johansen-Juselius cointegration test is investigated. In addition, the Johansen-Juselius cointegration test of bilateral relations with CF was investigated.

	Trace Test				Max-Eigen Test			
	H_0	H_1	Trace Statistic	0.05 Critical Value	H_0	H_1	Max-Eigen Statistic	0.05 Critical Value
None*	r=0	r≥1	388.7022*	187.4701	r=0	r=1	121.3865*	56.70519
At most 1*	r=1	r≥2	267.3157*	150.5585	r≤1	r=2	87.17834*	50.59985
At most 2*	r=2	r≥3	180.1374*	117.7082	r≤2	r=3	62.58674*	44.49720
At most 3*	r=3	r≥4	117.5506*	88.80380	r≤3	r=4	52.23570*	38.33101
At most 4	r=4	r≥5	62.31494	63.87610	r≤4	r=5	25.86353	32.11832
At most 5	r=5	r≥6	39.45141	42.91525	r≤5	r=6	20.19299	25.82321
At most 6	r=6	r≥7	19.25842	25.87211	r≤6	r=7	13.32489	19.38704
At most 7	r=7	r≥8	5.933532	12.51798	r≤7	r=8	5.933532	12.51798

***Table 3.** Johansen Cointegration Test Results (Multivariate)*

In Table 3, cointegration of variables expressing whether the hypothesis H_0 (r = 0) of the Trace Statistic is calculated 388.7022. This value is obtained from the 5% significance level, the null hypothesis was rejected because it is larger than the critical value of 187.4701 and cointegrated vector have been identified. Both statistic tests which are Trace and Max-Eigen statistic produced similar results. Either the trace test or the maximum eigenvalue test reveals the presence of a cointegrating vector, implying that there is a long-run equilibrium relationship between the variables. The results show that there is more than one cointegrating vectors whereby there are four cointegrating vectors between the CF and other variables. This gives the conclusion that in the long-term CF moves together with other variables towards equilibrium. In this context about the relationship between long-term stability can be mentioned and cointegration vector estimates obtained from this relationship is shown below.

CF= -0.001103 ED+0.324888 INF+0.005969 FDI+24.83708ER+ -1.12E-07GR

(2.7E-05)   (0.16277)   (0.00048)   (2.77017)   (4.9E-08)

-1.12E-06 UNC-0.003491DTD

(1.5E-07)   (0.00089)

(Note: An estimate of the cointegration vector is normalized according to CF. Standard error in parentheses.)

In this study, we are not discuss more on the interpretation of these number of cointegrating vectors due to the problems of interpretation when dealing more than one cointegrating vector (see Maddala and Kim, 1998: 233-242).

	H_0	H_1	Trace Statistic	0.05 Critical Value	0.01 Critical Value

	r ≤ 1	r = 2	6.269029**	3.841466	6.634897
CF-TBAL	r = 0	r = 1	13.63300	18.39771	23.15239
	r ≤ 1	r = 2	2.256511	3.841466	6.634897

***Table 4.** Bivariate Johansen's Cointegration Test Results (**Note:** * significant at 1%; ** significant at 5%)*

According to the bivariate cointegration test presented in Table 4, while there is a cointegration relationship between CF and ED, ER, GR, INF and UNC variables, a cointegration relationship can not be observed between CF and FDI, and TBAL. So, we can say that there is a long run relationship between CF and ED, ER, GR, INF and UNC variables.

It's already known that cointegration implies the existence of Granger causality, but it does not indicate the direction of the causality relationship. So, at least one directional relationship must be expected between variables. Table 5 presents Granger causality test results between CF and the other variables from VEC model.

Variables	Direction of Causality	F Statistics	Probability
CF-ED	→	2.77274***	0.0762
ED-CF	-	1.90672	0.1637
CF-FDI	-	1.12469	0.3362
FDI-CF	-	1.20145	0.3129
CF-ER	-	0.18041	0.8357
ER-CF	-	2.26982	0.1183
CF-GR	→	4.32697*	0.0041

CF-INF	-	2.11194	0.1362
INF-CF	-	0.19736	0.8218
CF-UNC	-	0.38232	0.6851
UNC-CF	→	10.3067*	0.0003
CF-TBAL	-	0.63606	0.5354
TBAL-CF	→	3.21583***	0.0522

Table 5: *Granger Causality Test Results from VECM* (**Note:** *significant at 10%; ** significant at 5%; *** significant at 1%*)

According to the test results, there is a bidirectional causality between CF and GR. Also, we found causality from changes in UNC and TBAL to changes in CF. This means uncertainty and trade balance anticipate changes in capital flight and capital flight appear to have no effect on uncertainty and trade balance. There is no causality between CF and FDI, ER and INF variables.

The variance decomposition measures the proportion of forecast error variance in one variable explained by innovations in itself and the other variables. The results are summarized in Table 6. The salient results from the variance decomposition technique are as follows: in general, own shock constitutes the predominant source of variations for all the variables in the model. Variance decomposition results from VEC model are given in Table 6.

Periods	CF	ED	INF	FDI	ER	GR	UNC	TBAL
1	100.000	0.00000	0.00000	0.00000	0.00000	0.00000	0.00000	0.00000
2	85.3166	0.82238	0.06690	0.59299	0.98027	5.29727	0.03896	6.88459

25	14.4481	3.71537	17.5413	5.40874	0.77755	12.8466	12.0876	33.1746
30	11.2494	3.33624	19.4385	5.86550	0.59273	14.4343	12.4551	32.6280

Table 6. *Variance Decomposition*

According to the variance decomposition results, CF variable is mostly affected by its shocks, and then by variables of trade balance, inflation rate, growth, uncertainty, foreign direct investment, external debt, and exchange rate, respectively. At the beginning of the period, capital flight is determined only by their shocks but at the end of the 30 years, this ratio decreases to 11,2%. So, 88,8 % percentage of change in CF was determined by variables used in the study. Trade balance shows its impact after the fourth year and this ratio rises to 32% at the end of the period. Inflation affects CF by 2,8% at the end of the fourth year and this ratio rises to 19% at the end of the 30th year. The effect of ER is rather small.

6 Conclusion

Recently capital flight has been became one of important issue for the developing countries'government and the main question is how it can be measured in orther words which measurement can show real capital flight

effect on macroeconomic variables. After the financial crisis, develeoping countiries affected mostly including Turkey. Turkish government has been trying to fing a way to get back the capital from abroad. The chosed medhod to calculate capital flight is the residuals method which is used by World Bank. The aim of this study is to investigate the relationship between capital flight and some macroeconomic variables which are GDP per capita, exchange rate direct financial investment, rate of inflation and trade balance. For this aim, OLS method, Johansen- Juselius cointegration method, Granger causality test and VEC model are used. OLS estimation results show that there are significant relationships between capital flight and exchange rate, trade balance, exchange rate, uncertainty, financial direct investment and external debt. However, rate of inflation is insignificant with 10%. There are positive impacts on trade balance, uncertainty and external debt as expected from the economics theory. Additionally, there are negative relationshiops between capital flight and financial direct investment and exchange rate. It is recommended that policymaker should put forward stricted laws to prevent capital flight; this paper shows that capital flight can be a cause of macroeconomic instability and vice verca.

Was the Turkish Financial Crisis in 2001 Caused by External or Internal Factors?

Ph.D. Candidate Fatih Konak (Hitit University, Turkey)
Ph.D. Candidate Hakan Turan (Hitit Üniversitesi, Turkey)

Abstract

There has been much discussion on the issue of whether financial crisis are caused by external factors or internal factors. This research has attempted to demonstrate what were the real reasons whether internal or external factors, behind the Turkish financial crisis in 2001. The crucial question that demands an answer is 'which one of them overwhelmingly triggered the crisis. It was argued that before the crisis occurred, the Turkey economy had been affected by some unfavourable external shocks such as, rise in crude oil prices which increased the current account deficit; however, it can be seriously solved by employing correct finance technique that using long-term capital and direct investment instead of short-term capital. Therefore, external factors effects on the economy can be eliminated by right monetary policy, which means they were not the key factors. On the other hand, there were many internal factors behind the crisis such as fragile finance and banking system, ruling out dis-inflation negative effects and seasonal factors and so on. It could be advocated that these factors led the Turkish economy into uncertain situation and they had central part in the crisis because, when the last global financial crisis was occurred in 2008, although all unexpected external factors were soared, the Turkish economy was less affected, because the Turkish economy has been become more durable by solving the internal triggering factors.

1 Introduction

There has been much discussion on the issue of whether financial crisis are caused by external factors or internal factors. In this context, internal factors in economic crisis refer to the financial structure of a country, lack of monetary policy and so on. In addition, it has to be noted that these internal factors can be controlled and altered by the government of the country. In contrast, external factors represent to macroeconomic matters throughout the world which cannot be controlled by the government of the country. In the case of Turkey, on the February 19, 2001, the Turkey economy was hit by massive financial crisis. In that time, overnight interest rates of the Central Bank of Turkey (CB) skyrocketed to 4059 percent in few days (Table 8), CB lost 7,5 billion dollars of reserves and the dollar exchange rate jumped from 685 thousand liras to 958 thousand liras (Fatih and Guven 2002). Therefore, the balance of Turkey economy was devastated and these conditions led the Turkey financial system to bankruptcy. Peter (2001) claimed that this crisis was the bankruptcy of the Turkey economy. Hence, it could be possible to state that it was the biggest financial crisis had been recorded in the Turkey economy history. Some economist blamed the Turkish financial crisis in 2001 was caused by the unfavourable changing in the world economy during the crisis period (Emre, 2001). According to Emre (2001), these external factors, which triggered the crisis, were: "the rise of the interest rates in the United States by 100 basis points, the increase in the international energy prices and the loss in the relative strength of the Euro vis-à-vis the US $". In addition, it can be added that the Russian economic crisis effects on the Turkey economy as a external factor (Ersan and Kenan, 1999), while other economist argue that the Turkish economy was overwhelmingly affected by internal factors (Emre, 2001). These internal factors behind the crisis namely dis-inflation programme, which was initiated in December 1999 backed and supervised by the International Monetary Fund (IMF), deficiencies and effects on the fragile banking system and financial environment, lack of fiscal discipline and monetary policy, also ruling out of structural reforms such as privatization, and seasonal factors, wrong monetary policy to finance the current account deficit and political crisis as a last shot   (Emre,2001 , Emre, Hakan and Kamuran, 2001 , Ahmet and Erinc, 2002 , Fatih and Guven, 2002). This essay argues that this crisis was overwhelmingly caused by internal factors because it could possible to eliminate the external factors effects on the economy with implementing right monetary and it could also possible that if a country's financial system is strong enough, it could protect itself from external attacks. However, some external factors also had an impact. In order to, demonstrate that this essay will first focus on the external factors behind the 2001 Turkish financial crisis. Having done that in the context of Turkey right before the crisis, the internal triggering factors will be presented. Moreover, this essay will endeavour to make contrast both of them with last global economic crisis effects, which boomed in the USA in the year 2008.

2 Role of External Factors

External factors behind the 2001 Turkish financial crisis can be examined under four main headings.

First of all, it is obvious that the USA economy is one of the most powerful economies in the world. Thus, other economies throughout the world are affected by tiniest variation in the USA economic indicators. One of

them is the gradual interest rate (the federal interest rate). It refers to overnight borrowing by banks to maintain their bank reserves in the United States of America (Federal Reserve Bank of New York, 2007). This is an important development because, Eichengreen and Rose (1998) point out that highly significant coefficient between changes in industrial-country such as America, interest rates and liquidity crisis in emerging market. Therefore this indicator should be monitored to determine monetary policy makers in order to avoid its bad effects on the economy by the economic policy makers. In the case of Turkey, during the year before the 2001 liquidity crisis, this rate was increased 125 basis point s (from 4,97% to 6,24%) (Figure 1) so as to relieve the US economy by the Board of Governors of the Federal Reserve System (Emre,2001). Meanwhile the Turkish overnight interest rates was affected negatively and continued to go up due to this situation. It was dramatically increased from 45, 6% to 62, 5. (Figure 2) As a result, it damaged the Turkish economy and triggered the 2001 economic crisis. This clearly shows that external factors are therefore relevant the 2001 crisis.

However, it can be argued that this external factor was not a big player behind the crisis. Because, in contrast, before the 2008 global financial crisis, which was considered to be the worst economic crisis worldwide since "the great depression". There was a considerable fluctuation in the FED Funds rates. For example, it was decreased from 6.24% to 1.13% between 2002 and 2004. (Figure 1) Nevertheless, after that it was went up sharply and reached to 5.02% just before the global financial crisis. In this context the Central Bank of Turkey could achieve to keep the recovery policies, which included financial and banking sector's reforms, after the 2001 crisis period. Thus, at the same period, the overnight interest rate of Turkey was declined from 62, 50% to 15, 75% apart from small rise at the beginning of 2006 (Figure 2). Consequently, it is clear that FED Funds rates effects could be reduced by keeping the monetary policy. Therefore, it could be possible to state that external factors are not the relevant because their effects can be eliminated.

Secondly, it could be claimed that there was a significant link between rise in crude oil prices and the 2001 financial crisis in Turkey. Emre (2001) has drawn attention to the fact that in the case of Turkey, "crude oil is the most important imported input for production and consumption". It is clear that trade deficit, which refers to the amount by that merchandise imports exceed merchandise exports, could be affected negatively by this variation in crude oil prices. In this case, crude oil prices raised from US$ 17,8 to US$ 35 in 2000 (Figure 1). Thus, this exacerbated the problem of the trade deficit of Turkey (Table 2). In addition, the current account balance was affected negatively as well (Table 4). Because, the fact that the current account balance in the Turkey economy is mostly affected by changing energy prices (CB, Bulletin, 2009). Hence, this balance was devastated by this rise. As a result, it prepared a convenient ground for the liquidity crisis in 2001. Therefore, this clearly shows that there is an important relationship between the crisis and external factors.

On the other hand, in order to see the role of rising crude oil prices on the Turkish economy as a triggering factor, ten year period after the 2001 financial crisis should be analyzed. There was a dramatic increase in crude oil price between early 2003 and 2007, and it reached the peak at almost $100 (Figure 1). It is true that it affected the balance of foreign trade and either trade deficit or the current account deficit soared. However, the Turkish economy could keep the sustainable growth and also could reduce the effects of this augmentation because, monetary policy makers changed the financing the current account system (CB, Bulletin, 2007). In 2001, it was based on short- term capital which is so vulnerable. After that the government started to finance this deficit with long-term capital and direct investment (Figure 2). Therefore, it is clear that rise in crude oil price's effects would be reduced. This clearly shows that external factors are therefore not the most relevant.

Thirdly, unfavourable change in US$/EURO parity triggered the Turkish liquidity crisis in 2001 because turkey import depends on US$ while export of Turkey EURO (Emre, 2001). As he points out "imports of raw materials and intermediary inputs are carried out in US$, whereas export to the EURO zone (54% of export in 1999, especially to Germany which is very important trade partner) are carried out in EURO". Therefore, changing in this parity could affect the Turkey economy. In this case, the balance of foreign trade of Turkey was devastated. Moreover, this movement in US$/EURO parity might have resulted in deterioration of current account deficit. Consequently, it is true that this variation triggered the crisis. This clearly shows that external factors are therefore relevant the 2001 crisis.

However, it has to be noted that the monetary policy makers of Turkey should have taken necessary measures in order to protect economy from unfavourable shock in this parity. Therefore, after the crisis, export and import inputs have been diversified so as to reduce unexpected variation in this parity. In this context, the Turkey government has developed trade relationship with different countries such as eastern, northern and Middle East countries. For example, the foreign trade volume has been increased from 6 billion $ in 1998 to 52 billion $ with countries, which are member of the Back Sea Economic Cooperative, so far. As a result, this external factor's effects have been   eliminated.

Finally, the vulnerable financial structure of Turkey economy was affected by the Russian economic crisis, which had been caused by the Asian crisis by reducing the prices of raw materials and by disturbing confidence of foreign investors to Russian emerging capital market (Ersan and Kenan, 1999). As a result of these developments Russia faced a financial crisis in 1998. Ersan and Kenan (1999) claim that this crisis affected Turkish firms engaged in business and exports, luggage trade and tourism, which is the major revenue in the

Turkey economy. They also note that the total loss of Turkey due to the Russian crisis amount for 3 billion dollars per year. Therefore, it can be claimed that it was the one of the most important external factors behind the 2001 liquidity crisis in Turkey.

In order to understand how the Russian economic crisis affected the Turkey economy, some data should be analyzed. The Turkish export to Russia had gone up from $1442 million in 1992 to $ 2057 million in 1997. However, the fall in Russian income due to the crisis, the Turkish export to Russia dropped $777 million in 1998. Hence, the Turkey economy lost $1290 million in a year.(Table 1). Moreover, the Turkey economy's revenue from luggage trade with Russia and the number of tourists in Turkey from Russia dropped sharply from $8,842 million and 1,256 (number in thousands) in 1996 to $3,689 million and 326 (number in thousands) in 1998, respectively (Table 1). As a result, this crisis had raised the vulnerability of the Turkey economy. Therefore, it could be possible to state that Turkey economy affected external factors.

In contrast, in terms of the last global financial crisis (2008), the majority of the governments throughout the world have taken austerity measures in order to preserve themselves from the crisis wave. For example, the USA, the UK and other European countries such as Greece, have been attempting to cut spending to reduce the effects of the crisis (Yenigun, 2010). In this perspective, this movement affected the Turkey foreign trade especially rate of export, it dropped from $132 billion in 2008 to approximately $102 billion in 2009(Table 2). The total loss of Turkey economy was $30 billion. However, the proportion of imports covered by exports rate increased from 65, 4% to 72, 5% at the same period. Consequently, it can be said that although the last global financial crisis was bigger than the Russian crisis, in terms of foreign trade, its effects on the Turkey economy was lower (Table 2). This clearly shows that external factors are therefore not the most relevant.

3   Role of Internal Factors

There were some external factors behind the 2001 Turkish liquidity crisis, even though internal factors the most relevant. In this perspective, Fatih and Guven (2002) has drawn attention the fact that the Turkish economy had been struggling the chronic inflation, which is one of the most important internal factors, for 25 years. Therefore, the monetary policy makers had implemented many stabilisation attempts, some of which have failed, in order to solve this problem (Emre, 2001). It is echoed by Ahmet and Erinc (2002), this program "exclusively relied on a nominally pegged exchange rate system for dis-inflation which has been major concern for Turkish policy makers for many years". In this case, before the Turkish liquidity crisis in 2001, Turkey initiated an extensive dis-inflation programme in December 1999 backed and supervised by the International Monetary Fund (IMF) (Ahmet and Erinc, 2002). As outlined in the Turkey letter of intent (1999), this programme aimed at fiscal adjustment, structural reform and privatization in Turkey economy. This letter also included significant measures to reinforce and regulate both the financial environment and banking sector of Turkey. However, this programme had many deficiencies on the implementation. For example, it just focused on reducing interest rate and inflation so that policy makers forgot the banking sector thus, this behaviour increased the vulnerability of the banking sector, and lack of monetary policy, also the Turkish government could not complete privatisation, which was very important in structural reform, and so on. As a result, it could not have been successful to prevent the internal factors effects so they triggered the crisis. Thus, this clearly shows that if the Turkish monetary policy makers had solved the internal problems, the crisis would not have boomed.

Initially, it could be possible to argue that the Turkish monetary policy makers should not have taken essential measures so as to protect economic stabilisation before the crisis. However, Ahmet and Erinc (2002) claim that throughout the first year of the dis-inflation programme, rule of this programme's were followed and the Central Bank of Turkey successfully controlled expansion of monetary base with its net domestic asset position within the programme limits. They also mentioned that "the fiscal operations were in line both the revenue and expenditure targets". Nevertheless, the crisis conditions emerged in does course, primarily as a result of the increase fragility in financial system. According to Ahmet and Erinc (2002) "this fragility, in turn, was generated by the uncontrolled and excessively capital flow with exceedingly speculative component". In other words, this could be explained in this way, the Turkish economy had become more vulnerable to speculative capital flow because of liberalized capital account system which had been applied since 1989 due to this programme's permission to higher level of speculative capital inflow. Hence, this clearly shows that lack of monetary policy increased the economic crisis risk.

Ahmet and Erinc (2002) also claim that, in the context of the Turkish dis-inflation programme, dept financed public deficit and rapid acceleration of private expenditures increased inflow of short-term foreign capital. Therefore, the ratio short-term foreign dept to the Central Bank's reserves rose secularly throughout the programme. In this case, this ratio should have been the value of 60 percent because in terms of international speculation, its critical threshold is 60 percent (see e.g. Kaminsky,Lizondo and Reinhart,1998). It is obvious note that this ratio had never fallen below 100 percent since the liberalization system in Turkey, 1989. It means that the Turkish financial system had been operating consistently under the "danger zone" (Ahmet and Erinc, 2002). During the implementation of the dis-inflation programme, this ratio rose to 112 percent in June 2000 to

147 percent December 2000 (Table 3). Thus, it can be said that the programme increased the financial fragility and its liquidity creating mechanism did not allow for stabilisation. Therefore, it could be said that internal conditions were the most relevant.

Moreover, in the context of the Turkish banking system before the crisis, the banking sector's profit based on high inflation rates and real interest rate because no one believed that these rates could neither be reduced nor controlled (Emre, Hakan and Kamuran, 2001). Therefore, they organized all working plans to gain profit based on these rates. Demirguc and Huizinga (1999) concluded that in their analysis, the determinant of interest margins and profitability of banking sector, "higher inflation and real interest rates are associated with higher realized interest margins and profitability". They also found that "banking sectors with higher rates of concentration have higher margins and earn more profit". However, after the dis-inflation programme, inflation rate and interest rate started to decrease so that the Turkish banking sector changed their position towards to government debt instrument portfolio. It has to be noted that the quality of the government debt instruments portfolio is directly related to expectation regarding dept sustainability. Hence, Fatih and Guven (2002) argue that this feature increased the vulnerability of the system to concerns about the rollover it the outstanding government debt instruments because they also claimed that this portfolio in commercial bank balance sheets was even greater than loan portfolio. Consequently, this movement triggered the crisis under the uncertain financial environment in Turkey. Therefore, this clearly shows that if the government had realized the banking sector's this perilous movement timely, the crisis could have been prevented.

The other crucial internal factor behind the crisis is mid-sized banks in the banking system. Einchengreen (1998) argues that regarding the banking sector crisis which triggered the 2001 financial crisis, "the problem lied with a number of mid-sized banks". In addition, it ought to be noted that the Turkish govern- ment gave them bailout guarantee which means that when they are in the bankruptcy situation, their deposits and assets will be protected by the government (CB, Financial Stability Report, 2008). In fact, the majority of mid-sized banks were established because they relied on this guarantee (Fatih and Guven, 2002). According to Burnside,Enchenbaum and Rebelo (2001) "economic agents expect that these future deficit due to bailout guarantee, are going to be financed by many creation, which leads to a collapse of fixed exchange rate regime". Hence, it is clear that these banks damaged the Turkish banking system. Therefore, having been given permission to establish these kinds of banks in the Turkish banking sector, and lack of controlling of these banks' financial structure, led the Turkey economy into the crisis.

Furthermore, The Banks Association of Turkey's data showed that before the 2001 crisis, Turkey have 84 banks. However, during the crisis period 37 mid-sized banks were bailout and the number of banks in the Turkish banking sector decreased to 47 (BRSA,2010). Failure of these banks brought massive amount of $ billion financial burden on the Turkey economy. Therefore, this circumstance led the Turkey economy into worse condition. However, it should be noted that after the crisis, Turkish banking sector has grown under the control of the Banking Regulation and Supervision institute which was established in the year 2000(Tevfik,2010). This institute reduced the number of mid-sized banks and controlled the bank's balance sheets in order to keep the sustainable growth. As a result, many banks have bankrupted in the USA after the global crisis. Despite this fact there is no bank has bankrupted. Therefore, this clearly shows that if the banking sector is controlled in right way, in other words, if the fragility of the banking sector is solved, the economy can be protected from the crisis.

On the privatisation front, the Turkish monetary policy makers were planning to make money from privatisation under the control of IMF so as to decrease budget deficit and increase the investments. However, Emre (2001) has drawn attention the fact that "instead of the privatisation receipt target value of US$7, 5 billion only US$3, 5 billion was realized throughout 2000". This development showed that the Turkish authority went out of the programme. Therefore, they could not meet the target. As a result, their finance plan was devastated. In contrast, after the crisis, the Republic of Turkey Prime Ministry Privatisation Administration's data indicates that the government has made almost $25 billion revenue from privatisation so that they could use this money to protect economy. (Table 7). Hence, following the monetary policy rules is very important. In this perspective, if it is not followed, it could trigger the crisis.

Besides, one of the most important triggering factors behind the crisis is the current account deficit. It reached the peak before the crisis at -9, 92 in 2000. Therefore, all economic predictions were damaged by this augmentation. However, it could be argued that the problem was not just current account deficit. The real problem was in how to finance it. Current account deficit was overwhelmingly financed with short-term capital in that year (Figure 2). Hence, when the short-term capital float from the country, it could not be financed consequently the problem become bigger. Turkey had same situation in the crisis year. On the other hand, although in the year 2007 the current account deficit was higher than used to be, the Turkey economy was not damaged because it was financed with long-term capital and foreign direct investment which are more durable than short-term capital. it stated in the CB bulletin (March 2009) that "long-term capital and foreign direct investment have significant impact in terms of the financing quality of the current account deficit, and they reduce the degree of vulnerability of the economy". As a result, it can be said that the current account might not be a big problem, if it is financed in right way. (Table 4)

Another important internal reason in the crisis is lack of monetary policy. For example, monetary policy makers ruled out the seasonal factors such as common in finance literature the so-called "January affect" which refers to outflow of the capital from a country in order for avoiding tax liability. In the case of Turkey, according to Emre (2001) stated that although the Central Bank of Turkey is able to sterilize the effects of this seasonal outflow, it operated like a quasi currency board and ruled out the possibility of unfavourable effects on the fragile finance and banking system structure due to such outflow. As a consequence, it is clear that policy makers always have to prepare themselves to these kinds of effects. Otherwise, financial environment could not be protected like in Turkish crisis case. This clearly shows that lack of monetary policy is therefore the one of the most relevant internal factors behind the crisis.

It could be stated that political stability is one of the most significant indicators for financial environment in order to sustain and keep their position. In this case, on the 19 of February in 2001, after the National Security Council meeting, the Prime Minister Bülent Ecevit declared that there was a deep difference opinion between him and President A.Necdet Sezer. He also added that it was a very important political crisis. This declaration was not estimated in the uncertain financial environment. Therefore, after this announcement, Fatih and Guven (2002) stated that overnight interest rate skyrocketed to 4019 in two days, and the Central Bank lost 7, 5 billion dollars of reserve thus, the CB had to accept the collapse of crawling peg exchange system and the Lira would be going to freely float so that the dollar exchange rate jumped to 958 thousand liras from a level of 685 thousand liras. Consequently, the Turkey economy slid into a massive crisis. This clearly shows that if this political instability had not been occurred, the financial crisis could have been obstructed. Therefore, it was relevant internal factor behind the crisis.

4 Conclusion

In conclusion, this essay has attempted to demonstrate what were the real reasons which were divided into two section; internal and external factors that have been already mentioned above, behind the Turkish financial crisis in 2001. The crucial question that demands an answer is 'which one of them overwhelmingly triggered the crisis. On the one hand, it has argued that before the crisis boomed, the Turkey economy had been affected by some unfavourable external shocks such as, rise in crude oil prices which increased the current account deficit; however, it can be seriously solved by employing correct finance technique that using long-term capital and direct investment instead of short-term capital. Therefore, it can be clearly seen that external factors effects on the economy can be eliminated by right monetary policy. On the other hand, it can be stated that there were many internal factors behind the crisis such as fragile finance and banking system, ruling out dis-inflation negative effects and seasonal factors and so on. It could be advocated that these factors led the turkey economy into uncertain situation and they had central part in the crisis because, after the crisis, they had been solved so the Turkey economy had become stronger. Consequently, it was not be affected by the last global financial crisis (2008) which soared the all unexpected external factors. It can be said that if an economy is strong enough, the external factors are not big problems.

The Effects of Exchange Rates on Macroeconomic Variables: A Study on Selected Emerging Economies

Asst. Prof. Dr. Birgül Cambazoğlu (Haliç University, Turkey)
Assoc. Prof. Dr. Hacer Simay Karaalp (Pamukkale University, Turkey)

Abstract

The exchange rate channel of the monetary transmission mechanism has gained importance through widespread use of the floating exchange rate regime with increased globalization. In this context, this study aims to explore the effectiveness of the exchange rate channel on net exports and thereby total output and price level using vector auto-regression (VAR) models. The sample countries are Turkey and Argentina, which have employed a floating exchange rate regime since 22 February 2001 and 11 February 2002, respectively. The monthly data set consists of five macro-economic variables, which are short-term interest rates, the real effective exchange rate, net exports, the consumer price index, and the industrial production index for the period 2003 to 2010. The impulse-response function outcomes indicate that the operation of the exchange rate channel is effective, both in Turkey and in Argentina.

1   Introduction

Because fiscal policy has lost its luster as a tool to stabilize the aggregate economy, economists and politicians advocate that the stabilization of the real economy should be left to monetary policy. In recent years, central banks in many countries are using monetary policies to provide price stabilization (to cope with inflation) and output. In this context, monetary policy is a powerful tool used by central banks to ensure sustainable growth and low inflation in the economy. However, to be successful in conducting monetary policy (or to determine which monetary policy affects the economy), the monetary authorities must have an accurate assessment of the timing and effect of their policies on the economy.

Furthermore, they must evaluate the stance of monetary policy at a particular point in time (Mishkin 1995, 1996; Boivin, Kiley, and Mishkin 2010). In this context, monetary policy decisions are implied with changes in the money stock or in short-term interest rates. Central banks usually use short-term interest rates as a tool of monetary policy.

The effectiveness of changes in monetary policies on the real economy (output) and prices (inflation) is expressed as the result of monetary transmission mechanisms. These transmission mechanisms, which include interest rate effects, exchange rate effects, and other asset price effects, can be categorized into two basic types: neoclassical channels, in which financial markets are perfect, and non-neoclassical channels, in which financial markets are imperfect (Boivin, Kiley, and Mishkin 2010). According to this classification, neoclassical channels comprise interest rate channel, other asset price channel, and exchange rate channel. Non-neoclassical channels comprise credit channel (credit view). In addition to understanding this classification, it is important to take into account changes in expectations, which affect the relationship between monetary policy and aggregate economic activity. In this context, 'management of expectations' has become an important tool of monetary authorities throughout the world (Boivin, Kiley, and Mishkin 2010).

Therefore, expectations of economic actors' are also included in this classification as expectation channel.

Within this framework, many international studies focus on the effectiveness of the channels of the monetary transmission on the macro economic variables due to evaluate the stance of monetary policy and decide to set the accurate policy instruments for the economy. In this context the main objective of this study is to explore the effectiveness of the exchange rate channel on net exports and thereby on total output and price level using two different vector auto-regression (VAR) models. In this study, Turkey and Argentina are analyzed as the case countries because they are both emerging market countries and because they switched their fixed exchange rate regimes to floating exchange rate regimes in 2001 and 2002, respectively, after an economic crisis. Following a long period of monetary and economic turmoil, both countries have reduced their inflation through exchange rate-based stabilization programs (DTM 2002). The VAR model covers the period of 2003 to 2010, and the monthly data set consists of five macroeconomic variables, which are short-term interest rates, real effective exchange rates, net exports, the consumer price index, and the industrial production index. This study proceeds as follows: following the Introduction, Section 2 provides a theoretical background for the exchange rate channel of monetary transmission mechanisms; Section 3 summarizes recent empirical studies; Section 4 gives brief information about the exchange rate systems of Argentina and Turkey; Section 5 describes variables and discusses the empirical findings of the model and Section 6 presents the Conclusion of the study.

2   Monetary Transmission Mechanism Exchange Rate Channel

With the growing internationalization of economies and the gradual increase in the implementation of floating exchange rate regimes, more attention has been paid to monetary policy transmission, which operates through exchange rates and effects on net exports. Both for developed and developing countries, one of the most important variables that affect the basic economic indicators of open economies has been the changes in exchange rates. In this

context, monetary authorities occasionally attempt the course of exchange rates with monetary   policies (short-run interest rates). In this context, the monetary transmission mechanism exchange rate channel is expressed as the changes of real production and general price level, which is the result of the effect of monetary policy on exchange rates and their impact on net exports. The theoretical foundation of the exchange rate channel, which operates in open economies, is based on the Mundell-Fleming model (Bordo and Schwarts 1988; Büyükakın, Cengiz, and Türk 2009). Therefore, the exchange rate channel is more effective in open economies, which adopt floating exchange rate regimes, than it is in closed economies.

Moreover, the exchange rate channel involves interest rate effects, and it reveals the mechanism through the interest rate channel. When domestic real interest rates drop, domestic currency deposits become less attractive relative to deposits denominated in foreign currencies. This situation leads to a drop in the value of the domestic currency and an appreciation of the foreign currency (denoted by E↑). The lower value of the domestic currency makes domestic goods less expensive than foreign goods, which causes an increase in net exports (NX ↑) and, hence, in aggregate output (Y↑).

The operation of the monetary transmission mechanism through the exchange rate channel in a monetary expansionary process is shown in the following schematic representation:

$$M \uparrow \Rightarrow i_r \downarrow \Rightarrow E \uparrow \Rightarrow \ NX \uparrow \Rightarrow Y \uparrow \qquad\qquad (1)$$

Contrary to monetary expansion is the implementation of contractionary monetary policy. When domestic real interest rates rise, foreign capital investors will want to take advantage of this rate rise and will therefore increase capital inflow and thereby, the amount of foreign currency in the country. The rise in the amount of foreign currency leads to a drop in the value of foreign currency (E↓) by force of the law of supply and an appreciation of the domestic currency. Moreover, the higher values of the domestic currency make domestic goods more expensive than foreign goods and cause a decrease in net exports (NX↓) and hence, a decrease in aggregate output (Y↓). The operation of the monetary transmission mechanism through the exchange rate channel in a contractionary monetary process is shown in the following schematic representation:

$$M \downarrow \Rightarrow \ i_r \uparrow \ \Rightarrow E \downarrow \ \Rightarrow \ NX \downarrow \Rightarrow Y \downarrow \qquad\qquad (2)$$

Finally, it is shown that two opposite monetary policies can affect both aggregate output and general price level (Mishkin 1995, 1996, 2001, 2007). Therefore, due to the effectiveness of changes in interest rates and exchange rates on the financial and real sectors, on the investment decisions of foreign companies and on consumer spending, it is important to consider interest rates and exchange rates during the constitution of economic policies and to ensure a stable economy and sustainable development.

3   An Assessment of the Floating Exchange Rate Regime

The transition from fixed or pegged exchange rates to managed floating or independently floating exchange rates has occurred gradually after the breakdown of the Bretton Woods system in 1973. While many developing countries continue to peg their exchange rates to a single currency, such as the US dollar or French franc or a basket of currencies, they, at first, shifted from single currency pegs to basket pegs in the late 1970s. Following that initiative, many developing countries over the past three decades have shifted from fixed exchange rates (that is, those that peg the domestic currency to one or more foreign currencies) and moved toward more flexible exchange rates (those that determine the external value of a currency more or less by the market supply and demand for it) (Caramazza and Aziz 1998). In floating exchange rate regimes or flexible exchange rate regimes, the currency itself is accepted as a nominal anchor, and central banks do not intervene in determining change rates (Arat 2003). Economists, analysts, and policy makers agree that determining the right exchange rate is crucial for economic stability and growth in developing countries. In this sense, exchange rates have been at the center of policy debates in developing countries for the last three decades. Emerging market economies, which have gradually combined with the increased integration of capital markets around the world, have been adversely affected by the crises in the international capital markets, such as the Mexican crisis of 1994-95, the Asian crisis of 1997–1998, the crises in Russia (May-August 1998), Brazil (from November 1998 to January 1999), and Turkey and Argentina in 2001. Therefore, the need for an appropriate exchange rate regime developed for the emerging economies (Yağcı 2001; Artus, Cartapanis, and Legros 2003; Ardıç and Selçuk 2006).

Although the debates about fixed or floating exchange rate regimes have been continuing, many economies have switched to floating exchange rate regimes since the last decade. Floating exchange rate regimes are an appropriate choice for the countries that are industrializing and for some emerging market countries that are fully

integrated into global capital markets and have diversified production and trade, whose import and export sectors are relatively small compared to GDP and that have a deep and broad financial sector with strong prudential standards (Yağcı 2001). In this context, Turkey and Argentina are two emerging market countries that switched their fixed exchange rates to flexible exchange rates in 2001 and 2002, respectively.

3.1 The Floating Exchange Rate Regime in Turkey

Turkey has switched from a more controlled exchange rate regime to a flexible exchange rate regime over the past 20 years. However, many different exchange rate systems have been implemented throughout that time period. Turkey implemented a fixed but adjustable peg exchange rate regime in 02 February 1947 after it became a member of the International Monetary Funds (IMF) and the World Bank (Arat 2003:37). After the collapse of the fixed exchange rate regime, alternative regimes were adopted in Turkey. The "crawling peg" regime was implemented from 1980 until the 1994 crisis. Then Turkey employed a managed float regime between 1994 and 1999 (Görmez and Yılmaz 2007). In this application, the exchange rate was determined freely in the market, but the Central Bank could intensively intervene in determining the exchange rate. At the beginning of 2000, a 3 year stand-by agreement, signed with the IMF, and a two-term implementation strategy were initiated in the exchange rate regime. From the beginning of 2000 until February of 2001, the first term of the implementation strategy, the exchange rate-based stabilization program implemented in Turkey and the exchange rate system were based on a flexible anchor. The second phase of the program involved the band strategy, which was a gradual shift toward a more flexible exchange rate regime (Ertekin 2003; Kasman and Ayhan 2006; Görmez and Yılmaz 2007). However, after the financial crisis in February 2001, the program failed, and Turkey started to implement the floating exchange rate regime almost a year earlier than was planned. Turkey is currently implementing a floating exchange rate regime, which started in 2002.

After the first day of the implementation of the floating exchange rate regime, exchange rates in Turkey over-depreciated (overshoot). The Turkish Lira depreciated 28.5% against US dollar. This depreciation can happen in any country until the exchange rates reach the natural balance value of the market (Arat 2003). However, the Central Bank of Turkey announced the dynamics of the floating exchange rate as follows: exchanges rates are determined by supply and demand conditions in the market, without any exchange rate target from the Central Bank during the implementation of the floating exchange rate regime. The Central Bank also announced that it would intervene in the markets only in cases of excess volatility, without trying to affect the long-run equilibrium level of exchange rates (Görmez and Yılmaz 2007; Yılmaz 2008). To increase foreign currency reserves, the Central Bank implemented 'foreign exchange buying auctions to build up reserves' to quell the negative effects of internal and external shocks to Turkey as an emerging economy and to increase confidence in the country. Since April 01, 2002, the Central Bank has implemented foreign currency purchases at foreign exchange auctions, where terms and conditions are pre-announced, to minimize the impact of supply and demand conditions on the foreign exchange market (Görmez and Yılmaz 2007; Uygur 2010). During the post-floating exchange rate regime, the Central Bank did not intervene in the foreign exchange market unnecessarily. It only intervened when expecting a significant volatility increase in this market, e.g., the volatility in financial markets observed in May and June 2006, in July 2007, and in the 2008 global crisis (October 2008). International conditions are the decisive factors for foreign currency liquidity. The Central Bank intervened in the markets and continued the foreign exchange buying auctions. It resumed the intermediary function in the foreign exchange deposit market and announced other precautions during the high level of uncertainty in the global economy. During the global financial crisis triggered in October 2008, the Central Bank suspended the foreign exchange buying auctions to reduce the financial market problems of Turkey and to strengthen the liquidity of Turkish banks (CBRT 2009). Following the recovery period of 2010, Turkey, along with inflation targeting, has been continuing to implement the floating exchange rate regime started in 2002, without using the exchange rate as a tool and without having any nominal or real target. Moreover, the Central Bank adopted a more flexible method for foreign exchange buying auctions in October 2010 and will continue to implement this method in 2011 to accelerate foreign reserve accumulation. Due to the normalization and recovery period of the global markets, the intermediary function of the Central Bank in the foreign exchange deposit market was abolished on 15 December 2010. However, the Central Bank will continue to monitor developments in the exchange rate market and will intervene through foreign exchange selling or buying auctions in case of unhealthy price formations (CBRT 2010).

3.2 The Floating Exchange Rate Regime in Argentina

Latin American countries' choice of an exchange rate regime has been substantially affected by historically specific degrees of freedom or urgency (Frankel and Rapetti 2010:3). After the breakdown of the Bretton Woods system, Latin American countries began to face a different international environment between the late 1960s and the early 1970s, which was the result of the shift in developed countries from fixed to floating exchange rates. Among Latin American countries, Argentina, Chile, and Uruguay had suffered economic and political crises and high inflation during the first half of the 1970s. Moreover, after the liberalization of the domestic financial system, the reduction of taxes on trade and the opening of a capital account for the balance of payments, Argentina, Chile, and Uruguay oriented their exchange rate policies towards stabilizing prices and adopting

active crawling peg regimes in the second half of the 1970s (Frenkel and Rapetti 2010:4). In the early 1980s, the rise in international interest rates triggered massive balance of payments crises in Argentina, Brazil, Chile, Mexico, Peru, Uruguay, and Venezuela. Therefore, the crawling peg exchange rate regime was not effective, especially in Argentina, Chile, and Uruguay, because it produced current account imbalances and real exchange rate appreciation, which were the cause of slow labor market adjustments and the selection of currency baskets in the crawling peg regime (Obstfeld 1984; Drabek and Brada 1998). Due to that financial crisis, some Latin American countries, including Argentina, Brazil, and Mexico, experienced sharp devaluation and high inflation between 1982 and 1990. These three countries were able to use fixed or near-fixed exchange rates during the 1990s, which was a new period with high international liquidity and credit availability. While the use of fixed exchange rates as a nominal anchor to lower inflation is often successful, some problems started to emerge (Caramazza and Aziz 1998; IMF 2004; Frenkel and Rapetti 2010). In Argentina, the Convertibility Law was sanctioned in March 1991, according to which the currency was fixed at one peso to the dollar, under a currency board. However, this approach caused overvalued real exchange rates (IMF 2004; Frenkel and Rapetti 2007, 2010). The appreciation of the US dollar in 1997, which was the commencement date of the Argentina crisis, reduced the competitiveness of Argentina significantly. Mexican, Asian, and Brazilian crises also negatively affected the competitiveness of Argentina, and the currency board in Argentina prevented adaptation to this new situation. Therefore, from 1998 to 2000, Argentina underwent a series of adverse shocks and consequently, unfavorable economic developments (IMF 2004). Argentina was one of the countries that maintained a hard peg in the 1990s, and in the early 2000s, it announced the implementation of a new exchange rate system for exports, which extended the currency peg to include the Euro as of 15 June 2001. At the end of 2001, Argentina moved to a dual exchange rate system, adopting a preferential exchange rate peg for exports (Spiegel 2002). However, the government abandoned the dual exchange rate system, intended to control capital outflows and stabilize the foreign exchange market, and started to implement a floating exchange rate system in 11 February 2002 (DTM 2002). As a result, the currency board, through which Argentina had a highly dollarized economy, came to an end after the Argentina crisis, which was one of the most severe currency crises (Edwards 2002).

After the implementation of the floating exchange rate regime following the economic crisis, nominal exchange rate increased rapidly, and the Argentinean Central Bank ran out of foreign exchange reserves due to the economic and political uncertainties Then, as the result of the stabilization of the foreign exchange market by the Central Bank, in July 2002, through selling US dollars in the market, nominal and real exchange rates began to appreciate. However, the government started to intervene in the foreign exchange markets in the opposite direction in July 2003 due to Argentina's new exchange rate policy, oriented towards maintaining a stable and competitive real exchange rate to recover output, employment and external and fiscal balances. Although the Central Bank did not make any statement regarding the existence of a real exchange rate target, it stated that its intervention in the foreign exchange market was to protect the economy from international capital market volatility. Therefore, the joint intervention of the Central Bank and the Treasury in the foreign exchange market continued until the beginning of 2007. After the implementation of the floating exchange rate regime, the monetary transmission mechanism interest rate was considered weak and uncertain by the Central Bank authorities. In this case, Argentina started to follow a monetary policy based on broad, quantitative monetary targets, apart from the implementations of other Latin American countries (Frenkel and Rapetti 2010). From 2003, targets were announced at the beginning of every year through the Central Bank's monetary programs. From mid-2002 to mid-2008, the Argentina economy grew at an 8.5% average annual rate because of the success of this exchange rate regime (Frenkel and Rapetti 2010). Currently, in spite of diminished domestic growth in 2008 and a mild recession in 2009 due to global economic turmoil, the economic downturn was less severe in Argentina than elsewhere. Therefore, Argentina's exchange rate policy is presently based on a managed floating exchange rate (DoS 2011).

4   Recent Empirical Studies of the Exchange Rate Channel in Turkey and Argentina

Channels of the monetary transmission mechanism have been examined in many international studies. A vast number of studies analyze the monetary transmission mechanism exchange rate channel in Turkey. However, there appear to be a limited number of studies that analyze the monetary transmission mechanism exchange rate channel in Argentina. In this context, the further contribution of this study is the analysis of the operation of the exchange rate channel in both Turkey and Argentina. Some recent studies that focus on the monetary transmission mechanism exchange rate channel for Turkey are summarized in the following discussion.

Generally, most of the studies that analyze the exchange rate channel for Turkey find that it operates in Turkey (Saraçoğlu and Köse 1999; Gündüz 2001; Öztürkler and Çermikli 2007; Çiçek 2005; Kasapoğlu 2007; Erdoğan and Yıldırım 2008; Örnek 2009; Büyükakın, Cengiz, and Türk 2009). The studies reveal that the exchange rate channel has a significant impact on prices (inflation). Başçı, Özel, and Sarıkaya (2008) reveal that the exchange rate channel is an important transmission channel for Turkey. They also find that in addition to its traditional effect on total demand through foreign trade, the exchange-rate channel has an important impact effective on fundamental variables, such as expectations, the risk premium, the company balance sheet, production costs and

prices. However, these authors indicate that, after the implementation of the flexible exchange rate system following the economic crisis in 2001, the effectiveness of the exchange rate channel started to decline. They showed that low inflationary environment resulting from the implementation of structural reforms after the 2001 have increased the importance of interest rate and credit channels in Turkey compared with the pre-crisis period, which is consistent with the economic theory about monetary transmission channel. Similarly, Catik and Martin (2012) examined monthly data for the period 1986 to 2011 by using a Threshold VAR (TVAR) model to investigate changes to the macroeconomic transmission mechanism in Turkey following a major reform of monetary policy in 2004. They detected two regimes, with a clear transition between them in 2003–4. The pre-reform regime is characterized by high inflation and persistent responses to shocks. The post-reform regime is characterized by low inflation, more active monetary policy and less persistent responses to shocks. However, Magud et al (2012) analyzed the impact of exchange rate flexibility on domestic credit to the private sector and volume of capital flows for 12 countries, including Turkey, and found that larger share of capital inflows could be intermediated through the banking system in economies with less flexible exchange regimes, which is not in line with Başçı et al. (2008) and Catik and Martin(2012), whilst also finding that less flexible regimes are associated with a higher share of credit in foreign currency, suggesting that the impact of exchange rate flexibility is economically relevant.

A limited number of studies find varying results for Argentina. Hsing (2004) applies the VAR model to determine how real output in Argentina would react to a shock to real interest rate, the external debt/GDP ratio, real stock prices, real exchange rates, deficit spending, and the lagged output for the period of 1994 to 2003. He finds that real GDP in Argentina responds negatively to a shock to real interest rate, the external debt ratio, or the real exchange rate and positively to a shock to real stock prices or the lagged real GDP during some of the quarters. Frenkel (2004) discusses the mechanisms by which the real effective exchange rate affects employment performance and finds that the magnitude of the real effective exchange rate effect is important for Argentina, Brazil, Chile, and Mexico. Vargas (2009) examines the relationship between net capital inflows, real exchange rates and economic growth in 20 emerging economies and compares it to a panel of 13 developed countries with a panel model. Twenty emerging economies divided into three regions, Argentina is included in the first group (Latin America and Africa), and Turkey is included in the third group. The results indicate that, unlike the situation in developed countries, credit constraints work through the exchange rate channel as an important driver of the business cycle in emerging economies. Padilla (2010) uses a series of VAR models that incorporate money market mutual funds (MMMFs) as a new endogenous variable to examine the transmission of monetary shocks to real activity, inflation, and money market funds in Argentina. According to the results, the exchange rate model shows that a currency devaluation positively impacts output but later causes inflation. The exchange rate channel is not the only source of monetary transmission to MMMFs. Friori and Amico (2010) examine the comparison of monetary policy and the inflationary process in Argentina and Brazil for the period 1990 to 2010 and find that the exchange rate channel to monetary policy has a critical importance for both Argentina and Brazil.

5   Data and Empirical Model

5.1 Data Selection

In this study, the relative effect of the monetary transmission mechanism exchange rate channel on macro-economic variables is tested for Turkey and Argentina. For this purpose, the VAR model is used for the period of January 2003 to August 2010. All variables are internal to the VAR method, which is widely used in the analysis of monetary transmission mechanisms (Sims 1980; Asteriou and Hall 2007).

International empirical studies are taken into consideration during the selection of variables.The VAR models cover the period of January 2003 to August 2010. The data set consists of macroeconomic variables that include the following: short-term interest rates (quarterly term reel deposit interest rates, Muço et al., 2004) (dr), real effective exchange rates ($rexc$), net exports ($nexp$), the industrial production index (ip), and the consumer price index (cp). The symbols 't' and 'a' represent the abbreviations for Turkey and Argentina, respectively. The real effective exchange rate and industrial production index of Argentina are provided by Bloomberg, the real effective exchange rate of Turkey comes from the Central Bank of the Republic of Turkey, and the rest of variables are from the IMF International Financial Statistics (IFS). The theoretical framework is taken into consideration during the ranking of the variables. In this framework, the VAR models used in the analysis of the exchange rate channels for Turkey and Argentina can be written as follows:

$$\text{Model I: } tdr_t \quad trexc_t \quad tnexp_t \quad tip_t \quad tcp_t \tag{3}$$

$$\text{Model II: } adr_t \quad arexc_t \quad anexp_t \quad aip_t \quad acp_t \tag{4}$$

5.2 VAR Estimation

Initially, all series should be processed for the VAR analysis. As a first step, logarithms of all variables were taken except for 'tdr','adr', and '$tnexp$' so that they could so that they could become independent of unit values

(to bring them to the same level). As a second step, all variables were tested as to whether seasonality effects exist. No seasonality effect was found for the variables. In the third step, all variables were tested for whether they were stationary using the augmented Dickey-Fuller (ADF) test because all variables must be stationary in VAR models. The stationarity of all variables in Model I estimated for Turkey was questioned for a significance level at 0.01, and all variables were found to be stationary in their first difference *I(I)* except the *'tnexp'* variable. The stationarity of all variables in Model II estimated for Argentina was also questioned for a significance level at 0.01, and all variables were found to be stationary in their first difference *I(I)*.

Before estimating a VAR model, it is essential to determine the optimal lag length of the model. In this context, the Likelihood Ratio (LR), Final Prediction Error (FPE), Akaike Information Criteria (AIC), and Hannan-Quinn (HQ) tests were used to determine the optimal (appropriate) lag length. According to the test results, the optimal lag length was determined to be "one" for both Model I and Model II. The reliability of Model I and Model II, whose lag lengths were determined to be one, was also confirmed on the basis of the 0.05 significance level found in four diagnostic tests: the Breusch-Godfrey Serial Correlation LM, ARCH, White Heteroskedasticity, and Ramsey Reset Tests.

The variance decomposition method was used to overcome the obstacles in the interpretation of the parameters in the VAR model and to determine the source of the changes in the variable. In this context, according to the results of variance decomposition for twenty- five periods obtained from Model I and Model II, the main source of all variables' variance is explained by their own shocks. In Model I, the secondary important source of the variance of the *'trexc', 'tip',* and *'tcp'* variables is the *'tdr'* variable, with an average 5.61%, 1.29%, and 19.40%, respectively. Moreover, the *'trexc'* variable explains the 4.90% of the forecast error variance in the *'tcp'* variable as the tertiary important source. According to the variance decomposition results of Model II for the long-run and mid-term period, the *'adr'* and *'arexc'* variables are secondary important sources of each other. On the other hand, the *'aip'* and *'adr'* variables explain the *'anexp'* variable. Shocks to the *'arexc'* variable explain up to 9.42% of the forecast error variance in the *'aip'* variable, and shocks to the *'anexp'* variable explain up to 3.14% of the forecast error variance in the *'aip'* variable. The sources of changes in variance of the *'acp'* variable for the twenty-five periods are explained by the *'adr'* variable with 17.45%, the *'arexc'* variable with 12% and the *'aip'* variable with 3.21%.

The response of other variables to a shock taking place in one of the variables of the VAR model is analyzed with the impulse-response function (IRF). Therefore, with the IRF, other variables' responses to the shocks that may occur in the future could be estimated.

In this context, the responses of other variables to one standard deviation of *'trexc'* shock in Model I is reported in Figure 1. The response of the *'trexc'* variable to its own shock was downward from the beginning period to the fourth period. The effect of the shock disappeared after the fourth period. The response of short-term interest rates to real effective exchange rates was downward from the initial period to the second period. However, after the foreign capital inflow, an upward trend is expected as the first response of short-term interest rates. In this context, the expected response emerged after the end of second period continued to the end of sixth period and then disappeared. The response of net exports to the *'trexc'* shock was found to be downward. The reason for this outcome is that the increase in the import ratio exceeds the increase in the export ratio due to the decrease in exchange rates. Due to the drop of the *'tdr'* and *'trexc'* variables, industry production increases from the initial period to the end of the second period in Turkey, which has imported input dependency. The response of *'tcp'* to the decrease of *'tdr'* which originated from *'trexc'*, was upward due to the increase in household consumption. The upward tendency of *'tcp'* continued to the seventh period.

The response of the short-term interest rate to its own shock was downward from the initial period to the end of the fourth period, as shown in Figure 2. After this period, the response of the *'tdr'* variable to its own shock disappeared. In the process, the expected response of the *'trexc'* variable is upward. In other words, the *'trexc'* variable, which is acting in line with the monetary transmission mechanism, increases from the initial period to the fifth period. As the result of depreciation of domestic currency deposits against foreign currency, the demand of foreign countries for domestic goods increases and the demand of foreign goods decreases. Therefore, as an outcome of the loss of real value (an increase in the real exchange rate leads to an increase in the export ratio and a decrease in the import ratio), the *'tnexp'* variable is affected positively. The response of the *'tnexp'* variable continues into the beginning of the second period. That increase in the aggregate demand also affects aggregate output *(tip)*, positively. Finally, the inflation rate increases as the result of responses of the variables in the model, which are in line with the theory. In other words, the *'tcp'* variable increases from the initial period to the fifth period because of the recovery effect of the changes in the *'trexc'* variable on the aggregate demand, as a response to the monetary shock.

The responses of other variables to one standard deviation *'arexc'* shock in Model II are reported in Figure 3. The response of the *'arexc'* variable to its own shock is downward from the initial period to the end of the fifth period. The *'arexc'* shock creates an upward pressure on short-term interest. In other words, this shock causes an upward response by the *'adr'* variable from the initial period to the second period. A decrease in exchange rates causes an increase in the demand for imported goods and a decrease in the export quantity. For this reason, the

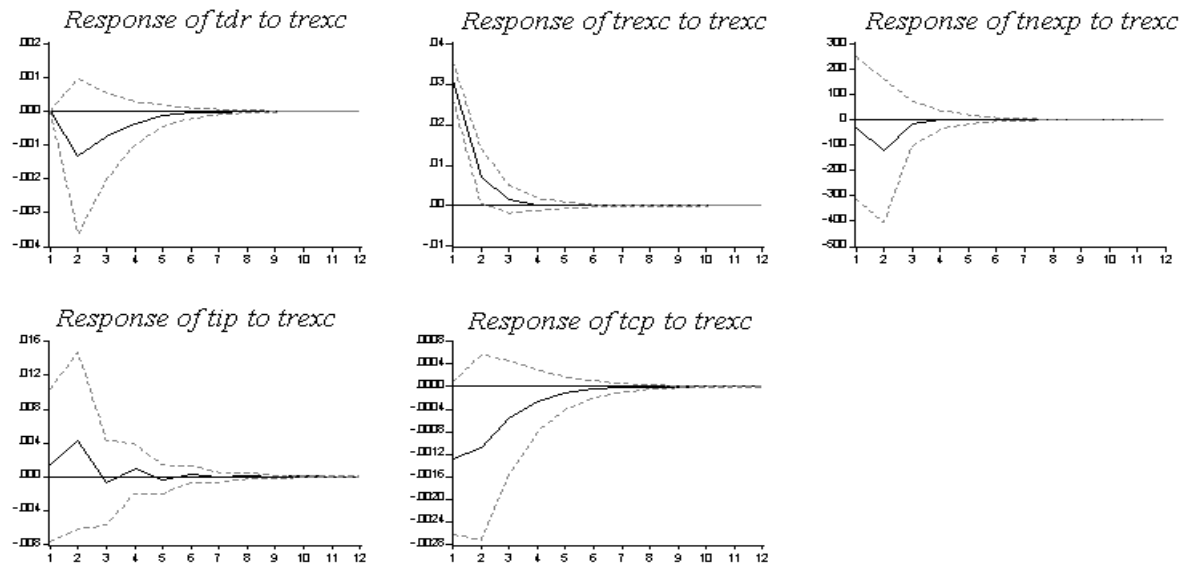
net export rate decreased from the initial period to the second period. The changes in the *'adr'* variable, which are created by the *'arexc'* variable, cause a decrease in the *'aip'* and *'acp'* variables. Nevertheless, the response of the *'acp'* variable continues up to the fourth period.


Figure 1: Response of model I variables to 'trexc' variable shock
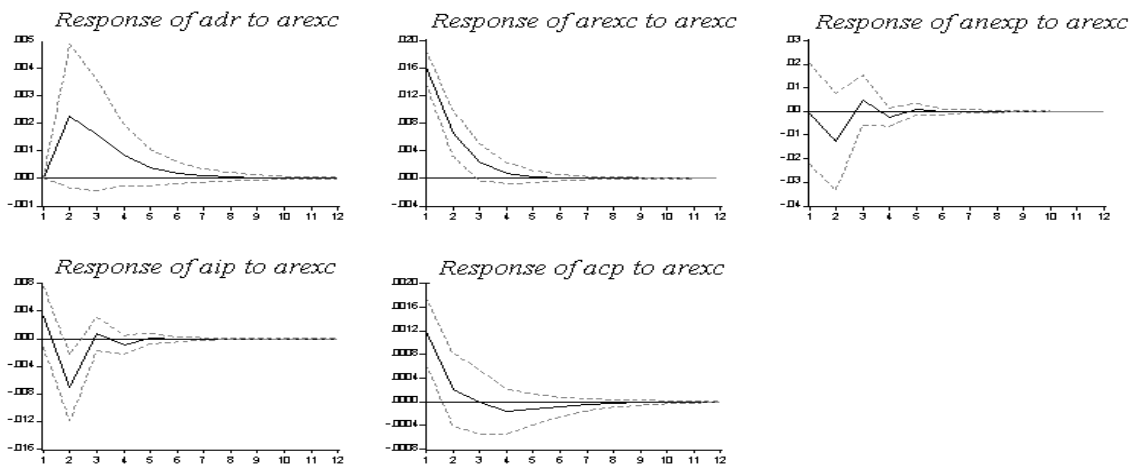
Figure 2: Response of model I variables to 'tdr' variable shock


Figure 3: Response of model II variables to 'arexc' variable shock

The responses of other variables to one standard deviation *'adr'* shock in Model II are shown in Figure 4. The response of the *'adr'* variable to its own shock from the beginning period to the fifth period downward. Although the first response of the *'arexc'* variable to the *'adr'* shock is downward and contradicts expectations, it is in line with expectations from the second period to the fifth period. The *'anexp'* variable decreased up to the second period due to the increase in imports relative to exports, which originated from the *'arexc'* variable. The effect of the shock on the *'anexp'* variable comes to an end after this period.
Figure 4: Response of model II variables to 'adr' variable shock

When the first responses are evaluated, it is found that the effect *'adr'* shock on the *'aip'* variable is positive, but that its effect on the *'acp'* variable is negative. However, the expected effect of the shock on the *'acp'* variable emerged in the second period and continued until the ninth period. In this context, the lagged response of the *'acp'* variable is accepted as normal in international studies.

6 Conclusion

Determination of the magnitude and timing of macroeconomic variables are gaining importance in predicting the effects of shocks to the macroeconomic variables. In this context, the issue of which monetary transmission mechanism channel is more effective arises. It is important to analyze and resolve this issue on a national basis. In this framework, this study examines the effects of the exchange rate channel, which is based on the interest rate channel and is especially effective with regard to net exports, over the period of 2003 to 2010 for Turkey and Argentina, which adopted flexible exchange rate regimes in 2001 and 2002, respectively. According to the results of the impulse-response function, the exchange rate channel is effective for both Turkey and Argentina.

The Applicability of Responsibility Accounting System within the Scope of Increasing Efficiency in Hospital Bussinesses in Turkey

Prof. Dr. Fehmi Karasioğlu (Selçuk University, Turkey)
Asst. Prof. Dr. İbrahim Emre Göktürk (Aksaray University, Turkey)

Abstract

In order to reduce the waste of resources of health to minimum level, The most important sub-system of the system must take the necessary precautions in hospitals. Improving the quality of services provided in hospitals, ensuring cost control in hospitals, increasing competition, promotion of private initiatives are important elements which help these bussinesses to increase their effectiveness. Because of human health is a matter of priority in health services, the businesses which offer this services should think the economic priorities for second plan. This is a policy based on hospital establishments with income instead of providing added value to the costs without compromising on quality to ensure a minimum to decrease the cost, with the creation of the control system will be possible.The complex and the complex structure of hospitals also complicates the management of these enterprises.With the centrifugal organization structure and the sparation of management in the responsibility fields, management of this complex structure can be provided more efficiently.The most important problems in Turkey, in hospitals, professional management and cost control as a responsibility accounting system is a system that will produce a solution to the problem proposed.

1   Introduction

The main source of hospitals' fundamental inputs and outputs involves people. The output in hospital enterprises can not be evaluated physically and it is hard to measure against certain standards. (Alpugan, 1995: 140). The output is attempted to be determined through such criteria as the number of patients or patient day. (Kurup, 2010 : 4). However, in this case, the functioning of hospitals becomes harder because different treatments and costs are applied for inpatients and outpatients in hospitals that have complex structures. (Alpugan, 1995 : 140)

Quality health services can be offered through the formation of qualified enterprises. A high quality approach to running of hospitals needs to be attained in order to be able to offer the best possible health services in health organizations. High quality service requires proper organization of these enterprises in terms of organization and their becoming enterprises operating effectively in such fields as production, marketing, sales and accounting in terms of functioning.

Ensuring the continuity of well-being, one of the fundamental needs of people, who are inputs in such a complicated and complex institution, requires passing through various stages of diagnosis and treatment and attempts are made to eliminate health problems or maintain the state of health. Although health services are the chief services being offered, use of raw materials or semi-finished materials, use of personnel and use of other production costs are also involved during the offering of these services. At the same time, services such as hotel services, catering services, security and transportation services are also provided in hospitals. Therefore, bringing costs under control in these institutions is an important issue but this requires formation of a system, which is a difficult and at the same time an important task.

One of the important benefits that **responsibility accounting** provides to enterprises is to ensure control over spending, In addition to macro-level measures that will be taken in health expenditures, supervision of unnecessary health expenditures in hospital enterprises, which are one of the most important sources of health expenses, will be possible through cost control. The system of responsibility accounting is one of the methods that can be used for more effective and efficient use of these hospitals to ensure cost control.

2   Efficiency (Productivity) in Hospital Enterprises

Increase in the efficiency of hospital enterprises depends on efficient distribution and use of resources, (Jacobs,2011 : 177), offering services in an effective manner, equal treatment in target group's accessing services and the satisfaction that recipients of services feel with the services given to them. An enterprise that has data to yield productivity growth can engage in activities to increase productivity. If productivity is not measured, it will not be appropriate to talk about the concepts of productivity performance and quality. At the same time, productivity is a concept that can be measured only when costs are controlled and cost data are known. (Jacobs,2011 : 178)

Today, rising health costs have become an important issue in developed and developing countries alike. In countries that wish to have positive health indicators thanks to health expenditures they make, it is a huge challenge for health institutions to get the worth of their spending. Hospitals are expected to work more

effectively and productively in the face of this challenge. The most important expectation is for them to bring costs under control and ensure productivity. (Moshiri vd., 2010 : 36)

Measurement of productivity is a prerequisite for the presence of a well-coordinated health system. At the same time, measurement of productivity is a necessity for a rational distribution (Barutçugil, 1983 : 202-203) of workforce, capital, technology and materials, which are major components of productivity in hospitals. (O'neil, 2008 :42)

The most frequently and widely used ratio for the measurement of productivity is

Productivity = Output /Input. (Kavuncubaşı, 2000 : 341)

The formula given above is usually aimed at explaining productivity in enterprises of production. In hospital enterprises, on the other hand, complex structures and difficulties in the measurement of output make it hard to measure productivity. (Nachum, 1999 : 923)

It is necessary to have healthy data about the output, which is the most important condition in the measurement of productivity, and the input used in the production of output. It is hard to say that hospitals in Turkey posses these data in full. Hospitals can measure their productivity as long as they have healthy data. Two fundamental precautions to have hospitals possess healthy data involve formation of information flow systems and implementation of the **responsibility (functional/profitability)** accounting system in enterprises. (Alpugan, 1981 : 149)

The information flow system in hospitals can be established within a medical statistics unit. The accuracy of the statistical information that will be obtained in this unit will be guaranteed if the personnel employed in this unit are composed of experts who can measure data accuracy. (Alpugan, 1981 : 150)

Being able to measure productivity is an important concept for hospital enterprises which aim at profitability to maximize profits and fulfil the goals of enterprises. Measurement of productivity should be performed in not only profit-oriented enterprises but also in non-profit public hospitals. (Craycraft, 1999 : 11). When seen from a larger perspective, return on investments made in the sector will affect development in health indicators such as human development index, which influences states' level of development. Therefore, implementation of responsibility accounting in public hospitals for productivity will be a useful practice.

In order to increase productivity in hospital enterprises and hence raise quality, hospitals' physical, ergonomic and motivational shortcomings should be eliminated, (Yılmaz, 1995 : 547) personnel's particitation in management should be ensured, personnel productivity should be rewarded, a supervisory mechanism should be established to prevent ill use and unnecessary expenses in the field of heatlh, unnecessary use of medicine and unnecessary tests and operations should be avoided, and new methods that will raise productivity should be implemented in hospital enterprises.

The structure of hospital enterprises should be modernized in order to increase productivity in hospital enterprises in Turkey. The number of hospital beds per 1000 patients in Turkey is below the OECD average with 2.5 beds. It is also seen that ratios of hospital bed occupation, hospital bed turnover range and average duration of stay in hospitals affiliated to the Ministry of Health are below the OECD data. (Hacettepe Üniversitesi, 2005 : 5)

The level of productivity and effectiveness of hospitals is directly related to qualities such as the enthusiasm, effort, hardwork and efficiency of their personnel. Managerial effectiveness and all other achievement criteria are based on the efforts of the human factor. The quality of services offered in hospitals rises in direct proportion to the hospital staff's adoption of the hospital's goals and targets and uniting around these goals and this situation influences the performance and productivity of the employees.(Bilgin and Çıraklı, 2010 : 118)

A good and high quality health service should be provided by well-trained and specialized health personnel using adequate and fully safe diagnostic devices; necessary tests and treatment should be performed, resources should be used appropriately, duration of tests and treatment and expenses should be kept at a minimum, and nothing should be wasted. (Yılmaz, 1995: 554). Meeting the conditions that are listed above for the organization will be possible through organizations that are formed in a decentralized structure. This structure, which we can also be called centrifugal structure, is at the same time one of the prerequisites of the responsibility accounting.

Increasing competition in the field of heatlh services and rising expectations on the part of individuals to obtain better services from these enterprises require raising quality in this sector. In order to further improve the level of health services in hospital enterprises and effectively use the resources, inputs and outputs should be determined and analyzed.(Tutar and Kılınç, 2007: 39)

3   The Importance of Responsibility Accounting in Raising Productivity in Hospital Enterprises

The responsibility accounting system ensures distribution of responsibility by creating a decentralized structure in hospital enterprises, and in this way aims to improve productivity by activating both administrative control and cost control through establishing centers of responsibility in the enterprise.

The responsibility accounting system, as an aid to management accounting and cost accounting, will create a decentralized management and cost, revenue, profit and investment centers compatible with this system of management in hospitals, the most important sub-systems among health enterprises, where managerial structure is complex, and managerial and cost control is hard due to this complexity. It will enable the emergence of an effective control mechanism within the organization through managers in these, centers, ensure cost control without sacrificing human health, which is the primary goal of hospital enterprises, and thus enable them to be better quality, high performance and productive enterprises.

Hospital enterprises are service organizations that require massive investments and the management and control of these investments are hard to handle. It is seen that in comparison to other enterprises, not enough progress has been made in these enterprises, which have become a billion-dollar sector in today's world, in terms of professional management. Although hospital enterprises are institutions where individuals such as doctors, nurses and laboratory technicians who are experts in their fields are employed, the health system has not attached enough importance to the management of these leading institutions of health as it has done to other professions. (Akwahle, 2006 : 1)

As of 2012, the concept of hospital manager is used by virtue of a law called public hospital unions in public hospitals in Turkey, which makes the first mention of management by a professional manager. Although it has not been fully implemented yet, it is expected that this concept will contribute significantly to public hospitals' becoming effective enterprises. In the responsibility accounting system, along with the decentralized structure, a more democratic system needs to be formed and individuals spealized in management need to have responsibility in regard to expenses, revenues and even investments in the enterprise and in their relevant units within the enterprise. This gives larger authority to expert managers regarding the decision-making process to ensure that hospital enterprises operate more effectively and efficiently.

The decentralized management style, which is necessary for the implementation of responsibility accounting, requires employment of personnel who are experts in management and in their relevant fields in the responsibility centers within the organization and this will ensure effective running of the system and hence the expected benefits. When the health sectors of developed countries are observed, it is seen that to meet the need for professional managers in hospital enterprises, individuals trained in accordance with the principles of management in health management programs of universities have entered this sector as members of a prestigious profession (Reed, 2008: 39). Raising effectiveness can be achieved by making use of these individuals.

With the implementation of responsibility accounting in hospital enterprises, it will be possible to run hospital enterprises in accordance with the principles of modern management and organization, ensure unity of goal in these organizations, provide equivalency in auhority and responsibility and define division of labor and duties (Özgen, 1993: 38-39) and thus hospital enterprises will be able to operate more effectively and efficiently.

For effective running of the responsibility accounting system, managers of the responsibility centers need to ensure effectiveness within their area of responsiblity, and to provide a rational measurement of performance, they need to have authority over costs and revenues and even decisions of investments that take place in the responsibility center. For this to happen, managers should be given this opportunity through transfer of authority (Newstrom and Davis, 1993 : 247). As long as this is ensured, benefits expected of responsibility accounting will be obtained. (Young, 2003 : 241)

The task of bringing costs under control within this complex structure of hospital enterprises requires the use of responsibility accounting system. For example, gathering information about daily costs of polyclinic services provided to outpatients, costs of x-rays and laboratory services, costs of doctors and nurses who take care of these patients, or daily costs of inpatients including costs of wards, care, medicine, nursing and similar services, overall calculation of costs and addition of these costs for different service centers necessitate cost accounting and cost control in hospital enterprises (Young, 2003: 241). Responsibility accounting offers significant benefits by allowing managers of enterprises, which it has divided into units through responsibility centers, to collect cost information that has accumulated in these centers, sort it out in the best possible way, check and report it and thus ensure an overall supervision.

In addition to macro-level measures that will be taken regarding health expenses, prevention of unnecessary health spending in hospital enterprises, which are among the most important sources of health expenditures, will also be possible through cost control. The responsibility accounting system is one of the methods that can be used for efficient and effective running of these hospitals for the purpose of controlling costs.

One of the objectives intended to be achieved for financial development of the health sector in accordance with the 8th five-year development plan as expressed in the "Effectiveness Special Expertise Report" concerns bringing costs of health services under control and using scientific methods and cost accounting systems to this end (DPT, 2001:132-143). As can be seen, the objectives stated in this report are intended to rid health enterprises of their unproductive structure and improve health services. One of the practices that help attain aforementioned goals will be the establishment of the responsibility accounting system in health enterprises. Costs wil be brought under control, necessary expertise will be achieved in terms of management, importance of budget applications will be understood and scientific studies will be adapted to these institutions thanks to the responsibility accounting system.

One of the contributions of the responsibility accounting system to enterprises concerns **responsibility (accountability)** reports. Accountability reports are those where managers of revenue, profit and investment centers compare and contrast the values arising in the centers of their repsonsibility with the actually occurring values according to the previously budgeted values. Thanks to these reports, the senior mnagement can see the activities that take place in their responsibility center and to what extent the objectives set by the budget values have been attained through deviations; these deviations are separately calculated, their causes are investigated and are used in preparing effective budgets in subsequent years. At the same time, accountability (responsibility) reports enable the senior management to make comparisons between units, conduct controls and checks and measure performances of responsibility centers and their managers.

One of the most important problems in hospital enterprises involves implementation of performance measurements to increase productivity. Productive and efficient hospital enterprises will provide benefits such as improvement in indicators in the health sector, more effective exploitation of health services by society at large and reduction of costs to a minimum. The most prominent obstacle in the way of measuring performance of health enterprises concerns problems encountered in the measurement of the output needed for productivity measurements. Measurement of performance is a phenomenon where increase in productivity will be achieved through responsibility centers and accountability (responsibility) reports.

It will not be possible to talk about concepts of productivity performance and quality if productivity can not be measured. At the same time, productivity is a concept that can be measured through control of costs and knowing cost information. (Jacobs,: 177)

Today, rising health costs have become an important issue in developed and developing countries alike. In countries which wish to have positive health indicators thanks to health expenditures they make, it is a huge challenge for health institutions to get the worth of their spending. Hospitals are expected to work more effectively and productively in the face of this challenge. The most important expectation is for them to bring costs under control and ensure productivity. (Moshiri vd., 2010 : 36)

Measurement of productivity is necessary for the presence of a well-coordinated health system. Measurement of productivity is also a necessary factor for a rational distribution of workforce, capital, technology and materials (Barutçugil, 1983: 202-203), which are major components of productivity in hospital enterprises (O'neil, 2008 :42). The measurement of these compounents in hospital enterprises which are divided into responsbility centers can be performed on the basis of centers and this may ensure obtainment of more active results.

It will be possible to get better results using the responsibility accounting system in hospital enterprises within the framework of the efforts intended to implement a system known as the diagnosis-related group method (DRG) in international literature for cost control in Turkey. Currently, ICD10-AM (International Classification of Diseases, Australian Modification) is being used in Turkey as an Australian example while A.R. D.R.G. (Australian Refined Diagnosis Related Groups) is being used as **T.İ.G.** algorithm.

For the formation of our own T.I.K. structure in hospital enterprises in Turkey by determining the costs of each unit, the diagnostic and treatment services generated in these units and production of relative values on the basis of costs, first, hospital enterprises should be accomodated to this structure. A system that can be used for this purpose is the responsibility accounting system. When this system is implemented in hospitals, a cost control system where these values can be formed will be created in hospitals.

The responsibility accounting system enables decentralization by dividing hospital enterprises into certain responsibility centers and thus reveals the controllable costs arising in each major center of service production; it can also provide the cost data, which are necessary to be able to form TIK values, in a more reliable manner than the responsibility center where the cost has occurred. Formation of relative values at the stage of determining costs on the basis of responsibility centers, and formation of the accounting system in cost production on the basis of responsibility centers and putting the accounting information system, where this system will be implemented, into use through computers and computer software will save time and procedures and enable obtainment of more realistic results.

4 Conclusion

The process of transformation in health, which began in Turkey in the 2000s, aim at providing more effective and productive services. Increasing productivity in hospital enterprises, which are the keystones of the health system in Turkey, will ensure that health spending is reduced to a minimum, people are treated without losing their health, the level of health is raised and welfare of people is increased. Although an increase in productivity, formation of an effective managerial process and profit motives are secondary, their more active functioning will be possible through effective control on costs without sacrificing health.

To this end, effective systems need to be added to the system in order to put in order the complex and complicated structures of hospital enterprises. The responsibility accounting system should be tried as one of the systems that can activate ponderous nature of hospital entreprises and provide increases in productivity.

Stakeholder-Based Analysis of Sustainability Report: A Case Study on Mining Companies in Indonesia

Dr. Ati Harmoni (Gunadarma University, Indonesia)

Abstract

This paper reviews the experience of the mining companie in Indonesia that publish a sustainability report. By doing such exploratory research, the study aims to contribute to the development of country-specific descriptive non financial disclosure theory by establishing a benchmark understanding of how company interpret their responsible relationship with stakeholders. Based on content analysis of the annual sustainability report, this paper provide a description of current practices current prioritization in terms of social, environmental, and sustainability disclosure themes. The results show that Indonesian mining companies share a wide range of disclosure themes in order to support relationships with their stakeholders.

1 Introduction

One of the main issues that emerged today is the debate on corporate responsibility to the stakeholder groups that influence their behavior and who in turn have an impact on their success. More than ten years of research by MORI has shown increasing corporate responsibility to various stakeholders, from customers and employees to legislators and investors (Dawkins and Lewis, 2003). This increases the concern that corporate responsibility issues are not confined to the public only. For many stakeholders, corporate responsibility is now the dominant driver opinions.

Corporate responsibility entails a company's recognition of broad responsibilities, that is part of society with consequent obligations, and that it should be concerned with more just profit. Concept which is currently considered to describe corporate responsibility not only in terms of profit alone is corporate social responsibility (CSR). CSR – one of the major aspects of sustainable development business, is a concept whereby companies integrate social and environment concerns into the company's business operations, as well as how they interact with stakeholders on a voluntary basis (CEC, 2001).

Along with the increasing number of companies acknowledging and internalizing the importance of CSR values and practices, a variety of sources have pressured the private sector to go beyond financial measures as all-inclusive indicators of corporate market performance. This operationally process is well represented by the large number of studies on the multiple ways of enacting CSR, which recognize the existence of a sort of parallelism between corporate socially responsible behavior and the aptitude of companies to systematically demonstrate their ability to respond to the social, economic and environmental requests of their stakeholders (Hummels and Timmer, 2004).

For these reasons, in addition to the initial trend, that is, adhering to the CSR paradigm, companies have paid growing attention to the importance of demonstrating CSR commitment through clear and verifiable data and information, similar to more traditional financial documents. Previous studies show that it is difficult for companies investing in CSR activities to maximize their reputation without disclosing information of such activities (Hasseldine et al. 2005). It is generally accepted that companies engaging in CSR activities usually concern the disclosure of related information because of its contribution to financial performance (Orlitzky et al, 2003; Barnett, 2007) or to market value (Mackey et al, 2007).

By now, research on CSR disclosure has referred to different theoretical perspectives—those of legitimacy theory, agency theory and stakeholder theory (Gray et al., 1995; Roberts, 1992). While, however, numerous studies have investigated the disclosure of nonfinancial information, only recently has research considered disclosure in a stakeholder-based setting, and extended the research focus to a more comprehensive CSR-reporting framework, based on the triple bottom line approach. In other words, although the content of nonfinancial disclosure has been addressed in an increasing number of studies, the adopted perspective is often partial, impeding the development of a complete CSR portrait (Schwartz and Carroll, 2003) for firms engaged in responsible practices.

Indonesia has become the first nation in the world to introduced mandatory legal requirements for corporations to implement corporate social responsibility (CSR) reporting based on Law No. 40 in 2007 regarding Limited Liability Companies. According to this law, all corporations that operate in Indonesia's natural resources sector or that have business activities related to natural resources must implement CSR, especially in relation to environmental responsibility, called corporate social and environmental responsibility (CSER). All companies are mandated to perform the social and environmental responsibility activities and submit annually the reports of these activities.

This study attempts to providing an up-to-date description of Indonesian companies' CSR reporting practices, how companies clearly engaged in socially and environmentally responsible practices interpret their CSR relationships with stakeholders. Hence, the remainder of this paper is organized as follows. First, we review the recent empirical evidence about sustainability reporting. Secondly the stakeholder theory and sustainability reporting are outlined with particular reference. Thirdly, the research method and data source are described. Fourthly, the findings from the study of sustainability reports are presented together with the relevant implications and concluding reflection.

2   Stakeholder Theory and Sustainability Report

The term 'stakeholder(s)' is broad ranging in scope. It has been defined as meaning all those individuals and groups with a 'critical eye' on corporate actors (Bowmann-Larsen and Wiggen, 2004). Freeman (1984) look at companies' responsibilities as consisting of a two-way responsibility between business and groups of stakeholders in a society. This is the stakeholder theory perspective which postulates that there are various groups in the society that an organization can impact on. These groups have a right on the organization for their interest to be addressed by the organization because of agency relationship. Business operations affect interests of multiple parties having stake in a business. Similarly behavior of multiple parties also affects business interests. Therefore businesses should incorporate stakeholder expectations into their planning and policies.

Stakeholders, acting either formally or informally, individually, or collectively, are a key element in the firm's external environment that can positively or negatively affect the organisation (Murray and Vogel, 1997). The main challenge for businesses is the task of identifying to whom they are responsible and how far that responsibility extends. Underpinning the difficulties of managing the relationship between a business and its stakeholders are issues such as divergent and often conflicting expectations between stakeholders (Brammer and Pavelin, 2004; Fairbrass, 2006); contextual complexities (Daniels and Radebaugh, 2001) that are further complicated by varying interpretations arising out of different geographical regions and cultures (Maignan and Ferrell, 2003); the challenge of identifying what might be considered to be 'best practice' with regard to CSR stakeholder dialogue strategy and then communicating this to stakeholders.

A prevalent way of exploring the roles and responsibilities of companies in today's society has been to look at them as nodes in a network of relationships among different parties that have stakes in their activities (Donaldson and Preston, 1995; Freeman, 1984). According to this theory, a principal function of managers is to handle stakeholders' needs, expectations and demands, and to manage conflicts among them. Different criteria have been suggested on how and why managers should allocate priorities to competing stakeholder views and demands, and the way to find the appropriate level of engagement.

Stakeholder theory is a fundamental element of corporate social responsibility, in the open system in which organizations interact with society; different groups with their own specific sets of needs, expectations and demands personify every interaction. CSR programs are or should be tailored around these needs in a strategic way. The impact of company's corporate responsibility program will depend on its alignment with the expectations of its various stakeholders. A Company's balancing of these several priorities must therefore be informed by its stakeholders of importance. The company must define, consult and engage these stakeholders in its program to ensure that its activity is seen as relevant both to the business and to its stakeholders, and some companies are well advanced in this process of dialogue.

Social, environmental and sustainability reports are placed in the context: 1) they substantially contribute to both formalizing firms' positions on CSR and providing a viable opportunity to assert commitment to good business practices; 2) reporting practices, that is, pulling and collecting information from business units with different priorities, represent not only a step towards evaluating and measuring the overall corporate responsibility performance, but also, and most important, a concrete opportunity to identify strengths and weaknesses across the whole spectrum of corporate responsibility (Nitkin and Brooks, 1998) and stakeholder relationships.

Sustainability reports are a modern concept of interdisciplinary reporting. They indicate the simultaneous integration of economic, environmental and social elements (Quick, 2008). After various attempts in the areas of social and environmental reporting, so-called sustainability reports have emerged in an attempt to respond to demands for interdisciplinary reporting. They reflect a simultaneous integration of economic, environmental and social factors into corporate behavior with the aim of sustaining resources for future generations.

Sustainability reporting can be explained by legitimacy theory (Gray et al., 1995). It assumes an implicit contract between companies and society. By reporting on economic, social and environmental issues a company can demonstrate that it fulfils its part of the contract and that its activities coincide with the value systems of society. This can prevent or mitigate future regulatory requirements that would constrain the strategic options of the company. Thus, the company can maintain its status and reputation in society. Instrumental stakeholder theory regards sustainability reporting as a means to address the demands of a company's stakeholders (Solomon & Lewis 2002). Following agency theory, voluntary disclosures on economic, social and environmental issues

can decrease the information asymmetry between management and stakeholders of a company and therefore reduce agency costs. These disclosures can avoid future legislative actions against the company (Gray et al. 2001).

The benefits of sustainability reporting go beyond relating firm financial risk and opportunity to performance along environment, social and governance dimensions and establishing license to operate. Sustainability disclosure can serve as a differentiator in competitive industries and foster investor confidence, trust and employee loyalty. Analysts often consider a company's sustainability disclosures in their assessment of management quality and efficiency, and reporting may provide firms better access to capital.

Beyond the Global 250, thousands of companies around the world issue sustainability reports, and the number of companies reporting grows every year. In 2011, more than 2,200 firms filed reports with the Global Reporting Initiative (GRI), and hundreds more filed GRI-referenced reports. These firms exemplify the principle that reporting is expected of the top companies in our modern business world. Firms continuously seek new ways to improve performance, protect reputational assets, and win shareholder and stakeholder trust.

Companies unanimously state that they are reporting in order to provide information to stakeholders. When asked which stakeholders, specifically shareholders were the group most frequently referred to followed by: government and local authorities; customers; business partners; the general community and NGOs. It is clear that companies in the ASEAN region produce a Sustainability Report to gain a competitive edge when attracting and retaining capital, dealing with global clients and managing relationships with governments.

Sustainability reporting is still a relatively new process for many companies. Unsurprising therefore the collection of data for a report is the key challenge for companies. Nevertheless, companies are able to clearly articulate the benefits of reporting: to improve branding and image; and, to strengthen dialogue with stakeholders who are key to their business. For report writers there is still a huge debate about the future of sustainability reporting. For many companies reporting started as disclosure on environmental issues and has now developed into something much more encompassing. For others it began as a report on philanthropic activities and expanded to address business operations pertinent to the attainment of sustainable development.

The link between CSR strategy and sustainability reporting implies that if companies want to obtain their stakeholders' trust, they must not only communicate, but also give concrete evidence that they are committed to continual, long-term improvement. Therefore, a sustainable and responsible company must identify, measure, monitor and report all social, environmental and economic effects of its operations on society at large, in order to increase both external and internal dialogue with constituencies and improve "managerial awareness of and control over social impact of corporate activity" (Preston, 1981). As a responsible management strategy to communicate with stakeholders, the reporting of CSR is one channel by which an organization discloses how it is addressing the social, environmental and economic issues (SustanAbility/UNEP, 2002).

These points are relevant to our paper because we are interested in modeling how firms translate their perceptions of their context of reference into CSR disclosure practices. If we accept the empirical maxim that firms are what they do (Post, Preston and Sachs, 2002), CSR topics chosen for reporting provide overall insight into a company's current priorities and, particularly, its perspective on nonfinancial reporting practices. This does not imply that the opposite is true and that the absence of reporting corresponds to an absence of action.

3   Methods

The data for this study was collected from the sustainability report of a mining company listed in Indonesian Stock Exchange (IDX) for the year 2011, since the required data was available for this particular year. Specifically, the company chosen for the study were quoted in November 2011 – April 2012 in the selective index of the IDX, the Bisnis-27 Index. Only publicly available sustainability reports was eximined in this study. The existence of a sustainability rreport will be determined via a web-site-based survey.

The choice to focus the analysis on an Indonesian sample was based on the firm belief that the country in which the company reports influences the themes of disclosure. In other words, we believe that single elements of organizational practice cannot be considered in isolation, especially when such practices result from the context in which firms operate.

The sustainability report were analyzed using content analysis. Content analysis is appropriate in that this study dwells upon the assumption that sustainability reporting represents the most external and systematic result of company thoughts concerning responsible relationships with stakeholders. We are aware that all forms of data reaching the public domain can be considered as part of the disclosure activity of an organization. However, the choice to focus the analysis solely on sustainability reporting is justified by several reasons already highlighted in previous literature. In particular, sustainability reports help focus on a firm's CSR prioritization because managers commonly use them to signal what is important to stakeholders (Cormier et al. 2004). Even more important, sustainability reports are produced regularly, thus allowing for comparative analysis across time and space.

The construction of categorization scheme is an essential stage in content analysis research. An interrogation instrument used in this study is adapted from a previous comparative analysis of the standard reporting tools from Tencati, Perrini, and Pogutz (2004) that are available on the market as reporting frameworks for firms who decide to disclose nonfinancial information. The interrogation instrument's categories, constructed based on the comparison among reporting standards, include the dimensions of the disclosure theme, which corresponds to seven categories of stakeholders (human resources, shareholders and the financial community, customers, suppliers, public authorities and institutions, communities and environment), a checklist for each dimension of disclosure theme, and evidence for each sub-theme included in the checklist (qualitative disclosure; quantitative disclosure; both qualitative and quantitative disclosure).

Given the recording instrument and consistent with previous literature on social and environmental reporting, the amount of disclosure per content category consists of recording whether or not a company made a disclosure in the category. At this stage, the quantification of the amount of disclosure per company is excluded.

4 Stakeholders: Who and What Really Counts?

The initial results showed that of the 7 companies studied, 5 of them issued sustainability reports. These 5 companies applying Global Reporting Initiatives (GRI) for their sustainability reports. Some companies indicate whether the coverage is fully, partially, or none for each indicator. Of the 5 companies analysed, 2 have 100% GRI indicator themes coverage. Table 1 breakdown the number of companies in the sample making CSR disclosures in each category themes, by stakeholders.

As shown by Table 1, the result of this empirical study is avarage degree of achievement of 84.8 per cent, which is high. This situation indicates that the companis consider important almost every stakeholder. Table 1 illustrated that the lowest number is the dimension of financial partners that just 20 per cent while other dimensions of more than 70 per cent. Highest results obtained for the environmental dimention and shareholder.

As mentioned above, according to Law No. 40 in 2007 regarding Limited Liability Companies, all corporations that operate in Indonesia's natural resources sector or that have business activities related to natural resources must implement CSR, especially in relation to environmental responsibility. The law also states that the companies must report the CSER in the annual reports and publish them publicly. The emphasis of CSER in on the issues of environmental concern, while CSR is aiming at the social responsibility activities in general. For those corporations whose business activities have a high impact on the environment, they are not only required to be responsible socially, but also environmentally through CSER.

Community concerns and shareholder rights are the most important factors that influence the companies' decision to report. Shareholders have a particularly powerful position from which to hold the company accountable on a variety of issues. The notion of shareholder democracy is a commonly discussed topic in corporate governance. The basic idea behind the term is that a shareholder of a company is entitled to have a say in corporate decisions

Human resources is a category that gets a high score. This is understandable because corporations have a strong influence on the administration of social rights of their employees, including aspects of health and safety, fair wages, education, etc. This is particularly the case in developing countries where governments have proven unwilling or unable to protect such rights, leaving it open to the discretion of corporations.

5 Conclusion

Interesting that in each the report are made, each company present the results of its own analysis of who their key stakeholders. In contrast to the reference made to the research instrument, the companies mentions NGO as the important stakeholders. Studies on CSR have shown that there has been increasing public pressure from bodies (such as governmental organisations, non-government organisations (NGOs), academics, trade unions and the media) for corporations to act in a socially and environmentally responsible way (Unerman and O'Dwyer, 2007). Such pressure has to some extent had an impact on CSR, as they have created a 'legitimacy gap', which provide a significant motivation for companies to engage or attempt to engage in responsible business practices in order to acquire or maintain legitimacy (Waddock, 2004). The work of NGOs and other independent pressure groups is crucial in promoting corporate disclosure, transparency and public accountability. NGOs have sought to step into the regulatory gap created by the inadequacy of both national governments and international institutions in demanding for social and environmental accounting and improved public accountability NGOs have played an increasingly significant role globally in challenging government policies and the activities of corporations with regard to abuses of human rights, environmental degradation and social unrest, including in Indonesia.

One of the key findings of this research was that Indonesian mining companies share a systematic approach to sustainability reports that address well-defined categories of stakeholders. The results also show that Indonesian mining companies share a wide range of disclosure themes in order to support relationships with their

stakeholders in order to support relationships with their social context. Research also shows that the company considers NGOs are stakeholders who should receive attention. This provides an opportunity to conduct advanced research in the future by expanding the dimensions of stakeholders and with a greater number of companies in order to obtain a complete picture of the practice of sustainability reporting in Indonesian context.

Sectoral Decomposition of CO$_2$ Emissions in China and India for the Period 1980-2010

Ph.D. Candidate Hasan Rüstemoğlu (Eastern Mediterranean University, Cyprus)
Assoc. Prof. Dr. Sevin Uğural (Eastern Mediterranean University, Cyprus)

Abstract

Increasing amount of CO$_2$ emissions and global warming is one of the hottest topics of world's agenda. At the same time there exists a public awareness about this important chapter. A lot of researcher proved that in order to live in a sustainable world, necessary regulations should be done and CO$_2$ emissions should be reduced immediately. For this study our aim is to decompose the CO$_2$ emissions of the world's new super powers, China and India, over 1980-2010. In order to see the accelerating and decelerating factors for CO$_2$ emissions, the Refined Laspeyres Index used as a method. Consistent data gathered from the official web sites of the World Bank and United Nations. Five main sectors, agriculture, manufacturing, construction, transportation and other services are used. Four different impacts, scale effect, composition effect, energy intensity effect and carbon intensity effect have been discussed to see the increasing or decreasing factors of CO$_2$ emissions. The results were interesting. The dominant impacts were the scale effect and energy intensity effect. The minor impacts were composition effect and carbon intensity effect. Fuel switching, efficient energy use and increasing usage of renewable resources are efficient tools to reduce the emissions.

1   Introduction

During the last thirty years, increasing amount of CO$_2$emissions and the threat of global warming is one of the most important topics of World's agenda. The biological and economic impacts of global warming are discussed especially by researchers since the beginning of 1990s. The environmental damage certainly increased due to increasing world population, energy consumption and industrial activities. After the industrial revolution the amount of Greenhouse Gas (GHG) emissions started to increase. Six of the main greenhouse gases are namely, carbon dioxide (CO$_2$), methane (CH$_4$), nitrous dioxide (N$_2$O), Hydrofluorocarbons (HFC),Perfluorocarbons (PFC) and Sulphurhexafluorid (SF$_6$). CO$_2$ emissions have the highest share in GHG emissions which also referred to as the 'carbon footprint'. The carbon footprint is a measure of the exclusive total amount of CO$_2$ emissions that is directly and indirectly caused by an activity or is accumulated over the life stages of a product. The amount of CO$_2$ concentrations was equivalent to 280 ppm in 1850 and by 2006 this value reached to 384 ppm. CO$_2$ emissions, is the main cause of global warming, which is estimated to increase up to 5.8 degrees of Celsius until the end of 21st century. According to scientists in order to keep the global temperature increase by 2 degrees of Celsius the overall countries should stabilize their total emissions either 400 ppm or 450 ppm. Accordingly to obtain a sustainable world, countries should reduce their CO$_2$ emissions by 60% in 2030. Furthermore this limitation should be 80% by 2050. The main element of CO$_2$ emissions are the fossil fuels that are widely used in all sectors of economics and daily life. Thermal electricity plants, natural gas electricity plants, other fossil fuel electricity plants, transportation (automobiles, buses, trucks, plane), industrial production (cement factories, petrochemical buildings, refineries, iron and steel industry), agriculture and livestock, global trade, tourism, defense industry, domestic electrical devices, deforestation are the main reasons of climate change. According to biological studies the temperature of earth's surface increased by 0.6 degrees of Celsius during the last 20th century (IPCC, 2001a). For Europe this value is equal to 1.2 degrees of Celsius. In the nearest future, because of the global warming and climate change, scientists are expecting extreme droughts and floods for some regions of the world. For example Mediterranean Countries, such as Spain, Greece and Turkey are expected to face a 5 percent average rainfall decline in every next decade. As a result of global warming, especially in summer seasons the ice shelf has been declined by 40 percent and at the same time it has been observed that there exists 10 or 20 cm increase in sea level of the world (IPCC, 2001a). As a result of climate change, hurricanes, floods and extreme droughts reveal a certain danger of extinction of some animal species and biodiversity. Global warming and climate change creates a certain threat on country's economies as well. They will show their negative impacts mainly on agriculture, industry, tourism and insurance sectors if serious preventions and developments on environmental issues are not taken into consideration. Energy policies and environmental issues have an important relationship with the GHG emission and with regard to this understanding and analyzing the decomposition of CO$_2$emissions are important. In order to reduce the negative impacts of global warming World Wide Organizations (for example United Nations) organized series of meetings. They firstly came together in 1988 and organized the Intergovernmental Panel on Climate Change. The aim of this panel was evaluating technical, scientific and socio-economic information about impacts of climate change. The IPCC published evaluation reports about the CO$_2$ emissions and global warming regularly. After long discussions, in December 1997 they signed the Kyoto Protocol. The Kyoto Protocol is an agreement under the United Nations Framework Convention on Climate Change (UNFCCC) aims to reduce the amount of

GHG emissions that are the main reason for global warming. It is the only agreement that targets a certain decline on GHG emissions. The protocol puts some restrictions to developed countries such that they would reduce the amount of GHG concentrations 5.2% below 1990 level between the years 2008-2012. It has been started to apply in 2005 after the long ratification process of Russian Federation.

Today the Kyoto Protocol considers more than 160 countries and more than 55% of overall GHG emissions. According to the agreement, there would be a certain decline in GHG emissions between 2008 and 2012 as compared to 1990 levels. The main objectives of Kyoto Protocol are heating with less energy, taking the long way by using less energy, placing less consuming technology systems into the industries, considering the environmentalism as a basic principle for transportation and waste storage, turning to alternative energy sources in order to decrease the amount of CO_2 and CH_4 emissions. Instead of fossil fuels the usage of biodiesel should be increased. High energy consuming enterprises, such as iron and steel, cement and lime factories should be re-organized according to their waste handling. Less carbon technologies in thermal power plants should be used. Strategies should clear the ways of solar energy. Since the nuclear energy is zero carbon energy, it should be placed at forefront in the world. Countries that are consuming high amount of waste and producing too much carbon should pay higher amount of taxes.

The Kyoto Protocol has three mechanisms, namely, Joint Implementation Mechanism, Clean Development Mechanism and Emission Trading Mechanism. According to the Joint Implementation Mechanism, if one country (that determined an emission target) makes an investment in another country (that also determined an emission target) in order to reduce GHG emissions then it will gain Emission Reduction Units. ERUs will be subtracted from the country's total emission targets. In the case of Clean Development Mechanism, if one country (that determined an emission target) makes an investment to reduce GHG emissions on another country (that did not determine an emission target) then it will gain Certified Emission Reduction Units. CERUs will also be subtracted from the total emission target. According to the third mechanism, Emission Trading, the countries that determined the emission targets can make emission trade between themselves. If a country obtains a higher reduction performance than its determined emission target then it will be able to sell the extra reduced emission units to other country.

The aim of this study is to decompose the CO_2 emissions for the most crowded countries China and India between the years 1980 and 2010 according to sectors agriculture, manufacturing, construction, transportation and service sectors. For each sector four effects (scale effect, composition effect, energy intensity effect and carbon intensity effect) are considered. The aim is to determine the accelerating and decelerating effects for CO_2 emissions. By using this analysis, it will be possible to apply true policies to reduce the amount of emissions.

2 Literature Review

For the concern of decomposition analysis, researchers followed different ways to do their research. Some researchers either did some comparison for decomposition analysis or they evaluated some extensions for available methods in order to reduce the value of residual terms and obtain a better approach. However, in the second category some researchers used the available methods to decompose the CO_2 emissions of countries according to sectors.

Ang et al. (2003) analyzed the perfect decomposition techniques for energy and environmental issues. They stated, "as there has been a great deal of interest in decomposition analysis in energy policy studies, we extend the work by Albrecht et al. (Energy Policy 30 (2002) 727) by giving a more complete and up to date overview of perfect decomposition techniques and their role in energy demand and related analysis."

Ang et al. (2004) developed a general Fisher index approach to energy decomposition analysis. By extending the conventional two-factor Fisher index decomposition approach to n factors, the authors evaluated a complementary approach for the existing methodology. The new approach possesses some desirable properties and may be used for some situations in energy studies. The authors also notice that the new formula is more complex than the other commonly adopted IDA approaches.

Liu (2006) did a comparison analysis for methodologies related with the decomposition approach based on energy consumption. The author considered the size of residual term as a comparison tool and he concluded the adaptive weighting Divisia index method and simple average Divisia index method represent most robust and smallest residual term.

Paul & Bhattacharya (2003) focused the factors that are increasing or decreasing CO_2 emissions emitted from the energy use of India. They did their research for time period 1980-1996. For their study, they used decomposition method and considered four main factors such as, pollution coefficient, energy intensity, structural changes and economic activity to explain the changes in CO_2 emissions. The authors applied the decomposition method and hence they proved that economic growth has the largest positive impact on CO_2 emissions changes, for all major economic sectors. As a result of the improved energy efficiency and fuel switching, they mentioned for all industrial sectors and transportation there is a decline for CO_2 emissions. The authors also underlined the reduction of pollution coefficient and energy intensity for CO_2 emissions emitted

from agriculture can be ignored. They finally concluded that the energy intensity has had a greater impact on energy induced CO_2 emissions than the production coefficient.

Comillie&Fankhauser (2004) decomposed energy data to identify the main factors behind the improvements in energy intensity. For more efficient energy use they concluded energy prices and progress in enterprise restructuring are two important factors. The authors also underlined the economies of Central and Eastern Europe and the former Soviet Union countries have been highly energy intensive. They also stated there is a decrease for energy intensity during the transition but still the transition countries are very energy intensive.

Kawase et al. (2005) discussed the long-term scenarios in other countries and the medium-term scenarios for Japan in order to develop Japan's long term climate stabilization scenario. For their study, the authors decomposed the CO_2 emissions by using extended Kaya identity according to following indexes: CO_2 capture and storage, carbon intensity, energy efficiency, energy intensity and economic activity. They also constructed a Reduction Balance Table. The authors also calculated the necessary energy intensity improvement and carbon intensity decline to achieve a 60-80% reduction for CO_2 emissions. ,

Ma & Stern (2007) examined the factors related with changing energy intensity schedule of China for time period 1980-2003. The authors used logarithmic mean Divisia index (LMDI) techniques to decompose the changes that are accelerating or decelerating energy intensity. They concluded technological change is the dominant factor for decreasing energy intensity. Structural change for industry sector increased the energy intensity during that period. Structural change considers shifts of production between sub-sectors, represent a declining trend for energy intensity. They also reported that increasing energy intensity after 2000 is because of the negative technological progress. Finally, inter-fuel substitution is a small contributor for changes in energy intensity.

Vinuya et al. (2010) decomposed the CO_2 emissions growth in US according to states between the years 1990 and 2004. They used the Logarithmic Mean Divisia Index (LMDI) method to decompose the emissions into five effects, namely, emissions per unit of fossil fuel, share of fossil fuel in total energy consumption, energy intensity, gross state product per capita and population. Their analysis showed that, during the 15 years period there is an increase in efficiency for energy use. At the same time, lowering the share of fossil fuels in total energy consumption and lowering the emissions intensity balances the effect of Gross Domestic Product (GDP) per capita and population growth in carbon emissions for US.

Kumaroğlu (2011) examined CO_2 emissions for Turkey for time period 1990-2007 according to sectors agriculture, manufacturing, electricity, residential buildings and transportation. The author considered four main effects (composition effect, scale effect, energy intensity effect and carbon intensity effect) and he used Refined Laspeyres Index Method to decompose the CO_2 emissions. He also noted that various interesting results on the underlying effects of sectors emission data are found. He also underlined the valuable insights that are gained into CO_2 impacts of sector policies including energy and emission intensities, fuel switching and activity changes.

The aim of this study is analyzing the most dominant effects of CO_2 emissions for China and India between 1980 and 2010 according to sectors. 5 different sectors (agriculture, manufacturing industries, construction, transportation and other service sectors) and 4 different effects (scale effect, composition effect, energy intensity effect and carbon intensity effect) will be considered. For decomposition analysis, Refined Laspeyres Index Method and a consistent data that is gathered from World Bank and United Nations will be used.

3   Overview of China and India

After the market reforms in 1978, Chinese economy moved from a centrally planned to a market based economy. As a result of this, China obtained a rapid economic and social development. In 1980, the total population of China was 981.235.000. By showing an annual average population growth of 1.02%, in 2011 its population reached 1.344.130.000. The total GDP of China was $189.399.992.473 in 1980 and by showing a great and impressive average economic growth performance (equal to 10%) it reached $7.318.499.269.769 in 2011. Today China is the second biggest economy of the world, as a result of rapid growth 600 million people have lifted out of poverty. China is an upper middle income country, its GDP per capita was equal to $193 in 1980, but after the thirty years significant growth performance, it reached $5444.79 in 2011. However, according to the World Bank records still more than 170 million people are below the $1.25 a day international poverty line.

CO_2 emissions of China showed annual 5.99% growth during the last thirty years. Today, China has the first position in world's CO_2 emissions classification. In 1980, CO_2 emissions per capita were equal to 1.5 metric tons and after thirty years it reached to 5.77 metric tons. During that period the CO_2 emissions share schedule from the fuel consumption didn't change significantly. Still more than 73% of the CO_2 emissions are due to solid fuel consumption. Liquid fuel consumption is responsible from 14% of CO_2 emissions. Gaseous fuel consumption is responsible only 2% of CO_2 emissions from whole fuel consumption. These values definitely prove that, China should focus to pollution reduction and it also should set new energy efficiency targets. If one considers

according to the sectors of Chinese economy, it can be easily seen that the schedule for CO_2 emissions completely changed during the three decades. In 1980, the biggest carbon dioxide share was related with the manufacturing industries and construction sectors. Numerically they considered 46.48% of all CO_2 emissions that are obtained from fuel combustion. In that year, second biggest CO_2 emissions were obtained from electricity and heat production, equivalently 25.02% of total fuel combustion. Third biggest share for CO_2 emissions was related with residential buildings and commercial and public services. They considered 17.26% of total fuel combustion in 1980. Transport sector and other service sectors considered small amount of total CO_2 emissions. Only 5.71% and 5.53% of total fuel combustion, respectively. In 2010, biggest share for CO_2 emissions was obtained from electricity and heat production. Compared to 1980 share, the percentage of emissions doubled. Numerically they considered 53% of all CO_2 emissions. The share of manufacturing industries and construction gradually decreased. By 2010, the numerical value for this sector was equal to 32.25%. Compared by 1980 level the CO2 emissions share of transport sector increased with little amount. Numerically it was equal to 7.04% in 2010. CO_2 emissions share of residential buildings and commercial and public services decreased to 6.08%. Finally the other service sector was responsible only 1.63% of all CO_2 emissions in 2010.

As the population increased and technology developed, the energy use of Chinese economy also increased rapidly. During the thirty years period annual energy use of China increased by 4.82%. In 2010, the total energy consumption of China reached 2417125.926 kt. For electricity production, the situation of China is quite interesting. In 1980, the share of electricity production from coal sources was equivalent to 54.6%. During the thirty years the dependence of electricity production to coal sources increased gradually. By 2010, China was getting 77.7% of its electricity production from coal sources. In 1980, oil was the second biggest source for electricity production of China equivalent to 25.80% of overall production. Until 2010, the production from oil resources showed a huge decreasing performance. On average, it decreased by 12.53% annually. In 2010, only 0.31% of electricity production of China depends to oil. There are no big fluctuations in Chinese electricity production from hydroelectric sources. It was equivalent to 19.36% and 17.16% in the years 1980 and 2010, respectively. Electricity production from nuclear sources, natural gas sources and renewable sources has really small shares, respectively 1.75%, 1.64% and 1.14% according to 2010 records. Those values are proving the idea that rapidly growing Chinese economy didn't show enough responsibility in case of environmental sustainability. Significant policy adjustments are necessary for China to obtain a sustainable growth. Past experiences are proving that it's more difficult to move from middle income to high income than to move from low income to middle.

India is a very crowded country like China and also in the last decade it showed a significant economic growth. According to WB 2011 records India is the 4th largest economy in the world. India is also an active player of global economy now. Recently there exists a slowdown in GDP growth of India. It seems that this will consider because of the tight macroeconomic policies, slow growth in the core OECD countries, weakness of investment and also because of an expectation for a global recession. Between 2004 and 2010 poverty showed a certain decline in India. It was 37.2% in 2004 and after six years it reduced to 29.8%. The Indian government does some necessary investment in order to bring fundamental services to the poor people. Elementary education, basic health care, health insurance, rural roads and rural connectivity are the examples for the investments that Indian government is doing.

The need for universalizing secondary education has obtained because of the necessary number of children entered to elementary school. A large number of Indian people are not able to access to good quality health care, and progress in improving health indicators is slow. India also has a certain malnutrition problem.

In 1980, the population of India was equal to 700.058.589. However, by showing annual average growth rate of 1.86% it reached 1.241.491.960 in 2011. During the thirty years, annual GDP growth rate of India was equivalent to 6.24%, as a result of this remarkable success Indian GDP reached to $1.847.976.748.641. In 1980, GDP per capita for India was equal to $270.83, by showing 4.28% annual average GDP per capita growth rate performance, in 2011, it reached to $1488.51. In case of environmental sustainability, like China, India also must show enough responsibility. According to World Bank records, during the thirty years period, CO_2 emissions of India, increased annually by 6.19% on average. The total amount of CO_2 emissions was equal to 1979424.60 kt. In 1980, CO_2 emissions per capita, was equal to 0.5 metric tons and after three decades this value reached to 1.64 metric tons. The CO_2 emissions of India are due to solid fuel consumption at most. In 1980, solid fuel consumption accounts 72.54% of overall CO_2 emissions where liquid fuel consumption accounts 23.88% and gaseous fuel consumption accounts 0.71%. During the three decades, the schedule didn't change too much. In 2009, solid fuel consumption is responsible from 67% of overall CO_2 emissions, 23.74% is the share of liquid fuel consumption and 3.99% is the share of gaseous fuel consumption. If we check the responsibility of CO_2 emissions of the main economic sectors it can be see that situation of India, like China is quite interesting. In 1980, electricity and heat production considers 31.39% of total emissions where manufacturing industries and construction were responsible from 32.16% of emissions from fuel combustion. In 1980, for CO_2 emissions, transport sector consists 19.97%, residential buildings and commercial and public services consist 12.33% and

finally other service sectors considers 4.14% of overall CO_2 emissions from total fuel combustion. During the three decades the schedule completely changed. Responsibility of the electricity and heat production increased to 57.63%. During that period CO_2 emissions share of manufacturing industries and construction sectors declined to 24.66%. CO_2 emissions from transport, residential buildings and commercial and public services, other service sectors declined to 9.93%, 5.49% and 2.29% respectively.

Total energy use of India increased gradually during the last three decades. By showing, on average, 4.14% increase it reached to 692689.009 kt of oil equivalent. In 1980, coal was the main source for electricity production. Numerically 51.53% of overall electricity production was obtained from coal. In that time, for India, water was also an important source for electricity generation. It considers 39.03% of overall electricity production. In 1980, electricity production from oil sources consists of 6.38% of overall electricity generation. Nuclear energy and natural gas sources consist only 2.51% and 0.52% of overall electricity production, respectively. When we check 2010 shares, it can be easily seen that electricity production scheme has completely changed during the last three decades. Share of coal sources increased to 68.02% and of course huge amount of coal dependence is challenging the environmental sustainability. During that period share of natural gas sources for electricity production showed an increasing performance and 2010 WB records show that they consist 12.27% of overall production. At the same time, hydro sources showed a sharp decline and today they account 11.92% of total production. Electricity production from oil sources and nuclear sources consider 2.75% and 2.73% respectively. India started use renewable sources for electricity generation in 1986. According to 2010 records 2.29% of electricity needs are obtained from renewable resources.

Because of its growing economy India is a significant consumer of oil and natural gas. According to 2009 energy results, India located at the 4th position in the energy consumption list of world just after US, China and Russia. Even a lot of countries suffered from global recessions the energy need of India will consider to increase. Petroleum demand of transport sector will continue to rise due to the expansion of car ownership.
Source: The International Energy Agency
Source: US Energy Information Administration International Statistics.

In 2010, Indian oil production was equivalent to 950 thousand barrels per day (bbl/d) and oil consumption was equivalent to 3.2 million barrels per day (bbl/d). India was the fifth largest oil importer of the world by 2010. In 2011 China obtained an annual growth performance equivalent to 9.2% where in the first half of 2012 this value was 7.8%. During the second half of 2012, growth of Chinese economy considers to slow because of global

financial crisis, decrease in industrial production and exports. According to 2011 energy statistics, China is the second largest oil consumer just behind the US. More interestingly China was a net oil exporter country at the beginning of 1990s and just after two decades it is the second largest oil importer of world. China produced an estimated 4.3 million barrels per day (bbl/d) of total liquids in 2011, of which 95% was crude oil (EIA). However, at the same year, the total consumption of country was 9.8 million bbl/d. Net oil import of China was equivalent to 5.5 million bbl/d.

4 Methodology

There exist, mainly two methods for decomposing the indicator changes according to sectors: namely the Structural Decomposition Analysis (SDA) and the Index Decomposition Analysis (IDA). As Kumbaroglu stated, SDA is related with the input output model of quantitative economics and its theoretical foundations and major properties are discussed by Rose and Casler. In literature mostly the IDA methods are used. The main advantage of IDA is it can be easily applied to any data at any level of aggregation. The well-known Laspeyres index method isolates the impact of a variable by letting that specific variable to change between two years while holding other variables constant at their base year values (Kumbaroğlu, 2011). Various methods have been developed and employed under IDA methodology (Kumbaroglu, 2011). In 2000, Ang and Zhang provided a survey of index decomposition analysis in energy and environmental issues. Refined Laspeyres Index (RLI) method is developed from Laspeyres Index Method by Ang and Zhang and it distributes the residual term evenly to each variable. RLI method widely used because, it is easy for calculation and understanding. According to Ang and Zhang, who include a comparison of several IDA methods, the refined Laspeyres Index Method passes all tests (time reversal, factor reversal and zero value robustness) and possesses several desirable properties (Kumbaroğlu, 2011). In this study to decompose Chinese and Indian CO_2 emissions, the Refined Laspeyres Index method is used.

The RLI method is based on the extension of Kaya Identity, which it is widely used to analyze the role of different factors, which influence the CO_2 emissions. The Kaya Identity explains carbon emissions (C) as a multiplication of four effects: population (POP), carbon intensity of energy use (C/E), energy intensity of production (E/P) and per capita production (P/POP). Mathematically, it can be shown as,

$$C = POP * \frac{C}{E} * \frac{E}{P} * \frac{P}{POP}$$

For this study the above given Kaya Identity is expanded to account for impacts at subsectors level. Therefore CO_2 emissions are calculated as a multiplication of the subsectoral total of four effects given as

$$CO_{2i}^t = P_i^t * \sum_j \frac{CO_{2j}^t}{E_j^t} * \frac{E_j^t}{P_j^t} * \frac{P_j^t}{P_i^t}$$

where $\frac{co_{2j}^t}{E_j^t}$ represents the carbon intensity of energy use in subsector j at time t, $\frac{E_j^t}{P_j^t}$ represents the energy intensity of production in subsector j at time t, and $\frac{P_j^t}{P_i^t}$ is equivalent to share of subsector j within sector i, at time t and can denote the carbon intensity by CI, the energy intensity by EI and the sectors share by SS then the previous equation can be written as;

$$CO_{2i}^t = P_i^t * \sum_j CI_j^t * EI_j^t * SS_j^t$$

The effect of changes in production activity which is referred to as scale effect, composition effect, energy intensity and carbon intensity can be calculated as:

Scale Effect (P_i^t)

$$= \Delta P(i) \sum_j \left\{ SS(j)EI(j)CI(j) + \frac{1}{2} * \left(\Delta SS(j)EI(j)CI(j) + SS(j)\Delta EI(j)CI(j) + SS(j)EI(j)\Delta CI(j) \right) \right\}$$

$$+ \Delta P(i) \sum_j \left\{ \frac{1}{3} * \left(\Delta SS(j)\Delta EI(j)CI(j) + \Delta SS(j)EI(j)\Delta CI(j) + SS(j)\Delta EI(j)\Delta CI(j) \right) + 1/4 \right.$$

$$\left. * \left(\Delta SS(j)\Delta EI(j)\Delta CI(j) \right) \right\}$$

First effect is the scale effect and it shows the change in CO_2 emissions due to the changing activity levels. According to the scale effect, the increase of activity levels increases the amount of CO_2 emissions and the decrease of activity levels reduces the amount of CO_2 emissions.

Composition Effect (SS_j^t)

$$= \sum_j \Delta SS(j)\{P(i)EI(j)CI(j) + \frac{1}{2} * (\Delta P(i)EI(j)CI(j) + P(i)\Delta EI(j)CI(j) + P(i)EI(j)\Delta CI(j))\}$$

$$+ \sum_j \Delta SS(j)\{\frac{1}{3} * (\Delta P(i)\Delta EI(j)CI(j) + \Delta P(i)EI(j)\Delta C(i) + P(i)\Delta EI(j)\Delta CI(j)) + 1/4$$

$$* (\Delta P(i)\Delta EI(j)\Delta CI(j))\}$$

Composition effect represents the change of emissions due to the changes in the composition of sector. A structural change toward less carbon intensive subsectors decreases CO_2 emissions and a structural change toward more carbon intensive subsectors increases CO_2 emissions.

Energy Intensity Effect (EI_j^t)

$$= \sum_j \Delta EI(j)\{P(i)SS(j)CI(j) + \frac{1}{2} * (\Delta P(i)SS(j)CI(j) + P(i)\,\Delta SS(j)CI(j) + P(i)SS(j)\Delta CI(j))\}$$

$$+ \sum_j \Delta EI(j)\{\frac{1}{3} * (\Delta P(i)\Delta SS(j)CI(j) + \Delta P(i)SS(j)\Delta CI(j) + P(i)\Delta SS(j)\Delta CI(j)) + 1/4$$

$$* (\Delta P(i)\Delta SS(j)\Delta CI(j))\}$$

Energy intensity effect suggests an indication for efficiency of energy process, conversion technologies and energy conservation. Energy saving activities reducing the use of fossil fuels and use of renewable technologies increases the energy efficiency. As a result of this there will be a decline in CO_2 emissions.

Carbon Intensity Effect (CI_j^t)

$$= \sum_j \Delta CI(j) \left\{ P(j)SS(j)EI(j) + \frac{1}{2} * (\Delta P(i)SS(j)EI(j) + P(i)\Delta SS(j)E(j) + P(i)SS(j)\Delta EI(j)) \right\} +$$

$$\sum_j \Delta CI(j)\{\frac{1}{3} * (\Delta P(i)\Delta SS(j)E(j) + \Delta P(i)SS(j)\Delta EI(j) + P(i)\Delta SS(j)\Delta EI(j)) + \frac{1}{4} * (\Delta P(i)\Delta SS(j)\Delta EI(j))\}$$

Carbon intensity effect is used to analyze the effect of fuel substitution on CO_2 emissions. For example, if the share of renewable resources increases or if people use natural gas instead of coal, there will be a certain decline in CO_2emissions. The change of CO_2 emissions between two time periods is the sum of these four effects.

$$\Delta CO_2(i) = Scale\ Effect\ (i) + Composition\ Effect\ (i) + Energy\ Intensity\ Effect\ (i)$$
$$+ Carbon\ Intensity\ Effect\ (i)$$

For the detailed analysis about the RLI method one can follow the work of Ang and Zhang, called Methodological Issues in Cross-Country/Region Decomposition of Energy and Environment Indicators.

5 Empirical Results for China & India

5.1 Agriculture

For agriculture sector of China, scale effect is one of the most dominant effects for identification of CO_2 emissions. Generally scale effect for agriculture shows an increasing trend because the output for agriculture increased during the last three decades despite the decreasing share of agricultural output in GDP. Energy intensity effect for agriculture sector of China shows a negative trend generally. For some years it has an increasing effect on emissions due to modern agricultural production techniques (i.e. for one unit of agricultural output more agricultural machinery has been used) but at the same time agricultural production is decreasing for some years therefore the energy use for this sector is also decreasing. Another reason is that, by time, the agricultural machinery equipment is getting more fuel efficient. Carbon intensity effect is negligibly small for Chinese agricultural production. For GDP decomposition analysis, agriculture is accepted as the primary industry. As it considered as a whole, there is no composition effect for agriculture.

For India, as the agricultural production of India continuously increased during the last three decades, scale effect is one of the most important contributors of CO_2 emissions and generally it showed an increasing trend. Despite the share of agriculture gradually decreased, still an important part of the population obtain their income from agriculture, therefore scale effect importance is not a surprising result for Indian carbon emissions. In this study, agriculture considered as the whole of primary industry there is no composition effect for Indian agriculture sector. For energy intensity, during the first half of time period, energy intensity effect showed an increasing performance for agriculture. After that, in the second half, energy intensity generally represents a decreasing trend because of the increasing energy efficiency. Carbon intensity effect is also an important contributor of CO_2 emissions. Generally it shows a decreasing trend.

5.2 Manufacturing Industries

Secondary industry for China is considered as the total of manufacturing industries and construction. The major impact for CO_2 emissions through manufacturing sector directly comes from the scale effect. As the Chinese economy showed a significant growth performance during the last three decades the results are not surprising. China has a huge manufacturing capacity today (40% of its GDP can be explained by manufacturing industries) and the scale effect for Chinese emissions showed a positive trend. Another major impact for manufacturing industries was the energy intensity effect. After 1990's the energy intensity effect shows a decreasing trend because of the raising energy efficiency. Energy use of the country increased but per unit of industrial output is produced by less energy. Carbon intensity effect for manufacturing industries is negligibly small during the last thirty years. Composition effect is even smaller than carbon intensity effect, because the share of manufacturing industries did not change too much in the same time interval.

The scale effect shows an increasing trend generally due to the raising capacity of manufacturing industries for India. Composition effect is smaller than the other effects for Indian manufacturing industries but it is a positive contributor for carbon emissions since its share in secondary industry increased faster than the share of construction. Energy intensity generally showed a decreasing trend during that period. Most probably it is due to increasing energy efficiency but in some years it represents a sharp increasing performance. This shows that India should do necessary regulations for energy efficiency. Carbon intensity shows a negative trend on average, that means some environmental regulations started to show their positive impacts however more regulations are needed for Indian manufacturing industries.

5.3 Construction

The dominant factor for Chinese construction sector for CO_2 emissions is the scale effect. As the population growth and country developed, the need for construction sector increased. Therefore scale effect for construction also showed an increasing trend. Composition effect also represents a raising trend especially in the last decade, because the share of construction sector of China is gradually increasing. Consequently the share of construction sector also grows in the overall share of secondary industry. Energy intensity effect for construction sector is also one of the major effects. It shows a negative trend as a result of increasing energy efficiency. Carbon intensity effect is also important for construction sector. For some years it shows a decreasing performance and for some years it represents an increasing performance. On average the impact of carbon intensity is negative on emissions.

As the population of the country increased the scale effect has a positive impact on carbon emissions in India, which is an expected result. Composition effect is negligibly small but generally has a negative trend for emissions. This was also an expected result because the increase of the share of construction sector is slower than the increase of manufacturing industries' share. For reducing the costs of construction, construction companies started to use their energy more efficiently. As a result of this, in the second half of research period, there is a certain decline for energy intensity effect. On average carbon intensity effect is also declining during the 30 years period, implies that construction sector started to be more environmentally efficient.

5.4 Transportation

The major determinant for Chinese transportation sector is the scale effect. As the production and use of cars, buses, trucks and other vehicles increased and as the population of China rapidly increased, the scale effect represents a significant impact on CO_2 emissions. The composition effect is also important for transport sector and it generally shows a negative trend during the last thirty years. Especially for recent years, composition effect becomes larger on the negative way. The main reason is share of transportation sector becomes smaller in tertiary industry. Energy intensity effect shows generally a decreasing trend for transportation sector because new technological vehicles are consuming less energy, i.e. there is an increase on fuel efficiency. Carbon intensity effect is negligibly small for Chinese transportation. Generally shows a decreasing trend due to alternative energy sources for transportation.

Compared to other sectors scale effect plays a smaller role for Indian transportation sector. There is an unexpected decrease in transportation GDP in 2010 and this decline also reduces the overall impact of scale effect. The composition effect plays also small negative role on the emissions for transportation sector. As the share of transportation grows with a smaller performance than the other service sectors, a negative impact is not surprising. However, this impact can be neglected. For India energy intensity effect represents a negative impact on CO_2 emissions. However in the last years of analysis there is a certain increase on this concept. This proves the idea that India needs certain regulations on fuel efficiency. The carbon intensity effect nearly has zero impact on emissions from transportation.

5.5 Other Service Sectors

As the output of service sector increased the main determinant factor is the scale effect for other service sectors and it represents an increasing trend during the last three decades. The second determinant factor is the energy intensity effect and generally it shows a decreasing performance. This is, probably, because of the increasing usage of nuclear sources, natural gas sources and renewable sources for electricity and heat

production for households and other main service sectors. Carbon intensity effect also represents a negative trend during the period. This is again, probably, due to the changing energy schedule for the country. Clean energy share is increasing for China but still country needs many reforms to prevent the air pollution. Finally the smallest impact for other service sectors is due to composition effect. It shows generally an increasing trend because of the increasing share of other service sectors concerning the tertiary industry.

As the population of the India increased very rapidly, a dominant scale effect is not a surprising result for other service sectors. The enormous growth of energy use at 2001 brings a big positive impact on energy intensity effect. The average energy intensity effect is also positive for other service sectors of India. Increasing usage of renewable sources and natural gas resources for residential and commercial buildings may be a true solution for energy intensity damage in the future. Carbon intensity effect is also left some dominant impacts on CO_2 emissions on the declining way. By doing necessary modifications this impact can be even smaller.

6   Conclusion

For this study, CO_2 emissions of the most populous countries, China and India decomposed according to data obtained for time period 1980-2010. Refined Laspeyres Index method has been used and some interesting results and valuable insights obtained. The countries' economies are subdivided into countries namely, agriculture, manufacturing industries, construction, transport and other service sectors. Four important effects considered, scale effect, composition effect, energy intensity effect and carbon intensity effect.

For China, scale effect plays an important role for the agricultural production. It shows an increasing trend during the research period. Energy intensity effect is also important for agricultural production. However it represents a decreasing trend during the research period. This is the result of increasing fuel efficiency. For India, scale effect is also remarkable for agricultural production. This is not a surprising result, because, despite the decreasing share of agriculture in Indian GDP, still agriculture is an important tool of GDP. Energy intensity effect started to show a decreasing trend but our study showed that for India, still energy regulations are necessary in order to reduce the energy intensity. Carbon intensity effect is more important for India in agriculture if we compare with China. In manufacturing sectors for both countries scale effect is dominating the CO_2 emissions. For both countries, energy intensity effect is an important tool to explain the emissions due to manufacturing industries and because of the efficient energy use it represents a declining performance. Because of the rapid technological growth the carbon intensity effect shows an increasing trend for manufacturing industries in China. This is not a surprising result, as the economy of the country boomed then the environmental damage is unavoidable. For construction sector of countries, the major effects are scale effect and energy intensity effect. They represent their dominant impacts on positive and negative directions respectively for both countries. As the population of both countries increased, the positive scale effect for construction sector is expected. During the thirty years there are some developments on construction sector for each of the countries. Construction companies are well organized and more efficient for energy use and other materials use, therefore there exists a decreasing trend on energy intensity effect. For composition effect there exist interesting results for both countries. For China there is a positive trend for construction according to composition effect and the opposite is observed for India. This is because of the changing share of construction sectors of countries, in the secondary industry. As mentioned before, secondary industry is classified as manufacturing industries and construction. For this case, carbon intensity effect can be ignored.

For transportation sector some interesting insights observed. For both of the countries, as their population increased, the transportation need also increased. Therefore a positive scale effect occurred during the research period. As the share of transportation in tertiary industry getting smaller then negative composition effect expected and observed. Because of the technological developments, new vehicles are consuming less fuel if one compare with the past. Today, cars, buses, trucks, ships etc… are more energy and economically efficient. As a result of this, energy intensity effect, on average, represents a decreasing trend for both China and India. However, if one compare these two countries, China is much better than India in energy intensity for transport sector. Since the alternative fuels have started to use, there exists a decline for carbon intensity for both countries. But, also for carbon intensity both countries need certain regulations.

Both of the countries were getting more and more crowded during the last three decades. At the same time the number of residential buildings, commercial buildings, hotels, restaurants and other service buildings increased. Therefore scale effect showed its positive dominant impact for both countries for service sectors. Composition effect for service sectors is also positive in India and in China because, the share of service sectors was increasing in tertiary industry. For energy intensity Chinese service sector shows a certain decline as the share of natural gas sources and renewable sources increased for residential and commercial electricity production. For India, energy intensity is generally increasing for service sectors. Probably, it will consider increasing in the near future, because 40% of the houses still do not have electricity generation according to World Bank.

Our work was interesting, because we also tried to show the similarities and differences of one upper middle income and one lower middle income countries. At the beginning of the research period, China and India had almost the same amount of GDP even in the concept of per capita income India was better than China. Today, of

course, China is in better conditions compared to India. However both of the countries still need certain regulations for environmental issues. They considered more than 40 percent of total world population. That means well organized economic and energy policies will bring a great success. The dominant scale effect also proves the idea that these two countries need modifications. The modest energy intensity effect is increasing the motivation that environmental success is not away from world. These countries may avoid to apply the policies related with environmental issues, because, they do not want to interrupt their economic growth.

Environmental Accounting and Environmental Costs

Assoc. Prof. Dr. Baki Yılmaz (Selçuk University, Turkey)
Ph.D. Candidate Fatma Özlem Yılmaz (Selçuk University, Turkey)
Prof. Dr. Naim Ata Atabey (Selçuk University, Turkey)

Abstract

The result of economic improvement and growth; rapidly population increase, technologic development, rapid industrialization, extreme water, air and soil pollution bring the enviromental problems. The increase lived in the environmental problems has caused an environmental conscious emerges, roots, and spills. With environmental conscious aganist the environmental problems; in the environmental costs and environmental accounting topics significant developments appear. Environmental Accounting aims at explaining the interaction between economy and environment by the information that it produces. The main approach in understanding of environmental accounting and environmental costs are to include changes in the natural environment into the national/regional accounts or corporate balance sheet. Our this Study serves the goal of the necessity of the subject of Environmental Accounting and Environmental Costs by aiming at providing for evaluating the damages in the natural environment in our world inside the process of globalization, in both a macro and micro level, and in a social, cultural, and economical structure.

1 Introduction

The managements, which are an indispensible part of the economical life and produce goods and services by the aim of fulfilling the unlimited needs of individual and society, carry out their activities to reach the objectives like maximizing the profit and providing the continuity of managerial activities. Managements, in the performing process of these activities, consume the nature and the natural resources differently and leave their wastes, which are in the base of environmental problems, into the nature by their activities occurring unconsciously and irresponsibly.

The increase lived in the environmental problems has caused an environmental conscious emerges, roots, and spills. Managements, because both the effect of environmental conscious and the laws inclined towards protecting the environment and the customers' reactions, who gradually become self-aware, have been obliged to move more sensitively. Managements have to pay attention not only economical but also the social effects of the activity results that they practice depending on the principle of social responsibility. In this reason, to make investments towards protecting the environment and to develop some technologies concerning with it is a state to which managements definitely have. The determination of the effects of the costs that emerge because of environmental investments and altruisms, which managements will make, and its usability in the decisions of the administration by following it is possible with the approach of *Environmental Accounting*. That accountancy gains an importance together with the changes occurring in economical and technological fields has brought this profession into an effective position inside the life of society and commerce. In this point, accountancy, due to the concept of '*social responsibility*' of accounting, has begun to reveal the damages that managements bring in the nature; by determining its effects, it has started to work by the goal of calculating, classifying, auditing (observing), and reporting of the costs that may come out, and at the end of these works, the concept of "*Environmental Accounting*" has been on the agenda.

2 The Environment and the General Principles towards Environment

Environment is "the general sense of the sources that the livings fulfill their vital needs directly or with operations," (Kabasakal, 1995). Environment, with its one broader definition, is "the whole of the nature and the man-made elements in the nature together with human and all other living beings," (Bulca, 1995). In the second definition concerning with environment, it is mentioned about the two dimensions of the nature: The first of them is the natural environment that, the natural environment is the environment that has not been exposed to humanity's effect and intervention and that the nature constitutes. In the result of humanity's effect and intervention on the nature, the artificial environment, which is the second dimension of the nature, has been emerged. As the artificial environment is a part of the natural environment, it is a state of the natural environment beginning to be destroyed, and it has been emerged in a result of humanity's intervention on the nature (Kırlıoglu and Can, 1998).

The environment that has a significant influence and a vital importance on all the living beings is an important phenomenon for managements. If we think managements are born, grow and die like all livings as well, we see managements try to function inside an environment that gives opportunities for themselves.

When we define *the environment* in terms of managements, the environment of managements is the system of the internal and external conditions and the effects that affects on its life of activity and its development as is for all the living beings (Yoruk, 1999).

We cannot definitely isolate the managements, which produce goods and/or services with the aim of fulfilling the unlimited needs of individuals and society, from the environment; because, managements consume the natural sources in different ways due to their activities and use many natural sources as a raw material. During the using of these sources, the nature is negatively affected, and the hazardous wastes, which bring the environmental problems out, emerge. We can express this state in the following figure:

Input (Production Factors)	→	Process (Production)	→	Output (Goods and Services)
Environmental Loses Consisting by Scarce Environmental Resources Constitute		*The Pollution of Solid, Liquid, and Gas Wastes, Which Occur During the Production, Lead to Pollute the Environment.*		*The Damages and the Wastes Left into the Environment, Which Consist of Using the Produced Goods and Services*

*Figure 1: The Role of Managements in the Environmental Problems **Source**: (Kirlioglu and Can, 1998)*

In the figure above, the managements continuously take some inputs from its environment and again give some outputs to its environment. Among these inputs called as *production factor*, there are many environmental sources, too. In the result that these sources used as an input are scarce, environmental loses emerge, and the sources decrease day by day. In addition, the pollution of solid, liquid, and gas wastes occurring during the production constitutes the base of the environmental problems.

3   The Concept of Environmental Accounting

Accounting, which is one of the basic functions of managements, is a science, an art, and an application that observes and determines systematically the financial-qualified events and operations occurring in the managements in the form of unit of currency and that collects and records information and documents concerned with them and that classifies and sums up meaningfully and reports and presents the results to the concerned persons and establishments by interpreting (Atabey and et al., 2001).

Accounting, as an open system, is continuously in an interaction with its environment. Accounting, due to the concept of *social responsibility*, is in the position of looking after the whole society's interests, not definite persons' and groups'. As an extension of the concept of *social responsibility*, the concept of *social responsibility accounting* has been born. Environmental Accounting, which is a subgroup of the *social responsibility accounting*, as a branch growing with the information demands suitable for the objectives of the concerned groups, stands in front of us as a field of study that includes the matters of documenting, reporting, and auditing of the expenses related to the environment.

"In recent times, as a result of the interaction between the environmental responsibility and the managerial strategies of the managements, it has needed to arise the information system of Environmental Accounting by the goal of getting the information needed in the evaluation of environmental effects and in the various managerial decisions" (Akun, 1999).

Various definitions have been made towards Environmental Accounting that is also called as "Green Accounting" in the literature of the world. Environmental Accounting:

"The definition of negative measurements of environment, and their practicing on the accounting system and its applications" (Güvemli, 1996).

"The indication of the financial-qualified events about the environment in the financial statements by accounting" (Pearce and et al., 1993 ; Aslan, 1995).

"In the accounting systems that are still practiced, especially on the cost and the profit analyses, the planning and the practicing of environmental factors" (Güvemli, 1996).

"As an example of the financial accounting measuring functions, the carefully practicing of the financial reporting and the internal and external environmental factors (related to a management)" (Gray and et al., 1993).

"The accounting of effects that are going to be emerged in the result of the using of environmental sources" (Ozbicerikli and Melek, 2002).

"It is an information system, which produces the information that explains the constituting of environmental sources, the form of using of these sources, the increases and the decreases occurring in these sources in the result of the operations of organizations and the state of the organization in terms of environment, and which conveys them to the concerned persons and establishments" (Kirlioglu and Can, 1998).

"The recording, classifying, reporting after summing up, and interpreting of the results of the financial-qualified environmental operations and events by signing with money" (Ozbicerikli and Melek, 2002).

Environmental Accounting aims at explaining the interaction between economy and environment by the information that it produces. It is seen that Environmental Accounting has the objectives lined up below, such other accounting systems (Kirlioglu and Can, 1998):

"To make up a balance sheet that indicates which level the source inventory stands on, in a definite time, and that gives its profile",

"To determine how much source stock is used, how much source come to the stock, what is added into them, and how much it changes the form in a definite period of time, and to prepare the accounts",

"To provide that the assets getting along with fixed assets become consistent, and in this way, to show it is the adding of the floating asset calculations of this year onto the balance sheet of the previous year, for every balance sheet".

Environmental Accounting has found a meaning generally in a macro level and always has been practicing like that until today. While the national applications of Environmental Accounting have been present in the resources in the literature, it has not been almost possible to meet with a work in the level of the management. The putting into practice of *the ISO 9000 Quality Standards* and *the ISO 14000 Environmental Management and Audit Standards* in the process of *European Union* and *International Accounting Standards* by the *Turkish Standards Institution* is an important phase practiced in this process (Kirlioglu and Can, 1998).

4   The Environmental Costs

The cost, in a general sense, can be defined as *the whole of economical altruisms gone through to reach a goal*. "As for *the* environmental *costs* are accepted as one of the costs that managements bear to present goods and services for their target groups" (Ozbicerikli, 2000). All the activities done by the managements for the environment lead to emerge the environmental costs.

Business managers, by considering the environmental suitability, will make the product diversifying and pricing, the selection of production inputs, the evaluation of the pollution prevention projects, and the waste management alternatives according to the environmental cost information, in the decisions that they will take in the managerial strategies (Akun, 1999).

Environmental costs may differ according to their shapes of formation. While some environmental costs emerge in result of the activities made for the aim of protecting the environment, some of them may arise because of their using for environmental sources (Kirlioglu and Can, 1998).

Moving from the data above, it is possible to come together the environmental costs in the dimension of environment in the three basic groups as *costs of reduction, costs of using*, and *costs of damage* (Aslan, 1995; Lutz and Munasingle, 1991).

Costs of reduction contain the costs that managements bear to prevent and reduce their environmental problems. *Costs of using* include the costs that a management has to go through in return for using the environmental sources. As for *costs of damage*, it consists of the costs of the environmental pollution and the environmental damages, which emerge in the result of the managerial activities, will load on the shoulders of managements (Ozbicerikli and Melek, 2002).

Under the light of the classification above, the cost distributions can be made the following:

Costs of Reduction	Costs of Using	Costs of Damage
Environmental planning	Cost of air	Air pollution
Control of process	Cost of water	Water pollution
Emission measurement devices	Cost of soil	Image pollution
Environmentally unharmful product-designing developing	Cost of noise	Punishments and Compensations
Recycling designs	Cost of image	Environmental Cleaning
Environmentally unharmful packing developing	Cost of natural gas	Researches of Complain
Develop the environment	Cost of petroleum	Costs of Bail and Guarantee
Environmental education	Cost of coal	Sale Reductions
Services of biologist and chemists	Cost of energy	Other Costs of Damages
Services of environmental engineering		
Environmental reports		
Environmental labels		
Environmental reliability		
Environmental management system		
Environmental audit		

Table 1. The Distribution of Environmental Costs   Source: (Ozbicerikli and Melek, 2002)

The costs can be classified, grounding on various criterions. As known, we can classify the costs as *fixed cost* and *variable cost* according to the sensitiveness tied to the level of production. *Fixed costs* are the elements of cost, which are not tied to the level of production and not variable whatever the level of production happens. As for *variable costs* are the elements of cost, which are variable as tied to the level of production. Besides, it is possible to be able to observe the distribution of environmental costs in this classification.

Costs of reduction, because of its general structure, are the costs that will consist usually by the managements make investments. By a definite investment is made by a management, it is evitable that the management bears *the fixed costs* related to these investments. *Costs of reduction* are *the fixed costs* that managements go through, namely bear to prevent the environmental problems. In this context, here, we can examine environmental planning, environmental education, and other costs of reduction inside the class of *the fixed costs*. With regard to the costs of using and damaging act usually as tied to the increasing and the decreasing of the level of the management production. In addition, we can treat *cost of noise* and *cost of energy* that are of *costs of using*, and *soil pollution, noise pollution* and other costs of using and damage that are of *costs of damage*, inside the class of variable costs.

The environmental costs are accepted as important for a business management in the direction of the reasons below (EPA, 1995; Ozbicerikli, 2000).

"A lot of environmental costs can be considerably reduced or removed in the result of its decisions towards the matters like an investment for a more green process of production, the process of producing/manufacturing and/or the redesigning of the product rather than the short-term changes related to the activities of the business management. Because, an important part of environmental costs can be provide an added-value into the process of production, system, and product."

"Environmental costs can be followed from the general expenses account or perhaps may be ignored."

"Many companies have discovered they can compensate the environmental costs, making an income by getting the license of clean technology or selling the outage byproducts."

"The better managing of environmental costs has a big share to provide significant benefits for human's health and to increase environmental performance as much as the success of management."

"Knowing the environmental costs and the environmental performance related to the process of manufacturing and producing helps for both determining the costs and the prices of the product more truly and designing the manufacture, service, and production processes of the management more preferably in terms of environment."

"The manufacture, service, and production processes, which are more preferably for customers in terms of environment, provide a competitive advantage."

"The accounting of the environmental costs and the environmental performance can support the development of a company and all the activities of the environmental management system."

Managements have to make some self-sacrifice in both legal coercion and thematic pressures for environmental matters (Dales, 1996).

For this, managements can reduce their environmental costs, going to adopt these ways below:

- The true preference of factory location,
- The preference of technologies that pollute the environment less,
- The preference of chemical materials that pollute the environment less,
- The true preference of clean-up system,
- The reduction of the quantity of chemical materials used,
- The reduction of the quantity of wastewater,
- The reusing of waste-water,
- The recycling some materials from wastewater.

In the environmental costs in the world, especially in the sector of energy, the important progresses have been made. Particularly in the energy sector of Brazil, the concepts of social and environmental costs, which are suitable for the characteristic of the sector, have been developed. The characteristic of the environmental costs defined for this sector is the following (Tolmasguim and et al., 2000):

Costs of Audit (Costs of Control): It is the costs, which the efforts of the energy sector that are inclined toward completely or partly preventing the social and environmental effects of an investment

Costs of Reduction: It is the costs, which the energy sector makes for decreasing the results of the social and environmental effects of an investment.

Costs of Compensation: In the case that the repairing (or renovating) is not possible, it is the costs emerged from the efforts directed to balancing the social and environmental effects of an investment.

Costs of Observing: It is the costs that the energy sector makes for evaluating the social and environmental programs of the energy sector.

Institutional Costs: It is the costs that the energy sector makes while managing the phases of planning, practicing, and managing of the social and environmental works and while preparing the works that the environmental agencies demand and while taking the environmental licenses.

Costs of Decomposition: It is the external costs that the waste social and environmental effects, which remain even after the energy sector makes real the costs of audition (control), reduction and/or compensation, do cause.

In the present day, there are two standards known environmentally. These are *ISO 14000 International Environmental Management and Audit System Standards* and *BS (British Standard) 7750 British Environmental Management System. The Environmental Management System (EMS)* is "the serial of management instruments, principles, and procedures that will protect the health of environment and human from the hazardous effects, which can be emerged from the activities, products, and services of the managements," (www.5mworld.com).

The most important advantage in the application of *the Environmental Management System* on the managements is the reduction that can occur in the costs of management. "The importance showed for prevention of pollution and waste-management (reduction) guides the managers continuously to look for lower-cost solutions," (www.5mworld.com).

5   Conclusion

In the present day, the increased population, the growing cities, the local and national highways traffics, and the industrialization have exposed people to environmental problems. By the environmental problems have begun to threat the life of humanity and other livings particularly after *the Revolution of Industry*, the attention of the whole world has started to focus on the environmental problems. It will not be a mistake to express that the levels of humanity's sensitiveness about the environment have increased and reached a significant point today.

By the phenomenon of globalization, all the countries of the world have begun to give a place to the environmental matters in their regulations (and legislation), and they have made some regulations on the environmental regulations in both national and international level.

The environmental issues, in a micro level, have become a matter interested in the managements very closely. The managements, which make investments towards the environment and renovate their present technologies, have to constitute an effective environmental accounting system, determining the environmental costs. Under the light of the environmental costs, the integration of environmental information into the accounting system will be provided by *the environmental accounting system*. As for this system, it is the adaptation of the functions of the accounting, such the documenting, calculating, classifying, recording, reporting, and auditing (control), on the environmental accounting.

By the aim of being able to evaluate the damages, in micro and macro levels, which are brought into the natural environment, inside the social, cultural, and economical structure of our world in the process of globalization, the necessity of the accounting of the natural sources and of the environmental accounting today emerge. In this point, inside this thinking system, the auditing, reporting, classifying, and interpreting of the environmental investments belonging to the managements and of the cost-profitableness analyses will be surely possible only with the environmental accounting. Besides, the establishing and developing of the environmental accounting system will be tied to the environmental cost information, which will be gotten from the environmental management systems, and to the analyzing of these information.

The Internal Innovation Processes in Kazakhstan

Ph.D. Candidate Aizhan Samambayeva (Universidade de Santiago de Compostela, Spain)
Prof. Dr. Manuel Fernandez-Grela (University of Santiago de Compostela, Spain)

Abstract

To evaluate the internal innovation processes in Kazakhstan, the paper involves two pieces of empirical research. In the first piece, the main drivers of innovation performance are identified based on regression analysis. The literature suggests three factors affecting innovation activities of firms, namely foreign direct investments, research and development investments, and international trade. In order to test this theoretical framework, a probit regression analysis is carried on to estimate the determinants of innovation performance in Kazakhstan. The chapter makes use of firm level data from the Kazakhstan Enterprise Survey 2009, conducted by The World Bank. The results are supplemented by descriptive analysis. The second piece deals with the examination of multi-level relationships between business organizations and innovation. The literature distinguishes between two modes of learning and innovation, based on the distinction between implicit and explicit knowledge. Promotion of R&D and codification of innovation process are the main features of the Science, Technology, and Innovation mode of innovation. On the other hand, the Doing, Using, and Interacting mode of innovation is based on learning by doing. In order to discern which of these is the main innovation mode adopted by firms within the EKMC, a survey was conducted among them in the period from November 2011 to January 2012.

1   Theoretical Background

Empirical and theoretical studies highlight three key factors affecting innovation performance: research and development activities, foreign direct investments and international trade.

Knowledge generated by firms' R&D activities creates an internal stock of scientific knowledge. According to many authors, their own installed knowledge base increases the absorptive capacity of the firms, enabling them to understand externally generated ideas and technologies, and to apply them to commercial ends (Feinberg & Majumdar, 2001). Therefore, the technological capability of firms depends on their investments in R&D and in the development of human capital (Aw, Roberts, & Winston, 2007). Other studies provide empirical evidence of a positive correlation between exporting and R&D investments. Firms exporting and investing in R&D at the same time are about 10 to 17% more efficient than those that only export (Aw, Roberts, & Winston, 2007).

International trade can be expressed in two activities, as the selling to export market and the importing of intermediate inputs. Exports as a channel of technology spillovers facilitate knowledge diffusion and transfer. Firms learn from information exchanges within foreign markets, directly or through export intermediaries (Liu & Buck, 2006). There, communication with buyers and suppliers stimulate firms to improve their own technological capacity and to increase the quality and specialisation of their products. Empirical results from Spanish manufacturing firms confirmed that international trade gives firms the opportunity to benefit from knowledge spillovers and learn from exporting and importing (Solomon & Byungchae, 2008). Firms gain from exposure to the more intense competition present in international markets that forces them to enhance their innovation activities.

Much of the empirical literature considers foreign direct investment (FDI) as an important channel of knowledge spillovers. Branstetter (2006) showed that FDI increased the flows of knowledge spillovers both from and to the firms. In particular, FDI spillovers are much higher in relatively high-technology industries than in relatively low-technology industries (Keller & Stephen R. Yeaple, 2003). Besides the fact that FDI brings employment and capital inflows, it also leads to technology transfers to domestic firms. Domestic firms gain from the accelerated technological diffusion implied by higher labor turnover. Moreover, foreign firms usually spend more on training programs than domestic firms. Since the early 1980s countries all over the world have liberalized their policies regarding FDI in order to attract foreign multinational enterprises (MNEs), based on the assumption that FDI positively affects human capital stocks, exports, capital formation, and the technological capacity and productivity of domestic firms. The contribution of FDI to knowledge accumulation by domestic firms, as well as to the increased productivity and production of the host country was well described in many articles (Blomstrom & Kokko, 1998). In them, MNEs are considered as main agents of technology transfer through the movements of skilled staff, the existence of demonstration effects, and the operation of backward linkages facilitating the adoption of new technologies by local firms.

Apart from the drivers of innovation performance there are externalities that have influence on the innovation performance of firms. These can originate from firms' and industry's characteristics such as firm size, age of firms, technological opportunity and foreign presence. Interidustry differences considerably contribute to the explanation of cross-industry variations in innovation performance.

1.1 Data and Methodology

In order to test the theoretical framework, we employed probit regression analysis to estimate the determinants of innovation performance in Kazakhstan. We used firm level data from the Kazakhstan – Enterprise Survey 2009, conducted by The World Bank, collected in Kazakhstan during calendar year 2008/2009. The survey covers firms in the manufacturing and services sectors using stratified random sampling. Three levels of stratification, industry, establishment size, and oblast (region) were used. To obtain unbiased estimates for the whole population, the survey comprises all manufacturing sectors, construction sector, services sector and transport, storage, and communications sector. Some industries are not included: financial intermediation, real estate and renting activities, except the IT subsector which was added to the population under study, and all public or utilities-sectors. To sum up, industry stratification includes 23 manufacturing industries, 2 services industries -retail and IT-, and one residual. Each sector had a target of 177 interviews. Regional stratification was defined in five regions: North, West, East, South, and Central. According to size stratification, the number of employees was defined on the basis of reported permanent full-time workers. The survey covers the entire population of Kazakhstan´s firms with more than 5 employees. 544 completed interviews are included in the sample (The world bank, 2009).

1.2 Dependent Variable

As an output variable we have the declaration of whether an enterprise has introduced new products or services in the last three years (dummy variable) and the sales share of innovative products introduced in last three years (continuous variable). The use of various indicators of innovation allows us to discover different aspects of the same phenomena and to interpret our results more properly. Firms may differ in their ways of innovating and the ways of turning research efforts into sales. Therefore reliance on the introduction of innovation variable alone might give the false impression of innovation processes in Kazakhstan. Innovation output is not easily measurable and moreover takes several years to be realized (Innovation performance of firms in manufacturing industry: Evidence from Belgium, 2007). Assessing both measures of innovation compensates partly the deficiencies inherent in selecting one measure to the exclusion of the other, like the subjectivity of innovation counts (Salomon & Shaver, 2005) or the difficulties to gather the information of innovative activities that do not lead to the introduction of actual innovations due to its failure, for instance (Archibugi & Pianta, 1996). Furthermore, the measures of new product sales throw some light about commercialization processes and the economic benefits of innovation.

In early researches on innovation, patents were used as a measure of innovation output, although technologies are not easily codifiable in from of patents or blueprints. As an alternative, Miresse and Mohnen (2002) suggested using innovative sales instead of the number of patents as a measure of innovativeness. Despite the fact that the sales of innovative products cover only product innovations, there are studies demonstrating that the majority of process innovating firms are also product innovators. The introduction of innovation is a better measure of innovation performance since it is faster than patenting.

Variables	Description
Dependent variables	
The introduction of innovation	Dichotomous variable taking the value 1 if the firm introduced an innovation during the last three years, and the value 0 otherwise
The ratio of new sales product to total sales product	Proportion of total sales represented by new product sales
Independent variables	
Domestic import	Percentage of material inputs and supplies of domestic origin in the last fiscal year
Foreign import	Percentage of material inputs and supplies of foreign origin in the last fiscal year
Export	Dichotomous variable taking the value 1 if the firm exported in last fiscal year and the value 0 otherwise
R&D investments	Dichotomous variable taking the value 1 if the firm invested in R&D in the last three years and the value 0 otherwise
Control variables	
Foreign presence	Percentage of private foreign individuals, companies or organization in ownership
Size	The number of permanent full-time employees
Technological opportunities	Dichotomous variable taking the value 1 if the firm belongs to a technology-intensive industry and the value 0 otherwise

Table 1: Description of Variables

The first dependent variable *y* represents the declaration of whether an enterprise has introduced new product or services in the last three years. By the definition of The Agency of Statistics of the Republic of Kazakhstan, "innovation" is the result of scientific and technological activities, been realized in the form of new or improved products (goods and services) or technology (The Agency of Statistics of the Republic of Kazkhstan). The value takes 1 if the firm introduced new products or services in the last three years and 0 otherwise (Table).

In the second model the innovation performance is measured by the ratio of new product sales to total sales in a given firm. "New product" is classified as a product or service that was introduced in the last three years. The ratio of new product sales to new total sales is a continuous variable expressed in percentage that presents a number of advantages. Firstly, it measures better the economic value and scope of innovation performance. Secondly, focusing on firms' efforts to launch new products more directly assesses innovation provoked by international knowledge spillovers. It can be interpreted then as an indicator of market acceptance and commercialization processes. Thirdly, in contrast to patent measures, the ratio consists of unpatented products that were employed in the production process i.e. "new to the firm" (Wang & Kafouros, 2009).

1.3 Independent variables

According to the theoretical framework, there are three factors that determine the innovation performance of a firm. To measure international trade we included in the model import and export variables. For exports, a dummy variable is used, taking the value 1 if the firm directly or indirectly exported in the last fiscal year, or 0 otherwise. Imports are divided into domestic and foreign imports. The last ones are measured as the percentage of material inputs and supplies of foreign origin in the last fiscal year. Domestic imports imply import of inputs from domestic manufactures. A dummy variable of R&D expenditure indicates to which extent a firm invest in R&D. R&D intensity is determined by whether or not the firm has invested in research and development in the last three years, including in-house or outsourced investments.

Unfortunately, the Enterprise Survey does not provide information on foreign direct investments. Therefore, the only way to measure foreign involvement is to take into account the share of foreign ownership in the ownership structure.

1.4 Control variables

In order to clarify the effect of explanatory variables, control variables have to be included. We included controls for a number of factors that include firm size, foreign presence and technological opportunity.

Firm size is believed to have a significant effect on innovation performance. Large firms are able to reap economies of scale that motivate them to innovate more (Liu & Buck, 2006). Size is one of the widely analysed and recognised determinants of innovation performance. We measured the size of firms by the number of permanent full-time employees.

We control for foreign presence, expecting a strong relationship between foreign participation and innovation performance. We measure foreign presence by the percentage of private foreign individuals, companies or organizations in the ownership structure (Lu & Ng, 2012).

The literature on innovation considers that there is a significant effect of industry classification on innovation performance. For example, A. Jaffe (1986) argued that firms in a given industry patent more in some classes than in others. The sectorial context relates to the fact that belonging to a particular industry may condition a firm's strategy and performance (Rodriguez & Rodriguez, 2005). Therefore, all firms were divided according to if they operate in low-technology industries or in high-technology industries, determining these categories according to Kafouros & Buckley (2008).

1.5 Methodology

We apply a probit model to measure whether firms introduced innovations or not. Then, we carried out a regression analysis for the second model, where the ratio of new product sales to total sales is the dependent variable.

Variables	Innovator	Non-innovator	Difference
Domestic import	67,51	83,9	16,39***
Foreign import	32,5	16,1	16,38***
Export	0,073	0,033	0,039**
R&D investments	0,224	0,03	0,193***
Foreign presence	0,09	0,04	0,05**
Size	142,8	87,4	55,4***
Manufacturing and non-manufacturing	0,39	0,29	0,09**

***Table 2:** Descriptive Statistics   ***Significant at the 0,01 level **Significant at the 0,05 level*

Table 2 compares the mean values of innovator and non-innovator firms. As can be seen there are significant differences between both groups of firms. Innovators import and export more intensively than non-innovators.

Interestingly, their imports are approximately double than those of non-innovators. As it was expected, non-innovators export and invest in R&D significantly less than innovators. In our dataset there is a distinction between imports of domestic origin and imports of foreign origin. Domestic inputs are inputs from other districts but within the country and foreign origin inputs are inputs imported from abroad.

Figure 1 visually shows the composition of innovative firms by trade orientation. Unsurprisingly, the majority of importers are service sectors. However, they have a very low rate of innovation. The highest rate of innovation is observed in high technology sectors such as chemicals, electronics, machinery and equipment and fabricated metal products. The country exports considerably less than imports. Exporters are mostly represented by manufacturing sectors, for instance electronics, machinery and equipment, fabricate metal products, chemical and non-metallic product.
Figure 1: The Composition Of Innovative Firms By Trade Orientation

Table 3 represents the results of the regression analysis of determinants of innovation performance. As can be seen, imports of material inputs and supplies of foreign origin have a positive and highly significant impact on the introduction of innovation. However, domestic imports have a negative and significant effect on innovation performance. Both R&D investments and the percentage of foreign imports are statistically significant. For each unit increase in foreign imports, the probit index of the predictor (introduction of innovation) increases by 0,007. Similarly, for one unit increase in R&D investments, the z-score of the predictor increases by 1,12.

Although the coefficients of size, export and foreign ownership are positive, they are not important in the decision to introduce innovation. In contrast to theory, technological opportunity does not show a significant effect on innovation performance. Moreover, the coefficient has a negative sign.

	First model	Second model
Variable	Coefficient	Coefficient
Domestic import	-0.0071762**	
Foreign import	0.0071726**	0.00
Export	0.0434462	-0.01
R&D investments	1.116533**	1.45***
Foreign presence	0.2866239	0.15**
Size	0.0012847	0.18***
Technological opportunity	-0.003	
Foreign technology		0.11
Intercept	-0.3899152*	5.77
Dummy variable for 5 regions		------
Dummy variable for 18 sectors		------
Number of observations	172	496
Likelihood Ratio	28.99	
Pseudo R^2	0.1220	
Log Likelihood	-104.30523	
R^2		0.22
Adj R^2		0.17

Table 3: Regression´s Results

***Significant at the 0,01 level **Significant at the 0,05 level *Significant at the 0,1 level

The results of the second model show that foreign presence, as share in the ownership of company is positively correlated and significant with proportion of new product sales, in contrast to the introduction of innovation. In order to estimate the "pure" effect of explanatory variable on our dependent variable, we control sector and region differences. Until the control of region, the results show positive and significant effect of foreign import on our dependent variable. However, the variable of foreign presence does not change if other explanatory variables are introduced. Unsurprisingly, the variable of R&D investment is highly significant and the increase of investments by 1 percent leads to the growth of new product sales by 1.5 percent approximately.

The foreign import does not influence on the firm´s decision to sale new products, controlling for the East region. In contrast to the results at national level, the size is insignificant to the dependent variable. The foreign presence is positively and statistically significant correlated with the share of new product sales. This can lead to the conclusion that the most of innovative firms are large-size and foreign firms in the East Region.

2   The Modes of Innovation

The innovativeness of an organization depends on its prior accumulation of knowledge that makes possible to assimilate and exploit new knowledge. From this point of view, both cognitive and organizational learning play important roles.Two key models of innovation can be distinguished: the STI model and the DUI model. The first one is the Science, Technology and Innovations (STI) mode that relies on codified scientific knowledge. The other is the Doing, Using and Interacting (DUI) mode, based on tacit knowledge and collective knowledge.

All the improvements in machinery, however, have by no means been the inventions of those who had occasion to use the machines" (Smith, 1904). This phrase proves the crucial importance of the STI mode, especially in radical innovations. R&D departments of big firms serve as key players in the STI mode. Usually, any R&D project is evoked by a practical problem. However, the primary search for a solution is based on the STI mode due to the availability of explicit knowledge, such as scientific publications or written recommendations. In order to communicate with scientists and scientific institutions it is needed to know their language in codified form. On the other hand, all research results have to be tested, and in this case the results have to be presented in an uncodified tacit form, the language of potential users. Then, it is not sufficient that the single scientist keeps results in his own memory as tacit knowledge (Jensen, Johnson, Lorenz, & Lundvall, 2007).

Social interactions, context and organizational environment are important for learning and knowledge creation. What makes the DUI mode crucially important as a key source of innovations? It is empirically proved that the successful innovation process involves interaction between people, departments or organizations. Steven Cohn (1980) has observed strong relationships between technical progressiveness and the openness of the formal inter-departmental communication structure. Since human knowledge is mainly tacit and subjective, it is difficult to codify and transfer it. Therefore, the transfer requires good functioning of social interactions, shared understanding and common interpretive schemes (Polanyi, 1966).

	Indicators	
1	**DUI-mode** **Interdisciplinary workgroups**	1 if the firm makes some use of interdisciplinary workgroups, 0 otherwise
2	**Quality circles**	1 if the firm makes some use of quality circles, 0 otherwise
3	**System for collecting proposals**	1 if the firm makes some use of system for collecting proposals, 0 otherwise
4	**Autonomous groups**	1 if the firm makes some use of autonomous groups, 0 otherwise
5	**Integrations of functions**	1 if the firm makes some use of integrations of functions, 0 otherwise
6	**Softened demarcations**	1 if demarcation between employee grouping have become more indistinct or invisible, o if they are unchanged or have become more distinct
7	**Cooperation with customers**	1 if the firm has developed closer cooperation with customers to a high extent, 0 if to a small or medium extent or not at all
1	**STI-mode** **Expenditures on R&D as a share of total revenue**	1 if the firm's expenditure on R&D are positive, 0 otherwise
2	**Cooperation with researchers**	1 if the firm cooperates with researchers attached to universities or scientific institutes rarely, occasionally, frequently or always, 0 if it never engages in these forms of cooperation

Table 4: *Indicators Of STI And DUI Modes* ***Source:*** *Jensen, Johnson, Lorenz, & Lundvall (2007)*

The DUI model can be described in terms of organizational practice and organizational design. Certain types of organizational design and practice are more likely to yield superior innovative performance in a particular

environment. They are more adapted to reduce or avoid transaction costs and cope with market failures. In contrast to the STI mode, the DUI mode does not pay a lot of attention to research-based knowledge. It focuses instead on experience and interactions. Employees combining their work experience with their previous education solve problems on the basis of teamwork and trial-and-error exercises. Usually, they rather cooperate with customers and suppliers than with research institutions and universities. Innovations in their majority are just incremental changes in already existing products and processes.

Nevertheless, we have to bear in mind that these two modes of innovation are theoretical concepts that do not exist in pure form in reality. Usually, industries combine in some proportion both models at the same time. The choice of methodology for our empirical analysis is based on that applied on the 2001 Danish DISKO Survey (Jensen, Johnson, Lorenz, & Lundvall, 2007). Methodology suggests using 7 and 2 indicators to measure the DUI-mode and STI-mode, respectively. The first six indicators of DUI model distinguish between rigid and bureaucratic organizations and more flexible and decentralized ones. Cooperation with customers reflects to which extent firms learn by interacting. Expenditure on R&D and cooperation with researchers are the indicators of the STI-mode. Since the evaluation of the DUI-mode is a more complicated and difficult process, more indicators are applied. As it is shown on Table , variable have been coded for further statistical analysis.

Our empirical analysis is based on 419 firms in the East Region, including private and government sectors. The majority of the firms (85%) present less than 50 employees. Medium size firms, from 51 to 250 employees, account to 9% of the firm population. Firms with more than 250 employees are the minority (6 %).We identified firms belonging to 11 sectors related to the metallurgical cluster. The half of total firms are classified as engaged in architecture and engineering activities, technical testing and analysis. East Kazakhstan is divided into 4 big cities and 15 administrative districts. The firms belonging to the metallurgical cluster are present in all four big cities and only nine districts. The largest share of firms is concentrated in the cities of Oskemen (54%) and in Semey (27%). At the initial stage, we identified 456 firms as belonging to the metallurgical cluster. During the research preparation stage and after interwieving some firms and specialists in this area, the number of firms was reduced to 388. Some firms were deleted due to being irrelevant to our cluster (34 firms). Twelve firms changed the sector where they operate in. Three firms moved into another district and ten are not active any more.

By 2011, nine firms ceased to exist, but 31 firms were created in the sectors identified as part of the metallurgical cluster. Therefore, we increased number of firms to 419 observations by adding 31 new firms.

We were able to contact only with 70 firms, to which we sent the questionnaire. Of these, we got an answer from 33 (i.e., a response rate of 48%).

In order to categorize firms into different innovation modes, we have pursued hierarchical cluster analysis. The goal of cluster analysis is to have observations in the same group to be more alike than observations in the other groups. The hierarchical method of clustering gradually forms groups going from small to large. The process starts out with each observation considered as its own separate "group". Then, the closest two groups are merged into one group and this procedure continues until all observations belong to one group. The cluster tree in Figure 2 allows to visualize the results.
Figure 2: Cluster Tree Diagram

The most appropriate number of clusters is four. The low learning cluster includes 4 firms. This cluster join together firms that are neither have highly developed forms of DUI or STI modes. The group includes 5 firms

that support DUI-learning and spend on R&D and cooperate with researchers, so can be considered as tending to a pure DUI mode of innovation, while three other firms tend to a pure STI mode of innovation.

The majority of the firms, 60% of them, combine both modes of innovation. They use a mixed strategy of informal experience-based learning with activities that indicate a strong capacity to absorb and use codified and scientific knowledge.

3   Conclusion

Our analysis has produced some important findings. Firstly, high percentage of material inputs and supplies of foreign origin increases probability to introduce innovations. Nevertheless, the firms, importing domestically produced inputs, are less likely to innovate. According to theory, the import of foreign intermediate inputs is more than simply purchasing foreign goods and passively installing it. Whole process includes the development of technological capabilities to introduce new technologies developed abroad, to absorb and use them efficiently, and to adapt them to local conditions. In Kazakhstan, import facilitates the assimilation of skills and knowledge embodied in goods. As a result it enhance local capabilities, since it requires activities required to adopt, adapt, repair and commercialize new inputs. The results confirm that Kazakhstan innovate mostly absorbing new knowledge and technologies embodied in import. Import may involve the purchases of foreign intermediate inputs as well as the import of machinery and equipment. Therefore, reverse engineering and learning-by-doing may take place.

The second finding is that foreign imports and the presence of foreign ownership increase the ratio of new product sales. The explanation can be that imports are accompanied by the absorption of new knowledge and skills. The introduction of new products always requires some experience and practice in launching new production. Usually, purely or partly foreign ownership is associated with new knowledge and experience embodied in personnel. This significantly contributes to the introduction and commercialization of "new to firm" products. However, foreign presence is critical only to firms´ capability to launch new product rather than to introduce innovation. This leads us to conclude that the firms with the high ratio of new product sales are mostly foreign companies.

The comparison of results at regional and national levels showed that imports do not influence firms' decisions to launch new product lines in the East region nor at national level. In both cases, foreign presence increases a firm´s probability to introduce new products. Regression results indicated the insignificance of the size variable at the regional level, where most of the firms introducing new products are large.

Exports are only statistically significant in high-technology industries such as chemical, electronics, machinery and equipment, and fabricated metal products. The relationship between industry characteristics and the likelihood to innovate appears to be complex. The extent of technological opportunity, foreign ownership and firm size are not important determinants of innovation. However, a larger number of employees is associated with a higher probability to sell new products. Unsurprisingly, manufacturing industries innovate more than non-manufacturing ones because they are more involved in international trade. The innovation performance of services industries and construction depends heavily on imports, which is also consistent with theory.

Our finding that firms in the low learning cluster are all firms with less than 50 employees supports the "Schumpeterian hypothesis" of the relative innovative advantage of large firms where markets are characterized by imperfect competition (Schumpeter, 1950). Since the innovation activity is positively correlated with R&D expenditures, large firms invest and innovate intensively than small and medium size firms. The evidence from our analysis confirms that business R&D expenditure (88%) are predominating over the public R&D expenditure.

Our findings are particularly important and relevant for metallurgical cluster. Mining and metallurgical sectors usually requires the large amounts of capital investments for long period of time under conditions of substantial technological, geological and market risk. Therefore, only large firm is able to take large up-front investments with long time of payback possibilities. Almost all firms in the low learning cluster belong to the Casting of other non-ferrous metals sector (code 24540). This can be explained by the technological nature of the sector, which is not technological intensive sector.

The majority of firms with employment higher than 250 employees adopted organizational practice designed to promote scientific and codified knowledge exchange, problem-solving and learning among their employees (DUI/STI modes). The small number of respondents does not give us opportunity to apply regression analysis in order to analyse the effect of learning modes on firm innovative performance, which might be an important topic for future research. Our research raised a number of problems caused by the lack of data and/or the interpretation of the data. For example, there are a large number of pseudo firms that seriously hampers the usefulness of the statistical information available. The high number of firms that do not actually exist may lead to an overestimation of the economic effect of the metallurgical cluster. Because of all this, it is difficult to achieve a meaningful description of the economic processes occurring in the East Region, so we want to conclude this

paper with a note of caution regarding statistical data in Kazakhstan. They should be treated with care, taking into account the particularities involved in gathering data about transition economies.

Allegories and Realities of Innovative China: The Case of Haier

Asst. Prof. Dr. Farrukh Kayani (COMSATS Institute of Information Technology, Pakistan)

Abstract

It is well recognized phenomenon that innovations are a strategic weapon for economic growth and they have played an important role in the industrialization of developing countries during the last few decades. Because of the conventional thought that China produces sub-standard goods; the term innovative China sounds like a myth. But in reality China has made tremendous progress in producing innovated goods. To support this view, in this paper, we have thoroughly discussed the case of Haier Company. Haier is one of the very successful stories of Chinese companies which absorbed the foreign technology and climbed up the technological ladder. The innovation target of Haier is very ambitious: two successful intellectual patent applications every work day. By building this firm innovation foundation, Haier was able to aggressively enter and establish a repute in the global appliance market.

1 Introduction

The Social Economic Zones (SEZs) have gained huge importance in this era of globalization as countries are shifting from import substitution strategies to export promotion policies. SEZs are geographically separate small areas of a country where governments provide special fiscal and financial incentives to foreign and domestic firms for boosting the exports. Developing countries offer various kinds of incentive packages to attract Multinational Corporations (MNCs) from developed and middle-income countries. These incentives are usually divided into "soft" and "hard" ones (Kusago and Tzannatos, 1998). In 1978, the Chinese government decided to move away from Soviet-style economic policies and to gradually reform the economy towards free market principles.

(Wong, 1987) mentioned that countries establish SEZs for employment creation, technology up-grading and foreign exchange earnings. SEZs as a means of attracting foreign investment and technology along with promoting Chinese exports. By granting special investment incentives to foreign investors, it was hoped that an export-oriented industrial base might be created in the SEZs via foreign capital and technology. Many of these privileges were also extended to domestic firms to encourage their participation in the SEZs and thereby increase their contact with foreign technology and managerial skills.

(Aggarwal, 2007) has discussed three aspects of SEZs i.e. employment generation, skill (human capital) formation and technology up gradation. Each aspect exerts two types of effects i.e. direct and indirect. For instance, the employment would be directly generated when the SEZs would hire labor. The indirect employment would be generated through the demand for complementary goods. Similarly, the skill formation effect operates directly when they acquire the skills by working in the SEZs. The spillover effects would take place through the movement of workers to domestic firms. The SEZs would also result into technology transfer to domestic firms.

(Johanson and Vahlne, 1977) stated that with the increasing internationalization, lots of businesses are emerging on the globe. For firms, to survive and to earn a leading role in the fierce competition, unremitting innovations are of immense importance. A number of studies in international business field show that the internationalization of a firm is an incremental process, that is, a firm should gradually increase its international involvement. There are several theories that focus on internationalization process of a firm on "its gradual acquisition, integration and uses of knowledge about foreign markets and operations and on its successively increasing commitment to foreign markets".

Haier is the single most extensive producer of exhaustive family machines in China. It has developed from a minor undertaking to being one of the advancing family apparatuses of China. In 2007, Haier had worldwide sales of worth RMB 118 billion and it employs 50,000 individuals worldwide.

The overall sale pattern of Haier Electronics Company, for the years 2008 to 2012 is provided along with forecasted sale in the same year as well as for the years 2013 and 2014, is provided in Figure 1.

We see an upward trend which shows an increase in sales. The forecast till year 2012 is very close to the actual sale, which shows the accuracy of the forecast sales. For the subsequent years after the year 2012, we expect the same pattern of the Haier's sales..

Haier has been the business guide in the Chinese family electrical machine industry, with a piece of the pie of 21 % for generally speaking apparatuses, 34 % for white merchandise and 14 % for modest electrical machines.

Figure 3: Actual vs Forecasted Annual Sales (2007-2015) Source: http://www.4-traders.com/
Today it makes about 15,100 feature mixed bags in 96 item lines. Over the period of time, Haier has not just upgraded the value but aid, objective and innovative proficiencies as well. In 1993, nine years following its establishment, Haier was certain enough to start a worldwide IPO. The role of present CEO of Haier in upgrading the quality of products is obvious. His order of destruction of 76 defective refrigerators was a symbolic step of moving towards quality production.

In 2003, the Haier brand topped all Chinese trademarks in a nationwide survey. The Chinese Fortune Magazine (issue 8/2004) appraised Haier the second in their catalogue of most obviously appreciated ensembles in China. In this rating Haier was observed as number one in the fields of administration display, development capacity and social obligation. In 2004, Haier was distinguished as one of the World's 100 Most Recognizable Brands in a worldwide name mark post altered by the World Brand Laboratory 10.

As per 2006 Euro-monitor statistics on outfit bargains, Haier has the most extensive planet business sector mark impart for fridges, and it is the fourth right around the worldwide white merchandise makers. Among 2003 and 2006, Haier ranked first in terms of the most part initiative right around terrain Chinese ensembles in the Wall Street Journal Asia's anniversary study of Asia's 200 Most Admired Companies. In 2008, Haier ranked 13th on Forbes' Reputation Institute Global 200 record. In addition in the same year, Haier ranked first around Chinese endeavors on the Financial Times record of the most exceptionally regarded worldwide teams (Duysters, Jacob, Lemmens and Jintian 2010). This short article thoroughly discusses the historical development, diversification process and globalization strategies of Haier Company in China.

2   Haier's Historical Development

Haier group started to work in 1992 by renaming the Qingdao Refrigerator plant which was shaped in 1984. In 1984 an organization together with Liebherr was created following a watchful assessment of 32 potential agreeable confederates. Haier transported in Liebherr's four-star fridge processing innovation and gear to China. Liebherr had 70 years of interaction in generating brilliant fridges. The Chinese features were a few star advances and obsolete-formed with a solidifying ability of – 12 degree Celsius. The solidifying ability of Liebherr's four-star innovation was – 18 degree Celsius. Haier ended up being the just Chinese ensemble to give four-star refrigerator mechanics following the partnership with Liebherr.

Following collusion, Haier sent above and beyond 40 of its beat engineers and managers to Liebherr for developing. Liebherr authenticated to be a truly fruitful teaching establishment for Haier's beat R&D talents. They concentrated on the growth of four-star refrigerator, and possibly aced the crux innovative aptitudes needed for improving progressed fridges. In 1985, a year following it permitted Liebherr's engineering, Haier was fit to present its first four-star icebox in the Chinese business. This feature immediately secured Haier as the advancing refrigerator maker in China.

3   The Process of Haier's Diversification

In 1991, Haier started to diversify. Haier also started to produce air-conditioners and freezers besides refrigerators. Haier took three years to establish repute in these two industries. In 1991, the sales and profits of Haier were RMB 724 million and RMB 31.2 million respectively. Whereas in 1994, Haier's sales and profits had grown to RMB 2.56 billion and to RMB 200 million respectively. Subsequently, Haier developed washing machines, microwave ovens and water heaters. In 1997, Haier entered into the production of black household appliances. Table 1 summarizes the processes of Haier's diversification over the time.
Figure 4: *Revenue over the time (2008-2012)* ***Source:*** *http://markets.ft.com/*
Figure 5: *Net Income over the time (2008-2012) Source: http://markets.ft.com/*

Stage	Period	Diversification Area	Procedure
1	1984-Dec 1991	Refrigerators	Imported refrigerator technology from Liebherr Company of Germany.
2	Dec. 1991- Jul.1995	Freezers Air-conditioners	Acquired Qingdao Freezer General Plant and Qingdao Air-conditioner Plant.
3	July.1995-Aug.1995	Washing machines Microwave ovens Water Heaters	Acquired Red Star Electric Appliance Factory and established a joint venture with Laiyang of Shandong Household Appliance General Plant.
4	Sept. 1997	Black household Appliances	Established a joint venture with West Lake of Hangzhou Electric Group.
5	1998	Knowledge sectors	Formed technology cooperation with many external organizations

4 Provision of Services by Haier

With the idea of "customers as the foundation of growth", Haier furnishes a one-stop star aid to its clients. In a joint review directed by the China Consumer Association and the China Enterprise Research Centre of Tsinghua University on China's domesticated sturdy items for 2003 and 2004, eight of Haier's feature classifications were ranked No. 1 for client fulfillment and for the most part fulfillment. Notwithstanding excellent home apparatuses, Haier is additionally centered on offering greatest-of-breed aid answers to its clients. Haier's aid framework runs all through the preparation method from item plan, preparation, assembling, to pre-deal, under deals and following deals fix. Inasmuch as 2002, Haier has efficaciously secured an arrangement of over 5,000 household pro aid suppliers to transport auspicious redid utility.

5 Internationalization Strategies

Haier is the first Chinese firm to buy a fridge production line in the European Household apparatus segment. It made the first European acquisition in 2001 by getting refrigerator manufacturing plant in Italy. The reason for this acquisition is to enhance range and production capacity. Haier has several abroad modern stops in the United

States, Pakistan and Jordan. In particular, it has 30 abroad plants and 58,800 deals executors worldwide. It sends out its items to more than 130 nations in Europe, Asia, Middle East and North America. The predominant production plant of Haier was in Yugoslavia under a joint wander with a neighborhood community. Haier is transforming coolers, freezers, clothes washers, dishwashers, microwave broilers and modest machines for the European business. European and North American business sectors elucidate about 60 percent of Haier's fares. In Asia, it has engaged in the business sectors of Indonesia, Philippine, Malaysia, United Arab Emirates, Algeria, Bangladesh and Iran through joint ventures.

Haier has received a few guidelines for its globalization policy. Under this guideline, one-third of its features are both handled and sold in its home nation and the other on one-third of the items are handled in home nation but sold abroad, and rest of the items are both handled and sold abroad. Under the worldwide extension procedure, Haier's method is to move from challenge to simplicity i.e. dropping in additional propelled business sectors first. It is vital to drop in the more progressed businesses first with a specific end goal, which is to increase more brand recognition.

In the European Union, Haier entered in the German business sector first. Germany is recognized as a troublesome business sector to enter in. Scrutinize systems possess a foremost place in the development and innovative advancements of any immovable. In this respect Haier has engaged in accommodating scrutinize systems with acclaimed unfamiliar firms. The proposed helpful systems furnish Haier qualified information about global slants in innovation improvement. Haier's worldwide mechanics cooperation compass Tokyo, Los Angeles, Montreal, Lyons, Seoul, Sydney and Amsterdam. The accommodating associates of Haier incorporate Toshiba, Mitsubishi, ESS, Philips, Metz and Lucent.

6 Haier's Secret of Success

Haier's success lies in the careful positioning of the products rather than only selling its products at the lowest possible prices. The products that accommodate the local specificities were made along with the identification of the niche markets. They are a lot of examples where Haier's products accommodated the local requirements. In Indonesia, Haier presented power saving adaptable-voltage apparatuses due to nation's capacity deficiencies and voltage variances. Haier presented a fridge with fold-out table in United States so as to target the scholars who are residing in dorms.

In China, Haier advanced a clothes washer that washes both the garments and vegetables. This model is offered to target the people of country territories. In France and Italy, Haier first sold out the iceboxes in light of strategic explanation. As the ventilation system business sector being comparatively a brand new mark was not imperative. The different item lines for example iceboxes and clothes washers were presented later following making its mark. Haier additionally presented brand new classes of products similarly as wine cellar room for American market. At first, Haier confronted weighty challenges in influencing the clients regarding the handiness of this feature. Anyway, now Haier's this item has a stupendous demand in the American businesses.

7   Conclusion

The products of Haier are sold in over 100 nations. The sales of Haier's production are about RMB 118 billion and it employees more than 50,000 workers across the world. Haier with its innovation spirit is a pioneer of Chinese enterprises globalization and brand building. Haier has emerged into a hefty multinational corporation, and it keeps on expanding its business in China as well as in abroad, such as North America, Europe, and Asia. Over the passage of time, Haier has advanced a noteworthy international R&D system. The ambitiousness of Haier's plan is reflected in its innovation target: two successful intellectual patent applications every work day.

Opinions on the Political Economy of the New Turkish Healthcare System

Prof. Dr. Aysegül Kaptanoğlu (Trakya University, Turkey)

Abstract

Turkish health care system is going on health care transitions nowadays. Fundamental role of government in providing, financing and managing public services, including health care are changed. Health care marketers insist that competition and aggressive management will raise health care productivity. Health economist suggests that health is a public service and has a value. The Health Care System in Turkey is financed by public funds, compulsory insurance premiums and delivered (90%) by The Ministry of Health (MoH) that also manages the system. For the sustainability of universal access to health care special insurance programs according the rule of political economy should be built. Poor and severe ill people who cannot work and elderly may not get access to public medical insurance. So, for contributing to the nationwide public health care system rich people could give some extra insurance premium and obtain additional private insurance as well. Referral chain might be established in the country in between primary, secondary and tertiary care.

1 Introduction

The purpose of this article is to draw up a brief global picture of political health economy in Turkey. In order to understand what is going on Turkish Health care system, there is a need for closer look to the context. Turkish Ministry of Health has initiated the Health Transition Program. "Health Transformation Programme" launched by the Turkish Government in 2003. Structural deficiencies of health care system were universal health insurance, access and quality of healthcare services for all citizens in needs, the strong establishment of the Primary Health Care Network via family practice. By this way the role of the Ministry of Health, change of the legislative environment, autonomy of healthcare facilities, capacity building and health professional training, health information systems as well as drug and medical devices independent control institutions. Turkey has 44 JCI certified hospitals, approximately 100 internationally standardized private hospitals and more than 1000 Turkish Republic Ministry of Health accredited hospitals with 60 university hospitals (Karadeniz. 2012). The Health Care System in Turkey is financed by public funds, compulsory insurance premiums and delivered (90%) by The Ministry of Health (MoH) that also manages the system. Healthcare providers are classified as physician, dentist, nurse, health officer, midwife and pharmacist etc. There is not a referral chain in the country yet.

Transformation in Health Care in Turkey has 4 major components. (Sharma, 2013).

1) Prime based general health insurance,

2) Determining the role Ministry of Health as overall planning, coordination and evaluation.

3) Solo practice of primary care by contracted family doctors.

4) Change of payment schedule for health care staff (fee for per capita + fee for service).

Until 2013 health indicators have improved, as observed in Table 1.

Indicators	1960	1980	1990	2000	2005	2013**
Population (million)	27,7	44,7	56,4	67,8	73,2	79,0
Infant mortality rate (%0)	>150	126	67	28.9	23.6	18.5
Total fertility rate (births per woman)	>4	3.41	2.65	2.27	2.19	2.07
Life expectancy at birth (year)	< 60	61.9	66.3	70.4	71.3	72.3
Population per hospital bed	>500	451	469	391	374	336
Population per physician	2,799	1,631	1,109	792	715	658

***Table 1.** Changes of some selected health indicators **Source:** Turkish Statistical Institute database and 9th strategic development plan report*

Health care is an important component of an economy. Health care technologies have advanced rapidly in the past few decades and the demand for health care continues to grow, health care expenditures have been increasing steadily in industrialized nations (Eatwell, J., Milgate, M. and Newman, P. (eds) 1987). In the Turkey, for example, health care expenditures as a share of the gross national product (GNP) grew from 4.4 percent in 1970 to 6.7 percent in 2009

2 Definition of Political Economy

The "political economy is the science of wealth" and "deals with efforts made by man to supply wants and satisfy desires". The political economy of health care has complex procedures (Hart, 2008).
Figure 1. The political economy

Efficiency and equity of heath care services to be the main concern of political economy. Political economy is the study of the role of economic processes in transforming society (Campos, Rafael, 2011). This economy makes extensive and intensive use of important analysis in making sense of society and history. This branch of economy does not deal with the context of political, cultural, and environmental processes, as well as other economic processes (Devi, Ngaire 2013).

3   Measuring Health Care System

The health care system gain can be measured by healthier births, lives, and improved patient's health etc. The most important result of the health care system is health gain that can be measured by quality of life (qaly) per year. Qaly is able to combine 'the effects of health interventions on mortality and morbidity into a single index'. This single index might provide a 'common currency' for comparisons across different chronic illness and health intervention. For example Qaly is calculated as follow:

Patient A has a serious, life-threatening condition like Leukemia.

If he continues receiving usual standard treatment A will live for 1 year. The quality of life of A will be 0.5 (0 or below = worst possible health, 1= best possible health)

If A receives the new drug, A will live for 2 year with a quality of life of 0.7.

The new treatment is compared with standard care in terms of the Qaly's gained:

Standard treatment: 1 (year's extra life) x 0.5 = 0.5 QALY

New treatment: 2 x 0.6 = 1.2 Qaly

Therefore, the new treatment leads to 0.7 additional Qaly's (that is: 1.2 -0.5 Qaly = 0.7 Qaly's).

The cost of the new drug is assumed to be £ 5,000, standard treatment costs £ 2000.

The treatment costs of leukaemia (£3000) are divided by the Qaly's gained (1.2) for calculating the cost per Qaly. So the new treatment would cost £ 2500 per Qaly. The well-organised political economy for health care system including whole population can help to sustain good mortality.

4   Political Economy Created by Turkish Health Care System

In 2003, the health transformation project started to be implemented. One of the main goals of this project was to increase accessibility to health care services. According to the results of this project, health expenditures increased rapidly. It was 3.86 of GDP in 2004. It reached 5.13 % of GDP in 2009. Financing of healthcare led to a decrease in direct out-of-pocket expenditures (OOP) and the private health sector that expand all over the big cities. According to the current official data from the MoH, the level of OOP has fallen to 16.7 %. According to the Ministry of Health's review (2012), the total health financing was at 7.4 % levels. This trend shows that public spending and resource allocation on medical costs in relations to income has caused major concerns over the social and economic consequences to an increasingly larger segment of the population. The health service availability has been improved. The population has a big increase in hospital utilization. In times of illness, low-income families are not trying to find money for needed treatments in case if they paid some amount like 30-90 Turkish Lira monthly. All family member spouse or husband can profit within this amount of money.

5 Health Insurance in Turkish Health Care System

The compulsory health insurance system in Turkey was firstly introduced in 2012 to cover all citizens. Government officials, state employees and staff of large invested companies are paying according to their wages. Their insurance covers all family member like spouse and mother, father. Those considered indigents such as war heroes, war invalids and all children below the age 18 are paid by government funds. Today, about 20 million Turkish who are not poor or disable are uninsured. Those people do not work anywhere else. Expanding insurance coverage is planned to reduce OOP payments, but most studies have found only a modest effect. The design of current insurance schemes has made the poor paying hospital fees for the rich and extracts insurance refunds from poor provinces to wealthier cities. It is state officials and urban elites that are the main beneficiaries of the insurance refunds as insurance coverage and refunds are to cover mainly high-class curative care and in-patient services in urban and centralized hospitals.

The health insurance refund system is facing major challenges in containing costs, involving dysfunctional rules and informal arrangements in which corruption incurs. There is hardly any effective mechanism to record, report or measure service costs and adverse insurance selections. Neither can they control doctors in their prescriptions and consultations involving duplication and falsification of doctors' medical records to claim refunds and medical reimbursements. Furthermore, pharmaceutical companies can lobby, or often pay bribes, to make their drugs included in insurance lists. Once on the lists, they encourage physicians to overprescribe expensive medications and laboratory tests.

6 Management and Productivity in Primary Care

Everyone in Turkey has a free access to a family practice center functioning as a personal physician. Currently, there is not a compulsory referral system in Turkey. MoH points to the inadequate number of primary care physicians for not being able to initiate referral chain obligation. An efficient gatekeeper role is needed for an effective primary care in the country. In 2013, Turkey has 1.7 physicians and 1.4 nurses per 1000 people. There is a serious demand of health staff for primary care health services. Clinical productivity of primary care has not been taken seriously until yet. There have been successive revisions designed to encourage proactive work considered by government likely to raise outputs of health care and to shift responsibilities for ambulant care from hospital outpatient departments back to primary care, particularly for continuing care of chronic health conditions like COPD, diabetes, hypertension etc. MoH of Turkey had been concerned almost exclusively with satisfying users rather than verifiably improving either their health, the health of their communities or their efficiency as gatekeepers to hospital based specialists. Everyone had free access to go secondary and tertiary care for undifferentiated, unprioritised public wants. Therefore, iatrogenic risks could not be avoided. The economic consequences of its loss in Turkey need to be calculated. Hospital based specialists are seen as a good doctor in the form of public opinion. Patients do not trust primary care physicians. They only apply to primary care whenever they need to repeat their prescriptions. Another main reason of application is oblige physician to write false illness report. Media side also report that primary care physician knowledge and health service is insufficient.

7 Management and Productivity in Hospital Based Care

Health services create jobs. This is increasingly labor intensive rather than capital intensive. The expansion of this work area depends in large part on further developing the skills of its workforce. If health care expands, it means that everyone wins economically. In recent years, mostly machines replaced agriculture and manufacture sectors instead of human labor. But, productivity labor in health care would still depend on increasingly very sophisticated human skills. Patients act as a co-producers rather than clients. As a result the health sector is expected to grow gradually every year. Health professionals would become relatively more costly to employ. In the very near future spending on health care in hospital would rise. The cost of health care is attributable to wages. If physicians are paid by capitation, they want to keep their patients as customers.

8 Conclusion

Healthcare systems are in crisis worldwide with rising rates of diseases and a growing gap between the poor and rich. The modern healthcare systems focus on benefitting individuals rather than communities (Ren, 2013). According to the rule of liberalism private healthcare is supported to provide quality healthcare only to those who can afford it. Budgetary cuts generally come at the expense of the primary determinants of health. Political economic gains are focused on the short-term healthcare system.

Pharmaceutical industry, medical profession unions, World banking institutions and political decision makers, think tank institutions challenged neoliberal assumptions directly to prevent the medical profession, health economists and public health practitioners in some instances (Sarbo, 2013). Financial support for health care would become a predominant consideration in the Turkish health system in near future. Turkey has adopted

blended payment systems that consist of a salary-like base supplemented by incentive payments with revolving funds. These payment reforms would not lead to the recreation of a "gatekeeper" system. Patients would continue to access to hospital based specialists. For the sustainability of universal access health care special insurance programs according the rule of political economy must be done. Poor people, severe ill people who cannot work and elderly may not get access to public medical insurance. For redistributive reasons, the rich who contribute to the nationwide public health care system could give some extra insurance premium and obtain additional private insurance as well. The aim of Turkish's health reforms is to ensure all citizen s access to general health care in case if they regularly pay the insurance premiums according to their income (especially the informal economy). Tertiary care physicians might select patients who need extra health care services like diseases. Process indicators might audit those physicians. To solve the political health economic insurance problem actions might be taken by health care providers, patients (consumers), policy makers, and health care industry. The important mater is that public health economic source is for health profit of all citizens of nations (Idrissa, 2013). The political economy of health in Turkey faces several challenges. Ageing population has a moderate challenge to long-term financial sustainability. The major challenges is linked to the labor market and weaknesses in resource allocation, purchasing and provider payment. Strengthening health care-financing policy can address many of the inefficiencies in resource allocation and health care utilization that exacerbate cost pressures.

Küreselleşmiş Dünyada Sürdürülebilir Gelişme Açısından İşsizliğin Önemi

The Importance of Unemployment with respect to Sustainable Development in the Globalized World

Prof. Dr. Levin Özgen (Abant İzzet Baysal University, Turkey)

Abstract

Unemployment is in a continious increasing trend during the 2000s in the globalized world. This fact have negative implications in accordance with the sustainable development which is the main development approach in the discourse of the globalized world. Main reasons of the unemployment in the globalized world may be explained throughout the changes and transformations in the labor process and production organization due to changing phiylosophy and regime, process and mechanizms of the capital accumulation of the capitalist system which has been based on the neo-liberal economy policy. A study about unemployment and it's implications may be realized by using the system method and consideretaions on emerging facts and literature. After the brief explanations related to unemployment, globalized world and sustainable development, basing on the some statistical data and literature, changes in the labor process and production organization may be taken in hand. Some implications of the unemployment for sustainable development may be discussed. In this study unemployment and it's sources were taken in hand by considerations on some data and literature. Finally, some solution propositions were tried to set up for unemployment.

1 Giriş

Bu çalışmada küreselleşmiş dünyada sürekli artma eğiliminde olan işsizliğin sürdürülebilir gelişme açısından önemi üzerinde duruldu. Çünkü önceki dönemin ve Keynesyen ekonomi politikaların önem verdiği ve tam istihdam politikaları içinden çeşitli çözüm uygulamaları ortaya konulabilen işsizlik sorunu, 1980ler sonrasında sürekli artış içinde olmasına karşın benzeri bir önem verişe konu değildir. İşsizliğin özelliklerinin de bu süreçte değiştiği öne sürülebilir. Bu duruma karşın küreselleşmiş dünyanın dayandığı neo-liberal politikaların işsizliğe çözüm önerilerinin yetkinliği de tartışmalıdır.

Çalışmanın sorunsalı 1980ler sonrasında sürekli artan, özelde 2000li yıllarda kalıcılık gösteren işsizlik olgusunun sürdürülebilir gelişme üzerindeki olumsuz etkileri bağlamında özelliklerinin, kaynaklarının ve olası tehlikelerinin irdelenmesidir. Kapsam olarak küreselleşmiş dünyada ve sürdürülebilir gelişme açısından, emek / iş süreci, ulus üstü üretim organizasyonu gibi çerçeveler ele alındı. Çalışmanın zaman ve mekan boyutu 2000li yıllar ve Avrasya coğrafyasındaki ülkeler özelinden hareketle küreselleşmiş dünyadır.

Çalışmada kullanılan malzeme dünya işsizlik istatistikleri, işsizlik, sürdürülebilir gelişme / kalkınma ve küreselleşmiş dünya üzerine yazın ve tartışmalardır. Yöntem olarak kuramsal irdelemelerden yola çıkan, işsizlik üzerinde irdelemeler yaptıktan sonra yeniden kuramla bağlantıların kurulduğu sistem yöntemi ve karşılaştırma yolu kullanıldı.

Çalışmanın temel savı ve bulgusu küreselleşmiş dünyada sürekli artış kaydeden işsizliğin yapısal olma özellikleriyle kalıcılık dinamizmi taşıdığıdır. Bu durumun ilgili unsurları ve bağlantılarıyla birlikte insanlığın barışı ve huzuru bakımından, özelde ise en azından sürdürülebilir gelişme açısından önemli sorunlar ve engeller yaratacağıdır. Bu bağlamda üzerinde toplumsal uzlaşı sağlanacak rasyonel, uzun soluklu ve kalıcı çözümlerin geliştirilmesinin zorunlu olduğudur.

Bu yaklaşımlarla çalışmanın metni beş kısım üzerinde kurgulandı. Birinci kısım olan Giriş'te çalışmanın konusu, konunun önemi, ana sorunsalı ve kapsamı, sınırları, kullanılan malzeme ve yöntemi ile temel savı ve bulgusu yerleştirildi. Metnin yapısı açıklandı. İkinci kısımda işsizlik hakkında genel tanımlara, açıklamalara ve tartışmalara yer verildi. Üçüncü kısımda küreselleşmiş dünyadaki gelişme ve kalkınma yaklaşımları bakımından sürdürülebilir gelişme yaklaşımı tanımlandı. Bunun üzerinde işsizliğin etkilerine bakıldı. İşsizlik ile ilgili istatistiksel verilere ve çeşitli yaklaşımlara yer verildi. Küreselleşmiş dünyadaki işsizlik özelliklerine ve olası risklere değinildi. Neo-liberal ekonomi politikaların ve uygulamaların işsizliğe ilişkin çözüm önerileri irdelendi.

Dördüncü kısımda küreselleşmiş dünyadaki işsizliğin kaynaklarına ilişkin yaklaşımlar, emek sürecinde ve üretim organizasyonunda ortaya çıkan değişmeler, sanayi ve hizmet sektörü ile doğrudan yatırım ve mali sermayeler arasında önem bakımından yer değiştirme, hizmet sektörünün sanayi sektörü aleyhine önem kazanması ve genişlemesi gibi olgular irdelendi. Mikro-elektronik teknolojilerindeki gelişmelerin küreselleşmiş dünyaya sağladığı olanaklar yerleştirildi. Ortaya çıkan yeni birikim düzenlemesi üzerinde duruldu.

Beşinci kısım olan Sonuç kısmında çözüm önerileri getirilmeye çalışıldı.

2 İşsizlik Üzerine Genel Açılımlar

2000li yıllarda, küreselleşmiş dünyada işsizliğin sürekli artış eğiliminde olduğu yazında sıklıkla dile getirilen bir olgudur (Boratav; 2007, Kepenek; 1990, MÜSİAD; 2012, ILO; 2012). Neo-liberal ekonomi politikalar bakımından bir sorun olarak önemini yitirmiş bir olgu gibi görünse ve yine bu politikalar ışığında çözümler önerilse (Rosas ve Rossignotti; 2010) de işsizlik insanlık açısından önemli bir sorundur. Küreselleşmiş dünyanın temel söylemlerinden ve hedeflerinden biri gibi görünen sürdürülebilir gelişme / kalkınma açısından insan kaynaklarının sürdürülebilir değerlendirilmesi, kullanılması bakımından ise yaşamsal önemdedir.

İşsizlik genel olarak bir kişinin çalışabilir durumda ve çalışmaya istekli olmasına karşın işsiz kalması, bir iş bulamaması şeklinde tanımlanır. Tanımın, işsizliğin, açık, gizli, yapısal, geçici, teknolojik, mevsimlik, konjonktürel, istihdam daralması, isteğe bağlı, istem dışı gibi türleri dikkate alındığında daha geniş açıklamalara taşınabileceği görülür.

Nüfus ve demografik çerçevelerle ilişki kurularak ekonomik aktif işgücü olan kesim içinde işi olmayan, çalışmayan kesimin yarattığı bir olgu olarak da vurgulanabilir. Çalışan ve çalışabilir durumda olan toplam işgücü ve bunlara dönük istihdam kapasitesi arasındaki denge önemlidir. Bunlar ücret / maaş gibi ödemeler karşılığında bir kurum ve işveren hesabına çalışırlar.

Uluslararası Çalışma Örgütünün (ILO) ölçütleri ile 14 – 65 yaş arasındaki nüfus kesimi ekonomik aktif işgücü olarak kabul edildiğinde bu grubun içinde ücret, maaş gibi çalışma karşılığı sağlanan gelirden işsizlik durumunda mahrum kalınır. Bu bağlamda çalışabilir durumda olan nüfus kesimi içinden bir kısmının kendi adına çalışan girişimci, kendi işini kuran olarak kabul edilmesi söz konusudur.

Yine nüfus ve demografik özellikler bakımından değerlendirildiğinde, işsizlik, 0-14 ve 65 yaş üstü yaş gruplarının oluşturduğu bağımlı nüfus miktarı yüksek ise daha yaşamsal bir sorun haline gelir. Daha geniş bir kitlenin karşı karşıya olduğu bir soruna dönüşür. Bu nedenle işsizliğin bir sorun olup olmadığı, sonuçları ve toplumsal barış, gelişme gibi açılardan taşıdığı risklerin, tekil verilerin değerlendirilmesi ile değil, nüfus ve demografik özellikler ile bağlantılı ve aile yapısı, hanehalkı büyüklüğü ve hane reisi gibi verilerle karşılıklı etkileşim içinde ele alınarak değerlendirilmesi gerekir. Aynı yaklaşımla işsizlerin ya da tersi olarak istihdamın nüfus gruplarına göre ayrımlandırılması ve değerlendirilmesi yerinde olacaktır. Örneğin genç kesimin işsizliği, yüksek eğitim mezunlarının işsizliği ya da orta yaş grubunun işsizliği veya kadınların işsizliği gibi çeşitli toplumsal kesimlerin işsizliğinin her birinin geniş bağlamları nedeniyle ayrı bir önemi vardır şeklinde kabul edilmesinde yarar vardır. Her biri için çözüm önerileri politikaları ve uygulamaları farklı olacaktır.

Yazında ve ilgili yasal düzenlemelerde işsizliğin genel nedenleri, bulunan iş türü için uygun olmama, sahip olunan becerinin/işin ilgili olduğu sektörün ekonomik sıkıntıda olması, açık iş sayısının veya istihdam kapasitesinin az olması şeklinde sayılır. İşsizlik yaratıcı nedenler olarak ülkenin ekonomik durumu, dış alımın / rekabetin yarattığı üretim gerilemesi, yeni işyeri açılmasını engellemesi gibi olgular öne sürülür. Yanı sıra işsizliğin ortaya çıkmasında gelişen teknolojinin rolünden, sanayilerin gerilemesinden ve kapanmasından da söz edilebilir.

O halde işsizliğin ülkenin ekonomik yapılanmasında sektörlerin birbirine göre konumu ve hiyerarşik sıralamadaki yerleri, nüfusun kırsal ve kentsel dağılımı, nüfusu kırsal ve kentsel mekanda tutan yatırımlar, bunlara bağlı olarak istihdamın özellikleri ve kapasitesi, istihdama ve emek pazarlarına ilişkin politikalar ve yasal, kurumsal düzenlemeler gibi olguların bir arada etkileşiminin sonucu olduğu öne sürülebilir. Bu yaklaşımla işsizliğe ilişkin çözüm önerilerinin ve uygulamaların bu ana çerçeveler içinden ortaya konması gerekir.

Çeşitli ekonomi politikaların böyle bir tutumu benimseyip benimsemediği, ne ölçüde bunları pratiğe aktardığı da işsizliğin ele alınış şekline ve içeriğine ilişkin ipuçları sunabilir. Bu çerçevede Keynesyen ekonomi politikası bakımından tam istihdam yaklaşımı, dönemin devlet /kamu anlayışlarıyla bütünleşen, sosyal devlet, sosyal refah uygulamaları, sanayileşme, hızlı kentleşme olguları ile denk düşen, onları içselleştiren bir yapı taşır. İşsizlik bu nedenle ciddi bir sorundur. Eksik istihdam pazarın dengesini bozucu bir rol üstlenebilir. Sosyal hukuk devleti yaklaşımı içinde bunun çözümünden kamu sorumludur.

Oysa neo-liberal ekonomi politikalar açısından pazar dinamiklerinin özgürlüğü önemlidir. Buna dışarıdan müdahale edilmemesi gerekir. Pazar kendi içinde denge sağlayacaktır. O halde devletin veya kamunun pazarı dengelemek üzere müdahale etmemesi, öteki deyişle yatırımcı, girişimci, üretimci ne olursa olsun üretim ve istihdam süreçleri içinde yer almaması gerekir. Emek pazarına, istihdam olanaklarına da karışmaması söz konusudur. Sosyal devlet anlayışı, sosyal refah ekonomi politikaları ve uygulamaları, pazarın bu özgür işleyişini zedeleyen, haksız rekabete yol açan bir unsur olarak görev üstlenmiş olacaktır. Oysaki serbest pazar ilişkileri içinde özel sektöre yer açılması, hatta öncelik verilmesi gerekir. Böylece özel sektör verimliliğini, karını en çoğa çıkartmak için en uygun emek / iş sürecini ve üretim organizasyonunu kurabilir. Özel sektör, sermaye türleri serbest rekabet ortamı içinde, sektörlerin önem sıralamasındaki ve firma tiplerindeki değişmelere dayalı ciddi bir yapısal dönüşüme de uğrayarak zayıflıklarından kurtulacak güçlü bir yapılanmaya yönelebilecektir.

Bu olgularla işsizlikle ilgili veriler üzerinde geniş tartışmalar olduğu söylenebilir. Tartışmaların başında 1980ler sonrasında işsizliğin gerçekten artıp artmadığı gelir. Ancak çeşitli istatistikler artışın gerçekliğine ilişkin

fazlasıyla kanıt ortaya koyar (Aysu ve Dökmen; 2011, Kepenek; 1990, Kongar; 1998, Erarslan; 2010, ILO; 2012, Güney; 2010). Sayısal verilerin artış olmadığını ifade etmeye temel oluşturan yanları olan işsizlik tanımları da tartışmalıdır. Özel olarak ise kayıt dışı ekonomik etkinliklere ilişkin verilerin bulunmayışının da işsizliğin gerçek boyutlarının tam olarak değerlendirilmesini engellediği yolunda yaklaşımlar vardır. İstatistiki veriler ve sektörel analizler üzerine dayalı bir kısım çalışmada ise sürekli artış içinde olan işsizliğin bir histeriye dönüşüp dönüşmediği (Onur; 2011) ya da doğal işsizlik olup olmadığı ele alınır. Ancak pek çok bilgi 2000li yıllardaki işsizliğin gerçekten bir histeri oluşturacak denli kabus haline geldiğini doğrular durumdadır.

1980ler sonrasında yüksek boyutlara ulaştığı halde sistem tarafından önemli bir sorun olarak görülmemesinin nedenleri ise yine sistem içinden yanıtlanabilir. Bu yaklaşımla 1980ler sonrasında biçimlenen küreselleşmiş dünyanın emek sürecini, üretim organizasyonunu, öteki deyişle anılan dönemdeki sermaye birikim düzenlemelerini, sürdürülebilir gelişme /kalkınma yaklaşımlarını ele almak yerinde olur.

3 Küreselleşmiş Dünya ve Sürdürülebilir Gelişme

1980 sonrasında kapitalist sistemin yeniden yapılanma sürecine girdiği, bu sürecin giderek küreselleşme sürecini getirdiği savları, üzerinde farklı yaklaşımlar ve tartışmalar olmakla birlikte genel kabul görür. Küreselleşme sürecinin içinden en azından 2000li yıllarda yeni bir dünya yapılanmasının istikrar kazandığı, küreselleşmiş dünyanın biçimlendiği öne sürülür. Bu kapitalist sistemin yeni bir aşamasıdır. Sistemin temel unsurları, yapısı aynı olmakla birlikte çeşitli düzenlemeleri, sermaye birikim rejimi ve mekanizmaları, bunların içinde yer alan aktörleri değişmiş durumdadır. Bağlı olarak söylemi, ekonomi politikası ve uygulamaları da değişti (Freidman; 2000 ve 2006).

Küreselleşmiş dünyanın biçimlenişinde, dönemin bilişim devrimi olarak da görülmesine ortam yaratan mikro-elektronik teknolojilerindeki gelişmeler temel katkıyı sağlayan unsurdur denebilir. Her şeyden önemli olarak zaman ve mekan kısıtlılıklarının aşılmasına ortam yaratan bu gelişmeler, küreselleşmiş dünyanın, ağlar üzerinden işleyen, çevresinde, iletişim ağlarının oluşturduğu sanal bir evren ile kuşatılmış dünya olarak betimlenmesine kaynak oldu.

Bu ağlar üzerinde sermaye, mal, ve hizmetler kesintisiz, engelsiz, hızlı ve sürekli, çok miktarlarda bir akış içindedir. Hareket etmeyen yalnızca emek ve işçilerdir, çalışanlardır. Sermaye üretim yatırımları için ucuz, düşük ücretli ve örgütsüz işgücünün olduğu mekanları yeğlerken, mal ve hizmetler uygun alım gücünün yaratıldığı her yere, talebi de kışkırtarak sorunsuzca girebilir ve en küçük risk karşısında da çıkabilir durumdadır. Sermaye akışlarının çoğu mali sermaye olarak hizmet sektörünün en canlı ve verimli olduğu, düzensiz pazarları yeğleyebilmektedir. İmalat sermayesi ise üçüncü pazarlara yakın coğrafyalarda imalat işlerini tamamlatabilmektedir.

Bu ana çerçeveler içinden küreselleşmiş dünyada önceki dönemin kalkınma / gelişme söylemi, stratejisi ve siyasaları da dönüşüme uğradı denebilir. Kaldıki bunların çoğu dünyanın geniş bir kesimini oluşturan gelişmemiş, azgelişmiş, gelişmekte olan çoğu ülke için sorunlarla ve yetersizlikler ile doluydu (Chang; 2011, Chang ve Grabel; 2005). Dünyanın geniş bir kesimini oluşturan Avrasya coğrafyasındaki ülkeler ise bağımsızlıklarını küreselleşmiş dünyada ve sürdürülebilir gelişme yaklaşımları ortaya çıktığında kazanmış oldular. Bu ülkelerin sosyalizm deneyimi ve yapılanması ile kapitalist sistemin bu yeni aşaması arasında hemen kavranamayacak önemli yapısal farklar vardı. Yanı sıra bu ülkelerin bağımsız bir bütçelerinin, devlet yapılarının oluşması da zaman gerektiren olgulardı (ILO; 1994). Enerji kaynakları dışındaki sektörlerinin varlığı ve rekabet gücü de sorunluydu. 1989 sonrasında doğrudan küreselleşmiş dünya ve sürdürülebilir gelişme uygulamalarıyla, yabancı sermaye çekme, dünya pazarlarında rekabet gücü sağlayabilme sorunlarıyla yüz yüze kaldılar. Bu arada sürdürülebilir gelişme yaklaşımı ve uluslararası düzenlemeleri tüm dünya ülkelerini bağlayıcı bir düzeye ulaşmıştı.

Sürdürülebilir gelişme, 1990da Birleşmiş Milletlerin Ortak Geleceğimiz ya da Beyaz Kitap adlı çalışmasında, var olan kaynakların gelecek nesillerin kullanımını riske atmaksızın kullanılması olarak tanımlandı. Bu temel çerçeveye bağlı olarak başka tanımlara da rastlanır. Hareket noktası kapitalist ülkelerin eşitsiz gelişme dinamizmi göstermeleri nedeniyle toplumsal ve küresel barışın tehdit altında olması, üretimin gitgide genişleyen kapasitesi nedeniyle insanlığa ait kaynakların tahrip olmasıdır. Bu nedenle ekonomik büyüme tek başına anlamlı değildir. Önemli olan insanlıkça yaratılan zenginliklerin, sahip olduğu kaynakların küresel çapta, dünyanın farklı mekanlarında adaletli dağıtılması ve sürdürülebilir kullanım için korunmasıdır (Kaynak; 2005). Bunlar doğal ve beşeri kaynakların ve değerlerin tümünü kapsar.

Tanımlarda anılan kaynaklar arasında insan kaynaklarının da sürdürülebilir kullanımı önemlidir. İnsan kaynaklarının yönetimi, verimli ve insanca kullanımı sürdürülebilir gelişme bakımından temel vurgulardan biridir. Bu bağlam içinde işsizliğin sürekli artmasına göz yummak sürdürülebilir gelişme açısından yaşamsal bir çelişki oluşturur durumdadır.

İşsizlik, ilgili tanımlar, içeriği ve düzeyi üzerinde tartışmaların genişliği ne olursa olsun, sürdürülebilir insani gelişme ölçütlerine aykırı bir durum oluşturur. İşsizlik, işsiz nüfus kesimleri, gelecek zaman dilimleri, nesiller ve sistem için önemli risk taşıyabilecek bir unsurdur. En azından 2000li yıllarda tüm dünyada yaygın şekilde

görülen işçi göçleri, buna bağlı olarak gitgide genişleyen insan ticareti ve bunun için örgütlenen küreselleşmiş dünyanın karanlık yanı, işsizlerin ve çevrelerinin yaşadığı insani bakımdan olumsuzluk yaratan intiharlar, moral düşüklüğü, psikolojik bozukluklar, şiddet (Özbek; 2007) görmezden gelinebilecek olgular değildir. Dahası, gelişmiş kapitalist ülkelerin sürdürülebilir gelişme, kaynakların sürdürülebilir kullanımı gibi söylemlerine karşın, insan kaynaklarının verimsiz kullanımı, işsizliğin sürekli artışı gibi olgularla somutlanan aşırı sermaye biriktirme hırsları ve çabaları ilerde dünyanın şiddeti çatışmalara girmesine de yol açabilecektir Attali; 2007).

İşsiz insanların yaşamlarını sürdürmedeki seçenekleri, iş bulamadıkça farklı yönlere gitme potansiyeline sahiptir. Bugün değilse yarın, bu birikimlerin önünde ya farklı yaşam tarzlarını ve yollarını seçmek ya da isyan etmek vardır. Yaşamını çalışmasının karşılığında elde ettiği gelir ve maaş gibi kazançlara dayandıran işçilerin bunlardan mahrum kaldıklarında özel girişimci olabilmeleri, kendi işlerini kurabilmeleri de pek olanaklı değildir. Olanaklı olsa bile işsiz kitlenin içinden pek azı girişimci olabilecek geriye yine de geniş bir işsiz kitlesi kalacaktır.

Bu açıdan işsizlik, ekonomi politikalar neyi önerirlerse önersinler, insani bakımdan, barış ve huzur dolu yaşam açısından, sürdürülebilir gelişme için ve sonuçta sistem için önemli bir risktir. Sistemin her zaman yedek işsizler ordusunu oluşturacağı varsayımı küreselleşmiş dünya için de uygun bir saptamadır. Çünkü zaten işsiz işçiler sermaye birikiminin hem zorunlu bir ürünüdür. Hem de birikimin varlık koşuludur. Her an hazır bir işgücü olarak tümüyle sermayeye aittir. Her türlü sömürüye açık ve razıdır. İstihdam içinde yer alan işçileri çeşitli açılardan baskılamak üzere rahatlıkla sistem tarafından kullanılır. Bu yaklaşımla aslında işsizlik sermaye birikim rejiminin dayandığı egemen birikim felsefesinin ve buna göre kurguladığı emek sürecinin ve üretim organizasyonunun dolaysız sonucudur (Marx; 1986).

2000li yıllardaki işsizliğin nedenleri, kaynakları ve özellikleri de önceki dönemden farklıdır. Bunun ayrıntılı hale getirilmesi için küreselleşmiş dünyanın sermaye birikim rejimine, mekan üzerindeki yer seçimine, emek süreci ve üretim organizasyonuna bakılması yerinde olacaktır. Çünkü esasen işsizlik kapitalist ekonomik politik sistemin bir zaman diliminde kendini üzerinde var ettiği emek sürecinin içindeki emeğin ve teknolojinin kompozisyonunun, emekçilerin bu süreçteki ve mekandaki konumlanışlarının ve rollerinin, iş örgütlenmesinin ve akışının, ürünün üretim mekanının oluşturduğu organizasyonun sonucu olarak ortaya çıkar.

4   Küreselleşmiş Dünyada İşsizliğin Kaynakları

Küreselleşmiş dünyanın ortaya çıkışı, kapitalist ekonomik politik sistemin sorunlarının, 1970li yıllarda krizlerin ortaya çıkmasıyla belirgin hale gelen birikiminin sonucudur. Sistemin doğası gereği belirli bir dönemde egemen durumdaki birikim rejimi ile düzenleme mekanizmalarının uyumlu olması gerekir. Bu bağlamda sistemin karşılaştığı krizlerin bir kısmı, birikim rejiminin süreçlerini ve düzenleme mekanizmalarını, bunlar içinde yer alan aktörleri uyumlandırma krizleridir. Uyumlandırma sonuç vermeyince, yerine sistem, birikim rejimini, süreçlerini, mekanizmalarını ve aktörlerini tümüyle değiştirme yoluna gider. 1970li yılların sonrasında kapitalist sistemin yeniden yapılanma sürecine girmesi bu çapta bir değişmedir.

Sistemin yaşadığı kriz, bazı yaklaşımlarda yer verildiği gibi petrol fiyatlarının ani yükselmesinden kaynaklanmış görünür. Böyle olsa da, bunun da etkisini içererek esasen, işçi sınıfının ekonomik siyasal kazanımlarından, fordist adı verilen önceki dönemin emek süreci ve üretim organizasyonunun katılıklarının yol açtığı sorunlardan, işgücü maliyetlerinin yüksekliğinden, atıl sermayenin fazlalığından ve talebe dönük üretim organizasyonunun verimlilik ve karlılık sorunlarından kaynaklanmış durumdadır. Bu durumda emek sürecinin ve üretim organizasyonunun köklü bir şekilde değiştirilmesi temel ve kesin çözümdü. Mikro-elektronik teknolojilerinin sağladığı zamanın ve mekanın aşılabilmesi olanaklarıyla da yeni bir emek sürecinin ve üretim organizasyonunun inşası, bunun üzerinde yeni bir sermaye birikim rejiminin, süreçlerinin, mekanizmalarının kurulması olanaklı hale geldi.

Böylece kapitalist sistemin yeni bir aşamaya doğru evrilmesi olanaklı olabildi. Yapısal değişmeye denk düşen bu yapılanma aynı zamanda sermaye birikim sürecinin ve mekanizmalarının dünya çapında örgütlenmesini, öteki deyişle üzerinde geniş tartışmalar olan küreselleşmiş dünyayı (Hirst ve Thompson; 1998) ortaya çıkardı.

Önceki dönemin, kitlesel seri üretim, öteki deyişle fordist emek süreci ve üretim organizasyonunda, sermaye birikimi açısından dört temel katılık ya da sorunlu alan vardır. Birincisi, imalat işlerini içeren blokta çok sayıda işçinin bir arada olması, hareketli üretim bandı üzerinde ilerleyen ürünün kalitesi üzerinde işçilerin ne bir sorumluluğunun ne de bir insiyatifinin olmamasıdır. Birarada oluşun örgütlenme ve pazarlık gücünü arttırmaya olanak yaratan bir ortam oluşturmasıdır.

İkinci olarak üretim siparişe/talebe göre yapıldığından üretimin başında envanter stokları olarak geniş bir miktar sermayenin atıl bekletilme zorunluluğudur. Üçüncü olarak kalite kontrolün ancak emek süreci ya da hareketli bant sonunda çıktı olarak çıkan bitmiş üründe yapılabilmesi nedeniyle çok miktarda defolu ürün üretiminin yol açtığı sermaye kaybıdır. Dördüncü olarak, seri, ucuz ve kalitesiz ürünün tüketicisi/pazarı hazır olduğundan pazarlama sonrası yeni talep yaratacak düzenlemelerin olmamasıdır.

Bu sorunların çözümü öncelikle imalat blokunu emek sürecinin hem mühendislik, tasarım, planlama, yönetim blokundan, öteki deyişle beyin emeğinin yoğunlaştığı kısımdan, hem de pazarlama blokundan koparmakla başladı. Burada bilgisayarlı tasarım ve üretim olanaklarının sağladığı katkı önemli bir rol üstlendi. Çünkü blokların birbirinden kopartılabilmesi yalnızca bir mekan içinde gerçekleşmedi. İmalat işlerini birbirinden kopuk, uzak mekanlarda, coğrafyalarda gerçekleştirilebilir kıldı. Zaman kısıtlılığını da aşmış oldu. Artık ürünün tasarımı, mühendisliği ana firmanın denetiminde ve bulunduğu ülkede yapılırken, çeşitli üretim işleri başka mekanlarda, coğrafyalarda yapılabilir oldu. Bu olanağın yarattığı felsefe içinde kapitalist üretim sistemi kısa zamanda emek sürecinin de sayısız alt parçalara bölünerek, her bir işin en alt/küçük yüklenicilere/taşeronlara (Özgen; 1994 b) kadar dağıtılabileceğini kavradı.

Bu sürecin eşliğinde bir yandan da talep yaratmaya dönük yapılanma olanağının farkına varan sermayenin hem atıl sermaye bekletmekten kurtulması, hem ucuz, örgütsüz, becerili emeği bulduğu her yerde üretim yapmak üzere ulus üstü üretim yapabilmesi, bu amaçla ortaklıklar, firmalar kurması olanaklı hale geldi. Böylece işgücü maliyetlerinin en aza indirilmesi, işçilerin kitlesel siyasal gücünün yarattığı sorunların yok edilmesi, hem de pazarların küresel çapta genişletilmesi olanağı doğdu. Bu oluşumlarda Japon modelinin (Özgen; 1992) örnek alındığı görüldü. Yanı sıra tasarım, mühendislik, planlama blokunda yer alan önceki dönemin yüksek ücretli beyaz yakalı becerili işgücü de sıradanlaştırıldı. Genelde her tür emek kişisel pazarlık gücüne göre istihdam edilir oldu. Bu süreçte pek çok işçinin emek sürecinin dışında ve işsiz kaldığı açıktır.

Bunun da ötesinde kapitalist birikim sisteminin bu yeni aşamasında ortaya çıkan maddi-olmayan emek pratikleri, önceki dönemlerin emeğe ait özelliğine ve vasfına yönelik değerleri, kategorileri bulanıklaştırdı ve parçaladı. Sonuçta maddi-olmayan emek süreçleri çalışanlar üzerinde çalışma yaşamı ile gündelik yaşam/boş zaman arasındaki ayrımı belirsizleştirdi (Emirgil; 2010). Böylece toplumsal üretim ilişkileri de belirsiz, bulanık dizgeler haline dönüştü.

Emek sürecine donanım teknolojilerinin ikamesi becerili emeğe gereksinimi azaltırken bir yandan işsizliği arttırarak bunları emek süreci dışında bıraktı. Bir yandan da becerili emeği becerisiz emek ile ücret, konum, pazarlık gücü gibi açılardan denk hale getirdi, becerisizleştirdi. Bu süreç içinde işçilerin önceki dönemde kazandıkları pazarlık ve örgütlenme gücü, ekonomik sosyal hakları ve ücretleri de önemli ölçüde geriletildi. Bilgisayarların ve internet ağlarının sağladığı olanaklarla, üretim organizasyonu dünyanın her tarafında tamamlanabilen üretim işleri sayesinde ulus üstü özellik kazanırken sermaye birikimi de küresel çapa ulaştı.

Sermayenin tasarımını, üretimini, yatırımını ve pazarlamasını küreselleşmiş bir düzlemde sanal ortamda yapma olanağına sahip olması, ilerleyen dönemlerde ortaya çıkan mali sermayenin yol açtığı krizlerde uluslararası para ve kredi kuruluşları eliyle tüm gelişmemiş ülkelere müdahale yeteneğini geliştirdi. Öteki deyişle dünyadaki gelişme süreçlerinin aklanması ya da karalanması ortak bir cürüm, yeni emek sürecinin ve üretim organizasyonunun üzerinde yükselen yeni sermaye birikimi rejiminin yarattığı işsizlik olgusu da salgın (MÜSİAD; 2012) haline dönüştü.

Yeni emek sürecinde kalite kontrol timleri düzenlemesiyle sermaye verimsizliğinden kurtulurken, bir yandan da pazarlama sonrası hizmet blokunu geliştirdi. Bu yolla talep yaratma, yeni pazarlar/mali sermaye ortaklıkları bulma olanağı sağladı. Hem mali sermaye hem hizmet sektörü bu süreçten sınai sermaye ve sanayi sektörü aleyhine daha fazla önem kazanarak çıktı. İmalat işleri giderek kolaylaştı ve önemsizleşti. Küreselleşmiş dünyanın her yerinde, Amerika firmalarının Çin'de, Kore'de, Avrasya ülkelerinde ya da Hindistan'da yatırım yapması örneklerinde olduğu gibi yayıldı.

Ürünün üretimindeki alt işler her yerde tamamlanabilir hale geldi. Üretim organizasyonu da değişti. Bu sırada ölçek ekonomileri önem yitirirken, bir birim işyerinde üretilen ürünün çeşitlendirilmesinden doğan alan ekonomilerinden (Özgen; 1994 a) yararlanan küçük, atak firmalar önem kazandı. Büyük sanayi kuruluşları bu süreçte işsizlik yaratarak ya kapandı, ya bünyesindeki imalat işlerini küçük firmalara verdi. Bazen bunları kendi kurdu. Bünyesinde stratejik işleri, beyin emeğine dayalı işleri ve mali işleri tuttu. Bunlar arasında pazarlama/sonrası hizmet ve ar –ge birimleri de vardır.

Böylece ağırlıklı olarak hizmet sektörü ve mali sektör firması haline geldiler. Küresel çapta çeşitli sermaye gruplarıyla bütünleşebildiler. Öteki deyişle odak sermaye grupları gelişmemiş /azgelişmiş ülkelerin sermaye gruplarını kendilerine eklemlenmeye yöneltti. Sermaye birikimi ulus üstü mekanda, öteki deyişle ulusal devleti ve sınırları aşarak küresel çapta, en küçük yerel sermaye aktörünü de içererek bütünleşti. Buradan bu tür kuruluşlarda çalışan beyin emekçilerinin düz hizmet sektörü çalışanı haline geldiğini, bireysel iş sözleşmeleri ve çalışma koşullarıyla yüz yüze kaldığını söylemek olanaklıdır.

Ucuz ve örgütsüz emek sunan ülkelerin kalkınma, ekonomik yapılanma yaklaşımları, küreselleşmiş dünyanın sürdürülebilir gelişme düzenlemelerine uyum sağlamak zorunda kaldı. Ancak bu uyumun, bu ülkelerin ulusal pazarlarını dışa açmak, ihracata dönük üretim yapmak, bu nedenle sanayi sektörlerinin yapısal bir dönüşüm yapması zorunluluğu ile yüz yüze kalırken, sektördeki çoğu firmanın bu dönüşümü gerçekleştiremediği de oldu. Sürdürülebilir gelişme, bu nedenlerle insan kaynaklarının verimli kullanılmasından çok doğal kaynaklar bakımından zengin Avrasya coğrafyasındakiler gibi ülkelerin gündemine doğal kaynaklarla ilgili düzenlemelerle,

yabancı firmaların hizmet sektörleri ve mali sermaye yatırımları ile girmiş oldu. Bu ülkelerdeki üretimin ve sektörel yapılanmanın daha baştan dış dinamiklere bağlı olarak biçimlenmeye yöneldiği öne sürülebilir.

Esasen neo-liberal ekonomik yaklaşım ve politika, yukarıda değinilen olguların betimlenmesidir. Neo-liberalizmin sonuçlarından biri, ekonomik büyüme ve istihdam artışı arasındaki ilişkiyi zayıflatmasıdır. Sanayi sektörünü önemsizleştirip, mali sermayeye, dolayısıyla hizmet sektörüne önem yüklemesidir. Bir başka deyişle istihdamsız büyüme, istihdamın istikrarsızlaştırılması, güvencesiz ve esnek hale getirilmesi, yasal ve kurumsal düzenlemelerle emek pazarının esnek yapıya yönlendirilmesi, devlet eliyle çalışan kesime yönelik korumanın terk edilmesidir. Kısaca küreselleşmiş dünyadaki işsizlik yapısaldır, kalıcıdır.

Neo-liberal politikaların işsizliğe çözüm önerileri genel olarak yaşanan olgular karşısında kalıcı olmayan, çalışanlara güven vermeyen, sorunu kısmi ve geçici olarak ele alan önerilerdir. Bunların gerçek çözümler olamayacağı çeşitli çalışmalarda dile getirilir. Önemli olan önlemler, işsizlerin de pay alabileceği altyapı yatırımları ve toplumsal yatırımlar (Erdoğdu; 2010) gibi yapısal düzenlemelerdir.

İşsizlik sorununun insanlık açısından ağır sonuçları olabileceği dikkate alınarak; öncelikle iş sürecinin sayısız ölçüde alt parçaya bölünerek kayıt dışı üretimi ve ekonomiyi oluşturan, hiçbir kurala, belirlenmiş çalışma koşuluna ve insani değere sahip olmayan firmalara verilmesinin sınırlandırılması gereklidir. Bununla ilgili çalışma kurallarının konmasında yarar vardır.

Yeni emek sürecine ve üretim organizasyonuna katkı sağlayan teknolojik gelişmelerin her zaman işsizliğe yol açacağı yaklaşımıyla, buradan sağlanan toplam yarar ve refahın bir kısmının toplumsal, yönetsel ve kültürel düzenlemeler yoluyla çalışanlara ve işsizlere toplumsal barışa katkı sağlayacak şekilde dönmesinin sağlanması yerinde olacaktır.

5   Sonuç

2000lerde sürekli artış içinde olan işsizlik, küreselleşmiş dünyanın birikim rejimini oluşturan yeni emek süreci ve üretim organizasyonunun dolaysız sonucudur. Aynı zamanda bilgisayar teknolojilerinin sağladığı olanaklardan doğan felsefesi de işsizliğin yapısal ve kalıcı hale gelmesine katkı yapmaktadır. İşsizlik bir histeriye ve salgına dönüşmüş durumadır. Neo-liberal politikalar ve uygulamalar, işsizlikle ilgili önerileri bir bakıma bunların meşrulaştırılmasıdır.

Bu nedenle işsizlik 2000li yıllarda gereken önemi görmemektedir. Ancak işsizlik en azından sürdürülebilir gelişme yaklaşımlarının önünde önemli bir engeldir. İşsizliğin oluşturduğu olumsuzluklar geniş kesimleri ilgilendirecek boyuttadır. Kısa sürede ortaya çıkabilecek şekilde, toplumsal barış ve huzur bakımından riskler barındırır durumdadır.

Bu yaklaşımla geçici ve rasyonel olmayan, bireyin yaşamını sürdürmesinde güvence sağlamayan çözümler yerine kalıcı ve uzun soluklu çözümlerin bulunmasında yarar vardır. Böylesi çözümlerin yine işsizliği yaratan emek sürecinin ve üretim organizasyonun bünyesinden çıkartılması yerinde olacaktır. Buna göre işsizlere, emek kesimine toplumsal refahtan daha yüksek payların verilmesi, toplumsal, yönetsel ve kültürel yaşamın, işçilerin çalışma ve boş zaman anlayışlarını değiştirecek ve ekonomik olanaklarla da destekli bir şekilde geliştirilmesine yarar vardır.

Development Strategies for Sustainable Urbanization in Turkey: KENTGES Action Plan (2010-2023) Case

Assoc. Prof. Dr. Mahmut Güler (Trakya University, Turkey)
Asst. Prof. Dr. Abdulmenaf Turan (Yüzüncü Yıl University, Turkey)

Abstract

One of the main characteristics of Turkey which is one of the countries that is becoming urbanized fast is that the majority of population chooses metropolises and accumulates in metropolises rather than medium sized cities. In this sense, there are specific problems such as basic urban services especially in metropolises. Therefore, there is an increasing need for enhancing spatial life quality of urban settlements in turkey, strengthen economic and social structure, restructuring spatial planning system in Turkey. It was projected to prepare "Urban Development Strategy and Action Plan" for this aim. In this sense, "Raising Life Standards of Cities and Enabling Sustainable Development" was determined as the primary policy. Moreover, "Integrated Urban Development Strategy and Action Plan for Sustainable Urban Development" was prepared within scope of Program for Alignment with the EU Acquis. " Integrated Urban Development Strategy and Action Plan 2010-2023", with its short name Urban Development Strategy (KENTGES), comprises of settlement and urbanization; space, theme and extents of settlement and spatial planning within the principle of sustainability, make relations between spatial sectors within an integrated approach, enable adaptation with national basic policies. KENTGES is a national document which puts forward principles, strategies and actions for solution of structural problems of urbanization and providing healthy, balanced and habitable urban development; determines their practical principles and conveys them to an action program. In this paper, basic principles and practicability of the mentioned action plan which was prepared in order to enable sustainable urbanization in Turkey will be discussed.

1   Giriş

Dünyanın en hızlı kentleşen ülkelerinden birisi olan Türkiye'nin başlıca özelliklerinden biri nüfusun artan oranlarda büyük kentleri seçmesi, orta büyüklükte kentlerden ziyade anakentlere yığılmasıdır. Bu bağlamda özellikle büyük kentlerde başta işsizlik olmak üzere, güvenlik, temel kentsel hizmetler, kadın ve çocukların korunması gibi bir takım sorunlarla karşı karşıya kalınmaktadır. Bundan dolayı da Türkiye'de kentsel yerleşmelerin mekânsal yaşam kalitesinin artırılmasına, ekonomik ve toplumsal yapının güçlenmesine, mekânsal planlama sisteminin yeniden yapılandırılmasına olan ihtiyaç giderek artmaktadır. Bu ihtiyaçtan hareketle "Kentsel Gelişme Stratejisi ve Eylem Planı" hazırlanması öngörülmüştür. Bu bağlamda "Kentlerin Yaşam Standartlarının Yükseltilmesi ve Sürdürülebilir Gelişmenin Sağlanması" öncelikli politika olarak belirlenmiştir. Ayrıca, Türkiye'nin AB Müktesebatına Uyum Programı kapsamında "Sürdürülebilir Kentsel Gelişme İçin Bütünleştirilmiş Kentsel Gelişme Stratejisi ve Eylem Planı hazırlanmıştır. Kısa adı Kentsel Gelişme Stratejisi (KENTGES) olan "Bütünleşik Kentsel Gelişme Stratejisi ve Eylem Planı", sürdürülebilirlik ilkesi çerçevesinde yerleşme ve kentleşme ile yerleşme ve mekânsal planlamanın alan, tema ve boyutlarını kapsamakta, mekâna ilişkin sektörleri bütünleşik bir yaklaşımla ilişkilendirmekte, temel ulusal politikalarla uyumu sağlamaktadır. KENTGES kentleşmenin yapısal sorunlarının çözümüne, sağlıklı, dengeli ve yaşanabilir kentsel gelişmenin sağlanmasına yönelik ilke, strateji ve eylemleri ortaya koyan ve bunların uygulama esaslarını belirleyen ve bir eylem programına bağlayan ulusal bir dokümandır. Bu yazıda Türkiye'de sürdürülebilir kentleşmenin gerçekleştirilmesi amacıyla hazırlanmış olan söz konusu eylem planının temel hedefleri ve uygulanabilirliği Türkiye'deki kentsel politikalar üzerinden değerlendirilecektir. Ancak öncelikle sürdürülebilirlik, sürdürülebilir gelişme, sürdürülebilir kentsel gelişme gibi kavramlara değinmek gerekmektedir.

2   Sürdürülebilirlik ve Sürdürülebilir Gelişme Kavramları

Sürdürülebilir kentsel gelişmeyi anlamak için öncelikle sürdürülebilirlik ve sürdürülebilir gelişme kavramlarına açıklık getirmek gerekmektedir.

Sürdürülebilirlik; bir toplumun, ekosistemin ya da sürekliliği olan herhangi bir sistemin işleyişinin kesintisiz, bozulmadan, aşırı kullanımla tüketilmeden ya da ana kaynaklara aşırı yüklenilmeden sürdürülebilmesi olarak açıklanabilir. Sürdürülebilirliğin temelde ekonomik, çevresel ve toplumsal sürdürülebilirlik olmak üzere üç boyutu olduğu düşünüldüğünde (Uysal, 2002: 46); sürdürülebilir gelişme kavramı da en temel ifadesini ekonomi, çevre ve toplum arasındaki dengede bulmaktadır.

Nitekim, Birleşmiş Milletler (BM) Çevre ve Kalkınma Komisyonu tarafından 1987 yılında hazırlanan ve komisyon başkanı Gro Harlem Brundtland'ın ismiyle Brundtland Raporu olarak da anılan "Ortak Geleceğimiz" başlıklı raporda sürdürülebilir gelişme kavramını benzer biçimde şu ifadelerle ele almaktadır: "Sürdürülebilir gelişme; temel ekonomik, çevresel ve sosyal hizmetlerin, bu hizmetlerin dayandığı ekolojik ve toplum merkezli sistemlerin varlığını tehdit etmeksizin herkese sunulabildiği gelişme olarak tanımlanabilir. Sürdürülebilir gelişme; yaşayan ve gelecekte yaşayacak olan tüm insanların, mevcut çevresel sınırlar dahilinde, ekonomik ve sosyal gelişmeye adil olarak katılmalarını sağlamak için gerekli olan üretim ve tüketim biçimlerindeki değişimlerle ilgilidir" (Türkiye Çevre Sorunları Vakfı, 1991: 71).

Brundtland Raporu'nda "bugünkü kuşakların, ihtiyaçlarını karşılarken gelecek kuşakların da kendi ihtiyaçlarını karşılama olanaklarını elinden almamasına" dayalı bir felsefe olarak vurgulanmıştır. Brundtland Raporu'ndan sonra yaygınlık kazanan sürdürülebilir gelişme kavramı; 1992 yılında Brezilya'nın Rio de Janerio kentinde gerçekleştirilen ve bu nedenle Rio Konferansı olarak da bilinen ve Rio Bildirgesi, Gündem 21, Orman İlkeleri, İklim Değişikliği Sözleşmesi ve Biyolojik Çeşitlilik Sözleşmesi olmak üzere beş temel belgenin ortaya konduğu BM Çevre ve Kalkınma Konferansı ile birlikte, 21. yüzyılda tüm insanlık için ulaşılması gerekli bir hedef olarak benimsenmiş ve sonraki yıllarda uluslararası düzeyde gerçekleştirilen birçok etkinlik ve ortaya çıkan birçok çalışmada bu şekilde yansıma bulmuştur.

3   Sürdürülebilir Kentsel Gelişme Konusundaki Temel Düzenlemeler ve Uygulamalar

Farklı ülkelerin deneyimleri ele alındığında; sürdürülebilir gelişme felsefesi çerçevesinde başvurulan politika ve uygulamaların her ülkenin kendi ekonomik, çevresel ve sosyal yapısına uygun olarak farklılık gösterdiği görülmektedir. Bu noktada, özellikle hızla kentleşen az gelişmiş ve gelişmekte olan ülkeler ve bu ülkelerdeki kentleşme olgusu dikkat çekmektedir.

Gerçekten de, özellikle az gelişmiş ve gelişmekte olan ülkelerde kentleşme, mevcut kent planlama ve yönetim kapasitelerinin önünde seyretmekte ve kaçınılmaz olarak ekonomik etkililiği azaltmakta, güçlükle korunan çevresel değerleri tehdit etmekte ve sosyal adaletin önüne geçmektedir (UN-HABITAT ve UNEP, 2001). İnsanların gerekli tüm ihtiyaçlarını karşılayan canlı sistemler olan kentler, en genel ifadeyle; sürekli gelişme içinde bulunan ve toplumun, yerleşme, barınma, gidiş-geliş, çalışma, dinlenme, eğlenme gibi gereksinmelerinin karşılandığı, pek az kimsenin tarımsal uğraşlarda bulunduğu, köylere oranla nüfus yönünden daha yoğun olan yerleşim birimi olarak tanımlanmaktadır (Keleş, 1998: 75). Bu haliyle doğal kaynakların başlıca tüketicisi ve çevresel zararın başlıca üreticisi olarak değerlendirilebilecek kentlerin, sürdürülebilir gelişme olgusu çerçevesinde ele alınması son derece önemli ve gereklidir. İşte sürdürülebilir kentsel gelişme kavramı da bu noktada önem kazanmaktadır. Bunun yanında, her kentin farklı özelliklere ve kendisine özgü farklı sorunlara sahip olduğu düşünüldüğünde, sürdürülebilir kentsel gelişmenin hassasiyet gerektiren bir konu olduğu daha iyi anlaşılacaktır. Sürdürülebilir kentsel gelişme, küresel düzeyde ortaya çıkıp gelişen sürdürülebilir gelişme olgusunun kentsel ya da yerel yansıması olarak değerlendirilebilir.

Sürdürülebilir kentsel gelişme konusunda BM ve AB'nin oldukça önemli bir rolü bulunmaktadır. Sürdürülebilir gelişme kavramının 1987 yılında Bruntland Raporu'nda dile getirilmesi ve 1992 Rio Zirvesi'nde ise küresel düzeyde kabul görmeye başlayan bir ilkeye dönüşmesi ülkelerin iç politikalarına da yansımıştır. Dolayısıyla sürdürülebilir gelişme ilkesinin etkisini artırmasıyla eş zamanlı olarak kentlere ilişkin çeşitli düzenlemelere de yansımıştır. Sözgelimi Gündem 21 ve Yerel Gündem 21, BM HABITAT ve UNEP ortaklığıyla kurulmuş olan Sürdürülebilir Kentler Programı (2001-2007), Avrupa Kentsel Şartı I (1992), Avrupa Kentsel Şartı II (2008), Avrupa Kıtasının Sürdürülebilir Mekânsal Gelişmesi İçin Rehber İlkeler (2000), Avrupa Kentsel Gelişme Politikaları Süreci, Sürdürülebilir Avrupa Kentleri İçin Leipzig Şartı (2007), Sürdürülebilirliğe Doğru Avrupa Kent ve Kasabaları Şartı (Aalbourg Şartı-1994 ve Aalbourg Taahhütleri-2004) sürdürülebilir kentleşme bakımından önem taşıyan toplantı, sözleşme veya şartlar arasında sayılabilir (Mutlu, 2010). Sözkonusu düzenlemelerin tamamı da sürdürülebilir kentsel gelişme konusunda birbirini tamamlayıcı ilkelerin ortaya çıkmasında çok önemli katkılarda bulunmuşlardır. Bu tür düzenlemeleri küreselleşen dünyanın kentlerine ilişkin yasalar olarak değerlendirmek yanlış olmayacaktır. Nitekim 1992 yılında hazırlanan ve Türkiye tarafından da kabul edilmiş olan Avrupa Kentsel Şartı I'in ardından 2008 yılında bu şartın ikincisi de hazırlanmıştır. İlkinde sürdürülebilir kentsel gelişme konusu nisbeten zayıf bir değiniden ibaret iken Avrupa Kentsel Şartı II'nin ise adeta belgenin ruhuna sirayet etmiştir. Öyle ki bu belgede sürdürülebilir kentle ve kasabalar başlığı altında 15 madde sayılmıştır. Bu maddelerin tamamında geleceğin Avrupa'sının kentlerinin ve kasabalarının sürdürülebilir mekânlara dönüştürülmesi isteği ilan edilmiştir. Ne yazık ki Türkiye'de Pendik ve Nilüfer belediyelerinin dışında bu Şart'a imza koyan belediye bulunmamaktadır (Mutlu, 2010). Ancak KENTGES Eylem Planı'nın bu düzenlemeler esas alınarak hazırlanmış olduğunu da belirtelim.

Öte yandan bu anlayışa uygun olarak gerek AB ülkelerinde gerekse de dünyada uygulanan bütünleşik kentsel gelişme projeleri olmuştur (EC, 2013). Avrupa Bölgesel Kalkınma Fonu 2007-2013 Dönemi Final Raporu'nda Bütünleşik Alan Temelli Yaklaşımlar başlığı altında yer alan sekiz örneğin hepsinde uygulanan kentsel yenileme projelerinin bütünleşik bir yaklaşımla yapıldığına referans verilmektedir. Örneğin, Fransız Politique de la Ville,

dezavantajlı yerleşimlerde eşitsizlikleri azaltma ve ulusal düzeyde Duyarlı Kentsel Bölgeleri artırma hedefiyle Avrupa'da başlatılan ilk ulusal programlardan biridir. Almanya'da, Sosyal Açıdan Bütünleşik Kent Programı da benzer bir yaklaşımla, bütünleşik girişimciliğe ilişkin yasal bir çerçeve ve planlama araçları sağlayarak dezavantajlı bölgelerin bütünleşik yenileme şemasını ulusal düzeyde çizmiştir. İspanya'da Kent İnisiyatifi yönetişim şeması, kentlerin blok fonlara başvurabilecekleri ulusal ve yerel düzey arasında doğrudan ilişki yapısı üzerinde çizilmiştir. Kazinbarcika örneği özellikle ilginçtir, çünkü Macaristan yalnızca AB fonuna dayanan ulusal bir bütünleşik politika çerçevesi hazırlamıştır. Bu ulusal bütünleşik politika çerçevesine göre, kentlerden bir Bütünleşik Kentsel Gelişme Stratejisi hazırlamaları istenmiştir. Asya Kalkınma Bankası ve Nepal Yönetimi Özel Fon kaynakları kullanılarak yürütülen Nepal Bütünleşik Kentsel Gelişme Projesi, Nepal'deki dört belediyede gerçekleştirilmek üzere Eylül 2011'de başlatılmıştır (ADB, 2013). Dünya Bankası tarafından finansal destek sağlanan Yemen Bütünleşik Kentsel Gelişim Projesi'nin amacı Taiz'de seçilen enformel yerleşim alanlarında temel ihtiyaçlara ulaşımı artırmak olarak belirlenmiştir (World Bank, 2013). Bir başka proje Güney Afrika'da gerçekleştirilmektedir. 1997 yılında başlayan bütünleşik Kentsel Gelişme Projesi'nin amacı kent yoksullarının yaşam alanlarının iyileştirilmesine dayanmaktadır (Practical Action, 2013).

Konuya kavramsal açıdan bakmak gerekirse, bu örneklerdeki bütünleşme anlayışının ortak bir anlayış mı yoksa bir niyetin ifadesi veya gerçek bir uygulama mı olduğu sorusu önem kazanmaktadır. Bütünleşme çevresel, sosyal ve ekonomik planlama politikalarının birbirlerine bağımlılığını ifade eder ve kentlilerin ve yönetimlerin gelişen kapasiteleri doğrultusunda kentsel sorunların karmaşıklığı ile mücadele etme niyetidir (EC, 2013).

4   Türkiye'de Kentsel Politikalar

2010 yılında KENTGES'in resmi bir belge olmasından önce Türkiye'de uygulanan kentsel politikaları değerlendirmek uygun olacaktır. Öncelikle belirtmek gerekir ki KENTGES Eylem Planı bir kopuşu değil bir sürekliliği arz etmektedir. Çünkü KENTGES'in üzerinde yükselmiş olduğu bir kentsel politikalar demeti, bir kentsel gelişme gerçekliği bulunmaktadır. Bundan ötürü KENTGES'in üzerinde yükselmiş olduğu zeminin analiz edilmesi gerekmektedir. Bu analizi Türkiye'nin kentsel gelişim sürecini kamu yönetimi, dolayısıyla yerel yönetimler alanında gerçekleştirilen reformlar bağlamında ama dahası bu reformların ekonomi-politik yönüne değinmek daha doğru olacaktır.

Türkiye'deki kentsel politikaların gelişim süreci aşağı yukarı birbirine benzeyen dönemlendirmeler şeklinde ele alınmıştır. Örneğin Tarık Şengül (2009), (a) ulus-devletin topraksallaşması (1923-1950), (b) emek gücünün kentleşmesi (1950-1980), (c) sermayenin kentleşmesi (1980 ve sonrası); Ayda Eraydın (2006), (a) Cumhuriyet'ten İkinci Dünya Savaşı sonrasına (yeni bir ulus-devlet yaratma döneminin tartışmaları 1923-1945) ve İkinci Dünya Savaşı'ndan planlı döneme (1945-1960) (b) nüfus artışının ve göçün kentlerde yarattığı sorunların ve gelişmişlik farklarının fazlalaşmasının getirdiği planlı gelişme dürtüsü (planlı dönemin başlangıcı ve sonu 1960-1980), (c) küresel bütünleşmeden beklentiler ve çözülemeyen sorunlar (bunalım sonrası noe-liberal politikaların mekânsal süreçleri tanımladığı dönem 1980 sonrası); Birgül Ayman Güler (1998), (a) yerel ölçekte devletçilik (1930-1945), (b) meclislerde geleneksel kentsel unsurların egemenliği (1946-1960), (c) yerel güçlerin dönüşümü ve gecekondulaşma (1961-1980), (d) sermaye ile küçük üreticiliğin çıkar birliği ve yeni ortaklar (1980'den günümüze). Her üç dönemlendirmede ve gerek kentsel politikalar gerekse de yerel yönetimlere ilişkin diğer çalışmalardaki en önemli temel özellik ilk dönemin ulus-devletin kentleşme süreci üzerindeki hegemonyası şeklinde, 1960 ve sonrası yılların gecekondulaşma ve planlı kalkınma çabalarının birlikte ele alındığı bir süreç şeklinde ve 1980 sonrası dönemin küreselleşme, neo-liberal politikaların uygulanması veya sermayenin egemenliği şeklinde ele alınmakta olmasıdır. Öte yandan 2000'li yıllarda kamu yönetimi alanında gerçekleştirilen düzenlemelerin önemli bir kısmının yerel yönetimlerle ilgili olduğu düşünüldüğünde yerelleşme ve kentsel politikaların yeni dönemin temel stratejileri açısından taşıdığı önem ortaya çıkacaktır. Ancak planlama yetkilerinin merkezileştirilmesi ve büyükşehir belediyeleri kurularak yerelde yeni merkezler oluşturulması yerelleşme politikalarının başka bir biçimde ama yeniden ele alınmasını gerektirmektedir.

Konumuz bakımından ise asıl önemli gelişmeler 1980 sonrasına ilişkin gelişmelerdir. 1980'li yıllar ve sonrası Türkiye açısından bütün dünyada olduğu gibi yeni bir dönemin başlangıcıdır ancak bu durum mekânsal politikalara da yansımıştır. Önceki dönemlere doğrudan değinilemese bile yeni dönem kentleşme sorunlarının önceki dönemlerde birikmiş olan sorunların birer uzantısı olduğu belirtilebilir. Gecekondulaşma, göç, kentsel yoksulluk, kentsel rantlar, kentsel dönüşüm, afet, 2b arazileri, meralar ve tarım topraklarının kullanımı, doğal ve kültürel varlıkların yanlış kullanımı, kıyılardaki yapılaşma yalnızca bugüne özgü değil geçmişten kaynaklanan sorunların tezahürleridir. Nitekim Eraydın (2006) bu dönemi farklılaşan bir dönem olarak nitelerken, süregelen ve çözülemeyen sorunların 1980 sonrası gündemin ana maddeleri olduğunu ifade etmiştir. Eraydın devamla, yeni politikaların mekânda yaratmış olduğu değişimleri şöyle sıralamıştır: Bölgeler arası dengesizliğin ekonomik ve siyasal niteliği ile gündeme gelmesi, kentsel kalitenin yükseltilmesi, gecekondu alanlarındaki dönüşüm, toplu konut alanlarının oluşturulması, küreselleşen ilişkiler ve küresel kentlerin ve yeni sanayi merkezlerinin ortaya çıkması ve yerel siyaset. Yine Bayındırlık ve İskân Bakanlığı tarafından 2007 yılında hazırlanmış olan bir raporda (akt. Mutlu, 2010), Türkiye'de sürdürülebilir kentleşmenin önünde duran sorunlar iki ana kategoride gösterilmiştir: Teknik alanlar ile ekonomik, sosyal ve kurumsal alanlar. KENTGES de bu tür sorunların

çözülmesi bakımından hazırlanmış olan, Türkiye'yi 2023 yılına taşıyacak yeni kentsel politikaların neler olacağını belirten ve sürdürülebilir kentsel gelişme ilkesini odağına alan bir eylem planıdır.

BM'nin başını çektiği uluslararası örgütlerin öncülüğünde ortaya konup birçok ülke tarafından sahiplenilen sürdürülebilir kentsel gelişmeye yönelik çalışmalar, Türkiye'de günümüzde merkezi düzeyde özellikle, 2011 yılında kurulan Kalkınma Bakanlığı ve aynı yıl Bayındırlık ve İskân Bakanlığı'nın yerine kurulan Çevre ve Şehircilik Bakanlığı bünyesinde gerçekleştirilmektedir. Bu noktada, 2003 yılında DPT tarafından gerçekleştirilen ve 2011 yılında Kalkınma Bakanlığı tarafından güncellenen Kentlerin ve Bölgelerin Sosyo-Ekonomik Gelişmişlik Sıralaması Araştırması'na (SEGE) değinmek yerinde olacaktır. Kentlerin, sürdürülebilir kentsel gelişmeye yönelik performanslarının; kavramın tüm boyutlarıyla, yani ekonomik, çevresel ve sosyal olarak izlenmesini mümkün kılması hedeflenen bu çalışmada kullanılan sosyo-ekonomik gelişmişlik göstergeleri incelendiğinde, SEGE-2003 çalışmasında 10 alt kategoride kullanılan 58 değişkenin yerini 8 alt kategoride 61 değişkenin aldığı görülmektedir.

5　KENTGES Eylem Planı (2010-2023)

Sürdürülebilir Kentsel Gelişme İçin Bütünleşik Kentsel Gelişme Stratejisi ve Eylem Planı Hazırlama Projesi (KENTGES)'in ön hazırlık çalışmaları Çevre ve Şehircilik Bakanlığı tarafından Nisan 2007'de başlatılmış, ilk aşaması 30 Mayıs 2008 – 4 Mayıs 2009 tarihleri arasında istişare toplantıları, Kentleşme Şurası Komisyonları ve Genel Kurul Çalışmaları ile tamamlanmış ve ikinci aşaması 3 Mart 2010 tarihinde deklare edilerek sonuçlandırılmıştır. Bu projenin sonuç dokümanı; "KENTGES Bütünleşik Kentsel Gelişme Stratejisi ve Eylem Planı (2010–2023)" Yüksek Planlama Kurulu'nun 25.10.2010 tarih ve 2010/34 sayılı kararı ile kabul edilmiş ve 4 Kasım 2010 tarih ve 27749 sayılı Resmi Gazete'de yayımlanmıştır (http://www.kentges.gov.tr., 2013). Özetle KENTGES'in hazırlanmasında; yukarıda anılan Kentleşme Şurası Komisyon Raporları ve Sonuç Bildirgesi, DPT Müsteşarlığınca yürütülen Sürdürülebilir Kalkınmanın Sektörel Politikalara Entegrasyonu Projesinde yer alan Türkiye'de kentleşmeye ilişkin tespit ve değerlendirmeler, kentleşme alanında sürdürülebilirlik çerçevesi, yaklaşım ve modeller, Dokuzuncu Kalkınma Planı, Orta Vadeli Program, Yıllık Programlar, Özel İhtisas Komisyonu Raporları, Ulusal Strateji Belgeleri, BM'nin Habitat, Mekânsal Planlama Rehberi, Gündem-21 ve ilgili strateji ve eylem planları, Avrupa Kentsel Şartı, Avrupa'nın Mekânsal Gelişmesi için Rehber İlkeler, Avrupa Mekânsal Gelişme Perspektifi vd. belgelerin dikkate alınmış olduğu görülmektedir (Kentges Eylem Planı, 2010).

Bu eylem planında temel amacın, yerleşmelerimizin yaşanabilirlik düzeyinin, mekân ve yaşam kalitesinin yükseltilmesi ile ekonomik, sosyal ve kültürel yapılarının güçlendirilmesine yönelik merkezi ve yerel idareler için yol haritasının oluşturulması olduğu ifade edilmiştir (Kentges Eylem Planı, 2010). Katılımcı bir süreçle elde edilmiş olan KENTGES için, çalışmaları Mayıs 2008'de başlayan ve 4–7 Mayıs 2009'da Genel Kurul ile sonuçlanan Kentleşme Şurası'nın Komisyon Raporları ve Sonuç Bildirgeleri, önemli bir kaynak oluşturmaktadır (Kentges Eylem Planı, 2010). Kentleşme Şurası ve KENTGES çalışmalarına merkezi ve yerel olmak üzere, 151 farklı kurum ve kuruluştan yaklaşık 500 uzman katkı sağlamıştır (KENTGES, 2013). Şûra Sonuç Bildirgesi'nde bu eylem planının gerekliliğini işaret eden şu ifade yer almaktadır. "Türkiye'de mekânsal planlama alanında bütüncül bir bakış açısının geliştirilmesinin gerekli olduğu belirlenmiştir. Mevcut durumdaki çok parçalı kurumsal yapının ve dağınık planlama yetkilerinin birlikte ele alınması ve çerçeve bir kanun ile yeni bir planlama yaklaşımı ve planlama sisteminin geliştirilmesi gerekmektedir" (Kentleşme Şurası, 2010).

KENTGES; ulaşım, altyapı, konut ve arsa sunumu, afetlere hazırlık, koruma, iklim değişikliği, yaşam kalitesi, sosyal politikalar ve katılım konularında merkezi ve yerel düzeyde yapılacak iş ve işlemleri belirlemektedir (KENTGES, 2013). KENTGES'te yer alan eylemlerin yüzde 28'si yerel yönetimlerin, yüzde 72'si ise merkezi yönetimin sorumluluğundaki eylemlerdir. Bayındırlık ve İskân Bakanlığı ise 37 eylemden sorumlu kılınmıştır (KENTGES, 2013). Belediyeler, KENTGES'in uygulanmasından sorumlu kurumlar içinde eylemlerin büyük bir kısmının yerine getirilmesinden sorumludur. Yerel yönetimlerin sorumlu olduğu eylemler 11 ayrı hedef başlığı altında toplanmıştır (Kentges Eylem Planı, 2010).

1. Yerleşmelerde sürdürülebilir bir mekânsal gelişme sağlamak.
2. Sürdürülebilir kentsel ulaşım sistemini oluşturmak.
3. Kentsel altyapı plan, proje ve yatırımlarını mekânsal planlarla bütünleştirmek.
4. Yerleşmelerde sosyal donatı ve hizmetlerin dengeli dağılımını sağlamak.
5. Sosyal, kültürel ve ekonomik boyutlarıyla bütünleşik bir kentsel yenileme ve dönüşümü sağlamak.
6. Afet ve yerleşme risklerini azaltmak.
7. Kent kimliğini korumak ve geliştirmek.
8. Kentlerde çevre duyarlı bir yaşam ortamı oluşturmak.
9. Kentlerde toplumsal dayanışmayı, bütünleşmeyi ve hoşgörüyü artırmak, muhtaçların ve dezavantajlı grupların kentsel hizmetlerden yararlanabilmesi için gerekli önlemleri almak.
10. Kent kültürünü, kentlilik bilincini, aidiyet duygusunu geliştirmek.
11. Kentli hakları konusunda farkındalık oluşturmak.

Söz konusu hedeflere ulaşmak için Çevre ve Şehircilik Bakanlığı'nca belirlenen performans hedefleri doğrultusunda belediye eylemlerinin izlenmesi ve raporlanması yapılmaktadır. Bu kapsamda tüm belediyelerin mevcut kurumsal kapasiteleri ile sorun alanlarının ortaya konulması ve KENTGES'i uygulama kapasitesine sahip belediyelerin tespit edilebilmesi amacıyla elektronik ortamda toplam 2954 adet belediyeyi kapsayan KENTGES Belediyeler Anketi hazırlanmıştır. Bu ankete katılım 2130 belediye ile yaklaşık yüzde 80 oranında olmuştur (KENTGES Belediyeler Anketi, 2011). Teknik kapasite, planlama ve arazi kullanımı, yeşil alanlar, ulaşım, altyapı, atık yönetimi, enerji, kentsel dönüşüm, afet, konut, kent kimliği, kültürel miras, kentlilik bilinci, sosyal hizmetler ve katılım konularında yapılan ankette şu sonuçlar ortaya çıkmıştır (KENTGES Belediyeler Anketi, 2011):

Büyükşehir belediyelerinin KENTGES belgesine dayanarak hazırlanan performans hedeflerine teknik kapasite, sosyal hizmetler, kent kimliği, kültürel miras ve kentlilik bilinci konularında yaklaştıkları görülmektedir. Ancak, planlama ve arazi kullanımı, yeşil alanlar, ulaşım, altyapı ve atık yönetimi, yenilenebilir enerji, kentsel dönüşüm, afet ve konut gibi konularda ise önemli ölçüde merkezi idare ile işbirliğine ihtiyaç duydukları ortaya çıkmıştır. Temel konularda il ve ilçe belediyelerine göre daha ileride olan büyükşehir belediyelerinin sakınım planı veya kentsel risk yönetimi, tasarım rehberleri, kent bilgi sistemi, yenilenebilir enerjinin kullanılması, yolculuk süresinin kısaltılması konularında konulan hedeflerin çok gerisinde oldukları ve bunları geliştirmek üzere merkezi yönetim ile bir işbirliğine ihtiyaçlarının olduğu ortaya çıkmıştır. İl belediyeleri, teknik kapasite ve sosyal hizmetler, kent kimliği, kültürel miras ve kentlilik bilinci konuları haricinde büyükşehir belediyeleri ile benzerlik göstermektedir. KENTGES hedeflerini gerçekleştirmek için yeterli teknik kapasite desteği sağlanırsa il belediyeleri ile verimli bir işbirliği ortamında KENTGES hedeflerinin hayata geçirilme potansiyeli yüksektir. İl ve ilçe belediyelerinin de altyapı, ulaşım ana planı, atık yönetimi, enerji, afet zararlarını azaltma, yeşil alanlar, katılım, kent kimliği ve sosyal hizmetler açısından katkı ve desteğe ihtiyaçları olduğu anketten anlaşılmaktadır. Özellikle ilçe belediyeleri yaya bölgesi, kentsel atık depolama ve geri dönüşüm, yenilenebilir enerji, dönüşüm projeleri, risk yönetimi ve kent kimliği konularında birikimleri düşüktür. Bu ölçekteki sorunun, kapasite artırımı, rehberlik etme, deneyimleri paylaşma ve eğitim gibi yöntemlerle aşılabileceği düşünülmektedir. Burada teknik ve idari kapasitenin artırılmasında önemli rol merkezi idareye düşmektedir.

Genel olarak tüm belediyelerde bina sayısının, yapı ruhsatlı ve yapı kullanma izinli bina sayısı, yol uzunlukları, alan büyüklükleri gibi sayısal verilerde tutarsızlıkların ve eksikliklerin bulunduğu, envanter ve istatistik konularında belediyelerde yeterli kapasite ve altyapı bulunmadığı tespit edilmiştir (KENTGES Belediyeler Anketi, 2011).

KENGES Eylem Planında ülkemizde kentleşme ve yerleşmeye ilişkin sorun ve potansiyeller belirli başlıklar altında toplanmıştır. Sorun alanları:

1. Kentsel sorunlar ve kentlerde kontrolsüz büyüme.
2. Kırsal gelişme ve göçler.
3. Kaçak yapılaşma ve gecekondu.
4. Afetlere dayanıksız kentleşme.
5. Kentsel altyapı ve çevre sorunları.
6. Kentsel ulaşım sorunları.
7. Planlama sisteminden kaynaklana sorunlar.
8. Yerel yönetimlerin kapasitelerine ilişkin sorunlar.
9. İklim değişikliği.
10. Kentsel dönüşüm.
11. Sürdürebilir kent formu ve enerji verimliliği.

Ancak asıl olarak kentleşme ve yerleşmeye ilişkin sorunların temelinde etkin mekânsal planlama sisteminin oluşturulamamasının bulunduğu ve Türkiye'de merkezi ve yerel düzeyde kurumlar arasında mekânsal planlama yetki ve uyum sorunlarının devam ettiği ve kent planları ile mekânsal kararlar getiren tematik planların bütünleştirilemediği belirtilmektedir (Kentges Eylem Planı, 2010).

Yukarıda sıralanan sorunların çözümü için ise üç temel strateji geliştirilmiştir:

1. Mekânsal Planlama Sisteminin Yeniden Yapılandırılması.
2. Yerleşmelerin Mekân ve Yaşam Kalitesinin Artırılması.
3. Yerleşmelerin Ekonomik ve Toplumsal Yapılarının Güçlendirilmesi.

6 Sonuç ve Değerlendirme

Ertan'ın (2007) belirttiği gibi sürdürülebilir kent, "sömürüye dayanmayan insanlığın hak ettiği, sağlıklı, nitelikli ve dengeli bir çevreyi de içine alan toplumsal eşitlik ilkesine dayanan, tüm toplumsal kesimler için uygun-sağlıklı yaşam koşulları sağlayan, ussal ve bütüncül planlama anlayışına dayalı, demokratik yurttaş

katılımlı bir kent olmalıdır." Görüldüğü üzere gerek tespit edilen sorunlar gerekse de sorunların çözümü için geliştirilmiş olan stratejilerde doğrudan sürdürülebilir kentsel gelişme kavramı kullanılmamış olsa da sözkonusu ilkenin KENTGES'e sirayet etmiş olduğu söylenebilir. Yalnızca Eylem Planı metnine ve belirlenen sorunlara bakıldığında oldukça faydalı görünen bu proje oluşturulduğu ancak döneme hakim neo-liberal politikalar ve uygulamalar ile ilişkilendirildiğinde kimi çekinceler ortaya çıkmaktadır. Swyngedouw ve arkadaşlarının (2002) 12 AB ülkesinde gerçekleştirilen 13 büyük ölçekli kentsel kalkınma projesinin teorik altyapısını/içyüzünü analiz ettikleri çalışmadan elde edilen sonuçlar düşündürücüdür. Çalışma, küreselleşme ve liberalleşmenin yeni yönetişim biçimleri yoluyla nasıl eklemlendiği/uygulandığı, yönetmenin yeni bir skalar bütünlüğünün oluşturulması ve büyük ölçekli kentsel kalkınma ile kentteki siyasal, sosyal ve ekonomik güç ilişkileri üzerine odaklanmıştır. Çalışmada, büyük ölçekli kentsel gelişme projelerinin planlama ve politika pratiklerinde istisnai ölçütlerin kurulması için bir araç olarak kullanıldığı ve bunun bir neo-liberal "Yeni Kent Politikası" yaklaşımı ve onun seçkinci "orta ve üst sınıf" demokrasisinin parçası olduğu ve bunun dadaha az demokratik daha çok elitist öncelikler tarafından karakterize edilen kentsel girişimlerin "yönetiminin" yeni formlarıyla ilişkili olduğu belirtilmektedir. Yine yerel demokratik katılım mekanizmalarının muteber olmadığı veya elit gücün yeni bir kareografisi ile sonuçlanan son derece "biçimsel" bir şekilde uygulandığı, kentsel gelişim projelerinin nadiren daha geniş ölçekli kentsel süreç ve planlama sistemleri ile azami ölçüde bütünleşmekte olduğu, bu projelerin gayrimenkul piyasası eliyle sosyo-ekonomik kutuplaşmaya neden olduğu belirtilmektedir

Sonuç olarak, Haziran 2013 itibariyle Türkiye gündemini meşgul eden ve uzun bir süre daha meşgul edeceğe benzeyen Gezi Parkı olaylarının ortaya çıkış nedenleri hatırlanacak olduğunda sürdürülebilir kentsel gelişmenin ne denli önem kazandığı anlaşılmaktadır. Sürdürülebilir kentsel gelişmeyi izlemekte birer araç olarak kullanılmalarının yanında; kentsel ve bölgesel düzeyde kamu politikalarının uygulanmasında kıstas görevi gören ve yazıda ele alınan konular özü itibariyle niteliksel bir yaklaşımı gerektiren sürdürülebilir kentsel gelişme anlayışıyla çelişkili görünmektedir. Çünkü bu ilke kuşaklar arası adaleti, sosyal, ekonomik ve çevresel sürdürülebilirliği içermektedir.

Ordu-Üniversite-Sanayi İşbirliğinin Ekonomik Gelişme Üzerindeki Rolü

The Role of Army-University-Industry Cooperation in Economic Development

Asst. Prof. Dr. Özgür Uysal (Akdeniz University, Turkey)
Prof. Dr. Recep Kök (Dokuz Eylül University, Turkey)

Abstract

The cooperation between the different institutions in an economic system, is one of the elements that contributes to the development of the economic system. The main purpose of this study is to analyze the main determinants of growth rate of the defense industry based patent production as a concretized indicator of the information economics, in order to determine in which ways the army-university-industry cooperation will contribute to economic development. In this study, generated basic and derivative hypotheses were tested using panel data method on NATO countries and were developed an econometric model to provide and improve the army-university-industry cooperation. The contribution of the army-university-industry cooperation to economic development have been revealed with a model proposal. According to the results of analysis, the basic dynamics that determined the growth rate of patent production resulting from army-university-industry cooperation are the share of technological progress of army on national income received by the army, the share of university R&D expenditures in total R&D expenditure and technological gap levels of the countries. It's observed that any reduction in technological gap levels of the countries or any increase in military-oriented technological progress or the share of university R&D expenditures in total R&D expenditure increases the growth rate of patent production resulting from the army-university-industry cooperation.

1 Giriş

Sosyal sistem parçalardan oluşan bir bütündür ve ekonomik sistem de sosyal sistem içerisinde var olan kurumlardan birisidir. Bu nedenle sosyal sistem içerisinde bulunan herhangi bir parçada meydana gelen bir değişiklik bütünün diğer parçaları üzerinde de etkide bulunur. Söz konusu durum, ister ekonomik, ister politik, isterse kültürel olsun bütün olaylar için aynıdır. O halde ekonomik sistemi, daha genel ve tüm sistemleri içerisine alan sosyal sistem içerisinde analiz etmek gerekir. Böylece ekonomik sisteme etki eden birçok faktör analiz dışına itilmemiş olur. Gelişme gibi birden çok faktörden etkilenen toplumsal bir olgunun doğru ve tutarlı bir analizinin yapılabilmesi ekonomiyle birlikte sosyo-kültürel ve psikolojik faktörleri de içinde barındıran bir yöntemle mümkün olabilir. Gelişme araştırmaları ancak bu şekilde tek boyutluluktan ve indirgemecilikten kurtarılıp toplumların problemlerini çözmeye yöneltilebilir.

Sosyal sistem bütününün parçalarından birisi ekonomik gelişmedir. Ekonomik gelişmeye etki eden faktörlerden birisi ise kurumlar arası işbirliğidir. Farklı kurumlar aralarında fikir, bilgi ve ürün paylaşımı yaparak yenilik üretmekte ve bu yolla ekonomik gelişmeye katkı sağlamaktadırlar. Bu işbirlikleri arasında ekonomik gelişmenin itici gücü konumunda olan ve ilerlemeye en yatkın olması beklenen ilişki üniversite-sanayi işbirlikleridir. İktisat literatüründe üniversite-sanayi işbirliğine yönelik olarak yapılan birçok çalışma mevcuttur. Yapılan bu çalışmalarda üniversite-sanayi işbirliğinin ne şekilde olduğu/olması gerektiği ve üniversitelere, sanayiye ve genel ekonomiye olan katkıları çeşitli boyutlarıyla ele alınmıştır. Bu çalışmada ise ordu, üniversite ve sanayi arasında oluşturulacak işbirliği, ekonomik gelişmeye katkıları bağlamında ortaya konulmuştur. İktisat literatüründe bu anlamda bir çalışma bulunmazken, ekonomilerdeki bazı temel kurumlarının niteliksel yapısı ve işleyişinin geliştirilmesine yönelik bazı öneriler ortaya koyması çalışmanın bir başka önemli yanıdır.

Bu çalışmanın temel amacı ülkelerin temel kurumları olan ordunun ve üniversitelerinin hem kendi aralarında hem de sanayi sektörü ile işbirliğini geliştirecek bir model önerisi ortaya koymak, nasıl bir ordu-üniversite-sanayi işbirliği modellenebileceğini araştırmak ve bilgi ekonomisinin somutlaştırılmış göstergesi olan savunma sanayi temelli patent üretiminin temel belirleyenlerini analiz etmektir. Bu sayede ekonomik gelişmede ordu, üniversiteler ve sanayi arasındaki karşılıklı etkileşimin ve işbirliğinin rolü ortaya konmuş ve bu konuda tarafımızdan kurulmuş hipotezler test edilerek ordu-üniversite-sanayi işbirliğinin geliştirilmesine yönelik politika önerileri geliştirilmiştir. Bu çalışma orduyu da içine alan bir işbirliği modeli ortaya koyarak literatürdeki bu eksikliği gidermeyi amaçlamaktadır.

Çalışmanın uygulama kısmında ordu-üniversite-sanayi işbirliğini sağlamaya ve geliştirmeye yönelik bir takım hipotezler kurulmuştur. Daha sonra ordu-üniversite-sanayi işbirliğine yönelik ilgili değişkenler belirlenerek ekonometrik bir model oluşturulmuş ve NATO ülkeler grubu üzerinden panel veri yöntemiyle çalışmanın hipotezleri test edilmiştir.

Üniversiteler bilim üreten ve geliştiren kurumlar olması, sanayi ekonominin üretim yapan motoru olması, ordu ise devletin bekasını sağlayan ve savunma hizmetini yürüten kurum olması bakımından ekonomik gelişmede önemli rol oynamaktadır. Ekonomik gelişmeye ayrı ayrı katkıları bulunan bu üç temel dinamiğin işbirliği yapmaları halinde ekonomik gelişmenin niteliğinin ve hızının artacağı ve işbirliğinden doğan sinerjinin ekonomiye daha büyük katma değer yaratacağı düşünülmektedir.

2 Ekonomik Gelişme

Gelişme, bir ulusun ekonomik, sosyal (doğum oranı, kentleşme oranı vb.), kültürel (sanat faaliyetleri vb.) ve çevresel yaşamındaki genel ilerlemedir. Ekonomik gelişme, aynı zamanda bir ekonomideki nicel değişmelerin yanında nitel (yaşam standardını iyileştiren, sayı ile ölçülemeyen) değişmeleri de kapsamaktadır.

Ekonomik gelişme süreci ve onun unsurları araştırılırken karmaşık bir yapıyla ve daima iç içe geçmiş olaylarla karşılaşılır. Bu nedenle sermaye ve teknoloji gibi ekonomik faktörlerin, diğer faktörlerin desteği olmaksızın gelişme olgusunu ortaya çıkarması güçtür. Gelişme olgusunun, iktisadın da içerisinde olduğu birden fazla faktörün birbirleriyle karşılıklı ilişki kurularak ortaya çıkması daha muhtemeldir. Genellikle toplumsal olayları ortaya çıkaran unsurlar birbirlerine bağlıdırlar. Bundan ötürü bir tek neden-sonuç ilişkisi anlayışı sosyal olayların incelenmesinde yeterli olamamaktadır. Çünkü bütünün bir değişkenle belirlenmesi değil, değişkenlerin birbirleri üzerindeki karşılıklı etkisi ile toplumsal olguların değişmesi söz konusudur. Gelişme gibi sosyal sistemin değişimini ifade eden ve sosyal sistemin değişikliğine neden olan bir olgunun da tek nedenli ilişki yerine, sosyal olaylar arasındaki karşılıklı ilişki anlayışıyla çözümlenmesi gerekir. Bu anlayış ise bütüncül bir yöntemi gerekli kılmaktadır. Bütüncül (holistik) yöntem; iktisadi, kültürel, politik ve psikolojik faktörlerin birlikte ele alınıp gelişmeye olan etkilerinin karşılıklı etkileşim içerisinde konu edildiği bir araştırma metodunu içermektedir.

Ekonomik gelişme olgusunun anlaşılabilmesi ve gerçekleştirilebilmesi için iktisadi yapı gibi tek bir kurumsal oluşumun ötesinde, birden fazla kurum birlikte ele alınmalıdır. Çünkü siyasal, ekonomik, kültürel ve bireysel faktörler arasında koparılamayacak bir ilişki bulunmaktadır. Bu nedenle, yukarıdaki faktörlerin gelişme olgusu etrafında birbirleriyle olan bağlantıları kurulmalı ve ilgili değerlerin değişimleri, bir bütünlük içerisinde tanımlanmalıdır (Yavilioğlu, 2002:68).

Bilgi toplumunda ekonomik gelişmenin temelinde, sermaye birikimi değil, bilimsel bilgi birikimi yatmaktadır. Burada üretilen bilimsel bilgi, kuantum düşüncesinin bilimsel yaklaşımları içerisinde üretilen yeni teknolojilere dayanmaktadır. Bilimsel bilginin doğaya ve yaşama uygulanabilir olması teknoloji olarak ortaya çıkmaktadır. Ekonomik gelişme; bilimsel bilgi ve teknolojik yeniliklere dayalı bir süreç olarak devreye girmektedir. Bilgi toplumunun temelindeki bilimsel bilgi ve yenilikler, toplumun; eğitim, öğrenim ve Ar-Ge ile entelektüel sermayesine ve dolayısıyla yetişmiş nitelikli insan gücüne bağlı olarak üretilmektedir.

Ekonomik gelişmeyi açıklamada büyüme teorileri denge analizleri olması ve konulara tek yönlü yaklaşması nedeniyle yetersizdir. Dolayısıyla ekonomik gelişme konusunun daha genel bir çerçevede incelenmesi gerekmektedir. Kuantum düşüncesi ve ağ etkileşim sistemi göz önünde bulundurulduğunda ekonomik gelişmeyi sağlamada farklı kurumlar arasında işbirliğinin sağlanması gerekir. Ordu, üniversite ve sanayi gibi farklı kurumların karşılıklı ilişkisini inceleyecek bir yaklaşımın basit ve tek yönlü mekanik etkileşim modeli ile incelenmesi yerine çok yönlü interaktif etkileşim yaklaşımıyla incelenmesi doğrudur. Yani, kullanılacak yöntem tek yönlü neden sonuç ilişkisinden ziyade çok yönlü interaktif etkileşim ilişkisi olmalıdır. Bu interaktif etkileşim sürekli ve dinamiktir. Bu da ancak kuantum mantığıyla olur. Karşılıklı dönüşüm ve kümülatif etkileşim kuantum mantığına dayanır. Bir toplumu sağlıklı olarak inceleyebilmek adına çok yönlü interaktif etkileşim ilişkisine bağlı kalarak yapılan bir arayışın varacağı yer kurumlar arası etkileşim ve işbirliği olmaktadır. Dolayısıyla, noktasal yaklaşım yerine işbirliği sayesinde daha çok sayıda yenilik üretilir.

3 Üniversite-Sanayi İşbirliği ve Ar-Ge

Sanayileşmiş ve ekonomik olarak gelişmiş ülkelerde üniversite-sanayi işbirliğinin de oldukça geliştiği görülmektedir. Dura (1995:101)'ya göre üniversite-sanayi işbirliği; üniversitelerin mevcut kaynakları (bilgi, personel, materyal, vb.) ile sanayinin mevcut kaynakları (tecrübe, personel, ekonomik güç, vb.) her iki tarafa ve topluma fayda sağlamak üzere, bir metot ve sistem dâhilinde birleştirilerek yapılan eğitim-öğretim, araştırma-geliştirme ve diğer hizmet faaliyetlerinin tümüdür.

Günümüzde bir ülke sanayisinin ya da bir sanayi kuruluşunun uluslararası pazarlardaki rekabet üstünlüğü yarışında ön plana çıkabilmesi, imalat yeteneğine Ar-Ge becerisini de ekleyebilmesine bağlıdır (Rasiah ve Govindaraju, 2009).

Üniversite-sanayi işbirliği sayesinde sanayi ve hizmet sektörlerinin talep ettiği iş gücü ihtiyacını nitelikli bir şekilde arz edilmesi sağlanacaktır. Güler (2000)'e göre, temel anlamda aşağıda belirtilen koşullar işbirliğini zorunlu kılmaktadır: Nitelikli insan yetiştirme zorunluluğu, Üniversitenin mevcut ve potansiyel imkânlarının sanayiye aktarılması; Sinerji etkisi yaratmak.

Gelişen teknoloji ve bilgi çağının getirdikleri, geride kalmayı ya da yerinde sabit bir yapıyı asla kabul etmemektedir. Bu kapsamda yarış, rekabet, hizmetler ya da üretim sektöründe ve her alanda devam etmektedir. Bu yarışta başarılı olmak ve en önde olmak, makro düzeyde her ülkenin, mikro düzeyde her sektör ve işletmenin var oluş amacı ile ayrılmaz bir bütünlük içindedir. İnsan kaynaklarına yapılan yatırım ve entelektüel sermayenin bu yarışta son derece önemli bir yeri vardır. Yetişmiş insan kaynakları ve rekabetin diğer unsurları arasında iyi bir koordine ile amaca yönelik işbirliğinin sağlanması zorunluluğu vardır (Çağlar, 1999).

Ar-Ge, bilimin evrenselliği temelinde bağımsızdır ama evrensel bilime yapılacak bireysel ya da kurumsal katkı, bağlı olunan ulus için de özel bir saygınlık kazandırmaktadır. O nedenle Ar-Ge yetersizliği ya da zayıf Ar-Ge yeteneği, o ülke için bilimsel ve teknolojik bağımlılık, ayrıca da dünya üzerinde saygın bir yerde olamama demektir.

4   Savunma Sanayi

Çalışmanın temel amacı ordu-üniversite-sanayi işbirliğinin ekonomik büyümeye katkılarını belirlemek olduğu için bu noktadan itibaren devletin temel kurumlarından olan "ordu" çalışma kapsamına dâhil edilmiştir. Ordu devletin bekasını sağlayan ve savunma hizmetini yürüten kurumu ve devletin silahlı gücüdür. Sanayi sektörünün ordu ve savunma ile ilgili olan kısmı genel olarak savunma sanayi başlığı altına girmektedir. Bu anlamda ekonomik gelişmeye önemli katkılar sağlayan ordu sanayi işbirliği özellikle savunma sanayi ölçeğinde gerçekleşmektedir.

Savunma sanayinin sivil sektörlerin faaliyetlerine benzer yanları olmasına rağmen, ileri teknoloji kullanımı, yüksek kalite standartları, sınırlı sayıda alıcısı olan bir pazar, politik etkilere açık olması ve tek bir ürün için çok büyük miktarlarda Ar-Ge ve yatırım gerektirmesi gibi özellikleri savunma sanayini diğerlerinden ayırmaktadır (SSM, 2004).

Savunma sanayi ülkenin tüm ekonomik yapısı, özellikle üretim endüstrilerinin yatırım faaliyetleri ile sıkı ilişki içerisinde, bir ülkenin silahlı kuvvetleri için, taktik ve stratejik silah sistemleri ile diğer askeri teçhizatı tasarlayan, geliştiren ve üreten kamu ve özel sektör işletmelerinin toplamıdır (Öztürk, 2001: 44). Silah sistemleri yüksek Ar-Ge harcaması ve uzun süren bir üretim süreci gerektirirler. Bu faktörler savunma sanayi işletmelerinin ürün değişim gereklerine reaksiyon göstermelerini zorlaştırır. Bazı hükümetler ise savunma sanayi kapasitesinin belirli bir seviyenin altına düşmesine politik direnç gösterebilirler (Öztürk, 2001:44-48).

Savunma Sanayi sektörü, uluslararası serbest ticaret antlaşmaları dışında tutulan, ticari ilişkilerin politik ilişkilere sıkı bir biçimde bağlı olduğu, uluslararası ticaret hacminin sınırlı ve az sayıdaki ülke tekelinde olduğu, bu nedenle iç pazar ile büyüyen, yatırım ve harcama kararları ekonomik gerekçelerden çok jeostratejik ve siyasi gerekçelerle verilen bir sektördür. Savunma Sanayi sektörünü diğer sektörlerden ayıran bir diğer konu da, bu sektörün, bilim ve teknolojinin en son yeniliklerinden yararlanması, ürünlerin genel olarak en ileri ürün ve üretim teknolojilerinin birer örneği olmasıdır (Cleand ve Gallagher, 1993:23). Dolayısıyla sektör, ülkelerin teknolojik altyapısının gelişimi açısından itici rol oynamaktadır. Bu gücün korunmasıysa, sürekli ve geniş ölçekli bir Ar-Ge faaliyeti yürütülmesi ve nitelikli, yenilikçilik ve yaratıcılık yetenekleri geliştirilmiş bir insan kaynağına yatırım yapılması ile mümkün olmaktadır. Bu nedenle, bu alanlardaki yatırım kararlarında ülkelerin stratejik hedefleri de önemli bir rol oynamaktadır. Öte yandan, yüksek teknolojiye dayalı tüm sektörlerde görüldüğü gibi, bu sektör; nitelikli, katma değeri yüksek ürünleri hedefleyen, teknoloji üretmek ve karşılıklı bağımlılık ilkesi çerçevesinde dünyayla sıkı entegre olmak zorunda olan, bu nedenle de karmaşık ve ileri düzeydeki Ar-Ge projelerine dayanan, ihtiyaçlardaki değişiklikler nedeniyle kapsamı ve hedefleri sıkça değişen faaliyet ve teknoloji alanlarını kapsayan bir sektördür (Gökpınar, 2003:5).

Son yıllarda ordunun ihtiyacı olan savunma sistemlerinde özgün yurt içi geliştirme modellerine öncelik verilmeye çalışılmıştır. Böylece, teknolojinin satın alınması yerine üretilmesi durumunda tedarik edilen sistemler üzerinde gerekli geliştirmelerin kısıtlamasız olarak yapılması mümkün hale gelmekte ve bu ürünlerin fikri mülkiyet ve kısıtsız kullanım haklarına sahip olunmaktadır. Savunma sanayinde yurtiçi üretim, güçlü bir savunmasının yanı sıra, savunma sanayinin uluslararası rekabette yer alabilmesi ancak teknolojik gelişmelere ayak uydurmak ve ileri teknoloji alanlarına hâkim olmakla mümkün olabilecektir. Bu çerçevede, Ar-Ge çalışmalarına olan ihtiyaç her zamankinden fazla hissedilmektedir.

5   Ordu-Üniversite-Sanayi İşbirliğine Yönelik Bir Uygulama

Çalışmanın bu bölümünde, hedeflenen ordu-üniversite-sanayi işbirliğini sağlayacak desteklenebilir bir yapının oluşturulmasına yönelik bir uygulama yapılmıştır. Daha sonra panel veri analizi sonuçları değerlendirilerek politika önerileri ortaya konmuştur. Çalışmanın temel amacı çerçevesinde ordu-üniversite-sanayi işbirliğine yönelik temel ve türev hipotezler kurulmuş ve yukarıda tanımlanan yöntemlerle kurulan model üzerinde test edilmiştir. Temel hipotez aşağıda belirtilmiştir.

Ordu-üniversite-sanayi işbirliğinden doğan patent artış hızı teknolojik yayılma etkisi yaratmaktadır.

Bu temel hipotezi destekleyecek iki türev hipotez şöyledir:

1) Ordu-üniversite-sanayi işbirliğine bağlı olarak artan katma değer ekonomide itici bir güçtür.

2) Patent artışında üniversite Ar-Ge harcamalarının etkisi yadsınamaz.

5.1 Uygulamanın Yöntemi

Temel amaç fonksiyonu olarak öncelikle çalışmanın ilk iki bölümünde aktarılan teorik çerçeveden hareketle ordu-üniversite-sanayi işbirliğine yönelik bir model oluşturulmaya çalışılmıştır. Oluşturulan model için tek bir ülkenin gerekli çoğunlukta veri seti bulunmaması nedeniyle analiz 15 NATO ülkesini kapsayacak şekilde genişletilmiş ve analiz aracı olarak panel veri yöntemi tercih edilmiştir.

Yukarıda belirtilen amaç doğrultusunda bu çalışmada yararlanılan yöntem panel veri yöntemidir. Bu yöntemin kullanılmasının nedeni tek bir ülkeye ait verilerde yaşanan zaman kısıtı nedeniyle analize diğer ülkelerin de dâhil edilmesidir. Veri setinin 1997-2010 dönemi ile sınırlı tutulmasının nedeni, hem savunma sanayi Ar-Ge harcamaları ve üniversite Ar-Ge harcamalarının hem de savunma sanayi sektörüne ait patent sayılarının ayrıntı bilgiler olması ve de gizlilik arz etmesi nedeniyle eski yıllara ait bu tür detaylı verilerin yayınlanmamasıdır. Bu tür verilerin daha ayrıntılı biçimde açıklanması özellikle son 10-15 yılda ortaya çıkan bir gelişme olmuştur. Dolayısıyla bu dar zaman aralığındaki veri seti ile sağlıklı bir ekonometrik uygulama yapmak ve çalışmanın hipotezlerini test edebilmek için tek bir ülke ölçeğinde değil aynı savunma paktında yer alan ülkeler grubu ölçeğinde analiz yapmak gerekir. Bu yüzden model analizinde başvurulan yöntem panel veri yöntemi olmuştur. Panel veri yönteminin standardizasyonunu sağlama açısından kurulan model NATO ülkeleri kapsamında düşünülmüştür. Birçok NATO ülkesi teknolojik yayılma politikalarını yüksek teknoloji üzerine kurmakta ve ulusal verilerini de açık olarak ortaya koymaktadır. Analiz 15 NATO ülkesinin verileri üzerinden analiz yapılmış, diğer NATO ülkelerinin söz konusu yıllara ait yayınlanmış verileri bulunmadığından bu ülkeler analiz dışında tutulmuştur. Örneklem olarak 1997-2010 döneminde 15 NATO ülkesine ait yıllık verilerden oluşan panel veri seti kullanılmıştır. Veri seti Ekonomik İşbirliği ve Kalkınma Teşkilatı (OECD) resmi internet sitesi (http://www.oecd.org/) ve Avrupa Patent Ofisi (EPO) resmi internet sitesinden (http://www.epo.org/) elde edilmiştir. Veri setinde her bir ülkeye ait 4 ayrı veri olmak üzere 14 yıl üzerinden toplam 840 veri kullanılmıştır.

Panel veri analizinde oluşturulan ekonometrik modelin katsayılarını tahmin etmenin yolu olarak Pedroni (1996, 2000) Düzenlenmiş/Geliştirilmiş En Küçük Kareler Yöntemi'ni (Fully Modified Ordinary Least Squares (FMOLS)) önermektedir. Bu yüzden çalışmada araştırma yöntemi olarak Düzenlenmiş/Geliştirilmiş En Küçük Kareler Yöntemi izlenmiş, kurgulanan modellerin spesifikasyonlarında Sabit Etkiler Modeli dikkate alınmıştır. Eğer araştırma yapılacak panel veri seti OECD ülkeleri, NATO ülkeleri, Amerikan Eyaletleri vb. gibi spesifik bir firmalar/ülkeler/eyaletler seti dikkate alınarak ve belirlenen bu set içinden oluşturuluyorsa, Sabit Etkiler Modeli en uygun panel veri spesifikasyonu olarak değerlendirilmektedir.

Sabit, eğim katsayısı ve hata terimi hakkında yapılan varsayımlara bağlı olarak panel veri regresyonu değişik şekillerde tahmin edilebilmektedir. Örneğin eğim katsayısının sabit, buna karşılık sabit katsayısının yatay kesitlerde farklı olduğu varsayılabilmektedir. Her bir yatay kesitin bireyselliklerini dikkate almanın bir yolu, her bir ülke için sabit katsayıların farklı olmasına, buna karşılık eğim katsayılarının aynı olmasına izin vermektir. Bu model literatürde Sabit Etkiler Modeli olarak bilinmektedir (Coşkun, Kök, Yücel, 2010:71). Buradaki sabit etkiler terimi, eğim katsayısının sabit (aynı), ancak sabit katsayısının her bir kesit için farklı olduğu ve her bir kesitin sabitinin zaman boyunca değişmemesi (time invariant) varsayımlarını nitelemektedir. Bu modelde eğim katsayıları hem zaman hem de kesit için aynı olmaktadır (Gujarati, 2004:642). Bu durumda bir veri setine ilişkin olarak ülkelerdeki bireylerin ırkı, cinsiyeti, yetenekleri, ülkelerin yönetsel performansları ve coğrafi konumları gibi gözlenemeyen bireysel etkiler (heterojenite), tahmin edilmesi gereken N sayıda parametre olarak düşünülmektedir (Greene, 2003:285). Bu çalışmanın veri seti göz önüne alındığında, kurgulanan modellere ilişkin spresifikasyonlarda sabit etkiler modeli dikkate alınmış ve gerçekleştirilen F testi sonuçları da Sabit Etkiler Modelinin seçiminin uygun olduğunu desteklemiştir (ilgili test sonuçları Tablo 1'de gösterilmiştir).

5.2 Model Analizi

Burada ordu-üniversite-sanayi işbirliğine yönelik bir model oluşturulmuş, değişkenlerle ilgili veri tanımlaması yapılmıştır. Sağlanacak işbirliği sayesinde ortaya çıkacak olan yenilikler ve buluşların bir göstergesi olarak savunma sanayinin elde ettiği patentler aynı zamanda bilgi ekonomisinin somutlaşmış bir göstergesi kabul edilmiş ve açıklanan değişken olarak modele dâhil edilmiştir. Bunun yanında savunma sanayi Ar-Ge harcamaları, üniversite Ar-Ge harcamaları ile bu verilerin toplam büyüklükler içindeki payları ve ülkelerin teknolojik açık düzeyleri 1997-2010 dönemi verileri halinde elde edilmiş ve panel veri yöntemiyle analiz edilmiştir.

5.3 Modelin Tanımı ve Temel Değişkenleri

Çalışmanın amaç kısmında belirtildiği üzere savunma sanayi patent üretimindeki gelişmenin temel dinamiklerini ele alan aşağıdaki değişkenler model ve analizde şu şekilde tanımlanmıştır.

$P_{i,t} = \alpha_{i,t} + \beta_{1i}M_{i,t} + \beta_{2i}U_{i,t} + \beta_{3i}T_{i,t} + \varepsilon_{i,t}$

i=1,…,15 ve t=1997,…,2010

Bir nitelik değişkeni haline getirilen modelin bağımlı değişkeni ($P_{i,t}$) ordu-üniversite-sanayi işbirliği sonucu elde edilen savunma sanayi patent sayılarının bu patentlerin dışında kalan diğer tüm patentlere oranındaki değişim hızıdır. Modeli açıklayan üç temel değişken ise şunlardır. ($M_{i,t}$) ordu Ar-Ge harcamalarının toplam Ar-Ge içindeki payının ordunun milli gelirden aldığı paya oranı ve ($U_{i,t}$) üniversite Ar-Ge harcamalarının toplam Ar-Ge harcamaları içindeki payı modelin iki yapısal değişkenidir. ($T_{i,t}$) ise araştırma konusu olan her bir ülkenin teknolojik açık düzeylerini ifade etmektedir ve ülkelerin denge durağan durumlarıyla paralel temel bir piyasa değişkenidir. Değişkenler aşağıdaki gibi formüle edilmiştir:

$$P_{i,t} = \frac{Ordu - Üniversite - Sanayi\ İşbirliğiyle\ elde\ edilen\ Savunma\ Sanayi\ Patentleri}{Savunma\ Sanayi\ Harici\ Toplam\ Patentler}$$

$$M_{i,t} = \frac{\frac{Ordu\ Ar - Ge\ Harcamaları}{Toplam\ Ar - Ge\ Harcamaları}}{\frac{Ordu\ Harcamaları}{GSYH}}$$

$$U_{i,t} = \frac{Üniversite\ Ar - Ge\ Harcamaları}{Toplam\ Ar - Ge\ Harcamaları}$$

$$T_{i,t} = \frac{GSYH_{max,t} - GSYH_{i,t}}{GSYH_{i,t}}$$

Burada, $P_{i,t}$ bağımlı değişkeni ordu-üniversite-sanayi işbirliği sayesinde elde edilen savunma sanayi patentlerinin diğer patentlere oranındaki gelişmeyi göstermektedir.

$M_{i,t}$ oluşturulan modelin birinci bağımsız değişkenidir. Savunma sanayi Ar-Ge harcamalarının toplam Ar-Ge harcamaları içindeki payının ordu toplam harcamalarının GSYİH içinden aldığı paya oranını temsil eder. Başka bir ifadeyle ordu odaklı Ar-Ge paylarının (ordudaki teknolojik ilerlemenin) ordunun milli gelirden aldığı paya oranıdır. Bu anlamda bakıldığında $M_{i,t}$, kaynak yönlendirme açısından ordu eksenli teknolojik ilerlemeyle ilgili yapısal bir kaynak tahsisi değişkenidir. $M_{i,t}$ değişkeni ordu odaklı kaynak kullanımının ne tür bir patent artışına neden olduğunu gösterir. Burada değişkenlerin birbirine oranlanması orduya ayrılan kaynakların hangi ölçüde Ar-Ge'ye yönlendirildiği ile ilgilidir ve modelde yapısal bir değişken olarak değerlendirilmiştir. Böylece değişkenler ayrı ayrı modele konmayıp birleştirildiği için çoklu doğrusallık probleminin ortaya çıkma şansı da azalmış olur.

$U_{i,t}$ değişkeni üniversite Ar-Ge harcamalarının ülkedeki toplam Ar-Ge harcamalarına oranını ifade etmektedir. Modelde üniversite Ar-Ge harcamalarının toplam Ar-Ge harcamaları içindeki payı ($U_{i,t}$) ile bağımlı değişken ($P_{i,t}$) arasında pozitif yönlü bir ilişki beklenmektedir.

$T_{i,t}$ değişkeni modelde ülkelerin teknoloji açığını ifade etmektedir. Teknoloji açığı iki ülkenin teknoloji düzeyleri arasındaki farkı ifade eder (Kök, Açıkgöz Ersoy, 2009:112). Teknoloji açığı; en ileri teknolojiye sahip olan ülkenin kişi başına düşen GSYİH değerini referans alarak referans ülkenin kişi başına düşen GSYH değerinden diğer ülkelerin kişi başına düşen GSYİH verilerini çıkarıp yine aynı ülkenin kişi başına düşen GSYH değerine bölerek hesaplanır. Örneğin modelde referans ülke A.B.D. olduğundan kişi başına terimlerle [(A.B.D. milli geliri – Türkiye Milli Geliri) / Türkiye milli geliri] şeklinde teknolojik açık hesaplanabilir. Böylece ülkeler arası refah farkları da ortaya çıkmış olur. Buna göre Ordu-üniversite-sanayi işbirliğinden doğan patent artış hızının yarattığı teknolojik yayılma etkisi incelenirken ülkelerin teknoloji açığını da dikkate almak gerekmektedir. Modelde bağımlı değişken ($P_{i,t}$) ile teknolojik açık değişkeni ($T_{i,t}$) arasında negatif bir ilişki beklenmektedir. Çünkü teknolojik açık arttıkça işbirliğinden doğan patent oranının azalması beklenir.

5.4 Ampirik Bulgular

Bu kısımda yukarıda belirtilen model, 1997-2010 yılları için panel veri yöntemi yardımıyla modellenmiştir. Veri setine otokorelasyon testi yapılmış ve otokorelasyona rastlanmadığı bunun yanında değişen varyans sorunu ile karşılaşıldığı görülmüştür. Bu sorun da modeli ağırlandırarak (white period metodu ile) çözülmüştür. Spesifikasyon testleri yapılmıştır. Ekonometrik modellerde uzun dönem denge varlığı tespiti ve veri kaybını önlemek amacıyla aynı dereceden durağan değişkenler için geçerli olan Johansen Eşbütünleşme Testi elde edilen verilerin azlığı ve değişkenlerin aynı derecede durağan olmamaları nedeniyle bu çalışmada kullanılmamıştır.

Aşağıda analiz sonuçları tablo halinde verilmiştir.

$$P_t = 13,06422 + 0,249066*M_t + 0,359225*U_t - 15,25142*T_t + \varepsilon_{i,t}$$

Model analizi sonuçlarına göre $M_{i,t}$ değişkeni anlamlı ve işareti pozitif, $U_{i,t}$ değişkeni anlamsız ve pozitif işaretli, $T_{i,t}$ değişkeni de anlamlı ve negatif işaretli olarak belirlenmiştir. Üç katsayının da işareti beklendiği gibi çıkmıştır. Buna göre ordu Ar-Ge harcamalarının toplam Ar-Ge içindeki payının ordu harcamalarının milli

gelirden aldığı paya oranı savunma sanayi patent sayılarıyla doğru orantılıdır. Üniversite Ar-Ge harcamalarındaki artışın toplam Ar-Ge içindeki payı da savunma sanayi patent oranlarıyla doğru orantılıdır. Üniversite Ar-Ge harcamalarındaki artışın toplam Ar-Ge içindeki payı arttıkça savunma sanayi patent oranları da artmaktadır. Buna karşılık teknolojik açık değişkeni ile savunma sanayi patent oranları ise beklendiği üzere ters orantılı çıkmıştır. Yani ülkelerin teknolojik açık düzeyleri azaldıkça savunma sanayi patent oranları artmaktadır.

Tablo 1: *Model Analizi Sonuçları*

Bu bulgulara göre $M_{i,t}$ değişkeninin paydası (ordu bütçesinin veya harcamalarının GSYİH içindeki payı) gittikçe azalıyorken, payı (ordu Ar-Ge'sinin toplam içindeki payı) artıyorsa, ekonominin bütününde ordu-üniversite-sanayi niteliksel işbirliği sayesinde oluşan patentlerin oranı artıyor demektir. Model analizi sonucunda bu durumun doğrulandığı görülmüştür.

Modelde üniversite Ar-Ge harcamalarının toplam Ar-Ge harcamaları içindeki payı ($U_{i,t}$) ile bağımlı değişken ($P_{i,t}$) arasında pozitif yönlü bir ilişki beklenmektedir. Bu hipoteze göre toplam Ar-Ge harcamaları içinde üniversite Ar-Ge harcamalarının payındaki artış Ordu-Üniversite-Sanayi niteliksel işbirliği sayesinde oluşan patentlerin oranında bir artışa neden oluyor demektir. Model analizi sonucunda bu ilişkinin pozitif yönlü olduğu ve bu hipotezin doğrulandığı görülmüştür.

Daha önce $P_{i,t}$ ile $T_{i,t}$ arasındaki ilişkinin ise negatif çıkması beklendiği vurgulanmıştı. Model analizi sonucunda bu ilişkinin de beklenildiği üzere negatif çıktığı görülmüştür. Dolayısıyla ülkelerin teknolojik açık düzeyleri azaldıkça işbirliğinden doğan patent artış hızı artmaktadır. Aynı zamanda $P_{i,t}$ ile $M_{i,t}$ arasındaki yapısal gösterge ülkeler arası yapısal teknoloji farklılığıyla ($T_{i,t}$) açıklanabilir. Genel olarak zengin ülkelerin Ar-Ge'ye daha fazla kaynak ayırdığı gözlenmektedir. Yüksek teknolojilere kaynak ayırabilmek ise daha çok zenginlik gerektirir. Bu yüzden ekonominin itici gücü kendi içerisinde katma değer yaratabilme gücüdür. Teknolojik açığı kapatmadan ve ülke içinde zenginlik yaratmadan patent ve teknoloji üretmek çok zordur. Kişi başına milli geliri daha yüksek ülkelerin daha fazla sayıda patent ürettiği görülür. Nurkse (1966)'nin Fakirlik Kısır Döngüsü Teorisi bu konuya ışık tutmaktadır. Nurkse azgelişmişliğin nedeni yine azgelişmişlikle açıklar. Teoriye göre, söz konusu ülkelerde düşük gelir düzeyi sonucu ortaya çıkan düşük tasarruf düzeyi ve sermaye birikiminin başlangıç noktası olarak alınması halinde, kısır döngü süreci sırasıyla; düşük gelir düzeyi, düşük tasarruf ve talep düzeyi, düşük yatırım düzeyi, yetersiz sermaye oluşumu, düşük verimlilik ve düşük gelir düzeyi biçiminde ortaya çıkmaktadır. Nurkse'ye göre az gelişmiş ülkeler bu çemberi kendiliğinden kıramaz. Bu nedenle, bu ülkelere dış yardım ya da yabancı sermaye girişi şartıyla kısır döngü aşılabilecektir (Altın, 2003:9). Bu nedenle çalışmada bahsedilen kısır döngüden kurtulmanın yolu olarak kaynakları doğru yönlendirmenin niteliksel bir sıçramaya neden olacağı üzerinde durulmuş ve teknoloji açığı değişkeni ($T_{i,t}$) modele dâhil edilmiştir.

Analiz sonuçları değerlendirildiğinde ordu-üniversite-sanayi işbirliğinden doğan patent üretimindeki gelişmeyi belirleyen temel dinamiklerin ordudaki teknolojik ilerlemenin ordunun milli gelirden aldığı paya oranı, üniversite Ar-Ge harcamalarının toplam içindeki payı ve ülkelerin teknolojik açık düzeyleri olduğu anlaşılmıştır. Böylece ordu-üniversite-sanayi işbirliğinden doğan patent üretimindeki gelişmenin temel dinamikleri belirlenmiş olmaktadır.

Model analizi yapılırken ülkeler bazında bireysel etkileri görebilmek için ülke sayısı yıl sayısına göre azaltılarak model daraltılmıştır. Modelin daraltılmasına referans olarak analize giren 15 NATO ülkesine ait açıklanan değişkenin (patent artış hızının) ortalaması hesaplanmış, ortalamanın altında kalan ülkeler analizden çıkarılmış, ortalamanın üzerinde kalan 4 ülke dikkate alınarak bu ülkelerin yanına Türkiye beşinci ülke ve kontrol değişkeni olarak dâhil edilmiştir. Söz konusu 5 ülkenin verileri panel SUR analizi yardımıyla analiz edilmiştir. Panel SUR analizine göre her bir ülkenin teknolojik açık düzeyi sonuçları (değişkenlerin katsayıları ve anlamlılık düzeyleri) daha önce kurulan ana modelle tam olarak örtüşmediği için ve modele yönelik örneklemlerin zaman aralığının darlığından ve örneklemin giderek küçülmesinden doğan bir serbestlik derecesi sorunu ile karşılaşıldığı için sonuçlar rapor edilmemiştir.

Çalışmanın temel hipotezi "ordu-üniversite-sanayi işbirliğinden doğan patent artış hızı teknolojik yayılma etkisi yaratmaktadır" ifadesidir. Temel hipoteze bağlı türev hipotezler ise "Ordu-üniversite-sanayi işbirliğine bağlı olarak artan katma değer ekonomide itici bir güçtür" ve "Patent artışında üniversite Ar-Ge harcamalarının etkisi yadsınamaz" hipotezleridir. Temel hipotez olan ordu-üniversite-sanayi işbirliğinden doğan patent artış hızının yarattığı teknolojik yayılma etkisi test edilirken ülkelerin teknoloji açığı, ordu odaklı teknolojik ilerleme (ordu Ar-Ge harcamalarının payı) ve üniversite Ar-Ge harcamalarının toplam içindeki payı dikkate alınmıştır. Model sonuçları genel olarak değerlendirildiğinde ülkelerin teknoloji açığındaki azalmaların, ordu odaklı teknolojik ilerlemenin ve toplam Ar-Ge harcamaları içinde üniversitelerin payındaki artışın ordu-üniversite-sanayi işbirliğinden doğan patent üretim hızını artırdığı görülmüştür. Diğer bir ifadeyle işbirliğinden doğan patentlerdeki artışlar ordu Ar-Ge ve üniversite Ar-Ge harcamalarındaki artışla, ülkelerdeki teknoloji açığının kapanmasıyla ve dolayısıyla teknolojinin yaygınlaşmasıyla mümkün hale gelmektedir. Bu sonuç çalışmanın temel ve türev hipotezlerini doğrular niteliktedir. Üniversite Ar-Ge harcamalarının patent artışını olumlu yönde etkilediği sonucu çalışmanın türev hipotezlerinden "Patent artışında üniversite Ar-Ge harcamalarının etkisi yadsınamaz" ifadesini de doğrulanmış olmaktadır.

Çalışmada sanayide var olan üretim gücü, üniversitede var olan bilgi ve orduda var olan tahsis yetkisi bir araya getirilerek, üretim, bilgi açığı ile tahsis yetkisi arasındaki bir olgu modellenmiş olmaktadır.

6   Sonuç

Sosyal sistem bütünü içerisinde birbirleriyle ilişkili çok sayıda sistem barınmaktadır ve bu sistemlerden birisi olan ekonomik sistemde meydana gelen değişiklikler bütünün parçası olan diğer sistemler üzerinde etkide bulunmaktadır. Ekonomik sistem içerisinde meydana gelen değişiklikler üzerinde inceleme yapılırken toplumsal ve psikolojik faktörlerle birlikte sosyal sistem bütününü oluşturan teknolojik, kültürel ve siyasal sistemleri de göz önüne almak gerekir. Ekonomik gelişme ekonomik sistemin içerisinde meydana gelen en önemli değişikliklerden birisidir. Dolayısıyla toplumsal bir olgu olan ekonomik gelişmeyi sosyal sistem bütünü içerisinde incelemek gerekir.

Farklı kurumlar arasındaki işbirliği nedeniyle oluşan fikir ve bilgi paylaşımı sayesinde ortaya çıkan yenilikler ve yeni teknolojiler ekonomik gelişmeye yol açan faktörlerdendir. Bu yolla ekonomik gelişmeye en çok katkıda bulunan işbirlikleri üniversite- sanayi işbirlikleridir. Bilim ile teknoloji arasındaki dinamik ilişkinin bir bileşeni olan üniversite sanayi işbirliğinin önemli unsurlarından birisini teknoparklar oluşturmaktadır. Üniversite-sanayi işbirliği teknoparkları doğurmuş, teknoparklarda oluşan yenilikler ve bu yeniliklerin ekonomik sistemde yarattığı değişimler de üniversite-sanayi işbirliğinin daha hızlı bir biçimde yayılmasını sağlamıştır.

Çalışmada Ordu-Üniversite-Sanayi İşbirliği'nin ekonomik gelişmeye olası katkılarına yönelik temel hipotez ve türev hipotezler geliştirilmiş, daha sonra bu hipotezler panel veri ve anket yöntemiyle test edilmiştir. Çalışmanın temel hipotezi "Ordu-Üniversite-Sanayi İşbirliğinden doğan patent artış hızı teknolojik yayılma etkisi yaratmaktadır" ifadesidir. Bu temel hipotezi destekleyecek diğer türev hipotezler ise "Ordu-Üniversite-Sanayi İşbirliğine bağlı olarak artan katma değer ekonomide itici bir güçtür" ve "Patent artışında üniversite Ar-Ge harcamalarının etkisi yadsınamaz" ifadeleridir.

Öncelikle Ordu-üniversite-sanayi işbirliğine yönelik özgün bir model geliştirilmiş, model kapsamında NATO ülkelerinin 1997-2010 yıllarına ait verileri bulunarak panel veri yöntemiyle oluşturulan model test edilmiştir. Modelde bir bağımlı değişken ($P_{i,t}$, Ordu-Üniversite-Sanayi işbirliği sonucu elde edilen savunma sanayi patent sayılarının bu patentlerin dışında kalan diğer tüm patentlere oranındaki gelişme) üç de bağımsız değişken vardır ($M_{i,t}$; ordu Ar-Ge harcamalarının toplam Ar-Ge içindeki payının ordunun milli gelirden aldığı paya oranı, $U_{i,t}$; teknoparklardaki üniversite Ar-Ge harcamalarının toplam Ar-Ge harcamaları içindeki payı, $T_{i,t}$; ülkelerin teknolojik açık düzeyleri). Model analizi sonuçları aşağıdaki şekilde oluşmuştur:

$$P_t = 13,06422 + 0,249066*M_t + 0,359225*U_t - 15,25142*T_t + \varepsilon_{i,t}$$

Model analizi sonuçlarına göre ordu-üniversite-sanayi işbirliğinden doğan savunma sanayi patentlerinin diğer patentlere oranındaki gelişme ile savunma sanayi Ar-Ge harcamalarının toplam Ar-Ge harcamaları içindeki payının ordunun toplam harcamalarının GSYH içinden aldığı paya oranı arasında anlamlı ve pozitif bir ilişki bulunmuştur. Bunun yanında savunma sanayi patentlerinin diğer patentlere oranındaki gelişme ile üniversite Ar-Ge harcamalarının toplam Ar-Ge harcamalarına oranı arasında pozitif bir ilişki bulunmuştur. Yine savunma sanayi patentlerinin diğer patentlere oranındaki gelişme ile ülkelerin teknoloji açıkları arasında ters yönlü bir ilişki bulunmuştur. Buna göre teknolojik açık azaldıkça savunma sanayi patentlerinin diğer patentlere oranının artış hızı artmaktadır. Bu model sonuçları çalışmanın temel hipotezi ve türev hipotezini doğrular niteliktedir.

Çalışmada yapılan hipotez testleri sonuçları değerlendirildiğinde ordunun ekonominin içerisinde sadece bir güvenlik öğesi olarak yer almadığı, aynı zamanda sanayileşmeyi geliştiren ve sürükleyen, katma değer ve istihdam yaratan bir kuruma dönüştüğü görülmüştür. Ordu istihdam ve katma değer yaratıcı ve ekonomide sürükleyici bir bağımsız güç olarak işlemektedir. Orduya yapılan harcamaların zorunlu güvenlik harcamaları olduğu, bunun yanında ekonomiye dolaylı olarak bir dinamizm kazandırdığı görülmektedir. Dünyanın savunma sanayisi en gelişmiş ülkesi olan Amerika Birleşik Devletleri'nde ordu ve savunma sanayinin Ar-Ge faaliyetleri

ağ ekonomileri açısından dünya güvenlik sisteminde baskın bir şemsiye ve refah yaratma unsuru olarak öne çıkmaktadır. Ülkelerde yapılan silah karşıtlığı ve güvenlik mallarına yapılan harcamalar karşıtlığı ideolojik bir karşıtlıktır. Askeri harcamaların ülkelere bir sosyal maliyeti bulunmaktadır. Ülkeler bir yandan bu sosyal maliyeti karşılarken diğer yandan bu harcamaları refah yaratma aracı olarak da kullanmaktadır. Dolayısıyla ordunun bu tür maliyetleri sadece sosyal bir maliyet olarak algılanmamalıdır. Askeri harcamalar ve patent sürecinin yaratmış olduğu katma değere bakıldığında ve karşılıklı dışsallık ve içsellik analizleri yapıldığında askeri harcamalardan kaynaklanan sosyal maliyeti kapatan artı bir değer yaratıldığı ve ekonominin sürükleyici bir güce dönüştüğü görülmektedir. Dolayısıyla bu tür harcamalar tek yönlü bir güvenlik aracı olarak görülmemeli, sağladığı ilave kazançlar göz ardı edilmemelidir. Ordu eksenli yapılan harcamaların yalnızca bir sosyal maliyet unsuru olarak görülmesi ya bir ideolojik önyargıya dayanmakta ya da toplumsal bilinç yetersizliklerinden kaynaklanmaktadır. Bu tür bir algı ekonominin jeopolitiğinin doğurduğu refah yaratma araçlarının ihmal edilmesine veya bazı ayrılıkçı ideolojilerin kasıtlı önyargılarına dayanmaktadır.

Alternatif Bir Ekonomik Model Olarak Halk Sektörü ve Denizli Örneği

People's Sector as an Alternative Economic Model and the Example of Denizli

Prof. Dr. Ayşe İrmiş (Pamukkale University, Turkey)
Mehtap Sarıkaya (Pamukkale University, Turkey)
Hatice Çoban (Pamukkale University, Turkey)

Abstract

People's sector is an establishment of an enterprise result of bringing together production tools take decisions related to the management of this property and create self-employment opportunities with people's own savings. This is the most distinctive feature from the private sector and the public sector. As well as the public sector and the private sector, labor is a part of the production, but in people's sector, employees participate in management, capital and profit. In private sector and public sector there is an up to down organization but in People's Sector, organization settles from down to top. People's Sector resemble to publicly held companies and worker companies in Western Europe and United States but differ from them in the form of establishment and statue of partnership. Because in these companies in the West, government or private sector open shares to public or make workers partner to the shares. In these companies, managerial decisions belong to the person or group that holds most of the shares. Whereas in public sector enterprises, people come together and have equal rights in establishment and management of the enterprise, without any person or group keeping the majority of shares in the hand. Without a precedent in the world, this sector is formed in 1970's with the savings of the workers went from Turkey to Germany and other European countries. In this study, a literature rewiev in the people's sector has been made, then exemplary research was carried out by the founders of the two People's sector companies

1   Halk Sektörünün Tanımı ve Amaçları

Kepenek'e (1974) göre, Halk Sektörü, köylü, esnaf ve zanaatkâr gibi küçük ölçekli üretim yapan grupların ve işçi-memur gruplarının birikimleri ile emek güçlerini kooperatifler, sosyal yardım kurumları ve diğer toplu girişimler vasıtasıyla, kendilerinin yönetiminde ve bir sektör bütünlüğü içerisinde birleştirmeleri sonucunda oluşan sektördür. Bir başka tanıma göre ise, Halk Sektörü "yaşamlarını kol ve kafa çalışmaları ile sürdüren fakat gelirleri katkılarının gerisinde kalan çok sayıdaki dağınık küçük girişimlerin ve halk yığınlarının örgütüdür. Bu bağlamda, halkın kendi tasarruflarını bir araya getirerek, kendi yönetiminde üretim yapma ve gelir elde etme imkânını sağlayan" sektöre Halk Sektörü denilir (Hamitoğulları, 1974). Halk sektörü ile halk kendi yönetiminde, kendisini üretici durumuna getirir. Her birey, tasarrufa katılma payı ve üretim mülkiyeti oranından bağımsız olarak, Halk Sektörü yönetiminde eşit işe ve eşit etkinliğe sahiptir (Ölçen, 1974).

Halk sektörünü özel sektörden ve kamu sektöründen ayıran en önemli özellik yayılma biçimleriyle ilgilidir. Özel sektör ve kamu sektörü girişimciliği, tavandan başlayıp aşağıya doğru giden bir üretim girişimciliğidir. Halk Sektöründe ise durum tam tersi olmakta, tabandan başlayıp, yukarıya doğru meydana gelen bir üretim girişimi gerçekleşmektedir (Ölçen, 1975). Halk Sektörünü diğer sektörlerden ayıran bir diğer özellik de, sosyal amaçlı yatırımların ve maliyet minimizasyonunun beraber sağlanmasıdır. Özel sektörde amaç kârın maksimizasyonun, kamu sektöründe ise maliyet minimizasyonunun ya da katma değer maksimizasyonunun sağlanmasıdır (İlbaş, 1974). Aynı zamanda, özel sektörde yönetim, sermayeyi elinde bulunduran sınırlı sayıdaki kişinin elindedir. Bu da genellikle işletmenin kurucusudur. Dolayısıyla işletmenin %51 hissesine kim sahipse, yönetimde söz sahibi olan o kişi veya gruptur (Ölçen, 1974). Kamu sektöründe ise yönetim devlete aittir. Hem özel sektörde hem de devlet sektöründe emek sahipleri sadece "üretimin bir parçasıdır". Hâlbuki Halk Sektöründe çalışanlar, sermayenin ve kârın sahibi olup, yönetimde de eşit söz hakkına sahiptir. İşçinin, sermayenin ve kârın sahibi olmasının ötesinde üretim faaliyetinin en kutsal parçası olan emeğin sahibi olarak yönetime katılmasıyla da iş yerlerinde demokrasi sağlanmış olacaktır. Ayrıca, üretimin bir parçası olan işçinin, yapıcı, yaratıcı ve uygulayıcı fikirlerini sunma fırsatını yakalamış olması üretimin ve kalitenin artmasını sağlayacaktır (Ak, 1976).

1974 yılındaki hükümet programında Halk Sektörünün amaçlarından daha sistematik bahsedilmiştir. Buna göre, Halk Sektörüyle, sanayileşmeye hız kazandırılacak, dağınık tasarruflar değerlendirilecek, kalkınmanın nimetlerinden daha yaygın ve adil faydalanma sağlanacak, halkın girişimcilik gücü harekete geçirilecek, yurt dışındaki işçilerin tasarruflarının ve teknik becerilerinin temel sanayi projelerine yönlendirilmesi sağlanacaktır (Öngün, 1974). S. H. Türk ise Halk Sektörünün amaçlarını ekonomik ve sosyal amaçlar olmak üzere iki grup içerisinde sınıflandırmış daha sonra bu amaçları ayrıntılı hale getirmiştir. Türk'e göre bu amaçlar (Türk, 1975);

1. Geniş halk topluluklarının küçük tasarruflarını, çağdaş ölçeklere uygun büyük işletmeler kuracak ve işletecek biçimde, bir araya getirerek daha hızlı bir kalkınma için gerekli sermaye birikimini sağlamak (ekonomik),
2. Üretim araçlarının mülkiyetini geniş halk topluluklarına yaymak (sosyal),
3. Halkı ekonomik karar merkezlerinde söz sahibi yaparak demokratik gelişme sürecinin ekonomik boyutunu tamamlamak (sosyal)
4. Toplumda daha adil bir gelir dağılımı sağlamaktır (ekonomik).

Bu amaçların sonucunda ise, milli gelirin artan bölümü, tasarruflara ve yatırıma yöneltilerek, tüketim malları üzerindeki talep fazlalığından kaynaklanan enflasyonist baskı azaltılacak, yatırım malları piyasası genişleyecek, tekelci sermaye karşısında dengeleyici bir güç oluşacaktır. Ayrıca, ekonomik gücü artan geniş halk topluluklarının siyasal alanda da etkinliği artacak, demokratik rejim daha sağlam temellere oturacaktır (Türk, 1975).

Bütün bu amaçlarının ötesinde Halk Sektörünün sosyal, ekonomik ve hatta siyasi bağlamda kendi yapısı itibariyle çok önemli fonksiyonları da yerine getirdiği görülmektedir. Hepsinden öte, Halk Sektörleri kırsal kesimde de örgütlenen sektörlerdir. Böylece, göçlerle köylerin boşalmasına gerek bırakmayan bir sanayileşme, kırsal alanların, kentsel alanlarla denge kuracak şekilde modernleşmesi ve kırsal alanlarda geniş istihdam imkânlarının sağlanması Halk Sektörleriyle mümkün olmuştur (Ölçen, 1974). Sermayenin tamamen tabana yayıldığı ve işçilerin çalıştıkları işletmede aynı zamanda pay sahibi olduğu bu sektörde sermaye payları ne olursa olsun, karar vermede eşit haklara sahip olmaları kendiliğinden öz yönetimi de getirmektedir. Öz yönetimde artı değeri yaratan emek gücü bu değerin nereye kullanılacağı kararında, yürütülmesinde ve denetiminde söz sahibi olmaktadır (Coşkun, 1976). Hatta emek gücünün yarattığı artı değer işletmenin kâra geçmesiyle beraber tekrar işçiye geri dönecektir. Böylece Halk Sektörüyle, Türkiye'de "endüstriyel demokrasi" gerçekleşecektir (Altun ve Akıncı, 1974). İşçinin üretim araçlarına sahip olması, yönetime katılması ve emeğinin yarattığı değere sahip olması onun yabancılaşmasını ve mekanikleşmesini de önleyecektir. Böylece işgücünün dolaylı olarak, yaratıcılığı, etkinliği ve verimliliği de artacaktır (Kepenek, 1974).

2 Sanayi Kenti Denizli'de Halk Sektörü Örnekleri

Günümüz Denizli'si Türkiye'nin önemli tekstil merkezlerinden biridir. Bu gelişmenin temeli tarihsel sürece dayalıdır. Türk tarihinde Osmanlı'dan beri bilinen Denizli dokumacılığı, bugün tekstilde dünya markası haline gelen, sanayi üretimine dönüşmüştür. Ancak, Denizli'nin bir sanayi kenti haline gelmesinin tek sebebi geleneksel üretime dayalı faaliyet göstermesi değildir. Türk Halkının 1970'li yıllarda Halk Sektörüyle ortaya çıkan girişimcilik vasfının en önemli örneklerinden birini de Denizli vermiştir. Üstelik sadece tekstilde değil, onun yanısıra, gıda, cam, elektronik ve makine sanayinde Türkiye'nin o dönemki şartlarına göre büyük atılımlar ve başarılar elde etmişlerdir. Bu çalışmanın alan araştırması yarı biçimsel mülakat usulüyle yapılmıştır. Denizli'deki Halk Sektörünün oluşumu anlatıldıktan sonra, Halk Sektörüne örnek teşkil eden üç şirketin hikâyesi bizzat kurucularının dilinden aktarılmıştır. Bu çalışmaya üç işletmenin dâhil olmasının sebebi, üçünün de kurucularını hayatta olmasıdır. Mülakata katılan kişilerden mülakat sırasında isimlerini çalışmada açık olarak yazabilmek için izin alınmıştır. Mülakatlara Ayşe İrmiş ve Mehtap Altınkesen Sarıkaya beraber katılmış ve her ikisi de anlatılanları elle yazarak not almıştır. Aynı gün içerisinde yazılanlar birbirleriyle karşılaştırılıp, bilgisayara geçilmiştir. Mülakata katılan kişilere ulaşmak için telefonla randevu alınmış, Uygar Motor'un kurucusu B.A ile 20.03.2013 tarihinde, Bir-Emek kurucusu H.A'yla 26.07.2012 tarihinde kendilerinin şu andaki iş yerlerine gidilerek mülakat yapılmıştır. Mülakat sırasında anlatılanlar elle not alınmıştır. Mülakat müddetince araştırmacılar tarafından mülakatın gidişatına göre az sayıda soru sorulmuş, mülakata cevap veren kişiler tamamen kendi doğal anlatımlarıyla konuyu aktarmışlardır. Araştırmanın ana amacı, halkın girişimci ruhunun ve gücünün, birbirleriyle ve devletle yaptıkları güven esasına dayalı karşılıklı işbirliği neticesinde, sanayiye, üretime ve kâra nasıl dönüştüğünü görebilmektir. İkinci amaç ise gelecekte sermayenin, üretimin ve riskin daha geniş bir tabana yayılacağı yeni işbirlikleri, üretim alanları ve ülkelerin kalkınmasındaki en önemli faktör olan girişimcilik için örnek modeller sunabilmek ve bu modellerin başarı ve başarısızlık sebeplerini irdelemektir. Araştırma sorusu, Denizli'deki Halk Sektörlerinin nasıl oluştuğu ve işleyişlerinin nasıl olduğuyla ilgilidir.

2.1 Halk Sektörünün Ortaya Çıkışını Sağlayan Sosyo-Ekonomik Alt Yapı

Türkiye'nin 1950'li yıllarda başlayan sanayileşmesi İstanbul, Ankara, İzmir gibi daha ziyade az sayıdaki büyük kentte ve çoğunlukla devlet destekli özel sektör eliyle gerçekleşmiştir. Henüz özel sektör tecrübesi az olan ülkede tarımsal faaliyetler de nüfusun geçim şartlarını iyileştirmek ve refahını sağlamak için yeterli düzeyde değildir. Bu sebeple bir taraftan özel sektördeki istihdamı gerçekleştirmek için diğer taraftan da köydeki yaşam şartlarından daha iyi yaşam şartlarını sanayileşmiş kentlerde bulabilmek gayesiyle köyden kente önemli miktarda göçler başlamıştır. Ancak, özel sektörün çok kısıtlı gelişmiş olması kırsal kesimde yaşayanların ve köyden kente iş bulma ümidiyle göç edenlerin istihdam beklentisini karşılayabilecek düzeyde değildir. Aynı dönemlerde, sanayileşmeye neredeyse yüz yıl önce başlamış ve çok büyük gelişme kaydetmiş olan başta Federal Almanya olmak üzere batı Avrupa ülkeleri fabrikalarında çalışacak fiziki güce dayalı işgücü talep etmektedir. 1961 yılında Federal Almanya ile imzalanan "Türk-Alman İşçi Mübadele Anlaşması" ve daha sonra diğer Avrupa ülkeleriyle

yapılan anlaşmalarla Türkiye'den özellikle Almanya'ya giden ve daha ziyade fiziki emek göçüne dayalı büyük miktarda işgücü göçü başlamıştır. Öyle ki, 1973 yılına kadar Türkiye'den Almanya'ya işçi olarak gidenlerin sayısı, 800 yüzbini bulmuştur. Ancak, hem kültürel farklılıklar, hem büyük sanayi ile ilk defa karşılaşmanın sıkıntısı hem de ülkelerinden ve ailelerinden uzak olmanın sıkıntılarıyla ilk dönem, oldukça sancılı geçmiştir. Bu nedenle göç eden işçiler kısa sürede sermaye biriktirip, ülkelerine geri dönmeyi ve tasarruflarını Türkiye'de değerlendirmeyi düşünmüşler, geleceklerini Türkiye'de görmüşlerdir (Akseki, 2007). Halk Sektörlerinin ortaya çıkışıyla beraber, tasarruflarının önemli bir kısmıyla Türkiye'deki işçi şirketlerinden pay almışlar ve bu şirketlerin ana sermayesini oluşturmuşlardır.

Türkiye'den yurt dışına en çok işçi gönderen yedinci il Denizli olmuştur. Denizli, 1960'lı yıllara kadar, nüfusunun %76'sı kırsal kesimde yaşayan, temel iktisadi faaliyetinin tarım ve el tezgâhlarıyla dokumanın olduğu bir kenttir. Türkiye'den Almanya'ya ve diğer batı ülkelerine işgücü göçünün başladığı bu dönemde Denizli'den 35 bin kişi adı geçen ülkelere işgücü olarak göç etmiştir. Göç eden işçilerin çoğunluğu gibi Denizli'den yurt dışına göç eden işçiler de tasarruflarını Türkiye'de değerlendirmeyi tercih etmişlerdir. Bu sebeple yurt dışındaki işçilerin birikimleriyle, Türkiye'deki vatandaşların birikimlerinin birleşmesiyle, 1970'li yıllarda kurulan Halk Sektörü bağlamındaki, çok ortaklı şirketlerin ve işçi şirketlerinin 21 tanesi Denizli'de kurulmuş ve önemli başarılar elde etmişlerdir (Akseki, 2007).

2.2 Halk Sektörü Kapsamında Denizli'deki İşçi Şirketi Örnekleri

Araştırma yapılırken Denizli'de kurulan bütün işçi şirketlerinin kurucularına ulaşılamamıştır. Bu kurucuların bir kısmı Denizli'den başka şehirlere göç etmiş, bir kısmı yaşlılığı ve hastalıkları sebebiyle mülakat yapmak için uygun şartlarda bulunmamış bir kısmı da vefat etmiştir. Mülakatlar ulaşılabilen ve araştırmaya en iyi örneği teşkil edebilecek iki şirketin önder kurucularıyla yapılmıştır. Bu şirketler Bir-Emek ve Uygar Motor'dur.

2.3 Uygar Motor Örneği

Uygar Motor, 1974 yılında Denizli ili Honaz ilçesi Kocabaş beldesinde motor üretmek üzere B.A'nın önderliğinde 10 bin işçinin birikimleri ve katılımıyla kurulan fakat daha sonra döküm ve döküm parçaları üreten bir işçi şirketidir. 1995'te icra yoluyla 130 milyar Liraya satılan Uygar Motor, Kalkınma Bankası, Sosyal Sigortalar Kurumu, Maliye ve işçilere borçlarını ödedikten sonra kalan 93 milyar Lirayı bankaya yatırmıştır. Uygar Motor, yıllar önce iflas etmiş olmasına rağmen bankaya yatırdığı 93 milyar Lira'nın 2,3 trilyon Lira'ya ulaşmasıyla faiz zengini olmuştur. Bu paranın 307,8 milyar Lira'sı vergi olarak ödenmiş geri kalan kısmı da ortaklara dağıtılmıştır. Böylece iflas etmiş olmasına rağmen vergi rekortmeni olan Uygar Motor vergi tarihine geçmiş, hatta Denizli'de vergi rekortmeni olmuştur.

B.A ile yapılan mülakat

Soru: Uygar Motor'un nasıl kurulduğunu anlatır mısınız?

B.A: 1974 yılında Almanya'da 100 arkadaşla beraber benim önderliğimde şirketi kurduk. Ben o dönem Almanya'daydım. Denizliliyim. 19 yaşında askere gitmeden 1968 yılında Almanya'ya işçi olarak gittim. Orada çalışırken bir yandan Almanca öğreniyordum. Tahsilimi tamamladım. Makine Mühendisliği okudum. Kendi başıma işçi olarak gittim. Hem çalışıp hem okudum. Okurken hamallık bile yaptım. Şirketi kurarken 25 yaşındaydım. O zaman tabii genç, ateşli bir durumdaydık. 1974 yılının Haziran ayında Kıbrıs Harekâtı yapılmıştı. 1974 Aralık ayında böyle bir girişim yaptık. O zamanlar her şey dışarıya bağımlıydı, ülkede bir şey yapılmıyordu, Denizli'de sanayi yoktu. Birkaç tane un fabrikası vardı o kadar. Birtakım arkadaşlar da Avrupa'nın çeşitli yerlerinde birleşerek bir şey meydana getirmek istedik. Takım oluşturduk ve bu şirketi kurduk. O zamanki işçi arkadaşların çoğu vefat etti. Şirketi kurma aşamasındaki ekipte uzman biri yoktu. Yola motor üreteceğiz diye başladık. Ancak bu mümkün olmadı. Daha doğrusu şirketin nasıl işleyeceği, nasıl olacağı konularında bilgimizde yoktu. Çeşitli kitaplar okuyarak araştırma yaparak bilgiler elde etmeye çalıştık. Motor fabrikası derken yani motor üretimi derken amacımız, zirai (su motorları, çeşitli amaçlarla kullanılan motorlar vs.) motorlardan başlayarak değişik motorlar üretmekti. Bu arada hummalı şekilde ortaklarla ilişkimizi ve iletişimimizi sürdürdük. 10.000 hissedarımız oldu. Hissedarlar da maksimum adedi geçmeyecek şekilde sermaye artırım haklarını kullandılar. 100 kişiyle karar almak daha kolaydı ancak bir süre sonra sermayeyi artıramadık. Beş milyara sermayeyi çıkardık ancak sonra arttıramadık çünkü ortaklar toplanamıyordu. Ayrıca belirlediğimiz kararla, bir kişi kuruluşta on beş hisseden fazla alamıyordu.

Soru: Neden motor üretimi yapmaya karar vermiştiniz?

B.A: Açıkça söylemek gerekirse motor üretme konusunda aldığımız karar doğru değildi. O heyecanla oldu. 19 yaşında Almanya'ya gitmişim, 19 yaşında bir çocuğun ülke hakkında, ekonomi hakkında ne kadar bilgisi olur? Televizyonun olmadığı, iletişimin olmadığı dönemde yetiştik. Kıbrıs Harekâtından sonra Türkiye'ye ambargo uygulanmıştı. Başkalarının vermediğini biz yaparız diye yola çıktık. Hatta bizim sloganımız vardı "Kendi Motorunu Yapamayan Toplum Sanayileşemez" diye.

Yaptığımız üretimde başarılı olduk. Çünkü üretimde Alman mühendisler falan çalıştı. İyi bir teknoloji geliştirmiştik. Döküm konusunda başarılıydık. Ancak şirketin işleyişi ve hukuksal yapısında bocaladık. Yoksa üretim iyiydi. Hammadde İskenderun'dan geliyordu. Piyasadan hurda topluyorduk. Emsan vardı, onun kırpıntı

saçlarını ve tuğlalarını alıyorduk. Elektrik enerjisi kullanıyorduk. Üretim makinelerini Almanya'dan aldık. Makineler alırken kendi sermayemizle aldık bütün altyapıyı kendi sermayemizle oluşturduk.

Soru: Biraz önce "Yola motor üreteceğiz diye başladık. Ancak bu mümkün olmadı" dediniz, neden mümkün olmadı?

B.A: Olmamasının en büyük nedeni o dönem yasal düzenlemelerin olmayışıydı. Daha sonraki gelen hükümetlerde bu şirketlere soğuk baktılar. Halk sektörü diye ismi de kondu. O zamanlar komünizm korkusu vardı. Birlik olmaya, birleşmeye, komünistlik gibi bakıldı. Özellikle 1980 sonrası daha soğuk bakıldı.

Soru: Ürettiğiniz şeyleri biraz açar mısınız? Tam olarak ne ürettiniz?

B.A: Madem motor üretemeyeceğiz, motor üretmekle ilgili döküm ve işleme kısmı kurduk, orada kaldık. Sonra döküm parçaları üretmeye başladık. İhracat yaptık.

Soru: Pazarınız neresiydi, nerelere ihracat yaptınız?

B.A: Ana pazar İstanbul'du. İhracatı biz kendimiz doğrudan Almanya ve Irak'a yaptık. Almanya'ya tır parçaları gönderdik. Mesela traktör parçaları falan yaptık. Haddanelerde, had topları döktük. Çeşitli motor ve makine parçaları ürettik. 1993'e kadar üretim devam etti. En büyük problemimiz yasal düzenlemelerin olmayışıydı. Yasal düzenlemeler olmadığı için şirkettin genel kurulu toplanamıyor, gerekli kararlar alamıyor, sermaye artırımını yapamıyorduk. Genel kurulun toplanması için dörtte üç çoğunluk gerekiyordu. 10.000 ortak var. Bunları toplamak imkânsızdı. İlk yıllar genel kurul, ortakların çoğunluğu Almanya'da olduğu için orada yapıldı. 1-2 yıl gittik sonra hepsi burada oldu.

Soru: Diğer pek çok Halk Sektörü bağlamındaki şirketler DESİYAB'dan kredi almış, daha sonra da ödeyemediği için yönetim hakkı DESİYAB'a geçmiş sizinde böyle bir kredi talebiniz oldu mu?

B.A: Biz de DESİYAB'dan kredi aldık. DESİYAB'dan kredi alacağımız zaman, uzmanlar geldi. Biz o zamanki parayla 1,5 milyonluk kredi aldık ve zamanında ödedik. Borcu ödediğimiz için DESİYAB'ın ortaklığına gerek kalmadı. Zaten sahip olunacak hisseyle ilgili sınırlandırma vardı. Şirketi kurarken bir kişinin alacağı hisseyi sınırladık. Şirket kurulup hisseler satıldıktan sonra o ortakları toplayabilmek sorun oldu. Nitekim tasfiye zamanında bile, elimizdeki parayı ortaklara dağıtamadık. 1 trilyon devlete kaldı. Sorun genel kurulun toplanamamasıydı. Ortaklara ulaşmak mümkün olmadığı için dağıtılamadı. Bir kısmının adresleri bile bulunamadı. Birçoğu da küçük pay sahibi olduğu için ilgilenmedi. Şunu da söyleyeyim; 1996 yılında şirketin mal varlığı satıldı. Fabrikası, büroları, taşıtları, her şeyi satıldı. O dönem tek Uygar Motor iflas etmemiştir. Diğer şirketler batmıştır, el değiştirmiştir. Uygar Motor batmamıştır, el değiştirmemiştir.

Soru: Çalışanlarınızın işletme sermayesinde payları var mıydı?

B.A: Çalışanların ortak olması gibi bir mecburiyet yoktu ama çalışan ortaklar vardı. Size Yönetim kuruluyla ilgili çok komik bir olay anlatayım. Bir yönetim kurulu üyesi fabrikaya geliyor, fabrikanın bekçisi bana selam vermedi diye, gelip bana şikâyet ediyor. Bu Yönetim Kurulu üyesi köyden biri aslında, düşünün artık. O dönemde bir statü açlığı da var. İşçilikten sermayedarlığa geçme durumu var. Sorunumuz profesyonel kişilerin olmayışıydı. İş çok karmaşık. Hem genel müdür, hem sermayedar hem de yönetim kurulu başkanıydım.

Soru: Çalışanlarınızın ne kadarı hissedardı?

B.A: Tam rakam söyleyemeyeceğim ama %10'u geçmez. İşçi şirketinden çok Halk Şirketi olarak çalışıyorduk.

Soru: Fabrikada çalışacak işçiyi bulmakta sorun yaşadınız mı?

B.A: Üretime başladığımız yıllarda sanayi işçisi yoktu, eleman bulmada çok sorun yaşadık. Adamları tarladan getirip dökümcü yaptık. İdari personeli de çeşitli illerden, özellikle İstanbul ve İzmir'den sağladık. Yerimiz Kocabaştaydı. Fizibilite çalışması yapıldı. Fizibilite çalışmasında motor üretimi olamayacağını anladık. O ara fark ettik, motor üretimi çok büyük sermaye isteyen bir işti, bunu toplayamayacağımızı anladık. Ama motor diye de çıktık yola. Bu nedenle motorun ana unsuru dökümdür, dökümden üretime başladık. Kısmet olursa daha iyisini yaparız dedik.

Soru: Gazetelerde Uygar Motorun kapandıktan yıllar sonra vergi rekortmeni olduğu yazdı. Bu haberlerin aslı nedir?

B.A: Sene 1992. Burada ben bütün milletvekillerini çağırdım, her partiden. Valiyi, belediye başkanlarını çağırdım. Ve bilgilendirme verdim. Şirketin durumu nedir, teknik durumu, mali durumu nedir, ne yapılacak, ne lazım. Bütün bunları açıklayan dosyalar hazırladım. Buraya devlet sahip çıksın, biz yürütemiyoruz dedik. Ancak gerekli ilgiliyi göremedik. Mali açıdan üretimi çeviremediğimiz için üretimini durdurduk. Tasfiye ettik. Malvarlığı satıldı. Elde edilen para bankaya yatırıldı. Sonra o da faizle çoğaldı. Vergi rekortmeni olundu ve haberler ondan oldu. Faiz işleyen paranın üçte biri devlete kaldı, üçte ikisini dağıttık. Genel kurul toplarken bulamadığınız ortakları, faiz verirken bulmada zorluklar yaşadık. Bulabildiklerimize dağıttık. Aşağı yukarı üçte ikisine ulaştık. Üçte birini devlete verdik. Dağıtılan gelir, çok sayıda kişiye yayılınca fazla bir önemi olmuyor.

2.3.1 BİR-EMEK (Birleşen Emekçiler) Örneği

Bir-Emek, Elektrik-Elektronik Sanayi ve Ticaret A.Ş. o dönem BM bursuyla Lahey'de eğitim gören H.A'nın öncülüğünde ve Almanya'daki Türk işçilerinin biraraya gelmesiyle Denizli'de kurulan, yaklaşık 16 bin ortağı bulunan bir şirkettir. Şirketin kuruluşundaki ana sözleşme gereği bir kişi en fazla on hisse alabilmektedir. Böylece şirketin hisselerinin birkaç elde toplanması engellenmekte ve tamamen Halk Sektörü özelliği ile kalması sağlanmaktadır. Kuruluşundaki asıl gaye elektrik sarf malzemeleri üretmektir. Telsiz ve haberleşme cihazları üretimiyle ilgili olarak 1974 yılında karar alınmıştır. Kıbrıs Barış Harekâtında Türk ordusunun haberleşmede büyük sorunlar yaşaması ve Kocatepe Muhribinin başka telsizlerden gelen yanlış yönlendirmesi sonucu Türk jetlerince batırılması yerli telsiz üretimi yapmak üzere yola çıkan Bir-Emek'in ortak sayısını hızla artırmıştır. Yurt içi ve yurt dışından ortak olanların bir kısmının gayesi kendilerive yakınları için iş imkânını sağlamakken, bir kısmı da tamamen milliyetçi duygularla ortak olmaktaydılar. Çünkü Türk Silahlı Kuvvetleri teknik ve teknolojik araçlar açısından dışa bağımlılıktan kurtulmak amacıyla yerli şirketlere çeşitli ihtiyaçlarını duyuruyor ve bunların geliştirilmesini istiyordu. Bir-Emek, 1975'te İtalyan firması Larimart lisansıyla Orman Bakanlığının telsiz ihalesini kazanır. Ancak Orman Bakanlığı kısa süre sonra Türkiye'deki ormanların geliştirilmesi için Finlandiya'dan kredi alır ve ilginç bir şekilde telsiz alımı da Finlandiya'ya verilir. Daha sonra Bir-Emek şirketi Alman firması Rohde Und Schwarz'ın lisansıyla Türk Silahlı Kuvvetlerinin ordular arası iletişimi sağlayacak büyük telsiz üretimi ihalesine katılır. Bir-Emek yerli firma olduğu için tercih sebebidir fakat bu defa da Türkiye Elektronik Sanayii A.Ş. ve Kara Kuvvetlerini Güçlendirme Vakfı tarafından ASELSAN kurulur ve bütün elektronik cihazların ASELSAN tarafından üretilmesine karar verilir. Böylece telsiz üretimi Bir-Emek için sadece bir proje olarak kalır. Bir-Emek mühendisleri Yugoslavya'da Philips lisansı ile üretim yapan bir fabrikadan elektronik parça ithal ederek 31 ekran TV dizayn eder ve üretime başlarlar. Televizyon markası hem şirketin ismi hem de milliyetçi bir anlayışla rakiplerle farkını göstermek için (diğer marka isimleri Türkçe değildir) Bir-Emek olarak belirlenmiştir. Daha sonra Sanayi Bakanlığının Bir-Emek'i yerli bir firmayla lisans anlaşmasına zorlaması üzerine, yönetim Profilo ile Profilo'nun TV 24 olarak bilinen modelini üretmek için anlaşma yapar. 61 ekran siyah-beyaz televizyonun seri üretimine 1979 yılında başlanır. 1982 yılında renkli televizyon da üreten Bir-Emek aynı zamanda telefon ve telefon santralleri de üretmiştir. Türkiye'deki ilk bilgisayar üretimi hatta bu bilgisayarın ana kartı da Bir-Emek tarafından üretilmiştir. Ancak Bir-Emek de diğer işçi şirketleri gibi sürekli finansman sıkıntısı çekmektedir. Büyük çoğunluğunu DESİYAB'dan aldığı borçlarını ödeyemez duruma geldiğinde de Denizli Asliye Hukuk Mahkemesi tarafından 1986 yılının sonunda Bir-Emek'in iflasına karar verilir (Akseki, 2007).

H.A'yla yapılan mülakat

Soru: Bir-Emek Şirketini nasıl kurduğunuzu, kurulma sürecini anlatır mısınız?

H.A: 1969 ODTÜ Mimarlık Fakültesi mezunuyum. Mezuniyetten sonra Köy işleri bakanlığı bünyesinde çalışmaya başladım. 1971 yılında Birleşmiş Milletlerin Türk Hükümetine verdiği bursun bana aktarılması sonucu lisansüstü eğitim için Hollanda'ya gittim. Lahey'de Institude of Social Studies okulunda eğitim devam ederken Denizlili bir grup Türk işçisi Denizli'de bir fabrika kurmak istediklerini benim de böyle bir kuruluşa önderlik etmemi söylediler. Kabul ettim. Eğitim bittikten sonra Bir Emek'in (Birleşen emekçiler) kuruluşu için çalışmaya başladım. Türkiye'deki bazı arkadaşlarımla işin teknik boyutunu planladık. Telsiz cihazları ve televizyon üretimine karar verildi. Fizibilite raporlarını endüstri mühendisi Ali Dinçer hazırladı. Denizli'de bir hazine arazisi tahsis edilmesini talep ettik. Ve bu gerçekleşti. O dönemki hükümet zamanında halk sektörü önemliydi. Hatta o hükümet döneminde resmi gazetede yayınlanan hükümet kararına göre Türkiye'de elektronik sanayide imalat yapacak kuruluşlardan sadece halk sektöründe olanlar teşvik edilecektir diye adı belirtilmeden Bir Emek desteklenmişti, elektronik sanayide o dönem sadece bir emek vardı. Dönemin hükümet üyesi Erol Çevikçe biz şirketi kurarken Devlet Planlama Teşkilatında Daire Başkanıydı ve bize büyük destek olmuştu, bakan olduktan sonrada bize desteğini devam ettirdi. Daha sonra fabrika binasını kurduk, laboratuvarda prototip üretime başladık. Ortak sayısı hızla yükseldi. Toplanan sermaye miktarı hızla yükseldi. Yatırımı tamamladık.

Soru: Bir-Emek'in sermaye yapılanması nasıl oldu?

H.A: Bir Emek'in en büyük özelliği sermaye yapılanmasıdır. Kuruluş sermayesi 60 milyon TL idi. Bu sermayenin her biri 2.500 TL değerinde 24 adet hisseden oluşmaktaydı. Ancak bir kişi en fazla 25.000 TL değerinde 10 hisse alabilirdi. Bundan amaç şirketi belirli sermaye gruplarına bırakmamaktı. Daha sonra genel kurulda sermaye 400 milyon TL'ye çıkarıldı. Şirketin, çoğunluğu yurtdışındaki işçilerden oluşan 16.000 ortağı oldu. Çoğunluk Denizli'den olmak kaydıyla Türkiye'nin değişik yerlerinden ortaklar vardı. 1974 Kıbrıs Harekâtında Kocatepe isimli Türk savaş gemisi Türk uçakları tarafından yanlışlıkla batırıldı. Nedeni ise gemi ile uçaklar arasında telsiz bağlantısı kurulamadığı için gemi kendisinin bir Türk gemisi olduğunu ifade edememiş ve Yunan gemisi diye batırılmış. Bu olay telsiz imalatıyla yola çıkan Bir Emek fabrikasına yurt dışındaki işçilerin büyük oranda sempati duyması ve ortak olması sonucunu getirdi. Bizim sloganımız " Türk ordusu yabancıdan telsiz almayacak" cümlesi oldu. Bir Emek'in sermaye yapılanması çok önemli. Hâlbuki Türkiye'deki ekonomik ve ticari yapılanma buna uygun değildi.

Soru: Şirketi kurmaya nasıl karar verdiniz?

H.A:7-8 kişi kurucu arkadaştık. Şirketi kurduğumuzda ne imal edelim diye konuştuğumuz arkadaşlar bunlar. Teknik eleman ve işçi arkadaşlar vardı. Ben aracı görevi üstlendim. İlk Hollandalı işçilerden böyle bir fikir çıktı. İşçiler toplanıp demişler ki Denizli'de bir fabrika kuralım, kendimize de bir önder bulalım. Dayıoğlumda onların arasındaymış. Dayıoğlum, "Lahey'de bir halaoğlum okuyor onunla konuşalım" demiş. Çarşamba telefonla konuştuk, Pazar günü yanıma geldiler durumu anlattılar. Olur dedim, fabrikanın kurulması iyi olur dedim. Başarılar diledim. Dayıoğlum Hüseyin Cihan tekrar telefon etti. "Pansiyonun yemekhanesini ayarladık, Pazar günü toplantı yapacağız. Almanya'daki arkadaşlara haber gönderdik, seni bekliyoruz" dedi. Bunların kaldığı yer Almanya sınırında. Şu an Denizli'nin kardeş şehri Almelo. Almelonun, Denizli'nin kardeş şehri olmasında da ben öncülük yaptım. Orda çalışanların çoğunluğu Türk işçisiydi. Onların çoğunluğu da Denizliliydi. Pazar günü bindim trene gittim. Hakikaten bunlar bir hazırlık yapmışlar, her taraf Türk bayrağı, 50 kişi toplanır demişlerdi, en az 200 kişi birikmiş. Orada bir konuşma yaptık ve iş orada başladı. İlk topladığımız parayı bankaya yatırmak istedik. Henüz şirket kurulmamış olduğu için banka şirket adına kabul etmedi. 3 kişi adına parayı yatırdık, o şekilde kurulma kararı verildi. Daha sonra Almelo şehrinin stadyumunda bir Türk takımı maçı vardı. O maça gittik, fikri biraz da o stadyumda geliştirdik. Ben Ankara'daki arkadaşlara Türkiye'ye dönünce aktardım. Sonra Ali Dinçer fizibiliteyle, Nazım Kalancı işin teknik kısmıyla görevlendirildi. Yıldırım Becer makine mühendisi vardı Denizli'den. Nordmende'nin laboratuvar şefini getirdik. Beko'dan teknik eleman getirdik. Cihazlar son teknolojinin gerektirdiği cihazlardı.

Soru: İşletmeyi ilk kurduğunuzda kaç çalışanınız vardı.

H.A: Ben çalışıyorken 80 çalışanımız vardı. 1985'de 400'ü bulmuştu.

Soru: Sermayeyi nasıl topladınız?

H.A: İşçileri toplayıp konuşma yapıyorduk. 8-10 kişilik bir grup, 2-3 kişilik alt gruplara ayrılıp dolaşıyordu. Evlerde toplanıyorduk. Saygı duyulan kişileri arayıp bulmak lazımdı. Türklerin gittiği kahveleri buluyorduk, toplantılar yapıyorduk. Ekipler oluşturup Almanya, Belçika, Avustralya, Fransa ve İsviçre'ye gidildi. Ve yurtdışındaki Türk işçilerin yoğun olduğu yerlerde temsilciler tayin ediyorduk. Zaman zaman biz de hisse satıp sermaye toplamak için yurtdışında dolaşıyorduk. Fabrikanın kurulumuyla ilgili film hazırlamıştık. Filmde bizde oynamıştık, bu filmi gösteriyorduk. Teşvik belgemizi gösterirdik. T.C. Hükümetinin Resmi Gazetede yayınlanan kararı gösterirdik. O dönemin valisi Münir Güney Bey'den özellikle hazine arazinin alınmasında çok yardım gördük. Bakın bir anımı anlatayım. Hollanda'da genel kurul toplantısı yapacağız. Fakat Ticaret Bakanlığı'na başvurmayı unutmuşuz. Erol Bey'e telefon ettim. Zor durumda olduğumuzu söyledim. Ertesi günü hemen Ticaret Bakanı Fehim Adak'a söyledik. Telekse geçecekler, elçilikten temsilci katılacak dedi. 2 gün sonra Elçilikten hükümet temsilcisinin toplantıya katılmasıkonusunda Ticaret Bakanlığı'ndan yazı geldi, biz de genel kurulu yapabildik.

Soru: Bir Emek'in sermaye yapılanmasının Türkiye'nin ekonomik ve ticari yapılanmasına uygun olmadığını söylemiştiniz bunu biraz açar mısınız?

H.A: Türkiye'deki ekonomik ve ticari yapılanma, kredi yapılanması Bir Emek'in yapılanmasına ters düştü ve Bir-Emek'in yapılanması onların yapılanmasına ters düşmüştü. İşçi şirketlerin özelliği yatırım sermayesi tamamlanır, fabrika kurulur, işletme sermayesi gerekir, bunun için bankaya gidersiniz ve kredi talep edersiniz. Şirkette 24.000 hissede 10 hissesi olan birisi milyonlarca dolarlık bir kredinin altına imza atmaz, zaten bankada onu kabul etmez. Bizim avantajımız o günlerde devlet hazinesinde dövizin olmamasıydı. Bizim sermayemizin çoğu da döviz sağlıyordu. Fakat bu durum bir avantaj olarak kullanılamadı. Çünkü toplanan döviz Türkiye'ye girdiği zaman TL'ye çevriliyordu. İthalat yapacağımız zaman sıraya giriyorduk, sadece hazinedeki döviz kadar ithalat yapıyorduk. Bir Emek'in diğer işçi şirketlerinden farkı sermaye sınırlamasıydı. Herhangi bir sermaye grubunun şirketi ele geçirmesini istemedik. Hatta Asil Nadir Grubu Manisa'da Vestel'i kurmadan önce Bir Emek'i satın almak, hisseleri toplamak istemiş. Ama ana tüzükteki maddeden dolayı olmadı. Bir Emek kurulduğunda telsiz kullanımı devlet tekelindeydi. Alıcı sadece devletti. Şimdi artık her çocuğun elinde telsiz var. Bir diğer tabloda yurtdışında malzeme ithalinin o dönem büyük izinlere tabi olmasıydı. Şimdi her şeyi ithal edebiliyorsunuz. Bir-Emek ve benzeri şirketler banka kredisi sistemine ve Türk Ticaret Kanunundaki uygulamalara ters düştü. Halk şirketlerinin yapısına uygun gerekli değişiklikler yapılamadı. Bu değişiklikler yapılsaydı, bu şirketler yaşayabilirdi. Kredinin projeye verilmesi ve bu tür ortaklı şirketlerde şahsi kefalet aranmaması gerekiyordu. Mesela kredi alırken banka ipotek için tapu istiyor. Tapu hazinenin, ipotek için bankaya tapuyu veremiyorsunuz. İşçi şirketlerinin başarıya ulaşamamasının sebebi Ticaret Kanununda ve bankalar yasasındaki gerekli uyum değişikliğinin yapılamamasıdır. Bir diğer konu Türkiye'de ekonomiyi yöneten güçlerle ilgilidir. İşçi şirketleri ilk ortaya çıktığı zaman mesela un, irmik, salça, makarna fabrikası yapacağız diye ortaya çıktılar. Bunlar ekonominin yapısının etkilemeyecek küçük çapta yöresel yapılardı. Ekonomik güçler bu fikirleri kolaylıkla destekledi ve hatta önderlik etti. Ne zamanki bu şirketler elektronik, motor ve mekanik sanayinde yatırım yapacağız dediler, ekonomiyi yöneten güçler irkildi ve siyaseti etkiledi. 16.000 ortaklı işçi şirketi Türk Silahlı kuvvetlerinin telsiz ihtiyacını karşılayacak. Nasıl bir güç! Buna izin verilmedi. Biz bu amaçla yola çıktık. Devlet TESTAŞ'ı kurdu ben yapacağım dedi ama yapamadı. Bir-Emek de engellendi. Devletin telsiz ihtiyacı da karşılanmadı.

Soru: Orman Bakanlığı Telsiz İhalesini almıştınız, neden daha sonra iptal edildi?

H.A: Biz İtalyan firmasıyla işbirliğine gittik. En kaliteli en ucuz teklifi verdik. Bizimki seçildi. Ancak Finlandiya devletinin Türk devletine verdiği orman ıslah çalışmalarıyla ilgili bir kredi söz konusuydu. Hazır Finlandiya'nın ayırdığı kredi var, bu telsizleri o kredinin içinde mütalaa edebiliriz denilmiş. O telsizler bu kredi kapsamında teslim edildi ve ihale iptal edildi. 460 küsur işçi şirketi kurulmuş, bunun 1 tanesi mi başarılı olmaz. Hepsinin mi bir yanlışı vardı. Hiçbiri kalmadı. Devam edenlerde büyük şirketlerin eline geçti. Ecevit 1987'de bu konuya bir takım konuşmalarında değindi ve büyük sermaye güçleri buna izin vermedi dedi. Bir-Emek'te payı olan 1.600 işçiden şimdi arada bir uğrayanlar oluyor, "bizim para ne oldu" diyorlar. "Ben parayı size vermiştim" diyorlar. Bu tür şirketlerde kâra da zarara da ortak olunduğunu düşünmüyorlar.

3   Değerlendirme

Girişimcilik, fırsatları görme, onları hayata geçirme, yenilik yapma faaliyetlerinin tamamını kapsayan bir süreçtir. Girişimciliğe başlamadan önceki karar aşamasında girişimi yapan kişi ya da kişilerin istekli olması, amaç ve hedefler belirlemesi, fırsat ve tehditleri öngörmesi, gerekli olan kaynakları temin etmesi ve engelleri görüp onlarla baş etme konusunda istekli olması gereklidir. Girişimciliğe başlama aşamasında ise keşfedilen fırsatlarla istek ve ihtiyaçlara cevap vermek, amaçları gerçekleştirmek ve uygulamadaki eksiklikleri gidermek üzere harekete geçilir ve stratejiler geliştirilir. Başarı aşamasında, büyüme, yeni yatırımlar gerçekleştirme, satışları ve kârlılığı artırma ve sürdürülebilir rekabet imkânları geliştirme vardır. Girişimin başarısızlığa uğraması veya geriye doğru gitmesi durumunda ise yeni önlemlerin alınması esastır (Yıldırım ve Balaban, 2013). Denizli'de Halk Sektörüyle ilgili yapılan araştırmanın mülakatları girişimcilik sürecinin bu dört aşaması bağlamında değerlendirilecektir:

Karar aşaması:

Bu aşamada girişimi yapacak olan kişileri harekete geçiren unsurlar ve karara götüren güdüleyici motifler önemlidir. Uygar Motor'un kurulmasında da yine ülkenin ve toplumsal şartların kurucular üzerinde yarattığı motive edici unsur vardır. B.A. ile yapılan mülakatta, "*O zamanlar her şey dışarıya bağımlıydı, ülkede bir şey yapılmıyordu, Denizli'de sanayi yoktu. Birkaç tane un fabrikası vardı, o kadar. Birtakım arkadaşlar da Avrupa'nın çeşitli yerlerinde birleşerek bir şey meydana getirmek istedik……. Kıbrıs Harekâtından sonra Türkiye'ye ambargo uygulanmıştı. Başkalarının vermediğini biz yaparız diye yola çıktık. Hatta bizim sloganımız vardı "Kendi Motorunu Yapamayan Toplum Sanayileşemez*" diye.Bir-Emek'in kurucularından H.A. da işletmenin karar aşamasının "*Denizlili bir grup Türk işçisi Denizli'de bir fabrika kurmak istediklerini, benim de böyle bir kuruluşa önderlik etmemi söylediler*" şeklinde ifade edip, sermayenin toplanması sırasında işletmeden pay alanların sayısındaki hızlı artışı şöyle anlatıyor: "*1974 Kıbrıs Harekâtında Kocatepe isimli Türk savaş gemisi Türk uçakları tarafından yanlışlıkla batırıldı. Nedeni ise gemi ile uçaklar arasında telsiz bağlantısı kurulamadığı için gemi kendisinin bir Türk gemisi olduğunu ifade edememiş ve Yunan gemisi diye batırılmış. Bu olay telsiz imalatıyla yola çıkan Bir Emek fabrikasına yurt dışındaki işçilerin büyük oranda sempati duyması ve ortak olması sonucunu getirdi. Bizim sloganımız " Türk ordusu yabancıdan telsiz almayacak*". Her iki işletmenin de kuruluş kararında, görüleceği üzere, özellikle yöre halkının itici gücü önemli rol oynamıştır. Bilhassa, Uygar Motor ve Bir-Emek girişimlerinde halkın sermaye oluşumuna verdiği katkının kuvveti milli bir ruhun ve gücün de etkisiyledir. Bu sebeple denilebilir ki, Halk Sektörlerinin oluşumundaki en önemli istek, amaç ve hedef Halkın var olma, birlik olma ve güçlü olma arzusudur. Millet olarak bağımsız ve güçlü olma olgusu Denizli'deki Halk sektörlerinin oluşumunda en önemli güç kaynağıdır. Halk, dışarıya bağımlı olma tehdidi karşısında elindeki kaynakları (kendi tasarruflarını, kendi yörelerindeki eğitimli kişileri ve fikir önderi olarak gördükleri aydın kişileri) fırsat olarak görüp, girişime döndürmüşlerdir.

Girişimciliğe başlama ve başarma aşaması:

Halk Sektörlerinde girişimciliğe başlama aşamasının ilk adımı sermayeyi bir araya getirmektir. Uygar Motor'un kurucu önderi B.A ise işletmenin kuruluşunu 100 arkadaşıyla beraber gerçekleştirdiğini ve motor üretmek üzere çok sayıda kitap okuyup araştırma yaptıklarını ifade ediyor. Ancak bu konuda hiçbir bilgileri olmayan B.A ve arkadaşları motor üretme fikrinin yanlış bir karar olduğunu fark ederek döküm üretimine başlamışlardır. B.A. bu kararlarını anlatırken, "*………motor üretme konusunda aldığımız karar doğru değildi. O heyecanla oldu……….Madem motor üretemeyeceğiz, motor üretmekle ilgili döküm ve işleme kısmı kurduk, orada kaldık. Sonra döküm parçaları üretmeye başladık*" diyor.

Bir-Emek işletmesi ise o döneme kadar Türkiye'de kurulmamış olan elektronik alanında faaliyet göstermek ve bu alandaki ihtiyacı karşılamak amacına sahiptir. Bir-Emek'in kurucularından olan H.A ve arkadaşları ise işletmeyi kurabilmek ve sermayeyi biraraya getirebilmek için 8-10 kişilik bir grup oluşturup Almanya, Belçika, Avusturya, Fransa ve İsviçre'ye gitmiş, kendilerinin de oynadıkları tanıtım filmlerini yapıp, oradaki Türk işçilerine göstermişlerdir. Ayrıca, Bir-Emek'in kurulması için teşvik belgesi alınmış, fizibilite raporu hazırlanmış ve devletten hazine arazisinin tahsisi talep edilmiştir.

Araştırmaya konu olan her iki işletme ve onların girişim önderleri işletmelerin kuruluş ve başarı aşamasında halkın istek ve ihtiyaçlarına cevap vermek üzere kurulma kararı alınan işletmeler için amaçları gerçekleştirmek

üzere üretim konusunu belirleme, sermayeyi bir araya getirme ve bu konuda bürokratik işlemleri gerçekleştirmek için çaba göstermiş ve de başarılı olmuşlardır. Uygar Motor örneğinde görüldüğü üzere motor üretiminin gerçekleşemeyeceği anlaşılınca, gelecekte motor üretimine fırsat oluşturacak şekilde döküm işine karar verilerek önemli bir stratejik adım atılmıştır. Keza, Bir-Emek de bütün çabasına rağmen kuruluş gayesi olan telsiz üretim fırsatını yakalayamamış olmasına rağmen, daha sonraki dönemlerde televizyon ve bilgisayar üretimiyle elektronik sanayinde varlığını korumaya çalışmıştır. Ancak işletmelerin başarısının ardında devlet desteğinin varlığını da göz ardı etmemek gereklidir. Özellikle H.A ile yapılan mülakatlarda dönemin Denizli Valisi Münir Güney Denizli'deki Halk Sektörü oluşumunun "kapılarını açan" önemli bir isim olarak görülmektedir. H.A, kendilerine dönemin hükümeti ve bürokrasisi tarafından verilen desteği şöyle dile getirmektedir: "*.....o hükümet döneminde resmi gazetede yayınlanan hükümet kararına göre Türkiye'de elektronik sanayide imalat yapacak kuruluşlardan sadece halk sektöründe olanlar teşvik edilecektir diye adı belirtilmeden Bir Emek desteklenmişti, elektronik sanayide o dönem sadece Bir Emek vardı. Dönemin hükümet üyesi Erol Çevikçe biz şirketi kurarken Devlet Planlama Teşkilatında Daire Başkanıydı ve bize büyük destek olmuştu, bakan olduktan sonrada bize desteğini devam ettirdi*".

Girişimciliğin başarısızlığa uğraması durumunda alınan önlemler:

Her girişimsel faaliyet bir müddet sonra varlığını korumakta bir takım güçlükler yaşar. Toplumsal, ekonomik, siyasi değişiklikler ya da mevcut kaynaklarda, pazarda, teknolojide vb. alanlarda meydana gelen değişiklikler işletmelerin ilk girişim sebeplerinin ve girişim türlerinin devamlılığında engeller oluşturmaktadır. İşletmelerin girişimlerine devam edebilmeleri bu engellerle baş edebilme becerilerine bağlı olmaktadır. Aksi takdirde işletmeler yaşamlarını devam ettirememektedirler. Denizli'deki çalışmaya konu olan işletmeler açısından da girişimlerin başarısızlığa uğrayıp Halk Sektörü bağlamıyla yaşamlarını devam ettirememelerinin sebeplerini iki grupta ele almak mümkündür. Bunlardan ilki işletmelerin dış çevresinden (toplumsal, ekonomik ve siyasi) kaynaklanan sebepler, ikincisi iç çevresinden kaynaklanan sebeplerdir.

Araştırmaya konu olan işletmelerin yaşamlarını devam ettirememelerindeki en önemli dışsal sebepler enflasyon, yasal düzenlemelerin olmaması ve bankacılık faaliyetlerinin Halk Sektörü özelliklerine uyum sağlayamaması olarak dile getirilmiştir. Bir-Emek'in girişim önderi H.A'ya göre, "*Türkiye'deki ekonomik ve ticari yapılanma, kredi yapılanması Bir Emek'in yapılanmasına ters*" düşmüştür. H.A. "*......... işletme sermayesi gerekir, bunun için bankaya gidersiniz ve kredi talep edersiniz. Şirkette 24000 hissede 10 hissesi olan birisi milyonlarca dolarlık bir kredinin altına imza atmaz, zaten banka da onu kabul etmez*" diyerek bankacılıktaki kredi sisteminin Halk Sektöründeki sermaye yapılanmasının gereklerine cevap verecek bir düzenlemeye sahip olmadığını belirtmektedir. H.A'ya göre, telsiz kullanımının sadece devlet elinde olması yani tek pazarın devlet olması, o dönem malzeme ithalinin büyük izinlere tabi olması, ithalat yapılırken sıraya girilmesi, sadece hazinedeki döviz kadar ithalatın yapılabiliyor olması ve Ticaret Kanunu'nda gerekli düzenlemelere gidilememesi işletmenin başarısızlığa sürüklenmesindeki önemli faktörlerdir. Keza B.A'da başarısızlığa gidişteki en önemli dışsal faktör olarak "*o dönem yasal düzenlemelerin olmayışı*"nı görmektedir.

İşletmelerin başarısızlığına sebep olan içsel faktörlerden en önemlisi profesyonelleşmenin olamamasıdır. İşletmeler kuruluş sermayesini temin etmekle beraber sıra işleyiş sermayesine geldiğinde aynı başarıyı gösterememişlerdir. Uygar Motor'un girişim öncüsü B.A'ya göre motor üretimindeki başarısızlıklarının sebebi üretim konusu ve şirket işleyişleri hakkındaki bilgisizlikleri olurken, döküm yaparken de şirketin işleyişiyle ilgili hukuksal yapıdaki bocalamaları olmuştur. Keza işgören bulurken de profesonelleşme konusunda sıkıntı yaşanmıştır. B.A. "*.... İşçilikten sermayedarlığa geçme durumu var. Sorunumuz profesyonel kişilerin olmayışıydı....... Üretime başladığımız yıllarda sanayi işçisi yoktu, eleman bulmada çok sorun yaşadık. Adamları tarladan getirip dökümcü yaptık*" diyerek yaşanan zorluğu anlatmaktadır.

İkinci içsel sebep ise ortak sayısının binlerle ifade edilen rakamlardan olması ve ortakların önemli bir çoğunluğunun Almanya'da ikamet ediyor olması sebebiyle genel kurulların toplanamamasıdır. Uygar Motor için B.A. benzer bir durumdan bahsediyor ve "*.........şirkettin genel kurulu toplanmıyor, gerekli kararlar alamıyor, sermaye artırımını yapamıyorduk. Genel kurulun toplanması için dörtte üç çoğunluk gerekiyordu. 10.000 ortak var*" diye ifade ediyor.

Sonuç olarak; ister içsel, isterse dışsal sebeplerden kaynaklansın her şeyden öte önemli bir Milli Sermaye birikimi olan ve üretim faktörleri mülkiyetinin tabana yayıldığı Halk sektörü1980'li yıllarda ülkenin dışa açılmasıyla da beraber tamamen ortadan kalkmıştır. Sektördeki işletmelerin başarısıyla ya da başarısızlığıyla ilgili tecrübeler de fiiliyatta sonraki nesillere aktarılamamıştır.

4 Sonuç

Girişimcilik, ülkenin endüstrileşmesine, endüstriyel dağılımın ve endüstriyel çeşitliliğin sağlanmasına, rekabet gücünün seviyesine ve ekonominin karakteristiğine etki ederek sonuçta o ülkenin teknolojisinin gelişmesi ve kalkınmasında ana rolü oynar (Ersoy, 2010). Girişimciliğin yapısında, bir malın ya da hizmetin üretilmesi, bunun için üretim metodunun kurulması ve geliştirilmesi, pazarın oluşturulması, hammadde kaynağının bulunması ve endüstrinin yapılandırılmasıyla genel olarak ülkenin ekonomik, ticari, teknolojik ve sosyal hayatında yenilenme

sürecine katkı vardır. 1970'li yılların başında yeni bir endüstriyel yapılanma olan Halk Sektörleri ülkenin sanayileşmesinde, teknolojik gelişmesinde, sermayenin bir araya getirilmesinde dünyada emsali çok da görülmemiş önemli bir girişimcilik örneğini temsil etmiştir. Yukarıda, yazına ve alan araştırmasına dayalı olarak aktarılanların satır aralıklarında o yıllara dair, girişimcilikte esas olabilecek çok önemli mesajlar da mevcuttur. Özellikle gelişme çabası içerisindeki ülkelerin girişimcilikle bir bütün olarak kalkınması, milli bir ruhun itici gücüyle hareket kazanabilmektedir. Çünkü girişimcilik stratejik bağlamıyla rekabeti içerisinde barındıran bir olgudur. Türk Halkının yeniden yapılanma, ekonomik ve teknolojik açıdan da bağımsız olma arzusu kimi zaman Halk Sektörü içerisindeki işletmelerin oluşumunda kimi zaman da bu işletmelerin gelişiminde güdüleyici faktör olmuştur. Böyle bir milli ruhun girişime dönüşmesinde ve on binlerce ortağın tasarruflarını bir çatı altında sermayeye dönüştürmesinde ise ana araç halkın birbirine duyduğu güvendir. Ülkelerinden binlerce kilometre uzakta yaşayan insanlar, birbirlerine güvenerek ve kendilerini organize etmek için çaba gösteren girişim ve fikir önderlerine güvenerek ve inanarak tasarruflarını büyük bir heyecanla bir araya getirmişlerdir. Halkın birbirine güveni, henüz sanayileşme tecrübesi çok düşük olan Türk insanının kârı ve zararıyla riske girdikleri işletmelerin kurulmasına ve işlemesine vesile olmuştur.

Yapılan yazın taramasında ve mülakatlarda bir diğer dikkati çeken faktör ise sosyal girişimcilik olgusunun 1970'li yılların Türkiye'sinde bizzat fiiliyatta gerçekleşmiş olmasıdır. Sosyal girişimciler, fark ettikleri ihtiyacı ve bununla ilgili fırsatı tespit eden, bu ihtiyacı karşılamaya yönelik girişime hayal gücü ve vizyon katan, söz konusu girişim için diğer insanları bir araya getiren, onları motive eden ve gerekli ağları kuran, ihtiyaç duyulan kaynakları bulan, engellerin ve zorlukların üstesinden gelen ve oluşan risklerle baş eden, girişimi kontrol etmek için uygun sistemler oluşturan kişilerdir (Thompson, 2002). Bu bağlamda araştırmaya konu olan her iki işletmenin de girişim önderleri, Uygar Motor'da B.A ve Bir-Emek'te H.A. gerçekte birer sosyal girişimcilik özelliği de göstermektedirler. Özellikle ihtiyaç boşluklarını görme, gerekli ağları kurma ve insanları bir araya getirme, kaynakları bulma, engellerin üstesinden gelme konularında önemli bir role sahip olmuşlardır.

Halk Sektörü dâhilindeki işletmelerin, yaklaşık on yıllık süreçte başarı göstermelerine rağmen, ekonomik, ticari, siyasi ve sosyal meselelerde gerekli zemine kavuşamamış olması ve halkın girişimcilik ve işletme bağlamında yeterli tecrübeye sahip olmaması gibi dışsal sebeplerle ve girişim öncülerinin ve pay sahiplerinin ticari ve hukuki açıdan yeterli bilgiye ve deneyime sahip olmamaları, profesyonel kişilerin istihdam edilememesi vb. içsel sebeplerle uzun dönemde başarılı olamamışlardır. Ancak bu gün, Türk Halkının elinde yaşanmış ve olabilirliği görülmüş bir Halk Sektörü tecrübesi vardır. Halk Sektörünü diğer sektörlerden ayıran en önemli özellik, sermayenin ve üretim araçları mülkiyetinin bir girişimcilik faaliyeti sürecinde tabana yayılmış olmasıdır. Çok daha önemlisi Halk Sektörü işletmeleriyle halkın, küçük tasarruflarını sermayeye dönüştürmesiyle ekonomik gücünün, kendilerinin sahibi oldukları işletmeye verdikleri fikirlerle zihin gücünün ve bilgi gücünün sinerjisi sağlanmaktadır. Aynı zamanda sahibi oldukları işletmelerde çalışan işgücünün yabancılaşmasına da engel olunabilecektir.

Bugün böyle bir oluşumun yaşanması Türkiye'de veya dünyanın herhangi bir yerinde tekrar mümkün olabilir mi bilinmez. Bununla beraber sürekli tüketim arzusu güdülenen hatta üretmek için önce tüketmesi gerektiği vurgulanan ve kazançları bankacılık sektörüyle alışverişe kanalize edilen insanların tekrar tasarrufa yönlendirilerek birikim yapmalarının sağlanması ve bu tasarrufları sermayeye dönüştürmek üzere Halk Sektörlerinin yeniden canlandırılması ihtimal dâhilindedir. Böylece kaynaklar israf edilmeyeceği gibi, mevcut kaynaklarla daha fazla katma değer yaratılabilecektir. Bunun için önce ülkelerin yöneticilerinin ve fikir önderlerinin gerekli olan ekonomik, hukuki ve ticari düzenlemeleri yapmaları, halkın birbirine ve yöneticilerine güvenlerini pekiştirmeleri gereklidir.

Türkiye'de Hanehalkı Tüketim Harcamaları: Pseudo Panel Veri ile Talep Sisteminin Tahmini

The Consumption Expenditure of Households in Turkey: Demand System Estimation with Pseudo Panel Data

Prof. Dr. Seda Şengül (Çukurova University, Turkey)
Ph.D. Candidate Çiler Sigeze (Çukurova University, Turkey)

Abstract

In this study, micro data sets obtained by 2005 and 2009 Household Budget Surveys compiled by Turkish Statistical Institute were used to estimate the parameters of household consumption demand and calculate the income-demand elasticities of consumer goods. Total expenditures of the households in this data set delivered into the following 12 different categories of goods and services. The expenditure share of these different categories of goods and services is the dependent variable of this model. In addition, the total household expenditure, the squared total household expenditure, the household size adjusted in accordance with the OECD equivalence scale and the logarithms of squared household size are the independent variables used in the study. The Seemingly Unrelated Regression Equations (SURE) is used to estimate the Quadratic Almost Ideal Demand System (QAIDS) so as to determine the demand parameters of the main commodity groups. The principal result of the study is that the consumption elasticities of the food and nonalcoholic beverages, housing, water, electricity, fuel, clothing and footwear, furniture and house appliances, communications, alcoholic beverages, cigarette and tobacco expenditure are less than 1. Therefore, it can be said that these commodity groups are considered to be mandatory goods. On the other hand, the consumption elasticities of the health, transportation, education services, entertainment and culture, restaurants, hotels, patisseries are more than 1. Thus, these commodity groups are considered to be luxury goods. In this regard, the study concludes that Turkey is considered to be a developing country in terms of the consumption characteristics.

1 Giriş

Hanelerin kısıtlı gelirlerini harcama grupları arasında nasıl dağıttıkları iktisatçıların ve politika yapıcıların en çok ilgilendiği alanlardan biridir. Bunun en önemli sebeplerinden biri mal ve hizmet tüketiminin büyük bir bölümünün temel gereksinimleri karşılamaya yönelik olmasıdır. Dolayısıyla hanehalkı tüketim harcamaları yaşam standardının önemli bir göstergesidir.

Tüketici davranışlarını belirleyen faktörler arasında gelir, ilgili malların fiyatları, tüketici zevkleri ve tercihleri, farklı sosyo-kültürel yapılar ve yerleşimler sayılabilir. Tüketim harcamaları çalışmalarında, gelir ve fiyat esnekliklerinin belirlenmesi ile tüketim üzerinde gelir ve fiyat gibi önemli faktörlerin etkisi vurgulanmakta ve bu etkilerin büyüklüklerin belirlenmesi ile gelecek piyasa tahminlerinin yapılması ve uygun mali politikaların belirlenmesi sağlanmaktadır.

Tüketiciler tarafından bir mal grubuna yapılan harcama o mal grubunun üreticisi açısından geliri ifade ettiğinden dolayı toplam tüketim harcamalarının mal grupları itibariyle dağılımının ve fiyat ve gelir değişimleri karşısındaki esnekliklerinin belirlenmesi, tüketiciler kadar üreticileri de yakından ilgilendirmektedir. Analiz sonuçları ışığında üreticiler araştırma bölgesindeki tüketicilerin taleplerini hangi mallara yönlendirdiklerini veya fiyatlarda meydana gelecek muhtemel bir değişme karşısında tüketim kalıplarında nasıl bir değişme olacağını tespit etmek suretiyle fiyat, tüketim ve pazarlama politikalarını belirleyecektir (Özer, 2001).

Talep sisteminin tahmini için yapılan ilk çalışmalarda zaman serisi verileri kullanılırken daha sonraki çalışmalara demografik değişkenlerin eklenmesi ile yatay-kesit veriler kullanılmıştır. Son çalışmalarda ise hem zaman hem de kesit boyutunu içeren panel veri analizi kullanılmaya başlanmıştır. Ancak hanehalkı çalışmalarında tekrarlı yatay-kesitlerdeki gözlemlerin aynı olmamasından dolayı Deaton (1985), bireysel gözlemlerden ziyade, aynı özelliklere sahip bireylerin gruplandırılması ile elde edilen verilerin (cohort) ortalamalarını baz alarak ekonomik ilişkileri tahmin etmeyi ve dolayısıyla pseudo panel veri kullanılmasını önermiştir.

Bu çalışmada da 2005 ve 2009 yıllarına ait Türkiye'de hanehalkı tüketim talebine ilişkin parametreleri tahmin ederek; tüketim mallarının gelir-talep esnekliklerini hesaplamak ve hesaplanan gelir-talep esnekliklerinden yararlanarak karar alıcılara, politika yapıcılara, refah düzeyini artırmaya yönelik doğru sosyal politikaların oluşturulmasına yardımcı olacak bilgiler sunmak amaçlanmaktadır.

2   Veri ve Değişkenler

Çalışmada Türkiye İstatistik Kurumu (TÜİK) tarafından derlenen, 2005 yılı ve 2009 yılı Hanehalkı Bütçe Anketi (HBA) Mikro Veri Seti kullanılmıştır. 2005 yılı 8560 ve 2009 yılı için 10046 hanehalkı örneklemi oluşturmuştur (TÜİK 2005, TÜİK 2009).

TÜİK, Hanehalkı Bütçe Anketlerinde uyguladığı COICOP (classification of individual consumption by purpose) sınıflamasında dikkate aldığı 12 mal ve hizmet grubu bu çalışmada incelenen mal gruplarıdır. Bu mal grupları; 1) gıda ve alkolsüz içecekler, 2) alkollü içecek, sigara ve tütün, 3) giyim ve ayakkabı, 4) konut, su, elektrik ve yakıt 5) mobilya, ev aletleri ve bakım merkezi, 6) sağlık, 7) ulaştırma, 8) haberleşme, 9) kültür, eğlence, 10) eğitim hizmetleri, 11) otel, lokanta, pastane 12) çeşitli mal ve hizmetlerdir.

Bu 12 mal ve hizmet grubunun bütçe paylarının bağımlı değişken olarak kullanıldığı QAIDS (Kuadratik İdeale Yakın Talep Sistemi) modelinin bağımsız değişkenleri ise toplam harcamanın logaritması, toplam harcamanın logaritmasının karesi, OECD eşdeğerli ölçeğine göre düzeltilmiş hane genişliğinin logaritması ve OECD eşdeğerlik ölçeğine göre düzeltilmiş hane genişliğinin karesinin logaritmasıdır.

Çalışmada kullanılan değişkenlerin ortalama değerleri ve standart sapmaları Tablo 1'de sunulmuştur.

Değişkenler	Açıklama	2005	2009
w1=Gıda	Gıda harcaması/toplam harcama	0.257	0.234
w2=Giyim	Giyim ve ayakkabı harcaması/toplam harcama	0.063	0.053
w3=Konut	Konut, su, elektrik, gaz harcaması /toplam harcama	0.269	0.280
w4=Mobilya	Mobilya ve ev aletleri harcaması/toplam harcama	0.060	0.064
w5=Sağlık	Sağlık harcaması/ toplam harcama	0.023	0.021
w6=Ulaştırma	Ulaştırma harcaması/toplam harcama	0.120	0.133
w7=Haberleşme	Haberleşme harcaması/ toplam harcama	0.042	0.042
w8=Eğitim	Eğitim hizmetleri harcaması/toplam harcama	0.018	0.017
w9=Evdışı	Otel, lokanta, pastane harcaması/toplam harcama	0.042	0.049
w10=Kültür	Kültür, eğlence harcaması/toplam harcama	0.025	0.026
w11=Diğer	Çeşitli mal ve hizmetlerin harcaması/ toplam harcama	0.041	0.041
w12=Alkol-tütün	Alkollü içecek, sigara, tütün harcaması/toplam harcama	0.040	0.040
LOECD	OECD eşdeğerli ölçeğine göre düzeltilmiş hane genişliğinin logaritması	0.837	0.772
SLOECD	OECD eşdeğerli ölçeğine göre düzeltilmiş hane genişliğinin karesinin log.	0.701	0.605
LHARCAMA	Hanehalkı aylık toplam harcamasının logaritması	4,04	7,39
SLHARCAMA	Hanehalkı aylık toplam harcamasının karesinin logaritması	6,08	14,79

Tablo 1: Çalışmada Kullanılan Değişkenler ve Tanımlayıcı İstatistikler

Değişkenlere ait tanımlayıcı istatistiklere baktığımızda 2005 ve 2009 yıllarında hanelerin tükettikleri mal ve hizmet gruplarının bütçe paylarında önemli bir değişiklik olmadığı saptanmıştır. Gıda harcamasının toplam harcama içindeki payı 2005 yılında %25.7 iken 2009 yılında %23.4'e düşmüş, otel, lokanta pastane gibi ev dışı gıda harcamasının toplam harcama içindeki payı ise sözü edilen dönemde %4.2'den %4.9'a yükselmiştir. OECD eşdeğerlik ölçeğine göre 2005 yılında 2.31 olan hane genişliği 2009 yılında 2.17'ye düşmüştür.

3   Yöntem

Hem gelişmiş hem de gelişmekte olan pek çok ülkede zaman içerisinde hanehalkı bütçe anketleri diğer verilere kıyasla daha sistematik ve düzenli olarak toplanmaktadır. Bu da, tüketim davranışlarının hem bireyler arasında hem de zaman içinde nasıl değiştiğini belirlemeye yönelik çalışmaların yapılmasına, yani panel verilerin kullanılmasına olanak tanımaktadır. Ancak, hanehalkı bütçe anketleri genellikle farklı hanelerden gözlemlenen tekrarlı yatay-kesit anketlerinden oluşmaktadır. Bu şekilde derlenen Hanehalkı Bütçe Anketi verilerinde (tekrarlanan yatay-kesitlerde) bireylerin aynı olmaması nedeniyle; bireysel gözlemlerin gruplandırılması (cohort) ile oluşturulan pseudo panel veri kullanılmaktadır. Bireysel gözlemlerin gruplandırılması bireylerin zamanla değişmeyen ortak özelliklerine (doğum yılı, cinsiyet, eğitim, yerleşim yeri büyüklüğü vb.) göre yapılmaktadır ve her bir grup pseudo panel verinin cohortlarını oluşturmaktadır. Öyle ki hanedeki referans kişinin (hanehalkı reisi) doğum yılı ya da eğitim düzeyine göre gruplandırma yapılmaktadır (Gardes vd, 2005).

Bu çalışmada, hanedeki referans kişinin (hanehalkı reisinin) doğum yılına (yaşına) ve eğitim düzeyine göre cohortlar oluşturulmuştur. Hanehalkı reisinin yaşına göre oluşturulan beş cohort ve hanehalkı reisinin eğitim düzeyine göre oluşturulan 4 cohort sırasıyla;1) Hanehalkı reisinin yaşının 35'den küçük olduğu haneler,2) Hanehalkı reisinin yaşı 35 ve 44 arasında olan haneler, 3) Hanehalkı reisinin yaşı 45 ve 54 arasında olan haneler, 4) Hanehalkı reisinin yaşı 55 ve 64 arasında olan haneler, 5) Hanehalkı reisinin yaşı 65 ve üstü olan haneler,6) Hanehalkı reisinin okur-yazar olmadığı ya da okur-yazar olup bir okul bitirmediği haneler, 7) Hanehalkı reisinin ilkokul-ilköğretim öğrenim düzeyinde olduğu haneler, 8) Hanehalkı reisinin ortaokul-orta dengi meslek lisesi ya

da lise-lise ve dengi meslek lisesi öğrenim düzeyinde olduğu haneler ve 9) Hanehalkı reisinin yüksekokul-fakülte, yüksek lisans ve doktora öğrenim düzeyinde olduğu hanelerdir.

Uygulamalı talep çalışmalarında özellikle hanehalkı bütçe verileriyle tutarlı bir fonksiyonel biçime sahip olması ve tahmininin de kolay olması nedeniyle AIDS talep sistemi kullanılmaktadır.

AIDS modeli Eşitlik 1'de sunulmuştur.

$$w_i = \alpha_i + \sum \alpha_i P_i + \beta_i \log(\frac{X}{P}) \qquad i,j=1,2,...,12 \qquad (1)$$

Burada;

w_i : i. malın harcama payını, X: toplam harcamayı, P: genel fiyat indeksini, P_i: i. mal grubunun fiyatını göstermektedir.

Eşitlik 1'in parametreler itibariyle doğrusal olmamasından kaynaklanan tahmin güçlüğünü gidermek için model Stone fiyat indeksi kullanılarak (Eşitlik 2) doğrusallaştırılmaktadır. Doğrusallaştırılan bu model, Doğrusal Formda İdeale Yakın Talep Sistemi (Linear Approximated Almost Ideal Demand System-LA/AIDS) olarak adlandırılmaktadır (Deaton & Muellbauer, 1980b). Ancak, Stone fiyat indeksinin eşanlılık sorununa yol açması nedeniyle ampirik çalışmalarda farklı fiyat indeksleri kullanılmıştır. Bu çalışmada kullanılan fiyat indeksi Eşitlik 3'te verilmiştir (Burton ve Young, 1992).

$$\log P = \alpha_o + \sum_{i=1}^{n} \alpha_i \log P_i + \frac{1}{2} \sum_{i=1}^{n} \sum_{j=1}^{n} \gamma_{ij} \log P_i \log P_j \qquad (2)$$

$$\log P = \sum_{i=1}^{n} \overline{w}_i \log p_i \qquad i,j=1,2,...,n \qquad (3)$$

$\overline{w}_i$: w_i'nin ortalaması, P_i: i mal grubunun aylık fiyat indeksidir.

Ancak, her bir mal grubuna ait fiyat verileri sağlanamadığından Eşitlik 1'den fiyat değişkeni çıkarılmıştır. Eşitlik 3'teki fiyat indeksi ise her bir mal grubunun fiyatının göstergesi olarak, bu mal gruplarının her biri için 2005 ve 2009 yıllarında TÜİK tarafından hesaplanan aylık fiyat indeksi (TÜİK, 2009) verileri kullanılarak hesaplanmıştır. Bu durumda, AIDS modeli Eşitlik 4 şeklinde gösterilebilir. Fiyat değişkeni modelde yer almadığından simetri kısıtının da test edilmesine gerek kalmamıştır.

$$w_i = \alpha_i + \beta_i \log(\frac{X}{P}) \qquad i=1,2,...,12 \qquad (4)$$

Toplam harcama i. mal grubunun bütçe payı üzerinde her zaman doğrusal olarak artan bir etkiye sahip olmayabilir. Bağımsız değişkenler arasında yer alan toplam harcamanın karesinin modele dahil edilmesi durumunda AIDS modeli, Karesel İdeale Yakın Talep Sistemi'ne (QAIDS) dönüşmektedir. Bu çalışmada da, toplam harcamanın bütçe payı üzerindeki doğrusal olmayan etkisini elde edebilmek için QAIDS modeli kullanılmıştır (Banks vd., 1997).

$\log(\frac{X}{P})$'in karesi Eşitlik 4' te sunulan eşitliğe eklendiğinde Eşitlik 5'te verilen QAIDS modeli elde edilmiştir.

$$w_i = \alpha_i + \beta_i \log(\frac{X}{P}) + \beta_2 \log(\frac{X}{P})^2 \qquad (5)$$

Çalışmada kullanılan veri setinin özellikleri ele alınarak kullanılan model ise Eşitlik 6' da sunulmuştur. Bu model pseudo panel veri analizinde, (C,t) cohortlarında, (h,t) hanehalklarının gruplandırılması ile ortaya çıkan toplulaştırılmış model, $h \in C$ olmak üzere $\alpha_h^i = \alpha_C^i$ hipotezi altında $\gamma_{ht} = \dfrac{X_{ht}}{\sum\limits_{h \in C} X_{ht}}$ ile $\sum\limits_{h \in H} \gamma_{ht} w_{ht}^i = w_{Ct}^i$

olmak üzere aşağıdaki şekilde elde edilir.

$$w_{Ct}^i = \alpha_C^i + \beta_1 \left(\sum_h \gamma_{ht} \ln(\frac{X_{ht}}{P_t}) \right) + \beta_2 \left(\sum_h \gamma_{ht} \ln\left(\frac{X_{ht}}{P_t} \right)^2 \right) \qquad (6)$$

$$+ \beta_3 \left(\sum_h \gamma_{ht} \ln \varsigma_{ht} \right) + \beta_4 \left(\sum_h \gamma_{ht} \ln \varsigma_{ht}^2 \right) + \sum_h \gamma_{ht} \varepsilon_{Ct}^i$$

i=1, 2,…,12 , C=1, 2,…,9, t=1, 2,…,12

X_{ht}: t zamanında, h hanesinin harcama tutarını, γ_{ht}: t zamanında, h hanesinin toplam harcamasının, bulunduğu cohorttaki toplam harcamaya oranını, w_{ht}^{i}: t zamanında, h hanesinin toplam harcaması içinde i malının harcama payını, w_{Ct}^{i}: t zamanında cohortta yer alan bütün hanelerin toplam harcamaları içinde i malının harcama paylarının toplamının ağırlıklı değerini, $\ln \varsigma_{ht}$: t zamanında, h hanesinin OECD eşdeğerli ölçeğine göre düzeltilmiş hane genişliğinin logaritmasını, $\ln \varsigma_{ht}^{2}$: t zamanında, h hanesinin OECD eşdeğerli ölçeğine göre düzeltilmiş hane genişliğinin karesinin logaritmasını göstermektedir.

Tam talep sistemi tahminlerinde, sistemi oluşturan eşitlikler arasında korelasyon olma olasılığı nedeniyle ve eşitlikler arasındaki kısıtlardan dolayı sistemi oluşturan eşitliklerin birlikte tahmin edilmesi gerekmektedir.Bu nedenle Eşitlik 6'daki sistem Zellner'in (1962) önerdiği görünürde ilişkisiz regresyon (SUR) denklemleri seti olarak ele alınabilir ve SUR tahmin edicisiyle (SUR estimator, SURE) ile tahmin edilebilir. Sistemde hata terimleri arasında korelasyonun olması sebebiyle varyans-kovaryans matrisi tekil olmaktadır. Bu matrisin tekil olması da, mal gruplarının bütçe payları toplamının 1'e eşit olması ve her bir harcama denklemindeki hata terimleri toplamının da sıfıra eşit olması gerektiğinden sistem tahminini imkânsız kılmaktadır. Bu da n sayıdaki denklemden oluşan sistemden herhangi bir denklemin atılması (hangi denklemin modelden atılacağı tahmin sonuçlarını etkilemez) ve n-1 sayıdaki denklemden oluşan sistemin tahmin edilmesiyle çözülebilmektedir.

Sistemden atılan n'inci denklemin parametresi ise toplama şartı ($\sum_{i=1}^{t} \beta_i = 1$) gereğince diğer denklemlerin parametrelerinden kolayca hesaplanabilmektedir (Judge vd., 1988). Ana mal grupları itibariyle AIDS'in tahmininde 12 denklemden oluşan sistemden "çeşitli mal ve hizmetler" mal grubuna ait denklem çıkarılarak 11 denklem tahmin edilmiştir.

Eşitlik 6 'nın gruplandırılmış veriler (ya da cohortlar) üzerinden oluşturulmasından dolayı hata terimi her bir gruptaki hanehalkı sayısına bağlı olarak değişen varyanslıdır. Kakwani (1977), hata terimi varyansının her bir gruptaki (cohorttaki) hanehalkı sayısı ile ters orantılı olduğunu ve bu değişen varyansın Ağırlıklı En Küçük Kareler yöntemiyle düzeltilebileceğini göstermiştir. Bunun için sistemdeki tüm değişkenlere ait gruplandırılmış veriler (sabit terim dahil) her bir gruptaki hanehalkı sayısının karakökü ile çarpılmak suretiyle dönüştürülmüştür.

Panel veriler, birim etkinin sabit yada rassal olmasın göre Sabit etkiler modeli ya da Rassal etkiler modeli olarak ayrılmaktadır. Sabit ve Rassal etkiler modelleri arasındaki en önemli fark, birim etkinin bağımsız değişkenlerle ilişkili olup olmamasıdır. Hausman (1978), yokluk hipotezi ($H_0 = E(u_{it} / X_{it}) = 0$) altında her ikisi de tutarlı ve bununla birlikte, yokluk hipotezinin reddedilmesi durumunda farklı olasılık limitlerine sahip olan iki tahmin ediciyi karşılaştırmayı önermiştir. Buna göre, birim etkinin bağımsız değişkenler ile ilişkisiz olduğu rassal etkiler modeli için Between tahmin edicisi ($\hat{\beta}_{Between}$) ve birim etkinin bağımsız değişkenler ile ilişkili olduğu sabit etkiler modeli için Within tahmin edicisi ($\hat{\beta}_{within}$) karşılaştırılmıştır (Baltagi, 2005).

Çalışmada Türkiye'deki tüketim mallarının gelir-talep esnekliklerini hesaplamak için kullanılacak AIDS modeli ve QAIDS modelinin gelir-talep esneklik formülleri Eşitlik 7 ve Eşitlik 8'de sırasıyla verilmiştir.

$$\varepsilon_i^a = 1 + \frac{\beta_i}{w_i} \qquad i=1,2,...12 \tag{7}$$

$$\varepsilon_i^q = 1 + \frac{\beta_i}{w_i} + 2\frac{\lambda_i}{w_i}\ln(\frac{X_{ht}}{P_t}) \qquad i=1,2,...,12 \tag{8}$$

4 Araştırma Bulguları

4.1 Türkiye'de Hanehalkı Tüketim Harcamalarının Cohortlara Göre Dağılımı

2005 yılında 12 mal grubunun cohortlara göre oratalama harcama paylarının verildiği Tablo 2'ye baktığımızda,2005 yılında %25.9 olan gıda harcama payı, hanehalkı reisinin 35 yaşından küçük olduğu hanelerde %22.7 oranıyla genel ortalamanın altında, 65 yaşından büyük olduğu hanelerde ise %30.6 oranıyla ortalamanın üstündedir.

Benzer şekilde 2005 yılında hanehalkı reisinin okur yazar olmadığı ya da okur-yazar olup bir okul bitirmediği hanelerde gıda harcama payı %37.3 oranıyla diğer öğrenim düzeyleri için hesaplanan gıda harcama payından yüksek iken, hanehalkı reisinin üniversite öğrenim düzeyinde olduğu hanelerde ise %15 oranıyla en düşüktür. 2005 yılında giyim- ayakkabı harcama payında cohortlara göre önemli bir farklılık olmadığı gözlenmistir.

Tablo 2: 2005 Yılında Mal Gruplarının Cohortlara Göre Ortalama Harcama Payları

Tablo 3'de ise 2009 yılı için 12 mal grubunun cohortlara göre ortalama harcama payları sunulmuştur, Tablo 3 incelendiğinde 2009 yılının 2005 yılıyla benzerlik gösterdiği saptanmıştır. 2009 yılında % 23 olan gıda harcama payı, hanehalkı reisinin 35 yaşından küçük olduğu hanelerde % 19.7 oranıyla genel ortalamanın altında, 65 yaşından büyük olduğu hanelerde ise %29.7 oranıyla ortalamanın üstündedir. Bununla birlikte, 2009 yılında hanehalkı reisinin okur yazar olmadığı ya da okur-yazar olup bir okul bitirmediği hanelerde gıda harcama payı %33.3 oranıyla diğer öğrenim düzeyleri için hesaplanan gıda harcama payından yüksek iken, hanehalkı reisinin üniversite öğrenim düzeyinde olduğu hanelerde ise %16.4 oranıyla en düşüktür.

2005 ve 2009 yıllarında, konut, su, elektrik ve gaz harcama payı, hanehalkı reisinin 65 yaşından büyük olduğu cohortlarda ortalamadan oldukça yüksek gözlenmiştir. Bu grupta en düşük harcama payı mobilya ve ev aletleri harcama payında gözlenmiştir.

Tablo 3: 2009 Yılında Mal Gruplarının Cohortlara Göre Ortalama Harcama Payları

4.2 Türkiye'de Hanehalkı Tüketim Harcamalarının Tahmini

Türkiye'de 2009 yılında hanelerin ana mal gruplarına göre talep parametrelerini bulmak için QAIDS modeli SUR tahmin ediciyle tahmin edilmiştir. Modelin sabit etkili mi rassal etkili olup olmadığını saptamak için Within ve Between tahmin edicileri kullanılmıştır. Bu iki tahmin edicinin hangisinin daha iyi sonuç verdiğini belirlemek için Hausman testi yapılmıştır. Hausman testine göre Within tahmin edicisinin Between tahmin edisicine göre daha iyi sonuç verdiği saptanmıştır. Bu durumda, bu çalışmada kullanılan veri setinin sabit etkiler modeli için daha uygun olduğu söylenebilir. Ayrıca çalışmada kullanılan veri setinin, bireylerin ortak özelliklerine göre gruplandırılması yani cohortların oluşturulması nedeniyle sabit etkili modelin geçerli olması beklenen bir sonuçtur.

Türkiye'de hanehalkı tüketim talebinin QAIDS modeli ile gerçekleştirilen tahmininde toplam harcamanın logaritması ve toplam harcamanın karesinin logaritması değişkenlerinin katsayılarının tamamı 0,05 anlamlılık düzeyinde istatistiksel olarak anlamlı ve iktisadi beklentiyle uyumlu elde edilmiştir.

2005 ve 2009 yılları için Within ve Between tahmin edicilerinden elde edilen parametre tahminleri Tablo 4 ve Tablo 5`te sunulmustur. Türkiye'de hanehalkı tüketim talebinin QAIDS modeli ile gerçekleştirilen tahmininde toplam harcamanın logaritması ve toplam harcamanın karesinin logaritması değişkenlerinin katsayılarının tamamı incelenen mal ve hizmet grupları için 0,05 anlamlılık düzeyinde istatistiksel olarak anlamlı ve iktisadi beklentiyle uyumlu elde edilmiştir. 2005 yılında gıda ve alkolsüz içecekler, giyim ve ayakkabı, konut, su, elektrik, yakıt, mobilya, ev aletleri, otel, lokanta ve pastane harcama grubunun harcama payı belli bir hanehalkı büyüklüğüne kadar artacak, daha sonra azalış gösterecektir. Eğitim hizmetleri, haberleşme, sağlık, ulaştırma, kültür, eğlence ve alkollü içecek, tütün ve sigara harcaması payı ise ortalama hanehalkı büyüklüğüne kadar azalacak, daha sonra artış eğilimi gösterecektir (Tablo 4).

Tablo 5 :*Türkiye'de 2009 Yılında Hanehalkı Tüketim Harcama Gruplarının Parametre Tahminleri*

2009 yılında ise hanehalkı büyüklüğü artıkça, gıda ve alkolsuz içecekler, giyim ve ayakkabı, konut, su, elektrik, yakıt, mobilya, ev aletleri, sağlık, ulaştırma, kültür, eğlence, otel, lokanta ve pastane harcama grubunun harcama payı önce artış, daha sonra azalış gösterecektir. Eğitim hizmetleri, haberleşme, alkollü içecek, tütün ve sigara harcaması payı ise belli bir büyüklüğe kadar azalacak, daha sonra artış eğilimi gösterecektir

Within ve Between tahmin edicilerinin parametrelerinden hesaplanan gelir-talep esneklikleri Tablo 6'da verilmiştir.

Mal Grupları	2005		2009	
	Within	Between	Within	Between
Gıda ve alkolsüz içecekler	0.83	0.94	0.68	0.85
Giyim ve ayakkabı	0.81	0.82	0.94	1.19
Konut, su, elektrik, yakıt	0.79	0.81	0.73	0.95

Mobilya, ev aletleri	0.88	0.98	0.67	0.81
Sağlık	1.15	1.31	1.64	0.98
Ulaştırma	1.20	0.92	1.21	1.01
Kültür, eğlence	1.32	1.34	1.74	1.05
Lokanta, otel, pastane	1.33	1.36	1.57	1.72
Alkollü içecek, sigara ve tütün	0.81	0.91	0.87	0.74

Tablo 6: Türkiye'de Hanelerin Ana Mal Gruplarına Göre Gelir-Talep Esnekliği

Türkiye geneli için harcama gruplarına bir bütün olarak bakıldığında, 2005 ve 2009 yıllarında gıda ve alkolsüz içecekler, giyim ve ayakkabı, konut, su, elektrik, yakıt, mobilya ve ev aletleri, haberleşme, alkollü içecek, sigara ve tütün gruplarının harcama esneklikleri 1'den küçük hesaplanmıştır. Bu da, Türkiye'de bu mal gruplarının zorunlu mallar sınıfına girdiğini göstermektedir. Aynı zamanda, sağlık, ulaştırma, eğitim hizmetleri, kültür ve eğlence, lokanta, otel ve pastane mal gruplarının harcama esneklikleri 1'den büyük çıktığından bu mal gruplarının da lüks mallar sınıfına girdiği söylenebilir.

Türkiye'de gıda-alkolsüz içecekler harcamasının toplam harcamaya göre esnekliği 2005 yılı için 0.83, 2009 yılı için 0.68 bulunmuştur. İncelenen dönemlerde gıda –alkolsüz içecekler harcama esnekliği düşmüştür. Bu da, Türkiye'de hanelerin toplam harcamalarının %1 oranında artması durumunda toplam harcamalarından gıda-alkolsüz içeceklere ayıracakları payın % 1 oranından daha düşük olacağını, bu oranın 2005 yılı için %0.83, 2009 yılı için %0.68 oranında artacağını göstermektedir

Türkiye'de giyim ve ayakkabı grubunun harcama esnekliği, 2005 yılında 0.81, 2009 yılında 0.94`tür. Gelişmekte Olan Ülkelerde giyim ve ayakkabı grubu nispeten pahalı mal grubundadır. Ayrıca, 2008 yılında yaşanan finansal krizin etkisiyle 2009 yılı için hesaplanan esneklik değerinin 2005 yılına göre daha yüksek çıktığı söylenebilir.

Türkiye'de konut, su, elektrik ve yakıt grubu harcama esnekliği 2005 ve 2009 yılları için 0.79 ve 0.73 değeriyle zorunlu mal grubundadır. Bu grup içerisinde kira harcamalarının payı yüksektir. Konut harcama esnekliğinin düşük olmasının nedenlerinden biri, son yıllarda düşük faiz oranı ve uzun vadeli borçlandırma yoluyla (mortgage-bu neden, aynı zamanda dünyada ve ülkemizde yaşanan finansal krizin de çıkış nedenlerinden biridir) ev sahibi olanların sayısındaki artıştır. Aynı zamanda, TOKİ aracılığıyla düşük gelirlilerinde ev sahibi olmalarının son yıllarda artması konut esnekliğinin düşmesinin nedenleri arasında gösterilebilir.

Türkiye'de hanehalkı eğitim hizmetleri harcama esnekliği 2005 ve 2009 yılları için 1.17 ve 1.16 değerleriyle benzer büyüklükte elde edilmişlerdir. Kültür ve eğlence grubu harcama esnekliği ise 2005 yılında 0.92, 2009 yılında ise 1.74 bulunmuştur. Türkiye'de 2009 yılında toplam harcama içinde eğitim harcamasının payı %0.9 değeriyle, kültür ve eğlence harcama grubunun payı da %2.1 oranıyla oldukça düşüktür. Türkiye'de en yüksek harcama esnekliği 2009 yılı için 1.74 değeriyle kültür ve eğlence grubu için hesaplanmıştır.

Ulaştırma harcama esneklik degeri her iki yıl içinde 1.2 bulunmuştur. Bu esneklik değeri de hanelerin toplam harcamalarındaki %1'lik bir artışın, ulaştırma harcamaların da %1.2 oranında bir artışa sebep olacağını göstermektedir. Lokanta, otel ve pastane harcama esnekliği 2005 yılından 2009 yılına 1.33`ten 1.57'e yükselmiştir. Bu da hanelerin toplam harcamalarının %1 oranında artması durumunda lokanta, otel ve pastane gibi ev dışı gıda harcamalarının %1 oranından daha fazla artacağını göstermesi bakımından önemlidir.

2005 ve 2009 yılları için Türkiye'de cohortlara göre hesaplanan mal gruplarının gelir-harcama esneklikleri Tablo 7 ve Tablo 8'de sunulmuştur.

2005 yılında hanehalkı reisinin yaşına göre oluşturulan cohortlar incelendiğinde, gıda ve alkolsüz içecekler harcama esnekliği bütün cohortlarda en küçük 0.81, en büyük 0.86 değeriyle yaklaşık olarak tüm cohortların ortalaması için hesaplanan 0.83 değerine yakın büyüklükte hesaplanmıştır. Ancak, eğitim cohortlarına gore gıda harcama esnekliği incelendiğinde ise en yüksek 0.88 değeriyle hanehalkı reisinin okur-yazar olmadığı veya okur-

yazar olup diploması olmayan haneler için, en düşük ise 0.80 değeriyle hanehalkı reisinin üniversite öğrenim düzeyine sahip olduğu haneler için hesaplanmıştır.

2009 yılında ise hanehalkı reisinin yaşına göre oluşturulan cohortlar incelendiğinde, gıda ve alkolsüz içecekler harcama esnekliği 0.62 değeriyle en düşük hanehalkı reisinin 35 yaşından küçük olduğu haneler için, en yüksek 0.85 değeriyle hanehalkı reisinin 45-54 yaş grubunda yer aldığı haneler için hesaplanmıştır. Hanehalkı reisinin 35 yaşından küçük olduğu hanelerde çocuk sayının 45-54 yaş grubundaki hanelerden daha az olması, dolayısıyla çocuk sayısının az olduğu, diğer bir ifadeyle hane genişliğinin küçük olduğu hanelerde gıda harcama esnekliğinin düşük, büyük olduğu hanelerde ise yüksek olduğu söylenebilir. Hanehalkı reisinin öğrenim düzeyine göre oluşturulan cohortlara bakıldığında gıda-alkolsüz içecekler harcama esnekliğinin hanehalkı reisinin okur-yazar olmadığı ya da okur- yazar olup bir okul bitirmeyen hanelerde 0.77 değeriyle en yüksek, hanehalkı reisinin üniversite öğrenim düzeyine sahip hanelerde ise 0.54 değeriyle en düşük hesaplanmıştır.

Cohortlara göre hesaplanan giyim-ayakkabı, konut gelir harcama esnekliği tüm cohortların ortalamasına göre hesaplanan esneklik değerinden önemli bir farklılık göstermemiştir.

2009 yılında sağlık harcama esnekliği 1.91 değeriyle en yüksek hanehalkı reisinin 35-44 yaş grubunda yer aldığı haneler için hesaplanmıştır.

Tablo 8:Türkiye'de 2009 Yılında Cohortlara Göre Mal Gruplarının Gelir Talep Esneklikleri

5 Sonuç ve Öneriler

Türkiye genelinde 2005 ve 2009 yıllarında hanelerin tükettikleri mal ve hizmet gruplarının bütçe paylarında önemli bir değişiklik olmadığı saptanmıştır. Gıda harcamasının toplam harcama içindeki payı 2005 yılında %25.7 iken 2009 yılında %23.4'e düşmüş, otel, lokanta pastane gibi ev dışı gıda harcamasının toplam harcama içindeki payı ise sözü edilen dönemde %4.2'den %4.9'a yükselmiştir. OECD eşdeğerlik ölçeğine göre 2005 yılında 2.31 olan hane genişliği 2009 yılında 2.17'ye düşmüştür.

Türkiye geneli için harcama gruplarına bir bütün olarak bakıldığında, 2005 ve 2009 yıllarında gıda ve alkolsüz içecekler, giyim ve ayakkabı, konut, su, elektrik, yakıt, mobilya ve ev aletleri, haberleşme, alkollü içecek, sigara ve tütün gruplarının harcama esneklikleri 1'den küçük hesaplanmıştır. Bu da, Türkiye'de bu mal gruplarının zorunlu mallar sınıfına girdiğini göstermektedir. Aynı zamanda, sağlık, ulaştırma, eğitim hizmetleri, kültür ve eğlence, lokanta, otel ve pastane mal gruplarının harcama esneklikleri 1'den büyük çıktığından bu mal gruplarının da lüks mallar sınıfına girdiği söylenebilir.

Bu çalışmada incelenen mal gruplarının büyük bir bölümü gıda, eğitim, konut, ulaştırma, giyim, sağlık vb. temel gereksinimler grubundadır. Bu çalışmanın bulguları, sosyal politikalarının oluşturulmasında ve refah analizlerinde yararlanılacak önemli bilgilerdir. Bu bağlamda, bu çalışma da sunulan, gelir-talep esneklikleri; sosyal politikalarıyla ve refah analizleriyle ilgili politika üretenler için önemli göstergeler olduğu söylenebilir.

Türkiye'de İç Göçün Yoksulluğa ve İstihdama Etkileri

The Effects of Internal Migration on Poverty and Employment in Turkey

Asst. Prof. Dr. H. Yunus Taş (Yalova University, Turkey)
Assoc. Prof. Dr. Selami Özcan (Yalova University, Turkey)

Abstract

Migration, which is persons movement to another location geographically, is usually predicated on economic, social and political reasons. Based on economic reasons, because of differences of region or intercity's economic conditions. To put it another way, move from regions ,which have underdeveloped economy to developed regions of labor forces. Thus, developed regions about economic terms, are waited become a "center of attraction". It is discussed after a particular rate immigrated to there immigrants can't find the desired conditions employment. In this study, the problems experienced in cities, which are sending immigrants, with internal migrations' structures and ways of Turkey will be examined. For this purpose, migration and its results' social structure of the last 50 years in Turkey will be examined.

1   Giriş

Göç, yerleşmek amacıyla bir yerleşim yerinden, başka bir yerleşim yerine doğru gerçekleşen mekân değiştirme eylemidir (Keleş, 1998). Ancak bu tanımlama göçün daha çok demografik sürecine vurgu yapmakta, göçün içeriğini anlatmak bakımından sınırlı kalmaktadır. Bu açıdan göç, mekânsal bir yer değiştirme hareketinin yanı sıra, sosyal formasyonların ekonomik, politik ve kültürel yapıların ve bu yapılar içindeki ilişkiler sisteminde yaşanan değişimlerin sonucunda ortaya çıkan, söz konusu yapılar üzerinde de önemli değişim ve dönüşümlere yol açan bir olgudur (Özer, 2004: 11; Kaygalak, 2009: 9).

Tarih boyunca birçok sebepler insanları göçe zorlamıştır. Dünyada her sene milyonlarca insan, ekonomik, sosyal, güvenlik, sağlık, doğal afetler veya daha iyi yaşam şartlarını elde etmek gibi birçok nedenle göç etmektedir. Yaşanan bu göçler, toplumlar arasında farklı bir şekilde bulunan imkânlardan yararlanma isteğinin bir sonucu olabildiği gibi çevreyle ilgili dayatmalar, otoritenin gündeme getirdiği sürgünler, mecburi iskânlar ve savaşlar gibi bir çok nedenle ortaya çıkabilmektedir. Günümüzde göçlere kaynaktarlık eden nedenler arasında, yoksulluk, işsizlik, siyasal koşullar, askeri çatışmalar, tarım alanlarına teknolojik aletlerin girmesi, hızlı nüfus artışı, sosyal ve kültürel imkânlardan yararlanma isteği, gidilecek yerin iş yönünden çekiciliği, haberleşme ve ulaşım imkanlarındaki gelişmeler olarak sıralanabilmektedir

Türkiye'de yaşanan iç göç süreci 1950'li yıllardan itibaren kır ve kent arasındaki farklılıklar, kentlileşme) süreci, gecekondu kültürünün ortaya çıkması göçün yönünün aslında farklı bir yöne doğru olduğunu doğrulamaktadır. Göç sadece var olan yerleşim yerindeki bir değişikliği değil, toplumsal yaşam alanındaki değişikliği de içermektedir. Göç bir yönüyle ülkede var olan imkân ve olumlu şartlardan mümkün olan en yüksek oranda yararlanma isteğinin bir ifadesidir.

Türkiye' de 1950' li yıllardan itibaren başlayan göçlerle kentleşme sürecide hızlanmış ve böylece belli bölge ve şehirlerde nüfus, yoğunlaşmaya başlamıştır. Türkiye' de iç göçlerin, ekonomik yönden geri kalmış doğu bölgelerinden gelişmiş batı bölgeleri doğrultusunda meydana geldiği varsayılmaktadır. Göçe ilişkin veriler, nüfus sayımı verilerinden elde edilebilmektedir. Türkiye' de göçlerdeki artışa paralel olarak, bu durumu inceleyen araştırmalar da artmıştır. İç göçle ilgili araştırmalara bakıldığında, 1960'larda daha fazla olan çalışmaların 1970'ler de azaldığı ve bu azalışın sonraki dönemlerde de devam ettiği görülür.

Yukarıda sayılan bu nedenlerin dışında olan göç türleri de bulunmaktadır. Bu durumu zorunlu göçlerle ifade etmek mümkün olmaktadır. Göçleri bu anlamda öncelikle iki ana kategori ye ayırmak mümkündür. Bu nedenle karar sürecini belirleyen, irade esasına dayalı gönüllü ve zorunlu göç türlerinden söz edilmektedir. Bu iki farklı göç türünün, başlangıcı, süreci, neden ve sonuçları da farklılaşmaktadır. Gönüllü olarak göç edenler, taşınma kararlarını hür iradeleri ile almış, kendi istekleri doğrultusunda çoğu zaman ekonomik nedenler gerekçe gösterilerek, göç edecek yeri ve devamında ne gibi şartlarını kendilerini beklediğini tahmin edebilmektedir. Ayrıca beklenmeyen durumlarda yeniden eski yer ve yurtlarına dönebilme imkânları da bulunmaktadır.

Zorunlu olarak göç edenler ise, taşınma kararını istek ve hür iradeleri dışında kabullenmiş/kabullenmek zorunda kalmış kişilerdir. Bu kişiler için eski yaşam alanlarındaki olumsuz şartlar göçün nedeni olmaktadır. Göçün süreci ve göç edilecek yeri ve sonrasını da önceden tam manasıyla bilemediğinden her açıdan hazırlıksız bir şekilde yeni yaşayacağı yerlere doğru, yaşanacak sorunlardan habersizdir.

Gönüllülük, göç edilecek yerleşim yerinde karşılaşılacak sorunları iradi olarak kabul etmeyi gerektirdiğinden başa gelebilecek muhtemel her türlü sorunla az-çok baş edebilen güçlü birey ve toplulukların hareketini belirler. Ancak zorunlu göç kararı, kişinin iradesi dışında belirlenmektedir. Bu şekilde yola çıkan güçsüz birey ve

topluluğun, göç sürecinde ve göç sonucunda yaşanan olumsuzluklar nedeniyle aldıkları darbelerle psikolojik olaraktan yaşam alanlarında tanımlanamayan kimlikleriyle, kentte uyum sağlama sorunları yaşayabildiklerinden, enformel sektörün ya da işsizliğin pençesinden kendilerini kurtaramadıkları görülmektedir.

Genellikle az gelişmişlik sorunu olsa da yoksulluk birçok gelişmiş ülkenin de temel sorunlarından biri olabilmektedir . Temel ihtiyaçlardan mahrum, yoksulluk içerisinde yaşayanlar; yeterli biçimde beslenemeyen, sağlıksız koşullarda yaşayan, ortalama yaşam beklentisi düşük olanlardır. Özellikle kentte göç eden, işsiz, çok çocuklu ve yaşamlarını idame ettirecek mal ve gelire sahip olmayan birey ve aileler için yoksulluk, kendilerini içinde buldukları ve kurtulmak için stratejiler geliştirdiklerinde bile kolay kurtulamadıkları acımasız bir gerçeklik olarak varlığını kentin göç mekânlarında sürdürdüğü görülmektedir.

Göç, kentteki mekânsal ayrışmaları derinleştiren etkilerde bulunurken yoksulluğun mekânsal olarak yoğunlaşmasına da neden olmaktadır. Göçlerle tekrar tekrar biçimlenen kent alanlarında yoksulluk olgusu, yeni bir yüz edinmiştir. Kente göçen ve kentin eski yoksullarına benzemeyen yeni kent yoksulları, sorunlarıyla yoksulluğun farklı bir yüzü olmuşlardır. Göçlerle gelenler, kent merkezlerinde tutunamadıklarından, kendilerini kent dışındaki az gelişmiş mahallelere atmaktadırlar. Kentlerin kıyısında yaşayanlar için kente yakın olmamak, bir bakıma kentin ekonomik, sosyal, kültürel imkânlarının dışında olmak, kentin üretim sürecine katılamamak anlamına gelmektedir. Bu durumd bulunanların çoğunun düzenli bir işi ve geliri de bulunmamaktadır.

 Bu anlamda kentin dış mahallelerinde göçün en önemli sorunlardan biri yoksulluk ve işsizlik olmaktadır . Son yirmi yılda Türkiye'de çok hızlı ve önemli ekonomik ve toplumsal değişmeler meydana gelmiştir. Bu değişmeler kentin yoksullarına benzemeyen, yoğun ve kitlesel göçler sonucu kentlerde biriken başta ekonomik olmak üzere, konut, sağlık, eğitim vb. sorunların yanı sıra yeni bir kültürle karşılaşmanın sebep olduğu sarsıntı ve çatışmaları yaşamak durumunda kalanlar kentin yeni sakinlerinin yanı sıra "kentin yeni yoksulları" olarak anılmışlardır (Bayhan, 1997: 28).

Kent yoksulluğunun dışında kentin yeni yoksullarının toplumsal görünümlerine baktığımızda, her konuda dezavantajlı durumlarıyla, geliştirdikleri yaşam stratejileriyle var olmaya çalışan, talepleri ve sorunlarıyla çoğu zaman yalnız kalan bir kesim görmekteyiz. Bugün Türkiye'nin İstanbul, Ankara, İzmir, Bursa, gibi metropol kentleri başta olmak üzere Mersin, Diyarbakır, Van, Şanlıurfa ve Batman gibi diğer kentlere zorunlu göçün kattığı nüfus, yeni kent yoksulluğunun ağır sonuçlarıyla yaşamak durumda kalmıştır.

2   Kavramsal Çerçeve

Bu bölümde göç kavramı, yoksulluk ve istihdam konuları değerlendirilecek göçün ne olduğu, göç tanımlarıyla ilgili tartışmalara, türlerine, neden ve sonuçlarına aynı zamanda Türkiye'de iç göç sürecinin son 60 yıllık sürecini 1990 öncesi ve 1990 sonrası olmak üzere iki ayrı dönem üzerinden bakılarak incelenecektir. Göçün olumsuz neticelerinden biri olan yoksulluk ve yoksulluk türlerinden de bahsedilecektir. Son olarak da yine göçün sonuçlarından biri olan şehirlerdeki hızlı nüfus artışı ve işsizlik problemi anlatılmaya çalışılacaktır. Söz konusu dönemlerde yaşanan göç hareketleri arasındaki farklılıklara değinilecektir. Özellikle son 20 yılda Doğu ve Güneydoğu Anadolu Bölgesinde yaşanan "zorunlu göç" üzerinde de durulacaktır.

2.1 Göç Kavramı

Göç, neredeyse tüm toplumları etkileyen, insanlık tarihiyle özdeş bir olgu olarak insanlık tarihinin bütün dönemleri boyunca var olmuş ve bugün de varlığını devam ettiren bir gerçektir. Göç kavramı ilk etaptaanlamı belli bir nüfusun bir bölgeden başka bir yere olan hareketi olarak tanımlanır. Bununla birlikte göç, kitlesel yer değiştirmenin ötesinde, sonuçları itibarıyla sosyal, ekonomik, kültürel ve psikolojik birçok konu ve kavramı da içinde bulundurmaktadır. Bu açıdan göç, coğrafi mekân değiştirme sürecinin sosyal, ekonomik, kültürel ve siyasi sonuçlarıyla toplum yapısını değiştiren nüfus hareketi olarak tanımlanabilir (Özer, 2004: 11).

Kimi durumlarda göç, yaşanılan yerden, ulaşılmak istenen yere doğru gerçekleşen bir harekettir. Yine göç, bireylerin ya da grupların sembolik veya siyasal sınırların ötesine, yeni yerleşim alanlarına ve toplumlara doğru kalıcı hareketleri olarak tanımlanabilmektedir. Bu tanımlama kalıcı olmayan göç hareketlerini dışarıda tutmaktır. Bir açıdan denebilir ki göç, insanların yaşadıkları yeri terk edip devamlı, geçici ya da belirli bir süre yaşayacakları bir başka yere gitmeleridir. Göçün, idari sınırı geçerek oturma yerini devamlı, uzun süreli ve geçici ya da belirli bir süreliğine değiştirme olayını ifade etmesi, bu değişimin, kıtalararası, uluslararası, bölgelerarası, kırsal kesimlerden şehirlere ya da bugün bazı ülkelerde görüldüğü gibi, kentten kıra doğru bir mekansal hareketlilik olarak ta tanımlanabilmektedir (Tümertekin & Özgüç, 1998: 308).

2.2 Göç Türleri

Göçler belli özelliklerine göre birbirinden ayrılmaktadır. Kimi araştırmacılar göç olgusunu göçün şekline ve süresine, yoğunluğuna göre sınıflandırabilmektedir. Tanımlamaların bazılarında ise göçün yönüne göre bir sınıflamaya gidilirken, diğer tanımlarda göçmenin göç istekliliğine göre bir sınıflama yapılabileceğini belirtmişlerdir. Böylece göçleri beş başlık altında sınıflandırmak mümkün olmuştur.

Ayrıca buna benzer şekilde yine göçlerin sınıflandırılması mümkündür. Bunlar, zorunlu, ilkel, serbest, büyüklüğü ve zorlama olmak üzere, beş kategoriye ayrılmaktadır. Burada zorlama ile zorunlu göç arasında bir

ayrım yapmak mümkündür.Bu durumda ikisinin arasındaki farkı da şu şekilde açıklamak mümkündür. "Zorunlu göç, insanların içinde yaşadıkları koşullar gereği bir bölgeden ötekine göç etmeleridir. Zorlama göç ise insanların kendi istekleri dışında baskı ile bir yerden ötekine göç ettirilmeleridir. Göçün yönüne göre yapılan sınıflamalara göre ise göçler içgöç ve dışgöç olarak ikiye ayrılmaktadır. "İçgöçler, bir ülkenin milli sınırları içinde, dışgöçler de ülkelerin milli sınırlarını aşarak (her iki yönde de olabilir, milli sınırların içinden dışarıya veya milli sınırların dışından içine doğru) yapılan nüfus hareketleridir" (Sevim, 2000: 58).

İçgöç, "bir ülke içinde bölge, kent, kasaba ve köy gibi yerlerin birinden ötekine yerleşme amacıyla yapılan devinim" olarak tanımlanmaktadır (Keleş, 1998: 63). Tekeli'ye göre ise, içgöç, günümüzde belli bir zaman dilimi içinde belli bir yerleşme alanında yaşayanların kendi iradesiyle yaşam yerlerini söz konusu yerleşme alanının dışına taşıyanların miktarı olarak tanımlanmakta; ancak söz konusu tanımın aynı ülke içindeki irade dışı gerçekleşen göçleri içgöç içinde değerlendirmediği görülmektedir (Keleş, 1998: 7).

Günümüzde içgöç, belli bir zaman dilimi içinde belli bir yerleşme alanında yaşayanların kendi iradesiyle yaşam yerlerini söz konusu yerleşme alanının dışına taşıyanların miktarı olarak tanımlamak Tekeli'ye göre, her toplum için geçerli bir tanım olamamaktadır. Bu tanım daha çok modern sanayi toplumları için geçerliyken, tarım toplumlarında insanların toprağa bağlılıkları dikkate alındığında nüfusun yer değiştirmesi bireyin kendi iradesinden bağımsız olmaktadır. Bu durumda göç zorla yer değiştirmeleri değil sadece gönüllü yer değiştirmelerini kapsayacaksa bu kategorinin var olabilmesi için modern toplumun, ulus devletin ve özgür bireyin oluşmuş olması gerekir. Ayrıca göçün belirli bir zaman dilimi içinde belli bir yerleşme alanından dışarıya çıkan yer değiştirmelerin toplam sayısı olarak tanımlanması, göçün zamanda ve mekânda toplumsallaştırılmış bir değer olmasını da gerektirmektedir (Tekeli, 1998: 9–10)

Diğer pek çok göç sınıflaması ise özellikle göç edenlerin istekli olup olmamaları yönüyle belirleyici olmaktadır. Buna göre göç zorunlu ve gönüllü göç olarak ikiye ayrılmaktadır. Kimi yazarlara göre gönüllü göç her ne kadar göç eden bireyin göç ettiği yerdeki değişiklikten kaynaklansa da, göç kararındaki 'gönüllülük', göç eden bireylerin hem göç ettiği yeni çevreyle, hem de eski çevresiyle ilişki biçimlerini önemli ölçüde etkilemektedir." Zorunlu göç ise göç kararının gönüllü olmayışı ve kendisi dışında oluşan zorlamayla gerçekleşmiş olması, hem göçün kaynaklandığı yerle ilişkilerinin kesintiye uğramasına neden olmakta, hem de göç edilen yeni çevreyle ilişkilerinde, önemli farklılıklar doğurabilmektedir" (Erder, 1997: 144).

2.3 Göçlerin Nedenleri

Göç nedenlerine değinirsek, çok sayıda neden tarih boyunca insanoğlunu göçe zorlamıştır. Bunlarında en başında ekonomik nedenler gelmektedir. Yoksulluk ve işsizlik milyonlarca insanı yerinden yurdundan etmeye devam etmekte, gerek siyasal şartlar günümüzde gerekse de geçmişte birçok insanı göçe zorlamıştır. Yine kitlesel göçlere yol açan askeri çatışmalar, çevresel koşullardaki bozulmalar, önemli depremler, su baskınları ve volkanik patlamalar da göçlere neden olmaktadır. Kişilerin gerek ülke içerisinde (iç göç) gerekse de bir ülkeden diğerine (dış göç) göç etme nedenleri oldukça çok ve karmaşıktır. Ancak bu nedenler belli kategoriler altında toplanıp temel nedenlere ilişkin bir şeyler söylemek mümkün olabilir (Tümertekin & Özgüç, 1998: 312).

İç göçler, kırdan kıra, kırdan kentte, kentten kentte ve kentten kıra doğru gerçekleştirilebilmektedir. Köyden veya kırdan kentlere olan göçlerin sebepleri açıklanırken, ilk olarak kentin çekiciliği ve kırın iticiliği ifadeleri kullanılmaktadır. Kentin çekiciliği, kent hayatının ekonomi, eğitim, sağlık ve refah gibi kişiye sağlayacağı imkân ve fırsatların varlığıyla ilgiliyken, kırın iticiliği ise tarımda makineleşme sonucu açığa çıkan işgücü, toprağın aşırı parçalanarak küçülmesi, kan davaları vb. olumsuzluklar bireylerin göç etmelerine neden olmaktadır. Ayrıca itici ve çekici faktörleri de şu şekilde sıralamak mümkündür. Bunlardan ilki olan itici güçler arasında çevresel, demografik, ekonomik ve siyasal baskılar yer alırken, göçmenleri varış yerine çeken çekici göçlerde hayat şartlarını iyileştirmek için ekonomik fırsatlar, kişisel güvenlik, özgürlük, ve eğitim fırsatları gibi toplumsal imkanları sıralamak mümkündür (Tümertekin & Özgüç, 1998: 314).

2.4 Göçlerin Sonuçları

Göçün, göç eden açısından, yeni bir yaşam biçimi, yararlanacağı fırsatları artırma, mesleki ve sosyal hareketlilik sağlamak gibi olumlu sonuçların yanı sıra maddi durumun elverişsizliği, işsizlik, psikolojik sorunlar gibi çok çeşitli olumsuzlukları da olmaktadır. Göç teorilerinden biri olan "Etnisite Teorileri", göç sonucunda ortaya çıkan bir gerçeği de göz önüne sermektedir. Farklı ırktan, dilden, dinden ve hayat tarzlarından insanların aynı ortamı paylaşma durumlarını konu etmektedir. Farklı kültürlerin göç sonucunda biraya gelip aynı ortamda bulunmaları etnisite kavramının ve bu konuda söz edilen teorik açıklamaların incelenmesini gerektirmiştir. Ayrıca göç edenlerin yeni yaşam alanlarına uyum sorunları yaşamaktadırlar (Yalçın, 2004: 76–78).

Bu uyum sorunu ise birbirinden bağımsız birçok değişkene bağlı olarak farklılık arz etmektedir. Göç nedeni, göç eden kişiler, göçün türü, göçle varılan yer ve burada yaşanılanlar değiştikçe göç eden kişilerin karşılaştıkları uyum sorunları da değişmektedir. Örneğin, kırsal bir alandan kentsel bir alana göç eden kişilerin ve ailelerinin konumlarını ele alan birçok çalışma kaçınılmaz olarak göçmenlerin yeni vardıkları alanlara uyum süreçlerini, göç etmiş olanlarla yeni çevreleri arasındaki Kentleşme, kentlileşme süreci, gecekondulaşma ve yoksulluk gibi göçün kaynaklık ettiği toplumsal olgulara değindiğimizde, göçün sonuçlarına da parmak basmış olacağız. Söz konusu olguların iç içe geçtiğini, neden-sonuç ilişkisi açısından da birbirlerine bağlı oldukları görülmektedir.

Ülkemizde kentleşme olgusu kırdan kentte doğru yaşanan göç hareketleriyle birlikte anıla gelmiştir. Bunun en önemli sebeplerinden birisi iki olgunun birbiriyle olan değişmez bağıdır. Bu bağın kurulduğu mekân olan kentlerde hem kentleşmenin, hem de kırdan kentte göçün sebep olduğu değişimlerin sonuçları, nüfus yoğunluğu ve buna bağlı yasadışı yapılaşma olgusudur. Demografik etmenler arasında yer alan nüfus artışı, insanların dünya üzerindeki paylarını sınırlayan unsurlardan biri olduğundan yoksulluk üzerinde olumsuz etkisi olmaktadır. Hanenin türü, büyüklüğü gibi özellikleri hane halkı içindeki bireylerin yaş ve eğitim durumları yoksulluk oranıyla ilişkili olduğu belirtilmektedir.

3 Türkiye'de İç Göç Hareketleri

Kavramsal çerçevenin başından bu yana vurgulandığı gibi, göç bir süreçtir. Bu süreç zaman ve mekân, neden ve sonuç, gibi birçok boyutun içinde barındırdıkları değişkenler, bu değişkenlerin yapısı ve karmaşık etkileşimleri nedeniyle de karşımıza farklı farklı biçimlerde çıkmaktadır. Göç sürecinin bu hareketli yapısı göçle ilgili yapılacak her türlü çalışmanın yanı sıra, sürecin anlaşılmasını ve yorumlanmasını da zorlaştırmaktadır. İçgöç süreci de ülkelerin, bölgelerin, köylerin kendi özgün konumlarından beslendiğinden sürecin net açıklamaları bazen mümkün olmayabilir. Göçler, yönü itibariyle iç ve dış göçler olarak iki şekilde ele alınmaktadır.

İç göç, bir ülkenin kendi sınırları içerisinde gerçekleştirilen nüfus hareketiyken, dış göç ülkeler arası bir nüfus hareketi olarak anlaşılmalıdır. Bu çalışmada dış göç olgusundan söz edilmeyecek, içgöç olgusu ve Türkiye'deki sürecine ilişkin açıklamalara yer verilecektir. Ayrıca Türkiye'de gerçekleşen içgöç hareketlerini tarihsel bir ayrıma göre tanımlamak yerine göçün yönü açısından ele alındığında, Türkiye'de ki içgöçleri dört ayrı kategoride incelemek mümkündür. Bunlar; "köyden kentlere basamaklı göç, köyden büyük kentlere sıçramalı göç, kentler arası basamaklı göç, kentlerden büyük kentlere sıçramalı göç" tür (Sezal, 1996: 150).

Bazı yazarlara göre Türkiye'de yaşanan bu karmaşık göç yönünün süreçlerinin tam yaşanmadığı için kentleşmeyi geciktiren unsurlar olarak değerlendirmektedir. Türkiye'de iç göçü açıklamaya yönelik düşünceleri incelediğimizde ise konuyu şu şekilde özetlemek mümkündür (Sezal, 1996: 150).

- Kırsal yapıdaki teknolojik dönüşüm
- Bazı önemli kentlerde sanayinin hızla genişlemesi
- Türkiye'deki hızlı nüfus artışı
- Köyün itici ve kentin çekici nedenleri
- Kırsal kesimdeki kan davaları ve terör olayları olmaktadır (Yalçın, 2004: 115–119).

Bu temel etkenler sonucu yaşanan iç göçlerin, zamansız ve plansız yapılması ülke içinde önemli problemlere neden olmuştur. İç göçlerde en çok rastlanan özellik ülkelerin gelişmekte olan bölgelerinden gelişmiş bölgelerine doğru olan göçlerdir. Örneğin İtalya'nın Mezzogiorno bölgesinden daha kuzeyindeki sanayi alanlarına, Norveç'in kuzeyinden Oslo ve çevresine, Türkiye'de Doğu ve Güneydoğudan Marmara başta olmak üzere diğer bölgelere yapılan göçler gibi (Tümertekin & Özgüç, 2002: 335)

Bu çalışmada Türkiye'nin iç göç süreci, nüfusun aynı ülke içinde yeniden yerleşim anlamında, 1990 öncesi ve sonrası olarak ele alınıp değerlendirilecektir. 1990'a kadar ki göçlerin itici, çekici, iletici gibi nedenleri söz konusuyken, 1990 sonrası göçlerin o yıllarda tırmanışa geçen Doğu ve Güneydoğu Anadolu Bölgelerindeki terör olayları, en başta buralarda yaşayan halkı tehdit eder duruma gelmesiyle, köy ve mezralardaki halkın can ve mal güvenliği nedeniyle zorunlu olarak göç ettirilmesidir. 1990 sonrası göç süreci, Türkiye göç tarihine yeni bir göç şekli eklemiştir. Literatüre "zorunlu" ve "zoraki" gibi adlarla geçen bu süreç önceki süreçlerden tamamen farklı ve süreci yaşayanlar açısından travmatik sonuçlar doğurmuştur.

3.1 Türkiye'de 1990 Öncesi İçgöç Hareketleri

Türkiye'deki göç hareketlerini içgöç bağlamında üç döneme ayırmak mümkündür. Bu üç dönem ise : "1950-1960", "1960-1970-1980" ve "1980-1990" şeklinde sınıflandırılabilir. Özellikle 50'li yıllarda başlayan ve hızlanan içgöç daha çok ülkede kırsal alanlardaki dönüşümün hız kazanması, bir anlamda "istenmeyen şekli", ile açıklanabilirken, 60'lı yılların sonları ile 70'li yıllar ve 80'lerin başına kadar daha çok kentsel alanlardaki dönüşümün belirleyici olduğu, bir anlamda "cazibesi" ile anlatılabilir. 1980'li ve 90'lı yıllar içinde ise, içgöç olgusu ve süreçleri modernleşme temelindeki toplumsal değişim ve dönüşümün yeni iletişim teknolojileri ile daha da yoğunlaşması sonucu ve toplumsal hareketliliğin her anlamda "iletişimciliği" etkenlerin oldukça artması ile yeni bir döneme girilmiştir.

Göç olgusu, dünyada daha ziyade 1950'li yıllarda Türkiye'de ise ancak 1960'lı yıllardan itibaren ağırlıklı olarak çalışılmaya başlanmıştır. Bu durum göç olgusunun geçmişini daha öte tarihlere dayandırılamaz anlamına gelmeyeceği gibi göçle ilgilenen bilim insanlarının da konuya ilgisiz kalmalarının ötesinde, göçün ülkelerin nüfus hareketleri içerisinde dikkati çeker bir konuma gelmesiyle hız kazanmış olmasıdır (Özcan, 1998: 78).

3.2 Türkiye'de 1990 ve Sonrası İçgöç Hareketleri

1990 sonrası görülen göçler, siyasal politikalar sonucunda zorunlu olarak ortaya çıkmıştır (Akşit, 1998: 28–29). 1990'lı yıllar boyunca köylerini terk etmek zorunda kalan yüz binlerce insanın büyük kentlere ve

kendilerine yakın kentlere göçmesi sonucunda, bu kentlerde nüfus patlamasıyla birlikte kentlerin gelen nüfusu kaldıramamasının doğurduğu birçok problem gündeme gelmiştir. 1990'lı yıllarda Türkiye'deki iç göçün, son 40 yıldır gözlenen nüfus hareketinden farklı bir yapı arz ettiği görülmüştür.

Ülkenin doğusunda yer alan bölgelerde güvenlik nedeniyle yaşanan göçler, ekonomik nedenli içgöçlerden farklıydı. Başlarda büyük kentlere olan göçlere diğer kentlerde eklenmiştir. Türkiye toplumu söz konusu iç göçlerle en büyük mekânsal değişimi yaşamak durumunda kalmıştır. Önceleri İstanbul, İzmir, Ankara, Bursa, gibi büyük metropollerdeki içgöçle oluşan gecekondu mahallerinin medyaya yansıyan toplumsal görünümlerin benzerleri Adana, Mersin, Diyarbakır, Van, Şanlıurfa gibi illerde de görülmüştür.

Doğu ve Güneydoğu Anadolu'da devletin 'güvenlik nedeniyle' boşalttığı ve yaklaşık olarak 3200 köy ve göçe zorlanan 385.000 köy sakini bulunmaktadır. Zorunlu göç konusunda yapılan araştırmalarda, zorunlu göç edenlerin 1990 sonrasında önemli bir yüzdesinin bölgede can ve mal güvenliklerinin sağlanmaması nedeniyle göç ettiklerini belirtmektedirler, bunun nedeni olarak da PKK ve kolluk kuvvetlerinin baskısını göstermektedirler. Zorunlu göç konusunda yapılan çalışmalarda, göç etmek zorunda kalanların geldikleri yerlerde çok zor koşullarda yaşadıkları, göç edenlerin çoğunun yoksulluk sınırının altında yaşarken, konut, yiyecek, ve sağlık hizmetlerinin yokluğundan kaynaklı sorunlarla uğraşırken bu göçmenlerin çoğu için gündelik hayatın bir yaşamda kalma savaşına dönüştüğüne yönelik açıklamalar yer almaktadır (Çakmak, 2012: 38).

Türkiye Mühendis ve Mimarlar Odalar Birliğinin (TMMOB) İnsan Hakları Komisyonu tarafından yayınlanan 'Zorunlu Göç Raporu'nda: "Türkiye'nin güneydoğusunda 1990'lı yılların başlarında yoğunlaşan köy boşaltma ve zorla göç ettirme olgusu 1999 yılına kadar devam etmiştir. Bu dönem içerisinde yaklaşık 3700 yerleşim alanından üç milyondan fazla bir nüfus kendi iradeleri dışında yaşadıkları alanları terk etmek zorunda kalmıştır. On altı yıllık çatışma ortamında yalnızca yerleşim alanları yakılıp boşaltılmakla kalmamış, aynı zamanda yaylalara çıkmak yasaklanmış, binlerce dönüm orman yakılmıştır. Boşaltılan, yakılan ve yıkılan yerleşim alanlarında mevcut yol, su, elektrik gibi temel altyapı olanakları da yok olmuştur. Tarlalar kullanılamaz hale gelmiştir. Meyve bahçeleri yok edilmiş, ağaçlar kesilmiştir. Boşaltılan köylerdeki arazi ve mülkler köy korucuları tarafından hem tahrip edilmiş hem de bunlara korucular tarafından el konulmuştur" (TMMOB, 2009).

TMMOB'nin 'Zorunlu Göç Raporu', devletin çeşitli sosyal, ekonomik ve güvenlik vb. konularda aldığı kararların yerine getirilmesi aşamasında nüfusta oluşan hareketliliğin zorunlu göçü ifade ettiğini belirtir ve cumhuriyet tarihinin en kitlesel zorunlu göçünün 1980 yılından sonragerçekleştiği ifade edilmiştir. 12 Eylül 1980'den itibaren devam eden sıkıyönetim ve olağanüstü hal uygulamaları, güvenlik nedeniyle köy boşaltma, bölgede yaşanan silahlı çatışmalar, yayla, mera yasağı, kontrollü gıda uygulaması gibi uygulamalar olduğunu ifade etmektedir (TMMOB, 2009).

Bir başka çalışma Başak Kültür ve Sanat Vakfının Aralık 2003'te başlayıp (Kadıköy, Üsküdar, Ümraniye, Beykoz, Maltepe, Kartal, Pendik, Sultanbeyli ve Tuzla) 9 ilçede yürütülmüştür. Dokuz ilçeye yerleşen 500 aile ve 369 çocuk ile görüşülmüştür. Zorunlu göçün çocuk, gençler ve aile üzerindeki etkileri araştırılmıştır. Araştırma sonuçları, 1989–1999 yılları arasında zorunlu göçle gelen ailelerin ekonomik, sosyal-kültürel, demografik sorunlarla boğuştuğunu ortaya çıkardı, özellikle çocukların bu süreçten çok etkilendiğini gözler önüne serdi: Çocukların dil, kültürel uyum konusundaki problemleri, okumayıp çalışmak zorunda kalmaları, sosyal güvenceden yoksun çocukların sağlık hizmetlerinden faydalanamamaları gibi bir çok sorun yaşadıkları görülmüştür.

Yaygın olan işsizlik göç edilen yerlerdeki işsizliğin daha da çok artmasına neden olmuştur. Göç edenlerin bu yerlere ne maddi ne de manevi bir kaynak getirmemeleri buraların oldukça sınırlı olan kaynaklarının daha çok tüketilmesine neden olmuştur. Göçmenlerin emeğini ucuza pazarlaması iş gücü piyasasının düşmesine neden olmaktadır. Emek karşılığı alınan ücretlerin düşmesinin yanı sıra yukarıda sayılan sorunların tamamı buralarda eskiden beri yaşayan insanların bu yeni gelen insanlara karşı düşmanlık ve ön yargı içinde yaklaşmasına neden olmaktadır. Bu tür bir tutum ise yeni gelenler ile eskiler arasında zaten var olan kültürel ve toplumsal uçurumun giderek büyümesine neden olurken, belli kesimlerin bu durumu istismar etmesine yol açmaktadır. (Peker, 1999: 28).

3.3 Türkiye'de İç Göçler Üzerine Genel Bir Değerlendirme

Türkiye'de esas olarak göçler 1950 li yıllardan sonra nispetten daha fazla artmıştır. Bu durumun bir çok sebeplerinden en önemlisinin sosyal ve ekonomik olduğunu belirtmekte yarar vardır. 1950'li yıllarda Türkiye'nin çok partili sisteme geçişi ve özgürlüklerle birlikte yolların yapılarak ulaşım imkanlarının artması ve köylünün adeta kabuğunu kırıp büyük şehirlere doğru akın ettiği bir dönem olarak tanımlamak mümkündür. Tablo 1 incelendiğinde bu durumu açıkça görmek mümkündür.

Tablo 1'e baktığımızda 1927 ile 1950 arası dönemdeki Türkiye nüfusu ve bu nüfusun kent ve kıra göre dağılımının kentli nüfusun % 0.72 oranında arttığı görülmektedir. Buradan kent nüfusunun bu dönemde sayı bakımından durağan olduğu yani fazla bir göç hareketi görülmemektedir. 1950'li yıllardan önce Türkiye'de artan nüfusla birlikte toprağın bireyler arasında paylaştırıldığı, ölüm ve doğum oranlarının yüksek olduğu, göçün olmadığı geleneksel köy toplumlarında hane ve topluluk düzeyindeki bir hayat sürülmektedir. (Akşit, 1998: 26).

Türkiye'de 1950'li yılların kalkınma faaliyetleriyle beraber bölgelerarası farklılıklar daha belirgin hale gelmiş, hızlı nüfus artışı ve tarımda makine ve teknolojinin kullanılmaya başlanması nedeniyle içgöç ve dışgöç hareketleri hızlanmıştır. Peker, Türkiye'de 1945–1950 döneminden günümüze kadar olan içgöçleri ve kentleşme olgusunu tipleştirdiğimizde karşımıza çıkacak olan iki örüntünün altını çizmektedir. İlki 1950-1980'de yaşanan kır-kent göçü, ikincisi 1980'den günümüze kent-kent göçü tipidir. Bu iki tipte söz konusu egemen faktör gönüllü göç olgusudur derken ikinci tipte, 1990'larda güvenlik nedeniyle Doğu ve Güneydoğu'da yaşanan göçlerin sosyal sistemde ihmal edilemeyecek boyutlara ulaştığının altını çizerken bu tipin aslında ayrı bir göç tipi olduğunu vurgulamaz.

Devlet İstatistik Enstitüsü (DİE) verilerine göre, Türkiye'nin 1927'den 1990'lara kadar kır nüfus oranı kentlere göre fazlayken, 1990'lı yıllarda kent nüfus oranının kır nüfusunu geride bıraktığı görülmektedir. Ve sonraki yıllarda da kent nüfusunda giderek daha fazla bir artış gözlenmektedir. 1990'da kent nüfus oranı %59 kır oranı ise %41 iken, 2000 yılında ise kent kapsamına giren yerleşim yerlerinin toplam nüfusa oranı daha da artarak %65' e ulaşmış kırların oranı ise % 35'lere kadar inmiştir (DİE Türkiye İstatistik Yıllığı, 2000: 48). Yaklaşık 30 yıldan bu yana ülkenin içinde yaşanan ve 1990'larda başlayan zorunlu göçlerin devam ettiğini de göz önünde bulundurduğumuzda kent nüfus oranının 2000'lerde daha da artmış olduğunu aşağıdaki tabloda yer alan TÜİK' verileri desteklemektedir (TUİK, 2007).

Yıllar	Genel Nüfus	Kent Nüfusu	Kent (%)	Köy Nüfusu	Kır(%)
1927	13.648.270	3.305.879	24.22	10.342.391	75 .78
1940	16.158.018	3.802.649	23.53	12.355.376	76.47
1945	17.820.950	4.346.249	24.38	13.474.701	75.62
1950	18.790.174	4.687.102	24.94	14.103.072	75.06
1955	20.947.188	5.244.337	25.03	15.702.851	74.97
1960	24.064.763	6.927.343	28.78	17.137.420	71.22
1965	27.754.820	8.859.701	31.92	18.895.089	68.08
1970	31.391.421	10.805.817	34.42	20.585.604	65.58
1975	35.605.176	13.691.101	38.45	21.914.075	61.55
1980	40.347.719	16.869.068	41.80	23. 478.651	58.20
1985	44.736.957	19.645. 57	53.02	23.789.701	46.98
1995	56.473.035	33.326.351	59.01	23.146.684	40.99
2000	67.803.937	44.006.274	64.90	23.797.653	35.10
2007	70.487.917	49.747.859	70.57	20.838.397	29.43
2008	71.517.100	53.611.723	74.96	17.905.377	25.04
2009	72.561.312	54.807.219	75.53	17.754.093	24.47
2010	73.722.938	56.222.356	76.26	17.500.632	23.74
2011	74.724.269	57.385.706	76.8	17.338.53	23.20
2012	75.627.384	58.460.35	77.3	17.167.200	22.70

Tablo 1: *Türkiye'de Sayım Yıllarına Göre Nüfus, Kent ve Kır Nüfusu.,* ***Kaynak:*** *(TÜİK, 2011.)*

Yıllar	Toplam	Şehir	Oranı	Köy	Oranı	Değişim (%)

Tablo.2: *Çeşitli Dönemlere Göre Türkiye'de Nüfus Hareketleri.,* ***Kaynak****: TÜİK,1965- 2007 Tarihleri arası nüfus hareketleri.*

Türkiye'de 1950'li yıllardan itibaren içgöçü ele alan araştırmalar çoğunlukla kırdan kente ekonomik göçü 'kentleşme, gecekondulaşma' çerçevesinde irdelerken niteliksiz erkek işgücü üzerinde durulurdu. 1990'larda nüfus hareketlerini etkileyen unsurlara gerek Doğu ve Güneydoğu'dan diğer bölgelere, gerekse bölge içindeki '*zorunlu göç*' de dâhil oldu. O günden bugüne mevcut çalışmalar, göç nedenleri, göç sürecine katılım, bu süreç esnasındaki yaşam deneyimleri ve göçün etkileri, göç edenlerin tutumları ve göçün sonuçları üzerinde durulmaktadır (İlkkaracan, 1998: 305–306).

Türkiye söz edilen göç hareketlerinden farklı olarak özellikle 1980'li yılların ortaları ve 1990'lı yıllar boyunca farklı bir göç hareketine tanıklık eder. "75 Yılda Köylerden Şehirlere", adlı kitapta bu göç hareketi, kırsalın iticiliği, kentin çekiciliği ve iletici etkenlerden görece bağımsız olarak ülkenin Doğu ve Güneydoğu Anadolu

bölgelerinin kırsal alanlarından bu bölgelerin kent merkezleri ile batıdaki büyük kentlere doğru gerçekleşen bir harekettir. Bu hareket daha önceki göçler gibi ekonomik kökenli değil siyasal kökenlidir. "1984 yılında bölgede başlayan ve giderek yoğunlaşan çatışmalar, bölgedeki kitlesel göç hareketlerinin nedenidir. Terör ortamı, can ve mal güvenliğinin olmaması, geçim kaynaklarının daralması, sivil halkın bölgeden hızlı bir şekilde uzaklaşmasına yol açmıştır.

4   Yoksulluk Kavramı ve Tanımlar

Toplumsal bir sorun olarak yoksulluğun yaygınlaşması ve çözüme dönük düzenlemelerin, politikaların başarılı olabilmesi için, yoksulluk kavramına açıklık kazandırılması gerekmektedir. Kavramın tanımına açıklık getirilmesi temelde iki amacı gerçekleştirmek için yapılmaktadır. Bunlardan birincisi bu tanımla yoksulluğun öğelerinin ve nedenlerinin neler olduğunun ortaya konulmasını sağlamak, ikincisi ise yoksulların sayısının hesaplanabilmesine yol göstermektir. Yoksulluğun nasıl tanımlanacağı ve hesaplanacağı konusunda değişik yaklaşımlar öne sürülmektedir. Tanımlar yoksullara bakış açısına göre, toplumdan topluma zaman içinde değişkenlik gösterebilmektedir. Yoksulluk araştırmalarında bazen ekonomik göstergelerin ön plana çıktığı görülürken, bazı yaklaşımlarda ise yoksulluk ile gelir eşitsizliği ilişkisine vurgu yapılmaktadır. Ancak genel olarak yoksulluk iki temel şekilde ölçülebilmektedir.

Bunlar "*mutlak yoksulluk*" ve "*göreli yoksulluk*" tur. Mutlak yoksulluk kavramı, fiziksel açıdan sağlıklı bir yaşam sürdürebilmek için gerekli temel koşulları ifade eden geçim düşüncesine dayandırılırken, göreli yoksulluk, her ülkeye göre değişen bir toplumun günlük yaşama katılma maliyetinden hareketle, her bir toplum için geçerli olan, geniş bir yaşam standardı düşüncesine dayanır. Bu yaklaşımlardan ilki evrensel yoksulluk standartlarıyla ölçülebilirken, ikinci yaklaşım ölçülemez; çünkü mutlak olarak yoksul sayılan birey evrensel yaşam standartlarının altına düştüğü zaman dünyanın neresinde olursa olsun yoksul sayılırken, insan ihtiyaçlarının toplumdan topluma farklılık arz etmesi bu ihtiyaçların her yerde aynı olduğunu düşünemeyeceğimiz anlamına gelmektedir. 21. yüzyılda yaşanmakta olan yoksulluk ise sanayi devrimi sürecinde yaşanan yoksulluktan farklı özellikler taşımaktadır. 21. Yüzyılda yoksulluk, üretim alanından dışlanmak, toplumdan dışlanmak, yalıtılmak, yalnızlık ve ihmal anlamına gelmektedir Bektaş & Yankaya, 2003: 58.

4.1   Yoksulluğun Nedenleri

Şenses'in belirttiği gibi yoksulluk tanımı genişledikçe yoksulluğun nedenlerini belirlemek de güçleşmektedir. Yoksulluk nedenleri tek bir başlık altında toplanabilecek kadar basit bir olgu olmadığından değişik türlerine göre, farklı nedenlerden kaynaklanabilmektedir. Aynı zamanda yoksulluk türlerinin bütün ülkelerde ve hatta aynı ülke içinde değişik yerleşim yerlerinde aynı nedenlerle ilişkilendirilmesi bile mümkün değildir. Yoksulluğun nedenlerinin zaman içinde siyasal ve sosyo-ekonomik değişimlere duyarlılık göstererek farklılık göstermesi doğal karşılanmalıdır.

Bu açıdan yoksulluğun nedenlerine ilişkin görüş ve değerlendirmeler arasında farklılıklar görülebilir. Yoksulluğun nedenlerini, kişilerin yetenekleri, sorumluluk ve disiplin anlayışı, tutumluluk derecesi ve gösterdikleri çaba gibi kişisel özellikleriyle ilişkilendiren ve yoksulların "yoksulluğun hem kurbanı hem de nedeni" olarak gören yaklaşımın yanı sıra yoksulluğu, yoksulların dışında başta ekonomi politikaları olmak üzere düşük ücretler, yetersiz eğitim ve istihdam olanakları ve ayrımcılık gibi yoksulların kendi denetimleri dışındaki "yapısal" nedenler sosyo-ekonomik sistemle ilişkilendiren yaklaşımlar, bir bütün olarak yoksulluğun nedenlerine ilişkin geniş bir yelpaze sunmaktadır.

4.2   Dünya'da Yoksulluk

Dünya yoksulluğunu etkileyen en önemli etkenler sıralanırken gıda, giyecek, yakacak, vs. gibi malzeme mahrumiyeti, ücretsiz veya ikame edilmiş kamu hizmetlerinden mahrum kalmak , sağlık, eğitim ve yol hizmetlerinden yararlanamama, alt yapı ve ulaşım araçlarından yararlanamama, servet ve gelir düşüklüğü gibi hususlar yer almaktadır (Dumanlı, 1996: 27).

Günümüzde dünya çok önemli bir dönüşüm yaşayarak üretim potansiyelini hızla geliştiriyor. Her geçen gün dünya toplam olarak daha çok katma değer üretiyor. Ama bu üretilen değerlerin dağılımının eşitsizliğini arttırıyor. Dünyada 1960 yılında nüfusun en varlıklı yüzde 20'sinin gelirinin en yoksul yüzde 20'sinin gelirine oranı 30 iken 1991'de aynı oran 61'e yükselmiştir Tekeli, 2000: 55 1970'li yıllarda yoksulluk kavramı yaşanmakta olan toplumsal olguları anlamakta yeterli olurken, günümüzde artık yeterliliğini yitirmektedir. Küreselleşen ve teknolojik olarak yeniden yapılanan dünya ekonomisi içinde uyum sağlayamayan gruplar ve kişiler emek piyasasından, siyasal süreçlerden, toplumsal ilişki ağlarından kolayca dışlanabilmektedir. Sanayi toplumu dünyasında sistemin yoksullara ihtiyacı varken, bilgi toplumuna geçen küreselleşen dünyada bu ihtiyaç azalmakta ve dışlanmalar yaşanmaktadır.

Neo-liberal politikalarla sosyal devlet uygulamalarının sınırlanması kitleleri ekonomik değişmeler karşısında korumasız bırakmış, özelleştirmeler sonrası işsizlik yaygınlaşmıştır. Dünyanın bir bölümünde üretim artışı ve zenginleşme yaşanırken öte yandan yoksulluk artmakta açlık, eğitimsizlik ve bunların uzantısı olan şiddet olayları ve savaşlar dünya gündemini meşgul etmektedir (Gürses, 2007: 61).

4.3 Türkiye'de Yoksulluk

Bireyin, gelişmiş ve gelişmekte olan ülkede yaşaması tüm yaşam çizgisini etkileyen bir unsur olmaktadır. Bireyin sahip olduğu nitelikler ve bunları üretime katabilmesi için sistemin ona sağladığı imkanlar ve ülkenin gelişmesi bir tür karşılıklı bağımlılık oluşturmaktadır. Yoksulluk Türkiye'nin önde gelen sosyolojik bir gerçeğidir. Devlet İstatistik Enstitüsü'nün 2010 verilerine göre, Türkiye'nin % 30'u yoksuldur. Türkiye insani gelişmişlik bakımından dünya ülkeleri arasında arzu edilen seviyeden oldukça uzak görülmektedir (TÜİK, 2010). 2010 yılında Türkiye İstatistik Enstitüsü, tarafından yayınlanan bir rapora göre yoksulluk, bir önceki yıla göre azalmıştır. Kırsal ve kentsel nüfusun gelir düzeyinde iyileşme görülmektedir (TÜİK, 2009).

Ülkemiz esas olarak zengin olduğu halde, toplumda yoksul bir kesim yine de mevcuttur. Bu tür yoksulluk, ülkenin genel karakterinden değil, sistemin insan merkezli olmayışından kaynaklanmaktadır ve tamamen gelir dağılımı bozukluğunun sonucudur. Örneğin Türkiye'de yoksulluk ve yoksul kesimlerin giderek artması bu iki nedenden kaynaklanmaktadır. Çünkü Türkiye hem çok az üreten bir ülkedir; hem de ülkemizde yürürlükte olan sistem gelir dağılımını son derece bozan bir yapıya sahiptir.

Sonuç olarak, önemli bir noktanın altını çizmek gerekir. Birçok yoksulluk nedeninin aynı yerleşim yerinde, ülke, bölge, il, ilçe, belde ve mahalle olabilir, birlikte ortaya çıkması bu söz konusu yerleşim yerinin yoksullukla özdeşleştirilmesi, yoksulluğu görünür kılmadığı gibi o yerlerde yoksulluk nedenlerinin birbirini güçlendirerek büyüttüğü ve yoksulluğu sürekli kıldığını unutmamak gerekir.

5 Sonuç

1950'li yıllardan bu yana göçün Türkiye'de özellikle kırdan kente doğru artan bir hareketi mevcuttur. Bu göçün en önemli sebeplerden biri önceleri ekonomik sosyal nedenler iken 1980'li yıllar ortalarından itibaren doğu ve güneydoğu illerimizdeki terör olaylarından dolayı kimi zaman zorunluluklardan kimi zaman da devlet eliyle bu bölgelerde yaşayanlar zorla göç ettirilmişlerdir. Bu nedenlerden dolayı Türkiye'de yaşanan iki farklı göç olgusu bulunmaktadır. Bu her iki göçün tabi olarak birbirinden farklı sonuçları olmaktadır. Dolayısı ile her iki göç için farklı önlemler almak gerekmektedir.

Ekonomik nedenlerle göç eden açısından, yeni bir yaşam alanına geçiş, yararlanacağı fırsatları artırma, mesleki ve sosyal hareketlilik sağlamak gibi olumlu sonuçların yanı sıra maddi durumun elverişsizliği, işsizlik, psikolojik sorunlar gibi çok çeşitli olumsuzlukları da olmaktadır. Etnisite ve yeni yaşam alanlarına uyum sorunları yaşamaktadırlar. Bu uyum sorunu ise birbirinden bağımsız birçok değişkene bağlı olarak farklılık arz etmektedir. Göç nedeni, göç eden kişiler, göçün türü, göçle varılan yer ve buralarda yaşanılanlar değiştikçe göç eden kişilerin karşılaştıkları uyum sorunları da değişmektedir. Kırsal bir alandan kentsel bir alana göç eden kişilerin ve ailelerinin yeni vardıkları alanlara uyum süreci, kentleşme, kentlileşme süreci, gecekondulaşma ve yoksulluk gibi göçün sebep olduğu toplumsal sorunlar yaşanmaktadır.

Kente göçen ve kentin eski yoksullarına benzemeyen yeni kent yoksulları, sorunlarıyla yoksulluğun farklı bir yüzü olmuşlardır. Göçlerle gelenler, kent merkezlerinde tutunamadıklarından, kendilerini kent dışındaki az gelişmiş mahallelere atmaktadırlar. Kentlerin kıyısında yaşayanlar için kente yakın olmamak, bir bakıma kentin ekonomik, sosyal, kültürel imkânlarının dışında olmak, kentin üretim sürecine katılamamak anlamına gelmektedir. Bu durumda bulunanların çoğunun düzenli bir işi ve geliri de bulunmamaktadır.

Bu anlamda kentin dış mahallelerinde göçün en önemli sorunlardan biri de yoksulluk ve işsizlik olmaktadır. Son yirmi yılda Türkiye'de çok hızlı ve önemli ekonomik ve toplumsal değişmeler meydana gelmiştir. Bu değişmeler kentin yoksullarına benzemeyen, yoğun ve kitlesel göçler sonucu kentlerde biriken başta ekonomik olmak üzere, konut, sağlık, eğitim vb. sorunların yanı sıra yeni bir kültürle karşılaşmanın sebep olduğu sarsıntı ve çatışmaları yaşamak durumunda kalanlar kentin yeni sakinlerinin yanı sıra "kentin yeni yoksulları" olarak anılmışlardır.

Türkiye'nin 1980 sonrası başlayan zorunlu göç sorunu, etkileri zaman geçtikçe çeşitlenerek artan, sadece zorunlu göç mağdurlarını değil, göç alan ve veren illerin genel nüfusunu, bu illerin sosyo-ekonomik ve kültürel dokusunu ve dolaylı olarak ülkenin bütününü etkileyen birçok önemli konu haline gelmiştir. Göç sonrası ağır bir yoksulluk ve yoksunluk içinde yaşamaya devam eden zorunlu göç mağdurlarının geniş bir yelpaze oluşturan yasal, sosyal, eğitim, siyasi, kültürel, çevreye uyum ve sağlık sorunları bulunmaktadır.

Türkiye'de zorunlu göç, sadece göç veren doğu ve güneydoğu illerini değil, ülkenin bütününü etkileyen toplumsal bir hareketliliktir. Ülkenin batısındaki büyük kentlere doğru gerçekleşen göçler sonucu kentler nüfus olarak büyürken, hayatlarını dayadıkları tarımsal ekonomiden uzak, kentsel ekonomiye katkı yapabilmek için gerekli beceriler ve çalışma sisteminden yoksun olan bu gruplar, göçle geldikleri yerde ayakta kalmaya ve yeni çevresi ile uyum sağlamak için verdiği mücadelesinde pek çok problemle karşılaşabilmektedirler.

Bu göç gruplar, kentlerin gecekondu mahallelerinde ya da yerleşim alanı olan ilçelerde genellikle tanıdıklarının yanında yaşamlarını sürdürmek ve çoğu zaman geçici işlerde çalışmaktadırlar. Tanıdık, akraba, hemşeri gibi yakın ilişkilerin gücüyle kente uyum sağlama ve kente dahil olma sürecinin sancılarını uzun bir süre çekmektedirler. Söz konusu nüfusun varlığı, kentlerde yaşanmakta olan yoksulluktan farklı yeni yoksulluk

izahlarını gerektirmektedir. Bu yeni problemlerin en çok hissedilen ve yaşananları ise işsizlik ve kentlerdeki altyapı yetersizliği, suç oranlarının artması gibi sorunların da ortaya çıkmasına neden olduğu belirtilmektedir.

Zorunlu göç sorununun ortaya çıkmasının üzerinden 30 yılı aşkın bir süre geçmiş olmasına rağmen, devletin çözüm ve rehabilitasyona yönelik attığı adımlar son derece geç kalınmış ve yetersiz görülmektedir (2013 yılında başlatılan çözüm süreci hariç). Bu yeni durumun sonuçlarının önümüzdeki yıl ve yıllarda görebileceği tahmin edilmektedir. Ayrıca zorunlu göç mağdurları için geliştirilen, 1999'dan bu yana yürürlükte olan Köye Dönüş ve Rehabilitasyon Projesi (KDRP) gibi projelerin geliştirilerek uygulamaya konulması Türkiye'nin normalleşmesi için önemli görülmektedir.

Hiç şüphe yok ki göçün göçenlere yüklediği en önemli sorunlardan biri olan işsizlik ve istihdam problemidir. Göçle gelen nüfusun büyük çoğunluğu kırsal alandan kent ve kentsel alanlara taşındığı için buralarda öncelikle sahip oldukları tarım ve hayvancılık vasıflarına uygun iş bulma imkanlarının olmaması nedeniyle bir anda işsizler ordusuna katılmaktadırlar. Bu durumda kendileri en büyük mağduriyeti yaşadıkları gibi yeni geldikleri mahalle ve komşularına da olumsuz etkileri kaçınılmaz olmaktadır. Bu nedenle bu tür zorunlu göçle gelenlerin Devlet otoritesi tarafından belli bir program dahilinde çeşitli eğitim ve rehabilitasyon seminerlerinden yararlandırılması gerektiği düşünülmektedir.

Sağlık Hizmetleri Reformu ve Hane Halkı Refahı: Türkiye'de Sağlıkta Dönüşüm Programı

Health Care Reform and Household Welfare: Health Transformation Programme in Turkey

Dr. Serdal Bahçe (Ankara University, Turkey)
Ph.D. Candidate Altuğ Murat Köktas (Ankara University, Turkey)
Ph.D. Candidate Deniz Abukan (Ankara Üniversitesi, Turkey)

Abstract

We assessed the health care reform and its effects on household's welfare such as access to health care and household economic burden. We used descriptive analysis on 2002-2011 Ministry of Health and OECD Health Statistics. The main result is about using health care. Access to health care increased after health care reform in Turkey. Number of applications to health care service server and its units rose. On the other hand, financial burden of health care on household's budget decreased number of applications. The main result percentage of not consulting a specialist even needed to consult a specialist but did not during the past 12 months is %4.9 in 2003 and %19.9 in 2010. To improve health care access, policy makers should improve public sector provision of health care, increase social security benefit packages and protect poor and vulnerable.

1 Giriş

Sağlık harcamalarının son yıllarda ekonomik büyümeden daha hızlı artış göstermesi, bu hizmetlerin finansmanında bütçe baskısını beraberinde getirmektedir. Çeşitli yollarla sağlık harcamaları olması gerekenin üzerinde gerçekleşmekte ve bir bakıma da kaynak israfına neden olmaktadır. Dolayısıyla ülkeler, sağlık harcamalarının artışını kontrol altına almaya çalışmakta ve bu yönde politikalar geliştirmektedirler. Söz konusu politikalar, *"reform"* olarak nitelendirilmekte ve sağlık piyasasının hem arz hem de talep ayağına odaklanmaktadır. Diğer yandan uygulanmasının kolay olması nedeniyle talep yanlı maliyet paylaşımları ağırlıklı olarak tercih edilmektedir. Sağlık hizmetleri finansmanında talep yanlı maliyet paylaşımının katkı ve katılım payı gibi isimlerle ağırlıklı olarak uygulanması, hane halkı tüketim harcamaları içinde sağlık harcamalarının payını artırmakta ve sonuç olarak hane yaşam memnuniyetini etkilemektedir. Bu bağlamda çalışmanın amacı, sağlık reformu uygulamalarının, yaşam memnuniyeti üzerindeki etkilerinin incelenmesidir. Elde edilen sonuçlar itibariyle, Türkiye'de sağlık hizmetlerinden duyulan yaşam memnuniyeti, reform ile birlikte artmıştır. Bunun yanında, sağlık hizmetleri kullanımında ise olumsuz göstergeler bulunmaktadır. Uluslar arası karşılaştırmalarda ise Türkiye, hizmet kullanımında son sıralarda yer almaktadır.

Ülkelerin sağlık harcamalarının sürekli olarak artmasıyla birlikte, harcamaların kamu bütçelerinde baskı oluşturması sağlık harcamalarının kontrol edilmesi üzerine politika önerilerinin doğmasına neden olmuştur. Sağlık reformu olarak isimlendirilen söz konusu politika değişiklikleri, temel olarak sağlık harcamalarının mümkünse kısılması veya kontrol altına alınması ile sağlık hizmetlerinden elde edilen gelirlerin artırılmasına odaklanmaktadır. Bu bağlamda sağlık hizmetlerinde reform çalışmaları birçok ülkenin gündeminde yer almakta ve reform yanlısı uygulamalara gidilmektedir.

Reform kavramının oldukça popüler olmasının yanında, sağlık sektöründe reformu oluşturan unsurların neler olduğuna yönelik evrensel ve tutarlı bir tanım bulunmamaktadır (Saltman ve Figueras, 2004: 2). Buna göre reform, toplum düzeni ve yapısının daha iyi bir konuma getirilebilmesi için gerçekleştirilen köklü değişim ya da düzeltme olarak tanımlanmakta ve hissedilen sorunlar üzerinde meydana gelen pozitif yönlü değişim olarak ifade edilmektedir (Berman ve Bossert, 2000). Bir diğer yaklaşıma göre ise reform, *"politika hedeflerine ulaşmak için sürdürülebilir ve yoğun kurumsal ve yapısal değişiklikleri kapsayan bir süreci kapsamaktadır"* (Saltman ve Figueras, 2004: 3). Sağlık hizmetlerinde reform ise, *"sağlık hizmetleri sisteminin performansını geliştirme yönünde önemli, amaçlı bir çaba"* olarak tanımlanmaktadır (Roberts vd., 2009: 9). Bu bağlamda reform, sağlık politikaları ve ilgili kuruluşları bir defaya mahsus olmayıp uzun vadede değiştirmeye yönelik faaliyetlerdir. Dolayısıyla sağlık reformu, önceliklerin belirlenmesi, politikaların geliştirilmesi ve bu politikaların uygulanacağı kurumlarda reform yapılması biçiminde özetlenebilir (Cassels, 1995: 331). Sağlık sektörünün finansman, ödeme sistemi, organizasyon, düzenleme ve tüketici davranışları gibi bir takım *"kontrol düğmeleri"* yoluyla etkilenmesi ise, reformun odak noktasını oluşturmaktadır (Hsiao, 2000).

Ülkelerin karşı karşıya kaldığı yaşlanma, ileri düzey kronik hastalıklar, yeni tedavi yöntemleri ve ileri teknoloji gibi sorunlar sağlık harcamalarının artması yönünde baskı oluşturarak, reform çalışmalarına zemin hazırlamaktadır (Saltman ve Figueras, 2004: 3). Kıt kaynakların verimsiz kullanımı, bireylerin ihtiyaç duyduğu sağlık hizmetlerine erişememesi ve sağlık hizmetlerinin bireylerin ihtiyaçlarına cevap verememesi ise reform gerekçelerinden bazılarıdır (Cassels, 1995: 330). Bu bağlamda 1980'lerin ikinci yarısından itibaren Batılı

gelişmiş ekonomilerde görülen sağlık endüstrisinde reform politikaları, ülkelerin en önemli girişimleri arasında yer almaktadır (Flood, 2003: 1; Twaddle, 2002: 3). Doğu Avrupa ülkeleri, sosyal sigorta programlarını genişletmekte, Güney Amerika ülkeleri, sağlık sigorta kapsamını kır ve kentte yaşayan yoksulları kapsayacak biçimde genişletmekte, Afrika'da mali desantralizasyon hastanelere ek kaynak oluşturmak amacıyla kullanılmakta ve verimliliğin artırılması için birçok ülke, yeni geri ödeme sistemleri ve sağlık hizmet sunumu organizasyonunda yeni yöntemler denemektedir (Saltman ve Figueras, 2004).

2   Türkiye Sağlık Hizmetlerinde Reform Uygulamaları

3 Mayıs 1920 tarihinde 3 Sayılı Kanun ile kurulan Sağlık Bakanlığı, ülke genelindeki tüm sağlık hizmetlerinin yürütülmesi ile görevlendirilmiştir. Diğer yandan 1921 Anayasasının 11. Maddesinde yer alan *"...Medaris, Maarif, Sıhhiye, İktisat, Ziraat, Nafia ve Muaveneti içtimaiye işlerinin tanzim ve idaresi vilâyet şûralarının salâhiyeti dahilindedir"* ifadesi ile sağlık hizmetlerinin yönetimine değinilmiştir. Cumhuriyetin ilanı ile birlikte sağlık hizmetlerine yönelik çalışmalar hız kazanmıştır. Dönemin Sağlık Bakanı Dr. Refik Saydam, 1937 yılına kadar süren bakanlığında, sağlık hizmetlerinin kuruluşu ve gelişiminde önemli bir rol oynamıştır. Bu bağlamda geliştirilen sağlık politikalarının temel amaçları; savaş sonrası problemlerin çözülmesi, sağlık personelinin nicelik ve nitelik bakımından desteklenmesi, merkezden başlayarak köylere kadar ulaşan örgütlenmenin oluşturulması ve koruyucu sağlık hizmetlerinin yaygınlaştırılması olarak belirtilebilir (Sağlık Bakanlığı, 2003: 8). Dolayısıyla tarihsel süreç, sağlık hizmetlerinin yaygınlaştırılması ve hizmet sunumunda kalitenin artırılması için reform çalışmaları hayata geçirilmiştir. Bu bağlamda 1946-1960, 1961-1980, 1980-2002 dönemlerinde yoğun olarak reform uygulamaları gerçekleşmiştir. Bununla birlikte söz konusu reform çalışmalarının en kapsamlısı 3 Kasım 2002 ile gerçekleşen hükümet değişikliği sonucu uygulamaya konulan "Sağlıkta Dönüşüm Programı"dır. Hükümet programında yer alan "Acil Eylem Planı"nda sağlığa yönelik politika değişikliğinin ipucu verilmiş ve kapsamlı bir reform düşüncesi ortaya çıkmıştır. Bahse konu planda belirtilen politika maddeleri şu şekilde sıralanabilir: *"Etkin ve kaliteli bir sağlık sistemi oluşturma, herkesin temel sağlık ihtiyacını özel sektörle işbirliği yaparak yerine getirme, ülkemizde sağlık hizmetlerinin yurt düzeyinde dağılımını dengeli hale getirme hedefleri çerçevesinde; Bir yıl içinde; i.) Devlet hastanesi, sigorta hastanesi, kurum hastanesi ayırımını kaldırılmaya dönük çalışmalar başlatılacak, ii.) Hastanelerin idari ve mali yönden özerkliğinin sağlanması çalışmaları başlatılacaktır, iii.) Genel Sağlık Sigortası Sistemi kurulacak, iv.) Aile hekimliği uygulamasına geçilecek ve sağlam bir sevk zinciri oluşturulacak, v.) Koruyucu hekimlik yaygınlaştırılacak, vi.) Özel sektörün sağlık alanına yatırım yapması özendirilecektir. İnsanların ayırım gözetilmeksizin, ekonomik ve sosyal bakımdan güvencede yaşamaları ilkesi çerçevesinde yine bir yıl içinde; i.) Sosyal güvenlik kuruluşlarında norm ve standart birliği sağlanacak, bütünleştirilmiş bir sosyal güvenlik ağı kurulacaktır, ii.) Bütünleştirilmiş bir sosyal hizmet ve yardım ağının oluşturulabilmesi için dağınık durumdaki sosyal hizmet faaliyetleri tek çatı altında toplanacak, iii.) Sosyal Yardımlaşmayı ve Dayanışmayı Teşvik Fonu'nun kaynakları artırılacak, harcama usul ve esasları yeniden belirlenecek ve yönetim yapısı güçlendirilecektir".* Bu bağlamda Acil Eylem Planında yer verilen politika önerileri ile sağlık ve sosyal güvenlik sistemlerinde kapsamlı bir reform düşüncesinin temelleri atılmıştır.

3   Sağlık Hizmetleri Reformunun, Yaşam Memnuniyeti Üzerindeki Etkileri

Sağlık hizmetleri reformu, esas itibariyle sosyal güvenlik reformu olarak ifade edilebilir. Reformun temel mantığının, harcamaları kontrol altına almak, ek gelir sağlamak ve hizmet sunumunun sürdürülebilirliğini sağlamak olduğu dikkate alındığında, sosyal güvenlik kapsamında yer alan garanti paketinin boyutu, hizmet kullanımının katkı payı gibi isimlerle finansmanının özel kesime kaydırılması ve sosyal güvenlik kapsamında yer alan nüfusun artırılması gibi uygulamalar, sosyal güvenlik reformunu desteklemektedir. Bu bağlamda söz konusu reform uygulamalarının ulaşmak istediği çeşitli amaçlar bulunmaktadır. Bunlar aşağıdaki gibi sıralanabilir.

1. Ahlaki tehlike nedeniyle oluşan aşırı talebin önlenmesi,
2. Gereksiz tetkik ve tedaviler nedeniyle artan sağlık harcamalarının azaltılması,
3. Ek gelir elde ederek, mali sürdürülebilirliğin sağlanması,
4. Sağlık hizmet sunumuna erişimde hakkaniyetin sağlanması,
5. Hizmet sunucuları tarafından oluşturulan yapay talebin önlenmesi,
6. Hastanın bilinçlendirilerek, harcamaların kontrol altına alınmasıdır.

Sağlık reformu, yukarıdaki hedeflere odaklanmakla birlikte, özellikle maliyet sınırlama düşüncesi çerçevesinde, talep odaklı maliyet paylaşımı unsurlarının (katkı payı, ek sigorta vb.) yoksul kesimin hizmete erişimi üzerinde olumsuz etkiye neden olduğu, literatürde genel kabul görmüş bir yaklaşımdır. Bu bağlamda hanehalkının, sağlık hizmete erişiminde yaşadığı güçlüğün yaşam memnuniyetini etkilediği ileri sürülebilir.

4   Sağlık Hizmeti Kullanımı Üzerindeki Etki

Sağlık reformunun temel mantığı, sektördeki aşırı talebi azaltarak sağlık harcamalarını ve bu bağlamda sağlık harcamalarını kontrol altına almak olarak özetlenebilir. Bu bağlamda, reformun etkilemek istediği temel

çıktılardan biri olan, hekime müracaat sayısında azalış beklenmektedir. Şekil 1, Türkiye'de kurum ve kuruluşlar bazında kişi başına hekime müracaat sayısını göstermektedir.
Şekil 1: *Sağlık Hizmet Sunucularına Kişi Başı Hekime Müracaat Sayısı **Kaynak:** Sağlık Bakanlığı 2011 İstatistik Yıllığı.*

Şekil 1'de görüldüğü üzere, SDP'nin uygulamaya geçtiği 2003 yılı itibariyle hekim başvuru sayısı düzenli olarak artış göstermiştir. Özellikle kamuda sağlık hizmet sunucularının birleştirilmesi ile birlikte, özel hizmet sunucularına erişimin kolaylaşması bu oranı artıran en önemli faktörlerdendir. Bu bağlamda, söz konusu oranda meydana gelen artış, maliyetleri ve harcamaları da artırdığından, 2009 yılında uygulamaya konulan katkı payı ile, bu oran kontrol altına alınmaya çalışılmıştır. Nitekim 2010 yılında, katkı payı uygulaması etkisini göstermiş ve artmamış fakat izleyen yıl yine artmıştır. Şekil 2 ise yıllar itibariyle müracaat sayısını vermekle birlikte yukarıdaki sonucu desteklemektedir.
Şekil 2: *Yıllar İtibariyle Sağlık Hizmetlerine Müracaat Sayısı **Kaynak:** Sağlık Bakanlığı 2011 İstatistik Yıllığı.*

Kişi başı hekime müracaat sayısının uluslar arası karşılaştırmasına ilişkin veriler Şekil 3'te gösterilmektedir.
Şekil 3: *Seçilmiş Ülkelerde Kişi Başına Hekime Müracaat Sayısı* ***Kaynak:*** *OECD Sağlık İstatistikleri, 2013.*

Şekil 3'te görüldüğü üzere, Türkiye SDP ile birlikte hizmete erişimi kolaylaştırmış ve hekim başvuru sayıları yıllar itibariyle artmıştır. Bu durum kendisini uluslar arası karşılaştırmada da göstermektedir. Buna göre Türkiye 7,3 olan hekime müracaat sayısı ile OECD ortalamasının üzerinde olup, birçok gelişmiş ülkeyi gerisinde bırakmıştır. Dolayısıyla 2009'da uygulamaya geçen maliyet paylaşımı çerçevesinde katkı payının, söz konusu müracaat sayısını azaltma başarısı tartışmalıdır.

Sağlık hizmetlerinde maliyet paylaşımının bir diğer önemli sonucu, tetkik ve tedavilerin daha kısa zamanlarda yapılarak, hastanede yatış süresinin azalmasıdır. Bu bağlamda Şekil 4, Türkiye'de yıllar itibariyle, hastanede ortalama kalış gününü göstermektedir.
Şekil 4: *Yıllar İtibariyle Hastanede Ortalama Kalış Süresi* ***Kaynak:*** *Sağlık Bakanlığı 2011 İstatistik Yıllığı.*

2002 yılında ortalama kalış günü 5,8 iken bu oran SDP ile birlikte 2011 yılında 3,9'a düşmüştür. Türkiye'de mevcut veri seti ile, söz konusu azalışın, maliyet paylaşımı ile ilişkisi test edilememektedir. Diğer yandan uluslar arası karşılaştırma, bunun üzerinde fikir oluşturabilir. Şekil 5, OECD ülkelerinde hastanede yatan hastaya ilişkin ortalama yatış gün sayısını göstermektedir.
Şekil 5: *OECD Ülkelerinde Hastanede Ortalama Kalış Süresi **Kaynak:** OECD Sağlık İstatistikleri, 2013.*

Şekil 5'te görüldüğü üzere, Türkiye mevcut hastanede ortalama yatış süresi ile Meksika'nın hemen üzerinde ve sondan ikindi durumdadır. OECD ortalamasının 7,1 ve Avrupa bölgesinin 9,3 olduğu uluslar arası göstergelere göre, Türkiye'nin söz konusu göstergesi oldukça kötüdür.

2009 yılında maliyet paylaşımı kapsamında uygulamaya konulan katkı payı türü cepten harcamaların önemli bir etkisi de, hastalar arasında acil kullanımının artmasıdır. Acil servislerde katkı payının bulunmaması nedeniyle, hastalar acil servisleri poliklinik hizmetleri için kullanmaya başlamakta ve bu da acil servislerin iş yoğunluğunu artırmaktadır. Söz konusu düşünce, 2012'de acil servislerde acil olmayan hastalar için getirilen katkı payı ile de desteklenmektedir. Şekil 6 yıllar itibariyle acil servis kullanım düzeyini göstermektedir.
Şekil 6: *Yıllar İtibariyle Acil Servis Kullanım Düzeyi **Kaynak:** Sağlık Bakanlığı 2011 İstatistik Yıllığı.*

SDP ile birlikte hizmet sunucularına erişimin artması, hastane ve hekim başvuru sayılarını artmıştır. Diğer yandan 2009 yılında uygulamaya konulan katkı payı ile birlikte Acil servis kullanımında artış görülmektedir. Bu bağlamda 2011 yılı için acil servis istasyonu başına düşen vaka sayısı 1.568 olup, bir önceki yıla göre artış hızı frenlenmiştir. 2012 yılında uygulama konulan acil serviste acil olmayanlara yönelik katkı payı ile bu miktarın düşeceği ileri sürülebilir.

Tablo 1, 2008 ve 2010 yıllarında, son 12 içerisinde bir hekim tarafından yataklı ya da günübirlik tedavi hizmeti önerilmesine rağmen, bu hizmeti alamayanların oranını ve nedenlerini göstermektedir.

	2008	2010
Hizmet alamayanlar	4.9	19.9
Ödeme güçlüğü (çok pahalı olması ya da sigorta fonu tarafından karşılanmaması)	44.1	44.9
Poliklinikte muayene olma güçlüğü	6.3	6.8
İş, çocuk ya da bakmakla yükümlü olduğu diğer kişilerden dolayı zaman bulamama	17.4	18.3
Hastanenin uzak olması, ulaşım imkanının zorluğu	3.5	4.3
Ameliyat/Tedavi korkusu	10.3	4.1
Kendisini hastaneye götürecek birinin olmaması	2.4	2.7
Ailesinin veya yakınlarının gerek görmemesi	1.9	0.6
Diğer nedenler	12.4	15.7

Tablo 1: *Son 12 Ay İçerisinde Bir Hekim Tarafından Yataklı ya da Günübirlik Tedavi Hizmeti Önerilmesine Rağmen, Bu Hizmeti Alamayanların Oranı (2008, 2010) TÜİK, Sağlık Araştırması, 2008-2010.*

Tablo 1'de görüldüğü üzere, 2008 yılında sağlık hizmeti önerilmesine rağmen, bu hizmeti alamayanların oranı %4.9 iken, bu oran 2010 yılında yaklaşık olarak %20'dir. Hizmetten yararlanamama nedeni olarak ise birinci sırada finansal sorunlar belirtilmektedir. Herhangi bir sigorta sahipliğinin bulunmamasıyla birlikte, sigorta kapsamı dışında bulunan hizmetlerin ortaya çıkardığı finansal yük, bireylerin sağlık hizmetlerinden yararlanamamasına neden olmaktadır.

5   Sağlık Finansmanı Üzerindeki Etki

Genel olarak herhangi bir sağlık finansman sisteminin üç temel amacı bulunmaktadır. Bunlar, i. Tüketicileri, sağlık harcamalarının finansal riskinden korumak, ii. Sağlık hizmetleri sunumunda etkinlik ve iii. Tüketici ve hizmet sunucu arasında adil olmaktadır (Ellis ve McGuire, 1993: 138). Bu bağlamda, sağlık sisteminin bu hedefler doğrultusunda planlandığı varsayımıyla, hastaları finansal yükten koruyarak, hizmete erişimde hakkaniyetin sağlandığı bir sistem reform çalışmalarının temel dayanağı olarak kabul edilebilir. dolayısıyla, özellikle yoksul, yaşlı ve kronik hastaların sağlık hizmetleri nedeniyle katlanacağı finansal yükün garanti altına alınmasıyla birlikte, sigorta kapsamının genişletilmesi, hizmet çıktılarında hakkaniyeti sağlayabilecektir.

Sağlık harcamalarında meydana gelen olağanüstü artışın, devlet bütçelerinde oluşturduğu finansal baskı ise, ülkeleri iki farklı politikaya yöneltmektedir. Bunlardan birincisi sağlık sistemine ek gelirler sağlamak, ikincisi ise harcamaları kontrol etmektir. Bu bağlamda ek gelir elde etmek adına, sağlık hizmetleri finansmanının daha yoğun olarak özel kesime (hanelere) kaydırılması düşüncesi, söz konusu hedefle uyumluyken, bu kaymanın haneler üzerindeki finansal yükü artırması ise, hizmetten yararlanan kesim üzerinde olumsuz etkiye yol açmakta ve nihayetinde hizmete erişimi engellemektedir. Dolayısıyla sağlık hizmetlerinin finansmanında cepten yapılan harcamaların yüksekliğinin, söz konusu etkiyi daha da şiddetlendireceği ileri sürülebilir. Şekil 7, Türkiye'de yıllar itibariyle sağlık harcamalarının GSYİH içindeki payını, kaynakları kapsamında göstermektedir.
Şekil 7: *Yıllar İtibariyle Sağlık Harcamalarının GSYİH İçindeki Payı **Kaynak:** Sağlık Bakanlığı 2011 İstatistik Yıllığı.*

Şekil 7'de görüldüğü üzere Türkiye'de sağlık harcamalarının GSYİH'ya oranı yıllar itibariyle artış göstermektedir. Diğer yandan söz konusu veriler 2008 yılına kadar gösterilmektedir. Çünkü TÜİK tarafından, 2008 yılından sonraki harcama istatistikleri halen ilan edilmemiştir. Bu bağlamda 2009 yılı sonlarında yürürlüğe giren maliyet paylaşımının, somut etkileri tespit edilememektedir. Diğer yandan Şekil 8, uluslar arası karşılaştırmaya yönelik verileri göstermektedir.
Şekil 8: *OECD Ülkelerinde Sağlık Harcamalarının Kamu-Özel Dağılımı, 2008* **Kaynak:** *OECD Sağlık İstatistikleri, 2013.*

Şekil 8'de görüldüğü üzere, Türkiye mevcut sağlık harcamaları ile 2008 yılı itibariyle tüm OECD ülkeleri arasında son sırada yer almaktadır. OECD ortalamasının %9,5 olduğu bu durumda, Türkiye sağlığa ayırdığı kaynak bakımından oldukça gerilerdedir. Benzer biçimde satın alma gücü paritesi kapsamında, kişi başına yapılan sağlık harcamalarında da Türkiye son sıradadır. Şekil 9, ilgili verileri göstermektedir.
Şekil 9: *OECD Ülkelerinde Kişi Başına Sağlık Harcamalarının Dağılımı, 2008* **Kaynak:** *OECD Sağlık İstatistikleri, 2013*

Sağlık harcamalarında oldukça kötü durumda olan Türkiye, hanelerin cepten sağlığa yaptığı harcamalar bakımından farklı bir durumdadır. Şekil 10, söz konusu verileri göstermektedir.
Şekil 10: *OECD Ülkelerinde Cepten Yapılan Sağlık Harcamalarının Dağılımı, 2008* **Kaynak:** *OECD Sağlık İstatistikleri, 2013.*

6 Sonuç

2003 yılı itibariyle uygulamaya konulan Sağlıkta Dönüşüm Programı ile birlikte, Türkiye'de demografik özellikler itibariyle sağlık göstergelerinde iyileşmeler görülmüş ve OECD ülkelerine yakın sonuçlar elde edilmiştir. Sosyal güvenlik kapsamında yer alan nüfus oranının artması ve güvence kapsamının genişlemesiyle birlikte, sağlık hizmet sunucularına olan erişim kolaylaşmıştır. Bununla birlikte sağlık reformunun temel mantığını oluşturan, sağlık harcamalarının kontrol altına alınması, gereksiz tetkik ve tedavinin önlenmesi ve bu yolla yapay talebin azaltılması, hizmet sunumuna erişimde adaletin sağlanması, sosyal güvenlik sistemi açıklarının azaltılarak bütçe üzerindeki baskının hafifletilmesi ile sosyal güvenlik sisteminin mali sürdürülebilirliğinin garanti altına alınması gibi hedeflenen birçok unsurun gerçekleşmediği görülmektedir. Bu bağlamda sağlık reformu uygulamalarının yakından takibi ve kapsamlı analizi gerekmektedir.

Bir Sosyal Dışlanma Biçimi Olarak Türkiye'de Refah Hizmetlerinden Dışlanma

Exclusion from Welfare Services in Turkey as a Social Exclusion Form

Asst. Prof. Dr. Nagihan Durusoy Öztepe (Pamukkale Universty, Turkey)

Asst. Prof. Dr. Çağla Ünlütürk Ulutaş (Pamukkale University, Turkey)

Abstract

The welfare regime of Turkey is classified in South European Welfare Modal. One of the main characteristics of this regime is lack of the inclusion of entire population. The aim of this presentation is analysing the exclusion of citizens from four main welfare services: health care, education, social security and social assistance. Datas of Turkey Staistics Institution's (TURKSTAT) 2010 Household Budget Survey are used to examine the population excluded from basic welfare services. This study has found that %13,5 of the population is excluded from health insurance. %8,6 of the population are not completed any school. Furtheremore, %49,8 of theemployees are not under the covereage of social security system. % 3,3 of the population can access to social assistance.

1 Giriş

18. yüzyılda İngiliz Yoksul Yasaları, 19. Yüzyılda, başta İngiltere olmak üzere, çeşitli ülkelerde zorunlu temel eğitimin hayata geçirilmesi, Fransa ve Almanya'da sosyal ve ekonomik hakların anayasal düzeyde tanınması, Almanya'da Bismark'ın ilk defa sosyal sigorta sistemini kurmaya dönük adımlar atması, refah devletinin de ilk adımları arasında sayılmaktadır. Bununla birlikte refah devletinin gelişimi ve yaygınlaşması 2. Dünya Savaşının ardından gerçekleşmiştir. Savaşı takip eden yeni dönemde Keynesyen ekonomi politikalarının benimsenmesi ve tam istihdam, yüksek büyüme oranları, devletin temel ihtiyaçları sağlamaya ve risklerden korumaya dönük hizmetler sunmasıyla tanımlanan altın çağ ancak 1970'li yıllardaki petrol krizlerine dek sürebilmiştir. Gerek ekonomik krizler, gerek toplumsal risklerin, nüfus ve aile yapısının dönüşümü, tüm ülkelerde refah karmasının bileşimini değiştirmiştir. Özellikle iki kutuplu dünyanın sona erişinin ardından küresel düzeyde hâkim olan neo-liberal politikalar, refah devletini tehdit etmekle kalmamış, sosyal dışlanma ve yoksulluk sorununu gerek ulusların, gerek küresel örgütlerin başlıca sorun alanları haline getirmiştir. 1974 yılında Fransa'da sosyal dışlanma kavramını literatüre kazandıran Rene Lenoir, sosyal dışlanmışları devlet tarafından uygulanan refah programlarına erişim olanakları olmayanlar olarak tanımlamıştır (Zohir vd,2008). Altın çağ olarak adlandırılan savaş sonrası dönemde meta dışına çıkarılmış olan temel refah hizmetlerinin metalaşması, çalışma devleti (workfare state) uygulamaları, sosyal harcamaların kısılması gibi uygulamalar, temel refah hizmetlerine erişemeyen nüfusu genişletmiş, sosyal dışlanmayı yakıcı bir sorun haline getirmiştir. Her ne kadar başta AB olmak üzere uluslararası örgütler, sorununun çözümü için istihdama katılım ile herkesin kaynaklara, haklara, mallara ve hizmetlere erişiminin kolaylaştırılmasını gerekli adımlar içinde formüle etseler de, benimsedikleri piyasayı hâkim kılan ekonomi politikaları çözüm önerilerini işlevsiz kılmaktadır.

Türkiye endüstrileşme sürecini Avrupa'nın gerisinden takip etmiş, dolayısıyla refah devleti uygulamalarının tarihsel süreci Batı Avrupa ülkelerindekinden farklı bir seyir izlemiştir. Her ne kadar Türkiye'de hiçbir tarihsel dönemde evrensel sağlık hizmetleri kurulamamış, refah hizmetlerine tüm nüfusun eşit erişim olanakları sağlanamamış olsa da, sosyal devlet nitelemesinin anayasal olarak tanındığı 1960'lı yıllardan itibaren temel hizmetlerinin meta dışına çıkarılması yönünde bazı önemli adımlar atılmıştır. Uluslararası dönüşümlere paralel biçimde 1980'li yıllardan itibaren özelleştirmeler, işsizlik oranlarındaki artış, ücretlerin baskı altında tutulması yoluyla işgücü maliyetlerinin düşürülmesi gibi uygulamalar yaygınlaşmış ve refah rejimine rengini vermiştir.

Türkiye'de gerek refah hizmetlerine gerek sosyal dışlanmaya ilişkin literatür çok gelişmemiştir ve daha çok batı merkezli kuramsal tartışmalara odaklanmaktadır. Türkiye'deki uygulamaları ele alan refah devleti çalışmaları ise, daha çok sağlık ve sosyal güvenlik reformu ekseninde geliştirilmiştir. Ülkemizdeki mevcut duruma ve uygulamalara odaklanan az sayıdaki sosyal dışlanma çalışmasının ise göçmenler, engelliler gibi farklı dezavantajlı grupların dışlanma pratiklerini ele aldıkları görülmektedir. Bu çalışmada mevcut literatür ışığında ülkemizde refah hizmetlerinden dışlanma, nicel verilerle irdelenmeye çalışılacaktır. TÜİK Hane Halkı Bütçe Anketi 2010 verilerinden yararlanılarak gerçekleştirilen hesaplamalarla, temel refah hizmetlerinden dışlanan nüfusun profili çizilecektir. Bu anlamda, gerek sosyal dışlanma kavramının ekonomik dışlanma boyutuna odaklanarak, refah hizmetlerine erişimi odak noktasına koyması açısından, gerekse nicel veriler ışığında sosyal dışlanmanın boyutlarını ortaya koyması açısından ülkemizdeki ilgili literatürden farklılaşmaktadır.

Çalışmanın ilk bölümünde refah rejimine ilişkin temel kavramlara kısaca değinildikten sonra, sosyal dışlanma kavramı ele alınacaktır. Ardından refah hizmetlerinden dışlanma sağlık, eğitim, sosyal güvenlik ve sosyal yardımlardan dışlanma başlıkları altında değerlendirilecektir.

2 Türkiye Refah Rejimi: Kapsayıcı mı Dışlayıcı mı?

Türkiye refah rejimine ilişkin kısa değerlendirmemize başlamadan önce kısaca refah devleti kavramının sınırlarını çizmeye çalışacağız. Ancak hatırlatmak gerekir ki, refah devleti üzerine son derece geniş bir literatür bulunmaktadır ve kavramsal tartışma henüz son bulmuş değildir. Bu noktada, burada yalnızca çalışmamız açısından anlamlı mevcut tanımlar içinden araçsal bir seçicilikle kavramın ne olduğu ortaya konmaya çalışılacaktır. Refah Devleti kavramı, 1942 yılında yayınlanan ve refah devleti oluşumunda önemli bir basamak olan Beveridge Raporu ile bireysel refah için beşikten mezara kadar devletin sorumluluğunu belirtme amacıyla kullanılmaya başlanmıştır. Refah devletinin dört tanımlayıcı unsuru, yurttaşlığa dayalı kapsamlı ve evrensel refah uygulamaları; kamusal kaynakların bu alanlara tahsisi, geniş tabanlı bir toplumsal ve siyasal konsensüs ve tam istihdam hedefine yönelik makroekonomik politikalar olarak tanımlanabilir (Topak, 2012: 54). Vaat ettiği, sadece toplumsal hastalıkları hafifletmek ve temel risklerin yeniden dağıtımını gerçekleştirmek değil, aynı zamanda devlet ve yurttaş arasındaki sözleşmeyi yeniden yazmaktır (Anderson, 2006: 34). Asa Briggs (1969'*dan aktaran* Özdemir, 2007)'in ünlü tanımına göre refah devleti, "piyasa güçlerinin rolünü azaltmak amacıyla, bilinçli bir şekilde örgütlü kamu gücünün kullanıldığı bir devlet türüdür" ve üç alanda faal durumdadır:

- Bireylere ve ailelere, minimum gelir garantisi sağlamak;
- Kişilerin, belirli sosyal risklerin (hastalık, yaşlılık, işsizlik vb.) üstesinden gelmelerine yardımcı olmak;
- Sosyal refah hizmetleri aracılığıyla, tüm vatandaşları en iyi yaşam standartlarına eriştirmek.

Bununla birlikte gerek refah devleti tanımları, gerek refah rejimleri, devletin rolü, devlete yüklenen sorumluluklar ve devlet yurttaş ilişkisi açısından büyük bir çeşitlilik göstermektedir. Ortak bir refah tanımında uzlaşma sağlanamamasının gerekçelerinden biri de budur. Esping-Anderson (1990)'ın ünlü tipolojisi, refah rejimlerinin ne denli farklılaştığını gözler önüne sermektedir. Anderson'un refah rejimi modellemesi olan Sosyal Demokrat (İskandinavya), Muhafazakâr- Korporotist (Almanya) ve Liberal (İngiltere) refah rejimi tipolojisi, Türkiye için açıklama gücüne sahip değildir. Söz konusu modelde kendine bir yer bulamayan Türkiye, refah rejimi sınıflandırmalarında Ferrera'nın Güney Avrupa refah rejimi tipolojisi kapsamında ele alınmaktadır. Ferrera (2006) bu modelin temel özelliklerini aşağıdaki biçimde tanımlamıştır:

- Nakit desteği sistemlerinin işteki statüye dayandırılması ve kurumsal parçalılık
- Sosyal korumanın formel/ enformel sektör arasında kutuplaşmış niteliği
- Özel sektör tarafından sağlanan kısmı genişleyen (kısmen) evrensel ulusal sağlık sistemleri
- Tikelci- klientalist refah devleti

Türkiye'de 2006 yılında başlayan sosyal güvenlik ve sağlık reformları, refah rejiminde önemli bir dönüşüme karşılık gelmektedir. İşteki statüye göre farklılaşan sosyal güvenlik kurumlarının tek çatı altında birleşmesiyle kurumsal parçalılığın ortadan kalkması söz konusu olmuştur. Bununla birlikte, hastanelerin SGK çatısı altında birleştirilerek finansmanla hizmet sunumunun ayrılması, sağlığın sosyal güvenlikle ilişkisini zaafa uğratırken sağlığın yeniden metalaşması sürecine ivme kazandırmıştır (Ünlütürk, Ulutaş, 2011).

Diğer Güney Avrupa ülkelerine benzer biçimde aile, refah karması içinde merkezi bir önem sahiptir. Devletin bakım hizmetlerinde boş bıraktığı alan, piyasa tarafından, daha yaygın biçimde ise aile içinde kadınlar arası dayanışma yoluyla doldurulmaktadır. Yakın döneme değin zayıf ve parçalı bir yapı arz eden sosyal yardım hizmetlerinin boşluğu da aynı biçimde aileler tarafından doldurulmuştur. Bununla birlikte bir yandan yeni yoksulluk biçimi, enformel dayanışma ağlarında zayıflamayı ve kent yoksullarının gıda deposu olma işlevi gören kırla ilişkilerinin zayıflamasını beraberinde getirmiştir (Buğra ve Keyder, 2008). Diğer yandan son yıllarda sosyal yardımlar alanında ortaya çıkan kurumsallaşma ve yardım miktarlarındaki yükseliş dikkat çekicidir. Nitekim sosyal yardım ve hizmetlere ayrılan payın GSYH'ye oranı geçtiğimiz 10 yılda %0,5''ten %1,43'e erişmiştir. Bununla birlikte halen sosyal yardımların hak statüsünde genelleşmesi söz konusu değildir ve göreli yoksulluk sınırının altındaki nüfusun çok azı sosyal yardımlara erişebilmektedir.

3 Sosyal Dışlanma Kavramı ve Tarihsel Gelişimi

En genel tanımıyla, toplumla bütünleşme sağlayacak ekonomik ve sosyal bir takım haklardan ve kaynaklardan yoksun olmak anlamına gelen sosyal dışlanma kavramı, genel olarak yoksulluk ve yoksunluklar üzerine inşa edilmiştir. Bu yoksulluk ve yoksunluk süreçleri bireyden bireye, ülkeden ülkeye hatta ülkelerin kendi içlerinde bile farklılıklar göstermektedir. Bu durum, üzerinde uzlaşılmış, tek ve sabit bir sosyal dışlanma tanımı yapmayı zorlaştırmaktadır.

Küreselleşme ve küreselleşmeye paralel süreçlerle farklı şekillerde ortaya çıkan sosyal dışlanma kavramı bugün üzerinde durulması ve çözüm bulunması gereken başlıca sorun alanlarının başında gelmektedir. Özellikle yoksulluğun derinleşen yüzü sorunun büyüklüğünü bir kez daha ortaya koymaktadır. Bu anlamda başta Avrupa Birliği olmak üzere birçok ülke sosyal dışlanmayla mücadele için kendi ulusal içerme politikalarını hazırlamaya koyulmuşlardır. Ancak liberal ekonomik politikalara insani bir çehre kazandırma amacından yola çıkan bu programların ne kadar etkili ve ihtiyaca dönük olduğu da büyük tartışmalara sahne olmaktadır.

Marshall (1999; 150)'a göre sosyal dışlanma, bireylerin ya da hanelerin kaynaklardan yada toplumla sosyal bağlar kurmaktan yoksun bırakılması sürecini ifade eder. İlk olarak 1960'larda Fransa'da kullanılmaya başlanan sosyal dışlanma kavramı, 1980'li yılların ekonomik krizi ve yeniden yapılanma sürecinde, refah devletinin krize girmesiyle daha sık kullanılmaya başlanmıştır. 1960'larda toplumda görülen marjinalleşme durumları için kullanılan dışlanma kavramı; 1980'lere gelindiğinde yaşanan yapısal değişimlerle, eşitsizlik ve yoksullukla birlikte ele alınmaya başlanmıştır. Küreselleşme ve küreselleşmeye paralel süreçlerin kavramın gelişiminde ve ele alınmasındaki etkisi hiç kuşkusuz önemlidir.

Kavramla ilgili yazından anlaşılacağı gibi sosyal dışlanma kavramı, genel olarak birbiriyle örtüşen ve birbirini tamamlayan farklı tanımlamalar içinde ele alınmaktadır. Kavramın çok yönlü ve geniş doğası nedeniyle kavrama, ekonomik, sosyal, politik ve kültürel birçok yan anlam ve boyut yüklenmiştir (Silver;1995: 60). Her ne kadar üzerinde uzlaşılmış bir tanım olmasa da sosyal dışlanma kavramının birçok unsuru içerdiği açıktır. Her şeyden önce sosyal dışlanma kavramı, bireylerin ve grupların yaşadığı yoksunluk ve yetersizlik durumunu ifade etmektedir (Sapancalı; 2003: 19). Yoksunluk, kabaca, bir şeye sahip olamama durumudur. Mutlak yoksunluk yiyecek, giyecek, barınma gibi yaşamı sürdürecek temel ihtiyaçların olmaması ya da kaybedilmesini ifade ederken; göreli yoksunluk kavramı, bireyin kendisini başkalarıyla kıyasladığında yoksun olduğu şeyleri ifade eder (Marshall,1999:828). Tanımdan da anlaşıldığı gibi, yoksunluk kavramı hem bir karşılaştırma içermekte, hem de sübjektif koşullarla belirlenmektedir. Dolayısıyla yoksunluk süreçlerine odaklanan sosyal dışlanma kavramı, farklı bireyler için farklı anlamlar ifade edebileceği gibi, ülkelerin farklı sosyo-ekonomik ve kültürel değerlerine göre de farklılıklar gösterebilmektedir.

Sosyal dışlanma kavramı genel olarak, ekonomik alandan dışlanma, sosyal haklardan ve sosyal dayanışma yöntemlerinden dışlanma, kurumsal yapılardan ve hizmetlerden dışlanma olmak üzere farklı tanımlamalar içinde yer almaktadır. Bu bağlamda ekonomik alandan dışlanma işgücü piyasalarından ve dolayısıyla ücretli bir işe sahip olmaktan dışlanmayla birlikte ele alınırken; sosyal haklardan dışlanma temelde yurttaşlık nosyonuyla birlikte ele alınmaktadır.

Bireylerin temel ihtiyaçlarını karşılamak için yeterli gelirden yoksun olması ekonomik dışlanmayı ifade eder. Gelirden yoksunluğun en büyük nedeni işsizliktir. Özellikle uzun süreli işsizler ekonomik dışlanmanın başlıca aktörleridir. İşsizliğin sosyal, psikolojik ve ekonomik sonuçlarını anlamak ancak çalışmanın, birey ve toplum açısından değerini tanımlamakla mümkündür. En genel ve önemli tanımıyla iş, birey ve ailesi için geçim kaynağı olarak düzenli bir gelir anlamı taşır. Bunun yanında iş, bireye sosyal statü ve kimlik sağlar, yaratıcılığını geliştirir, bireye amaç yaratır, kendine saygı ve işe yarama duygusu oluşturur (Savcı; 2002: 48). Dolayısıyla toplumsal düzenin sağlıklı işleyebilmesi için çalışmak önemli bir değer olarak kabul edilir. Ancak işgücü piyasasından ve düzenli gelirden dışlanmak, ekonomik dışlanmanın sadece bir ayağını oluşturmaktadır. Yapılan işin niteliği ve işgücü piyasası içindeki aktörler arasındaki eşitsizlik de ekonomik dışlanmanın önemli bir parçasıdır. Bu bağlamda, iş güvencesinden, sosyal korumadan ve örgütlenme özgürlüğünden yoksun, düşük ücretle istihdam edilen bireyler insan onuruna yaraşır çalışma koşullarına ve ücretlere erişememek anlamında dışlanmış sayılmaktadır.

Yurttaşlık haklarından dışlanma ise; toplumdaki önemli ekonomik ve toplumsal fırsatlara katılmayı sağlayan ve yaşam standartlarını belirleyen temel haklardan yoksun olma ya da bunlara ulaşamama durumudur (Bryne; 1999: 2). Marshall (1999: 833), yurttaşlık haklarının üç bileşeninden bahseder. Bunlar; medeni haklar, siyasal haklar ve sosyal haklardır. Medeni haklar, bireysel özgürlükleri ifade ederken; siyasal haklar, topluluk içinde siyasal gücün kullanımı sürecine katılmayı güvence altına alır. Sosyal haklar ise, düzgün bir yaşam standardına sahip olma hakkıdır ve bu hak genellikle eğitim, sağlık, konut, sosyal hizmetler gibi kavramlar etrafında değerlendirilir (Marshall ve Bottomore (2000)'*den aktaran* Sapancalı; 2003: 32). Yurttaşlık hakları içerisinde özellikle sosyal haklar ayrı bir anlam ifade etmektedir. Çünkü diğer hak ve özgürlüklerin gelişmesi ancak sosyal hakların gerçekleşmesi ölçüsünde mümkün olabilmektedir (Koray (2001)' *den aktaran* Sapancalı; 2003: 33) .

Toplumsal bağlardan ve toplumsal dayanışmadan dışlanma ise Durkheimci görüşe atıfta bulunur ve "anomi" nosyonuyla birlikte anılır. Durkheim dayanışmayı ele alırken, mekanik ve organik olmak üzere iki tür dayanışma modelinden bahseder. Mekanik dayanışma, birincil dereceden, yüz yüze ilişkiler yaşayan ve birbirine benzeyen bireylerin geliştirdiği dayanışma şeklidir; genellikle geleneksel toplumlarda görülür. Böyle bir dayanışma, bireylerin artık bireysel kimliklerini kaybedip, kolektif bir varlığın parçası oldukları zaman ortaya çıkar (Sapancalı; 2003: 27). Organik dayanışma ise, uzmanlaşma ve işbölümü sonucu farklılaşan toplumlarda ortaya çıkan dayanışma şeklidir. Bu toplumlarda bireyler arasında benzerliklerden ziyade farklılıklar hâkimdir; dolayısıyla ikincil derece ilişkilerin ve daha kurumsallaşmış ilişkilerin hâkim olduğu, modern toplumlara özgü dayanışma türleridir. Bu bağlamda sosyal dışlanma, organik dayanışmanın zayıflaması ve bu çerçevede pasif güven mekanizmasının gerilemesiyle ilgilidir (Sapancalı: 2003: 30). Başka bir ifadeyle Durkheimci yaklaşıma göre sosyal dışlanma, sosyal bütünleşmenin anormal çöküşünün bir sonucudur (Levitas;1996:5).

Kurumsal yapılardan ve hizmetlerden dışlanma, tüm bireylere onurlu bir yaşam sağlayacak devlet destekli barınma, eğitim, sağlık hizmetleri ile sosyal sigorta ve sosyal yardım mekanizmalarından dışlanma anlamına gelmektedir. Özellikle eğitimden ve sağlıktan dışlanma azgelişmişliğin ve yoksulluğun bir göstergesi olarak karşımıza çıkmaktadır. Eğitimden dışlanma ile istihdamdan dışlanma ve gelirden dışlanma doğru orantılı olarak

kabul edilmelidir. Örneğin; iyi eğitim almamış bir birey meslek edinmekten ve dolayısıyla işgücü piyasasından dışlanmaktadır. Bu durum bireyi aynı zamanda gelirden, tüketimden, konuttan ve sosyal güvenlikten dışlamaktadır (Sapancalı;2003:175). Aynı şekilde sağlıktan ve sosyal güvenlikten dışlanma da, dışlanmanın hem nedeni hem de sonucu olarak karşımıza çıkmaktadır. Sosyal dışlanmanın bu çok yönlü doğasına karşın, çalışmamız yalnızca temel refah hizmetleri olan eğitim, sağlık, sosyal güvenlik ve sosyal yardım hizmetlerinden dışlanma ile sınırlandırılmıştır.

4 Temel Refah Hizmetlerinden Dışlanma

4.1 Eğitim Hizmetlerinden Dışlanma

Eğitim, çocukluktan başlamak üzere, bireyin gelişimini belirleyen önemli bir aşama olduğu gibi, toplumsal bütünleşmeyi sağlayan katılımcı bir süreçtir. Çocukluk döneminde eğitimden dışlanma, ileriki yaşlarda sosyal dışlanmaya zemin hazırlamaktadır. Eğitimden dışlanmanın toplumsal cinsiyet, etnisite, ailenin sınıfsal konumu, ailenin eğitim düzeyi gibi çok sayıda toplumsal gerekçesi olabilmektedir (Sapancalı, 2003: 176) . Kuşkusuz eğitimin ne ölçüde piyasa ilişkilerinden bağışık kılındığı, tüm yurttaşların eğitim hizmetlerine erişiminin en temel belirleyicisidir.

Eğitim hizmetlerinden dışlananların sağlıklı bir şekilde ortaya konulabilmesi amacıyla herhangi bir öğrenim kurumunda okumakta olanlar dışarıda bırakılarak, bitirilen eğitim kurumu cinsiyet bazında ayrıştırılmıştır. Nüfusun %8,6'sının bir okul bitirmediği görülürken, bir okul bitirmeyenlerin % 63,6'lık kısmını kadınların oluşturması, kadınların eğitim hizmetlerinden daha çok dışlandığı gözler önüne sermektedir. İlk derece eğitim kurumlarına kadınlarla erkeklerin erişimi eşit düzeyde iken, öğrenim düzeyi yükseldikçe, söz konusu eşitlik kadınlar aleyhine bozulmaktadır. Kadınlar yükseköğrenim ve lisansüstü öğrenim olanaklarına erişim açısından erkeklere göre bir hayli dezavantajlı konumdadırlar. Eğitim hizmetlerine erişimin kolaylığı, öğrenim düzeyinin yüksekliği ile kişilerin diğer refah hizmetlerine erişim olanakları arasında da önemli bir ilişki vardır. Örneğin fakülte mezunlarının %5,9'u sağlık sigortasından dışlanmışken, bu oran herhangi bir okul bitirmeyenlerde %13,7'dir.

	Erkek	Kadın	Eğitim Düzeyine Göre Toplam Dağılım
Okur Yazar Olup Okul Bitirmeyenler	36,8%	63,2%	8,6%
İlkokul	49,8%	50,2%	46,1%
İlköğretim	50,0%	50,0%	7,2%
Orta Okul	65,9%	34,1%	8,2%

4.2 Sağlık Hizmetlerinden Dışlanma

Dünya Sağlık Örgütü,1946 yılında imzalanan Anayasası'nda sağlığı "sadece hastalık ve sakatlığın olmayışı değil, bedence, ruhça ve sosyal yönden tam iyilik hali" olarak ele almıştır (WHO, 2006). Bu tanım, sağlığın salt bireysel bir sorun olmadığını, toplumsal bir sorun olduğunu evrensel düzeyde ilan etmesi açısından önemlidir. Bu anlamda, yurttaşların bir bölümünün sağlık hizmetlerinden dışlanması, önemli bir toplumsal sorun alanıdır. Nitekim hasta veya engelli bireylerin yoksulluk ve sosyal dışlanma riski en yüksek gruplar içinde yer aldıkları bilinmektedir. Çünkü fiziksel veya zihinsel hastalık ya da engele sahip olmak, bireylerin diğer refah hizmetlerine erişimini de önlemektedir.

Genel bütçeden finanse edilen, evrensel bir sağlık sigortası sitemi, tüm nüfusun sağlığa erişimini sağlayan bir refah uygulamasıdır. Bununla birlikte 1980'li yıllardan itibaren evrensel sağlık sistemine sahip İngiltere gibi ülkelerde dahi sağlık reformları eliyle sağlığın yeniden metalaştırılması söz konusu olmuştur. Türkiye'de de reform sonrası özel sigortacılık tekniklerine göre örgütlenmiş olan Genel Sağlık Sigortası (GSS) ile temel teminat paketi daraltılmış, cepten ödemeler artırılmıştır. Tüm nüfusun, prime esas kazancın %12,5'i düzeyindeki GSS primlerini ödeyerek sağlık sigortası kapsamına alınması hedeflenmiştir. Ancak kişi başına geliri asgari ücretin üçte birinden az olanların primleri devlet tarafından ödenmektedir. Prim borcu olanlar GSS'den yararlanamamakta ve kamusal sağlık hizmetlerine erişememektedirler (Ünlütürk, Ulutaş, 2011).

Sağlık reform sürecinde, reformların tüm nüfusu kapsayacağına ilişkin argümana karşın, nüfusun %13,5'inin herhangi bir sağlık sigortası bulunmamaktadır. %15,1'i ise yeşil kart kapsamındadır. Kadınların zorunlu sosyal

güvenliğe %51,5'lik oranla göreli olarak yüksek erişimi, hanenin erkek bireyleri üzerinden bağımlı sigortalı olmaları ile ilişkilidir.

	Erkek	Kadın	Sigortalılık Durumuna Göre Toplam Dağılım
Zorunlu Sigortalı	48,5%	51,5%	70,3%
Diğer (Banka, Vakıf)	51,9%	48,1%	,4%
İsteğe Bağlı Sigorta	50,2%	49,8%	,8%
Yeşil Kart	48,6%	51,4%	15,1%
Sağlık Sigortası Olmayan	56,7%	43,3%	13,5%

Tablo 2: Sağlık Sigortası Olanların Cinsiyete Göre Dağılımı

4.3 Sosyal Güvenlikten Dışlanma

Uluslararası Sosyal Güvenlik Örgütü'ne göre sosyal güvenlik, yaşlılık, iş göremezlik, sakatlık, işsizlik ya da ölüm gibi durumlarla ile karşı karşıya kalındığında, bireylere gelir güvencesi sağlayan, mevzuat ya da başka bir zorunlu düzenleme ile kurulan sosyal koruma programları olarak tanımlanmaktadır. Tanımdan da anlaşılacağı gibi, sosyal güvenlik sosyal risklerle yakından ilgilidir. Bu anlamda, bireylerin karşılaşabileceği her türlü riski önlemek ve bu riskin ortaya çıkarabileceği zararları azaltmak konusunda bireylere ekonomik güvence sağlamak sosyal güvenlik sisteminin görevidir. Sosyal sigortalar ile sosyal yardım ve hizmetler, sosyal güvenliğin sağlandığı ana bileşenlerdir. Bireylerin sosyal güvenlik gereksinimleri hangi bileşenden karşılanırsa karşılansın, sosyal güvenliğin asıl amacı, gelirin yeniden dağılımı ile sosyal adaletin sağlanmasıdır (Ayhan, 2012). Bu anlamda sosyal güvenlik, tüm bireylerin toplumun bir üyesi olarak sahip olması gereken bir haktır. Ancak bugün dünya genelinde insanların sosyal güvenliğe erişimi oldukça kısıtlıdır. Uluslararası Sosyal Güvenlik örgütünün verilerine göre dünya nüfusunun yalnızca %50'lik kısmı sosyal güvenlik sisteminin çeşitli formlarına ulaşabilmektedir. Bunların yalnızca %20'si ise sosyal güvenlik sisteminin tüm edimlerinden yararlanmaktadır. Bu anlamda sosyal güvenlik sisteminden dışlanma, açık olarak sosyal güvenlik sistemine dâhil olmamaktan kaynaklanabileceği gibi, sosyal güvenlik sistemi içerisinde olduğu halde prim ödeme güçlüğü nedeniyle sosyal güvenliğin tüm edimlerinden yararlanamama şeklinde de karşımıza çıkmaktadır.

	Erkek	Kadın	Sosyal Güvenlik Kurumuna Kayıtlılık Durumuna Göre Toplam Dağılım
Kayıtlı	79,5%	20,5%	50,2%
Kayıtlı Değil	60,6%	39,4%	49,8%
Diğer	55,1%	44,9%	,1%

Tablo 3: Cinsiyete Göre Sosyal Güvenlik Kurumuna Kayıtlılık Durumu

Tablo 3'de görüldüğü gibi çalışan bireylerin %49,8'i herhangi bir sosyal güvenlik kuruluşuna kayıtlı değildir. Sosyal güvenlik kurumuna kayıtlılık durumu kadınlarda (20,5) erkeklere oranla (%56,9) daha düşüktür. Sosyal güvencesizliğin kadınsılaşması büyük ölçüde kadınların, cinsiyet eşitsizliği nedeniyle çalışma yaşamına girememesinden, güvencesiz işlerde yoğun olarak çalışmasından kaynaklanmaktadır. Bu durum gerek çalışma çağında gerekse emeklilik döneminde sosyal güvenlik açısından kadınların erkeğe bağımlılığını arttırmaktadır.

4.4 Sosyal Yardımlardan Dışlanma

Sosyal yardım, toplumun geleceğini güvence altına almak için devletin yoksul kimselere yiyecek, giyecek, yakacak, tedavi ve ilaç yardımı yapmak ve bunları ilgililerin katkısı olmadan işleten bir sosyal güvenlik aracı olarak tanımlanmaktadır (Ayhan, 2012: 47). Başka bir ifade ile sosyal yardımlar temel gereksinimlerini karşılamaya yetecek düzeyde gelire sahip olamayan bireylere devlet tarafından yapılan karşılıksız yardımlardır. Bu anlamda sosyal yardımlar, karşılık esasına dayanmaz ve kişilerin sosyal ve ekonomik durumlarından dolayı devletin bir görevi olarak ortaya çıkar.

Aşağıdaki tabloda görüldüğü üzere, ülkemizde sosyal yardımlardan yararlanan bireylerin oranı oldukça sınırlıdır. 2010 yılı itibariyle, 2022 sayılı yasaya göre verilen yaşlılık aylığını alan erkeklerin oranı %1,3, kadınların oranı ise yalnızca %2'dir. Sosyal yardımlar açısından da durum değişmemektedir. Kadınlar arasında dul ve yetim aylığı alanlar içinde ise erkeklere göre yüksek oranda olması dikkat çekicidir.

	Erkek	Kadın
Yaşlılık Aylığı (yoksullar için)	%1,3	%2
Dul ve Yetim Aylığı	%0,4	%6,9
Gazi-Maluliyet Aylığı	%1,2	%0,8
Sosyal Yardım (Nakdi)	%1,3	%2

Tablo 4: Yaşlılık Aylığı, Dul ve Yetim Aylığı, Malullük Aylığı ve Sosyal Yardım Alanların Cinsiyete Göre Dağılımı

5 Sonuç

Küreselleşme ve buna paralel süreçlerle birlikte, refah hizmetlerine erişimin tüm yurttaşları kapsayan "genellik ilkesinden" ayrılıp, çalışanları temel alan yeni devlet-yurttaş ilişkisine dönmesi toplumun birçok kısmını refah hizmetlerinden dışlanmayla yüz yüze bırakmıştır. Bu noktada, eğitim, sağlık, sosyal güvenlik ve sosyal yardım gibi refah hizmetlerinin toplumun tümünü kapsayacak şekilde düzenlenmesi sosyal dışlanmanın toplumsal alandaki görünürlüğünü azaltacak en önemli araçlardır.

Türkiye'de 2010 yılı itibariyle eğitimden dışlanma hala önemli boyutlardadır. Nüfusun %8,6'sı okuma yazma bilmezken, %46,1'i ilkokul mezunudur. Yüksekokul ve üzeri eğitim düzeyine sahip bireylerin oranı ise oldukça düşüktür. Sağlık hizmetlerinden dışlanan bireylerin oranı ise toplam nüfusun %13,5'dir. Nüfusun %15,1'i ise yeşil kart kapsamındadır.

Refah hizmetlerinden dışlanmada dikkat çeken diğer bir nokta ise Refah hizmetlerinden dışlanmanın büyük ölçüde cinsiyet eşitsizliği ile paralel gitmesidir. Öğrenim düzeyi yükseldikçe, kadınların yükseköğrenim ve lisansüstü öğrenim olanaklarına erişimi azalmaktadır. Benzer bir durum sosyal güvenlikten dışlanmada da karşımıza çıkmaktadır. Erkeklerde sosyal güvenlik kurumuna kayıtlılık %56 iken kadınlarda bu oran %20'lerdedir. Kadınların çalışma yaşamına düşük oranda girmesi, daha çok atipik işlerde istihdam edilmeleri sosyal güvenlik sisteminden dışlanmalarının başlıca nedenidir.

Sosyal güvenlik sisteminden dışlanma, hiç sosyal güvenlik sistemi kapsamına girmemekle ortaya çıkabileceği gibi sosyal güvenlik sistemine dâhil olunduğu halde prim yükümlülüklerinin yerine getirilememesi dolayısıyla sosyal güvenlik edimlerinden dışlanma şeklinde de ortaya çıkabilmektedir. Bireylerin sosyal güvenceden yoksun bırakılmaları sağlık ve güvenlik endişelerini de beraberinde getirmektedir. Sosyal yardımlar alanında ise toplumun önemli bir kısmının bu hizmetlerden yararlanamadığı görülmektedir. Sosyal yardımlara erişimin çeşitli koşullara bağlanması, bireylerin bu koşullarını bilmemesi ya da sosyal yardımlara erişimde "damgalanma korkusu" sosyal yardımlardan dışlanmanın önemli nedenleridir.

Beşeri Sermayeye Yönelik Eğitim ve Sağlık Alt Yapı Yatırım Harcamalarının Bölgesel Gelir Üzerindeki Etkisi: Türkiye Örneği

The Effect of Human Capital Improvments via Educational and Health Care Infrastructure Investments on Regional Income: The Case of Turkey

Dr. Mehmet Akif Kara (Sütçü İmam University, Turkey)

Asst. Prof. Dr. Serkan Ada (Selçuk University, Turkey)

Asst. Prof. Dr. Salih Yeşil (Sütçü İmam University, Turkey)

Abstract

Public education and health care infrastructure spending positively affect regional economic performance and develop regional competitive position through increasing workforce efficiency. While this type of investment is viewed as investment toward developing human capital, development of human capital stock may determine innovative forms of economies and technological applications, which can also be spilled over via human capital. Because of this, region wide educational and health care infrastructure spending aimed towards development of human capital can provide an increase in regional income and welfare. This study, aiming to identify effect of educational and health care infrastructure spending on development of human capital at regional level in Turkey, used regional data 2004-2008 Level-2. According to results obtained from the panel data fixed effect method, this type of spending can influence regional income. At regional level, the greatest positive effect has been observed in West Marmara region, the smallest effect was realized in Northeast Anatolian Region.

1 Giriş

Alt yapı yatırımları, kamu politikalarının bölgesel düzeyde, uzun dönem büyüme ve verimliliği etkileyebilme yolu olarak görülür iken Aschaur(1989)'un bu konudaki çalışma sonuçlarından sonra konuya yönelik ilgilinin artığı gözlemlenmektedir. Aschauer (1989) üretim fonksiyonunu kullanarak, A.B.D ekonomisinde 1949–1985 dönemini kapsayan ulusal verilerle, Alt yapı yatırımları şeklindeki kamu sermayesinin çıktı seviyesine olan katkısını belirlemeye çalışmıştır. Uygulama sonuçlarına göre kamu sermaye stoku ile çıktı seviyesi arasında çok güçlü ve pozitif bir ilişki bulmuş, kamu sermaye stokundaki yüzde 1'lik bir artışın çıktıyı dönemsel olarak 0,38 den 0,56'ya kadar artırdığını belirlemiştir. Ayrıca Aschauer (1989) temel altyapı (core infrastructure) olarak nitelendirdiği ulaşım altyapısının, elektrik ve gaz tesislerinin, su ve kanalizasyon sistemlerinin, çıktı artışlarına neden olan verimlilik artışlarının büyük bir kısmını oluşturduğunu ifade etmekte ve aynı zamanda A.B.D ekonomisinde 1970'li yıllardan sonra gündeme gelen verimlilik azalışlarının sebebinin, kamu sermaye yatırımlarındaki azalış olduğunu belirlemektedir. Benzer şekilde Munnell (1990)'da ulusal verilerle yaptığı çalışmasında Aschauer'in çalışmasına yakın sonuçlar bulmuşken, 1970-1986 yılları arası eyalet verileriyle yaptığı çalışmasında kamu sermayesindeki yüzde 1'lik artışın ulusal çıktıyı 0,15 civarında artırdığını bulmuştur. Bulduğu katsayıya bağlı olarak da, kamu sermayesinin marjinal verimliliğinin özel sermayeye yakın olduğunu ifade etmektedir. Holtz-Eakin (1994) ise 1969–1986 arası 48 ABD eyalet verileriyle yaptığı çalışmada alt yapı yatırımları şeklindeki kamu sermayesinin verimlilik üzerindeki etkisini belirlemeye çalışmıştır. Holtz-Eakin bu konuda daha önce yapılan çalışmalarda kamu sermaye birikimi ile özel sektör verimliliği arasında olumlu anlamda bir ilişkinin varlığının belirlendiği ancak, eyalete özgü gözlenemeyen özelliklerin dikkate alınmadığı, bunun dikkate alınması halinde kamu sermayesinin özel sektör verimliliği üzerinde önemli bir etkisinin bulunmadığını ifade etmektedir. Ulaşılan sonuçlar bu konuda yapılan uygulamalı çalışmaları artırır iken, bu çalışmaların bir kısmı ulusal ekonomileri dikkate almış, bir kısmı ise bölgesel ekonomileri dikkate alarak söz konusu alt yapı yatırımlarının bölgesel ekonomiler üzerindeki etkilerine yoğunlaşmıştır (Seitz ve Licht, 1995; Holtz-Eakin ve Schwartz, 1995; Moomaw v.d, 1995; Lau ve Sin, 1997; Fuente ve Vives, 1995; Pereira ve Sagales, 1999; Kumar, 2002; Nijkamp ve Poot, 2004 Pereira ve Andraz, 2006)

Gramlich(1994) alt yapı yatırımlarını; karayolu, diğer ulaşım imkânları, su ve kanalizasyon hattı, haberleşme sistemi gibi büyük sermaye yoğunluğu gerektiren doğal monopoller olarak tanımlarken, alternatif tanımlama olarak da, kamu sektörünün sahip olduğu maddi sermaye stokuna odaklanılması gerekliliğini belirlemektedir. Kamunun beşeri sermaye, araştırma ve geliştirme yatırımlarını ise, bu tanımlamanın genişletilmiş şekli olarak ifade etmektedir. Hansen(1965) ve Capello(2007)'da, alt yapı yatırımlarını, ekonomik alt yapı ve sosyal alt yapı yatırımları olarak ikiye ayırmakta ve ulaşım imkânları, yollar, otoyollar, demiryolları, havaalanı ve elektrik üretim merkezleri gibi ekonomik verimliliği daha fazla artıran yatırımları, ekonomik alt yapı olarak tanımlarken, sosyal alt yapı yatırımlarını ise beşeri sermayeyi geliştirici ve sosyal hizmetleri içeren okullar, sağlık tesisleri ve spor tesisleri şeklinde tanımlamaktadırlar. Bu sınıflandırmadan hareketle alt yapı yatırımlarının bölgesel ekonomiler üzerindeki etkisini, ekonomik ve sosyal alt yapı yatırımları açısından değerlendirmek mümkündür.

Bu çalışmada da literatürdeki bu ayrımdan da yararlanılarak, Türkiye'de kamunun beşeri sermayeyi geliştirmeye yönelik eğitim ve sağlık harcamalarının bölgesel gelir üzerindeki etkisi bir uygulanmayla belirlenmeye çalışılacaktır.

2   Teorik Çerçeve

Beşeri sermayenin ekonomideki rolü içsel büyüme modelleriyle gündeme gelirken, bu modellerden biri olan Lucas(1988)'ın beşeri sermaye modelinde, sermaye fiziksel ve beşeri sermaye olarak ikiye ayrılmış ve Lucas, beşeri sermayeyi de üretim fonksiyonuna dâhil ederek fiziksel ve beşeri sermaye birikimlerinin etkileşimlerine odaklanmıştır. Bu şekilde belirlenmiş Cobb-Douglass üretim fonksiyonu ise aşağıdaki şekildedir (Faggian ve McCann, 2009 ; Capello, 2008).

$$Y_t = AK_t^{\alpha}(u_t H_t L_t)^{1-\alpha} H_t^{\phi}$$

Bu eşitlikte (*K*) fiziksel sermaye (*L*) fiziksel çalışanların sayısı, (*u*) her bir çalışanın öğrenmeye yönelik aktivitelerine ayırdığı zaman, (*H*) ise, beşeri sermayedir ve çalışanların bilgi birikimi ve beceri elde edici çalışmalara ayırdığı zamana bağlı olarak gerçekleşmektedir. Böylelikle beşeri sermayenin gelişimi;

$$h_t = H_t \lambda (1 - u_t)$$

Şeklinde ifade edilebilir. Bu eşitlikte (*h*), zaman içerisinde beşeri sermayenin büyüme oranını, (*H*) beşeri sermaye stokunu (1-*u*) eğitime ayrılan zamanı ve (λ) ise, öğrenme yeteneğidir ve ulaştığı bilgi düzeyi açısından doğrusal ve pozitif olduğu varsayılabilmektedir. (*u*) zaman içerisinde sabitse, çıktıdaki büyüme oranı basit bir şekilde, yukarıdaki iki eşitliğin logaritmik yapıya dönüştürülmesiyle elde edilebilecektir (Capello,2008: 243).

$$y_t = \alpha k_t + (1-\alpha) l_t + (1-\alpha+\phi) h$$

Bu eşitlikte *y*, *k*, *l* ve *h* sırasıyla çıktıdaki, fiziksel sermayedeki, işgücü ve beşeri sermayede, *t* zamanında gerçekleşen büyüme oranını ifade etmektedir. Beşeri sermayedeki büyüme oranını ifade eden eşitliği tekrar bu eşitlikte dikkate alarak, işçi başına çıktıda büyüme ile ifade ettiğimizde;

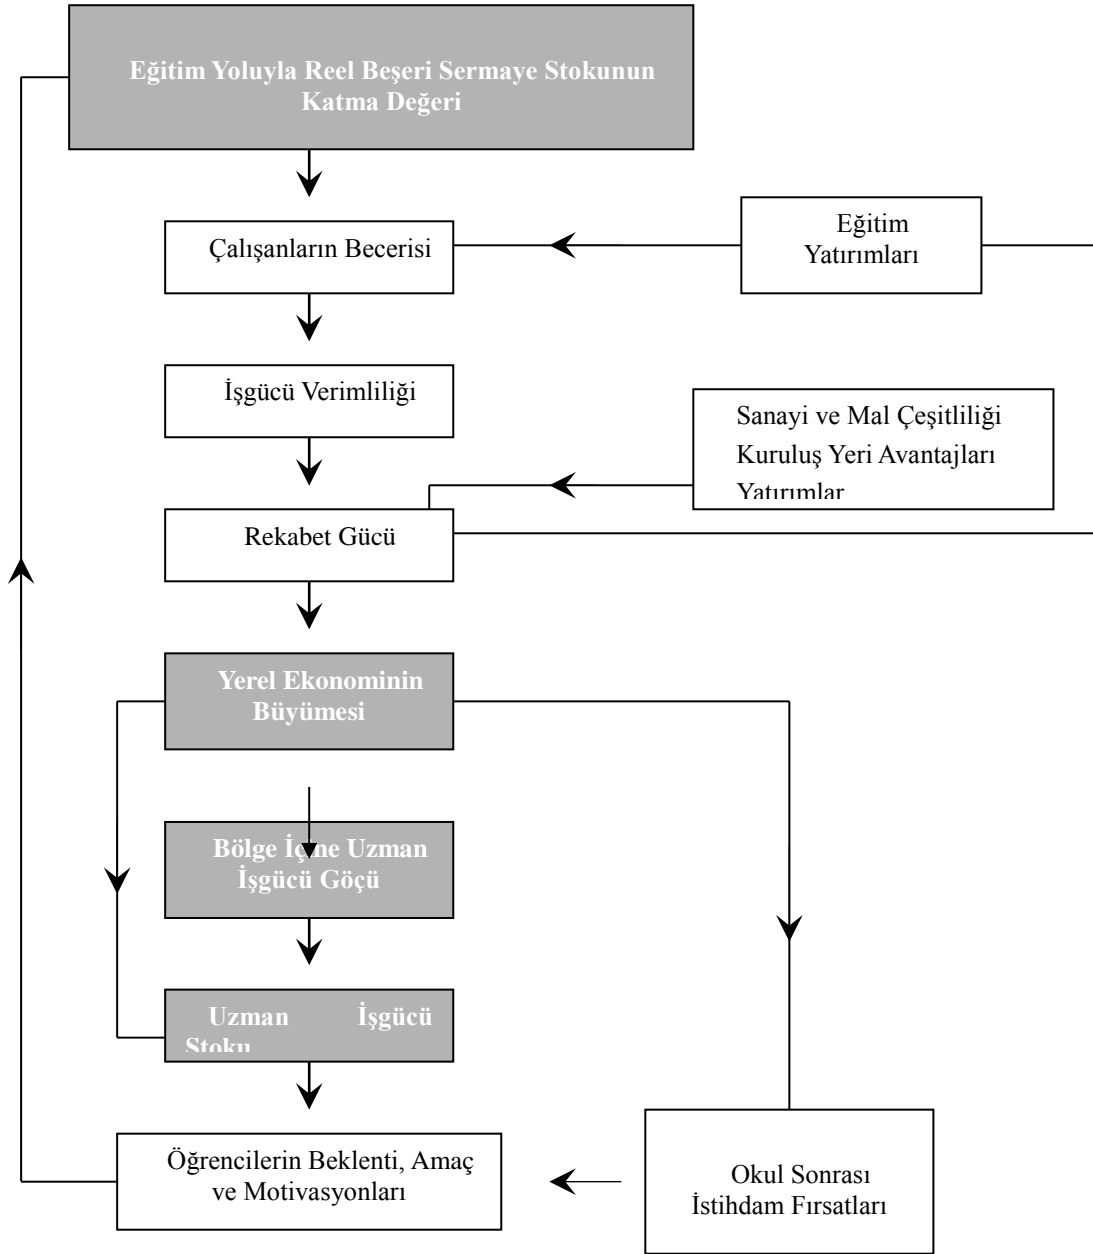
$$y_t - l_t = \alpha(k_t - l_t) + (1-\alpha+\phi)\lambda(1-u_t)$$

Eşitliğini elde ederiz. Durağan durumda burada sermaye ve işgücü büyüme oranları eşitse, $\alpha(k_t - l_t) = 0$ olacaktır. Bu durumda iki içsel değişken, işçi başına çıktıdaki büyümeye imkân sağlayabilecektir. Bunlar ekonomik sistemin artan getirisini mümkün kılabilen (ϕ) parametresiyle vurgulanan kalifiye işgücü piyasalarının dışsallıkları ve içsel olarak beşeri sermaye birikiminin belirleyicisi olan öğrenme yeteneğidir(λ) (Capello,2008).

Diğer yandan alt yapı yatırımlarıyla ilgili yapılan sınıflandırmalarda eğitim ve sağlık gibi sosyal alt yapı yatırımları, beşeri sermayeyi geliştirici yatırımlar olarak kabul edilirken (Hansen, 1965 ; Capello, 2007), teorik ve uygulamalı çalışmalarda da beşeri sermaye, yenilikler ve teknoloji uygulama ve birikimlerinin arkasındaki temel faktör olarak görülmektedir (Manca, 2011).

Beşeri sermayenin, üretim sürecine ek bir girdi olarak faktör verimliliğini artırabildiği ve teknolojik yenilikler ve teknolojik yayılıma olan katkısı yoluyla da büyüme üzerinde dinamik bir etkisinin olabileceği belirtilmektedir. Bu doğrultuda beşeri sermayenin ekonomik büyümeyi nasıl etkileyebileceğine yönelik iki temel yaklaşımın varlığı dikkati çekmektedir. İlki beşeri sermaye üretim sürecinde bir girdidir ve ima ettiği şey, beşeri sermaye stokunun artırılması çıktı seviyesini artırabilecektir. Bunun anlamı ise büyüme ve beşeri sermaye değişimi arasında bir korelasyon olabileceğidir. İkinci yaklaşım ise, beşeri sermaye stokunun, ekonominin yenilikçi ya da yeni teknoloji uygulamalarının belirleyicisi olması ve bunun yayılımına olan katkısı nedeniyle verimlilik artışlarının kaynağı olarak görülmektedirler. Diğer yandan teorik yaklaşımlarda, beşeri sermayenin büyüme üzerindeki etkisine yönelik geniş bir destek söz konusu iken, uygulamalı çalışmalardaki sonuçlarda kullanılan verilere ve tahmin yöntemlerine bağlı olarak tam bir netlik oluşmamaktadır (Jimenes, 2003).

Benzer biçimde Sanroma ve Ramos (2007), bu konudaki çalışmaların bir kısmının yerel beşeri sermaye ile ilgili dışsal ekonomilerin varlığına dayandığını, bir kısmının ise çeşitli üretim faktörleri özellikle de beşeri sermaye ve fiziksel sermaye arasındaki tamamlayıcılık ilişkilerinin ön plana çıkarıldığını belirlemektedirler. Beşeri sermayenin dışsal etkisi, resmi ve resmi olmayan etkileşim yoluyla çalışanlar arasında bilgi ve becerinin paylaşımıyla, bilginin büyümesi ve yayılmasıyla gerçekleşebilmektedir. Bilginin bu paylaşımı ve gelişimi ise faktör verimliliğini artırabilecektir (Rauch: 1991). Diğer yandan yüksek beşeri sermayenin seviyesine sahip bölgelere firmaların daha fazla yatırım yapacağına yönelik bir varsayım söz konusudur. Bu yatırımlar yalnızca verimli işgücünün verimliliğini değil, aynı zamanda düşük vasıflı işgücünün verimliliğini artırabilecektir. Bu süreç bölgenin verimlilik ve ücret seviyesini artırırken, bölgenin yaşam yeri olarak tercihini ve okullaşma düzeyine yönelik düşünceleri etkileyebilecektir (Sanroma ve Ramos, 2007).

Eğitim ve diğer alt yapı yatırımlarının, verimliliği ve özel faktör yerleşim yerlerinin değişkenliğini etkileyebileceğini ifade eden Fuente ve Vives (1995)'da, politikalarla bu faktörlerin desteklenmesinin bölgesel dengesizlikleri azaltmakta kullanılabileceğini belirlemektedirler. Aynı zamanda bölgelerin rekabetçi yapısının büyük ölçüde, işgücünün kalitesine bağlı olduğu, eğitim yapısı ve beşeri sermayenin bölgesel rekabetin önemli bir belirleyicisi olduğu ifade edilmektedir. Bu durum ise bölgelerin işsizlik oranı ve vasıflı işgücü arasında negatif yönlü bir ilişkinin varlığı yoluyla ortaya konulmaktadır. Eğitime erişim ve beşeri sermaye seviyesinin yükseltilmesi yerel, bölgesel ve ulusal düzeyde tüm ekonominin uzun dönem beklentilerinin en önemli belirleyicisi olabilmektedir (Taylor, 2001).


Şekil.1. *Beşeri Sermaye Yapısı ve Yerel Ekonomik Performans (Bradley ve Taylor, 1996)*

Bradley ve Taylor (1996) ise, Eğitim sistemi ve yerel ekonomi arasındaki etkileşimi inceledikleri çalışmalarında, bu etkileşimi üç değişkeni tanımlayarak modellemektedirler. Bu değişkenler ise, yerel eğitim sisteminin çıktısı, vasıflı işgücü stoku ve yerel ekonomik performanstır. Yerel eğitim sisteminin çıktı düzeyi, yerel ortamın sosyo-ekonomik yapısı, eğitime erişimin istihdam fırsatlarını artırabileceğine yönelik düşüncenin varlığı ve okulların kalitesi tarafından belirlenirken, ekonomik performans üzerinde önemli bir rol oynayan vasıflı işgücünü ise, yerel eğitim sisteminden işgücü piyasasına yeni katılanların beceri seviyesi, yerel piyasalara göç eden işgücünün beceri seviyesi ve işgücünün niteliklerini artırmaya yönelik mesleki eğitimin varlığı belirlemektedir. Yerel ekonomik performansı da onun rekabetçi yapısı belirlerken rekabetçi yapıyı da, göreceli fiyatlar, üretim maliyetleri, faktör verimliliği, ürün bileşimi ve ürün kalitesi belirleyebilmektedir. Dolayısıyla

yerel eğitim sisteminin ekonomik performans üzerindeki etkisi eğitimin faktör verimliliğine olan katkısıyla gündeme gelebilmektedir. Bu üç değişken arasındaki etkileşimi yukarıdaki şekil.1. yoluyla görmek mümkündür. Bu modele göre alınan, eğitim yerel işgücünün beceri seviyesini uzun dönemde doğrudan etkilemektedir. Bu ise sonuçta yerel rekabet ve buna bağlı olarak ekonomik performansı belirleyerek, yerel piyasaya göç eden işgücünün meslek çeşitliliğini ve hacmini etkilemektedir. Meslek yapısındaki yüksek becerili işgücüne doğru bir kayış ise, eğitimli işgücünün beceri seviyesini daha fazla fayda sağlayıcı biçimde etkileyebilecektir. Ancak eğitim çıktısının yerel ekonomik performans ve işgücü yapısı üzerindeki etkisinde zaman gecikmesi olabilmektedir. Bu etki kısa dönemde küçük olabilir iken, zaman süreci uzadıkça yükselebilmektedir. Benzer şekilde yerel ekonomik performanstaki gelişim, eğitim seviyesini zamanla artırabilecek ve zaman içerisinde yüksek becerili işgücünün bölgeye göçü yoluyla yerel işgücü yapısını etkileyebilecektir. Dolayısıyla uzun dönemde ekonomik performans, eğitim çıktısının kalitesini etkileyebilirken, eğitim çıktısının kalitesi de ekonomik performansı etkileyebilmektedir (Bradley ve Taylor, 1996).

Bradley ve Taylor (1996) yaptıkları çalışma sonuçlarında ise, Birikimli sürece bağlı olarak yerel eğitim sistemi ve sosyo-ekonomik yapının etkileşimlerinin yerel ekonomik performansı belirleyebileceğini ifade ederek, yetersiz sosyo ekonomik alt yapının ve yetersiz ekonomik performansın, yetersiz eğitim sistemiyle açıklanabileceği tespitini yapmaktadırlar. Ekonomik ve sosyal yapıdaki yetersizliklerin ve eğitim sistemindeki eksikliklerin kendi kendini besleyerek, bu yapının sürekliliğini gündeme getirebileceğini, bu sürecin tersine çevrilebilmesi için devlet müdahalesinin gerekliliğini belirlemektedirler. Bu doğrultuda öncelikle mesleki eğitim ve eğitim sisteminin yetersiz olduğu bölgelerde işgücünün kalitesini geliştirebilmek amacıyla daha fazla yatırıma ihtiyaç duyulduğunu, ayrıca bu bölgelerin ekonomik gelişimi için işgücünün beceri seviyesinin yükseltilmesi gerekliliğini ifade etmektedirler.

3   Ekonometrik Metodoloji

Türkiye'de bölgesel düzeyde gerçekleştirilen eğitim ve sağlık alt yapı harcamalarının bölgesel gelir üzerindeki etkisini belirlemeyi amaçlayan uygulamada, panel veri analizi kullanılacaktır. Panel veri analizi, zaman serileri ile yatay kesit serilerinin birleştirildiği ekonometrik tahmin yöntemi olarak tanımlanabilecektir (Greene, 2012). Zaman serisi ve yatay kesit regresyonlarından farklı bir panel veri regresyonu aşağıdaki biçimde ifade edilebilecektir (Baltagi, 2005)

$$Y_{it} = \alpha + \beta_k X_{kit} + \varepsilon_{it} \qquad i = 1 \ldots \ldots N \; ; \; t = 1 \ldots \ldots T$$

Bu eşitlikte Y bağımlı değişken, α sabit terim, X_k gözlenebilen açıklayıcı değişken i yatay kesit birimlerini, t zamanı, β ise gözlenebilen açıklayıcı değişkenin tahmin edilen katsayısını gösterir iken, ε'de hata terimlerini göstermektedir. Eğer hata terimi;

$$\varepsilon_{it} = \mu_i + \nu_{it}$$

Şeklinde ise, bu eşitlikte μ_i kesitlerin gözlenemeyen bireysel etkilerini ve ν_{it} de hata teriminin kalan kısmını temsil ediyorsa modelin, tek yönlü hata bileşenine sahip olmasından (Baltagi, 2005:11), eğer hata terimi hem gözlenemeyen bireysel etkileri, hem de gözlenemeyen zaman etkisini içeriyorsa çift yönlü hata bileşenine sahip olmasından söz edilir (Baltagi, 2005). Bu durumda hata terimi;

$$\varepsilon_{it} = \mu_i + \lambda_t + \nu_{it}$$

Şeklinde olacaktır. Bu eşitlikte, λ_t gözlenemeyen zaman etkisi ifade etmekte ve hata terimine eklenmektedir.

Panel veri regresyonu, farklı varsayımlara bağlı olarak Sabit Etkiler (Fixed Effect) ve Rassal Etkiler (Random Effect) yöntemleriyle tahmin edilebilmektedir. Sabit etkiler yönteminde gözlenemeyen etkiler modele kukla değişkenler yoluyla dahil edilirken, gözlenemeyen etkilerle açıklayıcı değişkenler arasında korelasyon olduğu varsayılmaktadır (Dougherty, 2011).

Panel veriye dayalı uygulamalı çalışmalarda her iki modelin de kullanıldığı görülmekle birlikte, özellikle de yatay kesit birimlerinin büyük ve zaman serisinin küçük olduğu durumlarda her iki yöntemin tahmin sonuçları farklılıklar arz edebilmektedir (Baltagi, 1998). Bu durumda hangi yöntemin kullanılması gerektiği sorusu akla gelmektedir. Genel olarak ifade edilecek olursa, yatay kesit geniş bir popülasyondan geliyorsa ve amacımız popülasyon hakkında çıkarımlar yapmaksa rassal etkiler modeli, eğer amacımız belirli yatay kesit birimleri hakkında çıkarımlar yapmaksa sabit etkiler modeli uygun olacaktır (Atıcı ve Güloğlu, 2006). Ayrıca modelin seçiminde literatürde, gözlenmeyen değişkenlerin, açıklayıcı değişkenlerle arasındaki korelasyonunu belirlemeye yönelik Hausman (1978) testinin kullanıldığı görülmektedir. Bu teste göre;

$$H_0 : E(\varepsilon \mid X_{it}) = 0$$
$$H_1 : (\varepsilon \mid X_{it}) \neq 0$$

Sıfır hipotezi, gözlenmeyen etkilerle açıklayıcı değişkenler arasında korelasyon olmadığını ifade eder iken sıfır hipotezinin kabul edilmesi Rassal Etkiler modelinin etkin olduğunu, reddedilmesi ise gözlenemeyen etkilerle açıklayıcı değişkenler arasında korelasyon olduğunu ve sabit etkiler modelinin etkin olduğunu ifade etmektedir (Baltagi, 2005 ; Wooldridge, 2002).

Türkiye ekonomisinde, devletin alt yapı yatırımlarının bölgesel gelir üzerindeki etkilerini belirlemeye yönelik oluşturulacak bizim modelimizde, bölgelere göre oluşturulacak yatay kesitlerin geniş bir ana kütleden rastgele seçilmiş örnekler olmaması, bölgelerin tamamının dikkate alınması ve yapılan Hausman test sonuçlarının sıfır hipotezini reddetmesi gibi nedenlerle sabit etkiler yöntemi kullanılacaktır. Ayrıca alt yapı yatırımlarının bölgesel düzeyde etkilerini belirlemeye yönelik yapılan uygulamalı çalışmalarda da, bu yöntemin sıkça kullanıldığı görülmektedir (Percoco, 2004 ; Lall, 2007 ; Sloboda ve Yao, 2008). Diğer yandan sabit etkiler modelinde bireysel etkilerin ve zaman etkisinin olup olmadığına, yani kukla değişkenlerin anlamlılığına yönelik olarak da F testi yapılmaktadır (Baltagi, 2005 : Greene, 2012). Ancak yatay kesit ya da zaman serisinden bir tanesinin küçük ve diğerinin büyük olması durumunda Greene (2012), modelde daha büyük olan veri seti için, tek yönlü sabit etkilerin, yani kukla değişkenin kullanılabileceğini belirtmektedir. Bizim modelimizde de yatay kesit serisi daha büyük olduğu için, yatay kesit için sabit etkiler kullanılmıştır.

3.1 Ekonometrik Model ve Veri Seti

Literatürde alt yapı yatırımlarının bölgesel çıktı veya bölgesel gelir üzerindeki etkisinin belirlenmesinde üretim fonksiyonunun kullanıldığı ve üretim fonksiyonuna sermaye ve emeğe ilave bir girdi olarak alt yapı yatırımları şeklindeki kamu sermayesinin eklendiği görülmektedir (Aschauer, 1989 ; Munnell, 1990 ; Button, 1998 ; Percoco, 2004 ; Rosik, 2006). Bu şekildeki Cobb-Douglas üretim fonksiyonunu aşağıdaki şekilde belirlemek mümkündür.

$$Y = AK^{\alpha}L^{\beta}G^{\gamma} \tag{1}$$

Bu fonksiyonda *(Y)* çıktıyı, *(A)* teknoloji seviyesi ya da teknolojik değişimi, *(K)* özel sermaye stokunu, *(L)* işgücünü ve *(G)*'de alt yapı yatırımları şeklindeki kamu sermaye stokunu ifade etmektedir. Bu üretim fonksiyonunu logaritması alındığında aşağıdaki eşitlik elde edilir;

$$\ln Y_{it} = \alpha + \beta \ln K_{it} + \varphi \ln L_{it} + \gamma \ln G_{it,sosyal\ alty.} + \varepsilon_{it} \tag{2}$$

Bu eşitlikte β, φ, γ sırasıyla çıktının, özel sermayeye, işgücüne ve alt yapı yatırımları şeklindeki kamu sermayesine olan duyarlılığını göstermektedir. Alt yapı yatırımları şeklindeki kamu sermayesi üretim fonksiyonun ek girdisi olarak çıktıyı doğrudan etkileyebilir iken, aynı zamanda işgücü ve sermaye gibi özel girdilerin kullanımını etkileme yoluyla toplam üretimi dolaylı yönden de etkileyebilmektedir (Pereira ve Roca-Sagales, 2003).

Yukarıdaki (2) nolu model, ulaşılabilen veriler açısından 2004-2008 dönemi itibariyle Türkiye'de Düzey-2 bölgeleri için panel veri sabit etkiler yöntemiyle tahmin edilmiş ve modeldeki alt yapı yatırımları şeklindeki kamu sermayesi için eğitim ve sağlık alt yapı yatırım harcamalarının toplamı kullanılmıştır. Çalışmada 2004-2008 Düzey-2 bölgesi verileri kullanılmıştır. Bu dönemin verilerinin kullanılma sebebi ise, 2002 yılında yapılan İstatistikî Bölge Birimleri Sınıflamasından (NUTS) sonra yayınlanan Düzey-2 bölgelerinin gelir seviyesinin 2004-2008 dönemiyle sınırlı olmasıdır. Diğer yandan bu model bölgelerle ilgili ortalama değerleri vermektedir ve modelin bölgelere özgü değerlerini bulmak amacıyla da Düzey-2 verileri Düzey-1'e dönüştürülmüş ve bu model ayrı ayrı Düzey-1 Bölgeleri için de oluşturulmuştur. Ancak İstanbul ve Doğu Karadeniz Düzey-1 bölgeleri, tek alt Düzey-2 bölgesine sahip olduğu ve panel veri yönteminde, tek yatay kesitte kullanılamadığı için İstanbul, Batı Marmara bölgesine eklenmiş ve Marmara bölgesi olarak, Doğu Karadeniz ise Batı Karadeniz bölgesine eklenmiş ve Karadeniz bölgesi olarak tahmin edilmeye çalışılmıştır. Modelde kullanılan bölgesel gelir ve işgücü verileri Türkiye İstatistik Kurumunun bölgesel istatistiklerinden alınmıştır. Bölgesel düzeyde özel sermaye verileri bulunmadığı için, sanayi elektrik tüketimi bu veriye yaklaşık bir değer olarak kullanılmıştır. Uygulamalı çalışmalarda özel sermaye stokunun bulunmadığı durumlarda elektrik tüketim verilerinin kullanıldığı görülmektedir (Moody, 1974 ; Schnorbus ve Israilevich, 1987 ; Pirili ve Lenger, 2011). Modeldeki kamunun alt yapı yatırımlarına ilişkin veriler ise DPT'nin yayınladığı kamu yatırımlarının illere göre sektörel dağılım verilerinde yer alan alt yapı harcama türleri, Düzey-2 bölgelerine dönüştürülerek elde edilmiştir. Aynı zamanda bu harcama türleri yine Türkiye İstatistik Kurumunun bölgesel istatistikleri içerisinde yer alan Düzey-2 bölgeleri fiyat indekslerinin kullanılması yoluyla reel harcamalara dönüştürülmüştür. Bölgesel düzeyde kamunun net alt yapı yatırımları sermaye stokunu hesaplayabilmek amacıyla da, literatürde kullanılması tavsiye edilen sürekli envanter yöntemi(perpetual inventory method) kullanılmıştır. Bu yöntem aşağıdaki şekilde ifade edilmektedir (Jacop vd, 1997).

$$G_{it} = (1-\delta)G_{t-1} + g_{it}$$

Bu eşitlikte G_t net alt yapı kamu sermaye stokunu, g_t zaman içerisinde yapılan reel alt yapı yatırımlarını, δ aşınma payını göstermektedir. Bu yönteme göre kamu sermaye stoku, önceki yılın aşınma payı ile brüt alt yapı

sermaye stoku arasındaki farkla elde edilen önceki yılın net alt yapı sermaye stokuna mevcut alt yapı şeklindeki kamu yatırımlarının eklenmesiyle hesaplanmaktadır. Ancak modelimizde 2003 yılı alt yapı sermaye stoku olmadığı için 2004 yılı için sermaye stoku aşağıdaki eşitlik yoluyla belirlenebilecektir.

$$G_{it} = \sum_{j=0}^{L} (1-d)^j g_{i,t-j}$$

Burada L yatırımların ömrünü gösterir iken, yapılan çalışmalarda bu yatırımların ömrünün yirmi yıl olduğu ve buna göre aşınma payı oranının 0.05 olacağı belirtilmiştir (Pirili ve Lenger, 2011). Oluşturulan modellerde de, alt yapı harcama türleri ile ilgili ifade edilen bu uygulamalar yapılmıştır.

3.2 Tahmin Sonuçları

Modellerle ilgili tahminler, E-Views 6 ekonometrik paket programında, panel veri sabit etkiler yöntemiyle yapılmıştır. Oluşturulan modellerle ilgili yapılan Hausman test sonuçlarının sıfır hipotezini reddettiği ve sabit etkileri kabul ettiğini görmekteyiz. Ayrıca yapılan Heteroscedasticty testi LMh ve Otokorelasyon testi LM-stat'a göre de, modelde otokorelasyon ve heteroscedasticty sorunlarının varlığı görülmektedir. Her iki sorunda, Ewiws 6 ekonometrik paket programındaki Cross Section SUR opsiyonuyla giderilmiştir.

Bu çerçevede, eğitim ve sağlık alt yapı harcamalarının toplamının alındığı ve sosyal alt yapı harcamaları diye ifade edilen (2) nolu modelin tüm Düzey-2 bölgeleri için tahmin sonuçları ise aşağıdaki tabloda yer almaktadır.

Sosyal Alt Yapı Harcamaları

Tablo.1.Sosyal Alt Yapı Harcamalarının Genel Olarak Bölgesel Gelir Üzerindeki Etkisi

Tahmin sonuçlarına göre, kamunun eğitim ve sağlık harcamalarından oluşan sosyal alt yapı yatırımlarının genel olarak bölgesel geliri pozitif etkilediği ve bu sonucunda istatistiki olarak % 1 seviyesinde anlamlı olduğu görülmektedir. Özel sermaye ve işgücü de bölgesel geliri pozitif etkilerken işgücü katsayısının istatistiki olarak anlamlı özel sermayenin ise anlamsız olduğu belirlenmiştir. Diğer yandan modele bağlı olarak, kamunun sosyal alt yapı harcama türlerinin Düzey-1 bölgeleri için tahmin sonuçları ise aşağıdaki tabloda yer almaktadır.

Bu tahmin sonuçlarına göre de, beşeri sermayeyi geliştirmeye yönelik sosyal alt yapı harcamalarının tüm Düzey-1 bölgelerinde bölgesel geliri olumlu anlamda etkilediği ve bu sonuçların Batı Anadolu dışında tüm bölgelerde istatistiki olarak anlamlı olduğu görülmektedir. Beşeri sermayeyi artırmaya yönelik alt yapı harcamaları bölgesel gelire en büyük katkıyı Batı Marmara'da sağlarken, Doğu Marmara, Orta Anadolu Akdeniz, Karadeniz, Ege ve Güneydoğu Anadolu bölgelerinde bu harcama türünün bölgesel gelire katkısı bölgesel ortalama civarında veya üzerindedir. Bölgesel gelire en düşük katkı ise ülkemizin görece en az gelişmiş bölgelerinden biri olan Kuzeydoğu Anadolu bölgesinde gerçekleşirken, yine görece geri kalmış bir diğer bölge olan Ortadoğu Anadolu bölgesinde de bu katkı bölgesel ortalamanın altında gerçekleşmiştir.

4 Sonuç

Bölgesel rekabet kavramının bölgesel ekonomik politikaları şekillendirdiği günümüzde, bu politikalar sadece belirli kaynakları geri kalmış bölgelere yönlendirme ve geri kalmış bölgelerde bazı faaliyetlerin desteklemesinin yanında, bölgelerin rekabet gücünü geliştirmeye yönelik politika araçlarına da ağırlık verildiği görülmektedir. Bu politika araçları içerisinde değerlendirilebilecek beşeri sermayeyi artırmaya yönelik eğitim ve sağlık alt yapı yatırımlarının sağladığı hizmetler, hem özel sermayenin hem de işgücünün verimliliğini artırabilme yoluyla çıktıda ve özel sektör yatırımlarında artış sağlayabilmekte ve firmaların kuruluş yeri tercihinde belirleyici bir faktör olabilmektedir. Ayrıca kamunun beşeri sermayeye yönelik alt yapı yatırım harcamalarındaki artış kısa vadede çoğaltan etkisi, uzun vadede ise verimlilik artışlarının ortaya çıkarabileceği fiyat azalışlarıyla talebi teşvik edebilecek ve talep etkisi de tüm üretimde ve istihdamda artış yaratabilecektir. Aynı zamanda kamunun bu

alt yapı yatırım türü işgücünün verimliliğini artırabilmesi nedeniyle şehirlerin, bölgelerin ve ulusların rekabetçi yapılarının geliştirilmesine imkân sağlayabilecektir.

Bu çerçevede eğitim ve sağlık alt yapı harcamalarının Türkiye'de bölgesel gelir üzerindeki etkilerini belirlemeye yönelik, 2004–2008 yılları itibariyle ve panel veri sabit etkiler yöntemiyle yapılan uygulama sonuçlarından da görüldüğü üzere, bu harcama türlerinin bölgesel gelire pozitif katkı sağladığı ve dolayısıyla bir bölgesel ekonomik politika aracı olarak kullanılabileceği söylenebilecektir. Ancak bu harcama türünün en fazla katkıyı, Türkiye'nin görece en gelişmiş bölgeleri olan Batı Marmara ve Doğu Marmara bölgelerine, en az katkıyı ise ülkenin görece en geri kalmış bölgeleri olan Kuzeydoğu Anadolu ve Ortadoğu Anadolu bölgelerine sağladığı dikkate alındığında, bazı bölgeler için bölgeler arası ekonomik gelişmişlik farklılığını artırdığı da ifade edilebilecektir. Diğer yandan Karadeniz, Güneydoğu Anadolu gibi yine ülkemizin görece geri kalmış bölgelerinde bu katkının bölge ortalamaları civarında olması nedeniyle, özellikle Kuzeydoğu Anadolu ve Ortadoğu Anadolu Bölgelerinde kamunun yaptığı eğitim ve sağlık alt yapı harcamalarını yeniden gözden geçirme zorunluluğu ortaya çıkmaktadır.

Bölgeler	*Sosyal Alt Yapı Harcamaları(Katsayı)*
Batı Marmara	*0.46* *(0.1120)* *[0.0024]*
Ege	*0.25* *(0.0569)* *[0.0016]*
Doğu Marmara	*0.41* *(0.0919)* *[0.0063]*
Batı Anadolu	*0.11* *(0.1013)* *[0.2946]*
Akdeniz	*0.34* *(0.00408)* *[0.0000]*
Orta Anadolu	*0.39* *(0.0313)* *[0.0001]*
Karadeniz	*0.28* *(0.0599)* *[0.0004]*
Kuzeydoğu Anadolu	*0.12* *(0.0010)* *[0.0001]*

Yükseköğretimin Büyümeye Etkisi: Eşbütünleşme Analizi
The Effect of Higher Education on Growth: A Cointegration Analysis

Asst. Prof. Dr. Murat Mustafa Kutlutürk (Çankırı Karatekin University, Turkey)
Assoc. Prof. Dr. Hakan Kasım Akmaz (Çankırı Karatekin University, Turkey)
Assoc. Prof. Dr. Ahmet Çetin (Çankırı Karatekin University, Turkey)

Abstract

In this study the relationship between higher education and economic growth was investigated using annual data between 1988 and 2012 for Turkey. To see short and long run effects of higher education on growth the Autoregressive Distributed Lag (ARDL) testing approach was used. In this investigation ratio of higher education graduates in employment was used as an explanatory variable. Zivot and Andrews test was implemented for the variables. The long and short run effects of higher education on growth was found significant. Granger causality test was implemented and one way Granger causality from higher education to growth was determined.

1 Giriş

İktisadi olgu ve olayların içinde en önemli yeri tutan ekonomik büyüme birçok teorik yaklaşıma konu olmaktadır. Büyümenin önemli faktörlerinden beşeri sermayenin etkisi üzerine mikro ve makro düzlemde araştırmaların önemli bir kısmı eğitim özelinde yoğunlaşmaktadır. Özellikle beşeri sermayenin verimliliğinin arttırılması sürecinde eğitimin doğrudan ve dolaylı etkileri araştırma konusu olarak literatürde önemini korumaktadır. Beşeri sermayedeki iyileşmenin temelde iki farklı etkisinden söz edilebilir. Bu etkiler yeni bilgilerin üretilmesi ve yayılması ile üretim sürecindeki çalışanların yeni teknikleri kullanması şeklinde kendini göstermektedir. Bu bağlamda kamu ve özel eğitim kurumlarındaki her düzeydeki formal eğitim yanında çalışan bireylerin bulundukları iş pozisyonlarına göre yeni geliştirilen teknolojileri kullanmaları için aldıkları eğitimler, hayat boyu öğrenme programları, buluşların genellikle ön plana çıktığı lisansüstü programlar bu olgular arasında yerini almaktadır.

Bu çalışmada yükseköğretim ile ekonomik büyüme arasındaki ilişki toplam istihdam içindeki yükseköğretim payı dikkate alınarak incelenmiştir. Bunun için 1988-2012 dönemine ait yükseköğretim mezunlarının istihdam içindeki oranı ile GSYİH değişkenleri kullanılmıştır. Yükseköğretim mezunu olarak istihdam edilen kişi sayısı ve toplam istihdam sayısına ait veriler TÜİK, GSYİH verileri ise Dünya Bankası resmi internet sitesinden alınmıştır.

2 Literatür Taraması

Bir ülkenin iktisadi büyümesini etkileyen en önemli unsurlardan birisi insan faktörüdür. Literatürde bu faktör "beşeri sermaye" kavramıyla belirtilmiştir. Bu kavram ise bir birey veya topluluğun mal, hizmet veya fikir üretimi sürecinde kullanılmak üzere sahip oldukları bilgi, beceri ve yeteneklerini tanımlamaktadır (OECD, 1998; Westphalen, 1999). Bu tanımlamadan da anlaşıldığı üzere beşeri sermayenin ve dolayısıyla ekonomik büyümenin en önemli etkenlerinden birisi eğitimdir (Mankiw, vd., 1992; Lucas, 1988; Romer, 1990; Nelson ve Phelps 1966). Eğitim ve ekonomik büyüme ilişkisi üzerine yapılan çalışmalar incelendiğinde aralarında pozitif bir ilişki olduğu sonucu ortaya konmuştur (Barro, 1991; Keller, 2006).

Ekonomik kalkınmanın en önemli yollarından birisi de istihdam edilen işgücünün nicelik yanında niteliğinin de arttırılmasıdır. Bu doğrultuda verimlilik düzeyinin yükselmesinde eğitimin rolü büyüktür. Türkiye için eğitimin ekonomik büyüme üzerindeki etkilerine yönelik yapılan çalışmalarda, farklı eğitim seviyelerindeki öğrenci sayıları ve ekonomik büyüme arasındaki ilişki incelenmiştir. 1923-2011 dönemini kapsayan çalışmada (Çalışkan, vd., 2013), eğitimin büyüme üzerindeki etkisi eşbütünleşme analizi ile incelenmiştir. Bu çalışmada, yükseköğretim ve lise seviyesindeki öğrenci sayısındaki artışın ekonomik büyümeyi etkilediği, ilköğretim ve meslek lisesi seviyesindeki öğrenci sayısı artışının büyüme üzerinde etkisi olmadığı tespit edilmiştir. 1923-2005 yıllarını kapsayan çalışmada (Özsoy, 2009), ilköğretim, orta öğretim, yükseköğretim, mesleki ve teknik eğitim olmak üzere farklı eğitim kademelerinin ekonomik büyüme üzerine etkisini incelemiştir. VAR modeli ile gerçekleştirilen eşbütünleşme analizi sonucunda eğitim ile büyüme arasında uzun dönemli bir ilişki bulunmuştur. Özellikle mesleki ve teknik eğitim başta olmak üzere eğitim ile GSYİH arasında nedensellik ilişkisi olduğu saptanmıştır.

Bu çalışmaların yanı sıra eğitim ve ekonomik büyüme ilişkisi yükseköğretim seviyesi ele alınarak da incelenmiştir. 1970-2008 dönemini kapsayan çalışmada (Erdem ve Tuğcu, 2010), Türkiye ekonomisinde ekonomik büyüme ile yükseköğretim arasında kısa ve uzun dönemli ilişkinin varlığı incelenmiştir. ARDL

(Autoregressive Distributed Lag) ile Dolado ve Lütkepohl Granger Nedensellik analizinin kullanıldığı bu çalışmada yükseköğretimin ekonomik büyüme ile eşbütünleşik olduğu ve aralarında nedensellik ilişkisi bulunduğu tespit edilmiştir. 1970-2006 yılları arasındaki çalışmada (Özsoy, 2008), VAR modeli kullanılarak ekonomik büyüme ile yükseköğretim arasında uzun dönemli bir bağıntı ve iki değişken arasında nedensellik ilişkisi olduğu belirtilmiştir. 1980-2010 dönemi için yapılan çalışmada (Özşahin ve Karaçor, 2013), yükseköğretime yapılan harcamanın ve yükseköğretim kayıtlarındaki artışın ekonomik büyümeyi olumlu etkilediği bulgusu saptanmıştır. 2002 yılına ait çalışmada (Tekin ve Çiftçi, 2005) yatay veri setiyle kümeleme analizi ve regresyon analizleri kullanılarak farklı eğitim seviyelerine sahip işgücünün kişi başına düşen GSYİH ile ilişkisi OECD ülkeleri için incelenmiştir. İş gücü kalitesinin artması ile kişi başına düşen GSYİH'nın arttığı tespit edilmiştir. 1968-2006 yıllarını kapsayan çalışmada (Telatar ve Terzi, 2010), Granger nedensellik ve VAR analizi kullanılarak ekonomik büyüme, nüfus ve eğitim arasındaki ilişki incelenmiştir. Çalışma sonucunda kişi başına düşen gelirden yükseköğretim mezun sayısına ve meslek lisesi mezun sayısından kişi başına düşen gelire doğru pozitif bir nedensellik ilişkisi bulunmuştur.

Eğitim ile büyüme arasındaki ilişkiyi inceleyen diğer ülkelere yönelik yapılan çalışmalarda benzer bulgulara ulaşılmıştır. 1970-2003 döneminde Nijerya'ya yönelik çalışmada (Babatunde ve Adefabi, 2005), eğitim ile ekonomik büyüme arasında uzun dönemli bir ilişkinin varlığı araştırılmıştır. Johansen eşbütünleşme tekniği ve Vektör Hata Düzeltme (Vector Error Correction, VEC) modelinin kullanıldığı bu çalışmada iyi eğitimli işgücünün üretim fonksiyonunun önemli bir faktörü olduğu ve toplam faktör verimliliğini artırarak büyüme üzerinde uzun dönem etkisinin olduğu belirlenmiştir. 1965-1999 yıllarına ait verilerle Uganda için yapılan çalışmada (Musila ve Belassi, 2004), çalışan kişi başına düşen eğitim harcamalarının kısa ve uzun dönem ekonomik büyüme üzerinde anlamlı ve pozitif bir etkisinin olduğu bulunmuştur. 1978-2007 yıllarını kapsayan çalışmada (Kreishan ve Hawarin, 2011), VEC modeli kapsamında Ürdün için eğitim ve ekonomik büyüme arasında eşbütünleşme ve nedensellik ilişkisi incelenmiştir. Çalışmada eğitimli çalışanlar ilk, orta, lisans ve lisansüstü mezunu olmak üzere dört kategoriye ayrılmış ve elde edilen bulgular sonucunda yükseköğretimin ekonomik büyüme üzerinde pozitif bir etkisinin olduğu, ilk ve ortaöğretimin ise etkisinin olmadığı ortaya konmuştur. 1970-2010 dönemini kapsayan çalışmada (Hussin vd., 2012), Malezya için eğitim ile ekonomik büyüme arasındaki uzun dönem ilişkiye bakılmış, VAR metodu kullanılarak eğitim harcamaları ile ekonomik büyüme arasında eşbütünleşme olduğu belirlenmiştir. 1960-2000 dönemini kapsayan veriler kullanılarak Yunanistan'a yönelik yapılan çalışmada (Tsamadias ve Prontzas, 2012), eğitimin ekonomik büyüme üzerinde pozitif ve anlamlı bir etkisi olduğu saptanmıştır. 1952-1999 döneminde Çin Halk Cumhuriyeti için ARDL metodu kullanılarak yapılan çalışmada (Narayan ve Smyth, 2006), kısa dönemde yükseköğretimin reel gelir üzerinde pozitif bir etkisi olduğu gösterilmiştir.

3 Model ve Metodoloji

Çalışmada ekonomik büyümenin göstergesi olarak reel GSYİH (milyar TL) alınmıştır. Yükseköğretimin büyümeye etkisini incelemede kullanılacak açıklayıcı değişken olarak istihdam edilen yükseköğretim mezunu sayısının toplam istihdam sayısına oranı seçilmiştir. Bu oran istihdamın niteliksel anlamda farklılaşmasının bir göstergesi olarak ele alınmıştır. 1988-2012 dönemine ait 25 yıllık veri kullanılmıştır. GSYİH verileri Dünya Bankası, istihdam verileri ise TÜİK resmi internet sitelerinden alınmıştır. Kullanılacak model

$$Y_t = \beta_0 + \beta_1 UIO_t + \varepsilon_t \tag{1}$$

olarak belirlenmiştir. Burada Y reel GSYİH ve UIO yükseköğretim mezunu olup istihdam edilen kişi sayısının toplam istihdam sayısına oranıdır.

Zaman serisi verilerinin karakteristik özelliklerini ortaya koyabilmek amacıyla geliştirilen Augmented Dickey-Fuller ve Phillips-Perron testleri yapısal kırılmanın olmadığı varsayımı altında birim kök analizini yapabilmek için kullanılmıştır (Dickey ve Fuller, 1981; Phillips ve Perron, 1988). Bunlara ek olarak yapısal kırılma varsayımı altında uygulanmak üzere geliştirilen Zivot ve Andrews birim kök testi de uygulanmıştır (Zivot ve Andrews, 1992). Yapısal kırılmayı içsel bir olgu olarak irdeleyen Zivot ve Andrews birim kök testi ortalamadaki kırılma, eğimdeki kırılma ve her ikisinin birlikte olduğu üç durumu sınamaktadır. Kırılma yılının tespitinden sonra elde edilen t istatistik değeri ilgili kritik t-değerlerinden küçükse H_0: Yapısal kırılmayla birim kök vardır hipotezi reddedilir. UIO ile Y arasındaki eşbütünleşme ilişkisini ARDL yöntemi ile incelemek amacıyla ilk aşamada

$$\Delta Y_t = c_0 + c_1 Y_{t-1} + c_2 UIO_{t-1} + \sum_{i=1}^{m} c_{3i} \Delta Y_{t-i} + \sum_{i=0}^{m} c_{4i} \Delta UIO_{t-i} + u_t \tag{2}$$

modeli kullanılarak sınır testi olarak adlandırılan yaklaşım uygulanmıştır. Burada Δ fark operatörü, m gecikme uzunluğudur. Değişkenler arasında eşbütünleşme olmadığını belirten H_0 hipotezi $H_0 : c_1 = c_2 = 0$ şeklinde

tanımlanmış olup $H_1 : c_1 \neq c_2 \neq 0$ alternatif hipotezine karşı F-istatistiği kullanılarak test edilmiştir. Elde edilen F-istatistiği değeri, üst kritik değerden yüksek ise değişkenler arasında eşbütünleşme ilişkisi olduğu, alt kritik değerden düşük ise ilişki olmadığı sonucuna ulaşılmaktadır. Hesaplanan F-istatistiği değeri alt ve üst kritik değerlerin arasında ise ilişkinin varlığı hakkında kesin bir sonuca ulaşılamamaktadır. Modelin uygun gecikme sayısının belirlenmesinde AIC ve SIC kriterleri kullanılmıştır.

Sınır testi sonucunda değişkenler arasında eşbütünleşme olduğunun belirlenmesiyle uzun ve kısa dönem ilişkilerin incelenebilmesi için sırasıyla (3) ve (4) nolu ARDL modelleri kurulmuştur.

$$Y_t = c_0 + \sum_{i=1}^{m} c_{1i} Y_{t-i} + \sum_{i=0}^{m} c_{2i} UIO_{t-i} + u_t \tag{3}$$

$$\Delta Y_t = c_0 + c_1 ECT_{t-1} + \sum_{i=1}^{m} c_{2i} \Delta Y_{t-i} + \sum_{i=0}^{m} c_{3i} \Delta UIO_{t-i} + u_t \tag{4}$$

Son olarak Granger nedensellik analizi değişkenlerin birbirini hangi yönde etkilediğini test etmek için kullanılmıştır.

4   Araştırma Bulguları ve Değerlendirme

Zaman serilerinde verilerin sahte regresyon ihtimaline karşı durağanlıklarından emin olmak için birim kök analizlerinden Augmented Dickey-Fuller (ADF) ve Phillips-Perron (PP) testleri uygulanmış ve sonuçlar Tablo 1'de özetlenmiştir.

Değişken	ADF		PP	
	Sabit	Sabit,trend	Sabit	Sabit,trend
Y	0.8241 [0]	-1.7783 [0]	1.1660 [3]	-1.8567 [1]
UIO	3.7315 [0]	-2.0408 [2]	9.1750 [21]	-0.6484 [12]
ΔY	-4.6120 [0] ***	-4.7293[0] ***	-4.6105 [2] ***	-4.7730 [3] ***
ΔUIO	-1.3785 [2]	-5.6421 [1] ***	-2.9092 [3] *	-9.4794 [22] ***

Not: ***: %1;   ** :%5;   * :%10 düzeyinde istatistiksel olarak anlamlılığı ifade etmektedir.

Tablo 1: Birim kök testi sonuçları (yapısal kırılma dikkate alınmadan*)*

Y ve UIO değişkenleri düzeyde durağan çıkmamış ancak birinci farkları alındığında seriler durağan hale gelmiştir. Yapısal kırılma durumunda durağanlığı test etmek için Zivot ve Andrews testi uygulanmıştır ve sonuçlar Tablo 2'de sunulmuştur.

Değişken	Model	Gecikme	t-istatistiği	Kırılma yılı	Sonuç
Y	A	0	-2.9291	2005	I(1)
	B	0	-3.3702	2002	I(1)
	C	0	-3.7387	2001	I(1)
UIO	A	2	-3.1260	2002	I(1)
	B	2	-4.5651*	2000	I(0)
	C	2	-4.2703	2000	I(1)

Not: ***: %1;   ** :%5;   * :%10 düzeyinde istatistiksel olarak anlamlılığı ifade etmektedir.

Tablo 2: Zivot-Andrews yapısal kırılma testi sonuçları

Zivot ve Andrews test sonuçları verilerin yapısal kırılmaların dikkate alınması durumunda Model B haricinde durağan olmadığını göstermektedir. Model farklı yıllar için kesme ve eğim kukla değişkenleri önermekle beraber bu önermelerin hiç biri istatistiki olarak anlamlı çıkmadığı için modele dahil edilmemişlerdir.

Gecikme Sayısı	AIC	SIC
1	5.5026	5.8482
2	5.5116	5.9579
3	5.3778	5.9250
4	5.2421	5.8894

Tablo 3: Sınır testi sonuçları

Hesaplanan AIC ve SIC değerlerine göre uygun gecikme uzunluğu 4 olarak hesaplanmıştır. Breusch-Godfrey serisel korelasyon LM testine göre 4 gecikme uzunluğunda otokorelasyon olmadığı belirlenmiştir. Hesaplanan F-istatistiği değeri 7.5023 bulunmuş olup tablo üst kritik sınırı olan 7.30 değerini geçtiği için H_0 hipotezi reddedilmiştir. Bu da değişkenler arasında eşbütünleşme ilişkisi olduğunu göstermektedir. Değişkenler arasında eşbütünleşme olduğu için ARDL modelleri kullanarak uzun ve kısa dönem ilişkilerin varlığı incelenebilir.

4.1 ARDL modeli

Değişkenler arasındaki uzun dönem ilişkinin araştırılması için oluşturulan ARDL modelinden SIC kriteri kullanılarak uygun gecikme sayısı elde edilmiştir. Burada gecikme sayısı (1, 0) olarak belirlenmiş ve elde edilen modelin tahmini ve uzun dönem ilişki değerleri Tablo 4 ve Tablo 5'de özetlenmiştir. Uzun dönem ilişkilere ait katsayı tahminleri beklentilere uygun ve 0.01 anlamlılık düzeyinde istatistiki olarak anlamlı çıkmıştır.

Değişken	Katsayı	t istatistiği
C	12.6840	2.5084**
UIO	2.6224	2.7836**
Y(-1)	0.5127	2.7040**

Tablo 4: Schwarz Bayesian Kriterine göre ARDL(1,0) modeli tahmin sonuçları

Değişken	Katsayı	t istatistiği
C	26.0314	6.9004 ***
UIO	5.3819	13.5807 ***

Tablo 5: ARDL(1,0) modeli uzun dönem katsayıları

4.2 Kısa Dönem İlişki

Uzun dönem ilişkinin bulunmasını takiben hata düzeltme faktörü ile kısa dönem etkileri ARDL yaklaşımının hata düzeltme modeli (ECM) kullanılarak hesaplanmıştır. Hata düzeltme terimi (ECT) ile tahmin edilen modeldeki ECT(-1) katsayısı kısa dönem dengeden sapmaların ne kadarlık kısmının uzun dönemde düzeltildiğini göstermektedir. Bu bağlamda ECT(-1) değeri istatistiki olarak anlamlı ve beklentilere uygun olarak negatif katsayıya sahiptir. Tablo 6'da sunulan sonuçlara göre kısa dönemde gerçekleşen sapmanın uzun dönemde % 48'lik bir kısmı düzeltilecektir.

Değişken	Katsayı	t istatistiği
ΔUIO	2.6224	2.7836 **
ECT(-1)	-0.4873	-2.5696 **

Tablo 6: ARDL(1,0) hata düzeltme modeli ve kısa dönem ilişki katsayıları

4.3 Granger Nedensellik

Değişkenler arasında eşbütünleşme ilişkisinin tespit edilmesi, bu ilişkinin yönünün ne olabileceği konusunda test uygulamamız için olanak sağlamaktadır (Engle ve Granger, 1987) . Granger nedensellik analizi bulguları Tablo 7'de iki farklı gecikme düzeyi için raporlanmıştır.

Gecikme sayısı: 1		
Boş Hipotez:	F-istatistiği	Olasılık
Y'den UIO'ya Granger nedensellik yoktur.	1.7425	0.2010
UIO'dan Y'ye Granger nedensellik yoktur.	6.3504 **	0.0199
Gecikme sayısı: 2		
Boş Hipotez:	F-istatistiği	Olasılık
Y'den UIO'ya Granger nedensellik yoktur.	0.7613	0.4815
UIO'dan Y'ye Granger nedensellik yoktur.	4.9495 **	0.0194

Tablo7: Nedensellik Analizi

Sonuçlara göre her iki gecikme için de yükseköğretim mezunu bireylerin istihdam içindeki oranı ile reel GSYİH arasında tek yönlü bir ilişki bulunmuştur. İlişkinin yönünün yükseköğretim istihdam oranından reel GSYİH'ya doğru olduğu tespit edilmiştir. Bu sonuç bize yükseköğretim mezunlarının istihdam içindeki oranının artmasının ekonomik büyümeyi artırıcı bir etkisi olduğunu göstermektedir.

5 Sonuç

Bu çalışmada yükseköğretim ile ekonomik büyüme arasındaki eşbütünleşme ve nedensellik ilişkisi 1988-2012 dönemine ait yıllık veriler kullanılarak incelenmiştir. Yükseköğretim için açıklayıcı değişken olarak yükseköğretim mezunlarının istihdama katılım oranı kullanılmıştır. Çalışma sonucunda yükseköğretimin gerek kısa gerekse uzun dönemde büyüme üzerinde olumlu etkisi olduğu sonucuna ulaşılmıştır. Nedensellik testi sonuçlarına göre ise yükseköğretimden büyümeye doğru tek yönlü bir nedensellik ilişkisi olduğu belirlenmiştir. Elde edilen bulgular ışığında yükseköğretim düzeyinde eğitimin hem nicelik hem de nitelik olarak iyileştirilmesinin ekonomik büyüme açısından olumlu olacağı sonucuna ulaşılmıştır.

Türkiye'de İş Kazaları ve Meslek Hastalıkları ve Sosyal Güvenlik Sistemi İçindeki Yeri

The Work Accidents and Occupational Diseases in Turkey and Its Place in the Social Security System

Assoc. Prof. Dr. Dilek Baybora (Anadolu University, Turkey)

Abstract

The work accidents and occupational diseases are very important especially in the industrializing countries. According to the International Labour Organization (ILO) every 15 seconds, a worker dies from a work-related accident or disease. Every 15 seconds, 160 workers have a work-related accident. Every day, 6.300 people die as a result of occupational accidents or work-related diseases–more than 2,3 million deaths per year. The economic burden of poor occupational safety and health practices is estimated at 4 per cent of global Gross Domestic Product each year. In Turkey, work accidents' figures are very high but occupational diseases' figures are not very high. There are several causes of this condition. In Turkey, the Work Accidents, Occupational Diseases and Maternity Act No. 4772 was accepted in 1945. The Social Security and General Health Insurance Act No.5510 was accepted in 2006. There are regulations about the work accident and occupational disease insurance in the Act. According to the Act, insured and the rights holders can obtain some assistance.

1　Giriş

Uluslararası Çalışma Örgütü'ne (ILO) göre dünyada, her 15 saniyede 160 işçi iş kazası geçirmekte olup, her 15 saniyede bir işçi, iş kazası veya meslek hastalığı sonucunda ölmektedir. Dolayısıyla, her gün 6.300 kişi iş kazası veya meslek hastalığı sonucunda ölmektedir ki bu da her yıl 2,3 milyondan daha fazla kişinin ölmesi anlamına gelir. Kötü iş sağlığı ve güvenliği uygulamalarının ekonomik maliyeti ise her yıl dünya gayri safi hasılasının %4 olduğu tahmin edilmektedir (http://www.ilo.org/global/topics/safety-and-health-at-work/lang--en/index.htm). Türkiye gibi iş kazası rakamlarının yüksek olduğu bir ülke açısından iş kazaları ve meslek hastalıkları büyük önem taşımaktadır. Çünkü iş kazasına uğrayan veya meslek hastalığına yakalanan kişiler açısından ortaya çıkan zararın tazmin edilmesi önem taşımaktadır ki bu noktada da karşımıza iş kazası ve meslek hastalıkları sigortası ve bu sigorta kolundan sağlanan yardımlar çıkmaktadır.

İş kazası ve meslek hastalığı sigortası dünyada ilk kurulan sigorta kollarındandır. Türkiye'de sistemli bir şekilde sosyal güvenlik sisteminin oluşturulması 1945 yılından itibaren gerçekleşmiştir. Türkiye'de de dünyada yaşanan gelişmeye benzer bir gelişme yaşanmış ve1945 yılında 4772 sayılı İş Kazaları, Meslek Hastalıkları ve Analık Sigortası Kanunu kabul edilmiştir (Güzel, vd, 2009; Tuncay ve Ekmekçi, 2011; Gerek, 2002; Alper, 2003). Günümüzde,2006 yılında kabul edilen 5510 sayılı Sosyal Sigortalar ve Genel Sağlık Sigortası Kanunu çerçevesinde *"Hizmet Akdiyle veya Kendi Adına ve Hesabına Bağımsız Çalışan Sigortalıların Tabi Olduğu Kısa Vadeli Sigorta Hükümleri"* başlığı altında iş kazası ve meslek hastalığı sigorta koluna ilişkin düzenlemeler yer almaktadır.

Bu çalışmamızda, iş kazası ve meslek hastalığı kavramları üzerinde durduktan sonra Türkiye'de iş kazası ve meslek hastalıklarının boyutları ortaya konacaktır. Daha sonra Türk sosyal güvenlik sistemi içinde iş kazası ve meslek hastalığı sigortası hakkında bilgi verilip Türkiye'de iş kazaları ve meslek hastalıkları konusunda sorunlar ve çözüm önerileri üzerinde durulacaktır. Sonuç kısmında da genel bir değerlendirme yapılacaktır.

2　İş Kazası ve Meslek Hastalığı Kavramları

2.1　İş Kazasının Tanımı

Dünya Sağlık Örgütü (WHO) iş kazasını, "önceden planlanmamış, çoğu zaman yaralanmalara, makine ve teçhizatın zarara uğramasına veya üretimin bir süre durmasına yol açan olay" olarak tanımlamaktadır. Uluslararası Çalışma Örgütü (ILO) ise iş kazasını, "belirli bir zarar veya yaralanmaya yol açan, önceden planlanmamış beklenmedik bir olay" şeklinde tanımlamaktadır (İş Sağlığı ve Güvenliği, 2012).

Doktrinde ise iş kazası,"sigortalının işveren otoritesi altında bulunduğu bir sırada gördüğü iş veya işin gereği dolayısıyla aniden ve dıştan meydana gelen bir etkenle onu bedenen veya ruhça zarara uğratan bir olay" olarak tanımlanmaktadır (Tuncay ve Ekmekçi, 2011).

5510 sayılı Sosyal Sigortalar ve Genel Sağlık Sigortası Kanunu (SSGSSK) m.13'de "İş kazasının tanımı, bildirilmesi ve soruşturulması" başlığı altında iş kazasının tanımı verilmekten çok hangi hal ve durumlarda meydana gelen olayın iş kazası sayılacağı düzenlenmiştir. SSGSSK m.13'e göre, "İş kazası

Sigortalının işyerinde bulunduğu sırada,

İşveren tarafından yürütülmekte olan iş nedeniyle sigortalı kendi adına ve hesabına bağımsız çalışıyorsa yürütmekte olduğu iş nedeniyle,

a) *Bir işverene bağlı olarak çalışan sigortalının, görevli olarak işyeri dışında başka bir yere gönderilmesi nedeniyle asıl işini yapmaksızın geçen zamanlarda,*

b) *Bu Kanunun 4'üncü maddesinin birinci fıkrasının (a) bendi kapsamında emziren kadın sigortalının, iş mevzuatı gereğince çocuğuna süt vermek için ayrılan zamanlarda,*

c) *Sigortalıların, işverence sağlanan bir taşıtla işin yapıldığı yere gidiş gelişi sırasında,*

meydana gelen ve sigortalıyı hemen veya sonradan bedenen ya da ruhen engelli hale getiren olaydır".

2012 yılında kabul edilen İş Sağlığı ve Güvenliği Kanunu (İSGK) m.3/g'de iş kazası, "İşyerinde veya işin yürütümü nedeniyle meydana gelen, ölüme sebebiyet veren veya vücut bütünlüğünü ruhen ya da bedenen engelli hale getiren olay" olarak tanımlanmıştır.

2.2 Meslek Hastalığının Tanımı

Doktrinde meslek hastalığı, *"belirli bir mesleğin (işin) ifası sonucu o mesleğin (işin) nitelik ve yürütüm şartların doğurduğu bir sakatlık veya hastalık"* olarak tanımlanmaktadır (Tuncay ve Ekmekçi, 2011). 5510 sayılı SSGSSK m.14/I'e göre meslek hastalığı, *"sigortalının çalıştığı veya yaptığı işin niteliğinden dolayı tekrarlanan bir sebeple veya işin yürütüm şartları yüzünden uğradığı geçici veya sürekli hastalık, bedensel veya ruhsal engellilik halleridir"*. 6331 sayılı İSGK m.3/l'demeslek hastalığı, *"mesleki risklere maruziyet sonucu ortaya çıkan hastalık"* olarak tanımlanmıştır

Meslek hastalığının tanımından da anlaşıldığı üzere meslek hastalığında tekrarlanan bir durum söz konusudur. Zaten bu durum, iş kazası ile meslek hastalığı arasındaki temel farktır. Çünkü iş kazası aniden, beklenmedik şekilde meydana gelirken meslek hastalığında tekrarlanan bir durum söz konusu olmaktadır (İş Sağlığı ve Güvenliği, 2012). Mesela, inşaatta çalışan işçinin düşmesi sonucunda kolunun kırılmasında aniden, birdenbire meydana gelen bir durum söz konusudur. Ancak, kömür madeninde çalışan işçinin ise sürekli olarak kömür tozu solumasına bağlı olarak solunum yollarıyla ilgili bir hastalığa yakalanmasında ise tekrarlanan bir duruma bağlı olarak ortaya çıkan bir hastalık söz konusudur.

3 Türkiye'de İş Kazaları ve Meslek Hastalıklarının Boyutları

Sanayileşme sürecinde bulunan tüm ülkelerde iş kazaları önemli toplumsal sorunların başında yer almaktadır (Güzel, vd, 2009). Ne yazık ki Türkiye'de de iş kazaları önemli boyutlara ulaşmıştır. Sosyal Güvenlik Kurumu (SGK) tarafından iş kazası ve meslek hastalıklarına ilişkin istatistikler her yıl yayınlanmaktadır. SGK tarafından en son yayınlanan istatistikler, 2011 yılı istatistikleridir. Bu nedenle çalışmamızda, en yeni veri olarak 2011 yılı verilerini kullanacağız.

SGK tarafından yayınlanan istatistikleri incelediğimiz zaman bazı çarpıcı sonuçlar karşımıza çıkmaktadır. Yukarıdayer alan tablo 1 ve tablo 2'ye göre 2011 yılında toplam 69.227 iş kazası meydana gelirken meslek hastalığını rakamı toplamda 697'dir. İş kazası ve meslek hastalıkları rakamlarının büyüklüğü ülke ekonomisine işgücü, üretim ve kazanç kaybı olarak yansımaktadır (Tuncay ve Ekmekçi, 2011). Tabloları incelediğimiz zaman iş kazaları rakamları ile meslek hastalıkları rakamları arasında büyük bir fark olduğu göze çarpmaktadır. Ancak, bir ülkede iş kazası rakamları bu kadar yüksek iken meslek hastalığı rakamlarının bu kadar düşük olması mümkün değildir.

YAŞ GRUPLARI	2010			2011

***Tablo 2:** Meslek Hastalıkları Vakalarının Yaş Gruplarına ve Cinsiyete Göre Dağılımı (**Kaynak**: Sosyal Güvenlik Kurumu İstatistik Yıllığı, 2011)*

Türkiye'de iş kazası ve meslek hastalığı sigorta kolu, ilk kurulan sigorta kollarındandır. Çok sayıda kişinin sigorta yardımlarından yararlanabilmesini sağlamak amacıyla kapsam geniş tutulmuştur. Aşağıda göreceğimiz gibi sigortalının işyerinde bulunduğu sırada başına gelen her olay SSGSSK'ya göre iş kazası sayılmaktadır. Mesela, işçi işyeri bahçesinde öğle tatili sırasında düşer ve kolu kırılırsa bu durum SSGSSK'ya göre iş kazasıdır. Dolayısıyla, iş kazası sayılmaması gereken bazı durumlar Kanun anlamında iş kazası sayılmakta ve istatistiklerde yer almaktadır. Tabi işin bir de diğer yönü bulunmaktadır. Türkiye kayıt dışı çalışma oranının yüksek olmasına bağlı olarak iş kazası sayılması gereken bazı durumlar da SGK'ya iş kazası olarak bildirilmemekte ve buna bağlı olarak istatistiklerde yer almamaktadır.

Meslek hastalığı rakamlarının düşük olmasında ise sigortalıların başlarına gelen hastalığı meslek hastalığı olarak değerlendirmeyip normal bir hastalık olarak tedavi ettirmesinin etkisi görülmektedir. Çünkü meslek hastalığının kişi işte çalışırken ortaya çıkması şart değildir, işten ayrıldıktan belirli bir süre geçtikten sonra da ortaya çıkabilir. Çalışma Gücü ve Meslekte Kazanma Gücü Kaybı Oranı Tespit İşlemleri Yönetmeliği'nde yükümlülük süresi, 2 gün ile 25 yıl arasında düzenlenmiştir.

Verileri incelediğimiz zaman meslek hastalıkları ve özellikle iş kazası rakamlarının erkeklerde kadınlara kıyasla oldukça yüksek olduğu görülmektedir. Kadınların bazı ağır ve tehlikeli işlerde çalıştırılmasının mevzuatla yasaklanmış olması ve kadınların işgücüne katılım oranlarının erkeklere kıyasla daha düşük olmasının bu durumun altında nedenler arasında yer aldığını ifade edebiliriz.

Tablo 6: *İş Kazalarının Meydana Geldiği İş Saatlerine Göre Dağılımı (**Kaynak**: Sosyal Güvenlik Kurumu İstatistik Yıllığı, 2011)*

SGK istatistikleri incelendiğinde en çok iş kazasının kömür ve linyit çıkarılması faaliyet alanında olduğu görülmektedir. İnşaat işleri kendi içinde gruplara ayrılmakla birlikte inşaat işleri toplamına baktığımızda ikinci sırada, fabrika metal ürünlerinin üçüncü sırada olduğu görülmektedir. Meslek hastalıklarında ise metal cevheri madenciliği birinci sırada iken kömür ve linyit çıkarılması işinin ikinci sırada ve makine ve ekipman kurulumunun üçüncü sırada olduğu görülmektedir.

Türkiye'de işyerlerinin büyük ölçüde küçük ve orta ölçekli işyeri olmasına bağlı olarak işyerinde çalışan sigortalı sayısı açısından da bu işyerlerinde iş kazası oranlarının en yüksek olduğu görülmektedir. Çünkü bu işyerleri açısından alınacak önlemler maliyet unsuru olarak görülmekte, işverenler de genellikle sigortalılarla

birlikte çalışmalarından dolayı önlem almaktan ziyade bir kaza meydana geldiği zaman sonuçlarının giderilmesini düşünmektedirler.

İşyerlerinin büyümesine bağlı olarak çalışan sigortalı sayısı arttıkça işverenler iş kazası ve meslek hastalıklarını önlemek için yapacakları her türlü çalışmanın kendilerine olumlu olarak yansıyacağını düşünmekte ve bu konuda ciddi çalışmalar yapmaktadırlar.

SGK istatistiklerini incelediğimiz zaman geçmiş yıllarda küçük bir farkla iş kazası rakamları 1. saatte daha çok meydana gelmekle birlikte son yıllarda 8. saatte daha fazla olduğu görülmektedir.

4 Türk Sosyal Güvenlik Sisteminde İş Kazası ve Meslek Hastalığı Sigortası

4.1 Türkiye'de İş Kazası ve Meslek Hastalığı Sigortasının Gelişimi

Türkiye'de, Cumhuriyet'in ilanından 1945 yılına gelinceye kadar bir sosyal güvenlik sistemi oluşturulamamıştır (Güzel, vd, 2009). 1945 yılında 4772 sayılı İş Kazaları, Meslek Hastalıkları ve Analık Sigortası Kanunu kabul edilmiştir. 09.07.1945 tarihindede İşçi Sigortaları KurumuKanunu çıkarılmıştır.

1961 Anayasası'nda herkesin sosyal güvenlik hakkına sahip olduğu ifade edilmiştir (m.48). Bu çerçevede Türk sosyal güvenlik sistemi karma bir yapıya sahip olarak hem primli sistemi hem de primsiz sistemi kendi içerisinde barındıran bir çerçevede gelişme göstermiştir. Bu kapsamda 17.07.1964 tarihinde kabul edilip 01.03.1965 tarihinde yürürlüğe giren 506 sayılı Sosyal Sigortalar Kanunu ile çeşitli tarihlerde kabul edilmiş bulunan ve dağınık bir görünüm sunan sosyal sigorta kollarının kapsamı genişletilmiş ve bu Kanun bünyesinde toplanmıştır. 506 sayılı Kanunda iş kazası ve meslek hastalığı sigorta kolu yer almaktaydı.

1982 Anayasası'ndada Türkiye Cumhuriyeti'nin bir sosyal hukuk devleti olduğu ifade edildikten sonra *"Herkes sosyal güvenlik hakkına sahiptir. Devlet bu güvenliği sağlayacak gerekli tedbirleri alır ve teşkilatı kurar"* (m.60) ifadesi ile 1961 Anayasası'ndaki ilke tekrarlanmıştır.

Türkiye'de sosyal güvenlik sisteminde yaşanan sorunlara bağlı olarak sosyal güvenlik sisteminin revizyonu gündeme gelmiştir. Bu kapsamda önce farklı sosyal güvenlik kurumları, 2006 yılında Sosyal Güvenlik Kurumu Kanunu'nun kabul edilmesiyle Sosyal Güvenlik Kurumu'nun çatısı altında biraraya getirilmiştir. Aynı yıl 5510 sayılı Sosyal Sigortalar ve Genel Sağlık Sigortası Kanunu kabul edilmiştir. Bu şekilde geçmişte çalışma ilişkilerinin hukuki niteliğine bağlı olarak farklı sosyal güvenlik kanunlarına tabi olan tüm çalışanların sosyal güvenliği aynı kanun içerisinde düzenlenmiştir.5510 sayılı Kanunda *"Hizmet Akdiyle veya Kendi Adına ve Hesabına Bağımsız Çalışan Sigortalıların Tabi Olduğu Kısa Vadeli Sigorta Hükümleri"* başlığı altında iş kazası ve meslek hastalığı sigorta koluna ilişkin düzenlemeler yer almaktadır.

4.2 5510 sayılı Sosyal Sigortalar ve Genel Sağlık Sigortası Kanunu'nda İş Kazası ve Meslek Hastalığı Sigortası

5510 sayılı SSGSSK'da *"Hizmet Akdiyle veya Kendi Adına ve Hesabına Bağımsız Çalışan Sigortalıların Tabi Olduğu Kısa Vadeli Sigorta Hükümleri"* başlığı altında iş kazası ve meslek hastalığı sigorta koluna ilişkin düzenlemelere yer verilmiştir. 5510 sayılı Kanuna göre kısa vadeli sigorta kolları prim oranı, yapılan işin iş kazası ve meslek hastalığı bakımından gösterdiği tehlikenin ağırlığına göre %1 ila %6,5 oranları arasındadır. Bu primin tamamını işveren öder (m.81/I, c).

4.3 İş Kazasının Unsurları

5510 sayılı SSGSSK, 506 sayılı Sosyal Sigortalar Kanunu m.11'deki düzenlemeyi esas almıştır. 5510 sayılı Kanunda kısa vadeli sigorta kollarına ilişkin hükümler iş sözleşmesiyle çalışanlar ile bağımsız çalışanlar hakkında uygulanacaktır. Kamu görevlileri hakkında kısa vadeli sigorta kollarına ilişkin hükümlerin uygulanması söz konusu değildir (Güzel, vd, 2009). Bağımsız çalışanlar açısından da aşağıda göreceğimiz gibi sadece yürütmekte olduğu iş nedeniyle kazaya uğraması durumunda meydana gelen olay iş kazası sayılacaktır.

5510 sayılı SSGSSK m.13'de *"İş kazasının tanımı, bildirilmesi ve soruşturulması"* başlığı altında hangi hal ve durumlarda meydana gelen olayın iş kazası sayılacağı düzenlenmiştir. 5510 sayılı Kanunda yer alan hükümden hareketle iş kazasının unsurlarını şu şekilde sıralayabiliriz:

Kazaya uğrayanın 5510 sayılı SSGSSK anlamında sigortalı sayılması: SSGSSK m.4'de tüm sigorta kolları açısından sigortalı sayılanlar, m.5'de bazı sigorta kollarının uygulanacağı kişiler düzenlenmiştir. Kanunda m.6'da ise sigortalı sayılmayanlar sıralanmıştır. Dolayısıyla, SSGSSK'da anlamında bir olayın iş kazası sayılabilmesi için kişinin ya SSGSSK m.4 anlamında tüm sigorta kolları açısından sigortalı sayılanlar arasında yer alması ya da m.5 anlamında iş kazası ve meslek hastalığı sigorta kolunun uygulanacağı kişilerden olması gereklidir.

Sigortalının kazaya uğraması: Sigortalının başına gelen olayın SSGSSK anlamında iş kazası sayılması için Kanunda m.13'de sıralanan hallerden birinde meydana gelmiş olması gereklidir.

Sigortalının işyerinde bulunduğu sırada kazaya uğraması: SSGSSK, sigortalının işyerinde bulunduğu sırada uğradığı kazayı başka hiçbir koşul aramaksızın iş kazası olarak kabul etmiştir. Sigortalının başına gelen kaza olayının mutlaka iş saatleri içinde meydana gelmesi de şart değildir (Güzel, vd, 2009). Örneğin, öğle tatilinde

sigortalının başka bir işçi veya yabancı bir kişi tarafından öldürülmesi, yaralanması, işyeri bahçesinde koşarken düşmesi, sigortalının sarhoşken işyerinde kendini yaralayıp kan kaybından ölmesi iş kazasıdır (Güzel, vd, 2009; Tuncay ve Ekmekçi, 2011).

a) İşveren tarafından yürütülmekte olan iş nedeniyle sigortalı kendi adına ve hesabına bağımsız çalışıyorsa yürütmekte olduğu iş nedeniyle kazaya uğraması: Sigortalının, başına gelen kaza olayı işyerinde meydana gelmemiş olsa bile sigortalının işverenden aldığı talimat gereğince veya sigortalının işin gereği olarak işyeri dışına çıkması halinde uğradığı kaza iş kazasıdır (Güzel, vd, 2009). Örneğin, mali müşavirin yanında çalışan sigortalının işvereninden aldığı talimat gereğince vergi dairesine giderken trafik kazası geçirmesi sonucunda yaralanması iş kazasıdır.

b) Bir işverene bağlı olarak çalışan sigortalının, görevli olarak işyeri dışında başka bir yere gönderilmesi nedeniyle asıl işini yapmaksızın geçen zamanlarda kazaya uğraması: Sigortalının, işveren tarafından görevli olarak işyeri dışında başka bir yere görevli olarak gönderilmesi durumunda asıl işini yapmaksızın geçen zamanlarda başına gelen her olay iş kazası sayılacaktır. İşveren tarafından sigortalının toplantı için başka bir şehre gönderilmesi halinde boş zamanlarını normal bir yaşantı içinde kalmak içinde koşuluyla sinemaya, kahveye giderek değerlendirmesi ve bu sırada başına gelen olay iş kazası sayılacaktır (Güzel, vd, 2009).

c) Bu Kanunun 4'üncü maddesinin birinci fıkrasının (a) bendi kapsamındaki emziren kadın sigortalının, iş mevzuatı gereğince çocuğuna süt vermek için ayrılan zamanlarda kazaya uğraması: 4857 İş Kanunu m.74/son'a göre, kadın işçilere bir yaşından küçük çocuklarını emzirmeleri için günde toplam bir buçuk saat süt izni verilecektir. Kadın sigortalının emzirme izni süresi içinde başına gelen olay iş kazasıdır. Kadın sigortalının emzirme izni süresi içinde evine giderken kaza geçirip yaralanması iş kazasıdır.

d) Sigortalıların işverence sağlanan bir taşıtla işin yapıldığı yere gidiş gelişi sırasında kazaya uğraması: Sigortalıların, işveren tarafından sağlanan taşıtla işin yapıldığı yere getirilip götürülmeleri sırasında başlarına gelen olay iş kazası sayılacaktır. İşverenin taşıtın sahibi olması şart değildir. Taşıtın işverenin zilyetliği altında bulunması yeterlidir (Güzel, vd, 2009; Tuncay ve Ekmekçi, 2011).

Sigortalının bedensel veya ruhsal bir zarara uğraması: Sigortalının başına gelen olayın iş kazası sayılması için sigortalının bedensel veya ruhsal olarak zarara uğraması gerekir. Her türlü yaralanma, sakatlanma, kırık, yanık gibi dış organlarda meydana gelen arızalar olabileceği gibi beyin kanaması, iç kanama gibi iç organlarda meydana gelen arızalar da iş kazası olarak kabul edilecektir. Ayrıca akıl hastalığı, sinir bozukluğu gibi sigortalıyı ruhsal yönden etkileyen olaylar da iş kazası olarak kabul edilecektir (Sosyal Güvenlik Hukuku, 2013).

Kaza olayı ile sigortalının uğradığı zarar arasında illiyet bağının bulunması: Kaza olayı ile sigortalının uğradığı zarar arasında neden sonuç bağlantısının olması gereklidir. Yani olayların normal akışına ve genel hayat deneyimlerine göre gerçekleşen türden zararlı bir sonucu meydana getirmeye elverişli ya da böyle bir sonucun meydana gelmesini kolaylaştıran nedenin olması gereklidir. Yargıtay tarafından sigortalının iş kazası sonucunda yaralanıp hastanede tedavi gördükten sonra memleketine giderken trafik kazası geçirmesi sonucunda ölmesi iş kazası sayılmamıştır (Güzel, vd, 2009).

4.4 Meslek Hastalığının Unsurları

5510 sayılı SSGSSK'da yer alan düzenlemeden hareketle meslek hastalığının unsurlarını da şu şekilde sıralayabiliriz:

Hastalığa yakalananın 5510 sayılı SSGSSK anlamında sigortalı sayılması: Yukarıda iş kazasının unsurlarını incelerken de ifade ettiğimiz gibi SSGSSK anlamında bir hastalığın meslek hastalığı olarak kabul edilebilmesi için kişinin ya SSGSSK m.4 anlamında tüm sigorta kolları açısından sigortalı sayılanlar arasında yer alması ya da m.5 anlamında iş kazası ve meslek hastalığı sigorta kolunun uygulanacağı sıralananlardan olması gereklidir.

Sigortalının bedensel veya ruhsal bir zarara uğraması: Sigortalının yakalandığı hastalığın iş kazasında olduğu gibi sigortalıda bedensel veya ruhsal bir zarara yol açması gereklidir. Meydana gelen zarar, geçici olabileceği gibi sigortalının sakatlığına neden olabilecek şekilde sürekli de olabilir. Meslek hastalığı sadece vücudun bedensel bütünlüğünde değil ruh ve sinir sisteminde de özür meydana getirebilir (Güzel, vd, 2009).

Hastalık veya sakatlığın yürütülen işin sonucu olması: İş kazasının çalışılan işle ilgisi bulunması şart olmadığı halde meslek hastalığının işin yürütümü sonucunda ortaya çıkması gerekir (Tuncay ve Ekmekçi, 2011). Türkiye'de, meslek hastalığının belirlenmesi konusunda karma bir yöntem benimsenmiştir. Çalışma Gücü ve Meslekte Kazanma Gücü Kaybı Oranı Tespit İşlemleri Yönetmeliği'nde meslek hastalıklarının listesi yer almaktadır. Yönetmeliğe göre, listede yer alan bir hastalığın 2 gün-25 yıl arasında değişen yükümlülük süresi içinde sigortalıda ortaya çıkması halinde bu hastalık meslek hastalığı sayılacaktır. Ancak, listede yer almayan veya yükümlülük süresi geçtikten sonra ortaya çıkan bir hastalığın meslek hastalığı sayılması için Sosyal Sigorta Yüksek Sağlık Kurulu'na başvurulabilir. Taraflar, kurulun kararına karşı İş Mahkemesi'nde dava açabilirler (Sosyal Güvenlik Hukuku, 2013).

4.5 İş Kazası ve Meslek Hastalığı Sigortasından Sağlanan Yardımlar

İş kazasına uğrayan veya meslek hastalığına yakalanan sigortalıya 5510 sayılı SSGSSK'ya göre iş kazası ve meslek hastalığı sigortası kapsamında sigortalıya veya onun ölümü halinde hak sahiplerine sadece parasal yardımların yapılması düzenlenmiştir. Kanun kapsamında sigortalıya ve hak sahiplerine sağlanacak olan sağlık yardımları, genel sağlık sigortası içinde düzenlenmiştir.

4.6 Sigortalıya Yapılan Parasal Yardımlar

Sigortalıya yapılacak parasal yardımlar, geçici işgöremezlik ödeneğinin verilmesi ve sürekli işgöremezlik gelirinin bağlanmasıdır.

Geçici İşgöremezlik Ödeneği: İş kazası veya meslek hastalığı nedeniyle işinde geçici bir süre için çalışamayacağı hekim raporu ile saptanan sigortalıya, çalışamadığı (istirahatli olduğu) her gün için SGK tarafından yapılan parasal yardıma geçici işgöremezlik ödeneği adı verilmektedir. Geçici işgöremezlik ödeneği, iş kazası veya meslek hastalığı nedeniyle çalışamayan sigortalının uğradığı gelir kaybını kısmen telafi etmeye yöneliktir (Güzel, vd, 2009; Tuncay ve Ekmekçi, 2011; Uşan, 2009).

İş kazası geçiren veya meslek hastalığına yakalanan sigortalının geçici işgöremezlik ödeneğinden yararlanabilmesi için belirli süre sigortalı olması ve belirli süre prim ödemiş olması şartı aranmaz. İş kazası veya meslek hastalığı nedeniyle işgöremez duruma düşen sigortalıya Kurum tarafından yetkilendirilen hekim veya sağlık kurullarından istirahat raporu alınmış olması şartıyla her gün için geçici işgöremezlik ödeneği verilir (m.18/I, a). Kendi adına ve hesabına bağımsız çalışan sigortalıların, iş kazası veya meslek hastalığı nedeniyle geçici işgöremezlik ödeneğinden yararlanabilmeleri için genel sağlık sigortası dahil prim ve prime ilişkin her türlü borçlarının ödenmiş olması şarttır (m.18/II).

Geçici işgöremezlik ödeneği, işgöremezliğin ilk gününden itibaren sigortalıya tedavi ve istirahatin devam ettiği süre boyunca verilir. Hastalık sigortasında geçici işgöremezlik ödeneği, hastalığın üçüncü gününden itibaren verilmeye başlanırken iş kazası ve meslek hastalığı sigortasında işgöremezlik ödeneği hastalık sigortasından farklı olarak işgöremezliğin ilk gününden itibaren verilmektedir. 5510 sayılı Kanunda kendi adına ve hesabına bağımsız çalışmaları nedeniyle sigortalı sayılanların iş kazası veya meslek hastalığı halinde geçici işgöremezlik ödeneği, yatarak tedavi süresince veya yatarak tedavi sonrası bu tedavinin gereği olarak istirahat raporu aldıkları sürede ödenecektir (m.18/II).

Geçici işgöremezlik ödeneği, yatarak tedavilerde m.17'ye göre hesaplanacak günlük kazancın yarısı, ayakta tedavilerde ise günlük kazancın 2/3'si tutarındadır (m.18/III).

Sürekli İşgöremezlik Geliri: Sigortalının geçirdiği iş kazası veya yakalandığı meslek hastalığı sonucunda sürekli olarak çalışma hayatından çekilmesi söz konusu olabilir. Bu duruma yönelik olarak 5510 sayılı Kanunda sürekli işgöremezlik geliri düzenlenmiştir. Buna göre, iş kazası veya meslek hastalığı sonucu oluşan hastalık ve engellilik nedeniyle SGK tarafından yetkilendirilen sağlık hizmeti sunucularının sağlık kurulları tarafından verilen raporlara istinaden Kurum Sağlık Kurulu tarafından meslekte kazanma gücü en az %10 oranında azalmış bulunduğu tespit edilen sigortalı, sürekli işgöremezlik gelirine hak kazanacaktır (m.19/I). Meslekte kazanma gücü kaybı oranı, Çalışma Gücü ve Meslekte Kazanma Gücü Kaybı Oranı Tespit İşlemleri Yönetmeliği'ndeki cetvellere göre belirlenir.

Sürekli işgöremezlik geliri, sigortalının mesleğinde kazanma gücünün kaybı oranına göre hesaplanır. Sigortalı, meslekte kazanma gücünü %100 oranında kaybetmişse sürekli tam işgöremezlik, %10'dan %100'e kadar olan bir oranda kaybetmişse sürekli kısmi işgöremezlik hali söz konusudur (Tuncay ve Ekmekçi, 2011; Uşan, 2009). Sürekli tam işgöremezlik durumunda sigortalıya m.17'ye göre hesaplanan aylık kazancın %70'i oranında gelir bağlanır. Sürekli kısmi işgöremezlikte ise sigortalıya bağlanacak gelir, tam işgöremezlik geliri gibi hesaplanarak bunun işgöremezlik derecesi oranındaki tutarı kendisine ödenir. Örneğin, meslekte kazanma gücünü %30 oranında kaybetmiş olan bir kişiye tam işgöremezlik halinde ödenecek olan %70'in %30'u gelir olarak bağlanacaktır. Sigortalının başka birinin sürekli bakımına muhtaç olması durumunda ise gelir bağlama oranı %100 olarak uygulanır (m.19/III).

Sürekli işgöremezlik geliri, sigortalı iyileşinceye kadar ödenir, sigortalının durumunda iyileşme olmazsa hayatı boyunca verilir (Tuncay-Ekmekçi, 2011).

4.7 Hak Sahiplerine Yapılan Parasal Yardımlar

İş kazası veya meslek hastalığı sonucunda sigortalının ölmesi halinde geride kalan hak sahiplerine, 5510 sayılı Kanun çerçevesinde iş kazası ve meslek hastalığı sigortasından gelir bağlanması, cenaze ve evlenme ödeneğinin verilmesi şeklinde parasal yardımlar yapılır. Sağlık yardımları, genel sağlık sigortası kapsamında düzenlenmiştir.

Gelir Bağlanması: 5510 sayılı SSGSSKm.3'e göre hak sahibi, *"sigortalının veya sürekli işgöremezlik geliri ile malullük, vazife malullüğü veya yaşlılık aylığı almakta olanların ölümü halinde gelir veya aylık bağlanmasına veya toptan ödeme yapılmasına hak kazanan eş, çocuk, ana ve babasını"* ifade etmektedir (m.3/7).

İş kazası veya meslek hastalığı sonucunda ölen sigortalının hak sahiplerine iş kazası ve meslek hastalığı sigortasından gelir bağlanması için ölen sigortalının belirli süre sigortalı olması ve belirli süre prim ödemiş olması şartı aranmamaktadır. Ancak, 5510 sayılı Kanunanlamında kendi adına ve hesabına bağımsız çalışmaları

kapsamında sigortalı sayılanların hak sahiplerine gelir bağlanabilmesi için kendi sigortalılığından dolayı genel sağlık sigortası dahil prim ve prime ilişkin her türlü borçlarının ödenmiş olması gereklidir (m.20/IV).

İş kazası veya meslek hastalığı nedeniyle ölen sigortalının hak sahiplerine m.17 gereğince belirlenecek aylık kazancının %70'i Kanundam.55/II'ye göre güncellenerek m.34 hükümlerine göre gelir olarak bağlanır (m.20/I). İş kazası veya meslek hastalığı sonucunda ölen sigortalının dul eşine hesaplanacak gelirin %50'si gelir olarak bağlanır (m.34/I, a). İş kazası veya meslek hastalığı sonucunda ölen sigortalının çocuklarına hesaplanacak gelirin Kanundam.5/a, b, ehariç 5510 sayılı Kanun kapsamında veya yabancı bir ülke mevzuatı kapsamında çalışmaması veya kendi sigortalılığı nedeniyle gelir veya aylık bağlanmamış çocuklardan 18 yaşını, lise ve dengi eğitim görmesi halinde 20 yaşını, yüksek öğrenim yapması halinde ise 25 yaşını doldurmayanların veya Kurum Sağlık Kurulu kararı ile çalışma gücünü en az %60 oranında yitirip malul olduğu anlaşılanların veya yaşları ne olursa olsun evli olmayan, evli olmakla beraber sonradan boşanan veya dul kalan kızlarının her birine %25 oranında gelir bağlanır (m.34/I, c). Hak sahiplerine bağlanacak gelirlerin toplamı sigortalıya ait gelirin tutarını geçemez. Bu sınırın aşılmaması için gerekirse hak sahiplerinin gelirlerinden orantılı indirimler yapılır (m.34/son). Hak sahibi eş ve çocuklardan artan hisse bulunması halinde her türlü kazanç ve irattan elde etmiş olduğu gelirinin asgari ücretin net tutarından daha az olması ve diğer çocuklarından hak kazanılan gelir ve aylıklar hariç olmak üzere gelir ve/veya aylık bağlanmamış olması şartıyla ana ve babaya hesaplanacak gelirin toplam %25'i oranında gelir bağlanır. Ana ve babanın her birinin hissesi %25'i geçemez. Ana ve babanın 65 yaşın üstünde olması halinde ise artan hisseye bakılmaksızın ifade ettiğimiz şartlarla toplam %25'i oranında gelir bağlanır (m.34/I, d).

Cenaze Ödeneği:İş kazası veya meslek hastalığı sonucu veya sürekli işgöremezlik geliri almakta iken ölen sigortalının hak sahiplerine Kurum Yönetim Kurulu tarafından belirlenen ve Bakanlar Kurulu tarafından da onaylanan tarife üzerinden cenaze ödeneği ödenir. Cenaze ödeneği, sırasıyla sigortalının eşine yoksa çocuklarına o da yoksa ana babasına o da yoksa kardeşlerine verilir (m.37/III).

Evlenme Ödeneği: Sigortalının ölümü nedeniyle kendisine gelir bağlanmış olan kız çocuklarının evlenmeleri ve talepte bulunmaları halinde almakta oldukları gelirlerinin iki yıllık tutarı bir defaya mahsus olmak üzere evlenme ödeneği olarak peşin verilir. Evlenme ödeneği alan hak sahibinin gelirinin kesildiği tarihten itibaren iki yıl içinde yeniden hak sahibi olması halinde iki yıllık sürenin sonuna kadar gelir bağlanmaz (m.37/I).

5 Türkiye'de İş Kazaları ve Meslek Hastalıkları Konusunda Sorunlar ve Öneriler

Türkiye açısından iş kazaları ve meslek hastalıklarının ayrı bir öneminin olduğunu söyleyebiliriz. Çünkü son yıllarda iş kazası rakamlarında biraz düşme olmakla birlikte hala yüksektir. Bunun altında yatan birçok neden bulunmaktadır. Türkiye'de genelde yaygın olan üretimin, küçük ve orta ölçekli işletmelere dayanması etkili bir faktördür. Çünkü bu işyerleri açısından iş kazalarını ve meslek hastalıklarını önlemek için alınacak her türlü önlem, maliyet anlamına gelmekte ve işverenler bu maliyetten kaçınmak istemektedirler. Dolayısıyla Türkiye'de üretim yapısında, büyük ölçekli işyerlerinin sayısının artmasıyla işyerleri iş kazaları ve meslek hastalıklarının önlenmesi konusunda daha fazla çaba harcayacaklardır.

Türkiye'de istatiksel veriler ve araştırma sonuçlarından kaynaklanan bazı sorunlar da bulunmaktadır. Türkiye'de SGK tarafından yayınlanan istatistikler incelendiğinde, iş kazası rakamları ile meslek hastalıkları rakamları arasında uçurum olduğu görülmektedir. 5510 sayılı SSGSSK'da iş kazası olarak kabul edilen durumların kapsamı geniş tutulmuştur. Kayıt dışı çalışmaya bağlı olarak bazı iş kazaları ise istatistiklerde yer almamaktadır. Ayrıca, meslek hastalıklarının her zaman kişi işte çalışırken ortaya çıkmaması nedeniyle normal hastalık olarak tedavi edilmesi ve buna bağlı olarak meslek hastalıklarının istatistiklerinde yer almamasının da etkileri bulunmaktadır.

Türkiye'de iş kazaları ve meslek hastalıkları alanında sorunların çözümünde daha fazla eğitime önem verilmesi, konuyla ilgili herkesin bilinçlendirilmesinin sağlanması önem taşımaktadır. İş kazaları ve meslek hastalıkları konusunda mevzuatın eksikliğini söyleyebilmek mümkün değildir. Ancak, mevzuatın uygulanması konusunda yaşanan sorunlar bulunmaktadır (İş Sağlığı ve Güvenliği, 2012).

Sosyal güvenlik sistemi içerisinde iş kazası ve meslek hastalığı sigortasından sağlananlar yardımlar dışında kişilerin karşılanmayan zararları söz konusu ise bu durumda genel hükümler uyarınca dava açılabilir. Ancak, Türkiye'de ne yazık ki davaların çok kısa süre içinde sonuçlandırılması mümkün olamamaktadır. Bu nedenle, iş kazası veya meslek hastalığı sonucunda zarara uğramış olan sigortalının veya onun ölümü halinde hak sahiplerinin bazı gelişmiş ülkelerde olduğu gibi zararlarının tamamının sosyal güvenlik sistemi tarafından karşılanıp daha sonra olayın meydana gelmesinde kusuru olan taraflara rücu edilmesi şeklinde bir yolun izlenmesi daha isabetli olacaktır. Çünkü SGK, zaten her iş kazası veya meslek hastalığı olayında ilgili taraflara olayın meydana gelmesindeki kusurları oranında rücu davası açmaktadır. Bu nedenle, ifade ettiğimiz şekilde bir yolun izlenmesi sonucunda mahkemelerdeki iş yükünün azalmasının yanı sıra zarara uğrayan tarafların zararlarının daha kısa süre içinde giderilmesi söz konusu olacaktır (İş Sağlığı ve Güvenliği, 2006).

6 Sonuç

Sanayileşme sürecinde bulunan bütün ülkelerde, iş kazaları önemli toplumsal sorunların başında yer almaktadır. Çünkü meydana gelen iş kazası veya meslek hastalıklarının işçiler, işverenler ve devlet açısından ortaya çıkan maliyetleri bulunmaktadır. İşçi açısından iş kazası veya meslek hastalığı sonucunda çalışma gücünün veya meslek kazanma gücünün kaybı veya azalması söz konusu olmakta ve buna bağlı olarak gelirin kaybedilmesi veya gelirin azalmasıyla karşılaşılmaktadır. Ayrıca, iş kazasına uğrayan ve meslek hastalığına yakalanan kişide bazı psikolojik ve ruhsal sorunların ortaya çıkması da söz konusu olmaktadır. İşveren açısından iş kazası veya meslek hastalığı sonucunda ortaya çıkan maliyetler tazminat ödenmesi, üretimde yaşanan kayıplar ve cezalar gibi daha çok parasal olmaktadır. Devlet açısından ise ortaya çıkan en önemli maliyet, yetişmiş insan gücünün iş kazası veya meslek hastalığı sonucunda kaybedilmesidir.Ayrıca, devlet açısından ortaya çıkan maliyetler alternatif maliyetler açısından da düşünülebilir. Dolayısıyla iş kazaları ve meslek hastalıkları, çalışma hayatının tüm tarafları açısından önem taşımaktadır

İş kazaları ve meslek hastalıklarının önlenmesi temel amaç olmakla birlikte meydana geldikten sonra ortaya çıkan zararın giderilmesi de büyük önem taşımaktadır. Bu konuda sosyal güvenlik sistemi devreye girmektedir. Nitekim, hem dünyada hem Türkiye'de iş kazası ve meslek hastalığı sigortası kabul edilen ya ilk sigorta olmuş ya da ilkler arasında yer almıştır. Türkiye'de ilk olarak 1947 yılında 4447 sayılı İş Kazaları, Meslek Hastalıkları ve Analık Sigortası Kanunu kabul edilmiştir. Son olarak sosyal güvenlik sisteminin revizyonu kapsamında çalışma ilişkilerinin hukuki niteliğine bağlı olarak farklı sosyal güvenlik kanunlarına tabi olanları tek bir kanunda toplayabilmek amacıyla 2006 yılında 5510 sayılı Sosyal Sigortalar ve Genel Sağlık Sigortası Kanunu kabul edilmiştir. 5510 sayılı Kanunda 2008 yılında yapılan değişiklikle kısa vadeli sigorta hükümlerinden hizmet akdiyle çalışan ve kendi adına ve bağımsız çalışanların yararlanması söz konusu olmuştur. Devlet memurlarının bu hükümlerden yararlanabilmesi mümkün değildir. 5510 sayılı Kanunda *"Hizmet Akdiyle veya Kendi Adına ve Hesabına Bağımsız Çalışan Sigortalıların Tabi Olduğu Kısa Vadeli Sigorta Hükümleri"* başlığı altında iş kazası ve meslek hastalığı sigortasından sigortalıya ve onun ölümü halinde hak sahiplerine sağlanacak olan para yardımları düzenlenmiştir. Sağlık yardımları, genel sağlık sigortası kapsamında düzenlenmiştir.5510 sayılı Kanunda iş kazası sayılan durumlar düzenlenmiş ve meslek hastalığının tanımı verilmiştir. Bir olayın 5510 sayılı Kanun anlamında iş kazası veya meslek hastalığı sayılması, yapılacak yardımların hangi sigorta kolundan yapılacağının tespit edilebilmesi açısından önem taşımaktadır. Çünkü iş kazası ve meslek hastalığı sigortasından sağlanacak olan yardımlarda, kişilerin belirli süre sigortalı olması veya belirli süre prim ödemiş olması şartı aranmaksızın yardımlar sağlanmaktadır. 5510 sayılı Kanun anlamında sigortalıya sağlanan parasal yardımlar, geçici işgöremezlik ödeneğinin verilmesi ve sürekli işgöremezlik gelirinin bağlanmasıdır. İş kazası veya meslek hastalığı sonucunda sigortalının ölmesi durumunda ise geride kalan hak sahiplerine iş kazası ve meslek hastalığı sigortasından gelir bağlanması, cenaze ve evlenme ödeneğinin verilmesi şeklinde parasal yardımlar yapılmaktadır. Ayrıca, sigorta yardımları ile karşılanmayan zararların tazmini için zarara uğrayan sigortalının veya hak sahiplerinin genel hükümler uyarınca dava açma hakları da bulunmaktadır.

Türkiye açısından ayrı bir önem taşıyan iş kazası ve meslek hastalıklarının önlenebilmesi için ilgili taraflara önemli görevler düşmektedir. Türkiye'de üretim yapısının niteliğinin değişmesinin yanı sıra işverenlerin bu konuda yapacakları çalışmaları maliyet olarak değerlendirmemesi, iş kazaları ve meslek hastalıklarını önleme amacı taşıyan mevzuatın uygulanması veeğitim çalışmalarına her seviyede önem verilmesi yerinde olacaktır. Ayrıca, iş kazası veya meslek hastalığına maruz kalan sigortalının veya onun ölümü halinde hak sahiplerinin zararlarının tamamının SGK tarafından karşılanıp daha sonra kusuru bulunan taraflara rücu edilmesi şeklinde bir yolun izlenmesi hem mahkemelerin iş yükünü azaltacak hem de zarar uğrayanların zararlarının daha kısa süre içerisinde giderilmesini sağlayacaktır.

Türkiye'de Enflasyonun Uzun Hafıza Özellikleri ve Enflasyon Sürekliliği Analizi

The Long Memory Characteristics of Inflation in Turkey and Analysis of Inflation Persistence

Ph.D. Candidate Zühal Kurul (Hacettepe University, Turkey)
Ph.D. Candidate Pınar Sezer (Hacettepe University, Turkey)

Abstract

The aim of this paper is to illustrate the long memory characteristics of the Turkish inflation rates and to analyze the potential inflation persistence. Our empirical analysis is carried out for inflation series of Turkey during the period of 1980-2013. We used the Autoregressive Fractionally Integrated Moving Average (ARFIMA) model and find that inflation in Turkey has long memory properties when structural breaks are not taken into account. When structural changes are considered, the long memory properties show different and ambiguous results. The exogenously identified structural changes have altered the dynamic structure of the inflation process and weakened the long memory characteristics of the series.

1 Giriş

Bir ekonomide politika yapıcılar için politika yapım sürecinde fiyat dinamiklerini anlamak büyük öneme sahiptir. Para otoriteleri, ekonomideki fiyat gelişmelerini dikkate alarak olası enflasyonist baskılara karşı önlemler alma çabası içindedirler. Bu nedenle, günümüzde pek çok gelişmiş ve gelişmekte olan ülke enflasyonla mücadele etmek konusunda enflasyon hedeflemesi rejimini kullanmaktadır. Enflasyonla mücadelede uygulanan politikaların başarısı ise ekonomiyi etkileyen şokların ekonomiyi nasıl ve ne ölçüde etkileyeceğine bağlıdır. Bu tür şokların etkilerinin genellikle süreklilik eğilimi göstermesi temel amacı enflasyonla mücadele etmek olan politika otoritelerini hangi politikaların benimsenmesi konusunda dikkat etmeye zorlamaktadır.

Özellikle enflasyon hedeflemesi rejimi uygulayan ekonomilerde fiyat istikrarının sağlanması ve sürdürülmesi için ekonomide enflasyon sürekliliği olup olmadığının tespit edilmesi ve varlığı halinde büyüklüğünün belirlenmesi uygulanacak politikaların başarısında önemli bir role sahiptir.

Enflasyon sürekliliği, enflasyonun onu etkileyen bir şok sonrası temel düzeyine dönme hızı olarak tanımlanmaktadır (Willis, 2003). Bu anlamda enflasyon sürekliliği, enflasyonun şoka verdiği tepkinin hızıdır. Enflasyon onu etkileyen şoka hızlı tepki veriyorsa süreklilik derecesi yüksek olacaktır.

Enflasyon sürekliliğinin analizi ise enflasyon oranlarının zaman serisi özellikleri incelenerek yapılmaktadır. Uygun bir politika seçimi için enflasyon oranlarının davranışı büyük önem taşımaktadır. Çoğunlukla cari enflasyon oranlarının geçmiş enflasyon oranlarından önemli ölçüde etkilendiği düşünülür. Bir başka deyişle, enflasyonu etkileyen şokların enflasyon üzerinde kalıcı etkileri olduğu varsayılır. Bu durumun istatistiksel anlamı enflasyon serilerinin genellikle birim köke sahip zaman serilerine sahip olduğuna inanılmasıdır. Optimal politika kurallarının oluşturulmasında durağan olmayan serilerle çalışmak enflasyonla mücadele etmeyi politika yapıcılar için zorlaştırmaktadır.

2 Literatür

Enflasyon dinamiklerini inceleyen çalışmalar, Phillips (1958)'den bu yana fiyat ve ücret katılıklarından yola çıkarak yapılmıştır. Fiyat ve ücretlerdeki katılıklarının enflasyona üzerindeki etkilerinin belirlenmesi son dönemde önemli tartışma ve araştırma alanı oluşturmuştur. Bu bağlamda günümüze kadar fiyat oluşumu sürecini oluşturduğu düşünülen pek çok mekanizma öne sürülmüştür. Taylor (1979, 1980) ve Calvo (1983) tarafından ortaya konan yapışkan fiyat modelleri, iki önemli standart model olarak karşımıza çıkmakta ve uzun bir süre fiyat dinamikleri konusundaki tartışmalarında baskın oldukları gözlemlenmektedir.

Zaman içinde enflasyonun geçmiş enflasyonla olan bağlantısını ve bu anlamda süreklilik gösterip göstermediğini araştıran pek çok çalışma yapılmıştır. Fuhrer ve Moore (1995), Gali ve Gertler (1999), Christiano, Eichenbaum, ve Evans (2001), Gali, Gertler, ve L´opez-Salido (2001), Driscoll ve Holden (2004), Coenen ve Wieland (2005) gibi çalışmalar başlıca örneklerdir. Bu çalışmaların sonuçlarına bakıldığında enflasyon sürekliliğinin nedenleri, derecesi ve istikrarı konusunda tartışmaların ve buna bağlı olarak farklı sonuçların devam ettiği söylenebilir. Gali ve Gertler (1999), enflasyonun gecikmeli değerlerinin dâhil edildiği modellerin başında gelmekte ve Yeni Keynesyen Phillips eğrisinin nihai halini oluşturmaktadır. Modele dâhil olan gecikmeler enflasyonun geçmişe dayalı yapısını gösterirken Gali ve Gertler, çıktı açığı yerine reel marjinal maliyetleri dikkate almaktadır. Aynı konu üzerinde analiz yapan Fuhrer ve Moore (1995) ise enflasyonun geçmişe dayalı yapısını modellerken nispi ücret yapısını ele almaktadır. Bir diğer taraftan para politikasının

uzun dönemde enflasyon beklentilerini yönetme ve kontrol etme gücü ile enflasyon sürekliliği ilişkisini inceleyen çalışmalar da vardır. Sargent (1999), yüksek derecede enflasyon sürekliliğinin mevcut olması halinde para politikasının etkinliğinin azaldığını öne sürmektedir.

Tüm bu çalışmaların sonuçları enflasyonun yavaş uyarlanmasının ve süreklilik göstermesinin arkasında çeşitli etkenler yer aldığını göstermektedir. Bu etkenlerin en önemlilerinden biri, marjinal maliyetler ya da çıktı açığı gibi enflasyonun temel belirleyicilerinden olan değişkenlerde meydana gelen kalıcı dalgalanmalardır. Buna dışsal (extrinsic) süreklilik adı verilmektedir. Bir diğeri ise enflasyonun kendi geçmişine olan bağlılığıdır. Bu duruma da öze bağlı (instrinsic) süreklilik adı verilmektedir. Üçüncü olarak ise enflasyon beklentilerinin oluşumundan kaynaklı bir süreklilik olgusu söz konusudur. Enflasyon sürekliliğine neden olan bu üç kaynak da geleneksel Yeni Keynesyen Philips eğrisine dayandırılabilir. Buna göre cari enflasyon, kendi gecikmelerine, gelecek enflasyon beklentisine, çıktı açığına ve maliyet enflasyonu şoku gibi değişkenlere bağlı olacaktır (Altissimo vd., 2006).

Enflasyon sürekliliği konusundaki ampirik literatür, ABD ve pek çok OECD ülkesinde enflasyonun yüksek derecede süreklilik gösterdiğini ortaya koymaktadır. Pek çok iktisatçı için yüksek enflasyon sürekliliği artık kesin bir olgudur ve yukarıda bahsedilen nedenlerle pek çok ekonomi enflasyon sürekliliği yaşamaktadır. Bu çalışmaların yanında enflasyon sürekliliğinin derecesinin yapısal geçmişten kaynaklanmadığı bunun yerine para politikası rejimlerindeki şeffaflık ve istikrarla birlikte değiştiği yönünde görüşleri öne süren çalışmalar da vardır (Levin ve Pieger, 2002).

Enflasyon dinamiklerinin ampirik olarak incelenmesine gösterilen büyük ilginin nedenleri arasında öncelikle uluslar arası para politikaları ve rejimleri konusunda yaşanan değişiklik ve gelişmeler yer almaktadır. Pek çok ülke enflasyon hedeflemesi rejimi uygulamakta ve para politikalarının temel amacını düşük ve istikrarlı bir enflasyon olarak belirlemektedir. Avrupa'da parasal birliğin kurulması ve pek çok gelişmiş ülkenin anti-enflasyonist süreçlerden geçmesi bunun belirgin örnekleridir (Gadea ve Mayoral, 2005).

Enflasyonun nasıl modellemesi gerektiği konusunda ortak bir sonuca varılmadığı açıktır. Öncelikle enflasyon sürekliliği kesin ve açık bir biçimde nasıl ölçülecektir? Bu sürekliliğin değişip değişmediği nasıl analiz edilecektir? Burada temel alınması gereken konu, enflasyon sürekliliğinin parasal aktarım mekanizmasında ve para politikasının düşük ve istikrarlı enflasyon oranlarını yakalamasında büyük öneme sahip olduğudur.

Tüm teorik ve ampirik tartışmalara karşın literatür, savaş sonrası dönemde sanayileşmiş ülkelerde enflasyon sürekliliğinin yüksek olduğunu ortaya koymaktadır. Örneğin ABD için Pivetta ve Reis (2001); Euro bölgesi için O'Reilly ve Whelan (2004) ise Euro bölgesi için enflasyon oranlarının geçmiş değerlerinden oldukça fazla etkilendiğini ve enflasyonda yüksek derecede süreklilik olduğunu kanıtlamışlardır. Tüm bu sonuçların kullanılan istatistik ve ekonometrik yönteme duyarlı olduğunu belirtmek gerekmektedir. Bunun yanı sıra gözlemlenen enflasyon sürekliliği incelenirken ekonominin yapısı ve geçmişi dikkate alınmalıdır. Beklenmedik yapısal kırılmalar - enflasyon hedeflerinde değişiklik, farklı döviz kuru rejimlerinde değişiklik, temel fiyatları etkileyen şoklar vs.- enflasyon sürekliliğinin derecesini etkilemektedir (Gadea ve Mayoral, 2005).

Cechetti ve Debelle (2006), son dönemde enflasyon sürekliliğinin yavaşladığını öne sürmektedir. Özellikle 1990'lardan sonra enflasyonla mücadele dönemine girilmesi, pek çok gelişmiş ve gelişmekte olan ekonomide enflasyon hedeflemesine geçilmesi, merkez bankalarının güvenilirliğin ve şeffaflığının artması enflasyon sürekliliğinin düşmesine ön ayak olmaktadır.

3 Türkiye'de Enflasyon

Türkiye'de 1980-2013 dönemi farklı para politikası uygulamalarını ve enflasyon dinamiklerini içermektedir. 1980'lerin başından itibaren bakıldığında Türkiye ekonomisinin yüksek ve değişken enflasyonla karşı karşıya olduğu görülmektedir. Bu süre içinde pek çok fiyat istikrarını sağlamaya yönelik dezenflasyon politikası uygulanmış ancak enflasyon Türkiye ekonomisinin temel sorunlarından biri olarak kalmaya devam etmiştir (Akyüz ve Boratav, 2003). Şekilden görüleceği üzere 1980'lerin ilk yıllarında enflasyon %30'lara kadar gerilemiş olsa da 1980'lerin ortasında yeniden artma eğilimine girmiştir. 1994 yılındaki ekonomik krizle birlikte %120 seviyelerine kadar yükselen enflasyon, ancak bir sonraki yıl %80'lere kadar gerileyebilmiştir. Bu dönemde enflasyonla mücadele amaçlı birçok geniş çaplı yapısal önlem alınmış ancak yüksek ve sürekli enflasyon Türkiye ekonomisinin temel özelliklerinden biri olarak kalmıştır.

Türkiye'nin 1995 yılı sonrası enflasyon deneyimi, farklı para politikası uygulamalarını ve değişen enflasyon oranlarını yansıtmaktadır. 1995-2001 dönemi ele alınacak olursa, bu dönem parasal hedefleme ve döviz kuru hedeflemesinin uygulandığı dönemdir ve bu dönemde enflasyon yüksek ve istikrarsız olarak değerlendirilebilir. 2000 yılında uygulanmaya başlanan "Enflasyonu Düşürme Programı", enflasyonu 2000 yılı sonunda % 39'a kadar geriletmiş olsa da bu durum sürdürebilir olmamıştır. Bunun nedenlerin başında Türkiye ekonomisine özgü yapısal problemlerin giderilmemesi (bankacılık sektöründeki kırılganlıklar, yapısal reformların gerçekleştirilmemesi, artan faiz oranları vs.) gelmektedir. 2000 yılının Kasım ayında ciddi bir likidite sıkışıklığı yaşanmış ancak bu sıkışıklığı aşmak üzere alınan önlemler yetersiz kalmıştır. 2001 yılı başında faiz oranları hedeflenen düzeyin üzerinde gerçekleşmiş ve fon sıkışıklığı devam etmiştir. Siyasi gelişmelerin de etkisiyle aşırı

döviz talebinin önüne geçilememiştir. Merkez Bankası'nın müdahalesine karşın likidite sıkışıklığının önüne geçilemeyince 22 Şubat 2001 tarihinde döviz kuru hedefinden vazgeçilerek kur dalgalanmaya bırakılmıştır.
Şekil 1: Türkiye'de Enflasyonun Gelişimi

Yaşanan finansal kriz, ekonominin yapısal olarak daha güçlü olması gerektiğini göstermiştir. Yeniden yapılanma kapsamında bankacılık ve finans sektörü ile reel sektör arasında sağlıklı bir ilişki kurmak, kamu finansman dengesini güçlendirmek üzere değişiklik yapılmasına karar verilmiştir (TCMB, 2001). Kriz sonrası dönemde kriz öncesinde ve sonrasında uygulanan politikaların enflasyonist etkilerinin azaltılması için para tabanı operasyonel bir hedef olarak seçilmiş ve nihai amacın enflasyon hedeflemesi olmasına karar verilmiştir. Bu çerçevede enflasyon hedeflemesine geçiş için gerekli şartların sağlanması yönünde adımlar atılmıştır. İlk olarak TCMB Kanunu değiştirilmiş ve bu kanunda bankanın temel amacının fiyat istikrarını sağlamak olduğu belirtilmiştir. Banka, bu bağlamda araç bağımsızlığına sahip olmuş ve bankaya şeffaflık ve hesap verebilirlik sorumluluğu yüklenmiştir.

2002 yılından itibaren örtük enflasyon hedeflenmesine geçilmiştir. İlk üç yıl için enflasyon hedefleri sırasıyla %35, %20 ve %12 olarak açıklanmıştır. Bu hedeflere ulaşılması için seçilen araçlar para tabanı ve kısa vadeli faiz oranları olmuştur. TCMB örtük enflasyon hedeflemesi rejiminde enflasyon beklentilerinin daha iyi yönetilmesini amaçlamış ve kamuoyu ile daha şeffaf bir iletişim kanalı oluşturmaya çalışmıştır. 2003 ve 2004 yılları mali disiplinin sağlanması yönünde önemli gelişmelere tanıklık etmiştir. 2000 yılı itibariyle kamu kesimi borçlanma gereğinin milli gelire oranı %3,6'ya, kamu borç stoku ise % 90 seviyesinden %63,4'e kadar gerilemiştir. Aynı dönemde döviz kurunun enflasyon üzerindeki geçişkenliğinin azaldığı gözlemlenmiştir (Kara ve Öğünç, 2005). Sonuç olarak, 2004 yılında enflasyon 30 yıl sonra ilk defa tek haneli olarak gerçekleşerek uygulanan programa olan güveni arttırmıştır. 2005 yılı bir geçiş yılı olarak düşünülmüş ve merkez bankasının şeffaflığın ve kurumsal alt yapısının geliştirilmesi yönünde çalışmalar yapılmıştır. 2006 yılında açık enflasyon hedeflenmesine geçilmiştir. TCMB bu dönemde iletişim araçlarını yeniden düzenlemiş, düzenli olarak Enflasyon Raporu yayınlamaya başlamıştır. Enflasyon raporlarında enflasyonun hedeften sapması halinde bunun nedenleri detaylı olarak açıklanmış ve gelecek enflasyon beklentilerine, uygulanacak para politikasına dair sinyallere yer verilmiştir.

2007-2013 dönemi için genel olarak açık enflasyon hedeflemesi rejiminin çerçevesi ve ilkeleri değişmemiştir. Para politikası aracı olarak kısa vadeli faiz oranları temel alınmıştır. Bu döneme ait enflasyon gelişmeleri dikkate alındığında hedeflemenin uygulandığı ilk üç yılda enflasyon hedeflenen düzeyi aşmıştır. 2006 yılında uluslararası piyasalardaki dalgalanmalar ve petrol fiyatlarındaki artışlar enflasyon üzerinde etkili olmuştur. 2009 yılında enflasyon önceden belirlenen aralık içinde kalmış ancak tam anlamıyla hedeflere ulaşılamamıştır. 2008 yılının son çeyreğinde tüm dünyayı saran küresel krizin etkisiyle TCMB krizin tahribatını azaltmaya yönelik politikalar uygulamaya başlamıştır. TCMB, piyasaya likidite desteğini arttırmış ve hızlı faiz indirimlerine giderek piyasaların işlerliğini korumaya çalışmıştır. İç talebi ve enflasyonu canlandıracak olan bu tedbirle

birlikte dış kaynaklı ve yukarı yönlü baskılar enflasyonun hedeflenen düzeylerin üzerinde gerçekleşmesine neden olmuştur. Bu süreçte merkez bankası, fiyat istikrarını sağlama sorumluluğunun yanında finansal istikrarı sağlama sorumluluğunu da üstlendiğinden farklı politika araçlarıyla para politikasını sürdürmüştür.

Son dönemde enflasyon, belirlenen hedeflerin üzerinde olmakla birlikte % 6-8 aralığında hareket etmektedir. Açık enflasyon hedeflemesinin başladığı tarihten günümüze kadar geçen sürede enflasyonun görece düşük ancak hala hedeften yüksek ve belirli bir aralıkta direnç göstermesi tartışmaya açık bir konu olarak karşımızda durmaktadır. Küresel krizle birlikte yeni bir politika bileşimi uygulayan merkez bankasının enflasyon hedefinden ayrılmamakla birlikte döviz kuru ya da krediler ile ilgili birtakım eşik değerler gündeme getirmesi ve gerektiğinde müdahale edileceğine dair sinyaller vermesi yeni politika bileşiminin enflasyonun gelişimi konusunu biraz gölgede bıraktığı izlenimini vermektedir.

4 Yöntem

Enflasyon sürekliliğini ölçen modeller başlıca üç grupta toplanabilir. Bunlardan ilki istatistiksel-parametrik ölçülerdir. Bu ölçüler de kendi arasında (i) Sabit ortalamalı otoregresif modeller, (ii) değişken ortalamalı otoregresif modelleri, (iii) ARFIMA modelleri olarak ayrıştırılabilir. İkinci ve üçüncü grup modeller parametrik olmayan ve yapısal enflasyon modelleridir. Bu çalışmanın kapsamında olmadığı için parametrik olmayan ve yapısal modeller detaylı olarak incelenmemiştir. Kısaca değinmek gerekirse yapısal enflasyon modelleri, Yeni Keynesyen Phillips Eğrisine dayanmaktadır. Yapısal yaklaşım, yapısal parametrelerin tahminine dayalı bir enflasyon direnci ölçüsü bulmak için kullanılmaktadır. Çalışmanın bundan sonraki bölümünde çalışmamızın kapsamı gereği sadece parametrik yöntemler tanıtılmaktadır.

4.1 Sabit ortalamalı otoregresif modeller

Andrews ve Chen (2004), enflasyon sürekliliğini aşağıdaki denklemle bir AR(p) süreci oluşturarak modellemiştir.

$$\pi_t = \alpha + \sum_{i=1}^{p} \beta_i \pi_{t-i} + \eta_t \tag{1}$$

Bu modelde enflasyon sürekliliği enflasyonun geçmiş değerlerine bağlıdır. Bu modele dayanarak yaygın olarak kullanılan enflasyon sürekliliği ölçüsü denklemdeki otoregresif katsayılar toplamıdır.

$$\rho = \sum \beta_i$$

Marques (2004)'e göre enflasyon sürekliliği kavramı enflasyonun kendisini etkileyen bir şok sonrası uzun dönem ortalamasına dönme hızı ile de ilişkilidir. Bu nedenle enflasyon için daha uygun bir gösterim (1) denklemini hata düzeltme modeli olarak ortalamadan sapmalarını da gösterecek biçimde yeniden düzenlenmesidir :

$$\pi_t - \mu = \sum_{i=1}^{p-1} \varphi_i \Delta(\pi_{t-i} - \mu) + \rho(\pi_{t-1} - \mu) + \eta_t \tag{2}$$

Burada $\mu = \frac{\alpha}{1-\rho}$ enflasyonun koşulsuz ortalamasını göstermektedir.

Hata düzeltme modelinde ρ' nun mutlak değeri arttıkça enflasyon sürekliliğinin derecesi artar. Bir başka deyişle, daha fazla süreklilik gösteren enflasyon, ortalama düzeyine daha yavaş dönmektedir. Burada önemli nokta, sabit ortalama varsayımının yapılıp yapılamayacağına dair makul bir neden bulunmasıdır.

4.2 Değişken ortalamalı otoregresif modeller

Levin ve Pieger (2004), enflasyon serisindeki muhtemel kırılmaları dikkate almayan sabit ortalamalı otoregresif modellere dayalı süreklilik ölçüsünün enflasyon sürekliliğini olduğundan yüksek tahmin ettiği sonucuna ulaşmıştır. Bu nedenle ilgili modele yapısal kırılmaların kukla değişken yöntemi kullanarak eklenmesi gerektiğini savunmuşlardır.

Marques (2004), değişken ortalamalı otoregresif modeli ortalamalardan sapmaları da içerek biçimde bir hata düzeltme modeli olarak şu şekilde ifade etmektedir:

$$\pi_t - \mu_t = \rho(\pi_{t-1} - \mu_{t-1}) + \sum_{j=1}^{k-1} \delta_j \Delta(\pi_{t-j} - \mu_{t-j}) + \varepsilon_t \tag{3}$$

4.3 ARFIMA modelleri

Enflasyon sürekliliğini göstermek için kullanılan bir diğer parametrik yöntem ARFIMA modelleridir. ARFIMA süreci, kesirli bütünleşme temeline dayanmaktadır. ARFIMA aslen bir otoregresif hareketli ortalama süreciyle temsil edilen bir serinin bütünleşiklik derecesinin tam sayı olmadığı, kesirsel olarak ifade edildiği durumdur. Bir ARFIMA modelinde kesirsel bütünleşme terimi d herhangi bir reel sayı olabilmektedir.

Bir ARIMA modeli tahmin eden araştırmacı, bütünleşme parametresini bir tam sayı olarak seçmekte ve d. derecen farkı alınmış olan bu seriyi durağan bir süreç olarak tanımlamaktadır. Oysaki birim kök testlerinin bir serinin gerçekten durağan olup olmadığı konusundaki sonuçları şüphe uyandırabilmektedir. Geçmişine bağlılığı

yüksek olan pek çok zaman serisi, I(1) olmadığı halde I(0) olarak sınıflandırılmaktadır. ARFIMA modeli bu tipteki serileri göstermek için tasarlanmıştır.

Durağan olmayan I(1) bir zaman serisini etkileyen şok kalıcı olmaktadır. Oysa I(0) bir durağan seride söz konusu şok üstel azalma şeklinde etkisini azaltarak ortadan kalkmaktadır. Kesirsel bütünleşme yaklaşımı bu iki durum arasında kalan bir süreci ifade etmektedir. Bir zaman serisi d=0 durumunda kısa hafıza özelliği taşırken d'nin 0 ve 1 arasında değer alması seriyi etkileyen şok sonrasında serinin kendi ortalamasına döneceğini ancak bunun uzun bir süre alacağını göstermektedir. Bir başka deyişle böyle bir seri, uzun hafıza özelliği taşımaktadır. D=1 olması halinde şok kalıcı hale gelmekte ve seri kendi ortalamasına dönmemektedir. Kesirli bütünleşiklik durumu şokun önemli ölçüde kalıcı ancak uzun dönemde kendi ortalamasına döneceğini göstermektedir. AFIMA modelleri ile bu tür bir sürekliliğin daha iyi betimleneceği kabul görmektedir (Franta vd., 2007).

Bir ARFIMA(p,d,q) modeli şu şekilde gösterilebilir:

$$\phi(L)(1-L)^d(y_t - \mu) = \theta(L)u_t \tag{4}$$

$$\phi(L) = 1 - \sum_{j=1}^{p} \phi_j L^j \tag{5}$$

$$\theta(L) = 1 + \sum_{j=1}^{p} \theta_j L^j \tag{6}$$

Burada p ve q dereceden polinomların kökleri birim çemberin dışında kalmaktadır ve hata terimi

$$u_t \sim iid(0, \sigma^2)$$

Ayrıca kovaryans durağan ve kısa hafızaya sahip bir serinin otokorelasyon fonksiyonu

$$\sum_{j=-\infty}^{\infty} |\rho(j)| < \infty \tag{7}$$

Şeklindedir ve bu fonksiyon üstel azalma göstermektedir. Eğer d>0 ise otokorelasyon fonksiyonları yavaş ve hiperbolik bir azalma sergileyecektir. Buna göre otokorelasyon fonksiyonu

$$\sum_{j=-\infty}^{\infty} |\rho(j)| = \infty \tag{8}$$

Şeklinde olacaktır.

Eğer 0<d<0.5 ise seri durağandır, sonlu bir varyansa ve uzun hafızaya sahiptir. Bu seri ortalamasına geri dönecektir. Eğer 0.5<d<1 ise seri durağan değildir, sonsuz varyansa ve kalıcı bir hafızaya sahiptir. Bu seri de bir süre sonra ortalamasına geri dönme eğilimindedir fakat artık durağan değildir. d=0 durumunda ise kısa hafızaya sahip durağan ve ARMA modeline dönüştürülebilen bir süreç gözlemlenmiş olur.

Uzun hafızaya ya da sürekliliğe sahip olan bir seri, kısa hafızaya sahip bir ARMA sürecinin geometrik azalan otokorelasyon fonksiyonuna göre daha yavaş ve hiperbolik olarak azalan bir otokorelasyon fonksiyonuna sahiptir.

ARFIMA modeli bu özellikleriyle enflasyonun modellenmesinde yaygın olarak kullanılmaktadır. ARFIMA modelleri ile enflasyon sürekliliğinin yüksek derecede olup olmadığı birim kök olmaksızın tespit edilebilmektedir.

Bir ARFIMA modelinin tahmin edilmesinde ilk aşama kesirli bütünleşme teriminin (d) tahmin edilmesidir. Elde edilen d değeri ile birlikte uygun ARFIMA(p,d,q) modelinin etki tepki fonksiyonları hesaplanarak enflasyonu etkileyen şokun süreklik gösterip göstermediği ve bunun için ne kadar süre geçmesi gerektiği ortaya konabilir. Sürekliliğin yüksek olduğu d parametresinin 1'e yakın çıkmasından ve etki tepki fonksiyonlarının da 1'e yakın değerler vermesinden anlaşılabilir (Franta vd., 2007).

5 Veri, Yöntem ve Ampirik Bulgular

Çalışmanın bu bölümünde Türkiye'de enflasyon sürekliliğini incelemek ve enflasyon serisinin uzun hafıza özelliklerini belirlemek amacıyla yapılan zaman serisi analizleri yer almaktadır. Çalışmada 1980-2013 yıllarını kapsayan çeyrek dönemlik enflasyon verileri kullanılmıştır. Enflasyon verileri 2005=100 bazlı tüketici fiyat endeksinden elde edilmiştir ve OECD veri tabanından alınmıştır.

Çalışmada ele alınan dönemin en önemli özelliği, Türkiye'de enflasyonun yüksek ve kronik olduğu bir dönemden görece daha düşük ve istikrarlı olduğu bir döneme geçişini yansıtıyor olmasıdır. Bu dönem içinde Türkiye'de iki önemli ekonomik kriz (1994 ve 2001 yılları) meydana gelmiş ve bu krizler enflasyon serisinde belirgin kırılmalara neden olmuştur. Daha önce belirtildiği üzere çalışmanın amacı uzun yıllar yüksek enflasyonla yaşamış olan Türkiye ekonomisinde enflasyonun süreklilik gösterip göstermediğini anlamak ve enflasyona etki eden bir şok sonrasında enflasyonun uzun dönem değerine dönüp dönmediğini ya da bu şokun kalıcı olup olmadığını ARFIMA (Otoregresif Kesirli Bütünleşik Hareketli Ortalama) yöntemi ile test etmektir.

Enflasyon sürekliliğinin derecesini ölçmeye yönelik geleneksel modellerden sabit ortalamalı ve değişken ortalamalı otoregresif modellere bu çalışmada yer verilmemektedir. Bu çalışmada uzun hafıza özelliklerini incelenen enflasyon serisine gerekli test prosedürlerine geçmeden öncelikle serinin durağanlık özellikleri

incelenmiştir. Bu nedenle enflasyon serisine uzun hafıza konusunda sinyaller verebilecek olan durağanlık testlerinden geleneksel olan Augmented Dickey Fuller (ADF) ve Phillips-Perron (PP) testleri uygulanmıştır.

Değişken	Model	ADF	PP
Enflasyon (Düzey)	Sabit	-2,017 (2)	-2,239(4)
	Sabit ve trend	-2,354 (2)	-2,354 (4)
Enflasyon (1.fark)	Sabit	-5,430**(2)	-9,158**(4)
	Sabit ve trend	-5,394**(2)	-9,145**(4)

Tablo 1. Durağanlık Testleri. ** %5 düzeyinde anlamlılığı, ** %1 düzeyinde anlamlılığı göstermektedir.*
Parantez içindeki terimler ADF testi için Akaike Bilgi kriterine göre belirlenmiş optimal gecikmeleri, PP testi
için Newey West gecikmelerini göstermektedir.

Tablo 1'de yer alan ADF ve PP testlerinin sonuçlarına göre enflasyon serisinin düzey hali her iki model türünde de durağan değildir ve birim köke sahiptir. Serilerin birinci farkları alınarak aynı testler yapıldığında serilerin durağan hale geldikleri gözlemlenmektedir. Dolayısıyla enflasyonu etkileyen bir şok enflasyon üzerinde kalıcı etkiler bırakmaktadır. Bu sonuçlar enflasyonda süreklilik olgusunun var olduğunu basit anlamda göstermektedir ancak enflasyon serisinin uzun hafıza özelliği taşıyıp taşımadığı konusunda herhangi bir açıklama yapmaya olanak sağlamamaktadır.

Durağanlık testlerinin yanında söz konusu seriye ait otokorelasyon fonksiyonunun incelenmesi de uzun hafızanın varlığına dair sinyaller vermektedir. Grafik 1 enflasyon serisine ait otokorelasyon fonksiyonunu göstermektedir.
Grafik 1 Enflasyon serisine ait Otokorelasyon Fonksiyonu

Grafik 1'de görüleceği üzere seçilen yirmi gecikme boyunca enflasyon serisine ait otokorelasyonlar yavaş bir azalma göstermektedir. Literatüre göre bu tür bir yavaş azalma seyri gösteren serilerde uzun hafıza özellikleri olması muhtemeldir.

Geleneksel birim kök testlerinin enflasyonun birim kökü olduğuna dair kanıtlar sunmasına rağmen bu testlerin açıklama gücünün kesirli bütünleşme (fractional integration) yöntemine nazaran zayıf olduğu düşünülmektedir (Diebold ve Rudebusch, 1991). Bu nedenle enflasyonun ARFIMA (Otoregresif Kesirli Bütünleşik Hareketli Ortalama) yöntemi daha iyi modellenebileceği düşünülerek çalışmaya ARFIMA modelinin tahmini ile devam edilmiştir.

ARFIMA modellerinin tahmininde literatürde yaygın olan en yüksek olabilirlik tahmin yöntemi tercih edilmiştir. Benimsenen tahmin yönteminin yapısı gereği farklı ARFIMA(p,d,q) modelleri denenmiş ve bu modellere göre uzun hafıza parametresi olan "*d*" tahmin edilmiştir. Bu tahminler arasından istatistiksel olarak en anlamlı modeller seçilerek incelenmiştir.

İlk olarak ARFIMA(0,d,0) modeli tahmin edilmiş ve *d* parametresi 0,49 olarak bulunmuştur. Parametre tahmini %1 düzeyinde istatistiksel olarak anlamlıdır. Bulunan *d* değeri 0<0,49<0,5 olduğu için seri uzun hafıza özelliği taşımaktadır. Bu durumda enflasyon serisi kovaryans durağandır ve bir süre sonra ortalamasına geri

dönmektedir. Enflasyonda meydana gelen bir şok ARMA ya da ARIMA modellerine nazaran daha yavaş etkisini kaybetmektedir.

Örneklem: 1980Q1-2013Q1

Log olabilirlik: -461.7575				
Wald Chi2(2): 652.49				
P>Chi2: 0,000				

Tablo 3. ARFIMA(1,d,0) modelinin tahmini

Daha uzun gecikmelerin olduğu olan modeller arasında istatistiksel olarak anlamlılığı yüksek modellerden biri de ARFIMA(1,d,2) modelidir. Tablo 4'te görüleceği üzere, bu model yapısının da uzun hafıza özellikleri taşıyan sonuçlar ortaya koymaktadır. Bu modelin sonuçlarına göre *d* parametresi 0,42 olarak tahmin edilmiştir. Fark parametresi olan *d,* 0 ve 0,5 arasında yer aldığından enflasyon serisi ARFIMA (1,d,2) modeli için uzun hafıza özelliği taşımakta ve bir süre sonra ortalamasına geri dönmektedir.

Örneklem: 1980Q1-2013Q1				
Gözlem sayısı: 133				
Değişkenler	**Katsayılar**	**Standart hata**	**Z testi**	**P>z**
Sabit	45,7719	32,8868	1,39	0,164
d	0,4225	0,10468	4,04	0,000
AR_L1	0,5841	0,1318	4,36	0,000
MA_L2	0,9021	0,0442	20,37	0,000
Log olabilirlik: -448,6941				
Wald Chi2(3): 757,83				
P>Chi2: 0,000				

Tablo 4. ARFIMA(1,d,2) modelinin tahmini

Tüm bu sonuçların özetlendiği Tablo 5'e bakılırsa enflasyon serisinin 1980-2013 dönemi için uzun hafıza özelliği taşıdığı, serinin herhangi bir şok sonrası bir süre sonra kendi ortalamasına geri döneceği ancak meydana gelen şokun etkisinin daha yavaş ortadan kalkacağı sonucuna ulaşılmıştır.

Model ARFIMA (p,d,q)	*d* tahmini
ARFIMA (0,d,0)	0,49
ARFIMA (1,d,0)	0,29
ARFIMA (1,d,2)	0,42

Tablo 5. ARFIMA modelleri ve d parametre tahminleri

5.1 Uzun hafıza ya da yapısal kırılma

Bir önceki bölümde kesirli bütünleşme parametresini tahmin ettik. Tüm anlamlı ARFIMA (p,d,q) modelleri için *d* parametresinin, 0 ve 0,5 arasında yer aldığı ve enflasyon serisinin uzun hafıza özelliği taşıdığı görüldü. Ancak serideki olası yapısal kırılmalar dikkate alınmadığı zaman bu sonuçlardan hiçbir zaman emin olamayız.

Bu nedenle bundan sonraki amacımız olası yapısal kırılmalar altında enflasyon sersinin gerçekten uzun hafıza özelliği taşıyıp taşımadığının tespit edilmesidir. Bu çalışmada yapısal kırılmaların varlığı dışsal olarak belirlenmiş ve bu şekilde modele dahil edilmiştir. Olası kırılma tarihleri Chow yapısal kırılma testiyle sınanmış ve 1994 ve 2001 yıllarında serilerde kırılma olduğu sonucu doğrulanmıştır.

Bir zaman serisinin gerçek uzun hafıza özellikleri taşıyabilmesi için yapısal kırılmaların dikkate alınması gerekmektedir. Bunun için her bir alt örneklem ele alınarak d parametresi bu dönemler için ayrı ayrı tahmin edilebilir. Eğer her alt örneklem tüm seri ile aynı istatistiksel özellikleri taşıyorsa seri gerçek uzun hafıza özelliklerine sahip olacaktır.

Aşağıdaki tabloda 1994 ve 2001 yıllarında yaşanan kırılmalarla oluşan üç döneme ait çeşitli ARFIMA modellerine dayanan d parametresi tahminleri yer almaktadır.

Model	1980q1-2013q1 d	1980q1-1993q4 d_1	1994q1-2000q4 d_2	2001q1-2013q1 d_3
ARFIMA(0,d,0)	0,49*	0,49*	0,46*	0,49*
ARFIMA(1,d,0)	0,29*	0,34*	0,12	0,40
ARFIMA(1,d,2)	0,42*	0,20*	0,05	0,32

Tablo 6. *Yapısal Kırılmalar ve d Tahmini* *İlgili katsayının %5 düzeyinde istatistiksel olarak anlamlı olduğunu göstermektedir.*

Tablo 6'de görüleceği üzere yalnızca ARFIMA (0,d,0) modeli için her bir ayrı alt örneklemde enflasyon uzun hafıza özelliği taşımaktadır. Diğer iki modelde ise yapısal kırılmalar dikkate alındığında d parametre tahmini 1994-2000 ve 2001-2013 dönemlerinde istatistiksel olarak anlamlı değildir ve uzun hafıza özelliği göstermemektedir. Bu sonuçlara göre Türkiye'de enflasyonun yüksek ve kronik olduğu 1980-1994 dönemi enflasyondaki sürekliliğin ve uzun hafızanın belirgin olduğu bir dönemdir. Örneklemin bütünü için geçerli olduğu düşünülen uzun hafıza özellikleri yapısal kırılmaların dikkate alınmasıyla bazı model tipleri için ortadan kaybolmaktadır. Sonuçların model spesifikasyonuna göre değiştiği gözlemlendiğinden bu tür sonuçların dikkatle değerlendirilmesi gerekmektedir. Buradan çıkarılabilecek sonuç, yapısal kırılmaların varlığında enflasyonun ortalamasının değişebileceği ve uzun hafıza özelliklerinin zayıflayabileceğidir. Yapısal kırılmaların içsel olarak sınandığı bir modelde sonuçların daha güvenilir olacağı düşünülmektedir.

6 Sonuç

Bu çalışmada Türkiye'deki enflasyonun uzun dönem özelliklerinin ve sürekliliğinin incelenmesi için 1980-2013 dönemindeki gelişimi ele alınmıştır. Çalışmanın ampirik bulguları öncelikle ekonomideki yapısal kırılmalar dikkate alınmadığında Türkiye'de enflasyonun uzun hafızaya sahip olduğunu göstermektedir. Buna göre enflasyon kendisini etkileyen bir şok karşısında yavaş tepki veren, geçmiş değerlerine uzun dönem bağlılığı olan ancak nihayetinde ortalamasına dönen bir sürece sahiptir. Dışsal olarak seçilen yapısal kırılmalar dikkate alındığında, 1980-1994 dönemi enflasyonda sürekliliğin ve uzun hafızanın olduğuna işaret etmektedir. 1994-2000 ve 2001-2013 dönemlerinde enflasyon uzun hafıza özelliği taşımamaktadır. Dolayısıyla son dönemde Türkiye'de enflasyon görece düşük ve istikrarlı olmanın yanında büyük ölçüde geçmiş dönem değerlerine bağlılığı zayıf bir yapı sergilemektedir.

Enflasyon Hedeflemesi Yaklaşımı: Türkiye'deki Uygulama Sürecinin Değerlendirilmesi

Inflation Targeting Approach: An Evaluation of the Application Process in Turkey

Assoc. Prof. Dr. Serdar Öztürk (Nevşehir University, Turkey)

Asst. Prof. Dr. Ali Sözdemir (Cumhuriyet University, Turkey)

Özlem Ülger (Nevşehir University, Turkey)

Abstract

As a result of many countries don't provide the achievement as regards the satisfaction of the price stability between 1970 and 1990, the other targets and the stability programs aimed at these targets were put away and price stability as a point target was put forward in this process. In this context, inflation targeting approach has been formed as providing price stability and the fight against the inflation after 1990s. The first application of inflation targeting approach by the New Zealand in 1990 affected The Central Bank of Republic of Turkey (CBRT), because of positive impacts on many countries such as developing and developed countries. The results of Inflation targeting approach that has been applied by many countries following New Zealand's experience are positive. Thus, CBRT explained to take place inflation targeting of the point target in monetary policy at the beginning of 2002. Because Turkey don't provide with the application set of the preconditions for this approach, CBRT decided to remove the elements that is restricting monetary policy and carried into practice "the implicit inflation targeting" until meeting this conditions. In the process of implicit inflation targeting approach, after the conditions related technical infrastructure was improved a new opinion, The CBRT announced to practice "the explicit inflation targeting" approach by the beginning of 2006.

1 Giriş

Enflasyon hedeflemesi yaklaşımı, para politikasının performansını arttırmak amacıyla oluşturulmuş operasyonel bir rejimdir. Bu yaklaşımın temel amacı enflasyonla başarılı bir şekilde mücadele etmektir. Merkez bankasına herhangi bir etki altında kalmadan para politikasını oluşturma ve yönlendirme özgürlüğü verildiği için başarı ve başarısızlıkta birinci derecede sorumludur.

Yıllardır yüksek enflasyonla mücadele etmek zorunda kalan Türkiye, bunu başarmak için farklı stratejiler denemiş ancak kalıcı ve istikrarlı çözüm üretememiştir. Yaşanan başarısızlıkların devamındaki yeni arayışlar sonucu Türkiye Enflasyon hedeflemesi yaklaşımına geçme kararı almıştır. Ancak ülkedeki siyasi ve ekonomik istikrarsızlık yanında alt yapının yetersiz oluşu buna imkân vermemiş ve Türkiye 2001-2005 yılları arası bu stratejiye yönelik gerekli koşulları oluşturabilmek amacıyla yoğun bir çaba harcamıştır. 2006 yılından itibaren ise açık enflasyon hedeflemesi yaklaşımına geçtiğini ilan etmiştir.

Bu bağlamda, bu çalışmada önce enflasyon hedeflemesinin genel çerçevesi sonrasında ise Türkiye'nin enflasyon hedeflemesi yaklaşımına geçiş çabaları ele alınacak ve son olarakta enflasyon hedeflemesinin uygulama süresi ve bu güne kadarki sonuçları incelenecektir.

2 Enflasyon Hedeflemesi Yaklaşımının Genel Çerçevesi

Enflasyon, ekonomik, sosyal ve siyasal yapıyı tahrip eden ciddi bir sorundur. Ülkeler tarihsel süreçte, yıllarca bu sorunla mücadele etmeye çalışmışlar ve sürekli farklı yaklaşımlar geliştirmişlerdir (Debelle, vd, 1998). Fiyat istikrarının sağlanmasına yönelik olarak para politikasının yönetilmesinde döviz kuru çapasının veya bazı parasal büyüklüklerin ara hedef olarak kullanılmasındaki zorluklar ve istenilen sonuçların elde edilememesi pek çok gelişmiş ülkenin enflasyon hedeflemesi olarak bilinen bir para politikası yaklaşımını benimsemesine neden olmuştur (Masson, vd, 1997).

Bu yaklaşım, ilk kez 1990 yılında Yeni Zelanda tarafından uygulanmış onu 1991 yılında Kanada ve 1992 yılında da İngiltere takip etmiştir (Gosselin, 2007). İlk başlarda gelişmiş ülkeler tarafından uygulansa da elde edilen başarılar daha sonra gittikçe artan sayıda gelişmekte olan ülkenin de bu yaklaşıma yönelmesine yol açmıştır (Roger, 2009). Enflasyon hedeflemesi yaklaşımının bu kadar geniş kabul görmesinin nedeni doğru zamanda doğru yerde olmasıdır denilebilir (Frankel, 2012).

Enflasyon hedeflemesi yaklaşımında, para politikası kararlarının enflasyonun bazı ölçümleri için sayısal bir hedefin ya da hedef aralığının açık bir şekilde ilan edilmesi ve tüm para politikası araçlarının bu hedefin gerçekleştirilmesine yönelik olarak formüle edilmesi temel prensiptir (Dennis, 2010). Başarılı olabilmek için amaç bağımsızlığı bir zorunluluk değildir. Ancak merkez bankası kullanacağı araç setini oluşturmada özgür olmalıdır (Croce and Khan, 2000). Merkez bankası enflasyonun gelecekteki rotası hakkında tahminlerde

bulunur; tahmin hedef enflasyon oranıyla karşılaştırılır; tahminle hedef arasındaki fark para politikasının ne şekilde ayarlanması gerektiğini belirler. Bu yaklaşımı uygulayan ülkeler merkez bankasının uyguladığı diğer klasik yöntemlerle karşılaştırıldığı zaman, para politikasının tasarımının ve performansının daha etkili olduğuna inanmaktadırlar (Debelle, 1997). Eğer merkez bankasının gerçekte enflasyonu kontrol edememe olasılığı varsa o zaman enflasyon hedeflemesi yarardan çok zarar verebilir. Bu yaklaşıma geçişte merkez bankasının maliye politikasıyla koordinasyonu sağlayabilmeli ve piyasa eğilimlerini tersine çevirebilecek kabiliyete sahip olmalıdır (Sims, 2003).

Enflasyon hedeflemesi yaklaşımının temel unsurları şu şekilde ifade edilebilir (Mishkin, 1999):

a) Enflasyon için orta vadeli rakamsal hedeflerin halka ilanı

b) Enflasyon hedefinin başarılabilmesi için para politikasının uzun dönem birincil hedefi olarak fiyat istikrarının kurumsal olarak taahhüt edilmesi

c) Para politikası uygulayıcılarının hedefleri ve planları hakkında piyasalar ve halkla iletişim şeffaflığının arttırılması

d) Hedeflenen enflasyon oranının başarılmasında Merkez bankasının bağımsızlığının ve sorumluluğunun arttırılması

e) Para politikası araçlarının belirlenmesinde pek çok değişkeni kapsayan bilgi içerikli bir strateji oluşturulması

Enflasyon hedeflemesi yaklaşımı özellikle yüksek düzeyde şeffaflık ve hesap verebilirlik düzeyi ile karakterize edilebilir. Merkez bankası, uygulama sürecinde kamuoyunu basın ve yayın araçları yoluyla düzenli olarak bilgilendirmelidir (Svensson, 1998a). Bu merkez bankasının kredibilitesinin arttırılması açısından önemlidir. Aslında, tüm para politikası yaklaşımlarında merkez bankasının kredibilitesinin arttırılması düşüncesi vardır. Ancak bu, enflasyon hedeflemesi yaklaşımının en önemli unsurlarından birisidir (Bleich, vd, 2012).

Sayısal enflasyon hedefi bir nokta hedef şeklinde ya da hedef aralığı şeklinde olabilir. Uygulama sürecinde bazı ülkelerin nokta hedef bazılarının ise hedef aralığı kullandığı görülmektedir (Svensson, 1998b). Aralarında Türkiye'nin de bulunduğu bir takım ülkeler nokta hedef kullanmakta ancak bu hedef etrafında her iki yönde simetrik olarak belirsizlik aralığı belirlemektedir (Svensson, 2010a). Bu, hedef aralığıyla karıştırılmamalıdır. Belirsizlik aralığı enflasyonun nokta hedeften hangi büyüklükte sapma göstermesi durumunda merkez bankasının hesap verebilirlik mekanizmasının devreye gireceğini gösteren bir sınırdır.

Enflasyon hedeflemesi yaklaşımının, ülkelerin ekonomik performansları üzerine etkileriyle ilgili yapılan ampirik çalışmaların bu yaklaşımı destekler nitelikte sonuçlar ortaya koyabildiği söylenebilir. Ülkelerin enflasyon hedeflemesi yaklaşımına geçtikten sonra, enflasyon düzeyi, enflasyonda oynaklık ve faiz oranlarının düştüğü görülmektedir Mishkin, and Hebbel, 2007). Ancak, buna ilave olarak bu yaklaşımın, istihdam, üretim düzeyi ve gelir dağılımı etkisiyle ilgili gerçek maliyeti hakkında çelişkili tahminler ve farklı görüşlerde vardır (Epstein and Yeldan, 2008).

Para politikası stratejilerinin kural ya da takdir olarak sınıflandırılması para ekonomisinin tarihinde ve bu günkü tartışmalarda önemli bir konudur. Enflasyon hedeflemesi yaklaşımı, bazı iktisatçılar tarafından kurala bağlı bir politika olarak kabul edilip eleştirilse de önemli ölçüde politik takdir unsurları da içerdiği söylenebilir. Dolayısıyla, enflasyon hedeflemesi yaklaşımını "sınırlandırılmış takdir" olarak tanımlamak daha doğru olacaktır (Mishkin, 2001).

Enflasyon hedeflemesi yaklaşımının, 2007 yılında ortaya çıkan küresel finansal krize kadar başarılı bir uygulama süreci yaşadığı görülmektedir. Ancak, kriz sonrasında performansında ciddi yetersizlikler olduğu konusunda ithamlara maruz kalmıştır. Bu eleştiriler doğrultusunda gerçekleştirilen bazı değişiklikler sonrası yaklaşım daha esnek hale getirilmeye çalışılmıştır (Kuttner and Posen, 2011). Esnek enflasyon hedeflemesi olarak isimlendirilen bu yeni yorumda para politikası orta ve uzun dönem fiyat istikrarını gözetirken aynı zamanda reel ekonominin istikrarını da hedeflemektedir (Svensson, 2010b).

3 Enflasyon Hedeflemesi Yaklaşımının Türkiye'deki Uygulama Süreci

Ekonomi politikalarının nihai amacı ekonomik refahı arttırabilmektir. Ekonomik refahın arttırılabilmesi için sürdürülebilir istihdam artışının ve sürdürülebilir büyümenin sağlanabilmesi gerekir. Bunun gerçekleştirilebilmesi ekonomik istikrarın sağlanmasıyla mümkündür. Ekonomik istikrarın ön koşulu ise fiyat istikrarıdır. Fiyat istikrarı paranın alım gücünün korunması ya da ihmal edilebilir düzeyde düşük bir enflasyon oranı olarak tanımlanmaktadır. Türkiye yaklaşık 30 yıllık bir süreçte sürekli yüksek ve kronik enflasyon sorunuyla yani fiyat istikrarsızlığıyla mücadele etmek zorunda kalmış ve bu amaçla pek çok istikrar programı uygulamıştır.

Bu programlardan bir tanesi de 1999 yılında yürürlüğe giren ve IMF tarafından da desteklenen kur çapasına dayalı istikrar programıdır. Programda döviz kurunun nominal çapa olarak kullanılması planlanmış ve Türk Lirasının 1 ABD Doları ile 0,77 Euro'dan oluşan bir para sepetine endekslenmesi kararlaştırılmıştır. Ancak 2000 yılı Kasım ayında Türkiye'de meydana gelen krizde enflasyondaki inişin beklendiği kadar hızlı olmaması reel kurun değerlenmesine yol açmış ve yapısal önlemlerin hızlı bir şekilde gerçekleştirilememesi, uygulanan sıkı

para politikalarına karşın programa karşı güven kaybına neden olmuştur (Çelik, vd, 2006). Türkiye Cumhuriyet Merkez Bankası (TCMB), 22 Şubat 2001 tarihinde yapmış olduğu açıklamada programa olan güvenin kaybolmuş olması nedeniyle sürdürülmesinin mümkün olmadığını açıklamıştır (TCMB, 2004).

2001 Şubat dönemi sonunda yürürlüğe konulan ve 2002 yılı başında 2002-2004 dönemini kapsayacak şekilde revize edilen güçlü ekonomiye geçiş programı ile para ve kur politikasına yeni bir çerçeve çizildiği görülmektedir. Bu bağlamda, ilk önce,14.01.1970 tarihli ve 1211 sayılı TCMB Kanununun 4.maddesi 25.04.2001 tarih ve 4651'nolu kanunla "Bankanın temel amacı fiyat istikrarını sağlamaktır. Banka fiyat istikrarını sağlamak için uygulayacağı para politikasını ve kullanacağı para politikası araçlarını doğrudan kendisi belirler" şeklinde değiştirilerek fiyat istikrarının sağlanması ve sürdürülmesi tek ve öncelikli hedef haline getirilmiştir (HDTM, 2001).

Enflasyon hedeflemesi yaklaşımının gerek gelişmiş gerekse gelişmekte olan ülkelerdeki uygulama sonuçlarının olumlu olması TCMB'yi etkilemiş ve banka 2002 yılı başında para politikasında nihai hedefinin enflasyon hedeflemesine geçmek olduğunu açıklamıştır. Türkiye'de enflasyon hedeflemesi yaklaşımı, enflasyon hedeflemesine geçiş süreci(2002-2005), açık enflasyon hedeflemesine geçiş ve kriz öncesi uygulama süreci (2006 -2008) ve Küresel finansal kriz sonrası enflasyon hedeflemesi yaklaşımının yeniden yapılandırılması (2008 sonrası) olarak üç kısma ayrılabilir.

3.1 Enflasyon Hedeflemesine Geçiş Süreci: Örtük Enflasyon Hedeflemesi (2002-2005)

Türkiye 2001 yılında yaşadığı tarihinin en derin krizi sonrası, uzun yıllar kronikleşmiş bir sorun olan enflasyonu çözmek için enflasyon hedeflemesi yaklaşımı uygulama kararı almıştır. Ancak, bu yaklaşıma geçmek için gerekli koşulların Türkiye'de henüz sağlanamamış olması nedeniyle önce mali baskınlık ya da kamu borcu baskınlığı, dolarizasyon ve kurumsal yapının geçiş sürecine ihtiyaç duyması gibi para politikasını kısıtlayan unsurların ortadan kaldırılmasına ve bu sağlanıncaya kadar da " örtük enflasyon hedeflemesi" uygulanmasına karar vermiştir. Aksi takdirde yaklaşıma olan güvenin sarsılacağı açıktır. Bu doğrultuda, kısa vadeli faiz oranları enflasyonla mücadele de etkin bir araç olarak kullanılırken para tabanı da ek bir çapa olarak belirlenmiş ve bu yolla da enflasyon hedeflerinin güvenirliliğinin arttırılması amaçlanmıştır. 2002 yılı sonunda, emisyon, TL cinsinden zorunlu karşılıklar ve serbest mevduat toplamından oluşan para tabanının nominal milli gelir büyüme hızı kadar artması hedeflenmiştir (TCMB, 2002).
*Grafik 1: Hedefler ve Gerçekleşmeler 2002-2005, **Kaynak:** A. Hakan Kara ve Musa Orak, Enflasyon Hedeflemesi, TCMB, Ekonomik Tartışmalar Konferansı*

Bu bağlamda, kolay takip edilmesi, anlaşılması ve günlük yaşam maliyetlerini iyi ölçmesi nedeniyle enflasyon hedefi TÜFE olarak belirlenmiştir. Yılsonu hedefinin, 2003 yılı temel alınarak TÜFE'nin yıllık yüzde değişimi olması kararlaştırılmıştır. Bekleyişleri yönlendirme de etkili olması nedeniyle enflasyon hedefi nokta hedef olarak seçilmiş ve enflasyon hedefi makroekonomik öngörülerle uyumu arttıracağı için üç yıllık patika çerçevesinde TCMB ve hükümet tarafından birlikte oluşturulmuştur. Ayrıca hedef etrafında +\-2 (%40) şeklinde bir belirsizlik aralığı belirlenmiştir. Ancak belirsizlik aralığı herhangi bir hedef olarak algılanmamalıdır (TCMB, 2005).

Uygulanan örtük enflasyon hedeflemesi yaklaşımı çerçevesinde 2002-2005 yılları arasında enflasyon belirlenen hedeflerin altında gerçekleşmiştir (Grafik 1). Bu süreçte hedeflerin altında kalınması kamu da enflasyonda ki düşüşün süreceğine dair algılamaları da kuvvetlendirmiştir. Bu süreçte, dalgalı kur rejimine uyum artmış, mali disiplinin sürekliliği konusunda kaygılar hafiflemiş ve finansal piyasaların kırılganlığı azalmıştır. Ayrıca, merkez bankasının bağımsızlığı konusunda da önemli mesafe alınmıştır (TCMB, 2005).

Ekonomik programın uygulanmasıyla enflasyon dinamiklerinde kalıcı ve belirgin iyileşmeler sağlanmış ve kronik enflasyon süreci son bulmuştur. 2002 yılı başında %70'lerin üzerinde olan TÜFE 2005 yılı sonunda %7.7'ye gerileyerek belirlenen %8'lik hedefin altında gerçekleşmiştir. Hedeflenen enflasyon ile enflasyon bekleyişleri arasındaki fark olarak ifade edilen güvenirlilik açığının 2002 yılı başında 13.3 puan iken 2005 yılında 0.4 puana gerilediği görülmektedir (Grafik 2).
Grafik 2: *Güvenirlilik Açığı 2002-2005,* **Kaynak:** *Erdem Başçı, 74. Hissedarlar Genel Kurul Olağan Toplantısı Açış Konuşması, TCMB*

Fiyat istikrarından taviz verilmesi yoluyla sağlanan büyümenin kalıcı olması mümkün değildir. Fiyat istikrarını sağlamak sağlıklı ve kalıcı bir büyümenin önündeki öneli bir engeli kaldırmak anlamına gelmektedir. Enflasyonla mücadelede gösterilen kararlılık ve doğru araçların seçimi 2002-2007 yılları arasında Türkiye'nin dünyada en hızlı büyüyen ülkelerden birisi olmasını sağlamıştır (Tablo 1).

Dönemler	Ortalama Enflasyon	Ortalama Büyüme
1970-2001	%74.0	%3.0
2002-2006	%14.9	%7.5

Tablo 1: *Türkiye'nin Ortalama Enflasyon ve Ortalama Büyüme Oranları 1970-2006,* **Kaynak:** *Erdem Başçı, Merkez Bankası ve Para Politikaları, Karadeniz Teknik Üniversitesi ve Beykent Üniversitesi, TCMB*

3.2 Açık Enflasyon Hedeflemesi Yaklaşımı Uygulama Süreci: (2006-2008)

Uygulanan örtük enflasyon hedeflemesi yaklaşımı sürecinde altyapıyla ilgili olumsuzlukların ortadan kaldırılması ve elde edilen başarı sonrasında, açık enflasyon hedeflemesi yaklaşımına geçilebilmesi için gerekli koşulların oluştuğu yönünde bir fikir oluşmasını sağlamıştır. Bu doğrultuda, merkez bankası 2006 yılı başından itibaren açık enflasyon hedeflemesi yaklaşımına geçildiğini ilan etmiştir (TCMB, 2006). 5 Aralık 2005 tarihinde yayımlanan politika metninde enflasyon hedeflemesi yaklaşımının genel çerçevesi açıklanmış ve 2006 yılı sonu için yıllık hedef iki puanlık bir belirsizlik bandı içinde %5, 2007 ve 2008 yılları için %4 olarak belirlenmiştir (Grafik 3). Açık enflasyon hedeflemesi yaklaşımına geçilmesinden itibaren, enflasyon hedeflerinin, TÜFE'nin 12 aylık değişimi ile hesaplanan yılsonu enflasyon oranları üzerinden 3 yıllık bir dönem için Hükümetle birlikte "nokta hedef" olarak belirlenmesi kararlaştırılmıştır (TCMB, 2008).

Dünya ekonomisinde hızlı değişmelerin ve dalgalanmaların yaşandığı bu dönemde Türkiye Ekonomisi de bir dizi şokla karşılaşmış ve 2006 yılı Mayıs ayından itibaren uluslararası sermaye koşullarında Türkiye'nin de dâhil olduğu gelişmekte olan ülkeler aleyhine önemli değişmeler ortaya çıkmıştır. Bunun yanı sıra YTL'de meydana gelen yaklaşık %30'luk değer kaybı, gıda fiyatlarında kuraklıktan kaynaklanan sert artışlar ve finansal istikrarsızlıktan kaynaklanan güvensizlik ortamı Türkiye'de fiyatların yükselmesine ve enflasyon beklentilerinin oldukça üzerine çıkmasına neden olmuştur (TCMB, 2008).
Grafik 3: Enflasyon Hedefleri ve Gerçekleşmeler (2002-2015), **Kaynak: TCMB**

Önceden ilan edilen bu enflasyon hedeflerinin, yalnızca para politikasının kontrolü dışında ortaya çıkan unsurlara bağlı olarak hedeflerden çok büyük ve uzun süreli sapmalar olabileceğinin belirlenmesi ve orta vadeli hedeflerin anlamsız kalması durumunda değiştirilmesi söz konusudur. Böyle bir durumda yeni hedefler TCMB ve Hükümet tarafından birlikte belirlenecektir. Geçici şoklar, enflasyon hedeflerini değil enflasyon tahminlerini değiştirecektir. Doğru para politikası, fiyat istikrarının sağlanmasında gerekli şarttır, ancak yeterli şart değildir. Fiyat istikrarına ulaşabilmesi için maliye politikalarında disiplinin sağlanması ve sürdürülmesi esastır (TCMB, 2005). Bu bağlamda, Enflasyonun hedefle uyumlu çizginin üzerine çıkması nedeniyle TCMB enflasyonun hedeften sapmasının nedenleri ve tekrar hedefe yönelmesiyle ilgili tedbirler hakkında hükümete yazdığı bir mektupla açıklanmış ve bu sürece ilişkin değerlendirmeler kamuoyuyla paylaşılmıştır. Bütün bu uygulamaların para politikasının iletişimini güçlendirdiği ve beklentilerin şekillenmesinde de önemli rol oynadığı söylenebilir (TCMB, 2005).

TCMB, 2007 yılında da para politikasını enflasyon hedeflemesi yaklaşımı çerçevesinde uygulamaya devam etmiştir. İlk üççeyrekte enflasyon rakamları oluşturulan belirsizlik aralığının içerisinde kalmış, yılın son çeyreğinde de enflasyon ise kuraklık nedeniyle gıda fiyatlarında ortaya çıkan artış ve küresel konjonktürden kaynaklanan nedenlerden olumsuz etkilenmiştir (TCMB, 2007).

3.3 Küresel Finansal Kriz Sonrası Enflasyon Hedeflemesi Yaklaşımının Yeniden Yapılandırılması (2008 sonrası)

Dünyada, 2007-2008 döneminde ortaya çıkan finansal dalgalanmanın kaynağı, ABD'de 2007 yılı Ağustos ayında başlayan mortgage krizidir (Tong and Wei, 2008). Bu kriz, Büyük Depresyondan bu güne kadar görülen en büyük şok haline gelmiş, finansal sistemin merkezindeki kurumlar ve piyasalar üzerinde ciddi hasarlara neden olmuştur (IMF, 2008). 2008 yılından itibaren oldukça hızlı bir şekilde yayılan küresel finansal kriz, sert ve sürekli belirsiz bir küresel durgunluğa neden olmuş, başta sanayileşmiş ülkeler olmak üzere birçok ülke resesyona girmiştir (IMF, 2009). Küresel finansal krizin geçmişte yaşanmış krizlerden en önemli farkı, klasik bir finans krizi olmaması karmaşık ve yüksek hacimli türev ürünlerini kapsamasıdır. Türev ürünlerinin yüksek hacimli olması mali destek paketlerinin de daha önce görülmemiş boyutlara çıkarılmasına neden olmuştur (Yılmaz, 2009a). Bu süreç, küresel enflasyonda hızlı bir düşüşe neden olmuştur. Gelişmiş ülkelerin tüketici fiyat enflasyonundaki gerileme eğilimi daha belirgin olmakla birlikte, gelişmekte olan ülkelerde de benzer bir düşüş eğiliminin olduğu dikkat çekmektedir.

Yaşanan bu süreçte, Türkiye'nin de dâhil olduğu gelişmekte olan ülkelerde risk algılaması belirgin bir şekilde bozulduğu için risk primleri yükselmiştir. 2008 yılı süresince, yurtiçi enflasyon oranı yoğun bir şekilde küresel ekonomik gelişmelerden etkilenmiştir (TCMB, 2009). Yaşanan gelişmeler, daha önce ilan edilen enflasyon hedeflerinin değiştirilme gerekliliği ortaya çıkarmış ve TCMB 3 Haziran 2008 tarihli açık mektupla Hükümet'e enflasyon hedeflerinin yenilenmesini önermiştir. Bu doğrultuda, 2009-2011 dönemi için yeni enflasyon hedefleri 2009 yılı sonu için %7.5, 2010 yılı sonu için %6.5 olarak değiştirilmiş ve 2011 yılı sonu için ise %5.5 olarak belirlenmiştir. Enflasyon hedeflerindeki bu değişikliğin parasal sıkılaştırma ile birlikte uygulanmasının sonraki dönemde enflasyon beklentilerinin kontrol edilebilmesine önemli bir katkıda bulunduğu söylenebilir (Yılmaz, 2009b).

Küresel krizin etkilerinin 2009 yılının üçüncü çeyreğinde azalarak ta olsa devam ettiği görülmektedir. Dış talepte meydana gelen hızlı daralma ve sıkılaşan finansal koşulların etkisiyle iktisadi faaliyette belirgin bir gerilemenin ortaya çıktığı görülmektedir. Bu durum tüm dünya da olduğu gibi Türkiye'de de enflasyon oranları üzerinde aşağı yönlü bir baskı oluşturmuştur (Yılmaz, 2009c).

2010 yılında küresel ekonominin kademeli olarak toparlanmaya devam ettiği, bu sürecin gelişmiş ekonomiler de daha yavaş ve kırılgan bir görünüm arz ederken gelişmekte olan ekonomilerde hızlı ve istikrarlı biçimde gerçekleştiği görülmektedir (TCMB, 2010). Küresel finans krizi sonrasında birçok ülkede para politikası, fiyat istikrarına ilave olarak finansal istikrarı da dikkate almaya başlamıştır. Gelişmiş ülkeler krizle birlikte orta çıkan bilanço sorunlarını çözmeye odaklanırken, gelişmekte olan ülkeler sermaye akımlarını ve bununla ilişkili makro finansal riskleri yönetmeye yönelik olarak daha kapsamlı politika çerçeveleri oluşturmaya çalışmışlardır (TCMB, 2011). Yaşanan küresel kriz sonrasında ortaya çıkan gelişmelerin Merkez Bankalarını yeni politika arayışlarına ittiği söylenebilir. Bu çerçevede TCMB'de 2010 yılının sonlarından itibaren para politikası yaklaşımını yeniden yapılandırmıştır. Bu yeni çerçeve dâhilinde fiyat istikrarından ödün vermeden finansal istikrarı da dikkate alan bir yapı söz konusudur (Şekil 1). TCMB, birden fazla amaca yönelik olarak uygulanan para politikasının gerektirdiği araç çeşitliliğini sağlamak amacıyla, politika faizinin yanı sıra likidite yönetimi, gecelik borç alma ve borç verme faizleri arasında oluşan faiz koridorunun ve zorunlu karşılıkların bir arada kullanıldığı bir politika seti oluşturmuştur (Yılmaz, 2011a).

Şekil 1: *TCMB'nin Politika Araçları ve Amaçları,* **Kaynak***: A. Hakan Kara, Küresel Kriz Sonrası Para Politikası, Çalışma Tebliği*

TCMB, faiz koridoru sisteminin sağladığı esnekliği kullanarak dönem dönem ek parasal sıkılaştırmaya gitmiştir. Bunun nedeni para politikası duruşunun sıkı olmasını sağlamaktır. TCMB bu sıkılaştırma dönemlerinde miktar ihalesi ile yaptığı fonlamayı azaltarak piyasaya sağlanan likiditenin ortalama maliyetini ciddi bir şekilde arttırmıştır (TCMB, 2012).

TCMB enflasyon hedeflemesi yaklaşımında yapmış olduğu yeni düzenleme çerçevesinde TL zorunlu karşılıkların döviz cinsinden tutulabilmesi imkânının üst sınırını %40'tan %45'e yükseltmiştir. Bu düzenlemeyle TL zorunlu karşılıkların TL veya döviz cinsinden oluşturulmasındaki maliyet farkının azaltılması ve bankaların bunu likidite gereksinimleri doğrultusunda istedikleri şekilde kullanabilmeleri amaçlanmıştır (Başçı, 2012).

Merkez Bankası, 2012 yılında da enflasyon hedeflemesinin yanı sıra dalgalı döviz kuru rejimi uygulamasına devam etmiştir. Merkez Bankasının nominal ya da reel herhangi bir kur hedefi bulunmamaktadır. Diğer taraftan, dalgalı kur rejimi uyguluyor olsalar da ülkemiz gibi gelişmekte olan ekonomilerde güçlü döviz rezerv pozisyonuna sahip olmak karşılaşılabilecek iç ve dış şokların olumsuz etkilerinin giderilmesine ve ülkeye duyulan güvenin arttırılmasına büyük katkı sağlamaktadır. Bu nedenle döviz arzının döviz talebine kıyasla arttığı dönemlerde Merkez Bankası rezerv biriktirme amaçlı döviz alım ihaleleri gerçekleştirmektedir. 2002 yılından itibaren Merkez Bankası toplam 76,2 milyar ABD doları net döviz alımı gerçekleştirmiştir. Söz konusu dönemde Merkez Bankası'nın döviz rezervleri de 73,3 milyar ABD doları artış göstererek 19,9 milyar ABD dolarından 93,2 milyar ABD dolarına ulaşmıştır (Grafik 4) (TCMB, 2011).

2012 yılı hem makro finansal risklerin dengelenmesi anlamında hem de fiyat istikrarı konusunda önemli gelişmelerin sağlandığı bir dönem olmuştur. 2011 yılı sonunda %10.45 olan enflasyonun, maliyet ve talep baskılarının hafiflemesiyle, yıl boyunca aşağı yönlü bir eğilim sergileyerek bir önceki yıla göre 4,3 puan gerilediği görülmektedir. Bu dönemde orta vadeli enflasyon beklentilerinde de ciddi iyileşmeler görülmektedir. Yılsonu itibariyle enflasyon %6,2 düzeyinde gerçekleşerek %3-7 arasındaki belirsizlik aralığı içerisinde kalmıştır (Başçı, 2013a). 2013-2014 yılları için olduğu gibi 2015 yılı enflasyon hedefi de Hükümetle koordineli olarak %5 olarak belirlenmiştir (Grafik 3), belirsiz aralığı önceki yıllarda olduğu gibi her iki yönde +/- 2 olarak korunmuştur (Başçı, 2013b).

Türkiye kriz öncesi döneme göre daha yüksek kredi notu alan birkaç gelişmekte olan ülkelerden biri olmuştur. Farkı yaratan çeşitli etkenlerden bir bileşimi olsa da kilit unsur ülkemizde aşırı borçlanma yaşanmamış olmasıdır (Yılmaz, 2011b).

Brüt Döviz Rezervleri

(Bar chart with y-axis "Milyar ABD Doları" from 0 to 100, x-axis "Yıllar")

Yıl	Değer
2001	19.9
2002	28.1
2003	35.2
2004	37.6
2005	52.4
2006	63.3

4 Sonuç

Tarihsel süreçte, ülkelerin yaşadıkları ekonomik sorunların üstesinden gelebilmek ve istikrarlı bir gelişme çizgisi yakalayabilmek amacıyla kendilerine farklı dönemlerde farklı nihai hedefler belirledikleri ve bu nihai hedeflere ulaşabilmek içinde farklı politika setleri oluşturdukları görülmektedir.

Enflasyon hedeflemesi yaklaşımının, teorik olarak tüm koşullarının aynı anda sağlanabilmesi oldukça zordur. Ayrıca, ülkelerin ekonomik, sosyal ve siyasal yapılarındaki farklılıklar nedeniyle yaklaşıma uyumları, algılanmaları ve tepkileri de farklılıklar göstermektedir. Dolayısıyla, para politikası oluşturulurken tüm bunların dikkate alınması gerekir. Yaklaşım katı kurallar yerine küresel ve ülkelere özgü koşullarla şekillendirilmeli, beklenmedik olaylara tepki verebilecek ve kendisini uyumlaştırabilecek gerekli esnekliğe sahip olmalıdır.

Türkiye'nin 2006 sonrası yaşadığı deneyim enflasyon hedeflemesi yaklaşımına geçişte zamanlamanın büyük önem taşıdığını ortaya koymuştur. Özellikle yüksek enflasyondan düşük enflasyona geçiş sürecinde olan ve iktisat politikaları konusunda henüz yeterince itibar sağlamamış ülkelerde, enflasyon hedeflemesine geçişin ilk yıllarında olumsuz dışsal gelişmelerle karşılaşılması yaklaşımın güvenirliğinin tesis edilmesini geciktirebilmektedir. Karşılaşılan bütün bu güçlüklere rağmen, Türkiye'nin enflasyon hedeflemesi deneyimi, bu yaklaşımın oldukça esnek ve koşullara çabuk uyum sağlayabilen bir para politikası yaklaşımı olduğunu göstermektedir.

Özelleştirmenin Teorik Temelleri ve Türkiye'deki Sonuçları
Theoretical Foundations of Privatization and Results in Turkey

Assoc. Prof. Dr. Oğuz Bal (Kocaeli University, Turkey)

Abstract

Liberal economic order, businesses efficiency, productivity and profitability, competition for work is present in accordance with the principles defended private property order. As sistematical the main foundations of economic liberalism created by Adam Smith. Then, his prenciples developed by evolving Classic School, continued to the sovereignty until the Great Depression of 1929. I.World War took place in an environment dominated by Classical Ekol During, and after the war, from the principles of Classical School had not doubt. In 1936, John Maynard Keynes, the basic assumptions of the classical school refused. Following the II. World War; the 1950s and 1960s,sounds of the proponents of the liberal principles, was not strong as much as Keynesians. In the 1970s, emerged the world's most developed economy ABD, the high unemployment and inflation. Until 1973, wasn't confronted with a serious crisis. Content of the neo-liberal economic policies between 1975-1980 was adopted. Since the 1980s, heavily affecting the world economy started to implement neoliberal policies. Acceleration of privatization, taxes, discounts for large scale unemployment, increase monetary measures to keep inflation under control was applied. In this article, on eight chapters were created. In the chapters, concept, scope and content, historical background of privatization, investigated material causes that give rise to privatization, the basic bases of privatization, the ideological foundations of privatization. Privatization aims were discussed, and was given examples of countries is characterized by intense privatization. The general results and in Turkey latests cases were discussed.

1 Giriş

Bütün dünyada "Refah Devleti" olarak kabul edilen 1930-1973 arası dönemde ekonomiler Keynezyen ve Post-Keynezyen ekonomi politikalarıyla beslendi. Bu politikalar tamamen veya kısmen mülkiyet ve yönetimi kamuya ait olan Kamu İktisadi Teşebbüslerini oluşturdu. 1973 yılında yaşanan stagflasyon olgusu, mevcut ekonomi politikalarının çözüm yerine çözümsüzlüğe neden olduğunu ortaya koydu. Özelleştirme çözüm olarak sunulmuştu. Başta İngiltere ve ABD özelleştirmeyi uyguladılar. Daha sonra da serbest piyasa ekonomisinin var olduğu tüm ülkelerde uygulanmıştır. Kamunun piyasa koşullarındaki ağırlığının azaltılması ya da tamamen çekilmesi hem gelişmiş hem de gelişmekte olan ekonomilerde yeni problemlerin ortaya çıkmasına neden olmuştur. Sorun hala devam etmektedir. Bu sorunun temelindeki teorik tartışmalar pratiğe de yansımakta ve siyasal, sosyal anlaşmazlıkların da nedeni olmaktadır.

Türkiye ekonomisi dünyada gelişen uygulamalardan ayrı kalmamış, gerek teorik gerekse pratik alanda tartışmaların içerisinde yerini almıştır. Karar verme durumunda olan siyasal odaklar, uygulamaların teorik alt yapısını kavramak ve popülist yaklaşımlardan uzak durmak zorundadır.

Yapılan bu çalışmada öncelikle özelleştirmenin teorik çerçevesi, ekonomik düşünce açısından yeri, tarihsel alt yapısı, gerekçeleri, amaçları ele alındı. Dünyada gelişmiş ve gelişmekte olan ülke örnekleri verildi. Türkiye'deki özelleştirme uygulamalarının kronolojik seyri ve elde edilen kazanımlar ayrıca ele alındı. Çalışmada tümden gelim metodu uygulanmış, kurumsal verilerden ve istatistiklerden, daha önce yapılmış ampirik çalışmaların sonuçlarından yararlanılmıştır.

1.1 Kavramsal Bakış ve Ekonomik Sorunla İlişkisi

Özelleştirme kavramı, dayanağını özel mülkiyetten almaktadır. Özel mülkiyet; Kapitalist sistemin temel kavramlarından biridir. Bu kavram, ekonomi bilim dalı bağlamında; iktisâdî, mâlî, sosyal ve siyâsî sebeplerle millî ekonomi içerisinde kamunun iktisâdî faâliyetlerinin sınırlandırılması veya tamâmen ortadan kaldırılmasına yönelik uygulamaların bütünü olarak tanımlanır.

Ana mesele mülkiyeti kimin yöneteceği sorunudur. Bireyler yönetecekse" fayda ve karı maksimum, maliyet ve zararı minimum düzeyde tutma" demek olan rasyonellik ilkesi, baskın bir rol oynamaktadır. Klasik İktisat ekolünde devlet; bireylerin yapamadığı alanlarda söz sahibi olur. Özel mülkiyete dayanan bu sistemde, kamu mülkiyetinin varlığı da güçlüdür. Devlet vergi toplar, tasarruf eder, yatırım yapar, yatırımlar devletin tekelinde gelişir. Sorun burada ortaya çıkar: Devlet; birey veya firma gibi rasyonel davranabilir mi? Devlet kurumunun zararını yine devlet ödemektedir. Bu paraların kaynağı ise vergilerden, ihracat gelirlerinden, iç borçlanma senetlerinden, dış borçlardan oluşmaktadır. Vergilerden ödendiğinde, devletin sağladığı tasarruflara kara delik etkisi etki yapmaktadır. DİBS gelirlerinin kullanılması; iç borçlanmayı artırmaktadır. Dış borçlanma ise dışa bağımlılığı artırmakta ve dış finans kurumlarının kontrolüne girmeye neden olmaktadır. Kamu zararlarını gidermede, KİT lerin toplum ekonomisi için yük olduğu apaçıktır.

2 Özelleştirmenin Tarihsel Nedenleri

Kapitalizm, birincisi 1929'da, ikincisi ise 1970'lerin başında Avrupa'da gerileyen verimlilik ile karın düşmesinin sonucu yapısal kriz yaşamıştır. Keynes; 1929 bunalımından şiddetle etkilenen sistemin yeniden inşasında, sistem içi bir çözüm olarak kamu girişimciliği, talep doğurucu kamu harcamalarının arttırılması, devlet müdahalesini kabul ederek de kapitalizmin yaşayabileceğini savunan yeni bir liberalizm modeli önerilerini de, özendirmiştir. Keynes'in ortaya attığı politika önerileri 1929 Buhranı'ndan kurtulmak için birçok ülke tarafından uygulandı ve başarılı sonuçlar elde edildi. İkinci Dünya Savaşı'ndan sonra dünya ekonomisi, kısa dönemde yatırım, ekonomiye satın alma gücü zerk etti, efektif talebi ve dolayısıyla istihdamı artırdı. 20 yıl, Keynesyen politikalar sayesinde ülkelerin finansal yapıları büyük ölçüde güçlenmiş, bankacılık sektöründe iyileşme görülmüş, hükümetin milli hâsıla içindeki payını artmıştır, otomatik istikrar tedbirleri faaliyet hacmini genişletmiştir. Ekonomiyi canlandırmak için bütçe açığı verilmesine göz yumulmuş, altın standardını terk etmiş, enflasyonla mücadele uğruna ücret ve fiyat artışları üzerine getirilen sınırlandırmalar gibi kamu müdahalelerine ve teşviklere geçici bir çözüm olarak bakılmışsa da, ikinci dünya savaşından sonra kamu girişimciliği yine ön plana çıkmıştır. (Berberoğlu;1987)

2.1 Stagflasyon Sorunu ve Keynesyen Politikalarda Arayışlar

1970'lerde Keynesyen iktisadın açıklayamadığı stagflasyon olgusu ile karşılaşılmaktadır. (Yay, 1993) Stagflâsyon, büyüme hızının düştüğü, önemli düzeydeki işsizliğe karşın, fiyat ve ücretlerin arttığı bir ülkenin durumunu tanımlıyordu. Bu durum, Keynezyen Ekonomi'nin 1930'lu yıllardan beri süren eden hâkimiyetinin sona ermesine neden olmuştur.

Stagflasyona neden olan olgu; Tekel konumuna sahip ABD'li kapitalistlerin 1960'ların ortalarından itibaren dünya pazarlarında Alman ve Japon rakipleriyle karşılaşmalarıdır. Rekabet sonucu ABD tekel konumunu koruyamadı. Tekel fiyatları ve tekel karlarının uyardığı yatırımlar nedeniyle ortaya çıkan arz fazlaları özellikle ABD kaynaklı malların fiyatlarının düşmesi imalat sanayi mallarında arz fazlası yaratmış ve bu da ABD'de imalat sanayinde fiyatlar ve kar oranlarını aşağı çekmiştir.

İşsizlik sorununu düzeltmek ve talebi canlandırmak için, hükümetler Keynes'çi ekonomiyi denediler. Keynesyen politikalar, resesyon hallerinde para ve maliye politikasının aktif biçimde kullanılmasını, faizlerin düşürülmesini, kamu harcamalarının artırılmasını ve vergilerin indirilmesini içeriyordu. Bu yolla, talebin yeniden genişlemesi sağlanacak ve tüketim artışından başlayarak üretim artışına ve oradan yatırım artışına, büyümeye ve işsizliğin azalmasına yol açan bir hareketin devreye sokulması amaçlanıyordu. Ancak bu; enflasyonun daha da kötüye gitmesine yol açtı.

2.2 Keynesyen Politikalardan Çıkış Uygulamaları

15 Ağustos 1971'de ABD, Bretton Woods Antlaşması'ndan çekildiğini açıkladı. ABD sabit kurdan dalgalı kura geçti hem ABD dolarının hem de diğer para birimlerinin değeri düştü. Petrol fiyatları dolar üzerinden olduğu için petrol üreten ülkeler aynı fiyata daha az net gelir elde eder hale geldi. Bu duruma karşı OPEC yaptığı açıklamayla petrolün fiyatının dolara değil altın değerine göre hesaplanacağını belirtince 1970'lerdeki petrol şoku başlamış oldu. 1970'lerin başlarında yaşanan petrol kriziyle birlikte "Sosyal Devlet" anlayışının terk edilmesi son bulmuştur.

1970'lerde Chicago Ekolü'nce şekillendirilen özelleştirme kavramı, ABD'de Ronald Reagan'ın ve İngiltere'de Margaret Thatcher'in seçilmelerinden sonra teoriden pratiğe geçerek hızlanan muhafazakâr ekonomik teorinin 'Neo-Klasik' versiyonunun egemenliği altına giren iktisat politikaları, devlet denetimlerinin ve düzenlemelerinin kaldırılmasına ve finansal piyasaların küresel bütünleşmesine entelektüel destek sağlamasının yanında, uluslararası ticaretin neredeyse her yerde serbestleştirilmesine yol açtı.

Diğer ülkelerde de Keynes'çi politikalar, ciddi bir biçimde sorgulanmaya başlandı. Klasik iktisadın yeniden yorumlanmasına yönelik düşünce hareketleri gelişmiş, muhafazakâr iktidarların ideolojisini oluşturmuştur. 1989 yılında Berlin duvarının çökmesi, soğuk savaşın sona erişinin ve merkezi planlı ekonomiler ile kamu teşebbüslerinin yerini piyasa ekonomisi ve özel teşebbüse devrettiği yeni bir döneme geçiş sağlanmıştır. Komünist bloktan ayrılan Doğu Avrupa ülkeleri ve gelişmekte olan ülkeler de uygulanmaya başlanmıştır. Verimli ve etkin çalışmayan, ekonomide verimsiz yapılanma modelleri, önemli kamu açıkları, politikanın güdümündeki kamu teşebbüsleri, bunalımın suçlusu olarak görülmüştür.

3 Özelleştirmede Teorik Gerekçeler

3.1 Amaçlardaki farklılıklar - Ödül-maliyet sistemindeki farklılıklar

Kamu statükocudur. Geçmişin izleri ve politikası atılmamaktadır. Özel sektörde şirket politikaları etkendir. Kamuda iktidar; belirli hedeflere göre çalışır. Özel sektör innovasyona dayalı bir politika izler. Kamuda iktidar beklentileri ağırlıktadır ve her şey iktidardan beklenmektedir. Özelde performansı görme ve ödüllendirme imkanı çok daha büyüktür.

Kamuda işler tepeden inme ve bürokratiktir. Özel sektör her zaman karlılık adına ucuza eleman çalıştırma ister. Kamu sektörü kar gözetmez yalnızca ihtiyacı karşılamaya yönelik üretim sağlar.

Kamu kurumlarındaki düzenin tazelenmesi zaman almakta ve bazen imkânsız hale gelmektedir. Günümüzde özel sektörde birçok şirkette performansa dayalı ücretlendirme özel sektörce kabul görmeye başlamıştır. Uzmanlar aynı sistemin, kamu kesimine taşınmasını tartışmaya başlamıştır. Bir başka sorun da ücretin belirlenmesindeki kriterlerdir.

3.2 Mülkiyetin devredilebilmesi

Özel mülkiyet kavramı kapitalist sistemin en temel öğelerinden biridir. Birey, sahibi olduğu mal veya eşyayı; alır, satar, devreder, rehin bırakır, hibe eder, nakleder, şeklini değiştirir ve yok eder. İktisadi bakımdan bu çeşit radikal karar alma hakları tamamen mal veya eşyanın özel mülkiyete konu olmasından kaynaklanmaktadır. Özel mülkiyet hakkı, bireylere kaynakları kullanma ve devretmede büyük bir serbestlik tanımaktadır. Bu hakların sınırlar çerçevesinde kullanılması hukuk sisteminin vaz' edeceği bir husustur. İktisadi açıdan bu sınırları piyasa belirlemektedir. Özel mülkiyete konu olan mal veya eşyaya karşı bireyler daha rasyonel davranma eğilimindedirler. Özel girişimin sahipliği altındaki varlıklarda geliştirme ve servet biriktirme güdüsü, kamuda söz konusu olmadığı için rasyonel davranma da ona göre zayıftır. Daha rasyonel bir düşünce yapısı, kamu sektörü için düşünülmese de olur. Kamuda çalışmaların ve yöneticilerin yegâne kaygısı pozisyonlarını korumak olduğu için, ödül ve ceza sistemde itici bir güç olabilir. Özelde mülkiyette risk alma önemli bir husustur. Bu risk; iflas etme ve ödenmeme şeklinde ortaya çıkmaktadır. Kamuda bu risk sıfıra yakındır.

Politik karar alma sürecinin taraflarının ve özellikle bürokratların davranış kalıplarının, kamu ekonomisinin etkin işlemesi ve kamu çıkarının gözetilmesinde olumsuz bir durum yarattığı düşünülmektedir. Teoriye göre rekabetçi piyasalar, monopolist özellikler taşıyan piyasalara kıyasla çok daha etkin işlemektedir. Rekabetçi piyasalarda kaynakların kullanımı daha dikkatli davranılması ve maliyetlerin minimize edilmesinin zorunluluğu, bu piyasaların daha etkin bir şekilde çalışması sonucunu doğurmaktadır. (Leibenstein;1996)

3.3 Yönetim – mülkiyet ilişkisi

İnsanlığın var oluş tarihinden beri mülkiyet kavramı özel ve kamu olarak var olmuştur. Temel sorun, mülkiyeti kim ve nasıl yöneteceği sorunudur. Bir tarafta yönetilen diğer tarafta da yöneten kesim vardır. Yöneticilerin yönetim kabiliyetlerini ortaya çıkaran temel faktörlerden birisi de kişisel farklılıklardır. Kamu yöneticisi gücü, yetkilendirilme yöntemleri, kamu yararının önde tutulması, karar ve denetim mekanizmasının merkeze bağlı olması, risk alma eğiliminin düşük olması, bürokrasinin hâkim olması, başarısızlık sonunda doğan zararın kamu tarafından giderilmesi gibi hususlar, kamu sektörünün özelliklerini içermektedir.

Kurumlar mülkiyet yapısına ve ekonomik-sosyal odaklılık olmak üzere ayrıldığında farklı ilişkiler ağına neden olur. Ekonomik odaklı olma durumunda tamamen bireysel çıkar söz konusu olurken sosyal odaklılık tam tersini içererek, topluma, gruba yönelik eylemler geliştirir. 1980'lerin başından itibaren "devlet" reformuna ilgi yoğun bir şekilde artmış ve günümüzde kamu yönetiminin hantal, çağın ve özellikle de ekonomik hayatın gereklerine cevap veremeyen bir kimliğe büründüğü, halkta uyandırdığı güvenin azaldığı ve giderek toplumun üzerinde bir yük haline geldiğidir (Ateş, 2001).

3.4 Kamu-Özel ikilemi

Devlet faaliyetlerinin maliyeti artarken, bunun nedenleri çoğunlukla sorulmaz. Kamu üstündeki kamburların, iktidarların üzerine sürekli yük olarak birbirlerine intikal ettiği göz ardı edilmektedir. Halk çoğu zaman sadece bireysel faydasını düşündüğünden meydana gelen olumsuzluklara karşı tepkinin dozu da kaçmaktadır. Halk iktidarları, iktidarlar da atadıkları kamu yöneticilerini suçlamaktadır. Gerçekler asla sıradan vatandaşın önüne sunulmaz. İktidarlar devamlılıklarını sürdürmek için çeşitli arayışa girerler. Bunun için ya gerçekleri gizleyen muhasebe tekniklerine başvurulur veya açığın kapanması için borçlanma yoluna gidilir. Borcu karşılamak için verimliliği artırıcı yatırımlara girişilir. Özellikle kalkınmakta olan ülkeler yeni yatırımların finansmanı için borçlanırlar. Yenilenen borç sözleşmelerinin bir kısmı eski borçlara tahsis edilerek borcu borç ile ödeme bataklığına girilmiş olur. Verimlilik artışı otomasyon yoluyla gerçekleştiği zaman ortaya teknolojik işsizlik çıkmaktadır. Bu çıkar çatışması kamu- özel ikilemini gündeme getirmektedir. Özelleştirmenin bir seçenek olduğu böylece ortaya çıkar.

4   Özelleştirmenin Teorik Temelleri

Klasik iktisat teorisi devam ederken oluşan 1929 Buhranı'ndan kurtulma reçetesini sunan Keynes'e göre; ekonomik kriz; doğrudan hükümet müdahalesiyle kırılabilirdi. İş dünyasını canlandırmak için, vergi ve faiz oranlarında indirimler, istihdamı teşvik eden maliye politikaları benimsenmeliydi. Keynes'in yaklaşımları, yeni seçilen ABD başkanı F. Roosevelt'ten büyük destek aldı.(Alçın:2013) Roosevelt, ABD'nin krizden çıkabilmesi için, müdahaleci politikanın gerekliliğini ilan etti. "Keynes'çi" iktisat kuramı, krizden sonraki 40 yıl boyunca ülkelerin temel ekonomik programını oluşturdu. Dünya ekonomisi II. Dünya Savaşı'ndan sonra, 20 yıl büyüme ve refah dönemi yaşamıştır. Ülkelerin finansal yapıları güçlenmiş, bankacılık sektöründe iyileşme görülmüş, hükümetin milli hâsıla içindeki payı artmış, otomatik istikrar tedbirleri faaliyet hacmini genişletmiştir.

1970'li yıllarla birlikte, Keynes'çi ekonomi politikaları itibarını kaybetti. Neo-liberalizmin yükseldiği yıl 1979'dur.Sağ kanat politikacıları ile eleştirmenler, bu yöntemin Marksizm'in bir uzantısı olduğu ve özgür girişimi engellediğini ileri sürdüler. 1980'lere gelindiğinde ise, sömürge ve bağımlı ülkelere sıçrayan kriz genelleşti. Başbakan Thatcher döneminde özelleştirme ideolojik bir temele oturtulmaya çalışılmıştır. Ona göre; özelleştirmenin gayesi, devletin gücünü azaltmak; bireyin özgürlüğünün, refahının ve mutluluğunun artması demektir. Bu çerçevede "özelleştirme"; uluslararası sermayenin dünya çapında uygulamaya koyduğu bir politika halini aldı. 1980'lerin ortalarına doğru da, paraya dayalı politikalar yok olmaya başladı. Türkiye'de özelleştirme uygulamalarını, dönemin Başbakanı Turgut Özal 1984'te başlattı

.Keynes sonrası Klasik iktisadın yeniden yorumlanması ile ortaya çıkan başlıca iktisadi ekoller; Monetarizm, Neo-Liberaller, Arz Yönlü İktisat Teorisi, Yeni Muhafazakârlar, Rasyonel Beklentiler teorisi olarak sıralanabilir. Bu ekoller farklı yoğunlukta olmalarına rağmen, yaşanan krizi, serbest piyasa mekanizmasını engelleyen müdahalelere bağlamışlar. En büyük engeli de, büyük bir müdahale potansiyeli olan devlet olarak görmüşlerdir. Krizden kurtulmanın reçetesi olarak, serbest piyasa mekanizmasına işlerlik kazandırılması, devletin ekonomik yaşamdaki rolünün daraltılması olduğunu savunmuşlardır.

Serbestleştirme (Deregulation), devletin ekonomideki bütün sektörler üzerindeki hukuki düzenleme ve kısıtlamaların kaldırılması ya da sınırlarını daraltan bir iktisat politikasıdır. Bu metodun ABD'de uygulanmaya başlamasından sonra, ilgili sektörlerde, rekabetin arttığı, mal ve hizmet maliyetlerinde önemli düşüşlerin sağlandığı görülmüştür. Türkiye'de 24 Ocak Kararları çerçevesinde, serbestleşme yönünde çeşitli uygulamalar yapılmıştır. Temel mal kavramı kapsamının daraltılması KİT'lerin mal ve hizmet fiyatlarını serbestçe belirleyebilmeleri, kredi ve mevduat faiz oranlarının serbest bırakılması, çay tekelinin kaldırılması, elektrik üretimi, dağıtımı, ticaretiyle eğitim sektöründe özel sektörün teşvik edilmesi bunlara örnek olarak verilebilir.

5 Özelleştirmenin ideolojik dayanağı

Kapitalist Sistem'de üretim ve tüketim kararları, kar, fiyat, efektif talep gibi piyasa kategorilerine bağlı olarak piyasa mekanizması içinde alınır. Kapitalist sistemde, üretimin asıl hedefi kar maksimizasyonudur. Savaş sonrası kapitalist genişlemenin sonuna ulaşılıp, sistemin yeniden "yapısal krize" girmesiyle, XIX' uncu yüzyılın liberalizmi, neo-liberalizm olarak yeniden sahneye döndü. Neo-liberal akım, üç sloganla yürüyecekti: a. liberalizasyon, b. Deregülasyon ve c. özelleştirme. Bunlardan liberalizasyon, sermayenin ve kapitalistin hareketini sınırlayan engellerin ortadan kaldırılmasını amaçlar. Neoliberal anlayışa göre, sosyal güvenlik l, bireylerin sorunu olmalıdır. Devletin bu alana müdahalesi engellenmektedir. Devlet bir sanayileşme siyaseti uygulayamaz, bazı sektörleri teşvik edemez, planlama yapamaz. Ancak bu akım; Kapitalizmin doğal gidişinin bir sonucu değil, Keynesyen kapitalizmin 70'lerin ortasında yeni bir krize neden olmasının bir sonucudur. Keynesci model çökmüş, dünya kapitalizmi krize girmişti. Özellikle sosyal tepkilere bir cevap verme gerekiyordu. Verilen cevap eski modellerin yenileştirilmesi biçiminde verilmiştir. Bunun adı, neo liberalizm'dir. Mali sermayenin serbestçe dolaşımı, bütün kamusal alanların tamamen özelleştirilerek kapitalist sisteme dâhil edilmesi, neoliberal ekonominin başlıca özelliklerindendir. Kamusal harcamaların (sağlık, eğitim, barınma, vb.) kaldırılıp özelleşmesinin önü açılmıştır.

6 Özelleştirmenin Amaçları

Yukarıda kavramsal, teorik, ideolojik, kronolojik incelemelerden sonra özelleştirmenin amaçları aşağıdaki gibi sıralanabilir: 1-Serbest piyasa ekonomisine işlerlik kazandırmak. 2-Kaynak kullanımında ve dağılımında etkinlik sağlamak. 3-Sermaye piyasasını geliştirmek. 4-Devletin ekonomideki etkinliğinin azaltmak. 5-Devlete gelir sağlamak. 6-Daha çok rekabet yaratmak. 7-Ekonomik performansı olumlu etkilemek. 8-Servetin geniş kitlelere yayılmasını sağlamak. 9-Hazine üzerindeki yükleri azaltmak. 10-Yabancı sermaye girişini, teknoloji ve yeni yatırımları özendirmek. 11-Siyasi çıkarlar amacıyla kamuyu şişirmenin önüne geçmek.

7 Dünyada Özelleştirme Uygulamaları

7.1 A.B.D

Özelleştirme, ABD'de en belirgin biçimiyle genel ve yerel düzeyde revaç bulmuştur. Bütçe fonlarının azalması ve vergilere karşı gelişen hoşnutsuzlukla karşılaşan politikacılar, kamu altyapı yatırımları ve hizmetlerinin özel kesimce gerçekleştirmesi için zorlanmıştır. Federal düzeyde özelleştirme, Başkan Reagan'ın kurduğu Federal Mülkiyeti İnceleme Teşkilatı (Federal Property Review Board) ile 1982 Şubat'ında başlamıştır. ABD'de kamu hizmetlerinin önemli bölümü özelleştirilmiştir. Özellikle belediye, cankurtaran, hapishane, çöp toplama, itfaiye işleri, büyük oranda özel kesimce yürütülmektedir. Böylelikle, yerel yönetimlerde gerçekleşmiş olan büyük çaplı özelleştirmeler sayesinde, 40.000 nüfuslu beldelerde devlet memuru sayısı yaklaşık 55 civarına inmiştir.(Doğan;1993)

Merkezi yönetimde de benzer özelleştirme uygulamaları gerçekleştirilmiştir. ABD ekonomisinde, önemli güce sahip olan haberleşme ve telekomünikasyon hizmetlerinde özelleştirilmeye geçilmiş ve rekabetçi bir piyasa

yapısı için tamamı özelleştirilmiştir. Hava ve demir yolları, yük taşımacılığı ve otobüs hizmetlerinin yasal-kurumsal serbestleşme süreci tamamlanmıştır(Aktan;1993). Gerçekleştirilen özelleştirmeler yararlı sonuçlar vermiş, ilgili sektörlerdeki rekabet ve verimlilik arttırmıştır. Özellikle şehirlerde özelleştirme faaliyetlerine ağırlık verilmektedir. Yönetimleri özelleştirmeye götüren sebep maliyetlerdeki düşüşlerdir.

7.2 İngiltere

Dünyada özelleştirme uygulamasının ilk örneği, 80 li yıllarda, İngiltere, Şili, Arjantin ve Meksika'da uygulanmıştır. İngiltere özelleştirme konusunda en başarılı ülkelerden birisidir. Özelleştirmeye taraftar sağlamak için yerel yönetimlere ait evler, kiracılara satılmıştır. En önemli özelleştirme British Telecom'a aittir. İngiltere'de tarım, ulaştırma, PTT, tersaneler, madenler, atom enerjisi, demir ve deniz yolları, çelik üretimi kadar tamamen kamu malı halinde idi. Artan sübvansiyonlar, politik arpalıklar, işçi-devlet münakaşaları, tüketici huzursuzlukları, sürekli bir şekilde zararının hazinece karşılanması ve borçlanma ve ortaya çıkan stagflasyon krizine karşı Keynes'yen çabalar sonuç vermemiştir. (Bilgin;1998) Bu gerekçelerle İngiltere'deki muhafazakâr parti iktidara gelince özelleştirmenin bütün yöntemleri denenmiştir (Öztürk;2005,12). 1991 yılında kamu sektörünün %50 den fazlası özelleştirilmiştir. Gerçekleştirilen özelleştirme uygulamaları sonucunda, sadece Margaret Thatcher'in başbakanlığı döneminde 75 milyar Dolar özelleştirme geliri sağlanmıştır.

7.3 Fransa'daki Özelleştirme

1979 petrol sokundan Fransa'da ekonomi bunalımlı bir döneme girmiştir. Mauroy Başbakanlığındaki sosyalist hükümet döneminde, tam bir istikrar politikası uygulanamamıştır. Bütçeden KİT şirketlerine yapılacak kaynak aktarımı sağlanamamıştı. 1985 yılına gelindiğinde, artık özelleştirmeden yana olanlar çoğunluğa ulaşmıştı.(Chirac, Mart-1986). 800 bin işçinin çalıştığı 65 adet kamu kurulusunun hisselerinin satısı kararlaştırılmış ve bunlardan 12 tanesi 1986- 1987 arasında 5 yıl için bir özelleştirme programı açıklandı 1987 Haziran'ına kadar 13 kuruluş satılmış ve bunlardan 56,8 milyar Frank gelir elde edilmiştir. Fransa'yı ayırt eden noktalardan biri de özelleştirmenin oldukça kapsamlı olmasıdır. Fransa'da tartışılan günlük ekonomik konulardan birisi de millîleştirilen şirket ve bankalardan hangilerinin özelleştirileceğidir. Fransız hükümeti, 33 kamu iktisâdî kuruluşunu özelleştirerek, önemli ölçüde gelir elde etmeyi plânlamaktadır.

7.4 Almanya'daki Özelleştirme

Preussag Prusya Mâden ve İzobe Ocakları A.Ş. ve Volkswagen firmaları ilk özelleştirilen şirketler arasında sayılabilir. Almanya'da 1980 yılında rekabet konusunda yapılan bu değişiklikler, bankacılık ve sigortacılık sektöründe yer alan ve rekabet dışında tutulan kurumlar da, rekabet sistemi içerisine alınmıştır. Birleşik Almanya ile dev ve hantal kamu isletmeleri için özelleştirme programı uygulamaya koymuştur. Bu uygulamalar ile 1991 yılı Ekim ayının sonuna kadar, özelleştirilen devlet isletmelerinin sayısı 4337'yi bulmuştur(Dartan, 1993, s:58). Başarılı bir özelleştirme programı devam etmektedir. Hükümet yıllara yayarak, Telekom, Alman Demir Yolları (Deutsche Bahn), Alman Posta İdaresi (Deutsche Post), Alman Hava Güvenliği, TLG mülkiyet şirketi ve Berlin-Schönefeld, Köln-Bonn ile Münih havalimanları gibi devasa devlet tekellerinin özelleştirilmesinin yolunu açmaya çalışıyor. Ülke güvenliği açısından önem taşıyan sektörlerdeki yabancı payını yüzde 25 ile sınırlamaya hazırlanıyor.

7.5 İspanya'da Özelleştirme

Diğer Batı Avrupa ülkeleri gibi İspanya ekonomisi de 2. Dünya Savaşı'nın ardından bir dönüşüm sürecine girmiş, bu süreçte tarım sektörü ekonominin hâkim sektörüdür. Ülkenin enerji bakımından ithalata bağımlı olması nedeniyle 1970'lerde yaşanan petrol krizi ekonomik büyümeyi şiddetli biçimde etkilemiştir. 1985 ten beri sanayide kamu payı önemli ölçüde azalmıştır. 1996 yılında petrol, elektrik ve telekomünikasyon iştiraklerini hızla özelleştirmiştir. Son 10 yılda yoğun bir özelleştirme uygulamasıyla her alanda devlet hâkimiyeti azalmıştır. AB mevzuatına uyum çalışmaları, devlet hâkimiyetinin ve tekellerin kaldırılması sonucunu doğurmuştur. Otoyolların yüzde 90'ını özel şirketler kontrol ediyor. 2000 yılının ortalarında petrol, doğal gaz, elektrik, telekomünikasyon, kitap, farmakotikler, arazi ve taşıt piyasalarında serbestleştirme ver uzun vadeli liberalizasyon önlemleri paketi onaylanmıştır.

7.6 Kanada

Diğer gelişmiş ülkeler ile karsılaştırıldığında daha ılımlı bir kamu sektörüne sahip iken, yapılan özelleştirmeler daha yavaş olmuştur. Kanada'da 1962 yılında sağlık sektöründe özelleştirmeler yapılırken, 1963 yıllarında British Colombia ve Quebec'te güç istasyonları özelleştirilmesi yapıldı. Federal, bölgesel ve yerel hükümetler, mali durumlarına göre farklı yöntemler izlediler. Birçok bölgesel kuruluş, doğal tekel sandıkları birçok sanayiyi özelleştirdiler. 1980'lerin ortalarında özelleştirme, halka arz yoluyla satıldı. Özelleştirmelere; BCRIC, The Mulroney Years, Bombardier, Air Canada, The Chretien Years, Navcan örnek verilebilir. Kanada Ulusal Tren yolu işletmesindeki hükümet payı, 1995 yılındaki açık arttırma ile satılma yöntemiyle özelleştirildi.

8   Türkiye'de Özelleştirme Uygulamaları

1970 li yıllarda gelişmiş ekonomilerde yaşanan stagflâsyonun esas nedeninin Keynes'in önerdiği politikalar olduğu keşfedilmiştir. Uygulanan politikaların, kamu borçlanmasını artırdığı, kamunun rasyonel davranamadığı

gerekçeleriyle, özelleştirme politikaları, ABD ve İngiltere'nin denemeleriyle, birkaç ülkenin dışında tüm dünyaya sirayet etmiş Türkiye Ekonomisi de bundan etkilenmiştir.

Türkiye, Cumhuriyetin başından beri serbest piyasa ekonomisi düşüncesine sahipken, sermaye birikiminin azlığı, girişimci sınıfın zayıflığı sebebiyle Sümerbank, Etibank, Şeker Fabrikaları, TMO gibi KİT'ler kurulmuştur. 1960'lara kadar iç dinamikler, 1929 buhranı, Dünya savaşlarının belirlediği dış konjonktürün de etkisiyle devlet tekeli pek çok alanda hâkimdi. Ülkemizde uzun süre uygulanan ithal ikameci politikaların da desteğiyle, devletçi politikalar hantal bir ekonomik yapının oluşmasına neden oldu. Dünyada yaşanan petrol şokları ve ülke ekonomimizin gidişatı sebebiyle kamu sektörünün işleyişinin ve ekonomiye getirdiği sorunların en yoğun tartışıldığı yıllar 70 li yıllardı.ı(Özsoylu ;2011).

Özelleştirme için siyasal dönüm noktası 24 Ocak 1980 kararları olmakla beraber, yasal çerçevenin oluşturulması 1984'de başlamıştır. 1986 yılından itibaren hızlanan ve tamamı kamu malı veya iştiraki olan kuruluşlardaki kamu paylarının özelleştirme kapsamına alınması yoluyla yürütülen program çerçevesinde, İdare tarafından bugüne kadar 201 kuruluşta hisse senedi veya varlık satış/devir işlemi yapılmış ve bu kuruluşlardan 191'inde hiç kamu payı kalmamıştır. 1986 yılından bugüne kadar gerçekleştirilen özelleştirme uygulamalarının toplam tutarı 46,3 milyar $ düzeyindedir. Bir bölümü vadeli ve döviz cinsinden gerçekleştirilen bu hisse senedi ve varlık satış işlemlerinden Mart 2013 itibariyle 44,7 milyar $ net giriş sağlanmıştır. Özelleştirme kapsamındaki kuruluşlardan elde edilen 4,5 milyar $ temettü geliri ve 1,4 milyar $ diğer kaynaklarla birlikte 1985 – Mart 2013 dönemi toplam kaynakları 50,6 milyar $ düzeyine ulaşmaktadır.

8.1 Türkiye şartlarında özelleştirmenin kronolojik seyri ve özelleştirme yöntemleri

Özelleştirmeye ilişkin ilk yasal düzenleme, 29.2.1984 tarih ve 2983 sayılı Kanun ile yapılmıştır. Bu çerçevede, gelir ortaklığı senedi, hisse senedi ve işletme hakkı devrinden oluşan özelleştirme yöntemleri tanımlanarak, Toplu Konut ve Kamu Ortaklığı Kurulu, Toplu Konut ve Kamu Ortaklığı İdaresi ve Kamu Ortaklığı Fonu kurulmuştur. Özelleştirmeye ilişkin ikinci yasal düzenleme 8.6.1984 tarih ve 233 sayılı KHK'nin 38'inci maddesi ile yapılmıştır. Diğer taraftan, 1984 yılında, 4.12.1984 tarih ve 3092 sayılı Çay Kanunu ile çay tarımı, üretimi, işlenmesi ve satışı serbest bırakılmış, aynı tarih ve 3096 sayılı Kanun ile de Türkiye Elektrik Kurumu dışında, özel sektörün elektrik üretimi, İletimi, dağıtımı yapabilmesine ilişkin düzenlemeler yapılmıştır.

28.5.1986 tarih ve 3291 sayılı Kanun ile 233 sayılı KHK'nin 38'inci maddesinin uyarınca, özelleştirmenin karar alma ve uygulama aşamalarına ilişkin yeni düzenlemeler yapıldı. 1986 yılında çıkarılan 3291 sayılı kanunda, kamu kuruluşlarının özelleştirme kapsamına alınması ve uygulanmaların yürütülmesine ilişkin esaslar belirlendi. Buna göre, 233 sayılı kanun hükmünde kararnamede adı geçen, tamamı devlete ait ve kamu iktisadi teşebbüsü statüsünde faaliyet gösteren kuruluşların özelleştirme kapsamına alınmasına Bakanlar Kurulu, KİT lerin müessese, bağlı ortaklık, işletme ve işletme birimleri, iştirakleri ile iştiraklerindeki payların özelleştirme kapsamına alınmasına da Yüksek Planlama Kurulu yetkili kılındı. Özelleştirme programının yürütülmesi konusunda ise, 2983 sayılı kanunla oluşturulan Toplu Konut ve Kamu Ortaklığı İdaresi görevlendirildi. Bu idare, özelleştirme programının yanı sıra, toplu konut uygulamalarının yürütülmesi, Kamu Ortaklığı Fonu'nun yönetimi ve Çalışanların Tasarruflarını Teşvik Hesabı'nda biriken paraların nemalandırılması gibi görevler de üstlenmişti. 3291 sayılı kanunla, özelleştirme uygulamaları konusundaki karar mercii, Toplu Konut ve Kamu Ortaklığı Kurulu olarak belirlendi.

28.12.1987 tarih ve 304 sayılı KHK ile TKKOK ve EİYKK'na ait olan görev ve yetkiler Yüksek Planlama Kurulu (YPK)'na devredilmiş ve bundan böyle özelleştirme kararları YPK tarafından alınmaya başlanmış, kamu iktisadi teşebbüslerinin özelleştirilmesine ise Bakanlar Kurulu tarafından karar verilmesine devam edilmiştir. 1987 yılında Sümerbank'ın özelleştirilmesi kararı alındı ve banka Kamu Ortaklığı İdaresi'ne devredildi. 1988'de Sümerbank Holding kuruldu. Holdingin bankacılık birimi 1993 de Yüksek Planlama Kurulu kararıyla Sümerbank adı altında yeniden yapılandırıldı. 24 Ekim 1995'te Garipoğlu şirketler grubuna 103,4 milyon dolara satılarak özelleştirildi. 1987 yılında Hüsnü M. Özyeğin tarafından kurulan Fiba Grubu bünyesinde yer alan Fina Enerji ve Fina Limancılık, İstanbul Anadolu Yakası Elektrik Dağıtım özelleştirme sürecinde Ortak Girişim Grubu olarak yer alıyor. 1987 yılında özelleştirme kapsamına alınan Petkim'in, İzmit-Yarımca'da bulunan üretim kompleksi, 2001 yılında 60 milyon dolar bedelle satılmış, kalan kısmının özelleştirme ihale süreci ise 20 Ocak 2003 tarihinde başlamıştı. 6 Haziran 2003 tarihinde yapılan ihaleyi ise Standart Kimya Petrol Doğalgaz Sanayi ve Ticaret A.Ş kazanmıştı. 28.12.1987 tarih ve 304 sayılı KHK ile Özelleştirmede tüm yetkiler Yüksek Planlama Kurulu (YPK)'na devredilmiş ve bundan böyle özelleştirme kararları YPK tarafından alınmaya başlanmıştır. Nisan 1987'de özelleştirme kapsamına alınan Gübre Fabrikaları A.Ş. 1989 yılında kapsamdan çıkarılmıştır. Yine kapsama alınan Boğaziçi Hava Taşımacılığı A.Ş. ise tasfiye edilmiştir.

1988 yılında, sadece YPK'nun 8.7.1988 tarih ve 88/3 sayılı Kararı ile Keskin Kalıp Fabrikası tesisinin özelleştirilmesine karar verilmiştir. Özelleştirme mevzuatında yapılan dördüncü önemli düzenleme 9.4.1990 tarih ve 414 sayılı KHK ile yapılmıştır

20.12.1991 tarihli ve 470 sayılı KHK ile Yüksek Planlama Kurulu'nun görevleri yeniden tanımlanmış, aynı tarih ve 473 sayılı KHK ile Kamu Ortaklığı Yüksek Kurulu oluşturularak özelleştirme ve Kamu Ortaklığı Fonu hakkında karar alma yetkisi bu kurula bırakılmıştır.

Özelleştirme mevzuatında bazı kuruluşlara ilişkin özel düzenlemeler de yapılmıştır. 20.8.1993 tarihli ve 509 sayılı KHK ile PTT'nin haberleşme hizmetleri ayrılarak yeni bir şirket kurulmuş ve bu şirketin özelleştirilmesine ilişkin hükümler ihdas edilmiştir.

10.6.1994 tarih ve 4000 sayılı Kanun ile PTT'nin posta ve telgraf dışında kalan hizmetlerinin ayrılması ve özelleştirilmesine ilişkin hükümler yeniden düzenlenmiştir. Özelleştirme konusu kapsamında değerlendirilebilecek bir diğer yasal düzenleme ise 8.6.1994 tarih ve 3996 sayılı Kanun ile yapılmıştır. Bu Kanun ile yap-işlet-devret modelinin uygulanabilmesi için yasal dayanak oluşturulmuştur.

1995 yılında özelleştirme kapsamına alınan Hamitabat, Kemerköy, Soma-B ve Yeniköy elektrik santralleri 1997 yılında kapsamdan çıkarılmış ve Enerji Bakanlığı'na iade edilmiştir. 1995 yılından bu yana özelleştirilmeye çalışılan PTT, telekomünikasyon ve posta hizmetlerinin birbirinden ayrılarak, Türk Telekomünikasyon A.Ş.'nin kurulmasıyla özelleştirildi.

Türkiye'nin tek çinko üreticisi ve altın üretim teknolojisine sahip kamu kuruluşu olan Çinko ve Kurşun İşletmesi (Çinkur), İranlı, Kanadalı ve yerli Ekin Madencilik firmalarından oluşan Kayseri Metal Madencilik firmasına, 29 Mart 1996 tarihinde 14 milyon dolar bedelle satıldı.

1997 yılında özelleşen Tekirdağ limanı özelleşen ilk kamu limanıdır.

TEAŞ'ın bazı şirketlerinde iştirak payı olan AKTAŞ, NURTEK, TGT ve SOYTEK Elekt. Sant. Tes. İşl. ve Tic. A.Ş., ETİTAŞ Elekt. Teç. İmal. Tesisat A.Ş., MİTAŞ Madeni İnş. İşleri A.Ş. ile Kayseri ve Civarı Elekt. T.A.Ş. Mart 1998'de kapsam ve programdan çıkarılmış, eski statülerine iade edilmiştir. Eylül 1997'de kapsama alınan Oyak Sigorta şirketleri Ekim 1998 tarihinde kapsamdan çıkartılarak eski statülerine iade edilmiştir.

Kamunun tekelini kaldırmak amacı ile doğalgaz iç pazarı için ortak kurallar ile ilgili 22 Haziran 1998 tarih ve 98/30/EC sayılı Avrupa Parlamentosu ve Konsey Direktifine karşılık gelen 18 Nisan 2001 tarih ve 4646 sayılı Doğalgaz Piyasası Kanunu 2 Mayıs 2001 tarihinde yürürlüğe girdi.

1998 yılında 98/10552 sayılı Kararname ile Etibank 'ın ETİ HOLDİNG A.Ş. ve yedi adet bağlı ortaklı şirkete dönüştürülmesiyle müessese ETİ KROM A.Ş. Genel Müdürlüğü adını almıştır. ETİ KROM A.Ş. 18.10.2000 tarih ve 24204 sayılı Resmi Gazetede yayınlanan Özelleştirme Yüksek Kurulunun kararı ile özelleştirme kapsam ve programına alındı.

Enerji sektöründe liberalizasyon ve elektrik üretim özelleştirmelerine bakıldığında; Elektrik Enerjisi Sektörü Reformu ve Özelleştirme Strateji belgesinin 10. maddesinde de belirtildiği önceliğe uygun olarak elektrik üretim özelleştirmelerine, dağıtım özelleştirme sürecinin tamamlanmasının ardından başlanması planlandı. Bu kapsamda, şimdiye kadar gerçekleştirilmiş olan tek elektrik üretim özelleştirmesi; yedi hidroelektrik, bir jeotermal ve bir de doğalgaz santralinden oluşan toplamda 140 MW kapasiteye sahip olan Ankara Doğalgaz Üretim Anonim Şirketi (ADÜAŞ) oldu. 5 Mart 2008 tarihinde yapılan ihaleyi 510 Milyon Dolar bedel ile Zorlu Enerji kazanmıştır. Bu çerçevede yapılan özelleştirme kapsamında ihaleyi kazanan Zorlu Enerji; Engil Gaz Türbinleri Santrali(Van, 15 MW), Kuzgun HES (Erzurum, 20,9 MW), Çıldır HES (Kars, 15,4 MW), İkizdere HES (Rize, 18,6 MW), Mercan HES (Tunceli, 19,2MW), Tercan HES (Erzincan, 15 MW), Ataköy HES(Tokat, 5,5 MW), Beyköy HES (Eskişehir, 16,8 MW) ve Denizli'de faaliyet gösteren Türkiye'nin en büyük kapasiteli jeotermal santralinin (15 MW) 30 yıllık işletme hakkına sahip olmuştur.

Et ve Balık Kurumu'nun (EBK) 16 kombinası, 1995-1999 arasında arsa bedellerinin bile altında kalan fiyatlarla özel sektöre devredildi. YEMSAN' bağlı tüm fabrika ve birimler 1993-1995 yılları arasında özelleştirildi.

1998 yılında da T. İŞ BANKASI'NDAKİ kamu hisseleri ile 2000 yılında TÜPRAŞ hisselerinin büyük bölümünün özelleştirilmesiyle yurtiçi ve yurtdışı piyasalarda bugüne kadar yapılan en büyük halka arz gerçekleştirildi. Etibank A.O. hisselerinin tamamı, 2 Mart 1998 tarihinde toplam 155 milyon 500 bin ABD Doları bedelle Medya – İpek Holding A.Ş.'ye satılarak özelleştirildi.

Özelleştirme Yüksek Kurulu'nun 30 Ocak 1999 tarihli toplantısında almış olduğu karar çerçevesinde, Turban Turizm A.Ş.'ye ait Ürgüp Moteli'nin 3 milyon 100 bin ABD Doları bedelle ODEN İnşaat Turizm ve Ticaret A.Ş.'ye satışı onaylandı.

Özelleştirmede 1985 yılında 28,6 milyon dolar, 1989'da 131,2 milyon dolar, 1990'da 486 milyon dolar, 1991'de 243,8 milyon dolar, 1992'de 422,9 milyon dolar, 1993'de 565,5 milyon dolar, 1994'de 411.8 milyon dolar, 1995'de 572.2 milyon dolar, 1996'da 292 milyon dolar, 1997'de 465.5 milyon dolar ve 1999'da da 38.3 milyon dolarlık uygulama gerçekleştirildi.

2000 yılı içerisinde POAŞ'ın % 51 oranındaki hissesinin blok satış yöntemiyle özelleştirilmesi sonucunda bugüne kadar yapılan en önemli özelleştirme uygulamalarından biri gerçekleştirilmiş. 2002 yılında ise kalan kamu hisselerinin İMKB'de satışı sonucunda POAŞ'da bulunan kamu hisselerinin tamamı özelleştirilmiştir. Ayrıca bu süreç içerisinde devletin, turizm, tekstil ve hayvancılık sektörlerindeki işletmelerinin yaklaşık % 90'ı da özelleştirildi.

Özelleştirme Yüksek Kurulu'nun 12 Mart 2001 tarihli kararı ile Sümer Holding A.Ş.'ye devredilmiş, 4 kuruluşun özelleştirme işlemleri tamamlandı Öte yandan, Özelleştirme İdaresi 2000 yılı programındaki 30 kuruluşun 25'inde ihaleye çıktı. Bu kuruluşlardan 11'inin özelleştirilmesi tamamlandı. Bazı kuruluşlarda halen ihale prosedürü devam ederken, bu kuruluşların bazılarında ise teklif gelmemesi veya başka nedenlerle ihalesi iptal edildi. ÖİB, 2000 yılında, özelleştirme programında yer alan Deniz Nakliyat, Orüs, Ankara Sigorta, Güven Sigorta, Asil Çelik, KBİ (varlık), Turban (Varlık), Petrol Ofisi, Tüpraş (halka arz), bazı iştiraklerin satışını tamamladı. Programda bulunan THY, Ebaş, Taksan, TZDAŞ, Etağ, İsdemir, KBİ (Blok), Sümer Holding (varlık), Trabzon limanı, Tügsaş, İgsaş'ta ise ihale prosedürü halen devam ederken, Tümosan ve bazı iştiraklerin ihalesi ise teklif gelmemesi nedeniyle iptal edildi.

2001 yılının ilk çeyreğinde (3 aylık dönemde) Ataköy grubunun hazırlıklarının tamamlanması nedeniyle ihaleye çıkılması, THY'nin ihalesinin tamamlanması, Petkim-Yarımca'da çalışmaların devam ettirilmesi ve İsdemir-Erdemir birleşmesinin gerçekleşmesi bekleniyor.

İGSAŞ İstanbul Gübre San. A.Ş. ise 15 Nisan 2002'de TÜGSAŞ Türkiye Gübre San. A.Ş. bünyesinde birleştirilmiş ve özelleştirildi.

İSDEMİR 31 Ocak 2002 tarihinde imzalanan devir sözleşmesiyle tüm varlıkları ile birlikte ERDEMİR'e devredilmiş ve tüzel kişiliği sona ermiştir. ÇELBOR A.Ş.'de bulunan %100 oranındaki hisselerin tamamı 31 Mayıs 2002 tarihinde ERDEMİR'e devredilmiştir. T. Gemi Sanayii A.Ş. ise T. Denizcilik İşletmeleri A.Ş. bünyesinde birleştirilerek Mayıs 2002'de tüzel kişiliği sona ermiştir. DİTAŞ Deniz İşletmeciliği A.Ş.'de bulunan %50.98 oranındaki hisselerin tamamı 21 Kasım 2002 tarihinde TÜPRAŞ' devredilmiştir.

Turban Turizm A.Ş., T. Zirai Donatım A.Ş. ve TÜMOSAN Türk Motor Sanayii A.Ş. 7 Şubat 2003 tarihinde, Türkiye Selüloz ve Kağıt Fabrikaları A.Ş. (SEKA) ile Türkiye Gübre Sanayi A.Ş. (TÜGSAŞ) 19 Eylül 2005 tarihinde SÜMER HOLDİNG A.Ş. bünyesinde birleştirilerek tüzel kişilikleri sona ermiştir.

2004 yılında Esgaz, Eti Bakır, Divhan A.Ş.,Bursa Gaz , Amasya Şeker Fabrikası A.Ş., Eti Gümüş A.Ş., Eti Krom A.Ş.,Çayeli Bakır İşletmeleri A.Ş. , BET Kütahya Şeker Fabrikası A.Ş., Eti Elektrometalürji A.Ş. nin blok satış yöntemiyle , Türk Hava Yolları A.O.' nun halka arz yöntemiyle özelleştirilmesi başta olmak üzere gerçekleştirilen tüm özelleştirme uygulamalarından cari yıl satış gelirleri ile geçmiş yıl satış taksitleri toplamı 1.1 milyar ABD Doları gelir elde edildi.

2005 yılının ilk 8 aylık döneminde ise Ataköy Turizm A.Ş. Ataköy Otelcilik A.Ş., Ataköy Marina ve Yat İşletmeleri ve Eti Alüminyum A.Ş.'nin blok satış yöntemiyle özelleştirilmesi başta olmak üzere gerçekleştirilen tüm özelleştirme uygulamalarından cari yıl satış gelirleri ile geçmiş yıl satış taksitleri toplamı 1.4 milyar ABD Doları gelir elde edildi. 2003 yılından önce çeşitli nedenlerle yapılan borçlanmaların tamamı 2004 yılında ödenmiştir. Bu kapsamda 2004 yılında ödenen borçların toplam tutarı 778 milyon ABD Dolarıdır. Ayrıca uzun yıllardan beri ilk kez 2005 yılının ilk 8 ayında 1,3 milyar ABD Doları kaynak Hazineye aktarılmıştır. 2005 yılında gerçekleşen özelleştirmeler: Araç muayene istasyonlarının 20 yıllık kullanım hakkı 613,5 milyon dolara Akfen – Doğuş – TÜV Süd ortak girişim gurubuna devredildi.(Yargıda) Atatürk Havalimanının 15 yıllık işletmecilik hakkı 3 milyara TAV ' a (Tepe –Akfe Vie) verildi. Aynı gurup 755 Milyon dolara Mersin Limanını aldı.(Yargıda)

TT nin % 55 hissesi 6 Milyar 550 Milyon Dolara Oger Telecoma verildi. Emekli Sandığına ait İstanbul Hilton Oteli 255,5 Milyon Dolara Doğan Grubuna satıldı. Ankara'da ki Tekel' e ait ikiz kuleler 100 Milyon Dolara TOBB ''e satıldı. Eylül 2005 de TÜPRAŞ ' ın % 51 lik hissesi 4 Milyar 140 Milyon Dolara Koç – Shell Grubuna satıldı. Erdemir ' in % 46.12 oranında ki hissesi 4 Ekim 2005 te 2 Milyar 770 Milyon Dolara OYAK ' a satıldı. 2005 Yılı özelleştirme gelirleri 16,9 Milyar Dolardır(Bu bölümde ki bilgiler TBMM, Kütüphane, Dokümantasyon ve Tercüme Müdürlüğü, Araştırma Servisinden alındı .

Özellikle 2005 ve 2006'da Türkiye çok önemli özelleştirme çalışmalarına imza attı ve özelleştirme gelirleri rekor yüksek seviyelere ulaştı. 2005 yılında yapılan özelleştirme işlemleri 8.2 milyar dolara, 2006 yılında ise 8.1 milyar dolara ulaştı. Özelleştirme gelirlerinin en yüksek olduğu yıllar 2005, 2006 ve 2008 yıllarıdır. (bkz Grafik 2)

2007 yılındaki özelleştirme uygulamalarına bakıldığında, dünyada yaşanan ekonomik dalgalanmalara ve ülkemizdeki seçim sürecine rağmen, başta Türkiye Halk Bankası'nın yüzde 24,98'lik bir payının halka arzı olmak üzere, TCDD Mersin Limanı, Türkiye Demir Çelik İşletmesi Deveci Maden Sahasının İşletme Hakkı, Karayolları Genel Müdürlüğü İstanbul Levent arsası, BUMAS A.Ş. ile TEDAŞ ve TEKEL'e ait bazı taşınmazların satış ve devir işlemleri tamamlandı.

2008 yılında özellikle Türk Telekom'un halka arzından 1 Milyar 911 Milyon Dolar, PETKİM'in yüzde 51'lik hissesinin devri ile 2 Milyar 40 Milyon Dolar gelir elde edilmiştir. 2006 Yılı içinde, TÜPRAŞ, ERDEMİR, BAŞAK SİGORTA A.Ş ve BAŞAK EMEKLİLİK A.Ş özelleştirilmeleri gerçekleştirildi.

2008 özelleştirmeleri, Mayıs ayında Türk Telekom'un yüzde 15'inin satılmasıyla 2008 yılı ikinci yarısından itibaren dünyada oluşan mali krize rağmen PETKDM, Tekel Sigara, Ankara Doğal Elektrik Üretim ve Ticaret A.S.ye ait Elektrik Santralleri, TEDAS ve Tekel'e ait taşınmazların satış ve devir işlemleri ile Türk

Telekomünikasyon A.S.nin yüzde 15'lik kamu payının ulusal ve uluslararası sermaye piyasalarında birincil halka arz işlemleri tamamlandı. Türk Telekom'un yüzde 15'lik kamu payının halka arz işlemleri, 2008 yılında Türkiye'de yapılmış en büyük halka arz işlemi olduğu gibi, gelişmekte olan ülkeler arasında da en dikkat çekici halka arz işlemi oldu. 29 Ocak 2008 tarihinde ise, Türkiye Demir Çelik İşletmeleri A.Ş., SÜMER HOLDİNG A.Ş. bünyesinde birleştirilerek tüzel kişiliği sona ermiştir. 2009 yılında ise Sümer Halıcılık A.Ş. hisseleri Sümer Holding A.Ş. bünyesinde birleştirilerek tüzel kişiliği sona ermiştir. 2009 yılında Sakarya Elektrik Dağıtım A.Ş, Başkent Elektrik Dağıtım A.Ş ile Tekel, TEDAŞ ve T.Şeker Fabrikalarına ait çeşitli taşımazların özelleştirme çalışmaları tamamlanmıştır.

   2010 yılı itibariyle özelleştirme portföyünde toplam 19 kuruluş bulunmaktadır. Temel politika belgelerinde yer verilen hedefler doğrultusunda özelleştirmelere program döneminde de hızla devam edilecektir. Önde gelen projeler arasında Türkiye Elektrik Dağıtım A.Ş. Elektrik Üretim A.S.,Türk Seker, limanlar, şans oyunları ve otoyollar-köprüler bulunmaktadır. Özelleştirme programında bulunan Türkiye Elektrik Dağıtım A.S.'ye bağlı 18 adet elektrik dağıtım şirketi bulunmaktadır. Bu şirketlerden 7 adedi (Başkent, Sakarya, Meram, Osmangazi, Çamlıbel, Uludağ ve Çoruh Elektrik Dağıtım A.S.) özelleştirilmiş, Aras Elektrik Dağıtım A.S. için yapılan ihaleyle ilgili olarak Danıştay tarafından yürütmeyi durdurma kararı verilmiştir. 7 adedinin (Yeşilırmak, Van, Fırat, Boğaziçi, Dicle, Gediz ve Trakya Elektrik Dağıtım A.S.) sözleşmeleri onay ya da imza aşamasında olup, 3 adedinin (Akdeniz, Istanbul Anadolu Yakası ve Toroslar Elektrik Dağıtım A.S.) özelleştirilmeleri ile ilgili süreç devam etmektedir. 2010 yılının Eylül ayı itibariyle elektrik dağıtım sektörünün % 75'i serbestleştirilmiş olup, 1986–2010 döneminde ihalesi tamamlanan özelleştirme işlemleriyle birlikte toplam 50 milyar ABD doları rakamına ulaşılmıştır

9 Sonuç

Sunulan bu çalışmanın başlığından anlaşıldığı gibi, önce "özelleştirme" sözcüğünün sözlük, terim anlamı üzerinde duruldu ve tanımlama yapılmıştır. Tanımlamalardan da anlaşılacağı gibi; "özelleştirme" sözcüğü ekonomi bilimi çerçevesinde özel bir anlama sahiptir.

Özelleştime;1970 li yıllarda, başlangıçta ABD ve İngiltere ekonomilerinde, var olan koşullar altında meydana gelmiş olan sorunların, meydan okumasına karşı bir cevap verme çabası olarak gündeme gelmiştir.

1930-1970 yılları arasında Keynesyen-müdahaleci politikalar denenmiş, deney sonucunda da, oluşan sorunların çözüm reçetesi değil, sorunların kaynağı olduğu açıkça ortaya çıkmıştır.

Özelleştime; Kapitalist sistem içerisinde geliştirilen Neo-Liberal teorik temellere dayanan bir uygulamadır.

Kuruluş yıllarından itibaren Karma Ekonomi sistemiyle, ithal ikameci politikalarla, büyük ölçüde devlet tekelinin hâkim olduğu ve Keynezyen Ekonomi Politikalarla da örtüşen Türkiye Ekonomisi için, 24 Ocak 1980 kararları bir dönüm noktası olmuştur.

Türkiye ekonomisi bağlamında özelleştirmeye ilişkin ilk yasal düzenleme, 29.2.1984 tarihinde yapılmıştır. Özelleştirme yöntemleri tanımlanarak, Toplu Konut ve Kamu Ortaklığı Kurulu, Toplu Konut ve Kamu Ortaklığı İdaresi ve Kamu Ortaklığı Fonu kurulmuştur.

Metin içinde ifade edilen özelleştirmenin amaçları, dünya ekonomisin ne ölçüde geçerli ise, Türkiye ekonomisi için de geçerlidir. Türkiye açısından ek bir amaç; kamu görevlilerinin politika ve yönetmelik konularında çalışmalarına izin verilmesi, yabancı yatırımlarla uluslararası ekonomik ve politik bağların kuvvetlendirilmesidir.

Metinden de anlaşılacağı gibi; özelleştirme kronolojisine bakıldığında özelleştirme uygulamaları ile Türkiye ekonomisinin, dünya ekonomisine uyum sağladığı, dışa açık ekonomisiyle yabancı sermayenin çekim merkezlerinden biri haline gelmiştir.

İdare tarafından bugüne kadar 201 kuruluşta hisse senedi veya varlık satış/devir işlemi yapılmış ve bu kuruluşlardan 191'inde hiç kamu payı kalmamıştır. 1986 yılından bugüne kadar gerçekleştirilen özelleştirme uygulamalarının toplam tutarı 46,3 milyar $ düzeyindedir. Bir bölümü vadeli ve döviz cinsinden gerçekleştirilen bu hisse senedi ve varlık satış işlemlerinden Mart 2013 itibariyle 44,7 milyar $ net giriş sağlanmıştır. Özelleştirme kapsamındaki kuruluşlardan elde edilen 4,5 milyar $ temettü geliri ve 1,4 milyar $ diğer kaynaklarla birlikte 1985/Mart/2013 dönemi toplam kaynakları 50,6 milyar $ düzeyine ulaşmaktadır.

Türkiye Ekonomisi' nin dışa açılma sürecinin 2000-2007 yılları arasında OECD ülkelerinde gerçekleştirilen özelleştirme işlemlerinin büyüklük açısından değerlendirildiği Top-10 listesinde, Türkiye, 5. sıraya yerleştiği anlaşılmaktadır.

Geçiş Süreci: Rusya ve Ukrayna Örneği

Transition Process: Russia and Ukraine Case

Ph.D. Candidate Esra Ballı (Çukurova University, Turkey)

Prof. Dr. Muammer Tekeoğlu (Çukurova University, Turkey)

Abstract

This study analyses how real GDP growth, inflation, employment, foreign direct investment inflow and income equality for Russia and Ukraine changed during the process of economic transition from 1991 to 2011. Most opinions agree that initial conditions and economic situation of a country, natural resources, historical background and institutions affect the process of economic transition. We see that both Russia and Ukraine experienced a transitional recession in the early 1990s at the start of the transition and an increase in the inflation rate. The Gini indexes of Russia and Ukraine have increased dramatically. The unemployment also went up in both countries until 1999s and reached a peak 13% during the 1998 Russian crisis in Russia. The growth rates of both countries were below 1% until 1997-1998, although it started to increase, after 2000, it decreased sharply in 2008 because of the Global Economic Crisis experienced the same year.

1   Giriş

Geçiş süreci sosyal, kültürel, siyasi ve politik yapıyı içine alarak köklü bir şekilde değişime yol açan bir süreç olma özelliği taşımaktadır. Kumanda ekonomilerinden piyasa ekonomisine geçiş sürecinin başlangıcında güvenilir verilere ulaşılamaması ve bunun yanında sistemin kendisinden kaynaklanan zorluklar bu geçiş sürecini anlama ve değerlendirmede büyük zorluklarla karşılaşılmasına sebep olmaktadır. Bunun yanı sıra uluslararası kuruluşların geçiş ekonomilerine ve sürecine yönelik sınırlı tecrübeleri kumanda ekonomilerinin dağılmasıyla birlikte ortaya çıkan problemleri çözmede yeterli olamamışlar, geçiş ekonomilerinin yerel koşulları, tarihsel geçmişleri ve kurumsal yapıları dikkate alınmadan politikalar uygulamaya konulmuştur (Güler, 2012).

Sosyalist modelin gelişiminde merkezi yönetim altında ağır endüstrileşme ve büyük tekel firmalar ön plana çıkmış, uluslararası ticaret piyasa tarafından değil de devletler tarafından yapılan antlaşmalar yoluyla organize edilmiştir (Fisher ve Gelb, 1991). IMF'ye göre, geçiş süreci liberalleşme, makroekonomik istikrar, yeniden yapılandırma, özelleştirme ve yasal ve kurumsal reformlar ile gerçekleşmektedir. Liberalleşme sürecinde, fiyatlar çoğunlukla serbest piyasada belirlenmekte, ticaret engellerinin kaldırılmasına izin verilerek dünya piyasa ekonomilerine entegre olunması gerçekleştirilmeye çalışılmaktadır. Makroekonomik istikrarda öncelikle enflasyonun kontrol altına alınarak düşürülmesi, kredi büyümesinin disiplin altına alınmasının sağlanması amaçlanır. Yeniden yapılandırma ve özelleştirme ise, bu ekonomilerde sağlıklı bir finansal sektör yaratılarak, teşebbüslerin serbest piyasalarda işlem görebilecek mal üretimini yapmalarını sağlamak ve bu teşebbüsleri özel sektöre transfer etmek şeklinde gerçekleşmektedir. Yasal ve kurumsal reformlar ile kastedilen ise bu ekonomilerdeki devletin rolünün yeniden tanımlanmasının gerekliliği, hukuk kuralları ve rekabet politikalarının oluşturulması gerekliliğidir. Donnorummo (2006)'ya göre üç önemli faktör geçiş sürecini etkilemektedir. Bunlar tarihsel geçmiş, 1990'lı yıllardan itibaren ülkelerin yapmış oldukları politikalar ve dış ve/veya iç çatışmaların varlığıdır.

'Şok terapi' olarak da adlandırılan Rusya'nın neoliberal geçiş stratejisine göre liberalizasyon, istikrar ve özelleştirme üç önemli politikadır. Liberalizasyon ile fiyatlar üzerindeki devlet kısıtlamalarının kaldırılması; istikrar ile hükümet harcamalarının azalttırılarak enflasyonun kontrol altına alınması; özelleştirme ile devlete ait teşebbüslerin satılarak özelleştirmesi kastedilmektedir (Kotz, 2000).

Aslund (1999) Rusya'nın ekonomik transformasyonu sürecindeki problemleri incelediği çalışmasında ülkede uygulanan radikal ekonomik reformların başarısız olmasını eski teşebbüs yöneticilerinin rant peşinde koşmasına bağlamaktadır. Aslund'a göre, Sovyetler Birliği'nin dağılmasından sonra Rusya'da ekonomik elitin eksikliği ve ekonomik çarpıklık eski yöneticilerin güçlenmesine yol açmıştır. Eğer demokratik kurumlar hızlı bir şekilde gerçekleştirilseydi ve Batı, 1992'nin başlarından itibaren reformların gerçekleştirilmesi için finansal bakımdan hızlı bir şekilde destek sağlasaydı reformların gerçekleştirilmesi için gerekli takviye sağlanmış olabilecekti. Zaman içinde rantın azalmaya başlamış olmasına rağmen, Rusya'nın sahip olduğu kurumlar yolsuzluklar nedeniyle ciddi zarara uğramışlardır. Rant üzerindeki bu rekabet de Ağustos 1998'de meydana gelen krize sebep olan etmenlerden biri olmuştur. Aslund (1999), aynı zamanda başarılı reformların gerçekleştirilebilmesi için rant düzeyinin sınırlandırılmasının ön şart olduğunu ileri sürmektedir.

Ahrend ve Tompson (2005)'e göre Rusya'nın piyasa dönüşüm süreci incelendiğinde öncelikle Sovyet sisteminin krizlerine, Sovyetler Birliği'nin çöküşüyle birlikte oluşan yeni bağımsız devletler ile girişilen radikal reformlara bakmak gerekir. 1950'lerden itibaren Sovyet Sosyalist Cumhuriyetler Birliği'nin büyüme oranındaki uzun süreli düşüş, Çernobil kazası, 1986 yılında uluslararası petrol fiyatlarındaki düşüş, 1986-1987 yılları arasında dolarda meydana gelen hızlı değer kaybı gibi dış şoklar da Sovyet kumanda ekonomisinin çöküşünü

hızlandıran etmenlerden olmuşlardır. 1980'lerin sonlarında gerçekleştirilen gevşek ekonomik reformlar, geleneksel yapılar ve kumanda ekonomisi özelliği nedeniyle başarıya ulaşamamıştır. Dąbrowski ve Antczak (1995)'a göre Orta ve Doğu Avrupa ve eski Sovyetler Birliği ülkeleri komünist dönemden kalan ciddi ekonomik problemlerle karşılaştıkları görülmektedir. Bunlar arasında ekonominin hemen hemen tümüyle devletleştirilmesi sonucu özel yatırım için açık yasaklamalar veya ciddi sınırlamalar, monopol piyasa yapısı, yönetim tarafından gerçekleştirilen fiyat düzenlemeleri ve merkezi yatırım kararları nedeniyle yapısal bozuklar, ekonomik gelişme düzeyine oranla sosyal harcama yükümlülüklerinin fazlalığı, iç ve dış makroekonomik dengesizlik sayılabilir.

Kumanda ekonomisine dayalı sosyalist sistemden piyasa ekonomisine geçiş sürecinde sistem değişimi ile karşı karşıya kalan ülkelerin sahip oldukları özellikler ve yaşadıkları süreçler birbirinden farklı olmakla birlikte bu ülkeler "Geçiş Ekonomileri" olarak sınıflandırılmışlardır. Bu ülkeler için geçiş sürecinde serbest piyasa ekonomisine geçiş esas alınmış Uluslararası Para Fonu (IMF)'nin (2000) yapmış olduğu sınıflandırma kullanılmıştır. Buna göre geçiş ekonomileri Avrupa ve eski Sovyet Sosyalist Cumhuriyetler Birliği (SSCB) Geçiş Ekonomileri ile Asya'daki geçiş ekonomileri olmak üzere iki temel grup altında sınıflandırılmaktadır (Güler, 2012).

Bu çalışmada aynı dönemde geçiş sürecine başlayan eski SSCB ülkelerinden Rusya ile Ukrayna'nın kişi başına düşen geliri (KBDG), reel GSYH'daki büyümeleri, yabancı doğrudan yatırım girişi, gelir eşitsizliği, enflasyon ve işsizlik oranlarında yaşanan değişimler, geçiş sürecine başladıkları 1991'den 2011 yılına kadar olan dönem esas alınarak incelenecektir. Bu değişkenler bir ekonominin gerek gelişmişlik düzeylerini gerek de bölüşümün yapısını göstermeleri açısından önem kazanmaktadır. Gini katsayısı, reel GSYH'daki büyüme, enflasyon, işsizlik oranı, yabancı doğrudan yatırım girişi verileri Dünya Bankas Dünya Gelişim Göstergeleri'nden, İnsani Gelişme Endeksi verileri ise Birleşmiş Milletler Kalkınma Programı veri bankasından elde edilmiştir. Çalışmanın ilk bölümünde geçiş sürecine, ikinci bölümde geçiş sürecinde olan ülkeler üzerine yapılmış çalışmalara yer verilmiştir. Üçüncü bölüm verilerin analizi ve dördüncü bölüm ise sonuç bölümünden oluşmaktadır.

2 Literatür taraması

Geçiş sürecindeki ekonomiler üzerine yapılmış birçok çalışma bulunmaktadır. Dąbrowski ve Antczak (1995)'ın yapmış olduğu çalışmada, Rusya, Ukrayna ve Beyaz Rusya'nın geçiş sürecinde diğer Baltık ülkeleri ile Merkez ve Doğu Avrupa ülkelerinden neden geride kaldıkları analiz edilmiştir. Araştırmacılar, kullandıkları karşılaştırmalı analizde, bu ülkelerin geride kalmasının nedenleri arasında politik değişim ile ekonomik geçişteki başarı arasında güçlü bir korelasyon bulmuşlardır.

Dünya Bankası Kalkınma Raporu (1996)'ya göre, geçiş sürecine giren ülkelerin farklı başlangıç noktaları ve temel ekonomik reformları bulunmaktadır. Geçiş sürecinde olan ülkelerin başlangıç koşulları her ülkede farklılık gösterebilmektedir. Ülkelerin ekonomik düzeyleri, kumanda ekonomisi ve komünist rejim altında kaldığı süre, ulusal ekonomideki özel sektörün payı, kapitalist ülkelere göre ekonominin açıklığı, ticarete konu olabilecek doğal kaynakların varlığı, iç ve dış makroekonomik dengenin düzeyi, komünist rejim yıkılmadan önce ülkelerin politik liberalizasyon ve demokratikleşme düzeyi, geçmişteki anti-komünist ve bağımsızlık hareketlerinin gücü, etnik bakımdan homojenlik veya farklılıklardan oluşan bu faktörler her ülkenin ekonomik ve politik geçiş sürecini farklı kılmaktadır.

De Melo, vd. (1996)'un Orta ve Doğu Avrupa ülkeleri ile eski Sovyetler Birliği ülkelerinin geçiş sürecini inceledikleri çalışmada ülkelerin başlangıç koşullarının farklı olmasına rağmen reform sürecinde aynı aşamada olan ülkelerin ortak özellik gösterdiklerini bulmuşlardır. Araştırmacılar, politik reformlar ile başlangıç koşullarını oluşturdukları liberalizasyon indeksi ile ölçtükleri çalışmada, liberalleşme sonucu sermayenin ve işgücünün endüstriyel sektörlerden hizmet sektörüne kaydığını ve daha önce baskı altında tutulan sektörlerin gerçekleştirilen hızlı reformlar ile birlikte pozitif gelişme sağladığını göstermişlerdir.

Dabrowski (1998) eski Sovyetler Birliği ülkelerindeki ekonomik dönüşüm ile Batı'nın 1990-1994 yılları arasında yapmış olduğu yardım arasındaki ilişkiyi incelediği çalışmasında, dönüşüm sürecinde dönüşümün ilk aşamalarında en önemli yardımın IMF'den geldiğini, IMF tarafından finanse edilen programların dönüşüm sürecindeki her ülke için hayati rol oynadığını ileri sürmektedir. Bunun yanı sıra, Batı ve eski komünist ülkeler IMF veya Dünya Bankası'nın bütçe kısıntıları ve tasarruf konusuna çok önem verdiklerini ileri sürerken IMF veya Dünya Bankası'nın borç verme raporları farklı söylemektedir. IMF ve Dünya Bankası tarafından ileri sürülen şartlar sıklıkla özellikle eski Sovyet Bloğu ülkelerinde makroekonomik istikrar için yanlış yönlendirilmiş tecrit edici yaklaşımların uyarlanmasını teşvik etmiştir. Geçiş ekonomisinde olan ülkelerin tecrübelerine bakıldığında radikal ve kapsamlı bir yaklaşımın istikrar ve ekonomik düzelme sonucunu verdiği görülmektedir. Araştırma sonuçlarında birçok yardım programının yumuşak önlemler içerdiği ve yapılan teknik yardımın kalitesinin de bunu gerçekleştiren kaynağa göre farklı olduğu görülmüştür.

De Melo, vd. (2001)'un Doğu Asya, Orta ve Doğu Avrupa ile eski Sovyetler Birliği'ni içine alan 28 geçiş ülkesi–üzerine yapmış oldukları çalışmada büyüme ile başlangıç koşulları, politik değişim ve reformlar

incelenmiştir. Çalışma sonucunda, başlangıç koşulları ve liberalizasyon indeksi ile büyüme arasında ilişki olduğunu bulmuşlardır.

Dünya Bankası Kalkınma Raporu (2002)'nun eski Sovyetler Birliği ve Doğu Avrupa ülkelerinin 1991-2000 yılları arasında geçirdiği geçiş sürecini inceleyen raporunda, ülkelerin farklı büyüme performansları gösterdikleri saptanmıştır. Bu rapora göre, ülkelerin özellikleri sözgelimi, kumanda ekonomisi veya kontrol altında tutulan veya diktatörlük rejiminde olup olmaması önemlidir. Piyasa ekonomisine geçiş ve reform sürecinde öncelikle fiyatlar serbest bırakılmalı, fakat fiyat liberalizasyonu sonucu oluşabilecek yüksek enflasyon nedeniyle, politika yapıcılar sıkı para ve maliye politikaları gerçekleştirmelidirler. Sivil toplum kuruluşları reform politikalarının uygulanmasında önemli bir rol oynamaktadırlar. Ayrıca, özelleştirme metodu büyük önem taşımaktadır. Devlet sahipliğinde olan yatırımların verim sağlamayacak şekilde özelleştirilmesi, devlet sahipliğinin devamı şeklinde olabilecek tercihler ve riskler ile politika yapıcıları karşı karşıya kalmaktadırlar. Ekonomik büyümeyi sağlamak için, politika yapıcıları eski teşebbüsleri disipline edecek ve yeni yatırımların yapılmasını teşvik edecek bir ortam oluşturmalıdır. Yasal ve kurumsal yapıların oluşturulması da reformlar açısından büyük önem taşımaktadır.

Avrupa İmar ve Kalkınma Bankası'nın geçiş sürecinde olan ülkelerdeki sektörlerin düzeylerini ölçtüğü ve geçiş göstergelerini 1'den (çok az veya hiç değişiklik göstermemekte) 4^{+}'e kadar (endüstrileşmiş piyasa ekonomisi standardına sahip olduğunu göstermekte) belirlediği Geçiş raporu 2012'ye göre, Rusya ve Ukrayna tarım ticareti, emlak sektörü, bankacılık 3^{-} ile gösterilen puanlama ile aynı gelişim skoruna sahiplerdir. Telekomünikasyon, elektrik, demiryolları ile sermaye piyasaları bakımından ise Rusya'nın gelişmişlik düzeyi daha üst sıralarda yer almaktadır.

3   Rusya ve Ukrayna'da Geçiş Süreci

Bu bölümde, Kişi Başına Düşen Gelir (KBDG), Büyüme Oranı, İşsizlik Oranı, Enflasyon Oranı, İnsani Gelişme Endeksi (İGE) ve Gini Katsayısı verileri incelenerek geçiş sürecinde Rusya ve Ukrayna'daki ekonomik durum ortaya konmuştur.

Rusya ve Ukrayna'nın bazı ekonomik ve sosyal göstergelerin incelenmesi bize bu ülkeler hakkında geçiş sürecinde meydana gelen değişiklikler hakkında bilgi vermesi açısından önem arz etmektedir. Bunlardan birisi olan İnsani Gelişme Endeksi'de (İGE) bu ülkelerin gelişmişlik düzeyleri hakkında bilgi vermesi açısından önemli göstergelerden biri olmaktadır. Bir ülkenin yalnızca kişi başına düşen gelir düzeyine bakılarak o ülkenin gelişmiş bir ülke olduğunu söylemek doğru değildir. Bu değerlendirmeyi yapabilmek için eğitim ve sağlık gibi bazı göstergelere de ihtiyaç duyulmaktadır. Bu ülkelerin İnsani Gelişme Endekslerine bakıldığında, Ukrayna'nın 0.740 ile 187 ülke arasında 78. sırada, Rusya'nın da 0.788 ile 55. sırada olduğu görülmektedir. Avrupa ve Orta Asya bölgesinin İnsani Gelişme Endeksi'lerinin1980'li yıllarda 0.651'den günümüzde 0.771'e çıktığı göz önünde alındığında Ukrayna İnsani Gelişme Endeksi'nde bölge ortalamasının altında, Rusya ise ortalamanın üstünde yer almaktadır.

Bu ülkelerin Gini katsayılarına baktığımızda, Sovyetler Birliği döneminden Ofer and Vinokur (1992) tarafından Sovyet göçmenleri esas alarak yapmış oldukları çalışmada bu katsayı 1973'de 0.77, 1979'da 0.61 olarak gerçekleşmiştir (Aktaran Alexeev, 1999). Rusya'da bu oranın 1993'te 0.48 iken 1999'da 0.37'e düştüğünü, 2006'da 0.42, 2009'da 0.40 düzeylerinde gerçekleştiğini görüyoruz. Verilerde de görüldüğü üzere Rusya'da geçiş sürecinin başında gelir eşitsizliğinin daha yüksek olduğu söylenebilmektedir. Bunun temel nedenlerinden birisinin gerçekleştirilen özelleştirmeler yoluyla bölüşümün adil olarak dağıtılamaması olduğu ileri sürülebilir. Ukrayna'da ise Gini katsayısı 1992'te 0.25 iken 1995'te 0.39 ile en yüksek değerine ulaşmış ve bu tarihten itibaren azalan bir seyir izlemiş, 2006'da 0.29'a ve 2009'da da 0.26'ya düşmüştür. Ukrayna'da ise gelir eşitsizliği bakımından geçiş süreci boyunca çok büyük farklılıklar yaşanmamıştır.

Rusya ve Ukrayna'nın 1990-2011 döneminde KBDG'i Grafik 1'de gösterilmiştir. Rusya ve Ukrayna'da KBDG 1990-2003 döneminde beraber hareket ederken 2003 yılından sonra bu ülkelerdeki KBDG farkı çok açılmıştır. Bunun temel sebeplerinden birisi Rusya'nın dünyanın en büyük doğal gaz ihracatçısı ve ikinci en büyük petrol ihracatçısı konumunda olmasıdır (EIAa, 2013). 1990'ların başında petrolün varili 18 USD iken, bu rakam 2001'den itibaren yükseliş trendine girmiş, 2003'de 28 USD, 2008 Temmuz'unda en yüksek rakam olan 132.72 USD'ye ulaşmış (EIAb, 2013) ve sonrasında petrol fiyatları düşme eğilimine girmiş ve GSMH'sı doğal kaynak ihracatına bağlı olan Rusya'nın ihracat gelirlerinde azalma meydana gelmiştir. Bu durum, Grafik 1'de görüldüğü gibi 2008 yılında Rusya'nın KBDG'na yansımış ve 2007 yılında KBDG'i 12000 USD'e yaklaşan Rusya'nın KBDG'i 8000 USD'e düşmüştür. 2008 küresel krizinin etkileri 2009 yılında bu iki ülkede büyük ölçüde hissedilmiştir. Ancak 2010 yılı sonrası petrol ve doğal gaz fiyatlarının artmasına bağlı olarak Rusya'nın KBDG'si tekrar artmaya başlamıştır.

Üretimde keskin düşüşler ve işsizlikte yüksek oranlı artışlarla karakterize edilen geçiş resesyonunun Rusya ve Ukrayna'daki uzunluğu sırasıyla 9 ve 10 yıllık dönemleri kapsamaktadır (Mickiewicz, 2005). Bu durum Grafik 2'de görüldüğü gibi Rusya ve Ukrayna'nın büyüme oranı ile geçiş döneminin başlangıcından itibaren 2000 döneminde kadar negatif bir seyir izleyen her iki ülkenin büyüme oranları ile örtüşmektedir. Üretim düzeyinin en düşük olduğu yıl 1998'de Rusya 'da % 45.1 olarak Ukrayna'da ise 1997 yılında %63.8 olarak gerçekleşmiştir

(Fischer ve Sahay, 2000). Bunun yanında Ağustos 1998'de yaşanan Rusya Ekonomi krizide Rusya'nın Ukrayna'ya en büyük ihracatçı ülke konumunda olması nedeniyle Ukrayna'nın da bu krizden etkilenmesine yol açmıştır.
Grafik 1. *Kişi Başına Düşen Gelir (Kaynak: Dünya Gelişim Göstergeleri, Dünya Bankası)*
Grafik 2. *Büyüme Oranı (%) (Kaynak: Dünya Gelişim Göstergeleri, Dünya Bankası)*

Geçiş süreci sırasındaki resesyon sırasında–yaşanan üretim azalışları işsizlik oranının yükselmesine neden olmuştur. Geçiş süreci ile birlikte hızla ortaya çıkmaya başlayan işsizlik, üretim düşüşlerine paralel bir şekilde firmaların işçi çıkarmalarına bağlı olarak gelişmiştir. Rusya ve Ukrayna'nın işsizlik oranları Grafik 3'te belirtilmiştir. Rusya'nın işsizlik oranı 1998 krizi ile ilişkili olarak %13 en yüksek düzeye ulaşmıştır. 1999-2008 dönemi sonrasında işsizlik oranı düşme eğilimine girmiştir. Hem Ukrayna hem Rusya 2008 sonrasında Küresel Kriz'den etkilenmişlerdir.

Grafik 4'e baktığımızda Rusya ve Ukrayna'nın geçiş sürecine girdikleri dönemde çok yüksek enflasyon oranlarıyla karşılaştıklarını görmekteyiz. Rusya Sovyet Federe Sosyalist Cumhuriyeti Devlet Bankası olarak anılan banka, 1991'de SSCB Devlet Bankası'nın tasfiye edilmesiyle Rusya Merkez Bankası haline gelmiştir. Ukrayna Merkez Bankası ise 1992 yılında kurulmuştur. Loungani ve Sheets (1997)'nın enflasyon üzerinde Merkez Bankasının etkisini ve enflasyonun ekonomik büyüme üzerindeki etkilerini Rusya ve Ukrayna dahil 12 eski SSCB ülkesini içine alarak inceledikleri çalışmalarında Merkez Bankası'nın bağımsızlığı ile düşük enflasyon oranı arasında ilişki olduğunu bulmuşlardır. Cukierman, Miller ve Neyapti (2002)'nin 26 eski sosyalist ekonomiyi inceledikleri çalışmada, liberalizasyon sürecinin ilk aşamalarında Merkez Bankalarının oluşan enflasyonla ilgisiz olduğu ve merkez bankası bağımsızlığının da başlangıçtaki fiyat kontrolleri üzerindeki güçlü enflasyonist etkiyi durduramadıklarını belirtmişlerdir. Liberalizasyon sürecinin hız kazanması ile birlikte yasal

olarak Merkez Bankası bağımsızlığı, enflasyon oranının düşüşünde etkili olmuştur. Kurumların eksikliği geçiş süreçlerinin uzamasına, gerekli reformların yapılmasına da engel teşkil eden bir durum olarak karşımıza çıkmıştır.
Grafik 3. *İşsizlik Oranı (Kaynak: Dünya Gelişim Göstergeleri, Dünya Bankası)*
Grafik 4. *Enflasyon Oranı (Kaynak: Dünya Gelişim Göstergeleri, Dünya Bankası)*

Yabancı doğrudan yatırımların büyüme ve kalkınma hedeflerini gerçekleştirmek isteyen ülke ekonomilerine yararlı olduğu konusunda birçok görüş bulunmaktadır. Bu yatırımlar verimlilik ve hizmetlerin kapsamı yönünden büyük oranda olumlu etkiye sahip olmakta, ülkenin hayat standardını yükseltmekte, yerel firmaları oluşacak rekabet nedeniyle zorlama, birlikte çalıştıkları durumda gerekli bilgi ve teknikleri transfer etme yoluyla yeni teknoloji kullanmaya ve yeni işletme tekniklerini uygulamaya yol açmaktadırlar. Bunun yanı sıra yabancı doğrudan yatırımcılar yatırım yaptıkları ülkede daha istikrarlı ve uzun vadeli bir yaklaşım içinde olduklarından, ülkelerde meydana gelebilecek kriz zamanlarında bu yatırımcılar yabancı kreditörlerin ve portföy yatırımcılarının aksine yatırım yaptıkları ülkede kalma yönünde hareket etmektedirler (Kaymak, 2005). Grafik 5'te doğrudan yabancı sermaye yatırımlarının milli hâsılaya oranı verilmektedir. 1992-2004 yıllarında doğrudan yabancı sermayenin gelire oranı Rusya ve Ukrayna için birlikte hareket ederken 2004'den sonra yabancı sermaye girişi Ukrayna'da Rusya'ya göre göreceli olarak oldukça fazladır. Miktar olarak baktığımız zaman 2011 yılında Rusya'ya ve Ukrayna'ya gelen yabancı doğrudan yatırımların büyüklüğünün sırasıyla 52 milyar USD ve 7 milyar USD olduğunu görmekteyiz. GSYH'nın yüzdeleri bakımından Ukrayna daha fazla iken, Rusya'nın miktar olarak Ukrayna'ya oranla yılda yaklaşık 7,5 kat daha fazla yabancı doğrudan yatırım çekmektedir. Bevan, Estrin ve Meyer (2004)'ün geçiş döneminde olan Rusya, Ukrayna ve 10 tane Doğu Avrupa ülkesini kapsayan çalışmalarında kurumlar bakımından gelişmiş olan ülkelerin daha fazla yabancı doğrudan yatırım çektiklerini bulmuşlardır. Bununla birlikte özel sektörün büyüklüğü, bankacılık sektörünün gelişmişliği, döviz kuru ve ticaret liberalizasyonu ve yasal kurumların gelişmişliği de yabancı yatırımları pozitif olarak etkilemektedir. Araştırmacıların 1994-1998 yıllarını esas aldıkları çalışmada, Rusya'nın doğrudan yabancı yatırım çekebilmesinin önündeki temel engelin büyük olasılıkla yasaların kapsamı ile etkinliği arasındaki aralıktan

meydana geldiğini belirtmişlerdir. Çalışmanın da ortaya koyduğu gibi özel sektör büyüdükçe bankacılık sektörü genişledikçe, döviz kuru ve ticaret liberalizasyonu ve yasal kurumlar daha etkili çalıştıkça Rusya ve Ukrayna'da daha fazla doğrudan yabancı yatırım çekmeye devam edeceklerdir.
Grafik 5. *Doğrudan Yabancı Sermaye Yatırımları (GSYH'nın yüzdesi) (Kaynak: Dünya Gelişim Göstergeleri, Dünya Bankası)*

4 Sonuç

Rusya ve Ukrayna sahip oldukları yer altı kaynaklarına, SSCB döneminden kalan güçlü bir sanayi mirası altyapısına ve iyi eğitilmiş insan güçlerine rağmen sosyalist ekonomiden piyasa ekonomisine geçiş süreci sıkıntılarından derin bir şekilde etkilenmişler, reformları hızlı bir şekilde gerçekleştirememişlerdir. Bu ülkelerde meydana gelen geçiş resesyonu Ukrayna'da 10 yıl, doğal kaynak zengini Rusya'da ise 9 yıl sürmüştür. Rusya ve Ukrayna'nın piyasa ekonomisine geçiş süreci sırasında meydana gelen resesyon ile birlikte her iki ülkenin üretim düzeylerinde çok büyük oranlı azalışla birlikte ekonomileri negatif bir ekonomik büyüme seyri izlemiş, işsizlik ve hiper enflasyon durumları ortaya çıkmıştır. Geçiş süreci başında Rusya'da meydana gelen özelleştirmeler zenginliğin bölüşümünde dengesizlik yaratmış, zenginliğin yalnızca bazı ellerde toplanmasına neden olmuş, gelir eşitsizliği yüksek oranlarda artmıştır.

Geçiş sürecinde uygulanması amacıyla eski sosyalist bloğa önerilen politikalar her ülke koşullarına göre uyarlanmadığından ve önerilen politikaları gerçekleştirebilecek kurumsal yapıların bulunmaması, reformların gerçekleştirilebilmesi yönündeki desteklerin yetersizliği geçiş sürecinin zorlu ve sancılı bir şekilde geçmesine neden olan etmenlerden biri olmuştur. Bunların yanı sıra geçiş sürecinde kurumsal bakımdan eksiklik büyük önem taşımaktadır. Kumanda ekonomisinden piyasa ekonomisine geçiş sürecinde geçiş sürecine hazırlayacak olan kurumların eksikliği de geçiş sürecinin uzun ve sancılı geçmesine neden olan temel faktörlerden bir olmuştur.

1999 yılından itibaren reformlarda ilerleme kaydedilmesi ülke ekonomilerine de olumlu yansımış, ekonomik büyümede ve yabancı doğrudan yatırımlarda artış baş göstermiştir. Yabancı doğrudan yatırımların artmasında bankacılık ve özel sektörünün gelişmesi, döviz kuru ve ticaret liberalizasyonu ve yasal kurumların gelişmişliği önemli faktörlerden biri olmaktadır.

Geçen 20 yıl süresince Rusya ve Ukrayna'nın artık başlangıç dönemine göre enflasyon oranının düştüğü, büyüme oranının ve kişi başına düşen milli gelir arttığı, daha çok yabancı yatırım çektikleri görülmektedir. Özel sektör büyüdükçe bankacılık sektörü genişledikçe, döviz kuru ve ticaret liberalizasyonu ve yasal kurumlar daha etkili çalıştıkça her iki ülkenin piyasa ekonomisine geçişi daha az sıkıntılı atlatılabilecektir.

Satın Alma Gücü Paritesi Hipotezinin Kazakistan İçin Geçerliliği

The Validity of Purchasing Power Parity Hypothesis for Kazakhstan

Asst. Prof. Dr. Seymur Ağayev (Recep Tayyip Erdoğan University, Turkey)

Abstract

The article examines the validity of Purchasing Power Parity (PPP) hypothesis for Kazakhstan by using the data set belonging to the period January 1995 to December 2012. Both linear and nonlinear unit root tests are used to make an econometrical investigation on stationarity characteristics of real exchange rate series of Kazakhstan's Tenge that defined according to different foreign countries or country groups. First of two nonlinear unit root tests that applied in this paper models structural change as a smooth transition and the other nonlinear unit root test takes into account both structural change and asymmetric adjustment characteristics of real exchange rates. Linear unit root test findings support the validity of the PPP hypothesis between Kazakhstan and Commonwealth of Independent States (CIS) countries. In addition to this finding, unit root tests that allow for nonlinear adjustment support evidences on stationarity of Tenge – US dollar real exchange rate, Tenge – Euro real exchange rate and Tenge's non-CIS related real effective exchange rate series. As a whole, findings of this study provide a strong support on the validity of PPP hypothesis for Kazakhstan. Furthermore, it is also shows that the nonlinear adjustment characteristics of real exchange rate should be taken into account, if foreign countries are represented by free market economies.

1 Giriş

Tek fiyat yasasına dayanan satın alma gücü paritesi (PPP) mutlak yaklaşımı bazı varsayımlar altında, aynı para cinsinden ifade edildiği zaman yurtiçi ve yurtdışı fiyatların eşitleneceğini öngörür. PPP mutlak yaklaşımı şu şekilde ifade edilebilir;

$$ExP_d = P_f \tag{1}$$

Burada E ulusal para birimi karşılığında satın alınabilen yabancı para miktarı şeklinde ifade edilen döviz kurunu, P_d yurtiçi fiyatları ve P_f ise yabancı ülke fiyatlarını ifade etmektedir. Bu durumda, döviz kuru yabancı ülke fiyatlarının yurtiçi fiyatlara oranı şeklinde gösterilebilir;

$$E = P_f / P_d \tag{2}$$

PPP mutlak yaklaşımı aynı zamanda ulusal malların yabancı ülke malları cinsinden karşılığını ifade eden reel döviz kurunun da bire eşit olmasını ima eder;

$$RER = ExP_d / P_f = 1 \tag{3}$$

Taşıma gibi işlem maliyetleri, kotalar ve gümrük tarifeleri gibi dış ticaret kısıtlamaları ve arbitrajı engelleyici tekelleşme PPP mutlak yaklaşımının gerçekleşmemesine neden olabilir. Ayrıca ticarete konu olmayan mallar, başlangıç yatırım sermayesinin büyüklüğü, ülkelerin fiyat endeksi sepetlerine dahil olan malların veya bunların ağırlıklarının farklı olması, fiyat ve döviz kuru müdahaleleri mutlak PPP'den sapmalara neden olabilir. PPP nispi yaklaşımı ise yurtiçi ve yurtdışı fiyatların eşitleneceğini değil, beraber hareket edeceğini öngörür. Sapmaların kalıcı veya geçici özellikler taşıması PPP bakımından önemli sonuçlara yol açar. Ulusal malların yabancı ülke malları cinsinden fiyatını ifade eden reel döviz kurunun uzun dönem denge düzeyine tekrar intibak etmesi sapmaların geçici ve dolayısıyla PPP hipotezinin geçerli olması anlamına gelir. Fakat reel döviz kurunun uzun dönem denge düzeyinden kalıcı şekilde uzaklaşması ise sapmaların kalıcı olduğu anlamına gelir. Bu nedenle reel döviz kurunun durağanlık özellikleri incelenerek PPP hipotezinin geçerliliği test edilebilir.

Bu çalışmada, Kazakistan için PPP hipotezinin geçerliliği reel döviz kuru serilerinin durağanlık özellikleri doğrusal ve doğrusal olmayan birim kök testleri kullanılarak incelenmiştir. Bu amaçla, Ocak 1995 – Aralık 2012 dönemine ait aylık veri seti kullanılarak Kazakistan ulusal parası Tenge'nin (KZT) on üç farklı reel kuru farklı özelliklere sahip birim kök testi incelemelerine tabi tutulmuştur. Uygulanan birim kök testlerinden ilki doğrusal genelleştirilmiş Dickey ve Fuller (1979) yaklaşımıdır. Doğrusal olmayan yaklaşımlardan ilki yapısal değişmeyi üstel yumuşak geçiş şeklinde modelleyen Kapetanios, Shin ve Snell (2003) tarafından önerilen yaklaşımdır. Çalışmada uygulanan diğer doğrusal olmayan birim kök testi ise yapısal değişmenin yanı sıra asimetrik intibaka izin veren Cuestas ve Ordóñez (2012) yöntemidir.

ADF test sonuçları on üç KZT reel kur serilerinden beşinin durağan olmadığını gösterirken, KSS testi bulguları bu sayının iki olduğu şeklindedir. Asimetrik intibaka izin veren CO testinin sonuçları ise KZT'nin Çin Yuanına karşı reel kuru hariç diğer tüm reel kur serilerinin durağan olduklarını gösterir ve PPP hipotezinin Kazakistan için geçerli olduğunu desteklemektedir.

Çalışmanın devamı şu şekilde düzenlenmiştir. Öncelikle Kazakistan'ın serbest piyasa ekonomisi dönemindeki ekonomik gelişmelere ilişkin öz bilgi verilmiş, döviz kurunun ve fiyatlar genel düzeyinin izlediği seyir değerlendirilmiştir. Ardından Kazakistan'da PPP hipotezinin geçerliliğine ilişkin yapılan çalışmalar değerlendirilmiş, kullanılan yöntem ve alınan sonuçlar ifade edilmiştir. Dördüncü bölümde reel döviz kuru serilerinin durağanlık özelliklerinin incelenmesinde kullanılan birim kök testlerine yer verilmiştir. Beşinci bölümde veri seti tanıtılmış ve test bulguları sunulmuştur. Sonuncu bölümde ise bulgular doğrultusunda değerlendirmelerde bulunulmuştur.

2   Geçiş Döneminde Kazakistan'da Konuyla İlgili Temel Gelişmeler

Sovyet sisteminin dağılmasından sonra kısa süre uygulanan Rus Rublesine dayalı parasal birliğin başarısızlıkla sonuçlanmasının ardından Kazakistan 15 Kasım 1993'de ulusal parası olan KZT'yi tedavüle bırakmıştır. Fakat 1990'lı yılların ilk yarısı tüm Bağımsız Devletler Topluluğu (BDT) ülkeleri için olduğu gibi Kazakistan için de ekonomik açıdan oldukça sorunlu bir dönemdir ve genellikle geçiş dönemi durgunluğu şeklinde karakterize edilmektedir. Kazakistan'ın 1991-2012 yıllarına ilişkin reel GSYİH artış hızı, enflasyon ve döviz kuru değişim oranı Tablo 1'de verilmiştir. Tablodan da görüldüğü gibi 1991-1995 yıllarında Kazakistan ekonomisi sürekli küçülmüştür ve bu dönemde reel GSYİH küçülmesi kümülatif olarak %38.84'tür. Başka bir ifade ile 1995 yılı GSYİH'sı 1990 yılına ait değerinin ancak %61.16'sına eşit olmuştur. Aynı dönemde fiyatlar genel düzeyindeki yüzde değişim yüksek, hatta bazı yıllarda hiperenflasyon düzeyindedir. 1992-1994 yıllarında Kazakistan'da Aralık ayları itibariyle tüketici fiyatları endeksinde yüzde değişim sırasıyla 2960.8, 2165.0 ve 1158.3 olarak gerçekleşmiştir. Bu oran 1995 ve 1996 yıllarında ise sırasıyla 60.3 ve 28.7 olmuştur. İlk olarak KZT Rubleye sabitlenmiş (1 KZT = 500 Ruble) şekilde tedavüle bırakılmıştır. Fakat kısa süre sonra ise dalgalanmaya bırakılmış ve ABD Doları karşısında süratli şekilde değer kaybetmiştir. Aralık 1993'de 5.8 olan ABD Doları kuru Aralık 1994'te 53.7 olmuş ve KZT Dolar karşısında yaklaşık olarak %825.1 oranında değer kaybetmiştir. KZT'nin ABD Doları karşısında değer kaybı Aralık ayları itibariyle 1995 ve 1996 yılında ise sırasıyla %19.6 ve %13.4 olmuştur. 1990'ların ortalarından itibaren bütçe açıklarının azaltılması, döviz kuru ve enflasyon için hedeflerin açıklanması fiyat ve döviz kuru istikrarında etkili olmuştur. Sonraki dönemde KZT'nin ABD Doları kuru Rusya'da finansal krizin patlak verdiği Ağustos 1998'a kadar istikrarlı bir seyir izlemiştir.

Yıllar	Reel GSYİH'de % değişim	TÜFE'de % değişim	Dolar kurunda % değişim
1991	-11.0	-	-
1992	-5.3	2960.8	-
1993	-9.2	2165.0	-
1994	-12.6	1158.3	825.1
1995	-8.2	60.3	19.6
1996	0.5	28.7	13.4
1997	1.7	11.2	4.1
1998	-1.9	1.9	10.3
1999	2.7	17.8	65.3
2000	9.8	9.8	4.7
2001	13.5	6.4	3.8
2002	9.8	6.6	3.6
2003	9.3	6.8	-6.9
2004	9.6	6.7	-10.3
2005	9.7	7.5	2.9
2006	10.7	8.4	-4.4
2007	8.9	18.8	-5.5
2008	3.3	9.5	-0.1
2009	1.2	6.2	23.2
2010	7.3	7.8	-0.8
2011	7.5	7.4	0.4
2012		6	1.7

Tablo 1: Kazakistan'da Büyüme, Enflasyon ve Döviz Kuru Artış Hızı **Kaynak:** Kazakistan Merkez Bankası. Not: TÜFE artışı yılsonlarına, kur artışı KZT'nin Aralık ayı değerlerine göre hesaplanmıştır.

Rusya krizi Kazakistan ekonomisini oldukça ciddi bir şekilde etkilemiştir. Uzun bir dönem devam eden sürekli ekonomik küçülmeden sonra 1996 ve 1997 yıllarında artan reel GSYİH 1998 yılında tekrar azalmıştır. 1998 yılında reel GSYİH büyüme oranı eksi işaretle %1.9'dur. Dünya Bankası verilerine (Global Economic Monitor) göre Rusya Rublesi ABD Doları karşısında Ağustos ve Eylül aylarında sırasıyla %21.4 ve %106.9 oranında değer kaybetmiştir. Rublenin ABD Doları karşısındaki değer kaybı düşük oranlarda olsa da Nisan 1999'a kadar

sürekli devam etmiştir. Ağustos 1998'de 7.6 olan Ruble-ABD Dolar kuru Nisan 1999'da 25.4 olmuştur. Rusya'nın Kazakistan'ın en önemli dış ticaret ortağı olması sebebiyle bu finansal kriz Kazakistan dış ticaretini ciddi şekilde etkilemiştir. Rublenin değer kaybetmesine karşın Kazakistan Nisan 1999'a kadar gözetimli dalgalanma sistemini izlemiş ve KZT'nin aşırı değer kaybetmesine izin vermemiştir. Nihayet durumun sürdürülemezliğini dikkate alan Kazakistan hükümeti ve merkez bankası yönetimi 5 Nisan 1999'da döviz kurunu dalgalanmaya bırakmış, bunun yanı sıra dış ticaret ve döviz kontrolüne yönelik tedbirler almıştır (NBK, 1999). Bunu takiben Nisan, Mayıs ve Haziran aylarında KZT Dolar karşısında %29.7, 6.1 ve 9.7 oranında değer kaybettikten sonra istikrarlı bir seyir izlemeye devam etmiştir.

Temmuz 1999 itibariyle kur 1Doları=132.5KZT düzeyindedir ve 2002 yılının sonuna kadar KZT ABD Doları karşısında yıllık %5'in altında değer kaybederek 1Dolar=155.6KZT düzeyine ulaşmıştır. 2002 sonundan ABD menşeli dünya finansal krizinin Kazakistan ekonomisinde etkilerinin hissedilmeye başlandığı 2009 yılı başlarına kadar ise KZT ABD Doları karşısında değer kazanma eğiliminde olmuştur. 2003-2008 yıllarında KZT'nin Dolar karşısında değer kazanma oranı %22.5'tir. Bahsedilen dönemde Kazakistan'da özellikle doğalgaz, petrol ve tarım ürünleri üretiminin artmasının yanı sıra dünya enerji ve tahıl fiyatlarının yükselmesi ulusal paranın değer kazanmasında etkili olmuştur.

Eylül 2004'de Kazakistan merkez bankası 2007 yılından itibaren enflasyon hedeflemesine geçeceğini ve öncelikli hedefinin fiyat istikrarını sağlamak olacağını duyurmuştur (NBK, 2004). İhracat ve yabancı sermaye girişi şeklinde ülkeye akan yabancı paranın ulusal para değeri üzerinde yarattığı yukarı yönlü baskıya rağmen Kazakistan merkez bankası KZT'nin ABD Doları kurunu 1Dolar=120±%2KZT düzeyinde sürdürmüştür. 2008 dünya finansal krizi ile birlikte Kazakistan için olumlu koşullar ortadan kalkmıştır. Petrol fiyatlarının süratli şekilde ucuzlaması ve dünyada sermaye akımlarının yok olması ulusal paranın değeri üzerinde aşağı yönlü baskı oluşturmuş ve Kazakistan merkez bankasını uluslararası rezervlerini korumak ve yurtiçi üreticilerin rekabet yapabilirliğini desteklemek amacıyla döviz kuru politikasını değiştirmeye itmiştir. Merkez bankası petrol fiyatlarınızdaki düşüşü, dış ticaret ortağı ülkelerin paralarının ABD Doları karşısında değer kaybetmelerini dikkate alarak ve döviz rezervlerini korumak amacıyla Dolar kuru bandını 1Dolar =150±%3 veya ±%5KZT şeklinde düzeltmiş (NBK, 2009). Bu değişiklikle Şubat ayında KZT'nin Dolar karşısında yaklaşık olarak %21 oranında değer kaybetmesine izin vermiştir. Kur bandında değişiklik sonrası dönemde Kazakistan'da döviz kuru ve fiyatlar genel düzeyi istikrarı sürdürülmüş, yıllık enflasyon %10'un altında ve Dolar kurunun da 145.5-150.9 bandında seyrettiği görülmüştür.

3 Literatür

Kazakistan için PPP hipotezinin geçerliliğine ilişkin sınırlı sayıda çalışma mevcuttur. Bu çalışmalar araştırma dönemi, reel kur hesaplamasında dikkate alınan yabancı ülke, kullanılan yöntem ve elde edilen sonuç açısından Tablo 2'de özetlenmiştir. Doğrusal panel birim kök testlerini kullanan Solakoglu (2006) geçiş ekonomileri için PPP hipotezinin geçerli olduğunu bulmuştur. Doğrusal koentegrasyon testlerini kullanan Doğanlar (2006) ise Kazakistan için PPP hipotezini destekleyici herhangi bir bulgu elde edememiştir. Doğrusal dışılığı dikkate alan birim kök testlerinin kullanıldığı Telatar ve Hasanov (2009) çalışmasında ise sadece Kapetanios ve diğerleri (2003) testi bulguları KZT'nin reel kurunun durağanlığını desteklemektedir. Liew, Puah, Choong ve Lau (2010) çalışmasında da uygulanan aynı yöntem benzer bulgu sunmamaktadır. Tablo 2'de ifade edilen çalışmalardan Hung ve Weng (2011) hariç diğer tüm çalışmalarda yabancı ülke olarak ABD dikkate alınmıştır. KZT'nin Rusya Rublesi reel kurunu dikkate alındığı Hung ve Weng (2011) çalışmasında kullanılan doğrusal zaman serisi birim kök testleri reel kur serisinin durağanlığını destekleyici bulgu sunmamaktadır. Liew, Chia ve Ling (2010), Liew, Puah, Choong ve Lau (2010) ve Korkmaz, Çevik ve Çevik (2013) de Kazakistan'da PPP hipotezini destekleyici bulgular sunmaktalar.

4 Yöntem

Reel döviz kuru serilerinin durağanlık özellikleri PPP hipotezinin geçerliliğine ilişkin bilgi sunmaktadır. Bu nedenle PPP hipotezinin uzun dönem geçerliliği birim kök testleri yardımıyla incelenebilir. Kazakistan için PPP hipotezinin incelendiği bu çalışmada reel döviz kuru serilerinin durağanlık özellikleri genelleştirilmiş Dickey ve Fuller (1979, ADF) ve iki farklı doğrusal olmayan birim kök testi yardımıyla incelenmiştir. Doğrusal olmayan yöntemler yapısal değişmenin üstel yumuşak geçiş şeklinde modellendiği Kapetanios ve diğerleri (2003) testi ile yapısal değişmenin yanı sıra asimetrik intibaka da izin veren Cuestas ve Ordóñez (2012) testidir.

İlgili literatürde yaygın şekilde kullanıldığından ADF birim kök testine ilişkin metodik açıklama burada verilmemiştir. Kapetanios ve diğerleri (2003) tarafından önerilen yöntemde durağan değildir şeklinde ifade edilen boş hipotez küresel olarak durağan (globally stationary) üstel yumuşak geçişli otoregresif süreçlere karşı test edilir. Yumuşak geçişli otoregresif temel model aşağıdaki gibidir:

$$\Delta y_t = \sum_{j=1}^{p} \rho \Delta y_{t-j} + \gamma y_{t-1}\{1 - \exp(-\theta y_{t-d}^2)\} + \varepsilon_t \tag{4}$$

Çalışma	Ülkeler	Dönem	Y. ülke	Yöntem	Sonuç
Solakoglu (2006)	21 geçiş ekonomisi	1994 – 2003 yıllık	ABD	LLC ve IPS panel birim kök testleri	Kabul

Telatar ve Hasanov (2009)	Kazakistan ve 9 eski Sovyet cumhuriyeti	Kasım 1993 Eylül 2006	ABD	KSS (2003), Leybourne, Newbold ve Vougas (1998) ve Sollis (2004) birim kök testleri	KSS testinde kabul
Liew, Chia ve Ling (2010)	Azerbaycan, Kazakistan ve Kırgızistan	Ocak 1995 – Aralık 2002	ABD	Breitung (2001) koentegrasyon rank testi	Kabul
Liew, Puah, Choong ve Lau (2010)	Azerbaycan, Kazakistan ve Kırgızistan	Ocak 1995 – Aralık 2002	ABD	DF, KSS (2003), panel durağanlık ve Engle ve Granger (1998) in eşik koentegrasyon analizi	Sadece momentum eşik otoregresif modelde reel kurun asimetrik uyumu desteklenmekte
Hung ve Weng (2011)	Azerbaycan, Kazakistan ve Kırgızistan	Ocak 1995 – Mart 2009	Rusya	ADF, DF-GLS, PP ve KPSS zaman serisi birim kök testleri ile Hadri, LLC, Harris-Tzavalis, Breitung, IPS, Taylor-Sarno, Fisher ve Pesaran panel birim kök testleri	Zaman serisi için ret, LLC, Harris-Tzavalis, Breitung, Fisher ve Pesaran panel birim kök testlerde destek
Korkmaz, Çevik ve Çevik (2013)	Azerbaycan, Kazakistan ve Kırgızistan	Ocak 1995 – Ocak 2009	ABD	ADF, PP, KPSS Zivot-Andrews, Lee-Strazizich birim kök testleri ile Engle-Granger, Gregory-Hansen ve Hatemi-J koentegrasyon testleri	KPSS, Zivot-Andrews, Lee-Strazizich birim kök testlerinde kabul

Tablo 2*: Kazakistan'da PPP Hipotezinin Geçerliliğine İlişkin Yapılan Çalışmalar*

Kapetanios ve diğerleri (2003), boş hipotezde sıfır ($\theta = 0$) ve alternatif hipotezde pozitif olan ($\theta > 0$) ortalamaya geri dönme hızı parametresine odaklanmaktadır. γ parametresi boş hipotezde tanıtılmadığından durağanlığı bu şekilde doğrudan test etmek mümkün değil. Bu nedenle Kapetanios ve diğerleri (2003) geçiş değişkeni gecikmesini $d = 1$ varsayarak ve sıfır hipotezi çerçevesinde 4 numaralı eşitliğin birinci mertebeden Taylor yaklaşıklığını elde etmektedir:

$$\Delta y_t = \sum_{j=1}^{p} \rho \Delta y_{t-j} + \delta y_{t-1}^3 + e_t \tag{5}$$

Cuestas ve Ordóñez (2012) tarafından önerilen doğrusal olmayan test ise doğrusal dışılığın iki kaynağını dikkate almaktadır. Bunlar yapısal geçiş ve asimetrik uyumdur. Deterministik trendin yanı sıra asimetrik uyuma da izin veren Cuestas ve Ordóñez (2012) testi şu şekilde açıklanabilir:

$$y_t = g(t) + \epsilon_t \tag{6}$$

Burada $g(t)$ zamanın sabit olmayan bir fonksiyonudur ve $g(t) = g_1 + g_2 t + g_3 L_t(\gamma) + g_4 t L_t(\gamma)$ şeklinde modellenir. $L_t(\gamma)$ ise $L_t(\gamma) = 1/(1 + e^{-\gamma t})$ şeklinde tanımlanan bir lojistik yumuşak geçiş fonksiyondur. Yapısal değişim ve asimetrik intibakı dikkate alarak birim kök incelemesinin yapılması için Cuestas ve Ordóñez (2012) 6 numaralı eşitliğin hata terimlerine (ϵ_t) Kapetanios ve diğerleri (2003) testini uygulamayı önerirler.

5   Veri Seti ve Bulgular

Çalışmada kullanılan veri seti Ocak 1995 – Aralık 2012 dönemini kapsamakta olup Kazakistan merkez bankasından alınmış KZT'ye ait on üç reel kur serisinden oluşmaktadır. Reel kur serilerinin araştırma dönemi için zaman yolu Grafik 1'de verilmiştir. Bunlardan yedisi Kazakistan ile en fazla dış ticarete sahip ülkelerin paraları karşısında KZT'nin reel kurlarıdır. Bu paralar ve temel alınarak oluşturulan KZT reel kurlarının grafikteki ve çalınmanın bundan sonraki kısmındaki kısaltmaları şöyledir; Rusya Rublesi (RUB), Euro (EUR), ABD Doları (USD), Çin Yuanı (CNY), Kırgızistan Somu (KGS), Ukrayna Hryvniası (UAH) ve Beyaz Rusya Rublesi (BYR). Diğer altısı ise KZT'nin reel efektif kurlarına ait serileridir. Bunlar tüm ülkeler (ER1), Bağımsız Devletler Topluluğu (BDT) ülkeleri (ER2), BDT dışındaki ülkeler (ER3), petrol ticareti hariç tüm ülkeler (ER4),

petrol ticareti hariç BDT ülkeleri (ER5) ve petrol ticareti hariç BDT dışındaki ülkeler (ER6) dikkate alınarak hesaplanan reel kurlardır. Grafikten de görülebildiği üzere ülke grupları için efektif reel kur serilerinin seyirleri petrol ihracatının dahil edildiği ve edilmediği durumlarda oldukça benzerdir. Bunun yanı sıra KZT'nin tüm ülkeler için efektif reel kuru serisi olan ER1'in seyri en fazla RUB şeklinde ifade edilen KZT'nin Rusya Rublesine karşı olan reel kuru serisine benzerdir.
Grafik 1*: Kazakistan'a Ait Farklı Reel Kur Serilerinin Zaman Yolu*

ADF birim kök testi sonuçları Tablo 3'de sunulmuştur. Trende ilişkin farklı doğrusal varsayımlara sahip ADF testine ait bulguları KZT'ye ait on üç reel kur serisinden beşinin durağan olmadığını, ikisinin en az 0.01 düzeyinde, beşinin en az 0.05 düzeyinde ve birinin de 0.10 düzeyinde durağan olduğunu gösterir. Durağan olmayan reel kur serileri KZT'nin Euro, ABD Doları, Çin Yuanı reel kurları ile BDT dışındaki ülkelere ve petrol ticareti hariç BDT dışındaki ülkelere ait reel efektif kur serileridir. Kazakistan'a ilişkin yapılan ve Tablo 2'de ifade edilen çalışmalardan bazılarında ADF testine yer verilmiştir. Bunlardan KZT'nin ABD Doları reel kurunu

dikkate alan Telatar ve Hasanov (2009) ile Korkmaz ve diğerleri (2013) de ADF testlerinde Kazakistan reel kur serilerinin durağan olmadığını bulmuşlar. KZT'nin Rusya Rublesi reel kurunu dikkate alan Hung ve Weng (2011)'in ADF bulguları ise elde ettiğimiz bulgulardan farklıdır. Şöyle ki, Hung ve Weng (2011)'in ADF testi sonuçları reel kur serisinin durağan olmadığı şeklindedir.

Reel kur	Trend durağan	Sabit durağan	Sıfır ortalama durağan
RUB	−3.3732 (1)***	−2.8638 (1)***	−0.7577 (1)

ER6	−2.2136 (1)	−2.1205 (1)	0.3954 (1)

Tablo 3: *ADF Birim Kök Testi Sonuçları* **Not:** *Parantez içindeki sayılar minimum Schwarz bilgi kriterine (SCI) göre gecikme uzunluklarını, *, ** ve *** simgeleri ilgili istatistiğin sırasıyla %1, %5 ve %10 düzeyinde anlamlı olduğunu gösterir.*

Yapısal değişmenin yumuşak geçiş şeklinde modellendiği Kapetanios ve diğerleri (2003) birim kök testi sonuçları Tablo 4'te ifade edilmiştir. Buna göre on üç reel kur serisinden ikisi durağan değildir. Bu serilerden beşi en az 0.01 düzeyinde, diğer beşi ise en az 0.05 düzeyinde durağan bulunmuştur. Durağan olmayan reel kur serileri KZT'nin ABD Doları ve Çin Yuanı reel kurlarına ait serileridir. Kapetanios ve diğerleri (2003) birim kök testi Tablo 2'de ifade edilen iki çalışmada kullanılmıştır. Her iki çalışmada da KZT'nin ABD Dolar reel kuru kullanılmasına karşın sonuçları birbirinden farklıdır. Kapetanios ve diğerleri (2003) testi sonucunda Kazakistan için Telatar ve Hasanov (2009) reel kur serisinin durağan olduğu, Liew, Puah, Choong ve Lau (2010) ise bizim de elde ettiğimiz gibi reel kur serisinin durağan olmadığı yönünde bulgulara ulaşmıştır.

Tablo 4: *Kapetanios ve diğerleri (2003) Birim Kök Testi Sonuçları* **Not:** *Kritik değerler Kapetanios ve diğerleri (2003)'ne dayanmaktadır. *, ** ve *** simgeleri ilgili istatistiğin sırasıyla %1, %5 ve %10 düzeyinde anlamlı olduğunu gösterir. Gecikme uzunlukları SCI'e göre belirlenmiştir.*

Yapısal değişmenin yanı sıra asimetrik intibakı da dikkate alan Cuestas ve Ordóñez (2012) birim kök testi sonuçları Tablo 5'te verilmiştir. Bu testte, 6 numaralı eşitliğin hata terimlerine Kapetanios ve diğerleri (2003) testi uygulanmaktadır. Hata terimlerinin ortalama ve trendden arındırılmış, ortalamadan arındırılmış ve ham şekli birbirinden farklı değildir. Bu nedenle Kapetanios ve diğerleri (2003) testinden farklı olarak Cuestas ve Ordóñez (2012) testi sonuçları her bir reel kur serisine ilişkin bir *t*−istatistiği ile ifade edilmiştir. Cuestas ve Ordóñez (2012) birim kök testi sonucuna göre on üç reel kur serisinden sadece biri; KZT'nin Çin Yuanına karşı reel kuru

serisi durağan değildir. Durağan bulunan serilerden beşi 0.01 düzeyinde, altısı 0.05 düzeyinde ve biri 0.10 düzeyinde durağan bulunmuştur.

Reel kur	Gecikme	t–istatistiği

Tablo 3: *Cuestas ve Ordóñez (2012) Birim Kök Testi Sonuçları* **Not**: *Cuestas ve Ordóñez (2012)'e göre 250 gözlem için %1, 5 ve 10 anlamlılık düzeyi için kritik değerler sırasıyla −3.928, −3.386 ve −3.110'dur. *, ** ve *** simgeleri ilgili istatistiğin sırasıyla %1, %5 ve %10 düzeyinde anlamlı olduğunu gösterir. Gecikme uzunlukları SCI'e göre belirlenmiştir*

6 Sonuç ve Değerlendirme

Kazakistan için PPP hipotezinin geçerliliği oldukça sınırlı sayıda çalışmada araştırılmış ve genellikle sadece ABD yabancı ülke olarak dikkate alınmıştır. Bu çalışmada KZT'nin çok sayıda farklı reel döviz kuru serisinin durağanlık özellikleri doğrusal ADF ile doğrusal dışılığı dikkate alan iki farklı birim kök testi çerçevesinde incelenerek PPP hipotezinin Kazakistan için geçerliliği araştırılmıştır. Çalışmada kullanılan doğrusal olmayan yaklaşımlar yapısal değişmeyi üstel yumuşak geçiş şeklinde modelleyen Kapetanios ve diğerleri (2003) testi ile yapısal değişmenin yanı sıra asimetrik intibaka da izin veren Cuestas ve Ordóñez (2012) testidir. Çalışmada, KZT'nin on üç farklı reel kurunun Ocak 1995 – Aralık 2012 dönemine ait aylık verileri kullanılmıştır.

ADF test sonuçları KZT'ye ait on üç reel döviz kuru serisinden beşinin durağan olmadığını gösterirken, Kapetanios ve diğerleri (2003) testi bulguları bu sayının iki olduğu şeklindedir. Asimetrik intibaka izin veren Cuestas ve Ordóñez (2012) testinin sonuçları ise KZT'nin Çin Yuanına karşı reel kuru hariç diğer tüm reel kur serilerinin durağan olduklarını gösterir. Bulgular KZT'nin Euroya karşı reel kur ve BDT dışındaki ülkelere ilişkin efektif reel kur serilerinde (Petrol ticareti dahil ve hariç) doğrusal dışı uyumun, ABD Dolarına karşı reel kur serisinde ise asimetrik intibakın varlığını desteklemektedir.

Bunun dışında, Kazakistan gibi önceden merkezi planlamaya dayalı sisteme sahip olan ve serbest piyasa ekonomisine geçiş yapan Rusya, Kırgızistan, Ukrayna, Beyaz Rusya ile BDT ülkelerinin tamamı dikkate alındığında doğrusal ADF testi sonuçları PPP hipotezinin geçerli olduğunu gösterir. Fakat KZT'in ABD Dolarına ve Euroya karşı reel kuru ile BDT dışındaki ülkelere karşı efektif reel kuru dikkate alındığında doğrusal PPP hipotezinin Kazakistan için geçerliliği desteklenmemektedir. Piyasa ekonomisinin hakim olduğu ülkelerle Kazakistan arasında PPP hipotezinin geçerliliğine ilişkin destek doğrusal dışılığın dikkate alınmasıyla elde edilmektedir. Bu sonuç Kazakistan'da piyasa ekonomisine yönelik uygulanan yapısal dönüşüm reformlarının reel döviz kuru intibakı üzerindeki etkisini yansıtmaktadır. Ayrıca Kazakistan ve Çin arasında PPP hipotezinin geçerli olmaması muhtemelen Çin'in önemli derecede dış ticaret fazlasına sahip olmasına rağmen Yuanın aşırı değerlenmesine izin vermemesinden kaynaklanabilir.

Kadınların Çalışma Yaşamına Katılımlarına Yönelik Tutum Ölçeğinin (KÇYKYTÖ) Bir Yapısal Eşitlik Modeli ile Geçerlik ve Güvenirliğinin İncelenmesi

Investigation of the Reliability and Validity of Attitude Scale on Labor Force Participation of Women with a Structral Equation Model

Asst. Prof. Dr. Erol Karaca (Anadolu University, Turkey)

Abstract

This study is designed to find out the relationship between labour force participation of women, internal and external factors that limiting to their labour force participation and negatives of working. This research was carried out with 900 women between the ages of 15-64, living in Eskişehir. The data was collected through "Attitude Scale on Labor Force Participation of women" developed by researchers. These data were analyzed with Second Order Confirmatory Factor Analysis by using the statistical package LISREL. The findings from the study revealed that the scale was valid and reliable and that internal factors and external factors that limiting to their labour force participation and negatives of working affect directly labour force participation of women.

1 Giriş

Türkiye'de kadınların işgücüne katılımı engelleyen nedenlerden olan toplumsal cinsiyet temelli iş yükleri ve bakım hizmetleri, kadınlar için evli olmak, özellikle kentlerde işgücüne katılımı azaltan ciddi bir faktördür. Kadınlar ev dışında çalışma ya da çalışmama kararı alırken evde yapmakta oldukları işlerin aksama olasılığını, çocuklara ve yaşlılara kimler tarafından bakılacağını, iş saatleri dışında evdeki işler için ayırabilecekleri zamanı düşünmek zorunadırlar. Eğitimde toplumsal temelli eşitsizlik ise işgücüne katılımı azaltan bir diğer nedendir. Türkiye'de ekonomi büyümekte, kadın istihdamına aynı oranda yansımamaktadır. Ekonomik büyüme, istihdam, işsizlik işgücüne katılımı etkileyen diğer önemli unsurlardır. Yüksek işsizlik oranları kadınları korkutmakta, bu nedenle kadınlar işgücü piyasalarında iş arama kararı vermekte zorlanmaktadırlar. Ayrıca teknolojik gelişmeler sonucu işlerin beceri gereklerinin yükselmesi, beceri düzeyi yüksek olmayan kadınlar bakımından işgücüne katılımda olumsuz etkide bulunan bir faktör olarak karşımıza çıkmaktadır (TÜSİAD, 2008: 168).

Günümüzde kadınlar diğer alanlara göre en çok ekonomik yaşama katılım konusunda ayırımcılığa maruz kalmaktadır. Kuşkusuz bu durumun en önemli nedenlerinden biri, kadını ekonomide erkeklerle aynı mesleki fırsatlardan ve eşit ücret alma hakkından yararlanmaktan alıkoyan sosyo-kültürel engellerin varlığını sürdürmesidir. Gerçekten de kadınların yaptığı işin, aileye destek olmak için yapılan bir çalışma olduğu yolundaki geleneksel anlayış, kadınlara ekonomik büyüme dönemlerinde gereksinim duyulan ve gerileme dönemlerinde bir kenara itilen, yedek işgücü niteliği kazandırmaktadır.

Kalkınmış ülkelerde kadınların işgücüne katılım oranları son yıllarda büyük ölçüde artmaktadır. Buna karşılık Türkiye'de kadınların işgücüne katılma oranlarında azalma eğilimi gözlenmektedir (TÜSİAD, 2008: 10). Bu çalışmanın amacı da, kadınların işgücüne katılma oranlarındaki azalma eğiliminin nedenlerinin ve işgücüne katılıma yönelik tutumlarının saptanabilmesi için bir tutum ölçeği geliştirmektir.

2 Yöntem

2.1 Evren ve Örneklem

Bu çalışmanın evreni, Eskişehir ilinde, ilçe ve köyler dâhil olmak üzere, yaşayan kadınlar; örneklemini ise Eskişehir il merkezi ile Sarıcakaya ve Seyitgazi ilçesi ve köylerinde ikamet eden 15-64 yaş grubunda yer alan, 900 kadın oluşturmaktadır.

2.2 Veriler ve Toplanması

Araştırmanın amaçları, kadınların işgücüne katılma oranlarını etkileyen nedenlerin belirlenmesine yönelik bir ölçme aracının kullanılmasını gerektirmektedir. Sosyal ve ekonomik yaşama katılım konusunda erkek ve kadın arasında eşitliğin sağlanabilmesi ve kadınların işgücüne katılımının artırılabilmesi için önem taşımasına rağmen, Türkiye'de kadınların işgücüne katılma oranlarını etkileyen nedenlerin belirlenmesine yönelik ölçek yoluyla yapılmış çalışmalar çok sınırlıdır. Toplumsal cinsiyet eşitliğinin son derece önem kazandığı günümüz açısından kadınların işgücüne katılma oranlarını etkileyen nedenlerin belirlenmesine dönük bir ölçme aracının geliştirilmemiş olması önemli bir eksikliktir. Bu eksikliğin giderilmesi amacıyla kadınların işgücüne katılma oranlarını etkileyen nedenlerin ve çalışma yaşamına katılımlarına yönelik tutumlarının saptanması amacıyla "Kadınların Çalışma Yaşamına Katılımlarına Yönelik Tutum Ölçeği" (KÇYKYTÖ) geliştirilmiştir. Söz konusu ölçeğin maddeleri oluşturulurken, öncelikle genel olarak işgücü, işgücüne katılım ve kadının işgücüne katılımı

ile ilgili literatür taranarak, yurtdışında ve yurtiçinde konuyla ilgili yapılan alan araştırmaları ve kadınların çalışma yaşamına katılımları konusunda geliştirilen ölçekler gözden geçirilmiştir. Alana ilişkin yapılan literatür taramaları sonucunda 18 tutum maddesi yazılmıştır. Bu maddelerin yarısının tutum boyutunun olumlu tarafını, diğer yarısının da tutum boyutunun olumsuz tarafını kapsayan ifadeler olmasına; bilişsel, duyuşsal ve davranışsal ifadeleri içermesine özen gösterilmiştir (Tezbaşaran, 1996). Maddelerin 7'si kadınların işgücüne katılımını etkileyen dışsal faktör ifadelerinden, 5'i kadınların işgücüne katılımını etkileyen içsel faktör ifadelerinden ve 6'sı da kadınlar açısından çalışmanın olumsuzluklarına ilişkin ifadelerden oluşmaktadır.

2.3 Kadınların Çalışma Yaşamına Katılımlarına Yönelik Tutum Ölçeği'nin Geçerlik ve Güvenirlik Çalışması

İşgücü, işgücüne katılım ve kadının işgücüne katılımı ile ilgili literatürün taranması sonucu hazırlanan tutum ölçeği, dil bakımından bir uzman tarafından incelenmiştir. Kapsam geçerliği açısından ise üniversitelerde görev yapan alan uzmanlarının görüşlerine başvurulmuştur. Alan uzmanlarının görüşleri doğrultusunda, gerekli düzeltmeler yapılarak, kadınların işgücüne katılma oranlarını etkileyen nedenlerin ve çalışma yaşamına katılımlarına yönelik tutumlarının saptanması için geliştirilen veri toplama aracının deneme formu, son şeklini almıştır. Veri toplama aracının geçerlik ve güvenirlik analizinin yapılabilmesi için hazırlanan veri toplama aracı deneme formu, ön deneme grubu olarak çalışma grubu dışında kalan 2010-2011 öğretim yılında Anadolu Üniversitesi İktisadi ve İdari Bilimler Fakültesi'nde okuyan 33 katılımcıya uygulanmıştır.

Araştırmada, tutum maddelerine verilecek tepkiler için 5'li dereceleme tercih edilmiştir. Cevaplayıcılardan ölçekte yer alan her bir tutum ifadesini "*kesinlikle katılmıyorum – katılmıyorum – kararsızım – katılıyorum - kesinlikle katılıyorum*" gibi beş kategoriden biriyle sınıflaması istenmiştir. Her cevaplayıcı için toplam puanın elde edilebilmesi için, en olumlu kategoriye 5 puan, en olumsuz kategoriye 1 puan verilerek toplanan cevaplar 1–5 arasında puanlanmıştır (Turgut, 1977, s.10, 11).

Geliştirilen ölçeği oluşturacak maddelerin belirlenmesi amacıyla söz konusu öğrencilerden elde edilen veriler üzerinde, her bir maddenin madde-toplam korelâsyonları hesaplanmıştır. Ölçekte yer alacak maddelerin seçiminde madde-toplam korelasyon katsayısının .20 değerinin üzerinde olması ölçütü esas alınmıştır (Tavşancıl ve Keser, 2002, s.87). Ölçekte bulunan maddelerin ayırt ediciliğin değerlendirmek amacıyla yapılan madde analizi sonuçları incelendiğinde; ölçekteki maddelerin 16'sının madde-toplam korelasyonunun .20'nin üzerinde olduğu görülmektedir. Bu bulgu ölçekteki 16 tutum ifadesinin her birinin ayırt edici özelliğe sahip olduğunu göstermektedir. Tüm ölçeğin güvenirlik katsayısı Cronbach α=.89 olarak bulunmuştur. Bu değerler, ölçeğin güvenilir olduğunu göstermektedir.

Ön deneme sonucunda maddelerin gayet iyi anlaşıldığı, ancak çok az sayıda maddenin ifade değişikliği gerektirdiği anlaşılmıştır. İfade değişikliği gerektiren maddeler değiştirilerek veri toplama aracına son şekli verilmiştir.

Ön deneme grubuna uygulanıp son şekli verilen "Kadınların Çalışma Yaşamına Katılımlarına Yönelik Tutum Ölçeği" (KÇYKYTÖ), araştırmaya dâhil edilen Eskişehir il merkezi ile Sarıcakaya ve Seyitgazi ilçesi ve köylerinde ikamet eden 15-64 yaş grubunda yer alan 914 kadına uygulanmıştır. Ancak daha önce değinildiği üzere, 14 anket yönergeye uygun şekilde doldurulmadığından analiz dışında tutulmuştur. Uygulama sonrası, ölçeğin geçerlik ve güvenirliğini test etmek için, analize dâhil edilen 900 kişiden elde edilen veriye veriye üç temel bileşenden oluşan Yapısal Eşitlik Modeli (YEM) uygulanmıştır.

Günümüzde gözlenen değişkenler tarafından ölçülen gizil yapılar arasındaki nedensel ilişkiler ile ilgili olan araştırma problemlerini çözmek için pek çok disiplinde kullanılan YEM'in tarihsel gelişimi incelendiğinde; path (yol) analizi, yapısal model ve ölçüm modellerinin kavramsal sentezi ve genel tahmin süreçleri şeklinde başlıca üç temel bileşeninin bulunduğu görülmektedir (Pek, 1999).

Path analizinin amacı değişkenler arasında varsayılan nedensellik bağlarının önemini ve büyüklüğünü tahmin etmek ve politika çıkarımları yapmaktır. Bu gerekçe ile sonuç ve sebep değişkenleri arasındaki ilişkiler dizisinin belirlenmeye çalışıldığı bu analizde hangi değişkenlerin sebep değişkeni, hangi değişkenin ya da değişkenlerin sonuç değişkeni olarak ele alınması gerektiği önem arz etmektedir (Pek, 1999).

Araştırmanın temel amacı kadınların işgücüne katılımlarını engelleyici dışsal ve içsel faktörler ile çalışmanın kendileri açısından doğurduğu olumsuzluklar gibi değişkenler ile kadınların çalışma yaşamına katılımları arasında nedensel bir ilişki bulunup bulunmadığını araştırmaktır. Bu amaç da, araştırmanın değişkenleri arasında neden-sonuç ilişkisi kurulmasını, başka bir deyişle YEM kurulmasını ve path analizini gerektirmektedir. Bu gerekliliğe uygun olarak açımlayıcı faktör analizi (AFA) çalışmasıyla belirlenen faktör yapıları, ikinci düzey doğrulayıcı faktör analizine (DFA) tabi tutulmuştur.

YEM, iki farklı istatistiksel geleneğin melezi olarak ortaya çıkmıştır. Bu geleneklerden ilki, psikoloji ve psikometri alanlarında gelişen faktör analizidir. Diğer ise, temel olarak ekonometri, daha öncesinde ise genetik alanında eş zamanlı olarak gelişen eşitlik modelidir (Çokluk, Şekercioğlu ve Büyüköztürk, 2010). YEM, gözlenen ve gizil değişkenler arasındaki nedensel ilişkilerin test edilmesinde kullanılan kapsamlı bir istatistiksel tekniktir. Özellikle ekonometri, psikoloji, sosyoloji, pazarlama ve eğitim bilimlerinde değişkenler arasındaki ilişkilerin değerlendirilmesinde ve kuramsal modellerin test edilmesinde kullanılan sistemli bir araçtır. YEM,

gizil değişkenler seti arasında bir nedensellik yapısının var olduğunu ve gizil değişkenlerin gözlenen değişkenler aracılığıyla ölçülebildiğini varsayar (Yılmaz vd., 2006: 172).

Açımlayıcı Faktör Analizi: AFA, ölçme aracının yapısını aynı yapıyı ya da niteliği ölçen değişkenleri bir araya toplayarak ölçmeyi az sayıda faktör ile açıklamayı amaçlayan bir istatistiksel tekniktir (Büyüköztürk, 2002, s.117). Faktör Analizine çok çeşitli amaçlarla başvurulabilir (Baykul, 2000, s.389). Bu araştırmada Faktör Analizi ölçeğin yapısını belirlemek amacıyla yapılmıştır.

Faktör analizi sonunda elde edilen varyans oranları ne kadar yüksek olursa, ölçeğin faktör yapısı da o kadar güçlü olmaktadır (Gorsuch, 1974; Lee ve Comrey, 1979. Akt. Tavşancıl ve Keser, 2002, s.87). Sosyal bilimlerde %40 ile %60 arasında değişen varyans oranları yeterli kabul edilmektedir (Scherer, Wiebe Luther, Adams, 1988. Akt. Tavşancıl ve Keser, 2002, s.87). Aynı yapıyı ölçmeyen maddelerin ayıklanmasında; maddelerin yer aldıkları faktördeki yük değerlerinin yüksek olmasına ve maddelerin tek bir faktörde yüksek, diğer faktörlerde ise düşük yük değerine sahip olmasına dikkat edilerek, maddelerin faktör yüklerinin en az .45 ve tek faktör altında yer alması (maddenin iki ayrı faktör altında yüksek faktör yükü alması durumunda farkın en az .10 olması) ölçütleri (Büyüköztürk, 2002, s.118, 119) esas alınmıştır. Faktör analizinde aynı yapıyı ölçmeyen maddelerin ayıklanmasında; maddelerin yer aldıkları faktördeki yük değerlerinin.45'in üstünde olmasına dikkat edilmiştir. Bu ölçütlere göre, Temel Bileşenler Analizi Uygulanan 16 maddeden varyansları .40'ın ve faktör yükleri ise .45'in altında olan 7, 10, 14, 15 ve 16. maddeler ölçekten çıkartılmış ve 11 madde kalmıştır.

Temel Bileşenler Analizi uygulanan 11 madde öz değeri 1.00'dan büyük olan 3 faktör altında toplanmaktadır. Dolayısıyla KÇYKYTÖ en çok 3 faktörlü kabul edilebilir. Üç faktör tarafından açıklanan toplam varyans %61.89'dur. Temel Bileşenler Analizine göre birinci faktörün sırasıyla öz değeri 4.52 açıkladığı varyans %41.04; ikinci faktörün 1.29, %11.68 ve üçüncü faktörün 1.01, %9.17'dir. Tablo 7'de görüleceği gibi, maddelerle ilgili olarak tanımlanan üç faktörün ortak varyansları ise, .50 ile .74 arasında değişmektedir. Bu bulgu, analizde önemli faktör olarak belirlenen üç faktörün birlikte maddelerdeki toplam varyansın ve ölçeğe ilişkin varyansın önemli bir kısmını açıkladığını göstermektedir.

Faktör analizinde faktör yük değeri .45'in üstünde olan maddeler alınmış ve bu ölçüte göre, 11 maddenin birinci faktörde yer aldığı ve birinci faktör yük değerlerinin .45 ile .74 arasında değiştiği gözlenmektedir. Bu durum KÇYKYTÖ'nün genel bir faktöre sahip olduğunu göstermektedir. Temel Bileşenler Analizinde birinci faktörün açıkladığı varyansın %41.04 olması da bunun bir göstergesidir.

Ölçekte bulunan maddelerin ayırt ediciliğini değerlendirmek amacıyla yapılan madde analizi sonuçları incelendiğinde madde-toplam korelasyon katsayısı .37 ile .63 arasında değişmektedir. Bu bulgu, 11 tutum ifadesinin her birinin ayırt edici özelliğe sahip olduğunu göstermektedir. Tüm ölçeğin güvenirlik katsayısı Cronbach α=.84 olarak bulunmuştur. Bu değerler ölçeğin güvenilir olduğunun bir göstergesi olarak yorumlanabilir.

KÇYKYTÖ üç faktörlü olduğu için, faktörlerin kendileriyle yüksek ilişki veren maddeleri bulmaları ve daha kolay yorumlanabilmeleri amacıyla varimax tekniği uygulanarak rotasyon işlemi yapılmıştır (Büyüköztürk, 2002, s.120). KÇYKYTÖ'nün faktör yapılarını incelemek amacıyla uygulanan varimax rotasyon sonucu ölçekteki maddelerin madde-toplam korelasyon katsayıları, temel bileşenler analizi sonuçları ve dört faktördeki yük değerleri Tablo 2'deverilmiştir.

Aynı yapıyı ölçmeyen maddelerin ayıklanmasında; maddelerin yer aldıkları faktördeki yük değerlerinin yüksek olmasına ve maddelerin tek bir faktörde yüksek, diğer faktörlerde ise düşük yük değerine sahip olmasına dikkat edilerek, maddelerin faktör yüklerinin en az .45 ve tek faktör altında yer alması (maddenin iki ayrı faktör altında yüksek faktör yükü alması durumunda farkın en az .10 olması) ölçütleri (Büyüköztürk, 2002, s.118, 119) esas alınmıştır. Ölçekteki tüm maddelerin faktör yüklerinin bu ölçütlere uygun olduğu saptanmış ve ölçekte 11 madde kalmıştır. Ölçekte kalan 11 maddenin faktörlere göre dağılımı Tablo 1'de verilmiştir.

Faktörler	Maddeler
1. Faktör: İşgücüne Katılımı Engelleyici dışsal Faktörler	4, 5, 8 ve 9
2. **Faktör:** İşgücüne Katılımı Engelleyici İçsel Faktörler	1, 2 ve 3
3. **Faktör:** Kadın Açısından Çalışmanın Olumsuzlukları	6, 11, 12 ve 13

Tablo 1. Ölçekte Kalan 11 Maddenin Faktörlere Göre Dağılımı

Tablo 2'de görülebileceği üzere, birinci faktörde yer alan dört maddenin faktördeki yük değerleri .65-.78; ikinci faktörde yer alan üç maddenin faktördeki yük değerleri .71-.84; üçüncü faktörde yer alan dört maddenin faktördeki yük değerleri ise .56-.74 arasında değişmektedir. Bu bulgu, ölçeğin birbiriyle yüksek düzeyde ilişkili olan maddelerden oluştuğunu ve kadınların çalışma yaşamına katılımlarına yönelik tutumlar olarak tanımlanan yapıyı ölçtüğünü göstermektedir. Birinci faktör ölçeğe ilişkin toplam varyansın %41.04'ünü, ikinci faktör %11.68'ini ve üçüncü faktör ise %9.17'sini açıklamaktadır. Üç faktör tarafından açıklanan toplam varyans %61.89'dur. Üç faktörün maddelerde açıkladıkları ortak varyans ise, .47-.74 arasında değişmektedir. Bu bulgular, ölçeğin faktör yapısının güçlü olduğunu göstermektedir.

Faktörler, maddelerin içerdiği anlamlar dikkate alınarak adlandırılmaya çalışılmıştır. Birinci faktöre, "İşgücüne Katılımı Engelleyici dışsal Faktörler"; ikinci faktöre, "İşgücüne Katılımı Engelleyici içsel Faktörler" ve üçüncü faktöre ise, "Kadın Açısından Çalışmanın Olumsuzlukları" adı verilmiştir.

Sıra No	Madde No	Madde-Toplam Korelasyonu	Faktör Ortak Varyansı	Faktör-1 Yük Değeri	Rotasyon Sonrası Yük Değeri		
					Faktör-1	Faktör-2	Faktör-3
1	M1	.53	74	.65	.21	**.83**	.10
2	M2	.46	.73	.59	.10	**.84**	.10
3	M3	.63	.67	.74	.32	**.71**	.26
4	M4	.55	.65	.65	**.76**	.27	.07
5	M5	.55	.66	.65	**.78**	.17	.13
6	M6	.59	.53	.68	.22	.41	**.56**
7	M8	.60	.60	.71	**.65**	.17	.37
8	M9	.60	.63	.70	**.68**	.10	.40
9	M11	.47	.51	.58	.18	.14	**.68**
10	M12	.55	.62	.63	.14	.24	**.74**
11	M13	.37	.47	.45	.16	-.04	**.67**

Açıklanan Varyans
Toplam = % 61.89
Faktör-1 = % 41.04
Faktör-2 = % 11.68
Faktör-3 = % 9.17
Cronbach α = .84

Tablo 2. *Varimax Rotasyon Sonucu Ölçekteki Maddelerin Madde-Toplam Korelasyon Katsayıları, Temel Bileşenler Analizi Sonuçları ve Üç Faktördeki Yük Değerleri*

Ölçekte bulunan maddelerin ayırt ediciliğini değerlendirmek amacıyla yapılan madde analizi sonuçları incelendiğinde, madde-toplam korelasyonlarının .37 ile .63 arasında yüksek düzeyde olduğu görülmektedir. Bu bulgu, 11 tutum ifadesinin her birinin ayırt edici özelliğe sahip olduğunu göstermektedir. Tüm ölçeğin güvenirlik katsayısı Cronbach α=.84 olarak bulunmuştur. "İşgücüne Katılımı Engelleyici Dışsal Faktörler" olarak adlandırılan birinci faktörde bulunan maddelerin ayırt ediciliğini değerlendirmek amacıyla yapılan madde analizi sonuçları incelendiğinde, her madde için hesaplanan madde-toplam korelasyon katsayısı .56-.63 arasında değişmektedir. Birinci faktörün güvenirlik katsayısı Cronbach α=.79'dur. "İşgücüne Katılımı Engelleyici İçsel Faktörler" olarak adlandırılan ikinci faktörde bulunan maddelerin ayırt ediciliğini değerlendirmek amacıyla yapılan madde analizi sonuçları incelendiğinde ise, her madde için hesaplanan madde-toplam korelasyon katsayısı .63-.67 arasında değişmektedir. İkinci faktörün güvenirlik katsayısı Cronbach α=.79'dur. "Kadın Açısından Çalışmanın Olumsuzlukları" olarak adlandırılan üçüncü faktörde bulunan maddelerin ayırt ediciliğini değerlendirmek amacıyla yapılan madde analizi sonuçları incelendiğinde, her madde için hesaplanan madde-toplam korelasyon katsayısı .38-.54 arasında değişmektedir. Üçüncü faktörün güvenirlik katsayısı Cronbach α=.69'dur. Bu değerler ölçeğin güvenilir olduğunun bir göstergesi olarak yorumlanabilir.

Doğrulayıcı Faktör Analizi: Daha önce değinildiği üzere, AFA çalışmasıyla belirlenmiş olan faktör yapıları, DFA'ya tabi tutulmuştur. Ancak DFA uygulamasına geçmeden önce, belirlenen faktör yapıları doğrultusunda, KÇYKYTÖ'nün geçerlik ve güvenirlik analizlerinin yapılabilmesi ve kadınların çalışma yaşamına katılımlarının üç gizil değişkeni ne ölçüde açıkladığının saptanabilmesi için öncelikle bir YEM modeli tanımlanmıştır. Kadınların çalışma yaşamına katılımları ile işgücüne katılımı engelleyici dışsal faktörler, işgücüne katılımı engelleyici içsel faktörler ve kadın açısından çalışmanın olumsuzlukları arasındaki ilişkiyi açıklayan model Şekil 1'de gösterilmiştir.

Şekil 1'de görülebileceği üzere, önerilen YEM'de değişkenler arasında tek yönlü oklarla gösterilen yollar, aslında araştırmanın hipotezleridir. Buna göre kadınların işgücüne katılımı engelleyici dışsal ve içsel faktörler ile kadın açısından çalışmanın olumsuzlukları gibi değişkenler kadınların çalışma yaşamına katılımını etkiler. Modelde kadınların çalışma yaşamına katılımını etkileyeceği öngörülen söz konusu değişkenler bağımsız gizil değişkenler, kadınların çalışma yaşamına katılımı ise bağımlı gizil değişken olarak tasarlanmıştır.

KÇYKYTÖ'nün geçerlik ve güvenirlik analizlerinin yapılabilmesi ve kadınların çalışma yaşamına katılımlarının üç gizil değişkeni ne ölçüde açıkladığının belirlenebilmesi, başka bir deyişle kadınların çalışma

yaşamına katılımı ile üç gizil değişken arasındaki ilişkinin incelenebilmesi için veri grubuna ikinci düzey DFA uygulanmış ve KCYKYTÖ ölçeği için yol şeması Şekil 1 'de gösterilmiştir.

KÇYKYTÖ'nün üç boyutlu modeli için gizil değişkenlerin gözlenen değişkenleri açıklama oranlarının anlamlılık düzeyleri ise Şekil 3'te gösterilmiştir. Şekil 2 ve Şekil 3'te görülebileceği üzere veri grubuna uygulanan DFA sonuçları Tablo 3'te de gösterilmiştir.

Toplanan verilerin LISREL'de ikinci düzey doğrulayıcı faktör analizi sonuçlarına göre, öncelikle gözlenen değişkenlerin t değerlerinin anlamlılık düzeyi kontrol edilmiştir. t değeri 1.96'dan büyük ise, .05 düzeyinde, 2.56'dan büyük ise .01 düzeyinde anlamlıdır. DFA sonuçlarına göre, t değerlerinin 2.56'dan büyük olduğu saptanmıştır. Bu sonuca göre, gizil değişkenlerin gözlenen değişkeni açıklama durumlarına ilişkin t değerleri .01 düzeyinde anlamlı bulunmuştur. DFA sonuçlarına göre, t değerlerinin anlamlı olduğu saptandıktan sonra, ayrıca değişkenlerin hata varyansları da incelenmiştir. Şekil 3'te görülebileceği üzere, değişkenlerin hata varyanslarının düşük düzeyde olduğu saptanmıştır. Dolayısıyla bu modelde tüm maddeler için anlamlı t değerlerinin elde edilmesi nedeniyle tüm göstergelerin bu model içerisinde yer alması yönünde karar verilmiştir.

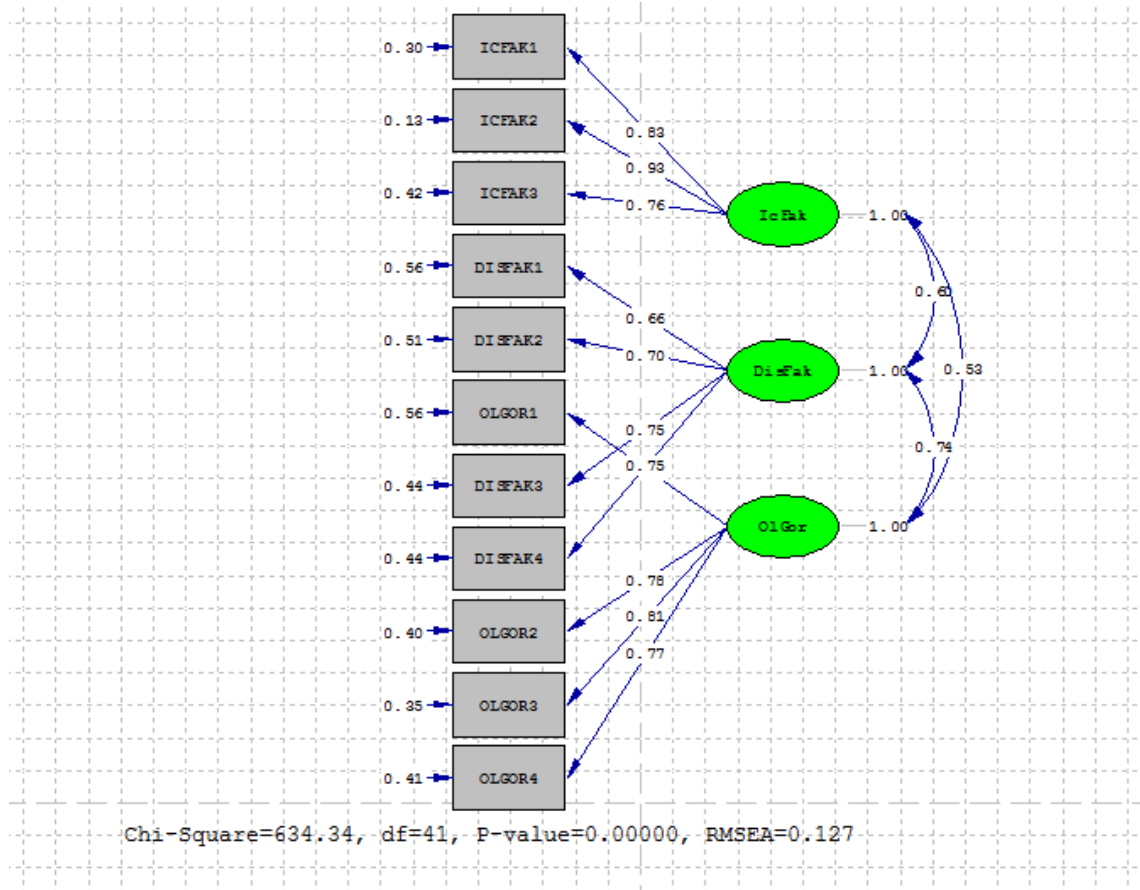
***Tablo 3**. İkinci Düzey DFA Sonuçları*

İkinci düzey doğrulayıcı faktör analizi sonuçlarına göre, hangi göstergelerin tanımlanan model içerisinde yer alması gerektiğine karar verildikten sonra, uyum ölçütleri göz önüne alınarak modelin uygunluğu tartışılmıştır.

Modelin uygunluğu açısından öncelikle p değeri kontrol edilmiştir. p değerinin anlamlı olmaması arzu edilen bir durum olmasına rağmen, Şekil 3'teki gibi doğrulayıcı faktör analizinde örneklemin büyüklüğüne bağlı olarak p değeri anlamlı çıkmaktadır. Bu nedenle alternatif uyum endeksleri değerlendirmeye alınmaktadır. Bu uyum endekslerinden ilki ki-kare istatistiği (χ^2)'dir. Ancak χ^2, tek başına değerlendirilen bir istatistik değildir. Bu nedenle serbestlik derecesi (sd) ile oranlanarak değerlendirmeye alınır. χ^2/ sd oranı 3'ten küçük ise, uyum mükemmel; 5'in altında ise uyum kabul edilebilir düzeydedir. Buna göre, yapılan analiz için χ^2/ sd oranının (634.34 / 41 = 15.46) düşük düzeyde uyum değeri verdiği ifade edilebilir.


Şekil 4. Yol Şemasında Hata Varyanslarının İncelenmesi

Yaklaşık Hataların Ortalama Karekökü (RMSEA) incelendiğinde ise, .13 düzeyinde bir uyum endeksi elde edildiği görülmektedir. RMSEA'nın aldığı değer 05'e eşit veya daha küçük ise uyum mükemmel, .08 ve altında ise uyum kabul edilebilir ve .10 ve daha büyük ise uyum zayıftır. Buna göre yapılan analiz için elde edilen uyum endeksinin zayıf olduğu söylenebilir.

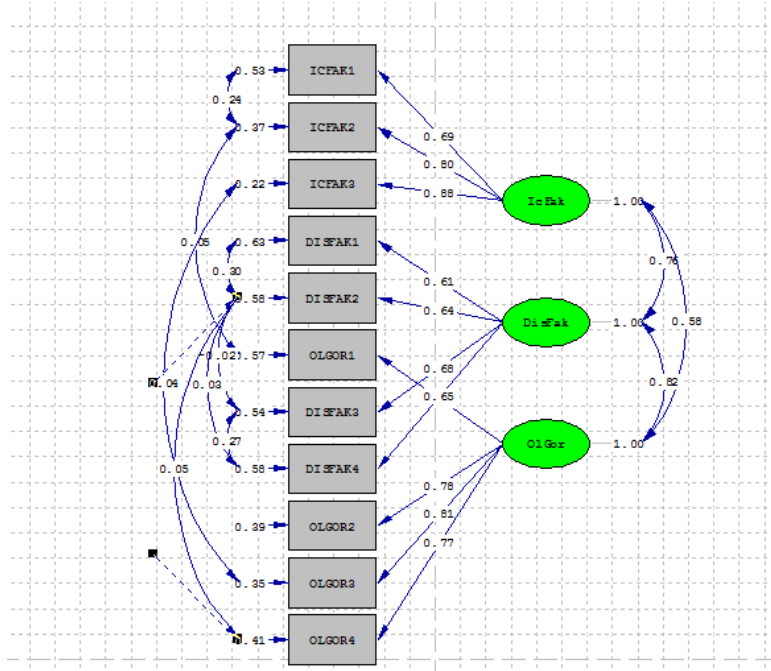
Uyum endekslerinin incelenmesine devam edildiğinde, İyilik Uyum İndeksi (GFI) = .89 ve Düzenlenmiş İyilik Uyum Endeksi (AGFI)'nin .82 olduğu görülmektedir. GFI ve AGFI, 0-1 aralığında değişen değerler alır. GFI ve AGFI değeri .95 ve üzerinde ise uyum mükemmel, .90-.94 arasında ise uyum kabul edilebilirdir (Schumacker ve Lomax 2004; Hooper, Caughlan ve Mullen, 2008). Buna göre, GFI'nın kabul edilebilir düzeye yakın bir uyum değeri verdiği, buna karşın AGFI'nın kabul edilebilir düzeyde uyum değeri vermediği söylenebilir.

Standardize edilmiş Artık Ortalamaların Karekökü (RMR) endeksinin .07 olduğu görülmektedir. RMR ve standardize edilmiş RMR'nin .05'in altında olması mükemmel uyuma, .08'in altında olması iyi uyuma ve .10'un altında olması ise kabul edilebilir uyuma karşılık gelmektedir. Buna göre, yapılan analiz için standardize edilmiş RMR'nin iyi bir uyuma sahip olduğu ifade edilebilir.

Normlaştırılmamış Uyum İndeksi (NNFI) ve Karşılaştırmalı Uyum İndeksi (CFI) incelendiğinde, NNFI'nın .86 ve CFI'ın .90 olduğu görülmektedir. NNFI ve CFI değerleri .95'in üzerinde ise uyum mükemmel, .90'ın üzerinde ise uyum kabul edilebilirdir (Sümer, 2000). Buna göre, yapılan analiz için NNFI'nın kabul edilebilire yakın düzeyde bir uyum değeri verdiği ve CFI'ın ise kabul edilebilir düzeye yakın bir uyum değeri verdiği söylenebilir.

İkinci düzey doğrulayıcı faktör analizi sonuçlarına göre modelin uygunluğunu ilişkin yapılan değerlendirmelerin ardından modifikasyon önerileri incelenmiştir. Yapılan incelemede yedi modifikasyon önerisi olduğu görülmektedir. Yapılan modifikasyonlar sonucunda 634.34 olan χ^2, 120.01'e düşmüştür.

Modifikasyon sonrası χ^2 / sd (120.01 / 33) oranı 3.64 bulunmuştur. Bu oranın 5'in altında olması nedeniyle uyumun kabul edilebilir olduğu ifade edilebilir. Yol şemasındaki RMSEA incelendiğinde ise, .054 düzeyinde bir uyum endeksi elde edilmiştir. RMSE'nın .08'den küçük olması nedeniyle uyum iyi olarak değerlendirilebilir.

Modifikasyondan sonra elde edilen uyum endeksleri incelendiğinde, NFI (.98), NNFI (.97) ve CFI (.98) değerlerinin .95'in üzerinde olmasının ve standardize edilmiş RMR değerinin ise .05'in altında olmasının mükemmel bir uyuma karşılık geldiği söylenebilir. GFI değerinin .98 olmasının mükemmel bir uyuma ve AGFI değerinin .94 arasında olmasının ise kabul edilebilir bir uyuma karşılık geldiği ifade edilebilir.


Chi-Square=120.01, df=33, P-value=0.00000, RMSEA=0.054

Şekil 5*. Modifikasyonun Yapılmasının Ardından Elde Edilen Yol Şeması*

3 Sonuç

Araştırma bulguları, KÇYKYTÖ'nün 11 maddeden oluşan üç faktörlü yapısının bir model olarak doğrulandığını; işgücüne katılımı engelleyen dışsal faktörler, işgücüne katılımı engelleyen içsel faktörler ve çalışmanın olumsuzlukları ile çalışma yaşamına katılım arasındaki ilişkiyi açıklamak için geliştirilen modelin uygunluğunu ortaya koymaktadır. Geliştirilen modelin uyum endeksleri, modelin reddedilmediğini gösterdiğinden güvenirliğin delili olarak sunulabilir. DFA sonuçlarına göre tüm standardize parametre değerleri .50'den büyüktür. Dolayısıyla tüm yapılar birleşme geçerliliğine sahiptir (Chou, Boldy ve Lee, 2002: 52).

Araştırma kapsamında elde edilen sonuçlar, ölçeğin çalışma grubundan elde edilen veriler için geçerli ve güvenilir olduğunu göstermektedir. Bu araştırmanın kapsamadığı, farklı illerde yaşayan kadınlar bakımından güvenirlik ve geçerlik çalışmalarının yinelenmesi ve yapılan analizlerin karşılaştırılması özellikle faktör yapı geçerliğini belirlenebilmesi açısından önemlidir. Bu bakımdan "Kadınların Çalışma Yaşamına Katılımlarına Yönelik Tutum Ölçeği" (KÇYKYTÖ) kullanılarak araştırmalar yapılmalı ve elde edilen sonuçlar bu araştırmanın sonuçları ile karşılaştırılmalıdır.

Bu araştırmada geliştirilen "Kadınların Çalışma Yaşamına Katılımlarına Yönelik Tutum Ölçeği (KÇYKYTÖ)"nin, kadınlar dışında işgücüne katılım oranlarını etkileyen nedenlerin belirlenmesi amacıyla kullanılabilmesi de mümkündür.

Kırgızistan ve Avrasya Gümrük Birliği

Kyrgyzstan and Eurasian Customs Union

Mrs. Aigul Turdubekova (Istanbul University, Turkey)

Mrs. Elmira Kupsuralieva (Kyrgyzstan-Turkey Manas University, Kyrgyzstan)

Abstract

This paper looks at the issue of joining the Eurasian Customs Union for Kyrgyzstan. We first provide a short description of how some former Soviet Union countries attempted to rejuvenate their regional integration followed by the review of the economic, social and political background of Kyrgyzstan in joining the Eurasian Customs Union. The main conditions for and the associated impact of joining the Union on customs tariffs and the international trade of Kyrgyzstan are discussed. By comparing the main development indicators of the Customs Union member countries we try to find any advantages for the Kyrgyz economy from joining the Union. An additional discussion of the potential losses and benefits shows that there are more benefits from joining the Customs Union. In general, we find that since the founders of the Customs Union – Russia and Kazakhstan – are also very important geographical, economic and political partners of our country, joining the Union seems inevitable for Kyrgyzstan.

1 Giriş

Günümüzdeki dünya ekonomisinin giderek bir bütün haline geldiği koşullarda ülkeler birbirleriyle karşılıklı ilişkiler kurmadan ve entegre olmadan gelişmeleri mümkün değildir. Özellikle de 1990'lardaki Doğu Bloku ve Sovyet Sosyalist Cumhuriyetler Birliğinin dağılıp serbest piyasa ekonimisini benimsemeleri ile dünya ülkeleri arasındaki sıkı ekonomik ve siyasi ilişkiler de hızla artarak küreselleşme ve bölgesel entegrasyon olguları daha da önemli hale gelmiştir.

Yeni dağılan eski sövyet ülkelerinin her biri bağımsız bir ülke olarak kendine en uygun gördüğü yollarla piyasa ekonomisine geçiş sürecini başlatmalarına rağmen birbirleriyle olan önceki bağları bir şekilde koruma eğiliminde bulundular. Böylece başlangıçta Sovyetler Birliğinin dağılmasının kolay ve sorunsuz geçmesi için kurulan Birleşik Devletler Topluluğunun amacı giderek değişerek bölge ülkeleri arasında ekonomik ve siyasi bütünleşme ile dünya arenasında iyi bir konuma sahip olma çabası ön plana çıktı. İşte Rusya Federasyonu, Kazakistan ve Belorusya'nın kurduğu Avrasya Gümrük Birliği de bu eğilimin bir sonucudur.

Günümüzde Kırgızistan da Avrasya Gümrük Birliği'ne üye olma aşamasındadır. Ancak bu konu hem Kırgız hem de Gümrük Birliği araştırmacıları tarafından çok yönlü tartışmalara yol açarak hala sonucunun nasıl olacağı bilinmeyen bir gelişme olarak nitelendirilmektedir. İşte biz de bu çalışmamızda Kırgızistan'ın bu bölgesel entegrasyon süreci içindeki yerini ve rolünü belirtmeye ve Avrasya Gümrük Birliği'ne üye olmasının yararlarını ve kaybedebilecek yönleriyle zararlarını tartışmaya çalışacağız.

2 Kığızistan'ın Genel Ekonomik, Siyasi ve Sosyal Durumu

Kırgızistan 1991'de bağımsızlığını ilan etmesiyle hem demokratik rejime geçmede, hem de refomları uygulamada kararlılık yönünden bölgede en aktif ülkelerden biri oldu. 1998'de ise uluslararsı ilişkileri kurma açısından da bölgede ayrıcalık göstererek Dünya Ticaret Örgütüne(DTÖ) üye olan ilk ülke oldu. Ancak diğer BDT ülkelerinden farklı olarak Kırgızistan yüzölçümünün, nüfusunun ve doğal kaynaklarının çok az olmasının yanında ne yazık ki bağımsızlığını kazandığından beri siyasi açıdan da devrimlerin en çok ve sık yapıldığı istikrarsız bir ülke olarak tanındı.

Eski sovyet dönemindeki üretim ağlarının kopmasıyla büyük fabrikaların kapatılması, tarım sektörünün ön plana çıkması ve sanayi sektörünün gelişimi için sermayenin yetersizliği işsizlik sorununu ön plana çıkardı. 5,6 milyon kişilik nüfusu ve 1158 dolar kişi başına düşen GSYİH'sı ile dünya ülkeleri arasında 149.sırada yer alması da (BDT ülkeleri arasında Tacikistan'dan önceki en son sıradadır) işsizlik sorununu daha da derinleştirerek işgücünün komşu ülkelere (Rusya ve Kazakistan'a) ve bölge dışındaki başka gelişmiş ülkelere göç etmesine sebep oldu. Doğal kaynakları açısından hidroelektrik, altın ve değerli madenler rezervlerine zengin olmasına karşın bunları işletmek ve üretmek için verimli yatırımlara ihtiyacı vardır. Böylece, Sovyetler döneminde tarımsal-endüstriyel olan Kırgızistan günümüzde tarımsal-hizmet ülkesi olarak eskideki ihracatçı ülkeden ithalatçı ülkeye dönüşmüştür. 2012 yılı verilerine baktığımızda ülkenin ticaret yapısında ihracatın payı %19,5 oran iken, ithalatın payı %80,5 olarak dış ticaret dengesi açık gösterdiği ve bu açığın Ocak-Nisan ayları aralığında 1287,4 milyon dolar olarak gerçekleştiği bilinmektedir. Ancak bunun yanında belirtmemiz gerekir ki Kırgızistan dışa açık ekonomiye sahiptir ve dış ticaret dengesinin GSYİH'ya oranı %110 cıvarındadır. Bu yüzden de dış ekonomik partnerlerinin ekonomisindeki herhangi bir değişiklikler hemen ülkenin ekonomisini de doğrudan etkiler. Özellikle komşu BDT ülkelerine (özellikle Rusya ve Kazakistan) olan cografi yakınlık ve

teknolojik bağımlılığı dolayısıyla bugünlere kadar bu ülkelerle sıkı ilişkilerini sürdürtmektedir. Fakat bunun yanında BDT dışı diğer ülkelerle olan ticari ilişkileri de önemlidir. Dış ticaret açığını kapatmak için ihracatı artırmak ve hammaddeye yönelik üretimden sanayi üretimine geçmek için yabancı sermayeleri çekmek gereklidir. Kırgızistan ekonomisisnin diğer önemli sorunu da dış borçlardır. 2010 yılında 2,62 milyar dolar olan dış borç, 2012 yılında da 3,3 milyar dolara ulaşarak GSYİH'yı %46 oranında aşmıştır.

	1991	1995	2000	2005	2011
GSYİH (Milyon Som)	92,6	16145,1	65357,9	100899,2	273107,8
GSYİH (milyon dolar)	1,97	343,51	1370,59	2146,79	5810,80
Sanayi Üretimi (milyon dolar)	1,67	158,36	881,01	1089,71	2827,24
Tarım Sektörü Üretimi (milyon dolar)	1.02	216,40	911.07	1348,5	3135,05
Kişi Başına Asgari Geçim (1 ay için dolarla)	...	7,59	26.28	39,92	74,52**
Tüketici Fiyat İndeksi. Yıllık Artışı (%)	21.3*	132,1	109,6	104,9	119,2**
Kayıtlı İşsiz sayısı (bin kişi)	0,1	50,4	58,3	68,0	61,1
Sabit Sermaye Yatırımları (milyon dolar)	0,3	76,69	241,22	257,65	1019,34
Dış Ticaret (milyon dolar)	737,4*	934,4	1069,0	1862,7	5576,3
İhracat	317,0*	412,0	510,9	674,0	1794,6
İthalat	420,7*	522,4	558,1	1188,7	3781,7

Tablo 1: Kırgızistan Cumhuriyetinin Genel Ekonomik Göstergeleri

Yukarıdaki tablodan görüldüğü gibi eski sovyet dönemindeki üretim ağlarının kopmasıyla büyük fabrikaların kapatılması, tarım sektörünün ön plana çıkması ve sanayi sektörünün gelişimi için sermayenin yetersizliği işsizlik sorununu ön plana çıkarmıştır. Tarımın en önemli can damarı olan sulak arazilerde buğday, pamuk, kenevir, tütün, yağlı tohumlar, şeker pancarı, üzüm, mısır gibi muhtelif meyveler ve sebzeler yetiştirilmesi de önemli bir imkândır. Çalışan nüfusun %34'ü tarım ve ormancılık alanlarında istihdam edilmektedir. Tarımın iklim ve benzeri etkilere çok açık olması dönemlik dalgalanmaları da beraberinde getirmektedir. Ancak Bağımsızlık sonrası Kırgızistan Cumhuriyeti'nin reform politikalarından biri de tarım arazilerini köydeki kayıtlı aile ferlerine bölmesinin doğru bir politika olduğunu da söylemeliyiz. Çünkü günümüzde tarıma dayalı bir ekonomi olarak nitelendirilmesine rağmen tarımın ülke nüfusunun yarısına yakınını geçindirmesi ve komşu Kazakistan ve Rusya ülkeleri açısından avantaja sahip olmasına sebep olduğunu inkar edemeyiz.

3 Birleşik Devletler Topluluğu Bölgesinde Bir Entegrasyon Çabası Olarak Avrasya Gümrük Birliği

1990'lardaki Doğu Blokunun ve Sovyetler Birliğinin dağılması dünya ekonomisinin tarihinde en önemli değişim noktalarından biri olarak nitelendirilebilir. Çünkü eski sovyet ülkelerinin bağımsızlıklarını ilan ederek dışa açılması ve dünya ekonomisi içine sokularak kendi yerlerini aramaya başlamaları tüm dünya ülkelerine yeni yollar açarak ekonomik ve siyasi politikalarını yeniden gözden geçirmeye sebep oldu. Bu yüzden küreselleşme olgusu da çok yönlü gelişmeye başladı. Bu karışık sisteme yeni açılan eski sovyet ülkeleri bir anda eski bağlarını yitirerek ekonomik ve siyasi politikalarını yeniden kurmak zorunda kaldılar.

Tabii ki çalışmamızın başında açıkladığımız gibi bu ülkeler dağılım sürecinin daha kolay ve sorunsuz geçmesi için bir Birleşik Devletler Topluluğu adı altında birlik kurdular. Ancak bu birliğin kurulmasına rağmen sözkonusu ülkelerin yeni kazanan egemenliği kaybetmeme endişeleri ve kendine uygun gödüğü yollarla gelişme arzuları olduğundan ilk başta birliğin ancak ismi olduğu da bir gerçektir. Daha sonraki yıllarda EurAsEC, SCO, CSTO gibi bütünleşme çabaları ile bölgesel siyasi ve askeri sorunların çözülmesi için entegrasyon çabaları yapılmıştır. Ancak üye ülkelerin genel amaç ve stratejiler konusunda oybirliğinin yokluğu, her memleketin kendi çıkarlarını düşünerek özgür hareket etmesi de bu kurumların etkisini ve önemini azaltmıştır.

Ancak bütün bu bütünleşme çabalarının bir sonucu olarak Avrasya Ekonomik Topluluğu EurAsEC(AET) çerçevesinde Rusya Federasyonu, Kazakistan ve Belorus devleteri arasında bir "Gümrük Birliği" oluşturulmasının kararlaştırılması çok önemli bir gelişme oldu. Dolayısıyla, bu birliğin kurulması ile bölgedeki entegrasyon hızının artmasına şartlar kuruldu diyebiliriz. Günümüzde Kırgızistan, Tajikistan ve Ukrayna'nın Gümrük Birliği'ne girmesi düşünülmektedir. AET'in coğrafi alanında 182,6 milyon kişinin ve dünya GSYİH'nın %4'ü, dünya petrol rezervlerinin %7,5'i, gaz ve kömürün %20'si, elektrikenerjisinin %5,5'i ve tahıl üretiminin % 5,9'una ve altın ve diğer değerli madenler rezervleri açısından dünyada ön sıralara sahip olduğunu hesaba aldığımızda birliğin ekonomik, siyasi stratejik önemi büyük olduğu anlaşılmaktadır.

Ancak, Avraya Gümrük Birliği oluşturma fikrini başlatan ve gelecekte de Avrasya Ekonomik Birliği kurma taraftarları olan Rusya ve Kazakistan ülkelerinin inisiyatifine gelecekte üye olması düşünülen Kırgızistan gibi küçük ülkeler çok dikkatli ve şüpheli bakarak bağımsızlıklarını ve diğer önemli dış ekonomik partnerlerini kaybetmekten kormakta iseler, bazı araştırmacılar bu birliğin eski entegrasyon çabaları gibi başarılı olup olmayacağını tartışmaktadırlar. Öyleyse, çalışmamızın esas amacı olan Kırgızistan Cumhuriyetinin Avrasya

Gümrük Birliği'ne üye olması nasıl bir sonuçları doğuracak? Bu üyelik hem Kırgızistan hem de Gümrük Birliği için gerekli mi? Kırgızistan açısından birliğe üye olmanın yararları neler ve kaybedecek zararları nelerdir? Bütün kaybedeceklerine rağmen üye olma riskine katlanmanın gereği var mıdır? Bütün bu sorulara biz de cevap aramaya çalışalım.

4   Kırgızistan ve Avrasya Gümrük Birliği

Kırgızistan egemenliğini ilan ettikten sonra eski sovyet ülkelerle olan bağlarının kopması ve üretimin durmasıyla elektrik ve elektronik ürünler, otomobil ve aletlerin üretimi, hafif sanayi ve tarım ürünleri pazarını kaybederk ihracatçı ülkeden ithalatçı ülkeye dönüştü. Bu yüzden de ülkeye yabancı yatırımları çekerek üretimi canlandırmak ve dış ticaret hacmini genişletmek amacıyla DTÖ'ne üye oldu. Ancak bunun sonucunda daha etkin ekonomik şartlarda çalışan dış ülkelerin rekabetiyle karşı karşıya kalarak ekonomisinin durumu daha da kötüleşti ve beklenen yabancı sermaye yatırımları patlaması da gerçekleşmedi. Bunun en önemli sebebleri ise, iç pazarın küçüklüğü, siyasi ve ekonomik istikrarsızlık olarak belirlendi. Küçük ve ekonomik açıdan gelişmekte olan ülkenin böylece aşırı derecede dışa açıklığı da ithlataçı ülkeye dönüşerek dış ticaretten negatif etkinin alınmasına yol açtı.

Günümüzde Kırgızistan'ın Avrasya Gümrük Birliği'ne (AGB) üye olması durumunda ise, onun DTÖ'ne üyeliği ve bundan kaynaklanan ticari rejimlerini uyumlaştırma meselesi ortaya çıkmaktadır. Çünkü DTÖ üyesi olarak Kırgızistan ithalat vergileri oranlarını cezalandırma maliyetlerisiz AGB oranlarıyla uyumlaştırması mümkün olmayacaktır. Bunun yanında DTÖ'nün üye ülkeleri ile en çok kayrılan ülke kuralını uygulamakta olan Kırgızistan'ın AGB'ne üye olmasıyla da onun ticari rejimlerinin gümrük birliği ülkelerinin üçüncü ülkelere uyguladığı ticari rejimleriyle uyumlaştırması gereklidir. Bu da Kırgızistan'ın DTÖ yükümlülüklerinin yeniden gözden geçirilmesini gerektirir.

Kırgızistan'ın Gümrük Birliği'ne üye olması durumunda ilk önce gümrük tarifelerini Gümrük Birliği Genel Tarifesine uygun olmalıdır. DTÖ'nde bölegesel birlikleri oluşturmaya izin verildiğinden Kırgızistan bu tarifelerini tekrar gözden geçirme hakkına sahiptir (3 yılda bir kez yapılabilir). Kırgızistan'ın gümrük tarifelerinin %30'nun gümrük birliği tarifeleriyle uygun olduğu, %21'inin gümrük birliği tarifeleriyle uyumlaştırılabileceğinin, %46,6'sının ise gümrük birliği tarifeleriyle uygun olmadığı kalan %2'sinin de tarife türlerinin farklı olduğundan mükayese edilemeyeceği görülmüştür. Gümrük Birliği'nin ortalama gümrük tarife oranı %10,5, Kırgızistan'ın ortalama gümrük tarife oranı %5, Kırgızistan'ın DTÖ karşısındaki yükümlüklerini hesaba kattığımızdaki tahmini ortalama gümrük tarifesi orani ise, %7,7'dir. Dolayısıyla Kırgızistan'ın gümrük birliği tarifelerini masrafsız kabul etmesi durumunda ülkenin gümrük tarifesinin DTÖ yükümlülüklerini aşan ortalama gümrük tarifesi artışı yaklaşık olarak %3 olacaktır. Gümrük tarifelerindeki bu değişiklik ilk olarak Kırgızistan'ın Çin Halk Cumhuriyeti ile olan ticari ilişkilerine etki eder.

ÇHC, gümrük birliği üyesi ülkelerinin ve bunların yanındada diğer üçüncü ülkelerin Kırgızistan'ın dış ticaretindeki yerine aşağıdaki şekilden bakabiliriz:
Şekil 1: Kırgızistan'ın İhracatındaki Başlıca Ülkeler (2011)

Şekil 1'den anlaşılacağı üzere, komşu ülkelerden Rusya ve Kazakistan, Kırgızistan'ın en önemli ihracat pazarlarını (tüm ihracatın yaklaşık olarak %30'unu) oluşturmaktadırlar. İsviçre ise Kumtör altın madeni üretimi işletmesinin sayesinde ihracatın %40'ına sahiptir. Şekil 2'den anlaşılacağı üzere Kırgızistan'ın ithalat partnerleri içinde ise %33 oranıyla Rusya en önemli paya sahiptir. Böylece bira, petrol ürünleri, eczacılık ürünleri, lastik, çikolata, karton, kağıt ve kereste ürünlerinin ithalatında Rusya birinci sırada yer almaktadır. Kömür, petrol,

benzin, dizel yakıtı, buğday, un, tütün, ayçiçek yağı ithalatında Kazakistan Japonyadan sonraki üçüncü önemli partner ülke durumundadır. Çin Halk Cumhuriyeti ise gıda, teksil ürünlerinden başlayarak beyaz eşya gibi her türlü malların ithalatında yaklaşık %22 orana sahiptir. Bu yüzden uzmanlara göre ÇHC mallarının yeniden ihraç edilmesi de kaçınılmaz olduğundan bu komşu ile ticari ilişkileri korumak gerekir. Bununla birlikte ÇHC'nin ihracatını azaltamak istemeyeceği ve bu yüzden de Kırgızistan toprakları içine yatırım yaparak üretimini kuracağı da tahmin edilmektedir.
Şekil 2: *Kırgızistan'ın İthalatındaki Başlıca Ülkeler (2011)*

Kırgızistan'ın ihraç ettiği önemli ürünler ise, kıymetli metaller (altın), giyim ve aksesuarlar, sebzeler, elektrik, kerosin, süt ve süt ürünleri, meyveler, organik olmayan kimyasal maddeler, pamuk lifini sayabiliriz. İthalatındaki önemli ürünlere de petrol ürünleri, ikinci el otomobiller, giyim ve aksesuarlar, ilaçlar, elektrikli iletişim donanım ve cihazları, şeker, et ve et ürünleri, doğalgaz, buğday olarak sıralanabilir.

Diğer bir önemli konu da Kırgızistan'ın üretim kaynaklarının bölgesel dağılımındaki eşitsizliği sorunudur. Ülkenin yedi bölgesinin gelişme oranındaki dengesizlikleri, özellikle güney bölgelerinden kuzeye doğru iç göçün, ondan sonra da nüfusun ülke dışına göç etmeleri ciddi bir sorun haline gelmiştir. Güney bölgelerinde aktif nüfüsün olmaması, komşu ülkelerin nüfüsünün de söz konusu bölgelere taşınmasına imkan sağlamaktadır. Şu anda uzmanların tahminlerine göre 1 milyon kişi yurt dışında çalışmaktadır, bu rakam ise aynı zamanda ülke nüfusunun beşte birini oluşturduğu da üzücü bir gerçektir. Kırgız Cumhuriyeti Ulusal İstatistik Komitesi verilerine göre 2011 yılında Kırgızistan'dan dışa göç edenler 457 bin kişi oldu, onun çoğunluğu - 416 bin işçi yani % 92 Rusya Federasyonu'nda çalışmaktadır. Bu yüzden Kırgızistan'ın Gümrük Birliğine üye olması göçmenlerin yasal statülerinin ve hukuklarının korunmasının iyileşmesini beraberinde getirmesi de ümit edilmektedir. Ancak böyle bir olumlu tarafıyla birlikte ülkede göç oranının daha da yükselmesi sorununun meydana gelebileceği de unutulmamalıdır. Bu ise ülkedeki ve bölgedeki çözülemeyen en önemli demografik (göçmenleri kabul eden ülkelerde etnik çatışmalara da yol açabilen) sorun olduğundan hangi boyutlara ulaşabileceğine dair henüz bir net cevap bulunamamaktadır.

	Yüzölçümü (bin km²)	Nüfusu (milyon kişi)	GSYİH	Sanayi Üretimi	Tarım Üretimi	Sabit Varlık Yatırımları	Perakende Ticaret	Dış Ticaret
Belarusya	207,6	9,5	48,9	62	9,9	17,6	20,1	87,2
Kazakistan	2724,9	16,7	188,1	109	15,6	34,2	26,4	125,1
Kırgızistan	199,9	5,6	5,9	3,6	3,2	1,0	3,6	6,5
Rusya	17,1 milyon	143,0	1860	1147	117,6	367	650,2	822,1

Tablo 2: *2011 yılındaki Avrasya Gümrük Birliği Ülkelerinin ve Kırgızistan'ın Temel Ekonomik ve Sosyal Göstergeleri (milyar dolar olarak)*

Günümüzde iç tüketim büyük oranda Gümrük Birliği ülkelerinde, özellikle Rusya ve Kazakıstan'da çalışanların para transferi ile gerçekleşmektedir. Para transferleri 2008 yılı 1,1 milyar dolar, 2009 yılı 894 milyon dolar, 2010 yılı yaklaşık 1,2 milyar dolar olarak devletin bütçe gelirleri oranlarıyla kıyaslanabilir. 2011 yılının ilk 6 ayı için Kırgız Cumhuriyeti para transferinin oranı toplam 724 milyon dolar olarak 2010 yılının ilk yarıyılı ile karşılaştırıldığında % 46'lık bir artış olmuştur. Rusya'dan 2011 yılı için ilk yarıyılında para transferi 676 milyon dolar olarak 2010 yılının aynı dönemine göre 1,5 kat bir artış gerçekleşmiştir.

Yukarıdaki tablodan anlaşılacağı üzere Kırgızistan diğer AGB ülkelerinden coğrafik, sosyal ve ekonomik göstergeler açısından en zayıf ve küçük ülke konumundadır. Bu yüzden Kırgızistan'ın Gümrük Birliğ'e girmesi,

üye ülkelerin makroekonomik göstergelerine etkisini göstermeyecektir. Ancak Gümrük Birliği için Kırgızistan ve ÇHC gümrüğündeki değişmeler, ucuz ve kalitesiz malların girmesini engelleyerek Gümrük Birliğin hukuki çerçevesi gereğince sağlık ve teknik açıdan daha kaliteli malların ithalatına yol açabilir. Bu da hem Kırgızistan'ın hem de diğer üye ülkelerin üreticilerinin Çin mallarına karşı fiyat rekabetinde avantaj sağlayarak birlik içi üretimin artmasına sebep olabilir.

Bununla birlikte Kırgızistan'ın en küçük ve ekonomik açıdan daha az gelişmiş ülke olarak doğal kaynakları ile üretim olanaklarına zengin olmaması uzmanların şüphe duyduğu konulardandır. Ancak AGB gibi büyük bölgesel ekonomik kuruma entegre olma, ülke içinde üretilen malların daha geniş pazara açılmasına, diğer ülkeler için yatırım açısından çekiciliğine yol açarak GSYİH'nın da artışını sağlayabilir. Bazı uzmanlara göre genel olarak Gümrük Birliğine üye olmak ile ülkenin ihracat potansiyeli %20-22 cıvarında artabilir. Bunun için Gümrük Birliği'ne üye olma sürecinde makroekonomik ve sektörel analizlerin yapılması, ülkemizden elektrik, tekstil, pamuk lifi, sebze ve meyvelerin (kuru meyve de dahil olmak üzere), süt ve et ürünlerinin ihracatı için indirimlerin ve kolaylıkların sağlanması, bölgelerde dünya standartlarına uygun sertifika verebilecek laboratuvarların kurulması, ülke düzeyinde ortak bir stratejilerin geliştirilmesi gereklidir.

Kırgızistan'ın ekonomik yapısına baktığımızda ise, sanayinin payı yaklaşık %15 iken, tarım sektörünün oranı daha yüksektir (yaklaşık olarak %20). Bu ekonominin tarıma dayalı olduğunu gösteriyorsa da, belirli yiyecek pozisyonları için bir net ithalatçı konumunda olduğu da bellidir. Ayrıca GB ülkelerinden yatırımların ülkeye çekilmesiyle tarım sektörünün de gelişmesi öngörülmektedir. Çünkü Kırgızistan AGB'nin güney tarafında yer alan ülkesi olarak suyunun bolluğu, ikliminin elverişliliği ve tarımda çalışanların sayısının çokluğu ile diğer üye ülkelere göre avantaja sahiptir. Bu avantajını iyi kullandığında ülke bölgede önemli tarım üreticisine dönüşebilir.

Sonuç olarak araştırmamızı genel olarak özetlersek Kırgızistan'ın Avrasya Gümrük Birliğine üye olması üye olmamasından daha avantajlı olarak görülmektedir. Gelecekte eğer Gümrük Birliği, ortak stratejileri belirleyerek genel ekonomik politikaları başarılı bir şekilde yürütürse bu üyelik hem Kırgızistan için hem de birlik için yararlı olabilecektir. Aksi halde Kırgızistan'ın Dünya Ticaret Örgütüyle olan etkisiz tecrübesi tekrarlanabilir.

Azerbaycan'ın Piyasa Ekonomisine Geçiş Sürecinde Karşılaştığı Sorunlar ve Çözüm Arayışları

Problems Encountered during the Transition to Market Economy in Azerbaijan and Solution Attempts

Prof. Dr. Cihan Bulut (Qafqaz University, Azerbaijan)

Ph.D. Candidate Elchin Suleymanov (Qafqaz University, Azerbaijan)

Assoc. Prof. Dr. Fakhri Hasanov (Qafqaz University, Azerbaijan)

Abstract

After re-gaining its independence on 18 October 1991, the Republic of Azerbaijan started to transform to the market-based economy and to integrate into the world economy. The country's oil and natural gas reserves have been considered the main source for financing range of government programs for reforms. On the one hand, these reserves had to be used effectively; on the other hand, there was a huge demand for foreign investment for extraction. To this end, Azerbaijan has signed "Contract of the Century" in 1994. Although Azerbaijan has wide oil and natural gas reserves, it has faced a number of difficulties in its transition way. This study analyzes these problems and reforms for solving them. One of the types of the problems were related to the economic structure of the former Soviet Union: disruption of the economic ties between the republics resulted in decline of production, high levels of unemployment and prices and consequently led to an economic recession in all of the republics. Another set of problems was related to lack of sufficient institutional bases to transform to the market economy. Moreover, internal conflicts between the political parties and groups for having authority as well as political chaos in the republic can be considered other serious problems during the transition period. Furthermore, Karabakh war and occupation of 20 percent of the Azerbaijani territory by the Armenian military forces had made the situation extremely complicated. Despite all of these extremes, Azerbaijan transformed to the market-based economy decidedly and even became one of the fast growing countries of the world. Even in 2006, with the GDP growth rate of 34.5 percent, Azerbaijan was a leader among growing economies. In parallel with this significant economic development, there is still a need for some socio-economic and institutional reforms in order to get a well-functioned market-based economy in Azerbaijan.

1 Giriş

Azerbaycan 18 Ekim 1991 de bağımsızlığını ilan ettikten sonra ekonomisinin liberasyonu ve serbest piyasa ekonomisine geçmek maksadıyla bir çok önemli reformlara imza atmıştır. Ekonomik hedeflerin gerçekleştirilmesinde ülkenin en önemli kaynakları ise hemen hemen hepsi Hazar'da yerleşen petrol ve doğal gaz rezervlerinden oluşan enerji kaynaklarıydı. Bu nedenle ekonomik hedeflere ulaşma adına Hazar enerji kaynaklarının en etkin biçimde kullanılması gerekmekteydi ve öyle de oldu. Zira Azerbaycan, ekonomik, siyasi ve sosyal açılardan yeniden yapılanma, kalkınma, gelişme ve bağımsızlık adına, Hazar enerji kaynaklarından 1994 yılından itibaren faydalanmaya başladı. Enerji kaynaklarının üretim ve dünya piyasalarına ihracına ilişkin çok önemli projelere karar verildi, inşa edildi ve kullanılmaya başlandı.(Suleymanov, Zeynalov,2012) Bağımsızlığını kazanan Hazar Havzası ülkelerinden Kazakistan ve Azerbaycan büyük petrol potansiyellerini, Türkmenistan ise doğal gaz zenginliğini ekonomilerinde değişimi geçekleştirmek için gerekli kaynakları sağlamak ve geçiş döneminin sıkıntılarını hafifletmek amacıyla bir an önce kullanma ihtiyacı duydular. Ancak mevcut boru hatları, Sovyetler Birliği'nin planlı ekonomisi çerçevesinde cumhuriyetler arası işbölümüne göre düzenlenmiş olduğundan, bunların ihraç amaçlı kullanım imkânları sınırlıydı. Sovyetler Birliği'nin dağılmasının ardından Rusya dışındaki üç kıyı devleti; Azerbaycan, Kazakistan ve Türkmenistan'ın bağımsızlıklarını ilan etmesiyle Hazar'ın önemi büyük oranda artmıştır. Bu ülkeler için Hazar enerji kaynaklarının geliştirilmesi ekonomilerini yeniden yapılandırma, kalkınma ve dünya ekonomisine entegre olma açısından önem arz etmektedir. Özellikle kaynakların amaçlar doğrultusunda geliştirilebilmesi için yabancı sermayeye ihtiyaç duyulmaktadır. Bu bakımdan üç devlet de batılı firmaları bölgede yatırım yapmaya ve enerji kaynaklarını çıkarmaya davet etmiştir. Azerbaycan ve Kazakistan petrol gelirlerinin ülkelerine hızla akmasını istemektedir.(Aras,2005) Dünyanın en önemli enerji kaynaklarından biri olan petrol, diğer enerji kaynaklarına göre daha geniş kullanım sahasına sahiptir. Petrol ürünlerinin maliyeti içerisinde temel yeri petrolün çıkarılması, taşınması ve dağıtılması için yapılan harcamalar önemli yer tutmaktadır. Enerji kaynakları sayesinde sahip olunan gelirlerin verimli şekilde kullanılması metodlarının hazırlanması yolu ile gayri-petrol sektörünün gelişimi, istikrarın, hızlı büyümenin ve reel gelirdeki artışın temini ile petrole dayalı tek yönlü ekonomiden vazgeçilmesi Azerbaycan ve diğer Hazar kıyısı Türk Cumhuriyyetleri için çok önemlidir. Aras,2008)

Tablo-1._Azerbaycanın Temel Sosyo-Ekonomik Göstergeleri_ **Kaynak:** ARDSK 2012 verileri

Hazar enerji kaynaklarının harekete geçirici unsur olmasının ardından, yabancı sermaye girişine paralel olarak ülkeye yapılan yardımlar ve uluslar arası mali kurumların açtığı krediler de artmıştır. Sovyetler Birliği'nin son dönemlerinde, dağılışının hayata getirdiği kaos ortamında devlet emlakının ve toplumsal servetin şahsi amaçlar doğrultusunda kullanılması ve dağıtılması sıradanlaşmıştı. Bu açıdan rüşvet ve yolsuzluk, toplumun Sovyet sisteminden miras aldığı ağır toplumsal hastalıklardan biridir. Her ne kadar daha sonra rüşvet ve yolsuzluk belirli şekil değişikliğine uğrasa da, varlığını toplumun genelinde yaygın şekilde hissettirmektedir. Öyle ki ülkede adeta resmi ve gayri resmi olmak üzere iki vergi sistemi mevcuttur. Gayri resmi verginin düzenleyici rolü, resmi verginin düzenleyici rolünden daha büyüktür. (Aras,2005)

2 Bağımsızlık Sonrası Azerbaycan Ekonomisinin Genel Durumu

Bağımsızlığını ilan ettikten sonra serbest piyasa ekonomisine geçmek maksadıyla bir çok reformlara imza atan Azerbaycan'ın ekonomik hedeflerin gerçekleştirilmesinde ülkenin en önemli kaynakları Hazar'da yerleşen petrol ve doğal gaz rezervlerinden oluşan petrol ve doğal gaz kaynaklarıydı. 1994 yılından itibaren Azerbaycan'ın uluslararası şirketlerle petrol ve doğal gaz anlaşmaları yapması ve bu çerçevede ortak faaliyetler gerçekleştirmesi, ülkeye gelişmiş modern teknolojilerin getirilmesine, enerji sektörü altyapısının yeniden kurulmasına imkan sağlamıştır. Örneğin, "Asrın Anlaşması"nın ilk aşamasının gerçekleştirilmesi ile hem Azeri-Çırak-Güneşli projesinin petrol stoklarını değerlendirme sorunu başarıyla çözülmüş, hem Hazar'da yeni petrol üretime teknolojilerinden yararlanılmış, hem de Hazar petrolünün dünya piyasalarına ihracına ilişkin modern sistem kurulmuştur.Azerbaycan modern teknolojiyi ülkeye transfer ederek, enerji sanayisinin aktiflerini yenileme fırsatı bulmuş ve petrol-doğal gaz sanayisinin gelişmesine yardım edebilecek kurum ve kuruluşlar kurmuştur. Böylece modern araştırma, petrol ve doğal gaz çıkarma, işleme ve ulaşım teknolojilerinin ülkeye girmesi mümkün olmuştur. Bu bakımdan, Hazar enerji kaynaklarının üretim ve ihracına ilişkin yapılan anlaşma ve projeler, Azerbaycan'ın enerji sanayisi tarihinde yeni sayfa açmıştır. Günümüzün küresel rekabet ortamında, Azerbaycan'da piyasa ekonomisine geçiş ve ekonomik kalkınmayı gerçekleştirmek amacıyla çeşitli programlarla kalkınma politikaları ve stratejileri belirleyen ülke yönetimi için bilinçli ve sistematik analizler yaparak, ülkenin potansiyel kaynaklarını ve imkanlarını en iyi şekilde kullanabilmesi ve yeni stratejiler geliştirebilmesi için, SWOT Analizi stratejik öneme sahiptir.Farklı sektörlere yatırım yapabilme açısından, ülke ekonomisi hakkında makroekonomik, sektörel ve ekonomi dışı alanlara yönelik ampirik olmayan bir analiz, stratejik ön adım olarak gereklidir(Aras,2005).Azerbaycan ekonomisinin makroekonomik açıdan güçlü yönlerini aşağıdaki gibi sıralayabiliriz.

-Başta fiyat istikrarı olmak üzere genel olarak makroekonomik açıdan istikrarlı bir ortamın varlığı: Son 15 yıldır tek rakamlı enflasyon oranı seyredilmektedir.Fiyatların çok istikrarlı şekilde olduğu vurgulanabilir.

-Dış borçların GSMH'ya oranının yüksek olmaması: Ülkede bağımızlığın kazanıldığı ilk yıllarda yaşanan siyasi, ekonomik istikrarsızlığın yanısıra Ermenistan ile Yukarı Karabağ savaşı nedeniyle 1995 yılına kadar makroekonomik göstergelerde istikrarsızlık gözlenmiştir. Ancak ülkede sağlanan siyasi istikrar ve ardından uygulamaya başlanan ekonomik politikalar ile birlikte, 1996 yılından itibaren ekonomide istikrarsızlık yerini istikrara bırakmıştır. Dolayısıyla yaklaşık 15 yıldır ülkede makroekonomik göstergelerde olumlu hava hakimdir.(Suleymanov, Zeynalov,2010)

- Döviz kurunun istikrarlı olması: Zaman zaman manat dolar ve euroya göre değer kazansa da genellikle uzun bir dönemdir istikrarlı bir seyir görülmektedir. Azerbaycan 1992 yılında "Ruble Bölgesi"nden çıkarak, milli para birimi olan Manatı tedavüle çıkarmıştır. İlk aşamada Ruble ile birlikte tedavülde olan Manat 1994 yılından

itibaren ülkede tek resmi para birinmi olmuştur. İthalatın önemli bir kısmının Ruble ile yapılması ve ithalatın yapıldığı ülkelerde, özellikle Rusya'da fiyatların liberalleşmeye paralel olarak yükselmesi sonucunda, Manat 1993'de Ruble karşısında değer kaybetmeye başladı. Öte yandan 1993-94 yıllarında bankacılık sektöründe yaşanan kriz ve Manat'ın değerine ilişkin beklentilerdeki olumsuzluk Manat'ın diğer ülke para birimleri karşısında değer kaybetmesine neden oldu.2000 yılından itibaren manat istikrarlı bir seyir izlemektedir.2006 yılı 1 0cak tarihinden Azerbaycanda manatın denominasyonu yapılarak paranın nominal değeri 5000 kat azaldılmış ve 1 Azn yaklaşık 1.2 ABD doları değerinde belirlenmiştir.(Aras,Suleymanov,2010) Yaklaşık yedi yıldır bu kur kısa dalgalanmalar dışında pek değişmemiş ve çok zaman manat dolara gore deger kazanmıştır.

Ülkede sağlanan siyasi ve ardından eknomik istikrar ile birlikte ülkede döviz kurları istikrarlı bir seyir izlemektedir.

-Ucuz işgücünün varlığı: Ülkede işsizlik oranının yüksek olması nedeniyle ücretler düşük seviyededir. Ülkede asgari ücret 93.5 Manat ortalama ücret 2012 yılı verilerine göre 360 manat civarıdır. Üretim faktörü olarak işgücü ödemeleri, toplam maliyetler bakımından avantaj sağlamaktadır. Neticede işgücünün ucuz olması, yatırım yapmayı teşvik eden unsurlardan biri olmaktadır.

Ekonomi Dışı Güçlü Yönler

-Nüfusun eğitim seviyesi: Her ne kadar ekonomik durumdaki gerileme ile birlikte şartların zorlaşmasına rağmen, Sovyet geleneğinin devamı olarak insanların eğitime karşı ilgi gösterdikleri görülmektedir. Ülkede okur-yazar oranı %98 ve lise-yüksek öğrenimli nüfus oranı %60 civarındadır. Her bir ülkede, ekonomik kalkınma için öncelikle siyasi istikrar ve bu istikrarı devam ettirecek bir iradenin yöneticilerde olmalıdır. Siyasi istikrar, yürütülen ekonomik programın kesintiye uğramayacağının göstergesi olarak piyasalara güven vermektedir. Azerbaycan'da Haydar Aliyev'in iktidara gelmesinin ardından sağlanan siyasi istikrar ve var olan siyasi istikrarı devam için gereken irade adına endişeye sevk edici belirsizlikler İlham Aliyev'in Cumhurbaşkanı seçilmesi ile minimum seviyeye çekilerek beklentiler olumlu kılınmıştır.

-Stratejik konumu: Asya ülkelerinin Avrupa'ya geçiş koridorunda yer almasının yanısıra İran'a ve Rusya'ya sınır olması nedeniyle de stratejik konumu itibariyle ABD ve Avrupa ülkeleri için önem taşımaktadır. Asırlar boyunca Doğunun zenginliklerini Batıya taşıyan kervanların geçtiği, beş Türk Cumhuriyeti'nin yanı sıra, Tacikistan, Gürcistan ve Ermenistan'ı da kapsayan, Karadeniz'den Çin'e tarihi İpek Yolu'nun 21. yüzyıla bir iletişim, ulaşım ve enerji koridoru olarak taşınmasını öngören ve 1998'de Bakü'de imzalanan anlaşma ile Azerbaycan global ekonomik ilişkiler zincirine yeni bir halka eklemiştir.

Ülke ekonomisinin zayıf yönleri ise makroekonomik açıdan

-İşsizlik sorunu: Resmi istatistikler Azerbaycan'da işsizlik oranının %1.5 civarında olduğunu ifade etmesine karşın, uluslararası kuruluşları verdiği bilgilere, yapılan farklı hesaplamalara ve uzmanların kanaatine göre bu oran %16-25 arasındadır. Dolayısıyla ülkede işsizlik oranının bir hayli yüksektir.

-Petrol ve petrol gelirlerinin ihracat içindeki payı %90 civarındadır. Öte yandan bütçe gelirlerinin ise %75'i petrol ve petrol ile ilgili alanlardan elde edilmektedir. Böylece, bütçenin petrol gelirlerinden, petrol gelirlerinin ise dünya piyasalarındaki konjonktüre bağımlı olması 'Hollanda Hastalığı' tehlikesi ile Azerbaycan'ı karşı karşıya getirmiştir.(Sabiroglu,2001) İşsizlik seviyesinin nedenlerinden birisi, Karabağ'ın Ermeniler tarafından işgalinin ardından 1 milyon civarında insanı mecburi göçe maruz kalmasıdır. Öte yandan değişim sürecinde modern üretim ile rekabet gücünde olmayan işyerlerinin kapanmasının ardından işini kaybedenler de işsizler ordusundaki en önemli oranı oluşturmaktadır. Eğitimli ve kalifiye yurtdışına göçü: İstihdam imkanının yetersizliği nedeniyle eğitimli ve kalifiye işgücünü yurtdışı göç etmiştir. Kalifiye ve eğitimli işgücünün büyük çoğunluğu Rusya, Türkiye, İran gibi komşu ülkelere yönelmişlerdir. Ülkeyi bu şekilde terk edenler arasında gençler ve orta yaşlı insanların oranının daha yüksek olduğu dikkat çekmektedir. "Beyin göçü" olarak ifade edilebilecek olan sözkonusu sürecinin özellikle son yıllarda daha fazla arttığı görülmektedir.

-Büyük işletmelerin özelleştirme sürecinin yavaş işlemesi:

-Bürokrasi ve yolsuzluk her ne kadar da her yıl daha da azalsa da yene de geçiş sürecinin önemli problemi olarak öncül yer tutur.

-İhracatın ve devlet bütçesinin petrol gelirlerine bağımlı olması:

- İşsizlik seviyesinin nedenlerinden birisi, Karabağ'ın Ermeniler tarafından işgalinin ardından 1 milyon civarında insanı mecburi göçe maruz kalmasıdır. Öte yandan değişim sürecinde modern üretim ile rekabet gücünde olmayan işyerlerinin kapanmasının ardından işini kaybedenler de işsizler ordusundaki en önemli oranı oluşturmaktadır. Eğitimli ve kalifiye yurtdışına göçü: İstihdam imkanının yetersizliği nedeniyle eğitimli ve kalifiye işgücünü yurtdışı göç etmiştir. Kalifiye ve eğitimli işgücünün büyük çoğunluğu Rusya, Türkiye, İran gibi komşu ülkelere yönelmişlerdir. Ülkeyi bu şekilde terk edenler arasında gençler ve orta yaşlı insanların oranının daha yüksek olduğu dikkat çekmektedir. "Beyin göçü" olarak ifade edilebilecek olan sözkonusu sürecinin özellikle son yıllarda daha fazla arttığı görülmektedir.

-Büyük işletmelerin özelleştirme sürecinin yavaş işlemesi:

Öte yandan gelir dağılımında da adaletsizlik vardır. Özellikle petrol ve petrole dayalı sektörlerde çalışanların ekonomik durumları çok iyi iken diğer sektörlerde çalışanların gelir seviyesi çok düşüktür. Bu ise belirli oranda nüfusu lüks tüketime yöneltmektedir. Ülkede orta tabakanın henüz tam oluşmadığı görülmektedir.

 -Tekelcilik ve haksız rekabet ortamının olması:

Ülkede işletmecilerin karşılaştığı başlıca problemlerden biri de monopollerin varlığı ya da haksız rekabet ortamının olmasıdır. Belirli alanlarda monopollerin varlığı özel teşebbüsün gelişmesini ve kaynakların verimli kullanımını engellemektedir. Tekellerin varlığı fiyatların zaman zaman kaotik şekilde artmasını da neden olmaktadır.

-Döviz kurunda dalgalanma beklentisi nedeniyle yerli para birimine duyulan güven eksikliği.

Bağımsızlığın ilk yıllarında yaşanan siyasi ve ekonomik krizler ortamında yaşanan enflasyonist süreç ve devalüasyonlarla insanların yerli para birimine karşı itimadı oluşmamıştır.

-Kayıt dışı ekonomi: Ülkede kayıt dışı ekonominin GSMH'ya oranı yüksektir. Hatta Azerbaycan, BDT devletleri ile mukayesede yolsuzluğun seviyesine göre olduğu gibi kayıt dışı ekonominin hacmine göre de ilk sıralarda yer almaktadır.

Ekonomide kayıt dışını tercih eden veya tercih etmek zorunda kalan özel sektörün karşısına çıkan temel problem ise rüşvet olmaktadır. Resmi verilere göre kayıt dışı ekonomi GSMH'nın %18-20'sine tekabül etmektedir. Ancak yapılan bazı değerlendirmelerde, kayıt dışı ekonominin kayıt altına alınan ekonomik faaliyetlerden daha büyük olduğu hesaplanmaktadır. Dünya Bankası uzmanlarına göre kayıt dışı ekonominin hacmi GSMH'nın %60'ından fazladır. GSMH'nın %60'ını kayıt dışı olarak kabul edildiğinde bu oran 8-10 milyar dolara tekabül etmektedir. Bazı uzmanlar bu oranın %80 olduğunu iddia etmektedirler. Rakamlar farklı olmakla birlikte genel anlamda kayıt dışı ekonomik faaliyetlerin yüksek olduğu görülmektedir.

-Altyapı yetersizliği ve eski teknoloji: Tarım ve hayvancılık için gereken sulama v.b. altyapı yetersizdir. Öte yandan tarım ve hayvancılık için gerken teknoloji hem eski hem de yetersizdir. Turizm sektörü içinde gereken yol, ulaşım araçları ve konaklama tesisleri hem yetersiz hem de eskidir. Sanayi sektörüne ilişkin altyapının da yetersiz ve eski teknolojiye sahip olduğu görülmektedir. Bu da günümüz modern teknolojisi ile hem ucuza hem de kaliteli olarak üretilen dünya piyasasında üretim yapmaya imkan vermemektedir. Petrol ve doğal gaz üretimine bağımlı bir ekonomik yapı neden ile diğer sektörlerin gereken ilgiden yoksun olması. Bağımsızlığın ilk yıllarında yaşanan bankacılık krizlerinin ardından finans sektörünün merkezinde yer alan bankacılık sektörü henüz gelişmemiştir. Büyük ölçekli işletmelerin özelleştirmesinin gerçekleştirilememesi menkul kıymetler piyasasının gelişmemesinde en önemli etken olmuştur.

Gelir düzeyinin düşük olması ise sigortacılık sektörünün gelişmesine engel olmuştur.

-Sektörel monopollerin varlığı: Monopollerin bazı sektörlerde varlığı, sözkonusu sektörlede üretilen ürünün kalitesine, fiyatına olumsuz etkide bulunmakta ve üretim kaynaklarının verimli kullanımına engel olmaktadır.

-Hollanda Hastalığı tehlikesi: İhracat, yabancı yatırımların petrol ve doğal gaz üretimine yönelmesi, ihracatın petrol ve doğal gaz ağırlıklı olması, bütçe gelirlerinin yine petrol ve doğal gaza bağımlı olması nedeniyle sektörel açıdan ekonominin petrol ve doğal gaza bağımlı olduğu görülmektedir. 2006 yılından itibaren ise petrol ihracındaki artışla birlikte bu bağımlılık daha da artacaktır.

- Bölgesel kalkınmada dengesizlik:

Öte yandan iktisadi işletmelerin daha çok Bakü ve civarında toplanmış olması ve vergi gelirlerinin Bakü ve civarından elde edilmesi nedeniyle de ülke bölgesel olarak Bakü ve civarına bağımlılık gösteren bir ekonomik yapıya sahiptir. - Bağımsızlık sonrasında daha çok petrol ve doğal gaz üretimine ilişkin olarak enerji sektörü yabancı ve yerli yatırımcı açısından dikkat merkezinde olmuştur. Yine kalifiye işgücü de daha çok bu sektörde iş bulmaya çalışmıştır. Hem yatırım hem de kalifiye işgücünün tek bir sektöre yönelmesi sonucunda diğer sektörlede arz edilen ciddi bir gelişme olmamıştır.

Ekonomi dışı zayıf yönler ise aşağıdaki gibi sıralayabiliriz.

-Bölgelerarası ulaşım engeli: Ermeni işgalinin ardından, Nahçıvan ile ülkenin diğer bölgeleri arasında ulaşıma imkan veren 130 km'lik demir yoluışgal edilmiştir. Dolayısıyla Yukarı Karabağ topraklarının Ermeniler tarafından işgal edilmiş olması nedeniyle, Nahçıvan Özerk Cumhuriyeti ile Azerbaycan'ın diğer bölgeleri arasında kara ve demir yolu ulaşımı yapılamamaktadır.

Günümüzde Nahçıvan'a yolcu ve yük ulaşım imkanı ancak İran üzerinden yapılabilmektedir. -Zihniyet değişimi:Sovyet rejiminden, serbest piyasa ekonomisine ve demokrasiye geçiş sürecinde zihniyet değişimi henüz gerçekleşmemiş, daha doğrusu tamamlanmamıştır. Sovyet sistemine benzer bir bakış açısıyla problemlerin değerlendirilmesi ve çözün önerilerinde bulunulması sözkonusudur. Bu ise ekonomik açıdan piyasa ekonomisinin ülkede yerleşmesini geciktirmektedir. Elbetteki zihniyet değişimi bir süreçtir, zamana ihtiyaç vardır.

Tehditler

Ekonomik Tehditler

-Petrol fiyatlarındaki dalgalanmalar. Petrol fiyatlarındaki dalgalanma ekonomik açıdan en önemli tehdittir.

-Yukarı Karabağ probleminin devam etmesi: Yukarı Karabağ henüz Ermeni işgalinden kurtulamamıştır. Bu bölgeye yakın sınırlarda zaman zaman çatışmalar da olmaktadır. Sorunun diyalog ile çözümlenememesi halinde güç kullanılarak işgal edilen toparkların alınması kararlılığı, ülkenin muhtemel bir savaş ile karşı karşıya olması demektir. Bu problem yabancı yatırımcı açısından, özellikle petrol dışı sektörlere yatırım yapmada caydırıcı bir etkiye neden olmaktadır.

2012 yılına kadar yapılan toplam 100 milyar dolarlık yatırımların %70'i yabancı yatırımdır. Yabancı yatırımlardan doğrudan yatırımların ise sadece %30'ü petrol dışı sektörlere plase edilmiştir. Yerli müteşebbislerinde petrol dışı sektörlere ciddi şekilde yatırım yapmadığı görülmektedir.

Sınır ülkelerin konumu: Diğer sınır devletlerinden; Gürcistan'da zaman zaman yaşanan siyasi ve sosyal problemler, Rusya ile sınırda yer alan Dağıstan Özerk Cumhuriyeti'nde Çeçenistan problemi nedeniyle zaman zaman yaşanan hadiseler ve İran'ın siyasi yapısı nedeni ile dış dünya ile hassas ilişki içerisinde olması yabancı ve yerli yatırımcı için olumsuz etki yaratmaktadır. Azerbaycan'a yapılacak olan yatırım, özellikle büyük ölçekli yatırımlar, sadece ülke içi pazar potansiyeli dikkate alınarak yapılmak istenmeyecektir. Yatırımcı bölgedeki diğer ülkeleri de dikkate alarak yapmak isteyecektir. Azerbaycan'ın sınır ülkelerinde zaman zaman yaşanan hadiseler sınırda problemlere neden olmakta, dış ticareti olumsuz şekilde etkilemektedir. Veya hassas ilişkiler içerinide olunması ise dış ticareti olumsuz etkilediğinden yabancı yatırmcıya yine olumsuz şekilde etkide bulunmaktadır.(Aras,2005)

-Hazar'ın statü sorunu: Hazar Denizi'nin statüsünün belirlenememesinden kaynaklanan sorunlar da ülke ekonomisinin kalkınmasına olumsuz etkide bulunmaktadır. Bazı petrol yataklarının tartışmalı olması nedeniyle, petrol şirketleri sözkonusu yataklarda petrol üretimi yapmak istememektedirler. Petrol ve doğal gaz rezervlerinin yanı sıra çok önemli balık ve havyar potansiyeline sahip olan Hazar'ın bu ekonomik imkanları da verimli şekilde kullanılamamaktadır.Öte yandan Hazar'da çevre kirliliği sorunu da zararlı dışsallık olarak ekonomiye olumsuz etkide bulunmaktadır. Statü sorunu Hazar'da deniz ulaşımının gelişmesine de engel olmaktadır.

-Deniz ve okyanus çıkışının olmaması:Ülkenin deniz ve okyanus çıkışının olmaması ise kıtalararası ulaşımda deniz yolu taşımacılığından faydalanılamamasına neden olmaktadır.

3 Azerbaycan'ın Piyasa Ekonomisine Geçişde Karşılaştığı Sorunlar Ve Çözüm Arayışları

SWOT analizi çerçevesinde Azerbaycan ekonomisinin ülke ekonomik açıdan iç bünyesine bakan yönleriyle güçlü ve zayıf yönlerin yanı sıra dış dünyaya bakan yönleriyle fırsat ve tehditler ana hatlarıyla sıralanmıştır.

Yabancı ve yerli yatırımcıların yapacakları yatırımlara ilişkin verecekleri kararlar açısından ilk stratejik adımı, ülke ekonomisinin ülke içi güçlü ve zayıf yanları ve ülke dışına bakan yönleriyle fırsat ve tehditleri dikkate alarak atmaları uygun olacaktır. Güçlü yönlerin fırsatlarla uyum içinde olduğu alanlara yatırım yapılmasının planlanması uygun olacaktır. Yatırımcılar ancak bu adım sonrasında verecekleri karar doğrultusunda alt sektör, ürün ve bölge bazında karar vermeleri mümkün olacaktır. İlk adım sonrasında hukuki ve diplomatik destek ve güvencenin yanı sıra bireysel ilişkilerin gerekliliğine de ayrıca dikkat çekmek gerekir.

Yukarıdaki analizde dikkat çekilen güçlü ve zayıf yönler ülkenin ekonomik kalkınmasında hangi sektörlere ve ne şekilde, ülkenin fırsat ve endişeleri ise hem ekonomik kalkınma hem de dünya ekonomisine entegrasyon açısından siyasi irade tarafından alınacak kararlar, yapılacak programlar, belirlenecek projeler için de önem arz etmektedir.(Aslanlı,2004)

Ülke yönetimi güçlü yönler ile fırsatların uyumlaştıracak, bir başka ifadeyle ekonominin güçlü yönlerini fırsatlardan yararlanacak şekilde kullanacak kararlar almalı ve uygulamalıdır. Öte yandan zayıf yönleri güçlü yönlere dönüştürecek tehditlerin güçlü yanlar ile bütünleştirilebilecek fırsatlara dönüştürüleceği stratejik karar ve politikalar geliştirmelidir. (Bağırzade, 2009)

Ülke yönetiminin gerekli yatırım ikliminin oluşturulmasında daha gerçekçi, kararlı ve güven verici adımları atması, teşvikleri sağlaması, yatırım iklimini olumsuz şekilde etkileyen zayıf yönleri ve tehdit eden unsurları giderici ekonomik, siyasi ve sosyal politikalar belirlemesi ve daha da önemlisi belirlediği politikalar doğrultusunda fiili adımlar atması gerekmektedir.Dış ticarette 150'den fazla ülke ile ekonomik ilişkiye giren Azerbaycan bir çok uluslararası ve bazı bölgesel organizasyonların üyesidir. Yapılan petrol anlaşmaları, petrol anlaşmalarına destek veren ülkeler, ülkelere ait petrol şirketleri ve yapılan yatırımların vermiş olduğu güven ortamı da ülkede mevcuttur.

-Serbest piyasaya geçişte bölgedeki ülkelere göre daha önde olması.

Serbest piyasa ekonomisine geçiş sürecinde, bölgede bağımsızlığını kazanan yeni cumhuriyetler ile mukayese edildiğinde, hukuki ve kurumsal altyapıyı gerçekleştirmede daha önde bulunmaktadır.

-Bağımsızlığını kazanan ülkeler arasında en fazla yabancı yatırımın yapıldığı ülke olması:

Bölgede bağımsızlığını kazanan diğer ülkeler ile mukayese edildiğinde en fazla yabancı yatırımın Azerbaycan'a yapıldığı görülmektedir. Bu ise petrol üretimine başlanmasından sonraki süreçte, diğer sektörlere yatırım yapılmasında, yatırımcı için olumlu bir gösterge olacaktır.

-Petrol ve doğal gaz ihracatçısı ülkeler arasında yer alması.

Petrol yataklarının keşfinin ardından yapılan çalışmalarla, 2005 yılından itibaren petrolün, 2006 yılından itibaren ise doğal gaz ihracatçı ülkeler arasında yer alacak olması, ülkeye yabancı yatırımları çekme ve dünya ekonomisine entegre etmek bakımından en önemli fırsatlardan biridir.

Ekonomi Dışı Fırsatlar

-Tarihi geçit ve ticari yollar üzerinde olması:

Coğrafi konumu ile Azerbaycan, iki kıtayı ve üç deniz havzasını birbirine bağlayan Yeni İpek Yolu gibi çok önemli tarihi ve ticari yolların geçiş güzergahında yer almaktadır.

-Bölge ülkeleri arasında demokrasiye geçişte aldığı mesafe:

Bölgede bağımsızlığını kazanan yeni ülkeler arasında demokrasiye geçişte daha önde bulunmaktadır. Bu özellik, bölge pazarına yönelik yatırımların Azerbaycan'da yapılmasına imkan vermektedir.

-Bölge ülkeleri arasında istikrarlı ve daha demokratik bir yönetimin varlığı.

Haydar Aliyev'in iktidara gelmesinin ardından ülkede sağlanan siyasi istikrar ve iktidarın demokratik tutumu diğer bölge ülkelerine göre yatırımcının Azerbaycan'ı tercihinde etkin olmaktadır.

Yatırımı İklimindeki Olumsuzluklar

Azerbaycan'da yatırım ikliminin elverişliliği bakımından, vergi oranlarının yüksekliği, rüşvet, yolsuzluk ve monopollerin varlığı, gerekli kanuni düzenlemelerin yetersizliği gibi olumsuzluklar müteşebbisler açısından endişe edilen konuların başında gelmektedir. Geçiş süreci yaşayan ülkelerde rekabet politikası esas unsurlardan biri olarak kabul edilmektedir. Ekonomide aynı şartların olmaması iş adamlarının faaliyetlerini engellemekte, iktisadi gelişmeyi geciktirmektedir. Azerbaycan hükümeti tarafından ekonomide eşitsizlik ortamının giderilmesine ilişkin bazı önlemler alınmaya çalışılmaktadır. Yolsuzluk ile mücadele programının kabulü buna örnek gösterilebilir. Vergi oranlarının yüksek olması nedeniyle, özel sektörün kayıt dışı faaliyete üstünlük verdiği görülmektedir. Özel işletmelerin büyük bir kısmı, istihdam ettiği personeline verdikleri ücretlerin büyük kısmını gayri resmi olarak vermektedirler. Kayıt dışı ekonomi daha çok silah, narkotik maddeler ve pornografik ürünlerin kanunsuz üretimi ve satışı olarak algılanmasına karşın, Azerbaycan'da esas olarak en basit üretim, ticaret ve hizmet alanlarında kayıt dışı ekonomik faaliyetler yürütülmektedir.(Bağırzade, 2007).Yapılan bazı değerlendirmelerde, kayıt dışı ekonominin kayıt altına alınan ekonomik faaliyetlerden daha büyük olduğu hesaplanmaktadır. Azerbaycan'da yapılan yabancı yatırımların %80'inin petrol sektörüne olduğu görülmektedir. Sektörel yatırımların daha çok petrol sektörüne yapılması ve bu doğrultuda GSMH'nın önemli bir bölümünün petrol gelirlerinden oluşması endişe vericidir. Petrol sektörünün tek taraflı gelişimi nedeniyle dünya piyasalarındaki fiyat değişmeleri GSMH üzerinde de dalgalanmalara neden olmaktadır. Bu durum 1998 Rusya krizinde açıkça görülmüştür. Kısaca Azerbaycan ekonomik açıdan "Hollanda Sendromu" diye ifade edilen, bir bölgenin veya bir sektörün hızlı gelişimi karşısında diğer bölgelerin veya sektörlerin çökmesi sonucunu doğuracak bir tehlike ile karşı karşıyadır.

Ekonomik gelişmenin sadece doğal kaynakların ihracı üzerine kurulması halinde ülke rezervlerinin tükenmesi ve sosyal adalet ilkesinin aksine olarak nüfusun yalnız küçük bir grubunun faydalanması, çoğunluğun yaşam düzeyinin düşmesi sonucunu doğurmaktadır. Dolayısıyla ekonomilerini sadece doğal kaynaklara ve tek sektöre dayandıran ülkelerin hem iç hem de dış ilişkilerde bağımsızlıklarını zedeleme durumu olabilecektir. Ekonominin sadece enerji sektörüne bağımlı olması bazı sosyo-ekonomik olumsuz sonuçlar da doğurabilecektir. Enerji sektörüne vasıflı işgücü ve araçların akımı diğer sektörlerin gelişim potansiyelini olumsuz yönde etkileyecektir. Petrol gelirlerinin ithal malları alımında harcanması, özellikle yatırım malları yerine tüketim malları ithal edilmesi durumunda, ülkenin ticaret bilançosu da açık verebilecektir.

Azerbaycan ekonomisine yabancı yatırım akımının güçlendirilmesi ve onların korunması için her türlü şartların yerine getirilmesi, "Hollanda Sendromu"ndan kurtuluş için ekonomi politikalarının temel amaçları arasında yer almaktadır.(Bulut, Suleymanov, 2012) Bu politikaların başında yatırım ikliminin elverişli kılınması gelmektedir. Bunun gerçekleşmesi için; önce ticari olmayan risklerin ortadan kaldırılması, vergi oranları, vergi toplama sistemi ve etiği, yabancı sermayeyi güvenceye alıcı hukuki ve idari düzenlemelerin varlığı ve icraatı, vergi ve gümrük sistemlerinin optimizasyonu ile ilgili düzenlemeler yapılmalıdır.Hollanda Hastalığı dışında Azerbaycan açısından yabancı sermayeden kaynaklanan problemler şunlardır: Ülkenin dış borcunun artması,yabancı sermayeli ve müşterek işletmelerin faaliyetlerinin daha çok erken gelir getiren hammadde yönlü ve hizmet sahalarına yönelmesi,ülkenin üretim sanayisi sahalarına yabancı sermaye yatırımının çok az olması,yatırımların hemen hepsinin Abşeron bölgesinde toplanması sonucu, diğer bölgelerde yabancı sermayenin yok denecek kadar az olması,

Uluslararası finans kuruluşlarından alınan krediler ve finans kuruluşlarının verdikleri tavsiyelerin ülkede makroekonomik istikrarın sağlanmasında büyük rol oynamasına karşın, reel sektörde üretimin seviyesinin ve veriminin yükseltilmesi ve halkın sosyal güvenliğinin artması gibi sosyo-ekonomik problemlerin çözümünde fark edilir bir değişiklikler sağlamamasıdır.Ülkede işletmecilerin karşılaştığı başlıca problemlerden biri de tekelcilik eğilimleridir. Bazı şirketlerin, iş adamlarının belirli alanları monopolleştirmesi özel teşebbüsün gelişmesinin karşısına engel koymakta hatta iş yerlerinin kapatılmasına neden olmaktadır. Azerbaycan'da özel teşebbüsün gelişmesine tekelcilik ve haksız rekabet engel olmaktadır. Tekellerin varlığı fiyatların kaotik şekilde artmasını da netice vermektedir.

4 Sonuç

Kısaca Azerbaycan ekonomik açıdan "Hollanda Hastalığı" diye ifade edilen ve en genel anlamda; bir sektörün hızlı gelişimi karşısında diğer sektörlerin gelişmemesi sonucunu doğuracak bir tehlike ile karşı karşıyadır. Hatta Azerbaycan'ın bir sektöre bağımlılığın ötesinde bir bölgeye bağımlılık tehlikesi ile de karşı karşıya olduğu görülmektedir.Bağımsızlık sonrası Azerbaycan ekonomisinin gelişimini ana hatlarıyla incelememiz sonucu, 1991-1996 yılları arası dönemde ekonominin neredeyse tüm parametrelerinde önemli gerilemelerin, 1996 yılından başlayarak ise istikrarın sağlanması ve 1998 Rusya ve 2008 dünya ekonomik krizlerinin etkileri dışında pozitif yönde gelişmelerin yaşandığı ortaya çıkmıştır. Özellikle petrol ve doğalgaz sektöründe yaşanan hızlı gelişim süreçlerinin etkisiyle 2000'li yıllarda temel ekonomik parametrelerde çok büyük iyileşmeler kaydedilmiş ve bunun önümüzdeki yıllarda da devam edeceği öngörülmektedir. Böylece bağımsızlık sonrası ekonomide yaşanan tüm olumlu ve olumsuz süreçlere rağmen 1991-2013 yılları arasında GSYİH hacmi (diğer ifadeyle Azerbycan Ekonomisinin büyüklüğü) yaklaşık 120 defa, kişibaşına GSYİH hacmi 400 defa, devlet bütçe harcamaları 280 defa, toplam dış ticaret hacmi 30 defa, ihracat 10 defa, ithalat ise 10 defa artmış ve bugün Azerbaycan ekonominin tüm temel kantitatif parametreleri üzerine Güney Kafkasya'da lider konumdadır. Azerbaycan'ın dış borç miktarı 2013 yılı başı itibariyle 5.688 milyar ABD dolarıdır. Bu miktar GSMH'nın %13.6'sına tekabül etmektedir. Kişi başına düşen dış borç miktarına göre, BDT ülkeleri ile karşılaştırıldığında sıralamada ortalarda yer almaktadır. Fakat bağımsızlık sonrası yaşanan tüm pozitif gelişmelere ve hükümetler tarafından uygulanan çözüm stratejileri ve politikalarına rağmen, Azerbaycan Ekonomisinde hala belli sorunlar yaşanmaktadır ki, bunlardan da en önemlileri ekonominin önemli ölçüde petrol sektörüne bağımlı hale gelmesi, istihdam dostu ekonomik büyüme modeline geçilememesi, bölgesel dengesizlik, tarım sektörünün verimsizliği, Dağlık Karabağ ve çevre bölgelerinin Ermenistan tarafından işgalinin doğurduğu sosyo-ekonomik sorunlar, yüksek faizler, yüksek vergi yükü, kamu hizmetlerinin yeteri kadar gelişememesi, şirketleşme oranının düşüklüğü, kurumsal yönetim geleneğinin zayıf olması, "nakit ekonomisi"nin yaygın olması, suni tekelcilik, kayıtdışılık, yolsuzluk ve çeşitli altyapı sorunlarıdır. Ekonomide yaşanan mevcut sorunların çözümü konusunda aşağıdaki yönlerde politika önlemlerinin alınması etkili olabilir:

- Sürdürülebilir ekonomik kalkınmanın sağlanması, istihdam düzeyinin yükseltilmesi, yoksulluğun azaltılması, gelir dağılımında adaletsizliyin azaltılması, regionlar arasında farklı gelişim düzeyinin azaltılması, petrol dışı sektörlerin geliştirilmesi yönündeki hükümetin 2008-2012 ve 2013-2015 programlarının takibi ve bu yönlü hükumet politikaların sürekliliyi:

-Serbest Piyasa keçit sürecinde yasaların uygulanabilirliyi ve dünyadakı gelişmiş ülkelerin tecrübesinden yararlanma

-Doğal kaynaklara dayanan ekonomik büyüme modelinden yüksek teknoloji ve verimliliğe dayanan ekonomik büyüme modeline geçilmesi gerekir. Bunun için ülkeye yeni teknoloji transferinin teşviki, teknoparkların kurulması, bilim-ekonomi işbirliğinin en mükemmel modellerinin uygulanması, ekonomide kaynak tahsisi ve kullanımı alanında verimlilik artışına yol açan modern üretim ve yönetim sistemlerinin ve optimal büyüklükteki ekonomik birimlerin oluşturulması, eğitimin, özellikler de teknik eğitimin kalitesinin yükseltilmesi

-Petrol fonunda biriken yaklaşık 50 milyar dolarlık rözervin verimli kullanılması.Bu kaynaktan yatırımcıların etkili kullanabilmesi ve bu kaynakların yurt içinde ve yurt dışında etkili yatırımlarla daha da artırılarak petrol sonrası dönemin sigortalanması ve güvence altına alınması.

-Yoksulluğun ve gelir eşitsizliğinin azaltılması amacıyla, yoksullukla mücadelenin mevcut politika mekanizmalarının geliştirilmesi, gelir eşitsizliğinin azaltılmasında mali politika araçlarının aktif şekilde kullanılması gerekir.

-Enflasyonla mücadelenin devamlılığını sağlayacak ve enflasyonun ekonomik sistem üzerindeki olumsuz etkilerini minimize edecek politikaların geliştirilmesi.

-Faiz politikasının kayıtdışı tasarrufları yatırım şeklinde resmi sektöre kazandırma etkisinin yükseltilmesi gerekir. Bu açıdan mevduatlara uygulanan ortalama faiz derecesi ile sermayenin kayıtdışı sektörde ortalama getiri derecesi arasındaki farkın minimize edilmesi, yatırım kredilerine uygulanan faiz derecesinin resmi sektörde yatırım faaliyetlerini özendirecek etkiye kavuşturulması etkili olabilir.

-Ülkede makroekonomik istikrarın önemli unsuru olan döviz gelirlerinin uzun vadede devamlılığının sağlanması açısından ihraç gelirlerinin petrole bağımlılığının azaltılması amacıyla petrol dışı sektörlerin ihrac potansiyelinin artırılması yönünde politika önlemlerinin alınması gerekir

-Bütçe dengesinin devamlılığının ve bütçenin sosyo-ekonomik fonksiyonlarının daha etkin bir şekilde gerçekleştirilmesinin sağlanması amacıyla, onun petrol faktörüne bağımlılığının zamanla azaltılması ve vergiler gibi devamlı gelir kaynakları ile finanse edilme düzeyinin yükseltilmesi gerekir

-Hem ekonomik kalkınmayı hızlandırması, hem de kayıtdışı sektörü sınırlayıcı etkiye sahip olması düşünülerek, petrol dışı sektörde yabancı yatırımları özendirici politikaların geliştirilmesi.

-Girişimciler için devlet teşvik mekanizmalarının geliştirilmesi gerekir. Bu bakımdan yeni girişimciler için teşviklerin genişletilmesi, Girişimciliğe Destek Ulusal Fonu'nun ucuz kredilendirme mekanizmasının geliştirilmesi, tarım sektöründe uygulanan teşvik mekanizmasının etkinliğinin artırılması, girişimcilere devlet tarafından bilimsel ve bilgi edinme desteğinin genişletilmesi, girişimcilerin devlet tarafından ödüllendirilme mekanizmasının geliştirilmesi önlemleri etkili olacaktır.

-Girişimcilik altyapsının geliştirilmesi gerekir. Bu bakımdan özellikle sermaye ve sigorta piyasasının geliştirilmesi, organize sanayi bölgelerinin oluşturulması, danışmanlık hizmetleri sektörünün ve fuarcılık altyapısının geliştirilmesi önem arz etmektedir.

- Ülkede girişimcilerin hak ve menfaatlerinin sağlanması düzeyinin daha da yükseltilmesi gerekir. Bu açıdan girişimcilerin organize olma düzeyinin yükseltilmesi, resmi işlemlerdeki gecikmelerin önlenmesi ve fikri mülkiyet veya telif haklarının korunması zorunludur.

- Kayıtdışı ekonomiyle mücadele politikasının geliştirilmesi gerekir. Bu yönde kayıtdışı ekonomiyle mücadele alanında devlet programının hazırlanması, resmi merkezi kurumun oluşturulması, istatistik verilerin geliştirilmesi, cezaların sertleştirilmesi, yasal boşlukların giderilmesi.

Rus Dış Politikasında Ekonomik Bölgeselleşme: Avrasyacı Bütünleşme Modeli'nden Söz Edilebilir mi?

Economic Regionalisation in the Russian Foreign Policy: Is it Possible to talk about the Eurasianist Model of Integration?

Prof. Dr. Erhan Büyükakıncı (Galatasaray University, Turkey)

Abstract

In this paper, we try how the idea of economic regionalism has developed within the framework of the interests of the Russian foreign policy, which adopted a Eurasianist rhetoric for nearly fifteen years. As the trends of globalisation spread over the world after the end of the Cold War period, the regional integration movements also gained speed with different forms and contents. Meanwhile the countries in the post-Soviet geography adopted different political approaches towards regionalisation and globalisation by taking into consideration their own capabilities and interests. At its own side, Russia was in search of integration within the world economy by trying to implement its own regionalist policies both at the level of the CIS area and with the neighbouring countries like China and the EU. The Eurasianist discourse has no doubt such impact on Russian leadership's choices of partners and orientations for economic regionalisation. At this point, we want to discuss if it is possible to talk about some "Eurasianist model of regional integration" as a new idea which can combine, at one side, the institutional integration process within the CIS area and, at the other, the strong regional cooperation with the Asian economic partners like China. This model can be also Russia's answer to embrace both globalism and regionalism by preserving its own hegemonic expectations after the Soviet legacy.

1 Giriş

Soğuk Savaşın bitişiyle birlikte tüm dünyada bölgeselleşme ve küreselleşme eğilimleri farklı açılardan tekrar tartışılmaya başlanmıştır. İdeolojik blokların ortadan kalkmasıyla, bir yandan tüm dünyada ekonomik ve demokratik yapılarda belirli bir liberalleşme eğilimi gözlenirken, öte yandan da bölgeselleşme yaklaşımlarının hız kazanmasına tanık olduk. Aslında bölgeselleşme-küreselleşme birlikteliğinin "ilk dalga"sı, Soğuk Savaş yıllarında Latin Amerika merkezli olarak karşımıza çıkmıştı; ithal ikameci bir sanayi politikasına yönelik daha korumacı hedefi olan bir bölgeselleşme akımı niteliğindeydi. Bölge ülkeleri arasında hammadde akışıyla birlikte küreselleşmenin etkilerinden korunma arzusu söz konusuydu. Ancak 1970'lerden itibaren petrol krizlerinin yanı sıra Soğuk Savaş döneminin tekrar ısınması ile birlikte küreselleşme-bölgeselleşme tartışmaları etkisini yitirmişti.

Tüm dünyada bunlar yaşanırken SSCB geneline baktığımızda, Gorbaçov'un 1985'te S.B.K.P.'nin genel sekreterliğine gelmesiyle başlayan Perestroyka süreciyle ideolojik tonların hem siyaset, hem ekonomi üzerindeki etkileri hafiflemesi ve sosyal yapılarda belirli bir liberalleşme sürecinin başlaması söz konusuydu. 1980'lerin ikinci yarısından sonra yavaş yavaş tüm dünyaya yayılan bu liberalleşme süreci, "ikinci dalga" olarak hem bölgeselleşme eğilimlerinin kurumsallaşmasını hızlandırmaya başlamış, hem de küresel düzlemde yeni değerlerin ve kurumların doğuşunu desteklemiştir. Soğuk Savaşın bitişi bu dalganın tüm dünyada kabul görmesini de kolaylaştırmıştı, ancak birçok ülke ulusal kalkınmasını tek ürün-hammadde kültürüne dayandırarak küreselleşmeye ayak uydurmak yönünde politikalar benimsemişti.

Nitekim 1990 yılında imzalanan ve Soğuk Savaşın bitiş belgesi konumundaki Paris Şartı ile birlikte hem insan hakları ve liberal demokrasi konuları artık devletler arasında sınıraşan bir tema haline gelirken, serbest piyasa ekonomisi yaklaşımı tüm dünya çapında genel bir kabul kazanmıştı. Birinci Körfez Krizi ve bunu takiben de SSCB'nin dağılmasının ardından, dönemin ABD Başkanı George Bush'un "Yeni Uluslararası Düzen" söylemi liberal demokrasi ve serbest piyasa ekonomisinin birlikteliğinin artık dünyada tek geçerli yaklaşım olduğunu ilan etmekteydi. Bu aşamada SSCB'nin dağılması sonucunda ortaya çıkan Rusya Federasyonu'nun bu "yeni dünya düzeni"ndeki konumu neydi ve yeni gelişen liberalleşme süreçlerine bakışı nasıldı?

Soğuk Savaşın bitimiyle birlikte küreselleşme ve bölgeselleşme olgularının birlikte hareket ettiklerini görüyoruz. Avrupa Topluluklarının Avrupa Birliği'ne dönüşmesi ve genişleme ve derinleşme süreçleriyle Avrupa kıtasının büyük bir bölümünde hem siyasal hem de ekonomik bütünleşmenin birlikte geliştiğine tanık oluyoruz. Bu süreç 1990'ların başlarından 2000'lerin ortalarına kadar devam eden bir dönemi kapsamaktadır ve bu çerçevede Avrupa bütünleşmesinde yeni bir yapı ortaya çıkmıştır. Her ne kadar üye devletlerin arasında ortak dış ve savunma politikasının kurumsallaşması yetersiz olmuşsa da, para birliğinin gerçekleşmesi bölgesel bütünleşmenin en önemli aşaması olarak da değerlendirilebilir, çünkü sosyal politikalardan ekonomik yapılara kadar para birliğinin inşa süreci siyasal karar alma mekanizmalarını da doğrudan etkileyen bir etki yaratmaktadır.

Avrupa Birliği'nin yanı sıra NAFTA (Kuzey Amerika Serbest Ticaret Alanı), MERCOSUR (Latin Amerika ülkeleri arasındaki ekonomik bölgesel yapılanma), ASEAN (Güneydoğu Asya), APEC (Asya-Pasifik coğrafyası)

gibi liberal ekonomi koşulları üzerinde kurumsallaşan, hem kıta içinde hem de kıtalar arasında ekonomik yakınlaşmayı amaçlayan hükümetlerarası yapıların ortaya çıkması, ekonomi-politika evliliğinin en önemli göstergesidir. Aynı zamanda bu kurumsal yapılar, küresel düzlemde liberalleşme yaklaşımın benimsenmesinin de en önemli göstergesiydi.

1990'lardan itibaren ivme kazanan bölgesel bütünleşme süreçlerine baktığımızda bu temel olguları tespit etmekteyiz: a) serbest ticaret alanı ya da gümrük birliği yapılanmalarıyla ekonomik alanda bir bütünleşme çabası; b) lojistik koşullarının kolaylaştırılması ve buna bağlı ülkeler arası ulaşım (karayolları, demiryolları, havayolları) şebekelerinin çeşitlendirilmesi ve güçlendirilmesi; c) toplumlar arası yakınlaşma ve kimlikler arası farklılıkların giderilerek sosyo-kültürel bir uyumlandırma sürecinin yaratılması. Hem materyal hem de sosyo-kültürel düzlemlerden bakıldığında, bölgesel bütünleşme sürecinin küreselleşmenin yaygınlık kazanmasına da yardımcı olduğunu söylemek mümkündür. Bu çerçevede küreselleşme-bölgeselleşme ilişkisinde daha önce zikrettiğimiz birinci (korumacı) dalga ile ikincisi (liberalleştirme eksenli) dalgalar arasında dönüşümlerin de olduğunu vurgulamak gerekiyor (Guraziu, 2008). Özellikle 11 Eylül sürecinden sonra iç politika ve güvenlik nedenleriyle küreselleşme etkilerini sınırlandırmak amaçlı devletlerin bölgeselleşme politikalarında belirli korumacı önlemler aldıkları da gözlemlenmektedir ve bu örnekleri özellikle de AB içindeki Anayasa ya da Romanların statüsü tartışmalarında da görmek mümkündür.

Bu süreçler olurken Avrasya coğrafyasında eski Sovyet mirası sonrasında yaşanılan dönüşüm çerçevesinde hangi bütünleşme tartışmaları yaşanmaktaydı? Rusya'nın bu tartışmalar içerisindeki konumu ve bakışı nedir? Bu çalışmamızda, dış dünyaya açıklık ya da kapalılık arasında giden bir bölgeselleşme olduğu hipotezinden hareketle, Rusya'nın özellikle Putin döneminde izlediği Avrasyacı dış politika çizgisine paralel olarak bölgeselleşmeye bakışının dünyadaki örnekler kadar küreselleşmeyi destekler ve dışa açık bir konumda olup olmadığını tartışmak istiyoruz. Bu çerçevede BDT içi ve dışı coğrafyalarda Rusya'nın ekonomik alandaki bölgeselcilik yaklaşımlarının nasıl şekillendiğini ve bu bağlamda "Avrasyacı bir bütünleşme modeli"nden söz edilip edilemeyeceğini gerekçeleriyle değerlendirmeye çalışacağız. Bu modelin Rusya'nın küreselleşen ekonomi şartlarıyla uyumlanmasına mı yardımcı olacağını, yoksa tam tersi daha korumacı, kendi alanı içinde daha müdahaleci bir zemin mi yaratacağı sorusuna da yanıt aramak istiyoruz.

2 Rus Dış Politikasında Bölgeselleşme Düşüncesi ve Girişimlerin Başlaması

Rus dış politikasında bölgeselleşme düşüncesi hangi şartlarda ortaya çıkmıştır sorusunu sorduğumuzda, karşımıza şu faktörler çıkmaktadır: Ekonomik ve altyapısal nedenler, jeopolitik ve tarihsel devamlılık arayışı, siyasal gereksinimler ve toplumsal zorunluluklar.

Sovyetler Birliği'nin dağılması neticesinde ortaya çıkan bağımsız devletlerin arasında BDT'nin kurulması, aslında *"eski rejim"*in avantajlarının sürdürülmesi çabası olarak değerlendirilebilir. Sovyet döneminin hem sosyo-politik, hem de ekonomik düzeni, bu birliği oluşturan devlet yapıları arasında belirli bir karşılıklı bağımlılık süreci yaratmış ve ekonomi-siyaset etkileşimi yapısal bir bağlayıcılık haline gelmişti. SSCB'nin dağılması, bağımsızlık süreçlerini doğurmuş olsa da, karşılıklı bağımlılığın belirli dezavantajlarını da ortaya koymuştu. Nitekim Sovyet sonrası alanda ortaya çıkan bağımsız devletler, aralarında karşılıklı sınırlar, azınlıklar, göçler gibi sosyo-politik sorunlar yaşarlarken, ekonomik bağımsızlıklarını özellikle mali/parasal alanlardan yeniden üretim şartlarının tanımlanması ve yapılanmalarına kadar oluşturmaya çalışmışlardır. Bu açıdan bakıldığında, iç ve dış politika etkileşimi de bu yeni süreç de kendisini göstermiştir. Rusya ve diğer bağımsız devletler, ekonomik yapılanmalarına paralel olarak dış politika söylemlerinde farklı açılara yönelmişler ve Sovyet sonrası coğrafyada dağınık yaşayan etnik gruplara yönelik özel hassasiyetler geliştirmeye başlamışlardır.

Özellikle 1990'ların başında Rusya açısından bakarsak, Soğuk Savaş döneminin blok liderliği - büyük güç statüsünden bölgesel bir güç konumuna düşmesi farklı siyasal söylemlerin ortaya çıkmasına yol açmıştır. Dönemin Rusya Başbakanı Gaydar'la başlayan ekonomide şok terapi politikası uygulamaları, buna uygun bir dış politika stratejisini zorunlu kılarken Avrupacı-Atlantikçi tonları içeren bir "Batıcılık" yaklaşımı hem Avrupa kurumları (Avrupa Konseyi, Avrupa Birliği) ve uluslararası iktisadi kuruluşlarla (İMF) siyasal ve ekonomik alanlarda yakınlaşma ve bütünleşme çabasını zorunlu kılmaktaydı, hem de NATO, AGİT gibi güvenlik alanlarındaki uluslararası kurumlarla işbirliğini cesaretlendirmekteydi. Bu aşamada liberal dünyanın bir parçası olmak isteyen Rusya'nın ekonomi-siyaset çıkarlarını bir arada gözeterek daha batıcı bir yaklaşımla, BDT alanından uzaklaştığına tanık olduk (Kubicek 2009; Libman 2007). Ancak bu liberalleşme aşaması, Rus iç politikasında en başından itibaren engellerle karşılaşmıştır; Komünistlerin Devlet Duması içerisindeki çoğunlukları karar alma sürecini tıkarken, Sovyet sonrası süreçte devletin ve bürokrasinin dönüşümü iradesi sınırlı kalmıştır. Tabii ki bu aşamada SSCB gibi yetmiş yıllık bir ideolojik yapıdan yepyeni bir liberal düzene geçişin kısa sürede gerçekleşmesi mümkün değildi (Büyükakıncı, 2004).

1990'ların başında Yeltsin yönetimi Batı'yla yakınlaşmanın yanı sıra BDT içi işbirliği araçlarını birçok alanda yaratmaya çalışmıştır; güvenlik işbirliği alanında Taşkent Antlaşması ile Kiev anlaşması, ekonomi alanındaki girişimleri göz önünde bulundurursak, hiç birisinde de yeniden bütünleşme ve Sovyetlerinkine benzeyen bir yapıya geçme iradesi bulunmamaktaydı. Her ne kadar 1990'ların ortalarından itibaren "Avrasyacı" söylem

ağırlığını göstermişse, BDT içi karar alma mekanizmalarının derinleştirilmesi, çeşitlendirilmesi ve daimi anlamda kurumsallaştırılması söz konusu değildi (Nikitin, 2008). Bu dönemdeki Birinci Çeçen Savaşı, Rusya Federasyonu devleti kendi içerisindeki yapılanmasına dair sorunları su yüzeyine çıkartırken siyasette oligarklar gibi yeni karar alma aktörleri ortaya çıkıyordu. Bu açılardan bakıldığında 1990'lı yılların karmaşasında Rus dış politikasının kendi yakın çevresine yönelik özel bir bölgesel bütünleşme yaklaşımına girebileceği bir çizginin oluşamadığını söylemek mümkündür (Libman, 2011).

Her ne kadar Karadeniz Ekonomik İşbirliği Bölgesi – KEİB, BDT alanı dışından Türkiye tarafından önerilen bir ekonomik bölgeselleşme hareketi olarak çıkmışsa da, bunun ciddi bir bütünleşme hareketine dönüşemediğini söylemek gerekir (Aelenei, 2013). Öte yandan 1994 yılından itibaren AB-Rusya yakınlaşmasına paralel olarak ortaklık ve işbirliği anlaşmasının oluşturulup işlerlik kazandırılması, TACIS gibi fonların BDT coğrafyası düzleminde devreye sokulması, Kuzey Boyutu gibi alt-bölgesel projelerin ele alınması, daha çok bölgeler arası ilişkilerin stabilizasyonu amacına hizmet etmekteydi (Büyükakıncı, 2003). Bunların yanı sıra, Orta Asya ülkelerinin kendi aralarında CASCO gibi serbest ticaret – gümrük birliği karması bir yapıya ilk adım atmaları, Rusya'nın dışında ortaya çıkan bir oluşumdu (Büyükakıncı, 2000).

Son olarak da 1997 yılında Şanghay Beşlisi olarak başlayan ve daha çok sınır güvenliği konularına odaklanan bir bölgesel işbirliği kurumu oluşumu, Rusya ve Çin'in kendi aralarında başlattıkları özel bir süreç olarak ele alınabilir; Rusya'nın Avrasyacı dış politika çizgisinin BDT dışı girişimleri çerçevesinde, "Şanghay İşbirliği Girişimi", Y. Primakov'un dışişleri başkanlığının ve Rus dış politikasına getirdiği yeni bakış açısının en önemli meyvası olarak görülebilir. Nitekim bu girişim bölgesel bütünleşme arayışından daha çok stratejik bir ortaklığın ilk aşaması olarak karşımıza çıkmakta (Balzer, 2008; Kerr, 2010).

Rusya'da Putin'in başbakanlık görevine gelmesi ve ardından da İkinci Çeçen Savaşı'nın başlamasıyla tamamen kendisini gösteren Avrasyacı-milliyetçi dış politika söylemi, BDT alanındaki eski kazanımları yeniden değerlendirmek hedefini ortaya koymuştu. Nitekim 2000 yılından itibaren kollektif güvenlik alanındaki Taşkent antlaşmasının yeniden canlandırılması, Avrasya Ekonomik İşbirliği Örgütü EURASEC'in gündeme alınması, Moskova-Minsk yakınlaşmasının başlaması gibi BDT coğrafyasına Rusya'nın geri dönüşü söz konusuydu; güvenlik ve ekonomi alanlarında işbirliğinin kurumsallaştırılması hedefi, Putin'in dış politika çizgisinde mevcuttu (Büyükakıncı, 2004).

11 Eylül süreci ve ardından gündeme gelen Afganistan Savaşı'yla birlikte Rusya'nın Avrasya'daki öncelikleri güvenlik konularında yoğunlaşırken, dünya piyasası fiyatlarıyla doğal gaz ihracına endeksli bir ekonomik kalkınma ve dönüşüm iç politikadaki önceliği olmuştu. 2001-2004 arası dönemde değişen uluslararası konjonktüre uygun olarak Putin yönetimi, Avrasyacı-Atlantikçi yaklaşımların bileşimi bir dış politika söylemi benimsemiştir; Atlantikçi söylem çerçevesinde dünyadaki ekonomik kuruluşlarla yakın ilişkilerin geliştirilmesi yapısal bir farklılık olarak değerlendirilebilir (Sokolov, 2008).

2004'ten itibaren Rusya'nın eski Sovyet döneminden gelen belirli yapısal avantajları ve BDT içi karşılıklı bağımlılık zincirlerini kendi lehine çevirmek istediğini görmeye başlıyoruz; bu aşamada Renkli devrimlerin gündemde olması, Rusya açısından BDT alanı içindeki güvenlik ve ekonomi ilişkisini müdahaleciliğe dönüştürme olanağını da yarattığını söylememiz gerekiyor (Kubicek, 2009). Buna en güzel örnekler Rusya-Ukrayna arasında yaşanan doğal gaz krizi ya da 2008 Gürcistan krizi verilebilir. Putin'in başkanlığa gelişinden beri arzuladığı Dünya Ticaret Örgütü – DTÖ'ye üyeliğin uzun süre engellenmesi, BDT alanın içinden Kırgızistan, Ukrayna, Asya'dan Çin gibi ülkelerin kabul edilmesi Avrasya coğrafyasında Rusya'yı yalnızlaştırma durumu yaratmaktaydı. Halbuki 2004'te IMF borçlarının kapatılması ve borç veren ülke statüsüne geçiş, Rusya açısından önemli gelişmelerdi, ancak ulusal ekonominin dönüşümü süreci bu aşamada başlayacaktı.

2008 mali krizi karşısında Rus ekonomisinin sağlam duruşu, BRIC ülkeleri arasında yer alması ve Avrupa kıtasında sorun yaşayan ülkelere kredi açması gibi, Rusya'nın dünya piyasalarında belirli bir rol üstlenmeye başladığını görüyoruz; küresel ekonomik gelişmeleri yönlendirmeye çalışan bir Rusya söz konusu. Bunun en önemli sonucu olarak da 2012 yılı itibariyle DTÖ'ye üyeliğin on dokuz senelik müzakereler sonucunda tamamlanması gösterilebilir. Bunun yanı sıra Şanghay İşbirliği Örgütü içinde Çin'le olan ikili ilişkilerin sıkılaştırılması, İran ve Suriye gibi Ortadoğu'daki önemli devletlerle ilişkilerin güvenlik alanında yoğunlaştırılması açılarından baktığımızda ise, güvenlik alanındaki bölgesel yaklaşımların stratejik temellere dayandığını söyleyebiliriz (Simbar, 2011). AGİT, APEC (Mihoko, 2007) gibi işlevsel alanlarda bölgesel işbirliği kurumlarına daha ağırlık veren Rus yönetimi, özellikle Medvedev'in cumhurbaşkanlığıyla çok-taraflı diplomasi söylemini benimsemeye başlamıştı (Nikitina, 2012).

Rusya'nın bölgeselleşmeye bakış açısını özetlemek gerekirse şu ana hatları sıralamak yeterli olacaktır. Öncelikle Sovyet sonrası dönemde her şeye rağmen Sovyet tarzı bir topraksal bütünlük düşüncesinden hareketle Rusya merkezli bir yapı söz konusudur. Tüm taşıma ve enerji nakil hatları şebekeleri Rus topraklarına bağlantılı durumdadır; dolayısıyla bağımsız devletler olsalar da, tüm bölge aktörleri ekonomik ve alt-yapısal olarak Rusya'nın merkezinde bulunduğu bir karşılıklı bağımlılık ağının içinde yer aldıklarının bilincindedirler. Öte yandan bölgeselleşme eğilimleri devlet merkezli politikalarca yönlendirilmekte ve icra edilmektedir. Oligarklar ve

siloviklerin ağırlıklı oldukları bir ekonomi yönetimi çerçevesinde devlet-dışı aktörlerin yatırımları çok fazla etkili olamamaktadır.

3 BDT İçi Ekonomik Bütünleşmenin Zeminleri

BDT üyesi ülkeler arasında ekonomik bölgeselleşme girişimlerine baktığımızda, merkez-çevre ilişkisi dikkatleri çekmektedir; ekonomik işbirliği alanında Rusya hep merkezi konumunu korurken, gerek Avrupa tarafında, gerekse Orta Asya coğrafyasında belirli ülkeler çevre alanlarda alt-liderler olarak ortaya çıkmaktadırlar (Qoraboyev, 2010). Avrupa tarafında Beyaz Rusya, Orta Asya cephesinde de Kazakistan ön plana çıkmaktalar. Bunlardan birincisi Rusya-AB ülkeleri arasındaki enerji nakil hatları üzerinde bulunmanın avantajıyla, diğeri ise enerji üreticisi ve dağıtıcısı konumuyla bu avantaja sahipler. Öte yandan Rusya'yla olan ekonomik ilişkileri daha kurumsal bir sürece de yayılmış durumdadır; 2012 yılı itibariyle Rusya, Beyaz Rusya ve Kazakistan arasında kabul edilen Ortak Ekonomik Alan (CES – Common Economic Space) yaratma girişimi ekonomik bütünleşmenin yolunu açmaktadır (Camba, 2012).

Öte yandan Beyaz Rusya ve Kazakistan, EURASEC düzeyinde de en istekli ve Rusya'yla en uyumlu partnerler olarak dikkatleri çekmektedir. Ancak Kazakistan'ın özellikle enerji ürünlerini BDT alanı içine pazarlamak yerine dış piyasalara yönelmesi söz konusudur. Bu noktada Rusya ve Kazakistan'ın hidrokarbon hammaddelerine dayalı ekonomilerinin olması, bunların arasında bölgesel bütünleşmenin gerçekleşmesi açısından bir engel midir sorusunu sorabiliriz; belirli hammaddelere dayalı olarak ekonomik yapıların birbirini tamamlamak yerine rekabete girme riski tartışma konusu olabilir (Movkebaeva, 2013).

Orta Asya coğrafyasından Kırgızistan ve Tacikistan da bu bölgeselleşme sürecinde küçük ölçekli çevre ülkeleri olarak karşımıza çıkmaktadır ve bu ülkeler ekonomik araçlarda dışa bağımlılıkları ve jeostratejik konumlarından ötürü bölge liderleri ya da merkez ülkeyle ittifak yapma zorunluluğunu hissetmekteler (Blank, 2011). Bunların yanında, 2000'li yıllar itibariyle baktığımızda gerek demografik açıdan, gerekse jeopolitik avantajlarıyla alt-bölge lideri konumuna oynayabilecek Ukrayna'nın ekonomik kapasitelerinin yetersiz ve yeniden yapılanmasını tamamlayamamış olmasından ötürü geri planda kaldığını görmekteyiz. Yanukoviç dönemi Ukrayna'sında Rusya'ya bölgesel bütünleşme girişimlerine dair net bir irade sergilendiğini söylemek mümkün değildir.

BDT içerisindeki en çelişkili aktör konumunda olan Özbekistan birçok açılardan güvensizlik sendromu yaşamaktadır; bölgeselleşme politikaları izlemek yerine uluslararası anlamda daha çok-vektörlü bir politika uygulamakta ve ekonomik ve dış politika alanlarında hiçbir ülkeye bağımlı olmamaya ve özel bir ittifak politikası izlememeye çalışmaktadır. Burada en güzel örnek, Özbekistan'ın GUAM'a 1999 yılında girişi, 2001'de ise çıkışı ya da EURASEC'e 2006 yılında üye olup 2011 yılında ayrılması gösterilebilir. Öte yandan, Orta Asya coğrafyasında Özbek-Kazak rekâbeti kapasitelerin karşılaştırılması açısından önem teşkil etmektedir; Rusya'nın bölgedeki varlığının arzulanması bu iki ülke açısından da tercih edilen bir durumdur. Rusya'nın buradaki konumu "düzenleyici, arabulucu ve rol dağıtan aktör" olarak ortaya çıkmaktadır. Özbekistan'ın Orta Asya bağlamındaki bir diğer sorunu da, Ferghana Vadisi ve nüfus dağılımları nedeniyle Tacikistan'dan gelebilecek her türlü güvenlik sorunlarıdır. Gerek dışardan gelebilecek köktendincilik kuşkuları, gerekse Tacik nüfusun ekonomik durumu ve sosyal mobilitesine dair çekinceler (Shkaratan, 2012), Taşkent yönetimini bölgesel süreçlere katılımını sınırlamaktadır. Kerimov yönetimi iktidarda kaldığı sürece bu temkinli dış politika oluşturma süreci devam edecek gibi görünüyor.

BDT alanı içerisinde bölgeselleşmeyi yönlendiren sektörler arasında, taşıma (lojistik), enerji (hammadde) ticareti ve nakil şebekeleri, özellikle Renkli devrimlerde gündeme gelen iletişim, medya ve bilişim, bankacılık başı çekmektedir. Özellikle yatırım bankacılığı alanında Rus ve Kazak firmaları dikkatleri çekmektedir. Bu sektörlerin özellikle küreselleşme-bölgeselleşme ilişkisini en yapısal anlamda geliştiren alanlar olmaları önemlidir. BDT içi doğrudan yatırımlara baktığımızda, doğal gaz ve petrol alanlarıyla bankacılık sektöründe Ruslarla Kazakların yarıştıkları söylenebilir. Telekomünikasyon (GSM) alanında da önemli bir yatırım sahası bulunmaktadır. Ruslar, yatırımlarını yaparlarken daha çok off-shore bankacılık yollarını kullanmakta, Kıbrıs, Hollanda, Avusturya, İsviçre, İngiliz Virgin adaları gibi vergi cenneti olan ülkeler üzerinden para aktarmaktadırlar. BDT içerisinde Çinli yatırımcıların sayısı çok önemli bir düzeyde değildir; özellikle Rus Sibirya'sında ve Orta Asya'da Çinli işçi göçüne yönelik sıkı önlemler söz konusudur (Kerr, 2010).

2000'ler sonu itibariyle BDT içi ticaret hacimlerini karşılaştırdığımız zaman Türkmenistan, Beyaz Rusya, Kırgızistan ve Ukrayna'nın BDT üyesi ülkelerle % 55-40 aralığında dış ticaret ağırlığına sahip olduğu gözlenirken, bu rakamların Rusya, Kazakistan ve Tacikistan açısından % 10'larda gezindiğini söylemek mümkün. Öte yandan BDT üyesi ülkelerin Rusya'ya yaptıkları ihracatın oranlarına baktığımızda, Beyaz Rusya'nın % 35, Özbekistan'ın % 22, Ukrayna, Kırgızistan ve Moldova'nın % 19-18 aralığında, Kazakistan'ın ise % 10 oranında olduğu görülmektedir. BDT üyesi ülkelerinin kendi aralarında yüksek oranlı bir ticaret hacmi yaratamamalarının en önemli sebebi, yukarda da belirttiğimiz gibi, uluslararası piyasalara hammadde ihracı merkezli bir stratejinin olması ve BDT içi piyasalardaki düşük fiyat standartlarından kaçınılması olarak değerlendirilebilir.

4 "Avrasyacı Bölgesel Bütünleşme Modeli"nin Çerçevesi ve Tartışılması

"Avrasyacı bölgeselcilik" yaklaşımı, küreselleşen dünya koşullarında belirli farklılıklar arz eden ve kendi iç dinamikleriyle özgün bir model olarak karşımıza çıkmaktadır. Her ne kadar Avrupa Birliği'nin bölgesel bütünleşme modeli belirli bir tarihsel çekişmelerin aşılması mantığıyla ve jeopolitik bütünlük çerçevesine otursa da, "Avrupa değerleri" dediğimiz ve Greko-Romen ve Hıristiyanlık kültürlerinin mirası üzerine Germen-İskandinav kimlik unsurlarının katılımıyla oluşmuş bir normlar yapısına dayanmaktadır. Halbuki Avrasya coğrafyası, hem etnik, hem dinsel, hem de coğrafya anlamında birçok farklılığı barındırmanın yanı sıra, farklı üretim biçimleri ve gelenekleri ve büyük nüfus hacmiyle zor bir alan olarak değerlendirilmelidir (Fischer, 2012). Birçok alt-bölgenin varlığı (Orta Asya, Hindiçin, Güneydoğu Asya gibi), Asya kıtasında kimliklerin ve buna bağlı olarak ekonomik yapıların kendi aralarında kümülasyonunu da doğurmuştur.

Rus dış politikası açısından bakıldığında Asya coğrafyasında ekonomik ortaklıklara girebileceği birçok seçenek bulunmaktadır, ancak bölgesel bütünleşme çerçevesinde daha derin ve yapısal olanakların seçeneği sınırlıdır (Vernygora, 2012). BDT alanının Asya coğrafyasındaki en önemli partnerleri Orta Asya ülkeleridir ve bunlar Rusya'yla birlikte daha sıkı ekonomik ve ticari ilişkiler ağı içerisinde olmayı da hem stratejik tercihler olarak görmektedirler, hem de yapısal belirli zorunluluklardan hareket etmektedirler. Rus dış politikasından bakıldığında, Orta Asya coğrafyası Avrasyacı bir bütünleşme modelinin Asya kıtasındaki merkez alanlarından birisini oluşturmaktadır ve Avrasyacı dış politika söyleminin "yakın çevre" ve "uzak çevre" algılamalarını Mackinder'in iç hilal ve dış hilal açılımlarını çok güzel temsil etmektedir. Eski Sovyet Orta Asya'nın Rusya açısından iç hilal coğrafyası değerlendirmesine bağlı olarak onu çevreleyen Çin, İran gibi dış alanlarla da ekonomik ve ticari ilişkilerin yoğunlaştırılması dış hilal çerçevesine çok iyi oturmaktadır.

Öte yandan Avrasya merkezli bölgeselleşmenin Asya ayağının yanı sıra Avrupa yakasından da eski Sovyet coğrafyası bağlamında başlıca aktör olarak Beyaz Rusya ve Ukrayna en önemli ülkeler olarak görülebilir, ancak bu iki ülkenin de Rusya'ya bakışları farklılaşmaktadır.

"Avrasyacı bölgeselleşme modeli"ni temel özellikleriyle tanımlamak gerekirse şu hususlara dikkatleri çekmek gerekir:

Avrasya alanı içerisinde özellikle eski Sovyet coğrafyası çerçevesinde güvenlik ve ekonomi yapıları arasında doğrudan bir etkileşim söz konusudur. Karar alıcıların gözünde stratejik tercihler sosyal ihtiyaçların tanımlanmasından daha büyük bir önem arz etmektedir (Molchanov, 2009). Bu çerçevede jeopolitik anlamda güvenlik aktörü olarak Rusya'nın Sovyet sonrası toplumların gözündeki değeri hâlâ kayda değerdir. Dolayısıyla eski Sovyet coğrafyasında Rusya'sız bir bölgeselleşme düşüncesi hemen hemen olanaksızdır.

Avrasya bütünleşmesine sahne olacak tüm bölge ülkeleri, devlet merkezli bir ekonomi geleneğine sahiptirler ve devlet-dışı yatırımcıların varlığı oldukça sınırlıdır ya da devletin sıkı kontrolü altındadır. Ekonomilerin gelişimi toplumların ihtiyaçlarına göre değil, devletlerin "realpolitik" çerçevelerine göre yapılanmaktadır. Dolayısıyla Avrasyacı bütünleşme modelinin en önemli ortak paydası, bu coğrafyadaki devlet güdümlü ekonomilerin arasında yaratılacak işlevsel bir zemin oluşumudur; bu mantık, aynı zamanda eski Sovyet mirasını ve merkeziyetçiliğinin de devamını sağlamak açısından önemlidir. Nitekim Sovyet döneminin de planlı ekonomi anlayışı bütünleşme ve füzyon hedeflerini içermekteydi.

Tarihten gelen "güç ilişkileri", jeopolitik çıkarlarla stratejik davranışların bir arada olmasına yol açmaktadır. Bölgesel bütünleşme modelleri hep ekonomik ortaklıklardan başlarken sonuç itibariyle ulusal güvenlik çıkarlarının devletlerin arasında uzlaştırılmasına da hizmet etmiştir. Avrasyacı modelde strateji-ekonomi birlikteliği, devlet merkezli bölgeselleşmeyi ön plana çıkarmakta, dolayısıyla toplumların refahının yaygınlaştırılması çabası daha çok ikinci planda kalmaktadır. Ancak uluslararası konjonktüre tepkimenin olmadığı aşamalarda kendi toplumlarının lehine düzenlemek yapmak amaçlı girişimlerin yoğunlaştığını da söylemek mümkündür (Mirkasymov, 2007). Örneğin Asya Kalkınma Bankası girişimleriyle bölgesel kalkınma projelerinin uygulanagelmesi, her iki açıdan da bölgeselleşme eğilimlerinin geliştiğini göstermektedir; hem devlet merkezli korumacı siyasetler benimsenirken, hem de liberal anlamda yerel yapıların küreselleşen ilişkilerle refah düzeylerinin arttırılması bir arada gitmektedir.

"Avrasyacı bütünleşme modeli"nde siyaseten otoriter ya da yarı-otoriter hükümet yapılarının yoğunluğu dikkatleri çekmektedir; dolayısıyla iç toplumsal dinamiklerin gelişimi arzulanmamaktadır. Başat lider ya da tek parti yönetimlerinin tüm bölge genelindeki hâkimiyeti, bölgeselleşme ve küreselleşme süreçleri arasındaki bağlantıyı da zayıflatmaktadır. Rusya açısından bakıldığında, küreselleşmenin demokratikleştirme etkisi Renkli Devrimler deneyimiyle olabildiğince sakınılması gereken bir gerçeklik olarak çıkmaktadır. Ekonomik anlamda liberal, ancak yönetim anlamında merkeziyetçi yapının olması, sadece Sovyet sonrası alanda karşımıza çıkan bir özellik değildir; bunu aynı zamanda Çin'de de görmekteyiz (Cheng, 2011).

Otoriter devlet merkezli bir bölgeselleşme modeli ister istemez küreselleşme karşısında kendini koruma amaçlı, muhafazakâr bir tepkime sürecini de yaratmaktadır. Batılı sermaye odaklarının yabancı yatırımcı olarak ulusal piyasalara girmesi belirli bir temkinlilik ve çekince ortamı yaratırken, iç siyaset dengelerinin korunması önceliği de söz konusu. Dolayısıyla küreselleşmenin demokratikleştirme etkisine karşı otoriter yönetimler

arasında bir dayanışma duygusunu da oluşturmaktadır. Bu çerçeveden bakıldığında, Rusya açısından Çin doğal bir ekonomik partner olarak değerlendirilmelidir (Cheng, 2011). Ancak Çin, Kırgızistan, Ukrayna gibi örneklerden sonra Dünya Ticaret Örgütü – DTÖ'ye kabul edilen Rusya'nın dünyadaki bölgesel ve küresel gelişmeleri kendisine pozitif bir sürece çevirmek arzusu önemlidir ve bu çerçevede sadece Avrasya platformunda değil, hem AB ile ilişkilerini geliştirmek, hem de APEC içerisindeki etkinliklerini arttırmak stratejisi dikkatleri çekmektedir. Bu sürecin 2008 mali krizinden sonra tartışılan yeni yükselen değerler olarak BRIC'in dünya ekonomisi içerisindeki konumuyla başladığı belirtmek gerekiyor.

Rusya açısından bakıldığında, "Avrasyacı bütünleşme modeli"nin Asya'daki merkez alanı, kaçınılmaz olarak Orta Asya coğrafyasıdır. Orta Asya ülkelerinin kendi aralarındaki toprak ve sınır sorunları, dinsel faktörler, siyasal yönetimlerin kendi iktidarlarını sürekli kılma arayışları, enerji şebekeleri, Ferghana vadisi gibi birçok sorun ve birçok avantaj da bu bölgede kendisini göstermektedir. Bu coğrafya üzerinde dış aktörlerin de ilgisi dikkatleri çekmektedir. Ancak Rusya, "Avrasyacı bakış açısı"yla Orta Asya coğrafyasının sürekli merkezî konumda bulunmasını arzu etmemektedir; bunu dengeleyebilmek için Beyaz Rusya, Ukrayna gibi denge faktörü olabilecek ülkelerle de yapısal anlamda karşılıklı bağımlılık süreçlerine dahil etmek ve bu süreci çeşitlendirmek istemektedir (Qoraboyev, 2010). Bu açıdan bakıldığında, AB örneğinden hareketle, Avrasya bölgesel bütünleşmesinin genişleme şansı sınırlı görünmektedir; nitekim bu genişleme mantığının ardında birbirlerine karşı çekinceleri olan bölge ülkelerinin ittifak politikalarına giderek bu yapıları tercih ettiklerini söylemek mümkündür.

Avrasya bölgesel bütünleşmesinin Orta Asya açısından bakıldığında en önemli konularından biri sınır güvenliği sorunudur; bu konu, bölge-dışı güvenlik konularının bölge içi dinamiklerini etkilememesi hedefiyle işlevsel işbirliği zemini gerekli kılmakta ve toplumsal ihtiyaçlara ve siyasal istikrara yönelik bölgesel bütünleşmeyi kolaylaştırmaktadır. Özellikle Afganistan ve Pakistan'ın istikrarsız iç politika yapıları, Orta Asya ülkeleri açısından çok önemli bir güvenlik sorunudur. Yasadışı göçler, uyuşturucu ve silah kaçakçılığı, köktendinci hareketlerin yaygınlaşması gibi sınıraşan güvenlik konuları, bölgeselleşme çerçevesindeki en önemli dayanışma zeminini oluşturmaktadır. Bu açıdan bakıldığında Ferghana Vadisi Orta Asya'nın merkez alanı olarak ön plana çıkmaktadır ve Avrasya bölgeselciliği açısından bir alt-bölge konseptini de doğurmaktadır; bu çerçevede yerel düzeydeki güvenlik sorunlarının çözümlenmesinde ortak diyalog arayışlarının güçlenmesine de etkisi olabilir. Ancak dört ülke arasında bölünmüş olan Ferghana Vadisi gerçeğinden hareketle, ademimerkeziyetçi bir çözüm arayışı mümkün olamamaktadır; Ferghana Vadisi'nde egemen olan ülkeler arasında yerel sorunların çözümlenmesi için ortak bir irade resmi olarak ortaya konamamaktadır. Halbuki yerel anlamda ortaya çıkan sorunlara çözüm yollarının bölgesel düzlemlerde aranması bütünleşme çabaları için de önem arz etmektedir (Allison, 2008). Benzer bir yerel-bölgesel düzeyler arasındaki diyalog eksikliği Aral Gölü konusunda da kendisini göstermektedir; Kazakistan ve Özbekistan arasında sorunun çözümlenememesi bölgesel sorunların uluslararası boyuta taşınması sonucunu da doğurmaktadır.

Avrasyacı bütünleşmenin Avrupa kıtasındaki en önemli ayağını Beyaz Rusya oluşturmaktadır; gerek Orta-Doğu Avrupa ile Baltık coğrafyasına uzanmış olmasının, gerekse Batı Avrupa'ya yönelik doğal gaz boru hatlarının temel güzergâhında bulunmasının avantajıyla Rusya'nın çok-vektörlü bir bölgesel işbirliği arayışı için de fayda sunmaktadır. Her ne kadar bir ekonomik potansiyel olarak Kazakistan kadar fırsat sunamasa da, Beyaz Rusya, Moskova'nın gözünde Slav-Ortodoks kimliği ve jeopolitik konumuyla olası bir bölgesel bütünleşme içerisinde farklı avantajlara yaratabilecek fırsatlar sunmaktadır. Ortak Ekonomik Alan – CES içerisinde yer alma düşüncesini daha 2000'li yılların başından beri Minsk yönetimi savunmaktaydı; hatta ortak dolaşım alanı ve gümrük birliği gibi düşüncelerle SSCB sonrasında BDT içerisindeki en Rusya'ya yakın pozisyondaki ülkelerin başında gelmekteydi. Bu açıdan bakıldığında Beyaz Rusya ve Kazakistan, Rusya açısından Avrasyacı bütünleşmenin "iç hilal" alanının temel aktörleri olarak tanımlanabilir. Ortak Ekonomik Alan girişimin kısa vadede kurumsallaştığını ve normları, ilkeleri ve kuruluş esaslarıyla "düzenleyici bölgeselleşme" (regulatory regionalism) dediğimiz bir modele dönüştüğünü söylememiz mümkündür (Camba, 2012) EURASEC'in CES'e göre kısa vadede daha gevşek ya da uzun vadede daha kurumsal bir çerçeveye dönüşüp dönüşmeyeceği tartışamaları vardır; gümrük birliği hedefiyle birlikte kurumsal anlamda tam bir ekonomik bütünleşmeye geçiş yapısını gösteren sözleşmeler imzalanmaktadır, ancak uygulamada henüz daha net sonuçlar elde edilmemiştir.

Ekonomik hacim olarak Rusya ve Çin merkezli bir Avrasya bütünleşme modelinde her ne kadar belirli bir siyasal dayanışma olsa da, yönetimlerin uluslararası iktisadi ilişkilerini kendi açılarından farklı yönettiklerini söylemek de mümkün (Mikheev, 2011; Chen, 2012). Çin yönetimi Avrasya genelinde daha çok ikili anlaşmalarla ilişkilerini geliştirmeye çalışırken, Rus yöneticiler bölgeselleşme çerçevesine daha çok önem vermektedir. Çin'in tek başına eski Sovyet piyasalarına nüfuzunu önlemek adına bölgesel bir taktik olarak Ruslar ortaklıkların kurulmasından ve "kurumsal ilişkiler"in oluşturulmasından yana tavır sergilemektedirler (Baizakova, 2013).

Avrasya bölgeselleşmesindeki en önemli ortak paydalardan birisi ise, toplum içi ilişkilerde varolan kollektiflik düşüncesidir. Özellikle doğu toplumlarında gördüğümüz bu değer yapısı, farklı kimlik ve inanç yapıları söz konusu olsa bile, merkezi otoritenin tanımladığı kollektif zihniyetiyle biçimlenmekte ve devletçiliğin ağır bastığı bir düzen anlayışı söz konusu olmaktadır. Bireysel girişimlerin yerine daha korporatif yapıların ön plana çıkması dikkatleri çekmektedir. Gerçi Rus ekonomisinin merkezi planlamalı yapıdan liberal sisteme geçerken, gerek

özelleştirmelerle, gerekse küresel şartlara adaptasyon arayışlarıyla bir nebze de olsa serbest girişimciliği benimsediğini görmekteyiz; benzer süreç Çin ekonomisinde de gözlemlenmektedir (Mikheev, 2011). Ancak serbest girişimciliğin her halükarda devlet güdümü altında yönlendirildiğini, hatta ekonomik kurum ve kuruluşların stratejik aktörler tarafından yönetildiğini (ekonomide partizanlık, oligarklar-silovikler dengesi gibi) görmekteyiz. Ekonomi yönetimiyle devlet kontrolünün iç içe geçmesi, küreselleşmeci eğilimlerin de sınırlı olmasına ve liberal demokrasi zemininin tam olarak oluşamamasına yol açmaktadır.

Avrasya'daki bölgesel işbirliği hareketlerinin merkezindeki en önemli konulardan biri, enerji güvenliği konusudur. Doğal gaz ve petrol boru hatlarının yaygınlaştırılması, Rusya'nın hem Avrupa, hem de Asya'daki siyasal mevcudiyeti açısından çok önem arz etmektedir. Nitekim Şanghay İşbirliği Örgütü'nün en stratejik tartışma konularından birisi de Orta Asya merkezli bir enerji nakil şebekelerinin güvenliğinin sağlanmasıdır; bunun yanı sıra Rusya'nın Orta Asya'daki nakil şebekelerinin işleyişini kendi ağları içerisinde bağımlı bir biçimde devam ettirmek ve bu ülkelerin uluslararası piyasalara doğrudan irtibatını sınırlandırmak arzusu da bulunmaktadır (Baizakova, 2013). Bu açıdan bakıldığında, Orta Asya coğrafyasında Kazakistan ve Türkmenistan enerji alanında Rusya için en önemli ülkeler konumundadır; nitekim Kazakistan'ın Avrasya bölgeselleşmesi içerisindeki konumu, hem stratejik aktör olarak, hem de jeo-ekonomik açılardan denge politikası izlemesini zorunlu kılmaktadır. Ancak enerji alanında bölge aktörlerinin bütünleşmeci stratejiler izlediklerini söylemek mümkün değildir; tektaraflı ya da ikili anlaşmalara dayanan girişimler söz konusudur. Bu davranış biçimi, bölge ülkelerinden bir bölümünün kendi ulusal ekonomisindeki enerji ürünlerine tek sektörlü olarak bağımlı olmasından da kaynaklanmaktadır (Yiğit, 2013; Demir, 2012).

Avrasyacı modelde, APEC gibi kıta-aşan bir yapıdan daha çok bölge içi kapalılık arayışı dikkatleri çekmektedir. Nitekim Dünya Ticaret Örgütü'ne üyelik zorunluluğundan çok birbirlerini tamamlama ve destekleme mantığı daha ön plana çıkmaktadır (Qoraboyev, 2010). AB'nin kuruluşunda gördüğümüz işlevselci (fonksiyonalist) bakış, bu çerçevede de kendisini göstermekte, ancak küresel ekonomi şartlarının tamamına adaptasyon söz konusu olmamaktadır. Öte yandan 2000'lerin sonları itibariyle Orta Asya merkezli bölge içi ihracat rakamlarına baktığımızda, bölge ülkelerinin birbirleriyle ticaret yapma oranlarının EURASEC genelinde ortalama % 10'larda, BDT genelinde ise ortalama % 20'ler civarında olduğu görülmektedir; halbuki bu oran AB ülkeleri için % 60-70 arasında, NAFTA ülkeleri arasında ise % 55'ler civarında olduğu saptanmaktadır. Bunun en önemli nedenlerinin başında Orta Asya ülkeleri hammaddelerini kendi aralarında düşük fiyatla satmak yerine, dış dünyaya daha yüksek fiyatlarla pazarlamayı tercih etmeleri gelmektedirler.

5 Sonuç

Eski Sovyet geleneğinden ve mirasından geldiği halde değişen dünya koşulları çerçevesinde düzene ayak uydurmak, Rusya'nın en önemli sorunsalı olarak karşımıza çıkmaktadır. Bugünkü Rusya, çok fazla içerik olarak değişmeden değişen uluslararası sisteme katılmak arzusundadır. Ancak ekonomik alandaki küreselleşme süreci, korumacılık ile liberalleşme arasında devletlere bölgeselci politikalar yönünde teşvik etmektedir. Küresel sisteme tam olarak katılmadan önce kendi bölgesiyle işlevsel anlamda bütünleşmek, aslında devamında diğer birçok etkileşiminin başlamasına da öncülük etmektedir. Kapalı toplum geleneklerinden gelip dönüşüm geçiren devlet yapılarında küreselleşmenin siyaseti liberalleştirmesine ve toplumun ve devlet yapısının demokratikleşmesine etkisi kaçınılmazdır; dolayısıyla bu devlet yapılarının ara modellerle kendi koşullarını değerlendirmek istemeleri olağandır.

Rusya gerçekliğinden bakıldığında, Avrasya coğrafyasındaki güç ilişkilerini kendi merkezinde yeniden düzenlemek istemesi tarihsel ve buna bağlı olarak da jeopolitik bir gerçekliktir. Dünyanın en büyük yüzölçümüne sahip bir ülkesinde hem farklı bölgelerle olan ilişkileri nedeniyle, hem de siyasal miras itibariyle çok-vektörlü arayışların olması kaçınılmazdır. "Avrasyacı bütünleşme modeli", küreselleşme sürecinin kaçınılmaz olduğu bir dönemde korumacılık ve liberalleşmeyi aynı çizgide götürmeye çalışan, devletin güdümünde bir serbest piyasa modeline ağırlık veren, hammadde ihracı merkezli kalkınma politikalarına bağımlı ve bu nedenle de orta ve uzun vadede çok riskler içeren bir içerikle karşımıza çıkmaktadır. Batılı liberal ekonomilerle de yakın ilişkileri nedeniyle belirli sanayi alanlarında (otomotiv, havacılık gibi) üst düzey kalite standartlarını gerçekleştirmiş, bankacılık sektörüyle de dünya ekonomisine uyumlu bir Rusya var karşımızda. Bu çerçevede Rusya'nın gerçek hedefinin ne olduğunu sorgulamamız gerekiyor. Hâlâ kendi coğrafyasında merkezi konumunu sürdürerek bir dünya gücü aşamasına gelebilmek için küresel ekonomi şartlarını mı Rusya kullanmak istiyor, yoksa yapısal anlamda devleti ve Rus toplumunu liberalleştirmek mi istiyor? İşte bu açılardan bakıldığında, Avrasyacı bütünleşme modelinin aslında bir araç olduğunu düşünmek mümkün ve değişen uluslararası konjonktüre göre yeni modellerinde de tartışılması gündeme gelebilir.

Ph.D. Candidate Dilek Özdemir (Atatürk University, Turkey)

Prof. Dr. Ömer Selçuk Emsen (Atatürk University, Turkey)

Abstract

On the basis of volatility or sharp fluctuations in macroeconomic variables, especially in the 1970s, it can be said to play a role in deepening the financial capital deepening. Deepening on volatility forms the basis of not only domestic and but also international economic deviations. With the collapse of the Eastern Bloc, a lot of countries have attempted to liberalize. This situation has caused volatility on mainly rate of exchange then many macroeconomics variables. In this aspect, the multi-relationship between volatility in foreign trade balance and the real interest rate, exchange rate and reserves' volatility are investigated empirically with the appropriate set of data on 11 transition economies for the period 1996-2011. In this study, the effects of the volatility of foreign trade (netxvol) on the exchange rate volatility (kurvol), reserve volatility (rezvol), and real interest rates subjected with using panel data analysis. Moreover to regression analysis, centred on Granger Causality Test the volatility of the foreign trade balance, import and export volatility, exchange rate volatility, volatility of reserves and try to determine the causal relationship between the real interest rate. The findings have light on that the volatility of trade balance was mostly affected to the volatility of the reserve. It may well be said that the volatility of the interest rate and the exchange rate at the independence of the trade predispose to speculative movements.

1 Giriş

Neo-Klasik iktisatta ekonomik denge ayırımında Marshall'ın kısmi denge ve Walras'ın genel denge analizleri yapılırken; buna benzer şekilde genel olarak iç ekonomik denge ve dış ekonomik denge tanımlamaları da söz konusudur. Klasik iktisatçılar iç dengenin kendiliğinden sağlandığını kabul ettiklerinden iç ekonomiye müdahaleden sakınma ve böylece daha çok dış denge üzerine yoğunlaşmışlardır. Buna karşılık Keynesyen iktisatçılar ise kısa dönemde iç ekonomik dengesizliklerin ekonominin doğası gereği var olduğunu kabul ederek iç dengenin sağlanabilirliğine odaklanmışlar ve iç denge sağlandığında dış dengenin kendiliğinden gerçekleşebileceğini ileri sürmüşlerdir. Ayrıca dünya ekonomilerinde özellikle 1973 yılından itibaren uygulanmaya başlanan dalgalı kur rejimi ile birlikte başta döviz kurları olmak üzere pek çok makroekonomik değişkende dalgalanmalar yaşanırken, bu durum da değişkenlerin oynaklığını artırırken; oynaklıklar arasındaki ilişkiler de pek çok araştırmaya konu olmuştur. Kurlarda dalgalanmaları besleyen asıl unsurlardan olan finans kapitalin giderek beslediği küreselleşme eğilimleri ise dış gelişmelere son derece duyarlı, kırılgan ve çok eklemli bir iktisadi yapıyı beraberinde getirmiştir. Dolayısıyla ilerleyen teknolojik gelişmelerin de etkisiyle daha karmaşık hale gelen iktisadi ilişkiler ağında, değişkenlerin birbiriyle olan etkileşimleri de daha karmaşık hale gelmiştir. Bu çerçevede iktisat literatürde makroekonomik değişkenlerin oynaklığı ve birbiriyle olan ilişkileri arasındaki ilişkiler yaygın bir şekilde araştırılırken, literatürde değişkenler arasında kesin ve sistematik ilişkiler yakalanamamıştır. Ancak, yine de dış ticareti etkileyen değişkenlerin bilinmesi, politika araçlarının seçiminde ve izlenecek politikaların doğru belirlenmesinde kolaylık sağlamaktadır. Bu çerçevede ödemeler bilançosunun en önemli kalemlerinin ithalat ve ihracat olduğu düşünüldüğünde, dış dengeyi sağlayan dış ticaret kalemleri para/nominal piyasaların yanında, reel sektörü de etkilemektedir ki, uygun politika araçlarının seçimi hususu, günümüzde global etkilerin ve istikrarsızlıkların arttığı dikkate alınırsa, bu unsurlar bir ekonominin başarısı için temel yapıyı oluşturmaktadır.

Diğer taraftan özellikle gelişmekte olan ülke ekonomileri için reel faizin, döviz kurunda ve rezervlerdeki oynaklık üzerine yarattığı en önemli yansımalardan net ihracata etkisinin bilinmesi makro bazda politika önermesinde bulunabilmek açısından büyük öneme sahiptir. Burada faiz cephesinde meydana gelen ani değişimler, finans sermayesinin uluslararası anlamda mobilite kazanması ve bunun sonucunda bozulan dış dengeden beslenen döviz kuru belirsizliği üzerinden ulusal ekonomilerin makro değişkenlerinin olumsuz etkileneceği görüşü de taraftar bulmaya başlamıştır (Hook ve Boon, 2000)

Çalışmada reel ekonomik unsurlardan olan dış ticaret değişkenlerinin yarattığı açık (fazla) unsurunun rezervlerdeki azalışa (artışa) mı, yoksa faiz oranlarında yükselme (düşme) yönünde etkilerle mi dengelendiği tartışmalı konulardandır. Ancak, gerek faiz oranlarındaki değişimlerle, gerekse rezerv hareketlilikleriyle dengelenmeye çalışılan süreçlerdeki gecikmeler ya da açığın (fazlanın) doğurduğu belirsizlik ortamları da kurlar üzerinde yükseliş (düşüş) yönünde baskılar doğurarak kur oynaklığını artırabilmektedir (Makin, 2001). Dolayısıyla iç içe geçmiş dış ticaret ilişkiler yumağına bağlı olarak iç ekonomik dengelerde de önemli değişimler yaşanabilmektedir. Bu doğrultuda çalışmanın amacı, dış ticaret dengesindeki oynaklığın reel faiz ile döviz kuru ve rezerv oynaklığı arasındaki ilişkiyi, uygun veri setine sahip 11 geçiş ekonomisi üzerine 1996-2011 dönemi için ampirik olarak incelemektir. Ele alınan ülkeler Hırvatistan, Çek Cumhuriyeti, Macaristan, Makedonya, Moldovya, Polonya, Romanya, Rusya, Slovakya, Slovenya ve Ukrayna'dan oluşmaktadır. Yapılacak analizlerde reel ekonomik faaliyetlerin bir yansıması olarak ortaya çıkan dış dengesizliklerin yine reel bir ölçüt olan rezervlerle ya da nominal bir ölçüt olan faizlerle dengelenebilirliği ile bu dengeleme çabalarının kur istikrarını ne ölçüde koruyup korumadığı ve bunların da bir bütün olarak ekonomiye etkileri ya da krize duyarlılığı inceleme konusu yapılmıştır. Çalışma giriş bölümü dışında, literatür özeti, ampirik irdeleme ve sonuç bölümlerinden oluşturulmuştur.

2 Literatür Araştırması

Genellikle literatürde yapılan çalışmalar, döviz kuru oynaklığının dış ticaret hacmi ya da ihracat ve ithalat üzerine etkilerine odaklanmıştır. Buna karşılık dış ticaret oynaklığının hem sebebi hem de sonucu olan reel kurlar ile rezerv düzeyleri ve reel faiz oranları arasındaki ilişkileri ele alan çalışmalar pek fazla dikkat çekmemektedir. Dolayısıyla daha çok kur oynaklığı ile dış ticaret arasındaki ilişkiler araştırılmaktadır. Dış ticaret ve kur oynaklığı ilişkileri açısından da bir ülke dış ticarette ne kadar fazla açık ise, o ülkenin hem para piyasalarının hem de toplam arz şoklarının daha düşük döviz kuru hareketliliği ürettiği görülmüştür. Hau (2002) tarafından 48 ülkeye ait veriler kullanılarak yapılan araştırmada ülkelerin uluslararası ticaretteki dışa açıklık farklılıklarına göre, reel döviz kuru oynaklığı ile ithalatlarının etkilenme derecesi açısından fark olduğu belirlemesi yapılmıştır.

Baldemir ve Keskiner (2004), devalüasyon, para ve reel gelir değişkenlerinin dış ticaret üzerine etkisini Türkiye özelinde en önemli ticaret partnerleri olan ülkeler açısında ele alarak panel veri analizleri yöntemi ile incelemişlerdir. Çalışmada, Türkiye'nin dış ticaret ilişkisinin en yoğun olduğu ABD, Almanya, Hollanda, İngiltere ve İtalya'nın 1987-2001 dönemini kapsayan verileri ele alınmıştır. Çalışmanın sonucuna göre, bütün ülkelerin GSYİH'ındaki artış, çalışmada ele alınan ülkelerin dış ticaret dengelerini olumsuz yönde etkilediği tespiti yapılmıştır.

Hayakawa ve Kımura (2008), döviz kuru oynaklığı ve uluslararası ticaret arasındaki ilişkiyi 60 ülke için inceleme konusu yapmışlardır. Araştırmada özellikle Doğu Asya ülkelerine odaklanılmış ve geleneksel çekim (gravity) modeli kullanılmıştır. Analizde, reel ihracat hacmi, yurtiçi gelir, yurt dışı gelir, mesafe, dil, döviz kuru oynaklığı, yakınlık ve topluluk değişkenleri alınmıştır. 1992-2005 dönemini kapsayan analizde, aylık veri setleri ile çalışılmış ve döviz kuru oynaklığı da GARCH modeli ile test edilmiştir. Öncelikle, EKK tekniği ile dünyadaki karşılıklı ihracat hacmi için çekim denge modeli tahmin edilmiştir. Daha sonra, iç-Asya ve Asya ticareti ile döviz kuru oynaklığı arasındaki ilişki araştırılmıştır. Elde edilen bulgulara göre, döviz kuru oynaklığının iç Asya'daki ticareti diğer bölgelerden daha fazla etkilediği belirlenmiştir. Uluslararası üretim ağında ara mallar ticareti için önemli bir engel oluşturan döviz kuru oynaklığının Doğu Asya ülkelerinde karşılaştırmalı ticaretin önemli bir unsuru olduğu tespiti yapılmıştır. Oynaklığın yol açtığı negatif etkilerin, tarifelerden ve mesafe farklılığından kaynaklanan maliyetlere göre daha yüksek olduğu belirlenmiştir.

Chit vd. (2008), döviz kuru oynaklığının reel ihracat üzerine olan etkilerini, gelişmekte olan beş Asya ülkesi ile 13 sanayileşmiş ülke kapsamında ele alarak incelenmişlerdir. 1982:I-2006:IV dönemini kapsayan çalışmada reel ihracat, yurtiçi gelir, yurtdışı gelir, nispi fiyatlar, döviz kuru oynaklığı ve çekim değişkenleri (ülkeler arasındaki uzaklık, ortak sınır ve serbest ticaret alanı) kullanılmıştır. Geleneksel uzun dönem ihracat modeli ve genelleştirilmiş çekim modeli ile panel veri çalışması yapılmıştır. Çalışmada sabit etkiler modeli kullanılırken, döviz kuru oynaklığı GARCH modeli ile modellenmiş ve eş-bütünleşme analizi yapılmıştır. Sonuçta, döviz kuru oynaklığının gelişmekte olan Asya ülkelerinin ihracatı üzerine negatif etkisinin olduğu bulgusuna ulaşılmıştır.

Hall vd. (2010), döviz kuru oynaklığının ihracat üzerine etkilerini incelemişlerdir. Araştırmada, yükselen piyasa ekonomileri ve diğer gelişmekte olan ülkeler ele alınmıştır. Yükselen piyasa ekonomileri için 1980:I-2006:IV dönemi ve diğer gelişmekte olan ülkeler için ise 1980:I-2005:IV dönemi incelenmiştir. Genelleştirilmiş Momentler Yöntemi (GMM) ve zamanla değişen katsayı yöntemi (TVC) olmak üzere iki tahmin modeli kullanılmıştır. Araştırmada, ihracat hacmi, reel ulusal gelir, nispi fiyatlar, petrol ihracatı gelirleri ve döviz kuru değişkenliği olmak üzere beş değişken analize tabi tutulmuştur. Elde edilen bulgulara göre, yükselen piyasa ekonomilerinde döviz kuru oynaklığının ihracat üzerine önemli ve negatif bir etkisi olmadığı ve diğer gelişmekte olan ülkelerle kıyaslandığında, döviz kuru dalgalanmalarının ihracat üzerine etkisinin daha az olduğu görülmüştür.

Omojimite ve Akpokodje (2010), döviz kuru oynaklığının Afrika Parasal Topluluğu ülkeleri ile Topluluk dışı ülkelerin karşılıklı ihracatı üzerine etkilerini araştırmışlardır. 1986-2006 dönemini kapsayan ve çeyrek verilerin ele alındığı çalışmada ihracat, dış gelir, döviz kuru oynaklığı, ithalat ve reel döviz kuru panel veri setleri kullanılmıştır. Araştırmada, döviz kuru oynaklığı GARCH modeli ile tahmin edilmiştir. Yazarlar EKK, sabit etkiler ve genelleştirilmiş momentler tekniklerini kullanarak yaptıkları analiz sonuçlarına göre, döviz kuru oynaklığının ihracat üzerine negatif etkisinin olduğunu tespit etmişlerdir. Bu sonuç her iki paneldeki ülkeler için de geçerlilik arz etmiştir. Ancak, döviz kuru oynaklığının etkisinin parasal topluluk ülkelerine göre topluluk dışı ülkelerde daha fazla çıktığı belirlemesi yapılmıştır.

Bayraktutan ve Demirtaş (2011), 19 gelişmekte olan ülkenin 1980-2006 dönemi verilerinden yararlanarak cari işlemler açığının belirleyicilerini panel veri analizi yöntemi ile test etmişlerdir. Çalışmada, cari işlemler açığının GSYİH'ya oranı, GSYİH'daki yıllık değişme, Yatırımlar/GSYİH, Nispi Gelir, Kamu harcamaları, Finansal Derinlik, Bütçe açığı/GSYİH, Dış Borç/GSYİH, Reel Döviz Kuru, Dış Ticaret Hadleri, Dışa Açıklık Oranı, Dünya Büyüme Oranı, Dünya Faiz Oranı ve Yurtiçi Faiz Oranı değişkenleri kullanılmıştır. Elde edilen bulgulara göre, GSYİH'daki yıllık değişme, yatırımlar ve nispi gelirin uzun dönemde cari işlemler açığı üzerinde belirleyici olduğu tespit edilmiştir. Buna göre, büyüme oranı, nispi gelir ve yatırımlardaki artış, cari işlemler açığını artırıcı yönde etkide bulunmaktadır. Dünya faiz oranları ve dünya büyüme oranının da cari işlemler açığı üzerine belirleyici bir rol oynadığı; söz konusu değişkenlerdeki artışın, gelişmekte olan ülkelerde cari işlemler açığını kısıcı etkide bulunduğu görülmüştür. Dış ticaret hadleri ve dışa açıklık oranının da cari işlemler açığı üzerinde etkili değişkenler olduğu tespit edilmiştir.

3   Veriler ve Ampirik Bulgular

Çalışmanın verileri 1996-2011 dönemini kapsayan 11 geçiş ekonomisini kapsamaktadır. 1996:01-2011:12 dönemini kapsayan aylık mevsimsel etkilerden arındırılmış seriler kullanılarak hesaplanan standart sapmalar oynaklığı temsil için alınmıştır. Veriler Dünya Bankası'nın Dünya Gelişme Göstergeleri (WDI) ve Dünya Görünüm Ekranı (GEM) adlı veri tabanlarından alınmıştır. İnceleme konusu yapılan 11 geçiş ekonomisi için, ele alınan dönemde dış ticaret dengesindeki oynaklık (netxvol), kur oynaklığı (kurvol), rezerv oynaklığı (rezvol) ve reel faiz ile olan ilişkilerini analiz etmek amacıyla panel veri analizleri yapılmıştır. Ayrıca Granger Nedensellik Testi ile dış ticaret dengesindeki oynaklık, ihracat ve ithalat oynaklığı, kur oynaklığı, rezerv oynaklığı ve reel faiz arasındaki nedensel ilişkilerin yönü belirlenmeye çalışılmıştır. Reel faiz hariç diğer değişkenlerin logaritmaları alınmış ve bu durum söz konusu değişkenin başına "l" simgesi getirilerek belirtilmiştir. Verilerin analizinde Eviews7.0 ve Stata12 programı kullanılmıştır.

Belirtilen değişkenler arasındaki ilişkileri araştırmak için Tek yönlü Sabit Etkiler Modeli (Fixed Effect Model) ve standart Granger nedensellik (standard Granger causality) testi kullanılmıştır. Bu çerçevede çalışmada dış ticaret dengesini etkileyeceği düşünülen reel efektif döviz kurundaki oynaklık, rezervlerdeki oynaklık ve reel faiz oranı değişkenleri ile oluşturulan model aşağıdaki gibi belirlenmeye çalışılmıştır.

$$LNETXVOL_{it} = \alpha + LKURVOL_{it} + LREZVOL_{it} + REELFA\dot{I}Z_{it} + \mu_i + \lambda_t + \varepsilon_{it} \qquad (1)$$

Burada i=1…11 ile analize tabi tutulacak 11 ülkeyi, t=1996…2011 yılları arasındaki konumu ifade edecek şekilde her ülke için 16 yıllık verinin varlığını göstermektedir. Ayrıca α; sabiti, μ_i; ülkeye özgü etkiyi, λ_t; zaman etkisini ve ε_{it}; hata terimini göstermektedir. Değişken tanımlamaları aşağıda belirtilmiştir.

$LNETXVOL_{it}$; i ülkesinin t dönemindeki net ihracat (dış denge) oynaklığının doğal logaritmasıdır. Oynaklık sabit fiyatlarla mevsimsel düzeltmesi yapılmış aylık ihracat rakamlarının standart sapması şeklinde hesaplanmıştır.

$LKURVOL_{it}$; i ülkesinin t dönemdeki 2005=100 bazlı reel efektif döviz kurunun aylık serisinin standart sapmasının doğal logaritmasıdır.

$REELFA\dot{I}Z_{it}$; i ülkesinin t dönemdeki reel faiz oranıdır.

Panel veri analizlerinde de zaman serisi gibi zaman boyutu olduğu için öncelikle serilerin durağanlık özelliklerinin belirlenmesi gerekmektedir. Granger ve Newbold (1974), durağan olmayan zaman serileri ile yapılan analizlerin sahte regresyon problemine yol açacağını ileri sürmektedir. Diğer yandan durağanlık test sonuçları çalışmada kullanılacak olan metodu belirleme açısından da önemlidir. Serilerin durağanlık özelliklerini tespit etmek için kullanılan değişkenlere ait serilerin durağan olup olmadıklarının araştırılmasına yönelik olarak, panel veri analizinde sıkça kullanılan birinci nesil birim kök testleri olarak adlandırılan Levin-Lin ve Chu (LLC), Im-Pesaran ve Shin (IPS), Fisher ADF ve Fisher PP birim kök testleri uygulanmıştır. Elde edilen sonuçlar Tablo 1'de verilmiştir.

Birinci nesil birim kök testlerinin sonuçlarına göre tüm değişkenlerin seviye değerleri cinsinden durağan olduğu görülmektedir. Diğer taraftan bu değişkenler ile (1) nolu modelde yapılacak tahminlerin yatay kesit bağımlılık içerip içermediğine Breusch-Pagan LM bağımlılık ki-kare (X^2) testi ile belirlenmeye çalışılmıştır. Zira CD$_{LM1}$ yatay kesit bağımlılığı testi, T>N durumunda kullanılan bir testtir. Çalışmadaki 1996-2011 dönemini kapsayan 16 yıl (T) ve 11 geçiş ekonomisi (N) yatay kesit boyutunun zaman boyutundan küçük olması koşulu

gerçekleşmiştir. Bu durumun analizlerde sorun teşkil edip etmediği CD_{LM1} testi ile belirlenir; yani her ülkenin bireysel zaman etkisinden ayrı şekilde etkilenebildiği varsayımı test edilir. Test, LM istatistiğine bağlı olarak tahminlemede bulunur (Çınar, 2011). (1)'nolu modele göre yatay kesit bağımlılık test sonuçları ve korelasyon matrisi Tablo 2'de verilmiştir.

Tablo 2: *Breusch Pagan LM Test Sonucu ve Korelasyon Matrisi   **Not:** Breusch-Pagan LM . chi2(55)= 115.102, Pr=0.0000*

Yapılan Breusch-Pagan LM bağımlılık testi sonucuna göre birimler arası korelasyonsuzluğu işaret eden H_0 hipotezi reddedilmiş ve yatay kesit bağımlılığın ya da birimler arasında korelasyon olduğu sonucuna ulaşılmıştır. Ayrıca korelasyon matrisine göre, bazı ülkelerin kalıntıları arasında yüksek korelasyonların olduğu görülmektedir. Özellikle Çek Cumhuriyeti (2) ile Polonya (6); Çek Cumhuriyeti (2) ile Slovenya (10); Macaristan (3) ile Polonya (6) için regresyon kalıntıları arasında yüksek korelasyonlar dikkat çekmektedir. Modelde yatay kesit bağımlılığın olması ikinci nesil birim kök sınamalarına ihtiyaç bulunduğunu göstermektedir. Yatay kesit artırılmış DF [Cross-section Augmented DF; (CADF)] testi ise Pesaran (2005) tarafından hazırlanmış ve kullanılmıştır. Burada uygulanan test, yatay kesit bağımlılığın kesitsel birimleri arasında tek bir ortak faktörün varlığında arttığı durumlar için uygulanır. CADF testi heterojen bir panelde bütün yatay kesit birimler için bireysel verileri ortalama olarak alır. Bireysel CADF t-istatistikleri OLS (En Küçük Kareler) t oranıyla elde edilir (Ndoricimpa, 2009). Sonuç itibarıyla CADF testi, birinci nesil birim kök testlere göre daha avantajlı birim kök sınamalarında bulunmaya imkân ağlar. Tablo 3'de ikinci nesil birim kök sınama sonuçları verilmiştir.

Tablo 4: *F ve LR Testi Sonuçları   **Not:** *, %1 düzeyinde anlamlılığı göstermektedir. Parantezler serbestlik derecelerini ve olasılık değerlerini gösterir.*

İkinci nesil birim kök testi sonuçlarında da tıpkı birinci nesil birim kök sınamalarında olduğu gibi serilerin düzey değerlerde durağan olduğu tespit edilmiştir.

Çalışmada serilerin durağan oldukları belirlendikten sonra zaman ve birim etkilerin var olup olmadıklarının tespitine yönelik olarak sabit etkiler modeli için F testi ve rassal etkiler modeli için ise LR testi uygulanarak araştırılmıştır. Sonuçlar Tablo 4'de gösterilmiştir.

Tablo 4'de görüldüğü üzere hem sabit etkiler hem de rassal etkiler modelleri için birim etkilerin var olduğu; buna karşılık zaman etkilerinin olmadığı, başka bir ifadeyle modelin sadece birim etkilerini içerecek şekilde tek yönlü tahmin edilmesi gerektiği anlaşılmaktadır. Bir sonraki aşamada ise, birim etkisinin sabit mi, yoksa tesadüfi mi olduğuna karar vermek için Hausman testi yapılmaktadır. Rassal etki modelindeki birim etki ile açıklayıcı değişkenler arasındaki korelasyonun sıfır olduğu varsayımı [H_0: $E(\alpha_i, X_{it})=0$], Hausman (1978) testi ile sınanmıştır. Elde edilen Hausman test istatistiği, söz konusu H_0 varsayımının sağlanamadığını ve bu nedenle modelin sabit etkiler tahmincisi ile tahmin edilmesi gerektiğini ortaya koymaktadır.

Modelde yatay kesit bağımlılığın olduğu Breusch-Pagan LM testi ile bilinmekle birlikte, otokorelasyon ve değişen varyans sorununun olup olmadığının da tespit edilmesine ihtiyaç vardır. Hata teriminde otokorelasyonu test etmek üzere Bhargava, Franzini ve Narendranathan'nin (1982) Değiştirilmiş Durbin Watson testi ile Baltagi-Wu (1999) tarafından önerilen Yerel En İyi Değişmez (LBI) testleri kullanılmaktadır. Bu testler için modelde öncelikle AR(1) kalıntıları kullanılarak sabit etkiler varsayımı ile tahmin edilmektedir. Her iki otokorelasyon test istatistiğinin değeri 2'den küçük olup birinci dereceden otokorelasyonun olmadığını belirten sıfır hipotezini reddetmektedir (Baltagi, 2005). Değiştirilmiş Wald Testi ise modelde değişen varyansın varlığına işaret etmektedir. Bu bağlamda model, değişen varyans, otokorelasyon ve birimlerarası korelasyonun varlığında tahmin edilmelidir. Parks-Kmenta, Beck-Katz ve Driscoll-Kray tahmincileri değişen varyans, otokorelasyon ve birimler arası korelasyonun varlığında dirençli tahminciler vermektedir. Driscoll-Kray tahmincisi, N>T olduğu durumda da güçlü bir tahminci konumundadır (Tatoğlu, 2012). Çalışmada T>N olduğu için Parks-Kmenta ve Beck-Katz tahmincileri ile tahminde bulunulmuştur. Dolayısıyla çalışmada değişen varyans, otokorelasyon ve birimler arası korelasyonun varlığında dirençli tahmincilerle yapılan tahmin modelinin son hali Tablo 5'de sunulmuştur.

Tablo 5: *Sabit Etkiler Model Sonuçları (Bağımlı değişken: lNETXVOL)*

Modelde değişkenlere ilişkin elde edilen sonuçlara bakıldığında, bağımlı değişken olan dış dengeyi temsil eden ihracatın ithalattan çıkarılmasıyla ortaya çıkan dış denge oynaklığı değişkeni üzerine reel efektif döviz kurundaki ve rezervlerdeki oynaklığın pozitif etkili ve aynı zamanda istatistiki açıdan anlamlı olduğu anlaşılmaktadır. Elde edilen sonuç, ödemeler bilançosundaki dengesizliklerin döviz kurunda önemli ölçüde ortaya çıkan sapmalardan kaynaklandığına işaret etmektedir. Ekonomide kur istikrarsızlıklarının yansıması olan dış oynaklıktaki derinleşmelerin yanı sıra uygulanan kur politikalarının dış dengedeki sapmaları derinleştirerek iç dengeye de dolaylı bir şekilde etkilerinin bulunduğu söylenebilir. Benzer şekilde dış oynaklığa yol açan ve istatistiki açıdan da anlamlı olan rezerv oynaklığının cari açığı dengeleme aracı konumundadır. Burada rezervler kurdaki spekülatif hareketleri önleme aracı olarak görülse de müdahaleci kur politikalarının ekonomide belirsizlik ortamı yaratarak spekülatif hareketlere zemin yarattığı ve bunun da dış dengesizlik doğurucu fonksiyonlar icra edeceği açıktır. Diğer taratan dış denge oynaklığı üzerine reel faiz oranlarının negatif, ancak istatistiki açıdan anlamsız etkiler yarattığı görülmüştür. Kısa dönemli faiz oranlarının sabit kur rejiminde daha fazla oynaklık göstermesi ise, faiz oranları ile dalgalı kur rejimi arasında herhangi bir ilişki bulunmadığına işaret etmektedir.

Çalışmada değişkenler arasında ilişkilerin yönünü belirlemek amacıyla nedensellik sınaması yapılmış ve nedensellik sınamaları sonuçları özet olarak aşağıdaki şekilde gösterilmiştir. Modelde tahmin edilen dış denge

oynaklık değişkeni ile birlikte, ayrıca ihracat ve ithalat değerlerindeki oynaklıklar da nedensellik sınamalarına tabi tutulmuştur.
Şekil 1: *Nedensellik İlişkilerinin Yönü*

Granger nedensellik sınamalarında ele alınan değişkenlerin 1 gecikmeli değerlerinin ilişkileri araştırılmış ve bulunan ilişkiler ise %1 önem düzeyinde anlamlı bulunmuştur. Nedensellik sınamalarında ilk etapta regresyon analizine koşulan (1) nolu modeldeki değişkenleri arasındaki ilişkiler irdelendiğinde, dış ticaret oynaklığı ile rezerv oynaklığı arasında çift yönlü nedensel ilişkinin olduğu görülmektedir. Diğer taraftan dış ticaret oynaklığı üzerine reel faiz oranlarının herhangi bir etkisinin olmadığı regresyon sonuçlarından farklı olarak bu iki değişken arasında tek yönlü ilişki bulunmuş ve ilişkinin yönü de dış ticaret oynaklığından reel faizlere doğrudur. Nedensellik sınamalarında herhangi bir ilişkinin yakalanamadığı değişken ise döviz kuru oynaklığı değişkenidir.

Tablo 6: *Nedensellik Sınaması Sonuçları* **Not**: *(a), (b) ve (c) sırasıyla %1, %5 ve %10 önem düzeyinde anlamlılığı göstermektedir.*

Nedensellik sınamalarında ihracat ve ithalat oynaklıklarının kendi içerisinde çift yönlü nedensellik bağlarının olduğu görülmektedir. Ayrıca bu iki değişkenin yine çift yönlü nedensellik ilişkileri ile hem rezerv oynaklığına hem de dış ticaret dengesi oynaklığına yol açtığı gözlenirken; ihracat ve ithalat oynaklığından reel faizlere doğru da tek yönlü nedensel ilişkilerin bulunduğu tespit edilmiştir. Genel olarak nedensellik sınamalarında zaman boyutu, yani gecikme uzunluğu artıkça, ilişkilerin de zayıfladığı görülmüştür.

4 Sonuç

Dış ticareti doğrudan ilgilendiren değişkenlerdeki değişmelerin etkileri konusu literatürde tartışma konusudur. Özellikle Klasik ve Neo-Klasik iktisatçıların iç dengenin daima sağlandığına dair görüşleri dikkate alındığında, ekonomi politikalarının da daha çok dış dengeyi sağlamaya yönelik olduğunu ileri sürmektedirler. Bu görüşle taban tabana zıt konumunda bulunan Keynesyen ve Neo-Keynesyen düşüncede ise iç dengede kısa dönemli istikrarsızlıklar-dengesizlikler söz konusudur ve dolayısıyla ekonomi politikalarının da iç dengeyi sağlamaya yönelik olması gerektiği; iç ekonomi denge sağlandığında ise dış dengenin de kendiliğinden gerçekleşeceğine dair iddiaları bulunmaktadır. Bu çalışmada planlı ekonomi uygulamalarından piyasa ekonomisi uygulamalarına yönelen eski doğu bloğu ülkelerinden uygun veri setine sahip ekonomilerde cari işlemler bilançosu açığı oynaklığı ile bu oynaklığı etkileyeceği düşünülen reel döviz kuru oynaklığı ve döviz rezervleri oynaklığı ile reel faiz oranları arasındaki ilişkilerin araştırılması amaçlanmıştır. Araştırma sonuçlarına göre geçiş sürecindeki ekonomilerde dış denge oynaklığı üzerine reel döviz kuru oynaklığının ve rezervlerdeki oynaklığın etkili olduğu belirlenirken; reel faiz oranlarının etkisinin bulunmadığı tespit edilmiştir. Diğer taraftan nedensellik sınamalarında da dış ticaret oynaklığı ile rezerv oynaklığı arasında çift yönlü nedensel ilişkilerin varlığı tespit edilmiştir.

Her iki sonuç birlikte değerlendirildiğinde, dış ticaret oynaklığının rezerv oynaklığını uyaran etkiler yarattığı belirlenirken; bu durum dış açık karşısında rezerv hareketlerinin hemen devreye girdiğini göstermektedir. Elde edilen sonuç, Merkez Bankalarının özellikle kur istikrarını sağlamayı hedeflediği bir yapının varlığına işaret ederken; kur istikrarının da bir tür iç istikrar unsuru olarak görüldüğü ve bu yönüyle politika uygulamalarının da dış açıklar karşısında doğrudan Klasik iktisat kökenli politikaları devreye soktuğu söylenebilir. Buna karşılık makroekonomik dengeler açısından asıl hedef olarak iç denge üzerine yoğunlaşılarak Keynesyen nitelikli politika uygulamalarına ağırlık verildiği de ileri sürülebilir. Özellikle 1970'lerde batı bloğunda ve 1990'larda da doğu bloğunun çökmesiyle hemen hemen bütün global ekonomilerde uygulamaya konulan esnek kur sistemlerinin hem rezerv birikimine ihtiyaç duyurmayacak hem de ödemeler dengesinde istikrarsızlıklar yaratmayacak şekilde mekanizmalar işletmesi beklenmekteydi. Fakat finans kapitaldeki derinleşmelere paralel olarak sermaye hareketliliğinin artması, kur istikarı arayışlarını ve bunu sağlamak için de rezerv artışını beraberinde getirmiştir. Ancak, bu türden politika uygulamalarının özellikle kısa dönemde sahip olunan rezerv stoku ile alakalı olduğu; uzun dönemde ise reel kur dengelemesini kaçınılmaz kılacağı ileri sürülebilir. Bu durumun nedensellik sınamalarında ihracat ve ithalat değişkenlerinin oynaklıkları arasına çift yönlü nedensel ilişkilerle de teyidi, ihracatın kura dayalı bir rekabet avantajı ile sağlanmadığı ve bunun daha çok ithal girdiye dayalı olduğunu göstermektedir. Sürdürülebilir bir ekonomik büyüme için ithalata dayalı ihracatın görece daha düşük katma değer ve büyüme yarattığı dikkate alınırsa, daha gerçekçi bir kur politikasının hem dış dengeyi hem de iç ekonomik büyümeyi ve istihdamı olumlulaştıracağı açıktır.

Kamu Harcamaları ile Bürokrasi Arasındaki İlişki: Avrasya Ekonomileri Örneği

The Relationship between Public Expenditure and Bureaucratic Quality: The Case of Eurasian Economies

Asst. Prof. Dr. Gökhan Dökmen (Bülent Ecevit University, Turkey)
Asst. Prof. Dr. Özcan Sezer (Bülent Ecevit University, Turkey)

Abstract

One of the controversial issues among researchers in the field of public finance is estimating the determinants of public expenditures. It's argued that public expenditure is determined by economic as well as demographic, social and political variables. One of the important element of political variables is bureaucracy. If bureaucracy, as one of the main actors of political decision making process, works in quality, effectiveness and efficiency would occur in publicly provided goods and services. In parallel with the good quality of bureaucracy, the size of state would become smaller. The purpose of this study is to test empirically between efficient bureaucracy and public expenditure, using dynamic panel data analysis of 6 Eurasian Economic Community countries from 1998 to 2011. This study finds evidence that existence of bureaucratic quality reduces the public expenditures.

1 Giriş

19. yüzyıl boyunca dünyanın birçok sanayileşmiş ülkesinde, bırakınız yapsınlar bırakınız geçsinler anlayışına dayalı olarak, kamu harcamaları çok düşük düzeyde kalmıştır. Şöyle ki; 1870 yılında kamu harcamalarının gayrisafi yurtiçi hasılaya oranı, 17 sanayileşmiş ülkede, yaklaşık % 11'ler seviyesinde iken; aynı oran 1913 yılında sadece % 1'lik bir artışla % 12 olarak gerçekleşmiştir. Ancak 1. Dünya Savaşı sonrasında yaşanan Büyük Buhran, devletin ekonomik ve sosyal yaşamda daha aktif rol almasını gerektirmiş ve kamu harcamalarının hacmi artmaya başlamıştır. 1937 yılından itibaren, Ekonomik İşbirliği ve Kalkınma Teşkilatı üyesi ülkelerde, kamu harcamalarının gayrisafi yurtiçi hasılaya oranı % 23'e ulaşmıştır. Kamu harcamalarındaki artış trendi, 1960 ila 1980 yılları arasında en üst seviyeye çıkmıştır. Çeşitli piyasa başarısızlıklarını düzeltmek amacıyla devletin ekonomik yaşama müdahalesi ile şekillenen bu dönemde, kamu harcamalarının milli gelire oranı yaklaşık % 50'ler seviyesinde gerçekleşmiştir. 20. yüzyılın son dönemleri ile 21. yüzyılın ilk yıllarında ise neoliberal politikaların etkisiyle kamu harcamalarındaki artış eğilimi azalmaya başlamıştır (Borcherding ve Lee, 2002:2).

Dünya ekonomisinde son dönemde yaşanan kamu harcamalarındaki azalma eğilimine rağmen; kamu harcamalarının hangi unsurlardan etkilendiği ve harcamalarının hacmini etkileyen dinamiklerin neler olduğu, kamu maliyesi literatürünün önemli inceleme konuları arasındaki yerini korumuştur. Bu çalışmada kamu harcamalarındaki değişimi etkileyen dinamikler, Sovyetler Birliği'nin dağılması sonrasında ortaya çıkan bağımsız devletlerin bazılarını da içine alan Avrasya Ekonomik Topluluğu ülkeleri açısından ele alınmıştır. Avrasya ekonomilerinin sosyalist devlet düzeni geçmişi olması nedeniyle konu, bürokrasi özelinde detaylandırılmış ve bürokratik kalitenin kamu harcamalarının hacmini ne ölçüde etkilediği incelenmiştir.

Çalışmanın planı şu şekildedir. İlk kısımda kamu harcamalarının seyri hem gelişmiş hem de gelişmekte olan ülkeler açısından ele alınmıştır. Sonrasında ise Avrasya Ekonomik Topluluğu üyesi ülkelerdeki kamu tüketim harcamaların gelişimi ortaya konulmuştur. İkinci kısımda ise kamu harcamaların hacmini etkileyen unsurlar ele alınmıştır. Bu aşamada bürokratların fayda maksimizasyonunu temel alan davranışları ile kamu harcamaları arasındaki ilişki detaylı bir biçimde incelenmiştir. Son kısımda ise bürokratik kalitenin kamu harcamalarının hacmi üzerindeki etkisi, Avrasya Ekonomik Topluluğu üyesi ülkeler açısından dinamik panel veri analizi yöntemiyle analiz edilmiştir.

2 Avrasya Ekonomilerinde Kamu Harcamalarına Genel Bir Bakış

Devletin ekonomik ve toplumsal yaşamda oynadığı role ilişkin tartışmalar, tarihin farklı dönemlerinde birbirinden farklı açıklamalara konu oluşur. Şöyle ki; Adam Smith öncülüğünde gelişen klasik iktisadi yaklaşımda devletin ekonomik yaşama müdahalesi en düşük düzeyde tutulmuştur. Klasik iktisatçılar, tam kamusal mal ve hizmetlerin sunumu, yasal ve kurumsal altyapının sağlanması ve güvenlik başta olmak üzere oldukça sınırlı bir alanda devlet müdahalesine izin vermiştir. Buna bağlı olarak da devletin ekonomideki büyüklüğünü gösteren kamu harcamalarının gayri safi milli hasılaya oranının oldukça düşük düzeyde olması beklenmiştir. Bu nedenle 19. yüzyılın sonlarından 20. yüzyılın başlarına kadar ki dönemde sanayileşmiş ülkelerin birçoğunda kamu harcamalarının milli gelire oranı yaklaşık % 10'lar civarında gerçekleşmiştir (Tanzi ve Schuknecht, 1997:165).

Ekonominin işleyişini bozmayacak bir devlet algısı, 1929 yılında yaşanan büyük buhran dönemine kadar hakim iktisadi anlayışı oluşturmuştur. Ancak büyük buhran sonrasında devletin ekonomik rolüne ilişkin düşünceler yeniden şekillenmeye başlamış ve John Maynard Keynes tarafından 1936 yılında yayımlanan *Para, Faiz ve İstihdam: Genel Teori* adlı çalışma ile devletin ekonomik rasyonelinin teorik temelleri atılmıştır. Keynesyen yaklaşımla birlikte ekonominin her zaman kendiliğinden dengeye gelemeyeceği ve devlet müdahalesinin gerekliliği kabul edilmeye başlanmıştır. Özellikle talep yönlü maliye politikası uygulamaları ile öne çıkan Keynesyen paradigma ile birlikte gerek gelişmiş gerekse gelişmekte olan ülkelerde kamu harcamalarının milli gelir içerisindeki payı artış eğilimine girmiştir.

1. Dünya Savaşını izleyen dönemden itibaren ise kamu harcamalarındaki artış giderek hızlanmaya başlamıştır. Sanayileşmiş ülkelerde 1960 yılında genel kamu harcamalarının gayrisafi yurtiçi hasılaya oranı ortalama % 28 iken; aynı oran 1980'de % 41.9, 1990'da % 43, 1996'da % 45 ve 2002'de % 43.5 seviyesinde gerçekleşmiştir. Ülke örneklerine bakıldığında ise ortalamadan bazı sapmalar olduğu görülmüştür. Şöyle ki; 1980 yılında Avustralya, Japonya, İsviçre ve Amerika Birleşik Devletleri'nde genel kamu harcamalarının gayrisafi yurtiçi hasılaya oranı % 35'in altında iken; Avusturya, Fransa, Almanya İrlanda ve İngiltere'de % 50'ye yakındır. 2000'li yıllarda ise Avusturya, Fransa, Almanya, İtalya, Norveç ve İsveç gayrisafi yurtiçi hasılanın % 50'ye yakın bir kısmını kamu harcamalarına ayırmıştır (Tanzi, 2005:619).

Kamu harcamalarındaki artış eğilimi sadece gelişmiş ülkeler ile sınırlı değildir. Gelişmekte olan ülkelerde, 1980'ler ve sonrasında kamu harcamalarının büyüklük ve bileşiminde yaşanan değişim oldukça dikkat çekicidir. 1980 yılında, 43 gelişmekte olan ülkenin kamu harcamaları 776 milyar dolar iken; bu rakam 1990 yılında % 4 artış göstererek 1148 milyar dolara ulaşmıştır. Söz konusu gelişmekte olan ülkelerin kamu harcamaları, 1990 sonrasında da artış kaydederek, 1998 yılında yaklaşık olarak 1789 milyar dolara ulaşmıştır. Kamu harcamalarındaki artışa bölgeler açısından bakıldığında ise en fazla artışın Asya ülkelerinde, ardından ise Afrika ve Latin Amerika ülkelerinde yaşandığı gözlenmiştir (Kovancılar, Miynat, Bursalıoğlu, 2007:1).

Kamu harcamalarındaki artış eğilimine Avrasya ekonomileri açısından bakıldığında ise diğer ülke ve bölgelerden farklı bir eğilim dikkat çekmektedir. Sovyetler Birliği'nin dağılması sonucu ortaya çıkan Avrasya ekonomileri başta Rusya olmak üzere Beyaz Rusya, Kazakistan, Kırgızistan, Tacikistan, Özbekistan, Moldova, Ukrayna ve Ermenistan'dan oluşmaktadır. Söz konusu ülkelerdeki kamu tüketim harcamalarının gayri safi milli hasılaya oranı, Grafik 1'de gösterilmiştir.
Grafik 1: *Avrasya Ekonomilerinde Kamu Harcamalarının Seyri (1990-2011)*   **Kaynak:** *World Bank (2013), World Development Indicators.*

Grafik 1'de görüldüğü üzere, kamu tüketim harcamalarının gayri safi yurtiçi hasılaya oranı dalgalı bir seyir izleyerek, % 10 ila % 30 arasında değişen değerler almıştır. Avrasya ekonomileri içinde kamu harcamalarındaki dalgalanmanın en yüksek olduğu ülke ise Tacikistan'dır. Tacikistan'da 1992 yılında % 27.21 olan kamu tüketim harcamalarının milli gelire oranı, 2000 yılında % 8.29'a, 2011 yılında ise tekrar eski seviyelerine yaklaşarak % 28.86 seviyesine ulaşmıştır. Avrasya Ekonomik Topluluğu üyesi diğer ülkelere bakıldığında ise yaklaşık % 20'ler seviyesi dikkat çekmektedir. Topluluk üyesi ülkelerden kamu harcamalarının en düşük olduğu ülke Kazakistan'dır. Kazakistan'ı sırasıyla Ermenistan, Beyaz Rusya ve Rusya izlemiştir. Kamu harcamalarının en yüksek olduğu ülkeler ise sırasıyla Tacikistan, Moldova, Kırgızistan ve Ukrayna'dır.

3 Kamu Harcamaları ile Bürokratik Kalite Arasındaki İlişki

Kamu harcamalarının hacmini ve bileşimini etkileyen birçok unsur bulunmaktadır. Bu unsurlardan bazıları ekonomik bazıları ise kültürel ve politik dinamiklere dayanmaktadır. Kamu harcamalarının hacmini belirleyen ekonomik faktörler ele alındığında Wagner Kanunu öne çıkmaktadır. Wagner Kanunu'na göre; kamusal mal ve hizmet talebi gelirle bağlantılıdır. Başka bir ifadeyle, gelirdeki artışa paralel olarak bireylerin tam kamusal (güvenlik, adalet gibi) ve yarı kamusal (eğitim, sağlık gibi) nitelikteki mal ve hizmetlere olan taleplerindeki artış, kamu harcamalarının artmasına neden olmaktadır. Bu açıdan bakıldığında kamu harcamalarının gayrisafi yurtiçi hasılaya oranı, kişi başına gelirin artan bir fonksiyonu olarak ele alınmaktadır (Wagner ve Weber, 1977; Ram, 1987; Peacock ve Scott, 2000). Kamu harcamalarının hacmini ve bileşimini etkileyen bir diğer değişken ise demografik yapıdır. Bir ülkenin demografik yapısı içinde esas teşkil eden ölçütlerden birisi nüfus yoğunluğudur. Zira bir ülkedeki nüfus yoğunluğunun artması, kamusal mal ve hizmet talebinin artmasına neden olmaktadır. Bu nedenle kamu harcamaların hacmi, nüfus yoğunluğunun artan bir fonksiyonu olarak ele alınmaktadır (Heller ve Diamond, 1990; Annett, 2000). Küreselleşme sürecinin hız kazandığı günümüz koşullarında ele alınan bir başka değişken ise dışa açıklıktır. Dışa açıklık ile kamu harcamaları arasındaki ilişki, Rodrick (1998)'in çalışmasına dayanmaktadır. Rodrick (1998)'e göre, ekonominin dışa açıklığı arttıkça kamu harcamalarının hacmi de artmaktadır. Başka bir ifadeyle, dışa açıklık ile kamu harcamaları arasında pozitif yönlü bir ilişki bulunmaktadır. Söz konusu ilişki, ekonominin dışa açıklığı arttıkça yaşanabilecek dış şoklar nedeniyle devletin sosyal güvenlik harcamalarına daha fazla pay ayırması ile açıklanmaktadır. Ancak Alesina ve Wacziarg (1998), Garen ve Trask (2005) ve Cavallo (2007) tarafından yapılan çalışmalarda, artan ekonomik entegrasyon sürecinin kamu harcamalarını olumsuz yönde etkileyebileceğine vurgu yapılarak; dışa açıklık ile kamu harcamaları arasındaki ilişkin çok kesin sınırlar içinde pozitif olmayabileceğinin altı çizilmiştir.

Ekonomik ve demografik faktörlerin yanı sıra politik faktörlerde kamu harcamaların hacmini ve bileşimini etkilemektedir. Kamu harcamalarının hacmini belirleyen politik faktörler ele alındığında siyasal karar alma mekanizmasının aktörleri öne çıkmaktadır. Siyasal karar alma süresince mal ve hizmetlerin üretimine ilişkin kararların alınması aşamasında birçok aktör etkili olmaktadır. Bu aktörler; siyasal partiler, baskı grupları, seçmenler ve bürokratlardır (Buchanan, 1967:7). Kamu harcamalarına ilişkin olarak yürütülen politikaların belirlenmesinde asıl aktör siyasal karar vericiler (politikacılar) olsa da karar verme sürecinde siyaset ve bürokrasinin karşılıklı etkileşim içerisinde olduğu ifade edilebilir. Siyasal elit tarafından yürütülen politika belirleme süreci ile bürokrasiye ait olması gereken bu politikaları yürütme görevini somut olarak birbirinden ayırt etmek kolay olmamakla birlikte, bürokratik otoritenin kullanılış şekli siyasi otoriteden soyutlanamaz (Şaylan, 1974: 32). Bu nedenle yasal düzenlemelerin ve kararların oluşturulmasında ve alınan kararların uygulanmasında bürokratların belirleyici rolünün olduğunu ifade edilmelidir (Riggs, 2009).

Bürokrasi dünyanın birçok ülkesinde modern yönetimin bir gereği olarak işlemektedir. Gerek devlet yönetiminde gerekse kamu ve özel birçok yönetimin örgüt yapısında bürokrasi mevcuttur. Dolayısıyla günümüzde kamu politikası oluşturma (policy-making) sürecinde bürokrasinin belirleyici rolü olduğu kabul edilmektedir. Kamu harcama politikalarına yön veren, kararların alınmasında belirleyici olan asıl güç noktası bürokrasidir. Bürokrasi ile siyasi iktidar arasında kamu harcama politikalarının oluşturulmasında çelişkiler ortaya çıkabilmektedir. Bazı durumlarda ise ağır ve etkinsiz işleyen bir bürokrasi hatalı kararların alınmasına neden olmakta ve çeşitli yolsuzluk türleri görülmektedir. Politikacılar oy kaygısı ile hareket ettiklerinden hesap verebilirlikleri seçmene karşıdır. Bürokratlar ise oy kaygısı taşımazlar, gelirlerini, prestijlerini, makamlarını ve sahip oldukları imkânları artırma isteğindedirler. Dolayısıyla bürokrasi harcama eğilimli kamu politikalarının oluşturulmasına daha meyillidir.

Bürokratlar, politikacılardan daha baskın çıkarak kararların kendi istedikleri yönde alınmasını sağlamak ve böylece politikacılar üzerinde etkili olmak istemektedir. Bürokratların karar alma sürecindeki davranışlarını şekillendiren bu yapı, kamu tercihi teorisi tarafından ele alınmaktadır. Kamu tercihi teorisi, ekonominin araç ve metotlarıyla politik karar alma sürecini analiz eden bir yaklaşım olarak kabul edilmektedir. Kamu tercihi kuramının arz yönü ile ilgilenen Niskanen, kamu sektöründe üretilen kamusal mal ve hizmetleri arz edenlerin (bürokratların) ve bu mal ve hizmetlerin alıcılarının yani kamusal mal ve hizmetlere seçmenleri adına talepte bulunan politikacıların var olduğunu savunmaktadır. Niskanen modelinin iki karakteristik özelliği bulunmaktadır. Bunlardan birincisi, bürokratların belli talep ve maliyet koşulları altında faydalarını maksimize temek için toplam bütçelerini artırma istekleri; ikincisi ise bürolar ile iktidar partileri arasında bir tür siyasi mübadelenin var olmasıdır (Bakırtaş, 1999: 2).

Özellikle 1990'lı yıllara kadar kamu sektörünün hacminin büyüdüğü ve kamu politikalarının belirlenmesinde bürokratların etkin bir role sahip olduğu ifade edilebilir. Bürokrasi sözü edilen döneme kadar ulus inşasında yönetim ve yönetişimin kurumsallaşmasında belirleyici rol üstlenmiştir. Bürokrasinin bu gücü örgütsel, bilgi ve denetim kapasitesinin yüksekliğinden kaynaklanmaktadır. Aynı zamanda bütçenin kullanımı konusunda hem statükolarını korumak hem de siyasal çıkarlarını genişletmek amacıyla politikacılar üzerinde etkili olmaktadırlar (Farazmand, 2009:10). Kamusal hizmetlere olan talebin artmasıyla birlikte kamu sektörü büyümektedir. Buna paralel siyasal iktidarda yeniden seçilebilmek için bürokrasiden bütçenin hacminin genişletilmesi talebinde

bulunmaktadır. Bürokrasi, bütçe maksimizasyonu yoluyla kendisine tanınmış olan yüksek mevkii, yüksek maaş, yurt dışı seyahatleri vb. imkânlarını da korumuş olmaktadır (Aktan, 1994: 48).

Bürokrasi ile kamu harcamaları arasındaki ilişki bürokrasinin etkinliği açısından da ele alınabilir. Etkinlik, kamu ve özel bürokrasilerin fayda/maliyet, girdi/çıktı dengesi açısından dikkate alınan en önemli kriter olarak değerlendirilmektedir (Downs ve Larkey, 1986; Blau ve Meyer, 1987; Wilson 1989). Bürokrasinin etkinlik ve etkililiğini artırmada iyi yönetişim (good governance) son yıllarda üzerinde en çok durulan konular arasındadır (Rajkumar ve Swaroop; 2008:96). İyi yönetişim, önemli kamusal gereksinimlerin giderilmesi açısından kamusal kaynakların ve sorunların etkin ve etkili yönetimi anlamına gelmektedir. Devletlerin gittikçe karmaşıklaşan, sayıca çoğalan ve dinamik hale gelen ekonomik ve toplumsal sorunları çözmede yetersiz kalması, yeterli kaynak ve kapasiteye sahip olmaması, ayrıca toplumun sorunlara daha duyarlı hale gelmesi ve katılıma ilişkin taleplerin artması yönetişim yaklaşımının benimsenmesine olanak sağlamıştır (DPT, 2007:1). Son yıllarda devletin kapasitesi ve ulusal ekonomik performans arasındaki bağlantının analizinde yönetişim kalitesinin ölçülmesi çabaları giderek artmaktadır (Polidano, 2000:805).

Kamu harcama politikalarında kararların alınması sürecinde etkin olan bürokratların kendi çıkar maksimizasyonlarına odaklanmaları kamudaki etkinsizliğin en önemli nedenleri arasında sayılmaktadır. Bu nedenle kamu yönetiminde bürokratların hesap verebilirliğine yönelik olarak iyi yönetişim uygulamalarının uygulamaya geçirilmesi gerekmektedir. Demokrasi ile yönetilen tüm ülkelerde iktidarlar halkı memnun etme adına kamu harcamalarını artırmak isterler. Ancak bu kısa vadede olumlu sonuçlar verse de uzun vadede kamu sektörünün büyümesine, bürokratların gücünün ve etkisinin artmasına ve kamu hizmetlerinde etkisizliğe, yozlaşmalara yol açmaktadır. Bu nedenle, ekonomik istikrar ve sürdürülebilir büyüme hedefleri açısından, hükümetler bütçe politikasını, kısa dönemde ekonomik istikrarı, orta ve uzun dönemde de büyümeyi ve refahı bir arada optimize eden bir vergi ve harcama politikasına göre yürütmek zorundadır (Betam, 2008:12).

4   Ampirik Uygulama

Bu kısımda etkin işleyen bir bürokrasinin kamu harcamalarını nasıl ve hangi yönde etkilediğini görmek amacıya ampirik uygulama yapılmaktadır. Bu kapsamda öncelikle çalışmada uygulanan metodolojiye ilişkin olarak teorik açıklamalar yapılacak, sonrasında ise analiz sonuçlarına yer verilecektir.

4.1 Metodolojiye Yönelik Teorik Açıklamalar
Birim Kök Testleri

Bu çalışmada serilerin durağanlığı Levin, Lin ve Chu (LLC) (2002) ve Im, Pesaran ve Shin (IPS) (2003) tarafından geliştirilen panel birim kök testleri ile sınanmıştır. LLC panel birim kök testi, tüm birimlerin aynı otoregresif parametreye sahip olduğunu varsaymaktadır. Bu testteki hipotezler aşağıdaki gibidir:

H_0: Seride genel bir birim kök vardır ($H_0 : \rho_i = \rho = 1$).

H_1: Seride genel bir birim kök yoktur ($H_0 : \rho_i = \rho < 1$).

Bu hipotez testi için sabitsiz, sabitli (birim (sabit) etkiler), sabitli-trendli olmak üzere üç farklı model oluşturulmuştur. Test prosedürünün dayandığı temel model şu şekildedir (Levin, Lin ve Chu, 2002:5):

$$\Delta y_{it} = \delta y_{it-1} + \sum_{L=1}^{P_i} \theta_{iL} \Delta y_{it-L} + \alpha_{mi} d_{mt} + \varepsilon_{it,} \qquad\qquad m = 1, 2, 3. \qquad (1)$$

(1) nolu denklemde d_{mt} deterministik değişkenler vektörünü belirlerken; α_{mi} ise belirli bir model için (m=1,2,3) katsayılar vektörünü göstermektedir. Modelde ρ_i gecikme derecesi bilinmediğinden, LLC testlerini uygulayabilmek için üç adımdan oluşan bir süreç önerilmektedir. Söz konusu adımlardan birincisi, her bir yatay kesit için ayrı ayrı ADF regresyonlarının uygulanmasıdır. İkincisi, uzun dönem standart sapmalardan kısa dönem standart sapmalara doğru bir tahmin yapılarak; birim köklü boş hipotez altında, modelin uzun dönem varyansının tahmin edilmesidir. Üçüncüsü ise panel test istatistiklerinin hesaplanmasıdır (İnal, 2009:23).

Söz konusu panel test istatistikleri, LLC tablo değerleri ile karşılaştırılmakta ve $H_0 : \rho_i = \rho = 1$ şeklindeki hipotez reddedilirse serinin birim kök içermediğine ve durağan olduğuna karar verilmektedir (Tatoğlu, 2012, 202).

LLC panel birim kök testinin yanı sıra başvurulan bir diğer test ise Im, Peseran ve Shin (IPS) (2003) testidir. IPS testinin en önemli özelliği, verileri birleştirmek yerine tüm birimler için zaman serilerine ayrı ayrı birim kök testi uygulamasıdır ve IPS panel birim kök testi istatistiği, tüm bireysel ADF test istatistiklerinin ortalamasıdır. Test için hipotezler aşağıdaki gibi kurulmaktadır;

H_0: $\rho_i = 1$

H_1: $\rho_i < 1$

IPS testinde, aşağıdaki modelden hareket edilmektedir:

$$\Delta Y_{it} = \rho_i Y_{it-1} + \sum_{L=1}^{\rho_i} \phi_{iL} Y_{it-L} + \mu_i' \gamma + \upsilon_{it} \qquad (2)$$

IPS test istatistiği, bireysel ADF istatistiklerinin ortalamasıdır. Şöyle ki;

$$\bar{t} = \frac{1}{N} \sum_{i=1}^{N} t_{\rho i} \qquad (3)$$

(3) nolu denklemde $t_{\rho i}$, bireysel test istatistiklerini ifade etmektedir. Söz konusu testte hipotezleri sınamak için standart normal t dağılımı yerine, her bir grup için hesaplanan t değerlerinin aritmetik ortalamasının alınması ile elde edilen $\bar{t}$ istatistiği kullanılmaktadır. Standartlaştırılmış $\bar{t}$ istatistiği $W_{\bar{t}}$ olarak adlandırılırsa,

$$t_{IPS} = W_{\bar{t}} \frac{\sqrt{N}(\frac{1}{N}\sum_{i=1}^{N} t_{iT}) - (\frac{1}{N}\sum_{i=1}^{N} E[t_{iT}\rho_i = 1]}{\sqrt{\frac{1}{N}\sum_{i=1}^{n} \text{var}\langle [t_{iT}\rho_i = 1]\rangle}} \qquad (4)$$

şeklinde ifade edilebilmektedir (Tatoğlu, 2012, 212-213).

4.2 Sistem GMM Tahmin Yöntemi

Çalışmada bağımlı değişkenin gecikmeli değerini modele dahil eden dinamik panel veri tahmin yöntemi olan Sistem GMM yöntemi kullanılmıştır. Çalışmanın modelinin dinamik panel veri şeklinde ele alınmasının en temel sebebi, kamu harcamalarının hacminin önceki yıllarla olan organik bağıdır. Başka bir ifadeyle kamu harcamalarının gecikmeli değerinin aynı zamanda modelin bağımsız değişkenleri arasında yer almasının gerekliliği dinamik panel verinin kullanılmasını gerektirmiştir.

Dinamik modellerde bağımlı değişkenin gecikmeli değerlerinin modele eklenmesi, gecikmeli bağımlı değişken ile hata terimi arasındaki ilişki nedeniyle, yapılan tahminlerin sapmalı ve tutarsız olmasına neden olabilmektedir (Baltagi, 2005:135). Bu sorunu gidermek amacıyla dinamik panel tahminlerinde Genelleştirilmiş Momentler Yöntemi'nin (Generalized Method of Moments-GMM) kullanılması önerilmiştir. Dinamik panel veri modellerinde GMM, değişik varsayımlar altında farklı versiyonlarla kullanılmaktadır. Arellano ve Bond (1991), GMM yönetiminin, normal dağılım, değişen varyans ve ölçüm hatalarının olduğu durumlarda diğer yöntemlere göre daha iyi sonuçlar verdiğini vurgulayarak Fark-GMM tahmin yöntemini önermiştir. Daha sonra Arellano ve Bover (1995) ve Blundell ve Bond (1998) tarafından Sistem-GMM yöntemi geliştirilmiştir. Sistem-GMM yaklaşımı, araç değişkenlerin gecikmeli değerlerini fark denklemlerinde, birinci farklarını ise düzey denklemlerinde kullanmaktadır. Arellano ve Bond (1991) tarafından geliştirilen "Fark GMM" yöntemine oranla Arellano ve Bover (1995) ve Blundell ve Bond (1998) tarafından önerilen Sistem-GMM'den elde edilen tahmincilerin daha iyi tahminciler olduğu belirtilmektedir (Coşkun ve Kök, 2011:79-80).

Sistem GMM yaklaşımına dayalı olarak çalışmada kullanılan ekonometrik model aşağıda gösterilmiştir.

$$Khar_{it} = \delta Khar_{it-1} + \beta_i Z_{it} + \eta_i + \lambda_t + \varepsilon_{it} \qquad t = 1.....,T; i = 1......,N \qquad (5)$$

(5) nolu denklemde Z kontrol değişkenler (GDP, Open, Pop ve Bur) vektörünü temsil etmektedir. Modeldeki ε_{it} hata terimini; η_i ile λ_t ise zamana ve kesite özgü sabit etkileri göstermektedir.

4.3 Veri Seti ve Değişkenler

Bu çalışmada kamu harcamaları ile bürokrasi arasındaki ilişki incelenmektedir. Analizde, 1998-2011 yılları arasında Avrasya Ekonomik Topluluğu'nda hem üye olan hem de gözlemci statüsünde yer alan 6 ülkenin verisi kullanılmıştır. Ülkelerden Beyaz Rusya, Kazakistan, Rusya Avrasya Ekonomileri Topluluğu üyesi iken; Ermenistan, Moldova ve Ukrayna Toplulukta gözlemci statüsüne sahiptir.

Kamu harcamalarının hacmini etkileyen unsurlara ilişkin olarak aşağıdaki değişkenler kullanılmıştır.

Kamu Harcamaları (Khar): Kamu tüketim harcamalarının GSYİH içerisindeki yüzde payı ile ölçülmektedir.

Kişi Başına GYSİH'daki Büyüme Hızı (Gdp): Kişi başı GSYİH düzeyindeki yüzde artışları göstermektedir. Ekonominin içinde bulunduğu durumu göstermek amacıyla modele dahil edilen bu değişkendeki değişim oranı ile kamu harcamaları arasında pozitif bir ilişki beklenmektedir. Başka bir ifadeyle, kişi başına gayrisafi yurtiçi hasılanın değişim oranı arttıkça kamu harcamalarının da artması beklenmektedir.

Dışa Açıklık (Open): Dış ticaret hacminin (ihracat ve ithalat toplamı) GSYİH içerisindeki yüzde payıdır ve ülke ekonomisinin dışa açıklık düzeyini göstermektedir. Dışa açıklık ile kamu harcamaları arasındaki ilişki belirsizdir. Rodrik (1998) başta olmak üzere bir grup iktisatçı kamu harcamaları ile dışa açıklık arasında pozitif

bir ilişki öngörmekte iken (Rodrik, 1998; Alesina ve Wacziarg, 1998; Garen ve Trask, 2005; Cavallo 2007); diğer bir grup iktisatçı ise dışa açıklık arttıkça kamu harcamalarının hacminin azalacağını ifade etmektedir (Alesina ve Spolaore, 1997 ve Alesina, Spolaore ve Wacziarg, 1997).

Nüfus Yoğunluğu (Pop): Nüfus yoğunluğu kilometre kare başına düşen kişi sayısı ile ölçülmüştür. Nüfus yoğunluğunun artması kamusal mal ve hizmet talebini arttırmasından dolayı kamu harcamalarının miktarını pozitif yönde etkilemesi beklenmektedir.

Bürokratik Kalite (Bur): Bürokratik kalite endeksi, Uluslararası Şeffaflık Örgütü (Transparency International) tarafından her yıl ülkeler bazında açıklanmaktadır. Bu endekste ülkelere 0 ila 4 arasında bir tam sayı değeri verilmektedir. Yüksek tam sayı değerleri, kamu hizmetlerinin kesintiye uğramaksızın ya da büyük değişiklikler olmaksızın uzmanlığa sahip bürokratlar tarafından yerine getirildiğini göstermektedir. Düşük tamsayı değerleri ise bunun tersini ifade etmektedir.

Analizde kullanılan değişkenlerden kamu harcamaları, kişi başına GSYİH'daki büyüme hızı, dışa açıklık ile nüfus yoğunluğu Dünya Bankası'nın World Development Indicators (WDI) veri tabanından; bürokratik kalite verisi ise Uluslararası Şeffaflık Örgütü'nden alınmıştır.

4.4 Analiz Sonuçları

Bürokrasinin kamu harcamaları üzerindeki etkisini incelemeden önce modelde kullanılacak değişkenlerin durağan olup olmadıkları ve eğer durağan iseler hangi seviyede durağan oldukları Levin, Lin ve Chu (LLC) (2002) ile Im, Pesaran ve Shin (IPS) (2003) tarafından geliştirilen panel birim kök testleri ile incelenmiştir. Panel birim kök test sonuçları tüm serilerin düzey değerlerinde durağan olduklarını göstermiştir.

LLC ile IPS panel birim kök test sonuçları, sistem GMM yaklaşımındaki değişkenlerin durağan olması varsayımına uygundur. Modelde kullanılan değişkenlerin durağan olmaları nedeniyle kamu harcamalarına ilişkin model, GMM-Sistem dinamik panel veri yöntemi ile tahmin edilmiştir. Tahmin sonuçları aşağıdaki tabloda gösterilmiştir.

Değişkenler	Katsayı ve Olasılık Değeri	Standart Hata
Khar$_{-1}$	0.577 (0.000)*	0.123
Gdp	0.127 (0.079)***	0.098
Open	-0.009 (0.663)	0.022
Pop	0.028 (0.082)***	0.016
Bur	-2.202 (0.066)***	1.200
Gözlem Sayısı	78	
Yatay Kesit Sayısı	6	
Wald χ^2 (p değeri)	140.81 (0.000)	
Arellano-Bond Test AR(1) (p değeri)	-1.83 (0.068)	
Arellano-Bond Test AR(2) (p değeri)	-1.42 (0.156)	
Sargan Test (p değeri)	12.14 8 (0.434)	

Tablo 1: *Sistem GMM Tahmin Sonuçları* **Not:** **, % 1 düzeyinde; *** ise % 10 düzeyinde anlamlı olan değerlerdir.*

Sistem GMM tahmin sonuçları genel olarak değerlendirildiğinde, kurulan modelin bir bütün olarak anlamlı olduğu görülmektedir. Wald χ^2 değerine göre bağımsız değişkenler % 1 anlamlılık düzeyinde bağımlı değişken üzerinde anlamlı bir etkiye sahiptir. Sistem GMM tahmincilerinin tutarlılığını test etmek amacıyla yapılan bir diğer test ise Sargan testidir. Sargan testi, modeli tahmin etmek için kullanılan araç değişkenlerin yeterli olup olmadığını ortaya koymaktadır. Test sonuçları, araç değişkenlerin geçerli olduğunu göstermektedir. Araç değişkenlerin geçerliliğinin yanı sıra modelde otokorelasyon olup olmadığının da test edilmesi gerekmektedir. Modelde otokorelasyon sorunu olup olmadığı Arellano-Bond (AB) testi ile sınanmaktadır. AR(1) istatistiği modelde birinci dereceden otokorelasyon gözlendiğini; AR(2) istatistiği ise ikinci dereceden otokorelasyonun mevcut olmadığını göstermektedir.

Kamu harcamalarını belirleyen dinamiklere ilişkin olarak yapılan bu analizde beklentilere uygun sonuçlar elde edilmiştir. Sistem GMM sonuçlarına göre, cari dönemin kamu harcamaları bir önceki dönemin değerleri ile istatistiksel açıdan anlamlı bir ilişki içindedir. Benzer şekilde, ekonominin içinde bulunduğu konjonktürü gösteren gelir düzeyi ile kamu harcamaları arasında beklentilere uygun bir biçimde pozitif bir ilişki tespit edilmiştir. Bu sonuca göre; kişi başına gayrisafi yurtiçi hasıladaki değişim, kamu harcamalarının bir fonksiyonudur. İstatistiksel açıdan anlamlı bir diğer değişken ise nüfus yoğunluğudur. Analiz sonuçlarına göre kilometre kare başına düşen kişi sayısı ile ölçülen nüfus yoğunluğunun artması sonucu kamusal mal ve hizmet talebi de artmaktadır. Modelde ele alınan bir diğer değişken ise dışa açıklıktır. Yapılan çalışmada dış ticaret

hacminin gayrisafi yurtiçi hasılaya oranı ile ölçülen dışa açıklık ile kamu harcamaları arasında istatistiksel açıdan anlamlı herhangi bir bulguya ulaşılamamıştır.

Ele alınan bu kontrol değişkenlerin yanı sıra bürokratik kalite ile kamu harcamaları arasındaki ilişkiyi incelediğimizde ise pozitif ve istatistiksel açıdan anlamlı bir ilişki tespit edilmiştir. Bu sonuç, bir ülkedeki bürokratik yapı ile kamusal mal ve hizmet arzı arasındaki bağlantıya işaret etmektedir. Başka bir ifadeyle, kamusal mal ve hizmet üretiminde siyasi otoritenin yanı sıra bürokrasinin oynadığı rol, sistem GMM sonuçları ile ortaya konulmuştur. Bu açıdan bakıldığında, bir ülkedeki bürokrasinin etkin işlemesi durumunda kamu harcamalarının oldukça istikrarlı bir büyüme sürecinde olacağı; aksine eğer bürokrasinin hantal ve ağır işleyen aynı zamanda da kişisel çıkar maksimizasyonunu temel alan bir yapıda olması durumunda ise kamu harcamalarının oldukça dalgalı ve hatta istikrarsız bir gelişme dinamiğinde olabileceği ifade edilebilir.

5 Sonuç

Günümüzde devletin yapısı ve işlevlerinde küçülme ve etkinleştirmeye dönük olarak önemli değişimler olsa da kamu harcamalarındaki artış devam etmektedir. Kamu harcamalarındaki artış başta ekonomik olmak üzere sosyal ve politik birçok değişkene bağlı olarak açıklanmaktadır. Kamu harcamalarını politik değişkenlere dayalı olarak açıklamaya çalışan yaklaşımlar, bürokrasiyi temel almaktadır. Profesyonellik, daimi ve istikrarlı bir statü, belirli bir kurum ideolojisine sahip olma, planlama ve bütçeleme konusundaki deneyim ve bilgi birikimi bürokratları devlet yönetiminde çok önemli bir aktör haline getirmektedir. Halkın oyu ile iktidara gelen ve yönetimde karar verme gücüne sahip olan siyasi mekanizmanın, devlet yönetiminde profesyonellik ve bilgi birikimi nedeniyle bürokrasi ile uyum içerisinde çalışması gerekmektedir.

Bürokrasi ile kamu harcamaları arasındaki ilişki, bürokratların "bireysel fayda maksimizasyonu" ile açıklanmaktadır. Bu bakış açısında bürokratların kişisel faydalarını maksimize etme çabaları sonucunda kamu harcamaları milli gelirle orantısız bir şekilde arttığının altı çizilmektedir. Bürokratlar politikacılar tarafından alınan kararların uygulayıcısı olarak, fayda maksimizasyonu doğrultusunda hareket ederek kendilerine en uygun avantajları sağlama güdüsü içerisindedirler. Bu nedenle kamu harcamalarının mümkün olduğunca genişletilmesini isteyeceklerdir. Kamu harcamalarının genişlemesi sosyal ve ekonomik göstergelerde olumlu sonuçlara yol açabilir, ekonomik büyümeyi teşvik edebilir; ancak daha sonra kamu harcamalarındaki ilave artışlar ve bu artışların bürokratlar tarafından bireysel fayda maksimizasyonu doğrultusunda yapılması yolsuzluklara, kamu hizmetlerinde etkinsizliğe, personel sisteminde kayırmacılığa ve bütçe açığının büyümesi gibi olumsuz sonuçlara yol açabilir. Bu tür olumsuz sonuçlarla karşılaşmamak için bürokrasinin karar verme sürecinde ve uygulama esnasında sınırlarının yasal düzenlemelerle iyi çizilmesi gerekmektedir.

Avrasya Ekonomik Topluluğu üyesi ülkelerdeki bürokratik yapı ile kamu harcamaları arasındaki ilişkinin incelendiği bu çalışmada, kamu harcama politika kararlarını alan politikacılar olsa da bu kararların alınmasında, uygulanmasında ve etkin bir şekilde yürütülmesinde bürokratların oldukça önemli bir rol oynadığı bulgusuna ulaşılmıştır. Bu nedenle söz konusu ülkelerde etkin işleyen, hesap verebilir, iyi yönetişim ilkelerini kurumsal hale getiren bir bürokrasiye gereksinim bulunduğu ifade edilebilir. Dolayısıyla Avrasya ekonomilerindeki etkin işleyen bir bürokrasinin kamu harcamalarının artışını dengeleyeceği ve kamu harcamalarını daha istikrarlı bir hale getireceği söylenebilir.

Kadının Ekonomik Yaşamdaki Yeri: Türkiye ve Geçiş Ekonomilerinin Karşılaştırması

The Position of Women in Economic Life: A Comparison between Transition Economies and Turkey

Prof. Dr. Nuray Gökçek Karaca (Anadolu University, Turkey)

Abstract

In this study, the participation of women in economic life, in other words their position in economic activity in Turkey was examined in comparison with the Central and Eastern Europe (CEE) countries and the Commonwealth of Independent States (CIS). To examine women's participation in economic life in Turkey in comparison with transition economies, we benefited from the Gender Empowerment Measure (GEM), which was developed by the UNDP the participation of women in economic activity in Turkey is low extremely. The factors that reduce the participation in the workforce by women in Turkey are traditional division of work, economic development, level of education, unpaid family work, informal employment, legal regulation, discrimination, work/non-work preferences. The participation of women in economic activity is also low in transition economies. But transition economies is not homogenous in terms of participation of women in economic activities. Results also indicate that, the participation of women in economic activity in the Central and Eastern Europe (CEE) is higher than the participation of women in economic activity in the Commonwealth of Independent States (CIS).

1 Giriş

Gelişen feminist hareketin etkisiyle, kadınlar 19. Yüzyılın ikinci yarısından itibaren kendilerini ve isteklerini ifade etmeye başlamışlar, ardından örgütlenerek, istekleri doğrultusunda çeşitli haklar elde etmişlerdir. Bu anlamda kadınların en dikkat çeken sosyal ve siyasal mücadelelerinden birisi, kadınların erkeklerle eşit oy hakkından yararlanabilmek, seçme ve seçilme haklarını kazanmak için verdikleri mücadele olmuştur. Birinci ve İkinci Dünya Savaşları'ndan sonra dünyanın büyük çoğunluğunda kadınlar seçme ve seçilme haklarını elde etmişlerdir. Kadınların seçme ve seçilme haklarını kazanmalarıyla başlayan bu süreç, günümüzde sosyal, siyasal, ekonomik ve kültürel konularda sürdürülen mücadele ile devam etmektedir. İnsan hakları, demokrasi ve eşitlik açısından gerçekleşen gelişmelere rağmen, dünya genelinde hala kadınların seçme ve seçilme haklarından yararlanabildiklerini söylemek olanaklı olmadığı gibi, kadınlara karşı hemen her alanda her tür ayırımcılık da varlığını korumaktadır.

Günümüzde kadınlar diğer alanlara göre en çok ekonomik yaşama katılım konusunda ayırımcılığa maruz kalmaktadır. Kuşkusuz bu durumun en önemli nedenlerinden biri, kadını ekonomide erkeklerle aynı mesleki fırsatlardan ve eşit ücretten yararlanmaktan alıkoyan sosyo-kültürel engellerin varlığını korumasıdır. Gerçekten de kadınların yaptığı işin, aileye destek olmak için yapılan bir çalışma olduğu yolundaki geleneksel anlayış, kadınlara ekonomik büyüme dönemlerinde gereksinim duyulan ve gerileme dönemlerinde bir kenara itilen, yedek işgücü niteliği kazandırmaktadır. Bu nedenle kadınlar erkeklerle çalışma hakkına az çok eşit koşullarda sahip olduklarında bile, çocuk yetiştirme ve ev işi hala sadece kadınların sorumluluğu olarak görüldüğünden, ya çifte emek harcamak durumunda kalmakta ya da işgücü piyasasından çekilmek zorunda kalmaktadır. Dolayısıyla kadınlar, ekonomik yaşamın dışına itilmekte ve ekonomik yaşamda yer alsalar bile erkeklerle karşılaştırıldığında pek de varlık gösterememektedirler.

Bu çalışmanın amacı, Türkiye'de kadınların ekonomik yaşama katılım konusunda ayırımcılığa maruz kalıp kalmadıklarının, Birleşmiş Milletler Kalkınma Programı (UNDP) tarafından geliştirilmiş insani gelişmişlik indeksine göre kendisi ile birlikte aynı grupta yer alan geçiş ekonomileri ile karşılaştırmalı bir değerlendirmesini yapmaktır.

2 Kadınların Ekonomik Yaşama Katılımının Saptanması

Kadınların ekonomik yaşama katılımı konusunda erkeklere göre ayırımcılığa maruz kalıp kalmadıklarının tespitinde, iki ölçütten yararlanılmaktadır. Bu ölçütler; kadın ve erkeklerin üç ana sektör içindeki istihdam payları ve aile çalışanlarının kadın ve erkek olarak toplam gelirdeki yüzdesel paylarıdır. Bu bağlamda Türkiye'de kadınların erkeklere kıyasla ekonomik yaşama katılım konusunda bir ayırımcılığa maruz kalıp kalmadıklarının tespitinde, UNDP tarafından geliştirilmiş iki indeksten yararlanılmaktadır. Bu indekslerden ilki, Siyasal ve Ekonomik Yaşama Katılım İndeksi (GEM), diğeri ise Cinsiyetlerle İlgili İnsani Gelişme İndeksi ya da Yaşam Kalitesi İndeksidir (GDI).

Mesleki ve teknik işgücü içerisinde kadın işgücünün oranı ölçütü dışında, kadının siyasal ve ekonomik yaşama katılımını belirlemek ve bu konuda kadın-erkek arasındaki eşitsizliklerin boyutlarını göstermek amacıyla kullanılan GEM, "parlamentodaki kadın milletvekili sayısı", "yönetici pozisyonunda olan kadın yüzdesi", ve "toplam kazanılmış gelir içerisinde erkeğin kazancına oranla kadına düşen pay" ölçütleri esas alınarak hesaplanmaktadır. GEM'in de alabileceği en yüksek değer "1", en düşük değer ise "0"dır. Yukarıda değinilen ölçütler çerçevesinde, kadının siyasal ve ekonomik yaşama katılımının yüksek olduğu ve bu konuda kadın-erkek eşitsizliğinin düşük olduğu ülkelerde, GEM değerinin "1"e yaklaştığı, kadının siyasal ve ekonomik katılımının düşük olduğu ve bu konuda kadın-erkek eşitsizliğinin yüksek olduğu ülkelerde ise, söz konusu indeks değerinin "0"a yaklaştığı görülmektedir (Karaca ve Kocabaş, 2010: 74).

GDI "sağlık", "eğitim" ve "refah" olmak üzere üç standart ve bu standartları belirleyen dört ayrı ölçüt esas alınarak hesaplanmaktadır. Sağlık standardını belirleyen ölçüt, "ortalama yaşam beklentisi"; eğitim standardını belirleyen ölçüt, "kadın ve erkek okuma-yazma oranı" ve "kadın ve erkek okullaşma oranı"; refah standardını belirleyen ölçüt ise, "ortalama gelir düzeyi" (kazanılan gelir içersinde erkek ve kadının % payı)'dır.

GDI'nın alabileceği en yüksek değer "1", en düşük değer ise "0"dır. Yukarıda değinilen standartlar ve bu standartları belirleyen ölçütler çerçevesinde, kadının toplumsal katılımının yüksek olduğu ve bu konuda kadın-erkek eşitsizliğinin düşük olduğu ülkelerde, GDI değerinin "1"e yaklaştığı, kadının toplumsal katılımının düşük olduğu ve bu konuda kadın-erkek eşitsizliğinin yüksek olduğu ülkelerde ise, söz konusu indeks değerinin "0"a yaklaştığı görülmektedir.

3 Türkiye'de Kadınların Ekonomik Yaşama Katılımı

3.1 İstihdam Ölçütüne Göre

Türkiye'de kadınların ekonomik yaşama katılım konusunda erkeklerle karşılaştırılabilmeleri için yıllar itibariyle sektörler bazında istihdamdaki payları Tablo 1'de gösterilmiştir.

Yıllar	Kadınların Ekonomik Faaliyeti (15 yaş ve üstü)			Çalıştığı Ekonomik Faaliyet Alanı (%)						Ücretsiz Aile İşçiliği		Kadın Profesyonel ve Teknik Çalışan Oranı (Toplamın %'si)
	Oran (%)	İndeks	Erkeklere Oranı (%)	Tarım		Sanayi		Hizmet				
				Kadın	Erkek	Kadın	Erkek	Kadın	Erkek	Kadın	Erkek	
2001	49.3	111	60	65	30	13	29	21	40	-	-	33.9
2002	49.9	114	61	72	34	10	25	18	41	-	-	36
2003	50.3	115	62	72	34	10	25	18	41	65	35	36
2004	50.8	116	62	56	32	15	56	29	60	68	32	31
2005	51.2	117	63	56	24	15	28	29	48	68	32	31
2006	27.8	81	36	56	24	15	28	29	48	67	33	30
2007-2008	27.7	81	36	52	22	15	28	33	50	67	33	31

Tablo 1: *Türkiye'de Yıllar İtibariyle Kadın ve Erkeklerin Üç Ana Sektör İçindeki İstihdam Payları* **Kaynak:** *UNDP, 2000-2008, Web: http: http://hdr.undp.org.*

Tablo 1'de görülebileceği üzere, Türkiye'de 15 yaş ve üstü kadınların ekonomik faaliyet oranı 2001-2005 yılları arasında 49.3-51.2 arasında değişmekte iken, bu oran 2006-2008 yılları arasında 27.7'ye gerilemiştir. Bu sonuç, Türkiye'de kadınların 2000 yılından itibaren işgücüne katılım oranlarının (İKO) düşmesi ile açıklanabilir. Literatür incelendiğinde, Türkiye'de kadınların İKO'sunu düşüren nedenlerin geleneksel işbölümü, kadınların eğitim düzeylerinin düşüklüğü, kadınların ücretsiz aile işçisi olarak çalıştırılmaları, kayıt dışı istihdam, yasal düzenlemeler ve kadınların ayırımcılıkla karşılaşma risklerinin yüksekliği olduğu görülür (Lordoğlu, 1990; Toksöz, 1999: 60; Törüner-Lordoğlu-Özkaplan, 1999: 44-46; Özer-Biçerli, 2003: 64-66; Minibaş, 2005; Selamoğlu-Lordoğlu, 2006: 197; Karadeniz-Yılmaz, 2007: 35-40; Türk Girişim ve İş Dünyası Konfederasyonu (Türkonfed), 2007: 21, 22; Budak-Özkaya, 2007: 44; T.C. Başbakanlık Kadının Statüsü Genel Müdürlüğü, 2008: 10).

Tablo 1 incelendiğinde, özellikle 2003 yılından itibaren %20'lik bir azalma göstermesine rağmen, Türkiye'de kadının tarımdaki istihdam payının hala erkeklerden çok yüksek olduğu, buna karşın kadının sanayi ve hizmet sektöründeki istihdam payının erkeklerden çok düşük olduğu ve bu sektörlerde yıllar itibariyle kadın istihdam payında ciddi bir artış olmadığı görülmektedir. Dolayısıyla Türkiye'de hala tarım, kadınlar için temel istihdam kaynağı olmaya devam etmektedir. Kadınların tarımdan sonra en çok hizmet sektöründe istihdam edilmektedir. İstihdam edilen kadınların önemli bir kısmının ücretsiz aile işçisi statüsünde olduğu görülmektedir.

Tablo 1 incelendiğinde, Türkiye'de mesleki ve teknik işgücü içerisinde kadın işgücünün oranı bakımından kadın ve erkek arasında yıllar itibariyle ciddi bir farklılık olmadığı görülmektedir.

3.2 Ortalama Gelir Düzeyi Ölçütüne Göre

Türkiye'de kadınların ekonomik yaşama katılım konusunda erkeklerle karşılaştırılabilmeleri amacıyla Tablo 2'de yıllar itibariyle "*ortalama gelir düzeyi*" ölçütü yönünden kadın-erkek eşitliği/eşitsizliğinin boyutları gösterilmiştir.

	GDI		Tahmini Gelir (Satınalma Gücü Paritesi, ABD Doları)	
Yıllar	GDI Sıra	GDI Değeri	Kadın	Erkek

Tablo 2: Türkiye'de Yıllar İtibariyle Ortalama Gelir Düzeyi Yönünden Kadın-Erkek Eşitliği/Eşitsizliğinin Boyutları **Kaynak***: UNDP, 2000-2008.*

Tablo 2'de görülebileceği üzere, 2007-2008 yılları itibariyle erkeklerin ortalama gelirlerinde (12.368$) diğer yıllara göre ciddi bir artış söz konusu iken, kadınların ortalama gelirlerinde (4.385$) 2000 ve 2004 (4.703$ ve 4.757$) yıllarına göre büyük bir azalma olmuştur. Bu durum, ülkemizdeki kriz sonrası ilk olarak kadınların işten çıkarımının ya da bir kriz ortamında kadınların daha az ücretli işlere razı olduklarının bir göstergesi olarak algılanabilir. Gerçekten de kadınların yaptığı işin, aileye destek olmak için yapılan bir çalışma olduğu yolundaki yaygın görüş, kadınların, ekonomik büyüme dönemlerinde gereksinme duyulan ve gerileme dönemlerinde bir kenara itilen yedek bir işgücü oluşturduğu düşüncesine yol açmaktadır (TİSK, 2002: 30).

4 Geçiş Ekonomilerinde Kadının Ekonomik Yaşama Katılımı ve Türkiye Karşılaştırması

4.1 İstihdam Ölçütüne Göre

Geçiş ekonomilerinde ve Türkiye'de kadınların ekonomik yaşama katılım konusunda erkeklerle karşılaştırılabilmeleri için yıllar itibariyle sektörler bazında istihdamdaki payları Tablo 3'te gösterilmiştir.

Tablo 3'te de görülebileceği üzere, kadın-erkek arasındaki eşitliğin/eşitsizliğin boyutları bakımından aralarında farklılıklar olabileceği varsayımı ile geçiş ekonomileri kendi arasında gruplandırılmıştır. Birinci grupta, CEE ülkeleri, ikinci grupta ise CIS ülkeleri yer almaktadır. Ayrıca CEE ülkeleri de kendi içinde AB'ye üye olan, AB'ye üye olmayan ve AB'ye aday ülkeler şeklinde üç gruba ayrılarak incelenmiş, AB'ye aday bir ülke olarak Türkiye'nin özellikle CEE ülkelerinden AB'ye aday olan iki ülke ve CIS ülkeleri ile karşılaştırması yapılmıştır.

Tablo 3 incelendiğinde, kadınların ekonomik faaliyet oranı bakımından CEE ülkelerinden Slovenya, Bosna Hersek ve Hırvatistan'ın ilk üç sırada; Bulgaristan, Letonya ve Polonya'nın son üç sırada yer aldığı görülmektedir. CIS ülkelerinden ise Kazakistan, Azerbaycan ve Özbekistan'ın ilk üç sırada; Ermenistan, Gürcistan ve Ukrayna'nın son üç sırada olduğu görülmektedir. Türkiye'nin ise, kadınların ekonomik faaliyet oranı bakımından son üç sırada yer alan CEE ve CIS ülkelerinden Letonya, Bulgaristan, Ermenistan ve Gürcistan'ın önünde yer almakla birlikte, diğer ülkelerin bir hayli gerisinde olduğu görülmektedir. Aynı şekilde Türkiye AB'ye üye olan CEE ülkelerinden Hırvatistan ve Makedonya'ya göre de, kadının ekonomik faaliyet oranı bakımından düşük indeks değerlerine sahiptir. Kadın ve erkeklerin üç ana sektör içindeki istihdam payları incelendiğinde, kadınların tarımsal istihdamdaki payının en yüksek olduğu üç CEE ülkesi Romanya, Hırvatistan ve Makedonya iken, kadınların tarımsal istihdamdaki payının en düşük olduğu üç CEE ülkesi ise Çek Cumhuriyeti, Slovak Cumhuriyeti ve Macaristan'dır. Kadınların sanayi istihdamındaki payının en yüksek olduğu üç CEE ülkesi Makedonya, Bulgaristan ve Çek Cumhuriyeti iken, kadınların sanayi istihdamındaki payının en düşük olduğu üç CEE ülkesi ise Letonya, Polonya ve Hırvatistan'dır. Kadınların hizmet sektöründeki istihdam payının en yüksek olduğu üç CEE ülkesi Macaristan, Letonya ve Slovakya iken, kadınların hizmet sektöründeki istihdam payının en düşük olduğu üç CEE ülkesi ise Romanya, Hırvatistan ve Bulgaristan'dır.

Kadın ve erkeklerin üç ana sektör içindeki istihdam payları incelendiğinde, yeterli veri olmamasına karşın kadınların tarımsal istihdamdaki payının en yüksek olduğu üç CIS ülkesi Gürcistan, Kırgızistan ve Moldovya iken, kadınların tarımsal istihdamdaki payının en düşük olduğu üç CIS ülkesi ise Rusya, Kazakistan ve Azerbaycan'dır. Kadınların sanayi istihdamındaki payının en yüksek olduğu üç CIS ülkesi Ukrayna, Rusya ve Moldovya iken, kadınların sanayi istihdamındaki payının en düşük olduğu üç CIS ülkesi ise Gürcistan, Kırgızistan ve Kazakistan'dır. Kadınların hizmet sektöründeki istihdam payının en yüksek olduğu üç CIS ülkesi Rusya, Ukrayna ve Kazakistan iken, kadınların hizmet sektöründeki istihdam payının en düşük olduğu üç CIS ülkesi ise Gürcistan, Kırgızistan ve Moldovya'dır.

Tablo 3'teki verilere dayalı olarak Türkiye'de kadın ve erkeklerin istihdam bakımından sektörel dağılımları incelendiğinde, tarımda çalışan kadınların oranının neredeyse hizmet ve sanayi sektöründe çalışan kadınların oranına eşit olduğu; Türkiye'nin, tarımda kadın istihdamı bakımından Rusya hariç CIS ülkeleri ile benzerlik gösterdiği; CIS ülkeleri ve Türkiye'nin aksine, CEE ülkelerinde kadınların hizmet sektöründeki payının çarpıcı bir şekilde yüksek olduğu görülmektedir. Bu durum Türkiye'nin CEE ülkeleri ile karşılaştırılamayacak boyutta, tarımda kadın istihdamına sahip olduğunu ortaya koymaktadır.

Tablo 3 incelendiğinde, AB'ye yeni üye olan CEE ülkelerinden Bulgaristan, Estonya, Romanya ve Slovakya ile AB'ye aday ülke olan Hırvatistan'da ücretsiz aile işçisi olarak çalıştırılan kadın oranının Türkiye'den yüksek olduğu görülmektedir. Buna karşın aynı oranın Moldovya hariç tüm CIS ülkelerine göre Türkiye'de yüksekliği dikkat çekicidir.

Kadınların ekonomik yaşamdaki statülerini ortaya koyan göstergelerden ikincisi olan mesleki ve teknik işgücü içerisinde kadın işgücünün oranı yönünden bir karşılaştırma yapıldığında, mesleki ve teknik personel içerisinde kadınların oranının Türkiye hariç tüm CEE ve CIS ülkelerinde %50-70 arasında değiştiği görülmektedir. Türkiye'de ise bu oran %32'dir. Bu sonuç, CEE ve CIS ülkelerinde kadınların mesleki ve teknik personel içerisindeki oranının erkeklere göre daha yüksek olduğunu, buna karşın Türkiye'de bu oranın kadınlarda erkeklere göre çok daha düşük olduğunu ortaya koymaktadır.

| | Kadınların Ekonomik Faaliyeti (15 yaş ve üstü) | | | Çalıştığı Ekonomik Faaliyet Alanı (%) | | | | | | Ücretsiz Aile İşçileri | | Kadın Profesyonel ve Teknik Çalışanların Oranı (Toplamın %'si) |

Tablo 4: *2008 Yılı İtibariyle Geçiş Ekonomileri ve Türkiye'de Ortalama Gelir Düzeyi Yönünden Kadın-Erkek Eşitliği/Eşitsizliğinin Boyutları* **Kaynak:** *UNDP, 2000-2008.*

Türkiye'de kadın-erkek eşitsizliğinin ortalama gelir düzeyi ölçütü yönünden boyutlarını ortaya koymak bakımından geçiş ekonomileri ile bir karşılaştırma yapıldığında ise, Tablo 4'te görülebileceği üzere Slovenya'da tahmini olarak kazanılan gelir içerisinde kadının payının 17.022$, erkeğin payının ise 27.779$ olduğu; buna karşın Türkiye'de ise tahmini olarak kazanılan gelir içerisinde kadının payının 4.385$, erkeğin payının ise 12.368$ olduğu görülmektedir. Geçiş ekonomileri arasında tahmini olarak kazanılan gelir içerisinde kadının payının en düşük olduğu ülke 992$ ile Tacikistan'dır. Tacikistan'da erkeğin payı 1.725$'dır. Kırgızistan 1.414 $, Özbekistan 1.547$ ile tahmini olarak kazanılan gelir içerisinde kadının payının düşük olduğu ülkelerdir. Erkeğin payı ele alındığında Kırgızistan'da 2.455$ ve Özbekistan'da da 2.585$'dır. CEE ülkelerinde genel olarak ortalama gelir düzeyi bakımından kadın ve erkek arasındaki eşitsizliğin göreli olarak düşük olduğunu, buna karşın söz konusu ölçüt bakımından CIS ülkelerinde kadının payının görece az olduğu söylenebilir. Ancak burada dikkat edilmesi gereken bir durum da genel olarak CIS ülkelerindeki ücret düzeylerinin CEE ülkelerine kıyasla daha düşük düzeyde olduğudur. Türkiye bu tablo içerisinde kadın ve erkek arasındaki eşitsizliğin çok ciddi boyutlarda olduğu ancak CIS ülkeleri de göz önünde bulundurulduğunda orta sıralarda yer aldığını ortaya koymaktadır. İnsani gelişme yönünden kadın ve erkekler arasındaki gelir eşitsizliği, sadece AB ülkeleri ile Türkiye karşılaştırıldığında değil, AB ile AB'ye aday olan diğer iki ülke arasında ve hatta AB'ye üye olan ilk 15 ülke ile AB'ye üye olan son 10 ülke arasında da görülmektedir (Karaca ve Kocabaş, 2010).

5 Sonuç

Gelişmekte olan ülkeler ile geçiş ekonomilerinde olduğu gibi, Türkiye'de erkeklerle karşılaştırıldığında kadınların ekonomik yaşama katılımının son derece düşük olduğu görülmektedir. Belirtmek gerekir ki,

kadınların ekonomik yaşama katılımı bakımından geçiş ekonomileri de kendi içlerinde homojen bir yapı göstermediği gibi, CEE ülkeleri ile CIS ülkeleri arasında da ciddi farklılıklar söz konusudur. Hatta bu farklılıklar, iki kategoriye ayrılan geçiş ekonomilerinin kendi içlerinde de söz konusudur. Nitekim araştırma bulguları, toplumsal işbölümü, ekonomik kalkınma, eğitim düzeyi, ücretsiz aile işçiliği, kayıt dışı istihdam, yasal düzenlemeler, ayrımcılıkla karşılaşma risklerinin yüksekliği ve çalışma/çalışmama tercihleri ölçütleri bakımından genel olarak CEE ülkelerinde kadınların ekonomik etkinliğe katılımının CIS ülkelerinden yüksek olduğunu ortaya koymaktadır. Geçiş ekonomilerinde ve özellikle CIS ülkelerinde kadının ekonomik yaşama katılımının yüksek olması, bu ülkelerde kadın-erkek eşitliği politikalarına dayalı planlı ekonomi döneminde oluşturulan altyapı ile açıklanabilir. Burada söz konusu edilen alt yapı kavramının geniş düşünülmesi gerekir. Zira her şeyin bireylerin ekonomik yaşama katılımının en yüksek düzeyde olması düşünülerek planlandığı bir ekonomik düzende, kadınların İKO'larını düşüren nedenlerin varlığından söz edilemez.

Ekonomide, eğitimde, kentleşmede ve iletişimde görülen tüm gelişmelere rağmen, istatistikler kadınların Türkiye'de istihdama giderek daha az katıldığını, istihdamda kısa sürelerle kaldıklarını göstermektedir. Başka bir deyişle, kadınlar çalışma yaşamına ya hiç girmemekte ya da girseler bile ilk fırsatta ve kolayca ayrılmaktadırlar. Bu durumun nedeni, kadınların erkeklere göre sigortasız, güvencesiz, örgütsüz, düşük ücretli, çalışma zamanı çoğu zaman belirsiz ve uzun, çalışma koşullar kötü olan kayıt dışı sektörde çalışmalarıdır. Gerçekten de Türkiye'de tarımın gayri safi milli gelir içerisindeki payının hızla küçülmesi ve kırsal yörelerde iş imkanlarının azalması, beraberinde köyden kente göç sürecini hızlandırmıştır. Köyden kente göçle gelen yeni kentli kadının sanayide ve hizmetlerde yaratılan istihdam kapasitesinden yeterince yararlanamaması, onları kayıt dışı istihdama yönelterek İKO'larının düşmesine yol açan önemli bir etken olmuştur.

Kırsal kesimde tarımda ücretsiz aile işçisi olarak çalışan kadın, kente göç ettiğinde nitelikli olmadığı için ya niteliksiz işlerde çalışmakta ya da işgücüne katılmaktan vazgeçmektedir. Bununla beraber eğitimli kadın, işgücü piyasasına girdiğinde, erkeklere göre daha düşük gelir elde etmekte ve işyerinde yükselememektedir. Diğer taraftan mesleki eğitim sisteminden kaynaklanan sorunlar da meslek eğitimi almış kadınların İKO'larını olumsuz yönde etkilemektedir.

Türkiye'de kadınların özellikle ücretsiz aile işçisi olarak tarım sektöründe çalışması ve kadının görünmeyen emek olarak ücretsiz çalışmasının, aile çalışanlarının toplam gelire katkısı hesaplanırken dikkate alınması, diğer ülkelerde olduğu gibi, ülkemizde de kadının toplam gelire katkısının erkekten daha yüksek çıkmasına neden olmaktadır. Sonuç olarak, ekonomik faaliyet oranı ve indeks değerinin oluşturulması ile söz konusu hesaplamaların yapılmasında dikkate alınan ölçütler bakımından kadın-erkek arasındaki eşitsizliğin devam ettiği söylenebilir.

Türkiye'de Kadınların ekonomik yaşama katılımının düşüklüğü formel sektör için geçerlidir. Çünkü kadınların ekonomik etkinliğe katılım oranlarının belirlenmesinde, kadın işgücünün erkeklere göre daha yüksek düzeyde yer aldığı enformel ekonomik faaliyetler göz ardı edilmektedir. Bu nedenle enformel ekonomik faaliyetler kayıt altına alınamadığı sürece, Türkiye'de kadınların ekonomik yaşama katılımının düşüklüğü devam edecektir. Ancak Türkiye'de kadınların ekonomik yaşama katılımının düşüklüğü, sadece kadınların enformel istihdam içinde yer alması ile açıklanamaz. Bu konuda başka nedenlerin olduğu da gözden kaçırılmamalıdır. Nitekim Türkiye'de kadın işçileri korumak amacıyla yapılan kanuni düzenlemeler; işe almada erkeklerin tercih edilmesine, kadınların korunması gereken zayıf cinsiyet imajı vermelerine neden olmakta ve kadınların yüksek ücretli işlere girişlerini engelleyerek özellikle kentli kadınların İKO'larını azaltmaktadır. Ayrıca Türkiye'de kadınların İKO'larının düşmesine neden olan bir diğer faktör ise, yasal düzenlemelerle yasaklanmış olmasına ve yapılması halinde ağır yaptırımlara bağlanmış olunmasına karşın, kadına yönelik yapılan ayrımcılık ve çalışma koşullarındaki olumsuzluktur.

Yapılan açıklamalar bağlamında, sonuç olarak Türkiye'de enformel ekonomik faaliyetler kayıt altına alınsa bile, ücretsiz aile işçiliğinin önlenmesine yönelik politikalar geliştirilmedikçe, kadının ekonomik faaliyetteki konumunun değişmeyeceği söylenilebilir. Bu bakımdan özellikle kadınların işgücüne katılımını özendirici ve yönlendirici –kota sistemi gibi- politikaların gelişmiş Dünya ülkelerinde olduğu gibi, Türkiye'de de hayata geçirilmesi önem arz etmektedir.

Disincentive Factors for Transformation of the Economic Cooperation Organization to Regional Integration: An Assessment Regarding Intra-regional Trade

Assoc. Prof. Dr. Hamza Çeştepe (Bülent Ecevit University, Turkey)
Ph.D. Candidate Tamer Güven (Bülent Ecevit University, Turkey)

Abstract

In this study, the structure and level of intra-regional trade in Economic Cooperation Organization (ECO), which is a movement of regional cooperation founded in the Western and Central Asia region, has been analyzed. In ECO, with a share below its potential at the world trade, intra-regional trade is low relative to other regional integrations such as the European Union. However, the volume of intra-regional trade in the region countries, except a few countries, tend to increase in recent years. In this study, as a result of the evaluation made by the indices calculated, it was found that the region countries is in the position of more complementary economies in context of foreign trade; the countries has generally a high trade intensity with its neighbors; intra-industry trade in the region is at low level. As a result, although the level and structure of intra-regional trade in ECO region seems to be disincentive for the transformation to regional integration as of today, recent developments suggest that this obstacle will gradually diminish in the future. In addition, if some of advantages and potential of the region in terms of regional integration can be valued it does not seem very difficult to reach more advanced stages of integration for this cooperation movement.

1   Giriş

Günümüz dünya ekonomisinin en önemli gerçekliklerinden ikisi küreselleşme ve bölgeselleşme hareketleridir. Aslında birbirine zıt gibi görünen bu olgular 1980'li yıllardan itibaren birbirini destekler şekilde hız kazanmış, ticaretin küreselleşmesinin temel aracısı konumunda olan GATT 1995'te Dünya Ticaret Örgütü'ne dönüşerek kurumsal yapıya kavuşmasına rağmen, bölgeselleşmeye olan eğilim son yıllarda daha da ivme kazanmıştır.

Genellikle belirli bir coğrafi bölgede yer alan ülkeler arasında dış ticaret ve diğer ekonomik faaliyetleri serbestleştirmeyi ve geliştirmeyi hedefleyen bölgeselleşme eğilimleri, ikinci dünya savaşı sonrasında iki dalga şeklinde gerçekleşmiştir. 1950'lerin sonundan itibaren 1960'lar ve 1970'ler boyunca dünya ekonomisinde yer alan "ilk bölgeselleşme" ya da Bhagwati'nin (1992) tabiriyle "eski bölgeselleşme" dalgasında bölgesel entegrasyonlar Kuzey-Kuzey ya da Güney-Güney arasında kurulmuşlardır. Başka bir ifadeyle bölgeselleşmede ağırlıklı olarak ticari hedeflere odaklanılan bu dönemde, gelişmiş ülkeler kendi aralarında gelişmekte olan ülkeler de yine kendi aralarında bölgesel entegrasyonlar oluşturmuşlardır. 1980'lerin sonunda ortaya çıkan ve günümüzde de devam eden ikinci ya da "yeni bölgeselleşme" dalgası ise ilk dalgayla benzer yönleri yanında çok önemli farklılıkları da beraberinde getirmiştir. En önemli farklılıklardan biri, ilkinin aksine yeni dalganın Kuzey-Güney birlikteliğine de izin vermesi yani daha kapsayıcı bir nitelik arz etmesidir. Bunun yanında gelişmiş ülkeler kendi aralarında, gelişmekte olan ülkeler de yine kendi aralarında bölgesel entegrasyon oluşturabilmektedir. Temeli 1960'lara dayanan Ekonomik İşbirliği Teşkilatı (Economic Cooperation Organization-ECO) da, benzer amaçlarla Batı ve Orta Asya bölgesindeki gelişmekte olan ülkeler arasında kurulmuş bir entegrasyon hareketidir.

Gelişmekte olan ülkelerin bölgesel entegrasyonlar kurmak ya da bunlara üye olmak istemelerinin siyasi nedenleri de olmakla birlikte ekonomik nedenlerin daha ağır bastığı söylenebilir. Nitekim 1960'larda gelişmekte olan ülkeler arasında kurulan bölgesel entegrasyonlarda gelişmiş ülkelere olan ekonomik bağımlılığı azaltmak ve oluşturulacak tercihli ticaret anlaşmalarıyla ortaya çıkacak ölçek ekonomilerinden yararlanmak düşüncesinin etkin olduğu görülmektedir. Bu ülkeler, entegrasyonlarla genişleyen piyasalarda verimlilik ve rekabet düzeylerini artırarak sanayileşme ve kalkınma düzeylerini geliştirmeyi hedeflemektedirler.

Bölgesel entegrasyonlarda birlik ülkelerinin birbirlerinin ürünlerine yönelik talebinin yüksek düzeyde olması ticaret yaratma etkisinin yüksek düzeyde olmasını sağlar. Başka bir ifadeyle bölge içi ticaret ne kadar fazlaysa bölgesel entegrasyonun başarı şansı da o kadar artmaktadır. Bu çalışmanın amacı, temeli 1960'lara dayanan, üye ülkelerdeki birtakım siyasi gelişmelerden dolayı işbirliğinden öteye gidemeyen, ancak son yıllarda Türkiye'nin çabalarıyla tekrar önem verilmeye başlanılan ECO bölgesinde bölge içi ticaretin düzeyini ve yapısını incelemektir. Şu andaki işbirliğini ileride bir bölgesel entegrasyona götürmeyi amaçlayan ECO'nun bu süreçte avantajları yanında bölge içi ticaretin düşüklüğü gibi bazı dezavantajları da bulunmaktadır. Ancak, bölgesel entegrasyonların amaçlarından biri de bu dezavantajları bu tür birleşmeler yoluyla avantaja dönüştürmektir.

Konuyla ilgili olarak literatürde yapılan fazla çalışma bulunmamaktadır. Bölgede entegrasyon açısısından fazla bir gelişme olmadığı için ve biraz da veri eksikliği nedeniyle sınırlı sayıda çalışma yapılmıştır. Var olan çalışmalar da genellikle Türkiye ve Türk Cumhuriyetleri arasındaki ekonomik ve ticari ilişkiler üzerine yoğunlaşmıştır.

Çalışmada, bölgesel bir entegrasyona evrilmek isteyen ECO bölgesinde bölge içi ticaretin düzeyi ve yapısı, istatistiksel veriler ve ihracat benzerliği, ticaret yoğunluğu gibi bazı indeksler yoluyla ortaya konulmaya çalışılmıştır. Endeksler hesaplandıktan sonra bölgenin geneli ve bölge ülkeleri açısından yorumlanmış ve değerlendirilmiştir.

Çalışmanın giriş bölümünden sonraki ilk bölümünde ECO bölgesinin ve bölge ülkelerinin ekonomik yapısı ortaya konulmuştur. Ardından bölgenin bölgesel entegrasyon açısından avantaj ve dezavantajları ele alınmıştır. Daha sonraki bölümde, ECO'da bölge içi ticaretin düzeyi ve yapısı çeşitli endekslerden yararlanılarak analiz edilmiştir. Çalışmanın sonunda ise genel sonuçlar yer almaktadır.

2 ECO Bölgesinin ve Bölge Ülkelerinin Ekonomik Yapısı

Ekonomik İşbirliği Teşkilatı Türkiye, İran ve Pakistan arasında bölgesel ekonomik, teknik ve kültürel işbirliğini geliştirmek amacıyla 1985 yılında kurulmuştur. Oluşumun temeli aslında 1964 yılında, adı geçen üç ülke arasında daha önce kurulmuş olan Bölgesel Kalkınma İşbirliği Örgütü'ne (Regional Cooperation for Development-RCD) dayanmaktadır. 1977'de İzmir'de yapılan RCD Zirvesi'nde alınan karar doğrultusunda hazırlanan İzmir Anlaşması, Teşkilat'ı kuran temel belge olarak aynı tarihte imzalanarak bir yıl sonra yürürlüğe girmiştir. Ancak, 1979 yılında İran İslam Devrimi'nin gerçekleşmesi İzmir Antlaşması'nın askıya alınmasına yol açmıştır. 1980'li yılların başlarında her üç üye ülkede yaşanan iç sorunların yatışması ve özellikle İran'da yönetimin istikrara kavuşması üzerine 1985 yılında İzmir Antlaşmasında yapılan bir değişiklikle RCD'nin Ekonomik İşbirliği Teşkilatı adı altında yeniden faaliyete geçmesi sağlanmıştır (DPT, 2013).

1992 yılına kadar üç üyesi olan ECO'ya, Sovyet Sosyalist Cumhuriyetler Birliği'nin dağılmasının ardından 18-29 Kasım 1992 tarihlerinde İslamabad'da yapılan Bakanlar Konseyi olağanüstü toplantısında Afganistan, Azerbaycan, Kazakistan, Kırgızistan, Tacikistan, Türkmenistan ve Özbekistan üye olmuş, böylece Teşkilat'ın üye sayısı 10'a yükselmiştir. Bunun yanında, aynı yıl Kuzey Kıbrıs Türk Cumhuriyeti'ne gözlemci üye statüsü verilmiştir.

ECO bölgesi toplamda yaklaşık 450 milyonluk nüfusu, 2,5 trilyon dolar büyüklüğünde bir ekonomik büyüklüğü ve 8 milyon kilometrekarelik bir alanı kapsamaktadır. Bu bağlamda, öncelikle nüfus ve coğrafi açıdan ECO'nun önemli bir potansiyele sahip olduğunu belirtmek gerekir. Dünya nüfusunun yaklaşık %6'sını barındıran bu bölgede nüfus artış hızı (%1,70) dünya ortalamasının (%1) oldukça üzerindedir. Bölgenin nüfus yapısına bakıldığında özellikle Pakistan, Türkiye ve İran'ın genç nüfus yapısıyla önemli bir işgücü potansiyeline sahip olduğu görülmektedir. ECO bölgesi doğal kaynaklar bakımından da zengin bir potansiyele sahiptir. Bunlar arasında başta petrol (dünyanın %7,4'ü) ve doğalgaz (dünyanın %9,2'si) olmak üzere işlenmemiş metaller, hidroelektrik gücü (dünyanın %3,3) ve pamuk (dünyanın %40) bölgenin bol olarak sahip olduğu doğal kaynakların en önemlilerdir (Shahabi, 2013).

	Nüfus	GSYİH (milyon $)	Enflasyon (%)	İşsizlik (%)	Dış Borç/ GSMH (%)	DYY (bin $)	IGE[b] (HDI)

[a]: 2010 değeri, [b]: İnsani gelişme endeksinde ülkenin sırası, v.y.: Veri yok.

***Tablo 1:** ECO Ülkelerinin Sosyoekonomik Göstergeleri (2011). **Kaynak:** World Bank, 2013, Ecosecretariat, 2013a; IMF, 2013.*

Bölgenin ekonomik büyüklüğüne bakıldığında 2000 yılında 491,2 milyar dolar olan Bölge GSYİH'sı (ki bu miktar o tarihte dünya üretiminin % 1.56'sını oluşturmaktaydı) Tablo 1'de görüldüğü gibi 2010 yılı itibariyle yaklaşık dört kat artarak 1,6 trilyon dolara ulaşmıştır. Böylece dünya üretiminde ECO bölgesi yaklaşık %2,5'lik bir paya sahip olmakla birlikte, bölgenin potansiyeli göz önüne alındığında bu payın yetersiz olduğunu söylemek mümkündür. Türkiye, İran, Pakistan ve Kazakistan bölge üretiminde öncü ülkeler olarak ön plana çıkmakta, bölge üretiminin yaklaşık %45'i Türkiye tarafından gerçekleştirilmektedir. Bölgede kişi başına ortalama gelir yaklaşık 4000 dolar civarında olup 2011 yılı itibariyle en yüksek kişi başına gelire sahip ülke Kazakistan (11.357 dolar), en düşük kişi başına gelire sahip ülke ise Afganistan (518 dolar)'dır.

Bölgenin enflasyon ve işsizlik değerlerine bakıldığında, bölgede 2011 yılı itibariyle ortalama enflasyon oranı %10,3'dür. Bölgede enflasyon oranının en yüksek olduğu ülkeler İran, Kırgızistan ve Pakistan'dır. Adı geçen üç ülkeden İran ve Kırgızistan'da enflasyon oranı bir önceki yıla göre iki kat artış göstermiştir. İran'da son dönemlerde %27'lere ulaşan yüksek enflasyon oranının en önemli sebeplerinin başında BM, AB ve ABD'nin bu ülkeye uyguladığı ambargonun geldiği çeşitli kesimler tarafından ifade edilmektedir. Bölgede en düşük enflasyon oranına sahip Tacikistan'da ise 2011 yılında fiyatlar genel düzeyi %0,5 azalış kaydetmiştir. Bölgede ortalama işsizlik oranı %6,5 civarında olup, 2011 yılı itibariyle işsizliğin en yüksek olduğu ülke İran (%12,31), en düşük olduğu ülke ise Kırgızistan (%2,49)'dır. Genç bir nüfusa sahip İran'da işsizliğin 15-29 yaş grubunda iki kat daha fazla (%24) olduğu ifade edilmektedir (Tümhaber, 2013). Bölgede Türk Cumhuriyetlerinde işsizlik oranları nispeten daha düşük düzeyde olup bazılarında işsizlik son dönemlerde düşme eğilimindedir.

Dış borç yükü açısından bölge ülkelerinin genel olarak hafif ağırlıkta dış borç yüküne sahip olduğu görülmektedir. Özellikle bölgedeki Türk Cumhuriyetleri, geçiş sürecinin ilk dönemlerinde uygulamaya konulan yapısal reformların sonucunda ortaya çıkan bütçe açıklarını finanse etmek, ithalatın finansmanına kaynak temin etmek ve ucuz uluslararası finansman kaynaklarından faydalanmak amacıyla dış borcu yoğun olarak kullanmaya başlamışlardır. Diğer taraftan, ülke içinde yeterince özel sermaye yapısının olmaması da, bu ülkeleri dış borçlanmaya itmiş ve borç yükleri artmıştır (Meriç, 2013). Ancak zaman içinde çoğunun dış borçlarının GSYİH'ya oranı düşmüştür. Dış borç/GSYİH kriterine göre en borçlu ülkeler Kazakistan, Tacikistan ve Türkiye'dir.

ECO bölgesine gelen doğrudan yabancı yatırımlar 90'lı yılların ikinci yarısından itibaren artmaya başlamış ve özellikle Türkiye'ye yönelik olarak 2000'li yılların ikinci yarısında daha da hız kazanmıştır. Türkiye dışında Kazakistan, Azerbaycan gibi petrol ve doğal gaz zengini ülkelerle Pakistan, bölgede en fazla doğrudan yatırım çeken ülkeler olarak ön plana çıkmaktadır. Yabancı yatırımlar, Kazakistan ve Azerbaycan'da petrol, doğal gaz ve diğer madencilik sektörlerinde yoğunlaşmıştır. Özbekistan ve Kırgızistan için ise, özellikle altın üretim sahalarında yabancı sermaye akımı yoğunlaşmıştır. Pakistan'da ilaç, kimyasal mamul, polyester iplik, gübre ve batarya üretimi ve otomotiv sanayii gibi alanlarda yoğunlaşmış olan yabancı yatırımlarda ABD, Avrupa ve Japon firmalarının etkin olduğu görülmektedir (Dikkaya ve Üzümcü, 2007). Türkiye'ye özellikle 2005 yılından itibaren yoğun bir şekilde genellikle OECD ülkelerinden gelen doğrudan yabancı yatırımlar ise daha çok hizmet sektörü ve imalat sanayinde yoğunlaşmıştır.

Birleşmiş Milletlerin İnsani Gelişme Raporuna (2011) göre, ECO ülkelerinin çoğu düşük ve orta dereceli insani gelişme gösteren ülkelerdir. İnsani gelişme endeksi (İGE) açısından sıralanan 187 ülke arasında en iyi durumda olan bölge ülkesi okuryazarlık oranın da en yüksek olduğu ülke Kazakistan, en kötü durumdaki ülke ise Afganistan'dır. Bölge ülkelerinin bu endeks sıralamasında üst sıralara tırmanabilmesi için, milli gelirin artışıyla birlikte eğitim, sağlık gibi sosyal hizmetlerin geliştirilmesi gerekmektedir.

3 ECO Bölgesinin Bölgesel Entegrasyon Açısından Avantaj ve Dezavantajları

Bölgesel ekonomik entegrasyonların etkileri, daha çok bölgesel entagrasyonun en önemli aşamalarından ya da şekillerinden biri olan gümrük birliği örneğinde ele alınmıştır. Nitekim bu konudaki ilk ve en önemli teorilerden birini ortaya koyan J. Viner (1950) de gümrük birliği üzerinden bölgesel entegrasyonların ekonomik etkilerini statik ve dinamik etkiler şeklinde incelemiştir. Gümrük birliklerinin ya da daha genel bir ifade ile bölgesel ekonomik entegrasyonların başarılı olabilmesi için birtakım şartların olması gerekir. Başka bir ifadeyle bölgenin ve bölge ülkelerinin bazı şartlara sahip olması ya da olmaması bölgesel entagrasyonun başarısını etkilemektedir. Bu şartları ECO açısından aşağıdaki şekilde değerlendirebiliriz:

Gümrük birliğinin yer aldığı ekonomik alanının büyük olması ve çok sayıda ülkeden oluşması birlik kapsamında daha iyi bir uluslararası işbölümünün ortaya çıkmasını sağlar (Viner, 1950). Böylece ticaret yaratma etkisi daha büyük olacağı için entegrasyonun başarı şansı artar. Şu anda on üyesi bulunan ve geniş bir coğrafyaya ve ekonomik potansiyele sahip olan ECO'nun bu açıdan nispeten iyi durumda olduğu söylenebilir. Tabi, daha ileri entegrasyon aşamalarına ulaşabildiğinde oluşumun üye sayısı daha da artabilir

Birlik ülkeleri coğrafi olarak birbirine ne kadar yakın olursa aralarındaki taşıma giderleri azalacak ve ticaret hacmi artacaktır. Bu nedenle gümrük birliklerinin genellikle komşu ülkeler arasında oluşturulması eğilimi yaygındır (Küçükahmetoğlu, 2008). ECO'ya bakıldığında bölge geniş bir coğrafi alana yayılmakla birlikte ülkelerin genelde Ön Asya ve Orta Asya bölgesinde yer aldıkları ve üye ülkelerin çoğunun birbiriyle komşu

oldukları görülmektedir. Ayrıca, günümüzde ulaşım araçlarındaki hızlı gelişmeler ülkeler arasındaki uzaklık dezavantajını önemli ölçüde azaltmıştır.

Ekonomik birlik içerisinde yer alan ülkeler arasında ekonomik gelişme seviyesi bakımından önemli ölçüde fark yok ise, entegrasyon daha başarılı olmaktadır. AB ve EFTA bunun örneklerini oluşturmaktadır. Eğer ülkeler arasında gelişmişlik düzeyi farkı çok fazla ise, "Kutuplaşma Teorisi"ne göre sanayisi geri olan ülkelerin gelişmiş sanayi ülkeleri ile rekabet imkanı güçleşecektir. Bölge içi serbest dolaşım sağlandığında işgücü ve sermaye yüksek gelir elde etmek amacıyla gelişmiş ülkelere akacak, böylece farklı gelişme düzeyindeki ülkeler arasında gelişmişlik farkı daha da artacaktır (Karluk, 2002). ECO bölgesinde gelişmişlik düzeyine bakıldığında Türkiye, İran ve Kazakistan gibi gelişmişlik düzeyi nispeten daha iyi ülkeler yanında Afganistan, Tacikistan ve Kırgızistan gibi gelişmişlik düzeyi çok düşük ülkeler yer almaktadır. Bu durum bölgesel entegrasyon önünde en önemli engellerden biri olmakla birlikte muhtemel entegrasyonun pazarın genişlemesi, mali yardımlar, politikaların koordinasyonu gibi gelişmelerle ileriki aşamalarda farkın azalmasını sağlama imkanı bulunmaktadır.

Gümrük birliği ülkelerinin rakip ekonomiler olması durumunda elde edilecek kazanç yüksek düzeyde, tamamlayıcı ekonomiler olması durumunda ise düşük düzeyde olur (Viner, 1950). Bu durumu üretim maliyetleri ve dış ticaret açısından iki şekilde düşünmek mümkündür. Gümrük birliklerinin rakip mallar üreten ülkeler arasında verimi artıran etkisi olduğu, iç üretim yapıları tamamlayıcı nitelikteki ülkeler arasında ise, bu etkinin bulunmadığı kabul edilmektedir. Üretim açısından bakıldığında bölge ülkelerinin çoğunun rakipten ziyade tamamlayıcı ekonomi durumunda oldukları görülmektedir. Buna göre, *rekabetin* sertleşmesinden sağlanacak yarar beklentisi sınırlı kalmaktadır. Dış ticaret açısından da bölge ülkelerinin durumu ise bir sonraki bölümde sayısal verilerle ortaya konulacaktır.

Gümrük birliği ülkelerinin birlik dışı ülkelerin ürünlerine yönelik talebinin düşük düzeyde, buna karşılık birbirlerinin ürünlerine yönelik talebinin yüksek düzeyde olması ticaret yaratma etkisinin yüksek düzeyde olmasını sağlar. ECO bölgesinde bölge içi ticaret oranı % 7 civarındadır. Avrupa Birliği'nde %70 civarındaki bölge içi ticaret oranıyla karşılaştırıldığında bu rakam çok düşük kalmaktadır. ECO ülkeleri birbirlerinden daha çok, bölge dışı ülkelerle ticaret yapmaktadır.

Bölgesel entegrasyonlarda resmi olarak dillendirilmese de ülkelerin ortak kültürel, tarihi, dini ve ahlaki değerlere sahip olması entegrasyonların başarısını etkileyen unsurlardan bir diğeridir. Bu konuda en önemli örnek olan Avrupa Birliği'nde Birliğin ortak görüşü olarak ifade edilmese de bireysel olarak bazı öncü ülke yetkilileri tarafından Türkiye'nin AB adaylığı konusunda engelleyici faktörlerden birinin bu olduğu çeşitli zamanlarda ve şekillerde dile getirilmiştir. ECO bölgesi bu açıdan avantajlı bir konumdadır. Çünkü bazı mezhep farklılıklarına rağmen ECO ülkelerinin tamamı Müslüman ülkelerden oluşmakta, Türkiye ile Türk Cumhuriyetleri arasında olduğu gibi bölge ülkelerinin birçoğu arasında ortak kültürel ve tarihi bağlar bulunmaktadır.

4 ECO Bölgesinde Bölge İçi Ticaretin Düzeyi ve Yapısı

İzmir Anlaşması'nın 2. Maddesinde (Ecosecretariat, 2013b) belirtildiği gibi diğer amaçlarla birlikte ECO, bölge içi ticaretin ve bölgenin dünya ticaretinde oynadığı rolün artırılmasını amaçlamaktadır. ECO bölgesi ülkeleri, gelişmişlik ve ekonomik yapı itibariyle birbirinden farklı ülkelerden oluşmaktadır. Bu durum bölge içi ticaretin düzeyini ve yapısını da önemli ölçüde belirlemektedir. Bölgeye bakıldığında Türkiye dışında bölge ülkelerinin yarıdan fazlasının dünya ekonomisine açılmasının üzerinden fazla zaman geçmediği, bazı ülkelerin ise dünya ekonomisine açılma sürecinin henüz başında oldukları için dış ticaret potansiyellerini tam olarak faaliyete geçiremediği görülmektedir.

ECO bölgesinin dış ticaret hacmi 2000 yılında yaklaşık 175 milyar dolar iken 2011 yılında yaklaşık beş kat artarak 850 milyar dolara çıkmıştır (Ecosecretariat, 2013a). Bu artış önemli olmakla birlikte bölgenin dünya ticaretinde aldığı pay (%2) düşünüldüğünde bölgenin dış ticaret hacminin, potansiyelinin oldukça altında olduğu söylenebilir. Bölge içinde en büyük ticaret hacmine sahip ülke Türkiye, en küçük ticaret hacmine sahip ülke ise Tacikistan'dır. Bölgede petrol ve doğal gaz gibi doğal kaynaklar bakımından zengin ülkeler dış ticaret fazlası verirken, adı geçen doğal kaynaklarda dışa bağımlı bölge ülkeleri dış açık vermektedir. Pakistan ve Türkiye dışında bölgeden yapılan ihracat başta petrol, doğal gaz olmak üzere maden fiyatlarının dünya piyasasında meydana gelen değişmelerine göre şekillenmektedir. İhracat açısından Türkiye ve Pakistan'ın performansları son dönemlerde dikkat çekmektedir. Bu iki ülke, son 20 yıl içerisinde imalat sanayinde büyük bir gelişim göstermiş, bu gelişme ülkelerin dış ticaret yapılarına da yansımıştır.

ECO bölgesinde bölgesel ticaretin gelişimini etkileyen iki temel faktörün olduğu ifade edilmektedir: Siyasal faktörler ve dış ticaret rejimleriyle tarife dışı engellerin ticarete etkisi (Tekeli ve Acartürk, 2008). Gelişmekte olan ülkelerin çoğunda görülen birbirlerine karşı güvensizlik, istikrarlı yönetimlerin olmaması ve siyasi huzursuzluklar gibi etkenler, bu ülkelerin kurdukları birliklerin başarılı olmasını engellemektedir (Dikkaya, 2002). Bu açıdan bölgede Türkiye dışında bölge ülkelerinin çoğunda demokrasinin ve serbest piyasa sisteminin henüz tam anlamıyla yerleşmemiş olması, bazı bölge ülkeleri arasındaki siyasal gerginlikler ve Rusya, İran gibi ülkelerin bölgedeki etkinliği ya da etkin olma çabası bölge içi ticaretin gelişimini etkilemektedir. Bunun yanında

bölge ülkelerinin çoğunun dış ticaret açısından kısıtlayıcı ticaret rejimi olmamasına rağmen, özellikle İran ve Özbekistan gibi ülkeler oldukça sıkı dış ticaret rejimine sahiptirler. Tarife oranlarının 0 ile %30 arasında değiştiği bölgede Özbekistan ve Tacikistan gibi ülkeler nispeten yüksek tarife oranları uygulamakta (Tekeli ve Acartürk, 2008) ve bölgede özellikle tarife dışı engeller bölge içi ticaretin artmasında önemli bir engel teşkil etmektedir.

Dış ticaretin kompozisyonuna gelince, tüm bölge açısından sanayi malları ticaretinin toplam ticaret içerisinde büyük öneme sahip olduğunu söylemek mümkündür. İran, Azerbaycan, Kazakistan ve Türkmenistan için petrol, petrol ürünleri ve doğal gaz gibi doğal kaynakların, Pakistan ve Türkiye için sanayi mallarının toplam ihracatın büyük bir kısmını oluşturduğu görülmektedir. İthalatın kompozisyonu bakımından ise, tüm ülkelerde, başta makine-teçhizat gibi sermaye malları olmak üzere sanayi malları ithalatı en büyük payı almaktadır.

Bölge-içi ticaretin düzeyi, daha önce belirtildiği gibi diğer pek çok bölgesel entegrasyonla karşılaştırıldığında ECO bölgesinde oldukça düşüktür. Bölge içi ticaretin bölgenin toplam ticaretinden aldığı pay sadece %5 olarak gerçekleşmektedir. Tablo 2'de görüldüğü gibi Türkiye, İran, Pakistan gibi bölgenin en büyük ekonomilerinin dış ticaretleri içerisinde ECO'nun payı oldukça düşüktür. Dış ticareti içinde ECO'nun payının yüksek olduğu Afganistan, Kırgızistan, Özbekistan gibi ülkelerin ise dış ticareti büyük ölçüde bunların komşusu olan bir ya da iki ülkeyle dış ticaretin yoğunlaşmasından kaynaklanmaktadır. Ancak birkaç ülke dışında Türkiye de dahil olmak üzere bölge ülkelerinin bölge içi ticaret hacmi son yıllarda artma eğilimindedir. Türkiye'nin dış ticareti içerisinde ECO'nun payı %7 gibi düşük bir orandır.

Ülke		2000	2003	2007	2008	2009	2010	2011

Not: Kazakistan ve Türkmenistan'la ilgili veri bulunamamıştır.

*Tablo 2: ECO Ülkelerinin Toplam Dış Ticaretleri İçerisinde ECO'nun Payı. **Kaynak:** Ecosecretariat 2013a.*

Bir ülkenin uluslararası piyasalarda rakiplerinin hangi ülkeler olduğunu belirlemek amacıyla ihracat benzerlik endeksi kullanılmaktadır. Benzer ürün ve sektörlerin ihracatında yoğunlaşmış iki ülke küresel piyasalarda birbirlerine rakip durumundadır. Ülkeler farklı ürün ve sektörlerde yoğunlaşmışsa bu durum onların rakiplikten çok tamamlayıcılık özelliğine sahip olduğunu gösterir. İhracat benzerlik endeksi Finger ve Kreinin (1979) tarafından şu şekilde formüle edilmiştir:

ESI = $\sum \min [X_k(jw), X_k(mw)] \times 100$

Formülde, $X_k(jw) \rightarrow$ j ülkesinin dünyaya gerçekleştirdiği k ürün grubu ihracat değerinin, dünyaya yaptığı toplam ihracat içindeki payını, $X_k(mw) \rightarrow$ m ülkesinin dünyaya gerçekleştirdiği k ürün grubu ihracat değerinin dünyaya yaptığı toplam ihracat içindeki payını göstermektedir.

Endeks 0 ile 100 arasında değerler alır. İki ülke arasında ticari akımlarda uygunluk yoksa yani bir ülkeden diğerine ihraç edilen ve diğeri tarafından ithal edilen ürün yoksa endeks 0 değerini alı (Mikiç, 2005). Bu durum iki ülke arasında rekabetin olmadığı şeklinde yorumlanabilir (Erlat ve Ekmen, 2009). Her iki ülkenin ihracat yapısı tamamen aynı ise endeks 100 değerini alır.

Azerbaycan'ın ECO ülkeleriyle dış ticarette rakiplik durumuna bakıldığında diğer dört ülke (Veri bulunamadığı için kalan altı ülke için endeks hesaplanamamıştır) içerisinde Azerbaycan'ın en yüksek ihracat benzerliğine sahip olduğu ülke Kazakistan'dır. Petrol ve doğalgaz gibi doğal kaynak bakımından zengin bu iki ülke için böyle bir sonucun ortaya çıkması doğaldır. Aynı şeyi İran için de söylemek mümkündür. Azerbaycan'ın Türkiye ve Kırgızistan'la ihracat benzerliği çok düşüktür.

Yıllar	Türkiye	Kazakistan	Kırgızistan	İran
2007	30.5	-	-	-
2008	41.8	-	14.8	-
2009	21.0	66.9	4.0	-
2010	24.1	67.5	6.6	-
2011	17.5	69.6	8.02	65.6

Tablo 3. *Azerbaycan'ın ECO Ülkeleriyle İhracat Benzerlik Endeksi.* **Kaynak:** *UN COMTRADE, 2013 verileri kullanılarak hesaplanmıştır.*

Kazakistan'ın dört ECO üyesi ülkeyle ihracat benzerlik endeksine bakıldığında yukarıda ifade edildiği gibi, petrol ve doğal gaz gibi doğal kaynaklar ihracatında yoğunlaşmış bu ülkeyle Azerbaycan'ın küresel piyasalarda birbirinin rakibi olduğu görülmektedir. Tablo 4'da görüldüğü gibi verisi olan 2011 yılına göre İran için de aynı şeyi söylemek mümkündür. Türkiye ve Kırgızistan'la ihracat benzerliği düşük olan Kazakistan bu ülkelerle tamamlayıcı ekonomi durumundadır.

Yıllar	Azerbaycan	İran	Kırgızistan	Türkiye
2007	-	-	-	-
2008	-	-	-	-
2009	67.0	-	5.9	40.2
2010	67.5	-	6.7	67.5
2011	69.6	68.5	11.4	39.9

Tablo 4: *Kazakistan'ın ECO Ülkeleriyle İhracat Benzerlik Endeksi.* **Kaynak:** *COMTRADE (2013) verileri kullanılarak hesaplanmıştır.*

Bölgenin en fakir ülkelerinden biri olan Kırgızistan'ın uluslararası piyasalarda rakibi durumundaki en önemli ülke İran (2011 rakamlarına göre)'dır. Kırgızistan'ın diğer üç ülkeyle düşük ihracat benzerlik endeksleri bu ülkenin ihracatındaki rekabet gücü açısından olumlu bir durumdur. Kısaca, Kırgızistan ve dört diğer dört ECO üyesi ülke uluslararası piyasada birbirine rakip değildir.

Yıllar	Azerbaycan	İran	Kazakistan	Türkiye
2007	-	-	-	-
2008	14.8	-	-	20.7
2009	4.0	-	5.9	17.4
2010	6.6	-	9.3	22.8
2011	8.0	68.5	11.4	29.9

Tablo 5: *Kırgızistan'ın ECO Ülkeleriyle İhracat Benzerlik Endeksi.* **Kaynak:** *UN COMTRADE, 2013 verileri kullanılarak hesaplanmıştır.*

Bölgenin en gelişmiş ülkesi konumunda olan Türkiye'nin diğer bölge ülkeleriyle ihracat benzerliği düşüktür. Özellikle Türk Cumhuriyetleriyle arasında önemli bir gelişmişlik farkı olan Türkiye'nin bölge ülkeleriyle uluslararası piyasalarda rakip durumunda olmaması beklenen bir sonuçtur. Sadece, petrol ve doğal gaz dışında metal ürünleri, gıda maddeleri gibi ürünler de ihraç eden Kazakistan'la diğer ülkelere nispeten Türkiye'nin ihracat benzerliği biraz daha yüksektir.

Yıllar	Azerbaycan	İran	Kazakistan	Kırgızistan
2007	30.5	-	-	-
2008	41.8	-	-	20.7
2009	21.0	-	40.2	17.4
2010	24.1	-	43.3	22.8
2011	17.5	38.3	39.9	29.9

Tablo 6: *Türkiye'nin ECO Ülkeleriyle İhracat Benzerlik Endeksi.* **Kaynak:** *UN COMTRADE, 2013 verileri kullanılarak hesaplanmıştır.*

Sadece 2011 verilerine ulaşabildiğimiz İran'ın uluslararası piyasalarda rakibi durumunda olan ülke Azerbaycan ve Kazakistan'dır. %9,3'lük oranla Suudi Arabistan, Venezüella ve Kanada'dan sonra dünyanın dördüncü en büyük petrol rezervlerine sahip ülkesi olan İran'ın (Öztürkler, 2012) bu ülkelerle ihracat benzerliğinin yüksek

çıkması beklenen bir sonuçtur. Türkiye ve Kırgızistan'ın ürün yapısı İran'a dış piyasalarda rakibi olacak benzerlikte görünmemektedir.

Yıllar	Azerbaycan	Kazakistan	Kırgızistan	Türkiye

2010	-	-	-	-
2011	65.6	68.5	14.3	38.3

Tablo 7: İran'ın ECO Ülkeleriyle İhracat Benzerlik Endeksi. **Kaynak**: *UN COMTRADE, 2013 verileri kullanılarak hesaplanmıştır.*

Ticaret yoğunluğu endeksi iki yanlı ticaret akımlarında değişmeleri ve nispi direnci ölçmek için kullanılır (Bano, 2002). Endeks bir bölgenin belirli bir bölgeye dünyanın geri kalanına yaptığından yüzde olarak daha fazla ihracat yapıp yapmadığını gösterir. Ticaret yoğunluğu endeksinin 1'e eşit olması, bir ülkenin diğerine ticaret ortaklarının satın alma gücüne uygun olarak ihracat yaptığını gösterir (Bano vd., 2013). Ticaret yoğunluğu endeksinin değeri 1'den büyükse, ülke dünya ticaretindeki payına kıyasla partnerine daha fazla ihracat yapıyor demektir. Ticaret yoğunluğunun değeri 1'den küçükse tersi durum ortaya çıkar.

Brown (1947) tarafından ilk defa ortaya konulan ve Kojima (1964) tarafından geliştirilen ve popülerleştirilen ticaret yoğunluğu endeksi iki yönden hesaplanabilmektedir. İlk olarak temel ülke açısından ya da başka bir ifadeyle ihracat perspektifinden ticaret yoğunluğu endeksi şu formüle göre hesaplanır:

$$TII = \frac{X_{ab}}{X_a} \bigg/ \frac{M_b}{(M_w - M_a)}$$

Formülde,

TII= a ve b ülkesi arasında ticaret yoğunluğu endeksi

Xab= a ülkesinin b ülkesine ihracatı

Xa= a ülkesinin dünyaya toplam ihracatı

Ma= a ülkesinin toplam ithalatı

Mb= b ülkesinin toplam ithalatı

Mw= Toplam dünya ithalatı'dır

Formülde Xab/Xa toplam yerli ihracatın bir yüzdesi olarak yabancı ülkeye gönderilen ihracatın oranıdır. Mb/(Mw-Ma) yerli ekonominin ithalatından daha az toplam dünya ithalatının bir yüzdesi olarak yabancı ülkenin toplam ithalatıdır. İhracatlarının çoğunu gönderdikleri aynı ülkeden nispeten yüksek düzeylerde ithalat yapan ülkeler yüksek bir TII'ye sahip olacaktır. Aksine, ithalatı için bir ülkeye bağlı olmayan çeşitli piyasalı bir ülke düşük bir TII'ye sahip olacaktır (Bano, 2002).

İkinci olarak ticaret yoğunluğu endeksi ülkenin ticaret partnerleri perspektifinden de hesaplanmaktadır. Başka bir ifadeyle temel ülke için ithalat perspektifinden ele alınan bu durumda formül aşağıdaki şekilde oluşacaktır:

$$TTI = \frac{X_{ba}}{X_b} \bigg/ \frac{M_a}{(M_w - M_b)}$$

Burada,

Xba= b ülkesinin a ülkesine ihracatı

Xb= b ülkesinin dünyaya toplam ihracatı

Ma= a ülkesinin toplam ithalatı

Mb= b ülkesinin toplam ithalatı

Mw= toplam dünya ithalatı'dır.

ECO ülkelerinin ticaret yoğunluğu endeksine bakıldığında bölge ülkelerinin genellikle komşularıyla ticaret yoğunluğunun nispeten yüksek olduğu görülmektedir. Örneğin Afganistan'ın ticaret yoğunluğunun en yüksek olduğu ülkeler komşuları başta Pakistan olmak üzere, Tacikistan, İran ve Özbekistan'dır. Afganistan bu ülkelere dünya ticaretindeki payından daha fazla ihracat yapmaktadır. Afganistan Azerbaycan, Kırgızistan ve Kazakistan'a dünya ticaretindeki payından daha az ihracat yapmaktadır. Azerbaycan'ın Pakistan dışında bölge ülkeleriyle ticaret yoğunluğu endeksi pozitif olmakla birlikte tüm ülkelerle ticaret yoğunluğunda azalma görülmektedir. Ticaret yoğunluğu en fazla Afganistan'la olan İran'ın Kazakistan ve Türkiye ile ticaret yoğunluğu negatiftir. Kazakistan'ın dört bölge ülkesiyle (Afganistan, Azerbaycan, İran, Pakistan ve Türkmenistan) ticaret yoğunluğu endeksinin negatif olması bu ülkenin bölge ülkeleriyle ticaretinin dünya ticaretindeki payından düşük

olduğunu göstermektedir. Kırgızistan ve Özbekistan'ın ticaret yoğunluğu endeksi sadece Pakistan'la negatif, Tacikistan'ın tüm bölge ülkeleriyle ticaret yoğunluğu negatiftir. Sadece iki yıllık verisine ulaşabildiğimiz Türkmenistan'ın Tacikistan ve Pakistan'la ticaret yoğunluğu negatiftir.

Türkiye'ye bakıldığında, Tablo 8'de görüldüğü gibi Türkiye'nin Pakistan dışında bölge ülkeleriyle ticaret yoğunluğu endeksinin pozitif olduğu görülmektedir. Türkiye genel olarak bölge ülkelerine dünya ticaretindeki payından daha fazla ihracat yapmaktadır. Bölge içinde Türkiye'nin ticaret yoğunluğunun en fazla olduğu ülkeler Azerbaycan, Türkmenistan ve özellikle son yıllarda İran olarak sıralanmaktadır.

Yıllar	Afganistan	Azerbaycan	İran	Kazakistan	Kırgızistan	Pakistan	Tacikistan	Türkmenistan	Özbekistan
2007	4.77	24.17	3.92	4.35	8.57	0.68	6.11	11.39	4.42
2008	5.61	28.78	4.48	2.91	5.81	0.48	6.67	18.17	4.30
2009	8.69	28.20	4.52	2.75	5.68	0.58	6.06	-	3.66
2010	6.76	31.51	6.34	3.53	5.38	0.96	7.27	-	4.31
2011	5.82	28.54	7.83	3.45	5.71	0.71	7.26	-	4.55

*Tablo 8: Türkiye'nin ECO Ülkeleriyle İhracat Yoğunluğu. **Kaynak:** Ecosecretariat, 2013a verileri kullanılarak hesaplanmıştır.*

Diğer bölge ülkeleri perspektifinden bakıldığında ise Kazakistan, Türkmenistan ve İran'ın Türkiye ile ticaret yoğunluğu endeksinin negatif olduğu görülmektedir. Afganistan, Azerbaycan, Kırgızistan, Özbekistan, Tacikistan ve Pakistan dünya ticaretindeki paylarından daha fazla Türkiye'ye ihracat yapmaktadır.

[*]Hammadde ve ilkel tarım ürünleri, [**]Mamul mallar

*Tablo 10: Türkiye'nin Türk Cumhuriyetleri ile Endüstriiçi Ticareti. **Kaynak:** M. Ozan Başkol, 2010.*

Faktör girdileri ve tüketim açısından birbirine yakın ikame malların eşanlı ithalat ve ihracatı (Tharakan ve Calfat,1996) şeklinde tanımlanan endüstriiçi ticaret (EİT) ile bölgesel ekonomik entegrasyon arasında yakın bir ilişki vardır. Kişi başına gelir düzeyindeki artış, ekonomik gelişmişlik düzeyi, ürünlerin özellikleriyle (farklılaştırılabilme, ölçek ekonomilerinden yararlanılabilme gibi) birlikte EİT üzerinde etkili olan temel faktörlerden biri ekonomik bütünleşmelerdir. Ekonomik bütünleşme, üye ülkeler arasında ticareti engelleyen etkenlerin ortadan kaldırılmasına yol açarak ticaretin genişlemesini sağlar. Bu şekilde bütünleşmeye giden ülkelerde EİT'in artması için gerekli ortam sağlanmış olur (Küçükahmetoğlu, 2008). Bunun yanında bütünleşme üyesi ülkelerin üretim yapıları tamamlayıcılıktan çok rakiplik özelliğine sahipse EİT ticaret artacaktır. ECO ülkelerine bakıldığında bölge ülkelerinin kişi başına gelir düzeyi Türkiye gibi birkaç ülke dışında genel olarak düşüktür. Türkiye, İran ve Pakistan dışındaki ülkelerde gelir ve nüfusun düşüklüğü dolayısıyla Türk Cumhuriyetleri ve Afganistan'ın ölçek ekonomilerinden yararlanmaları sınırlı kalmaktadır (Akal ve Karakaş, 2011). Bu nedenlerle ECO bölgesinde EİT düzeyi düşük kalmaktadır. Nitekim, Başkol (2010) tarafından hazırlanan çalışmada Türkiye'nin Orta Asya Türk Cumhuriyetleri ile Grubel Lloyd endeksine göre hesaplanan EİT düzeyinin Tablo 10'de görüldüğü gibi oldukça düşük düzeylerde olduğu, başka bir ifadeyle Türkiye'nin bu

ülkelerle ticaretinin endüstriler arası nitelikte olduğu tespit edilmiştir. Diğer bölge ülkeleri arasındaki ticaretin niteliği de bundan çok farklı değildir.

Tabi ECO henüz işbirliği düzeyinde bir ekonomik entegrasyondur. Bölge ülkeleri arasında zamanla ticaretin artması entegrasyon düzeyinin geliştirilmesinde etkili olacak, entegrasyonun ilerlemesi de bölge içinde ticaretin endüstriiçi ticarete doğru evrilmesine sebep olacaktır.

5   Sonuç

Bu çalışmada, Batı ve Orta Asya ekseninde ileride bir bölgesel entegrasyona dönüşmek üzere kurulmuş bir bölgesel işbirliği oluşumu olan ECO'da bölgesel entegrasyonun önündeki engeller, bölge içi ticaret bağlamında analiz edilmiştir. Şu anda bir tercihli ticaret anlaşmasına sahip olan Teşkilat'ta bazı somut projeler uygulamaya geçmiş olmakla birlikte, serbest ticaret bölgesi olma yolunda henüz bir gelişme olmamıştır.

Dünya ticaretinde potansiyelinin altında bir paya sahip olan ECO'da bölge-içi ticaret, diğer pek çok bölgesel entegrasyonla karşılaştırıldığında oldukça düşüktür. Ancak birkaç ülke dışında, Türkiye de dahil olmak üzere bölge ülkelerinin bölge içi ticaret hacmi son yıllarda artma eğilimindedir. Pakistan ve Türkiye dışında bölgeden yapılan ihracat başta petrol, doğal gaz olmak üzere maden fiyatlarının dünya piyasasında ortaya çıkan değişmelerine göre şekillenmektedir.

Çalışmada bölge içi ticaretin düzeyi ve yapısını belirlemek amacıyla hesaplanan endekslerden ihracatta benzerlik endeksi açısından genel olarak hammadde ve maden ihracatçısı durumundaki bölge ülkelerinin ihracat benzerliklerinin nispeten yüksek olduğu görülmektedir. Bölgenin en sanayileşmiş ülkesi durumundaki Türkiye, Pakistan ve doğal kaynaklar açısından fakir Türk Cumhuriyetleri ile diğer bölge ülkeleri bu bağlamda birbirini tamamlayıcı ekonomiler olarak ortaya çıkmaktadır.

İki yanlı ticaret akımlarında değişmeleri ve nispi direnci ölçmek için kullanılan ticaret yoğunluğu endeksi hesaplamaları sonucunda ECO ülkelerinin genellikle komşularıyla ticaret yoğunluğunun nispeten yüksek olduğu tespit edilmiştir. Türkiye'nin Pakistan dışında bölge ülkeleriyle ticaret yoğunluğu endeksinin pozitif olduğu görülmektedir. Türkiye genel olarak bölge ülkelerine, dünya ticaretindeki payından daha fazla ihracat yapmaktadır. Bölge içinde Türkiye'nin ticaret yoğunluğunun en fazla olduğu ülkeler Azerbaycan, İran ve Türkmenistan olarak sıralanmaktadır.

Bölge ülkelerinin kişi başına gelir düzeyi Türkiye gibi birkaç ülke dışında genel olarak düşüktür. Türkiye, İran ve Pakistan dışındaki ülkelerde gelir ve nüfusun düşüklüğü dolayısıyla Türk Cumhuriyetleri ve Afganistan'ın ölçek ekonomilerinden yararlanmaları sınırlı olmaktadır. Bu nedenlerle ECO bölgesinde EİT düzeyi düşük kalmaktadır.

Özetle, bir bölgesel entegrasyonun başarılı olabilmesi için önemli faktörlerden olan bölge içi ticaret düzeyinin yüksekliği ve ülkelerin dış ticaret yapılarının rekabetçiliği açısından, ampirik hesaplamaların ortaya koyduğu gibi ECO bölgesinin biraz dezavantajlı olduğu görülmektedir. Ancak son zamanlarda Türkiye gibi ülkelerin toplam dış ticaretleri içinde ECO'nun payının artması ve Türk Cumhuriyetlerinin dışa açılma sürecinin nispeten hızlanmış olması bu dezavantajın ileriki zamanlarda azalacağı sinyalini vermektedir.

Dünya Ticaret Örgütüne Girişi Sonrasında Rusya ile Türkiye Arasındaki Ticari İlişkilerinin İncelenmesi

Examining the Turkish-Russian Trade Relations after Russia's World Trade Organization Accession

Asst. Prof. Dr. Burak Kartal (Celal Bayar University, Turkey)

Abstract

Turkey and the Russian Federation (RF) have deep historical political and economic relations. The trade between the two countries have been growing since late 1980s when Turkey began to procure natural gas from Russia. The dissolution of USSR and the revival of Russian economy offered new opportunities for Turkish businessmen. During the last decade, Russia became one of the few major markets for Turkish construction and contractor companies whereas Turkey has been a favorable touristic destination for Russians. The agreements regarding Akkuyu nuclear power plant and natural gas pipelines have strengthened the ties between the two countries. In 2012, Russia became the 156th member of the WTO. Russia's WTO accession, along with the country's other economic cooperation and integration moves provide foreign companies interested in Russia with a better investment climate and business environment. Having competitive advantage in many goods and services categories needed by Russia, Turkish companies should benefit the new developments in RF and increase their business volumes in that country. This paper examines the current trade relations between RF and Turkey in detail considering the potential effects of RF's WTO membership.

1   Giriş

Rusya Federasyonu (RF), 2012 Dünya Yatırım Raporuna göre yatırım yapılacak en iyi 8 ülkeden birisidir (Yaraman, 2013). Bunun nedenlerini daha iyi anlayabilmek için ülkeyi biraz daha yakından tanımakta fayda var. 17 milyon kilometrekare ile coğrafi alan olarak dünyanın en büyük ülkesi olan RF, büyük çoğunluğu ülkenin batısında yaşayan 142,8 milyon kişiden oluşmaktadır. Ancak hem Dünya Bankası hem de Birleşmiş Milletlerin çalışmalarına göre, nüfusun 2050 yılında ciddi biçimde (%30'a varan oranlarda) azalması beklenmektedir. Diğer yandan dünya üzerindeki işlenmiş toprakların yüzde 15-20'si ve tropik ormanların %40'ı bu ülkededir. RF, zengin doğal gaz ve petrol kaynaklarına, kömür, alüminyum, bakır, demir, elmas, altın, platin, nikel, uranyum, gümüş maden kaynakları ve ormancılık ürünlerine sahiptir. Dünyadaki hammadde, enerji ve biyolojik kaynakların yüzde 35'inin ve alüminyum, platin, nikel, uranyum gibi stratejik hammaddelerdeki dünya rezervinin yarısının RF'da olduğu söylenmektedir. Bu nedenle enerji ve hammadde ihracatında dünyanın önde gelen ülkelerinden birisidir. Dünya çapında petrolün yüzde 13'ü, gazın yüzde 32'si, kömürün yüzde 11'i, demirin yüzde 26'sı, kurşunun yüzde 10'u ve çinkonun yüzde 15'i RF'na aittir. Ülkenin dünya enerji ihracatındaki payı ise %7'dir. Doğal olarak, ağır sanayisi gelişen ve ihracatının üçte ikisi petrol, petrol ürünleri ve gaza dayanan ülkenin ihracatında metaller, motor ve teçhizat ile kimyasal ürünler de önemli yer işgal etmektedir. Ülkenin ithalatında öne çıkan ürün grupları ise makine ve ekipman, tüketim malları, ilaçlar, et, şeker ve yarı işlenmiş metal ürünleridir. RF'nun 2012 yılında %3,4 büyüyen GSYİH'sı 2 trilyon $'a ulaşmıştır ve orta vadede benzer oranlarda büyümesi beklenmektedir. İleri teknoloji ürünleri ile tüketim mallarının üretimi, ekonomi içinde küçük bir paya sahip olduğu gibi, benzer şekilde küçük ölçekli işletmeler de gelişmiş ve gelişmekte olan çok sayıda ülkenin aksine büyük ölçekli işletmelerin hakimiyetindeki ekonominin %15'ini geçememektedir (Benli Özbaş, 2013; Özilhan ve Göçer, 2013). 2012 yılında 335 milyar $ ithalatına karşılık 531 milyar $ ihracat gerçekleştiren RF, 196 milyar $ civarında dış ticaret fazlası vermiştir (TC Ekonomi Bakanlığı İhracat Bilgi Platformu [f], 2013). İhracatın en önemli ürün kalemlerinden birisi olan petrol üretimi 2012 yılı Kasım ayında 1,5 milyon varil ile son dönemlerin en yüksek seviyesine çıkmıştır. Bununla birlikte, RF'nin çıkarılması kolay ve ucuz petrolü giderek azalmaktadır (TC Ekonomi Bakanlığı İhracat Bilgi Platformu [g], 2013). Doğrudan yabancı yatırım girişi ise 2012 yılında 45 milyar $ olarak gerçekleşmiş (Benli Özbaş, 2013), 2008 krizi sonrasındaki hemen hemen yatay seyrine devam etmektedir.

2   Rusya–Türkiye İlişkileri

Türkiye ve Rusya arasındaki ilişkiler çok köklüdür ve yüzyıllar öncesine dayanmaktadır. Tarih boyunca kimi zaman barış kimi zaman çatışma içinde olan iki ülke, özellikle soğuk savaşın sona ermesinden sonra birbirlerine daha fazla yakınlaşmış, özellikle ekonomik ve ticari açıdan ilişkilerini güçlendirmişlerdir. Ara sıra yaşanan ufak siyasi sorunlar bile söz konusu güçlenen ilişkilerin gölgesinde büyüme fırsatı bulamamaktadır.

Her iki ülkenin liderleri de iki ülke arasındaki ekonomik, siyasi, askeri ve kültürel bağların çeşitlenip, gelişerek geleceğe yönelik umut verdiğini belirtmektedir (Dış Ekonomik İlişkiler Kurulu, 2013). RF'da iş yapan Türk iş adamları da Türklere yönelik herhangi bir olumsuzluk yaşamadıklarını ifade etmekte (Özilhan, 2013), Avrupa'da

yaşanan sorunların iki ülkeyi birbirine daha da yakınlaştırdığını belirtmektedirler. Mersin-Akkuyu nükleer enerji santrali, petrol boru hattı gibi dev projeler (Ön, 2013) iki ülke arasındaki ilişkilere atılan sağlam dikişler haline gelmektedir. Soğuk savaş döneminde Türkiye'deki askeri okullarda Rusça öğretilirken, günümüzde Avrasya ülkelerinde iş yapmak isteyen gençlerimize çeşitli kurslarla Rusça öğretilmekte, soğuk savaş döneminin korkulan teknolojisi olan nükleer enerji konusunda Türk uzmanlar bizzat RF tarafından Rusya'da eğitilmektedir.

3   Rusya – Türkiye Dış Ticareti

Rusya ve Türkiye arasındaki ticari ilişkiler 15. yüzyıl sonlarına kadar gitmektedir; ancak 1991'de SSCB dağıldıktan sonra müteahhitlik, doğal gaz, deri, kürk ve bavul ticaretiyle gelişmeye başlamıştır. 1987 yılından itibaren başlayan doğal gaz alımı iki ülke arasındaki ilişkilerde önemli bir dönüm noktası olmuştur. 1998 yılında RF'unda yaşanan ekonomik krizden sonra bavul ticaretinin önemi azalıp mevcut pazar potansiyeli BAE, Çin, Polonya ve Yunanistan'a kaysa da (Özilhan ve Göçer, 2013), ilişkiler farklı alanlarda güçlenmeye devam etmiştir. İlişkilerdeki bu gelişmelerin tek nedeni coğrafi yakınlık değil aynı zamanda ekonomilerin birbirini tamamlamasıdır (İnce vd., 2013). Bunun başlıca nedeni, Türkiye ve RF'nun uluslararası pazarlara sattıkları temel ürünlerin birbirinden oldukça farklı olmasıdır (Kalaycı, 2013).

Türkiye İhracatçılar Meclisi (TİM) Başkanı Mehmet Büyükekşi, Türkiye ve RF'nun hem yatırım hem de ticarette çok güçlü iki ortak ülke olduğunu söyleyip, ortaklığın gelişmesi ve derinleşmesi için iş adamlarına da büyük bir sorumluluk düştüğünü ifade etmektedir. Büyükekşi, RF'nun, Türkiye'ye en çok turist gönderen ikinci ülke, Türklerin en çok yatırım yaptığı birinci, Türkiye'nin en önemli müteahhitlik hizmeti verdiği bir ülke olduğunu belirtmektedir (Dış Ekonomik İlişkiler Kurulu, 2013). Ekonomi Bakanlığı dış ticaret verilerine baktığımızda ise (Tablo 1), 2012 yılında RF, 26.62 milyar $ ile Türkiye'nin en fazla ithalat yaptığı birinci, 6.68 milyar $ ile en fazla ihracat yaptığı altıncı ülke olarak gözükmektedir. RF'na yönelik ihracat, Türkiye'nin toplam ihracatının %4.68'ini, ithalat ise Türkiye'nin toplam ithalatının %11.26'sını oluşturmaktadır.

ÜLKE SIRASI	ÜLKELER	İHRACAT						İTHALAT						ÜLKELER	ÜLKE SIRASI
		2008	2009	2010	2011	2012	(%)	2008	2009	2010	2011	2012	(%)

Tablo 1: *2008-2012 Yılları Arasında Türkiye'nin Dış Ticaretindeki İlk 10 Ülke (Milyon ABD Doları)* **Kaynak:** *T.C. Ekonomi Bakanlığı Dış Ticaret İstatistiklerinden yararlanılarak hazırlanmıştır.*

RF Ekonomik Kalkınma Bakanlığı Yatırım Politikası ve Kamu-Özel Sektör Ortaklığı Geliştirme Bölümü Müdürü Igor Koval (2013), Türkiye'nin en büyük dış ticaret ortakları listesinde RF'nın ikinci sırada, Türkiye'nin ise RF'nın dış ticaret ortakları arasında yedinci sırada olduğunu belirtmektedir. İki ülke arasındaki mevcut 35 milyar $ civarındaki dış ticaret hacminin 2015 yılında 100 milyar $'a çıkması her iki tarafça da hedeflenmektedir (Dış Ekonomik İlişkiler Kurulu, 2013; Kazaklı, 2013). Söz konusu olumlu hava iş adamları arasında da hakimdir. Örneğin, RF'da ciddi yatırımları olan Colin's firmasının Rusya Genel Müdürü Önder Ön, siyasi alandaki gelişmelerin iş dünyasına olumlu yansıdığını ve son 5 yılda, 50 yılda alınandan daha fazla yol alındığını söylemektedir (Ön, 2013).

RF ile ticaretin iyileşme beklentisinin bir nedeni de RF'nun girdiği işbirlikleri, entegrasyonlar ve DTÖ üyeliğidir. DTÖ üyeliği ileride daha detaylı ele alınacağı için burada kısaca işbirlikleri ve entegrasyonlara ilişkin bilgi verilmektedir. RF'nun Beyaz Rusya, Kazakistan, Kırgızistan ve Tacikistan ile Gümrük Birliği Anlaşması, Bağımsız Devletler Topluluğu (BDT) ülkeleri ile Serbest Ticaret Anlaşması bulunmaktadır (Benli Özbaş, 2013). Ayrıca Rusya ve Türkiye Karadeniz Ekonomik İşbirliği Örgütü içinde de aralarındaki ikili ve çok taraflı ekonomik, teknolojik ve sosyal ilişkilerini geliştirmeye çalışmaktadır (Devlet Planlama Teşkilatı, 2013).

Türkiye'nin, 2000'li yılların başından itibaren dış ticaret açığının önemli bir kısmı RF ile gerçekleştirdiği ticaretten kaynaklanmaktadır. (Kalaycı, 2013). Bunun başlıca nedeni, Türkiye'nin enerji açısından oldukça dışa bağımlı olması ve son dönemde tedarik kaynağı olarak tercihini daha çok RF'dan yana kullanmasıdır. İran'ın üzerinde yoğunlaşan uluslararası baskı, bu yönelimi son zamanlarda daha da artırmaktadır (Dombey ve Clover, 2013).

Türkiye 2002 yılından itibaren özellikle Mavi Akım Projesi kapsamında RF'ndan ciddi miktarda doğalgaz ithal etmeye başlamıştır. Bu alımların yanı sıra enerji fiyatlarındaki artış da RF'ndan yapılan doğalgaz ithalatının tutar olarak büyük ölçüde artmasına neden olmuştur.

Türkiye-Avrupa Birliği (AB) arasında oluşturulan gümrük birliği gereğince AB dışı ülkelere karşı Ortak Gümrük Tarifesi (OGT) uygulamaya başlaması da Türkiye'nin koruma düzeyini eskiye oranla azaltmış, diğer AB dışı ülkelere karşı olduğu gibi Rusya Federasyonu'na da bu kapsamda eskiye oranla daha düşük gümrük tarifeleri uygulanmış ve iki ülke arasındaki ticarette, dış ticaret hadlerinin Türkiye aleyhine gelişmesine yol açmıştır (Kalaycı, 2013).

Şekil 1'de Türkiye ve RF arasındaki ticaretin gelişimi 2001 yılından itibaren gözlenebilir. 2009 yılında küresel krize bağlı olarak yaşanan ciddi düşüş dışında hem ihracat hem de ithalatın düzenli bir artış içerisinde olduğu ve 2012 yılında, 2001 yılındaki değerleri üzerinden hem ihracat hem de ithalatın 7 kattan daha fazla artış gösterdikleri görülebilir. Türkiye'nin yakın gelecekte enerji kaynaklarında köklü bir değişim yapması beklenmediği için RF'dan ithalatın artarak süreceği beklenebilir.

Diğer yandan, RF'nun ithalatında tüketim mallarının ağırlığı devam ettiği sürece Türkiye menşeli tüketim mallarına yönelik talebin de sürmesi beklenebilir. Türk ürünleri RF pazarında hem fiyat ve kalite olarak hem de coğrafi yakınlık açısından rakiplerine göre avantajlı konumdadır (Benli Özbaş, 2013).

Yıllar	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012
İthalat	3.436	3.892	5.451	9.033	12.906	17.806	23.508	31.364	19.450	21.601	23.953	26.625
İhracat	924	1.172	1.368	1.859	2.377	3.238	4.727	6.483	3.190	4.628	5.993	6.681
Şekil 1: *Türkiye ve Rusya Arasındaki Dış Ticaretin Gelişimi* **Kaynak:** *T.C. Ekonomi Bakanlığı Dış Ticaret İstatistiklerinden yararlanılarak hazırlanmıştır.*

Türkiye ile RF arasındaki dış ticaret ilişkilerini sektörler itibariyle incelersek, 2010 yılı verilerine gore, RF'na yapılan ihracatın büyük bir kısmının başlıca sınıflara ayrılmış işlenmiş mallar ile makine ve ulaştırma araçları olduğu gözükmektedir. Diğer yandan RF'ndan yapılan toplam ithalat içinde ise en fazla payın mineral yakıtlar, yağlar vb. damıtılmasından elde edilen ürünler olduğu gözükmektedir (Kalaycı, 2013). İki ülke arasındaki ticaretin ürün gruplarına göre durumu Tablo 2'de incelenebilir.

4   Rusya – Türkiye Dış Ticaretinin Sektörel ve Bölgesel Açıdan İncelenmesi

RF Ekonomik Kalkınma Bakanlığı Yatırım Politikası ve Kamu-Özel Sektör Ortaklığı Geliştirme Bölümü Müdürü Igor Koval (2013), "Rusya'daki Türk yatırımların tekstil, gıda, ve kimya endüstrilerine odaklandığını ve Türk işletmelerinin Rusya'nın Güney Federal Bölgesi'ne yönelik yatırımlara daha fazla önem verdiğini ifade etmektedir. RF'nun Türkiye Ticaret Temsilcisi Tofik Melikov ise bu üç temel sektöre ek olarak ağaç işleme sanayi, elektronik ve teknik sanayi, inşaat malzemeleri, hizmet alanını (ticaret, turizm, banka sektörü) da saymaktadır. Ayrıca Melikov da Türk yatırımcıların artık Rusya'nın büyük şehirlerine değil daha çok Smolensk, Vladimir, Ryazan gibi güney ve özel bölgelere yöneldiğini belirtmektedir. Melikov (2013), her iki ülkede bölgeler arasında yapılacak ekonomik temasların artmasının önemine de dikkat çekmektedir.

Moskova'da düzenlenen Türk – Rus İş Forumunda konuşan Başbakan Recep Tayyip Erdoğan sektörel gelişmelerle ilgili olarak şunları söyledi: "*Enerji makineleri üretimi, otomotiv sanayi, kimya sanayi, gemi inşa sanayi, sağlık sanayi, havacılık sanayi, inşaat malzemeleri sanayinde işbirliğinin geliştirilmesi mutabakatına varıldı. Rusya Federasyonu'ndaki Özel Ekonomik Bölgeler ve ülkemizdeki Serbest Bölgelerde işbirliği de yine mutabakata varılan konular arasında. Bunlar, işadamlarımız için, özel sektörümüz için gerçekten önemli*

gelişmeler. Özel sektörümüzün, açılan bu yoldan güvenle ilerlemelerini arzu ediyorum." (Dış Ekonomik İlişkiler Kurulu, 2013)

RF ile dış ticaretimizde önem arz eden ürünleri üç grupta ele almakta fayda var: Sanayi ürünleri, tarım ve gıda ürünleri ile hizmet sektörleri.

RF'na ihracatımızda öne çıkan sanayi ürünleri şunlardır: Çimento, demir-çelik inşaat ve aksamı, demir-çelik radyatörler, demir-çelikten sağlığı koruyucu eşya, tuvalet eşyası ve aksamı, inşaat boyaları, plastik inşaat malzemeleri, işlenmiş doğal taşlar (kayagan hariç), seramik inşaat malzemeleri, prefabrik yapılar, düz cam, aydınlatma cihazları, mobilya, inşaat ve maden makineleri, maden ve mineraller, petrol ürünleri ve yağları, tekstil ve hazır giyim, deri ve kürklü giyim eşyaları, ayakkabılar, otomotiv ana ve yan sanayi, televizyonlar, beyaz eşya, kozmetik ve kişisel bakım ürünleri, sabunlar, ambalaj ürünleri, hijyenik kağıt ürünleri, gezinti ve spor amaçlı deniz taşıtları, takım tezgahları, metal şekillendirme-kesme makine ve presler, elektrik jeneratörleri ve statik konvertörler, kablo ve teller, plastik mutfak eşyaları ve tıbbi alet ve cihazlar (Benli Özbaş, 2013).

Rusya'da umut vaat eden sektörlerden birisi otomotivdir. Rusya, 2012 yılında Avrupa'da Almanya'dan sonra ikinci büyük otomobil pazarı olmuştur (TC Ekonomi Bakanlığı İhracat Bilgi Platformu [g], 2013). 40 milyar dolarlık pazar için mevcut 8 Türk firmasına (1. Nobel Automotive, 2. Coşkunöz, 3. Trakya Cam, 4. Tirsan Kardan, 5. Teklas, 6. Canel Otomotiv, 7. Pilot Koltuk, 8. Tırsan/Kaessbohrer) ek olarak, 20-25 Türk şirketi daha Rusya'da yatırım yapmak için teşebbüste bulunmuştur. Bu şirketlerin daha çok Japon, Kore, Çin ve Avrupalı devlerle rekabet etmesi beklenmektedir. Otomobil İhracatçıları Birliği Başkanı Orhan Sabuncu'ya (2013) göre, Rusya'da belirlenen yeni teşvik sistemiyle otomotiv ana sanayisi 36 ay içinde en az 300 bin araçlık kapasite oluşturacak ve 4 yıl içinde de üretilen araçların motorlarının yüzde 30'u Rusya'da imal edilecek. Son yıllarda özellikle St. Petersburg, otomotiv sanayinde bir üretim merkezine dönüşmektedir. Hyundai,Toyota, General Motors, Nissan ve Scania gibi dünyanın önde gelen otomotiv üreticilerinin bölgede yatırımları olduğu gibi otomotivin yanı sıra ilaç, gemi inşaat, bilgi teknolojileri, radyoloji, elektronik de bölgede öncelikli üretim alanları ve kümelenmelerdir (Bektaşoğlu ve Benli Özbaş, 2013).

Tarım ve gıda da yine Türk iş adamlarının önem verdiği sektörlerden birisidir. RF'na yönelik ihracatta önem arz eden tarım ve gıda ürünleri şunlardır: Su ürünleri, kanatlı eti, tütün, yaş meyve ve sebze (portakal, elma, limon, domates), şekerli ve çikolatalı mamuller, kesme çiçek, çay, meyve suyu, dondurulmuş meyve-sebze, sert kabuklu meyveler, makarna, kuru üzüm, kuru kayısı, gofretler, maya ve organik tarım ürünleri (Benli Özbaş, 2013).

RF 2012 yılında toplamda 5,7 milyar $ yaş meyve ithalatı gerçekleşmiştir. Türkiye pazarda Ekvador'dan sonra ikinci büyük tedarikçi ülkedir. RF yaş meyve pazarının yaklaşık %50'sinin ithal meyveden oluştuğu tahmin edilmektedir. RF'nun ithal ettiği en önemli ürünler muz, elma, mandalina, üzüm, armut, portakal, şeftali ve limondur. Ülkenin yaş sebze ithalatı da 2,3 milyar $'ı bulmaktadır. Türkiye pazardaki en büyük tedarikçi ülkedir. Bu alanda başlıca ürünler sırasıyla domates, diğer sebzeler (biber, patlıcan, mantar v.b.), hıyarlar ve kornişonlar, soğan ve şalotlar, havuç ve lahanadır. Türkiye, RF'na 2012 yılında toplam 804 milyon $ değerinde 1.172 bin ton yaş meyve ve sebze ihracatı gerçekleştirmiştir. Türkiye'nin RF'na ihracatından en fazla pay alan ürün grupları sırası ile narenciye ürünleri, domates, üzümler, kayısı, kiraz, vişne ve şeftaliler, diğer meyveler (çilek), hıyarlar ve kornişonlar, diğer sebzeler (kabak, biber, patlıcan), incir, soğan ve şalotlar, elma, armut olmuştur (Bektaşoğlu ve Benli Özbaş, 2013).

Devlet Bakanı Zafer Çağlayan (2013), Rusya Tarım Ürünleri Denetleme Kurumu'nun (Rosselhoznadzor) 1 Şubat 2010 tarihinden itibaren Türkiye'den kümes hayvanları ve kümes hayvanları ürünlerine ilişkin ithalat yasağını kaldırmasıyla, Türk beyaz et ihracatçılarının Rusya Federasyonu'nun en büyük beyaz et tedarikçisi olmasının mümkün hale geldiğini ifade etmiştir. Kişi başı beyaz et tüketiminin yılda 24 kilo olduğu RF'da en büyük beyaz et tedarikçileri sırasıyla ABD ve Brezilya'dır. Türkiye'nin üretim kapasitesinin yüzde 40'ını bu ülkeye satma şansına sahip olduğu da Çağlayan (2013) tarafından ifade edilmiştir.

Perakende sektörü de Türk yatırımcıların eskiden beri içinde bulunduğu sektörlerden birisidir. RF perakende pazarı küresel krizden kurtuldukça yeniden büyüme trendine girdi ve bu büyüme 2010 yılında yeniden çift haneli rakamlara ulaştı ve sektörün 2013 yılında 800 milyar $'lık büyüklüğe ulaşması bekleniyor. Pazardaki en önemli firmalar X5 Perakende Grubu (Pyaterochka, Perekryostok, Karusel markalarının sahibi) Tander ve Fransız Auchan (TC Ekonomi Bakanlığı İhracat Bilgi Platformu [b], 2013).

Hizmetlerde belki de RF ve Türkiye arasında en çok adı geçen sektör ise müteahhitlik hizmetleridir. Rusya'daki 500 büyük Türk yatırımcının 150 tanesi müteahhitlik firmasıdır (Türk, 2013). Dünyadaki en büyük 225 uluslararası müteahhit içinde 32 tane ile Çin'den sonra ikinci sırada olan Türk müteahhitlerinin, 2007 ile 2012 yılları arasında 101 ülkede üstlendikleri 7116 projenin %44'ü Avrasya'dadır. RF ise %17,1'lik pay ile tüm ülkeler arasında birinci sırada yer almaktadır. Bu süre zarfında 1423 proje ile toplamda 41 milyar $'a yakın iş gerçekleştirilmiştir. RF, 2012 yılında ise Türk müteahhitler için yaklaşık olarak 3,8 milyar $ iş hacmi ile Türkmenistan ve Irak'ı takip etmektedir. (Yenigün, 2013; Özilhan, 2013) RF özellikle Libya'daki iç karışıklıklar sonucu işlerin askıya alınmasından sonra Türk müteahhitlerin önde gelen inşaat pazarı haline gelmiştir. RF'da

inşaat şirketlerine lisans veren Moskova'daki bir ajansın başkanı olan Dracheva Yulia ülkede inşaat alanının 2015'te 90 milyon metrekareye, 2020 yılında ise 140 milyon metrekareye ve inşaat yatırımlarının da 120 milyar dolara ulaşmasını beklediklerini söylemiştir. Rusya İnşaatçılar Birliği Başkanı Yardımcısı Kischel Konstantin ise Türk firmalarının işlerini şimdiki gibi kaliteli ve zamanında yaptıkları sürece gelecekte işleri ve kazançlarını iki katına çıkarabileceklerini ifade etmiştir (Emlak En Son Haber, 2013). Bunun yanında, TOBB/DEİK Başkanı Rıfat Hisarcıklıoğlu da Türk müteahhitlik şirketlerine hem 2014 Soçi Kış Olimpiyatları hem de 2018 yılında Rusya'da yapılacak dünya futbol şampiyonasına hazırlıklar kapsamında projelerde daha aktif rol verilmesini RF tarafından istemektedir (Dış Ekonomik İlişkiler Kurulu, 2013) Önümüzdeki yıllarda RF ekonomisindeki gelişime paralel olarak çeşitli uzmanlarca da belirtildiği gibi müteahhitlik hizmetlerine talep artacak ve başta büyük ölçekli işletmeler olmak üzere Türk firmalarının RF'daki yatırımları artabilecektir (Türk, 2013).

İki ülkeyi yakınlaştıran bir başka alan ise turizmdir. Hisarcıklıoğlu ve Özilhan'ın verdiği bilgilere gore Türkiye'ye yaklaşık 3-3,5 milyon civarı Rus turist gelmekte ve vizelerin kalkması da Rusya'ya yönelik Türk turist sayısında artışa yol açmaktadır. Gelen Rus turistlerin önemli kısmı ise Antalya bölgesini tercih etmektedir (Dış Ekonomik İlişkiler Kurulu, 2013; Özilhan, 2013).

Tablo 2: Türkiye – Rusya Arasındaki Dış Ticaretin Ürün Gruplarına Göre Dağılımı (Milyon ABD Doları)
Kaynak: www.tuik.gov.tr'den uyarlayan Kalaycı, 2013.

5 Rusya'da Faaliyet Gösteren Türk Şirketleri

Rusya'da çeşitli sektörlerde 3 bin dolayında Türk şirketi faaliyet gösteriyor; bunlar arasından 5 milyon $'ın üstünde yatırımı olan Türk şirketlerinin sayısı 500'ün üstünde ve Türk şirketlerinin Rusya'da yaptığı doğrudan

yatırım miktarının 8 milyar $'a ulaştığı tahmin ediliyor. Bunlar içinde sadece 5 milyon $ üzerinde büyüklüğe sahip Türk yatırımlarının toplamının 6 milyar $'a yaklaştığı söyleniyor (Özilhan, 2013; Türk, 2013).

Resmi verilere göre ise, 2011 yılı itibarıyla yurtdışındaki 3 bin 641 Türk şirketinin 265'i Rusya'da bulunuyor ve yurtdışındaki Türk şirketi sayısı bakımından Rusya, KKTC (406) ve Almanya'dan (301) sonra dünyada üçüncü sırada geliyor. Ancak rakamların Türk şirketlerinin Rusya'daki gerçek büyüklüğü doğrudan yansıtmadığı söyleniyor. Bu ülkeye yönlendirilmiş yatırımların Hollanda veya vergi cenneti olarak nitelenen başka bir ülke üzerinden yapıldığı iddiası var (Rusya Online Haber ve Yorum Sitesi, 2013).

Ülkede büyük sanayi tesisleri kuran Şişecam grubunun yanı sıra, Anadolu Efes, Ruscam, Enka, Ramenka, Eczacıbaşı, Koç grubu, Zorlu grubu, Adopen, Merinos Halı gibi büyük şirketlerin de doğrudan yatırımları bulunuyor (Özilhan, 2013; Orta Karadeniz Kalkınma Ajansı, 2013). Sadece Şişecam'ın ülkede sürekli artmakta olan 1 milyar $'a yaklaşan yatırımı, 13 adet büyük fırını ve 3500 kişiden oluşan istihdam hacmi bulunmakta; cam ambalaj gibi bazı ürünlerinde ise üretim kapasitesi Türkiye'nin de üzerine çıkmaktadır (Yaraman, 2013).

Rusya'daki bazı spesifik Türk girişim ve yatırımları ise şunlardır:

2010'da Rusya'da faaliyet gösteren 6 Türk bankası vardı: Yapı Kredi, Moskova, Garanti Bankası, Denizbank, Finansbank ve Ziraat Bankası (İnce vd., 2013; Ilıcak, 2013). Ayrıca, Fiba Grubu Rusya'nın en büyük bankalarından Credit Europe Bank'ı satın aldı (Özilhan, 2013). RF'da giyim alanındaki başarı hikayelerinden birisi de Colin's. Colin's Rusya'da her iki kişiden birine markasını satmayı başarmış. 2011 sonu itibari ile Rusya genelinde 180 mağazası olan Colin's'in hedefi her Rus'a iki Colin's ürünü giydirmek. Şirketin, 2012 yılı hedefleri 200 mağazaya ulaşmak, 1500 kişiye istihdam sağlamak, en az 6,5 milyon adet ürün satarak perakende cirsouu da 225 milyon $'a çıkarmak (Ön, 2013). RF'da dikkat çeken bir başka şirket ise Efes'dir. Alkollü içecek sektöründe Efes, SABMiller ile gerçekleştireceği işbirliği ile Rusya'da dördüncü sıradan ikinci sıraya yükselmiştir (Rus Türk İşadamları Birliği, 2013).

6 Rusya ve Dünya Ticaret Örgütü

RF'nun DTÖ üyeliği, 2001'deki Çin'in üyeliğinden sonraki dünya ticaretindeki en önemli gelişme olarak görülebilir. (Yaraman, 2012). Rusya, DTÖ'ne girmek için ilk olarak 1993 yılında başvuruda bulundu. 1995 yılında çok sayıda ülkenin katılımıyla oluşturulan çalışma grubunun çalışmaları, 22 Ağustos 2012 tarihinde Rusya'nın Örgüte üye olmasıyla sonuçlandı. (Volchkova, 2013; TC Ekonomi Bakanlığı İhracat Bilgi Platformu [d], 2013)

Rusya Ekonomik Kalkınma Bakanlığı Ticaret Müzakereleri Bölümü Direktörü ve Rusya'nın DTÖ'ye Katılım Başmüzakerecisi Maxim Medvedkov DTÖ`nün kurallarını uygulamakta kararlı olduklarını söyledi (Türkiye Ekonomi Politikaları Araştırma Vakfı, 2013). Söz konusu üyelik, sadece gümrük vergisi oranlarında düşüş ve pazara giriş kolaylığı değil, çok sayıda yasal düzenlemenin DTÖ ilkeleriyle uyumlu hale getirilmesini de gerektirmektedir. Sadece ticaretin ötesinde tüm iş çevresini etkilemesi söz konusu olan bu değişikliklerden bazıları şunlardır: Dış ticaret düzenlemeleri, anti damping gibi bazı korumacılık araçlarını düzenlemek, rekabetin korunması, ticari sırlar ve teknik düzenlemeler, döviz kurlarıyla ilgili düzenlemeler, fikri mülkiyet hakları ve kamu alımlarıyla ilgili düzenlemeler. Örneğin, 11 hizmet sektöründe yabancı sermaye ve rekabete kademeli olarak kolaylık sağlanmaktadır. DTÖ'nün vergi oranlarındaki etkisine bakılacak olura, ortalama gümrük vergisi oranları 2011 yılında %10 iken geçiş sürecinde %7.8'e düşmüştür. Düşüşler geçiş süreci boyunca sürmektedir. Bazı ürünlerde (domuz eti, otomobil gibi) geçiş süresi 7-8 yıla kadar uzamaktadır (Volchkova, 2013; TC Ekonomi Bakanlığı İhracat Bilgi Platformu [d], 2013). Rusya Federasyonu'nun Türkiye Ticaret Temsilcisi Tofik Melikov (2013), katılım prosedürleri tamamen uygulandıktan sonraki düşüşleri şöyle ifade etmiştir: "*Rusya'ya ithal edilen malların vergi oranı %3'e düşecek. Sanayi ürünlerinde düşüş %3, tarım ürünlerinde %4, otomotiv ve uçak sanayi ürünlerinde ise %10-15 olacak*". Yapılacak olan toplam gümrük indirimin AB ihracatçıları için yıllık 2,5 Milyar Euro tutarında tasarrufa yol açacağı düşünülmektedir. Bununla birlikte, düşürülen vergilerin Rusya'ya yıllık olarak yapılan AB ihracatına fazladan 3,9 Milyar Euro eklemesi beklenmektedir (TC Ekonomi Bakanlığı İhracat Bilgi Platformu [d], 2013).

DTÖ üyeliğinin çok sayıda faydası bulunmaktadır. Öncelikle, DTÖ üyesi olmayan bir ülkenin dış ticaret alanında işinin çok zor olduğu açıktır. Hem ciddi tarife ve tarife dışı ticari engellerle karşılaşır hem de yabancı fonlar için daha az cazibe taşır (Yaraman, 2013). RF üyelikle bu zorlukları aşmayı başarmıştır. Faydalara daha yakından bakacak olursak, gerçekleştirilen analizlere göre, Rusya'daki pazarların liberalleşmesi doğrudan dış yatırımları artıracak ve ilgili sektörlerde verimliliği artırıp, maliyet ve fiyatları düşürecek, sonuç olarak tüketicilerin refahını artıracaktır. Yapılacak iyileştirmelerin aynı zamanda diğer ülkelerin ve bu ülkelerdeki şirketlerin de Rusya'ya karşı olumlu bir tavır sergilemesine neden olması beklenmektedir. Standartlar da yükselecek ve diğer etkenlerle birlikte zamanla tüketici refahına olumlu yansıyacaktır. Melikov'a gore RF'nun DTÖ'ye katılımının en büyük avantajı mevzuatın ve idari prosedürlerin şeffaflaşması, dış piyasalarda çalışmaların istikrarı, ticarette bariyerlerin azalması ve Rusya'nın genel ticaret kuralların oluşumuna katılması olacaktır. Rusya'daki sektörlerin DTÖ üyeliğinden nasıl etkileneceğine bakılırsa, demir ve demir dışı metaller,

kimya endüstrisi, iletişim ve finans sektörleri karlı çıkabilecek; buna karşın gıda, aydınlatma, mühendislik ve inşaat materyalleri üretimi düşebilecektir. (Volchkova, 2013; Melikov, 2013)

Ancak Melikov'a (2013) göre DTÖ herşeyi kısıtlamamaktadır. Örneğin, RF'nun kırmızı ve beyaz et gibi bazı ürünlerin ithalatında kota uygulamaya devam edeceğini söylemektedir.

Sonuç olarak, Rusya DTÖ'ne girmesi sayesinde ekonomik gelişmesini ve etkinlik artışını hızlandıracaktır. Bu süreçte olumsuz etkileri azaltmak için sosyal politika ve önlemler alınması, bunun yanı sıra iş ortamının iyileştirilmesi ve idari engellerin azaltılması faydalı olacaktır. (Volchkova, 2013; Ön, 2013)

RF'nun DTÖ üyeliğinin Türkiye'ye de oldukça faydası olacağı beklenmektedir. Örneğin, DTÖ üyeliği sayesinde, müteahhitlik sektöründe makine, inşaat malzemesi ihracatı kolaylaşacak, maliyetler düşecek ve Türk şirketleri rekabette daha avantajlı hale gelecektir. Bunun yanında gümrük işlemleri daha standart hale gelecek, firmalar düzenlemeleri daha kolay anlayacak, canlanan Rusya Federasyonu ekonomisi firmalara yeni fırsatlar sunacaktır (Yenigün, 2013).

7 Sonuç

RF ile Türkiye arasında yüzyıllardır süren siyasi ve ekonomik ilişkiler son yıllarda giderek güçlenmiş ve dünyanın coğrafi olarak en büyük ve yatırıma en uygun ülkelerinden birisi olan RF, Türk iş adamları için giderek artan bir öneme sahip olmuştur. Türkiye'nin enerji açısından oldukça dışa bağımlı olması, komşusu RF'nun ise dünyanın önemli enerji ihracatçılarından birisi olması, iki ülke arasındaki dış ticaret açığının 2000li yıllardan itibaren hızla artmasına yol açmıştır. Bununla beraber Rusya'nın büyük bir tüketim toplumu olması ve ihtiyaç duyduğu mal ve hizmetlerin birçoğunda Türkiye'nin rekabet avantajına sahip olması, söz konusu dış ticaret açığını biraz olsun sınırlandırmıştır. Günümüzde 35 milyar $ dış ticaret hacmine ulaşmış olan iki ülke arasındaki ticari ilişkilerin yakın geçmişine baktığımızda, 1987 yılında başlayan doğal gaz alımı ve 1991 yılında SSCB'nin dağılmasıyla başlayan bavul ticaretinin önemli dönüm noktaları olduğu söylenebilir. Zaman içinde ticari ilişkiler farklı alan ve sektörlere yayılmış, siyasi gelişmelerle birbirlerini etkileyerek, iki ülkeyi birbirleri için vazgeçilmez bir hale getirme yolunda ilerlemiştir. Artık Türkiye, Ruslar için önemli bir turistik destinasyon, Rusya ise Türk iş adamları ve müteahhitler için önemli bir hedef pazar haline gelmiştir. İki ülke arasındaki ilişkiler nükleer enerji ve boru hatları gibi devletler arası anlaşmalar ile geleceğe yönelik olarak daha sağlam ve uzun vadeli hale gelmiştir. Türkiye ve RF'nun ekonomilerinin birbirini tamamlaması ve coğrafi yakınlıkları dışında, RF'nun girdiği işbirliği ve entegrasyonlar, özellikle de DTÖ üyeliği ile dış ticaret ve dış yatırımlara daha açık hale gelmesi, iki ülke arasındaki ticari ilişkilerin daha da artmasına yol açabilecektir. DTÖ üyesi RF, gümrük oranlarını belirli süreler içinde düşürerek, korumacılık araçlarını DTÖ ilkeleri çerçevesinde düzenleyerek, rekabet ve fikri mülkiyet hakları gibi konularda yasal düzenlemelerinde değişikliklere gidecek; bu gibi çabaları sayesinde daha rekabete açık, bürokrasinin azaldığı, rahat iş yapılan, çok sayıda sektöründe maliyet ve fiyatların düşüp, rekabetin arttığı, standartların yükseldiği bir ülke haline gelecektir. Bütün bunların sonucunda tüketici refahı, kişibaşı geliri ve gelişmişlik göstergeleri iyileşmiş bir ülke haline gelecektir. Bu süreç boyunca, Türkiye RF ile ticari ilişkilerini daha da artırma imkanı bulacaktır. Birbirlerine yakın durmak, birbirlerinin kaynak ve uzmanlıklarından yararlanmak, her iki ülkenin de gelişiminde hızlandırıcı bir etkide bulunacaktır.

Turkey - Black Sea Economic Cooperation Organization: Foreign Trade Relations during the 1996-2012 Period

Ph.D. Candidate Cemal Ardıl (Istanbul Aydın University, Turkey)

Abstract

This paper presents the regional economic relations between Turkey and Black See Economic Cooperation Organization (BSEC). The Heads of State and Government of eleven countries: Albania, Armenia, Azerbaijan, Bulgaria, Georgia, Greece, Moldova, Romania, Russia, Turkey and Ukraine signed the Summit Declaration and the Bosphorus Statement giving birth to the Black Sea Economic Cooperation on 25 June 1992, in Istanbul. On 5 June 1998, the Heads of State or Government signed the BSEC Charter, came into force on 1 May 1999 BSEC has evolved into an international regional organization for economic cooperation. The organization has 12 members since Serbia joining the organization in 2004. It came into existence as a unique and promising model of multilateral political and economic initiative aimed at fostering interaction and harmony among the Member States, as well as to ensure peace, stability and prosperity encouraging friendly and good-neighbourly relations in the Black Sea region. Countries bordering the Black Sea, Balkan and Caucasus formed the BSEC countries cover an area of approximately 20 million square kilometer and represent more than 350 million people. The region with the foreign trade volume of U.S. $ 300 billion per year draws attention to the rich natural resources; and is the main European energy and transport corridor transfer. The Black Sea region is a contested neighbourhood and the subject of intense debates and conflicts in the globe. Also, this reflects the changing dynamics of the Black Sea region, its complex realities, the interests of outsiders and the region's relations with the rest of the globe. Moreover, its strategic position, linking north to south and east to west, as well as its oil, gas, transport and trade routes are all important reasons for its increasing relevance. Turkey's foreign trade volume with BSEC member countries is steadily increasing as per the findings over the period of 1996-2012.

1 Giriş

Günümüzde ülkeler hızlı küresel rekabet karşısında uluslararası ilişkilerinde örgütlenerek siyasi ve ekonomik yararlar kazanmak istemektedirler. Ülkeler, bu uluslararası ilişkilerin uzun vadeli çıkarları arasında ortak refah, ortak barış ve ortak istikrar düşünceleri ekseninde birlikte kalkınmayı hedeflemektedirler.

Yüzyıllardan beri Karadeniz bölgesi, çeşitli uygarlıkların beşiği olmuş, Asya ile Avrupa arasında değişik uluslar, kültürler ve dinlerden gelen insanların birbirleriyle kaynaştığı Doğu ve Güney Doğu Avrupa coğrafyasıdır (Kalaycı, 1993). Karadeniz bölgesinde, bugünkü kültürel, sosyal ve siyasi ekonomik işbirliği dönemine ulaşmak hiçbir zaman kolay bir süreç olmamış, barış ve huzur dönemlerini uzun çatışma ve savaşlar izlemiştir. Bu ortamda bile, İstanbul ve Çanakkale boğazları sayesinde Marmara, Ege ve Akdeniz bölgelerine açılan Karadeniz, gelişmiş siyasi ve ekonomik ilişkileri ve bağlantılarıyla büyük önem kazanmıştır (Karaman, 2009).

Bölgedeki ülkeler arasında barış ve huzur köprülerinin kurulmasında Avrupa ve Asya'yı birleştiren meşhur İpek Yolu'nun büyük bir etkisi olmuştur. İpek Yolu sayesinde iki kıtanın halkları arasında ilişki kurulması, farklı kültürlerin yanyana yaşaması ve karşılıklı olarak zenginleşmesi şeklinde çok değerli deneyimler kazanılmıştır.

Doğal hammadde ve enerji kaynakları yönünden çok zengin olan eski Sovyetler Birliği'nde savunma ve uzay sanayii gibi alanlara yatırım yapılmış, buna karşılık başta tüketim malları olmak üzere insana yönelik yatırımlar ihmal edilirken Türkiye de eski Sovyetler Birliği'nin çok fazla ihtiyaç duyduğu ve Batı ülkelerinde pazarlamada güçlük çekebileceği gıda ve tüketim mallarına sahip bulunmaktadır. Sanayileşmede önemli bir aşama kaydeden ve yeni bir atılıma hazırlanan Türkiye yanıbaşındaki bu doğal hammadde ve enerji kaynaklarına, eski Sovyetler Birliği ise gıda ve tüketim mallarına ihtiyaç duymaktadır (Şengül, 2009).

Üstelik Sovyetler Birliği'nde birçok Türk Cumhuriyeti'nin bulunması, ilişkilerin geliştirilmesine imkan sunmuştur.

Değinilen tüm bu gelişmeler, Türkiye ile Karadeniz'e kıyısı olan ülkeler arasında ekonomik işbirliği ve bölgesel bütünleşme girişimi için uygun bir ortam oluşturmuştur. Karadeniz Ekonomik İşbirliği (KEİ) fikri böyle bir ortamda ortaya atılmıştır (Gökalp, 1993).

KEİ, dünyada küreselleşme ve bölgesel düzeyde uluslararası bütünleşme yönünde, siyasal ve ekonomik alanda yeniden yapılanma sürecinin bir ürünüdür (Erol, 2006). Doğu ve Güney Doğu Avrupa'da, ekonomik boyutta serbest piyasa ekonomisine ve siyasal boyutta çoğulcu demokrasiye geçiş sürecinin yarattığı ortamda, konumunu ve zamanlamasını bulan KEİ fikri, öncülüğünü Türkiye'nin yaptığı bir bölgesel ekonomik işbirliği girişimidir.

Karadeniz Ekonomik İşbirliği Örgütü, 1980'li yılların sonunda Doğu Avrupa Ülkeleri ve Sovyetler Birliği'ndeki "Perestroika" (yeniden yapılanma) ve "Glasnost" (açıklık) değişim sürecinin hızlandığı bir dönemde doğmuştur (Kolos, 2012).

Başlangıçta KEİ'nin amacının Karadeniz'e kıyısı olan ülkeler arasında aşamalı olarak bir "serbest ticaret bölgesi" kurulması olduğu belirtilmiş, ancak daha sonra yapılan toplantılarda bu girişimin "ekonomik işbirliği" çerçevesinde değerlendirilmesi gerektiği belirtilmiştir. KEİ, üyesi ülkelerin potansiyellerinden, coğrafi yakınlıklarından ve ekonomilerinin birbirlerini tamamlayıcı özelliklerinden yararlanarak aralarındaki ikili ve çok taraflı ekonomik, teknolojik ve sosyal ilişkileri çeşitlendirmeleri ve daha da geliştirmeleri, böylelikle Karadeniz havzasının bir barış, istikrar ve refah bölgesi olması amaçlamaktadır. Bu amaca ulaşmak için seçilen araç ise ekonomik işbirliğidir.

KEİ'nin kuruluş sürecini başlatan ülkeler Karadeniz'e kıyısı olan Türkiye, eski Sovyetler Birliği, Romanya ve Bulgaristan'dır. Sovyetler Birliği'nin dağılması üzerine, Bağımsız Devletler Topluluğu olarak Rusya Federasyonu, Ukrayna, Azerbaycan, Moldova, Gürcistan ve Ermenistan kurucu üye sıfatıyla katılmışlardır. Daha sonra Karadeniz'de kıyısı olmayan Yunanistan ve Arnavutluk kurucu üye olarak katılmıştır.

İşbirliğine ilişkin ilk somut toplantı Türkiye'nin evsahipliğinde 19 Aralık 1990'da Ankara'da yapılmıştır. Toplantıda, Azerbaycan, Gürcistan, Moldova ve Ermenistan temsilcilerinin de dâhil olduğu eski Sovyetler Birliği heyeti ile Romanya ve Bulgaristan temsilcileri yer almışlardır. Toplantı sonucunda işbirliğinin temel prensipleri üzerinde uzlaşıya varılmış, "Karadeniz Ekonomik İşbirliği"nin kurulması hususunda anlaşma sağlandığı resmen açıklanmıştır. 12-13 Mart 1991 tarihlerinde Bükreş'te, 23-24 Nisan 1991 tarihlerinde Sofya'da uzman düzeyinde toplantılar yapılmıştır. Bu toplantılarda KEİ'nin amaçları ve ilkeleri üzerinde ortak bir anlaşmaya varılmıştır. 3 Şubat 1992 tarihinde Türkiye'nin ev sahipliğinde gerçekleştirilen toplantıda, Türkiye, Rusya Federasyonu, Romanya, Azerbaycan, Ermenistan, Gürcistan, Moldova, Ukrayna ve Bulgaristan KEİ ile ilgili temel belgeyi parafe etmişlerdir. Anılan belge, 25 Haziran 1992 tarihinde İstanbul'da düzenlenen ve yukarıda ismi geçen dokuz üye ülkenin yanı sıra, Yunanistan ile Arnavutluk'un da kurucu üye olarak katıldığı Zirve toplantısında on bir ülkenin devlet veya hükümet başkanları tarafından imzalanarak, "İstanbul Zirvesi Bildirisi" adı altında resmen işlerlik kazanmıştır.

Yalta'da 5 Haziran 1998 tarihinde Devlet veya Hükümet Başkanları tarafından imzalanan KEİ Şartı'nın 1 Mayıs 1999 tarihi itibarıyla yürürlüğe girmesiyle KEİ uluslararası bölgesel bir ekonomik işbirliği örgütüne dönüşmüştür. 2004 yılında Sırbistan'ın da katılmasından bu yana örgütün 12 üyesi bulunmaktadır.

KEİ, bundan böyle hükümetler boyutunun yanı sıra, parlamenterler, özel sektörler, belediyeler ve hatta hükümet dışı kuruluşlar boyutuyla; çalışma organları, usulleri ve yöntemleriyle; bankası, İstatistik Veri ve Ekonomik Bilgi Değişimi Koordinasyon Merkezi'yle somut projeleri sonuçlandırabilecek temel öğelere sahip olmuş bulunmaktadır (Dışişleri Bakanlığı, 2013).

KEİ Şartı'nın hukuki hükümleri kapsamında, anlaşmazlıkların halli için başvurulacak merci açık olarak belirtilmiştir. Bu hukuki hükümlere göre, iki veya daha fazla üye devlet arasında KEİ Şartı'nın yorumlanması veya uygulanmasıyla ilgili bir anlaşmazlığın olması halinde taraflar istişarede bulunacaklar ve gerekirse anlaşmazlığın incelenmesi ve sonuçlandırılması için Dışişleri Bakanları Konseyi'ne sunacaklardır.

2 Türkiye'nin Karadeniz Ekonomik İşbirliği Örgütü ile İlişkileri

Coğrafi konumunun kendisine verdiği eşsiz stratejik üstünlüklere sahip olan Türkiye, Türklerin 1354 yılında Anadolu' dan (Asya) Çanakkale Boğazı'nı Gelibolu (Avrupa) üzerinden Balkan yarımadasına geçerek 1361 yılında Edirne'yi ve 1453 yılında İstanbul'u fethettikleri tarihten itibaren, askeri, sosyal, kültürel, siyasi ve ekonomik gelişmesini Batıya yönelerek sağlamakta ve 1959 yılından bu yana da sabırla ucu açık müzakereler kapsamında Avrupa Birliği (AB) ile bütünleşme sürecini tamamlayarak tam üyesi olmaya çalışmaktadır. Türkiye koşut siyasi ve ekonomik ilişkilerini çeşitlendirmeye yönelik arayışlar sürecinde, AB'nin yanısıra diğer uluslararası ve bölgesel bütünleşme hareketlerine aktif üye veya gözlemci olarak katılmaktadır.

Türkiye, Rusya Federasyonu, Romanya, Azerbaycan, Ermenistan, Gürcistan, Moldova, Ukrayna ve Bulgaristan tarafından 1992 yılında Karadeniz Ekonomik İşbirliği olarak kurulan ve daha sonra Yunanistan, ve Arnavutluk'un katılımıyla 1998 yılında Karadeniz Ekonomik İşbirliği Örgütü (Black See Economic Cooperation Organization, BSEC) adını alan ve Sırbistan'ın da üye olmasıyla 19.240.267 km^2 yüzölçümüyle (Dünya yüzölçümünün (148.940.000 km^2 kara) %13' ü;) zengin doğal kaynaklara (uranyum, petrol, altın, doğalgaz, vb.) ve 350.000 milyon nüfusuyla dünya nüfusunun yaklaşık yirmide birine sahiptir (Black See Economic Cooperation Organization, 2013).

Türkiye'nin öncelikli stratejik bölgelerinden olan Kafkaslar ve Balkanlar arasında bir köprü niteliği taşıyan Karadeniz Bölgesi, tarihten günümüze kadar çevre ülkeler için sürekli olarak yüksek önem taşımaktadır. Zengin doğal hammadde ve enerji kaynaklarına sahip bulunmasıyla birlikte Avrupa, Kafkasya, Asya Ulaşım Koridoru (TRACECA,Transport Corridor Europe-Caucasus-Asia) olması nedeniyle, Karadeniz Bölgesi'ne duyulan uluslararası ilgi günümüzde de sürekli artmaktadır.

Türkiye, Karadeniz Havzasındaki işbirliği olanaklarının değerlendirildiğinde bölgenin en kapsayıcı ve tam teşekküllü ekonomik örgütü olan KEİ'nin kuruluşunda önemli rol almış olup, o zamandan beri faaliyetlerine aktif katılım sağlamakta ve Sekretarya'sına ev sahipliği yapmaktadır. Ayrıca, uluslararası toplumun Karadeniz'e artan ilgisinden yararlanarak, KEİ çerçevesinde somut işbirliği projelerinin hayata geçirilmesi için çalışmakta ve Örgüt'ün etkinliğinin daha da arttırılması için yoğun çaba sarfetmektedir.

Bölgede ekonomik işbirliğini tesis etme amacı güden KEİ'nin temel özelliklerinden birisi, işbirliğine ve dış dünyaya açık yapısıdır. Avusturya, Hırvatistan, Çek Cumhuriyeti, Mısır, Fransa, Almanya, Belarus, İsrail, İtalya, Polonya, Slovakya, Tunus, ABD, AB Komisyonu, Karadeniz Komisyonu, Uluslararası Karadeniz Kulübü ve Enerji Şartı Sekretaryası, KEİ toplantılarında gözlemci olarak bulunmaktadırlar. Macaristan, İngiltere, İran, Karadağ, Ürdün, Japonya, Kore ve Slovenya ise Sektörel Diyalog Ortağı Statüsünde toplantılara katılmaktadırlar.

KEİ'nin tek karar organı, yılda iki defa toplanan ve oydaşma ile karar alan Dışişleri Bakanları Konseyi'dir. Üye ülkelerin Dışişleri Bakanlarını temsil eden ve onlar adına hareket eden Yüksek Düzeyli Memurlar Komitesinin ise temel görevi Konseyin aldığı karar ve tavsiyelerin uygulanmasını sağlamak ve Konseye tavsiyelerde bulunmaktır.

KEİ bünyesinde; ticaret ve ekonomi, ulaştırma, enerji, haberleşme, bilim ve teknoloji başta olmak üzere çeşitli konularla ilgili 18 adet çalışma grubu yardımcı organ olarak faaliyet göstermektedir. Dışişleri Bakanları Konseyi'nin kararı ile kurulan ve KEİ çerçevesinde gelişen işbirliğinin temelini oluşturan Çalışma Grupları, Konseye faaliyetleri hakkında raporlar sunmakta ve tavsiyelerde bulunabilmektedirler. Bir projenin, anlaşmanın veya herhangi bir işbirliği girişiminin ilk etapta tartışıldığı organ olan Çalışma Grupları uzmanlar düzeyinde toplanmaktadır. Çalışma grubu faaliyetlerine etkinlik ve ivme kazandırılmasını teminen her üye ülke belirli alanlarda iki yıllık dönemler halinde "koordinatör ülke" görevini üstlenmektedir. Koordinatör ülke bir eylem planı hazırlayarak sözkonusu alandaki işbirliğinin önceliklerini belirlemek ve koordinatörlüğü boyunca en az iki toplantı düzenlemekle yükümlüdür. Türkiye halen Gümrük Çalışma Grubu, Çevre Koruma Çalışma Grubu, Kurumsal Yapılanma ve İyi Yönetişim Çalışma Grubu, KOBİ Çalışma Grubu ile Bilim ve Teknoloji Çalışma Grubu'nun koordinatörlüğünü yürütmektedir.

KEİ'nin, Karadeniz Ekonomik İş Birliği Parlamenter Asamblesi (KEİPA), İş Konseyi, Ticaret ve Kalkınma Bankası ve Karadeniz Etütleri Uluslararası Merkezi olmak üzere dört bağlı kuruluşu mevcuttur. Sözkonusu kuruluşların yönetimlerinde Türkiye'nin temsilcileri bulunmaktadır.

Son yıllarda KEİ çerçevesinde gerçekleştirilen işbirliği yeni boyutlar kazanmaya başlamıştır. KEİ faaliyet alanlarında kamu kurumları ve özel sektör tarafından geliştirilecek projelerin ön-fizibilite çalışmalarının finansmanı amacıyla oluşturulan bir Proje Geliştirme Fonu (Project Development Fund-PDF) bulunmaktadır. 2002 yılında kurulan bu Fonun amacı bölgesel işbirliğini olumlu etkileyecek, bölgeye yararlı olabilecek fikirleri destekleyerek projenin oluşturulmasına katkıda bulunmaktır.

PDF kurallarına göre bir proje başvurusu için en az üç KEİ ülkesinden birer proje ortağı bulunması gerekmekte ve bir projeye en fazla 30.000 Euro fon sağlanabilmektedir. Projenin süresi genelde 12 ayla sınırlı tutulmakta olup, KEİ'ye üye olmayan ülkelerden de katılım desteklenmektedir; fakat bu ortakların kendi aktivitelerini finanse etmeleri gerekmektedir. Projeleri değerlendirmek ve bu yöndeki çalışmaları yönlendirmek amacıyla üye ülke temsilcilerinden oluşan bir Yönlendirme Komitesi kurulmuştur.

Ulaştırma konusu, KEİ kapsamında önemli bir işbirliği başlığını oluşturmaktadır. Bu bağlamda KEİ ülkeleri arasında etkin bir ulaşım ağı oluşturmak suretiyle ekonomik işbirliğinin gelişimine katkıda bulunmayı amaçlayan "Karadeniz Çevre Ulaştırma Koridoru/Black Sea Ring Corridor" projesi önem taşımaktadır. Proje, üye ülkeleri birbirine bağlayan ulaştırma altyapısının geliştirilmesi, bu konudaki ulusal düzenlemelerin uyumlaştırılması, çevrenin korunması, uluslararası projelerin izlenmesi için bir veri tabanı oluşturularak bir harita hazırlanmasını amaçlamaktadır. Bu çerçevede, 19 Nisan 2007 tarihinde Belgrad'da yapılan KEİ Dışişleri Bakanları Konseyi 16. Toplantısı'nda "Karadeniz Çevre Otoyolunun Eşgüdümlü Olarak Geliştirilmesine Dair Mutabakat Zaptı (Memorandum of Understanding for the Coordinated Development of the Black Sea Ring Highway) - MoU" imzalanmış ve 1 Kasım 2008'de yürürlüğe girmiştir.

Sözkonusu Mutabakat Zaptı uyarınca, "KEİ Çevre Otoyolu Ortak Daimi Teknik Sekretaryası" Selanik'te faaliyete geçmiştir. Bununla, bölgedeki karayolu altyapısının ve Karadeniz'de kombine ve çok modlu taşımacılığın geliştirilmesi amaçlanmaktadır.

Buna ilaveten, Karadeniz'de deniz ulaşımından gereğince istifadeyle, karayolu ve demiryolu ağları üzerindeki yükün hafifletilmesi ve daha etkin bir ulaştırma modeline yönelinmesi amacıyla, "KEİ Bölgesinde Deniz Otoyollarının Geliştirilmesi Anlayış Muhtırası (Memorandum of Understanding on the Development of the Motorways of the Sea at the BSEC Region)", 19 Nisan 2007 tarihinde Belgrad'da yapılan KEİ Dışişleri Bakanları Konseyi 16. toplantısında imzalanmış, 1 Aralık 2008'de yürürlüğe girmiştir.

Karadeniz Ekonomik İşbirliği Örgütü (KEİ) Deniz Otoyolları Geçici Çalışma Grubu'nun son toplantısı, KEİ Dönem Başkanı Rusya'nın ev sahipliğinde, 6-7 Ekim 2011 tarihlerinde, Novorossisk'de düzenlenmiş, toplantıda KEİ Deniz Otoyollarının Geliştirilmesi Ortak Daimi Teknik Sekretaryasına hangi ülkenin ev sahipliği yapacağı

konusu ele alınmış, ancak tarafların ikili danışma talepleri nedeniyle bir sonraki toplantıda ele alınmak üzere ertelenmiştir. Türkiye de (Ulaştırma Bakanlığı) sözkonusu Sekretarya'ya ev sahipliği yapmak üzere talip olmuştur.

KEİ Bölgesi'nde Karayolu Eşya Taşımacılığı'nın Kolaylaştırılmasına Yönelik Anlayış Muhtırası 20 Temmuz 2006 tarihinde yürürlüğe girmiştir. Sözkonusu Anlayış Muhtırası, KEİ üyesi ülkeler arasında uluslararası karayolu taşımacılığında aşamalı bir serbestleştirmeyi öngörmekte ve buna yönelik olarak ülkelerin somut adımlar atmasını salık vermektedir. Bu hedef doğrultusunda Türkiye'nin öncülüğünde başlatılan girişimler çerçevesinde, eşya taşımacılığında kullanılan ticari araçların bir gidiş-dönüş seferinin arzu eden KEİ ülkeleri arasında transit olarak yapılabilmesine izin veren KEİ Geçiş Belgesi oluşturulup deneme amaçlı olarak 1 yıl süreyle uygulanmıştır. Sözkonusu uygulamaya Türkiye, Arnavutluk, Ermenistan, Gürcistan, Moldova, Romanya ve Sırbistan tarafından destek verilmektedir.

Bölge ülkeleri arasındaki ulaştırma ve ticaret alanında işbirliğini amaçlayan bir alan da KEİ üyesi ülkelerin profesyonel sürücülerinin ve işadamlarının vize işlemlerinin kolaylaştırılması anlaşmalarıdır. "KEİ üyesi ülkelerin işadamları için vize işlemlerinin kolaylaştırılması anlaşması" ile "KEİ üyesi ülkelerin profesyonel sürücüleri için vize işlemlerinin kolaylaştırılması anlaşması" Tiran'da, 23 Ekim 2008 tarihinde düzenlenen 19. KEİ Dışişleri Bakanları Konseyi Toplantısında ele alınmış, Türkiye'nin yanı sıra Arnavutluk, Ermenistan ve Moldova tarafından da imzalanmıştır.

Türkiye, KEİ ile AB arasında gelişmekte olan ilişkileri ve her iki örgüt arasında kurumsal işbirliği tesis edilmesini desteklemektedir. AB Komisyonu 2007 Haziran ayından bu yana KEİ nezdinde gözlemcilik statüsüne sahiptir. AB'nin Karadeniz Sinerjisi'ne görünürlük ve uyum kazandırmayı hedeflediği ilk üst düzey siyasi etkinlik 14 Şubat 2008 tarihinde Ukrayna'nın KEİ Dönem Başkanlığı sırasında, Kiev'de "Karadeniz Bölgesi Ülkeleri ve AB Dışişleri Bakanları Toplantısı" başlığı altında gerçekleştirilmiştir. Sözkonusu toplantıya esas itibariyle KEİ ve AB Dışişleri Bakanları katılmıştır. Toplantı, KEİ ile AB arasında Bakan düzeyinde yapılan ilk toplantı olması bakımından önem taşımıştır. Kiev'de yapılan toplantı sonunda, "Geniş Karadeniz Bölgesi Ülkeleri ve AB Dışişleri Bakanları Toplantısı Ortak Açıklaması" yayınlanmıştır. AB ile tamamı KEİ üyesi olan Geniş Karadeniz Bölgesi ülkeleri arasında ulaştırma, enerji, örgütlü suçla mücadele ve ticaret gibi alanlarda proje bazında işbirliği geliştirilmesine yönelik siyasi irade sergilenmiş ve sözkonusu alanlarda işbirliğinin temeli atılmıştır (TC Dışişleri Bakanlığı, 2013).

Türkiye, KEİ başkanlığını 15 Aralık 2012 de Ukrayna'ya devretmiş, böylece Ukrayna'nın 1 Ocak'tan 30 Haziran 2013'e kadar sürecek olan Karadeniz Ekonomik İşbirliği Örgütü dönem başkanlığı resmen başlamıştır. Eşzamanlı olarak Ukrayna, 2013 yılında Avrupa Güvenlik ve İşbirliği Teşkilatı (AGİT) dönem başkanlığını da yapacaktır. Ukrayna yönetimi, AGİT başkanlığı süresinde insan ticaretine karşı mücadele vaadinde bulunmuştur.

***Tablo 1.** En büyük 20 küresel ekonomi. (Cari fiyatlarla GSYH; Milyar $; Kaynak IMF ve TÜİK)*

3   Türkiye'nin Karadeniz Ekonomik İşbirliği Örgütü ile Dış Ticaret İlişkileri

3.1 Türkiye'nin Dış Ticaret İlişkileri

Küresel pazarda birçok sektörde önde gelen üretici ve ihracatçı ülkeler arasına girmeyi başaran Türkiye, Avrupa'nın 6. büyük ekonomisi olmayı başarmıştır (Avrupa Birliği Bakanlığı, 2013). Türkiye, 2012 yılında cari fiyatlarla 786.3 milyar dolarlık GSYH'si ile dünya sıralamasında 17. olmuştur. 2012 yılında milli geliri hızla küçülen Hollanda'nın bir basamak düşerek 18'inciliğe inmesi, Türkiye'yi bir basamak yukarı çıkartmıştır.

2012 IMF verilerine bakıldığında GSYH büyüklüğü baz alındığında ilk 20 küresel ekonomi sıralamasında Türkiye ve Hollanda dışındaki ülkelerin sıralamasında değişiklik olmamıştır (Tablo 1). 2012'deki bir basamaklık yükselişle Türkiye, 2023 hedefine biraz daha yaklaşmıştır. Türkiye, Cumhuriyetin Kuruluşu' nun (29 Ekim 1923) 100'üncü yılı olan 2023'te gayri safi yurt içi hasılasını (GSYH) 2 trilyon 64 milyar dolara çıkararak en büyük ilk 10 küresel ekonomi arasına girmeyi, kişi başına düşen milli gelirini de 25 bin 76 dolara çıkarmayı hedeflemektedir.

3.2 Türkiye- KEİ Dış Ticaret İlişkileri

KEİ'in AB, EFTA'ya göre sadece ekonomik işbirliği özelliği taşıması, KEİ'ye üye ülkelerin ekonomik düzeyleri arasındaki farklılık, üye ülkeler arasında ticaret hacminin genişlemesinde başlıca olumsuz etmen olduğu görülmektedir (Gençler, 1994). Türkiye açısından KEİ sürecinin en önemli amacı dış ticaret ilişkilerinin geliştirilmesidir. Bölgelerarası ticaretin arttırılması ve dış ticarette engellerin kaldırılması KEİ'nin öncelikli hedefleri arasındadır. Bölgesel dış ticaretin geliştirilmesinin yanı sıra, doğrudan dış yatırımlar ve teknoloji transferi de üye ülkelerde ekonomik gelişmeyi hızlandıran etkenler olarak KEİ'nin eylem alanı içinde yer almaktadır. Sınır ve kıyı ticareti, ticaretin serbestleştirilmesi, KOBİ'lerin teşviki, malların ve kişilerin sınır ötesi hareketlerinin kolaylaştırılması, iş seyahatlerinde vize kurallarının yumuşatılması halen üzerinde çalışılmakta olan konular olarak KEİ gündeminde bulunmaktadır (TC Ekonomi Bakanlığı, 2013).

Türkiye'nin KEİ ülkeleri ile olan dış ticareti incelendiğinde, 1991 yılına kadar Sovyet Sosyalist Cumhuriyetler Birliği (SSCB), 1991 yılında SSCB'nin dağılmasından sonra Rusya Federasyonu dışında, diğer KEİ ülkeleri ile gerçekleşen dış ticareti oldukça düşük olduğu görülürken, KEİ süreciyle birlikte Türkiye açısından büyük bir pazar potansiyeline sahip bu ülkeler ile zamanla dış ticaret ilişkilerinin yoğunluğunun arttığı, dış ticaret hacminin de genişlediği görülmektedir.

Tablo 2 ve 3' deki verilerin analizinden Türkiye'nin 1996-2012 döneminde KEİ ülkelerine yaptığı toplam ihracat değeri sürekli olarak artmıştır. Bununla birlikte, 1996 yılında Türkiye'den bu ülkelere yapılan toplam ihracat değeri $ 2.926.481.835 milyar dolar iken, toplam ihracattaki payı yüzde 12.6' dır, 2012 yılında toplam ihracat $ 18.789.983.573 milyar dolar olarak gerçekleşmiş olup, Türkiye'nin toplam ihracat içindeki payı yüzde 12,3'tür. 1996 yılında Türkiye'nin bu ülkelerden yapmış olduğu toplam ithalatı $ 3.896.559.666 milyar dolar iken, toplam ithalattaki payı yüzde 8,9 dur, 2012 yılında toplam ithalatı $ 41.509.682.946 milyar dolar olarak gerçekleşmiş olup, toplam ithalattaki payı 17,5'tir. 2008 küresel ekonomik krizi, 2008 yılının son aylarında ortaya çıkan ve dünyanın birçok ülkelerini olumsuz yönde etkileyen ekonomik gelişmelerdir. 1929 Dünya Ekonomik Bunalımıyla kıyaslanan bu kriz özellikle Eylül ayında gözle görülür hale gelmiştir. Tablo 2 ve 3 ile Şekil 1 ve 2 birlikte incelendiğinde, Türkiye'nin dış ticareti 1996'dan beri sürekli olarak artarken, 2008 krizi nedeniyle 2009 yılında önemli miktarda düşüş kaydetmekle beraber 2012 yılındaki dış ticaret performansı olumlu bir gelişme trendine işaret etmektedir.

Türkiye'nin KEİ ülkeleri ile olan 1996-2012 dönemi dış ticareti aşağıdaki Şekil 1 ve 2 ile Tablo 2 ve 3'de verilmiştir (TC Türkiye İstatistik Kurumu, 2013).

4   Sonuç ve Tartışma

Türkiye'nin KEİ ülkeleri ile olan dış ticareti incelendiğinde, 1991 yılına kadar SSCB'nin, 1991 yılından sonra Rusya Federasyonu'nun en büyük dış ticaret partneri olduğu, diğer KEİ ülkeleri ile gerçekleşen dış ticaretin ise oldukça düşük olduğu görülmektedir. Büyük ve gelişen bir pazar potansiyeline sahip bu ülkeler ile son yıllarda Türkiye'nin dış ticari ilişkilerinin arttığı, ticaret hacminin de genişlediği göze çarpmaktadır. Türkiye'nin mevcut

imkan ve potansiyeli ile daha nitelikli, teknoloji seviyesi yüksek ve sofistike ürünlerin ihracatına ağırlık vermesi durumunda, KEİ bölgesine yönelik dış ticaretin arttırılabileceği görülmektedir.

Türkiye'nin KEİ içindeki öncü rolü ve bu işbirliğinden beklentileri dikkate alındığında, Türkiye ile diğer KEİ üyesi ülkeler arasındaki ekonomik ilişkilerin geliştirilmesinde kullanılan araçların çeşitlendirilmesi önem taşımaktadır. Türkiye son yıllarda izlediği barışçıl ve dışa açık politika paralelinde dış ekonomik ilişkilerinde de çeşitlilik aramaktadır. Bu arayış Türkiye'nin dış ticaret verilerinde ve yöneticilerinin sözlerinde kendisini açıkça göstermektedir.

Türkiye, KEİ'nin birlikte kalkınma ülküsü etrafında, uluslarası örgütler ve bölgesel ülkelerle birlikte hareket ederek ortak refah, barış ve istikrar sağlamaktadır. KEİ, öncelikli olarak ekonomik ilişkilerin geliştirilmesine dayalı bölgesel bütünleşme biçimi olduğundan, AB bütünleşmesine alternatif olmamış, buna karşılık, her iki yönde de açılmak isteyen ülkeler için bir köprü olma işlevini hedeflemiştir.

KEİ örgütünün ortaya çıkış nedenleri arasında SSCB'nin dağılması, yeni dünya düzeninde açık ekonomi ve dış ticaretten beklenen büyük ve önemli yararlar, bölgede yeni bağımsız devletlerin ortaya çıkması, AB'nin siyasi bütünleşmesini sağlaması, ayrıca Kafkaslar ve Balkanlarda sıcak çatışmaların değişik boyutlarda sürmesi sayılabilir.

Bölgede meydana gelen bütün bu olay ve gelişmeler, Karadeniz havzasında bulunan istikrar boşluğunu doldurmak ve 20 milyon km^2'lik büyük bir coğrafi alan üzerinde 350 milyondan fazla bir tüketici pazarı kurmak, siyasi, ekonomik ve kültürel ilişkileri ilerletmek, dostluk ve işbirliğini geliştimek imkanı vermiştir.

Türkiye'nin KEİ'deki öncülüğü incelendiğinde, model ülke olma sorunu bulunmadığı, ancak bunun yerine 2023 küresel ekonomik hedeflere ulaşmada sorunları bulunduğu gözlemlenmektedir. Türkiye 2023 referans senaryo çerçevesinde; teknolojik gelişim ve altyapı olarak vizyoner, yüksek katma değer elde eden, araştırma-geliştime-inovasyon ve tasarım yapan, etkin ve verimli bir yapıyı hedeflemektedir. Ülke konumlanması açısından pazarı set eden, tüketici odaklı, küresel markalar çıkarmış, iş yapış şekli açısından stratejik düşünen ve uzun vadeli planlar yapan, paydaşlar arasında eşgüdümü en üst düzeye taşıyarak, sinerji üreten bir ülke olmayı amaçlamaktadır. Türkiye'nin 2023 yılında 500 milyar dolar ihracat hedefine ulaşması için, küresel ticaretten 2013 yılında %1, 2018 yılında %1,25 ve 2023 yılında %1,5 pay alması gerekmektedir. Ancak, mevcut en büyük ilk 10 küresel ekonomi listesi incelendiğinde, sıralamada ABD, Çin, Japonya, Almanya, Fransa, Brezilya, İngiltere, İtalya, Rusya ve Hindistan yeralmaktadır. Türkiye'nin 2023 hedefleri açısından bakıldığında, yukarıda bahsi geçen sıralamadaki son beş ülkenin, İngiltere ($ 2.440,5 milyar dolar), Brezilya ($ 2.396,0 milyar dolar), Rusya ($ 2.022,0 milyar dolar), İtalya ($ 2.014,1 milyar dolar), ve Hindistan ($ 1.824.8 milyar dolar), gelecekteki dinamik performsları dikkate alındığında, Türkiye'yi çok çetin bir küresel rekabet ve üstünlük yarışı beklemektedir.

Bölgede Bulgaristan, Romanya ve Yunanistan'nın AB üyesi olması diğer KEİ ülkelerinin Avrupa Birliği Müktesebatı kapsamında iç bütünleşmelerini, kurumsal yapılanmalarını ve siyasetlerini uyumlaştırmaları için açık fırsat ve imkan sağlamaktadır. Bununla birlikte, KEİ, kendisi dışında kalan ülkelere ve diğer bütünleşmelere zarar vermekten kaçınmalı, aksine yararlı diyalog ve işbirliklerine açık olmalıdır. Başta insan ve üretim faktörlerinin serbest dolaşımı sağlanarak, ortak kalkınma ve gelişme sağlanmalıdır. Bu kapsamda, bölgedeki turizm teşvik edilmeli, doğal, tarihi ve kültürel varlıklar korunma altına alınarak geleceğe miras bırakılması sağlanmalıdır.

Kültürün Ekonomik Kalkınmaya Etkisi ve Türkiye-Rusya Ekonomik İlişkisi

The Effect of Culture on Economic Development and Turkey-Russia Economic Relations

Emine Ebru Usta (Ministry of Family and Social Policies, Turkey)

Abstract

Globalization is worldwide integration of economical ,cultural,political,religious and social system.The incremental competitive conditions of nowadays make the firms not only analysis the other countries economic or political system but also cultural,religious and social systems. In this respect for globalization world , it is sure that culture and economy get the crucial role at the inter state relations.At the base of turkey and Russia also lays this dialog.For this reason in this study it is aimed that with current parameters tried to explain after diagnosis in general means the effects of culture on economical developments especially after 2001 economic recession- lives important regulation period in which known power transition world economy -Turkey,takes place in the developing countries, with Russia Federation ,important member of ascending market economy.

1 Giriş

Sosyal bir kavram olarak "kültür" kavramının kaynaklarda üzerine hemfikir olunmuş ortak bir tanımına rastlanmamaktadır. Nitekim Trifonovich'e göre kültür kavramının 450'den fazla tanımını yapmak olasıdır (Aydın, 2003). Genel bir tanımlama yapacak olursak kültür, "bir toplumun sahip olduğu bilgi, inanç, sanat, ahlak, gelenek ile her türlü beceri ve alışkanlıklar toplamını ifade eden karmaşık bir bütün" olarak düşünülebilir.

Küreselleşen dünyada kültür ve ekonomik faaliyetlerin ülkelerarası ikili ilişkilerini ilerletmede ve devamını sağlamada önemli bir faktör olduğu bir gerçektir. Fukuyama, herhangi bir ülkede işlerin nasıl yürütülmesi gerektiği konusunda kültürel değerin temel alınması gerektiğini iddia etmektedir. Bu görüş ışığı altında uluslararası ticari görüşmelerin başarısızlığının büyük bir kısmının ürün dışında kalan sosyo-kültürel unsurlardan kaynaklandığı açıklanmaktadır.

Bu çalışmada öncelikle kültürün genel bir tanımı yapıldıktan sonra, ekonomik yapı ile sosyal ve kültürel yapı ilişkisine değinilecek ve sonraki bölümde Türk ve Rus ortak kültürel yapısı kısaca özetlenecektir. Son bölümde ise iki ülke arasındaki uzun yıllardır süre gelen derin ve çok boyutlu ilişki incelenecek, özellikle 2001 krizi sonrası büyüyen ekonomisiyle ön plana çıkan Türkiye ile yükselen piyasa ekonomilerinin önemli bir ülkesi olan RF ile giderek artan ekonomik ilişkileri güncel verilerle gösterilecektir.

2 Kültürün Tanımı

Kültür sözcüğünün Latince ekip ürün almak, üretmek anlamına gelen "cultura" sözcüğünden geldiğini ve birçok dünya dilinde aynı sözcüğün kullanıldığı bilinmektedir. Kültür sözcüğü zaman içerisinde değişimlerin gelişimlerin ışığında öylesine zengin anlamlara bürünmüştür ki bu da şaşırtıcı değildir, çünkü "üretim" insanlık tarihinde sadece tarımsal düzlemde değil, düşüncelerin evrimi, teknik ve teknolojinin gelişimi düzeyinde de gerçekleşen bir olgudur. Ve bu tür değişimlerin hayat tarzlarından düşünme biçimlerine ve inançlara dek etkili olmaması olanaksızdır.

Tarihsel bilgiler bize kültürün tüm toplumlarda mutlaka bir birikime dayandığını göstermektedir. Bu birikim, kültür tarihçilerine göre (enerji, tarım, madencilik, metalürji, av ve balıkçılık hep işlemeyle gelişmiştir), zanaat (tüketim eşyalarını ve bununla ilgili teknik sorunların çözümüne yardımcı olacak mekanik nesneleri üretme), dönüştürme (maddeyi fiziksel, kimyasal, teknolojik olanaklarla başka bir nesneye dönüştürme, örneğin sentetik nesneler gibi) ve nihayet yaşam alanını yani mekanı değiştirme (inşaat, mimari, ulaşım için yollar, çevre düzenlemesi) eylemleriyle oluşur. Bütün bu eylemlerin farklı coğrafi alanlarda farklı topluluklar tarafından oluşturulması aslında dünya kültürünün özünü oluşturmaktadır ve bütün toplulukların er yada geç karşılıklı ilişkileri ve haliyle karşılıklı etkileşimi kaçınılmazdır.

Bilim adamları kültür kavramını tüm toplumsal grupları düzenleyen organik kuralları, düşünsel eğilimleri ve sanatları, gelenek, görenek, inanç ve adetleri, aletleri ve tüketim maddelerini, ahlak kuralları, insanların gerçekleştirdiği yetenek ve alışkanlıkları içine alan bütünsel bir olgu olarak tanımlar. Bu çerçevede, insanlar, kültürün değişik durumlarıyla, özellikleriyle sık sık karşı karşıya kalırlar: sanat etkileri, yemek kültürü, dünya kültür mirası gibi. Bu kısa adlandırmadan kültürün insanların hayatında hem maddi hem manevi öğeleri barındırdığını, hem geçmişten gelen hem günümüzde oluşan birikimleri içerdiğini, kısacası hayatımıza biçim anlam veren her şey olabileceğini düşünmemiz gerekiyor.

Hem insan hem toplum hem de çevreyi içine alan böylesine geniş içerikli olguyu aynı zamanda birçok bilim dalının da araştırma konusu olması şaşırtıcı değildir elbette. Kültür olgusunun devlet, politika, kamu alanını inceleyen sosyoloji, siyaset ve ekonomi bilimleriyle, ahlak, inanç, gelenek, özgürlük, muhafazakarlık gibi konuların ele alındığı felsefeyle, güzel duyunun ifadesi olan sanat ve sanat tarihini inceleyen arkeoloji, sanat tarihi, estetik bilimleriyle, ilkel toplumlardan günümüze, kültürün inanç ve ibadet dünyasında, ruhsal dünyamızda ve bilinç altı dünyamızda işgal ettiği yeri inceleyen ilahiyat, antropoloji, psikoloji ve psikanalizle bağlantısı çok güçlüdür (Gülmez, 2013). Yani görülen odur ki kültür hayatımızın her alanıyla ilgilidir. Artan rekabet koşullarında işletmeleri sadece diğer ülkelerin ekonomik ve siyasi sistemlerini değil aynı zamanda kültürel, dini ve sosyal sistemlerini de analiz etmeleri gerekmektedir.

Klasik yönetim anlayışının aksine modern yönetim anlayışının insana atfedildiği değer örgütlerin beşeri yönünü ön plana çıkartmaktadır. Bununla birlikte insan ve insancıl değerlerin önem kazanması, işletmeler açısından uluslararası faaliyetlerde kültürün yönetim açısından önemini arttırmaktadır (Öğüt, Kocabacak, 2007).

İşletmelerin küresel rekabette başarılı olabilmeleri yerel değerleri yani kültürü göz ardı etmemelerine bağlıdır. Bu konuda İranlı bir sosyologun bahsettiği olay dikkate değerdir. Sosyolog, Fransa'da öğrenci iken bir otomobil fabrikasının sosyolog ve psikolog aradığını duymuş, başvuruda bulunmuş, ancak bir otomobil fabrikasının neden bir sosyolog ve psikolog aradığına bir türlü anlam veremeyip sorunca, müdürden şu yanıtı almış: "Biz A,B,C ülkelerine çok iyi araba sattığımız halde D,E,F ülkelerine hiç satamıyoruz. Bunun nedenini mühendisler açıklayamıyorlar ve bunu sizden öğrenmek istiyoruz" der. Olaydan da anlaşılacağı üzere işletmeler özellikle yeni dünya düzeni olarak adlandırılan küreselleşen ekonomik sistemin rekabet ortamında büyüyebilmek için diğer ülkelerin kültürel ve sosyal yapılarını da araştırmaları gerekmektedir.

2.1 Ekonomik Yapı ve Sosyo-Kültürel Yapı Arasındaki Etkileşim

Ekonomik yapı ile sosyal ve kültürel yapı ilişkisi ekonomik gelişmelerin değerlendirilmesiyle önem kazanmıştır. Çünkü ekonomik gelişmenin yalnızca ekonomik terimlerle analizi mümkün olmamakla birlikte, ekonomik gelişme analizleri yapılırken oluşturulan şemaların insan unsuruna ve tepkilerine yer verilmedikçe sonuç alınamayacağı görülmektedir.

Ekonomik büyümenin analizindeki gelişmeler, elle tutulur ve sayılabilir unsurlardan, ele gelemez ve sayılamaz olgulara doğrudur; ekonominin bir yüzü madde ve servete dönükse, diğer yüzü insan davranışına dönüktür. Nerede ve hangi zamanda olursa olsun, ekonomik hayatın arkasında insan gerçeği ve onun yaşayış normları ile zihniyeti vardır.

Ekonomik unsurlar ve sosyal unsurlar bir bütün olarak ele alınmalıdır. Ekonomik faaliyet, toplumsal bir yapının içinde meydana gelmiş, gelişmiş ve sosyal yapı içerisinde sosyallik kazanmıştır. Ekonomik tedbir ve politikaların soyut bir durumdan somut bir zemine geçişi, sosyal ve kültürel yapı gerçeklerine kaydırılmasıyla mümkündür.

Gelişme, ekonomik işleyişin alışılmış yörüngesinden ayrılarak daha üst seviyede yeni bir denge alanına sıçraması olarak değerlendirilmektedir. Yeni denge durumunda aksama olamaması için, ekonomik gelişme ve büyümenin sosyal bütünleşme politikalarıyla desteklenmesi zorunludur.

Ekonomik yapının ve sosyal kültürel yapının etkileşimi konusunda Karl Marx determinist bir yaklaşım sergilemiş ancak Max Weber ona karşı çıkmıştır. Weber, ekonomik yapının sosyal-kültürel yapıya etkilerini kabul etmekte, ancak o konunun determinist ve tek etkenli bir yaklaşımla ele alınmasına karşı çıkmıştır. Weber'e göre, ekonomik, siyasal veya dinsel tek bir öğeyle ve tek yanlı olarak belirlenmesi mümkün olmayan bir bütün olan toplumun nedensel ilişkileri kısmi ve olası niteliktedir (Aron, 1986).

Weber, kültür ve ekonomik faaliyet arasındaki ilişkiyi incelerken, kültürün ekonomik faaliyetleri şekillendirdiğini ortaya koymuştur. Weber'e göre her toplumun bir kültürü vardır ve toplum kendi inanç ve değerler sistemini kültür yoluyla sahip olmaktadır.

Marx'a göre ise, üretim ilişkilerinin tümü, toplumun ekonomik yapısını oluşturur; bu belirli toplumsal bilinç biçimlerin karşılık olduğu ve üstünde yasal ve siyasal üst yapıların yükseldiği gerçek temeldir (Bottomore, Nisbet,1990). Marx, her toplumda alt yapı ve üst yapının ayırt edilmesi gerektiğini savunur. Ona göre, alt yapı ekonomik temellidir. Alt yapı üretim güçleri ve üretim ilişkilerinden meydana gelir. Üst yapıda yasal ve siyasal kurumlar, düşünce biçimleri, hayatın, toplumsal, yasal ve manevi süreçlerinin genel niteliğini belirler (Aron, 1986). Üst yapı kurumu olan dünya görüşlerinin ve ahlak anlayışlarının görevi, alt yapıda yer alan üretim araçları sahiplerinin çıkarlarını, gerçeğin kendisiymiş gibi göstermektir (Ülgener, 1983).

Ekonomik yapı ve sosyal-kültürel yapının etkileşimini konu alan diğer düşünürler ise; Schumpeter, ekonomik gelişimin, pür ekonomik terimlerle tahlilinin mümkün olmadığını belirtir. Keynes'e göre, iktisadi gelişme analizlerini, soyut şemalar arkasındaki insan unsurlarına ve onun tepkilerine kadar götürmedikçe sonuç alınamaz, Örnek olarak yatırım kararı, insanın iç dünyasında şekillenen bir oluşum sürecinin bir ürünüdür. Hirschman, ekonomik büyümenin analizindeki gelişmelerin, objektif, elle tutulur ve sayılabilir unsurlardan, ele gelemez ve sayılamaz olgulara doğru olduğunu savunur. Marshall'a göre, ekonominin bir yüzü madde ve servete dönükse, diğer yüzü insan davranışlarına dönüktür (Ülgener, 1983). İki farklı ülkedeki, sektörü, teknolojisi,

girdileri sayı ve kalite olarak aynı olan iki işletmenin yıl sonu karlılık ve verimlilik oranlarının farklı olması insan unsurunun kültürel farklarından kaynaklanmaktadır.

Ekonomik yapı ile sosyal-kültürel yapı arasındaki ilişki pek çok düşünür tarafından çok yönlü olarak değerlendirilmiştir. Tüm bu değerlendirmelerin ışığında ikisi arasında ilişki yadsınamaz bir gerçekliktir. Gerçeğin bir öğesinin, gerçeğin öteki yönlerinin onlardan etkilenmeden değerlendirilmesi mümkün değildir. Her toplumda ekonomik gelişme, ekonominin dışında kalan unsurlarla yani toplumun dini, estetik, kültürel ve sosyal değerleri ile örülü bir yapı halindedir. Sermaye birikimi, yatırım hareketleri, üretim, tüketim, satın alma kararları gibi her türlü ekonomik faaliyet derinlemesine incelendiğinde söz konusu faaliyetlerin arkasındaki insan olgusunun iç dünyasına götürür ve bu iç dünya; insanın dış çevresi ile yani sosyal ve kültürel çevresiyle şekillenmiştir.

2.2   Ekonomik Büyüme ve Sosyo-Kültürel Etki

İktisadi analiz yapılırken insan olgusunu görmezlikten gelmek değil, insandan başlamak yoluyla yapılmalıdır. Ekonomik unsurlarla toplumsal unsurlar bir bütündür. Beşeri hayatın iktisadi bir çaba ile başlaması, iktisadi faaliyetin bir topluluğun içinde ortaya çıktığını göstermektedir.

Kendiliğinden sosyolojik niteliğe sahip olmayan bir ekonomi birliği, bir sosyal düzen içerisinde toplumsallık kazanmaktadır. Sosyolojik bakımdan iktisadi faaliyetin yerinin tayin edilmesi önem taşımaktadır; bir işletmeye ekonomik nitelik kazandıran sadece teknik özellikleri değil, taşıdığı amaçtır. Biri kazanç dileği, diğeri ihtiyaç giderme zarureti olmak üzere iki esasa dayanan ekonomik fiil ile ilgili denge, bu iki kutup arasındaki çekişmenin sonucuna bağlıdır. Ekonomik konuların sosyolojik incelemesi, ekonominin bir topluluk ve onun düzeni içinde cereyan eden bir olay olduğunun ve bir fiil ekonomik olabilmesi için böyle bir amaca dönük olarak oluşması gerektiğini ortaya koymuştur (Çağatay, 1975).

En basitinden en gelişmiş şekillerine kadar çeşitli tiplerdeki beşeri teşkilatlanmalar içinde ve bir sosyal zeminde ortaya çıkan iktisadi hayat, toplumun bütünlüğüne eğilen sosyolojinin kapsamında yer almaktadır. Üretim, tüketim, mübadele, kıymet, iş bölümü ve dağılımı gibi iktisadi olaylar aynı zamanda toplumsal olaylardır ve bunlar insanları bir sosyal düzen içinde bulunmaya yöneltir (Erkal, 1990). Toplumdaki nüfusun maddi göstergeleri onun iktisadi refahını, sosyal ve kültürel seviyesi ise sosyal gelişmesini gösterir (Erkal, 1990). "Büyüme" sayı ve hacimdeki değişikliği, "gelişme" ise mahiyet ve nitelikteki farklılaşmayı ortaya çıkarır. Nüfusun çoğalması, iş gücünün fazlalaşması, üretim araçlarının artması büyüme kapsamındaki değişikliklerdir. Bünye ve çatıdaki farklılaşma ise, gelişme kapsamında yer alır (Ülgener, 1983). İktisadi büyüme ölçülebilir mahiyettedir; ancak bu durum onu rakamlara sığdırılabileceği anlamına gelmez. Büyümenin arkasında rakamlarla ifade edilemeyen davranışlar ve kurumlar vardır. Bu davranış ve kurumlar, siyasal düzen, eğitim sistemi, halkın yenilikleri benimseme derecesi, çalışmayı uyaran etkenler ve teşvik edici faktörlerdir (Ülgener, 1983).

Büyüme modellerinin uygulamadaki geçerliliklerine şekil verecek olan her ülkenin kendine has ekonomi dışı sosyal ve kültürel unsurlardır (Erkal, 1990). Esasen her türlü ekonomik tedbir ve politikaların soyut bir durumdan somut bir zemine geçişi, sosyal ve kültürel yapı gerçeklerine kaydırılmasıyla mümkün olur (Erkal, 1990). Bu konuda pek çok örnek verilebilir. Sözgelişi, israfı yasaklayan bir değer hükmüne sahip İslamiyet'in hakim olduğu ülkelerde iktisadi hayat bu değer hükmü tarafından şekillendirilmektedir; bu alandaki sapmalar, kültürel yapı ile sosyal yapı arasındaki farkın sonucudur. Hindistan'da inek kesiminin yasak olması, Müslüman ülkelerde domuz etinin haram olması, ekonomik malların dini ve kültürel değerlerden etkilendiğini göstermektedir. Mübadelenin Müslüman ülkelerdeki uygulamaları, onun ekonomik olduğu kadar sosyolojik taraflarının bulunduğunu ortaya koymaktadır. Mübadele, gerek evlilik, sünnet ve doğum hediyeleri gibi, gerekse zekat, fitre, kurban, vakıf gibi konularda sosyal niteliği ağır basan bir dayanışma şekli olarak ortaya çıkmakta, temeli itibariyle her zaman iktisadi-rasyonel/akılcı bir düşünceye de dayanmamaktadır. Geleneksel toplumlarda kişinin tasarrufundan ayrılmak istememesi, onun yatırıma dönüştürerek rizikoya girmekten kaçınması, gelirdeki artışın tasarruftan daha çok tüketimi harekete geçirmesi, sosyal gerçeklerin ekonomik bir mahiyet taşıyan tasarruftaki rolünü göstermektedir (Erkal, 1990).

Günümüzde ekonomik ve sosyolojik unsurlar içi içe geçmiş durumdadır. Bunu en belirgin şekilde ekonomik gelişme ve büyümenin toplumda yarattığı değişikliklerin sosyal bütünleşme ile desteklenmesine olan ihtiyaçta görmek mümkündür.

Schumpeter gelişmeyi, ekonomik akımın alışılmış yörüngesinden ayrılarak daha üst seviyede yeni bir denge alanına sıçraması şeklinde yorumlar. Karmaşık modern toplumlar, bir yeni dengeye giriş kanallarını açmak zorundadırlar. Buradaki aksama, sosyal bütünleşme bakımından sorunlara yol açar. Sosyal bütünleşme ile desteklenmeyen gelişme ve büyüme, sistemi aksatabilmektedir. Toplumdaki fert ve sosyal gruplar maddi tatmine kavuşmalarına rağmen bunalım ortay çıkmaktadır (Erkal, 1990).

Halkın ekonomik planlama ve politika konusunda ikna olması, söz konusu plan ve politikalara destek olmasının ilk koşuludur, çünkü halk nelere katlanacağının ve sonucunda neler elde edeceğini bilmesi uyum sağlamasını sağlar. Ekonomik büyüme hedefleri için planlar oluştururken toplumun davranışları ve o davranışları oluşturan sosyo-kültürel yapısı göz ardı edilemez durumdadır. Rakamları, formülleri, matematik bağlantıları

canlandıracak olan insan olgusudur. Ekonomik sayılar insanın arzu, istek ve tercihlerinin hacim ve miktara dönüşümleridir.

3 Rusya Federasyonu ile Türkiye Arasında Kültürel Benzerliklere ve Ekonomik-Ticari İlişkilere Genel Bir Bakış

3.1 Türk-Rus İlişkilerinin Tarihsel Boyutu ve Kültürel Karşılaştırması

Osmanlı-Rus ilişkileri, 16. yüzyıldan 20. yüzyılın başına kadar savaşlar ve güç mücadeleleri tarihi olarak gelişmiştir. Bu çatışmacı sürecin ana nedenleri arasında, Rusya'nın güneye doğru yayılma arayışının Osmanlı İmparatorluğu'nun çıkarlarıyla sürekli çatışma halinde olması yer almaktadır. Öte yandan, bölgedeki birçok nüfus rekabeti de bu iki gücün sürekli çatışmasına neden olmaktaydı. Birinci Dünya Savaşı sonrasında her iki ülkede de ortaya çıkan yönetim değişiklikleri iki ulus arasında yakınlaşma ve işbirliği sürecinin de başlangıcı olmuştur (Sönmez, 2004).

1928-29 yıllarından itibaren uluslararası sistemdeki rekabetin yayılmaya başlamasıyla Türk-Rus ilişkilerinde belirli değişim rüzgarları esmeye başlamıştır. II. Dünya Savaşı sonrasındaki yeni dünya düzeni iki kutuplu bir yapıya bürünmüş farklı kutuplarda yer alan iki ülkenin ilişkileri de zaman zaman gerginleşmiştir. Ancak işlevselci okulun ikili ilişkiler bağlamında ekonomik işbirliği olanaklarının geliştirilmesinin, dış politikada siyasal sorunların çözümünü kolaylaştırdığı söylemi açısından ele alacak olursak Soğuk Savaş döneminden itibaren Türk-Rus ilişkilerinde artan bir gelişme seyri olduğu söylenebilir. Söz konusu süreçte ekonomik ilişkiler sürekli devam etmiş ve Türkiye'deki birçok ağır sanayi yatırımı Sovyet döneminde Rusya tarafından yapılmıştır.

Soğuk savaş sonrasında da, iki ülkenin özellikle ekonomik, ticari ve kültürel olarak birbirine yakınlaştığı saptanmakta ve ikili ilişkilerinin en iyi seviyeye ulaştığı ve şu an Türk-Rus ilişkileri stratejik ortaklık boyutuna geldiği görülmektedir.

Yüzyıllardır yan yana yaşamış, iki ülke arasında yaşanan savaşları, gerginlikleri, yakınlaşmaları içeren süreç, sosyo-kültürel alış verişine neden olmuş ve ortak yönleri giderek artmıştır. Ruslar, Avrupalılarla karşılaştırıldığında Türklere daha yakın görünmektedir. Belki de bunun en önemli nedeni her iki ülke içinde geçerli olan ne tam doğulu, ne tam batılı olmaktır. Söz konusu yapı iki ülkenin demokratik gelişimi üzerinde de etkili olmuş ve iki ülkede de demokrasi aşağıdan değil tepeden kurulmuştur. Her iki ülkede de vatandaş devleti "baba" gözüyle görmektedir.

Rus halkının sosyal dünyasını yönlendiren ilici güç, rus kültürüdür. Rusların büyük çoğunluğu için uyum ve sadakat en yüksek kültür değerleridir. Bu nedenle de tarih boyunca pek çok Rus egolarını baskı altında tutmaya, kendilerini tamamen ülkelerine adamaya gönüllü olmuşlardır. Sıradan Rus vatandaşları arasında gözlenen olağanüstü derecede tek düzelik ve düzene itaat, sistematik olarak, sürekli devlete itaat etmenin en büyük şeref olduğu düşüncesinin tarih boyunca aşılanması sonucu oluşmuştur (Onay, 2008). İsmail Hakkı Küpçü'nün "Türklerin Medeniyetleri" adlı makalesinde Tüklerin kültürel özelliklerinden bahsederken "üste kesin itaat"ten söz etmektedir. Her iki milletinde devletlerini algılama biçimi Batılı ülkeler gibi değildir, "koşulsuz vatanseverlik" milli karakterlerinin temel özellikleridir.

Bütünüyle Bizans'a ait motiflerle dolu Ortodoks Hıristiyanlığının kabulüyle Rusya statik Bizans medeniyeti çevresine girmiştir. İşte bu nokta, Rusya'nın Roma Katolik ya da bir başka ifadeyle batı Avrupa Kavimlerinden ilk ve kesin olarak ayrılışının başlangıcını oluşturmaktadır. Bu gelişme Rus tarihinin bütün evrelerine damgasını vurmuş ve Rusya'nın tarih boyunca kendisini sürekli Avrupa ile onun oluşturduğu medeniyet ve kültürden farklı hissetmesine neden olmuştur (Onay, 2002).

Dinde yaşanan bu gelişmeden en önemli etkilenen Rus alfabesidir. Latin alfabesinden bütünüyle farklılık gösteren Bizans alfabesi esas alınmış ve bu yazı dili Rusları giderek Avrupalı kavimlerden ayırmıştır. Tıpkı Osmanlı döneminde de Avrupa ile benzer yazı dili sorunu yaşanmıştır ve gelişmelerin gerisinde kalınmıştır. Ayrıca her iki kültüründe ortak diğer bir özelliği olan gözü peklik özellikle ekonomik anlamda atılım yapmış ve ilişkilerini giderek gelişmesini sağlamıştır.

3.2 Türk-Rus İlişkisini Ekonomik ve Ticari Boyuttan İnceleme

Kültürler arası yakınlaşma ile son süreçte dostane bir yapıya bürünen Türkiye ile Rusya Federasyonu'nun ekonomik ilişkileri giderek artan bir seyir halindedir, IMF'nin 2009 yılına ilişkin, ülkeler arasında satın alma gücüne göre yaptığı sıralamada, 2,1 trilyon doları geçen gayri safi yurtiçi hasılası (GSYH) ile 6'ıncı sırada Rusya Federasyonu yer alırken, Türkiye aynı sıralamada 880,1 milyar dolar GSYH ile 16. sırada yer almıştır.

Bu iki ülkenin son süreçte yaşadığı ticari ilişkinin önemli noktalarını maddeler halinde sıralayacak olursak:

- 2008 yılında 38 milyar dolara ulaşan ticaret hacmi ile Rusya Federasyonu (RF) Türkiye'nin bir numaralı ticaret ortağı haline gelmiştir. İki ülke ekonomisinin rekabetçi olmaktan çok tamamlayıcı yapıya sahip olması ticari ve ekonomik alanda bir çok işbirliği imkanı bulunduğunu göstermektedir.

- 2008 yılının sonundan itibaren etkisini göstermeye başlayan global ekonomik kriz nedeniyle, 2009 yılında ikili ticaret 23 milyar dolara gerilemiştir.

- Öte yandan, bu gerilemenin, iki ülkenin karşılıklı ticari potansiyelinin gerilemesi anlamına gelmediği 2010 yılının sonu itibariyle ortaya çıkmış ve 2009 yılında yaşanan global ekonomik krizden ve 2009 yılı Ağustos ayına kadar ülkemiz ürünlerine Rus makamlarınca uygulanan önlemlerden kaynaklanan sıkıntıların da aşılması ile 2010 yılında ticaret hacmi 26 milyar dolara yükselmiştir.

- Özellikle, 2009 yılı Ağustos ayından itibaren, iki ülke arasında giderek hızlanan bir şekilde gelişen siyasi ilişkiler de, ticari ve ekonomik ilişkilerin 2013 yılı ile birlikte daha da hızla gelişeceğinin ve 2008 yılında yakalanan rekorların aşılacağının önemli bir göstergesi olmuştur.

- İkili ticaret 2011 yılında 30 milyar dolara yükselmiş ve karşılıklı yatırımlarda da iki ülkenin birbirine olan ilgisi sürekli artmıştır.

- RF'nin 1990'larda yaşadığı büyük gelişme, dünya enerji kaynaklarının önemli bir bölümünü elinde bulunduran Rus ekonomisinin cazip bir pazar olmasını da beraberinde getirmiştir.

- Türk işadamlarının, hemen hemen her sektörde, yoğun bir şekilde bulunduğu ülkelerin başında Rusya Federasyonu (RF) gelmektedir. Özellikle 1990 yılların başından itibaren öncelikle inşaat ve müteahhitlik firmaları RF pazarına giriş yapmış olup, ilerleyen yıllarda, tekstil ve konfeksiyon başta olmak üzere Türkiye ihracatı açısından önem taşıyan sektörlerde işadamları RF'de yerleşik bir şekilde iş yapmaya başlamıştır.

- Halihazırda, RF'de bilişim sektöründen gıda sektörüne, hukuk-danışmanlık sektöründen lojistik sektörüne, hemen hemen her sektörde yerleşik Türk işadamı bulunmakta olup, Moskova, Kazan (Tataristan) ve Güney Rusya Federal Bölgesi (Rostov, Krasnodar, Soçi, Novorossisk) başta olmak üzere, ülkenin önemli ticaret merkezlerinde (Novosibirsk, Yekaterinburg, Samara, St. Petersburg, Astrahan, vs.) yerleşik konumdadır.

- RF'de yerleşik olma ve ticari faaliyetlerini buradan takip etme, Türk firmalarına önemli avantajlar sağlamakta olup, esasen kar marjlarının yüksek olduğu RF pazarına daha hızlı giriş yapmalarını sağlamaktadır. Ayrıca, birçok Türk firmasının RF'de yerleşik konumda bulunması, Türkiye'nin RF'ye yönelik ihracatının artması açısından da yarar sağlamaktadır.

- 1992 yılında Sovyetler Birliği'nin dağılması ile birlikte Rusya Federasyonu ile ilk önce ticari ilişkiler gelişmeye başlamış, ardından ticari ilişkiler kadar olmasa da Türk yatırımlarında artış kaydedilmiştir. Türk özel sektörü 1990'ların sonlarına doğru yatırımlarına hız vermiştir.

- Enka, Koç, Zorlu Grubu (Vestel, Taç, Zorlu Enerji), Efes, Şişecam, Kale Grubu, Eczacıbaşı gibi büyük firmaların yanında küçük ve orta ölçekli firmaların üretim tesisleri kurmak suretiyle pazara olan ilgileri her geçen gün artmıştır.

- Rus özel sektörünün son yıllarda Türkiye'deki özelleştirme ihalelerine olan ilgisi ve yatırım kararları Türkiye'nin Rusya için cazip bir yatırım üssü olduğunu kanıtlamıştır. Turizm, hizmetler, petrol/gaz işleme ve depolama alanında yoğunlaşan Rus yatırım ilgisinin gelecek yıllarda artarak süreceği tahmin edilmektedir. 2011 yılı sonu itibariyle Türkiye'deki Rus yatırımlarının 9 milyar doları aştığı belirtilmektedir.

- 2000 yılında ihracatımızda 9'uncu sırada yer alan Rusya Federasyonu 2004 ve 2005 yıllarında 8'inci sıraya yükselmiş, 2006 yılında tekrar 9'uncu, 2007 yılında 7'nci sıraya yerleşmiştir. 2008 yılında ise Türkiye'deki ihracat sıralamasında 5'inci en büyük ülke konumuna yükselen RF, 2009 yılında 6'ıncı, 2010 yılında da 8'inci sıradadır.

- Türkiye'deki ithalat sıralamasında ise 2000 yılında 4'üncü sırada iken 2004 ve 2005 yılında 2'nci sıraya 2006 ve 2007 yıllarında ise ilk sıraya yükselmiş 2008 yılından itibaren de bu konumunu sürdürmüştür.

- İkili ticaret, 2000 yılındaki 4,5 milyar dolar tutarındaki seviyeden 2008 yılında 37,8 milyon dolar seviyesine yükselmiştir. Aynı dönemde, Türkiye Rusya Federasyonuna ihracatı da 640 milyon dolar seviyesinden 6,5 milyar dolara ulaşmıştır.

- Diğer taraftan, gerek 2008 yılı sonundan itibaren yaşanan küresel krizin global ticaretteki olumsuz etkileri, gerek Türkiye ile Rusya Federasyonu arasında son dönemde ikili ticari ve ekonomik ilişkilerde yaşanan sıkıntılar nedeniyle, 2009 yılında ikili ticarette yüksek oranlı bir düşüş kaydedilmiştir. İkili ticaret 2009 yılında 22,9 milyar düzeyine gerilerken, ihracatımız da 3,2 milyar dolar olarak kaydedilmiştir.

- 2010 yılında krizin etkilerinin biraz daha aşılması neticesinde, RF ile Türkiye'deki ticaret hacmi bir önceki yıla göre %15,8 oranında artarak 26,2 milyar dolar olarak kaydedilmiştir. Ülkedeki ihracat ise, %44,7 oranında bir artışla 4,6 milyar dolara yükselmiştir.

- 2011 yılında ise, her ne kadar Türkiye'deki ticaret hacmi 2008 yılı seviyesine yaklaşsa da, beklenen rekor kırılamamıştır. 2011 yılında ikili ticaret hacmi, bir önceki yıla göre %14,2 oranında bir artışla 30 milyar dolar olarak kaydedilmiştir. İhracat %29,5 oranında artışla 6 milyar dolar, ithalat ise, %10,9 oranında bir artış ile 24 milyar olarak kaydedilmiştir.

- 2011 yılında RF'ye ihracat artış oranı (%29,5), Türkiye'nin toplam ihracatının genel artış oranından (%18,5) iki kat fazla bir oranda artmış, RF'den ithalat artış oranı (%10,9) ise, Türkiye'nin toplam ithalatının genel artış oranından (%29,8) iki kattan fazla bir oranda az artış göstermiştir.

- İki ülke arasındaki ticarete konu olan ürünler her geçen yıl çeşitlenmektedir. Rusya başlangıçta Türkiye'den çoğunlukla gıda maddeleri alırken daha sonra tekstil ve konfeksiyon ürünleri, deri, kürk, makina ve teçhizat, otomobil almaya başlamıştır. Türkiye ise enerji kaynakları (petrol, doğal gaz, kömür) başta olmak üzere makina aksam ve parçaları, demir çelik, kimyasallar ve gübre ithal etmektedir.

- Türkiye'den Rusya Federasyonu'na ihraç edilen malların 2011 yılı verileriyle kompozisyonu incelendiğinde, dokumacılık ürünlerinin %18,2, gıda ürünlerinin %17,8, otomotiv sanayi ürünlerinin %13,8, diğer elektriksiz makinelerin %7,9 ve kimyasalların %7,8 paya sahip olduğu görülmektedir.

- Türkiye'nin Rusya pazarına yönelik ihracatını ağırlıklı olarak fiyat elastikiyetleri yüksek tüketim malları oluşturmaktadır.

- 2011 yılı verilerine göre, Türkiye'nin Rusya'dan ithalatının kompozisyonunda petrol gazları-doğalgazların %45,5, petrol ürünlerinin %18,7, demir çeliğin %8,6, demir dışı metallerin %6,7 ve kömürün %6,1 oranında payının bulunduğu görülmektedir.

- Türkiye, 2011 yılı verilerine göre Rusya Federasyonunun dış ticaret hacminde 7., ithalatında 13., ihracatında ise 6. sırayı almaktadır.

Son siyasi gelişmelerin iki ülke arasındaki ticari ilişkileri daha da arttıracağı düşünülmektedir. RF ile Türkiye arasında özellikle 2009 yılı Ağustos ayından itibaren siyasi ilişkilerde yaşanan önemli gelişmeler ve bu gelişmelerin iki ülke arasındaki ilişkileri "stratejik ortaklık" boyutuna yükselterek, ikili üst düzey ziyaretleri arttırması sonucunda, siyasi ilişkilerde yaşanan bahar havasının, ticari ve ekonomik ilişkilere yansıtılması hedefi daha da önem kazanmıştır.

Konuyla ilgili güncel istatistikler tablolar halinde aşağıda verilmiştir;

Özellikle, iki ülke siyasi iradelerinin en son Türkiye Cumhuriyeti Başbakanı Tayip ERDOĞAN'nın RF'ye yönelik 12-13 Ocak 2010 ziyareti, RF Devlet Başkanı Medvedev'in Türkiye'ye 11-12 Mayıs 2010 tarihleri arasında gerçekleştirdiği ziyaret, Putin'in 8 Haziran 2010 tarihinde Türkiye'ye düzenlediği ziyaret ve son olarak Başbakan Erdoğan'nın 15-17 Mart 2011 tarihleri arasındaki ziyareti sırasında da vurgulandığı üzere, ikili ilişkilerin stratejik ortaklık boyutuna çıkması ve bu hedefin realizasyonuna yönelik somut adımlar atılması, bu adımların ticari ve ekonomik çalışmalar da taçlandırılması gereğini ortaya çıkarmaktadır.

4 Sonuç ve Değerlendirme

Yenidünya düzeni olarak adlandırılan küreselleşme ülkeler arası sınırları giderek ortadan kaldırmış ve ekonomik sistemi tam bir rekabet ortamına dönüştürmüştür. İşletmeler bu rekabet ortamında varlıklarını devam ettirebilmek için birçok çaba ve yeni yaklaşımlar sergilemektedir.

Klasik yönetim anlayışı bu süreçte etkisini kaybetmiş, insani değerlerin ön plana çıktığı modern yönetim anlayışına yerini bırakmıştır. Bu bağlamda işletmelerin küresel rekabette başarılı olabilmeleri yerel değeri yani kültürü göz ardı etmemelerine bağlıdır. İşletmeler söz konusu rekabet ortamında büyüyebilmek için diğer ülkelerin sadece siyasi ve ekonomik sistemlerini değil kültürel, dini ve sosyal sistemlerini de araştırmaları gerekir.

Üretim, tüketim, satın alma, yatırım kararları gibi her türlü ekonomik faaliyetlerin ardında hep insan davranışı söz konusudur. İnsanın düşüncesini ve kararlarını davranışa dönüştüren iç dünyasıdır ve bu iç dünyayı şekillendiren insanın dış çevresi yani sosyal ve kültürel çevresi yer almaktadır. Buradan da, kültürün ekonomik faaliyetleri şekillendirdiği ortaya çıkmaktadır.

Son yaşanan süreçte ekonomik ve sosyolojik unsurlar iç içe geçmiş durumdadır. Ekonomik büyüme analizi, objektif, elle tutulur ve sayılabilir unsurlardan, ele gelemez ve sayılamaz olgulara doğru kaydığı, bu olguları da insan unsurları ve onun tepkileri olduğu görülmektedir. Ekonomik analiz yapılırken insan olgusunu görmezlikten gelmek değil insandan başlamak gerektiği ortaya çıkmaktadır.

Bu bağlamda, kültürel diyalogun ön plana çıktığı Türküye-Rusya ilişkisine son süreçte baktığımızda; Türkiye ve Rusya arasında siyasi, kültürel ve ekonomik alanda ilişkilerin son yüz yılın en iyi seviyede olduğu söylenebilir. Kültürel yönden ortak noktalarda buluşan iki ülke son süreçte bu durumu ekonomilerine yansıtarak ekonomik ve stratejik ortak konumuna gelmiştir. Rusya'nın özellikle ihracat, turizm ve müteahhitlik alanında Türkiye için önemli bir ülke olduğu ayrıca Türkiye'nin ilk nükleer santralini Rusya'nın inşa edecek olması da iki ülke arasında karşılıklı güvenin teyidi niteliktedir. Ayrıca iki ülke arasında kültürel etkileşim için 2007 yılında Türkiye'de "Rus Kültür Yılı", 2008 yılında Rusya'da "Türk Kültür Yılı" kutlanmış olması ekonomik ilişkileri de canlandırmıştır ve gelecek yıl Rusya'da düzenlenecek olan "Türk Kültür Festivali" de söz konusu yakınlaşmanın pekişmesinde önemli bir göstergesidir.

Hem insan hem toplum hem de çevreyi içine alan kültürün, küreselleşen dünyada ülkeler arası ekonomik ilişkilerin ilerletilmesinde ve devamının sağlamasında önemli bir faktör olduğu şüphe götürmez bir gerçektir. 20. Yüzyılın başlarına kadar savaşlar ve güç mücadelelerine tanık olmuş Türk-Rus ilişkisi her iki ülkede ortaya çıkan ve aynı süreci yaşayan yönetim değişikliği ile iki ulus arasında yakınlaşmaya neden olmuştur. Özellikle ekonomik, ticari ve kültürel anlamda ortaya çıkan yakınlaşma elde edilen veriler ışığında ikili ilişkilerinin en iyi seviyeye ulaştığını göstermektedir.

Türkiye'nin İhracat Performansı: İhracat Hacminin Temel Belirleyicilerinin İncelenmesi (1995-2012)

Turkey's Export Performance: Examining the Main Determinants of Export Volume (1995-2012)

Prof. Dr. Mehmet Balcılar (Eastern Mediterranean University, Cyprus)

Prof. Dr. Harun Bal (Çukurova University, Turkey)

Assoc. Prof. Dr. Neşe Algan (Çukurova University, Turkey)

Ph.D. Candidate Mehmet Demiral (Çukurova University, Turkey)

Abstract

The main objective of this study is to investigate the short and the long run relationships between export performance proxied by export volume index and real effective exchange rate changes in Turkey using the aggregated quarterly data sets covering the period of 1995-2012. The other factors that are expected to affect export performance such as wage, foreign income, productivity, trend GDP and exchange rate volatility are also added to the model. The ARDL bounds testing approach to cointegration is performed in the estimation process. The causalities among the variables in the model are determined based on the estimated ARDL models. The empirical results reveal that the variables of interest are cointegrated. Real effective exchange rate coefficient is significantly positive in the short run whereas negative in the long run and exchange rate volatility has no significant effect on export performance in contrast with theoretical expectations. Other evidences indicate that the recent export boom in Turkey can be explained by wages, productivity and world demand, rather than exchange rate changes. Consequently, findings suggest that policies that depressing wages and stimulating high productivity can help export sectors increase their export volume and competitiveness in Turkey.

1 Giriş

Dünya ekonomisi özellikle 1960'lardan sonra, iletişim ve taşıma teknolojilerindeki gelişmelerin de etkisiyle hızlı bir ticari küreselleşme sürecine girmiştir. Gelişmiş ülkeler özellikle kendi aralarında olmak üzere ekonomilerini daha önce uluslararası rekabete açmışlardır. Onları takip eden birçok gelişmekte olan ülke (GOÜ) için ise Doğu Asya ülkelerinin ihracat artışlarına dayalı ve istikrarlı ekonomik büyüme başarıları teşvik edici olmuştur. 1980'lerde gelişen bu süreçte ithal ikameci politikalar uygulayan Latin Amerika ülkeleri ile ihracata yönelik politikalar uygulayan ve istikrarlı bir şekilde büyüyen Doğu Asya ülkeleri arasında ekonomik performans farklılıkları dikkat çekmiştir.

Türkiye bu gelişmelere 24 Ocak 1980'de aldığı ekonomik kararlar gereğince, daha önce uyguladığı içe dönük ithal ikameci politikalardan, dış rekabete açılan ihracata yönelik politikalara geçerek uyum sağlamaya çalışmıştır. Bunu 1995'te Dünya Ticaret Örgütü üyeliği ve 1996 yılında Avrupa Birliği (AB) ile başlayan Gümrük Birliği (GB) süreci izlemiştir. Uygulanan bu dışa açılma politikaları ile hem ihracat hem de ithalat önemli ölçüde artmıştır.

Yaşanan ticari liberalizasyon süreci ile GOÜ'lerin dünya ticaretinde artan payı, beraberinde finansal liberalizasyonu getirmiştir. Bu süreçte birçok GOÜ, sermaye hareketleri üzerindeki kontrollerini azaltmış ve 1973'te Bretton Woods sisteminin yıkılmasının da etkisiyle sabit döviz kuru uygulamalarından vazgeçerek, yönetimli ya da serbest dalgalı kur sistemine geçmişlerdir. Türkiye ise daha önceden yapılan devalüasyonların ticaret açıklarını gidermede yetersiz kalması ve 24 Ocak 1980'de alınan ihracatı teşvik kararlarının bir gereği olarak daha esnek ve gerçekçi bir döviz kuru politikası uygulamaya başlamıştır. Sonrasında ise 1989 yılında sermaye hareketlerinin serbest bırakılmasıyla döviz kurları dış ticarette daha belirleyici bir politika aracı haline gelmiştir. 1990'lı yıllarda döviz kurlarına müdahaleler artmış ve yapılan devalüasyonlarla ihracat hacmi artırılmaya çalışılmıştır. 2001 krizinden sonra döviz kurlarının serbest dalgalanmaya bırakılmasıyla döviz kurlarında meydana gelen dalgalanmalar artmış ve bu oynaklıkların genel ekonomi, dış ticaret ve spesifik olarak ta ihracat üzerine etkilerini araştıran çalışmaların sayısı gün geçtikçe artmıştır.

Bir ülkenin ihracat performansı, yurtiçi firmaların uluslararası piyasalarda rekabet edebilme ölçüsünü göstermekte ve çok sayıda faktör tarafından farklı biçimlerde etkilenmektedir. Bu çalışmada, Türkiye ekonomisi için reel efektif döviz kuru değişmeleri ve oynaklığı başta olmak üzere ücret, yurtdışı gelir, verimlilik ve GSYH trendi gibi faktörlerin ihracat performansı üzerine etkileri araştırılmaktadır. İlk olarak, 1990 sonrası yapılan ampirik çalışmalardan seçilenlerin sonuçları doğrultusunda özet bir literatür incelemesi sunulmaktadır. Sonra, genel olarak ihracat performansının belirleyicilerine yönelik teorik açıklamalar ile ampirik model ve analiz yöntemleri hakkında bilgiler verilmektedir. Veri seti ve model tanıtımı yapılarak elde edilen analiz sonuçları ortaya konulduktan sonra çalışma, ulaşılan bulgular çerçevesinde yapılan yorumlar ve değerlendirmeler ile tamamlanmaktadır.

2 Literatür Sunumu

Türkiye'nin ihracat performansının döviz kuru başta olmak üzere temel belirleyicileri üzerine olan mevcut literatürde kapsam, yöntem ve elde edilen sonuçlar bakımından farklılıklar görülmektedir. Abuşoğlu (1990), 1980-88 dönemi için döviz kuru politikaları ile ihracat arasında anlamlı bir ilişki olmadığını ve Türk Lirası (TL)'nın yabancı paralar karşısında değer kaybetmesinin ihracatı çok az etkilediğini ortaya koymuştur. Arslan ve Van Wijnbergen (1993), 1980-87 dönemini kapsayan çalışmalarında reel döviz kuru (*RER*) yükselişlerinin ve ihracat teşviklerinin Türkiye'nin ihracatını artırdığını ortaya koymuşlardır. Barlow ve Şenses (1995), Türkiye'de 1980'lerde görülen ihracat artışlarını uygulanan politikalara ve diğer ülkelerin geliri, yaşanan krizler ve savaşlar gibi dış faktörlere bağlamışlardır. Uygur (1997), 1970'lerden 1990'ların ortalarına kadar Türkiye'de uygulanan yurtiçi talep, döviz kuru ve farklı ihracat politikalarının kısa dönemde pozitif, uzun dönemde ise negatif etkilerinin olduğunu ortaya koymuştur. Şahinbeyoğlu ve Ulaşan (1999), 1987-1998 dönemine ilişkin olarak hata düzeltme modeli (*ECM*) kullanarak arz ve talep fonksiyonlarının fiyat ve gelir esnekliklerinin inelastik olduğu sonucuna ulaşmışlardır. Sivri ve Usta (2001) tarafından yapılan *VAR* analizinde, RER'den ithalat veya ihracata doğru bir nedensellik bulunmamıştır. Zengin (2001), 1994-2000 dönemine ilişkin olarak, ihracat ve ithalat fiyat endeksleri ile RER değişkenlerinin karşılıklı nedensellik ilişkisini araştırmıştır. Sonuçlar, bu değişkenler arasında uzun dönemli bir eşbütünleşme ilişkisinin varlığını ve döviz kurlarının ithalat fiyat endeksine doğrudan etkisinin olduğunu ancak ihracat fiyat endeksine etkisinin olmadığını göstermiştir. Karagöz ve Doğan (2005), RER'in dış ticaret üzerinde uzun dönemli bir nedensellik etkisinin bulunmadığını ortaya koymuşlardır. Bununla birlikte kısa dönemde ilişkinin bulunduğu ve devalüasyon etkisinin anlamlı olduğu sonucuna ulaşmışlardır. Türkiye'nin AB ile GB sürecinin ticaret etkilerini araştıran çalışmalarında Nowak-Lehmann vd. (2007), 1988-2002 dönemi için yerçekimi modeli yardımıyla AB korumacılığı, fiyat rekabeti ve taşıma maliyetlerinin etkilerini incelemişlerdir. Elde edilen sonuçlar Türkiye'nin ihracatını, taşıma maliyetlerinin negatif ve RER yükselişlerinin pozitif yönde etkilediğini ortaya koymuştur.

Toplulaştırılmış makro verilerin kullanıldığı bu çalışmaların yanında sektörel olarak yapılan analizlerin sayısı da gün geçtikçe artmaktadır. Lall (2000), Türkiye'nin imalat sanayi ihracatının teknolojik yapısını incelemiştir. Lall, 1980'li ve 1990'lı yıllar için ihracatın düşük teknoloji ürünlerinden oluştuğunu, Türkiye'nin yüksek ücretli bir ekonomi olduğunu ve düşük ücretli ülkeler ile düşük teknolojik mallarıyla rekabet etmek durumunda olduğunu belirtmiştir. Ayrıca Lall, ihracat artışlarında, küresel rekabet gücünden çok AB ile yapılan serbest ticaret anlaşmalarından sağlanan imtiyazlara dikkat çekmektedir. Özçelik ve Taymaz (2002), 1995-97 dönemi için, 4000 firmayı kapsayan ankete dayalı verilerle ihracat performansının belirleyicilerini araştırmışlardır. Yazarlar, imalat sanayi firmalarının taklit üretimden vazgeçerek, inovasyon ve AR-GE faaliyetleri ile rekabet etmeleri gerektiği sonucuna ulaşmışlardır. Buna göre Türkiye'nin rekabet gücünün artırılması için teknoloji geliştirme politikalarının önemini ortaya koymuşlardır. Keyder vd. (2004), Türk imalat sanayii ve 15 ticaret ortağına ilişkin 1994-2003 dönemini kapsayan çalışmalarında, uluslararası rekabet gücünün ölçümünde reel kur ile birlikte nispi maliyetlere dayalı bir rekabet gücü endeksinin kullanılmasının yararını belirtmişlerdir. 1999-2003 döneminde TL'nin yabancı paralar karşısında değerlenmesine karşın ihracatta görülen yüksek ivmeyi, nispi verimlilik artışı ve dolar bazında birim ücret maliyetlerinin ticaret ortaklarından düşük olması ile açıklamışlardır. Yaşar ve Nelson (2004), 1990-96 dönemi için, giyim eşyası ile motorlu araçlar ve aksamları endüstrileri için ihracat ve verimlilik ilişkisini araştırmışlardır. Elde edilen sonuçlara göre, üretim birimlerinin önceki market deneyimleri şimdiki verimliliklerini etkilemektedir ve öğrenme etkisinin geçerli bir faktördür. Hata düzeltme modeli ile elde edilen sonuçlara göre ise, kısa ve uzun dönemde ihracat ve verimlilik arasında iki yönlü ilişkiler bulunmuştur. Elde edilen bir diğer önemli sonuç verimliliğin ihracat üzerine etkisinin, ihracatın verimlilik üzerine etkisinden daha fazla olduğudur. Yükseler ve Türkan (2006), Türk imalat sanayiinin 1996'dan 2005'e 10 yılda geçirdiği dönüşümü 'ithalatlaşma', 'uluslararasılaşma' ve 'Asyalılaşma' eğilimleri şeklinde özetlemiştir. Bu eğilimlerin etkisiyle imalat sanayiinde önemli ölçekte bir dış ticaret hacmi yaratıldığı, ancak bu ticaret hacminin katma değer ve istihdam üzerindeki yansımalarının kısıtlı olduğu görülmüştür. Yine Aysan ve Hacıhasanoğlu (2007), 1996-2006 dönemi için dinamik panel verilerini kullanarak Türkiye'nin imalat sanayiinde görülen artışların nedenlerini araştırmışlardır. Elde edilen sonuçlar özellikle 2000'lerden sonra verimlilik artışlarının ihracatı artırdığını, bunun yanında ücretlerin ihracatı negatif etkilediğini ortaya koymuşlardır. Özler, Taymaz ve Yılmaz (2007), imalat sanayiine ilişkin olarak mikro düzeydeki verilere dayanarak hazırladıkları çalışmada, ihracat kararının, firma büyüklüğü, toplam çalışanlar içinde yönetim kademesinin ve kadınların ağırlığı ile teknoloji ve makine/teçhizat donanımı tarafından belirlendiğini ortaya koymuşlardır. Son olarak Çelik ve Kaya (2010), 1985-2006 dönemi için Türkiye'nin toplam dış ticaretinin yaklaşık %60'nı oluşturan 7 ülke ile olan ikili ticaretini incelemişlerdir. RER yükselişlerinin uzun dönemde Almanya, Japonya ve İngiltere ile ikili ticaretinde Türkiye'nin ticaret dengesini iyileştirirken Fransa, Hollanda, İtalya ve ABD için böyle bir bulgu elde etmemişlerdir. Yazarlar, genel olarak kısa dönemde fiyatların yapışkan olmadığını ve böylece J-eğrisi gibi etkilerin görülmediğini ortaya koymuşlardır.

Görüldüğü gibi konuyla ilgili yapılan ampirik çalışmalara ilişkin elde edilen farklı sonuçlar başka faktörlerin de birlikte incelenmesi gerektiğini ortaya koymaktadır. Bu çalışma Türkiye ile ilgili literatüre katkı sağlamayı ve

global düzeyde değişen ticaret yapıları kapsamında Türkiye'nin ihracat performansını etkileyen başka faktörlere de dikkat çekmeyi amaçlamaktadır.

3 Teorik ve Ampirik Çerçeve

Türkiye İstatistik Kurumu (TÜİK) dış ticaret istatistiklerine göre Türkiye'nin ihracatı 1980 yılından itibaren, bazı istisna yıllar dışında, sürekli artmış ve günümüzde en yüksek seviyelerine ulaşmıştır. Bu gelişmelerin belli dönemlerde düşük seyreden döviz kurları ile birlikte yaşanması akademik ilgiyi değerli hale gelen TL sonucunda ucuzlayan ithal girdilere çekmiştir. Aşağıda Tablo 1'de, Birleşmiş Milletler (*UN*) Standart Uluslararası Ticaret Sınıflandırması (*SITC*), 3. revizyon 2-basamaklı endüstri sınıflamasına göre, Türkiye'nin hem 1990-2000 döneminde hem de 2001-2012 döneminde, petrol gibi yoğun enerji girdisi kullanan temel ihracat sektörleri için (78, 67, 33) ihracatın ithal içeriğinin yüksek olduğu ve bazı sektörler için (65, 77, 05, 69) bu payın dönemler itibariyle arttığı görülmektedir.

İlk 10 sektör (1990-2000)[*]	İthal içeriği (1998)[**]	İlk 10 sektör (2001-2012)[*]	İthal içeriği (2002)[**]
84. Giyim eşyası ve aksesuarları	0,18	78. Motorlu kara taşıtları, bisiklet/ motosikletler ve aksam/parçaları	0,36
77. Elektrikli makine, cihaz ve aletler vb. ile aksam ve parçaları	0,25	84. Giyim eşyası ve aksesuarları	0,28
05. Meyve ve sebzeler	0,05	67. Demir ve Çelik	0,38
65. Tekstil ürünleri (iplik, kumaş, yer kaplamaları, hazır eşya)	0,19	65. Tekstil ürünleri (iplik, kumaş, yer kaplamaları, hazır eşya)	0,28
69. Demir, çelik, bakır, nikel, alüminyum gibi adi metal eşyaları	0,29	77. Elektrikli makine, cihaz ve aletler vb. ile bunların aksam ve parçaları	0,33
82. Mobilya, yatak ve bileşenleri	0,21	05. Meyve ve sebzeler	0,07
57. İlk şekillerde plastikler, döküntü ve hurdalar	0,30	66. Taş, alçı, çimento, amyant, cam, seramik vb. maddelerden eşyalar	0,21
61. Başka yerde belirtilmeyen İşlenmiş deri ve köseleler	0,18	69. Demir, çelik, bakır, nikel, alüminyum gibi adi metal eşyaları	0,36
12. Tütün ve tütün mamulleri	0,05	33. Petrol, petrolden elde edilen ürünler	0,73
27. Hayvansal ve bitkisel gübreler, tuz, kükürt alçı vb. mineral maddeler	0,12	89. Başka yerde belirtilmeyen çeşitli mamül eşyalar	0,41

[*]İlk 10 sektör 1990-2000 dönemi için, USD olarak, toplam ihracatın yaklaşık %60'nı, 2001-2012 dönemi için ise yaklaşık %65'ini oluşturmaktadır.

[**]İhracatın ithal içeriği değerleri, $aN^m(I-N^d)^{-1}EX/\Sigma EX$ formülüyle hesaplanmıştır. Burada, a ele alınan ithalat kalemlerinde içeriği 1'e eşit olan her bir 1xn vektörünü, N^m ve N^d sırasıyla ithalat ve ihracat işlemleri için girdi-çıktı katsayı matrislerini; I köşegen özdeş matrisi ve EX ihracat vektörünü göstermektedir. Elde edilen değer aynı zamanda toplam ihracatta 'dikey uzmanlaşma' seviyesini göstermektedir (Hummels vd., 2001).

***Tablo 1:** Farklı Dönemler İçin 10 Temel İhracat Sektörü ve İthal İçeriği **Kaynak:** Ticaret verileri, UN-COMTRADE; Girdi-Çıktı Tabloları, TÜİK-Ulusal Hesaplar'dan elde edilmiştir.*

Froyen (1999), uluslararası ticarette kaynak etkinliğini ve uzmanlaşmayı artırdığı için artan ithalatın ülke ekonomilerine zarar vermediğine dikkat çekmektedir. Bunun yanında yatay uzmanlaşma ile şekillenen uluslararası ticaret yapısında köklü değişmeler gözlenmiş ve üretimde dikey uzmanlaşma süreci belirleyici hale gelmiştir. Dış kaynak kullanımı, dikey bütünleşme, dikey doğrudan yabancı yatırımlar ve montaj ticareti gibi genel olarak çok uluslu şirketlerin faaliyetleri tarafından şekillenen dikey uzmanlaşma, hem ihracat hem de ithalat yönlü tüm üretim faaliyetlerinde ülkelerin birbirlerine bağımlılığını artırmıştır (Hummels vd., 1998).
