Gelişen bu ilişkilerin etkisinde, Türkiye'nin ihracat hacmi ile temel belirleyicileri arasındaki uzun dönemli ilişkiyi gösteren regresyon modeli şu şekilde oluşturulmuştur:

$$X_{it} = \beta_0 + \beta_1 R_t + \beta_2 Y_t^* + \beta_3 C_t + \beta_4 K_t + \beta_5 G_t + \beta_6 H_t + \varepsilon_t \qquad (1)$$

$$i = 1, 2, ..., 6; \quad t = 1995.1, ..., 2012.4$$

Burada, X_t ihracat hacmini, R_t reel efektif döviz kurunu, Y_t^* yurtdışı reel gelirini, C_t ücret ile ifade edilen ifade eden nominal değişken maliyeti, K_t çıktı seviyesi trendini, G_t verimliliği, H_t döviz kuru oynaklığını, ε_t rassal hata terimini ve t zaman ya da trend değişkenini simgelemektedir. Bünyesinde ihracat arz ve talep yapılarını barındıran bu teorik model, temelde Goldstein ve Kahn (1985) tarafından ortaya konulan ve daha sonra Edwards ve Wilcox (2003) tarafından geliştirilen zayıf ikame modeline dayanmaktadır. Yani model yurtiçi mallar ile ihraç malları fiyatlarının farklı olmasına olanak tanımaktadır. İhracat fiyatlarındaki bir artış ihracat arzını artırırken,

yurtiçi fiyat seviyesinde ve ücret bakımından ölçülen maliyetlerdeki bir artış ihracat arzını azaltmaktadır. Yine ihracat fiyatlarındaki bir artış ihracat talebini azaltırken, rekabet edilen yurtdışı malların fiyatındaki ve yurtdışı gelirdeki bir artış ise ihracat talebini artıracaktır. Hem ithalat hem de ihracat fiyatlarını etkileyen döviz kurundaki bir yükselmenin ise ihracat talebini artırması beklenmektedir. Teknolojik gelişmenin sağladığı verimlilik artışı üretim maliyetini düşüreceğinden ihracat arzını pozitif yönde etkileyecektir. GOÜ'ler için döviz kuru oynaklığının ihracat üzerine negatif etkilerinin olduğu bilinmekle birlikte (Hall vd., 2010), Türkiye için de benzer bulgulara ulaşıldığı görülmektedir (Doğanlar, 2002; Rey, 2006; Tarı ve Yıldırım, 2009; Hall vd., 2010). Frey (2005)'e göre, döviz kuru dalgalanmalarının ortaya çıkardığı risk firmaların ticaret kararı almasını etkilemektedir. Firmalar kur dalgalanmalarını tahmin edemediklerinden ödeme güçlükleri ortaya çıkabilmekte ve ticaret engellenmektedir. Artan ekonomik faaliyetlerin sağladığı ve fiyat dışı rekabette belirleyici olan, toplam faktör verimliliği, ihracat arz ağları, yaparak öğrenme ve kapasite gibi faktörler gelir trendi tarafından temsil edilmektedir.

Teorik açıklamalara uygun olarak β_2 ve β_5'in pozitif, β_3 ve β_6'nın ise negatif işaretli olması beklenmektedir. Çok sayıda faktörün etkilerini barındıran gelir trendi değişkenine ilişkin β_4 parametresinin işareti belirsiz olmaktadır. Normal koşullar altında β_1'in pozitif olması beklenirken, ihracat içindeki ithal girdi payı ve montaj ticareti arttıkça RER'in ihracat arzı üzerine olan pozitif etkisi ortadan kalkabilmekte böylece β_1 parametre tahmini negatif ya da anlamsız olabilmektedir (Arndt ve Huemer, 2004; Freund vd., 2012).

Ayrıca döviz kurlarında meydana gelen değişmelerin gecikmeli etkileri de farklı olabilmektedir. Literatürde yaygın bir biçimde incelenen J-eğrisi etkisi bu faktörlerden biridir (Bahmani-Oskooee ve Ratha, 2004). J-eğrisi etkisi, $ARDL$ gibi bir dinamik modelleme ile görülebilmektedir. Bu nedenle çalışmada kısa ve uzun dönem ilişkilerinin belirlenebilmesi için son yıllarda yaygın olarak kullanılan Pesaran ve Shin (1999) ile Pesaran vd. (2001) tarafından geliştirilen gecikmesi dağıtılmış otoregresif modellere dayanan ARDL (*autoregressive distrubuted lag*) sınır testi yaklaşımı uygulanmıştır. Klasik eşbütünleşme yöntemlerine göre bazı avantajlar sağlayan bu yaklaşımda, değişkenlerin sıfırıncı dereceden I(0) veya birinci dereceden I(1) bütünleşik olmalarına bakılmaksızın, değişkenler arasındaki eşbütünleşme ilişkisi belirlenebilmektedir. Ayrıca sınır testi, bizim çalışmamızda olduğu gibi sınırlı gözlem sayılarında da kesin sonuçlar ortaya koyabilmekte ve yeterli sayıda gecikme uzunluğun belirlenmesine olanak tanımaktadır. ARDL yaklaşımı kullanılarak modelin kısa dönem dinamikleri ile uzun dönem bileşenleri, uzun dönem bilgi kaybı olmadan tahmin edilebilmektedir (Banerjee vd.,1993).

ARDL sınır testi yaklaşımı iki aşamadan oluşmaktadır. İlk olarak Pesaran ve Shin (1999) sınır testi ile uzun dönemli ilişkilerin varlığı belirlenmektedir. Değişkenler arasındaki ilişkinin yönü konusunda herhangi bir ön bilgi olmadığı durumda sınır testi yaklaşımında kısıtsız koşullu hata düzeltme modeli (*unrestricted conditional error-correction model-UECM*) tahmin edilmektedir. Bu yapılırken her bir değişken sırasıyla bağımlı değişken olarak alınmaktadır. X bağımsız değişken olduğunda, *UECM* şu biçimde olacaktır:

$$\Delta X_t = c_0 + c_1 t + \lambda_1 X_{t-1} + \sum_{i=1}^{6} \phi_i V_{it-1} + \sum_{j=1}^{p} \gamma_j \Delta X_{t-j} + \sum_{i=1}^{6} \sum_{j=0}^{p} \omega_{ij} \Delta V_{it-j} + \psi' D_t + \varepsilon_t \qquad (2)$$

Denklemde V_t, $V_t = (R_t, Y_t^*, C_t, K_t, G_t, H_t)$ biçiminde tanımlanan bir vektördür. D_t ise yapısal değişme kuklaları gibi dışsal değişkenlerden oluşan bir vektördür. Burada *Wald* kısıt testine göre, sıfır hipotezi eşbütünleşme olmadığı (H$_0$: $\lambda_1 = \phi_1 = \phi_2 = \cdots = \phi_6 = 0$), alternatif hipotezi ise uzun dönem ilişki olduğu (H$_1$: $\lambda_1 \neq \phi_1 \neq \phi_2 \neq \cdots \neq \phi_6 \neq 0$) yönünde kurulmaktadır. Seçilen bilgi kriterleri ile optimum gecikme uzunluğunun (p) belirlenmesinden sonra en küçük kareler (*OLS*) yöntemi ile Denklem (1) tahmin edilmektedir. Serilerin kısmen ya da tamamen eşbütünleşik olması durumlarına ilişkin asimptotik kritik değer setleri Pesaran vd. (2001)'nin çalışmalarından elde edilmektedir. Burada ilk set değişkenlerin tümünün I(0) (alt sınır), ikinci set ise tüm değişkenlerin I(1) olduğunu (üst sınır) varsaymaktadır. Eğer hesaplanan F istatistiği kritik değer üst sınırını aşarsa sıfır hipotezi ret edilerek değişkenler arasından uzun dönemli bir ilişki olduğu sonucuna ulaşılmaktadır. Tersi durumda, hesaplanan F-istatistiği alt kritik değerden küçük ise değişkenler arasında uzun dönemli bir ilişki olmadığına karar verilmekte ve alt ve üst sınırlar arasında kalırsa, ilişkinin varlığı belirsiz olmaktadır.

Uzun dönemli bir ilişki belirlendikten sonra ikinci aşamada Pesaran ve Shin (1999)'in *ARDL* yaklaşımı ile uzun dönem ilişkisinin tahmin edilmesi söz konusudur. *ARDL* prosedüründe X değişkeni için şu biçimde bir uzun dönem koşullu ARDL *(p_1, q_i)* modeli tahmin edilmektedir:

$$X_t = c_0 + \sum_{j=1}^{p_1} \eta_j X_{t-j} + \sum_{i=1}^{6} \sum_{j=0}^{q_i} \theta_{ij} V_{it-j} + \psi' D_t + u_t \qquad (i = 1, 2, \ldots, 6) \qquad (3)$$

Burada tüm değişkenler yukarıda tanımlandığı gibidir. Modelde yer alan değişkenlere ilişkin gecikme uzunluğu Akaike (*AIC*) ya da Schwarz Bayesian Bilgi Kriteri (*SBC*) kullanılarak seçilebilmektedir. *ARDL* prosedüründe ikinci olarak *ECM* tahmin edilmektedir. Koşullu *ECM* şu biçimde ifade edilmektedir:

$$\Delta X_t = \mu + \sum_{j=1}^{p} \gamma_j \Delta X_{t-j} + \sum_{i=1}^{6} \sum_{j=0}^{p} \omega_{ij} \Delta V_{it-j} + \vartheta ECM_{t-1} + \psi' D_t + \varepsilon_t \qquad (4)$$

Burada γ_j ve ω_{ij} kısa dönem parametreleri iken ϑ modelin dengeye gelme hızını göstermektedir. Hata düzeltme terimi (ECM_t) ise şu biçimde tanımlanmaktadır:

$$ECM_t = X_t - \hat{\beta}_0 - \hat{\beta}_1 R_t - \hat{\beta}_2 Y_t^* - \hat{\beta}_3 C_t - \hat{\beta}_4 K_t - \hat{\beta}_5 G_t - \hat{\beta}_6 H_t \qquad (5)$$

Denklem (5)'de görülen uzun dönem parametreleri ($\hat{\beta}_0, \hat{\beta}_1, \ldots, \hat{\beta}_6$), denklem (3)'teki koşullu *ARDL* modelinin *OLS* tahminlerinden, parametrelere ilişkin standart hatalar *Delta* (Δ) yöntemi kullanılarak elde edilmektedir.

Bir başka önemli durum değişkenler arasındaki neden-sonuç ilişkisi ve nedenselliğin yönünden ileri gelmektedir. Örneğin kur yükselişi ihracat performansını artırırken aynı zamanda ihracat artışı da döviz kurunu düşürücü etkiler ortaya çıkarabilmektedir (geri bildirim). Çalışmada ayrıca ihracat hacmi ve onun belirleyicileri arasındaki nedensellik ilişkilerinin belirlenmesi de analiz amaçları arasındadır. Engle ve Granger (1987) eğer iki I(1) serisi arasında uzun dönemli bir ilişki varsa en azından tek yönlü bir nedensellik ilişkisinin olduğuna işaret etmektedir. Nedenselliğin yönü koşullu ECM kullanılarak belirlenebilmektedir. Bizim çalışmamızda Granger nedensellik testi şu denklemler aracılığıyla yapılmıştır.

$$\Delta X_t = \pi_{10} + \sum_{j=1}^{p} \pi_{11,j} \Delta X_{t-j} + \sum_{i=1}^{6} \sum_{j=0}^{p} \pi_{1i,j} \Delta V_{it-j} + \varphi_0 ECM_{t-1} + u_{1t} \qquad (6a)$$

$$\Delta V_{it} = \pi_{i0} + \sum_{j=0}^{p} \pi_{i1,j} \Delta X_{t-j} + \sum_{j=1}^{p} \pi_{ii,j} \Delta V_{t-j}^i + \sum_{k=1}^{6} \sum_{j=0}^{p} \pi_{ki,j} \Delta V_{t-j}^k + \varphi_0 ECM_{t-1} + u_{it} \qquad (6b)$$

Burada, V_t^i, V_t'nin i'inci elemanıdır ($i = 1, 2, \ldots, 6$). V_t^k ise V_t nin k'ıncı elemanının dışarıda bırakılmasıyla elde edilen vektördür. π ler tahmin edilecek parametreler iken u_{1t} ve u_{it} ilişkisiz hata terimleridir. ECM_t denklem (5)'den tahmin edilecek hata terimidir. Hata düzeltme modellerindeki gecikmeli açıklayıcı değişkenlere ilişkin *F* istatistikleri, kısa dönem nedensellik etkilerinin, *t*-istatistikleri ise gecikmeli ECM deki ϕ_i ya ilişkin ($i = 0, 1, \ldots, 6$) olarak uzun dönem nedensellik etkisinin anlamlı olup olmadığını göstermektedir.

4 Veri Seti ve Ampirik Bulgular

Çalışmada, 1995-2012 dönemine ilişkin üçer aylık veriler kullanılmıştır. Dönem seçiminde Türkiye'nin 1980 sonrası ihracata yönelik politika uygulamalarının ardından 1989 sermaye hesabı liberalizasyonu politikalarının olgunlaştığı dönem olmasına dikkat edilmiştir. Ayrıca bu politikaların ilk büyük kriz deneyimi olan ve büyük bir devalüasyonun yaşandığı 1994 krizi analiz dışında bırakılmıştır. Yine AB ile başlayan GB sürecinde ihracat performansını etkileyen gümrük tarifeleri ve tarife dışı engellerin olmadığı dönem kapsama alınmıştır. Çalışmada kullanılan değişkenlere ilişkin bilgiler aşağıda Tablo 2'de sunulmuştur. *ERVOL* dışında tüm değişkenler logaritmik formdadır. *EXPORT, RWAGE, PROD* ve *RGDPUS* serilerinde anlamlı mevsimsel değişmeler görülmüş ve X-12 yöntemiyle mevsimsel etkilerden arındırılmıştır.

Zaman Serisi	Değişken	Açıklama	Kaynak
İhracat	LEXPORT	İhracat hacim (volume) endeksi.	IMF-IFS
Reel Efektif Döviz Kuru	LREER	Türkiye'nin ticaretinde en fazla paya sahip 13 ticaret ortağının ulusal paraları dikkate alınarak ve TÜFE bazlı olarak hesaplanmıştır.	TCMB
Reel Ücret	LRWAGE	Reel ücret endeksi.	TÜİK
Yurtdışı Gelir	LRGDPUS	ABD'nin Reel GSYH endeksi.	IMF-IFS
Verimlilik	LPROD.	Saat başına çıktı miktarı	TÜİK
GSYH Trendi	LTRENDGDP	Reel GSYH'dan Hodrick-Prescott (*H-P*) filtreleme yöntemi kullanılarak elde edilmiştir.	Reel GSYH: TÜİK
Döviz Kuru Oynaklığı	ERVOL	GARCH (1,1) modellemesi koşullu varyans tahminleri ile elde edilmiştir.	--

Tablo 2: Kullanılan Değişkenlerin Açıklamaları ve Veri Kaynakları

İhracat performansının ölçülmesi için ihracat hacmi, ihracatın GSYH içindeki ya da dünya ihracatındaki payı ile bu payın ticaret ortaklarına kıyasla büyüklüğü gibi göstergeler kullanılmaktadır. Bizim çalışmamızda ise ihracat performansının ölçüsü olarak ihracat hacmi değişkeni kullanılmıştır. Kapasite kısıtı ve daha önce bahsedilen fiyat dışı rekabet gelişmelerinin etkilerini ortaya koymak amacıyla modele GSYH trendi de eklenmiştir. İhracatçıların risk algısı ve riskten kaçınma eğilimlerine bağlı olarak ihracat performansını etkileyen döviz kuru oynaklığı, Engle (1982)'in Otoregresif Koşullu Değişen Varyans (autoregressive conditional

heteroscedasticity-*ARCH*) modeli ve Bollerslev (1986) tarafından genişletilmiş biçimi GARCH (*Generalized ARCH*) modelleriyle tahmin edilmiştir. Burada Bollerslev (1986) tarafından geliştirilen ve yaygın olarak kullanılan GARCH (1,1) modeli kullanılmıştır. Parantez içindeki ilk rakam denklemde 1 tane otoregresif gecikme olduğunu, ikinci rakam ise değişken hareketli ortalama içeriğine 1 tane gecikme sayısı eklendiğini göstermektedir. TÜFE ve ÜFE bazlı REER değişmeleri ve GARCH(1,1) modellemesi koşullu varyans tahminleri ile elde edilen döviz kuru oynaklığı aşağıda Grafik 1'de sunulmuştur.
Grafik 1: *Reel Efektif Döviz Kuru ve Oynaklık Tahminleri*

Çalışmada öncelikle serilerin dağılımlarının normalliği kontrol edilmiştir. Serilerde en büyük çarpıklık değeri (0,87) *LEXPORT* ve basıklık değeri (2,44) ise *LREER* değişkeni dağılımında gözlenmiş ve *Jarque-Bera* normallik testine göre %5 anlam düzeyinde *LREER* dışındaki tüm değişkenlerin seviyede normal dağılmadığı, ancak logaritmalarının normal dağıldığı görülmüştür. Logaritmik formda ifade edilen değişkenler arasında statik ilişkileri veren Pearson korelasyon katsayıları incelenmiş, ihracat hacmi ile yurtdışı gelir, verimlilik ve GSYH trendi arasında pozitif güçlü ve REER ile arasında negatif güçlü korelasyonlar belirlenmiştir. Bu ön bilgilerden sonra serilerin durağanlığı *ADF* birim kök testi ile incelenmiş ve tüm serilerin birinci dereceden durağan olduğu (I(1)) belirlenmiştir (Tanımlayıcı istatistikler ve birim kök testi sonuçlarının tamamı, istenmesi durumunda yazarlardan temin edilebilir). Tüm serilerin I(1) olmasına rağmen yukarıda değinilen avantajlarından dolayı analiz prosedürü *ARDL* sınır testi yaklaşımında izlenmiştir.

ARDL sınır testi yaklaşımında ilk olarak, değişkenler arasında uzun dönemli bir ilişki *OLS* ile tahmin edilmiştir. Teorik beklentiler gereği çalışmanın amacına uygun olarak sadece LEXPORT bağımlı değişken olarak belirlenmiştir. ECM modelinde ise modelin tahmin gücünü artırmak amacıyla her bir model deterministik trend içerip içermemesi durumları için ayrı ayrı tahmin edilmiştir. Kullanılan yöntemin gecikme sayısına hassas olması nedeniyle öncelikle optimum gecikme sayısı belirlenmiştir. Bunun için hata karelerindeki sıralı korelasyon sorununu elimine eden ve kalıntıların karelerine ilişkin minimum değeri veren *AIC* ve *SBC* baz alınmıştır. Ayrıca, her bir gecikme uzunluğu için 1. ve 4. sıra kalıntılara otokorelasyon testi uygulanmıştır. Bunun için bağımlı değişkenin gecikmeli değeri de modelde yer aldığından *Breusch-Pagan* Lagrange Çarpanı (LM) istatistiği kullanılmıştır. Sonuç olarak *AIC* ve *SBC* tarafından optimal gecikme uzunluğu 7 olarak belirlenmiştir. Bu gecikme uzunluğunda otokorelasyon sorununa rastlanmamıştır. Yine 1. ve 4. sıra kalıntıları için *LM* istatistikleri otokorelasyon sorunu olmadığını göstermiştir.

Aşağıda Tablo 3'te *LEXPORT* değişkeni bağımlı değişken olarak alındığında yapılan sınır testi sonuçları görülmektedir. *AIC* ve *SBC* tarafından seçilen 7 gecikme uzunluğunun yanı sıra, 2. 4. ve 6. gecikme için test istatistikleri sunulmuştur. Optimal gecikme uzunluğunda (7), hesaplanan *F*-istatistiklerine göre *F-iii, F-iv ve F-v*'den elde edilen değerler doğrultusunda %5 anlam seviyesinde değişkenler arasında ilişki olmadığı yönündeki sıfır hipotezi ret edilmiştir. Tabloda değişkenler arasında bir eşbütünleşme ilişkisinin olduğu görülmektedir.

	Deterministik Trendsiz Modeller		**Deterministik Trendli Modeller**			
L	*F-iii*	*P*	*F-iv*	*p*	*F-v*	*p*
7	*5,6471*[*]	*0,0131*	*5,0554*[*]	*0,0230*	*5,6784*[*]	*0,0178*
6	5,4563[*]	0,0474	4,9099[*]	0,0213	4,0645[*]	0,0197
4	4,611[*]	0,0042	4,5814[*]	0,0005	5,2105[*]	0,0003
2	4,5142[*]	0,0034	4,1555[*]	0,0052	4,5996[*]	0,0029

Not: k, modeldeki bağımsız değişken sayısıdır. k=6 için 5% kritik değer sınırları: F-iii tablosunda [2,45; 3,61], F-iv tablosunda [2,63; 3,62]; F-v tablosunda [2,87; 4,00] dir (Pesaran vd., 2001). [*], Hesaplanan test istatistiğinin, %5 üst sınırın üstünde olduğunu göstermektedir.

Tablo 3: *Sınır Testi Sonuçları: Eşbütünleşme İlişkisinin Belirlenmesi*

Denklem (2), deterministik trend içeren ve içermeyen durumlar için 7 gecikmeli koşullu ECM ile tahmin edilmiş ve deterministik trend içeren sınır testi denklemleri için anlamlı katsayılar elde edilmemiştir (test sonuçlarının tamamı, istenmesi durumunda yazarlardan temin edilebilir). Trend içermeyen denklem tahminlerine ilişkin anlamlı olan katsayılar aşağıda tabloda sunulmuştur.

Deterministik Trend İçermeyen Sınır Testi Denklemleri					Tanısal Test İstatistikleri	
Bağımsız Değ.	Katsayı	Std. hata	*t*-ist.	*p*	R^2	0,9832
DLREER(-5)	0,5916	0,2518	2,3493	0,0467	*Düzeltilmiş R^2*	0,8413
DLRWAGE	-0,5106	0,1983	-2,5740	0,0329	*Regresyon Std. Hatası*	0,0190

ECM(-1)	-0,3994	0,0872	-4,5815	0,0000		

Tablo 4: ARDL Yaklaşımına Dayalı Hata Düzeltme Modeli Tahmin Sonuçları

Sonuçlar, kısa dönemde ihracat potansiyelinin temel belirleyicisinin verimlilik olduğunu ortaya koymaktadır. Verimlilik arttıkça ihracat hacminin arttığı ancak dönem gecikmesi arttıkça bu pozitif ilişkinin azalma eğiliminde olduğu görülmektedir. *LREER*'in pozitif işaretli olması, kur yükselişlerinin kısa dönemde ihracat hacmini artırdığı ve j-eğrisi gibi gecikmeli bir etkinin ortaya çıkmadığı biçiminde yorumlanabilecektir. Beklendiği gibi ücrete ilişkin elde edilen negatif katsayı ücret maliyetinin ihracat performansını kısa dönemde olumsuz etkilediğini göstermektedir. Modelde hata düzeltme terimi (ECM(-1)) katsayısı -0,3994 olarak negatif ve anlamlı olarak elde edilmiştir. Bu katsayı kısa dönemdeki dengesizliğin yüzde 40'ının uzun dönemde düzeltileceğini göstermektedir. Bu sonuçlara dayanarak uzun dönem katsayılarını veren seviye ilişkilerini belirlemek için 7 gecikme uzunluğunda denklem (3) tahmin edilmiş ve sonuçlar Tablo 5'te sunulmuştur.

Parametreler	Katsayı	Standart Hata	*t*-istatistiği	*p*
C	-17,2004	3,7578[**]	-4,5772	0,0000
LREER	-0,3644	0,0882[**]	-4,1284	0,0001
LRWAGE	-0,5844	0,0695[**]	-8,4029	0,0000
LRGDPUS	2,4565	0,6566[**]	3,7410	0,0003
LPROD	1,1461	0,1435[**]	7,9858	0,0000
LTRENDGDP	0,8515	0,3792[*]	2,2455	0,0276
ERVOL	0,5809	0,4271	1,3600	0,1777

Not: Standart hatalar delta (Δ) yöntemi kullanılarak hesaplanmıştır.

*, ** sırasıyla %5 ve %1 seviyesinde anlamlılığı göstermektedir.

Tablo 5: ARDL Modeli Tahmin Sonuçları: İhracat Hacmine İlişkin Uzun Dönem Katsayılar

Tablo 5'te görülen sonuçlar ışığında *LERVOL* dışında tüm değişkenlerin katsayılarının anlamlı olduğu görülmektedir. Bu kapsamda özellikle 2001 yılından sonra kurların serbest dalgalanmaya bırakılmasıyla birlikte, ticari ortakların para birimlerine kıyasla TL'nin değeri oldukça oynak olsa da bu durumun ihracatı anlamlı bir biçimde etkilemediği sonucuna ulaşılmıştır. Beklenildiği gibi *LRGDPUS* (2,46), *LPROD* (1,15) ve *LTRENDGDP* (0,85) değişkenlerinin işaretlerinin pozitif olduğu görülmektedir. Bu durum Türkiye ekonomisinde son zamanlarda görülen ihracat artışlarının yurtdışı gelirin uyardığı dış talep ve verimlilik artışı tarafından belirlendiğini ortaya koymaktadır. Yine artan ekonomik faaliyetlerle gelişen ve modelde gelir trendinin kapsadığı altyapı, toplam faktör verimliliği, ihracat arz ağları, yaparak öğrenme ve uzmanlaşma gibi fiyat dışı rekabet gelişmelerinin ihracat hacmini anlamlı bir şekilde etkilediği anlaşılmaktadır. *LREER* değişkeninin negatif işaretli olması, reel efektif döviz kurunun yükselerek TL'nin değer kaybetmesinin ihracat hacmini azalttığını ifade etmektedir. Bu durum kısa dönem katsayıları ile birlikte değerlendirildiğinde ters-J eğrisi etkisine benzer gelişmeleri ortaya koymaktadır. Yine *LRWAGE* değişkenine ilişkin elde edilen negatif katsayı, beklendiği gibi ücret seviyesindeki reel artışların birim emek maliyetini artırarak ihracat performansını olumsuz etkilediğini göstermektedir.

Bu ilişkilerin daha net ortaya konulabilmesi için değişkenler arasındaki nedensellik ilişkisi ve yönünün belirlenmesi önemli olmaktadır. Bu kapsamda son olarak koşullu Granger nedensellik testi uygulanmış ve nedensellik ilişkisi belirlenen değişkenlere ilişkin sonuçlar aşağıda Tabloda sunulmuştur (Nedensellik testi sonuçların tamamı, istenmesi durumunda yazarlardan temin edilebilir).

Granger nedensellik test sonuçlarına göre anlamlı olan tek nedensellik *LPROD* değişkeninden *LEXPORT*'a doğru bulunmuştur. Yani kısa dönemde sadece verimlilik ihracatın bir Granger nedenidir. Elde edilen katsayılar

ile birlikte değerlendirdiğinde verimliliğin ihracat artışlarının bir nedeni olduğu anlaşılmaktadır. İhracattan verimliliğe doğru bir nedensellik ilişkisi olmaması geribildirim olmadığını göstermektedir.

Bağımlı değişken	Bağımsız değişken	Ki-kare	s.d.	*p*
D(LEXPORT)	D(LREER)	0,5013	3	0,9186
	D(LRWAGE)	1,0563	3	0,7876
	D(LRGDPUS)	1,0389	3	0,7918
	D(LPROD)	13,506	3	0,0037[**]
	D(LTRENDGDP)	0,1122	3	0,9903
	D(LERVOL)	3,2037	3	0,3613
D(LRWAGE)	D(LEXPORT)	11,127	3	0,0111[*]
D(LREER)	D(LEXPORT)	7,8453	3	0,0493[*]

[*], [**] sırasıyla %5 ve %1 seviyesinde nedensellik ilişkisinin anlamlı olduğunu göstermektedir.

Tablo 6: Granger Nedensellik Testi Sonuçları

5   Sonuç ve Değerlendirmeler

Çalışmada, Türkiye'nin ihracat hacmi ile ifade edilen ihracat performansını belirleyen temel faktörlerden reel efektif döviz kuru ele alınmakla birlikte, literatürde genel olarak ayrı ayrı etkileri incelenen reel ücret, verimlilik, yurtdışı reel gelir, döviz kuru oynaklığı ve GSYH-trendi gibi diğer faktörler de analize dahil edilmiştir. 1995-2012 dönemi üçer aylık veriler kullanılarak değişkenler arasındaki kısa ve uzun dönem dinamik ilişkiler ARDL sınır testi yaklaşımı ile analiz edilmiştir. Tahmin edilen ARDL modelleri kapsamında değişkenler arasındaki nedensellik ilişkileri incelenmiştir. Analiz sonuçlarından elde edilen temel bulgular ve yorumları şu şekildedir.

i). İhracat performansının reel efektif döviz kuru katsayısı, kısa dönemde pozitif, uzun dönemde negatiftir. Dolayısıyla son yıllarda ticari partnerlerinin paralarına kıyasla değerli seyreden TL (düşük seyreden kur), uzun dönemde ihracatı olumlu etkilemektedir. Bu durum ihracatındaki ithal girdi içeriğinin yüksek olduğu Türkiye için beklenen bir durumdur. Kaynak tasarrufu ya da verimliliğini ve alternatif enerji girdilerinin kullanılmasını teşvik edici politikalar ihracat potansiyelini daha da artıracaktır. Buna karşın döviz kuru oynaklığı ihracat performansını anlamlı bir şekilde etkilememektedir. ii) Verimlilik hem kısa hem de uzun dönemde ihracat performansının temel belirleyicisi durumundadır. Ayrıca ihracat performansı üzerine anlamlı olan tek nedensellik etkisi verimliliğe aittir. Ancak ihracatın verimlilik üzerine anlamlı bir etkisi bulunmamaktadır. Dolayısıyla ihracatın aynı zamanda verimliliği artıracağı argümanı bizim çalışmamızda desteklenmemektedir. iii) Reel ücret seviyesindeki bir artış hem kısa hem de uzun dönemde ihracat performansını olumsuz etkilemektedir. Bu nedenle özellikle 2001 krizi sonrası daha fazla uygulanan ve ücretleri baskı altına almaya yönelik politikalar ihracat hacmini artırmaktadır. Türkiye'nin, benzer ihracat sanayilerine sahip Çin ile uluslararası alanda rekabet edebilmesi için ücretin belirlediği birim emek maliyetinin düşürülmesi gerekliliği kendini göstermektedir. Bu kapsamda ihracat sektörlerinde sınırlı ücret artışlarını öngören politika uygulamaları ihracat hacmini artıracaktır. iv). Uzun dönemde Türkiye'nin ihracat performansının en önemli belirleyicisi ABD reel GSYH ile temsil edilen yurtdışı gelir ve bu yurtdışı gelirin uyardığı dış taleptir. Bu kapsamda Türkiye'nin ihracat performansının yurtdışı talep koşullarındaki değişmelere bağlı olduğu ve böylece ihraç edilebilir mallar üreten yurtiçi firmaların dışa açılmasıyla ihracat hacminin de artacağı görülmektedir.

Hem sektörel hem de ticaret ortaklarına ilişkin topluşturulmış verilerin analiz edildiği bu çalışma makro düzeyde sonuçlar ortaya koymaktadır. Ancak her bir sektör, ele alınan faktörler tarafından farklı şekilde etkilenebilmektedir. Bu nedenle faktör yoğunluklarına ya da ithal girdilere bağlılık durumlarına göre yapılacak sektörel analizler, daha spesifik sonuçlar ortaya koyabilecektir. Yine Türkiye'nin ticari ortaklarıyla ikili ticaretinin incelenmesi bu çalışmada ele alınan faktörlerin ülkeden ülkeye değişebileceği gerçeğinden hareketle daha kesin sonuçlar ortaya koyabilecektir.

Türkiye'nin İhracat ve İthalat Talep Fonksiyonlarının Rusya ile Dış Ticareti Bağlamında Analizi

Analysis of Turkey's Export and Import Demand Functions within the Context of Foreign Trade with Russia

Asst. Prof. Dr. Rüştü Yayar (Gaziosmanpaşa University, Turkey)

Ph.D. Candidate Yunus Emre Birol (Cumhuriyet Universty, Turkey)

Ph.D. Candidate Yusuf Demir (Cumhuriyet University, Turkey)

Abstract

The main purpose of this study is to analyze the foreign trade of Russia and Turkey. Considering the foreign trade volume between the two countries, an experimental study was carried out to determine export and import demand functions of Turkey. The Russian Federation has been one of the countries having an important part in export of Turkey. Whereas textile products have taken the first place within the export of Turkey, petroleum gas and natural gas have taken the first place in import. The data used in the study covered the period between 1995 and 2010 quarterly. The data were obtained from Turkish Republic Central Bank, International Money Fund, Russian Central Bank and Russian Federal Statistics Service databases. According to obtained results, export of Turkey to Russia has affected more from the income of Russia rather than the relative prices, and import of Turkey from Russia has affected more from the income of Turkey rather than the relative prices. When income and price elasticity of export and import demands were analyzed, income and price elasticity of the export demand was noticed as being greater than the income and price elasticity of the import demand.

1 Giriş

Temelleri İkinci Dünya Savaşı'nın sona ermesi ile birlikte uluslararası kuruluşların ve kutuplaşmaların ortaya çıkması sonucu atılan küreselleşme 1980'li yıllarda piyasa ekonomisi ve liberalleşmeye geçişle birlikte uygulama alanı bulmuş ve bu amaçla mal, hizmet ve sermayenin serbest dolaşımına ilişkin adımlar atılarak, ülke piyasalarını dünya piyasaları ile bütünleştirme eğilimi ortaya çıkmıştır. 1990'lı yıllarda ise, Sovyetler Birliği'nin dağılması üzerine yeni ulusların ortaya çıkması ve bu ülkelerin piyasa ekonomisini benimsemeleri üzerine süreç daha da hızlanmıştır.

Küreselleşmeyle beraber, uluslararası ticarette artış ve yapısal değişim meydana gelmiştir. Bu hızlı artış ve yapısal değişim ekonomik faktörler başta olmak üzere bir dizi değişken tarafından belirlenmektedir. Bu faktörlerin tespiti ve etki mekanizmalarının analizi uluslararası ticaret analizlerinin en önemli ayrıntılarındandır. Çünkü ihracatın ve ithalatın uygulanacak döviz kuru politikasına, dış ticaret politikasına veya değişen dünya şartlarına nasıl bir tepki göstereceğinin anlaşılması için ihracatın ve ithalatın göreli fiyatlardaki ve yurt dışı-içi talepteki değişmelere olan duyarlılığının bilinmesi önemli bir ön koşuldur. Bu nedenle, uluslararası iktisat literatüründe dış ticaret talep fonksiyonlarının tahminine yönelmiş çalışmalara sıkça rastlanmaktadır (Doğanlar vd., 2006: 51).

1990 yıllarda SSCB'nin dağılmasıyla onu oluşturan 15 ülke bu süreçte bağımsızlıklarını kazanmış ve kendi başlarına çeşitli ülkelerle ekonomik ve siyasi ilişkiler kurmaya başlamışlardır. Bu dağılmanın ardından ortaya çıkan kaos ortamında Rusya'da ekonomik sorunlar söz konusu olmuştur. Bunun ardından 1992 yılında, Rusya Federasyonu merkezi planlı sistemden piyasa ekonomisine geçebilmek için önemli ekonomik reformlar gerçekleştirmiştir. Fiyatlar serbest bırakılmış, mali denge sağlanmaya çalışılmış, ticari engeller ve teşvikler kısmen de olsa kaldırılmış, ülke ekonomisinin dışa açık hale gelmesi amaçlanmıştır. Ayrıca monopollerin kaldırılması ve geniş çaplı bir özelleştirme söz konusu olmuştur (Duman ve Samadov, 2003: 25-26). Bu çalışmanın temel amacı Türkiye'nin kuzey komşusu olan Rusya ile Türkiye'nin dış ticaretinin analiz edilmesidir. Bu bağlamda iki ülke arasındaki dış ticaret hacmi dikkate alınarak Türkiye'nin ihracat ve ithalat talep fonksiyonlarının belirlenmesine yönelik ampirik bir çalışma yapılacaktır.

2 Türkiye ile Rusya Arasındaki Ekonomik ve Siyasi İlişkilerin Gelişimi

Komünizm sonrası dönemde ekonomik anlamda ciddi bir çöküntü ile karşı karşıya kalan Rusya'da reel GSYİH 1991 yılında yaklaşık %12 oranında gerilemiş, bütçe açığı GSYİH'nın %26'sına kadar çıkmıştır. Komünist ekonominin çökmesi ile birlikte enflasyon üç haneli rakamlara yükselmiştir. Bu çöküntünün altında belli başlı yapısal sorunlar bulunmaktadır. Eski Doğu Avrupa pazarlarının Doğu Bloku'nun dağılması ile birlikte çözülmesi ve bunun sonucunda arz zincirinin bozulması, mali yardımların kesilmesi nedeni ile tarım sektöründe ortaya çıkan kriz, kumanda ekonomisi kurallarının, pazar ekonomisi kuralları uygulanmaya başlanmadan terk

edilmesi v.b. hususlar bu sorunlardan önemli olanları olarak ifade edilebilir (T.C. Moskova Büyükelçiliği Ticaret Müşavirliği, Temmuz 2011 Raporu).

Rusya'da mülkiyet ilişkilerinin dönüşümü temel olarak üç aşamada incelenebilir: 1987-1991 döneminde devlet işletmelerinin mali özerkliğinin artışına bağlı olarak ticari sermayenin geliştiği, spontane özelleştirme (spontaneous privatization process) süreci olarak adlandırılan dönem, mülkiyet ilişkilerinin dönüşümünde ilk adımı oluşturmaktadır. Perestroykanın başlangıç yıllarını oluşturan bu dönemde, işletme özerkliğinin artmasına bağlı olarak kaynak dağılım mekanizması giderek merkezi planlamadan uzaklaşmıştır. Dolayısıyla bu dönemde devlet işletmelerinin mali özerkliğinin artması, merkezi planlamaya dayalı üretim ilişkilerinin gayri resmi olarak piyasa ilişkilerine doğru kaymasına neden olmuştur. Bu süreç, özel parasal sermayenin birikimi olarak değerlendirilebilir. 1992-1994 dönemi, Rusya'nın neo-liberal politikalar eşliğinde kapitalist sistemle entegrasyonunun başladığı dönemi tanımlamaktadır. 1992 programında yer alan önlemler çerçevesinde bu dönemde blok özelleştirmeler ile mülkiyet ilişkilerinin dönüşümü gerçekleştirilmiştir. Blok özelleştirmeler sonrasında mülkiyetin yeniden dağılımı üçüncü aşamayı oluşturmaktadır. Bu aşamada; blok satış paylarının ikincil piyasalarda eski yönetici grup, parti eliti ve organize suç örgütleri tarafından, yatırım kurumları, bankalar ve elinde özelleştirme kuponları bulunan çalışanlardan satın alınmasıyla mülkiyetin yeniden dağılımı gerçekleşmiştir (Radygin, 2000: 7).

1994 yılında Merkez Bankası tarafından IMF desteği ile sıkı para politikası uygulaması başlatılmış ve enflasyonla mücadeleye dönük bir bütçe kabul edilmiştir. Üç haneli enflasyonla uzun yıllar süren mücadele sonunda Rusya, 1995 yılında belirli ölçüde bir makroekonomik istikrar sağlamış olup, bunu 1998 yılı ortalarına dek sürdürmeyi başarmıştır. 1997-98 döneminde Rusya'nın başlıca ihraç mallarının fiyatlarındaki düşüş ve Asya krizinin sonucunda yatırımcıların gelişen pazarlara yatırımlarda çekimser kalmaları Rus ekonomisi üzerinde güçlü bir dış şok etkisi yaratmıştır. Söz konusu dışsal şok, hızla artan borçlardan ve mikro düzeyde yapısal değişikliklerin eksikliğinden kaynaklanan ekonomik sorunları daha da şiddetlendirmiştir. Sonuç olarak Ruble'nin devalüasyonu ve iç borçların ödenememesi ile karşı karşıya kalınmıştır. Ağustos 1998'de çok ciddi bir ekonomik kriz başlamıştır. Kriz öncesinde 1 $: 6,3 Ruble iken, kriz sonrasında 1 $: 20 Ruble'ye ulaşmıştır. Enflasyon belirgin şekilde yükselmiş, 1998 yılı sonu itibarı ile %85'e ulaşmıştır. 1998 yılında ayarlanabilir sabit kurdan, dalgalı döviz kuru sistemine geçilmiştir (İGEME, 2008: 3)

Kriz sonrasında alınan önlemlere izleyen dönemlerde değişen hükümetler de bağlı kalmıştır. İhracattan elde edilen gelirler Ruble'nin değerinin düşmesi neticesinde artış göstermiş ve pek çok sektör devalüasyonun sağladığı bu avantajdan yararlanarak ihracata yönelmiştir. 2000 yılı sonu itibarı ile enflasyon %20'ye gerilemiştir. Enflasyondaki düşüş eğilimi izleyen yıllarda da devam etmiş olup, 2007 yılı başı itibarı ile %7'nin biraz üzerinde gerçekleşmiştir. Ancak bundan sonraki dönemde aşırı yüksek düzeyde seyreden enerji fiyatları, para arzındaki artış ve küresel gıda fiyatlarından dolayı enflasyonda yeniden bir yükseliş baş göstermiştir. Kriz sonrasında kamu maliyesi de dikkate değer bir gelişme göstermiştir. Bu gelişme, petrol sektöründen elde edilen beklenenin üzerinde kazancı yansıtmakla birlikte aynı zamanda toplanan vergilerde artış olduğunu ve harcamaların daha iyi denetlendiğini göstermektedir (İGEME, 2008: 4).

Türk-Rus ilişkilerinin tarihine baktığımızda bugün, ilk göze çarpan özellik, tarih içinde Rus Çarlığı ve daha sonra Sovyetler Birliği lehine olan güç dengesinin nispeten düzelmiş olmasıdır. Rusya Federasyonun, yaşamakta olduğu siyasi, sosyal, ekonomik ve askeri alanlardaki bunalım ve yaklaşık 300 yıl önceki sınırlarına geri çekilmiş olması nedeniyle, Türkiye karşısında, tarihte alışılagelen askeri ve siyasi ağırlığına artık sahip değildir. Sovyetler Birliği'nin dağılması sonucunda oluşan bu ortam içinde, iki-kutuplu uluslararası ilişkiler sistemi ve bu sistemin Türkiye ve Sovyetler Birliği'nin dış politikalarını şekillendiren kalıplarının da ortadan kalkmasıyla iki ülke, kendi ulusal çıkarlarına dayanan politikalar izlemeye başlamıştır. Türk-Rus ilişkilerinde Sovyetler Birliği'nin 1991 yılında dağılmasıyla yeni bir dönem başlamıştır. Tarih içinde çeşitli siyasi mücadelelere ve pek çok savaşa tanıklık eden bu ilişkilerde her iki ülkenin de kuruluş yılları olan 1920'lerde belirli bir yakınlaşma yaşanmıştır. II. Dünya Savaşı'nın sonunda Sovyetler Birliği'nin Türkiye'den toprak talebinde bulunması sonucunda güvenlik endişelerini gidermek amacıyla Türkiye, NATO'ya katılarak Batı ittifakının bir üyesi olmuştur. 1945 sonrası Soğuk Savaş döneminde, Türkiye-SSCB ilişkileri, iki kutuplu dünyanın izin verdiği çerçevede şekillenmiştir. 1960'larda Kıbrıs krizi sonrasında özellikle ekonomik konularda bir yakınlaşma başlamış, Sovyet lideri Mihail Gorbaçov'un 1980 ortalarında izlediği Perestroyka siyasetine kadar iki ülke mesafeli, ancak işbirliğine de yer veren bir yaklaşım içinde olmuştur (Kudrov ve Ekonomika, 1999: 85; Aktaran: İsmailov, 2003: 35-36).

Siyasi alandaki bu denge politikasının izlerini ekonomik alanda da görmek mümkündür. Nitekim Cumhuriyetin ilanı ile sağlanan siyasi bağımsızlığın ardından aynı zamanda bir ekonomik bağımsızlık mücadelesine de girişen 1930'ların genç Türkiye'sindeki sanayileşme hamlesinde Sovyet ekonomik yardımlarının ve SSCB desteğiyle kurulan ilk sanayi tesislerinin rolü şüphesiz yadsınamaz. Bu çerçevede özellikle Cumhuriyet Türkiye'sinde modern tekstilin, metalürjinin, cam sanayiinin ve kimya sanayiinin temelleri bu ikili işbirliği sayesinde atılmıştır. Ayrıca kuzey komsusu, Soğuk Savaş yıllarında dahi, Türkiye'nin özellikle ABD ve Batı dünyası ile siyasi ilişkilerde sorunların yaşandığı çeşitli dönemlerde Batı'ya karşı bir alternatif işbirliği merkezi haline gelebilmiştir. 1960 sonrasında özellikle Kıbrıs sorunu ile bağlantılı olarak Batı dünyası ile ilişkilerin krize dönüştüğü bir dönemde Türk ekonomisinin ihtiyaç duyduğu ve Batı dünyasından temin

edilemeyen çeşitli teknik ve teknolojik imkânların Sovyetler Birliği'nden sağlanması yoluna gidilmiştir. Bu açıdan Cumhuriyetin ağır sanayileşme döneminde, 1970'lerden başlayan Sovyetler Birliği'nin kurduğu dev sanayi kompleksleri, metalürji, kimya ve petrol rafinerileri Türk ekonomik ve sosyal hayatının önemli kilometre taşları olmuştur. Ancak Soğuk Savaş döneminde siyasi gelişmelere paralel olarak çeşitli dönemlerde gerilen siyasi ilişkilerden karşılıklı ekonomik işbirliği süreci de nasibini almıştır. Esasen sadece siyasi alanda değil, ekonomik alanda da Türkiye'nin Rusya'ya yönelik belli stratejiler temelinde sürdürülen istikrarlı bir dış politikasının olduğunu söylemek güçtür. Rusya daha çok Batı ile siyasi ya da ekonomik alanlarda ilişkilerin sıkıntılı devam ettiği ya da krize dönüştüğü kimi dönemlerde bir çeşit denge unsuru olarak değerlendirilmiş, krizlerin asılması ve Batı ile ilişkilerin tekrar rayına girmesi ile tekrar Türk dış politikasındaki alışılagelmiş konumuna dönmüştür (Şen, 2003).

İki ülke arasındaki ticari ve ekonomik ilişkilerin dönüm noktasını; 1967 tarihinde imzalanan ve SSCB tarafından bazı sanayi tesislerin inşası amacıyla Türkiye'ye yaklaşık 200 milyon dolar tutarında kredi açılması ve anılan krediye ait yıllık taksit ve faizlerin geri ödemelerinin ülkemiz menşeli mallarla yapılması esasına dayanan anlaşma oluşturmuştur. Türk ihraç mallarının SSCB piyasasına girmesinde ve iki ülke arasındaki ticaret hacminin geliştirilmesinde büyük bir rol oynayan ve "Özel Hesap" olarak bilinen, 1995 yılı sonu itibariyle de tasfiye edilen bu düzenleme çerçevesinde ülkemiz açısından o tarihlerde büyük önem arz eden İskenderun Demir Çelik Fabrikası, Seydişehir Alüminyum Tesisleri, Aliağa Petrol Rafinerisi, Orhaneli Termik Santrali gibi önemli sanayi kuruluşlarımızın tesisi için finansman sağlanmıştır (İsmailov, 2003: 36)

Rusya ve Türkiye'nin toplam dış ticareti sırasıyla Tablo 1 ve Tablo 2'de verilmiştir. Tablolar incelendiğinde, Rusya Türkiye'nin aksine yıllar itibariyle hep dış ticaret fazlası vermektedir. 2012 yılı itibariyle Rusya'nın toplam dış ticaret hacmi Türkiye'nin dış ticaret hacminin iki katından daha fazla olduğu tespit edilmiştir.

	2008	2009	2010	2011	2012

İki ülke ihracat ve ithalat açısından karşılaştırıldığında, Rusya'nın ihracat ve ithalatının yıllar itibariyle Türkiye'nin ihracat ve ithalatından fazla olduğu görülmektedir. 2012 yılı itibariyle Rusya'nın toplam ihracatı 524.727 milyon dolar iken Türkiye'nin toplam ihracatı sadece 152.561 milyon dolardır.

Türkiye'nin Rusya ile olan dış ticaret verileri Tablo 3'de verilmiştir. Tablo incelendiğinde, Yıllar itibariyle iki ülke arasındaki ticaret hacmini arttığı görülmektedir. Türkiye'nin Rusya'dan satın aldığı mal ve hizmet değeri

daha fazla iken sattığı mal ve hizmet değeri daha azdır. Türkiye son yıllarda en fazla ithalatını Rusya'dan yapmaktadır.

Türkiye, Rusya'dan çoğunlukla ara malları ithal ederken (%97,1), Rusya'ya ara malları ihracatı yapmaktadır (%51,1) (Tablo 4).

İhracat			İthalat		
2012	Mil. $	% Pay	2012	Mil. $	% Pay
Dokumacılık ürünleri	1.256	18,8	Petrol gazları-doğal gaz	12.272	46,1

***Tablo 4:** Türkiye-Rusya Federasyonu dış ticaretinde öne çıkan madde grupları.* ***Kaynak:** TUİK*

2012 yılı itibariyle Türkiye Rusya'dan 26.620 milyon dolar ithalat yaparken, 6.683 milyon dolar ihracat yaptığı Tablo 5'de görülmektedir. Rusya'dan yapılan ithalat içerisindeki en büyük payı petrol gazları-doğal gaz (%46,1) alırken bunu sırasıyla petrol ve ürünleri (%19,0), gıda ürünleri (%7,6) ve demir-çelik (%6,4) izlemektedir. Rusya'ya yapılan ihracatta ise ilk sırayı dokumacılık ürünleri (%18,8) alırken, bunu sırasıyla gıda ürünleri (%15,4), otomotiv yan sanayi (%11,8), diğer yarı mamuller (%8,9) ve kimyasallar (%8,2) izlemektedir.

3 Ekonometrik Metodoloji

Türkiye'nin Rusya ile dış ticaretini dikkate alarak oluşturulan ihracat ve ithalat talep fonksiyonlarının modellenmesinde Houthakker ve Magee (1969), Leamer ve Stern (1970), Stern, Francis ve Schumacher (1976) ve Mayes (1981) gibi araştırmacıların çalışmalarında kullandıkları modeller dikkate alınmıştır (Doğanlar vd., 2006: 57). Bu kapsamda Türkiye'nin Rusya ile dış ticareti üzerinden ihracat ve ithalat talep fonksiyonları aşağıdaki gibi oluşturulmuştur.

$$lnX_t = \beta_0 + \beta_1 lnRFGDP_t + \beta_2 lnPX_t + u_t$$
$$lnM_t = \alpha_0 + \alpha_1 lnTRGDP_t + \alpha_2 lnPM_t + u_t$$

Çalışmada kullanılan bütün değişkenlerin logaritmaları alınmıştır. X değişkeni Türkiye'nin Rusya'ya yaptığı ihracatı milyon ABD doları olarak göstermekte olup, nominal ihracat değerlerinin ihracat fiyat endeksi kullanılarak reel hale getirilmesiyle oluşturulmuştur. RFGDP değişkeni Rusya'nın reel GSYİH'nı, PX değişkeni ise göreli fiyatları yani Türkiye'nin ihracat fiyat endeksinin Rusya'nın tüketici fiyat endeksine oranını göstermektedir. M değişkeni Türkiye'nin Rusya'dan yaptığı ithalatı milyon ABD doları olarak göstermekte olup, nominal ithalat değerlerinin ithalat fiyat endeksi kullanılarak reel hale getirilmesiyle oluşturulmuştur. TRGDP değişkeni Türkiye'nin reel GSYİH'nı, PM değişkeni ise göreli fiyatlar olan Türkiye'nin ithalat fiyat endeksinin Türkiye'nin tüketici fiyat endeksine oranını göstermektedir.

İhracat talep fonksiyonu yabancı talebin (gelirin) ve göreli fiyatların (yurtiçi ihracat fiyat endeksinin yurtdışı fiyatlara oranının) bir fonksiyonudur. İthalat talep fonksiyonu ise yurtiçi talebin (milli gelirin) ve göreli fiyatların (yurtiçi ithalat fiyat endeksinin yurtiçi fiyatlara oranının) bir fonksiyonudur. İhracat ve ithalat talep fonksiyonlarındaki katsayılar talebin gelir ve fiyat esnekliklerini vermektedir. β_1 ve β_2 katsayıları sırasıyla ihracat talebinin gelir ve fiyat esnekliklerini, α_1 ve α_2 katsayıları ise sırasıyla ithalat talebinin gelir ve fiyat esnekliklerini vermektedir.

İhraç ürünlerinin fiyatlarında meydana gelen bir düşüş, söz konusu ürünlerin uluslararası rekabetini artıracağı için yabancı talebin o ürünlere yönelerek ihracatı artırması beklenir. Yabancı ülkelerin reel gelirlerinde meydana gelen bir artış bu ülkelerin yabancı mallara olan taleplerinde bir artışa neden olacağından, yabancı ülkelerin reel geliri ile reel ihracat arasında pozitif bir ilişkinin olması beklenmektedir (Doğanlar vd., 2006: 57). Ayrıca bir ülkenin ihracat talebinin fiyat ve gelir esnekliklerinin büyük olması da önemlidir. İhracat talebinin gelir esnekliği ne kadar yüksek olursa ekonomik büyümede ihracat o kadar önemli rol oynayacaktır. Aynı zamanda fiyat esnekliğinin yüksek olması da bir ülkenin uluslararası piyasalarda ihracatının rekabet gücünün yüksek olmasına yol açacaktır. Yani bu söz konusu esnekliklerin büyük olması ihracat gelirlerinin artırılmasında devalüasyon politikalarının etkinliğini artıracaktır (Şimşek ve Kadılar, 2005: 145). İthal ürünlerinin fiyatlarında meydana gelen bir artış ithalat talebini düşüreceğinden ters yönlü bir ilişki beklenmektedir. Bununla beraber reel milli

gelirde meydana gelen bir artış ithal ürünlerine olan talebi artıracağından reel milli gelir ile reel ithalat arasında pozitif yönü bir ilişki beklenmektedir (Doğanlar vd., 2006: 57). Teorideki beklentiye uygun olarak çalışmada ihracat ve ithalat talebinin gelir esnekliklerinin pozitif, fiyat esnekliklerinin negatif olması öngörülmektedir.

Çalışmada 1995Q1-2010Q4 dönemini kapsayan üçer aylık veriler kullanılmış olup, veriler Türkiye Cumhuriyet Merkez Bankası, IMF, Rusya Merkez Bankası ve Rusya Federal İstatistik Servisi veri tabanlarından elde edilmiştir. İlgili dönemlerin belirlenmesinde birbiriyle uyumlu verilerin analize dâhil edilmesi belirleyici olmuştur.

Durağan olmayan serilerde sahte ilişki söz konusu olabileceğinden çalışmada öncelikle kullanılan serilerin durağanlığının araştırılması amacıyla birim kök testi uygulanacaktır. Daha sonra regresyon analiz yapılarak esneklik katsayıları en küçük kareler yöntemi ile tahmin edilmeye çalışılmıştır.

İthalat talebinin fiyat esnekliği ile ihracat talebinin fiyat esnekliği toplamının mutlak değer içerisinde birden büyük olması Marshall-Lerner koşulunun geçerli olduğu anlamına gelmektedir (Ünsal, 2003: 357).

$$|\beta_2 + \alpha_2| > 1$$

Marshall-Lerner koşulunun geçerli olması devalüasyonun net ihracatı artırmada yani dış ticaret açıklarının kapatılmasında etkili olduğu anlamına gelmektedir (Ünsal, 2003: 358). Ancak bu koşulun sağlanması dış ticaret dengesizliklerinin giderilmesinde yeterli değildir. Dengesizliğin giderilmesinde üretimin ve ihracatın artırılması da büyük öneme sahiptir (Şimşek ve Kadılar, 2004: 33).

Çalışmada elde edilen ihracat ve ithalat taleplerinin fiyat esnekliği katsayıları ile Türkiye'nin Rusya ile ticaretinin devalüasyon sonucu dış dengesizliklerin giderilmesine katkı sağlayıp sağlamadığı değerlendirilecektir.

4 Ampirik Bulgular

Zaman serilerinde durağanlık, korelogram ve birim kök (unit root) testleriyle analiz edilmektedir (Tarı, 2005: 388). Literatürde çeşitli birim kök testleri bulunmakla beraber, en çok kullanılan testler; Dickey-Fuller (DF), Genişletilmiş Dickey-Fuller (ADF) ve Phillips-Perron (PP) birim kök testleridir. Bu çalışmada kullanılan serilerin durağanlığının tespit edilmesi amacıyla ADF birim kök testi kullanılmıştır. Serilerin durağanlığının araştırılması amacıyla yapılan ADF birim kök testi sonucu elde edilen bulgular aşağıdaki tabloda ortaya koyulmuştur.

	Düzey		1. Fark	
	t-ist.	prob.	t-ist.	prob.
lnX	-2.422	0.3651	-5.817	0.0000
lnM	-1.506	0.8170	-9.345	0.0000
lnRFGDP	-3.047	0.1286	-6.443	0.0000
lnTRGDP	-1.761	0.7107	-4.396	0.0046
lnPX	-1.506	0.8170	-4.801	0.0013
lnPM	-2.257	0.4504	-4.418	0.0042
*%1, %5 ve %10 kritik değerler sırasıyla -4.113, -3.484 ve -3.170 olarak hesaplanmıştır.				

Tablo 5: ADF birim kök testi sonuçları

Tabloda serilerin, düzey değerlerinde ADF test istatistiklerinin mutlak değerinin, MacKinnon kritik değerlerinden küçük olduğu, yani serilerin birim köke sahip olduğu sonucu ortaya çıktığı için, serilerin farklarının alınması gerekmektedir. Serilerin birinci derece farklarının alınması ile elde edilen sonuçlar, serilerin birinci derecede durağan olduklarını ortaya koymaktadır.

Aşağıda birbirine izleyen iki tabloda Rusya ile dış ticareti bağlamında Türkiye'nin ihracat ve ithalat talep fonksiyonlarının katsayılarının tahmini yapılmıştır.

Değişkenler	Katsayılar	Std. Hata	t-ist.	prob.
Sabit	-7.823082	3.764888	-2.077906	0.0421
lnRFGDP	3.117854	0.423831	7.356367	0.0000
lnPX	0.691521	0.163024	4.241823	0.0001
R^2:0.92, F-ist.:234.058, Durbin Watson ist.:1.823045				

Tablo 6: İhracat talep fonksiyonu tahmin sonuçları

Analizi yapılan modellerin açıklama gücünü gösteren R^2 değeri her iki modelde de yüksek düzeyde gerçekleşmiştir. Durbin Watson istatistik değerleri tablo değerleri ile karşılaştırıldığında otokorelasyon olmayan bölgeye düştüğü görülmektedir. Her iki modelde de tahmin edilen katsayılar istatistiki olarak anlamlı yani yorumlanabilir düzeydedir.

Değişkenler	Katsayılar	Std. Hata	t-ist.	prob.
Sabit	8.818955	5.122368	1.721656	0.0905
lnTRGDP	1.678197	0.497521	3.373117	0.0013
lnPM	-0.430916	0.178541	2.413540	0.0190
R^2:0.99, F-ist.:1067.509, Durbin Watson ist.:1.984107				

Tablo 7: *İthalat talep fonksiyonu tahmin sonuçları*

1995-2010 dönemi çeyrek verileri kullanılarak yapılan analiz sonucu tahmin edilen modeller aşağıdaki gibi yazılabilir.

İhracat Talep Fonksiyonu	lnX=-7.823+3.118lnRFGDP-0.692lnPX
İthalat Talep Fonksiyonu	lnM=8.819+1.678lnTRGDP-0.431lnPM

Tablo 8: *Tahmin edilen modeller*

İhracat talebinin gelir ve fiyat esneklikleri sırasıyla 3,118 ve -0,692 olarak hesaplanmıştır. İhracat talebinin gelir esnekliğinin pozitif, fiyat esnekliğinin ise negatif işarete sahip olması teorik beklentiye uygundur. İhracat talebinin gelir esnekliğinin pozitif olması Rusya'nın milli gelirindeki artışın Türkiye'nin Rusya'ya ihracatını attırıcı etkiye yol açacağını, ihracat talebinin fiyat esnekliğinin negatif olması ise Türkiye'nin ulusal parasındaki değer kaybının da yine Türkiye'nin Rusya'ya ihracatını arttırıcı etkiye yol açacağını ifade etmektedir. Elde edilen bu sonuçlar Türkiye'nin Rusya'ya ihracatının nispi fiyatlardan çok Rusya'nın gelirinden etkilendiğini göstermektedir.

İthalat talebinin gelir ve fiyat esneklikleri sırasıyla 1,678 ve -0,431 olarak hesaplanmıştır. İthalat talebinin gelir esnekliğinin pozitif, fiyat esnekliğinin ise negatif işarete sahip olması teorik beklentiye uygundur. İthalat talebinin gelir esnekliğinin pozitif olması Türkiye'nin milli gelirindeki artışın Türkiye'nin Rusya'dan ithalatını attırıcı etkiye yol açacağını, ithalat talebinin fiyat esnekliğinin negatif olması ise Rusya'nın ulusal parasındaki değer kaybının da yine Türkiye'nin Rusya'dan ithalatını arttırıcı etkiye yol açacağını ifade etmektedir. Elde edilen bu sonuçlar Türkiye'nin Rusya'dan ithalatı nispi fiyatlardan çok Türkiye'nin gelirinden etkilendiğini göstermektedir.

İhracat ve ithalat taleplerinin gelir ve fiyat esneklikleri incelendiğinde ihracat talebinin gelir ve fiyat esnekliklerinin ithalat talebinin gelir ve fiyat esnekliklerinden büyük olduğu görülmektedir. Bu durum Türkiye'nin Rusya'ya ihracatı ve Rusya'dan ithalatı ile alakalı olması mümkündür. Türkiye'nin Rusya'ya ihracatında tekstil ürünleri ön plana çıkarken ithalatında enerji belirleyici konumdadır. Bu nedenle ithalat talebinin gelir ve fiyat esnekliklerinin ihracat esnekliklerine göre katı olması muhtemeldir.

İhracat ve ithalat taleplerinin fiyat esnekliklerinin toplamı 1.123 olarak gerçekleşmiştir. Marshall-Lerner koşulunun sağlanması nedeniyle Türkiye'nin Rusya ile dış ticaretinin kur değişimlerinden etkilendiği yani nispi fiyatların iki ülke arasındaki dış ticaret akışında belirleyici olduğu ifade edilebilir. Bu nedenle devalüasyon politikalarının Türkiye'nin dış dengesizliğinin Rusya ile ticareti üzerinden giderilmesinde etkili olacağını söylemek mümkündür.

5 Sonuç ve Değerlendirme

1990'lı yıllarda SSCB'nin dağılmasıyla on beş farklı ülke bu süreçte bağımsızlıklarını kazanmış ve kendi başlarına çeşitli ülkelerle ekonomik ve siyasi ilişkiler kurmaya başlamışlardır. Bu bağımsızlık hareketinden sonra Rusya'da ekonomik sorunlar yaşanmaya başlanmıştır. 1992 yılında, Rusya Federasyonu merkezi planlı sistemden piyasa ekonomisine geçebilmek için bir dizi ekonomik reformlar yapmıştır. Bu çalışmada Rusya ile Türkiye arasındaki dış ticaret hacmi dikkate alınarak Türkiye'nin ihracat ve ithalat talep fonksiyonları farklı değişkenlere göre belirlenmiştir.

Yıllar itibariyle Rusya ile Türkiye arasındaki ticaret hacmini gittikçe artış göstermiştir. Türkiye'nin Rusya'dan ithalatı daha fazla iken ihracatı daha azdır. Son yıllarda Türkiye en fazla ithalatını Rusya'dan yapmaktadır. Türkiye, Rusya'dan çoğunlukla ara malları ithal ederken (%97,1), yine aynı şekilde en çok ara malları ihracatı yapmaktadır (%51,1). Rusya'dan yapılan ithalat içerisindeki en büyük payı petrol gazları-doğal gaz (%46,1) alırken bunu sırasıyla petrol ve ürünleri (%19,0), gıda ürünleri (%7,6) ve demir-çelik (%6,4) takip etmektedir. Rusya'ya yapılan ihracatta ise ilk sırayı dokumacılık ürünleri (%18,8) alırken, bunu sırasıyla gıda ürünleri (%15,4), otomotiv yan sanayi (%11,8), diğer yarı mamuller (%8,9) ve kimyasallar (%8,2) izlemektedir.

1995-2010 dönemi çeyrek verileri kullanılarak regresyon analizi yapılmış ithalat ve ihracat modelleri elde edilmiştir. İhracat modeline ilişkin gelir ve fiyat esneklikleri teoriye uygun olup sırasıyla pozitif ve negatif bulunmuştur. Elde edilen bulgulara göre, Türkiye'nin Rusya'ya ihracatının nispi fiyatlardan çok Rusya'nın gelirinden etkilendiğini açıklamaktadır. İthalat talebinin gelir ve fiyat esneklikleri sırasıyla 1,678 ve -0,431

olarak bulunmuş olup, teorik beklentiye uygundur. Bu sonuçlara göre, Türkiye'nin Rusya'dan ithalatı nispi fiyatlardan çok Türkiye'nin gelirinden etkilendiğini göstermektedir.

İhracat ve ithalat taleplerinin fiyat esnekliklerinin toplamı 1,123 olarak hesaplanmıştır. Marshall-Lerner koşulunun sağlanması nedeniyle Türkiye'nin Rusya ile dış ticaretinin kur değişimlerinden etkilendiği ifade edilebilir. Bu sebeple Türkiye'nin dış ticaret dengesizliğinin Rusya ile ticareti üzerinden giderilmesinde devalüasyon politikalarının etkili olacağı söylenebilir.

Avrupa Borç Krizinin Türkiye'nin İhracatı Üzerindeki Etkileri
The Effects of European Debt Crisis on Turkey's Exports

Prof. Dr. Bedriye Tunçsiper (Balıkesir University, Turkey)

Ph.D. Candidate Ömer Faruk Biçen (Balıkesir University, Turkey)

Abstract

The crisis that arose in Greece at the last quarter of 2009 affected the countries that have heavily government debt like Spain, Portugal, Italy and Ireland as soon as 2008 Global Financial Crisis originating from USA Mortgage Markets affect European Union (EU) countries under heavily debt burden. The effects of that crisis in the short run are demand shrinking and decrease in export. Turkey, which has important economic relations with EU countries in the last fifty years, is the primary country that can be negatively affected from demand shrinking in Europe. Turkey that indirectly experience 2008 global financial crisis because of the decrease in export volume in Europe also seem fatefully affected in this crisis. This article aims to determine the effects of the crisis to Turkey's export ampirically in the EU countries that have the lion's share in the Turkey's export markets. As well, it is trying to explain whether this crisis affects over-all Europe or not.

1 Giriş

2008 yılında Amerika Birleşik Devletleri'nde ortaya çıkan Mortgage Piyasası odaklı Küresel Finans Krizinin etkilediği ve Avrupa Birliği'ne üye ülkelerden Yunanistan'da başlayıp, İspanya, Portekiz, İtalya ve İrlanda'ya da yayılan kriz 2013 yılı içerisinde de etkisini sürdürmektedir. Kriz, her bir ülkede farklı karaktere ve farklı temele sahip olsa da bu ülkelerdeki krizi tanımlayan ortak görüş, krizin bir kamu borç krizi olduğudur. 2009 yılının son çeyreğinde başlayan kriz hızla zayıf mali ve makroekonomik koşullar altında bulunan ülkelere yayılmıştır (Neri and Ropele, 2013).

Krizin ortaya çıkmasında 2008 Küresel Finans Krizi önemli rol oynasa da Avrupa Birliği'nde Avro'ya geçiş süreciyle birlikte ortaya çıkan yapısal sorunların sürdürülebilir olmaktan çıkması krizi açıklayan ana unsur olarak kabul edilmektedir. Jan Kregel (2012)'e göre; Avro Bölgesinde yaşanan borç krizinden çıkarılabilecek bazı dersler bulunmaktadır. Buna göre; Avrupa'daki parasal birlik ödemeler dengesinde var olan problemleri (dengesizlikleri) çözememiş, Avrupa'daki rekabet, enflasyonu düşürmüş fakat büyümeye ve yakınsamaya yol açmamış ve ortak para birimi Avro'ya geçiş içeriden müdahaleye ihtiyacı ortadan kaldırmamıştır.

Mevcut kriz Türkiye'den de dikkatle izlenmektedir. Türkiye'nin Avrupa Birliği ülkeleriyle uzun yıllardır süren yakın ekonomik ilişkileri nedeniyle Avrupa'da ortaya çıkacak bir ekonomik kriz, Türkiye'yi önemli ölçüde etkileme potansiyeline sahiptir. Avrupa Birliği ülkelerinde ortaya çıkacak kriz Türkiye'yi öncelikle yabancı sermaye girişlerinde azalma ve ihracat düzeyinde bir düşme şeklinde etkileyecektir. Türkiye, önemli ölçüde cari açık veren bir ülke konumunda olduğundan yabancı sermaye'ye şiddetle ihtiyaç duymaktadır. Öte yandan, ihracattaki bir azalma da cari açığı daha da arttıracaktır. Bunun anlamı, Avrupa Birliği ülkelerindeki krizin önümüzdeki dönemde de devam etmesi ve diğer Avrupa Birliği ülkelerine yayılması, kaçınılmaz olarak Türkiye'nin de krize girmesine yol açabilecektir.

Çalışma, Avrupa Birliği ülkelerinde yaşanmakta olan borç krizinin Türkiye'nin ihracatını kısa ve uzun dönemde ne ölçüde etkileyeceğini ARDL (Autoregressive Distributes Lag) eşbütünleşme yaklaşımıyla test etmeyi ve bu kapsamda öneriler sunmayı amaçlamaktadır.

Çalışmanın giriş bölümünü takip eden ikinci bölüm, Avrupa borç krizinin ortaya çıkış nedenleri ve krizin gelişimi üzerinde durmaktadır. Üçüncü bölümde, borç krizinin yaşandığı ülkeler bazında krizin farklı sebepleri, krize yönelik alınan önlemler ve krizi yaşayan ülkelerdeki yüksek kamu borçlarının sürdürülebilirliği 2014 perspektifinde değerlendirilmiştir. Dördüncü bölümde, krizin Türkiye ekonomine yönelik olası etkileri incelenmiştir. Beşinci ve son bölümde ise, ampirik olarak Türkiye'nin ihracat düzeyi ile Avrupa Birliği ülkelerinin Gayrisafi Yurtiçin Hasıla düzeyleri arasında bir ilişki kurulmuştur. Bu ilişkiden ARDL eşbütünleşme yaklaşımıyla krizin Türkiye'nin ihracatı üzerindeki etkileri kısa ve uzun dönemli olarak belirlenmiştir.

Daha önce de bahsedildiği gibi, Avrupa Birliği ülkelerinden Yunanistan'da başlayan kriz daha sonra İspanya, Portekiz, İtalya ve İrlanda'ya yayılmıştır. Bu ülkeler, kriz sürecini inceleyen literatürde çoğunlukla borç krizine giren beş ülkenin baş harflerinden oluşan PIIGS (Portugal, Ireland, Italy, Greece, Spain) ülkeleri olarak adlandırılmaktadırlar. Çalışmamızda da, Yunanistan, İspanya, Portekiz, İtalya ve İrlanda'dan oluşan bu ülkeler PIIGS ülkeleri olarak adlandırılmaktadır.

2 Avrupa Borç Krizinin Ortaya Çıkış Nedenleri ve Krizin Gelişimi

Avrupa Birliği ülkelerinden Yunanistan'da 2009 yılının son çeyreğinde ortaya çıkan kriz, birliğe üye diğer ülkelerden İspanya, Portekiz, İtalya ve İrlanda'ya da kısa sürede yayılmıştır. Avrupa Birliği ülkelerinde ortaya

çıkan krizin temel sebebi olarak (birlik içerisindeki yapısal nedenler bir kenara bırakıldığında) 2008 yılının son çeyreğinde Amerika Birleşik Devletlerinde başlayan Mortgage Piyasası kaynaklı küresel finans krizi olduğu üzerinde bir görüş birliği bulunmaktadır.

Kibritçioğlu (2011)'na göre de, Avrupa'da ortaya çıkan kamu kesimi eksenli borç krizi küresel ekonomik/finansal krizin en önemli bileşenlerinden birisidir. Küresel finans krizi başladıktan sonra, kısa bir süre içerisinde Avrupa ülkelerini de etkileyerek, bu ülkelerin makro ekonomik göstergelerinin kötüleşmesine yol açmıştır. Avrupa ülkelerinde küresel finans krizine karşı uygulanan ekonomiyi canlandırma paketleri, bankalar aracılığı ile özel kesim borçlarının kamulaştırılması, büyüme düzeyindeki düşüşler sonucu vergi gelirlerinin azalması ve tasarruf açıkları, cari açığı yüksek olan bazı Avrupa Birliği ülkelerinde kamu borç yükünü arttırmıştır (Kılıç ve Bayar, 2012).

Aslında, 2008 yılının son çeyreğinden itibaren tüm dünyayı ve bununla birlikte Avrupa'yı da etkileyen Küresel Finans Krizi, Avrupa Birliği içerisindeki bilinen, fakat görmezden gelinen yapısal sorunların artık sürdürülemez olduğu gerçeğini bir anlamda kabul ettirmiştir. Avrupa Birliği ülkelerindeki krize ilişkin olarak en belirgin sebep, tek para birimi Euro'ya geçişle birlikte borçlanma maliyetlerindeki azalmalar sonucu göreceli olarak ekonomik açıdan zayıf olan ülkelerin aşırı borçlanması ve bu borçların büyümeyi sağlayacak, ekonominin rekabet gücünü arttıracak üretken alanlara yönlendirilmesi yerine, tüketim harcamalarının finansmanında kullanılmasıdır. Bu durum, her seferinde yeni borçlanmayı beraberinde getirmektedir.

Avrupa Birliği ülkelerinde ortaya çıkan borç krizinin yapısal sebepleri aşağıda dört grupta toplanabilir (Öztürk ve Aras, 2011):

İlk olarak, Avrupa'da ortak bir ekonomik alanın oluşturulması sürecinde, para politikası bir üst otorite olan Avrupa Merkez Bankasına devredilirken, maliye ve vergi politikalarının uygulama yetkisi hükümetlerin kendisinde kalmıştır. Bu durum mali disiplinden uzaklaşılmasına, bütçe açıkları ve artan borç yüklerinin ortaya çıkmasına yol açmıştır.

İkinci olarak, AB'nin birleşme sürecinde karşılaşılan önemli bir sorun da bölgesel gelişmişlik farkları ve bölgesel gelişmişlik farklarının giderilmesinde görece geri kalmış bölgelere yapılan maddi yardımlardır. 2004 yılında birlik tarihinin en büyük genişlemesinin yaşanması sonucunda birliğe yeni üyelerin dahil olması, fonların yetersiz kalmasına yol açmıştır.

Üçüncü olarak, Birliğe yeni katılan üyelerin Almanya, Fransa gibi birlik üyeleriyle rekabet edebilecek potansiyellerinin söz konusu olmaması, yeni üyelerin imalat sanayilerinin görece gerilemeye başlamasına yol açmıştır (Bagus, 2010).

Son olarak, Euro'ya katılan ülkelerde faiz oranlarının düşmesi, bu ülkelerin borçlanma imkanlarının arttırmıştır. Bunun yanında, Avrupa Merkez Bankası da Portekiz, Yunanistan, İtalya, İspanya ve İrlanda'ya ait kamu borç faiz oranlarını düşük tutarak bu ülkeleri aşırı harcama yapma konusunda bir anlamda teşvik edici rol oynamıştır (Kılıç ve Bayar, 2012).

Görüldüğü gibi, Avrupa Birliği ülkelerindeki borç krizinin arkasında yapısal nedenler ile Avrupa Merkez Bankası ile ulusal hükümetler arasındaki anlaşmazlıklar şeklinde ortaya çıkan ekonomik politikaların koordinasyonundaki sorunlar bulunmaktadır (Kılıç ve Bayar, 2012). Yapısal nitelikteki sorunların ve koordinasyon sorunlarının hızlı biçimde çözüme kavuşturulması, Avrupa Birliği ülkelerinde yaşanan kamu borç krizinin de hızlı biçimde atlatılmasına yol açacaktır.

3 Borç Krizinin Yaşandığı Ülkelerde Krize Yönelik Alınan Önlemler ve Yüksek Kamu Borçlarının Sürdürülebilirliği

2008 Küresel Finans Krizi sonrasında Avrupa'da ortaya çıkan durgunluk karşısında çok sayıda Avrupa Birliği ülkesi durgunluğu aşmak için parasal genişlemeyle birlikte geniş ölçekli ekonomik destek paketleri yürürlüğe koymuştur. Bu ekonomik destek paketlerine ek olarak ekonomilerdeki daralmanın vergi gelirlerinde yol açtığı azalma ve artan kamu borç stoku ve faiz oranları Avrupa Birliği genelinde kamu harcamalarının ve açıklarının artmasına yol açmıştır (SDE Analiz, 2012). Bu sebeple Avrupa Borç krizinin öncelikle etkilediği ülkeler olan Yunanistan, İspanya, Portekiz, İtalya ve İrlanda'da kamu borçlarının sürdürülebilirliği sorunu ön plana çıkmıştır.

Kamu borçlarının sürdürülebilirliğinin bazı temel belirleyicileri söz konusudur. Bu temel belirleyiciler arasında (Bryson, 2011);

Borcun değeri,

Hükümet tarafından ödenmesi gereken faiz oranı,

Faiz dışı bütçe dengesi,

Gayrisafi yurt içi hasıla büyüme oranı bulunmaktadır.

Dolayısıyla, yüksek kamu kesimi borcu, yüksek faiz oranı, büyük bütçe açıkları ve düşük büyüme hızının yaşandığı ülkelerde borçların sürdürülebilirliği sorunu ortaya çıkmaktadır (Kibritçioğlu, 2011).

Ülke	Krizin Ortaya Çıkış Sebebi	Yıl	Kamu Net Borç Stoku / GSYİH (%)	Yapısal Açık / GSYİH (%)	GSYİH Büyüme Oranı (%)	Faiz Oranları (%)	
						2012 Nisan	2013 Nisan
Yunanistan	Yüksek bütçe açıkları ve cari açıklar sonucu büyük ölçüde artan kamu borç stoku	2012	155,38	-3,74	-6,4	21,48	11,58
		2013	176,12	-0,42	-4,2		
		2014	172,21	0,61	0,6		
İspanya	Bankacılık sektöründeki hızlı kredi artışları ve konut fiyat balonu	2012	71,93	-5,70	-1,4	5,79	4,59
		2013	79,13	-4,54	-1,6		
		2014	84,66	-5,08	0,7		
Portekiz	Son on yılda AB ülkelerinin gerisinde kalan düşük büyüme oranı	2012	111,55	-4,02	-3,2	12,01	6,15
		2013	114,99	-2,90	-2,3		
		2014	116,52	-1,65	0,6		
İtalya	Borç stoku düzeyinin yüksekliği ve düşük büyüme beklentileri	2012	103,20	-1,29	-2,4	5,68	4,28
		2013	105,75	-0,19	-1,5		
		2014	106,04	-0,30	0,5		
İrlanda	2000'lerin başındaki konut fiyat balonu sonucu bankacılık kesimindeki sorunlar	2012	102,32	-5,98	0,9	6,88	3,78
		2013	106,15	-5,47	1,1		
		2014	107,53	-3,66	2,2		

Tablo 1: *PIIGS Ülkelerindeki Borç Krizinin Ortaya Çıkış Sebebi ve Kamusal Borçların Sürdürülebilirliğine İlişkin Göstergeler **Kaynaklar:** Kıbritçioğlu, (2011); IMF, World Economic Outlook, 2013; IMF, World Economic Outlook Database; ECB Eurosystem, Long-Term Interest Rate Statistics for EU Member State.*

Tablo 1, borç krizine giren Avrupa Birliği ülkelerindeki krizin ortaya çıkış sebepleri ve kamu kesimi borcunun sürdürülebilirliğine yönelik bazı veriler sunmaktadır. Tablo'da da görüldüğü gibi, Yunanistan, İspanya, Portekiz, İtalya ve İrlanda'da yaşanan kriz, kamu kesiminin yüksek borç yükümlülüğünden kaynaklanan bir kriz olmasına rağmen, krizin ortaya çıkış nedenleri ülkeler arasında heterojenlik göstermektedir. Borç krizinin sürdürülebilirliği noktasında önemli olan veriler 2012 için gerçekleşen, 2013 ve 2014 yılları için beklenen veriler olarak gösterilmiştir. Borç krizine giren tüm ülkelerde, 2014 yılına kadar kamu kesimi net borç stokunun gayrisafi yurt içi hasılaya oranında artış beklenmektedir. Bu durumun ortaya çıkışında en önemli etken ise, altıncı sütunda yer alan gerçekleşen ve beklenen büyüme oranlarının düşük düzeylerde olmasıdır. Hatta, İrlanda haricindeki ülkelerin hepsi 2012 yılında küçülmüştür. 2013 yılında da bu ülkelerin negatif büyüme oranlarına sahip olacağı beklenmektedir. İrlanda ise, 2012 yılında % 0,9 oranında büyürken, 2013 ve 2014 yıllarında beklenen büyüme oranı sırasıyla % 1,1 ve % 2,2'dir. Yüksek kamu kesimi borç stoklarının yaşanan düşük büyüme oranlarıyla kısa vadede azaltılması güç görünmektedir. Ülkelerde var olan yapısal bütçe açıkları da borçların kontrol altına alınmasını güçleştirmektedir.

Kriz sürecinde öncelikle Yunanistan Avrupalı ortaklarından ve Uluslararası Para Fonu'ndan (IMF) yardım istemiş, Avrupa Birliği ve IMF tarafından kredi havuzu mekanizması kapsamında 110 milyar Euro tutarında kredi sağlanmıştır (Trabelsi, 2012). Yunanistan gibi krize karşı alınan önlemler kapsamında kurulan fonlarla diğer üye ülkelerin de ödeme güçlükleri giderilmeye çalışılmıştır. Bu kapsamda, ödemeler dengesi fonu, kredi havuzu mekanizması, Avrupa finansal istikrar mekanizması, Avrupa finansal istikrar fonu kurulmuş olup, Avrupa finansal istikrar mekanizması ve Avrupa finansal istikrar fonu 2013 yılı itibariyle yerini Avrupa istikrar mekanizmasına bırakmıştır (Öztürk ve Aras, 2011).

Borç krizini yaşayan Avrupa Birliği ülkelerinin krizden çıkış sürecinin uzun olacağı belirtilmektedir. Bu durumun en belirgin etkisi ise, finansal piyasalarda istikrarsızlık ve dalgalanmalara yol açması ve Euro'nun diğer para birimleri karşısında bir süre zayıf kalmasıdır (Oliver, 2011; Öztürk ve Aras, 2011).

Ülkelerin borç krizini atlatmalarında yukarıda da bahsedilen önlemlerin yanında daha uzun vadede krizin atlatılması açısından, öncelikle borçların konsolide edilmesi ve uygun bir vadeye yayılması, ülkelerdeki mali disiplinin sağlanması ve kararlı bir şekilde yürütülmesi, daha uzun vade de ise ülkelerin Almanya ve Fransa gibi ülkeler karşısında rekabet gücünün yükseltilmesi ve bunun içinde imalat sanayinin canlandırılması gerekmektedir. Ayrıca, Avrupa Birliği'ndeki yapısal karakterli sorunlar çözülmediği sürece krize karşı alınan ve alınacak olan kısa ve uzun vadeli önlemlerin başarı şansları çok fazla gözükmemektedir.

İçinde bulunduğumuz yıla ilişkin beklentiler de krizin süreceğine yönelik kanıtlar sunmaktadır. 2013 yılında küresel ölçekte "ikinci dip" olasılığı düşük görülmekle birlikte, Avro Bölgesi'nde hükümetler mali ve siyasi birliğe doğru gidecek politikaları hızla hayata geçirmedikleri takdirde durgunluk daha da derinleşebilecektir. IMF'nin Avro bölgesine yönelik büyüme tahmini 2013 yılında negatif (- % 0,3) olup, Avro bölgesindeki

gelişmelerin küresel ekonomiye ilişkin beklentileri önemli ölçüde şekillendireceği ifade edilmektedir (T.C. Kalkınma Bakanlığı, Dünya Ekonomisindeki Son Gelişmeler Bülteni, Ocak ve Mayıs 2013).

4   Türkiye – Avrupa Birliği Ekonomik İlişkileri Çerçevesinde Krizin Türkiye'ye Etkileri

Avrupa Birliği ülkelerinde yaşanan borç krizinin bir diğer boyutu da, krizin Türkiye'ye etkileri veya potansiyel etkileridir. Türkiye'nin özellikle tarihsel olarak Avrupa ile ekonomik anlamda sürdürdüğü güçlü bağlar dolayısıyla, Avrupa'da yaşanan gelişmelerin direkt olarak Türkiye'yi de etkileyeceği beklentilerini gündeme getirmektedir.

2008 Küresel Finans Krizi'nde de Avrupa'daki ekonomik durgunluk süreci Türkiye ekonomisinin krizi dolaylı olarak yaşamasına yol açmıştır. Avrupa Birliği ülkelerine yönelik ihracat düzeyinde meydana gelen azalma, Türkiye'nin GSYİH'sının 2009 yılında % 4,8 oranında küçülmesine yol açmıştır. Ancak petrol fiyatlarındaki düşme ve küresel ölçekte hızlı toparlanma 2010 yılında Türkiye ekonomisinin % 9,2 oranında büyümesini beraberinde getirmiştir.

2008 Krizinin tetiklediği Avrupa Borç Krizinin de, Türkiye'yi ne ölçüde etkileyeceği merak edilen bir husustur. Avrupa Borç Krizinin Türkiye'yi üç ayrı kanaldan etkilemesi beklenmektedir (Doğru, 2011; Doğru, 2012). Bu üç kanal;

Beklentilerin kötüleşmesi,

Finansal sermaye girişlerinde azalma ve

İhracatın azalmasıdır.

Türkiye'ye yönelik finansal sermaye girişlerine bakıldığında, 2004-2009 yılları arasında Avrupa Birliği ülkelerinden Türkiye'ye gelen doğrudan yabancı sermaye yatırımlarının toplam yabancı sermaye yatırımlarının % 75'ini kapsadığı görülmektedir (Elitok and Straubhaar, 2010).

Yıllar	AB	ABD	Asya	Ortadoğu	Dünya
2007	67,80	22,01	7,34	1,63	100
2008	77,08	5,89	15,90	13,31	100
2009	83,72	4,16	10,76	3,34	100
2010	78,87	5,18	14,88	6,22	100
2011	78,16	8,73	12,54	1,21	100
2012	76,91	4,32	18,20	5,12	100
2013/Mart	58,31	8,35	32,81	3,13	100

Tablo 2: *2007-2013 Döneminde Türkiye'ye Gelen Doğrudan Yabancı Sermeye Yatırımlarının GSYİH'ye Oranı* **Kaynak:** *TCMB, Yurtdışında Yerleşik Kişilerin Türkiye'deki Doğrudan Yatırımlarının Ülkelere Göre Dağılımı.*

Tablo 2, 2004-2009 yılları arasındaki durumu doğrular kanıtları 2007-2013 dönemi için sunmaktadır. Türkiye Cumhuriyet Merkez Bankası verilerine göre, bazı ülke ve ülke gruplarının 2007-2013 yılları arasında Türkiye'ye gelen doğrudan yatırımlardaki payını göstermektedir. Tablo'dan da görüleceği gibi, Türkiye'ye gelen doğrudan yabancı yatırımlarda en büyük pay Avrupa Birliği ülkelerine aittir. Coğrafi yakınlığı olmasına rağmen Ortadoğu ülkelerinin Türkiye'ye gelen doğrudan yatırımlar içindeki payı düşüktür. Avrupa Birliği ülkelerinin payı ise 2007 yılında % 67 olup, 2009 yılına kadar sürekli artarak % 83,72 seviyesine ulaşmıştır. Daha sonrasında ise, 2012 yılına kadar sürekli azalma yaşanmış ve 2012 yılının sonunda % 76,91 olarak gerçekleşmiştir. 2013 yılı verileri Mart ayına kadar olan dönemi kapsamaktadır. 2013 yılının ilk çeyreğinde Avrupa Birliği'nin payı % 58 olarak gerçekleşmiştir. Oransal olarak azalma çok fazla gözükmemekle birlikte, değer olarak Avrupa Birliği'nden Türkiye'ye gelen doğrudan yabancı yatırımlar önemli ölçüde azalmıştır. 2007 yılında Avrupa Birliği ülkelerinden Türkiye'ye gelen doğrudan yatırım tutarı 12974 milyon $ iken, 2008 yılında 11367 milyon $'a, 2009 yılında 5234 milyon $'a, 2010 yılında da 4920 milyon $'a düşmüştür. 2011 yılında tekrar yükselişe geçen doğrudan yatırımlar (12549 milyon $), 2012 yılında ise 7796 milyon $'a gerilemiştir (Yurtdışında Yerleşik Kişilerin Türkiye'deki Doğrudan Yatırımlarının Ülkelere Göre Dağılımı).

Yıllar	İhracat (000 $)	Yıllar	İhracat (000 $)
2000	15.664.421	2007	60.398.502
2001	17.545.567	2008	63.390.419
2002	20.415.034	2009	47.013.415
2003	27.393.762	2010	52.685.304
2004	36.580.859	2011	62.347.441
2005	41.364.962	2012	59.204.167
2006	47.934.746	2013/Mart	15.271.087

Tablo 3: *2000-2013 Döneminde Türkiye'nin Avrupa Birliği Ülkelerine İhracatı ($)* **Kaynak:** *TÜİK*

Krizin Türkiye'ye yönelik etkilerinin bir diğer kaynağı ise, Türkiye'nin Avrupa Birliği ülkelerine yapmış olduğu ihracatta meydana gelen azalmadır. Tablo 3 incelendiğinde, 2000 yılından 2008 yılında kadar Türkiye'nin Avrupa Birliği ülkelerine yapmış olduğu ihracat sürekli olarak artış göstermiştir. 2000 yılında 15,6 milyar $ olarak gerçekleşen ihracat, 2008 yılında yaklaşık dört kat artarak 63,3 milyar $'a yükselmiştir. Fakat, 2008 küresel finans krizinin etkileri ve Avrupa Birliği ülkelerinde yaşanan borç krizi dolayısıyla 2009 yılında 47,0 milyar $'a düşen ihracat hacmi, 2010 ve 2011 yıllarında artsa da 2008 yılındaki tarihsel olarak en yüksek seviyeye ulaşamamıştır. 2012 yılında ise 59,2 milyar $ olarak gerçekleşmiştir. 2013 yılının ilk çeyreğinde 15,2 milyar $ olarak gerçekleşen ihracat hacminin 60,0 milyar $'ı aşması beklenmektedir.

Yukarıdaki tespitler karşısında, krizin Türkiye'ye yönelik etkilerine ilişkin görüşler farklılaşmaktadır. Bazı görüşlere göre Türkiye, Avro bölgesinin dışında olduğundan krizden direkt olarak etkilenmeyecektir. Bir diğer görüş ise, uzun vadede Avrupa Birliği ülkelerindeki borç krizinin Türkiye ekonomisini olumsuz yönde etkileyeceğini belirtmektedir (Elitok and Straubhaar, 2010).

Türkiye'deki yüksek cari açık düzeyi devam ettiğinde ve Avrupa'daki kriz sonucunda Türkiye'ye yönelik sermaye akımları azaldığında, Türkiye'de de kriz kaçınılmaz görünmektedir. Fakat, Türkiye 2008 Küresel Finans Krizinde olduğu gibi halihazırdaki Avrupa Borç Krizi'nde de cari açık düzeyindeki bir miktar azalma ve gelişmiş ülkelerdeki parasal genişlemeler neticesinde, gelişmekte olan ülkelere ve Türkiye'ye yönelik sermaye akımlarını artması (TCMB, Finansal İstikrar Raporu, Mayıs 2013) sonucunda mevcut açıkların sürdürülebilirliği, Türkiye'yi krizin etkilerinden içinde bulunduğumuz döneme kadar korunmuş gözükmektedir.

5 Ekonometrik Model ve Veri Seti

Çalışmada, Avrupa Birliği ülkelerindeki borç krizinin gelişimi, krizin geleceği ve mevcut krizin Türkiye ekonomisine yönelik olası yansımaları değerlendirildikten sonra, krizin Türkiye ekonomisini üç ayrı kanaldan etkileyebileceği belirlenmiştir. Çalışmanın ampirik kısmında, bu üç kanaldan yalnızca bir tanesi olan ihracat düzeyine yönelik etkiler üzerinde durulmaktadır. Ekonometrik model aşağıda gösterilmiştir.

$$\text{TREXP}_t = \beta_1 + \beta_2 \text{EUGDP}_t + \mu_t \quad (1)$$

Yukarıdaki (1) nolu denklemde, Türkiye'nin ihracat büyüklüğü (TREXP) ile Avrupa Birliği ülkelerinin Gayrisafi Yurtiçi Hasıla düzeyleri (EUGDP) arasında bir ilişki kurulmuştur. Türkiye'nin ihracat pazarlarının % 50'sine yakın bir bölümünü oluşturan Avrupa Birliği ülkelerinde yaşanan bir krizin, Avrupa Birliği ülkelerinde ekonomik daralmaya yol açarak Türkiye'nin ihracatının azalmasına yol açması beklenmektedir. Dolayısıyla, 2008 Küresel Finans Krizini de aynı mekanizma yoluyla dolaylı olarak yaşayan Türkiye, Avrupa Birliği ülkeleriyle yakın ekonomik ilişkileri sebebiyle Avrupa Birliği ülkelerinin geneline yayılma potansiyeli gösterebilecek bir krizin dolaylı etkilerine bir kez daha maruz kalabilecektir.

Modelde kullanılacak veriler ABD Doları cinsinden olup, 1960-2012 dönemini kapsayan yıllık verilerden oluşmaktadır. Türkiye'nin ihracat verileri Türkiye İstatistik Kurumu veritabanından elde edilirken, Avrupa Birliği ülkelerinin Gayrisafi Yurtiçi Hasıla verileri ise Dünya Bankası veri tabanından elde edilmiştir. Ekonometrik analizlerde Eviews 5 paket programı kullanılmıştır.

Ekonometrik analizin kapsamını denklem 1'de verilen iki seri arasındaki uzunlu dönemli ilişkinin belirlenmesi, yani eşbütünleşme ilişkisinin belirlenmesi oluşturmaktadır. Eşbütünleşme ilişkisini analiz etmeden önce ise serilerin durağan olup olmadıklarının belirlenmesi gerekmektedir. Bu amaçla, aşağıda öncelikle serilerin durağan olup olmadıkları ya da hangi düzeyde durağan oldukları belirlendikten sonra, koentegrasyon analizinin yapılıp yapılamayacağına karar verilecektir.

5.1 Birim Kök Testi Yardımıyla Verilerin Durağanlığının Tespit Edilmesi

Ekonometrik zaman serilerinin kullanımında karşılaşılan sorunlardan bir tanesi, serilerin durağan olmamalarıdır. Durağan dışı serilerle çalışmak Granger ve Newbold (1974)'a göre; "düzmece regresyon" sorununu ortaya çıkarmaktadır."Düzmece regresyon" durumunda R^2 yüksek olup, t-istatistikleri de anlamlıdır. Fakat elde edilen tahminler iktisadi çıkarsamalar açısından anlamsız olmaktadır (Gujarati, 2006; Sevüktekin ve Nargeleçekenler, 2010).

Ekonometrik zaman serilerinin durağanlığının belirlenmesinde çoğunlukla birim kök testleri kullanılmaktadır. Uygulamada Dickey-Fuller (DF), Genişletilmiş Dickey-Fuller (ADF) birim kök testleri yanında; ADF-GLS birim kök testi, KPSS (Kwiatkowski-Phillips-Schmidt-Shin) birim kök testi, Phillips-Perron (PP) birim kök testi ve Ng-Perron birim kök testi de kullanılmaktadır. Çalışmamızda da, modeli oluşturan serilerin durağanlığının belirlenmesinde literatürde yaygın olarak başvurulan ADF Birim Kök testi kullanılacaktır.

Dickey-Fuller (DF) birim kök testleri ekonometrik zaman serilerinin durağan olup olmadıklarının belirlenmesinde kullanılmasına rağmen, bu testlerin uygulanmasında ortaya çıkabilecek olası bir serisel korelasyonun DF test sürecini geçersiz kılması, serisel korelasyonun ortadan kaldırılması amacıyla sürece serinin gecikmeli değerlerinin eklenmesi gereğini ortaya koymaktadır. Serinin gecikmeli değerlerinin de dahil edilerek uygulandığı bu testlere Genişletilmiş Dickey-Fuller (ADF) birim kök testleri adı verilmektedir.

ADF birim kök testleri, denklemlerin sabitsiz ve trendsiz, sabitli ve trendsiz ve sabitli ve trendli olmalarına göre üç farklı şekilde yapılabilmektedir. Bu denklemler aşağıdaki (1), (2) ve (3) nolu denklemlerde sırasıyla gösterilmişlerdir.

$$\Delta Y_t = \delta Y_{t-1} + \sum_{j=1}^{p} \delta_i \Delta Y_{t-j} + \varepsilon_t \,(2)$$

$$\Delta Y_t = \mu + \delta Y_{t-1} + \sum_{j=1}^{p} \delta_i \Delta Y_{t-j} + \varepsilon_t \,(3)$$

$$\Delta Y_t = \mu + \beta t + \delta Y_{t-1} + \sum_{j=1}^{p} \delta_i \Delta Y_{t-j} + \varepsilon_t \,(4)$$

Yukarıdaki denklemlerde yer alan μ sabit değeri (kesim noktası), t trendi, p gecikme sayısını ve ε_t ise hata terimini göstermektedir. $\varepsilon_t \sim IID(0, \sigma^2)$ olduğu varsayılır.

p gecikme sayısının belirlenmesi için uygulamada genellikle Akaike Bilgi Kriteri (AIC) ve Schwarz Bilgi Kriteri (SIC) kullanılmaktadır (Sevüktekin ve Nargeleçekenler, 2010). Gecikme uzunluğu, mümkün olduğu kadar az olmalıdır ve Akaike ve Schwarz Bilgi Kriterlerini minimum yapan p, uygun gecikme uzunluğu olarak seçilmelidir.

Uygun gecikme uzunluğunun belirlenmesinin ardından birim kök testi uygulanır. Birim kök testinin uygulanmasında $H_0 : \delta = 0$ ve $H_1 : \delta < 1$ hipotezleri kurulur. δ parametresinin mutlak t-istatistiği değeri anlamlı ise, sıfır hipotezi reddedilir ve seri durağandır (birik kök içermemektedir), sıfır hipotezinin reddedilemediği durumda ise seri durağan değildir (birim kök içermektedir). t-istatistiğinin anlamlı olup olmadığı ise, Mac Kinnon (1996) kritik değerleri ile karşılaştırılarak belirlenir.

Değişkenler	I(0)			I(1)		
	Sabitsiz ve Trendsiz	Sabitli ve Trendsiz	Sabitli ve Trendli	Sabitsiz ve Trendsiz	Sabitli ve Trendsiz	Sabitli ve Trendli
TREXP	4,94 (6) [-1,9481]	4,38 (6) [-2,9266]	2,87 (6) [-3,5107]	1,02 (8) [-1,9486]	-0,50 (7) [-2,9297]	-4,92 (5) [-3,5107]
EUGDP	0,10 (5) [-1,9479]	-0,69 (5) [-2,6006]	-4,07 (4) [-3,5063]	-	-	-

Not: 1- Parantez içindeki değerler AIC Kriterine göre seçilen gecikme sayılarını göstermektedir.

2- Köşeli parantez içindeki değerler % 5 güven aralığında Mac Kinnon (1996) kritik değerleridir.

Tablo 4: ADF Birim Kök Testi Sonuçları

Tablo 4, ADF Birim Kök testi sonuçlarını göstermektedir. Üç modelden de elde edilen sonuçlara göre; Türkiye'nin ihracat serisi (TREXP), birinci farkında (I(1)) durağan, Avrupa Birliği ülkelerinin Gayrisafi Yurtiçi Hasıla serisi (EUGDP) ise düzeyde (I(0)) durağandır.

5.2 Eşbütünleşme Analizi

Literatürde serilerin arasındaki uzun dönemli birlikteliği ortaya koyan farklı yöntemler olmasına rağmen, her birinin birbirine karşı üstün ve zayıf olduğu noktalar söz konusudur. Uygulamada Engle ve Granger (1987), Johansen (1988), Johansen-Juselius (1990) ve Peseran, Smith ve Shin (2001) tarafından geliştirilmiş eşbütünleşme testleri bulunmaktadır. Ancak, Engle ve Granger (1987), Johansen (1988) ve Johansen-Juselius (1990) yaklaşımlarının uygulanabilmeleri için serilerin düzeyde durağan olmamaları ve aynı derecede farkı alındığında durağan hale gelmeleri gerekmektedir (Karagöl vd, 2007). Peseran, Smith ve Shin (2001) tarafından geliştirilen ARDL (Autoregressive Distributes Lag) yaklaşımında ise, serilerin bütünleşme derecelerine bakılmaksızın seriler arasında eşbütünleşmenin olup olmadığı araştırılabilmektedir. Ayrıca Narayan (2005)'a göre; ARDL yaklaşımı az sayıda gözleme sahip çalışmalarda da sağlam ve etkin sonuçlar vermektedir.

Çalışmamızda da, gözlem sayısı sınırlı ve seriler farklı derecelerde durağan olduklarından, diğer eşbütünleşme yöntemlerinin yerine ARDL yöntemi tercih edilmiştir. bu yöntemin uygulanabilmesi için öncelikle "kısıtlanmamış hata düzeltme modeli" (unrestricted error correction model) tahmin edilmesi gerekmektedir. Kısıtlanmamış hata düzeltme modelinin çalışmamıza uyarlanmış hali denklem 5'te gösterilmiştir.

$$\Delta TREXP_t = \beta_0 + \sum_{i=1}^{m} \beta_1 \Delta TREXP_{t-i} + \sum_{i=0}^{m} \beta_2 \Delta EUGDP_{t-i} + \beta_3 TREXP_{t-1}$$
$$+ \beta_4 EUGDP_{t-1} + \varepsilon_t \,(5)$$

Modelde yer alan iki seri arasındaki eşbütünleşme ilişkisinin varlığının tespit edilmesinde tahmin edilecek denklemdeki uygun gecikme sayısının (m) belirlenmesi gerekmektedir. Akaike Bilgi Kriterini (AIC) en küçük

yapan m değeri uygun gecikme sayısı olarak belirlenir. Fakat, AIC değerini en küçük yapan m değerinin bulunduğu denklem tahmin edildiğinde serisel korelasyon sorununun bulunmadığına da dikkat edilmelidir.

m	AIC	$X^{2\,BG}$
1	48,207	11,475
2	48,116	3,812
3	47,848	11,892
4	47,698	19,680
5	47,354	14,496

Not: $X^{2\,BG}$ Breusch-Godfrey serisel korelasyon test istatistiğidir.

Tablo 5: Gecikme Sayısının Belirlenmesi

Serilerin çok uzun bir dönemi kapsamaması nedeniyle gecikme uzunluğu maksimum 5 olarak alınmıştır. Tablo 5'te de görüldüğü gibi, diğer gecikme uzunluklarının serisel korelasyon problemi içermelerinden dolayı uygun gecikme uzunluğu (m) 2 olarak tespit edilmiştir. Uygun gecikme uzunluğu (m) belirlendikten sonra seriler arasında eşbütünleşme ilişkisinin belirlenmesine geçilebilir.

k	F İstatistiği	% 5 Anlamlılık Düzeyindeki Kritik Alt ve Üst Sınırlar	
		Alt Sınır	Üst Sınır
1	9,8693	6,56	7,30

Not: k, 5 numaralı denklemdeki bağımsız değişken sayısını göstermektedir. Kritik alt ve üst sınır değerleri, Peseran, Smith ve Shin (2001: 300) Tablo CI(V)'ten alınmıştır.

Tablo 6: Sınır Testi Sonuçları

2 gecikme uzunluğuna göre denklem 5 tahmin edildikten sonra $H_0: \beta_3 = \beta_4 = 0$ ve $H_1: \beta_3 \neq \beta_4 \neq 0$ hipotezlerinin test edilmesi gerekmektedir. Yapılan Wald testi sonucuna göre elde edilen F istatistik değeri kullanılarak seriler arasında eşbütünleşme olup olmadığına karar verilmektedir. Wald testi sonucunda hesaplanan F istatistik değeri Peseran, Smith ve Shin (2001)'de verilen kritik alt sınır ve üst sınır değerleriyle karşılaştırılması gerekmektedir. Eğer hesaplanan F istatistiği, Alt Sınır değerinden küçükse seriler arasında eşbütünleşme ilişkisi yoktur. F istatistiği Alt Sınır ve Üst Sınır değerleri arasında ise seriler arasında eşbütünleşme olup olmadığına karar verilememektedir. Seriler arasında eşbütünleşme ilişkisinin var olabilmesi için hesaplanan F istatistik değerinin Tablo 6'da verilen Üst Sınır değerini aşması gerekmektedir. Çalışmamızda da, 2 gecikme uzunluğuna göre hesaplanan denklem 5'ten elde edilen β_3 ve β_4 katsayılarına uygulanan Wald testi sonucunda hesaplanan F istatistik değeri Üst Sınırı aştığı için seriler arasında eşbütünleşme ilişkisinin bulunduğu sonucuna varılmıştır. Bunun sonucu olarak seriler arasında uzun ve kısa dönem ilişkileri belirlemek üzere ARDL modeli kurulabilir.

5.3 Uzun Dönem İlişki

Seriler arasındaki uzun dönemli ilişkiyi ortaya koyan ARDL modelinin çalışmamıza uyarlanmış şekli aşağıda gösterilmektedir.

$$TREXP_t = \alpha_0 + \alpha_1 TREND + \sum_{i=1}^{m} \alpha_{2i} TREXP_{t-i} + \sum_{i=0}^{n} \alpha_{3i} EUGDP_{t-i} + \mu_t \quad (6)$$

Bağımlı Değişken: TREXP		
Değişkenler	Katsayılar	T-İstatistiği
EUGDP	0,010716	2,2956**
TREND	-1776905258,43	-1,5227
C	11361010520,10	0,9129
Tanımlayıcı İstatistikler		
R^2	0,99	
Adj R^2	0,98	
F-İst	221,95 (0,000)	
DW	1,52	
Serisel Korelasyon (Breusch-Godfrey LM)	1,8447 (0,1638)	
Değişen Varyans (White)	42,9123 (0,0596)	
Normallik (JB)	1,7660 (0,4135)	

*% 1, **% 5 ve ***%10 düzeyinde anlamlılığı göstermektedir.

Tablo 7: ARDL (5,8) Modeli İçin Uzun Dönem Tahmin Sonuçları

Tablo 7, ARDL (5,8) modelinin tahmin sonuçlarına göre hesaplanan uzun dönem katsayılarını göstermektedir. Tablodaki sonuçlara göre, yalnızca EUGDP katsayısı % 5 düzeyinde istatistiksel olarak anlamlıdır. Buna göre, TREXP ve EUGDP serileri arasında uzun dönemli pozitif bir ilişki olup, Avrupa Birliği ülkelerinin Gayrisafi Yurtiçi Hasıla düzeylerinde meydana gelecek 100 $ düzeyindeki bir değişme, Türkiye'nin ihracatını uzun dönemde aynı yönde 1 $ düzeyinde değiştirecektir.

5.4 Kısa Dönem İlişki

Yukarıdaki uzun dönem ilişkiden elde edilen hata terimleri serisi kullanılarak oluşturulan ARDL yaklaşımına dayalı "hata düzeltme modeli"nin çalışmamıza uyarlanmış şekli aşağıda gösterilmektedir. Denklemdeki HDT değişkeni uzun dönem ilişkisinden elde edilen hata terimleri serisini göstermektedir. Hata terimleri serisi, hata düzeltme modelinde bir dönem gecikmeli olarak kullanılmıştır.

$$\Delta TREXP_t = \alpha_0 + \alpha_1 TREND + \alpha_2 HDT_{t-1} + \sum_{i=1}^{m} \alpha_{3i} \Delta TREXP_{t-i} + \sum_{i=0}^{n} \alpha_{4i} \Delta EUGDP_{t-i} + \mu_t \ (7)$$

Bağımlı Değişken: TREXP		
Değişkenler	Katsayılar	T-İstatistiği
DEUGDP	0,001238	0,1818
Trend	149092463,07	1,1505
C	-2903051860,82	-1,1336
HDT	-0,3597 (prob. 0,4737)	
Tanımlayıcı İstatistikler		
R^2	0,82	
Adj R^2	0,71	
F-İst	7,85 (0,000)	
DW	2,11	
Serisel Korelasyon (Breusch-Godfrey LM)	0,3078 (0,7378)	
Değişen Varyans (White)	42,9680 (0,0932)	
Normallik (JB)	3,2438 (0,1975)	

*% 1, **% 5 ve ***%10 düzeyinde anlamlılığı göstermektedir.

Tablo 8: *ARDL (5,8) Modeline Dayalı Hata Düzeltme Modeli Tahmin Sonuçları*

Tablo 8, ARDL modeline dayalı hata düzeltme modeli sonuçlarını göstermektedir. DEUGDP değişkeninin katsayısı beklenildiği gibi pozitif, fakat istatistiki olarak anlamsız çıkmıştır. Buna göre, kısa dönemde Avrupa Birliği ülkelerinin Gayrisafi Yurtiçi Hasıla düzeyindeki azalma Türkiye'nin ihracatını etkilememektedir.

Denklemde yer alan hata düzeltme terimi (HDT), kısa dönemdeki dengesizliklerin ne kadarının uzun dönemde dengeye geleceğini göstermektedir. Teorik olarak hata düzeltme teriminin negatif, anlamlı ve -1 ile 0 arasında olması beklenmektedir. Hata düzeltme terimi -1'e eşitse son dönemdeki dengesizliklerin tamamı ortadan kaldırılmaktadır. Eğer -1 ile 0 arasında ise, son dönem dengesizliklerin sadece bir kısmının ortadan kaldırıldığı sonucuna ulaşılır (Düzgün, 2010).

Tablo 8'de de gösterildiği gibi, hata düzeltme terimi -1 ile 0 arasında, negatif ve anlamlı çıkmıştır. Buna göre, uzun dönem dengeden sapmaların bir dönem sonrasında yaklaşık % 36'sı giderilmektedir.

6 Sonuç

Küresel ekonomide önemli bir aktör olmasına rağmen ekonomik birlikten siyasi birliğe doğru yönelen Avrupa Birliği, geçmişinden gelen yapısal sorunlarının 2008 Küresel Finans Krizi sonucu sürdürülemez bir boyuta ulaşması dolayısıyla üç yıla yakın bir süredir ekonomik kriz içerisindedir. Ekonomik kriz başlangıcından günümüze kadar yalnızca PIIGS grubunu etkilemiş gözükmektedir. Krizin temel sebepleri her bir ülkede farklılık gösterirken, krizin tanımlanmasında kamu kesimi borçlarının yüksekliği ön plana çıkmaktadır.

Merak edilen sorulardan en önemlisi, krizin tüm Avrupa Birliği ülkelerini etkileyip etkilemeyeceği sorusudur. Aslında, PIIGS ülkelerinin yaşadığı borç sorunlarının tüm Avrupa'nın ortak bir sorun haline gelmiş olduğuna dair görüşler vardır. Belirli açılardan bu durum geçerli olabilmektedir. Örneğin, krizin temel nedeni olarak mali birliğin gerçekleşmemiş olması olarak görülüyorsa bu durum Avrupa'nın ortak bir sorunu olduğu için krizin de tüm Avrupa'nın ortak bir sorunu olduğu algısı oluşabilmektedir. Ancak, krizin yalnızca PIIGS ülkelerini kapsayan bir kriz olması da, krizin tüm Avrupa'ya yayılmasının beklenmesine rağmen yine de tüm Avrupa'nın ortak bir sorunu olması konusunda temkinli yaklaşılması gerekmektedir. Mevcut kriz şu an için dar bir alana

yayılmış gözükmektedir. Alınan önlemler krizin etkilerini azaltmış gözükmektedir. Fakat uygulanacak "kemer sıkma" politikaları, vergi artışları ve harcama kısıntılarını içerdiğinden kısa dönemde resesyonist etkileri beraberinde getirmekte ve ağırlaşan kamu borçlarının sürdürülebilirliğini tehlikeye düşürmektedir. Çalışmada da belirtildiği gibi, 2014 yılını da kapsayacak şekilde ülkelerin ekonomik büyüme düzeyleri ya negatif olarak gerçekleşecek ya da çok düşük düzeylerde kalacaktır. Bu durum, krizin etkilerinin kısa vadede ortadan kalkmayacağına bir işarettir.

Avrupa ülkelerindeki kamu borç krizi aynı zamanda Türkiye ekonomisini de etkileme potansiyeline sahiptir. Avrupa Birliği ülkeleriyle tarihsel anlamda yakın ilişkileri bulunan Türkiye, Avrupa'dan Türkiye'ye yönelen yabancı sermaye yatırımlarındaki azalma ve Avrupa ülkelerine yönelik ihracatın azalması dolayısıyla olası bir ekonomik krize yakalanma potansiyeline sahiptir.

Çalışmamızda, Türkiye'nin Avrupa Birliği ülkelerine yönelik ihracat potansiyeli ampirik olarak değerlendirilmeye çalışılmıştır. Uygulanan ARDL yaklaşımı sonucunda Türkiye'nin ihracat düzeyi ile Avrupa Birliği ülkelerinin Gayrisafi Yurtiçi Hasıla düzeyleri arasında uzun dönemli bir eşbütünleşme ilişkisine rastlanılmıştır.

Elde edilen sonuçlara göre, uzun dönemde Avrupa Birliği ülkelerinin Gayrisafi Yurtiçi Hasıla (EUGDP) değişkeninin katsayısı pozitif ve anlamlı çıkmıştır. Buna göre, uzun dönemde Avrupa Birliği ülkelerindeki ekonomik büyüme veya ekonomik daralma Türkiye'nin ihracatını aynı yönde etkileyecektir. Kısa dönemde ise değişkenlerin katsayıları istatistiki olarak anlamsız çıkmıştır.

Buna göre, Türkiye ile Avrupa Birliği ülkeleri arasındaki yakın ekonomik ilişkiler ya da "tek taraflı bağımlılık", Avrupa Birliği'nde ortaya çıkacak ekonomik bir olumsuzluğun uzun dönemde Türkiye'yi de kaçınılmaz olarak etkileyeceğini ortaya koymaktadır. Çalışmada da belirtildiği gibi, cari açık düzeyindeki bir miktar azalma ve gelişmiş ülkelerdeki parasal genişlemeler neticesinde, gelişmekte olan ülkelere ve Türkiye'ye yönelik sermaye akımlarını artması sonucunda mevcut açıkların sürdürülebilirliği, Türkiye'yi krizin etkilerinden içinde bulunduğumuz döneme kadar korunmuş gözükmektedir. Bu durum kısa dönemli ampirik bulguları desteklemektedir. Ancak uzun dönemde, Türkiye'nin Avrupa Birliği ülkelerindeki olumsuz ekonomik gelişmelerin etkilerinden korunabilmesi için mutlaka dış ticaret pazarlarını çeşitlendirmesi ve Avrupa Birliği ülkelerinin toplam dış ticaret hacmi içerisindeki payını azaltması gerekmektedir.

Firmalarda Süreç Yenileme Yaklaşımının İhracat Üzerine Etkileri

Renewal Process Approach to Companies Effects of Exports

Asst. Prof. Dr. Ali Rıza İnce (Cumhuriyet University, Turkey)

Asst. Prof. Dr. Yücel Erol (Gaziosmanpaşa University, Turkey)

Asst. Prof. Dr. Enis Baha Biçer (Cumhuriyet University, Turkey)

Abstract

In this study, it has been discussed that whether the results of the reengineering is limited and remarkable or not. In this respect, it has been questioned whether there is a significant increase in the amount of exports of a furniture company before and after carrying out the reengineering project. It has been follow-up the same six-month periods of company's situation and the export amount before and after the reengineering project. The Wilcoxon Signed Ranks Test was applied on the data obtained. It has been concluded that reengineering was an important tool not only in increasing the amount of the production but also increase the amount of exports and profitability dramatically.

1 Giriş

İşletmelerde radikal bir değişim aracı olarak düşülen süreç yenileme yaklaşımının faydalarının fazlaca abartıldığı, etkisinin sadece üretim miktarını artırmakla sınırlı olduğu, bu konuda yapılan çalışmaların sağduyu ve deneyimler bir kenara bırakılarak konunun spekülatif olarak ele alındığı literatürde sıklıkla tartışılmaktadır. Süreç yenileme yaklaşımın sonuçlarının sadece üretimle sınırlı ve ifade edildiği şekli ile 'radikal' ve 'çarpıcı' olup olmadığını pratik alanda gözlemlemek adına bu çalışma gerçekleştirilmiştir. Bu doğrultuda süreç yenileme projesi yürüten bir mobilya firmasının süreç yenileme öncesinde ve sonrasında ihracat miktarında anlamlı bir artış olup olmadığı sorgulanmak istenmiştir. Söz konusu firmanın süreç yenileme öncesindeki altı aylık durumu ve ihracat miktarları ile yine aynı döneme ait süreç yenileme sonrası altı aylık miktarları takip edilmiştir. Elde edilen veriler Wilcoxon ilişkili örneklem testine tabi tutularak, oluşturulan hipotez doğrulanmaya çalışılmıştır.

2 Süreç Yenileme

Süreç yenilemenin daha geniş bir kapsamı olması gerektiğini belirten Grant (2002: 87), süreç yenileme faaliyetlerinde sadece süreçler üzerine odaklanmanın değil teknoloji ile birlikte iletişim, insan ve yapı gibi faktörlerin de dikkate alınması gerektiğini, bu faktörlerden süreç yenileme çalışmalarında hiç birinin diğerine veya diğerlerine rağmen ele alınamayacağı aksi halde süreç yenileme çalışmalarının tamamının başarısızlıkla sonuçlanacağını ifade etmektedir.Kapsamı konusunda farklı yaklaşımlar ve düşüncelere rağmen süreç yenilemenin amaçları konusunda kimi yazarlar ortak görüş bildirmektedirler (Garrison, Noreen ve Brewer, 2006: 15). Süreç yenilemenin amacı;

Çalışma biçimini ve çalışma aletlerini değiştirerek performansta radikal değişimler gerçekleştirmek

Müşteri ihtiyaçlarını belirleyerek bu konular üzerine odaklanmak

Karar verme için gerekli olan bilgi doğrultusunda işleri uygun şekilde yaparak hız kazanmak

Müşteri ihtiyaçlarını karşılamak için ürün ve hizmetlerin kalitesini geliştirerek kalite hedeflerini yakalamak

Gereksiz süreçleri elimine ederek ve değer üreten süreçler üzerine odaklanmak ve maliyetleri düşürmek ve organizasyona yardımcı olarak rakiplerle eş düzeyde mücadele etmek şeklindedir.

Süreç yenileme, TKY ve otomasyon gibi programlardan oldukça farklıdır. Otomasyon bilgi teknolojileri dâhil mevcut prosedürlerin uygunluğunu veya doğruluğunu sorgulamaksızın otomatik hale getirilmesi ile teknolojinin uygulanmasını ifade eder. Oysaki süreç yenileme eskiyi sorgular. Her ne kadar TKY süreçlere odaklansa da aşağıdan yukarı bir katılımla genellikle fonksiyonel açıdan mevcut faaliyetlerdeki iş tasarımında küçük iyileştirmelerle sonuçlanan sürekli gelişmeleri içerir. Oysaki süreç yenileme yukarıdan aşağıya doğru gerçekleşir, geniş ve çapraz fonksiyonel süreçler üzerine odaklanır mevcut iş tasarımının varlığını sorgular ve de kuantum bir sıçramayı hedefleyen tek seferlik bir girişimdir. Bununla birlikte bilgi teknolojileri TKY için çok fazla önem arz etmezken süreç yenilemenin çok önemli bir mümkün kılıcısı ve aracıdır (Grover ve Malhotra, 1997: 199). Bilgi teknolojileri süreç yenilemenin temel katalizörlerinden biridir ve göz ardı edilemeyecek bir öneme sahiptir (Hammer ve Champy, 1993: 92). Ayrıca Davenport and Short (1990: 15)'a göre bilgi teknolojileri süreç yenileme projelerinde maliyet avantajı sağlayan ve zaman kazandıran çözümler sunabilir. Küçük gelişmeleri içeren evrimsel değişmelerle büyük ilerlemeleri konu alan devrimsel değişimlerin bir arada uygulanamayacağını savunan yazarlarla benzer savı öne süren Grover ve Malhotra (1997: 199)'ya göre TKY, ancak sonraki süreç yenileme çabaları için bir yapı taşı olarak hizmet edebilir.Organizasyon yapısını da kapsayan süreçler üzerindeki değişimler çarpıcı sonuçlar elde etmeyi sağlayabilir ancak bu durum beraberinde belirli bir riski de getirecektir.

Hammer ve Champy, işletmelerin iş yapma şekillerini değiştirerek üst seviyede gelişme sağlayabileceklerini belirtmekle birlikte bunun risksiz olmadığına da değinmektedirler. Onlara göre süreç yenilemeyi deneyen firmaların % 50- 70 gibi bir oranının başarısız olmaktadırlar (Chan ve Peel, 1996: 44).Başarısızlık genel olarak süreç yenileme yaklaşımını anlamadaki eksikliklerden ve ifade etmedeki yetersizliklerden (Chan ve Choi, 1997: 222; Attaran ve Wood, 1999: 754), planlama sorunlarından (Grover, Jeong ve Teng, 1998: 3) ya da stratejik düşüncenin bir ikamesi olarak değerlendirilmesinden kaynaklanmaktadır (O'neill ve Sohal, 1999: 573). Bütün bunların dışında süreç yenilemeyi mümkün kılan bilgi teknolojilerinin göz ardı edilmesinden, insan kaynaklarının önemini kavrayamamaktan, liderlik eksikliğinden ve gerçekçi hedefler belirleyememekten de kaynaklanmaktadır (Attaran ve Wood, 1999: 755-756; Attaran, 2004: 594; Ray, Fray ve Khasnabish, 1999: 106). Organizasyon altyapısının esnek olmaması organizasyonel iletişim eksikliği ve çalışanların dirençlerini yönetmede başarısızlık da başarılı uygulamaları engellemektedir (Attaran, 2000: 795-796). Kültürün değişmediği sürece süreç yenilemenin de başarısız olacağını belirten yazarlar olmuştur (Hope ve Hope, 1997: 218)

2.1 Süreç Yenileme Başarı Faktörleri ve Sonuçları

Başarılı bir süreç yenileme faaliyeti için göz önünde bulundurulması gereken faktörleri şu şekilde sıralamak mümkündür (Hall, Rosenthal ve Wade, 1993: 128);

Saldırgan bir süreç yenileme performans hedefi belirlenmeli ve bu hedef bütün iş birimlerini kapsamalıdır.

Yönetici zamanının % 20 ile % 50'lik bir kısmını süreç yenileme projesine ayırmalıdır. Başlangıçta bu süre % 20 olabilir ancak uygulama aşamasında % 50 kadar çıkabilmelidir.

Müşteri istekleri, ekonomik kaldıraç noktaları ve pazar trendleri kapsamlı bir şekilde gözden geçirilmelidir.

Uygulamadan sorumlu olacak bir üst kademe yöneticisi özellikle süreç yenileme projesi için görevlendirilmelidir. Bu yönetici kritik uygulamalarda zamanının büyük bir kısmını projeye ayırabilmelidir.

Yeni tasarımın geniş kapsamlı bir pilot uygulaması yapılmalıdır. Pilot uygulama sürecin uygulaması kadar sonuçlarını da test edebilmelidir. Bununla birlikte nihai uygulama için heyecan oluşturabilmelidir.

Birçok riski beraberinde getiren süreç yenilemeyi başarı ile uygulayan firmalar, yüksek verimlilik, kalitede artış, pazara hızla cevap verme, taşıma ve hizmetlerde büyük oranda maliyet etkinliği, kısaltılmış iş çevrim süreleri, toplamda yüksek bir kar (Attaran ve Wood, 1999: 752) daha iyi müşteri hizmeti, hiyerarşik yapıda daha az kademe (Scott, 1995: 57) gibi avantajları elde ettiklerini ifade etmişlerdir.

3 Araştırmanın Amacı ve Kapsamı

Araştırmanın amacı bir mobilya firmasının koltuk ve kanepe fabrikasında yürütülen süreç yenileme çalışmalarının firmanın ihracatına olan etkisinin ortaya konmasıdır. Bu kapsamda süreç yenileme sonrasında elde edilen ihracat verileri mevsimsel dalgalanmalardan etkilenmemek için aynı dönemlere ait süreç yenileme öncesi ihracat verileri ile karşılaştırılmıştır. Sonuçların süreç yenileme faaliyetinden beklenen radikal gelişmeleri sağlayıp sağlamadığı konusu istatistiksel olarak ortaya konmaya çalışılmıştır.

3.1 Araştırmanın Yöntemi ve Kullanılan İstatistik Teknikler

Araştırmanın amacına ulaşabilmek için aynı dönemlere ait ihracat verileri toplanmış, araştırma sonucunda süreç yenileme öncesi ve sonrasındaki veriler arasındaki farkın istatistiksel olarak anlamlı olup olmadığını anlamak için SPSS paket programı yardımı ile veriler değerlendirilmiştir. Altışar aylık verilerin karşılaştırmasında karar değişkenleri arasında fark olup olmadığını ortaya koymaya yarayan bir test olan Wilcoxon ilişkili iki örneklem testi kullanılmıştır.

3.2 Araştırmanın Hipotezleri

Araştırma hipotezlerinde süreç yenileme öncesi ve sonrası ihracat miktarı arasında anlamlı bir farkın olup olmadığını ortaya konmak istenmiş ve hipotezler şu şekilde oluşturulmuştur.

H0: Mobilya firmasının süreç yenileme projesi öncesi ihracat miktarı ve süreç yenileme sonrası ihracat miktarı arasında anlamlı bir fark yoktur.

H1: Mobilya firmasının süreç yenileme projesi öncesi ihracat miktarı ve süreç yenileme sonrası ihracat miktarı arasında anlamlı bir fark vardır.

4 Süreç Yenileme Faaliyeti Öncesi ve Sonrası Verilerin Karşılaştırılması

Yurt dışı satışlarının, yurt içi satışlarının düştüğü dönemde artması sebebi ile dönemsel dalgalanmalardan en alt düzeyde etkilenmek açısından dış ticaret firmalar için oldukça önemli olarak kabul edilmektedir. İhracatta kalite ile birlikte termin yani teslimat süresi ön plana çıkmaktadır. Süreç yenileme öncesinde firmanın teslimat sürelerini çoğunlukla aştığı ve ceza ödediği tespit edilmiştir.Firma açısından yurt içinde geçici olarak kısmen tolere edilebilen termin, kalite ve satışlara cevap verememe sorunları ihracatta büyük problemler doğurduğu ve firmanın problemleri ancak büyük maliyetler ödeyerek çözebildiği gözlenmiştir. Sonuç olarak firma yurt dışı pazarını genişletmek bir yana bu satışlardan kar elde edemez bir hale geldiği ve ihracatı durdurma konusunun

düşünülmeye başlandığı bir duruma gelmiştir. Bu noktada yapılan süreç yenileme çalışmaları sonrasında üretim miktarında, teslimat süreleri ve kalite konusunda ilerlemeler kaydedildiği görülmüştür. Böylelikle ihracat miktarında artış olmakla birlikte diğer problemler de büyük oranda çözülmüş ve firma ihracattan kâr yapar bir duruma gelmiştir. İhraç edilen ürün miktarında ise ortalama % 11,8'lik bir artış gerçekleşmiştir. Aylar itibari ile gerçekleşen ihracat miktarları Tablo 1'de görüldüğü gibidir.
Grafik 1. *Aylar İtibari ile Süreç Yenileme Öncesi ve Sonrası İhracat Miktarları*

Elde edilen süreç yenileme öncesi ve sonrası ihracat rakamları Wilcoxon ilişkili iki örneklem testine tabi tutulumuş ve aşağıdaki sonuçlar elde edilmiştir.

Sıra Değerleri				
		N	Ortalama Sıra Değeri	Toplam Sıra Değeri
S.Y.Sonrası.Toplam.İhracat S.Y.Oncesi Toplam.İhracat	Negatif Sıra Değeri	0(a)	0,00	0,00
	Pozitif Sıra Değeri	6(b)	3,50	21,00
	Eşit	0(c)		
	Toplam	6		

Tablo 2. *Wilcoxon İlişkili İki Örneklem Testi*

a. S.Y. Sonrası.Toplam.İhracat < S.Y.Öncesi.Toplam.İhracat

b. S.Y. Sonrası.Toplam.İhracat > S.Y.Öncesi.Toplam.İhracat

c. S.Y. Sonrası.Toplam.İhracat = S.Y.Öncesi.Toplam.İhracat

Test İstatistiği(b)	
	S.Y.Sonrası.Toplam.Ihracat - S.Y.Oncesı.Toplam.Ihracat
Z	-2,207(a)
Asymp. Sig. (2-tailed)	0,027

a. Based on negative ranks.

b. Wilcoxon Signed Ranks Test

İhracat rakamlarının süreç yenileme öncesi ve sonrası arasında anlamlı bir fark olup olmadığı araştırıldığında, Asymp. Sig. satırındaki değerin 0,027 olduğu görülmüştür. Söz konusu değer anlamlılık derecesi olan 0,05'den küçük olduğu için, süreç yenileme öncesi ve sonrası ihracat rakamları arasında istatistiksel olarak anlamlı farkın olduğu; buradan hareketle ihracat rakamlarına ait **H₀** hipotezi reddedildiği söylenebilir.

5 Sonuç

Süreç yenileme, işletmelerde 'temelden', 'radikal' değişimleri konu alan; 'çarpıcı' sonuçları hedefleyen bir değişim aracı olarak değerlendirilmektedir. Sonuçlarının abartıldığı, etkisinin sınırlı olduğu konusunun sıklıkla tartışılması bu çalışmanın yapılmasında önemli bir motivasyon unsuru olmuştur. Bu doğrultuda süreç yenileme projesi yürüten firmanın proje öncesinde ve sonrasında ihracat verileri takip edilmiş; elde edilen veriler

değişkenler arası farkın anlamlı olup olmadığını değerlendiren Wilcoxon ilişkili iki örneklem testine tabi tutulmuştur. Test sonucuna göre firmanın süreç yenileme öncesi ve sonrası ihracat miktarları arasında istatistiksel olarak anlamlı bir farkın bulunduğu tespit edilmiştir. Süreç yenileme yaklaşımın sadece üretim miktarını artırmak konusunda değil aynı zamanda ihracat miktarını ve karlığını çarpıcı bir şekilde artırmak konusunda da önemli bir araç olduğu sonucuna ulaşılmıştır.

Türkiye ile Komşuları Arasındaki Ticaret Potansiyeli: Çekim Modeli Çerçevesinde Bir İnceleme

Turkey's Trade with Neigbor Countries:A Gravity Model Analysis

Sezai Ata (Ministry of Development, Turkey)

Abstract

With the ever-increasing level of integration in world economy, neighborhood relations become much more important for two-fold reasons. Firstly, neighbor countries are most important trade partners in general and secondly they form a bridge with the other countries. So, while good relations with neigbors have positive externalities for the trade with other countries, bad relations with neigbors mean reduced trade with other countries of a specific region. The main purpose of this study is to analyze Turkey's export potential with the neighbor countries with the help of the gravity model. For this purpose, first a gravity model has been set up using panel data which consists of bilateral data for 68 countries for the period 1980-2009, and then Turkey's exports potential to 10 neigbor countries is analyzed. One important finding of the study is that Turkey's exports to neighbor countries in general is below potential and there is a further room for increasing exports. While the short distance, one of the two most important indicator of trade in a gravity model (the other is GDP), is one of the main drivers of high trade among countries, its full effect depends on the geographical conditons of two countries. Our analysis shows that, high levels of untapped export potential exists for the majority of neighboring countries.

1 Giriş

Uluslararası ticaret literatüründe yapılan önemli ayrımlardan bir tanesi derinlik (intensive) ile genişlik (extensive) arasında olandır. Bir ülke ile yapılan ticaretin yüksek seviyede olması o ülke ile ticaretin derinliğini gösterirken, ciddi miktarda ticaret yapılan ülke sayısının çokluğu ticaret yapısının genişliğine işaret eder. Her ülke için arzu edilen durum belirli ürün ve belirli ülke grubu çerçevesine sıkışan ihracat yerine hem derinliğe hem de genişliğe sahip olan bir ticaret yapısıdır.

Türkiye'nin dış ticaretine bu açıdan baktığımızda, geçmişten beri ticaret yaptığımız ülkelerle ticareti daha da geliştirmek önemli iken daha önceden ticaret yapmadığımız ülkelerle ticarete başlamak daha da önemli olabilir.

Gelişmiş ülkelerin yakın çevresi ile ticaretine baktığımızda, komşu ve çevre ülkelerle ticaretin toplam ticaret hacmi içerisinde önemli bir paya sahip olduğunu görmekteyiz. Örneğin, 2009 yılı itibarıyla ekonomik entegrasyonları yüksek olan AB-27 ülkeleri, ihracatlarının yüzde 66,7'lik kısmını diğer AB-27 ülkelerine yaparken ithalatlarının da yüzde 64'lük kısmını yine diğer AB-27 ülkelerinden yapmaktadırlar. Asya ülkelerinde ve Kuzey Amerika bölgesinde ise, bölge içi ticaret yüzde 40'lar seviyesinde bulunmaktadır. Dünyadaki diğer pek çok gelişmiş ülkenin dış ticaretinde de bölgelerindeki ülkelerin payının önemli yer tuttuğu görülmektedir. Türkiye'nin ise, toplam ithalatları 2008 yılında yaklaşık 540 milyar dolar olan komşu ülkelerle ticari ilişkileri yeterli düzeyde bulunmamaktadır. Komşu ülkelerin Türkiye'nin toplam ihracatı içindeki payları, 2000 yılında yüzde 7,6 iken bu oran 2008 yılında ancak yüzde 15,7'ye yükselebilmiştir.

Türkiye'nin komşuları ile ticaretinde son dönemde yaşanan kısmi artışların önemli sebeplerinden birisi 2000 yılında ülkemiz tarafından yürürlüğe konulan 'Komşu ve Çevre Ülkelerle Ticareti Geliştirme Stratejisi'dir. Bu strateji çerçevesinde, Ortadoğu, Güneydoğu Avrupa, Karadeniz ülkeleri, Kafkasya ve Orta Asya ülkeleri ile ticaretin geliştirilmesine yönelik bir takım önlemler alınmıştır.

Bu stratejiye göre, Türkiye ile arasında geçiş zorluğu olmayan ve başka bir ülke üzerinden geçmeksizin doğrudan kara veya yakın deniz bağlantısı vasıtasıyla Türkiye ile ortak sınıra sahip ülkeler komşu ülke olarak tanımlanmaktadır. Bu gruba giren ülkeler Azerbaycan, Gürcistan, İran, Irak, Suriye, KKTC, Yunanistan, Bulgaristan, Romanya, Ukrayna, Rusya Federasyonu ve Ermenistan'dır.

Türkiye ile ortak bir sınıra sahip olmamalarına rağmen Türkiye ile coğrafi, kültürel ve tarihsel yakınlığı bulunan ve ekonomik potansiyeli olan ülkeler çevre ülkeler olarak tanımlanmakta ve bu gruba giren ülkeler de Türkmenistan, Kazakistan, Özbekistan, Kırgızistan, Tacikistan, İsrail, Suudi Arabistan, Ürdün, Lübnan, Mısır, Arnavutluk, Moldova ve Makedonya olarak belirtilmektedir.

Komşu ve çevre ülkeler stratejisi 2003 yılında genişletilmiş ve strateji kapsamına; Macaristan, Slovenya, Hırvatistan, Bosna-Hersek, Yugoslavya Federal Cumhuriyeti, Fas, Cezayir, Tunus, Libya, Sudan, Etiyopya, Eritre, Cibuti, Somali, Gazze, Kuveyt, Bahreyn, Katar, Birleşik Arap Emirlikleri, Umman, Yemen, Afganistan, Pakistan ve Beyaz Rusya da dahil edilmiştir.

Komşu ve çevre ülkeler stratejisi kapsamındaki 52 ülkeye ihracat 2000 yılındaki 6,9 milyar dolar seviyesinden 2008 yılı itibarıyla 56,7 milyar dolara yükselmiştir. Aynı dönemde, bu ülkelerden ithalat ise 13 milyar dolardan 73,5 milyar dolara yükselmiştir. Bölge ülkelerinin toplam ihracat içerisindeki payı 2000-2008 döneminde yüzde

24,7'den yüzde 43'e yükselmiştir. Suriye, Libya, Lübnan gibi ülkelere vizenin kaldırılması bu ülkelerle ticareti olumlu etkilenmiştir. 2009 yılı itibarıyla bir önceki yıla oranla Mısır'a olan ihracat yüzde 84, Afganistan'a yüzde 71, Libya'ya yüzde 67, Filistin ve Türkmenistan'a yüzde 43, Etiyopya'ya yüzde 40 ve Suriye'ye yüzde 28 oranında artmıştır. Irak'a olan ihracat ise aynı dönemde yüzde 31 oranında artmıştır. Irak ihracat içindeki yüzde 5'lik pazar payıyla 2009 yılında en çok ihracat yapılan ülkeler sıralamasında 5. sıraya yükselmiştir.

Tablo 1: *Komşu Ülkelerle Ticaret (Cari, Milyar $)* **Kaynak:** *IMF IFS, IMF DOT*

Türkiye'nin komşuları ile ticaretine ilişkin genel bilgilerin verildiği Tablo 1'e bakıldığında, bazı ülkeler ile ticaret fazlası verilirken bazı ülkelerle olan ticaret açığının önemli oranda arttığı görülmektedir. 2009 yılının kriz yılı olması ve dış ticaretin önemli ölçüde düşmesinden dolayı karşılaştırma için 2008 yılı verileri kullanılmıştır. 2000 yılında dört ülke ile dış ticaret açığı verirken 2008 yılı itibarıyla dış ticaret açığı verdiğimiz sadece iki komşu ülke kalmıştır. İran ve Rusya ile büyük oranda açık vermemizin sebebi enerji hammadde ihtiyacımızın önemli bir kısmını bu ülkelerden sağlamamızdır.

Türkiye'nin komşuları ile oluşturduğu bölgede 20. yüzyıl boyunca savaşlar, anlaşmazlıklar, siyasi istikrarsızlıkçok yoğun olarak yaşanmış, 21. yüzyılın ilk yıllarında da yaşanmaya devam etmiştir.

Son döneme kadar ülkemiz gündemini sürekli meşgul eden ve bazıları hala da meşgul etmeye devam eden Kıbrıs, Suriye vb. sorunlar Türkiye'nin komşuları ile ilişkilerinde bir belirsizlik kaynağı olmuşlardır, bu da ülkeler arası ticari ilişkilerin yeterince gelişmemesine sebep olmuştur. Bu bölümün devamında komşu ülkelerle olan ihracat performansımız çekim modelinden hesaplanan ihracat potansiyeline göre değerlendirilecektir.

2 Çekim Modelinin Yapısı

Sosyal bilimlerde ilk olarak Walter Isard (1954), Linder (1961 ve Tinbergen (1962) tarafından kullanılmaya başlanan çekim modelleri günümüzde uluslararası ticareti analizde en çok kullanılan modeller haline gelmişlerdir. Modelin fen bilimlerindeki kaynağı Newton'un ünlü çekim yasasıdır. Fizikte iki cisim arasındaki çekim kuvveti (F_{ij}) cisimlerin kütlelerinin (M_i, M_j) çarpımı ile doğru orantılı, aralarındaki uzaklığın (R_{ij}) karesi ile ters orantılıdır.

$$F_{ij} = c * \frac{M_i * M_j}{R_{ij}^2}$$

Bu denklemin uluslararası ticaret akımlarına uygulanmış şekli ise;

- T_{ij}: i ve j ülkeleri arasındaki ticaret,
- $GSYH_i$ ve $GSYH_j$: i ve j ülkelerinin GSYH'ları,
- R_{ij}: iki ülke arası mesafe,
- c: sabit,

olmak üzere;

$$T_{ij} = c * \frac{GSYH_i * GSYH_j}{R_{ij}}$$

halini alır. Denklemde iki tarafın da logaritması alındığında ise aşağıdaki denklemi elde ederiz.

$$Log(T_{ij}) = Log(c) + Log(GSYH_i) + Log(GSYH_j) - Log(R_{ij}) \qquad (1)$$

Denklem (1), çekim modelini en basit ve yalın haliyle temsil etmektedir. Denkleme göre iki ülke arasındaki ticaret hacmi, ülkelerin büyüklüklerinin artan, aralarındaki uzaklıkların ise azalan bir fonksiyonudur.

Bir çekim modelinde, i ve j ülkeleri arasındaki ticaret en genel haliyle;

$$Log(X_{ijt}) = \alpha_0 + \alpha_t + \alpha_{ij} + \beta`_{ijt} Z_{ijt} + \varepsilon_{ijt}, \ t = 1,...,T \qquad (2)$$

denklemiyle ifade edilebilir. Burada, X_{ijt} i ve j ülkeleri arasında t yılında gerçekleşen ticareti temsil etmektedir. Sabit katsayı üç bölümden oluşmaktadır. Birincisi bütün yıllar ve ülke ikilileri için ortak kısım olan α_0, ikincisi t yılına özgü bütün ülke ikilileri için ortak olan α_t, üçüncüsü ise her bir ülke ikilisine özgü bütün yıllar için ortak olan α_{ij}'dır. Diğer bütün değişkenler Z_{ijt} vektörüyle, katsayıları ise β_{ijt} ile temsil edilmektedir.

Denklem (2)'de verilen standart çekim modeli denklemini tahmin edebilmek için katsayılar üzerinde bazı kısıtlamalara gitmek zorunludur. Literatürde sıkça rastlanan toplu yatay kesit modellerinde konulan kısıtlar $\alpha_{ij} = 0$, $\beta_{ijt} = \beta_t$ ve $\beta_1 = \beta_2 = ... = \beta_T = \beta$ kısıtlarıdır. Bu kısıtları Denklem (2)'ye uygulandığında;

$$Log(Xijt) = a\ 0 + a\ t + \beta`Zijt + eijt\ ,\ t = 1,...,T \tag{3}$$

denklemi elde edilir ve bu denklem standart olarak en küçük kareler (EKK) yöntemiyle tahmin edilir.

Ekonometrik açıdan önemli bir nokta, çekim modeline giren değişkenlerin bazılarında birim köke (unit root) rastlanması durumudur. Böyle bir durumda, panel veri analizi yerine kointegrasyon analizi yapmak gerekmektedir. Bussiere at al (2005: 16), standart çekim modellerinin ticaret akımları ve GSYH gibi durağan olmayan değişkenler içermesine rağmen, sabit etki modelleri ile durağan olmayan etkileri içeren dinamik EKK modellerinin çok benzer oldukları sonucuna varmıştır.

Panel veri analizinde önemli bir diğer nokta sabit etkiler veya rassal etkiler tahmini arasında bir seçim yapmaktır. Sabit etkiler modeli panel gruplarına ait zamana bağlı olmayan bazı özelliklerin açıklayıcı değişkenleri etkilediğini ve aralarında korelasyon olduğunu varsayar. Sabit etkiler modeli, bu zamana bağlı olmayan etkileri gidererek sadece açıklayıcı değişkenlerin etkilerinin görülmesini sağlar. Rassal etkiler modeli ise panel grupları arasındaki varyasyonun rassal ve açıklayıcı değişkenler ile arasında korelasyon olmadığını varsayar. İki metodun hangisinin daha uygun olduğuna kadar vermek için standart olarak Hausman Testi uygulanır.

3   Türkiye ve Dünya İçin Çekim Modeli

3.1 Tahmin Yöntemi

Bu çalışmadaki modeller panel veri yöntemi kullanılarak tahmin edilmiştir. 1980-2009 dönemine ait olan veriler kesintisiz olduğu için veriler dengeli panel (balanced panel) şeklinde oluşturulmuş ve analizlerde dengeli panel özellikleri kullanılmıştır.

Panel veri analizinde önemli bir nokta sabit etkiler veya rassal etkiler tahmini arasında bir seçim yapmaktır. Sabit etkiler modeli panel gruplarına ait zamana bağlı olmayan bazı özelliklerin açıklayıcı değişkenleri etkilediğini ve aralarında korelasyon olduğunu varsayar ve bu zamana bağlı olmayan etkileri gidererek sadece açıklayıcı değişkenlerin etkilerinin görülmesini sağlar. Rassal etkiler modeli ise panel grupları arasındaki varyasyonun rassal olduğunu ve açıklayıcı değişkenler ile arasında korelasyon olmadığını varsayar. İki metodun hangisinin daha uygun olduğuna karar vermek için standart olarak Hausman Testi uygulanır. Çekim modelimizde uygulanan Hausman Testi sonucu sabit etki modelinin daha uygun olduğu görülmüştür.

Fakat sabit etki modelinde her ülke ikilisi için kukla değişken gerekmesinden dolayı bu modelin tam olarak uygulanabilmesi için 4556 adet kukla değişken kullanılması gerekmekte ve şu an kullanılan istatistik yazılımının buna kapasitesi yetmemektedir. İki tahmin yöntemi sonucunda elde edilen katsayıların işaretleri aynı ve büyüklükleri bir birine çok yakın olduğu için ve sabit etkiler tahmin yönteminde yıllara göre değişmeyen değişkenler (mesafe, ortak dil, komşuluk) dışlandığı için çalışmada rassal etkiler tahmin yöntemi kullanılmıştır. Böylece, incelenen ülkeler arasındaki mesafe, ortak dil kullanılması ve komşuluğu gibi kukla değişkenlerinin ticareti nasıl etkilediği görülebilecektir.

3.2 Model

Tüm ülke grupları için tahmin edilecek denklemin en genel hali şu şekilde ifade edilebilir;

$$Log(X_{ij}) = \alpha + \beta_1 Log(Y_i) + \beta_2 Log(Y_j) + \beta_3 Log(d_{ij}) + \beta_4 Contig_{ij} + \beta_5 Lang_{ij} + \tag{4}$$
$$\beta_6 Colony_{ij} + \beta_7 Landlock_{ij} + \beta_8 Pop_i + \beta_9 Pop_j + \beta_9 Rer_{ij} + e_{ij}$$

Yukarıdaki denklemde;

α sabit katsayıyı,

X_{ij} i ülkesinden j ülkesine reel ihracatı,

Y_i i ülkesinin reel GSYH'sı,

- Y_j j ülkesinin reel GSYH'sını,
- d_{ij} i ve j ülkesi arasındaki uzaklığı,
- $Contig_{ij}$ i ve j ülkelerinin komşu olup olmadığını,
- $Lang_{ij}$ i ve j ülkelerinin aynı dili konuşup konuşmadığını,
- $Colony_{ij}$ i ve j ülkelerinin geçmişte kolonyal bir bağ içinde olup olmadığını,
- $Landlock_{ij}$ i ve j ülkelerinin kaç tanesinin kara ile çevrili olduğunu,

- Pop$_i$ i ülkesinin nüfusunu,
- Pop$_j$ j ülkesinin nüfusunu,
- Rer$_{ij}$ i ve j ülke para birimleri arasındaki reel kur endeksini,
- e$_{ij}$ hata terimini, belirten değişkenlerdir. Kukla değişkenler dışındaki tüm değişkenlerin logaritmaları kullanılmıştır.

3.3 Model Sonuçları

Her bir ülke ile ticaret potansiyeli hesaplanırken dört farklı potansiyel hesaplanmıştır. Bunlar; bütün ülkeler, OECD ülkeleri, Euro bölgesi ülkeleri ve AB-27 ülkeleri kriterlerine göredir. Bütün ülkeler kriterine göre Türkiye'nin potansiyel ihracatı hesaplanırken, öncelikle bütün veri yani 68 ülkenin her birinin diğer 67 ülkeye olan ihracatı modellenmekte ve regresyon yapılmaktadır.

Sonrasında ise, bu regresyondan elde edilen denklemde Türkiye'nin her bir yıl için her bir ülkeyle ilgili açıklayıcı değişkenleri yerine konulmakta ve böylece potansiyel ticaret hesaplanmış olmaktadır. Diğer kriterlere göre potansiyel ihracat seviyesi benzer şekilde hesaplanmaktadır. Örneğin, OECD kriterine göre potansiyel hesaplanırken, öncelikle sadece OECD üyesi ülkelerden diğer OECD üyesi ülkelere ihracat modellenmekte ve regresyon yapılarak denklemin katsayıları tahmin edilmektedir. Sonrasında bu denklemde Türkiye ile ihracat yaptığı ülkenin açıklayıcı değişken bilgileri yerine konularak bağımlı değişken olan potansiyel ihracat seviyesi tahmin edilmektedir.

4 Komşu Ülkelerle Ticaret

4.1 Irak

Irak komşularımız arasında en fazla ticaret fazlası verdiğimiz ülkedir. 1990'lı yıllarda yaşanan birinci Körfez Savaşı öncesine kadar Irak Almanya'dan sonra en fazla ticaret yaptığımız ikinci ülke olarak Türkiye'nin en önemli ticari ortaklarından biriydi. Aynı dönemde petrol ihtiyacının önemli bir kısmı bu ülkeden karşılanmasına karşın, Irak aynı zamanda en yüksek ticaret fazlası verdiğimiz ülkeler arasındaydı. Ancak, Körfez Savaşı'nın patlak vermesiyle beraber Irak'a uygulanan ambargo dolayısıyla Türkiye'nin bu ülkeyle dış ticareti uzun yıllar bitme noktasına gelmiştir.

ABD'nin Irak'ı işgaliyle sonuçlanan savaş sonrasında Irak ekonomisi henüz tam anlamıyla düzlüğe çıkamamış ve kayda değer petrol üretimine başlamamış olmasına rağmen Türkiye'nin Irak'la dış ticareti son dönemde yeniden hızla artmaya başladı. Resmi veriler baz alındığında 1997-2002 döneminde hiç ihracat yapmadığımız Irak'a 2006 yılında yaklaşık 2,5 milyar dolar, 2008 yılında yaklaşık 4 milyar dolar ihracat yapılmıştır. Küresel krizden dolayı diğer ülkelere ihracatın önemli ölçüde düştüğü 2009 yılında ise bu artış hız kesmemiş ve Irak'a ihracat 5,1 milyar dolara yükselmiştir. Böylelikle Irak 2010 yılı itibarıyla en çok ihracat yaptığımız 5. ülke konumuna yükselmiştir.

Çalışmada elde ettiğimiz sonuçlara göre, son dönemde önemli oranda artırdığımız ticaretle beraber, Irak'a ihracat potansiyel seviyesini de aşmış, Türkiye için çok önemli bir pazar haline gelmiştir. (Bkz. Grafik 1) 2008 yılında Irak'a ihracat 3,9 milyar dolar iken potansiyel ihracat yaklaşık 3,5 milyar dolar seviyesindedir.

4.2 İran

İmparatorluklar döneminde sürekli savaş halinde olduğumuz fakat Kasrı Şirin anlaşmasından beri 400 yıldan uzun süredir barış halinde olduğumuz İran'la ekonomik ilişkilerimiz, bazı dönemlerde iyiyken bazı dönemlerde kesilme noktasına gelmiştir. 1990 yılında en çok ihracat yaptığımız altıncı ülke olan İran, 2000 yılında yirmi üçüncülüğe gerilemiş, 2009 yılında ise on altıncılığa yükselmiştir. Özellikle 1980-1988 yıllarında Irak-İran savaşı ve ertesinde ABD-İran arasındaki sorunlar İran ile ticaretimizi olumsuz etkilemiştir.

Dışa kapalı ekonomik yapısı, uyguladığı dış ticaret kontrolleri, yüksek gümrük tarifeleri, tarife dışı engeller, bankacılık ve ödemeye ilişkin sorunlar, iki ülke arasındaki ulaşım ağlarının yetersizliği ve sınır kapılarında karşılaşılan sorunlar gibi engeller nedeniyle 2003 yılına dek İran ile ticari ilişkilerimizin boyutu istenen düzeyde gerçekleşmemiştir. Son dönemde ise, İran'ın izlediği dışa açılma politikaları ve Dünya Ticaret Örgütü (DTÖ) 'ne üyelik hedefi doğrultusunda birçok ürünün ithalatında uygulanan tarife dışı engellerin kaldırılması ve birçok yasaklı ürünün ithalatına izin verilmesi gibi iyileşmeler ve son dönemdeki yüksek oranlı büyüme oranları nedeniyle İran Türkiye için önemli bir ticaret pazarı haline gelmiştir.

İran ile 1996 yılında 1 milyar dolar civarında olan dış ticaret hacmimiz, 2008 yılı itibarıyla 10 milyar doları aşmıştır. Türkiye aleyhinde seyreden dış ticaret açığı, İran'dan doğal gaz ithalatı ile birlikte son yıllarda daha da artmış ve 2008 yılı itibarıyla 6 milyar doların üzerinde gerçekleşmiştir.
Grafik 2: *Türkiye'nin Değişik Kriterlere Göre Potansiyel İhracatı - İran*

Çalışmada elde edilen sonuçlara göre, ülkemiz İran ile ticarette önemli bir potansiyele sahiptir. (Bkz. Grafik 2) 2008 yılında İran'a ihracat 2 milyar dolar iken potansiyel ihracat 2,8-3,5 milyar dolar seviyesindedir. Yani, yaklaşık 1,5 milyar dolarlık kullanılmayan bir potansiyel vardır.

Burada değinilmesi gereken bir nokta, Rusya örneğinde olduğu gibi İran ile Türkiye arasındaki mesafenin görece yüksek olmasıdır. İki ülke arasındaki mesafe bu çalışmada 1676 km olarak alınmıştır. Ancak Türkiye ile İran'ın komşu olduğu ve ticaretin özellikle sınır bölgelerinde yoğun olduğu düşünülürse, gerçek potansiyelin bu çalışma sonuçlarından daha yüksek seviyede olması muhtemeldir.

4.3 Suriye

Dışa açıklık konusunda en zayıf komşularımızdan birisi olan Suriye ile ticaretimiz son yıllarda önemli oranda artmıştır. Bu gelişmede, eskiden beri devam eden siyasi problemlerin büyük oranda çözülmüş olması ve son dönemde iki ülke arasındaki vizelerin kaldırılması önemli bir etken olmuştur.
Grafik 3: *Türkiye'nin Değişik Kriterlere Göre Potansiyel İhracatı - Suriye*

Suriye ile olan dış ticaretimiz, uzun yıllar iki ülke arasında yaşanan siyasi gerginlikten olumsuz etkilenmesine rağmen, Türkiye'nin Suriye'ye ihracatında son yıllarda önemli artışlar kaydedilmiştir. 2007 yılında yürürlüğe giren Serbest Ticaret Anlaşması'nın olumlu etkileri hem 2007 hem de 2008 yılı verilerine yansımıştır.

Çalışmada elde edilen sonuçlara göre, Suriye ihracatta en çok potansiyel vaad eden ülkelerden birisidir. 2008 yılı itibarı ile ihracat 1,1 milyar dolar iken potansiyel 2,1-4,3 milyar dolar aralığındadır. (Bkz.Grafik 3)

4.4 Azerbaycan

Önemli bir petrol ve doğal gaz ihracatçısı konumuna yükselmekte olan Azerbaycan'ın milli geliri yükseldikçe buna paralel olarak dış ticaretinde de bir artış olması beklenmektedir. Türkiye son dönemde Azerbaycan'a olan ihracatını önemli oranda artırmıştır.
Grafik 4: *Türkiye'nin Değişik Kriterlere Göre Potansiyel İhracatı - Azerbaycan*

Özellikle 1990'lı yıllarda Azerbaycan'a ihracat potansiyel düzeyin üzerine çıkarken, bu çalışmada elde edilen sonuçlara göre, son dönemde Azerbaycan'a ihracat potansiyel civarında gerçekleşmektedir. 2008 yılında Azerbaycan'a ihracat 1,7 milyar dolar düzeyinde iken, bu düzeyin 2 milyar dolara kadar çıkması mümkün görünmektedir. (Bkz.Grafik 4)

4.5 Ermenistan

Siyasi problemlerden dolayı sınırların kapalı olduğu Türkiye ile Ermenistan arasında resmi olarak ticaret gerçekleşmemektedir.

Ermenistan, doğu ve batı sınırları kapalı olan ve denize komşu olmayan bir ülke olarak, dünyanın geri kalan kısmına uzun kara yollarının kullanılmasıyla ulaşabilmektedir. Türkiye ve Ermenistan arasındaki bağlantı, Gürcistan ve İran üzerinden sağlanmaktadır. Ancak, Türkiye topraklarının kullanılması durumunda Ermenistan'ın bundan sağlayacağı önemli avantajlar bulunmaktadır. Türkiye dışındaki yolların kullanılmasının taşıma maliyetlerini yaklaşık % 23 oranında artırdığı tahmin edilmektedir.

Türkiye-Ermenistan sınırın kapalı olması, Ermenistan'ın Türkiye'nin sınır bölgeleriyle direkt olarak ticaret yapmasını engellemektedir. Ermenistan-Azerbaycan sınırının da kapalı olması, Ermenistan'ın dış dünya ile ticaretini olumsuz etkilemektedir. Bu nedenlerden dolaylı, Ermenistan'ın dış dünyaya açılımında Türkiye'nin karayolu, demiryolu ve deniz yolu bağlantıları büyük bir öneme sahiptir.

Çalışmadan elde edilen sonuçlara göre Ermenistan'a ihracatta 2008 yılı itibarıyla yaklaşık 500 milyon dolarlık bir potansiyel olduğu tahmin edilmektedir. (Bkz. Grafik 5)
Grafik 5: *Türkiye'nin Değişik Kriterlere Göre Potansiyel İhracatı - Ermenistan*
Grafik 6: *Türkiye'nin Değişik Kriterlere Göre Potansiyel İhracatı - Gürcistan*

4.6 Gürcistan

Son dönemde yüzünü batıya çeviren ve Rusya ile ilişkileri bitme noktasına gelen Gürcistan Türkiye için önemli bir pazar olma yolunda ilerlemektedir. Gürcistan ayrıca Kafkas bölgesine açılan bir kapı olmasından dolayı Türkiye için önem arz etmektedir.

2000 yılında Dünya Ticaret Örgütüne üye olan Gürcistan, Bağımsız Devletler Topluluğu (BDT) dışındaki ülkelerle ticari ilişkilerini geliştirmeye çalışmaktadır.

Çalışmada elde edilen sonuçlara göre, Gürcistan'a ihracat potansiyel seviyeler civarındadır. (Bkz. Grafik 6) 2008 yılında Gürcistan'a ihracat yaklaşık 1 milyar dolar iken potansiyel ihracat yaklaşık 800 milyon dolar seviyesindedir.

4.7 Bulgaristan

Bulgaristan Dünya Ticaret Örgütüne 1996 yılında üye olmuştur. DTÖ'ye üyelik Bulgaristan pazarının liberalleşmesinde önemli rol oynamıştır.

Türkiye'nin Bulgaristan'a ihracatı, Bulgaristan'da yaşayan önemli bir Türk nüfusu bulunmasına ve iki ülkenin komşu olmasına rağmen yeteri düzeyde gelişmemiştir.

Çalışmada elde edilen sonuçlara göre, son dönemde önemli oranda artırdığımız ticaretle beraber Bulgaristan'a ihracat potansiyel seviyelere yaklaşmış, 2008 yılında Bulgaristan'a 2,2 milyar dolar ihracat yapılmıştır. Ancak, ihracatın 3 – 3,5 milyar dolar düzeyine taşınması mümkün görünmektedir. (Bkz. Grafik 3.7)
Grafik 7: *Türkiye'nin Değişik Kriterlere Göre Potansiyel İhracatı - Bulgaristan*
Grafik 8: *Türkiye'nin Değişik Kriterlere Göre Potansiyel İhracatı - Yunanistan*

4.8 Yunanistan

Çekim modeli sonuçlarına göre ihracatı en fazla artırma imkanımız olan ülke Yunanistan'dır. 2008 yılı itibarıyla Yunanistan'a ihracat 2,4 milyar dolar olarak gerçekleşirken, potansiyel ihracat miktarımız 6-12 milyar dolar olarak tahmin edilmiştir.

Potansiyelin bu kadar fazla olmasının sebeplerini araştırdığımızda karşımıza iki basit ve temel neden çıkmaktadır. Çekim modelinin iki önemli değişkeni olan GSYH ve uzaklık açısından Yunanistan'ın yüksek potansiyeline şaşırmamak gerekir. Çünkü 2008 yılı itibarıyla, 352 milyar dolarlık GSYH'sı ile Yunanistan İran'dan daha yüksek gelire sahiptir. Öte yandan Yunanistan'ın Türkiye'ye olan ağırlıklandırılmış uzaklığı 655 km. iken İran'a olan uzaklık 1676 km'dir.

Türkiye ile Yunanistan arasındaki potansiyel ticaret seviyelerine iki ülke arasında yaşanan siyasi sorunlar nedeniyle ulaşılamamıştır. Son dönemde gelişen ilişkilerle beraber artmaya başlayan Yunanistan-Türkiye ticaretinin önümüzdeki dönemde artarak devam etmesi beklenmektedir. (Bkz. Grafik 8)

4.9 Rusya

Petrol, doğal gaz, kömür ve çok sayıda değerli madeni kapsayan doğal kaynak rezervi bulunan Rusya ülkemiz ihracatı açısından önemli bir pazardır. Türkiye, 2009 yılı itibarıyla Rusya'nın ihracatında 6., ithalatında ise 16. sırada yer almaktadır.

SSCB döneminde Türkiye'nin önemli bir ticari ortağı olan Rusya ile ticaretimiz SSCB'nin dağıldığı 1992 yılından sonra da devam etmiş özellikle bavul ticaretinin etkisiyle büyük miktarlara ulaşmıştır. 1998 yılında Rusya'da yaşanan ekonomik kriz sebebiyle Türkiye-Rusya ticareti önemli ölçüde daralmış ve kriz öncesindeki ihracat seviyesine ancak 2005 yılında ulaşılabilmiştir. Rusya ile ticaretimizde önemli bir nokta, ticaret açığının 1997 yılından beri sürekli artıyor olmasıdır. Bunun önemli sebeplerinden bir tanesi 1984 yılında SSCB ile imzalanan doğal gaz karşılığı mal ihracı anlaşmasının sonraki süreçte uygulanmamasıdır.
Grafik 9: Türkiye'nin Değişik Kriterlere Göre Potansiyel İhracatı - Rusya

Son dönemde özellikle değerli maden, petrol ve gaz rezervleri nedeniyle yüksek büyüme sürecinde olan Rusya'ya ihracat potansiyel civarında seyretmektedir. (Bkz.Grafik 9) Ancak burada değinilmesi gereken bir nokta, Rusya ile Türkiye arası mesafenin kullandığımız kaynaklarda 2009 km olarak hesaplanması ancak bunun günümüz şartlarında iki ülke arasındaki mesafeyi tam olarak yansıtmamasıdır. Moskova ile Ankara arası mesafe yaklaşık 1800 km olmasına rağmen iki liman kenti Trabzon ile Soçi arasındaki mesafe yaklaşık 300 km'dir. Bu çalışmada tahmin ettiğimiz logaritmik denklemlerde ihracatın mesafeye bağlı esnekliği yaklaşık -1'dir. Buna göre, Türkiye ile Rusya arasındaki mesafe 2000 km yerine kabaca 1000 km olarak alındığında bile, çalışma sonuçlarına göre hesaplanan ihracat potansiyeli yaklaşık yüzde 100 artmakta ve yaklaşık 7 milyar dolardan 14-15 milyar dolar seviyesine yükselmektedir.

5 Sonuç

Bu çalışmadan elde edilen en temel sonuç, Türkiye'nin bir çok komşu ülke ile gerçekleştirdiği ihracatın potansiyelin altında olduğu ve geliştirilmeye müsait olduğudur.

Modelin tahmin sonuçlarına göre Türkiye'nin dış ticareti, ticaret ortağı ülkenin ekonomik büyüklüğünden olumlu, nüfus büyüklüğü ve aradaki uzaklıktan olumsuz yönde etkilenmektedir. Ortak ülkenin geçmişte Türkiye

ile birlikte aynı devletin parçası olması da ticareti olumlu yönde etkileyen faktörlerdir. Dünya genelinde komşuluk ticareti artırıcı bir faktörken Türkiye için bunun tam tersi bir sonuç ortaya çıktığı görülmektedir. Bu da Türkiye'nin komşu ve çevre ülkelerle ticaretinde büyük bir potansiyel olduğunu göstermektedir.

2008 yılı verilerine göre komşu ülkelere gerçekleşen toplam ihracat 20.8 milyar dolar iken model sonuçlarına göre bu ülkelere yönelik potansiyel ihracatımız 41.5 milyar dolar seviyesindedir. Bu da komşu ülkelerle ticarette yaklaşık yüzde 103 oranında potansiyel artış mümkün görünmektedir. 10 komşu ülkenin 8 tanesi ile ticaretimiz potansiyelin altında iken sadece Gürcistan ve Irak ile ticaretimiz potansiyelin üzerindedir. En çok potansiyel vaad eden komşu ülkeler Yunanistan K.R. Yönetimi ve Suriye'dir.

Rusya ve İran gibi büyük yüzölçümüne sahip koşularımızla ticarette mesafe potansiyel ticareti azaltıcı bir rol oynarken, küçük yüzölçümüne sahip ve nüfus yoğunluğu daha fazla olan Yunanistan gibi ülkelerle ticarette mesafe potansiyeli artırıcı bir rol oynamaktadır.

Son dönemde Suriye'de devam eden gelişmeler sosyal ve siyasal olumsuzlukların ticarete olan olumsuz etkisini bir kez daha göstermiştir. Komşu ülkelerle ticarette sahip olunan potansiyel ancak bütün ülkelerde sağlanacak sosyal, siyasal ve ekonomik istikrar ile beraber kullanılabilecektir.

Krizin Orta ve Uzun Vadeli Yıkıcı Etkisi: Yükselen Korumacılık

Destructive mid- and long-term Side Effect of the Crisis: Rising Protectionism

Assoc. Prof. Dr. Serap Durusoy (Izzet Baysal University, Turkey)

Abstract

Finance based crisis with its effect felt in the second quarter of 2007 has acquired global characteristics, and taken held of many countries. Global crisis not only has worn down constructive opinions regarding global capitalism, which played an important role in shaping the 20 th, but it has also discredited market economies. Thus, in many countries, including the United States of America, public rescue package implementations have lead to more desirable state interventions.On the other hand, economic activities in the global arena following the crisis slowed down and it became more difficult for financial structures to exist, and reduction in global trade movements were observed.This situation has lead for countries to include protective policies against the crisis as well. In study, protective studies will be addresssed, which wear down the globalization acting as a descriptive property of both experimental and normative reality in the definition of the process we are currently experiencing. As the economic problems gradually increase, the kind of shapes trade constrictions and protective instincts illustrate themselves and possible results of this will be examined on a country basis (EURASİAN, USA, EU, OECD). Expecially, it will be examined whether protectionism is the right solition policy against the crisis on not, and then the degree of the effect of this policy in the drop experienced in the recent months in international trade will be addressed. Lastly, the type of measurements taken in the international arena regarding protectionism and suficiently of the measurements will be assessed.

1 Giriş

Yaşanan küresel krizlerle birlikte 20. yüzyılın ekonomik, sosyal ve siyasal olarak şekillenmesinde etkili olan ekonomide serbestleşmeyi ve rekabeti özendirme çabasını barındıran küreselleşmede bir zemin kayması yaşanmaktadır. Öyle ki dünya ekonomisinin, altmış yılı aşkın bir süredir, ticaretin kolaylaştırılması ve serbestleştirilmesine yönelik çabaları kriz sonrası aşınmaya başlamıştır. Küresel finansal krizin ülke ekonomileri üzerinde yarattığı yıkıcı etkinin olumsuzluklarını elimine etmek için çözüm dış ticarette aranmaktadır. Dolayısıyla bugünkü uluslararası sistemi açıklamakta kullanılan ve kapitalizmin en yüksek aşaması olarak tanımlanan küreselleşmenin ülkeleri organik bir bütün haline getirmesi krizin bütün dünyaya yayılmasına neden olmakla kalmamış kriz sonrası uygulanan korumacı politikalarda da etkili olmuştur. Şekli ve derecesi ne olursa olsun korumacılık, rekabet sürecini, dolayısıyla, toplumsal refahı ve kaynakların etkin kullanımını, çok yönlü ve çok güçlü bir biçimde etkileyen bir uygulamadır. Mevcut serbest ticaret modelinden korumacı uygulamalara geçiş ise aslında dünya ekonomik düzeninin değişmesi anlamına gelmektedir ve çok daha kapsamlı ve sarsıcı etkileri olabilecektir. Buevrilme ile birlikte yani dış rekabetin kontrolüne yönelik politikaların benimsenmesi sonucunda küreselleşme yandaşlarının dahi küresel ekonominin temel ilkelerine olan inançları sarsılmakta, küresel kapitalizmin erdemleri ve kötülükleri çevresinde dönen hararetli tartışmalar çoğalmaktadır. Yani artık kapitalist ilişkilerin dünya ölçeğinde belirleyici bir aşaması olan küresel kapitalizm ve içerisindeki ilişki ağı tartışmalarda başat rolü oluşturmaktadır.

2 Küresel Kriz Sonrası Küresel Eğilim: Korumacılık

Bilindiği üzere korumacılık (protectionism), bir ülkenin yerli üreticilerini, her türlü yıkıcı nitelikteki dış rekabet karşısında korunmasını savunan görüşlere dayanan dış ticaret politikasıdır. Klasik koruma araçları arasında akla ilk gelen tarife araçları ve bu kapsamda gümrük vergileridir. Ülkeler, bu tür maliye politikası araçlarını kullanarak birtakım iktisadi amaçlarını gerçekleştirmeye çalışmakta ve bu çerçevede bazı ticari engeller ortaya çıkmaktadır. Gümrük vergisinin konulmasındaki temel amaç, ülkenin iç piyasasını muhafaza etmektir. Ancak bu yönde alınan bazı tedbirler, ticari ilişkide bulunulan ülkelerce de misilleme amaçlı olarak uygulandığında, ticari dengelerin bozulması ve sonuçta dünya ticaretinin bundan olumsuz şekilde etkilenmesi söz konusudur.

Ülkeler ulusal güvenlik-savunma tezi, bebek-çocuk sanayi tezi, hakça ticaret politikası, stratejik ticaret politikası, koşulların eşitsizliği nedeniyle yeni ve daha derin bir kriz yaşamamak için korumacı politikalara başvurur (Efere, 2002, Robert, 2001).

İşte 2007' de ABD' de ortaya çıkan ve küresel niteliğe dönüşen krizin de Büyük Bunalım gibi derinleşerek uzun yıllar süreceğine dair görüş korumacılığa yönelik endişeleri beraberinde getirmiştir. Öyle ki IMF'nin Dünya Ekonomik Görünümü Raporları'nda ekonomik büyüme oranlarını aşağı seviyeye çekmesi (2012 için 3.5 2013 için ise 3.9 oranın da bir büyüme öngörülmüştür) bu endişenin kanıtıdır.

Kuşkusuz küresel alanda ekonomik faaliyetler yavaşladıkça finansal yapının varlığını sürdürmesi zorlaşmış ve dünya ticaret akımlarında düşüş gözlenmiştir. Nitekim küresel krizin derinleşmesi ile birlikte küresel boyutta yaşanan durgunluk, etkisini uluslararası ticaret alanında da göstermiş ve birçok sanayileşmiş ülkenin dış ticaret hacmi, bir önceki yıla göre %20'lerin üzerinde daralmıştır. 2008 yılında başlayan bu düşüş, bütün büyük ekonomileri derinden etkilemiştir. Bu bağlamda gerek söz konusu endişeler, gerekse ekonomik belirsizlik ortamı küresel krize çözüm arayışları içerisinde pek çok ülkede reel sektöre destek sağlayarak istihdam yaratan büyük firmaların ayakta kalmasına yönelik önlem paketleri uygulamaya konulmuştur. Kriz sonrası ekonomik göstergelerin daha da kötüleşmesi ve bunun etkilerinin ekonomik aktörler tarafından iyice hissedilmeye başlanmasıyla birlikte, uluslararası anlaşmaları ve serbest piyasa ekonomisinin temel mantığını zedeleyen korumacı ve içe kapanma gibi tedbirlerin uzun vadede pek çok ülke için bir kurtuluş reçetesi olacağı inancı yaygınlık kazanmıştır. Bu yaygın inançla birlikte korumacı uygulamalar gündeme gelmiştir. Yani küresel finansal ve ekonomik krizin derinleşmesine paralel olarak krizden büyük zarar gören sektörlerde ve işsizlik oranının yükselmesi ile işçi kesiminde serbest ticaret karşıtı ve korumacılık taraftarı baskılar doğal olarak güç kazanmıştır (TÜRMOB, 2009).

Nitekim Dünya Ticaret Alarmı (GTA) adlı girişimin hazırladığı raporda 2008 yılından beri küçük ve büyük çaplı 192 ayrı korumacılık adımı atıldığı ve bunun başını Çin 'in oluşturduğu belirtilmiştir. Bu uygulamalarla hükümetlerin Dünya Ticaret Örgütü ve çok taraflı ticaret rejimine yönelik taahhütlerden vazgeçtiğini söylemek mümkündür (Rodrik, 2009). Dolayısıyla günümüzde uluslararası ticaretin çoklu ticaret sistemine bağlı bir şekilde yürüdüğünü ileri süren (Chen, 2009) düşünce bağlamında irdelendiğinde, serbest mübadeleye izin verilmemesini, sınır ötesi ticarete engeller konmasını ve yerli üreticinin dış rekabete karşı korunmasını öngören, korumacılık anlayışının (Bhagwati, 2009), tehlikeli bir virüs olduğu çelişkisi görülmektedir (Kalaycı, 2011).

Aslında serbest ticaret ile korumacılık arasındaki mücadelenin geçmişi modern iktisat tarihi kadar, hatta daha da gerilere götürülebilir. Yani serbest ticaret ve korumacılık tartışmaları Merkantilist (16.-17.yüzyıl) ve Fizyokrat (18.yüzyıl) görüşlerin yaygın olduğu dönemlere kadar geriye gider (Adda, 2002). Zaman ilerlese, teknoloji gelişse ve dünya küreselleşme sayesinde küçük bir köye dönüşse de bu tartışma bitmemiş; serbest ticaret-korumacılık çatışması her devirde gündemdeki yerini koruyan, kısmen biçim değiştirse de özü itibariyle varlığını sürdüren bir sorunsala dönüşmüştür (Acar, 2012).

Ancak son yıllarda korumacı politikaların tekrar önem kazanmasına yol açan iki olumsuz gelişmenin etkili olduğu söylenebilir.

1- Uluslararası boyutta serbest ticaretin daha da genişlemesi için harcanan çabaların son yıllarda zayıflamasıdır. 1990'lı yıllara kadar özellikle sanayi ürünleri ticaretinde hem gelişmiş hem de gelişmekte olan ülkelerde serbestliğin tesis edilmesi açısından büyük başarılara imza atan dünya ticaret görüşmeleri, 1994'de anlaşmaya bağlanan Uruguay Turu'nun ardından tıkanma noktasına gelmiştir. 2001'de başlayan Doha Kalkınma Turu görüşmelerinin aradan geçen yedi yıldan uzun süreye rağmen hâlâ başarıyla sonuçlandırılamamış olması, kriz öncesinde dünya ticareti açısından oldukça karamsar bir tablo ortaya çıkarmaktadır.

2- 1990'lardan günümüze devam eden küreselleşme sürecinin sonucu olarak gelir dağılımında büyük bozulmanın gerçekleşmiş olmasıdır. Küreselleşme ile birlikte gelir dağılımındaki bozulmaya rağmen ciddi boyutta sosyal tepkiler doğmamıştır. Sonuçta, pasta büyüdükçe orta ve düşük gelirli ailelerin bu pastadan aldığı pay, zengin ailelerin aldığı paya göre azalmış olsa da, bu ailelerin reel gelirleri zaman içinde yavaş da olsa arttığı için küreselleşmeye olan tepkileri kısıtlı oldu. Ancak, küresel çapta ekonomik bunalım tehlikesinin arttığı günümüzde bu tepkilerin hızla artmış ve sosyal patlamalara yol açmıştır (Yılmaz, 2009).

İşte kriz sonrası uygulanan paketlerin liberal ekonomiye karşı bir seçenek olmayıp orta vadede etkili olması beklenirken, 1929 Büyük Bunalımından ders alınmamış korumacılık ve gümrük duvarlarını yükseltilmiştir. Yani bunalımın uzun sürmesinin en önemli nedenlerinden olduğunu göz ardı eden birçok ülke korumacılığa başvurarak krizin sosyal etkilerini kısa vadede yok etme çabası içine girmiştir. Bu bağlamda piyasa ekonomisinin mucidi konumunda olan bir çok ülkede korumacı bir takım tedbirlerin yeniden gündeme gelmiş olması küreselleşme ve kriz diyalektiğinin yaşanmasına neden olmaktadır. Görüldüğü üzere ticaret savaşlarından hiç kimsenin kazanmadığını ileri süren düşüncelere rağmen (Stiglitz, 2010) korumacılık ticaret savaşlarında bir silah haline dönüşmüştür.

Nitekim krizden kurtulmanın palyatif çözümü olduğu temelinden hareketle dikkati çeken ilk çıkışı, krizden hemen sonra ABD yapmıştır. ABD Şubat ayında Başkan Obama tarafından imzalanan ekonomik destek paketine Senato'daki görüşme aşamasında bazı maddeler eklemiştir. Bu maddelerde, ekonomik destek paketi çerçevesinde yapılacak demir ve çelik alımlarında sadece ABD'de üretilen demir ve çeliğin satın alınması kısıtlaması getirilmiştir. Her ne kadar daha sonra yumuşatılmışsa da bu maddeler Obama tarafından imzalanan ve yürürlüğe giren yasada da yer almıştır. Yani ABD açılan 800 milyarlık destek paketi ile Keynesyen politikaları benimsemiş ve bir anlamda ticaret savaşını başlatmıştır. Korumacılık eğiliminin artışa geçtiğine ilişkin diğer bir belirti, İngiltere'de bir petrol projesinde görev alacak bir İtalyan şirketin sadece İtalyan işçi ve mühendislerini çalıştıracağının ortaya çıkması üzerine bu kararın bazı İngiliz sendikalar tarafından gösteri ve grevlerle protesto edilmiştir. Sendikaların İngiltere'de yabancı işçilerin çalışamayacağı konusunu özellikle

vurgulaması artan korumacılık eğiliminin bir göstergesidir. Son olarak, Fransa Cumhurbaşkanı Nicolas Sarkozy'nin Fransız otomotiv şirketlerine hükümetin vereceği mali destek karşılığında bu şirketlerin başka ülkelerdeki ve özellikle de Orta ve Doğu Avrupa'daki fabrikalarını kapatıp Fransa'ya taşımalarını şart koşması da korumacılık eğiliminin bir başka şekilde kendisini göstermiştir. Bu zihniyetle atılan adımların uzun vadede sadece korumacılıktan ibaret kalmadığı ve AB projesi için de bir tehdit unsuru olduğunu AB ülkelerinde yaşanmakta olan kriz de görmek mümkündür. Bu uygulamalar siyasetçiler ve çıkar çevrelerinde hakim olan korumacılık içgüdüsünün ekonomik sorunlar arttıkça kendisini hangi biçimlerde göstereceğinin örnekleri olarak önem taşımaktadır (Yılmaz, 2009).Kuşkusuz bu örnekler çoğaltılabilir. Gelişmekte olan ve endüstrileşmiş ülkeler, yerli endüstrilerini korumak için farklı taktikler uygulamaktadır. Aşağıda Tablo 1'de görüldüğü üzere gelişmiş ülkeler daha çok sübvansiyonları kullanmakta ve yerli şirketlere finansal destek sağlamaktadır. Buna karşılık gelişmekte olan ülkelerin, hem sübvansiyonların maliyetini karşılayacak güçte bütçeleri ve hem de birçok endüstrileşmiş ülkelerin yaptığı gibi yerli şirketlerin borçlarını karşılayacak fonları bulunmamaktadır. Bu yüzden gelişmekte olan ülkeler tarifeleri artırmak ve diğer mali olmayan koruma önlemlerini hayata geçirmek eğilimindedir (Dadush,2009).

GOÜ'in Uyguladığı Önlemler	Gelişmiş Ülkelerin Uyguladığı Önlemler
İthalat Vergisi %49	Sübvansiyonlar ve Diğer Destek Paketleri%100
Sübvansiyonlar - Diğer destek Paketleri %31	
Tarife Dışı Engeller %11	
İthalat Yasağı %9	

*Tablo1: Gelişmiş ve Gelişmekte Olan Ülkelerin Uyguladığı Önlemler. **Kaynak:** Gamberoni Elisa and Newfarmer Richard (2009)*

Dünyanın ticaret kuralları, zaten ulusların ithalat girdilerinde yaşanan ani bir kesinti yerel firmaları sıkıntıya soktuğunda gümrük vergileri şeklinde tedbirlere başvurmalarına izin verir. Öte yandan WTO'ya yapılan taahhütler nedeniyle gümrük tarifelerini belli bir düzeyin üstüne yükseltmek mümkün olamazken, ülkeler tarife dışı sınırlamalar, ithalat kotaları ve ihracatın çeşitli şekillerde sübvanse edilmesi gibi tedbirlere de başvurulmaktadır. Tarife dışı engeller, tarifelerden farklı olarak kesinlik taşımadığı ve geniş ölçüde idari kararlara bağlı olduğundan zaman içinde büyük değişiklikler gösterebilir. Bu tür engellerle WTO kuralları da ihlal edilebilmekte (Rodrik, 2011) ve ithalat - ihracat üzerinde artan bir risk ve belirsizlik oluşturmaktadır.Öte yandan kriz sonrası gelişmiş ülkelerce uygulanan korumacılık önlemleri çeşitlilik gösterirken gelişmekte olan ülkelerin uygulamaya başladıkları yeni korumacılık önlemlerinin ise daha çok ithalata ve ticarete yönelik korumalardan oluştuğu söylenebilir.

	2007	2008	Değişim 2007/2008
Yeni Antidamping	143	188	31.5%
Gelişmekte Olan Ülkeler	85	188	62.4%
Oran	59.4%	73.4%	
Gelişmiş Ülkeler	58	50	13.8%
Oran	40.6%	26.6%	
Yeni Antidamping Uygulamaları	100	120	20.0%
Gelişmekte Olan Ülkeler	77	66	14.3%
Oran	77.0%	55.0%	
Gelişmiş Ülkeler	23	54	13.8%
Oran	23.0	45.0	

*Tablo2: Gelişmiş ve GOÜ deki Antidamping Soruşturmaları. **Kaynak:** Hufbauer, Gary Clyde and Stephenson Jensen & Sherry (2009)*

Nitekim AB Komisyonu tarafından yapılan araştırmalarda 2008'den bu yana G-20 ülkeleri tarafından uluslararası ticarete karşı getirilen tedbirlerin sayısının 424 olduğu ifade edilmiştir. Bu gelişme, ekonomiyi, uzun sürmesi olası bir daralma riskine sürüklemiştir. 2009 yılının ilk çeyreğinde 111 adet yeni ticaret kısıtlaması ve 2009 yılının ikinci ve üçüncü çeyreğinde de aynı miktarda yeni korumacılık önlemleri uygulanmıştır (Evenett, 2010a). Ayrıca, 2010 yılında dünya ticareti iyileşmeye başlamasına rağmen, 2009 yılından Kasım 2010'a kadar her üç aylık dönemde, 100-120 arası yeni ayrımcı önlemler uygulanmıştır. Kasım 2008"de gerçekleştirilen G–20 zirvesinden, Ocak 2010"a kadar uygulanan önlemlerin toplam sayısı 493 olarak gerçekleşmiştir (Evenett, 2010b).

Öte yandan Avrasya ekonomileri içerisinde de toplam korumacı uygulama sayısı en fazla Kazakistan'da görülürken en az ise Özbekistan ve Azerbaycan da görülmektedir.

Ülke	Uygulanan Korumacı Önlem Sayısı
Kazakistan	96
Kırgızistan	10
Özbekistan	11
Ermenistan	2
Azerbaycan	2

*Tablo 4: Uygulanan Toplam Korumacı Önlem Sayısı. **Kaynak:** Global Trade Alert, 2013.*

Ayrıca Kırgizistan ve Moldovya WTO'nun üyesidir ve Rusya Kazakistan ve Gürcistan'dan daha düşük gümrük tarifesi uygulamaktadır. Özellikle Gürcistan en yüksek tarifeyi un ,şeker ve sigaraya karşı uygulamaktadır. Ayrıca Rusya,Beyaz Rusya ,Kazakistan tarafından uygulanan en yüksek koruma seviyesi morotorlu taşıtlar sektöründe görülmektedir (Cusolito Hollweg, 2013).

Korumacılık önlemlerinde ortaya çıkan hızlı artış, gelişmiş ve gelişmekte olan ülkeler açısından oldukça önemlidir. Çünkü bu önlemler eğer belli bir ölçü dâhilinde alınmamışsa adaletsiz endüstri politikaları olarak nitelendirilmektedir (Spilimbergo vd :2008). Bu bağlamda WTO kurallarını da hiçe saymamak ve gümrük duvarlarının yükseltilmesinin olanaklı olmadığı günümüzde ithal ürünlere karşı en çok başvurulan yöntem tarife dışı engellerden oluşmaktadır (Hufbauer and Stephenson, 2009). Yerli malı kullanımını teşvik edebilmek için 'yerli malı' kampanyalarının düzenlenmesi buna bir örnek olarak gösterilebilir. Global krizle birlikte daha da belirginleşmeye başlayan tarife dışı engeller, ihracatçının karşısına da birçok şekilde çıkmaktadır. Örneğin ABD'de yeni ve oldukça tartışmalı bir yasa olan 12 kasım 2008 de yürürlüğe giren ABD Tüketici Ürünleri Güvenliğini Geliştirme Kanunu (CPSIA) da bu tür düzenlemelerden birisidir (TURKAK, 2012).

Küresel ekonominin giderek artan bir şekilde bütünleşmesi ve artan tüketici talebi nedeniyle ABD'nin tüketici ürünleri ithalatı son 10 yıllık dönemde iki kattan fazla artış göstererek 2007 yılında 639 milyar dolar olarak kaydedilmiştir. Bu rakam ABD içinde satılan tüketici ürünlerinin yaklaşık %44'üne tekabül etmektedir. ABD hükümeti tüketici ürünleri ithalatındaki bu artış karşısında güvenli olmayan ithal ürünlerinin gümrüklerde tespit edilerek girişinin durdurulmasına odaklı olan eski sistem yerine, ithalat işlemlerinin başlangıcından itibaren sürekli izleme yolu ile önlem alınmasına odaklı yeni bir sisteme yönelmiştir. Bu sistem güvenlik açısından risk taşıyan ürünlerin ABD sınırlarına ulaşmadan önlem alınmasını hedeflemektedir. Yasa, özellikle ithal edilen çocuk kıyafetlerindeki kurşun ve kimyasalların miktarına sınırlandırma getirerek bu tür ürünlerin ülkeye girişine vize vermemeyi içermiştir. Bunun yanında yine birçok ülke, anti-damping soruşturmaları ve kurduğu takip sistemleri ile yerli sanayiyi ithal mallara karşı korumaya almıştır (TURKAK, 2012).

Nitekim Tablo 3'de görüldüğü üzere Avrasya ülkelerinden özellikle Rusya ve Ukrayna'nın AB' liğine yönelik antidamping soruşturmalarının yüksekliği dikkati çekmektedir. Buna rağmen Çin Japonya ve AB'inden bölgeye karşı telafi edici uygulama söz konusu değildir (Cusolito and Hollweg, 2013).

Ülke	Çin	Hindistan	Japonya	Kore	Malezya	Avrupa Birliği
Ermenistan	0	0	0	0	0	1
Azerbaycan	0	0	0	0	0	0
Beyaz Rusya	0	0	0	0	0	9

Özbekistan	0	0	0	1	0	2

*Tablo3: Avrasya Ülkelerinde Antidamping Soruşturmaları. **Kaynak:** World Bank's 2012 Global Antidumping Database, Data Available Up to 2011*

Öte yandan ABD dışında da birçok gelişmiş ülke ekonomilerini canlandırma yönünde açıkladıkları paketlerde yerli malı kullanımı şartı getirmiştir. Ülke kaynaklarının ve tasarruflarının ilk önce o ülke vatandaşlarının krizden aldıkları darbenin azaltılması için kullanılması iç politika dinamikleri açısından alınması ve anlatılması kolay bir politika tedbiridir. Kısa vadede olumlu politik etkileri olsa bile uzun vadede korumacılığın refah arttırıcı bir politika olmadığı içinde bulunduğumuz liberal ekonominin ve küreselleşmenin en önemli kurallarından biridir. Eğer sistemsel risklerin önlenmesi için veya bazı kritik önemdeki sektörlerin çöküşünü önlemek için hükümetlerin müdahalesi söz konusu ise bu müdahaleler piyasaların işlerliği ve sürdürülebilirliğini bozmayacak,

aksine destekleyecek şekilde gerçekleşmelidir. Çünkü günümüzde rekor seviyelere ulaşan uluslararası doğrudan yatırımlar ve bunun sonucu olarak gelişen küresel yapı dünya üretimini son derece uluslararası hale getirmiş durumdadır. Bunun sonucu olarak birçok yerli şirket için korumacılık kabul edilemez bir olgu haline gelmiştir. Çünkü ilgili firmaların uluslararası piyasalarda yaptıkları gibi rakipleri de ülke içinde yerel iş gücü ve yerel girdilerle üretim/ihracat yapmaktadır.

Kriz sonrasında korumacılık eğilimi sadece mal piyasasında değil sermaye ve iş gücü piyasalarında da güçlenmiştir. Gelişmekte olan ekonomilere akan fonlar 2007 yılından itibaren hızla geri çekilmeye başlamıştır. Fransa ve İngiltere, sermaye veya kredi desteği almış bankaların bu fonları yurtiçine tahsis etmesi veya ancak ulusal şirketlerin yurtdışı operasyonlarında kullanılmalarını şart koşmuştur. İsviçre ise bazı sermaye rasyolarında yerli şirketlere verilmiş olan kredileri hesaba dahil etmeyip dolaylı faydalar sağlamaya çalışmıştır. Diğer Avrupa ülkelerinde benzer tepkiler görülmüştür. Daha çok yerleşik olmayan (non-resident) çalışanlar işten çıkarılmakta, yeni işe alımlarda yabancı çalışanlar yerine yerleşikler tercih edilmektedir (Hufbauer and Stephenson, 2009). Bu konu TARP (ABD Hükümeti tarafından 2008'de uygulamaya konulan finansal kurumlara yönelik kriz programı - Troubled Asset Relief Program) fonu kullanan bankalar için bir ön şart haline getirilmiştir.

Korumacılık modelleri arasında en tehlikelisi kuşkusuz finansal korumacılıktır. Hükümet yardımlarının ardından daha ulusal bir yaklaşım içine giren pek çok banka, özellikle Newyork, Londra, Frankfurt, Tokyodaki büyük ve önemli bankalar kendi ülkelerine geri dönmüştür. Özellikle bazı bankalar, hükümetleri tarafından kendi ülkelerinde yatırım yapmaya zorlanmıştır. Benzeri olarak Hollanda da Hollandalı işadamlarına ve tüketicilerine kredilerini yükseltmeleri karşılığında Ing Bank mali destek verilerek kurtarılmıştır (Hufbauer and Stephenson,2009). Uluslararası bankaların yabancı ülkelerdeki faaliyetlerini durdurmaları, kredi krizine neden olurken, fon bulmakta zorlanan reel sektörlere yönelik kurtarma planlarının da gündeme gelmesine neden olmuştur. Bu bağlamda finansal korumacılığın yaratacağı sonuçların özellikle AB için siyasi, ekonomik ve yasal açıdan önemli bir test niteliği taşıyacağı söylenirken, bankacılık sektöründe entegrasyonun sağlanamamış olmasının AB'ye büyük zarar vereceğine dikkat edilmelidir. Korumacılık baskılarının AB ve özellikle Euro bölgesi için ciddi bir tehdit olduğu Avrupa Merkez Bankası tarafından da çok kez ifade edilmiştir. Bu noktada şu soru dikkate alınmalıdır: "Gerçekten finansal korumacılık mı yaşıyoruz, yoksa bankalar kredilerini mi sınırlıyorlar?" Avrupa Uluslararası Ekonomi Politikaları Merkezi Başkan yardımcısı Razeen Sally her iki durumunda söz konusu olduğunu belirtmiştir. Sally'e göre bazı bankaların finans krizinden yararlanarak finansal korumacılık yapmaktadır. Finansal korumacılığın yarattığı bir diğer tehdit ise, devlet yardımlarının bankacılık dışındaki sektörlere yönelmesi. İsveç'in otomotiv sektörüne yönelik hazırladığı kurtarma paketi; Fransa'nın otomobil üreticilerine 6 milyar Euro destek sağlaması ve bunun karşılığında istihdam ve üretimlerini dışarı taşımamalarını istemesi; İtalya'nın zarar eden havayolu şirketi Alitalia'yı yabancılara kaptırmaması; İspanyol hükümetinin vatandaşlarını İspanyol malı tüketmeye davet etmesi; İngiltere'nin yabancı işçilerin istihdamına tepki göstermeye başlaması korumacılık uygulamalarından bazılarıdır (EURACTIV, 2012a).

Bu bağlamda finansal korumacılık tehdidinin en fazla yaşandığı bölge ise doğu ve güney Avrupa ülkeleridir. Bu ülkelerde yaşanan en büyük endişe bankaların sermayelerini geri çekebilecek olmalarıdır. Özellikle eski komünist ülkeler bu endişenin en yoğun yaşandığı yerler olarak dikkati çekmektedir. Öyle ki Uluslararası bankalara fonlarını kaçırmamaları için yerel yardımların dahi yapıldığı tespitleri vardır.

Öte yandan küresel finansal krizin ekonomiler üzerinde yarattığı makro ekonomik göstergelerin bozulmasını minimize etmek için ulusal paralarının değerini piyasalarda oluşan değerden farklılaştırmak amacıyla MB'ları kurlara müdahale etmektedir. Serbest piyasa ekonomisi koşullarının geçerliği olduğu küresel finans piyasalarında merkez bankalarının müdahaleleri piyasa mekanizmasının aksamasına haksız kazanç ve karlara yol açmakta olup küresel platformda tartışmalara yol açmaktadır. Bu tartışmaların başlığı Kur Savaşlarıdır. Dolayısıyla kur savaşları küresel ekonomide ülkelerin ihracatta ve yatırımda daha çekici hale gelmek için para birimlerini diğer güçlü kurlar karşısında düşük seviyede tutmaya yönelik aldıkları politika kararlarıyla başlamıştır. Aslında durgunluktan kurtulmak için, ticareti artırmanın ve/veya dünya ticaret içinde payını yükseltmenin yolu değersizleşmiş kurla beraber ülkelerin gelir düzeylerindeki ve/veya istihdamdaki artışla olası olduğudur.

Küresel finansal krizin ülke ekonomileri üzerinde yarattığı sarsıcı ve yıkıcı etkinin olumsuzluklarını elimine etmek için çözümü dış ticaret (dış talep) gören dünya ekonomileri ticaretteki pazarın paylaşımında pay almanın en kolay yolunun ulusal paranın diğer paralar karşısındaki değer kaybıyla olabileceği düşüncesindedir. Ve bu durumda büyük döviz rezervlerine sahip ülke ekonomileri bu avantajlarını sonuna kadar kullanacaktır(Çin'in yaptığı gibi). Kur savaşları korumacı önlemlerin, küresel ticaret hacminde yeni daralma dalgalarının öncüsü niteliğindedir. Getiriler hızla azalırken risklerin büyümesi, riskten kaçınma dalgalarının daha uzun süreli olmasını engellemenin zorlaşması bu süreci hızlandırmaktadır.

3 Korumacılığın Olası Sonuçları ve Korumacılığa İlişkin Alınan Önlemler

Küresel resesyon durumunda, bütün hükümetlerce, "komşunu fakirleştir" ticaret politikasını aynı anda uygulanma riski söz konusudur. GATT gibi uluslararası kuruluşların buna izin vermemesine rağmen, bir ülkede korumacılık önlemlerinin artması, diğer ülkelerin misilleme yapmasına yol açmaktadır. Bu durumda kriz

döneminde korumacılığın derinleşmesi ve uygulanan önlemlerin süresi uzamasına bağlı olarak, küresel refahın azalması ve ekonomik durumun daha da kötüleşmesi söz konusudur. Baldwin"in çalışmasına göre finansal krizin yaşandığı 2008"in ilk yarısında, WTO üyelerince yapılan anti-damping uygulamalarında %40 artış görülmüştür (Baldwin, 2008). Dolayısıyla bu rakam, küresel resesyon koşullarında ortaya çıkan ortak hareketin bir göstergesi olarak da kabul edilebilir (WTO, 2009:34).

Bu bağlamda artan korumacılık eğilimine karşı dünyanın çeşitli ülkelerinden oldukça önemli tepkiler de yükselmektedir. 2008'de patlak veren küresel krizden sonra yapılan G-20 toplantılarında üye ülkeler, resesyonun 1930'lardakine benzer bir depresyona dönüşmemesi için uluslararası ticaretin önündeki engellerin kaldırılması gerektiği görüşünü dillendirdiler. Bu görüşte içgüdüsel şekilde gündeme gelen korumacılık söylemlerine karşı tepkilerin ortaya çıkmasının ardında 1929 Büyük Buhranı deneyimi yatmaktadır. 1930'larda ABD'de başlayan ve dilimize 'komşunun canı çıksın' şeklinde çevirebileceğimiz 'beggar thy neighbor' deyimiyle özetlenen korumacı politikalar daha sonra Avrupa ülkelerine de sıçramış ve Büyük Buhran'ın daha da derinleşmesine neden olmuştur. Krizle mücadelenin ülkeler arası dayanışma yerine her ülkenin kendi duvarları arkasına çekilerek yapılması, önce bir ekonomik yıkıma sonra da savaşa yol açmıştır (Yılmaz, 2009).

İşte gerek 1929 krizi deneyimi, gerekse AB'nin komşuluk politikasıyla hedeflenen ekonomik entegrasyonunun dahi, kriz yüzünden tehlikeye girmesi dünya ekonomisinin deglobalizasyon' denilen yeni bir döneme doğru ilerlediğini göstermiş bu nedenle korumacılığa karşı AB 'nde de seslerin yükselmesine yol açmıştır Bu gelişmeler üzerine Avrupa Komisyonu Başkanı Jose Manuel Barroso ise 2008 yılının son AB zirvesinin ardından, küresel ekonomik krize yönelik "Ya birlikte yüzeceğiz ya birlikte batacağız" yorumunu yapmış ve yaşanan krizin korumacılık politikasının yeniden ortaya çıkmasına mazeret olmaması gerektiğini belirtmiştir (EURACTIV, 2012b).

Benzeri olarak OECD, Mart 2000'da hazırladığı raporunda (OECD, 2009) korumacılığın, küresel krizi daha da kötüleştireceği konusunda uyarılarda bulunmuştur. Rapor, altı gelişmekte olan ülkeyi analiz etmiş ve pazarlarını dünya ticaretine açtıktan sonra ekonomilerinin nasıl canlandığını göstermiştir. OECD, ticaret korumacılığının, mevcut ekonomik krizden kurtulmanın tek yolu olmadığını vurgulamıştır. Rapora göre, korumacı önlemlere karşı koymak siyasi olarak doğru olmasa da, dünyayı yaşadığı finansal sıkıntılardan kurtarmak için ekonomik olarak doğrudur (OECD,2009).

Küresel kriz sonrasında ortaya çıkan ulusalcı yaklaşımlar ve korumacılık önlemleri 2009 yılında Davos'ta gerçekleşen Dünya Ekonomik Forumu'nun da gündem maddelerinden birini oluşturmuştur. Liderler korumacılığın tehlikelerini gündeme getirseler de, uygulamalar şu an için bu yönde ilerlememekte her hükümet öncelikle kendi ekonomisini, kendi şirketlerini ve kendi işçilerini korumayı tercih etmektedir.

Nitekim 14 Haziran 2012'de yayımlanan korumacılık raporunda ,Kasım 2008'den bu yana alınan korumacı önlemlerin (gerek kamusal gerekse özel sektör kaynaklı) , çok büyük bir bölümünden bizzat G20 ülkeleri sorumlu olduğu tespiti yapılmıştır. Bu nedenle, G20 ülkelerinin, korumacılığın geriletilmesi için (G20 dışındaki WTO üyelerinin atacağı adımları kesinlikle beklemeden) acilen ortak kararlar alması gerektiği açıkça ortadadır.

Bu bağlamda 18-19 Haziran 2012'de Los Cabos'da yapılan Liderler Zirvesi'nde, önceki yıllarda oluşturulan genel gündem kataloğundan Meksika'nın tercih önceliklerine göre oluşturulan gündeme göre, iktisadi büyümeyi teşvik için finansal sistemin güçlendirilmesi ve finansal erişimin teşvikine ilişkin uluslararası taahhütler ortaya konulmuştur.

Tüm bu taahhütlere rağmen özellikle 15 Kasım 2008 'de Washington'da yapılan G-20 zirvesinde liderler, en az 12 ay boyunca korumacı önlemlerden kaçınma sözü verirken, gümrük tarifelerini indirecek ve küresel ekonomiye en az 100 milyar dolarlık katkı yapacak olan Dünya Ticaret Anlaşması'nı da tamamlama vaadinde bulunulmasına rağmen verilen bu sözler tutulmamıştır. Hindistan, bu zirveden yalnızca 3 gün sonra kendi çiftçilerini korumak amacıyla soya fasulyesi yağı ithalatında uygulanan vergiyi yüzde 20 artırmıştır. Küresel ekonominin korumacılık ve ticaretin kısıtlanması ile kısır döngüye sürüklenmesi konusunda özellikle Çin ve ABD'nin belirleyici olacağı çok açıktır.

4 Sonuç

1980'lerden sonra başat bir söylem haline gelen küreselleşme ile birlikte uluslararası alanda serbest ticaret artmıştır. Ancak küresel finans krizi küreselleşmeyi yavaşlatmış gelinen noktada, son 25-30 yıla damgasını vuran küresel düzenin bozulmasında etkin olmuştur. Bazı gelişmiş ülkelerin başını çektiği ve serbest piyasa ekonomisinin mantığına uymayan "korumacı" eğilimler küresel süreci aşındırmaktadır. Bu politikanın daha ne kadar devam edeceğini ve ne kadar etkili olacağını bugünden kestirmek güçtür. Ancak ekonomik durgunluk derinleştikçe korumacılık çağrılarının daha da yoğunlaşacağını şimdiden görmemiz gerekmektedir. Bu tür eğilimlerin yaygınlaşması küreselleşme sürecinde bir U dönüşüne yol açmasa dahi bir kırılma noktası yaratma potansiyeline sahiptir. Kuşkusuz yaşanan sorunların altında yatan en önemli neden, ilgili ülkelerdeki ekonomik zaafiyet ve bunlara kalıcı ve etkili bir çıkış yolunun bulunamamasıdır. Dolayısıyla korumacı girişimlerin derinliğini ve etkisini bu ülkelerdeki ekonomik gelişmeler belirleyecektir. Korumacılığa karşı en etken silah ülkelerin tek tek sektörlere seçilmiş destek vermesi yerine (yani seçilmiş bazı sektörlere mikro destek değil),

genel iç talebi artıracak yaygın makroekonomik destek paketleri uygulamayı seçmeleridir. Ancak gelişen ülkelerin çoğunun makroekonomik desteği vermeleri (kamu harcamasını artıracağı için) oldukça zor olmaktadır. Bu ülkelerde, ekonomik göstergelerin daha da kötüleşmesi ve bunun etkilerinin ekonomik aktörler tarafından iyice hissedilmeye başlanmasıyla birlikte, uluslararası anlaşmaları ve serbest piyasa ekonomisinin temel mantığını sakatlayan başka, yeni bir takım tartışmalı adımlar da gündeme gelebilecektir. Kuşkusuz bu tür tedbirler, kısa vadede gündelik sorunların çözümüne katkı sağlayabilir, ancak uzun dönemde dünya gerçeklerine uygun bir piyasa oluşturmaktan başka çare görünmemektedir. Bu da, gelişmiş ülkelerin belli oranda refahtan vazgeçmesi anlamına gelmektedir. Dolayısıyla korumacı girişimlerinin derinliğini ve etkisini bu ülkelerdeki ekonomik gelişmeler belirleyecektir.

Görüldüğü üzere kriz gelişmekte olan ülkeleri, gelişmiş ülkelere göre daha fazla etkilemesine rağmen korumacı tedbirlere başvurarak ticaret savaşını ilk başlatan ülkeler daha çok gelişmiş ülkelerdir. Oysaki bu ülkeler oluşturdukları kapitalizmin kalesi niteliğindeki kuruluşların politikaları aracılığıyla kriz zamanları dışında gelişmekte olan ülkeler üzerinde korumacı politikalara gitmemeleri yönünde baskı yapmış ve kendilerine yeni pazarlar açmıştır. Kriz koşullarında ise en önde kendileri korumacı politikalara başvurarak gelişmekte olan ülkelerin sanayilerinin mal satma imkânlarını sınırlamaktadır. Bu durum gelişmekte olan ülke sanayilerinin krizle birlikte batmasına ve işsizlik sorununun daha büyük boyutlara ulaşmasına yol açmaktadır. Tüm bunlar göstermektedir ki gelişmekte olan ülkeler kriz koşullarını dahi kendi faydalarına çevirebilme imkânı bulmaktadır. Yani korumacılık politikaları gerçekte gelişmiş ülkeleri korumaktadır.

Avrupa Komşuluk Politikası'nın Ülkeler Üzerindeki Ekonomik Etkileri

Economic Effects of European Neighborhood Policy on Countries

Ph.D. Candidate Esra Ballı (Çukurova University, Turkey)

Gülçin Güreşçi Pehlivan (Dokuz Eylül University, Turkey

Abstract

After the fifth enlargement of European Union in 2004 and with the expansion of European Unions borders and new neighbors, it became one of the important policies to provide security, stability and prosperity, and develop relationship between neighborhood countries. Although, enlargement process provide some opportunities to the member states of European Union, it brings about some difficulties. The differences at the life standards, environment, public health, prevention and combating organized crime between European Union and neighbor countries caused to create new policies. European Neighborhood Policy was launched in 2004, and consists of 16 countries, namely: Israel, Jordan, Moldova, Morocco, The Palestinian Authority, Tunisia, Ukraine, Armenia, Azerbaijan, Egypt, Georgia, Lebanon, Algeria, Syria, Libya and Belarus. European Union and the partner country sign the Partnership and Cooperation Agreements or Association Agreements, and then the Agreement Action Plans are mutually adapted. Action Plans include privileged relationship, mutual commitment to common values, democracy and human rights, legal and market economy principles, good governance, sustainable development, energy and transportation policies. Within the framework of European Neighborhood Policy, the main aim is to arrange the relationship between the neighbors of European Union. In this study, economic effects of the European Neighborhood Policy will be examined for the relevant countries.

1 Giriş

AB'nin 2004 yılında Litvanya, Slovenya, Macaristan, Çek Cumhuriyeti, Polonya, Estonya, Letonya, Malta ve Kıbrıs'ın katılımıyla gerçekleşen son genişleme dalgası değişik fırsat ve tehditler içeren bir coğrafya ile karşılaşması, Birliği farklı politika arayışlarına itmiştir.. Soğuk Savaş sonrasında AB'nin doğusunda meydana gelen gelişmeler ve özellikle bölge ülkeleri arasında artan iktisadi ve ticari faaliyetler, AB açısından memnuniyet verici olmuştur ancak son genişleme dalgasıyla birlikte yeni negatif etkiler ortaya çıkmaya başlamıştır. Primatarova'ya göre AB ülkeleri ve AB ülkeleri dışında kalan diğer ülkeler arasında yeni bir 'Demir Perde'nin oluşma ihtimali, yakın gelecekte karşılaşılması muhtemel sorunlardan biri olacaktır. 2004 yılında Hollanda'da Dışişleri Bakanı görevini yürüten Bernard Bot, bu durumu şöyle açıklamaktadır: "AB genişlemesi ile oluşan yeni sınırlar ile birlikte sınırın dışında kalan halkların dışlanmışlık hissi ve sınırın dışında kalan insanların gelişmiş yaşam standartlarından uzak olmaları nedeniyle AB'ye yasal olmayan yollardan girmeye çalışmaları sebebiyle oluşacak sınır güvenliği ve göçmen kontrolleri yeni bir Demir Perde yaratmamalıdır. Bunun yanında yeni metaforlar da oluşmuştur: 'Avrupa Kalesi', 'Schengen Duvarı', 'Avrupa ile Büyük Duvar' v.b." (Aktaran Primatorava, 2005). Christopher Hill'e göre genişlemenin AB dış politikasında neden olduğu en önemli sonuç, sınırların ulaştığı boyuttur. AB Komisyonu genişlemeyle beraber sınırın her iki yakasında oluşacak olan farklılıkların nasıl bir problem oluşturacağını sorgulamaya başlamıştır. (Aktaran Sönmez, 2010).Bu söz konusu fırsat ve zorluklara yönelik projeler geliştirilmiş ve bunlar üzerinde çalışmalar yapılmıştır. Yapılan çalışmalar sonucunda Avrupa Komisyonu'nun dış ilişkilerden sorumlu üyesi Benita Ferrero-Waldner 2004'te başlayan Avrupa Komşuluk Politikası (AKP-European Neighbourhood Policy) ile ilgili yaptıkları çalışmaları 3 Nisan 2004'te açıklamıştır. Ardından 12 Mayıs 2004 tarihinde ise Komşuluk Politikasının temel belgesi niteliğinde olan "Avrupa Komşuluk Politikası Strateji Belgesi" yayımlamıştır. Avrupa Komşuluk Politikası 16 Avrupa komşu ülkesinde siyasi ve ekonomik reformları desteklemektedir.

AB'nin Komşuluk Politikası, AB'nin aday ülke statüsünde olmayan yakın komşuları olan İsrail, Ürdün, Moldavya, Fas, Tunus, Filistin, Ukrayna, Ermenistan, Azerbaycan, Mısır, Gürcistan, Lübnan, Cezayir, Suriye, Libya ve Belarus olmak üzere toplam on altı ülkeyi kapsamaktadır. Söz konusu ülkeler ile Ortaklık Antlaşmaları imzalanmakta, daha sonra da bu antlaşma çerçevesinde Eylem Planları hazırlanmaktadır. Eylem Planları'nın temel unsurları ise ortak değerlere bağlılık, daha etkili siyasi diyalog, ekonomik ve sosyal kalkınma politikası, ticaret ve iç pazar, enerji ve ulaşımdır.Eylem Planları çerçevesinde ortak değerlere bağlılık ile demokrasi, hukukun üstünlüğü, insan haklarına ve temel özgürlüklere saygı gibi ortak değerler kastedilmekte ve bu konulardaki ülkelerin bağlılık seviyeleri göz önünde bulundurulmaktadır. Ortak Güvenlik Politikası ile de bağlantılı olarak, daha etkili siyasi diyalogun yaratılması hususu da Eylem Planlarına eklenmiştir. Bu çerçevede, dış politika ve güvenlik konuları kapsamında, özellikle bölgesel ve uluslararası krizlerin önlenmesi, kriz yönetimi ve ortak güvenlik tehditleri gibi konularda anlaşmalar öngörülmektedir. Bir diğer unsur olan ekonomik ve sosyal kalkınma politikası ile ticaret ilişkilerinin yanı sıra, mali ve teknik yardımların arttırılmasını içeren ekonomik hususlar yer almaktadır. Bu süreçte elde edilen ekonomik faydalar ise doğrudan ve dolaylı faydalar

olmak üzere ikiye ayrılmaktadır. Tarifelerin ve tarife dışı engellerin kaldırılması ve piyasa bütünleşmesi sağlanması gibi hususlar doğrudan faydalar kapsamına girmektedir. Ekonomik uygulamaların AB'nin ortak politikalarına yaklaştırılması suretiyle bu ülkelerdeki yatırım ortamının iyileştirilmesi ve özel sektörün gelişimi açısından daha saydam ve istikrarlı bir ortam oluşturulması gibi komşu ülkelere daha fazla ekonomik katkı sağlayacak hususlar ise dolaylı faydalar kapsamındadır. Ticaret ve iç pazar konusundaki politikalar, ticaretin serbestleşmesini ve bölgesel bütünleşmeyi sağlayacak çeşitli araçları içermektedir. Bu bağlamda, Dünya Ticaret Örgütüne üyelik Avrupa Komşuluk Politikası kapsamındaki öncelikler arasında yer almaktadır. Enerji temininin güvenliği konusunda komşu ülkelerle ortaklık hayati bir önem taşımaktadır. Zengin petrol ve doğalgaz kaynaklarıyla (Rusya, Hazar Havzası, Orta Doğu ve Kuzey Afrika) çevrelenmiş olan AB, dünyanın en büyük enerji ithalatçısı ve ikinci büyük enerji tüketicisi konumunda bulunmaktadır. Bu nedenle, Eylem Planları enerji konusunda işbirliği ve diyalogu arttırmak üzere somut adımlar içermektedir. Ayrıca, AB ve komşu ülkeler arasındaki ticaret ve turizm faaliyetlerinin artması için daha etkili ve istikrarlı ulaşım sistemlerinin kurulması gerekmektedir.

2 Üyelik Perspektifi Olmayan Avrupa Komşuluk Politikası

AB'nin, neden AKP'ye ihtiyaç duyduğunun sorgulanması son derece önemlidir. Casas-Cortes, vd, (2012)'e göre AKP ile Avrupa'nın çevresinde AB'ye üyelik perspektifi içermeyen fakat komşu ülkelerle ekonomik uyum ve göçmen kontrolü sağlamaya yönelik iki amaç bulunmaktadır. AKP ile ekonomik açıdan refah ve yasal göç akımlarının düzene konulması amaçlanılmaktadır. AKP, AB sınırlarında barışın ve istikrarın sağlaması amacıyla dizayn edilmiştir. AB bu ülkelere AKP çerçevesinde anlaşma yapılan ülkelere karşı bir taraftan 'Avrupa Kalesi' davranışı sergilerken diğer taraftan yasa dışı göçle, uluslararası suçlarla ve insan kaçakçılığıyla mücadele edebilmek için çözüm yolları üretmeye çalışmıştır. Birlik, AB'ye aday ülkelere AB'nin iç pazarına katılma gibi ekonomik kazançlar sağlama sözü vererek ülkelerin ekonomik ve politik sistemlerini AB üyesi ülkelere göre düzenlemelerini sağlayabilmektedir. Böylece aday ülkeler ileride gerçekleşebilecek tam üyelik nedeniyle, kendi ülkeleri içinde gerekli reformları gerçekleştirmektedirler. Bu noktada göze çarpan ise geçmiş dönemlerde güdülen genişleme politikasının bu sefer gerçekleştirilemeyeceğiydi. Geçmişte, komşulara sunulan tam üyelik şansı bu sefer bulunmamaktadır. Ayrıca söz konusu komşuların gerekli reformları gerçekleştirebilmeleri için ihtiyaç duydukları motivasyon da mevcut değildi. Daha önce bu motivasyon tam üyelik şansı aracılığıyla sağlanmaktaydı (Comelli, 2005).

AKP, dış politik bir araç olarak kullanılarak güvenliğin, AB çevresine yayılmasını amaçlamaktadır. Daha geniş Avrupa, AB dış politikasının önemli bir açılımı haline gelmiştir. Kısacası AKP, AB'nin güvenlik alanındaki rolünü, genişlemenin ötesine taşımak için önemli bir adımdır. Söz konusu politika, çevre ile iyi komşuluk ilişkileri oluşturacak ve genişlemenin tamamlayıcısı olmasının yanı sıra genişleme seçeneğinin yerine de kullanılacaktır. AKP ekonomi ve güvenlik araçlarını kullanan ve iyi yönetime, hukukun üstünlüğünü çevrede geliştirmeyi amaçlayan bir dış politika sistemi olacaktır. Argümanları, genişlemeyle aynı olmakla beraber daima genişlemenin bir adım gerisinde olacaktır. (Arıkbuka, 2006).

AKP, Kuzey Afrika, Akdeniz, Güney Kafkasya ve Doğu Avrupa ülkelerine finansal ve teknik yardımların yanı sıra Ortak Pazara giriş imkânı sunarken bunun karşılığında bu ülkelerin AB'ne üye ülkelerin ekonomik ve politik yapılarına yapacakları reformlarla benzemelerini istemektedir. Bu özellikleri ile AKP, 1995 yılında oluşturulan Barselona Süreci'nin daha ilerisine gitmektedir. Barselona Süreci, Akdeniz ülkelerine üyelik perspektifi vermeden; teknik yardım, ekonomik ve siyasi reformlarda destekte bulunulması konularını kapsamaktadır. Bu kapsamda 2006 yılı sonunda 9 milyar euro tutarında harcama yapmasına rağmen geri dönüşüm çok az olmuştur. Ayrıca o bölgede ekonomik durgunluk oluşmuş ve politik reformlar gerçekleşmemiştir. Toplumsal trendlerde de radikal İslama doğru kayışlar endişe verici boyutlara ulaşmıştır. Bu sonuçlara benzer şekilde AKP, eğer Doğu Avrupa'daki ve Güney Kafkasya'daki ülkelere hemen hemen Barselona Süreci'nin Güney Akdeniz ülkelerine sunduğu aynı imkanları sunarsa aynı şekilde olumlu olmayan sonuçların alınması tehlikesi ile karşı karşıya olunacaktır (Cottrell, 2005). Bu nedenle AKP oluşturulurken geçmiş deneyimler ve uluslararası mevcut ilişkiler iyi değerlendirilmelidir. Bunun yanısıra AKP dahilindeki ülkelere uzak gelecekte olsa bile üyelik perspektifinin sunulmaması nedeniyle ülkelerin komşuluk politikası ile yetinip yetinmeyeceği de ayrı bir sorundur. Bu bağlamda, Ukrayna gibi bir gün AB'ye tam üyeliği amaçlayan ülkelerin komşuluk politikasını benimsememeleri ve gerekli önemi vermemeleri de söz konusu olabilecektir. Pardo (2004)'e göre AKP çerçevesinde farklı ülkelere aynı fırsatların sunulup ve her birinden aynı davranışın beklenmesi anlamlı değildir. AKP'de ülkeler arasındaki farklılıklara vurgu yapacak farklı politikalar güdülmelidir. AKP'nin ana amaçlarına ulaşabilmesi için koşullarda ve gerekli zaman hususunda gerekli düzenlemeler yapılmalıdır Tüm bu unsurlar sağlandıktan sonra ancak AKP'nin başarılı olması beklenebilir.

Avrupa Birliği'nin Ortadoğu ve Kuzey Afrika ülkeleri üzerine dış politika yapımı ile ilgili çalışmalara bakıldığına sıklıkla söz edilen durum AB'nin bu bölgelerde demokrasinin geliştirilmesi yönünde karşılaşmış olduğu başarısızlık ön plana çıkmaktadır. AB'nin bu hususta başarısızlığı farklı bilim adamları tarafından AB'nin kurumsal eksikliği veya AB'nin politikaları gereğince kendi realist ihtiyaçları ve çıkarları doğrultusuna hareket ettiği şeklinde açıklanmaktadır. Bunula birlikte, AB'nin demokrasinin yüceltilmesi konusunda isteğinin

sahici olduğunu ve bu bölge ülkelerdeki rejimler tarafından bu durumun başarısızlığa uğradığı savı dile getirilmektedir. Lübnan'a bakıldığı zaman diğer Arap ülkelerindeki aynı otoriter kurumlara ve karakterlere sahip olmamasının yanı sıra ilke olarak Lübnan yönetiminin de daha yenilikçi olduğu göz önüne alındığında AB'nin stratejisini geliştirmede daha başarılı olması beklenmektedir (Seeberg, 2009). AB – Lübnan Eylem Planı'nda Lübnan'da demokrasinin gelişmesi yönünde AB'nin isteği bulunmakta olmasına rağmen bu başarının elde edilememesinin Seeberg'e göre temel iki nedeni bulunmaktadır. Bunlardan birincisi, Lübnan siyasi elitinin 1989 yılında imzalanmış olan Taif Anlaşması'nın uygulanması konusunda yaşamış olduğu sıkıntılar, ikinci olarak da Lübnan siyasi elitinin sahip olduğu bir taraftan o dönemin Başbakanı Fouad Siniora diğer taraftan muhalefetteki Hizbullah nedeniyle 'iki başlılık' sorunudur.

AKP ile ilgili yapılan başlıca çalışmaların aşağıdaki sonuçlara ulaştıkları görülmektedir: Freyburg, vd, (2011)'nin AKP çerçevesinde yer alan Ürdün, Moldova, Fas ve Ukrayna'nın demokratik yönetim için AB ile olan fonksiyonel sektörel ortaklık koşullarını rekabet, çevre ve göçmen politikası açısından inceledikleri çalışmada, siyasi liberalizasyon, üyelik isteği ve coğrafik olarak ülkelerin konumunun demokratik yönetimi açıklamadığını, demokratik yönetim kurallarının düzenlenmesi, fonksiyonel işbirliğinin kurumsallaşması gibi sektörel şartlar demokratik yönetimi desteklediğini göstermişlerdir. Browning ve Christou (2010)'nin Ukrayna ve Belarus'un AKP üzerinden AB ile olan ilişkileri incelediği çalışmada AKP'nin etkililiğinin AKP çerçevesinde olan ülkenin konumu ve o ülkenin kendileri nerede konumlandırdığı ve bunun yanında o ülkelerin amaçlarına ulaşmak için uygulayacakları stratejiler olmak üzere iki faktöre bağlı olduğunu ileri sürmektedir. Gavrich vd (2010) AKP-Ukrayna eylem planının etkiliğini ölçmek amacıyla yapmış oldukları çalışmada AKP'nin üç boyutu olan demokrasiyi yüceltme, ekonomik işbirliği, adalet ve içişleri ele alınmıştır. Bu çerçevede bağımsız değişken olarak bu üç değişkenin bağlı olduğu AB'nin taleplerinin içeriği ve açıklığı, teşvik ve ödül, direkt finansal destek, bağlantının düzeyi ve formu ve yerel düzeyde talep ve ödüllere karşı algı ve bağımlı değişken olarak Avrupalaştırılmış Komşuluk (Neighbourhood Europeanization) kullanılmıştır. Yeni kurumsalcılık yaklaşımın rasyonel seçim ve inşacı bakışı altında yapılan uygulama sonucunda AB ve Ukrayna arasındaki işbirliğinin önceliklerinde, özellikle enerji işbirliği ve yukardan aşağıya demokratikleşme konusunda çok önemli uyumsuzluklar olduğu görülmüştür. En iyi ödül üyelikten sonra vizesiz rejim olarak kapsamlı Serbest Ticaret Bölgesi'nin önünde yer almaktadırlar. Yerel algı açısından ise aşağıdan yukarıya demokratikleşme ve ekonomik işbirliği ön plana çıkmaktadır. Analize göre, Ukrayna'da üyelik perspektifinin olmaması sebebiyle oluşan düş kırıklığına rağmen, üyelik sorunu çözülene kadar daha derin entegrasyon için motive edecek unsur bulunmaktadır.

3 AKP'nin Komşu Ülkelerin Ekonomileri Üzerindeki Etkileri

AKP kapsamındaki ülkelerdeki bazı ekonomik ve sosyal göstergelerin incelenmesi bize bu ülkeler ve AKP sonrası meydana gelen değişiklikler hakkında bilgi vermesi açısından önem arz etmektedir. İnsani Gelişme Endeksi (İGE) ülkelerin gelişmişlik düzeyleri hakkında bilgi vermesi açısından önemlidir. İGE'nin üç temel bileşeni vardır. Bunlar sağlık, eğitim ve hayat standartlarıdır. Bir ülkenin yalnızca kişi başına düşen gelir düzeyine bakılarak o ülkenin gelişmiş bir ülke olduğunu söylemek doğru değildir. Bu değerlendirmeyi yapabilmek için eğitim ve sağlık gibi bazı göstergelere de ihtiyaç duyulmaktadır. Çünkü bir ülke, kişi başına düşen gelir düzeyi açısından ilk sıralarda yer alabilir; ancak, diğer faktörler de hesaplamaya dahil edildiğinde aslında o ülkenin insani gelişme düzeyinin düşük olduğu görülebilir. Aşağıdaki tabloda AKP kapsamındaki ülkelerin AB ile bu bağlamdaki ilişkilerinin başladığı 2005 yılı ve de verilerin elde edilebildiği en yeni tarih olan 2012 yılı İGE verileri görülmektedir.

Ülke	2005 İGE	2012 İGE
Azerbaycan	-	0.734
Beyaz Rusya	0.730	0.793
Fas	0.558	0.591
Filistin	-	0.670
Gürcistan	0.713	0.745
İsrail	0.885	0.900
Libya	0.746	0.769
Lübnan	0.714	0.745
Mısır	0.625	0.662
Moldavya	0.636	0.660
Suriye	0.618	0.648
Tunus	0.679	0.712
Ukrayna	0.718	0.74
Ürdün	0.684	0.700

Tablo 1: İnsani Gelişme İndeksi (Kaynak: Uluslar arası Para Fonu, Dünya Ekonomik Gelişme Veritabanı)

Bu ülkeler içinde en yüksek İGE'ye sahip olan ülkeler sırasıyla İsrail, Beyaz Rusya ve Libya'dır. En düşük İGE'ye sahip ülkeler ise sırasıyla Fas, Suriye ve Mısır'dır. 2005 yılında dünya ortalaması 0.666 iken 2012 yılında 0.694'tür. AKP kapsamındaki ülkelerin beşinin İGE'si ise hem 2005 yılında hem de 2012 yılında dünya ortalamasının gerisinde kalmıştır. Ancak Tablo 1'deki tüm ülkelerde AKP'nin başladığı 2005 yılından sonra İGE'lerde gözlenen artış, bu ülkelerde hayat standartları anlamında AKP'nin olumlu etkiler doğurduğunu göstermesi açından önem taşımaktadır.

AKP kapsamında komşu ülkelerle ekonomik ilişkilerin geliştirilmesi amacına yönelik olarak bu ülkelerde doğrudan yabancı yatırımların AKP öncesi ve sonrası durumlarına bakılması önem taşımaktadır. Uluslararası Para Fonu, Dünya Ekonomik Gelişmişlik Veritabanı verilerine göre AKP kapsamındaki ülkelerde doğrudan yabancı yatırımları 2005 yılından 2012 yılına kadar olan süreçte en çok artan ülkeler sırasıyla Beyaz Rusya, Ermenistan, İsrail, Suriye, Gürcistan, Cezayir ve Libya olmuşken, bazı ülkelerde ise önemli düşüşler görülmüştür. Bu ülkeler ise sırasıyla Mısır, Lübnan, Azerbaycan, Ürdün, Tunus, Moldavya ve Ukrayna'dır. Bu veriler sadece AB ülkelerinden bu ülkelere olan doğrudan yabancı yatırım miktarını göstermemekle beraber, yine de bu ülkelerin AKP kapsamında AB ile olan ilişkilerinin geliştirilmesinin olumlu etkileri sonucu doğrudan yabancı yatırımlarında önemli artışların gerçekleştiği bilinmektedir. Düşüş yaşanan ülkelerde ise güvenlik problemleri, siyasi istikrarsızlıklar ve 2008 dünya ekonomik krizinin olumsuz etkileri söz konusu olmuştur.

AKP'nin komşu ülkeler üzerindeki ekonomik etkilerini görebilmek için komşu ülkelerin AB ülkelerine olan ihracatının 2005 yılından 2010 yılına kadar olan dönemdeki büyüme oranlarını hesaplamak faydalı olacaktır. Aşağıdaki tabloda Uluslararası Para Fonu, Dünya Ekonomik Gelişmişlik Veritabanı verilerine göre bu dönemdeki ilgili ülkelerin AB ülkelerine olan ihracatlarının büyüme oranları hesaplanmıştır.

Ülke	İhracat Büyüme Oranı
Cezayir	2.080716518
Mısır	106.466228
Fas	20.10252168
Tunus	34.14234454
İsrail	34.0852276
Ürdün	32.32776491
Lübnan	238.8326941
Filistin	-19.83388418
Suriye	21.95895109
Beyaz Rusya	95.95487821
Moldavya	57.83297965
Ukrayna	57.79475826
Ermenistan	109.8084066
Azerbaycan	47.00674163
Gürcistan	92.03661419

Tablo 2: İhracat Büyüme Oranları

Ülke	İthalat Büyüme Oranı
Cezayir	70.87406099
Mısır	222.5853683
Fas	47.79027168
Tunus	38.52757546
İsrail	53.5648437
Ürdün	16.15452153
Lübnan	60.9249749
Filistin	36.44942963
Suriye	261.8616063
Beyaz Rusya	95.95487821
Moldavya	57.83297965
Ukrayna	57.79475826
Ermenistan	109.8084066
Azerbaycan	47.00674163
Gürcistan	92.03661419

Tablo 3: İthalat Büyüme Oranları

Tablo 2'deki ihracat büyüme oranlarına bakıldığında AKP kapsamındaki ülkelerin Komşuluk Politikasının başladığı 2005 yılından sonraki dönemde AB ülkelerine olan ihracatlarında önemli ölçüde artış gözlemlenmiştir.

Bu ülkelerden sadece Filistin'in AB ülkelerine ihracatında yüzde 19'luk bir düşüş söz konusudur. Bu veriler AKP'nin komşu ülkelerin ekonomileri üzerindeki olumlu etkilerini göstermesi açısından çok önemlidir. 2005 yılı sonrası komşu ülkelerin AB ülkelerine ihracatı artış göstermiştir. Bu artış AB ülkeleri ile ticari ilişkileri geliştirmesi açısından önemli etkiler doğurmuştur. Aşağıdaki tabloda ise komşu ülkelerin AB ülkelerine olan ithalat büyüme oranları görülmektedir.

Tablo 2 ve 3 karşılaştırıldığında sadece Ürdün ve Lübnan'da ithalat artışının ihracat artışından daha yüksek olduğu görülmektedir. Bu durum tüm komşu ülkelerin AB ülkelerinden ithalatının arttığını ancak bu artışın Ürdün ve Lübnan'da ihracat artışının gerisinde kaldığını göstermektedir. Buna göre bu iki ülkenin AB ülkeleri ile dış ticareti pozitif etki doğurmakta, yani ülkelerine giren yabancı para miktarını arttırmaktadır. Bu iki tablodan da görüldüğü gibi AKP'nin etkisiyle AB ülkeleri ve komşu ülkeler arasındaki dış ticaret önemli ölçüde artmıştır.

AKP Ortak Ülke	Sözleşme İlişkisinin başladığı tarih	AKP Ülke Raporu	AKP Eylem Planı	AB Tarafından Benimsenmesi	Ortak Ülke Tarafından Benimsenmesi
Azerbaycan	Ortaklık ve İşbirliği Anlaşması-1999	Mart 2005	2006 Sonbahar	13.11.2006	14.11.2006

Tablo 4: Avrupa Komşuluk Politikası Eylem Planlarında Mevcut Durum

4 Sonuç

AB'nin genişleyen sınırları çerçevesinde komşularla ilişkileri geliştirebilmek amacıyla oluşturmuş olduğu Komşuluk Politikası yeni bir dış politika aracı olarak karşımıza çıkmaktadır. Genişlemeyle birlikte sınırların iki yakasında kalan ülkeler arasındaki hayat standartları arasındaki farklılıklar, ekonomik açıdan geri kalmışlık, demokrasi, insan haklarının gelişimi gibi faktörlerdeki eşitsizlikler, yasal olmayan yollarla göç, insan kaçakçılığı, organize suçlar olarak AB içerisinde problem yaratabilmektedir.

AKP'nin başarı şansı AB'ye üye olan ülkelerin siyasi durumu ile Komşuluk politikasına dahil olan ülkelerin yapısal, ekonomik ve sosyal faktörlere bağlıdır. Farklı rejimlere sahip ülkelerde Komşuluk Politikası farklı algılanmakta ve AB'nin tehdit algısı ile komşuluk ilişkileri içerisinde bulunan ülkenin tehdit algısı farklı

olabilmektedir. Bu durumda Avrupa Komşuluk Politikası çerçevesinde ülkelerle yürütülen politikaların ülke gerçeklerini yansıtan, ülke ihtiyaçlarına cevap verebilen, iki taraflı bir plan etrafında hazırlanması Komşuluk Politikası'nın başarıya ulaşabilmesi açısından önem arz etmektedir.

AKP'ye getirilen eleştirilerin başında AB'ye tam üyelik perspektifi olmadan Komşuluk Politikası anlaşmaları yapılan ülkelerin gerekli reformları gerçekleştirme hususunda yeterli motivasyona sahip olmayacakları yönündedir. Doğu Avrupa genişlemesinde o ülkelerde reformların gerçekleştirilmesinde AB'ye tam üyelik perspektifi itici güç olmuştur. Bunun yanı sıra AKP dahilindeki ülkelerin diğer ülkelerle aynı koşullar altında komşuluk politikasına tabi olmak istememesi sorunu da önemli bir problem olmaktadır. Bazı ülkelerin ilerde tam üyelik beklentileri olduğu gibi diğer ülkelerin böyle bir talebi olmayabilmektedir.

AKP'nin komşu ülkelerin ekonomileri üzerindeki etkilerine bakıldığında önemli sonuçlar görülmüştür. Önemli bir gelişmişlik göstergesi olan İGE verilerine göre komşu ülkelerde antlaşmaların yürürlüğe girdiği 2005 yılından 2012 yılına kadar olan süreçte bu ülkelerin İGE'lerinin yükseldiği görülmektedir. Bu da gerek kişi başına düşen gelir gerekse de eğitim ve sağlık alanlarında bu ülkelerde iyi yönde gelişmelerin yaşandığını göstermektedir. Aynı şekilde bu dönemde komşu ülkelerin bir çoğunda doğrudan yabancı yatırımlar artmış; AB ülkeleri ile olan ihracat ve ithalat düzeyleri yüksek oranlarda gerçekleşmiştir. Bu da göstermektedir ki AKP, komşu ülkeler ile AB ülkelerinin ekonomik ilişkilerini geliştirmekte ve bu ülkeleri hem ekonomik alanda hem de yaşam kalitesi bağlamında daha yüksek bir seviyeye gitmektedir.

Türkiye ve Avrasya Ekonomik Topluluğu Ülkelerinin Lojistik Performans İndekslerinin Karşılaştırılması ve Bazı Çıkarımlar

A Comparison and some Suggestions for Turkey's and Eurasian Economic Community Countries' Logistic Performance Index Scores

Asst. Prof. Dr. Çiğdem Sofyalıoğlu (Celal Bayar University, Turkey)

Asst. Prof. Dr. Burak Kartal (Celal Bayar University, Turkey)

Abstract

Turkey is a bridge between Asia and Europe and this fact provides an opportunity for Turkey, whose exports mostly go to Europe, to diversify its export markets. In this geography, cooperation and integration are needed to sustain and to flourish economic activities. In that sense, Eurasian Economic Community (EurAsEc) is one of the most important economic integrations in the world considering the initiatives of becoming a Customs Union. EurAsEc includes five member and three observer countries while some other Eurasian countries are expected to join this community in the years to come due to its potential advantages. The members of are positive towards a cooperation with Turkey which has a strategic role in many important transport corridors within the Western Europe-Asia transit transport framework. Anyway, the development of international trade depends on logistic performance, logistic infrastructure and effectiveness of logistic sectors of the countries in this region. Therefore, Turkey and EurAsEc countries need to cooperate in overcoming logistics problems to develop international trade. Bearing that in mind, we compared logistic performance indexes of Turkey and EurAsEc countries in our study and we discussed what can be done to improve logistic activities in the region within the framework of mutual cooperation. The findings indicate that a better logistics infrastructure should be available throughout the EurAsEC countries and it is essential to adopt transit pass by EurAsEc countries and to improve the information technology infrastructure to accelerate customs transition.

1 Giriş

Türkiye'nin 2012 yılı dış ilişkiler gündeminde Avrupa Birliği'ndeki ekonomik sarsıntılar önemli bir paya sahip olmuştur. Türkiye'nin en büyük ekonomik ortağı AB ülkelerinin uzun süredir borç sorunları yaşaması, bu ülkelerdeki dış talebin azalıp, Türkiye'nin bölgeye yaptığı ihracatın da düşmesine neden olmuştur. Bu durum, geçmişte uyguladığı yanlış ihracat politikalarının (ihracatta coğrafi ve sektörel çarpıklıklar) farkında olan Türkiye'yi, (Bilgin, 2005) farklı pazarlara ağırlık verip ihracat pazarlarını çeşitlendirmeye zorlamıştır.

Nitekim 2008 yılında ekonomik krizin baş göstermesiyle birlikte ihracatında daralma yaşayan Türkiye, 2012 yılı itibarıyla ihracatını rekor bir seviyeye getirerek 150 milyar doların üzerine taşımış; bununla birlikte toplam ihracatında AB'nin payı % 46,2′den % 38,8′e gerilemiştir (Küresel Stratejik Araştırma ve Takip Portalı ,2013). Bu durumda söz konusu ülkelerde azalan pazar payının yeni ihraç pazarlarına kaydığını söylemek mümkündür. Bu bağlamda 2002 yılında ihracatımızdaki payı % 10 olan Ortadoğu'nun 2011 yılındaki payı % 21, 2012 yılındaki payı ise % 17.8 olarak gerçekleşmiştir. En önemli ticari ortağımız olan AB ülkelerinde etkisinin halen devam ettiği ekonomik krizin yanında Ortadoğu'da yaşanan siyasi karışıklıklar ve istikrarlı bir seyir izlemeyen petrol fiyatları dünya ekonomisinde belirsizlikleri de beraberinde getirmektedir. Ortaya çıkan bu istikrarsız sürecin Türkiye ihracatına olumsuz bir etkide bulunması muhtemeldir.

Bunun yanında Türkiye, Asya ve Avrupa'yı birbirine bağlayan bir köprü görevi görmekte ve iki farklı kıtayı birleştirerek önemli bir avantaja sahip bulunmaktadır. Bu avantaj, bir yandan Türkiye üzerinden gelişmiş batılı ekonomilere ulaşılabilmesini sağlarken, diğer taraftan eski Sovyet coğrafyasına erişilebilmesini ve bu sayede Türkiye'nin dış pazarını çeşitlendirmesine fırsat vermektedir. (Resmi Gazete, 2013). Sovyetler Birliği döneminde merkezi planlama ile yürütülen ekonomik faaliyetlerin, dağılma sonrasında ortaya çıkan bağımsız devletlerde, yüksek enflasyon ve siyasi/ekonomik istikrarsızlık nedeniyle imkansız hale gelmesi etkin bir iktisadi işbirliği ihtiyacını doğurmuş ve bu dönemde çeşitli ekonomik işbirliği entegrasyonları ortaya çıkmıştır. 10 Ekim 2000 yılında kurulan Avrasya Ekonomik Topluluğu (*AvET*) en önemli entegrasyon girişimlerinden biridir. Rusya Federasyonu, Beyaz Rusya, Kazakistan, Kırgızistan ve Tacikistan Avrasya Ekonomik Topluluğunun üye, Moldova, Ukrayna ve Ermenistan ise gözlemci statüsündeki ülkeleridir. 2006 yılında Rusya ve Kazakistan öncülüğünde kurulmuş olan Avrasya Kalkınma Bankası ve 1 Ocak 2010 yılından itibaren Rusya Federasyonu, Beyaz Rusya ve Kazakistan arasında yürürlüğe giren Gümrük Birliği anlaşmaları da Merkez Asya ülkeleri arasında ekonomik işbirliğinin sağlanmasında, üye ve gözlemci ülkelere ihtiyaç duydukları desteğin verilmesinde önemli bir girişim olmuştur (Öngel, 2010). Gümrük Birliği üçüncü ülkeler ile yapılan ticareti de kapsamaya başlamıştır. Dünya ekonomisi ve uluslararası ticaret sistemine entegrasyonu kolaylaştırmayı amaçlayan bu işbirliğinin diğer hedefleri; ortak döviz politikası belirlemek, ortak ulaştırma ve altyapı sistemi

kurmak, mal ve hizmet ticaretine yönelik ortak politikalar belirlemek, yabancı sermaye yatırımları için eşit şartlar sağlamak, üye ülkelerin hukuk sistemleri arasında işbirliğini geliştirmek, eğitim ve sağlık hizmetleri açısından topluluk içinde standardizasyon sağlamak, üye ülkelerin üretim seviyelerini birbirine yakınlaştırmak ve ortak enerji piyasası kurmak şeklinde sıralanabilir (Şanlı, 2010)

Ekonomik entegrasyonlara dahil olmanın dış ticaret ilişkilerini geliştireceği yadsınamaz bir gerçektir. Jeopolitik ve jeostratejik önemi nedeniyle Kazakistan ve Rusya devlet başkanları yaptığı açıklamalarda Avrasya Birliği projesine Türkiye'nin de dahil olmasını istediklerini belirtmişler, bunun gerçekleşmesi durumunda çok büyük bir güce ulaşacaklarının altını çizmişlerdir. Bunda Türkiye'nin Batı Avrupa-Asya transit ulaşım çerçevesinde birçok önemli ulaştırma koridorunun içinde yer almasının önemli bir payı bulunmaktadır. Son yıllarda uluslararası ticaret çerçevesinde Asya Kıtası'nın öneminin artması nedeniyle Avrupa ile Asya arasındaki ulaşım koridorlarının, özellikle demiryolu koridorlarının, kritik bir rol oynayacağı düşünülmektedir. Türkiye'nin bu gelişmelerin içerisinde yer alması kaçınılmazdır (Çekerol ve Kurnaz, 2011).

Türkiye'de bugün Batı yanlısı bir görüş hakim olmakla birlikte, Avrupa ülkelerinin ekonomik krizde olmalarına karşılık Avrasya ülkelerinin gelişmekte olduğu gerçeği birlikte Türkiye Avrasya'ya yönelmeye başlamıştır (Deutche Welle, 2013). Gümrük Birliği anlaşması imzaladığı AB ile bütünleşme sürecinin devam ettiği bir dönemde, Türkiye'yi dışarıda bırakan bir Avrasya Ekonomik Birliğinin kurulması, bölgede Türk ihracatçısının rekabet gücünü zayıflatacak ve bu durum ihracatın Avrupa pazarlarına sıkışması anlamına gelecektir. Bu yapıda, Avrasya girişiminin Avrupa'nın alternatifi değil, tamamlayıcısı olduğu unutulmamalı; bu süreçte başta Rusya, Ukrayna, Kazakistan ve Beyaz Rusya olmak üzere diğer ülkelerle de bölgesel işbirliklerinin arttırılması gerekmektedir (Bilgin, 2005).

Bu yaklaşıma paralel olarak çalışmamızda Türkiye'nin dış ticaret pazarlarını farklılaştırması açısından diğer işbirliği entegrasyonları arasında daha iyi bir işlerliğe sahip olduğu düşünülen Avrasya Ekonomik Topluluğu ele alınmıştır.

Tablo 1'de 2012 yılı itibari ile Türkiye'nin *AvET* üye ve gözlemci statüsünde yer alan ülkeleri ile gerçekleştirdiği dış ticaret rakamlarına yer verilmiştir.

Ülke Adı	İhracat (milyon $)	Ülke Adı	İthalat (milyon $)
Rusya Federasyonu	6681	Rusya Federasyonu	26625
Kazakistan	1069	Kazakistan	2056
Kırgızistan	257	Kırgızistan	45
Tacikistan	235	Tacikistan	345
Beyaz Rusya	264	Beyaz Rusya	190
Ukrayna	1829	Ukrayna	4394
Moldovya	225	Moldovya	135
Ermenistan	0	Ermenistan	0
Genel Toplam	**10560**	**Genel Toplam**	**33790**
Türkiye toplam ihracatı	**152478**	**Türkiye toplam ithalatı**	**236545**

Tablo 1. 2012 Yılı İtibarıyla Türkiye'nin AvET Üye ve Gözlemci Statüsündeki Ülkelerle Gerçekleştirdiği Dış Ticaret Rakamları. *Kaynak:* Türkiye İhracatçılar Meclisi, 2013.

Tablo 1'de görüldüğü gibi Türkiye'nin bölge ülkeleri ile 2012 yılındaki ticaret hacmi 44,35 milyar $ civarındadır. Ancak bu rakamın sadece 10,560 milyar $'lık kısmı bölge ülkelerine ihracat, 33,790 milyar $'lık kısmı ise bölge ülkelerinden ithalat şeklinde gerçekleşmiştir. Bölge ülkelerinden en önemli ithalat kalemleri ise petrol ve doğalgaz ve diğer doğal kaynaklar olmuştur. Topluluk içinde dış ticaret hacmi nispeten yüksek olan ülkeler sırasıyla Rusya Federasyonu, Kazakistan ve Ukrayna'dır. T.C Ekonomi Bakanlığı bünyesindeki çalışmalar sonrasında 2012-2013 dönemi için belirlenen 17 hedef ülkenin içinde Rusya, Kazakistan ve Ukrayna'nın da bulunması tesadüf değildir. 2023 Türkiye İhracat Stratejisi ve Eylem Planında Türkiye'nin uzun dönemli vizyonu "Orta ve yüksek teknolojili ürünlerde Avrasya'nın üretim üssü olmak", genel amacı ise "Türk sanayisinin rekabet edebilirliğinin ve verimliliğinin yükseltilerek, dünya ihracatından daha fazla pay alan, ağırlıklı olarak yüksek katma değerli ve ileri teknolojili ürünlerin üretildiği, nitelikli işgücüne sahip ve aynı zamanda çevreye ve topluma duyarlı bir sanayi yapısına dönüşümünü hızlandırmak" olarak belirlenmiştir. (TC Ekonomi Bakanlığı, 2013). Tüm bu gelişmeler paralelinde Türkiye'nin uzun dönem hedeflerine ulaşmak üzere ihracat pazarlarını farklılaştırmasında Avrasya Ekonomik Topluluğu'nun önemi yadsınamaz.

2　Türkiye'nin Lojistik Performans Endeksinin Değerlendirilmesi

İhracat pazarlarının farklılaştırılmasında Avrasya ülkeleri yükselen bir pazar olması nedeniyle sadece Türkiye'nin değil, diğer tüm Batı ülkelerinin de dikkatini çekmektedir. Batı ekonomisinin başta enerji olmak üzere yeni kaynaklara ulaşabilmesinde ve başka potansiyel pazarlar bulabilmesinde Avrasya bir cazibe merkezi haline gelmiştir (Yazıcı, 2003). Ancak Avrasya bölgesinin lojistik yapısı incelendiğinde, açık denizlere kıyısının olmaması ve ulaştırma alt yapısı sorunları bölgenin entegrasyonu açısından olumsuz bir etki yaratmaktadır (Şanlı, 2010). Hammadde ve malzemelerin tedariğinden ürün/hizmetin teslimatına kadar geçen süreçte katlanılan maliyetler ve süreler firmaların dış pazarlarda rekabet gücünü etkileyen önemli faktörler arasında sayılabilir. Firmaların lojistik performansları ve dış ticaret işlemlerinde katlandıkları maliyetler kuşkusuz ülkenin lojistik alt yapısına ve lojistik sektörünün etkinliğine bağlıdır (Ulu ve Aracı, 2012). Dolayısıyla karşılıklı dış ticaretimizin gelişebilmesi, sadece Türkiye'nin değil söz konusu Avrasya ülkelerinin de lojistik alanda karşılaşılan sorunların üstesinden gelebilmek için gerekli iyileştirmeleri yapabilmelerine bağlıdır.

Rekabetçi bir çevrede lojistik kalitesi firmaların hangi ülkelerde konumlanacağı, hangi tedarikçilerden satın alacağı ve hangi pazarlara gireceği ile ilgili kararlarda önemli bir etkiye sahiptir. Yüksek lojistik maliyetleri ve düşük lojistik hizmet düzeyi ticaret, doğrudan yabancı yatırımlar ve dolayısıyla ekonomik büyüme önünde bir engel teşkil etmektedir. Bu nedenlerden dolayı lojistik performansın iyileştirilmesi önemli bir kalkınma politikası hedefi haline gelmiştir. Dünya bankası ülkelerin ticaret yeteneği ve rekabet gücünü arttırmada lojistik reform programları geliştirmesine yardımcı olmak amacıyla lojistik performans indeksini (LPI) geliştirmiştir (Arvis vd., 2008). Bu endeks sayesinde ülkeler uluslararası lojistik faaliyetleri açısından kendilerini diğer ülkelerle karşılaştırma imkânı bulmakta, önlerindeki fırsat ve engelleri görmektedirler. Endeks bu açıdan 155 kadar ülkeye performanslarını geliştirmek için hangi temel alanlara yönelmeleri gerektiği hususunda da bir takım işaretler vermektedir (Çevik ve Gülcan, 2011). Lojistik Performans İndeksi (LPI) ilk olarak 2007 yılında, sonra sırasıyla 2010 ve 2012 yıllarında yayınlanmıştır.

LPI, ülkelerin özellikle öne çıkan aşağıdaki altı performans boyutu açısından değerlendirilmeleri ve bunların istatistiksel olarak birleştirilmeleri ile elde edilmektedir:

Gümrüklerin ve diğer sınır işlemlerinin etkinliği

Ticaret ve ulaştırma altyapısının lojistik açıdan kalitesi

Uluslararası sevkiyatların düzenlenmesinin kolaylığı ve maliyeti

Lojistik hizmetlerin kalitesi ve lojistik yetkinlik

Sevkiyatların takibi ve izlenebilmesi

Sevkiyatların alıcıya zamanında ulaşması

Tablo 2'de Türkiye'nin her üç yıl boyunca almış olduğu genel LPI ve alt bileşenlerine ait puanları ve dünya ülkeleri arasındaki sıralaması yer almaktadır. Endeks genel değerlendirmesinde Türkiye, 2007 yılında 34. sırada yer almış, 2010 yılında 39. sıraya gerilemiş ve en son 2012 yılı endeksinde ise gözlemlenen olumlu yönde değişiklik ile sıralamada 27. sıraya yükselmiştir. Bu gelişmede LPI alt bileşenlerindeki performans gelişmelerinin etkisi olduğu söylenebilir. Bu iyileşmeyle birlikte Lojistik performans indeksinin alt bileşenlerinde sürekli iyileştirme çabaları kuşkusuz önümüzdeki yıllarda Türkiye'yi endeks sıralamasında daha da üst sıralara taşıyacaktır. Bu kapsamda aşağıdaki bölümde Türkiye'nin her bir alt bileşende mevcut durumu, sorunları incelenecek ve çözüm önerileri getirilmeye çalışılacaktır.

TÜRKİYE		2007		2010		2012	
		Sıralama	Puan	Sıralama	Puan	Sıralama	Puan
	Lojistik Performans Endeksi (LPI)	34	3,15	39	3,22	27	3,51
LPI ALT BİLEŞENLERİ	Gümrük	33	3,00	46	2,82	32	3,16
	Alt yapı	39	2,94	39	3,08	25	3,62
	Uluslararası Sevkiyatlar	42	3,07	44	3,15	30	3,38
	Lojistik Hizmetlerin Kalitesi ve Lojistik Yetkinlik	30	3,29	37	3,23	26	3,52
	Sevkiyatların Takibi ve İzlenebilmesi	34	3,27	56	3,09	29	3,54
	Sevkiyatların Alıcıya Zamanında Ulaşması	52	3,38	31	3,94	27	3,87

Tablo 2. Türkiye'nin 2007, 2010 ve 2012 Yılları İtibarıyla Genel LPI ve Alt Bileşenlerine Ait Puan ve Sıralamaları. ***Kaynak:*** World Bank, 2013.

Tablo 2 incelendiğinde **Gümrük işlemlerinin etkinliği** açısından her ne kadar Türkiye önceki yıllara göre önemli bir gelişme kat etmiş olsa da, ele alınması gereken en önemli kriterin gümrük işlemlerinin hızı ve etkinliği olduğu görülmektedir. Bu alanda yaşanan sorunları gümrük işlemlerinin yapıldığı alanlardaki fiziki alt yapı yetersizliği ve gümrük BELGE otomasyon sisteminde zaman zaman yaşanan teknik alt yapı arızalarına bağlı sorunlar nedeniyle iş akışının yavaşlaması olarak saymak mümkündür. Ayrıca gümrüklerin ihracat ve ithalat işlemlerinde son nokta olarak yer alması, tüm mevzuatları uygulayıcı kurum olması, ilgili diğer kurumların yaptığı işlemler ve bu kurumlarla ilgili yasal yükümlülüklerin takibinin de gümrüklerde yapılması nedeniyle tüm sorunların gümrüklerden kaynaklandığı algısı artmaktadır (Koban, 2013).

Gümrük işlemlerinin hız ve etkinliğini arttırmak amacıyla Gümrük ve Ticaret Bakanlığının bazı yeni uygulamaları söz konusudur. Bunlar "yetkilendirilmiş yükümlü statüsü", "ihracatta yerinde gümrükleme" ve "izinli gönderici" uygulamalarıdır.

"**Yetkilendirilmiş yükümlü**"; kurallara uyan, kayıtları düzenli ve izlenebilir olan, kendi öz denetimini yapabilen, mali yeterliliğe ve yeterli güvenlik standartlarına sahip firmalar ile gümrük idaresi arasında stratejik bir işbirliği girişimidir. Yetkilendirilmiş yükümlü statüsünü alan firma güvenilir olduğunu ispatlamıştır. "Yerinde Gümrükleme" ve "İzinli Gönderici" haklarından sadece yetkilendirilmiş yükümlüler faydalanırlar. Uygulama ile güvenilir firmaların malları gümrüğe gelmeyecek ve gümrüklerde sadece güvenilir olup olmadığı tam olarak bilinmeyen firmaların malları incelenecektir. "Yerinde gümrükleme" ile güvenilir firmalar gümrük işlemlerini yapmak için gümrüğe gitmeyecek, kendi tesislerini gümrükleme mekanı olarak kullanabilecektir (Uluslararası Taşımacılık ve Lojistik Hizmet Üretenler Derneği, 2013). "İzinli Gönderici"; güvenilir olduğu onaylanmış taşıyıcı firmaların işlemlerinin kolaylaştırıldığı ve ihraç edilecek ürünlerin gerekli kontrollerinin taşıyıcı firmalar tarafından yapıldığı bir uygulamadır. "izinli gönderici" haklarından sadece "yetkilendirilmiş yükümlü" belgesine sahip ve uygulamaya ilişkin ilgili ek koşul veya koşulları sağlayan kurumlar yararlanabilmektedir. İzinli gönderici, eşyanın transit işlemlerini kendi tesislerinde basitleştirilmiş usuller çerçevesinde yapmak suretiyle, eşyayı hareket gümrük idaresine sunmaksızın doğrudan çıkış gümrük idaresine sevk etme yetkisine sahip olacaktır.

Ayrıca Türkiye 1 Aralık 2012 itibarıyla "Ortak Transit Sözleşmesi"ne de taraf olmuştur. Ortak Transit Sisteminin amacı bir AB üyesi ülkede açılan transit beyannamesinin, verilen teminatın ve tanınan basitleştirmelerin AB'ye üye olmayan ancak Ortak Transit Rejimine taraf olan bir ülkede de geçerli olması ve bu ülkeye girişte ayrıca bir transit beyanında bulunulmasına gerek kalmadan ortak transit işleminin kesintisiz bir şekilde tamamlanmasıdır. Aynı durum bir EFTA ülkesinde başlatılan her ortak transit işlemi için de söz konusudur. Ortak transit uygulamasıyla, gerek Türk gümrük idarelerinde gerek AB gümrük geçişlerinde daha az bürokrasi ile zamandan tasarruf sağlanacaktır (İktisadi Kalkınma Vakfı, 2013).

Tablo 2'de Lojistik Performans Endeksi'nin iyileştirilmesi gereken diğer bir kriterinin de uluslararası sevkiyatların kolaylığı ve maliyeti olduğu görülmektedir. Türkiye uluslararası sevkiyatların düzenlenmesiyle ilgili olarak 2012 yılında performansını iyileştirerek 3,38 puanla 30. sıraya yükselmiştir. Dış ticaretinin önemli bir kısmının karayolu üzerinden yapılması nedeniyle, bu alanda zaman zaman meydana gelen tıkanmalar Türkiye'nin dış ticaretini olumsuz yönde etkileyebilmektedir. Türkiye'nin yurt dışı taşımalarda yer alan belli başlı güzergahları Avrupa ve Kuzeye yönelik güzergahlar (Batı kapıları), Doğuya yönelik güzergahlar (Doğu kapıları) ve Güneye yönelik güzergahlar olmak üzere üç grup altında toplanmaktadır. Söz konusu güzergahlarda gerçekleşen taşımalarda taşıyıcıların karşılaştıkları başlıca sorunlar vize sorunları, geçiş belgesi sorunları, geçilen ülkenin gümrük ve yerel mevzuatıyla ilgili sorunlar olarak sıralanabilir. Türkiye uluslararası planda taşımacılığı kolaylaştıran 16 önemli konvansiyondan sadece yedisine taraftır. Bu alanda diğer dokuz anlaşmaya da taraf olunması taşımacılara önemli kolaylıklar getirecektir (Keçeci, 2006).

Türkiye lojistik hizmet kalitesi ve yeterlilik alt bileşeninde de performansını geliştirerek 3,52 puanla 26. sıraya yükselmiştir (Tablo 2). Günümüz küresel ve bölgesel pazarlarında varlık gösterebilmek için düşük üretim maliyetleri ile mal ve hizmet kalitesi firmalar açısından bir zorunluluk haline gelmiş, teslim hızı ve teslim güvenirliği rekabette ayırt edici bir özellik olmuştur. Firmaların lojistik hizmet kalitesini geliştirebilmesi ülkenin lojistik ve bilgi teknolojisi alt yapısı ile sektörde kalifiye elemanların varlığına bağlıdır. Dolayısıyla bilgi işlem teknolojisi kullanımının yaygınlaştırılması, lojistik eğitim niteliğinin arttırılması, lojistik meslek standartlarının oluşturulması, meslek içi eğitimin teşvik edilmesi, sektörde güven ortamı sağlamak için kurumsallaşma ve profesyonelleşmenin sağlanması, lojisik şirketlerin akreditasyonu, lojistik çalışanların sertifikasyonu, yeşil ve tersine lojistik faaliyetlerinin yaygınlaştırılması çalışmalarına odaklanmalı ve destek verilmelidir (Müstakil sanayici ve İşadamları Derneği, 2013). Türk lojistik sektörüne son yıllarda giren yabancı firmaların sayısının artması hem sektörde sunulan lojistik hizmetlerinin kalitesini, hem de sektörde yer alan diğer firmalarla kalite temelindeki rekabeti arttırmaya başlamıştır. Lojistik firmalarının hizmet kalitelerini iyileştirmesi için belirli bir ürün lojistiğinde uzmanlaşması, seçtiği ürün bazında hizmet çeşitliliğini geliştirmesi, insan kaynağına, eğitime ve bilgi teknolojilerine önem vermesi, kurumsallaşması ve profesyonel yönetime geçmesi, kalite yönetim standartlarına sahip olması, fırsat ve tehditleri iyi izlemesi gerekir (İhracat, Ticaret ve Ekonomi Sitesi, 2013).

Tablo 2'de Türkiye'nin sevkiyatların takibi ve izlenebilirliği kriterinde 2012 yılında ise 29. sıraya yerleştiği görülmektedir (3,54/5 puan). Bu performans artışında bilişim alt yapısındaki iyileştirmelerin önemli payı

bulunmaktadır. Günümüzün giderek karmaşıklaşan lojistik ve tedarik zinciri sistemleri **"sevkiyatların sürekli olarak izlenmesi ve yönetilmesini"** gerektirmektedir. Son yıllarda meydana gelen teknolojik gelişmeler şirketlerin mallarını tüm yaşam döngüleri boyunca izleyebilmesini ve tedarik zincirlerini yönetebilmelerini sağlamaktadır. Otomatik tanımlama teknolojileri (akıllı taşıma sistemleri, ITS teknolojileri) lojistik zincirinde malzeme akışının izlenmesinde yaygın olarak kullanılmaktadır (Shamsuzzoha vd., 2013). Bu sistemler işletmelerin giderek artan mobil operasyonlarını daha iyi yönetmelerine olanak sağlamaktadır. Takip ve izleme sistemleri birçok işletme için en yaygın kullanılan bilişim teknolojisine dayalı iş uygulamalarından birisi olmuştur. Bu sistemler maliyet düşürücü, müşteri memnuniyetini sağlayan katma değerli uygulama alanları yaratmaktadır (Pagani, 2005). Takip ve izleme sistemlerinin avantajlarını aşağıda olduğu gibi sıralamak mümkündür (Ünlü, 2007).

Haberleşme giderlerinin azalması,

Rekabet avantajının artması,

Etkin filo yönetimi,

Araçların hızlarının, rotalarının anlık olarak takip edilebilmesi,

Müşterilerin bilgilendirilmesiyle müşteri memnuniyetinde artış sağlanması,

Araçlardaki yüklerin takibi ve yeni yüklerin sipariş anında en yakınındaki araçlara yönlendirilmesiyle esneklik sağlanması,

Güvenliğin arttırılabilmesi,

Ürünlerin talep edilen noktalara varış sürelerinin belirlenebilmesi

Sevkiyatların takibi ve izlenebilme performansının daha da iyileştirilebilmesi için internet altyapısı sürekli geliştirilmeli, e-devlet, e-belge uygulamaları (e-vergi, e-tescil, e-sözleşme, e-imza, e-beyanname vd.) ve e-ticaret uygulamaları yaygınlaştırılmalı, lojistik bilişim ve iletişim standartları oluşturulmalı, BT yatırımları Tedarik Zinciri Yönetimi kapsamında gerçekleştirilmeli, araç, yük, taşıma kabı ve doküman izlenebilirliği (uydu haberleşmesi, akıllı ulaştırma sistemleri vd.) artırılmalı ve son olarak lojistik merkezler arasında iletişim, planlama, koordinasyon ve izlenebilirliğin sağlanmasına yönelik bir yapılanma gerçekleştirilmelidir (Tanyaş, 2010)

Türkiye'nin "**ticaret ve taşımacılık ile bağlantılı alt yapı kalitesinde**" ciddi bir artış olduğu ve bu konuda dünya ülkeleri arasında 25. sıraya yükseldiği (3,62/5 puan) görülmektedir. Ancak yine de lojistikle ilgili alt yapısında ivedilikle çözülmesi gereken sorunlar bulunmaktadır. Türkiye'de demiryolu ve denizyolu işletmelerindeki alt yapı eksikliği karayolu taşımacılığına daha da yük binmesine neden olmuştur. Bu durumun önüne geçmek üzere ulaşım sektörünün demir, deniz ve karayolları arasında daha dengeli bir biçimde dağılması konusunda çözüm arayışları üzerinde durulmaktadır. Bu kapsamda yük taşımacılığında karayolu taşımacılığı ile işbirliği halinde demiryolu ve denizyolu taşımacılığının daha da yaygınlaştırılmasının yanı sıra, birden fazla modu içeren kombine yük taşımacılığının da özendirilmeye başlaması dikkat çekicidir Keçeci, 2006 ; Kutlu ve Amil Gür, 2008; Kaya 2008).

Türkiye'nin puanını yükselten ve iyileşen bir diğer kriter de, **"zamanında teslim"** olup, üç dönemde de yükselme görülmüş, 2012 yılında ise 3,87 puanla 27. sıraya yerleşmiştir. Zamanında teslim performansının iyileştirilmesi diğer kriterlerin performansıyla yakından ilişkilidir. Dolayısıyla bu kriterlerin iyileştirilmesi uluslararası lojistikte zamanında teslim kriterini daha da geliştirecektir.

3 Türkiye İle Avrasya Ekonomik Topluluğu Ülkelerinin Lojistik Performans Endekslerinin Karşılaştırılması

Daha önce de değindiğimiz gibi genel olarak Avrasya bölgesinde özelde ise *AvET* ülkeleri ile dış ticaretin geliştirilmesi, her iki tarafında lojistik alt yapısıyla ilgili sorunları çözme çabalarına ve bu yönde karşılıklı işbirliğine bağlıdır. Tek yönlü çabalar sorunun çözümüne yeterli katkı sağlamayacaktır. Bu kapsamda Türkiye'nin ve *AvET* ülkelerinin Dünya bankası tarafından geliştirilen lojistik performans endekslerini karşılaştırmak yararlı olacaktır.

Türkiye ve diğer *AvET* üye ve gözlemci ülkelerinin 2012 lojistik performans indeksleri ve bu indeksin hesaplanmasında dikkate alınan kriterlerdeki performans ve sıralamaları Tablo 3'de yer almaktadır. Tablo 3 incelendiğinde Türkiye 'nin 2012 yılı itibarıyla LPI sıralamasında 155 ülke arasında 27. sırada yer aldığı (3,51/5,00 puanla), *AvET* ülkeleri arasında da gerek LPI gerekse LPI kriterleri bakımından açık ara ilk sırada yer aldığı görülmektedir. *AvET* üye ve gözlemci statüsündeki ülkelere bakıldığında ise hiçbir ülkenin üst üçte birlik dilime giremediği, Ermenistan, Kırgızistan, Moldova ve Tacikistan'ın ise en alt üçte birlik dilimde yer aldığı söylenebilir. Bu dört ülke ekonomilerinin iyi gelişmemiş olması bölge içi ticaretin düşük olmasının temel nedeni olarak görülebilir (Primpayev ve Ganiyev, 2010). Bunun dışında kara ve demiryollarının etkin ve iyi durumda olmaması, gümrük prosedürlerinin çok zaman alması, gümrük kontrol ve ülke içi mal kontrollerinin uyumlu yürütülmemesi, bilgi (enformasyon) değişiminde etkin sistemin olmayışı, transit vergilerin yüksek olması, resmi

olmayan ödemeler ve altyapının iyi gelişmemiş olması, uluslararası ödeme sisteminin olmaması *AvET* ülkelerinin LPI endeksi sıralamasında alt sıralarda yer almalarının temel nedeni olarak görülebilir.

ÜLKELER	Sıralama	LPI Puanı	Gümrük		Altyapı		Uluslararası Taşımacılık		Lojistik Kalitesi ve Yeterlilik		Sevkiyatların Takibi		Sevkiyatların Alıcıya Zamanında Ulaşması	
			Sıralama	Puan	Sıralama	Puan	Sıralama	Puan	Sıralama	Puan	Sıralama	Puan	Sıralama	Puan
Türkiye	27	3,51	32	3,16	25	3,62	30	3,38	26	3,52	29	3,54	27	3,87
Ukrayna	66	2,85	88	2,41	70	2,69	83	2,72	61	2,85	50	3,15	68	3,31
Kazakistan	86	2,69	73	2,58	79	2,60	92	2,67	74	2,75	70	2,83	132	2,73
Beyaz Rusya	91	2,61	121	2,24	65	2,78	107	2,58	89	2,65	98	2,58	114	2,87
Rusya Federasyonu	95	2,58	138	2,04	97	2,45	106	2,59	92	2,65	79	2,76	94	3,02
Ermenistan	100	2,56	116	2,27	110	2,38	96	2,65	115	2,40	99	2,57	92	3,07
Kırgızistan	130	2,35	84	2,45	90	2,49	147	2,00	129	2,25	132	2,31	135	2,69
Moldovya	132	2,33	129	2,17	98	2,44	145	2,08	142	2,15	116	2,44	126	2,74
Tacikistan	136	2,28	85	2,43	138	2,03	135	2,33	130	2,22	143	2,13	146	2,51

Tablo 3. Türkiye ve AvET Üye ve Gözlemci Statüsün deki Ülkelerin LPI ve Alt Kriterlerine Ait Puan ve Sıralamaları. ***Kaynak:*** World Bank, 2013

Diğer önemli bir sorun da, ülkeler arası bilgi değişim sisteminin yokluğu ve istatistikî verilerdeki hata ve noksanlar, yani ülkeler arasında istatistiki verilerin uyumsuz olmasıdır. Bunun nedeninin yolsuzluk olduğu öne sürülmektedir (Primpayev ve Ganiyev, 2010). Bölgede söz konusu ülkelerle dış ticareti daha da geliştirebilmek için lojistik ve ulaştırma alanında sağlanacak işbirliği de çok önemlidir. Bölgedeki ulaştırma ilişkilerinin, mevcut sorunları ortadan kaldırma ve bütün taraflara avantaj sağlamaya yönelik bir işbirliği yaklaşımıyla ele alınması gerekmektedir. Ulaştırma alanında bölge ülkeleri arasında;

Karayolu kullanımında, ortak ücret ve tarife politikasının uygulamaya konulması,

Gümrük altyapısında rehabilitasyon çalışmalarına hız kazandırılması,

Avrupa ülkeleri arasında uygulanmakta olan, belirli bir kota sistemine göre, serbest ve sorunsuz geçiş imkânı sağlayan sistemin benzerinin oluşturulması,

Bazı ülkelerde uygulanan yüksek geçiş ücretlerinin düşürülmesi,

Eşit rekabet şartları içinde, ortak kara taşımacılığı şirketleri kurulmasının teşvik edilmesiyle,

büyük faydalar temin edilecektir (TOBB, 2006).

Ayrıca Orta Asya ekonomilerinde, özellikle hizmet ve lojistik sektörlerinde, bölgesel entegrasyonun ve rekabetin gelişmesini sağlamak için, tarihsel İpek Yolu'nun canlandırılması ulaştırma alanındaki sorunların çözümüne katkı sağlayacaktır. Avrasya Bölgesinde Kuzey, Orta ve Güney olmak üzere Doğu ve Batı'yı birbirine bağlayan üç tane koridor bulunmaktadır. Bu koridorlardan Orta ve Güney koridoru Türkiye üzerinden Avrupa'ya bağlanmaktadır. Orta koridorunda demir ve denizyolu ile etkin bir taşımacılığın yapılabilmesi için öncelikle Hazar Denizi limanlarında gerekli alt yapı yatırımlarının tamamlanması, ülkeler arası transit anlaşmaların imzalanması ve demiryolu ağındaki teknik eksikliklerin giderilmesi gerekmektedir. Güney koridoru üzerinde ise demiryolu ve karayolunu kullanarak konteynır taşımacılığı yapılabilmesi için demiryolu alt yapısının tamamlanması, güvenlik sorunlarının aşılması ve ülkeler arası anlaşmalara gerek duyulmaktadır. Modern İpek yolunun bu sayede hayata geçirilmesi mümkün olabilecektir (Kulaklıkaya, 2013). Bu bağlamda Türkiye' nin artık sona yaklaşan Kars-Tiflis demiryolu projesini hızlı bir biçimde tamamlanması, İstanbul-Almaata konteynır demiryolu hattının etkin kullanımını sağlaması, Gümrük Birliğine olan sorumluluklarını unutmadan karşılıklı gümrük tarifesi ve kota muafiyetlerini sağlayabilmesi dış ticarette lehine bir durum olacaktır (Öngel, 2010). Türkiye'nin Gümrük Birliğine olan sorumluluklarını unutmadan karşılıklı gümrük tarifesi ve kota muafiyetlerini sağlayabilmesi dış ticarette lehine bir durum olacaktır (Öngel, 2010).

Ayrıca Türkiye'nin gerek kendi gerek Avrasya coğrafyasında stratejik noktalarda lojistik üslerin kurulması ve kombine taşımacılığın yaygınlaştırılabilmesi için gerekli yatırımları yapabilmesi lojistik maliyetlerin azalmasına katkı sağlayacaktır.

4   Sonuç

Dış ticaret hacmini arttırmak için alternatif ihracat pazarları bulmanın önemini fark eden Türkiye, Avrupa ve Asya kıtalarını birbirine bağlayan bir köprü olması nedeniyle bu avantajı bir üstünlüğe dönüştürmek üzere Avrasya bölgesi için Avrupa ülkeleriyle rekabet edebilecek ekonomik bir yapıya, karayolu, demiryolu, denizyolu ve boru hatlarından oluşan uygun bir ulaşım ve lojistik alt yapısına sahip olmak zorundadır. Dünya Bankası

tarafından hazırlanan lojistik performans endeksinde Türkiye 2012 yılı itibarıyla 155 ülke arasında 27. sıraya yükselmiştir. Lojistik alanda Türkiye'nin sürekli iyileştirme çabaları yanında endeks sıralamasında oldukça alt sıralarda yer alan AvET ülkeleriyle karşılıklı işbirliği çabalarının da büyük önem taşıdığı unutulmamalıdır. Türkiye AvET ülkelerine ve diğer ülkelere en uygun taşımacılık sistemini kullanarak bağlanmak zorundadır. Bu bakımdan Orta ve Güney koridorları, üzerinde çalışılması gereken bağlantılardır (Kaynak, 2004). Bu bağlantıların iyileştirilmesi, Türkiye'nin bölgesel lojistik güç olma potansiyelini güçlendirmiş olacaktır. *AvET* ülkeleriyle ticari faaliyetlerini arttırmaya çalışan Türkiye, özellikle Rusya ile denizyolu taşımacılığını güçlendirmek durumundadır. Ayrıca topluluğa gelecekte üye olması muhtemel Azerbaycan limanlarının iyileştirilmesi de; Türkiye açısından söz konusu bölgeye önemli bir yatırım fırsatı sunmaktadır. Orta ve Güney koridorlarında etkin bir kombine taşımacılığın desteklenebilmesi için mevcut demiryolu altyapısının modernize edilmesi, projelerin hızlı bir biçimde tamamlanması gerektiği unutulmamalıdır. Doğu-Batı ticaretinde Türkiye'yi transit geçiş noktası yapacak olan Kars-Tiflis-Bakü demiryolu hattının bitirilmesiyle bu hattan her yıl 3 milyon ton yük akışı hedeflenmektedir.

Sonuç olarak *AvET* ülkeleriyle dış ticareti geliştirebilmek için gerekli şartların oluşturulması önem taşımaktadır. Karayolları ve demir yollarında söz konusu ülkelerde fiziki standartlar geliştirilmelidir. Fiziksel altyapı standartlarının ülke bazında iyileştirilmesi yeterli olmamaktadır. Standartların uluslararası düzeyde, güzergâh bütününde geçerli hale getirilmesi gereklidir. Ayrıca bu ülkelerde gümrük geçişlerinin hızlandırılması için gerekli bilgi teknolojisi alt yapısının iyileştirilmesi, gümrükle ilgili transit geçiş belgelerinin de topluluğa üye ülkelerce uyumlu hale getirilmesi gerekmektedir.

Avrasya Ülkeleri'nde Gayri Safi Yurtiçi Hasıla Üzerine Doğrudan Yabancı Yatırımlar ve Dış Ticaret'in Etkisi: Panel Eşbütünleşme Analizi

The Effect of Foreign Direct Investment and Foreign Trade on Gross Domestic Product in Eurasian Countries: Panel Cointegration Analysis

Ph.D. Candidate Mehmet Songur (Tunceli University, Turkey)

Ph.D. Candidate Demet Yaman (Hacettepe University, Turkey)

Abstract

In recent years, with the phenomenon of globalization, both foreign trade and foreign direct investment have become important factors that impact on economic growth. The effect of foreign trade and foreign direct investment on economic growth has been an important research area for many economists. For this purpose, this study investigates the effects of foreign direct invesment and foreign trade on economic growth, with the help of Pedroni Panel Cointegration Analysis,for 9 Eurasian countries using annual data for the period 1995-2011.The results show that in analyzed countries, there has been a long-term relationship between the variables. The results of cointegration coeffficients show that, import and export has a negative impact but foreign direct invesment has a positive impact on GDP. From these results, Eurasian economies on one hand should develop policies to increase the effeciency of foreign direct invesment and increase foreign trade. On the other hand Eurasian economies should improve policies to increase the economic and human infrastructure.

1 Giriş

Mal ve hizmet üretim sınırındaki genişleme şeklinde tanımlanan ekonomik büyümenin nasıl sürdürülebilir ve iyileştirilebilir olması gerektiği tartışması iktisatçılar tarafından en çok araştırılan konuların başında gelmektedir. Özellikle gelişmiş ve gelişmekte olan ülkeler arasındaki ekonomik büyüme farklılıkları ve bu farklılıkların nasıl giderileceği birçok iktisat teorisinin inceleme konusu olmuştur. Klasik, Neoklasik ve hatta İçsel Büyüme Teorilerine göre ülkeler arasındaki ekonomik büyüme farklılıklarının temel kaynağı arz yönlü faktörlerdir. Diğer taraftan Keynesyen temelli ekonomik büyüme modelleri her ne kadar ekonomik büyüme üzerine spesifik olarak çalışmamış olsalar da ülkeler arasındaki ekonomik büyüme farklılıklarını açıklarken ekonomik büyümenin kaynağı olarak talep yönlü faktörleri dikkate almışlardır. Post Keynesyen İktisadi düşüncenin ortaya çıkışı ile birlikte Keynes'in çizgisinden ilerleyen iktisatçılar ekonomik büyüme üzerinde daha fazla durmaya başlamışlar ve özellikle 20. Yüzyılın ikinci yarısının ilk çeyreğinde ekonomik büyüme üzerinde sadece iç talebin değil aynı zamanda dış talebinde etkili olabileceğini belirterek dış ticareti ekonomik büyüme modellerine dahil etmişlerdir.

Post Keynesyen İktisat içerisinde yer alan Kaldor (1970) ihracatın toplam talebin temel unsuru olduğu gerçeğini dikkate alan ve kümülatif nedensellik üzerine temellendirdiği bir ihracata dayalı büyüme modeli geliştirmiştir. Thirlwall (1979) Kaldor'un modelinde ithalatın olmamasını bir eksiklik olarak görmüş ve ithalatın büyüme üzerinde kısıtlayıcı yani negatif bir etki yaratacağını belirtmiştir.

Dünya üzerinde küreselleşme olgusunun artması ile birlikte dış ticaretin yanı sıra doğrudan yabancı sermaye yatırımları da ekonomik büyüme üzerinde etki yaratan en önemli değişkenlerden biri olmaya başlamıştır. Özellikle gelişmekte olan ülkeler ekonomik büyüme performanslarını iyileştirmek için doğrudan yabancı yatırımların ülkeye girişini desteklemektedirler. Bu ülkelerde doğrudan yabancı yatırımların kalkınma ve büyüme için gerekli olan tasarruf ve yatırımı sağlaması, teknoloji transferini ve beşeri sermaye birikimini arttırması beklenmektedir.

Bu çalışmada, doğrudan yabancı yatırımların ve dış ticaretin ekonomik büyüme üzerindeki etkileri incelenmeye çalışılmıştır. Çalışmanın literatürde yer alan çalışmalardan temel farkı Avrasya Ekonomileri'nin seçilmiş olmasıdır. Avrasya Ekonomileri genel olarak 1991 yılında Sovyet Sosyalist Cumhuriyetler Birliği'nin dağılması ile birlikte bağımsızlığını elde eden ülkeler olarak tanımlanmakta olup toplamda 12 ülkeyi kapsamaktadır (Belarus, Ermenistan, Gürcistan, Kazakistan, Kırgızistan, Moldova, Özbekistan, Rusya, Tacikistan, Türkmenistan, Ukrayna, Azerbaycan). Ancak çalışmamızda kullanılan ilgili verilere ulaşılamadığı için analize Gürcistan, Özbekistan ve Türkmenistan dahil edilmemiştir. Bu çerçevede çalışmanın amacı, ele alınan 9 Avrasya Ekonomisi'nde doğrudan yabancı yatırımların ve dış ticaretin ekonomik büyüme üzerindeki etkilerini Pedroni (1999) Panel Eşbütünleşme çerçevesinde incelemektir. Bu doğrultuda çalışmanın ikinci bölümünde ilgili literatür incelenecektir. Üçüncü bölümde çalışmada kullanılan veri seti ve ekonometrik yöntem hakkında bilgi verildikten sonra, dördüncü bölümde ekonometrik analizden elde edilen bulgulara yer verilmektedir. Sonuç bölümünde ise, çalışmadan elde edilen bulgulara ilişkin değerlendirme yapılmaktadır.

2 Ampirik Literatür

İktisat Teorisi'nde genel kanı doğrudan yabancı yatırımların ve dış ticaretin ekonomik büyüme üzerinde pozitif etki yaratacağı yönündedir. Ancak ampirik literatüre baktığımızda bu durum teori ile daima paralellik arz etmeyebilir. Bu çerçevede doğrudan yabancı yatırımlarım ekonomik büyüme üzerine etkilerini uygulamalı olarak inceleyen çalışmaları doğrudan yabancı yatırımların ekonomik büyümeyi pozitif, negatif ve aralarındaki ilişkinin anlamsız olduğunu ifade eden çalışmalar olarak üçe ayırmak mümkündür.

Bu bağlamda Borensztein, Gregorio ve Lee (1995), Bosworth ve Collins (1999), Djankov ve Hoekman (2000), Ericsson ve Irandoust (2001), Campos ve Kinoshita (2002), Yang (2002), Cuadros, Orts ve Alguacil (2004), Fedderke ve Romm (2004), Razin (2004), Yao ve Wei (2007), Vu ve Noy (2009) çalışmalarında doğrudan yabancı yatırımların ekonomik büyümeyi pozitif yönde etkilediği sonucuna ulaşmışlardır. Diğer taraftan, Herzer, Klasen ve Lehmann (2008), Yang (2008) çalışmalarında doğrudan yabancı yatırımların ekonomik büyümeyi negatif yönde etkilediği, Xu (2000), Hermes ve Lensink (2003), Katerina, Papanastasiou ve Athanasios (2004) ise doğrudan yabancı yatırımlar ile ekonomik büyüme arasında ilişki olmadığı sonucuna ulaşmışlardır.

Doğrudan yabancı sermaye yatırımlarının yanı sıra dış ticareti temsil eden en önemli iki kalem olan mal ve hizmet ithalatı ile ihracatı da ekonomik büyüme üzerinde önemli etki göstermektedir. İhracat değişkeninin ekonomik büyümeyi pozitif etkileyeceği konusunda teorik olarak bir genel kanı oluşmasına rağmen, ithalat değişkeninin ekonomik büyüme üzerinde yaratacağı etki konusunda genel bir uyum sağlanamamıştır. Bu çerçevede kimi iktisatçılara göre ithalat ekonomik büyümeyi pozitif etkilerken, kimi iktisatçılar ithalatın ekonomik büyüme üzerinde kısıt oluşturacağını yani negatif bir etki yaratacağını ifade etmişlerdir.

Ampirik literatüre baktığımızda ise, ihracatın ekonomik büyüme üzerinde pozitif etki yaratacağını ifade eden çalışmaların yanı sıra aralarında anlamlı bir ilişki olmadığını ifade eden çalışmalarda bulunmaktadır. Bu çerçevede Balassa (1978), Williamson (1978), Feder (1982), Balassa (1985), Ram (1985), Chow (1987), Sengupta (1991), Bahmani-Oskooee ve Alse (1993), Konya (2006) ihracatın ekonomik büyüme üzerinde pozitif etki yarattığı sonucuna ulaşmışlardır. Diğer taraftan, ampirik literatürde ithalatın büyüme üzerinde pozitif etki yarattığı sonucuna ulaşan çalışmalara da rastlanmakta olup, Levine ve Renelt (1992), Marwah ve Tavakoli (2004), Shirazi ve Manap (2005), Mahadevan ve Suardi (2007) çalışmalarında ithalatın ekonomik büyümeyi pozitif etkilediği sonucuna ulaşmışlardır.

Tüm bunların yanı sıra dış ticaret ile ekonomik büyüme arasında herhangi bir anlamlı ilişki olmadığını ifade eden çalışmalar olmakla bunlar Darrat (1987), Colombatto (1990), Afxentiou ve Serletis (1991), Kugler (1991), Ramos (2001), Jin (2006)'in çalışmalarıdır.

3 Veri Seti ve Yöntem

Bu çalışmada 9 Avrasya Ekonomisi'nde doğrudan yabancı yatırımların ve dış ticaretin ekonomik büyüme üzerindeki etkileri incelenmektedir. Bu amaçla analizde 9 ülkeye ait 1995-2011 dönemine ait yıllık veriler kullanılmış olup, ilgili veri seti Dünya Bankası tarafından yayınlanan Dünya Kalkınma Göstergeleri'nden (World Development Indicators) elde edilmiştir. Öte yandan modellerin tahmininde E-views 6.0 Beta, WinRATS Pro 7.0 ve Gauss 9.0 paket programlarından yararlanılmıştır.

Çalışmada kullanılan en geniş model 1 numaralı denklemde verilmiş olup, lnGDP; Gayrisafi Yurtiçi Hasıla Düzeyini, lnX; mal ve hizmet ihracatını, lnM; mal ve hizmet ithalatını, lnFDI; doğrudan yabancı yatırım düzeyini ifade etmektedir. Tüm değişkenler 2000 yılı baz alınarak reel hale getirilmiş ve logaritması alınarak analize dahil edilmiştir.

$$lnGDP_{i,t} = \beta_0 + \beta_1 lnX_{i,t} + \beta_2 lnM_{i,t} + \beta_3 lnFDI_{i,t} + \varepsilon_{i,t} \tag{1}$$

Çalışmada panel eşbütünleşme yöntemi kullanılmış olup, panel eşbütünleşme analiz yönteminde ele alınan serilere ait birim kök özellikleri büyük önem arz etmektedir. Ancak hem panel birim kök testleri hem de panel eşbütünleşme testleri, panel veri setini oluşturan gruplar arasında yatay kesit bağımlılığının var olduğu ve olmadığı duruma göre varsayımlarını oluşturmuşlardır. Bu bağlamda, birinci nesil panel birim kök testleri yatay kesit bağımlılığının varlığını dikkate almaz iken, ikinci nesil panel birim kök testleri yatay kesit bağımlılığının varlığını dikkate almaktadırlar. Bu çerçevede öncelikle ele alınan serilerde yatay kesit bağımlılığının varlığı araştırılmalıdır.

Panel veri analizlerinde yatay kesit bağımlılığını test etmek için genellikle 3 test kullanılmaktadır. Birincisi, Breusch-Pagan (1980) tarafından geliştirilen CD_{BP} testidir. Bu test N sabit ve T sonsuza giderken ($T{\rightarrow}\infty$) yani $T>N$ iken geçerli olup (2) numaralı denklem ile hesaplanmaktadır. Burada $\hat{\rho}$ bireysel en küçük kareler (EKK) tahminlerinden elde edilen artıklar arasındaki yatay kesit korelasyonlarının tahminlerini göstermektedir. "Yatay kesit bağımlılığı yoktur" sıfır hipotezi altında geliştirilen CD_{BP} testi $N(N-1)/2$ serbestlik derecesi ile χ^2 dağılımına sahiptir.

$$CD_{BP} = T \sum_{i=1}^{N-1} \sum_{j=i+1}^{N} \hat{\rho}_{i,j}^2 \tag{2}$$

Yatay kesit bağımlılığı testlerinden ikincisi, Pesaran (2004) tarafından geliştirilen CD_{LM} testidir. Bu test T ve N'in büyük olması durumunda ($N \to \infty$ ve $T \to \infty$'a giderken) geçerlidir. "Yatay kesit bağımlılığı yoktur" sıfır hipotezi altında standart normal dağılıma sahip olan CD_{LM} testi (3) numaralı denklem yardımıyla hesaplanmaktadır:

$$CD_{LM} = \sqrt{\frac{1}{N(N-1)}} \sum_{i=1}^{N-1} \sum_{j=i+1}^{N} (T\hat{\rho}_{i,j}^2 - 1) \tag{3}$$

Yatay kesit bağımlılığı testlerinden üçüncüsü ve sonuncusu, Pesaran (2004) tarafından geliştirilen *CD* testidir. "Yatay kesit bağımlılığı yoktur" sıfır hipotezi altında, standart normal dağılıma sahip olan bu test, T sabit ve N sonsuza giderken ($N \to \infty$) yani $N>T$ iken geçerli olup, (4) numaralı denklem ile hesaplanmaktadır:

$$CD = \sqrt{\frac{2T}{N(N-1)}} \left(\sum_{i=1}^{N-1} \sum_{J=I+1}^{N} \hat{\rho}_{i,j} \right) \tag{4}$$

Panel eşbütünleşme testinde kullanılacak tekniğin seçiminde değişkenlerin birim kök özellikleri önemlidir. Bu çalışmada değişkenlere ait birim kök özellikleri, birinci nesil panel birim kök testlerinden Levin, Lin, ,Chu (LLC, 2002), Im, Pesaran, Shin (IPS, 2003) ve Hadri (2000) birim kök testleri ile ve ikinci nesil panel birim kök testlerinden ise Pesaran (2007) tarafından geliştirilen, Yatay Kesit Açısından Geliştirilmiş Dickey-Fuller (Cross-Sectionally Augmented Dickey Fuller (CADF)) testi ile incelenmiştir.

LLC (2002) panel birim kök testi bütün yatay kesitlerin homojen olduğu varsayımına dayanarak ortak birim kökün varlığına dair boş hipotez test edilmektedir. IPS (2003) panel birim kök testinde ise bütün yatay kesitlerin homojen olması varsayımının LLC panel birim kök testinin zayıf yönü olduğunu belirterek, bütün yatay kesitlerin heterojen olduğu varsayımından hareketle bireysel birim kökün varlığına dair boş hipotez test edilmektedir. Hadri (2000) ise ortak birim kökün olmamasını boş hipotezde test etmektedir.

Çalışmanın güvenilirliğini arttırmak amacıyla birinci nesil panel birim kök testlerinden LLC, IPS ve Hadri panel birim kök testlerinin yanı sıra panel veri setinde yer alan gruplar arasında yatay kesit bağımlılığını dikkate alan ikinci nesil panel birim kök testlerine de yer verilmiş olup, Pesaran (2007) tarafından geliştirilen, Yatay Kesit Açısından Geliştirilmiş Dickey-Fuller (Cross-Sectionally Augmented Dickey Fuller (CADF)) testi olarak adlandırılan panel birim kök testi bu çalışmada kullanılmıştır. CADF panel birim kök testi, (5) numaralı eşitlikte yer alan regresyon modeli sınamasına dayanmaktadır.

$$\Delta y_{i,t} = a_i + b_i y_{i,t-1} + c_i \bar{y}_{t-1} + d_i \Delta \bar{y}_t + \varepsilon_{i,t} \tag{5}$$

$$\bar{y}_t = N^{-1} \sum_{j=1}^{N} y_{jt} \tag{6}$$

$$\Delta \bar{y}_t = N^{-1} \sum_{j=1}^{N} \Delta y_{jt} \tag{7}$$

Bu modelde $\bar{y}_t$ (6) numaralı eşitlikteki gibi, $\Delta \bar{y}_t$ ise (7) numaralı eşitlikteki gibi bulunurken, $\varepsilon_{i,t}$ hata terimini ifade etmektedir. Regresyon modelinde yer alan yatay kesit ortalaması $\bar{y}_t$, onun gecikmeli değerleri ($\bar{y}_{t-1}$, $\bar{y}_{t-2}$, ...) ve $\Delta \bar{y}_t$; genel bir faktör yapısına bağlı olarak yatay kesit bağımlılığının dikkate alınmasını sağlayan bir kukla (Proxy) olarak regresyon modeline dahil edilmiştir (Pesaran, 2007: 269).

Pesaran (2007)'ın CADF panel birim kök testinde sıfır hipotezi, "paneli oluşturan her bir yatay kesite ait serinin birim kök içerdiği" önermesini (H_0: $b_i=0$ bütün yatay kesitler için); alternatif hipotez ise "paneli oluşturan yatay kesitlerin belirli bir bölümünün birim kök içermediği (H_1:$b_i<0$ ($i=1,2,...,N_1$) , $b_i=0$ ($i=N_1+1$, N_1+2, ..., N)) önermesini sınamaktadır (Pesaran, 2007: 267-269).

CADF testinde bulunan b_i katsayıları CADF istatistiği olup, bunlara ait t-istatistikleri mevcut kritik değerlerle karşılaştırılarak her bir yatay kesite ait serinin birim kök içerip içermediğine karar verilir. Panel veri setinin durağan olup olmadığını test etmek için CADF istatistiklerinin ortalaması alınarak kesit açısından genişletilmiş IPS (cross-sectionally augmented IPS (CIPS)) test istatistiği (8)'da ki gibi elde edilir.

$$CIPS = N^{-1} \sum_{i=1}^{N} CADF_i \sim N(0,1) \tag{8}$$

Son olarak panel veri setinin birim kök içerip içermediğini tespit etmek için Pesaran (2007: 279-280-281)'da verilmiş olan CIPS için kritik değerlerle karşılaştırılarak karar verilir.

Bu çalışmada, değişkenler arasındaki uzun dönemli eşbütünleşme ilişkisini tespit etmek için panel eşbütünleşme analizleri içerisinde sıklıkla kullanılan Pedroni (1999) panel eşbütünleşme testi kullanılmıştır. Pedroni panel eşbütünleşme testi durağanlık sınamasında serilerin I(1) yani birinci mertebeden durağan olduğu durumda geçerlilik arz etmektedir. Pedroni testinde ilk aşamada aşağıdaki model EKK yöntemi ile tahmin edilmektedir:

$$Y_{i,t} = \alpha_i + \delta_i t + \beta_i X_{i,t}' + e_{i,t} \tag{13}$$

Bu denklemde, Y ve X birinci farkları alındığında durağan olan değişkenler olup, α_i sabit etkileri, t trendi göstermektedir. Tahmin edilen modelden ($e_{i,t}$) hata terimleri elde edilir ve ikinci aşamada, (9) numaralı modelin EKK tahmininden ($\eta_{i,t}$) hata terimi elde edilir.

$$\Delta Y_{i,t} = \beta_i \Delta X_{i,t}' + \eta_{i,t} \tag{9}$$

Üçüncü aşamada, Newey-West (1987) tahmincisi kullanılarak ($\eta_{i,t}$) hata teriminin uzun dönem varyansı (L_{11i}^2) hesaplanır. Dördüncü aşamada, parametrik olmayan testler için ve parametrik testler için ayrı ayrı tahminlerden hata terimleri varyansı elde edilir. Parametrik olmayan testler için (10) numaralı model tahmin edilir ve ($\hat{u}_{i,t}$) hata terimlerinin varyansı ($\hat{s}_i^2$), uzun dönem varyansı ($\hat{\sigma}_i^2$) elde edilir.

$$\hat{e}_{i,t} = \hat{\gamma}_i \hat{e}_{i,t-1} + \hat{u}_{i,t} \tag{10}$$

Daha sonra, ($\hat{\lambda}_{i,t}$) terimi $\hat{\lambda}_{i,t} = 1/2(\hat{\sigma}_i^2 - \hat{s}_i^2)$ denklemi kullanılarak elde edilir. Parametrik testler için (11) numaralı model tahmin edilir ve ($\hat{u}_{i,t}^*$) hata terimlerinin varyansı ($\hat{s}_i^{*2}$) elde edilir.

$$\hat{e}_{i,t} = \hat{\gamma}_i \hat{e}_{i,t-1} \sum_{k=1}^{K_i} \hat{\gamma}_{i,k} \Delta \hat{e}_{i,t-k} + \hat{u}_{i,t}^* \tag{11}$$

Beşinci ve son aşamada ise, Pedroni (1999) tarafından geliştirilen, ilk dördü kesit içi, son üçü kesitler arası olmak üzere yedi panel eşbütünleşme testi aşağıdaki denklemler yardımı ile hesaplanır:

Kesit içi panel eşbütünleşme testleri:

1. Panel v-istatistiği:	$T^2 N^{3/2} Z_{\hat{v}_{N,T}} \equiv T^2 N^{3/2} \left(\sum_{i=1}^{N} \sum_{t=1}^{T} \hat{L}_{11i}^{-2} \hat{e}_{i,t-1}^2 \right)^{-1}$	(12)
2. Panel ρ-istatistiği:	$T\sqrt{N} Z_{\hat{\rho}_{N,T}-1} \equiv T\sqrt{N} \left(\sum_{i=1}^{N} \sum_{t=1}^{T} \hat{L}_{11i}^{-2} \hat{e}_{i,t-1}^2 \right)^{-1} \sum_{i=1}^{N} \sum_{t=1}^{T} \hat{L}_{11i}^{-2} (\hat{e}_{i,t-1} \Delta \hat{e}_{i,t} - \hat{\lambda}_i)$	(13)
3. Panel t-istatistiği: (Parametrik olmayan)	$Z_{t_{N,T}} \equiv \left(\tilde{\sigma}_{N,T}^2 \sum_{i=1}^{N} \sum_{t=1}^{T} \hat{L}_{11i}^{-2} \hat{e}_{i,t-1}^2 \right)^{-1/2} \sum_{i=1}^{N} \sum_{t=1}^{T} \hat{L}_{11i}^{-2} (\hat{e}_{i,t-1} \Delta \hat{e}_{i,t} - \hat{\lambda}_i)$	(14)
4. Panel t-istatistiği: (Parametrik)	$Z_{t_{N,T}}^* \equiv \left(\tilde{s}_{N,T}^{*2} \sum_{i=1}^{N} \sum_{t=1}^{T} \hat{L}_{11i}^{-2} \hat{e}_{i,t-1}^{*2} \right)^{-1/2} \sum_{i=1}^{N} \sum_{t=1}^{T} \hat{L}_{11i}^{-2} \hat{e}_{i,t-1}^* \Delta \hat{e}_{i,t}^*$	(15)

Kesit içi panel eşbütünleşme testleri:

5. Grup ρ-istatistiği:	$TN^{-1/2} \tilde{Z}_{\hat{\rho}_{N,T}-1} \equiv TN^{-1/2} \sum_{i=1}^{N} \left(\sum_{t=1}^{T} \hat{e}_{i,t-1}^2 \right)^{-1} \sum_{t=1}^{T} (\hat{e}_{i,t-1} \Delta \hat{e}_{i,t} - \hat{\lambda}_i)$	(16)
6. Grup t-istatistiği: (Parametrik olmayan)	$N^{-1/2} \tilde{Z}_{t_{N,T}} \equiv N^{-1/2} \sum_{i=1}^{N} \left(\hat{\sigma}_i^2 \sum_{t=1}^{T} \hat{e}_{i,t-1}^2 \right)^{-1/2} \sum_{t=1}^{T} (\hat{e}_{i,t-1} \Delta \hat{e}_{i,t} - \hat{\lambda}_i)$	(17)
7. Grup t-istatistiği: (Parametrik)	$N^{-1/2} \tilde{Z}_{t_{N,T}}^* \equiv N^{-1/2} \sum_{i=1}^{N} \left(\sum_{t=1}^{T} \hat{s}_i^{*2} \hat{e}_{i,t-1}^{*2} \right)^{-1/2} \sum_{t=1}^{T} \hat{e}_{i,t-1}^* \Delta \hat{e}_{i,t}^*$	(18)

Pedroni (1999) eşbütünleşme testinde sıfır hipotezi, "bütün yatay kesitler için eşbütünleşme ilişkisi yoktur", alternatif hipotez ise, "bütün yatay kesitler için eşbütünleşme ilişkisi vardır" savını sınamaktadır. Bu testler standart normal dağılıma sahip olmakla beraber panel v-istatistiği sağ kuyruk dağılımı, diğerleri sol kuyruk dağılımı göstermektedir.

Değişkenler arasında eşbütünleşme ilişkisi olduğu sonucuna ulaşılırsa, değişkenlere ait uzun dönem katsayılarının nasıl elde edileceği önem taşımakta olup çalışmada Pedroni (2001) tarafından geliştirilen Panel DOLS (Panel Dynamic Ordinary Least Squares) tahmincileri kullanılmıştır. Panel DOLS tahmincileri bağımsız değişkenler ve hata terimleri arasında içsellik ve hata terimlerinin kendine bağlaşımlılık sorununun

giderilmesinde Panel OLS tahmincisine kıyasla daha etkindir. Pedroni (2001) tarafından önerilen Panel DOLS tahmincisi (19) numaralı regresyon tahmini ile gerçekleştirilir:

$$y_{i,t} = \alpha_i + \beta_i x'_{i,t} + \sum_{k=-K_i}^{K_i} \gamma_{i,k} \Delta \beta_{i,t-k} + \mu^*_{i,t} \tag{19}$$

(19) numaralı denklemde $(-K_i)$ ve (K_i) öncül ve gecikme sayılarını ifade etmektedir. Panel DOLS'da paneli oluşturan yatay kesitlerin yatay kesit bağımlılığı içermediği varsayılmaktadır. Panel DOLS'da birinci aşamada panel eşbütünleşme vektörünü elde edebilmek için (19) numaralı denklem her bir yatay kesit için tahmin edilir. İkinci aşamada, her bir yatay kesite ait bu tahminlerin aritmetik ortalaması (20) numaralı denklemdeki gibi alınarak, panel eşbütünleşme katsayıları elde edilmektedir:

$$\hat{\beta}^*_{GD} = N^{-1} \sum_{i=1}^{N} \beta^*_{D,i} \tag{20}$$

(20) numaralı eşitlikte yer alan $(\beta^*_{D,i})$ her bir yatay kesite ait DOLS tahmininden elde edilen eşbütünleşme katsayılarını ifade etmektedir. Panel DOLS tahmincilerinin anlamlılıkları t-istatistikleri ile belirlenmekte olup, t-istatistikleri (21) numaralı denklemdeki gibi ifade edilmektedir.

$$t_{\hat{\beta}^*_D} = N^{-1/2} \sum_{i=1}^{N} t_{\hat{\beta}^*_{D,i}} \tag{21}$$

(21) numaralı denklemde $(t_{\hat{\beta}^*_{D,i}})$ her bir yatay kesit için DOLS tahmininden elde edilen eşbütünleşme katsayısına ilişkin t-istatistiğini göstermektedir.

4 Bulgular

Panel eşbütünleşme analizleri yapılırken, panel veri setinde yatay kesitler arasında ilişki olup olmadığı önem arz etmektedir. Çalışmada kullanılan değişkenlere ait yatay kesitler arasında ilişki olup olmadığını tespit ettiğimiz test sonuçları Tablo 1'de verilmiştir. Sonuçlar baktığımızda lnGDP CD testinde yatay kesit bağımlılığının varlığı %10 anlamlılık düzeyinde kabul edilmiş ve lnFDI değişkeni için yine CD testinde yatay kesit bağımlılığının varlığı reddedilmiş olmasına rağmen diğer testlerde yatay kesit bağımlılığının varlığı kabul edilmiştir. Bu bağlamda test sonuçlarına göre tüm değişkenlere ait yatay kesitler arasında ilişki olduğu yani değişkenlerin yatay kesit bağımlılığı içerdiği sonucuna ulaşılmıştır.

Tablo 1: Yatay Kesit Bağımlılığı Test Sonuçları

Serilerde yatay kesit bağımlılığı olduğundan serilere ait birim kök özellikleri hem birinci nesil panel birim kök testleri hem de ikinci nesil panel birim kök testleri ile araştırılmıştır. Ele alınan seriler panel birim kök testlerinde serilerin panel birim kök testlerinde düzey durumunda tam bir tutarlılık göstermemekle birlikte birince dereceden farkı alındığında tüm serilerin durağan hale geldikleri gözlemlenmiştir. Dolayısıyla çalışmada ele alınan serilerin tamamı I(1) olduğu sonucuna ulaşılmıştır.

Tablo 2: LLC, IPS, Hadri ve CIPS Birim Kök Sınaması Sonuçları

Not: Testlerde tahmin edilen modeller sadece sabit terim içermektedir. Gecikme uzunlukları Modifiye Edilmiş Schwarz Bilgi Kriterine göre belirlenmiş olup, tüm testlerde maksimum 3 olarak alınmıştır. Parantez içerisindeki değerler olasılık değerlerini göstermektedir. ***, ** ve * sırasıyla %1, %5 ve %10 anlamlılık düzeylerini ifade etmektedir. CIPS testi için kritik değerler Pesaran (2007) sayfa 280'dan alınmış olup %1, %5 ve %10 anlamlılık düzeyleri için sırası ile -2,66; -2,37 ve -2,22'dir.

Modele ait Pedroni (1999) panel eşbütünleşme testi sonuçları Tablo 3'te verilmiştir. Tablo 3'te görüldüğü gibi 7 testten 4'ü en az %5 anlamlılık düzeyinde istatistiksel olarak anlamlı bulunmuştur. Bu durumda ele alınan model için panel veri setinde eşbütünleşme ilişkisi yoktur sıfır hipotezi reddedilmektedir. Yani ekonomik büyüme, ihracat, ithalat ve doğrudan yabancı yatırımlar arasında uzun dönemli bir ilişki olduğu tespit edilmiştir.

Tablo 4: Panel DOLS Sonuçları

Son olarak, değişkenler arasında eşbütünleşme ilişkisi tespit edildiğinden değişkenlere ait uzun dönem katsayıları Panel DOLS tahmincisi kullanılarak tespit edilmiştir. Tablo 4'de yer alan panel grup istatistiği sonuçlarına göre ihracatta meydana gelen %1'lik bir artış GSYİH'yı %1,1 ithalatta meydana gelen %1'lik bir artış GSYİH'yı %1,4 arttırmaktadır. Diğer taraftan doğrudan yabancı yatırımlarda meydana gelen %1'lik bir artış GSYİH'yı %5,6 azaltmaktadır. Bireysel ülke sonuçlarına baktığımızda ise, Belarus, Ermenistan, Kazakistan,

Moldova, Tacikistan ve Azerbaycan'da ihracatın GSYİH üzerine etkisi pozitif iken, Kırgızistan, Rusya ve Ukrayna'da etki negatif olarak gerçekleşmiştir. Diğer taraftan, Kazakistan, Rusya, ve Ukrayna'da ithalatı'ın GSYİH üzerine etkisi pozitif iken, diğer ülkelerde negatif olarak gerçekleşmiştir. Son olarak doğrudan yabancı yatırımlar GSYİH üzerinde sadece Belarus ve Ermenistan'da pozitif iken, diğer tüm ekonomilerde negatif olarak gerçekleşmiştir.

5 Sonuç

Bu çalışmada, 1991 yılında Sovyet Sosyalist Cumhuriyetler Birliği'nin dağılması ile birlikte bağımsızlığını elde eden ülkeler olarak tanımlanmakta olan Avrasya ekonomilerinde dış ticaret ve doğrudan yabancı yatırımların gayrisafi yurt içi hasıla üzerine etkisi incelenmiştir. 1995-2011 dönemine ait verilerden yararlanılmış ve analiz Pedroni (1999) tarafından geliştirilen Panel Eşbütünleşme testi ile gerçekleştirilmiştir. Analizden elde edilen sonuçlar değişkenler arasında uzun dönemli bir eşbütünleşme ilişkisi olduğunu göstermekle birlikte, her bir ülke için Panel DOLS sonuçlarına bakıldığında her ne kadar ülkeler arasında farklılık göstermiş olsa da ele alınan ülkelerde Panel Grubuna ait sonuçlara bakıldığında ithalat ve ihracatın GSYİH'yı pozitif yönde, doğrudan yabancı yatırımların ise negatif yönde etkilediğini göstermektedir.

Çalışmadan elde edilen sonuçlar ele alınan Avrasya Ekonomileri'nde dış ticaretin ekonomik büyümeyi arttırıcı yönde desteklediğini göstermektedir. Gerçektende çalışma verileri incelendiğinde ele alınan Avrasya Ekonomileri'nde genel eğilim dış ticaretin arttığı yıllarda ekonomik büyümenin de artmış olmasıdır. 1995-2000 arasında ekonomilerdeki genel eğilim hem büyüme hem de dış ticaret bağlamında durgunlukla geçerken, 2000'li yıllarda hem dış ticaret hacmi artmış hemde ekonomik büyüme hızlanmıştır. 1995-2000 döneminde var olan durgunluğun temel sebebi ise Rusya kaynaklı Orta Asya Krizi'dir.

Diğer taraftan, doğrudan yabancı yatırımların ekonomik büyümeyi azaltıcı etkisi literatürde yer alan Herzer, Klasen ve Lehmann (2008), Yang (2008)'ın çalışmaları ile benzerlik göstermektedir. Bu durumun temel nedeni ele alına Avrasya ekonomilerinin temel yapısından kaynaklı olduğu düşünülebilir. Çok yakın zamanda bağımsızlığını ilan eden bu ekonomilerin hemen Orta Asya Krizi ile karşı karşıya kalmaları küreselleşme sürecini olumsuz yönde etkilemiş ve yeterli doğrudan yabancı yatırımların aktarılamamış olmasına neden olmuş olabilir. Ayrıca doğrudan yabancı yatırımların gidecekleri ülkelerde sürekli ve kalıcı olmaları ve gidilen ülke ekonomisinin doğrudan yabancı yatırımları destekleyecek hem ekonomik hem de beşeri altyapının varlığı ekonomik büyüme üzerinde olumlu etki yaratabilir. Diğer taraftan doğrudan yabancı yatırımlar gidilecek ülkede hem ekonomik hem de siyasi istikrarın var olmasını isterler. Avrasya ekonomilerinde hem ekonomik hem siyasi istikrarın var olması, ayrıca doğrudan yabancı yatırımların sürekli ve kalıcı olmasını sağlayacak ekonomik ve beşeri altyapının varlığı ancak 2000'li yıllarda gözlemlenmeye başlandığı söylenebilir.

Sonuç olarak, ele alınan Avrasya ekonomilerinde dış ticaretin ekonomik büyüme üzerinde var olan pozitif etkisi devam ettirilmelidir. Ancak bu amaca yönelik politikalar geliştirilirken politika uygulayıcılar ithalat ile ihracat arasındaki makasın ithalat lehine açılmasını önlemeye yönelik politikalar geliştirmelidirler. Diğer taraftan doğrudan yabancı yatırımların ekonomik büyüme üzerindeki negatif etkisini pozitife dönüştürmek için ekonomik ve siyasi istikrarın sağlanması ya da devam ettirilmesi, doğrudan yabancı yatırımların ülke ekonomisine girişini arttırmak ve kalıcı olmasını sağlamak için gerekli olan ekonomik ve beşeri altyapının sağlanması gerekmektedir. Bu çerçevede doğrudan yabancı yatırımların kalıcı olacak ve uzun vadede ekonomik büyüme üzerinde pozitif etkisi görülecektir.

İhracat Ve Ücretler Arasındaki İlişkinin Türkiye Ekonomisi İçin Sınanması

An Examination of the Relationship between Exports and Wages for Turkey

Ph.D. Candidate Gürçem Oransay (Çukurova University, Turkey)

Abstract

In this study the together with increasing foregin trade after trade liberalization, affects of changing income distribution on wages has been discussed. Assuming wages as an issue of income distribution, it continues with foregin trade theories which are related to foreign trade and affect of export on wages in particular. The developments such as effective markets after trade liberalization, high efficiency and removal of barriers in front of international trade increase cost competitiveness and wage levels change. It is still discussed whether foreign trade has positive or negative affects on wages but it can be claimed that differences of opinion vary depending on economical structures and trade volumes of countries. Using a model which has been supplied from both theoretical and practical literature, this research will try to find out affects of export and openness on wages using unit root test, cointegration techniques and error correction mechanism on Turkish economy during the period of 1988:Q1-2010:Q4. Affects of both export and openness on wages has been studied seperately for sub sectors of Turkish Manufacturing Industry. Although there is not a full compliance in all sectors which are studied in all models within periods examined, it has been found out that export and openness create a negative affect on wages.

1   Giriş

Son 30 yılda gelişmekte olan ülkeler ve Türkiye de dahil olmak üzere dünya ülkelerinin büyük bir kısmı uluslararası ticaretinin serbestleşmesi doğrultusunda ithal ikamesine dayalı büyüme stratejisini bırakıp, ihracata dayalı büyümeyi benimsemiş ve bu doğrultuda ihracat ve ithalat oranlarını arttırmışladır. Bu değişim büyüme oranlarında olumlu sonuçlar doğururken, yurtiçi gelir dağılımı ve ücretler üzerine olumsuz etkileri ise giderek artmıştır. Sebebi ise kısa dönemde artan rekabet baskısı ile baş edememe ve işgücünün ticareti yapılan ve yapılmayan mal sektörleri arasında yeniden dağılımının zorlaşması olup, uzun dönemde ise ülke kaynaklarının daha etkin kullanılarak büyüme oranlarında artış elde edileceğidir.

Ticari liberalizasyon ve yurtiçi gelir dağılımı arasındaki ilişkiler, teorik düzeyde ilk olarak geleneksel ticaret teorisinde ele alınmış, konu ile ilgili tartışmalar günümüze de farklı kollardan ilerlemeye devam etmiştir. Aşağıda bu konuda yapılan çalışmalarla ilgili literatürden bazı çalışmalara kısaca değinilecektir.

Beyer, Rojas ve Vergara (1999), Şili'de ticari liberalizasyon ve ücret eşitsizliği arasındaki ilişkiyi inceledikleri ampirik çalışmalarında Şili'deki son 20 yılda yaşanan liberalizasyon gelişmeleri ile işgücü yoğun ürünlerdeki göreceli fiyat düşüşünün ücret adaletsizliğindeki artışı açıklamaya yardımcı olduğunu ortaya koymuşlardır. Haouas, Yagoubi ve Heshmati (2002)'nin Tunus ekonomisinde 1980'lerden sonra artan ticari liberalizasyon üzerine, bu sürecin ihracat ve ithalat sektörlerine etkilerini uzun dönem ve kısa dönemler için ayrı ayrı incelemiştir ve sonucunda ihracat sektöründe kısa dönemde istihdam ve ücret artışları gözlenmiştir. Uzun dönem içinde ise yaparak öğrenmenin pozitif etkilerinin yanında üretkenlikte ve kapasitede gelişmeler ortaya çıktığı için düşüşler yaşandığı görülmüştür.

Kim ve Thompson (2006) 1964-1997 yılları arasında Birleşik Devletler üzerine yaptığı çalışmalarında tarifelerde yapılan indirimlerin ücretleri düşürdüğünü ve bununla birlikte satın alma gücünü de arttırdığını ortaya koymuşlardır. 1986-1990 yılları arası veriler kullanarak tarife indirimleri ve ithalat izinlerinde % 50'nin üzerine çıkan kısıtlama oranlarının Meksika'da ücretlere etkisini araştıran Feliciano (2001), ticaret yapılan sektörlerin ticaret yapılmayan sektörlere oranla daha fazla ücret düşüşleri ile karşı karşıya kaldığını bulmuştur.

Milner ve Wright (1998), sanayi açısından kalkınmakta olan ülkelerin işgücü piyasalarının liberalizasyondan etkilenip etkilenmediğini gösteren çalışmalarında ticaret politikası reformları ile Morityus'da ücretlerin seyrini incelemiş, 1972-1991 yılları arasında ticaret liberalizasyonu ile birlikte uzun dönemde ücretlerde artış gözlemlemiş, ancak kısa dönemde ücretlerde aşağı yönlü bir hareket belirlemişlerdir.

Greenway, Hine ve Wright (1999)'in yaptıkları çalışmada Birleşik Krallık'ın 1979-1991 yılları arasındaki 167 adet imalat sanayi alt sektörleri verileri ile ticaret yoğunluğunun ücretlere etkisini incelemişlerdir. İthalat ve ihracat yapılan sektörlerde ticaret yoğunluğu arttığında işgücüne talebi azaltarak, yurtiçi ücretleri arttırmaktadır.

Robbins (1996), çalışmasında 1976-1995 yılları arası farklı periyotlarda Arjantin, Şili, Kosta-Rika, Kolombiya, Malezya, Meksika, Filipinler, Çin ve Uruguay üzerine yaptığı çalışmada az gelişmiş ülkelerde ticaret liberalizasyonunun göreceli ücret farklarını düşürdüğünü göstermiştir.

Oyvat (2011) Türkiye üzerine yaptığı çalışmada, küreselleşmenin işgücü esnekliği ve işgücü pazarlık gücündeki düşüş sonucu özellikle de ticari malların üretildiği sektörlerde ücretleri düşürücü etkisinin olup olmadığı sorusuna yanıt aramış ve ticaret liberalizasyonunun takip ettiği düşük ücret durumunda rekabetin, imalat sanayinde ücret paylarını düşürdüğünü ortaya koymuştur.

Feenstra ve Hanson (1997) Meksika üzerine yaptıkları çalışmada gelişmekte olan ülkelerde 1980'lerle birlikte başlayan dış kaynaklı sermaye birikimi sürecinin, nitelikli işgücü talebini ve bu işgücünün talebinin de reel ücretleri arttırdığını bulmuştur. Bu reel ücretlerdeki artış aynı zamanda gelir eşitsizliğinin artmasına da yol açmıştır.

Gökalp, Baldemir ve Akgün (2011) Türkiye üzerine yaptığı incelemede, dışa açılma sürecinin ücretlere etkisini üç sektör grubunda incelemiştir. Bu sürecin emek yoğun sektörlerde çalışanların (niteliksiz işgücünün) ücretlerini, sermaye ve araştırma yoğun sektörlere nazaran arttırmadığı bulunmuştur. Teoremin aksine gelir dağılımının emek yoğun sektörde çalışanların lehine değişmediği, nitelikli işgücünün gelirlerinde daha yüksek düzeyde artış olduğu ve gelir dağılımının bozulduğu ortaya çıkmaktadır.

Avalos ve Savvides (2003), Latin Amerika ve Batı Asya üzerine yaptıkları çalışmada dış ticaret ve ücret eşitsizlikleri arasındaki ilişkiyi incelemişlerdir. Ticarette açıklık ücret farklarını her iki ülkede de azaltmaktadır. Revenga (1997), Meksika üzerine yaptığı çalışmasında kar paylarının ücret belirlemede önemli olduğunu ve ticarette korumacılığın ücret primlerini absorbe ettiğini vurgulamıştır. Ticari reformlar ücretleri baskılamaktadır ve kazanılabilecek karları azaltmaktadır. Onaran (2007) Kore, Meksika ve Türkiye için yaptığı incelemede, küreselleşmeyi uluslararası ticaret ve yabancı sermaye yatırımları ile bağdaştırarak, ücret değişimleri üzerindeki rolünü araştırmıştır. Kriz dönemlerinde ulusal paranın değer kaybı ve ekonomik resesyon görülen dönemlerde ücretlerin nasıl değiştiğini de incelediği çalışmasında, açıklığın ve endüstriyel politika altyapısının ticaret derinliğinin de etkili olduğunu belirtmiştir. İhracat yoğunluğunun artması, Türkiye ve Meksika imalat sanayi ücretlerinin düşmesine yol açarken, Kore için aynı etki söz konusu değildir. Yabancı sermaye yatırımlarının pozitif etki beklentisi ise üç ülke için de geçerli değildir.

Emirhan ve Konyalı (2010), 1983-2000 yılları arası Türkiye üzerine yaptıkları çalışmada imalat sanayisini tüm sektörler, ticarete tabi olan ve olmayan ve teknoloji yoğun olan ve olmayan sektörler olarak üçe bölmüşlerdir. Genel sonuç dışa açıklığın ücretler üzerine negatif etkisi olduğudur. İhracatın yüksek olduğu sektörlerde ücretler düşük, ithalatın yüksek olduğu sektörlerde ise ücretler yüksektir. İhracatın ücretlerle ters ilişkide olmasına açıklama getiren çalışmaya göre, ihracat yoğun sektörlerde uluslararası piyasalarla rekabet ve artan üretim maliyetlerinin karlılığı azaltmaması için ücretleri baskıladığıdır. Genel sonuç ise dış ticaretin Türkiye ekonomisinde beklendiği gibi üretkenliği arttırmayıp, rekabet için ücretlerde düşüşlere yönelindiğidir.

Abrache, Dickerson ve Green (2004) çalışmalarında ticari liberalizasyonun ücret düşüşlerine yol açtığını ve dışa açıklığın en yüksek olduğu sektörlerde en yüksek ücret düşüşlerine rastlandığını gözlemlemiştir.

2   Bir Gelir Bölüşümü Problemi Olarak Ücret Ve Ücreti Belirleyen Unsurlar

Ekonomideki önemli konulardan biri üretim süreci sonunda ortaya çıkan ürünün üretim faktörleri arasında nasıl paylaşılacağına karar verilmesidir. Bu karar teknik, ekonomik, toplumsal ve siyasal boyutları olan çok yönlü ve karmaşık bir olgudur (Öztürk, 2010). Bölüşüm problemi ve bu konuyla alakalı olarak ücret kuramları günümüze kadar iktisatçılar tarafından farklı şekillerde ele alınmış ve iktisadi olayların etkileri bu tanımlarla ifade edilmeye çalışılmıştır. Bölüşüm problemlerinin artan dış ticaretle birlikte daha da arttığı düşünülecek olursa, konuyu uluslararası ticaretle ilgili derli toplu görüşlere ilk olarak rastlanan merkantilist dönemden, dış ticaretin en yüksek seviyelere ulaştığı günümüze kadar incelemede fayda vardır. Dış ticaret ile ücretler arasındaki ilişkiye yönelik çıkarımlar da bu kuramlardan yola çıkarak elde edilebilir.

3   Neoklasik İktisatta Gelir Bölüşüm Problemi

Neoklasiklere göre işgücü piyasası; talebin marjinal verimlilik teorisine göre karını maksimum kılmak isteyen işverene ve arz teorisi ise faydasını maksimum kılmak isteyen işçiye bağlı olduğu bir piyasadan ibarettir (Leontaridi, 1998). Neoklasiklerde hem fiyatlar hem de miktarlar arz ve talep tarafından belirlenmektedir. Faktör piyasalarında arz-talep dengesi işgücünün tam istihdam durumunda olması olup, işgücü arzı ve talebini eşitleyen bir fiyata yani "ücrete" ulaşıldığı anda tam istihdam da sağlanmış olacaktır (Akyüz, 2009).

Neo klasik iktisatçıların varsayımları altında, emek talebi fonksiyonu $D_L = f(W/P, K)$, $f_1 < 0$ ve emek arzı fonksiyonu $S_L = f(W/P, K)$, $f_2 > 0$ iken işgücü piyasası dengesi $D_L = S_L$ olarak ifade edilir. (D_L) reel ücretle ters yönlü ilişki içindedir, çünkü kısa dönemde tek değişken girdi emek olduğu için (MR=MC) koşulu (W/P=MP$_L$) 'ye dönüşecektir ve daha düşük reel ücret ile işgücü maliyeti düşecek, bunun sonucunda daha fazla işgücü istihdam edilecektir. S_L'nin reel ücretlerle doğru yönlü ilişki içinde oluşu ise; emek sahibinin arz edeceği emek miktarını belirlerken çalışmanın marjinal zahmeti ile ücretin sağlayacağı marjinal tatmin arasındaki dengeyi göz önüne aldığı söylenebilir (Savaş, 2007).

Ücret, işçinin geliri olduğu için yaşam standartlarını belirleyen bir unsur, ekonomik açıdan maliyet unsuru ve ulusal gelirin gelir grupları arasında paylaşımının göstergesi olduğu için ise sosyal adaleti temsil eden bir unsurdur (Ar, 2007). Ancak bu derece önemli bir kavram olan ücret, liberal devletlerde yukarıda belirtildiği gibi ideal bir iş piyasasında değil, rekabetin eksik ve aksak olduğu tabii iş piyasalarında oluşmaktadır (Zaim, 1986). Ücret oluşumunda etkili arz ve talep koşullarının yanında, işgücü piyasasına etki eden yaşam maliyeti ve işgücü verimliliğindeki değişimler, işverenin ödeme gücü, diğer endüstri veya firmalarda ödenen ücretler, fiyatlar genel düzeyindeki sürekli artışlar, iktisadi konjonktürün seyri, mal piyasalarının özellikleri, seçilen istihdam politikaları ve ücretin istihdam üzerindeki sözde etkisi gibi birçok unsur ücret seviyesi üzerinde söz sahibidir (Shultz ve Coleman, 1959). Gelir; fiyatların bir fonksiyonu olup, fiyatlarda görülen değişimler ücretlerde değişimlere neden olmaktadır. Bunun dışında işçi ve işverenin piyasaya dair bilgilerinin tam olmayışı da işgücü piyasasında emek arz-talep dengelerinde olumsuz etkiler yaratmaktadır

Beşeri sermaye farklılıkları da ücret seviyeleri arasında farklılıklara yol açmaktadır. Yüksek beşeri sermaye stoku yüksek ücret gerektirdiği için, aynı iş kollarında farklı firmalarla çalışan iki işçinin ücretleri beşeri sermaye farklılıklarından dolayı birbirinden ayrılabilir. Bu durum iki işçinin çıktı düzeylerinin farklılaşmasına neden olabilir ve sonucunda çıktı düzeylerinin farklılaşması ücret farklılaşmasını gerektirebilir (Akyıldız ve Karabıçak, 2002).

4 Dış Ticaret ve Ücret İlişkisinin Uluslararası İktisattaki Yeri

Dış ticaretin ücretler üzerindeki etkisini açıklayabilmek için izlenecek yol, uluslararası ticaretin ortaya çıkışından günümüze kadar gelişerek gelen ve tartışmalara rağmen halen geçerliliğini koruyan uluslar arası iktisat teorilerine başvurmaktır. Dış ticaretin ücretlerle ilişkisini uluslararası düzeyde ortaya koyan teorilerden biri olan "Faktör Fiyatları Teoremi"ne göre aynı teknolojiye fakat farklı faktör donatımına sahip iki ülkenin ticarete açılmasıyla birlikte, eğer söz konusu iki ülke iki mal üretiyor ve faktör yoğunluklarında tersine dönme gerçekleşmiyorsa, faktör fiyatları eşitlenme eğilimi gösterir (Feenstra, 2004).

Ticarat liberalizasyonunun artışı ile yurtiçi gelir dağılımını teorik olarak ilişkilendiren ilk geleneksel ticaret teorisi olan Stolper-Samuelson gelir dağılımı teoremine göre, ülkeler ticarete daha çok açıldıkça ülkenin karşılaştırmalı olarak üstünlüğünün bulunduğu ihraç endüstrilerinde kullanılan bol faktörlere olan talep artar, ithalata rakip endüstrilerde kullanılan kıt faktörlere olan talep ise azalır. Bu nedenle işgücü ve sermaye gibi iki üretim faktörünü ele alan geleneksel modelde, artan dış ticaretin gelişmekte olan ülkelerin bol üretim faktörü olan işgücünün geliri olan ücretleri arttırması beklenmektedir (Litwin, 1998).

Yeni-Ricardocu görüşlerin geliştirdiği şekliyle ise; tarıma ilginin azaldığı sanayileşmiş dünyada zengin ülkeler yüksek katma değerli yani az emekli bol sermayeli malların üretiminde daha fazla rekabet gücüne sahip olup, tam tersi durumun görüldüğü fakir ülkeler ise az sermayeli ve bol emekli malların üretiminde daha fazla rekabet gücüne sahiptirler. Bu iki zıt özelliğe sahip ülkeler ticaret yapmalarıyla birlikte piyasalarda dengesizlikler görülmeye başlar. İthalat pek çok iş alanının ortadan kalkmasına yol açtığı için, genel sonuç emek aleyhine ve sermaye lehine işlemektedir. İthalat sonucu işlerini kaybeden işçiler yeni iş bulmak zorunda bırakılırken, bu durumu fark eden işverenler ücretleri aşağı çekecek, sermayedarlar kar marjlarını yükseltmek için bu fırsatı değerlendireceklerdir. İhracat sektörlerinde daha fazla kullanılan sermaye kıt hale geldikçe, sermayedarların karları daha da artacak ve küreselleşmeden karlı çıkan tek bir taraf olmuş olacaktır (Cohen, 2009). Ticaret liberalizasyonu ücretler konusunda bir nevi beklentileri boşa çıkarmıştır. İthal ikamesinden ihraç yanlısı politikalara kayma gelişmekte olan ülkelerde işgücü yoğun endüstrilerin genişleyerek işgücü talebinde artışa ve uzun dönemde ücret artışlarına neden olması beklenmiştir. Oysaki ticaret liberalizasyonu ile birlikte artan dış rekabet ücretlerde beklenen etkiye izin vermemektedir (Milner ve Wright, 1998).

5 Türkiye'de İmalat Sanayinde Yaşanan Gelişmeler Paralelinde Ücretlerin Gelişimi

Dış ticarette dönüşümün, 24 Ocak Kararlarıyla başladığı Türkiye'de mal piyasalarının dış pazarlara açılması ve ticaret kotalarının korumasındaki ithalat rejimi serbestleştirmesi 1980-83 döneminde başlamış, 1989-90'da sermaye hareketliliği ile devam etmiş, 1996'da AB ve Gümrük Birliği üyelikleri ile tamamlanmıştır. Döviz kuru yüksek bir devalüasyonla esnekleştirilmiş, teşviklerle ihracata yönelim sağlanmaya çalışılmıştır. 1980 öncesi korumacı ve ithal ikamesine dayalı içe dönük sanayileşme benimsenmiş, daha sonrasında ihracata dayalı büyümeyi benimseyerek 1990'lı yıllarda tamamen dışa açılmıştır (Yeldan, 2010). Türkiye ekonomisinde kar, faiz ve rant sahipleri lehine yaşanan dönüşümlerde reel ücretlerin azalan bir seyir izlemesinin veya düşük ücret politikasının nedenleri üç başlıkta özetlenebilir. Birincisi; tüketim harcamalarında kısıtlamalarla enflasyonu kontrol etme arzusu ve iç piyasaya olan talebi düşürerek, iç piyasada alıcı bulamayan malların yurt dışına satılma olanağının arttırılmasıdır. İkinci beklenti ise; istihdamın arttırılması amaçlı düşük ücret avantajıyla emek-yoğun yatırımların artacağıdır. Üçüncü önemli neden ise; üretim maliyetinde azalmanın bir yolu olarak görülen düşük ücretlerle, ihracat faaliyetinde dış dünya ile rekabet gücünün artacağıdır (Özkaplan, 1994).

1980 sonrası dış ticarette liberalleşme ve ekonomi politikaları ile ücretlerin seyri izlendiği zaman birebir örtüştüğü söylenebilir. İhracatı artırmaya yönelik politikaların emek-yoğun sanayilere dayandığı ve kısa

dönemde düşük maliyet temelinde rekabet gücü sağlamayı hedeflediği için ücretlerin düşürülmesini amaçladığı görülmektedir. Askeri yönetim yılları olan 1980-83 arası ve sendikaların baskılandığı 1981-87 arası reel ücret düşüşleri yılda % 3,3 oranındadır (Şenses ve Taymaz, 2003). 1988 sonrası dönemde ise reel ücretler 1993 yılına kadar artmıştır. En büyük sıçramanın 1991 yılında olmasının sebebi, bir önceki yılın sabit sermaye yatırımlarının %14 artmasına, büyüme oranının son yirmi yıldaki en yüksek büyüme oranı oluşuna, 1989 yerel seçim sonrası sendikal hakların kullanımının yaygınlaşmasına ve 1991 yılının genel seçim yılı olmasına bağlanmaktadır. 1994 krizi sonucunda düşen ücretler bu etkileri yok etmiş, 1994 yılından sonra yükselme eğiliminde olsa da ücretlerde ortalama artış 1993-2000 dönemi arası % 1,6 rakamıyla sınırlı kalmıştır (Kepenek ve Yentürk, 2003).

Sektörlerin faktör yoğunlukları açısından değerlendirilecek olursa ise 1980-1988 yılları arası emek ve sermaye yoğun sektörlerdeki değişim yüzdeleri benzer yapıda ilerlemekte olup, 1989-1993 yılları arası ise sermaye yoğun sektörlerdeki reel ücretler emek yoğun sektörlerdeki ücretlere kıyasla oldukça artış göstermiştir. 1994 kriz yılı her iki sektöre de aynı etkiyi bırakmış, 1996 sonrası sermaye yoğun sektörlerde artış emek yoğun sektörlerde ise azalış devam etmiştir (Gökalp vd., 2011).

6   Türkiye'de Ücret İhracat İlişkisinin Sınanması

Çalışmanın amacına yönelik olarak modelde çıktı düzeyinin, istihdam seviyesinin, ihracatın ve ithalatın ücret belirlemede rol oynadığı varsayımı ve kısıtları altında, ücretlerle ihracat düzeyi arasındaki ilişkiye bakılacaktır. Çalışmada 1988:Q1-2011:Q4 döneminde, Türkiye İstatistik Kurumu (TUİK) tarafından hesaplanan, 20 ve daha fazla çalışanı olan tüm kamu ve özel sektör işletmelerini kapsayan, Türk İmalat Sanayi alt sektörleri bazında ücret, istihdam, üretim (yayınlanmamış istatistikler), ithalat ve ihracat verileri kullanılmıştır. Ücret verilerinin 1988Q1-2006Q4 dönemleri arası "İstihdam ve Ücret İstatistikleri" veri tabanından dönemler itibariyle imalat sanayi üretimde çalışan saat başına reel ücret endeksi olarak alınmıştır. 2007:Q1-2011Q4 dönemleri arası nominal ücretlerin enflasyondan arındırılıp, reelleştirilmesi için ise TÜFE(2005=100) verileri TÜİK'ten temin edilmiştir.

Sektör tanımlaması Uluslararası Standart Sanayi Sınıflandırılması Rev.3'e göre olup, 2 basamakta 7 sanayi kolunu kapsamaktadır. Bu 7 sanayi kolunun belirlenmesinde, üretimin %70'ine sahip 7 sektör olan Gıda ürünleri ve içecek imalatı (15), Tekstil ürünleri imalatı (17), Giyim eşyası imalatı, kürkün işlenmesi ve boyanması (18), Kok kömürü, rafine edilmiş petrol ürünleri ve nükleer yakıt imalatı (23), Kimyasal madde ve ürünlerin imalatı (27), Başka yerde sınıflandırılmamış makine ve teçhizat imalatı (29) ve Motorlu kara taşıtı, römork ve yarı-römork imalatı (34) seçilmiştir.

Analiz E-Views 6.0 Beta ekonometri paket programında çoklu regresyon modeli ile uygulama gerçekleştirilmiştir. Bu modelin tahmini için ise "En Küçük Kareler (EKK)" yöntemi kullanılmıştır.

ADF ve KPSS birim kök testi sonuçlarına göre değişkenlerin düzeyde durağan olmadıkları ve birinci farkları alındığında durağan hale geldikleri için bütünleşme dereceleri I(1)'dir. Tüm değişkenlerin birinci dereceden entegre olması eşbütünleşme testini uygulayabilmemize imkan vermektedir. Değişkenler arasında eşbütünleşme var ise uzun dönemli ilişki olduğunu, eğer eşbütünleşme yok ise uzun dönemli ilişki olmadığını söyleyebilmekteyiz. Birim kök testleri yapılan verilere, çok değişkenli eşbütünleşmenin test edilmesine yarayan Johansen-Juselius (1990) eşbütünleşme testi yapılmış ve analiz sonuçları her bir sektör için değerlendirilmiştir ve normalize edilmiş eşbütünleşme vektörleri ile beraber sunulmuştur.

Tüm sektörlerin kısıtsız eşbütünleşme rank testi sonuçlarına göre İz test istatistiği % 5 önem düzeyinde değişkenler arasında bir eşbütünleşme vektörünün varlığına işaret ederken maksimum özdeğer istatistiği % 5 önem düzeyinde değişkenler arasında uzun dönem denge ilişkisinin bulunmadığını göstermektedir. Bu bağlamda İz test istatistiği dikkate alınarak değişkenler arasında bir eşbütünleşme vektörünün varlığı kabul edilmiştir. Söz konusu eşbütünleşme vektörü bağımlı değişken ücrete göre normalize edilerek değişkenler arasındaki uzun dönemli ilişkiyi gösteren denklemlere de her bir sektör için verilen analiz değerlerinin altında belirtilmiştir.

Gıda ürünleri ve içecek imalatı, Motorlu Kara Taşıtı, Römork ve Yarı-Römork İmalatı ve Kok Kömürü, Rafine Edilmiş Petrol Ürünleri ve Nükleer Yakıt İmalatı sektörüne ait bulgulara göre ihracatın ücret üzerinde pozitif etkisi vardır. Buna göre üretim ve istihdam düzeyindeki % 1'lik bir artış uzun dönemde ücretlerde sırasıyla %0.47 ve %1.27'lik bir artışa yol açarken, dışa açıklığı temsil eden net ihracatın milli gelire oranındaki bir birimlik artış ücretlerde 0.0203'lük bir azalmaya neden olmaktadır. Motorlu Kara Taşıtı, Römork ve Yarı-Römork İmalatı sektöründe üretim düzeyindeki % 1'lik bir artış uzun dönemde ücretlerde %0.22'lik bir azalışa yol açarken istihdamdaki %1'lik bir artış uzun dönemde ücretler üzerinde %0.14'lük bir artışa yol açmaktadır. İhracatın milli gelire oranındaki bir birimlik artış ise ücretlerde 0.0155'lik bir artışa neden olmaktadır. Kok Kömürü, Rafine Edilmiş Petrol Ürünleri ve Nükleer Yakıt İmalatı üretim ve istihdam düzeyindeki % 1'lik bir artış uzun dönemde ücretlerde sırasıyla %0.68 ve %080'lik bir azalışa yol açarken, ihracatın milli gelire oranındaki bir birimlik artış ise ücretlerde 0.0772'lik bir artışa neden olmaktadır.

Tablo 2. *Eşbütünleşme Analizi Sonuçları*

Başka Yerde Sınıflandırılmamış Makine Ve Teçhizat İmalatı, Tekstil ürünleri imalatı, Giyim eşyası imalatı, Kimyasal Madde Ve Ürünlerin İmalatı sektörlerine ait verilerden elde edilen sonuçlara göre ihracattaki değişimlerin ücretler üzerinde negatif bir etkiye sahip olduğu gözlenmektedir. Buna göre üretim ve istihdam düzeyindeki % 1'lik bir artış uzun dönemde ücretlerde sırasıyla %0.65 ve %3.90'lık bir artışa yol açarken, ihracatın milli gelire oranındaki bir birimlik artış ücretlerde 0.0586'lık bir azalmaya neden olmaktadır. Tekstil ürünleri imalatı sektöründe üretim düzeyindeki % 1'lik bir artış uzun dönemde ücretlerde % 0.23'lük bir artışa yol açarken, istihdamdaki %1'lik bir artış uzun dönemde ücretler üzerinde %0.55 azalışa yol açmaktadır. İhracatın milli gelire oranındaki bir birimlik artış ise ücretlerde 0.0915'lik bir azalmaya neden olmaktadır. Giyim eşyası imalatı sektöründe üretimdeki % 1'lik bir artış uzun dönemde ücretlerde %0.96'lık bir azalışa yol açarken istihdamdaki %1'lik bir artış uzun dönemde ücretler üzerinde %0.02'lik bir artışa yol açmaktadır. İhracatın milli gelire oranındaki bir birimlik artış ise ücretlerde 0.0025'lik bir azalmaya neden olmaktadır. Kimyasal Madde Ve Ürünlerin İmalatı sektöründe üretim ve istihdam düzeyindeki % 1'lik bir artış uzun dönemde ücretlerde sırasıyla % 0.34 ve %1.46'lık bir artışa yol açarken, ihracatın milli gelire oranındaki bir birimlik artış ise ücretlerde 0.0322'lik bir azalmaya neden olmaktadır.

7   Sonuç

Dünya genelinde serbestleşme temeline dayalı neo liberal politikalarla dışa açıklık temelli küresel bir yapı ortaya çıkmış, üretken sermaye verimlilik ve kar oranlarını arttırmak amacıyla artan dış ticaret ve rekabet olgusu ekonominin her alanında olduğu gibi ücretler üzerinde de etkili olmuştur. Son otuz yıl içerisinde dünya ekonomisinin hızla bütünleşmesi, dikkatleri bu bütünleşmenin ücretler üzerindeki etkilerinin incelenmesine çekmiştir.

Buna göre; 15. sektör olan gıda ürünleri ve içecek imalatı, 17. sektör olan tekstil ürünleri imalatı, 18. sektör olan giyim eşyası imalatı, kürkün işlenmesi ve boyanması, 24. sektör olan kimyasal madde ve ürünlerin imalatı, 29. sektör olan başka yerde sınıflandırılmamış makine ve teçhizat imalatı ve 34. sektör olan motorlu kara taşıtı, römork ve yarı-römork imalatında ihracatın ücretler üzerine negatif etkisi söz konusudur. Başka bir deyişle, bu sektörlerde ihracat oranlarında herhangi bir artış ücretlerde azalışa neden olmaktadır. Bu negatif etkinin en yüksek olduğu sektör gıda ürünleri ve içecek imalatı olurken, ikinci en yüksek negatif etkiye kimyasal madde ve ürünlerin imalatı sahiptir. Dışa açıklığın etkilerine bakılacak olursa da ücretler üzerinde en büyük negatif etkiye plastik ve kauçuk ürünleri imalatının sahip olduğunu söyleyebiliriz.

Motorlu kara taşıtı, römork ve yarı-römork imalatına ait analiz sonuçlarına göre ücretlerin ve dışa açıklığın etkisinin negatif ancak oldukça düşük olduğu görülmektedir. Bu sonuç bize bu sektörde rakebet gücünün yüksekliğini işaret etmektedir. Sektörün özellikleri incelenecek olursa, gelişmiş teknolojilerin ülke içine transfer yaratması ve bu teknolojiye adapte olabilecek nitelikli işgücü arzında yaşanan sıkıntılar ücretlerde bir miktar düşüşler yaşanmasını kaçınılmaz kılmaktadır. Sektörel özellikler, sendikalaşma oranları, rejim değişiklikleri, yasalar ve birçok yerleşik sosyal yapı gibi kurumsal etkiler emeğin karşılığı olan ücretin belirlenmesinin çok boyutlu olmasına neden olmakla birlikte ana akım uluslar arası ticaret kuramının da desteklediği gibi, ihracatın genişlemesinin işgücü bakımından zengin olan Türkiye'de talebi arttırarak ücretlerde pozitif etki yaratacağıdır. Sonuçlara baktığımızda ise durumun pek de kuramla tutarlı olmadığını görmekteyiz.

Sonuç olarak, gelirin kâr ve ücretler olarak belirlendiği bir ortamda kâr ve ücretleri belirleyen etkenlerin birikimli 'bir neden-sonuç ilişkisi' içinde birbirlerini şekillendirmesi kaçınılmazdır. Tam liberalleşme süreciyle ihracata dayalı büyüme politikası yeni rekabet koşullarıyla birleşince uygun rekabet koşullarında kâr oranlarında yaşanan herhangi bir düşüşün, fiyat artışları ile telafi edilebilirliği geçerli olmamıştır. Artan rekabet ile kar oranlarında yaşanan düşüşlerde maliyeti kısmak için ilk başvurulan da ücretler olmuştur. Ücretlerin esnekliğinin yüksek oluşu ve aynı zamanda ithalata bağımlı ihracat yapısına sahip sektörlerde firmaların girdi maliyet fiyatlarında söz sahibi olamamalarının bu durumda büyük rolü vardır. Bu etkiyi yok edebilmenin yolu ise daha verimli bir üretim teknolojisine geçiştir ancak gelişmekte olan ülke sınıfında yer alan Türkiye'de bu da pek mümkün olamamaktadır. Sürekli rekabet süreci ve teknolojik değişmelerin yarattığı farklı üretim koşullarına adaptasyonda zorluk ve nitelikli işgücünün kıt oluşu, üretimde verimlilik sağlanamayışı ve işsizler ordusundan kaynaklı esnek ücret yapısı ücretlerde düşüşlere neden olmaktadır. Ayrıca imalat sanayi anketlerinin kapsadığı firmaların tam rekabet varsayımına uymaması durumu daha da kötüleştirmektedir.

2008 Küresel Krizinin Felsefesi

Philosophy of the 2008 Global Crisis

Ziya Arpalı (Kyrgyzstan-Turkey Manas University, Kyrgyzstan)

Abstract

The crisis in late 2007 and early 2008, re-questioning of capitalism and re-evaluating institutional structures have arisen. Developed countries which directing of the world economy started a process along with the comments that developed countries maintain their existence. By Western economists led to criticism of the crisis inform of "today's form of capitalism, can't establish compliance with the changing world". The economic model based on the Balance of Imbalance is scheduled to sleep period in future years of the world management system. The sleeping process has been completed by the broken Balance of Imbalance. The process of planning in the field of application and the name given is crisis. This process should have a philosophy that mobilizing the internal dynamics of the economy. At the same time this crisis shown that money-driven economy conversion process is necessity in capitalism. The process of falling asleep economic model, in other words, the output from the crisis, not the money lead the economy but the economy lead the money. Transformation process will be realized at some point. In this study, it is introduced the philosophy of the crisis, in order to put into action the inner dynamics of capitalism's legal infrastructure, the political preferences of the founders of the political game and to pass system into sleeping process the necessity of the transformation an economic model to the upper structure have been identified.

1 Giriş

Kriz tanımı üzerinde ortak tanım olmasa da, varılan ortak bir kavram bulunmaktadır. Dengenin bozulması. Bozulma makro düzeyde ekonomik büyüklükler, mikro düzeyde bilançoların bozulması, bilanço içerisindeki kalemlerden kredi kalitesinin bozulması, mevduat içerisinde vade uyumunun bozulması. Bir denge; kontrolden çıkan büyüme, dengeye dışarıdan bir müdahale olması ya da dengenin tarafları arasında dengenin birisi lehine tekrar denge oluşturulmaya çalışması durumunda bozulabilir. Bu bağlamda krizi tanımlarken: *Kriz, dengesizliğin dengesinin bozulması* sonucu ekonomik olayların önceden bilinmesi ama katlanılmak istenmeyen maliyet nedeniyle aniden beklenmeyen olaylar olarak tanımlanan yeni ekonomik olayların tepkiye dönüşmesi sonucu ekonomik yönetimlerin mazeret ileri sürmeleri nedeniyle ortaya çıkan yönetim boşluğunun yönetilme sürecinden başka bir şey değildir.

Dengesizliğin dengesinin bozulmasında araçlar farklı olabilir, ancak süreç ve zamanlama ile ilgili politikalar, varlıkların el değişimi ve paylaşımına yönelik müdahaleye neden olan sonuçlar doğurmaktadır. Düşük faiz, kalitesi düşürülmüş kredi kullanım fırsatlarını sağlayan politikalar, teknolojideki gelişmelerin sonucu sanal ortamda kontrolden çıkmış büyük fonların piyasalara anlık giriş çıkışları, ekonomiyi sanal ekonomiye dönüştüren kağıtların kar yumağı mülkiyetten yoksun el değiştirmesi gibi türev piyasaların karmaşıklığı, yatırımcıların risk iştahını artırarak faize dayalı sistemin değerle ifade edilmeyen balona dönüşerek büyüyen ekonomin spekülatif hareketlerle dengesizliğin dengesinin taraflarından birinin lehine tekrar dengeye getirebilmek için siyasi bir karar olarak dünya kamu oyunu meşgul eden, vergi mükelleflerinin maliyetine katlanacağı kriz, ekonomik modelin uykudan uyanacağı süreç, üçüncü dünya paylaşımından başka bir şey değildir.

Bu çalışmada krizin bizatihi ekonomik modelin özünde var olduğunu, dünya servetindeki el değiştirmelere ihtiyaç duyulması sonucu yeniden paylaşımı sağlamaya yönelik amacın aracı olduğunu ortaya koymak. Krizin, *dengesizliğin dengesinin bozulması* sonucu, ortaya çıkan yönetim boşluğunun yönetilme süreci olduğu belirtilerek, uygulanan neo-liberal politikalarının etkisiz kaldığı ve kriz maliyetinin vergi mükellefleri üzerinde kalacağı tespiti yapılmıştır.

2 2008 Küresel Krizi Farklılaştıran ve Krizin Ortaya Çıkış Nedenleri

Katma değeri en yüksek olan teknoloji üretimi yapan gelişmiş ülkelerle, bilgi teknolojisini gerçekleştiren ülkelerin aleyhine süreç hızlanırken bilim teknolojisi üreten, dünya yönetimini üstlenen küresel sermayenin, tüzel kişiliğe sahip devlet olma yönünde fırsata dönüştürmeye çalıştığı kriz, siyasi bir tercih olarak spekülatif hareketler sonucu ortaya çıkmıştır.

1990'lı yıllarda, dünyada finansal piyasalardaki küreselleşme ve şeffaflaşma süreci ile birlikte bilgi teknolojisinde yaşanan buluş ve yeniliklerin finansal tekniklerde ve araçlarda sağladığı gelişim, yaşanan krizlere farklı boyutlar katmıştır. Yaşanan teknolojik gelişme sermaye akımlarının hızlanmasını kolaylaştırmış ve aynı zamanda yaşanan krizleri yaygınlaştırma ve algılamada da hızlandırıcı bir rol üslenmiştir.

2008 yılında yaşanmaya başlanan, birçok iktisatçı tarafından mortgage krizi, krizin başlangıcı olarak ifade edilse de, yaşanan süreç içerisinde karşılanması talep edilen likiditenin sistem içerisinde hareket kabiliyetinin etkisizleştirilmesi nedeniyle likidite krizine dönüşmüştür.

Krizin nedenleri olarak;

1. Likidite bolluğu sonucunda verilen kalitesi düşük krediler,

2. Aşırı menkul kıymetleştirme,

3. Saydamlık eksikliği,

4. Kurumsal yapı olan derecelendirme kurumlarının denetleme ve düzenlemedeki kabiliyetinin etkisizleştirilmesi ve kurumların müdahalede gecikmeleri (Alantar, 2009).

5. Spekülatif sermayenin hareketlerinin kontrol dışı kalmasıdır.

Netice olarak nedenlerin ortaya çıkmasını sağlayan; alınan politik kararlar ve siyasi tercihlerdir. Bu karar ve tercihlerin sonucu sanal ekonominin büyümesi ve nihaiyi olarak sanal ortamda oluşan finansal kriz reel ekonomiyi etkilemiştir.

2000-2007 yılları arası dönemde piyasalarda likiditenin tavan yaptığı, ekonomilerin akılcılıktan uzaklaştığı ve aşırı risk iştahının da finansal krize hız kazandırdığı söylenebilir.

Harvard Üniversitesi öğretim üyesi Dani Rodrik, Forum İstanbul'da yaptığı konuşmada küresel krizin ortaya çıkardığı zafiyetleri üç ana grupta toplamaktadır:

1. Mali kesimde yapılan düzenlemelerin, yenilikler karşısında yetersiz kalışı.

2. ektörde alınan risklerin anlaşılamamasıdır.

3. Aşırı kaldıraç kullanılmasına izin verilirken; ahlaki zafiyetler, yöneticilerin yanlış teşvikleri vs. küçümseniyor (Dani, 2010) olmasıdır.

Bu sınıflamada bile hukuki düzenleme zafiyeti, kontrol dışına çıkan ve akıl tutulması olarak ifade edilebilecek olan risk karmaşıklığı ile yönetimdeki ahlak bozulmasına vurgu yapılmaktadır.

Uluslararası finansal kriz tartışmalarında iktisatçılar balon ve köpük kavramları üzerinde fikir birliğine varırken, balon ve köpük oluşumunu etkinleştiren spekülatif sermayenin damarlarında dolaşan kapitalist sistemin genlerinde var olan faiz üzerinde durmamaktadırlar.

Faiz toplumsal değer yargılarının adeta kültürel dokusuyla uyumlaşmıştır. Ticari hayatta vade farklarının belirlenmesinde etken olan, spot piyasalarda, kontratlarda rol alan, piyasaya yön veren, büyük rakamlara ulaşmış olan borçlarda bir puanlık değişimin sonucu bakiye üzerinde etkili olan, üretim ve toplumsal adaletsizliğe neden olan faiz, göz ardı edilemeyecek kadar etkili faktördür. Dolayısıyla faizin ekonomi üzerindeki bu tahribatı göz ardı edilmektedir.

Ekonomideki dengesizliğin dengesinin kalıcı olmaması: Krizin bizatihi sistemin kendi yapısında var olması ve kapitalist sistemin DNA'sında var olan faizden kaynaklanmaktadır. Dengenin bozulmasının temelinde faiz etkili olmaktadır. Bu nedenle;

1. Küresel düzeyde reel dengesizliklerin oluşuyor olması, başta ABD-Çin ilişkileriyle ortaya çıkan dış ticaret dengesizliği ve üzerine rezervlerdeki hızlı artışlarında eklenmesi neticesinde küresel likidite patlamıştır.

2. Gerekli mekanizmalar olmadığı için, finansal krize küresel düzeyde tepki verilemiyor. Krizin derinliğine rağmen finansal kesimin düzenlenmesi, canlandırma paketleri ve küresel likidite konularında bir türlü koordinasyon sağlanamıyor olması. Faiz sistemine bağlı paylaşımın optimum noktada dengeyi sağlayamamasıdır.

3　Küresel Krizi Tetikleyen Sürecin İşleyişi

1990 yılı sonrası ABD ekonomisini hareket kabiliyetini koruya bilmek için düşük faiz bol para siyaseti benimsemiştir (Ertuna, 2009: 26). 2000 yılının başlarından itibaren ise dünya ekonomisinin kazandığı büyüme yönündeki ivme neticesi, parasal genişleme ve iyimserlik piyasalarda özellikle mal piyasasında hızlı fiyat yükselişine ve bu piyasalarda bir balon oluşmasına yol açmıştır (Akgüç, 2009:7). Haziran 2003 de mortgage faiz oranları 45 yılın en düşük seviyelerine inmiştir. Faizlerin gayrimenkul fiyat artışının altına düşmesi, borçlanarak gayrimenkule yatırım yapmayı kazançlı hale getirmiştir. ABD taşınmaz mal piyasasında fiyatlar kısa bir sürede ikiye katlanmış, 650 bin dolayında taşınmaz mal stoku oluşmuştur. Yalnız konut sahibi olmak isteyenler değil, yatırımcılar, vurguncular, karlı bir alan olarak gördükleri için gayrimenkul piyasasına yönelmişlerdir. Bankalar bilinçli olarak muhtemelen aldıkları kredilerin geri ödemelerinin tamamını ödeyecek kişilere vermişlerdir. Bu davranışlarının arkasındaki esas neden, ev fiyatları arttıkça kazançlarının garanti olacağını bilmeleridir. Bankalar ev fiyatları artmaya devam ederse kazançlarını artıracak, kredi alanlar geri ödeme yapmaz duruma gelseler bile, evlerini ellerinden alıp verdikleri kredilerden daha yüksek bir fiyatla satacaklar yani her iki durumda da kazançlı çıkacaklar. Daha doğrusu bankalar kredilerin ödememe riskinin bir kısmını türev araçları yoluyla menkulü kıymetleştirerek diğer bankalara, finans kurumlarına ve fonlara dağıtmışlar ve bu şekilde kendilerini

korumuşlardır. İpotek karşılığı krediler için çıkarılan varlığa dayalı menkul kıymetler Lehman Brothers ve diğer büyük finansal kurumlar tarafından piyasaya sürülmüş, bu menkul kıymetlerin önemli bir bölümü yatırım bankaları/ticaret bankacılığının yatırım bankacılığı yapan bölümlerince satın alınmıştır (Akgüç, 2009:7).

Gözden kaçan ya da gözden kaçırılmak isten ise, gayrimenkul kredilerinden elde edilen yüksek riskli menkul kıymetlerin tahsil edilebilirlikleri düşüktür. Bu yüzden çok fazla riskli kredi veren bir finansal kuruluş batar ya da yükümlülüklerini yerine getiremezse bu durum diğer finansal kurumlar arasına da yayılırsa, bankalar birbirlerine para vermeyi kesecekler ve daha çok finansal kurum likidite darlığı yaşayacak olmasıdır (Pressacco and Seravalli, 2009:792-793).

Dünya ekonomisini etkisi altına alan 2007- 2008 finansal krizi ve sonunda gerçekleşen inişli çıkışlı süreç aslında varlıkların el değiştirme mücadelesidir. Piyasa yapıcısı aktörler, araçlar, ürünler ve birimler arasında hareket alanını kısıtlama süreci yaşanmaktadır. Bu durum krize neden olan süreç değil dengesizliğin dengesinin bozulmasının doğal sonucudur. Finans sektöründe artan sorunlar krizi tetikleyen en önemli nedenler haline dönüştürülmüştür.

Geri dönmeyen krediler ne kadar artar ise bilançodaki vade uyumsuzluğu o denli çoğalır. Likidite riski yüksek, dövizde aşırı pozisyon açığı ile çalışan, özkaynakları yetersiz olan bir bankacılık sisteminin varlığı, kuşkusuz ekonomik kriz için uygun bir ortam yaratır (Akgüç, 2001). Bu bağlamda krize giden yolu açan nedenleri sıralamak istersek:

1. Rezerv paranın (ABD doları) tahtına yönelik Euro bölgesinden gelen tehdit,
2. Kontrolden çıkan enerji kaynaklarına sahip diktatörlerden gelen tehdit,
3. BRIC (Yükselen Ekonomiler) dünya üretim hacmindeki paylarının artması nedeniyle ortaya çıkan durumun tehdit olarak algılanması,
4. Stoklardaki ekonomik ömrü tamamlanmış silah, mühimmat, araç ve gereçlerin yüksek maliyetinden kurtulma isteği,
5. Üçüncü dünya paylaşımının küresel sermaye lehine yeniden tasarım sürecinin başlatılmasına duyulan gereksinim,
6. Dünya üretim hacminin genişlemesi için gerek duyulan yeni icatların gerçekleşememiş olması,ya da üretim tarihinin ötelenmesi,
7. Azalan oranda küresel sermayenin artı-değerdeki payının azalması,
8. Tek kutuplu dünyada dengesizliğin dengesinde istikrarlı büyümenin durmuş olması,
9. Emeğin üretiminin sermayeye dönüşüm sürecinin uzaması,
10. Sistemin devamlılığını sürdürebilmek için kriz süreçlerinin zaman dilimini 10 yıl Aralığından 5 yıl, son zamanlarda 19 ay gibi bir zaman aralığına çekmiş olması, bir başka ifadeyle sistem tıkanıklığının küçük çaplı operasyonlarla aşılamayacağı noktaya gelmiş olması,
11. Sermayenin kendini yenileme maliyetlerinin artması, 1929-1933 krizinden sonra rafa kaldırılmış olan kriz senaryosu 2007 yılında dünya ekonomisinin gündemine küresel sermayenin siyasi tercihi olarak oturtulmuş olması,
12. Krizin esas nedeni dolar merkezli dünya para sistemidir.
13. ABD'nin düşük dolar strateji ile dış ticaret açığını kapatma düşüncesi, Kapitalist sistemin gelecekte de öncelikli sorunlarından olan, dünya liderlik sorunu su yüzüne çıkmamış ve politikalarının sürdürülebilirliği tartışılır hale gelmiş olması, küresel ekonomide dengesizliğin dengesinin bozulmasında bir başka belirleyici etken olmuştur.

Akat'a göre kriz, para sistemindeki zafiyetin kanıtıdır (Akat, 2009). Aynı zamanda paranın ekonomiye yön verdiği nihaiyi dönemin sonuna yaklaşırken, ekonominin paraya yön vereceği aşamaya gelinmiş olmasıdır.

4 Siyasi Tercih Olarak Krizin Hukuki Altyapısı

ABD'de hukuki düzenleme 90'lı yılların başında krizin yolunu açan 'SEC 144 A yasası' ile olmuştur. Bu düzenleme tahvil piyasasının yabancılara açılmasını sağlamıştır. Aynı yıllarda 65 sayılı yasanın yürürlükten kaldırılmasıyla Japonya finansal piyasalarına yabancıların girme serbestliği sağlanmıştır. Ayrıca AB'de ülkelerinin tüm sınırları kaldırma girişimlerinin finansal piyasaları da kapsıyor olması teknolojik gelişimle paralel gelişen sermayenin yeni coğrafyaları hızla etki alanına almasıyla artarak genişleyen dünya ticaret hacminin yaratmış olduğu katma değerin paylaşılması finansal piyasalarla ilgili bir takım zorlukları da beraberinde getirmiştir.

Bu gelişme süreci küreselleşen finansal sistemde ikili bir yapı ortaya çıkarmıştır. Birincisi üretilmiş mal ve ticaretin yapıldığı yapı, ikincisi para tüccarlarıyla vurguncuların yer aldığı paradan para kazanan üretken olmayan bir kültürel bir yapı. Krizi bu iki yapının mücadelesi olarak da görmekte mümkün. Yani kriz kültürel yapının doğal sonucu olarak dışarıdan ekonomiye müdahale edilebilirlik üzerinden geliştirilmiş bir oğludur.

Bu kültürel yapı bütün dünyada finansal sektörün, sanayinin; rantiyecilerin de yatırımcıların önüne geçmesine neden olmuştur. Ayrıca, bu yapı finansal sektörün tek başına krizi belirleyen unsur olarak düşünülmesine neden olan algılama hatasına yol açmıştır. Çünkü sistem faize odaklı büyümektedir. Faizin hareket kabiliyeti kazandığı kurumsal yapılar ise finans sektör içerisinde ağırlıklı olarak yer alan aynı zamanda ekonomi üzerinde etkin rol alan bankalardır. Bankalar ekonominin DNA'sına enjekte edilen faizlerden beslen bir yapısal özelliğe sahiptir. Bu yapısal özelliğinden dolayı da ekonominin kırılganlığı üzerinde temel belirleyici faktör olmaktadır.

5 Ticari Bankaların Kriz Sürecine Katkısı Ve Önemi

Küresel bankacılığın 2000-2008 yılları arasında büyümesi krize sürükleyen nedenlerin gizlenmesinde de etkili olmuştur. Özellikle ABD ve AB'de ticari bankacılık bu dönemde hızlı ivme kazanmıştır. ABD'de 2000 yılların başında 7 trilyon dolar seviyesindeki aktif büyüklüğe sahip olan ticari bankacılık, 2008 yılında yaklaşık 15 trilyon dolar seviyesine ulaşmıştır. AB'de ise, 30 trilyon dolardan 60 trilyon seviyesine ulaşmıştır (IFSL, Banking 2010). Bu gelişme reel bir finans olmaktan çok, sorunları bünyesinde taşıyan sanal bir büyüme şeklindedir. Bünyede taşınan sorun; ters seçim ve ahlaki tehdit sorununun bir niteliği şeklinde ortaya çıkmaktadır. Dolayısıyla emlak kredilerinin dağıtımda teminatsız kredilerin dağıtımıyla başlayan süreç (ters seçim) krizin ilk unsurudur. Bu krediyi dağıtan finans kurumunun kurtarılması gerektiği şeklindeki beklentisi de ahlaki tehdidi olarak açıklanmaktadır (Mishkin, 1992;115-130). Ticari bankacılık bünyesinde yatırım bankacılığına hareket kabiliyeti kazandıran hukuki düzenlemeler, yöneticilere verilen yüksek prim ve imtiyazlı hisse senelerinin yönetim kurulu üyelerine dağıtılması, krizin önemli nedenleri arasında sayılmaktadır (Gorton,2008). Bu durum geleneksel bankacılığın devletler tarafından desteklenmesi nedeniyle, krizden kaynaklanan sorunları artırmıştır. İkinci dünya savaşıyla rafa kaldırılan, 1929 krizinden sonra, 90'lı yıllarda yürürlükten kaldırılan ticari bankaların yatırım bankacılığı yapmalarını yasaklayan Glass Stegall Kanunu, krize yol açan hukuki temel sebeplerden biridir.

Finansal piyasalarda çok önemli role sahip olan bankaların, finansal aracılık ve borç verme işlemlerindeki gücünün azalması, yatırımlarda ve ekonomik faaliyetlerde düşüşe neden olacaktır (Mishkin, 1997: 67). Banka bilânçolarında bozulmanın temel nedeni ise, yetersiz düzenleme ve denetleme sonucu aşırı risk üstlenilmiş olmasıdır. Faiz oranlarındaki artış, hisse senedi fiyatlarında hızlı düşüş ve para biriminde beklenmeyen değer kaybı gibi olumsuz şoklara neden olunmuştur. Böyle bir durumda finansal kurumlar ekonomik faaliyetleri yavaşlatma pahasına kredi verme işlemlerini kısmak ya da sermaye artırımına gitmek. Finansal kurumların kredi verme işlemlerinin önündeki en büyük engel ise, asimetrik bilgi sorunlarının artmasından kaynaklanan bilânçolardaki bozulmalardır ki, bu da finansal krizlerin etki alanlarının genişlemesinin temel faktördür (Mishkin, 1999a: 2–3).

Bu bağlamda bankacılık sektörünün; ABD gibi, gelişmiş türev piyasalarının işlerlik kazandığı, sermaye piyasalarınca yönlendirilen ve sermaye odaklı ekonomilerde geniş ekonomik alanı etkileyen kriz öncesine kadar göreli önemi azalmamıştı. Ancak özellikle banka merkezli finansal sisteme sahip gelişmekte olan ülkelerde bankacılık sektörü ' özel' olma niteliğini, ekonominin parayı yönetme kabiliyeti gerçekleşene kadar koruyacaktır. Netice de paranın ekonomiyi yönlendirdiği kriz aşamasında nakit pozisyonda olanlar, kurtarma paketleriyle gerçekleştirilen varlıkların el değiştirilmesi ve yaklaşık iki trilyon doların buharlaşma sürecinde karlı çıkmışlardır. Bu nedenle bankalar aracı kurum olarak yeni bir dönüşüm süreci gerçekleşene kadar "özel" olma konumlarını sürdürmede ısrarlı olacaklardır.

IMF'nin eski başkan yardımcılarından Joseph E. Stiglitz'e göre, "Diğer ülkelerde finans sektörüne ve onun gücüne gösterilen saygı çoğunlukla ABD'de olduğundan daha büyüktür. Finans sektörünün görüşleri ve politikaları yönlendirebilir ve hatta seçim sonuçlarını etkileyebilir" (Korkmaz, 2013). Günümüzde olduğu gibi, dünya coğrafyasında sınırlar yeniden çizilirken yönetimleri de geleceğe yönelik kurdukları modele uygun olarak tasarlanmaktadır. Süreç içerisinde tasarıların uygulanabilirliği bankaların "özel" olma konumlarının sürdürülebilirliğine bağlıdır. Ayrıca süreç yaşanırken yeni kullanılabilecek kavramlara ihtiyaç duyulmaktadır.

2008 Uluslararası Finansal Krizin ekonomik dönüşüm sürecinde kullanılmaya başlanan kavramlar ise;

1. Batmayacak kadar büyük,
2. Batmayacak kadar iyi bağlantılı,
3. Batmayacak kadar politik olmak.

İfadeleri ile kullanılan bu kavramlar, ölçeğin yarattığı risklerin ekonomik ve politik yönlerine vurgu yapmaktadır. Aynı zamanda bilinen iktisat yöntemleriyle sorunun çözülemeyeceğini de ortaya koymaktadır.

Netice olarak günümüzde, kredi sisteminin makro ekonomik faaliyetler açısından önemi, uluslararası finansal krizle birlikte ticari bankaların en önemli rakipleri arasında yer alan yatırım bankalarının faaliyetleri büyük ölçüde sekteye uğramıştır. Bankaların finans sektöründe büyük paya sahip olmaları ve para kanallarındaki hareket kabiliyetlerindeki rolleri nedeniyle ve ekonomiye yön vermeleri neticesinde hala sistemik krize neden olma riski taşımaktalar. Bu nedenle bankalar halen 'özel' olma konumuna sahip ve uluslararası finansal kriz sürecinde yaşanan banka kurtarmaları bankaların hala fazlasıyla "özel" olduğunu göstermektedir.

6   Sistemde Bir Düzeltme Hareketi Olarak Finansal Kriz

Soğuk savaş sonrası; üretim ve finans sermayesi küreselleşirken beklenti ve kriz tetikleyicilerde küreselleşmiştir. Krizi kapitalist sistemde bir düzeltme hareketi olarak düşünmekse, özelleştirilen karın maliyetinin toplumun geniş kesimine ödettirilirken, krizden kurtulma operasyonları adı altında varlıkların el değiştirme sürecinde küresel sermayenin yeniden yapılandırılma zorunluluğunun ortaya çıkmasının sonucudur.

Krizin ortaya koyduğu sonuçlardan biri de faize dayalı sistem tıkanmıştır. Tıkanıklığı aşabilmek için yeni bir patlamaya ihtiyaç duyulmaktadır. Patlama ise spekülatif sermaye ile gerçekleşebilmiştir. Çünkü spekülatif sermaye hem küresel sermayeye hem de iktidarlara yön vermektedir. Aynı zamanda spekülatif sermaye aklın yönettiği merkezin ikna aracıdır.

Doların rezerv para olma özelliğinin tartışılması ve kriz olarak ifade edilen ekonomik dengesizliğin koşulları, aklın yönettiği spekülatif sermaye tarafından hazırlanması, yaşanan olayların tamamen aklın yönettiği merkezce alınmış siyasi bir karar ifadesini kullanmamızda sanırım yanlış olmaz. Çünkü küreselleşen dünya ekonomisinde, uluslararası para ticareti uluslararası mal ticaretinin 40 katını aşan bir seviyeye ulaşmıştır. Bu rakam bile sanal dünya ekonomisinde yaratılan reel ekonomi üzerinde yarattığı krizin derinliğini anlamak için yeterlidir.

Küreselleşen dünya ekonomisinin büyüyen sermayesine, gelişmiş ve körfez ülkelerin tasarruf fazlaları kadar uluslararası kayıt dışı ekonominin artan hacmi de katkı sağlamaktadır. Bu Parasal döngü bize krizin hangi yapı içerisinde mücadeleye dönüştüğünü anlamamız için yeterlidir.

Küresel sermayenin kısa vadeli karlara odaklanması bütün mali piyasaları hedef haline getirmektedir. Hareket halindeki büyük miktarlı fonların piyasalara anlık giriş ve çıkışları finansal krizleri tetiklemektedir. Spekülasyonun ve açıktan sermaye hareketlerinin yol açtığı dalgalanmalar, bütünüyle dünya ekonomisini etkileyerek sosyo-ekonomik sonuçlar doğurabilmektedir.

Faiz odaklı dünyanın ekonomik-sosyal yapısı, tıkanıklığı düzeltme hareketiyle aşmak isterken yeniden yapılanmaya da ihtiyaç duymaktadır. Netice olarak dünya ekonomik düzeninde hiçbir oluşum beklenmedik, tesadüf, rastlantılar ve finans kuruluşlarının bilançolarındaki bozulmalarla açıklanamaz.

7   Krizi Fırsata Dönüştürenler

2007-2008 uluslararası finansal krizde finansal kurumların risklerini dağıtmış olmaları finansal sistemin yetersiz sermayeden kaynaklanan sorunları engelleyememiştir.2008 yılındaki finansal kriz paranın ekonomiye yön verdiği bir yapıda mevduat toplayamayan yatırım bankalarının bilançolardaki bozulma, makro düzeyde ekonomideki iniş çıkışları önemli ölçüde etkilemiştir.

Standard and Poor's Sanayi Endeksli Şirketlerin 1998 yılında 200 milyar dolar olan, toplam nakit büyüklüğünün 2008/ Şubat ayında 600 milyar doları aştığına dikkat çekmektedir. 1980-2006 döneminde ABD şirketlerinin nakit varlıklarının önemli ölçüde arttığını belirtmekte Bates, Kahle ve Stulz (2007:32).Bu gelişim süreci ABD'nin dünya ekonomisi üzerindeki ağırlığı nedeniyle, sanal ekonomisi sayesinde işler iyi giderken dahi nakit oranının artması; temelde faiz sisteminin tıkanması. Sonuç olarak paranın hareket edeceği karlı bir üretim sahası bulamaması ile ilişkilidir. Bu bağlamda, kriz ile birlikte, paranın kaliteye yönelerek güvenli limanlara sığınması, kısa vadede küresel ölçek de durgunluk ve işsizlik beklenen bir sonuçtur. Ancak küresel sermayesinin karlılığı düşen reel ekonomiye aktarılmasındaki güçlüklerin; ekonomide hareket kabiliyetini kısıtlaması, spekülatif sermayenin küresel sermayeye yön vermesinde etkili olmuştur.

Küreselleşen dünya ekonomisinde uluslararası para ticaretinin, uluslar arası mal ticaretinin yaklaşık 40 katına ulaştığı ve ekonomik krizlerin sıklaşmasının, dolardaki, altındaki ve sermaye piyasalarındaki dalgalanmaların dünyayı spekülatif bir pazara çeviren küresel yaklaşımın sonucudur. Bu bağlamda likidite fazlalığının, karlı yeni bir alanlara aktarılamaması, sistemin gelişimini engellemiştir.

8   Krize Giden Yolda Dünya Ekonomisindeki Gelişmeler Ve Krizin Derinliği

Krizin dünya ekonomisine bağlı nedeni; 1973 birinci petrol şoku, 1975 durgunluk, özellikle FED tarafından uygulanan sıkı para politikası neticesinde dolar faiz oranının yükselmesi olarak öncelikle belirtebiliriz. Faiz oranlarının yükseltilmesiyle, değişken faiz haddinden alınan eski borçların faiz yükünü artırmıştır. Ulusal parayla ifade edilen borç yükü artarken, borç erteleme anlaşmaları yeni faiz oranı üzerinden yapılmıştır. Uzun vadeli kredi sağlanması güçleşmiş ve maliyet artmıştır. Aynı dönemlerde dikkat çeken bir diğer husus ise kısa vadeli sermaye hareketlerinin kazandığı hızdır. Bir başka neden Amerikan ticari bankalarının yabancı devletlerin risklerinin analiz ve değerlendirmelerindeki hatalarıdır. Amerikan bankalarının %75'inin gelişmekte olan ülke hükümetlerine kredi açtığı ve bu kredilerin risk analizindeki hatalarda düşünülürse krizin dünya ekonomisindeki etkisinin ve sonuçlarının siyasi karar alan aktörler tarafından belirleneceğini ifade etmek yanıltıcı olmaz kanaatindeyim.

Ticari bankaların geri ödeme sorunu olan ülkelere nakit akışı sağlayan kredi kanallarını etkisizleştirmeleri, bu ülkelere sermaye piyasalarının açılmasının dayatılması da bu ülkelerin sermaye piyasalarına hareketlilik

kazandırmıştır. Gelişen piyasaların büyümesinin bu piyasalara yönelik portföy yatırımlarındaki artışa neden olurken, diğer bir nedeni de uluslararası sermaye piyasalarının kısa ve uzun vadeli faiz oranlarında büyük düşüşlerin yaşanmasıdır. Bu gelişme ağırlıklı olarak ABD kaynaklı olmak üzere uluslararası fonların kısa vadede işlem yapan vurguncuların söz konusu piyasalara yönelmesini sağlamıştır. Bu süreç dünya'nın yer altı yerüstü zenginliklerinin hangi yöntemlerle el değiştirdiğini göstermektedir.

Aklın ikna aracı olan spekülatif sermaye yoluyla devletin ekonomideki ağırlığının azaltılmasını, devletin etkisizleştirilmesini öneren neo-liberal özelleştirme politikaları, krizin şiddetini artıran diğer bir neden olmuştur. Bu nedenle küresel ekonomik kriz, sadece finansal sektörle sınırlı bir kriz değildir dersek, "Kapitalizmin bizatihi hastalığıdır" diyen iktisatçıların görüşlerini desteklemiş oluruz.

"Büyük buhran hiç sona ermedi, savaş ekonomisi içinde kayboldu" diyen Kenneth Galbraith gibi ABD'nin gerçekte 1929-1933 krizinden çıkmadığı, sıcak ve soğuk savaşların, bölgesel savaşların krizden çıkış görüntüsü verdiğini savunan ekonomistlerde bulunmaktadır. Sadece, bozulan dengesizliğin dengesi, küreselleşen sermayenin lehine olacak şekilde kurumsal yapıları ve araçları tekrar dengeye getirecektir. Bu nedenle sistem Birleşmiş Milletler, NATO ve Dünya Bankası gibi kurumlarla yapılandırarak kendisini güncelleştirmektedir.

9 Gelişmekte Olan Ülkelerde Kapitalizmin Değişen Yüzü ve Kriz

Gelişmiş ülkelerde başlayan kriz küresel piyasalarda olan ilişkinin boyutuna bağlı olarak hızla gelişmekte olan ekonomileri de etkisi altına almıştır. Krizin gelişmekte olan ülkelere ulaşması hem arz hem de talep yanlı farklı kanallarla olmuştur. Bu kanallar:

1. Birinci olarak, finansal piyasalar aracılığıyla krizin gelişmekte olan ülkelere ulaşmasıdır. Amerika ve Avrupa'nın para akışını durdurması gelişmekte olan ülkeleri olumsuz etkilemiştir.

2. İkinci olarak, Menkul değerler piyasası. Emtia fiyatlarının düşmesiyle menkul kıymetlerin fiyatları hızla ve önemli ölçüde gerilemiştir.

3. Üçüncü olarak ihracattaki değişim. Mallara olan talebin düşmesi, gelişmiş ülkelerde üretimi azaltmıştır.

Bu gün dünya ekonomisinin temel sorunu, küreselleşmenin kriz aralığını daraltmış olmasıdır. Bu nedenle Dünya sürekli kriz içerisindedir.

Finansal liberalizasyon süreci ile birlikte gelişmekte olan ülkelerde yüksek reel faiz oranından yabancı sermaye girişi hareketleri teşvik edilmiştir. Sermaye girişi hareketleri, ulusal paralarını dolara sabitleyerek sabit döviz kuru sistemini uygulayan hükümet politikalarıyla da desteklenmiştir. Finansal liberalizasyona bağlı olarak gelişen yüksek reel faiz oranları, gelişmekte olan ülkelerde finansal sektörün likidite krizlerinin temel belirleyici nedenlerini oluşturmaktadır (Mishkin, 1999a:10).

Gelişen ülkeler 1990'lı yıllardan itibaren dış kaynağa büyümekteydiler Bu siyasi tercih aynı zamanda sermaye hareketlerinin özendirilmesi anlamına gelmektedir. Dolayısıyla ülkelerin bağımsız para veya maliye politikası uygulama şansıda ortadan kalkmaktadır. Çünkü yukarıda açıklandığı üzere ülkeler, uzlaşmaz üçlü faktörlerden (sermaye-faiz ve döviz kuru) sadece birisini kontrol edebilmektedir (Eren ve Süslü, 2001:664).

Sermaye girişleri ekonomide makro ekonomik ısınma veya "balon etkisi" de denilen yapay bir genişleme etkisi doğurmaktadır. Böylece ulusal para arzı artmakta, borsa spekülatif biçimde yükselmekte, ulusal para aşırı değer kazanmakta ve sonuçta ihracat gerilerken ithalat artmaktadır. Ekonomik, siyasal veya doğal bir olay ya da gelişme, geleceğe ait bekleyişleri aniden olumsuzluğa dönüştürebilmekte ve yabancı sermayenin kitleler halinde ana ülkelerine geriye dönmesi için ilk kıvılcımı oluşturmaktadır (Adelman, 1999:8). Yakın geçmişteki finansal krizlerin çoğunda buna benzer bir gelişme gözlemlenmektedir. Bu nedenle Türkiye ekonomisi gelecekte önemli bir ekonomik sahada fay kırılmasıyla karşı karşıya kalabilir.

Gelişmekte olan ülkelerdeki finansal krizlerin dinamiklerini, Türkiye örneğindeki gibi üç aşama ile açıklamak mümkün;

1. Birinci aşamada, finansal serbestleşmenin ardından, sermaye girişleri ile sağlanan banka borçlarındaki aşırı artış, büyük ölçüde batak kredilere dönüşmesi ve bankalar başta olmak üzere, finans ve finans dışı kurumların açık pozisyon durumları bilânçolarında bozulmaya neden olmaktadır.

2. İkinci aşamada, piyasalarda ulusal para biriminin daha fazla korunamayacağı düşüncesinin egemenken ulusal para biriminin değerini korumak amacıyla Merkez Bankasının faiz oranlarını yükseltmesi neticesinde sermaye yapısı zayıf olan sektördeki bankaların bilânçoları daha da bozulmakta ve sürü psikolojisinin de etkisiyle, finansal kriz ortaya çıkmakta. 1994 Türkiye da yaşanan kriz gibi.

3. Üçüncü aşamada ise, ulusal para biriminin spekülatif saldırıların yoğunlaşmasıyla, değer yitirmesi ve yabancı para birimine bağlı olarak, kısa vadeli borçların, yani (bilânçodaki yükümlülüklerin) artması ve bu borçların genellikle çok kısa vadeli olması nedeniyle, nakit sorunlarının ortaya çıkışı. 2001 Türkiye örneğinde yaşanan, batık bankaların tasfiyesiyle sonuçlanan ve küresel sermaye tarafından yeniden dizayn edilerek dengesizliğin dengesi üzerine kurulan ve spekülatif sermaye tarafından yönlendirilen ekonomi ile yeniden dengeler kurulmaya çalışılmıştır.

Sonuçta bilânçolar, hem varlık hem de yükümlülük kalemleriyle, her iki yönden sıkışmış olmaktadır. Bozulan bilânçolar ile zayıf sermaye tabanının varlığı, bankaların borç vermesini zorlaştırmakta, böylece son aşamada, tam anlamıyla bir finansal kriz ortaya çıkarken sistem kendi kendini yeniliye bilmek için zayıf halkaların tasfiyesi ile büyük balığın küçük balığı yutması gibi şirket evlilikleri yoluyla varlıkların el değiştirmesi süreci yaşanmaktadır.

Bu gün dünya ekonomisinin temel sorunu, küreselleşmenin kriz aralığını daraltmış olmasıdır. Bu daralma aynı zamanda sistemin varlığını sürdürebilirliğinin sonuna yaklaşıldığını göstermektedir. Çünkü dünya sürekli kriz içerisindedir. Bu kriz ABD de finansal sorun Avrupa Birliği'nde ekonomik durgunluk, Türkiye'de enflasyon ve cari açık Kırgızistan da ise sermaye yetersizliği ve yatırıma yönelecek kaynak maliyetinin yüksek olması nedeniyle üretimin yetersiz oluşu paranın üretimle ilişkilendirilmeyip faizle ilişkilendirilen yapı olarak ortaya çıkmaktadır. Bu yapı adaletsiz paylaşıma neden olan sanal ekonomi ve faize bağlı sistemdir. Bu sistem dengesizlik üzerine kurulu bir dengesel yapıdır. Bu yapının zayıflaması krizin oluşmasına neden olmaktadır. Bu süreç ise, sistemin uykudan uyanma sürecidir.

Dünya da ekonomik krizlerin şekli değişmiştir. Çünkü küreselleşmeyle birlikte yalnızca sermaye ve spekülatif fonlara dolaşım imkanı getirilmiş, emek gibi üretim faktörlerinde küreselleşme olmamıştır. Mal hareketlerinde de sınırlar tamamen kalkmamıştır. Bu nedenle de dünyada, sektörel ve faktörel dengeler bozulmuştur (Korkmaz, 2012). Krizin temel nedeni, ekonominin dinamiklerindeki bu dengesizliğin dengesinin bozulmasıdır.

Shwab, "kapitalizm bu günkü haliyle, değişen dünyaya uyum sağlayamıyor ve bu nedenle küresel bir sorumluluk anlayışıyla yeniden tasarlanması gerekiyor" diyor. Burada ilginç olan gelinen noktada küresel kapitalizmin faize bağlı dünya sisteminin işleyiş biçiminin sorgulanması talebinin batılılardan geliyor olmasıdır.

Kriz bir başka gerçeği daha ortaya koymuştur. Kaldıraçlı araçların ve risk azaltıcı mekanizmaların ABD'den başlayarak kontrol altına alınma eğilimi, küresel ölçüde yaratılmış olan büyük kaydi paranın giderek ve süratle azalması sonucunu doğurmuştur. Bu ortam ABD odaklı olarak başlayan küresel krizin ABD merkez bankası (FED) politikaları ile çözülebilmesini olanaksız hale getirmiştir. Kısacası FED ne kadar para basarsa bassın, bastığı paranın üretim faaliyetlerini geliştirme etkisi sınırlı kalmaktadır. Anlaşılan o ki, iktisat ilminin bilinen bütün klasik kuralları değişecektir (Törüner, 2012). Asıl değişimi zorunlu kılan faize dayalı ekonomilerde sağlanan istikrarın kalıcı olmayışıdır.

Bu aşamada, ABD ekonomi yönetimi ve FED ne yaparsa yapsın AB gibi bölgesel yapının sorunları çözülmedikçe küresel sermayenin gelişim sürecindeki kriz de sona ermeyecektir. Bir süreliğine sorunun çözümünü sağlayacak karar merkezi, birinci ve ikinci dünya paylaşımının aktörü olan ve üçüncü dünya paylaşımının da oyun kurucusu olmak isteyen Almanya'nın elinde olacak gibidir. Çünkü patinaj yapan ekonominin tekerlerinin dönebilmesi Avrupa Birliğinin kendi içerisindeki, dengesizliğin dengesinin dengede olması gerekmektedir. Çünkü bölgesel yapıda;

1. Ürettiği kadar ya da ürettiğinden az tüketip, tasarruf sağlayan
2. Tükettiğinden daha az üretip tasarruf sağlayamayan,
3. Yaşlı nüfusun akıl tutulmasını yaşadığı bir ekonomik saha söz konusudur.

Bu yapıdaki birliktelik ise, ortak Merkez Bankası ve ortak para politikasıdır. Bu ortaklık ülkeler arasındaki farklılığı ortadan kaldıramamıştır. Aksine Üretmeden tüketen ülkelerin kontrolsüz borçlanmaları ve ticari bankaların birbirlerine olan borçları nedeniyle, finansal krizin derinleşmesine neden olmuştur. Bu bölgesel yapı bile faize dayalı sistemin sorunlarıyla ilgili kendi içerisinde istikrarlı gelişime katkı sağlayamamıştır. Dünya ekonomisinde istikrarlı büyüme bölgesel yapıda kurulan dengesizliğin dengesinin, yeni bir denge üzerine kurulmasıyla mümkün olabilecektir.

10 Sonuç ve Değerlendirme

Sonuç olarak Uluslararası Finansal Krizin Felsefesini kısaca özetlemeye çalışırsak; Sermayenin kendini yenileme maliyetinin artması, bir başka ifadeyle ödenmemiş belirli miktarda emeğin üzerindeki tasarrufun azalması krizin çıkış noktasıdır. Her türlü artı-değer sonrasında (kar, faiz rant gibi) karşılığı ödenmemiş emeğin maddeleşmesidir. Sermayenin kendisini yenileme sırrı da buradadır. Mevcut sermaye, biriktirilmiş ya da sermayeleşmiş faizdir. Faiz sistemine bağlı ekonomik yönetim biçimi gelir dağılımındaki eşitsizliğe neden olan dengesizliğin dengesini kuran istikrarsızlığın temel kaynağıdır. Kapitalist üretim biçimi yalnız bir zevkler dünyası oluşturmakla kalmaz, spekülasyon ve kredi sistemi ile dengesizliğin dengesini sürdürmeye çalışırken varlığını sürdürebilmek için kendi iktidarlarını ve sistemi koruyan küresel sermaye, faize dayalı sistemde yeni bir dengesizlik üzerine kurulan dengede, savunma iç güdüsüyle sistemi yeniden dizayn eder.

Küreselleşen sermaye, başkalarının emek gücünü baskı altına alarak, geniş halk kitlelerini yaşamın zevklerinden yoksun bırakmaya zorladığı ölçüde zenginleşir. Zenginleşmeye giden yol faiz sistemi. Faizi emeğin tasarrufundaki paya el koymada, el konan tasarrufun sermayenin kendisini yenilemesine katkı sağlaması, sermaye için faiz ve emeğin tasarrufunda ki azalma, krizin sessizliğini bozduğu anın kırılma noktasıdır.

Küresel Sermaye için ne kadar çok üretilirse o kadar çok tüketilir ve dolayısıyla o kadar fazla ürün, üretim araçlarına çevrilir. Bu süreç, emeğin üretim araçları ve onunla birlikte kendi ürünü ve geçim araçları, onun karşısına sermaye biçiminde çıkmadığı sürece, kendisini sermaye birikimi ya da kapitalistin bir işlevi olarak ortaya koymaz.

Ulusal sanayi gücünde ortaya çıkan güçlü bir ilerleme olduğu zaman, karlar, birikim kaynağı olarak küresel sermaye için büyük bir anlam ifade eder. Çünkü gelişmekte olan ülkelerde bir yıl içinde biriktirilen toplam servet, gelişmiş ülkelerin toplam servetine katkı yaptığı sürece sanayisi ivme kazanmakta ve küresel sermaye adına gelişmiş ülkelere Milli Gelirlerinden transfer edildiği sürece dengesizliğin dengesinde istikrar sağlanmaktadır. Çevre ülkelerden merkez ülkelere küresel sermaye adına transferlerin azalarak artmaya başlaması uluslararası krizin ayak seslerinin duyulması demektir. Bir başka ifadeyle üretimin genişlemesinin durduğu nokta dengesizliğin dengesinin kırılma noktasıdır.

Kapitalist sistemde ekonominin istikrarı sağlaması, sistemin düzeltme hareketinden önce, tasarlamış olduğu modele uygun rol verilecek ekonomik güçler belirlendikten sonra, dengesizlik üzerine kurulan dengeyle birlikte dünya ekonomisinde istikrar sağlanabilir.

Dünya nüfusunun geniş kitleleri fakirleşirken, oransal olarak sayıları azalan varlıklı kesim, yeni kurulan dengesizlik üzerine dengede, yeni bir sürece kadar krizi sessizliğe gömer. Netice olarak kriz faiz sistemini beslemekte, faiz adaletsizliği yaygınlaştırarak gelir dağılımını bozmakta, bozulan servet dağılımındaki adaletsizlik, dengesizliğin dengesini bozmaktadır.

Sonuç olarak sistem krizle birlikte var olmaktadır. Adil olmayan paylaşımı ortadan kaldıran model olmadıkça, kriz ekonomik gelişmelerle yerinden oynayan taşları yeniden yerine koyarak dengesizliğin dengesini dengeye getiren sonucun başlangıcını ifade etmektedir. Çünkü kapitalist sistemin DNA'sında faiz var. Faiz ise, adaletsiz paylaşım ve ekonomik kargaşa demektir. Ekonomik kargaşa ise geniş kitlelerin fakirleşmesi demektir. Fakirleşen geniş kitleler ise, nesillerinin bu günden geleceklerini ipotek altına koymaları demektir. Bu nedenle sistemin krize, krizin fakirleştireceği kitlelere ihtiyacı vardır. Bu nedenle geniş kitlelerin ekonomideki faiz halkasını ortadan kaldırması gerekir.

Küresel Kriz Sürecinde Altın Fiyatlarını Etkileyen Dinamikler

Dynamics Affecting Gold Prices in the Global Crisis

Ph.D. Candidate Togan Karataş (Marmara University, Turkey)

Ph.D. Candidate Emre Ürkmez (Marmara University, Turkey)

Abstract

Gold prices have been one of the most observed financial indicators in the global economy. Various macro dynamics that historically determine the price of gold, as a precious metal have been initiated. In this scope, gold price fluctuations are closely linked to the global economic conjuncture. In this study, the role of gold in the global economy and historical gold prices are examined briefly, and in the course of global finance crisis, the elements Dow- Jones Index, petrol prices and silver prices as assigning gold prices are dealt with. An economic and econometric analysis is carried out for these indicators since it is regarded that they are crucially instrumental in gold prices. Study period is determined monthly and covers between 2007:01 and 2013:02. Johansen co-integration test, VECM and impulse response analyses are used in the econometric analysis. According to VECM analysis, it has been found out that the indicators do not act in unison in the short term, but the results of co-integration analysis reveal that gold prices are associated with the related economic indicators in the long term. As a result of impulse response analysis, it is seen that gold prices are more influenced by the fluctuations in petrol prices than other indicators. Within the frame of findings, it has been revealed that gold prices unsurprisingly increase during the crisis periods and are influenced by the indicators stated above.

1 Giriş

Bu çalışmada dünya ekonomik konjonktürüne bağlı olarak fiyatı dalgalanmalar gösteren altının son finansal krize karşı verdiği tepkinin altında yatan dinamikler incelenmeye çalışılmıştır. Bu çerçevede değerli bir metal ve emtia olan altının dünya ekonomisindeki rolü, altın fiyatının gösterdiği değişkenliklerin tarihçesi ve nedenleri ile küresel kriz dönemindeki altın fiyatlarının değişimleri incelenmeye çalışılmıştır.

Çalışmanın birinci bölümünde, altının fiyatının nesnel şartlarını oluşturan, altının para sistemleri ile olan ilişkisi ele alınmıştır. İkinci bölümde, altın fiyatlarının tarihçesi incelenmiş ve altın fiyatlarına dair yapılan bazı çalışmalar ele alınmıştır. Bu çerçevede altın fiyatını belirleyen temel makroekonomik göstergeler ortaya koyulmuştur. Çalışmanın üçüncü bölümünde ise, küresel kriz sürecinde (2007'den günümüze) altın fiyatını belirleyen bazı kritik makroekonomik göstergeler, ilgili dönem içinde, aylık verilerle ve çeşitli testler aracılığıyla ekonometrik olarak analiz edilmiştir.

2 Para Sistemleri ve Değerli Bir Metal Olarak Altın

Günümüzde kullanılan para sistemi kâğıt para sistemidir. Bu sistemde paranın kendisinin bir değeri olmasa da paraya atfedilmiş bir itibari değer vardır. Bu çerçevede değerli metallerin para olarak kullanıldığı dönemlere göre para sistemi ciddi şekilde farklılaşmış durumdadır. Tarihsel olarak itibari paranın değerli metal cinsinden (altın) dönem dönem karşılığının olması, altının iktisadi ve politik olarak sahip olduğu konumun önemli bir göstergesi niteliğindedir. Çünkü itibari paranın değerinin emtia cinsinden ölçülmesinde dönemsel olarak en çok tercih edilen değerli metal altın olmuştur ve egemen para sistemi ile altının girdiği etkileşim altın fiyatlarını etkileyebilmektedir.

19. yüzyıldan günümüze uluslararası para sistemlerinin, değeri kendinden menkul olan altına bağlanması ya da altından ayrışması, altının dolar cinsinden fiyatı için karşılıklı etkileşimler yaratmıştır. 19. yüzyıldan 1. Dünya Savaşı'na kadar olan sürede belli kesintiler olsa da paranın bir değerli metal karşılığı olmuştur. Bu dönemde uygulanan sistem "klasik altın standardı" sistemidir. Ardından dünya savaşlarının da etkisi ile kısa süreli bir sistemsizlikten sonra 1944-1971 arası uygulanan "Bretton Woods" sisteminde, dünya altın rezervlerinin önemli bir kısmına sahip olan ABD'nin ulusal parası olan dolar, altına bağlanmıştır ve diğer para birimleri de dolara bağlanmıştır. Bu periyotta 1ons altın = 35 dolar olacak şekilde dolar için değerli bir metal üzerinden sabit kur uygulaması söz konusu olmuştur. Bu bağlamda o dönemde kurlar altın üzerinden sabitlendiğinden, altının fiyatı da sabitlenmiştir. Ancak ABD'nin Vietnam Savaşında yaptığı emisyon kaynaklı yaptığı yüksek harcamalar, dünyadaki ödemeler dengesi sorunları gibi nedenler ile doların değeri reel olarak düşmeye başlamış ve nominal seviyeyi zorlayarak, sabit kur uygulamasından 1971'de vazgeçilmesine neden olmuştur.

Altın fiyatındaki uzun dönemli istikrarın bozulması da hem ABD'nin sabit kur uygulamasından vazgeçmesine hem de 1973'te petrol krizi olarak şekillenen sermaye birikim krizi ile aynı döneme denk gelmiştir. Bu dönemden sonra dünya para piyasalarında bu türden bir sabit kur uygulamasından genel olarak vazgeçilmesiyle birlikte, madalyonun diğer tarafında yer alan altın için de fiyat dalgalanmasına yol açacak bir dinamik ortaya çıkmıştır. O süreçten sonra altın fiyatları da dalgalanmaya başlamıştır. Bu durum altının fiyatlarının

dalgalanmasına neden olan nesnel durumu oluşturmuştur. Küresel krize uzanan süreçteki para sistemi ise 2. Bretton Woods olarak adlandırılmıştır (Dooley vd.2004). Dünya ekonomisinde yeni sistem arayışına yol açacak olan her iktisadi gelişmede olduğu gibi yeni finansal krizin de uzun vadede yeni bir para sistemine yönelişi cezbetme olasılığı söz konusudur (3. Bretton Woods analizi için bkz: Şişman 2009). Olası bir değişim, tarihte olduğu gibi gelecekte de altın fiyatını etkileyebilecek niteliktedir.

3   Altın Fiyatlarının Tarihçesi: Fiyatları Hangi Göstergeler Belirliyor?

Altın fiyatları tarihsel olarak incelendiğinde, dünya ekonomisinin genişleme dönemlerinde altın fiyatlarının hareketinin genelde istikrarlı veya aşağıya doğru olduğu, kriz dönemlerinde ise yukarıya doğru olduğu görülmektedir. Enflasyonist etkilerden arındırılma durumunda dahi, gerek 1929, gerek 1973, gerekse 2007 kriz sürecinde altın fiyatı önceki dönemlere göre ciddi bir şekilde artmıştır. Bu da altının değerli metal olma özelliğinin kriz dönemlerinde daha net ortaya çıktığının tarihsel göstergesi niteliğindedir:

Grafik 1 Altın Fiyatları 1915-2013 (Enflasyondan Arındırılmış - Ons Olarak Dolar Bazında) **Kaynak:** *Macrotrends (2013).*

Altın fiyatının oluşmasında dünya ekonomisinin reel ve finansal konjonktürünün oldukça etkili olduğu Grafik 1'den kolayca okunabilmektedir. Bu çerçevede her ne kadar bir iktisadi göstergenin fiyat dinamiklerini tümüyle belirlemek mümkün olmasa da dünya altın piyasasında oluşan fiyatlar, çeşitli göstergelerden etkilenmektedir. Piyasalarda fiyat; finansal, reel ve siyasal birçok dinamiğin bütüncül etkisi sonucu oluşmaktadır. Zira ekonomilerde hemen hemen her gösterge birbiriyle ilişki içerisindedir. Bu bağlamda altın fiyatının belirleyenleri olarak birçok değişken ortaya çıkmaktadır.

Bu konuda yapılan bazı çalışmalara göz atmak gerekirse; Abken'e göre (1980) altın fiyatları iktisadi ve siyasal dengenin bir göstergesi olmasının yanı sıra bu makroekonomik ilişki karşılıklı ve karmaşık bir yapıya sahiptir. Vural'ın çalışmasına göre (2003), 1990-2003 dönemi için altın fiyatının; gümüş, petrol ve bakır fiyatı ile aynı yönde, Dow-Jones Endeksi ile ise ters yönde hareket ettiği sonucu söz konusudur. Levin vd. yaptığı çalışmaya göre (2006), ABD için uzun dönemde altın fiyatları ile enflasyon oranları, kurlar ve kredi riski arasında ilişki söz konusudur. Zaiyong ve Shuguang'ın yaptığı çalışmaya göre (2008), altın fiyatlarının uzun dönemli belirleyenleri olarak ABD'deki enflasyon oranları, dolar kuru, faiz oranları, altın stoğu ve Dow-Jones Endeksi ele alınmıştır. Simakova'ya göre (2011), altın ve petrol arasındaki ilişki son yıllarda biraz zayıflamış olsa da uzun dönemde bu iki gösterge arasında güçlü bir ilişki söz konusu olmuştur. Aksoy ve Topçu'nun (2013) 2003-2011 dönemi için yaptığı çalışmaya göre ise, altın getirisi ile hisse senetleri arasında ters yönlü bir ilişki söz konusudur. Görüldüğü üzere altın fiyatlarının belirleyicisi olarak birçok dinamik söz konusu olabilmektedir. Tüm değişkenleri birlikte incelemek zor olmakla birlikte, fiyat dinamiği olarak hem finans sektöründen hem de reel sektörden en azından bir değişkenin ele alınması yerinde olacaktır.

4 Küresel Kriz Sürecinde Altın Fiyatları ve Ekonometrik Analiz

2007'de etkileri ortaya çıkmaya başlayan ve halen tam olarak aşıldığı söylenemeyecek olan finans krizi ile birlikte altın fiyatları da artmaya başlamıştır. Kriz dönemlerinde, iktisadi aktörlerin altını "güvenli liman" olarak algılanması gayet doğal ve rasyoneldir. Zira altın, değeri kendinden menkul bir yatırım aracıdır. İnsanların tasarruflarını değerlendirme biçimlerinin konjonktürel olarak değişmesinin bir yansıması olarak altın kriz dönemlerinin yatırım aracı olma özelliğini bu dönemde de taşımıştır ve bunun bir sonucu olarak da 2007 sonrası altın fiyatlarında ciddi artışlar olmuştur.

Küresel kriz sürecinde altın fiyatının belirleyicileri olarak Dow-Jones Endeksi, kriz konjonktürlerinde fiyatları değişkenlik gösteren petrol ve temel iki değerli madenden biri olarak görülen gümüş fiyatındaki değişimlerle altın fiyatları arasındaki kısa ve uzun dönem ilişkisi incelenmiştir. İktisadi olarak altının diğer emtialar ile birlikte hareket etmesi, Dow-Jones Endeksi ile ters yönlü hareket etmesi beklenir. Çünkü kriz sürecinde menkul kıymetler piyasası düşüşe geçerken altın fiyatları ve diğer emtia fiyatları artma eğilimi gösterir. Bu çerçevede model şu şekilde oluşturulmuştur:

4.1 Metodoloji ve Model

Nominal altın fiyatları ile Dow-Jones hisse senedi Endeksi(DJI), West Texas Intermediate tanımlı petrol fiyatları(PE) ve gümüş fiyatları arasındaki uzun dönem ilişkiyi araştırmak için Johansen eşbütünleşme analizi kullanılmaktadır. Analize başlamadan önce, her bir değişkenin zaman serisi özellikleri araştırılmalıdır. Diğer bir ifadeyle serilerin bütünleme mertebeleri belirlenmelidir. Bu da birim kök testleri yardımıyla yapılmaktadır.

Bir zaman serisinde birim kökün varlığını araştıran ve literatürde en çok kabul edilen ilk test Dickey-Fuller birim kök testidir. Dickey-Fuller testi hata teriminin gaussyan saf hata özelliklerini yani ortalamasının sıfır, varyansının sabit ve normal dağıldığını varsayar. Ancak bu varsayım çoğunlukla geçerli değildir. Eğer hata terimlerinde otokorelasyon varsa, bu otokorelasyonu ortadan kaldırmak için bağımlı değişkenin gecikmeli değerleri modele dahil edilerek Dickey-Fuller birim kök testi yeniden uygulanır. Bu yeni test Genişletilmiş Dickey-Duller(ADF) testi olarak adlandırılır ve model şu şekilde sunulur:

$$\Delta y_t = \alpha + \beta T + \rho y_{t-1} + \sum_{j=1}^{k} \theta_j \Delta y_{t-j} + \varepsilon_t \tag{1}$$

Burada $\varepsilon_t \sim iid(0, \sigma^2)$ olduğu varsayılır ve modele eklenmesi gereken gecikmenin cimrilik prensibi gereği seçilmesi gerekmektedir. Modele eklenmesi gereken gecikme uzunluğu k'nın Akaike Bilgi Kriteri(AIC), Schwarz Bilgi Kriteri(SIC) ve Hannan Quin gibi bilgi kriterleri yardımıyla belirlenmesi gerekmektedir.

Diğer alternatif birim kök testi hata teriminin $\varepsilon_t \sim iid(0, \sigma^2)$ olduğu varsayımı dikkate almamaktadır. Phillips-Perron(1988) çalışmalarında Dickey-Fuller tarafından ileri sürülen birim kök testini genelleştirerek parametrik olmayan bir yaklaşımla yeni bir birim kök testi geliştirmişlerdir. Ancak bu yaklaşımda hata teriminin otokorelasyonları yüksek dereceden negatif olduklarında Phillips-Perron testi hata teriminin örneklem hatası ile karşılaşmaktadır. Ancak bu düzeltme yapıldığında Phillips-Perron testi ADF testine göre daha güçlüdür.

Eğer ilgili seriler, birim kök testleri sonucunda aynı mertebeden(özellikle birinci mertebeden, I(1)), bütünleşik ise değişkenler arasındaki uzun dönem ilişkisini araştırmak için eşbütünleşme testleri uygulanabilir. Johansen testi, iktisadi zaman serileri arasındaki uzun dönem ilişkilerini ortaya koyarken VAR modelini temel alır. Johansen testi eşbütünleşme vektör sayısını belirlemek için iz(trace) ve maksimum(max) testlerini kullanmaktadır. Ayrıca bu yaklaşım m boyutlu VAR modelinin hata düzeltme modeli(VECM) olarak yazılmasına da imkân vermektedir.

$$\Delta y_t = \Gamma_0 + \sum_{i=1}^{k-1} \Gamma_i \Delta y_{t-i} + \prod y_{t-k} + \varepsilon_t \tag{2}$$

Burada Γ_0 vektörü serilerde olması mümkün olan deterministik yığılmayı göstermektedir. $\prod$ matrisi değişkenler arasındaki uzun dönem bilgiyi içermektedir ve $\prod = \alpha \beta'$ olarak tanımlanmaktadır. α ayarlama katsayısı ve β' eşbütünleşme vektörünü göstermektedir. $\prod$ matrisinin rankı $0 < \text{rank}(\prod) = r < m$ olduğunda değişkenler arasında bir uzun dönem ilişkisinden bahsedilebilir. Denklem(2) verilen modelde gecikme uzunluğu(k)'nun doğru bir şekilde belirlenmesi oldukça önemlidir. VAR modelindeki gecikme uzunluğunun(k) belirlenmesi için kullanılan en yaygın bilgi kriterleri; AIC ve SIC'dir. Bu bilgi kriterlerinin yanında özellikle paket programlar tarafından sunulan; Olabilirlik oranı(LR), Nihai öngörü hatası(FPE) ve Hannan-Quinn bilgi kriteri(HQ)'de yer almaktadır.

4.2 Veri ve Ampirik Bulgular

Nominal altın fiyatları ile Dow-Jones hisse senedi endeksi(DJI), West Texas Intermediate tanımlı petrol fiyatları(PE) ve gümüş fiyatları arasındaki uzun dönem ilişkiyi araştırmak için Johansen eşbütünleşme analizi kullanılmaktadır. Çalışma 2007:01–2013:02 dönemini kapsayan aylık veriler kullanılarak yapılmıştır. Çalışmada kullanılan zaman serilerinin yapılarını görmek için Grafik 2'de serilere ilişkin zaman serisi grafikleri bir arada verilmiştir.
Grafik 2 *Altın - Petrol - Gümüş - Dow Jones Zaman Serisi Grafikleri*

Grafik 2 incelendiğinde, dört serinin de belirli bir ortalamaya sahip olmadığı hatta zaman ile birlikte hareket ettiği zaman serisi grafikleri yardımıyla görülmektedir. Ayrıca Grafik 2'de dört serinin de benzer davranışlar sergilemesi, bu dört seri arasında bir uzun dönemli ilişki olabileceğinin sinyalini vermektedir. Zaman serisi grafikleri her ne kadar serilerin durağanlığı hakkında önsel bir bilgi verse de, durağanlığın belirlenmesinde sadece zaman serisi grafiklerinin kullanılması yeterli değildir. Bu nedenle birim kök testlerine başvurulmaktadır.

4.2.1. Birim Kök Testleri

Çalışmada kullanılan serilerin bütünleme mertebelerini analiz etmek için uygulanan Genişletilmiş Dickey-Fuller ve Phillips-Perron birim kök testleri sonuçları Tablo 1'de gösterilmiştir.

Birim Kök Testleri	DÜZEYLER CİNSİNDEN				BİRİNCİ FARKLAR CİNSİNDEN			
	LALTIN	LGUMUS	LPETROL	LDJI	LALTIN	LGUMUS	LPETROL	LDJI
ADF	-1.8036	-2.3451	-3.8207	-1.4816	-7.1841	-6.3266	-5.3981	-6.3706
Phillips-Perron	-1.8036	-1.8772	-2.6220	-1.3231	-7.1572	-6.2615	-5.4624	-6.3706

*Serilerin birinci farkları alındığında, 0.05 anlam düzeyinde Ho hipotezi reddedilir.
*Tablo Kritik değerleri τ tablosundan düzeyler cinsinden sabit+trend için -3.45(%5), birinci farklar cinsinden ise sabit için -2.89(%5) olarak alınmıştır.

Tablo 1 *Birim Kök Testleri Sonuçları*

Tablo 1 incelendiğinde ilk olarak LALTIN serisi için sabit ve trendli model kalıbına göre birim kök testlerinin uygulandığı görülmektedir. Genişletilmiş Dickey-Fuller(ADF) birim kök testi uygulanırken tahmin edilen modele dâhil edilen gecikme sayısı Akaike(AIC) ve Schwarz(SIC) bilgi kriterleri ile Lagrange Çarpanları(LM) testi yardımıyla belirlenmiştir. Her üç değerlendirme kriteri de kullanılarak modele iki gecikme eklendiğinde artıklardaki serisel korelasyonun ortadan kalktığı görülmüştür. ADF testinde seri için birim kök testi uygulandığında ALTIN serisinin birim köke sahip olduğu sonucuna ulaşılmaktadır. Dolayısıyla ALTIN serisinin birinci farkı alınarak yeniden birim kök testi uygulandıktan sonra serinin durağanlaştığı veya birim kök olmadığı sonucuna ulaşılmıştır. Yani ALTIN serisinin birinci mertebeden bütünleşik, I(1) olduğu söylenebilir. Benzer biçimde LGUMUS, LPETROL ve LDJI serileri için de aynı işlemler yapılmıştır. Bu testlerin sonucunda, bu üç serinin de birinci mertebeden bütünleşik seriler olduğu sonucuna ulaşılmıştır.

Phillips-Perron testi, zaman serisinde dikkate alınmayan hareketli ortalama yapısını da dikkate alarak birim köktesti yapmaktadır. Tablo 1 incelendiğinde ALTIN serisi için sıfır hipotezi red edilememektedir. Yani ALTIN serisinin birim kök içerdiği veya durağan olmadığı sonucuna ulaşılır. ALTIN serisinin birinci farkı alındıktan sonra uygulanan test sonucunda serinin durağanlaştığı görülmektedir. Benzer sonuçlar LGUMUS, LPETROL ve LDJI serileri içinde söylenebilir.

4.2.2. Eşbütünleşme Testleri

LALTIN, LGUMUS, LPETROL ve LDJI serilerinin birinci mertebeden bütünleşik I(1) oldukları belirlendikten sonra, bu seriler arasında uzun dönem ilişkilerini ortaya koymak için eşbütünleşik olup olmadıkları

araştırılmaktadır. Eğer bu seriler arasında eşbütünleşme ilişkisi bulunursa, bu serilerin uzun dönem ilişkisine sahip olduğu söylenebilir. Ancak seriler eşbütünleşik olmadıklarında ise bu seriler arasında uzun dönemli bir ilişkiden bahsedilemez.

Eşbütünleme analizi için birçok test söz konusudur. Dolayısıyla farklı testler kullanılarak farklı sonuçlara ulaşılabileceğinden, burada LALTIN, LGUMUS, LPETROL ve LDJI serileri arasındaki uzun dönem ilişkisini ortaya koymak için iki tane eşbütünleşme testi uygulanmıştır.

Johansen testi için Tablo 2'de verilen karakteristik kökler Johansen'in olabilirlik fonksiyonundan hesaplanmaktadır. Olabilirlik oranı testi (λ_{trace}) ve maksimum karakteristik kök testi(λ_{max}) için boş hipotez kointegrasyonun olmadığıdır. λ_{trace} ve λ_{max} için kritik değerler ise Osterwald-Lenum'den alınmıştır. Engle ve Granger kointegrasyon testinde hesaplanan τ_{γ} için kritik değerler Patterson ve MacKinnon tepki yüzeyi fonksiyonundan bulunmuştur. Tablo 2 aynı zamanda eşbütünleşme için Johansen test sonuçlarını yansıtmaktadır. Johansen testi uygulanmadan önce VAR modeli için uygun gecikmenin belirli kriterlere göre belirlenmesi gerekmektedir. Çalışmada uygun gecikme uzunluğu Olabilirlik oranı (Likelihood Ratio, LR), Hannan-Quinn ve SIC'ye göre bulunmuştur. Buna göre uygun gecikmeli model VAR(4) olarak alınmıştır. Tablo 2 incelendiğinde Trace testi ve max-eigenvalue testi iki seri arasında bir uzun dönem ilişkisi olduğunu göstermektedir. Son olarak Engle-Granger (1987) tarafından ileri sürülen ve EKK artıklarına dayanan eşbütünleşme regresyon tahmin edilmiştir. Eşbütünleşme regresyon denklemi tahmin edildikten sonra kalıntılarına ADF testi uygulanmıştır. Ancak artıklarda serisel korelasyon söz konusu olduğundan AIC, SIC ve LM testi kullanılarak modele eklenmesi gereken gecikme uzunluğu belirlenmiştir. Buna göre artıkların 6 gecikmesi modele eklendiğinde serisel korelasyonun ortadan kalktığı belirlenmiştir. Sonuçta LALTIN ve LGUMUS, LPETROL ve LDJI serileri arasında uzun dönemli ilişki olmadığını ileri süren boş hipotez reddedilmiştir.

Johansen Testi				
H_0, H_1	Λ_{max}	Λ_{max} kritik değerleri	Λ_{trace}	Λ_{trace} kritik değerleri
r=0, r>0	27.58	23.49	51.66	47.85
r≤1, r>1	15.49	21.13	28.16	29.79
Engle-Granger Testi				
	T		k	
DF Testi($\Delta\varepsilon_t$)	-2.06*		0	
*0,05 düzeyinde anlamlıdır.				

Tablo 2 Eşbütünleşme Testi Sonuçları

Uygulanan iki eşbütünleşme testi de aynı sonucu vermiştir. Yani LALTIN ve LGUMUS, LPETROL ve LDJI serileri arasında uzun dönemli bir ilişki olduğu sonucuna ulaşılmaktadır. Dolayısıyla LALTIN ve LGUMUS, LPETROL ve LDJI serileri arasında bulunan uzun dönemli ilişki en azından bir dolaylı nedensel ilişkinin varlığını yansıtmaktadır. Bu uzun dönemli ilişki normalleştirilmiş eşbütünleşme vektör tahminleri yardımıyla daha kolay yorumlanabilir. Tahmin edilen vektör, LALTIN katsayısının ters işaretiyle çarpılması sonucu normalleştirilir. Normalleştirilen katsayılar aynı zamanda uzun dönem elastikiyetleri de gösterirler. Bulunan sonuçlar Tablo 3'te sunulmaktadır.

Normalized cointegrating coefficients (standard error in parentheses)			
LALTIN	LOIL	LDJI	LSILVER
1.000000	-0.298855	0.318658	-0.244548
	(0.04664)	(0.05397)	(0.04295)

Tablo 3 Eşbütünleşme Denklemi ^{a}*0.05 düzeyinde anlamlıdır,* ^{b}*0.01 düzeyinde anlamlıdır.*

$$LALTIN_t = 0.29 LPETROL_t - 0.31 LDJI_t + 0.24 LGUMUS_t \qquad (3)$$

Denklem (3) incelendiğinde LALTIN serisinin, LGUMUS, LPETROL ve LDJI serileri üzerine uygulanan regresyondan tahmin edilen PETROL ve GUMUS uzun dönem parametreleri pozitif ve anlamlı bulunmuştur. Bu sonuç ALTIN fiyatları ile PETROL ve GUMUS fiyatları arasında doğru yönlü, DJI Endeksi ile ters yönlü bir ilişki olduğu sonucuna ulaşılmıştır.

Engle ve Granger(1987) çalışmalarında değişkenler arasında uzun dönemli bir ilişki olması halinde hata düzeltme mekanizmasının yazılabileceğini göstermişlerdir. Yani uzun dönem dengesinde oluşacak bir sapmanın düzeltilebileceği ortaya konulmaktadır. Eşbütünleşme regresyon denklemindeki sapmaların düzeltilmesi hata düzeltme terimi (ECT) ile sunulmaktadır. Tablo 4 vektör hata düzeltme model (VECM) tahmin sonuçlarını göstermektedir.

Error Correction:	D(LALTIN)	D(LOIL)	D(LSILVER)	D(LDJI)
CointEq1	-0.009241	0.102508	0.039472	0.081946
	(0.01792)	(0.03432)	(0.03731)	(0.01557)
	[-0.51583]	[2.98718]	[1.05802]	[5.26233]

Tablo 4 Vektör Hata Düzeltme Modeli Sonuçları

Tablo 4 incelendiğinde ALTIN modeli için elde edilen tahmin sonuçları kısa dönemde diğer serilerde bir değişme olması altın fiyatlarını ters yönde etkilediği görülmektedir. Fakat ALTIN modeli için tahmin edilen kısa dönem parametresi istatistiksel olarak anlamsızdır. Yani bu seriler arasında kısa dönem denge ilişkisi söz konusu değildir.

4.2.3. Etki-tepki(Impulse-response, IR) Analizi

Etki-tepki fonksiyonları, hata terimlerinden birindeki bir standart sapmalık şokun, içsel değişkenlerin şimdiki ve gelecekteki değerlerine olan etkisini yansıtır. Başka bir ifadeyle, etki-tepki analizi bir değişkende meydana gelecek bir şokun sistemdeki diğer değişkenler üzerindeki etkisini analiz etmekte ve bu bakımdan ekonomik politikalara yön vermede önemli bir işlev görmektedir. Hareketli ortalama vektörü(VMA) gösterimi Sims(1980)'in yönteminde şokların VAR sisteminin içerdiği değişkenler üzerindeki etkilerinin zaman serisi grafiğinin çizilmesine imkân verir:
Grafik 3 Etki-Tepki Analizi Sonuçları

Grafik 3'te gösterilen sonuçları incelemek gerekirse, gümüş fiyatlarında 1 standart sapmalık şok meydana geldiğinde, altın fiyatları 3. döneme kadar yatay yönde, 4. dönemde azalış yönünde, 6. döneme kadar artış yönünde hareket eder ve daha sonra eski sürecine geri döner. DJI Endeksinde 1 standart sapmalık şok meydana geldiğinde, altın fiyatları 2. döneme kadar hafifçe artış yönünde, 4. döneme kadar azalma yönünde, 5. döneme kadar artış yönünde hareket eder ve sonra eski sürecine geri döner. Petrol fiyatlarında 1 standart sapmalık şok meydana geldiğinde altın fiyatları 2. döneme kadar azalır, 4. döneme kadar artar ve sonra eski uzun denge değerine geri döner.

5 Sonuç

Piyasalarda fiyatı en çok izlenen göstergelerden biri olan altın fiyatları tarihsel olarak başta dünya ekonomik konjonktürü olmak üzere birçok dinamikten etkilenmiştir. Son küresel finans krizi sürecinde de altın fiyatları dalgalanmıştır. Çalışmada küresel finans krizi sürecinde altın fiyatlarını belirleyen unsurlar olarak Dow-Jones Endeksi, petrol fiyatları ve gümüş fiyatları ele alınmıştır. Elde edilen bulgular çerçevesinde, altın fiyatının beklendiği gibi kriz dönemlerinde arttığı ve yukarıda adı geçen göstergelerden uzun dönemde etkilendiği ortaya çıkmıştır. Yapılan eşbütünleşme testi, VECM analizi ve etki tepki analizlerinin sonuçlarını spesifik olarak belirtmek gerekirse, VECM sonuçlarına göre kısa dönemde göstergelerin birlikte hareket etmediği ancak eşbütünleşme analizinin sonuçlarına göre uzun dönemde birlikte hareket söz konusu olduğu saptanmıştır. Ayrıca etki-tepki analizi sonucuna göre de petrol fiyatlarındaki oynaklığın, diğer göstergelere göre altın fiyatlarını daha çok etkilediği ortaya çıkmıştır. Bu çerçevede uzun dönemde altın fiyatlarının petrol ve gümüş fiyatları ile aynı yönde, Dow-Jones Endeksi ile ters yönde hareket ettiği görülmüştür. Bu durum hem altının diğer emtialar ile aynı yönde ilişkili olduğunun, hem de finansal krizin bir göstergesi niteliği olarak ele alınabilecek olan Dow-Jones'daki düşüşlerle ters yönde ilişkili olduğunu göstermiştir.

Öte yandan her ne kadar altın, değerli maden özelliği taşıması dolayısıyla herhangi bir türev ürüne göre daha az spekülasyona açık olsa da, büyük yatırımcıların hareketlerinden ve siyasi değişimlerden - tercihlerden de fiyat bazında etkilenmektedir. Bir başka deyişle, altın fiyatının uluslararası piyasadaki büyük oyuncular tarafından speküle edilebileceği ve siyasal gelişmelerden etkilenebileceği unutulmamalıdır. Bu bağlamda, son küresel krizde genel eğilimlerle birlikte başka bir sorun daha ortaya çıkmıştır. Krizin Avrupa'ya yayılması ile AB ülkelerinde merkez bankalarının altın stoklarının satışı gündeme gelmiştir. Böylece hem siyasal etkilerle hem de uluslararası arenada büyük oyuncuların – spekülatörlerin de etkisi ile 2013 yılında altın fiyatlarının artışı yavaşlamış hatta altın fiyatları düşüşe geçmiştir (bu konuda bkz: Guardian 2013 ve Soros 2013). Bu çerçevede,

altın fiyatlarının keskin bir şekilde yükselmesi krizin bir sonucu olarak ele alınabilecek nitelikte olsa da son aylarda altın fiyatlarındaki düşüşü, krizden çıkıldığına dair net bir gösterge olarak algılamak doğru olmayacaktır. Günümüzdeki küresel kriz için yukarıda bahsedilen bazı özel durumların yol açtığı riskler ve belirsizlikler söz konusu olsa da altın kriz dönemlerinin kritik yatırım araçları arasında halen yerini korumaktadır.

2008 Global Krizinin Geçiş Ekonomilerindeki Etkilerinin Kümeleme Analizi ile İncelenmesi

An Analysis of the Effects of 2008 Global Crises on Transition Economies using Cluster Analysis

Asst. Prof. Dr. Ali Özer (Erzincan University, Turkey)
Ph.D. Candidate Adem Türkmen (Erzincan University, Turkey)
Ph.D. Candidate Bülent Diclehan Çadırcı (Erzincan University, Turkey)

Abstract

In 2008 the global financial crisis on economic conjuncture had affected on not only developed and developing countries but also remarkably on transition economies. Effects of financial crisis in 2008 showed up impacts on developed countries in 2008, on the other hand, it is known that the reflection of crisis has emerged in 2009. In this study, it is examined that transition economies has moved different depends on time, additionally the phenomenon of facing crisis has followed heterogeneous patterns transition economies in 2009 the while transition economies has seemed as showing homogenous economic performances/movements on either specification or previously their structure. It is analysed in three cluster using classification of chosen countries. Among chosen countries, taking place in same cluster Belarus, Cambodia, Kazakhstan, Lao, Latonia, Lithuania, Romania and Russia between 2007 and 2010 have responded similar to both input and output of crisis. Moreover, the cluster for Kirgizstan, Macedonia and Moldova is determined as the most moving group between clusters and this group, which moved homogeneously within cluster, is affected on crisis differed from other countries. The cluster analysis has been investigated with 20 transition economies has appropriate data and it is determined that the relatively low level of current account economies has weak impact on the crisis contagion; while the exit from crisis is created stronger effects in the relatively high level of domestic savings economies.

1 Giriş

Geride bıraktığımız yüzyılın en önemli olaylarından birisi şüphesiz ki, 1989 yılının sonlarında Berlin Duvarı'nın yıkılması ve hemen ardından 1991 yılında Sovyet Sosyalist Cumhuriyetler Birliği'nin (SSCB) dağılmasıdır. Yıllarca sosyalizme dayalı merkezi planlama sistemiyle idare edilen ülkelerin serbest piyasa ekonomisine geçtiklerinin resmen ilan edildiği bu süreçte, böylesi bir düzen değişikliğine maruz kalan tüm ülkeler için "Geçiş Ekonomisi" *(Transition Economies)* tanımlaması kullanılmaktadır. Her ne kadar bu guruba dahil ülkelerin özellikleri ve yaşadıkları süreçler birbirinden çok farklı da olsa, ortak noktaları merkezi planlamadan serbest piyasa ekonomisine geçmek olduğundan, tamamı "geçiş ekonomisi" kavramı içine dahil edilmişlerdir.

1990'larda doğuda bu türden bir geçiş yaşanırken; batıda ve özellikle Amerika'da 2000'li yıllar boyunca uygulanan düşük faizler, düşük gelirli aileler için konut kredilerinin yolunu açarken, kredi baloncuklarının oluşmasını da beraberinde getirmiştir. Dolayısıyla risk primi yüksek olan bu konut kredilerinde 2006 yılında başlayan geri ödeme aksaklıkları ipotekli konutların satışı ile konut fiyatlarında düşüşlere neden olmuş ve 2007 yılının sonunda yüksek faizli ve yüksek riskli kredi (subprime mortgage) denen kredi sistemi çökmüştür. Bankaların ellerindeki değerinden fazla ipotek konulmuş konutların kredi akitlerini yatırım bankalarına tahvil olarak satması 2008 yılında Amerikan finans sistemi içinde büyük bir finansal krizin domino etkisiyle yayılmasını beraberinde getirmiştir. 2008'in son çeyreği itibariyle küresel bir likidite ve kredi krizine dönüşerek piyasalardaki güven unsuruna zarar vermiştir. Ayrıca 2008'de dev finans şirketlerinin iflası ile bankacılık ve finans alanlarında da yeni bir kriz olarak ortaya çıkmış, borsalarda dramatik düşüşler ve kurlarda ciddi yükselişler görülmüştür.

2008 krizi ABD'de ve tüm Dünya'da serbest piyasa olgusu ile ilgili tüm düşünceleri tıpkı 1929 Büyük Bunalımı'nda olduğu gibi sarsmıştır. Piyasaların kendi kendine iyi işleyebileceği inancı sarsılsa da; kapitalizmin tamamen ortadan kalkıp yerine daha farklı bir alternatif sistemin gelmesini beklemek pek mümkün görünmemektedir. Önümüzdeki yıllarda da liberal iktisadi düşüncenin ana hatları ile devam edeceği; ancak aksayan yönlerini de yeniden şekillendirerek bir tür evrim geçireceği söylenebilir. Bu nedenle 2008 krizi sonrasında tüm Dünya piyasalarındaki regülasyonların; bir başka deyişle kısmi müdahalelerin ön planda olacağı açıkça anlaşılmaktadır. Dolayısıyla kapitalizmin gerektiğinde piyasaların düzenlenmesini öneren yeni yorumu veya yeni şekli için "düzenleyici kapitalizm" (regulatory capitalism) kavramı ifade edilmeye ve kullanılmaya başlanmıştır. Bu nedenle planlı ekonomik sistemden kapitalizme geçiş yapan ve ekonomik sistem ortaklığı dışında herhangi bir ortaklığı bulunmayan Geçiş Ekonomilerinin kriz karşısında nasıl gruplandığını görmek önem arz etmektedir.

Buraya kadar yapılan açıklamalardan anlaşıldığı gibi, bu kriz ilk sinyallerini 2006 yılında vermesine karşın bunun globalleşmesi biraz zaman almıştır. Bu nedenle çalışmada veri aralığı 2007–2010 olarak belirlenmiş ve son krizin, geçiş ekonomileri üzerindeki etkileri kümeleme analizi yardımıyla ortaya konulmaya çalışılmıştır.

2 Literatür

Hutchison ve Ilan (2005), Dell'Ariccia vd., (2008) Reinhart ve Rogoff's (2009) gibi çalışmalar krizlerin ekonomiler üzerindeki etkilerini incelemiş ve gelişmekte olan ülkelerde krizin etkisini gelişmiş ülkelere göre daha büyük ve kalıcı olduğunu iddia etmiştirler.

Aras (2010), 2008 krizinin Türkiye'ye etkilerini araştırdığı çalışmasında, Türkiye ekonomisinin 2008 krizinden temelde dört farklı kanaldan etkilendiğini; bu kanalların ise dış talepte azalma, dış kredi azalması, iç kredi daralması ve ekonomiye duyulan güvenin azalması olduğunu vurgulamıştır. Krizin Türkiye'ye makro ekonomik açıdan olumsuz etkilerinin ise 1994 ve 2001 kriz tecrübeleri ve alınan önlemler dolayısıyla daha çok reel sektörle sınırlı kaldığını ifade etmiştir.

Çakmak ve Sarıdoğan (2010), küresel iktisadi kriz, genelde dünya ve özelde ise Türkiye ekonomisi ve sanayisini, beklentilerdeki ve talep koşullarındaki bozulmaya bağlı olarak üretimi, istihdamı, kârlılıkları-kazançları ve dolayısıyla toplumsal refahı olumsuz etkilediğini tespit etmiştir. İmalat sanayi ve alt sektörlerin krizden etkilenme düzeyi farklı olmakla birlikte, özellikle dış finansmana, dış talebe ve yüksek gelir esnekliğine bağlı olan sektörlerde daha fazla kayıpların ortaya çıktığını ileri sürmüşlerdir.

Yıldırım (2010), çalışmasında 2008 krizinin Türkiye üzerindeki etkisinin finansal piyasalara olduğunu iddia etmiştir. Çalışmaya göre; küresel ekonomik kriz önce borsada ortaya çıkmakta ve daha sonra da reel ekonomide kendini göstermektedir. Türkiye ekonomisinde 2007 yılından itibaren tarım, sanayi ve hizmetler sektöründe büyüme hızları düşmüş, buna bağlı olarak da GSYİH'da azalma meydana gelmiştir. 2007 yılı sonunda %4,7 olan GSYİH büyüme hızı 2008 yılı ağustos ayı sonunda %0,9'a düşmüştür. İşletmelerin talep yetersizliği nedeniyle kapasite kullanım oranlarında da azalışlar görülmüştür.

Berberoğlu (2011), 2008 krizinin Avrupa Birliği ülkelerindeki etkisini kümeleme analiziyle araştırmıştır. Analiz sonuçlarına göre 2006 yılı için Almanya, Fransa, İtalya ve İngiltere bir kümede; İspanya ve Hollanda bir diğer kümede ve Türkiye ile diğer AB ülkeleri ise bir başka kümede yer almıştır. 2007 yılı sonuçlarına göre aynı kümelenme durumunun devam ettiği tespiti yapılmıştır. Başka bir deyişle sözü edilen ülkelerden oluşan kümelerde bir değişiklik görülmemektedir. Ancak, 2008 yılına gelindiğinde; İngiltere'nin önceden bulunduğu küme olan Almanya, Fransa ve İtalya'dan ayrılarak İspanya ile bir küme oluşturduğu görülmüştür. Hollanda'nın da 2008 yılında İspanya ile aynı kümede yer almayıp Türkiye ve diğer AB ülkelerinin bulunduğu kümeye geçtiği tespit edilmiştir.

Kantar vd. (2011) 50 büyük Türk firmasının 2006-2010 yılları arasındaki verileriyle 2008 küresel krizinin firma bazındaki etkilerini hiyerarşik kümeleme metodu ile incelemişlerdir. Çalışma sonuçlarına göre, firmalar 4 ayrı kümeye ayrılmaktadır. Bankacılık ve finans kuruluşlarından oluşan kümenin, güçlü küme içi ilişkileri ile kriz döneminde sektörel artış yaşadığı ve bu kümenin Türkiye ekonomisi açısından önemli ve baskın nitelikte olduğu da belirtilmektedir. Genel olarak çalışmada 2008 finansal krizinin firma bazında Türkiye ekonomisi üzerinde etkinliğinin zayıf olduğu tespit edilmiştir.

Furceri ve Zdzienicka (2011), 11 Avrupa geçiş ekonomisi üzerinde 2008 krizinin etkilerini araştırmış ve bu ülkeler üzerinde anlamlı ve kalıcı etkisinden bahsetmiştir. Özellikle de finansal dengesizliklere karşı bankacılık sistemi duyarlı olan küçük ülkelerin daha fazla etkilendiğini iddia etmiştir. Ayrıca maliye politikalrının krizle mücadelede para politikalrından daha etkili olduğunu ileri sürmüştür.

Mazurek (2011), 2008 küresel krizinin Çek Cumhuriyeti'ndeki bölgesel etkilerini kümeleme analizi ile araştırmıştır. Araştırma sonuçlarına göre Ústecký, Moravskoslezský, Prague, Jihočeský, Jihomoravský, Liberecký bölgeleri krizden az etkilenen bölgeler olarak belirlenirken, Středočeský, Plzeňský, Karlovarský, Královéhradecký, Pardubický, Vysočina, Olomoucký, Zlínský krizden çok etkilenen bölgeler olarak tespit edilmiştir. Ayrıca çalışmada; krizden etkilenme oranlarına göre bölgelerde uygulanan politikaların incelenmesi sonucu, krizin etkilerinin hafifletilmesini sağlayabilecek politika önermelerine de vurgu yapılmıştır

Göçer (2012), 2008 küresel ekonomi krizinin genel olarak dünya ekonomisini ve özelde de ABD ile beş Avrupa ülkesi ve Türkiye ekonomisi için inceleme konusu yapmıştır. Krizin ekonomik büyüme üzerindeki etkilerinin dünya genelinde ve ülke özelinde en çok özel tüketim harcamaları yoluyla etkilediğini ortaya koymuştur. Doğrudan yabancı yatırımların genel olarak olumlu, fakat bazı ülkelerde ekonomik büyümeyi olumsuz yönde etkilediği görülmüştür. Kamu harcamalarının ise dünya genelinde ve ele alınan ülkelerde ekonomik büyüme üzerinde önemli bir etkisinin olmadığı tespiti yapılmış; ancak İtalya ve Yunanistan'daki etkileri anlamlı ve pozitif bulunmuştur. İspanya'daki etkisi ise negatiftir. İhracat, beklentilere uygun olarak ekonomik büyümeyi pozitif etkilerken, ithalat negatif etkilemiştir. Krizin bütün ülke ekonomilerine etkisi negatif olup, etki düzeyi ve etkinin anlamlılık derecesi farklılıklar göstermiştir. Krizden en çok etkilenen ülkelerin de sırasıyla; ABD, İtalya ve Yunanistan olduğu görülmüştür.

3 Yöntem ve Uygulama

Bu araştırmanın amacı, 2007-2010 yılları arasında küresel krizin geçiş ekonomileri üzerindeki etkisini analiz etmektir. Dolayısıyla kriz öncesi, kriz esnası ve kriz sonrasında geçiş ekonomilerinin birbiri ile olan ilişkilerini belirlemek amacıyla hiyerarşik kümeleme analizi kullanılmıştır. Hiyerarşik kümeleme analizi tipik olarak sayısı 250'den az olan küçük örneklem gruplarının analizinde etkin olarak kullanılan bir yöntemdir (Everitt ve Landau, 2001). Veriler Dünya Bankası ve ilgili ülkeler Merkez Bankaları internet sitelerinden elde edilmiş ve verilerin analizinde SPSS 21.0 paket programı kullanılmıştır. Ulaşılabilir verilere sahip ülkeler üzerine yapılacak geçiş ekonomileri de Tablo 1'de sunulmuştur.

Alfabetik Sıralaması	Ülkeler	Alfabetik Sıralaması	Ülkeler
1	Arnavutluk	11	Lao
2	Beyaz Rusya	12	Letonya
3	Bulgaristan	13	Litvanya
4	Kamboçya	14	Makedonya
5	Hırvatistan	15	Moldova
6	Çek Cum.	16	Polonya
7	Estonya	17	Romanya
8	Macaristan	18	Rusya
9	Kazakistan	19	Slovenya
10	Kırgızistan	20	Ukrayna

Tablo 1: Çalışmada Kullanılan Geçiş Ekonomileri

Çalışmada, literatürde krizin etkisi çalışmalarında sıkça kullanıldığı tespit edilen 6 değişken çalışmaya dahil edilmiştir. Kullanılan değişkenler ve kısaltmaları Tablo 2'deki gibidir.

Kısaltımı	Değişkenin Tanımı
CAB	Cari İşlemler Dengesi (% GSYİH)
FE	Nihai Tüketim Harcamaları (% GSYİH)
GCE	Kamu Nihai Tüketim Harcamaları (% GSYİH)
GDS	Brüt Yurtiçi Tasarruflar (% GSYİH)
M2	M2 Para arzı (% GSYİH)
GDPPC	Kişi Başı Gayri Safi Yurtiçi Hasıla Büyümesi (Yıllk %)

Tablo 2: Çalışmada Kullanılan Değişkenler ve Kısaltmaları

Çalışmanın bu kısmında birbirine en çok benzeyen ülkeleri belirlemek amacıyla hiyerarşik kümeleme analizi uygulanmıştır. Kümeleme sürecinin başlangıç aşamasında her gözlem bir küme konumundadır. Süreç sonunda ise tüm gözlemler bir kümede toplanmaktadır. Bu yöntem aşağıdaki algoritma ile ifade edilebilmektedir(Tatlıdil, 2002).

1. Adım: n tane gözlem, n tane küme olarak işleme başlanır.

2. Adım: En yakın iki küme (uzaklık değerleri en küçük olan) birleştirilir.

3. Adım: Küme sayısı bir indirgenerek yinelenmiş uzaklıklar matrisi bulunur.

4. Adım: 2 ve 3 nolu adımlar n-1 kez tekrarlanır.

Bu algoritmaya dayalı; tek bağıntılı, tam bağıntılı, grup ortalama, merkezi, ortanca ve minimum varyans yöntemlerinden (Ward yöntemi) söz edilebilmektedir. Çalışmada bu yöntemlerden hiyerarşik kümeleme analizlerinde sıklıkla tercih edilen Ward yöntemi kullanılmıştır. Bu yöntem iki küme arasındaki benzerlik tüm değişkenler dikkate alınarak en küçük kareler toplamının bulunması ile ölçülür. Amaç küme içinde homojenliği, kümeler arasında heterojenliği maksimum yapacak şekilde kümeler oluşturmaktır (Sharma, 1996). Bu yöntemle elde edilen aglomeratif tablolar yardımıyla 2007- 2010 yılında çalışmada kullanılan değişkenlere bağlı olarak birbirine en çok benzeyen ve birbirine en az benzeyen ülkeler tespit edilmiştir. Daha sonrada dendrogram yardımıyla 0-25 ölçek arasında ülkelerin kümelenmesine göre oluşan kümeler ve kümelerdeki ülkeler verilmiştir.

2007 yılı için aglomeratif tabloya bakıldığında, en çok benzeyen ülkelerin 1.basamakta Çek Cumhuriyeti ve Slovenya'nın ve birbirine en az benzeyen ülkelerin ise Arnavutluk ve Beyaz Rusya'nın olduğu görülmektedir. Diğer çok benzeşen ülkeler ise Polonya-Ukrayna ve Letonya-Litvanya'dır.

2008 yılı için aglomeratif tabloya bakıldığında, en çok benzeyen ülkelerin 1.basamakta Polonya ve Ukrayna olduğu ve birbirine en az benzeyen ülkelerin ise Arnavutluk ve Beyaz Rusya olduğu görülmektedir. Diğer çok benzeşen ülkeler ise Estonya-Macaristan ve Kamboçya-Romanya'dır

*Tablo 6: 2010 Yılı Geçiş Ekonomileri İçin **Aglomeratif Tablo***

Hiyerarşik kümeleme analizi sonuçlarını göstermede dendrogram yöntemi de kullanılmıştır. Dendrogram'da ülkeler soldan sağa 0-25 birim olarak ölçeklendirilmiştir. Burada birimler arasındaki mesafeler eşittir. Dendrogramdaki yatay çizgiler mesafeyi, dikey çizgiler ise birleşen kümeleri göstermektedir. Ölçek üzerinde kümelerin birleşme noktaları, hangi grupların oluştuğunu gösterdiği gibi aynı zamanda aralarındaki mesafeyi de göstermektedir. Araştırmada bu yöntemin uygulanması sonucunda ülkeler 0-25 birim arasındaki ölçeklendirilmiş mesafelerde gruplandırılmıştır.

Dendrogram incelendiğinde ise kullanılan veriler bakımından birbirlerine en çok benzeyen ülkeler 1 birimlik mesafede grup oluştururken, birbirlerine en az benzeyen ülkeler 25 birimlik mesafede bir araya gelmektedir.

Dendogram incelendiğinde, 10 birimlik mesafede hem ülkelerde kümelenme fazla hem de ölçekte benzeşmenin düşmeden yakalandığı bir nokta olduğu için referans alınmış ve ülkeler 10 birimlik mesafeye göre gruplanmıştır, bu kümeleri oluşturan ülkeler Tablo-7'de gösterilmiştir. Ayrıca k küme sayısını bulabilmek için kullanılan en pratik yöntemlerden biri yaklaşık olarak $k= (n / 2)^{1/2}$ formülünden de küme sayısı 3,17 bulunmakta ve bu değer çalışmada temel alınan küme sayısını desteklemektedir.

2007 Yılı Kümeleri			2008 Yılı Kümeleri

Tablo 7: 2007-2010 Yılları Arasında Geçiş Ekonomileri İçin Hiyerarşik Kümeleme Analizi Dendrogram (Ağaç Grafiği)'ne Göre Oluşan Kümeler

Tablo 7 incelendiğinde, 2007 yılında 1. kümede Arnavutluk, Bulgaristan, Kırgızistan, Makedonya ve Moldova yer almakta; 2. kümede Beyaz Rusya, Kamboçya, Kazakistan, Lao, Letonya, Litvanya, Romanya, Rusya ve 3. kümede Hırvatistan, Çek Cumhuriyeti, Estonya, Macaristan, Polonya, Slovenya, Ukrayna ülkeleri yer almaktadır.

2008 yılında, 2. Kümede herhangi bir değişiklik olmazken; 2007 yılında 1. kümede yer alan Kırgızistan, Makedonya ve Moldova bu kümeden ayrılarak 3. kümeyi oluşturmakta; 2007 yılında 3. kümede yer alan tüm ülkeler 2008 yılında 1. kümede yer almaktadır.

2009 yılında, krizin etkisi tüm ülkeler ve tüm değişkenler üzerine farklı boyutlarda göstermesi, kümelerde ciddi değişikler ortaya çıkarmıştır. Kırgızistan, Makedonya ve Moldova birinci kümeye geçerken, Bulgaristan, Hırvatistan, Çek Cumhuriyeti, Macaristan ve Slovenya 3. kümeye geçmekte; Ukrayna, Estonya ve Polonya ise 2. Kümeye geçmekte; 2. kümede yer alan diğer ülkelerde ise 2007'den itibaren herhangi bir değişiklik olmadığı gözlenmektedir.

2010 yılında, Bulgaristan, Hırvatistan, Çek Cumcumhuriyeti ve Slovenya 3. Kümeden 1. kümeye geçmekte; Macaristan 2. kümeye geçmekte, 2009 da 1. kümede yer alan Kırgızistan ve Moldova 1. kümeden 3. kümeye geçerken, Makedonya 2. kümeye geçmektedir.

Tablo 8'de görülen betimleyici istatistikler dikkate alındığında; 2007 yılında 1. kümede yer alan ülke grubu için, tüm ülke grubu ortalamasının üstünde cari açık, para arzı ve tüketim harcamaları söz konusu iken, ortalamanın (çok) altında yurtiçi tasarruf ve kişi başı GSYİH büyümesi söz konusudur. 2. ve 3. kümede yer alan ülkeleri ayıran temel noktalar ise 2. kümede ortalamanın altında kamu harcaması ve para arzı ile ortalamanın üstünde kişi başı GSYİH büyümesi söz konusudur.

2008 yılında, 2007 yılına göre bütün ülke grubu ortalamalarında çok büyük değişiklikler gözlenmezken, kişi başı GSYİH'da da %38'lik bir düşüş gözlenmektedir. 1. kümede yer alan ülke grubu ortalamanın üstünde cari açık, kamu tüketim harcaması, yurtiçi tasarruf ve para arzına sahiptir. 2. kümede yer alan ülke grubu, yurtiçi tasarruf dışında tüm değişkenlerde ülke grubu ortalamasının altında yer almaktadır. 3. kümede yer alan ülkeler

açısından dikkat çeken değişkenler; çok yüksek tüketim harcamaları, negatif tasarruf (borçlanma) ve ortalamanın üstünde bir büyüme oranıdır.

Tablo 8: Kümelere Ait Betimleyici İstatistikler

2009 yılında, 2008 yılına göre cari açıkta ve kişi başı GSYİH'da ciddi bir azalmaya karşılık, para arzında ve kamu harcamalarında artış gözlenmektedir. Tüm değişimler krizin etkisini 2009'da güçlü olarak gösterdiğini ve geçiş ekonomilerinin kamunun harcamalarını ve para arzını arttırarak, yani genişlemeci politikalarla krizin etkilerini azaltmayı amaçladıkları söylenebilir. Kümeler incelendiğindeyse, 1. kümede yer alan ülkeler için yüksek cari açık ve tüketim harcamalarına ilaveten çok düşük yurt içi tasarruf görülmekte ve buna karşın kişi başı GSYİH büyümesinde krizin etkisinin düşük olduğu söylenebilmektedir. 2. kümede yer alan ülkeler için ortalamanın üstünde tasarruf varken, diğer değişkenlerin tamamının grup ortalamasının altında olduğu görülmektedir. 3. kümede yer alan ülkelerde ise kamu harcaması, yurtiçi tasarruf ve para arzının ortalamanın üstünde olduğu; ayrıca tüm kümeler içinde bu kümenin en düşük kişi başı GSYİH değerine sahip küme olduğu da dikkat çekmektedir.

2010 yılında, cari açığın 2007'de başlayan azalmasına devam ettiği, 2009'da düşen yurtiçi tasarrufların yeniden artmaya başladığını, para arzının artmaya devam ettiğini ve kişi başı GSYİH büyümesinin pozitif değer alması ise krizin daralma etkisinin ortadan yavaş yavaş kalktığını göstermektedir. 1. kümede yer alan ülkeler için kamu harcaması ve para arzının ortalamanın üstünde olduğu ve kişi başı büyümenin ortalamanın altında olduğu görülmektedir. 2. kümede yer alan ülkeler için ise yüksek tasarruf oranı ve düşük cari açık ile kümeler içinde en yüksek büyüme ortalaması söz konusudur. 3. kümede yer alan ülkeler için ise yüksek cari açık ve tüketim harcamaları ile negatif tasarruf söz konusudur.

4 Sonuç

Planlı ekonomiden piyasa ekonomisine geçen geçiş ekonomilerinde 2008 küresel ekonomik krizinin ortak noktaları ve farklılaşan boyutlarını gözlemlemek üzere yapılan istatistiki çalışmada, kullanılan değişkenler itibariyle, bazı ülkelerin kriz öncesi durumlarını kriz sonrasında koruyamadıkları tespit edilmiştir. Buna karşılık, bazı ülkelerinse 2007-2010 yılları arasında aynı kümede yer alarak kriz öncesi ve sonrası grup olarak birbirine yakınsayan etkilere sahip olduğu belirlenmiştir.

Elde edilen bulgularda, 20 Geçiş Ekonomisi için 2009 yılında krizin etkisinin güçlü bir şekilde kendini gösterdiği görülmekte ve kümeler arası ülke geçişlerinin 2009 itibariyle arttığı tespit edilmiştir. Genel olarak 2. kümede yer alan Beyaz Rusya, Kamboçya, Kazakistan, Lao, Letonya, Litvanya, Romanya ve Rusya'nın 2007-2010 arasında bu kümeden hiç ayrılmadığı ve bu kümenin yıllar itibariyle incelenmesi sonucu sürekli yüksek tasarruf miktarına sahip ülkelerden oluştuğu görülmektedir. Burada 2. kümenin krizden orta düzeyde etkilenen ülke grubu olduğu görülmekte ve 2010 yılında da krizden çıkışı en iyi olan ülke grubu olduğu söylenebilmektedir. Krizden orta düzeyde etkilenen, ancak krizden en hızlı bir şekilde çıkan bu ülkelerin krizden çıkışta ortak olan özelliğinin ortalamanın üzerinde yüksek tasarruf oranlarının yanı sıra ortalamanın çok altında cari açık rakamının etkili olduğu söylenebilir. Diğer bir ifadeyle ikiz açık olgusuna düşmeme bu ülkelerde krizin bir tür panzehri konumundadır.

İstisna olarak kabul edilebilecek olan Arnavutluk, yüksek cari açık, tüketim harcamaları ve para arzı ile düşük tasarruf düzeyi rakamlarına sahip olmasına rağmen, kriz öncesinde de düşük büyüme oranlarına sahip oluşu ile krizden en az etkilenen küme içinde yer almaktadır. Kümeler arasında en çok hareket eden Kırgızistan Makedonya ve Moldova 2009 yılında, kriz öncesinde ortalamanın üzerinde yer alan cari açıklarında ve tüketim harcamalarında ciddi düşüş yaşamaktadırlar. 2009 yılında yurtiçi tasarruf ve para arzında artışlar yaşanan Kırgızistan ve Moldova'nın tasarruflarını 2010 yılında düşürdüğü, Makedonya'nın ise 2010'da da tasarruf artışının devam ettiği görülmekte; bu yüzden üçlü 2010 yılında farklı kümelerde yer almaktadır.

Birlikte hareket eden bir diğer grubun ise Bulgaristan, Hırvatistan, Çek Cumhuriyeti ve Slovenya olduğu görülmektedir. Bu gurubun kriz öncesi ve sonrasında genel durumuna bakıldığında, krizle birlikte cari açıklarında ciddi düşüşler yaşandığı, para arzında artışın gerçekleştiği ve büyüme oranlarının ciddi bir şekilde düştüğü istatistiki verilerinden görülmektedir. Krizden en fazla etkilenen kümede yer alan bu ülkeler kriz sonrasında krizin etkilerinden çabuk sıyrılarak 1. kümeye geçmektedirler.

Genel olarak çalışmadan elde edilen sonuçlar, seçilen ülke gurupları ve kullanılan değişkenlere bağlı olarak farklılık göstermesine rağmen, ülke guruplarının kriz karşısında ekonomik durumlarındaki benzeşmelere paralel olarak birbirine yakınsayan nitelikte, krizden etkilenme ve krizden kurtulma seyri gösterdiğini söylemek mümkündür. Çalışmada dikkat çeken önemli bir konu yurtiçi tasarrufların yüksek oluşunun krizden etkilenmeyi azaltıcı etkisinin yüksek olmamasına rağmen, bu göstergenin seçili ülke grubunda krizden çıkış etkisi açısından önemli bir gösterge niteliği taşıdığı ileri sürülebilir.

Abstract

The common features of the crises, which are resulted from global crisis rooted from the US and emerged in Euro Zone sequentially, are the rate of public debt and budget deficit of GNP far from reflecting Maastricht criteria. Beginning in Greece in 2009, it has been seen in Ireland, Italy, Portugal, and Spain in a recent time. Although money union is established, leaving financial policies to country's own initiative resulted in unsolved problems. Seeking solutions with IMF led to some sustainability programs. However, expectations show that debts will not be overcome for a long period. Towards this end, it is possible for Turkey to be affected since European Union is her biggest trade partner. There is a general consensus on that trade and credit channel of transmission mechanisms would affect Turkey. Export preserves its level at 55%. Likewise, a large part of foreign debt of Turkey is to European banks. Furthermore, sustainment of the recent growth trend of Turkey requires new funds. In case European banks strengthen their capital by means of downsizing their balance sheets as a restructuring, Turkey may be in a challenging position.

1 Avrupa Birliği Borç Krizi

ABD kaynaklı başlayan 2008 küresel kriz etkisini özellikle Avrupa'da sürdürmeye devam etmiştir. Krizin olumsuz etkileri sonucunda avro bölgesi 2009 yılında % 4,1 oranında küçülerek tarihindeki en büyük daralmayı yaşamıştır. Yaşanan küresel kriz, AB ülkelerinde kamu açıkları ve borç stoklarının ciddi boyutlarda artmasına ve birçok üye ülkede kamu maliyesinin sürdürülebilirliğinin tehlikeye girmesine neden olmuştur. Tablo-1'de istatistikleri bulunan Avro bölgesi üye ülkeler borç krizi ve artan cari açık sorunu ile mücadelede yetersiz kalmış, Avrupa Merkez Bankası (AMB) uyguladığı para politikaları ile bir nebze yavaşlama sağlayabilmiştir. Ancak AMB tarafından ortak bir para politikası uygulanmasına karşın mali politikaların uygulanması ülkelere bırakılmıştır (Kouretas ve Vlmais, 2010, s.396). AB müktesebatında üye devletler için ulusal bütçelerinin yapısına ilişkin hiçbir gereklilik veya standart bulunmamakta ve bütçe sisteminde belirli bir model öngörülmemektedir (Köse ve Karabacak, 2011, s.300). Bu durum da hem krizin etkisinin daha çabuk yayılmasını sağlamış hem de çözüme kavuşma sürecini uzatmıştır.

Ülke	Borç/GSMH Oranı (%)	Bütçe Açığı/GSMH Oranı (%)	İşsizlik Oranı	Cari Açık/GSMH Oranı	S&P Derecelendirmesi	10 Yıllık Bono
Portekiz	106	-1,9	12	-8,9	BB	11,6
İtalya	121	0,5	8	-3,9	BBB+	6,7
İrlanda	109	-6,8	14	0,8	BBB+	8,2
Yunanistan	166	-1,3	17	-10,2	CCC	28,4
İspanya	67	-4,4	23	-4,3	BBB+	5,9
Türkiye*	39.4	-2,80	10,1	-9,7	BB	8,7

*Tablo 1 Ülke Genel Bilgileri Kaynak: Wind, 2011, Chartsbin, 2013. *Araştırmacılar tarafından 2012 yılı değeri olarak ilave edilmiştir.*

AB'nin merkez-çevre ülkeler arasındaki dengesizliği giderebilmek için tek para birliği alanını yaratması ile çoğunlukla küçük ve orta ölçekli işletmelerden kurulu olan Yunanistan ve Portekiz gibi çevre ülkelerin finansman sorunu çözülmüş ve sınırsız kaynak kullanımı sağlanmıştır (Stratfor, 2011). Ancak bu iyi niyetli çabalar ülkelerdeki iyi olmayan yönetim uygulamaları sonucunda borç krizine ve cari açık sorununa dönüşmüştür. Aşağıdaki şekilde yolsuzluk durumu ile bütçe açığı ilişkilendirilmektedir. Buradaki bilgilerin ışığında Yunanistan, İtalya, Portekiz ve İspanya'da yolsuzluk ile bütçe açığı arasındaki pozitif korelasyon dikkati çekmektedir.

Genel sorunların içerisinde yer alan diğer bir husus da; Maastricht Antlaşması'nın tasarımında, bir kriz mekanizmasına yer verilmeyişidir. Üye devlet ekonomilerinin, ekonomik ve parasal birliğe geçmeden önce, bu

kriterler çerçevesinde, birbirine yakınlaştırılması hedeflenmiştir. Üye devletlerin bütçe açıklarının gayrisafi yurtiçi hasılaya (GSYH) oranının %3'ü aşmaması ve kamu borç stoklarının GSYH'ye oranının %60'ı geçmemesi gerekmektedir. Ancak Tablo-2'den de anlaşılacağı üzere kamu borçlarının oranı Yunanistan ve İtalya'nın 1999 yılından itibaren, diğer üç ülkenin de son yıllarda kriterin üzerinde gerçekleşmiştir.

Tablo 2 *Kamu Borçlarının GSYH'ya Oranı (%, Brüt) Kaynak: Eurostat ve Avrupa Komisyonu*
Şekil 2 *Bütçe Açıkları (%/GSYH) Kaynak: Akram ve ark., 2011, s.122.*

2009 yılında Yunanistan ile başlayan borç krizi, Portekiz ve İrlanda'ya sirayet etmiş, 2011 yılı sonunda İtalya'nın yardım çağrısı ile genişlemiş, 2012 yılında İspanya'nın da aralarına katılması ile gündemde kalmayı sürdürmüştür. Bu yayılmanın dış ticaret, faiz oranları ve döviz kuru olmak üzere üç ana yoldan meydana geldiği belirtilmektedir (akt. Köse ve Karabacak, 2011, s.300). Yunanistan'ın kamu borcunun büyük kısmının yabancı kreditörlere ait olması bu yayılma etkisini güçlendirmektedir. Diğer yandan, ortak faiz oranı ve döviz kuru kanalları ile krizin yayılabilmesi AB avro bölgesine üye olmakla ilişkili bir risk olarak görünmektedir.

Yunanistan'daki krizin ABD kaynaklı küresel krizden kaynaklanmadığı bilinmektedir (Kouretas ve Vlmais, 2010). Yunanistan krizinin temel nedenleri arasında, ekonomik gerilemeden ve reel GSYH'de beklenenden daha büyük bir düşüşten kaynaklanan "ekonomik döngü" etkisi, gelir toplama mekanizmalarının gevşekliğinden ve harcamaların yüksekliğinden kaynaklanan "seçim veya politik döngü" etkisi ve vergileri toplama, harcamaları kontrol etme ve verileri kaydetmeye ilişkin yaygın yapısal yetersizliklerden ve eksikliklerden kaynaklanan "yapısal" etki yer almaktadır (akt. Köse ve Karabacak, 2011, s.295). Yine de küresel krizden etkilenen özel sektörün borçlarının devlet tarafından üstlenilmesi de kamu borç stokunun artmasına neden olmuştur (Kouretas ve Vlmais, 2010, s.391). Bunlarla birlikte sosyal güvenlik reformu gibi yapısal reformların yapılmaması, ulusal rekabet gücünün kaybı ve finansal kaynaklara kolay erişim de krizin derinleşmesinde etken olmuştur (Akram ve ark., 2011, s.123). 2010 yılı Mayıs ayı içerisinde IMF destekli 110 milyar avro değerinde üç yıl sürecek bir kurtarma paketi onaylanmıştır.

İtalya'da kamu maliyesinin zayıf durumu bu ülke ekonomilerini kırılgan hale getirmiştir. AMB'nin hükümetlere yardım etmenin söz konusu olmadığını belirtmesi, istikrarın sağlanmasının önüne geçmiştir. AMB'nin bağımsızlık kriterlerinden biri de kamuyu destekleyemeyecek olmasıdır. Ancak 9 Aralık 2011'de AMB'nin politika değişikliği ile bankalara üç yıllık vade ile sınırsız kredi verilmesinin önü açılmıştır.

İrlanda'nın pozisyonu diğer üye ülkelerden farklı olarak ABD'de yaşanan krize benzemektedir. İrlanda krizinin etkenleri; kürsel krizle birlikte gayrimenkulde yaşanan değer kayıpları, sıkı politikaların doğurduğu panik havası ve yoğun işten çıkarmalar olmuştur. İrlanda halkında refahın süreceğine inançla birlikte yatırımlar inşaat sektörüne yapılmış, ancak krizle birlikte %50'lere varan değer kayıpları ile reel sektör zor durumda kalmıştır. İrlanda, Yunanistan ve Portekiz gibi küresel krizde ekonomik istikrarı sağlayabilmek için bankacılık sektörüne yüklü miktarda kaynak aktarmıştır (Kouretas ve Vlmais, 2010, s.392). Sonuç olarak bütçe açığı tahminlerin üzerinde gerçekleşmiştir. İrlanda için 85 milyar avro kadar mali yardım kapsamında kredi IMF, İngiltere, İsveç ve Danimarka tarafından sağlanmıştır.

Portekiz'de cari açığın oldukça yüksek seviyelerde olması ve bankacılık sektörüne ilişkin riskler krizi tetiklemiştir. Portekiz ekonomisinde uzun zamandır yaşanmakta olan durgunluk, kamu maliyesinin iyileştirilmesini daha da zor hale getirmiştir. Portekiz AB ve IMF ile 78 milyar avro finansman desteği için anlaşma sağlamıştır.

İspanya'da ise yetersiz iç ve dış talep nedeniyle iktisadi faaliyetin kriz öncesi düzeye kıyasla oldukça düşük seviyelerde seyretmesi ve işsizlik oranının % 20'leri aşması kırılganlığı artırmıştır. Cari açık Yunanistan'da kamudan kaynaklanırken, İspanya'da özel sektör rol oynamıştır (Üçer, 2011, s.4).

2 Aktarım Mekanizması Kavramı Üzerine Tartışmalar

Parasal aktarım mekanizması, para politikası-reel ekonomi arasındaki etkileşimin, toplam talep ve üretimi hangi yollarla ve ne ölçüde etkilediğini gösteren mekanizmadır (Kasapoğlu, 2007). Para politikaları reel piyasayı ve enflasyon oranını parasal hacmi veya faiz oranlarını değiştirerek etkilemektedir. Her iki durumda da farklı kanallar kullanılarak bu hedef gerçekleştirilmektedir. Aktarım kanalları veya mekanizmaları geleneksel olarak tasnif edilirken üçe ayrılmaktadır; faiz oranları, kur oranları ve diğer varlık fiyatları (Mishkin, 1995). Yakın zamanda kredi kanalı da bir aktarım mekanizması olarak kabul edilmektedir.

Ana mekanizma olan faiz oranlarındaki değişiklik yatırım ve dolayısıyla tüketim harcamalarında bir değişikliğe sebep olmaktadır. Para arzındaki artış, tahvillere olan talebi artırmakta, yükselen tahvil fiyatları faiz oranlarını düşürmektedir. Faiz oranlarındaki düşüş ile birlikte sermaye maliyeti azalınca, yatırım harcamaları artmakta ve böylelikle üretim miktarı artmaktadır.

Varlık fiyatlarındaki değişim, bono, menkul kıymetlerin değerlerinde yapılacak oynamalar suretiyle veyahut hanehalkı refahını artırılarak yapılmaktadır. Varlık fiyatları kanalı döviz kuru veya hisse senedi kanalı ile gerçekleşebilmektedir. Uygulanan kur rejimi döviz kuru mekanizmasının işleyişinin belirleyicisidir. Sabit döviz kur rejimi uygulanan ülkelerde faiz oranları dünya faiz oranlarına endeksli olduğu için bu kanalın kullanım imkanları da kısıtlanmaktadır.

Kredi kanalı bankalar aracılığıyla yapılabileceği gibi bilançolardaki oynamalarla da gerçekleştirilebilmektedir. Daraltıcı bir para politikası kredilerde azalmaya neden olarak yatırım harcamalarında da azalmaya sebep olacaktır.

Örnek olarak AB'de yaşanan borç krizinin ABD'ye olan etkisinin ticaret, kredi ve güven kanallarından olduğu belirtilmektedir (BBVA, 2012, s.12). Bunların haricinde varlık fiyatlarındaki değişmeler, belirsizlikler ve kürsel

kredi daralması aracılığıyla da dolaylı etkiler söz konusu olabilir. Massa ve arkadaşlarına (2011) göre AB krizi gelişmekte olan ülkelere üç aktarım mekanizması vasıtasıyla etki edebilmektedir. Bunlar sırasıyla, finansal (aracı kurumlar ve menkul kıymet borsaları), kurtarma paketleri nedeniyle oluşan işsizlik ve döviz kuru hareketleridir.

Türkiye gibi serbestleştirilmiş sermaye hesabına sahip ve sermaye akımlarının yurtiçinde büyük etkisi bulunan bir ekonomide, politika büyüklükleri fiyat istikrarı ve dış dengenin sağlanması gibi ana hedefler üzerinde farklı etkiler meydana getirebilmektedir (Aslan ve Korap, 2007).

3 Sonuç ve Öneriler

AB bölgesi ekonomilerinin yaşadığı borç sorunları sürdüğü için, Türkiye'nin ihracatının yaklaşık olarak yarısının gerçekleştiği bu ülkeler ile ilgili endişeler gündemde kalmaya devam etmektedir. Reel faiz oranları kriz yaşanan ülkeler açısından yatırımcılar için cazibesini kaybetmekte, böylelikle sermaye çıkışı görülmektedir. Kriz yaşanan AB üyesi ülkelere ait reel faiz oranlarını gösterir grafik Şekil-3'te yer almaktadır.
Şekil 3 *Uzun Dönem Reel Faiz Oranları (Yunanistan, Portekiz, İrlanda ve İspanya) Kaynak: Maurer, 2010.*

Türkiye açısından transfer mekanizmalarının işleyişlerini değerlendiren çalışmalar ulusal yazında kısmen yer almaktadır. Örneğin; Aslan ve Korap (2007) tarafından Türkiye örnekleminde yapılan görgül araştırma sonucunda, reel faiz yapısının para politikası gelişmelerine oldukça duyarlı olduğu bulgusuna ulaşılmış ve kısa süreli sermaye akımlarının etkisinden bahsedilmiştir. Benzer şekilde, Kasapoğlu (2007)'nun araştırmasında faiz oranı kanalının Türkiye için işlediği sonucuna varılmıştır. Bununla birlikte araştırmacı döviz kurunun fiyatlar genel seviyesini önemli oranda etkilediğini belirtmiştir. Ayrıca, hisse senedi ve kredi kanalının bir etkisi olmadığı da araştırmada ortaya konmuştur. Öte taraftan Üçer (2011, s.11) Türkiye'nin AB borç krizinden en çok ticaret ve kredi kanalıyla etkileneceğini öngörmektedir. Dünya ekonomisi büyüme oranı Türkiye'nin ihracatı arasında pozitif ilişki olduğundan dolayı cari işlemler açığının olumsuz etkileneceği belirtilmektedir.

Sonuç olarak AB krizinin Türkiye'ye transferi için ticaret ve kredi kanallarının aktarım işlevini yerine getirebileceği görülmektedir. Türkiye'nin krizlerden etkilenmemesi için ihracatın ithalata olan bağımlılığını düşürmek, ara malı ve yatırım mallarında yurtiçi üretim kapasitesini artırmak uygun bir çözüm yolu olarak gözükmektedir. Ayrıca, Türk lirası avro karşısında değer kaybetmeye başlayınca, yurtiçinde üretilen malların değeri yabancı mallardan daha ucuz hale gelmektedir. Net ihracat ve toplam talep artarak, ithal malların fiyatlarının lira cinsinden artmasına ve enflasyonun da yükselmesine sebep olmaktadır.

Ayrıca, dış borcun büyük bir kısmının Avrupa bankalarına olması sebebiyle (Özel sektörün 125 milyar dolarlık orta ve uzun vadeli borcunun 90 milyar dolara yakını Avrupa bankalarınadır.), finansal yapılanma söz konusu olur ise kredilerde bir daralma yaşanabileceği tahmin edilmektedir.

Bilanço Düzeltme Sürecinde Gelişmekte Olan Piyasa Ekonomilerinde Ani Duruş Problemine Karşı Makro Basiretli Politikalar

De-Leveraging and Mitigating Pro-Cyclicality of Capital Flows in Emerging Market Economies: Role of Macro-Prudential Policies

Tolga Dağlaroğlu (Gazi University, Turkey)

Dr. Baki Demirel (Gaziosmanpaşa University, Turkey)

Ph.D. Candidate Serdar Varlık (Gazi University, Turkey)

Abstract

International capital flows have been on an unprecedented roller-coaster ride in recent years. Capital flows to emerging market economies have been strongly correlated with changes in global financing conditions, rising sharply during periods with relatively low global interest rates and low VIX (called risk-on) and shrinking afterward. In open emerging market economies, interest rate increases can attract excessive capital inflows appreciating the exchange rate, and leading to excessive borrowing in foreign currency, and encouraging leverage. A well-designed macro prudential policy prevents credit –driven bubble and mitigating pro-cyclicality of capital flows.

1 Giriş

Gelişmekte olan piyasa ekonomilerine yönelik sermaye akımlarında görülen bu artış bu ekonomilerde çıktı açığının azaldığı ve enflasyonun yükseldiği dönemler olarak karşımıza çıkmaktadır. Sermaye akımlarında bu ortamda görülen bu artış sıkı para politikası yoluyla yurtiçi talebin kontrol edilmesini imkansız hale getirmektedir. Tam tersine sıkı para politikası yurtiçi faizlerin yüksek kalması nedeniyle yeni sermaye girişlerini teşvik etmektedir. Buna ek olarak sermaye akımlarında meydana gelen bu artış yurtiçi ekonomik dengelerin bozulmasına neden olarak finansal istikrarsızlığa ve kırılganlığa neden olmaktadır. Bu akımları absorbe etmeye yönelik yurtiçi tahvil, bono ve hisse senedi halka arzları aynı zamanda varlık fiyatları üzerindeki baskının azalmasına yol açmaktadır. Fakat başka bir problem kaldıraçlı işlemlerin artmasına neden olmaktadır.

Finansal piyasaların görece daha sakin olduğu dönemlerde bir başka ifade ile yatırımcıların riske açık (risk-on) sanayileşmiş ekonomilerdeki yatırımcılar kaldıraçlı işlemler ile ve/veya portföy yatırımları ile gelişmekte olan piyasa ekonomilerine yönelik yatırımlarını arttırmakta bunun sonucunda gelişmekte olan piyasa ekonomilerinin merkez bankaları kurun değer kazanımının önüne geçebilmek için yerli para karşılığında dolar almakta ve hiç istemedikleri bir biçimde rezerv para birimi cinsinden orta vadeli menkul kıymetlere yatırım yapmaktadırlar. Bu süreçte gelişmekte olan piyasa ekonomileri yurtiçi yatırımcıyla yerli para birimi cinsinden menkul kıymet ihraç ederek buna cevap vermektedir. Böylece görece finansal piyasaların sakin olduğu dönemlerde gelişmekte olan piyasa ekonomilerinde kaldıraçlı işlemler sonucunda yapılan yatırımlar asimetrik varlık swap neden olmaktadır bu işlem rezerv para birimi cinsinden finansal varlık yerine riskli olarak görülen gelişmekte olan piyasa ekonomisine ilişkin finansal varlıklara yatırım olarak ifade edilmektedir.Gelişmekte olan piyasa ekonomilerine yönelik sermaye akımlarının azaldığı ve finansal piyasalarda oynaklığın arttığı dönemlerde kısacası yatırımcıların risk almaya istekli olmadığı kısaca kapalı olduğu (risk-off) durumda ülkeden sermaye çıkışı olmakta bunun sonucunda merkez bankasının uluslararası döviz rezervleri önemli ölçüde azalmaktadır bir başka ifade ile gelişmekte olan piyasa ekonomisine ait merkez bankası uluslararası yatırımcıya güvenli finansal varlık arz etmektedir.Bu noktada makro basiretli politikalar hatta bazı durumlarda ise sermaye kontrolleri bu akımların ve etkilerinin yönetilmesinde önemli birer araç olmaktadır. Çalışmamız beş bölümden oluşmaktadır. İlk bölüm giriş bölümüdür. Giriş bölümünü takip eden birinci bölümde konu hakkındaki literatür üzerinde durulmuştur. İkinci bölüm çalışmada kullanılan verilerin ve yöntemin tanıtıldığı bölümdür. Bu bölümü takip eden üçüncü bölümde ise yapılan ekonometrik uygulama sonucu elde edilen bulgulara yer verilmiştir. Sonuç bölümü çalışmada elde edilen bulguların değerlendirildiği ve yorumlandığı nihai bölümdür.

2 Literatür Sorgulaması

Küresel kriz ile birlikte merkez bankacılığında ve para politikasının çerçevesinde önemli değişimler görülmüştür. İktisat yazınında küresel kriz ile birlikte para politikasının çerçevesinde ve merkez bankacılığında meydana gelen değişmeler ise üç başlık altında toplanabilir (Blanchard, Dell'Ariccia ve Mauro, 2010 ve 2013).

İlki, artık merkez bankalarının sadece fiyat istikrarı hedefine odaklı bir para politikası yürütmemesi gerektiği aynı zamanda açık bir biçimde ekonomik büyümeyi de göz önünde bulunduracak bir para politikası izlemesinin gerekli olduğudur (Blanchard, Dell'Ariccia ve Mauro, 2010 ve 2013). Küresel krizden önce makroekonomi

yönetiminde hakim görüş; fiyat istikrarının ve para politikasının tek aracı olarak kısa vadeli politika faiz oranlarının ön plana çıkartılmasıdır. Çünkü fiyat istikrarının sağlanması durumunda çıktı açığını oluşmayacağı ve böylece finansal istikrarın kendiliğinden sağlanacağı varsayılmaktadır. Bunu sağlayacak temel aracın ise kısa vadeli politika faiz oranı olduğudur (Blanchard, Dell'Ariccia ve Mauro, 2010 ve 2013). Fakat merkez bankasının yalnızca fiyat istikrarı hedefine odaklanması durumunda çıktının potansiyel düzeyine yakın bir seviyede oluşacağı bu durumun kendiliğinden finansal istikrarı sağlayacağı düşüncesinin kriz ile birlikte geçerli olmadığı görülmüştür. Küresel kriz ile birlikte para politikasında ve merkez bankacılığında ortaya çıkan değişmelerden ikincisi ise, merkez bankalarının finansal istikrarı gözeten ve sağlayan bir para politikası uygulamasıdır. Kısacası merkez bankalarının finansal istikrara ilişkin farkındalıklarının artmasıdır (Blanchard, Dell'Ariccia ve Mauro, 2010 ve 2013). Krizden önce savunulan temel görüş bir ekonomide fiyat istikrarının sağlanması ve çıktının istikrarlı olması aynı zamanda finansal istikrarı da sağlayacağıdır. Bunu sağlayacak temel aracın ise politika faiz oranı olduğudur. Bu görüşün hakim olduğu krizden önce büyük ılımlılık dönemi (Great Moderation) olarak adlandırılan makro ekonomik değişkenlerdeki oynaklığın azaldığı dönemde hem akademik yazında hem de politika uygulayıcılar arasında makro ekonomiyi ve finansal sistemi istikrara kavuşturmak için merkez bankasının sadece fiyat istikrarı hedefine odaklanması gerektiği ve politika faizinin krizlere neden olacak dengesizlikleri ortadan kaldırması için ideal bir araç olduğu görüşünün hakim olduğu görülmektedir. Böylece büyük ılımlık dönemi bu anlamda merkez bankalarının finansal sistemde yaşanabilecek riskleri göz ardı etmelerine yol açmıştır.

Krizden önceki dönemde finansal istikrarın sağlanmasına yönelik yaygın görüşlerden bir diğeri de politika faizine ek olarak mikro basiretli (micro-prudential) politika araçlarının finansal istikrarı sağlamak için yeterli olacağının düşünülmesidir. Buna göre merkez bankaları sadece para politikasının yürütülmesinden sorumlu olmalıdırlar. Finansal sistemde uygulanan politikalar ve politika araçları tek bir finansal kurum için değil tüm finansal sistemi kapsayacak şekilde uygulanmalıdır. Böylece tüm sistemi kapsayacak şekilde uygulanacak basiretli düzenlemeler ve denetlemeler bankaların aşırı risk almasının önüne geçerek finansal istikrara önemli katkıda bulunacaktır. Kısacası merkez bankaları tarafından savunulan hakim görüş para politikası ve finansal istikrara yönelik politikalar arasındaki dikotomidir (Eichengreen et al., 2011 ve Hahm et al., 2012). Fakat yaşanan kriz, para politikası ve finansal istikrara yönelik politikalar arasındaki dikotominin geçersizliğini göstermiştir. Bir başka ifade ile sadece finansal kurumlara yönelik mikro basiretli düzenlemeler ve denetlemeler sistemin tümünden kaynaklanan riskleri ortadan kaldırmakta yetersizdir (Unsal, 2011).

Dolaysıyla yaşanan bu kriz bu dikotominin geçersiz olduğunu göstermesi açısından son derece güzel bir örnektir. Ağustos 2008 yılında Amerika Birleşik Devletlerindeki konut kredileri piyasalarında ortaya çıkan kriz, ABD sermaye piyasalarının çok küçük bir kısmını oluşturmaktaydı. Başlangıçta bu piyasada önemli kayıplar görülmesine rağmen politika yapıcıları bu kayıpları yönetilebilir olduğunu düşünmekteydiler. 2008 yılının yaz aylarında başta ABD Merkez Bankası ve diğer merkez bankaları bütün dikkatlerini artan enflasyona çevirmişlerdi. Fakat bu dönemde peş peşe yaşanan şoklar finansal sistem ve ekonomi arasındaki uçurumun artmasına neden olmuştur. 15 Eylül 2008 tarihinde Lehman Brothers'ın ve 16 Eylül'de AIG iflası aynı gün ABD'de repo piyasalarında (Reserve Primary Fund) yaşan hücüm ve daha sonra ABD Kongresinin Sorunlu Varlıkları Alım Programı (TARP) onaylaması ile ABD finansal piyasalarında yaşanan şok global bir krize dönüşmüştür. Başta ABD olmak üzere Dünya'da ekonomik büyüme önemli ölçüde daralmış ve işsizlik başta ABD olmak üzere sanayileşmiş ekonomilerde yüzde 10'ların üzerine çıkmıştır. Dünya genelinde finansal kriz nedeniyle yaşanan resesyon 1930'lardan sonra dünyada yaşanan en ciddi resesyona neden olmuştur. Sonuç olarak yaşanan kriz para politikası ile finansal istikrarı sağlamaya yönelik politikalar arasındaki uyumun önemine dikkat çekmesi açısından önemlidir. Çünkü finansal sistemde yaşanan bu gelişmelerin ekonomiye etkisi düşünülenden daha fazla olmaktadır. Ayrıca finansal krizler sonrasında ortaya çıkan maliyette düşünülenden daha fazladır. Kriz ile birlikte artık finansal piyasalardaki gelişmelerin makro ekonomik analizlerin merkezinde yer alması gerektiğinin önemi anlaşılmıştır (Hahm et al., 2012: 10). Para politikası ve finansal istikrarı sağlamaya yönelik politikalar arasındaki bu dikotomi büyük ılımlılk döneminde sektörel dengesizliklerin oluşmasına yardımcı olmuş ve bu dengesizlikleri büyüterek global bir krize neden olmuştur. Bu anlamda global finansal kriz krizden önce temel politika araçları olarak görülen politika faiz oranına ve mikro ihtiyatı politikalara olan güveni derinden etkilemiştir (Hahm et al., 2012: 10).Yaşanan bu kriz merkez bankalarına sistemik finansal istikrarı sağlama konusunda iki önemli ders çıkartmalarına neden olmuştur (IMF, 2012). İlki, fiyat istikrarının sağlanması ve çıktının istikrarlı olmasının bir ekonomi açısından önemli olduğu fakat bu faktörlerin tek başına sürdürülebilir makro ekonomik istikrarı sağlayamadığıdır. Bunun için merkez bankaları para politikası uygularken makro basiretli politikalar ile finansal istikrarı da göz önünde bulundurmalarının gerekli olduğudur (Unsal, 2011). Çünkü finansal sektörde yaşanan gelişmelerin ekonomik faaliyetlere olan etkisi geçmiş dönemler ile kıyaslandığında daha büyüktür (IMF, 2010 ve Hahm et al., 2012).

Bunun için merkez bankaları sistemik riski büyütecek döngüsel hareketlerin (pro-cyclicality) önüne geçmeli ve yapısal kırılganlıkların oluşmasını engellemelidir. Kısacası bir ülkede merkez bankası ister ana düzenleyici rolü üstlenen olsun isterse bu rol başka bir denetleyici, düzenleyici başka bir kurumun olsun merkez bankalarının makro ihtiyati düzenleyici çerçevenin içerisinde bulunması mutlaka gerekmektedir. Bunun için açık bir biçimde

opearsyonel araçların, yönetişim ve kurumsal ilkelerin göz önünde bulundurulduğu makro basiretli politikaların çerçevesi oluşturulması gerekmektedir (IMF, 2012).

İkincisi ise, merkez bankaları enflasyonla mücadelede kazanmış oldukları kredibiliteyi zarar vermeden para politikasının oluşturulmasında (formülasyonunda), yürütülmesinde ve uygulamasında finansal sistemdeki riskleri ve gelişmelere yer vermesi gerekmektedir (Unsal, 2011 ve IMF, 2012). Bu noktada iktisat yazınında ortaya çıkan temel tartışma konusu merkez bankalarının finansal istikrarı sağlamak amacıyla varlık piyasalarda oluşan balonlara nasıl tepki vereceğidir (IMF, 2010). Çünkü, varlık fiyatları para politikasının aktarım mekanizması kanalı içerisinde çok önemli bir role sahiptir. Optimal bir para politikası uygulaması çerçevesinde merkez bankasının varlık fiyatlarına tepki vermesi çıktı ve enflasyon açısından istenilen sonuçlara ulaşılabilmesi açısından önemlidir (IMF, 2010). İktisat yazınında, merkez bankalarının varlık fiyatlarındaki balonlara (hareketlere) nasıl tepki vermesi gerektiği ile ilgili görüşler iki grupta toplanmaktadır. Bir başka ifade ile para politikasının yürütülmesinde varlık balonları ile ilgili temel tartışma, merkez bankası para politikası ile varlık fiyatlarında meydana gelen balonun patlaması halinde ekonomiye olan etkilerini sınırlayabilmek için balonu oluşmadan ortadan kaldırmalı mı (patlatmalı mı) yoksa balon patladıktan sonra ortalığı temizlemeli mi?

İlki, merkez bankalarının varlık fiyatlarında oluşan balonlara karşı durması (lean against wind) savunmaktadır (Blanchard, 2000; Borio ve White, 2003). İkincisi ise, merkez bankalarının varlık fiyatlarına doğrudan tepki vermemesi bunun yerine varlık balonu patladıktan sonra çıktıyı ve enflasyonu istikrarlı hale getirmeye çalışmasıdır. İktisat yazınında bu sonuncusuna merkez bankasının varlık balonu patladıktan sonra bunun temizlemesi (clean) denilmektedir (Bernanke ve Gertler, 1999 ve 2001). Merkez bankasının varlık fiyatlarına müdahale etmemesini savunanlar iktisat yazınında Greenspan doktrini olarak da bilinen görüş savunmaktadırlar. Bu görüşe göre para politikasının yürütülmesinde varlık fiyatları önemlidir. Bundan dolayı, varlık fiyatları enflasyon ve istihdam üzerinde tahmin edilebilir etkilere sahip olmaktadır. Bundan dolayı merkez bankaları ile varlık balonlarının önüne geçmek yerine varlık balonu patladıktan sonra çıktı ve enflasyonu istikrarlı hale getirmeye çalışmalıdır. Para politikasının yürütülmesinde Greenspan doktrine bağlı kalınmasını savunanların bu konudaki savları beş başlık altında toplanmaktadır. İlki, varlık balonlarının belirlenmesi son derece zordur. İkincisi, faiz oranları varlık balonun oluşmasını engellemek konusunda etkin bir araç olmayabilir. Çünkü merkez bankası varlık balonunu engellemek amacıyla faiz oranlarını arttırdığında piyasa katılımcıları balonun oluştuğu varlıklardan daha fazla getiri elde etmeyi bekleyeceklerdir. Üçüncüsü ise, piyasalarda bir çok varlık bulunmaktadır. Dolaysıyla oluşan balon sadece varlıkların belirli bir kısmını temsil etmektedir. Böylece para politikası eylemleri sadece balonun oluştuğu varlıkları değil tüm varlıkların fiyatlarını etkileyebilir. Dördüncüsü ise, merkez bankasının faiz oranlarını arttırması varlık fiyatlarının ivmelendirici rolünü azaltmaktadır. Kısacası merkez bankasının varlık balonunu ortadan kaldırmak amacıyla faiz oranlarını arttırması sonucu varlık balonun patlamasının ekonomiye olan etkisi tahminlerden daha büyük olabilir (Mishkin, 2010: 20-21). Bu anlamda Mishkin (2010) ve Claessens ve Kose (2013)'ye göre varlık balonlarının hepsi aynı olmamaktadır. Özellikle 1990'ların sonunda Asya'da görülen kredi artışı nedeniyle varlık fiyatlarında oluşan balon (credit-driven bubble) ekonomiler açısından en tehlikeli olanıdır. Bir ekonomide artan kredi hacmi ile varlık fiyatlarında ortaya balon şu şekilde çıkmaktadır. Ekonomiye ilişkin aşırı iyimser beklentiler veya finansal piyasalarda yaşanan yapısal değişim kredilerde artışa neden olmaktadır. Kredi hacminde meydana gelen artış varlık talebinin ve fiyatlarının artmasına neden olmaktadır. Varlık fiyatında meydana gelen artışlar bu kredilerin alınması sırasında kullanılan teminatların değerini artırmaktadır. Teminatların değerinde meydana gelen artış borçlanma imkanını kolaylaştırmakta bunun sonucunda tekrar varlık talebi ve fiyatları artmaktadır. Varlık balonu bu şekilde oluşmakta patladığında ise, varlık fiyatlarında önemli düşüşler meydana gelmekte bunun sonucunda teminatların değeri azalmakta teminatların değerinde meydana gelen azalış sonucunda kredi koşullarında daha fazla sıkılaştırmaya neden olmakta böyle kredileri geri çağrılmasına neden olmaktadır. Böylece varlık talebi, fiyatları ile birlikte kredi arzı da daralmaktadır. Geri dönmeyen krediler ve varlık fiyatlarında meydana gelen azalışlar finansal kurumlarının bilançolarını olumsuz etkilemekte bunun sonucunda tüm varlıkları ve kesimleri kapsayacak bir şekilde krediler ve yatırımlar azalmaktadır. Bu durum ise ekonomik birimlerin yatırım ve tüketim kararlarını olumsuz etkilemekte bunun sonucunda ekonomik küçülmeye bağlı olarak kredi piyasalarında makroekonomik risk artmaktadır.Sonuç olarak finansal kurumların aşırı risk alma güdüsü, örneğin aşırı kaldıraçlı işlemler yapmaları, ellerinde tutmuş oldukları riskli finansal varlıklar nedeniyle taşımış oldukları risk ve kırılgan bir yükümlülük yapısının bulunması kısa dönemde döngüsel olarak balonların oluşmasını ve sonrasında ortaya çıkan ekonomik maliyetin şiddetini arttırabilmektedir. Dolaysıyla son yaşanan kriz finansal sistemden kaynaklanan sorunların mevcut olduğu bir ekonomide refahın sadece fiyat istikrarı ile sağlanamadığını ortaya koymuştur. Ekonomik refahın maksimizasyonu için finansal istikrarın ek faaliyet hedefi olarak kullanıldığı makro basiretli politikalara ihtiyaç duyulmaktadır (IMF, 2013). Böylece makro basiretli politikaların kullanılması potansiyel finansal kırılganlıkların oluşmasını engelleyecektir. Bu dönemde özellikle gelişmekte olan ülkelerin merkez bankalarının finansal istikrarı sağlama konusunda karşılaşmış oldukları bir diğer önemli sorunda bu ekonomilere yönelik büyük çaplı ve oynaklığı yüksek sermaye akımlarında meydana artıştır. Türkiye gibi gelişmekte olan piyasa ekonomilerinde politika faiz oranlarındaki farklılık ülkeye yönelik carry-trade türünden sermaye akımlarını hızlandırmaktadır. Bu durum bankacılık sektörü aracılığı kredi artışına ve kaldıraçlı işlemlerin artmasına neden olarak finansal istikrarı tehdit etmektedir. Ülkeler arasındaki bu yüksek faiz

farklılıkları bankacılık sektörü aracılığı ile ülkeye yönelik sermaye akımlarının hızlanmasına neden olmakta bunun sonucunda yerli para değer kazanmakta ve ekonomide aşırı ısınmaktadır. Enflasyon hedeflemesi uygulayan birçok ülke bu duruma tepki olarak politika faiz oranlarını arttırmış fakat bu durum tam ters etki yaparak tekrar sermaye girişlerinin hızlanmasına neden olmuştur (IMF, 2013: 25-26). Bu durum gelişmekte olan piyasa ekonomilerinde sistemik riski büyütecek döngüsel hareketlerin (pro-cyclicality) oluşmasına yol açarak yapısal kırılganlıkların ortaya çıkmasına neden olmaktadır.Özellikle 2010 yılında G-4 merkez bankalarının (İngiltere Merkez Bankası, Japonya Merkez Bankası, Avrupa Merkez Bankası ve ABD Merkez Bankası) uygulamış oldukları niceliksel gevşeme politikasının sonucu aylık bazda Türkiye gibi gelişmekte olan ülkelere yönelik kısa vadeli sermaye girişlerinin hızlandığını göstermesi açısından önemlidir (IMF, 2010).2010 yılının ilk üç çeyreğinde gelişmekte olan piyasa ekonomilerine yönelik sermaye akımları 2004-2007 yılları arasındaki dönem ortalamasının üzerinde gerçekleşmiştir. Bu sermaye akımlarının bir diğer önemli özelliği gelişmiş ülkeler ile karşılaştırıldığında bu akımların oynaklığının (volatilitesinin) son derece yüksek olmasıdır IMF (2013c). Oynaklığının yüksek olmasından kastedilen bu sermaye akımlarının özellikle dışsal ekonomik gelişmelere son derece çabuk tepki verebilmesidir. Örneğin, IMF (2013b: 38) 2008-2012 yılları arasında gelişmekte olan piyasa ekonomilerinin bu dönemde risklilik düzeyini etkileyen faktörlerin neler olduğun araştırmıştır. Bu dönemde gelişmekte olan ülkelerinin risklilik düzeyinin göstergesi olarak kullanılan risk primleri ortalama olarak 400 baz puan düşmüştür. Bu dönemde ülkelerinin risklilik düzeyinin iyileşmesine yurtdışı faktörler önemli katkıda bulunmuştur. Bu faktörlerden ilki ABD S&P borsa endeksinin oynaklığını gösteren VIX endeksinin azalması gelişmekte olan piyasa ekonomilerinin risk primlerinde önemli düşüşe neden olmuştur. Bu endeksin azalması önümüzdeki dönemde borsa endeksinin oynaklığının azalacağını göstermesi açısından önemli olduğu gibi ayrıca günümüzde riski fiyatlamanın alternatif bir ölçüsü olarak ve küresel anlamda yatırımcının risk iştahının göstergesi olarak kullanılmaktadır (Rozada ve Levy Yeyati, 2006:14-15 ve Özatay, Özmen ve Şahinbeyoğlu, 2008b).

Gelişmekte olan piyasa ekonomilerinin risk primlerinde azalışa neden olan dışsal faktörlerden ikincisi ABD Merkez Bankasının uygulamış olduğu aşırı gevşek para politikasıdır. Risk primlerindeki azalışın arkasında yatan temel faktör, özellikle başta ABD olmak üzere sanayileşmiş ülkelerin merkez bankasının izlemiş olduğu gevşek para politikası faiz oranlarının düşmesidir. Faiz oranlarındaki bu azalış sanayileşmiş ülkelerdeki yatırımcıların ellerinde ihtiyaç amacıyla daha az nakit tutmak istemelerine neden olmuştur. Böylece getiri aramak amacıyla yatırımcıların riskli varlıklara yönelik talepleri artmış ve bunun sonucunda risk primleri düşmüştür. Sonuç olarak bu dönemde ABD izlenen aşırı gevşek para politikasının risk primlerindeki azalışa katkısı ise 85 baz puan olmuştur (IMF, 2013b: 38). Aynı zamanda gelişmiş ülkelerdeki düşük faiz oranları bu ülkelerdeki yatırımcıları getiri elde etmek amacıyla (search for yield) risk alma konusunda teşvik etmektedir (Rajan, 2005; 2010 ve Hoenig, 2010). Gelişmiş ülkelerdeki gevşek para politikasına ek olarak kriz, risk ve getiri arasındaki algılamanın da değişmesine neden olmuştur. Bu açıdan gelişmekte olan piyasa ekonomilerinin kamu borç dinamikleri çoğu gelişmiş ülkelerin borç dinamikleri ile karşılaştırıldığında daha iyi olması gelişmekte olan ülkelerin finansal varlıklarına olan talebin artmasına neden olan bir diğer faktör olarak karşımıza çıkmaktadır (IMF, 2010). Risk iştahındaki bu oynaklık risk primlerinin en önemli belirleyicisi olduğu gibi gelişmekte olan ülkelere yönelik sermaye akımlarının da etkileyen en önemli faktördür. VIX endeksinin düşük olduğu dönemlerde yatırımcıların risk alma iştahının arttığı ve Türkiye gibi ülkelere yönelik portföy şeklinde sermaye akımlarının hızlandığı görülmektedir. Tam tersine VIX endeksinin yüksek olduğu dönemlerde portföy biçimindeki sermaye akımlarının azaldığı görülmektedir. Aşağıdaki şekil Dünya ekonomisinde risk algılamasının düşük olduğu (VIX endeksinin düşük) dönemler süresince özellikle hisse senetlerine ve borçlanma enstrümanlarına yönelik sermaye akımlarının arttığını göstermektedir. Küresel kriz sonrasında Türkiye Cumhuriyet Merkez Bankası ve diğer gelişmekte olan piyasa ekonomilerinin yeni bir para politikası çerçevesine ihtiyaç duymasının nedeni uluslararası ekonomik konjonktürün yukarıda belirttiğimiz yapısından kaynaklanmaktadır. Sonuç olarak global hisse senedi piyasalarında nispeten risk algılamasının düşük olduğu dönemlerde Türkiye gibi gelişmekte olan piyasa ekonomilerine yönelik sermaye akımların ve bu ülkelerin çıkartmış olduğu finansal varlıklara olan talep artmakta ve ülkelerin risk primlerinde önemli azalışlar görülmektedir. Bu duruma iktisat yazınında sermaye akımlarının risklere açık (risk-on) olduğu dönem olarak adlandırılmaktadır. Tam tersine global anlamda hisse senedi piyasalarında oynaklığın arttığı dönemlerde yatırımcıların gelişmekte olan ülke finansal varlıklarına olan talebi azalmaktadır. İktisat yazının da bu duruma yatırımcıların risklere kapalı olunduğu (risk-off) durum denilmektedir (McCauley, 2012). Sermaye akımlarındaki bu oynaklık sanayileşmiş ekonomiler açısından çok büyük problemlere neden olmamaktadır. Fakat finansal piyasaların görece daha sığ olduğu, dış ticarette açıklık derecesinin yüksek olduğu, yabancı para birimi cinsinden finansal varlıklara olan ihtiyacın büyük olduğu ve reel sektörün üretim anlamında fazla bir çeşitlenme gösteremediği gelişmekte olan piyasa ekonomilerini makro ekonomik istikrarı ve finansal istikrarı iki açıdan tehdit etmekte ve uygulanan politikaları karmaşıklaştırmaktadır. İlki doğrudan cari işlemler açığı ve toplam talep üzerinde meydana getirmiş olduğu etkilerdir. Sermaye akımlarının hızlandığı dönemlerde gelişmekte olan piyasa ekonomilerinde çıktı açığı azalırken enflasyon yükselmekte ve reel döviz kuru orta vadeli denge değerinden sapmaktadır. Bu durum ekonomi açısından oldukça maliyetli olmaktadır. Karşılaşılan ilk maliyet enflasyon olurken, ikincisi dış ticarette ülkenin rekabetçiliğini kaybetmesidir. Bu durum karşısında merkez bankası yurtiçi talebi dengeleyebilmek ve enflasyonu kontrol altında

tutabilmek amacıyla faiz oranlarını arttırmak durumunda kaldığında bu durum ülkeye yönelik sermaye akımlarının tekrar artmasına neden olmakta ve tekrar başa dönülmektedir. Böylece bu ekonomilerde sermaye akımları yurtiçi makro ekonomik dengeleri bozmaktadır. Sermaye akımlarının ekonomi üzerinde ikinci etkisi kredi genişlemesine dayalı varlık balonlarının oluşmasına zemin hazırlayarak ülkeyi ani duruş problemine karşı finansal olarak istikrarsız hale getirmektedir. Özellikle sermaye akımlarının hızlandığı dönemlerde bankalar kredi koşullarını esnetmekte bu durumda hızlı kredi genişlemesine neden olmakta bunun sonucunda varlık fiyatları hızlı bir biçimde artmaktadır. Ayrıca sermaye akımlarının hızlandığı dönemlerde yurtiçi finansal varlıklara olan talebin artması yerel menkul kıymet (tahvil, bono ve hisse senedi) ihraçlarının hızlanmasına neden olmakta bu ihraçlar sermaye akımlarını absorbe edip varlık fiyatları üzerindeki baskının hafiflemesine neden olmakta fakat kaldıraç oranlarının (borç / öz kaynak) artmasına yol açmakta bu durum ülkenin net yurtdışı yükümlülüklerinin artmasına neden olarak ani duruş problemine karşı ülkeyi kırılgan hale getirmektedir (IMF, 2011 ve Claessens ve Kose , 2013:9).

3   Materyal ve Yöntem

Çalışmanın bu bölümünde yurt içine gelen kısa vadeli sermaye akımlarını (sıcak para) üzerinde hangi yurt içi ve yurt dışı faktörlerin etkili olduğu araştırılmak istenmiştir. Sıcak para üzerinde etkili olduğu düşünülen değişkenlerin belirlenmesi bir bölüm önce verilen literatürden yararlanılmıştır. Çalışama da kullanılacak regresyon denklemi kurulurken Adler ve Tovar (2012) çalışmaları referans alınmıştır. Temele regresyon denklemi şu biçimdedir:

$$swap_{it} = \beta + \alpha X_{it} + \varepsilon_{it} \tag{1}$$

Burada swap sıcak parayı beta kesişim değerini X ise sıcak parayı etkileyen değişkenler matrisini, ε, ise hata terimini simgelemektedir. Buradaki X matrisinde yer alan değişkenleri de kapsayacak biçimde model bir fonksiyon olarak aşağıdaki gibi yazılabilir

$$swap_t = f(CDS_t, EMBI_{t_t}, FF_t, VIX_t, LEV_t, REER_t, TCMB_t)$$

Burada CDS hazine bonosu spreadlerini, EMBI, JP Morgan gelişmekte olan ülke piyasa bona endeksini, FF, FED funds'u, VIX, global riski, LEV kaldıraç oranlarını, REER reel döviz kurunu ve TCMB merkez bankası politika faiz oranını (i_{TR}) simgelemektedir.

3.1 Materyal

Çalışma 2008-2012 dönemini kapsamaktadır ve yukarıda açıklanan her bir değişkene ait aylık zaman serileri kullanılmıştır. Kullanılan zaman serilerini Thomson data stream ve IMF (IFS) veri tabanlarından elde edilmiştir.

3.2 Yöntem

Eşbütünleşme analizi varsayımlarımdan birisi de durağanlıkla ilgili olduğundan değişkenlerin durağanlığının sınanmalıdır. Değişkenlerin durağanlığının sınanmasında ADF, PP ve KPSS gibi birim kök testleri kullanılabilmektedir. Bu testler de bir zaman serisi birim kök içermiyorsa durağan kabul edilmektedir. Bu çalışmada, Genelleştirilmiş Dickey-Fuler (ADF) (Dickey ve Fuller, 1979) kök testleri kullanılmıştır. Birim kök testlerinin sonuçları, Tablo 1'de sunulmuştur

ADF TESTİ		
SERİLER	DÜZEY	BİRİNCİ SIRA FARKLAR
Swap	0.7496	-8.7198***
EMBI	-1.4704	-5.9332***
FF	-4.5683	-6.5027***
VIX	-2.8485*	-5.8096***
REER	-1.0472	-6.4835***
LEV	-2.2715	-2.7749*
TCMB	-3.7295**	-5.0149***
CDS	-2.3368	-5.7555***

Not: ADF testine göre serilerin durağanlığı sınanmış, buna göre *** olan yerlerde 1 % anlamlılık düzeyine göre, ** olan yerlerde 5 % anlamlılık düzeyinde ve * olan yerlerde %10 anlamlılık düzeyine göre null hipotezi reddedilerek serilerin durağan olduğunu öngören alternatif hipotez kabul edilmiştir. ADF testi için kullanılan gecikme sayısını Eviews 5.1 ekonometrik paket programının otomatik olarak seçtiği değer kabul edilmiştir.

Tablo 1. Çalışmanın Değişkenlerine Ait Durağanlık Testleri

Tablo 1 de görüldüğü gibi analizde ele alınan, Swap, faiz, JP Morgan MB, , FED faiz oranı, reel döviz kuru, kaldıraç oranı ve CDS serilerinin düzeyde durağan olmadığı, MB politika faiz oranın düzeyde durağan, VIX ise düzeyde zayıf durağan olduğu bulgularına uyarlanmıştır. Diğer yandan (2) numaralı tahmin denkleminde yer

alan tüm değişkenlerin birinci sıra farklarının durağan olduğu yani birim kök olmadıkları bulgusuna erişilmiştir. Ancak kaldıraç oranlarının zayıf durağanlığa sahip olduğu görülmektedir. Bu sonuçlarla birlikte analizimiz bir sonraki aşamaya geçmeye olanak kazanmıştır. Birinci sıra farkları durağan olan seriler arasında uzun dönem ilişkinin olup olmadığı eş bütünleşme analizi ile belirlenmektedir. Bu çalışmada değişkenler arasında eş bütünleşmenin varlığı Johansen testi kullanılarak araştırılmıştır.

Johansen ve Juselius (1990), eş bütünleşme hipotezini test etmek için en çok benzerlik yöntemi (Maximum Likelihood Estimation) ve Likehood Ratio testlerini geliştirmişlerdir. Johansen testi birinci farkların ECM (Error Corection Model) formu şöyledir;

$$\Delta X_{1} = \Gamma_{t}\Delta X_{t-1} + \ldots + \Gamma_{k+1}\Delta X_{t-k} + \Pi X_{t-k} + \mu + \varepsilon_t \text{ ve } \varepsilon_t \sim N(0,\Lambda) \; t = 1, \ldots, T.$$

$$H_1(r) : \Pi = \alpha\,\beta \text{ dır} \tag{2}$$

Burada α β (nXn) boyutundaki matrislerdir Π ve Γ katsayı matrisleridir. Δ fark denklemini k ise gecikme uzunluğunu, μ (nX1) vektör sabit değeri, ε_t hata terimi vektörü ve Λ (nXn) kovaryans matrisini göstermektedir. $H_1(r)$ belli koşullar altında ΔX_1 sürecinin durağan olduğunu varsaymaktadır. Yani eşitlikte I (0) olduğundan sağ tarafın durağan olması ancak ΠX_{t-k}' nın durağan olmasıyla gerçekleşir. Eş bütünleşme testinde Johansen yaklaşımı Likelihood Ratio testine dayalıdır ve Trace ve max statistic testi olmak üzere iki ayrı test kullanılmaktadır.

$\Lambda_{max} = -T\,\Sigma_{i=r+1}\,ln\,(1 - \Lambda_i),\; r = 0, \ldots, n-1$. Burada Λ_i en yüksek eigenvalue değeridir. Max statistic testi ise $\Lambda_{max} = -T\,ln(1 - \Lambda_i)$ şeklindedir.

Aşağıdaki Tablo 2, tahmin denklemimizde yer alan değişkenler için yapılan Johansen Eş Bütünleşme test sonuçlarını göstermektedir.

Null Hipotez	Trace Test	Null Hipotez	Maximum Eigenvalue Test
r ≤ 0	309.1989***	r = 0	107.3405***
r ≤ 1	201.8584***	r = 1	59.61641***
r ≤ 2	142.2420***	r = 2	40.91777**
r ≤ 3	101.3242***	r = 3	29.94335
r ≤ 4	71.38087***	r = 4	28.85046**
r ≤ 5	42.53041***	r = 5	17.37649
r ≤ 6	25.15392***	r = 6	14.66283**
r ≤ 7	10.49109***	r = 7	10.49109***

Not: r, eş bütünleşme vektör sayısını göstermektedir. ***, ** ve * sırasıyla %1, %5 ve % 10 anlamlılık düzeyinde null hipotezini (seriler arasında eş bütünleşme yoktur) reddedildiğini gösterir. Kullanılan kritik değerler varsayımlara göre (örneğin: doğrusal trend, sabit değer) farklılık göstermektedir. Johansen öncesi VAR gecikme sayısı 3 alınmıştır.

***Tablo 2.** Johansen Eş Bütünleşme Testi Sonuçları*

Tablo 2'de sunulan Johansen eş bütünleşme analizi, trace ve makkimum eigenvalue test sonuçlarını yansıtmaktadır. Çalışmada, her iki testten elde edilen sonuçlara göre ''Türkiye'de sıcak parayı etkilediğini düşündüğümüz değişkenler arasında eş bütünleşme ilişkisi aranmıştır. Trace (İz) testinden elde edilen bulgular, veri değişkenler arasında en az yedi eş bütünleşme ilişkisi olduğunu göstermektedir. Maksimum Eigenvalue testinde ise üç eş bütünleşme ilişkisinin olduğu bulgusuna erişilmiştir. Her iki testen elde edilen bulgular seçilmiş değişkenler arasında eş bütünleşme ilişkisinin olduğunu işaret etmektedir.

4 Bulgular

4.1 Hata Düzeltme Modeli

Eş Bütünleşme'' analizi sonucu elde edilen bulgular bütün değişkenlerle sıcak para değişkeni (swap) oranı arasında bir eş bütünleşme ilişkisinin varlığına işaret etmektedir. Bu durum aralarında eş bütünleşme ilişkisi bulunan seçilmiş değişkenlerle swap arasında uzun dönemli bir ilişkinin varlığını göstermektedir. Aralarında uzun dönem bir nedensellik saptanan değişkenlerde görülebilecek kısa dönem sapmaların tekrar dengeye ulaşıp ulaşmayacağının saptanmasında "Hata Düzeltme Modelinden" yararlanılmaktadır. Dolayısıyla bu çalışmada da aralarında eş bütünleşme ilişkisi saptanan değişkenler arasında Hata Düzeltme Modelini Kullanmamızın gerektiği ortaya çıkmıştır. Daha açık bir ifadeyle Eşitlik (1) elde edilen hata teriminin bir gecikme değerini Eşitlik (3) de bağımsız değişken olarak katmamıza ihtiyaç olduğu görülmektedir.

$$\Delta swap_t = \beta_0 + \beta_1 \Delta MSCI_t + \beta_2 \Delta FF_t + \beta_3 \Delta VIX_t + \beta_4 \Delta REER_t + \beta_5 \Delta LEV_t + \beta_6 \Delta i_t + \beta_7 \Delta CDS_t + \beta_8 ecm_{t-1} + \upsilon_t \tag{3}$$

Burada, Δ fark denklemini, $\beta_0 \ldots \beta_8$ parametre değerlerini, ecm, hata düzeltme model terimini, υ ise hata terimini göstermektedir. Eş bütünleşme analizleri değişkenler arasındaki uzun dönemli denge ilişkisini

göstermektedir. Ancak eş bütünleşme analizi eş bütünleşme ilişkisinin yönünü vermemektedir. ECM dayalı nedensellik testi bu ilişkinin yönünü vermektedir. Hata Düzeltme Modeli (VEC-Vector Error Correction), Granger(1987) çalışmasında geliştirilmiş bir modeldir ve zaman serileri arasındaki kısa ve uzun dönem dengesizliğinin giderilmesi için kullanılmaktadır. Daha açık bir ifade ile hata düzeltme modeli kısa ve uzun dönem arasında ayrım yapılmasına ve kısa dönem dinamiklerinin belirlenmesine olanak sağlamaktadır. Bu modelde hata terimi (ecm) değişkenlerin kısa dönem davranışlarını uzun dönem davranışlarına bağlamak için kullanılmaktadır. Aşağıdaki Tablo 4 hata düzeltme modeli (ECM) bulgularını yansıtmaktadır.

Değişkenler	Katsayı	Standart Sapma	Olasılık
Kesişim***	7592.026	1334.017	0.0000
ΔMSCI(-1)**	-203.8871	76.23900	0.0135
ΔFF (-3)*	-88198.45	50053.44	0.0913

Not:. *, **, *** işaretleri sırasıyla %10, %5 ve %1 anlamlılık düzeylerini göstermektedir.

Tablo 3. ECM Regresyon Analizi Sonuçları

Tablo 3'de görülen hata düzeltme modeli sonuçları ele alınan değişkenler ile swap değişkeni arasındaki kısa dönem ilişkisi üzerinde bazı değerlendirmeler yapabilme olanağı sağlamaktadır. Tabloda yer alan tüm değişkenler ile swap arasında istatistiki olarak anlamlı bir ilişkisi olduğu bulgusuna ulaşılmıştır. Bu ilişkinin yönü MSCI, FF (FED Funds), VIX ve CDS için negatif i_{TR} (TCMB politika faiz oranı), ve LEV (Kaldıraç oranı) için ise pozitif olarak saptanmıştır. Değişkenler arası ilişkilerin yönü beklendiği gibi çıkmıştır ve ekonomik kurama uygundur.

Bu çerçevede küresel riski yansıtan VIX değerinin yükselmesi, küresel risk iştahının azalmasına ve Türkiye gibi gelişen piyasa ekonomilerine doğru küresel sermaye akışının düşmesine yol açabilecektir. Benzer biçimde ülke riskini yansıtan CDS değerinin yükselmesi de ülkeye yönelik yabancı sermaye akımlarını azaltabilecektir. Ayrıca FED'in faiz artırımına gitmesi küresel sermaye akışının ABD'ye yönelmesine neden olacağı için Türkiye gibi ülkelerden sermaye kaçışları olabilecektir. Dolayısı ile bu üç değişkenle Türkiye'ye yönelik sıcak para hareketleri arasında negatif bir ilişki olması beklenir ve nitekim bulgular beklendiği gibidir. Kaldıraçlı işlemlerin (LEV artan) yüksek olduğu dönemlerde Türkiye'ye gelen sermaye akımlarının da yüksek olması beklenir açıkçası sıcak para akımlarının yüksek olduğu dönemlerde bankacılık sektörü başta olmak üzere özel sektörün daha yüksek kaldıraç oranları ile çalıştığı ve riski arttırdığı görülmektedir. Buna karşılık sermaye akımlarının tersine dönmesi durumunda (sudden stop) banka ve özel sektörün yüksek kaldıraçlı işlemlerinin tersine döndüğü görülmektedir. Bu çerçevede kaldıraç oranları ve sıcak para ilişkisinin yönünün pozitif olduğunu söyleyebiliriz. TCMB politika faiz oranını yükseltmesi Türk lirası cinsinden yatırımların cazibesini arttıracağından sıcak para için cezp edici olacaktır bu bağlamda iTR ile swap arasındaki ilişkinin yönü pozitif olmalıdır. Reel döviz kuru ise ülke parasının değer kazanması ile birlikte pozitif bir görünüme sahip olacaktır buda sıcak para akışını arttıracaktır. Örneğin Türk lirasının dolar karşısında değer kazanması ucuz dolar cinsinden borçlanma imkanını ve ülkeye giren kısa vadeli yabancı sermayeyi arttıracaktır. Dolayısı ile Swap ve REER arasındaki ilişkinin yönün de pozitif olması beklenmektedir.

Eldeki bulgular gerek TCMB gerekse FED faiz politikalarının Türkiye'ye yönelik sıcak para hareketleri üzerinde zayıf ve daha uzun süreli etkiye sahip olduklarını göstermektedir. Zira FED politika karar değişikliğinin swap üzerindeki etkisi üç gecikme (üç ay) olurken TCMB politika faiz oranın sekiz gecikmedir (sekiz ay). Diğer yandan VIX, MSCI, CDS gibi riski yansıtan değişkenlerin Swap üzerindeki etkilerinin daha yüksek bir istatistiki anlam içerdiği ve gecikme sürelerinin daha kısa olduğu görülmektedir. Bu durum sıcak paranın lokal veya global riske daha duyarlı olduğu biçimde yorumlanabilir.

Uygulama sonucunda, hata düzeltme teriminin (ecm$_{-1}$) beklendiği gibi negatif ve istatistiki olarak anlamlı olduğu görülmüştür. Bu durum bize değişkenlerde görülen kısa dönem sapmalara karşın modelin uzun dönem değerlerine yaklaştığını göstermektedir. Modele eklenen AR(1) (Auto Regression) katsayısının anlamlı değer almasından dolayı sistemde bir oto korelasyon probleminin olmadığını söyleyebiliriz.

4.2 Varyans Ayrıştırması (Variance Decompozition)

Bu çalışmada seçilmiş değişkenler arasında bir eş bütünleşme ilişkisinin olup olmamasının sorgulanması kadar, bu değişkenlerin swap değişkenindeki değişmeleri etkileme dereceleri de önemlidir. Dolayısıyla çalışmada bu yönde bulgulara ulaşılmasına imkan tanıyan VAR modelinden hareketle "varyans ayrıştırması"

hesaplamaları yapılmıştır. Varyans ayrıştırması işleminin yapılabilmesi için ele alınan serilerin durağan olması önemlidir. Aksi takdirde durağan olmayan serilerle yapılan hipotez testleri kuşkulu hale gelmektedir. Bu yüzden çalışma içerisinde varyans ayrıştırma hesaplaması yaparken ele alınan serilerin birinci sıra farkları dikkate alınmıştır. Varyans ayrıştırması ile ilgili yapılan hesaplar aşağıdaki Tablo 4'da gösterilmektedir.

Dönem/ Değişken	ΔSwap	ΔMSCI	ΔFF	ΔVIX	ΔREER	ΔLev	Δİ$_{TR}$	ΔCDS
Q1	1000000	0.000000	0.000000	0.000000	0.000000	0.000000	0.000000	0.000000
Q2	64.03799	2.857800	9.189844	15.89902	6.238852	1.142504	0.453183	0.180808

Q22	42.85105	9.662190	14.67394	15.44858	9.648748	3.379006	4.106988	0.229490
Q24	42.47168	10.41700	14.52998	15.20191	9.666660	3.415888	4.046683	0.250193

Tablo 4 Varyans Ayrıştırma Hesaplamasının Sonuçları

Tablo 4'de gösterilen varyans hesaplamasından elde edilen bulgular Türkiye'ye yönelik sıcak para akımının büyük ölçüde hata düzeltme modeli ile uyumludur. . Elde edilen bulgulara göre sıcak parada meydana gelen değişimi açıklama gücü en yüksek değişkenler, MSCI, VIX ve FF(FED Funds) olarak karşımıza çıkmaktadır. Bu bağlamda sıcak paradaki değişimin açıklanmasında yurt dışı veya küresel faktörlerin daha belirgin bir paya sahip olduğunu söyleyebiliriz. Değişkenlere ilişkin bir başka önemli bulgu CDS'ler hariç tüm değişkenlerin zaman periyodu içerisinde sıcak para akımlarındaki değişimleri açıklama güçlerinin yüksek olmasıdır. Yurt dışı değişkenler kadar reel döviz kurunun da sıcak para akımlarındaki değişmeyi açıklama gücünün yüksek olduğu ve bu açıklama gücünün zaman periyotları içerisinde artış gösterdiği görülmektedir. Diğer yandan kaldıraç oranlarının da en az para politikası faiz oranı kadar sıcak para değişmelerini açıklama gücü olması dikkat çekici bir başka bulgudur. CDS oranlarının açıklama gücünün düşük çıkması ise ülke riski açısından umut verici bir bilgi olabilir.

5 Sonuç

Bu çalışma küresel finansal kriz sonrası Türkiye'ye gelen sıcak parayı etkileyen yurt içi ve yurt dışı faktörlerin belirlenmesini amaçlamıştır. Bu bağlamda değişkenler arasında uzun dönem ilişkinin varlığını test etmek için Johansen eş bütünleşme testinden, kısa dönem dinamiklerinin belirlenmesinde ise hata düzeltme modelinden yaralanılmıştır. Eldekii bulgular uzun dönemde veri setini oluşturan bütün değişkenlerle sıcak para arasında uzun dönemli ilişkinin varlığına işaret etmektedir. Kısa dönem etkilerine baktığımızda, sıcak paranın reel döviz kuru, TCMB politika faiz oranı ve kaldıraç oranı ile pozitif yönlü ve istatistiki olarak anlamlı bir ilişkisi olduğu anlaşılmıştır Yani merkez bankası politika faiz oranı ile sıcak para hareketlerine yön verebilmektedir. Ayrıca ülke para biriminin reel olarak değerlenmesi sıcak para için girişte ve çıkışta olmak üzere iki kere kazanç sağlayacağı için cezp edici olmaktadır. Bunlara ilaveten kaldıraçlı işlemlerin arttığı dönemlerde sıcak para akışının da arttığı ve aralarında kısa dönem ilişki olduğu bulgularca desteklenmektedir. Sıcak parayı etkileyen dışsal faktörler ise sıcak para arasında negatif bir ilişki vardır. Bu ilişki VIV, MSCI ve CDS'ler gibi küresel ve ülke riskini yansıtan değişkenlerde istatistiki olarak anlamlı çıkması sıcak paranın risk iştahına bağlı olarak hareket ettiği kanıtlamaktadır. Bu bağlamda küresel veya ülkeye özgü risklerin artması ani duruş (sudden stop) problemine yol açmakta ve ülke kırılganlığını arttırmaktadır diyebiliriz. Diğer yandan FED'in politika faiz oranı üzerinde yaptığı değişikliklerin Türkiye ekonomisine yönelik sıcak para hareketleri ile negatif ancak istatistiki olarak düşük anlamlılığa sahip olduğunun anlaşılması da FED faiz politikasının doğrudan değil dolaylı olarak sıcak para hareketine yön verdiği biçimde yorumlanabilir.

Çalışmada son olarak seçilmiş değişkenlerin sıcak para hareketlerinde meydana gelen değişmeyi açıklama güçlerine bakılmıştır. Bulgular sıcak parada meydana gelen değişmelerin en fazla kürsel değişkenler tarafından açıklandığına işaret etmektedir. Bu durum Türkiye'ye yönelik sıcak para hareketlerinde kürsel risk algılamalarının büyük etkisi olduğu biçimde ifade edilebilir. Ancak reel döviz kurundaki değişmelerde sıcak para hareketini açıklama gücü yüksek değişkenler arasında yer alması Türkiye'ye yönelik sıcak paranın kur değişimlerini dikkate almaya devam ettiği şeklinde yorumlanabilir.

Son olarak elde edilen bulgular Türkiye'ye yönelik sıcak para akımlarının risk on ve risk off uygun hareket gösterdiğini desteklemektedir. Ayrıca kaldıraç oranları ile sıcak para hareketi arasında hem uzun hem de kısa dönem ilişkisinin varlığı dikkate alındığında sıcak paranın ülke ekonomisinde yaratabileceği olumsuzluklar

karşısında makro ihtiyati politikaların önemi ortaya çıkmaktadır. Diğer yandan reel döviz kuru değişmelerinin sıcak para hareketini etkilediği düşünüldüğünde, döviz kuru ile enflasyon arasından doğrudan ve dolaylı ilişki ihmal edilmemeli ve finansal istikrar yanında fiyat istikrarı hedefinden de vazgeçilmemelidir. Zira fiyat istikrarı hedefinden sapma sıcak para hareketlerinin risk algılamalarında olumsuzluk yaratabilir ve ülke ekonomisinin kırılganlıkları artabilir.

Bağımsız Düzenleyici Denetleyici Kurumların Bankacılık Sektörünün Yeniden Yapılanmasında Önemi: Türkiye Örneğinden Geçiş Ekonomilerinin Alabileceği Dersler

The Importance of Independent Regulatory and Supervisory Agencies in Restructuring of the Banking Sector: Lessons for Transition Economies from the Case of Turkey

Asst. Prof. Dr. Resül Yazıcı (Şeyh Edebali University, Turkey)

Asst. Prof. Dr. Ayla Yazıcı (Anadolu University, Turkey)

Abstract

For countries, who did not know whence and how to start the quest for reform, that has come into question because of crises and downfalls, the solution process extends and the cost increases. In countries that are in the process of restructuring, the most important reform to alleviate these adversities will be the establishment of independent regulatory and supervisory agencies. The financial sector which is acting as an intermediary in the development of market economies should be at most subject to regulation and supervision. However, if these regulations and supervisions are supragovernmental the success of the transition to market economies will improve quickly. In this study the causes of the banking crises experienced in Turkey in 2001, and the means of solution to overcome them, are discussed. Owing to the creation of independent regulatory and supervisory agencies, the Turkish banking sector has qualitatively and quantitatively grown and has transfered positive externalities to the economy. Especially due to the efficient functioning of the regulatory and supervisiory agencies in the banking sector, Turkey has so far successfully managed the global financial crises. In this context with this study, it is aimed to present for transition economies in the process of restructuring, that the services of resource utilization to the private sector, which is the main function of banking, will develop and, like Turkey, these countries can achieve the same outcomes. This means that, these economies can benefit from Turkey's experiences.

1 Giriş

Geçiş ekonomisi ifadesi (ki çalışmada da bu amaçla kullanılan kavram), ilgili ülkedeki bütün ekonomik yapının, kural ve kurumları ile zorlu süreçlerden geçerek kabuk değiştirmesi anlamına gelmektedir. İktisadi sistemlerdeki değişim olarak bakıldığında ise: "Geçiş Ekonomisi, piyasa ekonomisinin alternatifleri olan sosyalist veya karma ekonomilerin; küreselleşme çağında ve açık ekonomi koşullarında, kendilerini piyasa ekonomisine uyarlamaları sürecine verilen addır" (Akalın, 2003). Özellikle Sovyetler Birliği'nin dağılmasından sonra, kendi içlerinde planlı ekonomiden liberal ekonomiye geçmekte olan ekonomiler için kullanılan kavram; aynı zamanda onların küreselleşme sürecine de uyumları için yapmak zorunda oldukları reformları da ifade etmektedir.

Çünkü bu uyarlanma süreci kaçınılmaz olmaktadır. Yani "sosyalist veya karma ekonomiler piyasa ekonomisine kendi istekleriyle geçmemektedirler. Küresel ekonominin rekabetçi yapısına ve piyasa güçlerinin işleyişine ayak uyduramayan piyasa ekonomisinin alternatiflerini benimsemiş ülkeler, ekonomik kriz denilen bir çöküntü ile karşılaşmaktadırlar" (Akalın, 2003).

Ekonomilerinde yaşadıkları çöküntü sonrasında gündeme gelen değişim, çözüm arayışları, nereden başlanacağı gibi kararsızlıklar bu ülkelerdeki gerekli reformlar için hayati kararlar alınmasını ve uygulanmasını zorlaştırmaktadır. Çünkü bu süreçte başarılı olma hızı ülkeden ülkeye farklılık gösteren yapısal özelliklere ve bunları değiştirme isteğine bağlıdır. Tabii ki bu değişime her yönüyle hazır olan, reformları en kısa sürede hayata geçiren ülkeler, geçişi daha az maliyetle ve kısa sürede gerçekleştirir.

Bu reformlardan en önemlileri, devletin düzenleyici rolünü üstlenen, denetim ve gözetim işlevlerini hakkıyla yerine getirebileceği yapılar; üst kurullar, bağımsız düzenleyici kurumlar olarak adlandırılmaktadır.

Bağımsız düzenleyici, denetleyici kurumların, öncelikle finans sektöründe oluşturulması gerekmektedir. Çünkü geçiş ekonomisi sürecinde olan ülkelerin temel sorunları; yetersiz sermaye birikimine ve piyasa aksaklıklarına sahip olmalarıdır. Bu sektör sayesinde işleyecek olan aktarım mekanizmaları sayesinde diğer kesimlerin yeniden yapılanması daha kolay olacaktır.

Zaten piyasa ekonomilerinin gelişiminde önemli bir aracılık görevini yerine getiren finans sektörü ve onun önemli bir parçası olan bankalar, en fazla düzenleme ve denetlemeye tabi olan kurumlar arasındadır. Fakat bu düzenlemelerin ve denetlemelerin hükümetler üstü olması; hem bu kurumların hem de ekonomilerin piyasa ekonomisine geçişlerinin başarısını artıracaktır.

Düzenleyici, denetleyici kurumların gelişmiş ekonomilerde oluşturulmuş fakat işletilmemiş; bağımsızlığının verilmemiş olmasının sonuçları; etkileri devam eden 2008 küresel finans krizinde görülmektedir.

Krizin temeli bilindiği gibi kısaca: ABD'deki ipotekli konut kredisi sisteminde, kaynak yaratılması sürecinde; bilanço dışı işlemler, türev ürünler ve verilen kredilerin yönetilememesiyle finans krizi olarak ortaya çıkmıştır. İpotekli konut finans sisteminde kaynak yaratılması sürecinde, finansman işlemlerinin uluslararası finans sisteminden de desteklenmesiyle uygulamalar küreselleşmiştir. Bu kredi işlemlerindeki küreselleşme sonrasında; likiditesi daralan küresel finans sisteminden borçlanan ülkelerin, borçlarını çevirememesiyle; kriz, bulaşıcı etkileriyle yaygınlaşmaya başlamıştır. Çoğu ülkelerde bu süreç, kamu borç krizine dönüşmüştür.

Gereğinden fazla liberal uygulamaların yol açtığı bu krizlerden alınması gereken temel dersler; ekonomideki finansal tarafların aşırı kazanma hırslarının kendi haline bırakılamayacağı; finansal sistemlerin, kurumların ve araçların çok hızlı büyümesini sağlayan serbestleştirme sürecine hazırlıksız girilemeyeceğidir. Çünkü finansal sistemdeki gerekli teknik altyapının düzenlenmesi ve denetlenmesi mekanizmasının kurulmamasıyla oluşturulan ekonomik yapılanmalar büyük riskler taşımaktadır.

Bu riskleri ve hükümetlerin popülist müdahalelerini azaltmak için, bağımsız düzenleyici, denetleyici yapıların oluşturulmuş ve işletilmiş olmasının ne kadar önemli olduğu, 2008 küresel finans krizini genel olarak başarıyla yönetebilen Türkiye tecrübesinde görülmüştür.

Bu çalışmada da, geçiş ekonomilerinin ders alabileceği Türkiye tecrübelerine yer verilmiştir. Özellikle 2001 yılında en sert bankacılık krizini yaşayan Türkiye'nin, bankacılık krizinin nedenleri ve bunları aşmada uygulamaya koyduğu çözüm araçları incelenmiştir. Türk Bankacılık Sektörü'nde, yeniden yapılanma ile oluşturulan bağımsız düzenleyici, denetleyici kurumlar sayesinde sektör niteliksel ve niceliksel olarak gelişmiştir. Bu gelişimin sonuçları sektör rakamlarına olumlu yansımıştır ve küresel finans krizini şimdiye kadar başarıyla yönetebilmiştir. Türkiye'nin bu tecrübesiyle; geçiş ekonomilerinin bankacılık sisteminde; uzun süreli istikrarı sağlayabilmek için oluşturulması gereken bağımsız düzenleyici, denetleyici yapıların meydana getirilmesinin ve işletilmesinin ne kadar önemli olduğu gösterilmektedir.

Zira geçiş süreci o kadar kolay değildir. Değişimde her ne kadar acele edilse de başarılı olunması şansa bağlıdır. Çünkü "bu paradigma kapsamında uygulanan reform stratejilerinin öncelikli amacı bir an evvel serbestleşme (liberalizasyon) sürecinin başlatılması ve özel mülkiyete dayalı bir piyasa ekonomisinin inşa edilmesidir. Dolayısıyla neoklasik iktisat politikaları; ekonomik faaliyetler üzerindeki kısıtlamaların kaldırılması (deregülasyon), liberalizasyon, minimal bir devlet, ekonominin dışa açılması gibi birçok alanda, ilgili ülkenin başlangıç koşulları, büyüklüğü, kaynak rezervi, sosyal yapısı, kurumları, uluslararası ilişkileri ve tarihsel gelişimi dikkate alınmaksızın devreye sokulmuştur. Oysa bir yanda piyasa ekonomisi ile taban tabana zıt eski sistemin mirası, diğer tarafta tüm kurum ve kuruluşlarıyla tamamen yeni bir düzenin inşası, geçiş sürecinin en zor ve karmaşık sorunu olagelmiştir. Burada özellikle belirtilmesi gereken nokta geçişin her şeyden önce kurumsal bir değişim olması"nı sağlamaya yönelik olmalıdır. Bunun başarılabilmesi için, bu düzenlemelerin, hükümetler üstü olması gerekmektedir. Böylece hem bu kurumların hem de geçiş ekonomilerinin piyasa ekonomisine hızla eklemlenmede başarılı olma şansı artacaktır (Güler, 2012).

2 Yeniden Yapılanmada Bağımsız Düzenleyici Denetleyici Kurumların Önemi

Piyasa ekonomisine geçiş sürecinde olan ekonomilerde, kamu mülkiyetinde olan işletmelerde, etkin olmayan yönetimlerle ortaya çıkan zararların sürdürülemez hale gelmesi veya "bağımsız olmayan seçilmiş ve atanmış kamu görevlilerinin, kamu malının yönetilmesinde özel sektör yöneticileri kadar etkin olamamaları; kamu sektörünün özel sektöre göre başarısızlık nedenlerinin temellerini oluşturmaktadır. Seçilmiş ve atanmışların, kamusal kaynakları yönetirken, bunları toplum yararına ve yasalara göre idare ettikleri konusunda hesap vermeye ve bireylerin de bu hususları sorgulamaya uygun bir yapılanma süreci ülkelerin geleceği için gereklidir (Şimşek ve Yazıcı, 2008, 399)." Bu yapılanmada bağımsız düzenleyici, denetleyici kurumların oluşturulmasının ne kadar önemli olduğu ortaya çıkan finansal krizlerle teyit edilmiştir.

Kriz dönemleri yanında normal dönemlerde de: Piyasa aksaklıklarının ortadan kaldırılmasıyla, kaynak tahsisinde etkinliği sağlayabilecek; ekonomik sistemi rasyonelleştirebilecek; piyasaların kamu müdahalesinden kurtarılmasını ve mali baskınlık sonucu özel yatırımlar üzerindeki kamu harcamalarının sınırlayıcı, haksız rekabet yaratıcı etkilerinin ortadan kaldırılmasını sağlayacak; oyunun kurallarını koyan ve denetleyen disipline edilmiş bir piyasa; Bağımsız Düzenleyici ve Denetleyici Kurumlar ile sağlanabilecektir.

Bu gerçekleri özellikle, kamunun bütçe açıklarının finansmanını ve borç yönetimini başarıyla uygulayabilmek için mali disiplin dışında gerekli olan; çeşitli politikaların ve kurumların eş zamanlı çalışmasını sağlamaktır. Bu da; otoritenin, yönetimsel hatalarını azaltmak için uygulamaya aktarılan minimal devlet yaklaşımlarıyla; yani, hükümetlerin ekonomideki karışmacı rolünün en aza indirilmesiyle; bağımsız düzenleyici - denetleyici yapıların oluşturulmasıyla sağlanabilmektedir (Yazıcı, 2012, 259).

Devletin ekonomiye müdahalesinin haklı gerekçelerine karşın; uygulama sonuçlarının da aynı şekilde başarılı olmadığı günümüz gerçeklerinde görülmektedir. Yani bir dönem gerekli olan kamu müdahaleleri–kamu

işletmeciliği günümüzde gerekmemekte veya müdahale şekli değişmektedir: Piyasa ve devlet birbirini dışlamamalı yani müdahaleler sınırsız olmamalı fakat doğru zamanda, tam yerinde ve uygun bir şekilde yapılmalıdır. Mali disiplini sağlayıcı şeffaflık uygulamaları, kamu gelirlerini artırıcı politikalar, profesyonel yönetimin olmadığı kamu işletmelerinde özelleştirme, piyasa ekonomisinin olmazsa olmazı hukuksal ve kurumsal altyapının oluşturulması; birileri (IMF) istediği için değil ülke geleceği için yapılmalıdır. Çünkü artan kamu açıklarının sığ mali piyasalarda yarattığı yüksek faiz oranlarıyla; bütçe içinde faiz harcamaları artmakta, crowding-out etkisiyle özel sektör mali piyasalardan dışlandığından kaynaklar sadece kamuya–etkin olmayan kullanıma akmaktadır (Yazıcı, 2004,163-164).

Bu şekildeki ekonomilerde, yönetimden kaynaklanan olumsuzlukların, kötü alışkanlıkların kısa sürede giderilebilmesi mümkün değildir. Bu şartlanmış davranışların değiştirilmesi, radikal reformlarla, politikalarla mümkün olabilecektir. "Bu politikalar çerçevesinde, çoğu gelişen ülke ekonomisinde dış ticaret, mali piyasalar ve kamu maliyesinde etkinliği artırmak amacıyla önemli reformlar yapılmıştır. Rekabetçi ve tek bir döviz kuru uygulaması, faiz hadlerinin serbestleştirilmesi, ticari serbestleşme, özelleştirme, vergi gelirlerinin artırılması ve kamu harcamalarının disipline edilmesine yönelik düzenlemeler bu reformların önemli araçları olmuştur. Ancak birinci nesil reformlar olarak da adlandırılan ve makroekonomik istikrarı sağlamanın yanı sıra devletin ekonomideki rolünü en aza indirmeyi amaçlayan bu tür reformlar piyasaların nasıl gelişeceğinden daha çok nasıl işleyeceği üzerinde yoğunlaşmıştır" (Emek ve Diğerleri 2002, 42).

Devlet yönetimindeki klasik bürokrasinin müdahale şekli ve ölçüsü, ortaya çıkan krizlerle; kamu ekonomisinin başarısızlıklarıyla tartışılmaktadır. Kamunun yönetimdeki, denetimdeki yerinin, siyasal sistemden bağımsız, saydam ve hesap verebilen kurumlara verilmesinin önemi, bunların kriz dönemlerindeki başarılarında görülmektedir. Çünkü popülist anlayışın olmadığı yapılarda hatalar daha az ve telafisi daha kolaydır. Bu nedenle bağımsız düzenleyici ve denetleyici kurumlara, ülkelerin yeniden yapılanmasında; kurumsallaşma ilkelerinin uygulanmasında önemli görevler düşecektir.

Özellikle tüketicilerin egemen olduğu piyasa ekonomisine geçişin başarılabilmesi için; düzenleyici, denetleyici kurumların oluşturulması ve hükümetler üstü olabilmesi için de, bağımsızlığının sağlanması gerekir. Piyasa ekonomisine geçiş uygulamalarındaki başarıda, küreselleşme sürecine uyum derecesi de önemlidir. Çünkü piyasa ekonomilerini, dünya ölçeğinde - serbest piyasa koşullarında oluşan fiyatlar yönlendirir.

Küreselleşme sürecinde, ulusal rekabet gücünün yaratılabilmesi için de; üretimden tüketime, üretim süreçlerini düzenleyen ve denetleyen kalite sistemlerinin kurulmasını, mülkiyet haklarının tanınmasını ve korunmasını da bağımsız düzenleyici otoriteler sağlayacaktır.

Tüketici refahını olumlu yönde etkileyecek tüm "özelleştirme uygulamalarının başarısı için özelleştirme yöntemleriyle birlikte piyasa ekonomisinin müesseseleri de önem taşımaktadır. Piyasa ekonomisinin müesseselerinden olan ve kaynak dağılımını yeniden sağlamaya aracılık eden sermaye piyasaları, iflas müessesesi ve iyi düzenlenmiş bir ticaret kanunu olmadan ve bölgesel gelişmişlik farkları dikkate alınmadan, özelleştirmeden beklenen faydaları olan rekabet, kaynak dağılımında etkinlik ve firma yönetiminde verimlilik hedeflerine ulaşılması mümkün değildir" (Yaşar, 2007, 174-175).

3 Türk Bankacılık Sektöründeki 2001 Krizi Sonrasında Yeniden Yapılanma ve Bağımsız Düzenleyici Denetleyici Kurumların Oluşturulma Sürecine Genel Bakış

Türk Bankacılık sektöründe krizler; sektörü yöneten ve denetleyenlerdeki düşük risk anlayışının şekillendirdiği yanlış uygulamaların, ekonomik yapının ve onları şekillendiren popülist politikalardaki hataların birikiminin bir sonucudur. Yani makro ekonomik dengesizliklerin olduğu, tutarlı politikaların sürdürülebilir olmadığı bir yapıda bankacılık sektörünün de istikrarlı olmasını beklemek yanlıştır.

Bu yanlışlara ilave olarak; artan borç stoku nedeniyle kamunun; hem bankacılık sisteminin en önemli müşterisi olması hem de sistemi düzenleyen ve denetleyen görevlerini başarıyla yerine getirmesi beklenemez. O dönemde bağımsız olmayan - olamayan düzenleyici, denetleyici otoritelerin başarısız olmasının sebepleri aşağıdaki şekilde özetlenebilir (Yazıcı, 2012, 253-254):

- Siyasi otoritenin, popülist, programsız, yanlış politika seçimi ve uygulamalarıyla; Türkiye ekonomisinin serbestleştirme, dışa açılma sürecinin yönetilememesi.
- Kamunun kötü performansının ve artan bütçe açıklarının neden olduğu çevrilemeyen borç stoku.
- Artan kamu borç stokunun, mali baskınlığa yol açması.
- Mali baskınlığın etkilediği temel fiyatların; kur ve faizi dolayısıyla enflasyonist bekleyişleri artırması.
- Enflasyonist sürecin; güçsüz, denetimsiz bankacılık sektörünün risk yönetimini zayıflatmasıyla aktarım mekanizmasında etkinliğin azalması ve dışlama etkisinin ortaya çıkması.
- Böylece hem enflasyonu besleyen bir süreç hem de yetersiz tasarrufların kamuya akışının ortaya çıkardığı kur ve faiz kanalıyla (özel ve kamu) bankacılık sektörünün; menkul kıymet yatırımlarının, mevduatlarının, kredilerinin ve kârlarının kamu tarafından şekillendirildiği bir süreç yaşanmıştır.

- Kamu bankaları üzerindeki baskılar nedeniyle de ortaya çıkan görev zararlarının ve kullandırılan kredilerin geri dönüşünde sorunlar olması, üretime aktarılamaması; hem reel sektörde büyümeyi olumsuz etkileyen hem de finans sektörünün krize sürüklenmesini artıran bir durum yaratmıştır.

Türkiye ekonomisindeki krizlerin temel nedenleri olarak özetlenebilecek bu durumların artık daha fazla sürdürülemez hale gelmesiyle ortaya çıkan 2001 krizi; maliyetleri çok yüksek olmasına rağmen ve/veya başka çare kalmadığından; yeniden yapılanmanın sağlanabilmesi için heteredoks istikrar programlarının uygulandığı bir dönemi başlatmıştır. Makro anlamdaki önlemleri içeren bu istikrar programları, bankacılık sektöründe IMF'nin direktifleriyle sert bir şekilde uygulanmıştır.

Türk bankacılık sektöründe o dönemde acı faturalara katlanmanın temel amacı; bankacılık sektörünün gelecekteki etkinliğini artırmaktır. Bu hedefe ulaşılabilmesinde çeşitli araç ve teknikler kullanılmış ve günümüzde de kullanılmaya devam edilmektedir. "Yeniden yapılandırma programlarında kullanılan enstrüman ve teknikler aşağıda sıralanmıştır" (Çolak, 2005, 152):

- Devletten bankalara sermaye aktarımı,
- Sorunlu krediler problemleri ile ilgilenecek aktif yönetim (asset management) şirketlerinin kurulması,
- Merkez bankalarından likidite desteği,
- Kamu bankalarının özelleştirilmesi,
- Sorunlu kredilerin devlet tahvili ile değiştirilmesi,
- Bankalar tarafından yeni hisse senedi ihracı ve senetlerin bir kısmının veya tamamının (geçici olarak) devlet tarafından satın alınması,
- Banka birleşmeleri,
- Yabancı bankalara devirler,
- İflas etmiş bankaları kapatmak veya idaresini kapanma işlemleri sonuçlanana kadar programı yürüten kurumun kontrolüne alınması,
- Sorunlu bankanın faaliyetlerinin bazı bankacılık ürünlerinden ve alanlarından çekilmesi veya düzenlemeler yapılması ile yeniden şekillendirilmesi (splits), (Bu düzenlemeler genellikle yabancı bankalarla birlikte yapılmaktadır).
- Sorunlu bankalara dışarıdan gerek teknik gerekse danışmanlık gibi destekler vererek bankacılık operasyonları ve faaliyetlerinde daha iyi bir düzeye ulaşılması, (twinning)
- Banka sahipliği ve yöneticiliğine bazı düzenlemeler getirilmesi.

2001 krizi sonrasında yukarıda sıralanan enstrüman ve tekniklerin çoğunu kullanan BDDK'nın (Bankacılık Düzenleme ve Denetleme Kurumu) ve TMSF'nin (Tasarruf Mevduatı Sigorta Fonu) hedefi şu şekilde özetlenebilir: Türk bankacılık sektöründeki kamu bankalarının, görev zararı şeklindeki uygulamalarına son vererek; özerkliğini artırarak etkinliğini artırmak. El konulan TMSF bünyesindeki bankaların sorunlarını en kısa sürede çözüme kavuşturarak finansal sistemi rahatlatmak. Ayakta kalan özel bankaların da sağlıklı bir yapıya kavuşmalarını sağlayacak düzenlemeleri hayata geçirmektir. Bu düzenlemelerin temelini oluşturan "Güçlü Ekonomiye Geçiş Programı" ile Türkiye ekonomisinde özellikle finans sektöründe, aşağıdaki yapısal reformlar gerçekleştirilmiştir.

3.1 Maliye Politikası Reformlarının Para Politikası ile Uyumluluğunun Sağlanması

Yeniden yapılanan veya geçiş sürecindeki ekonomilerin makro dengesizliklerinin temel nedeni, kamu açıkları ve bunların sürdürülemez hale gelmesidir. Kamu kesimindeki finansman dengesizliklerinin giderilebilmesi için yapılması gereken temel düzenleme mali disiplini sağlamaya yönelik yeniden yapılandırma reformlarını içermelidir.

Bu yapısal önlemler özelleştirmeden, bankacılık sisteminin yeniden yapılandırılmasına, şeffaflıktan, kamu kesiminde çalışanların etik kurallarına kadar çok geniş bir yelpazeye yayıldı. Buna paralel olarak kamuoyu ve medyada da yapısal reform adeta sihirli bir kavram haline geldi. "Yapısal reformları cesaretle yapacak hükümetler", "kararlılıkla sürdürülen yapısal reformlar", "yapısal reformlar tamamlanamadığı için patlayan krizler" gibi ifadeler yaygın bir biçimde kullanılmaya başlandı. 1980'lerde 1990'lı yılların başında yapısal reformlar deyince genellikle özelleştirme ve piyasa mekanizması önündeki engellerin kaldırılması yani serbestleşme akla gelirken, son zamanlarda bu kavramın içeriğinin genişlediği gözlenmektedir (Esen, 2002, 1).

Türkiye'de kamu bütçesindeki dengesizliklerin, bankacılık sektörü üzerindeki olumsuz sonuçlarını azaltabilmek için 2001 krizi sonrası uygulanan maliye politikası reformları şu şekilde özetlenebilir (bk.:BDDK, 2009, 9-10):

- Gelir artırıcı, harcama azaltıcı önlemlerle; faiz dışı fazla verilmesinin hedeflenmesi ve çeşitli dolaylı vergilerin artırılması gibi tedbirler.
- Kamu personelinin ve tarımsal destekleme harcamalarının azaltılması.

- Kamu iç ve dış borcunun etkin bir şekilde yönetilebilmesini amaçlayan, Kamu Finansmanı ve Borç Yönetiminin Düzenlenmesi Hakkında Kanun'un 28 Mart 2002'de çıkarılması.

- Kamunun iç piyasadan borçlanmasını kolaylaştırmak amacıyla, kamu borçlanma araçlarının (DİBS) iç piyasada derinleşmesini ve katılımcı bankaların yükümlülüklerini yerine getirmelerini sağlayan bir piyasa yapıcılığı sistemi Eylül 2002'de hayata geçirilmiştir.

- 1 Ocak 2003 tarihinde Kamu İhale Kanunu'nun yürürlüğe girmesi.

- Kamuda, kamu mali yönetim ve denetimini düzenleyen Kamu Mali Yönetim ve Kontrol Kanunuyla, bütçe kurumlarının gruplamaları değiştirilerek, analitik bütçeleme tekniği ve denetçiler için performans denetim anlayışı başta olmak üzere yeni uygulamalar getirilmesi.

- Memurlar ve Kamu Yöneticileri İçin Ahlaki Görev ve Uygulama Esaslarına İlişkin Kanun'un, 25 Mayıs 2004'de yürürlüğe girmesi.

3.2 Para Politikası Otoritesine Bağımsızlığının Kazandırılması

Türkiye gibi gelişmekte veya geçiş ekonomisi aşamasında olan ekonomilerin (ki 2008 finans krizinin Euro bölgesi bazı ülkelerde maliye ve para politikası uyumsuzluğu gibi) sorunlarının temelinde; genişletici maliye politikası uygulamalarıyla ortaya çıkan bütçe açıkları ve onların finansmanı için artan kamu borç stokunun sürdürülemez hale gelmesidir. Özellikle merkez bankası kaynaklarıyla yaratılan parasallaşma ve iç borçlanmanın ortaya çıkardığı mali baskınlık sonucunda; araç bağımsızlığına sahip olamayan merkez bankaları ve Türkiye Cumhuriyet Merkez Bankası (TCMB) para politikalarında başarılı olamamıştır. Bu başarısızlıkları ortadan kaldırıcı düzenlemelerin temelinde para politikası otoritesine, bağımsızlığının yasa ile verilmesi yatmaktadır.

Günümüzde TCMB modern merkez bankacılığı ile uyumlu yasal düzenlemelerle, para politikası araçlarına ve araç bağımsızlığına sahip hale gelmiştir. Diğer yandan, günümüz ekonomisinde dolaylı para politikası araçlarının kullanılabilmesinin ve dolayısıyla para politikasının etkin olarak yürütülmesinin ön şartlarından ilk ikisi mali baskınlığın bulunmaması ve merkez bankalarının bilançolarına hâkim olabilmesiyse, üçüncüsü de etkin çalışan bir para piyasasının bulunmasıdır. Türkiye'de para piyasaları TCMB'nin 1987'den bu yana katkıları ile birlikte gerek teknik alt yapı ve gerekse işleyiş açısından gelişmiş ülkelerle karşılaştırılabilir düzeydedir. Bu nedenle, güvenli bir şekilde Türkiye'deki finansal alt yapının, modern dolaylı para politikası araçlarının etkin olarak kullanımına uygun olduğunu söyleyebiliriz. Ayrıca, TCMB'nin para politikası araçları ve likidite yönetiminin gelişmiş ülke uygulamaları ile aynı teknik özelliklere sahip olduğunu görmekteyiz. Bu çerçevede, geçmişte olduğu gibi gelecekte de makroekonomik istikrar ve para politikalarının başarısı bütçe disiplinine ve yapısal reform sürecine bağlı olacaktır. Bu nedenle, siyasi otoritelerin Türkiye'deki merkez bankacılığının geçmişte yaşadığı olumsuz tecrübeleri her zaman göz önünde bulundurması faydalı olacaktır (Önder, 2005, 287).

3.3 Bağımsız Düzenleyici - Denetleyici Yapıların Oluşturulmasına Yönelik Reformlar

Aşırı liberalist uygulamaların finans sektöründe ortaya çıkardığı 2008 küresel finans kriziyle gündeme gelen daha çok müdahale politikaları; önceki dönemlerdeki serbestleştirme politikalarının yerini almaktadır. Türkiye ekonomisinde 2001 krizi sonrası, IMF destekli, bankacılık sektörünün yeniden yapılandırılmasına yönelik program 15 Mayıs 2001'de açıklanmıştır. Bankacılık Sektörü Yeniden Yapılandırma Programı adıyla açıklanan program: İç ve dış şoklara dayanıklı; etkin aracılık fonksiyonuna odaklanmış ve uluslararası ölçekte rekabet edebilir bir bankacılık sektörüne geçişi amaçlayan; yasal ve kurumsal düzenlemelerin en iyi uygulamalarının oluşturulmasını ele almaktadır.

En iyi uluslararası uygulamalara paralel olarak bağımsız düzenleyici kurulların iyi işleyen bir piyasa ekonomisi için gerekli olduğundan hareketle Sermaye Piyasası Kurulu ve Bankacılık Denetleme ve Düzenleme Kurumu'na ilaveten Rekabet Kurumu, Telekomünikasyon Kurumu, Enerji Piyasası Düzenleme Kurumu, Tütün Kurulu ve Kamu İhale Kurulu oluşturulmuştur. Bu kurullar, ekonomi yönetiminin siyasetten arındırılmasına yardım etmiş, kamu harcama yönetiminin iyileşmesine ve daha etkin bir devlet yapısı oluşmasına katkıda bulunmuştur (BDDK, 2009, 10).

Geçiş ekonomilerinin yeniden yapılandırma programlarında yer verilmesi gereken ulusal ve uluslararası ölçekteki bağımsız düzenleyici, denetleyici kurumların önemi, 2008 küresel finans krizinde de ortaya çıkmıştır. Bu yüzden "bankacılık sisteminin mali ve operasyonel yapısının güçlendirilmesine yönelik uygulamalar ile bankacılık sektöründe gözetim ve denetimin etkinliğini artıracak, sektörü daha etkin ve rekabetçi bir yapıya kavuşturacak yasal ve kurumsal düzenlemeler" devam ederse Türk bankacılık sisteminde dolayısıyla ekonomisinde istikrar devamlı olabilecektir (BDDK, 2001, 13).

4 Türk Bankacılık Sektöründe Bağımsız Düzenleyici Denetleyici Kurumların Oluşturulması Sonrasındaki Gelişimin Önemli Rakamlara Yansıması

Türk Bankacılık Sektöründe en sert yaşanan 2001 krizi sonrası uygulanan radikal reformlara; bağımsız düzenleyici denetleyici para politikası uygulamalarına; kamu maliyesinin de destek vermesiyle sağlanan başarı sayesinde, bankacılık sektörünün finansal aracılık işlemlerinde etkinliğin artışı rakamlara olumlu yansımaktadır.

Mali disiplin, para politikalarının etkinliği ve bankacılık sektörünün istikrarı açısından hayati öneme sahiptir. Küresel kriz öncesinde bütçe dengesi gelişmeleri sıkı mali disiplinin bir göstergesi niteliğinde olmuş, faiz dışı dengedeki olumlu tablo, finansal istikrarın güçlenmesine katkı yapmıştır (BDDK, 2013).

Bankacılık sektöründeki bağımsız düzenleyici, denetleyici kurumlara destek veren mali disiplin sonucunda, kamunun borçlanma ihtiyacının azalmasıyla; mali baskınlığın eski gücünü kaybetmesiyle; bankacılığın asli fonksiyonu olan özel sektöre kaynak kullandırma hizmetlerinin gelişmesi mümkün olmuştur. Bu gelişmeler:

- 2001–2012 döneminde Kredi/Mevduat Oranında yükseliş ve MDP (Menkul Değerler Portföyü) / Mevduat Oranında azalış şeklindedir. Kredi/Mevduat Oranında yükseliş mali baskınlığın azalmasının, özel sektörün dışlanmasının (crowding-out) önlenmesine işaret eden önemli bir orandır.

- MDP (Menkul Değerler Portföyü) / Mevduat Oranında azalış da bunu desteklemektedir. Yani kamunun borçlanma talebi azaldığı için ihraç ettiği DİBS'ler (Devlet İç Borçlanma Senedi) azalmaktadır. Bu da bankaların, sadece kamuya değil özel sektörü de finanse etmeye yönelmelerine yol açmıştır. Böylece crowding-out etkisiyle özel sektörün mali piyasalardan dışlandığı durum; kaynakların sadece kamuya, etkin olmayan alanlara aktığı konum; kısacası mali baskınlık azalmaktadır.

	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012
Kredi / Mevduat Oranı %	34	36	43	52	62	71	80	81	76	85	98	103
MDP / Mevduat Oranı %	54	62	69	65	56	52	46	43	51	47	41	35

Tablo 1: *Türk Bankacılık Sektöründe Mali Baskınlığın Değişimi **Kaynak:** BDDK (2010-2013) verilerinden hesaplanmıştır.*

Türk Bankacılık Sektörünün 2001 yılı sonrasında gerçekleştirmiş olduğu reformların sonuçları küresel finans krizinde test edilmiştir. Küresel krizin ülkelerdeki olumsuz etkileri; toparlanmak için mücadeleleri devam ederken Türkiye Ekonomisi, bu reformlar sonucunda göreceli olarak daha iyidir. Ekonomideki bu olumlu sürecin önemli bir göstergesi de, "kredi hacminin milli gelire oranı, hem finansal derinleşmenin hem de kredi genişlemesinin bir göstergesi olarak kabul edilmektedir. Toplam kredi hacminin milli gelir (GSYH) içindeki payı, 2002 yılı sonunda %14 iken, 2012 üçüncü çeyrek itibarıyla %54'e ulaşmıştır. Küresel krize rağmen artış eğilimi devam etmiştir. Finansal istikrar ve ekonomik büyüme ile eşanlı giden kredi büyümesi, reel kesim ve tüketici kredilerinin artmasıyla söz konusu ivmeyi kazanmıştır (BDDK, 2013).

5 Bankacılık Sektörünün Düzenlenmesindeki Türkiye Örneğinden Geçiş Ekonomilerinin Alabileceği Dersler

Ülkelerin ekonomik yapılarının zorlu süreçlerden geçerek kabuk değiştirmesi anlamına gelen geçiş ekonomisi kavramı, özellikle sosyalist veya karma ekonomilerin, piyasa ekonomisine dolayısıyla küresel ekonomik sisteme uyarlanmaları süreci olarak ifade edilebilir.

Geçiş ekonomilerinde, "geçişin üç sacayağı üzerine inşa edildiği, yani siyasal anlamda otoriter-totaliter devlet anlayışından demokratik sisteme; ekonomik anlamda merkezi planlamacılıktan piyasa ekonomisine ve sosyo-kültürel anlamda da tek tip-homojen anlayıştan heterojen yapıya yönelimler söz konusudur (Gerni vd. 2011: 253)". "Reformlar açısından ilk etabı fiyat ve ticari liberalizasyon ile küçük ölçekli özelleştirme oluştururken; ikinci etap ise kurumsal yönetim, rekabet politikası ve finansal kurumlar gibi daha ileri kurumsal reformlardır (Gerni vd. 2011: 255)".

Acemoğlu da (2012), bir ulusun yeteneğini en iyi şekilde göstermesini sağlayacak, eşit şartlar sağlayabilecek kurumları "kapsayıcı ekonomik kurumlar" olarak adlandırmaktadır. Bununla birlikte, kapsayıcı ekonomik kurumları, kural değil istisna olarak görmektedir. Bu durumun tüm dünyada tarih boyunca olduğu gibi bugün de geçerli olduğunu ifade etmektedir. Yazar, geçmişte olduğu gibi bugün de pek çok milletin, mülkiyet haklarını koruyamayan, asayiş ve düzeni sağlayamayan, anlaşmazlıkları çözüme kavuşturamayan ya da yenilikçiliği ödüllendirmeyen dışlayıcı kurumlara sahip olduğunu, bu kurumların kesinlikle eşit şartlar sağlayamayacağını ve bu nedenle sürdürülebilir ekonomik büyümeyi teşvik edemeyeceğini belirtmektedir.

Bu olumsuzlukların ortadan kaldırılabilmesinde; ekonomik düzenin kurulmasında ve etkin işleyişinin sağlanmasında bağımsız düzenleyici, denetleyici kurumların önemi büyüktür. Çünkü kurumsallaşmış, hesap verebilen, profesyonel anlayışa sahip bu yapılar sayesinde; popülist anlayışın olmadığı, günü birlik kararların alınıp verilmediği politikalar uygulanabilir. Bu yönetim tarzında; mülkiyeti garanti eden hukuksal düzenlemeler uygulamada egemen olur; piyasalarda rekabetçi yapılar oluşturulup işletilebilir. Böylece ekonomik gelişme açısından önemli mesafeler alınabilir.

Türkiye ekonomisinde 2001sonrası bankacılık sektöründe oluşturulan bu yapıların, kurulması ve işletilmesi süreçlerini üçüncü alt başlıkta vermiştik. Bu kurumlar sayesinde elde edilen olumlu kazanımları da sonraki başlıkta özetlemiştik. Türk Bankacılık Sektöründeki bu başarılı yeniden yapılanmanın geliştirilmesi ve

ekonomideki diğer sektörlere de yaygınlaştırılması gerekmektedir. Çünkü bankacılık sektöründe bazen bu kurumların bağımsızlığına müdahale edilmesi şeklindeki günlük yanlış uygulamalarla (örneğin: TCMB'na, politika faizlerini indirmesi şeklindeki beyanlarıyla siyasilerin yaptığı baskı); katlanılmak zorunda kalınan sosyal, ekonomik maliyetler artmaktadır.

Türkiye ekonomisi gibi geçiş ekonomileri de, ülkeden ülkeye dozu değişebilecek bu yapıları kurabilirse aşağıdaki kazanımları elde edebilirler:

- Bağımsız merkez bankalarının, yerel paranın iç ve dış değerini korumada kısacası fiyat istikrarını sağlamada başarısı artar. Parasının dış değeri yani döviz kurunda istikrarı sağlayabilecek bağımsız politika ve araçlarına para politikası otoritesi sahip alacağı için; portföy yatırımlarının (sıcak para) ülkeye hızlı giriş ve çıkışlarında yaratacağı olumsuzlukları azaltabilir.

- Para politikası otoritesine ve ilgili diğer düzenleyici, denetleyici kurumlara bağımsızlığın verilmesine yönelik düzenlemeler ile maliye politikasının da para politikasına destek vermesi şeklindeki uygulamalarla, kamunun borçlanma talebi dolayısıyla finansal sistemde mali baskınlık, özel sektörü dışlama etkisi azalır.

- Böylece finansal sistemin kaynak aktarma yani aracılık işlemleri etkinleşir ki, geçiş ekonomisi sürecinde olan ülkelerin en temel sorunları; (hem yetersiz sermaye birikimine sahip olmaları hem de bunun reel sektöre aktarılacağı etkin piyasalara sahip olamamaları) çözüme kavuşur.

- Aynı zamanda finansal sektörün özellikle bankacılığın öncelikle yapılanması sonucunda, etkin işleyecek olan aktarım mekanizmaları sayesinde diğer sektörlerin yeniden yapılanması daha kolay olacaktır.

- Çünkü bağımsız bankacılık düzenleme denetleme kurumu aracılığıyla, bankacılık sektörünün düzenlenmesi ve denetlenmesinde parçalı bir yapı ortadan kalkar. Sektöre ilişkin tek bir bağımsız düzenleyici ve denetleyici bir kurum sayesinde, düzenleme ve denetlemede etkinlik artar. Zor durumdaki bankalara zamanında yapılacak müdahale ile olumsuz dışsallıklar ortadan kaldırılabilir.

- Proaktif bir yaklaşıma sahip olmak zorunda olan bağımsız düzenleyici, denetleyici kurumların bu yönetim tarzı sonucunda bankalar, en fazla düzenleme ve denetlemeye tabi olmaktadır. Yukarıdan aşağıya sıkı bir şekilde denetlenen bankalar bu disiplini müşterilerine de yansıtır. Çünkü banka yönetimlerinin yapacakları hatalarının, batıracakları paranın hesabının sorumluluğu yüksektir. Bu sorumluluğun gereği bankalar, kredi kullandırım süreçlerine, kredi geri dönüşlerini takip etme sistemlerine hassasiyet göstereçektir.

- Bu yüzden bankalar, kredi kullandıracakları müşterilerinin ve projelerinin seçiminde, geri dönüşü yüksek olacak talepleri seçeceklerdir. Riski yüksek projelerden yüksek faiz, düşük riskli projelerden düşük faiz talep ederek portföylerinde müşteri farklılaştırması yapacaklardır. Böylece hem müşterilerini hem de piyasaları, kayıt içinde çalışan, verimli projelere yatırım yapmaya yönelten bir misyona yöneleceklerdir.

- Kayıt dışı ekonominin kayıt altına alınması için de bankacılık sektörü ödeme sistemlerini geliştirecektir. Bu amaçla kullanılacak elektronik ödeme sistemlerinin yaygınlaştırılması, zorunlu tutulması; hem kayıt dışı hem de yasa dışı ekonomik faaliyetleri azaltabilecektir.

- Kayıt dışı ekonomik faaliyetlerin azalmasıyla, kamu gelirlerinin temeli olan vergi gelirleri dolayısıyla bütçe açıkları ve faiz giderleri azalacaktır.

- Nihayetinde geçiş ekonomileri, bankacılık sistemindeki bu bağımsız düzenleyici, denetleyici kurumları oluşturmuş yapılanmasıyla, ekonomilerinde uzun süreli istikrarı sağlayabileceklerdir.

6 Sonuç

Geçiş ekonomisi sürecinde olan ülkelerin, reform arayışlarına nereden, nasıl başlayacağını bilememesiyle; acele edilmesiyle; çözüm süreci uzamakta ve maliyeti artmaktadır. Bu olumsuzlukların hafifletilebilmesindeki reformlardan en önemlileri, devletin düzenleyici ve denetleyici rolünü üstlenen, bağımsız düzenleyici, denetleyici kurumların oluşturulmasıdır. Çünkü geçişi kolaylaştıracak olan, her şeyden önce kurumsal bir yapılanmanın sağlanmış olmasıdır. Böylece hem bu kurumların hem de geçiş ekonomilerinin piyasa ekonomisine hızla eklemlenmesinde başarısı artacaktır.

Bağımsız düzenleyici, denetleyici kurumların, öncelikle bankacılık sektöründe oluşturulması da önemlidir. Çünkü geçiş ekonomisi sürecinde olan ülkelerin en temel sorunları; hem yetersiz sermaye birikimine sahip olmaları hem de bunun reel sektöre aktarılacağı etkin piyasalara sahip olamamalarıdır. Bankacılığın yapılanması sonucunda etkin işleyecek olan aktarım mekanizmaları sayesinde diğer kesimlerin yeniden yapılanması daha kolay olacaktır. Çünkü finans sektörü ve onun önemli bir parçası olan bankalar, en fazla düzenleme ve denetlemeye tabi olmak zorundadır. Fakat bu düzenlemelerin ve denetlemelerin hükümetler üstü olması; hem bu kurumların hem de ekonomilerinin piyasa ekonomisine geçişlerinin başarısını artıracaktır.

Düzenleyici, denetleyici kurumların gelişmiş ekonomilerde oluşturulmuş fakat işletilmemiş; bağımsızlığının verilmemiş olmasının kötü sonuçlarını, etkileri devam eden 2008 küresel finans krizi de göstermektedir.

Gereğinden fazla liberal uygulamanın yol açtığı bu krizden alınması gereken temel dersler veya yeniden yapılanmada bağımsız düzenleyici, denetleyici kurumlar neden öncelikle finans sektöründe oluşturulmalıdır. Çünkü: Ekonomideki finansal tarafların aşırı kazanma hırsları kendi haline bırakılamaz; finansal sistemlerin, kurumların ve araçların çok hızlı büyümesini sağlayan serbestleştirme sürecine düzenleyici, denetleyici kurumlar olmadan girilemez. Çünkü finansal sistemdeki gerekli düzenlemenin ve denetlemenin kurulmamasıyla oluşturulan yapılanmalar büyük riskler taşır.

Bu riskleri ve hükümetlerin popülist müdahalelerini azaltmak için, bağımsız düzenleyici, denetleyici yapıların oluşturulmuş ve işletilmiş olmasının ne kadar önemli olduğu, 2008 küresel finans krizini genel olarak başarıyla yönetebilen Türkiye tecrübesinde görülmüştür. 2001 yılında en ağır bankacılık krizini yaşayan Türkiye, kurup işletebildiği bağımsız düzenleyici, denetleyici kurumlar sayesinde, bankacılık sektörünün hızla yeniden yapılanmasını tamamlamış ve olumlu dışsallıklarını da ekonomiye aktarabilmiştir.

Türk Bankacılık Sektöründe yeniden yapılanma ile oluşturulan bağımsız düzenleyici, denetleyici kurumlar sayesinde sektör niteliksel ve niceliksel olarak büyümüştür. Bu gelişimin sonuçları sektör rakamlarına olumlu yansımıştır ve küresel finans krizi şimdiye kadar başarıyla yönetilebilmiştir. Türkiye'nin bu tecrübesi, geçiş ekonomilerinin bankacılık sisteminde dolayısıyla ekonomilerinde, uzun süreli istikrarı sağlayabilmek için oluşturulması gereken bağımsız düzenleyici, denetleyici yapıların meydana getirilmesinin ve işletilmesinin ne kadar önemli olduğunu göstermektedir.

Piyasa ekonomisine geçiş uygulamalarıyla birlikte küreselleşme sürecine uyum da gerçekleştirilmelidir. Çünkü küresel piyasalara mal ve hizmet satabilmek, ulusal rekabet gücünü yaratılabilmek gerekir. Bunun için de, üretimden tüketime, üretim süreçlerini düzenleyen ve denetleyen kalite sistemlerinin kurulmasını, mülkiyet haklarının tanınmasını ve korunmasını da üst kurullar; bağımsız düzenleyici otoriteler sağlayacaktır.

Günümüz devlet yönetiminde, siyasal sistemden bağımsız; saydam ve hesap verebilen; oyunun kurallarını koyan ve denetleyen bağımsız düzenleyici ve denetleyici kurumlar: Ülkelerin yeniden yapılanmasında; kurumsallaşma ilkelerinin uygulanmasında; piyasa aksaklıklarının ortadan kaldırılmasında; kayıt dışı, yasa dışı ekonomik faaliyetlerin ortadan kaldırılmasında; ekonomik sistemin rasyonelleştirilebilmesinde; piyasaların popülist hükümet müdahalelerinden kurtarılabilmesinde önemli görevleri yerine getirmektedir ve getirecektir.

Türkiye'deki 2001 Krizi Sonrası Bankacılık Sektöründeki Yapısal Değişim: 2001 Öncesi ve 2001 Sonrası Bir Karşılaştırma

Structural Changes in the Banking Sector in Turkey after 2001 Crisis: A Comparasion between before 2001 and after 2001

Asst. Prof. Dr. Emine Fırat (Aksaray University, Turkey)

Abstract

Globalization movements around the word caused countries to be faced with crisises successive. The financial sector has seen major losses from economic crises. Developments in the aftermath of the economic crisis has led to some changes especially in the banking sector, furthermore leading to the growth of the financial sector. In recent years, after the international economic, financial, technological and social developments, activities of banks have increased. Banks, in line with improving economic conditions and changing customer demands have been restructured in order to provide the best service to customers. First, banks increased product, service, quality, variety, technological advances, demand for advertising expenditures, customer satisfaction and efforts on risk management. After 1980, the Turkish banking sector entered a rapid change period in technology, by taking advantage of the facilities to be brought. However, when crises in November 2000 and February 2001 have been added to the previous problems in the banking system, sector has become more fragile. After the 2001 crisis the banking sector has entered the configuration process. The aim of this study is to investigate in detail the process of rapid change after the 2001 crisis, by comparing with the pre-crisis and after the crisis of Turkish banking sector in 2001. In this study, banks in the market will be examined within the framework of a lot of different topics. The changing face of the banking sector after the 2001 crisis in Turkey will form the basis of the study.

1 Giriş

Küreselleşmenin hız kazanmasıyla gelişen finansal yapı değişimleri deberaberinde getirmiştir. 1980 ve 1990 arasındaki on yıl içerisinde bankacılık sektörü, demografik değişiklikler, bankaların konsolidasyonu, düzenleyici reformlar, gelişen teknolojilerin bankacılık sektöründe kullanılması ve değişen müşteri istekleri gibi nedenlerden dolayı hızlı bir değişim ve gelişim süreci içine girmiştir. Küreselleşen dünya düzeni bankaların yapıları hatta ülkeler sürekli değiştirmiştir.Küreselleşmeden etkilenme düzeyleri yükselen bankalar kendilerini gittikçe şiddetlenen bir rekabet ortamı içerisinde bulmuştur.Bankalar meydana gelen değişimlere ayak uydurarak faaliyetlerini sürdürülebilmek ve rekabetçi avantajlarını artırabilmek için çeşitli yeniliklere gerek duymuşlardır.Türkiye'de 1980 sonrası yaşanan üç büyük krizin ardından bankalar büyük zarar görmüş, bankacılık ve finans sektörü güvenilirlik açısından sarsılmıştır. Dünya ekonomilerinde 1990'lı yıllara kadar ödemeler bilançosu krizleri yaşanırken, 1990'lardan sonra bankacılık sektöründeki krizler ve döviz krizleri belirleyici olmuştur.

1990'lı yıllarda bankacılık sisteminde yaşanan krizler genellikle gelişmekte olan ülkelerde görülmüştür.Çünkü geçiş ekonomilerinde bankacılık sistemi henüz gelişmemiş, mevduat devlet güvencesinin kötü kullanıma açıktır.Yaşanan krizlerde banka sahiplerinin topladıkları fonları kendi şirketlerine aktardığı ve banka müşterilerine olan yükümlülüklerini yerine getiremediği görülmüştür. Ayrıca bankacılık sisteminde kamuya ait bankaların görev zararlarının devlete olan maliyetinde gözlenen sürekli artışlar dikkat çekmiştir.Bu durum merkez bankalarının da sağlıklı çalışmasını engellemiştir (Yentürk, Çimenoğlu, 2003). Bu süreci yaşamış ülkelerden biri de Türkiye ekonomisidir.Yaşanan krizler bankaların zayıf yapısını ve kötü kurumsal yönetim uygulamalarının sonuçlarını gözönüne sermiştir.Türkiye'de yaşanan 2001 Krizi finans ve bankacılık sektörünün önemini daha iyi ortaya çıkarmıştır.

Dünya ekonomik konjonktüründe yaşanan hızlı dalgalanmalar, sermaye hareketlerini arttırarak bankacılık sektöründe krizlere yol açmıştır.Özellikle son yıllarda yaşanan küresel krizin ardından bankacılık sektöründe zor günler yaşanmıştır.Bankacılık krizleri bankaların iflas etmesine ve skandalların yaşanmasına neden olmuş, ülke ekonomileri zarar görmüştür.Krizlerin ardından bankacılık sektörünün sarsılan güvenilirlikleri ve zarar gören imajlarını sağlamlaştırma çabaları artmıştır.

Bankacılık sektörü ekonomik ve sosyal bütün değişimlerden çok çabuk etkilenmektedir.Türkiye'de yaşanan krizlerin ardından uygulanmaya çalışılan yeniden yapılandırma programlarında bankacılık sektörü ve özel sektör ayrı bir öneme sahiptir.Bankalar uygulanan yeniden yapılandırma programlarına ayak uydurmak için teknolojik yeniliklere dayalı, bilgi ve rekabet avantajı sağlayacak bir yapıyı benimsemek zorunda kalmışlardır.Bu nedenle bankalar 2001 Krizi sonrasında hızlı bir değişim sürecine girerek, salt kar ve büyümeye dayanan bir bankacılık anlayışı yerine; insana verilen önemin arttığı, büyüme ve kar elde etmenin kurumsal bir anlayış zeminine oturtulduğu bir yapı geliştirmişlerdir. Çünkü bankalar 2001 Krizi'nden sonra rakipleriyle sadece işlem yönünden

değil; ürün ve hizmet kalitesi, fiyat, pazarlama, reklam, liderlik, kendini geliştirme, yeniliklere uyum sağlayabilme sosyal sorumluluk gibi farklı faktörler konusunda da rekabet etmek zorunda kalmışladır. Bu amaçla bankacılık ve finans sektöründeki işletmelerin, sarsılan güveni geri kazanabilmek ve rekabetçi avantaj sağlayabilmek konularında kurumsal yapılarını değiştirdikleri ve bu konuda Türk Bankacılık sektörünün başarılı oldukları sonucuna varılmıştır.

2   1980 Sonrasında Türk Bankacılık Sektörünün Gelişimi

Türkiye ekonomisi 24 Ocak 1980 tarihinde alınan kararlar ile küreselleşme, finansal liberalizasyon, özelleştirme, devletin küçülmesi, döviz kuru, faiz oranları ve sermaye hareketlerinin serbestleşme sürecine başlamıştır (Karaçor, 2006).

1980'li yıllardan sonra finansal entegrasyon ile birlikte uluslararası sermaye hareketlerinin serbestleşmesi ve bankaların özelleştirilmesi hızlanmış, faiz oranlarındaki üst limitin kaldırılması ve zorunlu rezerv oranlarının azaltılması gibi uygulamalara geçilmiştir (Sürek, 1999).Piyasa ekonomisiyle başlayan süreçte bankacılık sektörü de hızlı bir değişim sürecine girmiştir.Ancak 1980 sonrası ülkedeki makroekonomik dengelerin bozulması bankalardaki yaşanan olumlu gelişmelerin duraklamasına neden olmuştur. Bankacılık krizleri Türkiye'nin de yaşamış olduğu ve gelişmekte olan ülkelerin çoğunun deneyim sahibi olduğu krizler olmuştur. Finansal entegrasyon sürecine geçiş aşamasının sancılı olduğu ülkemiz bankacılık krizlerine hazırlıksız yakalanmıştır.

1990'larda yaşanılan krizler "finansal" kelimesinin önemi üzerine yoğunlaşmasına neden olmuştur. Finansal krizlerde aniden ortaya çıkan likidite darlığı, faiz stokları ve ağır devalüasyonlar, mali kurumların ve şirket sektörünün bilançolarını bozarak, büyük zararlara ve güven kaybına neden olmuş, üretimde ve istikrarda büyük kayıplara yol açmıştır. Bu süreçte finansal kesim-reel kesim tartışması ön plana çıkmıştır. 1990'lar da gözlemlenen başlıca finansal krizler, sermaye hareketlerinin serbest olduğu ortamda gerçekleşmiştir (Celasun, 2001). Türkiye'de 1990'lı yıllarda yüksek enflasyon ve artan faizler, döviz kurundaki değişmelerin yanı sıra bankacılık sektörü de kırılgan bir hale gelmeye başlamıştır. Bankaların hızla çoğalması, bankalardaki denetimin zayıflığı, bankacılık kesiminin risklerinin artması gibi finansal belirsizlikler bankacılık sektörünü olumsuz yönde etkilemiştir (Seyidoğlu, 2003).1990 yılında TCMB yeni bir para politikası uygulamasına geçerek, bankacılık sistemini güçlendirmeye çalışmıştır.Türkiye'deki bankacılık sektörünün 1990-1993 arasında hızlı büyümesine rağmen, piyasalardaki tedirginlik ve makroekonomik göstergelerdeki belirsizlik krizlere davetiye çıkarmıştır. 1994 yılında ülkedeki mali kriz, piyasalarda tedirginlik yaratmış, ülkede güven ortamını ortadan kaldırmıştır.

1994 yılında bankalar yurtdışına yönelmiş, Hazine açık piyasa işlemlerine başvurarak borçlanmış, piyasadaki belirsizlik dövize yönelmeyi arttırmış, kurlar yükselmiştir (Seyidoğlu, 2003).Bankaların açık pozisyonları artarak özkaynakları azalmış, piyasadaki belirsizlik güvensizlik ortamına dönüşmüştür (Karaçam, 2006: 137). Bu kriz ortamında dedikoduların artmasıyla Marmarabank, TYT Bank ve Impexbank ile üç aracı kurum; Türk Invest, Çarmen ve Pasifik iflas etmiştir (Günal, 2001). 5 Nisan Kararları sonrasında devalüasyon ve dalgalı kur uygulamasına geçilmiş, kısa sürede para ve döviz piyasaları hızla istikrar kazanmış, döviz kuru kontrol altına alınmış, TL'ye güven sağlanmıştır.Devalüasyon sonrası cari işlemler açığı fazlaya dönmüş, bütçe açıkları azaltılmış, enflasyon hızı yavaşlatılmış belli bir süre bankacılık sektörü rahatlamıştır.

Türkiye 1997-1998 Asya ve Rusya Krizlerinden olumsuz etkilenmiş, Asya Krizinin nedenleri arasında sayılan bankacılık sisteminin zayıf olması durumu, krizin boyutlarını arttırmış, genel olarak yüksek faizler ve bankacılık sektöründeki artan sorunlu krediler bankaların karlılığını düşürmüştür (Stubbs, 2005). Latin Amerika özellikle Arjantin'de 1998'den itibaren yaşanan krizlere ekonomik olarak işsizlik, küçülme ve sermaye çıkışları damgasını vurmuş toplumsal olaylar ve yoksulluk krizleri derinleştirmiştir (Pion-Berlin ve Trinkulas, 2005). 2000 yılı başında uygulamaya konulan Enflasyonla Mücadele Programı sonrasında bankacılık sektörünün yapılanmasıyla ilgili olumlu gelişmeler yaşanmıştır. Ancak artan cari açık, kamu bankalarının görev zararları ve yönetim zafiyetleri, bankaların açık pozisyonlarının çok yüksek olması, kısa vadeli paranın ülkeye hızlı giriş-çıkışı, iç ve dış borçlanmanın artması, finansal temel sorunların başında gelmiştir.

Kasım 2000 krizi öncesinde enflasyon dizginlenememiş, faizler düşürülememiş, açık pozisyonları olan bankaların sıkıntıları artmış, bono satışına yönelen bankalar, Kasım 2000 Krizi'nin baş aktörleri olmuştur. Bu güvensiz ortamda bankalar paniğe kapılmış, faizler şaşırtıcı bir şekilde yükselmiş, yabancı yatırımcılar bu kriz ortamından kaçmış, borsada bu hareketlerden olumsuz etkilenmiştir (Gülcan vd., 2001). Bankaların denetimsiz yapısı, banka yönetimlerinin yanlış kararlar alması, TMSF bünyesindeki bazı bankaların holdingleşme sonucu mevduatlarını şirketlerine usulsüzce aktarması, bankaların kamu kesimini finanse etmesi gibi nedenler bankaların borçlanmasını arttırmıştır (Ateş, 2004). 2000 yılında IMF ile imzalanan stand-by anlaşması sonrasında uygulanan kur çıpası uygulaması sırasında programa aşırı güven kur riskini arttırmış, döviz kuru ve faiz oranlarındaki hızlı artışlar, kamu borç stokunun hızlanmasına neden olmuştur (Akyüz, Boratav, 2002). Kasım krizinin nedenleri arasında cari açığın büyümesi, döviz kurunun hedefinden sapması, yabancı sermaye giriş çıkışın düzensiz olması makro ekonomik göstergelerin yanında bankacılık sektörünün zayıflaması, kamu bankalarının satılamaması, rekabetin ölçüsüz bir şekilde artması örneğin Demirbank'ın zor durumda bırakılması gibi nedenlerde sayılmıştır (Boratav, 2001).

Kriz sonrası Bankacılık kesiminin içinde bulunduğu durgunluk, ekonomik küçülmeye yol açmış, bankaların zayıf yapısı istikrarsız bir ortama doğru sürüklenmiştir. 2000 yılında Tasarruf Mevduatı Sigorta Fonu'na toplam 11 banka aktarılmıştır. Kasım 2000 kriziyle TMSF'ye devredilen bankaların sayısı 18 olmuş, bu bankaların 12'si birleştirilmiş, 5'i satılmış, 1'i tasfiye edilmiştir (Kazgan, 2005).Kasım Krizi sonrasında para politikasında değişiklikler yapılmış, Aralık ayında IMF'den Türkiye'ye yönelik olumlu destek gelmiştir. Ancak kısa süreli de olsa bu iyileşme Şubat 2001'de son bulmuş, Kasım 2000'de yaşanan finansal kriz sonrası uygulanan ekonomik programa güvensizlik arttığından, faiz riski kur riskine dönüşerek, dövize yönelim başlamış, Şubat 2001 krizi karşımıza çıkmıştır. Şubat ayında Hazine'nin ihalesi öncesi siyasi gerginlikler de uygulanan programa olan güveni tamamen ortadan kaldırmış piyasalar altüst olmuştur.

Şubat 2001 krizi sonucunda dövizde sabit kurdan vazgeçilmesi ve bankacılık sektöründe yüksek faizler, maliyet artışlarına sebep olmuştur.Bankaların ellerinde bulunan kâğıtların piyasa değerlerindeki düşüş, geri dönmeyen krediler, kambiyo zararlarının artması, TMSF'deki ve kamu bankalarının görev zararlarının Hazine'ye yüklenmesi, kamu borçlanmasının artması bankacılık krizini devam ettirmiştir (Erdoğan, 2002).Finansal krizler yaşanırken yüksek enflasyon ve faiz oranları spekülatif sermaye hareketlerini hızlandırmış, bütçe açıklarını arttırmıştır. Firmaların yüksek faizler sonucu kredi alma imkânının kısıtlanması, işten çıkarmalara hatta şirket iflaslarına kadar giderek üretim daralmasına sebep olmuş, reel sektörü de olumsuz etkilemiştir (Göktaş, 2000). 22 Kasım 2000 tarihinde bankacılık sektöründe başlayan kriz 19 Şubat 2001tarihinde döviz krizine dönüşerek ikiz kriz (twin crisses) karakterine bürünen krizlerden sonra yapılacak uygulamaların başında enflasyon ve yüksek faizler ile mücadele yer almış, yıllarca uğraşılmıştır.

Yaşanan bu ikiz krizler sonrasında ekonomi yüzde 8.5-9 oranında daralmış, ulusal gelir 51 milyar dolar azalmış, kişi başına gelir 725 dolar gerilemiş, 19 banka kapanmış, 1.5 milyon kişi işsiz kalmış, yüzde 30'lara düşen enflasyonyüzde 70'i aşmış, hazinenin faiz ödemeleri yüzde 101 artmış, iç borç stoku 2000 yılının 4 katına ulaşmıştır (Karluk, 2005). Bankacılık sisteminde yeniden yapılandırma süreci 1999 yılı sonunda uygulanmaya konulan enflasyonla mücadele programı ile başlatılmıştır.2001 yılında kapsamlı "Bankacılık Yeniden Yapılandırma Programı" açıklanmıştır. İlk dönme yapılanlar büyük ölçüde düzenlemelerin uluslararası standartlara ve uygulamlara yaklaştırılması yönünde olmuştur.Bankalar kanunda kapsamlı değişiklikler yapılmıştır. Bankacılık alanında idari ve mali özerkliğe sahip düzenleyici ve denetleyici bir otorite olan BDDK'ya geçmiştir. Bankacılık sektöründe yeninde yapılandırma süreci ; (i) TMSF bünyesindeki bankaların en kısa sürede çözüme kavuşturulması; (ii) Kamu bankalarının finansal ve operasyonel açıdan yeniden yapılandırılması, (iii) yaşanan krizlerden olumsuz yönde etkilenen özel bankaların sağlıklı bir yapıya kavuşturulması ve (iv) bankacılık sektöründe gözetinm ve denetim etkinliğini arttıracak, sektörü daha etkin ve rekabetçi bir yapıya kavuşturacak yasal ve kurumsal düzenlemelerin gerçekleştirilmesi olmak üzere dört temel unsura dayandırılmıştır. Bankacılık sistemi önemli bir yeniden yapılandırma süreci yaşamıştır. Özel bankalar 2001 krizinden sonra önemli ölçüde kaybettikleri sermayelerini güçlendirmiştir.Bunu yapamayan bankalar birleşmiş ve TMSF ye alınmıştır.Kamı bankaları yeniden yapılandırılmış, ortak bir yönetim altına alınmıştır. Kamu bankalarında görev zararları Devlet iç borçlanma senetleri karşılığı tasfiye edilerek, bankaların mali bünyeleri güçlendirilmiştir. Bankacılık sektörünün takipteki alacaklarının bir kısmı için "Finansal Yeniden Yapılandırma Programı" (FYYP- İstanbul Yaklaşımı) uygulanmıştır. Bankalardaki risk yönetimi anlayışı, kamusal gözetim ve denetim otoritesinde risk bazlı denetim anlayışı güçlenmiştir. Kamusal gözetim ve denetim işlevi özerk bir yapıya kavuşturulmuştur. Bankaların faaliyetini düzenleyen mevzuat 2005yılında yenilenerek, uluslararası genel kabul görmüş prensiplere ve uygulamalara önemli ölçüde yaklaştırılmıştır (TBB, 2008).

2001 öncesi özellikle işadamlarına çok kolay bir şekilde bankacılık ruhsatı vermişlerdir. 2001 yılından sonra bankaların risk yönetimi uygulamalarının yönetim boyutu ve teknik yeterlilikleri konusunda önemli çalışmalar yapılmıştır. Bankacılık sektöründe geleneksel denetim yaklaşımından risk odaklı yaklaşıma geçilmesi ile birlikte düzenlemelere dayalı denetim yanında piyasa denetimi de önem kazanmıştır. Yatırımcılar ve kamuoyu tarafından bankaların faaliyetlerinin daha kolay izlenilmesi ve değerlendirilmesi amacıyla muhasebe standartları, raporlama ve kamuoyuna bilgi verilmesine yönelik uygulamalar daha çok daha etkin hale getirilmiştir. Bankacılık kanundaki risk yönetimi konusunda uluslararası gelişmeler ve yönetim sistemleri kurma yolunda önemli adımalar atmışlardır (http://www.ekodialog.com).

Kamu bankalarının yüksek görev zararları ve BDDK' nın bazı özel bankalara ek koymak zorunda kalması bu sektörde ciddi bir denetim eksikliği sorunu olduğunu göstermektedir. Genel kabul görmüş muhasebe prensiplerinin uygulanmaması ve mali tabloların bağımsız dış denetim firmalarınca denetlenmemesi sektörde yayınlanan mali tablolar arasında önemli farklar olmaktadır (Toprak ve Demir, 2001) Bu programda sağlam bankacılık sektörünün piyasada etkin bir rol oynaması için başta kamu ve TMSF bünyesindeki bankalar olmak üzere, hızlı ve kapsamlı bir yeniden yapılandırma çalışmalarına başlanmıştır. Bu programda istikrarlı ekonomik büyüme, yatırım ve istihdamı artırarak refah düzeyini yükseltme toplumsal refahı sağlama genel stratejiler olmuştur (HM, 2001). Yani 2001 Krizi sonrasında düzenleyici otorite bankaların denetimi ve işleyişinde yeknesaklık sağlamış olup, BDDK ve TMSF kısaca rehabilite edilmiştir.

Bu çalışmalar sonucunda Türk bankacılık sektöründe risk yönetimi konusunda çok büyük gelişmeler sağlanmış, açık pozisyonları kapatılmış, sermaye rasyosu hedefi artmış, banka yapısı teknolojik uygulamalar ve

enstrumanlar ile güçlendirilmiş, kredi kartına ilişkin düzenlemeler yapılmıştır.Bankaların yapısı güçlendirilmiş, sistemi bozan kamu bankalarının yapısı değiştirilmiştir. TCMB Kanunu'nda değişiklikler yapılmış, BDDK'nın yaptığı denetimler sayesinde sistemin şeffaflığı sağlanmış, bankaların uluslararası rekabet güçlerinin artması için gerekli devir ve birleşmeler yapılmıştır (Pazarbaşıoğlu, 2003). Bankaların mali tablolarının muhasebeleştirilmesi konusunda Muhasebe Uygulama Yönetmeliği'nin çıkarılmasına, repo işlemlerinin bilanço kapsamına alınmasına, enflasyon muhasebesi uygulama zorunluluğunun getirilmesine karar verilmiştir (Erdönmez, 2001). Bu süreç içerisinde Türkiye ekonomisi para ve fiyat dengesi için Merkez Bankası'nın özerk olması, dalgalı kur rejimi uygulaması içerisinde enflasyonla mücadele edilmesi, mali ve finansal sistemin yeniden yapılandırılması, denetleyici ve düzenleyici kurumların etkin hale getirilmesi, toplumsal uzlaşmanın sağlanması, etkin ve verimli bir devlet ve güçlü ama şeffaf bir kamu finansmanı, rasyonellik, bilgiyi kullanma, kurum ve kuruluşların etkinliği, güvenilir, riski ve belirsizliği yönetmeyi sağlayacak yapısal reformlar gerçekleştirmeye çalışmıştır. Ekonomide kalıcı ve sürekli istikrarı sağlamayı hedeflemiştir (Karaçor, 2006).

ABD'de mortgage piyasalarında başlayan kriz, ABD de konut kredilerinde başlayan sıkıntılar, Freddie Mac ve Fannie Mae'nin devlet gözetime geçmesi, yatırım bankası Lehman Brothers'ın kendini iflasın ortasında bulması, Merrill Lynch çok düşük bir bedelle Bank of Amerika'ya satılması ve AIG sigorta şirketinin hayatını devam ettirebilmesi için FED'den(ABD Merkez Bankası) büyük miktarda kredi kullanmak durumunda kalması küresel bir krizin işareti olarak finansal piyasalar aracılığıyla önce Avrupa ve hemen ardından tüm dünyaya yayılmıştır (Alantar, 2008). Ülkemizin yaşadığı Kasım 2000- Şubat 2001 krizlerinden sonra bankacılık sistemi çok büyük zarar görmüştür.Türkiye'nin yaşadığı krizlerin ardından uygulamaya koyduğu Güçlü Ekonomiye Geçiş Programının uygulamasında ilerlemeler kaydedilmiş ancak artan finansal piyasalar, yeni finansal araçlar, kur riskleri ve ortaya çıkan küresel kriz sonucu program riskli ve uzun bir sürece yayılmıştır.Güçlü Ekonomiye Geçiş Programı sonrasında sermaye yeterliliği açısından güçlü bir yapıya sahip olan Türk bankacılık sektörü global krizden etkilenmiştir. Ancak Türk bankacılık sektöründe o dönemlerde mortgage kredilerinin verilmemesi ve bu krizin global bir kriz olması Türk bankaları'nın 2001 Krizi'ndeki kadar riske girmesini engellemiştir.Küresel kriz süresinde kredi verme konusunda başarılı bir performans sağlayan bankalar kredi bulma konusunda zorlanmışlardır.Banka ve şirket bilançolarının küçülmesi, Türkiye'yi de diğer ülkeler gibi bir takım önlemler almaya zorlamıştır.Özellikle son yıllarda bankalar zor dönemler geçirmiş, hızlı bir değişim sürecine girmiştir.

Günümüzde bankaların yapısındaki gelişmelerin özellikle ekonomi üzerinde olumlu etkileri de söz konusudur. Örneğin 2001 Krizi'nden dersini alan Türk Bankaları 2008 krizinden sağlam bir kurumsal yapı sayesinde fazla etkilenmemiştir. Kriz karşısında bankaların kırılganlığı azaltılmış, sermaye rasyoları yükseltilmiş, sağlıklı bir yapıya kavuşturulması için birbirleriyle rekabet savaşına girmişlerdir.

3   Türk Bankacılık Sektöründeki Yapısal Gelişmeler

Bankacılık krizleri, teknolojinin hızlı gelişimi, bankacılık sektörünün küreselleşmesi ve bankaların ekonomik gelişmedeki rolü, bankaların yasal denetim ve gözetimlerini giderek daha önemli hale getirmektedir (Ungureanu, 2008: 1).Bankaların ülke ekonomisindeki rolü dikkate alındığında, kurumsal yönetim uygulamalarının önemi daha da artmaktadır. Bankalariyi yönetildiklerinde, sermayeyi verimli bir şekilde dağıtacak ve kendilerinin kredi vererek fon sağladığı firmaların üzerinde daha etkili olabileceklerdir. Bankalar kaynak aktarım sürecinde talep edebilecekleri norm ve standartlar aracılığıyla reel sektörün yönetim anlayışını değiştirebilirler Diğer taraftan banka yöneticilerikendi kişisel çıkarlarını ön plana almak yerine hissedarların ve mevduat sahiplerinin çıkarlarını gözetmelidir.Böyle bir durumda, bankalar toplumun tasarruflarını verimli bir şekilde değerlendirecek ve firmalara kurumsal yönetim konusunda örnek olacaklardır.Bankacılıkta kredi kalitesini belirlemek çok kolay değildir.Daha önce aldıkları kredileri geri ödeyemeyen müşterilere tekrar kredi vererek problemleri gizleyebilirler. Bankaların ekonomideki önemi ile banka varlık ve faaliyetlerinin şeffaflığının az olmasından dolayı, hükümetler bankaları yasa ve yönetmeliklerle kontrol altında tutmaya çalışmaktadırlar. Diğer sektörlerde devlet müdahalesinin az olduğu ülkeler bile, bankacılık sektörüyle ilgili çok sayıda yasal düzenleme getirmişlerdir. Bankaların kurumsal yönetiminin değişimi önemli bir konu haline gelmiştir. (Saygılı, 2003:47).

Bankacılık sektörü 2001 Krizi sonrasında sistem değişikliklerine gitmiş ve bu süreç sonunda bilgi ve deneyim kazanmışlardır.Krizler sonrasında Bankacılık düzenleme kuralları değişmiş ve bu da bankacılık anlayışını etkilemiştir. Basel II, yasal düzenlemeler ve denetleme kurumlarının getirmiş olduğu kurallar, bankaların sunduğu hizmetleri fiyatlamasında ve uygulamasında değişikliklere neden olmaktadır. Bankalar sosyal gelişimle beraber teknolojik anlamda da gelişmeler yaparak yeni ürün ve sistemler veya mevcut ürünlerinde sistem gelişimine gitmektedirler.

Bankacılık sisteminin sağlıklı bir yapıya kavuşturulması ve istikrarlı işleyişinin sağlanması olan Basel Bankacılık Denetim Komitesi'nin çalışmaları bankalarda kurumsal yapının dünyada ve Türkiye'de yaygınlaşmasına önemli katkılar sağlamaktadır. Basel Bankacılık Denetim Komitesi, sağlam kurumsal yönetim uygulamalarının üye ülkelerdeki bankalar tarafından benimsenmesini sağlamaları konusunda bankacılık otoritelerine yardımcı olmak için 1999 yılında yayımlanan rehber yeniden gözden geçirilerek 2005'te tekrar görüşe sunulmuş ve 2006'da yayınlanmıştır (BIS, 2006a).

2001 Krizi sonrasında bankaların kurumsal yapısı değiştirilmiştir. Örneğin, 2001 Krizi öncesi Şube Müdürü 'nün daha falza yetkisi var iken şimdi ise şube müdürünün yetkileri yok denecek kadar az seviyeye indirilmiştir. Bankalar segmentasyona gitmektedirler. Eskiden kurumsal, ticari bireysel şubeler gibi bir ayırım yokken şimdi herkes her işi yapmamaktadır. Operasyon işlemleri eskiden şubeden yapılmakta iken şimdi merkezileştirilmektedir.2001 Krizi'nden sonra banka adedi şube adedi insan kaynağı adedi açısında küçülme dönemi yaşanmaktadır. Pazarlama/satış ekipleri ve operasyon ekipleri ayrı ayrı merkezileştirilmektedir.

Bankalar sanayinin gelişiminde, kritik önem taşımaktadır.Türkiye'nin özel sektöründeki şirketlerinin büyük bir bölümünü "Küçük ve Orta Büyüklükteki İşletmeler" kısaca KOBİ'ler oluşturmaktadır. Günümüzde ülkemizdeki işletmelerin %99,8'i KOBİ durumundadır. Ekonominin lokomotifi olan KOBİ'leri ülkeyi küresel rekabete bankalar hazırlamaktadır.KOBİ'lerin dış pazarlarla tanışmaları, üretim kalitelerini yükseltmeleri, markalaşmaları, çağdaş finans kaynaklarını kullanmaları ve işlerini geliştirmek için araştırma geliştirme, inovasyon gibi alanlarda yatırım yapabilmeleri için sağlam bir bankacılık yapısının var olması gerekmektedir. Bu nedenle KOBİ'lere daha çok kaynak sağlanması ve onların hem yurt içinde hem de yurt dışında küresel rekabette daha başarılı olmaları için KOBİ'leri teşvik projelerinin arttırılması bankaların en önemli konuları arasındadır(Özdemir, 2008;15-17). 2001 Krizi öncesinde sipariş bankacılığı söz konusu iken artık KOBİ'lerin ayağına kadar gidilmekte kredi kolaylıkları sağlanmaktadır. Pazarlama ekipleri ürün odaklı yaklaşarak KOBİ'lere çeşitli ürünler ve fırsatlar sunmaktadır.

Türk bankalarının yüksek performansında 2001 Krizi sonrasında yabancı ortak ve satın almaların etkili olduğu söylenebilir.2001 Krizi'nden önce piyasada yabancı sermayeli banka yokken, 2001 Krizi sonrası yabancı sermaye yavaş yavaş sektöre girmeye ve satın almalara başlamıştır. 2004 den sonra sektör yabancı sermaye ağırlıklı olarak görülmektedir. Örneğin bankacılık sektöründe BNP Paribas, Rabobank, Fortis, UniCredito gibi finans devleri ile General Electric'in finans kolu Türk Bankalarına kayıtsız kalmamıştır.Satın almalar, bankaların piyasa değerine de etki etmiştir. Örneğin Finansbank'ın 2001 krizinde 84 milyon dolara kadar düşen değeri 5 yılda müthiş bir performansla 3.069 milyar dolara çıkmıştır. Yapı Kredi ise % 200'le değerini en az artıran banka olmuştur.

Türk bankacılık sistemi 2001 krizinin ağır yaralarını en hızlı saran, değerini de en fazla katlayan sektör olmuştur. 2001 krizinde halka açık 10 bankanın toplam piyasa değeri 4.6 milyar dolara kadar gerilemişti. Yani 2001 kriz yılında bu parayı cebine koyan bir yabancı yatırımcı mevduat ve kredi kartı pazarında Türk bankacılık sisteminin yüzde 60'lık bölümüne hükmeden bu 10 bankayı satın alabilirdi.Oysa bugün sözkonusu bankalara sahip olabilmek için 43.7 milyar dolar gerekiyor.Yani 10 bankanın piyasa değeri 5 yılda yüzde 848 oranında artmıştır. Örneğin bu süreçte halka açık banka statüsüne Denizbank'ın da dahil olduğu, Denizbank'ın piyasa değerinin toplama 1.8 milyar dolar katkı yaptığı dikkati çekmektedir. Rabobank'ın ortak olduğu Şekerbank'ın piyasa değeri sadece 20 milyon dolar iken,dünyanın en büyüklerinden BNP Paribas'ın ortak geldiği Türk Ekonomi Bankası'nın (TEB) piyasa değeri de ancak 42 milyon dolar seviyesindeydi.Bugün ise TEB'in toplam piyasa değeri 714 milyon doları geçmiştir.Yani kriz yılına göre yüzde 1601'lık artış göstermiştir.Şekerbank'ın piyasa değerindeki artış ise yüzde 1705'i bulmuştur (http://www.ekodialog.com).

Sosyal sorumluluk temelde mesuliyet bilincine dayanır.Bireylerin ye da kurumların kendi amaçlarını gerçekleştirmek için gösterdikleri çabalarda, topluma zarar verecek ya da zarar vermesi olası eylemlerden kaçınmaları anlamına gelmektedir.İşletme bilimi açısından bakıldığında sosyal sorumluluk; işletmelerin faaliyetlerini sürdürürken çevre ve toplum konularında duyarlı davranmaları olarak açıklanabilir. Bu duyarlılık sadece yasal düzenlemelere uymakla sınırlı kalmamakta; yasal düzenlemelerde boşluklar olsa bile etik ve ahlaki değerler çerçevesinde gelişen bir bilinç olarak ele alınmaktadır (Lazol vd., 2008: 63).Ülkemizde Sermaye Piyasası Kurulu'na göre, bankalar eşitlik, şeffaflık, hesap verebilirlik, sürdürülebilirlik ve sorumluluk ilkeleri doğrultusunda bankacılık faaliyetlerini devam ettirmelidir (SPK, 2005: 3). Bankaların sosyal sorumluluğa bakışı ilk önceleri hayırseverlik ve yardımseverlik düzeylerinde başlamış, sonraları etik düzeyine yükselmiş ve daha sonra da firma itibarı üzerinden rekabetçi avantaj sağladığı tespit edilince bir iş stratejisi olarak ele alınır olmuştur (Yönet, 2005: 245). 2001 Krizi öncesinde Türk Bankacılığının kurumsal sosyal sorumluluk faaliyetlerinin temeli karlılığını arttırma ve büyümeye odaklıyken 2001 Krizi sonrasında kurumsal bir strateji olarak karşımıza çıkmıştır.2001 Krizi öncesinde bankaların başarılarının değerlendirilmesinde sadece kâr payları, büyüme vb. finansal kriterler dikkate alınmaktaydı.Günümüz yaklaşımlarında işletmelerin performansı ölçülürken finansal kriterlerin yanında; değer yaratma, memnuniyet sağlama, toplumsal konulara katkı vb kriterlere de büyük önem verilmektedir.Dolayısıyla kurumsal sosyal sorumluluk düzeyleri işletmelerin başarıları üzerinde etki sahibi olan önemli bir faktör olarak karşımıza çıkmaktadır (Kaygusuz, 2005: 230).Dünyadaki finansal entegrasyon ve küreselleşme hareketlerinin ardından kriz yaşayan toplumlarda görülen makro ekonomik problemler birtakım sosyal ve ahlaki bozulmaları da beraberinde getirmiştir.Kriz yaşayan ülkelerde bazen etik ikilem denilen kargaşanın yaşandığı görülmüştür.Kriz yaşayan işletmelerde ve ülkelerde uygulanan politikalar krizi çözme hedefli olacağından bazı bankalar bazı şirketlerin kayrılması, çıkarcı uygulamalar, sahte belgeler ve etik olmayan bir ikilemlere yönelmiştir.Küreselleşen dünyamızda global krizlerin sonrasında yaşanan gelişmeler etiğin ve sosyal sorumluluk kavramlarının üzerinde durulması gereken kavramlar olduğu gerçeğini ortaya çıkarmıştır.Bu kavramlar günümüz toplumunda ekonomik gelişmelerinde etkisiyle daha detaylı araştırılmaya

başlanmış son zamanlarda bankacılık hayatında sıkça karşılaştığımız bir gelişme olmuştur.

Yaşanan skandallar ve krizlerin sebeplerini ortadan kaldırarak tekrarlanmalarının önüne geçebilmek amacıyla küresel çapta bazı çabaların gösterildiği söylenebilir.Pek çok ülke yasal düzenlemelerdeki değişikliklerle finansal raporların güvenilirliklerini artırarak özellikle denetim konusunda ilerlemeler kaydetmişlerdir (Arı, 2008: 133). 2008 yılının ardından yine yenilenen yasal düzenlemelerle finansal raporlamanın sarsılan güvenilirlik düzeyinin artırılması amaçlanmıştır. Bu bağlamda ülkemizde de UFRS, TFRS ve TMS konularında çalışmalar yapılarak önemli aşamalar kaydedilmiştir.Türk Ticaret Kanunu'nda yapılan ve 2013 yılı itibariyle yürürlüğe giren düzenlemelerde özellikle kamuyu aydınlatma üzerine vurgu yapılarak şeffaflık ve kurumsal yönetim anlayışının benimsendiği görülmektedir (Güneş, 2012: 243).Ancak krizlerde batan işletmelerin çoğunun büyük ölçekli, kurumsallaşma dereceleri yüksek ve kurumsal yönetim anlayışını benimsemiş olmaları; etik ve ahlak konusundaki eksikliklere işaret etmektedir (Gökgöz, 2012: 329).

Buradan hareketle 2001 Krizi sonrasında bankacılık sektöründe kurumsal sosyal sorumluluk kavramının ön plana geçtiği fark edilmektedir.Bankaların hızla değişen hizmet yapılarının yanı sıra son zamanlarda toplumsal değer yargıların önemsenerek, sosyal sorumluluk projelerine önem verdiği görülmektedir. Bankacılık sektörü içinde bulunduğu topluma ve dünyaya karşı sorumluluğunun farkında olarak var olan değerlerine sahip çıkmak ve yaşatmak adına önemli sosyal sorumluluk projelerine destek vermektedir. Sosyal sorumluluk ve sponsorluk çalışmalarında özel bankalar dikkat çekmektedir.Bankaların en büyük desteği eğitim, spor ve çevre ile ilgili projelere ve etkinliklere verdiği görülmektedir.Son yıllarda bankaların tümü sosyal sorumluluk alanında çeşitli projeler üretip, başarılara imza atmıştır.Bankacılık sektörü dünyadaki yeniliklere açık, değişmeler karşısında daima dinamik, yenilikçi, yaratıcı olmakla birlikte sosyal sorumluluk bilincine etik ve ahlak kurallara da sahip çıkmalıdır.

Pek çok çalışmada belirtildiği gibi 1990'lı yıllar ve 2008'de yaşanan krizlerin sebepleri içerisinde finansal raporlama temelli nedenler önde gelmektedir. Yeterince şeffaf olmayan finansal raporlar, üst düzey yöneticilerinin teşvik edildiği sistemler nedeniyle iyice yanıltıcı hale getirilerek tarafsızlık ve dürüstlük ilkelerinden sapmalara ve belirli bazı grupların kayırılmasına neden olmuştur. Muhasebenin sosyal sorumluluk kavramı ve meslek etiğine tamamen zıt olan bu tür olaylar, finansal raporların güvenilirliklerini iyice sarsarak işletmelerin itibar kaybetmesine yol açmıştır. Bu skandallar ve krizlerin ardından pek çok ülkede finansal raporlamanın güvenilirliğini artırmak, başta yatırımcılar olmak üzere tüm paydaşların haklarını korumak ve iç ve dış denetim konusundaki eksiklikleri giderebilmek için yeni yasal düzenlemelere gidilmiştir. Ancak finansal raporlamanın güvenilirliğinin sağlanması konusunda belirli bir bilinç düzeyine ulaşan bazı işletmelerin, yasal düzenlemeler zorlamasa da kurumsal sosyal sorumluluk anlayışına geçmeye başladıkları da görülmüştür (Arı, 2008: 51-170, Gökgöz, 2012: 315).Bankacılık açısından bakıldığında, kurumsal sosyal sorumluluk ve finansal raporlama arasındaki bağıntının önemi daha da belirginleşmektedir.Çünkü bankaların faaliyet alanı finansal raporlamanın ölçü birimi olan paradır. Kurumsal sosyal sorumluluk gereğince bankaların güvenilir finansal raporlar üreterek bunları iç ve dış kullanıcılarla paylaşmaları; hesap verilebilirlik, şeffaflık, tarafsızlık ve dürüstlük açılarından bir gerekliliktir. Ayrıca bankalar tarafından sürdürülen sosyal sorumluluk projeleri toplumun kendilerine duyduğu sempatiyi etkilemektedir.Bu da işletme itibarı ve marka değeri açılarından rekabetçi avantajlar sağlayarak tercih edilmeleri konusunda önemli katkılar ortaya koymaktadır (Çalışkan ve İçke, 2009: 142).

4 Alternatif Dağıtım Kanalları

2001 Krizi'nden önce hizmet kalitesinin kavramına önem verilse de banka ürünlerindeki satışın arttırılması öne çıkmış, müşteriye sunulan hizmetin, hem müşteri istekleri doğrultusunda olması hem de kaliteli sunulması bankaların işini zorlaştırmıştır.Teknolojinin hızla gelişmesi bankaları teknoloji üzerine yatırım yapmaya zorlamıştır.Geçmişte yeni müşteri kazanmanın ve müşteriyi elde tutmanın daha kolay olduğu, ancak günümüzde, daha değişken, endüstrileşmiş ve karmaşık bir müşteri topluluğundan dolayı, bunun giderek zorlaştığı, bu yüzden satışlardan ziyade, özellikle satış sonrası hizmet ve müşterilerle olan ilişkinin önem kazandığı görülmektedir. (Kuveyt Türk, 2012). Son yıllarda Türk bankalarının ileri teknoloji kullanımları artmış, Türk bankacıları ülkeler tarafından aranan elemanlar haline gelmişlerdir.

Bankalar, bu değişim sürecinde uyum içerisinde çalışan ve entegre olmuş alternatif dağıtım kanallarıyla birlikte derin bir müşteri deneyimi oluşturmayı tercih etmektedir.Bankalar teknolojik gelişmelerden faydalanarak bunu karlarına ve maliyetlerine yansıtan en önemli kurumlardır.Bankaların maliyeti düşürmek için tercih ettikleri yöntem genellikle yeni bir dağıtım kanalı kullanma olmaktadır.Kârı artırmak için ise çapraz satış fırsatlarından yararlanılmaktadır.Müşteri sayısını korumak ve artırmak için müşteri ihtiyaçları yeni ürünlerle karşılanmaya çalışılmaktadır.Bu anlamda Bankalar müşterilerine 7/24 hizmet veren alternatif dağıtım kanalları ürünleri sunmaktadır.

Bu kanalların çeşitliliği ise bankalara farklılık ve müşteriyle daha derin ilişkiler kazandırmaktadır.Direkt kanallar olarak telefonun, internet ve mobil şubenin, yüz yüze iletişimin ve son olarak da ATM ve maillerin bankacılık hizmetlerindeki önemi özellikle son yıllarda katlanarak artmıştır.ATM, telefon ve maillerin satış ve

hizmetteki gelişmelerin yanı sıra şubeler de, bankacılık işlemlerinin merkezi durumundadır.Bu kanallar müşteriyle yüz yüze veya çağrı merkezi ile ilişkiyi artırmıltır. 1980'lerde henüz bankacılıkta kullanılmayan internet günümüzde hem işlem sayısı hem verdiği hizmetlerle ATM'ler kadar kullanılmaktadır. Son yıllarda telefon bankacılığında Mobil Bankacılıkta yapılan işlemlerin arttığı görülmektedir.Günümüzde bankacılık kanallarının dağılımı konusunda müşteri ile yüz yüze diyaloğun önemli bir yere sahip olması için çalışmalar hızlanmıştır (Bireysel ve İşletme Bankacılığı Ürün Geliştirme Müdürlüğü ADK Birimi, Araştırma Bülteni, 2013).

	2005	2006	2007	2008
Diğer		24%	31%	21%
Şube'lerden	85%	61%	48%	40%
ATM'lerden	12%	15%	28%	39%
Tablo1: Türkiye Genelinde Borç Ödeme Kanalı

4.1 ATM (OtomatikVezne Makineleri)

Otomatik Vezne Makineleri (ATM), günde 24 saat aralıksız hizmet vererek müşterilerin bankacılık işlemlerini yerine getiren elektronik cihazlardır. ATM'ler, üzerlerindeki bilgisayar ve bu bilgisayarı çalıştıran işletim sistemi aracılığı ile bankanın ana bilgisayarı ile iletişim kurarak müşterilerin bankacılık sistemindeki hesaplarına ulaşmalarını ve bu hesapları üzerinden standart bankacılık işlemlerini kendi kendilerine yapmalarını sağlamaktadır. Ülkemizde ATM makinesinin ilk kullanımı 1987 yılının Aralık ayında gerçekleşmiştir ATM'ler ilk olarak İş Bankası tarafından kullanıma sokulduğu için bu bankanın ATM'lere verdiği özel isim olan Bankamatik ismi zamanla tüm bankaların ATM'leri için benimsenmiş ve bu makinelerde kullanılan tüm kartlara halk arasında bankamatik kartı denilmiştir.Plastik kartların hemen hepsi ATM'lerden para çekmek için kullanılabilmektedir. Aynı zamanda ATM kullanılarak kredi ve banka kartlarının şifrelerinin değiştirilmesi, virman, havale yapılması, ekstre bilgilerinin alınması, bakiye öğrenilmesi, para yatırılması, fon, hisse senedi veya döviz ile ilgili yatırım benzeri pek çok işlemin yapılabilmesi mümkündür. 2001 Krizi öncesinde ATM'lerin sayısı ve kullanımı çok az iken özellikle son yıllarda ATM'ler şubeler kadar hizmet veren kanallar olarak dikkati çekmektedir. Elektronik ödeme makineleri (ATM), satış noktası terminalleri (POS) ve başta kredi kartları olmak üzere chipli kartlar yaygınlığı konusunda Avrupa'da ve Dünya'da saygın bir konuma gelmiştir.ATM'lerin işlem sayısı ve hizmetteki yoğunluğu önemli derecede artmıştır(Banka ve Para Teknolojileri, 1999:24).Tablo 1'e göre 1985-1990 döneminde hazine gelirleri artmaya başlamaktadır.1991-2000 döneminde hazine gelirlerinin zirveye ulaştığı görülmektedir.2001'den sonra ADK'nın (ATM, Çağrı Merkezi, Internet) ağırlığı artmaktadır (Finansbank Eğitim Notları, 2008).

Dönem	Bireysel	Ticari	Hazine	ADK	Kurumsal
1985-90	45	-	40	-	15
1991-2000	30	5	50	5	10
2001 Sonrası	30	30	20	10	10

Tablo 2: Türk Bankacılık Sektöründe Gelir Merkezlerinin Dağılımı %

4.2 İnternet Bankacılığı

2000'li yıllarda Türk bankalarında ortaya çıkan konsolidasyon eğilimi 2001 Krizi'nden sonra artarak bankaların yeni yapısı üzerinde de belirleyici olmuştur.Müşterilerin talepleri dikkate alınarak, kurumsal yapı içinde; ticari bankacılık, yatırım bankacılığı, sigortacılık ve diğer tüm finansal aracılık hizmetlerinin bir arada verilmiştir.Burada görevler ayrılığı ilkesine dikkat edilerek hareket edilmiştir. Banka müşterilerinin artan iş hacminin getirdiği gereksinimler yeni ödeme sistemlerini doğurmuştur. Bu durum Internet başta olmak üzere elektronik ortam kullanılarak yapılan ödemelerin artmasını, yeni iletişim teknolojilerinden yararlanma ve bu alanda yatırım yapma zorunluluğunu ortaya çıkarmıştır.

Alternatif Dağıtım Kanalları'nın gelişimine baktığımızda elektronik kanalların gelişmesiyle birlikte aynı zamanlarda yol aldığı görülmektedir.İnternet bağlantılarının ADK için önemi büyüktür. İnternet bankacılığının yapısını, müşterinin bilgisayarında çalışan bir internet gezgini programı ile bankanın ana bilgisayarı ile

bağlantıyı sağlayan bir bankainternet sunucu bilgisayarı oluşturmaktadır.İnternet bankacılığı ile, hesap bakiyesi ve takibi, para transferleri, ödemeler, kredi kartı, döviz alım/satım, yatırım işlemleri, hisse senedi, hesap açma ve talimat verme işlemleri gibi 200'e yakın işlem yapılabilmektedir.İnternet hizmetlerinin ve İnternet üzerinden yapılan ticari faaliyetlerin yoğunlaşmasıyla, İnternet bankacılığı uygulamaları hız ve etkinlik kazanmıştır.Türkiye'de uygulama alanı bulan alternatif dağıtım kanalı ürünlerinin başında Elektronik Fon Transfer Sistemi (EFT) başta gelmektedir.1980'lerde henüz bankacılıkta kullanılmayan internet günümüzde hem işlem sayısı hem verdiği hizmetlerle ATM'ler kadar kullanılmaktadır. Şubelerdeki işlem sayısı ise düşerken satış ve hizmet noktasında hala yoğun olmaktadır.Telefon Bankacılığında yapılan işlemler satışlar ve verilen hizmet artışından çok daha fazladır.Maillerle yapılan satışların ve verilen hizmetlerin yoğunluğu azalmış, işlem sayısı ise aynı kalmıştır. Örneğin müşteriler bankacılık hizmetlerini %70 oranında şubelerden alıyorken 2010 itibariyle bu oran %30' a kadar düşmüş durumdadır. Şubelerin hizmet sayısı azalırken diğer kanalların yükselişi devam etmektedir. Web ve ATM, şubeler kadar hizmet veren kanallar olarak dikkat çekmektedir (Tekfenbank Eğitim Notları, 2008).

Türkiye Geneli Müşteri Adedi	Kayıtlı (En az bir defa)	Aktif (Son 3 ay)
Bireysel	18,1 milyon	7,8 milyon
Kurumsal	1,8 milyon	803 bin
Türkiye Geneli İnternet Şubesi İşlemleri	Adedi	Tutar
Finansal Olan (Yatırım İşlemleri Hariçtir**)**	330 milyon	1.1 katrilyon TL.
Finansal Olmayan	537 milyon	-

Tablo 3: 2011 Yılı Türkiye Geneli Müşteri Adedi ve Türkiye Geneli İnternet Şubesi İşlemleri

SMS onay uygulaması İnternet Şube'sine girişlerde ya da İnternet Şubesi'ndeki işlemlerinde kişiye özel şifrenin banka tarafında kayıtlı olan cep telefonuna giriş esnasında üretilip iletilmesi işlemidir. Bu uygulama için müşterinin İnternet Şubesi hesabı ve sistemde kayıtlı cep telefonu bilgisi olmak zorundadır.Önemli Alternatif Dağıtım Kanalları'ndan biri olan SMS kanalı finans sektörü başta olmak üzere bir çok kurumun başlıca iletişim kanallarından biridir.Bankalar SMS kanalını reklam içerikli, risk takip ve SMS amaçlı kullanmaktadır.Grafik 1'de görüldüğü gibi Türkiye'deki operatörlerin SMS gönderim adetlerine baktığımızda Mart-Haziran 2010 arasında 36, 3 milyar SMS yollandığı görülmektedir (Kuveytürk ADK Birimi Araştırma Bülteni 2012).

Parolamatik, İnternet Şubesi'ne girişte ve telefon bankacılığında kullanabilen bir parola üretme cihazıdır. Tek kullanımlık şifre üreten Parolamatik her kullanımda özel bir şifre üretmektedir.Parolamatik herkesin kullanabileceği kullanım kolaylığıyla birlikte özellikle güvenliğe önem veren kurumsal müşterilerde önemli bir tercih nedenidir. Cihazın hafif ve taşınabilir olması ergonomik sunumu yine ürünün başarılı taraflarındandır.Mobil imza, 5070 sayılı Elektronik İmza Kanunu'na göre elektronik ortamlarda ıslak imzaya eş değer kimlik doğrulayan bir servistir. Elektronik posta (e-posta), pazarlamada, markanın tanıtımında ve müşteri ile iletişim kurmada kullanılan pazarlama araçlarından biridir. E-posta kullanımının yaygınlaşması, birçok kişiye bilgisayar aracılığıyla haberleşme alışkanlığı kazandırmasının yanısıra, bilgi aktarımı hız kazandırmıştır. E-posta haberleşme sistemiyle hareketli, sesli ve görüntülü iletilerin gönderilebilmesi, mümkün olup, müşterilerin cevap verme oranı süresi kısadır. Elektronik postada % 15-% 30 arasında değişen cevap verme oranı geleneksel posta yönteminde % 3-% 4 arasında değişmektedir. Yine yapılan araştırmalarda, pazarlama amaçlı gönderilen elektronik postaların %99'unun müşteriler tarafından açıldığı, müşterilerin yaklaşık % 65'inin elektronik posta içerisinde yer alan linklere ulaştığı ve %8'ininde elektronik postayı aktif olarak yanıt verdiği belirlenmiştir. (infomag.com.tr). Mobil Şube Akıllı Cep Telefonlardan 7/24 bankacılık işlemi yapılan bir mobil uygulamadır. Kiosk müşteri ilişkilerinin interaktif bir şekilde yürütülmesini sağlayan bir bilgi merkezi şeklindeki bilgisayarlara verilen genel sistemdir. Yapılan bir başka araştırma ADK içinde en az kullanılan kanalın Kiosk olduğunu da göstermektedir.

Deloitte, "Deloitte Center forBanking Solutions" raporunda bankaların şubesiz bankacılık kanallarını geliştirirken karşılaşabilecekleri sorunları açıklamıştır.Bunlar müşterilerin alternatif dağıtım kanallarına yönelmesinin şube kaynaklı kar büyümesini zorlaştırması,bankacılık işlemlerin birçoğunun uzaktan yapılabilmesinin bankasüreçleri ve müşteri servislerini her geçen gün şubeden bağımsız hale getirmesi, günümüz teknolojilerini kullanan müşterilerin iyi bir iletişim ve çok kanallı bankacılık hizmeti almak istemeleri,kitle etnik gruplarının özel hizmet tercihleri olarak sıralanmaktadır.

5   Sonuç ve Değerlendirme

Türkiye'de yaşanan finansal krizler bankacılık ve finans sisteminin güçlü, güvenilir ve etkin nitelikte olması gerektiğini göstermiştir. Türkiye'de yaşanan Kasım 2000 ve Şubat 2001 krizlerinden sonra, uygulamaya konan Güçlü Ekonomiye Geçiş Programında, bankacılık sektörüne ayrıca önem verilmiş, bankacılık sektörünün zedelenmiş imajını düzeltmek ve uluslararası rekabette söz sahibi yapmak üzere yeni kararlar alınmıştır.

Çoğunluğu yapısal veya denetim eksikliklerden kaynaklanan Türkiye'deki banka iflasları ve tasfiyeleri sonucunda sektörün imajı zedelenmiş, hortumlanan bankalardan ülke ekonomisi büyük zarar görmüştür. 2000'li yıllarda patlak veren bu finansal krizler bankaların özellikle yapısalanlamda uluslararası standartlara uygun hareket etme, denetim ve bankacılık anlayışının değişmesine vesile olmuştur.Bu süreç içerisinde bankacılık sektörü hızla gelişmiş, sermaye yapıları ve karlılıkları artmış ve bankacılık anlayışları değişmiştir.Dolayısıyla bankacılık anlayışının değişmesi, sosyal sorumluluk kavramına uygun hareket edilmesi daha gerçekçi ve güvenilir finansal raporların oluşturulmasına neden olmuştur.Bankacılık sektörü ve reel sektör yeniden yapılandırma süreci içerisinde birlikte hareket etmiş, marka değeri ve itibarı üzerinde rekabetçi avantaj elde etmiş,makroekonomik dengelerin düzeltilmesinde büyük rol oynamışlardır.

Ülkemizde yaşanan finansal krizler, bir yandan bankacılık sektörünü zayıflatırken diğer taraftan da son yıllarda bankaların yeni fırsatlarla karşılaşmasına imkân tanımıştır.Bankalar mevcut hizmet kalitesini sürdürürken alternatif dağıtım kanallarını da arttırmışlardır.Bir yandan finansal sorumluluklarını bilerek karlılıklarını arttırmışlar diğer yandan da sosyal sorumluluk projeleriyle yeni bir bankacılık anlayışı getirmişlerdir.Bankalar artan rekabet şartları arasında müşterinin tercihi olma yarışına girmişlerdir.Buradan hareketle, bankaların müşteriye yönelik çalışmalarının arttırılarak, müşteri memnuniyetinin sağlanması rekabet açısından faydalı olacaktır.Ayrıca bankacılık işlemlerinin maliyetinin azaltılması için alternatif dağıtım kanallarının zenginleştirilmesi karlılık açısından faydalı olacaktır. Bankacılıkta kalite, Uluslararası Standartları'na sahip çağdaş bir bankacılık sistemi ile sağlanabilir. Bu yüzden alternatif dağıtım kanallarının zenginleştirilmesi, İnternet, web,mobil ve ATM kanallarının etkinliğinin arttırılması, maliyetlerin düşürülmesi, şube işlemlerinin müşterinin ayağına götürülmesi,müşterilere özel bankacılık hizmetlerinin arttırılarak tercih edilme konusunda bir adım öne geçilmesi, ve diğer ülkelerde kullanılan tüm bankacılık ürünlerinin ve yeni teknolojilerin transfer edilmesi gerekmektedir. Ancak günümüzde artan rekabet şartları, ürün hedefli yaklaşım, bireysel hedef geçekleştirmeleri, azalan marjlar neticesinde daralan karlar, daha çok satış baskısı bankaları zorlamaktadır. Bu bakımdan bankacılık sektörü sürekli olarak değişikliklere ve yeniliklere açık olmalı ve önümüzdeki günlerdeki yaşayacağı sorunları önceden görerek bu sürece daha hazırlıklı olmalıdır.

Parametrik Riske Maruz Değer Hesaplamasında Volatilitenin Modellenmesi: Türkiye'de Emeklilik Yatırım Fonları Üzerine Bir Uygulama

Volatility Modelling in Parametric Value at Risk Calculation: An Application on Pension Funds in Turkey

Umut Akduğan (Trakya University, Turkey)

Asst. Prof. Dr. Yasemin Koldere Akın (Trakya University, Turkey)

Abstract

Risk management has strategic importance with deepness and globalization of financial markets. Financial markets are faced with systematic or non-systematic risk factors. Risk management has a great importance for banks, as well as other financial institutions and investors.In this context, "Value at Risk (VaR)" is recommended as one of the methods to measure market risk by international organizations and Turkish Banking Regulation and Supervision Agency (BRSA). The parametric method (Variance-Covariance Method), one of the methods used in VaR calculation, used in pension funds which have reached large numbers and established by the Turkish pension companies. Moreover, this method is applied in two different ways based on the assumption of constant variance and based on the basis of conditional heteroscedasticity, and the results were compared. The accuracy of the calculations have been tested by backtesting method. For this purpose, daily returns company's growth equity fund between 03/01/2011 - 04/30/2013 is used for the four pension companies which is the maximum size of the fund and operating in Turkey.

1 Giriş

Bireysel emeklilik sistemi dünyada uzun yıllardır uygulanmakta, bireysel emeklilik sisteminin gelişimiyle beraber hızla büyüyen emeklilik yatırım fonları da finansal piyasaların temel unsurlarından bir halini almaktadır. Gelişmiş ülkelerde bireysel tasarrufların yöneldiği alanların başında bireysel emeklilik sistemi gelmektedir. OECD ülkelerinde emeklilik fonu varlıklarının GSYİH'ya oranının ağırlıklı ortalaması 2009 yılında %67,1 iken 2011 yılında %72,4 olarak gerçekleşmiştir. Emeklilik fonu varlıklarının GSYİH'ya oranı dikkate alındığında, 2011 yılında Hollanda'da bu oran %138, İzlanda'da %129, İsviçre'de %111 olarak gerçekleşmiş, yani emeklilik fonu varlıkları ülkelerin GSYİH'sını aşmıştır (EGM, 2012).

Türkiye'de ise 2003 yılında başlayan bireysel emeklilik sistemi 2012 yılı sonu itibarı ile 20.352.242.626 TL net varlık değerine ulaşmıştır. 2011 yılına göre 2012 yılında % 42 büyüyen emeklilik yatırım fonlarına bakıldığında, 2012 yılı sonu itibarı ile halka arz edilmiş fon adedi 173'e yükselmiştir (EGM, 2012). Ancak 2011 yılında Türkiye'de emeklilik fonu varlıklarının GSYİH'ya oranının % 2,2 düzeyinde gerçekleştiği düşünüldüğünde, dünyadaki diğer ülkelere bakarak Türkiye'de bireysel emeklilik sistemindeki gelişmelerin yetersiz kaldığı görülmektedir. Fakat 2012 yılı bireysel emeklilik sisteminin gelişimine önemli oranda katkı sağlayacak düzenlemelerin yapıldığı ve sistemle ilgili pek çok olumlu gelişmelerin yaşandığı bir yıl olmuştur. Yapılan bu düzenlemeler ile sisteme getirilen yenilikler sayesinde 2013 yılının ilk 4 ayında, önceki yılın aynı dönemine göre sisteme katılanların sayısı 3,5 kata yakın düzeyde artmıştır.

Son yıllarda büyük ilerlemeler sağlayan ve gittikçe büyüyen Türkiye'deki bireysel emeklilik sistemi ve emeklilik yatırım fonları, finansal piyasaların da en önemli parçası haline gelmiştir. Bu bağlamda araştırma kapsamında Türkiye'deki emeklilik şirketlerinin kurduğu bazı emeklilik yatırım fonlarının risk analizi yapılmıştır. Ancak çalışma kapsamında asıl üzerinde durulan nokta Riske Maruz Değer (RMD) hesaplamasında kullanılan tekniklerin doğru seçilmesi ve gerçeğe yakın sonuçların elde edilmesidir.

Risk yönetimi kavramı, 1970'lerin ilk yarısında doğup gelişen bir kavramdır. Zamanla finansal piyasaların derinleşmesi ve işlem hacminin çok büyük boyutlara ulaşmasıyla harekete geçen Basel Komitesi, 1996 yılında son halini alan Basel Sözleşmesi'nin piyasa riskini de içerecek şekilde düzenlenmesini sağlamışlardır. Riske Maruz Değer (RMD) kavramı ise 1990'ların başında karşılaşılan finansal skandallar sonrasında ortaya çıkmış, ilk olarak JP Morgan RiskMetrics ve gerekli veri setini Kasım 1994'te yayınlamaya başlamıştır.

RMD, belli bir zaman aralığında ve bir olasılık dahilinde finansal varlıklardan oluşan bir portföyün değerinde gerçekleşebilecek maksimum değişimi ifade eder. Yani belli bir elde tutma süresi içinde ve belli bir olasılıkla portföy en fazla ne kadar kaybeder sorusunun yanıtını verir. RMD hesaplamasında kullanılan 3 temel yöntem vardır. Bunlar, Parametrik Yöntem (Varyans-Kovaryans Yöntemi), Tarihsel Simülasyon Yöntemi ve Monte Carlo Simülasyonu Yöntemi'dir. Ayrıca RMD hesaplamasında dikkate alınan etkenlerden biri de standart sapma, yani volatilitedir. Dolayısıyla bir zaman serisinin volatilitesinin doğru hesaplanması ve modellenmesi oldukça

önemlidir. Normal dağılıma uymayan zaman serileri ile RMD hesaplarken normal dağılım varsayımı altında hesaplama yapılırsa gerçeği yansıtmayan sonuçlar elde edilecektir.

Buradan yola çıkarak bu çalışmada seçilen emeklilik yatırım fonlarına ait getiri serileri kullanılarak ve iki farklı yöntemle standart sapma bulunarak RMD hesaplaması yapılmış ve elde edilen sonuçlar karşılaştırılmıştır. Çalışmada verilerin analizi sürecinde MS-Excel 2007 ve E-views 5.0 paket programlarından yararlanılmıştır.

2 Riske Maruz Değer (RMD)

RMD, piyasa riskinin belirlenmesinde son yıllarda sıklıkla kullanılan ve istatistiki temeli olan bir yöntemdir. Teorik olarak bir portföyün belirli bir olasılıkla belirli bir zaman aralığında gerçekleşebilecek maksimum zarar miktarını ölçer (Bams, Lehert ve Wolff, 2001). İstatistiki olarak ise, bir örneklem üzerinde hesaplanan portföy zarar dağılımı olarak ifade edilmektedir (Henriks, 1996).

RMD, temel olarak finansal piyasa fiyatlarının değişimi sonucu oluşan piyasa riskini ölçmek için kullanılan bir yöntemdir (Kaplanski ve Kroll, 2001). Bu bağlamda, risk raporlaması, risk limitlerinin belirlenmesi, sermaye uygulamaları, sermayenin iç dağılımının belirlenmesi, performans ölçümü gibi her türlü risk yönetimi ihtiyacı için kullanılmaktadır (Çelik ve Kaya, 2010).
Grafik 1: *Riske Maruz Değer (**Kaynak**: Albanese ve Campolieti, 2006)*

RMD modellerinde temel parametrelerin önceden belirlenmesi gerekir. Bu parametreler, elde tutma süresi, örnekleme periyodu, güven aralığının belirlenmesi ve risk faktörleri arasındaki korelasyonun belirlenmesidir. RMD'in hesaplanmasında kullanılan yöntemleri iki başlık altında değerlendirmek mümkündür. Bunlardan birincisi, "Parametrik Yöntemler" olarak bilinir. Varyans-Kovaryans ya da Parametrik RMD olarak adlandırılan yöntemde, taşınan alım-satım portföyünün değerini etkileyen parametreler belirlenmekte ve bunlarda belirli bir olasılık dahilinde meydana gelebilecek dalgalanmalardan yola çıkılarak portföydeki değer kaybı hesaplanmaktadır. İkinci grup ise, simülasyon teknikleridir. Geleceğe ilişkin piyasa fiyatlarının belirlenmesi ve buna bağlı olarak portföyün piyasa değeri dağılımının hesaplanmasına dayanmaktadır. Bu gruptaki yöntemler "Tarihi Simülasyon Yöntemi" ve "Monte Carlo Simülasyonu Yöntemi" dir (Linsmeier ve Pearson, 1996).

Bu çalışmada RMD hesaplamasında Varyans-Kovaryans Metodu, yani parametrik yöntem kullanılmıştır.

2.1 Varyans Kovaryans Yöntemi

Bu yöntemde, geçmiş verilerden elde edilen fiyat ve oranların volatilite ile korelasyonları kullanılarak gelecekteki risk faktörlerinin davranışları hesaplanmaktadır. Bu tahmini volatilite ve korelasyonlar, bir pozisyonun değerindeki beklenen değişimleri hesaplamak için kullanılır (Bolgün ve Akçay, 2009).

Parametrik yaklaşım olarak da adlandırılan bu yaklaşımda, getirilerin normal dağılıma uyduğu varsayımı yapılmaktadır. Bu bağlamda RMD hesaplamasındaki parametreler normal dağılım özelliklerinden faydalanılarak tahmin edilir ve hesaplanır. Normal dağılıma sahip değişkenlerin lineer toplamı da normal dağılıma sahip olduğundan tek yatırım aracı için hesaplanan RMD, normal dağılım özelliklerinden faydalanılarak aynı şekilde hesaplanabilmektedir. Varyans-Kovaryans Yöntemi'nde temel olarak aşağıdaki formül ile RMD hesaplanır:

$$RMD = PV \times \alpha \times \sigma \times \sqrt{t}$$

Formülde; PV = Portföyün bugünkü değeri, α = Güven düzeyi, σ = Portföyün volatilitesi, t = Elde tutma süresini belirtmektedir.

Portföyün standart sapması (volatilite) aşağıdaki formülle hesaplanmaktadır.

$$\sigma_p = \sqrt{[w_1 \quad w_2 \ldots \ldots w_n] * \Sigma * \begin{bmatrix} w_1 \\ w_2 \\ \ldots \\ w_n \end{bmatrix}}$$

$$\sigma_p = \sqrt{\begin{bmatrix} w_1 & w_2 & \dots \dots & w_n \end{bmatrix} * \left\{ \begin{bmatrix} \sigma_1 & 0 & \dots & 0 \\ 0 & \sigma_2 & \dots & 0 \\ \dots & \dots & \dots & \dots \\ 0 & 0 & \dots & \sigma_n \end{bmatrix} * \begin{bmatrix} \rho_{1,1} & \rho_{1,2} & \dots & \rho_{1,n} \\ \rho_{2,1} & \rho_{2,2} & \dots & \rho_{2,n} \\ \dots & \dots & \dots & \dots \\ \rho_{n,1} & \rho_{n,2} & \dots & \rho_{n,n} \end{bmatrix} * \begin{bmatrix} \sigma_1 & 0 & \dots & 0 \\ 0 & \sigma_2 & \dots & 0 \\ \dots & \dots & \dots & \dots \\ 0 & 0 & \dots & \sigma_n \end{bmatrix} \right\} * \begin{bmatrix} w_1 \\ w_2 \\ \dots \\ w_n \end{bmatrix}}$$

σ_p = Portföyün standart sapması

Σ = Varyans – Kovaryans Matrisi

w_i = Portföyü oluşturan pozisyonların ağırlıkları

$\rho_{i,j}$ = Risk faktörlerinin korelasyon katsayıları

Tek yatırım aracı için parametrik yöntemle yapılan RMD hesaplamasında, koşullu değişen varyans esasına dayanarak elde edilen standart sapma değerlerinin kullanılması daha tutarlı sonuçlar vermektedir (Ural, 2010). Bu çalışmada Parametrik RMD'in hesaplaması, normal dağılım esasına dayanarak elde edilen standart sapma ve koşullu değişen varyans esasına dayanarak "Üstel Ağırlıklı Hareketli Ortalama Yöntemi" ile elde edilen standart sapma değerleri kullanılarak yapılmıştır.

2.2 Üstel Ağırlıklı Hareketli Ortalama (EWMA)

Üstel Ağırlıklı Hareketli Ortalama Yöntemi, varlık getirilerinin simetrik ve bağımsız olarak dağıldığı prensibi üzerine kurulmuş olup, zamana bağlı olarak değişen bir volatilite varsayımına dayanmaktadır (Akçay ve Bolgün, 2009). Bu yöntemde oynaklık tahmin edilirken, hesaplama yapılacak döneme yakın olan fiyat değişimlerine daha fazla ağırlık verilmektedir. t zamanındaki tahmini varyans, geçmiş tahminlerin λ ağırlıklı ortalamasıdır. Bu yöntemde standart sapma aşağıdaki formülle hesaplanır (Çelik ve Kaya, 2010).

$$\hat{\sigma} = \sqrt{(1 - \lambda) \sum_{i=1}^{t} \lambda^{t-1} (r_{t-1})^2}$$

Yukarıdaki eşitlikte;

r_t : Yatırım aracının t zamanındaki getirisini,

r_{t-1} : Yatırım aracının t-1 zamanındaki getirisini,

λ : Sabit bir sayıyı (RiskMetrics tarafından kabul edilen değeri 0,94'tür) ifade etmektedir.

3 Uygulama

Bu çalışmada, Türkiye'de kurulan emeklilik şirketlerinden fon büyüklüğüne göre sıralandığında ilk dördünün kurduğu büyüme amaçlı hisse senedi emeklilik yatırım fonlarının günlük birim pay değerlerine ait veriler kullanılmıştır. Anadolu Hayat Emeklilik A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu, Avivasa Emeklilik ve Hayat A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu, Garanti Emeklilik ve Hayat A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu ile Yapı Kredi Emeklilik A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu'na ait birim pay değerleri kullanılarak, iki farklı volatilite modellemesiyle parametrik RMD hesaplanmıştır.

Analizde kullanılan zaman serilerine ilişkin değişkenler aşağıdaki sembollerle gösterilmiştir.

DLNAH: Anadolu Hayat Emeklilik A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu

DLNAVI: Avivasa Emeklilik ve Hayat A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu

DLNGRN: Garanti Emeklilik ve Hayat A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu

DLNYKR: Yapı Kredi Emeklilik A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu

Öncelikle belirtilen fonların 01.03.2011 – 30.04.2013 tarihleri arasındaki kapanış fiyatları alınmış ve bu fiyatların logaritmik getirileri hesaplanmıştır $\left(\ln(p_t / p_{t-1}) \right)$. RMD'nin hesaplanmasıyla ilgili yapılan uygulamalarda ağırlıklı olarak logaritmik getiriler kullanılmaktadır. Çünkü finansal piyasalarda yatırım araçlarının getirileri genellikle lognormal dağılıma uyar (Bolgün ve Akçay, 2009).

Finansal verilerin değerleri genelde birbirine bağımlı değerlerdir ve bu birim kök sorununu, yani durağan olmama sorununu doğurur. Bir serinin durağan olması demek, o serinin ortalamasının ve varyansının sabit, kovaryansının ise zamana değil, gecikme uzunluğuna bağlı olması demektir. Daha teknik bir tanımla, ortalamasıyla varyansı zaman içinde değişmeyen ve iki dönem arasındaki ortak varyansı bu ortak varyansın hesaplandığı döneme değil de yalnızca iki dönem arasındaki uzaklığa bağlı olan olasılıklı bir süreç için durağandır denir (Gujarati, 2006). Yani durağanlık analizi, zaman serileri analizinde bir anakütleyi temsil eden gözlem kümesinden hesaplanacak değerlerin, gelecekteki değerleri tahmin edebilme etkinliğini test etmek için kullanılır. Bir zaman serisi durağan ise gelecekte de benzer eğilimde hareket edecek ve benzer özelliklere sahip

olacaktır. Tersi durumda ise serinin özellikleri sadece ilgili dönemi içereceği ve geleceğe dair sağlıklı tahminler yapılamayacağı sonucu ortaya çıkmaktadır.

Bu çalışmada serilerin durağan olup olmadıklarını test etmek için "Augmented Dickey Fuller (ADF)" birim kök testi, yani "Genelleştirilmiş Dickey Fuller" birim kök testi kullanılmıştır. ADF birim kök testinin uygulama aşamasında aşağıdaki regresyon denklemleri kullanılmaktadır.

$$\Delta Y_t = \delta Y_{t-1} + \gamma_i \sum_{i=1}^{m} \Delta Y_{t-i} + \varepsilon_t$$

$$\Delta Y_t = \alpha + \delta Y_{t-1} + \gamma_i \sum_{i=1}^{m} \Delta Y_{t-i} + \varepsilon_t$$

$$\Delta Y_t = \alpha + \beta t + \delta Y_{t-1} + \gamma_i \sum_{i=1}^{m} \Delta Y_{t-i} + \varepsilon_t$$

ADF birim kök testinde, deterministik bileşenlerin (trend ve sabit) olup olmamasına göre üç farklı regresyon modeli kullanılmaktadır. Yukarıdaki denklemlerde incelenen seride birim kökün var olduğu kabul edilen hipotez (H$_0$: $\delta = 0$), Mc Kinnon kritik değerleri ile test edilir. Hesaplanan test istatistiğinin mutlak değeri, tablo değerinden küçükse sıfır hipotezi kabul edilir. Bu durumda incelenen seri durağan değildir. Tersi durumda ise sıfır hipotezi reddedilerek incelenen serinin durağan olduğu kabul edilir.

Getirilerin logaritmik getiri yöntemiyle hesaplanması, durağan olmama sorununu ortadan kaldırmaktadır. Tablo-1'de analizde kullanılan değişkenlere ait getiri serilerine uygulanan ADF birim kök testi sonuçları yer almaktadır.

	ADF	McKinnon Kritik Değerleri	
		% 5	% 10
DLNAH	-18,8204	-1,9414	-1,6163
DLNAVI	-19,1888	-1,9414	-1,6163
DLNGRN	-19,7883	-1,9414	-1,6163
DLNYKR	-18,9985	-1,9414	-1,6163

Tablo 1: ADF Birim Kök Testi Sonuçları

Bütün serilere ait ADF test istatistiği, kritik değerlerden daha negatif olduğu için, serilerin birim kök içerdiği temel hipotez reddedilmektedir. Yani analizde kullanılan değişkenlere ait logaritmik getiri serileri hem % 5, hem de % 10 anlam düzeyinde durağandır. Bu getiri serilerinin tanımlayıcı istatistikleri Şekil-1'de verilmiştir.
Şekil 1: Değişkenlere Ait Histogram ve Betimleyici İstatistikler

Getiri serilerinin histogramlarına ve tanımlayıcı istatistiklerine bakıldığında serilerin normal dağılıma uymadığı açıkça görülmektedir. Normal dağılım hipotezi her dört seride de Jarque-Bera istatistiğine bakarak reddedilmektedir. Her dört seri için de basıklık değeri (kurtosis) kritik değer olan 3'ün üzerinde hesaplanmıştır. Bu da dağılımların ortalamadan aşırı sivrilik gösterdiğini ve şişman kuyruk özelliklerine sahip olduğunu göstermektedir. Bu sonuç ta dağılımların normal dağılıma uymadığının bir kanıtıdır.

Varyans – Kovaryans yönteminin en önemli ön koşullarından birisi zaman serilerinin normal dağılıma uyduğu, yani standart sapmanın zamandan bağımsız olduğu varsayımıdır. Ancak finansal zaman serileri incelendiğinde genellikle standart sapmasının zaman içinde değiştiği görülmektedir. Bu durumda sabit varyans varsayımı ile hesaplanacak RMD gerçek riski yansıtmayacağından volatilitenin tahmin edilmesinde farklı yöntemlerin kullanılması gerekmektedir. Riskmetrics tarafından da kullanılan Üstel Ağırlıklı Hareketli Ortalama (Exponentially Weighted Moving Average – EWMA) yöntemi, uygulamacılar tarafından yaygın olarak kullanılan bir yöntemdir.

Araştırma kapsamında seçilen emeklilik yatırım fonlarına ilişkin getiri serilerinin standart sapması hem sabit varyans, hem de koşullu değişen varyans varsayımı altında hesaplanmış ve RMD analizine dahil edilmiştir. Tablo-2'de her iki şekilde hesaplanan standart sapma değerleri verilmiştir.

	Sabit Varyans Varsayımı Altında Hesaplanan Standart Sapma	Koşullu Değişen Varyans Varsayımı Altında EWMA Yöntemiyle Hesaplanan Standart Sapma
DLNAH	0,012402	0,014966093
DLNAVI	0,011759	0,01259754
DLNGRN	0,011583	0,012384281
DLNYKR	0,011226	0,01178905

Tablo 2: Getiri Serilerinin Standart Sapma Değerleri

Çalışmada RMD hesaplamalarında varyans - kovaryans yöntemi kullanılmıştır. Yapılan hesaplamalarda seçilen dört ayrı emeklilik yatırım fonunun her birine 10.000 TL yatıran bir yatırımcının % 99 güven düzeyinde ve 550 gün ile 1 gün elde tutma sürelerinde her bir fon için karşılaşabileceği maksimum kayıp miktarları bulunmuştur. Emeklilik Gözetim Merkezi (EGM)'nin yayınladığı "BES 2012 Gelişim Raporu" na göre emeklilik yatırım fonları ortalama vadeleri 2012 yılı içinde 510 – 740 gün aralığında bir seyir izlemiştir. Bu nedenle yapılan RMD hesaplamalarından birincisinde elde tutma süresi 550 gün olarak alınmıştır. Bunun yanında geriye dönük test sürecinde kullanılmak üzere elde tutma süresi 1 gün alınarak da RMD değerleri hesaplanmıştır. Ayrıca sabit standart sapma ve EWMA yöntemiyle hesaplanan standart sapma değerleri normal dağılım için % 1 anlamlılık düzeyine karşılık gelen 2,33 değeriyle çarpılarak RMD hesaplanmıştır.

Elde tutma süresi 550 gün alınarak hesaplanan RMD değerleri aşağıdaki tabloda gösterilmiştir.

	Sabit Standart Sapma Kullanılarak Hesaplanan RMD	**EWMA Yöntemi İle Bulunan Standart Sapma Kullanılarak Hesaplanan RMD**
DLNAH	6 776,87	8 177,97
DLNAVI	6 425,51	6 883,72
DLNGRN	6 329,33	6 767,19
DLNYKR	6 134,26	6 441,93

Tablo 3: Elde Tutma süresi 550 gün Alınarak Hesaplanan RMD Değerleri

Sabit standart sapma kullanılarak hesaplanan RMD sonuçlarına göre;

- Anadolu Hayat Emeklilik A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu (DLNAH)'na 10.000 TL tutarında, 550 günlük bir yatırım yapılması durumunda karşılaşılabilecek kayıp % 1 olasılıkla 6.776,87 TL'yi aşacaktır.
- Avivasa Emeklilik ve Hayat A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu (DLNAVI)'na 10.000 TL tutarında, 550 günlük bir yatırım yapılması durumunda karşılaşılabilecek kayıp % 1 olasılıkla 6.425,51 TL'yi aşacaktır.
- Garanti Emeklilik ve Hayat A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu (DLNGRN)'na 10.000 TL tutarında, 550 günlük bir yatırım yapılması durumunda karşılaşılabilecek kayıp % 1 olasılıkla 6.329,33 TL'yi aşacaktır.
- Yapı Kredi Emeklilik A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu (DLNYKR)'na 10.000 TL tutarında, 550 günlük bir yatırım yapılması durumunda karşılaşılabilecek kayıp % 1 olasılıkla 6.134,26 TL'yi aşacaktır.

EWMA yöntemi ile bulunan standart sapma kullanılarak hesaplanan RMD sonuçlarına göre;

- Anadolu Hayat Emeklilik A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu (DLNAH)'na 10.000 TL tutarında, 550 günlük bir yatırım yapılması durumunda karşılaşılabilecek kayıp % 1 olasılıkla 8.177,97 TL'yi aşacaktır.
- Avivasa Emeklilik ve Hayat A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu (DLNAVI)'na 10.000 TL tutarında, 550 günlük bir yatırım yapılması durumunda karşılaşılabilecek kayıp % 1 olasılıkla 6.883,72 TL'yi aşacaktır.
- Garanti Emeklilik ve Hayat A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu (DLNGRN)'na 10.000 TL tutarında, 550 günlük bir yatırım yapılması durumunda karşılaşılabilecek kayıp % 1 olasılıkla 6.767,19 TL'yi aşacaktır.
- Yapı Kredi Emeklilik A.Ş. Büyüme Amaçlı Hisse Senedi Emeklilik Yatırım Fonu (DLNYKR)'na 10.000 TL tutarında, 550 günlük bir yatırım yapılması durumunda karşılaşılabilecek kayıp % 1 olasılıkla 6.441,93 TL'yi aşacaktır.

Yapılan RMD hesaplamalarının doğruluklarını test etmek için geriye dönük test uygulanmıştır. Geriye dönük test sürecinde kullanılmak üzere elde tutma süresi 1 gün alınarak RMD değerleri hesaplanmış, bulunan sonuçlar Tablo 4'te gösterilmiştir.

	Sabit Standart Sapma Kullanılarak Hesaplanan RMD	EWMA Yöntemi İle Hesaplanan Standart Sapma Kullanılarak Hesaplanan RMD
DLNAH	288,97	348,71
DLNAVI	273,98	293,52
DLNGRN	269,89	288,55
DLNYKR	261,57	274,68

Tablo 4: Elde Tutma süresi 1 gün Alınarak Hesaplanan RMD Değerleri

Geriye dönük test için en doğru yol önceden belirlenmiş RMD'e karşı günlük kar/zararı işaretlemek ve önceden belirlenen RMD limitine göre oluşan aşım sayılarını veya güven bandı aşımlarını göstermektir (Aksel, 2001). RMD yöntemlerinin performansları ölçülürken belirli bir gündeki pozisyonun ertesi gün gerçekleşen piyasa fiyatları ile piyasa değeri yeniden hesaplanmaktadır. Bulunan bu yeni piyasa değeri ile pozisyonun gerçek piyasa değeri arasındaki fark RMD ile karşılaştırılmaktadır. Bu fark, RMD'den yüksekse, yöntemin o gün itibariyle maksimum kaybı tahmin etmekte başarısız olduğu anlamına gelmektedir (Sezgin ve Tüzün, 2001). Günlük zararın, modelin RMD tahminini aşma sayısı, sapma sayısı (number of exceptions) olarak adlandırılır ve kullanılan modelin uygun olması için sapma sayısının beklenen sapma sayısına yakın olması arzu edilir (Şahin, 2004). Aşağıdaki tabloda değişik gözlem sayılarında, belirli güven aralıkları için kabul edilebilir sapma sayıları verilmiştir.

Güven Aralığı	Kabul Edilebilir Sapma Sayısı		
	T = 255 Gün	T = 510 Gün	T = 1000 Gün
% 99	N < 7	1 < N < 11	4 < N < 17
% 97,5	2 < N < 12	6 < N < 21	15 < N < 36
% 95	6 < N < 21	16 < N < 36	37 < N < 65
% 92,5	11 < N < 28	27 < N < 51	59 < N < 92
% 90	16 < N < 36	38 < N < 65	81 < N < 120

*Tablo 5: Kabul Edilebilir Sapma Sayıları (**Kaynak:** Jorion, 2002)*

Çalışmada geriye dönük test sürecinde, dört ayrı fon için 550 günlük veriler kullanılarak günlük kar/zarar hesaplanmış ve elde tutma süresi 1 gün alınarak hesaplanan RMD değerleri ile RMD bantları oluşturularak sapma sayıları incelenmiştir. Bu amaçla oluşturulan grafikler aşağıda verilmiştir. Bu grafikler çalışma kapsamındaki dört ayrı fon için sabit standart sapma kullanılarak ve EWMA yöntemiyle bulunan standart sapma kullanılarak hesaplanan RMD değerlerini ayrı ayrı göstermektedir.

	Sabit Standart Sapma Kullanılarak Hesaplanan RMD Sınırlarına Göre Sapma Sayısı	EWMA Yöntemi İle Hesaplanan Standart Sapma Kullanılarak Hesaplanan RMD Sınırlarına Göre Sapma Sayısı
DLNAH	7	3
DLNAVI	10	6
DLNGRN	8	7
DLNYKR	8	8
GÖZLEM SAYISI: T = 550 gün		
GÜVEN ARALIĞI : % 99		

Tablo 6: Geriye Dönük Test Sonuçlarına Göre Sapma Sayıları
Grafik 2: *DLNAH İçin Günlük Getiri ve Sabit Standart Sapma İle Elde Edilen RMD Bantları*

Türkiye'de özelikle son zamanlarda yapılan düzenlemelerle birlikte Bireysel Emeklilik Sistemi büyük ilerleme kaydetmiş, emeklilik yatırım fonlarının varlıkları da aynı oranda büyümüştür. Çalışmada, Riske Maruz Değer hesaplamak üzere Türk emeklilik şirketlerinin kurduğu emeklilik yatırım fonlarından net varlık değeri en fazla olan dört tane büyüme amaçlı hisse senedi emeklilik yatırım fonunun getirileri kullanılmıştır. Çeşitli fon tiplerinin içinden büyüme amaçlı hisse senedi emeklilik yatırım fonlarının seçilmesinin nedeni, bu fonların riskli fonlar grubunda yer alması ve dolayısıyla bu fonlarla ilgili hesaplanan risk değerlerinin daha yorumlanabilir olmasıdır. Gerçekleştirilen Riske Maruz Değer hesaplamalarında Parametrik Yöntem (Varyans-Kovaryans Yöntemi) kullanılmıştır. Bu yöntemin parametrelerinden biri de standart sapma, yani volatilitedir. Çalışmanın

asıl amacı ise RMD hesaplamalarında doğru volatilite modellemesi yaparak gerçeğe yakın sonuçlar elde etmektir. Bu bağlamda yapılan RMD hesaplamaları "Geriye Dönük Test (Backtesting)" süreci ile test edilerek elde edilen sonuçlar karşılaştırılmıştır.

Geriye Dönük Test sonuçlarına göre her iki standart sapma modellemesi kullanılarak hesaplanan RMD değerlerinin tutarlı olduğu, yani sapma sayılarının belirtilen güven aralığında kabul edilebilir sınırlar içinde olduğu görülmektedir. Ancak bu iki yöntem karşılaştırıldığında EWMA yöntemi, sabit standart sapma yöntemine göre daha yükse risk tahminine ulaşmıştır. EWMA yöntemi son dönemlere daha çok ağırlık verdiği için daha yüksek risk değerlerine ulaşmış, sabit standart sapma yöntemi normal dağılım varsayımından dolayı daha düşük risk tahmininde bulunmuştur. Bu doğrultuda da geriye dönük test sonuçlarındaki sapma sayıları, EWMA yönteminde daha azdır. Yani EWMA yöntemi ile elde edilen RMD değerleri gerçeğe daha yakındır.

Risk yönetiminde RMD modeli seçimi ve volatilite modeli seçimi portföy yapısı ve ekonomik koşullara göre farklılıklar göstermektedir. Tarihsel hesaplamalara dayalı modeller, yeni yöntemlerin geliştirilmesiyle yerini zaman içerisinde değişen varyans modellerinin ağırlık kazandığı EWMA, ARCH ve GARCH gibi volatilite tahmin yöntemlerine bırakmıştır. Geçmişte yapılan bir çok araştırma portföyde yer alan finansal varlıkların korelasyon ve varyanslarının zaman içinde değiştiğini göstermektedir. Buradan hareketle bu çalışmada, RiskMetrics tarafından geliştirilen risk yöneticilerinin de sıklıkla kullandığı EWMA modeli kullanılarak volatilite tahminleri yapılmış, sabit varyans varsayımı altında yapılan hesaplamalara göre daha tutarlı sonuçlar elde edilmiştir. Çünkü EWMA modelinin temeli olan üstel ağırlıklandırma sonucunda, model piyasadaki büyük değişimlere anında tepki vermektedir. Her veriye aynı ağırlık verildiğinde, olağan dışı durumların etkileri görülememektedir.

Sonuç olarak doğru volatilite tahminleri geleceğe dair öngörülerde en önemli etkenlerin başında gelmektedir. Bu çalışmanın bulgularına ve Basel II'nin de önerilerine göre, en az 252 gün gibi uzun bir dönem ve % 99 güven seviyesi için volatilitedeki değişimlere daha hızlı tepki verebilen, yani değişen varyansı da hesaba katan EWMA gibi modellerin kullanılmasının daha doğru sonuçlar vereceği düşünülmektedir.

Kırgızistan-Türkiye Manas Üniversitesi Öğrencilerinin Girişimcilik Eğilimlerinin Sosyo-Demografik Özellikler Açısından Değerlendirilmesi

Assessment of Kyrgyzstan-Turkey Manas University Students' Entrepreneurship Orientations by Socio-Demographic Characteristics

Assoc. Prof. Dr. Lütfiye Özdemir (Ahmet Yesevi University, Kazakhstan)

Abstract

The purpose of this research is to determine the effects of socio-demographic characteristics on the entrepreneurship orientation. The research was carried out 581 undergraduates on the Kyrgyzstan-Turkey Manas University. The data was collected with questionnaire. Reliability of measurement tool (Cronbach's Alpha) is 73 %. Frequency analysis, T-test, and one-way ANOVA analysis were used in research. As a result, it was found that the socio-demographic characteristics affected aggressive competitiveness, innovation, proactive behavior, risk-taking, autonomy, self-efficacy, need for achievement, internal control focus, and creativity.

1 Giriş

Çağdaş uygarlığın gelişmesinde önemli bir yere sahip olan girişimcilik, neredeyse hemen her dönem için stratejik değerini korumaktadır. Çünkü girişimcilik geçmişte olduğu gibi günümüzde de ekonomik kalkınmanın, istihdam yaratmanın ve sosyal gelişmenin itici gücüdür. Girişimcilik, aynı zamanda ulusal sorunların çözümü açısından da önem arz etmektedir. Çünkü ülkelerin içinde bulundukları krizlerin ve işsizlik sorunun çözümlenebilmesi, girişimsel çabalarla sağlanabilmektedir.

İçinde bulunduğumuz bilgi çağında girişimciliğin önemi ve etkisi daha da artmaktadır. Çünkü bu çağda ekonomik değerler yaratma kaynağı ve yeteneği, fiziki güçten uzaklaşıp tamamen bilgi gücüne geçmektedir. Bu dönemde bilim ve teknoloji alanında yaşanan hızlı gelişmeler, toplumların yapısını hızla değiştirirken girişimciliğin ekonomik değerini ve önemini artırmaktadır. Bu bağlamda kişisel yeteneğe ve bilgiye dayalı girişimcilik faaliyeti ön plana çıkmaktadır.

Girişimcilik geçiş ekonomilerinde özellikle önemli olan bir konudur (Chelariu vd., 2008). Çünkü devletçi ekonomiden piyasa ekonomisine geçildiğinde karşılaşılan sorunlar olarak; yoksulluğun ortadan kaldırılabilmesi, ekonominin canlandırılabilmesi girişimciliğin harekete geçirilmesine bağlıdır. Bu bağlamda bilgi donanımlı genç girişimcilere duyulan ihtiyaç ortadadır. İşte bu araştırmayı yapmaktaki amaç, potansiyel girişimci adayları olarak genç girişimcilerin ortaya çıkmasına katkıda bulunabilmektir. Bu nedenle üniversiteye adımını atan her öğrenciye bir girişimci gözü ile bakmak ve onlara içinde yaşadıkları çevrenin çeşitli konulardaki potansiyellerinin farkına varabilecekleri bilgi ve becerilerle donatmak, yaratıcılığı bastırılmayıp özendirilmiş insanlar olarak yetişmelerini sağlamak büyük önem arz etmektedir. Bu bağlamda söz konusu araştırmada Kırgızistan-Türkiye Manas Üniversitesi öğrencilerinin girişimcilik eğilimlerini sosyo-demografik özellikler açısından irdelemeyi ve böylece öğrencilerin kişisel ve ailesel özelliklerinin, demografik niteliklerinin ve alınan girişimcilik eğitiminin girişimcilik eğilimi üzerinde bir etkisinin olup/olmadığını saptamayı amaçladık.

Girişimcilik eğiliminde yaygın olarak araştırılan boyutlar; risk alma ve yenilikçiliktir. Bu araştırma, girişimcilik eğilimini daha kapsamlı olarak ele alıp önceki araştırmalarda tam olarak irdelenmeyen proaktiflik, özerklik, öz yeterlilik, içsel denetim odağı, dışsal denetim odağı ile birlikte yenilikçilik, risk alma ve yaratıcılık boyutlarını sosyo-demografik özellikler açısından irdelemiştir. Diğer araştırmalardan farklı olan başka bir yönü de araştırmanın bir uluslararası üniversite niteliği taşıyan Kırgızistan-Türkiye Manas Üniversitesi'nde Kırgızca ve Türkçe olarak uygulanmış olmasıdır. Araştırmada sosyo-demografik özelliklerin girişimcilik eğilimi üzerinde etkisinin olup olmadığı saptanmaya çalışılmıştır. Bu bağlamda istatistiki olarak Cronbach's Alpha, frekans dağılımları, t-testi ve ANOVA analizi kullanılmıştır. Araştırmada öncelikle teorik bilgi olarak girişimcilik, girişimcilik eğilimi (GE) ve girişimcilik eğiliminin boyutlarını ele alınmış daha sonra araştırmanın amacı, yöntemi ve hipotezleri hakkında bilgi verilerek ulaşılan bulgulara değinilmiş ve son olarak bu bulgulara dayanarak sonuç açıklanmıştır.

2 Girişimcilik Süreci

Son on yıldır girişimcilik konusuna duyulan ilgi giderek artmaktadır. Ulusal düzeyde girişimcilik ekonomik büyümenin, yeni iş alanları açmanın ve yeniliğin önemli bir lokomotifi olarak görülebilir. Ekonomi alanında ilk kez 18. yüzyılda Fransız ekonomist Richard Cantillon tarafından kullanılan girişimcilik kavramına ilişkin

literatürde genel kabul görmüş bir tanım yoktur. Buna karşın, girişimcilik esas olarak risk taşıyan ve değer yaratan kişisel fırsatçı bir faaliyeti ifade eder ve girişimcilik önemli bileşenlerin biri olan yenilikle güçlü bir şekilde ilişkilendirilir. Girişimcilik, kaynakları yeni kombinasyonlarda birleştirme ya da yenilik yapma, fırsatların peşinden koşma, gerekli kaynakları bir araya getirme, risk alma, kar peşinde koşma ve değer yaratmayla ilgili bir kavramdır. Bütün bunlar yeni kurulan bir firmada yapılabileceği gibi kurulu bir organizasyonda da gerçekleştirilebilir. Sık atıfta bulunulan bir girişimcilik tanımı da; fırsatlardan yararlanabilmek amacıyla kaynakları tek bir havuzda bir araya getirerek değer yaratma sürecidir. Kişiler, kurulu bir firmada girişimsel davranışlarda bulunarak değer yaratabilirler. Bu durumda, girişimcilik, başarının, büyümenin ve sürdürülebilir rekabetçi üstünlüğün bir itici gücü olarak düşünülebilir (Kraus, 2013; Ercan ve Gökdeniz, 2009). Latince'de "intare" kökünden türüyen girişimci kavramı, İngilizce'de enter (giriş) ve pre (ilk) kelime köklerinden gelmekte ve *entrepreneur* yani ilk girişen, başlayan anlamını taşımaktadır (Korkmaz, 2000: 163). Bu bağlamda Bozkurt (2000: 12) da girişimciliği yaşadığımız çevrenin yarattığı fırsatları sezme, o sezgilerden düşler üretme, düşleri projelere dönüştürme, projeleri yaşama taşıma ve zenginlik üreterek, insan yaşamını kolaylaştırma becerisine sahip olma olarak vurgulamaktadır (Okay ve Karahan, 2010). Girişimcilik konusu sanayi toplumundan bilgi toplumuna geçildiğinde daha fazla önem kazanmıştır. Çünkü bilgi toplumuna geçildiğinde, insanın fiziki gücünün ekonomik değeri azalmış ve düşünce üstünlüğü, bilgi üretmek kısaca beşeri sermayenin ekonomik değeri büyük bir hızla artmıştır (Müftüoğlu, 1997: 2).

3   Girişimcilik Eğilimi (GE)

Firmaların yaşları, büyüklükleri ve faaliyet gösterdikleri sektörler her ne olursa olsun bugün GE neredeyse tüm firmalar için önemi giderek artan bir konu olmuştur. Çünkü GE, ekonomik büyümenin ve firma başarısının en önemli itici güçlerden biridir (Kraus, 2013). Ekonomik gelişimi teşvik eden GE (Knight, 1997), özellikle ekonomik koşulları zayıf olan ülkelerde daha büyük önem arz etmektedir. Çünkü GE, firmaların performans gösterebilmelerini sağlamaktadır. Bu nedenle GE'nin örgütsel büyüme üzerinde de önemli bir etkisi vardır (Chen ve Hsu, 2013).

GE'ni kavramsal olarak incelediğimizde, eğilim kelimesi TDK'nun sözlüğünde bir şeyi sevmeye, istemeye veya yapmaya içten yönelme olarak açıklanmaktadır. (TDK, 2013). GE ise kişinin yeni bir girişimde bulunma yönündeki yatkınlığını ifade eder (Chelariu vd., 2008). İşletmeler açısından ele alındığında, GE üst kademedeki yönetimin hesaplı riskler üstenebilme, yenilik yapabilme ve proaktif davranışlar sergileyebilme yatkınlığını gösterir (Todorovic vd., 2011). Bu nedenle GE genelde yenilikçilik, proaktiflik ve risk alma konusunda üst yönetimin stratejisine gönderme yapar (Poon vd., 2006). GE üniversite öğrencileri açısından düşünüldüğünde ise potansiyel girişimci kavramı ile karşılaşırız. Potansiyel girişimci kişilerin kendilerini girişimsel davranışa sevk edebilecek özelliklere, becerilere ve isteklere sahip olmasını tanımlamak için kullanılmaktadır (Chelariu vd., 2008).

Çocukluktan başlayarak, yetişkinlik döneminin sonuna kadar kişinin gelişimi üzerinde etkili olan faktörlerin her biri girişimcilikte de etkilidir. Girişimciliği etkileyen ve kişilerin girişimci olma ya da olmama kararlarını belirleyen bu faktörler; aile desteği, finansman olanakları, devlet destekleri, yetiştirme ve eğitim (Arıkan, 2002) gibi psikolojik, sosyal ve ekonomik etkenler olarak ifade edilebilir. Hatta doğru bir girişimci ruhunun nasıl ortaya çıktığını araştıran çalışmalar; iş, dini geçmiş, olgunlaşma ile ırk, eğitim ve cinsiyet gibi sosyo-biyolojik etkenlerin girişimciliğin ortaya çıkmasında etkin olduğunu ortaya koymuştur. Bu bağlamda eğitimin de özellikle üniversitelerde verilen eğitimin gençlerin girişimciliğe bakış açılarını etkilemede önemli olduğu düşünülmektedir (Börü, 2006: 13).

GE'nin çok sayıda boyutları olmasına karşın, pek çok araştırma, genellikle en önemlileri olarak kabul edilen yenilikçilik, proaktiflik ve risk alma boyutlarına odaklanmaktadırlar (Chen and Hsu, 2013; Chelariu vd., 2008; Kraus, 2013; Covin ve Slevin, 1991; Poon vd., 2006). Daha tutarlı sonuçlara ulaşabilmek amacıyla çalışmamızda bu boyutlara ek olarak saldırgan rekabetçilik, özerklik, başarma ihtiyacı, denetim odağı ve yaratıcılık boyutlarına da değinilmektedir.

4   Girişimcilik Eğiliminin Öğeleri

Girişimcilik eğilimi dokuz alt boyut açısından irdelenmektedir.

4.1 Yenilikçilik

Yenilik, yeni bir düşünceyi pazarlanabilir bir değere dönüştürebilecek yapının kurulmasını ve bu yapının sürdürülmesini (Zahra, 1995; 1998) ifade etmektedir. Literatürde girişimcilik eğilimi çoğunlukla yenilikçilikle ilişkilendirilir (Covin ve Slevin, 1991; Knight, 1997; Zahra 1995). Brenkert (2009) de yeniliği firmanın yeni ürün ve hizmet geliştirmeyi amaçlayan yeni düşünceleri desteklemesi ve yaratıcı süreçleri teşvik etmesi olarak tanımlamaktadır. Firma yeni ürün ve hizmet geliştirdiğinde ve bunları pazara sunduğunda, kolayca rekabet üstünlüğü sağlayabilmektedir. Yenilik yeni ürün ve hizmet getirebilmek amacıyla firmayı yeni teknolojiyi kullanma yönünde harekete geçirebilmektedir (Chen ve Hsu, 2013). Firmalar yeni ürün ve hizmet getirme yönünde çaba harcadıklarında, deneyimle meşgul olma ve yaratıcı düşünebilme eğilimleri gelişmektedir (Chen

ve Hsu, 2013). Son olarak yenilikçilik sürecinde yaratıcılığın sonucunda ortaya çıkan yeni ya da iyileştirilmiş ürünlerin, hizmetlerin ve süreçlerin ticareti gerçekleştirilmektedir. Bu bağlamda yenilikçilik süreci girişimsel davranış ile birleştiği zaman uzunca bir zaman süresine gereksinim duyulmaktadır (Kraus, 2013). Görüldüğü gibi, yenilikçilik girişimciliğin temelini oluşturan en önemli araçlarından biridir. Girişimcinin yarattığı yenilik ya da yeni düşünceler rekabet ortamında firmayı başarıya taşımaktadır. Bunun farkında olan girişimci, gerekliliklerini mutlaka yerine getirerek, yeni yönetim biçimi, yeni düşünceler, yeni teoriler veya yeni icatları uygulamaya koymaktadır. Sonuç olarak yenilik, yaratıcı düşünlerin başarılı bir şekilde uygulanması ve sonuçlandırılmasıdır (Çetin, 2011).

4.2 Proaktiflik

Reaktifliğin karşıtı (Knight, 1997) olarak proaktiflik, geleceği ön görerek ve yeni iş fırsatlarını teşvik ederek inisiyatif almadır (Brenkert, 2009). Proaktiflik, rakipleri geçebilmek amacıyla rekabetçi önceliklerin ve amaçların peşinde koşarak atılgan olma anlamına da gelmektedir (Zahra, 2008). Bu nedenle proaktif davranışlar gösterildiğinde, rekabet üstünlüğü elde edebilmek amacıyla müşterilerin gelecekteki ihtiyaçlarıyla ilgili yeni fırsatlar arama üzerine odaklaşılır (Chen ve Hsu, 2013). Örgütsel açıdan değerlendirildiğinde, proaktiflik firmaların müşterilerinin gelecekle ilgili gereksinimlerini önceden tahmin etmeleri ve rakiplerine karşı üstünlük sağlayabilecek yeni mal ve hizmetler üretmeleridir. Proaktif firmalar, rekabet yeteneklerini zenginleştirebilmek amacıyla ortaya çıkan fırsatları kullanırlar (Chen ve Hsu, 2013). Girişimci kişilerin proaktif olması; fırsatlara odaklanmaları, olayları henüz tatmin edilmemiş gereksinimler olarak görebilmeleri, pazarı ve pazardaki boşlukları görüp hangi yeni ürün konseptlerini geliştirilebileceklerini kararlaştırmaları ve tüm bunları sürdürülebilir rekabet üstünlüğü yaratabilmek için kullanmaları şeklinde açıklanabilir (Çetin, 2011). Sonuç olarak, proaktiflik, gelecekteki talebi öngörerek rekabette önde kalabilmek için fırsat arama davranışını ifade eder (Kraus, 2013).

4.3 Saldırgan Rekabetçilik

Saldırgan rekabetçilik, kişilerin rakiplerine karşı daha üstün bir konuma gelebilmek (Brenkert, 2009) ve onlara egemenliklerini kabul ettirebilmek amacıyla bilinçli olarak alışılmadık yöntemlerle "rakibi yok etme" istek ve eğilimine işaret eder. Bu eğilimin temelinde; rakiplerin alt edilmek istenmesi, onların düşman olarak görülmesi ve onlarla barışçıl bir ortamda yaşanmak istenmemesi istekleri vardır. Girişimcilik eğilimi açısından incelendiğinde, saldırgan rekabetçilik potansiyel girişimci adayları olarak öğrencilerin kendilerini değerlendirebilmek amacıyla rekabetten hoşlanmalarına ve başarılı olmak için gayret göstermelerine bağlanabilir.

Saldırgan rekabetçilik firmalar açısından değerlendirildiğinde, girişimci firmaların dinamik pazarlarda değişen müşteri isteklerini ve beklentilerini karşılayabilmek amacıyla pazardaki tehditlerin üstesinden gelerek eylem ve varlıklarını sürdürebilmek adına oldukça gözü pek rekabetçi davranışlar sergilemeleridir (Covin ve Slevin, 1991). Söz konusu rekabetçi davranışlar sıklıkla, rakiplerin eylemlerine doğrudan karşılık verecek biçimde saldırgan fiyat rekabeti, yeni ve üstün bir sunumla pazara giriş, bir rakibi hızlı bir biçimde kopyalayarak izleme, hızlı bir biçimde müşteri farkındalığı yaratmak amacıyla yüksek reklam maliyetlerine katlanma ve kâr marjlarından fedakârlık etme ve alışılmadık sürpriz taktikler geliştirme veya finansman, satış sonrası hizmet, garanti, fiyat, ürün kalitesi ve benzeri rekabet unsurlarına odaklanma biçimindedir. Özetle, rekabetçi davranışların özünde, firmaların kendilerini rakipleri ile karşılaştırarak kaynaklarını hızlı bir biçimde harekete geçirmesi ve rakibe saldırı amacıyla rakibin zayıf yönleri hakkında bilgi biriktirmesi vardır.

4.4 Risk Alma

Tüm örgütsel faaliyetlerde birtakım etkileri bulunan risk ve risk alma kavramları, girişimcilik sürecinin temelini oluşturmaktadır. Kraus'a (2013) göre, risk alma gerek kişisel gerekse örgütsel düzeyde hem büyük fırsatlar hem de büyük başarısızlıklar getirebilecek faaliyetleri ele alır. Girişimsel yapı içinde risk alma, tedbirsizce değil hesaplı ve kontrollüdür. Risk alma eğilimi ise kişinin riskli durumlarla karşı karşıya kaldığında riski göze almak yönünde davranış gösterme eğilimidir (Keleç vd., 2012). Risk girişimcilik sonucu girişimcinin istediği sonuçları elde edebileceği gibi hayal kırıklığı yaşama durumuyla da karşılaşabileceğini ifade eder. Girişimci bu durumu ortadan kaldıramaz. Önemli olan hesaplanabilir ve kabul edilebilir bir düzeyde risk almaktır (Kraus, 2013). Çünkü girişimciliğin doğasında kazanmak ya da kaybetmek vardır. Kuşkusuz hiçbir girişimci kaybetmek için bir işte başlangıç yapmaz. Ancak kazanmak için, kaybetme olasılığı da dikkate alınmalıdır (Akdemir, 1996: 86). Risk alma eğilimi olan girişimciler firmanın önemli kaynaklarını sonuçları bilinmeyen belirsiz endüstrilere yatırım yapmak isteyebilirler ve hatta firmayı bu yönde teşvik ederler (Chen ve Hsu, 2013).

4.5 Bağımsızlık

Özerklik, kişilerin önemli kararları vermede ve fırsatların peşine düşmede bağımsız olarak hareket edebilme serbestliğidir (Brenkert, 2009). Özerk olan bir kişi bir düşünceyi ya da vizyonu ortaya koymada ve uygulamada bağımsız olarak hareket edebilir. Genel olarak fırsatları kovalamada kendi kendini yönlendirme anlamı taşıyan özerklik kavramı, dar anlamda, iş tasarımı çerçevesinde iş özelliğinin ve iş metotlarının seçilmesi ile iş programı üzerindeki kişisel kontrol derecesini göstermektedir (Kurt vd., 2006).

4.6 Öz Yeterlilik

Luszczynska ve arkadaşları (2005) öz yeterliliği, "zor ve belirsiz görevleri yapabilme ve özel gereksinimleri olan zorluklarla baş edebilme konusunda kişinin kendi yetkinliklerine olan inancı" şeklinde tanımlamaktadır. Diğer yandan öz yeterlilik, "kişinin belli görevleri ve davranışları yapabileceğine olan inancı" olarak tanımlanmaktadır (Salas ve Cannon-Bowers, 2001). Öz yeterlilik algısı kişilerin girişimcilik süreçlerinde göstermeleri gereken yüksek performansın bir açıklayıcı faktörü olarak görülebilir. Öz yeterlilik algısı yüksek kişiler, meydan okuyucu amaçlar planlama eğilimde olan, zor ve stresli koşullar altında dahi amaçlarına ulaşma konusunda istikrarlı olan, başarısızlıkla karşılaştıklarında, hızlı bir şekilde toparlanabilen (Hmieleski ve Corbett, 2008), daha yüksek düzeylerde kişisel inisiyatif gösterebilen (Speier ve Frese, 1997) ve daha uzun dönemli bakış açılarıyla hareket edebilen kişilerdir (Heckhausen ve Schulz, 1995). Karşıt olarak öz yeterlilik algısı düşük olan insanlar, kişisel inisiyatif alamamakta, meydan okuyucu durumlardan kaçma eğilimine girmekte ve engellerle karşılaştıklarında hızlı bir şekilde çekilmektedirler (Speier ve Frese, 1997). Ayrıca yapılan bazı çalışmalarda öz yeterlilik algısının artması ile girişimcilik davranışları arasında aynı yönlü ilişkiler elde edilmiştir (Poon vd., 2006; Hmieleski ve Corbett, 2008). Bu bakımdan kişisel başarıyla yakın ilişkisi bulunan öz yeterlilik algısı, kişilerin girişimcilik süreçlerindeki davranışlarında rolü olduğu değerlendirilen önemli bir kişilik özelliği olarak karşımıza çıkmaktadır.

4.7 Başarma İhtiyacı

Girişimcilik eğilimini etkileyen önemli bir faktör olarak başarma ihtiyacı, kişisel başarıya ulaşabilmek için daha iyisini yapma isteğini ifade eder. Başarma ihtiyacı yüksek olan kişilerin başarıya ulaşabilme yönünde daha istekli olmaları, onların girişimcilik eğilimlerinin daha yüksek olmasına neden olmaktadır (Poon vd., 2006). Dolayısıyla yüksek başarma ihtiyacı kişileri bir girişimsel faaliyette bulunmaya sevk etmekte ve bu faaliyetin sonucunun başarılı bir şekilde son bulması için uğraş vermektedirler (İşcan ve Kaygın, 2011). Çünkü başarma ihtiyacı, başarı ve mükemmelliğe ulaşmak için kişiyi mücadeleci olmaya iten güçtür. Sonuç olarak, başarma ihtiyacı; insanları girişimciliğe sevk etmekte, kontrollü riskleri üstlenmeye yöneltmekte, sorun çözme becerisini geliştirmekte ve amaçların belirlenmesine katkıda bulunmaktadır.

4.8 Denetim Odağı

Denetim odağı kavramı bilim adamları tarafından içsel ve dışsal denetim odağı şeklinde sınıflandırılmıştır. Bu sınıflandırmaya göre, kişiler başlarına gelen iyi veya kötü olayların sebeplerini algılama bakımından farklılaşmaktadırlar. Kişilerin, yaşadığı olayları nelerin kontrol ettiğine dair inancını ifade eden (Strauser vd., 2002) bu kavrama göre, eğer kişiler başlarına gelen olayların ve sonuçların kendilerinin değil, kader, şans ve talih gibi dışsal ve çevresel olayların belirleyebileceğine inanıyorlarsa (Chelariu vd., 2008), bu algılama dışsal denetim odağına işaret etmektedir. Buna karşılık eğer kişiler başlarına gelen olayları ve durumları kendi davranışlarının bir sonucu olarak algılıyorlarsa, kişinin sahip olduğu bu inanç içsel denetim odağı olarak belirtilmektedir (Solmuş, 2004). İçsel denetim odağına sahip kişiler, çevresel koşulları değiştirme konusunda daha fazla adım atmakta, yeteneklerine, başarı ya da başarısızlıklarına daha fazla önem vermektedirler. Girişimcilik süreçlerinde bu kişilik özelliklerinin etkisi olduğu belirtilmektedir. Özellikle içsel denetim odağına sahip kişiler, elde ettikleri ödüllerin ve başarıların, kendi davranışlarının bir sonucu olduğuna inanmaktadırlar. Bu bağlamda içsel denetim odaklı kişiler, girişimcilik süreçlerinde daha azimli olmakta ve arzu edilen sonuçlara ulaşma yönünde daha fazla çaba sarf edebilmektedirler. Bunun aksine dışsal denetim odaklı kişiler ise, pasif tutumlar takınarak elde edecekleri sonuçlarda kendi tutumlarının ve davranışlarının bir rol oynayabileceğine inanmayarak; bu süreçlerde başarısız olabileceklerdir. İçsel denetim odağı yüksek olan kişilerle düşük olanlar karşılaştırıldığında, içsel denetim odağı yüksek olan kişiler, değerli sonuçları elde edebilme yönünde daha fazla çaba harcamakta ve bu konuda daha istikrarlı davranmaktadırlar; çünkü onlar sonuçları denetleyebileceklerini hissetmektedirler. Gösterilen büyük çaba ve sabır, genellikle bu kişileri daha önemli başarılara götürebilmektedir (Poon vd., 2006). Bu doğrultuda yapılan araştırmalar girişimcilik davranışları ile denetim odağı arasında benzer bir ilişkiyi ortaya çıkarmıştır. Buna göre, içsel denetim odaklı kişilerin girişimcilik süreçlerinde daha başarılı oldukları; dışsal denetim odaklıların ise bu başarıyı yakalayamadıkları belirlenmiştir. Aynı biçimde Chelariu ve arkadaşları (2008) da öğrenciler üzerine yaptıkları bir araştırmada, içsel denetim odağı inancının girişimcilik eğiliminin artmasında önemli bir açıklayıcı olduğunu ortaya çıkarmışlardır. Ayrıca bu araştırmacılar, içsel denetim odağı ile girişimcilik eğilimi arasında pozitif bir ilişki olduğu bulmuşlardır.

4.9 Yaratıcılık

Bağımsız bir güç olarak yaratıcılık ve yeni düşüncelere yürekten bağlılık; yeni ya da mevcut ürün ve hizmetlerle yeni veya kurulu piyasalara girebilmek için önemli bir güçtür (Brenkert, 2009). Yaratıcılık kavramının en kabul görmüş tanımlarından biri, her alanda yeni ve yararlı düşüncelerin üretilmesi sürecidir (Amabile vd., 1996: 1154). Bu süreç, ya önceden var olan düşüncelerin geliştirilmesi ya da özgün bir bileşiminin sağlanması şeklinde gerçekleşir (Eren, 1982: 17). Her yeniliğin ve icadın kökeninde yaratıcılıkla elde edilmiş düşünceler vardır. Ancak yaratıcılık sonucu elde edilen düşünceler her zaman sorunların çözümünde uygulanabilirlik niteliği taşımayabilir (Eren, 1982: 17).

5 Araştırmanın Amacı, Yöntemi ve Hipotezleri

5.1 Araştırmanın Amacı

Bu araştırma, Kırgızistan-Türkiye Manas Üniversitesi Öğrencilerinin girişimcilik eğilimlerini saptamak amacıyla yapılmıştır. Ayrıca bu çalışmada potansiyel girişimci olarak tanımlanan üniversite öğrencilerinin "vatandaşı oldukları ülkenin, büyüdükleri yerin, anne/babalarının eğitimlerinin, kardeş sayısının, ailenin kaçıncı çocuğu olduklarının, aile gelirinin, ailede girişimci olup olmadığının, cinsiyetin, okudukları fakültenin/yüksekokulun, kaçıncı sınıfta olduklarının, akademik not ortalamalarının ve girişimcilik dersi alıp almamalarının" girişimcilik eğilimi üzerinde bir etkisinin olup olmadığı ortaya çıkarılmaya çalışılmaktadır.

5.2 Araştırmanın Yöntemi ve Örneklem Kümesinin Seçimi

Araştırmada veri toplama aracı olarak yüz yüze anket yöntemi kullanılmıştır. Anket 2013 yılında Kırgızistan-Türkiye Manas Üniversitesi öğrencilerine uygulanmıştır. Üniversitenin güncel Web sitesinden alınan bilgiye göre, 2013 yılında Manas Üniversitesi'nde toplam olarak 4.026 öğrenci eğitim görmektedir. Bu ana kütleden kolayda örneklem yöntemi ile seçilen 800 öğrenciye uygulanan anketten, analize uygun 581 tanesi değerlendirmeye alınmıştır. Çalışmada öğrencilerin girişimcilik eğilimlerini ölçmek amacıyla Johnson'un (2011) "Girişimcilik Eğilimi Ölçeği" kullanılmıştır.

Araştırmada kullanılan anket formu; iki bölümden, 57 sorudan oluşmaktadır. Anket formunun birinci bölümünde literatür taraması sonucunda oluşturulan 15 tane sosyo-demografik özelliklerle ilgili soru yer almaktadır. İkinci bölümde öğrencilerin girişimcilik eğilimlerini ölçmeye yönelik 42 tane Likert Ölçeği ifadesi bulunmaktadır. Bu sorular, girişimcilik eğiliminin öğeleri olarak yenilikçilik, proaktiflik, saldırgan rekabetçilik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, denetim odağı ve yaratıcılık boyutlarını ölçmeye yöneliktir. Anket Kırgızca ve Türkçe hazırlanmış olup öğrencilerin arzularına göre istedikleri dilden form verilmiştir. Öğrencilerden anketi "1=hiç katılmıyorum-5=tamamen katılıyorum" şeklinde 5'Likert ölçeğine göre doldurmaları istenmiştir. Olumsuz olan onbeş ifadenin veri girişi tersten kodlanmıştır. Toplanan veriler SPSS 16 programına girilmiş ve ölçeğin güvenilir olup/olmadığını ölçen Cronbach's Alpha değerinin .73 olduğu saptanmıştır.

5.3 Araştırmanın Kısıtları

Araştırmanın en önemli kısıtları şunlardır:

1. Araştırmayla ilgili olarak toplanan verilerin, girişimcilik eğilimi ölçeğiyle sınırlı olması
2. Verilerin tek bir üniversiteden toplanmış olması
3. Anket tekniğinin dışında diğer veri toplama yöntemlerinin kullanılamamış olması
4. Araştırmanın sonuçlarının örneklemin nitelikleri ile sınırlı olması
5. Zamanın dar olması nedeniyle tüm fakültelere ve meslek yüksekokullarına ulaşılamaması

5.4 Araştırmanın Varsayımları

Araştırmanın varsayımları üç madde altında toplanmaktadır:

1. Araştırma için seçilen örneklemin evreni temsil ettiği,
2. Öğrencilerin anketteki soruları doğru anladıkları ve soruları samimi bir şekilde cevapladıkları,
3. Sosyo-demografik değişkenlerin girişimcilik eğilimini etkilediği.

6 Araştırmanın Hipotezleri, Bulguları ve Analizi

Uluslararası bir nitelik taşıyan Manas Üniversitesi'nin öğrencilerinin %86.2'si Kırgız, %11'i de Türk vatandaşıdır. 269'u (%46.3) şehirde yetişmiş olan bu öğrencilerin 220'si (%37.9) köylerde, geri kalan 92 (%15.8) öğrenci de kasabada büyümüşlerdir. Bu öğrencilerin anne-babalarının eğitim düzeylerinin yüksek olması dikkat çekicidir. Çünkü 396 (%68.2) anne, üniversite ve lisansüstü eğitim grubundadır. Üniversite ve lisansüstü eğitim düzeyindeki babaların oranı (%73.2) ise daha yüksektir. Yüksek eğitimli anne ve babaların gelir düzeylerinin düşük olduğu söylenebilir. Çünkü 426 (%73.2) ailenin geliri ≥200-650 dolar arasında değişmektedir. Düşük gelir düzeyine rağmen ailelerdeki çocuk sayısının fazla olduğu görülebilir. Çünkü tek çocuklu aile sayısı 24 (%4.1) iken 305 (%52.5) aile, 4 veya daha fazla çocuk sahibidir. Öğrencilerin %35.6'sı (207) ailenin en büyük çocuğu durumunda, %27.6'sı (160) ise en küçük çocuktur.

Öğrencilerin %48'i (279) İİBF'de, %23.8'i (138) İletişim Fakültesi'nde, %9'u (52) Mühendislik Fakültesi'nde, %9.6'sı (56) meslek yüksekokullarında, %7.9'u Edebiyat Fakültesi'nde ve en düşük oran olan %1.7'si (10) de Veterinerlik Fakültesi'nde okumaktadırlar. Farklı bölümlerde okuyan bu öğrencilerin %42.7'si (248) üçüncü ve dördüncü sınıfta iken %57.1'i (332) de birinci ve ikinci sınıftadır. İki dilde (Kırgızca ve Türkçe) eğitim vermekte olan Manas Üniversitesi'nin 428 (%73.6) öğrencisi üç veya daha fazla sayıda yabancı dil bilmektedirler. Bu öğrencilerin çoğunun bildiği dil; Rusça, Kırgızca ve Türkçedir. Öğrencilerin %69.2'si (402) girişimcilik dersi almadıklarını ve aynı şekilde %67.3'ü (391) ailelerinde bir girişimcinin olmadığını belirtmişlerdir.

"H1: Öğrencilerin girişimcilik eğilimleri vatandaşı oldukları ülkelere göre anlamlı bir farklılık göstermektedir" hipotezini test edebilmek için t-testi yapılmıştır. T testi sonucunda (0,05 anlamlılık düzeyinde) öğrencilerin

vatandaşı oldukları ülkelerin saldırgan rekabetçilik ve içsel denetim boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olduğu, yenilikçilik, proaktiflik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, dışsal denetim odağı ve yaratıcılık boyutları üzerinde ise anlamlı bir etkisinin olmadığı belirlenmiştir. Bu sonuca göre Kırgız ve Türk öğrencilerinin saldırgan rekabetçilik ve içsel denetim boyutlarını farklı algıladıkları görülmektedir. Buna göre Türk öğrencilerinin Kırgız öğrencilere göre daha saldırgan rekabetçi eğilim içinde oldukları buna karşılık Kırgız öğrencilerinin Türk öğrencilerine göre daha büyük bir içsel denetime sahip oldukları görülmektedir. Bu farklılıkların temel kaynağının Kırgız ve Türk öğrencilerinin büyüdükleri ve içinde bulundukları kültüre ilişkin olduğu söylenebilir. Sonuç olarak H1, saldırgan rekabetçilik ve içsel denetim odağı boyutları açısından kabul edilirken, diğer boyutlar açısından reddedilmektedir.

"H2: Öğrencilerin girişimcilik eğilimleri yetiştikleri yerlere göre anlamlı bir farklılık göstermektedir" hipotezinin testi için Anova testi yapılmıştır. Anova testinin sonuçlarına göre (0,05 anlamlılık düzeyinde) öğrencilerin yetiştikleri yerin sadece saldırgan rekabetçilik boyutuna bakış açıları üzerinde anlamlı bir etkisinin olduğu belirlenirken, yenilikçilik, proaktiflik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, içsel denetim odağı, dışsal denetim odağı ve yaratıcılık boyutlarına bakış açıları üzerinde ise anlamlı bir etkisinin olmadığı görülmektedir. Anova testine ek olarak yapılan Tukey testine göre ise; öğrencilerin saldırgan rekabetçilik faktörünü algılamaları açısından köyde yaşayanlarla şehirde yaşayanlar arasında önemli bir fark olduğu tespit edilmiştir. Sonuç olarak H2, sadece saldırgan rekabetçilik boyutu açısından kabul edilmekte, diğer boyutlar açısından reddedilmektedir.

"H3: Öğrencilerin girişimcilik eğilimleri annelerinin eğitimine göre anlamlı bir farklılık göstermektedir" hipotezinin testi için yapılan Anova sonucuna göre (0,05 anlamlılık düzeyinde), demografik özelliklerden annenin eğitim durumu; yenilikçilik, proaktiflik, saldırgan rekabetçilik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, içsel denetim, dışsal denetim ve yaratıcılık boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olmadığı görülmektedir. Sonuç olarak H3, GE'nin tüm boyutları için reddedilmektedir.

"H4: Öğrencilerin girişimcilik eğilimleri babalarının eğitimine göre anlamlı bir farklılık göstermektedir" hipotezinin testi için yapılan Anova sonucuna göre (0,05 anlamlılık düzeyinde), demografik özelliklerden babanın eğitim durumu; yenilikçilik, proaktiflik, saldırgan rakabetçilik, risk alma, bağımsızlık, öz yeterlilik, başarma güdüsü, içsel denetim, dışsal denetim ve yaratıcılık boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olmadığı görülmüştür. Sonuç olarak H4, girişimcilik eğiliminin tüm boyutları açısından reddedilmektedir.

"H5: Öğrencilerin girişimcilik eğilimleri kardeş sayısına göre anlamlı bir farklılık göstermektedir" hipotezinin testi için yapılan Anova sonucuna göre (0,05 anlamlılık düzeyinde) ailevi özelliklerden öğrencinin kendisi dahil toplam kardeş sayısının; sadece saldırgan rekabetçilik boyutuna bakış açıları üzerinde anlamlı bir etkisinin olduğu görülürken, yenilikçilik, proaktiflik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, içsel denetim odağı, dışsal denetim odağı ve yaratıcılık boyutlarına bakış açıları üzerinde ise anlamlı bir etkisinin olmadığı görülmektedir. Anova testine ek olarak yapılan Tukey testine göre ise; öğrencilerin saldırgan rekabetçilik faktörünü algılamaları açısından 2 kardeşli öğrenciler ile 5 ya da daha fazla kardeşli öğrenciler arasında önemli bir fark olduğu tespit edilmiştir. Sonuç olarak H5, sadece saldırgan rekabetçilik boyutu açısından kabul edilmektedir..

"H6: Öğrencilerin girişimcilik eğilimleri kaçıncı çocuk olduklarına göre anlamlı bir farklılık göstermektedir" hipotezini test etmek amacıyla yapılan Anova sonucuna göre (0,05 anlamlılık düzeyinde), öğrencilerin ailelerinin kaçıncı çocuğu olduklarının; yenilikçilik, proaktiflik, saldırgan rekabetçilik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, içsel denetim odağı, dışsal denetim odağı ve yaratıcılık boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olmadığı görülmektedir. Sonuç olarak H6, GE'nin tüm boyutları açısından reddedilmektedir.

"H7: Öğrencilerin girişimcilik eğilimleri aile gelirine göre anlamlı bir farklılık göstermektedir" hipotezi için yapılan Anova testi sonucuna göre (0,05 anlamlılık düzeyinde), demografik özelliklerden öğrencilerin aile gelirinin; yenilikçilik, saldırgan rekabetçilik, öz yeterlilik ve içsel denetim odağı boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olduğu belirlenirken, proaktiflik, risk alma, bağımsızlık, başarma ihtiyacı, dışsal denetim odağı ve yaratıcılık boyutlarına bakış açıları üzerinde ise anlamlı bir etkisinin olmadığı görülmektedir. Anova testine ek olarak yapılan Tukey testine göre ise; öğrencilerin yenilikçilik faktörünü algılamaları açısından aile geliri 200 dolar veya daha az olan grupla geliri 351-500 dolar olan grup arasında önemli bir fark vardır. Öğrencilerin saldırgan rekabetçilik faktörünü algılamaları açısından ise aile geliri 200 dolar veya daha az olan grup ile 651 veya üstünde olan ve ayrıca geliri 201-350 dolar olan grup ile de 651 veya üstü doları olan grup arasında önemli bir fark bulunmuştur.

Öğrencilerin öz yeterlilik faktörünü algılamalarında geliri 501-650 dolar olan grupla 651 veya üstü dolar olan grup arasında istatistiki olarak anlamlı bir fark saptanmıştır. Son olarak öğrencilerin içsel denetim faktörünü algılamalarında geliri 200 dolar veya daha az olan grupla 501-650 gelir grubunda bulunanlar arasında önemli bir fark bulunmuştur. Sonuç olarak H7, yenilikçilik, saldırgan rekabetçilik, öz yeterlilik ve içsel denetim odağı boyutları açısından kabul edilirken, diğer boyutlar açısından reddedilmektedir.

"H8: Öğrencilerin girişimcilik eğilimleri ailede girişimci olup/olmamasına göre anlamlı bir farklılık göstermektedir" hipotezi için yapılan t testi sonucunda (0,05 anlamlılık düzeyinde), ailede girişimcinin olup olmama durumunun; yenilikçilik, proaktiflik, saldırgan rekabetçilik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, içsel denetim odağı, dışsal denetim odağı ve yaratıcılık boyutları üzerinde anlamlı bir etkisinin olmadığı görülmektedir. Sonuç olarak H8, GE'nin tüm boyutları açısından reddedilmektedir.

"H9: Öğrencilerin girişimcilik eğilimleri cinsiyetlerine göre anlamlı bir farklılık göstermektedir" hipotezi için yapılan **t**-testi sonucunda (0,05 anlamlılık düzeyinde), demografik niteliklerden cinsiyetin; saldırgan rekabetçilik, bağımsızlık, içsel denetim ve yaratıcılık boyutlarına bakış açılarının anlamlı bir etkisinin olduğu, yenilikçilik, proaktiflik, risk alma, öz yeterlilik, başarma ihtiyacı ve dışsal denetim odağı boyutları üzerinde ise anlamlı bir etkisinin olmadığı belirlenmiştir. Bu sonuca göre kız ve erkek öğrencilerin saldırgan rekabetçilik, bağımsızlık, içsel denetim ve yaratıcılık boyutlarını farklı algıladıkları görülmektedir. Erkek öğrenciler, kız öğrencilerden daha fazla saldırgan rekabetçilik eğilimde iken buna karşılık kız öğrenciler erkek öğrencilere göre daha bağımsız olma, daha yüksek içsel denetim odağına sahip ve daha fazla yaratıcılık eğilimde oldukları söylenebilir. Sonuç olarak H9, saldırgan rekabetçilik, bağımsızlık, içsel denetim odağı ve yaratıcılık boyutları açısından kabul edilirken, diğer boyutlar açısından reddedilmektedir.

"H10: Öğrencilerin girişimcilik eğilimleri bağlı oldukları fakülteye/yüksekokula göre anlamlı bir farklılık göstermektedir" hipotezi ile ilgili olan Anova testi sonucuna göre (0,05 anlamlılık düzeyinde), öğrencilerin fakültelerinin/yüksekokullarının; saldırgan rekabetçilik, öz yeterlilik, başarma ihtiyacı, içsel denetim ve yaratıcılık boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olduğu belirlenirken, yenilikçilik, proaktiflik, risk alma, bağımsızlık ve dışsal denetim odağı boyutlarına bakış açıları üzerinde ise anlamlı bir etkisinin olmadığı görülmüştür. Anova testine ek olarak yapılan Tukey testine göre ise; öğrencilerin saldırgan rekabetçilik ve içsel denetim odağı faktörlerini algılamaları açısından Mühendislik Fakültesi ile İİBF arasında önemli bir fark olduğu tespit edilmiştir. İletişim Fakültesi ve Edebiyat Fakültesi öğrencilerinin de öz yeterlilik algılamalarında anlamlı bir fark görülmüştür. Son olarak başarma ihtiyacıyla ilgili algılamalarda İletişim Fakültesi ve Meslek Yüksekokulları arasında anlamlı bir fark varken yaratıcılık boyutunu algılama açısından da İletişim Fakültesi ve Mühendislik Fakültesi arasında önemli bir fark saptanmıştır. Sonuç olarak H10, saldırgan rekabetçilik, öz yeterlilik, başarma ihtiyacı, içsel denetim odağı ve yaratıcılık boyutları açısından kabul edilirken, diğer boyutlar açısından reddedilmektedir.

"H11: Öğrencilerin girişimcilik eğilimleri kaçıncı sınıfta olduklarına göre anlamlı bir farklılık göstermektedir" hipotezi için Anova testi sonucuna göre (0,05 anlamlılık düzeyinde), öğrencilerin sınıflarının; yenilikçilik, proaktiflik, saldırgan rekabetçilik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, içsel denetim odağı, dışsal denetim odağı ve yaratıcılık boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olmadığı görülmüştür. Sonuç olarak H11, GE'nin tüm boyutları açısından reddedilmektedir.

"H12: Öğrencilerin girişimcilik eğilimleri akademik not ortalamalarına göre anlamlı bir farklılık göstermektedir" hipotezinin Anova testi sonucuna göre (0,05 anlamlılık düzeyinde), öğrencilerin genel akademik not ortalamasının; risk alma, bağımsızlık, öz yeterlilik ve başarma ihtiyacı boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olduğu belirlenirken, yenilikçilik, proaktiflik, saldırgan rekabetçilik, içsel denetim odağı, dışsal denetim odağı ve yaratıcılık boyutlarına bakış açıları üzerinde ise anlamlı bir etkisinin olmadığı görülmüştür. Anova testine ek olarak yapılan Tukey testine göre ise; öğrencilerin risk alma ve öz yeterlilik faktörlerini algılamalarında şu gruplar arasında fark saptanmıştır; not ortalaması 2.51-3 arasında olan grup ile 3.01-3.50 arasında olan grup. Öğrencilerin bağımsızlık faktörünü algılamalarında ise şu iki grup (2.01-2.50 arası not) (3.01-3.50 arası not) arasında fark saptanmıştır. Son olarak öğrencilerin başarma ihtiyacı faktörünü algılamalarında en düşük not ortalaması olan grup (1-2 arası) ile en yüksek not ortalaması (3.51-4 arası) grubu arasında önemli bir fark olduğu tespit edilmiştir. Sonuç olarak H12, risk alma, bağımsızlık, öz yeterlilik ve başarma ihtiyacı boyutları açısından kabul edilirken, diğer boyutlar açısından reddedilmektedir.

"H13: Öğrencilerin girişimcilik eğilimleri bildikleri yabancı dil sayısına göre anlamlı bir farklılık göstermektedir" hipotezini test etmek üzere yapılan Anova sonucuna göre (0,05 anlamlılık düzeyinde), öğrencilerin ana dillerinin dışında bildikleri dillerin; proaktiflik, risk alma ve bağımsızlık boyutlarına bakış açıları üzerinde anlamlı bir etkisinin olduğu belirlenirken, yenilikçilik, saldırgan rekabetçilik, öz yeterlilik, başarma ihtiyacı, içsel denetim odağı, dışsal denetim odağı ve yaratıcılık boyutlarına bakış açıları üzerinde ise anlamlı bir etkisinin olmadığı görülmüştür. Anova testine ek olarak yapılan Tukey testine göre ise; öğrencilerin proaktiflik ve risk alma faktörlerini algılamaları açısından 2 dil bilenlerle 5 veya daha fazla dil bilenler arasında önemli bir fark olduğu tespit edilmiştir. Ayrıca, 2 dil bilenlerle 4 dil bilenler arasında bağımsızlık faktörünün algılanmasında önemli bir fark olduğu saptanmıştır. Sonuç olarak H13, proaktiflik, risk alma ve bağımsızlık boyutları açısından kabul edilirken, diğer boyutlar açısından reddedilmektedir.

Son olarak "H14: Öğrencilerin girişimcilik eğilimleri girişimcilik dersi alıp/almamalarına göre anlamlı bir farklılık göstermektedir" hipotezine ilişkin t testi sonucunda (0,05 anlamlılık düzeyinde), eğitim esnasında girişimcilik dersi alıp almama durumunun; yenilikçilik, proaktiflik, saldırgan rekabetçilik, risk alma, bağımsızlık, öz yeterlilik, başarma ihtiyacı, içsel denetim odağı, dışsal denetim odağı ve yaratıcılık boyutları

üzerinde anlamlı bir etkisinin olmadığı belirlenmiştir. Sonuç olarak H14, GE'nin tüm boyutlar açısından reddedilmektedir.

7 Sonuç

Girişimcilik, geçiş ekonomilerinde gerek ulusal gerekse bölgesel gelişmenin sağlanabilmesi, rekabetin canlanması ve istihdamın artması açısından büyük önem taşımaktadır. Ancak küresel değişme ve gelişmelere bağlı olarak girişimciliğin niteliğinin de değiştiğini söyleyebiliriz. Çünkü içinde bulunduğumuz bilgi çağında fiziki gücün yerini bilgi gücü almaktadır. Bu çağda sadece para veya sermaye sahibi olmak, girişimci olmaya yetmemektedir. Çünkü girişimci, kendi bilgi ve yetenekleri ile birlikte emek, sermaye, doğal kaynaklar ve hammaddeyi bir araya getirerek üretim ve dağıtım süreçlerini gerçekleştirip yöneten kişidir.

Girişimciliğin ve girişimci kişilerin varlığının geçiş ekonomilerinde ve dolayısıyla Kırgızistan'da yadsınamaz değere sahip olduğu bilinen bir gerçektir. Bu açıdan potansiyel girişimcileri belirlemek ve onları pazara çıkarmanın yollarını bulabilmek açısından üniversite öğrencilerinin girişimcilik eğilimlerinin saptanması önem arz etmektedir. Bu amaçla Kırgızistan-Türkiye Manas Üniversitesi öğrencileri üzerinde kapsamlı bir anket çalışması yapılmış ve öğrencilerin sosyo-demografik özelliklerinin girişimcilik eğilimleri üzerindeki etkisi araştırılmıştır. Araştırmanın sonucunda şu bulgulara ulaşılmıştır:

Uluslararası niteliğe sahip olan Manas Üniversitesi öğrencilerinin çoğunluğunu Türkler ve Kırgızlar oluşturduğu için bu iki grup, vatandaşı oldukları ülkelere göre karşılaştırılmıştır. Türk ve Kırgız öğrencilerinin GE'nin saldırgan rekabetçilik ve içsel denetim boyutları açısından farklılık gösterdiği saptanmıştır. Buna göre Türk öğrencilerin saldırgan rekabetçilik eğiliminin Kırgız öğrencilerden daha fazla olduğu bulunmuştur. Böyle bir bulguya ulaşılmasının sebebi, Kırgız öğrencilerin henüz tam olarak devletçi yapının etkisinden kurtulamamış olmasından kaynaklanıyor olabilir. İçsel denetim boyutu açısında bakıldığında, Kırgız öğrencilerinin içsel denetim odağının Türk öğrencilerden daha yüksek olduğu görülmüştür; -ki bu bulgu, Kırgız kültürünü etkileyen SSCB'nin (Sovyet Sosyalist Cumhuriyetler Birliği) kültürüyle -özellikle dini inançlarıyla- ilgili olabilir. Çünkü Kırgız halkı Müslüman olmasına karşın, bu inançlarını henüz tam olarak gereği gibi yerine getirememektedirler. Türk öğrenciler ise dini inançları gereği kadere daha fazla inanmaktadırlar.

1. Manas Üniversitesi öğrencileri yetiştikleri yer açısından değerlendirildiğinde, köyde, kasabada ve şehirde yetişenler arasında saldırgan rekabetçilik boyutu açısından anlamlı bir farklılık bulunmuştur. Buna göre şehirde yetişen öğrenciler köyde yetişenlere göre daha büyük bir saldırgan rekabetçilik eğilimi sergilemektedirler.

2. Çocukların büyümesinde çok önemli bir etkiye sahip olduğu düşüncesiyle anne ve babaların eğitim düzeylerinin yüksek olup olmamasının GE üzerindeki etkisine bakıldığında, anne baba eğitiminin GE'nin hiç bir boyutunu etkilemediği görülmüştür.

3. Toplam kardeş sayısının GE üzerindeki etkisine bakıldığında, sadece saldırgan rekabetçilik boyutu açısından anlamlı bir farklılık bulunmuştur. Bu bağlamda iki kardeşli olan öğrencilerin beş ya da daha fazla kardeşli olan öğrencilere göre saldırgan rekabetçi eğiliminin yüksek olduğu saptanmıştır. Türkiye'de yapılan araştırmalarda girişimcilerin genelde birinci ve ortanca çocuklardan çıktığı bulgusu elde edilmiştir. Bu bağlamda, Kırgızistan'da kardeş sırasının GE'nin hiç bir boyutu üzerinde etkili olmadığı sonucuna ulaşılmıştır.

4. Aile gelirlerinin öğrencilerin GE üzerinde etkisi değerlendirildiğinde, gelir düzeyinin saldırgan rekabetçilik, öz yeterlilik ve içsel denetim eğilimlerini etkilediği saptanmıştır. Saldırgan rekabetçiliğin en düşük gelir grubu (200≤ dolar) ile en yüksek gelir grubu (651≥ dolar) arasında olduğu bulunmuştur. Ayrıca aile geliri 201-350 dolar arasında olan öğrenciler ile aile geliri 651≥ dolar olan öğrenciler arasında saldırgan rekabetçilik açısından farklılık vardır. Bu bağlamda yüksek gelirli aile çocuklarının daha düşük gelirli aile çocuklarından daha büyük saldırgan rekabetçilik eğiliminin olduğunu söyleyebiliriz. Aile geliri 501-650 dolar arasında olan öğrenciler ile 650≥ dolar olan öğrenciler arasında da öz yeterlilik açısından önemli bir farklılık saptanmıştır. Yüksek gelirin öğrencilerin öz yeterliliği üzerinde etkisi olduğunu belirtebiliriz. Son olarak aile geliri 200≤ dolar olan öğrencilerle 501-650 dolar olan öğrenciler arasından içsel denetim odağı açısından önemli bir farklılık bulunmuştur. Gelir düzeyi yüksek öğrencilerin içsel denetim odağı daha yüksek çıkmıştır.

5. Ailede bir girişimcinin olmasının öğrencileri girişimciliğe yönlendirebileceği düşüncesiyle hareket edilerek yöneltilen soru bağlamında, ailesinde girişimci olan öğrenci grubuyla olmayan grup arasında anlamlı bir farklılık bulunmamıştır. Bu bağlamda Kırgızistan'da ailede girişimcinin olup olmamasının GE üzerinde hiç bir etkisinin olmadığı görülmüştür.

6. Cinsiyet açısından değerlendirildiğinde, saldırgan rekabetçilik, bağımsızlık, içsel denetim odağı ve yaratıcılık boyutları açısından erkek ve kız öğrenciler arasında önemli bir farklılığa rastlanmıştır. Buna göre erkek öğrencilerin saldırgan rekabetçilik eğilimi kız öğrencilerden daha yüksek çıkmıştır. Bu, beklenen bir sonuçtu. Çünkü Hofstede'in de yaptığı bilimsel çalışmalarda ortaya konduğu gibi, eril özelliği bir girişimcilik niteliğidir. Karşıt olarak anlamlı farklılıkların bulunduğu bağımsızlık, içsel denetim odağı ve yaratıcılık eğilimleri açısından da kızlar erkeklere göre daha yüksek ortalamalara sahiptir. Kırgızistan'da kadınların iş yaşamında neredeyse her alanda çok önemli roller üstlendiklerini düşündüğümüzde, böyle bir sonucun çıkması şaşırtıcı olmamıştır.

7. Fakültelere göre öğrencilerin girişimcilik eğilimleri karşılaştırıldığında, Mühendislik Fakültesi ile İİBF öğrencileri arasında saldırgan rekabetçilik açısından anlamlı bir farklılık bulunmuş olup, İİBF öğrencilerinin daha fazla saldırgan rekabetçi eğiliminde oldukları görülmüştür. Öz yeterlilik açısından ise İletişim Fakültesi ile Edebiyat Fakültesi öğrencileri arasında önemli bir farklılık bulunmuştur. Buna göre Edebiyat Fakültesi İletişim Fakültesi öğrencilerine göre daha yüksek öz yeterliliğe sahiptir. Başarma ihtiyacı açısından anlamlı farklılık gösteren İletişim Fakültesi ile MYO öğrencileri değerlendirildiğinde, MYO öğrencilerinin başarma ihtiyaçlarının İletişim Fakültesi öğrencilerine göre daha büyük olduğu çıkmıştır. Son olarak İletişim Fakültesi ile Mühendislik Fakültesi öğrencileri arasında yaratıcılık eğilimi açısından önemli bir farklılık bulunmuştur. İletişim Fakültesi öğrencilerinin yaratıcılık eğilimlerinin Mühendislik Fakültesi öğrencilerine göre daha yüksek olduğu saptanmıştır.

8. Sınıfa göre öğrencilerin GE'nin farklılaşacağı hipotezi değerlendirildiğinde, birinci sınıfta okuyan öğrencilerle son sınıfta olan öğrencilerin GE'lerinde hiçbir farkın olmadığı görülmüştür.

9. Öğrencilerin genel akademik not ortalamaları değerlendirildiğinde, risk alma, bağımsızlık, öz yeterlilik ve başarma ihtiyacı açısından anlamlı farklılıklar bulunmuştur. Risk alma not ortalaması 2.51-3.00 arasında olan öğrencilerle akademik ortalaması 3.01-3.50 arasında değişen öğrenci gruplarında fark olduğu görülmüştür. Akademik ortalaması yüksek olan grup düşük olan gruba göre daha büyük riskler alma eğilimdedir. Bağımsızlık eğilimi şu iki grup (2.01-2.50 arası) (3.01-3.50 arası) arasında farklılaşmakta olup, not ortalaması yüksek olan grup düşük olan gruba göre daha fazla bağımsız olma eğilimindedir. Öz yeterlilik açısından ise şu iki grup (2.51-3.00 arası) (3.01-3.50 arası) arasında önemli bir farklılık bulunmuştur. Not ortalaması yüksek olan grubun düşük olan gruba göre daha fazla öz yeterlilik algısına sahip olduğu görülmüştür. Son olarak başarma ihtiyacı, şu iki grupta (1.00-2.00 arası) (3.51-4.00 arası) anlamlı bir farklılık göstermiştir. Not ortalaması en düşük olan grup yüksek olan gruba göre daha fazla başarma ihtiyacı olduğu inancındadır.

10. Yabancı dil bilmenin girişimcilik ve yurt dışına açılabilme açısından önemli olduğu düşünülmüş ve GE üzerindeki etkisi araştırılmıştır. Ana dilin dışında bilinen toplam yabancı dil sayısı değerlendirildiğinde, proaktiflik, risk alma ve bağımsızlık boyutları açısından anlamlı farklılıklara rastlanmıştır. Proaktiflik açısından iki dil bilenle beş ya da daha fazla dil bilen grup arasında fark vardır. iki dil bilen öğrenciler beş ya da daha fazla dil bilen öğrencilere göre daha proaktif davranışlar sergilemektedirler. Aynı şekilde iki dil bilen öğrenciler beş ya da daha fazla dil bilenlere göre daha büyük bir risk alma eğilimindedirler. Son olarak iki dil bilen grupla dört dil bilen grup arasında bağımsızlık açısından görülen fark, dört dil bilenin daha büyük bağımsızlık eğilimde olması şeklindedir.

11. Son olarak eğitim esnasında alınan girişimcilik dersinin GE üzerinde bir etkisinin olmadığı bulunmuştur.

Yerel Ekonomilerin Yeni Aktörü, Bölgesel İnovasyon Stratejileri: RIS Mersin Uygulaması

New Actor of the Local Economies, Regional Innovation Strategies: RIS Mersin Application

Asst. Prof. Dr. Filiz Tutar (Niğde University, Turkey)

Asst. Prof. Dr. Emine Fırat (Aksaray University, Turkey)

Mrs. Çisil Erkan (Niğde University, Turkey)

Prof. Dr. Erdinç Tutar (Niğde University, Turkey)

Abstract

Innovation is in a key position of competition and development in our globalizing world.Regional innovation system can be defined to minimize interzonal imbalances,to take the skilled labor and policies and strategies implemented to enhance the competitiveness of firms.In this connection , regional innovation strategy plays an important role in terms of increasing the regions innovation. Mersin which is an important port city in the eastern coast of the Mediterranean, is not at the place it deserves in socio-ecenomic sense either in turkey or in the world. In general to promote regional innovation systems in order to increase of the region's innovation potential and competitiveness and in particular put forth of Mersin's regional innovation strategy's strengths and weaknesses and opportunities and threats is form of the purpose of the study.

1 Giriş

Günümüzde ulusların Dünya ile rekabet edebilmesinin tek yolu ülkelerin/bölgelerin ne kadar yenilik yani inovasyon yaptığıdır. Bölgesel inovasyon stratejilerinin ana hedefi ise bölgedeki firmalar ekseninde rekabetçiliği ve inovasyonu desteklemektir. Mersin inovasyon stratejisinin vizyonu; Mersin'in yüksek yaşam kalitesi, bilgi ve inovasyona dayalı sürdürülebilir bir ekonomiye sahip bir dünya kenti haline gelmesi, hedefi ise, Mersindeki işletmelerin inovasyon yeteneğinin geliştirilmesidir.

Mersin inovasyon stratejisinin başarısı için kilit önem taşıyan aktörler (Örneğin; işletmeler, hükümet organları, finansman sağlayan kurumlar, üniversiteler ve diğer bilgi üreticileri) arasında bağlantı, etkinlik ve etkileşimin kalitesi ve yoğunluğu çok önemlidir. Bu da inovasyonun sadece teknolojik değil, aynı zamanda sosyal bir süreç olduğunu gösterir. İşte Mersin'de ki işletmelerin inovasyon yeteneğini geliştirmeyi hedefleyen bu strateji, aynı zamanda ilde yaşam kalitesinin arttırılmasına, istihdam yaratılmasına ve sürdürülebilir bir bölgesel ekonomi oluşturulmasına katkı sağlayacaktır. Çalışmamızda öncelikle yerel kalkınma bölgesel inovasyon ilişkisine teorik olarak değinildikten sonra bölgesel inovasyon sistemi ve performans belirleyicileri hakkında bilgi verilmiştir. Çalışmamızın ana konusunu oluşturan Mersin RIS'de tüm detaylarıyla anlatılmıştır.

2 Yerel Ekonomik Kalkınma - Bölgesel İnovasyon İlişkisi

Günümüzde kentler arası rekabetin ortaya çıkmasıyla beraber yerel ekonomik kalkınma giderek önemi artan bir kalkınma politikası olmuştur. ILO'ya göre yerel ekonomik kalkınma; yerel kaynakları ve rekabet avantajını kullanarak belirli bir bölgede kamu ve özel sektör aktörleri arasında ortaklık ve işbirliği faaliyetlerini destekleyen, genel bir kalkınma stratejisinin ortak şekilde oluşumu ve uygulamasına imkan tanıyan, uygun bir iş ortamının yaratılması ve ekonomik aktivitelerin desteklenmesi gibi önemli hedefleri olan katılımcı bir kalkınma sürecidir (Boekel ve Logtestijn, 2002). Bu kalkınma sürecinde rol oynayan yerel ekonomik kalkınmanın aktörlerini sıraladığımızda,valilikler, belediyeler, sivil toplum kuruluşları, iş dünyası, üniversiteler ve medya başta gelmektedir. Bunlara ek olarak son yıllarda teknolojinin gelişmesi, kurumlar arası iletişimin artması ve bilginin artan önemiyle beraber inovasyon sistemi kavramı ortaya çıkmıştır.

Başlangıçta ulusal düzeyde tanımlanmış olan inovasyon sistemi kavramı, sonraları bölgesel, sektörel ve yerel düzeye de uyarlanmıştır. Bölgesel düzeyde ele alındığında, işletmeler, üniversiteler ve eğitim kurumları, araştırma kuruluşları, kamu kurumları, finansman kuruluşları, aracı kuruluşlar (inovasyon ve iş destek merkezleri, teknoloji transfer ofisleri, vb.), sivil toplum kuruluşları, inovasyon ve teknoloji altyapısını destekleyen kuruluşlar (teknoparklar, kuluçka merkezleri, vb.) gibi çok çeşitli aktörün ve bunlar arasındaki etkileşimin oluşturduğu bir ortamdır (Elçi, vd, 2008).

İnovasyon sistemi içerisinde; yerel nitelikte ki ekonomik kalkınma araçları/kuruluşları özel bir yer tutarlar. Bunlar (Arıkan, 2004);

- *İnovasyon Merkezleri;* merkezle firmalar arasında ağyapı kurarak yaratıcı fikir ticareti konusunda danışmanlık hizmetleri sunar ve girişimciye işe başlaması için destek verir.

- *Kuluçkalıklar;* başlangıç aşamasındaki yaratıcı girişimciye ucuz mekan, ortak tesisler ve uzman desteği sağlar.
- *Araştırma Parkı;* endüstriyel araştırma faaliyeti ile akademik araştırma arasındaki bağı kurarak endüstriyel araştırma faaliyetini araştırma enstitülerine yaklaştırır.
- *Bilim Parkı;* üniversite araştırması ile ticari faaliyet arasında ilişki kurar, üniversite merkezli ve kamu destekli bir ortam sağlar.
- *Teknoloji Parkı;* endüstriyel gelişme amacı ile teknoloji tabanlı imalatçılara çekim alanı yaratır, onlara destek avantaj sunar.
- *İşbirliği Parkı;* yapılarla sınırlı olarak tesis kullanımı sağlar.
- *Girişimci Bölgesi;* belirli iş faaliyetlerinin, özel fon destekleri ile tanımlı alanlara çekilmesini kolaylaştırır.
- *Bilim Kenti;* imalat bağı bulunmayan bilimsel komplekslerdir. İnovasyon ortamının sinerjisinden bilimsel mükemmeliyet oluşturmak için kurulmuştur.
- *Teknokent;* teknoloji – sanayi çevresinin bütünüyle bir kent olarak tasarlandığı ve bölgesel kalkınma amaçlı araçlardır.
- *Kümeler;* bölgesel olarak birbirine yakın ve birbiri ile ilişki içinde olan işletmelerin rekabet içinde işbirliği yapmasıdır.

Temel olarak inovasyon sistemleri; mikro, mezo ve makro olmak üzere üç düzeyde ele alınabilir. Mikro düzeyde firmalarda ki inovasyon süreçlerine odaklanılırken, mezo düzeyde endüstriyel/sektörel inovasyon sistemlerine (kümelenmelere) odaklanılmaktadır. Makro seviyede ise inovasyon sistemi ulusal düzeyde ele alınmaktadır. Ancak bu noktada ulusal, bölgesel ve sektörel inovasyon sistemi düzeylerinin birbirlerinin yerine geçebilecek alternatifler olarak düşünülmemesi gerektiği de belirtilmelidir. Aksine tüm inovasyon sitemi düzeyleri, Birbirlerinin tamamlayıcıları niteliğindedir. Çünkü ulus-altı yapılanmalar, böylesine riskli bir faaliyet alanına yatırım yapmak için ihtiyaç duyulan yasal ve finansal kaynaklara sahip değildir. Bu nedenle ulusal bir yaklaşım olmaksızın bilim, teknoloji ve inovasyon için bölgesel bir politika yürütmek mümkün olmamaktadır. Ancak, ulusal bir yaklaşım gerekli olmakla birlikte, böyle bir yaklaşım inovasyonu teşvik edememektedir. Çünkü beşeri sermayenin belli bölgelerde birikmesi, yoğunlaşması ve diğer bölgelerde ki eksiklikler nedeniyle, ulusal inovasyon politikaları bazı bölgelerden yararlanma imkanına kavuşmaktadır. Dolayısıyla ulusal inovasyon sisteminin inşasını bölgesel kurumların oluşturulması ve bölgesel inovasyon sistemi takip etmelidir (Niosi, 2010).

3 Bölgesel İnovasyon Sistemi

İnovasyon, bugün artık sadece ulusal düzeyde değil, bölgesel düzeyde de gelişme, kalkınma ve rekabetçiliği mümkün kılan en önemli unsurların başında gelmektedir. Bu gerçekten hareketle yaklaşık 20 yıldır dünyanın pek çok ülkesinde bölgesel inovasyon sistemleri tasarlanmakta ve uygulanmaktadır (OKA, 2012). Günümüzde gelişmiş ve gelişmekte olan ülkelerde bölgesel inovasyon sistemleri ekonomik büyümenin tetikleyicisi olarak görülmeye ve ekonomik politikalarda önemli yer tutmaya başladı.

Bölgesel inovasyon sistemi; bölgeler arasındaki dengesizlikleri en aza indirmek, inovasyona dayalı firmaları ve nitelikli işgücünü çekmek ve firmaların rekabet gücünü artırmak için uygulanan politika ve stratejiler olarak tanımlanmaktadır. Bir bölgenin inovasyona bağlı olarak gelişmesi ve refah seviyesinin yükseltilebilmesi için bölgenin sahip olduğu fiziksel, toplumsal, beşeri ve finansal sermayeye yatırım yapılması gerekir (Işık ve Kılınç, 2011).

Bölgesel İnovasyon Merkezlerinin vizyonu, bulundukları bölgelerin kalkınmasına katkıda bulunmak üzere bölge için kritik sektörlerin inovasyona dayalı sürdürülebilir rekabet gücü kazanmasını mümkün kılacak lider kurumlar olmaktır.

Bölgesel İnovasyon Merkezlerinin misyonu, odaklandıkları sektörlerde faaliyet gösteren firmaların küresel düzeyde rekabet gücüne sahip; daha hızlı ve sağlıklı büyüyen, daha çok değer ve daha fazla istihdam yaratan firmalara dönüşmelerini sağlamak için inovasyona dayalı ihtiyaçlarını karşılamak ve inovasyon için işbirliklerini oluşturmaktır.

Bölgesel İnovasyon Merkezlerinin Amaçları, Yukarıdaki vizyon ve misyon doğrultusunda bölgede odaklanılan sektörlerin küresel düzeyde rekabet edebilir hale gelmesi için inovasyona ilişkin fırsatları yaratmak ve bu amaçla bölgedeki inovasyon potansiyelini harekete geçirmektir.

Bu çerçevede belirlenen özel amaçlar şunlardır:

- Odaklanılan sektörlerdeki tüm bölgesel paydaşları (büyük firmalar, KOBİ'ler, üniversiteler, araştırma merkezleri, kamu kurumları, sivil toplum kuruluşları) sektörün inovasyon performansının artması için işbirliği yapma konusunda cesaretlendirmek ve yönlendirmek,
- Odaklanılan sektörlerdeki firmaların inovasyon yapma yeteneğini artırmak, sektörde inovasyona dayalı yeni firmaların kurulmasını sağlamak,

- Odaklanılan sektörlerin inovasyon faaliyetlerinin etkinliğini artırmak için gerekli altyapı ve imkanların oluşmasını, mevcut ve kurulacak olan altyapıların etkin kullanılmasını sağlamak.

Bölgesel inovasyon sistemi, kendisini oluşturan aktörler (bölgedeki işletmeler, kamu kurumları, finansman sağlayıcılar, üniversiteler, sivil toplum kuruluşları, araştırma kuruluşları ve diğer ilişkili kuruluşlar) arasındaki işbirlikleriyle hayat bulur. Bir bölgesel inovasyon sisteminin etkinliği, bu aktörler arasındaki ilişkilerin kalitesi ve yoğunluğuna bağlıdır.

Bölgesel inovasyon sistemi, bir bölgenin üretim yapısı içerisindeki inovasyonu destekleyen kurumsal altyapı olarak düşünülebilir. Bölgeler, bölgesel (mezo) düzeydeki iktisadi koordinasyonun önemli bir dayanağıdır: Bölge, inovasyonun; inovatif bölgesel ağlar, yerel kümeler ve araştırma enstitülerinin verimli etkileri aracılığıyla üretildiği yerdir (Asheim ve Gertler, 2005).

Bölgesel inovasyon sistemi yaklaşımının önemli olmasının iki ana nedeni vardır: Bölgelerde üretilen güçlü inovasyon dinamikleri ulusal inovasyon politikası hedeflerine ulaşmak için önemlidir ve inovasyon performansı firmaların verimliliğini artırarak bölgelerin genel ekonomik rekabet edebilirliğine katkı sağlarlar. Bölgesel inovasyon politikasının hedefleri bölgesel kalkınma ve bilim ve teknoloji alanlarındaki politika yapıcıları ile ilgilidir (OECD, 2008).

3.1 Bölgesel İnovasyon Stratejisi

Bölgesel inovasyon stratejisi bölgelerin yenilikçiliğini arttırması açısından strateji geliştirme noktasında önemlibir rol üstlenmektedir.

Bölgesel İnovasyon stratejisini oluşturan ana kavramlar; Avrupa Yenilikçi Bölgeler Ağı (IRE), Bölgesel İnovasyon Stratejileri (RIS) ve İnovasyon Aktarım Merkezleri (IRC) şeklindedir. Avrupa Komisyonu tarafından desteklenen IRE (Avrupa Yenilikçi Bölgeler Ağı) , işbirliğinin sağlanması ve bölgesel yenilikçilik stratejilerinin uygulanması veya gelişmekte olan bölgelerin deneyimlerinin paylaşımı amacıyla yapılanmıştır. IRC (İnovasyon Aktarım Merkezleri) ise Avrupa genelinde kurulan, uluslararası teknoloji transferine destek sağlama konusunda uzmanlaşmış teknoloji aracı kuruluşlarıdır (Gök, 2006).

RIS (Bölgesel İnovasyon Stratejileri); yenilikçiliğin teşvik edilmesine yönelik denenmiş ve sınanmış yaklaşımları işletmelere taşıyarak bu işletmelerin rekabet edebilir düzeye gelmelerini sağlamaktır. RIS, bölgelerin yenilikçiliği arttırmaları adına stratejiler üretmesi, inovasyon politikaları ile birlikte mevcut altyapının en iyi şekilde kullanılması ve geliştirilmesi üzerine çizilen bir yol haritasıdır. Bu, beş aşamalı bir sürecin takip edilmesi ile ortaya çıkmaktadır. Bu aşamaları şu şekilde sıralayabiliriz;

- Bölgesel diyaloğun başlatılması,
- İlgili bütün organizasyonların inovasyon politikasının oluşturulması sürecine doğrudan katkıda bulunması,
- Güçlü ve zayıf yanların,tehdit ve fırsatların belirlenmesi,
- İnovasyonun teşviki için önceliklerin belirlenmesi,
- Uygulama ve stratejilerin eyleme dökülmesi (Rekabet Forumu, 2006) Bölgesel inovasyon stratejileri bu aşamaların takip edilmesi sonucu ortaya çıkmaktadır.

Bölgesel inovasyon stratejilerinin oluşturulmasında şu noktaların özellikle altı çizilmektedir.;

- Arzu edilen kalkınma yörüngesinin tanımlanması, ayrıca değişimin ana etkenlerinin belirlenmesi,
- Bu özellikler ışığında inovasyon politikasının tasarımı,
- Diğer ulusal fonlarla birlikte yapısal fonların uyarlanması,
- Koordinasyon ve bölgesel karar sistemleri ile merkezi yönetim arasındaki dengenin sağlanması ve sürdürülmesi için kurumsal düzeyde çalışmaların yapılması,
- Kurumlar, organizasyonlar arasındaki etkileşimin en azından mali kaynaklar kadar büyük öneme sahip olduğunun kabul edilmesi,
- Başarı örneklerinin paylaşılması (Rekabet Forumu, 2006).

3.2 Bölgelerin İnovasyon Sistemi Performans Belirleyicileri

Bir bölgenin inovasyona bağlı olarak gelişmesi, rekabet gücünün artması ve yaşam kalitesinin yükseltilmesi için, o bölgenin sahip olduğu dört sermaye faktörüne (fiziksel sermaye, toplumsal sermaye, insan sermayesi ve finansal sermaye) yatırım yapılması gerekir. Bu faktörlerin varlığı ve etkin kullanımı, bölgesel verimlilik, istihdam ve yüksek yaşam standartını beraberinde getirir. Bu faktörler;

Fiziksel sermaye, insan sermayesi ve toplumsal sermayenin gelişimi için şarttır.

Toplumsal Sermaye, bireyler arasındaki bağlantıları ifade eder. İnovasyonda başarının ana şartlarından biri işbirliğidir. Bu nedenle toplumsal sermayenin gücü bölgenin inovasyona dayalı kalkınmasının belirleyici unsurlarındandır.

İnsan sermayesi, bireylerin beceri, eğitim ve bilgilerini; bölgenin sahip olduğu insan kaynaklarının niteliğini ve miktarını ifade eder. İnsan sermayesi, diğer sermayelerle yakından ilişkilidir: Nitelikli insan kaynağı toplumsal sermayenin güçlenip gelişmesini sağlar. Güçlü bir fiziksel sermaye nitelikli insan kaynaklarının

bölgeye çekilmesini mümkün kılar. Zengin insan sermayesi, finansal sermayenin artmasını sağlar (örneğin yabancı yatırım çekilir).

Finansal sermaye, bir bölgede inovasyonun gelişmesi için varolan ve bölgeye çekilen (yerli ve yabancı) finansal kaynakları ifade eder (Elçi, 2006).

Bölgeler arasındaki dengesizliklerin ortadan kaldırılması için, her bölgenin özelliğine göre inovasyon politika ve stratejilerinin oluşturulması gerekir. Bu politikaların tasarlanması ve uygulanmasında bölgenin tüm paydaşlarının etkin rol alması çok önemlidir.

3.3 Dünya ve AB Ekseninde Bölgesel İnovasyon Stratejileri Uygulamaları

Dünya'nın çeşitli ülkelerinde değişik şekillerde bölgesel inovasyon stratejileri uygulanmıştır. Bunlara örnek verecek olursak;

Amerika Birleşik Devletleri'nde İnovasyon stratejileri; hükümet aracılığı ile desteklenmiştir. İnovasyonun önemli araçlarında olan ilk teknopark 1952 yılında ABD Kuzey Kaliforniya Resarch Park'tır. ABD'de 150 teknopark vardır. Bunlardan en önemlilerinden bir tanesi Dell Bilgisayarlarının kurulduğu 1750 teknoloji şirketi ile Teksastaki Austin teknoparkıdır. Bu bölgede spor ve eğlence teknoloji ile kaynaştığı için eğlence programlarının yazılım merkezi olmuştur. Bostondaki Massachusett teknoloji parkında ise 3600 ileri teknoloji şirketi faaliyet göstermektedir. Bölgede 65 kolej ve üniversite vardır. En bilinen şirket Lotus'tur ve IBM'i gerçekleştirmiştir. Bölgedeki zengin kişilerin oluşturduğu iki melek grubu yeni şirketlerin fikir aşamasındaki oluşumlarına finansal destek sağlayarak ilerlemelerini sağlamaktadır. Salt Lake City'de ise savunma sanayinin gelişimi 1960'lı yıllardan itibaren araştırma geliştirme faaliyetlerine önemi artırmıştır. 1980 ve 1990'lı yıllarda bilgisayar yazılım hizmetlerinde gelişim yaşanmıştır. Bölgede 2120 teknoloji şirketi faaliyet göstermektedir ve yerel araştırma merkezi Utah Üniversitesidir. Novell, Imega, Evans Sutherland ve yeni kurulan yerel şirketler için dört yıllık data depolama yazılımları yapan Power Quest'dir. Washington'da Seattle'da Windows programının başarısı ile yazılım şirketlerinin sayısı 25000'e ulaşmıştır. Microsoft ve Amazon.com bölgedeki teknoloji yetenekleri havuzundan yararlanmışlardır. Silikon Vadisinde ise 8000 şirket bulunmaktadır ve 400.000'e yakın kişi istihdam edilmektedir. Silikon Vadisi Standfod üniversitesi ile bağlantılı çalışmaktadır ve dünyanın en büyük teknokentlerindendir (Taymaz, 2001).

Japonya'da bölgesel inovasyon stratejileri; Japonya'da 1957 yılında teknoloji politikalarının ilk hamlesi olan Elektronik Endüstri Teşvik Yasası çıkarılmıştır. Hükümet yasa çerçevesinde yerel firmaların işbirliğini ve anahtar teknolojilerin geliştirilmesi için gerekli özgür ortamın yaratılmasını desteklemektedir. Japonya'da Uluslararası Ticaret ve Sanayi Bakanlığı MITI inovasyon sürecinde etkin rol oynamaktadır. Japonya'da kurum içi bireyler arası işbirliği ve dayanışma için "Keiretsu" adı verilen örgütler Dış Ticaret ve Sanayi Bakanlığı ile işbirliği sağlayarak rekabette dayanışmayı sağlamışlardır (Ertuna, 2000). Japonya'da bilim ve teknoloji politikaları tek bir kuruma dayalı merkezi bir yapı içerisinde olmamasına rağmen kurumlar arası sistemli ve iyi işler bir eşgüdüm sağlanabilmiştir. Japonya'da inovasyon politikaları açısından etkin olan kurumlar Bilim ve Teknoloji Konseyi (CST), Bilim ve Teknoloji Ajansı(STA), Uluslararası Ticaret ve Sanayi Bakanlığı (MITI), Japon Araştırmaları Geliştirme Kurumu (JRDC), Eğitim Bilim ve Kültür Bakanlığı (MESC)'dir (TÜBİTAK, 1996). Ekonomik Plan Ajansı (EPA) 2010 Yılı Komite Raporunu hazırlayarak inovasyon konusunda çalışmalar yapmakta bilim ve teknoloji hedeflerini ortaya koymaktadır.

Hindistan'da bölgesel inovasyon stratejileri; Bangalore Bölgesel inovasyonun önemli merkezlerindendir. 250 ileri teknoloji şirketi Hindistan Bilim Enstitüsü ile çalışmalar yürütmektedir. Hindistanın teknoloji başkenti olan Bangalor'da 1881'de 2.4 milyon olan kent nüfusu, son yıllarda 5 milyona çıkmıştır. Dünyada en çok program yazılımcısı yetiştiren Hindistan, yazılım ürünlerinin tümünü uydu aracılığı ile ihraç edebilmektedir (Harmancı ve Önen, 1999).

AB'nde bölgesel inovasyon stratejileri; 1986 yılında uluslararası rekabet yeteneğinin artırılması amacı ile tek Avrupa pazarını geliştirmeye yönelik Avrupa Tek senedi projesi başlatılmıştır. Bölgenin inovasyon düzeyini artırmak amacı ile Enformasyon Teknolojisi Avrupa Stratejik Programı ESPRİT, Avrupa ülkelerinin dünya pazarında rekabet gücünü artırmak amacı ve Ar-Ge faaliyetlerine öncelik vermek için Avrupa Teknolojik İşbirliği Ajansı-EUREKA, AB ülkelerinin inovasyon politikaları arasında bütünlüğü sağlamak amacı ile Avrupa Çerçeve Programları AB inovasyon politikaları çerçevesinde oluşturulmuştur. Girişimcilik Genel Müdürlüğü AB inovasyon politikasının yapılandırılması açısından önemlidir. 1994 yılında büyüme, rekabet ve istihdam konulu Beyaz Rapor yayınlanmıştır. Ar- fonlarının artırılması yönünde sonuç bildiren raporda AB'nin İnovasyon politikaları irdelenmiştir. 2000 yılı AB Lizbon stratejisi kapsamında dünyanın en rekabetçi ekonomisi olma yolunda adımını atmıştır. Rapora göre 2005 yılında ABD'nin inovasyon performansı AB'den % 40 daha iyi bir gelişme göstermiş, 2008 yılında fark % 28 olmuştur. 1997 yılında inovasyon bazlı işletmelerin geliştirilmesi için Avrupa İnovasyon Eylem Planı ve İnovasyon Eğilim Haritası oluşturulmuştur. 2008 Avrupa İnovasyon Göstergeleri son beş yıldır AB'de inovasyon performansı artışının 2.3 oranında olduğunu göstermektedir. AB'nin güçlü olduğu alanlar genç eğitimi, kamu kesimine ait Ar-Ge harcamaları, bilgi teknolojileri harcamaları, bilgi yoğun hizmetler ve ileri teknoloji ürün ithalatıdır. Rapora göre AB'nin güçsüz olduğu göstergeler ise hayat boyu eğitim ve KOBİ'ler arası inovatif işbirliği performansıdır. AB ülkelerinden Finlandiya, Almanya, Danimarka ve

İngiltere grup içinde inovasyon lideri olarak değerlendirilirken, İnovasyon liderleri arasında da en yavaş ülke Danimarka iken en hızlı ülke Almanya'dır. Avusturya, İrlanda, Lüksemburg, Belçika, Fransa, Hollanda AB ortalamasının üstünde fakat Finlandiya Almanya Danimarka ve İngiltere'nin altında bir grafik sergilemektedir. Kıbrıs, Estonya, Lüksemburg, Slovenya, Çek Cumhuriyeti, İspanya, Portekiz, Yunanistan ve İtalya AB ortalamasının altında bir seyir izlemektedir. 2008 AB inovasyon göstergesi, inovasyon konusunda Avrupa Birliği'nin, uluslararası patentler, kamu özel sektör bağlantıları, araştırmacı sayısı ve iş dünyasının Ar-Ge harcamaları konusunda ABD ve Japonya'dan geri olduğunu göstermektedir. AB üyesi olan İtalya'da da inovasyon çalışmaları yapmak amacı ile Technopolis Novus Ortus İnovasyon Parkı, Trieste'deki temel uygulama araştırma merkezi Area ve Torinodaki Tecnocity projesi, ülkenin ilk çalışmalarını oluşturmaktadır. Torino ülkedeki Ar-Ge harcamalarının %28'nin yapıldığı ve dışsal ekonomilerin yaratıldığı bir bölgedir. 1981 yılında Padoa üniversitesinden güç alınarak kurulan Venedik Araştırma Merkezi'de bölgenin diğer önemli inovasyon merkezidir (Güleç, 1994).

3.4 Türkiye'de Bölgesel İnovasyon Sistemi Kronolojisi

Türkiye'de inovasyon politikalarının ilk tohumu 1963 senesinde Türkiye Bilimsel Araştırma Kurumu'nun (TÜBİTAK) kurulmasıyla atılmıştır. 'Türk Bilim Politikası 1983- 2003' adlı ilk politika belgesi devlet tarafından 1983 yılında yayımlanarak Ar-Ge faaliyetlerini artırmayı ve öncelikli teknoloji alanlarını tanımlamayı hedeflenmiştir. Önemli bir diğer kilometre taşı ise yine 1983 yılında 'Bilim ve Teknoloji Yüksek Kurulu'nun (BTYK) kurulmasıdır. 1993 yılında oluşturulan ikinci politika dokümanı ise, 'Türk Bilim ve Teknoloji Politikası: 1993-2003' adı verilen çalışma olmuştur. Söz konusu politika dokümanlarının amacına bakıldığında; bir ulusal inovasyon sistemini kurmak, bu sistemin tüm kurumları ve diğer mekanizmalarının yine sistematik bir uyum içerisinde bilimsel ve teknolojik Ar-Ge aktivitelerini geliştirmesini sağlamak ve tüm faaliyetlerin sonuçlarını ekonomik ve sosyal fayda sağlamaya dönüştürmek olarak ortaya konduğu görülür.

1997 Ağustos'unda BTYK, '1996-1998 yılları için Bilim ve Teknoloji Politikası Gündemi' başlıklı raporu onaylamıştır. Rapor, ulusal bilim ve teknoloji politikasının ana temalarından biri olan ulusal inovasyon sisteminin oluşturulması amacıyla gerek duyulan hazırlıkları tanımlamaktadır. BTYK'nın bu kararı inovasyon kavramı çevresinde şekillenmiş, bölgesel inovasyon sistemleri üzerinde araştırma; inovasyon kavramı üzerinde bir bilinç yaratma; teknoloji yönetimi, inovasyon ve kalite yönetimi tekniklerini yaygınlaştırma; inovasyon geliştirme faaliyetlerini hızlandırma ve son olarak da KOBİ'lerin inovasyon geliştirme etkinliklerini destekleme alanlarına değinmiştir.

BTYK'nın 1999, 2000 ve 2001 yıllarındaki toplantılarının ardından yayımladığı kararları, benimsenmiş inovasyon politikalarını ve stratejilerini koruyacak biçimde şekillenmiştir. TÜBİTAK'ın koordinasyonu ve BTYK'nın takip eden kararı ile 2002 yılında başlayan 'Vizyon 2023 Projesi' ile geçmişteki Türk bilim ve teknoloji politikasına yönelik çabalar devam etmiştir. Proje genel olarak, farklı sosyo-ekonomik alanda 11 adet panelle beraber bir ulusal teknoloji öngörüsü çalışmasını, kamu, özel sektör ve sivil toplum kuruluşları ile yapılacak olan bir araştırmayı kapsamaktadır.

2001 ile 2005 yılları arasındaki dönemi kapsayan 8. Beş Yıllık Kalkınma Planı teknolojik inovasyon üretme konusundaki ihtiyaçlara odaklanmaktadır. Sekizinci Beş Yıllık Kalkınma Planı'nın hazırlanması aşamasında, 'Bilim ve Teknoloji Özel İhtisas Komisyonu' inovasyon politikalarının sürdürülmesi alanında bir öneri dokümanı hazırlamıştır (Ulusoy vd., 2006).

Tüm bu raporların kalkınma planlarında bahsedilen inovasyon ile ilgili konular üzerinde birer yapıtaşı oluşturduğunu söylemek mümkündür. 2007-2013 yılları arasındaki dönemi ele alan son kalkınma planı olan 9. Plan'da ulusal düzeyde rekabet gücü kazanılabilmesi için inovasyona özel bir önem verildiği görülür.

Türkiye'de son yıllarda çeşitli bölgelerde bölgesel inovasyon stratejileri uygulanmakta ve projeler hazırlanarak yürürlüğe konmaktadır. Bunlara örnek verecek olursak,

ESİNKAP adı altında Eskişehir ili inovasyon stratejileri için kapasite oluşturma projesi gerçekleştirilmiştir. Bu projede, Bölgesel İnovasyon Sistemi ile ilgili ana hatlar sunulmuş ve Eskişehir Bölgesi için teknolojik inovasyon ve çevre ağırlıklı bir bölgesel inovasyon çalışması için gerek duyulabilecek ve bölgenin ATGİ yeteneklerinin gelişimine destek olabilecek bazı faaliyetler önerilmiştir.

Gaziantep İlinde Gaziantep Sanayi Odası öncülüğünde, firmaların inovasyona yönlendirilmesini sağlamak, inovasyon bilincini oluşturmak, belirlenen amaçlar ve uygulama planı dahilinde özel sektör- üniversite ve projeye katkı sağlayacak diğer önemli paydaşların etkileşimini arttırmak; Gaziantep yoluyla hedeflenen ve hayata geçirilen gelişmelerin sonucu olarak ortaya çıkan verileri bölgesel, ulusal ve uluslar arası platforma taşıyarak birer başarı, gösterge ve motivasyon öğesi haline getirmek amacıyla 2006 yılında inovasyon vadisi Gaziantep projesi yürütülmeye başlanmıştır ve başarılı olması sonucunda Türkiye Halkla İlişkiler Derneği tarafından sektördeki hizmet kalitesini yükseltmek ve mesleki gelişimi desteklemek amacıyla her yıl düzenlenen "Altın Pusula Halkla İlişkiler Ödülleri" nde 1.lik kazanmıştır.

2011 yılında Orta Karadeniz Kalkınma Ajansı (OKA) tarafından Technopolis Group'un danışmanlığında 'Orta Karadeniz İnovasyon Stratejisi ve Eylem Planı Geliştirme Projesi' ortaya sürülmüştür. Bölgenin inovasyon potansiyelinin harekete geçirilmesi ve eksiklerinin giderilmesi için bir yol haritası niteliğinde olan ve bölgenin

geleceğine yön verecek 'Bölgesel İnovasyon Stratejisi ve Eylem Planı'nın hazırlığına ilişkin çalışmayı Kasım 2011'de başlatmıştır. Orta Karadeniz Bölgesel İnovasyon Stratejisi, "akıllı uzmanlaşma" *("smart specialisation")* yaklaşımı dahil olmak üzere, yeni nesil bölgesel inovasyon stratejilerinin öngördüğü kavram ve unsurlar esas alınarak hazırlanmıştır. Buna göre, bölgenin ulusal ve uluslararası rekabet avantajı kazandıracak az sayıda önceliğe odaklanması ve stratejiyi, dörtlü sarmal olarak nitelendirilen özel sektör, kamu, üniversite ve toplum arasında sağlanacak etkin bir işbirliğiyle hayata geçirmesi öngörülmektedir. Orta Karadeniz Bölgesi inovasyon vizyonu şu şekildedir: Orta Karadeniz Bölgesi, 2023 yılında rekabetçi sektörleri ile inovasyon ve girişimcilik kültürü yüksek toplumu sayesinde ulusal ve uluslararası düzeyde kalkınmada öncü bir bölge halini alacaktır (Orta Karadeniz Eylem Planı, 2012).

Mersin RIS projesi Türkiye'de gerçekleştirilmiş olan en geniş çaplı bölgesel inovasyon projesidir.

4 Mersin RIS Örneği

Doğu Akdeniz sahilinde, önemli bir liman kenti olan Mersin'de, RIS-Mersin Projesi, Haziran 2005-Ocak 2008 tarihleri arasında Mersin Valiliği başkanlığı ve ODTÜ Teknopark A.Ş. koordinasyon'unda, Mersin Üniversitesi, Mersin Ticaret ve Sanayi Odası, Mersin Tarsus Organize Sanayi Bölgesi ve Yunanistan'dan Epirus Bölgesi İşletmeler için İnovasyon Merkezi (Business Innovation Center) ortaklığında yürütülmüştür.

Avrupa'da yaklaşık 150 bölgede Avrupa Komisyonunun katkılarıyla yürütülen Bölgesel İnovasyon Stratejileri Projeleri "KOBİ odaklı olmak üzere bölgelerin yenilikçilik potansiyelini artırmaya yönelik stratejiler üretilmesini, inovasyon politikaları ile mevcut kaynakların ve altyapının en iyi şekilde kullanılmasını ve geliştirilmesini" amaçlamaktadır.

Proje sonucunda Türkiye'nin ilk bölgesel inovasyon stratejisi çalışması olan "**2016 Mersin İnovasyon Stratejisi**" ve "**2008-2009 Eylem Planı**" oluşturulmuştur

Mersin İnovasyon Stratejisi kapsamında Mersin'in vizyonu; "yüksek yaşam kalitesine, bilgi ve inovasyona dayalı sürdürülebilir ekonomiye sahip bir bölge haline gelmek" olarak belirlenmiştir.Mevcut durum analizine dayanarak, Mersin'in bu vizyona ulaşabilmesi için Mersin İnovasyon Stratejisi aşağıdaki hedefler etrafında şekillendirilmiştir.

Ana stratejik hedefler:

- Mersin'in inovasyon sisteminin iyileştirilmesi,
- Mevcut firmalardaki inovasyon faaliyetlerinin arttırılması ve inovasyona dayalı girişimciliğin teşvik edilmesi,
- Kilit önem taşıyan sektörlerde (Tarım-Gıda, Lojistik ve Turizm) bölgesel potansiyelin kullanılması,
- Bilgi üreticilerinin geliştirilmesidir.

Ortamı iyileştirici yatay hedefler:
- İnovasyon sistemi aktörleri arasında inovasyon kültürü ve inovasyona dayalı kalkınma konusunda fikir birliği ve güven oluşturulması,
- İdari ve hukuksal ortamın iyileştirilmesi ve altyapının neden olduğu engellerin kaldırılması,
- Bölge için çekici bir imaj oluşturulması,
- İnsan sermayesinin geliştirilmesine yatırım yapılmasıdır.

Mersin İnovasyon Stratejisi, 2008-2009 Eylem Plan'ında yer alan projelerin hayata geçirilmesi için Proje Müdürlüğü tarafından çeşitli fon imkanları araştırılmış ve 2008 yılı içinde bu kapsamda sekiz adet proje teklifi hazırlanmış ve bunlardan altı adedi sözleşmeye bağlanmıştır. İl'de ki diğer kurum ve kuruluşların proje hazırlama kapasitelerini geliştirmek ve farklı finansal araçlar hakkında bilgilenmelerini sağlamak için destek faaliyetleri yürütülmüştür.

Mersin İnovasyon Stratejisi'nin hayata geçirilmesi için en önemli destekleyici kuruluş olan Çukurova Kalkınma Ajansınca yürütülecek hibe programının, 2008-2009 Eylem Planının hayata geçirilmesine imkan verecek kapsamda hazırlanması için lobi faaliyetleri gerçekleştirilmiştir. Mersin İnovasyon Stratejisi ve Eylem Planı'nın uygulanmasını temin ve takip etmek, İl çapında paydaşları temsil etmek ve koordinasyonu sağlamak amacıyla 26 Şubat 2008 tarihinde Mersin İnovasyon Kurulu kurulmuştur.

Proje 4 aşamadan oluşmuştur. Bunlar;

- Aşama:İnovasyon kavramının tanıtılması ve bölge aktörlerinin bilinçlendirilmesi
- Aşama:İl çapında düzenlenen SWOT toplantıları, anket çalışmaları ve firma ziyaretleri yolu ile mevcut durumun saptanması, ihtiyaçların tespiti, taslak stratejinin oluşturulması
- Aşama:Pilot uygulamalar ve taslak stratejinin sınanması (AR-GE 33, GİRİŞİMCİ 33, EXPO 33, MERSİN I. İNOVASYON YARIŞMASI)
- Ocak 2008:Mersin İnovasyon Stratejisi'nin tamamlanması

Mersin'de, 2007 yılının başından itibaren taslak Mersin İnovasyon Stratejisi ile uyumlu olarak dört pilot proje uygulanmıştır. Mersin ilinde yenilikçi genç girişimciler yetiştirilmesini amaçlayan eğitim projesi Girişimci 33,

KOBİ'leri dış ticaret konusunda atağa geçirecek kalifikasyona sahip uzmanların yetiştirilmesini amaçlayan İhracat 33, Üniversite firma işbirliğini kolaylaştırıcı etkinlikler içeren ve ortak proje sayısını artırmayı hedefleyen Ar-Ge 33 adlı projeler başarı ile tamamlanmıştır. Ayrıca firmalar arasında İnovasyon kültürünü yaygınlaştırmayı hedefleyen ve Mersin'de gelenekselleştirilmesi düşünülen 1. İnovasyon Yarışması düzenlenmiştir.

Tarım-Gıda, Lojistik ve Turizm Sektörleri Mersin'de İnovasyon potansiyeli taşıyan ve birbirini bütünleyen üç kilit sektör olarak belirlenmiştir. Bu sektörlerin seçilmesinde kullanılan kriterler ise;

- Sektörlerin coğrafi konum, liman, iklim avantajı, tarihi ve kültürel değerler gibi sürdürülebilir güçlü öz kaynaklara dayanıyor olması,
- Sektörlerin nüfusun geniş kesimini kavraması,
- İnovasyon ve Ar-ge yolu ile bu geleneksel sektörlerde katma değerin yükseltilmesi imkanı,
- İstatistiki sonuçlara göre; firma sayıları, KOSGEB kümeleme analizi, dış ticaret yapan firmaların profili,
- Araştırma altyapısının bu sektörleri destekliyor oluşu,
- Bu sektörlerde kurumsal altyapı ve temsil-karar alma mekanizmalarının güçlü olmasıdır.

İnovasyon potansiyeli taşıyan Tarım-Gıda, Lojistik ve Turizm Sektörleri için; Üç sektörde kümeleşmenin teşvik edilmesi ve ihtiyaç analiz çalışmalarının yapılması, Ulusal ve uluslararası ağların tespit edilmesi ve Mersin'deki sektörel platformların bu ağlara dahil edilmesi ve Eko-inovasyon faaliyetlerinin gerçekleştirilebileceği alanların tespiti gerekmiştir.

5 Mersin RIS Projesinin SWOT Analizi

SWOT analizi yapılırken Mersin Bölgesel İnovasyon Stratejisi 2006-2016 1. Taslaktan yararlanılmış, bölgedeki fiziksel, sosyal ve ekonomik sermayenin inovasyon açısından güçlü ve zayıf yönlerinin, fırsatlarının ve tehditlerinin anlaşılması amaçlanmıştır.

Güçlü yanlar; kamu-özel sektör uzlaşması, İşbirlikçi kültüre sahip olunması, Mersin'in Ortadoğu ve Akdeniz'e açılan bir kapı olması sebebiyle stratejik konumu, gelişmiş altyapı (liman, karayolları, demiryolları, havayolları, bilgi ve iletişim teknolojilerinde geniş bant bağlantı, serbest bölge, organize sanayi bölgesi, teknoloji geliştirme bölgesi, iş geliştirme merkezleri v.b.), girişimci insanların varlığı, verimli topraklara sahip olması, doğal ve tarihi güzelliklerin çokluğu, üniversite ve araştırma enstitülerinin varlığı, Yurtdışından ve yurt içinden diğer bölgelerden yatırımların varlığı, kültürel çeşitlilik, genç nüfusun çok olması, güneş, rüzgar ve su gibi yenilenebilir enerji kaynaklarının kullanılması, KOSGEB benzeri kamu kurumlarının varlığı.

Zayıf yanlar; çevre problemleri, hızlı göç ve plansız kentleşme sonucu oluşan kirlilik, firmaların yenilenebilir enerji kaynaklarının kullanımı için yüksek enerji maliyetlerine katlanması), fiziksel altyapının geliştirilmesine duyulan ihtiyaç, kalifiye insan kaynaklarının Mersin dışına, vasıfsız insan kaynaklarının ise Mersin'e göçü, paydaşların inovasyon konusunda düşük farkındalık düzeyleri (özellikle firmalar ve halk arasında), inovasyona destek veren kuruluşların sayısının ve hizmet çeşitliliğinin artırılması ihtiyacı, inovasyon ve AR-GE yatırımlarının düşük düzeyde olması, üniversitenin kapasitesinin zayıf olması, kent yönetiminin çeşitli nedenlerle projeye katılamaması.

Fırsatlar; uluslararası düzeyde bir prestij aracı olarak kullanılması, kişi ve firmaları heyecanlandırıp hareketlendiren inovasyon yarışmalarının başlamış olması, bir şehrin gelişmesi için AR-GE faaliyetlerinin gerekliliği ve önemi, girişimci ve işadamlarının inovatif ürün ve süreç kavramı ile tanışması ve dış dünyada rekabet için mücadelenin farkına varması, meslek odaları ve sivil toplum kuruluşlarının kent gelişmesinde kendilerini sorumlu bir paydaş olarak görmeleri. (Gök, 2009), Bursa, Eskişehir, Kütahya, Kırşehir, Samsun ve Gaziantep gibi illere örnek olması., 2008 yılında 122 proje arasında en başarılı "yerel kalkınma projesi" seçilmiş olması, Çukurova havaalanının yapılıyor olması, Akdeniz oyunlarının Mersin'de yapılıyor olması, bölgesel inovasyon stratejisinin oluşturulması ve başarılı şekilde uygulanması, Mersin kentsel dönüşüm planının başarılı şekilde uygulanması, araştırma ve inovasyon alanında AB programlarına ve ulusal programlara aktif katılım, İnovasyon konusunda çevre bölgelerle ve diğer ülkelerle işbirliğinde artış, hükümetin bölgesel politikaların geliştirilmesi ve bölgesel kalkınma ajansının kurulması konusundaki kararlılığı, hükümetin Ar-Ge ve inovasyon alanında artan çalışmaları, "Mersin" markasının oluşturulmasında ve Mersin imajının ulusal ve uluslararası ortamda tanıtılmasına yönelik faaliyetler, Türkiye'nin AB'ne entegrasyonu.

Tehditler; bölgede planlanan stratejilerin gerçekleştirilmesi konusunda eksiklik, makroekonomik ve siyasi istikrarsızlık, devam eden göç, kayıtdışı ekonomiden kaynaklanan sorunların devam etmesi, ulusal düzeyde hazırlanan bölge planlarının başarısız şekilde uygulanması, Ortadoğudaki gerginlik ve istikrarsızlık ortamı

6 Sonuç

İsviçre'de 2003 yılında OECD üst düzey toplantısı sonuç bildirgesine gore "hem küresel ekonomik büyüme, hemde sosyal uyum özellikle potansiyelin en yüksek olduğu alanlarda bölgelerin rekabet gücünün arttırılmasını zorunlu kılmaktadır. İnovasyon ve yatırımı yönlendiren göreli avantajlar, bölgesel olduğu kadar ulusal

özelliklerdir. Başarılı olabilmek için bölgeler, küresel piyasada rekabet edebilmek ve kullanılmayan potansiyellerini geliştirmek amacıyla kendi varlık, beceri ve fikir girişimlerinden yararlanmalıdır".

Çalışmamızın ana eksenini oluşturan Mersin, Türkiye'de eşsiz kaynaklara (turizm, tarım, lojistik) sahip olmasına rağmen içinde barındırdığı büyük potansiyeli yeterince kullanamamış ve ekonomik performansı kendisiyle aynı özelliklere sahip (örneğin, Antalya) illerin gerisinde kalmıştır. Bu strateji ile Mersin'in bir sloganı da olmuştur. "Mersin'in karakterinde Dünyalı olmak ve evrensel olmak vardır". İşte Mersin, bu devamedegelen kaderine değiştirmeye katkıda bulunan, Avrupa'dan 20 yılı aşkın süredir yüzlerce bölgede devam eden uygulamalardan ve IRE Network (İnnovating Region in Europe) aracılığıyla paylaşılan metodolojinin uygulandığı " bölgesel inovasyon stratejisi" ile kısır döngüden çıkmayı başarabilmiş ve bugün tüm dünyaya (17. Akdeniz Oyunları vb.) sesini duyurabilmiştir. Türkiye'nin ilk inovasyon stratejisi " RIS Mersin Projesi" ile Mersin ili 2016 yılına kadar belirlenen üç kilit sektörde (turizm, tarım ve lojistik) dünya ve Türkiye ekseninde haketttiği konuma ulaşması beklenmektedir. Mersin inovasyon stratejisi 4 ana stratejik hedef üzerine kurgulanmıştır;

- Mersin'de inovasyon sisteminin ve kültürünün iyileştirilmesi
- İnovasyona yatırım yapılmasının teşvik edilmesi
- Kilit önem taşıyan sektörlerde bölgesel potansiyelin kullanılması
- Bilgi üreticilerinin yetiştirilmesidir.

Bu bağlamda, geliştirilen bu stratejiyle Mersin'de öncelikle ekonomik büyüme, teknolojik rekabet edebilirlik ve ildeki istihdam oranlarına pozitif bir katkı yaptığını söyleyebiliriz.

Girişimcilik ve Spor

Entrepreneurship and Sport

Ph.D. Candidate Yeter Aytül Dağlı Ekmekçi (Pamukkale University, Turkey)
Prof. Dr. Ayşe İrmiş (Pamukkale University, Turkey)

Abstract

Underlined the contributions of entrepreneurship to countries' economies and development in today's researches, sports entrepreneurship studies referred to in recent times. With this study, emphasized that the sports industry is an economically emerging sector in our developing country and in addition to this economic size many opportunities have been aimed at creating new emphasis. In our country, we have a young population and have the structure of an open society for development and innovation, thus the sports industry is growing rapidly in our country compared with the world. That sports industry is associated with many of the other sectors is a key element to improve the variety of activities. Sports entrepreneurship studies have increased in recent years in the world. However, in our country, this area hosts many opportunities for sports entrepreneurship, almost no work have been encountered, has made it necessary to carry out this study. That sport is managed as professional, it requires the study of sports entrepreneurship. Sports entrepreneurship has needed studied. This study is a first step of building the relations between sport and entrepreneurship at Turkish literature.

1 Giriş

Girişimcilik hem işsizlik sorununa önemli bir çözüm olanağı sunmakta hem de ekonomik büyümeyi sağlamaktadır. Girişimci, ekonomik kaynakların düşük üretkenlik alanlarından yüksek alanlara aktarılma sürecinde baş aktördür, çünkü üretim kaynaklarını yeni bir tarzda birleştirerek kullanılmayan üretim faktörlerinin kullanılmasını sağlar, ama daha önemlisi kullanılmakta olan üretim araçlarının ve mevcut girdilerinin değişik şekillerde kullanımı ile üretimi artırır. Yeni düşünceler girişimciler sayesinde yaratılır, yayılır ve uygulanması hızlanır. Yeni endüstrilerin doğmasıyla ekonomik büyüme hızlanır (TÜSİAD, 2003, 2). Ayrıca girişimciliğin artması, yeni fikirler ve yeni yatırım alanları, kaynakların farklı şekillerde bir araya getirilmesi rekabet ortamını da etkileyecektir. Örgütler daha etkin olabilmenin yollarını arayacaklar, böylece girişimciliğin temel özellikleri olan yenilik yaratma, kaynakları farklı şekillerde kullanma boyutu yeniden ön plana çıkacaktır. Yani bu durum girişimciliğin daha üst boyutlara geçmesi için itici bir güç yaratacaktır.

Girişimciliğin kalkınma açısından faydaları arasında istihdam sağlanması, ekonomik büyüme ve toplumsal yapıya değişimci/yenilikçi bir anlayış kazandırılması ön planda gelmektedir. Bu faydaları sağlamak açısından bireyin içinde bulunduğu sosyo-ekonomik ve kültürel yapı, aile, toplumsal davranış örüntüleri, eğitimin kalitesi, düzeyi, genel ekonomik koşullar ile devletin girişimciliğin gelişmesine ilişkin teşvik edici tutum ve uygulamaları önem kazanmaktadır. Bu sayede girişimcilik potansiyeline sahip kişiler harekete geçebilecek ve dış kaynaklı büyüme yerine ulusal kaynaklı büyüme sağlanabilecektir (Çetinkaya Bozkurt vd., 2012, 230). Özellikle bu açıdan bakıldığında dünyada çok büyük bir sektör olarak bilinen spor sektöründe de yerel girişimciliğin önemi artmaktadır. Bununla beraber, bir bilim alanı olarak spor, psikoloji, sosyoloji, felsefe, yönetim, pazarlama gibi birçok disiplin tarafından çalışıldığı halde kendisini başlı başına bir disiplin olarak henüz tanımlayan spor girişimciliğine odaklanılmış çalışmalarda önemli eksiklikler bulunmaktadır. Hâlbuki spor pazarlamacıları, girişimciliğe odaklanarak organizasyonlarını ve müşterilerini daha değerli hale getirebilirler. Ayrıca spor örgütlerinin büyümesinde spor girişimciliğinin önemi kendini daha fazla göstermektedir (Ratten, 2011, 57-58).

2 Girişimciliğin ve Girişimcinin Tanımı

Girişimci kelimesi, "entre" (girmek) ve "prendre" (almak, üstlenmek) sözcüklerinden oluşmaktadır. Ekonomik açıdan ilk kez 1730'larda Fransız Richard Cantillon tarafından kullanılmış, 19. Yüzyılda da İngilizler tarafından kullanılmaya başlamıştır (Çetindamar, 2002, 33).Cantillon girişimcinin sosyal statüsüne değil, ekonomideki işlevine değinmiştir. Daha sonraki dönemlerde Schumpeter, Kirzner ve Knight Cantillon'un bu tanımını daha geniş çerçevede ele almış ve girişimcinin yenilikçi, kâr fırsatlarını fark eden ve risk üstlenen yönlerine değinmişlerdir (Işık vd, 2011, 150-151).

Girişimcilik tanımının modern çağa uyarlanmasında en bilinen isim Schumpeter'dir. Schumpeter'in (1934), tanımıyla bir taraftan girişimciliğin yeni kombinasyonlarından biri olarak, yeni bir pazar oluşturma ifade edilirken (Ibeh, 2004, 96), diğer taraftan da günümüz bilgi toplumunda ekonominin itici gücü olacak ve küresel anlamda başarı elde edebilecek, iyi yetişmiş ve gerçek anlamda girişimcilik ruhuna sahip bireylerin varlığının gerekliliği ortaya çıkmaktadır (Ercan ve Gökdeniz, 2009, 59). Ana unsurları algılayış, riski göze alma ve faaliyete geçme olan girişimcilikte hem mevcut durumda ortaya çıkan fırsatları değerlendirmek hem de yeni fırsatlar yaratmak önemlidir. Girişimci ise, piyasadaki eksik enformasyon durumunda tam olmasa da diğerlerinden fazla enformasyona sahip olarak hareket eden kişidir (Işık vd., 2011, 153).

Schumpeter'in girişimcilik tanımının ana unsuru mevcut kaynakların yeni bir bileşimi şeklinde tanımlanan yenilik olgusudur. Bu tanıma göre girişimci davranışı beş çeşittir (Aktaran Çetindamar, 2002, 35):

- Yeni bir malın ya da servisin üretimi
- Yeni bir üretim metodunun geliştirilmesi
- Yeni bir pazarın oluşturulması
- Yeni bir hammadde kaynağının bulunması
- Endüstrinin yeniden yapılandırılması

Tüm bu anlatılanlardan çıkan ortak sonuç; yaratıcı fikir sahibi olmanın sonucunda yeni yatırım olanaklarının bulunması, kar fırsatlarının yakalanması ve bu sayede istihdam ve verimliliğin artması yoluyla ekonomik büyümeye katkı sağlanmasında girişimciliğin önemli bir rolü vardır.

3   Girişimciliğin Ülke Ekonomisi Açısından Önemi

Girişimci, ekonomi biliminin temelini atan Adam Smith tarafından yönetici olarak düşünülmüştür. Bu fikir; 20. yüzyılın başından Joseph Schumpeter'in bir sistem olan ekonomide değişimlerin dışarıdan değil içeriden geldiğini ve bu değişimi de bizzat girişimcinin sağladığını söylemesine kadar neo-klasikler tarafından da aynı şekilde sürdürülmüştür (Çetindamar, 2002, 35). Schumpeter'le beraber yenilik yapma, üretme, risk alma, fırsatları görme ve uygulamaya geçme faaliyetlerinin geneli olarak tanımlanan girişimciliğin davranışsal göstergeleri pazara yeni bir ürün/hizmet sunmak, üretimde yeni bir yöntem geliştirmek, henüz keşfedilmemiş bir talep boşluğu yakalamak ve bir sanayi dalında yeni bir firma kurmak şeklinde aktarılmıştır (Ercan ve Gökdeniz, 2009, 67).

Açıktır ki, girişimcinin yüklendiği yeni faaliyetler yeni kâr fırsatlarının oluşmasına alt yapı hazırlamaktadır. Bu fırsatlar verimlilik artışının bir nedeni veya sonucu olabilir. Başka bir deyişle girişimcilik ile iktisadi büyüme (Schumpeter'e göre iktisadi gelişme) arasında her ikisini de artıran pozitif yönlü ilişki bulunmaktadır ve bu sistem kendi kendini beslemektedir (Işık vd., 2011,156). Çetinkaya Bozkurt ve arkadaşları (2012, 233-234) girişimciliğin ekonomik ve sosyal yönden önemini birçok yazar tarafından belirtilen görüşleri derleyerek şu şekilde açıklamışlardır. Ekonomik yönden; istihdam hacminin genişletilerek işsizliğin önlenmesinde, ekonomik büyümenin hızlandırılmasında, yeni endüstrilerin doğmasında, refah düzeyinin yükseltilerek geniş bir toplumsal tabana yaygınlaştırılmasında ve orta sınıfın güçlendirilmesinde, bölgesel gelişmişlik farklarının ortadan kaldırılmasında ya da azaltılmasında işlevseldir. Sosyal yönden; birçok teknolojik buluşun toplumun yararı için yenilikçi ürün ya da hizmetlere dönüştürülmesinde, değer yaratmada, toplumsal yapıda değişmci/yenilikçi bir sürecin başlatılmasında, girişimciliğin risk üstlenme, yenilikçi ve öncü olma niteliğinden dolayı tüm toplumların değişim ve gelişim süreçlerinde işlevseldir.

ŞEKIL 1. Girişimcilik Sürecindeki Temel Faktörler
Kaynak: Wickham, 2001: 37.

(Aktaran Karabey ve Bingöl, 2010,12)

Karabey ve Bingöl (2010,10)'e göre girişimcilik sürecinde her türlü değer yaratma faaliyetinden bahsedildiği için karmaşık bir yapı söz konusudur. Bu karmaşık yapı nedeni ile de girişimciliğin doğası, girişimcinin özellikleri ve davranışları hakkında net açıklamalar yapmak ve ekonomiye katkısını kesin olarak belirlemek zorlaşmaktadır. Yukarıda da belirtildiği gibi girişimcilik "bir fırsatın tanımlanması, değerlendirilmesi ve bu fırsattan yararlanmak amacıyla faaliyete geçilmesini kapsayan bir süreç" olarak tanımlanmaktadır (Şekil 1). Bu durumda girişimci kaynakları bulan ve bir araya getiren, organizasyonu kuran ve bu organizasyonda liderlik ve

yönlendirme yapan, fırsatları görerek ve/veya fırsatları oluşturarak değer yaratan kişidir. Bu özelliğiyle girişimci ülke ekonomisine üründe, üretimde, teknolojide yenilikler yaparak veya mevcut durumun devamlılığını sağlayarak, istihdam imkânları oluşturarak, sermayenin tabana yayılmasına vesile olarak ve bütün bunlar sonucunda değer yaratarak katkıda bulunmaktadır. Aynı zamanda girişimciler küreselleşmeyle beraber, dünya üzerinde geniş pazarlarda yer alarak, üretim iş birliklerini dünyadaki diğer işletmelerle birleştirerek ve endüstrisinde yenilikler yapıp, endüstriler arası yeni organizasyonlar kurarak dünya ekonomisine de katkı vermektedirler.

4 Türkiye'de Girişimciliğin Tarihçesi

Türk kültüründe girişimciliğin en bilinen hali Ahi örgütlerine uzanmaktadır. Ahi örgütlerinin önemli özelliği sadece üretim ve ticaret anlayışına dayanmaması aynı zamanda toplumdaki ekonomik, siyasi, sosyal, askeri ve kültürel yapıda da etkin olmasıdır. Daha kapalı bir sitem içerisinde üretimin ve ticaretin yapıldığı Ahi örgütleri kapitülasyonlar neticesinde kısmen de olsa ekonomide dışa açılma politikasıyla kitle üretimine ve yenilik anlayışına ayak uyduramayarak etkinliğini ve verimliliğini kaybetmiştir. Cumhuriyetin kuruluşundan sonraki ilk dönemlerde alınan karma ekonomik model kararlarıyla Türk Halkının girişimcilik vasıflarının geliştirilmesi ve sanayi kültürünün oluşturulması amacıyla, devletin ve özel sektörün girişimcilik olgusuna beraber katıldıkları bir dönem yaşanmıştır.

1950'li yıllardan itibaren daha ziyade devlet desteğiyle kendini göstermeye başlayan özel sektör girişimciliğinin atak yaptığı dönem 1960'lı yılların sonu ile 1970-1980 arası olmuştur. Halk Sektörü adı altında kurulan çok ortaklı şirketler Türkiye'deki o döneme mahsus bütün imkânsızlıklara rağmen gıda sanayiden, elektronik sanayiye kadar çok geniş bir yelpazede girişimlerde bulunmuşlardır. Bu dönem aynı zamanda milli sermayenin halk eliyle yatırıma dönüştüğü ve yaratılan sinerjiyle kat-kat arttığı dönemdir. Dünya ekonomisinde 1970'lerdeki piyasa istikrarsızlıkları nedeniyle kitlesel üretim yerini esnek üretim sistemlerine bırakmış, 1980'lerden sonra gelişmiş ülkelerde küçük işletmelerin toplam işletmelere oranla paylarının artmış ve batı ülkelerinde işsizlik sorununun makro iktisadi politikalarla çözülememesi küçük ve yeni işletmelere olan ilgiyi artırmıştır. Bu durum da girişimcilik olgusunu özellikle KOBİ niteliğindeki işletmelerde ön plana çıkarmıştır (Işık vd., 2011, 149). Ayrıca Batı Avrupa ve Amerika'daki pek çok işletme artan üretim ve çevre maliyetlerinden dolayı, ivme kazanan küreselleşme süreciyle yaratılan bir fırsat olarak, üretimlerini gelişme arzusunda olan az gelişmiş ve gelişmekte olan ülkelere kaydırmaya başlamışlardır. Gelişmiş bölge işletmeleri üretimlerini bir taraftan az gelişmiş ve gelişmekte olan bölgelerde yabancı sermayeli yatırımlar yaparak diğer taraftan da o bölgelerdeki KOBİ niteliğinde bulunan işletmelere kendi markaları adına fason üretim yaptırarak gerçekleştirmeye başlamışlardır.

Türkiye'de ise 1980 sonrası dışa açık politikaların uygulanmasıyla Türk ekonomisi ve yatırım alanları dışarıya açılmıştır. İthal ikameci politikalardan dışa açılmaya yönelik ihracatı artırma politikalarıyla uluslar arası sermaye ile tanışan Türk girişimcileri özellikle Anadolu kentlerinde fason üretim yapmaya yönelik girişime teşvik edilmişlerdir. Aradan geçen onlarca yıla rağmen, ulusal piyasalar haricinde, uluslar arası piyasalarda hâlâ gerçek anlamda kendi markasını geliştirememiş olan ülke girişimciliğimizin, üretim girişimciliği açısından kısmen daha çok yol kat etmiş olmasına rağmen mamulü sunma, pazar yaratma, marka oluşturma vb. pazarlama girişimciliği açısından yeterli bir gelişme gösteremediği görülmektedir.

5 Sporun Tanımı ve Spor Kulüplerinin Şirketleşmesi

Spor, "belirli ölçüde fiziksel güç ve beceri gerektiren yarışmalı ve eğlenceli etkinlikler", "fiziksel kondisyonu iyileştirmeyi amaçlayan, oyun, yarışma ve mücadele anlayışıyla yapılan fiziksel etkinlikler" ya da çok çeşitli amaç ve araçlarla yapılan, önceden belirlenmiş ve benimsenmiş kurallara farklı derecelerde de olsa uymayı gerektiren, performansı artırıcı bedensel etkinlikler" olarak tanımlanmıştır. Spor hem kültür, hem fiziksel aktivite hem de yarışmadır (Kılcıgil, 1998, 8). Bir başka tanıma göre ise spor ferdin tabii çevresini beşeri çevre haline getirirken elde ettiği kabiliyetleri geliştiren, belirli kurallar altında araçlı veya araçsız, ferdi veya toplu olarak serbest zaman faaliyeti olarak veya tam zamanını alacak şekilde meslekleştirerek yaptığı sosyalleştirici, toplumla bütünleştirici, ruh ve fiziği geliştiren rekabetçi, dayanışmacı, kültürel bir olgudur (Erkal, 1982, 119).

Bireyleri doğrudan ya da dolaylı olarak kendisine bağımlı kılan spor her zaman toplumun ilgisini canlı tutmayı başarmış sosyal bir olgudur. Bu olgu toplumun ihtiyaçlarını karşılayarak büyük bir toplumsal kurum olduğunu dünyaya kabul ettirmiş, toplumu yakından ilgilendiren davranış, düşünce, inanç ve simgeler geliştirmiştir. Her toplumsal kurumda olduğu gibi spor da diğer toplumsal kurumlarla ilişki halindedir ve o toplumun hukukundan, siyasetinden, ekonomisinden, demografik, kültürel, coğrafi yapısından ve çevresinden etkilenmektedir (Kılcıgil, 1998, 9). Ayrıca spor; insanlığın varoluşunda temel ihtiyaçlar için kullanılırken, günümüzde bir sosyal katılım ve sağlık kazanma aracı, bir iş veya bir eğlence olarak görülmektedir (Basım ve Argan, 2009, 4).

Spor, Türkiye'de yıllar içerisinde farklı kurumlar tarafından yönetilmiştir. Ancak genel olarak değişmeyen kısım, spor federasyonlarının özerkliğe kavuşmuş olmasına rağmen dünyada birçok ülkede görüldüğü üzere, tam bağımsız bir yönetimden bahsedilememesi ve işleyişin merkezden güdümlü olması yönündedir. Bunula beraber

Türkiye'de bazı spor işletmeleri halka açılmıştır. Bunlar; Beşiktaş Futbol Yatırım, Fenerbahçe Futbol, Galatasaray Sportif, Trabzonspor Sportif'tir.

Spor kulüpleri dernek ve şirket olmak üzere iki farklı tüzel kişiliğe sahiptir. Derneklerin amacı kâr değildir ancak şirketler tamamen kâr amacına yöneliktir. Avrupa'da ve Türkiye'de özellikle futbol kulüpleri olmak üzere pek çok spor kulübü şirketleşmek ve borsada işlem görmek (halka arz) üzere birçok metodu kullanmakta ve çalışmalar yapmaktadırlar. Bu gün özellikle Avrupa'daki futbol kulüpleri şirketleşerek veya hizmetlerinin bir kısmını şirketlere devrederek gelirlerini artırma yönünde faaliyet göstermektedirler. Hâlihazırda Avrupa'da çok sayıda halka açık futbol kulübü bulunmaktadır. Bu konudaki öncülüğü İngiliz kulüpleri yapmış ve elde ettikleri başarıyla da diğer Avrupa ülkelerindeki kulüplere model olmuşlardır. Bununla beraber belirtmek gerekir ki, spor kulüpleri için halka açılma, şirketleşmenin bir sonucu değil, sadece şirketleştikten sonra Genel Kurulca onay verilmesi durumunda uygulanabilecek alternatif bir finansman aracıdır (Devecioğlu ve Çoban, 2003, 4).

Türkiye'de spor kulüplerinin şirketleşmesi konusu ilk olarak 1986 yılında Tük Ticaret Kanunu hükümlerince düzenlenmiştir. Bu düzenlemeden sonra Türkiye'deki büyük kulüpler ve diğer birkaç kulüp şirketleşme çalışmalarına başlamış ve gelirlerini artırmada Avrupa ülkeleri örneklerini benimsemişlerdir. Türkiye'deki ilk Halka arz işlemini başlatan spor kulüpleri ise Beşiktaş Jimnastik kulübü ve Galatasaray Spor kulübüdür. Bu kulüpler, kurmuş oldukları şirketlerle halka arzı gerçekleştirmişlerdir (Devecioğlu ve Çoban, 2003, 5-6).

6 Spor ve Girişimcilik

Ratten (2010) spor tabanlı girişimcilik teorisi geliştirmeyi amaçladığı çalışmasında tüketicilerin günden güne değişen istekleri ve girişimciliğin en önemli özelliklerinden biri olan yenilik yapmanın göz önünde bulundurulduğunda sporun girişimcilik açısından önemli bir sektör yarattığını belirtmektedir. Spor bağlamında, kısa vadeli kazançların uzun vadeli kazançlar elde etme umuduyla feda edildiği bir karşılıklılıktan kaynaklanan, sosyal sermayenin mümkün kıldığı girişimcilik söz konusudur. Sosyal sermayeye sahip spor organizasyonları diğer organizasyonların da aynı şekilde cevap vermeleri umuduyla güven ve risk alma isteğine vurgu yapmaya çalışmaktadırlar. Girişimcilik birbiri ardına devam eden sosyal ilişki ağlarından doğar ve spor; takımları, işletmeleri ve tüketicileri ile yeni fırsatlar belirlemek için girişimcilikle işbirliği içerisindedir. Dünya çapındaki spor organizasyonları, girişimciliğin gelişmesine, strateji geliştirilmesi için sosyal ağları kapasite oluşturma şeklinde kullanarak yardım etmektedir (Ratten, 2010, 559).

Profesyonel spor liglerinin, programlarını çeşitlendirmelerini sağlayacak eşsiz gelir kaynakları bulunmaktadır. Bunlar bilet bağışları, imza organizasyonları, tesisler (stadyum, arena gibi), müsabakalar/organizasyonlar, medya ilişkileri, localarin tutulması (Amerika'da localardan maç izleyebilmek için öncelikle büyük meblağlarda bağışların yapıldığı spor kulüpleri bulunmaktadır), tedarikçiler, sponsorlar ve profesyonel yöneticiler (sahipler, avukatlar, koçlar, muhasebeciler…)'dir. Profesyonel spor ligleri gişe gelirlerinden, bağışlardan, reklamlardan ve üyelik aidatlarından doğan farklı gelir akışlarına sahiptirler (Sheth&Babiak, 2010, 436). Hardy (1996)'ye göre spor finansal güdülerle yönetilmezse ve topluluklar ve devlet tarafından sübvanse edilirse, yenilik tüketicilere değer katmanın bir yolu olarak giderek daha önemli hale gelmektedir (Ratten, 2010, 560).

Girişimcilik araştırmaları genel olarak artan bir yapı göstermesine rağmen, spor endüstrisine özellikle spor faaliyetlerinin yer aldığı benzersiz yapıya dikkat son yıllarda çekilmektedir. Ayrıca girişimciliğin sporla ilişkili örgütlerdeki rolü diğer endüstrilerden farklıdır. Girişimcilikle ilgili spora özgü faktörler kitle iletişim gücü, sosyal etkileşim ve spora olan genel taleptir (general appeal). Sporda girişimcilik, daha ileri çalışmaların yapılmasını sağlamak ve girişimcilik literatürüne girişimciliğin incelenme yolunu anlamak ve girişimciliğin örgütlerde/organizasyonlarda nasıl deneyimlendiğini görmek açısından katkıda bulunabilir. Genel performanslarını artırmak için sporla ilgili örgütler tarafından girişimciliğe; işbirlikçi, toplum odaklı ve stratejik bir şekilde yaklaşılmaktadır. Girişimciliğin iç ve dış paydaşları içeren yararlanıcıları sporcular, taraftarlar, müşteriler, hükümetler, sponsorlar, topluluklar ve çalışanlardır. Spor tabanlı girişimcilik, girişimciliğin ekonomik gelişme için umut verici bir strateji sunan bir kategorisidir. The Sports Journal'ın tanımına göre; bir spor tabanlı girişimci, örgütleyen, yöneten ve bu iş girişimi için riski kabul eden kişidir (Ratten, 2010, 560).

Sporla ilgili ürün ve hizmetlerin sunulmasıyla, girişimciliğin bir özelliği olan risk almak belli bir ölçüde oluşmuştur. Gatorade (bir içecek) daha sonra sporcular ve sporla ilgili olmayan kişiler tarafından küresel olarak kabul edilmiş olan, Florida State Üniversitesi'nin futbol takımı tarafından geliştirilen bir yeniliktir. Cheetah Lower Limb protezleri, çift ampute para olimpik koşucuların, vücudu sağlam koşucularla yarışmasını olanaklı kılmıştır. Sportsvision, Ulusal Futbol Ligi'nde belirlenen alan çizgilerini, Major Beyzbol Ligi'nde atışları ve NASCAR yarışlarında arabaları izlemek için sadece televizyon izleyicisinin görebildiği sarı çizgiler gösteren bir grafik sistemi geliştirmiştir. Spor bilimlerinde, protezlerde ve yapay malzemelerde sporda yeniliklere neden olmaya devam edecek hızlı bir ilerleme olmuştur (Ratten, 2010, 561).

Sporda kurumsal girişimcilik kurumlar tarafından yeni aktivitelerin yaratılmasını içermektedir. MajorLeague Baseball (Amerika ve Kanada Ligi)'da kurumsal girişimcilik standartlaştırılmış uyuşturucu testini, belirlenmiş oyuncuların tanıtımını ve yenilikçi beysbol üniformalarını içermektedir (Ratten, 2010, 562).

Çetindamar (2002, 33)'ın girişimcilikle ilgili verdiği örnekte; bir lokanta ya da bakkal açan kişinin risk aldığı ancak bir yenilik yapmadığı belirtilmektedir. Yüzyıllardır bilinen ve birçok yerde satılan bir ürün olan Kahramanmaraş dondurmasını bir marka haline getirmek, bunun üretimini standartlaştırmak ve farklı ürünlerle tüketimini sağlamak, özel dağıtım kanalları yoluyla satışa sunmak yenilik yapmak olarak belirtilmektedir.

Bu bağlamda düşünüldüğünde; spor kulüplerinin farklı birçok marka adı altında sunulan sportif ürünleri kendi kulüplerini markalaştırmak üzere; kulüplerinin renkleri ile satmaları, sportif ürünlerin yanı sıra kişisel kullanımı da içeren birçok ürünü üretmeleri (kalem, şampuan, bardak, havlu, dekorasyon ürünleri, atkı, bere vb.) gerçek anlamda girişimcilik tanımına uyan, bir yenilik yapma, risk alma ve bulunan kaynakları farklı şekillerde kullanma özelliklerine uymaktadır. Diğer taraftan spor kulüplerinin kar elde etmek için kurdukları şirketlerin halka arz edilmeleri, diğer sektörlerde de olduğu gibi alternatif bir finansman kaynağı olarak düşünülebilir. Zaten var olan halka açılma yöntemini spor kulüplerinin şirketlerinin hisse denetlerini satmak yoluyla uygulamaları girişimcilikten ziyade, henüz spor sektöründe yer almayan bir uygulamanın başlatılması olarak ele alınabilir.

Spor yöneticiliğinden mezun olan birçok öğrencinin spor endüstrisindeki geleneksel spor alanlarına yönelmek yerine kendi spor işlerini kurmaya başlamaları nedeniyle bazı spor yöneticiliği programları girişimcilik derslerini müfredatlarına koymaya başlamışlardır. Spor yöneticiliği programları girişimcilik programları gibi artmaya devam etmektedir (Borgese, 2007, 1-2).

Girişimcilik ve küçük işletme sahipliği Amerikan ekonomisinin büyük bir payını oluşturmaktadır. "Amerikan Rüyası" olarak bilinen bir işletme sahibi olma ve yürütme fikri hala birçok insan için geçerlidir. Amerika'da yılda yaklaşık 600,000 adet küçük işletme kurulmaktadır ve buna ek olarak %75inin çalışanı olmayan 23 milyon küçük işletmenin varlığından söz edilmektedir. Bu sonuçlar da her geçen yıl daha çok öğrencinin girişimciliğe bir akademik disiplin olarak ilgi duyduğunu göstermektedir (Borgese, 2007, 2).

Spor muazzam büyüklüğü ve ekonomiye katkısına rağmen henüz USA'da resmi bir sektör olarak değerlendirilmemektedir. Sanat, eğlence ve rekreasyonla aynı grupta değerlendirilmektedir. Ancak spor bu bireysel sektörü aşmakta ve aslında diğer birçok sektörlere de dahil edilebilir. Konaklama ve yiyecek hizmetleri sektörü spor turizmi ve spor alanlarındaki tüketimle beraber değerlendirilmemesi gerekken ayrı bir sektördür. Howard and Crompton (2004) spor ürünleri ve hizmetleri ile ilgili üretim ve tüketim harcamalarının yıllık yaklaşık 213 milyar dolar olduğunu tahmin etmektedirler (Borgese, 2007, 2).

Spor girişimcileri sadece profesyonel spor kurumları sahiplerinden oluşmamaktadır. Spor endüstrisi büyük ve küçük ölçüde alt işletmelerin çeşitliliğini gerektirmektedir. Örneğin sağlık kulübü sahipleri, spor salonlarının ve tesislerinin işletmecileri, lig sahipleri/işletmecileri, sportif ürün mağazalarının sahipleri, bilet acentaları ve fizik tedavi uzmanları bunlardan sadece birkaçıdır. Borgese (2007, 3) de girişimcilikle ilgili yapılan araştırmaların bolluğuna rağmen spor girişimciliğiyle ilgili araştırmaların eksikliğine dikkat çekmektedir. Amerika'da online girişimcilik organizasyonlarından Kansas City Royals Major League Baseball takımını alarak hayırseverlik yapan Ewing Marion Kauffman Vakfı web sitesi ve Birleşik Devletler Küçük İşletmeler ve Girişimcilik Derneği (United States Association for Small Business and Entrepreneurship - USASBE) web sitesi spor girişimciliği konusunda daha fazla araştırma yapılmasına gerek duyulduğunu belirtmektedir. Spor işletmeciliği küçük işletme sektörünün büyüyen bir parçasıdır ve bu nedenle bu alanda daha fazla araştırma yapılmasının gerekmektedir.

7   Sonuç

Girişimciliğin ekonomiye, kalkınmaya ve ülke refahına katkısının öneminin fark edildiği günümüzde, buna paralel olarak spor sektörünün yeme-içme, eğlence, konaklama, performans ürünleri açısından teknolojik gelişmeler ve sportif ürünler açısından üretim hacmini de içine alarak hızla büyüyen yapısı dikkat çekmektedir. Yenilik yapma, üretme, risk alma, fırsatları görme ve uygulamaya geçme faaliyetlerinin geneli olarak tanımlanan girişimciliğin davranışsal göstergeleri pazara yeni bir ürün/hizmet sunmak, üretimde yeni bir yöntem geliştirmek, henüz keşfedilmemiş bir talep boşluğu yakalamak ve bir sanayi dalında yeni bir firma kurmak şeklinde belirtilmektedir. Ülke ekonomisine üründe, üretimde, teknolojide yenilikler yaparak veya mevcut durumun devamlılığını sağlayarak, istihdam imkânları oluşturarak, sermayeyi tabana yayarak ve bütün bunlar sonucunda değer yaratarak katkıda bulunmaktadır. Bu katkıların sağlanmasında sporun rolü ise, küreselleşen dünyada sosyal ağlar yaratması, özellikle büyük çaplı uluslar arası organizasyonlara aracı olması, kitleleri peşinden sürüklemesi ve birçok disiplinle ilişkili olmasıdır. Bu nedenlerle girişimcilik özelliklerinin gelişmesi ve girişimciliğin beklenen faydalarının sağlanmasında sporun rolü ve önemi göz ardı edilmemelidir.

Dünyada 100'ü aşkın spor dalının bulunması ve bunların yaş, cinsiyet, sağlık durumu, profesyonellik ve katılım düzeyi, bölge gibi ölçütlerle değerlendirilmesi sportif faaliyetlerin çeşitliliğini artırmaktadır. Bu çeşitlilik de girişimcilik açısından üretilebilecek fikirleri artırmaktadır.

Spor sektörünün her geçen gün büyüyen yapısı, sporun yönetiminde profesyonellik ve kurumsallaşmayı da beraberinde getirmekte, spor örgütleri de bu açıdan diğer örgütlerle rekabet edebilir konuma gelmektedir.

Tüm bu anlatılan nedenlerden dolayı spor girişimciliği son yıllarda bir bilim olarak değerlendirmeye başlanmıştır. Spor yöneticiliği alanında eğitim veren kurumlar spor girişimciliğini ders olarak vermekte ve bu alanda bilimsel çalışmaların sayısı zamanla artmaktadır.

Bu araştırma sonucunda Amerika ve Avrupa ülkelerinin spor sektörünün büyüklüğünden ve çeşitliliğinden yararlanarak girişimcilik örneği olarak gösterilebilecek birçok faaliyetler gerçekleştirdiği görülmüştür. Aynı şekilde gelişmekte olan ülkelerin spor girişimciliğine örnek uygulamalarına pek rastlanmamıştır. Bu nedenle gelişmekte olan ülkelerin ekonomik kalkınmalarına katkı sağlaması açısından spor sektörünün büyüklüğünü ve çeşitliliğini göz ardı etmemeleri gerekmektedir.

Henüz Türkçe alanyazında rastlanmayan spor girişimciliği konusunun, yoğun genç nüfusa ve buna bağlı olarak sporda yoğun talebe sahip olan ülkemize sağlayacağı katkıların daha net ortaya konulmasını sağlayacak araştırmalara ihtiyaç duyulmaktadır.

Türkiye'nin Sakin Şehirlerindeki Kadın Girişimciliğine Sosyolojik Bir Bakış

Women Entrepreneurship in Slow Cities of Turkey from a Sociological Perspective

Asst. Prof. Dr. Zerrin Sungur (Anadolu University, Turkey)

Abstract

Cittàslow movement was established in Italy in 1999. The Slow City movement incorporates a philosophy and a commitment to maintain the cultural heritage and quality of life of their membership towns. A slow city aims to improve the quality of life of its citizens and its visitors. Member towns are obliged to pursue local projects protecting local cultures, contributing to a relaxed pace of life, creating conviviality and hospitality and promoting a unique sense of place and local distinctiveness. There are nine slow cities in Turkey in 2013. This study examines the women entrepreneurship in slow cities of Turkey from a sociological perspective. Slow cities offer many opportunities in the meaning of local development especially for women in Turkey. They can engage with small business, hand-crafts, and organic farming in slow cities. But training of women, certification of the quality of artisan products and awareness of the citizens of slow cities are the critical issues in the sustainable local development process. Therefore, it is possible to increase income level of women living in slow cities in Turkey and also to preserve local tastes.

1 Giriş

Yaşam temposunun hızının giderek arttığı ve yaşam tarzlarının giderek birbirine benzediği gerçeği dikkate alındığında diğer taraftan da yeni yaşam felsefeleri de buna tepki olarak gelişmiştir. Yavaş yemek ve daha sonra ortaya çıkan sakin şehir hareketi bunlardan başlıcalarıdır. Bu hareketlerin 1970'ler sonrası post-Fordist dönemde üretimde de yeni anlayışlara sahne olan İtalya'da ortaya çıkması tesadüf olmasa gerektir. Sakin şehir, modernle geleneksel, küresel ve yerel arasında insan ilişkilerini ve çevreye duyarlılığı önemseyen bir modeli ifade etmektedir. Ortaya çıkardığı dinamikler açısından bakıldığında bir tür yerel kalkınma modeli olarak da ele alınabilecek sakin şehir, özellikle kadınlar açısından istihdam olanakları zengin bir yelpaze sunmaktadır.

2 Yavaş Beslenme ve Sakin Şehir Hareketi

İtalyanca Città (şehir) ve İngilizce slow (yavaş) kelimelerinden oluşan Cittàslow, "sakin şehir" anlamına gelmektedir. 1986 yılında hızlı yiyecek (fast food) zincirine karşı çıkılarak, İtalya'nın Barolo kentinde "Yavaş Beslenme Birliği" oluşturulmuştur. Cittàslow Ağı, küreselleşmenin şehirlerin dokusunu, sakinlerini ve yaşam tarzını standartlaştırmasını ve yerel özelliklerini ortadan kaldırmasını engellemek için Slow Food (yavaş beslenme) hareketinden ortaya çıkmış bir kentler birliğidir. Küreselleşmenin yarattığı homojen mekanlardan biri olmak istemeyen, yerel kimliğini ve özelliklerini koruyarak dünya sahnesinde yer almak isteyen kasabaların ve kentlerin katıldığı bir birliktir (http://www.cittaslowturkiye.org/). 1989'da Paris'te uluslararası boyut alan birliğin bugün 100'den fazla ülke temsilcisinden oluşan 100 binden fazla üyesi bulunmaktadır (http://www.cittaslowturkiye.org/; http://www.habitat.org.tr/sakin-sehirler/727-sakin-sehir-seferihisar.html). Sakin Şehir Hareketi kendisine logo olarak modern ve tarihi binaları taşıyan turuncu renkli bir salyangoz (Şekil 1) tasarımını belirlemiştir (Sırım, 2012; Slow Magazine, 2012). Yavaş, temkinli, fakat kararlı bir biçimde yol alan salyangoz, cüssesinden beklenmedik mesafeler katetmekte; bunu yaparken de geçtiği yerlerde ince bir iz bırakmaktadır (Sırım, 2012; Kavas ve Kavas, 2012).

Şekil 1: *Cittàslow logosu*

Yavaş yiyecek kavramından esinlenen "Sakin Şehir Hareketi"nin temeli, İtalya'nın Toskana bölgesindeki 13 bin nüfuslu Greve in Chianti'nin belediye eski başkanı Paolo Saturnini'nin girişimleri sonucunda 1999 yılında atılmıştır. Saturnini, fikirlerini Bra, Orvieto ve Positano belediye başkanlarıyla da paylaşarak yaşam kalitesini

artırmaya dayalı olan ve gelişmeyi farklı bir biçimde ele alan bu anlayışın öncüsü olmuştur (http://cittaslow.org/section/association). İlk bildirgede küreselleşmenin insanlar arasındaki iletişimi, kaynaşmayı ve değişimi kolaylaştırmasına karşılık farklılıkların törpülenerek, tek tip bir insan modeline doğru gidildiğini ve sonunda sıradanlığın hakim olacağı bir düzenin yaratılacağı konusundaki endişeler dile getirilmiştir. Bu olası sonuçların engellenmesi, yerel değerlere sahip çıkılması, bu değerlerin korunması ve geliştirilmesi sakin şehir kavramı çerçevesinde bir ağ oluşturulmuştur (http://habitat.org.tr/sakin-sehirler/727-sakin-sehir-seferihisar.html).

Cittàslow, nüfusu 50.000′nin altında olan kentlerin üye olabildiği, kentlerin kendi gelenek, göreneklerini, yemeklerini, tarihsel kimliklerini korumalarını öngören bir birliktir. Cittàslow felsefesi kentlerin hangi alanlarda güçlü ve zayıf olduklarını analiz etmelerini ve sahip oldukları şartlar çerçevesinde bir strateji geliştirmelerini teşvik etmektedir (http://www.cittaslowturkiye.org/). Citttàslow Birliği'ne üye olmak için birliğin tespit ettiği ölçütleri gerçekleştirmek için projeler geliştirmek ve uygulamak gerekmektedir. Kentlerin ölçütler çerçevesinde yaptığı çalışmalar puanlanmakta ve bir kentin üye olması için 50 ve üzerinde puan alması gerekmektedir. 1999 yılında birliğin belirlediği ölçütler, birliğin sadece İtalya veya Avrupa'da değil bütün dünyada yayılması sonucu daha evrensel bir hale getirilmeye çalışılmıştır (http://www.cittaslowturkiye.org/index.php?option=com_ content&view=article&id=131&Itemid=529). Harekete dahil olan kentlerde insan daha düşük tempoda yaşarken, daha az enerji tüketerek ve vahşi bir gıda tüketimi yerine az ama öz beslenme ile yaşıyabilmektedir. Kendisine, ailesine ve çevresine daha çok zaman ayırabilmektedir. Bu değişim bir anlamda insanın çevresi ve doğa ile sağlıklı bir ilişki içinde olmasının, sağlıklı bir beden ve ruh için en önemli adım olduğunun onaylanmasıdır (Şahinkaya, 2010).

Bir sakin şehrin yaşamına yön veren prensipler, şehir insanlarının ve ziyaretçilerinin yaşam kalitesinin yükseltilmesi, birliğe dahil olan şehirler arasında ulusal ve uluslararası ölçekte bilgi, fikir ve deneyimlerin paylaşılması üzerine kuruludur (Fullagar, Markwell ve Wilson, 2012). Sakin şehir hareketi toplumun "McDonaldlaşması"na (Ritzer, 2004) karşı bir duruşu temsil ederken, yaşamın artan temposuna karşı bir direnişi ve "mekansızlığı" ifade etmektedir (Mayer ve Knox, 2009). Yerli kültürle çok az ilişki kuracakları yabancı ülkelere gitmek için insanlar önemli miktarda harcama ve çaba içine girmektedirler (Ritzer, 2011). Paket turlar genellikle turizm açısından herşeyin öncesinde belirli ve öngörülebilir olduğu, daha çok Batılı bir anlayışı temsil etmektedir.Tatil tercihlerini bu türde yapan kimseler de yerel halkla, oranın yerel kültürüyle hiç karşılaşmadan izole bir ortamda yaşamaktadır. Oysaki sakin şehirlerde birkaç gününü geçiren kimseler çok farklı deneyimleri yaşama şansına sahip olmaktadırlar.

Sakin şehir hareketine yöneltilebilecek eleştiriler ele alınırsa bunlardan biri bu hareketin kolaylıkla moralsiz, geriye dönük ve soyutlanmış topluluklar ortaya çıkarabilmesi üzerinedir. Acaba sakin şehirler hızlı dünyanın hararetli maddeciliğinin yerini sakinliğin tutuculuğuna bıraktığı ortamlar mıdır? Diğer taraftan sakin şehirler çeşitliliğin olmadığı, akşamları gençlere yönelik faaliyetlerin olmadığı, hareketsiz aptallaştırıcı mekanlar olmayı da istememektedir. Sakin şehirler işletmeciliğe, yenilik ya da teknolojiye karşı durma gibi bir niyetleri de yoktur. Yavaşlığın öngördüğü tehlikelerin farkında olarak, sakin şehir hareketli çiftçi pazarları, festivaller ve cazip kamusal alanların yaratılması ile canlılığı yaygınlaştırmayı hedeflemektedir. Bu anlamda çevreye duyarlı, bölgesel olarak otantik işletmeler yoluyla gastronomi odaklı bir turizmi teşvik etmektedir. Bir diğer tehlike paradoksal bir biçimde sakin şehir etiketinin miras endüstrisi içinde bir tür marka farkındalığına dönüşmesidir. Sakin şehirler nüfusları 50 binin altında olması dolayısıyla zamanla turizm yoluyla kolayca cazibe merkezleri haline gelebilirler. Bu şehirler sakin tempolarını gösteriş konusu haline getirirken, hızlı bir değişime uğrayabilirler. Bu senaryoda dükkan kiralarının artması, kafelerin özgünlüğünü yitirerek bozulmasına neden olabilir. Dışarıdan gelen zengin ziyaretçiler sakin şehirleri ikinci evleri olarak seçebilirler. Bu durumda ev kiraları yükselecek, yoksullar ve gençler dışlanabilecektir. Bu tehdit karşısındaki en iyi savunma, hareketin propagandasını yapmaktır. Ne kadar yerel kalınırsa, o kadar az özel üyelik statüsü olacak, bunlar daha az ilgi çekecektir. Bu bağlamda herşey ilk uyum sağlayanların başarılarına ve becerilerini daha geniş bir üyelik için zemin oluşturmada kullanma kabiliyetlerine bağlıdır (Knox, 2005).

2.1 Sakin Şehir Olma Ölçütleri

Belirli bir çevre politikasını uygulayan, teknolojiyi çevrenin kalitesini geliştirme yönünde kullanan, doğal ürünlerin kullanımını destekleyen şehirler, sakin şehir olarak adlandırılmakta ve bu şehirler, sakin şehir ölçütlerini hayata geçirdikleri takdirde CittàSlow ağına katılabilmektedir (Miele, 2008). Rönesans döneminin temel düşünceleri arasında yer alan "festina lente", hızlı yaşarken, dikkatli olmak; gerektiğinde hızlanıp, gerektiğinde yavaşlayarak, arada denge kurmak anlamına gelmektedir. Sakin şehir olabilmenin 60 ölçütü, "festina lente" prensibine dayandırılmıştır (Çiner, 2011; Bilgi, 2013).

Sakin şehir olma ölçütleri çevre, alt yapı, kentsel kalite için teknoloji ve tesisler, yerel üretimin korunması, misafirperverlik, farkındalık, sakin şehir kimliği ve ilgili projeler başlıkları altında incelenebilir. Bu ölçütlerin detaylı gerekleri ise çevre politikaları bağlamında hava, su ve toprağın kalitesinin, yasa tarafından belirtilen parametrelerde olduğunun belgelenmesi; kentsel çöp ve özel atıkların ayrıştırılarak toplanmasının teşvik edilmesi ve yaygınlaştırılmasına yönelik projelerin uygulanması; endüstriyel ve evsel kompostlamanın teşvik edilmesi ve yaygınlaştırılması; kentsel ya da toplu kanalizasyon için, atık su arıtma tesisinin bulunması; RSU ve biyokütlelerden ısı üretilmesi ve özellikle alternatif enerji kaynaklarının (yenilenebilir enerji, yeşil hidrojen, mini

hidroelektrik santral) kullanılması yoluyla enerji tasarrufu yapılmasına yönelik belediyenin planı olması; genetiği değiştirilmiş ürünlerin (GDO) tarımda kullanımının yasaklanması; reklam tabelaların ve trafik işaretlerinin düzenlenmesine dair belediyenin planının olması; elektromanyetik kirliliğin kontrolü için sistemler geliştirilmesi; gürültü kirliliğinin azaltılması ve kontrolü için program yapılması; ışık kirliliğinin kontrolü için sistemler ve programlar oluşturulması; çevre yönetimi sistemlerinin benimsenmesi (EMAS ve ECOLABEL ya da ISO 9001; ISO 14000, SA 8000 ve Gündem 21 projelerine katılım) olarak sıralanabilir.

Altyapı politikaları bağlamında ise tarihi merkezlerin ıslahı ve iyileştirilmesi için planlar ve/veya kültürel ve tarihi değerler üzerine çalışmalar yapılması; güvenli ulaşım ve trafik için planlar yapılması; okullar ve kamu binalarına bağlanan bisiklet yollarının yapılması; özel taşıtlar yerine uygun alternatif taşıma ve trafiğin toplu taşım araçları ve yaya alanları ile bütünleştirilmesi için (toplu taşımla bağlantılı ilave kentsel araba park alanları, yürüyen merdivenler, yürüyen bantlar, teleferik, bisiklet yolları, okullar, işyerleri ve benzerlerine erişim sağlayan yaya güzergâhları) planlar yapılması; kamusal ve kamuyla ilgisi olan alanların engelliler için erişilebilir olması, mimari engellerin kaldırılması ve teknolojilere erişimin sağlanmasını garanti altına almak üzere altyapıların teşvik edilmesi; aile yaşantısına ve yerel aktivitelere (eğlence, spor aktiviteleri, okul ve aile arasında bağ oluşturmayı amaçlayan aktiviteler, yaşlılar ve kronik hastalar için evde yardımı da kapsayan yardım çalışmaları, sosyal tesisler, belediye çalışma saatlerinin düzenlenmesi, umumi tuvaletler) yardımcı olacak programların teşvik edilmesi; tıbbi yardım merkezinin bulunması; vasıflı yeşil alanların ve hizmet altyapılarının (yeşil alanların birbiriyle bağlantıları, oyun sahaları, vb.) bulunması; ticari malların dağıtımı ve "doğal ürünler için ticari merkezler" oluşturulması için plan hazırlanması; mağaza sahipleriyle, zor durumda olan vatandaşlarla ilgilenme ve yardım etme üzerine mutabakat sağlanması: "dost mağazalar"; bozulmakta olan kentsel alanların ve şehrin yeniden kullanılmasına yönelik projelerin iyileştirilmesi; kent tarzının yeniden yapılandırılması ve iyileştirmesi için bir program; kentin tanıtımında kullanılan bilgilendirme ofislerinin, U.R.P. (kentsel yenilenme programı) işlevlerinin Cittàslow tanıtım/bilgi ofisiyle bütünleştirilmesi sayılabilir.

Sakin şehir olma ölçütleri arasında kentsel kalite için teknolojiler ve tesisler bağlamında ise biyomimari için büro ve biyomimarinin teşvik edilmesi yönündeki bilgilendirme projesi için görevlendirilen personelin eğitilmesi; şehrin, fiber optik kablolar ve kablosuz sistemler için teçhiz edilmesi; elektromanyetik alanları izleme sistemlerinin benimsenmesi; kentin çevresi ve peyzajıyla uyumlu çöp tenekeleri bulundurulması ve çöplerin belirli zamanlarda toplanması; kamu ve özel alanların çevreyle uyumlu bitkilerle, tercihen bahçe peyzajı ölçütlerine uygun yerel bitkilerle, bitkilendirilmesi için teşvik edilmesi ve programlar oluşturulması; vatandaşlara götürülen hizmetler (belediye hizmetlerinin internet vb. üzerinden duyurulması, vatandaşlar için internet tabanlı bir belediye ağı oluşturulması ve vatandaşların bu ağı kullanmaları yönünde eğitilmeleri) için planlar yapılması; özellikle gürültülü alanlarda gürültünün kontrol edilmesi için plan yapılması; kentte kullanılan renklerle ilgili plan hazırlanması; elektronik evden çalışmanın (telework) teşvik edilmesi sıralanabilir.

Yerel üretimi koruma başlığında ise organik tarımcılığın geliştirilmesi için projelerin üretilmesi; esnaf ve zanaatkârlar tarafından üretilen ürünler, eşyalar ve el sanatlarının kalitesinin belgelendirilmesi; yok olma tehlikesiyle karşı karşıya olan esnaf ve zanaatkârların ve/veya el işi ürünlerinin korunması ve himayesine yönelik programlar yapılması; yok olma riskiyle karşı karşıya olan geleneksel çalışma ve meslek yöntemlerinin himayesi; organik ürünlerin ve/veya yerli ürünlerin kullanılması ve restoranlar, okul kafeteryaları ve korunan yapılarda yerel geleneklerin muhafaza edilmesi; Slow Food hareketiyle işbirliği içerisinde okullarda tat ve beslenme konusunda eğitim programlarının hazırlanması; yok olma riski altında olan şarap ve gastronomik yavaş yemek çeşitleri için aktivitelere destek olunması; yöreye özgü ürünlerin tespit edilmesi ve bu ürünlerin ticarileşmesi için destek olunması (pazarların ve marketlerin yerel ürünlerin satışı için düzenlenmesi, uygun mekanların oluşturulması); şehirdeki ağaçların sayımının yapılması ve büyük ya da "tarihi ağaçların" değerinin arttırılması; yerel kültürel etkinliklerin korunması ve teşvik edilmesi; kent ve okul bahçelerinde geleneksel yöntemlerle yerel ekinler yetiştirilmesi için teşvik edilmesi yer almaktadır.

Misafirperverlik bağlamında ise turist bilgisi ve nitelikli misafirperverlik için eğitim kurslarının açılması; turistik güzergâhlarıyla tarihi merkezlerin ve turistik yerlerin işaretlenmesinde uluslararası işaretlerin kullanılması; ziyaretçilerin özellikle takvimlendirilmiş etkinlikler için şehre yaklaşımlarını ve bilgi ve hizmetlere erişimlerini kolaylaştırıcı resepsiyon yönergelerinin ve planların hazırlanması (otopark, resmi kurumların çalışma saatlerinin uzatılması/esnetilmesi, vb.); şehrin "yavaş" güzergâhlarının düzenlenmesi (broşürler, internet siteleri, ana sayfalar vb.); turistik işletmeciler ve mağaza sahiplerinin, ücret şeffaflığı ve fiyatların müessesenin dışında sergilenmesi gerekliliği konusunda bilinçlendirilmesi sakin şehir olma ölçütleri arasındaki yerini almaktadır.

Farkındalık bağlamında bakıldığında yerel yönetimin Cittàslow olma niyetini açıklamadan önce vatandaşların Cittàslow'un ne olduğu, amaçları ve prosedürü hakkında bilgilendirilmesi amacıyla kampanyalar düzenlenmesi; "Yavaş" felsefesini kazanmada ve Cittàslow projelerinin uygulanmasında sosyal yapıların dâhil edilmesi için programlar hazırlanması, özellikle; eğitsel bahçe ve parklar, okuma mekanları, tohum bankası projesine katılım; Slow City ve Slow Food faaliyetlerinin yaygınlaştırılması için programlar hazırlanması ifade edilebilir.

Olağanüstü gereklilikler bağlamında ise kentte Cittàslow kimliğini vurgulayacak kampanyalar düzenlenmesi ve Cittàslow tarafından lanse edilen şartların karşılanması (zorunlu); Yavaş Yemek Komitesinin oluşturulması ve

desteklenmesi (liyakat notu); üye şehirlerin antetli kağıtlarına Cittàslow logosunu eklemeleri ve web sitelerine "yavaş" felsefesi hakkında içerik koymaları gerekmektedir.

Slow Food Faaliyetlerine ve Projelerine Destek çerçevesinde yerel bir Slow Food Convivium'unun oluşturulması; Slow Food ile işbirliği yaparak zorunlu ve orta öğretimde tat ve beslenme üzerine eğitim programları hazırlanması; Slow Food ile işbirliği yaparak okul sebze bahçelerinin kurulması; Arca veya Slow Food Merkezlerinin, yok olma riski altında olan türlere veya ürünler için bir veya daha çok projelerinin uygulanması; Slow Food tarafından himaye edilen yerel ürünlerin kullanılması ve beslenme geleneklerinin, gıda eğitim programlarıyla birlikte, toplu gıda hizmetleri, korunan yapılar ve okul kantinleri içerisinde muhafaza edilmesi; Slow Food ile işbirliği içerisinde "Mercati della Terra" uygulamasıyla özgün yerli ürün elde edilmesinin desteklenmesi; "Terra Madre" projesinin ve yemek cemiyetlerinin ortak eşleştirme ile desteklenmesi istenmektedir.

3 Dünyada ve Türkiye'de Sakin Şehir Profili

Nisan 2013'te güncellenen listeye göre tüm dünyadan 27 ülkeden toplam 176 şehir Sakin Şehir hareketine katılmış bulunmaktadır. Sakin şehirlerin bulunduğu ülkeler ve bu ülkelerdeki sakin şehir sayıları ise şöyledir: Avustralya (3), Avusturya (3), Belçika (5), Kanada (2), Çin (1), Danimarka (2), Finlandiya (1), Fransa (8), Almanya (12), Büyük Britanya (5), Hollanda (5), Macaristan (1), İzlanda (1), İrlanda (1), İtalya (72), Japonya (1), Yeni Zelanda (1), Norveç (3), Polonya (10), Portekiz (6), Güney Afrika (1), Güney Kore (12), İspanya (6), İsveç (1), İsviçre (1), Türkiye (9) ve Amerika Birleşik Devletleri (3).

Şekil 2: *Cittàslow Uluslararası Ağı*

Türkiye'de 2013 yılında sakin şehirlerin sayısı 9'a çıkmıştır. Bu belde ve ilçelerin bağlı bulundukları iller ise şöyledir; Seferihisar (İzmir), Gökçeada (Çanakkale), Akyaka Beldesi (Ula İlçesi- Muğla), Taraklı (Sakarya), Yenipazar (Aydın), Yalvaç (Isparta), Vize (Kırklareli), Perşembe (Ordu), Halfeti (Şanlıurfa)'dir. Bunlardan Seferihisar, Türkiye'de ilk sakin şehir olma unvanını kazanarak 2009 yılında Cittàslow ağına dahil olmuştur. Daha sonra 2011 yılında ise Taraklı, Gökçeada, Yenipazar ilçeleri ve Akyaka Beldesi ile birlikte Türkiye'de sakin şehir sayısı beşe çıkmıştır (Sırım, 2012).

Akyaka Özel Çevre Koruma Bölgesi olması ve biyoçeşitliliğiyle, Taraklı karakteristik mimari yapısı ve restore edilen çok sayıda binasıyla, Yenipazar'ın Türkiye çapında ünlü pidesi başta olmak üzere yerel yemekleriyle, Gökçeada ise adada organik üretim yapılmasıyla ve Slow Food etkinlikleri sayesinde kendi özelliklerine sahip çıkan kentlerdir denilebilir. Yeni üyelerle birlikte Ulusal Birliği'ni kurarak İcra Kurulu'na giren Seferihisar, Cittàslow'ların geleceğiyle ilgili karar verme yetkisini kazanmıştır. Ulusal Birliği'ni kuran Türkiye 2013 yılı Cittàslow Genel Kurulu'na ev sahipliği yapma hakkını elde etmiştir. Birliğin en büyük organizasyonu "Cittàslow Genel Kurulu" 2013 yılı Haziran ayında Türkiye'de, İzmir'de, Seferihisar'da yapılmıştır.

4 Yerel Bir Kalkınma Modeli Olarak Türkiye'de Sakin Şehir

Sakin şehir hareketinin yerel bir kalkınma modeli olduğuna ilişkin tespitler öncelikle Türkiye'de sakin şehirin ilk örneği olan Seferihisar örneği üzerinden yapılabilir. Seferihisar Belediyesi'ni sakin şehir ağına taşıyan faaliyetler arasında şunlar sıralanabilir:

Köylülerin ürettikleri yerel ürünleri satabilecekleri ve hem yerel kalkınma hem çevre açısından önemli kazanımlar sağlayan pazarlar oluşturulmuştur. Seferihisar'ın Sığacık mahallesinde yerel ürünlerin ve el işlerinin sergilendirdiği "Sığacık Üretici Pazarı" kurulmuştur. Yeni çıkan tohum yasasına göre yerli tohumların satışının yasak olması nedeniyle üreticiler takas yöntemiyle istedikleri tohumları tohum takas şenliğinde elde etmişlerdir. Tarladan Sofraya İyi Tarım Projesi kapsamında 140 üretici, sürdürülebilir üretim yöntemlerinden birisi olan İyi

Tarım Uygulamaları ile tanışmış bu konuda geniş bilgi edinmiştir. Ulamış mahallesi ve Doğanbey köyünde Seferihisar Belediyesi "Kadın Emeği Evleri" açılmıştır. Bu evler kadın emeğinin değerlendirilmesine, kadınların meslek edinmelerine veya gelir getirici faaliyetlerde bulunmalarına imkan sağlamıştır. Seferihisar´da unutulan ve unutulmaya yüz tutan geleneklerin ve kültürel etkinliklerin tespit edilmesi için "75 Yaş Yemeği" düzenlenerek bu etkinlik kapsamında Seferihisar ilçesinde yaşayan yaşlılarla röportajlar yapılmıştır. Seferihisar'ın yerel değerlerinden biri olan hayvancılık sektörünün korunması ve geliştirilmesi amacıyla Damızlık Koyun-Keçi Panayırı düzenlenmiştir. "Okullarda Sebze Bahçeleri" projesi çerçevesinde öğrenciler sebze yetiştirmeye başlamıştır. Sadece yöresel yemeklerin satıldığı "Sefertası Lokantası", Sakin Şehir örgütlenmesinin en önemli ölçütlerinden biri olan Yavaş Beslenme (Slow Food) ve yöresel lezzetlerin ön plana çıkarılması amacına hizmet etmektedir. Bunlar arasında sakızlı tarhana, nohutlu mantı, samsades, ekmek dolması, balıklama, piroh, Armola, kuzu dolması, loklok ve yuvalaça gibi yöresel tatların temsil ettiği mutfak mirası sayılabilir. Bunların yanında Seferihisar Sözlü Tarihi çalışmaları, aracısız satış yapılan köy pazarı, tiyatronun kaynağı antik Teos kenti, Mavi Bayraklı plajları, CittàSlow Üniversitesi Projesi ve UNICEF bünyesinde oluşturulan Çocuk Dostu Kentlerin Türkiye'deki ilk örneği olması, Seferihisar'ı özel kılmaktadır (Bilgi, 2013).

Seferihisar'da bisiklet kullanımını yaygınlaştırmak ve günlük kullanılabilecek bir ulaşım aracı olduğunu vurgulamak için Seferihisar Belediyesi hizmet binasında ve Sığacık'ta iki adet bisiklet garajı oluşturulmuştur. Atatürk Caddesi ve çevresi başta olmak üzere Seferihisar şehir merkezindeki trafiğin azaltılması ve yayalaştırılması için trafiğe kapatılması uygulaması başlatılmıştır. Kentsel çöp ve özel atıklarının ayrıştırılarak toplanmasına yönelik projeler hayata geçirilmiştir. 50.000 kişilik bir biyolojik atık su arıtma tesisi kurulmuştur. Şehirde farklı boylarda ve tarzlarda ilan ve reklam panoları yerine Belediye yetkilileri tarafından belirlenen standart boyda ve tarzda ilan ve reklam panoları kullanılmaya başlanmıştır. Bu çalışmalar için Seferihisar Atatürk Caddesi ve Sığacık-Merkez pilot uygulama alanları olarak seçilmiştir. Bu bölgelerde dükkânların tabelaları yeni tabelalarla değiştirilmiştir. Çeşitli binalarda mimari iyileştirmeler gerçekleştirilerek uydu antenleri merkezi sisteme çatıya alınmıştır. Belediye serasında yetiştirilen sardunyaların kullanıldığı saksılar balkonlara yerleştirilmiştir. Sakin Şehir olmanın amaçları, prosedürleri, bu ağa katılmanın Seferihisar'a katacakları hakkında kamuoyunu bilgilendirici programlar düzenlenmiştir. Seferihisar'ın sakin şehir olma sürecinde planlama ilkeleri ve yaklaşımı doğaya, çevreye ve insana daha saygılı olma anlamında bir bakış açısı değişikliği yaratmıştır (Öztürk, 2012).

Sakin şehirlerin bir diğer hedefi de doğayı koruyarak teknolojiyi en üst düzeyde kullanmaktır (Şarman, 2011). Bu bağlamda güneş, rüzgâr ve jeotermal gibi alternatif enerjilerden yararlanmak çok önemli bir hedeftir. Güneş enerji panelli aydınlatma elemanlarının kullanılmaya başlandığı Seferihisar'da amaç, bu enerji kaynağının kullanımının yaygınlaştırılmasıdır. Yılın üç yüz gününü güneşli geçiren Seferihisar, aynı zamanda kaplıcalar ve termal enerji kaynakları açısından verimli bir coğrafyaya ve güçlü rüzgâr koridorlarına sahiptir. Bu çerçevede şehrin ısınmasında jeotermal enerji kullanımı planlanmakta; rüzgâr enerjisi kullanan aydınlatma üniteleri projelendirilmektedir (Bilgi, 2013).

Türkiye'de sakin şehir unvanına sahip bir başka şehir olan Gökçeada'nın da içinde bulunduğu Kuzey Ege Adaları, günümüze kadar ulaşan kültürel miras değerleri ile köklü bir uygarlık sentezinin izlerini taşımaktadır. Sanatın birçok dalının ve ticaretin geliştiği bu adalarda yaşayan uygarlıklar, günümüzde de birçok insanı etkilemeye devam etmektedir (Yurtseven, 2007). Bir Kuzey Ege adası olarak Gökçeada; rüzgârı, tatlı su kaynakları, Rum köylerindeki taş evleri, TÜDAV'a tahsis edilen Yıldız koyundaki Türkiye'nin ilk Su Altı Milli Parkı, sakızlı muhallebi, paştiço, kouka, cicirya, feta, koliva, dibek kahvesi, nar likörü, cipuna, şarap, keçi dolma gibi Slow Food kaynaklarının temsil ettiği mutfak mirası, organik tarımı, gastronomi eğitimi ve kendine özgü günlük yaşam kültürüyle özel bir destinasyondur (Bilgi, 2013).

Gökova Körfezi ağzında bulunan sakin şehir Akyaka, günümüzde Ege ve Akdeniz'deki kıyı yerleşimlerinin plansız yapılaşmayla birlikte yüzleşmek zorunda kaldığı kaçınılmaz sondan uzak kalmayı başaran bir tür örnek şehir denemesidir. Özel Çevre Koruma Statüsü'nün yanı sıra doğal SİT Alanı içinde olması, kuzeyinde 1000 metreye yükselen Sakar Dağı, doğusunda Kadın ve Akçapınar azmakları, azmaklar arasında uzanan verimli ova ve Gökova Körfezi'ne açılan ıssız koylar, Nail Çakırhan tarafından tipik Muğla-Ula mimarisinin stilize edildiği, geleneksel çizgiler taşıyan ahşap evleri Akyaka coğrafyasını özel kılmaktadır. Akyaka'nın ünlü Mavi Bayraklı plajının yanı sıra, coğrafyasına can veren iki akarsudan biri olan Kadın Azmağı, sualtı bitki popülasyonu ile dalış meraklıları için cazip bir doğal akvaryum sunmaktadır. Yıl boyu yüksek debisini ve sıcaklığını koruyan bu sodalı akarsuda eskiden yöre kadınlarının çamaşırlarını yıkamasından dolayı, akarsu halk arasında Kadın Azmağı olarak anılmaktadır. Akyaka'nın diğer akarsuyu Akçapınar, denize yaklaştığı noktadan itibaren denizle arasında uzun bir kıyı şeridi oluşturmaktadır. Doğal SİT Alanı olan Akçapınar Azmağı ile Kadın Azmağı arasında kano, uçurtma kayağı (kite surf) ve çift kişilik yamaç paraşütü gibi (tandem), motorlu su sporlarına alternatif doğa sporları ilgi görmektedir (Tuvi, 2010). Küçük piyade tekneleriyle azmak turu yapmak, Akyaka'nın mimari dokusunun yaratıcısı Nail Çakırhan'ın adının verildiği sokakta dolaşmak ve Azmak kıyısında Akya buğulamayı ve Akyaka balı ile susamın pişirilmesiyle yapılan Çitirmek'i tatmak, Akyaka yerel mutfağı örnekleri arasında bulunmaktadır (Bilgi, 2013).

Yenipazar'ın 2011 yılında sakin şehir unvanını alması yerel kalkınma modelinin lokomotifi olmuştur. Bu bağlamda, kasabada aracısız köy pazarı ve kadın kooperatifleri kurulmuş, yaya alanları artırılmış, sivil mimari örnekleri koruma altına alınmış ve bisiklet istasyonları projelendirilmiştir. Bisiklet kullanımının alternatif bir ulaşım aracı olarak yaygınlaştırılması amacıyla her yıl Bisiklet Şenlikleri organize edilmektedir. Yerel mutfağı temsil eden en önemli Slow Food kaynakları Yenipazar pidesi, cızdırma, yavru kavurması, hurma ve pırasalı ekmektir. Batı Anadolu'nun kültür mirası olan Geleneksel Yörük Şenlikleri, yirmi altı yıldır Yenipazar'da düzenlenmeye devam ettirilmektedir (Bilgi, 2013).

19. yüzyılda, İstanbul'dan Anadolu'ya uzanan İpekyolu üzerinde bir konaklama merkezi olan Taraklı, o dönemde ipek böcekçiliği, şimşir tarak ve kaşıklarıyla önem kazanırken, 1950'li yıllardan sonra E5 karayolunun ve TEM'in dışında kalarak büyük şehirlerin hızlı yaşam tarzından uzaklaşmıştır. Taraklı evlerinin kendine özgü genel karakteristiği, 19. yüzyıl Osmanlı şehir mimarisini yansıtan üç katlı ahşap karkas evlerden oluşmasıdır. Korunarak günümüze ulaşanlar arasında bulunan Küçükhan, Kale Han, Çakırlar, Orhangazi Çarşısı ve Hacırıfatlar gibi birçok tarihi konağın restorasyonu tamamlanarak bu yapılara butik otel fonksiyonu kazandırılmıştır. Cittàslow üyeliğinin bir özdenetim mekanizması olarak fonksiyonellik kazandığı Taraklı'da, jeotermal enerji potansiyelinin gelecek beş yıllık dönemde rasyonel anlamda değerlendirilebilmesi amacıyla, iki yüz elli bin kişiden oluşan bir nüfus kitlesine hizmet vermeyi hedefleyen kaplıca tesisleri projelendirilmektedir (Bilgi, 2013).

Türkiye'de sakin şehir kavramı belediyelerin yol haritası haline gelirken şehirlerin geleceğini korumaktadır. Yavaş şehir kavramı plansız kentleşme, para kazanma ve küreselleşmenin bir parçası olma gibi kentsel değerleri devam ettirirken, daha hızlı ve modern olma adına insanların gelenek ve göreneklerini unutmalarının önüne geçmektedir (Karabağ ve diğerleri, 2012).

5　Türkiye'de Sakin Şehirlerde Kadın Girişimciliği

Türkiye'de istihdam ve işgücüne katılımda kadın ve erkekler arasında büyük farklar bulunurken, kadınların işgücüne katılım oranlarının giderek düşme eğilimi içinde olması, onun diğer gelişmekte olan ülkelerden ayırt edici özelliği olarak ortaya çıkmaktadır. Uluslararası Çalışma Örgütü'nün Kadınlar için Küresel İstihdam Eğilimleri Raporu'na göre gelişmekte olan ülkelerde son on yıl içinde kadınların istidama katılım oranlarının arttığı gözlenmektedir. Türkiye'de ise 1950 sonrası dönemde eğilim, milli gelirde ve istihdamda tarım sektörünün payının azalmasına koşut olarak kadınların işgücüne ve istihdama katılım oranlarının gerilemesi yönündedir (Toksöz, 2011). Türkiye'nin 1970'lerin sonuna kadar izlediği ithal ikameci sanayi modeline dayalı kalkınma stratejisi içinde kadınlar için asıl istihdam alanı tarım olmuş, sınai istihdam içindeki payları çok sınırlı kalmıştır. 1980'lerde yeni kalkınma stratejisi olarak ihraç yönelimli sanayileşme modeli içinde kadınların payı düşük düzeyde artmıştır. Tarımda uygulanan makro ekonomik politikalar sonucu olarak üretimin ve istihdamın gerilemesi hem erkek hem de kadın işgücü açığa çıkmış, fakat tarım dışı istihdamdaki büyüme özellikle kadınlar açısından bu gerilemeyi karşılayacak boyutta bir işgücü talebi yaratmamıştır. Bu durumdan en fazla etkilenen kesim, eğitim düzeyi düşük kadınlar olmuştur (Toksöz, 2011). Kandiyoti, cinsiyete dayalı işbölümündeki değişimlerin niteliğini anlamak için hem cinsiyetler arasında önceden var olan ilişkilerin niteliğine, hem de sermayenin kırsal alanlara giriş biçimlerine bakmak gerektiğini ifade eder. Toprakta mülkiyet yapılarına, hanelerin tarımsal tabakalaşmadaki konumuna, tarımda mekanizasyonun derecesine, üretilen ürünün cinsine ve niteliğine ve üretim sürecinde emeğe duyulan ihtiyaca bağlı olarak kadın emeğinin kullanım yoğunluğu değişmektedir. Büyük toprak sahibi ailelerde ücretli işçi kullanma ve yeni teknolojilerden yararlanma imkanı ölçüsünde kadınlar üretim sürecinden çekilmekte olup, bu durum özellikle makinayla tahıl üretiminin yapıldığı Orta Anadolu bölgesinde gözlenmiştir. Diğer taraftan pamuk, tütün gibi emek yoğun ürünlerin piyasa için üretimine geçişle beraber Batı Anadolu'da görüldüğü gibi küçük topraklı veya topraksız köylü ailelerinde kadınlar ürün toplama ve çapalama aşamalarında daha yoğun emek harcarken, erkekler makine kullanımı ve ticari faaliyetlerde yoğunlaşmışlardır (Kandiyoti, 1997).

Türkiye'de kadın girişimciliği üzerine yapılmış akademik çalışmalar incelendiğinde olumlu bir tablo karşımıza çıkmaktadır. Çelebi ve Sallan (1994) kadın girişimcilerin cinsiyet rollerini araştırmış ve onların eşdeğer değerlere sahip olduklarını saptarlarken, kadınların ekonomik ve toplumsal değişimlere kolayca uyum sağladıklarını tespit etmişlerdir. Bircan (1998) kadın girişimciliğinin desteklenmesinin kadınlar arasındaki yüksek işsizlik oranlarının düşmesinde etkili olacağını ifade etmektedir. Bircan'a göre kadın girişimciliği bir taraftan yeni istihdam alanları yaratırken diğer taraftan da ürün çeşitliliğini ve ihracatı artırarak, yerel kaynakların harekete geçmesine yardımcı olabilecektir. Çelebi (1997) turizm sektöründeki küçük işyerlerinde kadın girişimciler üzerine yaptığı çalışmasında farklı girişimcilik faaliyetleriyle uğraşan kadınların rol kodlarını araştırmayı hedeflemiştir. Araştırmanın sonuçları kadınların beklenenden daha güçlü bir biçimde eşitlikçi tutum sergilediklerini göstermektedir. Özar (2002) Türkiye'de kadınların mikro ve küçük girişimcilik başarılarının önündeki engelleri dokuz kent kapsamında odak grup görüşmesiyle araştırmaktadır. Bu araştırmada kadınların girişimlerine başlarken gösterdikleri motivasyonları, neden benzer faaliyetlere yöneldiklerini, kültürel, sosyal, çevresel ve ekonomik engelleri analiz etmektedir. Ufuk ve Özgen (2001) ise Ankara'da 220 kadınla yüzyüze yaptıkları görüşmelerle kadın girişimcilerin bir profilini çıkarmayı hedeflemişlerdir. Türkiye'de 2013 yılı

itibarıyla 9 sakin şehir mevcuttur. Tüm bu şehirlerde özellikle yerel girişimlere yapılan vurgu kadınların bu sürece yapacakları katkının önemini bir kat daha artırmaktadır. Kadın girişimciliğin bu ve benzeri kentlerdeki örnekleri diğer kadınlara da cesaret vermektedir. Ev pansiyonculuğu, halıcılık, lokantacılık, çay ve kahvaltı salonu işletmeciliği, deri ve keçeden üretilen el sanatları, geleneksel lezzetler üzerine mekan işletmeciliği, konserve, tarhana, reçel, kurutulmuş sebze vb. üretme, organik tarım, hayvancılık gibi işlerin çoğu kadınların ev içi rollerinin yada becerilerinin devamı niteliğinde karşımıza çıkmaktadır. Kadınlar girişcilik eğitimi almaları doğrultusunda kendilerini hem geliştirme fırsatı bulurken, girişimci faaliyetlerde bulunmak isteyen diğer kadınlarla biraraya gelip güç birliği de yapabilmekte, bu girişimleri kooperatiflere dönüşebilmektedir. Çağımızın iletişim ve ulaşım olanaklarının çok geliştiği dikkate alınırsa kadın girişimcilerin özellikle ürün ve hizmetlerini pazarlamaları aşamasında bu olanaklardan daha etkin yararlanması etkiyi artıracaktır.

Sakin şehir olma ölçütleri arasında özellikle yerel üretimi koruma başlığında ele alındığı üzere organik tarımcılığın geliştirilmesi ve bölgede üretilen eşya ve el sanatlarının kalitesinin belgelendirilmesi önem kazanmaktadır. Kadın girişimciler bu alanda çalışmaları durumunda bu ön aşamanın gerçekleşmesi başarıyı da beraberinde getirecektir. Bunun yanında yöreye özgü ürünlerin, lezzetlerin tespit edilmesi önem taşımaktadır. Geleneksel tatların hem korunması hem de bunların piyasada talep edilir hale gelebilmesi için uygun mekanların oluşturulması anlamında teşvikler yapılmalıdır. Sakin şehirlerde kadın girişimciliğinin geliştirilmesi için misafirperverlik konusunda turist bilgisi ve nitelikli misafirperverlik için eğitimler verilmelidir. Girişimcilerin ücret şeffaflığı ve fiyatların müessese dışında sergilenmesi gerekliliği konusunda bilinçlendirilmesi gerekmektedir. Tüm bunların yanında önce sakin şehirlerde yaşayan vatandaşlar farkındalığı ve bu anlayışın sürdürülebilirliği anlamında bilinçlendirme önem taşımaktadır.

6 Sonuç

Bir taraftan küreselle yerel, modernle geleneksel olanı sentezleyerek insan ilişkilerini ve çevreyi öne çıkararak, birliktelik anlayışına dayanan sakin şehir modeli aynı zamanda yerel bir kalkınma modeli de sunmaktadır. Dünyada ilk örneklerinin İtalya'da görüldüğü sakin şehir hareketi ülkemiz açısından değerlendirildiğinde Türkiye'nin büyük bir potansiyele sahip olduğu açıktır. Uluslararası boyutta giderek önem kazanan ve Seferihisar'ın öncülük ettiği sakin şehirlerin Türkiye'de sayıca artması önümüzdeki yıllarda olasıdır. Bu süreçte hem girişimci olarak hem de karar mekanizmalarında söz sahibi kişiler olarak kadınların daha aktif roller üstlenmesi gerekmektedir. Böylelikle kadın emeğinin daha görünür hale gelmesi, kadının ekonomik ve sosyal statüsünün gelişmesi mümkün hale gelecektir. Girişimcilik ve turist bilgisi konularında kadınların eğitilmesi ve desteklenmesi öncelik taşımaktadır.

Dünya'ya Kıyasla Türkiye'de Kadın Girişimciliği

Women's Entrepreneurship in Turkey Compared to the World

Ph.D. Candidate Gülay Tamer (Medislim Health Center, Turkey)

Abstract

In recent years, it is strategically important for developing economies that women contribute into working areas and entrepreneurship activities because the way to create new job areas and activate unused potential in business is attached to encouragement of the women entrepreneurship. Giving priority to the policies and strategies that help women exist in business contributes to the economic and social development significantly. However, women encounter important obstacles within the entrepreneurship activities.Entrepreneurship has been speeding up in today's world and this project aims at comparing the women entrepreneurship between Turkey and the world, the obstacles women come across in entrepreneurship and the opportunities created by women in theoretical framework.

1   Giriş

Küreselleşme, işletmelerin ve girişimcilerin daha şiddetli bir rekabet ortamında çalışmaları sonucunu doğurmuştur. Çünkü kapalı ekonomi döneminin dış rekabete karşı devletçe korunan işletmecilik anlayışı yerini müşteri odaklı, sürekli kendini yenileyen, esnek ve hızlı üretim ve yönetim anlayışına bırakmıştır. Bu anlayışı tüm ekonomik hayata uygulayabilmenin yolu ise etkin girişimcilik faaliyetinden geçmektedir. Özellikle dünyadaki gelir dağılımındaki adaletsizlik, ekonomik gelişmişlik açısından bölgesel farklar, giderek artan işsizlik, yoksullaşma, yeterince büyüyememe ve etkin bir rekabet ortamının oluşturulamaması girişimcilik faktörüne günümüz dünyasında hayati bir önem kazandırmıştır. Bu bağlamda girişimcilik ile üretim ve dağıtım faaliyetleri gerçekleştirilerek bölge ve ülke kalkınmasında ekonomik bir temel yaratılır. Bunun yanında girişimciliğin, bilim ve piyasa arasındaki boşluğu kapatmanın, yeni iş yaratmanın ve piyasaya yeni mal ve hizmet sunmanın en etkili yolu olduğu söylenebilir. Gelişmiş ve gelişmekte olan ülkelerde girişimciliğin özendirilmesine özel bir önem verilmektedir. Avrupa Birliği'nde küçük işletmelerin geliştirilmesi, rekabet gücünün arttırılması, uluslararası ve girişimciliğin özendirilmesi amacıyla bir dizi destekleme programları geliştirilmiştir. Aynı şekilde Türkiye'de de son yıllarda girişimcilik kültürünün gerek bireysel bazda gerekse kurumsal ölçekte geliştiği, yaygınlaştığı ve teşvik edildiği bilinmektedir. Son teknolojik gelişmeler ve ekonomik beklentiler sayesinde girişimciliğin daha da güç kazandığı söylenebilir. Özellikle 1980'lerden itibaren hızlı bir gelişme gösteren girişimcilik anlayışı, erkekler kadar kadınlarında ilgi alanı içerisine girmiştir. Son yıllarda dünyada çalışanların demografik yapısında görülen birçok değişiklik kadınları da etkileyerek onları iş yaşamının vazgeçilmez aktörleri haline getirmiştir. Sanayi Devrimi'ne kadar kadınların görevleri çok belirgin bir şekilde ev veya el işi olarak belirlenmişken, sonraki dönemlerde kadınların toplumdaki yerinde anlamlı değişimler olmuştur. İşgücüne katılan kadınlar çoğalmış, çalışan karı-koca sayısında yükselme meydana gelmiş ve ailenin geçimini tek başına sağlayan anneler daha sık görülmeye başlanmıştır. Uluslararası rakamlara bakıldığında, kayıtlı ekonomi içindeki şirketlerin yüzde 25-33'ünün sahiplerinin kadın olduğu görülmektedir. Yine Dünya Bankası'nın yedi Orta Doğu ülkesinde yapmış olduğu bir çalışmada, toplam 4000 şirketin sahiplerinin %13'ünün kadın olduğu belirlenmiştir. Araştırmalar, global kadın işgücündeki en yüksek artışın endüstrileşmiş ülkeler olduğunu gösterirken, en düşük artışı sergileyenlerin ise zaten işgüçlerinde büyük sayıda kadın bulunan Doğu Avrupa Ülkeleri olduğunu belirtmektedir. Böylece yalnızca profesyonel anlamda çalışan kadınlarda değil, kadın girişimciliğinde de artışların olduğu söylenebilir. Bu durum Türkiye açısından değerlendirildiğinde, 1995-2009 arasındaki dönemde kadınların kırsal alanda işgücüne katılım oranı, %49.3'ten %35.7'ye düşerken, kentlerde %17.1'den %21.3'e çıkmıştır (TÜİK, 2007; TÜİK, 2009). Yani çalışmak isteyen kadın sayısının özellikle kentlerde görevli olarak hızla arttığı söylenebilir. Bu durum, kadınların tarımsal faaliyetlerden çok ticari ve ekonomik arenada daha bilinçli girişimcilik faaliyetlerine yöneldiğini göstermesi açısından önemlidir (Bedük, 2005). Yine toplam 42 ülkede yapılan Küresel Girişimcilik Araştırması'nda (2007), Türkiye'deki kadınların işgücüne katılımı 2006 yılında %30 iken 2007 yılında bu oranın %24'e gerilediği ve Türkiye'deki erkeklerin kadınlardan üç kattan daha fazla girişimci olduğu belirlenmiştir. Her ne kadar kadınların erkeklere göre işgücüne katılımı ve girişimcilik faaliyetleri konusunda istenen seviyede olamadığı bir gerçek olsa da, kadınların her geçen gün ekonomik hayatta daha etkin hale gelmeye başladığı bilinen bir gerçektir. Ülkemizde; ekonomik büyütmede, istihdamı arttırmada ve kalıcı bir üretim ve pazarlama anlayışı ile dünya ölçeğinde faaliyet gösteren işletmeler yaratmada, kadın girişimcilerin önemli bir rol oynayabileceği dikkate alınmalıdır. Türk iş dünyasında zengin olmanın, kullanılmayan potansiyeli etkin hale getirmenin ve yeni iş sahaları oluşturmanın yolunun, kadınların girişimciliğinin teşvik edilmesinden geçtiğini ifade edebiliriz. Kadınların, ekonomik ve sosyal yaşamdaki potansiyellerini harekete geçirecek gücü kendilerinde görmeleri gerekmektedir. Ancak bu düşüncelerin başarılı olabilmesi için kadın girişimcilerin karşılaştıkları engelleri, çalışma koşullarını, yönetim biçimlerini, işlerini kurma ve geliştirme stratejilerini, gelecek yönelimlerini ve örgütsel ve çevresel fırsatları

değerlendirme potansiyellerini ortaya koyan kapsamlı araştırmalara gerek vardır. Bu çalışmada, girişimciliğin hız kazandığı günümüz dünyasında, kadınların Türkiye perspektifinden, girişimcilik faaliyetlerinde karşılaştıkları engelleri ve yaratacakları fırsatları kuramsal bir çerçevede ele almak amaçlanmıştır.

Bu Proje Kadın Girişimciliğinin Dünya'da ve Türkiye'deki durumunun İncelenmesi ve Değerlendirilmesi amacıyla hazırlanmıştır (Özçelik, 2008).

2 Dünya'da ve Türkiye'de Kadın Girişimciliği

2.1 Kadın Girişimciliği ve Mikro İşletmecilik Kavramı

Ev dışı bir mekanda, kendi adına kurduğu bir işletmesi olan, bir işletmede tek başına veya çalıştırdığı diğer kişilerle birilikte çalışan veya sahibi olması sıfatıyla ortaklık kuran, iş ile ilgili olarak çeşitli kamu ve özel kuruluşlarla temaslara geçen, işletmenin geleceği ile ilgili planlar yapan, işletmeden elde ettiği kazancı, yatırım ve kullanım alanları üzerinde söz sahibi olan, işletmesi adına tüm riski üstlenen kadındır. Bu bağlamda kendi mesleğini icra eden kadınlar eğitimini gördükleri alanlarda herhangi bir riske girmeden çalıştıkları için girişimci olarak kabul edilmemektedirler. Yapılan çalışmalarda kadın girişimcileri tanımlayan kişisel karakteristikler; dinamik, bağımsız, özgüvenli, rekabetçi ve amaç yönelimli olmalarıdır. Ayrıca girişimcilik faaliyetini sürdüren kadınlar hırslı olma, risk alma, kendi işini kontrol etme gibi özellikler çerçevesinde de betimlenmektedir. Küreselleşme, işletmelerin ve girişimcilerin daha şiddetli bir rekabet ortamında çalışmaları sonucunu doğurmuştur. Çünkü kapalı ekonomi döneminin dış rekabete karşı devletçe korunan işletmecilik anlayışı, yerini müşteri odaklı, sürekli kendini yenileyen, esnek ve hızlı üretim ve yönetim anlayışına bırakmıştır. Bu anlayışı tüm ekonomik hayata uygulayabilmenin yolu ise etkin girişimcilik faaliyetinden geçmektedir. Özellikle dünyadaki gelir dağılımındaki adaletsizlik, ekonomik gelişmişlik açısından bölgesel farklar, giderek artan işsizlik ve yoksullaşma, yeterince büyüyememe ve etkin bir rekabet ortamının oluşturulamaması girişimcilik faktörüne günümüz dünyasında hayati bir önem kazandırmıştır. Bu bağlamda girişimcilik ile üretim ve dağıtım faaliyetleri gerçekleştirilerek bölge ve ülke kalkınmasında ekonomik bir temel yaratılır. Bunun yanında girişimciliğin, bilim ve piyasa arasındaki boşluğu kapatmanın, yeni iş yaratmanın ve piyasaya yeni mal ve hizmet sunmanın en etkili yolu olduğu söylenebilir. Gelişmiş ve gelişmekte olan ülkelerde girişimciliğin özendirilmesine özel bir önem verilmektedir. Avrupa Birliği'nde küçük işletmelerin geliştirilmesi, rekabet gücünün arttırılması, uluslar arası ve girişimciliğin özendirilmesi amacıyla bir dizi destekleme programları geliştirilmiştir. Aynı şekilde Türkiye'de de son yıllarda girişimcilik kültürünün gerek bireysel bazda gerekse kurumsal ölçekte geliştiği, yaygınlaştığı ve teşvik edildiği bilinmektedir. Son teknolojik gelişmeler ve ekonomik beklentiler sayesinde girişimciliğin daha da güç kazandığı söylenebilir Özellikle 1980'lerden itibaren hızlı bir gelişme gösteren girişimcilik anlayışı, erkekler kadar kadınlarında ilgi alanı içerisine girmiştir. Son yıllarda dünyada çalışanların demografik yapısında görülen birçok değişiklik kadınları da etkileyerek onları iş yaşamının vazgeçilmez aktörleri haline getirmiştir. Sanayi Devrimi'ne kadar kadınların görevleri çok belirgin bir şekilde ev veya el işi olarak belirlenmişken, sonraki dönemlerde kadınların toplumdaki yerinde anlamlı değişimler olmuştur. İşgücüne katılan kadınlar çoğalmış, çalışan karı-koca sayısında yükselme meydana gelmiş ve ailenin geçimini tek başına sağlayan anneler daha sık görülmeye başlanmıştır. Uluslararası rakamlara bakıldığında, kayıtlı ekonomi içindeki şirketlerin yüzde 25-33'ünün sahiplerinin kadın olduğu görülmektedir. Yine Dünya Bankası'nın yedi Orta Doğu ülkesinde yapmış olduğu bir çalışmada, toplam 4000 şirketin sahiplerinin %13'ünün kadın olduğu belirlenmiştir. Araştırmalar, global kadın işgücündeki en yüksek artışın endüstrileşmiş ülkeler olduğunu gösterirken, en düşük artışı sergileyenlerin ise zaten işgüçlerinde büyük sayıda kadın bulunan Doğu Avrupa Ülkeleri olduğunu belirtmektedir. Dolayısıyla yalnızca profesyonel anlamda çalışan kadınlarda değil, kadın girişimciliğinde de artışların olduğu söylenebilir.

2.2 Kadınları Girişimci Olmaya İten Nedenler

Kadınların iş kurma nedenlerine bakıldığında "itme ve çekme" faktörlerinin önemli rol oynadığı söylenebilir. Buna göre kadınları iş kurmaya iten faktörler arasında; ülkenin ekonomik koşullarından kaynaklanan işsizlik sorunları, kadınlara uygun olmayan iş koşulları ve kadınların özellikle ücretli işlerde cinsiyet ayrımcılığına uğramaları sayılabilmektedir. Bağımsızlık isteği, kendini gerçekleştirme isteği, kendi işinin patronu olma, aile ve iş sorumluluğu arasındaki dengeyi kurma isteği gibi çekme faktörleri de kadınları iş kurmaya yönelten faktörler arasında sayılabilmektedir. Buna göre kadını girişimci olmaya hem iten hem de çeken farklı faktörlerin olduğu söylenebilir. Kadınları girişimci olmaya iten nedenleri şu şekilde sıralamıştır. Sosyo-kültürel yapıdaki değişim sonucu öğrenim düzeyi yükselen kadının daha fazla sayıda işgücüne katılması, şirketlerin orta yönetim kadrolarında yer alan kadınların, çalıştıkları işletmelerin personel azaltma politikalarından etkilenebilecekleri Türkiye'de Kadın Girişimciler: Engeller ve Fırsatlar Bağlamında Bir Değerlendirme düşüncesiyle, kendi işlerini kurarak kendi kendilerinin patronları olmayı yeğlemeleri, her geçen gün başarılı kadın girişimci sayısının artması ile kadınların kendilerine rol modeli olarak aldıkları kişi sayısının çoğalması ve işlerini kaybetmeyecek kadar şanslı olan kadınların bir süre sonra şirket hiyerarşisinde daha üst kademelere çıkmalarının önüne set çeken, sırf cinsiyetlerinden ötürü daha sorumlu pozisyonlara gelmelerini engelleyen "cam tavan" etkisi nedeniyle yükselme olanakları kalmayan kadınların, her şeye karşın potansiyellerini ortaya koyma, kendilerini gerçekleştirmek ve başarılarını kanıtlamak için kendi işletmelerini kurma ve geliştirme çabaları. Kadınları girişimci olmaya iten bir

diğer neden ise hükümetler tarafından kadınların yerel ekonomiyi kalkındırmada önemli bir aktör olarak görülmesi politikasıdır. Bu politikada özellikle yerel aktörler içersinde yer alan potansiyel kadın girişimcilerin yönlendirilmesi, teşvik edilmesi ve güçlendirilmesi öngörülmektedir. Böylece özellikle kırsal alanda ekonomik faaliyetlerde yeterince yer alamayan kadınların mikro finansman yöntemi ile gelir elde etmelerinin sağlanması amaçlanmıştır. Çünkü iş hayatında erkeklere göre kadınların yeterli öz sermayeye sahip olmadığı veya başlangıç için gerekli finansmana ulaşamadığı bir gerçektir. Mersin'de kadın girişimciler üzerinde yapılan araştırmada, kadınların %70'inin kuruluş aşamasında güvensizlik, prosedürlerin zorluğu gibi nedenlerle banka kredisine başvurmadıkları ve %60'ının ise işletmelerinde sermaye sıkıntısı çektikleri belirlenmiştir. Bu durum dikkate alındığında mikro finansman sisteminin işletmenin gerek kuruluş aşamasında ve gerekse faaliyet döneminde ne kadar önemli olduğu ortaya çıkmaktadır. Dünya nüfusunun %20'sini oluşturan yaklaşık 1.2 milyar insanın günde 1 dolarlık mutlak yoksulluk sınırının altında http://siteresources.worldbank.org) yaşamaya çalıştığı günümüzde, "mikro finansman sistemi" özellikle kırsal alanda yoksulluğu azaltmak, geliri arttırmak ve istihdamı desteklemek üzere tasarlanmış birçok müdahale stratejilerinden biri olarak görülmektedir.Böylece zamanla yoksul kişilerin ve özelliklede kadınların kendi işine başlaması için mikro finansman bir seçenek olarak da değerlendirilmektedir.Kadınların iş kurma nedenleri ile ilgili Mersin'de 160 girişimci kadın üzerinde yapılmış araştırmada; kazanç elde etmek, bağımsız çalışma ve sosyal yaşam sürme istekleri gibi faktörlerin ön plana çıktığı belirlenmiştir. Kocanın ölmesi, kendini ispat etme ve geçmiş mesleki tecrübelerin ticari hayata aktarılması gibi faktörlerin etkili olduğu tespit edilmiştir (Özdevecioğlu ve Çelik, 2001).

2.3   Türkiye'de Kadın Girişimciliği ve Mikro işletmecilik

Türkiye'de kadın girişimci çalışmalarının yapılmasında, gelişmiş ülkelerden başlayarak artış gösteren kadın girişimci sayısı ve AB, OECD, BM gibi uluslararası kuruluşların kadın girişimciliğini destekleyici ve yaygınlaştırıcı politikalar izlemesi etkili olmuştur. Fakat buna rağmen ülkemizde, Batı'lı ülkelerde olduğu kadar kadın girişimciliğinde önemli gelişmeler olmamış veya oldukça yavaş olmuştur. Türkiye'de ancak 1980'li yıllardan itibaren kadınların işgücüne katılımı konusunda yapılan çalışmalar yoğunluk kazanmış ve 1990' lı yıllarda da bu çalışmalar belli bir düzeye ulaşmıştır. Son yıllarda medyanın da yardımıyla kadın girişimcilere olan ilgi artmıştır. Kadın girişimciliğine yönelik olan bu ilgi, özellikle gelişmekte olan ülkelerde benimsenen ihracata yönelik kalkınma stratejileri ile yakından ilişkilidir. Gelişmekte olan ülkelerin ithal ikamesi politikasında yaşanan sorunlar, yurt içi kaynak kullanarak küresel pazarla bütünleşme yollarının aranmasına neden olurken, kullanılan girdiler açısından ithalata bağımlı olmayan emek yoğun sektörlerin ve bu sektörlerde istihdam edilen "kadın emeğinin önemini arttırmıştır''. Yukarıda da belirtildiği gibi Türkiye gibi gelişmekte olan ülkelerde kadın girişimciliği üzerine yapılan çalışmaların oldukça sınırlı olması bu tür ülkelerde kadın girişimcilerin rolünün ve etkinliğinin ne oranda olduğunu anlamada sorun oluşturabilmektedir. Bununla birlikte Türkiye'de kadınların ekonomik faaliyetlere katılımlarının sınırlı olması genellikle; aile içindeki rol, bu role bağlı tercihler ve aile içindeki ataerkil ilişkilerle açıklanmaya çalışılmıştır. Kadınların Türkiye'de girişimcilik faaliyetleri temelde yapısal uyum politikalarının etkisiyle azalan hane gelirlerine yönelik geliştirilen "kadınların kendi başlarına küçük işyeri kurma girişimlerine" dayanmaktadır. Kadınların gerek haneye ek gelir sağlamak ve gerekse ücretli işlerde çalışma çabalarının artması onların ekonomik faaliyetlere girişini hızlandırmıştır. Fakat Türkiye'de özellikle başvurulan işlere uygun eğitim ve becerisi olmayan kadınların iş bulma şanslarının son derece zayıf olması, zorunlu olarak kadınları kendi işinde çalışmaya sevk etmiştir. Türkiye'de kadınları girişimci olmaya iten nedenlerin, kadınların daha özgürlükçü ve eşitlikçi değerlere sahip olmaya başladıkları ayrıca; Türkiye'de Kadın Girişimciler; engeller ve fırsatlar bağlamında bir değerlendirme, güvendikleri çeşitlenen mal ve hizmet piyasasında kendilerine daha uygun işler bulabildikleri gibi faktörler olmadığı aksine ülkenin makro ekonomik koşullarının hane halkı geliri üzerinde yarattığı olumsuz etkileri azaltmanın bir çabası olduğu ifade edilebilir. Kadınların işlerini daha çok yalnız başlarına kurdukları, işlerini büyük ölçüde sevdikleri için yaptıkları, büyük bir bölümünün herhangi bir ticari ve iş deneyimine sahip olmadan işlerini kurdukları, başlangıç sermayelerini ise daha çok aile ve akrabalardan temin ettikleri tespit edilmiştir. Kadınların mücadeleci, hırslı, evine iş götüren ve kendileri için erişilmesi zor hedefler belirleyen yapıda oldukları bulgularına ulaşılmıştır. Türkiye'de 1990'lı yıllardan itibaren kadın çalışanlar ile ilgili yapılan çalışmalar özetlenecek olursa; iş kadınlarının yarısından fazlasının ticaret sektöründe girişimci olduğu, genellikle 30-39 yaş diliminde yer aldığı ve yarısına yakınının eğitim düzeyinin sadece lise eğitimi düzeyinde kaldığı ve genellikle kentli oldukları belirlenmiştir. Türkiye'de girişimci kadınları belirleyen temel karakteristikler ise; kendine güvenli, cesaretli ve sabırlı olmasıdır. Kadınlar, erkek girişimcilerle karşılaştırıldığında kârdan çok sosyal itibara önem vermekte, risk almada erkek girişimcilere oranla daha temkinli hareket etmekte ve daha az özgüvenli bulunmaktadırlar. Bu bağlamda Türkiye'de işverenler içerisinde kendi işini kuran ve girişimcilik faaliyetleri içerisinde olan kadınların oranı %13 olarak belirlenmiştir. Türkiye'de kadınları girişimci yapmaya yönelik çalışmaların oldukça çeşitli olduğu söylenebilir. Kadın girişimciliğini destekleme ve geliştirme kapsamında dönemini kapsayan Dokuzuncu Kalkınma Planı'nda kadın girişimciliğinin desteklenmesi amacıyla birtakım tedbirler alınmıştır. Kadın girişimciliğinin desteklenmesi amacıyla bankalar kredi programlarını daha etkin hale getirmişlerdir. Yukarıda da ismi geçen kamu kuruluşları, meslek örgütleri ve sivil toplum kuruluşları tarafından kadın girişimciliğini arttırmaya yönelik uygulamaya aktarılan ve yürütülen projeler de bu kapsamda ifade edilebilir (Gürol ve Marşap, 2007).

3 Dünya'da ve Türkiye'de Kadın Girişimciliğinin Kıyaslı Değerlendirilmesi

"Toplumdaki başarısızlığın nedeni, kadınlarımıza karşı gösterdiğimiz ihmal ve kusurdan doğmaktadır"
(Mustafa Kemal Atatürk, 1923).

Kadın Girişimciliği: Türkiye açısından değerlendirildiğinde, 1995-2009 arasındaki dönemde kadınların kırsal alanda işgücüne katılım oranı, %49.3'ten %35.7'ye düşerken, kentlerde %17.1'den %21.3'e çıkmıştır. Yani çalışmak isteyen kadın sayısının özellikle kentlerde göreli olarak hızla arttığı söylenebilir. Bu durum, kadınların tarımsal faaliyetlerden çok ticari ve ekonomik arenada daha bilinçli girişimcilik faaliyetlerine yöneldiğini göstermesi açısından önemlidir. Yine toplam 42 ülkede yapılan Küresel Girişimcilik Araştırması'nda Türkiye'deki kadınların işgücüne katılımı 2006 yılında %30 iken 2007 yılında bu oranın %24'e gerilediği ve Türkiye'deki erkeklerin kadınlardan üç kattan daha fazla girişimci olduğu bulgulanmıştır. Her ne kadar kadınların erkeklere göre işgücüne katılımı ve girişimcilik faaliyetleri konusunda istenen seviyede olamadığı bir gerçek olsa da, kadınların her geçen gün ekonomik hayatta daha etkin hale gelmeye başladığı ise bilinen bir gerçektir. Özellikle kırılgan bir ekonomiye sahip olan ülkemizde, ekonomiyi büyütmede, istihdamı arttırmada ve kalıcı bir üretim ve pazarlama anlayışı ile dünya ölçeğinde faaliyet gösteren işletmeler yaratmada, kadın girişimcilerin önemli bir rol oynayabileceği dikkate alınmalıdır. Nitekim Türk iş dünyasında zengin olmanın, kullanılmayan potansiyelin etkin hale getirmenin ve yeni iş sahaları oluşturmanın yolunun açılması gereklidir. Bu bağlamda, kadınların da üretim yaşamı içine katılımını arttırmak için kadın girişimcileri destekleyen politika ve programların ön plana çıkması, kadınların, ekonomik ve sosyal yaşamdaki potansiyellerini harekete geçirecek gücü kendilerinde görmeleri gerekmektedir. Ancak bu program ve düşüncelerin başarılı olabilmesi için kadın girişimcilerin karşılaştıkları engelleri, çalışma koşullarını, yönetim biçimlerini, işlerini kurma ve geliştirme stratejilerini, gelecek yönelimlerini ve örgütsel ve çevresel fırsatları değerlendirme potansiyellerini ortaya koyan kapsamlı araştırmalara gerek vardır. Bu çalışmada, girişimciliğin hız kazandığı günümüz dünyasında, kadınların Türkiye perspektifinden, girişimcilik faaliyetlerinde karşılaştıkları engelleri ve yaratacakları fırsatları kuramsal bir çerçevede ele almak Kadınların Özellikle 1980'lerden itibaren hızlı bir gelişme gösteren girişimcilik anlayışı, erkekler kadar kadınlarında ilgi alanı içerisine girmiştir. Son yıllarda dünyada çalışanların demografik yapısında görülen birçok değişiklik kadınları da etkileyerek onları iş yaşamının vazgeçilmez aktörleri haline getirmiştir. Sanayi Devrimi'ne kadar kadınların görevleri çok belirgin bir şekilde ev veya el işi olarak belirlenmişken, sonraki dönemlerde kadınların toplumdaki yerinde anlamlı değişimler olmuştur. İşgücüne katılan kadınlar çoğalmış, çalışan karı-koca sayısında yükselme meydana gelmiş ve ailenin geçimini tek başına sağlayan anneler daha sık görülmeye başlanmıştır. Uluslararası rakamlara bakıldığında, kayıtlı ekonomi içindeki şirketlerin yüzde 25-33'ünün sahiplerinin kadın olduğu görülmektedir. Yine Dünya Bankası'nın yedi Orta Doğu ülkesinde yapmış olduğu bir çalışmada, toplam 4000 şirketin sahiplerinin %13'ünün kadın olduğu belirlenmiştir. Araştırmalar, global kadın işgücündeki en yüksek artışın endüstrileşmiş ülkeler olduğunu gösterirken, en düşük artışı sergileyenlerin ise zaten işgüçlerinde büyük sayıda kadın bulunan Doğu Avrupa Ülkeleri olduğunu belirtmektedir. Dolayısıyla yalnızca profesyonel anlamda çalışan kadınlarda değil, kadın girişimciliğinde de artışların olduğu söylenebilir. . Yani çalışmak isteyen kadın sayısının özellikle kentlerde göreli olarak hızla arttığı söylenebilir. Bu durum, kadınların tarımsal faaliyetlerden çok ticari ve ekonomik arenada daha bilinçli girişimcilik faaliyetlerine yöneldiğini göstermesi açısından önemlidir. Toplam 42 ülkede yapılan Küresel Girişimcilik Araştırması'nda Türkiye'deki kadınların işgücüne katılımı 2006 yılında %30 iken 2007 yılında bu oranın %24'e gerilediği ve Türkiye'deki erkeklerin kadınlardan üç kattan daha fazla girişimci olduğu bulgulanmıştır. Her ne kadar kadınların erkeklere göre işgücüne katılımı ve girişimcilik faaliyetleri konusunda istenen seviyede olamadığı bir gerçek olsa da, kadınların her geçen gün ekonomik hayatta daha etkin hale gelmeye başladığı ise bilinen bir gerçektir. Özellikle kırılgan bir ekonomiye sahip olan ülkemizde, ekonomiyi büyütmede, istihdamı arttırmada ve kalıcı bir üretim ve pazarlama anlayışı ile dünya ölçeğinde faaliyet gösteren işletmeler yaratmada, kadın girişimcilerin önemli bir rol oynayabileceği dikkate alınmalıdır. Türk iş dünyasında zengin olmanın, kullanılmayan potansiyelin etkin hale getirmenin ve yeni iş sahaları oluşturmanın yolunun, kadınların girişimciliğinin teşvik edilmesinden geçtiği ifade edilmektedir. Bu bağlamda, kadınların da üretim yaşamı içine katılımını arttırmak için kadın girişimcileri destekleyen politika ve programların ön plana çıkması ve kadınların, ekonomik ve sosyal yaşamdaki potansiyellerini harekete geçirecek gücü kendilerinde görmeleri gerekmektedir. Ancak bu program ve düşüncelerin başarılı olabilmesi için kadın girişimcilerin karşılaştıkları engelleri, çalışma koşullarını, yönetim biçimlerini, işlerini kurma ve geliştirme stratejilerini, gelecek yönelimlerini ve örgütsel ve çevresel fırsatları değerlendirme potansiyellerini ortaya koyan kapsamlı araştırmalara gerek vardır. Bu çalışmada, girişimciliğin hız kazandığı günümüz dünyasında, kadınların Türkiye perspektifinden, girişimcilik faaliyetlerinde karşılaştıkları engelleri ve yaratacakları fırsatları kurumsal bir çerçevede ele almak amaçlanmıştır (Nayır, 2008).

3.1 Ekonomik Kalkınmada Kadın Girişimciliğinin Stratejik Etkisi

Kadınlar tarih boyunca hemen hemen her dönemde içinde yaşadıkları toplumun özelliklerine göre değişen şartlarda ekonomik faaliyetlere katılmışlardır. Özellikle sanayileşme ile bu sürecin hızlandığı söylenebilir. Gerçekten, 21. yüzyıla doğru hızla ilerlerken her alanda kendini gösteren değişim ve gelişmeler çerçevesinde kadınların bir zamanlar sadece erkeklere açık olan iş dünyasına girdikleri ve bu dünyada güç, yetki, mevkii elde

etmek için yoğun bir mücadele verdikleri gözlenmektedir. Çalışma yaşamında küreselleşme çerçevesinde yaşanılan değişimler ve yeni değerler, iş dünyasında erkek hakimiyetinin kırılarak kadının güçlenmesine neden olmuştur. Özellikle küreselleşme ile beraber artan rekabet işletmeleri bir taraftan kalite ve fiyat açısından malları ve hizmetleri daha etkin bir biçimde tüketiciye yönlendirmeye, diğer taraftan da mevcut kurumsal yapı ve uygulamalarını insan kaynaklarının geliştirilmesi doğrultusunda "çalışma hayatının kalitesinin iyileştirilmesi", "işin insanileştirilmesi "esneklik" vb. uygulamalarıyla çevrelenmiş yeni işgücü yapısı ve davranış biçimine uygun Abdullah Soysal Türkiye'de Kadın Girişimciler: Engeller ve Fırsatlar Bağlamında Bir Değerlendirme haline getirmeye mecbur kılmaktadır. Bu anlayış doğrultusunda iş hayatında katılımı yetersiz olan, bilgi, beceri ve yeteneğinden yeteri kadar yararlanılmayan kadınların iş hayatına büyük oranda katılması ve daha etkin rol alması gelişen ekonomiler için bir "stratejik" zorunluluk halini almıştır. Özellikle Batılı ülkelerde ve gelişen Uzak Doğu'da kadınların ekonomiye katılımlarını arttırmak için hükümetlerin yasal düzenlemeler yapma, teşvik programları hazırlama ve kurumsal değişiklikleri gerçekleştirme konusunda büyük adımlar ataması bu gelişmelerle ilgilidir. Bu kapsamda günümüzde yaşanan ekonomik, sosyal ve teknolojik gelişmeler bütün dünyada olduğu gibi Türkiye'de de kadınların gittikçe daha fazla aktif olarak çalışma hayatına katılmalarına yol açmıştır. Bununla birlikte kadınların kişisel çabalarıyla birlikte hükümetlerin ve diğer sivil toplum örgütlerinin de kadınların iş hayatında daha etkin hale getirilmesine yönelik karar ve uygulamalar içine girmesi gerekmektedir. Çünkü kadınlar dünya ve Türkiye nüfusunun yarısını oluşturmasına karşın aynı oranda temsil edilmemektedir. İnsan kaynakları kullanımı açısından potansiyel işgücünü oluşturan bu nüfusun bilgi, yetenek ve tecrübelerinden yeteri kadar yararlanmamak ciddi bir kayıptır. Bu bağlamda kadınların ekonomik hayatta erkeklerin yanında gerek işçi statüsünde ve gerekse kendi işinde yer almalarının sağlanması ile onları ekonomik gelişmeye önemli katkılar sağlayan potansiyel güç haline getirmek mümkündür. Böylece kadınların iş hayatında temsili ve başarısının sağlanması her şeyden çok ülke ve toplumların ekonomik ve sosyal gelişimi açısından önem taşımaktadır. Geçmişte kadınların; okuma yazma ve iş yaşamına katılım oranlarının düşüklüğü, finansmana erişim olanaklarının yetersizliği gibi nedenlerle girişimci olmaları daha düşük düzeyde kalırken, son yıllarda yapılan çalışmalarda, kadınların iş yaşamında, karşı cinse göre, daha başarılı oldukları gözlemlenmiştir..Bunun nedeni ise önceden erkeklere özgü olduğuna inanılan işlerde başarılı olmaları, erkeklerle aralarındaki girişimcilik konusundaki bilgi ve deneyim farkının giderek azalması, çok daha iyi örgütlenir hale gelmeleri ve doğaları gereği olaylara karşı daha duyarlı, daha sakin, daha yoğun insan ilişkilerine sahip olmalarıdır. Diğer taraftan gelişmiş ya da gelişmekte olan hemen hemen tüm ülkelerde cinsler arası eşitsizliğe karşı birtakım önlemler alınmaya başlanmış olması da kadınları girişimciliğe teşvik etmede önemli bir politika açılımı olarak algılanabilir. Günümüzde küreselleşmenin birlikte getirdiği hızlı değişim ve rekabet, yeni teknoloji ve anında iletişim karşısında geleneksel yöntemler etkin olamamakta ve bunun üstesinden gelebilmek için "yeni düşünce ve uygulama tarzlarına, bir anlamda "kadına has liderlik stili, kapasite ve niteliklere gereksinim duyulmaktadır. Yani yapısal değişim, değerler sisteminde de değişimi beraberinde getirmektedir. Örgütlerde değişim "değişen değerler sistemi ekonomik gereklilikle birlikte sergilendiğinde" daha belirgin bir şekilde göze çarpacaktır. Bu bağlamda işyerinde yönetim tarzları ve yaklaşımlarının kadının kendine has değerleri bastırmasından çok tam tersine, fırsatını bulduğunda onun potansiyelini açığa vurduğu zaman daha etkin olabilecektir. Bu bağlamda, kadın girişimciliğinin ekonomik ve toplumsal hayata önemli yarar ve fırsatlar sunduğu bir gerçektir. Kanıtlar göstermektedir ki, girişimcilik, ekonomik gelişme ve iş yaratımına değişik yollar sağlamaktadır. Kadınlar kendi ülke ekonomilerini geliştirmede potansiyel girişimcilik faaliyetleri ile önemli bir kaldıraç kuvveti oluşturmaktadırlar. Yani kadın girişimciler, ekonomik gelişmenin önemli bir kaynağını temsil etmektedirler. Avrupa'da (Avrupa Birliği ve diğer ülkeler), tahminler göstermektedir ki, yaklaşık 16 milyon işverenden, kendi işinde çalışan kadın sayısı 10 milyondan fazladır ve Amerika'da 9.2 milyon insan için istihdam sağlayanların 6.4 milyonu kendi işinde çalışan kadınlardan oluşmaktadır. OECD kaynaklı bir araştırmada da belirtildiği gibi, kadınların fırsatlara nispeten yenilikçi bir tarzda yaklaşımları, iş yaşamının "yaşam kalitesi yanında yeni ekonomik çevrenin gelişimine de katkı sağlayacak niteliktedir. Kadının kendine has karakteristiklerinden biri olan yenilikçilik (innovative impulse) bunda rolü olduğu düşünülebilir. Bernstein'ın yaklaşımı çerçevesinde erkek girişimcinin genelde otoriter yönetim tarzına yatkın olmasına karşın, kadın girişimci, yönetim olgusuna daha "bütüncül" yaklaşmakta, araştırma sonuçlarına göre personel eğitimi, takım çalışması, işletme yapısında hiyerarşinin azaltılması ve kalite konularında ve başarı olgusunu erkeklerden farklı değerlendirmesi sonucu çalışanların kariyerlerinde gelişimlerinin sağlanması ve müşterilerin beklentileri konularında daha duyarlı olmaktadır. Kutanis ve Alparslan'ın (2006) "girişimci kadınların profilleri" ile ilgili yapmış oldukları araştırmada, girişimci kadınlar; kendilerine güvenen, güçlü önsezilere sahip, sabırlı ve dayanıklı olan, riski üstlenebilen, ikna kabiliyeti kuvvetli ve inisiyatif kullanan bireyler olarak bulgulanmıştır. Aynı araştırmada girişimci kadın olmanın, kadına çalışma yaşamında diğer çalışma biçimlerine kıyasla daha fazla özerklik imkanı verdiği, kadının işine yönelik kısa ve uzun vadeli planlar yapma, kaynakları optimum kullanma, beşeri ilişkiler kurma ve sürdürme, işinde edindiği deneyimleri verimli kanallara aktarma gibi önemli kazanımlar sağladığı belirlenmiştir Türkiye'de Kadın Girişimciler: Engeller ve Fırsatlar Bağlamında Bir Değerlendirme de Dünya Bankası'nın Orta Doğu ülkelerinde ki şirketlerle ilgili yapmış olduğu bir araştırmada, bu ülkedeki işletme sahibi olan kadınların Afrika ve Asya'daki diğer kadın girişimcilere oranla işletmelerini daha fazla büyütme eğiliminde oldukları ve bir çok engelle karşılaşmalarına rağmen, erkek girişimcilere göre

işletmelerinde daha fazla sayıda işçi çalıştırdıkları belirlenmiştir. Yine yapılan bir diğer araştırma sonucuna göre ise, kadın girişimcileri *"yönetsel becerilerine* ilişkin" öz değerlendirmelerinde yeni fikirler ve yeni ürün geliştirme konularında kendi becerilerini "mükemmel" olarak tanımlamışlardır. Aynı araştırmada, insan ilişkileri, yönetim, geliştirme ve eğitim ile pazarlama, pazarlama araştırması alanında *"çok iyi"*, envanter, üretim gibi işe yönelik teknik alanlarda "iyi" oldukları ortaya konulmuştur. İngiltere'de yapılan bir araştırmada, "Çalışanların patronlarını tanımlamaları ve nasıl bir patron istediklerini tarif etmeleri" istenmiştir. Yapılan araştırmanın sonucuna göre çalışanların, kadın patronla çalışmak istedikleri ortaya çıkmıştır. Çalışanların daha çok kadın patron tercih etmelerindeki sebepler ise şöyle sıralanmaktadır:

- Kadınlar, bir iş için erkekten daha fazla çaba gösteriyorlar ve daha dikkatliler.
- Kadınlar, çalışanlarına gerekli eğitimi daha iyi verebiliyorlar.
- Kadınların öğreticilik yanı erkeklere oranla daha gelişkin.
- Kadınlar yeni durumlara ve değişimlere daha rahat uyum sağlayabiliyorlar.
- Kadınların, yanlarında çalışanları iş konusunda heveslendirme ve teşvik etme yetenekleri erkeklere oranla daha gelişkin.
- Kadınlar yeni fikirlere daha açıktır. Ayrıca kadınların yaratıcılıkları da iş yaşamında başarının kapısını aralıyor.
- Kadınlar gözlem yeteneklerini iş yaşamında başarılı bir biçimde kullanabiliyor.
- Çalışanlarıyla iletişim kurarken kadının sağladığı başarı iyi bir yönetici olmasında olumlu bir etki yapıyor.
- Kadının problem çözebilmedeki başarısı, bir yönetici olarak erkekten daha başarılı olmasını sağlıyor.
- Kadınlar özel yaşamlarında olduğu gibi iş yaşamında da açık bir stratejiye sahipler.
- Kadınlar iş yaşamında erkeklere oranla daha neşeli ve eğlenceli olabiliyor.

Tahminlerin aksine kadınlar, iş yaşamında kararlarını kolay verebiliyorlar ve kararları konusunda daha ısrarcıdır. Yukarıda belirtilen araştırma ve değerlendirmeler göz önünde tutulduğunda; kadın girişimcilerin ekonomik ve sosyal anlamda ülkeye getirdiği kazanımlarının daha gerçekçi ve geleceğe yönelik olarak değerlendirilmesi gerekmektedir. Bu bağlamda kadın girişimcilerin, hem kendileri hem de istihdam ettikleri kişiler için iş yaratmaları ve çalışma yaşamında daha etkin ve aktif olmaları; onların toplumdaki konumlarını güçlendirmesine, toplumların gelişmişlik düzeyini etkilemesine ve gelir dağılımındaki adaletsizliği de önlemeye önemli katkılar sağlamaktadır , dolayısıyla Türkiye'nin sosyal ve ekonomik gelişmesine katkıda bulunmak ve sürdürülebilir kalkınmayı gerçekleştirebilmek için ekonomik değer yaratan kadın girişimci sayısını arttırmak, var olan kadın girişimcileri güçlendirmek ve onları dünya ile bütünleştirmek gerekmektedir (Can ve Karataş, 2007).

4 Kişisel Yorum

Ticari yaşamla birlikte kadınlar, kimlik arayışı içine girmişleridir. Yaşadığımız dönemin beraberinde getirdiği değişen yaşam standartları ve tüketim ihtiyaçları kadınların bilinen evinin kadını, çocuğunun annesi olmanın artık yeterli olmadığı fark edip rollerini değiştirmeye ve onlara dayatılan yaşam şeklinin dışına çıkarak; gerek sahip oldukları eğitim, gerekse el becerisi gibi yetenekleriyle çalışma hayatında var olma ihtiyacı doğmuştur. Bu noktada Girişimci Kadınlara çalışma hayatına başlayabilmeleri için bir takım maddi imkanlar veya destek verebilecek kaynaklar sağlanması gerekmektedir, Günümüzde artık birçok kanaldan girişimciliği destekleyecek krediler devreye girmiştir. Kadınlar kendilerini bulundukları ortama kabul ayrı bir kimlik oluşturarak farklılaşma yoluna gitmişlerdir. Başarılarının sürekliliğini sağlayabildiklerinde kurumsal kimlik oluşturma başarısına ulaşabilmektedirler. İşletmelerine küresel bakabilen, rekabetçi avantaj ve katma değer yaratabilen, söyleneni ve düşünülebileni yapabilen hayal kurabilen, sürekli öğrenmeye çalışabilen, kaybetmeyi göze olabilecek kadar stratejik düşünme yeteneği olan girişimciler ekonominin gelişmesine katkıda bulunma, iş imkanı sağlama, işletmesini geliştirerek yeni işkollarının oluşturulması konularında her daim başarılı olmaktadırlar. Son yıllarda yapılan çalışmalarda kadın girişimcilerin kişisel karakteristikleri; dinamik, bağımsız, özgüvenli, rekabetçi ve amaç yönelimli olarak tanımlanmaktadır. Bu bağlamda kadınların ekonomik hayatta erkeklerin yanında yer almalarını sağlayacak politika ve projelere öncelik verilmesi ile onları ekonomik ve sosyal gelişmeye önemli katkılar sağlayan potansiyel güç haline getirmek mümkündür. Bununla birlikte kadınların, girişimcilik faaliyetlerinde önemli engellerle karşılaştıkları ve oldukça zorlandıkları ifade edilebilir. Bu çalışma, girişimciliğin hız kazandığı günümüz dünyasında, Türkiye perspektifinden, kadınların girişimcilik faaliyetlerinde karşılaştıkları engelleri ve yaratacakları fırsatları kuramsal bir çerçevede ele almayı amaçlamaktadır.

5 Sonuç ve Beklentiler

Son yıllarda, kadınların, çalışma hayatına büyük oranda katılması ve daha aktif rol alarak girişimcilik faaliyetlerinde bulunmaları, gelişen ekonomiler için "stratejik" bir öneme sahiptir. Çünkü iş dünyasında zengin olmanın, kullanılmayan potansiyeli etkin hale getirmenin ve yeni iş sahaları oluşturmanın yolunun, kadınların girişimciliğinin teşvik edilmesinden geçtiği gerek akademik çevrede, gerekse iş dünyasında ifade edilmektedir. Yapılan çalışmalarda kadın girişimcilerin kişisel karakteristikleri; dinamik, bağımsız, özgüvenli, rekabetçi ve

amaç yönelimli olarak tanımlanmaktadır. Bu bağlamda kadınların ekonomik hayatta erkeklerin yanında yer almalarını sağlayacak politika ve projelere öncelik verilmesi ile onları ekonomik ve sosyal gelişmeye önemli katkılar sağlayan potansiyel güç haline getirmek mümkündür. Bununla birlikte kadınların, girişimcilik faaliyetlerinde önemli engellerle karşılaştıkları ve oldukça zorlandıkları ifade edilebilir. Bu çalışma, girişimciliğin hız kazandığı günümüz dünyasında, Türkiye perspektifinden, kadınların girişimcilik faaliyetlerinde karşılaştıkları engelleri ve yaratacakları fırsatları kuramsal bir çerçevede ele almayı amaçlamaktadır. Günümüzde kadının çalışma yaşamında, her geçen gün etkinliğini arttırması, hem kendisi hem de toplum açısından oldukça önemli görülmektedir. Özellikle kadının daha eğitimli, azimli, hırslı ve kararlı duruşu onu, erkeğe bağımlı olmaktan kurtararak ekonomik anlamda bağımsızlığını ve toplumdaki konumunu güçlendirmesine olanak sağlamaktadır. Kadına bu gücü sağlayan en önemli olgu ise onun girişimcilik özelliğidir. Girişimcilik faaliyeti ile kadın, bir taraftan maddi ve manevi kazanımlar elde ederken, diğer taraftan bağımsızlık, finansal fırsatlar, toplumsal hizmet, iş güvenliği, aile istihdamı ve meydan okuyuculuk gibi özellikler ile de cinsiyet ayrımcılığına yönelik yargıları kadınlar lehine çevirebilme fırsatını da elde etmiş olmaktadır.

Kadının girişimci olarak çalışma yaşamına katılmasının, kadın açısından getirdiği zorluklar ve engellerin de bu süreçte dikkate alınarak değerlendirilmesi daha gerçekçi olacaktır. Çünkü kadın, gerek kadın olmanın, gerekse iş ve toplumsal yaşamın *erkek egemen* kurgulanmış düzenin de oldukça güç şartlar içerisinde girişimcilik faaliyetini sürdürme çabası içerisindedir. Fakat kadının çalışma yaşamında varlığını kısıtlayan bu düşünce ve uygulamaların, kadını ekonomik hayatta pasifleştirme anlayışına ittiğini söylemek çok da doğru olmayacaktır. Çünkü son yıllarda, kadınların iş yaşamında, karşı cinse göre, daha başarılı oldukları gözlemlenmektedir. Bunun nedeni ise; önceden erkeklere özgü olduğuna inanılan işlerde başarılı olmaları, erkeklerle aralarındaki girişimcilik konusundaki bilgi ve deneyim farkının oluşmasından kaynaklanmaktadır. Türkiye'de Kadın Girişimciler: Engeller ve Fırsatlar Bağlamında Bir Değerlendirme giderek azalması, çok daha iyi örgütlenir hale gelmeleri ve doğaları gereği olaylara karşı daha duyarlı, daha sakin, daha yoğun insan ilişkilerine sahip olmalarıdır. Bu kapsamda ekonomik hayatta girişimci olarak önemli roller oynayan kadının; işine yönelik kısa ve uzun vadeli planlar yapma, kaynakları optimum kullanma, beşeri ilişkiler kurma ve sürdürme, işinde edindiği deneyimleri verimli kanallara aktarma gibi bir etkiye sahip olduğu söylenebilir. Kadınların, örgütün başarısını zora sokan yıkıcı çatışmaların ve şiddetin ortaya çıkmasında veya büyümesinde de engelleyici bir rol üstlendiği ifade edilebilir. Bunun yanında kadınların ekonomik anlamda güçlü olmaları, ortaya çıkabilecek rüşvet, yanlış yönetim, şiddet ve yıkıcı çatışmaların azaltılmasında da etken olabilecektir. Bu bağlamda, kadın girişimciliği, ekonomik ve toplumsal hayatta önemli yarar ve fırsatlar yaratarak, kendi ülke ekonomilerini geliştirmede ve iş yaratımında önemli katkılar sağlamaktadırlar. Yani kadınların, potansiyel girişimcilik faaliyetleri ile ekonomik ve toplumsal yaşamın *"erkek egemen"* cinsiyetler arası adaletsizliğini *"insani"* boyuta dönüştürerek, çalışma yaşamını daha etkin hale getirdiğini söylemek olasıdır.

Yeni Zirve: Girişimcilikte Ahlakın Artan Değeri

New Summit: Increasing Value of Morality in Entrepreneurship

Prof. Dr. Sabahat Bayrak Kök (Pamukkale University, Turkey)

Mrs. Mehtap Sarıkaya (Pamukkale University, Turkey)

Abstract

The history of entrepreneurship is a history of market economy. Thus, entrepreneurship means to take risks, to catch the novelty, to score the opportunities and it is a process to make all them real. In this sense, entrepreneurship is the basic power to move the economy as the main actor of development. On the other hand, the run riot nature of entrepreneurship in terms of profit maximization since 19th century necessitates some level of ethics in business life. Infringements of consumer rights, bribery, tax evading and the presence of institutional scandals worldwide necessitate to evaluate that entrepreneurship should have both economic and socio-cultural values. This paper aims to discuss a notion that entrepreneurship should be run based on ethics.

1 Giriş

Ekonomik hayat, hangi yüzyılda ve nerede olursa olsun sadece dış faktörlerin bir araya gelmesinden oluşan bir madde dünyası olarak görülemez. Bütün olay ve olgularda olduğu gibi, ekonomik olay ve olguların arkasında kendine has bir değerler kümesi vardır. Başka bir deyişle, her çağ ve toplumda iktisadi ve sosyal hayat, sadece dış kalıplar ve maddi unsurlarla değil, ahlaki değerlerle de varlık bulmuştur. Ancak, 20. yüzyılın son çeyreği bu bağlılık ve derinliğin görmezlikten gelindiği ahlaki yozlaşma ve kirliliğin zemin bulduğu zamanlar olarak ifade edilmiştir. 1970'li yıllardan bugüne kadar küresel çapta birbiri ardına ortaya çıkan Enron, Tyco, WorldCom, Adelphia, Ahold, Parmalat gibi şirketlerin hileli finansal raporlama yapmaları, Ford, General Motors, Nestle, Johnson& Johnson, Union Carbide gibi şirketlerin ciddi sonuçlar doğuran ahlaki olmayan tutumları girişimcilikte ahlaki bir yaklaşımın kaçınılmazlığına işaret etmiştir. Sonuçta yaşanılan çok yönlü kirlilik örnekleri, ahlaka geri dönüş sürecini başlatırken, ekonomik hayatın ahlakı dışarıda bırakan bir faaliyet alanı olmayacağını göstermiştir. Bildiri, bu bakış açısıyla temel olarak ahlaka verilen önem ve artan değeri ve girişimcilikte ahlaka aykırı davranışın neden olabileceği kayıpları değerlendirecektir.

2 Girişimcilik ve İş Ahlakı

Girişimcilik, hızla küreselleşen dünyamızda her geçen gün önemi giderek artan bir kavramdır. 1980'li yıllardan sonra dünyada ve Türkiye'de önemli gelişmeler kaydedilmiş, şartlar değişmiş ve yepyeni bir girişimcilik anlayışı ortaya çıkmıştır. Özellikle girişimci, ekonomik mal ve hizmet yaratma sürecinde, artan ulusal ve uluslararası iş fırsatları ile birlikte tanınma ve prestij elde etme ve bütün toplum katmanlarında ön plana çıkan kişi olmuştur. Ancak, ekonomik değer yaratma konusunda yüksek başarı güdüleriyle ve iş başarılarıyla dikkat çeken girişimciler, belirsizlik ve riskin arttığı küresel rekabet şartlarında ahlaki değerler konusunda aynı derecede başarılı olamamışlardır. Rollerini, girişimsel başarı ve kişisel yüksek kazançlara yönelten girişimciler, belirsizlik ve risk şartlarında karar vermenin ekonomik yanı ile ilgilenip, kar fırsatlarını değerlendirmeye odaklanırken, karar vermenin ahlaki ya da ruhsal yönü ile ilgilenmemiş ve girişimciliğin kişisel ve toplumsal sorumluluk çerçevesini göz ardı etmişlerdir.

Günümüzün son derece değişken ve rekabetçi iş yaşamında girişimciler kar elde etme ve varlık sürdürme ya da rakiplerinden bir adım önde olmak için ahlaki olmayan birtakım tutum ve davranışlar sergilemekte ve ahlak dışı çözümler üretmektedirler. Özellikle piyasa koşulları ve artan küresel rekabet baskıları nedeniyle 1980'li yıllarda rüşvet, çalışanlar arasında ayrımcılık yapma, tüketiciyi yanıltıcı reklamlar, işçi sağlığı ve iş güvenliğinde büyük istismarların varlığı, ekonomideki ahlaki bozuklukların "süte su katmak"tan ya da "elmayı eksik tartmak"tan çok daha ötelere gittiğine dikkat çekmektedir.

Kapitalist zihniyetin hakim olduğu 1980'li yıllar dünyada ve Türkiye'de girişimcilerin para kazanmayı tek amaç haline getirdiği ve bunun için her yolu meşru gördüğü, başkaları tarafından yaratılan ekonomik değerlerin kendi taraflarına aktarıldığı "iş adamı" statüsünü kazanmış girişimcilerin yılları olmuştur. Beş kıtada işlenen insan hakları ihlalleri, yoksulluk, ayrımcılık, sömürü, suistimal ve her türlü kötülüğün kaynağı olarak da kar maksimizasyonuna odaklı girişimcilik anlayışı görülmüştür. Köşe dönmeyi, bencilliği, aç gözlülüğü ilke haline getiren girişimcilik anlayışının cezalandırılmaması ise, bu dejenere girişimciliğin yaygınlaşmasında ve toplumsal değer yargılarının bozulmasında yüksek bir etkiye sahiptir. Alman sosyologu Von Götze'nin, "Marjinal Moral Teorisi" bu noktaya dikkat çekmesi açısından önemlidir. Götze'ye göre, "bir toplumda geçerli olan hukuki ve ahlaki kurallarının en alt sınırında oynayanlar kazançlı çıkarsa, uzun vadede bu alt sınırda oynayanların sayısı artmaktadır. Alt sınır bu ağırlığı taşıyamadığından hukuki ve ahlaki kurallar gevşetilerek sınır daha aşağıya çekilmektedir. Yine kuralların tekrar gevşetilmesi gerekmektedir. Bu sürecin devamı ise kuralların dejenerasyonu ve neticede toplumun bozulmasıyla sonuçlanmaktadır" (Müftüoğlu ve Durukan, 2004).

Bu noktadan yaklaşıldığında girişimciliğin ne pahasına olursa olsun para kazanmak olmadığı ve girişimciliğin ekonomik olduğu kadar ahlaki bir yönünün de olması gerekliliği anlaşılmaktadır. Elbette piyasa koşulları, artan rekabet baskısı ve mevcut firma dinamiklerinin yanına ahlaki yaklaşımı almak kolay değildir. Ancak önemli olan ekonomik hayatın ahlakı dışarıda bırakan bir faaliyet alanı olmayacağını anlamaktır. Çünkü, insanoğlunun çalışmasının ve üretmesinin temel amacı, mutlu ve refahlı bir yaşamdır. Mutluluk ise hazların doyurulması ile değil, ancak erdem ile ulaşılabilecek bir duygudur. Yani, mutluluk erdemsiz yakalanabilecek bir şey değildir (Bayrak, 2001).

Küreselleşmenin tüm boyutlarıyla yaşanmaya başlandığı günümüzde, girişimlerin varlıklarını devam ettirebilmeleri, çevre ile kurdukları ilişkideki başarıya ve katma değer yaratma potansiyellerine bağlıdır. Dinamik ve çoğulcu bir toplumda girişimcilerin rolü, teknoloji, sosyal değişim ve yönetsel tutum açısından, "sosyal sorumluluk" ve "iş ahlakı" kavramlarını içerecek şekilde yerine getirilmelidir. Bu nedenle günümüzde girişimciler, önceki yılların tersine, kıt kaynakları etkin kullanmayı, çevre kirliliğini önlemeyi, verimliliği artıracak şekilde üretim yapmayı, çalışanların moral ve motivasyonunu artıracak şekilde önlemler almayı, müşteri beklentilerine uygun mal ve hizmet üretme ve toplumda iyi bir imaj oluşturacak şekilde toplumun sorunlarını çözme ve topluma katkıda bulunmayı önemsemelidirler. Amerikalı düşünür Brezinski'nin dediği gibi, "ortak paydaları olmayan ve herkesin kendi ihtiyaçlarını karşılamayı düşündüğü bir toplum, sonunda yok olmaya mahkumdur".

Dürüstlük, güven, sorumluluk kişiler açısından olduğu kadar kurumlar için de önemlidir. Girişimciler iş ahlakına uygun davranıldığı ölçüde, güvensizlik, korku yaşamayacak ve risk almaktan çekinmeyeceklerdir. Piyasalarda ve firmalarda oluşacak güven işbirliğini artıracak, kişiler arası ve kurumlar arası ilişkilerde açıklık ve davranış rahatlığı getirecektir. Bu nedenle, iş ahlakı düzeyi yüksek olan toplumlarda faaliyetler büyük ölçüde belirli olduğundan düzenleme yapma ve politika tespit etmenin maliyeti oldukça düşük olmaktadır. Bu konu son yıllarda "sosyal sermaye" kavramıyla dile getirilmeye çalışılmakta hatta sosyal sermaye kavramına olan ilginin onun yokluğunun ekonomik gelişmede önemli engellerden birini oluşturmasına bağlanmaktadır. Bu nedenle, Woolcook (1998), Coleman (1990), Putnam (1993), geniş bir yelpazede yer alan sosyal sermayenin -karşılıklı ilişkilerde olan güven, bağlılık, dayanışma, norm ve sosyal ağlar- azlığının ya da yokluğunun ülkelerin ve kurumların üretkenliğinde temel sorun olabileceği üzerinde durmaktadırlar (Durlauf ve Fafchamps, 2004).

Değerler sisteminden kök alan bir iş ahlakı günümüzde bütün girişimcilerin ilgi göstermesi gereken bir alandır. Çünkü, karşı karşıya kalınan ahlaki istismar ve ihmallerin bedelinin küresel çerçevede daha fazla arttığı görülmektedir. Diğer taraftan gelişen bir bilinçlenme ile giderek ahlaki yaklaşımlara ve ahlaki tavır ve davranışlara bir ilgi artışına da tanık olunmaktadır. Bu noktada bir takım yanlış inançları düzeltmek anlamında iş ahlakının artan önemi üzerinde durmak girişimcilere yeni bir perspektif sunmak yararlı olacaktır.

2.1 İş Ahlakı Kavramı

Madsen'in deyişiyle, iş ahlakını tanımlamak, "çiviyi taş duvara mıhlamak" gibi zor bir sorundur. Çünkü bu kavramla neyin ifade edildiği konusunda genel kabul görmüş bir görüş yoktur. Aynı şekilde, iş ahlakının belirli ve sınırları çizilmiş bir alanını da göstermek oldukça zordur. Hatta "nerede olmadığını" söylemek bile güçtür. Bu durumda iş ahlakı alanının tanımlanmasını, bazı önemli unsurları dışarıda tutarak daraltmak ya da bütünüyle kuşatıcı ve oldukça geniş bir alanı kapsayacak şekilde genişletmek mümkündür (Madsen ve Shafritz, 1990).

Çoğu insan için, tanımlanması ve anlaşılması zor olan iş ahlakı, genel olarak, "ekonomik faaliyetleri yürütürken dürüstlük, güven, saygı, adaletli davranmayı ilke edinmek ve topluma destek olacak şekilde hareket etmektir" (McHugh, 1991) şeklinde tanımlanabilir. Başka bir tanımda, iş ahlakı, iş dünyasına yol gösteren ahlaki ilke ve standartlar olarak ifade edilmektedir.

İş ahlakı toplum tarafından görüş birliğine varılmış prensipler, normlar ve standartlar ile tutarlı şekilde işletmecilik uygulaması davranışıdır. İşletmenin; hissedarlarına, müşterilerine, tedarikçilerine, çalışanlarına, içinde faaliyet gösterdiği topluma ve genel olarak küreselleşen dünya ile birlikte ilişkide bulunduğu bütün toplumlara nasıl davrandığına bakılarak bir işletmenin iş ahlakının ne olduğu anlaşılabilir. Eğer işletmeler, işlevlerini yerine getirirken, bir bütün olarak kendileri ve üyeleri için yasal sorumlulukların ötesinde toplumsal sorumluluk da üstlenen ilkeler ile tutarlı davranıyorlarsa, işletmenin ahlaklı davrandığı söylenebilir (İlhan, 1990).

2.2 İş Ahlakının Artan Önemi

Son otuz yılda iş ahlakının çeşitli nedenlere bağlı olarak önem kazandığı görülmektedir. Nedenlerden ilki, girişimcilerin ahlaki olarak iş yapmaları konusunda artan kamuoyu baskısı ve gelişen sosyal sorumluluk anlayışıdır. Bilindiği gibi ekonomik hayatta, klasik anlayışın hakim olduğu dönemde, işletmeler için, yegane sorumluluk olarak "karı artırmak" öngörülmüştür (Ferrel vd., 1994). Özellikle Milton Fridman'ın öncülük ettiği bu görüşe göre girişimcilerin tek sorumluluğu, açık ve serbest rekabet şartlarında, oyunun kuralları içinde kalarak, kaynaklarını ve enerjilerini, karlarını artıracak şekilde düzenlenmiş faaliyetlerinde kullanmaktır (Carroll, 1991). Milton Freidman (1970) *The Social Responsibility of Business is to Increate Profits* başlıklı yazısında işletmelerin ve yöneticilerin yegane sorumluluğunun yasalar içinde ve açık bir rekabet ortamında ortaklara-hissedarlara yönelik olarak kar etmek olduğunu savunmuş, bunun ötesindeki girişimlerin daha karmaşık iktisadi, siyasi ve toplumsal sorunlara yol açacağını ileri sürmüştür. Bu görüşe göre yönetici, hissedar ve ortakların

görevlendirdiği kişidir ve dolayısıyla topluma değil, hissedara ve ortaklara karşı sorumludur. Yöneticinin kar maksimizasyonu dışında bir amaç peşinde koşması görevini yerine getirmediği anlamına gelmektedir. Sosyal sorumluluk adına yapılan harcamalar ya çalışanların ücretlerinin ya da kalitenin düşürülmesi veya maliyetlerin müşterilere yansıtılmasına neden olacak, her durumda şirket rekabetçi konumdan uzaklaşacaktır. Ayrıca, sosyal sorumluluk ekonomik verimliliği düşürmenin ötesinde yöneticinin iş yükünü artıracaktır. Bu bağlamda, sosyal sorumluluğun şirketlerin değil, devletin ve kamunun işi olduğunu, iş dünyasının bu konuda ne yetki nede gerekli beceri ve donanıma sahip olduğu savunulmaktadır (TÜSİAD, 2009).

Kar dürtüsü ve serbest piyasa sisteminin getirdiği yararlarla ilgili kazanımlar kimi girişimciler için hala meşru ya da en geçerli savunumlar olabilir. Ancak kabul edelim ki bu durum geniş bir kesim için de kaygı doğuran en önemli alanlardan biridir. Çünkü yukarıda ifade edilen görüşler doğrultusunda girişimciler çok uzun yıllar karı maksimize etme ve rasyonelliği gerçekleştirme ile ilgilenmiş ve bunlara ulaşmada birer engel olarak gördükleri ahlaki değer ve ilkeleri ya iş hayatının dışında bırakmış ya da kendi istekleri doğrultusunda bu değer ve normlar üstünde yontma yapmışlardır. Böylece, kazanç elde etme, servet biriktirme, statü ve ün kazanma isteğinin önüne serilen imkanlarda, önceki yıllardan daha fazla bir çeşitlilik görülmüş ve geleneksel değerlerdeki çözülmenin etkisiyle bütün toplumlarda bir "ölçüsüzlük" korkusu her yeri sarmıştır. Ancak, bugün gelinen noktada, ticaretin amacının para kazanmak değil, topluma hizmet olduğunun altı çizilmekte ve karın bu hizmetin bir ödülü olduğu, tek başına bir amaç olamayacağı belirtilmektedir. "İşletmeleri zengin eden karları değil, değerleridir" (Quigley, 1993) sözü günümüzde her çerçevede büyük oranda kabul görmektedir.

İş ahlakı kavramının önem kazanmasının ikinci bir nedeni, "good ethics=good business" söyleminin sloganlaşmasıdır (Grace ve Cohen, 2005). "İyi bir işin, iyi ahlak ile özdeş" olduğunun farkına varılmış ve iyi bir iş tanımı için yasal sınırların yeterli olmadığının altı çizilmiştir. Ahlaki olarak faaliyetlerde karar verme, sorunların iyi çözümlenmesi ve etkili stratejilerin tespitinde oldukça önemlidir (Dean, 1997). Bir kişi yasalara aykırı olmasa da müşterilerine zarar verebilecek bir faaliyeti yapabilir mi? Bu soruya günümüzde daha net bir cevap verilerek, "hayır" denilebilmektedir. Ancak bundan öncesine bakıldığında durumun bu kadar açık olduğunu söylemek mümkün değildir. Örneğin, bir İngiliz firması, yasallığı ahlaki davranış açısından yeterli sınır sayarak, Üçüncü Dünya ülkelerine, oranın arazi şartlarına uygun olmayan oto kaplama lastiklerini satmış, trafik kurallarının yeterince iyi düzenlenmediği bu ülkelerde pek çok kazaya neden olmuştur (McHugh, 1991). Aynı şekilde, bir diş hekiminin hastasına gerekmeyen bir tedaviyi sırf daha fazla ücret almak için yapması durumu da yasal olmakla beraber ahlaki değildir. Çünkü hekim, yasal olarak belirlenmiş ücret listesine uygun ücret almaktadır, ancak bu ücret, müşteriye gerekmeyen bir tedavi sonucu oluşmaktadır. Görüldüğü gibi yasalar ve kurallar, bir işletmenin ya da bir kişinin ahlaken ne yapacağını tam olarak hiçbir zaman ifade etmezler. Onlar yapılacaklar konusunda minimum standartları ortaya koyarlar. Bu nedenle yasal zorlamalarla insan davranışlarını düzenlemek en pahalı yoldur (Report and Recommendation to President, 1981).

İş ahlakının önem kazanmasında üçüncü bir neden ise, girişimciler açısından iş ahlakının ve ahlaki tartışmaların, bir tehdit ve zayıflık olarak görülmesi yerine, mükemmellik ve kaliteye ulaşmanın doğal uzantısı ve uzun ömürlü olmanın temel şartı olarak görülmeye başlanmasıdır. Klasik anlayışın tersine, modern anlayışı benimseyen girişimciler, iş dünyasının iş ahlakıyla iç içe geçme zorunluluğuna bir tehdit olarak değil bir fırsat olarak bakmakta, kalite ve mükemmelliği iş dünyasının; ahlakı ise, kalite ve mükemmelliğin ayrılmaz parçaları olarak değerlendirmektedirler (Tierney, 1997). Bu çerçevede Surroca, Tribo ve Waddock (2009) bu durumu, sosyal sorumluluk çerçevesinde ahlaki sosyal performansın finansal performansı artırdığı bir "döngü" şeklinde değerlendirmişlerdir. Yazarlara göre başarılı şirketler ahlaki konularda duyarlı sosyal projelere aktif katılan şirketlerdir (Surroca vd., 2009). Dolayısıyla girişimcilikte ahlaki yaklaşım, sürdürülebilir başarının mihenk taşı olarak değerlendirilmektedir.

Rekabetin şiddetinin artması ve niteliğinin değişmesi, iş ahlakına yönelimde etkili bir başka husustur. Küreselleşme sürecinin hız kazanmasıyla şiddeti ve hızı artan rekabette Amerikalı ve Avrupalı işletmelerin iş ahlakının güçlü olduğu Japonya gibi ülkelerin işletmeleri karşısında başarısız olmaları, ahlaki değerler yönünden çözülmüş kitleleri, güçlü ahlaki bağlarla birleştirmenin yollarının aranmasına neden olmuştur. Çünkü yapılan çalışmalar iyi ahlak ve güçlü sorumluluk duygusunun şiddetlenen rekabette stratejik bir önem kazandığını göstermiştir. İşletme sayısının hızla artması, üretilen malların önceden olduğu gibi kolay satılamaması buna karşılık müşterilerin sürekli güçlü ve nazlı hale gelmesi ahlaki yaklaşımın önemini daha da artırmıştır. Bu güçlü ve bilinçli müşteriye ilkeli yaklaşarak güven vermek ve bu konuda sorumlulukları gönüllü olarak üstlenmek bir zorunluluk haline gelmiştir. Aynı şekilde işin yapısındaki değişim bu anlayışı gerektirmektedir. Mikro teknolojilerin kullanılması ve bilgi işçilerinin varlığı ahlaki ilke ve değerlere bağlılığın önemini arttırmıştır.

İş ahlakı kavramının önem kazanmasının diğer bir nedeni de, daha sınırlı değişkenlerin ve daha dar bir ekonomik yaşam alanına göre üretilmiş iş ahlakı anlayışının, günümüzdeki iş ilişkilerini kavramaya ve düzenlemeye yeterli gelmemeye başlamasıdır. 2000'li yıllarda yukarıda da belirtildiği gibi geleneksel toplumlarda egemen olan, daha dar bir kontrol alanına sahip, sosyal baskı ve kanun baskısına dayalı bir ahlaki anlayışın günümüzde yeterli olmadığıdır. Dolayısıyla önceki nesillerden farklı olarak bu nesil sadece maddi unsurlarda değil, moral unsurlarda da hassasiyet kazanmalıdır. Çünkü tarım toplumundan sanayi toplumuna geçişi yaşayanlar, hızlı bir teknolojik yenilenme yaşarken o zamanın gerekli kıldığı moral değerleri üretememiş,

tam tersine bir önceki neslin ürettiği "antropolojik ahlakın" kendilerine uymayan yönlerini yontmak yoluyla alıp bir süre tüketmişlerdir. Ancak yaşanan hızlı değişim, bu boşluğu istenmeyen ve toplumlarda ahlaki kriz yaratan davranışlarla doldurarak, üretimi bugünkü nesillerin bir sorunu olarak karşımıza çıkarmıştır. Her çağ, her devir nasıl kendi ekonomik, sosyal, siyasi ve kültürel gerçeğini yakalıyorsa, ahlaki gerçeğini de yakalamalıdır. Bu çerçevede günümüz girişimci yöneticileri, yönetim süreçlerinde başkalarını yakından ilgilendiren ve etkileyen kararları ahlaki karar verme mekanizması çerçevesinde alma, bunları tüm paydaşların yararına olacak şekilde uygulama, şirketin yarattığı finansal değeri hak ve sorumluluklar çerçevesinde toplumla adil olarak paylaşma arayışlarını sürdürmektedirler. Böylece yaşanılan dünyaya değerleri yozlaştıran değil, değer katan bilinçli bir benlik sahibi girişimcilik anlayışı yaşanılacaktır. Bu haliyle iyi yaşam ideali ve ahlaki kusursuzluk şeklindeki erdemli var oluşa insanın kendini yeniden keşfetmesi ve gerçekleştirmesi yönüyle yeni nesil girişimciliği katkı sağlayabilecektir.

Toplumdaki genel ahlakın ve iş dünyasındaki ahlaki ilkelerin dejenerasyonu ya da yetersizliği nedeniyle, yaşamın "değerler" alanındaki bozukluğunun, bir anlamda "ahlaksızlığın" sonuçlarının ve maliyetlerinin gittikçe yükseliyor olması, iş ahlakının önem kazanmasının başka bir nedeni olarak görülmektedir. İnsanlık ve iş dünyası, "ahlaki ilkeler" konusundaki duyarsızlığın bedellerini o kadar yüksek faturalarla ödemektedir ki ahlaklı olmayı ve ahlaki tavır ve davranışta bulunmayı bir tür "koruyucu hekimlik" gibi değerlendirmektedir. Ahlaklı olmak, ahlaki davranmamanın neden olduğu sorunlarla uğraşmak zorunda kalmamanın ve bunun için ilave kaynak kullanma durumundan kurtulmanın daha avantajlı olduğu gerçeği, tüm dünyanın deneysel olarak bizzat yaşayıp öğrendiği pahalı bilgiler arasına girmiştir.

Bilindiği gibi, her çağda, her devirde bir takım ekonomik, sosyal ve fikri değerler, diğer değerleri etrafında toplamaktadır. Öyle görünüyor ki günümüzde de "ahlak ve sosyal sorumluluk" kavramları, diğer kavram ve olguları etrafında toplayacaktır. Merkeziyetçi toplumların çözüldüğü, ulus devletin sınırlarının tam olarak çizilemediği, toplumsal farklılaşmanın arttığı, müşterinin son derece kırılgan ve nazlı hale geldiği, ikili ilişki ve ortaklıkların arttığı 2000'li yıllarda iş ahlakına yönelik değişimin doğru algılanması büyük değer taşımaktadır.

2.3 Ahlaki Yönetim İlkelerinin Tesis Edilmesi

Ahlak yönetimi girişimcilikte bir süreç olarak kabul edilebilir. Ahlak yönetiminin temel amacı işyerinde istenilen davranışları teşvik etmektir. Ahlak yönetimini diğer yönetim uygulamalarıyla bütünleştirmek ve görevlerini yerine getirirken çalışanların katılım ve bağlılığını sağlamak, yapılacak işlerde yol gösterici bir takım ilkelerin varlığını gerektirmektedir. Bu ilkeler, yapılacak işlerde belirlenen standartlar olarak, "kabul edilebilir davranışların" asgari özelliklerini ortaya koyarlar. Bu ilkelerin varlığı; toplumsal faydayı gerçekleştirmede, halkın güvenini sağlamada ve bir takım şüpheleri gidermede önemli rol oynarlar.

Yönetici ve çalışanlara problemli ahlaki konularda kılavuzluk edecek şekilde davranış ilkeleri oluşturmak ilk anda alışılmadık bir gelenek olsa da, bu ideal dünya genelinde pek çok şirkette olumlu sonuç vermektedir. ABD girişimcilerinin yaşadıkları deneyimler, bu tür ahlaki kılavuzların varlığının çalışanların bağlılıklarını artırdığını ve müşterilerle ilişkileri geliştirdiğini kanıtlamaktadır. Örneğin Johnson & Johnson'ın elli yıldır uygulanmakta olan ve "Credo" olarak bilinen değerler bildirisinin 1982 ve 1986'da Tylenol'le yaşanan krizlerde şirkete kılavuzluk ettiği (Naisbitt, 1994) güven yaratacak şekilde denge kurduğu görüş ağırlık kazanmaktadır.

İngiltere'deki İş Ahlakı Enstitüsü'nün yaptığı bir araştırma, büyük şirketlerin %30'unda bir ahlak ilkesi olduğunu ve pek çok Avrupa şirketlerinin davranış standartları hazırlamayı planladığını gösteriyor. National Westminister Bank (NatWest) diğer büyük şirketlerin de kabul edebileceği bir standart oluşturmaya çalışmaktadır. Bu doğrultuda 90.000 NatWest elemanı, bir İngiliz şirketinin hazırladığı en hırslı davranış ilkelerinin ayrıntılarını içeren on sayfalık bir döküman almış ve bu kitapçık şirketin öncelikleri konusunda çalışanları bilgilendirmeye yönelik hazırlanmıştır. Özellikle, anlaşmalarda bütünlük, müşteri tatmininin sağlanması, çalışanlar için fırsatlar yaratılması, çıkar çatışmaları, suç oluşturan faaliyetler vb. konular üzerinde durulmuştur (Naisbitt, 1994).

Avrupa, ahlak dışı davranışların çalışanlarda hissedarlarda ve müşterilerde yarattığı etkinin giderek farkına varmakta ve çalışmalarını giderek yoğunlaştırmaktadır. İspanya'da Banoo Bilbao Vizcaya (BBV) adlı şirketin davranış ilkeleri hazırlaması bir İspanyol şirketi için alışılmadık olarak tanımlanmış olsa da bu ilkeler, hükümetle kurulduğu iddia edilen yozlaşmış ilişkiler karşısında iyileştirici bir adım olarak destek bulmuştur. Bu davranış ilkeleri ile şirket üst düzey yöneticilerinden dolaylı ya da dolaysız özel çıkarlarının olabileceği bankalarla faaliyetten kaçınmalarını istemiştir. İsveç'te konu daha ileri boyutlara varmış ve iş dünyasının temsilcilerinden oluşan bir grupla kurulan Yozlaşma Karşıtı Enstitüsü (1923) şirketleri uygulama ilkeleri ve yasal değişiklikler konusunda bilgilendirerek, ahlakla uzun süreli bir uğraş vermişlerdir. Aynı şekilde, Alman girişimcileri ve politikacılar arasında var olan uygun olmayan ittifaklara ve ülkesindeki "ahlaki krize" dikkat çekerek ulusal bir tartışma başlatmıştır. Fransa, rüşvet olayları karşısında daha etkili yaptırımlar için çalışmalar başlatarak, ahlaki davranış ilkelerini gerektiren durumlara dikkat çekmeye çalışmıştır (Naisbitt, 1994).

Günümüzde dünya ekonomisinin "çokuluslu", "küresel", ya da "ulus ötesi" olarak nitelendirilen yıllık ciroları 22-484 milyar doları aşan dev şirketlerin varlığı (money.cnn.com, 2013), ahlaki ilkelerin gerekliliği konusunda daha ciddi sinyaller vererek dünya genelinde arayışları başlatmıştır. Kurt Mirow ile Hary Maurer'in Webs of

Power (İktidar Ağları) kitabında dikkat çektikleri gibi bu şirketler yasadışı sayılmakla birlikte karteller kurarak öteden beri işbirliğine gitmişlerdir. "Av Alanı" anlaşmalarıyla rekabeti azaltıp, karı artıran bu şirketler son yıllarda olağanüstü boyutlara ulaşan güçlerini daha farklı kullanarak, politika alanına kadar güçlerini uzatmışlardır. Bilindiği gibi, politik gündemi belirlemek ve kendi lehlerine siyasal sonuçlar sağlamak için sık sık olağanüstü lobi güçlerini kullanarak politik ağırlıklarını ön plana çıkarmışlardır. Bu durumda, ev sahibi devletler üzerinde büyük çapta nüfuz uygulayabilecek bir konumda olan küresel şirketler, doğrudan ve bazen yasadışı biçimde siyasal sürece etki ederek ekonomik gibi gözükse de, politik ve ideolojik bir tutum içerisine girmişlerdir. Klasik ve bilinen örnek ITT'nin, 1970'de Marksist devlet başkanı Salvador Allende'nin seçilmesini önlemek için entrikalar çevirerek Şili'nin içişlerine karışmasıdır. CIA ile birlikte gizli düzenlemelere girişen ITT, Şili içinde ekonomik kaos yaratmaya ve böylece askeri darbeye zemin hazırlamaya çalışmış ve bu arada Allende'nin iktidara gelmesinin önüne geçmesi için Beyaz Saray'a "yedi haneli bir rakam"a varan bir katkıda bulunmayı önermiştir (Morgan,1998).

Küresel şirketlerin yeni dünya düzeninin temel aktörleri olduğu açıktır. Şirketlerin sahip olduğu mutlak güç, beraberlerinde getirdikleri kartel ve ittifakları, onları tutan, iç içe geçmiş mülkiyet ve kontrol kalıpları, hep birlikte kuruluşların egemen olduğu bir dünya ekonomisine, karlılığa, büyümeye ve stratejik gelişmeye yönelik şirket çıkarlarının bir bütün olarak öncelik oluşturup, yerel toplulukların ve ülke çıkarlarının ikinci sırada yer almasının kabul edilebilir olarak görülmesinin mümkün olmadığına dikkat çeken gelişmelere sahne olmaktadır. Özellikle küresel şirketlerin Üçüncü Dünya üzerinde etkilerinin, "doğal ve öteki kaynakları sömüren modern yağmacılar" olarak değerlendirmelere varması, değişime işaret etmektedir. Dünyanın bütünüyle kalkınması için, Birleşmiş Milletlerin tehlikeli atık ürünleri boşaltma konusunda ILO'nun iyi şirket yurttaşlığı konusunda ortaya koyduğu kurallar tarzında, yapıcı bir çerçeve yaratmak için davranış ve sorumlulukla ilgili kural (Morgan,1998) ve ilkeleri acil olarak geliştirmek gerekiyor.

Bütün kötümserlik ve eleştirilere rağmen sevindirici gelişmeleri göz ardı etmemek gerekiyor. Günümüzdeki iletişim fırsatları en önemli gerçek. Çünkü geçmişte ahlaka aykırı davranışlar olduğunda (etnik ayrımcılık, rüşvet, sahtekarlık ve skandallar vb.) sadece zarar gören topluluk ya da toplum vatandaşları yaptırımlar uygularken, bugün olayları anında izleme fırsatlarının olması, ahlak ve ahlaki standartların ihlal edildiği durumları göz ardı etmenin kolay olmadığını göstermektedir. Sosyolog James Q. Wilson "The Moral Sense" adlı kitabında evrensel öneme sahip ahlaki niteliklerin yerel ilişki ve uygulamalardan türeyerek, küresel ilişki ve uygulamalara kadar varacağına işaret etmektedir. Dolayısıyla büyüyen küresel ekonomik düzen yeni kurallar yaratırken, bir kez daha dünyanın en küçük oyuncaklarından yararlanmak durumunda kalabilecektir (Naisbitt, 1994).

2.4 Ahlaki Yönetim Anlayışı

Girişimciliğin ahlaki boyutunu oluşturmak çok önemlidir ve bu nedenle de girişimcilerin ahlaki davranışları ya da karşılaştıkları ahlaki problemler daha fazla ilgi çekmeye başlamıştır. Her ne kadar, girişimci tanımı gereği kendisine ait sermayeyi riske eden kişi olarak kabul edilse de, bir girişimin başarısızlıkla sonuçlanması ya da ahlaki olmayan uygulamalar nedeniyle müşteri ve prestij kaybetmesi sadece girişimcinin kişisel sermayesi değil, fakat aynı zamanda toplumun kıt kaynaklarının da israfı anlamına gelecektir.

Günümüzde örgütler devlete olan vergilerini ödemek, fabrikalarında çevre kirliliğini önlemek amacıyla yatırım yapmak, toplumda muhtaçlara, kadınlara ya da özürlülere istihdam imkanı sağlamak, kültür-sanat faaliyetlerini desteklemek şeklinde örneklendirilebilecek uygulamaların karlarını azaltacağını düşünerek, bu tür faaliyetlere pek de sıcak bakmamaktadırlar. Ancak hatırdan çıkmaması gereken bir gerçek, ahlaki ve toplumsal sorumluluklarını yerine getirmekten kaçınan işletmelerin, kısa dönemde yüksek karlılığa ulaşsalar bile, uzun vadede daha ciddi maliyetlere katlanmak durumunda olacaklarıdır. Her ne kadar kar, bir işletme için bir başarı göstergesi ya da prestij kaynağı ise de, unutulmamalıdır ki, toplumsal sorumluluklarından kaçınmayan girişimciler ya da yöneticiler halkın daha fazla takdirini kazanacaklardır. Bu nedenle ahlaki yönetim, bir işletme için değer yaratan faydalı bir yönetsel tarzı ifade etmektedir.

Ahlaki bir yönetimin faydalarını şu şekilde ifade etmek mümkündür (Arıkan, 2002):

1. Ahlaki kurallara uygun olarak yönetilen bir işletme, her şeyden önce, ahlak-dışı uygulamalarla yönetilen bir işletmenin sahip olduğu kötü ünün zararlarından korunmuş olacaktır. İşletmenin ahlaka aykırı davranışlar sergileyerek karlılığını artırması sadece kısa vadede bir fayda sağlayacaktır. Ancak işletme uzun vadede bu tür uygulamalardan zarar görecektir.

2. Ahlaki anlamda temeli sağlam bir biçimde oluşturulmuş işletmelerin farklı taleplere cevap vermesi çok daha kolay olacaktır.

3. Ahlaki yönetimin söz konusu olduğu işletmeler iki önemli grubun yani müşterilerin ve işgörenlerin saygısını kazanacaktır.

Son olarak, ahlaki davranışları keşfeden işletmeler, yukarıda ifade edilen çelişkinin aksine, kazançlarını artırma şansı yakalayacaklardır. Literatürde yapılan pek çok çalışma da ahlaki bir çalışma tarzı ile yüksek karlılık arasında yakın ilişkiler bulunmuştur. Örneğin, Alfred Marcus tarafından yapılan çalışmada, ahlaki ve sosyal

sorumluluk davranışları ile yüksek karlılık arasında olumlu yönde bir korelasyon bulunduğu sonucuna ulaşılmıştır.

3 İş Ahlakına Aykırı Davranmanın Neden Olduğu Kayıplar

Ahlaki değerler, yumuşak ve soyut olarak algılanabilir. Ancak sonunda ahlaka aykırılık, somut ve ölçülebilir çıkarlara, işin özüne, parasal getirilere zarar verebilir. Dahası ahlakı göz ardı etmek, şirketlerin imajını, ismini ve kariyerini mahvedebilir. Union Carbide, BCCI, Exxon Valdez, Michael Miliken, Robert Maxwell, Barlos Clowes Borings Bank, Nestle vb. gibi dünyanın ünlü firmaları iş yaşamında bulanık, belirsiz yasalarla tamamen düzenlenmemiş alanlardaki uygulamaları nedeniyle dünya kamuoyuna konu oldular. Bu firmalar ürün ve hizmet kalitesi ile değil, ne yazık ki sorumsuzca ve ahlaki olmayan kararları ve uygulamaları yüzünden kamuoyunda yer almanın zorluğunu yaşadılar.

Bunlar "Yakalanmayı Başaranlar"dır. Ancak bu firmalar dışında, hiçbir gazete ve haberde yer almayan kişi ve kuruluşlar olduğu da bilinmektedir. Yıllarca hileli işler yapıp hiçbir zaman yakalanmayan bu kişilerin insanlara, hayvanlara ve çevreye verdiği zararlar tespit edildiğinde, bir gün mutlaka düşecekleri durumun olumsuzluğunu göz önüne getirmek dahi istemiyoruz. Bu kişi ve firmaların bu duruma düşmelerinin iki nedeni vardır: Birincisi, ahlaka aykırı davranmanın sonuçlarını görememeleri, ikincisi de ahlaka aykırı davranışların bedelini anlayamamalarıdır.

Dürüst davranmadıkları halde işlerini yürütebilmiş, ahlaka aykırı davranmada bir sakınca görmeyip bu tür uygulamalar ile para kazanan girişimcilerin yakalanmasalar da iyi durumda olduklarını söylemek mümkün değildir. Çünkü, bu kişilerin içine düştükleri yabancılaşma durumları en büyük cezadır. Özellikle nerede, nasıl ve ne şekilde hareket edeceklerini belirleyecek ahlaki norm ve kuralların saygınlık ve etkinliklerini azaltmak ya da ahlaki normlara bağlılıklarını zayıflatmak sonucunda yaşadıkları "anomi", ahlaki norm ve kuralları reddetme ve onlara karşı çıkma şeklinde ortaya koydukları "kuralsızlık ve sapma" sonucunda içine düştükleri başıbozukluk, kararsızlık, karamsarlık ve "hiç"lik duygusu en ağır cezadır. Vicdanını yok sayan bu kişiler, verdiği kararlara güvenme cesaretini gösterememekte, kendilerine inanmamakta, kendilerini güçsüz görmekte ve güçsüzlüklerinden dolayı da küçük görmektedirler (Fromm, 1994). Böylece bu kişilerin kendi varlıkları ile ahlak (moral) anlamındaki varlıkları arasındaki mesafe açılmakta ve bunlar "kendi kendilerine yabancılaşmak"tadırlar (Tolan, 1980).

Anlaşılacağı gibi ahlaka aykırı davranışların bir bedeli vardır, hatta bu bedel oldukça ağırdır. Ahlaka aykırı davranışın neden olduğu kayıplar, güvenin kaybedilmesi, grup çalışmalarının etkinliğinin kaybedilmesi, iletişimin zarar görmesi, bağlılık duygusunun yok olması, imajın zarar görmesi şeklinde sıralanabilir (Tierney, 1997).

3.1 Güvenin Kaybedilmesi

Güven duygusu, tarihin başlangıcından itibaren kişisel ve örgütsel ilişkilerin vazgeçilmez unsurları arasında yer alan ve bulunmadığı ilişkilerin sürdürülemez olarak kabul edildiği son derece önemli bir kavramdır. Bu nedenle güven kavramı, insan motivasyonunun en yüksek biçimi olarak kabul edilmekte, kişisel ve mesleki ilişkilerde önemli tek faktör olarak değerlendirilmektedir. Güven bir insanın kontrolü dışındaki olaylardan zarar görmesini önleyen ve olumsuz etkileri azaltan bir süreçtir. Korkunun yeni korkuları beslemesi gibi güven duygusu da güveni artırır. Korku ve güvensizlik bir tehlikenin olduğundan daha büyük algılanmasına neden olur ve gerginliği artırır. İnsanı yalnızlığa, mutsuzluğa, içe kapanmaya götürür. Diğer taraftan, güven ise insanı denge ve kontrol noktasına getirir. İletişim ve ilişki süreçlerinin işlemesini kolaylaştırır. Korku olumsuz düşünce ve duyguları, güven ise olumlu duyguları, sağlıklı ilişkileri ve huzurlu bir ortamı besler.

Örgütsel güven ise, çoğu kişinin zannettiğinden çok daha önemlidir. Çünkü güven, örgütsel verimlilikte kilit sözcüklerden biridir. Günümüzde örgütlerde:

Yaratıcı ortamların geliştirilmesi

Çalışanların düşünce ve fikirlerinin ortaya çıkarılması

Çalışanların sürekli öğrenmesi

Tüm yönlere açık iletişimin yapılabilmesi güvene dayalı ilişkilerin tesis edilmesini gerektirmektedir. Güvenin kaybedilmesi, iletişimin zarar görmesi, öz saygının kaybolması, bağlılık duygusunun kaybolması, sadakatin yitirilmesi, istifa ve benzeri olumsuz sonuçların doğması demektir. Bu durumda güven yaratılmadan başarı beklemek, büyük bir hayalcilik olacaktır. Çünkü Berry'nin de ifade ettiği gibi, "iş ilişkileri ancak ve ancak güven temeli üzerine kurulabilir" (Blois, 1999).

Literatürde, güvenin örgütsel başarı için gerekli olduğu, ancak kısa vadede yaratılamadığı, uzun ve özverili çabalar gerektirdiği konusunda fikir birliğine varılmıştır. Bu nedenle, örgüt üyeleri tarafından paylaşılan değerler, inançlar ve vizyon yaratmak ancak örgütsel güvenle mümkündür. Dolayısıyla işteki başarı için, güvenin tesis edilmesi ve onu zedeleyecek düşünce, davranış ve uygulamalardan uzak kalınması gerekmektedir.

3.2 Grup Çalışmalarının Etkinliğinin Kaybedilmesi

Günümüzde işletmeler daha etkin ve verimli bir şekilde rekabet edebilmek, kendilerini sürekli yenileyebilmek ve çalışanların yeteneklerinden en iyi şekilde yararlanmak için ekip çalışmasını kullanmaya başlamışlardır. Ancak ekip çalışmasının başarısı bir takım şartların varlığını gerektirir. Bunların başında güven ilişkisi gelmektedir. Güven ilişkisi olmadığında; hedefler, görevler veya projeler bütünüyle zarar görebilir. Çünkü kişiler muhtemelen böyle bir ortamda risk almaz, yaratıcı çözümler bulmak için gayret göstermez ve kendilerini geri çekerler. Çünkü pek çok araştırmanın da ortaya koyduğu gibi (Bourgeois ve Eisenhardt, 1988; Eisenhardt, 1989; Woolridge ve Ployd, 1990) günümüz şartları "grup konsensusunu" gerektiren kararlara dayanmaktadır. Bu da ancak liderin ve grup üyelerinin birbirine güveni ile ancak bir grup ya da ekipte yaratılabilir (Korsgaard vd., 1995). Güven, adeta insanları bir arada tutan bir yapıştırıcıdır.

Örgütlerde güvene dayalı ilişkilerin kurulması, çalışanların arkadaşlarına ve liderlerine güven duyması, örgütlerine duygusal açıdan bağlı, işlerinden tatmin olan ve kurumlarından ayrılmayı istemeyen çalışanlar yaratabilmekte ve ekip çalışmalarının temel dayanağını oluşturmaktadır.

3.3 İletişimin Zarar Görmesi

İş dünyasındaki karşılıklı ilişkilerde ahlaki ilke ve kurallar hemen her zaman varlıklarını hissettirmişlerdir. Üst üste baskı yapan bestseller kitaplarından "The 100 Best Companies To Work for in America" eserinin yazarı Robert Levering, bir kuruluşta ahlaki kuralların çiğnenmesi kadar çalışanların moralini bozabilecek pek az durumun söz konusu olduğunu ve kendi kitabına konu olan pek çok kuruluşun en hassas davrandıkları hususların da dürüstlük, güvenilirlik ve adil olma olduğunu (Gürlek ve Gürol, 1993) belirterek girişimcilikte ahlaki davranmamanın ciddi kayıplar yarattığına dikkat çekmiştir.

Ahlaki bir tavrın ciddiye alınmamasının getirdiği en büyük zarar, açıklık ve dürüstlüğün yok olmasıdır. Açıklık ve dürüstlüğün yok olması, güven ortamının kaybolması ve iletişimin zarar görmesi demektir. Bu nedenle güvenin en önemli belirleyicilerinden biri, taraflar arasındaki iletişimin açıklığı kabul edilmektedir (Carnavalle ve Sharp, 1993; Gabarro, 1978; Lambert, 1995).

Gerçekten kişiler arası sağlıklı ilişkilerin kurulabilmesi için kişilerin duygu ve düşüncelerini açabilme güvencesinin olması gerekir. Bir kişinin kendini tanıtma ve kendini açma ölçüsüyle o kişiyle olan yakınlık, samimiyet ve güven derecesi arasında yakın bir bağ vardır. Kendini açmak ancak güven duyulan kişiye yapılabilir. Bir insanın karşısındakine güven duyması ise zaman içinde gerçekleşir. Kendini açan kişi karşısındakine güven verir ve karşılığı da güven duyulan kişinin kendini açmasıdır. Böylece derin ve yakın bir ilişki ortaya çıkar. İnsan kendini kapadıkça, karşısındakini de kendini kapamaya zorlayan bir fasid daire oluşturur. Kuşkusuz açık olmanın riskleri de vardır. Ancak unutmamak gerekir ki hayattaki bütün başarılar, az çok riskli davranışlara dayanır.

Günümüzde yaşanılan rekabette Japon işletmelerinin karşılarındaki rakiplerine üstün gelmelerinde en büyük faktörün, Japon yöneticilerin üstlerine, astlarına ve tüm çalışanlara duydukları güven olduğu belirtilmektedir (Premaux vd., 1991). Diğer taraftan bu güven halka doğru bilgilendirme ve gerçek bilgiye dayalı iletişim aracılığıyla kurumsal girişimciliğinin sürdürülebilirliğini sağlamaktadır. Gerçekten yapılan çalışmalar, ahlaki davranmamanın ve kendi menfaatini düşünmenin iletişimde güvene yönelik bir şüphe ortaya koyduğunu, bunun ise iletişimlerin en büyük engeli olarak gösterildiğinin altını çizmektedir.

3.4 Bağlılık Duygusunun Yok Olması

Bir örgütte çalışanların işletmeye ve birbirlerine güvenlerinin kaybolması, iletişimleri bozduğundan doğal olarak aralarındaki bağlılık duygularını da olumsuz etkileyecek ve bağlılık duygusu yok olacaktır (Tierney, 1997). Bağlılık kavramı örgütsel ve mesleki bağlılık olarak ayrılmaktadır. Örgütsel bağlılık, bir çalışanın örgütün amaçlarını, değerlerini kabul etmeye olan inanç ve örgütün yararı için çaba göstermeye olan isteklilik olarak düşünülmektedir (Camp, 1991). Araştırmalara göre, çalışanlar işyerlerinde tatmin oluyorlarsa, üstlerinin destekleyici ve duyarlı olduklarını algılıyorlarsa ve adaletli davranıldığına inanıyorlarsa çalışanların örgüte duyduğu bağlılık ve yakınlık artmakta ve çalışanlar örgüt ile kendilerini özdeşleştirmektedirler (Sloat, 1999). Bu bilgi, örgüte bağlı çalışanlara sahip olmanın sağladığı avantajlarla (Meyer ve Allen, 1997) yan yana getirildiğinde, konunun gerçekte ne denli önemli olduğu daha iyi anlaşılacaktır. Bu durumda ahlaki yaklaşım içerisinde olan bir örgüt, günümüzde en zor kazanılan konu olarak karşımıza çıkan çalışanının bağlılık ve sadakatini sağlamış olacaktır. Aksi bir durumda ise, katlanılan maliyetler oldukça yüksek olacaktır. Örneğin, bir işletmede bağlılık duygusu yok olduğunda, başarılı olmaya çalışmanın, sorunlara yenilikçi çözümler bulmanın, işi yoğun bir arkadaşa yardım etmek için gece geç saatlere kadar çalışmanın bir gereği olmayacaktır. Pek çok araştırmanın ortaya koyduğu gibi (Deutsch, 1957-Guth ve MacMillan, 1986; Hitt ve Tyler, 1991), çalışanlar arasında bağlılığın zayıflaması, bilgi paylaşımının azalmasına, motivasyonun kaybolmasına, yabancılaşmaya ve işten ciddi oranlarda ayrılmalara ayrılmalara yol açmaktadır (Campion, [1991]).

3.5 İmajın Zarar Görmesi

Ahlaka aykırı davranışların ve uygulamaların sonucunda güvenin yitirilmesi dışında ödenecek bir başka bedel, o güne kadar oluşturulmuş işletme imajıdır. Müşterilerine verdiği sözleri tutmayan, hesaplarında oynamalar yapan, bir takım meşru olmayan ve bulanık işlere adları karışan işletmeler, olumlu bir imajı anında kötü bir

imaja çevirebilirler. Toplumda imaj yaratma kaygısı, modern girişimcilerin mal ve hizmet kalitesi kadar önem verdikleri bir konudur. Çünkü günümüzde mal ve hizmeti, saygın imajın daha kolay sattırdığı inkar edilemez bir gerçektir (Aldemir vd., 1996). Bu nedenle, markalar güçlerini milyarlık reklamlarla yarattıkları imajların üzerine kuruyor ve bu konuda çok hassaslar. Şayet şirketler kendilerini özellikle, sosyal, sağlıklı, modern, çocuk sever, kadın, aile ve çevre dostu olarak tanımlıyorlarsa onları kendi koydukları bu değerler üzerinden değerlendirmek çok meşru. Örneğin, İtalyan moda milyarderi Benetton, Aids hastaları, savaş kurbanları, yeni doğmuş bebekleri kullanarak yaptığı kışkırtıcı reklamlarda sosyal konularla ilgilendiğini göstermiş oldu. Oysa 1998 yılında şirketin giyim eşyalarının Türkiye'de 12 yaşında çocuklar tarafından üretildiği kulaktan kulağa dolaşıyordu (Werner ve Weiss, 2002).

Akla günümüzde şu soru geliyor? Niçin şirketler reklamlara ayrılan paraları ödemekten kurtulmak istemiyorlar bizi kurtarmıyor ve ürünlerini usandırıcı marka reklamlarıyla dünyayı bunaltmadan satamıyorlar? Amerikalı ekonomist ve yazar Jeremy Rifkin, şirketlerin reklamla verdiği mesajların, modern iletişim tekniklerinin yardımıyla, okul, dini kurumlar, sosyal topluluklar ve kültürel kuruluşlar gibi geleneksel duyarlılıklar yaratanların rollerini üstlendiğini belirterek, şöyle diyor: "Bir markayı satın almış olmak, alıcıyı hayali bir dünyaya götürür, tasarımcıların aktardıkları değerleri ve anlamları gerçekten başka insanlarla paylaştıkları hissine kapılırlar (Werner ve Weiss, 2002)". Nike işte bu nedenle sadece spor ayakkabı değil, "ortak bir sağlık" duygusu üzerine çalışır. IBM sadece bilgisayar değil sorunlara çözüm üretir. Bu şekilde, ürünün kendisiyle birlikte, ayakkabıların, bilgisayar parçalarının insanı öldürmeyecek kadar yaşatacak ücretlerle üretildiği gerçeği de arka plana atılmış olur. Gazeteci Naomi Klein'in "No Logo!" adlı kitabında yazdığı gibi tam da o anda "markaların göz kamaştıran cephesindeki çatlaklar ve gedikler ortaya çıkıyor…" (Werner ve Weiss, 2002).

Oysa marka değerinin, değerler krizi yaratarak oluşturulduğu servetlerin yıkımı saniyeler sürebilir. Çünkü giderek daha fazla insanın bu göz kamaştıran cepheyi yıkmak için buluştuğu ve pazarın en hızlı silahını "interneti" kullanarak karşıt bir cephe oluşturdukları dikkat çekmektedir. Bu durumda işletmelerin sık sık telaffuz ettiği, ancak uygulamalarında tam tersi sonuçlar sergilediği iş ahlakına çok daha fazla önem vermeleri gerektiğini anlamaları (Hoffman ve Frederick, 1995), modern iş dünyasının temel şartlarından biri olarak görülmektedir.

4 Sonuç

"Çağımız bir geçiş dönemi içerisinde bulunmaktadır. Orta Çağ 15. yüzyılda bitmemiş, Yeni Çağ ise hemen ondan sonra başlamamıştır. Son ve başlangıç dört yüz yıl süren bir süreci gerektirmiştir – bu dört yüz yılı kendi ömrümüzle değil de, tarihsel gelişme açısından ölçecek olursak, bunun gerçekten de çok kısa bir zaman olduğunu görürüz. Bizim çağımız da hem bir sondur, hem de imkanlarla yüklü bir başlangıçtır".

İnsan tarihsel dönemlerin ve sosyo-kültürel coğrafyaların farklılıklarına rağmen genel geçer ahlaki ilkelere işaret etme ve değer ve normlar üretmeye çalışmıştır. Yaşamını ahlaki ilke ve değerlere dayamaya çalışmıştır. Ancak 20. yüz yılın son yarısında yaşanılan büyük değişim ve dönüşümler inşa edilen değerlerin altını üstüne getirmiş ve bu durum dünyanın hemen her köşesinde ortaya çıkan ahlaki yozlaşma ve kirlilikle sosyal, siyasi, kültürel ve ekonomik tüm alanları kapsamıştır. Yaşanılan son elli yıl, kapitalist zihniyete dayalı bu kirliliğin yayılım ve çeşitlenme süreci olurken, bu sürecin baş aktörlerini ise girişimciler oluşturmuşlardır.

Kapitalist zihniyetin kendisine amaç kıldığı maksimum kazanç anlayışı, geniş bir rant tabanı yaratmış bu taban üstünde ahlak kendisine yer bulamamıştır. Kendini her türlü ahlaki sınırlamanın üstünde gören aşırı kazanma hırsıyla beslenen girişimcilik kültürü, "her koşulda ve her zaman kar elde etmek" anlayışıyla, insana, topluma ve doğaya ciddi zararlar vermiştir. Böylece, girişimcilerin kar maksimizasyonu amacıyla tüketmiş olduğu maddi kaynaklar yanında, önceki tarihsel süreçte insanlığın ürettiği manevi kaynakların da yok edilmesiyle birlikte ortaya çıkan "ahlaki boşluk" tüm dünyada insanlık için yaşanılan savaşlardan sonra en önemli acı ve sancının kaynağı olmuştur. Zedelenen güven, bozulan iş disiplini, kısa ve uzun vadeye yayılan ekonomik, sosyal, siyasi ve hukuki dezavantajlar ya da ahlaki krizler krizden çıkış yolları aranmasını zorunlu kılmıştır. Dolayısıyla ahlaki kaybettiğimiz zemin ahlaki aynı zamanda inşa zeminimizdir. Ahlaka ilgi ve ahlaki davranışa yönelik artan değer İnsanlık için yeni zirvenin ahlaka odaklılık ve ahlaki bir yönetim yaklaşımı olduğunu belirtmektedir. Ahlak tarihsel olarak yaşanılan bir olgu olarak yeni değer inşasını, ekonomik sahada ahlaki meşruiyet içerisinde kendisine kazanç arayan yeni nesil girişimcileri aracılığıyla yapacaktır. Yeni nesil girişimciliğin sorumluluğu, maddi temele oturmuş bir dünyada, maddi idrakla alınmış kararlardaki ekonomik faaliyetin "değer körü" olduğunu ve bunun sonucunda elimizde kalan değersizliğin sancı ve acılarını, sömürü, suistimal ve ihlallerini değer üreten girişimci anlayışıyla refah ve barışa çevirmesidir.

Biliyoruz ki, "iyilik de, kötülük de kendi başına ya da bir alın yazısına bağlı olarak gerçekleşen şeyler değillerdir, Karar, insana bırakılmıştır. Bu karar insanın kendisini, kendi hayatını ve mutluluğunu ciddi bir biçimde ele alma yeteneğine bağlıdır; kendisinin ve içinde yaşadığı toplumun ahlaki problemi ile yüz yüze gelme isteğine bağlıdır. "Kendisi" olma ve "kendisi için" olma cesaretini göstermesine bağlıdır".

Turist Akımında Oynaklık: Türkiye Örneği
Volatility in Tourist Inflows: Evidence from Turkey

Assoc. Prof. Dr. Kadir Karagöz (Celal Bayar University, Turkey)

Abstract

Tourism sector, like most of the other countries of the world, has also gained importance in Turkey in last few decades. Global tourist flows and tourism income have a steady increase. Hence, as an effective tool for sustainable economic development and welfare, importance of tourism sector is rising. Tourism is a considerable source of an additional income, exchange, employment and tax revenue for most countries. Turkey is one of the prominent tourism destinations for the world tourist flows. Turkish tourism industry began to grow in 1980s with the incentive macroeconomic policies. The industry has been growing in terms of international tourist arrivals and tourism receipts despite some discouraging events, such as economics crisis in the source countries, changing concerns, political incidents etc. For a sustainably growing and productive tourism sector it is essential to reduce the volatility in tourist arrivals. A less volatile tourist inflow may help to policy and decision makers. So, understanding the volatility of demand can reduce the uncertainty and help to develop appropriate policies. This paper aims to conduct such an analysis for Turkey's inbound tourist flow, using the monthly data for 1996-2011 period. Exploiting alternative modeling techniques to measure and investigate the volatility in international tourist arrivals, the study concluded that the volatility of tourist arrivals to Turkey is asymmetric: positive shocks have a differential impact on future volatility than negative shocks.

1 Giriş

Turizm, dünyada en hızlı gelişen sektörlerden biridir. Küresel turist akımı ve turizmden elde edilen gelir son yıllarda istikrarlı bir artış göstermektedir. Bunun sonucunda, turizmin ekonomik büyüme ve kalkınmada etkili bir araç olarak önemi de artmaktadır. Birçok ülke için turizm önemli bir ilave gelir, döviz, istihdam ve vergi geliri kaynağıdır. 2010 itibariyle küresel turist akımı 940 milyon kişiye, turizm gelirleri ise 733 milyar $'a ulaşmıştır. Bu değerlerin 2020 yılında 1,36 milyar kişi ve 2 trilyon $'a çıkacağı tahmin edilmektedir (UNWTO, 2012).

Turizm, kendine özgü doğal, kültürel ve tarihî zenginliklere sahip olan Türkiye ekonomisi için gittikçe önem kazanan sektörlerden biridir. Sektörün önemi, istihdam yaratma kapasitesi, ekonomik büyümeye katkısı, hükümet için kayda değer bir döviz ve gelir kaynağı olmasından kaynaklanmaktadır. Turizm sektörü, güçlü ileri ve geri bağlantıları nedeniyle ekonominin neredeyse tümünü etkileme potansiyeline sahiptir. Turizm, ödemeler dengesi üzerinde önemli etkileri bulunan görünmeyen bir ihracat kalemi olarak değerlendirilebilir. Otomasyon ve mekanizasyon kabiliyeti oldukça düşük olan sektörde istihdam/yatırım oranı da genel olarak yüksektir. Turizm, yarattığı uyarıcı etkiler nedeniyle de dolaylı olarak diğer birçok sektörde üretim, istihdam ve gelir artışına neden olmaktadır. Turizm sektörünün sahip olduğu mikro ve makro dışsallıklar ve büyüme potansiyeli birçok ülkeyi bu pastadan daha fazla pay almak için kıyasıya bir yarışa sevk etmektedir.

Turizm sektörünün yukarıda belirtilen yararları sektörün önemini artırmaktadır. Bu nedenle, sektörün gelişmesine yönelik önlem ve politikaların belirlenmesi kadar, turist akımının karakteristiklerinin incelenmesi de önem arz etmektedir. Bir ülkeye gelen turist akımının şoklar karşısında aşırı ve kalıcı oynaklık göstermesi, geleceğe yönelik belirsizliği artıracağından sektörden beklenen yararın tam olarak sağlanamamasına yol açacaktır. Bu nedenle Türkiye'ye yönelik turizm akımının oynaklığının ortaya çıkarılması ve buna uygun politikaların izlenmesi sektörün daha plânlı ve kontrollü olarak geliştirilmesi bakımından önem taşımaktadır.

Bu çalışmanın amacı, önemli bir turist destinasyonu olan Türkiye'ye gelen turist akımının oynaklığını çeşitli ölçütler kullanarak test etmektir. Çalışmanın izleyen bölümünde Türkiye'nin turizm potansiyeli ve Türkiye ekonomisi içinde turizmin yerine ilişkin kısaca bilgi verilmektedir. 3. Bölümde turist akımlarındaki oynaklığın sonuçları ve oynaklığın ölçülmesinin önemine değinilmekte, konu ile ilgili önceki çalışmalardan bahsedilmektedir. 4. Bölümde oynaklığın ölçülmesi ve modellenmesi konusunda başvurulan çeşitli ampirik ölçütler tanıtılmaktadır. 5. Bölüm, aylar itibariyle Türkiye'ye gelen turist sayısındaki oynaklığın bahsedilen ölçütlerle araştırıldığı analiz sonuçlarına ayrılmıştır. Çalışma, Sonuç bölümüyle nihayet bulmaktadır.

2 Türkiye'de Turizm Sektörü

Dünya turizm akımlarındaki gelişmeye paralel olarak Türkiye'ye gelen turist sayısı ve turizm gelirlerinde de son yıllarda dikkat çekici gelişmeler gözlenmektedir. Özellikle 1980'lerden itibaren, hem devlet destekli arz yanlı atılımlar hem iç ve dış turizm akımlarındaki genişlemeden kaynaklanan talep yanlı gelişmeler nedeniyle Türk turizm sektörü çok büyük bir gelişme göstermiştir.

Türkiye'de ekonomi politikalarının geniş bir perspektifle tartışılmaya başlandığı 1960'lı yıllar, turizmin öneminin de kavranmaya başladığı yılları ifade etmektedir (Çımat ve Bahar, 2003). Türkiye'de kutsal yerler,

sağlık ve yaz tatili amaçlı yurt-içi turizmin geçmişi eskilere dayansa da, ülkenin uluslararası turizm piyasasına açılması 1980'lerin sonlarına rastlamaktadır (Yıldırım ve Öcal, 2004). 1980'lerin başlarında başlayan dışa açılma ve liberalleşme politikaları ile birlikte uluslararası mal ve hizmet ticareti gibi turizm de önem verilen konulardan biri haline gelmiş, bu yöndeki yatırımlar da devlet tarafından desteklenmiştir. Turizmin gelişmesinde 1982 tarihli Turizmi Teşvik Kanunu ile sektöre sağlanan yatırım teşvikleri ve mali desteğin çok önemli etkisi olduğu söylenebilir (Bahar, 2006;138). Bu destekleyici politikalar sayesinde, 1980 yılında GSYH içinde % 0,6 olan turizmin payı 2006 yılında % 13,5'e çıkmıştır. Ödemeler dengesi açığını kapatmada da turizm gelirleri en önemli kaynaklardan biridir (Kar vd., 2004). Günümüzde turizm sektörü, imalat sanayisinden sonra en önemli döviz ve istihdam kaynağı durumundadır. Diğer taraftan turizm büyüme, istihdam ve verimlilik artışı açısından da uygun bir araç olarak değerlendirilmektedir. Uzun dönemde turizm sektörünün Türkiye'nin ekonomik büyümesi üzerinde olumlu etkide bulunduğuna dair ampirik bulgular mevcuttur (Bahar, 2006; Gündüz ve Hatemi-J, 2005; Yıldırım ve Öcal, 2004). Girdi – çıktı analizleri, Türkiye'de turizm sektörünün diğer sektörler üzerinde kayda değer bir etkiye sahip olduğunu ortaya koymaktadır (Çakır ve Bostan, 2000; Dilber, 2007; Canlı ve Kaya, 2012).

Bununla birlikte, son yıllarda gelen turist sayısı artarken turist başına harcama miktarındaki azalmaya bağlı olarak turizm gelirlerinde nisbî bir gerileme görülmektedir (Ünlüönen ve Kılıçlar, 2004). 2011 yılı Dünya Turizm Örgütü verilerine göre, gelen turist sayısı açısından Türkiye dünyada 6. sırada iken, turizm geliri bakımından ne yazık ki ilk 10'a girememektedir (bkz Tablo 1).

UNWTO verilerine göre, 2006 yılı itibariyle Türkiye'nin turizm gelirleri GSYH'sinin % 13,53'ü kadardır. Türkiye, 2006 yılında turizmden elde ettiği 16,9 milyar \$'lık gelirle dünyada turizmden en fazla gelir elde eden ilk on ülke arasında (9. sırada) yer almaktadır. Ancak yine de, Türkiye'nin sahip olduğu coğrafî ve tarihsel zenginliklerinden kaynaklanan turizm potansiyelini tam olarak değerlendirdiği söylenemez. Türkiye gibi bir Akdeniz ülkesi olan İspanya'nın 2011 yılında turizmden elde ettiği gelir 59,9 milyar \$, İtalya'nın ise 43,0 milyar \$'dır (UNWTO, 2012).

Gelen Turist Sayısı (Milyon kişi)				Turizm Geliri (Milyar ABD \$)				
Sıra	Ülke	2010	2011	% Değ.	Sıra	Ülke	2010	2011	% Değ.

Tablo 1. Turist sayısı ve turizm gelirleri açısından önde gelen ülkeler. Kaynak: (UNWTO, 2012)

3   Turizm Akımlarında Oynaklık

Turist akımları içsel ve dışsal faktörlere karşı oldukça duyarlıdır. Turist gönderen ülkelerin ekonomik durumları, doğal afetler, etnik çatışmalar, asayiş sorunları, terörist faaliyetler bir ülkeye gelen turist akımını olumsuz etkileyebilmekte ve dönemsel olarak dalgalanmalara yol açmaktadır. Turizm talebindeki bu dalgalanmalar, özellikle rekabet ve ödeme güçlüğü çeken küçük oteller üzerinde baskı yaratmakta ve sektörün istihdam düzeyi ve genel olarak faaliyetlerini etkilemektedir (Lorde ve Moore, 2008). Diğer taraftan, turizm akımının oynak olması gelirlerde belirsizlik yaratacağından oynaklığın derecesi hükümetler ve yatırım kararları açısından önem arz etmektedir.

Ampirik literatürde turizm hareketleri birçok açıdan incelenmekle birlikte turist akımlarındaki oynaklığın yeterince ele alınmadığı, bununla birlikte son yıllarda konuya olan ilginin arttığı görülmektedir. Chan vd. (2005), 1975 – 2000 dönemi içinde dört büyük kaynak ülkeden (Japonya, Yeni Zelanda, İngiltere ve ABD) Avustralya'ya gelen turist sayısının koşullu ortalama ve varyansını üç farklı GARCH modeli kullanarak incelemişlerdir. Ulaştıkları bulgular, dört ülkenin koşullu varyansları arasında karşılıklı bağımlılık bulunduğunu, iki ülkenin (Japonya ve Yeni Zelanda) ise şoklardan asimetrik olarak etkilendiğini ortaya koymaktadır. Negatif şoklar bu iki ülkeden turist akımının oynaklığını pozitif şoklara oranla daha fazla etkilemektedir.

Lorde ve Moore (2008), 1977 – 2005 dönemine ait aylık verilerle, küçük bir ada ülkesi olan Barbados'a gelen turist miktarının oynaklığını çok sayıda farklı ölçüt kullanarak analiz etmişlerdir. Kullanılan ARCH ve GARCH modelleri Barbados'a gelen turist sayısının kısa dönemde kalıcı (persistent) ve asimetrik bir oynaklığa sahip olduğunu göstermektedir. Gelen turist miktarındaki oynaklığın pozitif şoklardan daha fazla etkilendiği belirlenmiştir.

Daniel ve Rodriges (2010), Portekiz'e en fazla turist gönderen altı Avrupa ülkesinden gelen turist akımının mevsimsellik ve oynaklığını araştırmışlar ve şokların bu ülkelerden gelen turist akımı üzerinde uzun vadeli etkide bulundukları sonucuna varmışlardır.

Coşkun ve Özer (2011) dört ülkeden Türkiye'ye yönelik turizm talebinin oynaklığını modellemişlerdir. 1985 – 2009 dönemini kapsayan analiz sonucunda, dört ülkenin turizm talebinin hem etkileme hem de etkilenme açısından birbirleriyle ilişkili oldukları bulgusuna ulaşılmıştır. Çalışma, genel ve ülkelere göre turizm akımlarının iç ve dış şoklar karşısındaki asimetrik tepkisi konusunda herhangi bir ipucu vermemektedir.

4 Zaman Serilerinde Oynaklığın Ölçülmesi

Her ne kadar turizm araştırmalarında son zamanlarda kullanılmaya başlamışsa da, oynaklık modelleri 1990'ların başından beri finansal ve makroekonomik araştırmalarda yaygın olarak kullanılmaktadır. Zaman serilerindeki oynaklığın modellenmesine yönelik yöntemler Engle (1982) ve Bollerslev (1986) in çalışmalarıyla başlamış, zaman içinde çeşitlenerek gelişmiştir.

Tüm oynaklık modelleri, hata terimi içeren bir ARIMA veya regresyon modeli biçimindeki bir *ortalama denklemi* ile işe başlamaktadır. Oynaklığın modellenmesinde koşullu (stokastik) ve koşulsuz (sabit) hatalar arasında bir ayrım yapılmaktadır. Hata terimlerinin σ_t^2 ile gösterilen koşullu varyans zaman içinde değişmektedir. Oynaklık modelinde, başlangıçtaki ortalama denklemine bir *varyans denklemi* eklenerek bu koşullu varyans modellenmeye çalışılır (Coshall, 2009).

Bu modellerden biri RiskMetrics (1996) tarafından geliştirilen risk ölçüsüdür. Oldukça basit bir yapıya sahip olan ve fazla gözlem gerektirmeyen bu ölçü aşağıdaki şekilde hesaplanmaktadır:

$$\sigma_t^2 = (1 - b)r_t^2 + b\sigma_{t-1}^2 \tag{1}$$

Burada; σ_t^2, t dönemindeki oynaklığı; r_t^2, t dönemindeki getirinin (bir aydan diğerine gelen turist sayısındaki değişimin) karesini göstermektedir. b ise risk parametresi olarak adlandırılmaktadır ve RiskMetrics tarafından aylık veriler için 0,97 olarak belirlenmiştir (RiskMetrics, 1996). RiskMetrics ölçütü, aslında daha genel bir ölçüt olan GARCH (generalised autoregressive conditional heteroskedasticity) modelinin özel bir halidir.

Bollerslev (1986) tarafından geliştirilen GARCH modelinde koşullu varyans aşağıdaki gibi modellenmektedir:

$$\sigma_t^2 = \alpha_0 + \sum_{i=1}^q \alpha_i \varepsilon_{t-i}^2 + \sum_{j=1}^p \beta_j \sigma_{t-j}^2 \tag{2}$$

Burada, varyansın negatif olmasını engellemek için $\alpha_0 > 0$ ve α_i ve $\beta_j \geq 0$ dır. Bu model yapısına göre, koşullu varyans geçmişe ait bilgi ile, yani ortalama denkleminden elde edilen hata terimlerinin karesinden oluşan kısa dönem şokları (ε_i^2) ve daha uzun dönem koşullu varyanslar (σ_j^2) ile ilişkilendirilmektedir. Denklem 2'deki genel yapı GARCH(p, q) süreci olarak nitelendirilmektedir. GARCH modellerinde, durağanlık koşulunun sağlanabilmesi için $\sum \alpha_i + \sum \beta_j < 1$ olması gerekmektedir. Bütün $\beta_j$ler sıfır olursa, Denklem 2 ARCH(p) sürecine dönüşür. Uygulamada sürecin derecesi fazla yüksek olmamakta, genellikle aşağıdaki GARCH(1,1) modeli yeterli olmaktadır (Coshall, 2009; 496).

$$\sigma_t^2 = \alpha_0 + \alpha_1 \varepsilon_{t-1}^2 + \beta_1 \sigma_{t-1}^2 \tag{3}$$

Denklem 2'nin gerisinde yatan varsayım, pozitif ve negatif şokların etkisinin simetrik olduğudur. Oysa çoğu zaman serisinde negatif ve pozitif şokların etkisi farklılaşabilmektedir. Örneğin, turizm serilerinde negatif bir şokun oynaklık üzerindeki etkisi, aynı büyüklükteki pozitif bir şoktan daha fazla olmaktadır. Bu durum, eşik GARCH (TGARCH) ve üssel GARCH (EGARCH) gibi *asimetrik* oynaklık modellerinin geliştirilmesine yol açmıştır.

Eşik GARCH modeli, olası asimetrileri hesaba katmak için yukarıdaki GARCH denklemine ilave terim(ler) eklenmektedir. GARCH(p,q) modelinin eşiksel biçimi şöyledir.

$$\sigma_t^2 = \alpha_0 + \sum_{i=1}^q (\alpha_i \varepsilon_{t-i}^2 + \phi_i \varepsilon_{t-i}^2 I_{t-i}^-) + \sum_{j=1}^p \beta_j \sigma_{t-j}^2 \tag{4}$$

Burada, I_{t-i}^- kukla değişkendir. $\varepsilon_{t-i} < 0$ ise 1'e, $\varepsilon_{t-i} > 0$ ise 0'a eşittir. Eğer, Denklem 3'de $\phi_i > 0$ ise negatif bir şok oynaklığı artıracaktır.

EGARCH(p,q) modelinde ise koşullu varyans, asimetriyi de hesaba katarak;

$$log_\varepsilon \sigma_t^2 = \alpha_0 + \sum_{i=1}^q (\alpha_i \left| \frac{\varepsilon_{t-i}}{\sigma_{t-i}} \right| + \phi_i \frac{\varepsilon_{t-i}}{\sigma_{t-i}}) + \sum_{j=1}^p \beta_j log_\varepsilon \sigma_{t-j}^2 \tag{5}$$

şeklinde modellenmektedir. Bu modelde asimetri etkisinin ϕ_i parametresi yansıtmaktadır. Eğer $\phi_i < 0$ ise negatif şoklar oynaklığı artıracaktır.

Oynaklığın ölçümü, varyans yerine standart sapmanın modellenmesiyle de yapılabilir. Böylelikle elde edilen Power GARCH modelinde, standart sapmanın güç parametresi (δ) önceden belirlenmek yerine tahmin edilmektedir. Asimetrik etkiyi hesaba katmak için de bir γ parametresi modele eklenmektedir.

$$\sigma_t^\delta = \alpha_0 + \sum_{j=1}^p \beta_j \sigma_{t-j}^\delta + \sum_{i=1}^p \alpha_i (|\varepsilon_{t-i}| - \gamma_i \varepsilon_{t-i})^\delta \tag{6}$$

Burada, $\delta > 0$, $i = 1, 2, …, r$ için $|\gamma_i| \leq 1$, $i > r$ için $\gamma_i = 0$ ve $r \leq p$ dir. $\gamma \neq 0$ ise asimetrik etki söz konusudur.

GARCH(1,1) modelinde benimsenen koşullu varyans yapısı gereği, ortalamaya dönüşün zaman içinde sabit olduğu kabul edilmektedir. Component GARCH modeli, bu varsayımın gevşetilmesine, ortalamaya dönüş hızının (m_t) zaman içinde değişebilmesine imkân vermektedir:

$$\sigma_t^2 - m_t = \alpha(\varepsilon_{t-1}^2 - m_{t-1}) + \beta(\sigma_{t-1}^2 - m_{t-1})$$
$$m_t = \alpha_0 + \rho(m_{t-1} - \alpha_0) + \varphi(\varepsilon_{t-1}^2 - \sigma_{t-1}^2) \tag{7}$$

Burada, σ_t^2 yine oynaklığı göstermekte, m_t ise zaman içinde değişen uzun dönemli oynaklığı temsil etmektedir. Birinci denklem, $(\sigma_t^2 - m_t)$, $(\alpha + \beta)$ kuvvetiyle sıfıra doğru yaklaşan geçici bileşeni göstermektedir. İkinci denklem ise, ρ kuvvetiyle α_0'a yaklaşan uzun dönem bileşenini vermektedir.

5 Ampirik Analiz

Çalışmada 1996 Ocak – 2011 Aralık dönemine ait giriş yapan yabancı turist rakamları kullanılmıştır. Aylık veriler Türkiye İstatistik Kurumu (TÜİK) elektronik veri tabanından elde edilmiştir. Düzey değerlerindeki olası bir değişen varyans sorununu hafifletmek için seriye logaritmik dönüşüm uygulanmıştır. Zaman serilerinde oynaklığın modellenebilmesi için sürecin durağan olması gerektiğinden önsel olarak, mevsimsellikten arındırılmış logaritmik seriye ADF ve PP birim-kök testleri uygulanmış ve serinin düzey değerleri itibariyle durağan olduğu anlaşılmıştır. Diğer tanımlayıcı istatistiklerle birlikte birim-kök testi istatistikleri de Tablo 2'de verilmiştir. Tablodaki değerlerden, Türkiye'ye gelen yabancı turist miktarı (*YT*) serisinin dağılımının sola çarpık ve normalden basık (platicurtic) olduğu görülmektedir. Jarque – Bera istatistiği de serinin normal dağıldığı yönündeki hipotezin reddedilebildiğine işaret etmektedir.

Ortalama	13,951
Medyan	13,977
En büyük değer	14,758
En küçük değer	13,034
Standart sapma	0,461
Çarpıklık	− 0,021
Basıklık	1,584
Jarque-Bera değeri	16,052 (0,0003)
ARCH	24,211 (0,0000)
ADF test istatistiği	− 3,462 (0,0465)
PP test istatistiği	− 4,262 (0,0044)
Gözlem sayısı	192

Tablo 2. Turizm serisine ait tanımlayıcı istatistikler

Gelen turist akımına ilişkin zaman serisi grafiği Şekil 1'de verilmiştir. Grafik incelendiğinde, seride pozitif bir trend ve katı bir mevsimsellik bulunduğu görülmektedir. Türkiye'ye gelen turist sayısında, 1999 yılındaki siyasî ve ekonomik kargaşadan dolayı negatif bir şokun etkili olduğu gözlenmektedir.
Şekil 1. Gelen turist sayılarının zaman içindeki değişimi (1996-2011)

Serinin, mevsimsel dalgalanmaların etkisi Census-X12 yöntemiyle giderildikten sonraki seyri Şekil 2'de verilmiştir. 1999 yılındaki şokun gelen turist sayıları üzerindeki etkisi ve pozitif eğimli trend bu grafikte daha net olarak görülmektedir.
Şekil 2. Mevsimsellikten arındırılmış serilerin zaman içindeki değişimi

Chan, Lim ve McAleer (2005) e benzer şekilde, bir ARMA sürecinden elde edilen hata terimleri tahminlerinin karesi alınarak turizm serisinin oynaklığı hesaplanmıştır. Serinin korelogramı incelendiğinde AR(1) sürecinin uygun olduğu görülmüştür. Birim-kök testi sonucunda da AR(1) sürecinin kalıntılarının durağan olduğu bulunmuştur. Buna göre tahmin edilen oynaklık modeli şöyledir:

$$lnTUR_t = \alpha + \beta t + AR(1) + \varepsilon_t \tag{8}$$

$$vol(\varepsilon_t) = \varepsilon_t^2 \tag{9}$$

Burada *t* trend değişkenini göstermektedir (*t* = 1, 2, …, 192). Elde edilen oynaklık serisi aşağıda Şekil 3'te verilmiştir. Şekil incelendiğinde gelen turist serisinde bir ölçüde oynaklık kümelenmesi olduğu söylenebilir. 1996-2005 döneminde genellikle aşırı oynaklık görülürken, 2005 sonrasındaki dönemde oynaklığın nisbî olarak düşük kaldığı görülmektedir. Bu durum, kısmen Türkiye'deki iç siyasî ve ekonomik istikrarsızlıkların 2005 öncesi dönemde turist akımı üzerinde neden olduğu negatif şoklarla, kısmen de Butler (1980) tarafından geliştirilen yaşam döngüsü modeli ile açıklanabilir. Butler (1980), bir turizm destinasyonunun yaşam döngüsünün ilk dönemlerinde büyümenin genel olarak pozitif fakat çok oynak olacağını ileri sürmektedir.
Şekil 3. Mevsimsellikten arındırılmış turizm serisinin oynaklığı

Çalışmada turizm akımında oynaklığı araştırmak üzere farklı oynaklık modelleri kullanılmıştır. Tahmin edilen oynaklık modeline göre tahmin sonuçları Tablo 3'te verilmiştir. İlk olarak gelen turist miktarı serisine ARCH modeli uygulanmıştır. SBC kriteri ARCH (4) modelinin uygun olduğunu göstermiştir. Kalıntılara uygulanan ARCH-LM testi de, dört ARCH teriminin modele dâhil edilmesinin ARCH etkisini gidermek için yeterli olduğuna işaret etmektedir. ARCH(4) modelinin tahminine göre, üçüncü terim dışında diğer terimler anlamlı etkiye sahiptir. Buna göre cari bir ayda, turist gelişleri üzerindeki bir şok sonraki dört ay boyunca gelen turist sayısının oynaklığını etkilemektedir. Ancak bu etki giderek azalmaktadır.

GARCH(1,1) modelinin tüm katsayıları pozitiftir ve %1 düzeyinde anlamlıdırlar. ($\alpha + \beta$) nın tahminî değerinin 0,71 olması kalıntıların durağan olduğunu göstermektedir. Bu değerin 1'e çok yakın olmaması oynaklıktaki kalıcılığın (persistence) uzun dönemli olmadığını ifade etmektedir. ARCH-LM testi GARCH(1,1) sürecinin ARCH etkisini gidermekte yeterli olduğunu ortaya koymaktadır.

Negatif ve pozitif şokların asimetrik etkisini ortaya koyabilmek için buna uygun EGARCH, TGARCH ve PGARCH modelleri de tahmin edilmiştir. Her bir modelde de GARCH terimi (σ_{t-1}^2) istatistiksel olarak anlamlı bulunmuştur. Elde edilen bulgular, aylık turist gelişlerindeki oynaklığın şoklara asimetrik olarak tepki verdiğini göstermektedir. EGARCH(1,1,1) modelinde asimetri parametresi negatiftir (-0,2809) ki bu, negatif şokların oynaklık üzerinde aynı büyüklükteki pozitif şoklardan daha fazla etkili olduklarını ifade eder. Diğer taraftan

TGARCH(1,1,1) sürecine ilişkin tahminlerde ise asimetri terimi yine anlamlı ancak pozitif (0,4718) çıkmıştır. Buna göre pozitif şoklar, aynı büyüklükteki negatif şoklara kıyasla oynaklığa daha fazla etki etmektedir. PGARCH(1,1,1) modelinden elde edilen asimetri tahmini de TGARCH modelini destekler şekilde pozitiftir. Buna göre, Türkiye'de, pozitif şokların yabancı turist gelişlerine ilişkin oynaklık üzerinde negatif şoklardan daha etkili olduğu sonucuna varılabilir.

Tahmin edilen son oynaklık modeli, farklı oynaklık derecelerinde ortalamaya dönüşü araştıran CGARCH sürecidir. $0 < \rho < 1$ olması koşullu varyansı etkileyen şokların üssel olarak azaldığını ve sürecin ortalamaya dönme eğilimi gösterdiğine işaret etmektedir. ρ katsayısının 0,9797 çıkması bu dönüşün oldukça hızlı olduğunu ifade etmektedir.

	ARCH (4)	GARCH (1,1)	EGARCH (1,1,1)	TGARCH (1,1,1)	PGARCH (1,1,1)	CGARCH (1,1)
α_0	0,0046 (0,0000)	0,0020 (0,0015)	$-1,6595$ (0,0009)	0,0016 (0,0005)	0,0484 (0,3390)	0,0029 (0,0000)

ρ						0,9797 (0,0000)
φ						$-0,0495$ (0,0255)
ARCH-LM	0,1139 (0,7362)	0,0287 (0,8657)	0,0103 (0,9192)	0,0963 (0,7566)	0,0061 (0,9378)	0,1298 (0,7191)

***Tablo 3.** Logaritmik turizm serisi için oynaklık modelleri tahminleri   **Not:** % 10 veya daha yüksek düzeyde anlamlı olan tahminler koyu olarak belirtilmiştir. Olasılık (p) değerleri parantez içinde verilmiştir.*

6 Sonuç

Turizm sektörü, diğer birçok gelişmekte olan ülke gibi Türkiye için de sürdürülebilir kalkınma ve istihdam için önemli bir alternatif teşkil etmektedir. Bu imkânın gerektiği gibi değerlendirilebilmesi için, sektörün altyapısının iyileştirilmesi kadar Türkiye'ye yönelik turist akımının iyi bir şekilde analiz edilmesi de önem taşımaktadır. Böylelikle daha etkin politikaların ve daha verimli yatırımların önü açılabilecektir.

Bu çalışmada, Türkiye'ye gelen yabancı turist miktarındaki oynaklık modellenmeye çalışmış ve pozitif ve negatif şokların gelen turist miktarının değişkenliği (oynaklığı) üzerinde asimetrik etkide bulunup bulunmadığı GARCH sınıfı modeller kullanılarak araştırılmıştır.

ARCH ve GARCH modellerinin tahminleri, Türkiye'ye gelen turist miktarındaki oynaklığın kısa dönemli denebilecek bir kalıcılık sergilediğini göstermektedir. CGARCH modelinin tahmininden elde edilen uyarlanma parametresi tahmininin 1'e yakın olması da turizm sektörünün şokların etkisinden hızlı bir şekilde çıktığına işaret etmektedir. EGARCH, TGARCH ve PGARCH modellerinden elde edilen bulgular ise gelen turist miktarındaki oynaklığın asimetrik karakterli olduğunu, yani pozitif şokların negatif şoklara nazaran oynaklık üzerinde daha etkili olduğunu ortaya koymaktadır.

İnternette Gerilla Pazarlaması ve Turizm Endüstrisindeki Uygulamaları Üzerine Bir Değerlendirme

Guerilla Marketing on the Internet and an Evaluation on the Tourism Industry

Ph.D. Candidate Aysegül Kutluk (Kırklareli University, Turkey)

Abstract

At the present time, managements which can see and use alterations, they can remain stand and strive with their competitors. Changes are in managements only able to possible by using new strategies, that can make a management comperior under the competition clause. These strategies are: last trends, fun promotions, flash mobbings, guerrilla advertising and even the viral applications that can make people unwittingly a marketer. On the other hand, at the first times, while guerilla marketing was a method that small scale enterprise can struggle against the big bussiness, nowadays it is a very simple method which every management can apply easily.The aim of guerilla marketing is to make more sales, like traditional marketing. But, the methods that used, are different from eachother. This method try to find with very low budget some works, that will take place more higher from other traditional marketing methods' effects. This works have to be effective, different, enjoyable and unforgetable. That is possible to see them in out,on ethernet and somewhere of our life. Especially, these activities are organized contemplated by advertising agencies; diversified according to the imagination of the creators. Guerilla marketing and the other similar marketings are done especially online network in tourism sector of Turkey. The purpose of this study; is increasing the awareness of guerilla marketing as an alternative method in academic and sectorel context, that can increase the sales of tourism managements and at the same time can provide quickly and easily reach to their target group.

1 Giriş

Günümüzde değişimi görebilen ve değişimi kullanabilen işletmeler ayakta kalabilmekte ve rakipleriyle mücadele edebilmektedir. İşletmelerde değişim sadece; rekabet şartlarında kendini üstün kılabilecek yeni stratejiler kullanma ile mümkündür. Bu stratejiler; en son trendler, eğlenceli tanıtımlar, flash mobbingler, gerilla reklamlar ve hatta insanları da farkında olmadan bir anda pazarlamacı konumuna getiren viral uygulamalar vb. farklı fikirlerdir. Gerilla pazarlama ise, ilk zamanlar küçük işletmelerin büyük işletmelere karşı kafa tutabileceği bir yöntem iken günümüzde her işletme için kolaylıkla uygulanabilen bir yöntemdir. Gerilla Pazarlama'nın amacı geleneksel pazarlama ile aynıdır; daha çok satış yaptırmak. Sadece kullandığı yöntem klasik pazarlama yöntemlerinden biraz farklıdır. Bu yöntem, en düşük bütçe ile klasik pazarlama araçlarının sonuçlarının da üstüne çıkabilecek etki oluşturan araçlar bulmaya çalışmaktadır. Bu uygulamalar, çarpıcı, farklı, eğlenceli, unutulmaz olmalıdır. Gerilla pazarlama örneklerine açık alanda, internette veya yaşamın herhangi bir alanında rastlamak mümkündür. Özellikle reklam ajansları tarafından düşünülüp organize edilen bu çalışmalar yaratıcılarının hayal gücü doğrultusunda farklılık göstermektedir. Türkiye'nin turizm sektöründe gerilla pazarlama ve benzeri pazarlamalar özellikle internet üzerinden daha rahat yapılmaktadır. Bu çalışmanın amacı; turizm işletmelerinin satışlarını arttıracak aynı zamanda hedef kitlelerine kolay ve hızlıca ulaşabilmelerini sağlayacak alternatif bir yöntem olan gerilla pazarlama yönteminin akademik alanda ve sektörde bilinirliğini ve bu yöntemin uygulanmasını arttırmayı sağlamaktır.

2 İnternetin Pazarlamada Keşfedilişi ve Gerilla Pazarlamacılığa Geçiş

Teknolojiyle birlikte internet, turizm endüstrisinde stratejik bir silah ve rekabet avantajı olarak düşünülmektedir. Güncel bilgi ve müşteri hizmetlerini an ve an sağlayan internet; bugünkü iş dünyasının da temel taşı konumundadır (Schegg, Murphy ve Leuenberger, 2003: 100).Çünkü internet; mesafe ve zaman kavramını ortadan kaldırarak insanlığa yeni bir iletişim, dayanışma, paylaşım ve ortak çalışma alanı oluşturmaktadır. Bilgi teknolojilerinde yaşanan hızlı gelişmeler ve internetin gün geçtikçe daha çok önemsenmesi, bu teknolojilerden yararlanan kişi sayısının da hızlı bir şekilde artmasına neden olmaktadır (Boz, 2006: 38).

İnternet kullanan her kitleye hitap edebilen çevrimiçi pazarlama yani internetten pazarlama yöntemleri; hedeflenen grupla daha kolay ve etkileşimli bir ilişki kurar. Aynı zamanda maliyeti kitlesel pazarlamaya göre daha düşüktür. Dolayısıyla işletmenin verimliliği artarken, pazarlama faaliyetlerindeki etkileşimli iletişim de işletmenin üstünlüğünü arttırmaktadır (Korkmaz, 2006: 19). Diğer yandan ürün ve hizmetlerin günümüzde çok çeşitli ve alternatiflerinin kolayca bulunabileceği düşünülürse, ürünlerin tanıtımıyla ilgili bir bolluk ve ciddi bir pazarlama kirliliği yaratacağı da beklenen bir sonuç olmaktadır. Çoğu insan televizyonda on binlerce dolar harcanarak yayınlanan reklamları artık seyretmemektedir. Çünkü bugünlerde satın alma kararında en etkin

yöntem, tanıdığımız, inandığımız, çevremizdeki insanların deneyimleri ve tavsiyeleridir. Özellikle bu yayılmaların internetteki uygulamaları geleneksel pazarlama yöntemlerinden çok daha fazla etkili olduğu görülmektedir(Taşpınar, 2012). Baruh ve Kırgız, 2009; internetin etkili olmasının temel iki sebebini şöyle açıklamaktadır;

- Çift yönlü bilgi akışının (üreticiden-tüketiciye ve tüketiciden-üreticiye) mümkün olması,
- Bir sistem kullanıcısının o sistemi nasıl kullandığı hakkında her bilgi parçasının içerik sahibi ve servis sunucusu tarafından gerçek zamanda takibi ve depolanabilme kabiliyetinin olmasıdır.

Dünyamızın interaktifleşmeye başlamasıyla birlikte, internet en önemli iletişim mecralarından biri olmuştur. İnternet sayfaları, e-postalar, çevrimiçi satış kanalları, sanal güncemeler, çevrimiçi sosyal ortamlar, sanal oyun dünyaları gibi birçok yeni kavramı ve anlayışı hayatımıza sokan ve zaman-mekân anlayışımızı tamamen değiştiren internetin, sanal dünyası genel anlamda pazarlamanın da ufkunu genişletmeye ve yeni reklam formları yaratmaktadır (Dahan ve Levi, 2012: 42). Her ne kadar tutundurma için firmaların ayırdığı toplam bütçe içerisinde, "internetten pazarlama" ya ayrılan pay az da olsa, mevcut potansiyelin zamanla farkına varılacaktır. İnternetten yapılan pazarlamaların amacı; tüm iletişim kanallarıyla entegre biçimde çalışılabilen, doğru ve etkili dijital reklam ve pazarlama yöntemlerini kullanabilmek ve mecralardaki faaliyetleri en iyi biçimde yönetebilmektir. Bunun için internetten pazarlama, iletişim ve reklam kavramlarını iyi anlamak, bu kapsamda silah olarak kullanılacak araç ve yöntemlerin neler olduğunu bilmek ve dijital projeleri bütünsel pazarlama çalışmaları içinde doğru bir yerde konumlayabilmek zorundadır(Şahin, 2009: 86). İnternetin göz ardı edilemeyecek yararları sayesinde, turizm endüstrisinde faaliyet gösteren işletmeler internet üzerinden pazarlamaya yönelmektedir. Mesela; Rynaair bilet rezervasyonlarının %93'ünü, Easyjet ise %90'ını web siteleri üzerinden almaktadır. Amerika Seyahat Sektörü Birliği'nin (TIA-Travel Industry Association of Amerika) internet üzerinden yapılan seyahat satışları ile ilgili araştırmalar, ABD'li seyahatçilerin büyük bir kısmının uçak biletleri ve konaklama ile ilgili rezervasyonlarını internet üzerinden yaptığını ortaya koymuştur. ABD'de, 2000 yılında yaklaşık 16 milyon kişi internet üzerinden seyahat rezervasyonu yaptırmıştır. Rezervasyon yapanların %47'si havayollarının işlettiği sitelerden alışveriş yapmış, %37'si ise hem bağımsız online sitelerinden hem de havayollarından satın alma işlemi gerçekleştirirken, %18'i online seyahat acentelerine başvurmuştur (Boz, 2006: 40). Turizm endüstrisinde yer alan seyahat acenteleri, tur operatörleri, havayolu şirketleri, konaklama işletmeleri ve diğer turizm işletmeleri, internetin sağladığı yararlara tepkisiz kalmayarak, internet üzerinden faaliyet göstermeye başlamaktadırlar(Boz, 2006: 39) Bu faaliyetlerden biriside gerilla tipi hareketlerden doğan "Gerilla Pazarlama"cılıktır.

Uluslararası sözlükte Gerilla terimi ("Guerilla" İspanyolca Guerra, savaş anlamına gelir) ilk defa Napolyon sayesinde savaş zamanında kullanılmıştır. Zamanında Napolyon, İspanya kral ailesini tahtından mahrum edip kendi ağabeyine iktidarı vermiş fakat İspanya milleti buna isyan ederek silahlı isyancı kitleler oluşturmuştur. İsyan edenler Napolyon askerleriyle olan meydan savaşında başarılı olmuş ve bu az sayıdaki kitleye "gerilla-gerillalar" adı verilmiştir(İleri ve Shamuratova, 2007: 3). Gerilla kelimesinin işaret ettiği önemli bir teknik bilgi ise "orantısız güçlerde karşı karşıya gelmiş iki silahlı grup"tur. Bu tarz durumlarda zayıf olan tarafın tek çaresi saklanmak ve vur-kaç taktiği ile büyük orduyu taciz etmektir(Yılmaz, 2007). Gerilla pazarlama; yer ve zaman temelli pazarlama türlerinden biri olup, alışılmışın dışındaki taktiklerle ve beklenmeyen yerlerde, beklenmeyen zamanlarda ekseriya mahalli yasa ve kurallara meydan okurcasına yürütülen bütün pazarlama kampanyalarıdır (Kaya, 2010; 157). Gerilla pazarlamada önemli olan; inanç, felsefe, enerji ve hayal gücüdür. Geleneksel pazarlamanın soğuk ve mesafeli tavrına karşı gerilla pazarlama, tüketicilerle çok daha yakın temas kurmakta, sıcak ve samimi ilişki içine girmektedir. Geleneksel pazarlamada herkesin ezbere bildiği yöntemler kullanırken gerilla pazarlama, yaratıcılık üzerine kurulu, inovatif ve esnek taktikler kullanılan bir pazarlama türü olma yolunda ilerlemektedir. Uygulamalarının çoğunda tüketicilerin de katılımı sağlanmaktadır. Gerilla pazarlama, içinde barındırdığı yaratıcılık ve müşteriye yakınlık sayesinde, markalara bir aura (hale) ve gençlik katmaktadır. Ayrıca gösterdikleri cesaret ve romantizm ile markaları daha çekici kılmaktadır (Aksoy, 2011). Gerilla pazarlamasının anlaşılabilmesi için üç önemli öğe vardır. Bu öğeler gerilla hareketlerinin neden daha sık kullanılması ile ilgili olup, aşağıdaki gibi sıralanmaktadır (Levinson, 2013);

- Yerelleşme mantığının yayılması, devletin yasal düzenlemelerindeki değişiklikler, teknolojinin her şeyi uygun hale getirmesi, insanların çok daha fazla bilinçlenmesi nedeniyle dünyadaki insanları küçük işletmelere çekmekte ve büyük işletmelerin de küçülmeye gitmesine neden olmaktadır.
- Küçük işletmelerin pazarlama alanında ki başarısızlığı pazarlamayı anlayamamalarıdır. Gerilla pazarlamanın dünya çapındaki bütün küçük işletmelerde geçerli olması onun basit, anlaşılır ve ucuz olmasından kaynaklanmaktadır.
- Gerilla pazarlama, yüksek fiyatlı ekonomi dünyasında ve pazarlama karmalarıyla karışan rekabetçi pazarlama dünyasında küçük işletmelere, küçük işlerinde biraz adil olmayan avantajlar elde etmeyi öğreten bir yöntemdir.

3   Online Gerilla Pazarlama Hareketleri

İnternet sayesinde küçük işletmeler, multimilyar dolarlık bir pazar payına sahip olarak global markaların önüne geçebilme şansına erişmiştir. Bu nedenle internet gerilla uygulamalar için uygun bir mecra olarak kabul görmektedir. İnternet sayfaları, e-posta, çevrimiçi satış kanalları, sanal günceler, çevrimiçi sosyal ortamlar, sanal oyun dünyaları gibi birçok yeni kavramı ve anlayışı hayatımıza sokan ve zaman-mekân anlayışımızı tamamen değiştiren internetin sanal dünyası genel anlamda pazarlamanın da ufkunu genişletmeye ve yeni reklam formları yaratmaya devam etmektedir (Dahan ve Levi, 2012: 41-42). Bu kadar geniş bir mecrada gerilla pazarlamasını kullanmamak pazarlama alanında geride kalmayı, satışların olası düşüşlerine razı olmak demektir. İnternet kullanımında tüketicilerin sayısının her geçen gün arttığını inkâr edilemez bir gerçektir ve Tablo 1. de de bu artış rakamlarla istatistiksel olarak gösterilmektedir;

Bölgeler	Nüfus (2012)	Internet Kullanıcı Sayısı Dec. 31, 2000	Internet Kullanıcı Sayısı Son Veriler (2012)	Penetrasyon Yüzdesi (2012)	Büyüme 2000-2012	Dünya Payı (%)
Afrika	1,073,380,925	4,514,400	167,335,676	15.6 %	3,606.7 %	7.0 %
Asya	3,922,066,987	114,304,000	1,076,681,059	27.5 %	841.9 %	44.8 %
Avrupa	820,918,446	105,096,093	518,512,109	63.2 %	393.4 %	21.5 %

DÜNYA TOPLAM	7,017,846,922	360,985,492	2,405,518,376	34.3 %	566.4 %	100 %

Tablo 1: Dünyada İnternet Kullanımı ve Nüfus İstatistikleri

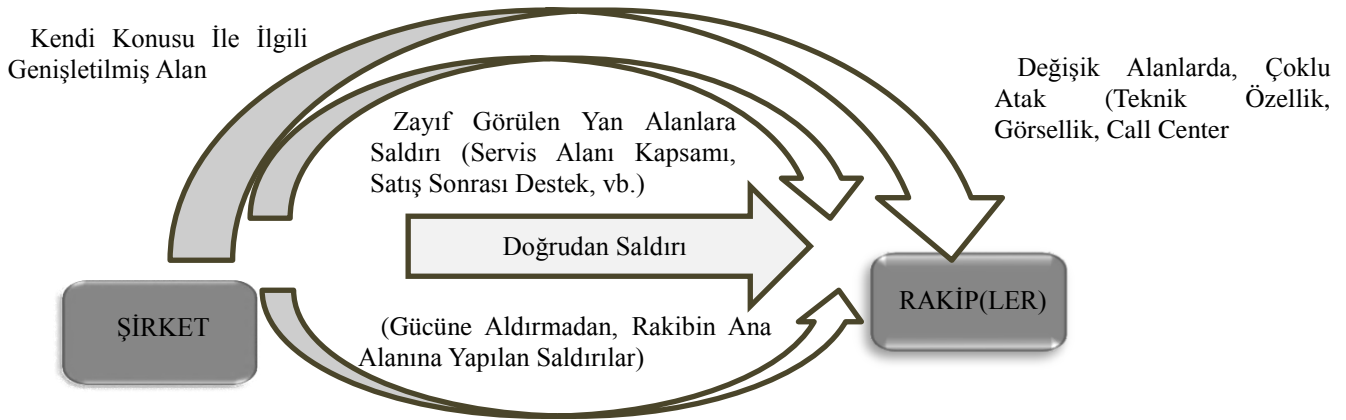
Tabloda görüldüğü gibi internetin dünyada 2 milyonu aşkın kullanıcısı vardır. Bu sayının her geçen gün artacağını söylemek yanlış olmayacaktır.

Gerilla uygulamaları; fiyat farklılaştırmaları, yoğun tanıtım faaliyetleri, ürün çeşitlerini arttırmak, yeni ürünler sunmak, maliyetleri düşürmek ve satış sonrası hizmetlere ağırlık vermek şeklindeyken buna ek olarak; yeni müşterileri yakalamaya ve etkilemeye yönelik geliştirilen ağızdan ağıza duyurum taktiği vardır (Uysal, 2011: 71). Müşterilerin bir firma, bir ürün veya hizmet hakkında olumlu ya da olumsuz yorum yaparak o firmayı, ürünü ya da hizmeti yakın çevresine tavsiye etmesi ve ürün hakkındaki deneyimlerini resmi olmayan bir şekilde başka alıcılarla paylaşmasına ağızdan ağıza duyurum denir (Derbaix ve Vanhamme, 2003: 2). İnternette gerilla pazarlama; viral pazarlama ve ağızdan ağıza pazarlama gibi farklı pazarlama karmaları yoluyla, daha fazla farkındalık yaratmaktadır (Drüing ve Fahrenholz, 2008: 7). İnternetin son zamanlarda gerilla pazarlama dünyasına kattığı uygulamalardan biri de "advergaming" reklam-oyunlarıdır. Çeşitli oyunlara ürün yerleştirmesi veya belli bir marka için özel olarak hazırlanması suretiyle oluşturulup kullanılan reklam-oyunları (Sanje & Şenol, 2010: 307) sanal bir ortamda gerçekleşmelerine rağmen gerçek kişilerce oynanmaları ve bünyelerinde gerçek markaları barındırmaları sebebiyle gerçek bir gerilla pazarlama uygulaması olarak görülmektedir (Dahan ve Levi, 2012: 42). Web sitelerinde kullanılan diğer çevrimiçi oyunlar sayesinde ise hedef kitlenin konunun içine çekilmesi sağlanır. Hedef kitle oyuna katılımı nedeniyle ilgili sitede uzun süre kaldığından gerilla reklam mesajları ile yoğun olarak karşılaşmaktadır (Tosun, 2009: 41).

Herhangi basit bir şeyin internette görülür görülmez değişme olasılığı çok yüksektir. Çünkü sanal ortamda değişim çok çabuk gerçekleşmektedir. İletişim teknolojisinin dünden bugüne gelişimi ve bugünden sonraki gelişimleri sürekli devam edecektir. Gerilla pazarlamanın bu konudaki avantajı da; değişime tepki vermesi ve o doğrultuda ilerlemesidir (Levinson ve Lautenslager, 2006; 262).

Gerilla pazarlamanın internetteki işleyişini kavrayabilmek için alt yapısında dikkat edilmesi gereken temel öğeleri bilmek gerekir. Bu öğeler sayesinde gerilla pazarlamanın niteliği daha çok artacaktır. Bu temel öğeler şöyledir (Levinson ve Lautenslager, 2006: 262-263);

Trafik; internette, bir web sitesinin ziyaretçi sayısını yükseltmektir. **Değer/Enformasyon;** çevrimiçi değer genellikle enformasyon ağırlıklı bilgilerin hepsidir. Ne kadar bilgi sunulursa o kadar çok değer yükseltilir. **Kaynak;** müşteriler için bir kaynak konumuna gelmek gerilla pazarlamada önemlidir. Kaynak ağı oluşturmak pazarlamanın ve müşterilerle ilişkilerin iyi olmasını sağlar. **AIDA;** Günümüzde hiçbir zaman olmadığı kadar fazla internet pazarlama mesajı bulunmaktadır. Bunların arasından sıyrılabilmek için dikkat çekmek, ilgi uyandırmak, istek yaratmak ve müşterileri harekete geçirtebilecek olayların kurgulanmasını sağlar.

İnternette pazarlama sistemini işletmesine oturtmuş rakiplerin uzun süredir hizmet veriyor olması, geniş bir veri tabana sahip ve fiyatlara hükmedebileceğini düşünülmektedir ki çoğu zaman durum bu şekildedir. Bu tarz rakiplerle uğraşabilmenin en akılcı yolu gerilla pazarlamalardır. Çünkü her gerilla saldırısı ile rakip firmadan bir parça kopartıldığı ve dikkatinin dağıtıldığı düşünülmektedir. Kotler bu tip saldırıyı "Marketing" kitabında aşağıda ki gibi göstermiştir (Odabaşı ve Odabaşı, 2007: 49-50);


Şekil 1*. Rakiplerden Pay Çalmak/ Kotler' in Gerilla Yaklaşımı*

Gerilla pazarlamada işletmeciler, müşterilere beklediklerinden ya da ödediklerinden daha fazlasını vererek ya da her zaman orijinal tahmini fiyattan daha az bir bedel isteyerek ve her müşteriyi ödüllendirerek sadık bir müşteri tabanı oluştururlar (Levinson, vd., 2009: 36) Modern gerilla pazarlamasında, müşterilerle sürekli irtibat sağlanır. Müşterilerin satın alma kararları için gerekli bilgiler, ışık hızında onlara verebilmek için internet, sesli posta, e-posta, web siteleri gibi iletişim sistemleri kullanmaktadır (Levinson, vd., 2009: 21).

İyi bir gerilla pazarlama oluşumu için öncelikle bir plan hazırlanması gerekir ve bu planın içerisinde yer alması gereken öğeler Tablo 2.de online gerilla pazarlama taktikleri uygulanırken dikkat edilmesi gereken hususlar şeklinde gösterilmiştir;

Tahmin Edilemeyen Olaylar/Sürprizler:	Tamamen beklenmeyen olaylar ve kampanyalardır. Amaç; Şaşırtılan müşterilerin dikkatini çekmek ve internette daha fazla etki yaratmaktır.
Radikal Öğeler:	Etkili ve çarpıcı öğeler seçerek küçük bir pazarlama bütçesiyle, büyük hedef kitlelere ulaşmayı amaçlar. Kullanılacak öğelerin dikkat ve ilgi çekici olması muhtemeldir. Aynı zamanda kişisel değerlere ters düşebilme riski oldukça fazladır.
Komik Öğeler/Mizah:	Mizah, alıcı ile satıcı arasında bariyerleri kaldıran bir öğedir. Pazarlamada eğlenmek, müşteri potansiyelini arttırıcı ve rakiplerinden ayırt edilebilme özelliğine sahiptir. Özellikle internette viral pazarlama türünde etkilidir.
Tek Atışta İsabet Edilebilirlik/ Oyunlar:	Gerilla uygulamaları/kampanyaları genelde bir defaya mahsus ve kısa süreli yapılır. Fakat interaktif araçlar ve ileri teknolojiye dayalı alternatif uygulamalarla uzun vadeli gerilla kampanyaları yapılabilmesi mümkündür.
Ucuzluk:	Gerilla pazarlamanın işletmeler için çekiciliği aşikârdır. Hedef kitlede söylenti, vızıltı etkisi, ağızdan ağıza yayılım yaratmak için işletmelerin sıkı bir bütçeye gereksinimi vardır. Fakat internet üzerinde daha az maliyetle daha fazla yaratıcılıkla gerilla etkisi yaratmak mümkündür.
İyi Niyet:	Merhamet ve kibarlığa doğru ve bununla birlikte güçlü bir marka ve rekabetçi fayda sağlayabilecek özel eğilimlerdir.

Tablo 2: *Online Gerilla Pazarlama Planının Temel Öğeleri*

Yaygın bir yanlış anlama, internet sitelerinde ücretsiz reklamlar yayınlayıp tüm dünyadan insanların, şirketlerin ürün ve hizmetlerine talepleri arttırması gerektiği düşünülüp beklenmektedir ki bu siber uzayda bir internet sitesi yayımlayıp başka hiçbir şey yapmadan milyonlarca internet sörfçüsünün ürün veya hizmetler için sıraya girmesini beklemek ile eşdeğerdir. İnternette başarılı olabilmek bu tarz beklentileri es geçip etkili bir gerilla pazarlama planı hazırlanmalı ve tablo 2'de gösterilen öğelerden mutlaka yararlanılmalıdır. Levinson, (2009)'a göre ise gerilla pazarlama planlarının başarılı olabilmesi için dikkat edilmesi gereken hususlar şunlardır;

1. E-postalar; inandırıcı, kibar ve insanlara yardımcı olabilecek şekilde hazırlanmalıdır.
2. E-postalara müşterilerin alabileceği kadar ücretsiz bilgiler eklenebilir.

3. Satışları optimize etmek için internet sitesinin tasarımının nasıl olacağı ve ziyaretçilerin tekrar tekrar siteye ulaşmasını sağlamak için yaratıcı fikirler geliştirmek gereklidir.

4. Sitenin görünürlüğü çok önemlidir. Gerçek hayatta vitrin ne kadar önemliyse internet alanında da işletmelerin web site görünüşü müşteriyi kendine çekebilecek kapasitede ve dizaynda olmalıdır. Ayrıca düşük maliyete site görünürlüğünü arttırmak için sitenin nereye yerleştirileceği, siteyi kimin ne şekilde hazırlayacağı da üzerinde durulması gereken konulardan biridir.

5. İnternette haber grupları, internet siteleri ve forumlar gibi birçoğu bedava olan ve sektör ile ilgili reklamlar, basın açıklamaları ve diğer faydalı bilgileri göndermeye izin veren özel alanlar mevcuttur. Bunlardan faydalanılması gereklidir.

6. Bir başka strateji alakalı ve rakip olmayan internet siteleriyle bağlantı değişimi yapmaktır. (Bu siteler Yahoo!, Google gibi büyük arama motorlarından bulunabilir.)

7. İnternette işletmeler kendi firmalarını çok iyi tanımak zorunda ve diğer rakip siteleri, internetteki güncel değişimleri, modaları ve trendleri sürekli takip etmeli ve ona göre güncellemelerini yapmalıdır.

İnternet kullanımı ve teknolojinin sürekli artması rekabet kavramını da doğru orantılı bir şekilde etkilemektedir. Günümüz rekabet koşulları arasında, gerilla pazarlamanın kullanılacağı sektörleri daraltmak doğru değildir. Çünkü bu pazarlama türünün kullanımı, sektördeki firmaların ne kadar yaratıcı olabileceği ile alakalıdır. Tüm sektörler için rahatlıkla entegre edilebilecek bir pazarlama çözümü olan gerilla pazarlama bugüne kadar Türkiye'de aktif olarak alkollü içecekler, ilaç ve otomotiv sektöründe uygulanmıştır (Kaya, 2013). Gerilla pazarlama artık, turizm sektöründe ve internetten e-turizm alanında da uygulanabilir bir stratejik pazarlamadır.

4 Turizm Sektöründe Gerilla Pazarlama ve Uygulama Örnekleri

Turizm işletmelerinde en uygun gerilla pazarlama uygulaması, rakiplerin durulduğu, en az miktarda pazarlama yatırımıyla çok büyük payın alınacağı zamanda yapılması gerekir. İşletmenin faaliyet gösterdiği döneme göre rakiplerin pazarlamada en durgun aylar kabul ettiği dönemde gerilla pazarlamanın yapılmasında fayda vardır (Çeltek ve Bozdoğan, 2012: 4809).Bu dönemin turizm sektörü için Aralık ayından itibaren Şubat sonu/Mart başına kadar olabileceği düşünülmektedir.

Turizm sektöründe işletmeler tarafından uygulanan en yaygın gerilla pazarlama taktiği; web sitelerinin kullanımıdır. İşletmelerin web sitelerini hazırlamaları, bu sitelere müşteriler için yararlı bilgiler koymaları, bu bilgileri sürekli güncel tutmaları müşterileri çekme yöntemlerinden biridir (Arslan, 2009, 74). Turizm işletmelerinde gerilla pazarlamanın verimli bir şekilde uygulanabilmesi için gerilla planlaması yapılması gerekmektedir. Bu planlamada; turizm işletmesinin öncelikle iç ve dış çevresiyle ilgili olabildiğince detaylı ve doğru bilgilere dayanan bir veri tabanı oluşturulur, işletmenin ve faaliyet gösterdiği pazarın olası tehdit, fırsat ve üstünlüklerini göz önüne alınarak bir SWOT analizi yapılır. İşletmenin sahip olduğu üstün yönü belirlendikten sonra bu üstünlüğüne uygun bir pazarlama aracı seçilir, daha sonra pazarlama odaklı bir gerilla pazarlama takvimi oluşturulur ve bu takvime olabildiğince sadık kalmaya çalışılır. Rakiplerden gelebilecek tepkilere karşı hazırlıklı olunarak bu tepkiler ve işletmelerin ihtiyaçları doğrultusunda gerilla pazarlama planı güncellenmek zorundadır (Çeltek ve Bozdoğan, 2012: 4792). Ayrıca işletmelerin mevcut kaynaklarını yeni fırsatlara hızlı ve en etkin bir şekilde yönlendirebilmeleri ve piyasalarda oluşabilecek her türlü durumu önceden tahmin etmeleri ve yoğun rekabet ortamında ayakta kalabilmek için içinde bulundukları durumu iyi analiz etmeleri gerekmektedir (Kaya, 2011: 29).

Turizm işletmeleri için gerilla pazarlamanın birçok avantajın yanı sıra bazı dezavantajları da bulunmaktadır. Bu dezavantajlar, pazarlama çalışmalarından kesin sonuçlar alınamaması, gerilla mesajının olabildiğince kişiye ulaşamaması ve kaynakların etkin bir şekilde yönlendirilememesinden kaynaklanmaktadır (Çeltek ve Bozdoğan, 2012: 4792). Bu dezavantajların oluşmasını engellemek için ise gerilla pazarlama uygulamalarının online yani internet alanında gerçekleştirilmesi ya da gerçek hayatta sürdürülen etkinliklerin mutlaka sosyal medyada duyurulması gerekmektedir. Bu sayede daha fazla kişiye ulaşılması sağlanırken aynı zamanda bütçeden de tasarruf edilmesi sağlanır. Gerilla pazarlamanın avantajları ise aşağıdaki gibidir (Çeltek ve Bozdoğan, 2012: 4791);

- Gerilla pazarlamada kullanılan 100 pazarlama metodu vardır ve bunların 62 tanesi ücretsizdir,
- Turizm işletmelerinde daha az maliyetle pazarlama yapma imkânı sunar,
- Sektörde faaliyet gösteren rakiplerle daha iyi mücadele imkânı verir,
- İşletmelere minimum maliyetle maksimum karı elde etme imkânı sunar,
- İşletmelerin kaynaklarının yeni fırsatlara hızlı ve en etkin bir şekilde yönlendirebilmesine olanak sunma açısından turizm işletmelerine avantaj sağlamaktadır.

Çalışma kapsamında; 2012 Kasım ayından itibaren internette yer alan gerilla faaliyetleri incelenmiş ve bu faaliyetlerden turizm ile ilgili olanlarına örnek teşkil edecek uygulamalara değinilmiştir. Bu örnekler şöyledir;

"Carpuzz", İstanbul'da "Rent a Car" tarzı hizmet veren işletmelerden birisidir. Bu işletmeyi diğerlerinden ayıran en büyük özelliği, sunduğu hizmetlerin ucuzluğu ve iş yapma anlayışındaki farklılıktır. Şirket çok uygun fiyatlarla araba kiralamayı mümkün hale getirmiştir. Bu kadar uygun fiyata araba kiralamasını mümkün kılan

uygulama ise gerilla pazarlama taktiğinde gizlidir. Şirket, arabaların üzerine reklamlar alarak, hem arabayı kiralayan tüketiciden hem de arabaya reklam veren işletmeden kazanç elde etmektedir. Müşteriler otomobili çok düşük bir bedelle kiralarken reklam veren işletmenin reklamı da farklı coğrafik bölgelerde kendini gösterme fırsatı elde etmektedir. Ayrıca bu işletme reklam verenlerine global positioning system (GPS) yardımıyla reklamlarının nerelerde dolaştığını gösterebilmektedir. Reklam mecrasına son derece etkin bir şeffaflık kazandıran bu uygulama araçların daimi şekilde trafikte olduğunu izlenebilir hale getirmektedir (Nardalı, 2009: 116).

Mirage Tur, bir seyahat acentesi olup, tropik seyahat turlarını yeni ve farklı bir mecra ile tanıtma fikriyle insanların bir an olsun şehir yaşantısının stresinden uzaklaşarak yapacağı bu tatilin nasıl bir hissiyat sağlayacağını empoze etmek istemiştir. Bunun için işlek sokaklarda, plazaların önündeki ağaçların aralarına hamaklar kurulmuş ve evine giderken trafiğe takılan, işine giderken günün getireceği sıkıntıları düşünen insanların, tatil planlarına egzotik bir turda onları nelerin beklediğini düşlemeleri hedeflenmiştir. Bu gerilla çalışmasının sonucunda ise; turlara ve broşür talebinde artış, rezervasyon sayılarında dramatik bir yükseliş görülmüştür (http://adsoftheworld.com)

Tourism British Columbia'nın "100 BC Anısı" adındaki pazarlama hareketi de son zamanların en dikkat gerilla pazarlama uygulamalarındandır. San Francisco'da Justin Herman Plaza önüne yerleştirilen 14 metre uzunluğunda ve 10 metre genişliğindeki dev bir otomattan tatil ile ilgili (bisiklet, deniz botu, tatil rehberi, can simidi… vs) birçok ürün tedarik edilebilmektedir. Tourism British Columbia eğlenceli ve şaşırtıcı bir teknikle insanları tatile çıkma konusunda etkileyebilmeyi başarmıştır (Anonim, 2012a).

American Airlines, 2010 yılının Aralık ayında, toplu taşıma araçlarından en fazla kullanılan metro istasyonunun iç kısmını seyahat destinasyonlarının dev posterleri ile kaplamıştır. Yeraltı treni içinde yolculuk yapan kitlenin o an tatile çıkma isteğini ve potansiyelini arttırmaya çalışması dikkat çeken gerilla pazarlama uygulamalarından biri niteliğindedir (Pembecioğlu, 2011).

Brezilya kökenli havayolu şirketi olan "Gol" gerilla pazarlama kapsamında; facebook sayfasından bir kampanya başlatacağını duyurmakta ve bir uçağın koltuk planının ait olan görseli parçalara ayırarak herhangi bir uyarı olmadan gün içinde yayınlayacağını söylemektedir. Yayınlanan resimdeki boş koltuğu gören ve altına koltuk numarasını yazan ilk kişilere şirketin gitmiş olduğu şehirlerden istedikleri birine uçak bileti hediye edeceğini vaat etmektedir. Ücretsiz bilet kazanmak isteyen kullanıcılar bileti kaçırmamak için sürekli olarak sayfayı yenilemek zorunda kalmakta ve firma " Sayfayı yenilemeye devam edin birazdan yeni koltuklar yayında olacak " mesajıyla kullanıcıların sayfayı yenilemesini sağlayarak, sayfanın sürekli olarak ziyaret edilmesi sağlanmaktadır. Kampanya sayesinde büyük bir başarıya imza atan şirket kullanıcı başına ortalama 90 sayfa yenileme rakamıyla kampanya öncesinde 13.000 olan Facebook hayran sayısını kampanya sonunda 200.000′e çıkartarak rakibi olan diğer Brezilya kökenli havayolu şirketlerini de geride bırakmıştır (Şenkaya, 2012).

Danimarka'daki Kilroy isimli turizm-seyahat firması için hazırlanan afişlerde Antarktika'da ki buzullarının her geçen gün eridiğini göstermektedir. Afişteki diğer destinasyonların da "geç olmadan git ve gör" mesajına uyması başarılı bir gerilla uygulamasıdır (Çeltek ve Bozdoğan, 2012).

Türkiye' de ise her yıl birbirinden ilginç promosyonlarla yerli ve yabancı turistlere kapılarını açan Sheraton Çeşme oteli bir ay boyunca junior süit odalarında konaklayacak müşterilerine Lufthansa havayolları işbirliğiyle Londra, Frankfurt, New York, Miami, Bahamalar, Rio De Janeiro, Buenos Aires, Los Angeles, Hawai, Auckland, Sydney, Singapur ve Hong Kong gibi görülesi şehirlerin bulunduğu, iki yıl içinde istedikleri dönemde çıkabilecekleri 20 günlük dünya turu hediye etmektedir. Birbirinden prestijli markaların, müşterilerine alışveriş karşılığı konaklama sağladığı Sheraton Çeşme'nin yönetim kadrosu bu noktaya gelişlerini, satış ve pazarlamada gerilla usulü çalıştıklarını, agresif satış ve pazarlama çalışmalarına bağlamaktadır (Milliyet,2012).

2008 yılında Mirage Park Resort Hotel ise Türk gecesinin yapıldığı her cumartesi günü havuz kenarında müşterilerine ücretsiz yemek kursu verme uygulaması başlatmış ve usta aşçılar tarafından ücretsiz yemek kursu almak isteyen müşterilere onlar farkında olmadan gerilla taktiği uygulanmıştır (Arslan, 2009: 98).

İnternette dijital butik ajans olarak firmaların çevrimiçi gelirlerini maksimum düzeye çekmeye odaklanan Web Girişim ajansı, turizm sektöründeki kurum ve kuruluşların yüksek satış devrimi yakalayabilmeleri hatta daha ileriye götürmeleri için oteller ve seyahat acenteleri için özgün modeller geliştirmeye çalışmaktadır. Örnek bir çalışma olarak yürütülen Wizard İstanbul projesi, Web Girişim 'in çevrimiçi turizm pazarlaması üzerine çalışmalar yürütürken, hayata geçirdiği yenilikçi bir destinasyon pazarlama girişimidir. Wizard İstanbul projesiyle, turistlerin 7/24 Twitter, Facebook ve Wizardistanbul.com üzerinden İstanbul ile ilgili gelen sorular dakikalar içerisinde cevaplanarak yalnızca 1,5 ay gibi kısa bir sürede sadece ağızdan ağıza pazarlama yöntemiyle 20′den fazla turistin İstanbul'a gelmesi ikna edilmiş, 6000' den fazla turiste bilgi verilmiş ve 1100′den fazla doğrudan turist sorusu cevaplanmıştır (Kutluk, 2012).

"Gönüller 1 Olsun Diye, 1 Bilet Onur Air' den Hediye!" kampanyası ile Onur Air' in 12 Şubat ve 13 Şubat 2013 tarihlerinde Facebook sayfasında kampanya başvuru formunu doğru ve eksiksiz dolduran ve sayfada sorulan soruyu doğru cevaplayan herkes, kendisi ve sevdiği 1kişi için Onur Air' den % 50 indirim kodu kazanmıştır (Anonim,2013a).

Türk Hava Yolları'nın "inanılmaz evlenme teklifi" adlı viral videosu ilk iki gün içinde 150.000 kişi tarafından izlenmiştir. Video, romantik sevgilinin dünyanın çeşitli ülkelerine giderek bir evlenme teklifi videosu hazırlamasını konu almaktadır. "Havada 432 bin mil uçtum ve bunların çoğu bedavaya geldi." cümlesi, videoda birçok karede görünen THY kartları, THY' nın eğlenceli bir gerilla pazarlama taktiğidir (Anonim,2013b).

İnsanlar tatil planını yapmadan önce Travelocity, Tripadvisor gibi sitelere girip, kullanıcıların o ülke ya da bölge hakkındaki yorumlarını okumakta veya Facebook, My Space gibi sosyal arkadaşlık sitelerindeki gruplar aracılığı ile o bölgeler hakkında bilgi alışverişinde bulunmaktadır. Yani, bu davranış biçimleri günümüzün geçerli tanıtım stratejisinin, bu kanallar aracılığı ile uygulanan gerilla pazarlama yöntemleri olduğunu göstermektedir (Yücel, 2008). İnternetin karşılıklı etkileşime olanak veren iki yönlü bilgi alışverişi sayesinde insanlar diğer insanların tatil bilgilerine çok çabuk ulaşabilmektedir. Üstelik milyonlarca kişinin yaptığı gibi turistler deneyimlerini bloglarında yazmakta, gezdikleri ve fotoğrafladıkları yerleri flicker'a yüklemekte, çektikleri videoları Youtube gibi dünyanın ikinci büyük arama motoru olan video izleme ve paylaşma sitesinde yayınlamaktadır. Bu mecralar, bir topluluk oluşturmuş insanlardan ve onların yüzlerce arkadaşı, yakınından oluşmaktadır. Hem fotoğraf, hem video, hem yazı içeriği paylaşıp bu içeriklere birçok yorum alınabilirken, bu bilgileri şu anda dünyanın 1 numaralı paylaşım ağı olan ve 860 milyondan fazla üyesi bulunan Facebook'ta insanlar günde en az 1 saatini ayırarak sürekli takip edip, güncellemektedirler. Google'da uçak bileti arama motor Skyscanner'in hazırladığı Travel-Trends benzeri onlarca seyahat alışkanlık raporu ve ya anketine rastlanmaktadır. Travel Trends ve bir çok diğer raporlara ve araştırmalara bakıldığında her 10 kişiden 8'inin facebook, twitter, ve bloglardaki görüşlere anlamlı bir ölçüde önem verdiği ve rezervasyonların çoğunun sosyal veya mobil ağlar kullanılarak yapıldığı görülmektedir (Anonim, 2012b). Seyahat ile ilgili aramaların 2008'den bu yana yılda ortalama yüzde 30 artış gösterdiği, 2011 yılında bu artışın ortalamanın üzerine çıkıp yüzde 36 civarında gerçekleştiğini belirten Google Türkiye Turizm Sektör Yöneticisi Sencer Kutluğ, erken rezervasyon uygulamasının, seyahat alışkanlıklarında değişime neden olduğunu yapılan aramalara bakıldığında seyahat planları yapma zamanlamaları gitgide öne çekildiğini bundan birkaç yıl önce nisan, mayıs gibi dönemlerde artış gösteren seyahat aramalarının artık aralık ayında başlayarak, şubat ayı itibari ile hızlı bir yükselme gösterdiğini belirtmektedir. Çok açık ortaya çıkan, insanların artık yoğun bir şekilde internet üzerinden tatil planlarını yaptığı, interneti bilgi almak, alternatifleri karşılaştırmak, nihai karar verip, satın almada kullandığı yönündedir (Sabah, 2012).

Güçlü Yönler	Zayıf Yönler
1)Küçük ve Orta ölçekli konaklama işletmelerinin ve seyahat acentelerinin kolaylıkla kullanabileceği bir yöntemdir. 2)Çarpıcı, etkileyici ve sıra dışıdır. 3)Geniş pazar kitlesi yerine sınırlı bir pazar (niş) odak alınarak da gerçekleştirilebilir. 4)İşletmelerde eski müşterilerle iletişimin iyi tutulmasını sağlanıp, müşteriler aracılığı ile yeni müşteriler kazandıran bir yöntemdir. 5)Gerilla pazarlamada uygulanabilecek yöntemler genelde maliyetsizdir. 6)Viral gerilla yöntemleriyle çok çabuk ve kolay bir şekilde verilmek istenen mesaj yayılır. 7) İnternette kısıtlı bir alanı yoktur, yayılması istenilen mesaj veya bir tatil fikrinin herhangi bir sanal ortama bırakılması yeterlidir.	1)Sadece uygulandığı dönemde başarılı olmakta zamanla etkisini yitirmektedir. 2)Her gerilla uygulaması turizm işletmesine uygun olamamaktadır. 3) İnternette bazı gerilla uygulamalarının internet kullanıcıları tarafından doğru bir şekilde algılanmaması veya spam olarak algılanması. 4)Sadece karlılığı hedef almaktadır. 5)Uygulamadaki bilgi eksiklikleri ve gerilla isminin negatifliği. 6)Zaman kaybı olarak görülmesi ve geleneksel pazarlama yöntemleri ile henüz yarışır konuma gelememesi.
Fırsatlar	Tehditler
1)Sadece hizmetin pazarlanması için değil, halkla ilişkiler ve tanıtım çalışmaları çerçevesinde de kullanılması mümkündür. 2)Pazar alanındaki fırsatların farkına varma ve onlardan ne zaman ve nasıl yararlanılacağını anlama imkânı tanımaktadır. 3)Rakipler arasından daha kolay sıyrılmayı kolaylaştırır. 4)Gelecekte bile bahsedilen ve turistlerin hafızalarında kalan bir tanıtım/pazarlama ile şaşırtıcı ve etkili bir imaj oluşturabilir.	1)Turizm sektöründe gerilla pazarlama uygulamaları tam olarak bilinmediğinden yanlışlıkla fazla maliyetlere sebep olabilir. 2)Turizm ürünün tanıtımında hayal gücü gerektiren sıra dışı tanıtımlardan kaçınılmaktadır. 3)Gerilla pazarlamanın yanlış algılanması ve bu yöntemden kaçınılması 4)Sıra dışı olmak ve rakipleri elemek için etik olmayan unsurların kullanılması.

Tablo 3: *Turizm İşletmeleri Açısından İnternette Gerilla Pazarlamanın SWOT Analizi*

5 Sonuç

İnternetin yaygın kullanımı, turizm endüstrisine ekstra bir canlılık kazandırmasına ve hatta yepyeni bir sektör oluşumuna yol açmıştır. Tatil acentelerinin, hava yollarının ve çeşitli otellerin SMS yöntemiyle müşterilere ulaşması, internet reklamları ve internet kampanyaları internetin etkin gücünün kullanılmasıyla gerçekleşmektedir. Turizm işletmelerinin geleneksel pazarlama yöntemlerinden vazgeçmesi, onları farklı arayışlara itmektedir. Bu aşamada alternatif bir yöntem olarak internette gerilla pazarlama uygulanabilir. Çünkü artık ürün ve hizmetlerin "lovemark" aşamasına geçebilmesi için kampanyalarında ve tüketiciye sunduklarında basit bir "satın al " mesajının ötesine geçmesi gerekmektedir. "Satın al" mesaj içerikli kampanyalar sadece tüketiciyle ticari bir ilişki doğurmakta, onların zihnine hitap etmektedir. Yoğun pazarlama programlarında eksik olan şeyler yaratıcılık, dikkat çekmek ve duygulara hitap edememektir. Gerilla pazarlama her yerde her zaman, müşteriler farkında olmadan bir anda karşılarına çıkabilen ve duyguları etkileyebilen bir pazarlama hareketi olduğu için etkilidir. Gerilla pazarlama uygulamaları için İnternette faaliyet alanları oldukça fazladır ve çok çabuk yayılabilmesi büyük bir fırsattır. Ayrıca gerilla pazarlamanın internette çeşitlenen türleri sayesinde etkili bir hedef kitle oluşturabilmek çok kolaydır. Turizm sektöründe "gerilla pazarlama" anlayışı henüz çok yaygın olmadığından özellikle Türkiye literatüründe, örnek gösterilecek uygulama sayısı bakımından sınırlı kalmaktadır. Ancak zamanla gerilla pazarlamanın daha fazla kullanılacağı düşünülmektedir. Çünkü diğer ülkelerde genel olarak turizm sektöründe internet üzerinden yapılan gerilla hareketlerine bakıldığında; özellikle seyahat acentelerinin ve havayolları firmalarının aktif bir şekilde çalışmalarının devam ettiği görülmektedir. Seyahat acentelerinin uygulamalarında, bir "seyahat acentesini pazarlamak" yerine, "tatile çıkma fikri" ni müşterilerin zihninde oluşturmanın amaçlandığı, havayolu firmalarının daha fazla satış yapılmak ve rakiplerin önüne geçmek amacıyla gerilla pazarlama kampanyaları yaptıkları fark edilmektedir. Konaklama işletmelerinin ise pazarlamada bilinen klasik yöntemlerden pek kolay kolay vazgeçemediği ve internette gerilla hareketlerini pek kullanmadığı görülmektedir. Tablo 3.de turizm işletmeleri için yapılan SWOT analizi şu şekildedir;

Gün ve gün gelişen faklı yöntemler, internetin etkileşim sağladığı alanlarda bilgilerin yayılma hızı ve birçok kişinin bu bilgileri anında görebilme avantajı, turizm işletmelerinin ise sadece kendilerine ait bir web sitesinin olması, işletmelerin pazarlamada gerçekten eksik olduklarını gösterir. Bu çalışma bağlamında; farklı, yaratıcı ve sıra dışı fikirleri kullanmaları ve müşterileri etkilemek zorunda oldukları bir dünyanın ve rekabetin içinde olan turizm işletmelerine aşağıdaki uygulamalar önerilmektedir;

- "Gerilla pazarlamacılık" alanında uzmanlaşmış reklam ajanslarından, bu alanda uzmanlaşmış kişilerden yardım alması sağlanmalı ve mutlaka etkili bir pazarlama planı yapılmalıdır.
- Turizm işletmeleri adına sosyal paylaşım sitelerinde özel hesaplar ve bloglar oluşturmaları ve bu hesapların aktif bir şekilde kullanılması sağlanmalıdır.
- Turizm işletmelerini "erken rezervasyon" kampanyalarını sosyal paylaşım sitelerinin reklam bölümlerine vermeleri hatta advergaming yöntemi kullanılarak müşterilerin eğlenceli bir şekilde tatil planı yapmaları sağlanmalıdır.
- Turizm işletmeleri, kendi fikirlerini de gerilla pazarlama alanında fazla bir maliyet sarf etmeden de bulup uygulayabilirler. Mesela işletmenin logosunun yer aldığı bir aracı şehir içinde dolaştırması, yine az bir bütçeyle 50-60 kişilik bir turist grubunun kiralanarak, bu grubun gittiği her mekânda ve sosyal bir topluluk içerisinde gidilen bir otel ya da tatil satın alınan bir seyahat acentesi hakkında olumlu ağızdan ağıza duyurum yapılması sağlanabilir.
- Turistlerin olmazsa olmazları olan cep telefonlarına çeşitli tatil fırsatları içerikli mesajların ve MMS' lerin gönderilmesi sağlanabilir.
- Dans gösterileri, küçük şenlikler düzenlenerek hatta tiyatral oyunlarla "turizm" konusunun sokaklarda işlenmesi ve etkilerinin sosyal medyada duyurulması sağlanabilir.
- Tatile özendirecek renkli afişler veya tatili anımsatacak her türlü öğenin pazarlama amaçlı kullanılması sağlanabilir. Mesela, iş çıkışlarında oldukça yoğun olan metro istasyonlarında insanlara herhangi bir seyahat acentesinin üzerinde reklamı olan deniz kabuklarının dağıtılması gibi farklı projeler düşünülebilir.

Gerilla pazarlama, turizm sektöründe net bir şekilde bilinmeyen ve uygulamalarından kaçınılan bir yöntem olduğu için, çalışmada öncelikle internetin kullanım gerekliliği, pazarlama dünyasında farklı yöntemlere mutlaka gerek duyulduğu ve gerilla pazarlamanın ise diğer klasik yöntemlerden aykırı, kolay ve eğlenceli olduğundan bahsedilmiştir. Bu açıdan gerilla pazarlama ile ilgili yapılacak diğer çalışmalara yol göstermesi ve kaynak oluşturması beklenmektedir. Diğer çalışmalarda, turizm işletmelerinin yöneticileri ile gerilla pazarlama hakkında birebir görüşülerek, konu hakkındaki görüşler alınabilir, ya da satış veya tanıtım için gerilla pazarlama yöntemlerinden birini uygulayan bir turizm işletmesinde anket çalışması yapılarak gerilla pazarlamadan beklentiler ve elde edinilen sonuçlar daha net karşılaştırılabilir.

Türk-Rus Vize Serbestliği Anlaşmasının Turizm Ekonomisine Katkısı

The Contribution of Turkey-Russia Liberty of Visa Treaty to the Tourism Economy

Mr. Halil Şimşek (Istanbul Aydın University, Turkey)

Abstract

Tourism which is one of the fastest developing sector in the world is an economic source which has a great importance espically for the developing countries. In most countries which have tourism demand, both the balance of the current account deficit and a significant part of employement are met with the revenues which are provided from this sector. So the contribution of tourism to the economies of the countries is increasing day by day. The importance of tourism in Turkey in recent years has been recognized and focused on development efforts but it has not yet been reached the desired level. There is no doubt that as a result of a number of economic and political measures and arrangements taken, Turkey which is almost a tourism paradise will carry its place in 12th ranking in the world today, to the higher ranks. In this context, first of all the importance of tourism and then the contribution of tourism to the economies of countries and Turkish economy were mentioned. Also in this part, tourism datas taken from the official sources were displayed and evaluated in the form of tables and graphs. In the last part, Turkey-Russia tourism economy relations were examined from past to present and the results of the agreement on Visa Liberalization signed in 2011 were evaluated.

1 Giriş

Turizm bir yeri gezip görmek, öğrenmek, dinlenmek, eğlenmek ve o yerin güzelliklerini tatmak için yapılan seyahattir. (Türk Dil Kurumu) Deniz, sağlık, kongre, "incentive" (ödüllendirme ve motivasyon), yat, spor, av, tarih, inanç gibi daha sayamadığımız bir çok farklı nitelikteki faaliyeti içerir. Ekonomik perspektiften bakıldığında tam anlamıyla bir sanayi çeşidi olduğu söylenemez ancak çok sık kullanılan bir tabir olan "bacasız sanayi" şeklinde ifade edilmektedir. Kısacası turizm, "bir yere yapılan amaçlı ve süreli bir yolculuktur" denilebilir.

Günümüzde milyonlarca insan her yıl çeşitli turistik amaçlarla seyahat etmekte ve gittikleri yerlerde yaptıkları harcamalarla kendilerine turistik mal ve hizmet sağlayan ülke ve bölgeler için gelir kaynağı yaratmaktadırlar. Ülkeler turizmin önemini kavrayarak bu sektörün sürdürülebilirliğine ve kalkınmasına yönelik çalışmalarına ağırlık verdikleri oranda sektörden sağladıkları gelirlerini arttırabileceklerdir. Bunun yanı sıra kendilerine turist sağlayan ülkelerle olan ilişkileri de önemli bir noktadır.

Türkiye'ye yıllardan beri en çok turist gönderen ülkelerin başında Almanya'dan sonra Rusya gelmektedir. Rusya'dan enerji ithalatı turizm geliriyle kıyaslandığında çok daha yüksektir. Ancak Türkiye açısından bakıldığında turizmden elde edilen gelir de bir hayli önemlidir. Özellikle son yıllarda hükümet, turizmin ülkeye olan ekonomik katkılarının farkındadır ve bununla ilgili sürdürülen uluslararası ilişkilere gereken önemi vermektedir. Başta Rusya olmak üzere daha birçok ülke ile gerçekleştirilen vize serbestliğinin de gerek ülkeye sağladığı döviz girdisi, gerek istihdama etkisi ve gerekse de uluslararası platformdaki olumlu izlenim ve neticesindeki ekonomik atılımlar bu anlamda yapılan çalışmaları destekler niteliktedir.

2 Turizmin Ülkeler ve Türkiye Ekonomisindeki Yeri

Bugün dünya gayri safi milli hasılasının önemli bir bölümünü oluşturan turizm sektörü dünyada en hızlı gelişen sektörlerin başında gelmektedir. Harcanabilir kişisel gelirlerden turizm ve tatile ayrılan payın artması, iletişim ve ulaşım sektöründeki gelişmeler ve bu faktörlerdeki değişimlere bağlı olarak insanların şimdiye kadar görmedikleri yeni yerleri görmek istemeleri turizme olan ilginin de artmasına neden olmuştur (Dilber, 2007).

İnsanların birbirlerini karşılıklı olarak tanımalarını sağlamanın yanında doğal, sosyal ve kültürel çevrenin korunmasına ve değerlendirilmesine de katkı sunan bir faaliyet olması turizmin sosyal yönünü ortaya koymaktadır. Ekonomik yönden ise üretici ve tüketici olarak milyonlarca insanı ilgilendirir. Ekonomik gelişmenin itici ve sürükleyici bir elemanı olan turizm her şeyden önce, mal ve hizmetlerin tüketimini sağlar. Dolayısıyla bunları üretenler içinde bir gelir kaynağı demektir. İhtiyaçların artmasıyla turizm, daha çok mal ve hizmet üretme zorunluluğunu, yatırımları ve nihayet gelirleri artırır (Dilber, 2007).

2.1 Turizmin Ülke Ekonomilerindeki Yeri

Başta gelişmekte olan ülkeler olmak üzere günümüzde birçok ülke ekonomik gelişmeye dolayısıyla refah düzeyindeki artışa yapacağı pozitif katkılar nedeniyle turizmin ekonomi içindeki konumunu geliştirme

çabasındadır. Özellikle II. Dünya Savaşı'nın ardından değişen dünya düzeni turizmin de gelişimine ivme kazandırmıştır. Şöyle ki teknolojinin gelişmesiyle birlikte küreselleşme ve buna bağlı olarak sınırların ortadan kalkması, ulaşımdaki kolaylık, gelir ve boş zaman artışıyla turizm sektöründe hızlı bir büyüme kaydedilmiştir.

Ödemeler dengesine katkısı, istihdam ve gelir yaratması, katma değerin çok yüksek olması, altyapı ve üstyapı olumlu etkileri ve diğer sektörlere olan etkisi nedeniyle turizm özellikle gelişmekte olan ülkeler açısından önemli bir sektör durumundadır (Özkök, 2006).

Ödemeler dengesi, bir ülkenin ekonomik durumunu en iyi ve en açık şekilde gösteren ölçüdür. Belli bir dönemde tüm yabancı ülkelerle olan ekonomik ilişkileri tablo şeklinde gösterir. Uluslararası turizmin neden olduğu döviz hareketleri, turist gönderen ülkenin döviz talebini, turist kabul eden ülkenin de döviz arzını artıcı bir rol oynadığından ülkelerin ödemeler dengesini etkiler. Döviz arz ve talebi açısından mal ithal ve ihracı ile turistik faaliyetler arasında ortaya çıkan sonuçlar açısından fark yoktur. Ülkeye gelen turistlere bazı mal ve hizmetlerin satılması, mal ihracında olduğu gibi döviz arzı, buna karşılık ülke vatandaşlarının gittikleri ülkede mal ve hizmetleri satın almaları, sektörel üretim için gerekli mal ve hizmet ithali ise ürün ithalatında olduğu gibi döviz talebi yaratır. Dış turizm bilançosundan yararlanılarak döviz arz ve talebi arasındaki fark ele alınır. Bu etkinin olumlu olması ölçüsünde ödemeler bilançosu açıkları kapatılır (Sarı, 2013).

İstihdam geniş anlamda bütün üretim faktörlerinin, dar anlamda ise yalnızca emek faktörünün üretime katılmasıdır. Turizm, gelişimine ve talebin yoğunluğuna bağlı olarak ekonomide istihdam etkisi yaratır. Turistik talebin yoğunlaştığı dönemlerde işgücü talebi de artar ve bu da istihdam yoğunluğunu etkiler. Artan istihdamla sağlanan gelir harcandıkça ekonomide sağlanan canlılık olumlu gelişmeleri de beraberinde getirecektir. Gelir etkisiyle ilgili olarak ise birinci aşamada direkt harcamalar göze çarpar. Bunlar turistlerin yaptığı harcamalardır. Bu harcamalar, ekonomide konaklama tesisleri, restoranlar, ulaştırma işletmeleri gibi kuruluşlar için direkt gelir etkisi yaratır. Sağlanan bu direkt gelirleri elde eden birimlerin yaptıkları harcamalar ise endirekt gelirlerdir. Turizm işletmelerinin istihdam ettikleri insanlara ödedikleri ücretler ve stok teşkili için yaptıkları alımlar ek bir talep yaratacaktır. Bu ek talebin karşılanması için istihdamın arttırılması ya da ücretlerin yükseltilmesi gerekecek, bu da kişisel gelirlerde bir artış sağlayacaktır. Kişisel gelirlerdeki yükselişe paralel olarak da artan tüketim harcamaları ekonomide uyarılmış etkiler yaratarak bir canlanmaya neden olacaktır. Turizmin gelir etkisinin bir başka yönü de katma değere olan etkisidir. Katma değer, satışa sunulan malın fiyatından, bu malı üretmek üzere daha önce başka kişiler veya kuruşlar tarafından yapılmış ara tüketim harcamaları çıkarıldığında kalan farktır. Ülkede bütün ekonomik birimlerin mal ve hizmet üretiminde yarattıkları katma değer toplam milli hasılayı verir. Turistik mal ve hizmet üretiminin milli gelir üzerinde yarattığı katma değer etkisi diğer sektörel üretimlerden daha yüksek olduğu için önem kazanmaktadır (Sarı, 2013).

Turist çeken bölgelerde, mevcut turizm gelirlerini arttırabilecek potansiyele sahip su, yol, elektrik, ulaşım gibi alt yapı yatırımları önem kazanmaktadır. Konaklama, eğlence, alışveriş tesisleri gibi üst yapı ile ilgili faktörler de alt yapı eksikleri tamamlandığı taktirde yatırım için ön plana çıkmaktadır. Alt ve üst yapı yatırımları turizm gelirlerinin de artmasını sağlayacaktır. Turizm bölgelerinde havalimanları pist ve tesislerine yapılan yatırım ve yenileştirmeler bu yatırım türüne örnek olarak verilebilir.

Gelişmekte olan birçok ülke açısından turizmin çekici yönlerinden en önemlisi, az zamanda yapılan yatırımların ekonomik geri dönüşlerini daha kısa sürede gösterebilmesidir. Turizm, başarılı bir tanıtım kampanyasından ortalama 1-2 yıl sonra büyük gereksinim duyulan döviz girdisini sağlayabilen, gelir ve istihdam artışı yaratabilen bir sektördür. Özellikle gelişmekte olan ülkelerin ekonomik kalkınmalarını gerçekleştirmede karşılaştıkları en büyük sorun olan döviz darboğazlarının aşılmasında, turizm sayesinde elde edilen dövizler bir çıkış yolu olabilmektedir (Shoyunchap, 2008).

Dünya Turizm Örgütü, hizmet verdiği kişi sayısı, yarattığı istihdam, gelir ve katma değerle turizmin, dünyanın en büyük sektörü konumuna geldiğini ifade etmektedir. Bu bağlamda, tüm dünya ülkeleri vatandaşlarını turizme bir şekilde, üretici veya tüketici olarak katılmaları konusunda desteklemektedir (Önal vd., 2008). Dünya Turizm Örgütü tarafından yayımlanan son turizm raporunda 2012 yılı sonu itibariye uluslararası turizm hareketi tüm detaylarıyla aşağıdaki tablo ve grafiklerde sunulmuştur.

Yukarıdaki tablo ve grafikler incelediğinde 2012 yılında dünya turizm hareketlerinde bir yıl öncesine oranla yüzde 4'lük bir artış olduğu ve buna bağlı olarak turizm gelirlerinin 1 trilyon 75 milyar dolara çıktığı görülmektedir. Ayrıca çarpıcı noktalardan bir tanesi de uluslararası seyahat gerçekleştiren kişi sayısının 2012 yılında ilk defa 1 milyar sınırını aşarak 1 milyar 35 milyona ulaşmasıdır. Gelişmekte olan ülkeler yüzde 4.1'lik büyüme oranı ile gelişmiş ülkelerin (yüzde 3.6) büyüme hızlarını geride bırakmıştır. Birleşmiş Milletler Dünya Turizm Örgütü (UNWTO) Genel Sekreteri Taleb Rifai'nin de ifade ettiği gibi 2012'de küresel boyutta bir ekonomik dalgalanma yaşanmasına rağmen uluslararası turizm rotasından çıkmamış, yolunda ilerlemeye devam etmiştir. 2012'de 2011'e nazaran 39 milyon daha fazla kişi turizm amaçlı seyahat ederken, en fazla büyüme yüzde 7 ile Asya ve Pasifik bölgelerinde görülmüştür. Avrupa 535 milyon kişi ile en fazla turist çeken bölge olmuş ve yüzde 3'lük bir büyüme kaydedilmiştir. Savaşların ve istikrarsızlıkların gölgesindeki Ortadoğu'da bile 2011 yılı turist sayısındaki yüzde 7'lik azalma, 2012 yılında yalnızca yüzde 2 oranında düşerek yüzde 5'e gerilemiştir. Kuzey Afrika ülkelerinde Arap Baharıyla yaşanan halk hareketlerinden dolayı 2011 yılında yüzde 1'lik düşüş yaşayan Afrika kıtası 2012'de yüzde 6 büyümüştür. Amerika Kıtası'da 2012'de yüzde 4'lük artışla toplam 162 milyon turiste ev sahipliği yapmıştır. 2012'de Avrupa merkezli tüm dünyada yaşanan ekonomik kriz ve yıllardır Ortadoğu'da süregelen savaş ortamına rağmen turizmin ekonomiye olan katkısı daima pozitif yönde olmuştur. Dünya Ticaret Örgütü'ne göre 2013 yılında da turizmin ekonomideki payı, dolayısıyla ülke ekonomilerine olan katkısı bu veriler ışığında devam edecektir.

2.2 Turizmin Türkiye Ekonomisindeki Yeri

Tarihi medeniyetlerin buluştuğu bir ülke olmasının yanı sıra Türkiye, rakiplerine göre son derece temiz plaj ve koylara sahiptir. Ayrıca dört mevsimin bir arada yaşanması nedeniyle de adeta bir turizm cenneti görünümündedir. Sahip olduğu bu değerleri turizm amaçlı kullanması, ülkemizin içinde bulunduğu işsizlik sorununun giderilmesinde çok önemli rol oynayacaktır.

Turizm sektörüne gereken önem ancak 1980 yılından itibaren verilmeye başlanmış, bu kapsamda gerekli yatırım ve tanıtım faaliyetlerine ağırlık verilmiştir. Ülkemizde özellikle son yıllarda turizm teşvik edilerek özellikle dış turizm gelirlerini artırma ve böylelikle ödemeler dengesi açıklarını kapatma politikası benimsenmiştir. Ödemeler dengesi açıklarını kapatan önemli alanlardan birisinin turizm olduğu net bir şeklide hissedilmektedir. İçinde bulunduğumuz kriz dönemlerinde dahi istihdama katkısı en üst düzeyde olan sektör yine turizm sektörüdür. İthalat ihracat dengesizliğine dayanan bütçe açığı artan turizm gelirleriyle kapatılmaya çalışılmaktadır. Ülkemiz, yılın her mevsimde çeşitli turizm etkinliklerine imkan sağlayan ılıman iklimi, zengin kültürel ve doğal değerleri ile seyahat endüstrisinde popülerliği artan bir turizm merkezi haline gelmektedir.

Kültür ve Turizm Bakanlığı tarafından yayımlanan "Türkiye Turizm Stratejisi 2023" konulu eylem planında sektör ile ilgili belirlenen vizyon şöyle ifade edilmiştir: "Sürdürülebilir turizm yaklaşımı benimsenerek istihdamın arttırılmasında ve bölgesel gelişmede turizmin öncü bir sektör konumuna ulaştırılması ve Türkiye'nin 2023 yılına kadar, uluslararası pazarda turist sayısı ve turizm geliri bakımından ilk beş ülke arasında önemli bir varış noktası ve uluslararası bir marka haline getirilmesinin sağlanmasıdır." Bu kapsamda; alt yapı ve üst yapı çalışmaları, turist profilini geliştirmeye yönelik çalışmalar, turizm pastasından alınacak payı büyütmeye dönük uluslararası ilişkiler ile sürdürülen ve planlanan ekonomi politikaları gibi konuyla ilgili birçok faaliyet hızla ve artarak devam etmektedir. Dünya genelindeki turizm hareketliliği ve buna bağlı olarak uluslararası turizm gelirlerindeki artış gözlendiğinde turizmin Türkiye ekonomisi için ne derece önemli olduğu ortaya çıkmaktadır.

Grafik 6. *Yıllara Göre Türkiye Turizm Gelirleri* **Kaynak***: Kültür ve Turizm Bakanlığı*

1980'lerden başlayarak son 30 yıl içinde Türkiye'nin turizme verdiği önem giderek artmış, böylelikle sektörün gelişimi ve ülkeye olan katkısı birçok dünya ülkesini geride bırakmıştır. Yukarıdaki grafikler ışığında Türkiye açısından bakıldığında 2008 yılında başlayarak günümüze kadar devam eden ve tüm dünyayı etkisi altında bırakan ekonomik krize rağmen ülkeye gelen yabancı ziyaretçi sayısı azalan oranlarda da olsa artmaya devam etmiştir. Yine turizm gelirinin de krizle birlikte yıllar içinde inişli çıkışlı bir takım dalgalanmalara rağmen arttığı görülmektedir. Krizin başladığı 2008 yılında bir önceki yıla göre ortalama 3 milyon kişi ve 4.5 milyar dolarlık bir artış gerçekleşmiştir. Grafiklerdeki en dikkat çekici nokta ise 2010 yılında turist sayısındaki artışa rağmen turizm gelirlerinde kaydedilen gerilemedir. Bunun nedeni turist başına gelirin düşmesidir. Daima eleştirilere konu olan kızgın rekabet anlayışı ve küresel krizin özellikle Avrupa'da yarattığı talep düşüşü turizm sektöründe de kendisini göstermiştir. Talepte meydana gelen bu düşüş neticesinde özellikle 2010 yılında turistik tesisler belli doluluk oranlarını koruyabilmek maksadıyla fiyatları indirerek karlarından feragat etmişlerdir. Bu esnada turizm giderleri standart artışını sürdürmüş ve dolayısıyla aradaki fark net turizm gelirlerine negatif oranda yansımıştır.

Günümüzde turizm pastasından pay alabilmek için ülkeler arasında kıyasıya bir rekabet olduğu görülmektedir. Bu yarışta, birçok medeniyete ev sahipliği yapmış, dünyanın hiçbir yerinde olmayan doğal ve kültürel zenginliklere sahip, dört mevsimin tüm güzellikleriyle yaşandığı ve kıtaları birbirine bağlayan konumuyla adeta bir cennet görünümündeki Türkiye bu avantajını daha iyi bir şekilde kullanmalıdır. Turizme ayrılan kaynakların arttırılması ve turizm faaliyetlerinin çeşitlendirilerek tüm ülke çapında yayılmasıyla birlikte Türkiye yaşanacak her türlü krize rağmen turist çeken bir ülke olma özelliğini koruyacaktır.

Tablo 5. *2010-2012 Yılları Ocak-Aralık Döneminde Türkiye'ye Gelen Yabancıların Milliyetlerine Göre Dağılımı (İlk 10 Ülke)* ***Kaynak:*** *Kültür ve Turizm Bakanlığı*

Yukarıdaki istatistikler incelendiğinde, özellikle 2011-2012 yılı değişim yüzdelerinde bir önceki yıla göre belirgin bir azalma olduğu dikkati çekmektedir. Turizm otoriteleri bu durumu 2012 yılında derinleşen küresel ekonomik kriz ile kapsamı sürekli artan Arap Baharı'nın birleşmesine bağlamaktadırlar. Ancak dünya ile kıyaslandığında ülkemizin turizm verilerinin daha umut verici olduğunu görülmektedir. Turizmi arttırmaya yönelik faaliyetlerin yoğunlaşması, artan turizm çeşitliliği, özellikle son yıllarda uygulanan politikalar sonucunda fiyat kalite dengesindeki avantajlı konum ve yeni destinasyonlar oluşturmak için gerçekleştirilen yatırımlar etkisini göstermektedir.

Diğer tabloda ise ülkemize gelen yabancıların milliyetlerine göre dağılımı verilmiştir. Buna göre en büyük payı ilk defa 5 milyon rakamını geçen Almanya alırken, 3.5 milyonun üzerindeki Rusya ikinci, ortalama 2.5 milyon kişi ile İngiltere'de üçüncü sırayı almıştır.

Türkiye'de 1980'li yıllardan itibaren atılım gösteren turizm sektörünün genel ekonomi üzerinde büyük etkiler yarattığını söylemiştik. Bunlardan en önemlisi, ödemeler dengesine katkıda bulunan döviz girdisidir. Bir diğer önemli faydası da istihdam etkisidir ve bu bağlamda sektör işsizliğin büyük bir sorun olduğu ülkemizde vasıfsız işçilere de istihdam olanağı sağlayarak emek piyasasındaki arz fazlasını bir nebzede olsa azaltabilmektedir. Ayrıca milli gelir üzerinde doğrudan ve dolaylı yarattığı etkiyle hem GSMH'nin hem de vergi gelirlerinin artmasına yardımcı olmaktadır. Diğer sektörlerle ileri ve geri bağlantısı da son olarak değinilmesi gereken

noktadır. Yani diğer sektörlerden girdi talep etmesi (geri bağlantı etkisi) ve diğer sektörlere mal arz etmesi (ileri bağlantı etkisi) yoluyla ekonomiye olumlu katkı sağlamaktadır (Hepaktan ve Çınar, 2010).

3 Türk-Rus Turizm Ekonomisi İlişkileri

Türk-Rus ilişkilerinin başlangıcı Rusların tarih sahnesine çıktıkları bin yıl öncesine kadar uzanır. Yan yana yaşayan bu iki halk tarih boyunca sık sık savaşmışlardır ancak Avrupa ile kıyaslandığında, ortak yönlerinden dolayı birbirlerine daha yakın hissetmektedirler. Tarihteki en büyük imparatorlukları kuran iki ülkenin bir diğer ortak notası da bu imparatorlukların yakın dönemlerde yıkılması ve yerine yeni devletler kurmuş olmalarıdır. Dolayısıyla yeni kurulan ve benzer kaderleri paylaşan bu iki devlet birbirleriyle yakınlaşma ihtiyacı duymuştur.

Mustafa Kemal'in Lenin'e yazdığı diplomatik ilişkilerin tesisi ve yürütülen bağımsızlık savaşı için yardım talebini içeren 26 Nisan 1920 tarihli mektup ise Türkiye ile Sovyet Rusya arasındaki resmi ilişkilerin başlangıcı

olarak kabul edilir. Ayrıca Sovyet Rusya, TBMM'yi tanıyan ilk devlet olmuş ve devamında Türk ve Sovyet Hükümetleri arasında 16 Mart 1921 tarihinde Moskova'da Dostluk ve Kardeşlik Anlaşması imzalanmıştır. Böylelikle iki ülke arasındaki diplomatik münasebetlerin yanı sıra ekonomik ve kültürel alanlarda da bir yakınlaşma başlamıştır. İkinci Dünya Savaşı sonrasındaki Soğuk Savaş yıllarında, farklı cephelerde yer alan iki ülke arasındaki yakınlaşma sona ermiş ancak 1991'de SSCB'nin yıkılmasından sonra en büyük mirasçısı Rusya ile ilişkiler tekrar canlanmıştır. 1990'da Bavul Ticareti ile başlayan ilişkiler farklı boyutlarda artarak devam etmiş ve günümüzde liderler tarafından "Stratejik Ortaklık" ifadesinin kullanılmasına kadar gelinmiştir (Orsam, 2010).

Türkiye ile Rusya arasında en fazla gelişme kaydeden ekonomik sektörlerden birisi turizmdir. Rusya resmi verilerine göre 2012'de turistik amaçla yurt dışına çıkan 15 milyon 300 bin Rus vatandaşın yüzde 17'sinin tercihi Türkiye'den yana olmuştur. Bu bağlamda Rusya'da uzun yıllardan beri en popüler turizm destinasyonu olan Türkiye'nin bu avantajını 2012 yılında da koruduğunu görmekteyiz. Türkiye'yi bir tatil ülkesi olarak gören Rusların yüzde 75'i yaz turizminin ağırlıklı olduğu Antalya'yı tercih etmektedir.

ABD ve AB ülkelerine dahi vize uygularken, Rusya ile 12 Mayıs 2010'da Ankara'da imzalanan ve 16 Nisan 2011'de yürürlüğe giren "Vatandaşların Karşılıklı Seyahatlerine İlişkin Usullere Dair Anlaşma" iki ülke arasında vizesiz dönemin başlangıcı olmuştur. Bu anlaşmaya göre; iki ülke vatandaşları 90 gün içinde 30 günü geçmeyen seyahatleri için vize almak zorunda kalmayacaktır. Anlaşmayla beraber Türkiye'ye vize uygulamayan ülke sayısı 58'e, özerk bölgelerle beraber de 64'e çıkmıştır. Devlet başkanları ve birçok yetkili atılan bu stratejik adımın her iki ülke içinde hayırlı olacağını belirtmişlerdir. Gerek turist sayısı gerekse de ticaret hacminin artacağını ve bundan ülke ekonomilerinin büyük oranda etkileneceğini ifade etmişleridir. Nitekim sonraki dönemlerde yaşanan krizlere rağmen özellikle Türkiye açısından elde edilen veriler ümit verici olmuştur.

160 milyonluk büyük bir nüfusa sahip Rusya Federasyonu'ndaki turist potansiyeli Türkiye için yadsınamayacak kadar ciddi büyüklüktedir. TÜİK ve Kültür Bakanlığı verilerine göre, vize muafiyeti uygulamasının geçerli olmadığı 2010 yılında Rusya'dan ülkemize 3 milyon 107 bin turist gelirken, vizesiz geçişlerin yapıldığı 2012'de bu rakam 492 bin kişilik bir artışla 3 milyon 599 bine çıkmıştır. Rusya açısından bakıldığında ise dünya genelinde ülkeye giriş yapan turist sayısı, 2012'de yüzde 10 artarak 2 milyon 570 bine ulaşmıştır. Aynı yıl Türkiye'den giden turist sayısında ise yüzde 25 ile dünya ortalamasına oranla iki buçuk katlık bir artış olmuş, 101 bin Türk Vatandaşı Rusya'yı ziyaret etmiştir. Turizm Bakanlığı verilerine göre bir turistin ülke ekonomisine katkısının ortalama bin doları bulduğu göze alındığında imzalanan vize serbestliği anlaşmasının, Rusya'ya oranla çok daha fazla turizm potansiyeli olan ülkemiz için ne denli önemli olduğu net bir şekilde ortaya çıkmaktadır. Bu kapsamda 2013 yılı sonunda 4 milyonun üzerinde Rus turistin ülkemize gelmesi beklenmektedir.

Rusların tatil anlayışına değinecek olursak, Rus turistler için Türkiye kelimesinin tatil kavramıyla özdeşleştiğini söylemek mümkündür. Rus Mobaly Turizm Seyahat Acentesi, 2012 yılı içinde tatile getirdikleri 5 bin turist üzerinde yaptığı yüz yüze anket sonucunda Rusların yüzde 85'inin tatil önceliğinin deniz turizmi olduğunu tespit etmiştir. Araştırmaya göre Rus turistler, dünyada tatil yapmada birinci sırada Türkiye, ikinci sırada Mısır, üçüncü sırada Tayland, dördüncü sırada İspanya ve beşinci sırada Yunanistan'ı tercih etmektedirler. Bu tespitleri doğrulayan Kültür ve Turizm Bakanlığı verilerine göre de Türkiye, tatil tercihinde birinci sıraya yüzde 47'lik bir oranla yerleşmiştir. Ayrıca Türkiye, uygun fiyatlı, hizmet ve tesis kalitesine sahip, özgün tarihi ve kültürel değerleri olan ve medeni bir destinasyon olarak algılanmaktadır. Türkiye'de tatil yapanların yüzde 59.4'ü kesinlikle çok memnun kaldıklarını belirtirken, yüzde 5'lik bir kısım ise memnun kalmadığını ifade etmiştir. Otel kalitesi, servis kalitesi, sıcak iklim, doğal güzellikler, eğlence imkanları ve uygun fiyat avantajları, vize kolaylığı ile birleştiğinde çok daha anlamlı hale gelmiş ve 2012 verilerine de artan oranda katkı sağlamıştır. Gelen turistlerin ortalama yüzde 80'inin Haziran-Eylül döneminde geldiğini görmekteyiz. Özellikle kültür, kongre, spor, iş ve sağlık turizmi olanaklarının daha etkin bir şekilde tanıtılmasıyla deniz turizmi ağırlıklı Rus turist profilinin çeşitlendirilmesi mümkün olabilecektir.

4 Sonuç ve Değerlendirme

Yıllardan beri süregelen dünya çapındaki krizler ülkelerin ekonomik dengelerini daima değiştirmektedir. Bugün iyi denilen bir ekonominin yarın ne durumda olacağını tahmin etmek çoğu zaman yanıltıcı olabilmektedir. Konjonktürel dalgalanmalardan bir hayli etkilenen özellikle Türkiye gibi gelişmekte olan ülkeler ise kırılgan ve istikrarsız ekonomilere sahiptirler. Gerçekleşen bir krizin bu tarz ülkeleri vurması gelişmiş ülkelere nazaran kuvvetle muhtemeldir.

Gelişmekte olan ülkeler statüsündeki Türkiye için turizm başlıca gelir kaynaklarından biridir. Ülkeye sağladığı döviz girdisi, istihdama etkisi, vatandaşların gelir seviyesine olan katkısı ve alt ve üst yapı yatırımları ile ekonomiye kazandırdığı canlılık en zor ekonomik dönemlerin dahi daha az zararla atlatılmasını sağlamıştır.

Turizmi yalnızca ekonomik getirisi olan bir sektör olarak değil, aynı zamanda farklı kültürler arasında yakınlaşma ve iletişimi arttıran bir faaliyet olarak da düşünmek gerekir. Bu sosyal yönüyle de turizm dünya barışına katkı sunmaktadır. Özellikle son yıllarda Türkiye, turizmin önemini daha çok kavramıştır. Bu bağlamda turizme gerek devlet eliyle, gerekse de özel sektörü teşvik anlamında her türlü yatırım yapılmaktadır. Bu sayede

ülkenin ihtiyacı olan döviz girdisi önemli oranda sağlanarak ödemeler dengesindeki açıkları kapatma politikası başarıyla uygulanmaktadır.

Turizm gelirlerinin ülke ekonomileri içerisindeki payı her geçen gün artmaktadır. Sahip olduğu doğal ve kültürel zenginliklerden dolayı turizm potansiyeli bir hayli yüksek olan ve bugün dünya ülkeleriyle kıyaslandığında turizm gelirleri bakımından 12'nci sırada yer alan Türkiye, sektörün gelişimine verilen önemin giderek artmasıyla birlikte önümüzdeki yıllarda daha üst sıraları hedeflemektedir. Ülkeye gelen turist potansiyeli açısından ise ilk üç sırada Almanya, Rusya ve İngiltere bulunmaktadır.

Avrasya'nın en büyük ekonomisi olan Rusya, 20 milyar doları aşan ticaret hacmi ile Türkiye'nin en önemli ticari ortaklarından birisidir. Ancak iki ülke arasındaki ekonomik ilişkilere bakıldığında kıyaslanamayacak derecede bir fark olduğu görülmektedir. Bunun nedeni Rusya'ya olan enerji bağımlılığıdır ve bu anlamda Rusya ülkeler sıralamasındaki liderliğini günümüzde de sürdürmektedir. Birçok ihtiyacını kendisi karşılayabilecek kapasiteye sahip olan Türkiye'nin, söz konusu enerji kaynakları olduğunda dışa bağımlılığı ön plana çıkmaktadır. Bu kapsamda tüketilen doğalgazın yüzde 50'ye yakını bu ülkeden temin edilmektedir.

Türkiye açısından bakıldığında ise son yıllarda ülkeye gelen turist sayısının artmasına bağlı olarak turizm gelirinin de ekonomiye katkısı artmıştır. 2012 yılında turizm geliri ihracat gelirlerinin yüzde 19.2'sini oluşturmakta, böylelikle de dış ticaret açığının yüzde 34.9'unu kapatmaktadır (Turizm Seyahat Acentaları Birliği). Turizm gelirlerinin 2013 yılında da cari açığın büyük bir bölümünü kapatacağı beklenmektedir.

Son yıllarda karşılıklı ülke çıkarları çerçevesinde Rusya ile olan ikili ilişkiler genişletilmektedir. Gerçekleştirilen vize serbestliği anlaşması da bunlardan en göze çarpanıdır. Bu anlaşma, ABD ve AB ülkelerine dahi vize uygulayan Rusya'nın Türkiye'ye verdiği önemin bir göstergesidir. Hem ekonomik, hem ticari, hem de sosyo-kültürel alanlardaki işbirliği ve yakınlaşma çabaları her iki ülkeye de kazanç sağlayacaktır. Özellikle Rusya'dan gelen turistlerin bıraktıkları dövizin ülke ekonomisine katkısı göz önüne alındığında, misafirperverliği ve yatırımları sayesinde Türkiye, yaşanan tüm ekonomik krizlere ve bunların yarattığı olumsuzluklara rağmen kazançlı çıkmaya devam edecektir.

Ülkelerin Turizm İstatistikleri Bakımından Farklı Kümeleme Analizi Metotları ile Sınıflandırılması ve Türkiye'nin Bu Oluşumdaki Yeri

Classification of Countries According to their Tourism Statistics via Different Cluster Analysis Methods and the Place of Turkey in this Structure

Asst. Prof. Dr. Selay Giray (Marmara University, Turkey)

Abstract

The aim of this study is to classify the countries according to their tourism indicators via different cluster analysis methods and compare the findings. Using classical cluster analysis and fuzzy clustering together will be more appropriate to determine the World tourism structure. In this way the findings can be interpreted more detailed and comparatively. Data obtained from website of Worldbank (3 basic international tourism statistics of 159 countries for the year 2010) and findings are gained using NCSS (statistical software) 2007. According to the findings of fuzzy clustering method, Turkey belogs to a cluster which contains ABD, United Kingdom, China, Austria, France, Germany, Italy, Malaysia, Spain, Hong Kong, Russian Federation, and Ukraine. According to the findings of classical clustering method (k means), Turkey is in the same cluster with same countries except Hong Kong. Also the findings of two techniques are similar about Turkey. Such a result can be expected correspondingly grading the countries about international their tourism data in 2011. Different clustering methods findings are steady about Euroasian countries too. Except Russian Federation and Ukraine all of the other Euroasian countries are located together in same cluster depending upon two different clustering methods. In conclusion two different clustering methods provide consistent (similar) results about the classification of countries according their internatianol tourism statistics.

1 Giriş

Turizm, T.C. Kültür ve Turizm Bakanlığı tarafından "Kişilerin ikamet ettiği yer dışındaki bir yere bir yılı aşmamak üzere, boş zaman değerlendirme, iş ve diğer benzeri amaçlarla yaptıkları seyahatler" olarak tanımlanmaktadır. Turizm sektörü ise her ülke için son derece önemli olan çok yönlü bir sektör olup çeşitli yapısal özellikleriyle diğer sektörden farklılık göstermektedir. Sektörün en önemli özelliklerinden biri dünya genelinde çok hızlı gelişmesidir. Turizm sektörü istihdamı arttırıcı bir sektör olup, sektörün ülkeye gelir sağlayıcı etkisi bulunmaktadır. Bunların yanısıra turizm sektörü sosyo-ekonomik ve kültürel gelişmeyi hızlandırmakta, yabancı sermaye girişi ve döviz girdisi sağlamakta, dolayısıyla iktisadi kalkınmada önemli bir unsur olarak nitelendirilmektedir.

Turizm sektörünün her ülke için önemli olduğu belirtilmişti. Sektör, farklı gelişmişlik seviyelerinde olan ülkeler için ayrı ayrı anlam taşımaktadır. Örneğin gelişmiş ülkeler turizm sektörünün gelir etkisinden yararlanmaya çalışmakta iken gelişmekte olan ya da az gelişmiş ülkeler ise bu sektörün döviz kazandırıcı ve yeni istihdam olanakları yaratıcı gücünden faydalanmak istemektedirler. Emek-yoğun hizmet üreten bir sektör olan turizm sektörü işsizlik sorunun çözümünde son derece önemli etkilere sahip bir sektördür. (Yıldız, 2011)

Sektörün diğer sektörlerden yapısal olarak farklılaştığı bir diğer nokta da çevre dostu olmasıdır. Turizm sektörü, "bacasız fabrika" ve "açık hava fabrikası" isimlendirmeleriyle sürdürülebilir iktisadi gelişmeye katkı sağlayan son derece önemli bir sektördür. (Karataş ve Babür, 2013) Ayrıca dostluk duygularını geliştirerek dünya barışına katkı sağlayan bir sektör olduğu da genel olarak kabul görmektedir. (Önen, 2008)

Özetle turizm bugün dünya ekonomisi içinde gelir sağlayıcı faktörlerin başında gelmekte, bu sebeple büyük oranda yatırım yapılan ve gelişen bir sektör haline gelmektedir. (Aktaş, 2005) Bütün bunların bir sonucu olarak turizm bütün ülkelerin bahsedilen olumlu sonuçlarından (örneğin ödemeler dengesine olan katkısı ve sebep olduğu ekonomik canlılık) yararlanmak için çaba sarf ettikleri bir faaliyet olup, kalkınma planlarında geniş yere sahiptir. (Çuhadar, 2006)

Uluslararası turizmdeki gelişmeleri takip eden Türkiye'de turizm sektörü 1980'li yılların başından itibaren hızla gelişmeye başlamıştır. Türkiye, uluslar arası turizm pazarındaki payını gitgide arttırmıştır. (Uğuz, 2012) Dünya Turizm Örgütü verilerine göre 2011 yılında Türkiye'ye gelen turist sayısı 30 milyonun üzerinde olup, bu durum Türkiye ekonomisine yaklaşık 23 milyar dolar katkı sağlamıştır. 2011 varış istikametine göre ülkelere gelen turist sayıları açısından Türkiye 2012 yılında dünyada 6.sıradaya, Avrupa'da ise 4. sıraya yükselmiştir. 2011'de ülkelerin elde ettikleri uluslar arası turizm gelirleri açısından ise Türkiye ilk 10'da yer almamaktadır. Bu konuda ilk sırada ABD yer almaktadır. 2011'de turistlerin gittikleri yerdeki harcamaları açısından Türkiye yine ilk 10'da yer almamakta olup, bu konuda ilk sırada yer alan ülke Almanya'dır.

2020 yılında dünya turizm gelirlerinin 2 trilyon dolar civarında olacağı tahmin edilmektedir (Kaynak: Dünya Turizm Örgütü). Yakın gelecek için yapılan bu tahminin sonucunda, her ülke turizm arz potansiyeli oranında pastadan pay alma ya da payını büyütme mücadelesine girişmiştir. Türkiye'de turizm daha da geliştirilebilecek bir yapıdadır. Bu bağlamda öncelikle geniş turizm potansiyeline sahip olan Türkiye'nin turizm sektörünün dünya ülkeleri içindeki yerinin çok değişkenli istatistiksel analizler ile saptanması yararlı olacaktır. Böylece uluslararası turizm verilerine göre Türkiye'nin hangi segmentte hangi ülkelerle birlikte yer aldığı belirlenmiş olacaktır. Bu saptamanın ardından ülke bazında sektöre ilişkin daha da gelişmeye yönelik hedefler daha net ve ayrıntılı bir şekilde koyulabilir.

2 Literatür Taraması

Turizm istatistiklerinin çok değişkenli analizi konulu literatür taraması sonucunda ulaşılan bazı temel çalışmalar aşağıda özetlenmiştir:

Uğuz (2012) "Göç ve Turizm: Türkiye-Almanya Örneği" isimli çalışmasında Türkiye ve Almanya arasındaki göç ve turizm hareketliliğinin ampirik kanıtlarını araştırmayı amaçlamıştır. Bu amaçla, Almanya'ya giden göçmen sayısı ile Türkiye'ye gelen turist sayısı arasındaki ilişkiyi, VAR analizi yöntemiyle incelemiştir.

Kılıç vd. (2011), "Bulanık Kümeleme Analizi İle Ülkelerin Turizm İstatistikleri Bakımından Sınıflandırılması" adlı çalışmalarında 2007 yılı verilerini kullanarak 30 ülkeyi 9 değişkene göre standartlaştırılmış ve ham veri kümelerini kullanarak bulanık kümeleme yöntemi uygulamışlardır. Analiz sonucunda ortalama gölge istatistiği, Dunn katsayıları ve ayırma analizi ile 30 ülkenin 3 kümeye ayrıldığını görmüşlerdir.

Cengiz ve Kırkbir (2007), "Yerel Halk Tarafından Algılanan Toplam Turizm Etkisi İle Turizm Desteği Arasındaki İlişkiye Yönelik Yapısal Bir Model Önerisi" isimli çalışmalarında dört turizm etki faktörünün toplam turizm etkisi ve yerel halkın turizme desteği değişkenleri üzerindeki yapısal etkilerini, turizmin gelişimi bağlamında incelemişler, bu amaçla bir model geliştirip yapısal eşitlik modeli metodu ile test etmişlerdir. Çalışmada Bodrum'da ikamet eden 193 kişiye uygulanan anket sonuçları kullanılarak; turizmin ekonomik, sosyal, kültürel ve çevresel boyutlarının turizmin toplam etkisini farklı derecelerde belirlediği ve turizmin toplam etkisinin de yerel halkın turizme destek vermesini şekillendirdiği sonucu bulunmuştur.

Kandır, Özmen ve Önal (2007), "Türk Turizm Sektöründe Büyüme Göstergelerinin Turizm İşletmelerinin Finansal Performansına Etkisinin İncelenmesi" isimli çalışmalarında 1991-2003 yılları için regresyon modelleri yardımıyla turizm gelirlerinin milli gelire oranı ve turizm işletmelerinin finansal performansları arasındaki ilişkiyi incelemişlerdir.

Aktaş (2005), "Türkiye'nin Turizm Gelirini Etkileyen Değişkenler İçin En Uygun Regresyon Denkleminin Belirlenmesi" isimli çalışmasında 1980-2000 zaman periyodundaki yıllık verileri kullanarak çoklu doğrusal regresyon modelleri (ve zaman serisi ekonometrisi yöntemleri) yardımıyla turizm gelirini etkileyen değişkenlerin turist sayısı ve seyahat acentası sayısı olduğunu belirlemiştir.

Karaman (2000), "Balıkesir Yöresine Gelen Fransız Turist Talep Analizi" isimli çalışmasında 1998 yılı Ağustos ayında yapılan bir anket çalışması ile Fransız turistlerin Balıkesir yöresini tercih etme nedenlerini, ziyaret amaçlarını, seyahatlerini, organize biçimlerini, ortalama kalış sürelerini, ortalama harcama tutarlarını, Balıkesir yöresinde tespit ettikleri olumsuz ve olumlu izlenimleri, yöreye tekrar gelip gelmeyecekleri hakkında görüşlerini betimleyici istatistikleri kullanmak suretiyle saptamıştır.

Yürütülen yerli- yabancı literatür taraması sonucunda yapılan çalışmaları kabaca dört grupta toplamanın mümkün olduğu görülmüştür.

1. Tahmin amaçlı ve farklı tekniklerin öngörü başarı performanslarının karşılaştırıldığı çalışmalar (Ör.: "Türkiye Turizm Endüstrisinde Talep Oynaklıklarının Çok Değişkenli GARCH (MGARCH) Modelleri ile Analizi", "Turizm Talebini Tahminleme Yöntemleri, Trend Analizi, Regresyon Analizi ve Korelasyon Analizi", "Kuzey Kıbrıs Türk Cumhuriyeti'nde Turizm Sektörünün Yeri ve Ekonomik Büyümeye Olan Etkisi")

2. Makroekonomik göstergeler arasındaki ilişkilerin zaman serisi ekonometrisi yöntemleri ile araştırıldığı çalışmalar (Ör.: "Türkiye'de Ekonomik Büyüme ve Turizm İlişkisi Üzerine Ekonometrik Analiz", "Türkiye'de Turizm Gelirleri- Ekonomik Büyüme İlişkisi: Nedensellik Analizi [1963-2010]", "Turizm Gelirlerinin Çeşitli Makro Ekonomik Göstergeler İle İlişkisi: Türkiye Örneği (1992- 2011)", "Turizm Sektörünün Türkiye'nin Ekonomik Büyümesi Üzerindeki Etkisi: VAR Analizi Yaklaşımı", "Türkiye'de Turizm ve Ekonomik Büyüme Arasındaki Kısa ve Uzun Dönemli İlişkiler")

3. Belli bir il veya ilçe için yapılan anket çalışması sonucunda elde edilen verilerin analiz edildiği çalışmalar (Ör.: " Pamukkale'deki Yöre Halkının Turizmi Desteklemesi İle Turizmin Sosyo-Kültürel Etkileri Arasındaki İlişki", "Van Halkının Turisti ve Turizmi Algılama Şekli", "Turizmin Yerel Halk Üzerindeki Etkileri ve Kuşadası İlçesi Uygulaması")

4. Ülkeler arası karşılaştırma temelli çalışmalar (Ör.: "Applications of Multivariate Analysis in International Tourism Research: The Marketing Strategy Perspective of NTOs", "Turistlerin Satın Alma Kararlarındaki Kültürel Farklılıklar Türk- Alman Karşılaştırması", "Türk Turizm Talebi ve Yunanistan")

İlk üç grup kapsamında değerlendirilebilecek olan çalışmalara literatürde sıkça rastlanmıştır. Ancak dördüncü grup kapsamındaki çalışmaların nispeten sınırlı olduğu gözlenmiştir.

3 Çalışmanın Amacı ve Kapsamı

Bu çalışmanın amacı güncel verileri kullanarak dünya ülkelerinin uluslararası turizm açısından kümelenmesini incelemektir. Uygun küme yapısı çeşitli ölçütler ve farklı çok değişkenli analizlerin desteğiyle ortaya konduktan sonra, oluşan kümeler betimleyici istatistikleri yardımıyla tanımlanmış ve Türkiye'nin bu yapı içindeki yeri araştırılmıştır.

Türklerin tarihsel varoluşlarını ortaya koyan bir coğrafya olan Avrasya (Türkler Asya'nın merkezinden Avrasya'nın batı, kuzey, güney bölgelerine doğru yayılma özelliği gösteren uzun bir göç serüvenini bu coğrafyada yaşamışlardır); Avrupa ve Asya kıtalarının ortak adı kavramında kullanılmaktadır. Ancak Avrasya bunun yanısıra sosyal, kültürel, iktisadi, tarihi ve stratejik faktörlerin geri planını oluşturduğu bir biraradalık anlamına gelmektedir.

Oluşan kümelerde Türkiye'nin yeri araştırıldıktan sonra, Türkler için bir anlamda 'Atayurt' demek olan Avrasya bölgesindeki ülkelerin bu kümelerdeki dağılımı ile de ilgilenilmiş, bulgular yorumlanmıştır. (Yazıcı, 2003)

Amaç doğrultusunda kullanılabilecek yöntemlerden bulanık kümeleme analizi ve klasik kümeleme analizi (k Ortalamalar) tekniklerinin ikisinin de kullanılmasının daha yararlı olacağı düşünülmüştür. Böylece iki tekniğin uygulaması sonucunda elde edilen bulgular karşılaştırmalı olarak analiz edilebilecek, yorumlar daha detaylı bir şekilde yapılabilecektir.

Çalışma kapsamında 2010 yılı yatay kesit verileri kullanılmıştır. Veriler Dünya Bankası'nın web sitesinden elde edilmiştir. Dünya Bankası web sitesinde uluslar arası turizm istatistiklerinin üç temel grupta ele alındığı görülmüştür. İlgili göstergeler için kayıp gözlem sayıları hesaplanmış ve her bir değişken grubu için en az kayıp gözlem değerine sahip turizm göstergesi değişkeni analize dahil edilmiştir. Böylece dünya ülkeleri en az veri kaybıyla kümeleme işlemine tabi tutulabilmiştir. Yapılan ayıklamalar sonrasında 159 kayıp gözlemsiz ülke verisi ile çalışılmıştır.

Bunun yanısıra herhangi bir ülkenin turizm verilerinin karşılaştırılabilir olması için ülkenin ekonomisinin de göz önünde bulundurulması gerektiği eleştirisi yapılan literatür taraması aşamasında gözlenmiş ve dikkate alınmıştır. Dolar cinsinden ölçülmüş olan iki uluslararası turizm göstergesi değişkeni (turizm harcamaları ve turizm gelirleri), ülkelerin yine Dolar cinsinden ölçülmüş olan 2010 yılı gayrisafi milli hasılalarına (GSMH) oranlanarak analize dahil edilmiştir. Çalışmada kullanılan üç değişkenin isimleri aşağıda yer almaktadır:

Değişken 1 (x_1: Expenditures)   : Turizm harcamaları / GSMH

Değişken 2 (x_2: Arrivalsnr)   : Geliş sayısı

Değişken 3 (x_3: Receipts)   : Turizm gelirleri / GSMH

Turizm Harcaması: Ziyaret edilen ülkede kalınan süre içinde ziyaretçi tarafından veya ziyaretçi adına yapılan tüketim harcamalarıdır. Bir ülkedeki yabancı ziyaretçilerin yapmış oldukları harcamalar o ülke için turizm geliri o ülke vatandaşlarının yurtdışında yapmış oldukları harcamalar ise o ülkenin turizm gideridir. (Önen, 2008)

4 Metodoloji: Kümeleme Analizi

Çalışmanın bu kısmında, çalışma kapsamında kullanılan temel metot olan kümeleme analizi kısaca özetlenmiştir.

Çok değişkenli analiz tekniklerinden kümeleme analizinde amaçlanan gözlemlerin (birimlerin) benzerliklerine göre homojen kümelere ayrılmasıdır. Bu amaç doğrultusunda çeşitli uzaklık ölçülerinden yararlanılmakta ve kümeler oluşturulmaktadır. Analiz kapsamındaki her bir birimin yer aldığı küme bellidir. Sosyal bilimler konulu çalışmalarda kesin yorumlar yapmanın çok fazla olanak dahilinde olmadığı söylenebilir. Herhangi bir birimin atandığı küme önemli olmakla birlikte, ilgili birimin bu kümeye hangi olasılıkla atandığını da bilmek daha yararlı olacak, daha sağlıklı yorumlara ulaşmayı sağlayacaktır. Bu sebeple bulguların bulanık kümeleme analizi bulguları ile karşılaştırılarak yorumlanması önem kazanmaktadır.

Klasik kümeleme yöntemleri her bir birim için kesin kararlar alarak bir kümeye atarlarken, bulanık kümeleme analizinde her bir birimin oluşan kümelere ait olma derecesini gösteren ağırlık katsayıları hesaplanmaktadır. Bu katsayıların toplamı 1'e eşittir. Bu yöntemde bir birim için ağırlık katsayılarının toplamı her zaman 1 olmak üzere, bir birimin bir kümede olma olasılığı tüm olası kümeler arasında 0 ile 1 arasında değişmektedir. (Yılancı, 2010) Sonuç olarak birim, ait olma olasılığının en yüksek olduğu kümeye atanmaktadır. Birimlerin ağırlık katsayılarının toplam değeri için üst limit, analizdeki toplam birim sayısına eşit olmaktadır.

Bulanık kümeleme analizinin en yaygın kullanılan algoritması Kaufman ve Rousseeuw tarafından geliştirilen Fanny algoritmasıdır. Uygulanabilmesi için bütün değişkenlerin ölçek düzeyleri en azından eşit aralıklı ölçek olmalıdır. Algoritmanın amaç fonksiyonu aşağıda yer almaktadır. (Kaufman ve Rousseeuw, 1990)

$$C = \sum_{v=1}^{K} \frac{\sum_{i,j=1}^{n} u_{iv}^2 u_{jv}^2 d(i,j)}{2\sum_{j=1}^{n} u_{jv}^2}$$

Amaç fonksiyonunun minimizasyonu hedeflenmekte olup, fonksiyonda geçen simgelerin ne anlama geldikleri aşağıda yer almaktadır.

d(i,j)= i. ve j. birim arasındaki uzaklık

K= toplam küme sayısı

u_{iv} = i. birimin v kümesine olan bilinmeyen üyeliği ($u_{iv} \geq 0$ ve $\sum_{v=1}^{K} u_{iv} = 1$)

u_{jv} = j. birimin v kümesine olan bilinmeyen üyeliği

n= Toplam birim sayısı

Küme üyelikleri negatif olamaz ve bir birim için kümelere ait olma katsayıları toplamı 1'e eşit çıkmalıdır. Bu kısıtlar aşağıdaki şekilde ifade edilir:

$u_{iv} \geq 0$ ve $\sum_{v=1}^{K} u_{iv} = 1$; i=1,…, n ve v=1,…, K.

Amaç fonksiyonu bu kısıtlar altında yinelemeli bir algoritma ile minimize edilerek katsayılar matrisine (U_{nxK})ulaşılır. (Tütmez ve Tercan, 2006) Her birimin tüm kümelerde eşit üyelik katsayısına sahip olması durumunda kümeleme tamamen bulanık olarak isimlendirilir. Kümelemenin ne derece bulanık olduğu hakkında fikir sahibi olabilmek için Dunn'ın Parçalama Katsayısı hesaplanmalıdır.

F(u) = $\sum_{i=1}^{n} \sum_{v=1}^{K} \frac{u_{iv}^2}{n}$

Görüldüğü gibi bu katsayı üyelik değerlerinin kareler toplamına dayanmakta ve tüm birimlerin tüm kümeler üzerindeki üyelik değerlerini dikkate almaktadır. Dunn'ın Parçalama Katsayısı tamamen bulanık kümeleme durumunda (u_{iv} değerlerinin 1/k'ya eşit olduğu durumda) 1/k değerini alacak, kümelemenin çok net (katı) olduğu durumda ise (her bir gözlem / birime ait u_{iv} değerlerinin (v-1) tanesinin 0, 1 tanesinin 1 olduğu durum: kesin küme durumları) 1'e eşit olacaktır. Dunn'ın Parçalama Katsayısı minimum değeri 0, maksimum değeri 1 olacak şekilde normalleştirilebilir. Böylece katsayı küme sayısından bağımsız hale gelecek şekilde standartlaştırılmış olur. Normalleştirilmiş Dunn Katsayısı Bulanıksızlık İndeksi adını almakta olup, bu indeks değerinin 0 olması tamamen bulanıklığı, 1 olması ise güçlü kümelenmeyi göstermektedir. (Yılancı, 2010)

$$F_k(U) = \frac{k.F(u) - 1}{k - 1}$$

Bu katsayıya alternatif olarak Kaufman Ayrıştırma Katsayısı'ndan da yararlanılabilmektedir. Kaufman Katsayısı ve Normalleştirilmiş Kaufman Katsayısı formülleri aşağıda yer almaktadır:

$$D(U) = \frac{1}{n} \sum_{v=1}^{K} \sum_{i=1}^{n} (h_{iv} - u_{iv})^2$$

$$D_c(U) = \frac{D(U)}{1 - \left(\frac{1}{K}\right)}$$

Hesaplanan bu katsayının 0'a yakın olması güçlü kümelenmeyi göstermektedir.

Küme sayısı belirlenirken Bulanıksızlık İndeksi $F_k(U)$ değerinin mümkün olduğunca büyük olması istenirken, $D_c(U)$ değerinin ise mümkün olduğunca küçük olması istenmektedir. Bu katsayılar literatürde "Küme Geçerlilik İndeksleri" olarak da yer almaktadır. (Alpaslan, 2011) Ayrıca birimlerin ne kadar iyi kümelendiğinin belirlenmesi veya kümelerin kararlılık yapısı için Gölge İstatistiği (SC: Silhoutte Coefficient) kullanılmaktadır. Gölge istatistiği, i. birimin kendi kümesi içindeki diğer birimlerle farklılığını en yakın komşu diğer kümedeki birimlerin farklılığı ile karşılaştırmaktadır. Hesaplanan istatistik değeri -1 ile +1 arasında olup, +1'e yakın olması durumunda i. birimin doğru sınıflandırıldığı yorumu yapılır. Bu istatistik değerlerinin ortalaması Ortalama Gölge İstatistiği adını almaktadır. Bir veri setindeki kümeleme yapısının 'uygun' olarak nitelendirilebilmesi için bu ortalama değerin 0,50 olması beklenmektedir. (Kılıç ve Özbeyaz, 2010) Ortalama Gölge İstatistiği değeri denenen küme sayılarından hangisinde en yüksek olarak elde ediliyorsa, ilgili küme sayısı analiz için en uygun küme sayısı olacaktır. (Şahin ve Hamarat, 2002) Bulanık kümeleme analizinde küme sayısının belirlenmesinde en çok tercih edilen yöntem, k=2,3,4,… için analizi gerçekleştirmek, Normalleştirilmiş Dunn Katsayılarını, Normalleştirilmiş Kaufman Katsayılarını ve Ortalama Gölge İstatistiği değerlerini kontrol etmektir. Bunların sonrasında belirlenmiş küme üyelikleri ile diskriminant analizi de uygulanabilir.

5 Bulgular

Çalışmanın analiz kısmında NCSS 2007 paket programından yararlanılmıştır.

5.1 Bulanık Kümeleme Analizi Bulguları

Öncelikle uygun küme sayısı metodoloji kısmında belirtilen ölçütler yardımıyla belirlenmiştir:

Küme Sayıları	Ortalama Uzaklık	Gölge	F(U)	Ortalama $F_c(U)$	D(U)	$D_c(U)$
2	160612533,37	0,671793	0,8066	0,6131	0,0699	0,1399
3	93972640,02	0,710950	0,7551	0,6327	0,0727	0,1090
4	68131754,32	0,547865	0,6323	0,5097	0,1387	0,1849
5	54217291,78	0,534955	0,5803	0,4754	0,1612	0,2015

Tablo 1. *Uygun Küme Sayısının Belirlenmesi*

Maksimum $F_c(U)$ değerini ve minimum $D_c(U)$ değerini veren küme sayısının 3 olduğu görülmektedir.

Bulanık kümeleme analizi sonucunda elde edilen üyelik değerleri kullanılarak Normal Dağılım ve varyansların homojenliği varsayımları altında uygulanan diskriminant analizi sonucunda doğru sınıflandırma oranının %92,5 olduğu görülmüştür. Bu oranın yüksekliği de seçilmiş olan küme sayısının uygunluğunun bir göstergesi olarak alınabilir.

Bulanık kümeleme analizi sonucunda oluşan üç kümeye ilişkin betimleyici istatistik değerleri aşağıdaki tabloda yer almaktadır:

Değişken	Küme 1	Küme 2	Küme 3
X_1: Expenditures	0,0329	0,0071	0,0277
X_2: Arrivalsnr	603.000	8.611.000	26.875.000
X_3: Receipts	0,0236	0,0027	0,0149

Tablo 2. *Kümelere İlişkin Betimleyici İstatistikler*

Sonuçları yorumlamadan önce Silhouette Amount (gölge istatistiği) değerleri incelenmelidir. Bu değerler incelenmiş; hiç birinin negatif olmadığı ve çoğunun 0,5'ten büyük olduğu görülmüştür. Bu durumda sonuçların yorumlanmasında herhangi bir sakınca yoktur.

Küme 1:

1 Arnavutluk , 2 Cezayir, 3 Angola, 4 Antigua and Barbuda, 6 Ermenistan, 9 Azerbaycan, 10 Bahama Adaları, 12 Bangladeş, 13 Barbados, 14 Belarus, 16 Belize, 17 Benin, 18 Bermuda, 19 Butan, 20 Bolivya, 21 Bosna Hersek, 22 Botsvana, 25 Burkina Faso, 26 Burundi, 27 Kamboçya, 28 Kamerun, 30 Cape Verde, 31 Orta Afrika Cumhuriyeti, 32 Şile, 34 Kolombiya, 35 Demokratik Kongo Cumhuriyeti 36 Kosta Rika, 37 Fildişi Sahili, 39 Kıbrıs, 42 Dominik, 44 Ekvador, 46 El Salvador, 47 Estonya, 48 Etiyopya, 49 Fiji, 50 Finlandiya, 52 Gambiya, 53 Gürcistan, 55 Gana, 57 Grenada, 58 Guatemala, 59 Guyana, 60 Haiti, 61 Honduras, 64 İzlanda, 67 Irak, 69 İsrail, 71 Jamaika, 74 Kazakistan, 75 Kenya, 77 Kuveyt, 78 Kırgızistan, 79 Lao PDR, 80 Letonya, 81 Lübnan, 82 Lesoto, 83 Litvanya, 84 Lüksemburg, 86 Makedonya, FYR, 87 Madagaskar, 88 Malavi, 90 Maldivler, 91 Mali, 92 Malta, 93 Morityus, 95 Moldova, 96 Moğolistan, 97 Karadağ, 99 Mozambik, 100 Namibya, 101 Nepal, 103 eni Zelanda, 104 Nikaragua, 105 Nijerya, 107 Umman, 108 Pakistan, 109 Panama, 110 Papua Yeni Gine, 111 Paraguay, 112 Peru, 113 Filipinler, 116 Porto Riko, 119 Ruanda, 120 Samoa, 121 Sao Tome ve Principe, 123 Senegal, 124 Sırbistan, 125 Seyşeller, 126 Sierra Leone, 128 Slovakya, 129 Slovenya, 130 Solomon Adaları, 133 Sri Lanka, 134 St. Kitts ve Nevis, 135 St. Lucia, 136 St. Vincent ve Grenadinler, 137 Sudan, 138 Surinam, 139 Swaziland, 143 Tacikistan, 144 Tanzanya, 146 Timor-Leste, 147 Togo, 148 Trinidad ve Tobago, 151 Uganda, 155 Uruguay, 156 Vanuatu, 157 Venezüela, 159 Yemen

Küme 2:

5 Arjantin, 7 Avustralya, 11 Bahreyn, 15 Belçika, 23 Brezilya, 24 Bulgaristan, 29 Kanada, 38 Hırvatistan, 40 Çek Cumhuriyeti, 41 Danimarka, 43 Dominik Cumhuriyeti, 45 Mısır, 56 Yunanistan, 63 Macaristan, 65 Hindistan, 66 Endonezya, 68 İrlanda, 72 Japonya, 73 Ürdün, 76 Kore Cumhuriyeti, 85 Çin Makao, 98 Fas, 102 Hollanda, 106 Norveç, 114 Polonya, 115 Portugal, 117 Romanya, 122 Suudi Arabistan, 127 Singapur, 131 Güney Afrika, 140 İsveç, 141 İsviçre, 142 Suriye, 145 Tayland, 149 Tunus, 158 Vietnam

Küme 3:

8 Avusturya, 33 Çin, 51 Fransa, 54 Almanya, 62 Hong Kong, 70 İtalya, 89 Malezya, 94 Meksika, 118 Rusya, 132 İspanya, 150 Türkiye, 152 Ukrayna, 153 İngiltere, 154 ABD

Tablo 3. *Bulanık Kümeleme Sonuçlarına Göre Oluşan Kümelerdeki Ülkeler*

Birinci küme, gelen turist sayısının diğer kümelere göre en az olduğu kümedir (603.000). Buna karşın turizm gelirinin GSMH'sına oranı en yüksek olan kümedir (%2). GSMH'sının yaklaşık %3'ü turizm harcamalarına denk gelmektedir. Bu değer diğer üç kümeye nazaran en yüksek oran değeridir. Özetle turizm harcamaları oranı

en yüksek, turizm gelirleri oranı da en yüksek ancak gelen turist sayısının en düşük olduğu küme, birinci kümedir. Özetle; bu kümede yer alan 109 ülkeye gelen turist sayısı (diğer kümlerdeki ülkelere kıyasla) az ancak bu az sayıda turistin ülkeye bıraktıkları döviz miktarı yüksektir. ($n_1 = 109$)

İkinci kümede ise turizm harcamaları oranı diğer iki kümeye kıyasla en düşüktür (% 0,7). Benzer şekilde turizm gelirleri oranı da diğer iki kümeye göre daha düşüktür (% 0,2). Gelen turist sayısı (8.611.000) açısından birinci kümeden daha yüksek, üçüncü kümeden ise daha düşüktür. Yani oluşan kümeler arasında gelen turist sayısının orta olduğu anca turizm gelir ve harcama oranlarının en düşük olduğu küme, ikinci küme olup, 36 ülkeden oluşmaktadır.

Üçüncü küme, gelen turist sayısı açısından en yüksek olan kümedir (26.875.000). Çok fazla sayıda turist ağırlamasına rağmen turizm gelirleri oranı ortadır (% 1). Turizm harcamaları oranı da, turizm gelirleri oranına benzer şekilde, diğer kümelere kıyasla ortadır (% 2). Analiz sonucu oluşan bu kümede 14 ülke yer almaktadır.

Avrasya ülkelerinin çoğunun Küme 1'de yer aldığı görülmüştür. Ukrayna ve Rusya'nın ise 3 no.lu kümede yer aldığı saptanmıştır. Türkiye de Rusya ve Ukrayna ile birlikte 3. kümede yer almaktadır.

Üçüncü küme, gelen turist sayısı açısından en yüksek olan küme (ortalama 26.875.000) olup çok fazla sayıda turist ağırlamasına rağmen turizm gelirleri oranı diğer kümelere kıyasla 'orta' (% 1 civarında) olan kümedir.

Türkiye'nin turizm açısından benzer yapıda olduğu yani aynı kümede yer aldığı 13 ülke ABD, İngiltere (Birleşik Krallık), Almanya, Fransa, İtalya, İspanya, Avusturya, Çin, Hong Kong, Malezya, Meksika, Rusya ve Ukrayna'dır. Türkiye'nin 2012 yılında uluslar arası turizm istatistikleri 2011 verilerine göre ilk 10 ülkede yer aldığı hatta İngiltere'yi geçip 6. sıraya yükseldiği düşünülürse bu sonucun beklenen bir sonuç olduğu söylenebilir.

Çıktılar incelendiğinde 43 numaralı ülke olan Dominik Cumhuriyeti 'ne ilişkin olasılık değerlerinin 0,4539; 0,4786 ve 0,0675 olduğu görülmüştür. Dominik Cumhuriyeti'nin tam olarak bir kümeye atanması diğer ülkelere kıyasla zor olmuştur. Ülkenin 1 ve 2. numaralı kümelerin kesişiminde kaldığı yorumu yapılabilir.

5.2 Klasik Kümeleme Analizi Bulguları

Bulanık kümeleme analizi sonucuna paralel şekilde küme sayısını 3 olarak almanın uygun olacağı düşünülmüş ve analiz 3 küme oluşacak şekilde uygulanmıştır. Yine sonuçlar diskriminant analizi ile desteklenmek istenmiş; diskriminant analizi ile belirlenmiş 3 kümeye ilişkin üyelik değerleri kullanılarak gerçekleştirilecek bir analiz sonucunda yüksek bir doğru sınıflandırma elde edilip edilmeyeceği kontrol edilmiştir. Küme üyelik değerleri yardımıyla, normallik ve homojenlik varsayımı altında uygulanan diskriminant analizi sonucunda doğru sınıflandırma oranı %98,1 olarak elde edilmiştir. Bu oranın oldukça yüksek olduğu görüldükten sonra analizler sonucu elde edilen bulguların yorumlanması aşamasına geçilmiştir.

Değişken	Küme 1	Küme 2	Küme 3
X_1: Expenditures	0,0768	0,0212	0,0196
X_2: Arrivalsnr	2.563.917	3.073.943	37.640.920
X_3: Receipts	0,2422	0,0415	0,0274

Tablo 4. Kümelere İlişkin Betimleyici İstatistikler (k-ortalamalar)

24 ülkeden oluşan birinci küme, gelen turist sayısının diğer kümelere göre en az olduğu kümedir (2.563.917). Buna karşın turizm gelirinin GSMH'sına oranı en yüksek olan kümedir (yaklaşık %24). GSMH'sının yaklaşık %7'si turizm harcamalarına denk gelmektedir. Bu değer diğer üç kümeye nazaran en yüksek oran değeridir. Özetle turizm harcamaları oranı en yüksek, turizm gelirleri oranı da en yüksek ancak gelen turist sayısının en düşük olduğu küme, birinci kümedir.

122 ülkeden oluşan ikinci kümede turizm harcamaları oranı diğer iki kümeye kıyasla ortadır (%2). Benzer şekilde turizm gelirleri oranı da diğer iki kümeye kıyasla ortadır (%4). Gelen turist sayısı açısından birinci kümeden daha yüksek, üçüncü kümeden ise daha düşüktür (3.073.943). Yani oluşan kümeler arasında gelen turist sayısının, turizm gelir ve harcama oranlarının orta olduğu küme, ikinci kümedir.

13 ülkeden oluşan üçüncü küme ise gelen turist sayısı açısından en yüksek olan kümedir (37.640.920). Çok fazla sayıda turist ağırlamasına rağmen turizm gelirleri oranı en düşüktür (%2). Turizm harcamaları oranı da, turizm gelirleri oranına benzer şekilde, diğer kümelere kıyasla en düşüktür (%1).

Kümeleme analizi kapsamındaki değişkenlerin istatistiksel anlamlılığı kümeleme analizindeki ANOVA tablosuyla incelenebilir:

Değişkenler	sd_1	sd_2	GAKO	GİKO	F-ORAN	Prob. (Sig.)
Expenditures	2	156	3,166805E-02	2,526112E-04	125,36	0,000000
Receipts	2	156	0,4173497	9,618066E-03	43,39	0,000000
Arrivalsnr	2	156	7,168927E+15	4,086011E+13	175,45	0,000000

Tablo 5: Kümeleme Analizi'nde Varyans Analizi Tablosu

Görüldüğü gibi 3 değişken de kümelemede istatistiksel olarak anlamlı bulunmuştur. (prob.<0,05) Kümelerde yer alan ülkeler tablosu aşağıda yer almaktadır.

Küme 1:	Küme 2:	Küme 3:
1, 4, 10, 13, 18, 30, 39, 62, 73, 78, 81, 82, 84, 85, 90, 92, 93, 120, 125, 127, 130, 135, 146, 156,	2, 3, 5, 6, 7, 9, 11, 12, 14, 15, 16, 17, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 31, 32, 34, 35, 36, 37, 38, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 52, 53, 55, 56, 57, 58, 59, 60, 61, 63, 64, 65, 66, 67, 68, 69, 71, 72, 74, 75, 76, 77, 79, 80, 83, 86, 87, 88, 91, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 119, 121, 122, 123, 124, 126, 128, 129, 131, 133, 134, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 147, 148, 149, 151, 155, 157, 159	8 (Avusturya), 33 (Çin), 51 (Fransa), 54 (Almanya), 70 (İtalya), 89 (Malezya), 94 (Meksika), 118 (Rusya), 132 (İspanya), 150 (Türkiye), 152 (Ukrayna), 153 (Birleşmiş Krallık), 154 (ABD),

***Tablo 6.** k Ortalamalar Kümeleme Sonuçlarına Göre Oluşan Kümelerdeki Ülkelerin Numaraları*

k ortalamalar kümeleme analizi bulguları incelendiğinde, bulanık kümeleme analizi bulgularına benzer şekilde Avrasya ülkelerinin çoğunun aynı kümede yer aldığı görülmüştür (Küme 2). 2. küme profil olarak "oluşan kümeler arasında gelen turist sayısının, turizm gelir ve harcama oranlarının orta olduğu küme" şeklinde tanımlanmıştı.

Yine bulanık kümeleme analizi bulgularına benzer şekilde Avrasya ülkelerinden Ukrayna ve Rusya'nın diğer Avrasya ülkelerinden ayrılarak başka bir kümede yer aldığı (Küme 3) görülmüştür. Türkiye de Rusya ve Ukrayna ile birlikte bu 3. kümede yer almaktadır. 13 ülkeden oluşan üçüncü küme gelen turist sayısı açısından en yüksek olan küme (ortalama 37.640.920) olup çok fazla sayıda turist ağırlamasına rağmen turizm gelirleri oranı diğer kümelerin ortalama oranlarına kıyasla en düşük (%2) olan küm şeklinde tanımlanmıştı.

Türkiye'nin turizm açısından benzer yapıda olduğu yani aynı kümede yer aldığı 12 ülke ABD, Çin, Fransa, Almanya, İtalya, Malezya, Meksika, Rusya, İspanya, Ukrayna, İngiltere ve Avusturya olarak belirlenmiştir. Klasik kümeleme bulgularının bulanık kümeleme analizi bulgularına paralel olduğu görülmektedir. Türkiye ile aynı kümede yer alan ülkeler aynı çıkmıştır. Sadece bulanık kümeleme analizi sonucunda elde edilen bulgularda Hong Kong'un da bu kümede yer aldığı görülürken, klasik kümeleme analizi sonucunda bu ülke küme değiştirmiş, Türkiye ile aynı kümede yer almamış, 1. kümede yer aldığı görülmüştür.

6   Sonuç

Amacı dünya ülkelerinin uluslararası turizm istatistikleri açısından kümelenmesini incelemek ve Türkiye'nin yerini irdelemek olan bu çalışmada, bulanık kümeleme ve klasik kümeleme (k ortalamalar) analizleri uygulamasıyla 159 ülke uluslar arası turizm istatistikleri baz alınarak sınıflara ayrılmıştır. Sınıf (küme) sayısı metodolojide açıklanan çeşitli ölçütler yardımıyla 3 olarak belirlenmiştir. Bu tespit diskriminant analizi ile de desteklenmiştir. Analiz kapsamında kullanılan 3 değişkenin de kümelemede istatistiksel olarak anlamlı olduğu görülmüştür. Oluşan kümelerin betimleyici istatistik değerleri yardımıyla küme profilleri belirlenmiştir.

Elde edilen bulgular incelendiğinde Türkiye'nin her iki metot uygulaması sonucunda da aynı ülkelerle aynı kümede yer aldığı görülmüştür. Benzer şekilde her iki metot uygulaması sonucunda da Avrasya ülkelerinin çoğu aynı kümede yer almıştır. Ve yine her iki teknikte de Rusya ve Ukrayna diğer Avrasya ülkelerinden ayrılarak turizm açısından nispeten daha olumlu olduğu söylenebilen bir kümede yer almışlardır. Türkiye de her iki kümeleme analizi tekniğinde de bu kümede yer almıştır. Bu küme kapsamında dünyanın uluslar arası turizm istatistikleri açısından ilk 10 ülkesinde yer alan çoğu ülke bulunmaktadır.

Bulanık kümeleme analizi sonucunda Türkiye'nin turizm açısından benzer yapıda olduğu yani aynı kümede yer aldığı 12 ülkenin ABD, İngiltere, Almanya, Fransa, İtalya, İspanya, Avusturya, Çin, Malezya, Meksika, Rusya ve Ukrayna olduğu belirlenmiştir. Klasik kümeleme analizi bulgularına göre ise bu kümeye Hong Kong da dahil olmaktadır. Türkiye'nin 2012 yılında uluslar arası turizm istatistikleri 2011 verilerine göre ilk 10 ülkede yer aldığı hatta İngiltere'yi geçip 6. sıraya yükseldiği düşünülürse bu sonucun yapısal olarak beklenen bir sonuç olduğu söylenebilir.

Bunların yanısıra bulanık kümeleme analizi yardımıyla elde edilen küme üyelik değerleri incelenmiş ve iki kümenin kesişiminde kalan bir ülke olduğu (Dominik Cumhuriyeti) tespit edilmiştir.

Sonuç olarak çalışmada birbirlerini tamamlayacak şekilde kullanılan iki farklı kümeleme analizi metodunun tutarlı sonuçlar verdiği görülmüştür. Türkiye, uluslar arası turizm verileri itibarı ile dünya ülkeleri içinde son derece önemli bir konumdadır. Gelen kişi sayısı çok yüksek olmakla birlikte gelen ziyaretçilerin yüksek oranda harcama yapmadıkları dikkat çekmektedir. Önümüzdeki yıllarda alternatif turizm çeşitlerine de daha çok ağırlık verilmesi yoluyla olumlu gelişmeler yaşanabilir.

Endüstri Mirasının Ekonomiye Kazandırılması: Toronto Distilery District Dönüşüm Örneği

Benefiting from Industrial Heritage: Toronto Distilery District Urban Transformation Example

Assoc. Prof. Dr. Sülün Evinç Torlak (Pamukkale University, Turkey)

Abstract

It is a common fact that the confinement and to become unfunctional of the historical factories due to they have remained behind of technological improvement, not been managed effectively and polluted to the environment. However, their falling into disuse the demolition and the destruction of these buildings cannot be accepted. A lot of factories in Türkiye that have been able to reach today from the industrial background had been demolished for their land value, and a few of them had been re-functioned by transforming. These plants as contributes to the economic development of the countries and bears the stamp of the past, also could be re-evaluated and transferred to future generations by preserving their original identities. With the transformation of a historical plant, not only an industrial heritage would be protected but also this act would contribute to the economic development and cultural significance of the urban, and improve the quality of life. On this issue, there are lots of examples in Western countries. In this study, a succesful transformation sample from Canada-Toronto has been handled. In Distillery Region where has a significant role in the establishment, enrichment and physical embodiment of the city of Toronto, the regeneration/transformation process has been achieved thus the region has been redounded to tourism industry. In the study, the development of Distilery and its meaning for the urban is stated, the transformation process and its effect on urban is discussed and at this issue some suggestions are made while determining the deficiencies in Türkiye.

1 Giriş

Tarihi fabrikaların; teknolojik açıdan geri kalmaları, verimli işletilememeleri, hantal görünümleri ve çevreyi kirletmeleri gibi nedenlerle işlevlerini yitirip, kapatılmaları tüm dünyada karşılaşılan bir durumdur. Ancak, işlevini yitiren bu yapıların bilinçli olarak tahrip edilmesi kabul edilir bir yaklaşım değildir. Ülkemizin, endüstri geçmişinden, günümüze ulaşan tesislerin büyük bir kısmı arsa değeri önde tutularak yıkılmıştır. Bir kısmı da terk edilmiş, harap olmuştur. Çok azı dönüşüm geçirerek yeniden kazanılmıştır. Ülkelerin ekonomik gelişimine katkı sağlayan bu tesisler, geçmişin izleri, yapıların özgün kimliklerini korunarak, yeniden değerlendirilebilir, gelecek kuşaklara aktarılabilir. Eski bir tesisinin, dönüşümü uygulaması ile sadece endüstri mirası korunmayacaktır, Ayni zamanda kentin ekonomik gelişimi, kültürel önemi, yaşam kalitesinin artmasına da katkı sağlanacaktır. Bu konuda Batı ülkelerinde önemli örnekler verilmektedir.

Bu çalışmada, eski tesislerinin dönüşüm uygulaması için öneri geliştirmede yararlı olabilecek, başarılı bir örnek aktarılmaktadır. Toronto- Distilery District dönüşüm uygulaması analiz edilmektedir. Toronto Kentinin kurulması, zenginleşmesi ve fiziki şekillenmesinde önemli rol oynayan, bir dönem çöküntü bölgesi olan Distilery, bir dönüşüm uygulaması ile turizm endüstrisine kazandırılmıştır. Çalışmada kronolojik olarak Distilery'nin gelişimi ve kent için taşıdığı anlam verilmiş, yeni uygulama ve bunun kentte etkisi tartışılmış, öneriler geliştirilmiştir. Kompleksin gelişimi ve dönemsel koşullar ile ilgili bilgiler; dönem gazetelerinden, internet sitesinden ve tezlerden yararlanılarak derlenmiştir. Kentte yarattığı etki ile ilgili veriler dönemsel haritalar üzerinden aktarılmıştır. Alan, çeşitli zamanlarda gözlenmiş, rastgele seçilen kişilerin Alan hakkındaki görüşleri alınmış, bu görüşlerden çalışma kapsamında yararlanılmıştır.

2 Eski Endüstri Tesislerinin Dönüştürülmesi

2.1 Endüstri Mirasının Dönüştürülmesi

Endüstri Bölgelerinin Dönüşümü; 20'nci yy sonu işlevsizleşen sanayi tesisi alanlarının yeniden değerlendirme girişimidir (Yıldırım, 2006:7). Kent için sorunlu hale gelen bu alanları, sağlıklı ve yaşanabilir hale getirmek için dönüşüm projeleri üretilip, uygulanır. Dönüşüm projeleri ile zamanla eskiyen, terkedilen, değer kaybına uğrayan, köhneleşen bu kent alanları, günün sosyo ekonomik, fiziki koşullarına uygun olarak yeniden canlandırılır ve kente kazandırılır (Özden,2000:257). Batı'da amaç, kent ekonomisini canlandırıp, istihdam alanı oluşturmak, yaşam kalitesini arttırmaktır. Türkiye'de endüstri alanları, rant paylaşım aracı olarak görülmektedir. Miras Alanlarının tarihi-kültürel değerinden çok, kentsel toprakların değişim değeri öne çıkmaktadır.

2.2 Tarihsel Süreç

1960'li yıllarda Batılı Ülkelerde farklı bir kentleşme süreci başlar. İngiltere başta olmak üzere, Avrupa ve Amerika kentlerinin merkezlerinde yer alan sanayi tesisleri kapanır. Üretim biçimleri değişmiştir, daha geniş

alanlara gereksinim vardır. Arsa fiyatlarının yükselmesi, trafiğin artması ve güvenliğin azalması vb nedenlerle büyük şirketler sıkıştıkları merkezi alanları terk edip, gelişen ulaşım sistemi sayesinde kent dışına geniş, ucuz alanlara taşarlar (Özdemir-a, 2010:4). Kent içi "sanayisizleşme" sürecine girilir. Bu kaçışa gelir düzeyi iyi olan kesimde eklenir, kentin sıkışık alanlarında banliyölere geçerler. İstihdam kent dışındaki kasabalara kayar. Kent merkezleri; üretim, birikim ve refahın paylaşım merkezi olma canlılığını yitirir. Merkez çevredeki işçi mahalleleri ve yaşam alanları da gözden düşer. Merkezler, dar gelirlilerin yaşam alanlarına dönüşür. Merkezin kayması, kentleri yıpratır, kentlerin gelirleri azalır. Merkezde oturan dar gelirliler, gereksinimlerini karşılayamaz hale gelir. Terk edilen sanayi ve konut alanları sürekli yıpranır. Kent merkezlerinde mekansal sorunların yanı sıra, hırsızlık, çetecilik, uyuşturucu vb sosyal sorunlar da artar. Atıl fabrikaları temizleme ve kent mekânını değerlendirme girişimi başlar. "Buldozer Dönemi"diye atlandırılan bu dönemde dönüşüm projelerinin esası, kentin boşalan, atıl ve çöküntü alanlarının temizlenmesidir.

1970'li yıllarda, kentler genişlemiş büyümüştür. Kurulurken kentlerin çeperinde yer seçen endüstri yapıları, artık kent içinde kalmıştır. Kent içinde ise boş alan kalmamış, arsa değerleri oldukça yükselmiştir. Kentlerin nüfusları artmış, kent halkının artan ve güncel yaşam koşullarına göre çeşitlenen ihtiyaçlarına yanıt verecek arsa stoku tükenmiştir. Bu durumda kent yönetimleri ve yatırımcılar açısından terk edilen sanayi tesislerinin arsaları çok caziptir. Kentin yaşam kalitesini arttırma, alt yapısını iyileştirme, ekonomik gelişim, girişimciliği ve istihdamı arttırma, mekansal ve sosyal sorunları gidermek üzere temizlenen endüstri bölgelerinin değerlendirilmesi süreci başlar, dönüşüm projeleri uygulanır. "Yaratıcı yıkım" diye atlandırılan yaklaşımın esası, dönüşüm sonrası bölgenin değer kazanmasıdır. Dönüşüm uygulamaları endüstri bölgelerinin temizlenmesi ve civarında yaşayanların kentten uzaklaştırılması "soylulaştırma" şeklinde gelişmiştir. Ancak bu yenileme sürecine tepkiler artar. Refah devleti uygulamalarının etkisi ile 'yumuşak kentsel yenileme' hareketi başlar (Almanya-Kreuzberg örneği). Dönüşümde, fiziksel yapılaşmadan çok sosyal, ekonomik, kültürel yapı önemsenir. (Yiğitcanlar,2001:56). Endüstri alanları yenilenirken; verimliliği arttırmak, yatırımları büyütmek, istihdam yaratmak vb ekonomik amaçlar yanısıra sıkıntıları gidermek, refahı arttırmak, eşitsizliği azaltmak, sosyal adalet sağlamak, suç oranını ve sınıfsal ayrımları azaltılmak gibi sosyal amaçlar da hedeflenir.

1980'li yıllarda ekonominin merkezleri kentlerdir. Yaşanan, Küresel yeniden yapılanmanın odağında kentler yer alır. Teknolojik değişim, üretim sisteminin dünyaya yayılarak parçalanması, finans-hizmet iletişim, ulaşım sektörlerinin parlaması, kentlerde köklü dönüşümlere neden olmuştur. Ekonomik- sosyal yapı, yaşam tarzları farklılaşır, kent mekanı da dönüşür, tüm dünyada belirgin kentsel yenilenme başlar ve dönüşüm, bir süreç olarak kabul edilir. Tüm Avrupa kentlerinde, Amerika'dan esinlenerek büyük iş alışveriş merkezleri, kongre merkezleri, spor tesisleri gibi emlak piyasalarını tetikleyecek, yatırımcı ve turistleri çekmeyi hedefleyen emlak eksenli büyük projeler uygulanır (Özdemir-a, 2010:6). 1981 Avrupa Konseyi, "Kentsel Yenileme İçin Avrupa Kampanyası" başlatır. Kampanya süresince, pek çok Avrupa kentindeki endüstri bölgeleri yenilenir. Yeniden yapılanma üzerine bilimsel çalışmalar başlar. Kentler arasında rekabet artmıştır. Yerel birimler sürekli hiç denenmemiş yaratıcı projeler geliştirir ancak, her projenin taklit edilmesi ile her kent bir birine benzemeye başlar, her kette benzer kent parçaları ortaya çıkar (Özdemir-a, 2010:8). Mekânsal yenileme, kentler arasında rekabette bir avantaj olmaktan çıkar. Tarihi ve kültürel miras ile ekonomik gelişme arasındaki bağın önemi anlaşılır, "koruma" kavramı öne çıkar (Karadağ, 2008). Kentlerin tarihi kimlikleri ve bunun izlerini taşıyan mekanlar önem kazanır.

2000'lerde endüstri mirasını dönüştürme kavramının içeriği ve etkisi genişler, Bugünkü anlamını kazanır. Bu dönemde başta kent insanı olmak üzere, herşey dönüşüm kapsamına girmiştir. Kent insanı; kent mekânı, kent kültürü, kent yaşamı ile birlikte yeniden yapılandırılır. "Bütünleşik Dönüşüm" diye adlandırılan yaklaşımla, ekonomik, toplumsal, çevresel faktörlere dayalı "sürdürülebilir kent"ler gelişimin aracı olarak görülür. Sadece, fiziksel mekân düzenlenmemekte, aynı zamanda halkın katılımı sağlanıp, kentin yeniden canlandırılması ve "kentte kimlik" kazandırmak hedeflenmektedir. Kentsel kimlikler tanımlanırken, kentlerin geçmişi ve bunların mimari izleri, yani kentin varolan kimliğini koruması büyük önem taşır. Kentsel sürdürülebilir en önemli unsurdur, bunu sağlanmak için gelecekle bağları kurulurken, kentlerin geçmişle ilgili bağları da canlandırılmaktadır. Dönüşüm günün koşullarına göre düzenlenirken, tarihi yapılara hassasiyet ön plana çıkar.

2.3 Endüstri Mirası Dönüştürme Yöntemleri

a) Yenileme: En radikal dönüşüm yaklaşımıdır. Temel anlayış eskiyi tamamen yıkıp, farklı işlev için yeniden inşa etmek, mekanı arsa olarak değerlendirmektir. Rantı değeri, yaşam kalitesi düşmüş, riskli hale gelmiş alanlara yeni imar hakları verilerek, rant ve yaşam kalitesini yükseltilir. Yönetem, Türkiye'de tercih edilmektedir. Arsalar, spekülatif amaçlı el değiştirmektedir. Özel girişimci için cazip, karlı bir metottur.

b) Sağlıklaştırma: Yıpranan, işlevlerini yerine getiremeyen, alt yapısı yetersiz, ancak özgün niteliğini kaybetmemiş çevrenin iyileştirilip, tekrar sağlıklı ve değerli hale getirilmesi, yapıların korunup restore edilmesidir. Hizmet sunmak için sağlıklaştırma, gelir için yenileme tercih edilir.

c) Koruma: Tarihi, mimari, kültürel değer taşıyan, işlevlerini yerine getirebilen bölgelerin korunması yaklaşımıdır. Bu yöntemle tarihi ve mimari mirası değerlendirmek üzere; yeni yapılanma koşulları saptanır,

yapılar güçlendirilir, restarasyon çalışmaları yapılır, alt yapı eksikleri giderilir, açık alanlar düzenlenir, çevre standartları yükseltilir, alana/ bölgeye farklı işlevler verilir.

d) Soylulaştırma: Toplumun geçmiş sosyal, ekonomik koşulları, kültür değerlerini yansıtan fiziksel yapının, günün değişen koşulları altında yok olmasına engel olma, bu yapının çağdaş gelişmelerle bütünleştirilerek yaşatılmasıdır. Soylulaştırma da dönüşüm geçiren alanın kullanıcıları değişir, daha üst gelir düzeyi alana yerleşmektedir. Böylece; alanın kimliği değişir,yeni kullanıcı ile bakım, çevresel nitelik ve yaşam kalitesinin yükseltilir, ancak yöntem sosyal soruları beraber getirmektedir. Yeni kullanıcı eski kullanıcı birlikte bölgede yaşasa da, eski kullanıcılar farklı bölgeye taşınsa da hukuki ve sosyal sorunlar yaşanmaktadır.

İki yollu vardır: 1. Tarihi alanlara, yeni işlev kazandırmak; 2. Tarihi alanda yaşayan kitleyi değiştirip ekonomik yaşanabilirlik sağlamak.

e) Bütünleştirme: Mekânın fiziki, ekonomik, toplumsal, çevresel boyutlarına ek dönüşümün; yasal, kurumsal, örgütlenme, süreçlerini bütünleşik ele alan yaklaşımdır. Çok aktörlü ve sektörlü dönüşüm süreçleri kabul görür. Yöntemde alanın sakinleri bölgede kalır, dönüşüme katkıda bulunur. STK güçlenir, ortaklıklar etkin olur. Yapılaşmaya dokunmadan, bölgeye yeni binaların yapılması yöntemi ile kent kimliği korunurken, mevcut binaların yanına yeni binaların katılımıyla zengin bir çevre oluşturulur.

3 Toronto - Distilery District Dönüşüm Uygulaması

3.1 Alanın Tanıtımı

Ontario Eyaletinin başkenti Toronto, Kanada'nın en büyük kentidir. Kentin, nüfusu yaklaşık 6 milyondur (wikipedia.org, 2013). Dünya kenti Toronto, Ülkenin ekonomik merkezidir. Kent bir kültür, sanat, eğitim, turizm merkezidir. Kent aynı zamanda ulaşım, haberleşme, bilgi teknolojileri ve tıbbı alanlarında oldukça gelişmiştir. Başta film festivali olmak üzere, dünyanın önde gelen sanat festivallerine ev sahipliği yapar. Güvenli olması, temiz bir çevreye sahip olması, iş bulma olanakları ve üst düzey yaşam standartları ile her yöreden göç alır. 2012'da dünyanın "en yaşanılabilir" dördüncü kenti seçilmiştir.[4] Kentinin bu özellikleri kazanımında, zenginleşmesinde ve fiziki formunun gelişiminde, Distilery District (Damıtımevi Bölgesi) büyük rol oynamıştır.

Distilery, Toronto Kent Merkezi'nin doğusunda yer alan, olağanüstü mimarisi ile eşsiz bir endüstri yerleşimidir. 1832 yılında kurulan sanayi sitesi, inişli çıkışlı gelişim süreci geçirmiş, yel değirmeni ile başlanan iş, dünyanın en büyük içki üretim merkezine dönüşmüştür. Toronto'nun kuruluşuna ve gelişimine yön vermiştir. Uzun bir dönem, çeşitli şekilde ve ölçekte Kentti hatta Ülkeyi etkilemiştir. Bir dönem çöküntü bölgesi olan Alan, 2003'de yeniden canlandırılarak, Kanada'nın önde gelen turizm merkezlerinden biri haline gelmiştir.

3.2 Tarihsel Gelişim

1830 da İrlanda'dan Kanada'ya Göç eden genç Worts, Ontorio Körfezi kenarında eniştesi Gooderham'la birlikte yel değirmeni inşa ederek, öğütme işine başlar. (G&W) ortaklığı kurulur. (Careless,1984) Toronto küçük bir yerleşimdir, körfez kıyısı boştur (Goad,1890). İnsanlar kuzeyde çiftliklerde yaşamaktadır. İlk olarak değirmeni kentte bağlayan, zamanla kentin en önemli caddesi olan toprak yol açılır- Değirmen Önü Caddesi. Öğütme süreci sonucu oluşan atıkları değerlendirmek üzere sığır besleme işi başlatılır (Shuttleworth, 1924). Değirmenin etrafı, ahırlar, süt ve et tesisleri ile dolar. Çiftlik çalışanlarının evleri Körfez kenarında yerleşim yeri oluşturur. Değirmen, kentin sınırını belirlemiştir. Kentin Güney sınırı için "Yel Değirmeni Hattı" tabiri kullanılır (Boulton, 1858).

1840'da hasat artışı hat safhadadır, artığı alkole dönüştürüp, satmaya karar verilir. İçki işi tutar, değirmenin önüne içki satış yeri ve pub eklenir. Mekân, Kentin en popular yeri haline gelir. G & W Kenttin en önde gelen Şirketidir. Şirket, Toronto'ya en fazla katkısı olan kurum ilan eder (Distillery Heritage Website). G & W viskide başarıdır, Kanada'nın yerel viskisi haline gelir. G&W, Ülkenin vergi rekortmeni olur (G&W Heritage Plan Report,1994:4). 1846 İşletmenin önüne İskele yapılır, Liman kentlerine satış başlar. 1850 İngiliz İmparatorluğu'nun en büyük içki üreticisi ve satıcısıdır (G&W Heritage Plan Report,1994:4). Üretim artınca yeni damıtım evi gerekir. Alkol yanıcı bir malzemedir. Alandaki binalar ahşap yapılmıştır. Dayanıklı yapılar gereklidir. İrlandalı, mimar David Roberts Sr. yeni Damıtım evini kireçtaşından tasarlar. Distilery inşaatı, 1859 başlar, 1861 hizmette açılır (Armstrong,1869). Binaya yapı malzemelerinin taşınabilmesi için Distilery'in önündeki iskele büyütülür. Gemilerle milyonlarca galon içki taşınmaktadır. 1856 Kentte Grand Trunk Demiryolu gelir, uzatma hattı Distilery'den geçer. Muazzam genişleme getirir. Kıta Ülkelerine Montreal, Halifax, New York, Rio, Buenos Aires, Güney Amerika'ya satış yapılmaktadır.

1870 G & W dünyanın en büyük içki üreticisidir. Tüm alkol türleri üretilmekte, konserve ve süt tesisleri devam etmektedir. 1886 Kraliçe Victoria madalya ile ödüllendirir (G&W Heritage Plan Report,1994:5). 1885 alkolü iki yıl bekletme Yasası çıkar (G&W Heritage Plan Report, 1994:4). Depolama acil mesele haline gelir. Roberts ardı ardına malt ve fıçılama kompleks, saf alkol kompleksi, tank, varil, raf evleri inşa eder. Distilery birçok sokağı olan büyük bir komplekse dönüşmüştür. Binaların karakteri taş Distilery'den farklıdır, Viktorian Tarzı kırmızı tuğladandır. Robert'in ölümünden sonra oğlu Roberts Jr işi devralır. Asıl büyüme onun döneminde yaşanır. Alana inşa edilen son Viktorya Bina (1895) Yangın Pompa Binası olur. Binaların tarzı; fonksiyonel, büyük, pahalı hoş

tezatları ve uyumu sergiler. İnce detaylı, yeni kırmızı tuğla binalar, yeni üretim süreçlerini, gelişen teknolojiyi ve işlemleri yansıtır. Zamanla, binalar hem fiziksel, hem de fonksiyonel olarak bazı değişikliklere uğrar ancak, mimari bütünlük ve inceliği korunmuştur. Kent İşletmenin etrafında gelişir. Kentin önemli binaları idari ve ticari yapıları, bu bölgede yer seçer. Mimari tarz olarak Site, Kentin diğer binalarını etkilemişi Viktorian Mimari kentte hakim olmuştur.

İki olay şirketin sonunu getirir. Dünya Savaşları (I. 1914-1918 ve II. 1939-1945) ve İçki Yasağı (1916- 1920). I. Dünya Savaşında üretim, patlayıcı bileşenleri aseton ve keton üretimine dönüştürülür. İngiliz Hükümetine üretim yapılır. İşletme ekonomik olarak sarsılmasa da, pazar kaybedilmektedir. Asıl değişim İçki Yasağı ile gelir, üretimi durma noktasına gelir. Şirket bir daha eski konumuna dönemez, tekrar, tekrar satılır. 1930 antifriz üretimi başlar. Tek kullanımlık antifriz üretilir. Dünyanın en büyük antifriz üreticisidir. 1934'de Toronto da bardakta içki izne bağlanır, bu İşletme için yeni bir darbedir. Yavaş yavaş, içki üretim kesilir. Rom ve endüstriyel alkoller ana ürün haline alır. 1990'de 158 yıl sürekli üretim yapan Distilery'de üretime sona verilir, Alan tamamen kapatılır (Lakey,1990:A2). Alan artık, kent halkı tarafından tercih edilen bir bölge değildir. Kentin merkezi yer değiştirmiş, önemli yapılar batıya kaymıştır. Mimari tarz farklı anlayışların etkisi altına girmiştir. Distilery, yeni bina eklenmez, olanlar işlev değişimine göre tadil edilir. Tamamen kapanıca, yıkıntı haline gelir. Alan tarihi sit bölgesi olarak tescil edilir.

90'larda Hollywood, Distilery keşfeder. Distilery, Kanada birinci, dünyada Hollywood'dan sonra ikinci büyük film setidir (Goddard, 2002:10). Richard Gere, Meg Ryan, Russell Crowe gibi ikonların rol aldığı, Oskarlı büyük bütçeli yapımlara fon olur. Three Men and a Baby, The Hurricane, X-Men, Dracula, Don't Say a Word, Chicago, Cinderella Man, Alanda çevrilen baş yapıtlardan bazılarıdır (Distillery District, 2006). Film sektörünün mekânı kullanması binaların yıpranmasını bir sure engellemiştir. Kentin sinema sektörü ile birlikte anılmasına neden olmuş, dünyanın önde gelen festivalinin Toronto film festivalli, nüvesi atılmıştır. Sinema sektörü birçok sanatçının kentte gelmesini sağlamıştır. Kentin kültür ve sanat açısından gelişimine ivme kazandırmış, bu kentsel mekân kullanımına yansımıştır (Goddard, 2002:10). Kentte Hollywood yıldızlarının akın etmesi, uzun dönem kentte kalmaları, onların yaşamlarına uygun standartlarda yerleşim yerlerinin ve yaşam alanlarının oluşmasına, lüks-kule evlerin, otellerin yapılmasına neden olmuştur.

3.3 Distilery District Dönüşüm Uygulaması

2000'li yıllarda Distilery tekrar unutulur. Victoria Binaları harap olmaktadır. Muhteşem, sanayi sitesinin geleceği hakkında endişeler vardır. Victoria kumaş üretimi yapılması gibi alanın kullanımı ve canlandırılmasına yönelik çeşitli öneriler geliştirilir. Film platosu olarak kullanım, Distilery gündeme getirmiş, pek çok kişi izledikleri filmin mekânlarını görmek arzusu ile Alanı ziyaret etmeye başlar. Yeni sahipleri (Dundee Realty Coorporation) Alanın, sanat ve kültür merkezi olarak değerlendirilmesi kararını alır. Amaç; kentin gurur duyacağı, insanlarda tutku oluşturacak bir yer sağlamak; dinamik, romantik, rahatlatıcı atmosferleri birleştirmektir. Projenin öngörüsü; yaratıcı beyinleri (sanatçı, esnaf, girişimci, işadamı) bir araya, birbirlerine ilham verebilir hale getirmektir. (McClelland, 2005: 20-25).

2003 açılan Distilery için yeni bir dönem başlar. 13 dönümlük bir yerleşimde, 47 bina restore edilir, 10 sokak ve bir meydan yaya alanı olarak düzenlenir. Distilery, kentinin en seçkin mahallelerinden biri, Ontario'nun en canlı turistik alanına dönüşmüştür. Tarihi merkez, bugün Kanada'nın önde gelen sanat, kültür, eğlence hedefi olarak kabul edilir. Hareketli kent çekirdeğinin bir parçası olsa da, farklı karakteri ile kent merkezinin karmaşasından korunmuş; zamanda geriye gidilen, geçmiş yaşam deneyimlerinin yansıtıldığı bir mahalleye olmuştur. Alanda, konut kullanımına yer verilmemiştir. Tiyatrolar, sanat galerileri, dans salonları, modern mobilya ve tasarım atölyeleri, moda tasarımcıları, butikler, mücevher - takı mağazaları, dünya standartlarında hamur işleri, kafeler, ödüllü restoranlar, mikro bira fabrikası vd. Alanda yer almaktadır. Festivallere ve pek çok sanatsal, kültürel etkinliğe ev sahipliği yapmaktadır.

Bütünleşik bir anlayışla ele alınmıştır. Alanın mimari tarzı; eski ve yeni birleşimi, 19. yy malzemeleri, kalas, taş, tuğla ile günümüz malzemeleri, yeşil teknolojilerin karışımıdır. Victorian Mimarisi ve bugünün tasarım anlayışı uyumlaştırılmıştır. Yeni gelişimin, Distilery yakın çevresinin şekillenmesine etkisi hızlı ve büyük olmuştur. Alanın çekim gücünün artması, - günümüz dünya düzeni - maksimum kazanç sağlama dürtüsü ile çevresinde toprak değerinin artmasına, alan içinde ve bölgede rant artışına neden olmuştur. Konut yatırımcıları için eşsiz bir fırsat doğurmuştur. Alanın çevredeki çok az kalan arazileri üzerinde büyük talep oluşturulmuş, çok uluslu büyük firmalar konut üretimine başlanmıştır. Tarihi Distilery Bölgesinin çevresi yeni inşaatlarla dolmuştur. Distilery yakınlık avantaj olarak kullanmaktadır. Ona, bitişik yeni konut alanları, onun parçası olarak lanse edilmektedir. Kondos sakinlerini ticari ve rekreatif alan gereksinimini Distilery sağlayacaktır.

3.4 Örneğin Değerlendirilmesi

G&W, endüstri mirasının gelecek kuşaklara aktarılması için öneri geliştirmede yararlı olabilecek en güzel örneklerden biridir. G&W Kentin ekonomik, kültürel ve sosyal gelişimini etkilemiş, kenttin gelişiminde, makro formunun şekillenmesinde belirleyici olmuştur. Değirmen olarak kurulduğu zaman, Toronto tarım kentidir, sanayi sitesine dönüşmüş, dönemin en büyük endüstri yerleşimi olmuştur. Bu dönemde Toronto, endüstri kenti olarak anılmıştır. Film platosuna dönüşmesi, Toronto'nun bu alanda dünyasının önde gelen kenti olmasını

sağlamıştır. Bu gün Kent, önemli bir turizm merkezidir. Kentin böyle tanınmasında da Distilery'in büyük payı vardır. Her işlevde dünyanın en iyisi olmayı başarabilmiştir. Etkileyici, pahalı bir yapı tarzı geliştirilmiş, Viktorian Tarzının en önemli örnekleri verilmiş, Dönemin mimari ekolünün önde gelen temsilcisi olmuş, kent ve ülke mimari tarzını etkilemiştir. Koruma altındaki Alan bugün tamamen kültür- sanat ve turizme ayrılmıştır. Çevresinde topraklar üzerinde yarattığı artı değerle, küresel sermayeyi bölgeye çekmiş, kentin şekillenmesinde yeniden rol oynamaya başlamıştır. Çevresi spekülatif baskı altında olsa da, Alanı korumak başarılmıştır. Pek çok örnekte olduğu gibi, işlevini yitirdikten sonra mimari yapı varlığından vazgeçilerek, toprak üzerinden kaba bir rant peşine düşülmemiş, amaç bu ise yapı stoku korunarak da, tarihi bir yerleşmenin kazanç temin edilebilen bir yere dönüşebileceği örneklenmiştir.

4   Türkiye'de Endüstri Mirasının Durum

Osmanlı'da endüstri girişimi en yoğun, başkent İstanbul ve çevresinde gelişmiştir. 1830-40'larda, son teknolojiyi ithal edilerek, ordu ve sarayın gereksinimlerini karşılamak üzere fabrikalar kurulmuştur (Clark, 1992). 1850'de kent endüstri merkezidir. Fabrikalarının dörtte üçü 1880'lerde kurulmuştur (Pamuk, 1997). 20. yy başı İstanbul'da 256 adet fabrika vardır. Günümüze (2005) sadece 43'ü ulaşabilmiştir. (Ökçün, 1997). Ülkemizin teknoloji tarihinin önemli bileşeni ve kentlerin fiziksel gelişiminde etkin rol alan işletmelerin önemli kısmı, 1980 kadar tam kapasiteyle işletilmiş, bu tarihten sonra işlevini yitirmiş, kapatılmış, çoğu çeşitli nedenlerle yıkılmıştır (Özdemir –b, 2009:73) Pek çok sanayi tesisi 1990 yıllarda, hammadde üretiminin desteklenmemesi, üretimin az çeşitle ve yetersiz düzeyde yapılması, yerli mal kullanımını teşvik eden girişimlerde bulunulmaması vb nedenler, terk edilmiş, ekonomik, fiziksel, sosyal çöküntü bölgesi konumuna gelmiştir. Az sayıda kalan yapı ve tesislerimiz mimari, tarihi ve teknolojik miras olarak koruma altına alınmayı beklemektedir. Çoğunun belgelenmesi dahi yapılmamıştır (Özdemir –b, 2009:77).

Günümüzde, Cumhuriyet Dönemi kamu endüstri yapıları da işlevini ve kullanım yoğunluğunu kaybetmiştir. Özelleştirmelerle tamamen veya parçalanarak satılan tesislerin, satın alınma nedeni, üzerinde yer aldıkları arsalar olmuştur. Zamanla kentlerin içinde kalan bu büyük alanların, arsa değerlerinin artması, tesislerin korunmasını imkansız kılmaktadır. Endüstri yapılarının yıkılmadan, yeni kullanımlar için dönüştürülmesi, yeni yapı inşa etmeye oranla daha ekonomik olsa da, korunmaya değer tesisler, yatırımcılar için çekici özellik taşıyan, kentin rant değeri yüksek alanlarında yer almaktadır (Akitera, 2005). Yeniden işlevlendirmede de rant ön plana çıkmaktadır. Kentsel dönüşüm, başlangıçta büyük maliyet gerektirebilir. (etüdler projler restarasyon çalışmaları) Ancak, Distilery örneğinde olduğu gibi başarılı dönüşümle, bu maliyet geri kazanılmakta, alan içinde ve çevresinde iş olanakları artmakta, ekonomik ve sosyal katkı sağlanmakta.

5   Öneriler

Öncelikle, Endüstriyel dönemler ve gelişmeler (Sanayi Devriminde olduğu gibi) sadece teknolojik bir devinim değil, aynı zamanda insanların düşünce ve yaşam biçimini değiştiren, sosyal, kültürel ve ekonomik boyutlarıyla çevresel etki yaratan dönüşümlerdir. Bu nedenle endüstri mirasını koruma çalışmalarında, teknik miras sosyal çevreleri ile birlikte ele alınmaktadır. Endüstri sitleri kent ile ilişkilendirilmelidir.

Endüstri mirası sitlerinin yeniden işlevlendirilmesi için, bölge ihtiyacı araştırılmalı. Uygun işlev seçimi, geri dönülebilir değişiklikler, teknik donatının yerinde sunumu, endüstri yapıların mekân ve strüktür niteliklerinin değerlendirilmesi başarılı uygulamalara olanak sağlar.

Tarihi fabrikalar bilinçsiz onarım veya gelişigüzel yeniden işlevlendirme ile de tahrip olmaktadır. Yeniden kullanım projelerinde, yapının sadece cepheleri dikkate alınmakta, içi boş kabul dilmektedir. Oysa asıl amaç bu tesislerin kendilerine özgü niteliklerini korumaktır. Uygulamalar konunun uzmanları tarafından yapılmalı, bilimsel bir yol izlenmelidir. Bu gereklilik üzerine, 1950'lerde endüstri mirasını inceleyen "endüstri arkeolojisi", mimarlık tarihi, teknoloji tarihi, arkeoloji, koruma boyutlarını birlikte ele alan bir disiplin olarak ortaya çıkmıştır.

Başarılı bir uygulama ve kullanım için, güç birliği şarttır. Bu amaçla halkın, üniversitelerin, yetkili yerel ve merkezi kurumların, ilgili kişi ve kuruluşların ortak çalışması sağlanmalıdır. Diğer yandan kullanıcıların koruma, planlama ve uygulama sürecine katılması, endüstri mirasının geleceğini garanti altına alabilir. Ülke teknoloji tarihinin önemli bir bileşeni olan ve kentlerimizin fiziksel gelişiminde etkin rol alan endüstri mirası gelecek kuşaklara aktarılmalı, endüstri tesisleri için korumaya dayalı dönüşümler ivedilikle yapılmalıdır.

Ülke Kalkınmasında Marmaris Turizm Sektörünün Önemi Ve Rus Turistlerin Marmaris'i Tercih Etme Nedenleri

The Importance of Marmaris Tourism Industry on Development and Factors That Influence Russian Tourists in Choosing Marmaris

Asst. Prof. Dr. Aziz Bostan (Kyrgyzstan-Turkey Manas University, Kyrgyzstan)
Ph.D. Candidate Zehra Türk (Sıtkı Koçman University, Turkey)
Ph.D. Candidate Hande Akyurt Kurnaz (Sıtkı Koçman University, Turkey)

Abstract

Turkey thanks to its natural and cultural tourism resources is an international tourism destination characterized by intense mobility. Due to the length and the seasonal availability of sea coast, especially from the Russian tourist market activity experienced in Marmaris. The purpose of this study, to determine the contribution of the tourism sector in the country's economy and Russian tourist profile were examined and investigated the reasons for choosing as a destination of Marmaris. Survey data collection techniques were used in the study of national and international research was supported by literature. In this context, the problem of the study, subject, scope and importance of the material and the methods used are explained and explained and the data obtained were analyzed. The results of this analysis are evaluated.

1   Giriş

Turizm; bireylerin sürekli ikamet ettikleri ve çalıştıkları yerler dışına seyahat ederek o bölgeye yerleşmeme ve kazanç sağlama amacına yönelik olmamak kaydıyla turizm işletmeleri tarafından üretilen mal ve hizmetlerden yararlanmaları ve konaklamaları sonucunda ortaya çıkan olayların bütünüdür (Barutçugil, 1998). 2012 yılının verilerine göre; uluslararası turist trafiği % 4 dolayında büyüyerek 1 milyar 35 milyona yükselmiştir. 2013 yılında da % 3-4 olarak turizm sektörünün gelişmesi beklenmektedir. Bu bağlamda; turizm sektörü dünya ekonomisinde sürekli gelişen ve büyüyen bir sektör haline geldiğini göstermektedir. Turizm göreceli olarak önemli bir eylem alanı ve turizm ekonomik, sosyal ve fiziksel etkilerinin ortaya çıktığı alandır. Turizmin temel ekonomik faaliyetler arasında yer aldığı ülkeler, bölgeler, şehirler ve turizm destinasyonudur (T.C. Kültür ve Turizm Bakanlığı, 2013a). Bu bağlamda, Türkiye sahip olduğu cazibe merkezleri sayesinde birçok turizm destinasyonuna sahiptir. Bu destinasyonlarından biri de Marmaris'tir. Marmaris'e turist en çok yaz aylarında sonra da sonbahar aylarında gelmektedir. Bunlar en çok hava yolu ve kara yolu ile gelmektedir. Turistlerin büyük çoğunluğu İngiltere, Almanya, Fransa ve Bağımsız Devletler Topluluğu (çoğunlukla Rusya) vatandaşlarından oluşmaktadır (Uzun ve Avcı, 2007).

Turizm, günümüzde döviz girdisini artırıcı ve istihdam sağlayıcı özellikleriyle ulusal ekonomiye katkıda bulunan, uluslararası kültürel ve toplumsal iletişimi sağlayıcı ve bütünleştirici etkisi ile dünya barışının korunmasında büyük payı olan bir sektördür. Türk ekonomisinin de vazgeçilmez temel taşlarından birisi olan turizm, bugünkü dış ticaret açığına, enflasyona ve işsizliğe çare arayan hükümetlerin önemle üzerinde durduğu bir konudur. (Çımat ve Bahar, 2003).

Bu çalışmada, Marmaris destinasyonunun önemli bir turizm pazarı olan Rus Turizm Pazar Profilinin nitelikleri araştırılmıştır. Özellikle Rus turistlerin Marmaris'i tercih etme nedenlerinin belirlendiği çalışmada, anket veri toplama tekniği kullanılarak araştırma yöntemi tamamlanmıştır. Basit tesadüfi örnekleme seçilip, 3,4 ve 5 yıldızlı konaklama işletmelerinde konaklayan Rus turistler seçilmiştir. Yapılan araştırmada Marmaris'in Rus turizm pazarının gerçekleştirilmesinde çeşitli öneriler sunularak, diğer çalışmalara da örnek olacağı tahmin edilmektedir.

2   Türkiye Turizm Verileri

Turizm, uygun tanıtma faaliyetleri ve planlamalar sayesinde ülkelerin turizm gelirlerine ve ülke ekonomilerine olumlu yönde katkı sağlamaktadır. Turizm sektörünü büyütmek ve devamlılığını sağlamak isteyen ülkeler, çeşitli turizm politikaları sayesinde bu katkının devamlılığını sağlayacaktır.

Tablo 1 ve 2 incelendiğinde, Türkiye'nin Dünya Turizm gelirleri ve gelen turist sayısı içindeki payının da yükseldiği görülmektedir.

1980 yılında Türkiye'nin dünya turizm gelirleri içindeki payı % 0.31 iken, 2011 yılında % 2.23'e yükselmiştir. Yabancı ziyaretçi açısından da dalgalı bir şekilde olmasına rağmen bir artış söz konusudur. Elde edilen sonuçların inişli çıkışlı olmasının sebebi, turizmin diğer sektörlerden ve dünyadaki gelişen olumsuzluklardan

kolayca etkilenebilmesidir. Türkiye sahip olduğu doğal ve kültürel özelliklerinden dolayı son yıllarda kitlesel turizm hareketlerindeki yaşanan beklenti ve destinasyonların farklılaşması sonucu; farklı turizm ürünleri ortaya çıkmıştır.

3   Marmaris'in Turizm Sektöründeki Durumu ve Turizm Ekonomisine Katkısı

3.1 Marmaris'in Coğrafi Konumu

Muğla ilinin güneybatısında bulunan Marmaris, batıdan Reşadiye Yarımadası ve Kerme Körfezi, kuzeyden Ula, doğudan Balan Dağı, Karadağ ve Günlük Tepeleri ile güneyden Akdeniz'le çevrilmiştir. Akdeniz iklimi nedeniyle çok nemli bir havaya sahiptir. Akdeniz ikliminin hakim olduğu ilçede yazlar oldukça sıcak ve kurak, kış ayları ise bol yağışlı geçmektedir. Marmaris Milli Parkı, Marmaris Merkez, İçmeler, Armutalan, Nimara Yarımadası, Yalancıboğaz, Turunç, Kumlubük, Günnücek ve Aksaz geniş bir alanı kapsar. Ayrıca iki özel çevre koruma bölgesi vardır; Gökova Özel Çevre Koruma Bölgesi ve Datça-Bozburun Yarımadası Özel Çevre Koruma Bölgesi'dir. Marmaris Milli Parkı ve özel çevre koruma bölgeleri bitki varlığı açısından Türkiye'nin en zengin bölgelerindendir (MarmarisMarmaris, 2013).

Marmaris Coğrafi konumu nedeniyle Akdeniz ve Ege Denizinin kavuştuğu yerde, önemli bir liman ve sahil kentidir. Bu nedenle ilk çağdan günümüze kadar Ege ve Akdeniz arasında önemli bir geçiş noktası olmuştur. Gerek Marmaris'in gerekse çevresinin kıyı yapısının çok girintili çıkıntılı olması, iyi korunmuş koyları ve limanları bulunması bu bölgenin Asya, Avrupa ve Afrika arasında önemli bir bağlantı noktası olmasını sağlamıştır (MarmarisMarmaris, 2013).

3.2 Marmaris'in Turizm Varlıkları

Marmaris denizi, kumu, ormanı, plajları, meşhur çam balı, Physkos, Loryma, Amos, Hydas gibi antik yerleşimleriyle dikkat çekmektedir. .Marmaris'in turizm varlıkları incelendiğinde hem doğal hem de kültürel özelliklerin bir arada bulunduğunu görmek mümkündür (T.C. Marmaris Belediyesi, 2013):

Marmaris Kalesi: Marmaris'in simgelerinden olan Marmaris Kalesi, yat limanının hemen arkasında yer almaktadır. 1991 yılında restore edilmiş ve Marmaris Müzesi olarak ziyarete açılmıştır. Müzede Hellenistik, Roma ve Bizans dönemlerine ait arkeolojik eserler sergilenmektedir.

Hafsa Sultan Kervansarayı: Osmanlı Dönemi'ne ait yapılardan olan Hafsa Sultan Kervansarayı, 1545 yılında inşa edilmiştir. Kale yolu üzerinde bulunan kervansaray, günümüzde özel mülkiyette olup, turistik ve hediyelik eşya satan dükkânlar olarak kullanılmaktadır.

Halıcı Ahmet Urkay Müzesi: Marmaris'e 10 km uzaklıkta, Muğla yolu üzerinde yer alan Halıcı Ahmet Urkay Müzesi, özel bir müze olup 3 bin m2'lik bir alan üzerine kurulu olan müze etnografya ve arkeoloji olmak üzere iki bölümden oluşmaktadır.

Plajlar: Marmaris'te hem merkezde hem de çevre beldelerde plajlar bulunmaktadır. İçmeler Plajı, Turunç Halk Plajı, Cennet Adası Plajı, Sedir Adası Plajı, Uzunyalı Plajı, Boncuk Koyu Plajı sayılmaktadır.

Koylar: Bördübet, Kumlubük, Abdi Reis Koyu, Ayın Koyu, Kızkumu, Amos Koyu, Marmaris Boncuk Koyu, Turunç, Hisarönü, Selimiye Marmaris'in koylarına örnek olarak verilmektedir.

Antik Kentler: Marmaris'in antik kentleri arasında Physkos, Loryma (Bozukkale), Amos, Cedrae, Hydas, Erine, Castabus (Pazarlık), Saranda (Söğüt), Bybassios, Euthenna (Altınsivrisi) yer almaktadır.

3.3 Marmaris'in Turizme Katkısı

Dünyada turizm endüstrisine hala kitle turizmi anlayışı egemen olmakla ve toplam turizm gelirleri içinde büyük paya sahip olmakla birlikte; kültür, macera, otantiklik ve bozulmamış bir çevre arayışı içindeki yükselen yeni orta sınıfların taleplerine yönelik alternatif turizm anlayışı yaygınlaşmakta ve bu tür turizmden elde edilen gelirler hızla artmaktadır (Purkis, 2009).

Yıllar	Turizm Geliri (1000 $)	Ziyaretçi Sayısı
2006	11.050.877	1.376.199
2007	11.492.072	1.492.477
2008	13.589.597	1.657.268
2009	12.896.863	1.647.109
2010	13.973.389	1.850.780
2011	13.955.725	1.793.795
2012	16.574.787	2.077.041

Tablo 5: Marmaris'te Turizm İşletme Ve Yatırım Belgeli Konaklama Tesisleri Ve Yatak Kapasiteleri   Kaynak: Muğla İl Kültür ve Turizm Müdürlüğü, 2013a.

Tablo 4'de görüldüğü üzere; ziyaretçi sayısında farklı oranlarda artış görülmektedir. Marmaris sahip olduğu kültürel ve doğal özelliklerden dolayı, uluslararası turizm pazarında belirli bir imaj sahibi olan bir

destinasyondur. Bu değerlerin daha kaliteli bir şekilde pazarlanarak Marmaris'in bütün turizm çekiciliklerinin belli bir pazar payı alması sağlanmalıdır.

Tablo 5'e göre, Marmaris gelen turist potansiyelini karşılayacak konaklama imkanına sahiptir, Artan konaklama işletmeleri hem turistlerin ihtiyacını karşılamakta hem de sezonluk olarak devam etmesinden dolayı sezon içerisinde istihdamın arttırılmasına yardımcı olmaktadır. Marmaris'te yer alan turizm hareketliliğinin on iki aya yayılmasını sağlayarak işgücü istihdamının sürekliliği sağlanmalıdır.

Tablo 6, 7 ve 8'e göre deniz ve su sporları ile ilgili Marmaris büyük öneme sahiptir. Son yıllarda popüler hale gelen yat ve marina turizmi açısından Marmaris turistik cazibe merkezi haline gelmektedir. Deniz ve yat-marina turizminin sayısal verileri kapsamında Muğla ilçelerinin karşılaştırması yapıldığında; güzel plajları ve kumsallara sahip olan Marmaris ikinci sırada yer almaktadır.

4 Marmaris'i Tercih Etme Nedenleri

Marmaris'in turizm arzı potansiyelinin sonucu olarak, uluslararası turizm hareketliliğinin yüksek bir oranda yaşandığı önemli bir destinasyon konumundadır. Marmaris'e turist en çok yaz aylarında sonra da sonbahar aylarında gelmektedir. Bunlar en çok hava yolu ve kara yolu ile gelmektedir. Turistlerin büyük çoğunluğu İngiltere, Hollanda, Almanya, Fransa ve Bağımsız Devletler Topluluğu (çoğunlukla Rusya) vatandaşlarından oluşmaktadır.

Tablo 9: Marmaris'e Gelen Turist Sayıları ve Milliyetlerine Göre Değişimler **Kaynak:** *Getob, 2012.*

Uzun ve Avcı'nın 2007 yılında yapmış oldukları araştırmaya göre; yabancı turistlerin Marmaris'e gelişini etkileyen 5 faktör vardır. Bunlar; yaş, gelir düzeyi, eğitim düzeyi, kaldıkları yerin fiyatı ve tarihi -kültürel değerlerdir. Bu bulguların, gelir düzeyi yüksek olan turistlerin daha çok AB üyesi ülkeleri (Fransa, İspanya, İtalya, İngiltere, Yunanistan) tercih ettikleri bilgisi ile örtüştüğü incelenmiştir (Uzun ve Avcı, 2007).

5 Araştırma Amacı Yöntemi

Bu araştırma; ülke ekonomisinde Marmaris'in turizm kalkınmasındaki yeri ve öneminin belirlenmesi amacıyla yapılmıştır. Ayrıca Rus turistlerin Marmaris'i tercih nedenlerinin belirlenmesi de hedeflenmiştir. Araştırma amacı ve kapsamına uygun olarak ayrıntılı literatür taraması yapılmıştır. Araştırmanın yönteminin temelini oluşturan örnekleme basit tesadüfi örneklem olarak belirlenmiştir. Araştırmanın veri toplama tekniği ankettir. Anket yaklaşık 50 kişiye uygulanarak bir pilot uygulama yapılmıştır. Güvenilirlilik analizi sonucu daha sağlıklı bir ölçüm aracı olması sağlanmıştır. Veriler bilgisayar ortamına aktarılarak SPSS 14.0 programında gerekli analizleri yapılmıştır

5.1 Anketin Hazırlanması

Araştırma anketinin hazırlanmasında konu ile ilgili yapılmış ulusal ve uluslararası çalışmaların anket veri toplama örneklerinden yararlanılmıştır. Araştırmanın konusu ile ilgili olan Demirci Orel ve Memmedov 2004 (Demirci Orel ve Memmedov, 2004) yılında yapmış oldukları çalışmanın anketi uyarlanarak veri toplama yöntemi oluşturulmuştur. Araştırma anketinde yer alan 12 adet soru demografik ve seyahat özelliklerini belirlemeye yönelik, 4 adet soru Rus turistlerin konaklama ve bilgi kaynaklarını belirlemeye yönelik ve Marmaris destinasyonunu tercih etme nedenini belirlemeye yönelik 5'li Likert Ölçeği ile derecelendirilmiş soru ile araştırmanın anketi tamamlanmıştır.

5.2 Verilerin Toplanması

Araştırmanın kapsamına ve amacına uygun olarak hazırlanan anketlerin güvenirliğini ve geçerliğini belirledikten sonra veri toplama aşamasına geçilmiştir. Verilerin toplanmasında basit tesadüfi belirlenen örnekleme uygun olarak Rus turistlerin Marmaris destinasyonun tercih ettikleri 3, 4 ve 5 yıldızlı otellerde uygulanmış olup, veri toplama işlemi gerçekleştirilmiştir. Toplanan verilerin yüzyüze bir şekilde gerçekleştirilmesinden dolayı herhangi bir değerlendirme dışı bırakılan olmamıştır. Yapılan çalışmanın anketi Rusça'yı ileri derecede bilen rehberler vasıtasıyla toplanmış böylece herhangi bir anlam bozukluğunun olması önlenmiştir. Çalışmanın evreni 2013 yılında Marmaris'i tercih eden Rus turistler oluştururken, örneklemini ise 2013 yılının Mayıs ayında Marmaris'i tercih eden Rus turistler oluşturmaktadır. Bu bağlamda belirlenen örneklem sayısının Tablo 10'da belirtildiği üzere; 381-384 arasında olduğu görülmektedir.

Evren Büyüklüğü	+̄ 0.03 örnekleme hatası (d)			+̄ 0.05 örnekleme hatası (d)			+̄ 0.10 örnekleme hatası (d)		
	p=0.5 q=0.5	p=0.8 q=0.2	p=0.3 q=0.7	p=0.5 q=0.5	p=0.8 q=0.2	p=0.3 q=0.7	p=0.5 q=0.5	p=0.8 q=0.2	p=0.3 q=0.7
100	92	87	90	80	71	77	49	38	45
500	341	289	321	217	165	196	81	55	70
750	441	358	409	254	185	226	85	57	73
1000	516	406	473	278	198	244	88	58	75
2500	748	537	660	333	224	286	93	60	78

100000	1056	678	888	383	245	322	96	61	81
1000000	1066	682	896	384	246	323	96	61	81
100 milyon	1067	683	896	384	245	323	96	61	81

Tablo 10: Örneklem Sayısı **Kaynak:** *Yazıcıoğlu, Y. ve Erdoğan, S. (2004)*

Marmaris destinasyonunu ziyaret eden Rus turistlere yönelik olarak yapılan bu çalışma kapsamında verilerin toplanması esnasında bazı sıkıntılar yaşanmıştır. Marmaris'te turizm sezonunun yüksek olduğu bir dönemde olması, turistlerin anketleri zaman kaybı olarak görmesi, otellere gönderilen anketlerin tamamının cevaplanmaması sebebiyle kullanılabilir anket sayısından düşüş yaşanmıştır. Araştırma kapsamında kullanılan anket sayısı 176 olmuştur.

5.3 Araştırmanın Bulguları ve Değerlendirilmesi

N	Cronbach Alpha
176	,903

Tablo 11: Güvenilirlik Analizi Sonucu

Cronbah Alpha; anket ölçeğinin güvenilir olup olmadığının belirlenmesinde önemli bir ölçüttür. Tablo 11 incelendiğinde araştırmanın yüksek derecede güvenilir olduğu belirtilmiştir.

Çalışmanın verilerinden elde edilen demografik bilgiler yüzde ve frekans analizi yapılarak değerlendirilmiştir.

Özellik	Gruplar	N	%
Cinsiyet	Kadın	132	75

Tablo 12: Demografik Bilgilerinin Belirlenmesi

Marmaris'i tercih eden Rus turistlerin sosyo- demografik özellikleri incelendiğinde; turistlerin büyük bir oranının kadın, 30-39 yaş arasında, evli, lisans mezunu, özel sektör çalışanı, 1000$ ve üzeri gelire sahip, evli oranının yüksek olması ile eşiyle birlikte tatil yapmış oldukları incelenmiştir.

Konaklama Şekli	N	%
Yarım Pansiyon	8	4,5
Tam Pansiyon	8	4,5
Herşey Dahil	160	91

Tablo 13: Turistlerin Konaklama Şekilleri

Marmaris'i tercih eden Rus turistlerin konaklama şekilleri incelendiğinde (büyük bir oranın) %90,9'unun herşey dahil sistemde konaklama biçimini tercih ettiği görülmüştür. Bu durum; Marmaris'inin konaklama sektöründe herşey dahil sisteminin fiyat yönünden daha uygun olduğunun bir göstergesi olabilmektedir.

Tatil Süreleri	N	%
1 hafta	40	22,7
10 gün	44	25
2 hafta	80	45,5
Diğer	12	6,8

Tablo 14: Turistlerin Tatil Süreleri

Marmaris'i tercih eden Rus turistlerin tatil sürelerine bakıldığında 2 haftalık tatiller şeklinde destinasyonu tercih ettikleri belirlenmiştir.

Ziyaret Sıklıkları	N	%
1. kez	44	25
2. kez	48	27,3
3. kez	20	11,4
4. kez	16	9
5. kez ve daha fazla	48	27,3

Tablo 15: Turistlerin Marmaris'i Ziyaret Sıklıkları

Daha önce Marmaris'i tercih etme sıklığı incelendiğinde ikinci kez gelenler ile beşinci kez ve daha fazla ziyaret sayısına sahip olanların oranlarının eşit olduğu görülmüştür. Bu bağlamda Rus turistlerin Marmaris'e tekrar gelme sıklıkları yüksek olduğu belirlenmiştir.

Bilgi Kaynakları	N	%
Seyahat Acenteleri	80	45,5

Tablo 17: Turistlerin Marmaris'i Tercih Etme Nedenleri

Marmaris'i tercih etme nedenleri incelendiğinde; daha rahat arkadaş ortamına Tamamen Katılıyorum oranının %59,1 olduğu görülmüştür. Bu bağlamda Marmaris sahip olduğu farklı turist profilleri doğrultusunda daha rahat arkadaş ortamının olduğu belirlenmiştir. Daha rahat arkadaş ortamı dışında deniz,kum, güneş tatil anlayışı, misafirperverlik ve Marmaris'in sahip olduğu doğal, tarihi, kültürel özellikler; Rus turistlerin Marmaris'i tercih etme nedenleri arasında yer almıştır.

Önceki Tatil Deneyimleri	N	%
Evet	140	79,5
Hayır	36	20,5

Tablo 18: Önceki Tatil Deneyimleri

Daha önce tatil deneyimleri konusunda; büyük çoğunluğunun tatil yapmış olduğu ve yeterli imkana sahip olduğu belirlenmiştir.

Marmaris sahip olduğu çeşitli özelliklerden dolayı farklı turizm aktivitelerinin yapıldığı önemli bir destinasyondur. Bu bağlamda, Marmaris'i tercih eden Rus turistler farklı turistik etkinliklere katılmayı düşündükleri belirlenmiştir. Marmaris'in gece hayatının ön planda olmasından dolayı disko turları diğer turistik etkinliklerine göre daha yoğun katılım olmuştur.

Rus turistlerin en fazla harcama yaptığı kalemlerin başında geziler ve alışveriş gelmektedir. Herşey dahil sistemi kullanmalarının bir sonucu olarak yeme-içme maliyeti çok fazla olmamıştır. Ulaşım ve eğlence açısından da çok fazla imkan olması sebebiyle, yüksek düzeyde bir harcama görülmemiştir.

Turlar	N	%

Tablo 22: Marmaris İsmi Sizin İçin Ne İfade Etmektedir

Marmaris'i ziyaret eden Rus turistlere Marmaris isminin ne çağrıştırdığı sorulduğunda; turistlerin çoğunun Marmaris isminin "Harika Bir Tatil"i çağrıştırdığı görülmüştür. Ayrıca disko-eğlence, deniz-kum-güneş ve doğa kelimeleri Marmaris'i en iyi ifade eden tanımlar olarak belirlenmiştir

6 Sonuç

Destinasyonlar, turistik çekiciliğe sahip, turistik ürün üreten işletmelerce desteklenmiş, ulaşılabilir turizm bölgeleridir. Turizm bölgeleri ziyaretçilerine, turistik ürün bileşimini bir bütün olarak sunan yerlerdir. Turizm bölgesi ya da destinasyon ifadesi bazen küçük yerel bir bölgeyi ifade ederken bazen de bir coğrafik bölge, bir ülke hatta bir kıta için de kullanılmaktadır (Kılıç, 2011). Ayrıca turizm destinasyonu, ülkeden küçük ve şehirden büyük, belirli bir imaja sahip önemli turistik çekicilikler gibi çeşitli etkinliklere, iyi bir ulaşım ağına, gelişim potansiyeline ve üstyapı turistik tesislerin gelişimi için yeterli coğrafi alana sahip bölgedir (Hosany vd., 2006).

Marmaris sahip olduğu kaynaklar neticesinde doğal ve kültürel özellikleri bir arada taşıyan önemli bir deniz-kum-güneş destinasyonudur. Genel olarak uluslar arası turizm hareketliliğinde Muğla ili içerisinde oldukça fazla payı olmasına rağmen, gelen turistlerin sosyo demografik nitelikleri bakımından zayıf kaldığı görülmektedir.

Yapılan çalışmanın sonucuna göre; Marmaris'i tercih eden Rus Turistlerin profili belirlenmiştir. Gelen turistlerin çoğunun kadın katılımcılardan oluştuğu, orta yaş grubunda yer aldığı, evli olduğu, özel şirket çalışanı, aylık geliri 1000\$ ve daha fazla olan, eşiyle tatile çıkmış olan katılımcılardan oluştuğu belirlenmiştir. Herşey dahil sistem ile gelmiş oldukları, 2 hafta süreliğine tatil yaptıkları, seyahat acenteler vasıtasıyla bilgi topladıkları, Marmaris'i tekrar ziyaret etme sıklıklarının yoğun olduğu incelenmiştir. Ayrıca alışveriş ve geziler için harcama yaptıkları ve en fazla disko turunu tercih ettikleri görülmüştür. Rus turistlere göre Marmaris ismi; harika bir tatil olarak ifade edilmektedir. Bu bağlamda Rus turistler tarafından Marmaris sevilen ve tatil için oldukça uygun görülen destinasyonlar arasındadır. Turistlerin büyük bir çoğunluğunun tekrar Marmaris'i tatil yeri olarak seçeceklerini belirtmişlerdir.

Yeni turizm anlayışına uygun olarak pazarlanan yerler dünyada turizm gelirlerinden giderek daha fazla pay almaya başlarken, Marmaris gibi yeni turizm anlayışlarına ayak uyduramayan bölgeler giderek önemlerini yitirmektedir (Purkis, 2008) Genel olarak Marmaris destinasyonu, Rus Turist Pazar'ında önemli bir yere sahiptir. Ama gelen turist sayısı ve turizm geliri açısından Marmaris olarak daha kaliteli bir altyapı ve üstyapı hizmetlerinin sunulması, turizm çeşitliliğinde farklılık yaratılması, farklı turizm aktivitelerin tanıtımının yapılarak uluslararası pazarlarda daha farklı ve kaliteli müşteri pazarına ulaşılmalıdır.

Ulusal Otel Zincirinin Büyüme Başarısına İlişkin Bir Değerlendirme: Rixos Otel Zinciri

An Assessment on the National Hotel Chain Growth Success: The Case of the Rixos Hotel Group

Assoc. Prof. Dr. Ufuk Durna (Akdeniz University, Turkey)

Prof. Dr. Mehmet Emin İnal (Akdeniz University, Turkey)

Ph.D. Candidate İhsan Kurar (Akdeniz University, Turkey)

Abstract

This study examines the growth phenomenon and strategies of Rixos Hotel Group, which is regarded as one of the local hotel groups. The growth forms of international hotel businesses vary from country to country. The hotel businesses need to get to know the working ways of both local partner and national tourism sector with the fact that legal arrangements and socio-cultural characteristics are very important in terms of growth strategies of hotel businesses in service industry. A Turkish Hotel Group has not been examined so far in the studies which have been already done about multinational hotel businesses. In this context, the growth type, growth strategy, guest relationships, education of employees and innovation applications of Rixos Hotel Group which is regarded one of the local hotel groups, are examined for the first time, which contributes to the importance level of this study in a positive way.

1 Giriş

Günümüzde artan rekabet koşulları otel işletmelerinin ulusal ve uluslar arası turizm piyasasında doğru stratejilerle geleceklerini planlamalarını zorunlu kılmaktadır. Bu nedenle turizmin gelişmesine yön veren ulaşım olanakları, kişisel gelir artışı, uluslar arası ekonomik ve politik ilişkilerin gelişmesi ve teknolojinin ilerlemesinden dolayı büyük otel işletmelerinin sayısında önemli bir artış görülmektedir. Bu kapsamda büyük otel işletmeleri, çeşitli ülkelerde tesisler kurarak veya yerel markaları satın alarak küreselleşme yoluna gitmektedir. Bu stratejiler, yabancı bir ülke pazarına girişte bir otel zincirinin seçtiği büyüme şeklidir. Bu çalışmada ulusal bir otel grubu olan Rixos Otel Zincirinin büyüme başarısı iki bölümde anlatılmaktadır. Çalışmanın birinci bölümünde grubun büyüme stratejileri anlatılırken, ikinci bölümde ise grubu büyümeye götüren temel yeteneklere yer verilmektedir. Buna göre konaklama sektöründe uluslararasılaşma iki şekilde ortaya çıkmaktadır. Bunlardan biri dikey büyüme, diğeri ise yatay büyüme. *Dikey büyüme, g*irdi üretiminden perakende satışa kadar birbirini izleyen aşamaların aynı firma bünyesinde toplanmasıdır. *Yatay büyüme* ise bir işletmenin faaliyette bulunduğu iş kolundaki pazar payını artıracak yönde büyümesidir (Öncer, 2012). Rixos Otel Zinciri, sadece konaklama sektöründe hizmet verdiği için yatay bir büyüme izlemektedir.

Bununla birlikte uluslararası otel işletmeleri, farklı stratejilerle büyüme yoluna gidebilmektedir. Örneğin, Inter Continental Hotels Group, Marriott International ve Hilton Hotels Corp. bir den çok büyüme stratejisi izlerken, Wyndham Worldwide ve Choice Hotels International ise sadece franchising vererek büyümektedir. Pegasus Solutions ve VIP Investment Corp., konsorsiyum ile oluşturulmuş en büyük otel gruplarını oluşturmaktadır. Bununla birlikte Four Seasons Hotels and Resorts sadece yönetim anlaşması ile büyüyen bir şirkettir (Met ve Erdem, 2011). Rixos Otel Zinciri ise çoklu bir büyüme stratejisi izlemektedir. Bu nedenle gruba şimdiye kadar tam sahiplik, kiralama, satın alma ve yönetim anlaşmasıyla büyümektedir. Bununla birlikte grubun, lüks otel markalarının bir araya gelerek oluşturduğu bir konsorsiyum olan Global Hotel Alliance (GHA) üyeliği bulunmaktadır. Global Hotel Alliance, dünya genelinde 60 ülkede, 320 lüks otel markası tarafından oluşturulan bir sadakat programıdır. Bu üyelik gruba ortak pazarlama ve rezervasyon olanakları sağlamaktadır.

Çalışmanın ikinci kısmında büyüme olgusuna, otel işletmeciliğini temel yetenek alanları olarak gören ve küresel bir marka olma yönünde ilerleyen ve her geçen gün zincirine yeni oteller ekleyen Rixos Otel Grubu açısından bakılacaktır. Bu kapsamda gruba ait oteller kent merkezlerinde ve sahil bölgelerinde hizmet sunmaktadır. Kent merkezlerindeki oteller daha çok iş adamlarına hizmet verirken, sahil bölgelerindeki otellerde farklı erklerde müşteriler ağırlanmaktadır. Bilindiği gibi konaklama sektörü işbirliğine dayanmakla birlikte karmaşık da bir yapıya sahiptir. Bu nedenle grubun büyüme stratejileri doğrultusunda sadece konaklama sektörüne yönelik yatırımlar yapılmaktadır. Bu durum grup çalışanlarına önemli avantajlar getirmektedir. Örneğin, turizmde düşük sezon olarak ifade edilen dönemlerde iş görenlerini dünyanın farklı bölgelerindeki otellerine göndererek, düşük sezonda personelin işten çıkarılmaması sektör çalışanları adına önemli bir fırsattır. Bununla birlikte Rixos Otel Zinciri mutlaka yerelden personel istihdam etmektedir. Bu nedenle turizmin sürdürülebilirlik ilkesinden yerel refah hedefinin benimsendiği söylenebilir. Bu kapsamda grubu büyümeye götüren temel özellikler arasında yatırım kararları, pazarlama çalışmaları, dış kaynak kullanımına ilişkin

uygulamaları, kalite standartları, kapasite esnekliği ve personel istihdamına ilişkin politikaları, müşteri ilişkileri uygulamaları, yenilik uygulamaları, iş gören eğitimi ve imaj çalışmalarına yer verilmektedir.

2   Rixos Otel Grubunun Genel Özellikleri

Günümüzde artan rekabet koşulları otel işletmelerinin ulusal ve uluslar arası turizm piyasasında doğru stratejilerle geleceklerini planlamalarını zorunlu kılmaktadır. Bu nedenle turizmin gelişmesine yön veren ulaşım olanakları, kişisel gelir artışı, uluslar arası ekonomik ve politik ilişkilerin gelişmesi ve teknolojinin ilerlemesinden dolayı büyük otel işletmelerinin sayısında önemli bir artış görülmektedir. Küreselleşme sürecine paralel olarak yaşanan bu artış, son yıllarda çok uluslu otel işletmelerinin etkinliğini arttırmaktadır. Bu nedenle büyük otel işletmelerinin, çeşitli ülkelerde tesisler kurarak veya yerel markaları satın alarak küreselleşme yoluna gittiği görülmektedir. Bu oteller müşterilerine çoğu zaman merkezi bir yönetim ve rezervasyon sistemiyle hizmet sunmaktadırlar. Rixos Otel Grubu 2000 yılında % 100 misafir memnuniyeti sağlayarak turizm endüstrisinde lider bir kurum olma amacıyla sektörün başkenti Antalya'da Fettah TAMİNCE tarafından kuruldu. Grubun ana ilkesini yüksek kalitede hizmet sunumu ile misafirlerin ihtiyaçları, duyguları ve hissettikleri tüm faaliyetler oluşturmaktadır. Bu nedenle %100 müşteri memnuniyeti ve serviste mükemmellik hedefiyle "All Inclusive - All Exclusive" konseptini geliştirilmiştir (http://www.rixos.com/tr/kurumsal/tarih#sthash.1zASXMa8.dpuf, 2013).

Rixos Sharm El Skeikh, Mısır	2012	695	1950
Rixos Lake Borovoe, Kazakistan	2013	200	448
Toplam	2013	9155	21850

Tablo 1. Rixos Hotel Kronolojisi

Tablo 1.'de görüldüğü gibi Rixos Otel Grubu, zincirindeki 23 otelle dünyanın 8 ülkesinde misafirlerini ağırlamaktadır. Toplam 9155 oda ve 21850 yatak kapasitesiyle hizmet sunmaktadır. Grubun on üç resort oteli, dokuz şehir oteli ve 2 rezidans otel olmak üzere toplam 23 oteli bulunmaktadır. Rixos Otel Grubu'na ait otellerin 11 tanesi Türkiye'nin farklı bölgelerinde bulunurken, Kazakistan'da 3 tane, Birleşik Arap Emirlikleri (BAE)'nde 2 tane Azerbaycan, Gürcistan, Hırvatistan, Mısır, Ukrayna ve Libya'da birer tane olmak üzere toplam 22 oteli bulunmaktadır. Bununla birlikte gruba yakın zamanda beş yeni otelin katılması beklenmektedir. Bunlar, İsviçre'nin Davos şehrinde, Rusya'da Soçi, BAE Ras San bölgesinde 750-800 odalı bir tesis ve Azerbaycan'da Kuba adı altında bir otel de gruba katılacaktır.

Yıllar	Çalışan Sayısı
2008	2,594
2009	4,032
2010	4,666
2011	5,001
2012	5,901

Tablo 2. Çalışan Sayısı

Müşterilerine kaliteli hizmet sunmak isteyen işletmelerin oda sayısına uygun personel istihdam etmesi gerekir. Rixos Grubunun uygulamalarında, oda sayısı başına düşen personel sayısının 0,8-1 arasında değiştiği ve bazı

otellerde bu oranın 1,5'e kadar yükseldiği görülmektedir. Bu nedenle Rixos Otel Grubunun hizmetini sunan on bine yakın çalışanı bulunmaktadır. Bu çalışanların beş bin kadarı otellerde geriye kalan kısmı da Rixos Villa'da hizmet sunmaktadır. On bin iş gören içinden beş bin çalışan gittiği bölgelere Rixos kültürünü, ürün ve hizmet kalitesi anlayışını taşıdığı için çok önemli görülmektedir.

Tablo 2.'de görüldüğü gibi 2012 yılı itibariyle 5,901 kişi Rixos Hotel grupta istihdam edilmektedir. Bu kişilerin kalifiye olması personelin iletişim şekli, özgüveni ve müşteri istekleri karşısında güler yüzlü olarak müşteriye cevap vermesi çok önemli görülmektedir. Önemli olan iş gören bulmak değil, iş görenin işletmeyi temsil edebiliyor olmasıdır. Bu anlamda yılda bir defa insan kaynakları fuarı düzenlenmektedir. Bu fuarda Rixos Grupta çalışmak isteyen ciddi sayıda talep ile karşılaşılmaktadır. Bununla birlikte otelin bulunduğu bölgeden çalışanlar mutlaka istihdam edilmektedir. Bu şekilde Rixos Otel Zinciri faaliyette bulunduğu bölgenin yerel halkına da istihdam sağlama, malzeme satın alma gibi yöntemlerle hizmet etmeye çalışmaktadır.

Rixos Otel misafirleri ilk deneyimini olumlu veya olumsuz yaşamışsa bunu uygulanan anketlerde yorum ve tavsiye şeklinde paylaşmaktadır. Bu kapsamda Rixos Grubu'nun müşterilerine uyguladığı anketlerin geri dönüş oranının % 85 olması önemli bir göstergedir. Müşterinin, beklentilerinde veya beklentilerinin üzerinde sunulan hizmetlerden memnun olarak ayrılması Rixos'a yeniden ziyaret eğilimi olarak yansıdığı gibi, pazarlama çalışmalarında da maliyet avantajı sağlamaktadır.

Rixos Grubu'nda konaklayan müşterilerin şikâyetleri müşteri ilişkilerine iki farklı şekilde yansımaktadır. Birincisi müşterilerden konaklama sırasında gelen ve mümkün olduğunca otelde giderilmeye çalışılan şikâyetlerdir ki, grup olarak en iyi yolun bu olduğuna inanılmaktadır. Çünkü müşterinin geri kalan tatilinden memnun olarak ayrılması sağlandığı takdirde grubun sahip olduğu veya müşterinin konakladığı oteli tekrar tercih etme olasılığı artacaktır. İkincisi müşterinin tatilinden sonra merkez ofise gelen şikâyetler. Bu tür şikâyetlerde yorumun doğru yapılması ve problemin çözümüne katkı sağlaması amacıyla ilk olarak otelle görüşülmektedir. İlgili otelden şikâyete yönelik cevap alındıktan sonra müşteriyi Rixos kalitesinde memnun etme çalışmaları yapılır. İlk olarak müşteriden özür dilenir ve problemin şiddetine göre farklı tedbirler alınır. Müşteri memnun edilmeden asla problem kapatma yoluna gidilmez. Bu bakımdan sunulan hizmetler sonrasında müşterilerden gelen geri bildirimler, Rixos için çok önemli görülmektedir. Çünkü bazen müşteri tarafından şikâyet olarak dile getirilen bir konu, müşteri evine döndükten sonra müşteri tarafından tatlı bir anı olarak da ifade edilebilmektedir.

2.1 Rixos Otel Grubunun Büyüme Stratejileri

Uluslararası otel zincirleri, yönetim deneyimi ve bilgisi, marka imajı, ortak pazarlama ve rezervasyon vb. konularda rekabetçi üstünlüklere sahiptirler (Met ve Erdem, 2011). Bu nedenle Rixos Otel Grubu tarafından her hangi bir ülkeye yatırım kararı alınmadan önce o ülkenin ekonomik, sosyal ve kültürel özellikleri iş geliştirme departmanı tarafından araştırılmaktadır. Araştırmalar karar verilmek üzere yönetim kurulu başkanı ve yönetim kurulu üyelerine sunulmaktadır. Buna göre planlamalar yapılmakta ve yatırımın geri dönüşümü tatminkâr ise yatırım kararı alınmaktadır. Bu kapsamda grubun öncelikli yatırım kararlarını gelişmekte olan pazarlar veya yeni pazarlar oluşturmaktadır. Bu nedenle Rixos Otel Grubu bugüne kadar yeni destinasyonlar açan cesur, girişken, genç ve dinamik bir yapıya sahip grup olarak bilinmektedir. Örneğin, Kazakistan Astana'ya otelcilik Rixos grubu tarafında götürüldüğü için kalite çıtası da Rixos tarafından belirlenmektedir. Çalışmanın bu kısmında Rixos Otel Grubunun büyüme stratejileri üzerinde durulacaktır.

Tam sahiplik, uluslararası işletmelerin ülke riskinin düşük olduğu ve karlı gördüğü sektördeki işletmeleri satın alarak veya ülkede yeni bir işletme kurarak faaliyette bulunmasıdır. Büyüme stratejisi alternatiflerinden "tesis inşa etme" ve "tesis satın alma", şirkete yüksek faaliyet kontrolü sağlamasına karşılık yüzde yüz finansman sorumluluğu ve buna bağlı olarak yüksek yatırım/işletme riski yüklemekte ve yavaş bir büyüme hızı ile kısıtlamaktadır (Met ve Erdem, 2011). Rixos Otel Grubunda faaliyet gösteren otellerden Rixos Premium Belek, 769 oda ve 1738 yatak kapasitesiyle öz sermayesinin tamamı ve mülkiyeti gruba ait olmak üzere, 2005 yılında hizmete sunuldu. Bununla birlikte Rixos Tekirova, 2002 yılında satın alma yöntemiyle gruba dâhil edilmiş ve yaklaşık on yıldır Rixos Otel Grubu bünyesinde hizmet sunmaktadır. Bununla birlikte satın alma stratejik bakımdan önemli ve doymuş pazarlara girmenin de etkin bir yolu olduğu için gruba önemli bir avantaj sağlamaktadır (Met, 2005). Bu nedenle 254 odalı ve 504 yatak kapasiteli Rixos Libertas Dubrovnik, satın alınarak 2007 yılında gruba dâhil edilmiştir. Tam sahiplik yöntemiyle büyüme stratejisi her ne kadar yüksek risk içerse de, küresel otel zincirlerinin Türkiye'nin farklı bölgelerinde inşaat halinde olan otel işletmelerini satın alma girişimleri, grubun önceki yıllarda aldığı kararları doğrular niteliktedir.

Kiralama, çok uluslu otel zincirlerinin ülkenin en iyi yerlerindeki bireysel tesisleri elde etmek için kullandığı bir yöntemdir. Genel olarak uzun süreli sözleşmelerin uygulandığı yöntem otelin iç tefrişatı, çevre düzenlemesi ve belirli bir kira bedelini içermektedir (Zhao, 1998). Bundan dolayı kiralama, belirli finansal yükümlülükler ve sabit kira ücreti nedeniyle orta seviyede yatırım ve risklilik özelliği göstermektedir (Met ve Erdem, 2011). Kira usulüyle çalışılan Rixos Lares, 2010 yılında 804 oda ve 2500 yatak kapasitesiyle hizmete sunuldu.

Yönetim sözleşmesi, otelleri sahibi adına yöneten profesyoneller çalıştırmanın ilk formatı kiralamadır. Otel sahipliği ve yönetimin büyük ölçüde ayrıldığı günümüzde her ikisinin de ayrı bir uzmanlık ve deneyim gerektirdiği bilinmektedir. Bununla birlikte otelciliğin yönetimin yoğun olduğu bir sektör olmasından dolayı

düşük karlılıkların iyileştirilmesinde uzman ve yetenekli yöneticilere ihtiyaç vardır (Tarras, 1991). Buna göre otel sahibi, otel yönetmenin tüm sorumluluğunu yönetim şirketine devretmekte, yönetim şirketi de hizmetine karşılık bir yönetim ücreti almaktadır. Konaklama sektöründe yönetim anlaşmalarına, markalı otel zincirleri ve bağımsız yönetim şirketleri olmak üzere iki farklı şekilde karşılaşılmaktadır (Yu, 1999). 215 oda ve 480 yatak kapasiteli Rixos Grand Ankara, 2009 yılında yönetim sözleşmesiyle gruba katıldı. Bununla birlikte Rixos Şarm El-Şeyh yönetim sözleşmesiyle çalışılan başka bir oteldir.

Otel konsorsiyumu, uluslararası pazara açılmak isteyen birey oteller ya franchise zincirlerine üye olabilirler ya da tümüyle bağımsız kalarak otel konsorsiyumlarına üye olurlar. Bununla birlikte konsorsiyumlar, bir üyelik sistemi olup üye otellere, bağımsızlıklarına müdahale etmeksizin rezervasyon hizmetinin yanı sıra toplu pazarlama ve eğitim desteği hizmeti de sağlayabilirler (Yarcan,1998). Rixos Otel Grubu, Global Hotel Alliance üyesidir. Global Hotel Alliance'ın grubunun bulunmadığı pazarlarda hizmet sunması, bazı avantajlar sağlamaktadır. Örneğin Global Hotel Alliance, ABD, Çin ve Japonya gibi ülkelerde faaliyet gösterirken, Rixos Otel Grubu Rusya, Birleşik Arap Emirlikleri, Kazakistan, Azerbaycan, Gürcistan, Hırvatistan, Mısır, Libya ve Ukrayna'da faaliyet göstermektedir. Bu nedenle üyelik gruba ortak pazarlama ve rezervasyon olanakları sağlamaktadır.

3   Rixos Otel Grubunu Büyümeye Götüren Temel Özellikler

Rixos dünya da milyonlarca tatil yapan insanın her birine, bir marka değeri olarak ulaşmayı hedeflemektedir. Böyle büyük bir iddianın sorumluluğunun çok yüksek olduğu ifade edilebilir. Bu nedenle Rixos Otel Grubu herkese kapısını açan mutlaka bir gün herkesin Rixos'ların birinde konaklanacağı düşüncesindedir. Bu kapsamda grubu büyümeye götüren temel özellikler arasında yatırım kararları, pazarlama çalışmaları, dış kaynak kullanımına ilişkin uygulamaları, kalite standartları, kapasite esnekliği ve personel istihdamına ilişkin politikaları, müşteri ilişkileri uygulamaları, yenilik uygulamaları, iş gören eğitimi ve imaj çalışmalarına yer verilecektir.

3.1 Rixos Grubunun Yatırım Kararlarındaki Temel Kriterler

Küreselleşmenin getirdiği olumlu ortam ve uluslararası piyasalarda artan rekabetten dolayı grup yatırım kararlarını üretim maliyetlerinin düşük olduğu ve alt yapı hizmetlerinin yoğun olduğu bölgelere doğru yönlendirmektedir. Bununla birlikte, uluslararası alanda faaliyet gösteren yerli bir otel zinciri olmanın getirdiği bazı zorluklarla da karşılaşılmaktadır. Bu nedenle yatırım kararlarını etkileyen birçok değişken söz konusudur. Bu kapsamda Rixos grubunun ürün ve hizmetlerinin asgari standartlarını yatırım yapılan ülkelerdeki kurallar oluşturmaktadır. Bu durum grup çalışanları tarafından da tam olarak algılanmaktadır. Yatırım yapılan ülkede her ne kadar farklı uygulamalarla karşılaşılsa da grubun vizyonuyla güçlendirdiği temel değerleri, müşterilerin hayal ettiklerinin de ötesinde bir tatil deneyimi yaşayabilmeleri için servis ve ürün kalitesinin yüksek standartlarını korumak, standartlarda sürekli iyileşme ile otel işletmeciliğine daima inovatif fikirleri entegre etmek, Türk kültürü ve geleneklerine özgü Rixos misafirperverliği ve servisini yansıtmaktır.

Günümüzde otel işletmelerine ait yüzme havuzları misafirlerin tatil tercihini önemli ölçüde etkilemektedir. Otelin sahip olduğu havuzların çeşitliliği ve kalitesi, yükse rekabet ortamında, tercih edilmesinde önemli bir etken olarak görüldüğü için Türkiye'de havuz temizliğine çok dikkat edilmektedir. Bu nedenle Rixos Türkiye'nin standartlarını tam olarak sağlamak durumundadır. Bu standartları uygulamanın Rixos'a farklı getiriler olmaktadır. Bu kapsamda, Sağlık Bakanlığı Halk Sağlığı Müdürlüğü tarafından bir yıl süresince yapılan denetim ve analiz sonuçlarına göre havuz hijyeni ve havuz suyu kalitesi bakımından yönetmeliklerde belirtilen kalite standartlarını sağladığı için Rixos Downtown Antalya en temiz havuz ödülüne layık görülmüştür.

Aynı örneğe Kazakistan uygulamalarında bakıldığında havuz suyu hijyeni, temizliği ve gıda güvenliği kontrolleri, Türkiye'deki kadar sıkı olmamakla birlikte oraların da kendine göre standartları bulunmaktadır. Bununla birlikte Rixos olarak yatırım yapılan her ülkenin kriterlerinin yerine getirilmesi temel değerler arasındadır. Bu nedenle ülkelerin kurallarının farklılık göstermesi Rixos Grubu'nun kalite anlayışının dışına çıkartmamaktadır. Çünkü Rixos standartları en iyi şekilde tüm destinasyonlarda uygulama vizyonuyla güçlendirilmiştir.

Grubun yatırım kararlarındaki en önemli faktörlerden birisi de ürün tedarikindeki kolaylıklar oluşturmaktadır. Bilindiği gibi uluslararası malzeme tedariki karmaşık ve uzmanlık gerektirmektedir. Bu nedenle kesintisiz ve güvenilir olarak malzeme akışını sağlamak için birlikte çalışılacak güvenilir tedarikçileri seçmek ve onlarla işbirliği yapmak gerekmektedir. Örneğin, yerelden kaliteli ürün tedariki her zaman mümkün olmadığı için yatırım yapılan bölgelerde istenilen kalitede et, peynir ve yoğurt bulmada güçlüklerle karşılaşılmaktadır. Dolayısıyla da sevkiyatın büyük bir kısmı Türkiye'den yapılmaktadır. Bundan dolayı gümrüklerde uzun bekleme süreleri meydana gelmektedir. Bu nedenle de malzeme alımları eldeki stok miktarı gözetecek şekilde yapılmaktadır.

3.2 Pazarlama ve İmaj Çalışmaları

Müşteri tatminini sağlayan otellerin diğer otellere göre rekabet üstünlüğü sağlayacağı aşikârdır. Bu nedenle, otel işletmelerinde özellikle son zamanlarda görülen kaliteli hizmet ve müşteri odaklı yaklaşımların temeli, otel müşterilerinin beklentilerini karşılamak suretiyle müşteri tatminini arttırmaya dayanmaktadır (Aksu, 2000). Bu kapsamda, üründe marka standardizasyonu ve sürekliliğinin sağlanması Rixos grubunun çok önemli gördüğü yükselen bir değeridir. Grupta ayrıca markanın imajı, gücü, kimliği ve tüketici tarafından konumlandırılmasına da önem verilmektedir. Başka bir ifadeyle Rixos grubuna bağlı oteller, tüketicinin şüphelerini doğru marka konumlandırması sağlayarak gidermeye çalışmaktadır. Marka imajına yönelik olarak yapılan pazarlama çalışmalarıyla sunulan hizmetler birebir örtüştüğünde ise müşterilerin kafasında herhangi bir kuşku ve tedirginliğin kalmadığı görülmektedir. Turizm işletmelerinin potansiyel müşterilerine yönelik çalışmalarında ürün ve hizmet standardizasyonunda ileriye gittiklerini duyurdukları ve bunu da pazarlama çalışmalarıyla desteklediklerine çok sık rastlanmaktadır. Endüstrinin genelinde ise markanın doğru konumlandırması ve marka imajının sürekliliğinin sağlanması rekabette büyük önem taşımaktadır. Bu bakımdan Rixos Group müşterinin ilk deneyimine çok önem vermektedir. Müşteri ilk deneyimini olumlu veya olumsuz yaşamışsa bunu uygulanan anketlerde yorum ve tavsiye şeklinde paylaşmaktadır. Bu kapsamda Rixos Grubu'nun müşterilerine uyguladığı anketlerin geri dönüşüm oranının % 85 olması önemli bir göstergedir. Müşterinin, beklentilerinde veya beklentilerinin üzerinde sunulan hizmetlerden memnun olarak ayrılması Rixos'a yeniden ziyaret eğilimi olarak yansıdığı gibi, pazarlama çalışmalarında da maliyet avantajı sağlamaktadır.

Grup öncelikli olarak belirli bir pazara hitap etmekten ziyade müşterilerinin tekrar konaklamasına yönelik çalışmalar geliştirmektedir. Çünkü tatile gelen herkes temiz bir oda, deniz, kum, güneş ve eğlence beklemektedir. Bu kapsamda yapılan çalışmalar, grubun otellerini tekrar tercih eden müşterilerin oldukça yoğun olduğunu göstermektedir. Çeşitli ülkelerde otelleri olan grubun müşterilerinin, destinasyonlardaki otelleri farklı amaçlarla tercih ettikleri görülmektedir. Örneğin, Rixos Downtown'a tatile gelen bir müşteri bir yıl sonra Almatı'ya iş amaçlı geldiği düşünüldüğünde Rixos'u tercih etmesi önemli bir avantaj sağlamaktadır. Bununla birlikte Rixos'un farklı müşterileri city ve resort ayrımında değişik kategorilerde yer almaktadır. Bu nedenle Rixos Grubu'nun sadakat programına geçme planlamaları olmak birlikte grup olarak ürünü sattıktan sonra müşteriye sunulan hizmetin çok daha önemli olduğuna inanılmaktadır. Çünkü tatminkar ve değer verilen müşteri ancak sadık müşteri olabilir.

İmaj, çeşitli kanallar aracılığıyla elde edilen bilgi ve verilerin değerlendirilmesi sonucunda oluşmaktadır. Bu noktada bilgi ve veriler, içinde yaşanılan çevrenin özellikleri ve sahip olunan ön yargılar gibi pek çok kanal aracılığıyla elde edilmektedir (Uzoğlu, 2001). Rixos Otel Zinciri imaj çalışmalarını iki anket grubuyla ölçmektedir. Birinci uygulanan anket hâlihazırda konaklayan müşteriye uygulanan anketlerdir. İkincisi ise müşteriye otelden ayrıldıktan sonra elektronik posta yoluyla uygulanan anketlerdir. Bu anketlerin soruları arasında herhangi bir farklılık bulunmamaktadır. Üzerinden biraz zaman geçtiğinde müşteri olaya çok farklı yaklaştığı için grup için ikinci ankette en az birinci anket kadar önemli görülmektedir. Bu kapsamda elektronik posta yoluyla yapılan anketlerin geri dönüşlerinin %85 olması çok iyi bir dönüş oranıdır. Bu grubun imajının iyi algılandığını göstermektedir.

3.3 Dış Kaynak Kullanımı (DKK)

Dış kaynaklardan yararlanma (DKY) organizasyon dışındaki işletmeler ile ortaklaşa çalışarak maliyetleri düşürme, verimliliği artırma ve müşteri tatminini sağlama amacıyla yapılmaktadır (Gövdere, 2009). Bundan dolayı otel işletmelerinde DKK en fazla ön büro, yiyecek-içecek, house keeping, animasyon, güvenlik, teknik servis ve muhasebe bölümlerinden oluşan hizmetleri kapsamaktadır (Tetik ve Ören, 2007). Konaklama işletmelerinin son yıllarda en çok başvurduğu dış kaynak kullanım şekli çamaşırların dışarıda yıkatılmasıdır. Bu nedenle bütün dünyada olduğu gibi Türkiye'de çamaşır yıkama işletmelerinin sayısı ve oteller tarafından kullanımı artmaktadır. Türkiye'de 62 otel üzerinde yapılan bir araştırmaya göre tesislerin % 34'ünün çamaşırhane hizmetlerini dış kaynak kullanımıyla sağladığı görülmektedir (İsfendiyaroğlu, 2001). Bunun en önemli nedeni, çamaşırhane hizmetlerinde maliyetlerin % 70'inin emek yoğun olmasından ve yeni oteller inşa edilirken çamaşırhane kurmak yerine o bölgedeki çamaşır yıkama tesislerinden yararlanarak bu hizmetleri gerçekleştirmeye çalışmaktan kaynaklanmaktadır (Kesgin, 2005).

Bununla birlikte dışarıdan hizmet satın almaların avantaj ve dezavantajlarının da olduğunu belirtmek gerekir. Bu şekilde çalışmanın sakıncalarından birisi, anlaşmalı olunan firmanın herhangi bir sıkıntı yaşaması halinde işlerin aksamasının muhtemel olmasıdır. Bunun dışında müşterilerin çamaşırlarının başka otellerin çamaşırlarıyla karışma durumu ve çamaşırların her geldiğinde sayılması başka bir iş yükünü oluşturmaktadır. Aynı şekilde farklı kurumların (örneğin hastaneler ile otellerin) çamaşırlarının yan yana yıkandığı da görülmektedir. Bu nedenle çamaşırhane hizmetleri dışarıdan alınmadığında işler daha kontrollü olmaktadır. Bundan dolayı, Rixos Otel Zincirine bağlı otellerin tamamında kat hizmetleri departmanına bağlı bir çamaşırhane bulunmaktadır. Buralardaki çamaşır makinelerinin ve kazanların bakımına son derece dikkat edilmektedir. Bununla birlikte örgüt kültürü ve marka uyumuna önem verildiği için grubun tüm otellerinde sular arıtmalıdır. Bütün kazanlar aylık ve yıllık olarak kontrolden geçmektedir. Herhangi bir yanma ve sudan bir koku gelmesi söz konusu değildir. Bu şekilde müşteri şikâyetlerinin de önüne geçilmektedir.

Yiyecek- içecek hizmetleri otellerde konforun bir parçası olmakla birlikte aynı zamanda bir gelir merkezidir. Bu nedenle yiyecek- içecek hizmetleri otellerin en büyük departmanlarından biri olduğu için personel maliyetlerinin de yarısından fazlasını oluşturmaktadır. Dış kaynaklardan yararlanıldığında bu alanı kontrol etmenin bazı zorluklarıyla karşılaşılmaktadır. Örneğin, bu alanda dış kaynaklardan yararlanıldığında yiyecek ve içecek hizmetlerinin fiyatlama ve promosyon esnekliğinin kaybedilmesine neden olmaktadır. Rixos Otel Zincirinde, yiyecek- içecek hizmetlerinde örgüt kültürüne ve marka uygunluğuna önem verilmektedir. Bu nedenle, Rixos Grand Ankara ve Rixos Taksim İstanbul'da alakart menüde yiyecek hizmeti sunulmaktadır. Ancak oteller inşa edilirken her şey dahil sistemine göre dizayn edildiği için alakart menüde hizmet sunmak örgüt kültürüne ve marka uygunluğuna göre hareket etmeyi zorlaştırmaktadır. Bu oteller aynı zamanda grubun yönetim sözleşmesiyle çalıştığı işletmeler olduğu için otellerde yeniden bir dizayn ve üretim alanı genişlemesine gidilmemektedir. Bu nedenle personelin yemek hizmeti dış kaynak kullanarak sağlanmaktadır.

Rixos Otel Zincirinin tüm işletmelerinde animasyon faaliyetleri oldukça geniş bir faaliyet alanını kapsamaktadır. Bu hizmetlerin tamamı ücretsiz olarak sunulmaktadır. Eğlence ve animasyon faaliyetleri, otelde konaklayan misafirlerin zamanını eğlenceli bir şekilde geçirmesi için misafirlerin beklentilerine bağlı olarak değişik ilgi odaklarına yönelik hazırlanmaktadır. Bu nedenle animasyon gösterileri haftanın iki günü grubun kendi personeli tarafından sunulmakla birlikte, haftanın 5 günü dışarıdan dans, müzik, akrobasi, jimnastik, yarışmalar şeklinde bazı özel gösteriler satın alınmaktadır. Bunlar yıllık olarak yapılan sözleşmelerle satın alınan gösterilerdir. Dışarıdan alınan bazı animasyon gösterileri grubun değişik otellerinde gösteri yapmakta, bu da grup oteli olmanın maliyet ve etkinlik çeşitliliği avantajını beraberinde getirmektedir.

Otel işletmelerinin verdiği hizmetler dikkate alındığında, teknik anlamda farklı uzmanlık gerektirdiği görülmektedir. Bu nedenle dış kaynaklardan daha iyi ürün ve hizmet sağlanıyorsa, bu başvurulması gereken bir yöntemdir. Örneğin personel servis hizmeti farklı bir uzmanlık alanı gerektirdiği için grup bu hizmeti dış kaynak kullanarak sağlamaktadır. Çünkü aracın bakımı, onarımı ayrı bir uzmanlık alanı olarak görülmektedir.

3.4 Rixos Kalite Standartları

Yoğun rekabetin yaşandığı günümüzde, müşteri memnuniyetinin sağlanması müşteri odaklı yönetim anlayışı ile gerçekleştirilmektedir. Çünkü müşteri memnuniyeti, bir işletmenin ürün ya da hizmetleri kullanması sonucu müşterinin bu ürün ya da hizmetin değeri, niteliği ve özellikleri hakkındaki olumlu ya da olumsuz duygularının tamamını oluşturmaktadır (Altan ve Engin, 2004). Bu nedenle turizm endüstrisinde sunulan hizmetlerin yapısal özelliği olan üretim ve tüketim sürecinin birbirinden ayrılmaması göz önünde bulundurulması gereken en önemli faktördür. Bununla birlikte hizmet işletmelerinde müşterinin sipariş ettiği mal ve hizmetlerin en kısa sürede yerine getirilmesi rakiplere karşı üstünlük sağlanması açısından önemli bir unsur olarak görülmektedir. Bu durum hizmetlerde bir aksama olması halinde işletmeler açısından bazı riskleri de beraberinde getirmektedir.

Rixos'un kalite anlayışında ise yüksek standartlarını korumak, sahip olduğu standartları sürekli iyileşme ile otel işletmeciliğine inovatif fikirler entegre etmek vardır. Bu kapsamda Rixos 'u tercih eden müşterilerin otelden %100 memnun ayrılması grubun başlıca değerleri arasında bulunmaktadır. Grup bu amacını tüm işletmelerinde unutulmaz bir konaklama sağlayarak, konuklara özel, Türk kültürü ve geleneklerine özgü Türk misafirperverliği ve servisini yansıtarak gerçekleştirmektedir. Bu nedenle Rixos kalite anlayışını, Türkiye'de ve dünyada güvenilir ve aynı kalitede hizmet veren örgüt kültürüne ve marka uygunluğuna yakışır bir şekilde sürekli olarak fark ve değer yaratan, rakiplerin örnek aldığı, her aşamada bir otelden daha fazlasını vaad eden ve herkesin bir gün yolunun Rixos Otel Zincirin'den birine düşeceği anlayışıyla sürdürmektedir. Bundan dolayı grup, hizmet sektöründe kalitenin kontrol noktasını tüketici olarak algılamaktadır. Bu anlayış gruba farklı erklerde ödüller de getirmektedir. Örneğin, ilk defa 2009 yılında verilmeye başlayan AB Kalite Zirvesi ödülünü Rixos Otel Grubu aldı. Grubun bu ödüle layık görülmesinde koşulsuz müşteri memnuniyeti anlayışı ile verilen hizmet kalitesinin, Avrupa Standartlarının da üzerinde olmasından kaynaklanmaktadır. Bununla birlikte grubun bünyesinde uluslararası alanda faaliyet gösteren birçok otel işletmesinin bulunması ulusal ve uluslararası kalite standartlarına akredite olunmasını gerektirmektedir. Grubun uyguladığı ve akredite olduğu kalite standartları, iç pazarda olduğu gibi dış pazarda da kendine rekabet avantajı sağlamaktadır.

Ulusal ve uluslararası alanda faaliyet gösteren Rixos Grubu'ndaki otellerin akredite olduğu ve uyguladığı kalite standartları, ISO 22000 gıda güvenliği, ISO 14001 çevre güvenliği ve ISO 9001 kalite yönetim sisteminin kurulması esnasında uygulanması gereken şartları tanımlayan ve belgelendirmeyi teşkil eden standartlardır. Bu kapsamda Rixos Dubrovnik, Rixos Konya ve Rixos Grand Ankara 2011 yılında ISO 22000 gıda güvenliği ödülüne layık görülmüştür.

Grubun bütün otelleri bu sertifikalara sahip olmakla birlikte uygulamada, planlama ve kontrol noktalarına son derece önem verilmektedir. Çünkü üretim ve tüketimin aynı yerde yapıldığı bir endüstride planlamanın önceden tam bir titizlikle yapılması gerekmektedir. Kalite kontrol noktası olan tüketiciye sunulan hizmetlerle ilgili geri bildirimler kalitenin istenilen şartlarda olup olmadığının belirlenmesine yardımcı olur. Bu kapsamda müşterilere uygulanan anketlerle birlikte gelen şikâyetler titiz bir şekilde ele alınmaktadır.

3.5 Rixos Kapasite Esnekliği

Kapasite esnekliği özellikle hizmet sektörü açısından önemli bir sorundur. Talep yetersizlikleri işletmeleri düşük kapasite ile çalışmaya yöneltmektedir. Bundan dolayı otel işletmelerinin büyük bir çoğunluğunun çalışmalarını mevsimsel olarak yürüttükleri görülmektedir. Türk turizm sektörüne mevsimsel olarak bakıldığında, Avrupalı turistler Antalya'da özellikle kış mevsiminde kongre ve toplantı amaçlı bulunurken, yaz döneminde Rus ve Rus dilini konuşan ülkelerden gelen turistlerin konaklamasında bir yoğunluk görülmektedir.

Rixos' da ise mevsimsel bir uygulamadan daha çok gruba ait otellerin farklı konseptlerde tasarlanması bir avantaj olarak görülmektedir. Özellikle Antalya Lara'da hizmet veren Rixos Lares, hem milli takımlardan hem de yurt dışı takımlarından oldukça rağbet görmektedir. Milli takımlar, ulusal futbol kulüpleri ve yurt dışı takımları tarafından kamp merkezi olarak tercih edilen otelin bünyesinde, üç profesyonel futbol sahası ve profesyonel tartan kortları bulunmaktadır. Türkiye'nin büyük bir futbol kulübü olan Galatasaray'ın tesisde birkaç kez kamp amaçlı konaklaması tercih edilirliğinin yüksek olduğunu göstermektedir. Bununla birlikte Antalya'nın Belek turizm bölgesinde faaliyet gösteren, Rixos Premium Belek'in kendine özgü bir golf sahası olmamasına rağmen otelde golfle ilgili transfer ve golfe ilişkin özelliklerin sergilenmesi farklı zamanlarda tercih edilirliğini arttırmaktadır.

Antalya merkezde faaliyet gösteren Rixos Sungate ve Rixos Downtown oteller, daha çok kongre ve toplantı ağırlıklı tercih edilmektedir. Rixos Sungate otelde, büyük bir kongre merkezi on iki ay boyunca faaliyet göstermektedir. Kongre merkezinin bünyesinde on beş tane toplantı salonunun talebe göre irili ufaklı salonlara dönüştürülebilir özellikte olması rahat bir kullanım sağlamaktadır. Bununla birlikte kongre merkezinin bünyesinde ayrı bir restoranı ve oturma yerlerinin bulunması müşterilere ve işletmeye çok büyük bir rahatlık sağlamaktadır. Otelin bu özelliğiyle toplantı ve tatil amaçlı gelen müşteriler ayrı yerlerde tutulabilmektedir.

Rixos Grubu'nun aynı bölgede birden fazla otelinin olması yüksek talep zamanlarında oteller arasında müşteri transferini mümkün hale getirmektedir. Ayrıcı özel programı olan (şirket toplantıları, kongreler, doğum günü partileri, düğünler gibi) otele personel ve ihtiyaç duyduğu araçlar grubun diğer otelleri tarafından sağlanmaktadır. Bu da grup oteli olmanın getirdiği en büyük avantajlardan birisidir.

3.6 Personel Politikası

Küreselleşme sürecinin ve teknolojik gelişmenin eş zamanlı olarak devreye girmesi, geleneksel rekabet stratejilerinin geçerliliğini azaltmıştır. Günümüzde rekabette üstünlük için verimlilik artışı sağlamak ve yenilik yapmak önemli ölçüde insan kaynaklarına yönelinmesini zorunlu kılmıştır (Aksu, 2000). Bu nedenle otel işletmelerinde hizmet kalitesini arttırmanın en önemli yolu, istihdam edilen personelin memnuniyetinin sağlanmasıdır. Yapılan bilimsel çalışmalara bakıldığında ise ekonomik faktörlere nazaran, psiko-sosyal faktörlerin, işgörenin iş tatmini üzerinde etkisinin daha fazla olduğunu ortaya koymaktadır. Emek-yoğun bir sektör olan turizm sektörüne bağlı konaklama işletmelerinde işgücünün öneminin diğer sektörlere göre daha fazla olduğu görülmektedir. Çünkü hizmeti satın alan müşteri ile hizmet sunan işgörenin iç içe, yüz yüze olduğu bir sektörde, iş tatmini düşük olan işgörenin müşterisine tatmin edici bir düzeyde hizmet sunması ve müşteri tatmini sağlaması mümkün değildir (Akıncı,2002). Başka bir ifadeyle personelini mutlu edemeyen işletmelerin müşterilerini memnun etmesi mümkün değildir.

Çalışan memnuniyeti sağlanan işletmelerin güçlü bir örgüt kültürüne sahip olduğu görülmektedir. Güçlü bir örgüt kültüründe, örgüt üyeleri temel değerleri kabul eder, örgütün amacını bilir ve onun için çalışır. Zayıf örgüt kültüründe ise, ortak bakış açısının yokluğu, yöneticiler ve çalışanlar arasında kopukluklar, diyalog eksikliği, kuşku, düşmanlık hisleri ve gerilime dayalı bir sosyal iklim görülür (Doğan, 1997). Bundan dolayı Rixos Otel Zinciri'nde görev yapan yöneticiler, iş görenlerini sadece ekonomik bir varlık olarak değil aynı zamanda sosyal yönü olan ekonomik beklentilerinin dışında farklı beklentilerini ve ihtiyaçlarını karşılamak için bir örgütte çalıştıklarını göz önünde bulundurarak personele yaklaşırlar. Çünkü çalışanlar, işletmeler için çok önemli sinyallerin alındığı müşteriye küçük dokunma noktalarını (touchpoint) oluşturmaktadır. Bu nedenle, Rixos Otel Zinciri olarak personelin motivasyonu hem ekonomik yönden hem de psiko-sosyal yönden sağlanmaktadır. Bu kapsamda yılda iki kez düzenlenen personel gecelerinde çekilişle maddi değeri yüksek olan hediyeler sunulmaktadır. Örneğin 2012'de düzenlenen personel gecesinde, personelin birine çekilişle 2+1 daire, başka bir personele belli standartlarda araba, birçok personele de çeyrek altın ve farklı Rixos' larda konaklama imkânı verildi. Bununla birlikte yeni evlenen çiftlere balayı ödülü verilmesi veya maddi durumuna bakılarak para desteği sağlama gibi uygulamalar da bulunmaktadır. Bu nedenle grubun, çalışanlarının mutlu olduğu günleri ve üzüntülerini paylaşmak isteyen farklı bir yönü de bulunmaktadır.

Turizm sektörünün hizmet sektörü olması nedeniyle istihdamı olumlu yönde etkilediği bilinmektedir. Buna paralel olarak çalışma hayatıyla ilgili sorunların artması ve çeşitlenmesi de kaçınılmazdır. Otel işletmelerinde aynı çatı altında birden çok hizmet sunulmasından dolayı da istihdam yoğunluğu maliyeti, toplam maliyetler içinde önemli bir payı oluşturmaktadır. Bu nedenle turizm işletmeleri emek yoğun bir endüstride hizmet verdiği için personel sayısının hizmetin kolay, sağlıklı ve kaliteli olmasında önemli bir etkisinin olduğu görülmektedir. Hizmet sektörünün dünyadaki uygulamalarına bakıldığında hemen her sektörde yarı zamanlı (part-time) personel istihdam edilmektedir. Ancak müşterilerine kaliteli hizmet sunmak isteyen işletmelerin oda sayısına uygun

personel istihdam etmesi gerekir. Rixos Grubunun uygulamalarında, oda sayısı başına düşen personel sayısının 0,8-1 arasında değiştiği ve bazı otellerde bu oranın 1,5'e kadar yükseldiği görülmektedir. Bu şekilde personel istihdamı, hizmeti hem kolay hem de daha sağlıklı kılmaktadır. Bununla birlikte Rixos çalışanlarına belirli davranış kalıpları, kurum kültürü ve çeşitli eğitim faaliyetleriyle sağlanmaya çalışılmaktadır. Çünkü grubun çalışanları her ne kadar Türk olsa da çalışanlar arasında bölge halkından da iş görenler bulunmaktadır. Her zaman otelin bulunduğu bölgeden çalışanlar mutlaka istihdam edilmektedir. Bu şekilde Rixos Group faaliyette bulunduğu bölgenin yerel halkına da istihdam sağlama, malzeme satın alma gibi yöntemlerle hizmet etmeye çalışmaktadır. Grubun bünyesinde farklı kültürlerden iş görenler bulunduğu için müşteri yürürken ona gülümsemek, selam vermek, herhangi bir şey sorduğunda yakından ilgilenmek, bir problemle karşılaştığında problemi çözmek ya da çözecek kişilerle irtibata geçmek, müşteriye karşı sürekli saygı ve nezaketle davranmak ve konuşmak çalışanlara kazandırılmaya çalışılan temel davranışlardır.

İş tatmini, işgörenin ruhsal sağlığını önemli ölçüde etkilemektedir. Bu nedenle Rixos Gruba bağlı tüm otellerde personelin özlük haklarına son derece önem verilmektedir. Personelin sigortalılığına titizlik gösterilmekte ve sigorta primleri brüt maaş üzerinden yatırılmaktadır. Bununla birlikte personelin işe başlama ve çıkış saatleri parmak izi okuyucularla sağlanmaktadır. Bu şekilde mesai fazlası olan personele, herhangi bir beyanda bulunmasına gerek kalmadan ay sonunda fazla mesai ücreti ödenmektedir. Personelin fazla mesai yapmasına ise bölüm müdürü ve insan kaynakları müdürü birlikte karar vermektedir.

Personelin en önemli motivasyon kaynaklarından biri de onlara ve yaptığı işe değer vermektir. Çalışanlarını dinleyen ve sözlerine önem verildiğini hisseden personelle işletmelerin arasında bir sadakat bağı kurabilmektedir. Bu bakımdan grup, çalışanlarının motivasyon seviyelerini arttırmak amacıyla ayın personeli uygulaması yapmaktadır. Müşteriler ve departman yöneticileri tarafından öne çıkartılan isimlerin görüşüldüğü aylık toplantılarda, farklı departman müdürlerinin de katıldığı oylamayla ayın personeli seçilmektedir. Ayın personeline verilecek hediyelerin niteliği otelin uygulamasına göre farklılık gösterdiği gibi bu konuda oteller özgür bırakılarak herhangi bir kısıtlamaya da gidilmemektedir.

Grubun otelleri arasında personel transferi imkânının olması, personelin iş akdinin askıya alınmasının da önüne geçmektedir. Örneğin, Kazakistan'da Rixos Astana'dan sonra Rixos Almatı'nın açılışı yapıldı. Dolayısıyla Astana'da yetişmiş personel oraya destek amacıyla transfer edilerek, zincire yeni katılan bu otelin Rixos kültürüyle uyum sağlaması hızlandırılmaktadır. Grubun bu yönü hem iş görenler açısından hem de kurum açısından önemli bir avantaj sağlamaktadır. Çünkü herhangi bir kriz durumda personel işten çıkarılmak yerine yoğunluğun yüksek olduğu otele yönlendirilmektedir. Bundan dolayı personelin iş akdinin askıda kalması gibi bir durumla çok fazla karşılaşılmamaktadır. Bununla birlikte iş akdi askıya alınan personel, yoğunluğa göre düğün ve gala gecelerinde, kongre ve toplantı organizasyonlarında istihdam edilmektedir. Bu durum grubun personel ayağını güçlendirmektedir.

Periyodik olarak ülke dışındaki otellerdeki çalışanlarla bir araya gelerek motivasyonlarını arttırmaya yönelik çalışmalar yapılmaktadır. Örneğin Mısır'daki otelin çalışanlarının kendilerini yalnız hissetmesini önlemek için Türkiye'ye toplantıya çağrılararak moral desteği sağlanmaktadır. Çünkü personelin her yerde grup için canla başla mücadele verdiğine inanılmaktadır. Bu nedenle özellikle Türkiye dışındaki otellerde personelle ilgili zaman zaman sıkıntılar olmakla birlikte, merkez ofis olarak otellerle sürekli görüşerek onların yanlarında olunduğunu hissettirerek motivasyonları sağlanmaya çalışılıyor.

Çalışanların eğitimi ve davranışları kadar önemli bir unsur olan görünümlerine son derece dikkat edilmektedir. Çünkü personel dış görünüşüyle otelin yenlikçi kimliği karşılaştırılmaktadır. Rixos Otel Zinciri'nde personelin kıyafeti marka departmanı tarafından belirlenmektedir. Bu nedenle gruba bağlı otellerin tamamında personelin çalışmaya başladığı andan itibaren ayakkabı, yiyecek-içecek, üniforma ve servis hizmetleri karşılanmaktadır.

3.7 Personel Eğitimi

Hizmet işletmelerinin verimli bir şekilde faaliyet göstermesi yapmış veya yapacak olduğu etkin bir iş gören bulma ve seçme sürecine bağlıdır. Bununla birlikte iş görenlerin gelişmesine olanak sağlayarak onların motivasyonuna katkıda bulunmak için ilk olarak personele güven vermek gerekir. Bu nedenle grup personelin yaşam standartlarını geliştirmek için planlı ve sürekli mesleki eğitim politikası uygulamaktadır. Bu nedenle Rixos Otel Zincirindeki işletmelerde iki farklı personel eğitimi yaklaşımı bulunmaktadır. Bu nedenle grubun merkez ofisindeki eğitim departmanı gruptaki tüm otellerden yıllık olarak eğitim programlarının belirlenmesi yönünde çalışma içindedir. Dolayısıyla eğitimlerle ilgili planlar yıllık yapılmaktadır.

Bunlar otelin kendi bünyesinden verdiği eğitimler ve merkez ofis tarafından tüm otellerde verilmesi gereken eğitimlerdir. Bunlar dil eğitimi, iletişim teknikleri, problem çözme teknikleri, müşteri ilişkileri eğitimi ve şikâyet yönetimi eğitimi verilmektedir. Bunların dışında müşteri kontak eğitimi, müşteri dinleme eğitimi, iletişim eğitimleri, doğru iletişim kurma teknikleri, doğru dinleme, doğru cevap verme teknikleri ve acil durumlara müdahale eğitimleri gelmektedir. Bununla birlikte Rixos dil eğitimine çok öenm vermektedir. Grubun uluslararası bir marka olmasından dolayı bünyesinde farklı dillerden ve milletlerden çalışan barındırıyor olması dil eğitimini gerektirmektedir. Aynı dili konuşan insanların birbirleriyle daha iyi anlaşacağı göz önünde bulundurulduğunda personele problem çözme tekniklerinin öncesinde dil bariyerlerini aşmaları yönünde

eğitimler verilmektedir. Örneğin, Mısır'da çalışan Rixos personeline dil eğitimi verilmektedir. Çünkü Mısır'da bölgede çoğunlukla Arapça konuşulması ve İngilizce imkânlarının çok kısıtlı olması çalışanlara haftada 1-2 gün İngilizce eğitimi vermeyi gerektirmektedir.

Personel eğitimleri kurum içi çalışanlar tarafından verildiği gibi kurum dışından da sağlanmaktadır. Örneğin, otel işletmelerinde oluşabilecek acil durumlarda tesis içerisindeki kişilerin en hızlı ve emniyetli bir şekilde kaçış yolları üzerinden tahliye edilmesi gerekmektedir. Bu nedenle eğitimlerin bazılarının (örneğin, yangın eğitimi) sertifikalı olması gerekmektedir. Bu eğitimlerle işletmedeki tüm çalışanların acil durumlarda üretilen panik çıkış donanımlarını kullanabilmesi hedeflenmektedir. Bundan dolayı bu eğitimler grubun akredite olduğu kurum tarafından sağlanmaktadır.

Bununla birlikte Türkiye'deki tüm otellerde verilmesi gereken zorunlu bir eğitim olan iş sağlığı ve güvenliği eğitimi bütün otellerde verilmektedir. Bunun yanında müşteriye bilgi vererek veya vermeden yapılan yangın eğitimi tatbikatı zorunlu olduğu için bütün çalışanların bu eğitimi alması gerekmektedir. Bununla birlikte kurum çalışanlarının %20'sinin alması zorunlu olan ilk yardım eğitimi verilmektedir. Rixos Grup çalışanlarına yapılan eğitimlerin tamamı sertifikalandırılması personelin özgeçmişi için önemli görülmektedir. Bununla birlikte departmanın kendi içinde bir eksiği varsa, örneğin ön büroda kullanılan programla ilgili bir eksiklik varsa ilgili eğitimi sadece ön büro personeli almaktadır. Kat hizmetleri departmanında görevli olan ve alanı kimyasallarla ilgili olan çalışanlar anlaşmalı olunan ve kimyasalların satın alındığı firma tarafından ölçeklendirme ve korunma eğitimi verilmektedir.

Rixos Grubu aidiyet duygusuna büyük önem vermektedir. Nitekim üst yönetimde görev yapan personel ortalama en az beş yıllık çalışanlardan oluşmaktadır. Kalifiye personel ağırlıklı olarak üniversite ve turizm meslek lisesi mezunlarından oluşmaktadır. Personelin yoğun sezonların dışındaki dönemlerde işten çıkarılması çok fazla karşılaşılan bir durum değildir. Rixos Otel grubu sürekli büyüdüğü için düşük sezon olarak ifade edilen dönemlerde personelin sezonun yoğun olduğu ülkelere transfer edilmesi grubun işini kolaylaştırmaktadır. Çünkü, Rixos personeli başka bir Rixos'a gittiğinde, gittiği bölgedeki personelle kaynaşarak ona işi öğretiyor.

Değişik ülkelerde faaliyette bulunan Rixos'da pek çok değişik milletten insan çalışmaktadır. Personel arasındaki kültürel farklılıklar bir takım zorlukları da beraberinde getirebilmektedir. Örneğin bazı ülkelerde personel sözlü olarak değil de, yazılı talimatla işini dört dörtlük yapmakta ve iş tanımlarının dışına kesinlikle çıkmamaktadırlar. Örneğin odaları temizleyen personele koridoru ya da merdivenleri temizlememektedir.

3.8 Rixos Hotel Grubunun Sahip Olduğu Ödüller

Rixos Grubu farklı erklerde ödüllere layık görülmektedir. Bunlar uluslararası faaliyet gösteren kuruluşlardan ve yerel yönetimlerin takdirleriyle değer bulmuş ödüllerdir. Aynı zamanda Rixos'la ilgili bloklara ve web sitelerine yapılan yorumlarında etkisi olmaktadır. Bununla birlikte günümüzün tatil anlayışı tecrübeyle müspet sonuçlanmaktadır. Bu nedenle müşterilerin memnun olarak ayrılmasının başka getirileri de olmaktadır. Bunların başında ödüller Rixos Grubun en çok değer bulduğu karşılıklardır. Bunlar, bağımsız bir şekilde web 2 olarak ifade edilen sosyal medya sitelerinde yayınlanan, Rixos Otel Zincirine bağlı işletmelerden herhangi birinde konaklayan veya toplantı organizasyonuna katılan müşterilerin yaptığı yorumlar sonucunda gelmektedir. Bu kapsamda şu örnekler verilebilir:

Rixos Downtown, dünyanın en büyük tur operatörü olan TUI tarafından 'En iyi beş yıldızlı otel' seçildi. Bu ödül Rixos' a TUİ'nin İskandinav ülkeleri kolu TuiNordic'in, 'Blue Awards 2013' ödülleri kapsamında 150 otel işletmesinde 265 bin müşteriye uygulanan anket sonucunda, 2012'de en iyi beş yıldızlı otel kategorisinde verildi.

Holiday Check tarafından verilen 'Quality Selection' ödülü eğlence programının zenginliği, spor aktivitelerinin sürekliliği ve dünyanın ilkleriyle hizmet kalitesinde ayrı bir yerde olan Rixos Sungate'e layık görüldü. Rixos Sungate, Holiday Check tarafından ödül kriterleri belirlenen ve Hotel Conulting Service tarafından ölçümlenen değerler sonucunda 2011'de "Akdeniz Bölgesi'nin En İyi Entertainment ve Event Oteli" seçildi. Bu seçimde müşterilere sunulan günlük aktivitelerin yoğunluğu, çocuk aktivitelerinin kapsamı ve içeriği gibi kriterler bulunmaktadır.

Rixos Lares hayvanlara yönelik olumlu uygulamalarından dolayı TUI' den 'Hayvan Dostu Ödülü' aldı. Bir benzer ödülde Hayvanlara Etik Muamele İçin Mücadele Edenler-People For the Ethical Treatment of Animals (PETA) adlı hayvan hakları organizasyonundan geldi. Otelin açık yaşam alanında bulunan kuş, kedi, köpek ve caretta caretta'lar için uyguladığı özel bakım hizmetlerinden dolayı bu ödüle layık örüldü. Rixos Lares'in doğal yaşam alanında kedilerin barınmaları için yapılan kedi evleri, hayvanların kontrolsüz çoğalmalarını engellemek amacıyla kısırlaştırma çalışmaları ve hayvanlara düzenli olarak veteriner kontrolleri gibi pek çok faaliyet yapmaktadır. Bu kapsamda kuşların yuvalama alanlarını arttırıldı. Tesis içinde yer alan yüksek ağaçlara kuş yuvaları asılarak kötü hava şartlarından korunmaları sağlandı. Buradaki kuşlar koruma altına alınarak veteriner hekimlere yönlendirilmektedir. Otelin sahilinde yumurta bırakan caretta caretta yuvaları koruma altına alınarak, yuvalarda tespit edilen yumurtaların ve yavruların denize canlı olarak ulaşması sağlanmaktadır

Rixos Libertas otelinin projesi öncelikle bir dönüşüm projesidir. Bu kapsamda değerlerin etkin ve yenilikçi uygulamalarla çevreye kazandırılmış olmasından dolayı Turizm, Seyahat & Ulaşım Kategorisinde "En İyi Yapı" Ödülüne layık görüldü.

Bunların dışında grubun otellerine yerel yönetimler tarafından farklı ödüllere layık görülmektedir. Örneğin denetimler sonucu yapılan değerlendirmeye göre Rixos Downtown Otel 'En İyi Mutfak', 'En Güvenilir Tesis' ve 'En İyi Spa&Sport' ödülleri verildi.

Türkiye'deki Rixos Grubuna ait otellerin bütün sahilleri Mavi Bayraklıdır. Bilindiği gibi Mavi Bayrak (Blue Flag) ödülü tüm dünyada geçerliği olan temiz sahil, sahil çevresi ve deniz suyuna sahip olan işletmelere verilmektedir. Bu ödüller Rixos Gruba müşteri sağlayan tur operatörlerinin ve devlet tarafından yapılan denetimlerin sonucunda verilmektedir. Rixos Grup için olumlu bir reputasyon olan ödüller, grubunun sunduğu hizmetlerin beğeni topladığını göstermektedir.

3.9 Yenilik ve CRM Uygulamaları

Uluslararası otel işletmelerinin yenilik uygulamalarına bakıldığında sahip oldukları inovatif değerleri yeni destinasyonlara taşıdıkları görülmektedir. Bu nedenle grubun uluslararası bir zincir olmasının etkisini yenilik uygulamalarında görmek mümkündür. Bu kapsamda Rixos uygulamalarına bakıldığında bunların başında Müşteri İlişkileri Yönetimine - MİY (Customer Relationship Management-CRM) ilişkin yatırımlar gelmektedir. Müşteri ilişkileri yönetimi; stratejik, analitik, işlevsel ve işbirlikçi olarak örgüt içerisinde uygulanmaktadır. Stratejik müşteri ilişkileri yönetimiyle işletmeler, müşteri amaçlarını tanımlayarak karlılığını belirler. Bu strateji geliştirme ve değer yaratmayla ilgili bir düzeydir (Timur, 2013). Bununla birlikte internet ve yeni haberleşme teknolojilerinin gelişmesiyle, müşteriler artık bilgiye çok çabuk ulaşabilmekte ve sürekli daha iyisini kendilerine daha uygun olanı tercih edebilmektedir. Bu nedenle kurumların müşterileriyle "öğrenmeye dayalı" ilişkiler kurabilmesi için en önemli teknoloji unsurlarını veri tabanlı pazarlama ve e-ticaret oluşturmaktadır (Aktepe vd., 2009). Çalışmanın bu kısmında Rixos Otel Zinciri'nin yenilik uygulamalarına ve müşteri ilişkileri yönetimine ilişkin yaklaşımları incelenecektir.

Yapılan MİY sonuçlarına göre müşterilerin mutfak kültürüne uygun tasarımlar sağlanmaya çalışılmaktadır. Bu kapsamda Rixos'un uyguladığı en önemli strateji, bulunduğu destinasyonları Türk kültüründeki yiyecek ve içeceklerle tanıştırmaktır. Örneğin Kazakistan'ın Türk çayı ve zeytinle tanışması Rixos grubuyla mümkün olmuştur. Rixos'un bu uygulamaları bölge insanın ve zaman zaman orada konaklayan Türk müşterilerinin de beğenisini kazanmaktadır. Bu kapsamda yiyecek-içecek büfelerinin daha çok ilgi uyandırması yönünde ve müşterilerin zevkleriyle uyumlu tasarım çalışmaları yapılmaktadır. Bununla birlikte yiyecek içecek alanında dünya mutfaklarından da ikramlarda bulunulduğu için Michelin yıldızlı aşçılar istihdam edilmektedir. Örneğin, Dubai Rixos' da Türk yemekleri sunulmaktadır. Ancak müşteri büfede dünya yemeklerini de görmek isteyebiliyor. MİY ürün olarak burada otele müşterinin beklentilerinin neler olduğunu önceden bildirerek hizmetleri kolaylaştırmaktadır. Bununla birlikte Rixos Otellerindeki büfelerde minimum 8-10 peynir çeşidi ikram edilmektedir. Müşterilerden bu ürünleri satın alabilecekleri yerlerle ilgili taleplerin gelmesi endüstriyel bir hizmet verilirken bireysele de hitap edildiğini göstermektedir.

Hizmet endüstrideki tüketicilerin beklentileri sürekli değiştiği için markanın tutundurma aşamasında ürün ve hizmet standardı kadar yenilik de önemli görülmektedir. Bu kapsamda markanın çocuklu aile konsepti pazarlama çalışmalarıyla güçlendirilmeye çalışılmaktadır. Örneğin, Rixos Sungate Otel, bir tatil değerlendirme şirketi olan Holiday Check ve Hotel Consulting Service'nin 7 farklı kategori için yaptığı ölçümlemeleri ve kriterlerine göre tatilcilerin sosyal medyada paylaştığı yorumları incelenerek 'En İyi Aile Oteli' kategorisinde birinci seçilmesi markanın en yoğun yatırım yaptığı alan olarak görülmektedir. Rixos Sungate Otelde çocuk ve yetişkin plajı olmak üzere iki ayrı plaj bulunmaktadır. Çocuk plajında, çocuk şezlongları, şemsiyeleri, çocuklar için özel güneşlikler, kumdan yapılmış masalar ve oturma yerleri bulunmaktadır. Bununla birlikte çocuklar için özel büfeler hazırlanarak çocukların damak zevkine göre farklı ürün yelpazesi sunulmaktadır.

Otellerin en önemli ek gelir kalemlerinden biri haline gelen SPA'lar en yüksek yatırımları gerektirmektedir. Bununla birlikte bu alandaki yenilikleri de takip etmek gerekmektedir. Bu nedenle Rixos'un kendi özel markası olan Rixos Royal Spa merkezlerinde güzellik merkezi, masaj salonu, fitness merkezi, Türk Hamamı, Sauna ve Thalasco Spa hizmetleri verilmektedir. SPA' nın görüntü kalitesine son zamanlarda çok önemli yatırımlar yapılmaktadır. Çünkü müşterilere rahatlık ve huzur sağlayabilmesi için otellerin SPA alanları ve karşılama alanları özellikle iç mimari açısından hassasiyetle üzerinde durulması gereken alanlardır. Örneğin, Rixos Royal Spa merkezlerinde kuru yüzdürme tekniğini içeren dry flotation yatakları yaygın olarak kullanılan bir üründür. Bununla birlikte bu merkezlerdeki görevli terapistler, güzellik uzmanları ve masörler sertifikalı çalışanlardan oluşmaktadır.

Rixos grup olarak otelcilik sektöründe başarının devamının ancak sektördeki yeniliklere önem verilerek gerçekleştirilebileceğine inanılmaktadır. Bu nedenle özellikle şehir otellerinde ev konforu ve ofis teknolojileri bir arada sunulmaktadır. Bu kapsamda MİY'nin gruba katkısı müşterilerin otele giriş yapmadan önce, daha önceki bilgilerden isteklerinin bilinmesi ve bu kişiye özel hizmetleri sunma imkânını vermesidir. Bundan dolayı şehir otellerinde konaklayan iş adamı müşterilere ihtiyaç halinde haberleşme araçları, ofis gereçleri ve sekreterlik hizmetlerinin sunulduğu kullanıma açık büro hizmetleri (business center) verilmektedir. Aynı zamanda bu hizmetler müşterilerin tercihlerine göre oda servisi olarak da sunulmaktadır.

MİY anlayışında müşterinin bir kez otele gelmesi yeterli olmaktadır. MİY'in teknolojik yatırım tarafında bu anlamda grubun bütün otelleri birbirine benzemektedir. Örneğin Rixos Astana Kazakistan'da konaklayan müşterilerin giriş-çıkış işlemi arasındaki tüm bilgileri (şikâyetlerde dâhil) internet ortamından sisteme bağlanarak grubun başka bir otelinin görmesi mümkündür. Bu nedenle alerjik rahatsızlığı olanlar (besin veya koku), yastık tipi tercihi (boyunla ilgili problemi olanlarda medikal yastıklar tercih edilmektedir), pike, yorgan tercihi ve özel puro tercihi olanlar gibi çok farklı müşteri istekleri bir veri havuzunda toplanmaktadır. Bu bilgilerden hareketle müşterinin bir sonraki konaklamasında hassasiyet gösterilmektedir. Bunula birlikte boyunla ilgili problemi olan konuklara yastık menüsü sunulmaktadır. Konuklar tercihlerine göre seçtikleri yastık tiplerinde keyifli bir uyku geçirdikleri için yoğun ilgi görmektedir. Yapılan anket çalışmalarında bu hizmetlerin müşterileri memnun ettiği görülmektedir.

Günümüzde birçok aile evcil hayvan beslemektedir. Bu evcil hayvanlar onların hayatlarının bir parçasını oluşturduğu için ayrılmak istememektedirler. Bu nedenle müşterilerin hayvanlarıyla gelebildiği bir otel olan Rixos Premium Belek'te hayvanların kaldığı özel barınaklar bulunmaktadır. Buradaki barınaklar bir veteriner hekim gözetimde sürekli takip edilmektedir.

Turizm sektöründeki aşırı rekabet ve küreselleşme olgusu sektördeki işletmelerin teknolojik gelişmelere paralel olarak yenilikçi ve kaliteli mal ve hizmet sunumunu zorunlu kılmaktadır. Bundan dolayı Rixos Otel Grubu'nun odalarında yenilikçiliğe ve kaliteye çok önem verdiği ifade edilebilir. Bunula birlikte aydınlatma tasarımı, otelin görünümünü güçlendirdiği için mimaride son derece önemli bir rol oynamaktadır. Bu nedenle bir otel binasındaki aydınlatma düzeni görsel konfor koşulları ve güvenliğini sağlamanın yanı sıra, müşterileri yönlendirmek ve mekânlardaki belirli detayları vurgulayarak, değişik işlevlere cevap verebilmek amacıyla tasarlanmalıdır (Şahin, 2006). Bundan dolayı Rixos Otel Zinciri'ndeki oda aydınlatmaları insanın içini karatmayacak şekilde tasarlanmaktadır. Işık tavandan odaya alçıpanın içinden süzüldüğü için doğrudan müşterinin gözüne gelmesi engellenmektedir. Bunula birlikte otellerin iç mimarisinde kişisel kullanımı ön plana çıkarmak için üç çeşit okuma lambası kullanılmaktadır. Lambalardan bir tanesi abajur olarak, bir diğeri etajer, başka bir lambada yatağın yan tarafından ışık sağlayacak özelliktedir. Bunula birlikte lambalarda kullanılan ampullerin ışık kalitesi insanın gözünü yormayacak şekilde tasarlandığı için istenilen ayara getirilebilir özelliktedir. Bu şekilde odalarda az sarfiyatlı ve ısı yaymayan aydınlatma gereçleri kullanılarak çevre duyarlılığı ve enerji tasarrufu sağlanmaktadır.

Otel işletmelerinin sunduğu hizmetler, konuğun mutlu ve huzurlu bir tatil geçirmesinde önemli bir yer tutmaktadır. Çünkü rahat ve konforlu yataklarda uyuyan müşteriler, iyi dinlenmiş ve zinde olarak uyanır ve güne başlarlar. Bu nedenle odalarda kişiye özel bulgari marka oda bukletlerin kullanıldığı ve odalardaki yataklar son derece konforlu olduğu Rixos Pera Otel, müşterilerine farklı bir dünyada olmanın hissini vermektedir. Bunula birlikte gün içerisinde havuzda, denizde, otel içi ve otel dışı aktivitelerde yorgun düşen müşteriler için rahatlayabilecekleri yerler olan banyoların tasarımları ve kullanışlı olması konuklar açısından oldukça önemlidir. Bu nedenle otelin suit oda ve villa konseptlerinde küvetler kullanılırken diğer oda tiplerinde duşa kabin mantığı görülmektedir. Duşa kabin odaların konforuna da son derece önem verilmektedir. Buralar müşterinin rahat edeceği genişlikte tasarlanmıştır. Su kalitesi ve su ayarı yapılabilir özellikte olup aynı zamanda duşlarda müzik yayını da yapılmaktadır. Rixos Otel için önemli olan dar alanı estetik bir şekilde tasarlayarak teknolojik ve farklı aksesuarlarla müşterilere hizmet vermektir.

Özellikle yurt dışından gelen müşteriler şampuanlarını çok fazla getirmedikleri bilinmektedir. Rixos'la birlikte var olan Lara marka şampuan müşteriler tarafından çok beğenilmektedir. Kullanan müşteriler, hangi marka şampuan olduğunu sormakta ve temin etme yoluna gitmektedir.

Rixos Grup olarak müşteriler hem hizmet hem de kullanılan ürün olarak memnun edilmeye çalışılmaktadır. Bu nedenle grubun tüm otellerinde sular arıtmalıdır. Bütün kazanlar aylık ve yıllık olarak kontrolden geçmektedir. Herhangi bir yanma ve sudan bir koku gelmesi söz konusu değildir. Çünkü çok ilginç müşteri istekleriyle karşılaşılmaktadır. Örneğin çok titiz bir müşteri İstanbul'da konakladığı sürece normalde müşteri başına odaya iki havlu bırakılırken, o müşteri için her gece için on tane tıraş havlusu bırakılmaktadır.

4   Sonuç ve Bulgular

Küreselleşmeyle birlikte uluslararası otel işletmelerinin arasındaki yarış da hızlanmaktadır. Bu pazarlardaki fırsatları değerlendirmek için otel işletmelerinin farklı stratejiler izlediği görülmektedir. Rixos Hotel Grubu bu yarış içinde yerli bir otel zinciri olarak konaklama sektöründe farklı stratejilerle yatay bir büyüme izlemektedir. Bu kapsamda farklı destinasyonlarda kiralama, yönetim anlaşması ve konsorsiyum gibi stratejileri takip ettiği görülmektedir. Büyümenin getirmiş olduğu bazı yenilikleri de bünyesine katarak müşterilerinin son derece memnun olarak otelden ayrılmasını sağlamak için oluşturulan MİY biriminde farklı dillerde müşterilerle konuşma yeteneğine sahip personeller istihdam edilmektedir.

MİY uygulamalarıyla birlikte grubun herhangi bir otelinde konaklayan müşterinin istekleri gruba ait başka bir otel tarafından da görülmektedir. Bu nedenle müşteri rezervasyon yaptırdığı andan itibaren istekleri önceden bilindiği için daha kolay hizmet verilmektedir.

Otel işletmelerinde hizmet kalitesini arttırmanın en önemli yolu istihdam edilen personelin memnuniyetinin sağlanmasıdır. Bu nedenle personelin sigorta ve prim gibi özlük hakları brüt ücret üzerinden ödenmesi motivasyonunu arttırmaktadır.

Otel işletmelerinde aynı çatı altında birden çok hizmet sunulmasından dolayı istihdam yoğunluğu maliyeti, toplam maliyetler içindeki önemli bir payı oluşturmaktadır. Buna rağmen, Rixos Otel Grubunun uygulamalarında, oda sayısı başına düşen personel sayısının 0,8-1 arasında değiştiği ve bazı otellerde bu oranın 1,5'e kadar yükseldiği görülmektedir.

Ayrıca Rixos Grup olarak personelin motivasyonuna da son derece önem verilmektedir. Bu kapsamda yılda iki kez düzenlenen personel gecelerinde çekilişle maddi değeri yüksek olan hediyeler sunulmaktadır.

Uluslararası otel işletmelerinin en önemli özelliklerinden biriside gittikleri destinasyonlara sahip oldukları inovatif değerleri taşımasıdır. Bu kapsamda Rixos Otel Grubunun sahip olduğu en önemli inovatif değeri, gittiği destinasyonları Türk kültürü ve yiyecek-içeceğiyle tanıştırmasıdır.

Yerli otel işletmelerinin uluslararasılaşma çabaları sadece şehir otelciliğinde görülürken, Rixos Otel Zinciri, resort otel, şehir oteli ve rezidans otel olmak üç farklı şekilde büyüme eğilimi göstermektedir.

Yerli otel işletmeleri ev sahibi oldukları ülkeye daha çok turist çekme planları yaparken, Rixos Otel Zinciri yeni destinasyonlar açan cesur, girişken, genç ve dinamik bir yapıya sahiptir.

Küresel otel işletmeleri konaklama sektörü pazarına lüks, tam donanımlı hizmet, orta ölçekli hizmet ve ekonomik otellere kadar genişletirken, Rixos Otel Zincirinin lüks ve tam donanımlı hizmet tipiyle büyüme eğilimi göstermesi, dünyanın lider turizm ve konaklama şirketi olma yolundaki başarısını geciktirmektedir.

Rixos Otel Zinciri, yiyecek içecek hizmetinde know-how ya da daha önce başarıya ulaşmış bir konsepti misafirlerin beklentilerini karşılama ve yerel müşterileri etkileme amacıyla dış kaynak kullanım yoluyla gerçekleştirebilir.

Rixos Otel Zinciri, küresel bir restoran zinciriyle ortaklık kurarak iki güçlü markanın karşılıklı olarak kalitelerini ve profillerini geliştirmede katkıda bulunabilir.

Rixos Otel Zincirinde, yiyecek- içecek hizmetlerinde örgüt kültürüne ve marka uygunluğuna önem verilmektedir. Bu nedenle grup büyüme stratejisine ilişkin çalıştığı işletmelerde (örneğin yönetim sözleşmesi) yeniden bir dizayn ve üretim alanı genişlemesine gitmek yerine, hizmetleri dış kaynak kullanarak sağlamaktadır.

Dışarıdan alınan bazı animasyon gösterileri grubun değişik otellerinde gösteri yapmakta, bu da grup oteli olmanın maliyet ve etkinlik çeşitliliği avantajını beraberinde getirmektedir.

Teknik anlamda uzmanlık gerektiren işler (örneğin, personel servis hizmeti) dış kaynak kullanarak sağlanmaktadır.

Rixos'la birlikte var olan Lara marka şampuan misafir tarafından satın alınabilmesi sağlanmalıdır.

Misafirlere iki otel kullanım imkanı verilmelidir. Konukların aynı gruba ait olan otellere günün istedikleri zamanında giriş-çıkış yapabilmesi ve oradaki hizmetlerden faydalanması sağlanmalıdır. Böylelikle misafir bir ücret ödeyerek iki otelde tatil yapması sağlanabilir.

Misafirlerin otelde tattığı ve çok beğendikleri yiyecekler küçük tatlar halinde otelden ayrılırken hediye olarak vermek misafirlerin otelden memnun ayrılmasına sağlayacaktır.

Özel film gösterimleri ve sinema geceleri düzenlenmelidir. Bu misafirleri büyük bir memnuniyet oluşturacağı gibi otel için de yeni bir gelir kaynağı olacaktır.

Rixos Otel Zinciri'ndeki oda aydınlatmaları insanın içini karatmayacak şekilde tasarlanmaktadır. Otellerin iç mimarisinde üç çeşit okuma lambası kullanılmaktadır. Bunun yerine oda aydınlatmalarında gölge saat olabilir. Bu sayede konuklar gece uyandıklarında hem saati rahatça görebilir hem de gece lambası olarak kullanabilir.

Yakın gelecekte otel işletmelerinde sıklıkla görüleceği tahmin edilen ve yeni teknoloji ürünlerinden biri olan Glo-Pillow'un odalarda kullanılmasına geçilebilir.

Resepsiyonda m-bot sistemi kullanılarak yabancı konukların klavye kullanarak 17 dil üzerinden anında İngilizceye çeviri yapılabilen bu sistem sayesinde, misafirin resepsiyonist ile çok daha kolay iletişim kurması sağlanabilir.

Rixos Otel Zinciri'nde odalarda engelli konuklara özel yenilik uygulamalarına yer verilmelidir. Örneğin, yatak başlarında veya banyolarda acil çağrı butonları yerleştirerek engellilere kolaylık sağlanabilir.

Rixos Otel Zinciri kendi markası olan Rixos Royal Spa merkezlerinin yanı sıra Avrupa ve Amerika'da sadece çocuklar için açılmış Kids Spalar bulunmaktadır. Çocuklar için yapılacak bu hizmetler Rixos Otel Zinciri'ne rekabet avantajı sağlayabilir.

Rixos çalışanlarına dil eğitimi verilmemektedir. İyi işler yapan işletmeler iyi işler yapan çalışanlar istihdam ederek büyüyebilirler.

Personelin motivasyonun sürekli olması doğru ve etkili bir ödüllendirme sisteminin kurulabilmesine bağlıdır. Bu tür ödüle yönelik programlar yeni personelinde ilgisini çekecektir. Böylece işletme içindeki rekabet ortamını arttırabilecektir.

Eski ürünlerin kullanımıyla ilgili kampanyalar yapılırken, yeni ürünlerin tanıtımı da yapılmalıdır.

Rixos Otel Zinciri'nde çalışanlar, mevcut ve potansiyel müşterilerin beklenti ve ihtiyaçları hususunda ortak tavır almak suretiyle kurumsal bir imaja da katkı sağlayacaktır.

Çağrı merkezi kurulmalıdır. Günümüzde çağrı merkezleri, işletmelerin markasıyla buluşma noktası olarak değerlendirilmektedir. Bu bakımdan misafirler, işletmeyle ilgili zihninden geçen düşüncelerin tamamını çağrı merkezlerinin faaliyetleri ve performansları değiştirebilir.

Stratejik İttifak Oluşumundaki Konaklama Sektöründe İşletmeler Arası İlişkileri Düzenleyici Faktörler ve Bir Model Önerisi

Inter-Organizational Relations in Hospitality Industry in the form of Strategic Alliance and a Model Suggestion

Ph.D. Candidate Nilüfer Vatansever Toylan (Kırklareli University, Turkey)

Prof. Dr. Fatih Semerciöz (Istanbul University, Turkey)

Abstract

In this study, strategic alliances are discussed from the perspective of hospitality industry and inter organizational relation factors that regulate the formation of strategic alliances have been revealed in hospitality industry. In addition, the relations between inter organizational relation factors, knowledge sharing and organizational innovativeness are raised within the scope of the literature and a model is proposed. In this context, with review of literature, relation factors between hospitality businesses that affects knowledge sharing are examined. These factors are specified as inter organizational trust, the intention of learning, shared vision, communication, (partner-specific) absorptive capacity and commitment. Knowledge sharing and innovativeness variables are especially important in terms of competitive advantage in the market for hospitality strategic alliances. Thus, the main problem of the study is to investigate the relationships between all of these variables.

1 Giriş

Çalışmada öncelikle stratejik ittifak oluşumu içerisindeki konaklama işletmeleri ele alınmıştır. Ardından konaklama işletmelerinde bu ilişkiyi düzenleyen unsurların neler olduğu tek tek ortaya konmuştur. Bu çalışmanın önemli vurgularından biri bu unsurların örgütler arası bilgi paylaşımını etkilediği yönündedir. Bu ilişki unsurlarının örgütün yenilikçiliğini etkilediği ve bilgi paylaşımı ile örgütsel yenilikçilik arasındaki ilişkiler de araştırılmaktadır. Ayrıca tüm bu değişkenler arasındaki ilişkileri ortaya koyan bir model önerilmektedir.

2 Stratejik İttifaklar

Strateji yazınında uzun bir süredir işletmeler bir ürün ya da hizmetin satın alınmasının mı yoksa imal edilmesinin mi daha avantajlı olacağı sorusuna bir yanıt aramaktadırlar. Son yıllarda ise yurt dışı yazında ittifakların bu sorunun cevabı olabilecek şekilde satın almaya, elden çıkarmaya ya da iç gelişmeye nasıl önemli bir alternatif olabileceği yolunda çokça çalışmaya rastlanmaktadır (Gulati ve Larence, 2000).

Drucker (1995) işletmelerin yönetim şekillerinde, ilişkilerin büyümesini sağlayan en büyük değişimin sahiplikten çok ortaklıktan kaynaklandığını vurgulamaktaydı (Drucker, 1995). Koçel'e göre ise bir işletmenin tek başına piyasalara açılıp, global bir çerçeve içinde rekabete girişmesi yerine başka işletmelerle dayanışma içinde olması başarı şansını yükseltebilecektir (Koçel, 2005). Bu nedenle ilişki yaratma ve stratejik işbirliği kavramı işletmeler için önemli bir hal almış ve stratejik işbirliklerine iş dünyasının neredeyse her alanında rastlanmaktadır. Günümüzde işletmeler diğer kuruluşlarla ortaklığa giderek, fikirleri, yöntem bilgisi (know-how)'ni ve yetenekleri tedarik edebileceklerinin farkına varmışlardır (Baloh vd., 2008).

Stratejik ittifaklara özgü karakteristik bir tanımlama, bir değişim ilişkisi kuran ancak ortaklık içermeyen iki ya da daha fazla işletmenin aralarında yapmış oldukları düzenleme şeklinde karşımıza çıkmaktadır (Lowensberg, 2010). Bu tipik ve jenerik tanımlamanın yanı sıra, stratejik ittifakları basit bir şekilde, taraflar için önemli olan ve amaçlarını gerçekleştirmelerine yardım edecek işbirlikleri olarak tanımlayan çalışmalar da mevcuttur (Das ve Teng, 2000a). Bu tanımlamalardaki en önemli ayrımın örgütler arasında her hangi bir hisse sahipliğinin olmaması şeklinde ortaya çıktığı söylenebilir. Zaten Ohmae de ittifak oluşumunun bir ön şartı olarak hisse sahipliği olmaması koşulunu öne sürmektedir (Ohmae, 1989). Hisse, değişken bir ölçek üzerinde örgütsel ilişkilerin derinliğini (yoğunluğunu) ölçmeye yardım eden iyi bir gösterge olarak tanımlanabilir (Loensberg, 2010). Moss Kanter işbirliği düzenlemeleri ya da ittifakları tanımlamada böyle bir ölçek veya düzlem kullanmaktadır. (Yazar bu iki kelimeyi eş anlamlı olarak kullanmaktadır). Bu ölçek zayıf ve uzak ile güçlü ve yakın arasında değişiklik göstererek, ortakların ittifaktan nasıl derinden etkilendiğini gösterir (Kanter, 1994). Newman ve Chaharbaghi, ittifakları benzer bir düzlem üzerinde sınıflandırarak savunmacı mı yoksa saldırgan bir strateji mi izleyip izlemediklerini ortaya koyar (Newman ve Chaharbaghi, 1997). Bunlara ek olarak bazı yazarlar, metaforlara başvurarak, ittifaktaki ortaklar arasındaki ilişkiyi tıpkı yeni bir evlilikteki ortaklar arasındaki ilişkiye benzeterek kontrollü bir paylaşım şeklinde bir "anlaşma/uyuşma" olarak tanımlar (Ohmae, 1989).

Uzun zamandan beri ittifak tanımlamaları üzerine yapılan çalışmalar, farklı tanımlamalar gelişmesine neden olmuştur. Ancak genelde iki taraf üzerinde yoğunlaşıldığı görülmektedir. Bir tarafta "stratejik ittifak" terimini

kapsamlı bir tanım olarak benimseyen yazarlar, diğer yandan "stratejik birleşmeler" (Marks ve Mirvis, 2001), "işbirliği sözleşmeleri" (Devlin ve Bleackley, 1997) ya da "işletmeler arası ilişkiler" (Barringer ve Harrison, 2000) gibi terimler kullanarak stratejik ittifak terimini karşılamaya çalışan yazarlar. Sonuç olarak, bu çalışmada stratejik ittifaklar işletmelerin bir ya da birkaç amacı yerine getirmeleri için gerçekleştirilen planlı işbirlikleridir. Yani stratejik ittifakın tasarımında planlı bir amaç vurgusu vardır.
Ayrıca ortaklık anlamında kullanıldığında bir hisse sahipliğini içerir ki, ittifaklar sadece hisse paylaşımını değil, hisse paylaşımı olmaksızın kaynakların da paylaşıldığı bir işbirliği türüdür. Bu işbirliği türünde önemli olan başka bir husus da işletmelerin anlaşma sonrasında hukuki bağımsızlıklarını devam ettirmeleridir. Bu durum stratejik ittifakları, birleşme ve satın almalardan ayıran başlıca özelliktir (Semerciöz ve Çakınberk, 2003).

Böylece stratejik ittifaklar, işletmelerin iş yaşamının hızla değişen koşullarına uyum sağlayabilmeleri, rekabet avantajını elde edebilmeleri ve bunu sürdürebilmeleri için aynı dalda ya da farklı daldaki işletmelerin kaynaklarını bir araya getirmeleri ve bu işbirliğini ihtiyaca göre şekillendirerek, feshetmesi ya da farklı bir boyuta taşıması olarak tanımlanabilir. Ek olarak dikkat edilmesi gereken başka bir husus da işletmelerin anlaşma sonrası bağımsızlıklarının devam ediyor olmasıdır.

Stratejik ittifaklar, ulaştırma sektöründen telekomünikasyona, lojistikten turizme ve tarıma kadar pek çok sektörde (Zhang ve Zhang, 2006), aynı dağıtım kanalını kullanmak, araştırma ve geliştirme birimlerini birleştirmek, ortak girişim oluşturmak, piyasa paylaşımları ve ortak bilgi bankası oluşturmak (Koçel, 2005) gibi daha birçok alanda faaliyetlerini gerçekleştirebilmektedirler.

İşletmeler arası ilişkilerin oluşumunu açıklayan teorilerin kapsamlı bir şekilde ele alındığı çeşitli çalışmalar mevcuttur. Bu çalışmalar genellikle stratejik ittifakları açıklamak üzere işlem maliyeti ve kaynak temelli yaklaşım teorilerini kullanmaktadırlar. Bu çalışmalardan biri Barringer ve Harrison tarafından yapılarak, bu teorilerin örgütler arası ilişkileri tek başına açıklamaktan çok birlikte ele alındığında bu tür karmaşık ilişkileri açıklamakta etkili olacağı da vurgulanmıştır (Barringer ve Harrison, 2000b). Bunun yanı sıra stratejik ittifakların açıklanmasında içselleştirme ve Pazar şartlarına göre değişen durumlarda bir teorinin diğer teoriye göre daha açıklayıcı olabileceğini söyleyen çalışmalar da mevcuttur (Das ve Teng, 2000b). Bu yaklaşımların dışında Ireland ve diğerlerinin yapmış olduğu çalışmada her ne kadar özellikle işlem maliyeti teorisine, sosyal ağ teorisine ve kaynak temelli görüşe yer verilmiş olsa da, çalışmada evrim teorisi, kurumsal kuram, süreç teorisi, karmaşıklık (kompleksite) yaklaşımı, kaynak temelli görüşün bir uzantısı olarak bilgi temelli görüş, sosyolojik kuramlar, koşul bağımlılık kuramı, vekalet teorisi, dinamik yetenekler yaklaşımı, stratejik davranış görüşü, oyun kuramı ve sosyal değişim teorisi gibi çok çeşitli görüşler de yerini bulmuştur (Ireland vd., 2002). Stratejik ittifaklar ekonomi, pazarlama, yönetim gibi çeşitli alanlarda araştırma konusu yapıldığından ve ayrıca ittifakların sahip olduğu karmaşık yapıdan dolayı konunun çok sayıda teoriyle ve farklı bakış açılarıyla açıklanması olağan kabul edilmektedir.

Bu nedenle bu çalışmada kapsamlı ve açıklayıcı olması açısından Barringer ve Harrison'ın çalışmaları temel alınmış ve teoriler açıklanırken yazarların modeli kullanılmıştır (Barringer ve Harrison, 2000).

İşlem Maliyeti	Kaynak Bağımlılığı	Stratejik Tercih	Paydaş Teorisi	Öğrenme Teorisi	Kurumsal Teori

Ekonomi ⟵————————————————⟶ Davranışs

Şekil 1. Barringer ve Harrison, 2000.

İşlem maliyeti teorisi, işlemlerle ilgili maliyetlere vurgu yaparak, piyasa işlemleri görüşünü açıklar. Stratejik işbirlikleri kavramında yöntemler, piyasalar arasındaki işlemleri izleyerek ve yöneterek toplam maliyeti azaltma ile sonuçlanan işlemler için kullanılabilir (Child ve Faulkner, 1998). Sonuçta işletmeler arasında bu türden bir anlaşmanın yapılması da başlı başına bir maliyet kalemini oluşturmaktadır. Bu nedenle işletmeler tüm bu maliyetleri azaltmak için doğru ortakla işbirliğine gitme arzusundadırlar. Maliyet azaltmayı vurgulayan işlem maliyeti yaklaşımının aksine, kaynak temelli görüş, değerli kaynaklardan faydalanarak ve onları biriktirerek firmanın değerini maksimize edebileceğini belirtir. Yani işletmeler, tüm kaynaklar arasından en uygun kaynağı bulmaya yönelirler (Balakrishnan ve Koza, 1993). Kaynak temelli yaklaşımın öncülerinden olan Wernerfelt (1984)'e göre bu teori; işletmelerin başarılı olabilmesi için, ihtiyaç duydukları kaynaklara sahip olmaları ve bunları kontrolleri altında tutmaları gerektiği düşüncesi üzerine kurulmuştur (Wernerfelt, 1984). Böyle bir durum işletmelere rekabet avantajı sağlayacak ve fayda yaratacaktır.

Stratejik tercih yaklaşımına göre, bir firmanın stratejik oryantasyonu firmanın içinde bulunduğu pazarın özelliklerinden etkilenir (Luo ve Tan, 1998). Böylelikle işletme pazara uyum sağlayabilmek için bir takım stratejik tercihler geliştirir. Öğrenme teorisi de tıpkı kaynak temelli görüş gibi işletmelerin işbirliği için belirli ortakları neden seçtiğini açıklar (Hitt vd., 2000). Eğer işletme ortaktan yeterince öğrenebiliyor ve bunu içeride uygulayabiliyorsa, ortaklık devam edecek ve belki de uzun süreli bir işbirliği söz konusu olabilecektir.

Kurumsal kuram ile ilgili yapılan çalışmalarda, stratejik ittifakların doğasında olan teknik faydaların çeşitliliğine ihtiyaç duyulan belirli bir meşruluğu karşıladığı belirtilir. Yani, firma ve ittifak performansının artırılabildiği ve teknik faydaların gerçekleştirilebildiği önemli bir meşruluk olduğu anlamına gelir. Böylece işletmeler, meşruluğu sağlamak ve onu elde etmek için harekete geçerek, bileşenlerden gelen kaynak ve destek gibi stratejik ve teknik faydalara erişebilirler. Bu görüşler ekonomik avantaj ve rekabet avantajı kazanarak örgütler arası bağları oluşturmak için uğraşan işletmelerin çabalarını açıklayan çalışmalar üzerine kurulmuştur (Dacin, vd., 2007). Böylece çalışmanın genelinde bu teorilerin sahip olduğu bakış açısı gözetilmiş ve çalışma bu teoriler çerçevesinde ele alınmıştır.

2.1 Konaklama Endüstrisinde Stratejik ittifaklar

Stratejik ittifaklar hem akademisyenler hem de uygulamacılar tarafından özellikle stratejik işbirliğinin alternatif formlarına geçişte tercih edilen biçimlerin başında geldiği kabul edilmiş ve işbirliği ile ilgili konular üzerinde inceleme ve çalışmalar yoğunlaşmıştır (Fyall ve Garrod, 2005). İttifakları sınıflandırırken ittifakın içinde bulunduğu endüstriden büyüklüğüne dek pek çok unsuru göz önünde bulundurmak gerekir. Bu çalışmada ittifakın sektörü belirleyici faktör olarak öne çıkmaktadır.

Chathoth ve Olsen (2003) konaklama sektörü üzerine yapmış oldukları araştırmalarında ittifakları, yönetim sözleşmeleri ve franchise anlaşmaları, tedarikçiler arasındaki ittifaklar, turizm işletmesi ile tedarikçi arasındaki ittifaklar, pazarlama ittifakları, teknoloji ve bilgi transferi ittifakları ve rakip işletmeler arasında yapılan stratejik ittifaklar olarak belirlemiştir (Chathoth ve Olsen, 2003). Bu çalışmada yapılan sınıflamadan hareketle bizim çalışmamızda otel işletmesi odaklı yapılan stratejik ittifak türleri aşağıdaki şekilde gösterilmektedir.

3 Örgütler Arası İlişki Unsurları

Örgütler arası ilişki unsurları literatürü bu ilişkileri çeşitli açılardan ele almaktadır. Çalışmaların bir kısmı bu unsurların örgütlerin performansı üzerinde etkili olduğunu savunurken, bir kısmı başarı faktörleri olarak belirlemektedir. Bir kısmı ise sadece örgütler arası ilişkileri düzenleyen ve işletmelere rekabet avantajı kazandıran unsurlar olarak ele almaktadır. Bu çalışmada da örgütler arası ilişkileri düzenleyen söz konusu unsurların işletmeler arası bilgi paylaşımını ve örgütün yenilikçiliğini ne yönde etkilediği ele alınmaktadır. Dolayısıyla literatürdeki diğer çalışmalardan elde edilen ilişki unsurlarının bilgi paylaşımı ve örgütsel yenilikçilik ilişkilerini açıklamak üzere bu çalışmada yer aldığı, bu nedenle de diğerlerinden farklı olduğu göz önünde bulundurulmalıdır.

Bu çalışmalarda başta güven olmak üzere, öğrenme niyeti (Perez- Nordtvedt vd., 2008), paylaşılan vizyon, ilişki gücü, bağlılık, liderlik, iletişim, özümseme kapasitesi'nin önemi vurgulanmıştır (Dyer ve Singh, 1998). Araştırmacılar alıcı işletmeninin öğrenme niyeti ve kaynağın çekiciliğinin bilgi aktarımının etkinliğini etkilediğini göstermişlerdir. Ayrıca, çalışmalar sonunda alıcının öğrenme niyetinin bilgi aktarımının verimliliği üzerinde de etkisi ortaya çıkmıştır (Perez- Nordtvedt vd., 2008). Özümseme kapasitesiyle ilgili olan diğer çalışmalarda da egemen paradigmanın tek yönlü öğrenme odaklı yaklaşımı eksik bulunarak kavramın "sosyo-teknik ilişkiler"e dayandığı, "ilişkisel getiri" sağlayan "yinelemeli bir değiş tokuş süreci" olduğu ve işletmenin özel bir ittifak ortağından gelen değerli bilgiyi tanıma ve sindirme yeteneği olarak tanımlanan "ortağa özgü özümseme kapasitesi"nin önem kazandığı ortaya konmuştur (Dyer ve Singh, 1998).

Yabancı yazında ise bu faktörler bağlılık, koordinasyon, karşılıklı bağımlılık ve güven olarak sıralanmış ve ortaklıktaki önemli faktörler olarak görülmüştür (Mohr ve Spekman, 1994). Stratejik ortaklıklarda başarıyı etkileyen temel faktörler farklı başlıklar altında toplanmaktadır. Bennet, British Airways örneğini incelediği

çalışmasında; işbirliği stratejisi, ilişki, ortak güven ve anlayış, ortaklık süresince esneklik, kültürel uyumluluk ve karşılıklı çıkarlar başlıklarını başarı kriteri olarak incelemiştir (Bennett, 1997). Rothkegel ve arkadaşları, KOBİ'ler ve büyük şirketler arasındaki stratejik işbirliğini inceledikleri çalışmalarında, güven, bağlılık ve kontrolün önemini vurgulamışlardır (Rothkegel, vd., 2006). Pansiri 600 seyahat acentası, tur operatörü ve perakendecisi üzerine yaptığı çalışmasında, bir stratejik ortaklığın sürekliliğin önemli belirleyicisi olan faktörler olarak uyumluluk, yapılabilirlik, bağlılık, kontrol ve güven konularını incelemiştir. Araştırma sonucunda uyumluluk, bağlılık, yetenek ve güvenin ortaklığın performansı ile ilgili tatminde pozitif etkisi olduğu bulunmuştur (Pansiri, 2008). Stratejik ortaklıklar ile ilgili yapılan çalışmalar belirli başlıklar altında gruplandırılabilir. Bir gruplandırmaya göre stratejik ortaklıklar ile ilgili araştırmalar; nasıl ve niçin kuruldukları, kritik başarı faktörleri, başarısızlık nedenleri, ortaklar arasında bilgi, yetenek ve teknoloji transferinin sağlanması ve ortak seçimi şeklinde ayrılabilir (Evans, 2001). Ayrıca Medina-Munoz ve Garcõa-Falcon işletmeler arası ilişkilerde başarıyı etkileyen faktörleri, örgütler arası güven, ilişkiye bağlılık, örgütler arası iletişim, örgütler arası koordinasyon, örgütler arası çatışma, örgütler arası güç ve bağımlılık olarak sıralamıştır (Medina-Munoz ve Garcõa-Falcon, 2000).

Bu çalışmada yapılan araştırmanın bir yönünün ise söz konusu başlıklardan daha çok işletmeler arasındaki bilgi, yetenek ve teknoloji transferinin sağlanması için gerekli olan örgütler arası ilişki faktörlerinin belirlenmesi alanına girmekte olduğu söylenebilir. Bu durumda çalışmanın öncelikli amaçlarından biri olan örgütler arası ilişki faktörlerinin belirlenmesi için çeşitli çalışmalar incelenmiş ve özellikle örgütler arası bilgi paylaşımını etkileyen faktörler açısından bu unsurlar şu şekilde belirlenmiştir:

- Örgütler arası Güven
- (Ortaktan) Öğrenme Niyeti
- İletişim
- (Ortağın) özümseme kapasitesi
- Paylaşılan vizyon
- Bağlılık

Şimdi kısaca bu unsurların çalışmada nasıl yer aldığı ve bu unsurlarla esas kastedilenin ne olduğu yönünde açıklama getirilmektedir.

Güvenin hem örgüt içerisinde (çalışanlar ve yöneticileri arasında ya da meslektaşların birbirleri arasında gerçekleşen örgütsel bir olgu olarak) hem de örgütler arasında (eknomik hiyerarşi ve etkililik yerine, birliktelik, ortaklaşa ilişkiler, esnek ağlar, ve stratejik ittifaklar sıralanabilir) örgütsel bağlılık, verimlilik, yenilik gibi örgütsel çıktıların arkasındaki en etkili araçlardan biri olduğu söylenebilir (Semerciöz, vd., 2007). Güven konusunu yerli ve yabancı literatürde işletmeler arası ilişkileri düzenleyen, başarı ve performansı arttıran ayrıca bilgi paylaşımını sağlayan en önemli unsur olarak gören çok sayıda çalışma mevcuttur (Lui ve Ngo, 2004; Marshall vd., 2005; Lane vd., 2001; Szulanski, vd., 2004). Bu çalışmalarda güven örgütler arası bilgi paylaşımını etkileyen balıca unsur olarak belirtilmektedir. Ayrıca güven söz konusuysa, izleme ve diğer kontrol mekanizmalarına ihtiyaç azalır (Norman, 2004). Karşılıklı güven ne kadar fazlaysa işletmelerin kendilerini koruma ihtiyaçları da o kadar azalabilmektedir. Ayrıca ifade edilmesi, elde edilmesi ve paylaşılması zor olan böylesine değerli bir varlık olarak bilginin işletmeler arasında aktarımının yapılabilmesi için tarafların bir birbirine güvenmeleri şarttır.

Bir diğer unsur olan *öğrenme niyeti* ortağın beceri ve yetkinliklerini içselleştirmek için istekli olmak olarak tanımlanır (Perez- Nordtvedt, vd., 2008). Çeşitli çalışmalarda bir stratejik ittifaktaki ortağın sahip olduğu belirli becerileri öğrenme kararlılığı olarak belirtilir. Ayrıca diğer işletmeden öğrenme için bir arzunun var olması şeklinde tanımlanan öğrenme niyeti, bilgi aktarımı için de önemli bir faktör olarak sayılmaktadır (Tsang, 2002; Simonin, 2004). Yani ortakların birbirinden öğrenme niyeti bilgi paylaşımını kolaylaştırabilmektedir.

Bilgi paylaşımı sürecini etkileyen bir diğer unsur *iletişim* olarak belirlenmiştir. Bilgi paylaşımı işbirliği ortaklarının iletişim kurmasını, problemleri birlikte çözümlemelerini ve örtük bilginin ortaya çıkmasını gerektiren bir ortak öğrenme sürecidir. Bilgi aktarımı iki taraflı, etkileşimli ve tekrarlanan bir süreç olduğundan, değiştirilen ve paylaşılan bilginin miktarı, her bir tarafın kararlılığına ve girdilerine (veri) bağlı olacaktır (Ho, 2008). Bu nedenle iletişim ortaklar arasındaki bilgi paylaşım sürecinde bir nevi araç olarak da görülebilir. Çünkü tüm bu belirtilenler ancak iletişim sayesinde sağlanabilir.

Özümseme kapasitesi geçmiş yıllarda örgütsel araştırmalarda ortaya çıkmış en önemli yapılardan biri olarak görülmektedir. Özümseme kapasitesi işletmenin dış kaynaklardan edindiği bilginin tanımlanması, benimsenmesi ve faydalanılması yeteneğini ifade eder. Bu kapasite diğer firmaların ürün ve süreçlerini sadece taklit etmeyi değil, aynı zamanda temel bilimsel araştırma gibi daha az ticari olarak odaklanmış bilgiden faydalanmayı da içerir. Özümseme kapasitesi yapısının oluşumu işletmenin kaynak temelli görüşün gelişimi ile aynı zamana denk gelir ve bu nedenle bu görüşün ürünü olarak görülmektedir. Böylece özümseme kapasitesi bilgi yönetimi, örgütsel öğrenme, stratejik ittifaklar ve yenilik yönetimi gibi çeşitli alanlarda temel yapı haline gelmiştir (Lane vd., 2002). Bu nedenle özümseme kapasitesi stratejik ittifak ilişkilerinde kullanılmakta ve hem öğrenme hem de yenilik faaliyetlerine katkı sağlayabilmektedir.

Önceki çalışmalar *paylaşılan vizyonun* işbirlikçi ilişkileri birçok açıdan kapsadığını belirtmektedir. Paylaşılan vizyon kavramı paylaşılan değerleri, karşılıklı amaçları ve işbirliği ilişkisindeki anlayışı belirtmek için kullanılır. Paylaşılan vizyon konusunda Hakanson örgütsel kültürün dikkate alınması gerektiğini belirterek, örgütsel kültürün üyelerdeki kimlik duygusunun aktarılmasına yardım ettiğini ve örgüte ve hedeflerine bağlılık yaratabildiğini vurgulamaktadır (Hakanson, 1995). Bu nedenle tutarlı bir örgüt kültürü örgütler arasında paylaşılan vizyon yaratmaya yardım eder. Tsai ve Ghoshal'a göre de bir örgütün üyelerinin ortak amaç ve niyetlerinin toplamı paylaşılan vizyonu oluşturur. Paylaşılan vizyon örgütler arasındaki çeşitli kaynak alış verişlerinin gerçekleşmesi için önemli bir şarttır (Tsai ve Ghoshal, 1998). Ortaklar arasındaki paylaşılan vizyon, ortaklar arasındaki inançların ve paylaşılan değerlerin yapısının benzerlik derecesi olarak tanımlanır. Paylaşılan vizyon, ortakların hangi davranışların, amaçların ve politikaların önemli ya da önemsiz, uygun ya da uygun olmayan ve doğru ya da yanlış olduğu konusunda ortak inançlara sahip olmasıdır. Çünkü benzer örgütsel kültürlere sahip işletmelerin ortaklarına daha fazla güvenmeleri de daha mümkün olabilmektedir. Tedarik zinciri içerisindeki işbirliğine yönelik çalışmalarda bu işletmelerin ancak ortakların ortak bir dünya görüşünü paylaşmaları durumunda başarılı olabileceği belirtilmektedir. İşbirliği içerisindeki işletmelerde yaşanan örgütsel uyumsuzluklar, yani ün, iş durağanlığı, stratejik görüşler, kontrol sistemleri ve amaçlar daha az bilgi paylaşımına götürmektedir (Li ve Lin, 2006). Bu nedenle stratejik ittifaklar arasındaki bilgi paylaşımını kolaylaştırıcı işletmeler arası ilişki unsurlarından biri olarak görülmektedir.

Bağlılık, işletmeler arası ilişkilerde en önemli unsurlardan birisi olarak görülmektedir. Bağlılık, bir işletmenin bir diğer işletme ile olan ilişkilerini sürdürmesinin kendi amaçlarını gerçekleştirmede önemli olduğu konusundaki inancını ifade etmektedir. Bir ilişkide bağlılık yaratıldığında, tarafların daha karlı sonuçlar elde etmek için ilişkinin sürdürülmesine yönelik hareket ettikleri görülmektedir (Morgan ve Hunt, 1994). Diğer taraftan birbirine bağlılık seviyesi yüksek olan taraflar, kısa dönemli avantajlar elde etmek yerine uzun dönemli kazanç elde etmeyi düşüneceklerdir. Bunun sonucunda taraflar arasındaki çatışmalar en az düzeye inecek, yüksek bağlılık seviyesi ise tarafların ortak faaliyetlerden duyduğu memnuniyeti arttıracaktır (Demirbağ ve Mirza, 2000). Birbirine bağlı işletmelerin ilişkilerini uzun dönemde sürdüreceği ve bunun sonucunda işletmelerin sürekli aynı kalitede ürün ve hizmetleri ortaya koyması beklenmektedir. Literatürde yukarıda sözü edilen tüm bu ilişki unsurlarının örgütler arası bilgi paylaşımını etkilediği yönünde çeşitli bulgulara rastlanmaktadır.

4 Örgütler Arası Bilgi Paylaşımı

İşletmeler günümüzün rekabetçi ortamında kendi kendine yetemediklerinde çeşitli sebeplerle işbirliği yapmak ihtiyacı duyarlar. Böyle durumlarda bilgi ve onun paylaşılması büyük önem taşır. İşletmeler özellikle bilgiye ihtiyaç duymalarından dolayı, bilginin karşılıklı paylaşılması gündeme gelmektedir. Loebecke ve arkadaşları bilgi paylaşımını bilginin yaratılması, aktarılması ve bütünleştirilmesi olarak tanımlamaktadır (Loebecke, vd., 1999).

Strategic Management dergisinin özel bir sayısı ağ/şebeke/network araştırmacılarının, işletmelerin stratejik işbirliği gibi ortaklıklara girerek, onların performanslarını ve yönetilmelerini araştırmak için ağ bakış açısını kullanarak desteklediklerini ortaya koymaktadır (Gulati, vd., 2000). Bu araştırmacılar, firmalar arası ağları, işbirliği içerisindeki işletmelerin birbirlerinin bilgi ve kaynaklarına erişmelerinde, ölçek ve kapsam ekonomilerinin çeşitli avantajlarından yararlanmalarında ve örgütsel öğrenme gibi çeşitli stratejik amaçlara ulaşmalarını sağladığını savunmaktadırlar. Ayrıca bu tür yapılar bir işletmenin eşsiz ve ikame edilemez kaynaklarına erişebilmek için de düşünülebilmektedir (Nahapiet ve Ghoshal, 1998). Son yıllarda gelişen konuyla ilgili araştırmalar işletmeler arasındaki bu yapının bilgi edinimi ve bilginin paylaşılması ile işletmelerin performanslarını arttırdığını varsaymaktadır (Inkpen ve Tsang, 2005). Powell (1990)'a göre işbirliği içerisindeki işletmeler, etkili teknoloji kanalları ve know how aktarımını esnek, çabuk cevap veren ve yenilikçi yapılarıyla firmalar arası ağların avantajlarını sunar (Powell, 1990). Stratejik işbirlikleri stratejik yönetim alanında giderek artan bir öneme sahip olmakla birlikte, bilgi kaynaklarının yönetilmesi ve aktarılmasında da önemli bir rol almaktadırlar. Bilgi yönetimi literatürünün büyük bir kısmı örgüt içerisindeki bilgi edinimi, aktarımı, yaratılması ve bilgi ile değer yaratma gibi konular üzerine odaklanmışken, örgütler arası bilgi yönetimini anlamaya yönelik çok az çalışma mevcuttur (Parise ve Henderson, 2001).

Günümüzün işletmecilik alanında hızla artan bir olgu olan işletmeler arasındaki stratejik ittifaklar bilgi paylaşımı için bir araç olarak kullanılmaktadır (Tan ve Thai, 2012). Ayrıca birçok çalışmada stratejik ittifakların başarısını etkileyen önemli faktörlerden biri olarak sayılmaktadır (Mohr ve Spekman, 1994; Zaman ve Mavondo, 2001). Güçlü işletmeler arası bağlar, sadece asgari düzeyde koordinasyon, bilgi paylaşımı ya da ortakların anlaşmasını gerektiren ortak pazarlama girişimleri ve teknoloji lisanslarından çok, yatırım ve etkileşim açısından daha geniş ve derin bir ilişkiyi gerektiren hisse temelli anlaşmaları, üretim ortak girişimlerini ve ortak AR-GE projelerini içermektedir. Güçlü bağlar iki önemli avantaj sağlar. Güçlü bağları geliştirirken işletmeler birbirleri hakkında bilgi edinirler, birbirlerine daha bağımlı hale gelirler ve ilişkisel güveni geliştirirler. Derin bir karşılıklı anlayışa dayandırılan ilişkilerde, yüksek kaliteli bilgi ve kodlanmamış, örtülü bilgi örgütsel sınırlar arasında daha rahat bir şekilde paylaşılabilmekte ya da aktarılabilmektedir (Baum ve Ingram, 2002). Böylece işletmeler

stratejik ittifak oluşturup karşılıklı bilgi paylaşımını sağlayarak, bu bilgiden elde edebilecekleri avantajları da elde etmiş olurlar.

Bilgi stratejik ittifaklar için önemli bir çıktı olduğundan, yapılan çalışmalarda bilgi edinimi konusu önem taşımaktadır. Çünkü ittifakın başarısı öğrenme ve bilgi paylaşımı ile ilişkilendirilmektedir, ortaklar öğrenmeye elverişli bir ortam yaratmak için teşvik edilirler. Böyle bir çevrede işletmenin sahip olduğu önemli bilgi ve yetenekler ortağı aydınlatabilir ve bu bilgiyi taklit etmesini ve benimsemesini sağlayabilir. Firmanın özel bilgisini korumak için, işletmeler ortağın öğrenme fırsatlarını kısıtlayarak, bu tür kayıpları ortadan kaldırabilirler. Ancak bu türden davranışlar işletmenin kendi öğrenme fırsatlarını azaltabileceği gibi ittifak başarısını da azaltabilir. İşletmeler firmaya has bilginin kaybını ortadan kaldırmak için paylaşılan bilginin hem kalitesini hem de miktarını arttırarak ilişkilerini yapılandırabilir (Norman, 2004). İşletmeler bunun için gerekli ortamı sağlamalıdırlar. Sahip oldukları bilgiyi koruyarak paylaşırlarsa bu hem bilginin değerini kaybetmemesini hem de doğru aktarılıp her iki taraf için de doğru bir şekilde avantaja dönüşmesini sağlayabilir. Bunun için de en uygun araçlardan biri stratejik ittifaklar olarak görülmektedir.

5 Stratejik İttifaklarda Örgütsel Yenilikçilik

Drucker'a göre bilginin nasıl yapılacağı tam anlamıyla bilinen işlere uygulanması 'verimlilik', yeni ve farklı amaçlar doğrultusunda uygulanması ise 'yenilik'tir. Bu iki amaca yalnız bilgi sayesinde ulaşılabilir (Koenig ve Srikantaish, 2000). Oslo kılavuzuna göre yenilik, işletme içi uygulamalarda, işyeri organizasyonunda veya dış ilişkilerde yeni veya önemli derecede iyileştirilmiş bir ürün (mal veya hizmet) veya süreç, yeni bir pazarlama yöntemi ya da yeni bir organizasyonel yöntemin gerçekleştirilmesidir (Oslo Klavuzu, 2005). Yeniliğin önemli belirleyicileri olmakla birlikte, stratejik ittifakların, işbirliklerinin, ortak girişimlerin ve çeşitli ortaklıkların yeniliği doğurduğu veya işletmelerin yenilik için bu girişimlerde bulunduğu çeşitli çalışmalarda ele alınmıştır (Tidd vd., 2005).

İşbirliği yaparak elde edilen yenilik göz önüne alındığında, ortaklar arasında yeniliğin maliyetlerini paylaşmak, yeni becerileri ve teknik bilgiyi öğrenmek sinerjiden ve tamamlayıcı kaynaklardan yararlanmak, bilgi aktarımının olumlu etkileri ile mümkün olabilmektedir (Maggioni vd., 2012). Wang ve Fesenmaier'in keşfedici çalışmaları Amerika'da İndiana eyaletindeki Elkhart şehrinde turizm işletmelerinde gerçekleştirilmiş ve mülakat sonucu elde ettikleri bulgularından biri olarak işbirlikçi destinasyon pazarlamasında işletmeleri bu ilişkiye yönlendiren güdüler ortaya konmuştur. Söz konusu güdüler, stratejiyle ilgili güdüler, işlem maliyeti ile ilgili güdüler, öğrenme ile ilgili güdüler, küme rekabeti ve toplumsal sorumluluk olarak sıralanmıştır (Wang ve Fesenmaier, 2007). Birçok çalışma yenilik için stratejik işbirliklerinden söz etmektedir. Diğer bir deyişle stratejik işbirliklerinin çeşitli formlarının yeniliği getirdiğini birçok çalışma ele almaktadır (Kodama, 2007; Wong vd., 2005; Gilsing vd., 2007; Damanpour, 1991; Wolfe, 1994).

Öte yandan düşük teknolojili olarak adlandırılan konaklama endüstrisi gibi endüstrilerde hizmetlerde ve hizmet fonksiyonlarında yapılan yenilikler pratikte yaygın olmakla birlikte yenilik araştırmalarında, yenilik yönetiminde ve yenilik politikalarında fazla önemsenmemektedir. Gerçekte ne yazık ki hizmetlerde özellikle teknolojik olmayan yeniliğe yönelik bir isteksizlik ve üretimde teknolojik yeniliğe doğru köklü bir önyargı söz konusudur. Sürekli olarak yeterli veri eksikliği ve ölçüm ve tanımlama problemlerinin var olması, hizmetlerin yeniliğe, verimlilik artışına ve refaha katkısını belirsizleştirir (Hertog vd., 2011). Hizmetlerin yenilik açısından farklı olduğunu söyleyen alternatif bir bakış açısı mevcuttur. Bu görüş hizmetlerde yenilik için, işgücünün becerileri ve tedarikçi ve müşterilerle işbirliği uygulamaları gibi soyut (soft) yeteneklerin devamlı değişimi üzerine vurgu yaparak, daha mekanistik işletme yaklaşımına dayalı iyi tanımlanmış ürünlerin sıçramalı değişimi üzerine kurulu geleneksel "yenilik merdiveni" yaklaşımından daha uygun görülmektedir. Yenilikteki güçlüklerin algılanmasına göre de farklılıklar mevcuttur. Örneğin endüstri işletmeleri, etkili üretim yöntemlerine sahip olmanın ve pazarın ihtiyaç duyduğu ürünün üretilebilme esnekliğine sahip olmanın yanı sıra AR-GE yetkinlikleri ve teknolojik gelişimlere daha fazla önem vermektedirler. Hizmet işletmeleri ise işgücünün profesyonelliğine, becerilerine (özellikle yeniliğe olan uyum konusunda) ve tedarikçileri, müşterileri ve diğer işletmelerle olan işbirliklerine daha fazla önem vermektedirler. Genel olarak bu söylemlerin endüstri işletmelerinin daha çok sert (hard) yönler ve teknoloji kaynakları üzerinde, hizmet işletmelerinse daha çok yumuşak (soft) avantajlar ve tutumlar üzerinde durduğu yargısına ulaştırdığı söylenebilir (Tether, 2005). Bu nedenle hizmet işletmeleriyle ilgili özellikle de turizm sektörüyle ilgili yapılacak yenilikle ilgili akademik ve sektörel çalışmalara ihtiyaç duyulmaktadır. Bu eksiklik giderildiğinde yeniliğin sadece teknoloji üzerine gerçekleştirilebileceği ve turizm gibi soyut üretim yapan hizmet sektörü üzerindeki yeniliğe dair ön yargı ortadan kalkabilecektir.

Teknoloji işletmeleri dışında kalan işletmeler beklenmedik bir saldırıya maruz kaldıklarında temel yeteneklere daha fazla ihtiyaç duyacaktır. Bunu özellikle konaklama işletmeleri endüstrisinde görmek mümkündür. Oteller "web sayfası girişlerini arttırmak için" geleneksel olmayan temel yeteneklerini kullanarak tur operatörleri ve havayolu acentaları gibi aracılar ile ilişkilerini geliştirerek bunu gerçekleştirebilirler. Yani oteller söz konusu aracılarla ilişki kurmazlarsa web sitelerinin tıklanma olasılığı düşmektedir. Oteller kendi öz yeteneklerinden elde ettiği kazancın bir bölümünü onlara yeni yetenekler kazandıran elektronik iş çevresi ile paylaşmak zorundadırlar

(Kothandaraman ve Wilson, 2001). Otellerin bu türden yapacakları stratejik ittifak ortaklıkları onlara hem yeni yetenekler kazandırabilecek hem de rekabet avantajı yakalamalarını sağlayabilecektir. Böylece dışarıdan edinilen bilgi yenilikçiliğe de beraberinde getirmektedir.

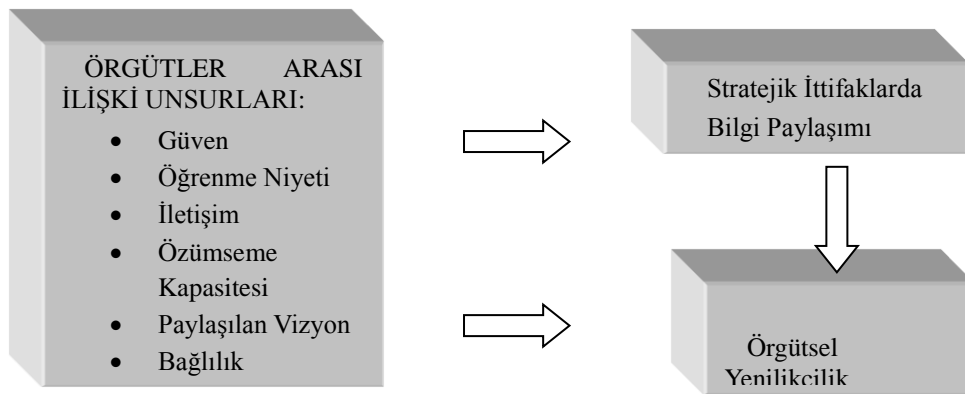
6 Model Önerisi

Çalışma için yapılan teorik araştırma çerçevesinde stratejik ittifak yapmış konaklama işletmelerinin aralarında bu ilişkiyi düzenleyen, kolaylaştıran ve yönlendiren bazı unsurlar elde edilmiştir. Bunlar örgütler arası ilişki unsurları olarak adlandırılmıştır (Li ve Lin, 2006). Bhatti'nin yaptığı doktora tez çalışmasında, firmalar arası kontrol mekanizması olarak ortakların uyum sağlama, cevap verme ve esnek olma gibi bilgi paylaşımının davranışsal yönleri ortaya çıkmıştır. Ortaklığın bu davranışsal yönleri işletmelere hızlı bilgi paylaşımı, yenilikçilik, pazara ulaşma ve karşılıklı gelişim sağlamaktadır (Bhatti, 2011). Li ve Lin çalışmalarında güven, bağlılık ve paylaşılan vizyon gibi örgütler arası ilişki faktörlerinin bilgi paylaşımını etkilediğini ortaya koymaktadırlar (Li ve Lin, 2006). Başka bir çalışmada güven, bağlılık ve öğrenme niyeti gibi unsurların stratejik ittifaklardaki bilgi paylaşımını etkilediği ortaya konmuştur (Wang ve Nicholas 2005). Bu unsurların en belirgin özelliği örgütler arası bilgi paylaşımını etkiliyor olmalarıdır. Yani örgütler arası ilişkileri etkileyen güven, öğrenme niyeti, iletişim, özümseme kapasitesi, paylaşılan vizyon ve bağlılık unsurları örgütler arası bilgi paylaşımını etkilemekte, işletmeler bilgiyi paylaştıkça işletmenin yenilik yeteneği oluşmaktadır. Öte yandan işletmeler arasındaki bilgi paylaşımının yenilikçiliği etkilediğine dair çalışmalar da mevcuttur (Magnini, 2008). Bununla birlikte literatürde örgütler arası ilişkilerin örgütsel yenilikçiliği etkilediğine dair çalışmalara da rastlamak mümkündür (Dewett ve Jones, 2001).

Çalışmada araştırılmak istenen model literatürden edinilen bilgilere dayanarak böyle bir öngörüyle ortaya konmuştur. Bununla birlikte çalışmada örgütler arası ilişki unsurları, bilgi paylaşımı ve örgütsel yenilikçilik değişkenlerinin arasındaki ilişkiler ve etki ortaya konmak üzere saha araştırması devam etmektedir. Böylece çalışmada;

- Örgütler arası ilişki faktörleri (güven, öğrenme niyeti, iletişim, özümseme kapasitesi, paylaşılan vizyon ve bağlılık) stratejik ittifak oluşumlarındaki bilgi paylaşımını nasıl etkiler?
- Stratejik ittifak oluşumlarındaki bilgi paylaşımı örgütsel yenilikçiliği nasıl etkiler?
- Örgütler arası ilişki faktörleri (güven, öğrenme niyeti, iletişim, özümseme kapasitesi, paylaşılan vizyon ve bağlılık) stratejik ittifak oluşumlarındaki yenilikçiliği nasıl etkiler?

sorularına yanıt aranmaktadır. Bu nedenle çalışmada üç ana değişken yer almakta ve bu değişkenler arasındaki ilişkiler araştırılmaktadır.

Bu amaç doğrultusunda çalışmada yer alan değişkenler ve değişkenler arasındaki ilişkiler toplu bir şekilde ilişkinin etki yönünü gösterecek şekilde aşağıda verilmiştir.


7 Sonuç

Çalışmada örgütler arası ilişkileri düzenleyen unsurlar bilgi paylaşımı açısından belirlenmiş ve bu ilişki unsurları kapsamlı bir literatür taraması sonucu, örgütler arası güven, öğrenme niyeti, iletişim, özümseme kapasitesi, paylaşılan vizyon ve bağlılık olarak belirlenmiştir. Bu çalışmada bu unsurların bilgi paylaşımı ve yenilikçilikle ilişkisi ortaya konmuştur. Ayrıca bilgi paylaşımı ve örgütsel yenilikçiliğin de ilişkisi ortaya konmuştur.

Günümüz işletmeleri için bilgi en önemli ve en değerli kaynaklar arasında sayılmaktadır. Bilgiye sahip olan işletmeler rakipleri karşısında her zaman önde olacaklarını bilirler. Çünkü bilgi yeniliği meydana getiren en önemli işletme kaynaklarından biridir. Bu nedenle bilgi yeniliğin hammaddesi olarak görülmektedir. Yenilik ise müşteri beklenti ve memnuniyetini sağlayabilecek, dolayısıyla işletmenin karlılık performansını artırabilecek en

önemli unsurdur. Bunun farkında olan işletmeler özellikle işletme dışından elde edilecek bilginin işletmeye uyarlanıp, yenilikleri ortaya çıkarabileceğinin de farkındadırlar.

Böylece işletmeler arası bilgi paylaşımının önemi giderek artmaktadır. İşletmeler bilginin saklanarak değil de paylaşıldıkça artacağını bilerek hareket etmeli ve böylelikle hem kendine hem de piyasaya katma değer kazandırmalıdır. İşletmeler var olan bilgilerini diğerleriyle paylaşarak, mevcut bilgilerin yeni şekillerde yorumlanmasını böylece ürün ve hizmetlerde yenilik yapılmasını sağlayabilirler. Ayrıca bilginin örgüt dışındaki ortaklardan elde edilmesi de yine yenilikçiliği ortaya çıkarabilmektedir. Günümüzde örgütler arası ilişkilerin, bilgi paylaşımının ve bunun bir sonucu olarak işletmelerin elde ettiği yenilikçilik yeteneğinin işletmelere sağlayacağı faydalar, bu işletmelerin rekabette avantaj elde etmelerini sağlayabilmektedir.

Sonuç olarak çalışmada, örgütler arası ilişki unsurları, bilgi paylaşımı ve yenilikçilik yeteneği arasındaki ilişkileri ortaya koymayı amaçlayan bir model önerilmektedir. Literatürden edinilen bilgiler sonucunda modelde yer alan değişkenlere ve bu değişkenler arasındaki ilişkilere kısaca yer verilmiştir. Model özellikle konaklama sektöründeki stratejik ittifak oluşturmuş otel işletmelerinin bazı ilişki unsurları sayesinde bilgiyi paylaşarak, yenilikçilik yeteneğini elde edebileceklerini öngörmektedir. Böylece otel işletmelerinin rakiplerine göre pazarda öncelikli duruma geçebilmeleri de mümkün olmaktadır.

Yabancı Turistlerin Güvenlik Algılarının Analizi:Alanya Örneği

Analysis of Security Perceptions of Foreign Tourists: The Case of Alanya

Asst. Prof. Dr. Muharrem Aksu (Akdeniz University, Turkey)

Asst. Prof. Dr. Ali Rıza Aktaş (Akdeniz University, Turkey)

Ph.D. Candidate Onur Oku (Akdeniz University, Turkey)

Ph.D. Candidate Faruk Kerem Şentürk (Akdeniz University, Turkey)

Abstract

High risk perception of the tourists affects tourism demand and causes serious declines in the number of tourists to destinations. With this respect, data collected from 500 randomly chosen foreign tourists were analyzed in order to identify their safety perception levels of Alanya town center and in which circumstances and places they have risk perceptions. Factors such as country of origin (nationality), gender, age, travel companion, education level, and duration of stay were tested in order to find out if they have an effect on safety/risk perceptions. Analysis included frequency tables and chi-squared tests. According to the main findings, majority of foreign tourists visiting Alanya find the destination safe (90,6%). There were significant differences in tourists' perception of risk and safety among issues like traffic and criminal cases such as theft, purse-snatching, sexual harassment, crimes. Additionally, correlation was detected between one of the factors affecting risk perception, -gender and risk types such as -going out at nights, theft and sexual harassment; and foreign tourists' showed different risk perceptions according to their gender.

1 Giriş

Turizm, güvenlik eksikliğine ve tehlike algılarına son derece duyarlı ve kırılgan bir sektördür. Turizmde suç vakalarının artışı ve güven eksikliği, seyahat ve turizm sektörünü, diğer negatif faktörler kadar tehdit etmektedir. Güvenlik gerek destinasyondaki turistlerin huzurlu bir tatil yapması konusunda gerekse destinasyonun seçiminde önemli bir unsurdur. Emniyet ve güvenliğin, güvenlik yönetiminin ve güvenlik algısının destinasyonları derinden etkilediği de bir gerçektir. Aynı zamanda bir turizm destinasyonun başarı ve başarısızlığı da ziyaretçilere güvenli ve emniyetli bir çevre sağlamaya bağlıdır. Bir turizm bölgesinde siyasi ve ekonomik istikrarsızlıklar, çevre, gıda, sağlık riskleri, terör olayları, turistlere yönelik hırsızlık, kap-kaç, gasp, yaralama ve cinsel taciz gibi olumsuz faktörler nedeniyle hem bölgenin güvenlik imajı zedelenmekte hem de turizm talebinde azalmalar meydana gelmektedir. Diğer yandan bahsedilen olumsuz faktörler ziyaretçilerin risk algılarını güçlendirmekte ve ziyaretçilerde destinasyon hakkında olumsuz algılara neden olmaktadır. Turistler konakladığı ya da konaklayacağı yer ile ilgili olarak kişisel güvenlik açısından herhangi bir risk algılar ya da kendilerini güvensiz hissederlerse bu yerlere ilişkin negatif bir imaj geliştirebilmekte ve tatil planlarında değişiklik yapabilmektedirler. Bir bölgenin güvenliğinin ziyaretçiler tarafından nasıl algılandığının bilinmesi, uygulanacak turizm pazarlama stratejileri konusunda avantaj sağlayacağı gibi turizm güvenliği konusunda da yapıcı/etkili politikaların üretilmesine katkıda bulunacağı şüphesizdir.

2 Turizm ve Güvenlik İlişkisi

Turizm endüstrisini güvenlik ve emniyetten bağımsız düşünmek neredeyse mümkün değildir (Tarlow ve Santana, 2002). Turizm sektörü, sosyo-ekonomik, doğal, kültürel ve siyasal olaylara en kısa sürede tepki vermesi nedeniyle oldukça kırılgan bir sektördür. Bu nedenle bir destinasyonun güvenli yer/bölge imajının oluşturulması, ilgili bölgenin tanıtımının en önemli unsurunu oluşturmaktadır.

Turistler, tatil yerlerini belirlerken destinasyonun güvenlik açısından imajını değerlendirerek karar verirler. Dolayısıyla güvenlik ve emniyet konusunda yetkin veya güvenlik riskinin düşük olduğu destinasyonlar, tatilciler açısından tercih edilebilir bölgeler haline gelmektedir. Bu bağlamda turizm güvenliği, seyahat ve turizmin en önemli koşullarından biri (Mansfeld ve Pizam, 2006; Reisinger ve Mavondo, 2005; Ryan, 1993; Sönmez ve Graefe, 1998b), turizm sektörünün gelişiminin de temel koşulu olarak karşımıza çıkmaktadır (George, 2003; Lepp ve Gibson, 2003; Mawby, 2000; Sönmez ve Graefe, 1998b).

Güvenlik ve emniyet, yurt içi ve yurt dışı seyahat edenler için uzun zamandan beri var olan global bir kaygıdır (Smith, 1999). Son yıllarda birçok araştırmacı, turizm destinasyonunda suç ve güvenlik problemlerinin turizm talebine doğrudan ve dolaylı olarak etkisinin olup olmadığını araştırmaya başlamıştır. Araştırmalar suç algısının, turizm talebi üzerinde zararlı bir etkisi olduğunu göstermiştir (Demos, 1992; Barker ve diğerleri, 2003; George, 2003, 2010, 2012). Yapılan çalışmalar, güvenliğin turistin karar alma sürecinde belirleyici bir unsur olduğunu göstermekte ve turizm bölgelerinde güvenli tatilin turistler için azımsanmayacak bir gereklilik olduğu vurgulamaktadır.

3 Güvenlik Algısının Turizm ve Turistler Üzerinde Etkisi

Kriminal aktivitelerden etkilenen turistlerin güvenlik algıları ile turizm arasındaki ilişki ağırlıklı olarak 1990'ların başlarından itibaren incelemeye başlanmıştır. Seyahat riski, endişe ve güvenlik algısı, turistlerin seyahat kararlarını alma esnasında dominant bir faktör olarak ortaya çıkmakta ve turistik tüketicinin seyahate çıkma aşamasında duygusal ya da rasyonel olarak vereceği kararın en etkin elemanı haline gelmektedir. Aynı zamanda algılanan risk ve emniyet, seyahat karar alma sürecini ve destinasyon seçimini de etkilemektedir (George, 2003; Mawby, 2000; Sönmez ve Graefe, 1998b). Güvenlik algısının olumsuz olması ya da kişisel güvenlik endişesi, turistlerin gelecekteki seyahat tercihlerinin de belirleyicisi olmaktadır (Reisinger ve Mavondo, 2005; George, 2003:576-578; Sönmez ve Graefe, 1998a). Seyahatlerinde ya da konaklamalarında kendilerini tehdit altında hisseden turistlerin ilgili destinasyonu tekrar ziyaret etmeleri ve kendilerini tekrar güvende hissetmeleri pek muhtemel değildir (Reisinger ve Mavondo, 2006:17).

Turistlerin güvensizlik ve yüksek risk algıları, bir destinasyonla ilgili ne oranda endişe hissettikleriyle doğrudan ilişkilidir. (Reisinger ve Mavondo, 2006:17). Yukarıda değinildiği gibi, algılanan risk ve güvenlik eksikliği, turistlerin uluslararası seyahat planlarını ve tatil destinasyonu seçimini doğrudan etkilemektedir. Bunun sonucunda da riskli algılanan destinasyonlar, potansiyel olarak gidilebilecek destinasyonlar listesinden çıkartılmaktadır. Kısacası, turistik kararlarda risk algısı, rutin karar almayı bozma potansiyeline sahip güçlü bir etkendir (Sönmez ve Graefe, 1998b:120). Aslında bu karar değişimi, turistler açısından emniyet ve güvenliğin huzurlu bir tatilin ön şartı olduğunu göstermektedir (George, 2003:576).

Diğer yandan insanlar destinasyon seçimini yaparken sadece fiyatına ya da destinasyonun imajına göre seçmezler, aynı zamanda algıladıkları kişisel güvenlik ve emniyete göre de karar vermektedirler (Pizam ve diğerleri, 1997). Gerçekten de güvenlik endişesi ya da risk algısının yüksek olduğu durumlarda, destinasyon seçiminde benzer faydalar sunan iki alternatif arasında -daha ucuz ve daha güvenli- daha güvenli olanın tercih edileceği belirtilmiştir (Sönmez ve Graefe, 1998:120b). Kısacası, turistler tatil destinasyonunda kendini güvensiz ya da tehdit altında hissederse destinasyon hakkında negatif bir izlenim geliştirebilirler. Bu durum, destinasyona zarar verebileceği gibi bölgede turizmin düşmesine neden olabilecektir (George, 2003:577). Yapılan araştırmalarda seyahat amaçları ile risk algıları arasında ters bir ilişki bulunmuştur. Yani, risk algısının yüksek olduğu durumlarda seyahat isteğinin düşük olduğu görülmektedir (Gray ve diğerleri, 2011:65).

4 Turizmle İlgili Risk Türleri

Birçok araştırmacı tarafından turizmle ilgili risk türleri oldukça geniş bir yelpazede incelenmektedir. Risk kategorilerini Reisinger ve Mavondo (2005) genişleterek öncelikli olan 13 seyahat riski belirlemiştir. Bunlar; suç, kültürel, sosyal, finansal, sağlık, donanım/ekipman, performans/başarı, fiziksel, siyasi, psikolojik, memnuniyet/tatmin, terörizm ve zamandır. Turistler bu risklerden sadece birini ya da birden fazlasını birlikte algılayabilirler (Reisinger ve Mavondo, 2006:15).

Yapılan birçok araştırmada risk türleri ile turizm ilişkilendirilerek turizm risk kaynaklarının turizme etkisi incelenmiştir. Turizm ve seyahat; doğal felaketler (Faulkner, 2001; Armstrong ve Ritchie, 2007; Mazzocchi ve Montini, 2001; Higgins, 2005; Faulkner ve Vikulov, 2001), kültür ve dil zorlukları (Basala ve Klenosky, 2001), suç (Dimanche ve Lepetic, 1999; Pizam ve Mansfeld, 1996; Brunt ve diğerleri, 2000; Pizam, 1999; Lepp ve Gibson, 2003), sağlık (Richter, 2003; Carter, 1998; Lepp ve Gibson, 2003; Rittichainuwat ve Chakraborty, 2009; Miller ve Ritchie, 2003; McKercher ve Chon, 2004; Cooper, 2005), savaş ve politik istikrarsızlık (Sönmez ve diğerleri, 1999; Gartner ve Shen, 1992; Ioannides ve Apostolopoulos, 1999; Seddighi ve diğerleri, 2000; Lepp ve Gibson, 2003), terörizm (Sönmez, 1998; Aziz, 1995; Sönmez ve Graefe, 1998a, 1998b; Sönmez ve diğerleri, 1999; Richter, 2003; Araña ve León, 2008; Lepp ve Gibson, 2003; Pizam, 2002) gibi bir dizi risk faktörüyle ilişkilendirilmiştir. Turistler, bu risk faktörlerinden herhangi birinin tehdit olduğu algısına sahip olurlarsa seyahat destinasyonu seçimlerini değiştirebilirler ya da seçilen destinasyondan vazgeçebilirler (Kozak ve diğerleri, 2007). Kontrolü zor olan bu faktörler, gerçekleştikleri zaman kalıcı bir etkiye neden olabilmekte (George, 2012:85) ve destinasyon imajına zarar vererek turizmi olumsuz yönde etkileyebilmektedirler (Ukwayi ve diğerleri, 2012:36).

5 Turistlerde Risk Algısını Etkileyen Faktörler

Araştırmalar, turistlerin risk algılarını kişilik özellikleri, milliyet, sosyal sınıf, cinsiyet, yaş gibi bir dizi bireysel faktörün etkilediğini göstermektedir (George, 2003, 2012:85). Gerçekten de turistlerin risk algılarını, bireysel bilgi, riski kabul ve riske maruz kalmaya isteklilik (Dowling ve Staelin, 1994), seyahat aşamaları (McIntosh ve diğerleri, 1998), durum, seyahat programları gibi organizasyonel faktörler (Roehl ve Fesenmaier, 1992), motivasyon ve kişilik gibi psikografik faktörler (Lepp ve Gibson, 2003; Carr, 2001; Schweer, 1986; Lepp ve Gibson, 2008; Reisinger ve Mavondo, 2005), cinsiyet (Gibson ve Yiannakis, 2002; Lynch ve Atkins, 1988; Sellick, 2004; Staats ve diğerleri, 2006; Reisinger ve Crotts, 2010), medeni durum (Sellick, 2004), gelir (Sönmez ve Graefe, 1998b; Sellick, 2004), sosyal statü, (Schweer, 1986; Demos, 1992) yaş (Sönmez ve Graefe, 1998b;

Sellick, 2004; Seddighi ve diğerleri, 2002), gibi sosyo-demografik faktörler, riskin türü ya da riskin tüketici için önemi (Tsaur ve diğerleri, 1997) farklı boyutlarda etkilemektedir. Böylece bireyler aynı riskleri farklı şekillerde algılayabilmektedirler (Kahneman ve Tversky, 1982). Ayrıca bireylerin seyahat risk algısı, seyahat bilgi kaynakları (Pizam ve diğerleri, 2004; Kozak ve diğerleri, 2007) geçmiş seyahat deneyimleri (Chen ve Gürsoy, 2001; Lepp ve Gibson, 2003; Floyd ve diğerleri, 2004; Kozak ve diğerleri, 2007) kalış süresi (Barker ve diğerleri, 2003; George, 2003), seyahat tercihleri (Lepp ve Gibson, 2003), destinasyonu ziyaret etme sayısı (Demos, 1992), ziyaret amacı gibi (Rittichainuwat ve diğerleri, 2002; George, 2010) çeşitli davranışsal özelliklerden etkilenebilmektedir (George, 2010; Reisinger ve Mavondo, 2006:15-16). Diğer yandan uluslararası turizmde turistlerin risk algısı, kültürel, dinsel ve siyasal faktörlere de fazlasıyla bağlı olabileceği belirtilmektedir (Reisinger ve Mavondo, 2006:14). Ayrıca risk algısı milliyete göre değişmekle birlikte (George, 2003, 2010; Seddighi ve diğerleri, 2001; Barker ve diğerleri, 2003; Reisinger ve Mavondo, 2006; Richardson ve Crompton, 1988), farklı milletlerden seyahat edenler aynı riski farklı düzeylerde algılayabilmektedirler (Richardson ve Crompton, 1988).

Risk algısı ve risk önceliği cinsiyet ve yaşa göre farklılık göstermektedir (Carr, 2001). Cinsiyet, farklı risk ve güvenlik algılamalarında önemli bir belirleyicidir (Reisinger ve Mavondo, 2006). Örneğin kadınlar ve daha yaşlı kişilerin kişisel emniyet konusunda daha endişeli oldukları belirtilmektedir. Kadınların seyahat aktivitelerini potansiyel riskle karşılaşmaktan kaçınmak için sınırlandırdıkları (Stanko, 2000), erkeklere göre risk konusunda daha duyarlı oldukları (Gibson ve Jordan, 1998) ve geceleri herhangi bir tehlike söz konusu olduğunda daha yüksek risk algısına sahip oldukları tespit edilmiştir (Carr, 2001). Ayrıca kadınların terörizmle ilgili risk konusunda erkeklerden daha yüksek risk algısına sahip oldukları belirtilmiştir (George, 2010:87) Staats ve diğerleri (2006) ise, cinsiyet farklılıklarının, terör eylemleri sonrasında yapılan gelecek seyahat planlamalarını etkilediğini belirtmiştir.

Yapılan bir araştırmada kişilerin geçmişteki suç deneyimlerinin, milliyetinin ve kalış süresinin güvenlik algılarını etkilediği görülmüştür (George, 2003:582-583). Başka bir araştırma ise daha önce suça maruz kalan kimselerin kendilerini daha az güvende hissettiklerini göstermiştir. Turistlerin daha önceki suç deneyimleri daha güvensiz bir algıya sebep olduğu ve bunun sonucunda da turistler suç korkusuyla destinasyondaki aktivitelerini de sınırlandırdığı tespit edilmiştir. Ayrıca turistlerin hava karardıktan sonra dışarı çıkma konusunda daha dikkatli oldukları da vurgulanmaktadır (Milman ve Bach, 1999:384; Pinhey ve Iverson, 1994:92). Gibson ve Yinannakis (2002)'e göre ise seyahatle ilgili risk algısı yaş ilerledikçe azalmaktadır.

Turistler, suçlular tarafından yanlış yerde yanlış zamanda bulunan kolay hedefler olarak kabul edilmekte ve suç kurbanı olabilmektedirler. Akabinde medyanın ilgisiyle bu destinasyonlarda bulunan ziyaretçilerin ya da potansiyel ziyaretçilerin güvenlik algıları olumsuz olarak etkilenebilmektedir (George, 2003:577). Gerçekten de medyanın turistlerin algılarında önemli bir rol oynayarak (Glenson ve Tepe, 2004; Ukwayi ve diğerleri, 2012:36 Korstanje, 2011) risk algı düzeylerini etkilediği bulunmuştur (Gray ve diğerleri, 2011). Keza Mawby'e (2000:101) göre de suç ile ilgili haberler, var olan riski daha da yükseltmektedir.

6 Metodoloji

Çalışmanın evreni 2012 yılında Alanya'ya tatile gelen yabancı turistleri kapsamaktadır. Araştırmanın örneklemi ise Alanya kent merkezine gelen yabancı turistlerden rastgele seçilen 500 yabancı turistten oluşmaktadır. Örneklem büyüklüğünün hesaplanmasında kabul edilebilir hata payı 0.05 (%5) olarak alınmış, %95'lik güven seviyesine göre minimum örneklem büyüklüğü örneklem belirleme çizelgesinden yararlanılarak 384 olarak hesaplanmıştır. Ancak anketlerin yeterli sayıda geri dönmeyebileceği düşünülerek turistlere 550 anket uygulanmış; geri dönen anketlerden eksik/hatalı doldurulanlar çıkarıldıktan sonra 500 anket araştırma için kullanılmıştır.

Araştırmada literatür taraması ve alan araştırması yöntemi kullanılmış. Literatür taramasında ikinci kaynaklardan yararlanılırken alan araştırmasında çalışmanın amacını ortaya koyacak nitelikte bir anket formu kullanılmıştır. Söz konusu anket formu deneklerin demografik özelliklerini ve araştırma alanı ile ilgili güvenlik algılarını belirlemeye yönelik sorulardan oluşmaktadır. Araştırma alanına gelen turistlerin çok farklı dilleri konuşuyor olmasından dolayı anket formları başlıca 3 dilde hazırlanmıştır. Anket, 2012'de sezonun en yoğun olduğu Temmuz-Ağustos aylarında kent merkezindeki bar, restoran, kafe, plaj ve otellerde uygulanmıştır. Anket uygulaması sonucu elde edilen veriler SPSS paket programında analiz edilmiştir. Yapılan analiz iki aşamadan oluşmaktadır. Birinci aşamada deneklerin tüm sorulara verdikleri cevapları frekans çizelgeleri ile gösterilerek, cevapların düzeylere göre dağılımı belirlenmiştir. İkinci aşamada bir faktörün diğer bir faktöre bağlı olup olmadığı veya bir faktör üzerine diğer bir faktörün etkisinin olup olmadığını belirlemek için parametrik olmayan testler içinde en yaygın kullanım alanı olan ki-kare testi yapılmıştır. Ki-kare testinde boş hipotez yani H_0 hipotezi sorulara verilen cevaplar arasında **"ilişki yoktur"** (H_0: Değişkenler arasında ilişki yoktur) ve alternatif hipotez yani H_A hipotezi ise sorulara verilen cevaplar arasında **"ilişki vardır"** (H_A: Değişkenler arasında ilişki vardır) şeklinde oluşturulmuştur. Ki-kare testi yardımıyla aşağıdaki hipotezler test edilmiştir.

Araştırmada nitel bir değişken olan güvenlik algısı ile yine nitel birer değişken olan cinsiyet, eğitim düzeyi, yaş, gelinen ülke, Alanya'da yerel arkadaşın bulunması, araştırma bölgesinde cinsel taciz, hırsızlık, kapkaç, suç, trafik kazası gibi değişkenler arasında bir ilişki olup olmadığı araştırılmıştır. İlgili analizlerde değişkenlerin nitel değişkenler olması nedeniyle ki-kare bağımsızlık testi uygulanmıştır.

7 Araştırma Bulguları ve Değerlendirmesi

Demografik Değişkenler	Kategori	f	%	Demografik Değişkenler	Kategori	f	%
	Erkek	198	39.6		Bir haftaya kadar	228	45.6

Ülke	Kuzey Avrupa	199	39.8				
	Doğru Avrupa	118	23.6				
	Batı Avrupa	102	20.4				
	Orta Avrupa	54	10.8				
	Diğer	27	5.4				

Tablo 1: Demografik değişkenler tablosu

Araştırmaya katılan turistlerin 198'i erkek (%39.6) ve 302'sinin ise (%60,4) kadın olduğu tespit edilmiştir. Tablo 1'de görüldüğü gibi Alanya'ya gelen turistlerin büyük bir çoğunluğunun 40 ve altı yaş grubundan oluştuğu görülmektedir. Tablo 1'deki verilere göre araştırmaya katılan turistlerin %48'i bekârdır. Araştırma bölgesine gelen turistlerin büyük bir çoğunluğunun yüksek eğitim seviyesine sahip olduğu görülmekte olup ilköğretim düzeyinde eğitime sahip olanların oranı %6 düzeyinde kalmıştır. Alanya'ya gelen turistlerin geldikleri ülkelere göre dağılımına bakındığında ise ilk sırada Kuzey Avrupa ülkelerinden gelenler yer almaktadır (%39.8). Bu ülkeleri sırasıyla Doğu Avrupa ülkeleri (%23.6), Batı Avrupa ülkeleri (%20.4) ve Orta Avrupa ülkeleri izlemektedir (%10.8).

Araştırma kapsamında ankete katılan turistlerin %45.6'sı bir haftadır Alanya'da bulunduklarını belirtirken %41.2'si ise iki haftadır Alanya'da olduğunu beyan etmiştir. Alanya'ya gelen turistlerin büyük bir çoğunluğu (%66.2) otellerde konaklamayı tercih ederken kendi evinde konaklayanların oranı ise %4.6 olarak tespit edilmiştir. Tablo 1 incelendiğinde araştırma bölgesine gelen turistlerin ağırlıklı olarak eşleriyle veya arkadaşlarıyla tatile geldikleri görülmektedir. Alanya'ya gelen turistlerin yarıdan fazlası bu kentte Türk arkadaşının olduğunu (%53) belirtmiştir.

Araştırma kapsamında Alanya kent merkezine tatile gelen yabancı turistlerin neredeyse tamamına yakını Alanya'da kendilerini güvende hissettiklerini (%90.6) ifade ederken güvensiz olduğunu belirtenlerin oranı ise %9.4 olarak tespit edilmiştir. Güvenli olup olmaması bakımından Alanya'yı kendi yaşadığı kent ile mukayese etmesi istenen turistlerin %55.8'i kendi kentlerinin daha güvenli olduğunu belirtmiştir. Ankete katılan turistlerin %75.6'sı güvenlik görevlilerinin (polis, jandarma) hizmetlerinden memnun olduğunu beyan etmişlerdir. Diğer bir ifadeyle turistlerin %75.6'sı güvenlik hizmetlerini kötü bulmamaktadır. Dolayısıyla bu durum, güvenlik hizmet kalitesinin iyi verilmesinin aynı zamanda Alanya'yı güvenli bulmasında da etkin bir faktör olduğu söylenebilir. İnsanların elbette kendilerini yabancısı oldukları bir ülkeye göre kendi ülkelerinde güvende hissetmeleri doğal bir durum olmakla birlikte Alanya'yı kendi ülkesinden daha güvenli bulanlar ile kendi ülkesiyle fark yok diyenlerin toplam oranının %44.2 olması, Alanya'nın güvenli bir kent olarak algılandığını gösteren diğer bir veridir.

Araştırma alanındaki turistlerin %77.6'sının Alanya'ya gelmeden önce Alanya'yı güvenli bir kent olarak gördüklerini, %22.4'ünün ise güvenli bir kent olarak görmediklerini ifade etmişlerdir. Alanya'ya geldikten sonra güvenlik algılarında olumlu bir değişme olduğunu ifade edenlerin oranı %34.6, değişmediğini ifade edenlerin oranı %26.2 iken olumsuz olarak değiştiğini ifade edenlerin oranı ise %5.8 olduğu tespit edilmiştir. Alanya'ya

gelmeden önce Alanya'yı güvenli bir kent bulmayanların oranın %22.4 oranında kalması, Alanya'nın destinasyon imajının genel olarak güvenli bir kent olarak algılandığını göstermektedir. Alanya'ya gelen turistlerden Alanya'ya gelmeden önce güvenli bulan %77.6'sının (388 kişi) geldikten sonra sadece %3.4'ünde (13 kişi) olumsuz yönde değişim olmuştur. Buna karşın Alanya'ya gelmeden önce Alanya hakkında güvenlik algısı olumsuz olanlardan (%22.4) olumlu yönde değişenlerin oranı %54.5 (61 kişi) olarak tespit edilmiştir. Olumlu yöndeki büyük değişim dikkate alındığında araştırma bölgesinin güvenlik algısının yüksek olduğu söylenilebilir.

Algı Değişkenleri	Kategori	f	%	Algı Değişkenleri	Kategori	f	%
Genel olarak Alanya'da kendinizi güvende hissediyor musunuz?	Evet	453	90.6	Alanya'ya geldikten sonra Alanya ile ilgili güvenlik algınızda nasıl bir değişme oldu?	Olumlu olarak değişti	173	34.6
	Hayır	47	9.4		Olumsuz olarak değişti	29	5.8
Hangi ülkede (şehirde) kendinizi daha güvende hissediyorsunuz?	Kendi ülkemde	279	55.8		Değişmedi	298	59.6
	Alanya'da	74	14.8	Başkalarına Alanya'nın güvenli bir kent olduğunu tavsiye eder misiniz?	Tavsiye ederim	449	89.8
	Fark Yok	147	29.4		Tavsiye etmem	51	10.2
Alanya'daki güvenlik görevlilerinin (polis, jandarma) hizmetlerinden memnuniyet dereceniz nedir?	Mükemmel	69	13.8	Alanya ile ilgili güvenlik algınızı hangi kaynaktan edindiniz?	İnternet	219	43.8
	İyi	204	40.8		Gazete/Dergi	84	16.8

	Kısmen	135	27.0	Alanya'ya gelmenizde etkili olan faktörler	Güneş/Deniz/ Doğa	373	74.6
	Hayır	28	5.6		Tarih/Din	11	2.2
	Fikrim yok	149	29.8		Fiyat	54	10.8
Alanya'ya gelmeden önce Alanya hakkında güvenlik algınız nasıldı?	Alanya güvenlidir	388	77.6		Güvenlik	38	7.6
	Alanya güvenli değildir	112	22.4		Arkadaşlık	24	4.8

Tablo 2: Algı değişkenleri tablosu

Tablo 2'ye göre araştırmaya katılan turistlerin büyük bir çoğunluğu (%89,8) Alanya'yı güvenli bir kent olarak başkalarına tavsiye edeceklerini belirtmektedir. Bu durum özellikle, Alanya'yı ziyaret edenlerin gönüllü birer turizm elçisi olarak potansiyel ziyaretçiler üzerinde Alanya'nın güvenli kent imajının oluşmasını sağlayacaktır. Keza Tablo 3'ten çıkan sonuç da arkadaşlardan alınan bilgilerin (%95.1) güven algısını yükselttiğini göstermektedir. Araştırmaya katılan turistlerin Alanya ile ilgili güvenlik bilgilerini ağırlıklı olarak internet üzerinden (%43.8) edinirken bunu sırasıyla Türk arkadaşları (%39) ve tur operatörleri (%26.2) takip etmektedir (Tablo 2). Bu veriler daha önce yapılmış olan çeşitli çalışmalardaki bulguları da destekler niteliktedir. Katılımcıların toplamda %74.6'sının Alanya'nın güvenliği hakkında yazılı ve görsel medyadan bilgi alması medyanın güvenlik algısı oluşturmadaki rolüne işaret etmektedir. Ayrıca Türk arkadaşların güvenlik algısının oluşmasındaki rolü de göz ardı edilmemelidir.

Araştırma kapsamında ankete katılan turistlerin Alanya'yı tercih etmelerinde etkili olan en önemli faktörün güneş-deniz-doğa olduğu görülmektedir. Nitekim güneş-deniz-doğa nedeniyle Alanya'yı tercih edenlerin oranı %74.6'dır. Bunu sırasıyla Alanya'daki fiyatların uygun olması (%10.8), Alanya'nın güvenli bir kent olması (%7.6), arkadaşlık (%4.8) ve tarihi/dini yerlerin çekiciliği (%2.2) faktörleri takip etmektedir. Tablo 3'ten de görüleceği üzere Alanya'nın tercih edilmesinde güvenlik unsuru, üçüncü faktör olarak ortaya çıkmaktadır.

Tablo 3'e göre, araştırma alanına gelen turistlerin demografik değişkenlere göre güven algı düzeyleri düşük düzeyde de olsa farklılık arz etmektedir. Tablo 3 incelendiğinde, erkeklerin kadınlara göre kendini daha fazla güvende hissettiği; 20 yaşın altında olanların 20 yaş üstüne göre kendini daha az güvende hissettiği; eğitim düzeyi arttıkça kendini güvende hissetme oranının yükseldiği; Doğu Avrupa ülkelerinden gelen ziyaretçilerin kendilerini güvende hissetme oranının daha düşük düzeyde olmasına karşın, diğer kategorisinde yer alan Ortadoğu ve Orta Asya'dan gelen ziyaretçilerin kendini daha fazla güvende hissettiği; eşleriyle birlikte tatile gelen turistlerin daha fazla güven algısına sahip olduğu; Alanya'da 1 haftadır bulunanların Alanya'yı güvenli

bulma düzeyi sonraki haftalarda düşmekteyken 4. hafta ve sonrasında yükseldiği; Türk arkadaşı olanların kendini daha fazla güvende hissettiği; bilgi kaynakları açısından kendi arkadaşlarından bilgi edinenlerin kendilerini daha fazla güvende hissettiği görülmektedir.

Genel olarak Alanya'da kendinizi güvende hissediyor musunuz?

Tablo 3: *Demografik değişkenlere göre güvenlik algı düzeylerinin dağılımı*

Yukarıdaki veriler (Tablo 3), eğitim düzeyi ile güvenlik algısının doğru orantılı olduğunu göstermektedir. Ayrıca Orta Asya ve Orta Doğu'dan gelen ziyaretçilerin diğer ülkelerden gelenlere göre kendilerini güvende hissetmeleri dil ve din benzerliği gibi faktörlere bağlanabilir. Alanya'ya gelen turistlerin ilk hafta kendilerini güvende hissetme oranı yüksekken sonraki haftalarda düşmesi ve sonrasında ilk haftaya göre biraz daha yükselmesi, turistlerin Alanya'ya yüksek bir güvenlik algısıyla gelmelerine ve Alanya'nın güvenli bir ortam sunmasıyla birlikte güvenlik algılarındaki olumlu değişime bağlanabilir (Bkz. Tablo 5).

Tablo 5: *Cinsiyetlere göre güvenlik algı düzeylerinin dağılımı*

Alanya'ya gelen turistlerin %50.4'ü toplu taşıma araçlarında kendilerini güvende hissettiklerini ifade etmiştir. Benzer sonuçlar gece yaya olarak dışarı çıktıklarında da gözlemlenmiştir. Araştırma bölgesine gelen turistlerin büyük bir çoğunluğu plajlarda ve eğlence merkezlerinde kendilerini güvende hissettiklerini belirtmişlerdir. Tablo 4 incelendiğinde turistlerin %58.8'i plajlarda ve %53.4'ü ise eğlence mekanlarında kendilerini güvende hissettikleri görülmektedir. Turistler, özellikle trafik konusunda kendilerini güvensiz hissetmekteyken (%29.2), suç, cinsel taciz, kap-kaç ve hırsızlık durumlarında güvenlik algı düzeyleri düşük ve birbirine yakındır.

Araştırma alanına gelen turistlerin Alanya'ya gelmeden önce Alanya'yı güvenli bulma oranları cinsiyetlere göre incelendiğinde erkeklerin %80.3'ü Alanya'yı güvenli bulurken kadınların %75.8'i güvenli bulmaktadır. Alanya'ya geldiklerinde ise hem kadın hem erkeklerde güvenlik algılarında olumlu yönde bir değişim olduğu gözlemlenmektedir. Erkeklerin %91.4'ü Alanya'yı güvenli bulurken kadınlarda bu oran %90.1 olarak gerçekleşmiştir. Alanya'ya geldikten sonra Alanya'nın güvenlik algısındaki değişim kadınlarda daha yüksek seyretmektedir. Oysaki kadınların Alanya'ya gelmeden önce, Alanya hakkındaki güvenlik algıları erkeklere göre daha düşüktür. Ankete katılan erkeklerden %80.3'ü Alanya'yı güvenli bulurken kadınlarda bu oran 75.8'dir.

Tablo 6: Turistlerin bilgi kaynaklarına göre Alanya'ya yönelik güvenlik algılarının dağılımı

Alanya'ya ile ilgili güvenlik bilgi ediniminde bilgi kaynakları açısından cinsiyetler arası çok farklılık olmamakla birlikte turistlerin en fazla internete (%39.8) başvurdukları görülmektedir. Turistlerin ikinci sırada Türk arkadaşlarından (%35.6) üçüncü sırada ise tur operatörlerinden (%23) bilgi edindikleri görülmektedir. Ayrıca, araştırma bölgesine gelen turistlerin bilgi kaynaklarına göre Alanya'yı güvenli bulmaları bakımından cinsiyetlere göre karşılaştırılması yapıldığında, çok büyük farklılıklar olmamakla birlikte tur operatörleri ve kendi arkadaşlarından bilgi edinen kadınların, erkeklere göre Alanya'yı güvenli bulma oranının daha yüksek olduğu görülmektedir. Buna karşın diğer bilgi kaynaklarıyla kıyaslama yapıldığında Alanya hakkında tur operatörlerinden bilgi edinen erkekler ile gazetelerden bilgi edinen kadınların güvenlik algısının düşük olduğu görülmektedir.

Tablo 7: Alanya'da Turistlerin cinsiyetleri ile çeşitli ortam ve durumlarda kendilerini güvenli hissetme durumlarının dağılımı

8   Hipotezlerin Test Edilmesi

Turistlerin cinsiyetleri ile toplu taşıma araçlarında, gece ve gündüz yaya olarak dışarı çıktıklarında, plajlarda, eğlence mekânlarında, hırsızlık, kap-kaç, cinsel taciz, suç ve trafik durumunda güvenlik algıları arasında bir ilişki vardır.

Araştırmaya katılan turistlerin kendilerini en fazla güvende hissettikleri durum "gündüz yaya olarak dışarı çıkma" durumu olup bu oran erkeklerde %79.8 iken kadınlarda %80.1'dir. En düşük güvende hissettikleri durum ise trafik durumu olup kadın ve erkek turistlerde sırasıyla bu oranlar %32.5 ve %33.3 olarak tespit edilmiştir. Tablo 7'deki veriler incelendiğinde araştırma bölgesine gelen erkek turistlerin; toplu taşıma araçlarında, gece yaya olarak dışarı çıkmada, plajlarda, eğlence mekanlarında, hırsızlık, kap-kaç, cinsel taciz, suç ve trafik durumlarında kadın turistlere göre daha yüksek düzeyde kendilerini güvende hissettikleri, kadın turistlerin ise sadece gündüz yaya dışarı çıkmada erkeklere göre kendilerini daha güvende hissettikleri görülmektedir. Ayrıca kadınlarla erkekler arasındaki en büyük farklılık cinsel taciz konusunda ve gece dışarı çıkma konusunda görülmektedir. Dolayısıyla gece yaya olarak dışarı çıkmak, cinsel taciz açısından motive suçlular için uygun ortamı sağlayan bir durum olarak değerlendirildiğinde bu iki faktörün birbirinden bağımsız olmadığı sonucuna varılabilir. Bu faktörlere bağlı olarak kadınlarda güven algısı erkeklere göre daha düşüktür. Tablo 9 incelendiğinde ise kadınların cinsel tacize maruz kalması sonrasında Alanya hakkında güvenlik algısının erkeklere göre daha düşük oranda (%45.2) değişmesi, zaten bu konudaki düşük güvenlik algısına bağlanabilir.

Alanya'ya gelen turistlerin cinsiyetleri ile toplu taşıma araçlarında, gece ve gündüz yaya olarak dışarı çıktıklarında, plajlarda, eğlence mekanlarında, hırsızlık, kap-kaç, cinsel taciz, suç ve trafik gibi durumlarda güvenlik algıları arasında bir ilişkinin varlığını araştırmak amacıyla ki-kare testi yapılmıştır. "Gece yaya olarak dışarı çıkma", "hırsızlık" ve "cinsel taciz" durumlarında cinsiyet ile güvenlik algıları arasındaki ilişkiyi belirlemeye yönelik yapılan ki kare testi sonucunda elde edilen ki kare değerleri sırasıyla 0.040, 0.015 ve 0,000 olarak hesaplanmıştır. Buna göre P<0,05 olduğundan %5 anlamlılık düzeyinde H1 hipotezi kabul edilmiştir. Daha önceki yapılan çalışmalarda, şehirle ilgili geceleri tehlike söz konusu olduğunda, kadınların daha yüksek risk algısına sahip olduğu tespit edilmiştir (Carr, 2001). Gerçekten de Alanya'da özellikle kadınların geceleri yaya olarak dışarı çıktıklarında erkeklere göre kendilerini güvende hissetme oranı (%44.0) daha düşüktür. Ayrıca toplamda gece dışarı çıkan kadınlarda güvenlik algısı %44 olmasına rağmen, gece yaya olarak dışarı çıkma konusunda Alanya'ya yalnız gelen kadınların sadece %27.3'ü kendini güvende hissetmektedir. Kısmen güvende hissedenlerin oranı %59.1, güvende hissetmeyenlerin oranı ise, %13.6'dır. Bu veriler, genel olarak Alanya güvenli bir kent olarak algılansa da yalnız gelen kadınların gece dışarı çıkma konusunda güven algılarının yüksek olmadığını göstermektedir.

8.1 Turistlerin cinsel tacize, hırsızlığa, suça, kap-kaça ve trafik kazasına maruz kalmaları durumunda kendini güvende hissetme algıları arasında bir ilişki vardır.

Yaşanan olaylar	Erkek		Kadın		Toplam		Güvenli		Güvensiz		sd	Ki-Kare (X²)	P

Tablo 8: Turistlerin cinsel tacize, hırsızlığa, suça, kap-kaça ve trafik kazasına maruz kalmaları durumunda kendilerini güvende hissetme algılarının dağılımı

Alanya'ya gelen turistlerden cinsel tacize uğradığını belirten 59 kişinin (%11.8) 47 kişisi (%79.7) Alanya'yı güvenli bir şehir olarak algılarken 12 kişi (%21.1) ise Alanya'yı güvenli bir şehir olarak görmemektedir. Hırsızlık olayı ile karşılaşan 35 kişi (%5.4) tespit edilmiştir. Söz konusu durumla karşılaşan turistlerin büyük çoğunluğu (%77.1) araştırma bölgesini, bu duruma rağmen hala güvenli buldukları belirtmiş olup güvensiz bulanların oranı sadece % 22.9 düzeyinde gerçekleşmiştir. Turistlerden herhangi bir suça maruz kalanların oranı %8, maruz kalmayanların oranı ise %92 olduğu tespit edilmiştir. Herhangi bir suça maruz kalanların %75'i Alanya'yı güvenli bir kent olarak bulduklarını beyan etmektedir. Turistlerin araştırma bölgesinde karşılaştıkları sorunlar arasında trafik kazası %15.6 ile ilk sırada gelmektedir. Trafik kazası geçiren turistlerin %76.9'u Alanya'yı güvenli bir kent olarak gördüğünü beyan ederken güvensiz bir kent olarak görenlerin oranı ise %23.1 olarak gerçekleşmiştir. Tablo 8 incelendiğinde araştırmaya katılan turistlerden %9.2'si Alanya'da tatil süresince kap-kaç olayına maruz kaldıklarını belirtmiştir. Turistlerin kap-kaç olayına maruz kalmasına rağmen büyük bir çoğunluğunun (%76.1) Alanya'yı hala güvenli bulmaları oldukça dikkat çekicidir. Turistlerin cinsel tacize, hırsızlığa, suça, kap-kaça ve trafik kazasına maruz kalmaları durumu ile güvenlik algıları arasındaki ilişkiyi

belirlemeye yönelik yapılan ki kare testi sonucunda hesaplanan ki kare değerlerinin hepsi istatistiksel olarak anlamlı bulunmuştur. Buna göre P<0,05 olduğundan %5 anlamlılık düzeyinde H2 hipotezi kabul edilmiştir.

8.2 Turistlerin cinsiyetleri ile cinsel tacize, hırsızlığa, suça, kap-kaça ve trafik kazasına maruz kalmaları sonrasında güvenlik algı değişimleri arasında bir ilişki vardır.

Tablo 9: Turistlerin cinsel tacize, hırsızlığa, suça, kapkaça maruz kalmaları ve trafik kazası geçirmeleri sonrasında güvenlik algıları arasındaki ilişkinin dağılımı

Araştırma bölgesinde cinsel tacize maruz kalmış erkeklerin %11.8'inde olumlu yönde değişme olurken kadınlarda bu oran %38.1 olarak gerçekleşmiştir. Benzer sonuçlar hırsızlık, suç, kapkaç ve trafik kazası konusunda da görülmüştür. Nitekim Tablo 5'deki veriler incelendiğinde erkeklerin Alanya'ya geldikten sonra güvenlik algılarındaki olumlu değişim %29.8 iken, kadınlarda %37.7 olarak tespit edilmiştir. Bu verilerden hareketle Alanya'ya gelen kadın turistlerin Alanya hakkındaki güvenlik algı değişimleri erkeklere göre daha yüksek olduğu sonucuna varılabilir.

Turistlerin cinsel tacize, hırsızlığa, suça, kap-kaça ve trafik kazasına maruz kalmaları sonrasında güvenlik algı değişimi ile cinsiyetleri arasındaki ilişkiyi belirlemeye yönelik yapılan ki kare testi sonucunda elde edilen ki kare değerlerinin hepsi istatistiksel olarak anlamlı bulunmuştur. Buna göre P<0,05 olduğundan %5 anlamlılık düzeyinde H3 hipotezi kabul edilmiştir.

9 Sonuç

Bu çalışmada Alanya'ya gelen yabancı turistlerin Alanya hakkındaki güvenlik algıları araştırılmıştır. Araştırma sonuçları, Alanya'ya gelen turistlerin oldukça yüksek güvenlik algısına sahip olduklarını göstermiştir. Ayrıca cinsel taciz, kapkaç, suç, hırsızlık ve trafik gibi risk türlerine bağlı olarak algı farklılığı olduğu görülmüştür. Her ne kadar turistlerin cinsel tacize, hırsızlığa, herhangi bir kriminal olaya, trafik kazasına, kap-kaç olayına maruz kalmış olmalarına rağmen algılarında önemli bir değişim meydana gelmemiştir. Üstelik güvenlik algılarında da neredeyse yok denecek düzeyde negatif yönde bir değişim olmuştur. Trafik kazaları bir kenara bırakılırsa turistlere yönelik suçların yüksek olmadığı da diğer bir bulgudur. Güvenlik görevlilerine güven düzeyinin ve güvenlik hizmetlerinden memnuniyet oranının yüksek olması aynı zamanda Alanya hakkında güvenlik algısının pozitif yönde etkilemektedir. Alanya'yı ziyarete gelenlerin eğlence mekanlarında ve plajlarda da kendilerini güvende hissettikleri görülmüştür. Bilgi kaynaklarının algı farklılaşmasına etki de bulunduğu diğer veriler arasındadır. Turistlerin kendi arkadaşlarının Alanya hakkındaki düşünceleri de Alanya hakkında güvenlik algısını etkilemektedir. Turistlerin cinsiyetleri ile toplu taşıma araçlarında, gece ve gündüz yaya olarak dışarı çıktıklarında, plajlarda, eğlence mekânlarında, hırsızlık, kap-kaç, cinsel taciz, suç ve trafik olayı durumunda güvenlik algıları arasında bir ilişki bulunduğu gibi, bu tip sorunların yaşanması sonrasında turistlerin cinsiyetleri ile güvenlik algıları arasında farklılıklar tespit edilmiştir. Nihayetinde araştırma bulguları bir bütün olarak değerlendirildiğinde Alanya'nın turistler için güvenli bir kent olmasının yanı sıra huzurlu bir tatil için de gerekli ortamı sağladığı söylenebilir

Turizm ile Ekonomik Büyüme Arasındaki İlişki: Akdeniz Ülkeleri Üzerine Bir Panel Veri Analizi

Relationship between Tourism and Economic Growth: A Panel Data Analysis on Mediterranean Countries

Asst. Prof. Dr. Ali Rıza Aktaş (Akdeniz University, Turkey)

Dr. Fatih Kaplan (Bingöl University, Turkey)

Ph.D. Candidate Seyfettin Kocaman (Akdeniz University, Turkey)

Abstract

In this study, unit root tests, co-integration tests and long term co-efficient tests are researched with panel data of GDP and tourism receipts for mediterranean countries between 1995-2011. In the study, as research method tests, first generation root tests (Levin-Lin, Breitung, Im-Pesaran and Shin(IPS), Fisher ADF, Fisher PP and Hadri estimators) and second generation unit root tests (CADF-CIPS estimators) have been used. In order to test cointegration, Pedroni, Kao, Johansen-Fisher and Westerlund co-integration tests have been used, to estimate the long-term coefficients PMGE (Pooled Mean Group Estimation) has been used. As a result of the econometric applications, a cointegration relationship between growth and tourism revenue in the long term with the correlation of .05 has been found.

1 Giriş

Turizm, boş zamanın ve tasarrufun nasıl kullanılacağına ilişkin ekonomik bir kararla başlayan ve yatırım, tüketim, istihdam, dışsatım ve kamu gelirleri gibi ekonomik yönleri bulunan bir sosyo-ekonomik olaydır. Turizm başlangıçta insanların gezme ve değişik yerler görme merakından doğmuş, özellikle 1950'li yıllardan sonrada hızla gelişerek daha geniş kitlelere ve uzak mesafelere yayılmıştır. Günümüzde parasal ve toplumsal bir olay haline gelen turizmin yarattığı ekonomik ve politik etkiler, ülke ekonomilerinde ve özellikle uluslararası ekonomik ve politik ilişkilerde önemli sonuçlar doğurmaktadır.

Turizm bugün dünya ekonomisi içerisinde gelir sağlayıcı faktörlerin başında yer almakta, büyük oranda yatırım yapılan ve gelişen bir sektör haline gelmektedir. Turizm bir ülkenin ekonomik, sosyal ve kültürel alanlarda kazanım elde etmesini sağlayan en önemli hizmet sektörlerinden biri olarak kabul edilmektedir. Bu nedenle turizm potansiyeli bulunan gelişmiş ve gelişmekte olan ülkeler özellikle uluslararası turizm faaliyetlerine ağırlık vererek, hem ekonomik gelişmelerini hızlandırmak hem de geliri tabana yaymak suretiyle ülkedeki refah düzeyini yükseltmeyi amaçlamaktadırlar. Turizm yönlü büyüme stratejini belirleyen ülkeler, turizm sektörüyle hizmet ihracatı yaparak daha fazla döviz girdisi, istihdam ve dolayısıyla ulusal gelir sağlayabilmektedirler. Milli gelir ve istihdamın artmasıyla vergi tabanının genişlemesi devletin vergi gelirlerinde belirgin bir artışın olmasına neden olacaktır. Artan vergi gelirleri merkezi ve mahalli idarelerce yapılan yatırımları artırarak ülkenin gelişmesine yardımcı olacaktır. Turizm gelirleri milli gelir içinde yer almakta ve ekonomide bir çoğaltan etkisi yaratmakta, ortaya çıkan çarpan etkisi de ekonomi üzerinde olumlu etki yapmakta ve birçok sektörü desteklemektedir.

Turizmi bünyesinde barındıran hizmet sektörü kuşkusuz emek yoğun bir sektördür. Sermayenin yetersiz fakat emeğin yoğun olarak bulunduğu Türkiye gibi gelişmekte olan ülkelerde, turizm sektörünün büyümesi, ülkenin milli gelirinin arttırılmasında bir fırsat olarak görülmektedir. Söz konusu emek yoğun ülkeler, turizm sektörünün büyümesi ile hizmet ihracatlarını arttırarak, ülkelerine döviz girdisi sağlayıp, istihdam seviyelerini ve dolayısıyla milli gelirlerini arttırmaktadırlar (Yamak ve diğ., 2012).

Turizm faaliyetleri dünya ekonomisinde giderek artan oranlı bir gelişim göstermektedir. Birçok ülkede turizm, GSMH ile istihdamın önemli bir bölümünü meydana getirmektedir. Buna ilave olarak turizmden elde edilen uluslararası döviz gelirleri ülkelerin mevcut bütçe açıklarını finanse etmeye yardımcı olmaktadır.Turizm gelirinin zengin ülkelerden daha fakir ülkelere, gelişmişlerden gelişmekte ve az gelişmiş ülkelere doğru dağılımına katkı yaparak ülkeler arasında yakınsamaya da neden olmaktadır. Böylece turizm bölgesel gelişmeye de yardımcı olmakta ve bölgesel ekonomik farklılıkların azaltılmasına olanak sağlamaktadır. Dolayısıyla sektöre yapılacak ulusal/uluslararası yatırımlar, kısa sürelerde etkisini göstererek geri kalmış bölgelerin ilerlemesine olumlu yönde etki edebilecektir (Bahar ve Bozkurt, 2010).

Uygarlık seviyelerinin artması, ülkelerin yakınlaşması, hayat standartlarının yükselmesi ve çalışma saatlerinin azalması sayesinde günümüz insanları daha çok seyahat etmeye başlamıştır. Artan bu seyahat eğilimleri sonucu turizm olayı coğrafi olarak daha geniş bir alana yayılmış ve bütün dünya ziyaretçileri tarafından kullanılan bir olgu haline gelmiştir. Geniş ölçekli ve çok boyutlu bir toplumsal olay olan bu harekete, bugün dünya nüfusunun yaklaşık %12,5'i katılmaktadır (Alaeddinoğlu ve Can, 2007).

Dünya savaşının hemen ardından 1918-1920 yılları arası modern turizmin başlangıcı olarak kabul edilmektedir. Bu dönemde turizm, otel, motel, ulaşım araçları ve yolları, plajlar, eğlence ve spor alanları, konaklama tesisleri ve tüm altyapısıyla büyük bir sektör haline gelmiştir. Günümüzde ise, teknolojik ilerlemeler, yaşam standartlarında ortaya çıkan iyileşmeler, küreselleşmenin beraberinde getirdiği seyahat serbestliği, turizm aktivitelerine katılan insan sayısının hızla artmasına neden olmuştur. Bunun doğal bir sonucu olarak da turizm sektörü dünyanın en hızlı gelişen sektörlerinden biri halini almıştır. Öyle ki, dünya turizmi 1980–90 döneminde %60, 1990–2000 döneminde %52 artış göstermiştir. 1980 yılında 280 milyon olan turist sayısı 2000 yılında 698 milyona ulaşmıştır. Bu rakam 2007 yılında 903 milyona, 2008 yılında 922 milyona ulaşmış, 2009 yılında 880 milyona gerilemiştir. 2010 yılında turizme katılanların sayısı 940 milyon iken, 2011 yılında turizme katılanların sayısı 983 milyona ulaşmıştır (UNWTO, 2012). Rakamlardan da anlaşılacağı üzere turizm sektörü büyük bir hızla büyümekle birlikte bazı dönemlerde gerek terör sebebiyle gerekse ekonomik konjonktür sebebiyle küçük düşüşler yaşasa da genel olarak büyüme trendini devam ettirmiştir. Bunun bir göstergesi olarak Dünya Turizm Örgütü 2020 yılında 1600 milyon turistin turizm aktivitelerine katılacağını ve bunu ekonomik sonucunun 2 trilyon dolar olacağını tahmin etmektedir. Bu açıdan bakıldığında yeni gelişmelere sahne olacağı beklenen turizm sektörünün önümüzdeki dönemde de en hızlı büyüyen sektörlerden biri olacağı beklenmektedir.

Dünya genelinde turizm hareketliliklerine bakıldığında, Avrupa destinasyonu uluslararası turizm hareketliliklerinin en yoğun yaşandığı destinasyon konumundadır. Avrupa destinasyonu dünya turizm hareketliliği içerisinde 1990 yılında %58'lik bir pay alırken 2011 yılında bu oran yıllar itibariye azalarak %53'e düşmüş olmasına rağmen en yüksek hareketliliğin yaşandığı bölge konumundadır. Tablo 1'de uluslar arası turizm hareketliliklerinin Dünya genelinde bölgeler itibariyle dağılımı gösterilmektedir.

Bölgeler	Turist Sayısı (Milyon Kişi)						
	1990	1995	2000	2005	2009	2010	2011
Avrupa	250.80	303.50	388.80	449.20	476.80	492.90	516.60
Asya Pasifik	58.70	86.10	113.90	152.70	179.50	204.40	215.30
Amerika	99.30	108.50	130.80	136.50	146.90	155.80	162.00
Orta Doğu	8.20	9.30	14.00	22.60	32.60	35.80	36.00
Afrika	9.80	11.50	14.90	19.30	25.60	28.00	29.30
Diğer	7.80	8.60	11.20	18.40	21.60	23.00	24.00
Toplam (Dünya)	434.60	527.50	673.60	798.70	883.00	939.90	983.20
Akdeniz Bölgesi	152.16	172.08	232.27	238.80	246.06	256.80	274.21
Dünya Turizm Hareketleri İçinde Akdeniz Bölgesinin Payı(%)	35,01	32,62	34,48	29,90	27,87	27,32	27,89
Avrupa Destinasyonu İçerisinde Akdeniz Bölgesinin Payı (%)	60,67	56,70	59,74	53,16	51,61	52,10	53,08

Tablo 1: *Uluslararası Turizm Hareketlerinin Dünya Genelinde Bölgesel Dağılımı* **Kaynak:** *UNWTO, Tourism Highlights, 2012.*

Avrupa bölgesinde yer alan ve dünya turizminden büyük pay alan ülkelerin de bulunduğu Akdeniz bölgesi içerisinde gerek turizm hareketleri açısından en fazla yoğunlaşma gerekse de turizmden en fazla gelir elde eden ülkeler, Fransa, İspanya, İtalya, Türkiye ve Yunanistan'dır. Tablo 2'de Akdeniz bölgesi içerisinde en fazla turizm yoğunlaşmasının yaşandığı ilk beş ülkeye ilişkin turizm hareketliliklerine ve turizm gelirlerine ilişkin veriler gösterilmektedir.

Akdeniz bölgesi içerisinde turizmden en büyük payı alan kuzeybatı Akdeniz bölgesi (%66.66) içerisinde, Dünya'da birinci sırada gelen Fransa'nın 2011 verilerine göre 79.50 milyon turist sayısı ile istikrarlı şekilde birinciliğini sürdürdüğü görülmektedir. Dünya turizminde de ikinci sırada yer alan İspanya'nın 2011 yılı turist sayısı ise 56.69 milyondur. Dünya üçüncüsü İtalya ise 2011 yılında 46.11 milyon turisti ağırlamıştır. Kuzeydoğu Akdeniz bölgesi içerisinde iki güçlü rakip, Türkiye ve Yunanistan bulunmaktadır. 2000 yılı itibariyle Türkiye turist sayısında yıllık ortalama %16,2'lik bir artışla ve 2005 yılında 20,27 milyon turist sayısıyla bu bölgede birinci sırada yer almıştır. 2011 yılı itibari ile Kuzeydoğu Akdeniz bölgesine gelen 55.68 milyon turistin 29.34 milyonunun Türkiye'yi tercih ettiği görülmektedir. Yıllar içindeki turist sayısı artışları incelendiğinde 2005 yılından sonra da artış oranın en yüksek olduğu ülke Türkiye'dir. Kuzeydoğu Akdeniz bölgesinin Akdeniz havzası içindeki turist payı 1990 yılında %10 iken 2011 yılında bu pay %20'lere ulaşmıştır.

Akdeniz bölgesi içerisinde yer alan ülkelerden dünya turizm gelirlerinden en büyük payı alan ülkelerin başında gelen ülkelerin başında Fransa ve İspanya gelmektedir. 2011 yılı verilerine göre İspanya dünya turizm gelirlerinden 67.5 milyar dolarlık bir pay alarak Akdeniz bölgesi ülkeleri arasında ilk sırada yer almaktadır. İspanya'yı sırasıyla 65 milyar dolar ile Fransa ve 45 milyar dolar ile İtalya takip ederken 28 milyar dolar turizm geliriyle Türkiye takip etmektedir. Akdeniz bölgesi ülkelerinin turizm gelirlerinde 2000 yılına göre en yüksek artış Türkiye'de gerçekleşmiştir. Nitekim, Türkiye'nin 2000 yılında 7.6 milyar dolar olan Turizm gelirleri geçen

11 yıllık sürede %207 oranında artarak 28 milyar dolara ulaşmıştır. Turizm gelirlerinde ikinci en yüksek artış %106 oranıyla İspanya'da gerçekleşmiş olup bu ülkeleri sırasıyla Fransa (%69), Yunanistan ve İtalya (%58) takip etmektedir.

Bu çalışmada, Akdeniz bölgesinde yer alan ve dünya turizm hareketliliği içinde önemli bir yere sahip olan Fransa, İspanya, İtalya, Türkiye ve Yunanistan'ın turizm gelirlerinin GSMH'leri üzerinde etkisinin olup olmadığı 1995-2011 dönemine ait yıllık panel veriler ile araştırılmaktadır. Bu amaç doğrultusunda, çalışmanın birinci bölümünde söz konusu ülkeler ait sayısal veriler verilmekte, bu ülkelerin dünya ve bölge turizmi içerisindeki yeri ve önemi incelenmektedir. Böylece çalışmada kullanılan örneklemin önemi ortaya konulmaktadır. Uygulamanın yapıldığı çalışmanın ikinci bölümünde, çalışmada kullanılan veriler ve yöntem tanıtılmakta, uygulama sonucunda ulaşılan bulgular sunulmaktadır. Çalışma, genel bir değerlendirmenin yapıldığı sonuç bölümüyle sona ermektedir.

Ülkeler	Turist Sayısı (Milyon Kişi)				Ülkeler	Turizm Gelirleri (Milyar $)			
	2000	2005	2010	2011		2000	2005	2010	2011
Fransa	77.19	76	77.14	79.50	Fransa	38.53	51.69	56.28	65.17
İspanya	47.89	55.55	52.67	56.69	İspanya	32.66	53.07	59.04	67.54
İtalya	41.18	36.51	43.62	46.11	İtalya	28.71	38.37	40.06	45.37
Türkiye	9.58	20.27	27.00	29.34	Türkiye	7.64	19.72	24.78	28.06
Yunanistan	13.09	14.27	15.00	16.42	Yunanistan	9.26	13.45	12.58	14.98
İlk Beş Toplam	188.93	202.6	215.43	228.06	Toplam	116.79	176.31	192.75	221.12
Akdeniz Bölgesi Toplamı	232.27	238.80	256.80	274.21					
İlk Beş Payı	81.34%	84.84%	83.89%	83.17%					

Tablo 2: Akdeniz Bölgesi İçerisinde Yer Alan İlk Beş Ülkenin Turizm Hareketlerinin ve Turizm Gelirlerinin Dağılımı Kaynak: UNWTO, Tourism Highlights, 2012.

2   Panel Veri Seti ve Birim Kök Testleri

Çalışmada, 1995-2011 dönemi kapsayan, Fransa, İspanya, İtalya, Türkiye ve Yunanistan'a ait GSMH ile turizm geliri verileri kullanılmıştır. Veriler Dünya Bankası'nın "World Development Indicators " (WDI) veri tabanından alınmıştır. GSMH ve turizm gelirlerinin logaritmaları alınarak analizleri yapılmıştır.

Panel veri analizlerinde kullanılan değişkenlerin durağan olması gerekmektedir. Durağanlık bir serinin ortalamasının, varyansının ve iki dönem arasındaki ortak varyansının zaman içerisinde sabit kalması durumunu ifade etmektedir (Gujarati, 2009).

	GDP		TOUR	
	Sabitli	Sabitli ve Trendli	Sabitli	Sabitli ve Trendli

Tablo 3: Birinci Nesil Birim Kök Testleri Sonuçları   Not: a, b ve c sırasıyla % 1, % 5 ve % 10 önem düzeylerini göstermektedir. Optimal gecikme uzunluğu için SIC dikkate alınmıştır.

Uygulamada, panel verilerin durağan olup olmadıklarının tespit edilmesine yönelik olarak geliştirilen I. ve II. nesil panel birim kök testleri kullanılmıştır. I. nesil panel birim kök testleri birimler arasında korelasyonun (yatay kesit bağımlılığın) olmadığı varsayımına ve/veya temel hipotez (H0 = yatay kesit bağımlılık yoktur)'ine dayanmaktadır. I. nesil birim kök testleri içerisinde yer alan Levin-Lin&Chu, Breitung, Im-Pesaran&Shin, Fisher ADF, Fisher PP ve Hadri testleri sıkça kullanılan testlerdendir (Tatoğlu, 2012).

Yapılan birinci nesil birim kök testleri sonucunda, değişkenlerin bazılarının seviyede bazılarının ise birinci farkta [I(1)] durağan hale geldikleri tespit edilmiştir. Ele alınan değişkenlerin farklı seviyelerde durağan olmaları, yatay kesit bağımlılık probleminin olup olmadığı sorusunu akla getirmiştir. Çünkü birinci nesil birim kök testleri birimler arasında korelasyon olmadığı varsayımı altında yapılmaktadır. Bu nedenle birimler arası korelasyonun varlığı/yokluğu, yatay kesit bağımlılığı araştıran Breush- Pagan (B-P), Pesaran (CDLM), Friedman (FR), Frees (FRS) testleri ile araştırılmıştır (Tatoğlu, 2012, s.215-220). B-P, CDLM, FR ve FRS testleri sonucunda H0 hipotezi reddedilirse, birimler arasında yatay kesit bağımlılığın var olduğu kabul edilecektir.

Modeller	İstatistik	Olasılık
Breush- Pagan (1980)	101.415 [a]	0.0000
Friedman (1937)	33.735 [a]	0.0000
Frees (1995)	2.344 [a]	alpha = 0.10 : 0.1521 alpha = 0.05 : 0.1996 alpha = 0.01 : 0.2928
Pesaran (2004)	3.798[a]	0.0000

Tablo 4: Birimlerarası Korelasyon Testi   Not: a, b ve c sırasıyla % 1, % 5 ve % 10 önem düzeylerini göstermektedir. Optimal gecikme uzunluğu için SIC dikkate alınmıştır.

Tablo 4'te görüldüğü gibi CDLM, FR ,FRS ve BP testleri sonucunda, birimler arasında yatay kesit bağımlılığın olmadığını ileri süren H0 hipotezi % 1 önem düzeyinde reddedilmiştir. Bu nedenle çalışmada kullanılan değişkenlere, yatay kesit bağımlılığı dikkate alan ve II. nesil birim kök testleri olarak adlandırılan tahminciler içerisinde yer alan Pesaran'ın CADF-CIPS birim kök testi uygulanmıştır. CADF-CIPS testi, standart ADF birim kök testinin bireysel serilerin birinci farkları ve gecikme seviyelerinin yatay kesit ortalamalarıyla genişletilmiş şeklidir (Pesaran, 2007).

Değişkenler	CADF-CIPS Birim Kök Testi	
	Sabitli	Sabitli/Trendli
GDP	-2.713[a]	-4.421 [a]
TOUR	-2.35 [a]	-3.185 [a]

Tablo 5: İkinci Nesil Birim Kök Testi Sonuçları   Not: a, b ve c sırasıyla % 1, % 5 ve % 10 önem düzeylerini göstermektedir. Optimal gecikme uzunluğu için SIC dikkate alınmıştır.Kritik değerler Pesaran'ın (2007) makalesindeki Tablo C'den temin edilmiştir.

Tablo 5'te görüldüğü gibi CADF Testi sonucunda elde edilen CIPS istatistiklerine göre, çalışmada ele alınan tüm değişkenlerin seviyeleri ile [1(0)] durağan hale geldikleri, yani birim kök içermedikleri tespit edilmiştir.

2.1 Panel Eş Bütünleşme Testleri

Çalışmanın bu kısmında GSMH ile turizm gelirleri arasında bir eşbütünleşmenin olup olmadığı sınanmaktadır. Bu bağlamda, Pedroni, Kao, Johansen-Fisher ve Westerlund eşbütünleşme testleri panel veri setine uygulanacaktır.

Pedroni (1999) "seriler arasında eşbütünleşme yoktur" şeklinde dördü panel ve üçü grup test istatistiği olmak üzere yedi adet panel eşbütünleşme testi önermiştir. Kao (1999), "birimlerde eşbütünleşme vardır" şeklindeki hipotezi sınamak için kalıntı temelli test önermiştir (Baltagi, ve diğ., 2000; Baltagi, 2005). Johansen-Fisher panel eşbütünleşme testi Johansen ve Juselius eş bütünleşme testinin panel verilere uygulanmasıdır. Westerlund (2007), hata düzeltme temelli dört adet panel eşbütünleşme testi önermiştir. Pedroni, Kao ve Johansen-Fisher eş bütünleşme testleri birimler arası korelasyonun olmadığı varsayımında yapılırken, Westerlund eş bütünleşme testi birimler arası korelasyon olması durumunda etkin sonuçlar verebilmektedir. Yapılan Pedroni, Kao, Johansen-Fisher ve Westerlund eşbütünleşme testleri Sonuçları Tablo 6'da yer verilmiştir.

Pedroni eşbütünleşme sonucuna göre panel ADF ve grup ADF test istatistikleri istatistiki olarak anlamlıdır. Bu testlerin anlamlı çıkması panel verilerinde eşbütünleşmenin var olduğu göstermektedir. Kao eş bütünleşme testi sonucuna göre ise ADF test istatistiği %1 de anlamlıdır, yani eş bütünleşme vardır. Johansen-Fisher eş bütünleşme testi, en az bir adet eş bütünleşmenin bulunduğunu ifade etmektedir. Westerlund eş bütünleşme testine ise ürettiği dört istatistikten üçünün anlamlı sonuçları vermesi, yine eş bütünleşmenin var olduğu ifade etmektedir.

Pedroni, Kao, Johansen-Fisher ve Westerlund eşbütünleşme testleri sonucunda, GSMH ile turizm gelirlerinin panel verilerinin eşbütünleşik olduğu sonucuna ulaşılmıştır. Modeldeki eşbütünleşme varlığını kabul ettikten sonra, uzun dönem eşbütünleşme katsayısı tespit edilmiştir.

GSMH'nin bağımlı, turizm gelirlerinin bağımsız değişken olduğu modelde uzun dönem etkisinin tahmin edilmesi amacıyla dinamik en küçük kareler yöntemi kullanılacaktır. Modeli tahmin ederken, PMGE (Pooled Mean Group Estimation) veya MGE (Mean Group Estimation) tahmincilerinin tutarlılığını test etmek için Hausman testi uygulanmış (Paseran ve diğ., 2004), PMGE'nin yapılmasına karar verilmiştir. Yapılan PMGE'nin sonuçları Tablo 7' de sunulmuştur.

Pedroni	İstatistik	Kao İstatistik	Johansen-Fisher İstatistik		Westerlund İstatistik	
Panel v	-0.429162		None	**Fisher istatistiği** trace test 47.02[a]	Gt	-8.021[a]

Tablo 7: *PMGE Sonuçları*

Yapılan PMGE tahmincisinin sonucuna göre, hata düzeltme parametresi (-0.50) negatif ve anlamlıdır. İki değişken arasında uzun dönemli bir ilişki mevcuttur. Buna göre, bir dönemde (yani bir yılda) oluşan dengesizliklerin yaklaşık %50'i, bir sonraki dönemde düzelecek ve uzun dönem dengesine yaklaşması sağlanacaktır. Ayrıca, turizm gelirlerinin uzun dönem parametresi (1.4) anlamlı ve pozitif işaretli, fakat kısa dönem parametresi (0.01) pozitif ve anlamsızdır. Uzun dönemde turizm gelirlerinde meydana gelecek %1 bir artış, GSMH'i %1.1 oranında artıracaktır.

3   Sonuç

Turizm, cari işlemler hesabındaki uluslararası hizmetler kısmında yer almakta olup ülkeler için önemli bir gelir kalemi niteliğindedir. Turizm bu özelliği sayesinde, milli gelir artışına ve ülkelerin kalkınmasına katkı sağlamaktadır. Önemli bir gelir kaynağı olarak kabul edilen turizm ülkelere sağladığı döviz gelirleri ile ülkelerin dış ve bütçe açıklarının finansmanına yaptığı katkı bakımımdan büyük öneme sahiptir. Turizmin ülke ekonomilere yapmış olduğu bu katkılardan dolayı turizm ile ekonomik büyüme arasındaki ilişki, literatürde son dönemlerde dikkat alınan ve üzerine birçok araştırma yapılan önemli bir konu haline gelmiştir. Bu çalışmanın ana amacı, dünya ve bölge turizm içerisinde önemli yere sahip olan beş büyük Akdeniz ülkesin turizm gelirlerinin GSMH'lerine olan etkilerini araştırmaktır. Çalışmada panel verilerinin eşbütünleşik bulunması sonucunda elde edilen uzun dönem katsayılarına göre, bir yıl içerisinde oluşan dengesizliklerin %50'sinin, bir sonraki dönemde düzeleceğini ifade etmektedir. Elde edilen bu sonuca göre, mevcut turizm gelirlerinde bir süreklilik olduğunu, her ne kadar da olsa her şey etkilenen turizm sektörünün bir yıl gibi kısa bir ortaya çıkabilecek olumsuzlukları bir sonraki yıl ortadan kaldırabilecek potansiyele sahip olduğunu göstermektedir. Ayrıca, turizm gelirlerindeki artışın uzun dönemde GSMH'i üzerinde pozitif etki yapması, iktisat teorisi bakımında beklentiler yönündedir.

Geçiş Ekonomilerinde Girişimciliğin Ekonomik Büyüme Üzerine Etkileri

Effects of Entrepreneurship on Economic Growth in Transition Economies

Assoc. Prof. Dr. Mine Gerni (Marmara University, Turkey)

Ph.D. Candidate Ziya Çağlar Yurttançıkmaz (Atatürk University, Turkey)

Abstract

The emphasis on entrepreneurship with the importance for economic growth and development is increasing day by day. This situation is particularly feeding the level of development, but also providing to have high level of economic, social, technological and cultural infrastructure in developed countries. In other words, this is particularly the level of sophistication feeding, but also in developed countries, economic, technological, social and cultural infrastructures are also leading to a high level of entrepreneurship. In other words, more entrepreneurial individuals grow in the country which has economic and social conditions in relevant level and this increase the importance of determination on the performance of economic growth. In this study, until the 1990s, private enterprise was almost zero in 1991 to the former socialist countries with the transition process relations of production and consumption was abandoned from planned economy conditions to in the conditions of market economy. In this aspect, the factors affecting economic growth, entrepreneurship and employment variables are the level of savings. After econometric analysis, all independent variables are found significant and the impacts of those variables on economic growth are examined positive. This showed that entrepreneurship took a place as an important factor on growth performance of countries in development such as labour and capital.

1 Giriş

Küreselleşen bir dünyada işletmelerin yaşamlarını sürdürebilmeleri, hızla değişen teknolojiye ve rekabet koşullarına uyum gösterebilmelerine bağlıdır. Dolayısıyla bu değişime ayak uyduramayanların yaşamlarını sürdürebilme şansı bulunmamaktadır. İşletmenin söz konusu değişime ayak uydurabilmesi ise yönetici ve işletme sahibi konumunda bulunan girişimci ile ilgilidir. İşletmenin başında bulunana girişimcinin başarıya ulaşmak için mücadeleci olması, riskli durumlarla karşı karşıya kaldığında riski-getiri oranını iyi tahlil etmesi ve piyasalardaki belirsizlik durumlarında işletmeyi en iyi şekilde yönlendirmesi büyük önem arz eder. Diğer taraftan Schumpeteryen bakış açısıyla girişimcinin yeni ürünler oluşturma, yeni teknolojiler kullanma ve yeni pazarlara girme konusunda istekli ve yetenekli olmasının yanı sıra kendine güvenmesi onda bulunması gereken temel özelliklerdendir.

Girişimcilik ve ekonomik büyüme arasındaki ilişkide girişimcilik istihdam ve refah artışı oluşturarak ekonomik gelişmeyi hızlandırmaktadır. Burada girişimcilik ekonomide yeniliklerin artması olanak sağlayarak ekonomik büyümeyi, verimliliği ve iş olanaklarını artırmaktadır. Bu çerçevede Romer (1986) ve Lucas (1988) bilginin yayılmasının önemine içsel büyüme modellerinde özellikle vurgu yaparlarken; yayılma etkilerini sağlayan unsur olarak girişimciyi görürler. Audretsch ve Thurik (2004) ile Carree ve Thurik (2005) ise girişimciliğin ekonomik büyümeyi bilgi yayılımı, artan rekabet ve çeşitliliğin artması yoluyla etkilediğini belirtmişlerdir. Girişimciliğin çeşitli ve gelişmiş kanallar aracılığı ile firmalar arası bilgi yayılmasına artırdığı ve bunun da ekonomik büyümeyi olumlu etkilediği belirtilmiştir. Bir kişi veya ekonomik birim tarafından sahip olunan bilginin ticarileştirilerek ekonomik büyümeyi desteklemesi ise ancak girişimci vasıtasıyla olmaktadır. Yeni firmaların kurulması ve girişimciliğin desteklenmesi dışsallıklar oluşturarak bilginin gelişimine katkı sağlar. Ayrıca bilgi dışsallığının da yerel monopoller yerine daha rekabetçi bir çevre oluşturduğu gözlenmiştir. Glaeser vd. (1992) ile Feldman ve Audretsch (1999) da yerel rekabetin yenilikçi çalışmaları ve ekonomik büyümeyi teşvik ettiğine vurgu yapmıştır (Henderson, 2006: 2-6).

Ekonomik gelişmişlik düzeyinin hem sonucu hem de nedeni olan girişimcilik unsuru her şeyin devlet eliyle yürütüldüğü planlı ekonomilerde adeta törpülenmiş vaziyettedir. Çalışmada yaklaşık 3 çeyrek asır sosyalist planlamacılık ile yönetilen ve dolayısıyla girişim unsurunun doğal olarak güdük-bodur bırakıldığı eski demir perde ülkelerinde 1990'ların başında ortaya çıkan geçiş sürecinin atlatılabilirliğinde girişim faktörü en önemli unsur haline gelmiştir. Bu çerçevede eski doğu bloğu ülkelerinde girişim unsurunun yeteri düzeyde oluşup oluşmadığı ve oluştuysa bunun ekonomik büyüme üzerine etkiler yaratıp yaratmadığı araştırmaya değer kabul edilebilir.

2 Girişimcilik ve Ekonomik Büyüme İlişkileri

Girişimciliğin tanımı ilk kez 18. yüzyılın başlarında Fransa'da Richard Cantillon tarafından yapılmıştır. Bu tanıma göre girişimci, henüz belirginleşmemiş bir bedelle satmak üzere üretim girdilerini ve hizmetlerini satın alan ve bunlardan hareketle katma değer yaratarak üretimde bulunan kişidir. Satış fiyatının belirsizliği de girişimcilerin risk üstlenme özelliğini vurgulamaktadır. Jean Baptise Say ise girişimciliği ve girişimcide olması gereken özellikleri geliştirerek onun temel özelliği olan risk üstlenmenin yanı sıra üretim girdilerini örgütleme ve yönetme niteliğine vurgu yapmıştır. Cantillon ve Say'a ilaveten girişimcinin yenilikçi ve dinamik olma özelliği ise Joseph A. Schumpeter tarafından ele alınmıştır. Schumpeter'in çalışmalarında girişimcilik, yenilik yaratma ve teknolojik buluşlar ile açıklanmaya çalışılmış ve yeni ürünler, yeni süreçler ve yeni pazarlar yaratmak için yeni kaynakların oluşturulması gibi konulara ağırlık vermiştir. Schumpeter'in bakış açısında girişimci, toplumda değişimi yaratacak kişi ve kurumlar olarak tanımlanmaktadır (Odabaşı, 2005: 4). Diğer taraftan Wennekers ve Thurik (1999), girişimciyi ekonomideki yeni fırsatların farkına varabilen ve piyasaya yeni fikirler sunan kişiler olarak ele alır iken, Lundström ve Stevenson ise (2005) girişimciyi kendi işlerini yönetmenin, kurmanın ve geliştirmenin farklı safhalarında olan birey olarak tanımlamaktadır. Bu çerçevede girişimcileri de "potansiyel girişimci", "kendi nam ve hesabına yalnız çalışan girişimci", "mikro girişimci", "yaşam-tarzı girişimciliği", "teknoloji odaklı girişimci", "yüksek büyüme hızlı girişimci" ve "yenilikçi girişimciler" olarak sınıflandırmaktadırlar (Aslan, 2009: 16-17).

Gelişen şartlara bağlı olarak girişimcilik algısı ve buna bağlı tanımlamaları evrim süreci geçirirken; aynı zamanda tam bir konsensüs ile iktisadi gelişme-büyümenin temelinde girişimciliğin olduğu genel kabul görmektedir. Çünkü artan rekabet ortamında farklılıklar yaratabilmek ancak girişimcilik düzeyine bağlıdır. Bu nedenle girişimde bulunma ve yenilik oluşturma (yeni ürün veya teknoloji geliştirme) ekonomik dinamizmin temellerini oluşturmaktadır. Oluşturulan yenilikler ekonomik büyümeyi ve verimliliği artırarak istihdam üzerinde de olumlu etkiler meydana getirmektedir. Girişimciliğin önemi, özellikle sanayi toplumundan bilgi toplumuna geçiş ile birlikte oldukça fazla artmıştır. Dünya ekonomisinin %65'ini temsil eden G-7 ülkelerinde (Kanada, Fransa, Almanya, İtalya, Japonya, İngiltere ve Amerika) girişimcilik düzeyi ve yıllık ekonomik büyüme arasında güçlü bir ilişki olduğu yapılan araştırma sonuçlarında somut bir şekilde ortaya konulmuştur (Salvatore, 2005: 63). Bu olguya küresel açıdan bakıldığında, girişimciler tarafından gerçekleştirilen yenilik faaliyetleri ve artan rekabetin bir ülkenin ekonomik büyümesi açısından son derece önem teşkil ettiği bilinmektedir (Keleş vd., 2012: 108; Wennekers ve Thurik, 1999: 42).

Girişimciliğin ekonomideki yeri konusunda ise 1970'lerden itibaren bir değişim meydana gelmiştir. Algıdaki değişime paralel olarak 1970'li yıllardan sonra kendi işine sahip olanların oranlarında bir yükseliş trendi ortaya çıkmıştır (Acs ve Audretsch, 1993; OECD, 1998). Bu değişim başlayana kadar firma ölçeğinin büyüklüğü gerek diğer firmalarla rekabet edebilme açısından, gerekse küresel çapta faaliyet gösterme avantajı nedeniyle önemli bir konuma sahipti. Ancak, 1970'lerden sonra büyük işletmeler, yürüttükleri faaliyetleri büyük çapta ve kendilerinin üretimleri ile sınırlı tutma durumundan vazgeçerek, tedarikçi firmalar ile çalışmaya başlamışlardır. Ortaya çıkan bu durumun yansımaları ise hem çok sayıda küçük girişimcinin kendi firmalarıyla piyasaya girerek gelişmesine hem de büyük firmalara maliyetlerini düşürmesine olanak sağlamıştır. Oluşan yeni düzende büyük firmalar üretilen ürünün ana üreticisi olmakla birlikte, küçük ve orta boy işletmelerden mal ve hizmet tedarik ederek üretimde uzmanlaşmaya gitmişler ve kendi üretim süreçlerinde önemli bir yer tutmayan, ancak üretilmesi gerekli malların üretimini küçük işletmelere vererek kaynak israfını önleme imkanına sahip oldular. Bu çerçevede Carlsson, Amerika'nın en büyük firmalarının küçülmeye başladığını ve 1970'li yıllarda %20 olan istihdam oranlarının 1996'da %8.5'e düştüğünü vurgulamaktadır. Günümüzde yapılan araştırmalara göre, küçük firmalar büyük firmalara nispetle daha girişimci konumundadırlar (Parker, 2006). Küçük firma olmanın en önemli avantajı ise tüm sektörlerde piyasaya daha fazla ve esnek biçimde giriş-çıkış yapabilmeleri ve daha hızlı büyüme eğilimi gösterebilmeleridir. Dolayısıyla küçük firmaların esnek bir yapıya sahip olmaları ve böylece değişen ekonomik ortama hızlı bir şekilde uyum sağlayabilmeleri, küçük firmaları daha kârlı hale getirmekte ve böylece küçük firmaların kurulmasıyla gerçekleşen girişimcilik değer kazanmaktadır (Aslan, 2009: 20).

Girişimciliğin giderek mikro perspektif kazanması ve esnek yapıya bürünmsinin ülkelerin veya bölgelerin ekonomileri üzerinde büyük etkisi bulunmaktadır. Ekonomik büyüme ve endüstrideki yapısal değişim arasındaki ilişkinin varlığı, Schumpeter'e kadar gitmektedir ve geleneksel Schumpeteryen görüş açısından bakıldığında ekonomik büyüme düzeyi, endüstrinin kıt kaynaklarını en etkili biçimde kullanmasıyla meydana gelmektedir (Carre ve Thurik, 2003: 437-471). Dolayısıyla endüstri yapısındaki değişiklikler aynı zamanda ekonomik büyüme oranlarına etki etmektedir. Endüstri yapısının belirleyicileri ise, teknolojik değişiklikler, küreselleşme, deregülasyon, emek piyasasındaki artışlar ve talepteki çeşitlilikler gibi unsurlardan oluşturmaktadır. Diğer bir ifadeyle endüstri yapısındaki değişikliği sağlayan en önemli unsur küçük firmalardır. Küçük firmaların sayısı arttıkça (yani girişimcilik arttıkça), endüstrinin yapısında da gelişme söz konusu olmaktadır (Aslan, 2009: 21).

Diğer taraftan girişimci ve girişimcilik de içinde bulunduğu çevreden büyük ölçüde etkilenmektedir. Literatürde girişimciliğin altyapısı beş temel kategoride incelenir. Bunlar; (i) insan kaynağı, (ii) finansman, (iii) yasal düzenlemeler, (iv) sosyal, kültürel ve politik altyapı ve (v) girişimciliği teşvik ve desteklerdir. Bu

çerçevede GEM (2001) raporu insan kaynağının önemi konusunda şu değerlendirmeleri yapmaktadır. 29 ülkede yapılan çalışmalarda 25-34 yaş arası grup girişimciliğin en yüksek olduğu yaş aralığıdır. Toplumun demografik yapısı, istihdam yapısı ve eğitim düzeyi girişimcilik performansı üzerinde etkilidir. Eğitim düzeyinin artması sadece girişimciliği altyapısını desteklemekle kalmaz, aynı zamanda girişimcilerin bilgi ve becerilerini artırarak yeni iş ortaklıkların kurulmasına yardımcı olur (TÜSİAD, 2002). Ayrıca GEM (2001) raporu finansal destek ile girişimcilik düzeyi arasında doğrusal bir ilişki olduğunu göstermektedir. Girişimciler ihtiyaç duydukları finansal desteği ailelerinden, bankalardan, hükümetten veya finansal piyasalardan karşılamaktadırlar. Geleneksel finans kaynaklarının dışında risk sermayesi firmaları, özellikle ABD'deki girişimciler için oldukça büyük miktarlarda finansal kaynak sağlamaktadırlar. Çok sayıda çalışmada ABD'deki hızlı teknoloji ve girişimcilik alanındaki gelişmede risk sermayedarlarının önemini vurgulamaktadır (Çetindamar, 2002).

Girişimcilerin ilgilendikleri yasal konuların başında ise mülkiyet ve tescil, şirket hukuku, vergi ve çalışma hayatını düzenleyen konular gelmektedir. Girişimciler teknolojik devrim oluşturan ve büyük emek ve maddi çaba gerektiren icatlarının veya fikirlerinin mülkiyet haklarını tescil ettirerek koruma sağlamak isterler. Aksi halde kendileri ile rekabet eden rakipleri bu buluşları ve fikri hakları kopyalayarak haksız kazanç sağlayarak kendilerine üstün gelebilirler. GEM (2008) raporu girişimcilik sürecini, girişimcileri farklı kategorilere ayırarak oluşturmaktadır. Bu ayrıma göre girişimcilik süreci; (i) potansiyel girişimciler; yani bir iş kurma niyeti olan ve bunu gerçekleştirebilmek için gerekli bilgi ve yeteneklere sahip olan kişiler; (ii) başlangıç aşamasındaki girişimciler; yani bir işi kurabilmek için gerekli hazırlıkları yapan kişiler; (iii) yeni bir iş sahibi olanlar; yani en çok 3.5 yaşına kadar yeni bir iş yerine sahip olanlar ve (iv) 3.5 yıldan fazla bir süreden beri var olan bir iş yerinin sahibi olan kişilerin oluşturduğu birbirini takip eden dört ana gruba ayrılmaktadır. Girişimcilik düzeyi ise statik ve dinamik olmak üzere çeşitli göstergelere bakılarak ölçülebilmektedir. OECD, GEM ve IMD World Competitiveness Yearbook girişimciliğin tespiti ve ülkelere ait seriler oluşturulmasında önemli çalışmaları olan kuruluşlardır. Bunların yanı sıra serbest çalışma (self-employment) ya da iş sahipliği (business ownership) oranları (EIM/ENSR, 1997) girişimcilik düzeyini gösteren önemli statik göstergelerdir. Dolayısıyla ülkedeki küçük ve orta ölçekli işletmelerin (KOBİ) sayısı girişimcilik düzeyini yansıtmaktadır. Bir dinamik gösterge ise kurulma aşamasındaki girişimcilik faaliyetleri (nascent entrepreneurship) ve yeni iş yeri kurmuşlar arasındaki faaliyetlerdir (start-up activity). Ayrıca dinamik gösterge olarak ekonomide meydana gelen firma giriş ve çıkışlar oranlarının toplamı da dinamik bir gösterge olarak ele alınmaktadır (Wennekers ve Thurik, 1999).

3 Literatür Özeti

Ekonomik büyümenin sağlanmasında fiziksel sermayenin yanı sıra girişimciliğin önemi 1990'lı yıllarda giderek önem kazanmaya başlamıştır. Büyük firmaların üretim süreçlerini ayrıştırması, giderek artan sayıda küçük ve etkili girişimci firmanın oluşmasına yol açmıştır. OECD (2001) raporlarına göre 1980'lerde ABD, Japonya'ya göre daha fazla girişimcilik oranları sergilemektedir. 1990'lara gelindiğinde ise ABD, Japonya'dan daha yüksek ekonomik performans göstermektedir. Ancak, ABD 1980'lerde bu performansı gösterememektedir. Bu durum artan girişimcilik düzeyinin gecikmeli bir şekilde de olsa ekonomik büyüme performansını olumlu olarak etkilediğini göstermektedir (Aslan, 2009: 21).

Nickell (1996) ile Nickell vd. (1997) piyasa etkinliğinin bir ölçüsü olarak piyasadaki rakip firma sayısını almışlardır. Buna göre piyasadaki rakip firma sayısının artması yeni bir ürün oluşturma ve piyasaya yeni firmaların girmesini sağlayarak girişimciliği ölçmede etkilidir. 600 İngiliz imalat sanayi firmasından sağlanan 1972-1986 ve 1982-1994 dönemlerini kapsayan verilerle yapılan çalışmada rekabetin artmasının toplam faktör verimliliğini olumlu bir şekilde etkilediği belirtilmiştir. Caree ve Thurik (1998) küçük firmaların piyasa payındaki değişimin endüstri toplam çıktısı üzerindeki payını nasıl değiştirdiğini araştırmışlardır. 13 Avrupa ülkesindeki 14 imalat sanayi endüstrisi için yapmış oldukları çalışma sonuçlarına göre küçük firmaların payının yüksek olduğu endüstrilerde çıktı artışı daha yüksek düzeyli gerçekleşmiştir. Ağca vd. (2008) yaptıkları çalışmada IMD 2003-2006 dönemi verilerini kullanarak 51 ülke için analiz etmişlerdir. Elde edilen sonuçlara göre ülkelerin girişimcilik performansları ile ulusal ekonomi arasında pozitif yönlü bir ilişki olduğu tespit edilmiştir. Holtz-Eakin ve Kao (2003) girişimciliğin ekonomik büyüme üzerindeki etkisini analiz etmişlerdir. Büyüme ölçüsü olarak verimlilikteki değişimi aldıkları çalışmalarında firma kuruluş ve kapanış oranlarındaki değişimlerin pozitif olması durumunda verimliliğin de pozitif olarak etkilendiğini belirtmişlerdir. ABD için girişimciliğin verimlilik artışı üzerinde pozitif bir etkisi olduğu vurgulanmıştır. Acs ve Armington (2006) girişimciliğin ABD'nin ekonomik büyümesi üzerindeki etkisini 1990'lar için incelemişlerdir. Elde edilen sonuçlara göre yüksek girişimcilik aktivitelerinin bulunduğu bölgelerde yüksek ekonomik büyüme oranlarının yakalandığı gözlenmiştir. Audretsch (2007) ise bilginin yayılımı, taşmalar ve ticarileşmesi için girişimciliğin olmazsa olmaz bir olgu olduğunu belirtmiştir. Girişimciliğin bilgi sermayesi ile ekonomik büyüme arasında bir bağlantı noktası olduğunu vurgulayarak ekonomik büyümenin gerçekleşmesi için girişimcilik sermayesi ile yeni firmaların kuruluş ve büyümelerinin desteklenmesi gerektiğini belirtmiştir. Harhoff ve Stahl (1995) ise Almanya'da 11.000 imalat, inşaat, ticaret, finans ve hizmet firmasının verilerini kullanarak yapmış oldukları çalışmada piyasaya giriş sonrasında büyük firmaların ayakta kalma şanslarının daha yüksek olduğunu, ancak firmaların büyüme oranlarında ise küçük firmaların daha yüksek büyüme oranlarına sahip olduğu sonucuna

ulaşılmıştır. Genel olarak değerlendirildiğinde küçük ve genç işletmelerde büyüme oranlarının daha yüksek olduğu ve özellikle bilgi yoğun endüstrilerdeki küçük ve genç işletmelerde büyüme oranları oldukça yüksek olduğu sonucuna ulaşılmıştır. Küçük ve genç işletmelerin yüksek büyüme performansları ekonominin genel büyüme oranı üzerinde olumlu katkı yapmaktadır.

Acs vd. (2006) 18 ülke için 1981-1998 dönemi verilerini kullanarak girişimcilik ve ekonomik büyüme ilişkisini 2 aşamalı EKK ile araştırmışlardır. Çalışmada girişimcilik göstergesi olarak serbest meslek sahiplerinin oranı kullanılmıştır. Ülkenin bilgi stoku, işgücü, sermaye stoku ve kurumsal faktörlerin de analiz edildiği çalışmada yüksek girişimcilik düzeyine sahip ülkelerin daha iyi ekonomik büyüme performansı gösterdikleri tespit edilmiştir. Camp (2005) ise 1990-2000 dönemi için girişimcilik aktiviteleri ve ABD işgücü piyasalarındaki ekonomik büyümeyi analiz etmiştir. Çalışmada kullanılan girişimcilik endeksi, yeni kurulan firma sayısı ve yeni kurulan firmaların oranlarından oluşmaktadır. Yüksek girişimcilik endeks değerine sahip bölgelerde istihdam, ücret ve verimlilik düzeylerinin de yüksek olduğu sonucuna ulaşılmıştır. Audretsch ve Keilbach (2005) Almanya'nın batı bölgelerinden elde ettiği 1989-1992 dönemi girişimcilik sermayesi (yeni kurulan firma sayısı ile ölçülmüş) ile bölge büyüme oranı verilerini kullanarak yapmış olduğu çalışmada yüksek girişimcilik sermayesine sahip olan bölgelerde çıktı düzeylerinin ve işgücü verimliliğin de oldukça yüksek olduğu görülmüştür. Çalışmada ayrıca girişimcilik sermayesi ve ekonomik büyüme ilişkisinin şehir bölgelerinde daha yüksek düzeyli olduğu ve buna karşılık kırsal bölgelerde ise değişkenler arası ilişkinin zayıfladığı tespit edilmiştir.

Autio vd. (2005), Cobb-Douglas üretim fonksiyonunu temel alarak ve GEM 2002 veri seti ile yeni firma kurulumu ve teknolojik gelişmenin büyüme üzerindeki etkisini 37 ülke için yatay kesit veri analizi ile araştırmışlardır. Analiz sonuçlarına göre sadece yüksek büyüme potansiyeli olan girişimcilik alanlarının ekonomik büyüme üzerinde anlamlı bir etkisi olduğu sonucuna ulaşılmıştır. Van Stel vd. (2005) Gem monitorun girişimcilik göstergelerinden olan TEA (Toplam Erken Aşama Girişimcilik Faaliyeti) göstergelerini 36 ülke için kullanarak girişimciliğin GSYİH üzerindeki etkisini analiz etmişlerdir. Elde edilen sonuçlara göre girişimcilik düzeyi ekonomik büyüme üzerinde etkilidir. Ancak, bu etki kişi başına GSYİH'ye bağlıdır. TEA endeksi düşük GSYİH düzeyine sahip ülkelerde ekonomik büyümeyi negatif etkilerken, yüksek kişi başına GSYİH düzeyine sahip ülkelerde ekonomik büyümeyi pozitif etkilemektedir. Salgado-Banda (2007), 22 OCECD ülkesinde 1980-1995 dönemi için girişimcilik ile ekonomik büyüme arasındaki ilişkileri araştırmıştır. Çalışmada bağımlı değişken olarak kişi başına GSYİH, bağımsız değişken olarak ise serbest girişimcilik düzeyi göstergeleri olarak meslek sahipleri (kendi işine sahip olanların oranı) ve patent başvuruları ile başlangıç düzeyi kişi başına GSYİH değeri, ortaokullarda okullaşma oranı, dışa açıklık, kamunun ekonomideki payı ve enflasyon oranı değişkenlerini kullanmıştır. Elde edilen sonuçlara göre patent başvuruları ile ifade edilen verimli girişimcilik ile ekonomik büyüme arasında pozitif yönlü bir ilişki yakalanırken, serbest meslek sahipliği oranı ile gösterilen girişimcilik ve ekonomik büyüme arasında ise negatif yönlü bir ilişki tespit edilmiştir. Özet olarak literatürdeki çalışmalar değerlendirildiğinde, girişimcilik düzeylerinin yüksek olduğu ülke veya bölgelerde ekonomik büyüme oranlarında, verimlilikte ve istihdam oranlarında da yüksek oranlar yakalanmaktadır. Söz konusu durumun istisnası olduğunu gösteren çalışmalar olmakla birlikte girişimciliğin ekonomik büyüme üzerinde anlamlı ve pozitif yönlü bir etkisi olduğu sonucuna ulaşılabilir.

4　Uygulama Sonuçları

Orta Asya, Merkezi-Doğu Avrupa ve Kafkasya geçiş ekonomileri ile Türkiye için girişimcilik ve ekonomik büyüme ilişkilerinin araştırılmasına yönelik olarak yapılan bu çalışma her ülke için uygun veri setine ulaşılan yılları kapsamakta olup, bu da 2008-2011 arası dönemi içermektedir. Çalışmada her ülke için GSYİH'nın büyüme oranı (GDP), toplam tasarrufların GSYİH'ye oranı (SAV), 15 yaş üstü çalışan nüfusun toplam nüfusa oranı (EMP) ve girişimcilik göstergesi olarak 15-64 yaş arası çalışan her 1000 kişi başına düşen yeni açılan şirket sayısı (ENT) değişkenleri kullanılmaktadır. Çalışmada öncelikli olarak tanımlayıcı istatistikler ortaya konularak, daha sonra birim kök analizleri ve nedensellik testi uygulamalarına geçilmiştir. GSYİH'nın büyüme oranı bağımlı değişken olarak kabul edilmiş olup, diğer değişkenler bağımsız değişkenlerdir. Çalışmada kullanılan model şu şekilde oluşturulmuştur;

$GDP = b_0 + b_1 SAV + b_2 EMP + b_3 ENT$

Yukarıdaki model bağlamında uygun veri setine sahip 24 ülkeye (Arnavutluk, Azerbaycan, Beyaz Rusya, Bosna-Hersek, Bulgaristan, Hırvatistan, Çek Cumhuriyeti, Estonya, Gürcistan, Macaristan, Kazakistan, Kırgızistan, Letonya, Litvanya, Makedonya, Moldova, Polonya, Romanya, Rusya, Slovakya, Slovenya, Tacikistan, Türkiye ve Ukrayna)ait değişkenlerin tanımlayıcı istatistikleri Tablo 1'de verilmiştir.

Tanımlayıcı istatistikler incelendiğinde tüm değişkenlerde oldukça büyük farklılıklar olduğu görülmektedir. Jarque ve Bera sınaması için hipotezler; H_0: veriler normal dağılım gösterir, H_1: veriler normal dağılım göstermez. Herhangi bir serinin normal dağılıp dağılmadığının belirlenmesinde kullanılan Jarque-Bera testi, çarpıklık (Skewness) ve basıklık (Kurtosis) ölçülerine dayanan bir testtir. Sıfır hipotezi beklenen çarpıklığın 0 değerde ve beklenen basıklık fazlalığının 3 değerde olacağı sıfır hipotezidir; çünkü bir normal dağılım için bu

değerler gereklidir. Söz konusu duruma göre serilerin normal dağılmadığı görülmektedir. Ayrıca standart hatanın genel olarak yüksek olması da istenmeyen bir durumdur. Standart hata ne kadar küçükse örneklem istatistiği anakütle parametresine o derece yakın, parametre hakkında o kadar duyarlı bir kestirim olacaktır. Standart hata büyüdükçe, bu kestirimin duyarlılığı o derece duyarlı olmaktan çıkacaktır.

Panel veri analizlerinde yatay kesit 24 ülke boyutuna ilaveten 4 yıllık zaman serisi (2008-2011) boyutu söz konusudur. Bu nedenle özellikle zaman boyutunun olduğu verilerde düzmece-sahte regresyon sorunu ortaya çıkabilmektedir. Sahte regresyon sorunu ise yapılan tahminler anlamlı bile olsa, sonuçlarına ihtiyatla bakılmasını gerekli kılmaktadır. Sahte regresyon sorununun önüne geçebilmek amacıyla serilerin durağanlığının-birim kök içerip içermediğinin araştırılmasına gereksinim duyulmaktadır. Bu amaçla Levin-Lin ve Chu (LLC), Fisher ADF ve Fisher PP birinci nesil birim kök testleri olarak adlandırılan tahminciler kullanılarak değişkenlerin birim kök içerip içermediği araştırılmıştır. Çalışmada kullanılan değişkenlere ilişkin birinci nesil birim kök testleri Eviews 6 ekonometri programında hesaplanmış ve bu testlerden elde edilen sonuçları Tablo 2'de verilmiştir.

	GDP	SAV	EMP	ENT
Mean	2.552	20.858	51.483	2.997
Median	3.324	20.162	52.350	2.245
Maximum	21.245	52.374	67.700	11.180
Minimum	-17.954	2.003	33.500	0.270
Std. Dev.	6.072	7.772	7.369	2.519
Skewness	-0.933	1.278	-0.429	1.070
Kurtosis	5.109	6.705	3.162	3.399
Jarque-Bera	31.727	81.052	3.057	18.989
Probability	0.000	0.000	0.216	0.000

Tablo 1: Tanımlayıcı istatistikler

Değişkenler	Levin, Lin & Chu t*	ADF - Fisher Chi-square	PP - Fisher Chi-square
GDP (Sabitli)	-20.80(0.00)	66.69 (0.01)	65.71 (0.01)
SAV (Sabitli)	-10.56(0.00)	16.76 (0.03)	22.13 (0.00)
EMP (Sabitli)	-3.65 (0.00)	41.78 (0.39)	60.67 (0.02)
ENT (Sabitli)	15.12 (0.00)	16.78 (0.03)	24.41 (0.00)

Tablo 2: Birim Kök Testi Sonuçları

Tüm örneklem	Test Değeri (Ki-Kare(1))	df	Olasılık Değeri	Karar
F testi	71.770	(26, 66)	0.000	Zaman ya da birim etki var
F_b	17.961	(3,89)	0.000	Birim etki var
F_z	45.919	(23,69)	0.003	Zaman etkisi var
LR testi	27.345	3	0.000	Zaman ya da birim etki var
LR_b	31.170	3	0.000	Birim etki var
LR_z	0.000	3	1.000	Zaman etkisi yok

Tablo 3: Birim ve/veya Zaman Etkilerinin Varlığı

Değişkenlerin birim kök analizi sonuçları incelendiğinde tüm değişkenlerin seviyede durağan oldukları görülmektedir. Çalışmada kullanılan zaman aralığının kısa olması nedeniyle sadece sabitli birim kök testleri uygulanmıştır. Çalışmada klasik Cobb-Douglas fonksiyonun uygunluğu birim ve zaman etkilerine bakılarak araştırılmıştır. Zaman ve birim etkilerinin var olup olmadığı sabit etkiler modeli için F testi ve tesadüfi etkiler modeli için ise LR testi uygulanarak araştırılmıştır. Sonuçlar Tablo 3'de sunulmuştur.

Tablodan da görüldüğü üzere, birim ve zaman etkilerinin standart hatalarının sıfıra eşit olduğunu söyleyen H_0 hipotezi reddedilirken; birim ve zaman etkilerin var olduğunu ifade eden H_1 hipotezi kabul edilmektedir. Dolayısıyla hem sabit etkiler hem de tesadüfi etkiler modelleri için birim etkilerin var olduğu, buna karşılık zaman etkilerinin olmadığı, dolayısıyla tek yönlü modelin tahmin edilmesi gerektiği anlaşılmaktadır. Birim etkisinin sabit mi yoksa tesadüfi olduğunun kararı için Hausman testi sonuçlarına bakıldığında, LR testinde zaman etkisinin olmadığı görülmektedir. Sabit etkili modelinin uygun olduğu görülmektedir.

Çalışmada yapılan Granger nedensellik analizi sonuçlarına göre GDP'nin istihdam düzeyi ve girişimcilik faaliyetleri üzerinde etkili olduğu ve istihdamından girişimcilik üzerinde etkili olduğu görülmüştür.

H_0 Hipotezi	F-İstatistiği	Olasılık
GDP, EMP'nin Granger nedeni değildir.	3.01847	0.059
GDP, ENT'nin Granger nedeni değildir.	10.7694	0.000
EMP, ENT'nin Granger nedeni değildir.	18.871	0.000

Tablo 4: Granger Nedensellik Testi Sonuçları

Değişkenler	Katsayı	t-ist.	Prob.
SAV	0.329	1.66	0.09
EMP	0.941	1.93	0.05
ENT	2.578	3.47	0.00
Prob(F-statistic) : 0.025		Durbin-Watson stat: 1.896	

Tablo 5: EKK Analiz Sonuçları

Yapılan EKK test sonuçlarına göre geçiş ülkelerinde girişimcilik düzeyi ile ekonomik büyüme arasında pozitif yönlü bir ilişki olduğu sonucuna ulaşılmıştır. Çalışmada zaman etkisinin olmadığı ancak birim etkinin bulunduğu sonucuna ulaşılmıştır. Elde edilen bu göstergelere dayanılarak yapılan EKK testi sonuçlarına göre girişimcilik (%1 önem düzeyinde), istihdam (%5 önem düzeyinde) ve tasarruflar (%10 önem düzeyinde) büyüme üzerinde etkili çıkmıştır. Söz konusu durum mevcut ülkelerdeki ekonomik ve siyasi sistemin bir sonucu olarak düşünülebilir. Söz konusu ülkelerdeki çoğu faaliyetin hala devletin tekelinde olması ve özel sektör yatırımlarına duyulan ihtiyaç böyle bir sonucun çıkmasında etkili olmuştur.

5 Sonuç

Girişimciliğin ekonomide yeniliklerin artması olanak sağlayarak ekonomik büyümeyi, verimliliği ve iş olanaklarını artırması başta gelişmekte olan ülkeler olmak üzere tüm ülkeler için önemlidir. Bu açıdan değerlendirildiğinde ekonomik büyümenin sağlanmasında emek ve sermaye birikimi ne kadar önemli ise girişimciliğin de önemi o kadar büyüktür. Çünkü bir ülkede girişimciliği düzeyi ne kadar yüksekse, yeni iş olanakları oluşturulması ve yeni teknik ve fikri gelişimlerin yaşanması daha olasıdır. Bu durum ise ülkelerin ekonomik büyüme performanslarını olumlu bir şekilde etkilemektedir. Yapılan analizlerde 23 geçiş ekonomisi ile Türkiye'de ekonomik büyümenin temel sürükleyici unsurunun emek ve sermayeden de daha fazla önemde, girişimcilik unsurunun olduğu tespiti yapılmıştır. Diğer bir ifadeyle bu ülkelerde girişimcilik düzeyindeki artışların ekonomik büyümeyi olumlu etkiliği görülmüştür. Diğer taraftan yapılan nedensellik sınamalarında girişimcilik unsuru ile ekonomik büyüme arasında çift yönlü nedensellik ilişkisinin varlığı tespit edilmiştir. Bu durum da özellikle piyasa ekonomisi kurallarını kurumsallaştırmaya çalışan geçiş ekonomilerinde girişimciliğin ekonomik gelişmeyi uyardığını ve benzer şekilde ekonomik gelişmişlik düzeyindeki artışların da girişimcilik iklimini iyileştirdiğinin ortaya koymaktadır. Dolayısıyla ekonomik açıdan hala çeşitli sıkıntılar yaşayan ve kamunun ekonomideki ağırlığını azaltmayı hedefleyen geçiş ülkeleri için girişimcilik faaliyetlerinin ve girişimcilerin desteklenmesi istikrarlı ekonomik büyümenin sağlanabilirliği açısından oldukça önemli ve gerekli bir unsur konumundadır.

Türkiye ve Seçilmiş Bazı Bağımsız Devletler Topluluğu Ülkelerinde Sebze ve Meyve Ürün Grubunda Uluslararası Rekabet Gücü Analizi

Competitiveness Analysis of Selected Members of Commonwealth of Independent States and Turkey in Vegetables and Fruit Sector

Assoc. Prof. Dr. Fahriye Öztürk (Gazi University, Turkey)

Ph.D. Candidate Sıtkıcan Saraçoğlu (Gazi University, Turkey)

Ph.D. Candidate Işın Kortan (Hacettepe University, Turkey)

Abstract

Our paper aims to quantify levels of competitiveness of the selected Commonwealth of Independent States countries(Belarus, Moldova, Russia and Ukraine) and Turkey in vegetables and fruit sector and sub-sectors during the 1995-2012 period with respect to world market. Because only these CIS countries have prolonged annual data for vegetables and fruit sector in this period, these countries are selected for our paper. Our paper uses export and import data obtained from UNCTAD database and the data set covers the period of 1995 to 2012. To investigate competitiveness of these five countries five indexes are calculated: The Relative Comparative Advantage Index (RCA), The Relative Export Advantage Index (RXA), The Relative Import Penetration Index (RMP), The Relative Trade Advantage Index (RTA) and The Revealed Competitiveness (RC). Our findings indicate that Moldova and Turkey have high comparative advantage in vegetables and fruit sector than Belarus, Russia and Ukraine with respect to the world market. The comparative advantage level of Turkey has decreasing trend during the 1995-2012 period. The import penetration of Moldova has been higher level than Turkey which can be said as her rival.

1 Giriş

1980 sonrası dönemde uluslararası düzeydeki mal ticareti, mal üretimine oranla çok daha hızlı bir biçimde artmış; liberal iktisat politikaları, uluslararası sermaye akımlarının serbestleştirilmesine yönelik çalışmalar, bilişim teknolojisinde yaşanan gelişmeler ve küreselleşme eğilimi ülkelerin firma ve sektörlerinin küresel piyasada yer almak veya var olan piyasa paylarını artırmak amacıyla rakipleriyle ürün fiyatı ve kalitesi bakımından daha yoğun bir rekabet ortamına yol açmıştır (Kibritçioğlu, 1996). Öte yandan, 1970 sonrası dönem Sovyet Sosyalist Cumhuriyetler Birliği için bir dönüm noktası olmuş, yeni koşullara uyum gösterilememesi, teknoloji ve kaliteden yoksun ürünler, arz ve talep arasındaki dengesizlik ve tarım sektöründe uygulanan hatalı politikalar sonrasında merkezi otorite zayıflamıştır. SSCB'nin dağılması, tüm dünyayı siyasal ve iktisadi anlamda etkileyen bir gelişme olmuş ve bu yeni dönemde SSCB'nin de yerini alacak, eski birliğe oranla daha esnek, ancak etkili yeni bir yapının kurulması için girişimler başlatılmıştır. 8 Aralık 1991'de Beyaz Rusya, Rusya ve Ukrayna, iktisadi işbirliğine dair kapsamlı bir programı içeren Bağımsız Devletler Topluluğu anlaşmasını imzalamış ve 21 Aralık 1991'de Moldova, Ermenistan, Azerbaycan, Kazakistan, Türkmenistan, Özbekistan, Tacikistan ve Kırgızistan ve 1993 yılının Aralık ayında Gürcistan topluluğa katılmıştır. SSCB'nin dağılması sonucu bağımsızlığına kavuşan ülkeler, bağımsız devlet olma özelliklerini kazanma ve merkezi planlı ekonomiden piyasa ekonomisine dönüşüm sürecinin getirdiği sorunlar ve gerçekleştirilen reformlarda yapılan hatalar sonucunda büyük üretim düşüşleri yaşanmış ve 1991-1995 dönemi iktisadi reformların gerçekleştirilmesinden çok iktisadi krizle mücadele yılları olmuştur. 1990'lı yılların ortasında başlayan toparlanma süreci, 1998 Rusya Krizi ve buna eşlik eden petrol fiyatlarındaki düşüş yüzünden sekteye uğramış, döviz kurunun zamanla düşmesi ve petrol fiyatlarında yaşanan artış ile birlikte ise 2000 yılından itibaren söz konusu ülkeler tekrar büyüme sürecine girmiş ve bölge ülkelerinde iktisadi istikrar büyük ölçüde sağlanmıştır. Bağımsız Devletler Topluluğu ve diğer komşu ülkeler arasındaki gıda piyasasının genişlemesi, Bağımsız Devletler Topluluğu'na üye olan ülkelerin üretim ve ihracat konusunda ivme kazanmasını sağlayacak ölçüde geniş topraklara sahip olması, bu ülkelerin kalkınma süreçlerinde tarımı önemli kılmaktadır. Bu çalışmada amaç, Türkiye ve bağımsız Devletler Topluluğuna üye seçilmiş bazı ülkelerin (Beyaz Rusya, Moldova, Rusya, Ukrayna) sebze ve meyve ürün grubunda 1995-2012 yılları arasındaki dönemde uluslararası rekabet gücündeki gelişmenin araştırılmasıdır. Analiz kapsamına alınan ülkelerin seçiminde, ele alınan dönemde tüm yıllar itibariyle verilere ulaşılabilmesi etkili olmuştur. Çalışmada öncelikle rekabet gücüne yönelik tanımlara ve uluslararası rekabet gücü ölçüm yöntemlerine yer verilecektir. Üçüncü bölümde, söz konusu ülkelerin tarım sektöründe uluslararası rekabet gücüne yönelik literatür taraması incelenecektir. Dördüncü bölümde, çalışmaya konu olan Beyaz Rusya, Moldova, Rusya, Türkiye ve Ukrayna'nın SITC Rev.3'e göre 05 Kodlu Meyve Sebzeler ürün grubunda 1995-2012 dönemi dış ticaret dengesine ve çalışmada hesaplanan RCA, RXA, RTA, RMP ve RC endeks değerlerine yer verilmektedir.

2   Rekabet Gücü Kavramı ve Uluslararası Rekabet Gücü Ölçüm Yöntemleri

2.1 Rekabet Gücü Kavramı

Rekabet gücü kavramı firma, endüstri ve uluslararası boyutta incelenebilmektedir. Porter (1990), firma düzeyinde rekabet gücünü tanımlarken, firmanın piyasa payı ve verimliliğine ön planda tutarak, faaliyetlerini birincil ve destek faaliyetler biçiminde iki kısma ayırmıştır: Üretim, dağıtım, pazarlama gibi faaliyetleri birincil faaliyetler biçiminde, bu faaliyetlerin sürekliliği için gereken altyapı hizmetleri, teknoloji gibi faaliyetleri destek faaliyetleri biçiminde ifade etmiştir. Porter'a göre, firmaların rekabet gücüne sahip olmaları, teknoloji alanındaki yenilikleri ve farklı girdileri üretim sürecinde kullanmaları yoluyla gerçekleşecektir. Kibritçioğlu'na (1996) göre, bir firmanın rekabet gücüne sahip olması, ürün fiyatı (fiyat ve maliyet rekabet gücü) ve/veya ürün kalitesi, teslimde dakiklik ve satış sonrası hizmet (kalite rekabet gücü) gibi fiyat dışı unsurlar bakımından mevcut dönemde aynı veya daha üstün konumda yer almasıdır. Endüstri boyutunda rekabet gücü, Markusen (1992), bir endüstrinin rakip endüstriler ile karşılaştırıldığında, onlarla eşit veya daha yüksek verimlilik düzeyine ulaşması ve bu düzeyin sürekliliğini sağlayabilme yeteneği veya onlarla eşit ya da daha düşük maliyette üretim yapma ve bu ürünleri satma yeteneği biçiminde tanımlanmaktadır. Landau (1992), bir ülkenin rekabet gücünü, vatandaşlarını daha yüksek ve kaliteli istihdam düzeyine eriştirmek yoluyla, yüksek yaşam standartlarına ve yeterli büyüme oranının sağlanması biçiminde ifade etmektedir. Ülkedeki istihdam düzeyini belirleyen faktörler arasında, ülkede faaliyet gösteren firmaların rekabet güçleri de yer almaktadır. Uluslararası rekabet gücünü, Fagerberg (1988), ödemeler dengesinde sorunlara yol açmadan, iktisadi büyüme ve istihdam artışı gibi bir ülkenin temel iktisat politikası hedeflerini gerçekleştirme yeteneği ve teknoloji, fiyat ve kapasite açısından rekabet üstünlüğüne sahip olması biçiminde ifade etmektedir. Aiginger (1998), bir ülkenin uluslararası rekabet gücünü, ülkenin arzu ettiği mevcut ve gelecek dönemde elde edeceği faktör gelirlerinde ve vatandaşlarınca yeterli görülen iktisadi, çevresel ve sosyal bir makro ekonomik ortamda uluslararası piyasalara yeterli düzeyde ürün ve hizmet satabilme yeteneği, biçiminde ifade etmektedir.

2.2 Balassa Endeksi

Balassa, bir ülkenin belirli bir ürün veya sanayi ticareti açısından karşılaştırmalı üstünlüğünü hesaplamak amacıyla, ilgili ürün veya endüstrinin toplam dünya ihracatı içerisindeki payının, ülkenin toplam ihracatı içerisindeki payına oranını ifade eden bir endeks geliştirmiştir. Bu endeks, karşılaştırmalı üstünlüğün kaynaklarını saptamaktan daha çok ülkenin karşılaştırmalı üstünlüğe sahip olup olmadığını saptamaktadır. Balassa'nın geliştirdiği endeks aşağıdaki biçimde ifade edilmektedir (Balassa, 1989):

$$RCA = \frac{X_{ij} / \sum X_i}{X_{wj} / \sum X_w}$$

Yukarıdaki denklemde "X_{ij}", i ülkesinin j ürünü açısından gerçekleştirdiği ihracatı; "X_i", i ülkesinin gerçekleştirdiği toplam ihracatı; "X_{wj}" dünya genelinde gerçekleştirilen j malı ihracatını; "X_w" ise dünya genelinde gerçekleştirilen toplam ihracatı işaret etmektedir. Endeksin değerinin birden büyük olması, analize konu olan ülkenin ilgili malda karşılaştırmalı üstünlüğü sahip olduğuna işaret ederken; endeks değerinin birden küçük olması ise ilgili malda karşılaştırmalı dezavantaj durumuna işaret etmektedir.

2.3 Vollrath Endeksleri

Vollrath' a (1991) göre, daha önce oluşturulan endeksler yalnızca ihracatı göz önünde bulundurmakta, ithalatı ise dikkate almamaktadır. Vollrath, 1991 yılındaki çalışmasında ihracat ve ithalat verileri ile net ticaret etkisini içinde barındıran bir endeksi, göreli ticaret avantajı endeksini (RTA), oluşturmuştur. Bu endeks, göreli ihracat avantajı endeksi (RXA) ile göreli ithalat nüfuz endeksi (RMP) arasındaki fark biçiminde ifade edilmektedir.

Göreli ihracat avantajı endeksi (RXA), bir ülkenin belirli bir üründe uluslararası piyasalardaki ihracat payının diğer bütün ürünlerde dünya ihracatındaki payına oranı biçiminde hesaplanmaktadır. Böylece, analize konu olan ürünler ve ülkeler dünya genelindeki toplam ihracat düzeyi hesaplanırken dışarıda tutulmakta dolayısıyla söz konusu ülke ve ürünün iki kez hesaba katılması sorunu ortadan kalkmaktadır (Frohberg ve Hartmann, 1997). Göreli ihracat avantajı endeksi aşağıdaki biçimde gösterilmektedir:

$$RXA_{ij} = \frac{\sum X_{ij} / \sum_{l,l \neq j} X_{il}}{\sum_{k,k \neq i} X_{kj} / \sum_{k,k \neq i} \sum_{l,l \neq j} X_{kl}}$$

"X" ihracatı, "i" ve "k" ürün kategorilerini, "j" ve "l" ise analize konu olan ülkeleri işaret ederken endeksin 1'den daha yüksek değer alması analize konu olan ülkenin sözü edilen ürün kategorisinde rekabet avantajı elde ettiğini, 1'den daha düşük değer alması ise rekabet açısından dezavantajlı bir durumun yaşandığını işaret etmektedir.

Göreli İthalat Nüfuz (RMP) endeksinin gösterildiği denklemde "M_{ij}", j ülkesinin i ürünü açısından gerçekleştirdiği ithalatı, "M_{il}", j ülkesi dışarıda tutulduğunda dünya genelinde i ürünü açısından gerçekleştirilen

ithalatı, "M_{kj}", j ülkesinin i ürünü dışarıda tutulduğundan geri kalan ürünlerinin ithalatını, "M_{kl}" ise j ülkesi dışarıda tutulduğunda dünya genelinde i ürünü dışındaki ürünlerin toplam ithalatını işaret etmektedir (Aktan ve Vural, 2004). Endeksin 1'den daha büyük bir değer alması rekabetçi dezavantajı, 1'den küçük bir değer alması ise rekabetçi avantajı işaret etmektedir.

$$RMPij = \frac{Mij \Big/ \sum_{l,l \neq j} Mil}{\sum_{k,k \neq i} Mkj \Big/ \sum_{k,k \neq i} \sum_{l,l \neq j} Mkl}$$

Göreli ticaret avantajı endeksi (RTA), aşağıdaki biçimde ifade edilmekte ve endeksin pozitif bir değer alması rekabetçi üstünlüğü, negatif bir değer alması ise rekabetçi dezavantajı işaret etmektedir (Frohberg ve Hartmann,1997):

$$RTAij = RXAij - RMPij$$

Göreli Rekabet Üstünlüğü (RC) Endeksi ise aşağıdaki biçimde ifade edilmekte ve endeks değerinin negatif olması rekabet dezavantajını; pozitif olması ise rekabet üstünlüğünü işaret etmektedir:

$$RC = \ln RXA - \ln RMP$$

3 Literatür Taraması

Ülkelerin uluslararası rekabet gücünün ölçülmesi ve karşılaştırılmasına yönelik çok sayıda çalışma yapılmıştır. Bu çalışmada, yalnızca ele alınan ülke ve ülke grubu itibariyle yapılan bazı çalışmalar ve ulaşılan sonuçlara değinilecektir.

Freinkman vd. (2004) çalışmalarında, 2000 yılı WITS ve COMTRADE verilerinden ve Açıklanmış Karşılaştırmalı Üstünlükler endeksinden yararlanarak Bağımsız Ülkeler Topluluğu'nu oluşturan ülkelerin topluluk içerisinde ve küresel boyutta rekabet gücünü ölçmüşlerdir. Yazarlar, "Meyve ve Sebzeler" ürün ana grubunda küresel piyasada 11.3 endeks değerine sahip olan Moldova'nın rekabet gücüne sahip olduğu, sırasıyla 0.5 ve 0.4 endeks değerleri ile Beyaz Rusya ve Ukrayna'nın rekabet gücüne sahip olmadığı sonucuna ulaşmışlardır.

Ahrend (2006) çalışmasında, 1997-2004 dönemi UN-COMTRADE verilerinden ve Açıklanmış Karşılaştırmalı Üstünlükler endeksinden yararlanarak Rusya'nın rekabet gücünü ölçmüştür. Kullanılan Açıklanmış Karşılaştırmalı Üstünlükler endeksi, Balassa Endeksinin 100 ile çarpılmış halidir. Ahrend'in çalışmasında ulaşılan bulgulara göre, SITC Rev.3 e göre 05 kodlu "Meyve ve Sebzeler" ürün ana grubundaki endeks değeri, 1997-2004 döneminde ortalama -3.6 düzeyindedir ve Rusya'nın rekabet gücüne sahip olmadığını göstermektedir.

Cooper (2006) çalışmasında, 2000-2004 dönemi UN-COMTRADE verilerinden ve Balassa endeksinden yararlanarak Rusya'nın seçilmiş ülkeler karşısında ve küresel piyasada çeşitli sektörlerdeki rekabet gücünü ölçmüştür. Çalışmanın sonuçlarına göre, SITC 054 kodlu ürün grubundaki RCA değeri 2000 yılındaki 0.061 düzeyinde 2004 yılında 0.081 düzeyine ulaşmıştır. SITC 056 kodlu ürün grubundaki RCA değeri 2000 yılındaki 0.027 değerinden 2004 yılında 0.037 düzeyine ulaşmıştır. SITC 057 kodlu ürün ana grubundaki endeks değeri 2000 yılındaki 0.058 değerinden 2004 yılında 0.076 değerine ulaşmıştır. SITC 058 kodlu ürün ana grubundaki endeks değeri 2000 yılında 0.142 iken 2004 yılında 0.182 değerine ulaşmıştır. SITC 059 kodlu ürün ana grubundaki endeks değeri 2000 yılında 0.036 iken 2004 yılında 0.122 değerine ulaşmıştır. Elde edilen bu endeks değerleri, Rusya'nın "Meyve ve Sebzeler" ürün ana grubunda rekabet gücüne sahip olmadığını göstermektedir.

Shelburne ve Pidufala (2006), çalışmalarında, 2004 yılı UN-COMTRADE verilerinden ve Balassa Endeksinden yararlanarak Bağımsız Ülkeler Topluluğu'nu oluşturan ülkelerin topluluk içerisinde ve küresel boyutta imalat sanayindeki rekabet gücünü ölçmüşlerdir. Çalışmada SITC Rev.2 'ye göre 05 kodlu "Meyve ve Sebzeler" ürün ana grubunda topluluk içerisinde 36.7, küresel piyasada ise 9.4 endeks değeri ile Moldova'nın bu ana ürün grubunda rekabet gücüne sahip olduğu sonucuna ulaşılmıştır. Moldova'nın küresel piyasada, SITC Rev.3'e göre 056 kodlu ürün grubunda 8.3; 057 ürün grubunda 14.8, 058 ürün grubunda 17.5 ve 059 ürün grubunda 21.7 endeks değerine sahip olduğu bulunmuştur. Elde edilen bu bulgulara göre, Moldova için, topluluk içerisindeki endeks değerleri ise çok daha yüksek düzeyde çıkmıştır.

Karaalp (2011) çalışmasında, 1996-2008 dönemi WTO verilerinden ve içerisinde Balassa Endeksi'nin de bulunduğu çeşitli endekslerden yararlanarak, Türkiye'nin çeşitli sektörlerdeki uluslararası rekabet gücünü ölçmüştür. Türkiye tarım ürünleri sektörünün küresel piyasadaki rekabet düzeyini işaret eden endeks 1996 yılındaki 1.90 değerinden 2008 yılında 1.02 düzeyine; gıda sektörünün küresel piyasadaki rekabet düzeyini işaret eden endeks 1996 yılındaki 2.21 değerinden 2008 yılında 1.17 düzeyine gerilemiştir. Bu düşüşe karşın, endeks değerleri sözü edilen sektörlerde Türkiye'nin küresel piyasada rekabet gücüne sahip olduğunu göstermektedir. Moldova'nın tarım ürünleri ve gıda sektörlerinde küresel piyasada sahip olduğu karşılaştırmalı üstünlük 1996-2008 dönemi boyunca azalış eğilimi izlemiştir. Öte yandan, Moldova tarım ürünleri sektöründe sözü edilen

dönemde ortalama 5.00 civarında, gıda sektöründe ise ortalama 7.00 civarında endeks değerlerine sahip olduğu ve bu değerlere Türkiye'nin aynı dönemde elde etmiş olduğu endeks değerlerinin oldukça üzerinde seyrettiği gözlenmiştir. Ukrayna'nın tarım ürünleri ve gıda sektöründe küresel piyasada karşılaştırmalı üstünlüğünü işaret eden endeks değeri sözü edilen dönemde çok küçük miktarda da olsa artış kaydetmiştir. Beyaz Rusya'nın, tarım ürünleri ve gıda sektörlerinde küresel piyasada sahip olduğu karşılaştırmalı üstünlük ise 1996-2008 dönemi boyunca azalış eğilimi izlemiştir.

Akgüngör vd. (2002) çalışmalarında, Türkiye İşlenmiş Meyve ve Sebze Sektörünün 1994-1997 döneminde Avrupa Birliği piyasasındaki rekabet gücünü içerisinde RCA endeksinin de bulunduğu çeşitli endekslerden yararlanarak ölçmüştür. Çalışmada, İspanya, Yunanistan ve Portekiz rakip ülkeler olarak belirlenmiş; Türkiye işlenmiş domateste rekabet gücüne sahip olmadığı; işlenmiş üzümde Portekiz ve İspanya'ya karşı, işlenmiş turunçgillerde ise Portekiz ve Yunanistan'a karşı rekabet gücüne sahip olduğu sonucuna ulaşılmıştır .

Özağ vd. (2003) çalışmalarında, Türkiye'nin yaş meyve (turunçgiller, üzüm) ve sebzenin(domates, soğan, patates) de içerisinde olduğu çeşitli tarım ürünlerinde 1995-1999 döneminde Avrupa Birliği piyasasındaki rekabet gücünü içerisinde RCA endeksinin de bulunduğu çeşitli endekslerden yararlanarak ölçmüştür. Sözü edilen dönemde, her iki ürün ana grubunda da Türkiye'nin yüksek rekabet gücüne sahip olduğu sonucuna ulaşılmıştır.

Serin ve Civan (2008) çalışmalarında, Türkiye domates, zeytinyağı ve meyve suyu sektörlerinin 1995-2005 döneminde Avrupa Birliği piyasasındaki rekabet gücünü içerisinde RCA endeksinin de bulunduğu çeşitli endekslerden yararlanarak ölçmüştür. İspanya, İtalya ve Yunanistan rakip ülkeler olarak belirlenmiştir. Zeytinyağı sektöründe, Yunanistan Türkiye'ye karşı belirgin bir karşılaştırmalı üstünlüğe sahipken, Türkiye İtalya karşısında 1999 yılına kadar sahip olduğu karşılaştırmalı üstünlüğü kaybetmiş ve 1999 sonrasında karşılaştırmalı üstünlük sürekli el değiştirmiştir. Domates sektöründe, Türkiye İspanya karşısında 1999 yılına kadar sahip olduğu rekabet gücünü 2000 yılında kaybetmeye başlamıştır. Öte yandan, Yunanistan ve İtalya 1996 yılı dışında sözü edilen sektörde Türkiye'ye karşı karşılaştırmalı üstünlüğe sahiptir. Meyve suyu sektöründe, Türkiye 1998 ve 1999 yılları dışında Yunanistan'a karşı; 2002 ve 2004 yılları dışında İtalya'ya karşı rekabet gücüne sahiptir. İspanya, 2000 yılından itibaren sözü edilen sektörde Türkiye'ye karşı rekabet gücüne sahiptir.

Fidan (2009) çalışmasında, Türkiye turunçgil sektörünün 1990-2003 döneminde AB-15 piyasasındaki rekabet gücünü TÜİK, FAO ve EUROSTAT verilerinde ve RCA, RTA endekslerinden yararlanarak ölçmüştür. Yunanistan, İspanya, İtalya ve Portekiz rakip ülkeler olarak belirlenmiştir. Elde edilen bulgulara göre, Türkiye limon ve greyfurt ürün gruplarında İspanya, İtalya, Yunanistan ve Portekiz'e karşı rekabet gücüne sahiptir.

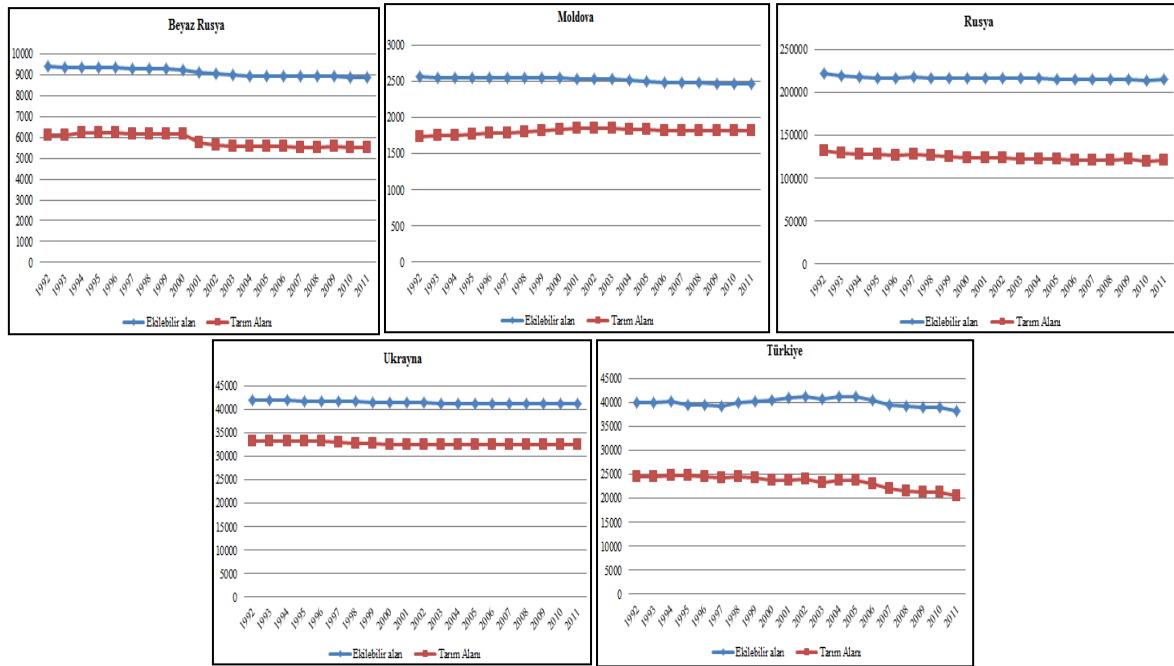
Utkulu ve Seymen (2004) çalışmalarında, Gümrük Birliği sürecinin Türkiye'nin çeşitli sektörlerdeki rekabet gücü üzerindeki etkisini 1990-2003 dönemi DTM verilerinden ve RCA endeksinin çeşitli versiyonlarından yararlanarak ölçmüştür. Sözü edilen dönem, 1990-1995 ve 1996-2002 biçiminde iki alt dönem ayrılmış, Türkiye'nin 05 kodlu "Meyve ve Sebzeler" ürün grubundaki rekabet gücü Gümrük Birliği sonrasında (1996-2002) azalmıştır.

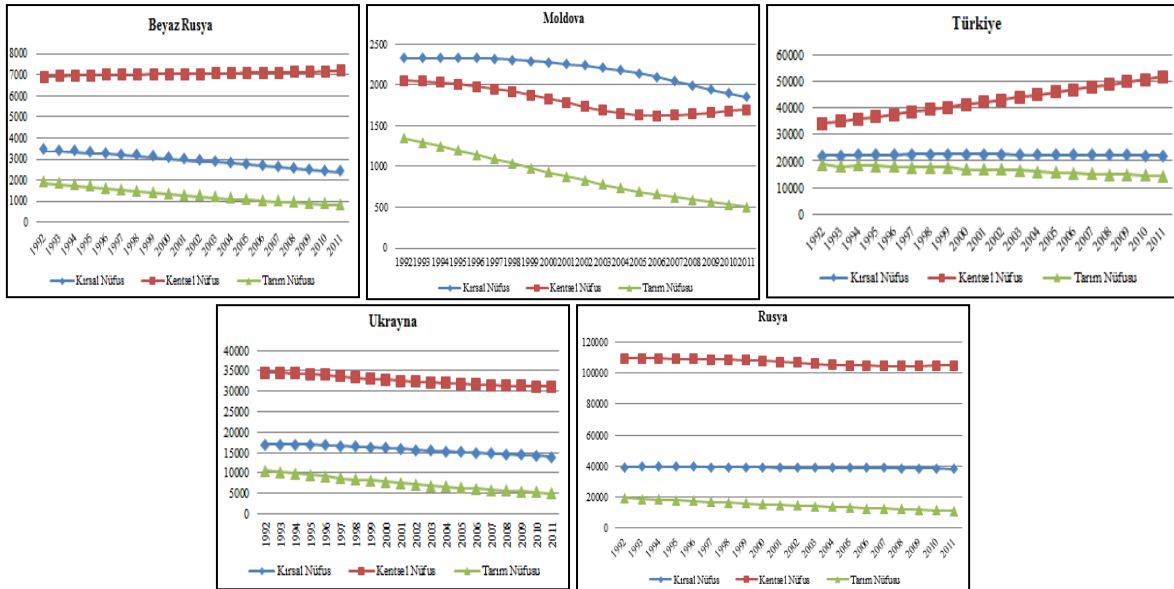
4 Tarım Sektörünün Genel Görünümü

SSCB'nin dağılması sonucu bağımsızlığına kavuşan ülkeler, tarım alanında büyük ölçekli ve devlete ait arazilerde kolektif üretim, ürün ve girdi ile ilgili kararların ve üretim hedeflerinin merkezi yönetim tarafından belirlenmesi gibi özellikleri SSCB'den miras olarak almışlardı (Lerman vd., 2004). Bu özelliklerin etkisiyle, 1990'lı yılların ilk yarısında tarımsal üretim keskin bir düşüş yaşamış, 1997 yılı sonrasında yapılan reformlar sonucunda tarımsal üretimin yeniden artmasını sağlamıştır (Lerman, 2008). Bu reformlar, toprak kaynaklarının yeniden yapılandırılması, mülkiyet haklarında ve arazi kullanım kalıplarında değişiklikleri içermekte, bu düzenlemelerle birlikte sosyalist ekonomiden piyasa ekonomisine geçiş hedeflenmiş, Moldova, Gürcistan, Ermenistan devlete ait tarım kuruluşlarından özel arazi sahipliğine hızlı bir biçimde geçmişlerdir (Lerman vd., 2004).

Grafik 1'de seçilmiş ülkelerin 1992 ve 2012 yılları arasındaki dönemde brüt ve net üretim değerleri verilmiştir. Grafik 1'den de izleneceği gibi 1999 yılına kadar gerek brüt gerekse net üretim değerleri düşüş eğilimi, yukarıda da işaret edildiği gibi, tarım sektörüne yönelik gerçekleştirilen reformlar sonucu 1999 yılından itibaren ise artma eğilimi göstermektedir. Ayrıca kişi başına düşen üretim de paralel bir görünüm sergilemektedir.

Grafik 2'de seçilmiş ülkelerin ekilebilir alanları ve tarım alanları verilmiştir. Grafikten de izleneceği gibi ele alınan dönemde tarımsal alanlarda dikkate değer bir değişme olmamıştır.

Grafik 3'de seçilmiş ülkelerde tarıma ilişkin demografik göstergeler yer almaktadır. Grafik'ten de izleneceği gibi ele alınan dönemde gerek kırsal gerekse tarımsal nüfusun mutlak olarak azaldığı dikkat çekmektedir. Böyle bir gelişmenin, zaman içinde ülke ekonomilerinin iktisadi gelişmelerine paralel olarak tarımın ekonomideki göreli öneminin azalması yönündeki beklentilerle tutarlı olduğu söylenebilir.
Grafik 1: *Seçilmiş Ülkelerde Tarımsal Üretim Brüt ve Net üretim Değerleri (Dolar, 1992-2011)* **Kaynak***: FAOSTAT veritabanı verilerinden yararlanılarak tarafımızdan oluşturulmuştur.*


Grafik 2: *Seçilmiş Ülkelerde Tarım Alanları (hektar, 1992-2011)* **Kaynak***: FAOSTAT.*


Grafik 3: *Seçilmiş Ülkelerde Tarıma ilişkin Demografik Göstergeler (1992-2011)* **Kaynak***: FAOSTAT.*

Grafik 4'de seçilmiş ülkeler itibariyle çalışma kapsamını oluşturan sebze ve meyve grubunda dış ticaret dengeleri verilmiştir. Grafiklerden de izleneceği gibi Türkiye ve Moldova (STIC 054 dışında) hariç diğer ülkeler ağırlıklı olarak net ithalatçı konumundadır.

Grafik 4: Seçilmiş Ülkelerde Sebze Meyve Grubunda Dış Ticaret Dengeleri (Dolar, 1995-2012) *Kaynak:* FAOSTAT veritabanı verilerinden yararlanılarak tarafımızdan oluşturulmuştur.
Grafik 5: Seçilmiş Ülkelerde 1995-2012 dönemine ait RCA endeks değerleri *Kaynak:* UNCTAD veritabanı verilerinden yararlanılarak tarafımızdan oluşturulmuştur.

5 Seçilmiş Ülkelerde Uluslararası Rekabet Gücü

5.1 Yöntem ve Veriler

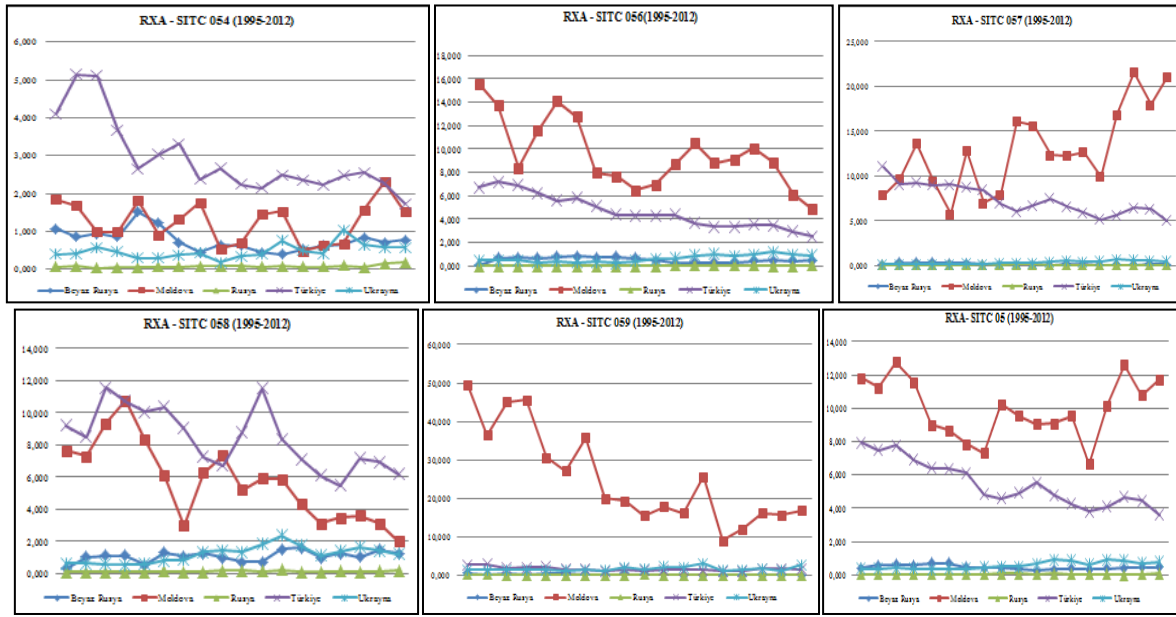
Çalışmada yöntem olarak, Bölüm 2.2.'de teorik altyapısına yer verilen RCA, RXA, RMP, RTA ve RC endekslerinden yararlanılmıştır. Çalışmanın veri setinde, UNCTAD veri tabanından 1995-2012 dönemine ait SITC Rev.3 kodlarına göre 05 (Meyve ve Sebzeler) ana ürün grubu ve bu ürün grubuna ait 054(Sebzeler, kuru

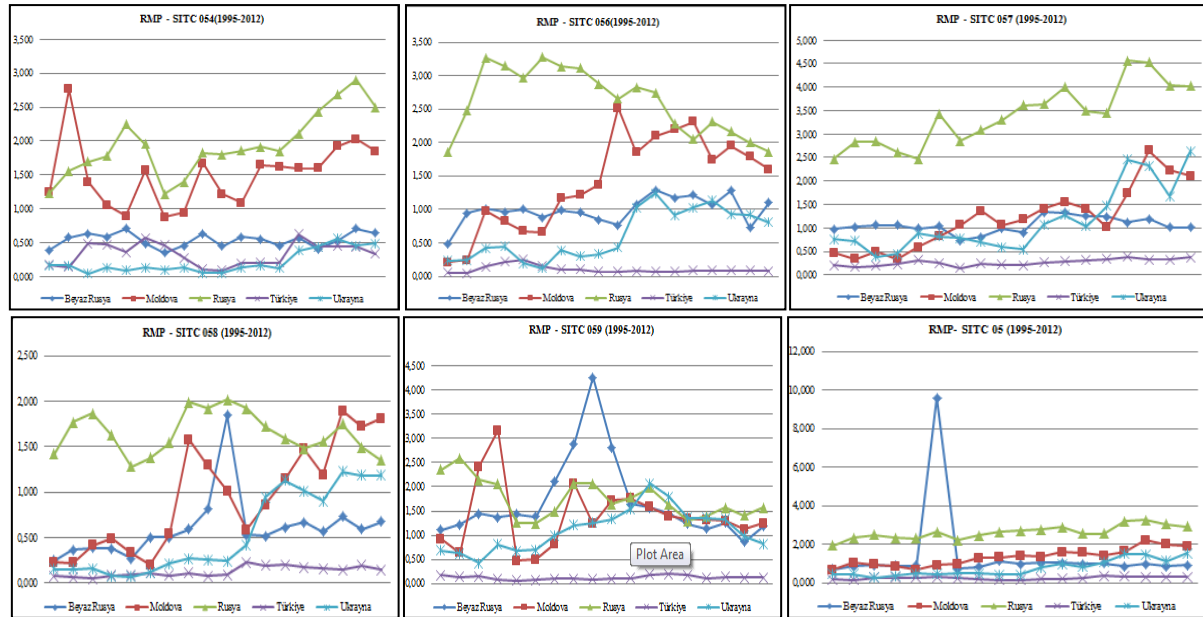
baklagiller vb.), 056(Kurutulmuş sebzeler, sebze unları ve müstahzarları), 057(Taze/kuru meyve ve kabuklu yemişler), 058(Sebze ve meyveden hazırlanmış konserveler), 059(Meyve suları, sebze suları) ürün gruplarına dair ihracat ve ithalat verileri kullanılmıştır.

5.2 Bulgular

RCA ve RXA değerlerine göre 059 ürün grubu dışında Türkiye ve Moldova diğer ülkelere oranla daha yüksek rekabet gücüne sahiptir. Türkiye 059 ürün grubunda Moldova'nın oldukça gerisinde kalmıştır. Öte yandan, 05 ana ürün grubuna bakacak olursak, Türkiye'nin dönem başındaki RCA endeks değeri 7,22 düzeyinden 2012 yılında 3,5 düzeyine gerilemiştir. Türkiye'nin 05 ana ürün grubunda dönem başındaki RXA endeks değeri, 7,92 düzeyinden dönem sonunda 3,61 düzeyine gerilemiştir. Beyaz Rusya, Rusya ve Ukrayna'nın gerek RCA gerekse RXA değerleri dönem boyunca 1'in altında seyretmekte ve bu durumda söz konusu ülkelerin rekabet gücüne sahip olmadığına işaret etmektedir. Grafik 5 ve Grafik 6 incelendiğinde, RCA ve RXA endekslerinin 1995-2012 döneminde birbirine paralel trendlere sahip olduğu görülmektedir.

Grafik 6: *Seçilmiş Ülkelerde 1995-2012 dönemine ait RXA endeks değerleri* **Kaynak:** *UNCTAD veritabanı verilerinden yararlanılarak tarafımızdan oluşturulmuştur.*

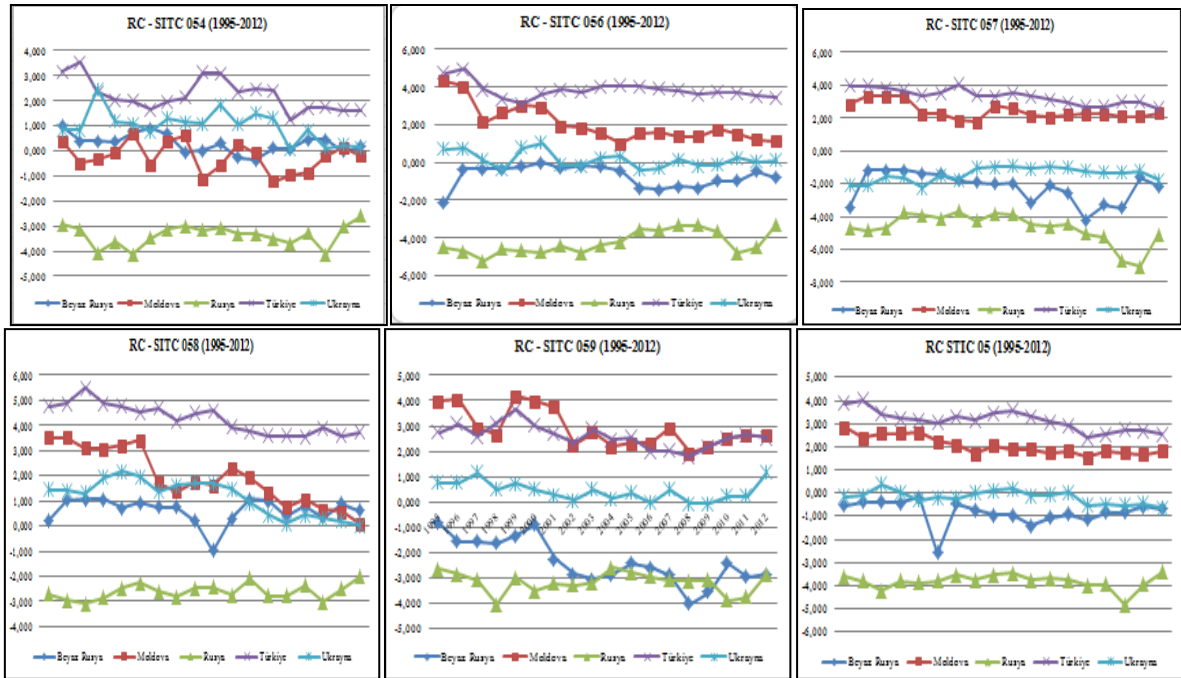




Grafik 7: *Seçilmiş Ülkelerde 1995-2012 dönemine ait RMP endeks değerleri* **Kaynak**: *UNCTAD veritabanı verilerinden yararlanılarak tarafımızdan oluşturulmuştur.*

Grafik 7 incelendiğinde dönem boyunca Türkiye, gerek alt ürün gruplarında gerekse 05 ana ürün grubunda Türkiye'nin sahip olduğu RMP endeks değerleri 1'in altındadır ve bu durum Türkiye açısından rekabet avantajının olduğunu işaret etmektedir. Moldova'nın, 05 ana ürün grubunda dönem başında sahip olduğu RMP endeks değeri, 7,92 düzeyinden dönem sonunda 3,61 düzeyine gerilemiştir 0,7 düzeyindeyken 1996-2001 döneminde dalgalı bir trend seyretmiş, 2001 sonrasında ise RMP endeksi sürekli olarak 1'in üzerinde değer almıştır. Rusya, 05 ana ürün grubunda1995-2012 döneminde ortalama 2,5 düzeyinde RMP endeks değerine sahiptir.

Grafik 8: *Seçilmiş Ülkelerde 1995-2012 dönemine ait RTA endeks değerleri* **Kaynak***: UNCTAD veritabanı verilerinden yararlanılarak tarafımızdan oluşturulmuştur.*

Grafik 9: *Seçilmiş Ülkelerde 1995-2012 dönemine ait RC endeks değerleri* **Kaynak***: UNCTAD veritabanı verilerinden yararlanılarak tarafımızdan oluşturulmuştur.*


Grafik 8 incelendiğinde Türkiye 059 ürün grubu dışında gerek diğer ürün gruplarında gerekse 05 ana ürün grubunda yüksek RTA değerlerine sahiptir. Moldova 059 ürün grubunda dönem boyunca yüksek RTA değerlerine

sahiptir. 05 ana ürün grubunda Beyaz Rusya ve Rusya dönem boyunca negatif RTA değerlerinde sahiptir ve bu durum söz konusu ülkelerin rekabet gücüne sahip olmadığını işaret etmektedir. Moldova 059 ürün grubundaki yüksek endeks değerlerinin etkisiyle 05 ana ürün grubunda dönem ortalaması açısından daha yüksek endeks değerlerine sahiptir. Öte yandan 05 ana ürün grubunda Türkiye dönem başında sahip olduğu 7,76 düzeyinden dönem sonunda 3,33 düzeyine gerilemiştir.

Grafik 9 incelendiğinde ise Türkiye dönem boyunca gerek ürün gruplarında gerekse 05 ana ürün grubunda 1'in üzerinde RC değerlerine sahiptir ve bu durum Türkiye'nin rekabet gücüne sahip olduğuna işaret etmektedir. Moldova 056, 057 ve 059 ürün gruplarında ve 05 aa ürün grubunda 1'in üzerinde RC değerine sahiptir ve bu durum Moldova'nın rekabet gücüne sahip olduğuna işaret etmektedir. Moldova'nın 054 ve 058 ürün gruplarında ise sahip olduğu RC değerleri dalgalı bir seyir izlemektedir. 05 ana ürün grubunda dönem boyunca Rusya ve Beyaz Rusya negatif RC değerlerine sahiptir ve bu durum söz konusu iki ülkenin rekabet gücüne sahip olmadığına işaret etmektedir.

6   Sonuç

SSCB'nin dağılması sonucu bağımsızlığına kavuşan ülkeler, bağımsız devlet olma özelliklerini kazanma, merkezi planlı ekonomiden piyasa ekonomisine dönüşüm sürecinin getirdiği sorunlar, tarım alanında büyük ölçekli ve devlete ait arazilerde kolektif üretim ve gerçekleştirilen reformlarda yapılan hatalar sonucunda büyük üretim düşüşleri yaşanmıştır. 1990'lı yılların ilk yarısı iktisadi reformların gerçekleştirilmesinden çok iktisadi krizle mücadele yılları olmuş, bu dönemde tarımsal üretimde keskin bir gerileme yaşanmıştır. 1997 yılı sonrasında yapılan reformlar sonucunda tarımsal üretimin yeniden artması sağlanmış, Bağımsız Devletler Topluluğu ve diğer komşu ülkeler arasındaki gıda piyasasının genişlemesi, üye ülkelerin üretim ve ihracat konusunda ivme kazanmasını sağlayacak ölçüde geniş topraklara sahip olunması, bu ülkelerin kalkınma süreçlerinde tarımın başat rol oynaması sonucunu doğurmuştur. Buradan hareketle, 1990'lı yılların ikinci yarısından 2012 yılına kadar olan süreci kapsayan çalışmamızda, Bağımsız Devletler Topluluğu'ndan seçilen Beyaz Rusya, Moldova, Rusya ve Ukrayna' nın yanı sıra Türkiye eklenerek söz konusu ülkelerin Meyve ve Sebzeler ana ürün grubunda dünya piyasasındaki rekabet düzeyi çeşitli endeksler yardımıyla ölçülmüştür. Elde edilen bulgulara göre, Moldova ve Türkiye diğer ülkelere oranla söz konusu ana ürün grubunda daha yüksek rekabet avantajına sahiptir. RCA ve RXA değerleri incelendiğinde, Türkiye dönem başında daha yüksek rekabet avantajına sahipken, dönem sonunda sahip olduğu rekabet avantajının azaldığı görülmektedir. RMP endeks değerlerine göre, Türkiye daha düşük düzeyde ithalata maruz kalırken, rakibi olarak ifade edebileceğimiz Moldova'nın yüksek RMP değerleri söz konusu ülkenin daha yüksek düzeyde ithalata maruz kaldığına işaret etmektedir.Tüm endeks değerleri birlikte değerlendirildiğinde Ukrayna, Beyaz Rusya ve Rusya'nın rekabet açısından dezavantajlı durumda olduğu görülmektedir.

Tüketim Toplumunun Çevresel Etkileri

Environmental Effects of the Consumerist Society

Naile Karakehya (Osmangazi University, Turkey)

Abstract

Consumerist society is a concept which was exist in modern history and raised up with postmodern period. Therefore, it belongs to the period of time corresponding to after modernity of mankind. Some features of the consumerist society like consumption of images and consumption for pleasure, causes serious environmental problems. Because of frantic production and energy consumption in order to meet the demands about consuming and discharging of goods without obsolescence, our planet is becoming less and less livable. Create awareness of this is to be done first to put a stop to dangerous downturn. In order to emerge a social reaction and to provide conscious consumption, it is necessary to create awareness about the damage to the environment of people first. Otherwise it seems to, it will not be a livable world for our future and our children. Here the key issue at this point to keep in mind is, there is no other planet that we can live yet.

1 Giriş

İçinde bulunduğumuz zaman diliminin modern sürecin devamı mı, yoksa yeni bir süreç mi olduğuna dair tartışmalar hala devam etmekle birlikte, hemen herkesin üzerinde hemfikir olduğu bir husus var ki; o da modern başlangıcın en merkezi zaman dilimi olan 18. yüzyıldan çok farklı bir dünyada yaşamakta olduğumuzdur. Bu farklılık, yaşam tarzımız, imkanlarımız, ihtiyaçlarımız, tatmin noktalarımız ve birbirimizle olan ilişkilerimizin yanında, küreselleşen dünyamızdaki üretim ve tüketim ilişkilerinde de açıkça görülmektedir.

Bu yeni dönemde kişilerin tüketim davranışları, insanlık tarihinin önceki dönemlerine nazaran fazlasıyla farklılaşmıştır. Hatta bazı toplumlarda sosyal tabakalaşma bile bireylerin tüketim alışkanlıklarıyla şekillenir olmuştur. Dolayısıyla tüketim, içinde yaşadığımız zaman diliminde, toplumsal yaşamın en önemli kavramlarından birisi olmuştur (Baudrillard, 2000).

Bununla birlikte ortaya çıkan yeni tüketim anlayışının bir takım çevresel etkileri de bulunmaktadır. Zevk merkezli olarak tüketen bireyler, eskiden yaşayan insanların tükettiğinden çok daha fazlasını tüketmekte, tüketilen nesneler de çoğu kez atık olarak gezegene bırakılmaktadırlar. Söz konusu tüketim artışının oluşturduğu yoğun mal talebi ise daha fazla üretimi ortaya çıkarmaktadır. Üretim arttıkça, tüketimi sağlamak için kullanılan reklamlar ve diğer pazarlama teknikleri ile tüketim daha büyük boyutlara taşınmaktadır. Dolayısıyla birbirini tetikleyen bir üretim ve tüketim kısırdöngüsü ortaya çıkmaktadır. Ekonomi çevrelerince "ekonomik büyüme" olarak ifade edilen bu çılgın hacim artışının, zannedilenden çok daha fazla çevresel zararları olduğunu ve içinde yaşadığımız gezegenin geleceğine ilişkin karamsar bir tablo oluşturduğunu söylemek yanlış olmayacaktır.

Biz bu çalışmamızda tüketim toplumunun çevresel etkilerini inceleyeceğiz. Bu bağlamda çalışmada öncelikle, tüketimin büyük boyutlara ulaşmasında ve toplumsal refahın artmasında temel kırılma noktasını oluşturan modern sürece ilişkin genel açıklamalar yapılacaktır. Sonrasında ise içinde bulunduğumuz dönemin modern sürecin bir devamı mı; yoksa yeni bir süreç mi olduğu, özellikle tüketim ilişkileri bağlamında irdelenecektir. Daha sonra tüketim toplumu kavramı ele alınacak ve zamane insanının hangi amaçla ve nasıl tükettiği incelenecektir. Son olarak ise bu tüketim alışkanlıklarının çevresel etkileri örneklerle ortaya konularak, gezegenimizin geleceğine ilişkin tehlikeler ifade edilecektir.

Yaşamakta olduğumuz süreci, ekonominin en önemli ayaklarından birisini oluşturan tüketim ve olası çevresel sonuçları bağlamında irdelemenin, özellikle sosyal farkındalık oluşturmak bakımından faydalı olacağını umut etmekteyiz.

2 Tüketim Toplumunun Ortaya Çıkışındaki Temel Öğe Olarak Modern Dönemin Başlaması

Modernizm ya da modern süreç, 17. yüzyılda Avrupa'da başlayan ve sonrasında neredeyse tüm dünyayı etkisi altına alan, toplumsal yaşam ve örgütlenme biçimini ifade etmektedir (Giddens, 2011). Modernizmin üç temel ayağı bulunmaktadır. Bir başka deyişle yaşanan toplumsal değişim üç temel alanda kendisini göstermiştir. Birincisi ekonomik alanda sanayileşme yaşanmış, üretim tarzı ve ilişkileri geleneksel yöntemlerden farklılaşmış ve sanayi tarzı üretime geçilmiştir. İkinci olarak sanatta, mimaride ve kültürde bir yenileşme ve farklılaşma başlamıştır. Daha önce yapılmamış tarzda yüksek, büyük ve farklı görünümlü binalar şehirleri kaplamış, daha önce hiç ortaya konulmamış tarzda sanat eserleri ortaya konulmuş, yeni sanat akımları ortaya çıkmış ve toplumsal yaşam kültürü önemli bir değişim göstermiştir. Üçüncü temel değişim ise düşünsel alanda olmuştur. Bu dönemle birlikte akılcılık ön plana çıkmış, bilginin tek kaynağı olarak bilim kabul edilmiş ve *aydınlanma* gerçekleşmiştir.

Modern sürecin başlıca özelliklerinden birisi, bilimsel verilerle ortaya konmuş büyük toplumsal projelerin üretilmesidir. Dolayısıyla modern bir sosyal projede, bilimsellik vurgusu ve geniş kitleler için güzel bir gelecek vaadi, ilk göze çarpan öğelerdir. Nitekim modern düşünceye göre, bilim sayesinde insanlık için en iyi olan tespit edilecek, en iyi olana ulaşmak için bilimsel yöntemler geliştirilecek, amaçların gerçekleştirilmesiyle de küresel çapta mutluluk ve refah sağlanacaktır. Dolayısıyla modern düşüncede, akılcı olan ve deneysel bilgiye dayanın faydalı olduğu düşüncesi hakimdir (Horkeimer, 2005).

Ancak modern süreçte aydınlanmanın ve aklın önderliğinin hiç de beklendiği kadar küresel çapta bir refah ve mutluluk getirmediği; birçok büyük sorunu da beraberinde taşıdığı özellikle ikinci dünya savaşından sonra bariz bir şekilde ortaya çıktı. Diğerleri bir tarafa bırakılırsa, modern sürecin beraberinde getirdiği en önemli sorunlardan birisi çevre kirliliği olmuştur. Gerçekten de modern süreç içerisinde, gerek yapılan savaşlar ve kullanılan kimyasal silahlar gerekse de aşırı tüketim ve buna bağlı üretim nedeniyle dünya giderek daha çok kirlenmiş; ekilebilir arazilerin, temiz ırmakların, girilebilir denizlerin sayısı giderek azalmaya başlamıştır. Gerçekten de, aklın ve bilimin kullanılmasıyla geliştirilen ağır silahların kullanıldığı iki dünya savaşı insanlık tarihinde büyük yaralar açtığı gibi, önemli bir çevresel kirlenmeye de neden olmuştur. Bunun yanında teknolojik üretimin çevreye verdiği zararlar, bilimsel gelişmelerin ortaya çıkartabileceği olumsuz sonuçların en açık göstergeleri olmuştur.

Tüketimin toplumsal bir vakıa haline gelişinin temelleri de modern sürecin başlamasıyla atılmıştır. Nitekim sanayi üretimi sayesinde daha çok mal insanların hizmetine sunulmuş ve zaman içerisinde daha çok üretime bağlı olarak bu malların elde edilebilirliği kolaylaşmıştır. Böylelikle daha çok insan daha çok sayıda mala ulaşabilir ve tüketebilir hale gelmiştir. Ancak tüketimin bir kültür haline gelmesi ikinci dünya savaşından sonraki zamanlara tekabül etmektedir.

Bu başlık altında modern sürecin başlamasına, temel unsurlarına ve felsefesine ilişkin bilgiler verilmiştir. Ancak ikinci dünya savaşından sonraki süreçte söz konusu unsurlara ilişkin önemli değişimler olmuştur. Hatta sosyal hayatta yaşanan bu önemli değişim nedeniyle, modern sürecin de ötesine geçen yeni bir döneme girildiğini ileri süren yazarlar da olmuştur (Bkz. Lyotard, 2000). Aşağıda tüketimin bir kültür haline geldiği ikinci dünya savaşı sonrasındaki bu döneme ilişkin tespitler yapılacaktır.

3 Postmodern Dönem ve Tüketim Toplumunun Yükselişi

3.1 Genel Olarak Postmodern Dönem

Yukarıda da ifade ettiğimiz üzere gerek teknolojik gelişmelerin olumsuz çevresel etkileri gerekse de atom bombası gibi bilimsel icatların insanlığın kötülüğüne kullanımı gibi gelişmeler, modern düşüncede ciddi sarsıntıya neden olmuştur. Bunların yanında, özellikle ikinci dünya savaşından sonra ortaya çıkan başkaca önemli toplumsal değişimleri de gözlemleyen bazı yazarlar, modern dönemin sona erdiği yönünde görüşler ileri sürmeye başlamışlardır. Artık modernliğin de ötesine geçen yeni bir döneme girildiğini savunan bu yazarlardan önemli bir kısmı, bu yeni dönemi postmodern (modern sonrası) dönem olarak adlandırmaktadırlar. Bu teriminin ortaya çıkışında ve yaygınlaşmasında özellikle Lyotard'ın büyük etkisi vardır (Bkz. Lyotard, 2000). Biz de bu genel kullanıma uygun olarak söz konusu süreçten postmodern dönem olarak bahsetmeyi uygun buluyoruz.

Yeni bir döneme girildiğini savunan postmodernistler, bu görüşlerine dayanak olarak, modern dönemin başlarına nazaran içinde bulunduğumuz dönemde ortaya çıkan onlarca değişimi göstermektedirler. Örneğin; bu yeni dönemde, sosyal tabakalaşmanın oluşumunu, modern dönemde olduğu gibi üretim ilişkileri değil; tüketim ilişkileri belirlemektedir. Ayrıca yeni toplumsal düzene simge ve imajlar hakimdir. İnsanlar saçlarının kesimiyle, internetteki profilleriyle, giyimleriyle bir imaj ortaya koymakta ve bu imajlarıyla değerlendirilmektedirler. Yine tüketimde modern dönemin aksine, mal eskitilerek tüketilmemekte, bilakis imajı tükendiği, modası geçtiği için tüketilmiş olmaktadır. Hizmet sektörü ekonomi içerisinde giderek daha büyük bir yer kaplamaya başlamıştır. Ayrıca sanayi üretimi de fordist tarzdan postfordist tarza (esnek üretim tarzına) evrilmiştir. Modern dönemin başlarında olmayan finans ekonomisi giderek ülke ekonomilerinde daha çok rol oynamaktadır. İletişim araçlarının gelişmesi ve küreselleşme ile dünya büyük bir köye dönüşmüş, coğrafi sınırlılıklar önemli ölçüde ortadan kalkmıştır. Ayrıca bilime olan güven sarsılmaya başlanmış; bilim dışı bilgi kaynakları yeniden önem kazanmıştır. Bu gibi nedenlerle söz konusu yazarlar yeni bir toplumsal düzenin ortaya çıktığını ileri sürmektedirler (Şaylan, 2002). Buna karşın modern sürecin hala devam ettiğini, aslında bu sürecin iyi bir süreç olduğunu, ancak bilimin kötüye kullanılması gibi bazı yanlışlıklarının düzeltilmesi gerektiğini savunan yazarlar da bulunmaktadır. Onlara göre modern süreci eleştirmek için illa da postmodern olmaya gerek yoktur. Modern süreç, kendi içerisindeki aksaklıkları giderme gayreti içerisinde yoluna devam etmektedir.

3.2 Tüketim Toplumunun Yükselişi

Postmodernistlere göre artık dünyaya kapitalist düzen tam olarak hakim olmuş durumdadır ve bu nedenle gelecek adına umut edecek herhangi bir şey de kalmamıştır. Nitekim kapitalist sistem, özellikle kitle iletişim araçlarıyla örtülü ve sürekli olarak kitlelere kendisinin ideolojik meşruiyetini pompalamakta, bu şekilde de kitlelerin eşitsizliklere dayalı mevcut düzeninin devamına ilişkin rızalarını kazanmakta ve hücrelerimize kadar işlemektedir. Dolayısıyla kapitalist düzen sürekli olarak gündelik yaşamda yeniden üretilmekte ve kitleler için

kendisini vazgeçilmez kılmaktadır. Ekonomik ilişkiler bağlamında ezilen bir insan bile, her gün iç içe olduğu bu kültürel yeniden üretim nedeniyle, mevcut düzenin en büyük savunucusu konumuna gelebilmektedir (Adorno, 2009).

Üretim artışı ve çeşitliliğine bağlı olarak tüketimin bir haz aracı olması, malın kendisinden çok imajının tüketilir hale gelmesi, esasen ikinci dünya savaşından sonra görülen bir vakıadır. Zaman içerisinde tüketime ilişkin bu toplumsal değişim giderek yaygınlaşmış ve içinde bulunduğumuz zaman dilimine damgasına vurmuştur. Günümüzde, özellikle temel sosyal problemlerini halletmiş batı toplumlarında sosyal statüler ve grupların belirlenmesinde üretimden çok tüketim ilişkilerinin rol oynamaktadır. Bu nedenlerle bazı yazarların içinde bulunduğumuz toplumu, tüketim toplumu olarak isimlendirdikleri görülmektedir (bkz. Baudrillard, 2000).

"Toplumumuz bir tüketim toplumudur. Ama bütün insanlar dahası bütün canlılar ezelden beri tüketmektedirler. O halde, bir tüketim toplumundan söz ettiğimizde aklımızda o toplumun bütün üyelerinin bir şeyler tükettikleri gibi sıradan bir tespitten öte şeyler vardır ki o da şudur: Nasıl atalarımızın toplumu, kuruluş aşamasındaki modern toplum, endüstriyel çağın toplumu, bir üreticiler toplumu idiyse, aynı derin ve temel anlamda bizim toplumumuzda bir tüketim toplumudur (Bauman, 2006)."

Günümüzde yaygın olan inanış çalışmanın zahmetli, tüketmenin ise zevkli olduğudur. Tüketmek iyidir ve daha fazlası her zaman daha iyidir. Bu inanış önemli ve henüz oldukça yeni bir geçmişe sahiptir. Geçmişte büyük bir insan topluluğu için en çok kaygı uyandıran problem yetersiz üretimdi. Bu kaygı 19. yüzyıldaki hızlı endüstrileşme ile büyük oranda giderildi. Ancak zamanla problemin türü değişti. ABD'de talebin, ülkenin üretim kapasitesi karşısında yetersiz kalacağı şeklinde yaygın bir korku oluşmaya başladı. Nihayet problem aşırı üretim ve bunun sonucu yetersiz tüketim haline dönüştü. Ekonomistler, iş adamları, dini liderler ve politikacılar tüketimi teşvik etmek için el birliğiyle çalıştı. Faydalılık ve doyumsuzluk gibi bazı yeni kavramların geliştirilmesiyle ve insan davranışının bazı yönlerinin (kabul görme isteği ve sahip olma ile gelen statü gibi) öne çıkartarak tüketimi teşvik ettiler. Hatta tüketime vatanseverlik gibi bir anlam yüklediler. Bu süreçteki en önemli vurgu ise "daha fazlanın her zaman daha iyi olduğu" şeklindeydi (Princen).

Zamanla bu tüketim azmettiriciliği o kadar başarılı oldu ki, artık bireylerin toplum içerisindeki yerinin oluşmasında, hangi marka ayakkabı giydiği, hangi parfümü kullandığı, hangi saati taktığı önemli bir etken haline gelmiştir. Tüm bu tükettiği malların toplam imajı, aynı zamanda bireyin toplum karşısındaki imajını, dolayısıyla grubunu ve sınıfını belirlemektedir.

Bu yeni süreçte, bireysel tüketim alışanlıkları da çok ilginç bir şekilde değişmektedir. Artık bireyler ihtiyaçlarını ellerinde olan malın imajına göre belirlemektedirler (Featherstone, 2005). Örneğin bireyin iki çift yeni aldığı ayakkabısı varsa ve bu ayakkabıların imajı tükenmiş ya da bir diğer ifade ile modası geçmişse; bu iki çift yeni ayakkabısı olan bireyde yeni bir ayakkabı (imaj) alma ihtiyacı ortaya çıkmaktadır. Dolayısıyla birey, malın kendisinden çok onun imajını satın almaktadır. Bu bağlamda günümüz toplumlarının önemli bir kısmında tüketim ilişkilerinin tüketeni bireyler iken tüketileninin ise imajlardır.

Bireylerin karşılıklı ilişkilerinde de bu duruma şahit olmak mümkündür. Birey bir başkasıyla aldığı ürün üzerine konuşurken çoğu kez aldığı malın çeşidinden önce markasını (imajını) ifade etmektedir. Artık karşılıklı konuşmalarda "yeni bir ayakkabı aldım." cümlesinden çok "yeni bir adidas aldım." cümlesini duymak daha yüksek bir ihtimaldir.

Bununla birlikte sanayileşmiş ülkelerde inanılmaz bir kullan-at kültürü gelişmiştir. Bireylerle nesneler arasındaki ilişki ve bireylerin nesnelere yükledikleri anlam da bu kültürle birlikte yeniden inşa edilmiştir. Yeni geliştirilmiş modellere sahip olmak uğruna eski Barbie bebeğini parçalayan ve severek elden çıkartan yeni kuşak kız çocuklarıyla, bir çocukluk boyu aynı bez bebeği kullanan ve büyüyünce de saklamaya devam eden büyükanneleri arasındaki farkta bu değişim açıkça görülmektedir (Toffler, 1981). Bolluk içindeki insanlar artık tüm geçmiş zamanlarda olduğu gibi başka insanlar tarafından değil; nesneler tarafından kuşatılmış durumdadır (Baudrillard, 2000).

Ayrıca günümüz insanı gerçek anlamda kullanmak için değil; bilakis haz almak için tüketmektedir. Yukarıdaki örnekte de belirttiğimiz üzere düzinelerce ayakkabısı olan bir kimse, bunlarla haz alma duygusunu tatmin edemeyince yeni bir ayakkabı alma ihtiyacı hissedebilmektedir. Dolayısıyla tüketim toplumunun bireylerinde tüketimi tetikleyen temel güdü; haz ihtiyacının tatminidir. Alış-veriş yapmak artık insanlar için bir hobi, birlikte zaman geçirilecek bir aktivite haline gelmiştir. Günümüz toplumunda üzülünce, keyiflenince ve hatta canı sıkılınca alış-veriş yapan bireyler çok normal karşılanmaktadırlar.

Bu noktadan hareketle bazı postmodernist yazarlar artık günümüzde üretim ilişkilerinin yerini tüketim ilişkilerin aldığını ileri sürerler. Kanaatimizce bu iddialar dünya popülasyonunun azınlıkta kalan bir kısmını oluşturan varsıl toplumlar için bir ölçüde doğrudur. Bu toplumların sosyal alışkanlıklarını anlamamız bakımından söz konusu tespitler son derece de önemlidir. Ancak dünyanın çoğunluğunu oluşturan toplumlar ve varsıl toplumların alt kesimindeki insanlar için hala imaj pek bir şey ifade etmemektedir. Çünkü insanlar daha temel ihtiyaçlarını bile karşılayamamışken, içlerinde imaj kaygısını da barındırmamaktadırlar. Dünyanın azınlığına bakarak, bu şekilde küresel bir portre çizmek sakıncalıdır ve asıl önemli hususları gözden

kaçırmamıza neden olabilir. Bu bağlamda üretim ilişkileri ve sınıf çatışmaları hala dünyada sosyal sınıfların oluşmasındaki en önemli kriterdir kanaatini taşımaktayız.

4   Günümüzde Tüketimin Çevresel Etkileri

Sanayi üretimi ile birlikte eskisine nazaran daha çok ve tehlikeli boyutlarda kirlenmeye başlayan gezegenimiz, özellikle ikinci dünya savaşından sonra haz için tüketmeye başlayan kitlelerin ortaya çıkmasıyla daha hızlı ve tehlikeli boyutta kirlenmeye başlamıştır. Nitekim tüketilen mal ve eşyalar çevreye atılmakta ve doğanın bunları kendi içerisinde yok etmesi beklenmektedir. Ancak tüketimin boyutları o derece artmış ve mal yapımında kullanılan malzemeler o denli çeşitlenmiştir ki; doğa atıkları hazmedemez duruma gelmiştir. Gerçekten de karlılığın ön planda olduğu kapitalist sistemde, en ucuza daha dayanaklısını imal etmek için doğayla barışık olmayan malzemelerin kullanımında herhangi bir sakınca görülmeyebilmektedir. Buna direnen işletmeler ise çoğu kez küresel rekabetçi ortamda, kepenk indirmek durumunda kalmaktadırlar.

Nüfus artışı ve teknoloji ile birlikte artış gösteren tüketim, çevresel değişikliklerdeki en önemli nedendir. Ancak günümüze dek araştırmacılar ve politikacılar konuya gereken ilgiyi göstermemiştir (Princen, 1999). Bu konunun önemini ortaya koymak bakımından sadece plastik tüketimini ele almak bile yeterlidir. Plastikler, ucuz, hafif, esnek ve kolay şekil verilebilir olduklarından modern hayatta özel bir yere sahiptirler. Söz konusu özellikleri nedeniyle günümüzde çok çeşitli ürünlerde kullanılmak üzere büyük miktarda üretilirler. Ortaya çıkışının üzerinden henüz bir yüzyıl geçmemişken, 1988'de sadece ABD'de sentetik plastik üretimi yıllık 30 milyon tondan daha fazlaydı. Birçok avantajına karşılık plastiklerin atıldıklarında uzun süre doğada varlığını sürdürmesi, onları çevre açısından önemli bir tehdit haline getirmektedir. Sentetik polimerlerin doğada bozunması için çok uzun bir süre gerekmektedir. Mikro organizmalar onları indirgemek için gerekli enzimlere sahip olmadığından bu atık plastikler, genellikle toprağa gömülerek ortadan kaldırılmaya çalışılmıştır. Ancak gömüldükleri yerde yüzyıllarca varlıklarını sürdüreceklerdir (Derraik, 2002).

Bu tür olumsuz sonuçlara rağmen, seri üretim o hale gelmiş ve maliyetler o denli ucuzlatılmıştır ki; bazı gelişmiş ülkelerde bir kez giyilen t-shirt veya çorabın yıkanması yerine atılması yoluna gidilebilmektedir. Eskimeyen eşyalar modası geçti diye rahatlıkla gözden çıkartılabilmektedir. Ancak bu tür davranışlarla, bazen inanılmaz bencil olabilen türümüzün, aynı zamanda başka canlıların da yaşadığı ve gelecek nesillerimizin de yaşayacağı bu gezegeni her geçen gün daha yaşanılmaz hale getirdiği açıktır. Maalesef sürdürülebilir kalkınma politikalarıyla gelecek nesillere gelişmiş bir toplum yanında, yaşanabilir bir gezegen bırakma planları da çoğu kez sözde kalmaktadır.

Tüketilen malların çevreye atımı sonucunda meydana gelen çevresel zararların yanında bunların üretim süreci de son derece zararlı sonuçlar doğurmaktadır. Şöyle ki; üretim sürecinde kullanılan enerjiye bağlı olarak doğaya salınan zararlı gazlar nedeniyle atmosferimiz giderek daha çok kirlenmekte, canlıları zararlı ışınlardan koruyan ozon tabakası gibi koruyucu katmanlar giderek zayıflamaktadır. Bunun yanında büyük hacimde sanayi üretimi yapan ülke sayısındaki artışa bağlı olarak enerjiye olan talep artmakta, bu talebi karşılamaya yönelik olarak da nükleer enerji gibi çevresel riskleri yüksek enerji türlerine doğru bir yönelim olmaktadır. Nitekim tüketim toplumu tüketmek için daha çok yeni telefon, daha çok yeni araba ve daha çok kıyafet beklemektedir.

Bu tür çevresel zararlarının yanında mevcut sistem de insanları daha çok tüketmeye itmektedir. Değişik pazarlama teknikleri sayesinde, sürekli insanların yeni bir şeylere ihtiyacı olduğu onlara empoze edilmekte, reklam vs. gibi araçlarla sürekli bir şeyler alma arzusu beslenmektedir. Postmodern insan artık ancak tükettiği zaman var olmanın bir anlamı olduğunu düşünmeye başlamıştır. Tüketmeden yaşamak, tüketemiyor olmak bir mutsuzluk nedenidir. Çoğu kimse tüketmeden yaşamanın çok anlamlı olmadığı kanaatini taşımaktadır. Çünkü tüketemeyince haz almamakta, haz almayınca da yaşamdan soğumaktadır.

Özellikle teknolojik ürünler bakımından yeni alınan son teknoloji bir alet bir-iki yıl sonra değersiz, imajı tükenmiş bir elektronik çöpe dönüşebilmektedir. Aslında onunla da ihtiyaçlarını karşılayan birçok insan her gün yeniden üretilen tüketim kültürü nedeniyle "hala 3 megapiksel kameralı telefon mu kullanıyorsun?" ya da "şu LCD'nin yerine bir LED veya akıllı TV almadın" gibi toplumsal baskı altında daha çok tüketmeye güdülenmektedirler. Bu tüketme kültürü nedeniyle giderek daha çok tüketilmekte, buna bağlı olarak daha çok talep edilmekte, daha çok üretilmekte ve çevre giderek daha çok kirlenmektedir.

5   Sonuç

Modern dönemle birlikte temelleri atılan tüketim toplumu, ikinci dünya savaşı sonrasında postmodern dönem olarak da ifade edilen süreçte giderek daha çok belirginleşmiş ve içinde bulunduğumuz döneme damga vuran bir olgu haline gelmiştir. Bu dönemde sosyal sınıflar bile tüketim alışkanlıklarına göre oluşmaya başlamıştır. Artık tüketim bir yaşam tarzı ve kişilerin kendilerini anlamlandırma biçimi olmuştur. Tüketilen ise nesnelerden çok onların imajlarıdır. Bir malın tüketilmesi ve atılması eskimesine değil; bilakis imajının bitmesine yani modasının geçmesine bağlı hale gelmiştir. Tüketimin temel gayesi ise artık haz ihtiyacını tatminidir. O nedenle alış-veriş arkadaşlarla yapılan ve haz veren sosyal bir faaliyete, can sıkıntısını giderme veya eğlenme aracına dönüşmüştür.

Ancak bu kadar çok tüketim ve buna bağlı olarak yapılan üretim her geçen gün gezegenimizi daha çok kirletmektedir. Haz alma odaklı olarak sürekli ve giderek daha çok tüketen türümüzün çoğu üyesi ise, maalesef bu durumun tehlikeliliğini tam olarak idrak edebilmiş değildir.

Günümüzde dünyaya hakim olan tam rekabetçi kapitalist sistemde üretim yapılırken ön planda tutulan husus karlılıktır. Bu nedenle üretimin yapıldığı ham maddenin veya ürün tüketildikten sonra ortaya çıkacak atığın ya da üretimde kullanılan enerji araçlarının çevreye ne kadar zarar verebileceğinden çok, ne kadar az maliyetli oldukları göz önünde bulundurulmaktadır.

Ancak görünen odur ki, mevcut durum bu haliyle uzun süre gitmeyecektir. Görece yaşlı dünyamız artık insanlığın çevreye verdiği zararları tolere edemez hale gelmiştir. Dünya dışında yaşayabileceğimiz ve çocuklarımıza bırakabileceğimiz ikinci bir gezegen ise bulunmamaktadır. Bu nedenle artık karlılıktan önce çevresel sonuçların göz önünde tutulduğu bir üretim tarzına geçilmeli, çevreye en az oranda zarar verecek ciddi sürdürülebilir kalkınma politikaları üretilmeli ve bu konularda uluslararası toplum birlikte hareket etmelidir. Nitekim bu husus devletlerin tek başlarına başa çıkabilecekleri bir problem değildir. Çevreyi kirleten devletin yanında ondan binlerce kilometre uzakta bulunan başkaca devletlerin insanları da bu kirlilikten etkilenmektedir. Çevre kirliliği etkileri tüm dünyada görülen küresel bir problemdir. O nedenle gelecekte de yaşanabilir bir gezegenimizin olması için uluslararası toplumun birlikte hareket etmesi bir zorunluluk olarak karşımıza çıkmaktadır.

Türkiye'de Kayıtdışı İstihdam Konusu Üzerine Teorik ve Ampirik Bir Çalışma

A Study on Informal Employment in Turkey from Theorical and Emprical Perspectives

Eren Gül Aydın (Beykent University, Turkey)

Abstract

This paper elaborates both theorical and empirical evolution of the informal employment as an part of the informal economy in Turkey. First of all, economic dualism and migration is emphasized as the main reasons of informal employment and examine other reasons of the informal employment such as social, fiscal and economic.Later of this study, an econometric model is employed by using Multiple Linear Regression Analysis. Informal employment is used as independent variables of industrial production (IPI). The first result of econometrics model, informal employment was seen statistically significant determinator of IPI. Secondly, some production and employment variables and Gross National Product are used for estimating decisive factor of the informal employment in Turkey between 2005 and 2012. Results show that GDP and all other variables used in regression positively corelated to informal employment except import and export in Turkey.

1 Giriş

Kayıtdışı istihdam, kayıtdışı ekonominin iş gücü piyasasına yansımasıdır. Kayıt dışı ekonomi, ekonomiyi düzenleyen yasalara ve yönetmeliklere aykırı olarak gerçekleştirilen, belgeye bağlanmamış, kanuni defterlere işlenmemiş tüm ekonomik faaliyetler olarak tanımlanmaktadır (Altuğ, 1999).Kayıt dışı istihdam faaliyeti ise çalışanların ilgili kamu kurum ve kuruluşlarına kayıtlı olmaması ya da eksik bildirilmesi anlamındadır (Bulutay,Taşçı,2002). Kayıtdışı istihdam ile kayıtdışı sektör kavramları çoğu zaman karıştırılmakta veya birbiri yerine kullanılmaktatır.Ancak kayıtdışı sektör ve kayıtlı sektör çalışan sektörün özelliğine işaret ederken,öte yandan kayıt dışı istihdam faaliyeti bir sosyal güvenlik kuruluşuna kayıtlı olup olmamayı ifade etmektedir (Bulutay ve Taşçı,2002).Yani kişi kayıtdışı sektörde kayıtlı istihdam edilebilir, kayıtlı sektörde de kayıtdışı olarak istihdam edilebilir.Bir başka deyişle kayıt dışı istidamın çalışılan sektörün özelliği ile ilgisi yoktur.

Günümüzde istihdam sosyal ve ekonomik yapının temel sorunlarından biridir. Ülkelerin gelişmişlik düzeyleri, istihdam olanakları ve istihdamın yapısı arasında sıkı bir bağ olduğu bilinmektedir. Gelişmekte olan ülkelerde kayıtdışı istihdam ekonomik yaşamın büyük ve önemli bir parçasıdır. Kayıtdışı istihdam az gelişmiş ve gelişmekte olan ülkelerde gelişmiş ülkelere oranla daha fazla olmakla beraber, gelişmiş ülkeler içinde önemli bir sorun olmaya devam etmektedir. Türkiye'de kayıtdışı istihdamın %40'ların üzerinde, istihdam oranının neredeyse yarısına yakın olması kayıtdışı istihdamın Türkiye ekonomisinin gelişmesinin önünde bir engel olarak durduğuna ve çözülmesi gereken öncelikli sorunlardan biri olduğuna işaret etmektedir

Kayıtdışı istihdamın Türkiye gibi gelişmekte olan ülkelerde yüksek olmasının temel ekonomik,sosyal ve mali nedenleri;nüfus artışı, iç göç,vergi sistemindeki aksaklıklar,gelir dağılımındaki adaletsizlikler, işsizlik,enflasyon ve bu ekonomilerin yapısal değişimleridir.

Türkiye'de 1980 sonrası serbest piyasa döneminde ekonomik büyüme ve gelişme hareketiyle birlikte kayıt dışı istihdam,genişleyen iş gücü piyasasıyla önemli oranda büyümeye başlamıştır.Türkiye'de kayıt dışı işgücü piyasasının büyümesinde talep ve arz yönü faktörler eş zamanlı olarak etki etmiştir.İş gücü talebi tarafında, ucuz iş gücü istihdamını gerektiren ve kayıtdışı istihdam oranını arttıran etken, küresel pazarlara entegrasyonu artan Türkiye'nin küresel fiyatlarla rekabet edebilmek için, ticareti yapılan mallarda maliyetleri düşürmek zorunda kalmasıdır.İş gücü arzının kayıtdışı istihdamı artırıcı etkisinin nedeni ise özelleştirme ve kamu sektörü istihdamının azalan payı ve kırdan kente göçün artmasının kritik koşullar altında çalışmaya hazır bir iş gücü sağlamış olmasıdır.

Özellikle ekonomik kriz dönemlerinde artış gösterdiğini söyleyebileceğimiz kayıt dışı istihdam faliyeti olağan dışı ve geçici bir istihdam türü olarak belirli bir zaman diliminde normal karşılanabilir. Ancak Türkiye'ninde içinde bulunduğu gelişmekte olan ülkeler için bu geçici olması beklenen durum yapısal bir sorun haline dönüşmüştür. Kayıt dışı istihdam faaliyetlerinin kayıt altına alınması temel finans kaynağı vergiler olan gelişmekte olan ülkeler için çözülmesi gereken önemli bir sorundur ve bu sorunun çözümü kuşkusuz, nedenlerini ortaya çıkaran sosyal ve ekonomik etkenleri engelleyecek önlemlerin alınmasına bağlıdır.

Bu çalışmada, kayıtdışı istihdama genel bir bakış yapıldıktan sonra, Türkiye'de 2005-2012 yılları arasında kayıtdışı istihdamı etkileyen işsizlik, enflasyon, GSMH, verimlilik, üretim ve istihdam faktörleriyle çoklu regresyon analizi kullanılarak yapılan ekonometrik bir çalışmaya yer verilecektir.

2 Kayıtdışı Ekonomi ve Kayıtdışı İstihdama Genel Bir Bakış

Kayıtdışı ekonomi terimi bir çok farklı şekilde kullanılmıştır.Bunlardan bazıları "düzensiz ekonomi "(Ferman ve Ferman,1973), "gizli ekonomi"(Gutmann,1977), "yeraltı ekonomisi "(Simaon ve Witte,1982), "kara ekonomi" (Dilnot ve Moris,1981), "gölge ekonomi" (Frey vd.,1982), "kayıtdışı ekonomi" (McCrohan ve Smith,1986)'dir (Losby,2002). Kayıtdışı ekonomi sözüyle anlatılmak istenen mevcut faaliyetin gizliliğiyse gizli ekonomi, gölge ekonomi, saklı ekonomi, yer altı ekonomisi; faaliyetin yasa dışılığı belirtilmek isteniyorsa kara ekonomi, gri ekonomi, illegal ekonomi; faaliyetin devletin bilgisi dışında olması irdeleniyorsa gayri resmi ekonomi, enformel ekonomi; son olarak da faaliyetin önemsiz olarak GSMH kayıtlarına alınmaması vurgulanıyorsa da marjinal ekonomi, ikincil ekonomi şeklinde adlandırılır (Azaklı,2009). Kayıtdışı ekonomi ile ilgili ilk çalışma Cagan tarafından yapılmıştır. Cagan 2. Dünya Savaşı sırasında beyan edilmeyen gelirleri parasal araçlar kullanma yoluyla tahmin etmeye çalışmıştır (Cagan,1958).

Kayıtdışı istihdam kavramı ise ilk olarak 1970 yılında ILO'nun düzenlediği Dünya İstihdam Programı (World Employment program) kapsamında ki Kenya Raporunda "enformal sektör" adıyla yer almıştır.Bu raporda işçiler ve ekonomik birimler tarafından gerçekleştirilen tüm ekonomik faaliyetlerin resmi düzenlemeler kapsamında olmadığı,yada resmi düzenlemelerin tüm ekonomik faaliyetleri kayıt alıtna alma konusunda yetersiz olduğu belirtilmiştir.Kayıtdışı faaliyetlerin kayıt altına alınamayışının nedenlerine dair bir ayrımda yapılmıştır; bu faliyetler ya yasa da belirtilmediği için kayıt altına alınamamakda ya da yasada yaptırımı olduğu halde, yasaların uygulamasındaki zorluklar ve yüksek maliyetlerin bu yasaların uygulanmasına engel olması nedeniyle kayıt altına alınamamakta olduğu belirtilmiştir (Bulutay,Taşçı,2002).

1993 yılında düzenelenen Onbeşinci Uluslararası İş Gücü İstatistikleri Konferansında kayıtdışı çalışma satatüsü ücretsiz aile işçileri,serbest meslek çalışanları ve küçük ölçekli işletmeler (belirli bir sayının altında işçi çalıştıran) kayıtdışı ekonominin bir parçası olarak olarak kategorize edilmiştir(Aydn,vd.,2013). Kayıt dışı istihdamın değişik biçimleri bulunmaktadır. Bunlar genel olarak sigortalı çalıştırıldığı halde sosyal güvenlik kuruluşlarına bildirilmeyenler, sigortalı çalıştırıldığı halde sosyal güvenlik kuruluşlarına eksik veya geç bildirilenler, aldıkları ücretten daha az bildirilenler, emekli olup da çalışanlar, yabancı ve çocuk işçilerdir. Buradan hareketle kayıtdışı istihdam kendi adına ve bağımsız ya da bir işverene bağlı çalışanların çalışmalarının veya elde ettikleri ücret ve kazançların, ilgili kamu kurum ve kuruluşlarına hiç bildirilmemesi ya da gün sayısı veya ücret tutarı olarak eksik bildirilmesi olarak ifade edilebilir (Yereli ve Karadeniz, 2004: 180).

Kayıtdışı istihdam genel anlamda istihdam faaliyetlerinin(üretim,hizmet) resmi belgelere dayandırılmaması ve böylece resmi kayıtlara girmemesi,bunun sonucunda vergisel ve zorunlu yasal yükümlülükleri de dahil olmak üzere tüm yükülülüklerin,mali ve sosyal güvenlik kurumlarının denetim alanı dışına çıkarılmasıdır (Güloğlu,2005). Bu tanım ile birlikte kayıtdışı istihdama yönelik tanımların ortak yönü bir sosyal güvenlik kurumuna kayıtlı olmamak ve bunun sonuncunda oluşan vergi ödememe durumu olarak karşımıza çıkmaktadır.

Göç ve kentleşmenin temel nedeni olduğu kayıtdışı istihdamın bir ekonomi için yapısal bir sorun haline dönüşmesinin mali, ekonomik ve sosyal nedenleri vardır (Yılmaz ,Öğünç ,2000).

Literatürde kayıtdışı istihdamın nedenlerini anlamaya yönelik bir çok teorik ve ampirik çalışma vardır.Bu çalışmalardan bir kısmı vergi gelirleri ve kayıtdışı istihdamın ilişkisi üzerinedir.Teorik çalışmaların bir çoğu (Rauch,1991 ve Loayza,1996) vergiler ve kayıtdışı istihdam arasında pozitif ilişkiye işaret etmektedir (Elgin,2010).Bu teoriye göre yüksek vergi oranları yüksek kayıtdışı istihdam eğilimine neden olmaktadır.Teorinin aksine bazı ekonometrik çalışmalar (Torgler and Schneider, 2007) vergiler ile kayıtdışı istihdam arasında negatif ilişkiye işaret etmektedir (Elgin,2010).

Saraçoğlu(2007), informal,formal ve tarım sektörü olarak tanımladığı üç sektörlü büyüme modeli ile yaptığı çalışmada,gelir artışıyla birlikte hane halklarının kayıtlı sektördeki malları tercih edeceğini ve bununla birlikte ekonominin büyüyeceğini,ekonomi büyürken artan gelirle beraber kayıt dışı sektördeki malların talebinin azalmasından dolayı kayıtdışılığında zamanla azalacağını savunmuştur.Ayrıca gelir vergisi oranlarının düşürülerek kayıt dışılığın azaltılacağını öne sürmüştür.Ekonomik büyümenin kişi başı gelir üzerinde olumlu etkileri varsa bu durumun geçerliliğinden bahsetmek mümkün olabilir.Ayrıca istihdamı kayıt altına almanın amacı vergi gelirlerini artırmaktır fakat kayıtdışılığın azaltılması amacıyla gelir vergisi oranlarının çok düşük seyretmesi de vergi gelirlerini düşürebilir.Bu nedenle vergi oranları ne kayıtdışılığa teşvik edici düzeyde yüksek olmalı ne de vergi gelirlerini olumsuz etkileyecek kadar düşük olmalıdır.

Göç ve informal istihdam arasında ki bağlantıyı ortaya koyan bir model çalışmasında (Bulutay ve Taşçı,2002) öncelikle Türkiye'de informal istihdamın payının başlıca belirleyicileri olarak, gelir değişkenleri,nüfus değişkenleri ve istihdam değişkenleri tanımlanmıştır.Kurulan ekononometrik modellerde değişkenler öncelikle göçe neden olmakta ve bu göçün sonucunda da kayıtlı veya kayıtdışı istihdam artmaktadır.Bu çalışmanın sonucunda istihdam olanaklarının genişlemesi ve nüfus artışının kayıtdışı istihdamı artırdığı,GSMH daki gelişmenin ise kamu istihdamını ve kayıtlı istihdamı artırabileceği, bu nedenle GSMH'nın kayıtdışı istihdam ile ilşkisinin negatif olduğu öngörüsü göze çarpmakadır.

3 Kayıtdışı İsthdamın Nedenleri

Özellikle az gelişmiş ve gelişmekte olan ülkelerde bir çok insan için kayıtdışı çalışma bir zorunluluk haline gelmiştir.Yüksek enflasyon ve işsizlik sorunuyla karşı karşıya kalan insanlar ya daha az ücretle güvencesiz çalışmak zorunda kalmakta yada çalıştıkları işe ek olarak bir başka iş yapmaktadırlar ve tüm bunlar kayıtdışı istihdamı artırmaktadır.Bundan dolayıda istihdamın kayıt altına alınmasıiçin yapılan çalışmalar ancak nedenlerinin çözüme ulaştırılması ile mümkün olacaktır.(Güloğlu,2005).

3.1 Sosyal Nedenler
Ekonomik Düalizm,Göç ve Kayıtdışı İstihdam İlişkisi Üzerine

Sosyal nedenlerin başında nüfus artışıyla birlikte artan işsizlik,göç ve kentleşme gelmektedir.Kayıtdışı istihdamın sosyal nedenlerinin incelenmesine sanayi devriminden sonra değişen, ikilileşen sosyal ve ekonomik yapının analizi ile başlamakta ve öncelikle emek arzını artıran aynı zamanda emeği işsiz bırakan bir oluşumun temelinde yatan sosyolojik nedenleri görebilmekte fayda var.Bu noktada Sanayi devrimi sürecine gitmek gerekmektedir.Sanayi Devrimi öncesinde genellikle tarımın egemen olduğu ekonomide İngiltere'de başlayan sanayileşme ile birlikte üretimde makineleşme süreci başlamıştır.Makineleşme verimliliği artırmış,emek gücü işsizlikle tanışmıştır.Artan nüfusla birlikte emek arzı fazlalığı kentlere göç etmeye başlamış,düşük ücretlerle,güvencesiz olarak çalışılan bir sektörü oluşturmuşlardır.

Sanayi devrimi yeni bir ekonomik sistem doğurmuş(piyasa sistemi) ve geleneksel olarak üretim,bölüşüm ve dağıtım yapan ülkeler,İngiltere ye göre ekonomik sistemlerini değiştirmek çabasına girmek zorunda kalmışlarıdır.Bu milat niteliğinde ki devrimin geleneksel toplumlarda ekonomik sistemin sosyal yaşamı değişime zorlaması,diğer bir deyişle ekonomik sistemin sosyal yaşama yerleşmesi (Polanyi,1944) gerekliliği yeni piyasa yapısının işleyişi için kuraldı.Bu durum geleneksel toplumlarda kökten bir değişimin başlaması anlamına gelmekteydi.Sanayileşmenin gerisindeki toplumlar yeni ekonomik sisteme ayak uydurmaya çalışmış ve bu sistemin etkileri hem ekonomik hem sosyal anlamda bir dönüşüm süreci yaratmıştır. Ekonominin değişimi ile aynı zamanda toplumların geleneklere bağlı sosyal yaşamları da, kültürleri de değişime uğramıştır.Toplumsallıktan bireyciliğe,ortak mülkiyetten özel mülkiyete ve özgürlüğe doğru bir değişim söz konusuydu,ancak işsizlik sorunu(Köksel,2011) ve üretim araçlarının belirli bir kesim elinde toplanmasıyla toplumsal sınıflar ortaya çıkmış,bir yan kötü ve uzun çalışma şartlarında yaşarken diğer tarafta sürekli zengişleşen bir kesim varlığını sürdürmüştür.Dolayısıyla toplumlarda dual(ikili) bir ekonomik yapı oluşmuştur.Düalizm kavram olarak birbirine zıt iki farklı olgunun aynı anda bulunması durumudur.Ekonomik alanda bir yanda sanayi/modern sektör diğer yanda geleneksel/tarım sektörünün varlığını sürdürmesi ile artan ikilik az gelişmiş ülkelerde ikili ekonomik yapının yani ekonomik dualizmin oluşmasına neden olmuştur.Bu durum hem az gelişmiş ülkelerde gelir dağılımı eşitsizliğini artırmış hem de ülkeler arası gelir dağılımı eşitsizliğini büyütmüştür.

Bourguignon ve Morrisson (1994), 35 az gelişmiş ülke arasında 1970 yılı kişi başı GSMH,eğitim seviyesi,gini katsayısı,tarım ve sanayi iş gücü verimliliği değişkenlerini kullanarak yaptıkları tahminlerin sonuncunda gelir dağılımı eşitsizliği ile kalkınma arasındaki güçlü bağın temelinde ki en etkili faktörün ekonomik düalizmin genişlemesinin bulunduğunu vurgulamıştır.

Az gelişmiş ve gelişmekte olan ülkelerde hem modern hem geleneksel yaşam tarzı ve üretim tarzı halen bir aradadır. Dolayısıyla geri kalmış ülkelerin ekonomileri de tarımsal/geleneksel ve sanayi/modern olmak üzere halen ikili yapıdadır.Genelde kırsal kesim tarımsal/geleneksel üretime devam ederken büyük kentler sanayi/modern üretimin toplandığı yerler olmaktadır.

Sosyologlar ve antropologlar tarafından 1950 li yıllarda az gelişmiş ülkeler de ki bu ikili yapıya dikkat çekmiş,sonraları ekonomistlerde dualizm ile ilgilenmeye başlamışlardır.

1954 yılında Arthur Lewis ekonomik kalkınma modeli olarak "ikili model"i geliştirmitir.Kırsal kesimdeki sınırsız iş gücü arzının kentlerde ki modern sektör tarafından istihdam edilmesi ve bu yolla az gelişmiş ülkelerde modern sektörün gelişimini öngören bu model için Arthur Lewis analizinin kapitalist sınıfın ortaya çıkışının yarattığı sosyolojik probleme dayandığını söyler(Kirkpatric,Barrientos,2004).İş gücü fazlasının kayıtdışı sektöre kaymasının merkezindeki hem sosyal hem ekonomik bir olgu olan göç hareketlerinin iş gücü piyasalarına yansıması,sanayinin gelişimi için gerekli iş gücü yarattığından olumlu görünebilir ancak öte yandan kayıtdışı istihdam göçün negatif dışallığı olarak karşımza çıkmaktadır.

Çocuk İş Gücü

Geleneksel aile yapılarında çocukların çalışması,onların hayata hazırlanması,ayrı bir eğitim alması anlamına geldiğinden aileler tarafından desteklenmekteydi.Ne var ki günümüzde çocuk iş gücü yaygınlaşmış önüne geçilmesi gereken bir sorun haline gelmiştir.Özellikle az gelişmiş ve gelişmekte olan ülkeler üretim sürecinde çocuk iş gücünü ucuz iş gücü,maliyet düşürücü bir unsur olarak değerlendirdiğinden çocuk emeği sömürülmektedir.Çocuklar yetişkinler yerine istihdam edilmekte,aynı çalışma saaterinde daha düşük ücretle emekleri sömürülmektedir.Dolayısıyla çocuk istihdamı artık iş gücü piyaasını etkilemektedir.

Türkiye'de işteki duruma göre; çalışan çocukların %52,6'sı (470 bin kişi) ücretli veya yevmiyeli, %46,2'si (413 bin kişi) ise ücretsiz aile işçisidir. Zorunlu eğitim süresinin uzatılması çocukların iş yaşamından geri çekilmelerini sağlayabilecek bir politika olarak uygulanabilir.Öte yandan mesleki eğitimin yaygınlaştırılması staj adı altında çocuk iş gücünün kayıt dışı istihdam edilmesinin önünü açmaktadır.Çocuk işgücü istihdamının önüne geçecek düzenlemeler başta belirttiğimiz gibi zorunlu ve kesintisiz eğitim süresinin uzatılması ve aynı zamanda da yeni yasalarla çocuk iş gücü istihdamının engellenmesidir.

Kadın İş Gücü

Özellikle istihdam alanında, kadınların erkeklere kıyasla çok daha dezavantajlı bir konumda oldukları, istatistiki sonuçlara bakıldığında da görülmektedir. Ülkemizdeki yasalarda gerçekleştirilen olumlu değişikliklere rağmen kadınların niteliklerinin iş piyasasının gerektirdiği niteliklere uyumlu olmaması ve işgücü piyasasına girişi sağlayacak mekanizmaların yetersizliği nedeniyle kadının işgücüne katılımı hem mutlak olarak hem de erkeklere oranla düşük orandadır.

Kayıt dışı çalışan kadınlar, bütün diğer kayıt dışında çalışanlar gibi sosyal güvenlik hukukunun kendilerine sağlayacağı güvenceden yoksun kalmaktadırlar. Kayıt dışında çalışan kadınların çalışma süreleri uzundur.Ücretleri, özellikle parça başı ücret uygulamasının olduğu tekstil sektöründe düşüktür. Kayıt dışında çalışmalarına bağlı olarak iş kazalarına karşı bir korumaları da bulunmamaktadır.

Türkiye'de kayıt dışı kadın istihdamı giderek artmaktadır.2012 ortalaması %40.9 olan kayıt dışı kadın istihdamı 2013 Ocak ve Şubat alarında %41.1 olarak açıklanmıştır.(Tüik,2013).

Kaçak İşçiler

Uyruğunda bulunmadığı bir ülkede çalışan işçilere yabancı işçi denir.Türkiye de işsizlik iş gücü piyasası arz ve talebindeki dengesizlik nedeniyle zaten büyük bir sorunken, kaçak işçilerde Türkiye iş gücü piyasasına bir başka sorun eklemektedir(Güloğlu,2005).Kaçak işçiler girdikleri ülkede iş gücü arzını artıdıkları için ücretleri düşürücü etki yaparlar.Göç veren ülkede ise bunun tam tersi gerçekleşir ve azalan iş gücü arzı nedeniyle ücretler yükselir. Ücretlerde ki yükseliş maliyetleri artıracağından göç veren ülkede toplam arz düşer, fiyatlar yükselir,tüketim azalır ve ekonomik büyüme olumsuz etkilenir.Kaçak işçilerin engellenmesi yine yasalarla,yeni yaptırımlarla mümkün olabilir.

3.2 Mali ve Ekonomik Nedenler

Vergi sistemi

Türk vergi sisteminin sürekli yenilenen yasalar ve kararnameler nedeniyle oluşan değişken yapısı, takibini zorlaştırdığından bireyleri vergi ödememeye iten nedenlerden biri olmaktadır.Dolayısıyla vergi ve vergilendirmenin ekonomik ve yasal yanı gibi sosyolojik ve psikolojik yanıda göz önüne bulundurulmalıdır (Altuğ vd.,2010).Bu bağlamda toplumun vergi ahlakı ve ödenen vergilerin nereye harcandığının da bilinmesi,yani hükümet harcamalarındaki şeffaflık da bireylerin kayıtdışı faaliyet gösterme kararlarında önem teşkil etmektedir.Vergi ahlakı bir toplumun kültür seviyesi ile de doğru orantılıdır(Güloğlu,2005). Türkiye'de yüksek gelir vergisi oranları ve vergi adaletsizliği kişileri kayıtdışı faaliyetlere yönlendirmektedir(Saraçoğlu,2008).Sonuç olarak vergi sisteminin anlaşılabilir ve maliye politikalarının şeffaf olması, kayıtdışı faaliyet eğilimini engellemede vergi adaleti kadar önemlidir.

Öte yandan kayıtdışı çalışmayı engellemek amacıyla devletin uyguladığı kimi politikalar kayıtdışılığı artırabilir.Bu" ters etki" emeklilik yaşının düşürülmesi veya çalışma saatlerinin azaltılması sonucunda ortaya çıkabilir(Yılmaz vd.,2000).Erken emeklilik kişileri sigortasız bir başka işte çalışma fırsatı sağlamaktayken öte yandan çalışma saatlerinin düşürülmesi de yine ikinci bir işte kayıtdışı çalışmayı özendirici olabilir.Özetle bu tür politikalar çalışanların çalışma ve boş zaman tercihlerini etkilediğinden uygulamaya koyulmadan önce iyi analiz edilmelidir.

Enflasyon ve Gelir Dağılımı Eşitsizliği

Türkiye'de kayıtdışı istihdamın genişlemesinin en önemli nedenlerinden biri enflasyondur.Enflasyon nedeniyle gelirlerinde aşınma meydana gelen düşük ve sabit gelirli tüketiciler bu kayıplarını gidermek, enflasyon nedeni ile girdi maliyetlerinde artışlar meydana gelen üreticiler de, maliyetlerini azaltmak amacıyla kayıt dışı istihdama yönelmektedirler. Bu nedenle enflasyon rakamlarının yüksek olduğu ülkelerde kayıt dışı ekonomik faaliyetlerin arttığı gözlemlenmektedir.Ekonomik krizlerin yaşandığı dönemlerde, işsiz kitleler kayıtlı ekonomide bulamadıkları istihdam imkanlarını kayıt dışı ekonomi alanlarında aramaktadırlar. İşletmeler de krizin olumsuz etkilerini azaltmak için üretimlerini kayıt dışı alanlarda yaparak ve kayıt dışı işçi istihdam ederek maliyetlerini azaltmaya çalışmaktadırlar.Öte yandan gelir dağılımında giderek artan eşitsizlik yoksulluğu artırmakta ve yoksul insanlar da düşük ücretle ve güvencesiz de olsa bir işte çalışmaya mecbur kalmaktadırlar.Bu da kayıt dışı istihdamı artırmaktadır.Bu anlamda kayıtdışı istihdamla mücadele aslında bir yanıyla gelir dağılımı eşitsizliği ve yoksullukla mücadele olmalıdır.Çünkü ancak bunlara çözüm üretmekle kayıtdışı istihdamın önüne geçilebilir.

4 Türkiye'de Kayıtdışı İstihdam'ın Belirleyici Faktörlerinin Çoklu Regresyon Modeli ile Analizi

4.1 Modelin Metodolojisi

Modeller için seçilen değişkenler kayıtdışı istihdamın gelişimi üzerinde önemli etkilere sahip istihdam,üretim ve işsizlik faktörleridir.Bu faktörler ile kayıtdışı istihdam ilişkisinin incelenmesinde Çoklu Regresyon Analizi kullanılmıştır.

Veri setleri Türkiye İstatistik Kurumu(TÜİK) web sitesi kütüphanesi ve Türkiye Cumhuriyeti Merkez Bankası Elektronik Veri Dağıtım Sisteminden (EVDS) elde edilmiştir. Bu çalışmada farklı değişkenlere ait iki farklı veri seti kullanılmıştır. Kayıtdışı istihdamın belirleyiciliği üzerinde önemli etkiye sahip olduğu düşünülen değişkenlerin tümünün TÜİK tarafından aynı dönemler için yayınlanmamasından dolayı,çeyreklik veriler ve aylık verilerle ayrı regresyonlar yapılmıştırİlk veri setinin örneklem aralığı 01.2006-12.2012 tarihlerini kapsayan aylık zaman serisinden oluşmaktadır.İkinci veri setinin örneklem aralığı 2005 ilk çeyrek-2012 son çeyrek arasını kapsayan çeyreklik zaman serisinden oluşmaktadır.Ayrıca 2005 öncesi verilerin, TÜİK tarafından nüfus projeksiyonuna göre güncellenmemesi nedeniyle önceki dönemler ile karşılaştırma yapılamayacağından,yapıldığı taktirde regresyon sonuçlarının yanıltıcı olacağından daha eski tarihli veriler kullanılamamıştır.

Çalışmada verilerin ekonometrik analizinde Eviews 7 istatistik paket programı kullanılmıştır.Veriler ve değişkenler kısıtlı olduğu halde modellerin tahmininden sonra Eviews ile görüntülenen tahmin ve gerçek-tahmin uyum grafiklerinde,modeller ile tahmin edilenlerin birbiri ile uyumu gözlenmiştir.

Aylık veri setleri ile yapılan regresyonlarda kayıtdışı istihdam bağımsız değişken olup,sanayi üretim endeksi(SÜE) üzerindeki etkisi tahmin edilmeye çalışılmıştır.SÜE nin aylık verisine ulaşılabildiğinden,GSMH ile birlikte hareket etmesinden ve GSMH nın en önemli göstergesi olmasından dolayı aylık veride GSMH yerine SÜE kullanılmıştır.Çeyreklik verilerle yapılan regresyonlarda ise kayıtdışı istihdam bağımlı değişkendir ve kayıt dışı istidamı etkileyen bazı faktörler tahmin edilmeye çalışılmıştır.

İlk olarak değişkenlere ait zaman serilerinin logaritmaları alınmış ve logaritmik serilere Dickey-Fuller birim kök(durağanlık) testleri yapılmıştır.Logaritmik seriler birim kök içerdiğinden,serileri mevsimsel etkilerden kurtarmak için serilerin birinci farkları alınmış ve seriler tekrar birim kök testinden geçirilmiştir.Birinci farkları alınmış logaritmik serilerin birim kök içermediği tespit edildiğinden yani seriler artık durağan olduğundan regresyonda kullanılmışlardır. Serilerin birim kök içermemesi uzun dönem dengesinin sağlandığı,dengeden sapmaların durağan olduğu anlamına gelmektedir. Durağanlaştırılmış seriler kullanıldığı için de sahte regresyon problemi ortadan kalkmaktadır.Modeller tahmin edildikten sonra otokorelasyon kontrol edilmiş,sıçrama olan dönemler varsa bunlar modele eklenerek model yeniden tahmin edilmiştir.Model tahminini takiben hata terimlerinin normal dağılıma sahip olup olmadığını kontrol etmek için Histogram ve Normallik testi yapılmış ve test sonucunda tüm modellerin hata terimlerinin normal dağıldığı gözlenmiştir.Modellerin değişken varyans sorunu olup olmadığı Heteroskedasticity(değişken varyans) ve F testi yapılarak kontrol edilmiş,test sonuçlarında hiç bir modelde değişken varyans sorununa rastlanmamıştır.Son olarak önemli değişkenlerin hata terimleri içinde olup olmadığını kontrol etmek için Ramsey Reset testi yapılmış tanılama hatası kontrol edilmiştir,modellerde tanılma hatasına rastlanmamıştır.Ayrıca kukla değişken kullanılan modelde(tablo-1-model 4) tahmininden sonra 2008 sorası için Chow Kırılma Testi yapılmış, kırılmaya rastlanmamıştır.

Aylık veriler sanayi üretim endeksi(SÜE), kayıtdışı istihdam,Tüketici Fiyat Endeksi(TÜFE) ve dolaylı vergi gelirleridir.Çeyreklik veriler;Gayrı Safi Milli Hasıla(GSMH), kayıtdışı istihdam,toplam istihdam, toplam tarım üretimi ,tekstil üretimi,toplam imalat üretimi , kişi başı imalat üretimi(verimlilik).

4.2 Bulgular ve Yorumlar

Model 1, tahmin edildikten sonra $ß_2$ katsayısı istatistiki olarak anlamsız bulunmuş,otokorelasyon kontrolünde de,1.gecikmede de sıçrama görülmüştür.1.gecikme modele eklenerek model-2 tahmin edilmiştir.Model-2 de $ß_2$ katsayısı istatistiki olarak anlamlı hale gelmiş ve R^2 den anlaşılacağı üzere modelde iyileşme olmuştur.Ancak 10 ve 12. gecikmelerde sıçramalar görülmüş,bunların olmasının ocak ayı etkisine bağlı olduğu düşünülmüş ve grcikmeler modele eklenerek model 3 tahmin edilmiştir.Otokorelasyon kontrolünde görülen 11.dönemde oluşan sıçrama modele eklenerek ve ayrıca kriz kukla değişkeni ile sanayi üretimi üzerinde 2007 krizinin etkilerinin modele eklenmesi amaçlanarak model 4 tahmin edilmiştir. Heteroskedasticity ARCH testi yapılmış(F istatistik olasılığı=0.44>0.05),modelin değişken varyans sorunu olmadığı saptanmıştır.Modelde kukla değişkenle krizin etkisi yakalanmıştır. 2008 sonrası için Chow krılma testi yapılmış olup kırılma olmadığı bulunmuştur.. Modelin bu çerçevede kırılma testinden geçmesi ile regresyon kabul edilmiştir.Bunda kukla değişkeninin de etkisi söz konusudur.Kukla değişken 0.10 alfa seviyesinde,diğer parametreler ise 0.05 alfa seviyesinde anlamlıdır.Hata terimleri normal dağılıma sahiptir(Jarque-Bera test=0.25>0.05).Tablodaki katsayıların yorumu örneğin $ß1=0.76$ katsayısı için,"kayıtdışı istihdamda %1 lik bir artış Sanayi Üretim Endeksinde %0.76 lık bir artış sağlayacaktır "şeklinde yapılır. $ß_0$ katsayıları 4 model içinde istatistiksel olarak anlamsız bulunmuştur ancak regresyon doğrusunun kesene sahip olması bakımından modelden çıkartılmamasına karar verilmiştir.

Tablo 2 Regresyon sonuçlari-2

Regresyon sonucunda kayıtdışı istihdam,TUFE ve dolaylı vergi gelirleri değişkenlerinin GSMH 'nın en önemli göstergesi olan SÜE ile pozitif ilişkiye sahip olduğu tahmin edilmiştir.Diğer bir deyişle bu değişkenlerdeki artış(azalış) GSMH da da bir artış(azalış) olacağı anlamına da gelmektedir.Enflasyon ve kayıtdışı istihdam üretim maliyetlerini düşürücü etkiye sahiptir.Enflasyon reel ücretlerde yarattığı düşüş ve yine kayıtdışı istihdamın da iş gücü maliyetlerinde yarattığı düşüş karları ve arzı artırmakta ve GSMH da artış meydana getirmektedir.Öte yandan dolaylı vergi gelirleri Türkiye'de genel bütçe gelirlerinin % 70 ini oluşturmaktadır. Vergi gelirleri yeni yatırımlar için en önemli finansman kaynağı durumundadır ve uzun dönem GSMH büyümesinde bu nedenle olumlu etkiye sahiptir.Ancak dolaylı vergilerdeki artışın kayıtdışı istihdamdaki artışla

ilikisinide belirtmek gerekir.Kayıtdışı istihdamın artması gelir vergisi üzerinden toplanması gereken direk vergi gelirlerini azalttığından dolayı dolaylı vergiler ile bu açık kapatılmaya çalışılmaktadır.Yani dolaylı vergilerdeki yüksek oranlar kayıtdışı faaliyelerdeki artışın bir göstergesi olarak kabul edilebilir.

Modellerde otokorelasyon sorununa rastlanmamıştır.Tüm modeller tahmin edildikten sonra Heterskedasticity testi yapılmış,değişken varyans sorunu olmadığı tespit edilmiştir.Modellerin hata terimleri normal dağılıma sahiptir ve tüm beta katsayıları istatistiki olarak 0.05 alfa seviyesinde anlamlıdır.Toplam istihdam ve tarım istihdamı tüm modellerde kayıtdışı istihdam ile pozitif ilişkide tahmin edilmiştir.Toplam tekstil üretimi,tarım üretimi, imalat üretimi ve kişi başı imalat üretiminden(verimlilik) oluşan üretim değişkenleride yine kayıtdışı istihdamla pozitif ilişkide tahmin edilmiştirToplam ithalat ve ihracat değişkenleride modellerde kullanılmış ancak istatistiki olarak anlamsız olmalarından dolayı modellerden çıkartılmıştır.Tablodaki katsayıların yorumu örneğin $ß_1$=0.60 katsayısı için;"GSMH %1 lik bir artış kayıtdışı istihdamda %0.60 lık bir artışa neden olacaktır" şeklinde yapılır.

Tablo 2 de gözlendiği üzere regresyon sonuçlarına göre 2005-2012 dönemleri arasında GSMH tüm modellerde kayıtdışı istihdam ile pozitif ilişkide tahmin edilmiştir. Bulutay ve Taşçı(2002)'nın çalışmalarında GSMH'daki artışın istihdamı kamu sektörüne kanalize eden bir etkiye sahip olduğu, bundan dolayıda kayıtdışı istihdamı azaltacağı sonucuna ulaşılmıştır.Ancak bu çalışmada GSMH'daki artışın kayıtdışı istihdamı artırıcı etkisi tahmin edilmiştir.Bu noktada GSMH daki artışın yanı sıra kayıtdışı istihdam oranının düşmemesinin, Türkiye ekonomisi büyürken öte yandan işsizliğin ve gelir adalesizliğinin de artıyor olmasının bir sonucu olarak karşımıza çıktığı söylenebilir.Ekonomideki büyüme düşük gelirli kesime yansımadığından kayıtdışı istihdamda bir azalış olmamaktadır.Yoksulluk ve işsizlik toplumu kayıtdışı çalışmaya gönüllü hale getirmektedir.Öte yandan güvencesiz işçi çalıştırma yine ucuz iş gücü sağladığından işverenlerin kayıtdışı işçi çalıştırma eğilimi artmaktadır.

Toplam İstihdam, tarım istihdamı ve Kişi Başı İmalat Üretimi (verimlilik) katsayıları yine kayıtdışı istihdam ile bu değişkenlerin birlikte hareket ettiğini göstermektedir.Bulutay ve Taşçı (2002)'ın çalışmalarında ulaştıkları sonuca paralel bir sonuç elde edilmiştir. İstihdam olanaklarındaki genişleme, kırdan kente göçü artırmasından dolayı kayıtdışı istihdamı da yükselten bir etkiye sahiptir (Bulutay,Taşçı,2002). Verimlilik yine kayıtdışı istihdam ile doğru orantılı tahmin edilmiştir.Verimlilik teknolojik gelişme ile artabilir ve bu artış aynı zamanda iş gücüne ihtiyacın azalması anlamına gelmektedir.Tarımda veya imalatta verimliliğin artmasıyla birlikte işsizliğin artması ve kırdan kente göçün artması buna bir örnektir. Verimlilik artışıyla işsiz kalan vasıfsız iş gücü kayıtdışı istihdama yönelmektedir.Sonuç olarak Türkiye'de 2005-2012 dönemi için istihdam ve üretim değişkenlerindeki artışların kayıtdışı istihdamı artırdığı sonucuna ulaşılmıştır.Bunda kuşkusuz Türkiye'deki iş gücünün yapısının büyük rolü vardır.Eğitimsiz ve donanımsız iş gücünün fazla olduğu ülkemizde kayıtdışı istihdam faaliyetlerinin önüne geçilmesi iş gücü kalitesinin yükseltilmesi buda eğitime yapılacak yatırımlarla da ilgilidir.Kayıtdışı faliyetlerde işgücünün yapısı büyük önem taşımaktadır.

5 Sonuç

Önemli bir üretim faktörü olan emeğin konu olduğu kayıtdışı istihdam, ülke ekonomilerine ülkenin üretimine, isihdam ve ücret seviyesine, işçilerin, kadın ve çocuk işçilerin çalışma şartlarına kadar bir çok farklı kanalla, işgücü piyasası dengelerini değiştirmek yoluyla etki etmektedir.

Bireyler özellikle az gelişmiş ve gelişmekte olan ülkelerde yüksek işsizlik enflasyon gibi nedenlerde kayıt dışı olarak çalışmaktadırlar.Kayıt dışı sektörde çalışanlar işsizliğin yoğun olduğu dönemlerde iş imkanı bulabildiklerinden gelir elde edebilirler ve bu onlar içinde işveren içinde olumludur.Ancak ülkemizde olduğu gibi bu durumun yapısal bir soruna dönüşmesi kayıtdışı çalışan kesimin düşük eğitim seviyesi,düşük verimlilik ve düşük ücretler ile çalıştırılmasını da sürekli kılmaktadır.

Kentleşme ve göç kayıtdışı istihdamın temel nedenleri olmakla birlikte mali,ekonomik ve sosyal nedenler de kayıtdışılığın sürekliliğinde etkilidir.Bunlarla birlikte psikoljik,politik ve ahlaki faktörlerde kayıtdışılık ile yakından ilişkilidir.Enflasyon,gelir dağılımı eşitsizliği,ekonomi politikaları ve stratejileri,vergilendirme,vergi denetimi ve yasaları,yaşam memnuniyeti gibi bir çok neden kayıt dışı istihdamın ortaya çıkmasında ve genişlemesinde rol oynamaktadır.

Kayıtdışı istihdam kısa dönemde üretim seviyesini yükseltme,maliyetleri ve işsizliği düşürme gibi ekonomi üzerinde olumlu etkilere sahipse de uzun vade de ekonomik kalkınmaya etkisinin olumsuz olduğunu söylemek mümkündür.Gelişmekte olan ülkeler ucuz işgücünü kısa dönem ekonomik büyüme hedeflerine ulaşabilmek için bir avantaj olarak kullanmaktadırlar ancak bu durum uzun dönem de ekonomik ve sosyal olarak yapısal sorunlar ortaya çıkarmaktadır.Bu nedenle Türkiye gibi gelişmekte olan ülkeler kayıtdışılığı azaltmak ve uzun vade de sağlıklı bir ekonomiye sahip olmak için ekonomi politikalarını gözden geçirmelidir.Bu bağlamda şunu söylemek mümkündür;Türkiye'de çalışanların yarıya yakının kayıtdışı iş gücüne dahil olduğu göz önüne alındığında, kayıtdışı istihdamın azaltılması için yapılacak ani düzenlemeler işsizliği,enflasyonu ve yoksulluğu artıracak ekonomik büyümeyide olumsuz etkileyecektir.Bu nedenle kayıtdışı istihdamın azaltılması diğer bir deyişle ekonomide ki bu ikili yapının değiştirilmesi için uzun vadeli sosyal ve ekonomik planlar yapılmalıdır.Bu

planlarda da emek ve sermaye gelirleri arasındaki farkın zamanla azaltılması,yoksulluğun ve işsizliğin önüne geçecek doğru politikalar izlenmesine öncelik verilerek kayıtdışı istihdamı uzun vadede azalması sağlanacaktır.

Bankacılık Sektöründe Personel Güçlendirme Uygulamalarının Örgütsel Bağlılığa Etkisi: Trakya Bölgesi Bankalarında Araştırma

TheEffects of Empowerment Applications on Organizational Loyality in the Banking Sector: A Study of Trakya Region

Gözde Gürbüz (Trakya University, Turkey)

Asst. Prof. Dr. İlknur Kumkale (Trakya University, Turkey)

Assoc. Prof. Dr. Adil Oğuzhan (Trakya University, Turkey)

Abstract

It is necessary that several applications should be done by the firms to adaptation to the changing market conditions and taking advantage of loyalty. The first-major one of these applications is "empowerment" which is a modern management application. Efforts and labor of employees, who are so important for the firms' developing and growing process, make valuable the firms. As businesses are aware of this, give power, responsibility, authority, and confidence to the employees; and thus they will be empowered. When the employees feel that they are empowered, their loyalty will increase to the employer. This is important for the firms in today's hard conditions. In this study, it was investigated how was applied empowerment in the banking sector that there is intensive competition and how the empowerment effect the loyalty level on the organization. The study is done via first data acquired from questionnary which were applied to 382 employees in 20 banks in Edirne, Tekirdağ and Kırklareli city-centers, and seconder data is from the literrature. The reliability test, demographical dispersion of employees, interpretation of employee empowerment and organizational commitment's surveys, factor analiysis, variation tests (Kolmogrov-Smirnov Z, Mann-Whitney U, Kruskal-Wallis), regression and correlation analysis was made by SPSS. As a result of the study, it is concluded that, the empowerment applications in the banking sector, increased the loyality of the employee to the organizations.

1 Giriş

Uluslararası rekabetin artması, küreselleşme, müşteri beklentilerindeki hızlı ve sürekli değişim gibi nedenler işletmelerde insan kaynaklarının önemini artırmış ve bu konudaki çalışmalar da önem kazanmıştır. Çalışanların kendilerini işletmeleriyle özdeşleştirdikleri ve bağlılıklarını artırdıkları ölçüde işletmelerinin performansında artış meydana geldiği görülmüştür.İşletmelerin verimliliklerinin artmasında güçlü/ güçlendirilmiş personelin önemi konusunda birçok çalışma yapılmaktadır.Personel güçlendirme, işletmelerde bulunan üst yönetimin, astlarına yetki, güç, sorumluluk vererek işin sahibi haline gelmelerini, bir işi yapabilme cesareti kazanmalarını ve kendilerini sürekli geliştirmelerini sağlayan, özgüvenlerini artıran kapsamlı bir süreç olarak tanımlanmaktadır.

Personel güçlendirme uygulamalarına tarihsel olarak bakıldığında, F:W:Taylor'dan günümüze çeşitli aşamalardan geçse ve hala farklı görüşler öne sürülerek tartışılmakta olsa da,personel güçlendirme ile işletmelerin rekabet üstünlüğü elde edebileceği, performanslarını artırabileceği, sürekli değişen ihtiyaçlarınıhızlı bir şekilde karşılayabileceği ifade edilmektedir.

Bu çalışmadahedeflenen,literatürden elde edilen bilgiler ışığındaTrakya Bölgesi'nin üç ili olan Edirne, Tekirdağ ve Kırklareli'de banka çalışanlarına yüz yüze anket uygulaması şeklindealan çalışması yaparak Türkiye'deki bankacılık sektöründe uygulanan personel güçlendirmenin, banka çalışanlarının örgüte olan bağlılıklarına etkisi hakkında fikir oluşturmaktır.

2 Personel Güçlendirme ve Örgütsel Bağlılık Kavramlarına Genel Bakış

Bu bölümde personel güçlendirme ve örgütsel bağlılık konularında kısaca literatür bilgilerine yer verilecektir.

2.1 Personel Güçlendirme

Personel güçlendirme 20. Yüzyılın ortalarında, İnsan İlişkileri kuramcıları tarafından savunulan görüşlerle ortaya çıkmıştır (Emet, 2006). Hawtorne Çalışmaları olarak bilinen ve Elton Mayo önderliğinde yürütülen deneylerde çalışanların yönetime katılımının sağlanmasının maddi ve manevi faydalar sağlayacağı iddia edilmiştir. 1950'lerde Mayo'nun görüşleri esas alınarak Maslow'un başlattığı ve beşeri ilişkiler olarak adlandırılan yaklaşım(Seçgin, 2007), 1960-1970 yılları arasında yöneticilerin, çalışanların önerilerini alan, amaç belirlemede insancıl bir yaklaşım ortaya çıkmış, işgücü devir oranının azaltılmasını amaçlanmıştır (Emet, 2006),. 1970'li yıllarda, başlangıcı 19.yüzyıla uzanan Endüstriyel Demokrasinin popüler bir yaklaşım olarak gündeme gelmesi(Hacımustafaoğlu, 2008) ile çalışanların itaati, hiyerarşik otorite kabulü ve takım çalışması, yüksek güvene dayalı ilişkiler, göreve içten bağlılık ve çalışanların uzmanlıklarından faydalanmayı içeren yaklaşımlar(Churin, 2006)oluşmuş, 1980'lerde kalite çemberleri, kâr paylaşımı gibi yönetime katılmayı güçlendiren kavramlar ortaya çıkmıştır. 1980 sonrası teknolojik gelişmelerin yaşandığı işletmelerin de buzorlu

sürece ayak uydurabilmek için esnek bir yapı oluşturmaya özen göstermeleri müşteri kavramına önem vermelerigerektiği anlaşılmıştır(Hacımustafaoğlu,2008). Çalışanı güçlendirme anlayışı yenilik ve esneklik ihtiyacı nedeniyle, 1990'larda örgütlerin yapısına uygun bir kontrolün nasıl geliştirilebileceği sorusu ile karşı karşıya bulunan yöneticilerin, bu sorunu çözmede kullanmaya başladıkları bir anlayış(Özbek, 2008) olmuştur. Çalışanların yönetime katılımının sağlanmasında, işgücü devir hızının düşürülmesinde ve iş tatminin sağlanmasında günümüz iş dünyasında önemli bir yere sahip görünmektedir (Hacımustafaoğlu, 2008).Bowen ve Lawler (1992) personel güçlendirmeyi; "çalışanlara karar verme olanağının tanınması"olarak tanımlarken, Pastor (1996) ise "çalışanların kendi faaliyetlerinde sorumluluk almalarının sağlanması" şeklinde tanımlamıştır. Zemke ve Schaff'a(1989) göre, çalışanların güçlendirilmesinde, müşteriler ile doğrudan iletişimde bulunan çalışanlara özgürlük verilmesinin gerekli olduğu, yaratıcılık ve yenilikleri uygulama konusunda da çalışanların cesaretlendirilmesi gerektiği belirtilmektedir(Karakoç ve Yılmaz,2009). Ripley(1992) ise personel güçlendirmenin, bir kavram, bir felsefe, bir dizi örgütsel davranış ve program olduğuyla ilgili tanımlar yapmıştır(Çavuş, 2006).

Personel güçlendirme ile ilgili tanımlar incelendiğinde, güçlendirmenin temel unsurları çalışanları karar verme aşamasına dâhil etmek, çalışanlara yetki vermek ve çalışanların kendilerini geliştirmesini sağlamak olduğu görülmektedir. Motorola, Marrıot, Wal-Mart, McDonalds, SouthwestAirlines gibi personel güçlendirme anlayışını uygulayan işletmelerin(Doğan, 2006), çalışanlara duydukları güven sonucunda uzun ömürlü işletme haline geldikleri görülmektedir.

2.1.1   Personel GüçlendirmeYaklaşımları

Personel güçlendirme konusunda iki temel yaklaşım ortaya çıkmıştır. Birincisi iş yerinde personeli güçlendirici sosyal-yapısal faktörleri göz önünde bulunduran yaklaşım, ikincisi ise personelin psikolojik-motivasyonel yönünü göz önünde bulunduran yaklaşımdır(Çavuş, 2006).

Davranışsal yaklaşım (Yapısal Güçlendirme)teorisi, çalışanların davranışlarını etkileyen koşulları araştıran Kanter tarafından 1993 yılında geliştirilmiş ve yapısal güçlendirme için dört yapı ortaya konmuştur; Çalışanın kendini geliştirebilmesi için mesleğinin sınırları dışındaki faaliyetlere katılabilmesi, örgütle ilgili tüm bilgiye ulaşabilmesi, karar vermede desteğe sahip olabilmesi, çalışanın istediğinde kaynaklara ulaşabilmesi olaraksıralanabilir(Allanazarov, 2008).

Personel güçlendirmenin psikolojik boyutunda ise, yapılanların işgörenler tarafından nasıl algılandığı konusuna odaklanılmıştır.Spreitzer(1995) güçlendirme algıları(anlam, yetkinlik, özerklik, etki) ile performans arasında pozitif bir ilişki olduğunu ifade etmektedir.

Psikolojik güçlendirmeyi ilk tanımlayanlardan Conger ve Kanungo (1988) güçlendirmeyi, güçsüzlüğü besleyen koşulların belirlenmesi yoluyla, resmi kurumsal uygulamaların ve yeterlilik bilgisi sağlayan gayriresmi tekniklerin ortadan kaldırılması yoluyla çalışanların öz yeterlilik duygusunu arttırma süreci olarak tanımlamışlardır (Vasugi, vd.2011) Öz yeterlilik duygusunun güçlendirilmesi, bireysel güçsüzlüğe neden olan örgütsel faktörler, yönetim tarzı, ödül sistemi gibi faktörlerin indirgenmesi ile mümkündür (Arslantaş, 2007).

2.1.2   Personel Güçlendirmenin Unsurları

Bir işletme içerisinde personel güçlendirmeyi uygulayabilmek ve örgüt kültürü içerisine yerleştirebilmek için; katılım, yenilik, bilgiye ulaşılabilirlik ve sorumluluk olmak üzeredört ana koşul vardır(Koç, 2008).

Katılım; güçlendirilmiş personelin yönetime katılımını, yenilik; işlerin yapılmasında karar verme ve yeni fikirler üretme yetki ve cesaretine sahip olmasını, bilgiye ulaşılabilirlik ve bilginin paylaşılması; güçlendirmenin başarılı olabilmesi için bilginin örgüt içinde ve güçlendirilecek personel arasında paylaşılması gerektiğini, sorumluluk ise; yöneticinin güçlendirmeyi uygulayacaksa, yetki ve sorumluluğu dengeli olarak vermesi gerektiğini ifade etmektedir.

2.1.3   Personel Güçlendirmenin Yararları

Personel güçlendirme süreci güçlendirilmiş davranışla sona erdiği taktirde, çalışanlar, müşteriler ve işletme açısından yararlı olacaktır. Yararları şu şekilde özetlemek mümkündür:

Çalışanların değişime açık olmasını, kendini geliştirmesini, kendi kendini motive edebilmesini, farklı kademelerdeki çalışanlar arasında canlı, değerli ve anlamlı ilişkilerin oluşmasını sağlamaktadır (Farmer, 2011). Çalışanlar arasındaki bu uyum, çalışanların işlerine daha sıkı sarılmalarına ve işlerini istekle yapmalarına yardımcı olmakta ve çalışanlar kendilerini güvende hissetmektedirler. Güçlenen çalışanlar, iş ve kişiler üzerinde yetki/kontrole sahip olduğunu hissederler ve kurumda kalmak isterler. Personel güçlendirme, işyerinde etkili bir geribildirim sağlamaktadır. İşyerinde uygulanan etkili bir geribildirim sistemi, çalışanların kendi iş alanlarında uzmanlaşmalarına ve performanslarının artmasına yardımcı olabilmektedir. Müşteri ihtiyaçlarına daha hızlı cevap verilebilirler (Schneıervd. 1994). Yöneticiler, güçlendirilmiş çalışanlarına görevlerini devrettiklerinde, idari ve yönetim görevlerine daha az zaman harcayarak, iş planlama ve çalışanları geliştirme gibi önemli işlerini yapabilmeleri için daha çok zamana sahip olurlar (Çavuş, 2006).Bu da performansa olumlu yansımaktadır.

2.2 Örgütsel Bağlılık

Örgütsel bağlılık, insan kaynakları yönetimi faaliyetlerinin kalbinde yer alan bir kavramdır. Oluşturulan bütün insan kaynakları yönetimi politikalarındaki temel düşünce, olumlu çıktıların sağlanabilmesi için örgütsel bağlılık seviyesinin yükseltilebilmesidir(Bülbül,2007).Bunu gerçekleştiren işletmeler, zor koşullarda daha mücadeleci olurlar, daha emin adımlarla ilerlerler ve rekabette fark yaratıp rekabet üstünlüğü elde edebilirler.

Örgütsel bağlılığı ilk tanımlayanlardan birisi olan Grusky (1966) bağlılığı, *"bireyin örgüte olan bağının gücü"* olarak tanımlamıştır (İnce ve Gül, 2005). Mowday, Steers ve Porter (1979)'e göre örgütsel bağlılık, örgütün amaç ve değerlerine güçlü bir inanç duyma, örgütün yararına olan her türlü faaliyetlere yönelik olarak çaba sarf etmesi ve son olarak da işgörenin örgütte üyeliğini devam ettirme arzusudur (Yavuz ve Tokmak, 2009;Allen ve Meyer, 1990).

Örgütlerin güçlenerek büyümesi, çalışanların örgüte güçlü duygular beslemesine bağlıdır. Kurumlar, çalışanların kurumuyla ilgili ne düşündüğü ve nasıl hissettiğinin yanı sıra kuruma kendilerini ne şekilde adamaya istekli olacağı ile ilgili yönetimin rolüyle uzun süredir ilgilenmektedir (Roberson ve Strickland, 2010). Yani örgütsel bağlılık çift yönlü bir ilişkiden oluşmaktadır. Çalışanların örgütüne bağlılık hissetmesi için aynı duyarlılığı örgütün de çalışanlarına göstermesi gereklidir(Cengiz, 2001).

2.2.1 Örgütsel Bağlılık Konusundaki Yaklaşımlar

Örgütsel bağlılık konusuyla ilgili olarak, çok sayıda farklı yaklaşımlarda bulunulmuştur. Bu yaklaşımları; tutumsal bağlılık, davranışsal bağlılık ve çoklu bağlılık yaklaşımları olmak üzere üç ana grupta toplamak mümkündür.

Bu konuda özellikle Allen ve Meyer'intutumsal bağlılık konusundaki çalışmaları öne çıkmış olup,örgütsel bağlılığı, bireyin örgütsel hedeflere ve değerlere inanması, onları kabul etmesi, örgütün bir parçası olmak için çaba göstermesi ve organizasyonun sürekli bir üyesi olma kararını almalarını sağlayan davranış olarak tanımlamışlar(Tak ve Çiftçioğlu, 2009) ve duygusal bağlılık,devam bağlılığı ve normatif bağlılık olmak üzere üç temel boyutta incelemişlerdir.

3 Türkiye Trakya Bölgesi'nde Faaliyet Gösteren Bankalarda Personel Güçlendirmenin Örgütsel BağlılıkÜzerindeki Etkilerine Yönelik Araştırma

3.1 Yöntem ve Bulgular

Bu çalışmada, Türkiye'nin Trakya Bölgesinde Edirne, Tekirdağ ve Kırklareli il merkezlerinde faaliyette bulanan bankalarda uygulanan personel güçlendirme uygulamalarının çalışanların örgüte olan bağlılık(Şekil:1) düzeylerini belirlemek amacıyla bir anket çalışması yapılmıştır. Araştırmada iki ölçekten yararlanılmıştır. Personel güçlendirme ile ilgili ölçek oluşturulurken Cacioppe (1998) ve Hayes (1994) tarafından geliştirilen ölçeklerden, örgütsel bağlılık ile ilgili ölçek oluşturulurken ise Allen ve Meyer tarafından geliştirilen (1991-1997) ölçeklerden yararlanılmıştır(Şahin,2007). Araştırmanının analizinde betimsel istatistikler yanında ölçeklerin güvenirliliğinin testi,Faktör analizi sonuçları non parametrik testlerden Mann-Whiney U testi ve Kruskal Wallis testinin yanında regresyon korelasyon analizi kullanılmıştır.

3.1.1 Araştırmaya Katılanların Demografik Özeliklerine Göre Dağılımı

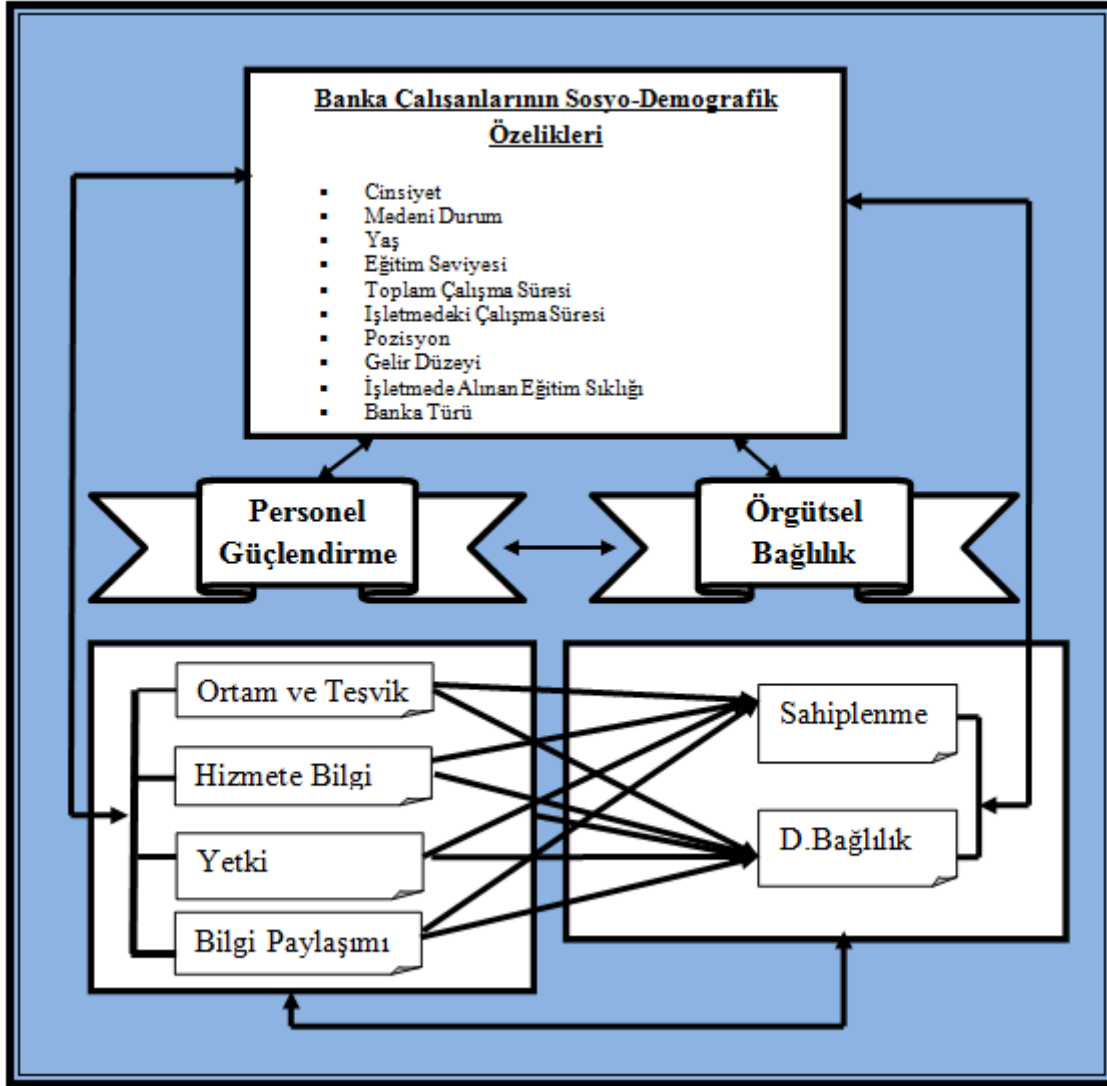
Üç bölümden oluşan anketin birinci bölümünde; bankada çalışanların cinsiyet, medeni durum, yaş, eğitim seviyesi, toplam kaç yıldır çalıştıkları, bulundukları işletmede çalıştıkları yıllar, pozisyonları, gelir düzeyleri, şu an çalıştıkları işyerinde ne sıklıkta eğitim gördükleri ve çalıştıkları bankaların türleri gibi sorulara yer verilmiştir.

Yapılan analiz sonucunda; illere göre dağılım incelendiğinde; en yüksek oran % 61,5 ile Edirne'ye aittir. İkinci sırada %22,5 ile Tekirdağ yer almaktadır. Üçüncü sırada ise %16 ile Kırklareli yer almaktadır.

Bankaların isimleri bilimsel araştırma etiği gereği açıklanmamış olup harflerle ifade edilmiştir. Anket araştırması için gidilen bankaların dağılımına bakıldığında ise, en yüksek oran %31,9 ile B bankasına aittir. Daha sonra %16 ile C bankası, % 12,8 ile E bankası, %11,3 ile A bankası, %8,4 ile F bankası, %6 ile D bankası, %5,2 ile H ve I bankaları, %3.1 ile G bankası yer almaktadır. B bankasında oranın yüksek olması ankete katılım gösteren personel sayısının fazla olmasından ve ziyaret edilen üç ilde de uygulanmasından kaynaklandığını belirtmek mümkündür.

Ankete dâhil olan banka çalışanlarının %50,3'ü bayan iken, %49,7'lik kısmı erkeklerden oluştuğu, %55'i evli ve %45'i ise bekar olduğu görülmektedir. Yaş dağılımı incelendiğinde; %0.5'inin 18 yaş altı, %22.3'ünün 18-25 yaş, %53.4'ünün 26-35 yaş ve %23.8'inin ise 36 yaş ve üstü yaş grubunda olduğu görülmektedir. Araştırmaya en çok katılan yaş grubunun %53,4 oranına sahip 26-35 yaş grubu oluşturmaktadır. 36 yaş grubu altındaki çalışanların toplam oranı %76,2 olduğu görüldüğünden bankalarda çoğunlukla genç ve evli personel istihdam edildiği söylenebilir.

Eğitim düzeylerine bakıldığında; %14.7'sinin lise ve altı mezunu, %75.4'ünün lisans mezunu, %9.9'unun ise lisans üstü mezunu olarak saptanmıştır. Çalışanların toplam kaç yıldır iş hayatında oldukları incelendiğinde; %5'inin 1 yıldan az süredir çalıştığı, %37.7'sinin 1-5 yıl arasında çalıştığı, %33'ünün 6-10 yıl arasında çalıştığı

ve %24.3'ünün ise 11 yıl ve daha uzun süredir çalıştığı belirlenmiştir. Bulundukları bankada çalışma sürelerine ilişkin yapılan analiz sonucunda personelin %7.1'inin 1 yıldan az, %44.2'sinin 1-5 yıl, %31.4'ünün 6-10 yıl ve %17.3'ünün ise 11 yıl ve daha uzun süredir çalıştıkları ortaya konmuştur. Üç ilde görev yapan banka çalışanlarının oranlarına bakıldığında görev aldıkları işletmelerde genel olarak 1-5 yıl arasında çalıştıklarını beyan etmişlerdir.Personelin bulunduğu pozisyonları belirlemeye yönelik soruların analiz sonuçlarına göre; %45'i memur, %36.1'i şef, %9.7'si müdür yardımcısı, %1.6'sı müdür, %7.6'sı ise güvenlik görevlisi, çaycı ve temizlik işleriniyapan çalışanlardan oluştuğu görülmekte olup, anketi yanıtlayanların %45'inin memur, %47,4'ünün yönetim kademesindeki kişilerden oluştuğunu söylemek mümkündür.


Şekil 1: *Araştırma Modeli*

Çalışanların işyerlerinden aldıkları aylık toplam gelirlere göre dağılımı göre %52.9'u 1000-2000, %35.1'i 2001-3000, %9.4'ü 3001-4000, %1'i 4001-5000 ve %1.6'sı ise 5000'den daha fazla gelir elde etmektedir. Oranlara bakıldığında bankalarda çalışanların çoğunluğunu memurların oluşturmasından dolayı en yüksek oranın 1000-2000 arasında olduğu açıkça görülmektedir.

Bunların yanında ankete katılan banka çalışanlarının bulundukları işyerlerinde ne sıklıkta eğitim gördükleri sorusuna verilen cevaplar incelendiğinde; %6.3'lük kısmın eğitim görmediği, %28.8'lik kısmın yılda 1 kez eğitim gördüğü, %52.1'lik kısmın yılda birden daha fazla eğitim gördükleri ve %12.8'lik kısmın ise çalışanların eksik oldukları konularda istedikleri zaman veya sıklıkla eğitim aldıklarını belirterek bu bulgulara ulaşılmıştır. Edirne, Tekirdağ ve Kırklareli'nde bulunan banka personelinin bulundukları işletmelerde ne kadar sıklıkta eğitim aldıklarına dair oranlara bakıldığında en yüksek oranın yılda bir defadan fazla olduğunu belirtmek mümkündür. Aynı zamanda bankalarda çalışan personelin %93,7'sinin çeşitli eğitimlere tabi tutulduğu görülmektedir.

Edirne, Tekirdağ ve Kırklareli illerinde toplam 5 kamu, 15 özel bankada anket yapılmış olup, %25'i kamu, %75'i özel bankadır. Diğer bir yandan çalışanların bulundukları banka türlerine göre dağılım incelendiğinde; %59.9'unu özel ve %40.1'ini kamu bankası çalışanları oluşturmaktadır.

3.1.2 Faktör Analizi

Faktör analizi birbiri ile ilişkili çok sayıda değişkeni bir araya getirerek az sayıda kavramsal olarak anlamlı değişkenler (faktörler, boyutlar) bulmayı amaçlayan çok değişkenli bir istatistik yöntemidir. Ayrıca Personel güçlendirme ölçeğin maddelerinin güvenirliği Cronbach alfa katsayısı 0,957 olarak elde edilmiştir. Bu çalışmada Personel güçlendirme ölçeğinin faktör analizinin yapılıp yapılamayacağını ortaya koymak içim K.M.O testi sonucu 0,951 dir. Böylece p<0,05 olduğundan faktör analizine uygun olduğu belirlenmiştir.

Yapılan faktör analizinde personel güçlendirme alt boyutlarının dört faktörde ortaya çıktığı gözlemlenmiştir. Buna göre personel güçlendirme alt boyutları; birinci faktörde ortam ve teşvik, ikinci faktörde hizmette bilgi ve güven, üçüncü faktörde yetki ve dördüncü faktörde ise; bilgi paylaşımı olarak belirlenmiştir. Analizin sonucunda ortaya çıkan boyutlardan ortam ve teşvik en fazla paya sahip olan boyuttur. Benzer şekilde Örgütsel bağlılık ölçeğinin maddelerinin güvenirliği Cronbach alfa katsayısı 0,895 olarak elde edilmiştir. Faktör analizinin K.M.O testi sonucu ise 0,921 olarak elde edilmiştir burada p<0,05 olduğundan faktör analizine uygun olduğu belirlenmiştir.

Elde edilen döndürülmüş faktör matrisi, iki faktörden oluşmaktadır. Önemli olarak belirlenen faktörlerden ilki ölçeğe ilişkin toplam varyansın %41,768'ini, ikincisi %21,936'sını, açıklamaktadır. İki faktörün açıkladıkları toplam varyans %63,704'tür.

Sahiplenme ve duygusal bağlılık boyutunda yer alan maddelerin ortak varyansı 0,504-0,823 arasında, devam bağlılığı boyutundaki maddelerin ortak varyansı 0,584-0,770 arasındadır.

Yapılan faktör analizinde örgütsel bağlılık alt boyutları duygusal, devam ve normatif olmak üzere üç boyutta incelenmesi gerekirken banka çalışanlarının normatif bağlılıkla ilgili ifade vermemeleri nedeniyle örgütsel bağlılık alt boyutlarının iki faktörde incelendiği ortaya çıkmıştır. Buna göre örgütsel bağlılık alt boyutları; birinci faktör sahiplenme ve duygusal bağlılık, ikinci faktör ise devam bağlılığı olarak belirlenmiştir. Analizin sonucunda ortaya çıkan boyutlardan sahiplenme ve duygusal bağlılık en fazla paya sahip olan boyuttur.

Sahiplenme ve duygusal bağlılık boyutu; işyerlerinin çalışanlar için özel bir anlam ifade etmesi, çalışanların işyerlerinde ortaya çıkan sorunları kendi sorunları gibi hissetmesi, çalışanların işyerleri ile ilgili gurur duyması, kariyerlerinin geri kalanını bulundukları kurumda devam ettirmekten mutluluk duyulması, işyerinde, kendilerini aileden biri gibi hissetmeleri, işyerlerinin; çalışanların bağımlılığını hak etmesi, çalışanların kariyer gelişimleri açısından işyerlerine karşı kendilerini borçlu hissetmesi, çalışanların bulundukları kurumdan ayrıldıkları takdirde suçluluk duyması, çalışanların işyerinde çalışmaya devam etmelerinin en önemli nedenlerinin sadakatin önemine inanmalarından dolayı işyerinde kalmayı ahlâkî zorunluluk olarak görmeleri ifadelerini içermektedir.

Devam bağlılık boyutu ise; çalışanların, işyerlerinde çalışmaya devam etmelerinin nedeni, istek olduğu kadar mecburiyetten de kaynaklanması, iş alternatiflerinin az olması nedeniyle işyerinden ayrılmayı düşünmemeleri, bulundukları kurumda çalışmaya devam etmelerinin nedeni; başka bir işte, şimdiki kazancından daha fazla kazanamayacağının düşünülmesi, eğer çalışanlara başka bir yerden daha iyi bir iş teklifi gelirse işyerinden ayrılma söz konusu olması, çalışanların işyerinden ayrılmaya karar vermesi hâlinde hayatındaki pek çok şeyin olumsuz etkilenmesi ve çalışanların işyerlerine olan katkılarından dolayı başka bir yerde çalışmayı düşünmemeleri ifadelerini içermektedir.

3.1.3 Personel Güçlendirme Alt Boyutlarının Banka Çalışanlarının Sosyo- Ekonomik Durumlarına Göre Farklılığının Testi

Banka çalışanlarının cinsiyetlerine, medeni durumlarına, yaşlarına, eğitim seviyelerine, toplam çalışma sürelerine, işletmedeki çalışma sürelerine, pozisyonlarına, gelir düzeylerine, işyerinde aldıkları eğitim sıklığına ve banka türlerine göre personel güçlendirme alt boyutları arasında fark olup olmadığına ilişkin testler ele alınmış, bu amaçla önce personel güçlendirme alt boyutlarına verilen puanların dağılımının normal olup olmadığına bakılarak, parametrik veya parametrik olmayan testler uygulanmıştır.

Bu nedenle, personel güçlendirme alt boyutlardan olan ortam ve teşvik, hizmette bilgi ve güven, yetki ve bilgi paylaşımı puanlarının dağılımının normalliği Kolmogorov-Smirnov testi ile test edilmiş; sonuç olarak alt boyutlarının puanları normal dağılım göstermediklerinden non parametrik testler uygulanmıştır.

Personel Güçlendirme		Cinsiyet	Medeni Durum	Banka Türü
Ortam ve teşvik	Pi	0,660	0,358	0,079
Hizmette bilgi ve güven	Pi	0,610	0,070	0,632
Yetki	Pi	0,747	0,216	**0,000**
Bilgi Paylaşımı	Pi	0,860	0,942	0,270

Tablo 1: *Personel Güçlendirme Alt Boyutlarının Banka Çalışanlarının Cinsiyetlerine, Medeni Durumlarına ve Çalıştıkları Bankanın Türlerine Göre Mann-Whitney U Testi*

Banka çalışanlarının cinsiyetlerine, medeni durumlarına, çalıştıkları bankanın türlerine göre personel güçlendirme alt boyutlarının aldıkları puan düzeyleri arasında bir farkın olup olmadığı Mann-Whitney U testi ile test edilmiş ve bulunan sonuçların anlamlılık düzeyleri verilmiştir.

Banka çalışanlarının cinsiyetlerine ve medeni durumlarına göre personel güçlendirmenin alt boyutları olan ortam ve teşvik, hizmette bilgi ve güven, yetki ve bilgi paylaşımı boyutlarına yaklaşımlarında farklılık görülmezken, banka çalışanlarının çalıştıkları bankanın türüne göre yaklaşımlarında farklılık görülmektedir. Böylece, banka çalışanları için çalıştıkları bankanın özel veya kamu bankası olmasının onlar için önemli olduğu söylenebilir. Yapılan testler sonucunda kamu bankasında çalışanların personel güçlendirmenin yetkilendirme boyutuna daha olumlu baktıkları görülmüştür. Kamu bankalarında yetki boyutuna daha fazla önem verilmesinin nedeni; kamu bankalarında çalışan ve müşteriyle iletişim hâlinde olan personel sayısının fazla olmasından ve beraberinde getirdiği sorunların da çok olmasından kaynaklanan bir takım problemlere çözüm bulmak, en aza indirgemek, dengelemek ve müşteri memnuniyetini sağlama açısından kaynaklanabilir.

Ayrıca Banka çalışanlarının yaşları, eğitim seviyeleri, toplam çalışma süreleri, işletmedeki çalışma süreleri, pozisyonları, gelir düzeyleri, işyerinde aldıkları eğitim sıklığına göre personel güçlendirme alt boyutları arasında fark olup olmadığını ortaya koymak için Kruskal-Wallis testi aşağıda Tablo 2'de verilmiştir.

Personel Güçlendirme		Yaş	Eğitim Seviyesi	Toplam Çalışma Süresi	İşletmedeki Çalışma Süreleri	Pozisyon	Gelir Düzeyi	Eğitim Sıklığı
Ortam ve teşvik	Pi	0,233	**0,038**	0,226	0,282	**0,02**	**0,000**	0,064
Hizmette bilgi ve güven	Pi	**0,031**	0,418	**0,03**	0,143	**0,02**	**0,002**	0,861
Yetki	Pi	0,310	**0,003**	0,407	0,254	**0,02**	**0,000**	**0,012**
Bilgi Paylaşımı	Pi	0,584	**0,026**	0,763	0,726	**0,02**	**0,000**	**0,044**

Tablo 2: *Personel Güçlendirme Alt Boyutlarının Banka Çalışanlarının Sosyo-Demografik Yapılarına Göre Farklılığının Kruskal Wallis Testi*

$P < 0,05$'den küçük ise farklılık söz konusudur. Bu temel bilgi dikkate alınarak personel güçlendirmenin birinci alt boyutu olan ortam ve teşvik boyutunda, banka çalışanlarının yaşlarının, toplam ve bulundukları işletmedeki çalışma sürelerinin ve işletmede aldıkları eğitim sıklıklarının banka çalışanları için bu boyuta olan yaklaşımlarını değiştirmediğini yani bir farklılık görülmediğini, ancak banka çalışanlarının eğitim seviyelerine, işletmedeki pozisyonlarına ve gelir düzeylerine göre $p < 0,05$ oluğundan dolayı farklılık görüldüğü söylenebilir. Bu farklılık, eğitim düzeyi lisans üstü (yüksek lisans ve doktora) mezunu olanlardan, bulundukları işletmede müdür konumunda olanlardan, gelir düzeylerinin 4001-5000 gelire sahip olanlardan kaynaklanmaktadır. Yani lisans üstü mezunu olan, müdür olan, gelir düzeyleri 4001-5000 arasında olan banka çalışanları için bulundukları işletmenin çalışma ortamının iyi olması (yöneticilerin çalışanlarına yenilik yapabilmeleri, yaratıcı fikirler üretebilmeleri için gerekli imkânları sunması vb.) ve yöneticilerin onlara destek olması onlar için önem teşkil ettiğini belirtmek mümkündür.

Personel güçlendirmenin diğer alt boyutu olan hizmette bilgi ve güven boyutunda, banka çalışanlarının eğitim seviyelerine, bulundukları işletmedeki çalışma sürelerine ve işletmede aldıkları eğitim sıklıklarına göre $p > 0,05$ olduğundan dolayı farklı yargı içinde olmadıkları görülürken, banka çalışanlarının yaşlarına, toplam çalışma sürelerine, işletmedeki pozisyonlarına ve gelir düzeylerine göre $p < 0,05$ olduğundan dolayı farklı yargı içinde oldukları ortaya konulmuştur. Bu farklılığın yaşlara göre 18 yaş altı çalışan yaş grubundan ileri gelirken, toplam çalışma süresinde 11 yıl ve daha üstü olan, işletmedeki pozisyonlarına göre müdür konumunda olanlardan ve gelir düzeyinde ise 5001 ve üstü gelire sahip olanlardan farkın ileri geldiği test sonucunda ortaya çıkmıştır. 18 yaş altı grubunda olan, toplam 11 yıl ve daha uzun süredir çalışan, müdür olan, 5001 ve üstü gelire sahip olan banka çalışanları için, müşteriye verilen hizmette bilgiye sahip olmanın ve çalışanların birbirlerine güven duymalarının önemli olduğu söylenebilir.

Ayrıca personel güçlendirme alt boyutlarından yetki boyutundaki farklılık incelendiğinde, banka çalışanlarının yaşlarına, toplam ve bulundukları işletmedeki çalışma sürelerine göre $p > 0,05$ olduğundan dolayı farklı görüşlere sahip olmadıkları anlaşılmaktadır. Fakat, banka çalışanlarının eğitim seviyelerine, işletmedeki pozisyonlarına, gelir düzeylerine ve işletmede aldıkları eğitim sıklıklarına göre $p < 0,05$ olduğundan dolayı farklı görüşlere sahip oldukları görülmektedir. Banka çalışanlarının farklı görüşlere sahip olmaları ise; eğitim düzeylerinin lise ve altı mezunu olan, işletmedeki pozisyonlarının müdür olan, gelir düzeylerinin 4001-5000 arasında gelire sahip olan ve işletmede aldıkları eğitim sıklıklarının ise yılda 1 kez eğitim gören banka çalışanlarından kaynaklanmaktadır. Böylece lise mezunu olan, bulunduğu bankanın müdürü olan, 4001-5000 arasında geliri olan ve işletmede yılda 1 kez eğitim gören banka çalışanları için karar verme yetkisine, sorunları düzeltme yetkisine vb. yetkilere sahip olmak farklı yani olumlu bakmalarına neden olmaktadır.

Personel güçlendirmenin son alt boyutu olan bilgi paylaşımında ise, banka çalışanlarının yaşlarına, toplam ve bulundukları işletmedeki çalışma sürelerine göre $p > 0,05$ olduğundan dolayı birbirine yakın görüşlerin olduğu

anlaşılmaktadır. Ancak, banka çalışanlarının eğitim seviyelerine, işletmedeki pozisyonlarına, gelir düzeylerine ve işletmede aldıkları eğitim sıklıklarına göre p<0,05 olduğundan dolayı farklı sonuçlar elde edilmiştir.

Elde edilen sonuçlar incelendiğinde, eğitim seviyesi lisansüstü mezunu olanlar, işletmedeki konumu müdür olanlar, gelir düzeyi 4001-5000 gelire sahip olanlar ve işyerinde hiç eğitim almayanlar için, işyerinde veya müşteri ile ilgili herhangi bir sorun ortaya çıktığında, işyerinde meydana gelen değişiklikler hakkında bilgi sahibi olmak istediklerinde vb. durumlarda işyerinde bilgi akışının sağlanması banka çalışanları açısından olumlu algılanmaktadır.

Banka çalışanlarının cinsiyetlerine, medeni durumlarına, çalıştıkları bankanın türlerine göre örgütsel bağlılık alt boyutlarının aldıkları puan düzeyleri arasında bir farkın olup olmadığı Mann-Whitney U testi ile test edilmiş ve bulunan sonuçların anlamlılık düzeyleri Tablo 3'de verilmiştir.

Örgütsel Bağlılık		Cinsiyet	Medeni Durum	Banka Türü
Sahiplenme ve Duygusal Bağlılık	Pi	0,409	0,880	**0,00**
Devam Bağlılık	Pi	0,642	0,078	**0,00**

Tablo 3: *Örgütsel Bağlılık Alt Boyutlarının Banka Çalışanlarının Cinsiyetlerine, Medeni Durumlarına ve Çalıştıkları Bankanın Türlerine Göre Whitney U Testi*

Banka çalışanlarının cinsiyetlerine ve medeni durumlarına göre örgütsel bağlılığın alt boyutları olan sahiplenme ve duygusal bağlılık ve devam bağlılık boyutlarına yaklaşımlarında farklılık görülmezken, banka çalışanlarının çalıştıkları bankanın türüne göre yaklaşımlarında farklılık görülmektedir. Yani, banka çalışanları için çalıştıkları bankanın özel veya kamu bankası olmasının onların örgüte olan bağlılıklarını etkilemektedir. Buna göre; bazı kamu bankası çalışanları kendilerini örgütün bir parçası olarak ve kendilerine verilen değeri gördükleri kuruma gönüllü olarak bağlandıkları ve istedikleri için kurumda kalmaya devam ederlerken, bazı kamu bankası çalışanları da örgütten ayrılmanın getireceği olumsuz durumlar nedeniyle mecbur kaldığı için örgütte kalmaya devam ederler.

Banka çalışanlarının yaşları, eğitim seviyeleri, toplam çalışma süreleri, işletmedeki çalışma süreleri, pozisyonları, gelir düzeyleri, işyerinde aldıkları eğitim sıklığına göre personel güçlendirme alt boyutları arasında fark olup olmadığını ortaya koymak için Kruskal-Wallis testi aşağıda Tablo 4'de verilmiştir.

Örgütsel Bağlılık		Yaş	Eğitim Seviyesi	Toplam Çalışma Süresi	İşletmede Çalışma Süreleri	Pozisyon	Gelir Düzeyi	Eğitim Sıklığı
Sahiplenme ve Duygusal Bağlılık	Pi	0,570	0,196	0,137	**0,043**	**0,00**	**0,00**	0,091
Devam Bağlılık	Pi	0,450	**0,019**	0,701	0,511	**0,00**	**0,00**	**0,006**

Tablo 4: *Örgütsel Bağlılık Alt Boyutlarının Banka Çalışanlarının Sosyo Demografik Yapılarına Göre Farklılıklarının Kruskal Wallis Testi*

Örgütsel bağlılığın alt boyutlarından sahiplenme ve duygusal bağlılık boyutunda, banka çalışanlarının yaşları, eğitim seviyeleri, toplam çalışma süreleri ve işletmede hangi sıklıkta eğitim aldıkları örgüte olan bağlılıklarını etkilemezken yani bir farklılık görülmezken, işletmedeki çalışma sürelerine, pozisyonlarına ve gelir düzeylerine göre p<0,05 olması nedeniyle de farklılık görülmektedir. Bu farklılık, işletmedeki çalışma süreleri 11 yıl ve daha üstü olanlardan, işletmedeki konumu müdür olanlardan ileri gelirken, gelir düzeyinde ise 3001-4000 gelire sahip olanlarda meydana gelmiştir. Yani bulundukları işletmede 11 yıl ve üstü gibi uzun yıllar çalışmış, işletmede müdür olmuş, 3001-4000 gelire sahip olmuş banka çalışanları için, örgüte olan sahiplenme ve duygusal bağlılık boyutlarının yüksek olduğu söylenebilir. Çünkü sahiplenme ve duygusal bağlılık boyutunda, bireyin iş tecrübelerinin, algılamalarının ve kişisel özelliklerinin birleşiminin sonucu olarak örgüte karşı gelişen olumlu tutumlar esas olduğu için uzun yıllar çalışmış, emek harcamış insanların ve bir takım aşamalardan, zorlu süreçlerden geçtikten sonra müdür konuma gelmiş insanların, emeklerinden kolay vazgeçemeyeceği ve Türkiye'nin zorlu koşullarında 3001-4000 gibi yüksek gelire sahip olmuş insanların örgüte olan sahiplenme ve duygusal bağlılıklarının yüksek olması beklenen bir sonuçtur.

Örgütsel bağlılığın diğer önemli boyutu olan devam bağlılık boyutu incelendiğinde ise; banka çalışanlarının yaşlarına, toplam ve bulundukları işletmedeki çalışma sürelerine göre farklı düşüncelere sahip olmadıkları, ancak eğitim seviyelerine, işletmedeki pozisyonlarına, gelir düzeylerine ve işletmede alınan mesleki eğitim sıklıklarına göre ise farklı düşüncelere sahip oldukları Kruskal-Wallis testi yardımıyla ortaya konmuştur. Bu testte meydana gelen farklılıklar, bir çalışanın örgütte çalıştığı süre içerisinde harcadığı emek, zaman ve çaba ile edindiği statü, para gibi kazanımlarını örgütten ayrılmasıyla birlikte, kaybedeceği düşüncesinden yola çıkılarak, çalışanların lisans üstü mezunu olanlarda, şef pozisyonunda bulunanlarda, 4001-5000 gelire sahip olanlarda ve işletmede aldıkları mesleki eğitim sıklıklarına göre ise yılda 1 kez eğitim alanlarda görülmektedir.

3.1.4 Personel Güçlendirme İle Örgütsel Bağlılık Arasında Doğrusal Regresyon Modeli

Araştırmanın bu kısmında, örgütsel bağlılık ve onun alt boyutlarını etkileyen faktörlere ilişkin regresyon modeller aşağıdaki tabloda farklı model denemeleri ele olarak ele alınmıştır.

Açıklayıcı Değişkenler	Model 1	Model 2	Model 3	Model 4
	Bağımlı Değişkenler			
	Toplam Örgütsel Bağlılık	Toplam Örgütsel Bağlılık	Sahiplenme	Devam Bağlılık
Sabit	1,672	4,819	-4,321	7,358
Toplam Personel Güçlendirme	0,798 (25,77)	-	-	-
Ortam ve Teşvik	-	0,247 (4,725)	0,465 (8,712)	-0,243 (-3,095)
Yetki	-	0,446 (8,816)	0,241 (4,848)	0,550 (7,251)
Bilgi Paylaşımı	-	0,233 (6,344)	0,156 (4,218)	0,221 (4,025)
Hizmete Bilgi ve Güven	-	-	0,073 (1,850)	-
R^2	0,635	0,670	0,685	0,258
F	664,44	258,812	207,749	45,273

Tablo 5: *Personel Güçlendirme İle Örgütsel Bağlılık Arasında Doğrusal Regresyon Model Sonuçları *Parantez içindeki değerler t istatistik değerleridir.*

Belirlenen birinci model, toplam personel güçlendirmenin toplam örgütsel bağlılığa etki düzeyini ölçmek üzere oluşturulmuştur toplam örgütsel bağlılık arasındaki ilişkinin kuvvetli ve pozitif bir ilişki olduğu sonucu ortaya çıkmaktadır. Örgütsel bağlılığın 0,635'i personel güçlendirme tarafından belirlenirken kalan 0.365'i diğer etmenlerden kaynaklanmaktadır. Ayrıca, personel güçlendirme puanında bir standart sapma artığında örgütsel bağlılık puanının 0.798 standart sapma kadar artacağını da söylemek mümkündür.

Toplam personel güçlendirme ile toplam örgütsel bağlılık arasındaki anlamlılık düzeyine bakıldığında, F değerinin 664,449 ve $p < 0,05$ olması modelin anlamlılığını göstermektedir.

Model 2'de personel güçlendirmenin dört alt boyutundan biri olan faktör 2 (hizmette bilgi ve güven) boyutu istatistiksel açıdan anlamsız bulunduğu için çıkarılmıştır ve personel güçlendirmenin diğer üç alt boyutu; faktör 1 (ortam ve teşvik), faktör 3 (yetki), faktör 4 (bilgi paylaşımı) ile toplam örgütsel bağlılık arasındaki ilişkinin kuvvetli ve pozitif bir ilişki olduğu sonucuna ulaşılmıştır.

Bu modelde, toplam örgütsel bağlılığın 0,670'i personel güçlendirmenin üç alt boyutu tarafından belirlenirken, kalan 0.330'u ise diğer etmenlerden kaynaklanmaktadır. Ayrıca, personel güçlendirme alt boyutlarının (Faktör 1, Faktör 3, Faktör 4) yargı puanlarındaki bir birimlik artışın toplam örgütsel bağlılık puanının %82 birim artıracağını da ifade etmek mümkündür. F değerinin 258.812 ve $p < 0,05$ olması modelin anlamlı olduğunu göstermektedir.

Ortam ve teşvik, yetki ve bilgi paylaşımı, toplam örgütsel bağlılığa etkisini gösteren katsayılar örgütsel bağlılığı etkileyen değişkenlerden en önemli değişken yetki faktörü olurken onu sırasıyla ortam ve teşvik ve bilgi paylaşım faktörleri takip etmektedir. Böylece, ortam ve teşvik, yetki ve bilgi paylaşımı boyutlarının banka çalışanlarının toplam örgütsel bağlılığını pozitif yönde etkiledikleri görülmektedir. Banka çalışanlarının çalışma ortamlarından memnun olması, yetkiye sahip olmaları ve işletmede olup bitenlerden haberdar olmaları işlerin yapılmasını hızlandırdığı gibi çalışanların örgüte olan bağlılıklarını da artırmaktadır.

Model 3'de personel güçlendirmenin dört alt boyutu ile örgütsel bağlılığın birinci boyutu olan sahiplenme boyutu arasındaki ilişki incelendiğinde aralarında doğrusal ve pozitif bir ilişki olduğu önem sırasıyla etkileyen değişkenlerin ortam ve teşvik, yetki,bilgi paylaşımı ve hizmette bilgi ve güven olduğu tahmin edilmiştir.

R^2 değeri örgütsel bağlılıktaki 0,685'lik değişimin personel güçlendirme alt boyutları olan tarafından açıklandığını, geriye kalan 0,315'lik kısmın ise; diğer etmenler tarafından açıklandığını göstermektedir. Personel güçlendirmenin alt boyutları ile örgütsel bağlılığın sahiplenme boyutu arasındaki modelin F değerinin 207.749 $P < 0,05$ olması modelin anlamlı olduğunu söylemek mümkündür.

Model 4'de Personel güçlendirmenin ortam ve teşvik, yetki ve bilgi paylaşımı boyutları ile örgütsel bağlılığın devam bağlılık boyutu arasındaki F değerinin 45,273 ve $P < 0,05$ olmasından dolayı model anlamlıdır.

Personel güçlendirmenin ortam ve teşvik boyutundaki bir standart sapmalık artış, örgütsel bağlılığın devam bağlılık boyutunu -0,243 standart sapmalık azalmakta ve aralarındaki ilişki negatif çıkmıştır. Devam bağlılık boyutunda, çalışan mecbur kaldığı için örgütte kalmaya devam eder. Bu nedenle, çalışanların bulundukları kurumda çalışma ortamlarının iyi olması ve yöneticiler tarafından destek görmeleri onların duygusal

bağlılıklarını artırırken devam bağlılıklarını azaltmıştır. Çünkü çalışan mecbur kaldığı için değil istediği için örgütte kalmayı sürdürmektedir. Bu nedenle böyle bir olumsuz ilişkinin ortaya çıkması teorik açıdan beklenen bir sonuçtur.

Personel güçlendirmenin yetki boyutundaki bir standart sapmalık artış örgütsel bağlılığın devam bağlılık boyutunu 0,550 standart sapmalık artırırken, personel güçlendirmenin bilgi paylaşımı boyutundaki bir standart sapmalık artış ise örgütsel bağlılığın devam bağlılık boyutunu 0,229 standart sapmalık artırmaktadır. Bu bulgulardan hareketle, personel güçlendirmenin yetki ve bilgi paylaşımı boyutu banka çalışanlarının örgüte olan devam bağlılıklarını olumlu yönde etkilediği görülmektedir. Çalışanlara sadece yetki verilmesi ve bilgilendirme yapılması onlar için bazı durumlarda yeterli olamayabilir. Yani, çalışan kendini işyerinde mutlu ve değerli hissetmiyorsa ellerinde bulunan yetkinin ve bilgiye sahip olmanın onlar için pek bir öneminin kalmadığını ifade etmek yerinde olacaktır.

4 Sonuç

Personel güçlendirme, çalışanlara yetki, güç, sorumluluk vererek kararlara katılımını sağlayan, kendilerine güven duyulduğu, fikirlerini özgürce ifade edebildiği, yaratıcılığını geliştirebileceği bir çalışma ortamı sağlayan, eğitimlerin verilmesi ile çalışanların sürekli gelişimini ve değişimine katkıda bulunarak, motive ederek psikolojik yönlerini de besleyen, insanı insan olarak değerli gören bir yaklaşımdır.

Örgütsel bağlılık, çalışanların örgütün amaç ve hedeflerini benimsemesi, bu amaç ve hedefleri büyük bir arzuyla yerine getirmesi, kendilerini örgütün bir parçası olarak görmesidir. Örgütsel bağlılığı yüksek olan çalışanlar, örgütte daha uzun süre üyeliklerini devam ettirmek istemekte, örgüt yararına daha fazla yaratıcı ve yenilikçi düşünceler üreterek verimlilik artışına yol açmaktadır. Böylece işletmelerde devamsızlık ve personel devir hızı azalmakta, rekabet avantajı artmakta, ürün veya hizmet kalitesinde önemli artışlar görülmektedir.

Yukarıdaki açıklamalar doğrultusunda, personel güçlendirme ile örgütsel bağlılık kavramlarının birbirini tamamladığı ve işletmelerin hayati önem taşıyan bu iki kavrama önem vermeleri gerektiği vurgulanmaktadır.

Personel güçlendirme ve örgütsel bağlılık ölçeklerine faktör analizi uygulanarak, az sayıda kavramsal olarak anlamlı faktörler bulunmuştur. Personel güçlendirme; ortam ve teşvik, hizmette bilgi ve güven, yetki, bilgi paylaşımı olmak üzere dört boyutta, örgütsel bağlılık ise; sahiplenme ve duygusal bağlılık ve devam bağlılık boyutu olmak üzere iki boyutta incelenmiştir.

Çalışmaya söz konusu olan Trakya Bölgesindeki üç ilde banka personel güçlendirme ile örgütsel bağlılık ilişkisine yönelik dört model belirlenerek basit doğrusal regresyon analizi de yapılmıştır. Bu modellerden birincisi, toplam personel güçlendirme ile toplam örgütsel bağlılık arasındaki ilişkiyi belirlemek, ikincisi personel güçlendirmenin dört alt boyutundan biri olan faktör 2 (hizmette bilgi ve güven) boyutu istatistiksel açıdan anlamsız bulunduğu için çıkarılmıştır ve personel güçlendirmenin diğer üç alt boyutu; faktör 1 (ortam ve teşvik), faktör 3 (yetki), faktör 4 (bilgi paylaşımı) ile toplam örgütsel bağlılık arasındaki ilişkiyi belirlemek, üçüncüsü personel güçlendirmenin alt boyutları ile örgütsel bağlılığın birinci boyutu olan sahiplenme ve duygusal bağlılık boyutu arasındaki ilişkiyi belirlemek ve dördüncü model ise personel güçlendirmenin üç alt boyutu ile örgütsel bağlılığın ikinci faktörü olan devam bağlılık boyutu arasındaki ilişki düzeyini belirlemektir. Ortaya çıkan sonuçlara bakıldığında ilk üç modelde doğrusal ve pozitif bir ilişki görülürken, dördüncü modelde ilişki düzeyi düşük çıkmıştır. Böyle sonuçların ortaya çıkması teorik açıdan beklenen sonuçlarla örtüşmektedir.

Özet olarak; bankacılık sektöründe uygulanan personel güçlendirmenin ve personel güçlendirme alt boyutlarının(ortam ve teşvik, hizmette bilgi ve güven, yetki, bilgi paylaşımı) çalışanların örgüte olan bağlılıklarını artırdığı sonucuna varılmıştır.

İşletmeler, büyüme politikası olarak kendi bünyesinde çalışan personeli güçlendirmek ve örgüte olan bağlılıklarını artırmak istiyorsa öncelikle güçlendirecekleri personelin istekliliğine ve kapasitesine dikkat etmeleri gerektiği söylenebilir. Çünkü gerçek anlamda güçlendirme, ancak gerçek anlamda çalışanın istekliliğine bağlıdır. İşletmeler, daha sonra bu istekli personeli örgüte kazandırmak ve uzun süre elde tutabilmek için örgüte bağlayıcı faaliyetlerde (çalışanlarını eğitme, ödüllendirme, bilgilendirme, çalışanlarına kariyer imkânları sağlama vb.) bulunmaları gerekir. Böylece, güçlendirilmiş ve örgütüne bağlı hale gelmiş çalışanların bulundukları işletmenin büyümesine ve gelişmesine önemli oranda katkı sağlayacağını belirtmek mümkündür.

Katılım Bankası Müşterilerinde Bankacılık Ürün ve Hizmetlerine Yönelik Memnuniyet: Türkiye Örneği

Satisfactions of Islamic Banks' Costumers: The Case of Turkey

Asst. Prof. Dr. Bengül Gülümser Kaytancı (Anadolu University, Turkey)

Dr. Etem Hakan Ergeç (Osmangazi University, Turkey)

Prof. Dr. Metin Toprak (Istanbul University, Turkey)

Abstract

Despite differences in the principles by which they operate between the participation (Islamic) and conventional banks, there is no huge difference between the products and the services provided by these banks. The distinctive features of the participation banks, compliance with the Islamic precepts, are not the only way for these banks to appeal to the customers. For this reason, customer satisfaction is an important element in the banking sector. The major goal of this study is to analyze the level of awareness and satisfaction among the customers of the participation banks. This study which uses the data compiled through the surveys held in Eskişehir with the participation of 500 Islamic bank customers reveals findings that suggest that most of the customers are satisfied with the products and services by the participation banks and that they have high level of awareness on the Islamic banking products.

1 Giriş

Finansal sistemde faizli bankalar gibi katılım bankaları da benzer fonksiyonları yerine getirmekle birlikte, farklılık düzenleme ve kurallarda kendisini gösterir. Katılım bankaları işlemlerini İslam dini tarafından belirlenen esaslara uygun olarak yürütürler. (Akhtar ve dig., 2011) İslami bankacılık sistemi, Müslüman müşterilerin ihtiyaç ve taleplerini karşılama ihtiyacının bir sonucu olarak oluşturulmuştur. Çünkü geleneksel bankacılık sektörü tamamen faizli sisteme dayanmakta iken İslami kurallara göre faiz almak da vermek de yasaktır. (Khattak ve Rehman, 2010,)

Dünyada 1.8 milyara ulaşan Müslüman nüfusu ve bunun yanında dünyanın birçok yerinde bulunan Müslüman göçmenlerin olması Citibank, HSCB gibi uluslararası bankaların da İslami prensiplerle uyumlu ürün ve hizmetler sunan şubeler ve bölümler açmalarına yol açmıştır. Müslüman nüfusun talepleri doğrultusunda faizsiz işlem yapmaları, bu bankaların kar/zarar ortaklığı prensibine uygun olarak çalışmalarını gerektirmektedir. Diğer bir deyişle katılım bankaları kar /zarar paylaşımı ve kiralama geliri ile ilgili işlemleri gerçekleştirirler. Ayrıca, bu bankalar, alkol, silah üretimi, tütün gibi İslam'ın yasakladığı sektörlere finansman sağlanmamaktadırlar (Saini ve diğ., 2011) Bu temel prensipler çerçevesinde faizsiz finansal kuruluşların geliştirdikleri başlıca kredi/fon kullandırma yöntemleri peşin alım taksitle satım olarak tanımlanabilecek olan "murabaha", temel olarak bir yatırım ortaklığı olan "mudaraba", bir kar/zarar paylaşımı olan "muşaraka", geleneksel bankacılıktaki finansal kiralama işlemine karşılık gelen "icara" ve tarafların belirli bir malın anlaşma anında belirlenen ve tamamen ödenen bir fiyattan gelecekteki bir tarihte alım-satımı konusunda anlaştığı yöntem olan "salam" dır.

Faizsiz bankacılık kuruluşları, kredi/fon kullandırma yöntemleri yanında fon toplama yöntemleri açısından da farklılık göstermektedir. Bunlardan bazıları herhangi bir para cinsinden, vade taşımayan ve kar payı gibi herhangi bir getirisi olmayan "özel cari hesaplar"; kâr veya zarara katılma sonucunu veren ve anaparanın aynen geri ödenmesi garanti edilmeyen fonların oluşturduğu "katılma hesapları" ve "faizsiz bono" olarak tanımlanan "sukuk" sertifikaları olarak sıralanabilir.(TCMB Finansal İstikrar Raporu, Mayıs 2011)

Dünyadaki ilk İslami bankacılık deneyimi 1963 yılında Mısır'da Mit Ghamr Tasarruf Bankası (Mit Ghamr Saving Bank) tarafından kar ve zarar ortaklığı yatırımı ile başlamıştır. Ancak İslami bankacılık alanında asıl gelişme yeni yatırım teknikleri, stratejileri ve ürün geliştiren ve aynı zamanda dünyadaki ilk İslami banka olarak bilinen Dubai İslam Bankası (Dubai Islamic Bank) 1975 yılında kurulmuştur. (Khan ve Asghar, 2012) Türkiye'de ise bu kurumlar Özel Finans Kurumları adı altında 1985 yılında faaliyetlerine başlamıştır. 2005 yılının sonlarında kabul edilen 5411 sayılı Bankacılık Kanunu ile Özel Finans Kurumlarının adı Katılım Bankaları olarak değiştirilmiştir. Bugün itibariyle Türkiye'de 31'i mevduat bankası ve 13'ü kalkınma ve yatırım bankası olmak üzere toplam 44 adet faizli prensiplere göre çalışan banka ve 4 adet katılım bankası aynı piyasada kendi işlemlerini yan yana yapmaktadırlar. 5411 sayılı kanunun 4. maddesine göre katılım bankaları mevduat kabul edemezken mevduat bankaları da katılım fonu kabul edememektedir.

Son dönemlerde hızla büyüyen İslami bankacılık sektörü, günümüzde 1 trilyon ABD doları varlık büyüklüğü ve 4 trilyon ABD doları küresel potansiyeliyle dikkat çekmektedir. (TCMB Finansal İstikrar Raporu, 2011) Dünyadaki hızlı gelişimine paralel ülkemizde de hızlı bir gelişim performansı gösteren faizsiz bankacılığın gerek bu gelişim ivmesini sağlıklı analiz edebilmek gerekse de bu gelişme sürecini daha iyi bir performansla devam ettirebilmek için, bu banka müşterilerinin memnuniyet düzeylerinin değerlendirilmesi önem arz etmektedir.

Son dönemlerde sektördeki sıkı rekabet nedeniyle müşteri memnuniyeti, müşteri tutma ve müşteri hizmetlerine odaklanmak herhangi bir bankanın varlığını devam ettirebilmesi için daha da önemli hale gelmiş ve bankacılık işlemlerinde müşteri memnuniyeti anahtar faktör olarak kabul edilmiştir. Çünkü bankasından memnun olan bir müşteri bankayı tekrar tercih edecek ve aynı zamanda başkalarına da memnuniyetini aktaracaktır. Diğer taraftan memnun olmayan müşteri ihtiyaç duyduğu ürün veya hizmeti başkasıyla karşılamaya çalışacak ve bu durumu başkalarına da aktaracaktır. Bu nedenle müşteri memnuniyetinin değerlendirilmesinin önemi giderek artmaktadır. (Akhtar ve dig., 2011) Müşteri memnuniyetini önemli kılan bir başka unsur ise bu bankaların tercih nedenlerini inceleyen çalışmaların ortaya koydukları sonuçlardır. Bu bankalarının tercih edilme nedenini değerlendirme amaçlı birçok çalışmada, Dinin tek tercih nedeni olmadığı tespit edilmiştir. (Haron ve diğ, 1994; Dusuki ve Abdullah, 2007; Erol ve El-Bdour, 1989; Naser ve diğ. 1999, Ergeç ve diğ. 2013).

Bu çalışmada, katılım bankası müşterililerinin memnuniyetlerini değerlendirme amacıyla, Eskişehir İli genelinde 500 katılım bankası müşterisi ile yüz yüze gerçekleştirilen anket görüşmesinde elde edilen veriler kullanılarak, katılım bankası müşterileri farkındalık, kullanım düzeyi ve memnuniyet düzeyi incelenmistir. Büyükşehir statüsünde olmasının yanında Eskişehir, Türkiye'de faaliyette bulunan tüm katılım bankalarına ait şubelerin bulunması, kentli yüksek nüfus oranı, gelir ve eğitim düzeyi gibi alanlarda önde gelen bir şehir olması gibi nedenlerden dolayı tercih edilmiştir. Ankette müşterilere katılım bankası ürün ve hizmetlerine yönelik farkındalık, kullanım ve memnuniyet alanlarını değerlendirmek için sorular yöneltilmiştir. Bu sorulardan elde edilen cevaplar ile müşterilerin sosyopolitik kimlik, sosyoekonomik statü, genel özellikleri ve çalıştıkları katılım bankasını tercih etmeleri arasında anlamlı ilişki olup olmadığı incelenmiştir.

2 Literatür

Müşteri memnuniyeti herhangi bir kuruluşun stratejilerinin temel bileşenlerinden birisidir ve herhangi bir endüstride, müşteri gelirin daimi kaynağıdır. Bankacılık sektöründeki rekabet ve bazı bankaların pazarlama stratejisinin temel bileşeni olarak müşteri memnuniyetinin göz önünde bulundurulması son dönemlerde bankaların müşterilerinin memnuniyeti konusuna odaklanmalarına neden olmuştur. (Khattak ve Rehman, 2010) Bu nedenle, bankacılık sektöründeki rekabetçi ortamda, müşteri memnuniyeti hem mevcut müşterilerin bankayla ilişkilerinin devam etmesi hem de bankaya yeni müşterilerin kazandırılabilmesi açısından önemle üzerinde durulması gereken konulardır. Bu sebeple literatürde yer alan pek çok çalışmada faizsiz banka müşterileri farkındalık, kullanım ve memnuniyet düzeyi açılarından incelenmiştir.

Literatürde yer almış önemli çalışmalardan biri, Metawa ve Almossawi'nin (1998) çalışmasıdır. Bahreyn'deki 300 İslami banka müşterisinin değerlendirildiği bu çalışmada müşterilerin; banka seçim kriterleri, hizmet ve ürünler hakkındaki farkındalıkları ve memnuniyet düzeyleri araştırılmıştır. Çalışmada müşterilerin İslami banka ile çalışmada temel etkenin Din olduğu, çoğu müşterinin İslami banka ürün ve hizmetlerinden memnun olduğu ancak bazı finansman olanaklarının maliyeti ve esnekliği konusunda memnun olmadıkları tespit edilmiştir. Buna göre müşterilerin hizmet sunumunda en memnun oldukları konu banka çalışanları olmuştur. Çoğu müşterinin tasarruf hesabı, cari hesap, ATM gibi temel İslami banka ürün ve hizmetleri hakkında farkındalıklarının yüksek olduğu tespit edilmiştir. Hem var olan müşterilerin kaybedilmemesi hem de yeni müşterilerin çekilmesi ve müşteri ilişkilerinin geliştirilmesi için yazarlar İslami bankaların hizmet kalitesini arttırıcı programlar uygulamaları gerektiğini ve kaliteyi arttırmak için başarılı deneyimleri olan faizli bankaları incelemelerinin yararlı olabileceğini vurgulamışlardır. Bankaların gelecekteki başarıları için yönetim etkinliğine önem vermeleri, bunun için de banka personelinin yönetim etkinliğini geliştirmek için eğitim programlarının iyi bir araç olacağını belirtmişlerdir. (Metawa ve Almossawi, 1998)

Literatürde yer alan önemli bir başka çalışma ise Ürdün'ün değerlendirildiği Naser ve diğerlerinin (1999) çalışmasıdır. Ürdün'de 206 banka müşterisinin, banka seçim kriterleri, hizmet ve ürünler hakkındaki farkındalıkları ve memnuniyet düzeyleri, hem İslami hem de faizli bankalarla çalışma nedenleri araştırılmıştır. Çalışmaya göre müşterilerin İslami banka ile çalışmalarında, din faktörü önemli olsa da, birincil neden bankanın itibarıdır. Müşterilerin çoğu ürün ve hizmetlerden memnun oldukları ve bazı spesifik İslami finansal ürünlerin farkında olmalarına rağmen bunların çoğunu kullanmadıkları tespit edilmiştir. Müşterilerin İslami bankanın sınırlı şube sayısı ve çalışma saatleri nedeniyle memnun olmadıkları ve bu yüzden faizli bankalarla da çalıştıklarını tespit etmişlerdir. Yazarlar İslami bankanın müşterilerini tutabilmesi için müşterilerin ihtiyaçlarını karşılayacak yeniliklere açık olmasını ve İslami bankanın pazarın belirli bir kesimi için 24 saat online bankacılık hizmetlerini sağlamak için internet kullanımını göz önüne alması gerektiğini belirtmişlerdir. Ayrıca müşterilerin spesifik İslami ürünleri kullanmalarını sağlamak için bankanın promosyonları kullanabileceği ve müşterilerin farkında olmadıkları bazı spesifik İslami banka hizmetleri ile ilgili olarak İslami terminoloji hakkında müşterilerin eğitilmesi gerektiğini vurgulamışlardır. (Naser ve diğ., 1999)

Khan ve diğerleri (2007), ise benzer bir çalışmayı Bangladeş'teki 100 İslami banka müşterisini değerlendirerek gerçekleştirmişlerdir. Çalışmada müşterilerin İslami banka ile çalışmada temel etkenin din olduğu, müşterilerin cari hesap ve kar/zarara katılma hesapları gibi temel yatırım araçları için yüksek farkındalıkları varken, bireysel finansman olanakları hakkında düşük farkındalık ve düşük kullanım düzeyine sahip oldukları tespit edilmiştir.

Yazarlar temel ürünler dışında farkındalık düzeyinin düşük olmasını Arapça konuşulmayan Müslüman ülkelerde bu ürünlerin Arapça terimlerle tanımlanmasının İslami ürün ve hizmetlerin anımsanmasını ve müşterilerin kullandığı bu ürünleri çevrelerine anlatabilmelerini engelleyen bir durum olduğunu ve müşterilere bu tip ürünleri tanıtmak için bazı yöntemler bulunması gereğini belirtmişlerdir. (Khan ve dig., 2007)

Güncel bir başka çalışma ise benzer soruların değerlendirildiği Pakistan için yapılmıştır. 156 müşterinin değerlendirildiği bu çalışmaya göre müşterilerin cari ve vadeli hesaplar gibi genel ürünlerle ilgili farkındalıkları yüksekken, çoğu müşterinin murabaha, icara gibi İslami finans ürünleri hakkında bilgiye sahip olmadıkları tespit edilmiştir. Genel olarak müşterilerin çoğunluğunun banka hizmetlerinden memnun olduğu sonucuna varılmış ve çalışmaya göre banka seçiminde din önemli bir faktör olsa da banka işlemlerinin etkinliği, çalışma saatleri, müşteri bilgilerinin gizliliği gibi faktörlerin de banka seçiminde önem arz ettiği tespit edilmiştir. Yazarlar, müşterilerin İslami terminolojiye hâkim olmamaları nedeniyle İslami bankaların icara, murabaha gibi farklı ürün ve hizmetlerle ilgili bilgilendirme seminerleri düzenlemelerini önermektedirler. Ayrıca, yazarlar müşterilerin çoğunun (%66,7) her iki bankacılık sistemini de kullandığını, bunun nedeninin ise İslami bankaların faizli bankaların müşterilerine sundukları kadar etkin ürün sunamamaları olduğunu vurgulamışlardır. Bu yüzden İslami bankaların müşterilerine ürün sağlamaları ve bankacılık ağlarını genişletmelerini önermişlerdir. (Khattak ve Rehman, 2010)

Akhtar ve diğerlerinin (2011), 167 İslami banka müşterisini inceledikleri çalışmaları, Pakistan için yapılmış bir başka güncel çalışmadır. Çalışma; müşterilerin çoğunun, İslami banka terminolojisinin farkında olduğunu, fakat bu ürün ve hizmetleri kullanmıyor olduğunu tespit etmiştir. Hizmet kalitesi ve müşteri memnuniyeti arasında pozitif bir ilişkinin tespit edildiği bu çalışmada, hizmet kalitesinin değerlendirilmesinde ele alınan dört ölçütten ikisi olan "İslami kurallara uyumluluk" ve "müşterilerin ihtiyaçlarını karşılayabilme" ölçütleri ile müşteri memnuniyeti arasında diğer iki ölçüte göre daha güçlü bir ilişki bulunmuştur. Yazarlar, bankaların müşteri sorunlarını daha iyi çözümlemeye dönük hizmetlerini geliştirmeye yardımcı olmak için insan kaynaklarının eğitimine ve gelişimine yatırım yapmalarını önermektedirler. (Akhtar ve diğ., 2011)

Güney Afrika için Saini ve diğerlerinin (2011) yaptığı çalışmada 250 İslami banka müşterisi incelenmiştir. Çalışmada müşterilerin %96,6'sının ürünler hakkında bilgi sahibi olduğu, ancak İslami banka ürünlerinin kullanım düzeyinin düşük olduğu tespit edilmiştir. Çalışmaya göre; müşteriler banka seçerken dini sebeplerden ziyade hızlı ve etkili hizmet, düşük masraf, geniş ATM ve şube ağı gibi etkenleri temel olarak dikkate almaktadırlar. Yazarlar, artan rekabet ortamında banka yöneticilerinin müşteri kazanmak ve mevcut müşterileri tutabilmek için müşterilerin ihtiyaçlarını ve beklentilerini karşılayacak ürünlerin geliştirilmesini dikkate almaları gerektiğini vurgulamışlardır. (Saini ve diğ., 2011)

Rehman'nın (2012) çalışması ise literatürde yer alan, gelişmiş ve gelişmekte olan ülkelerin birlikte değerlendirildiği güncel bir çalışmadır. Yazar, müşteri memnuniyeti ve altı bileşen çerçevesinde ele aldığı hizmet kalitesi arasındaki ilişkiyi Pakistan, Birleşik Krallık (İngiltere) ve Birleşik Arap Emirlikleri'ndeki 75'er müşteri için incelemiştir. Araştırma sonucuna göre müşterilerin çoğunun islami bankaların sundukları hizmetlerden memnun oldukları tespit edilmiştir. (Rehman, 2012)

Literatürde yer alan çalışmalar içinde Türkiye'nin değerlendirildiği çalışma Okumuş' un (2005) çalışmasıdır. 161 müşterinin incelendiği bu çalışmada, müşterilerin İslami banka ile çalışmada temel etkenin din olduğu, müşterilerin cari hesap ve kredi kartı gibi ürünler hakkında bilgi sahibi olduğu, ancak spesifik İslami bankacılık terimleri hakkında farkındalıklarının olmadığı ve müşterilerin geniş bir çoğunluğunun ürün ve hizmetlerden memnun olduğu sonucuna ulaşılmıştır. Müşteri memnuniyetinde en yüksek memnuniyet skorunu sırasıyla işlemlerin tamamlanması, personelin yönlendirmesi ve personelin yakın ilgisi takip etmiştir. Yazar, müşterilerin %55'inin hem İslami hem de faizli banka ile çalışıyor olduğunu tespit etmiş ve bunun nedeni olarak, İslami bankaların geniş şube ağlarının olmaması ve faizli bankaların sunduğu bazı ürün ve hizmetlerin İslami bankalarda olmamasını belirtmiştir. Bu yüzden, İslami bankaların hizmet ve ürün kalitesini faizli bankalarla rekabet edebilecek düzeyde geliştirmeleri gerektiğini ve müşterilerin farkındalığının az olduğu spesifik İslami ürünlerin kullanımı için yönlendirmesinin İslami bankaların büyümesini kolaylaştıracağını belirtmiştir.

3 Örneklem Profili

Eskişehir ilinin seçildiği bu araştırmanın anket uygulaması için, 500 deneklik bir örnek hacmi tespit edilmiş, daha sonra cinsiyet ve yaş kotaları uygulanmıştır. Yüz yüze anket tekniğinin kullanıldığı bu çalışmada, yarı yapılandırılmış bir form, deneyimli anketörlerce uygulanmıştır. Anketör eğitimi, alan uygulamasından önce gerçekleştirilmiş ve akabinde pilot uygulama yapılmıştır. Daha sonra anket formlarının kalite kontrolü, alan uygulaması esnasında ve sonrasında gerçekleştirilmiştir. Çalışma için kullanılan anket formu, 4'ü açık uçlu olmak üzere toplam 27 sorudan oluşmaktadır. Ankette; cinsiyet, yaş, gelir, eğitim, iş durumu, sosyopolitik kimlik ve sosyo ekonomik statü gibi betimsel kimlik bilgilerine yönelik sorulara yer verilmiştir. Sosyopolitik kimlik kategorisini oluşturma amacıyla, çeşitli düşünce akımları ve dünya görüşleri bir liste halinde sunularak, görüşülen kişilere bu listede yer alan kimliklerden hangilerinin kendisini tanımlamada uygun olduğunu belirtmesi istenmiştir. Yine desteklenen siyasi parti ile namaz kılma ve oruç tutma gibi dini tutumlar da

sosyopolitik kimliği tespit etme amacıyla ankette sorulan sorular arasında bulunmaktadır. Anket için pilot uygulama 1-5 Mart 2011 tarihleri arasında, anket uygulaması ise 10 Mart 2011-25 Mayıs 2011 tarihleri arasında, örneklemdeki deneklerle bankada bulundukları sırada veya randevu alınarak ev ve işyerlerinde görüşülmüştür. Elde edilen veriler bir istatistik paket programı yardımıyla analiz edilmiş; analizde bazı değişkenler anket formunda yer aldığı yalın haliyle, bazı değişkenler ise türetilmiş türev değişkenler olarak kullanılmıştır. Örneğin sosyoekonomik statü ve sosyopolitik kimlik değişkenleri başka birkaç değişkenin birlikte değerlendirilmesiyle oluşturulmuştur. Analizlerde betimsel istatistikler ki-kare anlamlılık testi ile sınanmıştır. Bileşik ve kategorik değişkenlerin oluşturulmasında, küme analizi ve faktör analizi yapılmıştır.

Ankete katılan müşterilerin profilini yansıtmak için Tablo 1 düzenlenmiştir. Tablo incelendiğinde, 500 katılım bankası müşterisinin, Türkiye'de ekonomik hayatta aktif rol oynamada erkeklerin baskın görünüme sahip olmasıyla uyumlu olarak, % 71,4'ünün erkeklerden, %28,6'sının ise kadın müşterilerden oluştuğu görülmektedir.

Müşterilerin eğitim düzeyleri değerlendirildiğinde %41'nin eğitim düzeyinin üniversite ve üstü olduğu görülmektedir. Eğitim düzeyi lise olan müşteriler ise %35,4'lük bir pay ile ikinci sırada bulunmaktadır. Görüldüğü gibi banka müşterilerinin eğitim düzeyleri yüksektir. Bu durumun, Eskişehir ilinin Türkiye geneline göre yüksek bir eğitim düzeyine sahip olmasının bir sonucu olduğu düşünülmektedir.

Anketin uygulandığı banka müşterilerinin yaş gruplarına bakıldığında ise 30-40 yaş aralığında olan banka müşterilerinin en yüksek paya sahip olduğu görülmektedir. Banka müşterilerinin yaş ortalamasının 34,6 olduğu tespit edilmiştir. Banka müşterilerinin iş durumları incelendiğinde, müşterilerin %39,2'si devlette ve ya özel sektörde çalışmakta iken %21'i kendi işini yapmaktadır. Öğrenci olanların oranı %12,8'dir. Kendini işsiz olarak tanımlayanların oranı ise %7,4'dür. Emekli, öğrenci, ev kadını ve işsizler örneklemde anlamlı analizlere imkân verecek düzeyde temsil edilmiştir. Banka müşterilerinin gelir düzeylerine göre dağılımına bakıldığında, %39,6 oranındaki 2000 TL-3000 TL arasında gelir elde edenlerin gelir grupları arasında en yüksek orana sahip olduğu görülmektedir. Ankete katılan müşterilerin, hanelerine ilişkin aylık gelir düzeyine ilişkin soruya verdikleri yanıtlar ise, en düşük gelir düzeyinin aylık 600 TL, en yüksek gelir düzeyinin ise aylık 15000 TL olduğu şeklindedir. Buna göre aylık ortalama gelir düzeyi 2273 TL'dir.

Anket formunda sorulan eğitim düzeyi, yaşam biçimi, gelir düzeyi, meslek grubu, dini ibadet alışkanlıkları ve dünya görüşüne yönelik çeşitli sorular küme analizi, faktör analizi ve diskriminant analizi gibi çeşitli teknikler kullanılarak değerlendirilmiş ve sosyopolitik kimlik ve sosyoekonomik statü değişkenleri geliştirilmiştir. Sosyopolitik kimlik, siyasi parti tercihinden daha kapsamlı ve daha uzun erimli bir değişken olarak tasarlanmış olup, siyasi içerimin yanısıra sosyolojik yapıyı da yansıtmaktadır. Buna göre, Türkiye toplumu Milliyetçi-Muhafazakâr, Laik-Modernist ve Sol-Sosyal Demokrat sosyopolitik gruplar olarak sınıflandırılmıştır. Bu gruplar arasında elbette örtüşmeler olmakla birlikte, genelleştirmelere imkân vermesi bakımından Türk toplumunun başlıca üç sosyopolitik grup altında sınıflandırılabileceği kabul edilmiştir. Bu kimlikler çerçevesinde katılım bankaları müşterilerinin sosyal ve politik eğilimleri de tespit edilmiş olmaktadır. Beklenildiği gibi en yüksek oranda olan kesim Milliyetçi-Muhafazakârlardır. Müşterilerin %77'si bu kimlik grubu içinde yer almıştır. Gelir ve meslek gibi değişkenlerden hareketle oluşturulan sosyoekonomik statüye göre değerlendirdiğimizde ise en yüksek payın %44,6 ile orta düzey statüye ait olduğu görülmektedir.

	Sayı	%		Sayı	%
Cinsiyet			**İş Durumu**		
Erkek	357	71,4	Devlet-Özel	196	39,2
Kadın	143	28,6	İş adamı/Esnaf/Sanaatkar	106	21,2

Tablo 1: Müşteri Örneklem Profili

4 Katılım Bankalarına Bakış: Kullanım, Farkındalık, İmaj ve Memnuniyet Düzeyi

4.1 Katılım Bankası Ürün ve Hizmetlerinde Kullanım ve Farkındalık

Ankette müşterilere, değerlendirmesi istenen bir ürün hakkında fikri olup olmadığı ve bu ürünü kullanıp kullanmadığı sorulmuştur. Bu sorulara verilen cevapların sunulduğu Tablo 2 incelendiğinde, en yüksek farkındalık ve kullanım düzeyine sahip olan katılım bankacılığı ürününün katılma hesabı olduğu görülmektedir. İkinci sırada yer alan bankacılık ürünü ise farkındalıkta cari hesap, kullanımda ise kredi kartları olmuştur. Katılım bankalarının sundukları ürün ve hizmetler konusunda müşterilerinin farkındalık düzeyleri ile bu ürünleri kullanma düzeyleri arasında anlamlı bir farklılık vardır. Buna göre, müşteriler, katılım bankalarının sundukları ürün ve hizmetleri genel olarak ortalama yüzde 54 düzeyinde bilmekte iken, bu ürün ve hizmetleri kullanma oranları ortalama yüzde 27'dir. Dolayısıyla, ürün ve hizmetleri bilenlerin, bunları kullanma düzeyleri ancak yarısı düzeyindedir. Ticari müşterilere yönelik ürünler olan üretim desteği, leasing, kar zarar (yatırım) ortaklığı ve dış ticaret hizmetlerinin kullanımını dikkate almaz isek, genel olarak bilinme oranı %74, kullanım oranı ise ortalama %45 olmaktadır. Görüldüğü gibi ortalamalar arasındaki fark daha da yükselmiştir.

	Bilinme Oranı	Kullanılma Oranı
Özel cari hesap	81,6	36,4
Katılma hesabı	93,6	79,8
Tüketici kredisi	66,6	30,4
Taşıt kredisi	49,4	11,8
Üretim desteği	32,8	3,8
Leasing (Finansal kiralama)	23,2	2,6
Kar zarar (yatırım) ortaklığı	39,0	9,2
Kredi kartı	79,8	65,0
Dış ticaret hizmetleri	17,4	3,2

Tablo 2: Katılım Bankaları Bankacılık Ürünlerinde Farkındalık ve Kullanım Düzeyi

4.2 Çalışılan Katılım Bankasına Yönelik Kanaat

Müşterilerin genel kanaatini değerlendirmek için, ankete katılan müşterilere öncelikle çalıştıkları katılım bankasına ilişkin genel kanaatlerinin ne olduğu sorusu yöneltilmiştir. Ayrıca müşterilerden, bankalarını memnuniyet bakımından bazı alanlarda değerlendirmeleri istenmiştir. Müşterilerin cevapları derecelendirilerek, bu memnuniyet alanlarına ilişkin skorlar belirlenmiş, böylelikle skor ortalaması alınarak genel bir memnuniyet düzeyi tespit edilmiştir. Böylelikle, müşterilerin genel beyanları ile memnuniyet alanlarına ilişkin değerlendirmelerinin tutarlı olup olmadığı da kontrol edilebilmiştir. Müşterilerin genel beyanları ile değerlendirme alanlarından elde edilen ortalama memnuniyet düzeyinin uyumlu olduğu görülmüştür. Görüşülen kişilerin yüzde 70,2'si çalıştığı katılım bankasıyla ilgili kanaatinin genel olarak olumlu olduğunu belirtirken, olumsuz kanaat belirtenlerin oranı yüzde 5,6'dır. Bu soruya verilen cevapların müşterilerin özelliklerine göre ayrışımı incelendiğinde, müşterilerin gelir düzeyleri, cinsiyetleri ve sosyopolitik kimliklerine göre anlamlı bir farklılık gözlenmemiştir.

Yaş grupları itibariyle genç yaştakilerin olumlu kanaati görece daha düşük düzeyde iken, ileri yaş gruplarındakilerin olumlu kanaatleri daha yüksektir. Eğitim düzeyi yükseldikçe çalışılan bankaya yönelik olumlu kanaatte bir düşüş gözlenmektedir. Meslek grupları itibariyle çalışılan bankaya yönelik kanaat de farklılaşmaktadır. Buna göre, emekliler ve ev kadınları en yüksek düzeyde olumlu kanaat belirtirlerken, işadamı/esnaf/sanatkârlar ile öğrenci kesimi görece daha düşük oranda olumlu kanaat ifade etmektedir. Değişik sosyoekonomik statülerdeki kişiler çalıştıkları bankadan memnuniyet bakımından birbirinden ayrışmaktadır. Buna göre, düşük sosyoekonomik statüdekiler, orta ve yüksek sosyoekonomik statüdekilere göre, çalıştıkları katılım bankası ile ilgili daha yüksek olumlu kanaat belirtmektedir.

	Sayı	%
Olumlu	351	70,2
Ne olumlu Ne olumsuz	103	20,6
Olumsuz	28	5,6
Fikrim yok	18	3,6
Toplam	500	100,0

Tablo3: Çalışılan Katılım Bankasına Yönelik Kanaat

4.3 Katılım Bankaları Ürün ve Hizmetlerinden Memnuniyet

Ankete katılan müşterilerden, çalıştıkları bankalarla ilgili olarak memnuniyet düzeylerini bazı açılardan değerlendirmeleri istenmiştir. Katılım bankası müşterilerinin verdikleri cevaplar kategorize edilmiş ve böylece memnuniyete ilişkin skorlar oluşturulmuştur. Bu alanların ortalamasından her müşteriye ilişkin genel memnuniyet skoru hesaplanarak, müşterilerin genel memnuniyet düzeyleri değerlendirilmiştir. Genel olarak

müşteri memnuniyeti yüzde 68 düzeyindeyken, memnun olmayan müşteri oranı yüzde 6, düşük düzeyde memnuniyet belirtenlerin oranı ise yüzde 26'dır.

	Sayı	%
Memnun	339	67,8
Çok az memnun	131	26,2
Memnun değil	28	5,6
Toplam	498	99,6
Cevapsız	2	0,4
Toplam	500	100,0

Tablo 4: Katılım Bankalarının Sunduğu Hizmet ve Ürünlerden Memnuniyet Düzeyi (Toplulaştırılmış)

Katılım bankalarının sunduğu ürün ve hizmetlerden genel olarak memnun olma düzeyi, müşterilerin özelliklerine göre değerlendirildiğinde; müşterilerin yaş, gelir düzeyi, sosyoekonomik statüsü ve çalışan katılım bankası tercihlerine göre memnun olmada, istatistiki olarak anlamlı farklılaşmalar gözlenmiştir. Buna göre, en yüksek memnun olma oranı 30 yaş altı müşteri grubunda gözlemlenirken, en az memnun olma oranına 30-40 yaş arası müşteri grubunda rastlanmıştır. Müşterilerin gelir düzeyi ile memnun olma durumu arasındaki ilişki ayrışımına bakıldığında, çalışılan katılım bankasına ilişkin genel kanaate benzer bir biçimde, gelir düzeyi yükseldikçe memnun olan müşteri yüzdesinin düştüğü görülmektedir. Sosyoekonomik statüye göre değerlendirdiğimizde de benzer eğilimi destekler bir durum görülmektedir. Memnun olan müşterilerin en yüksek yüzdeye sahip olduğu sosyoekonomik statü, düşük sosyoekonomik statü olmuştur. Sosyoekonomik statü yükseldikçe memnun olan müşterilerin oranının düştüğü görülmektedir. Memnun olan müşterilerin toplam müşteriler içindeki oranı, tercih edilen bankaya göre istatistiki olarak anlamlı değişim göstermektedir. A ve C katılım bankalarının müşterileri içinde, memnun olanların oranı diğer katılım bankalarına göre daha yüksektir.

YAŞ Grubu						
30 Yaş Altı		30-40 Yaş		40 Yaş Üstü	Ki-Kare	Olasılık
75,2		60,3		71,5	12,541	0,014
Gelir Düzeyi						
1000 den Az	1000-1500	1500-2000	2000-3000	3000 Üstü	Ki-Kare	Olasılık
78,9	80,2	72,2	58,1	67,5	21,814	0,005
Sosyoekonomik Statü						
Düşük		Orta		Yüksek	Ki-Kare	Olasılık
69,3		67,3		55,9	14,595	0,006
Çalışılan Katılım Bankası						
A	B	C		D	Ki-Kare	Olasılık
74,2	57,6	75,0		46,4	29,547	0

Tablo 5: Ürün ve Hizmetlerden Memnun Olmada Ayrışım (%) (Toplulaştırılmış)

	Sayı	Yüzde
İşlemlerin tamamlanma hızı ve etkinliği	414	82,8
Personelin yatırıma yönelik tavsiyesi	365	73,0
Şubenin yeri	343	68,6
Şube iç dizaynı	302	60,4
Personelin müşteriye karşı tutumu	287	57,4
Mesai saatlerinin uygunluğu	240	48,0
Müşteri mahremiyetine verilen önem	236	47,2
Yeni ürün ve hizmetler hakkında bilgilendirme ve tanıtım	196	39,2
Kredi koşullarının uygunluğu	192	38,4
Otopark imkânı	189	37,8
Hesaplara yüksek gelir sunması	180	36,0
İnternet bankacılığının kalitesi	154	30,8

Tablo 6: Katılım Bankalarının Sunduğu Hizmet ve Ürünlerden Memnuniyet Düzeyi

Katılım bankası müşterilerinin değerlendirildiği alanlar, ortalama skorlar dikkate alınarak aşağıda verilen tabloda sunulmuştur. Tablo incelendiğinde, katılım bankaları müşterilerinin bankaları ile ilgili olarak en memnun oldukları konunun, banka işlemlerinin tamamlama hız ve etkinliği olduğu görülmektedir. Bunu, personelin yatırım konusundaki danışmanlığı takip ederken, üçüncü ve dördüncü sırada ise şubeye ilişkin fiziki koşullar yer almıştır. Banka müşterilerinin en az memnun oldukları alanlara baktığımızda ise, en düşük skorun, internet

bankacılığının kalitesine ait olduğu görülmektedir. Bunu, hesaplara yüksek getiri sunulması alanı izlemiştir. Bu listenin alt sıralarında yer alan konular, katılım bankalarının kendilerini geliştirmek için çaba sarf etmesi gereken alanları göstermektedir.

Katılım bankası müşterilerinin, banka ürün ve hizmetlerinden memnuniyet düzeylerini değerlendirmeleri için sunulmuş olan 12 alan; müşterilerin sosyopolitik kimlik, sosyoekonomik statü, betimsel özellik ve çalışılan katılım bankası tercihlerine göre analiz edilmiştir. Böylelikle özeliklerine göre gruplandırılan müşterilerin memnuniyet alanları değerlendirilebilmiştir.

4.3.1 Yaş Gruplarına Göre Memnuniyet Düzeyinde Farklılaşma

Banka müşterileri yaş gruplarına göre değerlendirildiğinde, memnuniyet alanlarından 7 tanesinde müşterilerin yaş gruplarına göre anlamlı ayrışım görülmüştür. İstatistiki olarak anlamlı sonuçlara ulaşılan bu değerlendirme alanları; işlemlerin tamamlama hız ve etkinliği, personelin yatırıma yönelik tavsiyesi, şubenin yeri, şube içi tasarım, personelin müşteriye karşı tutumu, müşteri mahremiyetine verilen önem ve mesai saatlerinin uygunluğu alanlarının tümünde 30-40 yaş aralığı müşteriler içinde memnun olma oranı, diğer yaş gruplarına kıyasla daha düşük çıkmıştır.

30 Yaş Altı	30-40 Yaş	40 Yaş Üstü	Ki-Kare	Olasılık
İşlemleri Tamamlama Hızı ve Etkinliği				
84,7	80,0	84,8	11,181	0,08
Personelin Yatırıma Yönelik Tavsiyesi				
77,7	68,8	73,9	10,89	0,092
Şubenin Yeri				
70,7	60,0	79,0	17,051	0,009
Şube İçi Dizayn				
63,1	50,2	72,5	22,732	0,001
Personelin Müşteriye Karşı Tutumu				
63,1	47,8	65,2	13,606	0,034
Müşteri Mahremiyetine Verilen Önem				
47,1	40,5	57,2	14,31	0,026
Mesai Saatlerinin Uygunluğu				
51,0	39,5	57,2	13,237	0,039

Tablo 7: *Yaş Grubuna Göre Ürün ve Hizmetlerden Memnun Olmada Ayrışım (%)*

Orta yaş grubundaki farklılaşmanın olası nedenini değerlendirmek için banka müşterilerinin yaş ve iş durumu arasındaki ilişki ele alınmıştır. 30 altı yaşta öğrenci ve işsizler, 40 yaş üstünde ise emekliler yüksek bir paya sahip iken, bu grupların 30-40 yaş aralığındaki payları ise düşüktür. Dolayısıyla 30 yaş altı ve 40 yaş üstünde orta yaşa göre daha yüksek bir memnun olma oranının tespit edilmesinin olası nedeninin, ekonomik hayata aktif katılım durumları olduğu düşünülmektedir.

	30 yaş altı	30-40 yaş	40 yaş üstü
Ücretli Çalışan	30,30	39,80	32,30
İşadamı/Esnaf/Sanatkar	8,50	27,90	23,30
Emekli	--	--	24,10
Öğrenci	40,60	3,00	--
Ev kadını	4,80	23,90	19,50
İşsiz	15,80	5,50	0,80

Tablo 8: *İş Durumunun Yaş Aralığına Göre Dağılımı*

4.3.2 Sosyopolitik Kimliğe Göre Memnuniyet Düzeyinde Farklılaşma

Memnuniyete ilişkin değerlendirme alanlarından banka müşterilerinin sosyopolitik kimliğine göre istatistiki olarak anlamlı farklılaşma, ancak iki alanda gözlemlenmiştir. Bunlar internet bankacılığının kalitesi ve yeni ürün ve hizmetler hakkında tanıtım alanları olmuştur. Bu alanlardan memnun olan müşterilerin oranı, milliyetçi muhafazakâr grup için en düşük düzeydedir.

Milliyetçi-Muhafazakar	Laik-Kemalist	Sol-Sosyal Demokrat	Ki-Kare	Olasılık
İnternet Bankacılığının Kalitesi				
28,8	33,7	52,2	10,813	0,094
Yeni Ürün ve Hizmetler Hakkında Tanıtım				
36,4	43,5	69,6	14,786	0,022

Tablo 9: *Sosyopolitik Kimliğe Göre Ürün ve Hizmetlerden Memnun Olmada Ayrışım (%)*

4.3.3 Eğitim Düzeyine Göre Memnuniyet Düzeyinde Farklılaşma

Banka müşterileri içinde memnun olma oranının eğitim düzeyine göre anlamlı farklılaşma gösterdiği 7 memnuniyet değerlendirme alanı tespit edilmiştir. Tablo 10'da görünen bu alanlar, işlemlerin tamamlama hız ve etkinliği, şubenin yeri, personelin müşteriye karşı tutumu, hesaplara yüksek getiri sunulması, müşteri mahremiyetine verilen önem, mesai saatlerinin uygunluğu ve yeni ürün ve hizmetler hakkında tanıtım alanları olmuştur. Bu alanlar içinde, işlemlerin tamamlama hız ve etkinliği, şubenin yeri, personelin müşteriye karşı tutumu alanlarında eğitim düzeyi yükseldikçe, memnun olan banka müşterilerinin oranında artış görülmüştür. Ancak diğer anlamlı ilişki tespit edilmiş olan hesaplara yüksek getiri sunulması, müşteri mahremiyetine verilen önem, mesai saatlerinin uygunluğu ve yeni ürün ve hizmetler hakkında tanıtım alanlarında ise tam tersi bir eğilim görülmektedir.

İlkokul	Ortaokul	Lise	Üniversite ve Üstü	Ki-Kare	Olasılık
İşlemleri Tamamlama Hızı ve Etkinliği					
84,2	77,0	78,5	87,8	31,56	0
Şubenin Yeri					
64,9	59,0	65,5	75,1	19,271	0,023
Personelin Müşteriye Karşı Tutumu					
50,9	57,4	53,7	62,4	27,683	0,001
Hesaplara yüksek Getiri Sunması					
45,6	47,5	37,9	28,3	17,533	0,041
Müşteri Mahremiyetine Verilen Önem					
57,9	45,9	51,4	41,0	18,251	0,032
Mesai Saatlerinin Uygunluğu					
54,4	45,9	46,3	48,3	17,362	0,043
Yeni Ürün ve Hizmetler Hakkında Tanıtım					
54,4	44,3	39,5	33,2	16,07	0,065

Tablo 10: *Eğitim Düzeyine Göre Ürün ve Hizmetlerden Memnun Olmada Ayrışım (%)*

4.3.4 İş Durumuna Göre Memnuniyet Düzeyinde Farklılaşma

Katılım bankası müşterilerinin iş durumları ile memnuniyet değerlendirilmesinin yapıldığı alanlar bakımından anlamlı ilişki tespit edilmiş alanlar, işlemlerin tamamlama hız ve etkinliği, hesaplara yüksek getiri sunulması, internet bankacılığının kalitesi ve yeni ürün ve hizmetler hakkında tanıtım alanları olmuştur.

İşlemlerin tamamlama hız ve etkinliğinde, memnun olan müşteri oranı tüm iş gruplarında yüksek bir düzeyde çıkmıştır. Ancak bu değerlendirme alanında memnun olan müşteri oranı, nispi olarak iş adamı/esnaf ve sanatkâr iş grubunda en düşük düzeyde çıkmıştır. Bir başka anlamlı ayrışımın gözlemlendiği değerlendirme alanı olan hesaplara yüksek getiri sunulmasından memnun olan müşterilerin dağılımı incelendiğinde ise, en yüksek memnun olma oranı emekli ve ev hanımı gruplarında tespit edilirken, işsiz ve öğrenci grubu bu alanda en düşük memnun olan müşteri oranına sahip olmuştur. Anlamlı ayrışımın gözlendiği bir başka memnuniyet değerlendirme alanı ise internet bankacılığının kalitesi olmuştur. Emekli müşteriler içinde bu alanda memnun olan müşterilerin oranı tüm gruplara göre daha yüksek düzeyde tespit edilirken, bu oranın en düşük kaldığı gruplar ev hanımı ve işsizler olmuştur. Yenilikler hakkında tanıtım konusunda ise diğer gruplara göre emekli ve ev hanımı gruplarında memnun olan müşterilerin oranının daha yüksek olduğu görülmüştür.

Ücretli Çalışan	İşadamı, Esnaf ve Sanatkâr	Emekli	Öğrenci	Ev Hanımı	İşsiz	Ki-Kare	Olasılık
İşlemleri Tamamlama Hızı ve Etkinliği							
86,7	73,6	85,7	79,7	86,9	83,8	26,827	0,082
Hesaplara yüksek Getiri Sunulması							
34,7	31,1	54,3	28,1	52,5	27,0	28,163	0,06
İnternet Bankacılığının Kalitesi							
30,6	33,0	48,6	31,3	21,3	21,6	30,679	0,031
Yeni Ürün ve Hizmetler Hakkında Tanıtım							
38,8	39,6	57,1	40,6	44,3	13,5	37,715	0,004

Tablo 11: *İş Durumuna Göre Ürün ve Hizmetlerden Memnun Olmada Ayrışım (%)*

4.3.5 Sosyoekonomik Statüye Göre Memnuniyet Düzeyinde Farklılaşma

Sosyoekonomik statü, anlamlı ayrışımın en çok tespit edildiği katılım bankası müşteri özelliklerinden biri olmuştur. 12 değerlendirme alanının 8'inde bu özelliğe göre istatistiki olarak anlamlı ayrışım tespit edilmiştir. Personelin müşteriye karşı tutumu, kredi koşullarının uygunluğu, hesaplara yüksek getiri sunulması, müşteri mahremiyetine verilen önem, mesai saatlerinin uygunluğu alanlarında ve yeni ürün ve hizmetler hakkında tanıtım, katılım bankası müşterilerinin sosyoekonomik statüleri yükseldikçe memnun olan banka müşterilerinin oranın azaldığı görülmektedir. İşlemlerin tamamlama hız ve etkinliği alanında çok zayıf bir farklılaşma görülmekte iken, internet bankacılığı alanında memnun olan banka müşterilerinin oranının sosyoekonomik statü yükseldikçe arttığı görülmektedir.

Düşük	Orta	Yüksek	Ki-Kare	Olasılık
İşlemleri Tamamlama Hızı ve Etkinliği				
83,2	83,9	81,3	22,328	0,001
Personelin Müşteriye Karşı Tutumu				
60,0	61,9	50,5	17,144	0,009
Kredi Koşullarının Uygunluğu				
42,1	39,9	34,6	14,205	0,027
Hesaplara yüksek Getiri Sunulması				
46,3	32,7	34,6	16,451	0,012
Müşteri Mahremiyetine Verilen Önem				
56,8	45,3	44,5	16,62	0,011
Mesai Saatlerinin Uygunluğu				
55,8	48,9	42,9	13,277	0,039
İnternet Bankacılığının Kalitesi				
31,6	27,4	34,6	11,271	0,08
Yeni Ürün ve Hizmetler Hakkında Tanıtım				
47,4	34,1	41,2	17,919	0,006

Tablo 12: Sosyoekonomik Statüye Göre Ürün ve Hizmetlerden Memnun Olmada Ayrışım (%)

5 Sonuç ve Öneriler

Dünyadaki gelişim hızına paralel olarak ülkemizde de hızlı bir gelişim performansı gösteren faizsiz bankacılığın gerek bu gelişim ivmesini sağlıklı analiz edebilmek gerekse de bu gelişme sürecini daha iyi bir performansla devam ettirebilmek için, bu banka müşterilerini değerlendirme odaklı birçok çalışma yapılmaktadır. Bu çalışma da bu amaç doğrultusunda Eskişehir İli genelinde 500 katılım bankası müşterisi ile yüz yüze yapılan anket görüşmesi ile gerçekleştirilmiştir. Ürün ve hizmetlere yönelik memnuniyet, ankete katılan banka müşterilerinin değerlendirildiği alanlardan biri olmuştur. Bu çalışmada ayrıca banka müşterilerinin sosyopolitik kimlik, sosyo ekonomik statü ve demografik özellikleri açısından memnuniyet düzeylerinde ayrışma olup olmadığı da ele alınmıştır. Eskişehir'deki 500 katılım bankası müşterisinin bu bankaları tercih etme nedenleri içinde ilk sırayı akraba ve arkadaş tavsiyesi alırken, Din 4. sırada yer almıştır. (Ergeç ve diğ, 2013) Bu durum Haron ve Planisek'in (1994) Malezya için yaptıkları çalışmaya benzer sonuçları gündeme getirmektedir. Dinin banka tercihinde tek neden olmaması ve müşteri çekmenin temel yolunun din olmaması bankaların hizmet ve ürün kalitesini arttırmaları gereğini göstermektedir. Bu çalışmada banka tercihinde akraba ve arkadaş tavsiyesinin ilk sırada yer alması, müşterilerin yakın akraba ilişkilerine sahip ve sosyal bağlarının kuvvetli olduğu gerçeğini ortaya koymakta, bu durum da bankaların müşterileriyle iyi ilişkiler kurmasının önemini göstermektedir.

Ankete katılan banka müşterilerinde katılım bankası ürün ve hizmetlerine yönelik genel anlamda yüksek denilebilecek bir farkındalık ve kullanım düzeyi tespit edilmiştir. Ancak ürünler arasında farkındalık ve kullanım düzeyleri farklılık göstermektedir. Katılım bankalarının sunduğu ürünler arasında en yüksek farkındalık ve kullanım düzeyi katılma hesabı için tespit edilmişken, ikinci sıradaki farkındalıkta cari hesap, kullanımda ise kredi kartları yer almıştır. Ayrıca ürün ve hizmetler konusunda müşterilerin farkındalık ve kullanım düzeyleri arasında anlamlı bir farklılık vardır. Banka müşterileri, katılım bankalarının sundukları ürün ve hizmetleri genel olarak ortalama yüzde 54 düzeyinde bilmekte iken, kullanma oranları ortalama yüzde 27'dir. Ticari müşterilere yönelik üretim desteği, leasing, kar/zarar (yatırım) ortaklığı ve dış ticaret hizmetlerinin kullanımı göz önüne alınmaz ise, bu durumda bilinme oranı %74, kullanım oranı ise ortalama %45 olmakta, yani ortalamalar arasındaki fark daha da yükselmektedir. Dolayısıyla katılım bankaları, müşterilerinin fikir sahibi oldukları bazı ürünleri kullanmama nedenlerini iyi irdelemelidir.

Ankette müşterilere yöneltilen, bankalarından genel anlamda memnun olup olmadıklarına ilişkin soruya verilen cevaplar göstermektedir ki müşteriler bu konuda yüksek oranda olumlu fikir beyan etmişlerdir. Banka müşterilerinin yüzde 70,2'si kanaatinin genel olarak olumlu olduğunu belirtirken, olumsuz kanaat belirtenlerin

oranı ancak yüzde 5,6'dır. Cinsiyet, gelir düzeyi ve sosyopolitik kimliğe göre olumlu kanaat belirtmede anlamlı bir ayrışım gözlenmemekte iken, diğer değişkenlere göre bu soruya verilen cevapta anlamlı ayrışımlar tespit edilmiştir.

Genç yaştakilerin olumlu kanaati görece daha düşük, ileri yaş grubundakilerin olumlu kanaatlerinin ise daha yüksek olduğu tespit edilmiştir. Eğitim düzeyi yükseldikçe çalışılan bankaya yönelik olumlu kanaat belirtenlerin oranının düştüğü görülmektedir. Düşük sosyoekonomik statüdekilerde olumlu kanaat belirtme oranının orta ve yüksek sosyoekonomik statüdekilere göre daha yüksek olduğu tespit edilmiştir. Meslek grupları itibariyle dağılım dikkate alındığında ise, emekliler ve ev kadınları en yüksek düzeyde olumlu kanaat belirtirlerken, bu oran işadamı/esnaf/sanatkârlar ile öğrenci kesiminde görece daha düşük gerçekleşmiştir.

Katılım bankalarının müşterilerine sunduğu ürün ve hizmetlerin sunumuna ilişkin 12 memnuniyet alanı hakkında sorular yöneltilmiştir. Sorulara verilen cevaplar derecelendirilerek bu alanlara ilişkin ortalama memnuniyet skorları tespit edilmiştir. Bu alanlar içinde banka işlemlerinin tamamlanma hız ve etkinliği en yüksek memnuniyet ortalamasına sahiptir. İkinci sırada personelin yatırım konusundaki danışmanlığı, üçüncü ve dördüncü sırada ise şubeye ilişkin fiziki koşullar yer almıştır. Memnuniyet derecelendirmesinde listenin en sonunda yer alan alanlara baktığımızda, en düşük skorun, internet bankacılığının kalitesi alanına ait olduğu görülmektedir. Bunu, hesaplara yüksek getiri sunulması alanı izlemiştir. Katılım bankalarının müşteri memnuniyeti için bu listenin alt sıralarında yer alan konulara önem vermeleri gerekmektedir.

Ayrıca bu memnuniyet alanlarına ilişkin her müşteri için ortalama skor hesaplanarak genel anlamda müşteri memnuniyeti de değerlendirilmiş, müşterilerin çalıştıkları katılım bankasına yönelik genel kanaatlerine benzer sonuçlara ulaşılmıştır. Buna göre, hizmetler için genel olarak müşteri memnuniyeti yüzde 68 düzeyindeyken, memnun olmayan müşteri oranı yüzde 6, düşük düzeyde memnuniyet belirtenlerin oranı ise yüzde 26'dır. Ürün ve hizmetlerden genel olarak memnun olma düzeyinin müşterilerin özellikleri ile ilişkilendirildiğinde; banka müşterilerinin yaş, gelir düzeyi, sosyoekonomik statü ve çalışılan katılım bankası tercihlerinde memnun olmada anlamlı ayrışım gözlenirken, diğer değişkenler ile benzer bir ilişki tespit edilememiştir. Buna göre, en yüksek memnun olma oranı 30 yaş altı müşteri grubunda gözlemlenirken, en az memnun olma oranına 30-40 yaş altı müşteri grubunda rastlanmıştır. Gelir düzeyi değerlendirildiğinde ise, çalışılan katılım bankasına ilişkin genel kanaate benzer biçimde, gelir düzeyi yükseldikçe memnun olan müşteri yüzdesinin düştüğü görülmektedir. Sosyoekonomik statüye göre ayrışıma baktığımızda da benzer eğilimi destekler bir durum görülmektedir. Memnun olan müşterilerin en yüksek yüzdeye sahip olduğu sosyoekonomik statü, düşük sosyoekonomik statü olmuştur. Sosyoekonomik statü yükseldikçe memnun olan müşterilerin oranının düştüğü görülmektedir.

Günümüzde hem birbirleri ile hem de geleneksel faizli bankalar ile rekabet ortamının daha da sıkılaştığı dikkate alındığında, bu çalışma ile katılım bankalarının müşteri odaklı değerlendirilmesinde dikkate alınması gereken sonuçlara ulaşılmıştır.

Türk Bankacılığında Rekabet Değerlendirme Yaklaşımları ile Rekabet Dinamiklerinin Ampirik Analizi

Emprical Analysis of Competition Dynamics in Turkish Banking via Competition Determination Approaches

Asst. Prof. Dr. Utku Altunöz (Sinop University, Turkey)

Abstract

Due to the complex and close interaction of banks with other economic units, any trouble in banking sector might have repercussion on the whole economy which makes the market structure and competition in banking sector as a cynosure. Business world is facing gradually increasing competition. It seems that the existence of firms depends on the power and the advantage of their competitiveness. The purpose of this study is to analyze the competition structure and the market conditions of Turkish banking system. despite the existence of a number of studies about competition in banking sector, there is still a lack of the studies which has been done with Lerner's Index. Due to this fact, Lerner's Indeks is used in this study. Bank level determinants of Lerner Index is analysed using Panel Data Regression Method and was reached to factors effecting competitive behavior in Turkish Banking Sector.

1 Giriş

Finansal sistem reel kesimin ihtiyaç duyduğu gerekli kaynağı sağlamanın yanı sıra, bu kaynakların etkin bir şekilde ve uygun zamanda yatırımlara aktarılmasını da sağlamaktadır. Finansal sistem, üstlendiği fonksiyonlar itibariyle reel kesimi yakından etkilemektedir. Finansal sistemdeki gelişmeler ve sektörün etkin işlemesi ekonominin bütünü açısından önem arz etmektedir (Kar ve diğ., 2008). Bu görevi önemli ölçüde bankalar yerine getirmektedir. Bankaların etkin çalışabilmelerinin ve kendilerinden beklenen finansal aracılık fonksiyonlarını en iyi şekilde yerine faaliyette bulundukları piyasanın yapısıyla doğrudan ilişkilidir. Bu nedenle bankaların faaliyette bulundukları piyasa yapısının tam rekabetçi olup olmaması, kendilerinden beklenen fonksiyonların etkin bir şekilde yerine getirilmesi açısından önem arz etmektedir. Öte yandan bankacılık sektörünün diğer piyasalardan farklı olduğu ve bu nedenle de rekabet açısından değerlendirme yapılırken diğer piyasalarla eş tutulamayacağı ileri sürülmektedir. Bu açıdan bakıldığında sektörde rekabete ilişkin iki farklı görüş ortaya çıkmaktadır. Bir görüşe göre rekabet ile kırılganlık arasında pozitif bir ilişkinin var olduğudur. Bankacılık sektöründeki rekabet, beraberinde kırılganlığı doğuracağı için bu kırılganlığın önce sektörü sonra ise tüm reel kesimi etkileyebileceği yönündedir. Sektörde yaşanabilecek bir yoğunlaşmanın yüksek faiz, ahlaki tehlike ve ters seçim sorununu gündeme getirerek piyasayı ve bütün bir ekonomiyi olumsuz etkileyebileceği yönündedir.

Bu çalışmanın amacı Rekabet her zaman iyidir önermesinin Bankacılık sektörümüz açısından doğru olup olmadığının sınanmasıdır. Klasik ekonomi teorilerine göre rekabetin artmasının refahı da beraberinde arttırması kabul görmüş bir düşüncedir. Fakat günümüz dünyasında yapılan bilimsel çalışmalarda tersi görüşler de yüksek sesle dile getirilmeye başlanmıştır.

Bir grup bilim adamı banka sektöründeki yoğunlaşmanın kırılganlık ihtimalini azalttığını, çünkü rekabet düzeyinin azaldığını ve buna bağlı olarak kârlılıktaki artışın bankaların risk alma eğilimini düşürdüğünü ileri sürmektedir. Ayrıca aynı bilim adamları, az sayıda büyük bankadan oluşan bir sektörün otoritelerce daha etkin bir şekilde denetleneceğini böylece kriz riskinin daha da düşeceğini savunmaktadır. Karşı görüşteki bilim adamları ise, serbest rekabeti savunurlar ve bu çerçevede yoğunlaşmanın banka sisteminin kırılganlığını arttıracağını ileri sürerler. Onlara göre; eksik rekabet koşullarında faaliyet gösteren dev ölçekli bankalar kredi verme konusunda daha ihtiyatsız olacak, faaliyet zararı riskleri artacaktır. Diğer taraftan, "batmayacak kadar büyük" olduklarından ve elbette bunun farkında olduklarından daha pervasız davranacaklar, gerekirse otoritelerin zararlarını karşılayarak kendilerini ayakta tutacağına güveneceklerdir. Böylece rekabetin azalması, kamu eliyle etkinsizlikler doğuracak ve kırılganlığı arttıracaktır. Yani rekabetle banka kırılganlığı negatif bir ilişki içindedir.

Üçüncü görüş ise, rekabetle banka kırılganlığı arasındaki ilişkinin yönünün ekonomik yapı ve ilişkilere göre farklılaşabileceği, bu anlamda her yerde ve her zaman geçerli yargılara varılamayacağı üzerinedir. Bu görüşü savunan bilim adamları, yaptıkları ampirik araştırmalarda çelişkili sonuçlara ulaşmışlardır. Dolayısıyla, onların diğer iki uç görüşün arasında yer aldıkları söylenebilir.

2 Bankacılık Sektöründe Rekabet Yaklaşımları

Genellikle tekelin tersi olarak ifade edilmesine rağmen rekabet, fiyatı ve marjinal maliyeti eşitleyerek kaynakların kullanımında dağılımsal etkinliği temin eden güç olarak ifade bulmuştur(McNulty, 1968). Stigler'in

(1987) tanımı çerçevesinde "rekabet iki veya daha fazla tarafın, herkesin aynı anda elde etmesi mümkün olmadığı bir şeyi elde etmek için uğraşmasından kaynaklanan yarıştır". Endüstriyel iktisat (industrial economics) literatüründe, rekabet diğer sektörlerde olduğu gibi bankacılık sektöründe de refahı artırmak için gerekli bir mekanizma olarak kabul edilmektedir (Frexias ve Rochet, 1998).

2.1 Yapı-Davra nış-Performans Paradigması

Bu yaklaşıma göre bir endüstrinin performansı pazarın yapısına bağlı olarak pazardaki alıcı ve satıcıların davranışlarına bağlıdır. Pazar yapısı ise teknoloji, talep gibi temel koşullara bağlıdır. Dolayısıyla yapı, davranış ve performansın tahmin edicisi olarak kullanılır. Pazarın yapısı (tam rekabet, tekel, tekelci rekabet, oligopol gibi) genellikle yoğunlaşma oranları ile tanımlanırken, performans pazar gücü ölçütleri olan getiri (rate of return), fiyat maliyet farkı ile ölçülür. Davranış ise teşebbüslerin ilgili pazar yapısında rekabetçi ya da koordinasyon doğurucu karar almalarını ifade eder. Fiyat, Ar-Ge, reklâm, üretim, teknoloji seçimi, giriş engelleri, yıkıcı fiyat uygulamaları, birleşme gibi kararlar teşebbüslerin davranışlarına örnek olarak sayılabilir. Firmalar arası gizli anlaşma, fiyat ayarlamaları ve normalin üzerinde kâr sağlanması gibi olayları; yapısal faktörler, piyasaya giriş engelleri, ürün farklılaştırması gibi nedenlerle açıklayan bu paradigma refah ekonomisine teorik temel oluşturur.

2.2 İşbirliği Hipotezi

Bain'in (1951) "işbirliği hipotezi" (collusion hypothesis) olarak adlandırılan bu görüşe göre, piyasa yoğunlaşması ile karlılık arasında doğrusal, dolayısıyla yoğunlaşma ile piyasa performansı (rekabetçi yapı) arasında ise ters yönlü bir ilişki söz konusudur. Bu hipoteze göre yüksek yoğunlaşma örtülü anlaşmaların maliyetini düşürür ve bunun sonucunda kredilere daha yüksek fiyat uygulanırken, mevduata ödenen faizler düşer, ücretler artar. Rakipler birbirlerinin davranışlarını veri olarak kullanarak kendi stratejilerini oluştururlar. Örneğin, firmaların piyasa fiyatını etkileyemediği ve pasif fiyat alıcıları (price takers) olduğu tam rekabet piyasalarının aksine, oligopol piyasalardaki firmalar tüm piyasa katılımcılarını zarara uğratacak büyük fiyat savaşlarını önlemek için fiyat kırmaktan kaçınırlar. Bu durumda firmalar arasında açık bir iletişim olmasa dahi, tekel fiyatı uygulama konusunda örtülü anlaşma olması durumudur (Kraft, 2006).

2.3 Etkin Yapı Hipotezi

Demsetz (1973), etkinlik hipotezinin temellerini attığı çalışmasında, rekabetçi yapının baskısı altında ve etkili giriş engellerinin olmaması durumunda, bir sektörün çıktılarının birkaç firmada yoğunlaşmasının, ürünlerin üretilmesinde ve fiyatlamasındaki üstünlükten veya yalnızca birkaç firmanın faaliyet gösterdiği sektörel yapının üstünlüğünden ileri geldiğini öne sürmektedir.

Etkin yapı hipotezi yoğunlaşma ile kârlılık arasındaki ilişkiyi kabul etmekle birlikte yoğunlaşmanın yalnızca firmalar arasında rastlantısal şekilde meydana gelen anlaşmalardan meydana gelmeyeceğini, bunun rekabetçi ortam vesilesiyle gerçekleşebileceğini vurgulamaktadır. Diğer bir deyişle piyasadaki yoğunlaşma ile karlılık arasında pozitif bir ilişki olmasına karşılık bu ilişki nedensel değildir. Bu da yoğunlaşmanın dışsal bir faktör olduğu anlamına gelir. Piyasa yapısı ise içseldir. Kısaca özetlemek gerekirse Demstez'in etkin yapı hipotezine göre karlılık ile yoğunlaşma arasında gözlemlenen ilişki sahte (spurious) bir ilişki olup esasında yüksek etkinlik, yüksek piyasa payına ve bu da o piyasada yüksek yoğunlaşma oranına neden olmaktadır (Smirlock, 1985).

2.4 Yarışılabilirlik Teorisi

Eğer girişler açısından sabit maliyetler batık değilse ve yeni girenler mevcut firmalara kıyasla değişken maliyetlere sahiplerse piyasa "yarışabilir" bir piyasadır ve mevcut satıcılar arasındaki yoğunlaşmadan bağımsız olarak rekabetçi davranacaktır (Baumaol, Panzar ve Willig, 1982). Teoride piyasaya giriş ve çıkış maliyetsiz ve hızlı bir şekilde gerçekleştiği için fiyatı kontrol edecek güçleri olmamaktadır (Martin 1994). Söz konusu teoride, hem firmalar, hem de tüketiciler tam bilgiye sahiptir. Bratland (2004) yarışılabilirlik teorisi altında, çok ürün üreten tekelcilerin bile, potansiyel rakiplerin piyasaya giriş tehditleri nedeniyle fiyatlama davranışlarını kısıtlayabileceğini öne sürmektedir. Yarışılan piyasa "0" maliyet marjı ile ilerleme eğiliminde olduklarından, uzun dönemde tam rekabet dengesi ile Pareto optimumu sağlanmış olur.

2.5 Herfindahl-Hirschman İndeksi (HHI)

Pazardaki her firmanın piyasa paylarının karelerinin toplamına eşittir. Herhangi bir sektörde HHI değerinin 1000'in altında olması, o sektörün tam rekabet içinde olduğunu gösterir. HHI değerinin 1000 ila 1800 arasında olması, o sektörün "ideal" rekabet ortamında olduğunun göstergesidir. Piyasanın oligopol piyasası olduğu HHI değerinin 1800'ün üzerine çıkmasından anlaşabilir.

Bir pazarda birbirine eşit pazar payına sahip çok sayıda oyuncu olması durumunda HHI sıfıra yakınsayacaktır. Bu tip pazarlara Atomistik Pazar / Atomistik Piyasa denir. Pazarda tek bir firma olması durumunda ise 10.000 (ya da 1) olacaktır.

2.6 Yoğunlaşma Oranı (Crm)

Satış hâsılatına göre, o iktisadi faaliyet sınıfı içindeki N sayıdaki işyeri içinde, faaliyet sınıfı içindeki payı en büyük 'm' sayıda işyerinin oranıdır. Bu yoğunlaşma ölçütleri arasında en eski ve özellikle ampirik çalışmalarda en yaygın kullanılan M firma yoğunlaşma oranıdır.

$$CRm = i = i$$

Burada,

Xi = i. firması için X değişkeninin değeri, Pi = i. firmasının toplam içindeki oranı veya i. firmasının payı, X = Tüm sanayi için X değişkenlerinin toplamı, n = Sanayideki firma sayısı, CRm = En büyük M firmasının toplam piyasa payı içindeki payıdır.

M değeri geleneksel olarak dört, sekiz veya yirmi olarak alınır. Bankacılık sektöründe bu oran, mevduat veya krediler gibi çeşitli büyüklüklerden biri baz alınarak belirlenen aktif toplamlarına göre sıralanan bankalardan ilk M tanesinin temel alınan kriter açısından toplam değerinin, aynı kriter açısından o bankaların yer aldığı endüstride gerçekleşen toplam değere oranlanması ile bulunmaktadır.

Yoğunlaşma oranı ölçütü, araştırmaya konu olacak banka sayısının belirlenmesi hususunda sübjektif bir ölçüt olma özelliği taşımakta olup, aynı zamanda, endüstrideki büyük bankaları dikkate almakta, küçük ve orta büyüklükteki bankaları dikkate almamaktadır. Banka sayısı arttıkça sektördeki yoğunlaşmanın azalması, eşitsizlik endeksi arttıkça ise yoğunlaşmanın artması gerekmektedir. Bu özelliğin matematiksel ifadesi (1.1) nolu eşitlikte verilmektedir.

$$C = f(n, I) \quad f_n \leq ve \quad f_I \geq 0 \qquad \qquad (1.1)$$

Yukarıdaki eşitlik, sektöre yeni giriş yapan bir bankan›n yoğunlaşmayı azaltacağı sonucunu doğurmaktadır. Ancak, yeni giriş yapan banka sektörde mevcut bulunanlara göre "yeterince" büyükse yoğunlaşmanın artması mümkündür. Piyasaya yeni giriş yapan bankan›n yarattığı eşitsizlik etkisinin banka sayısındaki artışın yarattığı yoğunlaşma azalışı etkisinden daha fazla olduğu durumlarda sektördeki yoğunlaşma artacaktır.

2.7 Hannah ve Kay İndeksi

Herfindahl - Hirschman İndeksi'nin daha genel biçimi olarak ifade edilir. Herfindahl – Hirschman İndeks'deki piyasadaki bütün bankaların piyasa paylarının karesi, güç α'ya artırılmıştır. Hannah ve Kay indeksi şu şekilde gösterilir:

$$HK = \left[\sum_{i=1}^{n} S_i^{\alpha} \right]^{1/(1-\alpha)}$$

3 Yapısalcı Olmayan Yaklaşımlar

Yapısal yaklaşımlar, yoğunlaşmış piyasaların rekabetçi olmadığını çünkü yarışılabilirliğin potansiyel rekabetin derecesine bağlı olduğunu varsayar. Muhtemelen yapısal olmayan yaklaşımların en önemli avantajı, bu seklindeki bir neden sonuç ilişkisini varsaymamasıdır. Yapısal olmayan modellerin bir diğer avantajı, her bir bankanın davranışı kendi piyasa gücü hakkında bir fikir verebildiği için, coğrafi piyasa tanımlamasına gerek olmamasıdır (Casu, Girardone, 2006).

3.1 Lerner İndeksi

Rekabetin ölçülmesine yönelik ampirik yaklaşımlar genelde problemli olduğundan ölçüm çoğunlukla firma seviyesinde bilgilerin gerekmesi nedeniyle endüstriyel organizasyondaki methodların kullanımı önem kazanmıştır(Guevara, Maudos ve Pe´rez:2005). Akademik alanda, özellikle bankacılık sektöründe rekabetin ölçümüne dair yoğun bir ilgi söz konusu olmuştur. Bu yüzden, geçtiğimiz yıllarda çeşitli araştırmalarda bu konuda rekabet için çeşitli göstergeler ortaya koyularak (Lerner endeksi, Panzar Rosse Testi, Breshanan Testi, Varsayımlı değişken parametre) yeni yöntemler geliştirilmiştir. Lerner'in ortaya koyduğu varsayım, piyasa yapısının nispi marjlar yoluyla açıklanabileceğini, oligopol rekabet modellerinin nispi marj ile piyasanın yapısal ve rekabetçi koşulları arasındaki denge ilişkisini tanımladığını ifade eder.

Lerner İndeksi = (Fiyat - Marjinal Maliyet) / Fiyat'dır. Yani,

$Lerner \ indeksi = \frac{P-MC}{P}$ olarak formülize edilmektedir.

Lerner indeksinin sıfır değerini alması, tam rekabetçi bankaların varlığını işaret etmektedir. İndeks değeri 1'e yaklaştığında piyasa gücü artmaktadır. Yüksek derecedeki bir piyasa gücüne sahip olan banka, ekonomik faaliyet içinde etkili bir birim olacaktır. Fakat elde edilen yüksek kâr düzeyleri, piyasa gücünün ve kötü ekonomik performansın bir göstergesi olarak karşımıza çıkabilecektir. Bunun tersine rekabetçi durumdaysa, piyasa gücü önemsiz hale gelecektir. bankalar için takdir etme yetkisi ortadan kalkacak ve fiyatlar, maliyetlere doğru düşecektir. Böylece banka piyasada pasif bir birim olacaktır.

3.2 Panzar-Rosse Modeli

Literatürde bankacılık sektörü için yapılan piyasa yapısı tahminine yönelik Yeni ampirik endüstrisi iktisadı çalışmalarında genel olarak Panzar ve Rosse (1987) modeli kullanılmaktadır. Oligopolistik, rekabetçi ve monopolistik piyasalar için oluşturulan model çerçevesinde, piyasa yapılarını karşılaştırmak amacıyla bir test istatistiği geliştirmektedir. Bu test, firma veya banka seviyesinde indirgenmiş form hasılat eşitliğinin özelliklerine dayanmakta olup, belirli koşullarda bankaların rekabetçi davranışlarını ölçümleme işlevi gören H

test istatistiğini hesaplamaktadır. H testi, hem banka hem de sektör seviyesinde kârların maksimum kıldığı denge üretim miktarı ve banka sayısının belirlendiği genel bankacılık piyasa modelinden elde edilmektedir. Panzar ve Rosse modelinde tahmin edilen indirgenmiş formda gelir denklemi aşağıda verilmiştir.

$$InR = j_0 + \sum_{K=1}^{m} h_k \, InW_{k_i} + j_1 InA_1 + j_2 InK_i \qquad i = 1, \dots, n \qquad \textbf{(1.2)}$$

Eşitlikte W, girdi fiyat vektörünü, R firma gelirini, A talep üzerinde etkisi olan değişkenler vektörünü ve K kapasiteyi temsil eden diğer değişkenler vektörünü ifade etmektedir. Bankacılık sektöründe piyasa yapısının belirlenmesi konusunda yapılan ampirik çalışmalar, Panzar ve Rosse (1987) H istatistiği tahminine yöneliktir. AB bankacılığı üzerine yapılan çalışmaların birçoğu, Türk bankacılık sektörü üzerine yapılan çalışmaların ise tamamı PR H istatistiği tahminine yöneliktir.

Tahmine Edilen H Değeri	Piyasa Yapısı
H≤0	Tekel Piyasası: Her bir firma kendisine ait talep eğrisi üzerinde bağımsız bir tekelcifirmas gibi davranmaktadır. (H algılanan talep esnekliğinin azalan bir fonksiyonudur)
0<H<1	Piyasaya girişlerin serbest olduğu tekelci rekabet hamberlin)modeli. Fazla kapasite söz konjusudur. (H algılanan talep esnekliğinin artan bir fonksiyonudur.)
H=1	Tam rekabet piyasası. Etkin (tam) kapasite kullanımı söz konusudur.

Tablo 1: *Panzar ve Rosse H Değerlerine Karşılık Gelen Piyasa Türleri* **Kaynak:** *Vesela (1995:59)*

Literatürde Panzar ve Rosse (1987) modeli tahminlerinin çoğunda banka gelirlerini temsil etmek üzere modelin bağımlı değişkeni olarak ya net faiz gelirleri, ya da toplam gelir dikkate alınmıştır. Ayrıca söz konusu çalışmalarda bankaların toplam aktifleri, banka gelirini etkilediği düşünülen ve ölçeği yansıtan bağımsız değişken olarak modellerde yer almıştır.

3.3 Klein Monti Monopol Modeli

Tam rekabet durumunda tüm bankalar fiyatları veri kabul ederler ve özdeştirler. Rekabetçi dengede, marjinal operasyon maliyeti faiz marjına -hem kredi hem de mevduatta- eşit olmalıdır. Kredi ve mevduat maliyetleri ayrılabiliyorsa çapraz etkiler sıfırdır. Kapsam ekonomileri (economies of scope) çapraz etkiler negatif işaretliyse mevcuttur. Yani, kredi hacmindeki bir artış marjinal mevduat maliyetini azaltıyorsa kapsam ekonomilerinin varlığından bahsedebiliriz. Bu durumda banka kredi ve mevduat fonksiyonlarını tek bir birimde (şube) etkin olarak yerine getirebilir sayılıyor. Literatürde kapsam ekonomilerinin varlığı veya yokluğu, bankacılık sektöründeki rekabetin niteliğini değiştirecek kadar önemli bir konu olarak görülüyor. Ayrıca, sektördeki banka sayısını ve kapsam ekonomilerinden yararlanan "evrensel bankaların" oranını da etkileyecektir. Kapsam ekonomileri, sektördeki yabancı sermaye oranını belirleyebilecek kadar önemli bir etken olabilir (Fındıkçıoğlu, Çevirim içi, 2012).

Klein Monti Monopol Modeli, tekelci banka modeli bu anlamda tam rekabetin tam tersi bir limit sunmaktadır. her bir bankanın krediler için talep fonksiyonu $L(r_L)$ aşağı yönlü bir eğri ve mevduat için talep fonksiyonu $D(r_D)$ yukarı yönlü bir eğri şeklinde oluşur. Bu fonksiyonların tersi ise $r_D(D)$ ve $r_L(L)$ şeklindedir. Bankalar kredilerin (L) ve mevduatların (D) miktarlarına karar verebilmektedirler. Bu kararlar da ilgili faiz oranlarını etkilemektedir.

Bankalar için piyasa gücü arttıkça esneklik azalmakta ve Lerner endeksi artmaktadır.

3.4 Cournot Modeli (Oligopol Varyantı)

Firmaların üretim miktarlarını belirleme yoluyla rekabet ettikleri Cournot modeli çerçevesinde üretilen ürünün homojen olduğu varsayımı altında yürütülen çalışmanın ortaya çıkardığı çarpıcı sonuçlardan biri, etkinlik yaratmayan yatay birleşmelerin genellikle fiyatı artırdığıdır. Bir diğeri ise, birleşme sonrası fiyat düşüşünün gerçekleşebilmesi için, sabit maliyetlerden ziyade marjinal maliyetlerde düşüşün gerekli olduğudur. Gerekli olan marjinal maliyet tasarrufu miktarı ise tarafların pazar payları ile doğru, talep esnekliği ile ters orantılıdır (Farrell ve Shapiro 1990, 110-122). Tekel yerine oligopol bir piyasa yapısı üzerinden hareket eder. Bir banka diğer rakip bankanın tepkilerini görmesine rağmen görmüyormuş gibi davranır. Esneklikler, banka sayısı ile çarpılır. Bu modelde Klein Monti modelinin birinci dereceden türevi aşağıdaki gibi değişmektedir.

$$\frac{r_{L*} - (r + c_l)}{r_L} = \frac{1}{Ne_L(r_{L*})}$$

$$\frac{r(1 - \alpha)C_D - r_{D*}}{r_{D*}} = \frac{1}{Ne_d(r_{D*})}$$

3.5 Bertrant Modeli

Bertrand türü oligopol modelinde firmalar rakiplerin fiyatlarının veri olarak alınabildiği varsayımı altında karı maksimize edecek fiyatları (miktarları değil) bağımsız olarak belirlemektedirler. Modele yapılan en önemli eleştiri, büyük bankaların diğer küçük bankaların davranışlarına aldırış etmemeleridir.

3.6 Salop Modeli (Tekelci Rekabet)

Tam rekabet ve monopol piyasaları arasında yer alan ve gerçek hayatta en sık karşılaşılan piyasa yapılarından bir diğeri ise monopolcü rekabet piyasasıdır. literatürdeki iki uç noktayı temsil eden tam rekabet ve monopolcü yapının birtakım özelliklerini taşır. Tam rekabet piyasasında olduğu gibi monopolcü piyasada da, faaliyet gösteren ekonomik birimlerin sayısı çok fazladır. Ancak bu ekonomik birimler, homojen değil, farklılaştırılmış ürünler arz etmektedirler. Firma sayısının çokluğu nedeniyle, fiyat ya da miktar üzerinde bir anlaşmaya varma olasılığı çok zordur. Monopolcü rekabet piyasa yapısının geçerli olduğu bir bankacılık sisteminde, bankalar, farklılaştırılmış hizmetleri ile rekabet içindedirler. Her bankanın karşı karşıya olduğu talep eğrisi, banka sayısının çokluğu nedeniyle ortaya çıkan ikame kolaylığı nedeniyle çok esnektir. Bankalar, oligopol piyasalarına benzer olarak, reklam ve promosyon gibi rekabet araçlarını kullanarak, hizmet farklılaştırmasına giderler. Monopolcü rekabet bu özellikleri ile özelikle Avrupa'daki bankacılık sistemlerinde, oldukça sık rastlanan bir piyasa yapısıdır. Son yıllarda Avrupa bankacılık sisteminde gözlemlenen ortak eğilim, banka sayılarındaki düşüş ve birleşme oranlarındaki artıştır. Bu durumun rekabeti azaltacağı ve bankacılık hizmet alternatiflerini daraltacağı düşünülmekteydi. Ancak, yüksek yoğunlaşma düşük rekabete yol açar şeklindeki geleneksel görüşün aksine, özellikle Avrupa için yapılan çoğu çalışmada, yoğunlaşma ve rekabet arasında anlamlı bir ilişki bulunamamıştır.

3.7 Iwata Modeli

Yeni Ampirik Endüstriyel Organizasyon yaklaşımı temelinde ortaya çıkan yapısal olmayan modellerin öncülüğünü 1974 yılındaki çalışmasıyla Gyoichi Iwata gerçekleştirmiştir. Iwata modeli, oligopolcü bir piyasada, homojen bir ürün arz eden her bir banka için tahmini varyasyon(variation)değerlerinin hesabını mümkün kılar(Koutsomanoli ve Staikouras,2004).

3.8 Bresnahan ve Lau Modeli

Bresnahan ve Lau (1989) tarafından bankacılık sektörüne yönelik geliştirilen ikinci yapısal olmayan model, eş zamanlı denge modelini temel almaktadır. Eş zamanlı arz ve talep fonksiyonlarının yanında, yine eş zamanlı bir fiyat eşitliğinin tahmini ile piyasa gücünün göstergesi geliştirilmektedir(Hempell,2002).

4 Bankacılık Sektöründe Rekabet Konusunda Yapılan Amprik Çalışmalar

Bankacılık alanında piyasa gücüne ilişkin yapılan çalışmaları genel hatlarıyla üç farklı gruba ayırmak mümkündür. İlk gruba mikro iktisat ve endüstriyel organizasyon kuramları çerçevesinde yapılan tamamen teorik çalışmaları dâhil etmek olası iken, ikinci grupta daha az kuramsal içeriğe sahip olan "indirgenmiş biçimli modeller" yer almaktadır. Üçüncü grupta ise teoriden ve fiyat, talep ile arz gibi iktisadi parametrelerden bağımsız olarak geliştirilen, piyasa yapısına belirli ölçütler çerçevesinde yaklaşılan betimsel analizler bulunmaktadır.

Panzar-Rosse yönteminin bankacılık sektöründeki ilk uygulamalarından biri olan ve New York'daki bir grup bankanın davranış biçimini inceleyen Shaffer (1982), uzun dönem dengede bankaların ne monopolistik ne de tam rekabetçi davrandığını tespit etmektedir.

Shaffer(1993), 1968–1989 dönemi için Kanada bankacılık sektöründeki bulguların tam rekabet ile tutarlı olduğunu tespit etmiş ve tekel hipotezini tamamen reddetmiştir. Dolayısıyla, Avrupa'dakine benzer bir konsolidasyonun Kanada bankacılık sektöründe rekabeti fazla etkilemeyeceğini ileri sürmüştür.

Fischer ve Hempell (2008), Alman Bankacılık sektöründe 1993-2001 yılları arasında faaliyet gösteren bankalar için Lerner Endeksini hesaplamışlardır. Hesaplanan Lerner Endeksinden yola çıkılarak, bölgesel piyasa gücünü belirleyen faktörler tespit edilmiştir. Elde edilen bulgulara göre, banka ürünlerinin talebini etkileyen diğer piyasa özellikleri gibi yerel piyasadaki yoğunlaşma düzeyi de piyasa gücü ile ilişkili bulunmuştur. Sonuçların birbirini desteklediği görülmüş ve böylelikle çalışmanın bulgularının doğruluğu kuvvetlendirilmiştir.

Çelik ve Kaplan (2010) ise Türk Bankacılık Sektöründe etkinlik ve rekabet ilişkisini 2002-2007 dönemine ilişkin yatay kesit verileri ile incelemiştir. Çalışmasında etkinlik ile rekabet arasında doğrusal bir ilişki olduğu sonucuna varmış ve etkinliğin arttığı 2005 ve 2006 yıllarında rekabetin de arttığı sonucuna ulaşmıştır.

5 Türk Bankacılık Sektöründe Rekabet Dinamiklerinin Ampirik Analizi

Çalışmamızın bu kısmında rekabeti ampirik olarak test eden modellerden Lerner Endeksi'ni kullanarak Türk Bankacılık Sektörü rekabet yapısını analiz edeceğiz. Bankacılık sektörü ve rekabet konusunda yapılan çalışmalar genelde yoğunlaşmanın performans üzerindeki etkilerine odaklanan ve rekabetin ampirik olarak test edilmesine önem veren çalışmalar olmak üzere ikiye ayrılmaktadır. Yeni Ampirik Endüstriyel Organizasyon yaklaşımı çerçevesinde piyasa gücünün ölçülmesinde kullanılan modeller arasında Panzar-Rosse H-istatistigi, Bresnahan Modeli ve Lerner Endeksi sayılabilir.

5.1 Türk Bankacılık Sektörü İçin Lerner İndeksinin Hesaplanması ve Veri Seti

Piyasa yapısının çeşitli unsurlarından meydana gelen monopol derecesini göstermek için kullanılmaktadır. Piyasa gücü göreceli bir kavramdır ve firmaya ya da bir grup firmaya, sattıkları ürünlerin fiyatını, miktarını ve niteliğini belirleme konusunda takdir yetkisi sağlamaktadır. Tam rekabet modelinin aksine firmalar, fiyatı marjinal maliyetin üzerine çıkarabilmektedirler. Dolayısıyla piyasa gücünü, fiyatları tam rekabetçi düzeyin üzerine çıkarabilme yeteneğidir şeklinde de tanımlayabiliriz. Lerner indeksi ya da diğer adıyla fiyat-maliyet marjini, piyasa gücünün ölçümünü bize göstermektedir.

Ortalama bir firmanın istediği marjinal getirinin talep fiyatından sapması, piyasa gücünü ifade edecektir. LE, "0" ile "1" arasında bir değer alır. "0", tam rekabet piyasasını, "1" ise tekel durumunu ifade eder. LE'nin "0"ın altında değer aldığı da görülür ki bunun anlamı, firmaların optimum fiyatlama davranışının dışına çıktığıdır.

Lerner indeksi, bankaların marjinal fiyatını, marjinal maliyetine kıyasla ne kadar arttırabildiğini gösteren bir ölçüttür ve piyasa gücünün hesaplanmasında yaygın olarak kullanılmaktadır. Bu bilgiler ışığında, lerner endeksi sayesinde firma ya da firmalar tam rekabet koşullarında faaliyette bulunmaları halinde elde edecekleri normal kârın üzerinde bir kar elde edebiliyorlarsa tekel gücüne sahiptirler. Bu kâr normal kârdan ne kadar büyükse tekel gücü de o ölçüde büyük demektir. Endüstride tam rekabetten sapılmış olduğunun ve dolayısıyla kârın normal kârın ne kadar üzerinde olduğunun saptanmasında Lerner Endeksine başvurulur. Her firmalar tam rekabet koşullarında faaliyette bulunuyorlarsa fiyat = marjinal maliyet olacağından Lerner endeksi de sıfır olacaktır. Bu da tam rekabet piyasası koşullarında faaliyette bulunan firmaların tekel güçlerinin sıfır olduğunu gösterir. Firma ya da firmalar, tam rekabetten uzaklaştıkça fiyat marjinal maliyetin üzerine çıkarken, Lerner endeksi büyüyecek ve tekel gücü artacaktır. O halde oligopolcü firmalar aralarında anlaşarak arzını kontrol ettikleri malın fiyatını yükselttikleri oranda tekel güçleri artacaktır.

Yıllar	Sektör Ort.	Kamu Bankaları	Özel bankalar	Türkiye'de kurulmuş Yabancı Bankalar	Türkiye'de Şube Açan Yabancı Bankalar
1992	0.46	-0.29	0.55	0.56	0.55

2007	0.05	0.16	0.14	-0.02	-0.09
2008	0.40	0.33	0.42	0.33	0.44

Tablo 2: Türk Ticari Bankacılık Sektörünün Lerner Endeksi Değerleri

Tablo 2 den izlendiği gibi özellikle 1992-1995 döneminde yabancı bankaların Lerner İndeksleri, yerli bankalara göre oldukça yüksektir. Benzer şekilde özellikle kriz dönemlerinde Piyasa gücünün kullanımı noktasında en etkin bankaların yerli bankalar olduğu da dikkat çekmektedir.

5.2 Durağanlıkların Test Edilmesi

Zaman serilerinin durağan olması olarak ifade edilen şey, zaman içinde varyansın ve ortalamanın sabit olması ve gecikmeli iki zaman periyodundaki değişkenlerin ko-varyansının değişkenler arasındaki gecikmeye bağlı olup zamana bağlı olmamasıdır. Çalışmamızda aşağıdaki değişkenlerin durağan olması nedeniyle deterministik bileşenlerinin araştırılmasına gerek duyulmamıştır. Değişkenler arasında sahte ilişkilere neden olunmaması için kullanılan değişkenlerin durağan olması gerekmektedir. Bunun için denklem tahminlerine geçmeden önce değişkenlerin durağan olup olmadıkları Levin, Lin, Chu (2002) birim kök testi ile test edilmektedir.

Levin, Lin, Chu (2002) ise bireysel birim kök testlerinin alternatif hipotezlere karşı sınırlı gücünün olmasını tartışmıştır. Bu, küçük örneklemlerde kendisini daha fazla hissettirmektedir. Levin, Lin, Chu her bir yatay kesit birim için bireysel birim kök testlerine nazaran daha güçlü bir panel birim kök testi önermektedirler. Sıfır hipotezi her bir bireysel zaman serisinin birim kök içerdiği, alternatif hipotez ise her bir zaman serisi durağandır şeklinde kurulmaktadır. Levin, Lin, Chu aşağıdaki gibi bir modeli dikkate alır (Baltagi, 2005).

Değişkenlerin, deterministik bileşen içerip içermemelerine göre durağanlıkları test edilmiştir. Buna göre aşağıdaki değişkenlerin, deterministik bilesen içermemesi, trend bileşeni içermesi ve kesme bileşeni içermesi durumlarına göre her üç düzeyde de durağan olduğu görülmüştür. Her üç düzeyde de durağan olan değişkenlerin deterministik bileşenlerinin araştırılmasına gerek duyulmamıştır.

Değişken	Piyasa Gücü (Lerner İndeksi) ile Etkileşimi
Etkinlik Göstergeleri (Finansal Rasyolar)	Rasyonun büyük olmasının bankaların piyasa gücünü azaltacağı kabul edilir.
Karlılık Göstergeleri	Rasyonun büyük olmasının bankaların piyasa gücünü azaltacağı kabul edilir.
Risk	Lerner İndeksi ile aralarında negatif ilişki beklenmektedir
Uzmanlaşma	Lerner İndeksi ile aralarında negatif ilişki beklenmektedir
Kapitilizasyon	Piyasa gücünü arttırması beklenir
Bilanço Yapısı	Açık pozisyon nedeniyle bankaları kur riskine maruz bırakacağı için negatif ilişki beklenir
Pazar Payı	Piyasa gücünü arttırması beklenir
Ölçek	Büyük ölçeklibankaların maliyet avantajı sağlayarak piyasa güçlerini arttırması beklenmektedir

Tablo 4: *Levin-Lin ve Chu Durağanlık Testi Sonuçları*

Pazar payı ve Öz kaynak/TA değişkenleri hem kesme hem trend içermektedir. Durağan oldukları tespit edilmiştir. LogTA ve Bilanço Yapısı değişkenleri kesme ve trend içerdikleri halde bu düzeyde durağan değildir. Bu nedenle kesme ve trendden arındırılmış ve durağan hale getirilmiştir. Bilanço Dışı/TA değişkeni ise yalnızca Kesme içermekte olup, bu düzeyde durağandır.

5.3 Panel Veri Regresyon Modeli İle Analiz

Panel Veri yöntemi, ülkeler, firmalar, hane halkları, vb. kesit (cross-section) gözlemlerinin belli bir zaman dönemi içinde bir araya getirilmesi olarak tanımlanabilir. Regresyon modeli genel anlamda şu şekilde formülize edilmektedir.

$$Y_{it} = \beta_1 + \beta_2 X_{2it} + \beta_3 X_{3it} + \cdots + \beta_n X_{nit} + u_{it}$$

Panel veri setinin her bir yatay kesit için eşit uzunlukta zaman serisi içermesi durumu dengeli panel; zaman serisi uzunlukları yatay kesitten yatay kesite değişmesi durumu ise dengesiz panel olarak adlandırılmaktadır (Wooldridge, 2003). Çalışmamızda analizimizde panelin dengeli olması için ilgili dönemde sürekli olarak faaliyet gösteren 27 bankası analize alınmıştır.

***Tablo 6:** Sabit Etkiler Yöntemiyle Panel Veri Regresyon Analizi Sonuçları* **Not:** *Bağımlı değişken Lerner İndeksidir. Panel en küçük kareler yöntemi kullanılmıştır. *,%95 ve **,%90 güven aralığını ifade etmektedir.*

Regresyon analizlerinde, korelasyon katsayıları, Korelasyon katsayısı, regresyon modeli ile bulunan tahmini Y değerlerinin, gerçek değerlere uygunluğunu ölçmede kullanılır. Korelasyon katsayısı -1 ile 1 arasında değişir. Katsayının -1 çıkması, iki değişken arasında ters yönlü tam bir ilişkinin olduğunu, 1 çıkması ise doğru yönlü tam bir ilişkinin olduğunu ifade eder. Katsayının -1'e doğru yaklaşması, değişkenler arasında ters yönlü kuvvetli bir ilişkiyi gösterirken, 1'e yaklaşması değişkenler arasında doğru yönlü kuvvetli bir ilişkiyi ifade eder. Korelasyon katsayısının işareti, regresyon doğru veya eğrisine ait eğim katsayısının işaretidir. bankacılık sektöründe, bankaların aracılık fonksiyonların en önemli göstergelerinden biri Krediler/Toplam Aktifler ve Krediler/Mevduatlar oranlarıdır. Bankalarda aracılık hizmetlerinin etkinliğindeki artış ve rekabet ilişkisi negatif katsayılı ise bu iki göstergenin doğru orantılı olduğunu ifade etmektedir. Çalışmamızda bu iki katsayının negatif değer alması ülkemizde bankalarda aracılık etkinliğinin rekabet ile doğru orantılı olarak arttığını göstermektedir. Analiz sonuçları bu anlayışı desteklemekte ve bankaların mevduatın krediye dönüşüm oranını yüksek tutabilmek için yoğun biçimde rekabet etmek zorunda olduklarını ortaya koymaktadır. Verilen kredi miktarının arttırılması ise, kredi kullananların ekonominin geleceği ile ilgili olumlu beklentilerinin yanı sıra, kredi faizlerinin düşük tutulması ile mümkün olabilir. Analiz sonuçları bu anlayışı desteklemekte ve bankaların mevduatın krediye dönüşüm oranını yüksek tutabilmek için yoğun biçimde rekabet etmek zorunda olduklarını ortaya koymaktadır. Toplam Gelirler/Toplam Giderler Değişkenin pozitif katsayı alması, piyasa gücü ile etkinliğin doğru orantılı olduğu, diğer bir değişle daha etkin bankaların daha fazla piyasa gücü elde edebilecekleri anlamına gelmektedir.

Kârlılık ile ilgili olarak ele alınan iki değişken (ROA ve NFM) piyasa gücü ile negatif ilişkili olarak bulunmuştur. Bankacılık sektörlerinde, diğer tüm sektörlerde olduğu gibi, rekabetin kârlılığı azaltması beklenir. Bu durumda ulaştığımız sonuç beklediğimiz bir sonuç değildir. Bununla birlikte aracılık fonksiyonlarındaki gelişimle birlikte değerlendirilmesi durumunda lerner indeksi düşük olan bankalarda krediye dönüşüm oranının yüksek olması, kârlılığı yükseltebilecektir. Bankaların toplam aktifleri içerisinde menkul kıymetlerin payının yüksekliği, Türkiye'de banka karlarının yalnızca kredi/mevduat oranına ya da rekabetçi davranışlarına bağlı olmadığını göstermektedir. Bu noktada, Devletin finansman ihtiyacının önemli ölçüde bankalar kanalıyla karşılandığı gerçeği, faiz gelirleri içerisinde menkul kıymetlerden alınan faizlerin büyük bir yer tutmasına, bu vesileyle de kredilere düşük faiz uygulayarak rekabetçi bir davranış sergileyen bankaların dahi yüksek faiz marjları ve yüksek aktif kârlılığı elde etmelerine yol açmaktadır. Öz kaynaklar/Toplam Aktifler, Yüksek öz kaynak rasyosuna sahip bankaların, sağlam sermaye yapısına bağlı olarak iflas olasılıklarının, dolayısıyla da finansman maliyetlerinin düşük olduğu kabul edilir. Bu varsayım altında, daha düşük maliyetler nedeniyle öz kaynak rasyosu ile piyasa gücü arasında pozitif bir ilişki beklenmektedir. Analizden elde edilen sonuçlar, bu beklentiyi doğrulamaktadır. Yabancı para aktifler/toplam aktifler, lerner indeksini arttıran diğer etmendir.

Dolayısıyla döviz varlıkları yüksek olan bankaların Pazar payında bir yükselme olmuş, bu varlıklar üzerinden beklenen getirinin artmasına bağlı olarak piyasa güçleri yükselmektedir.

Çalışmamızda risk ile Lerner İndeksi arasında anlamlı negatif ilişkidir. Bu sonuç, rekabetin bankalarda risk alımını arttırdığı ve piyasa genelinde istikrarı tehdit ettiği yönündeki Görüşe uyumludur. Rekabetin yoğun yaşandığı piyasalarda bankalar Pazar paylarını genişletmek amacıyla kredi verilecek birimlerin seçiminde daha az seçici davranabilmektedirler.

Faiz Dışı Gelirler/Toplam Aktifler, bankalarda uzmanlaşmanın etkilerini göstermesi bakımından önemli bir değişkendir. Analiz sonuçlarına göre, rekabetçi davranış içerisindeki bankaların faiz dışı gelirlerini arttırdıkları, bu değişken ile lerner indeksi arasındaki negatif katsayı ile anlaşılmaktadır. Yabancı para aktifler/toplam aktifler oranının, bankalarda piyasa gücünü arttıran bir diğer etken olduğu kabul edilmektedir.

Yapı- Davranış-Performans (YDP) hipotezinin geçerliliğini araştırmak amacıyla analize dâhil edilmiş, beklenenin aksine negatif bir katsayı almış, ancak bu sonuç istatistiksel olarak anlamlı bulunmamıştır. Bankaların büyüklüğünü temsil eden bir değişken olan Toplam Aktifler (logaritması), piyasa gücü ile pozitif bir ilişki içerisindedir. Yani banka büyüklüğü arttıkça piyasa gücü de artmaktadır. Analiz sonucu istatistiksel olarak anlamlı değildir.

6 Değerlendirme Ve Sonuç

Bu çalışmada amaçlanan Türk bankacılık sektöründe faaliyet gösteren ticari bankaların rekabet dinamiklerini anlayabilmektir. Bu amaçla öncelikle sektördeki rekabet düzeyi banka ölçeğinde belirlenmiş ve her bir bankanın rekabete ilişkin tutumu ortaya konulmuştur. Rekabet düzeyinin göstergesi olarak lerner endeksi kullanılmıştır. Her bir banka için hesaplanabilir oluşu ve banka düzeyinde rekabeti etkileyen değişkenlerin belirlenmesine izin vermesi nedeniyle lerner endeksi tercih edilmiştir.

Bankacılık sektöründe rekabet yapısı çalışmalarında sıkça kullanılmayan ve rekabet konusunda oldukça bir öneme sahip Lerner İndeksi doğrusal regresyon analizi kullanılarak, hesaplanmıştır. Doğrusal regresyon analizi kullanılarak, piyasa yapısı göstergesi olan Lerner Endeksi hesaplanmıştır. Lerner Endeksinin tercih edilmesinin nedeni, diğer piyasa yapısı göstergelerinden farklı olarak bu yöntemin banka düzeyindeki değişkenlerin analizine imkân vermesidir. Başka bir ifadeyle Türk Bankacılık Sektöründe rekabet aracılık fonksiyonunu geliştirmektedir ki bunun da üretim, istihdam, büyüme ve refah artışına katkı sağlayacağı açıktır.

Lerner Endeksinin banka ölçeğindeki belirleyicilerinin tespiti, Panel Veri Analizi ile gerçekleştirilmiştir. Analiz sonucu Türk Bankacılık Sektöründe rekabetçi davranış üzerinde etkili olan faktörlerin, Krediler/Toplam Aktifler, Krediler/Mevduatlar, Faiz Dışı Gelirler/Toplam Aktifler, Toplam Gelirler/Toplam Giderler, Aktif Karlılığı (ROA), Risk, Öz kaynaklar/Toplam Aktifler, Bilanço Yapısı ve Net Faiz Marjı olduğu sonucuna ulaşılmıştır.

Sağlık Sektöründe Bilgi Asimetrisinin Hasta Memnuniyetine Etkisi: Yalova Ağız Ve Diş Sağlığı Merkezinde Bir Uygulama

Effects of Health Sector Information Asymmetry on Patient Satisfaction: An Appilication on Yalova Oral and Dental Care Centre

Assoc. Prof. Dr. Selami Özcan (Yalova University, Turkey)

Kerim Baş (Yalova University, Turkey)

Asst. Prof. Dr. H. Yunus Taş (Yalova University, Turkey)

Abstract

Effects of excessive information level difference between providers and receivers of health care services on patients will be presented with this work. Fundamental concepts like health care service, information asymmetry and it's effects will be explained. Information levels of attempts and treatments that were put in practice to the patients, surgical operations and billing will be studied and the outputs of the information level difference between the provider and the receiver will be determined. In this research, it will be revealed if the practical applications and the concepts in the literature overlap each other and developing a new method towards evaluating the information level difference will be attempted. Patients who received a certain number of treatments will be targeted. Survey questions that will be asked to the patients will try to reveal the amount of information on the procedure they have undertaken and the between this level of information and the their satisfaction. SPSS software is used for the analysis of the data. Resolving of the relation between patient satisfaction themeasured percentage of level of information about the procedure the subject have undertaken will be attempted during the evaluation of the survey results. The effects of gender, age and education on level of information-customer satisfaction will also be investigated while determining the patients level of information with this survey.

1 Giriş

Son on yılda ülkemiz genelinde sağlık hizmetlerinin hızla gelişmesi, vatandaşların bu paralelde gelişen ve artarak devam eden kaliteli, hızlı ve etkin hizmet alma talebiyle birlikte, bilimde, kültürde, ekonomideki olumlu yönde meydana gelen gelişmeler sağlık hizmetlerinde belirli bir standardı yakalama ihtiyacını doğurmuştur. Ancak bu arada sağlık hizmetlerini diğer hizmet sektörlerinden ayıran bir etmen olarak hizmeti alan ile hizmeti veren arsasındaki belirgin bilgi asimetrisi faktörü öne çıkmaktadır. Taraflardan birinin mal ya da hizmet hakkında diğerinden çok daha fazla bilgiye sahip olması diğerini etkileme ve yönlendirme imkânı sunmakta, rekabet koşullarının ve müşteri memnuniyetinin azalmasına sebep olmaktadır. Hasta ile hekim arasındaki bilgi düzeyi arasındaki makasın, hastanın daha fazla bilgilendirilmesi ile azaltılacağı varsayılmaktadır. Tedavi görecek kişinin bilgi düzeyine göre, uygulanan tedaviden sonra bilgi asimetrisinin yukarıda bahsedilen negatif etkilerinin azalacağı düşünülmektedir. Bu araştırmanın konusu bilgi asimetrisinin etkilerinin ortaya konulması olacaktır.

Sağlık hizmeti kavramı koruyucu, tedavi edici ve rehabilite edici her türlü tedavinin yapıldığı hizmet olarak tanımlanır. İnsanlar bu hizmeti almak için belirli bir zaman ve bedel öderler. Kısacası bir piyasa oluşur. Piyasanın kendi dengeleri içinde asimetrik bilgi varlığı piyasa etkinliğinin oluşmasına engel olduğu düşünülmektedir. Hastalar bu belirgin bilgi farklılığından dolayı kendilerine hangi tedavinin ne kadar süreyle ve hangi ücrete yapılacağını bilmez. Bilmediği için hizmeti veren lehine bir durum ortaya çıkar.

Ülkemizde sağlık hizmetlerinde ana geri ödeme kurumu olan ve sağlık hizmetlerinin önemli bir paydaşı olan SGK son yıllarda hastalara uygulanacak olan her türlü tedavinin ücretlendirmesini net bir şekilde yapmıştır. Ayrıca -özellikle özel sağlık kurumlarında- yapılan iş ve işlemlerde ise "paket tedavi" kavramını geliştirerek her bir girişim için standart bir ödeme şekli geliştirmiştir. Burada ki amaç; hastaya ne kadar iş ve işlem yapılırsa yapılsın, tanımlanan "paket tedavi" türü için belirlenmiş olan sabit bir ücretin üzerinde ödeme yapmayacaktır. Böylece hastaya tıbbi anlamda zorunlu olmadıkça kan tahlili, radyolojik görüntüleme, diş dolgusu, protez vb. işlemler yapmak, ekonomik anlamda avantajlı olmaktan çıkarılması hedeflenmiştir. SGK bu uygulamasını ilaç alımında da yapmaktadır. Son olarak SGK hastaları özel sağlık kurumunda gördüğü tedaviye ait faturayı alıp yapılan tedaviyi kontrol etmek imkânına sahip olmuştur. Bu uygulamalar bize sağlık alanında ki belirgin asimetrik bilgi farklılığının olması, suni ya da gerekmediği halde yapılan tedavinin varlığını ortaya koyarken, ona çözüm yolları arandığını gösteriyor. Bu da işin diğer bir boyutudur.

Bilinçlenen hastalar artık her yapılacak olan tedavi ile ilgili olarak bilgilenmek, o bilgilerin doğruluğunu kontrol etmek istemektedir. Kendisine yapılacak olan girişimin ki bu basit bir enjeksiyondan organ nakline kadar herhangi bir işlem olabilir, kendisi için gerekli mi, yan etkileri neler, beklenmeyen sonuçları nedir gibi sorularla

konuyu anlamaya çalışarak aradaki bilgi uçurumunu kapatmaya çalışmaktadır. Burada bilginin kaynağı gene o hizmeti almayı planladığı satıcısı olduğu için tam güven oluşmadığı gözlemlenebilmektedir. Bu durumda başka bir sağlık hizmeti sunucusuna gidip oradan da bilgiler alınabilmektedir. Bu ikinci başvurulan hizmet sunucusu diğer sağlık kurumu ile aynı tedavi şeklini açıkladığında kafadaki soru işaretleri kalkarken bazen de tersi olup tamamen farklı bir teşhis ve tedavi ortaya çıkabilmektedir. Bu durum hizmeti alacak olan (hastanın) müşterinin kafasındaki güven bunalımını daha da derinleştirecektir. Ortaya çıkacak sonuç sadece rakamsal değil aynı zamanda ve daha da önemlisi tıbben gerekmediği halde yapılmış bir girişim olacaktır. Gerekmediği halde yapılan bir ameliyat, gerekmediği halde çekilen bir röntgen, gerekmediği halde yapılan bir protez hastaya (müşteriye) verilebilecek en büyük zarar olacaktır.

Bilgi asimetrisi kavramı hemen hemen tüm alanlarda mevcuttur. Bankacılık, otomobil tamirciliği, sigortacılık, teknoloji ürünleri ve daha birçok alanda bunu görebiliriz. Ancak kısa bir araştırma ile insanlar bu alanlarda almak istedikleri mal ya da hizmeti detaylı bir şekilde öğrenebilirler. Bu bir otomobil olabilir, bir bilgisayar ya da kasko sigortası… Ancak hiç biri sağlık alanı kadar riskli, sağlık alanı kadar derinlemesine ve çok boyutlu bilgi taşımaz. Bütün bu alanlarda sağlıklı bir piyasa oluşmasına uygun iklim oluşurken sağlık alanında tam anlamıyla bu iklimin oluşması mümkün değildir.

Alıcı ve satıcı arasında her zaman bir güven duygusunun olması gereklidir. Güven arttıkça asimetrik bilgi varlığı önemini yitirmeye başlar. Son zamanlarda ülkemizde hastaların sağlığa daha kolay ulaşması ve fizik mekânlardaki olumlu gelişmeler olmakta, bu da insanları memnun etmektedir. Ancak esas mesele doğru tedavinin, doğru zamanda ve doğru şekilde yapılması, sık sık görülen ve çok önemli olduğu kabul edilen asimetrik bilgiden kaynaklanan ekonomik amaçlarla, oluşturmak için yapılan işlemler olabildiğince azaltılmasıyla tam memnuniyet tesis olacaktır. Ülke kaynakları boşuna harcanmayacaktır.

2   Yalova Ağız Diş Sağlığı Merkezinde Bir Uygulama

Bu araştırmada literatürdeki kavramlarla pratik uygulamaların örtüşüp örtüşmediği ortaya çıkarılmış ve bilgi asimetrisinin ölçümüne yönelik yeni bir yöntem geliştirilmeye çalışılmıştır. Yalova Ağız ve Diş Sağlığı Merkezine önceden belirlenmiş olan bir tarih aralığında başvuran değişik sosyo-demografik yapıdaki hastalara yöneltilen sorularla hastaların kendisine uygulanan tedaviler hakkındaki bilgi düzeyi ile hasta memnuniyeti arasındaki ilişki ortaya çıkarılmaya çalışılmıştır.

Beşli likert ölçeği kullanılarak SPSS paket programında güvenilirlik analizleri ve ayrıca tutarlılık analizleri yapılmıştır. Anket sonuçları değerlendirilirken deneklerin bilgi düzeyleri, yaşları, cinsiyetleri, eğitim durumları, medeni durumları, sosyal güvenceleri, gelir düzeyleri ve memnuniyetleri ölçülüp % metodu ile analizler yapılmıştır.

2.1 Araştırmanın Önemi ve Amacı

Bu çalışmayla sağlık hizmetlerinde hizmeti alan ve hizmeti veren taraflar arasındaki aşırı bilgi düzeyi farklılığının hasta memnuniyetine etkisi ortaya konulmaya çalışılmıştır. Burada sağlık hizmeti, bilgi asimetrisi ve etkileri gibi temel kavramlara açıklık getirilmeye çalışılmaktadır. Hastaya uygulanmış olan girişim ve tedavileri, cerrahi operasyonlar ile faturalandırma konularındaki bilgi düzeyleri araştırılıp hizmeti veren ile alan arasındaki bilgi düzeyi farkının neden olduğu çıktılar tespit edilmektedir. Bu araştırmada literatürdeki kavramlarla pratik uygulamaların örtüşüp örtüşmediği ortaya çıkarılarak bilgi asimetrisinin ölçümüne yönelik yeni bir yöntem geliştirilmeye çalışılmıştır.Ankette hastalara yöneltilecek sorular vasıtasıyla kendisine uygulanan işlem hakkında ne kadar bilgiye sahip olduğu ve bu bilgi düzeyi ile memnuniyeti arasındaki ilişki ortaya çıkarılmaya çalışılmaktadır.SPSS paket programı ile güvenilirlik analizleri yapılmaktadır. Anket sonuçları değerlendirilirken deneklerin kendilerine uygulanan tedaviler hakkında % metodu ile bilgi düzeyleri ölçülüp bu oranlarla hasta memnuniyeti arasındaki ilişki çözümlenmeye çalışılmıştır. Ayrıca bu anketle hastanın bilgi düzeyi tespit edilirken cinsiyet, yaş ve eğitim gibi unsurların da bilgi düzeyi-hasta memnuniyetine etkisi araştırılmıştır.

Bu çalışma sonucunda elde edilen sonuçlara dayanılarak yapılacak değişiklikler ya da uygulamalarla ağız ve diş sağlığı hizmetlerinde daha yüksek bir hasta (müşteri) memnuniyetinin sağlanması amaçlanmaktadır.

2.2 Araştırmanın Ana kütlesi ve Örneklemi

Araştırmanın evreni Yalova Ağız ve Diş Sağlığı Merkezine başvuran toplam hasta sayısıdır. Bu ana kütlenin Yalova Ağız ve Diş Sağlığı Merkezinde tedavi gören anket tarihindeki karşılıkları ise araştırmanın örneklemidir.

2.3 Araştırmanın Sınırlılıkları ve Hipotezi

Bu araştırma genel anlamda kamu ağız ve diş sağlığı hizmetlerine yönelik olup Yalova Ağız ve Diş Sağlığı Merkezi ile sınırlandırılmıştır. Yalova Ağız ve Diş Sağlığı Merkezine belirli bir tarih aralığında başvuran 200 hasta üzerinde anket uygulaması yapılmıştır.

Araştırmanın hipotezi ise hastaların yapılacak ya da yapılan tedavi hakkında ne kadar fazla bilgi düzeyine sahipse o kadar fazla memnun kalacağı düşünülmektedir.

2.4 Araştırmanın Yöntemi

Bu araştırmada Yalova Ağız ve Diş Sağlığı Merkezine önceden belirlenmiş olan bir tarih aralığında, başvuruda bulunan ortalama bir hasta profiline uygun tedavi olmuş olan hastalara bilgi düzeyleri ile memnuniyetleri arasındaki ilişkiyi ortaya çıkaracak şekilde hazırlanmış anket soruları uygulanmıştır. 200 hastaya uygulanan anket daha sonra SPSS paket programı ile değerlendirilmiştir. Anket sonuçları Ayrıca araştırmanın hipotezi ile hangi ölçüde örtüştüğüne bakılıp, çapraz tablolar ve yüzdelik oranlarla sonuç değerlendirmeleri yapılmıştır.

2.5 Güvenilirlik Analizi

Cronbach's Alpha	N
0.724	24

Tablo 1. *Güvenilirlik Katsayısı*

2.6 Anket Sonuç Bulguları

Ağız ve Diş Sağlığı Merkezine önceden belirlenmiş olan bir tarih aralığında başvuran 200 hastaya uygulanan ankette, öncelikle sosyo-demografik durumu ortaya çıkarmaya yönelik altı soru yöneltilmiştir.

Sorular	Ölçütler	Frekans	Geçerli Yüzde
Cinsiyet	Kadın	89	45,2
	Erkek	107	54,3
Yaş	18-30	75	37,5
	31-50	84	42
	51 ve üstü	41	20
Medeni Durum	Evli	121	61,7
	Bekâr	67	34,2
	Diğer	8	4,1
Gelir Düzeyi	Gelirim Yok	37	19
	1000 Liradan az	78	40
	1000-2000 Lira arası	62	31,8
	2001-3000 Lira arası	14	7,2
	3001 Lira ve üzeri	3	1,5
Sosyal Güvence	SSK	132	66,7
	Bağ/kur	30	15,2
	Emekli Sandığı	27	13,6
	Yeşilkart	6	3
	Diğer	3	1,5
Eğitim	Okuryazar	6	3
	İlköğretim	63	31,7
	Lise	89	44,7
	Önlisans	20	10,1
	Lisans	19	9,5

Tablo 2. *Sosyo-Demografik Soru Verileri*

Merkeze başvuran hastaların yüzde 45,2'si kadın, yüzde 54,3'ü erkek hastalardan oluşmuştur.

Yaşa bağlı başvurularda en fazla başvuru yüzde 42 ile 31-50 yaş arası hastalar oluşturmuş olup, 51 yaş üzeri hasta oranı yüzde 20'de kalmıştır. 18-30 yaş arası hasta oranı yüzde 37,5 olmuştur.

Medeni durumdaki oranlarda evli olanların oranı yüzde 61,7, bekârlar yüzde 34,2 diğerlerinin oranı ise yüzde 4,1 olarak gerçekleşmiştir.

Eğitim düzeyi oranlarında yüzde 44,7 ile en yüksek lise mezunu gelirken, onu yüzde 31,7 ile İlköğretim mezunları takip etmiştir. Ardından yüzde 10,1 ile önlisans, yüzde 9,5 ile lisans ve yüzde 1 ile yüksek lisans geldiği görülmüştür.

Sosyal Güvence durumunda da yüzde 66,7 ile en yüksek SSK gelmiştir. Bağ kur yüzde 15,2 ile ikinci sırada yer alırken, Emekli Sandığı mensupları yüzde 13,6, yeşil kart ise yüzde 3 olarak gerçekleşmiştir. Diğer başvuru oranı yüzde 1,5 olmuştur.

Gelir düzeyine yönelik sonuçlarda en yüksek oran yüzde 40 ile bin liradan az geliri olanlar yer almıştır. Ardından yüzde 31,8 ile 1000-2000 lira arası geliri olanlar, yüzde 19'u gelirim yok diyenler, yüzde 7,2'si 2001-3000 lira arası geliri olanlar, yüzde 1,5'i de geliri 3001 liradan fazla olanlar oluşturmuştur.

Ankette sosyo- demografik sorulardan sonra hastalara on sekiz adet anket sorusu ve bir adet de yorum sorusu yöneltilmiş olup bunlardan yedinci sıradaki soru ile hastanın yapılan tedaviden sonra memnuniyet düzeyi ölçülmeye çalışılmıştır. Yedinci soru ile diğer anket soruları ve sosyo- demografik sorularla yapılan çapraz tablolarda hastanın memnuniyeti ile değişkenler arasındaki bağ ortaya çıkarılmaya çalışılmıştır. Esas amaç olan hastanın bilgi düzeyi ile memnuniyet arasındaki ilişki ortaya konulmaya çalışılmıştır.

Örneğin aşağıdaki tablodan da görüleceği üzere kişinin eğitim durumu ile memnuniyeti arasındaki ilişki pozitif olarak gerçekleşmiştir.

Eğitim		Yapılan tedavi sonrası memnuniyet					
		Çok	Yeterince	Az	Çok az	Hiç	Total
Okur-yazar	Sayı	0	1	4	0	0	5
	yüzde	,0%	20,0%	80,0%	,0%	,0%	100,0%
İlk Öğretim	sayı	12	18	7	7	4	48
	yüzde	25,0%	37,5%	14,6%	14,6%	8,3%	100,0%
Lise	sayı	12	32	8	3	4	59
	yüzde	20,3%	54,2%	13,6%	5,1%	6,8%	100,0%
Ön Lisans	Sayı	1	8	2	0	1	12
	yüzde	8,3%	66,7%	16,7%	,0%	8,3%	100,0%
Lisans		3	8	0	1	0	12

Tablo 3. Eğitim İle Memnuniyet Arasındaki İlişki

Memnuniyet ölçütlerinden "çok ve yeterince" düzeylerinin toplamını alarak yapılacak bir değerlendirmede; ilköğretim mezunu bir hastanın toplam memnuniyet oranı yüzde 62,5 iken, önlisans mezunu bir hastanın memnuniyet oranının yüzde 75, lisans mezunu bir hastanın memnuniyeti ise yüzde 91,7 olarak gerçekleştiği görülmektedir. Bu da eğitim düzeyi ile memnuniyet arasında doğru bir orantının olduğunu göstermektedir. Eğitim düzeyi eşittir bilgi düzeyi olarak değerlendirilirse, bilginin de memnuniyet üzerinde olumlu etki yaptığı kabul edilebilir.

Sorular	Ölçütler	Frekans	Geçerli %
1.Daha önce kaç kez diş hekimine gittiniz?	Hiç	14	7,0
	Bir Kez	26	13,1
	2-5 Kez	80	40,2
	5'ten Fazla	79	39,7
2.Diş hekiminizin size uygulayacağı tedavi hakkında bir araştırma (internet,dergi,bilen bir tanıdığınız vb.) yaptınız mı?	Evet tamamen	34	17,3
	Kısmen yaptım	51	25,9
	Oldukça az yaptım	20	10,2
	Hiç yapmadım	92	46,7
3.Diş hekiminiz size yapılan tedavi hakkında önceden bilgi verdi mi?	Evet tamamen	68	35,1
	Kısmen	59	30,4
	Oldukça az	9	4,6
	Çok az	21	10,8
	Hiç vermedi	37	19,1
4.Diş hekimi size yapılan tedavi sonrası yapmanız ve yapmamanız gerekenler hakkında bilgi verdi mi?	Evet tamamen	97	50,0
	Kısmen	50	25,8
	Oldukça az	8	4,1
	Çok az	8	4,1
	Hiç vermedi	31	16,0
5.Diş hekiminin bugün size uyguladığı tedavinin benzeri (dolgu,protez,kanal tedavisi vb.) daha önce yapılmış mıydı?	İlk kez yapıldı	87	46,3
	2-3 kez yapıldı	84	44,7
	4-5 kez yapıldı	9	4,8
	6 ve daha fazla yapıldı	7	3,7
6.Diş tedavileri hakkında ne kadar bilgili olduğunuzu düşünüyorsunuz?	Çok	9	4,6
	Yeterince	62	31,8
	Az	61	31,3
	Çok az	32	16,4
	Hiç bilgim yok	31	15,9
7.Yapılan tedaviden sonra memnun kaldınız mı?	Çok	40	21,7
	Yeterince	91	49,5

	Az	28	15,2
	Çok az	12	6,5
	Hiç	13	7,1
8.Diş hekiminizin size doğru tedaviyi uyguladığını düşünüyor musunuz?	Evet kesinlikle	75	38,7
	Evet	65	33,5
	Kısmen	42	21,6
	Hayır	7	3,6
	Kesinlikle hayır	5	2,6
9.Diş hekiminiz size uygulayacağı tedavinin riskleri hakkında sizi bilgilendirdi mi?	Evet kesinlikle	39	20,9
	Evet	54	28,9
	Kısmen	37	19,8
	Hayır	46	24,6
	Kesinlikle hayır	11	5,9
10.Tedavi sonrası ödeyeceğiniz tutar hakkında önceden bilgilendirildiniz mi?	Evet kesinlikle	39	20,9
	Evet	52	27,8
	Kısmen	19	10,2
	Hayır	64	34,2
	Kesinlikle hayır	13	7,0

***Tablo 5.** Diş Hekimine Gitme Sayısı İle Memnuniyet Arasındaki İlişki*

İlk kez diş hekimine giden bir hastanın diş tedavisi hakkındaki bilgi düzeyi ile birçok kez gitmiş bir hastanın bilgi düzeyinin aynı olamayacağını, çok giden bir hastanın daha fazla bilgiye sahip olduğu düşünülür. O açıdan bakıldığında Tablo 5'te ilk kez giden bir hastanın memnuniyet oranı çok 16.7, yeterince 33.3 gerçekleşmiş olup toplam oran %50 olmuştur. Bir kez gidende bu toplam oran %65,2, 2-5 kez giden de %73,7, beşten fazla giden de ise % 73.9 olduğu görülmektedir. Bu da bilgi düzeyi arttıkça memnuniyetin de arttığına dair bir gösterge olarak görülebilir.

Hastanın kendisine uygulanacak olan diş tedavisi hakkında önceden bir araştırma yapmış olması kendisine uygulanacak olan tedavi ve sonuçları hakkında az ya da çok bilgi sahibi olacağı düşünülmekte olup sonuç değerlendirmelerine bakıldığında "Evet tamamen araştırma yaptım" diyenlerin memnuniyet oranları çok ve yeterince toplamı olarak% 84.4 olurken, " Kısmen Yaptım" diyenlerin memnuniyet oranı % 83,3 , "Oldukça az yaptım" diyenlerin memnuniyet düzeyleri % 66,6, "Hiç Yapmadım" diyenlerin memnuniyet oranı ise %59,1 olarak gerçekleştiği görülmektedir. Burada da bilgi düzeyini kendi çabalarıyla araştırarak yapan müşterilerde de (hastalar) memnuniyet oranıyla bilgili olmak arasındaki doğru orantı görülebilmektedir.

Diş hekiminizin size uygulayacağı tedavi hakkında bir araştırma (internet,dergi, tanıdık vb.) yaptınız mı?			Tedavi sonrası memnuniyet

Tablo 7. Önceden Bilgilendirme ile Memnuniyet Arasındaki İlişki

Tablo 7'de Hastaya kendisine yapılan tedavi hakkında tedavi öncesi diş hekimi tarafından hangi düzeyde bilgi verildiği sorulmakta olup, alınan cevaplara göre memnuniyet düzeyi ölçülmeye çalışılmıştır. Alınan cevaplar ve memnuniyet oranlarına bakılacak olursa; " Evet tamamen bilgi verildi" diyenlerin % 39,1oranında çok memnun kaldığı, % 48,4 oranında da yeterince memnun kaldığı anlaşılmakta olup iki oranın toplamı % 87,5 olmuştur. "Kısmen Bilgi Verildi" diyenlerin memnuniyet oranı toplamı %81,8 olurken, "oldukça az bilgi verildi" diyenlerin memnuniyet oranı %72,5 , "Çok az bilgi verildi" diyenlerin memnuniyet oranı %55, "Hiç bilgi verilmedi" diyenlerin memnuniyet oranı ise %33,4 olarak gerçekleşmiştir. Bu tabloda da bilgilendirme diş hekimi tarafından yapılıyor ve hasta kendisinin ne kadar fazla bilgilendirildiğini düşünüyorsa o kadar memnunda kalmaktadır. Bilgi düzeyi ve memnuniyet ilişkisi bu tabloda da aynı şekilde tezahür etmektedir.

Tablo 8'de hastalara kendilerine uygulanan tedaviden sonra yapıp yapmaması gerekenler   hakkında   bilgi verilip verilmediğine göre memnuniyet düzeyi ölçülmeye çalışılmıştır. Zira diş hekimliği uygulamalarında tedavi sonrası başarı hastanın bazı hususlara dikkat etmesiyle mümkün olabilmektedir. Örneğin bir dolgu türünde dolgu yapıldıktan sonra iki saat hiçbir şey yenilmemesi gerekirken eğer bu kurala uyulmazsa dolgu düşecek ve hasta memnuniyetsizliği doğacaktır. "Evet tamamen bilgi verildi" diyen hastaların çok ve yeterince memnun kalma oranları toplamı % 85,7 iken bu oran "hiç bilgi verilmedi" diyenlerde % 40,7' ye kadar gerilemektedir. Ayrıca tablonun sağ tarafında yer alan "çok az" ve "hiç" memnuniyet oranları bilgi verilmemesine bağlı olarak hızla yükselmektedir. Tedavi sonrası yapılacaklar hakkında daha fazla bilgiye sahip olan hastaların memnuniyet oranları belirgin olarak yüksek çıkmıştır.

Diş Hekimi hastaya uygulayacağı tedavinin kapsamlı bir şekilde içeriğini açıklamasına bağlı olarak bilgilendirilmiş olan hastanın memnuniyet düzeyi ölçülmeye çalışılmıştır. "Diş hekimi uygulayacağı tedavinin içeriği hakkında bilgi verdi mi?" sorusuna "kesinlikle verdi ile verdi" cevabını veren hastalarda ki memnuniyet oranı "çok ve yeterince" kıstasları dikkate alarak değerlendirildiğinde %82,6-87,1 düzeylerindeyken, " hayır ve kesinlikle hayır" cevabı veren hastalarda bu memnuniyet oranı % 36,6-0 düzeyine inmektedir. O halde kendisine uygulanacak olan tedavinin içeriğini bilen, o konuda bilgi düzeyi daha yüksek olan hastalar daha memnun

olmaktadır denilebilir.

Diş hekimi size yapılan tedavi sonrası yapmanız ve yapmamanız gerekenler hakkında bilgi verdi mi?		Tedavi sonrası memnuniyet

Tablo 10. *Hastanın Uygulanacak Tedavinin Riskleri Hakkında Bilgilendirilmesiyle Memnuniyet Arasındaki İlişki*

Bu tablo ile hastanın kendisine uygulanacak olan tedavinin risklerini bilme düzeyi ile memnuniyeti arasındaki bağın çözümlemesi hedeflenmiştir. Diş hekimi tarafından tedavinin riskleri hakkında bilgilendirilme düzeyine bağlı verilen cevaplarda "kesinlikle evet ile evet" olarak cevap verenlerin "çok ve yeterince" toplamı alınarak yapılan değerlendirmede % 84,2-88,5 düzeyinde bir memnuniyet hâsıl olurken, bu oran "hayır ve kesinlikle hayır" olarak cevap verenlerde %48,8-18,2 oranlarına düşmüş olduğu görülmektedir. Kısaca burada da bilgi düzeyi ve memnuniyet arasındaki doğru oran kendini göstermektedir.

Tedavi sonrası ödeyeceğiniz tutar hakkında önceden bilgilendirildiniz mi?			Tedavi sonrası memnuniyet					
			Çok	Yeterince	Az	Çok az	Hiç	Total

Tablo 11. *Hastanın Tedavi Sonrası Ödeyeceği Tutar Hakkında Önceden Bilgilendirilmesiyle Memnuniyet Arasındaki İlişki*

Tablo 16'da hastanın tedavi öncesi ne kadar ücret ödeyeceğine dair bilgilendirilmesi ile memnuniyeti arasındaki ilişki ortaya çıkarılmaya çalışılmıştır. Ücret konusundan bilgilendirildiniz mi sorusuna "evet kesinlikle ve evet" cevabını veren hastaların "çok ve yeterince" düzeylerinde memnun olma oranları toplamı % 80,5-78,4' iken, "hayır ve kesinlikle hayır" cevabı verenlerdeki memnuniyet oranı % 64,4-50 olarak gerçekleşmiştir. Yalova Ağız ve Diş Sağlığı Merkezinde sadece protez tedavisinde hastalardan katılım payı alınmakta olup, diğer hiçbir tedavi için ücret talep edilmemektedir. Bu alandaki hastaların verdiği cevap oranlarına bakılarak bu bilgi düzeyindeki artış ta aynı şekilde memnuniyet üzerinde olumlu bir etki yaptığı *gözlemlenmiştir.*

Tablo 12. *Hastanın Tedavisini Yapan Diş Hekiminden Başka Bir Diş Hekimine Giderek Bilgi Alma İhtiyacı Duymasıyla Memnuniyet Arasındaki İlişki*

17 numaralı tablo ile bir hastanın tedavisini yaptırmakta olduğu diş hekiminden yeterince bilgi alamadığı ya da aldığı bilgiden tatmin olmadığından hareketle, kafasındaki soru işaretlerini kaldırmak ve kendisine uygulanacak olan tedaviyle ilgili bilgi donanımını artırmak üzere bir başka diş hekimine gidip bilgi almak istiyorsa bunun hasta memnuniyetine olumsuz etki yapacağı düşünülmektedir. "Evet kesinlikle" şeklinde cevap verenlerin memnuniyet oranı "çok ve yeterince" toplamı alınırsa %46,4, "evet" diyenlerin memnuniyet oranı % 71,5, "kısmen" diyenlerin memnuniyet oranı % 72,7, "hayır" diyenlerin oranı % 72,6, "kesinlikle hayır" diyenlerin

memnuniyet oranı ise % 81,8 olarak gerçekleşmiştir. Görüldüğü üzere bil açlığı varlığı, ya da yeterince bilgilenme imkânı bulamama durumu memnuniyeti belirgin bir şekilde aşağıya çekmektedir.

3 Sonuç ve Değerlendirme

Birinci bölümde etraflı bir şekilde kamu ağız ve diş sağlığı merkezlerinde uygulanmakta olan toplam kalite uygulamalarının değerlendirmesi ve açılımı ele alınmıştı. Dikey ve yatay olarak sıralanan bu toplam kalite yönetimi uygulamaları 2005 yılından günümüze kadar gelişerek ve değişerek şartlara uygun hale gelmektedir. 2002 yılına göre kamu ağız ve diş sağlığı hizmetlerine ulaşım rakamlarında ciddi artışlar olmuş, memnuniyet oranları % 39,5 ten % 75,9 kadar çıktığı görülmektedir. Bu oranlar içerisinde diş hekimliği hizmetlerinin de olduğu genel anlamdaki sağlık hizmetlerini içermektedir. Tüm çabalara rağmen son yıllarda bu oranlardaki yükseliş ivmesinin daha önceki yıllara göre yavaşladığı görülmektedir. İşte bu noktada bilinen anlamda ki hizmet sektöründe toplam kalite ölçütleri ve memnuniyet ölçümlerinde ele alınmayan ancak önemli bir etken olduğun düşünülen "bilgi düzeyi-memnuniyet" kriterinin de bu değerlendirmelere katılması durumunda daha etkin, daha müşteri odaklı bir anlayışa yaklaşılacağı düşünülmektedir.

Yapılmış olan anket çalışmasının sonucunda deneklerden alınan bilgiler ve değerlendirmeler ışığında hasta memnuniyeti ile bilgi düzeyi arasında olumlu bir bağlantının olduğu anlaşılmaktadır. Hizmet verenler eğer tam anlamıyla bir memnuniyet tesis etmek istiyorsa ki (tüm işletmeler ve kamu hizmet birimlerinin temel hedefi bu olmalıdır) hizmeti almakta olan kişinin tedaviye ilişkin bilgi düzeyinin artırılması yönünde de bir çalışma yapmaları gerekmektedir. Bu çalışma şekli ilkokul düzeyinde milli eğitim bakanlığı aracılığıyla küçük yaşlarda başlanılacağı gibi hizmeti vermekte olan kurumların kendi bünyelerinde kısa, anlaşılabilir şekilde yapacakları hasta odaklı eğitimlerle de etkili olacaktır. Gelen her hastaya sadece bir tedaviyi yapıp göndermek değil, eğer konuya ilişkin bilgiler verilirse bir sonraki gelişinde kafasında daha az soru işareti olan bir kişiyi memnun etmek daha kolay olacaktır.

Türkiye ve Rusya Yükseköğretimindeki Araştırma ve Deneysel Geliştirme Faaliyetleri

Turkish and Russian Higher Education Research and Experimental Development Activities

Dr. Mediha Tezcan (Anadolu University, Turkey)

Abstract

With the developments in Information and Communication Technologies, the competition now seems to be emerging on a global level rather than being on a national level. Communication, knowledge and information flow caused trade, production, consumption and any economic activity to originate the new competition and bond market opportunities on a national and global extent. The most dynamic and affective source of competition is to focus on the production of the new in today's Information Age. Mutual benefits rely mostly upon the technological developments and initiatives. Research and development activities gradually gain importance for the countries. In this paper, the data on research and development between Turkish Republic and Russian Federation is comparison and analyzed.

1 Giriş

Bilim ve teknoloji alanındaki hızlı değişmeler dünyamızı şekillendirmektedir. Günümüzde; bilim, teknoloji ve teknolojik yenilikte söz sahibi olmak, uluslararası pazarlarda rekabet üstünlüğünü gerçekleştirmektir. Ulusal politikaların ana hedefi; ulusal ve uluslararası pazarlarda rekabet üstünlüğü kazanmaktır. Uluslararası pazarlarda rekabet üstünlüğü kazanmak; pazar payını arttırarak ekonomik gelişmeyi gerçekleştirmek ve geleceğe hükmetmeyi sağlamaktadır.

Uzun dönemde eğitim yatırımlarının artması, insan sermayesi birikimini artırmaktadır. İnsan sermayesi birikiminin yükselmesi; araştırma ve deneysel geliştirme faaliyetlerinde, istihdam edilen araştırmacı birey sayısının artmasına sebep olmaktadır. Bir ülkedeki artan araştırmacı sayısı, araştırma ve deneysel geliştirme faaliyetlerin hızlandırmasına neden olmaktadır. Uzun dönemde araştırma ve deneysel geliştirme faaliyetlerinde istihdam edilen araştırmacı sayısında artış sağlanmasıyla birlikte araştırma ve deneysel geliştirme üretimi yükselmekte ve ekonomik büyümedeki artış ivme kazanmaktadır.

Üniversiteler, araştırma ve deneysel gelişme faaliyetlerinde bulunmakta ve sanayi ile işbirliği; yapmaktadırlar. Üniversite-sanayi işbirliği, bilimsel düşünmenin ve gelişmenin ana üreticisi olan üniversite ile yeni teknolojilerin ve ekonomik gelişmenin temel belirleyicisi olan sanayi sektörün aynı mekânda birlikte araştırma ve deneysel gelişme imkânı veren ekonomik işbirliği ortamlarıdır. Üniversite-sanayi işbirliği, üniversitelerde yapılan bilimsel çalışmaların ticarileştirilerek ekonomide katma değer yaratacak, uluslararası pazarlardaki rekabet gücünün artırılmasına katkı sağlayacak yeni ürün ve üretim yöntemi geliştirilmesi, mevcut üründe ve üretim yönteminde yenilik yapılması amacı ile sanayinin ihtiyaçları doğrultusundaki faaliyetlerdir. Üniversiteler-sanayi işbirliği faaliyetleri ekonomiye doğrudan katkı sağlamaktadır. Üniversite-sanayi işbirliği; ülkelerin, araştırma ve deneysel gelişmelerine büyük destek veren kuruluşlardır.

Eskinin Çarlık Rusya'sı, dünün Sovyetler Birliği ve bugünün Rusya Federasyonu ile ilişkiler, Osmanlı İmparatorluğun'da olduğu gibi Türkiye Cumhuriyeti için de her zaman ön planda yeralmıştır. "Soğuk Savaş Sürecinin" fiilen sona ermesi ile birlikte, ikili ilişkiler, günümüzde işbirliği mekanizmalarına dönüştürülmüştür.

Bu çalışmada; Avrasya'nın iki ülkesi olan Türkiye Cumhuriyeti ve Rusya Federasyonu yükseköğretimlerindeki araştırma ve deneysel gelişme faaliyetleri incelenmiş; birbirlerine olan üstünlükleri açıklanmış ve araştırma ve deneysel gelişme faaliyetlerinde en iyi olan OECD ülkelerin verileri ile de karşılaştırmaları yapılmıştır.

2 Rusya Fererasyonu

2.1 Ekonomisi

24 Ekim 1917'de Ekim Devrimi ile Rus Çarlığı sona erdi. Yerine Sovyet Sosyalist Cumhuriyetler Birliği (SSCB) kuruldu. Sosyalist ekonomik model ve merkezi hükümet modeli başarısız olması sonucunda 1991 yılında SSCB dağılmıştır. Yeni kurulan Rusya Federasyonu merkezi planlı ekonomik sistemden piyasa ekonomi sistemine geçebilmek için birçok ekonomik reformlar gerçekleştirmiştir (Martinez-Vazquez, ve Boex, 2001; SİSAV, 1995).

Rusya Federasyonu, zengin doğal gaz ve petrol kaynaklarının yanısıra, kömür, alüminyum, bakır, demir, elmas, altın, gümüş maden kaynakları ve ormancılık ürünlerine sahiptir. Rusya Federasyonu dünyanın 2. büyük petrol üreticisi ve dünyadaki kömür rezervlerinin yarısına sahiptir. Zengin doğal kaynaklara sahip olması nedeniyle hammadde ve yarı mamul ihraç eden ve tüketim malı ithal eden bir ülkedir (Benli, 2011; İSO. 2010).

Petrol ve doğalgaz, Rusya Federasyonuna ekonomik zenginlik elde etmek için karşılaştırılamaz bir üstünlük sağlamaktadır. Rusya Federasyonu ihracatının büyük payını doğal kaynaklar oluşturmaktadır. Bu durum; Rusya Federasyonunda, ekonomik büyümeyi daha çok uluslararası enerji fiyatlarına bağımlı hale getirerek, ekonomik büyümenin sürdürülebilir olmasını olumsuz yönde etkilemektedir (İşcan ve Hatipoğlu, 2011).

Rusya Federasyonunun SSCB döneminden kalan eski ve hantal teknolojiye sahip alt yapısı, üretim sürecinde işgücü verimliliğini olumsuz etkileyerek ülke ekonomisinin performansını düşürmektedir (İşcan ve Hatipoğlu, 2011).

2.2 Türkiye-Rusya Ekonomik İlişkileri

Uluslararası Para Fonunun (IMF), 2012 yılında; dünyadaki ülkelerin (nominal fiyatlar ile) gayrisafi milli hasılalarına göre yaptığı gelişmişlik sıralamasını içeren araştırmasında; Rusya Federasyonu dünyanın 8. büyük ekonomisi, Türkiye Cumhuriyeti de dünyanın 17'ci büyük ekonomisi olarak yeralmışlardır. İki ülkenin ekonomilerinin büyüklüğünü bu araştırma ortaya koymaktadır (IMF, 2013).

18. Ve 19. Yüzyılın tümü ve 20. Yüzyılın başlarını kapsayan dönemde, iki ülke arasında sayısız savaşlar çıkmıştır (SİSAV, 1995). Türk Halkının Ulusal Kurtuluş Savaşı döneminde Türk-Sovyet dostluğu, unutulmayacak komşuluk ilişkilerine örnek oluşturmaktadır.

Türkiye; eskiden SSCB ile günümüzde de Rusya Federasyonu ile, önemli bir ticaret ortağı konumundadır. 1992 yılında SSCB'nın dağılması ve "Soğuk Savaş" döneminin bitmesinin ardından ticari ve ekonomik faaliyetler artarak devam etmektedir. Türkiye ve Rusya Federasyonu arasındaki stratejik işbirliğinin temelinde, enerji ve ham madde ticareti önemli paya sahiptir. Coğrafi yakınlık Türkiye-Rusya ticari ve ekonomik ilişkilerinin gelişmesine önemli avantajlar sağlamaktadır (İSO, 2010; SİSAV, 1995).

2011 yılı verilerine göre; Türkiye'nin dış ticaretinde, Türkiye'nin ihracat yaptığı ülkeler arasında 5'inci, Türkiye'nin ithalat yaptığı ülkeler arasında ise Rusya Federasyonu 1'inci sırada yer almaktadır. 2011 yılında Türkiye'nin Rusya Federasyonuna ihracatı 5992 milyon $ iken, ithalatı 23952 milyon $'dır. Bu ithalatın 16,832 milyon doları mineral yakıt ve mineral yağlardan oluşmaktadır. Türkiye; enerji ihtiyacının %70'ini yurt dışından karşılamakta; bu yüzdenin %65'ini ise, Rusya Federasyonun'dan almaktadır. Türkiye, enerji alanında Rusya Federasyonuna bağımlı hale gelmiştir (Caşın, 2012).

İki ülke arasında turizm, yıllar içinde artmaktadır. 2007 yılında Türkiye'ye gelen Rus turist sayısı; 2.465.336 kişiden 2011 yılında 3.468.214 kişiye yükselmiştir. Türkiye, Rusya Federasyonuna; tekstil, giyim sektörü, tarım ve gıda sektörü ile inşaat ve taahhüt hizmetleri gibi alanlarda ihracaat yapmaktadır (Benli, 2011; Caşın, 2012; Duman, ve Samadov, 2003).

Karadeniz Bölgesi, Orta Asya Bölgesi, Orta Doğu Bölgesi ve Kafkasya ötesine geliştirilecek çok taraflı ekonomik işbirliği Türkiye ve Rusya Federasyonu için büyük bir gelecek vaat etmektedir. İki ülke arasında diplomatik, siyasi, ekonomik ve kültürel düzeyde ilişkiler artmaktadır.

3 Araştırma ve Deneysel Geliştirme

3.1. Teknolojik Yenilik

Bilim; genel anlamda "evrenin yapısını ve davranışlarını gözlem ve deney yardımıyla sistematik bir şekilde inceleyen ve yasalar biçiminde açıklamaya çalışan düzenli "bilgi bütünü" olarak tanımlanabilir (Yörükoğulları, 2013). Teknoloji ise insanın; tabiatı, toplumu kontrol etmek, değiştirmek için, hem kendi hem de toplumsal aklı ve belleği kullanarak elde ettiği sonuçlardır. Teknoloji ya da teknikler bilgisi bir "şeyin" (bu şey bir maddi ürün, bir hizmet hatta bir güzelsanat icrası da olabilir) nasıl üretildiği, nasıl tüketildiği veya nasıl kullandığına dair sistematik, belli bir sistem veya disiplin çerçevesinde sunulmuş bilgiler demetidir (Türkcan, 2011). Teknoloji; bilimsel bilgiden yararlanarak yeni bir ürün geliştirmek, üretmek ve hizmet desteği sağlamak için gerekli bilgi, beceri ve yöntemler bütünüdür (Yörükoğulları, 2013).

Bilimsel bilgi ile teknolojik bilgi arasındaki "organik" bağlar nedeniyle, çok kesin "saf bilim-saf teknoloji" ayrımı yapmak neredeyse imkânsızdır. Bir icadın, bir buluşun, üretime, kullanıma başarıyla uygulanmasına da "yenilik" denir (Türkcan, 2011). Yenilik; yeni fikirlerin uygulamaya konulması ve ticarileştirilmesi sürecidir (Özdaşlı, 2010).

İktisatçılar, her zaman, teknolojik yeniliğin iktisadi bir gelişme için çok önemli olduğuna dikkat çekmişlerdir. Adam Smith; makinelerin gelişmesi ve iş bölüşümünün özel buluşları nasıl teşvik edeceğinden bahsetmiştir. Karl Marx, sermaye mallarında teknolojik yeniliklerin önemini vurgulayarak "burjuvazi, üretim araçlarında sürekli bir devrim yapmadıkça yaşayamaz" fikrini savunur (Freeman ve Soete, 2003). Joseph Schumpeter, 1934 ve 1947 yıllarında yayınladığı eserlerinde, yenilik kavramına yeni bir boyut kazandırmıştır. Schumpeter; bir ekonomik aktivite olarak teknolojik yeniliği çevreleyen süreçleri incelemiş ve teknolojik değişmeyi yönlendiren prensipleri bir piyasa kurgusu ile açıklamaktadır.

Schumpeteryen bakış açısı ile ekonomik büyüme; yenilikçilerin tekelci güçleri temelinde teknolojik olarak ileri ürünleri ortaya çıkardıkları ve yeni ürünlerin eski ürünlerin yerini, yeni tekniklerin, eski tekniklerin yerini ve yeni kurumların eski kurumların yerini aldığı, bir sürekli yaratıcı yıkım sürecidir.

Ekonomik büyüme; ne sermaye birikimidir ne de mistik bir teknolojik değişme sonucunda üretim fonksiyonundan bir kaymadır; ekonomik büyüme yapısal değişmedir (Yeldan, 2011).

Schumpeter, ekonomik büyümenin yenilikler tarafından; kendisinin "yaratıcı yıkım" olarak adlandırdığı yeni teknolojilerin, eskisinin yerini aldığı dinamik bir süreç yoluyla harekete geçildiğini savunmaktadır (OECD, 2005).

Schumpeter teknolojik değişmeyi yönlendiren prensipleri bir piyasa kurgusu ile açıklamaktadır. Teknolojik yeniliğin piyasada yaptığı değişiklik şu şekilde kurgulanabilir:

Yeni bir malın, yeni bir üretim metodunun sunulması; yeni bir pazarın açılması, yeni bir hammadde kaynağının bulunması ya da piyasada yeni bir pazar örgütlenmesini de kapsar (bir monopolün kırılması ya da oluşması gibi). Müteşebbis; ortaya çıkardığı teknolojik yenilik sayesinde normalin üstünde "süper normal" bir kâr marjı sağlar ve monopol konumuna gelir. Bu yeniliğin zamanla diğer firmalarca da adapte edilmesiyle beraber kâr; normal düzeye iner ve bu durum, başka bir müteşebbis tarafından başka bir teknolojik yenilik yaratılana kadar devam eder. Bu da ekonomide iş çevrimlerine sebep olmaktadır. Dolayısıyla, girişimcilerin olağanüstü gayretleri ile ortaya çıkan teknolojik yenilik, ekonominin içsel bir unsuru olarak, ekonomik gelişmenin dinamiğini sağlayan en önemli faktör konumuna yerleştirilmiştir (Ansal, 2004).

Dünya'da bilim ve teknoloji çalışmalarıyla bilgi, eski dönemlere göre daha hızlı artmaktadır. Hızlı artan bilgi birikimi, rekabeti büyük ölçüde etkilemektedir. Günümüzde ülkelerin ekonomik gelişmişlik sınıflandırılmaları, bilgi birikimi ve yeni teknoloji üreten ve üretmeyen ülkeler olarak gruplandırılmaktadırlar. Bilim ve teknoloji alanındaki üstünlükler, dünyada gelir dağılımının yeniden dağılımını ve toplumsal refahın yükseltilmesini etkilemektedir.

3.2 Araştırma ve Deneysel Geliştirme

Araştırma ve deneysel geliştirme (Ar-Ge), insan, kültür ve toplumun bilgisinden oluşan bilgi dağarcığının arttırılması ve bu dağarcığın yeni uygulamalar tasarlamak üzere kullanılması için sistematik bir temelde yürütülen yaratıcı çalışmalardır (OECD, 2002). Ar-Ge; işletmelerde yeni ürün ve süreçlerin ortaya çıkarılmasına yönelik sistemli ve yenilikçi faaliyetler bütünüdür.

Ar-Ge, ürün, makine-teçhizat ve üretim sisteminde planlı yenilik yapma faaliyetidir. Ar-Ge faaliyetinde bulunan firmaların amacı, verimliliklerini, ürün kalitesini, pazar paylarını ve kârlarını artırmaktır. Ar-Ge faaliyetleri firmalar; bilgi birikimini artırarak, piyasada monopol gücü kazanması ile aşırı kâr elde ederek, hem Ar-Ge; masraflarını karşılarlar, hem de ülke ekonomisine katkı sağlarlar (Demir, Üzümcü ve Duran, 2006).

Paul Romer; bir piyasa optimizasyonu çerçevesinde, büyümenin temel iticisi olarak, teknolojiye ait üç öneride bulundu. Bunlar (Yeldan, 2011):

- Teknolojik yenilik büyümenin nihai kaynağıdır.
- Bir piyasa kurgusu altında teknolojik yenilikler, kâr amaçlayan girişimcilerin bilerek yaptıkları faaliyetlerin sonucudur. Piyasa sinyalleri ve teşvikleri; girişimcileri, sanayi dallarında yenilikçi araştırma ve geliştirme faaliyeti yapmaları ve uygulamaları için yönlendirmede anahtar bir rol oynamaktadırlar.
- Araştırma ve geliştirme teknolojisi, ekonomideki diğer mallardan farklıdır.

Ar-Ge faaliyetlerinde bulunan ülkeler, teknoloji üretme yeteneğini geliştirerek; istikrarlı, güçlü ve verimli bir ekonomik ve toplumsal kalkınmayı sağlarlar. Üretim ve pazarlamada standartlaşmayı, optimal ölçek ekonomisini, yeni mal ve hizmet üretimlerini gerçekleştirmek yolu ile uluslararası ticarette rekabet avantajını artırmak yoluyla verimliliği ve kârlılığı artırırlar (Yanardağ ve Süslü, 2007).

Kalkınma planlarında; bilim, teknoloji ve sanayi politikaları ile eğitim-öğretim ve Ar-Ge politikaları arasında uyum sağlanmalıdır (Kaymakçı, 2006). Bir ülkenin ya da bir firmanın Ar-Ge harcamaları, o ülkenin ve o firmanın teknoloji yeteneğini, büyüme performansını ve uluslararası piyasalardaki rekabet gücünü belirleyen en kritik unsurlardan biridir.

3.3.Üniversite –Sanayi İşbirliği

İlk üniversitenin ortaya çıktığı Ortaçağdan, 19. Yüzyıla kadar üniversitenin ana görevi eğitim olmuştur. 19. Yüzyılda üniversiteler eğitim görevlerinin yanında araştırma çalışmaları da yapmaya başlamışlardır (Kiper, 2004).

Üniversite-sanayi işbirliği, üniversitelerin kaynakları ile sanayinin kaynaklarını her iki kuruma ve topluma fayda sağlamak üzere bir yöntem içinde birleştirerek, bilimsel, teknolojik ve ekonomik yönden güçlenmek için yapılan eğitim-öğretim, Ar-Ge ve diğer hizmetler bütünüdür (Demir, Üzümcü ve Duran, 2006).

21. Yüzyılda teknolojik yenilikler çok hızlı gelişmektedir. Bilginin ve yeniliğin rekabet üstünlüğünü sağlamada önem arz ettiği yüzyılımızda; bilginin üretime dönüştürülerek ticarileştirilmesi sonucunda, sanayinin ihtiyacı olan teknik bilginin karşılanması, üniversite ve sanayi işbirliği ile hayata geçirilmektedir. Üniversite-

sanayi işbirliği; sanayinin ihtiyacı olan teknik bilginin üniversitelerden sağlanması, üniversitelerde üretilen bilginin de ticarileştirilmesini sağlayan kurumlardır.

Üniversite-sanayi işbirliğinin faaliyetlerinin ekonomik etkileri üçe ayırarak incelendiğinde (Andersson, Gråsjö, ve Karsson, 2009; Kiper, 2004):

Üniversite-sanai'ye işbirliğinin üniversiteye olan ekonomik katkıları şu şekilde sıralanabilir;

- Akademisyenlere ve bilimsel araştırmalara uygulama ortamı yaratılması,
- Akademik personel ve öğrencinin etkinlik ve verimliliğinin artırılması v ek gelir sağlanması,
- İnsan sermayesi ve sosyal sermaye oluşumuna katkı sağlanması,
- Görev alan öğrencilerin iş deneyimi kazanmasıyla, mezun olduklarında kolay iş bulma fırsatı,
- Üniversitenin, sanayicinin deneyimini öğrenme fırsatı bulması,
- Araştırma fonlarının sağlanması,
- Ar-Ge katkısı ile ulusal ekonominin rekabet düzeyinin yükseltilmesi,
- Araştırma sonuçlarının konferans, seminer ve sunumlarla duyurulması ve yayınlanması,
- Fikri mülkiyet haklarının alınması ve prestij elde edilmesi,
- Üniversitelere toplumsal görev ve sorumluluklarını yerine getirme fırsatı yaratmasıdır.

Üniversite-sanayi işbirliğinin sanayiye olan ekonomik katkıları şu şekilde sıralanabilir;

- Akademik personelin bilgi birikiminden yararlanma ortamının oluşması,
- Akademik personel ve öğrenciden etkin ve verimli bir şekilde yararlanma fırsatı,
- Eğitimli üniversite personeli ile birlikte çalışana fırsatı bulan sanayi firma personelinin etkinlik ve verimliliğinin artması,
- Sanayinin sahip olduğu insan sermayesi ve sosyal sermaye birikiminin artması,
- Üniversitelerin sahip olduğu altyapı ve donanımlardan yararlanma fırsatı,
- Sanayinin araştırmaları için finansman kolaylığı,
- Yatırımların geri dönüşlerinin yükselmesi,
- Girişimciliğin teşviki,
- Kaynakların etkin kullanımı, kalite ve verimlilik artışı,
- Sanayinin rekabet gücünün artması,
- Yeniliğin (inovasyon) artması,
- Sanayinin kârının artması,
- Rekabet gücü ve kârlılığı artan firmanın yeni ticari faaliyetlerini sürdürme fırsatı,
- Sanayi Ar-Ge faaliyetleri sonucunda bölgesel ekonomi, ülke ekonomisinin rekabet gücünün artmasına katkı sağlar.

Üniversite-sanayi işbirliğinin devlete olan ekonomik katkıları şu şekilde sıralanabilir;

- Toplumsal yarar,
- Teknolojik yeniliğin teşvik edilmesi,
- Teknolojik tabanlı ekonomik gelişme,
- İnsan sermayesi ve sosyal sermaye stokunun artışı,
- Akademik girişimciliğin teşvik edilmesi ve gelişmesi,
- Üniversitelerin sahip olduğu bilgilerin sanayiye transferlerinin kolaylaştırılması,
- Üniversitelerde oluşturulan yeni bilgi, ya da fikri mülkiyetin sanayi tarafından satın alınma fırsatı,
- Akademik ve sanayi araştırmacılar arasında kişisel ağların oluşması,
- Devletin denetiminin artmasını sağlar.

Üniversite-sanayi işbirliği, yukarıda sıraladığımız yarattığı fırsatlar ile Ar-Ge faaliyetlerin artmasını yaygınlaştırır. Yaygınlaşan Ar-Ge faaliyetleri; ulusal ekonomiye katkı sağlayarak, ülke ekonomisinin büyümesi ve uluslararası pazarlarda rekabet etme gücüne erişir. Ar-Ge ile uluslararasında rekabet edebilen ülkelerin refah düzeyleri yükselir. Refah düzeyi yüksek olan ülkelerde demokrası gelişmesiyle toplumsal barış sağlanır.

4 Türkiye ve Rusya Yükseköğretiminde Ar-Ge Faaliyetleri

Türkiye Cumhuriyeti ve Rusya Federasyonu yükseköğretiminde araştırma ve deneysel geliştirme (Ar-Ge) faaliyetlerine ait istatistiki veriler aracılığı ile iki ülkenin verilerinin yorumlanması ve karşılaştırılması yapılacaktır.

OECD, 1960 yılından itibaren düzenli olarak üye ülkelerin Ar-Ge verilerini toplamakta ve "Ekonomik Analiz ve İstatistik Merkezi" tarafından yayınlamaktadır. 1990 yılından itibaren üye olmayan birkaç ülkeye ait

Ar-Ge verilerini ayrıca da tabloların alt kısmına ekleyerek yayınlamaktadır. Bu çalışmadaki istatistiki veriler, OECD'nin 2013 yılındaki yayınına aittir (OCED, 2013).

Yükseköğretimdeki araştırma ve deneysel geliştirme (Ar-Ge) faaliyetlerinin verileri;

- Cari fiyatlar ve satınalma gücü pariteleri (SAGP) ile, yükseköğrenim araştırma ve deneysel geliştirme (Ar-Ge) harcamaları,
- GSYİH yüzdesi olarak, yükseköğrenim Ar-Ge harcamaları,
- 2005 yılı sabit fiyatları ve SAGP ile, yükseköğrenim Ar-Ge harcamaları,
- Sanayi tarafından finanse edilen yükseköğrenim Ar-Ge harcamalarının yüzdesi,
- Tamgün istihdam edilen yükseköğrenim araştırmacıları,
- Ulusal toplamın bir yüzdesi olarak yükseköğrenim araştırmacıları,
- Tamgün istihdam edilen yükseköğretim toplam Ar-Ge personeli.

Ülkelere ait sayısal veriler yedi başlıkta gruplanarak incelenmiştir.

4.1. Cari Fiyatlar ve SAGP ile Yükseköğretim Ar-Ge Harcamaları

2000-2011 yılları arasında her iki ülkedeki cari fiyatlar ve SAGP ile hesaplanan yükseköğretim Ar-Ge harcamalarının düzenli olarak artış içinde olduğu görülmektedir. 2000-2011 yılları arasında Türk yükseköğretiminde Ar-Ge faaliyetlerinin cari fiyatlar ve SAGP olarak değerinin, Rusya'daki faaliyetlerden daha fazla olduğu görülmektedir. İki ülkeye ait sayısal veriler Tablo 1'de yeralmaktadır. 2011 yılında OECD ülkelerinden İngiltere'nin cari fiyatlar ve SAGP ile hesaplanan yükseköğretim Ar-Ge harcamalarının değeri 63 102.01 milyon ABD $'dır. Her iki ülke, uluslarası rekabette üstünlük sağlamak için İngiltere'nin sahip olduğu değeri aşmalıdırlar (OECD, 64).

Yıllar	Türkiye Cumhuriyeti	Rusya Federasyonu
2000	1 704.5	477.5
2006	2 660.5	1 396.0
2007	3 395.9	1 679.6
2008	3 394.0	2 013.0
2009	4 182.0	2 389.2
2010	4 469.1	2 738. 5
2011	..	3 045.8

Tablo 1. *Cari fiyatlarla ve SAGP'ri ile yükseköğretim Ar-Ge harcamaları (Milyon ABD $).* **Kaynak:** *OECD. 2012. Main Science and Technology Indicators.*

4.2. GSYİH Yüzdesi Olarak Yükseköğretim Ar-Ge Harcamaları

2000-2011 yılları arasında, her iki ülkede GSYİH bir yüzdesi olarak yükseköğretim Ar-Ge harcamalarının düzenli olarak arttığı görülmektedir. 2000-2011 yılları arasında Türkiye'ye ait GSYİH bir yüzdesi olarak yükseköğretim Ar-Ge harcamalarının, Rusya'daki faaliyetlerin yüzde oranından daha fazla olduğu görülmektedir. İki ülkeye ait veriler Tablo 2'de yeralmaktadır. 2011 yılında OECD ülkelerinden Danimarka'nın, GSYİH bir yüzdesi olarak hesaplanan yükseköğretim Ar-Ge harcamalarının değeri % 0.92'dır. Her iki ülkenin de uluslararası rekabet için sahip oldukları yüzde değerlerin, arzu edilen yüzde değerinin oldukça gerisinde olduğu gözlenmektedir (OECD, 65).

Yıllar	Türkiye Cumhuriyeti	Rusya Federasyonu
2000	0.29	0.05
2006	0.30	0.07
2007	0.35	0.07
2008	0.32	0.07
2009	0.40	0.09
2010	0.39	0.10
2011	..	0.10

Tablo: 2. *GSYİH yüzdesi olarak yükseköğretim Ar-Ge harcamaları. (%)* **Kaynak:** *OECD. 2012.*

4.3. 2005 Yılı Sabit Fiyatları ve SAGP'leri ile Yükseköğretim Ar-Ge Harcamaları

2000-2011 yılları arasında her iki ülkenin 2005 yılı sabit fiyatları ve SAGP ile yükseköğretim harcamalarının düzenli artış içinde olduğu görülmektedir. 2000-2011 yılları arasında Türkiye'de 2005 yılı sabit fiyatları ve SAGP ile yükseköğretim Ar-Ge harcamalarının, Rusya'daki yükseköğrenim Ar-Ge harcamalarından daha fazla olduğu görülmektedir. İki ülkeye ait veriler Tablo 3'de yer almaktadır. 2011 yılında OECD ülkesi İngiltere'nin 2005 yılı sabit fiyatlar ve satınalma gücü paritesi (SAGP) ile hesaplanan yükseköğretim Ar-Ge harcamalarının

değeri 55 671.0 milyon ABD $'dır. Her iki ülke, uluslarası rekabet için İngilterenin sahip olduğu üstünlüğe erişmeli ve geçmelidirler (OECD, 66).

Yıllar	Türkiye Cumhuriyeti	Rusya Federasyonu
2000	1 808.5	602.5
2006	2 485.3	1 202.5
2007	3 042.4	1 406.1
2008	2 796.2	1 466.1
2009	3 371.9	1 724.9
2010	3 547.1	1 951.0
2011	..	2 124.7

4.4. Sanayi Tarafından Finanse Edilen Yükseköğretim Ar-Ge Harcamalarının Yüzdesi

2000-2011 yılları arasında; her iki ülkenin, sanayi tarafından finanse edilen Ar-Ge'nin yükseköğretim harcamalarının yüzde miktarlarının, başlangıç yıllarına göre azaldığı görülmektedir. 2000-2011 yılları arasında; Rusya'ya ait sanayi tarafından finanse edilen Ar-Ge'nin, yükseköğretim harcamalarına ait yüzde değerlerinin, Türkiye'deki faaliyetlerin yüzde değerine göre daha fazla olduğu görülmektedir. İki ülkeye ait veriler Tablo 4'de yeralmaktadır. 2011 yılında OECD ülkesi Slovakya Cumhuriyeti'ne ait sanayi tarafından finanse edilen yükseköğretim Ar-Ge harcamaları %12.5'dir, Rusya'nın sahip olduğu yüzde değeri ile OECD ülkelerinin yüzde değerlerini aşarak üstünlük sağlamıştır (OECD, 67).

Yıllar	Türkiye Cumhuriyeti	Rusya Federasyonu
2000	19.4	27.3
2006	23.8[0]	29.3
2007	23.3[0]	31.0
2008	17.4[a]	28.6
2009	16.0	22.4
2010	16.2	24.5
2011	..	24.0

4.5. Tamgün İstihdam EdilenYükseköğrenimde Araştırmacılar

2000-2011 yılları arasında her iki ülkedeki yükseköğretimde tamgün (tam zamana eşdeğer) çalışan araştırmacıların sayıları başlangıç yıllarına göre düzenli olarak artmıştır. 2000-2011 yılları arasında Rusya'da tamgün yükseköğretim araştırmacılarının sayısı, Türkiye'deki araştırmacı sayılarına göre bariz bir şekilde fazladır. İki ülkeye ait veriler Tablo 5'de yeralmaktadır. 2011 yılında OECD ülkesi İngiltere'nin tamgün istihdam edilen yükseköğretim Ar-Ge araştırmacı sayısı 163 506 kişidir. Her iki ülke, uluslarası rekabet için İngiltere'nin sahip olduğu üstünlüğe erişmeli ve geçmelidirler (OECD, 68).

4.6. Ulusal Toplamının Bir Yüzdesi Olarak Yükseköğretim Araştırmacıları

2000-2011 yılları arasında her iki ülkede ulusal toplamın bir yüzdesi olarak yükseköğretim araştırmacıları yüzde değerinin düzenli olarak artığı görülmektedir. 2000-2011 yılları arasında; Türkiye'deki ulusal toplamın bir yüzdesi olarak yükseköğretim araştırmacılarının sayısı, Rusya'daki araştırmacı sayılarına göre bariz bir şekilde fazladır. İki ülkeye ait veriler Tablo 7'de yeralmaktadır. 2011 yılında OECD ülkesi Slovakya Cumhuriyeti'nin

ulusal toplamın bir yüzdesi olarak yükseköğretim araştırmacıları % 67.5 dir. Her iki ülke, uluslarası rekabet için Slovakya Cumhuriyeti'nin sahip olduğu üstünlüğe erişmeli ve geçmelidirler (OECD, 69).

Yıllar	Türkiye Cumhuriyeti	Rusya Federasyonu
2000	73.2[u]	14.3
2006	62.6[u]	15.6
2007	59.5[u]	16.3
2008	56.6[u]	17.0
2009	53.2[u]	17.6
2010	51.2[u]	19.1

4.7. Tamgün İstihdam Edilen Yükseköğretim Toplam Ar-Ge Personeli

2000-2011 yılları arasında her iki ülkede tamgün (tam zamana eşdeğer) istihdam edilen yükseköğretim toplam Ar-Ge personel sayısının düzenli olarak arttığı görülmektedir. 2000-2011 yılları arasında Rusya'da tamgün istihdam edilen yükseköğretim toplam Ar-Ge personel sayısı, Türkiye'deki araştırmacı sayılarına göre bariz bir şekilde fazladır. İki ülkeye ait veriler Tablo 7'de yeralmaktadır. . 2011 yılında OECD ülkesi İngiltere'nin tamgün istihdam edilen yükseköğretim toplam Ar-Ge personeli sayısı 174 245 kişidir. Her iki ülkenin de uluslararası rekabette üstünlük sağlayabilmeleri için, İngiltere'nin istihdam ettiği araştırmacı sayılarını geçmeleri gerekmektedirler (OECD, 70).

Yıllar	Türkiye Cumhuriyeti	Rusya Federasyonu
2000	..	99 552
2006	26 713[m]	100 990
2007	29 9 543[m]	105 643
2008	29 912[m]	106 816
2009	31 037[m]	106 443
2010	32 913[m]	113 353
2011	..	121 151

Tablo: 7.*Tamgün istihdam edilen yükseköğretim toplam Ar-Ge personeli. Dipnot m: Yetersiz tahmin ya da yetersiz tahmine dayalı.* **Kaynak: OECD. 2012.**

Türkiye ve Rusya'daki yükseköğretimdeki AR-GE faaliyetleri incelenip karşılaştırıldığında, her iki ülkenin de üstün olduğu alanlar vardır.

Türkiyenin üstün olduğu alanlar;

- Cari fiyatlar ve SAGP ile, yükseköğrenim Ar-Ge harcamaları,
- GSYİH yüzdesi olarak, yükseköğrenim Ar-Ge harcamaları,
- 2005 yılı sabit fiyatları ve SAGP ile, yükseköğrenim Ar-Ge harcamaları,
- Ulusal toplamın bir yüzdesi olarak yükseköğrenim araştırmacıları.

Rusya'nın üstün olduğu alanlar;

- Sanayi tarafından finanse edilen yükseköğrenim Ar-Ge harcamalarının yüzdesi,
- Tamgün istihdam edilen yükseköğrenim araştırmacıları,
- Tamgün istihdam edilen yükseköğretim toplam Ar-Ge personeli.

Türkiye ile Rusya yükseköğretimindeki Ar-Ge faaliyetleri karşılaştırıldığında iki ülkenin de birbirlerinden örnek alması ve kendilerini geliştirmeleri gereken alanlar mevcuttur. Her iki ülkenin, üniversite-sanayi işbirliğine faaliyetlerine büyük önem vermeleri ve desteklemeleri gereklidir. Ayrıca, iki ülkenin karşılaştırılan değerlerini gelişmiş ülke seviyelerine yükseltmeleri, uluslararası rekabette söz sahibi olmaları ve ulusal kalkınmaları için zorunludur.

5 Sonuç

Ülkelerin kendi toplumlarının refah seviyelerini yükseltme çabaları ve uluslararası ekonomik rekabet, bilim ve teknolojiye önem verilmesine ve ülkelerin yeni keşifler ve buluşlar yapma yönünde amansız bir yarışa girmelerine sebep olmaktadır. Ar-Ge faaliyetlerinde bulunan ülkeler, teknoloji üretme yeteneğini geliştirerek; istikrarlı, güçlü ve verimli bir ekonomik kalkınmayı sağlarlar. Üniversite-sanayi işbirliği, sanayinin ihtiyacı olan teknik bilginin üniversitelerden sağlanması ve üniversitelerde üretilen bilginin de ticarileştirilmesine fırsat sağlayan ekonomik faaliyetlerdir.

Bilgi toplumunda, küresel piyasa ortamında, iletişim ve bilişim teknolojilerinde yaşanan baş döndürücü gelişmelerin yaşandığı bu yüzyılda, firmalar kıyasıya bir ulusal ve uluslararası rekabet ortamındalar. Ar-Ge faaliyetlerinde bulunmayan firmaların uzun süre ekonomik faaliyetlerini sürdürmeleri mümkün olmamaktadır. Aynı şekilde, Ar-Ge faaliyetlerine destek olmayan ulusların, ekonomik büyüme ve uluslararası rekabeti sürdürmelerine imkân yoktur.

Türkiye ile Rusya yükseköğretimindeki Ar-Ge faaliyetleri karşılaştırıldığında her iki ülkenin de birbirlerinden örnek alması ve kendilerini geliştirmeleri gereken alanlar mevcuttur. Her iki ülkenin de uluslararası rekabet için sahip oldukları yüzde değerlerin arzu edilen yüzde değerin oldukça gerisinde olduğu gözlenmektedir Her iki ülkenin de uluslararası rekabette üstünlük sağlamaları ve ülkelerinin ekonomik büyümelerini gerçekleştirmek için işbirliği yapmaları, çıkarları için zorunludur.

Post – Sovyet Ülkeler Arasında Bölgeselleşme Eğilimleri

Regionalism Tendency in Post – Soviet Countries

Prof. Dr. Ekrem Erdem (Erciyes University, Turkey)

Dr. Halit Mammadov (Erciyes University, Turkey)

Abstract

We drew attention in our study to two directions of the growing regionalism in the Post – Soviet countries. The regionalism in the Post – Soviet Space has an indecisive character. A group of the country (Ukraine, Moldova, South Caucasus countries) is evaluating the regionalism as a medium of the integration with global markets and liberal world, but the other group (leading through Russia, Belarus and countries of Central Asia) see the regionalism as a factor, which is against the globalism. We made a conceptional analyze in the first part of our study. The second part of our study contents the implementation. The main these of our study "Regionalism processes in the Post – Soviet space" have been researched and analyzed under the title of Commonwealth of Independent States and Eurasian Economic Union. The foundation of the Eurasia Economic Union with the aim of more supporting of the economically integration in the Post – Soviet countries is a very important example of the new regionalism tendencies. There will be analyzed in our studies the phases of the Eurasian Economic Union – Eurasian Economic Community, Custom Union and Common Economic Space in scope of regionalism concept. It will be also explained the strategically aims of the mentioned regional structure.

1 Giriş

Günümüz sosyal bilimlerinde üzerinde durulan önemli kavramlardan biri bölgeselleşme kavramıdır. Bölgeselleşmenin hayata geçmesi açısından coğrafi yakınlık, istikrarlı ekonomik gelişim, siyasi sistemlerin yakınlığı, sürece verilen toplumsal destek, ortak tehdit ve meydan okumalar gibi faktörler oldukça önem taşımaktadır. Özellikle siyasi ve ekonomik istikrarın sağlanması küreselleşen dünyaya entegre olmayı daha mümkün kılmaktadır.

Bölgeselleşmeyi küreselleşme sürecine karşı geliştiğini öngören argümana göre bölgeselleşme süreci bir tamamlayıcı unsur değil, tam aksine küreselleşmenin alternatifidir. Bu argüman bölgeselleşmenin küreselleşmeden daha dinamik gelişen bir süreç olmasına ve sonuçta çok kutuplu bir uluslararası ilişkilerin meydana çıkmasına kuvvetli bir şekilde vurgu yapmaktadır.

Bu anlamda bölgeselleşme; ortak çıkarları ve kaygıları olan belirli bir bölge ve ülke grublarının ekonomik ve siyasi sistemlerin güçlendiren ve etkin bir gelişimini sağlayan ekonomik ve politik entegrasyon sürecidir. Diğer yandan, bölgeselleşme küreselleşmeyle birlikte oluşturulmaya çalışılan siyasi, ekonomik ve sosyo – kültürel tek tipliliğe karşı da bir tepki niteliği taşımaktadır.

Günümüz uluslararası ilişkilerinde Rusya, Çin gibi ülkeler bölgeselleşmeyi ABD ve Batı hegemonyasına karşı siyasi bir araç olarak görmektedirler. Rusya ve Çin gibi ülkeler çok kutuplu bir dünya düzeninin ortaya çıkmasının bölgeselleşme yoluyla hayata geçeceğini ileri sürmektedirler. Uluslararası sistemde gelişen bölgeselleşme örnekleri ya iktisadi ya da güvenlik amaçlıdır. Bu bağlamda AB, NAFTA, APEC, ASEAN, ŞİÖ gibi bölgesel örgütlerin ve onların temel faaliyet istikametlerinden birini de ekonomi oluşturmaktadır.

Soğuk Savaş'ın sona ermesinden sonra, bölgeselleşme veya bölgesel entegrasyon girişimleri ekonomik geçiş sorunları ile ilgilenmiş ve özellikle Avrupa jeopolitiğinde ekonomik ve güvenlik yapıları ile daha yakın ilişkiler geliştirmiş, istikrarın sağlanmasında önemli bir araç olarak ortaya çıkmıştır.(Celac, 2006)

Günümüzde küreselleşme süreci hız kazanmakla birlikte, bölgeselleşme hareketleri iktisat ve uluslararası ilişkiler disiplinlerinin gündemine dâhil olan konuların başında gelmektedir. Bu çerçevede dünya ülkelerinin başta iktisadi olmak üzere birçok alanda birbiriyle ortaklık kurma arzusu içerisinde hareket ettiğini müşahede etmek mümkündür.

Bölgeselleşme kavramına baktığımızda, söz konusu kavramın ülkeler için yasal bir çerçeve sunduğu ve ekonomik ilişkilerini geliştirmesine yönelik bir yapılanmayı ifade ettiğini gözlemlemek mümkündür. Bu bağlamda bölgeselleşme muhtelif ülkelerin esasında ekonomik birlikteliğini kapsayan oluşum karakteri taşımaktadır.

Bölgeselleşme ve bölgesel entegrasyonun iktisadi kalkınma üzerindeki etkilerinin boyutuna ilişkin siyaset bilimi ve ekonomi politik arasında tartışma söz konusudur. Ancak son hamlede ekonomik kalkınmanın önemi sürekli olarak dikkat çekmiş ve gündemde olmuştur.(Engel, 2010) Bölgeselleşmenin oluşumu, çeşitli ihtiyaçları veya siyasi, ekonomik veya iktisadi kalkınmayı ihtiva eden stratejik açıdan önemli bir jeopolitik eylemi temsil etmektedir.

Soğuk Savaşın bitimi ile hız kazanan yeni bölgeselleşme dönemi, AB gibi başarılı örneklerden esinlenmiş ve bu aşamada bölgeselleşme hareketlerinde önemli ilerlemeler yaşanmıştır. Bu dönemde dünyanın muhtelif

yerlerinde bölgeselleşme arzuları hız kazanmış, ülkeler bölgesel entegrasyonlar yoluyla kendi stratejik hatlarını oluşturmuşlardır.

2 Post - Sovyet Ülkelerde Bölgeselleşmenin Karakteristiği

Siyasi ve jeopolitik anlamda parçalanan Post – Sovyet coğrafyasında muhtelif bölgesel yapılanmalar ortaya çıkmıştır. Bu yapılanmaların ilki Baltık ülkeleri dışındaki eski Sovyet ülkelerini kapsayan Bağımsız Devlet Topluluğu (BDT) olmuştur. BDT'nin birçok Post – Sovyet ülkenin dış politika ihtiyaçlarını karşılayamaması yeni bir bölgesel entegrasyonun meydana çıkması için zemin hazırlamıştır. Söz konusu zeminde Azerbaycan, Ukrayna, Gürcistan ve Moldova'nın inisiyatifinde Strasbourg'de 10 Ekim 1997'de GUAM örgütü kurulmuştur. (Papava,2008) 7 Haziran 2001'de, Yalta'da, GUAM'ın ilk zirvesinde örgütün amaç ve ilkeleri belirlenmiştir. GUAM'a katılan ülkeler milli bağımsızlıklarını ve egemenliklerini muhafaza etmek ve Rusya karşısında manevra kabiliyetlerini artırmayı amaçlamışlardır.(Kuzio,2000)

Batı ise Rusya'nın etkisindeki BDT örgütüne karşı GUAM'ı desteklemiştir. Batılı ülkeler özellikle Karadeniz ve Transkafkasya enerji hatlarının güvenliğini teminat altına alınması istikametinde GUAM örgütüne önem vermişlerdir. Bu bağlamda GUAM ilk bakışta ekonomik veya kalkınmaya yönelik bir örgütlenme olarak gözükse de, özellikle Batı açısından söz konusu bölgesel entegrasyonun hedef ve beklentileri güvenlik ve siyasi konular etrafında şekillenmiştir. Böylece, GUAM Batı'ya Kafkasya'daki enerji boru hatları ve ulaşım koridorları üzerinde stratejik bir kontrol sağlama olanağı kazandırmıştır.(Chossudovsky, 2008)

3 Post – Sovyet Ülkeleri Arasında İlk Bölgeselleşme: Bağımsız Devletler Topluluğu

Bağımsız Devletler Topluluğu (BDT) (Sodrujestvo Nezavisimih Gosudarstv (SNG) 8 Aralık 1991 yılında Belojevsk'de Rusya, Ukrayna ve Belarus Devlet Başkanları arasında imzalanan anlaşmayla 21 Aralık 1991'de faaliyete başlayan devletlerarası bir örgüttür. 21 Aralık 1991'de Kazakistan'ın Almaty kentinde Gürcistan ve Baltık ülkeleri dışında on bir eski SSCB ülkesi BDT'ye üye olmak için protokol imzalamıştır.(BDT resmi sitesi – 11.05.2013) 1993 yılında kabul edilen BDT tüzüğü (ustav) ekonomik, siyasal, çevresel, insani, kültürel alanlardaki işbirliği konusunda bir dizi kapsamlı hedef amaçlamıştır.(BDT resmi sitesi – 11.05.2013) BDT'nin temel amaçlarından biri de ortak ekonomik alanın yaratılması olmuştur. Diğer önemli nokta ise BDT ülkeleri arasında mevcut olan çatışmaların veya ortaya çıkacak sorunların barışçıl yöntemlerle halledilmesi olmuştur. BDT'nin temel amaçları "BDT üyesi ülkelerin sosyo – ekonomik gelişiminin sağlanması, yaşam standartlarının yükseltilmesi, istikrar ve güvenliğin artırılması" şeklinde ifade edilmektedir.(Konseptsiya Povişenia Prodovolistvennoy Bezopastnosti Gosudarstv – Uçastnikov SNG,2010)

Rusya, BDT'yi gelecekte Post – Sovyet ülkeleri ile ilişkilerini derinleştirecek bir araç olarak değerlendirmiş, özellikle Orta Asya üzerindeki etkisi açısından bu örgüte önem vermiştir. (Purtaş,2008) Bu bağlamda BDT Rusya'nın "Yakın Çevre" (Politika Blijnego Zarubejiya – Near Abroad) olarak adlandırılan Orta Asya ve Kafkasya'ya yönelik politikalarının ilk adımı olarak dikkat çekmektedir. Rusya ilk yıllarda ekonomik ve siyasal anlamda yeteri derecede güçlü olmaması nedeniyle "Yakın Çevre" politikasında söz konusu bölgede yaşayan ve söz konusu coğrafyanın (özellikle Orta Asya) "yumuşak karnı" olan etnik Rusları ve bölgenin ortak dili olan Rusçayı kullanmıştır. (Lepingwell, 1994; Laitin, 1998) Rusya, "Avrasya Ekonomik Topluluğu"na giden yolda BDT'yi ön hazırlık olarak düşünmüştür.

Bu bağlamda BDT Rusya'nın "yakın çevresinde" yeniden güç oluşturması için ekonomik, siyasi ve kültürel araç niteliği taşımaktadır. Küresel güç olması açısından BDT ve eski SSCB coğrafyası Rusya için hiçbir makul alternatifi olmayan bir işbirliği alanı niteliği taşımaktadır. Rusya'nın BDT politikası ekonomik açıdan stratejik bir politikadır ve söz konusu strateji Rus ulusal ekonomisinin geleceğini belirleyecek perspektife sahiptir. (Ekonomiçeskie İnteresi i Zadaçi Rossii v SNG, 2010)

4 Post Sovyet Coğrafyada Yeni Bölgeselleşme Eğilimi: Avrasya Ekonomik Birliği

Avrasya Ekonomik Birliği (Evraziyskiy Ekonomiceskiy Soyuz) düşüncesi Rusya'nın önderliğinde eski Sovyet jeopolitiği içinde yer alan devletlerin artan küresel rekabet karşısında bölgesel işbirlikleri ile ayakta kalabilme çabaları sonucu ortaya çıkmıştır. Avrasya Ekonomik Birliği'nin teorik temellerini dört ana hat üzerinde değerlendirmek mümkündür:

1. Atlantikçilik ve onun uzantısı olarak kabul edilen küreselleşmeye karşı koyma, Batı Avrupa'ya ve ABD'ye karşı kültürel, politik ve ekonomik mücadele;
2. Ekonomide devletin güçlü olmasını destekleme; kamu sektörünün muhafaza edilmesi;
3. Rus Ortodoks Kilisesi'nin desteğini arkasına almak ve aynı zamanda diğer geleneksel gruplarla işbirliği;
4. Rusya'nın çekirdek güç olarak yer aldığı, eski SSCB coğrafyasında 'Avrupa Birliği' tarzında bir platformun oluşturulması.(Vasechko, 2007)

Avrasya Birliği Entegrasyonu Süreci ve Aşamaları:

1. Serbest Ticaret Bölgeleri
2. Avrasya Ekonomik Topluluğu
3. Gümrük Birliği
4. Tek Ekonomik Saha
5. Avrasya Ekonomik Birliği
6. Avrasya Birliği

1994 yılında Kazakistan Cumhurbaşkanı Nursultan Nazarbayev tarafından söylemselleştirilen Avrasya Birliği düşüncesi 2010 yılında Avrasya Gümrük Birliği'nin (Tamojenniy Soyuz) kurulması ile yeni boyut kazanmıştır. 10 Ekim 2000'de imzalanan Avrasya Ekonomik Topluluğu (AET) anlaşması Gümrük Birliği ve Tek Ekonomik Saha'nın gelişmesi için önayak rolü oynamıştır. Günümüzde Avrasya Ekonomik Topluluğu'na beş ülke dâhildir: Rusya, Belarus, Kazakistan, Kırgızistan ve Tacikistan. 2002 yılından Ukrayna ve Moldova, 2003'den itibaren ise Ermenistan AET'te gözlemci ülke konumundadırlar. Orta Asya ülkelerinden Özbekistan, Topluluğa 2006 yılında üye olmuş, 2008 yılında ise ayrılmıştır.

AET, Birleşmiş Milletler ve uluslararası hukuk ilkelerine tam uygun olarak kurulmuş ve uluslararası tüzel kişiliğe sahiptir. 2003 yılında, Avrasya Ekonomik Topluluğu'na, BM Genel Kurulunda gözlemci statüsü verilmiştir. (Avrasya Ekonomi Topluluğu resmi sitesi – 15.05.2013) Avrasya Ekonomik Birliği'ne katılan ülkeler (Rusya, Belarus, Kazakistan) Dünya Ticaret Örgütü'nün (DTÖ) belirlemiş olduğu uluslararası norm ve kuralları çerçevesinde hareket edeceklerini belirterek, DTÖ üyeliği konularının önemine vurgu yapmışlardır.

Rusya inisiyatifindeki yeni bölgeselleşme sürecinin temel istikametleri aşağıdaki şekilde karakterize edilmektedir:

- Gümrük Birliği ve Tek Ekonomik Saha'nın tam olarak hayata geçirilmesi;
- Mal, hizmet, sermaye ve emek dolaşımının etkin bir şekilde sağlanması;
- Sanayi, ulaşım, enerji ve tarım politikalarının koordineli şekilde yürütülmesi ve ortak ulus ötesi korporasyonların tesis edilmesi;
- Milli yasaların uyumu ve harmonizasyonu, ekonomi politikalarının koordinasyonu:
- Ekonomi güvenliği, göç sorunlarında işbirliği, sınır ve bölgelerarası işbirliğinin geliştirilmesi.(Avrasya Ekonomik Birliği Komisyonu resmi sitesi – 15.05.2013)

2011 yılından itibaren Avrasya Ekonomik Birliği süreci Rusya Devlet Başkanı Vladimir Putin tarafından ilan edilmiş ve uygulamaya konulmuştur. 2010 yılında Rusya, Kazakistan ve Belarus arasındaki gümrük duvarı kalkmış, 2012 yılı itibariyle de Tek Ekonomik Saha (Edinoe Ekonomiceskoe Prostranstvo) süreci tamamlanmıştır.

Avrasya Ekonomik Birliği'nin en önemli organı Ekonomik Birlik Komisyonu'dur. Komisyon, 2011 yılında Rusya, Belarus ve Kazakistan Devlet Başkanlarının kararıyla tesis edilmiştir. Komisyon bu ülkelerin hiçbir kurumuna bağlı olmaksızın faaliyet göstermektedir. Komisyonun temel misyonu Gümrük Birliği ve Tek Ekonomik Saha'nın gelişimine katkı sağlamaktır. (Avrasya Ekonomik Birliği Komisyonu resmi sitesi – 15.05.2013)

Günümüzde Avrasya Ekonomik Birliği'ne katılan ülkelerin önemli hedeflerinden biri de ortak para biriminin faaliyete geçirilmesidir. 2004 yılında Belarus Devlet Başkanı Lukaşenko ortak para fikrini ortaya atmıştır. Kazakistan Cumhurbaşkanı Nazarbayev "evraz" veya "Avrasya rublesi" isimli bir para birimini desteklemektedir. Ortak para biriminin 2015 yılından itibaren faaliyete geçmesi öngörülmektedir. Ancak Rusya Devlet Başkanı Putin, Avrasya Birliği sürecinde "AB'nin yaptığı yanlışları göz önünde bulundurduklarını" ve ortak para birimi oluşumu için acele etmeyeceklerini ifade etmiştir. (Kostenko; Novikova, 2012)

5 Gümrük Birliği

Gümrük Birliği 6 Ekim 2007'de Tacikistan'ın başkenti Duşanbe'de imzalanan anlaşmayla kurulmuştur. Gümrük Birliğinin yüksek organı katılımcı ülkelerin Devlet ve Hükümet Başkanlarının yer aldığı Devletlerarası Konsey'dir. 2007 yılından itibaren Gümrük Birliği Komisyonu daimi faaliyet gösteren yegâne organdır. Gümrük birliği çerçevesinde ortak gümrük tarifesi ve üçüncü ülkelerle ticaret düzenleyen önlemler alınmıştır. 2009 yılında, Gümrük Birliği Yüksek Organı, Gümrük Birliği Komisyonu ve katılımcı ülkelerin Hükümetleri Ortak Gümrük Tarifesi, Gümrük Kanunu, Gümrük Birliği Divanı Statüsü de dâhil olmak üzere Gümrük Birliği'nin yasal çerçevesini tamamlamak için bir dizi tedbirler almışlardır. (Avrasya Ekonomi Birliği Komisyonu resmi sitesi – 15.05.2013) Bu çerçevede 40'dan fazla uluslararası anlaşma, katılımcı ülkeler tarafından kabul edilmiş ve onaylanmıştır.

2011 yılında Petersburg'da yapılan Avrasya Ekonomik Topluluğu toplantısında Kırgızistan'ın Gümrük Birliği'ne katılımı deklare edilmiştir. Kırgızistan Cumhurbaşkanı Almazbek Atambayev, "Kırgızistan'ın Gümrük Birliği'ne katılmak için kararlı olduğunu" bildirmiştir. (Fergana News – 17.05.2013) Rusya Başbakanı Dmitri Medvedev "Kırgızistan'ın Gümrük Birliği ve Tek Ekonomik Saha'ya katılma kararlılığını desteklediklerini ve bu konuda yardım göstermeye hazır olduklarını" beyan etmiştir.(TKS – 11.05.2013) Katılımcı ülkeler ise Gümrük Birliğinin üçüncü ülkelere açık olduğunu defalarca ifade etmişlerdir. Bu çerçevede diğer Post – Sovyet ülkelerinin katılımı özellikle Gümrük Birliğinin geleceği açısında oldukça önem taşımaktadır. Bu bağlamda Ukrayna'nın üyeliği Gümrük Birliği açısından önemli gündem maddesidir.

Ukrayna, nüfusu ve coğrafi konumuyla Gümrük Birliği ve geniş manada Avrasya Ekonomik Birliği'nin gelecek hedefleri açısından kilit ülke konumundadır. Post – Sovyet Ukrayna'nın jeopolitik olarak AB ve Rusya arasında kalması bu ülkenin dış ilişkilerinin gündemini belirlemiştir. Bağımsızlık sonrası Ukrayna, Rusya ve Batı'nın (özellikle AB'nin) rekabet ettiği önemli jeopolitik alan olmuştur. (Snirelman, 2009) Bu nedenle Ukrayna Gümrük Birliği'ne gözlemci statüsünde katılmak istemektedir.

ÜLKELER	Sanayi Üretimi	Tarım Üretimi	Sabit Sermaye Yatırımları	Nakliye Taşımacılığı (Boru Hatları Hariç)	Perakende Ticaret Hacmi	Tüketici Fiyatları endeksi

Tablo 2.*Gümrük Birliği Hukuki Altyapısını Oluşturan Temel Uluslararası Anlaşmalar*

Diğer bir alternatif süreç ise Ukrayna tarafından ileri sürülen "yarım üyelik" (polovinchatiy) statüsüdür. Bu statü 3+1 şeklinde de formüle edilmektedir. Buna göre Ukrayna Gümrük Birliği'ne aşamalı olarak entegre olmayı hedeflemektedir. Böylece, Ukrayna bugün itibariyle Gümrük Birliği'ne tam katılımı düşünmediğini ortaya koymaktadır. "Yarım üyelik" statüsü Rusya tarafından makul görülmemektedir. (RİA Novosti – 1505.2013) Rusya, Ukrayna'nın Gümrük Birliği'ne tam katılımını istemekte ve oldukça önemsemektedir. Bu çerçevede kısa vadede Ukrayna'nın gözlemci statüde Gümrük Birliği üyesi ülkelerle ekonomik işbirliğine gideceğini gözlemlemek mümkündür. Ukrayna'nın Gümrük Birliği üyeliği ve AB sürecini referanduma götürmesi bile olasıdır.

Ukrayna, 2013 yılının sonuna kadar hem Gümrük Birliği ülkeleri hem de AB ile serbest ticaret anlaşması imzalamayı ümit etmektedir. Ukrayna Dışişleri Bakanı Leonid Kojara Rusya Dışişleri Bakanlığı Diplomasi

Akademisindeki konuşmasında "Ukrayna'nın hem Gümrük Birliği (Doğu) ve hem de AB (Batı) ile serbest ticaret anlaşması imzalayan tek ülke konumuna sahip olmasından ve bu durumun dünyada tek örnek olma ihtimalinden" bahsetmiştir.(RİA Novosti – 15.05.2013)

6 Tek Ekonomik Saha

19 Eylül 2003'de Yalta'da, Rusya, Belarus, Ukrayna ve Kazakistan Devlet Başkanları zirvesinde Tek Ekonomik Saha'nın oluşturulması hakkında anlaşma imzalanmıştır. Rusya, Belarus ve Kazakistan yasama organları anlaşmayı onaylarken, Ukrayna parlamentosu bu Anayasasına ve dış politika önceliklerine ters düşmesi nedeniyle söz konusu anlaşmayı tasdik etmemiştir. (Rusya Ekonomik Gelişim Bakanlığı – 17.05.2013)) Böylece, Tek Ekonomik Saha üç ülkenin - Rusya, Belarus ve Kazakistan - katıldığı iktisadi bir aşama olmuştur. Tek Ekonomik Sahanın temel amaçları aşağıdaki şekilde sıralanmaktadır:

- Mal, hizmet, sermaye ve emeğin tek pazar altında oluşturulması;
- Üye ülkelerin ekonomik kurumsallaşması ve bu ülkelerde hayat standartlarının yükseltilmesi;
- Vergi, banka, finansal, ticari, gümrük ve tarife politikalarının ortak yürütülmesi;
- Ulaşım, enerji ve iletişim alanlarında ortak bir sistemin geliştirilmesi, ekonomide yüksek teknolojinin uygulanmasında devlet desteğinin sağlanması.(Avrasya Ekonomik Topluluğu – 11.05.2013)

	İhracat	İthalat	Denge	2012 yılının ilk çeyreği (%)

Tablo 3. *Gümrük Birliği ve Tek Ekonomik Saha Üyesi Ülkelerin Dış Ticaret Hacmi (2013 yılının ilk çeyreği)*
Kaynak: *Avrasya Ekonomi Komisyonu*

16 Ağustos 2006'da Avrasya Ekonomik Topluluğu Devletlerarası Konseyi'nin Devlet Başkanları düzeyinde aldığı kararla Tek Ekonomik Saha'nın yasal çerçevesi için gerekli belgeler geliştirilmeye başlanılmıştır. 2009'da Almatı'da yapılan gayri resmi zirvede Rusya, Belarus ve Kazakistan Devlet Başkanları Tek Ekonomik Saha 2010 – 2011 Eylem Planını onaylamışlardır.

Bu çerçevede 2010 yılında Petersburg'da yapılan AET Devletlerarası Konsey toplantısında Tek Ekonomik Saha ile ilgili dört anlaşma imzalanmıştır:

- Rusya Federasyonu, Belarus ve Kazakistan arasındaki teknik düzenlenmelerin ortak ilke ve kuralları;
- Üçüncü ülkelerden yasadışı göçle mücadele için işbirliği;
- Göçmen işçilerin ve aile üyelerinin hukuki statüsü;
- Fiyatlandırma ve tarife politikalarında, elektrik sektöründe doğal tekel hizmetlerine erişim. (Avrasya Ekonomik Topluluğu – 11.05.2013)

Tablo 4. *Gümrük Birliği ve Tek Ekonomik Saha Üyesi Ülkelerin Karşılıklı Ticaret Hacmi* ***Kaynak:*** *Avrasya Ekonomi Komisyonu*

18 Kasım 2011'de Rusya, Belarus ve Kazakistan liderleri Avrasya ekonomik entegrasyon sürecinin bir sonraki aşamaya geçişi hakkında bir Deklarasyon imzalamışlardır. Rusya, Belarus ve Kazakistan Devlet Başkanları "1 Ocak 2015 tarihine kadar Gümrük Birliği ve Tek Ekonomik Saha'nın yasal çerçevesini oluşturan uluslararası anlaşmaları tamamlayarak, söz konusu yasal çerçeve temelinde Avrasya Ekonomik Birliği'ni oluşması için çaba harcayacaklarını" beyan etmişlerdir. (Avrasya Ekonomik Topluluğu – 11.05.2013) Bu süreci tamamlaması için Avrasya Ekonomi Komisyonu görevlendirilmiştir.

Tek Ekonomik Saha dört temel prensibin hayata geçmesini içermektedir:

- Malların Serbest Dolaşımı
- Hizmetin Serbest Dolaşımı
- Sermayenin Serbest Dolaşımı
- Emeğin Serbest Dolaşımı

Tek Ekonomik Saha ile ilgili yukarıda bahsettiğimiz temel ilke ve kurallar 1 Ocak 2012 tarihi itibariyle yürürlüğe girmiştir. Tek Ekonomik Saha'nın tamamlanmasıyla 2015 yılından itibaren daha ileri entegrasyon aşaması olan Avrasya Ekonomik Birliği sürecinin başlatılması öngörülmektedir.

7 Stratejik Çıkarımlar

Soğuk Savaş sonrası ortaya çıkan yeni koşullarda bölgesel örgütlerin temel kaygısını yeni tehditlere ve meydan okumalara karşı hızlı ve etkin bir biçimde cevap verebilecek güvenlik anlayışının geliştirilmesi oluşturmuştur. Günümüz uluslararası koşullarında devletler kendi güvenliklerini tek başına değil, muhtelif bölgesel organizasyonlar aracılığıyla sağlamaktadırlar.

Putin dönemi ile birlikte Avrasya Birliği düşüncesi Rusya için stratejik bir öncelik taşımakta ve tedricen ŞİÖ'nün önüne geçmektedir. (RİA Novosti – 15.05.2013) Rusya, Putin dönemi ile birlikte değişik bölgeselleşme süreçleri vasıtasıyla çok kutuplu uluslararası ilişkiler sistemini stratejik hedef olarak belirlemektedir. 7 Mayıs 2012'de Rusya Devlet Başkanı Vladimir Putin tarafından imzalanan "Rusya Federasyonu Dış Politikasının Uygulanması İçin Gerekli Önlemler" belgesinde, bölgesel örgütler çok yönlü diplomasi çerçevesinde ele alınmaktadır. (Rusya Devlet Başkanı resmi sitesi – 17.05.2013) Rusya, ŞİÖ'nün bölgesel rolünü diğer önemli bir yapılanma projesi olan Avrasya Birliği düşüncesiyle desteklemektedir.

Bu bağlamda Avrasya Birliği, ABD ve Çin'in Orta Asya'daki etkinliğini dengelemeye dönük bölge ülkeleri ile Rusya arasında siyasi, ekonomik ve güvenlik alanında entegrasyonu hedeflemektedir. Putin'in iktidara gelişi ile birlikte Rusya, Avrasya bölgesinde bölgesel örgütler yoluyla etkili bir dış politika uygulamaktadır.

Putin'in 2011 yılında ikinci kez iktidara gelişinden sonra Avrasya Birliği projesi Rus dış politikasının temel önceliği haline gelmiştir. Rusya, Avrasya Birliği'nin 2013 yılında öncelikle ekonomik entegrasyon temelinde gelişeceğini hedeflemektedir. Rusya, Avrasya Birliği'nin ekonomik perspektifini serbest ticaret kuralları çerçevesinde değerlendirmektedir. Ekonomik temelli Avrasya Birliği, Avrupa ve dinamik Asya – Pasifik bölgeleri arasında etkin bir "köprü" rolünü oynama potansiyeli taşımaktadır.(İzvestia – 11.05.2013)

Rusça'nın bölgede etkin bir şekilde kullanımı Rusya açısından Avrasya Birliği için önemli bir araç teşkil etmektedir. Rusya Avrasya Birliği düşüncesiyle jeopolitik çıkarlarını gözetlemeyi esas stratejisi olarak benimsemektedir. Avrasya Birliği esas itibariyle ileri aşamada siyasi bir entegrasyon olarak Rusya'nın dış politika önceliğini oluşturmaktadır. Modern Rus dış politikasının ve Avrasyacı ekolün önde gelen fikir adamlarından olan Aleksandr Dugin çok kutuplu bir dünyanın oluşumunun Rusya'nın Avrasya istikametindeki politikasına bağlı olduğunu vurgulamaktadır. Dugin'e göre, Avrasyacılık ve Avrasya Birliği düşüncesi sadece stratejik bir öncelik olduğu kadar, ekonomik, manevi ve siyasi bir anlam da ifade etmektedir. (Dugin'in makaleleri – 17.05.2013)

Bugün ekonomik, askeri ve normatif alanları kapsayan küresel rekabet kavramı, Rus siyasi seçkinleri arasında güçlü bir yankı uyandırmaktadır. Bu düşünce dünya siyasetini sürekli mücadele arenası olarak gören Hobbesian anlayıştan kaynaklanmaktadır. Rusya'nın yeniden süper güç olma iddiası "Yakın Çevresi'ndeki politikaları ve başarılarıyla birebir bağlantılıdır. Bu çerçevede Rusya son dönemde "Yakın Çevresi" ile entegrasyonda hukuki – normatif yönlere dikkat çekmektedir. (Dragneva; Wolczuk, 2012)

Bugün Orta Asya'nın Post – Sovyet ülkeleri ortak bir bölgesel kimlik çerçevesinde, Rusya'nın başat güç olacağı bir bölgeselleşme projesine katılımı kendi dış politikaları açısından temel öncelik olarak görmektedirler.(Koraboev, 2012) Bu faktör Avrasya Birliği projesinin başarılı olma ihtimalini yükseltmektedir. Rusya ise Avrasya Birliği'ni pragmatik Şanghay İşbirliği Örgütü'nden (ŞİÖ) daha çok önemsemektedir. Sonuç olarak, Avrasya Birliği düşüncesini Rusya'nın Batı merkezli küreselleşme sürecine karşı bölgeselleşme yoluyla tepki koyduğu bir oluşum olarak değerlendirmek mümkündür.

8 Sonuç

Bölgeselleşme jeopolitik nedenler ve iç faktörlerin etkisi altında küreselleşme sürecinde yaşananlara paralel olarak gelişim göstermekte ve devletlerin ekonomik yapısını ve bunu müteakiben dış politikalarını da dönüştürme potansiyeli taşımaktadır. Söz konusu dönüşüm hem olumlu, hem de olumsuz istikamette tezahür etmektedir. Örneğin, birçok ülke küresel sisteme entegre olmak için bölgeselleşmeyi bir araç olarak görmekte, bazı ülkeler muhtelif metotlarla (İran, Kuzey Kore ve diğerleri) bölgeselleşmeyi küresel dünyaya karşı bir direniş vasıtası olarak değerlendirmektedir.

Bu bağlamda günümüzde bölgeselleşme, iki eğilim istikametinde gelişim göstermektedir. Bunlardan ilki, bölgeselleşmenin, küreselleşmenin tamamlayıcı bir öğesi ve bu sürecin bir parçası olmasıdır. İkinci eğilim ise, bölgeselleşmenin küreselleşmeye alternatif olduğu ve söz konusu iki sürecin zıt anlam taşımasını ihtiva etmektedir.

1991 yılında SSCB'nin dağılmasıyla bağımsızlıklarının kazanan yeni ülkeler ise yeni uluslararası siyasi ve iktisadi koşullara hazırlıksız yakalanan devletlerin başında gelmişlerdir. Yeni bağımsız ülkeler zayıf siyasal sistemleri, dağılmış ekonomik düzenleri, deformasyona uğramış sosyal ve kültürel yapılarıyla ciddi meydan okuma ve tehditlerle karşı karşıya kalmışlardır. Bu ülkeler küreselleşmeyi hem fırsat hem de meydan okuma olarak değerlendirmişlerdir.

Post – Sovyet ülkelerin bir kısmı pazar ekonomisi yoluyla dünya iktisadi sistemine eklemlenirken, diğer bir kısım ülke ise ekonomik liberalizayon konusunda acele etmemektedirler. İkinci grup ülkeler bölgesel örgütlenmeler vasıtasıyla ekonomik küreselleşmenin risk ve meydan okumalarını bertaraf etmeyi hedeflemektedirler.

Avrasya Ekonomik Birliği Post – Sovyet coğrafyasını iktisadi anlamda ikiye ayıran bir ekonomik bölgeselleşme sürecidir. Söz konusu bölgesel organizasyon Post – Sovyet ülkelerine alternatif sunsa da ekonomik örgütlenmeden siyasi bir örgütlenmeye geçişi sırasında ciddi jeopolitik sorunlarla karşı karşıya gelebilir.

Açık Denizlere Kıyısı Bulunmayan Avrasya Devletlerinin Transit Geçiş Hakkı

Transit Passage Rights of Eurasian Countries without Coastal Access to High Seas

Asst. Prof. Dr. Abbas Karaağaçlı (Giresun Univesity, Turkey)

Abstract

When the rules of international law, practices and conventions are all studied, it becomes evident that there exist certain rules of international legislation which enable the countries not bordering the high seas to reach the open seas. However, differences in practice arise due to geographical conditions, balance of power and economic development. In order for the countries concerned to reach the open seas and benefit in transit from the territory of the neighboring countries located by the high seas for trade and transportation, it is essential that the two countries should have good relations and that the country bordering the high seas should have good-intention. Because in Eurasian Geography, almost none of the countries in Central Asia and Caucasus do not border the open seas, they are in need of other countries for trade and transport. In this study, the focus is on this issue.

1   Giriş

Dünya ticaretinin %95'i denizler ve okyanuslar yoluyla gerçekleşmektedir. Yer kürenin ¾'ü denizler ve okyanuslar kaplamaktadır. Uluslararası ticaretin deniz yoluyla yapılması ve dünya ticaretinin kıtalar arası ulaşımı okyanuslar vasıtasıyla gerçekleşmesinin en önemli nedeni deniz taşımacılığının çok düşük maliyetli olmasından kaynaklanmaktadır. Uluslararası ticaretin deniz taşımacılığıyla gerçekleşmesi açık denizlerde deniz taşımacılığının serbestçe yapılması her zaman kıyısı bulunan ülkelerin ve yine kıyısı bulunmayan devletlerin sorunlar yaşadıkları ve ilgilendikleri bir husus olmuştur. Günümüzde deniz ticaretinin uluslar arası ticaretin gelişmesinde en büyük faktördür. Nitekim Birleşmiş Milletler Ticaret ve Kalkınma Örgütü'ne (UNCTAD) göre: "Açık denizlere kıyısı bulunmayan devletler, gelişmekte olan ülkeler sıralamasında en fakir ülkeler kategorisinde yer almaktadırlar. Karayoluyla açık denizlere ulaşamamaları o ülkeleri dünya pazarlarında inzivaya sürüklemiş ve gelişmeleri önünde en büyük engeli teşkil etmiştir" (UN. Doc. TD/191, 1976, s.200).

Sovyetler Birliğinin çökmesiyle birlikte Ortaya çıkan yeni durumda Avrasya coğrafyasında yer alan Orta Asya bölgesinde bulunan Kırgızistan, Kazakistan, Tacikistan, Özbekistan, Türkmenistan ve Kafkasya bölgesinde yer alan Ermenistan ve Azerbaycan muhat ülkeler yani açık denizlere kıyısı bulunmayan devletler olarak ortaya çıktılar. Her ne kadar Kazakistan, Türkmenistan ve Azerbaycan Hazar Denizi'ne kıyıdaş olsalar da Hazar Denizi'nin uluslararası denizlerle bağlantısı bulunmaması ve kapalı bir deniz olması sebebiyle söz konusu devletler de muhat (kapalı) devletler konumunda değerlendirilmektedirler.

Orta Asya ve Kafkas devletleri açık denizlerden yararlanma hususunda uluslararası hukuk çerçevesinde bazı haklara sahiptirler. Bağımsızlıklarını kazandıkları 1990'lı yıllardan beri; önceleri dağılan Sovyetler Birliğinin en büyük mirasçısı olan Rusya Federasyonu'nun açık denizlerde bulunan limanlarını kullanırken daha sonraları Avrupa, Amerika ve Asya devletleriyle kurdukları ilişkiler sayesinde dünyaya açılıp açık denizlerin taşımacılık imkânlarından yararlanmayı hedeflemişlerdir. Kazakistan, Azerbaycan ve Türkmenistan zengin doğal kaynaklarını dünya piyasalarına ulaştırmada her türlü fırsat ve imkanı değerlendirirken Özbekistan başta pamuk olmak üzere tarımsal ürünlerini dünya piyasalarına ulaştırmakta sorunlar yaşamıştır.

Diğer üç ülke yani Kırgızistan, Tacikistan ve Ermenistan ise uluslararası ticaret açısından çok önemli sanayi veya tarımsal ürün üretemediklerinden dolayı eski Sovyet sisteminin dar ekonomik kalıplarını yıkmakta zorlanmışladır. Her üç ülkenin Rusya Federasyonuyla sıkı ekonomik ilişkilerinin bulunması bu durumun göstergesidir. Elbette Kırgızistan ve Tacikistan'ın Çin Halk Cumhuriyeti ile olan sınır komşuluğu bu iki ülkeye ticari ilişkiler açısından olumlu bir alternatif sunmuştur. Ermenistan ise güneyindeki komşusu İran ile geliştirdiği ekonomik ve ticari münasebetlerle alternatifler yaratmaya çalışmaktadır.

Açık denizlere kıyısı bulunmayan devletlerin hakları konusunda 1958 Cenevre Konvansiyonu ve yine 150 devletin temsilcilerinin 9 yıl çalışması sonucunda 1982 yılında ortaya çıkan uluslararası deniz hukuku 3. Birleşmiş Milletler Konvansiyonu'nca ortaya konan çalışmalar çok önem arz etmektedir. Ortaya konan bu konvansiyonlarda açık denizlere kıyısı bulunmayan devletlerin transit hakkı, açık denizlerin tavanından yararlanma, bilimsel ve teknolojik çalışmalara iştirak etmek, açık denizlerde gemi taşımacılığı gibi ekonomik faaliyetler yapmak gibi uygulamaları ön görmektedir.

Orta Asya devletlerinden Kazakistan ve Türkmenistan, Kafkasya'dan ise Azerbaycan zengin ham petrol ve doğalgaz kaynaklarına sahiptirler. Özbekistan ise pamuk ve altın üretiminde söz sahibi olup, Avrasya coğrafyasının önemli ekonomilerinden biri konumundadır. Kazakistan enerji kaynaklarının yanı sıra uranyum, demir çelik ve en önemlisi tahıl üretimiyle coğrafyanın ve hatta dünyanın en önemli üreticilerinden biridir. Diğer

ülkelere de baktığımızda Avrasya coğrafyasının bu iki bölgesi yer altı ve yer üstü zenginlikleri bakımından büyük önem arz etmelerine rağmen açık denizlere kıyıları bulunmaması bu ülkelerin uluslararası ticaretle entegrasyon sağlamalarında büyük bir dezavantaj ve handikap olarak ortaya çıkmaktadır.

2 Açık Denizlerde Ulaşım ve Transit Geçişin Önemi

Sovyetler Birliği döneminde raylı sisteme önem verilmiş, ülkenin dört bir yanı demir ağlarla örülerek kentler, sanayi kuruluşları, limanlar, enerji yatakları ve tarım sahaları birbirlerine bağlanmıştır. O dönemde Orta Asya ve Kafkasya'da ki önemli kentler, sanayi merkezleri Hazar Denizi'nde ki limanlar, petrol ve doğalgaz sahaları birbirlerine bağlanmanın yanı sıra başkent Moskova Saint Petersburg, Karadeniz ve Baltık Denizi'nde ki bütün Limalara bağlanmış durumdaydı. 1990'lar da Sovyetler Birliğinin dağılmasıyla birlikte kurulu bulunan raylı sistem, Sovyetlerin iyi bir ekonomik mirası olarak Orta Asya ve Kafkasya devletlerine intikal etti.

Muazzam bir alt yapıya sahip olan raylı sistemin yanı sıra gelişmiş tren istasyonları, vagon ve lokomotif fabrikaları bağımsızlığını kazanan devletlerde ekonominin hizmetine girerek ham madde ve ürünlerin ulaşımında büyük imkânlar sağladı. Dağlık ve çok engebeli olmaları nedeniyle Tacikistan ve Kırgızistan hariç Kazakistan, Özbekistan, Ermenistan ve Azerbaycan bu imkândan fazlasıyla yararlanmaktadırlar. Tacikistan ve Kırgızistan'ın da önemli ekonomik ve siyasi merkezleri demir ağlarla birbirine bağlanmış durumdadırlar. Hatta Tacikistan'ın hemen hemen en önemli ulaşım ve taşımacılık kanalı demir yolu vasıtasıyla komşu Özbekistan ve Kırgızistan kanalıyla gerçekleşmektedir.

Kara alanlarda sıkışmış devletler ham madde, enerji kaynakları, sanayi ürünleri ve diğer ticari mamullerinin diğer ticari ve tarımsal ürünlerinin ithalat ve ihracatında komşu ülkelerin, kara, demir yolu veya nehirlerinden yararlanmak zorundadırlar. Komşu ülkelerle herhangi bir siyasi kriz veya anlaşmazlık yaşadıklarında bu kanalların kapanması tehlikesiyle karşı karşıya kalınmaktadır. Örneğin karaya sıkışmış Tacikistan enerji ihtiyacını gidermek amacıyla ülkesindeki nehirler üzerine barajlar inşa etmek ve barajların üzerine elektrik santrallerini kurarak enerji ihtiyacını karşılama siyasetini gütmektedir.

Tacikistan'ın Senguvare ve Erguvan Barajlarını inşa etme girişimi barajların yapılacağı nehirlerin suyu azalacağı bahanesiyle pamuk üretiminde söz konusu nehirlerden yararlanan komşu Özbekistan devletini rahatsız etmekte, barajların inşaatı için demir yoluyla İran'da Tacikistan'a sevk edilen inşaat malzemesinin sevkiyatı Özbekistan tarafından sürekli engellenmektedir. Tacikistan'ın açık denizlere kıyısı bulunmamasından dolayı komşu Özbekistan'ın demir yolu ağından yararlanmaya mahkûm bir duruma sokmuştur. Bu durum iki ülke arasında sürekli siyasi krizlere neden olmaktadır. Özellikle farklı alternatifleri bulunmayan devletler bu hususta önemli sıkıntılarla karşı karşıya kalmaktadırlar.

Yine Avrasya coğrafyasının en önemli devletlerinden olan Afganistan'ın açık denizlere kıyısı bulunmamasından dolayı bu ülke açık denizlere ulaşmak için pek çok sorun yaşadığı Pakistan'a muhtaç durumdadır. Afganistan açık denize ulaşmak için 950 kilometrelik demir yolu vasıtasıyla Pakistan'ın Karaçi Limanı'nı ithalat ve ihracat için kullanmaktadır. Yine Nepal ve Bhutan'da açık denizlere ulaşmak için Hindistan'ı kat ederek Hint Okyanusu'na ulaşmak zorundadırlar.

3 Uluslararası Hukukta Transit Geçiş ve Açık Denizlerde Serbest Geçiş Hakkı

Uluslararası hukukun en yaygın kaideleri açık denizlerde ki ticaret ve deniz ulaşımıyla ilgili olanlardır. Dünyada ki bütün egemen devletlerin açık denizlerde özgür bir şekilde deniz taşımacılığı, uçuş, petrol boru hattı, kıtalar arası kablolar ve benzer uygulamaları yapmayı gerçekleştirebileceklerini söylemek, günümüz şartlarında doğru bir tespit değildir. Açıkçası gelişmiş devletlerin teknolojik imkânları da kullanarak açık denizleri hakimiyet alanları gibi kullanmaları sayesinde açık denizlere kıyısı bulunan devletleri bile kimi zaman sıkıntılarla karşı karşıya getirmekte, kaldı ki açık denizlere kıyısı bulunmayan devletlerin bu haklardan yararlanmaları, kıyısı bulunan devletin rızası ve onayına bağlı bir durumdur. Uluslararası deniz hukuku kurallarına göre kapalı devletlerin açık denizlere ulaşma hakkı söz konusu devletlerin olumsuz coğrafi şartlarından dolayı maruz kaldıkları zararların azaltılması yönünde ön görülen bir hak olarak tecelli etmektedir (Helmut Terkand G. Hafner, 1985, s. 63).

Açık denizlere ulaşma hakkı konusunda ki tezinin savunanları ve karşı çıkanları vardır. Özellikle açık denizlere kıyısı bulunan devletlerin teorilerini savunanlar ülkelerin egemenlik ve hâkimiyet haklarına istinat ederek transit hakkının resmi bir anlaşmayla sağlanması gerektiği tezini ileri sürüyorlar. Bu hususta araştırmaları bulunan Prof. Duvar Zemberger'e göre: "Uluslararası hukuk açık denizlere ulaşmak için hiçbir doğal hak tanımamaktadır. Kapalı devletler uygun bir limandan faydalanmak için komşu devletlerin iyi niyetine bağlıdırlar ve böylece bu hukuku elde etmek için o imkânlardan yararlanmak doğrultusunda anlaşmalar yapılmalıdır" (Robert. K. Redden, 1990, s. 260).

1982 yılında Birleşmiş Milletlerin denizler konvansiyonunun nihai aşamaya geldiği toplantıda kıyıdaş ülkeler kendi toprakları üzerinde gerçekleşen bütün faaliyetleri o cümleden muhat statüsünde ki komşu devletlere tanınan geçiş imtiyazı konusunu kendi ülkeleri açısından bir güvenlik algısı çerçevesinde değerlendirmişlerdir.

Nitekim bundan önce de 1974 yılında Birleşmiş Milletlerin deniz hukuku konvansiyonunun Karakas'taki 3. Konferansında söz konusu ülkelerin oluşturduğu gurubun düşüncelerini anlatan Kenya devletinin temsilcisi şöyle demiştir: "Hiçbir ülke ikili veya bölgesel anlaşmalar çerçevesi dışında kendi topraklarını transit hakkı için başka bir devlete ihtisas etmek zorunluluğu söz konusu değildir. Bunun dışında ki durumlar gerçekleşir ve transit hakkı kanun olarak konulursa kendi ülkelerinin vatandaşlarının can ve mal güvenliği tehlikeye düşüp, kanun hâkimiyetine helal getirilir (Conf. 62/C. 3/SR. (1974), s. 253).

Kıyıdaş ülkeler transit hakkı karşısında kendilerine karşılık olarak imkânların tanınmasını talep etmektedirler. Onlara göre muhat ülkeler transit hakkı karşılığında kendilerine ticari ve iktisadi haklar sunmalıdırlar. Muhat ülkeler ise transit hakkının doğal bir hakları olduğunu ve serbest geçişin ticaret, ziyaret ve ulaşım için bütün ülkelerin hakkı olduğu tezini savunmaktadırlar. Bu tezi ileri süren Prof. Grosios'a göre: "Başka bir milletin hâkimiyeti altında bulunan topraklar, nehirler ve denizler meşru nedenlerden dolayı buralardan transit geçişe ihtiyaç duyanların kullanımına açık olmalıdır" (Redden, 253).

Uluslararası hukuk örf-adet hukuku kurallarına göre transit geçiş hakkını kullanmanın iki ana şartı söz konusudur.

- Transit geçiş hakkı talebinde bulunan ülke bunun zorunluluk ve gerekliliğini ispat etmelidir.
- Bu hakkın kullanımı sırasında transit geçiş yapılan ülkeye zarar verilmemelidir.

Bu durumun gerekliliği ispatlansa bile kimi zaman ülkeler arasında ki siyasi krizler transiti imkânsız kılmaktadır. Nitekim 1949-1953 yılları arasında Pakistan topraklarını Afganistan'ın transit geçiş hakkı kullanımı için kapatmıştır. Yine 1970'li yıllarda Hindistan kendi topraklarını Nepal'ın geçiş hakkı için kapatmıştır. Günümüzde ise Ermenistan cumhuriyeti Azerbaycan'la olan sorunlarından dolayı, Azerbaycan'ın kendine bağlı Nahçivan özerk cumhuriyet ile olan transitine kendi topraklarını kullandırmamaktadır. Günümüzde Nahçivan ile ana Azerbaycan toprakları arasında ki geçiş İran toprakları üzerinden gerçekleşmektedir.

Yine dönem dönem ABD'nin insansız savaş uçaklarının Pakistan'ın sivil yerleşim yerlerini hedef alıp, sivil köylüleri katlettiğinde Pakistan hükümeti kamuoyundan gelen tepkiler nedeniyle ABD'ye Afganistan'da ki NATO birliklerine ihtiyaçlarının sevkiyatı için kullanılan transit geçişi kapatmaktadır. Böylece ABD Afganistan'da ki birliklerinin özel ihtiyaçlarını ve özellikle yakıt ihtiyacını karşılamakta zorlanmakta, alternatif olarak Kırgızistan veya Özbekistan'ı kullanmakta, bu sevkiyatta hava yoluyla gerçekleştiğinden dolayı maliyetleri aşırı derecede yükseltmektedir. Genel olarak muhat ülkelerin transit hakkı kullanımlarında 18. yüzyıldan itibaren ekonomik çıkarların söz konusu olduğu görülmektedir. Bununla birlikte: gereklilik ve maslahat serbest transitin 21. yüzyılda en önemli dayanağı olarak öne çıkmaktadır (Martin Glassner, 1970).

Uluslararası deniz hukuku ilk kez Milletler Cemiyeti'nin kuruluş beyannamesinin 23. maddesinin H bendinde serbest dolaşım ve transit hakkını bütün uluslara tanıyan madde olarak karşımıza çıkmaktadır. Bundan önce Avrupa Devletleri'nin kendi aralarında ikili veya çok taraflı yaptıkları anlaşmalarda bu haklara değinilmiştir. Örneğin 1921 yılında Barcelona'da imzalanan transit hakları, yine 1923 limanlar hakkında ki Cenevre Konvansiyonu, 1921 Paris Konvansiyonu, 1923 Belgrat Konvansiyonu ve 1922 Lozan Anlaşmasın da deniz ve transit haklarına değinilmiştir. 1921 Barselona Konvansiyonu transit hakları konusunda ortaya kesin bir kanı koymaktan uzak durularak, muhat ülkelerin açık denizlerde gemi taşımacılığı haklarına değinmemektedir. 1947 yılında imzalanan Gümrük ve Ticaret Tarifeleri Anlaşması (GATT) da muhat ülkelerin hukuku konusunda sarih bir tanımlama yapmamaktadır.

1947 yılında Küba'nın başkenti Havana'da Dünya Ticaret Örgütü'nü (DTÖ) oluşturmak için toplanan konvansiyon GATT'ın transit haklarından ileriye giderek, ilk kez açık denizlere kıyısı bulunmayan devletlerin haklarını gündeme getirmiştir. 1957 yılında Birleşmiş Milletler Genel Kurulu 11'inci doruk toplantısında deniz hakları konusunda uluslararası bir toplantı düzenlenmesini kararlaştırmıştır. Söz konusu konferans İsviçre'nin Cenevre kentinde toplandı. Toplantı sonucunda yedili Magna Carta (First Conference on the Law of the Sea, ss.78-79) diye adlandırılan haklar ortaya çıktı. Muhat ülkelere tanınan bu haklar;

- Açık denizlere ulaşım hakkı
- Açık denizlerde gemi kullanma hakkı
- Gemilerde bayrak asma hakkı
- Limanların hukuksal konumu
- Serbest transit hakkı
- Transit ülkelerin hakları
- Ticaret, ulaşım ve sigorta konuları

olarak tespit edilmiştir.

Bu çalışmaların ardından 1958 Cenevre Konvansiyonunda 3. maddesinde açık denizlerle ilgili durumlar şöyle tespit edildi;

1. Muhat ülkeler kıyıdaş ülkelerle eşit şartlara sahip olmaları için özgürce açık denizlere ulaşabilmelidirler. Bu doğrultuda açık denizler ile o devletin toprakları arasında bulunan devletlerarasında uluslararası konvansiyonlara göre aşağıdaki imtiyazlar tanınmalıdır:

- Karşılıklı anlaşmaya göre transit ülkeye serbest geçiş hakkı tanınmalıdır.
- Limanların kullanımında muhat ülke gemilerine eşit muamele yapılmalıdır.

2. Muhat ülkeyle kıyıdaş ülke arasında bulunan 3'üncü devletlerarasında eşitliğe dayanan anlaşmalar yapılarak transit sorunları çözülmelidir.

Görüldüğü gibi bu konferanstan muhat ülkeler nispi bir başarı elde ederek çıkmış ve gelecek toplantılar için konumlarını güçlendirmişlerdir. Ama söz konusu ülkelerin daha işin başında oldukları ve transit haklarını diğer ülkelere kabul ettirmek için çok çaba göstermeleri gerekecektir.

1965 yılında UNCTAD öncülüğünde 23 muhat ülkenin katılımıyla gerçekleşen New York Konvansiyonunda transit hakkı ve sorunları masaya yatırılarak kıyıdaş ülkeler ve 3'üncü ülkelerin konumu ilk kez uluslararası bir toplantının temel esasını oluşturarak dünya gündemine geldi (John. H. Fried, 1965, s. 28-30). Ne var ki 1965 konvansiyonu çok destek görmedi. Ardından çeşitli uluslararası toplantılarda transit hakkı gündeme geldi. 1958 konvansiyonu ve diğerlerinde konu ayrıntılı biçimde değerlendirildi. Transit hakkında karşılıklılık ilkesi sorunları çözmekten uzak bir tez olarak gündemi meşgul etmekteydi. Nitekim 1982 yılında bu madde gündemden çıkartıldı. Hukukçulara göre de:"Bunun için hiçbir hukuki temel dayanak ve gerçekçilik mevcut değildi. Zira fiziki koşullar bakımından da muhat ülkenin transit ülkeye böyle bir karşılık vermesi söz konusu değildir" (Lociuc, C. Caflish, 1978, s. 98).

Açık denizlerde muhat ülkelere tanınan gemi taşımacılığı ve o gemilerde kullanılan bayrak sürekli itilaf konusu olmuştur. 1982 konvansiyonu, 1923 ve 1958 konvansiyonlarından farklıdır. Bu konvansiyonun 131. maddesi açık denizlerde gemi taşımacılığı ve limanların kullanımı konusunda kıyıdaş ülkelerle muhat devletlere eşit haklar tanımaktadır. Bu maddeye göre:" Muhat ülkenin bayrağını taşıyan gemilerle, diğer yabancı gemilere limanlarda eşit muamele yapılmalıdır (United Nations Convention on the Law of the Sea, 1982).

4   Orta Asya ve Kafkasya Devletlerinin Durumu

Orta Asya Cumhuriyetleri ve Kafkasya coğrafi olarak uzak ve tarih boyunca genel olarak inzivada yaşamış bölgelerdir. Her ne kadar 8. yüzyıldan itibaren İslamiyet'in bölgeye ulaşması, Çin ve Hindistan ile Avrupa arasında İpek Yolu ve Baharat Yolu'nun gelişmesiyle Orta Asya bölgesi önem kazanmış, ticaretin öne çıkmasıyla gelişme göstermişse de Cengiz Han'ın ortaya çıkmasıyla bu önemini kaybetmiştir. O yıllar da Çin, Hindistan ve İran üzerinden Batı pazarlarına giden ürünler ve karşılıklı olarak Batı'dan gelen mamuller bölgenin ticari ve ekonomik yaşamına canlılık getirmiş, güvenliği sağlanan yollar ve kervansaraylar inşa edilerek, malların transiti kolaylaştırılmıştır.

Sovyetler Birliği döneminde bölge devletlerin komşu devletlerle irtibatı Moskova üzerinden gerçekleştiğinden dolayı söz konusu ülkeler kapalı bir konumdaydılar. 1990'lar da Sovyetler Birliği'nin dağılmasıyla birlikte bu ülkeler farklı aşamalarda serbest piyasa ekonomisine geçip, komşu ve diğer ülkelerle iktisadi, ticari ve siyasi ilişkiler kurarak uluslararası sisteme entegre olmayı hedeflediler. Komşu ülkelerle ilişkilerini geliştirirken egemen bir devlet olarak birbirleriyle de karşılıklı münasebetler kurmaya başladılar. Esasen Sovyetler Birliği'nden tevarüs eden deniz, kara ve demiryolu ulaşım ortaklığı sayesinde ve özellikle demiryolu ağlarının gelişmişlik ve genişliği açısından halen en önemli ulaşım ve taşımacılık unsuru olarak öne çıkmaktadır.

Eskiden Sovyet demiryolu ağının bir parçası olan Orta Asya ve Kafkasya'daki demir yolu idareleri günümüzde hükümetlere bağlı temel bir ulaşım ve ekonomik araç olarak görev ifa etmektedir. Örneğin; Özbekistan demiryolları günümüzde başbakan yardımcısına bağlı devlet idaresinde bir kurum olarak Özbekistan ekonomisinde önemli bir paya sahiptir. Toplam 6600 km uzunluğunda ki demiryolu ağının 3500 kilometresi genel, diğer kısmı ise yalnızca sanayi taşımacılığında kullanılmaktadır (Uzbekistan, Institute for Political and International Studies (IPIS), 2009, Tahran, ss. 96-97). Bu ülkenin karayolu uzunluğu ise 115000 kilometredir. Kırgızistan'da ise güneydeki Oş ve Celal Abat'ı başkent Bişkek'e ise Özbekistan'ın başkenti Taşkent'e bağlayan bir demiryolu mevcuttur. Ülkenin dağlık olmasından dolayı taşımacılığın %95'i kamyonlarla gerçekleştirilmektedir. Karayollarının uzunluğu 40000 km civarındadır (Kyrgyztan, Institute for Political and International Studies (IPIS), 2008 Tahran, s. 122).

Türkmenistan'ın en önemli ulaşım ve taşımacılık aracı demiryollarıdır. Bu ülkenin demiryolu uzunluğu 2440 kilometredir. Karayolları ise 19400 km civarındadır. (Turkmenistan, Institute for Political and International Studies (IPIS), 2009 Tahran, ss. 68-69). Kazakistan ise 2.724.900 km^2 ile Orta Asya ve Kafkasya ülkelerinin toplamından daha da büyük bir ülkedir. Bu ülke gelişmiş, çift şeritli demiryolu ağıyla örülmüş durumdadır. Demiryolu ağı 15.082 km, karayolu ise 93000 km civarındadır. Kazakistan'da demiryolları sürekli yenilenerek günümüz teknolojik imkânların kullanımıyla ülkenin en önemli ulaşım ve taşımacılık vasıtasıdır (Kazakistan, Institute for Politicaland International Studies (IPIS), 2007 Tahran, s. 136). Tacikistan, Orta Asya'nın en küçük ve dağlık bir ülkesi olarak, 1500 km civarında demiryolu, 30000 km civarında ise karayoluna sahiptir. (Tacikistan, Institute for Political and International Studies (IPIS), 2010, Tahran, s. 59). Kafkasya Bölgesi çok dağlık ve engebeli olduğundan dolayı demir yolu ağları Orta Asya gibi gelişmiş değildir. Ermenistan

Cumhuriyetinde 900 km civarında demiryolu, 12000 km civarında da karayolu mevcuttur (Central Asian, 2005 Tahran, s. 216). Azerbaycan'ın ise karayolu ağı 25000 km civarında, demiryolu ağı ise 2120 km civarındadır.

Bağımsızlığını kazanan yeni devletler ekonomik gelişmişlik durumları, gelirleri, sosyal ve siyasal durumlarına göre her sahada olduğu gibi ulaşım yollarının gelişmesine önem verdiler. Örneğin, Özbekistan başkent Taşkent'i doğudaki Andijan, Nemengan ve Fergana illerine bağlayan Hokant'tan geçen yüksek dağlardan dolayı daha önceleri tırların ve otobüslerin geçişine elverişli olmayan Taşkent-Andijan karayolunu önemli bir kaynak harcayarak çift şeritli otobana dönüştürerek Fergana Vadisi'nde üretilen pamuğun başkente taşımasını sağladı. Kazakistan demiryolu ağlarını yenilerken ülkeyi baştanbaşa, doğudan batıya, güneyden kuzeye bağlayan bütün karayolları uluslararası standartlara uygun hale getirdi.

Özellikle eski başkent Almatı'yı, kuzeydeki yeni başkent Astana'ya bağlayan otoban genişliği ve kalitesiyle dikkat çekmektedir. Ayrıca ülkenin en batısını doğudaki Çin sınırında Alataşanko'ya bağlayan demiryolu enerji naklinde büyük önem arz etmektedir (Eastern Europe and the Commonwealth of Independent States, 1994). Kırgızistan kısıtlı imkânlarına rağmen başkent Bişkek'i güneydeki Oş'a bağlayan, yüksek Tanrı Dağları'ndan geçen karayolunu ve tünellerini restore ederek, ülkenin bütünlüğüne önemli katkı sağlayacak karayolunu hizmete sokmuştur.

Üstelik daha önceleri Özbekistan üzerinden gerçekleşen Oş ve Celal Abat kentlerini de Özgen yoluyla birbirlerine bağladı. Türkmenistan Çarju, Merv (Marı) ve başkent Aşkabat'ı birbirlerine ve Hazar kıyısındaki Türkmen başı limanına bağlayan yolları restore ederek ekonomiye kazandırdı. Tacikistan'da ise halen başkent Duşanbe'yi doğuda ki Bedaxşan dağlık özerk cumhuriyeti merkezi Murğab'a bağlayan, yine bu iki merkezi Hocent'e (Lenin Abat) bağlayan karayollarını restore ederek ülkenin birliğine önemli katkı sağlamıştır. Sovyetler Birliği döneminden tevarüs eden gelişmiş demir yolu ağının Avrupa ve Asya'daki demir yolu ağları ile entegrasyonunun önünde önemli bir engel söz konusudur. Zira Sovyetler Birliği muhtemel bir dünya savaşı sırasında düşman vagonlarının ülkesindeki demir yolu ağını kullanmasını engellemek doğrultusunda demir yolu raylarının uluslararası standarttan 30 cm civarında geniş tutarak vagonlarını da geniş yapmıştır. Böylece Sovyetler dışından gelen herhangi bir lokomotifin demir yolu raylarını kullanmasını imkânsız hale getirmiştir.

5 Sonuç Yerine

Orta Asya ve Kafkas ülkelerinin çok gelişmiş demiryolu ve karayolu şebekelerine sahip olmalarına rağmen ithalat ve ihracatlarını gerçekleştirmek için 2. veya 3. bir ülkeye ihtiyaç duymaktadırlar. Açık denizlere ulaşmak için önlerinde çeşitli alternatifler söz konusudur. Bu seçenekler:

- Rusya Federasyonu üzerinden Karadeniz ve Baltık Denizi alternatifi
- Gürcistan üzerinden Türkiye ve Karadeniz alternatifi
- İran üzerinden Fars Körfezi ve Umman Denizi alternatifi
- Afganistan ve Pakistan üzerinden Hint Okyanusu alternatifi
- Çin Halk Cumhuriyeti üzerinden Çin denizi ve Büyük Okyanus alternatifi

Rusya alternatifine baktığımızda Orta Asya devletlerinin Rusya'nın doğu limanlarına 10.000 km, Doğu Avrupa limanlarına 8.000 km ve Karadeniz limanlarına 6.000 km uzaklık mesafesi bulunmasından dolayı çok ağır maliyetin yanı sıra zaman kaybı da söz konusudur. Bu alternatif eskiden kullanılmakta olup, halen dönem dönem kullanılmasına rağmen ekonomik bir alternatif değildir. Üstelik Rusya Federasyonu'nda hâkim olan yoğun bürokratik işlemler, rüşvet ve işlerin ağırdan yürümesi olumsuzluğu artırmaktadır. Kafkas ülkelerinde ise bu alternatif açısından ise mesafenin kısalığı olumlu bir etken iken Kuzey Kafkasya, özellikle Çeçenistan ve Dağıstan'da ki güvenlik ve istikrar sorunu alternatifi çok olumsuz yönde etkilemektedir.

Gürcistan üzerinden Türkiye alternatifi ve buradan Karadeniz yoluyla açık denizlere ulaşmak, Kafkas ülkeleri yani Ermenistan ve Azerbaycan için en ekonomik ve rasyonel alternatif olarak ortada durmaktadır. Nitekim halen Azerbaycan petrolleri Bakü-Tiflis-Ceyhan boru hattı vasıtasıyla dünya pazarlarına ulaşmaktadır. Öte yandan Tanap projesi çerçevesinde Azerbaycan'ın doğalgazını Avrupa'ya ulaştıracak boru hattı da başarılı bir ekonomik proje olarak hayata geçirildiğinde önemli ekonomik katkılar sağlayacaktır.

Kars-Tiflis-Bakü tren demiryolu hattı da Azerbaycan'ı ülkemize bağlayacak, üstelik demiryolu taşımacılığında önemli bir alternatif olarak ortaya çıkacaktır. Ermenistan'la yaşadığımız siyasal sorunlardan dolayı bu ülkeyi çok kısa yoldan Karadeniz'de ki Trabzon'a veya Akdeniz limanlarına bağlayacak alternatifler ortada durmaktadır. Orta Asya devletlerinin Karadeniz ve Akdeniz'e ulaşmaları Hazar Denizi'ni geçme durumuyla ilgilidir. Kazakistan ve Türkmenistan bu alternatifi değerlendirmektedirler.

Orta Asya ve Kafkas ülkelerinin açık denizlere ulaşmalarında bir alternatifte İran üzerinden Fars Körfezi veya Umman Denizi'ne inmektir. İran demiryolu ağları Meşet-Aşkabat güzergahı üzerinden Orta Asya'ya bağlanmış durumundadır. İran'ın Fars Körfezi'nde ki Bender Abbas ve Bender Buşehr gibi limanları demiryolu ve karayoluyla Hazar Denizi'ne bağlanmış durumdadır. Orta Asya ve Kafkas Devletleri bu alternatifi kullanarak açık denizlere ulaşabilirler. Bu alternatif en ekonomik seçenek olmasına rağmen günümüzde İran, başta ABD olmak üzere Batı'yla yaşadığı sorunlardan dolayı Batı'nın hedef tahtasında olup, ambargolara ve yaptırımlara

matuf kaldığından dolayı bu alternatifin kullanımında sıkıntılar yaşanmaktadır. Öyle ki Türkmenistan sınırda İran'a ham petrol veya doğalgaz teslim edip, güneyde ki limanlarından Türkmenistan adına aynı miktarda doğalgaz veya ham petrol sevkiyatı yapması ABD tarafından engellenmektedir.

Bir alternatifte Afganistan ve Pakistan üzerinden Hint Okyanusu'na ulaşmaktır. Normal şartlarda bu alternatif ekonomik ve rasyonel bir seçenektir. Bugünkü şartlarda Afganistan'da yaşanan kargaşa, Afganistan-Pakistan sınırında Peştun'ların yaşadığı bölgede Taliban ve El Kaide gibi terör örgütlerin hâkimiyet alanları oluşturmaları önemli bir güvenlik ve istikrar sorunu olarak karşımıza çıkmaktadır. Böylece bu güzergâhın kullanımını zora sokmaktadır.

Çin üzerinden açık denizlere ulaşma alternatifi ise mesafenin uzunluğu ve coğrafi şartlardan dolayı rasyonel bir alternatif değildir. Yalnız son zamanlarda Çin Halk Cumhuriyeti ile Orta Asya devletleri özellikle Tacikistan önemli kara ve demir yolu inşaatı anlaşmaları imzalamaları gelecekte bu seçeneğe geçerlilik kazandıracak gelişmelerdir. Üstelik Orta Asya devletleri ile Çin Halk Cumhuriyetinin Şanghay örgütündeki işbirliği olasılıkları günden güne artarak devam etmektedir.

Avrasya coğrafyasının en önemli bölgelerinden ikisini oluşturan Orta Asya ve Kafkasya'daki muhat ülkeler yani Kazakistan, Kırgızistan, Özbekistan, Türkmenistan, Tacikistan, Azerbaycan ve Ermenistan'ın durumuna baktığımızda açık denizlerde deniz taşımacılığı yapmak gemilerinde bayrak bulundurmak ve diğer ülkelerin limanlarından yararlanmak alternatifleri şimdilik uzak bir alternatif olarak gözükmektedir. Halen bu ülkeler ithalat ve ihracatlarını uluslar arası deniz taşımacılığı yapan dev şirketler vasıtasıyla gerçekleştirmektedirler. Ama gelişen ekonomileri ve büyüyen pazarları mutlaka önümüzdeki dönemlerde bu ihtiyacı hissettirecek ve bu hususta yeni arayışlar bulmaya sevk edecektir. Bu günden bunun alt yapısı yasal mevzuatı ve fizibilitesini yapmak zorundadırlar.

Türkiye'nin Yeni Jeopolitiğinin Çevresi
The New Geopolitical Environment of Turkey

Asst. Prof. Dr. Hakkı Çiftçi (Çukurova University, Turkey)

Dr. Murat Koç (Gaziosmanpaşa University, Turkey)

Abstract

The World Political Atlas has been reorganized, the direction of this reorganization is determined by shared sovereignty reflexes, and is applied through strategic decisions. Metropolitan and hinterland borders form the backbone of the newly formed world political atlas Various western- (or the US) origin approaches such as "Neo Liberal Colonialism" , The Clashes of Civilizations", "The End of History", and Eurasian Sovereignty", introduced as the application components of the framework of sovereignty, attract particular attention as the primary sources of the newly formed political atlas . Within the embracing scope of the concept of globalization, "The new World Order" formed through a new political atmosphere with such concepts and claims as "postmodernism", neo-liberalism", "the end of history", and "the cashes of civilizations" can neither maintain its validity nor is wholly embracing in its attempt to perceive the political future of the world . Instead of establishing a comprehensive reconciliatory platform, all of these concepts and claims reflect enormous controversy due to their characteristics leading to constant arguments and, therefore, result in new conflicts, new political actors, new relations of power, and new searches for sovereignty. New "geopolitical gaps" constitute the focus of sovereignty and power relations of the new process.

1　Giriş

Dünya Siyasal Atlası yeniden oluşturulmakta, bu oluşumun temel yönelimi, paylaşım egemenlik refleksleriyle belirlenmekte, stratejik belirlemelerle uygulanmaktadır. Bu durum yeni jeopolitik yönelişleri belirlemektedir. Metropol ve hinterland sınırları yeni oluşturulmaya çalışılan dünya siyasal atlasının omurgasını oluşturmaktadır (Hacısalihoğlu, İ.Yaşar, 2005). Batı eksenli (veya ABD) egemenlik şemasının uygulama araçları olarak sunulan "Yeni Liberal Sömürgecilik" (Manisalı, 2005) , "Medeniyetler Çatışması" , "Tarihin Sonu" ve "Avrasya Egemenliği" gibi yaklaşımlar oluşturulmaya çalışılan yeni siyasal atlasın besleyici kaynakları olarak dikkati çekmektedir. Yeni bir siyasal atmosferle şekillenen "Yeni Dünya Düzeni" küreselleşme kavramının kucaklayıcı yörüngesi içinde, (Giddens, 1996) "postmodernizm", "neoliberalizm", "tarihin sonu", "uygarlıklar çatışması" gibi birçok kavram ve savlarla, dünyanın siyasal geleceğini algılamak adına, ya geçerliliklerini koruyamamaktadır ya da bütünüyle kucaklayıcı değildir. Tüm bu kavram ve savlar, geniş bir uzlaşma zemini yaratmak bir yana, sürekli tartışma üreten özellikleriyle derin bir çelişki yumağını yansıtmakta, yeni çekişmeleri, yeni siyasal aktörleri, yeni güç ilişkileri ve yeni egemenlik arayışlarını beraberinde getirmektedir. Yeni "Jeopolitik boşluklar" yeni sürecin egemenlik ve güç ilişkilerinin odağı durumuna gelmektedir (Hacısalihoğlu, 2005a).

Bugünkü dünyada 2000 yılından itibaren bir jeopolitik değişme yaşanmaktadır. Yani tek odaklı güçten çok odaklı güce doğru bir değişme seyri içerisine girilmiştir. ABD'den ayrı olarak, Rusya, Çin, AB bir ölçüde Hindistan, Japonya gibi evrensel değerde güçler oluşmaya başlamıştır (Wolferen, 1992). Onun dışında Türkiye, İran, Endonezya, Brezilya gibi bölgesel güçler teşekkül etmeye başlamıştır (Onay, 2005a). Bu, yeni jeopolitik ortamın iki hali oluşmasına sebep olmuştur. Birincisi, ABD tek gücün egemenliği politikasını sürdürmeye çalışması ve ikincisi diğer güçlerin çok odaklı güç oluşmasına çalışması (Hacısalihoğlu, 2005b). "Tüm bu gelişmelerin çok uzağında olmayan kendisi de son derece dinamik olan bir yapının yine son derece dinamik olan çevrenin içindeki konumunu anlama çabası içerisinde bulunan (Davutoğlu, 2003). Türkiye üç kıtanın birleşme noktası üzerinde bulunmaktadır; doğuyu batıya, batıyı doğuya, kuzeyi güneye, güneyi kuzey açıp kapamaktadır. Üç kıtanın menteşesi durumundadır. Üç kıtaya vurulan kilit ve aynı kilidi açan anahtar değerindedir. Balkanlar-Ortadoğu ve Kafkaslar'ın bileşkesi üzerindedir. Dünya adasının iki iç denizine (Akdeniz, Karadeniz) kıyıları bulunmaktadır ve bu iki denizi bağlayan Boğazlara sahiptir. Türkiye Cumhuriyeti çok değerli bir arsa üzerinde kurulmuştur. Kafkaslardan, Karadeniz'e Orta Asya'ya, Balkanlar'dan Akdeniz'e ve Orta Doğu'ya uzanan coğrafi yapı, Soğuk Savaş sonrasının; güçler çekişmesinin ve sınanmasının, Soğuk Savaş kurumları ve davranışlarının meşrulaştırma çabalarının ve küresel-bölgesel güç konumlarının uygulama alanları olarak

2　Jeopolitiğin Kimliğine Dönük Durum Tespiti

Jeopolitik politikaya veri hazırlayan, kuramsal tabanı olan birer planlama çalışmasıdır. Jeopolitik, politik düzeyde veri üretmek için coğrafi ve beşeri (ekonomik, sosyal, politik, askeri, kültürel) değerleri kullanır. Jeopolitik, siyasi coğrafyanın beşeri değerlerle aktif hale gelmesidir. Politikanın iki dayanağı olan güç ve hedefi coğrafi açıdan inceler. En başta siyasi coğrafya olmak üzere, coğrafyanın bütün türleri jeopolitik üzerinde söz sahibidir (Brzezınski, 2005). İskender, Anibal, Sezar, Cengiz, Attila gibi kıtalararası uzun seferler yapan liderler

harekete geçmeden önce hedef ülkelerin ve aradaki coğrafi bölgelerin özelliklerini, hareket istikametlerini tespit ederek yola çıkmışlardır.Coğrafi muhiti politikada kullanma sanatı olan Jeopolitik 20.yy başlarında kavram olarak bu dönemde anlam kazanmaya başlamış ve özellikle iki dünya harbi arasında geliştirilmiştir. Dünya hakimiyeti peşinde koşan veya güçlü kalma uğraşı veren ülkeleri, ortaya attıkları teorilerle etkileyen büyük jeopolitikçiler çoğunlukla bu dönemde yaşamışlardır. Jeopolitiğin Düşünürleri: 19 yy sonları ile 20 yüzyılın başlarında Friedrich Ratzel(1844-1904), Alfred Mahan(1840-1914), Rudolf Kjellen(1864-1922), Nicholas j. Spykman(1893-1943), Karl Hausfer(1869-1946), Halford Mackinder(1861-1947) gibi düşünürler jeopolitiğe doğrudan ya da dolaylı katkıları olmuştur (Aktaran İlhan, 2012).

Herodot	(M.Ö. 485-425), devlet ile o devletin üzerinde yaşadığı arazinin ilişkilerini incelemişlerdir.
Eflatun	(M.Ö. 427-347)devlet ile o devletin üzerinde yaşadığı arazinin ilişkilerini incelemişlerdir.
Aristo	(M.Ö. 384-322),içinde yaşadığı Atina şehrinin özelliklerinden cesaret alarak bir ülkenin büyüyüp gelişmesi için, muhtemel dış saldırılardan tepeler ve dağlarla korunmuş olması ve denizaşırı ticaretten azami istifade için iyi bir limana yakın bulunması gerektiğini ileri sürmekte
Strabo	(M.Ö.63-M.S.24),devletlerin kültürel ve politik faaliyetleri ile üzerinde yaşadıkları araziler arasındaki ilişkileri belirtmeye çalışmıştır.Bu noktadan hareketle mükemmel coğrafi mevkii, iklimi ve kaynakları dikkate alındığında, İtalya'nın böyle güçlü bir devlet olabileceğini ileri sürmüştü
Jul Sezar	(M.Ö.100-44), coğrafi unsurların ülke fetihlerine olan etkilerini çok iyi incelediği bilinmektedir ve yaptığı muharebeleri kazanmasının en önemli sebeplerinden birisinin de coğrafyaya değer vermesidir denilebilir. "Galya Savaşları" isimli kitabında, coğrafya ile siyaset ve strateji arasında önemli ilişkiler bulunduğunu öne sürmüştür.
İbni Haldun	(1332-1406), coğrafya konusundaki büyük katkısı fiziki coğrafya ile tarihin ilişkisine yönelmiş olmasıdır. İbni Haldun sayesinde fiziki, sosyal ve ekonomik coğrafya, sosyoloji, ekonomi ve siyasi tarihle birleşerek **"Jeopolitik"** adı verilen ve senteze dayanan yeni bir bilim dalı ortaya çıkmıştır
Kardinal Richelieu	(1585-1642), Tabii Sınırlar Tezi
Friedrich List	Hayat Sahası Tezi ile, politika ile coğrafyayı birbirine bağlayan anlayışı sergilemiştir.
Monteskiyö	(1689-1775), Monteskiyö, herhangi bir coğrafi alanın iklimine önem vermiş ve bu yerlerde oturan insanların karakterlerini oturdukları yerin iklimi ile mütalaa etmiştir.
Emanuel Kant	(1724-1804),Siyasi coğrafyanın ayrı bir bilim dalı olduğunu ilk olarak ortaya atan "siyasi coğrafyanın babası" ünvanını bu hususataki görüşleriyle kazanmıştır. Hatta Kant, modern coğrafyanın kurucusu olarak tanınır.
Ratzel	(1844-1904), Çağdaş jeopolitiğin başlangıcı olarak Alman Coğrafyacı ve antropolog Friedrich Ratzel'e göre siyasi coğrafya mükemmel haritalar yapmakta ve ülkeleri tanımak için yeni bilgiler getirmekte, havanın, nüfusun, iklimin etkilerini yeterli bir şekilde açıklamakta ise de, siyasi ilimler üzerinde tatmin edici bir duruma ulaşamadığından cansız ve sade kalmaktadır. O halde coğrafya, siyasi ilimleri de yine kendi sahasında işleyerek ancak Siyasi Coğrafyayı statik olmaktan kurtaracak ve ona bir hayat ve canlılık kazandıracaktır. Teorisini önce coğrafyanın politikaya sunduğu iki temel unsura dayandırıyordu. Genişlik, fiziki özellikler, iklim vb. ile tayin edilmiş "mekan-raum"; mekânın yeryüzündeki vaziyetini tayin eden ve münasebetlerinin bir kısmını yöneten "konum".Ratzel, devletin coğrafi ve politik yapılarını biyolojik organizmalara benzeten fikirleriyle kendisinden sonra "Hayat Alanı – Rebensraum" adıyla gelişecek Alman Jeopolitik Ekolü'nün temellerini atmıştır.Ratzel, devletler arasındaki sınırlara geçici işaretler gözüyle bakıyordu. Sonunda dünya hakimiyeti için muazzam bir mücadeleye girecek olan bir kaç güçlü devletin ortaya çıkmasına sebep olacak şekilde, küçük politik bölgeler, daha büyükleri tarafından eritilecektir (Mütercimler,1997)
Rudolf Kjellen	(1864-1922)1916 yılında yazdığı "Bir Hayat Şekli Olarak Devlet" adlı eserinde, yaşayan bir organizmaya benzettiği devletin beş aktif unsurunu "Sosyopolitik, Ekonopolitik, Kratopolitik, Demopolitik ve Geopolitik" olarak adlandırmış ve böylece JEOPOLİTİK terimi doğmuştur. İlk defa "Jeopolitik" adı altında devleti bir şahsa benzeterek, her ikisinin de organlarını kıyaslamak suretiyle devletlere davranışlarında, insanlara benzer davranışlar vererek bir doktrin vazetmiştir.
Karl Hushoffer	Ratzel ve Kjellen'den daha ileri giderek yabancı referanslarla tezini kuvvetlendirme hünerini gösterdi. Mackinder'in "Kalpgâh"ını biraz daha batıya oynatarak onun fikirlerini Almanlar için kullandı.

Fransız Vidal de Blanche	Alman Jeopolitik Ekolü'nün aksine, olayların sadece müşahade ve sınıflandırılmasında kalmayarak daima coğrafi olayların izahını aramıştır. Devleti bir canlı organizma değil, "Kültürel ve Ulusal Bir Varlık" olarak kabul eder. Politikaya insan unsurunun hakim olduğu görüşündedir, bu nedenle coğrafi determinizme karşıdır. Coğrafi olaylar bir akışkanlığa sahip olup değişirler. Bu Vidal'in getirdiği önemli bir kavramdır.
Sir Halford Mackinder (Mackinder, 1996)	(1861-1947), Mackinder, dünya coğrafyasına politik ve özellikle dünya hakimiyeti açısından değerlendirme çalışmasına girmiş ve bu çalışmaları ile "Kara Hakimiyet Teorisi"ni geliştirmiştir. Mackinder'in coğrafyayı devlet idaresi için bir yardımcı olarak kullanmayı ileri sürmesine karşılık, Kjellen Coğrafyaya dayalı bir devlet idaresi sistemi formüle etmiştir. Mackinder, yeryüzünde bir tek büyük kara parçasının olduğunu kabul eder. "Dünya Adası-World Island" adını verdiği Avrupa-Asya-Afrika kıtalarıdır. Rusya'nın bulunduğu orta bölge "Heartland-Kalpgah"tır.Mackinder, üç aşamada hudutlarını geliştirdiği Heartland ile meşhur formülünü ifade eder."Doğu Avrupa'yı elinde tutan Heartland'e egemen olur, Heartland'i elinde tutan Dünya Adasına egemen olur, dünyanın bu adasını elinde tutan dünyaya egemen olur."Böyle bir kara parçasına sahip tek devlet Rusya'dır ve dünya hegemonyasını elde etmesine mani olunmak isteniyorsa onun açık denizlere çıkmasına müsaade edilmemelidir (Sempa, 2005)
Alfred Thayer Mahan	(1841-1914)1890'da yayımlanan "Deniz Kuvvetlerinin Tarihe Etkisi" adlı eseriyle "Deniz Hakimiyet Teorisi"nin esaslarını ortaya koymuştur. 19. Yüzyılda endüstri devrimi sonucu bir yandan yeni keşifler yapılmış, diğer yandan ekonomik ilişkiler büyümüştür. Ham madde arayışı ve yeni ürünlerin pazarlanması ihtiyacı, deniz yollarının önemini artırmış, gelişen teknoloji ile mesafeler kısalmıştır. Tarihi ipek yolu önemini kaybederken, Mahan'ın "Denizlere hakim olan dünyaya hakim olur" tezi tesadüfen ortaya çıkmamıştır.
Nicolas Spykman	(1893-1943), Spykman, 1944'de yayımlanan "Sulhün Coğrafyası" adlı iki önemli eseriyle jeopolitiği Amerikan milli güvenlik politika ve stratejisinin dayanacağı coğrafi esasları ve yaptığı dünya coğrafyası değerlendirmesi ile de "Kenar Kuşak Teorisi – Rimland"i ortaya koymuştur. Spykman bu teori ile aslında Mackinder'in Kara Hakimiyet Teorisine cevap vermekte ve Sovyetleri Asya'nın merkezi bölgesinde tutacak ve denizlere çıkışını çok büyük ölçüde engelliyecek politika ve stratejileri ön plana çıkarmaktadır.ABD'nin güvenlik stratejisinin oluşumunda benimsediği Kenar Kuşak ve Deniz Hakimiyet Teorileri günümüze kadar aktüelliğini devam ettirmişlerdir.
Pascal Boniface,	Jeopolitik, uluslararası ilişkilerde tarafların genel yaklaşımlarını ortaya koyan, ilgili aktörlerin satranç hamlelerini analiz etmeye yarayan bir sistem yaklaşımı olarak açıklamaktadır. Boniface haklı olarak fiziki coğrafyanın, devletlerin politikası üzerinde yakın etkisini jeopolitik olarak tanımlamak gerektiğini ifade etmektedir.
Yves Lacoste,	Günümüzde Jeopolitik teorilerden ziyade "Jeopolitik Problemler" olduğunu ve bu problemlerin olabildiğince objektif olarak sergilenmesi gerektiğini ve bu maksatla yegane yöntemin oyunları, gelişmeleri, birbirine zıt argümanlara sahip güçleri ve liderlikleri olduğu gibi ortaya koymak olduğunu iddia etmektedir. Jeopolitiği ulusal sorunlar ve azınlık sorunları etrafında odaklayarak da mikro milliyetçiliği körüklemektedir
Jacque Attali;	Güç ve güç olabilmenin şartları üzerinde durmakta, 21. yüzyılın jeopolitiğinin iki şeye sık sıkıya bağlı olacağını ve bunlarında AB ve ABD arasındaki ortaklığın alacağı şekil ile Rusya ve Çin'in pozisyonları olacağını vurgulamaktadır.
Foucher	Foucher'e göre bugün jeopolitik, dinamik bir dış politika coğrafyası halini almıştır.
Brzezinsk	Brzezinski açıkça; "Avrasya'ya egemen olan dünyaya egemen olur" demektedir.
Samuel Huntingon	1993, 21. yüzyıldaki büyük savaşların medeniyetler arasında meydana geleceğini ileri sürerken, karşıt medeniyetlerin de Katolik Dünyası, Ortodoks Dünyası, İslam Dünyası ve Konfüçyen devletler olduğunu belirtmektedir. İleri sürdüğü tezin özeti; 19. yüzyılda devletler, 20. yüzyılda ideolojiler çarpışmıştı, 21. yüzyılda ise kültürler çarpışacaktır (Keskintepe,2003). Huntington bu tezinde 1960'larda Fransız filozof Raymond Aron ve 1940'lı yıllarda İngiliz Arnold Toynbee ile Christophe Rufin'in benzer görüşlerinden de destek almaktadır. Huntington'a göre dünya dini ve etnik blok teşkillerinin ve çatışmalarının eşiğinde olduğu bir çağa giriyordu. Sınırlar artık ulusal devletleri değil kültür bölgelerini gösterecekti. Geleceğin global politik çatışmaları uygarlıkları birbirinden ayıran çizgiler üzerinde olacaktı.Rufin bir "Avrupa Kalesi" eğiliminden bahsederken, Huntington benzer şekilde; her kim batıyı bir arada tutmak istiyorsa ülke içinde batılı kültürü sadece muhafaza etmemeli, aynı zamanda batının sınırlarını da tarif etmelidir.Uluslararası güç mücadelesinde kültür bilinçli olarak bir araç haline getirilmektedir.

Jeopolitik yeni ve genç bir bilim dalı sayılabilir. Hatta oluşumu ve gelişimini tamamlayıp temeline oturduğu bile söylenemez(Hacısalihoğlu, 2005b). Guido Fischer'in işaret ettiği coğrafi durum, toprak genişliği, nüfus

sayısı ve yoğunluğu, organizasyon yeteneği, kültür düzeyi, sınır özellikleri, ve komşu ülkelerin tutumlarından oluşan **politik faktörleri**, iktisat politikalarının etkinliği, uyum kabiliyeti, yenilikçi zeka gibi **psikolojik faktörler**, toprak verimi, hammadde kaynaklarının zenginliği, sanayi kapasitesi, teknoloji düzeyi, ticaret hacmi ve finansman imkanları gibi **ekonomik faktörleri** ele geçirmek maksatlı (Ergin, 2008), nükleer silahların çoğalması, çevrenin bozulması, tekno ekonomik hız gibi olabilecek felaket beklentileri insanlarda gelecek kaygısı oluşturmaktadır (Morin, 2005). Bu kaygıları bertaraf edebilmek için müzakereler, iyi niyet görevi ve uzlaştırıcılık, tek yanlı kararlar, iktisadi baskılar ve savaşa yakın durumlar, tahrik ve tedhiş kampanyaları, sabotajlar ve darbeler, soğuk savaş, sınırlı savaşlar, topyekün savaşlar, değişen dünya ve nükleer silahlar gibi uluslar arası politika aksiyonları çağımızda değişik platform ve zeminlerde kendine yer edinmiştir (Ergin, 2008). Çelişkiler, barışı egemen kılamama, çıkar çatışmaları, sanal düşmanlıklar, yönetme-yönetilme ayrışmasının kökleşmesi gibi hususlar yeni bir düzen arayışını sürdürmekte ve yeni koşulların dinamik ortamından yararlanma yollarıyla egemenlik kutuplarını oluşturmaktadır (Hacısalihoğlu, 2005b). Kuvvetler dengesinin dışında ise, pasifizm, İzolasyonizm, nötralizasyon ve silahsız duruma getirilme, tecavüz savaşlarının kanunsuz aksiyon sayılması, birbiriyle rekabet eden büyük politik ve ideolojik bloklardan birine veya diğerine katılmadığı ve bunlarla askeri bağlaşmayı reddeden nötralizm doktrini gibi doktrinler ise kuvvetler dengesi dışındaki korunma ve savaşsız aksiyon politikaları içerisinde yer almaktadır (Ergin, 2008).Öte yandan bölgesel, global ve fonksiyonel bütünleşme ise ulusal politikalarda belirleyici olmaktadır (Aydın, 2002), Jeopolitik bir düşünce hayatı, politika ve strateji gibi hareket tarzları üretilmesi bağlamında bir çok anlaşmazlığın kaynaştığı bir kavramdır (İlhan,1989). 1967 yılından bu yana savunulduğu gibi, güç merkezlerine göre yapılacak jeopolitik yorum ve değerlendirmeler teorilerin yerini almış, yeni teoriler üretmek gereği kalmamıştır. Evrensel ve bölgesel düzeydeki güç odakları, bunların coğrafi ve jeopolitik kurumları, güçlerin olanakları, niyet ve amaçları belirleyici olmaya devam etmektedir. Jeopolitiğin coğrafi unsurları stratejide "mekân", beşeri unsurları stratejide "güç" komşuluğudur. Her ikisinde de konuları, düşünceleri akıcı kılan zamandır. Bütün bu unsurların toplu değerlendirmesi coğrafi temele dayanan ulusal gücü belirler. Coğrafyaya dayanmayan, coğrafi değerleri dikkate almayan ulusal güç araştırmaları eksiktir. Ulusal gücün de unsurları olan, jeopolitiğin bu alt birimlerinden her birisi ayrı ayrı stratejik değer taşırlar (Özey,1999).

3 Türkiye'nin Yer Aldığı Yeni Jeopolitik Ortam

Türkiye, geniş olduğu kadar, sorunlar, çatışmalar ve istikrarsızlıklar içeren bir coğrafyada yaşamaktadır. Ancak Türkiye, böyle bir bölgede bir barış ve istikrar adası olma özelliğini koruma başarısını göstermiştir. Türkiye, Avrupa'dan Pasifik'e ve Orta Doğu'ya uzanan geniş coğrafyada yer alan ender demokrasilerden biridir.

Büyük ölçüde coğrafi bütünlüğe sahip Anadolu Yarımadası; Balkan Yarımadası, Kafkaslar, İran, Arap Yarımadası ile çevrelenmiştir. Anadolu Yarımadası bu konumu ile bu coğrafyanın kalesi ve Dünya Adasının merkezi görünümündedir. Doğu-Batı ve Güney-Kuzey istikametlerindeki her türlü girişimi bloke eder veya yolunu açar. Türkiye; ABD, Rusya ve AB gibi güç odaklarının çıkarlarının yol kavşağında, politikalarının güzergahı üzerindedir (Tezkan, 2005). Hatta zaman zaman bu politikaların hedefi veya hareket noktası olabilmektedir. Türkiye coğrafyası, NATO sorumluluk alanı dışında kalan Ortadoğu, Kafkaslar ve Orta Asya bölgelerinde Batı çıkarlarına vaki olabilecek tehditlere, istenmeyen değişimlere müdahale için en yakın ve en uygun bir harekat platformu teşkil eder. Türkiye coğrafyası üzerinde her anlamda ve her alanda zayıf toplumlarını yaşama şansı yoktur. Bir bölge devleti durumunda olan ve evrensel genişlikte etkinlik arayan Türkiye çok duyarlı bir konumdadır (Atalay2000). Türkiye Cumhuriyeti, zor bir coğrafyada yer almaktadır ve uzun vadeli politikalar üretmesi kolay değildir. Çünkü bu politikalar çok yönlü, çok seçenekli ve bağımsız politikalar olmayı gerektirir. Türkiye'nin politika üretiminde yakın çevresi, Avrasya'daki güç odakları ve küresel güç ve aday güçler etkin faktörlerdir. Bu nedenle, Türkiye için seçenekler sunmadan önce, Türkiye'yi çevreleyen coğrafyadaki jeopolitik gelişmeleri ve Avrasya'dan başlayarak ABD, AB Rusya Federasyonu, Balkanlar, Ortadoğu, Kafkasya, Orta Asya ve Çin'in bölgesel ve Avrasya çapındaki muhtemel politikaları ve stratejileri ile Türkiye'ye bakış açılarına özetle yer verilecektir. Brzezinski, aynı eserinde Türkiye'nin önemini aşağıdaki gibi değerlendirmektedir (Brezezinski, 1992). Yeni Jeopolitik Koşullarda Türkiye'nin Konumu ve Seçenekleri Türkiye, üç kıtanın (Asya, Avrupa ve Afrika) teşkil ettiği "Dünya Adası"nın menteşesi durumundadır. Aynı zamanda bu menteşeyi açan ve kapatan bir kilit ve anahtar değerindedir. Bu üç kıtanın iç denizleri olan Akdeniz ve Karadeniz'i birbirine bağlar. Balkanlar, Kafkaslar ve Ortadoğu'yu birleştirir ve ayırır. Bu coğrafi konum dünyada ve bölgede oluşabilecek her türlü güç yapısına göre büyük bir değer taşır. Bu coğrafi konum ve beşeri değerlerle oluşan ülke jeopolitik gücü dünya ve bölge güçleri ile birlikte değerlendirildiği ve yorumlandığı zaman Türkiye'nin Jeopolitik konumu belirlenmiş olur (Serin, 2004)

Türkiye, jeopolitik ve jeostratejik mevkii itibarıyla; dünyanın en önemli petrol rezervlerine sahip Orta Doğu ve Hazar Havzası, önemli deniz ulaştırma yollarının kavşağı durumunda bulunan Akdeniz Havzası, tarihte her zaman önemini sürdürmüş olan Karadeniz Havzası ve Türk Boğazları, SSCB ve Yugoslavya'nın dağılması sonucu yapısal değişikliklere uğrayan Balkanlar, etnik çatışmalar yanında, zengin tabiî kaynaklara sahip Kafkasya ASAM(2003) ve bunun daha ötesinde Orta Asya'nın oluşturduğu coğrafyanın merkezinde etkili bir konumda bulunmaktadır. Üç kıtayı birbirine bağlayan ve çok önemli bir jeostratejik konuma sahip olan Türkiye,

aynı anda bir Avrupa, Asya, Balkan, Kafkas, Ortadoğu, Akdeniz ve Karadeniz ülkesidir. Kısacası Türkiye bir Avrasya ülkesidir. Anadolu Yarımadası'nın sunduğu zenginlikler ile tarih boyunca jeopolitik bir kavşak niteliği taşımış olan bu topraklarda yaratılan insanî değerlerin en güzel yönlerini benimseyen Türkiye Cumhuriyeti, çeşitli kültürlerin güzel bir sentezini oluşturmaktadır. Demokratik, müreffeh ve istikrarlı bir Türkiye, doğu ile batının değerlerinin bütünleşip, bir arada yaşayabileceğinin çarpıcı kanıtıdır. Türkiye'nin hem doğulu, hem de batılı yönleri, üyesi olduğu uluslar arası örgütlerin çeşitliliği ile de kendini göstermektedir. Türkiye aynı anda NATO, Avrupa Konseyi, Ekonomik İşbirliği ve Kalkınma Örgütü (OECD), Karadeniz Ekonomik İşbirliği (KEİ), Ekonomik İşbirliği Teşkilâtı (ECO), D-20 ve İslâm Konferansı Örgütü (İKO) üyesi olan yegâne devlettir (Başoğlu, 1999). Türkiye ayrıca, gelecek yüzyılda Hazar ve Orta Asya doğal kaynaklarının batıya ulaşmasında doğal bir köprü rolü üstlenmektedir. Dünya doğal enerji kaynaklarının %70'i Türkiye'nin etrafında kümelenmiştir. Hazar petrollerinin batıya taşınmasını öngören ve uluslar arası camiadan büyük destek bulan Bakü-Ceyhan projesi, petrol nakil güzergâhı bakımından en istikrarlı ve güvenli ortamı sunmakta ve çevre korunması bakımından da en az riski taşımaktadır.   Soğuk Savaş ertesi şartlar içinde dünyanın en duyarlı bölgelerini oluşturan Balkanlar, Karadeniz ve Akdeniz Havzaları, Kafkasya, Orta Asya ve Orta Doğu coğrafyasındaki gelişmeler, Türkiye'nin bu bölgelerdeki rollerine ve etkinliklerine yenilik ve hareketlilik getirmiştir. Bu coğrafyadaki oluşumlar, dünyanın ve Avrupa'nın geleceğinde belirleyici rol oynayacaktır (Çeçen, 2005). Türkiye bir yandan bu oluşumların yol açtığı sorumluluklarını bütün gücüyle yerine getirmeye, diğer yandan da yeni imkân ve fırsatlardan yararlanmaya çalışmaktadır. Böylesine önemli ve geniş bir coğrafyada, Türkiye, etkinliğini ve belirleyici rolünü önümüzdeki yüzyılda da devam ettirme zorunluluğundadır. Balkanlarda, Orta Doğu'da ve Kafkasya'da barış ve istikrar sağlanmadıkça, Avrupa ve Asya'nın tam anlamıyla birbirine kenetlenmesi mümkün değildir (Yıldızoğlu, 2004). Türkiye'nin, Balkanlar, Orta Doğu ve Kafkaslar'daki ihtilâfları söndürme inisiyatiflerine katkısı, bu kenetlenmenin gerçekleşmesine yöneliktir (İlhan, 1999). Jeopolitik fırsatlar ve ilişkiler açısından AB, Rusya, Balkanlar, Kafkasya, Orta Asya ve Çin'e kısa bir tur atılırsa; Türkiye'nin AB'ne katılması ile AB coğrafyasının hudutları Asya'ya, Ortadoğu'ya doğru uzanacak; Ortadoğu, Kafkasya güneyi ve Doğu Akdeniz AB'nin hudutlarını teşkil edecektir (Özdağ, 2003).

Öte yandan, Kafkasya açısından yapılacak özet değerlendirmede, Türkiye'nin Kafkasya'dan jeopolitik ve ekonomik yararlar sağlayabilecek durumda olduğu görülmektedir. Türkiye'nin eğilimleri Kafkas ülkeleri üzerinde belirleyici bir etki yapma olanağına da sahiptir. Orta Asya (Türkistan)'da ise, Türkiye'nin hem handikapları ve hem de kuvvetli kozları vardır. Tarihi ve kültürel bağları, Türk özel sektörünün dinamizmi ve eğitim alanındaki girişimler Türkiye'ye özel bir mevki sağlamaktadır. Türkiye, Orta Asya petrol ve doğal gazının önemli bir kısmının dünya piyasalarına ulaştırılmasını üstlenebilirse daha ağırlıklı bir rol oynayabilecektir (Taşağıl,2004). Türkiye'nin Çin'e karşı stratejisi 2020 yılları Çin'ine yönelik olmalıdır. Eğer Türkiye Çin'i ihmal ederse bu, Çin'in İran ile işbirliğini daha da güçlendirme sonucunu verir. Çin şimdiden İran'a Ortadoğu'da başlıca müttefiki olarak bakmaktadır. Türkiye Çin'i iyi öğrenmeye çalışmalı, uzun vadeli bir strateji saptayarak çok yönlü ilişkiler içeren "yakın işbirliği"ni tesise gayret etmelidir. Çin'in, bugünkü tek kutuplu küresel sistemi çok odaklı küresel sisteme dönüştürmeye gayret sarf ederken globalleşmeye de ayak uyduracağını ve kendine özgü sistem içinde kendi gelişmesini gerçekleştirmeye gayret edeceğini düşünmek hatalı olmaz (Kuchins, 2005). Ortadoğu ile ilgili fırsatlarda ise, Türkiye'nin jeopolitiğinin ve jeostratejisinin şekillenmesinde Ortadoğu'nun payının önemli olduğu bilinmektedir (Hacısalihoğlu, 2005c) Bu gelişmelerin öznesi konumunda olan Türkiye için alternatif olacak fırsatlar, ya Soğuk Savaş'tan kalma ABD'ye sadık müttefiklik rolünü, ortaklık kavramının özünü yansıtmayan bugünün "stratejik ortaklık" yakıştırmasıyla yaşamaya devam edecek ya da bölgesinde barış kuşağı yaratmayı öncelikli sayan (Şimşek, 2005a), yeni işbirliği ve ilişkiler zemini kurabilen, kalıcı, köklü, dengeleyici ve çok seçenekli ilişkiler üretebilen sözü dinlenen ve sorunlara Türkiye'den ve ulusal çıkarları temelinden ödünsüz bakabilen "aktif bir bölge gücü" olmaya karar verecek (Henze, 1995).

4   Sonuç ve Öneriler

Bugün uluslararası ilişkilerin geldiği noktada, "Tek kutupluluk, geçici bir güç boşluğunun doğurduğu durumdur". Waltz ise bu tartışmayı tamamlayıcı bir ifadeyle; "yeni bölgesel güçlerin ortaya çıkmasının zaten çok zayıf olan bu durumu değiştirdiğini" söylemektedir (Waltz, 1993). ABD, iki Almanya'nın birleşmesi, Sovyetler Birliği'nin yıkılması ve Körfez Savaşından sonra bir süre tek kutup olma vasfına sahip olmayı istemiştir. Hatta, belki de bu rolü istemese de yüklenmek zorunda kalmıştır, Ancak, özellikle Almanya, Fransa, Türkiye, Mısır ve İran'ın bölgelerinde ekonomik ve mali bir güç haline gelmeleri, ister istemez ABD'yi bu rolden uzaklaştırmıştır. Dikkat edilirse, Almanya ve Fransa bu süreci AB'yi kullanarak yapmışlardır (Açıkçeşme,2005). Türkiye, Mısır ve İran'ın durumu farklıdır. Bu ülkeler, halkının refahından keserek jeopolitik pozisyonlarını korumuştur ve bölgesel güç olmuşlardır. Yeni uluslararası siyasal sistem, dış politikada olduğu kadar iç politikadaki baskıyı da artırmıştır. Bunun sonucu, iç politikadaki karar verme sürecinde de aktörlerin artması olmuştur (Baldwin, 1995). Bürokratik sınırlamalar, her müzakere sürecini yavaşlatan bir rol oynamaktadır (Fisher, 1997). Büyük güç olmanın getirdiği yükümlülükler, onları bölgesel güçlerden daha fazla güvenliği koruyucu (security manager) olmaya doğru itmektedir (Hopmann, 1995). Eğer sistemin yapısı, çok merkezli (polycentric) ise, devletlerin

tehdit algılamaları daha yoğun hissedilir. Hiyerarşik çok merkezli yapıda ise, bir süper gücün tırmanmaya etki yapması veya önlemesi mümkündür (Goldstein ve Pevehouse, 1997).

Öte yandan, dünya, biten Soğuk Savaş'ın ideolojik karşıtlığından yeni çelişkiler üreten ve gerilimi, savaşları tükenmeyen bir atmosfere doğru sürüklenmektedir. Askeri girişimler, silah üretimi, aşırı silahlanma, nükleer, kimyasal ve biyolojik silahlara sahip olma, ileri askeri teknoloji üretimi, yeni askeri örgütlenme çabaları sürmektedir. "Füze kalkanı" projesinden Avrupa ordusu oluşumuna, silahsızlanma anlaşmalarını geçersizleştirme eğilimlerinin belirlenmesinden, kitle imha silahları üretiminin sürmesine, boyutlanan yeni tehdit algılamalarından, küreselleşen teröre dek uzanan geniş yelpaze içinde, biten Soğuk Savaş'ın egemen bir dünya barışına dönüşememesinin yansımalarını görmekteyiz (Onay, 2005b). Türkiye'nin coğrafi konumu, Soğuk Savaş sonrasında ve Avrasya zemininde Avrupa ve Asya uzanımlarıyla temelde iki boyutlu ilişki alt yapısını adeta koşullandırmaktadır. Bu temel iki boyut ayrıca alt seçenekler üreterek, çok boyutlu ilişki düzeneğini Türkiye adına yapılandırmaktadır. Ancak güç şemasında da yansıtıldığı gibi asıl olan sahip olunan coğrafi konumun yönlendiriciliğini benimseyerek, onunla iyi iletişim kurarak, birikimini ve rolünü algılayarak gereğini yapabilmektir. Tüm bu açılımlardan sonra denilebilir ki, dünya siyasal yaşamı adına "tarihin sonu" gelmemiştir. Dünyanın bugününe yansıyan çelişkilerini "Medeniyetler Çatışması" türü tezler açıklayamamaktadır. Asıl çelişki gelişmişlik farklılığını derinleştirmesini önleyememekten kaynaklanmaktadır. Bu tabloyu besleyen ana kaynak ise güç ilişkilerine yansıyan çıkar çatışmasıdır (Tahsin, 2001). Soğuk Savaş sonrasının "jeopolitik boşlukları" yeniden oluşturulmaya çalışılan siyasal atlasın öncelikli paftaları olarak ele alınmaktadır (Hacısalihoğlu, 2005a). Balkanlar'dan sonra Orta Asya ve güncel olarak bugün Orta Doğu (Irak odaklı) yeni çözülmelerin ve düzenlemelerin odağı durumuna gelmektedir. Afganistan (Baleta, 2005) sonrasında Irak'taki odaklanma, oluşturulmaya çalışılan yeni Orta Doğu haritasının temel paftası olarak yansımaktadır (Öztürk, 2005). Bu çerçevede Irak konusundaki ABD ısrarı, Avrasya stratejisinin bir gereği olarak oluşturulmaktadır(Cordier, (2005). Bu çerçevede yer alanlar, ABD açısından bugün de geçerliliğini korumaktadır. Ancak ilaveler de vardır. Örneğin Avrupa (Fransa-Almanya) Rusya yakınlaşması, Rusya'nın ekonomik toparlanması, ABD açısından Avrasya jeopolitiğini boyutlandırmaktadır. ABD'nin Avrupa'ya bakışı farklılaşmıştır. Gerek Avrasya egemenliğine yönelik, gerekse Rusya-Çin Fransa-Almanya dengeleri açısından ABD'nin Avrupa'daki sıklet (ağırlık) merkezi Batıdan daha doğuya doğru kaymaktadır. Polonya, Macaristan, Romanya, Bulgaristan gibi eski Doğu Bloku ülkeleri bu yönelişte önem kazanmaktadır. ABD Baltık'tan-Balkanlar'a, doğu eksenli bir jeopolitik hattan oluşumunu arzulamaktadır. Hem Avrasya'ya yakınlaşmak hem Rusya-Avrupa (Almanya-Fransa) yakınlaşmasını jeopolitik olarak perdelemek, hem de Irak konusunda boyutlanan Fransa-Almanya-ABD ayrışmasının bir uzantısı olarak bu yeni jeopolitik hat ABD'nin Avrupa'ya yönelik güvenilir – güvenilir olmayan müttefik" ayrımına yönelik anlamlar içermektedir (Davutoğlu,2003). AB, ABD bölge açısından bunları düşünürken, Türkiye, kendini tam olarak tanımlayamamakta, stratejik çeşitliliğini oluşturamamakta, AB karşıtlığı veya yandaşlığına sıkıştırılmış, dağınık ve ufuksuz bir çizgi üzerinde seyrini sürdüren bir ülke görünümü vermektedir (Canbolat, 1998). Tüm bunlar yeni Siyasal Atlas'ın oluşum sürecinde, Türkiye'nin yeni bir jeopolitik konum ve ortamla yüz yüze olduğunun resmini çizmektedir. Bu yeni jeopolitik konum ve ortam, Türkiye'nin ulusal duruşunu belirlemesini, "aktif bir bölgesel güç kimliğini" tartışmasız kılmasını, iç ve dış jeopolitik bütünlüğü oluşturmasını, çok seçenekli, stratejik öngörülerle bezenmiş bir jeopolitik konum elde etmesini koşullandırmaktadır (Arat, 2003). Bu yaklaşım, Türkiye'nin, Doğu Akdeniz, Kıbrıs, AB ve Kuzey Irak gibi güncellik taşıyan ve sıkıntılar üreten konuları karşılayabilme, çözüme kavuşturabilme, gelecek güvencesine bağlayabilmesine olanaklar sunmaktadır (Şimşek, 2005b). Tüm bunlar göstermektedir ki Türkiye, ulusal güvenlik stratejisini yeniden ele almalıdır. Türkiye merkezli bir dünya algılamasıyla tüm gelişmeleri ve yönelişleri derinlemesine irdelemelidir. Jeopolitik konumunun öngördüğü gibi Avrupalı kimliğini, Asyalı kimliğiyle dengelemesi,geleceğin güç ilişkilerini belirleyecek olan Avrasya jeopolitiğinde etkin olabilmenin stratejisini geliştirmesi, kendi tehdit (Yeniçeri) algılamalarının bir gereği olarak ekonomi, kültür, hukuk gibi alanları da içine alan geniş ve etkili yeni bir ulusal güvenlik stratejisi geliştirmesi,yeniden kalkınma heyecanını hissederek, benlikli ve kimlikli bir yükseliş hedeflemesi Türkiye açısından büyük öneme sahiptir (Kabasakal, 1996)

Uluslararası Emek Göçü Bağlamında Almanya'ya Türk İşgücü Göçü ve Sosyo-Ekonomik Etkileri

Turkish Labor Migration to Germany and its Socio-Economic Impacts in the Context of International Labor Migration

Asst. Prof. Dr. Şenol Yaprak (Kocatepe University, Turkey)

Abstract

Germany being encountered great destruction during the World War 2 has gone through a process of reconstruction and development. However, as it could not be able to find sufficient labor force during this process, Germany has signed subsequent labor migration agreements with Italy, Greece and finally with Turkey in the year of 1961. From this date onwards, a constant labor migration has started in Germany and currently it can be concluded that 3 million Turkish origin people are living in Germany. This study aims to analyze socio-economically the point that the situation has reached in 50-year period of time. As opposed to the existing aged German population, Turkish people having relatively younger population provides support to necessary labor force. Recently, Turkish people are not only laborers in the context but also with their increasing number they began to become employers in Germany whereby contributing to Germany economy. The number of Turkish entrepreneurs in Germany is estimated to be 70-80 thousand; they operate in diverse sectors and employing approximately 400 thousand laborers. It is estimated that the Turkish businesses are making annual return of 35-40 billion Euros in Germany. More and more, a new Turkish generation has been formed there, which embraced Germany as home country and they form plans about future around Germany values. Turkish population living in Germany is crucial in terms of improving the relationships with Germany; therefore importance should be given to this issue and establishment of novel policies by the central authorities in both countries.

1 Giriş

Küreselleşmenin henüz hayatımızda yer almadığı, bugüne göre oldukça kapalı sayılacak ekonomik sistemlerin hüküm sürdüğü yıllarda bile çeşitli nedenlerle uluslararası boyutta bir işgücü hareketliliği yaşanmaya başlamıştı.Özellikle İkinci Dünya savaşı sonrasında ülkelerinin yeniden imarını ve kalkınmasını hedefleyen ülkeler, bunun için gerekli olan işgücünü kendi kaynaklarından sağlayamayınca diğer ülkelerle işgücü göçü anlaşması yapma yoluna gitmişlerdir. Almanya, Avusturya, Hollanda, Belçika, Fransa gibi ülkeler bu amaçla ihtiyaç duydukları emeği diğer ülkelerden sağlamak için anlaşmalar yapmak durumunda kalmışlardır. İşçi ithal eden ülkeler geçmişin acılarını sarmak ve kalkınma yolunda ilerlemek istemişlerdir. Diğer yandan işgücü ihraç eden ülkeler ise, hem işsizliği azaltmak, hem de bu sayede ülkelerine döviz girdisi sağlamak amacı ile bu yola yönelmişlerdir. 1950'li yıllardan itibaren diğer ülkelerden işgücü almaya başlayan Almanya, 1961 yılında da Türkiye ile işgücü alımı amacı ile anlaşma yapmıştır. Misafir işçi olarak adlandırılan bu ilk işçi göçü, her iki ülke açısından da geçici bir olay olarak algılanmış ve çalışmalar da ona gore yapılmıştır. Ancak aradan geçen yıllar içerisinde, misafir işçiler kalıcı olmaya başlamışlar ve sayıları da hızla artmıştır. Ellerine aldıkları bir valiz ile para biriktirip, tekrar ülkelerine dönme hayali ile yola çıkan işçilerimizin bu hayalleri boyut değiştirmiş ve ailelerini de yanlarına almaya başlamışlardır. İlk yıllarda binlerle başlayan işgücü hareketi, aradan geçen elli yıllık süreçte hızla artarak, bugün Almanya'daki Türk nüfusu üç milyona yaklaşmıştır. Üstelik artık ilk giden kuşak emekli olmuş, şimdi ikinci, üçüncü dördüncü kuşak orada hayatın her alanında ve her kademede yer almaktadır.

2 Uluslararası İşçi Göçü Hareketleri ve Nedenleri

İnsanlar dünyada uzun yıllardır çeşitli nedenlerle yaşadıkları vatanlarını terkederek başka yerlere göç etmektedirler. Bu göçün nedenlerinden biri de emek hareketlerinde yaşanmaktadır. Fakat nedenleri farklı da olsa bütüncül olarak bakıldığında her göçün bir işgücü hareketi olduğu kabul edilebilir. Uluslararası göç hareketlerinin nedenlerini değişik öçlütlere gore sınıflandırmak mümkündür. Göçün oluş şekline gore yada göç edenlere göre de gruplandırılmaktadır. Genel olarak uluslararası göç çeşitlerini şu şekilde sıralayabiliriz(Çavuşoğlu, 2006):

a) İlkel göç

b) Zorla göç

c) Zorunlu göç

d) Kitle göçü

e) Serbest göç

f) Mülteci göçü

g) Geçici göç

h) Kalıcı göç

ı) İşçi göçü

i) Beyin göçü

İnsanların doğup büyüdükleri, ortak kültürel değerlere sahip oldukları yerleri terkederek, tamamen farklı bir ortamda ve coğrafi alanda yaşamaya yönelmelerine neden olan etkenleri değişik şekilde sınıflandıranlar da bulunmaktadır. Göçe neden olan etkenleri şu şekilde sınıflandırmak da mümkündür (Aksoy, 2012):

a)Ekonomik kaynaklı göç

b)İklim kaynaklı göç

c)Siyasal kaynaklı göç

d)Eğitim kaynaklı göç

e)Beyin göçü

f)Emekli göçü

Aşağıdaki tabloda göçlerin itici ve çekici faktörleri gösterilmektedir. İşçi göçünün de dahil olduğu ekonomik ve demografik göçün itici ve çekici faktörlerine bakıldığında bu etkenlerin Türkiye'den Almanya'ya işçi göçünde de etken olduğu söylenebilir.

	İtici Faktörler	Çekici Faktörler
Ekonomik ve Demografik	•Yoksulluk •İşsizlik •Düşük ücretler •Yüksek doğum oranı •Temel eğitim ve sağlık hizmetlerinden yoksunluk	•Yüksek gelir beklentisi •Yaşam standardının yükselmesi potansiyeli •Kişisel ve mesleki gelişim
Politik	•Şiddet, güvensiz ortam •Zayıf hükümet •İnsan hakları ihlali	•Güvenlik •Politik özgürlük
Sosyal ve Kültürel	•Etnik,cinsiyet, dinsel vb. ayrımcılıklar	•Aile birleşmesi •Etnik olarak bağlı bulunulan ülke •Özgürlük

*Tablo 1: Uluslararası Göçün Belirleyenleri **Kaynak:** Kara, 2008, s.22*

Göç olgusu insanlık tarihi kadar eski olmakla birlikte, tek bir bölgeye yada ülkeye özgü değildir. Göçlerin ortaya çıkmasına neden olan unsurlar her ülkede aynıdır(Koçak ve Terzi, 2012). Göçe neden olan unsurların şiddeti ve kişiler üzerindeki etkisi farklılık gösterse de, genel olarak evrensellik gösterir. Uluslarası işgücü hareketliliği kapitalizmin gelişmesine paralel olarak artmıştır. Ancak bu göçler 1945 yılına kadarki dönemde okyanuslar ötesi bir hareketlilik gösterirken, bu tarihten sonra az gelişmiş ülkelerden, gelişmiş bölgelere doğru bir göç halini almıştır. 1815-1914 arası dönemde 30 milyondan fazla Avrupalı Amerika'ya göç etmiştir. Ayrıca 16. yüzyıldan itibaren çok sayıda Afrikalı da zorla Amerikaya göç ettirilmiştir. 1900'lü yılların başında Almanya ve Fransa'da birer milyondan fazla yabancı olduğu belirtilmektedir. 1945'ten sonra ise Porto-Riko ve Meksika'dan Amerika'ya, Pakistan, Hindistan ve Jamaika'dan İngiltere'ye, İtalya, Yunanistan ve Portekiz'den de Almanya'ya işçi göçü olmuştur (Sönmez,1980).

Geçmişte bu şekilde bir gelişme gösteren uluslararası işgücü hareketliliği, günümüzde küreselleşme ile birlikte şekil değiştirmiştir. Uluslararası göçün artışının yıllar içerisinde gittikçe artmasının nedeni olarak zenginliğin dünyanın gelişmiş ülkelerinde yoğunlaşırken, fakirliğin ise az gelişmiş ve gelişmekte olan ülkelerde artması ve insanların da daha iyi bir gelecek için ülkeler arasında yer değiştirmektesi gösterilmektedir. 1960 yılında dünyadaki göçmen sayısı 76 milyon iken, bu sayı 40 yılda üç kat artarak 175 milyona yükselmiştir. 2050 yılında ise 400 milyon olacağı tahmin edilmektedir. (Gökbayrak, 2006). Son yıllarda göçün bu hızlı artışında küreselleşme, teknonoloji ve iletişimdeki hızlı değişim ve ülkeler arasında oluşturulan birliktelikler de önemli paya sahiptir.

3   Türkiye'den Almanya'ya İşçi Göçü

İkinci Dünya Savaşı sırasında ve sonrasında ortaya çıkan olumsuz tablo nedeni ile ekonomik olarak büyük sıkıntılar yaşayan Almanya, savaş sonrasında yeniden toparlanabilmek amacı ile harekete geçmiştir. Bir yandan yıkılan, harap olan yerleşim yerlerini yeniden imar etmek, diğer yandan da kalkınma ve gelişmeyi hızlandırmak

amacı ile önemli projelere girişmiştir. Ancak yıllar içerisinde ihtiyaç duyduğu işgücünü kendi ülkesinden karşılayamayınca başka ülkelerden misafir işçi alımı yoluna gitmek amacı ile çalışmalara başlamıştır.

3.1 Almanya'daki Türk Nufusu ve Tarihsel Süreç İçerisinde Yaşanan Değişimler

Batı Avrupa ülkelerinin o yıllardaki tipik özelliği, yavaş artan bir nüfus yapısı ve işgücü yapısına karşın, çok hızlı büyüyen ve hızla gelişen bir ekonomik yapıya sahip olmasıydı. Bu orantısızlık nedeni ile ekonominin ihtiyaç duyduğu işgücünün arzı sorunu nedeni ile mümkün olduğunca emek yoğun yatırımlar yerine sermaye ve teknoloji yoğun yatırımlara yönelmişler, ancak buna rağmen yine de önemli miktarda işgücü ihtiyacı ortaya çıkmıştır. Bu durumda önlerinde iki seçenek vardı; ya yatırımlarını yabancı sermaye transferi yoluyla başka ülkelere yapacaklardı yada yurtdışından yabancı işçi transfer edeceklerdi. Almanya'nın da içinde olduğu bu ülkeler ikinci seçeneği seçmişler ve yabancı işçi sağlamak amacı ile işgücü fazlası olan ülkelerle anlaşmalar yapmak amacı ile çalışmalar başlatmışlardır (Yıldırımoğlu, 2005). Savaş sonrasındaki büyük enkazı ortadan kaldırmak amacı ile çalışmalara başlayan Alman İş ve İşçi Bulma Kurumu 1950'li yılların başında dört milyon işgücü ihtiyacı olduğunu hesaplamıştı. Yeniden yapılanma için gereken parayı Amerika'dan sağlayan Almanya, işgücü ihtiyacını sağlamak için de arayışa girmiş ve bu açığın ancak başka ülkelerden sağlanacak işçilerle giderilebileceği sonucuna varmıştır (Çelik, 2012). Günün şartlarına göre ekonomik ve teknolojik olarak yeterli kaynağa sahip olduğundan, tek eksiği olan işgücünü de bu şekilde bulmanın kalkınma ve gelişme hamlesi için daha uygun olacağını hesaplamışlardır.

Bu plan doğrultusunda Alman Hükümeti 20 Aralık 1955 tarihinde İtalya ile işgücü göçü anlaşması imzalamış ve 1959 yılında Almanya'ya çalışmak amacı ile giden 25 bin İtalyan işçinin, toplam yabancıların %31'ini oluşturduğu öçlülmüştü. Bunlar da yetersiz kalınca bu defa 29 Mart 1960'da İspanya, 30 Mart 1960'da da Yunanistan ile işçi temini için anlaşma yapılmıştır. Bu anlaşmalardan sonra Almanya'daki yabancı çalışanların sayısı 122 bine yükselmiştir. Bu işçilerin önemli bir kısmı (93 bin) İtalyanlardan oluşmaktaydı ve bu şekilde işe yerleştirilenlerin oranı %47'ye yükselmişti (Erker, 1967).

Sonraki yıllarda yaşanan büyük işçi göçünden once 1956 yılında Almanya'da bulunan Kiel Üniversitesi Türkiye'de yapılacak Alman yatırımlarını desteklemek amacı ile oralarda çalışacak Türklerin once Alman firmalarında yetiştirilmesini planlamış ve bu amaçla da 12 Türk stajeri aileleri ile birlikte Almanya'ya getirmiştir. Bu amaçla 1957 yılında Türk ve Alman hükümetleri ilk defa bir işçi göçü anlaşmasını imzalaşmışlardır. Staj programının öngörülenin aksine başarısız olması sonucu, Almanya'ya giden bu ilk işgücü kafilesini oluşturan 12 kişi Türkiye'ye dönmeyerek Almanya'da çalışmaya devam etmişler ve ileride yaşanacak büyük işçi göçünün kapısını aralamışlardır (Kılıçaslan, 2006). O yıllarda belki de hiç Türk vatandaşının bulunmadığı bir ülkede kendilerince bir düzen kuran ve daha sonra bu yolu izleyerek gelecek çok sayıda Türk'e bir yol gösterici olması açısından da bu ilk temsilcilerin varlığı önemli olmuştur.

Bu gelişmelere bağlı olarak Almanya'nın işgücü talebini değerlendiren Türkiye, döviz getirisi elde etmek, işsizliği azaltmak, sonrasında nitelikli işgücüne sahip olmak gibi nedenlerle bu teklife olumlu yaklaşmış ve 31 Ekim 1961 tarihinde Almanya ile işgücü anlaşmasını imzalamıştır (Silkin, 2011). Bu anlaşma sonrasında ilk işçiler de Almanya'ya gitmeye başamış ve ilk yıl bu sayı yedi bine ulaşmıştır.

1961 yılına Almanya'ya giden ilk kafile 1476 kişien oluşuyordu ve bunun 1430'u erkek, 46'sı da kadındı. Başlangıçta kadınların sayısı çok azdı, ancak zamanla bu oran yükseldi ve 1973 yılında kadın oranı %20 oldu. Aile birleşimi hakkı verilmesi ile birlikte, 1970'li yıllardan itibaren eşlerini de Almanya'ya götürme süreci başlayınca kadın sayısındaki artış hızlanmıştır (Suğanlı, 2003). Başlangıçta belirli bir süre çalışıp geri dönme düşüncesi olduğundan sadece çalışacak olanlar gitmekteydi. Amaç biraz para biriktirip, tekrar Türkiye'ye geri dönmekti. Bu durumu o zaman yapılan araştırmalar da doğrulamaktadır.

1972 yılına Alman Çalışma Kurumu tarafından Türk işçiler ile yapılan bir anketin sonucuna göre, Almanya'daki Türk işçilerin % 91'inin Türkiye'ye geri dönme düşüncesinde olduğu, sadece % 9'unun Almanya'ya yerleşmeyi düşündüğü sonucu çıkmıştır. 1974 yılında Marplan adlı bir araştırma kurumunun yaptığı araştırma sonucuna göre ise Almanya'da kalmak isteyenlerin oranı %29.1 olarak ölçülmüş, ancak bu orana kalmayı kesin olarak karar veremememişler de dahil edildiğinden, kesin olarak kalma düşüncesinde olanların daha düşük düzeyde olduğu anlaşılmaktadır (Demircioğlu, 1983).

Almanya'daki işgücü ihtiyacındaki değişme, yabancılara yönelik politika değişiklikleri, uyum sorunu gibi değişik etkenlere bağlı olarak Almanya'daki Türklerin demografik yapısında da değişimler olmuştur. 1961 yılında işçi ihtiyacının karşılanması için anlaşma yapılmasından sonra işçileri teşvik etmek amacı ile 1964 yılında da iki ülke arasına sosyal güvenlik anlaşması yapılarak, işçilerin sağlık, emeklilik, iş kazaları, ölüm, işsizlik sigortası, doğum ve çocuk yardımı gibi konularda yeni haklar tanınmıştır. Ancak Almanya daha sonra 1973 yılında yaşanan petrol krizi ve ortaya çıkan ekonomik kriz nedeni ile yabancı işçi alımını durdurmuştur. 1980 yılına gelindiğinde ise Türklere vize zorunluluğu getirilmiş, iltica yoluyla gelenlere çalışma izni verilmemiş ve 1983 yılında da geri dönüşü teşvik amacı ile yasal düzenleme yapılmıştır. Bu amaçla 30 Haziran 1984 tarihine kadar Türkiye'ye geri dönecek işçilere 10.500 mark ve çocuk başına da 1.500 mark parasal yardım verileceği, ödedikleri primleri de iki yıl beklemeden geri alacakları yasada kararlaştırılmış, bunun sonucunda da 211.000 Türk, Türkiye'ye geri kesin dönüş yapmıştır (Koçtürk, 2008).

Bu gelişmelerden sonra yıllar içerisinde Almanya'daki Türk vatandaşlarının yıllar itibari ile gelişimi aşağıdaki tabloda gösterilmiştir. Göçün ilk yıllarında kadın-erkek oranı kadınlar aleyhine bir durumdaydı ve ilk işçi göçünden oniki yıl sonra da 1973 yılında % 20'ye yükselmişti. Bugün gelinen noktada Almanya'daki Türk nüfusunun yaklaşık % 52'si erkeklerden oluşurken, % 48'i kadınlardan oluşmaktadır. Elli yıllık süreçte nüfus bazında kadın-erkek arasında nisbi bir dengenin oluştuğunu söylemek mümkündür. Alman İstatistik Kurumu'nun verilerinden hazırlanan bu tabloda Alman vatandaşı olan Türk kökenlilerin yer almadığını da dikkate almak gerekmektedir.

Yıl	Toplam	Erkek	Kadın
1975	1 077 097	669 995	407 102
1980	1 462 442	876 154	586 288
1985	1 401 932	808 468	593 464
1990	1 694 649	940 948	753 701

Tablo 2: *Almanya'daki Türk Vatandaşları (1975-2010)* **Kaynak:** *Statistisches Bundesamt, Wiesbaden, 2011*

Alman vatandaşlığına geçenleri de dikkate aldığımızda Almanya'daki Türk nüfusunun çok daha fazla olduğu görülecektir. İşçi göçü anlaşmasının yapıldığı ilk yıl Alman vatandaşı olan Türk sayısı sadece 13 kişi iken, zamanla bu sayı artarak 2010 yılında 830.736 kişiye yükselmiştir. Burada dikkat çekici olan belirli yıllarda Alman vatandaşlığa geçişin hızla arttığı, ancak özellikle 2000 yılından sonra bu artışın durarak, tersine hızla azaldığı görülmektedir. 1995'ten 2000 yılına kadarki beş yıllık süreçte % 162 artmışken, bu defa yine 2000'den 2005 yılına kadar geçen beş yılda %153 azalmıştır. 2000 yılına kadar Alman vatandaşlığı Türkler tarafından çok rağbet görürken, daha sonraki yıllarda bu durum tersine dönmüş ve Alman vatandaşlığına geçenlerin sayısında hızlı bir oransal azalma yaşanmaktadır. Yine de az da olsa her yıl önemli sayıda Türk, Alman vatandaşlığına geçmeye devam etmektedir.

Tablo 3: *Alman Vatandaşlığına Geçen Türkiye Cumhuriyeti Vatandaşlarının Dağılımı (1961-2010)* **Kaynak:** *Statistisches Bundesamt, Wiesbaden, 2011*

Alman vatandaşlığına geçişte 2000 yılından sonra yaşanan hızlı azalışın temel nedeni Almanya'da yapılan yasal düzenlemelerdir. 2000 yılında yürürlüğe giren Alman Vatandaşlık Yasası ile artık çifte vatandaşlık bütünüyle yasaklanmıştır. Önceden Alman vatandaşlığına geçen ve aynı zamanda da Türk vatandaşlığını koruyabilen Türkler için Alman vatandaşlığı cazip gelmekteydi. Ancak yeni yasayla birlikte bu durum mümkün olmadığından dolayı Alman vatandaşlığına geçiş te azalmıştır.

2000 yılından itibaren Almanya'da doğmuş olan yabancı kökenli biri, doğumla Alman vatandaşlığını kazanabilmektedir. Ancak bu kişi aynı zamanda bir başka ülkenin de vatandaşı ise reşit olduğunda hangi vatandaşlığı tercih ettiğini görevli makamlara bilirmek zorundadır. Eğer 23 yaşını dolduruncaya kadar tercihini bildirmez ise Alman vatandaşlığını kaybedeceklerdir (madde 29) (Özkan ve Tütüncübaşı, 2008). Daha önce böyle bir uygulama ile karşılaşmayan ve böyle bir tercihe zorlanmayan yabancılar için ortaya çıkan bu yeni durumla beraber, Alman vatandaşlığını tercih etmenin önemli bir avantajı olmalıdır ki, insanlar kendi vatandaşlıklarından vazgeçsinler. Almanya'da uygulanan bu yeni sisteme "opsiyon modeli" adı verilmektedir ve bu modelin ortaya çıkardığı sorunlar ülke gündeminde sürekli tartışılmaktadır. Eylül 2013'te yapılacak genel seçimler öncesi yaşanan önemli tartışma başlıklarından birini de opsiyon modeli uygulaması oluşturmaktadır. Resmi makamlarca 2013 yılında 3.300 gencin bu tercihini bildirmesi gerektiği açıklanmıştır. Bu uygulama devam ederse 2018 yılında bu sayının 40.000 kişiye ulaşacağı öngörülmektedir (Deutsche Welle, 21.02.2013)

Tablo 4'te Almanya'ya gelen ve ayrılan Türklerin sayıları gösterilmektedir. 2005 yılına kadar gelen vatandaşların sayısı, ayrılanların sayısından daha fazla iken, bu yıldan itibaren ayrılanların sayısı gelenlerin sayısından daha fazla olmaya başlamıştır. Ayrılanların sayısı rakamsal olarak bir artış göstermemiştir, ancak gelenlerin sayısında yıllar itibari ile önemli azalış olduğundan dolayı aradaki fark büyümüştür. Buradan da anlaşıldığı gibi Almanya'dan ayrılanların sayısı artmamakta, aksine azalmaktadır. Yani artık yıllar itibari ile Almanya artık Türkler için kalıcı vatan olmaya başlamıştır. Bunun yanında çeşitli nedenlerle gelenlerin sayısı da azalmaktadır. İş bulma, eğitim, evlilik gibi nedenlerle geçmişte daha fazla insan Almanya'ya gelirken, artık gittikçe azalan sayıda Türk Almanya'ya gelmektedir denebilir.

Yıl	Gelen	Ayrılan
1998	47.858	45.142
1999	48.129	42.823
2001	40.858	26.656
2002	58.128	36.750
2003	49.699	35.612
2004	42.644	38.005
2005	36.019	34.466
2006	30.720	32.424
2007	27.599	29.879
2008	28.741	38.889
2009	27.212	35.410
2010	27.564	31.754

Tablo 4: *Almanya'ya Gelen ve Ayrılan Türk Vatandaşları (1998-2010)* ***Kaynak:*** *Berlin Çalışma Müşavirliği İstatistikleri*

Almanya'yı artık kendi vatanı olarak kabul eden yeni nesil göçmen gençler arasında Almanlar ile evlilik olayları da artmaktadır. Almanya'da bulunan 18.2 milyon evli çiftin 1.2 milyonu yabancılarla yapılan evliliği tercih etmişlerdir. Bu yabancı evliliklerin % 14'ünü de Türklerle yapılan evlilikler oluşturmaktadır. Alman Federal İstatistik Dairesi verilerine göre Alman kadınların yabancı erkeklerle yaptıkları evlilikte ilk sırayı % 17 ile Türk erkekleri almaktadır. Aynı durumun erkekler içinde geçerli olduğu ve yabancılarla evlenen Alman erkeklerde de % 11 ile ilk sırayı Türk kadınları almıştır (Sabah Avrupa, 2011).

3.2 Almanya'daki Türklerin Eğitim Durumu ve İstihdamdaki Yeri

Almanların Türklere yönelttikleri en büyük eleştirilerden biri eğitime olan ilgisizliktir. Bunu resmi rakamlara da dayandırarak ifade etmektedirler. Federal Göçmen ve Mülteciler Dairesi tarafından yapılan bir araştırmaya göre "Almanya'da yaşayan Polonyalı göçmenlerin üçte ikisi, Yunan göçmenlerin ise yarısından fazlası ortaokul ve üzerinde eğitim seviyesine sahipken, İtalyanlarda ve eski Yugoslavya ülkelerinin göçmenlerinde bu oran yüzde 44, Türklerde ise yüzde 41 olarak ölçülmüştür. Türk kökenli göçmenler, okuma-yazma oranına göre yapılan değerlendirmede de en arka sırada yer almaktadır. Araştırmaya göre, Almanya'daki Türklerin yüzde yedisi okuma-yazma bilmemektedir."(DW, 1010,b) . Bu olumsuz görüntünün ve algının değişmesi için Türk çocuklarının daha fazla oranda eğitime yönlendirilmesi gerekmektedir. Diğer göçmenler eğitimin önemini kavradıklarından olayı, Türklere göre daha fazla oranda insan eğitim hayatının içinde yer almaktadır.

Almanya'da üniversitede okuyan çok sayıda Türk kökenli göçmen de bulunmaktadır. Alman İstatistik Kurmu verilerine göre 2009-2010 eğitim öğretim döneminde Almanya'da toplam 24.170 Türk vatanşı üniversitede okumaktadır. Ancak bu sayıya Alman vatandaşı olan Türkler dahil edilmemiştir. Onları da dikkate aldığımızda sayının 40 bin civarında olabileceği tahmin edilmektedir ve bu üniversite öğrencilerinin %42 'si de bayanlardan oluşmaktadır. Okul türlerinde ise ilk sırayı dil ve kültürle ilgili bölümler alırken, onu sırasıyla hukuk-ekonomi – sosyal bilimler, mühendislik ve matematik-fen alanları izlemektedir (Statistisches Bundesamt, 2011).

Almanya'da işsizleri ve bu işsizler arasında yabancı ülke vatandaşlarının ve Türklerin durumunu görmek için aşağıdaki tabloya bakıldığında 1999 yılında en büyük yabancı grubunu oluşturan Türklerin 176.614'ü işsiz iken on yıl sonra 2009 yılında 157.357'ünün işsiz olduğu görülmektedir.

Almanya'da iş bulma ve eğitimine uygun bir işte çalışma konusunda göçmenlerin Almanlara göre daha dezavantajlı konumda oldukları bilinen bir gerçektir. OECD'nin 2007-2008'de yaptığı bir araştırma sonucuna göre, göçmenlerin Almanlara kıyasla ortalama 5 adet daha fazla iş başvurusu göndermesi gerekmektedir. Yakın zamanda Türkler ile Almanların işe yerleştirilmerindeki farklılığı ortaya koymak amacı ile yapılan bir başka araştırmada, hayali Alman ve Türk isimleri ile 1000 iş başvurusu yapılmış ve Alman şirketlerinin % 14 oranında daha fazla olarak, isimleri Alman olan iş başvurularını tercih ettikleri ortaya konmuştur. Neden böyle bir tercihte bulundukları sorulduğunda da, Türklerin kalifiye eleman olmadıkları yada müşterilerin rahatsız olduğu gibi cevaplar verilmiştir (DW, 2010c). Ayrımcılığın özellikle işe alınma ve kariyer imkanlarından

yararlandırma konusunda ortaya çıktığı bilinmektedir. Bu nedenle Türk gençleri Almanlara ve diğer göçmenlere kıyasla daha güçlükle çalışma yaşamında yer alabilmekte ve mücadele etmek durumunda kalmaktadırlar.

Köken	1999			2009		
	Toplam	Cinsiyet		Toplam	Cinsiyet	
		Erkek	Kadın		Erkek	Kadın
Toplam	4.100.499	2.160.461	1.940.038	3.139.846	1.724.562	1.415.284
Alman	3.592.317	1.835.339	1.756.978	2.650.405	1.455.129	1.195.276
Yabancı	503.341	321.564	181.777	484.931	266.783	218.148
Yunan	24.507	14.361	10.146	16.387	9.572	6.815

Tablo 5: *Almanya'da İşsiz Sayısı, Türkler ve Seçilmi Bazı Yabancılar 1999-2009* ***Kaynak:*** *Bundesagentur für Arbeit (Almanya Federal Çalışma Ajannsı) İstatistikleri*

Almanya'nın ihtiyaç duyduğu işgücü ihtiyacına göçmenlerinde büyük katkısı bulunmaktadır. Aşağıdaki tabloda Almanya'da sigortalı olarak çalışan Türk vatandaşlarının cinsiyete ve yaşa göre dağılımı gösterilmiştir. Tabloya bakıldığında, rakamlar özellikle genç nüfusta çalışanlar içinde kadın sayısının önemli miktarda olduğunu göstermektedir. Kadınların yaşlarına göre çalışma yaşamındaki oranlarına bakıldığında; 15-20 yaş grubunda çalışan kadın oranı % 43, 20-25 yaş grubunda % 40, 25-30 yaş grubunda % 31, 50-55 yaş grubunda % 29'dur. Genç yaşlarda çalışanlar içindeki kadın oranı oldukça yüksektir. Toplamda ise çalışanlar içindeki kadın oranı % 30'dur. Türkiyede toplam istihdamda kadın oranının % 24 olduğu (TEPAV, 2012) düşünülürse Almanya'da çalışma yaşamında Türk vatandaşı kadınların oranının daha yüksek olduğu anlaşılmaktadır. Türkiye'ye kıyasla Almanya'daki Türkiye kökenli kadınlar, çeşitli etkenlere de bağlı olarak, çalışma yaşamına katılmakta daha istekli durumdadırlar. Bu sonuçta etken olan en önemli nedenlerden biri de yaşadıkları ülkedeki sosyo-kültürel yapıdır.

Yaş Grubu	Çalışan Sayısı		
	Erkek	Kadın	Toplam
15-20 yaş arası	9.966	7.744	17.710
20-25 yaş arası	36.208	24.924	61.132
25-30 yaş arası	38.354	17.574	55.928
30-35 yaş arası	57.789	19.505	77.294
35-40 yaş arası	62.955	24.193	87.148
40-45 yaş arası	53.997	22.172	76.169
45-50 yaş arası	53.126	18.411	71.537
50-55 yaş arası	20.494	8.765	29.259
55-60 yaş arası	11.937	6.534	18.471
60-65 yaş arası	5.952	2.998	8.950
65 ve yukarı	590	323	913
Toplam	351.368	153.143	504.511

3.3 Almanya'daki İşveren Türkler

Almanya'da Türk kökenlilerin önemli bir bölümü artık kendi işyerlerini kurmuşlar ve girişimci olarak farklı sektörlerde önemli işler yapmaktadırlar. 1960'larda Türklere yönelik ürün satmak amacıyla açılan ilk Türk işyerlerinin yerini yıllar içerisinde farklı sektörlerde yer alan işletmeler almıştır. Sayıları sürekli artarak büyüyen Türk işletmeleri, Almanya ekonomisine de önemli katkı sağlamaktadır. 1970 yılında Almanya'da çalışan Türklerin ancak 3.300'ü kendi işyerinde girişimcilik faaliyetinde bulunuyordu ve bu oran %1'den de düşüktü. 1999 ylına gelindiğinde Türk girişimcilerinin sayısı 55.000'e ulaştı ve çalışan Türklerde girişimcilerin oranı da % 6.7'ye yükseldi (ATGİAD,2011). Bugün gelinen noktada bu sayının çok daha fazla olduğu görülmektedir. Aşağıaki tabloda bu gelişim daha net olarak görülmektedir.

1987 yılında Türk'lerin sahip olduğu işletme sayısı 25.500 iken bu sayı 2008 yılında 72.000'e yükselmiştir. İşletme sayısı ile beraber işletme başına yapılan yatırım tutarları da yükselmiştir. 1987'de işletme başına ortalama yatırım 92 bin Euro iken, 2008'de 115 bin Euroya yükselmiştir. Aynı şekile çalışan sayısı da 87 binden 331.200'e yükselmiştir. Burada dikkat çeken bir diğer nokta da, Türk işletmelerinde çalışan Alman ve diğer

yabancıların sayısıdır. 1987'de çalışanların %10'u Türk olmayan kişilerden oluşurken, bu oran 2008'de %20'ye yükselmiştir. Çalışan sayısı arttıkça, Türk işletmelerinde çalışan yabancı sayısı da artmaktadır. Bu tabloya göre Türk işletmeleri sadece Türk kökenliler için bir istihdam kapısı olmayıp, aynı zamanda Almanlar ve diğer göçmenler için de iyi bir istihdam yeri durumundadır. Bugün gelinen noktada Türk işletmelerinde çalışan her beş kişinden biri, Türk kökenli olmayan çalışanlardır.

Yıl		1987	1992	1997	2002	2007	2008
İşletme Sayısı		25.500	35.000	47.000	56.800	70.300	72.000
İşletme başına ortalama yatırım hacmi (Euro)		92.000	105.000	104.000	115.000	110.000	115.000
Almanya'daki Türk İşletmelerinde Toplam İstihdam Sayısı	İstihdam Edilen Alman ve Diğer Uyrukluların Sayısı	8.700	15.000	28.980	43.500	67.400	66.240
	İstihdam Edilen Türk Kökenli Sayısı	78.300	110.000	178.020	246.500	269.600	264.960
	Toplam İstihdam Sayısı	87.000	125.000	207.000	290.000	337.000	331.200

Tablo 7: *Almanya'daki Türk Girişimcilerinin Gelişimi (1987-2008)* **Kaynak:** *Şen ve Güler, 2009, AB ve Almanya'da Türk Girişimcilerin Ekonomik Gücü Araştırması*

Almanya'daki Türk işletmelerinin dağılımı aşağıdaki tabloda gösterilmiştir. Buna göre dışardan bakıldığında, yada eleştiri amacı ile yaklaşıldığında söylenen, "Türkler genelde lokanta-market türü işlerle ilgileniyorlar" söyleminin yanlış olduğu anlaşılmaktadır. Tablodan da anlaşıldığı gibi her sektörde belirli bir oranda Türk firmasının olduğu görülmektedir. Bu sonuçlara göre sadece belirli işleri Türk işletmelerinin işi gibi görmek de yanıltıcıdır.

Faaliyet Alanı	Sayı	Oran (%)
Zanaat, inşaat, imalar sektörü	11.700	17.2
Ticaret	22.800	33.4
Yiyecek-İçecek işletmesi	18.100	26.5
Hizmet	15.700	22.9
Toplam	68.300	100

Tablo 8: *Türk İşletmelerinin Sektörel Dağılımı , 2006* **Kaynak:** *Şen vd. 2008. Almanya ve AB'nde Türk Girişimciler*

Yılda ortalama 400 milyar euro ciro yaptığı tahmin edilen Türk girişimcilerin Almanya tarafından yeterince önemsenmediğini de söylemek mümkündür. Artık bu işletmeler klasik dönerci, yada manav olmanın çok ötesine geçmiştir ve bugün bu cironun ancak %10'luk kısmı dönercilere yada manavlara aittir. Günümüzde Türkler yüzden fazla değişik alanda faaliyet göstermekte ve 400 bin kişiye istihdam sağlamaktadır (DW, 2010c).

4   Sonuç

Türklerin Almanya'ya misafir işçi olarak gittikleri ilk yıl olan 1961 yılının üzerinden elli yıldan fazla zaman geçti. Öncelei binlerle başlayan bu misafirlik, sonraları milyonlarla ifade edilen ev sahipliğine doğru bir dönüşüm yaşadı. Bu süreç içerisinde ilk kuşak emekli oldu, onların çocukları, torunları bugün Almanya'da hayatın her alanında yer almaktadırlar. Başlangıçta geri dönüş düşüncesi egemen olduğu için para biriktiren, tasarruflarını Türkiye'ye aktaran ve yatırımlarını da Türkiye'de yapan göçmen işçiler, Almanya'da kalıcı olmaya başladıktan sonra artık birikimlerini de orada değerlendirme yolunu seçmişlerdir. Siyasetten, ekonomiye, sanattan spora her alanda Türkiye kökenli insanlarımızı görmekteyiz. Misafir işçi olarak başlanılan süreç artık işverenlik, milletvekilliği, bakanlık, siyasi parti başkanlığı, milli sporculuk, yılın işvereni, yılın sanatçısı, yılın başarılı girişimcisi gibi sıfatlarla devam etmektedir.

Bu yaşananların Almanya açısından olduğu kadar Türkiye açısından da aynı derecede önemi bulunmaktadır. Almanya'daki Türk nüfusu ülkemizdeki pek çok şehrin nüfusundan fazladır. Türkiye'nin Avrupa Birliği serüveninde, dış politikasında, ekonomisinde onların destekleri de önemlidir. Bu büyük nüfus, aynı zamanda Türkiye'nin Avrupa'daki görünen yüzü, imajı ve temsilcileri olmuşlardır. Onların yaşadıkları ülkedeki başarıları ve güçleri, aynı zamanda Türkiye'nin başarısı ve gücü olacaktır. Bugün Almanya'da Alman vatandaşı olmuş, dolayısı ile seçme ve seçilme hakkı elde etmiş bir milyona yakın Türkiye kökenli insan bulunmakta, yine yaklaşık aynı sayıda insan Almanya'da yaşamasına ragmen Türkiye'deki seçimlerde seçme ve seçilme hakkına

sahiptir. Üstelik yapılan son yasal düzenlemelerle birlikte bu vatandaşlar artık oylarını Türkiye'ye gelmeden, Almanya'da kullanabileceklerdir. Bu kadar iç içe bir ilişki yumağı bulunan Almanya'daki Türkler konusunda üretilecek politikalar ve uygulamalar konusunda da iki ülkenin işbirliğine daha fazla ihtiyaç buaunmaktadır.

   Almanya'daki Türkler artık Almanya'yı acı vatan olarak görmemekte, kalıcı vatan olarak görmektedir. Kalıcı vatanda da gerek Alman toplumu ile gerekse de diğer göçmen toplumlarla daha güçlü ilişkiler kurabilmenin yolu mutlaka her yönden daha güçlü olmaktan geçer. En önemli güç kaynağı da şüphesiz Türk gençlerinin daha fazla eğitime yönelmeleri, bulundukları ülkenin dilini daha iyi kullanmaları ve bunun yanında da kendi anadillerini de unutmamaları gerekmektedir. Almanya'nın en önemli göçmen grubunu oluşturan Türklerin çağımızın önemli bir stratejik gücü olan lobi faaliyetlerinde de önemi rol oynayabileceklerini de unutmamak gerekir. Son yıllarda sayıları hızla artan Türk girişimciler gerek ciroları ve ürettikleri mal ve hizmetlerle, gerekse de sağladıkları önemli sayıdaki istihdamla Alman ekonomisi için önemli aktörler konumuna gelmişlerdir. Zira bu girişimciler artık klasik manav-dönerci sınıflandırmasını çoktan aşmış ve profesyonel girişimciler olarak ekonomik hayatta yer almaktadırlar. Bu trend bu şekliyle devam ederse yakın gelecekte işçilikten işverenliğe doğru işleyen süreç daha da hızlanacak ve artık daha fazla oranda göçmen Türk, işçilikten işçi çalıştıran konumuna yükselecektir. Bunun yanında sosyal ve kültürel alanda da Türklerin Almanya'ya katkısının da artarak süreceği söylemek mümkündür.

Rusya'nın Oylama Gücünün Avrasya Ülkeleri Üzerindeki Ekonomi Politiği

Political Economy of Russia's Voting Power on Eurasian Countries

Asst. Prof. Dr. Ceyhun Haydaroğlu (Bilecik Şeyh Edebali University, Turkey)

Abstract

The relationship between economy and politics shows itself explicitly while governments are determining and implementing national and international economic policies. In democratic societies voting power, which means that economical and political units uses against one another in decision making mechanisms, shapes stability and/or unstability. It can be explained that a government, which is structured by the sovereignty of a single party in a parlament, has a monopoly power. Putin, has an important voting power in both The Council of The Federation and State Duma. The confidence through this voting power, while national economic and political equlibrium is provided, in international context, stable and strong policies are followed. Russia, increases the pressure and makes its economical and political power apperant on the eurasian countries, especially which were under its' authority before. In this context Russia's voting power calculated seperately for all election periods by Normalized Banzhaf Index. According to this, the effect of today's Russia's dominance on the Eurasian countries has been analyzed within the boundaries of political economics dicipline. In consequence of the analysis; it is indicated that, there is a linear relationship between the Russia's voting power and economical stability, and Russia's efficieny on the eurasian countries gradually increases. The most important feature of this study, which makes it differentiated form others, is making political economy of Russia's efficiency on the eurasian countries within the context of political economics literatüre by the voting power perspective, besides cultural, historical and social factors.

1 Giriş

Politika ile ekonomi, her politik rejimde değişik şekillerde karşı karşıya gelmektedir. Politik yaşam, hem ekonomiden etkilenmekte hem de ekonomiyi etkilemektedir. Bir toplumun politik yapısı, benimsenen politik ideoloji ve yapıya dolaylı ve dolaysız etki yapan bütün faktörler, o ülkenin ekonomi modelini ve işleyişini etkilemektedir. Buna karşın ekonomide geçerli ilkeler, ekonominin yapısı, başarısı ve/veya ortaya çıkardığı sonuçlar da politik modele ve işleyişine yön vermektedir (Onur, 2004:1). Bir ülkenin ekonomik faaliyetlerini etkileyen tek faktör politik konsept olmamasına rağmen, ekonomi alanında yeni bir alt kol olarak ortaya çıkan politik ekonomi, politikanın ekonomik faaliyetleri etkileyip etkilemediği sorusundan kaynaklanan merakların cevaplandırılması için uğraşmaktadır.

Ekonomi bilimi, kıt kaynaklar ile sonsuz istekler arasındaki ilişkiyi temel alarak, insan davranışlarını inceleyen bir bilim olarak tanımlanırsa; politik iktisat, karar vermenin politik yapısını ortaya koyarak, politikanın toplumdaki ekonomik tercihleri nasıl etkileyeceğini incelemektedir. Toplumu oluşturan birimleri ülkeler ve diğer hükümetlerin yanında firmalar, sosyal gruplar ve diğer organizasyonları da içermektedir. Bu nedenle, politik yapının ve aktörlerin kararları piyasa güçleri içinde kıt kaynakların alternatif kullanımları ve fırsat maliyetleri hakkında sinyaller ortaya koymaktadır. Güç ve otoritenin nasıl elde edildiği ve uygulandığını kolektif karar almak için kullanılan mekanizmanın ne olduğu konusu politik ekonominin odak noktasını teşkil etmektedir (Bakırtaş, 2007:10).

Rusya, 2000 yılından itibaren Soğuk Savaş'ın yorgunluğunu üzerinden atarak Putin Dönemi'nde yeni bir reform sürecine girmiştir. Bu bağlamda; Putin Yönetimi, ülke içerisinde federal yapıyı güçlendirerek siyasi otoriteyi yeniden tesis etmiş, ülke dışında AB, Çin ve İran gibi önemli aktörlerle işbirliğini artırmış, enerji kaynaklarını hem ulusal güvenlik hem de ekonomik gelişmeyi sağlayabilecek ustalıkla kullanarak yeniden etkinliğini artırmıştır (Özkan, 2010:110).

Putin'in dış politika yaklaşımı genel olarak; çıkara dayalı işbirliği ve medeni bir rekabetin olduğu çok kutuplu dünya düzeni içerisinde Rusya'nın yeniden bir dünya gücü haline gelmesi, bu konuda Batı'yla işbirliği yapılırken, pragmatik olarak Avrasya kartının da sıkça kullanılması üzerine kurulmuştur (İşyar, 2004:51). Putin'in dış politikada bu kadar güçlü konuma gelmesinin en önemli sebeplerinden biri iç politikada istikrarı yakalaması olmuştur. Bu çalışma bu istikrarı sağlayan unsurun parlamento temelinde oylama gücü üstünlüğü olduğunu ifade ederek farklı bir anlayış getirmektedir. Bu temelde oylama gücü kavramı, tarihçesi ve oylama gücünün ölçülmesi için sıklıkla kullanılan Banzhaf güç indeksi açıklanmıştır. Ardından Rusya'nın siyasi yapısı ortaya koyularak, parlamento temelli seçimler analiz edilerek oylama güç indeksleri türetilmiştir. Rusya'nın sahip olduğu oylama gücünün Avrasya bölgesi üzerindeki etkinliği tartışılmıştır. Sonuç ve öneriler sunularak çalışma tamamlanmıştır.

2 Oylama Gücü Yaklaşımı

Güç, karar alma sürecinde bir grup veya kişinin diğerleri üzerinde kendi kararının çıkmasına yönelik kullanabileceği artı değerler bütünüdür. Seçim, karar alma sürecinde kişilerin özgür iradeleri doğrultusunda alınacak kararın sonucunu etkileme hakkıdır. İktisatçılara göre oy maksimizasyoncusu davranış sergileyen politikacı, politik bilimcilere göre kişisel güç veya otoritesini maksimize etmeye çalışmaktadır (Bakırtaş, 2007:11). Parlamentoda tek bir partinin hakimiyeti ile oluşturulan hükümetin, bir anlamda tekel gücüne de sahip olduğu ifade edilebilir. Mutlak oylama gücüne sahip bir parti kanunları değiştirme veya yürürlükten kaldırma konusunda tam bir serbestiye sahiptir (Saas, 2001:18).

Politik güç, politik karar alma sürecinin yasal bir sonucu olup muhalefete karşı hükümetin yasama gücü olarak tanımlanabilir. Bu nedenle politik güç, çoğu kez parlamentoda partiler tarafından elde edilen milletvekili sandalye sayıları olarak algılanabilir. Bununla birlikte, oylama mekanizması içerisinde partinin gücü oylama kurallarına, oluşturulan koalisyonlara ve partiler arasında parlamentoda sandalye dağılımlarına göre şekillenmektedir. Bu unsurların hiçbiri tek başına bir partinin oylama gücünü belirlemez (Bakırtaş ve Koyuncu, 2010:23).

Oylama teorisi ve oylama gücü yaklaşımı, önerilen bir durum için karar verme sürecinde farklı konumdaki üyelerine güç indekslerini kullanarak kararları etkileyebilme konusunda farklı etki düzeylerini sağlayan ve üyelerin oylama süreçlerindeki karar güçlerini analiz eden bir yaklaşımdır.

İlk oylama gücü ölçümleri 1780'lere dayanmakta ve Luther Martin tarafından uygulanmıştır. İlk bilimsel tartışma ise 1946 yılında Lionel Penrose tarafından yapılmış, oylama gücü kavramı tanıtılmış ve oylama birimindeki bir katılımcının sonucu etkileme yeteneğinin ölçüsü olarak tanımlanmıştır. 1954 yılında Lloyd S. Shapley ve Martin Shubik günümüzde en sık kullanılan indekslerden biri olan kendi güç indekslerini tanıtmıştır. Penrose'a benzer bir kavram da 1965 yılında John F. Banzhaf ve 1971 yılında James S. Coleman tarafından yapılmıştır. Daha sonra çok sayıda güç indeksi de önerilmiştir (Gambarelli ve Stach, 2009).

Birleşmiş Milletler Güvenlik Konseyi'nde alınacak kararlarda üyelerin karar alma sürecindeki oy güçleri, Dünya Bankası gibi uluslararası ekonomi kuruluşlarında üye ülkelerin kararlarda finansal katkıları kadar oy gücüne sahip olması ve AB'nin genişleme sürecinde oylama prosedürlerinin yeniden düzenlenmesi gibi konular günümüzde güncelliğini tekrar kazanan oylama gücü yaklaşımının uygulama kapsamındadır.

Oylama gücü kavramının arkasındaki önemli fikir, seçmenin belli kriterlere göre hesaplanan oy ağırlığının iyi bir güç ölçüsü olmamasıdır. Dolayısıyla, analizde güç kavramı devreye girmektedir. Oylama teorisinin standart terimlerinden olan koalisyon, herhangi bir oyuncular kümesinin oylamada bir durumu oylarken güçlerini birleştirdikleri yapıdır. Bir koalisyon tarafından kontrol edilen toplam oy sayısı koalisyonun ağırlığı olarak adlandırılır. Bazı koalisyonlar kazanmak için yeterli oya sahipken bazıları yeterli oya sahip değildir. Yeterli oya sahip olan koalisyon kazanan koalisyon olarak adlandırılırken yeterli oya sahip olmayan koalisyon kaybeden koalisyon olarak adlandırılır. Tüm oyuncuları içeren koalisyon ise büyük koalisyon olarak adlandırılır. Büyük koalisyon, tüm oyları kontrol ettiğinden her zaman kazanan koalisyondur. Bir oyuncu koalisyondan ayrıldığında o koalisyon kazanan koalisyon durumundan kaybeden koalisyon durumuna dönüyorsa bu oyuncu ilgili koalisyon için kritik oyuncudur. Kazanan koalisyonlar bir ya da daha fazla kritik oyuncuya sahipken nadiren kritik oyuncu içermeyebilir, kaybeden koalisyon ise hiçbir zaman kritik oyuncu içermez. Eğer bir oyuncunun ağırlığı kota değerine eşit ya da büyükse diktatör olarak adlandırılır ve bir oyunda diktatör varsa diğer oyuncuların oyları hiçbirşey ifade etmez ve güce sahip olmazlar. Diktatör olmayan fakat tek başına bir kararın alınmasını engelleyebilen oyuncu ise veto gücüne sahiptir. Oylama gücü analizini yapabilmek için öncelikle ortaya çıkabilecek tüm koalisyonlar analiz edilir, her bir seçmenin belli kriterler göz önüne alınarak çeşitli algoritmalarla ağırlığı bulunur. Daha sonra güç indeksinin hesaplanabilmesi için kararın geçerli olabilmesini sağlayacak lehte verilmesi gerekli minimum oy sayısı olan kota değeri belirlenir ve kota değerine göre kazanan koalisyonlar bulunur. Son olarak, güç indeksleri yardımıyla her bir oyuncuya ait oylama gücü değerleri belirlenir (Tannenbaum, 2004).

Oy ağırlığı ve oylama gücü kavramları birbirinden farklıdır. Bir oyuncunun oylama ağırlığı olması o oyuncunun oylamada gücünün olduğunu göstermez. Bir oyunda oyuncunun oyu sonucu değiştiriyorsa o oyuncunun gücü vardır. Yani oylama gücü, oy ağırlığına orantılı bir kavram değildir (Kirsch et al., 2004). X, Y ve Z gibi üç partinin olduğu bir örnek ile desteklemek gerekirse, 100 sandalyeli parlamentoda X ve Y partileri 49'ar Z partisi ise 2 sandalyeye sahiptir. Basit çoğunluk kuralı geçerli olması halinde herhangi bir partinin hükümeti kurabilmesi için diğer partilerden biri ile koalisyon kurması gerekir. Partilerin tümü koalisyonu kurabilmek için gerekli olan çoğunluğu sağlama bakımından eşit kritik öneme sahiptir. Bu nedenle, üç partinin oylama gücü %33,3'e eşittir. Görüldüğü gibi büyük partiler için oylama gücü onların oylama ağırlıklarından daha düşükken, küçük partiler için ise oylama gücü oylama ağırlığından daha büyüktür (Reynaud vd. 2007:6).

Oylama gücü analizi ile; bireylerin bir karar üzerinde birbirlerine göre nispi güçlerini hesaplamak, oylama sistemini adil olup olmaması açısından değerlendirmek ve ortalama oy gücünü maksimize etmek, istenen oylama gücü dağılımına ulaşabilmek için ağırlıkları belirlemek ve üyelerin karar alma sürecinde

etkili olabilmek için oluşturdukları koalisyonların yararlarını anlayabilmek amaçlanmaktadır (Gelman vd., 2002).

Belirli bir karar mekanizmasında oylama gücü analizi, üç faktöre bağlı olarak gerçekleştirilir. Bunlar; partiler arasındaki oyların dağılımı, kullanılan karar kuralları ve partilerin koalisyon oluşturma olasılıklarıdır. Oylama güç indeksleriyle gerçek oylama davranışları değil, çeşitli partilerin potansiyel güçleri belirlenir. Partiler, elde edeceği sonuç için tercihlerini 'evet' veya 'hayır' oyu şeklinde kullanarak açıklar. Bu nedenle partilerin oylama gücünün değeri, tercihlerine, uygulanan kotaya, oluşan koalisyon yapısına ve seçim sistemine bağlıdır. (Raunio ve Wiberg, 1998).

2.1 Banzhaf güç indeksi

Sıklıkla kullanılan B.G.İ. kritik oyuncu kuralına dayanmaktadır. N oyunculu bir ağırlıklı oylama sisteminde B.G.İ. hesaplanırken tüm kazanan koalisyonlar ve her bir kazanan koalisyondaki kritik oyuncular belirlenir. Daha sonra tüm oyuncuların kritik olduğu durumların sayısı belirlenir. Pi, i. oyuncu olmak üzere Pi'' nin kritik olduğu durumların sayısı belirlenir. Pi'' nin kritik oyuncu olduğu durumların sayısını tüm oyuncuların kritik olduğu durumların sayısına bölümü ile o oyuncunun B.G.İ. bulunur. Bu işlemler her Pi oyuncusu için yapılırsa B.G.İ. dağılımı bulunur (Tannenbaum, 2004).

Bir karar mekanizmasında, oy dağılımlarına bağlı olarak, her seçmen oluşturulacak koalisyonu etkileyecek mutlak bir güce sahiptir. Bir seçmen oluşturulacak koalisyonun ya kazanan ya da kaybeden tarafında bulunacaktır. Bir karar mekanizmasında herhangi bir seçmenin belirleyici olma olasılığı, sahip olduğu oy sayısından çok az etkilenmektedir. Oylama gücü, ancak seçim sonucunda sahip olunan oy sayılarının meclis içindeki dağılımlarının ölçülmesiyle hesaplanabilir. Bu ölçüm için sıklıkla Banzhaf indeksi kullanılmaktadır (Felsenthal ve Machover, 1998:8-9).

N = {1, 2, . . . i . . . , n} kümesindeki oyuncular göz önüne alındığında, 'i' oyuncusu w_i oylama ağırlığına sahip olmaktadır. Ω, N tarafından oluşturulan tüm muhtemel S koalisyonlar kümesini ifade etmektedir. $S \in \Omega$ biçimindeki bir kazanan koalisyon, q çoğunluk için gerekli olan sınır değerini gösterdiğinde $\sum_{j \in S} w_i \geq q$ ile karakterize edilmektedir. Eğer bir S koalisyonu kazanan koalisyon içerisinde yer alıyorsa, bu koalisyonun 'v' değeri 1 olarak tanımlanır. Bu durumda S oylamanın sonucunu belirleyebilmektedir. Tüm kaybeden koalisyonlar v=0 değerini almaktadır. Oyuncu 'i' kazanan veya kaybeden koalisyonu etkileyebilmektedir. Oyuncu 'i' kazanan koalisyondan çıktığı zaman koalisyon bozulmakta, kaybeden koalisyon içerisine dahil olduğunda kazanan koalisyon şekline dönüşmektedir. Önemli olan oyuncu 'i'nin kazanan veya kaybeden tarafta yer alması değil, dağılımı etkileyecek bir konuma sahip olup olmamasıdır. Bu açıklamalar ışığında mutlak Banzhaf indeksi (Absolute Banzhaf Index) ABI, aşağıda eşitlik'de gösterilmektedir (Huber, 2003:337):

$$\beta_i^* = \frac{\sum_{S \subset \Omega} \left[v(S) - v(S/\{i\}) \right]}{2^{n-1}}$$

2^{n-1} 'i' oyuncusunun dahil olduğu toplam koalisyonların sayısını temsil etmektedir. Normalize edilmiş Banzhaf indeksi, karar alma mekanizmasında tüm oyuncuların belirleyici olma sayısının 'i' oyuncusunun belirleyici olma sayısına oranı şeklinde ifade edilir. Oyuncu 'i'nin normalize edilmiş Banzhaf indeksi (Non-normalized Banzhaf Index) NBI aşağıda eşitlik'te gösterilmektedir (Huber, 2003:337):

$$\beta_i = \frac{\beta_i^*}{\sum_{j=1}^{n} \beta_j^*} = \frac{\sum_{S \subset \Omega} \left[v(S) - v(S/\{i\}) \right]}{\sum_{j=1}^{n} \sum_{S \subset \Omega} \left[v(S) - v(S/\{i\}) \right]}$$

Üç seçmenli ağırlıklandırılmış bir oyunda, A, B ve C seçmenlerinin ağırlıkları sırasıyla 50, 49 ve 1 olmaktadır. Basit oy çokluğu kuralının geçerli olduğu bu oyunda kota 51'dir. Bu karar mekanizmasında oyun [51: 50,49,1] şeklinde ifade edilir. ABI, seçmenlerin belirleyici olma durumlarını belirleyebilmek için tüm olası seçmen kombinasyonları incelenir. 'n' üyeli bir oyunda her zaman 2^n kadar dağılım bulunmaktadır. Bu oyunda $2^3=8$ farklı kombinasyon vardır. kombinasyonlar sırasıyla: A, B, C, **AB**, **AC**, BC, **A**BC, (O)'dır. ABI'da 51 olarak belirlenen kotayı aşan kazanan koalisyon dağılımı ortaya konulur. Bunlar: **AB**, **AC**, **A**BC'dir. Kalın ve altı çizgili seçmenler belirleyici konumda bulunmaktadırlar. Belirleyici seçmenler kazanan koalisyonlardan alınarak koalisyonu kaybeden şekline dönüştürüp dönüştürmediğine bakılarak tespit edilir. Tek tek belirleyici seçmenler tespit edildiğinde bu oyunda kazanan koalisyonlar içinde belirleyici seçmen sayısının beş olduğu görülür. ABI formülünde payda, 'i' seçmenin içinde bulunduğu kazanan veya kaybeden toplam koalisyon sayısını ifade etmektedir. Bu oyunda $2^{3-1}=4$ olur. Daha sonra her seçmenin belirleyici olma sayısı hesaplanır. ABI, her seçmenin belirleyici olma sayısının her seçmenin içinde bulunduğu toplam koalisyon sayısına bölünmesi şeklinde hesaplandığından seçmen A, B ve C'nin ABI değerleri sırasıyla; 3/4, 1/4 ve 1/4'dür. NBI değeri, seçmenlerin belirleyici olma durumlarının, her seçmenlerin belirleyici olma sayısına oranı şeklinde

hesaplanmaktadır. Bu oyunda seçmenlerin belirleyici olma durumu beş olduğundan A, B ve C seçmenlerinin NBI değerleri sırasıyla; 3/5, 1/5 ve 1/5 şeklinde ölçülmektedir (Louzek, 2004:219).

2.2 Rusya'nın Oylama Gücü

1991 yılında Sovyetler Birliği"nin dağılmasıyla bağımsız bir ülke olarak dünya sahnesine çıkan Rusya Federasyonu, bağımsızlığının ilk yıllarında 75 yıl süren Sovyet yönetiminin ardından yeni bir siyasi sistem oluşturulması sürecinin zorluklarını yaşamıştır. Bu dönemde, yönetim kademelerinde baş gösteren görüş ayrılıkları 1993 yılında zirveye çıkmış ve aynı yıl Devlet Başkanı Boris Yeltsin askeri kuvvet kullanarak parlamentonun dağıtılmasını ve seçimlere gidilmesini sağlamıştır. Aralık 1993'teki referandumla kabul edilen yeni anayasa ve seçim sonucunda oluşan ve değişik görüşlerden siyasi partilerin temsil edildiği yeni parlamento, Rus siyasetine istikrar kazandırılması açısından önemli iki adımı temsil etmektedir (Yardımcıoğlu ve Koçarslan, 2012:165).

Devlet Duma'sı ise 4 yılda bir yapılan seçimlerle belirlenmektedir. Duma'nın tarihi 1905 Devrimine kadar uzanmaktadır. 1905'ten sonra kapatılan Duma için, 1917'ye kadar birkaç kez daha yeniden kurulma girişimlerinde bulunulmuştur. 1917'den sonra ilk Duma seçimleri 1993 yılında yapılmıştır.

1993 anayasasına göre Rusya, cumhuriyetle yönetilen, demokratik ve federatif bir hukuk devletidir. Yürütme yetkisi, anayasa tarafından devlet başkanı ve başbakana verilmiştir. Devlet başkanı genel seçimle 4 yıllık bir süre için doğrudan seçilir ve aynı kişi ancak iki kez devlet başkanlığı yapabilirdi. Ancak anayasada yapılan değişiklikle 2012 yılında yapılan seçimle birlikte ilk kez devlet başkanı 6 yıllık bir süre için seçilmiştir (Atasoy, 2008:85).

Dokunulmazlığa sahip olan RF devlet başkanına verilmiş olan bazı yetkiler kendisini yasama organlarının üzerinde bir konuma yerleştirmektedir. Örneğin devlet başkanı, meclisin onayı gerekmeden kanun hükmünde kararnameler çıkartma, belirli şartlar altında Duma"yı dağıtma, Duma"ya yasa taslağı gönderme, gerekli durumlarda kabineyi bütünüyle azletme ve referandum talep etme yetkisine sahiptir. Ayrıca devlet başkanı Duma'nın onayıyla başbakanı atamak ve hükümet toplantılarına başkanlık etmekle sorumludur.

Rusya"nın ilk Devlet Başkanı Boris Yeltsin'dir. Yeltsin, 1999 yılının 31 Aralığı'na kadar bu görevi iki dönem arka arkaya seçilerek yürüttükten sonra yetkilerini Vladimir Putin'e devretmiştir. 26 Mart 2000 tarihinde gerçekleştirilen devlet başkanlığı seçimlerini ilk turda yüzde 53 oyla kazanan Vladimir Putin, dört yıllık görev süresinin bitiminin ardından 2004 yılının Mart ayında yapılan seçimlerde oyların yüzde 71,31'ni alarak ikinci kez devlet başkanlığına seçilmiştir. Putin, görevdeki ikinci dönemini 2008 yılı başında tamamlayarak başkanlığı, Mart 2008 tarihinde gerçekleştirilen Başkanlık seçimlerini kazanan Dmitriy Medvedev'e devretmiştir. Medvedev yeni görevine 7 Mayıs 2008 tarihi itibariyle başlamıştır. 15 Nisan 2008'de Birleşik Rusya Partisi başına geçen Putin ise 8 Mayıs 2008"de Başbakanlık görevini üstlenmiştir. 4 Mart 2012 tarihinde yapılan seçimler sonucu % 63,6 oyla Rusya Federasyonu'na 3. kez devlet başkanı seçilmiştir (Başbuğ, 2008).

Rusya"da yürütme gücünün diğer bir ayağı da hükümettedir. Rusya hükümeti, başbakan, başbakan yardımcıları ve federal bakanlardan oluşur. Başbakan, görevine devlet başkanı tarafından Devlet Duması'nın onayıyla atanır. Başbakan atandıktan sonra en geç bir hafta içinde federal yürütme organlarının yapısı hakkındaki önerileri ile başbakan yardımcıları ve federal bakanların isimlerini devlet başkanına sunar.

Hükümetin, federal bütçenin belirlenmesi, finans, kredi ve para politikalarının uygulanması, sosyal, yardım, sağlık, kültür, bilim gibi alanlarda uygun devlet politikasının izlenmesi ve ülke savunması ile devlet güvenliğinin sağlanması gibi görevleri vardır. Bu bağlamda, Rusya"da hükümetin, ağırlıklı olarak ekonomik yönetim organı olduğu söylenebilir. Rusya"da aynı zamanda Anayasa Mahkemesi, Yargıtay, Danıştay, Sayıştay gibi yargı ve yürütme alanında kurulmuş anayasal devlet kurumları da bulunmaktadır.

Bu kurumlara ek olarak Eylül 2000 tarihinde Devlet Başkanlığı'na bağlı olarak kurulan Devlet Konseyi de danışma organı olarak faaliyet göstermektedir. Genellikle 3 ayda bir toplanan Konsey"de devlet yapılanması, federatif, siyasi, ekonomik ve sosyal konular görüşülmektedir. Federal Meclis ise Rusya'nın parlamentosu, temsil ve yasama organıdır. Federal Meclis"in iki kanadı vardır: Federasyon Konseyi (üst meclis) ve Devlet Duması (alt meclis). Yasama yetkisine sahip olan 628 sandalyeli parlamento (Federal Meclis), 450 sandalyeli alt kanat Devlet Konseyi (Duma) ve 178 sandalyeli Federasyon Konseyi'nden oluşmaktadır.

Federasyon Konseyi'nde Rusya Federasyonu'na dahil olan 89 idari birimden ikişer kişi olmak üzere toplam 178 üye bulunur. Federasyon Konseyi danışma ve temsil özelliği ağır basan bir senato görünümündedir. Ancak son yıllarda öneminin azaldığı bir gerçektir. Devlet Duması ise 4 yılda bir yapılan genel seçimlerle belirlenen 450 milletvekilinden oluşmaktadır. Milletvekilleri belirli bir partiden veya bağımsız olarak seçilebilmektedir.

Federal Konsey ve Devlet Duması'nın görev alanları birbirinden farklıdır. Hatta çalışma yerleri de birbirinden farklı yerdedir. Duma'dan basit çoğunlukla geçen yasaların yürürlüğe girebilmesi için Federal Konsey tarafından onaylanmaları gerekir. Buna karşın, Duma, üçte iki çoğunluğu yakaladığı takdirde, Federal Konsey'in vetosunu geri çevirebilme yetkisine sahip olduğu gibi, Anayasa değişimleri de önerebilmektedir. Aynı şekilde, Başkan Putin'in vetosunu üçte iki çoğunlukla reddedebilir; önerdiği başbakan adayını da onaylamayabilir; Hatta, Başkan'ın görevine son verilmesini de talep edebilir (Shukurov, 2003).

Tablo 2: Rusya Genel Seçim Sonuçlarının NBI Dağılımı

Başkan Putin, Duma'nın üçte ikisini oluşturan Birleşik Rusya Partisi'nin tam desteğine sahip olduğundan Komünist Parti dışında parlamentoda iktidara muhalefet edebilecek veya istenilen yasaların çıkmasını engelleyecek bir siyasi parti veya grup bulunmamaktadır. Dolayısıyla da Putin reformlarına yasama organından bir engelleme çıkması mümkün olmamaktadır. Bu nedenle Rusya'da demokratik hayat ve parlamentonun istikrar içinde çalışması Batı'daki anlamda tam olarak mümkün olamamaktadır. Rusya'da demokrasi geleneği ve siyasi uzlaşının oturması zaman almaktadır (Uslubaş, 2005, s. 120).

3   Rusya'nın Oylama Gücünün Avrasya Bölgesi Üzerindeki Etkisi

Vladimir Putin'in bir dönem ara verdikten sonra tekrar Rusya devlet başkanlığı koltuğuna oturmasıyla "Rus İmparatorluk stratejisinin" yeniden vücut bulduğu görüşleri sık sık uluslararası basında yer almış, Başkan Putin, Rusya'nın yaşam sahasının Avrasya coğrafyası üzerinde yer aldığı görüşünde olduğu görülmektedir. Rusya'nın Avrasya politikası çerçevesinde amacı, hem Sovyet bloğu ülkeleri üzerindeki etkisini yeniden tesis etmek, hem de özellikle Akdeniz ve Hazar Havzası'nda varlığına tehdit oluşturabilecek faktörleri bertaraf edebilmektir.

Rusya'nın toparlanma döneminin Vladimir Putin'in 2000 yılında iktidara gelmesiyle başladığı söylenebilir. Nitekim ilk on yıllık süreçteki Yeltsin iktidarı döneminde iç istikrarsızlık derinleşmiş ve ülkede yeniden güvenliğin tesis edilmesinin oldukça zor olduğu algısı yerleşmiştir. Bu nedenle 1990-2000 yıllarını belirsizlik dönemi olarak görmek mümkündür. Putin, Rusya'nın ilk on yılda geçirdiği belirsizlik döneminin ardından iç istikrardaki zafiyetin dış politikayı da etkilediğini görmüştür. Putin, kısa zamanda ilk on yılda oluşmuş oligarşiyi denetimini altına almış, Kuzey Kafkasya bölgesinde Çeçenistan, Dağıstan ve diğer özerk yönetimlerde yerli elitler ile ortak dil oluşturup, güvenliği sağlayabilmiştir. Putin iktidarı, ülke ekonomisini petrol ve gaz ihracatı ile ayağa kaldırmış ancak ülkedeki birçok ekonomik sorunu çözememiştir. Rusya Federasyonu'nda genel Petersburg ve Moskova bölgeleri yani ülkenin batı kısmı gelişmiş durumdadır. Diğer bölgelerin ekonomik durumu daha geridedir.

Yakın gelecekte, Avrasya bölgesinin ekonomik ve siyasi gelişmeyle birlikte rekabet alanı olacağı beklenmektedir. Rusya kendisinin "yumuşak karnı" olarak adlandırdığı Orta Asya'da ve "arka bahçesi" olarak adlandırdığı Kafkasya bölgelerinde ABD, AB, İngiltere, Çin, Hindistan ve Türkiye ile rekabete girmektedir. Bu rekabetin Avrupa bölgesindeki rekabetten ve denge politikasından daha sert bir kıvamda seyredeceğini fark eden Kremlin, Asya'daki rekabet ve denge oyununa hazırlıksız yakalanmaktan endişe etmektedir.

Rusya'nın "arka bahçesi" olarak nitelendirdiği eski Sovyet ülkelerini de içine alan "Avrasya Birliği Projesi" Moskova'nın önderliğinde şekil almaya başlamıştır. Başkan Putin'in yaptığı son açıklamaya göre, Avrasya Birliği için taslak anlaşmasının Mayıs 2014 yılına kadar hazır olması beklenmektedir. Bu perspektiften hareketle Rusya'nın yeni dış politika vizyonu değerlendirildiğinde Moskova, global ölçekte istikrarsızlığın arttığı bir dönemde dengeleyici ve barış tedarikçisi misyonuna sahip olmak isteyecektir. Artık Birleşmiş Milletler

Rusya'nın bakış açısına göre küresel sorunlara çare bulmada son derece "aciz" kalmaktadır. Bunun en somut örneği ise BM'nin Batılı güçlerin bazı ülkelerin uluslararası hukuku çiğneyerek müdahale bulunması karşısında yaptırım uygulayamamasıdır. Rusya'nın yeni dış politika penceresinde ülkeler birbirlerine ekonomik ve siyasal olarak daha bağımlı, dolayısıyla da tek başlarına güvenlik ağı oluşturamayacak kadar yetersiz kalmaktadır.

Rusya, tek kutuplu dünya düzeninin 2008'de ABD'de ve AB'de başlayan ekonomik kriz ve Çin'in yükselişinden sonra devam edemeyeceğini anlamış, Avrupa'da kendi denge politikasını kurarak arka planda güçlenmeyi ve küresel bir güç olarak kabul edilmeyi hedeflemiştir.

Moskova bu nedenle yakın gelecekte oluşabilecek tehditleri önlemek maksadıyla eski etki alanlarında kısa zamanda ekonomik bir birlik kurmayı hedeflemektedir. Rusya böylece AB benzeri bir sistemle merkezi Avrasya bölgesinde yeniden toparlanma politikasını yürürlüğe koymayı amaçlamaktadır. Rusya tasarladığı bu birliği Avrasya Birliği biçiminde tanımlamaktadır. Eski Sovyet ülkelerini kendi çevresinde toparlamayı amaçlayan Moskova, ilk olarak 2012 yılında Kazakistan ve Beyaz Rusya ile gümrük birliği anlaşması imzalamıştır (Kokoshin, 2006:108).

Putin, SSCB'nin dağılmasını "çağın en büyük felaketi" olarak gören ve uluslararası sistemik yapının "çok kutupluluk" çerçevesinde düzenlenmesini arzulayan bir isim olarak ön plana çıkmaktadır. Bu çerçevede, Putin'in, Avro-Atlantik Dünyası'nın sistemsel hâkimiyetine karşı çıkan en önemli aktör olduğu söylenebilir. Ne var ki, Putin oldukça gerçekçi bir liderdir. Ülkesinin ABD ve Çin'in sahip olduğu askeri, siyasal ve ekonomik olanaklar ile AB'nin uhdesinde bulundurduğu "yumuşak güç" unsuruna karşı koyamayacağını bildiğinden, mevcut konjonktürde, kendi ulusal çıkarlarına tamamıyla aykırı bir girişim yaşanmadıkça, ABD, Çin ve AB ile doğrudan bir mücadele içerisine girmemekte ve savunmacı realist bir dış politika anlayışı çerçevesinde hareket etmektedir. Konu Rusya'nın kendi siyasal ve ekonomik kontrolünde olması gerektiğine inandığı Avrasya coğrafyası olduğunda ise, Rusya'nın yaklaşımı farklılaşmakta ve bu ülke, gerektiği an saldırgan realizme kayabilmektedir. 2008 yılında yaşanan Rusya-Gürcistan Savaşı, bu durumun en önemli göstergesidir. Bu durum, Rusya'nın "arka bahçesi" olarak gördüğü eski SSCB topraklarını siyasal kontrolü altında tutmak istemesi ile ilgilidir. Siyasal realizm, Rus milliyetçiliği ve imparatorluk stratejisi ile tarihsel ve sosyo-kültürel unsurların birleşimi doğrultusunda oluşturulmuş Avrasyacılık doktrini ise, Rusya'nın dayandığı en önemli kuramsal boyut olmaktadır. Nitekim bu doktrinin öngördüğü "yakın çevre politikası", Rusya'nın, eski SSCB topraklarını yeniden kontrolü altına alması gerektiğini belirtmektedir. Vladimir Putin, Rusya'nın yakın çevresi üzerinde sağlayacağı siyasal, askeri ve ekonomik kontrol ile çok kutuplu sistemik yapının önemli bir aktörü haline geleceğine inanmaktadır.

Vladimir Putin'e göre Avrasya Birliği, Rusya-Kazakistan-Belarus arasında kurulmuş olan ve Ocak 2012 itibarıyla ortak ekonomik alana dönüşen gümrük birliğinin, başta diğer Orta Asya ülkeleri olmak üzere, Avrasya coğrafyasında yer alan ve birliğe katılmak isteyen tüm ülkeleri içerecek bir ekonomik entegrasyona dönüşmesidir. Putin, bu işbirliği bağlamında, üye ülkeler arasındaki mali ve ekonomik politikaların koordinasyonunun sağlanabileceğini ve orta vadede ortak para biriminin kullanıma girebileceğini belirtmektedir. Görüleceği üzere, Avrasya Birliği Projesi daha çok bir ekonomik entegrasyon örneği olarak planlanmaktadır. Ne var ki, Rusya'nın bu projeyi ortaya koymaktaki asıl amacı, eski Sovyet coğrafyasını yeniden kendi etkisi altına alabilmek ve böylece diğer küresel ve bölgesel güç odaklarına karşı sistemik gücünü arttırabilmektir. Nitekim Putin'in öngördüğü bu ekonomi eksenli işbirliği girişimi, zaman içerisinde kurumsallaşarak ve gerekli bürokratik yapılanmayı da gerçekleştirerek, geniş çaplı ve stratejik öneme haiz bir siyasal entegrasyon hareketi haline getirilebilir. Rus liderin ortaya attığı Avrasya Birliği Projesi'nin kurumsal manada kendisine örnek alacağı en önemli unsur da, kuşkusuz, AB olacaktır.

Avrasya Birliği Projesi, başarılı olması halinde, bölgedeki siyasal ve ekonomik sorunlardan kaynaklanan istikrarsızlığı ortadan kaldırabilecektir. Ne var ki, bu projenin hayata geçirilmesi, başta ABD ve Çin olmak üzere küresel ve bölgesel aktörlerin kendi politikaları ile uyumlaşmamaktadır. Zira, Avrasya Birliği Projesi'nin odaklandığı Orta Asya-Hazar-Karadeniz Havzası ekseni; sahip olduğu enerji kaynakları, enerji ulaştırma projelerindeki rolü, ekonomik ve ticari potansiyeli ve demografik yapısı ile dünyanın siyasal geleceğine yön verebilecek en önemli coğrafi bölümlenmedir. Avrasya Birliği'nin başarısı ekseninde, Rusya'nın bölge bağlamındaki gücü ve etkinliği artacağı ve ABD, Çin, Hindistan gibi ülkelerin sistemik güç algılarında önemli bir değişim yaşanacağı için, bu projenin diğer küresel/bölgesel aktörler tarafından kabul edilmeyeceği ortadadır. Yeniden başkanlık koltuğuna oturan Putin, hem kendi siyasal geleceğine olumlu katkıda bulunacak hem de Rusya'nın küresel dengelerdeki rolünü güçlendirecek Avrasya Birliği Projesi'ne sıkı sıkıya sarılmış durumdadır.

4 Sonuç

Rusya gerçek egemenliği sağlamak için önemli adımlar atmakta; iç güvenliğini sağlamakta, dış borcunu ödemekte, Çin ve Hindistan gibi önde gelen ülkelerle karşılıklı çıkarlara dayalı ilişkiler kurmakta, ülkenin savunma kabiliyetini geliştirmektedir. Ruslara göre gerçek egemenlik ve egemen demokrasinin iki temeli

bulunmaktadır; ülkenin uluslararası toplum içindeki yerini sağlamlaştıracak şekilde siyasi ve ekonomik kalkınma.

Rusya, Ukrayna'daki Turuncu devrim ile birlikte önce kendi evini düzenlemeye karar verdi. İdeoloji olarak egemen demokrasi batının anladığı biçimde olacak ama gerçek farklı olacaktı. Hukukun üstünlüğü, azınlıkların korunması, özgür basın, politik muhalefet, mülkiyet hakları gibi hususlar batılıların istediği gibi düşünülmüyordu.

Sovyetler Birliği'nin dağılmasından sonra Rusya'nın yeniden Avrasya bölgesinde bir güç olabileceği öngörülmektedir. Ancak Rusya'nın bu kapasiteye sahip olup olmadığı dünya kamuoyunda tartışılmaktadır. Bundan dolayı, Rusya'nın son 20 yıl sürecinde yaşadığı iç ve dış kaynaklı gelişmelerin değerlendirilmesi gerekmektedir.

Rusya'nın oylama gücü literatürde yaygın olarak kullanılan Normalize Edilmiş Banzhaf İndeksi ile her seçim dönemi için ayrı ayrı hesaplanmıştır. Ölçümlenen oylama gücü doğrultusunda günümüz Rusya'sının Avrasya ülkeleri üzerindeki hakimiyetinin etkisi analiz edilmiştir. Analiz yapılırken politik iktisat disiplini içerisinde kalmaya özen gösterilmiştir. Analiz sonucunda Rusya'nın oylama gücünün artışı ile ekonomik istikrarı arasında doğrusal bir ilişki olduğu ve Avrasya ülkeleri üzerindeki etkinliğinin bu ilişki doğrultusunda giderek arttığı sonucuna ulaşılmıştır. Bu çalışmayı diğer çalışmalardan ayıran en önemli özellik; Rusya'nın Avrasya ülkeleri üzerindeki etkinliğinin kültürel, tarihsel, sosyal faktörlerinin yanı sıra politik iktisat literatürü kapsamında oylama gücü perspektifinden bakılarak ekonomi politiğinin yapılmasıdır.

Türk Hukuk Sisteminde Tahkim Mevzuatı
Arbitration Rules in Turkish Legal System

Ahmet Tuncay (Turkish Supreme Court, Turkey)

Abstract

International companies, with the countries having the relations of commerce and investment, would refer to go to arbitrators, which is completely based upon their free will, to remove or minimise the risks in their own legal systems, to provide the disputes resolve fast and effective way, during the resolution of disputes. Also in our country, to provide the improvement of the international commerce and to promote investment of foreign and local corporation, according to the national and international arbitration legal regulations are made and international agreements are signed by taking notice of the international arbitration rules. Under the title of this, Turkish legal system of the arbitration rules will be researched in details.

1 Tahkim Kavramı

Genel olarak kişiler arasındaki uyuşmazlıkların çözüm yeri mahkemelerdir. Ancak taraflar özel hukuka ilişkin uyuşmazlıklarının, serbest iradeleri ile aralarında yapacakları anlaşma yoluyla mahkemeler dışında tahkim yoluyla çözümünü kararlaştırabilirler.

Bir hak üzerinde uyuşmazlığa düşmüş olan iki tarafın bu uyuşmazlığın çözümlenmesini özel kişi veya kişiler tarafından incelenip karara bağlanması konusunda anlaşma yapmalarına tahkim denir.

Uyuşmazlığın çözümlenmesi işi kendilerine bırakılan bu özel kişi veya kişilere ise hakem denir.

Taraflar uyuşmazlığın çözümü konusunda hakemlerin verecekleri karara önceden razı olurlar, hakemler de uyuşmazlık hakkında mahkemeler gibi yargılama yaparak karar verirler. Bu nedenle hakemlere hakem mahkemesi de denilmektedir.

2 Tahkim Türleri

Tahkim birçok açıdan sınıflandırılabilir.

2.1 İhtiyari Tahkim-Zorunlu Tahkim

İhtiyari tahkim tarafların rızaları ile başvurdukları bir tahkim yoludur. Burada taraflar uyuşmazlığın çözümlenmesi için hakeme başvurmak zorunda değildirler. Ancak taraflar aralarında tahkim sözleşmesi yaparak çıkabilecek hukuki uyuşmazlıkların hakem veya hakemler aracılığıyla çözümlenmesini kararlaştırabilirler.

Hukuk Muhakemeleri Kanunu (HMK) ve Milletlerarası Tahkim Kanunu'nda (MTK) yapılan düzenlemeler ihtiyari tahkime yöneliktir.

Zorunlu tahkimde taraflar arasında ortaya çıkabilecek özel hukuk alanındaki uyuşmazlıkların önceden tahkim sözleşmesi yapılmamasına rağmen kanun gereği uyuşmazlığın çözümlenmesi için hakeme başvurmak zorunludur.

Zorunlu tahkime örnek olarak 3533 sayılı Umumi, Mülhak ve Hususi Bütçelerle İdare Edilen Daireler ve Belediyelerle Sermayesinin Tamamı Devlete veya Hususi İdarelere Ait Daire ve Müesseseler Arasındaki İhtilafların Tahkim Yolu ile Halli hakkında Kanun'u verebiliriz.

2.2 İç Tahkim-Dış Tahkim

İç tahkim-dış tahkim ayrımında esas alınacak ölçüt toprak ve hukuk sistemi kriteridir.

HMK'da düzenlenen iç tahkimdir. Yabancılık unsuru içeren uluslararası nitelikli sözleşmelerden kaynaklanan uyuşmazlıklarda ise MTK'u uygulanmaktadır.

Dış tahkimden kastedilen aslında milletlerarası tahkimdir. Dış tahkimde tahkim usulünü milletlerarası mevzuat hükümleri belirlemektedir.

Türk hukukunda milletlerarası tahkime yönelik düzenlemeler, Milletlerarası Özel Hukuk ve Usul Hukuku Hakkında Kanun (MÖHUK), Milletler Arası Tahkim Kanunu, 4501 sayılı Kamu Hizmetleri ile ilgili İmtiyaz Şartlaşma ve Sözleşmelerinden Doğan Uyuşmazlıklarda Tahkim Yoluna Başvurulması Halinde Uyulması Gereken İlkelere Dair Kanun'dur.

2.3 Ad Hoc Tahkim-Kurumsal Tahkim

Ad Hoc tahkim taraflar arasındaki hukuki uyuşmazlığa konu olayın çözümlenmesi amacıyla tarafların hakemleri, tahkim yerini, tahkim usulünü ve uyuşmazlığa uygulanacak maddi hukuk kurallarını serbestçe kendi iradeleriyle belirledikleri hiçbir örgütün aracılığının söz konusu olmadığı tahkim türüdür.

Ad Hoc tahkimin ilk düzenlenişi 1961 tarihli Avrupa Milletlerarası Ticari Tahkim Sözleşmesi ile olmuştur. Daha sonra Birleşmiş Milletlerin Milletlerarası Ticaret Hukuku Komisyonu (UNCITRAL) tarafından 15 Aralık 1976 tarihinde hazırlanan modern kurallar Genel Kurulca kabul edilmiştir.

Kurumsal tahkimde daimi bir hakem kuruluşunun idaresi ve onun önceden hazırlanmış kuralları bulunmaktadır. Taraflarca sözleşmede düzenlenmemiş hususlar kurumun kurallarına göre yönetilmektedir.

Bu tahkim kuruluşlarına örnek olarak;

- Milletlerarası Ticaret Odası (International Chamber Of Comberce-ICC)
- Londra Uluslar arası Tahkim Divanı (London Court Of International Arbitration-LCIA)
- Amerikan Tahkim Kurumu (American Arbitration-AAA)
- Tahkim Hakemleri Kurumu (Chartered Institute Of Arbitrators)

gösterilebilir.

3 Anayasal Düzenleme

Tahkimle ilgili düzenlemeye Anayasa'nın 125.maddesinde yer verilmiştir.

13.08.1999 tarih 4446 sayılı Kanun'un 2.maddesiyle eklenen hükümle, kamu hizmetleri ile ilgili imtiyaz şartlaşma ve sözleşmelerinde bunlardan doğan uyuşmazlıkların milli ve milletlerarası tahkim yolu ile çözülmesi öngörülmüş, milletlerarası tahkimin söz konusu olabilmesi için yabancılık unsur öğesinin bulunması koşulu aranmıştır.

Bu düzenleme ile bu tür sözleşmelerden doğacak olan uyuşmazlıkların çözümünün Danıştay'ın görev alanından çıkartılarak uyuşmazlıkların tahkim yoluyla giderilmesine imkan tanınmıştır.

4 4501 Sayılı Kamu Hizmetleri ile İlgili İmtiyaz Şartlaşma ve Sözleşmelerinden Doğan Uyuşmazlıklarda Tahkim Yoluna Başvurulması Halinde Uyulması Gereken İlkelere Dair Kanun

4466 sayılı Kanun'la yapılan Anayasa değişikliği doğrultusunda bu değişikliğe paralel olarak bu kanun çıkarılmıştır.

4501 sayılı Kanun 22.01.2000 tarihinde yürürlüğe girmiştir.

Kanunun amacı kamu hizmetleri ile ilgili imtiyaz, şartlaşma ve sözleşmelerinde bunlardan doğan uyuşmazlıkların tahkim yoluyla çözülmesinin öngörülmesi durumunda taraflarca sözleşme yapılırken uyulması gereken ilke ve esasları belirlenebilir.

5 Milletlerarası Özel Hukuk Usul Hukuku Hakkında Kanun (MÖHUK)

1982 yılında yürürlüğe giren 2675 sayılı MÖHUK yabancı hakem kararlarının tenfizine ilişkin özel hükümler getirmişti. MÖHUK'nun ilgili maddeleri 1958 tarihli Yabancı Hakem Kararlarının Tanınması ve Tenfizi Hakkındaki Newyork Sözleşmesi hükümleri kaynak alınarak düzenlenmiştir.

04.12.2007 tarihinde yürürlüğe giren 5718 sayılı MÖHUK'nun 64/1 maddesi ile söz konusu kanun yürürlükten kaldırılmıştır.

Yabancı hakem kararlarının tenfizi anılan kanunun 60-63 maddeleri arasında düzenlenmiştir.

6 Hukuk Muhakemeleri Kanunu

1086 sayılı Hukuk Usulü Muhakemeleri Kanunun yürürlükte olduğu dönemde iç tahkim HMUK md. 516-536 arasında düzenlenmiştir. HMUK'nun uygulandığı dönemde milletlerarası tahkim kuralları ile iç tahkime yönelik hükümler arasında önemli farklılıklar vardı. 6100 sayılı Hukuk Muhakemeleri Kanunun düzenlenmesinde UNCITRAL model kanunu esas alınmış Milletlerarası Tahkim Kanunu ile paralellik sağlanarak tahkime ilişkin iki düzenleme arasındaki farklılıkların giderilmesi amaçlanmıştır.

6100 Sayılı HMK 01.10.2011 tarihinde yürürlüğe girmiş olması nedeniyle bu konudaki tahkim ile ilgili düzenlemeler genel olarak açıklanacaktır.

6100 sayılı HMK'unda tahkime ilişkin hükümler 407-444 maddelerde düzenlenmiştir.

6.1 Tahkimin Uygulama Alanı (HMK md. 407)

HMK md. 407'ye göre tahkimin uygulanma alanı bulabilmesi için uyuşmazlığın yabancılık unsuru içermemesi ve tahkim yerinin Türkiye olarak belirlenmesi gerekir.

Bu maddeyle milli tahkim açısından toprak ilkesi kabul edilmiştir.

6.2 Tahkime Elverişlilik (HMK md. 408)

Tahkim sözleşmesi tarafların iradesine tabi olan uyuşmazlıklar için mümkündür. Tarafların dava konusu üzerinde serbestçe tasarruf edemeyecekleri durumlarda örneğin boşanma, medeni hal, soy bağı gibi davalarda tahkim sözleşmesi yapılamaz.

Ayrıca taşınmaz mallar üzerindeki ayni haklara ilişkin uyuşmazlıklar da tahkime elverişli değildir.

6.3 Tahkim Sözleşmesinin Şekli

Tahkim sözleşmesinin yazılı şekilde yapılması gerekir. Yazılı şekil ispat şartı olmayıp geçerlilik şartıdır.

Yazılı şekil şartının yerine getirilmiş sayılması için tahkim sözleşmesinin tarafların imzaladığı yazılı bir belgeye veya taraflar arasında teati edilen mektup, telgraf, teleks, faks gibi iletişim aracına veya elektronik ortama geçirilmiş olması ya da dava dilekçesinde yazılı bir tahkim varlığının iddia edilmesine davalının verdiği cevap dilekçesinde itiraz etmemiş olması yeterlidir. Aslı sözleşmenin bir parçası haline getirilmek amacıyla tahkim şartı içeren bir belgeye yollama yapılması halinde de tahkim sözleşmesi yapılmış sayılır.

6.4 Hakem Sözleşmesi

Hakem sözleşmesi taraflar ile hakem veya hakemler arasında yapılır. Bu sözleşme tahkim sözleşmesinden farklı olarak özellikle borçlar hukukuna tabi bir sözleşme olup vekalet veya hizmet sözleşmesi niteliğindedir.

Hakem sözleşmesi ile hakemler uyuşmazlığı çözümlemek görevini üstlenirler. Taraflar ise bunun karşılığında hakemlere bir ücret ödemeyi kararlaştırırlar.

6.5 Hakemlerin Seçimi

Taraflar hakem seçim usulünü kararlaştırmakta serbesttirler. Taraflar aksini kararlaştırmadıkça ancak gerçek kişiler hakem seçilebilir. Taraflar hakeminin sayısını belirlemekte serbesttirler. Ancak bu sayı tek olmalıdır. Hakemlerin sayısı taraflarca kararlaştırılmamışsa üç hakem seçilir.

Tek hakem seçilecek ise tarafların anlaşamamaları halinde tarafların birinin talebi üzerine hakem mahkemece seçilir.

Üç hakem seçilecek ise taraflardan her biri bir hakem seçer, bu şekilde seçilen iki hakem üçüncü hakemi bizzat belirler. Taraflardan birisi süresinde kendi hakemini seçmezse veya tarafların seçtiği iki hakem süresinde üçüncü hakemi belirleyemezse taraflardan birinin talebi üzerine üçüncü hakem mahkemece seçilir, bu hakem başkan olarak görev yapar.

6.6 İhtiyati Tedbir ve Delil Tespiti

HMK'ya yeni eklenen hükümlerden bir tanesidir.

Taraflarca aksi kararlaştırılmadıkça tahkim yargılaması sırasında hakem veya hakem kurulu taraflardan birinin talebi üzerine bir ihtiyati tedbirin alınmasına veya delil tespitine karar verilebilir. (md. 414/1)

Hakemlerin icra organları üzerinde etkisi olamayacağından verilen tedbir kararının icra edilebilirliği yetkisi geçerli bir tahkim sözleşmesinin var olması kaydıyla mahkemeye tanınmıştır.

Mahkemenin verdiği ihtiyati tedbir kararı hakem veya hakem kurulunca değiştirilebilir veya ortadan kaldırabilir.

6.7 Tahkim Yargılama Usulü

Taraflar hakemlerin uygulayacağı yargılama usulüne ilişkin kuralları kanunun emredici hükümleri saklı kalmak kaydıyla serbestçe kararlaştırabilirler veya tahkim kurallarına yollama yaparak belirleyebilirler.

Taraflar arasında böyle bir sözleşme yoksa hakem veya hakem kurulu tahkim yargılamasını HMK'nun 407-444'ncü maddeleri hükümlerini gözeterek uygun bulduğu şekilde yürütür.

Hakemler HMK'ya göre tahkikat yapabilecekleri gibi belirleyecekleri başka bir yargılama usulünün de uygulanmasına da karar verilebilirler.

Tahkim yeri taraflarca veya onların seçtiği bir tahkim kurumunca serbestçe kararlaştırılabilir.

HMUK'unda 6 ay olan tahkim süresi HMK'da MTK m 10/B'ye paralel olacak şekilde 1 yıl olarak düzenlenmiştir. Taraflar tahkim süresini uzatabildikleri gibi taraflardan birinin başvurusu üzerine mahkemece de süre uzatılabilir.

HMUK 533. maddesi hükmü yürürlükten kaldırıldığından artık hakem kararlarının temyizi mümkün değildir. Hakem kararına karşı yalnızca tahkim yerindeki mahkemede iptal davası açılabilir. İptal sebepleri HMK'nun 439/3 fıkrasında sınırlı olarak sayılmıştır.

Kesinleşmiş hakem kararlarına karşı m. 443 uyarınca yargılamanın iadesi yoluna gidilebilir. Yargılama iadesi sebepleri 443. maddede sınırlı olarak sayılmıştır.

7 Milletlerarası Tahkim Kanunu

Milletlerarası Tahkim Kanunun taslak çalışmaları 1997 yılında Banka ve Ticaret Hukuku Araştırma Enstitüsünce başlatılmış, UNCITRAL model kanunu ve İsviçre Devletler Özel Hukuku Kanunu'nun milletlerarası tahkime ilişkin hükümlerinden esinlenerek hazırlanmıştır. 21.06.2001 tarihinde kabul edilen 4686 sayılı kanun 05.07.2001 tarihinde yürürlüğe girmiştir.

7.1 Kanunun Amacı ve Uygulama Alanı

Kanunun amacı milletlerarası tahkime ilişkin usul ve esasları düzenlemektedir. Buna göre milletlerarası tahkim 4686 sayılı MTK'ya, iç tahkim ise 6100 sayılı HMK'ya tabi olacaktır.

Kanunun uygulama alana yabancılık unsuru taşıyan ve tahkim yerinin Türkiye olarak belirlendiği veya bu kanun hükümlerinin taraflar veyahut hakem veya hakem kurulunca seçildiği uyuşmazlıklar girmektedir.

Uyuşmazlığın hangi hallerde yabancılık unsuru taşıdığı kanunun 2. maddesinde sayılmıştır.

"1.Tahkim anlaşmasının taraflarının yerleşim yeri veya olağan oturma yerinin ya da işyerlerinin ayrı devletlerde bulunması

2.Tarafların yerleşim yeri, olağan oturma yeri veya işyerlerinin;

a)Tahkim anlaşmasında belirtilen veya bu anlaşmaya dayanarak tespit edilen hallerde tahkim yerinden,

b)Asıl sözleşmeden doğan yükümlülüklerin önemli bir bölümünün ifa edileceği yerden veya uyuşmazlık konusunun en çok bağlantılı olduğu yerden,

Başka bir devlette bulunması,

3)Tahkim anlaşmasının dayanağını oluşturan asıl sözleşmeye taraf olan şirket ortaklarından en az birinin yabancı sermayeyi teşvik mevzuatına göre yabancı sermaye getirmiş olması veya bu sözleşmenin uygulanabilmesi için yurt dışından sermaye sağlanması amacıyla kredi ve/veya güvence sözleşmeleri yapılmasının gerekli olması

4)Tahkim anlaşmasının dayanağını oluşturan asıl sözleşme veya hukuki ilişkinin, bir ülkeden diğerine sermaye veya mal geçişini gerçekleştirmesi."

Uyuşmazlık yabancılık unsuru taşımasa da tahkim yeri Türkiye olarak belirlenmemiş ise de taraflar uyuşmazlıkların çözümü için MTK'nun uygulanabileceğini kararlaştırabilirler.

7.2 Kanunun Uygulama Alanı Dışında Kalan Uyuşmazlıklar

Kanunun 1. maddesi uyarınca;

- Türkiye'de bulunan taşınmaz mallar üzerindeki ayni haklara ilişkin uyuşmazlıklar
- Tarafların iradelerine tabi olmayan uyuşmazlıklar
- Türkiye'nin taraf olduğu milletlerarası anlaşma hükümlerinin saklı tutulması,

7.3 Tahkim Sözleşmesi

Tahkim sözleşmesi asıl sözleşmeye konan bir tahkim şartı veya müstakil bir sözleşme şeklinde yapılabilir.

Tahkim sözleşmesinin yazılı olarak yapılması gerekir. Bu bir ispat şartı değil, geçerlilik şartıdır.

Yazılı şekil şartının hangi hallerde yerine getirmiş sayılacağı kanunun 4/2 nci maddesinde belirtilmiştir.

Bu düzenleme 6100 sayılı HMK'daki tahkim sözleşmesine ilişkin hükme paralel bir düzenlemedir.

Hakemlerin seçimin usulü, tahkim süresi , kanun yoluna başvurma, ihtiyati tedbir ve ihtiyati hacze başvurma halleri 6100 sayılı HMK hükümlerine benzer düzenlemeler içermektedir.

8 Milletlerarası Tahkime İlişkin Sözleşmeler

8.1 Newyork Sözleşmesi

10 Haziran 1958 tarihli Yabancı Hakem Kararlarının Tanınması ve Tenfizi Hakkında New York Konvansiyonu Türkiye'de 1991 yılında onaylanmıştır.

New York konvansiyonu hakem kararlarının verilmesinden sonraki aşama olan hakem kararlarının tanınması ve tenfizine ilişkin bir konvansiyondur.

8.2 Avrupa (Cenevre) Sözleşmesi

25 Nisan 1961 tarihli Milletlerarası Ticari Tahkime İlişkin Avrupa – Cenevre Sözleşmesi, Birleşmiş Milletler Avrupa Ekonomik Komisyonu'nun çalışmaları sonucu milletlerarası ticari ilişkilerden doğan ihtilafların tahkim yolu ile çözümünü sağlanmak amacıyla hazırlanmıştır.

Sözleşme akit ülkelerde meydana gelen milletlerarası ticari tahkim prosedürlerini düzenlemek amacıyla çıkarılmıştır.

Sözleşme Türkiye tarafından 08.05.1991 tarih ve 3730 sayılı Kanunla onaylanmıştır. Avrupa Sözleşmesi'nin 1.maddesi tahkimi konu itibariyle Uluslararası ticari ilişkilerle sınırlandırılmıştır. Bu maddeye göre milletlerarası

ticari ilişkilerden doğan veya doğacak olan uyuşmazlıkların halli için akdolunan ve akdin yapıldığı sırada mutad meskenleri ve muamele merkezleri değişik akit ülkelerinde bulunan tüzel kişiler arasındaki tahkim sözleşmelerinde uygulanır.

Cenevre Konvansiyonunun uygulanabilmesi için biri objektif diğeri subjektif iki şartın gerçekleşmesi gerekir. Sübjektif şart, tahkim anlaşması yapıldığı sırada tarafların mutad meskenlerinin farklı akit devletlerde bulunmasıdır. Dolayısıyla iki tarafın mutad meskenlerinin aynı devlette olması halinde Cenevre Konvansiyonunun uygulanması mümkün değildir. Objektif şart ise, uyuşmazlığın Uluslararası ticari ilişkiden doğmuş olmasına ilişkindir. Ticari olmayan işlerden doğan uyuşmazlıklara Cenevre Konvansiyonu uygulanamaz.

Cenevre Konvansiyonu tahkimin tanıma–tenfizden önceki aşamasını düzenlemektedir.

Taraflar tahkim sözleşmesini esas sözleşmeden ayrı olarak yapabilecekleri gibi esas sözleşmeye bir tahkim şartı da koyarak da yapabilirler. Tahkim sözleşmesinin yazılı olması gerekir. Ancak yazılı şekil şartına esnek bir düzenleme getirilerek tarafların birbirlerine yolladıkları mektup, telgraf veya teleskriptör metni içeriği de kabul edilmiştir.

8.3 ICSID (Washington) Sözleşmesi (International Center for the Seltlemen Of Investment Disputes)
Devletler ve Diğer Devletlerin Vatandaşları Arasındaki Yatırım Uyuşmazlıklarının Çözümlenmesi Hakkındaki Konvansiyon 14 Ekim 1966 yılında yürürlüğe girmiş, Türkiye bu sözleşmeyi 27.05.1988 tarih 3460 sayılı yasa ile onaylanmıştır.

ICSID Dünya Bankasının İnsiyatifi ve ön çalışması sonucu kurulmuş Uluslararası hükmü şahsiyete sahip bir kurumdur. Merkezi Washington'dur.

Merkezin amacı sözleşmede yer alan hükümler doğrultusunda taraf devletler ile diğer taraf devletlerin vatandaşları arasında yatırımlardan kaynaklanan uyuşmazlıkların uzlaştırma ve tahkim yolu ile çözümlenmesine çalışmaktır.

8.4 Enerji Şartı Sözleşmesi (Energy Charter Treaty – ECT)
Sözleşme 17 Aralık 1994 tarihinde Lizbon'da imzalanmış 16 Nisan 1988 tarihinde yürürlüğe girmiştir.

Türkiye bu anlaşmayı 17 Aralık 1994 tarihinde imzalamış, 4519 sayılı kanunla 6 Şubat 2000 tarihinde onaylanmıştır.

Sözleşmenin 2. maddesinde amaç olarak; Avrupa Enerji şartının amaçları ve prensipleri uyarınca, tamamlayıcılık ve karşılıklı faydalar prensibi baz alınarak, enerji alanında uzun dönemli işbirliğinin teşvik edilmesi için hukuki bir çerçeve tesis etmek olduğu belirtilmiştir.

Enerji şartı Sözleşmesi uyarınca yatırımcı yükümlülüğünü yerine getirmeyen devlete karşı Uluslararası tahkime başvurabilir. Sözleşmeye göre çözülmeyen hukuki uyuşmazlıklarda, akit devletin yükümlülüğünü ihlal ettiğini iddia eden yatırımcı uyuşmazlığı;

- Ulusal adli mahkemeye veya idari mahkemeye,
- Önceden kabul edilen diğer bir mahkemeye,
- Sözleşmede düzenlemen tahkime götürebilir.

Her bir taraf uyuşmazlığın Uluslararası tahkime götürülmesine onay vermek zorundadır.

Yatırımcı uyuşmazlığı tahkime götürmeye seçtiği takdirde üç ihtimal bulunmaktadır.

- Washington sözleşmesine uygun olarak ISCID tahkimi,
- UNCITRAL tahkim kurallarına göre oluşturulan tek hakem veya ad hoc hakem mahkemesi,
- Kurumsal tahkim olarak Stockholm Ticaret Odası Tahkim Enstitüsü – SCC

Uluslar arası hakem kararları bağlayıcı ve kesindir.

Her bir taraf devlet bu kararların icra edilmesini sağlamakla yükümlüdür.

8.5 İki Taraflı Yatırım Anlaşmaları (Bilateral Invenstment Treaties – BIT)
Yatırımcının vatandaşı olduğu devlet ve yatırımı kabul eden devletin arasında ikili bir anlaşma olmasıdır.

Türkiye'nin taraf olduğu iki veya daha çok taraflı Yatırımların Teşviki Korunması Anlaşmalarının tamamında ev sahibi devlet ile diğer akit tarafa mensup yatırımcılar arasındaki yatırım uyuşmazlıklarının milletlerarası tahkim yolu ile çözümü kabul edilmiştir. Ancak anlaşmalarda adli yargı süreci tamamen kapatılmamış, mahkemelere başvuru genel olarak yatırımcının insiyatifine bırakılmıştır.

Başvurunun yapılacağı Uluslar arası kurumsal tahkim merkezleri olarak;

- ICSID tahkim merkezi
- ICC tahkimi
- UNCITRAL tahkim kuralları uyarınca oluşturulacak hakem mahkemesi belirlenmiştir.

9   Sonuç

Ekonomideki hızlı değişim ve gelişmeler, yeni teknoloji sermaye hareketliliği sayesinde dünyada uluslararası ticaret ve büyük yatırımlar hızla artmıştır.

Yabancı yatırımcı şirketler veya kredi kuruluşları sözleşmelerden doğan uyuşmazlıkların milletlerarası tahkim yoluyla çözümlenmesini talep etmektedir.

Özellikle az gelişmiş ve gelişmekte olan ülkeler milletlerarası tahkim mevzuatına kendi iç hukuklarında yer vermek suretiyle yabancı sermaye girişinin sağlanması, yabancı yatırımcı sayısının artmasını teşvik etmek istemektedirler.

Türkiye de ancak dış finansman ile gerçekleştirilecek büyük alt yapı tesislerinin köprülerin, barajların inşası gibi büyük yatırımların dış sermaye ile sağlanabilmesi için tahkim ile ilgili mevzuatın düzenlenmesi ihtiyacını gözeterek milletlerarası tahkim mevzuatı da dikkate alınarak tahkim kurumunun daha işler hale getirilmesi amacıyla iç ve dış tahkimle ilgili anayasal ve yasal düzenlemelere gitmek ihtiyacını hissetmiştir.

Gelişen ve değişen Uluslararası ticaretin ve dış yatırımların kapsamı, sözleşmelerin uygulanması sırasında ortaya çıkan karmaşık ve değişik hukuki uyuşmazlıklar dikkate alındığında bu hukuki uyuşmazlıkların uzman kişiler tarafından hızlı bir şekilde ve adil olarak çözümlenmesi amacıyla tahkimle ilgili gerek milletlerarası gerekse ülkelerin milli mevzuatlarındaki değişim ve gelişimin de devam edeceği kuşkusuzdur.

Milletlerarası Ticari Tahkim Kuruluşları

International Commercial Arbitration Institutes

Uğur Sayın (Turkish Supreme Court, Turkey)

Abstract

Because of exportation and importation of countries, the amount of commerce enlarged, therefore foreign agreements increased. Because of having differnet law systems of the contries the people, working on permanent investment and commerce wishes to have the suitable arbitration that they want.From this point of view, begining from the year 1898, It has been worked on to develop contraptions do international authorized commercial court's duty. Then permanent arbitration council was established, Cenevre Convention, New York Convention was established, and the rules of international arbitration called UNCITRAL was constituted. The countries which are the contracting parties of these agreements, agreed that the implement of rules on their own domestic law systems. In addition, they delegated compulsory execution for these rules. Beside this, to organise the international commercial arbitration, countries and private institues are founded arbitration institues. Today there are hundereds of international commercial arbitration institues, which are called as the same name of their city's, the most favorite and their woking systems are explaned.

1 Giriş

Yabancılık unsuru taşıyan ticari sözleşmelerden doğan uyuşmazlıkların yargı dışında barışçı yollar ile adil, tarafsız ve hızlı şekilde çözümü uluslararası ticaret için önemlidir. Yatırımcı sağlayacağı kazanç ile birlikte uyuşmazlık halinde yatırımlarının güvence altında olacağını bilmek ister. Finans kurumlarına bu güvenceyi sağlamak ve yatırımları ülkeye yönlendirmek isteyen devletler taraf iradesine dayanan Tahkim Kuruluşlarının oluşumu için Tahkim işleyişine en az müdahalede bulunacak şekilde yasal düzenlemeler yapmışlar, uluslararası anlaşmaları imzalamışlardır. Milletlerarası Ticari Tahkim kuruluşlarından bazıları inceleme konumuzu oluşturmaktadır.

2 Genel Olarak Milletlerarası Tahkim

Yabancı finans kurumunun hukuk kuralları ile güvence altına alınması devletlerin de yararınadır. Bu nedenle Uluslararası ticari uyuşmazlıkların yargı dışında çözümlenmesi için hakem (tahkim) usulü konusunda çeşitli düzenlemeler yapılmıştır. Uluslararası anlaşmalar imzalanmıştır. Bu sözleşmelere taraf olan ülkeler tahkim kuruluşları tarafından verilen kararları kendi mahkeme kararları gibi uygulamak, infaz etmek zorundadırlar.Yargı dışı çözüm yolları içeresinde diplomatik yöntemlerde vardır. Ancak her zaman başarılı sonuç vermez.

Uluslararası Tahkim Kurallarının hukuki metin haline getirilmesi,1899 ve 1907 La Haye Barış Konferansında gerçekleşmiştir.1899 yılında aralarında Osmanlı İmparatorluğu'nun da bulunduğu, 26 devlet arasında, 61 maddeden oluşan, 1899 La Haye Sözleşmesi imzalandı. Uluslararası uyuşmazlıkların çözümünde, Sürekli Tahkim Divanı'nın kurulması kararlaştırıldı. 1907 yılındaki Konferans ile kurallar genişletildi.Divan'da hakemlerin listesi ile tahkim kurulunun oluşturulması sistemi vardır. Divan devletlerarasındaki yada devlet ile kişi veya kurumlar arasındaki uyuşmazlıkların çözümünde en eski kuruluştur. Dostça girişim, arabuluculuk, araştırma, soruşturma ve uzlaştırma hizmetleri de sunar.Üç organı vardır.Bunlar, Yönetim konseyi, Uluslararası büro, Hakemler listesidir.

Çarlık Rusya'sı Uluslararası barış ortamının sağlanması için 1898 yılında konferans yapılmasını istedi.Bu çağrı aynı zamanda, Uluslararası ticari uyuşmazlıkların barışçı yollarla çözümü konusunda başlangıç olmuştur.

Rus hükümeti," ülkeler arasında silahlı çatışmaların önlenmesi amacıyla, mümkün olan hallerde, dostça girişim, arabuluculuk, ve gönüllü tahkimin kullanılmasının kabulü, bunların kullanım tarzları hakkında anlayış ve tek tip uygulamanın tesisedilmesini öneride bulundu. Bu şekilde tahkim uluslararası uyuşmazlıkların çözümünde alternatif bir yol olarak ortaya çıktı.

Devletlerarasında Ticari Tahkimin gelişmesi, 21 Nisan 1961 tarihli, " Milletlerarası Ticari Tahkime ilişkin Avrupa Cenevre Konvansiyonu" ile başlamıştır.Bununla Milletlerarası Tahkimin teşkilatlanması ve en iyi şekilde işlemesini sağlamak amaçlanmıştır.

1964 yılında yürürlüğe giren Cenevre Konvansiyonu,10 maddeden oluşmaktadır. (Bunlar, Konvansiyon uygulama alanı, kamu tüzel kişilerinin tahkime tabi olma ehliyeti, yabancıların hakem olarak seçilmesi, hakem heyetinin oluşumu, hakem heyetinin görevsizliği itirazı, tahkim anlaşmasına rağmen mahkemeye müracaat ve bunun sonuçları, uygulanacak hukuk, hakem kararının gerekçeleri hakem kararının iptali ve son hükümleri düzenlemesidir.)

New York Konvansiyonu ise hakem kararlarının sonuçlarını düzenlemiştir.Tanıma ve tenfiz konusunda düzenleme getirilmiştir.Cenevre Konvansiyonunda tanıma ve tenfizden önceki aşama düzenlenmiştir.

Tahkim anlaşmasını yapan "kişilerin yerleşim yerlerinin ayrı ayrı ülkelerde olması ve sözleşmenin ticari iş olması halinde, tahkim usulü ve hakem kararı Cenevre Konvansiyonu hükümlerine bağlı olacaktır. Uyuşmazlığın hakemlerin önüne gelmesinden itibaren kararın verilmesine kadar Konvansiyon hükümleri uygulanır.

Taraflar ayrı bir tahkim sözleşmesi yapabilecekleri gibi, sözleşmelerine tahkim maddesi koyarak hakeme gidileceğini yazılı olarak kararlaştırabilirler.

Cenevre Konvansiyonu'nun (1/2.b md.), taraflar somut olay için seçilmiş hakeme (ad hoc tahkim) gidebilecekleri gibi kurumsal nitelikte oluşturulan daimi tahkim merkezlerine de başvurabilirler.

Milletlerarası Tahkim, "Yabancılık unsurunu taşıyan, ekonomik ve ticari uyuşmazlıkların hakemler vasıtasıyla çözümünü düzenleyen kurallardır. Bu incelemede, uyuşmazlıkların niteliği dikkate alınarak, Milletlerarası Tahkimde uygulanan kurallar, tahkimi organize edip uygulamayı denetleyen kurumlar yeralacaktır.

Devletlerarası anlaşmalara göre oluşturulan kurallar ile oluşturulan kurumlar nezdinde yürütülen tahkimde, devletlerarası uyuşmazlıklar Devletler Umumi Hukukuna göre çözümlenir.Bunun örneği, B.M bünyesinde bulunun Daimi Hakem Mahkemesi (The Permanent Court of Arbitration) dir.

Konusu ticari ve ekonomik menfaatler olan sözleşmelerden doğan anlaşmazlıklara çözüm bulmak amacıyla kurulmuş tahkim kuruluşları da vardır.Bunlar ICSID (İnternational Center For Settlement Of Investment Disputes) ve WIPO gibi.

Bir kısım tahkimde, doğrudan sektör temsilcileri tarafından oluşturulan, hiçbir uluslararası anlaşmaya dayanmayan kurallara göre oluşturulan tahkim kurumları vardır.Bunlar, ICC (Milletlerarası Tahkim Odası), LCIA (Londra Milletlerarası Tahkim Mahkemesi) örnekleridir.

Milletlerarası Tahkim'in bir kısmı ise Muhtelif ülke devletleri ya da belirli sektör mensupları tarafından milli hukuk kuralları üzerine kurulan tahkim kuruluşları tarafından yerine getirilir.Çok sayıda tahkim kuruluşları vardır. Bunlara örnek, Avusturya Federal Ekonomi Odası Milletlerarası Tahkim Mahkemesi, Stockholm Tahkim Enstitüsü Hakem Mahkemesi, Rusya Federasyonu Ticaret Odası Milletlerarası Tahkim Mahkemesi sayılabilir.

Milletlerarası tahkimin bir kısmı ise, hiçbir kurumsal tahkim merkezinin denetimine tabi olmaksızın, tarafların aralarında düzenledikleri kurullara ya da atıfta bulundukları kurallara göre yürütülür.

Birinci sırada açıkladığımız, Devletlerarası anlaşmazlıkların çözümünde uygulanan tahkim ile inceleme konumuzu oluşturan, konusu yabancılık unsuru taşıyan, ekonomik ve ticari uyuşmazlıkların çözümünde uygulanan tahkimi ayırmak için, Milletlerarası Ticari tahkim olarak açıklamak daha doğru olacaktır.

3 Tahkim Türleri

Tahkim, Ad Hoc Tahkim ve Kurumsal Tahkim olarak iki şekilde incelenebilir.Kurumsal tahkim, bir tahkim kurumunun önceden belirlenmiş kurallarına göre uygulanan onun gözetimindeki tahkimdir.Ad Hoc tahkimde ise, tamamen tarafların iradesine göre oluşturulan tahkim söz konusudur.

3.1 Ad Hoc Tahkim

Ad Hoc tahkimde, tarafların kaleme aldığı ya da uygulanmasını istedikleri belirli kurallara göre, tarafların yetkilendirdikleri hakemler tarafından tahkim yerine getirilir.Kurumsal tahkimin bürokratik engelleri gibi sebepler Ad Hoc tahkimin tercih nedeni olmakta, Devletler ve Kamu Kurumları uyuşmazlıklarında Ad Hoc tahkimi tercih etmektedirler.

Ad Hoc tahkimde, yerel tahkim kurallarına tabi olmadan, Milletlerarası kurallara göre tahkimin yürütülebilmesi için BM, Milletlerarası Tahkim Hukuku Komisyonu (UNCİTRAL) tahkim kuralları getirmiştir. Ad Hoc tahkim yolunu seçen taraflar yapacakları bir düzenleme ile UNCİTRAL'ın 1976 tarihli Tahkim kurallarının uygulanmasını isteyebilirler. Dünyada kabul gören yaygın olarak kullanılan UNCİTRAL kuralları ad hoc tahkimde kullanılmak için düzenlenmiştir. Bu tahkim kurallarına göre belirli bir kurum tarafından izleme, denetim yapılmaz.Sadece tahkim uygulamasına rehberlik edilir.

3.2 Kurumsal Tahkim

Ticari Sözleşmelerde taraflar, uyuşmazlık halinde ne yapılması gerektiği hususlarında ayrıntılı düzenleme yapmazlar.Uluslararası sözleşmelerde genellikle uyuşmazlık halinde, Tahkim usullerini tüm ayrıntıları ile düzenleyen, denetleyen, teknik ve idari organizasyona sahip daimi hakem mahkemeleri tercih edilmektedir.Ticaretle uğraşanlar tarafından bu mahkemelerin kuralları ve kararları hareket tarzı bilinmektedir.Bu da ticari hayatta güven sağlayıcıdır.

Bu merkezlerin bazıları, Meslek Odaları ve Birliklerine bağlı olduğu için bu Oda ve Birliklere bağlı olan tacirler arasında farklı etkileri vardır.Bu nedenle tercih edilmektedir.Bugün dünyada tahkim hizmeti veren yüzlerce tahkim Merkezi bulunmaktadır.

4   Kurumsal Tahkim Merkezleri

Bu tahkim merkezlerinin bir kısmı, özel kişilerce kurulmuş bu kısmı, uluslararası anlaşmalar uyarınca oluşturulan örgütler tarafından bir kısmı, devletler ve bir kısmı da Ticaret Sanayi Odaları, Üniversiteler, Meslek ve Sektör Mensupları tarafından kurulmuştur.

4.1 ICSID

Bu kuruluş Dünya Bankası tarafından "Devletler ile Diğer Devlet Vatandaşları arasındaki Yatırım uyuşmazlıklarının Halline Dair Anlaşma" ile kurulmuş olup, 1966 da yürürlüğe girmiştir.

Dünya Bankasının Washington'daki bürosunda Yatırım uyuşmazlıklarının çözümü için faaliyet gösterir.2011 itibariyle 157 Devlet, bu anlaşmaya taraf olmasına rağmen, Yatırım Sözleşmelerinde ICSID hakemliği çok tercih edilmemektedir. Ancak son yıllarda, yapılan Uluslararası Yatırım Anlaşmalarında, ICSID hakemliği taraflarca kabul edilmektedir. ICSID'E göre 2011 yılı itibariyle bu anlaşmaların sayısı 4673'den

ICSID Konvansiyonu'nun 47. maddesine göre Merkez ihtiyati tedbir kararı verebilir. ICSID Kararları kendi sistemine göre kesinleştiğinde taraf devletlerin iç hukukuna göre cebri icra kuralları ile doğrudan icra edilebilir.ICSID, İdari Konsey, Sekreterya ve Paneller olmak üzere üç birimden oluşur. Paneller kendi arasında, arabulucular ve hakemler olarak ikiye ayrılmıştır.ICSID bütün dünya ülkelerine açıktır.Dünya Bankasına ve IMF'ye üye olmak gerekmez.

ICSID tahkimi yatırımcı ile ev sahibi ülkenin menfaatleri arasında bir denge kurulacak şekilde düzenlenmiştir. Hakem mahkemesinin tarafların iradesine göre oluşturulması prensibi burada da geçerlidir. Menfaat eşitliği prensibi ile güvensizlik giderilmiş, bir devlete karşı onunla eşit mücadele yapacağı bir ortam sunulmuştur.ICSID arabulucu ya da hakem olarak tahkime katılmaz. Taraflara, hakemlerini serbestce seçme imkanını sağlayan özel nitelikli kişilerden oluşan panellere sahiptir.Konvansiyona üye olma tek başına ihtilafı konvansiyonda çözme yükümlülüğü doğurmaz.Ancak bazı devletler, merkezin yetkisine tabi tutmadıkları ihtilafları bildirmişlerdir.Türkiye'deki taşınmazların mülkiyeti ile ilgili uyuşmazlıklar ICSID'e götürülemez.

ICSID tahkimine gidilebilmesi için taraflardan birisinin devlet, diğerinin ise Konvansiyon'a taraf diğer devlet vatandaşı olması gerekir.Uyuşmazlığın yatırımdan kaynaklanması gerekir. Yatırım, geniş anlamı ile yorumlanmak gerekir. Uzun süreli işler (imtiyaz sözleşmeleri gibi)olmalıdır. Geçici, bir defaya mahsus işler kapsama girmez.

Hakem kurulu, oy çokluğu ile karar verir.Verilen karara karşı taraflar, kararın yorumunu (md.50), yeni maddi vakıaların ortaya çıkması nedeniyle kararın yeniden gözden geçirilmesini (md.51), belirli sebeplerin varlığı halinde kararın hükümsüz kılınmasını (md.52) isteme hakları vardır.

4.2 WIPO - Dünya Fikri Mülkiyet Örgütü Tahkim Mahkemesi

1883 tarihli "Sınai Mülkiyetin Korunmasına Dair Paris Konvansiyonu" ile sınai mülkiyet alanında ilk uluslararası düzeyde koruma getirilmiştir.WIPO, 14 Temmuz 1967'de bir anlaşma ile kurulmuş, BM'nin uzman kuruluşlarından birisidir.

WIPO, Fikri Mülkiyete ilişkin eserlerin uluslararası düzeyde korunması için uluslararası anlaşmaların yapılmasında yardımcı olmaktadır.

1994 yılında, Cenevre'de "Tahkim ve Uzlaştırma Merkezi" kurulmuştur. Bu tahkim ve uzlaştırma merkezinin amacı, Patent, marka, know-how, yazılım lisansı sözleşmeleri gibi sınai ve fikri mülkiyete, internet alan adlarına ilişkin tescil ve ihlallerden çıkan ticari uyuşmazlıklarda tahkim hizmeti sunmaktadır. Özel kuralları vardır.

Taraf iradesi burada da geçerlidir.Tarafların uyuşmazlığın hallini WİPO ya götürmek konusundaki iradelerinin bulunması gerekir.WIPO' ya gidebilmek için, anlaşmaya taraf devletin vatandaşı olunması gerekmez.WIPO'da 70 ülkeden oluşan 1000 hakem listesi mevcuttur. Taraflar bu listeden hakemlerini seçebilirler. Bu liste dışından da seçim yapmak mümkündür.

WIPO tahkiminde iki ayrı tahkim usulü vardır.Normal tahkim ve hızlandırılmış tahkim.Normal tahkimde hakem tarafından 9 ayda verilecek karar, hızlandırılmış tahkimde 1 hakem tarafından en fazla 3 ayda verilir.Tahkim yerini taraflar serbestçe belirler.Hakem kararları New-York konvansiyonuna göre icra edilir.

4.3 ICC - Milletlerarası Ticaret Odası Tahkim Mahkemesi

Milletlerarası Ticaret Odası 1919 yılında uluslararası ticareti geliştirmek amacıyla, dünya özel sektörü tarafından Paris'te kurulmuştur.Özel nitelikte bir kuruluştur.

MTO, uluslararası ticari ve ekonomik uyuşmazlıkları tahkim yolu ile çözümünü organize etmek için 1923 yılında "uluslararası ticaret odası tahkim divanı ismi ile bir mahkeme oluşturdu. Bu tahkim mahkemesi doğrudan ihtilafları çözen daimi bir hakem mahkemesi değildir. MTO tahkim kuralları ile tarafların yada mahkemenin belirlenmesine göre dünyanın neresinde olursa olsun tahkim usulünü organize etmektedir. Hakem heyeti, taraflarca yada verdikleri yetki ile Divan tarafından oluşturulur.

1.0cak. 2012'de yeniden düzenlenen Tahkim Tüzüğü uygulanmaktadır. Tüzükte, hakem seçimi, müracaat usulü, cevap, karşı dava süreleri, tahkim masrafları, hakem ücretleri, uygulanacak hukukun tespiti, tahkim

yerinin belirlenmesi, tahkim süresi, karar nisabı, tebliğ, kesinleşme gibi tüm hususlar ayrıntılı olarak düzenlenmiştir.

MTO'de tahkim usulü 5 aşamadan ibarettir.Tahkim talebinin sunulması, hakemleri seçimi, dosyanın sekreterya tarafından hakeme tevdii ve görev belgesi düzenlenmesi, esastan inceleme.Görev belgesinin düzenlenmesinden sonra 6 ay içinde karar tasarısı Divan'a sunulur.Süre uzatılabilir Hakemler davanın esasını tarafların seçtikleri hukuka göre çözerler.Taraflar seçim yapmamışsa, hakemler uygun buldukları hukuka göre çözüm bulurlar.İhtiyati tedbir kararı verilebilir (md 28).Son aşama, MTO Tahkim Divanının, hakem karar taslağını incelemesi.Karar verme özgürlüklerini etkilemeden, şekil değişikleri yapılması için ve bazı noktalarda hakemlerin dikkatini çekebilir, tavsiyede bulunabilir (md 33).Verilen kararların, şekil ve esas bakımından geçerliliği ve etkinliğini sağlamaya yöneliktir.

Divan tarafından onaylanan ve hakemlerin imzasını taşıyan karar, sekreterya tarafından masrafları alındıktan sonra tebliğ edilir. Taraflar MTO tahkim kurallarını seçmekle, bu karara derhal uyup icra etmeyi temyiz ve itiraz yoluna başvurmaktan feragat etmeyi kabul etmiş sayılırlar (md. 34).

4.4 SPICAC - Petersburg Uluslararası Ticari Tahkim Mahkemesi

1997 yılında faaliyete geçmiştir.Petersburg şehrinde ticaret odası tarafından kurulmuş, bağımsız tahkim kuruluşudur.Uncitral kurallarından etkilenerek hazırlanmış Rusya hukuk kurallarına göra tahkim yönetilir.Rus ve yabancılardan oluşan hakem listesi vardır.Taraflar hakem sayısını,uygulanacak dili,uygulanacak hukuku serbestce seçebilirler.Hakem kararlarına itiraz yolu açıktır,sınırlıdır.

4.5 LCIA - Londra Uluslararası Tahkim Mahkemesi

İngiliz hukukuna göre, kâr amacı gütmeyen ve ortakları taahhütleri ile sınırlı sorumlu olan bir şirket modelinde kurulmuştur. Uluslararası tahkimlerde ICC'den sonra en çok tercih edilen Uluslararası tahkim kuruluştur.

Bir uyuşmazlıkta, LCIA' nın seçilmesi, zorunlu olarak tahkimin LCIA kurallarına tabi olacağı anlamına gelmez.Taraflar UNCITRAL tahkim kurallarına göre de davanın görüleceğini kararlaştırabilirler.Bu durumda LCIA, hakem seçimi ve tahkim prosedürünün idaresinde rol oynar.Bir başkan, dört başkan yardımcısı ve 25 kurul üyesinden oluşan yönetim kurulu tarafından idare edilmektedir.

01.01.1998'de revize edilen kurallar, Anglosakson ve Kıta Avrupası Tahkim Hukuklarının Sentezi niteliğindedir. LCIA yönetim kurulunun, doğrudan tahkime müdahalesi yoktur.Tahkim hakem tarafından yürütülür.İngiltere dışındaki faaliyetlerini dünyanın çeşitli bölgelerinde oluşturduğu Konseyleri aracılığı ile gerçekleştirir.Avrupa, Kuzey Amerika-Latin Amerika- Güneydoğu Asya-Afrika konseyleri vardır.

4.6 ICAC -Rusya Federasyonu Ticaret ve Sanayi Odası Uluslararası Tahkim Mahkemesi

1932 yılında SSCB Ticaret ve Sanayi Odası Tahkim Mahkemesi olarak kurulmuştur. Bugün uygulanan Tahkim Kuralları, 01.05.1995 tarihinde yürürlüğe giren Rusya Federasyonu Sanayi ve Ticaret Odasınca onaylanan kurallardır. Rusya Federasyonu Ticaret ve Sanayi odasından bağımsızdır , geniş bir hakem listesi vardır. Taraflar bu liste dışından da hakem seçebilirler.

ICAC Başkanı tahkim davasında raportörü belirler, bu raportör hukuki bakımdan tahkime nezaret eder. Merkez Moskova olmasına rağmen, talep ve masraf karşılanması halinde, Moskova dışında da duruşma yapılabilir.

Yargılama süresi, tahkim mahkemesinin oluşumundan itibaren 180 gündür.Mahkeme tarafların seçtiği maddi hukuku uygular.Taraflar hukuk seçimi yapmamışsa, maddi hukuk Rusya Federasyonu Kanunlar ihtilafı kurallarına göre belirlenir. Mahkeme ticari örf adeti de dikkate alır.Taraflar tek hakemde anlaşamazlarsa, mahkeme heyeti üç hakemden oluşur.

4.7 VIAC - Avusturya Federal Ekonomi Odası Uluslararası Tahkim Merkezi

Avusturya Federal Ekonomi Odası tarafından Viyana'da kurulmuştur.Tahkim ve uzlaştırma kuralları, 01.07.2006'da yürürlüğe girmiştir.Tahkim prosedürü Viyana'daki Merkez ofiste yürütülür. Viyana dışında da yürütülmesine karar verilebilir.Taraflar hakemlerini serbestçe belirlerler. Liste dışından da hakem belirlenebilir.

4.8 SCC INSTITUTE - Stockholm Ticaret Odası Tahkim Enstitüsü

Sovyetler döneminde doğru batı arasındaki Ticaret ve ekonomik sözleşmelerden doğan tahkimlerde kullanılmakta idi. 1977 tarihli anlaşma ile ABD-SSCB Merkezli şirketler arasındaki sözleşmelerden doğan uyuşmazlıkların çözümlenmesinde SCC İnstitute öngörülmüştür. SSCB 'nin dağılmasından sonrada tercih edilmiştir.

Türkiye ile Rusya arasında imzalanan yatırımların teşviki ve korunması anlaşmasında Enstitü Tahkim Mahkemesi olarak kararlaştırılmıştır.

Stockholm ticaret odası tarafından kurulmuştur.1917'den buyana faaliyetlerini sürdürmektedir. Uluslararası tahkim faaliyeti ile birlikte, hızlandırılmış tahkim, ara buluculuk, sigorta tahkim faaliyetleri de vardır. Odadan bağımsız olarak çalışır. Doğrudan tahkimde görev almaz sadece tahkim prosedürüne nezaret eder.Tahkim kuralları, 2007 yılında yenilenmiştir.

Taraflar hakem sayısı belirlememişlerse tahkim heyeti üç hakemden oluşur.Tahkim talebinin sunumundan itibaren 6 ay içerisinde karar verilmesi gerekir. Süre uzatılabilir (md 37).Hakem kararı verildiği anda kesin ve bağlayıcıdır.İtiraz yolu yoktur.

4.9 AAA-Amerika Tahkim Odası

Merkezi New York'ta bulunan, Uluslararası uyuşmazlık çözüm merkezi ICDR, 1997 yılında kurulmuştur. 01.06.2009'da revize edilen tahkim kuralları AAA geçerlidir.

AAA' nın Uluslararası tahkim kuralları, karışık ve detaylı Amerikan usul Hukuku kurallarından ayrıdır.Diğer tahkim merkezlerinin kurallarına benzer.Kıta Avrupa hukuk kurallarına benzemektedir.Taraflar hakem sayısını belirlememiş ise, kural olarak tek hakem atanır.

4.10 GAFTA -Hububat ve Yem Ticaret Birliği Tahkim Mahkemesi

Hububat ve yem ticareti yapan tacirler tarafından Londra'da kurulmuştur. Birlik bünyesinde bir tahkim mahkemesi vardır.Tahkim kuralları,1 Temmuz 2007'de yürürlüğe girmiştir.

Uluslararası hububat, yem ve tohum ticareti yapanlar, Birliğin formüle edilmiş sözleşmesini kullanmaları halinde, uyuşmazlıklar GAFTA tahkim mahkemesince, 125 numaralı kurallara göre karara bağlanır.

Tahkim yeri İngiltere'dir.Taraflarca düzenleme yapılmamışsa, İngiliz tahkim kuralları uygulanır.Kural olarak 3 hakemden oluşur.Taraflar tek hakem belirleyebilirler. Kararlar bağlayıcıdır. Taraflar dilerse, birlik nezdinde 30 gün içerisinde temyiz incelemesine başvurabilirler.Bu durumda karar temyizden sonra bağlayıcı hale gelir.

4.11 FOSFA- Sıvı ve Hayvansal Yağ ve Tohum Bilirlikleri Federasyonu Tahkim Mahkemesi

Bu sektörde faaliyet gösteren tacirler tarafından Londra'da kurulmuştur.Formül sözleşmeleri vardır.Bu sözleşme ile atıf yapılması halinde Birlik nezdinde bulunan Tahkim Mahkemesi yetkilidir.Kararlarına karşı temyiz yolu açıktır.Ücretler harcanan mesaiye göre belirlenir.

4.12 Refine Şeker Birliği Tahkim Mahkemesi

Bu sektörde çalışan tacirler tarafından, 08.01.1891'de kurulmuştur. Merkezi Londra'dır. Formüler sözlemeler ile şeker alım satımını düzenleyen genel şartlar belirlenmiştir.Diğer tahkim kurumlarından farklı olarak tahkim, doğrudan Birlik tarafından yürütülmektedir.Birlik tahkim sistemi, tipik bir mesleki tahkim kurumudur.Kaybeden taraf karar gereğini yirmi sekiz gün içerisinde yerine getirmek zorundadır.

5 Sonuç

Finans kuruluşları ve devletlerin imzaladıkları ekonomik ve ticari nitelikteki sözleşmelerin uygulanmasından doğan uyuşmazlıkların çözümü için her devletin içinde değişik nitelikte ulusal ve uluslararası tahkim kurumları oluşturulmuştur. Uluslararası Tahkim Kuruluşlarının büyük bir kısmı doğrudan tahkim işine müdahil olmazlar. Sadece tahkim kurallarını belirleyip, uzman, deneyimli hakem listesi sunarak, tahkim prosedürünü uygularlar. Tahkim kurumunu tercih eden taraflar bu karara uyacaklarını da taahhüt etmiş olurlar. Bu kuruluşlar aynı zamanda milletlerarası ticaret mahkemesi görevi yerine getirirler.

Tahkimde Kamu Düzenin Etkisi

Effects of Public Policy on Arbitration

Prof. Dr. Mustafa Topaloğlu (Beykent University, Turkey)

Abstract

Public policy is a ambiguous concept. Public policy can be defined as a set of rules which protecting the essential structure of society and its interests. Under New York Convention dated 1958, an arbitration verdict which breaching of public policy in the executing country can't be executed. Same provision valid under Turkish Act Related International Private Law and Procedure Law. An arbitration verdict can't be subject to appeal directly. But, it can be sued for annulment before court of first instance. The public policy is stipulated as a ground of annulment in the Turkish International Arbitration Act. New Turkish Civil Procedure Act accepted same solution about domestic arbitration. In this paper was tried to define the public policy concept and examined point of view of legal rules questioned above.

1 Giriş

Tahkim, mahkeme dışında alternatif bir ticari uyuşmazlık çözüm metodudur. Tahkim usulünde hakem denilen tahkim heyeti milletlerarası ticari uyuşmazlıkları bağlayıcı şekilde çözmektedirler.

Tahkimde yargısal bir faaliyet söz konusudur. Bu nedenle tahkim, bilirkişilikten, ekspertizlikten ve değerleme uzmanlığından farklıdır.

Milletlerarası ticaret hukukunda tahkim en uygun ve en yaygın bir uyuşmazlık çözüm metodu olarak karşımıza çıkmaktadır.

Tahkim, mahkemelere göre daha hızlı hareket etmektedir. Tahkimde yargılama masrafları ve avukatlık ücretleri devlet yargısına göre daha ucuzdur..

Tahkimde görev alan hakemler milletlerarası ticari uyuşmazlıklar konusunda uzman olduklarından uyuşmazlığın niteliğine uygun ve daha adil karar verebilmektedirler. Aynı zamanda hakemlerin uzmanlığı tahkim yargılamasının mahkemelere göre daha kısa sürmesine de neden olmaktadır.

Hakemler, mahkemeler kadar resmi yaklaşım göstermediklerinden dolayı daha esnek davranabilmektedirler. Hakemler yerine göre kanunlar veya içtihat hukuku yerine hakkaniyete ve ticari hayatın gereklerine özgü karar verebilmektedirler. Mahkemeler kanunların sıkı şekil şartları bağlı olmaları bazen adil olmayan karar verebilmelerine neden olabilmektedir.

Mahkemeler her ne kadar bağımsız da olsalar bulundukları devletin siyasi, sosyal ve ekonomik politikalarından etkilenebilmektedirler. Tahkimde ise hakemler tavır ve davranışları ve verdikleri kararlar ile objektifliklerini ispatlamış kişiler arasından seçilmektedirler.

Buna karşılık tahkimde de hakemlerin özellikle hak ve nefasete göre karar vermeleri halinde adaletsiz ve hakkaniyete aykırı karar verdikleri görülmekte ve tahkim yargılaması sırasında adil yargılama ilkesine aykırı davrandıklarına rastlanmaktadır.

Hakem kararları mahkeme kararlarına göre ilgili ülkede daha yaygın ve kolay bir şekilde icra edilebilmektedir. Yabancı Hakem kararlarının Tanıma ve Tenfizine ilişkin 1958 tarihli New York Anlaşmasına çok fazla ülke taraftır. New York Anlaşmasına göre taraf ülkelerden birinde verilen hakem kararları diğer bir ülkede de uygulanabilmektedir.

Türk tahkim hukuku uygulamasında ister iç isterse milletlerarası hakem kararı olsun, kamu düzeni kavramı, hakem kararlarının mahkemeler tarafından iptali için anahtar bir kavram olarak kullanılmıştır.

2 Kamu Düzeni Kavramı

Kamu düzeni kavramı gerek iç hukukta gerekse milletlerarası hukukta kullanılan bir kavramdır. İç hukuk ve milletlerarası hukukun kamu düzeni yaklaşımı farklı olduğu görülmektedir. Buna rağmen ne iç hukukta ne de milletlerarası hukukta kamu düzeni herhangi bir hukuk metninde yasal olarak tanımlanmış değildir.

Anayasa'da temel hak ve hürriyetlerin kısıtlanmasında, kamu yararı, genel ahlak, genel sağlık gibi ölçülerle kamu düzenin korunması esas alınmış fakat kamu düzenin ne olduğu hususunda herhangi bir belirtme yer almamıştır. Zaman içinde kanun koyucu ve uygulayıcıların siyasi, sosyal, ekonomik ve ahlaki kriterlere atfettiği değere göre kamu düzeninin kapsamı ve içeriği belirlenecektir.

Kamu düzenini iç hukukta Türk toplumunun temel yapısı ve temel çıkarlarını koruyan kuralların bütünü olarak görmek mümkündür. İç hukuktaki bu kurallar herkesin uymakla yükümlü olduğu kamu hukuku veya özel hukuk karakterli olabilir. Bu bağlamda Anayasal temel hak ve özgülüklere aykırılık, Türk Kanunlarının esas

ilkelerini ihlal ve Türk adap ve ahlak anlayışına karşı gelme hallerinde kamu düzeni mülahazasıyla iç hukukta müdahalede bulunulmaktadır.

Kamu düzeni kavramı ülkeden ülkeye değişiklik gösterir. Aynı zamanda kamu düzeni, sabit bir kavram olmayıp, zaman ve mekana göre de değişen bir özelliğe sahiptir. Kamu düzeni kavramının bu değişken niteliği onu takdire bağlı bir kavram haline getirmektedir. Somut bir olayda kamu düzenine aykırılığın bulunup bulunmadığını hakim takdir yetkisine dayanarak belirleyecektir.

Bireylerin serbest iradelerinin dışında kalan emredici hükümler kamu düzeni amacıyla konulmuştur. Ancak her emredici kural kamu düzeninden sayılmaz. Bununla beraber 6098 sayılı Borçlar Kanununun 27.maddesinde *"Kanunun emredici hükümlerine, ahlaka, kamu düzenine, kişilik haklarına aykırı veya konusu imkânsız olan sözleşmeler kesin olarak hükümsüzdür."* denilmektedir. BK m.27 hükmünde kamu düzeni kavramı, emredici hükümlerle birlikte irade özgürlüğünün bir sınırı olarak kanunen sayılmıştır. Buna göre gerek emredici hükümlere gerekse kamu düzenine aykırı tahkim sözleşmeleri geçersiz sayılır.

Milletlerarası özel hukukta kamu düzeni kavramı içerik ve işlev bakımından iç hukuktan farklıdır. Milletlerarası kamu düzeni iç hukuka göre daha dar ve sınırlı kapsamdadır. İç hukukta kamu düzeninden sayılan bir husus, milletlerarası özel hukukta kamu düzeninden sayılmayabilir.

Milletlerarası özel hukukta kamu düzenin içeriğini belirlemek çok zordur. Kamu düzeni kavramı zamana ve yere göre değiştiği gibi, ülkeden ülkeye de değişiklik gösterebilir. Kamu düzeni kavramıyla bir ülkedeki temel haklarla ilgili hükümler, anayasasının tüm ilkeleri kamu düzeninden sayılabilir. Her toplumun siyasi, ekonomik, sosyal ve hukuki yapısı o toplumun iç ve dış kamu düzeni anlayışını oluşturmaktadır.

Bütün bu açıklamalardan sonra kamu düzeni kavramını kısaca "toplumun temel yapısını ve çıkarlarını koruyan kuralların bütünü" olarak tanımlamak mümkündür.

3 Hakem Kararlarının Uygulanmasında Kamu Düzeninin Etkisi

Hakem kararlarına karşı temyiz yoluna gidilemez. Ancak iptal davası açılması mümkündür. Yabancı mahkeme kararı niteliğindeki kararların da uygulanabilmesi için Türk mahkemelerinde tenfiz davası açılarak tenfiz kararını alınması gerekir. Alınan tenfiz kararı Yargıtay'da temyiz konusu yapılabilir

3.1 Hakem Kararlarının Tenfizi Davasında Kamu Düzeni

Türk hukukunda yabancı hakem kararlarının tenfizi, Yabancı Hakem Kararlarının Tanınması ve Tenfizi Hakkında 1958 tarihli New York Anlaşması veya 5718 sayılı Milletlerarası Özel Hukuk ve Usul Hukuku Hakkında Kanun hükümlerine tabiidir.

1958 tarihli New York Anlaşması

New York Anlaşması 1 Ekim 1992 tarihi itibariyle onaylandığı için bu tarihten itibaren Türkiye açısından da uygulama kabiliyeti kazanmıştır. Türkiye'nin koyduğu çekince uyarınca New York Anlaşması taraf olan bir devlette verilen hakem kararının Türkiye'de tanınması ve Tenfizinde uygulama alanı bulabilir.

Türkiye'nin tahkim yeri olduğu hakem kararları ise 4686 sayılı Milletlerarası Tahkim Kanununa tabiidir. Ancak Türkiye'de gerçekleşecek bir tahkim yargılamasının MTK'ya ve 6100 sayılı HMK'ya tabi olmayacağı taraf iradelerinden anlaşılan yabancı unsurlu hakem kararlarına New York Anlaşmasının uygulanması söz konusu olabilir.

New York Anlaşmasının V.maddesinde yabancı hakem kararlarının tenfizi şartları sınırlı şekilde sayılmıştır. Bu şartlardan biri de tenfizi istenen hakem kararının tenfiz devleti hukukunun kamu düzenine aykırı olmamasıdır. Burada dikkate alınması gereken kamu düzeni, iç hukuktaki kamu düzeni değil, milletlerarası unsurlu hukuki ilişkiler bakımından geçerlilik taşıyan kamu düzenidir. Ayrıca, kamu düzenine aykırılığın değerlendirilmesi ise tenfiz devleti olan Türkiye'de tenfize karar verildiği andaki geçerli bulunan anlayışa göre gerçekleştirilecektir.

Yabancı hakem kararlarının tenfizinde kamu düzeni birçok bakımdan değerlendirmeye alınabilir. Bunlardan birincisinde, tenfizi istenen kararın, kumar veya rüşvet alacağı veya ithali veya ihracı yasak bir malın teslimi gibi Türk kanunlarına göre ifası yasak olan edimler içermesi ya da uyuşturucu veya beyaz kadın ticareti gibi genel ahlaka ters düşen sözleşmelerden kaynaklanan edimleri hüküm altına alıyor olması halinde kamu düzenine aykırılık nedeniyle tenfiz talebinin reddedilebilir.

New York Anlaşmasında revizyon sistemi reddedildiğinden tenfiz mahkemesi burada belirtilen şartların dışına çıkarak hakem kararını esastan inceleyemez. Ancak istisnai hallerde kamu düzenine aykırılık iddiasının incelenmesi amacıyla sınırlı olarak hakem kararının içeriğine dahil bazı vakıaların incelenmesi söz konusu olabilir.

New York Anlaşmasının V (2)(b)maddesi anlamında kamu düzenine aykırı sayılabilecek ikinci hal ise, özellikle bazı milletlerarası tahkim merkezlerinde yapılan tahkim yargılaması sırasında hakemlerin bağımsızlığı veya tarafsızlığı ilkelerinin ihlal edilmesidir. Hakemlerin bağımsızlığından kasıt, onların hiçbir makam, merci, organ veya kişiden emir, talimat, tavsiye veya telkin almamaları veya özellikle davanın tarafları ile objektif karar vermeyi engelleyecek ölçüde herhangi bir bağ içinde bulunmamalaradır. Hakimler gibi adil, objektif ve tarafsız

karar vermeleri gereken hakemlerin bağımsızlığının taraflar için usuli güvence oluşturacağı tartışmadan uzaktır.

Hakemlerin bağımsız olmadıklarına karar verirken sadece şüphe yeterli olmayıp, söz konusu şüphenin kararın muhtevasına yansıması gerekir. Ancak bu şekilde somutlaşmış hakem kararları kamu düzenine aykırı sayılarak tenfizi reddedilebilir. Bazı durumlarda da hakemlerin bağımsız olmadıklarına ilişkin iddialar taraflarla hakem arasındaki rüşvet veya çıkar ilişkileri ispatlanarak açıkça ortaya konabilir.

Üçüncü olarak, bazı usuli hatalar savunma hakkını ihlal ederek kamu düzenini bozabilir. New York Anlaşmasının V (1)(b)maddesi anlamında özellikle taraflardan birinin tahkim usulünden haberdar edilmemiş olması ve bu diğer sebeplerden dolayı savunmamasının alınmamış olması temel hakları ihlal ettiğinden kamu düzenine aykırılık nedeniyle tenfiz engeli oluşturur.

Kamu düzenine aykırı sayılan bir diğer durum da tenfizi istenen hakem kararının kesinleşmiş Türk mahkeme kararına aykırı hükümler içermesidir. Zira, birbirine aykırı hüküm içeren iki ayrı kararın Türkiye'de aynı anda icra edilebiliyor olması, hukuki güvenlik, toplumsal barış ve istikrarı bozacağından, kamu düzeni fikrini ihlal edeceğinde şüphe yoktur.

Son olarak, hakem kararlarının taraflarının anlaşması ile gerekçesiz olarak verilebileceğine ilişkin kuralların işlerlik kazandığı hakem kararları kamu düzeni engeliyle karşılaşır. Anayasanın 141.maddesine göre bütün mahkeme kararları gerekçeli olmak zorundadır. Emredici nitelikte bulunan Anayasa m.141 hükmü hakem kararları için dahi geçerlidir. Diğer taraftan ancak gerekçe taşıyan hakem kararları, tenfiz şartlarına sahip olunup olunmadığı yönünde yapılacak bir incelemeye imkan tanır.

5718 sayılı MÖHUK

New York Sözleşmesi birçok ülke tarafından onaylanmış olduğu için bu anlaşmaya taraf olmamış devlet kalmamış gibidir. 5718 sayılı MÖHÜK, tenfiz şartları bakımından New York anlaşmasından daha ağır hükümler taşıdığı için tarafların MÖHUK hükümlerini tercih etmeleri pek düşünülemez. Ancak New York Anlaşmasının uygulanamadığı çok sınırlı hallerde yabancı hakem kararların tenfizinde MÖHUK hükümlerinin uygulanması düşünülebilir.

5718 sayılı MÖHUK hükümleri kamu düzeni açısından New York Anlaşması ile benzer hükümler içerdiği için New York Anlaşması için söylenenler burada da geçerlidir.

3.2 Hakem Kararlarının İptalinde Kamu Düzeni

Hakem kararlarının iptali tahkimin iç tahkim veya milletlerarası tahkim olmasına göre değişmektedir.

4686 sayılı Milletlerarası Tahkim Kanunu

4686 sayılı MTK, sadece yabancılık unsuru taşıyan ve tahkim yerinin Türkiye olarak belirlendiği veya bu Kanun hükümlerinin taraflar veya hakem kurulu tarafından seçildiği uyuşmazlıklarda uygulama alanı bulmaktadır.

Türk Hukukunda hakem kararlarına karşı asliye hukuk mahkemelerinde iptal davası açma usulünü ilk defa MTK getirmiştir. İptal kararına karşı Yargıtay'da temyiz yoluna başvurmak mümkündür. Esasa girme yasağını öngören MTK'ya göre, mahkemeler ancak iptal sebeplerinin gerçekleşip gerçekleşmediği noktasında hakem kararlarını inceleyebilir.

MTK'ya göre hakem kararının kamu düzenine aykırı olması açık bir iptal sebebi olarak düzenlenmiştir. Bu düzenleme New York Anlaşmasına paraleldir. Her ne kadar tahkim yargılaması Türkiye'de gerçekleşse de yabancılık unsurundan dolayı kamu düzenine aykırılık kavramı belirlenirken milletlerarası kamu düzeni yaklaşımı esas alınmalıdır.

6100 sayılı Hukuk Muhakemeleri Kanunu

Genellikle iç tahkim, hukuk muhakemeleri kanunlarında düzenlenir. Mülga 1086 sayılı Hukuk Usülü Muhakemeleri Kanunu iç tahkime ilişkin hükümler içermekteydi. Mülga HUMK, hakem kararlarına karşı temyiz yoluna başvurma imkanı tanımaktaydı. Kamu düzeni Mülga HUMK'da temyiz sebepleri arasında gösterilmese de, Yargıtay İçtihadı Birleştirme Kararına göre kamu düzenine aykırılık temyiz incelemesi sırasında resen gözetilebilmekteydi. Mülga HUMK döneminde hakem kararlarının kamu düzenine aykırılık nedenine dayalı olarak çok fazla Yargıtay kararı verilmişti.

6100 sayılı yeni HMK ise hakem kararlarına karşı mülga HUMK'dan farklı olarak temyiz yolunu kaldırmış ve MTK'daki düzenlemeye paralel olarak iptal prosedürü öngörmüştür. Buna göre hakem kararından hoşnut olmayan taraf, asliye hukuk mahkemelerinde iptal davası açabilir. Asliye mahkemesinin iptal davasındaki kararına karşı da Yargıtay'da temyiz yolu açıktır.

HMK, mülga HUMK'dan farklı olarak kamu düzenine aykırılığı özel bir iptal sebebi olarak düzenlemiştir. Bu düzenleme New York Anlaşması ve MTK'yla neredeyse aynıdır. Ancak, HMK'da düzenlenen tahkimin iç tahkim olduğu ve bu nedenle kamu düzeni kavramının da Türkiye'ye özgü bir yargılama olduğu dikkate alınarak yorumlanmalı ve değerlendirilmelidir.

4 Sonuç

Son yasal düzenlemelerden sonra Türkiye'de hakem kararlarının kamu düzenine aykırılığı New York Anlaşmasına paralel düzenlemeye kavuşmuştur. Ancak HMK, öngörülen kamu düzeni kavramının bir iç tahkim olduğu hususu gözden uzak tutulmamalıdır.

Kamu düzeni kavramı muğlak bir kavram olup tanımlanması zor bir kavramdır. Ancak bu belirsizlik kamu düzenine aykırılık nedeniyle hakem kararlarının içeriğine müdahale imkanı vermez. Tahkim yargılamasını tercih eden taraflar Devlet yargılamasından vazgeçerek hakemlerin hukuk anlayışı ve yaklaşımına razı olmuşlardır. Özellikle milletlerarası tahkimde esasa girme yasağına aykırı yargısal yorum ve uygulamalardan özellikle kaçınılmalıdır.

Türkiye'de Yabancı Hakem Kararlarının Tanınması ve Tenfizinde Karşılaşılan Sorunlar

Problems in Recognition and Enforcement of Foreign Arbitral Awards in Turkey

Assoc. Prof. Dr. Adnan Deynekli (Turkish Supreme Court, Turkey)

Abstract

If the arbitral award which requested to recognition and enforcement given in the country is a party to New York Convention dated 1958, primarily the provisions of this Convention shall be applied. The recognition and enforcement of domestic law and regulations duly implemented. Whether judgment fees should be fixed or proportional are discussion. The demand for recognition and enforcement of foreign arbitral tribunal shall not review the basis of the decision of the referee. The necessary conditions for enforcement of foreign arbitral decisions and must be moved. The existence of the arbitration agreement against the enforcement of the arbitration requested by referee assignments, and to be aware of the dispute to arbitration and enforcement required to be favorable verdict must not be contrary to public policy.

1 Giriş

Yabancı hakem kararlarının Türkiye'de tanınması ve tenfizi konusunda iki düzenleme bulunmaktadır. Bu düzenlemelerden birisi 5718 sayılı Milletlerarası Özel Hukuk ve Usul Hukuku Hakkında Kanunun 60, 61, 62 ve 63. maddelerinde yer alan hükümlerdir. Diğeri ise Türkiye'nin katıldığı Yabancı Hakem Kararlarının Tanınması ve İcrası Hakkındaki 10 Haziran 1958 Tarihli New York Sözleşmesidir.

Ayrıca Türkiye ile bazı ülkeler arasında iki taraflı milletlerarası sözleşmeler de bulunmaktadır.

958 tarihli New York Sözleşmesi'nin 1. maddesine göre sözleşme tanıma ve tenfiz istenen devletten başka devlette verilmiş hakem kararlarını kapsamaktadır. Sözleşmenin 1. maddesinin 3. fıkrası uyarınca Türkiye bazı çekincelerle sözleşmeyi onaylamıştır. New York Sözleşmesi Türkiye'nin koyduğu çekinceden dolayı sadece ticari uyuşmazlıklara ve anlaşmaya taraf olan ülkelerden verilen hakem kararlarının tanınması ve tenfizi 1958 tarihli New York Sözleşmesi'ne göre istenebilecektir. Tanınması ve tenfizi istenen yabancı hakem kararının verildiği ülke sözleşmeyi onaylamamışsa yabancı hakem kararın tanınması ve tenfizi 1958 tarihli New York Sözleşmesi'ne göre değil 5718 sayılı MÖHUK hükümlerine göre istenebilecektir.

1958 tarihli New York Sözleşmesi birçok ülke imzaladığı için yabancı hakem kararlarının tanınması ve tenfizinde daha çok 1958 tarihli New York Sözleşmesi hükümleri uygulanacaktır.

2 Tanınması ve Tenfizi İstenebilecek Yabancı Hakem Kararları

Bir hakem kararının Türkiye'de tanınması ve tenfizi için bu kararın yabancı hakem kararı olması gerekir.

Hangi hakem kararının yabancı hakem kararı sayılacağı hususunda 2675 ve 5718 sayılı MÖHUK'da hüküm bulunmamaktadır.

Hakem kararının yabancı hakem kararı olup olmadığı konusunda tarafların vatandaşlığı, hakemlerin milliyeti, hakem kararının verildiği yer, hakem kararının otoritesi altında verildiği konu kriterleri kullanılmıştır.

Türk Hukukunda Hukuk Genel Kurulu'nun 7.11.1951 tarihli 126/109 sayılı kararı bu açıdan önemlidir. Hukuk Genel Kurulu bu kararında "bir hakem kararı yabancı bir hakem otoritesi altında verilmiş ise, o kararın yabancı hakem kararı sayılabileceğini" kabul etmiştir.

1958 tarihli New York Sözleşmesi, 1. maddesinde bir hakem kararının yabancı hakem kararı sayılabilmesi için iki kıstas getirmiştir.

Birinci kıstasa göre hakem kararı tenfizi istenen ülkeden başka bir yerde verilmişse bu karar yabancı hakem kararıdır. Görüldüğü gibi bir hakem kararının yabancı hakem kararı sayılması için tenfizi istenen ülkeden başka bir ülkede verilmiş olması yeterli sayılmıştır.

İkinci kıstası göre hakem kararının tanınması ve tenfizi istenen ülkede milli sayılmaması gerekir.

Bir kararın tanınması veya tenfizi talebi ile başvurulan devlet mahkemesi, öncelikle kararın yerli bir hakem kararı mı yoksa yabancı bir hakem kararı mı olduğunu tespit edecektir.

Türk hukuku bakımından yerli hakem kararı Türk usul hukukunun emredici kurallarına uyarak verilmiş olan hakem kararıdır. Yabancı bir devletin usul hukukuna göre verilmiş bir hakem kararı yabancı hakem kararı olarak tanıma ve tenfizi konu edilebilir.

1 Ekim 2011 tarihinde yürürlüğe giren 6100 sayılı Hukuk Muhakemeleri Kanunu yabancılık unsuru içermeyen ve tahkim yerinin Türkiye olarak belirlendiği uyuşmazlıklar hakkında uygulanacaktır (HMK m. 407).

4686 sayılı Milletlerarası Tahkim Kanunu ise yabancılık unsuru taşıyan ve tahkim yerinin Türkiye olarak belirlendiği veya bu kanun hükümlerinin tarafları ya da hakem veya hakem kurulunca seçildiği uyuşmazlıklar hakkında uygulanır. Türkiye'de cereyan eden yabancı unsurlu tahkimler, hangi usule göre icra edilirse edilsin Türk Milletlerarası Tahkim Kanununa tabi olduklarından hakem kararları Türk hakem kararlarıdır. Tahkim yeri olarak Türkiye öngörülmesine rağmen tahkimin 4686 sayılı kanuna tabi olmayacağı kararlaştırılmışsa hakem kararı yabancılık unsuru içermiyorsa 6100 sayılı HMK hükümlerine tabi olacak, yabancılık unsuru içeriyorsa yabancı hakem kararı sayılacak ve 1958 tarihli New York Sözleşmesi veya 5718 sayılı MÖHUK   hükümlerine göre tanıma ve tenfize tabi tutulacaktır.

Tanınması ve tenfizi istenebilecek yabancı hakem kararının ad hoc veya kurumsal tahkim sonunda verilen hakem kararı olmasının tanıma ve tenfiz açısından bir önemi bulunmamaktadır. Kurumsal tahkim merkezleri önceden düzenlenmiş kuralları ve zaman içindeki uygulamaların bilinmesi nedeniyle taraflara güven sağlamaktadır. Tanıma ve tenfizi istenen kararlar göz önüne alındığında kurumsal tahkim hizmeti sağlayan merkezlerin bazılarını sayabiliriz.

Bunlar MTO Tahkim Mahkemesi, Londra Uluslar arası Tahkim Mahkemesi, Rusya Federasyonu Ticaret ve Sanayi Odası Uluslar arası Tahkim Mahkemesi, Avusturya Federal Ekonomi Odası Uluslar arası Tahkim Merkezi, Stockholm Ticaret Odası Tahkim Enstitüsü, Amerika Tahkim Odası, Hububat ve Yem Ticaret Birliği Tahkim Mahkemesi (GAFTA), Suni ve Hayvansal Yağ ve Tohum Birlikleri Federasyonu Tahkim Mahkemesi (FOSFA) ve Rafine Şeker Birliği Tahkim Mahkemesidir.

3   Yabancı Hakem Kararının Tanınması ve Tenfizi Usulü

Bu başlık altında görev ve yetkiye ilişkin hususlar ile çeşitli usule ait hususlar tartışılacaktır.

3.1   Görevli ve Yetkili Mahkeme

Yabancı hakem kararlarının tanınması ve tenfizinde görevli mahkeme asliye hukuk mahkemesidir (MÖHUK m. 60/2). Görev kamu düzeninden olup (HMK m.1) davanın her aşamasında resen gözetilir (HMK m. 115). Yabancı hakem kararının tanınması ve tenfizi sulh hukuk mahkemesinden istenirse görev dava şartı olması nedeniyle (HMK m. 114) mahkeme resen görevsizlik kararı vermelidir.

Tanınması ve tenfizi istenen yabancı hakem kararı ticari bir uyuşmazlığa dayanıyorsa asliye ticaret mahkemesinde tanıma ve tenfiz talep edilebilir mi?

Şanlı'ya göre ticari uyuşmazlıklarla ilgili olarak verilmiş yabancı hakem kararlarının tenfizi davaları ve bu davaların konusu, "ticari iş" veya "ticari dava" niteliğinde olmadığından, tenfiz davalarında işin esasına girilemeyeceğinden mahkeme burada uzmanlığı gereği ve yargılama yapmayacak, sadece tenfiz şartlarının bulup bulunmadığını tespit edecektir. Bu nedenle uyuşmazlık ticari olsun olmasın yabancı hakem kararlarının tanınması ve tenfizinde görevli mahkeme asliye hukuk mahkemesidir.

Tenfizi istenen yabancı hakem kararına konu sözleşme ve uyuşmazlık Deniz Ticaret Hukukunu veya Fikri ve Sınai Hakları ilgilendiriyorsa görevli mahkemenin Deniz İhtisas Mahkemesi veya Fikri ve Sınai Haklar Mahkemesi olup olmadığı sorunu ortaya çıkabilir.

Yabancı hakem kararlarının tanınması ve tenfizinde yetkili mahkeme, tarafların yazılı olarak kararlaştırdıkları yerdeki mahkemedir. Taraflar arasında böyle bir sözleşme yoksa davalının Türkiye'deki yerleşim yeri, yerleşim yeri yoksa sakin olduğu yer mahkemesi, sakini olduğu yer de yoksa davalının icraya konu teşkil edebilecek mallarının bulunduğu yer mahkemesidir (MÖHUK m. 60/2). Davalının Türkiye'de icraya konu edilebilecek malları yoksa Türk mahkemeleri yabancı hakem kararlarının tanınması ve tenfizi konusunda yetkisiz olacaktır. Ancak yetkinin kesin olmadığı durumlarda mahkeme yetki itirazını resen gözetmez. Davalının cevap süresi içinde yetki ilk itirazında bulunması gerekir.

3.2   Tanıma ve Tenfiz Başvurusu

Yabancı hakem kararının tanınmasını ve tenfizini isteyen taraf görevli ve yetkili mahkemeye bir dilekçe ile başvurur. Bu dilekçenin HMK'nın 119. maddesine uygun olarak düzenlenmesi gerekip gerekmediği konusunda tereddüt ortaya çıkabilir. HMK'nun 119. maddesinin a, b, ç, d, ğ, h bentlerinde yer alan hususlar tanıma ve tenfiz talebi dilekçesinde bulunması gerekir.

5718 sayılı MÖHUK, dilekçeye bazı belgelerin eklenmesini zorunlu kılmıştır. 1958 tarihli New York Sözleşmesi'nin IV. Maddesinde yabancı hakem kararının tanınmasını ve tenfizi isteyen tarafın sunması gereken belgeleri belirtmiştir.

5718 sayılı MÖHUK'un 61. maddesine göre eklenecek belgeler şunlardır:

  i- Tahkim sözleşmesi veya şartının, aslı yahut usulüne göre onanmış örneği

  ii- Hakem kararının usulen kesinleşmiş ve icra kabiliyeti kazanmış veya taraflar için bağlayıcılık kazanmış aslı veya usulüne göre onanmış örneği,

iii- Yukarıda sayılan belgelerin tercüme edilmiş ve usulen onanmış örnekleri

1958 tarihli New York Sözleşmesi'nin IV. Maddesine göre dilekçeye eklenecek belgeler şunlardır:

i- Hakem kararının usulüne göre tasdik edilmiş aslı yahut aslına uygunluğu tasdik edilmiş bir sureti,

ii- Kararın dayandığı tahkim anlaşmasının aslı veya usulü dairesinde tasdik edilmiş sureti.

iii- Hakem kararı veya onun dayandığı tahkim anlaşması tenfizi istenen mahkemenin resmi dilinde yazılmamışsa tercümesi.

3.3 Başvuruda Alınacak Harç

Yabancı hakem kararlarının tenfizinde tenfiz isteyen taraftan başvuru harcı ve nisbi harca tabi davalarda nisbi karar ve ilam harcının %68,31'nü ¼'ü harç alınır. Uygulamada da harcın bu şekilde alınacağı kabul edilmektedir. Yargıtay bir kararı şöyledir:

"yabancı hakem kararlarının tenfizine ilişkin mahkeme kararından hakem kararının mahiyetine göre (Türk hakem kararları gibi) karar ve ilam harcı alınır. Bu durumda yabancı hakem kararının tenfizini isteyen taraftan başvurma harcı ve nisbi harca tabi davalarda nispi karar ve ilam harcı alınır. Somut olayda nispi harç alınması gerektiği gözetilmeden maktu harç alınması da isabetsizdir."

Harçla ilgili 1958 Tarihli New York Sözleşmesi'nin III. Maddesi önemli bir düzenlemedir. Hükme göre sözleşme kapsamında hakem kararlarının tanınması ve tenfizi için milli hakem kararlarına nispetle oldukça ağır şartlar yükleyemeyecek ve adli harç alınmayacaktır. 4686 sayılı MTK'nun 15/B maddesine göre hakem kararına karşı açılan iptal davasının reddine ilişkin kararın kesinleşmesinden sonra hakem kararının icra edilebilir olduğuna ilişkin belge istemde bulunan tarafa verilir. Bu belgenin verilmesi harca tabi değildir. Hakem kararının icraya konulması halinde Harçlar Kanununu hükümleri uygulanır. Bu hüküm uyarınca yabancı hakem kararlarının tanınması ve tenfizinde nisbi değil maktu harç alınması gerektiği düşünülebilir.

3.4 Teminat

Yabancı hakem kararının tanınması ve tenfizi talebi de dava olduğundan tanıma ve tenfiz hakkında bulunan davacı yabancı ise 5718 sayılı MÖHUK'un 48. maddesine göre, Türkiye'de mutat meskeni bulunmayan Türk vatandaşı ise 6100 sayılı HMK'nun 84. maddesine göre teminat göstermek zorundadır. Davacının mensup olduğu veya ikamet ettiği ülke ile Türkiye arasında teminattan muafiyet konusunda iki veya çok taraflı anlaşma varsa teminat istenmeyecektir.

3.5 Uygulanacak Yargılama Usul ü

5718 sayılı MÖHUK'un 61. maddesinin atıf yaptığı 55. maddeye göre tenfiz istemine ilişkin dilekçe duruşma günü ile birlikte karşı tarafa tebliğ edilir. İstem basit yargılama usulü hükümlerine göre incelenerek karara bağlanır. Basit yargılama usulü 1086 sayılı HUMK'un 507-511 maddeleri arasında düzenlenmişken 1 Ekim 2011 tarihinde yürürlüğe giren 6100 sayılı HMK'nun 316-322 maddeleri arasında düzenlenmiştir. Bu yargılama usulünde cevap süresi iki haftadır. Bu süre zarfında mahkemeye başvuran davalıya durum ve koşullarag öre bir defaya mahsus olmak üzere iki haftayı geçmemek üzere ek süre verilebilir (HMK m. 317).

Taraflar dilekçeleri ile birlikte tüm delillerini açıkça ve hangi vakıanın delili olduğunu bildirmek, ellerindeki delilleri dilekçelerine eklemek zorundadır (HMK m. 318).

İddianın genişletilmesi veya değiştirilmesi yasağı dava açılmasıyla, savunmanın genişletilmesi veya değiştirilmesi yasağı cevap dilekçesinin mahkemeye verilmesiyle başlar (HMK m. 319).

Yabancı hakem kararlarının tanınması ve tenfizi talebiyle açılan davalarda ön inceleme ve tahkikat kesin çizgilerle birbirinden ayrılmamıştır (HMK m. 320). Mahkeme ilk duruşmada dava şartları ve ilk itirazlarla hak düşürücü süre ve zamanaşımı hakkında tarafları dinledikten sonra tarafların iddia ve savunmaları çerçevesinde anlaştıkları ve anlaşamadıkları hususları tek tek tespit eder. Uyuşmazlık konularının tespitinden sonra hakem tarafları sulhe teşvik eder. Tarafların sulh olmaları halinde sulhe göre karar verir. Taraflar sulh olmazlarsa anlaşamadıkları hususlar tutanağa yazılır ve tutanağın altı hazır bulunan taraflarca imzalanır (HMK m. 320/2).

Mahkeme tahkikat işlemlerini ön inceleme duruşması hariç iki duruşmada tamamlar. Duruşmalar arasındaki süre bir aydan uzun olamaz. İşin niteliği gereği bir aydan fazla süreli duruşma günü belirleyebilir ve ikiden fazla duruşma yapabilir (HMK m. 320).

Yabancı hakem kararlarının tanınması ve tenfizi talebiyle açılan davalar bir defa takipsiz bırakılabilir. İkinci defa takipsiz bırakılması halinde davanın açılmamış sayılmasına karar verilir (HMK. M. 320/4).

1086 sayılı HUMK'un 176. maddesinde basit yargılama usulüne tabi davaların adli tatilde görülebileceği belirtilmiştir. Bu kanun yerine yürürlüğe giren 6100 sayılı HMK'nun 103. maddesinde adli tatilde görülecek dava ve işler arasında basit yargılama usulüne tabi tutulan dava ve işler sayılmamıştır. HMK'nun 103. maddesinin (h) bendinde kanunlarda ivedi olduğu belirtilen dava ve işlerin adli tatilde görülebileceği hükme bağlanmıştır. Basit yargılama usulüne tabi dava ve işlerin ivedi olup olmadığı hususu yeni bir tartışmayı gündeme getirecektir. Özellikle temyiz sürelerinin adli tatilde işleyip işlemeyeceği konusundaki çıkabilecek tartışmaların önüne geçmek için konuya açıklık getirilmesi uygun olur.

Basit yargılama usulünde iddianın genişletilmesi veya değiştirilmesi yasağı dava açılmasıyla, savunmanın genişletilmesi veya değiştirilmesi yasağı cevap dilekçenin mahkemeye verilmesiyle başlar (HMK m. 319). Davacı yabancı hakem kararının tenfizini isterken kararda belirtilen yargılama giderini talep etmemişse ve daha sonra yapacağı talep davalının iddianın genişletildiği savunmasıyla karşılaşabilir.

3.6 Davalının İleri Sürebileceği İtirazlar

5718 sayılı MÖHUK'un 61. maddesinin 2. fıkrasının atıf yaptığı 55. maddesinin 2. fıkrasındaki hüküm yabancı hakem kararlarının tanınması ve tenfizinde de uygulanacaktır. Davalı tenfiz şartlarının bulunmadığını veya yabancı mahkeme ilamının kısmen veya tamamen yerine getirilmiş olduğunu veya yerine getirilmesine engel bir sebep bulunduğunu ileri sürerek tenfiz talebine itiraz edebilir. Bu itirazlar sınırlı olup genişletilemez. Ancak davalı tenfiz isteyen kişinin talepte bulunurken dilekçesine eklemesi gereken belgeleri hiç eklemediğini veya eksiklik bulunduğunu belirterek de itiraz da bulunması mümkündür.

Davalı tahkim yargılamasında ileri sürülen ancak kabul edilmeyen ödeme savunmasını, tenfiz davasında itiraz sebebi olarak ileri süremez. Ancak hakem kararının verilmesinden sonraki ödemeler gözetilir.

3.7 İncelemenin Kapsamı

1958 tarihli New York Sözleşmesi'nde ve 5718 sayılı MÖHUK'da mahkemelerin yabancı hakem kararlarının tanınması ve tenfiz davalarında işin esasına göremeyeceği kabul edilmiştir. Yargıtay kararlarında da tenfiz mahkemesinin hakem kararının esasına ilişkin hususlarda inceleme yapamayacağı belirtilmektedir.

"Davalı tek sözleşme olmasına rağmen iki kere tazminata hükmedilmesini savunmanın dikkate alınmadığını gösterdiğini belirterek tenfiz talebinin bu nedenle de reddi gerektiğini savunmuştur. Bu iddia kararın esasına ilişkin olup, hakem kararının doğruluğunu inceleme yapma yasağı (revision au fond) kapsamında bulunduğundan tenfiz mahkemesine bu iddiaları inceleme yetkisi tanınmamıştır."

Tenfiz talebini inceleyen mahkeme tenfiz talebinin reddini gerektiren hususlar yönünden inceleme yapacaktır. MÖHUK'un 62. maddesinde (ç), (d), (e), (f), (g) ve (h) bentlerinde yazılı hususları ispat yükü, hakkında tenfiz istenen tarafa aittir. Aynı maddenin (a), (b) ve (c) bentlerinde yazılı hususlarda ise ispat yükü tenfiz talep eden davacıya ait bulunmaktadır.

1958 tarihli New York Sözleşmesi'ne göre tenfiz şartlarının gerçekleşmediğini ispat yükü, aleyhine tenfiz istenen davalıya aittir. Ancak tenfiz talebini inceleyen mahkeme de hakem kararının tahkime everişli olmayan bir konuda verildiğini veya kamu düzenine aykırı olduğunu tespit ederse tenfiz talebini reddeder (m. V-2).

Davalı hakem tenfizini veya hakemlik prosedürünün kendisine haber verilmediğini belirterek tenfiz talebinin reddini isterse bu durumda menfi vakıanın ispatı mümkün olmadığından ispat yükünün davalıda değil davacıda olduğunu kabul etmek gerekir.

4 Yabancı Hakem Kararının Tanınması ve Tenfizi İçin Gerekli Koşullar

4.1 Tenfizi İstenen Kararın Yabancı Hakem Kararı Olması

Bir hakem kararının Türkiye'de tanınmasının veya tenfizinin istenebilmesi için bu kararın yabancı hakem kararı olması gerekir.

4.2 Hakem kararının Kesinleşmesi ve İcra Kabiliyeti Kazanması veya Taraflar İçin Bağlayıcı Olması (İptal Edilmemiş Olması veya İcranın Geri Bırakılmamış Olması)

1958 tarihli New York Sözleşmesi'nde tenfizi istenen yabancı hakem kararının bağlayıcı olması gerektiği kabul edilmiştir (m. V-e). 5718 sayılı MÖHUK'un 60. maddesine göre kesinleşmiş ve icra kabiliyeti kazanmış veya taraflar için bağlayıcı olan yabancı hakem kararları tenfiz edilebilir. 2675 sayılı kanunda yer almayan yabancı hakem kararının bağlayıcı olması 5718 sayılı kanunla getirilmiştir. Bu hükmün amacı yabancı hakem kararlarının tanınmasını ve tenfizini kolaylaştırmaktır. Yargıtay da tenfizi istenen yabancı hakem kararının bağlayıcı olmasını yeterli kabul etmektedir.

"Davacı vekili, taraflar arasında 25.8.1997 tarihinde yapmuk alım satım sözleşmesi akdedildiğini, davalının sözleşmeden doğan edimini yerine getirmediğini, Liverpool Pamuk birliği Hakem Mahkemesine yapılan müracaatın karara bağlandığını ileri sürerek hakem kararının tenfizine karar verilmesini talep ve dava etmiştir.

Davalı vekili 25.8.1997 tarihli sözleşmedeki imzanın müvekkiline ait olmadığını, taraflar arasında geçerli bir tahkim sözleşmesi bulunmadığını, hakemde görülen davada savunma hakkı tanınmadığını, tebligatların usulsüz olduğunu belirterek tenfiz talebinin reddini istemiştir.

Mahkemece, tahkim sözleşmesinin geçerli olduğu, davalının savunma hakkına riayet edildiği, hakem kararının bağlayıcı olduğu, tahkimle çözümlenmesi mümkün bir konuya ilişkin bulunduğu, kamu düzenine aykırı olmadığı gerekçesiyle hakem kararının tenfizine karar verilmiş, hüküm davalı vekili tarafından temyiz edilmiştir.

Dosyadaki yazılara kararın dayandığı delillerle gerektirici sebeplere, delillerin takdirinde bir isabetsizlik bulunmamasına göre, davalı vekilinin yerinde görülmeyen bütün temyiz itirazlarının reddiyle usul ve kanununa

uygun bulunan hükmün Onanmasına, aşağıda yazılı onama harcının temyiz edenden alınmasına, 21.2.2008 gününde oybirliğiyle karar verildi."

4.3 Tahkim Anlaşmasının Yapılmaması

Taraflar arasında tahkim sözleşmesi yapılmamışsa veya esas sözleşmeye tahkim şartı konulmamış ise tenfiz talebini inceleyen mahkeme tenfiz talebini reddeder (5718 sayılı MÖHUK m. 62).

Türk hukukunda tahkim sözleşmesinin yazılı olarak yapılması geçerlilik şartı olarak kabul edilmiştir (HUMK. m. 517/2; 4686 sayılı MTK m. 4; HMK m. 412/2). 4686 sayılı MTK'nun 4. maddesi, HMK'nun 412/2 maddesi ile 1958 tarihli New York Sözleşmesi'nin II/2. maddesinde tahkim sözleşmesinin her iki tarafın imzasını taşıyan bir sözleşme ile yapılabileceği gibi, mektup veya telgraf teatisi yoluyla da yapılabileceği kabul edilmiştir.

Tahkim sözleşmesinin yazılı olması şartının gerçekleşip gerçekleşmediği tarafların anlaşmayı tabi kıldıkları hukuka veya böyle bir anlaşma yoksa hakem kararının verildiği yer kanununa göre tayin edilir (1958 tarihli New York Sözleşmesi m. V/I-a).

Türk hukukuna göre tahkim sözleşmesinin şekli, tarafların bu anlaşmaya uygulanmak üzere seçtikleri hukuka ve böyle bir hukuk seçimi yoksa Türk hukukuna göre belirlenir (4686 sayılı MTK m. 4/3).

Tahkim sözleşmesini imzalayan temsilcinin yetkisizliğinden dolayı tahkim sözleşmesinin geçersizliği şekil kapsamında mı, ehliyet kapsamında mı yoksa esası kapsamında mı değerlendirilecektir?

Temsilcinin tahkim sözleşmesi yapmasına özel yetki verilmiş olması halinde engel bulunmamaktadır (818 sayılı BK m. 388; 6098 sayılı TBK m. 504; 6100 sayılı HMK m. 74).

Temsil yetkisi bulunmayan kişinin imzaladığı tahkim sözleşmesi geçerli değildir. Asıl sözleşmenin geçerli olması veya geçerli kabul edilmesi tahkim sözleşmesini geçerli hale getirmez. Ancak tahkim sözleşmesinin geçersizliğinin ileri sürülmesinin MK'nun 2. maddesine aykırılık teşkil etmesi halinde bu itiraz dinlenmez.

Tahkim sözleşmesini imzalamayan kişi yönünden sözleşme hükümleri uygulanamaz. Tahkim sözleşmesi istisna nitelikte olup sözleşmenin taraflarını bağlar.

Bir sözleşmede yer alan tahkim kurumunun tereddüte yer vermeyecek açıklıkta bulunması gerekir. Bu olayda "bu sözleşme, İngiliz hukukuna tabi olup, uyuşmazlıklar MTO'ya havale edilir" şeklindeki kayıt MTO nezdinde tahkime başvuru nedeni anlaşılır olmadığından MTO tahkim prosedürünün izlenmesini sağlayacak bir tahkim kaydı olarak kabul edilmemiştir.

Yargıtay bir kararında "çıkacak ihtilafların İngiltere'de ki Uluslar arası Tahkim Mahkemesinde çözümleneceğine" ilişkin ibareyi Paris'te bulunan MTO tahkim mahkemesine başvuru için yeterli görmeyerek tahkim mahkemesi olarak kararlaştırılmayan bir hakemin verdiği kararın tenfiz edilemeyeceği kabul etmiştir.

4.4 Aleyhine Karar Verilen Tarafın Hakem Tayininden veya Tahkim Yargılamasından Haberdar Edilmemesi

Yabancı hakem kararının aleyhine tanınması veya tenfizi istenen tarafın hakem tayininden haberdar edilmiş olması veya başka bir sebep yüzünden iddia ve müdafaa vasıtalarını ikame etmek imkanından mahrum edilmemiş olması gerekir.

Adil bir yargılama çerçevesinde verilen hakem kararının tanınması ve tenfizi istenebilir.

-Usulüne uygun tebligat yapılmalıdır.

-Hakem seçimi, delillerin sunulması veya savunma hazırlanması için verilen sürelerin yeterli olması gerekir.

4.5 Uyuşmazlığın Tahkime Elverişli Bulunması

Tenfizi istenen hakem kararının temyiz devletinin hukukuna göre tahkim yolu ile çözümü mümkün olan bir uyuşmazlıkla ilgili olması gerekir. Taşınmaz mallar üzerindeki ayni haklardan (TMK m. 683, d. 779 vd.) kaynakların uyuşmazlıklar tahkime elverişli değildir (MTK m.1; HMK m. 408).

Ayrıca tarafların iradelerine tabi olmayan işlerden kaynaklanan uyuşmazlıklar da tahkime elverişli değildir. Tenfizi istenen bir kararla ilgili uyuşmazlığın tahkime elverişli olup olmadığının itiraz üzerine mi yoksa resen mi inceleneceği konusunda çeşitli görüşler ileri sürülmüştür.

Tenfizi istenen yabancı hakem kararlarının tahkime elverişli olmaması halinde tenfiz talebini inceleyen mahkeme tenfiz talebini reddedecektir. Uyuşmazlık kısmen tahkime elverişli ise tenfiz istenen kararın tahkime elverişli olan kısmının tenfizine karar verilecektir.

Konu ile ilgili en büyük sorunlardan bir tanesi ise tahkime elverişliliğe hangi hukukun uygulanacağıdır.

1958 tarihli New York sözleşmesinin V/2-a maddesinde bir düzenleme bulunmaktadır. Hükme göre tanıma ve tenfiz isteğini öne sürüldüğü ülkenin kanuna göre uyuşmazlık konusunun tahkime elverişli olmaması halinde tanıma ve tenfiz isteği reddolunabilir.

İtalyan Temyiz Mahkemesi 1979 tarihli bir kararına bu görüşü kabul etmiştir. İş hukukundan kaynaklanan bir uyuşmazlığın İtalyan hukukuna göre tahkime elverişli olmadığı kabul edilerek tanıma ve tenfiz talebi kabul edilmemiştir.

4.6 Hakem Kararının Tenfiz Devletinin Kamu Düzenine Aykırı Olması

Hakemleri bağımsız ve tarafsız olmaması, tahkim anlaşması da taraflardan birine üstünlük tanınması, sözleşme konusunun ahlaka aykırı olması, hakem kararını gerekçesiz olması durumda hakem kararının kamu düzenine aykırı olduğu kabul edilebilir.

1958 tarihli New York Sözleşmesinin V/2-b maddesinde ve 5718 sayılı Kanunun 62/I-b maddesinde kamu düzenine aykırı kararın tenfiz edilemeyeceği hükme bağlanmıştır.

5 Sonuç

Yabancı hakem kararlarının verildiği ülkeden başka bir ülkede etki doğurması isteniyorsa bu kararın o ülkede tanınması ve tenfizi gerekir. Yabancı hakem kararlarının tanınması ve tenfizinde ad hoc ve kurumsal hakem kararları arasında bir fark bulunmamaktadır. Yabancı hakem kararlarının tanınması ve tenfizinde sorunlardan biri yabancılık unsurunun tespitidir. 1958 tarihli New York sözleşmesi yabancılık unsuru gözetilerek düzenlenmiştir.

1958 tarihli New York sözleşmesi ve 5718 sayılı MÖHUK yabancı hakem kararlarının tanınması ve tenfizinde paralel düzenlemeler yapmakla birlikte bazı hallerde farklı düzenlemeler de bulunmaktadır.

Yabancı hakem kararının Türkiye'de tenfizini isteyen tarafın nisbi harç mı yoksa maktu harç mı yatıracağı konusunda istikrarlı bir uygulama bulunmamaktadır. Konu ile ilgili düzenleme yapılması veya Harçlar Kanununa konuyu düzenleyen bir hükmü konulmasının uygun olacağı düşünülmektedir.

Yabancı hakem kararının tanınması ve tenfizinde mahkeme hakem kararının esasını inceleyemez. "Revision au fond" yasağı Türk Mahkemelerince kabul edilerek uygulanmaktadır.

Yabancı hakem kararlarının tanınması ve tenfizine engel haller gerekli 1958 tarihli New York Sözleşmesinde gerekse 5718 sayılı Kanunda sayılmıştır. Tahkime elverişlik ve kamu düzeni konusunda uygulamada birlik sağlanmamıştır.

Ceza Hukukunun Tahkime Etkileri

The Effects of the Criminal Law to Arbitration

Assoc. Prof. Dr. Çetin Arslan (Turkish Supreme Court, Turkey)

Abstract

While the arbitration, in essence, is a special law institution, there are various points it intersect with the criminal law. It is quite important to investigate the aforementioned probabilities that criminal law norms may affect the arbitration procedures and/or decisions and the probable consequences of these. In this respect, the feasibility of the use of the Criminal Procedure Law (i.e. criminal conviction, illegal evidence) in the Arbitration Law, the bindingness and the indirect effects of the decisions of the criminal court and the punitive responsibilities of the refrees are all some of the important issues that can be examined under this heading. The subjects mentioned in the paper will be evaluated from the perspective of Turkish Law theory and practice.

1 Giriş

"Yargı" devlete ait bir fonksiyon olup, "Anayasa (AY)"ya göre Türk milleti adına bağımsız mahkemelerce kullanılır (AY md. 9). Yine Anayasaya göre, hiç kimse kanunen tabi olduğu mahkemeden başka bir merci önüne çıkarılamaz -kanuni hâkim güvencesi- (AY md. 37/1). Bu hükümler göz önüne alındığında herhangi bir neden ve şekilde ortaya çıkan uyuşmazlıkların, kamu görevlisi olan hâkimler tarafından yasalarla belirlenmiş muhakeme prosedürüne göre çözümlenmesi gerekmektedir. Bununla birlikte gerek Anayasamız (md. 59/2, 82/1, 125/1), gerekse başta 12.01.2011 tarih ve 6100 sayılı "Hukuk Muhakemeleri Kanunu (HMK)" (RG, 04.02.2011/ 27836) (md. 74/1, 103/1-g, 116/1-b, 316/1-f, 407- 444) ile 21.06.2001 tarih ve 4686 sayılı "Milletlerarası Tahkim Kanunu (MTK)" (RG, 05.07.2001/24453) olmak üzere çeşitli düzenlemelerde (ör. 4077 sayılı "Tüketicinin Korunması Hakkında Kanun" md. 22 ve 4857 sayılı "İş Kanunu" md. 20) özel hukuka ilişkin uyuşmazlıkların, bazı hallerde tahkim yoluyla halledilebilmesine olanak tanınmıştır. Nitekim "Yargıtay Hukuk Genel Kurulu (HGK)"nun güncel bir kararında bu husus şu şekilde açıklanmaktadır:

"…2709 sayılı 1982 Anayasası'nın 9.maddesinde yargı yetkisinin Türk Milleti adına bağımsız mahkemelerce kullanılacağı öngörülmüştür. Öteki deyişle, kural olarak hak arayan kişiler öncelikle mahkemelere başvuracaktır. Bu temel kuralın istisnası ise, bazı kanunlarda usul ve amaçları belirtilen **özel yargıdır. /Bu özel yargılama usullerinden birisi de tahkim usulüdür.**/ Tahkimin türlerinden birisi 'İç Tahkim'dir./ Genellikle tahkimle ilgili hükümler ülkelerin Hukuk Usulü Muhakemeleri Kanunlarında yer almaktadır. Türk hukukunda da, 1086 sayılı Hukuk Usulü Muhakemeleri Kanunu (HUMK)'nun 516-536. maddelerinde ve bazı özel yasalarda iç tahkim usulü düzenlenmiştir./ İç tahkimde kendi içinde 'Mecburi Tahkim' ve 'İhtiyari Tahkim' olmak üzere iki gruba ayrılmaktadır./ Mecburi tahkim; doğrudan doğruya kanundan doğan bir tahkim türüdür. Bu tür tahkimde dava mahkemelerde açılmaz, ihtilaf çözüm için hakemlere götürülür. Mecburi tahkim özel kanunlarla öngörülmüş olup, bu kanunlarda kimin hakem olacağı, hakemin görev ve yetkileri düzenlenmiştir. Mecburi tahkim, HUMK'da yer almamış olup, bu Kanunda sadece 516 ilâ 536. maddeler arasında ihtiyari tahkim hükümlerine yer verilmiştir (Doç.Dr. Kemal Dayınlarlı, HUMK'da Düzenlenen İç Tahkim, Ankara-1977, s.7-11)./ Öteki deyişle; bazı hallerde, taraflar arasında ortaya çıkan özel hukuk alanına ilişkin uyuşmazlıkların, evvelce bu konuda bir tahkim sözleşmesi yapılmamış olmasına rağmen, sıfatları belirtilen kişiler tarafından bakılması zorunlu kılınmıştır ki, buna mecburi ya da kanuni tahkim denilmektedir. / Tahkimin hangi hallerde mecburi olduğu, özel kanun hükümleri ile tayin edilir; mecburi tahkime tabi iş ve davalarda, taraflar Devlet mahkemelerinde yani genel mahkemelerde dava açamazlar; kanunla gösterilen hakemlere başvurmaya, bir başka söyleyişle hakemlerde dava açmaya mecburdurlar…" (HGK, 15.12.2010, 2012/3-213, 2012/200) (UYAP-Yayınlanmamıştır).

Kanunda, "Tarafların, sözleşme veya sözleşme dışı bir hukuki ilişkiden doğmuş veya doğabilecek uyuşmazlıkların tamamı veya bir kısmının çözümünün hakem veya hakem kuruluna bırakılması hususunda yaptıkları anlaşma…" (HMK md. 412) şeklinde tanımlanan "tahkim"in; taraf iradesinin egemen olduğu bir "Özel Hukuk" kurumu olması karşısında (bkz. HMK md. 408); -ilk bakışta- emredici hukuk kurallarının hâkim olduğu "Ceza Hukuku" ile herhangi bir irtibatının bulunmadığı veya en azından doğrudan bir ilişkisinin olmadığı düşünülebilir. Bununla beraber hukuk düzeninin uyumlu bir bütün olması gerçeği ile ceza hukukunun evrensel hukuk orijinli ilkelerinin bağlayıcılığı olgusu; kimi ceza hukuku kurallarının tahkim sürecine etkilerini kaçınılmaz kılmaktadır. İşte bu tebliğde kanımızca önemli olan, ancak bu güne kadar üzerinde yeterince durulmamış olan bu konuya genel hatlarıyla değinilecektir.

2   Tahkime Doğrudan Etkili Hususlar

2.1 Hakemin Göreviyle İlgili Bir Suç İşlemesi

Hakemin Ceza Hukuku Açısından Hukuki Durumu: Tahkim tarafların seçtiği bir hakem veya hakem kurulu tarafından yerine getirilmektedir. Tahkim sürecinde hakemin görev ve sorumluluklarına ilişkin gerek HMK' de gerekse ilgili mevzuatta çeşitli hükümler mevcut ise de, ceza hukukundaki konumunun ne olduğuna ilişkin özel bir düzenleme yoktur. Bu nedenle genel hükümler dikkate alınarak bir değerlendirme yapmak ve sonuca varmak gerekmektedir.

26.09.2004 tarih ve 5237 sayılı Türk Ceza Kanunu (TCK)'un (RG, 12.10.2004/ 25611) 6/1-c ve d. maddesine göre, "c) Kamu görevlisi deyiminden; kamusal faaliyetin yürütülmesine atama veya seçilme yoluyla ya da herhangi bir surette sürekli, süreli veya geçici olarak katılan kişi,/ d) Yargı görevi yapan deyiminden [ise]; yüksek mahkemeler ve adlî, idarî ve askerî mahkemeler üye ve hâkimleri ile Cumhuriyet savcısı ve avukatlar…" anlaşılmaktadır.

Hakem tahkim sürecinde bir tür yargılama işlevi yerine getirmekteyse de, hâkim gibi atama yoluyla görev ifa eden bir devlet görevlisi olmayıp; kural olarak uyuşmazlığın taraflarınca seçilmektedir. Bununla birlikte hakem, tahkim usulüyle uyuşmazlığı çözmekte, kararları yargısal denetime ve cebri icraya konu olmaktadır. Keza hakem, görevini tarafsız ve bağımsız şekilde yerine getirmekle yükümlü olup, aksi halde hâkimlerde olduğu çekinmeleri veya reddi söz konusudur. Bu temel özellikleri itibariyle hakemin yargı görevi yaptığı söylenebilirse de; maddede sınırlı olarak sayılan hâkim, savcı veya avukat sıfatını taşımadığından "yargı görevi yapan" kategorisinde düşünülemez. Bununla birlikte yapılan iş kamusal bir faaliyettir ve bu nedenle "hakem", tıpkı kamusal faaliyetin yürütülmesine atama veya seçilme yoluyla katılan diğer kişiler gibi, TCK açısından kamu görevlisi konumundadır.

Rüşvet: Ancak kamu görevlileri ve belli nitelikteki kişilerin işleyebilmesi nedeniyle "rüşvet suçu" "özgü/mahsus suç" niteliğindedir. Bu nedenle hakemin rüşvet suçunda daha fazla cezayı gerektirecek şekilde cezalandırılması, yaptığı görevin kamusal niteliği ve öneminden kaynaklanmakta ve ayrıca kanun koyucunun yaklaşımını da ortaya koymaktadır. Gerçekten TCK'nin genel hükümlerinde (md.6) hakem açıkça "yargı görevlisi" veya "kamu görevlisi" sayılmasa da, rüşvet suçu bağlamında yargı görevi yapanlarla aynı konumda kabul edilmiştir. Nitekim bu anlayışın bir sonucu olarak hakemin rüşvet alması, bu konuda talepte bulunması veya anlaşmaya varması halinde tıpkı hâkim, savcı, avukat, noter, bilirkişi veya yeminli mali müşavirler gibi, daha fazla cezayı gerektiren nitelikli rüşvet suçundan cezalandırılmaktadır (TCK md. 252/7, 9-e).

Görevi kötüye kullanma, sahtecilik, irtikâp, zimmet vs.: Hakemin tahkim sürecindeki faaliyetleri çerçevesinde görevini kötüye kullanması ihtimalinde mevzuatta açık bir düzenleme bulunmamaktadır. Bununla beraber, biraz önce değindiğimiz üzere, yapılan işin "özel nitelikte bir yargı faaliyeti" olması, hakemin de bu bağlamda kamu görevlisi sayılması karşısında, diğer koşulların bulunması halinde "görevi kötüye kullanma suçu (TCK md. 257)" oluşacaktır. Örneğin herhangi bir nedenle (kayırma, düşmanlık, rüşvet kapsamına girmeyen menfaat temini vb.) taraflı karar verilmesi ihtimalinde durum bu merkezdedir. Keza hakemin tahkimle bağlantılı olarak sahtecilik yapması halinde, fiilin diğer özelliklerine göre, TCK'nin 204-205, 212. maddelerindeki sahtecilik suçları oluşacaktır. Örnekleri çoğaltmak mümkün ise de, [ör. zimmet (TCK md. 247), irtikâp (TCK md. 250)], çalışmanın boyutu itibariyle gerekli değildir.

2.2 Hakem Haricindeki Kişiler Tarafından Tahkimle Bağlantılı Bir Suç İşlenmesi

Tahkim hakem tarafından yürütülen bir süreç olmakla birlikte, gerek tarafların gerekse üçüncü kişilerin katılımı söz konusu olabilir. Dolayısıyla bu kişiler (ör. tanık, bilirkişi, tercüman, vekil vs.) tarafından da herhangi bir suç işlenebilir. Örneğin taraflardan birisinin tahkime ilişkin bir konuda sahte belge düzenlemesi veya kullanması, yalan tanıklık yapılması veya bilirkişinin sahte rapor düzenlemesi ihtimal dâhilindedir.

2.3 Ceza Mahkemesi Kararının Etkisi

Hakemin anılan suçları işlediğinin kesin hükümle sabit olması halinde bu karar tahkim süreci açısından bağlayıcı olur (AY md. 11, 138; TBK md. 74). Keza tahkimin tarafları veya tahkim süreciyle ilgili üçüncü kişilerin tahkimle ilişkili bir suç işlediğinin kesin hükümle sabit olması halinde, bu karar tahkim süreci açısından bağlayıcıdır (AY md. 11, 138; TBK md. 74). Bunun sonucu olarak ise, tahkim sürecinin kesinleşmemiş olması ihtimalinde HMK'nin 439. maddesi gereğince iptal, kesinleşmiş olması ihtimalinde ise HMK'nin 443 gereğince yargılamanın yenilenmesi söz konusu olur.

Hakem, tahkimin tarafları veya ilgilisi hakkında -yukarıda belirtilen suçlar başta olmak üzere- tahkimle ilişkili bir suçtan hakkında hüküm verilmesi (CMK md. 223) halinde bunun tahkime etkisi çeşitli ihtimallere göre değerlendirilmelidir:

1.- Tahkim yargılamasının ilgilisi olan kişi (ör. hakem, bilirkişi, tanık) aynı zamanda ceza mahkemesindeki suçun failidir ve hakkında verilen mahkûmiyet kararı (CMK md. 223/5–6) kesinleşmiştir. Bu durumda kesinleşen mahkûmiyet kararı ceza mahkemesinin sabit gördüğü olay temelinde, tahkim açısından hakemi bağlayıcı niteliktedir (TBK md. 74) (RG, 04.02.2011, 27836).

2.- Yukarıdaki -(1)- ihtimalde kişi hakkında isnat edilen suçun faili olmaması nedeniyle beraat kararı verilmiş ve karar kesinleşmiştir (CMK md. 223/2-b). Bu durumda kişinin isnat edilen fiili işlemediği ceza mahkemesi kararıyla sabit olmuştur. Bu karar tahkim için bağlayıcıdır (AY md. 11, 138).

3.- Ceza muhakemesi sonucunda yukarıda değinilen mahkûmiyet veya beraat kararı dışında bir karar (ör. kamu davasının düşmesine, reddine veya sanık hakkında ceza verilmesine yer olmadığına) (bkz. CMK md. 223) karar verilmiş olabilir. Bu durumda verilen karar tahkim/hakem açısından bağlayıcı değildir.

3 Tahkime Dolaylı Etkili Hususlar

3.1 Bekletici Sorun Konusu

Hukuk düzenin bir bütün olması nedeniyle devlet organlarının kararlarının ve özellikle mahkeme kararlarının birbiriyle çelişkili olmaması gereklidir. Bununla birlikte, hukuki iş ve işlemlerin kendine has özellikleri nedeniyle belli bir konularda kısmen farklı hukuki durumlar ortaya çıkabilir.

Bir davada hüküm verilebilmesi, başka bir davaya, idari makamın tespitine yahut dava konusuyla ilgili bir hukuki ilişkinin mevcut olup olmadığına kısmen veya tamamen bağlı ise mahkemece o davanın sonuçlanmasına veya idari makamın kararına kadar yargılama bekletilebilir (HMK md. 165/1).

Tahkim yargılaması sürecinde, tahkimin tarafları veya ilgilileri hakkında bir ceza soruşturması veya kovuşturması söz konusu olabilir. Böyle bir halde, soruşturma ve/veya kovuşturmanın sonucunun tahkimi etkilemesi olasılığı nedeniyle bekletici sorun yapılıp yapılmayacağı hususu gündeme gelmektedir.

Bu bağlamda tahkimle bağlantılı olarak bazı ihtimaller söz konusu olabilir. İlk akla gelen hakem hakkında göreviyle ilgili bir soruşturma veya kovuşturmanın söz konusu olması; örneğin görevi kötüye kullanma, rüşvet, sahtecilik vb. bir isnadının bulunulmasıdır. Tahkimin tarafları, tahkim sürecinde görev üstlenen tanık, tercüman vs. hakkında benzer diğer ihtimaldir.

Zikredilen ve benzer hallerin bekletici sorun yapılmasını zorunlu kılan herhangi açık bir hüküm yoktur. Yani hakem söz konusu iddiaların kesin hükümle sonuçlanmasını beklemek zorunluluğunda değildir. Ancak hakem, delillerin yeterliği ve yoğunluğuna göre konuyu bekletici sorun yapabileceği gibi, nispi muhakeme yoluyla kendi de çözüp sonuca ulaşabilir (bkz. HMK md. 214).

Diğer taraftan TBK'nin 74. maddesi göz önüne alındığında; "hakem" zarar verenin kusurunun olup olmadığı, ayırt etme gücünün bulunup bulunmadığı hakkında karar verirken, ceza hukukunun sorumlulukla ilgili hükümleriyle bağlı olmayacağından bu konudaki yargılamayı bekletici sorun yapamaz. Keza ceza hâkiminin kusurun değerlendirilmesine ve zararın belirlenmesine ilişkin kararı da, hukuk hâkimini (ve dolayısıyla hakemi) bağlamadığından, bu konuların da bekletici sorun teşkil etmesi mümkün değildir.

Nihayet kanun koyucu HMK'nin 239/1. maddesinde; yemin eda edildikten sonra, yalan yere yemin nedeniyle açılan ceza davasının, esas dava bakımından bekletici sorun yapılamayacağını düzenlemiştir. Bu durumda tahkimde yemin edildikten sonra tanık hakkında açılan kamu davası bekletici sorun yapılmayacaktır. Bununla birlikte tanığın bu söz konusu suçtan mahkûm olması halinde yargılamanın yenilenmesi gündeme gelecektir (HMK md. 375, 443).

3.2 Hukuka Aykırı Delil Sorunu

Taraflar, hakem veya hakem kurulunun uygulayacağı yargılama usulüne ilişkin kuralları, serbestçe kararlaştırabilecekleri gibi, tahkim kurallarına yollama yaparak da belirleyebilirler. Bu yönde bir sözleşmenin bulunmaması halinde ise, hakem veya hakem kurulu, tahkim yargılamasını, HMK' deki tahkimle ilgili hususları gözeterek uygun bulduğu bir şekilde yürütür (HMK md. 424). Dolayısıyla tahkimde esas itibariyle tarafların iradesi belirleyici olmaktadır. Bununla birlikte, söz konusu serbesti hukukun genel ilkeleri ve kamu düzenin öngördüğü sınırlamalara tabidir (HMK md. 424, 439/2-, f, g, ğ).

Bu bağlamda üzerinde durulması gereken konu, hukuka aykırı delil sorunudur. Gerçekten hakemin kararına esas aldığı delil, hukuka uygun olmalıdır. Anayasamızın 03.10.2001 tarih ve 4709 Kanununun 15. maddesiyle değişik 38/6. maddesinde, "Kanuna aykırı olarak elde edilmiş bulgular, delil olarak kabul edilemez." ibaresiyle oldukça kapsayıcı bir şekilde ifade edilen bu husus, - HMK'nin "ispat hakkı" başlıklı 189/2. maddesine göre, "Hukuka aykırı olarak elde edilmiş olan deliller, mahkeme tarafından bir vakıanın ispatında dikkate alınamaz." (ayrıca bkz. AY md. 38/6, CMK md. 216/2) biçiminde formüle edilmiştir. Bu düzenleme her ne kadar doğrudan tahkime ilişkin bir kural değil ise de, uygulanamayacak hükümler kapsamında kalmaması nedeniyle (bkz. HMK md.444) tahkim yargılaması açısından da bağlayıcıdır.

Tahkimde ceza muhakemesiyle bağlantılı olarak hukuka aykırı delil konusunda birkaç husus gündeme gelebilecektir. Bunlardan birincisi, konusu suç teşkil eden delildir. Bu ihtimalde, örneğin işkence, kötü muamele, hırsızlık, konut dokunulmazlığını bozmak, özel hayatın veya iletişim özgürlüğü ihlal etmek yoluyla bir delil elde edilmişse bunun tahkim yargılamasında kullanılması mümkün değildir. İkincisi, ceza mahkemesinde herhangi bir nedenle hukuka aykırı bulunarak itibar edilmeyen (CMK md. 217/2) bir delildir. Hukuk düzenin bir bütün olması ve ceza mahkemesi kararın niteliği gözetildiğinde bu delillere hakem de itibar edemez. Üçüncü ihtimal ise, ceza muhakemesinde sadece belli ağırlıktaki suçların ispatında kullanılabilecek yöntemlerle elde edilen delillerdir. Bu

kapsamda örneğin iletişim denetlenmesi (CMK md. 135-138), gizli görevli kullanılması (CMK md. 139) ve teknik takip (CMK md. 140) yöntemlerine başvurulmak suretiyle elde edilen deliller (ceza muhakemesinin mahkûmiyetle sonuçlanması hali hariç) tahkimde kullanılmaz. Çünkü iletişimin denetlenmesi, gizli görevli kullanılması ve teknik takip kişinin temel hak ve özgürlüklerinin (özellikle haberleşme özgürlüğü ile özel hayatın gizliliği) (AY md. 20–21) kısıtlanmasına yol açan bir koruma tedbiri olup, ölçülülük ilkesi gözetilmek suretiyle ve ancak kanunla sınırlanabilir (AY md.13, 20, 22). Bu nedenle kanun koyucu tarafından ancak belli ağırlıktaki suçlar için ve sadece ceza muhakemesi çerçevesinde başvurulabilecek birer koruma tedbiri olan anılan yöntemlere; amacı, konusu ve yöntemi farklı olan özel hukuk alanında (ve bu bağlamda tahkimde) başvurulabileceği düşünülemez.

4 Sonuç

Tahkimin klasik bir özel hukuk kurumu olmasına rağmen, ceza hukukuyla zorunlu olarak zaman zaman kesiştiği görülmektedir. Özellikle tarafların, hakemin, süreçte görev alan tanık, bilirkişi, tercüman vs. tahkim sürecinde ve bu süreçteki görevi/konumu nedeniyle bir suç işlemesi durumda bu durum kendini açıkça hissettirmektedir. Zira bu ihtimalde ceza mahkemesi kararı tahkimi doğrudan etkilemektedir. Bunun yanında anılan kişiler hakkında bir ceza davası bulunmamakla birlikte, bu konuda bir iddiada bulunulması durumunda ortaya çıkan bekletici sorun konusudur. Bu halde hakemi doğrudan bağlayıcı bir normun bulunması nedeniyle, konu bekletici sorun yapılabileceği gibi, nispi muhakeme yoluyla da çözülebilecektir. Hakemin bu gibi hallerde dikkatli olması, ciddi delillerin bulunmaması halinde tahkim sürecini uzatmaya yönelik girişimlerden etkilenmemesi gerekir.

Tahkimde ceza hukukuyla bağlantılı olarak hukuka aykırı delil konusu da gündeme gelebilecektir. Bu çerçevede konusu suç teşkil eden veya sadece ceza hukukunda kullanılması gereken ya da ceza mahkemesince hukuka aykırı olduğundan değerlendirmeye alınmayan delillerin tahkimde de değerlendirilmesi mümkün değildir.

Son olarak tahkimi yürüten hakemin ceza hukukunda hukuki durumu açıkça düzenlenmemişse de, gördüğü işin niteliği gereği kamu görevi olması karşısında ve dolayıyla görevi nedeniyle bir suç işlemesi halinde bu statüleri göz önünde tutulacaktır.

Türkiye ve Rusya'da Rekabet Politikası ve Rekabet Hukuku

Competition Policy and Competition Law in Turkey and Russia

Asst. Prof. Dr. Hülya Göktepe (Anadolu University, Turkey)

Abstract

Competition law provides the formation and protection of free competition. Modern market economy is the basis of the principle of free competition. Free competition provides an effective utilization of resources, price goes down, saving to reduce costs, find new technologies and their use in production. Desired markets, although a perfect competition market, because of market failures rather than the ideal situation monopolies, cartels can occur. At this stage, competition policies become important because they provide an efficient resource allocation, and constitutes an important element in raising the level of social welfare. Competition law is state intervention tool in order to establish and maintain free competition in the economy. Competition laws is seen as the constitution of the economy. In Russia, first competition authority was created in 1990 and the Law "On Competiton and Ristriction of Monopolistic Activity on Goods Markets" passed in 1991. After the OECD Peer Rewiew Report on Russia's Competition Policy and Law, competition authority was abolished, new Federal Antimonopoly Service (FAS) established in 2004. Also new competition law passed in 2006. In Turkey, competition law passed in 1994, Turkish Competiton Authority was established in 1997. The aim of this study is to analyze competition law rules is implemented in Turkey and Russia. Also Examples of decisions issued by the Turkish competition authority and FAS Russia will be presented.

1 Giriş

Liberal ekonomik sistemin temeli serbest rekabettir. Serbest rekabet, kaynakların etkin kullanılmasını, fiyatların düşmesini, maliyetleri düşürmek için tasarruf yapılmasını, yeni teknolojilerin bulunmasını ve bunların üretimde kullanılmasını sağlar. Rekabet hukuku serbest rekabetin oluşması ve korunmasını sağlamaktadır. Rekabet kanunları ise, devletin ekonomiye serbest rekabeti kurma ve koruma amacıyla müdahale aracıdır. Rekabet kanunlarında işletmelerin anlaşmalarla, birleşme ve devirlerle veya pazar gücünü kötüye kullanmak suretiyle rekabeti sınırlamaları yasaklanır. Böylece herşeyden önce, kişilerin temel hak ve özgürlüklerinin bir parçası olan fırsat eşitliği ve özgürlüğü sağlanmış olur. Sosyal bakımdan tüketicinin korunması yönünde önemli bir gelişme sağlanır (Aslan, 2006).

Rekabet kanunları bir çeşit ekonomi anayasası olarak görülmektedir. Serbest rekabetçi sistemleri benimseyen tüm ekonomilerde, bu sistemi koruyucu nitelikli rekabet kanunlarına gerek duyulmaktadır (Aslan, 2006). Ekonomi hukuku açısından bakıldığında, rekabet kanunlarının ya da ekonomideki ifadesiyle anti tröst kanunlarının amaçlarının, oligopolcü teşebbüslerin kartel oluşturmalarının ya da birleşerek (tröst) monopol gücü elde etmelerinin veya elde etmeye çalışmalarının engellenmesi olduğu belirtilmektedir. Rekabetin ortadan kalkması sonucu ortaya çıkacak sorunların bertaraf edilmesi, ekonomik sistemin bir rekabet kanunu ile desteklenmesi ve bu kanunu uygulayacak etkin bir rekabet otoritesinin tesis edilmesi ile mümkün olabilecektir (Güven, 2009).

Bu çalışmanın amacı Türkiye ve Rusya'daki rekabet hukuku kurallarını incelemek olduğu için çalışmanın 2. bölümünde Rusya rekabet hukuku 3. bölümünde Türkiye rekabet hukuku kuralları incelenmektedir. Ayrıca çalışmanın içerisinde Türk Rekabet Kurulunun ve Rus Rekabet Otoritesinin (FAS) kararlarından örneklere yer verilmektedir.

2 Rusya Federasyonu Rekabet Politikası ve Rekabet Hukuku

Rusya Federasyonu 11 saat dilimini kapsayan dünyadaki en büyük ülkedir. Sovyetler Birliğinin çökmesini takiben 1988 yılında Rusya Federasyonu ilk Sovyet Cumhuriyeti olmuş ve bağımsızlığını açıklamıştır. Bu durum Moskova tarafından 1991 yılında tanınmıştır. Bağımsızlığın kazanılmasından sonra Rusya ekonomisinde bir çöküş yaşanmıştır. Develüasyon olmuş, borç ödemede yetersizlik ve banka iflasları ortaya çıkmıştır. Yapılan reformlar ile Rusya'nın ticarette rekabet edebilirliği artmış ve gayrisafi milli hasılada artış görülmüştür. 2002-2003 yıllarında büyüme kuvvetlenmiştir. Amerika Birleşik Devletleri ve Avrupa Birliğinin katkılarıyla Rusya'nın pazar ekonomisine geçişi sağlanmıştır.

2.1 Rusya Rekabet Hukuku Tarihi

Rusya'da önce rekabet otoritesi kurulmuş sonra rekabet kanunu kabul edilmiştir. İlk Rusya Rekabet Otoritesi 1990 yılında kurulmuştur, adı Yeni Ekonomik Yapıyı ve Tekel Karşıtı Politikayı Destekleme Bakanlığıdır (Devlet Komitesi) (kısaca MAP olarak anılmaktadır). İlk rekabet kanunu ise 1991 yılında çıkarılmıştır. Adı "Ürün Pazarlarında Tekelci Faaliyetlerin Kısıtlanması ve Rekabet Üzerine Kanun" 'dur. 1993 Anayasasında ve diğer temel yasalarda da örneğin 1994 Medeni Kanununda rekabete destek veren ifadelere yer verilmiştir.

2003 yılında OECD, Rusya'nın rekabet hukuku ve politikasındaki on yıllık deneyimini detaylı olarak değerlendirmeye almıştır. Değerlendirme raporu sonuçlarına göre rekabetin yasal olarak düzenlenmesi ve kanunlardaki rekabeti destekleyen kuvvetli açıklamalara rağmen iç pazarlarda rekabetin yaratılması ve korunması Rusya'nın öncelikli politikası değildi. Rekabet otoritesinin geniş sorumlulukları vardı. Otorite pazarlardan, kamu çıkarının ve zayıf tarafların korunmasından sorumlu olduğu kadar tüketicinin korunmasından, reklam düzenlemelerinden, emtia alım satımının gözetiminden, küçük işletmelerin korunmasından da sorumluydu. Oysa bu alanların her biri farklı prosedür ve işlemler gerektirmekte ve kurumun etkinliğini azaltmaktaydı. Ayrıca 1991 yılında çıkarılan Rekabet Kanunu çoğu rekabet ihlallerinde nispeten hafif yaptırımlar içermekteydi, ya çok azdı yada caydırıcı etkisi yoktu. Bireyleri cezalandırmak ya da doğrudan para cezası uygulamak yerine iptal, durdurma gibi yaptırımlar tercih edilmekteydi. Kanun ceza yaptırımları içermesine rağmen bunlar hiç uygulanmıyordu. Bu durum problemlere sebep olmakta ve rekabet hukuku ile ilgili adalet endişelerini arttırmaktaydı. Yeni kuralların konulmasında da isteksizlik yaratmaktaydı. Sonuç olarak geniş sorumluluklar ve uygulanabilir yaptırımların yokluğu rekabet hukuku uygulamalarını önemli ölçüde sınırlamaktaydı. Rekabet Otoritesinin soruşturma gücü ile ilgili de eksiklikler vardı, prosedür çok ağırdı, soruşturmalarda tanıklık etmek için zorlayamıyordu.

OECD'nin değerlendirme raporundan sonra Rusya Hükümeti yürütme organlarının temel olarak yeniden yapılanmasını sağlamıştır, bunlara yeni rekabet otoritesinin oluşturulması da dahildir. 2004 yılında Rusya Federasyonu Başkanının "Federal Yürütme Organlarının Sistemi ve Yapısı Hakkındaki Kararnamesi" ile Yeni Ekonomik Yapıyı ve Tekel Karşıtı Politikayı Destekleme Bakanlığı feshedilmiştir. Bunun yerine Federal Tekel Karşıtı Kurum (Federal Antimonopoly Service-FAS) kurulmuştur. Feshedilen Bakanlığın görevleri bu kuruma devredilmiştir, fakat küçük işletmelerin desteklenmesi ve tüketici haklarının korunması görevleri bunun dışında tutulmuştur. Yeni rekabet kanunu çalışmaları da başlatılmıştır.

2006 yılında yeni rekabet kanunu kabul edilmiştir.

2.2 Rusya Rekabet Kanunu Sistemi ve Uygulanması

16 Haziran 2006 tarihli ve 135-FZ numaralı Rekabetin Korunması Hakkında Federal Kanun (kısaca Rekabet Kanunu), 2006 yılında yürürlüğe girmiştir. Bu kanun ile birlikte daha önce yürürlükte olan 22 Mart 1991 tarih ve 948-1 numaralı Ürün Pazarlarında Tekelci Faaliyetlerin Yasaklanması ve Rekabet Üzerine Kanun, 23 Haziran 1999 tarih ve 117-FZ numaralı Finansal Hizmet Pazarında Rekabetin Korunması Üzerine Kanun yürürlükten kaldırılmıştır. Böylece daha önce genel kanun ve finansal hizmetler sektöründe uygulanan kanun olmak üzere rekabet ile ilgili iki kanun, tek bir rekabet kanunu haline getirilmiştir. 2006 tarihli Rekabet Kanununda 2011 yılında değişiklik yapılmıştır.

Kanunun konusu ve amaçları; rekabeti korumak için yasal ve organizasyonel temeli oluşturmak, tekelci faaliyetlerin ve haksız rekabetin kısıtlanması ve önlenmesi, federal yönetici otoriteler, kamu otoriteleri, yerel otoriteler, Rusya Merkez Bankası tarafından rekabeti önleyen, kısıtlayan, ortadan kaldıran faaliyetlerin kısıtlanması ve önlenmesidir. Rekabet kanunu ekonomideki bütün sektörlerde uygulanmaktadır, sektör ayrımı yoktur.

Rekabet Kanunu, Rusya tüzel kişileri, yabancı tüzel kişiler, organizasyonlar, federal yönetici otoriteler, yerel otoriteler, diğer organizasyonlar, gerçek kişiler, bireysel teşebbüslerin dahil olduğu haksız rekabet ve tekelci faaliyetlerin kısıtlanması ve önlenmesi de dahil rekabetin korunması ile bağlantılı ilişkilere uygulanmaktadır. Federal kanunun maddeleri, Rus ve yabancı kişiler ya da Rusya federasyonu dışındaki kuruluşlar arasındaki Rusya federasyonundaki rekabeti etkileyen anlaşmalara da uygulanır.

Rekabet kanunu Rus ve yabancı şirketler arasında yapılan bütün anlaşmalara ve faaliyetlere uygulanır. Rusya dışında yapılsa bile eğer bu anlaşma Rusya Federasyonu sınırları içinde rekabeti etkiliyorsa bu anlaşmaya da uygulanır. Rus rekabet otoritesi bu anlaşmaları değerlendirmek ve Rusya içindeki rekabet üzerinde bir etkisi olup olmadığına karar vermekle yükümlüdür.

Rekabet Kanununun 14. maddesinde haksız rekabete değinilmektedir. Kanuna göre haksız rekabet, ekonomik teşebbüslerin işletme faaliyetlerini yerine getirirken Rusya federasyonu yasalarına, iş geleneklerine, saygınlık, akılcılık ve eşitliğe aykırı olarak, rakiplerinin ekonomik olarak zarar görmesine ve iş itibarlarının zarar görmesine sebep olup bundan fayda sağlamayı amaçlamasıdır. Haksız rekabete izin verilmemekte ve haksız rekabet halleri şöyle sıralanmaktadır:1. Ekonomik zarara sebep olan ya da iş itibarının zarar görmesine sebep olan yanlış, hatalı, çarpıtılmış bilginin yayılması, 2. Malın niteliği, niceliği, tüketim özellikleri, üretim yeri, yöntemi, doğası ile ilgili ya da üretici ile ilgili olarak yanlış beyanda bulunulması, 3. Rakibinin sattığı ve ürettiği ürünler ile kendi sattığı ve ürettiği ürünlerin yanlış karşılaştırılması, 4. Bir malın dolaşıma girişi, satışı, değişimi sırasında fikri mülkiyetle ilgili yasadışı kullanımı, 5. Kanunlarla korunan sırların yasa dışı olarak elde edilmesi, kullanılması, bilginin açıklanması.

Rekabet Kanununun 19.maddesinde bazı faaliyetlerin yerine getirilmesinde devlet kurumlarına öncelik verileceği düzenlenmiştir. Bu maddenin başlığı devlet ve belediye tercihleri olarak geçmektedir. Buna göre Rusya sınırları içindeki yetkili otoriteler, federal yönetici otoriteler, yerel otoriteler ya da diğer acentalar veya kuruluşların yasal faaliyetleri temelinde, devlet ve belediye tercihleri yapılabilir. Bu tercihlerin özellikle şu

amaçlar için yapılabileceği belirtilmektedir: kuzey ve kuzeye yakın bölgelerde yaşayan nüfusun yaşamsal faaliyetlerini güvence altına almak, eğitim ve bilimin ilermesini sağlamak, araştırma projelerini yapmak, çevreyi korumak, kültürel mirası korumak (tarihsel anıtları ve kültürü), kullanmak, yaygınlaştırmak, sanat ve kültürü geliştirmek, kültürel değerleri korumak, spor ve fiziksel kültürü geliştirmek, ulusal savunma ve güvenliği temin etmek, tarımsal ürünleri üretmek, sosyal güvenlik hizmetlerini sağlamak, iş güvenliğini sağlamak, vatandaşın sağlığını korumak, küçük ve orta ölçekli işletmeleri desteklemek. Belirtilen bu amaçlar dışında devlet ve belediye tercihleri yasaklanmıştır.

Rekabet Kanununa göre, rekabetin kısıtlanması işaretleri şunlardır: ürün piyasasında ekonomik teşebbüslerin sayısının azalması, pazardaki genel koşullarda ortaya çıkan değişikliklerle bağlantılı olmayan artan ve azalan fiyatlar, ürün pazarında bağımsız davranabilecek, aynı grubun üyesi olmayan ekonomik teşebbüslerin reddedilmesi, ekonomik teşebbüsler arasında yapılan anlaşma ile ürün pazarında ürünün dolaşımının genel koşullarının tanımlanması ya da diğer kişi tarafından zorlayıcı koşulların ileri sürülmesi, ekonomik teşebbüsler tarafından ürün pazarında koordinasyon faaliyetlerinde bulunulması, birkaç ekonomik teşebbüsün birlikte ürün dolaşımının genel koşullarını etkilenmesi

Tekelci faaliyet, tekel karşıtı düzenlemeler tarafından yasaklanan anlaşmalar ve uyumlu eylemler ya da tekelci faaliyet olarak tanımlanan diğer faaliyetler ile hakim durumda olan grubun veya ekonomik teşebbüsün bunu kötüye kullanması olarak tanımlanmaktadır.

Rekabet Kanununun uygulanmasından Rus Rekabet Otoritesi (Federal Antimonopoly Service-FAS) sorumludur. FAS'ın başlıca görevleri şunlardır: 1) tekel karşıtı yasaların gözetilmesi ile ilgili olarak ekonomik teşebbüsler, gerçek kişiler, federal yönetici otoriteler, kamu otoriteleri, yerel otoriteler, diğer kuruluşlar, kamu bütçe dışı fonlar üzerinde devlet kontrolünü sağlamak; 2) tekel karşıtı yasaların ihlallerini durdurmak, ihlallerin durdurulması için önlemler almak, bu ihlalleri incelemeye almak; 3) tekelci faaliyetleri, haksız rekabeti, diğer ihlalleri önlemek 4) toprak, maden kaynakları, su ve diğer doğal kaynaklar ile ilgili ekonomik yoğunlaşmalar üzerinde devlet kontrolünü uygulamak.

FAS ve onun bölgesel ofisleri rekabet kanununun ihlali durumunda Rekabet Kanununu ve İdare Kanunundaki (30 Aralık 2001 tarih ve 195-FZ numaralı Rusya Federasyonu İdari Suçlar Kanunu) kartel yasaklamalarıyla ilgili maddeleri uygulamaktadır. İhlal aynı zamanda suç olarak kabul ediliyorsa bu durumda araştırma İçişleri Bakanlığı (Ministry of Internal Affairs, kısaca MIA) tarafından, Ceza Kanunu (13 Haziran 1996 tarih ve 63-FZ numaralı Rusya Federasyonu Ceza Kanunu) ve Ceza Usulü Kanunu'na (18 Aralık 2001 tarih ve 174-FZ numaralı Ceza usulü kanunu) göre yapılmaktadır. Buna göre FAS'ın sadece idari soruşturma gücü vardır, ceza soruşturma gücü ise MIA'ya verilmiştir. Genellikle Rekabet Kanunu ihlali FAS tarafından tespit edilir ve kartel dosyası kapatılır. Otorite dosya belgelerini ceza sürecinin başlatılması için MIA'ya gönderir. MIA sadece ciddi ve karmaşık dolandırıcılıklarla ilgili kartel durumlarında ceza soruşturması yapar. Bunu yaparken FAS ile işbirliği yapabilir. MIA, ceza işlemlerini Ceza Usulü Kanunu ve Kolluk İşlemleri Kanununa göre yürütür. FAS soruşturmayı kendi insiyatifi ile açar. Soruşturma için diğer devlet ve belediye otoriteleri, bireyler, tüzel kişiler, kitlesel medya kaynaklarından alınan bilgiler ve FAS'ın kendi soruşturma sonuçları ya da kartel kanıtlarının tespiti sonuçları esas olarak alınır. FAS soruşturma açıp açmayı düşünür ve FAS tarafından rekabet ihlali bilgisinin alınmasını takip eden bir ay içinde soruşturma açılır. Eğer ilave bilgiye ihtiyaç varsa su süre üç aya uzayabilir. Soruşturma ile ilgili temel kurallar Rekabet kanunu 24 ve 26 maddeleri arasında bulunmaktadır. Olağandışı durumlarda, FAS tarafından yapılan soruşturmaya savcılık kurumları da dahil olmaktadır.

Her bir rekabet ihlalinin incelenmesi için FAS bir komisyon kurar. Komisyon FAS yetkililerinden oluşur. Otoritenin başkanı, yapısal birim başkanı ya da başkan yardımcısı komisyonun başkanı olabilir. Komisyon üye sayısı en az üç olmalıdır. Bankacılık hizmetleri pazarında kredi kuruluşlarının rekabet ihlallerinin incelenmesinde Rusya Merkez Bankasından temsilciler de komisyona katılır ve temsilciler üyelerin yarısını oluşturur. Komisyon tarafından düzenlenen duruşma sırasında, teşebbüs ve ilgili tarafların yazılı ve sözlü açıklamalar göndermek hakkı vardır. Komisyon davanın başlamasından itibaren üç ay içinde üyelerin basit çoğunluğu ile nihai kararını verir, bu dönem altı aya kadar uzatılabilir. Komisyon uyarı verir, iptal eder, kararlar verir ve tespitler yapar. Komisyon kararına karşı üç ay içinde tahkim (ticari) mahkemesinde temyiz davası açılabilmektedir.

Rekabet Kanunu 41.maddeye göre zamanaşımı süresi rekabet kanunu ile ilgili davalarda rekabetin ihlalinin belirlenmesi tarihinden itibaren üç yıldır. Ceza kanununa göre sure suçun işlendiği tarihten itibaren on yıldır.

FAS kartel oluşturma ya da kartele katılıma para cezası uygulayabilir. Bu para cezasının miktarı ihlalin olduğu pazarda malın satışından şirketin elde ettiği gelir payına bağlıdır. Gelirin belli bir oranı para cezası olarak belirlenir. Oran, duruma göre yüzde 10'dan yüzde 50'ye değişir, fakat para cezasının miktarı 100.000 rubleden az olamaz. FAS kimya, ilaç, cenaze hizmetleri, enerji ürünleri, gıda ürünleri, hava taşımacılığı ve sigorta pazarının da dahil olduğu finansal hizmetler pazarlarında rekabet konusunda çok özen göstermektedir.

Şirket yetkilileri de hem idari hem cezai sorumluluğa sahiptir. Kartel oluşturma veya kartele katılma durumunda 20.000 den 50.000 rubleye kadar idari para cezası ya da üç yıla kadar yetkisizleştirme cezası verilebilmektedir. Aynı suç için ceza sorumluluğunun sonucu ya 1 milyon rubleye kadar para cezası ya da beş

yıla kadar hapis cezası, birden üç yıla kadar yetkisizleştirme cezasıdır. Bazı nitelikli suçlar daha ağır cezai sorumluluk ile cezalandırılabilir. Yetkisizleştirme demek bu kişilerin bir tüzel kişinin yöneticisi, yönetim kurulu üyesi olmasının, yönetim ile ilgili işletme faaliyetlerini yapmasının yasaklanmasıdır.

2.3 Hakim Durum ve Hakim Durumun Kötüye Kullanılması

Rekabet Kanunu once hakim durumu ayrıntılı bir şekilde tanımlamış ondan sonra hakim durumun kötüye kullanılması hallerine örnekler vermiştir. Rekabet Kanununa göre hakim durum, bir veya birkaç ekonomik teşebbüsün belirli emtia pazarında, emtia pazarındaki genel koşulları etkileyebilecek kararı alabilmesi ya da diğer ekonomik teşebbüsleri bu pazarın dışına itebilmesi ya da diğer ekonomik kuruluşların bu pazara erişimini engelleyebilmesi durumu olarak tanımlanmaktadır. Finansal kuruluşlar hariç pazar payı yüzde elliyi aşan teşebbüsler hakim durumda kabul edilmektedir. Yeni rakipler pazara giremiyorsa ve rakiplerin payları ile karşılaştırıldığında teşebbüsün payı önemliyse pazar payı yüzde ellinin altında olsa bile bu teşebbüslerde hakim durumda kabul edilmektedir. Ekonomik teşebbüsün (finansal kuruluşlar hariç) pazar payı yüzde otuzbeşi aşmıyorsa hakim durumda olmadığı kabul edilmektedir.

Rekabet Kanunu belli ürünlerin pazarında pazar payı yüzde 35 den az olan teşebbüsleri de bazı durumlarda hakim durumda kabul etmektedir. Bu durumlar şöyle sıralanmaktadır: 1.Ekonomik teşebbüs mal fiyatlarını belirliyorsa ve malın dolaşımını etkileyen kararlar alıyorsa, 2.Yeni rakiplerin ilgili pazara girişini özellikle ekonomik, teknolojik, idari ve diğer kısıtlamalarla zorlaştırıyorsa, 3. Ekonomik teşebbüs tarafından satılan veya satın alınan mallar tüketimde başka mallarla ikame edilemiyorsa (buna endüstriyel amaçlarla kullanımda dahil), yani malın talep esnekliği yoksa, 4. Malların değişen fiyatı talepte uygun bir azalmaya sebep oluyorsa.

Birden fazla ekonomik teşebbüs de belli koşulların oluşması durumunda birlikte hakim durumda kabul edilebilir. Bu koşullar şunlardır: a.en fazla üç ekonomik teşebbüsün toplam payının yüzde elliyi aşması, bunların herbirinin paylarının pazardaki diğer ekonomik teşebbüslerin paylarını aşması, en fazla beş ekonomik teşebbüsün toplam payının yüzde yetmişi aşması, bunların herbirinin paylarının diğer ekonomik teşebbüslerin paylarını aşması, (bu madde yukarıda bahsedilen ekonomik teşebbüslerin en az birinin payı yüzde sekizden daha azsa uygulanmaz) b. en az bir yıl, bu ekonomik teşebbüslerin paylarının büyüklüğünün aynı kalması yada pazara yeni rakipler girsede önemsiz değişiklikler olması, c. ekonomik teşebbüs tarafından satılan ya da satın alınan emtianın, tüketim sürecinde başka bir emtia ile ikame edilememesi (buna üretim amacı için tüketimde dahildir).

Ekonomik teşebbüs mahkemeye gidilmeden once hakim durumda olmadığını kanıtlama hakkına sahiptir. Doğal tekele konu olan ekonomik teşebbüsün durumu hakim durum olarak tanımlanır.

Finansal kuruluşların (kredi kuruluşları hariç) hakim durumda olduğunu tespit eden koşullar Rusya hükümeti tarafından Federal kanundaki kısıtlamalar göz önüne alınarak tanımlanır. Kredi kuruluşlarının hakim durumda olduğunu tespit eden koşullar ise Rusya Merkez Bankası ile Rusya hükümeti tarafından belirlenir. İşletme ortaklıkları durumunda, pazar payları sadece Rusya'da yüzde onu aşmıyorsa ya da diğer mallarla birlikte emtia pazarında payları yüzde yirmiyi aşmıyorsa hakim durumda olmadıkları kabul edilir.

Kanunun 6. Maddesi tekelci yüksek fiyatlamayı düzenlemektedir. Tekelci yüksek fiyatlama hakim durumdaki teşebbüs tarafından yapılmaktadır. Eğer fiyat, malın üretim, dağıtım maliyetleri ve kar toplamını aşıyorsa ya da pazarda rekabetçi koşullara oluşan fiyatı aşıyorsa tekelci yüksek fiyatlamadan söz edilir. Fiyatta artışla birlikte şu koşulların ortaya çıkması da aranmaktadır: a) üretim ve dağıtım için gerekli masraflar aynı kalıyorsa ya da değişiklik fiyat değişikliği ile uyuşmuyorsa b) satıcı ve alıcılar değişmiyorsa ve değişiklik önemli değilse c) pazarda malın dolaşımı koşulları devlet düzenlemeleri, vergi ve tarife düzenlemeleri dahil aynı kalıyorsa ya da değişiklikler fiyat değişimi ile orantısızsa.

Kanunun 7.maddesi tekelci düşük fiyatlamayı düzenlemektedir. Tekelci düşük fiyatlama hakim durumdaki ekonomik teşebbüs tarafından belirlenen fiyatın malın üretim ve dağıtım maliyetleri ve kar toplamının altında kalmasıdır ya da pazarda rekabetçi koşullara göre oluşan fiyatın altında kalmasıdır. Önceden belirlenen fiyattaki azalma ile birlikte aşağıdaki koşullar oluşuyorsa tekelci düşük fiyatlamadan söz edilir. Bu koşullar: a) üretim ve dağıtım için gerekli olan masraflar aynı kalıyorsa ya da değişiklik fiyat değişikliği ile uyuşmuyorsa, b) satıcı ve alıcılar değişmiyorsa ya da değişiklik önemsizse, c) malın dolaşımı koşulları aynı kalıyorsa ya da değişiklik fiyat değişikliği ile aynı oranda değilse.

Rekabet Kanununa göre hakim durumda olan bir teşebbüsün, rekabeti önleyen, sınırlayan, ortadan kaldıran faaliyetleri yasaklanmıştır. Bu faaliyetlere örnek olarak şunlar sayılmıştır: 1) Tekelci yüksek ya da tekelci düşük fiyatlama yapılması ve buna devam edilmesi; 2) Malların dolaşımdan çekilmesi böylece malın fiyatında artış olmasına sebep olunması; 3) Sözleşmenin konusuyla bağlantılı olmayan sözleşme koşullarının zorla uygulanması; 4) Ekonomik ya da teknolojik olarak haksız bir şekilde malın üretiminin azaltılması veya kesilmesi. Eğer malın talebi varsa yada sipariş veriliyorsa ve karlı bir ürün olma olasılığı varsa. Aynı zamanda bu azaltma ve kesme doğrudan kanunlara göre ve yetkili otoritelere göre sağlanmıyorsa; 5) Haksız olarak alıcı (müşteri) ile sözleşme yapmanın reddedilmesi; 6) Haksız olarak aynı mallar için farklı fiyatlar (tarifeler) uygulanması; 7) Finansal kuruluşlar tarafından haksız bir şekilde finansal hizmetlerin yüksek ya da düşük fiyatla belirlenmesi; 8) Ayrımcı koşullar yaratılması; 9) Diğer ekonomik teşebbüslerin pazara girişlerine engel olunması

ya da pazardan ayrılmasının sağlanması; 10) Yasal düzenlemelere göre oluşturulan fiyat prosedürünün ihlali; 11) Elektrik enerjisi toptan ve perakende pazarında fiyatlar üzerinde manipülasyon yapılması

Hakim Durumun Kötüye Kullanılması İle İlgili Karar Örnekleri

Telekomünikasyon pazarı: FAS Rusya ve Kazakistan Rekabet Otoritesi, OJSC MTS, OJSC VympelCom, OJSC MegaFon (Rusya Federasyanu) ve "GSM Kazakhstan" Ltd, "Kar-Tel" Ltd, "Mobile Telecom-Service" Ltd (Kazakistan Cumhuriyeti) isimli mobil operatörlerle ilgili, tekelci yüksek fiyat uygulamalarına yönelik ortak bir soruşturma yaptılar. Üç büyükler olarak adlandırılan Rus şirketleri rekabet ihlali yaptıklarını kabul ettiler ve bu şirketlere 38 milyon ruble (1,2 milyon US Doları) para cezası verildi. FAS Rusya üç büyük operatörün tekelci yüksek fiyat tespit ettiğini ve hesaplamalardaki değişikleri abonelerine haber vermeksizin haksız sözleşme şartları uyguladıklarını belirledi. Üstelik operatörler Rusyaya gelen konuklara verilen hizmetlerde aşırı kar kazanmayı temin etmeye yönelik karşılıklı anlaşmalarla tekelci yüksek fiyatlar uyguluyorlardı. Soruşturmanın sonucunda şirketler Bağımsız devletler topluluğunu oluşturan ülkelerde sunulan hizmetler için önemli ölçüde fiyatlarını azalttılar. Ayrıca Rus ve Kazakistan operatörleri Bağımsız Devletler Topluluğu ülkelerindeki operatörlere tarifelerin azaltılması teklifi gönderdiler ve bu teklif yüzde 70 kabul edildi. Ayrımcı olmayan koşulların kabul edilmesini reddeden operatörler hakkında Bağımsız Devletler Topluluğunu oluşturan ülkelerdeki rekabet otoritelerine bilgi gönderidli.

Havaalanı hizmetleri pazarı: 2010 yılında FAS Rusya bazı Rus şehirlerindeki birkaç havaalanına karşı hakim durumun kötüye kullanılması ile ilgili olarak soruşturma başlattı. Toplam olarak 10 milyon ruble (333000 US Doları) para cezası uygulandı. İhlal, jet yakıt hizmeti veren havaalanları ve ekonomik teşebbüslerin hava taşıyıcılarının bu havaalanlarında kendi yakıtlarını depolamasına karşı çıkmasıydı. FAS Rusya, OJSC"Aeroflot-Russian airlines"şirketinin iddiaları ile bu soruşturmayı başlattı. Şirket ilgili havaalanları ve ekonomik teşebbüslerin havaalanlarında önerilenden daha düşük maliyetle elde edilebilecek olan kendi jet yakıtlarını sağlamalarına izin verilmesini istedi, fakat havaalanları bunu reddetti. İlgili havaalanları ve ekonomik teşebbüsler yerel jet yakıt pazarında hakim durumda olduğundan onların faaliyetlerinin jet yakıt pazarında rekabetin sınırlanmasına sebep olduğuna karar verildi. Yargısal işlemler FAS Rusya kararını destekledi böylece havaalanlarında jet yakıt hizmetlerinin girişinin temin edilmesi ile ilgili başarılı bir uygulama yapılmış oldu.

Gübre üretimi Pazarı: Şirkete karşı soruşturma FAS Rusya tarafından OJSC "Voskresenski NIYiF" şirketinin başvurusu ile 2008 yılında başladı. İddia OJSC "Voskresenskie fertilizers"şirketinin haksız olarak fosforik asit satmadığı ve ekonomik çıkarları ihlal ettiği idi. Şirkete fosforik asit pazarında hakim durumunu kötüye kullandığı için yaklaşık 1,5 milyon ruble (50000 US Doları) para cezası verildi. Eylül 2010'da üst Tahkim Mahkemesi FAS'ın kararını onayladı ve şirkete idari sorumluluk getirdi.

2.4 Teşebbüsler Arası Rekabeti Kısıtlayıcı Anlaşmalar ve Uyumlu Eylemler

Rakip teşebbüsler arasında anlaşmalar kartel olarak kabul edilmekte ve bu anlaşmalar yasaklanmaktadır. Rekabeti sınırlama amacı olan bu anlaşmalardan örnekler de verilmiştir. Bunlar: fiyatı (tarifeyi) , indirimleri, ek fiyatları belirleme anlaşmaları; rekabete açık ihale sırasında fiyatların artırılması, azaltılması, muhafaza edilmesi anlaşmaları; pazarın, mal ve hizmetlerin satış ve alış hacminin bölünmesi ya da satıcıların veya alıcıların sıralanması anlaşmaları;malların üretiminin azaltılması veya sona erdirilmesi anlaşmaları; belli satıcı veya alıcılar ile sözleşme yapmanın reddedilmesi anlaşmaları.

Teşebbüsler arasında malların fiyatlarının belirlenmesine sebep olan, rakibin malını satmamasına zorlayan dikey anlaşmalar yasaktır. Eğer teşebbüslerin pazar payı yüzde yirmiyi aşmıyorsa dikey anlaşmalara izin verilmektedir (finansal kuruluşlar arasındaki dikey anlaşmalar hariç)

Teşebbüsler arası uyumlu eylemlerde yasaklanmıştır. Eğer bu uyumlu eylemler; fiyatların indirimlerin, ek ücretlerin belirlenmesini sağlıyorsa, ihalede fiyatın artmasını azalmasını, devamını sağlıyorsa, pazarları, mal ve hizmetlerin satış ve alış hacmini bölüyorsa, malların üretimini azaltıyorsa ve sona erdiryorsa, belli satıcılar ve alıcılarla sözleşme yapmayı reddediyorsa yasaktır. Elektrik enerjisinin toptan ve perakende pazarında, ticari altyapı organizasyonlarında, teknolojik altyatırım organizasyonlarında, iletişim organizasyonlarında teşebbüsler arası uyumlu eylemler yasaklanmıştır.

Rekabeti kısıtlayan anlaşmalar, uyumlu eylemler ve işlemlere bazı durumlarda muafiyet verilebilir. Eğer bu anlaşmalar, uyumlu eylemler ve işlemler, malın iyileştirilmesini, malın satışının ya da teknik, ekonomik ilerlemesinin teşvik edilmesini, dünya pazarında Rusya'nın rekabet kapasitesinin arttırılmasını sağlıyorsa, teşebbüslere göre tüketiciler bundan daha fazla fayda sağlıyorsa, bunlar yasaklama kapsamı dışında tutulmaktadır.

Kanunun 15. Maddesine göre; federal yönetici otoriteler, kamu otoriteleri, yerel otoriteler ve diğer kamu kurumlarının rekabet ihlalleri de yasaktır. Madde 16 'ya göre de bu otoritelerin rekabeti kısıtlayıcı anlaşmaları ve uyumlu eylemleri yasaklanmıştır.

Rekabeti Kısıtlayıcı Anlaşmalarla ilgili Karar Örnekleri

Kömür Santrali Pazarı: Aralık 2010'da FAS Rusya, OJSC "SUEK", OJSC "Russian coal" and CJSC "Stroyservice" şirketlerinin rekabeti ihlal ettiklerine karar verdi. Şirketler kömür santrali pazarında pazarı bölen

ve fiyat belirlemeyi amaçlayan bu yüzden rekabeti kısıtlayan anlaşma yapmışlardı. Kömür santrali pazarındaki bu anlaşma nedeniyle Rusya İçişleri Bakanlığı'da OJSC "SUEK" ve kartel anlaşmasının diğer taraflarının yetkilileri ile ilgili Ceza Kanununun 178.maddesine göre ceza davası başlattı. OJSC "SUEK", OJSC "Russian coal" and CJSC "Stroyservice" şirketleri tarafından bu anlaşma nedeniyle elde edilen kar 100 milyon rubleyi aşıyordu. Kartelle ilgili kanıtlar ilk defa FAS Rusya ve İçişleri Bakanlığı (polis) tarafından birlikte toplandı. FAS Rusya'nın soruşturmadan elde ettiği sonuçlar ceza davası için İçişleri Bakanlığına gönderildi.

Kimya Endüstrisi: Aralık 2010'da FAS Rusya, OJSC "Uralkali", OJSC "Silvinit" and "Mineral Trading" Ltd şirketlerinin rekabeti ihlal eden anlaşma yaptıklarını kabul etti. Şirketler arasındaki anlaşma rekabet kanunu tarafından yasaklanan dikey anlaşmaydı. Bu anlaşma potasyum klorür üzerinde tekrar satış fiyatının belirlenmesine sebep olan bir anlaşmaydı. FAS Rusya'nın bu şirketlerle ilgili kararı pazarın devamlılığı, rekabetin geliştirmesi ve sonuç olarak ulusal gıda güvenliğinin sağlanmasını amaçlıyordu. Nisan 2010 tarihinde FAS bu şirketlere yaklaşık 264 milyon ruble (8,8 milyon US Doları) para cezası uyguladı. Ağustos 2010 tarihinde Tahkim Mahkemesi bu kararı onayladı.

2.5 Ekonomik Yoğunlaşmalar (Birleşme ve Devralmalar)

Ekonomik yoğunlaşmalar üzerinde devlet kontrolü Kanunun 7. Bölümünde yer almaktadır. Kanunun 26 (1). Maddesi devlet kontrolüne tabi işlemleri düzenlemektedir. Bu bölüme göre, Rus finansal kurumlarının, maddi ve maddi olmayan varlıkları Rusya Federasyonunda yer alan ticari ve ticari olmayan Rus kuruluşlarının ve Rusyaya mal satan yabancı kişi ve kuruluşların birleşme ve devralma işlemleri, işlemin yapıldığı yıl bir milyar ruble'nin üzerinde ise devlet kontrolüne tabidir. Şu işlemler sadece tekel karşıtı (rekabet otoritesinin) kurumun izniyle yapılabilir: 1. en son bilançoya göre toplam varlıklarının değeri yedi milyar rubleyi aşan ya da birleşmeden önceki takvim yılında malların satışından elde edilen toplam gelirleri on milyar rubleyi aşan ticari kuruluşların birleşmesi (finansal kuruluşlar hariç), 2. en son bilançoya göre varlıklarının toplam değeri 7 milyar Ruble'yi aşan ya da katılmadan önceki takvim yılında satıştan elde edilen toplam gelirleri on milyar rubleyi aşan bir veya birkaç ticari kuruluşun diğer ticari kuruluşlara katılması (finansal kuruluşlar hariç) 3. son bilançayo göre varlıklarının toplam değeri Rusya hükümeti tarafından belirlenen miktarı aşan finansal kuruluşların birleşmesi ya da bir veya birkaç finansal kuruluşa katılması (finansal kuruluşların birleşme veya konsolidasyonu durumunda, bu miktar Rusya Federasyonu Merkez Bankası ile koordineli olarak Rusya Federasyonu Hükümeti tarafından belirlenir)

Birleşme ve devralmalarla ilgili karar örnekleri

Birleşme ve devralmanın rekabet kanununa aykırı olmadığına dair menfi tespit verilmesi: 2010 yılında FAS Rusya süt ve süt ürünleri pazarında satış, üretim ve satın alma üzerine birbiriyle bağlantılı üç işlemi onayladı. Üç işlem süt ve süt ürünleri üretimi ve satışının birleşmesini amaçlıyordu. DANONE'nin de dahil olduğu grup, UNIMİLK'e ait olan diğer grup ile ortak girişim kurmak üzere bir karar vermişlerdi. FAS Rusya belli koşullarla DANON-UNIMILK ortak girişimine izin verdi. Bu koşullar süt ve süt ürünlerinin satışı, üretimi ve satın alınmasında rekabetin devamlılığının sağlanmasını amaçlıyordu. FAS'a göre UNIMILK grup bazı bölgelerde özellikle süt satın alınan pazarlarda yüksek pazar potansiyeline sahipti. DANONE şirketi aynı zamanda süt ve süt ürünleri pazarında UNIMILK şirketinin dışındaki bölgelerde faaliyet gösteriyordu. Pazar araştırma verilerine göre, Pazar bölümlemesi temelinde işlem, bazı Pazar bölümleri ile ilgili olarak süt ve süt ürünlerinin satışı, üretimi ve satın alınmasında belli bölgelerde hakim durumun yaratılmasına sebep olabilirdi. FAS Rusya şu şartla izin verdi. Danone-Unimilk ortak girişimi, süt ve süt ürünlerinin alış fiyatları, satış fiyatları ve bazı diğer koşulların yerine getirildiği ile ilgili olarak FAS Rusya'yı üç ayda bir bilgilendirmelidir.

Birleşmenin reddedilmesi: 2010 yılında FAS Rusya tarafından, OJSC "Ural mining and smelting"şirketinin LLC "Shatravan Holdings Limited"şirketine ait payların yüzde 100'ünü devralması ile ilgili bildirimi reddedilmiştir. Verilerin incelenmesi üzerine FAS Rusya bu işlemin tamamlanması ile OJSC'nin pazar payının bakır ve bronz pazarında yüzde 35'den daha büyük olacağı, nikel pazarında ise yüzde 50'den daha büyük olacağına karar vermiştir. Böylece FAS bu bildirimi reddeden bir karar vermiştir. Pazar payının yüzde 35 olması FAS Rusyanın birleşmeye izin vermemesi için asıl sebep değildir bildirilen işlem ile rekabet üzerinde olumsuz bir etki olacağı belirtilmiştir.

3   Türk Rekabet Hukuku

1970'li yıllardan itibaren Türkiye'de rekabet hukuku ile ilgili çalışmalar yapılmasına karşın, "4054 sayılı Rekabetin Korunması Hakkında Kanun (RKHK)", 07.12.1994 tarihinde kabul edilerek yürürlüğe girmiştir. Türkiye'de bir rekabet kanununun çıkarılması ve uygulanması öncelikle anayasal bir zorunluluk olarak ortaya çıkmaktadır. Kanunun hazırlanmasında etkili olan bir diğer unsur da, uluslararası anlaşmaların Türkiye'ye yüklediği yükümlülüklerdir. Türkiye ve AET arasındaki 12 Eylül 1963 tarihli Ortaklık Anlaşması'nın (Ankara Anlaşması) 16 ncı maddesi, Roma Antlaşması'nın rekabet, vergi ve mevzuatın uyumlaştırılması ile ilgili hükümlerinde anılan ilkelerin, ortaklık ilişkisinde uygulanmasını öngörmüştür. Nitekim Türk Rekabet Kanunu büyük ölçüde Roma Antlaşması'nın 81 ve 82 nci maddelerini kaynak almıştır. Ayrıca AB ile Türkiye arasındaki Ortaklık Anlaşması çerçevesinde oluşturulan Ortaklık Konseyi'nin 6 Mart 1995 tarih ve 1/95 sayılı kararı ile bir

Gümrük Birliği kurulmuştur. Türkiye ile AB arasında Gümrük Birliği kuran bu karar 01.06.1996 tarihinde yürürlüğe girmiştir. Bu karara göre AB ile Türkiye arasanda oluşturulacak gümrük birliğinin önemli araçlarından birisi de tarafların rekabet politikası ve rekabet hukuklarının birbirine uyumlaştırılmasıdır. Başka bir deyişle Türkiye'nin AB rekabet politikalarını ve rekabet hukukunu benimsemesidir. Gümrük birliği kararı ile Türkiye sadece bir rekabet kanunu çıkarmayı taahhüt etmekle kalmamış, yasa, ikincil mevzuat ve içtihat ve ilkeler bakımından da AB hukukuna uygun davranacağını da taahhüt etmiştir.

RKHK'nun uygulanmasını gözetecek makam Türk Rekabet Kurumu'dur ve 1997 yılında kurulmuştur. Kurum Kanun'un kendisine verdiği görevleri yaparken ve Kanunun uygulanmasını gözetirken "mal ve hizmet piyasalarının serbest ve sağlıklı bir rekabet ortamı içinde teşekkülünün ve gelişmesinin teminini" amaçlayacaktır. Rekabet Kurumu kamu tüzelkişiliğine, idari ve mali özerkliğe sahip bir kurumdur. Kurum görevini yaparken hiçbir organ, makam, merci veya kişiden emir ve talimat almaz. Tamamen kendi araştırma sonuçlarıyla ulaştığı kanaate göre karar verir. Rekabet Kurumunun merkezi Ankara'dadır. Kurum gerek görürse başka yerlerde de şube yada irtibat bürosu kurabilecektir. Rekabet Kurumu, Rekabet Kurulu, Başkanlık ve Hizmet birimlerinden oluşur. Rekabet Kurumunun ana organı Rekabet Kurulu'dur. RKHK'nun uygulanması görevi esas olarak ve genel bir hükümle Rekabet Kurumu'na verildiğinden RKHK'da aksi belirtilmediği sürece bu görevleri Rekabet Kurulu yürütecektir. Rekabet Kurulu yedi üyeden oluşmaktadır.

3.1 RKHK'nun Sistemi ve Uygulanması

RKHK'un amacı, mal ve hizmet piyasalarındaki rekabeti engelleyici, bozucu veya kısıtlayıcı anlaşma, karar ve uygulamaları ve piyasaya hakim olan teşebbüslerin bu hakimiyetlerini kötüye kullanmalarını önlemek, bunun için gerekli düzenleme ve denetlemeleri yaparak rekabetin korunmasını sağlamaktır.

Türkiye Cumhuriyeti sınırları içinde mal ve hizmet piyasalarında faaliyet gösteren ya da bu piyasaları etkileyen her türlü teşebbüsün aralarında yaptığı rekabeti engelleyici, bozucu ve kısıtlayıcı anlaşma, uygulama ve kararlar ile piyasaya hakim olan teşebbüslerin bu hakimiyetlerini kötüye kullanmaları ve rekabeti önemli ölçüde azaltacak birleşme ve devralma niteliğindeki her türlü hukuki işlem ve davranışlar, rekabetin korunmasına yönelik tedbir, tespit, düzenleme ve denetlemeye ilişkin işlemler Kanun kapsamında yer almaktadır. Serbest rekabeti etkileyebilecek olan hükümet tasarrufları, devlet yardımları ve ayrı bir kanunla düzenlenmiş olan ithalatta damping bu Kanun'un konusu dışındadır. Danping ve devlet yardımlarına ilişkin konular Kanun'da ayrıca düzenlenmediğinden bu konuların denetimi RKHK'nun kapsamı dışında kalmaktadır.

Özel teşebbüsler olduğu kadar kamu teşebbüsleri de kanun kapsamında kabul edilmiştir. Madde gerekçesinde rekabet kurallarının ekonomik faaliyette bulunan her teşebbüse uygulanması gerektiği, teşebbüslerin kamu kurumlarına veya özel kişilere ait olmasının bir önemi olmadığı, her ne kadar rekabet hukukunda da kamu yararı ve kamu düzeninin korunması amaçları ön plana çıkıyorsa da genel ekonomik menfaatlere hizmet etmekle görevlendirilmiş teşebbüslerin bu görevlerini yerine getirmelerinin rekabet kurallarıyla çatışmaması gerektiği ifade edilmiştir. Buna göre kamu teşebbüsleri ile özel teşebbüsler arasında bir ayırım yapılmamış temel kriter olarak "ekonomik faaliyette bulunma" esas alınmıştır.

Özelleştirme yoluyla yapılacak devralmaların denetlenmesi de RKHK kapsamı içerisinde yer almaktadır. Kartellerin denetimi de RKHK'nun kapsamı içerisinde yer almaktadır. Rekabet Kurumu "Kartellerin Ortaya Çıkarılması Amacıyla Aktif İşbirliği Yapılmasına Dair Yönetmelik" yayınlamıştır. Rekabet Kurulu, RKHK'un devlet ihalelerine de uygulanacağına karar vermiştir.

RKHK teşebbüslere (işletmelere) uygulanmaktadır. RKHK'nun 3. maddesinde "Teşebbüs; piyasada mal veya hizmet üreten, pazarlayan, satan gerçek ve tüzel kişilerle bağımsız karar verebilen ve ekonomik bakımdan bir bütün teşkil eden birimler" olarak tanımlanmıştır. Teşebbüs birlikleri ise, teşebbüslerin belirli amaçlara ulaşmak için oluşturduğu tüzelkişiliği haiz ya da tüzel kişiliği olmayan her türlü birliklerdir.

Sektörel açıdan bütün mal ve hizmet sektörleri Kanun kapsamına girmektedir. RKHK'da sektör bazında herhangi bir ayırım yapılmamıştır.

RKHK'nun kapsamı, rekabetin Türkiye sınırları içinde kurulması ve korunmasıdır. Ancak, Kanun sadece Türkiye'de yerleşmiş işletmelere değil, başka ülkelerde yerleşmiş olmakla birlikte Türkiye'de bulunan mal ve hizmet piyasalarını etkileyen işletmelere de uygulanır. RKHK'nun 2.maddesine göre, "Türkiye Cumhuriyeti sınırları içinde mal ve hizmet piyasalarında faaliyet gösteren ya da bu piyasaları etkileyen her türlü uygulama" bu kanun kapsamındadır.

Türkiye'de haksız rekabete ilişkin düzenlemeler Türk Ticaret Kanununda (TTK) yer almaktadır. Hangi hallerin haksız rekabet sayılacağı da TTK'da belirtilmektedir. Haksız rekabete ilişkin ihtilaflar Rekabet Kurumu dahil olmaksızın özel davalarla çözümlenmektedir. Tüketicilere zarar veren aldatıcı uygulamalar ise 1995 yılında kabul edilen Tüketicinin Korunması Hakkında Kanun çerçevesinde düzenlenmiştir. İlgili Kanuna göre aldatıcı reklam faaliyetleri konusunda kuralları uygulama yetkisine sahip bir Reklam Kurulu oluşturulmuştur. Gümrük ve Ticaret Bakanlığı bünyesindeki Tüketicinin Korunması ve Piyasa Gözetimi Genel Müdürlüğü de Kanunun diğer hükümlerini uygulama yetkisine sahiptir.

3.2 RKHK'da Yasaklanan Faaliyetler

RKHK kapsamında yasaklanan faaliyetleri üç ana başlık altında toplamak mümkündür. Bunlar; 1.Türkiye Cumhuriyeti sınırları içinde mal ve hizmet piyasalarında faaliyet gösteren ya da bu piyasaları etkileyen her türlü teşebbüsün aralarında yaptığı rekabeti engelleyici, bozucu ve kısıtlayıcı anlaşma, uygulama ve kararlar (RKHK m.4), 2. Piyasada hâkim durumda olan teşebbüslerin bu güçlerini kötüye kullanması (RKHK m.6), 3. Hâkim durum yaratmaya veya var olan bir hâkim durumu güçlendirmeye yönelik ve bunun sonucu olarak rekabeti önemli ölçüde azaltacak birleşme ve devralma niteliğindeki her türlü hukuki işlem ve davranışlardır(RKHK m.7).

Rekabeti Sınırlayıcı Anlaşma, Uyumlu Eylem ve Kararlar

Rekabet hukukunda, teşebbüsler arası anlaşmalar, teşebbüs birliği kararları ve uyumlu eylemler yoluyla gerçekleştirilen rekabet ihlalleri hukuka aykırı ve yasak kapsamında kabul edilmiştir. Teşebbüslerin aralarında yapacakları gizli veya açık anlaşmalarla veya uyumlu davranışlarla rekabeti sınırlamaları mümkündür. Teşebbüsler aralarında oluşturacakları birliklerin kararlarıyla da bu sonucu doğurabilirler. Birden fazla teşebbüs birlikte davranarak rekabeti sınırlamaktadır. Teşebbüsler arası anlaşmalar yatay ve dikey anlaşmalar olarak iki kategoride incelenir. Yatay anlaşmalar, üretimden tüketime kadar uzanan zincirin aynı seviyesindeki işletmeler arasında (rakipler) yapılan anlaşmalara denir. Dikey anlaşmalar ise farklı seviyelerdeki işletmeler arası yapılan anlaşmalardır.

RKHK'nun 4.maddesinde üç husus yasaklanmaktadır. Bunlar rekabeti sınırlayıcı olan teşebbüsler arası anlaşmalar, teşebbüsler arası uyumlu davranışlar ve teşebbüs birlikleri kararlarıdır. Teşebbüsler arası anlaşma, uyumlu eylem ve teşebbüs birliği kararlarının yasaklanabilmesi için ya amaçlarının ya da doğurdukları ekonomik etkilerin rekabeti sınırlayıcı olması gerekmektedir. Bir anlaşma henüz uygulanmamış ve dolayısıyla rekabeti henüz sınırlamamış bile olsa hükümlerinden rekabeti sınırlayıcı amaçlı olduğu anlaşılıyorsa, uygulamadaki etkilerini görmek için beklemeye gerek yoktur. Doğrudan doğruya daha uygulamadan önce yasaklanır. Rekabeti sınırlayıcı etkisi çok küçük olan anlaşma, karar ve uyumlu eylemler kanunun kapsamı dışındadır. Bir anlaşmanın hükümleri rekabeti sınırlayıcı amaçlı olmasa bile, uygulandığı zaman fiilen rekabeti sınırlayıcı etkiler doğuruyorsa bu anlaşmayı yapan işletmelerin amaçlarının ne olduğuna bakılmaz. Bu anlaşma da yasaklanır.

Teşebbüsler arasındaki anlaşmalar, teşebbüs birliği kararları ve uyumlu eylemler yoluyla gerçekleştirilen rekabet ihlallerinin en sık rastlananları RKHK'nun 4.maddesinde örnek olarak sayılmıştır. Bunlar; fiyatların ve diğer ticari koşulların tespiti, pazar paylaşma, üretimin sınırlanması, girişlerin engellenmesi, ayrımcılık, ek yükümlülük koymak gibi hallerdir.

Rekabeti sınırlayıcı nitelik taşıyan anlaşma ve uyumlu eylemler, belirli koşulları taşımaları halinde yasaklama dışında bırakılmaktadır. Muafiyet. bireysel muafiyet ve grup muafiyeti olmak üzere ikiye ayrılır. Grup muafiyeti, muafiyet şartlarının gerçekleşmesi halinde Rekabet Kurulunun belirli konulardaki anlaşma türlerine çıkartacağı tebliğler ile grup olarak muafiyet tanımasıdır. Bireysel muafiyet ise grup muafiyeti tebliği kapsamı dışında kalan durumlarda muafiyet şartlarının gerçekleşmesi halinde Kurul tarafından verilen muafiyettir. RKHK'nun 5.maddesine göre muafiyetin verilebilmesi için aranan şartlar şunlardır: Malların üretim veya dağıtımı ile hizmetlerin sunulmasında yeni gelişme ve iyileşmelerin ya da ekonomik veya teknik gelişmenin sağlanması; tüketicinin bundan yarar sağlaması; ilgili piyasanın önemli bir bölümünde rekabetin ortadan kalkmaması; rekabetin belirtilen amaçların elde edilmesi için zorunlu olanlardan fazla sınırlanmaması. Muafiyet verilebilmesi için bu dört şartın bir arada bulunması gerekmektedir, sadece birisinin bulunmaması halinde muafiyet talebi kabul edilmez. Muafiyetin en önemli sonucu ilgililerin yasal belirlilik ve güvenlik içinde olmasıdır. Muafiyet verilen bir anlaşma hakkında para cezası uygulanmaz. Muafiyet devam ettiği sürece bu anlaşmaya dayanarak yapılan her türlü hukuki işlem geçerlidir. Muafiyet kararı çeşitli şartlara ve yükümlülüklere bağlı olarak verilmiş olabilir. Taraflar bu şart ve yükümlülüklere uymak zorundadırlar. Aksi halde muafiyet kararı geri alınır.

Rekabet Kurulu Kararlarından Örnekler

Çimento Karteli: Çimento üreticileri Ege, Marmara, İç Anadolu ve Akdeniz bölgelerinde yapacakları satışları kendi aralarında tespit ederek pazarları paylaşmışlardır. Bu bölgeler dışında kalan yerlerde de hangi fabrikanın ne kadar satış yapacağını veya söz konusu yerleşim biriminde yapılacak satışlardan kimin ne kadar pay alacağını ve tüm bölge düzeyindeki fiyatları birlikte belirlemişlerdi. Bunlara ek olarak "klinker fazlalığı" olarak nitelenen ürün, yapılan anlaşmalar yoluyla zorunlu olarak ihracata tabi tutulmuştur. Ayrıca yapılan incelemelerde, fabrikaların bulunduğu merkezlerde fiyat ve diğer satış koşullarının rekabetçi yapıdan çok uzak bir şekilde tespit edildiği ve teşebbüslerin iç pazardaki karlılığı korumaya yönelik bir ihracat karteli oluşturduğu belirlenmiştir. Soruşturma sonucunda hem teşebbüslerin Kanun'u ihlal edici davranışlarına son verilmiş, hem de teşebbüsler idari para cezasına çarptırılmıştır.

LPG Pazarında Rakiplerin Piyasa Dışına Çıkarılması ve Yıkıcı Fiyat Uygulaması: LPG dolumu ve dağıtımı alanında faaliyet gösteren 3 büyük gruba bağlı teşebbüsler aralarında anlaşarak Adıyaman'da 1997 yılı içinde 12 kg.'lık LPG tüpünün fiyatını yarı yarıya indirmişlerdir. İlk bakışta tüketici lehine olarak gözüken bu davranış, yerel bir rakip teşebbüsün şikayeti üzerine Rekabet Kurumu tarafından incelemeye alınmıştır. Yapılan soruşturma neticesinde fiyatların toplu halde ve anlaşma yoluyla maliyetinin de altına indirilmesinin arkasında

şikayetçi yerel teşebbüsün piyasa dışına çıkarılması amacı olduğu anlaşılmıştır. Rekabet Kurumunun müdahalesiyle yerel rakibi aleyhine "yıkıcı fiyat" uygulamak olarak adlandırılan bu davranış engellenerek tüketicinin ileride rekabetten arındırılmış bir ortamda daha yüksek fiyatlarla karşılaşma ihtimalinin de önüne geçilmiştir.

Hâkim Durumun Kötüye Kullanılması

RKHK'nun 6. maddesi teşebbüslerin faaliyet gösterdikleri mal ya da hizmet piyasalarında oluşturdukları hakim durumu kötüye kullanmalarını yasaklamaktadır. Bu maddeye göre, "Bir veya birden fazla teşebbüsün ülkenin bütününde ya da bir bölümünde bir mal veya hizmet piyasasındaki hakim durumunu tek başına yahut başkaları ile yapacağı anlaşmalar ya da birlikte davranışlar ile kötüye kullanması hukuka aykırı ve yasaktır".

Bir teşebbüsün faaliyet gösterdiği piyasada hakim durumda bulunması sahip olduğu yüksek pazar payından kaynaklanacağı gibi, üretim kapasitesinden, ürettiği malın kalitesinden, kullandığı markanın yüksek çekici gücünden de kaynaklanabilir. Rekabet hukuku tarafından yasaklanan, herhangi bir teşebbüsün belli bir pazarda hakim durumda bulunması değil, bu konumunu kötüye kullanmasıdır. Birden fazla teşebbüsün birlikte hakim durumda bulunmaları halinde, bu konumlarını ortaklaşa kötüye kullanmaları da hukuka aykırı kabul edilecektir (Poroy ve Yasaman, 2001).

RKHK'nun 3.maddesinde hakim durumu tanımlanmıştır. Buna göre hakim durum "Belirli bir piyasadaki bir veya birden fazla teşebbüsün, rakipleri ve müşterilerden bağımsız hareket ederek fiyat, arz, üretim ve dağıtım miktarı gibi ekonomik parametreleri belirleyebilme gücünü" ifade etmektedir. RKHK, hakim durumun kötüye kullanılmasına örnek oluşturacak bazı halleri saymıştır. RKHK'nun 6.maddesine göre bu haller; girişleri engellemek ve rakipleri zor durumda bırakmak, eşit durumdaki alıcılar arasında ayrımcılık yapmak, bir mal veya hizmetin satımında alıcılara ek yükümlülük koymak, bir pazardaki hakim durumun başka bir pazarda kötüye kullanılması, tüketicinin zararına olarak üretimin, pazarlamanın ya da teknik gelişmenin kısıtlanması gibi hallerdir.

Rekabet Kurulu Kararlarından Örnekler

Belko Kararı: Ankara ilinde kömür satışı konusunda yasal tekel olan Büyükşehir Belediyesi'nin firması Belko'nun kömürü komşu illerdeki benzer pazarlara nazaran %60-70 daha yüksek fiyattan satması üzerine Rekabet Kurulu tarafından soruşturma açılarak bu firmaya para cezası verilmiştir. Buna ilave olarak, Rekabet Kurulu'nun görüşü doğrultusunda Belko'nun Ankara ilindeki kömür satışında sahip olduğu tekel hakkı kaldırılmıştır. Bu karar tüketicinin yararına olarak Ankara ilinde yüksek kömür fiyatlarının düşmesine sebep olmuştur.

Biryay Kararı: Gazete ve dergi dağıtım pazarında birlikte hakim durumda olan BBD, BİRYAY ve YAYSAT'ın, bayilerini diğer dağıtım şirketlerince dağıtılan gazete ve dergileri satmamaları konusunda zorlamaları hakim durumun kötüye kullanılması olarak değerlendirilmiş ve adı geçen teşebbüslere para cezası verilmiştir. Bu karar ile Türkiye'de, belediyelere ait olan gazete ve dergi satış büfelerine her dağıtım şirketince sağlanan yayınları satma zorunluluğu getirilmiş ve böylece, tüketicilerin son satış noktalarında istediği gazete ve dergileri bulabilmesinin önü açılmıştır.

Birleşme veya Devralmalar

Pazarda faaliyet gösteren teşebbüslerin birleşme ya da devralma işlemleri ile güçlerini birleştirmeleri, ürünlerin daha ucuza sunulması, yeni ürünlerin geliştirilmesi ya da kalitenin arttırılması gibi çeşitli faydaları beraberinde getirebilir. Bununla birlikte, bu tür işlemler hakim durum yaratmak ya da hakim durumu güçlendirmek suretiyle pazardaki rekabeti de azaltabilirler. Tüketiciler bakımından fiyatları arttıran, çeşitliliği azaltan ve innovasyonu zayıflatan bu tür birleşme/devralma işlemleri RKHK'nun 7. maddesi çerçevesinde yasaktır. 7. maddeye göre; "Bir ya da birden fazla teşebbüsün hakim durum yaratmaya veya hakim durumlarını daha da güçlendirmeye yönelik olarak, ülkenin bütünü yahut bir kısmında herhangi bir mal veya hizmet piyasasındaki rekabetin önemli ölçüde azaltılması sonucunu doğuracak şekilde birleşmeleri veya herhangi bir teşebbüsün ya da kişinin diğer bir teşebbüsün mal varlığını yahut ortaklık paylarının tümünü veya bir kısmını ya da kendisine yönetimde hak sahibi olma yetkisi veren araçları, miras yoluyla iktisap durumu hariç olmak üzere, devralması hukuka aykırı ve yasaktır".

Küçük işletmelerin birleşmelerinde ilk anda rakip sayısı azaldığından rekabetin de azalacağı düşünülebilirse de büyük işletmelere karşı küçük işletmelerin birleşmeleri rekabeti arttıracaktır. Küçük işletmeler böylece ölçek ekonomilerine yaklaşacaklar, araştırma ve geliştirme için daha büyük fonlar ayırabilecekler, üretim, dağıtım, personel gibi konularda iyileşme sağlayacaklardır. Bu nedenle her türlü birleşmenin hukuka aykırı sayılması ve RKHK sistemine göre izne tabi olması gerekmemektedir. Müdahale ancak rekabetin bozulması tehlikesinin varlığı halinde söz konusu olacaktır. Küçük işletmelerin birleşmesi rekabet için olumlu bir uygulama olarak görülürken, büyük ya da pazara hakim işletmelerin birleşmesi sakınca doğurabilecek niteliktedir.

Bir birleşme ve devralmanın hukuken geçerlik kazanabilmesi için Rekabet Kurulu'na bildirilerek izin alınması gerekmektedir. Rekabet Kurulu rekabeti bozucu bulduğu işlemleri geçersiz kılabilir. Eğer işletmeler fiilen birleşmişlerse bunların ayrılmalarına da karar verebilir. RKHK'nun 7. maddesi çerçevesinde birleşme ve

devralma sayılan haller, hukuki geçerlilik kazanabilmesi için Rekabet Kurulu'ndan izin alınması gereken birleşme veya devralmalar ile bunların Rekabet Kurulu'na bildirilmesi usul ve esasları *Rekabet Kurulu'ndan İzin Alınması Gereken Birleşme ve Devralmalar Hakkında Tebliğ (Tebliğ No : 2010/4)* kapsamında düzenlenmiştir. Bu Tebliğ çerçevesinde ciro eşikleri öngörülmüştür. İlgili pazardaki toplam ciroları belirtilen eşiklerin üzerinde olan teşebbüslerin gerçekleştirdikleri birleşme ve devralmalar hakkında izin almak üzere kuruma başvurulması gereklidir. Ancak, ortak girişimler hariç olmak üzere, belirtilen eşikler aşılsa dahi, herhangi bir etkilenen pazarın bulunmadığı işlemler için Kuruldan izin alınması gerekmez.

Rekabet Kurulu Kararlarından Örnekler

Trakmak Traktör ve New Holland NV Arasındaki Devir İşlemine Koşullu İzin: İngiltere'de kurulu New Holland N.V. unvanlı teşebbüsün, Koç grubuna ait Trakmak Traktör ve Ziraat Makinaları Ticaret A.Ş. hisselerinin %37.5'ini devralmasına ilişkin işlem 1998 yılında Rekabet Kurulu'nca nihai incelemeye alınmıştır. Yapılan incelemede, Koç grubu ile New Holland arasında kurulan bu ortaklığın temel olarak traktör ve biçerdöver piyasalarını etkileyeceği belirlenmiştir. Rekabet Kurulu, söz konusu işlemin, traktör piyasasında bir sakınca yaratmayacağına karar verirken; biçerdöver piyasasının arz seviyesinde hakim durumu güçlendirici; dağıtım seviyesinde ise hakim durum yaratıcı etkisine dikkat çekmiştir. Bu nedenle Kurulca biçerdöver piyasasına yönelik olarak New Holland'a Trakmak Traktör ile aynı koşulları yerine getiren diğer teşebbüslere de talep etmeleri halinde eşit davranarak distribütörlük tesis etmeleri zorunluluğu getirilmiş, devralma işlemine bu koşulun yerine getirilmesi kaydıyla izin verilmiştir.

Ortak Girişime (Joint Venture) İzin: Emaye bobin teli üreten dört teşebbüs tarafından kurulan ortak girişime Kurulca izin verilmiştir. Kurulan bu ortak girişim pazarda lider konuma geçecek bir pazar payı büyüklüğüne ulaşmaktadır. Pazardaki yoğunlaşmanın artmasına karşılık, Kurul özellikle emaye bobin teli üretiminde uluslar arası rekabet bakımından ölçek büyüklüğünün önemi üzerinde durmuş; sektördeki yurt içi ve yurt dışı rekabet koşullarını, ithalat ve pazara giriş imkanlarını, alıcıların gücünü ve pazardaki rakip teşebbüslerin mevcut ve potansiyel rekabet güçlerini de dikkate alarak işleme izin vermiştir.

4   Sonuç (Türk Rekabet Hukuku İle Rus Rekabet Hukukunun Karşılaştırılması)

Türkiye'de haksız rekabete ilişkin düzenlemeler Türk Ticaret Kanununda (TTK) yer almaktadır. Hangi hallerin haksız rekabet sayılacağı da TTK'da belirtilmektedir. Haksız rekabete ilişkin ihtilaflar Rekabet Kurumu dahil olmaksızın özel davalarla çözümlenmektedir. Tüketicilere zarar veren aldatıcı uygulamalar ise 1995 yılında kabul edilen Tüketicinin Korunması Hakkında Kanun (TKHK) çerçevesinde düzenlenmiştir. Rusya'da ise haksız rekabet ile ilgili düzenlemeler rekabet kanununun 14.maddesinde yer almaktadır. Haksız rekabet tanımlandıktan sonra haksız rekabet sayılan haller sıralanmıştır. Haksız rekabetin tespiti, önlenmesi ve ortadan kaldırılması Rus Rekabet Otoritesinin yetkisine görmektedir ve görevleri arasında sayılmaktadır.

Türkiye'de serbest rekabeti etkileyebilecek olan hükümet tasarrufları, devlet yardımları ve ithalatta damping RKHK'da düzenlenmemiştir. Devlet tekeli ile ilgili düzenlemeler yoktur. Özel teşebbüsler olduğu kadar kamu teşebbüsleri de kanun kapsamında kabul edilmiştir. Kamu teşebbüsleri ile özel teşebbüsler arasında bir ayırım yapılmamış temel kriter olarak "ekonomik faaliyette bulunma" esas alınmıştır. Genel ekonomik menfaat için hizmet etmekle görevlendirilmiş olan işletmelere de aynı rekabet kuralları uygulanır. Sektörel açıdan bütün mal ve hizmet sektörleri Kanun kapsamına girmektedir. RKHK'da sektör bazında herhangi bir ayırım yapılmamıştır. Rusya'da ise özel teşebbüsler ve kamu teşebbüslerinin rekabet ihlalleri ayrı olarak düzenlenmiştir. Devlet tekeline ilişkin düzenlemeler bulunmaktadır. Rus Rekabet Kanununda da sektör ayrımı yoktur, bütün sektörlerde uygulanmaktadır.

Rus Rekabet Kanununda hakim durum ayrıntılı bir şekilde tanımlanmıştır. Ayrıca tekelci yüksek fiyatlama ve tekelci düşük fiyatlamaya yer verilmiştir. Hakim durumun kötüye kullanılması halleri hem Türk hem Rus rekabet kanununda sıralanmıştır.

Rekabeti sınırlayan anlaşmalar uyumlu eylemler iki ülkenin rekabet kanununda da yasaklanmıştır. Ayrıca muafiyete yer verilerek şartları açıklanmıştır. Ayrıca bazı konularda Türk Rekabet Kurumu tarafından Grup Muafiyet Tebliğleri çıkarılmıştır. Rus Rekabet Kanununda grup muafiyetinden bahsedilmemektedir. Rus Rekabet Kanununda kamu teşebbüslerinin rekabeti sınırlayan anlaşmaları ayrı olarak düzenlenmiştir.

Türk Rekabet Kanununda birleşme ve devralmalar olarak düzenlenen konu Rusya Rekabet Kanununda ekonomik yoğunlaşmalar olarak geçmektedir.   Birleşme ve devralmalar RKHK'nun 7.maddesinde düzenlenmiştir ve bu maddenin uygulanması için Rekabet Kurumu tarafından bir Tebliğ yayınlanmıştır. Rekabet Kurulundan İzin Alınması Gereken Birleşme ve Devralmalar İle İlgili Tebliğ 7 Ekim 2010 tarihinde yenilenmiştir. Rus Rekabet Kanunu, Devlet kontrolüne tabi birleşme ve devralmalar ile ilgili ayrıntılı hükümlere sahiptir. Türkiye'de Tebliğ ile düzenlenen konu Rusya'da Rekabet Kanununun içerisinde yer almaktadır.

Türkiye'de rekabet ihlali durumunda Rekabet Kanunu uygulanmaktadır. Kanunun uygulanmasından Rekabet Kurumu sorumlu olduğu için ön araştırma ve soruşturma Rekabet Kurumu tarafından yerine getirilmektedir. Yaptırımların uygulanmasından da Rekabet Kurumu sorumludur. Rusya'da ise rekabet ihlali durumunda Rekabet

Kanununun yanı sıra İdari Suçlar Kanunu ve Ceza Kanunu da uygulanmaktadır. Rekabet ihlali varsa Rus Rekabet Otoritesi (FAS), Rekabet Kanunu ve İdari Suçlar Kanununa göre soruşturma yürütür ve para cezası verir. Eğer ihlal suç kapsamında ise soruşturma İçişleri Bakanlığı tarafından Ceza Kanununa göre yapılmaktadır.

Rekabet ihlali soruşturmalarında Türkiye'de rekabet kurulu nihai kararı verecek organdır ve 7 kişiden oluşmaktadır. Rusya'da ise her soruşturma için en 3 kişilik bir komisyon kurulur. Bankacılık sektörü ile ilgili ihlallerde Rusya Merkez Bankasından temsilciler de komisyona katılır.

Her iki ülkede de rekabet kurumunun verdiği kararlar temyiz edilebilir. Temyiz davası Türkiye'de Danıştay'da, Rusya'da ise bir tahkim (ticaret) mahkemesinde açılabilir.

İnsan Ticaretinin Ekonomik ve Hukuki Boyutları

Economic and Legal Aspects of Trafficking in Human Beings

Asst. Prof. Dr. Filiz Tepecik (Anadolu University, Turkey)

Abstract

In the next decade, trafficking in human beings is expected to be the largest part of the illegal markets such as drug and arms trafficking. Trafficking in human beings can be done in many different purposes which includes the sexual exploitation, the practices similar to slavery or servitude. The problem is becoming visible both for the Eurasian countries and for Turkey. Despite being an inhuman trade, all parties of the trafficking in human beings are rational economic agents and they are acting according to the rules of supply and demand. Therefore in this paper, this economic structure that nourish the illegal market is primarily be discussed. It is focused on the push and pull factors to this market members and this is tried to shown in a quantitative dimension of the market. Secondly, in order to combat trafficking in human beings, legal and social measures are being taken. These regulations generally aim to find and punish perpetrators, and /or protect victims of trafficking. But these regulations always cause a change of the benefits and the costs of the parties involved in trafficking in human beings. Thus the economic perspective are convenient to analyze these results. Finally, with this paper it is aimed to produce a common ground for people who want to work in this academic field.

1 Giriş

Insan ticareti kavramı, 19.yy'nın "beyaz köle ticareti" kavranmının izlerini taşımaktadır. 19.yy'da beyaz köle ticareti kavramı, Avrupalı ya da Amerikalı beyaz kadınların ticari seks piyasasında çalıştırılmak üzere transferini ve ticaretini ifade etmek için kullanılıyordu. Genellikle çalışan işçi sınıfından kadınları hedef alan bu ticaret, Josephine Butler (1828-1906) gibi kölelik karşıtı ve fahişeler için refah artırıcı tedbirleri savunan feministlerin düzenledikleri kampanyalarla 1910'da Mann Yasası (The White-Slave Traffic Act - Beyaz Kadın Ticareti Yasası) ile engellenmeye çalışılmıştır (Mann Yasası, 2013). Mann Yasası'nın ilk hali "herhangi bir ahlaksız amaç için beyaz kölelerin ve kadınların eyaletler arasında ulaşımını yasaklıyordu ve Avrupa ve Amerikalı çoğunluğu işçi sınıfından kadınları koruma altına alırken aynı zamanda göç ve mekânsal hareketliliğine bir sınırlılık getiriyordu (Doezema, 2002). Benzer şekilde 1911'de Hollanda'da genelevler yasaklanmıştı, 1919'da Rusya'da eski Çarlık rejiminin isteksiz kurbanları olan kadınların yeniden eğitilerek farklı mesleklere yönlendirilmelerinden bahsediliyordu (Prostitution, 2013).

1980'lerde yeniden küçüklerin fuhuş sektöründe yer alması, seks turizmi ve hatta AİDS'in yayılması ile insan ticareti ilgi çekmeye başlamıştır. 1996'da Birleşmiş Milletler, fuhuşu tanımlayarak insan ticaretini ile bağlantılı olarak "kadına yönelik şiddet" konusunda dünya çapında bir araştırma yapmak üzere Özel Raportör atamıştır. Bunu 2000 tarihli insan kaçakçılığı bağlantılı uluslararası organize suçlara ilişkin Sınıraşan Örgütlü Suçlara Karşı Birleşmiş Milletler Sözleşmesi takip etti. Sözleşme, uluslararası sınırlar arasında kişi, silah ve uyuşturucunun taşınmasını sınırlandırıyordu.

İnsan ticareti, "kuvvet kullanarak veya kuvvet kullanma tehdidi ile veya diğer bir biçimde zorlama, kaçırma, hile, aldatma, nüfuzu kötüye kullanma kişinin çaresizliğinden yararlanma veya başkası üzerinde denetim yetkisi olan kişilerin rızasını kazanmak için o kişiye veya başkalarına kazanç veya çıkar sağlama yoluyla kişilerin istismar amaçlı temini, bir yerden bir yere taşınması, devredilmesi, barındırılması veya teslim alınması anlamına gelmektedir. Bu tanım Birleşmiş Milletler çerçevesinde 12-13 Aralık 2000 tarihlerinde Palermo'da düzenlenen konferansta kabul edilen "Sınıraşan Örgütlü Suçlara Karşı Birleşmiş Milletler Sözleşmesine Ek İnsan Ticaretinin, Özellikle Kadın ve Çocuk Ticaretinin Önlenmesine, Durdurulmasına ve Cezalandırılmasına İlişkin Protokol"ün 3 maddesinden gelmektedir (Palermo protokolü, 2003)

Madde istismar terimini son derece detaylı ifade etmiştir. Maddeye göre istismar, asgari olarak, başkalarının fuhuşunun istismar edilmesini veya cinsel istismarın başka biçimlerini, zorla çalıştırmayı veya hizmet ettirmeyi, esareti veya esaret benzeri uygulamaları, kulluğu veya organların alınmasını içerecektir (3/a). Bu nedenle insan ticareti, bireylerin cinsel sömürü, zorla çalıştırılma ve/veya organları için ticaretini içermektedir ve bu haliyle de insan ticareti modern kölelik olarak isimlendirilmektedir. Bu çalışmada da temelde bu üç başlık altında insan ticaretinin nedenleri ve boyutları üzerinde durulacaktır. Hukuki düzenlemelerin bu kara ticaretinin gelişimini üzerindeki etkisi tartışılacaktır.

2 İnsan Ticareti

İnsan ticareti bireylerin tedarik edilmelerini, kaçırılmalarını, bir yerden başka bir yere götürülmeleri, sevk edilmeleri veya barındırılmaları içerdiği için, farklı kavramlarla ifade edildiği görülmektedir. Örneğin "yasadışı göç", "düzensiz göç", "yabancıların kaçakçılığı", "sığınmacı hareketi" gibi kavramlar, biraz farklılıklarla aynı bireyleri sınıflandırmakta kullanılıyor olabilir. Bu nedenle Palermo protokolü, insan ticareti ile diğer insan

hareketlerini ayırıcı bir tanım getirmek zorundadır. Tablo 1'de insan ticareti, cebri (zorla) çalışma koşulları ve insan kaçakçılığı arasındaki fark ve uluslararası düzenleme belgeleri yer almaktadır.

Kullanılan Terim	Tanım	Belge
İnsan Ticareti	"İnsan ticareti", kuvvet kullanarak veya kuvvet kullanma tehdidi ile veya diğer bir biçimde zorlama, kaçırma, hile, aldatma, nüfuzu kötüye kullanma kişinin çaresizliğinden yararlanma veya başkası üzerinde denetim yetkisi olan kişilerin rızasını kazanmak için o kişiye veya başkalarına kazanç veya çıkar sağlama yoluyla kişilerin istismar amaçlı temini, bir yerden bir yere taşınması, devredilmesi, barındırılması veya teslim alınması anlamına gelir. İstismar terimi, asgari olarak, başkalarının fuhuşunun istismar edilmesini veya cinsel istismarın başka biçimlerini, zorla çalıştırmayı veya hizmet ettirmeyi, esareti veya esaret benzeri uygulamaları, kulluğu veya organların alınmasını içerecektir.	Sınıraşan Örgütlü Suçlara Karşı Birleşmiş Milletler Sözleşmesine Ek İnsan Ticaretinin, Özellikle Kadın ve Çocuk Ticaretinin Önlenmesine, Durdurulmasına ve Cezalandırılmasına İlişkin Protokol, 2000 (Palermo protokolü)
Sömürü, zorla veya zorunlulukla çalıştırma	Cezalandırma tehdidi altında, söz konusu kişinin rızası olmaksızın iş ve hizmet gördürme	Cebri veya Mecburi Çalıştırmaya İlişkin Sözleşme, 1930
İnsan Kaçakçılığı	Vatandaşı olmadığı bir ülkeye, bir kişinin mali veya maddi çıkar elde etmek amacıyla illegal girişi	Sınıraşan Örgütlü Suçlara Karşı Birleşmiş Milletler Sözleşmesi, 2000.

Tablo 1: İnsan Hareketliliği Kavramları ve Uluslararası Düzenlemeler ***Kaynak: ICPC, 2012: 27.***

Tablodan görüklebileceği gibi, insan ticaretinde de, baskı ve/veya daha iyi iş ve kazanç vaadi ile evlerinden, ülkelerinden göçen bireyler söz konusudur. Fakat bununla birlikte göçen bireyler, ulaştıkları ülkelerde serbest olmamaktadırlar, Genellikle getiren birey ya da kuruluşa borç ya da benzeri başka bir esaret zinciri ile bağlılıkları sürmektedir. Cebri çalıştırma denilebilecek bu durum, insan kaçakçılığında ticari seks piyasasından ağır bedensel işçilik gerektiren inşaat ya da tarla işçiliğine, askerliğe kadar uzanabilmektedir. Göçmen kaçakçılığı ise, bireylerin gönüllü olarak, yasal girişin ya da çıkışın mümkün olmadığı bir ülkeden diğerine gidebilmek için birini kiralamasını içermektedir. Hedef ülkeye ulaşıldıktan sonra genellikle, kaçak birey ne yapacağı konusunda özgürdür.

Diğer bir bakış açısı ile insan kaçakçılığı göçmenlik yasaları ihlali nedeniyle devlete karşı bir suçtur. Oysa insan ticareti, baskı ve sömürü yoluyla kurbanın haklarını ihlal ettiği için kişiye karşı bir suçtur (ICMPD, 2013). Bu iki tanımın dolaylı sonucu olarak, göç söz konusu olduğunda, suç denetiminin odağı, bir ülkeye yasadışı giriş veya konaklama olmaktadır ve yasayı ihlal eden göçmenin kendisidir. Bu odak, insan hakları ihlallerini ve sömürüyü içine alamadığı için, insan ticareti sözkonusu olduğunda doğru suçluyu bulma konusunda yetersiz kalabilmektedir. Hatta çoğunlukla geri planda kalan organize bir örgüt aynı işi yapmaya devam edebilmektedir. Hükümetler (yönetimler) öncelikle işverenleri ve sömürücüleri hedef alsa bile, suçun mağdurlarının işbirlikçi olarak değerlendirilme riski vardır (UNODC, 2008: 90).

İnsan kaçakçılığının kurbanları, göçmeye ikna edildikleri için sınırlardan hukuka uygun olarak ya da olmayarak geçtiklerinde göçmen olduklarını düşünmektedirler. Götürenler için yoğun beden faaliyeti gerektiren işlerde ya da daha kötüsü ahlak dışı işlerde çalışmaya zorlandıklarında, bulundukları durumun hukuki adıda değişmektedir. Tablo 2'de Belser'in Dünya Çalışma Örgütü (ILO) için hazırladığı insani hareketliğin boyutlarına ilişkin bir tahmin görülmektedir. Tabloyu yorumlamadan önce suç istatistiklerinin niteliklerinden bahsetmek anlamlı olabilir. Diğer istatistiklerden farklı olarak suç istatistikleri büyük bir karanlık alan taşırlar. Örneğin işlenmekle birlikte bazı suçlar açığa çıkmaya bilir, açık hale gelenler ihbar edilmeyebilir. Bu nedenle istatistiklerin gösterdiği resmi suçluluk ile gerçek suçluluk arasında büyük farklar vardır. Bu karanlık alan, illegal mal ve hizmet alanlarında daha büyüktür. Diğer bir ifade ile bu makalede kullanılacak olan veriler büyük bir karanlık alanın açıya çıkmış kısmı olarak değerlendirilmelidir. Tablo 2'de 2005 yılı için cebri ve mecburi çalıştırmanın diğer sömürü çeşitlerine baskın olduğu görülmektedir ve sayılar bu tür uygulamaların en yaygın şekilde Asya ve Pasifik'de olduğunu düşündürmektedir. Tablodan sanayileşmiş ekonomilerde ve geçiş ekonomilerinde cinsel sömürünün; diğerlerinde ise, cebri çalıştırılmanın baskın olduğu da düşünülebilir.

	Zorla Ticari Cinsel Sömürü (kişi)	%	Zorla Ekonomik Sömürü (kişi)	%	Karışık veya Belirsiz (kişi)	%	Toplam (kişi)	%

Tablo 2: Dünya'daki Insan Ticaretinin Boyutları ***Kaynak: Belser, deCock, Mehran (2000)***

3 İnsani Sömürünün Yüzleri

İnsani sömürü, hukuki açıdan birkaç farklı şekil alabilmektedir. Cebri çalıştırma amacıyla, cinsel sömürü amacıyla, organ ticareti amacıyla insan ticareti yapıldığı görülmektedir:

Cebri Çalışma İçin İnsan Ticareti: Uluslarası Çalışma örgütüne göre kölelik, adam kaçırma, kamu hizmetlerine zorla katılım, tarım sektöründe zorla çalıştırılma, alıkonarak çalıştırma, asker tarafından zorla çalıştırılma, asker olarak çalıştırılma gibi formlarından bahsetmiş olmasına rağmen, cebri çalıştırılma "ter işleri" denilen yoğun bedensel aktivite gerektiren herhangi bir alanda olabiliyor. Geçmişte daha çok tarım sektöründe iken, günümüzde yaşlıların bakımı, ev bakımı gibi iç kulluk kabul edilebilecek işlerde, inşaat sektörü gibi ağır işçilikte kadın, erkek veya çocuklar zorla, uzun saatler ve ücretsiz çalıştırılabilmektedir. Kurbanlar, genellikle sahte seyahat belgeleri ile seyahat ederler ve onlara bu belgeleride sağlayan organize bir ağ tarafından, daha sonra borç sözleşmeleri ile bağlanacakları, cinsel köleliğe, sahte evliliklere zorlanacakları hedef ülkeye taşınırlar. Aşağıda Avrupa İnsan Hakları Mahkemesi'ne yansıyan olaylardan bir örnek görülmektedir. Tablo 2'de ve Şekil 1'de insan ticaretinin büyük bir kısmının cebri çalışmadan oluştuğu görülmektedir.
Şekil 1: *Sömürü Biçimlerine Göre Tesbit Edilen Kurban Sayılarının Oranı (%, 2007-2010)* ***Kaynak: UNODC, 2012: 35.***

C.N. – Birleşik Krallık Davası (no. 4239/08): Uganda vatandaşı başvuran, Uganda'da cinsel tacizden kaçarak sahte pasaportla Birleşik Krallık'a geldiğini iddia etmektedir. Ülkeye giriş yaptıktan sonra belgeleri elinden alınmış ve Parkinson hastası bir yaşlının bakımında çalıştırılmıştır. Hem gece hem gündüz çalışmaya zorlandığı halde kendisine hiçbir ücret ödenmemiştir. Sürekli tecrit halinde tutulmuş, şiddet ve sınırdışı

edilmekle tehdit edilmiştir. O sırada yürürlükte bulunan kanunlarda kullaştırma ve zorla çalıştırma suçları yer almadığı için İngiliz mahkemelerinden koruma talebinde bulunamadığından bahisle, Birleşik Krallık'ın özellikle 4. Maddeyi ihlal ettiğinden şikayetçidir. (Avrupa İnsan Hakları Mahkemesi, Bilgi Notu- Zorla çalıştırma ve insan ticareti, Eylül 2012)

Cinsel Sömürü Amacıyla Kadın Ticaret: İnsan ticaretin bu yaygın formu dünyanın bütün bölgelerini etkilemektedir. İnsanlar kendi ülkelerinden ikna edilerek ya da zorla bir başka bölgeye, ülkeye göçmeye ikna edilerek fuhuş sektörünün herhangi bir alanında kendi rızası olmadan ve çoğunlukla ücret almaksınız çalıştırılmaktadır. Diğer bir ifade ile ticari seks piyasasında çalışma cebri çalışmanın bir sektörde yoğunlaşmış şeklidir. Cebri çalışmada yoğun olarak erkekler çalıştırılmasına rağmen ticari seks piyasası daha çok kadınları ve yetişkin kadınları içermektedir (Şekil 2). Ticari seks sektörü, randevu evleri, gece kulüpleri ve teknolojinin gelişmesi ile internet aracılığı ile yapılan her türlü pornografik yayın aracılığı ile gelişmektedir. Bu sektör temel metası olarak kadını kullanmaktadır.
Şekil 2: *İnsan Ticaretinden Etkilenen Bireylerin Oranları **Kaynak:** UNODC, 2012: 26-27.*

Turizmde çocukların ticari cinsel sömürü: Cinsel sömürü amacıyla insan ticaretin daha da kötüsü küçüklerin (18 yaşından küçükler) ticaretinde ortaya çıkmaktadır. Uluslarası sözleşme kendi rızası ile bile olsa küçüklerin ticaretini illegal kabul etmiştir (Palermo protokulu, 3/c). Bununla birlikte farklı ülkelerde cinsel ilişki ve evlilik yaşı ile ilişkili farklı hukuki düzenlemeler vardır. Bu nednele 18 yaşından küçükler cinsel ilişki için ehil sayıldıkları ülkeler olabilir. Cinsel ilişki için kimin küçük sayıldığına ilişkin bu farklılıklar, küreselleşmenin de etkisiyle, küçüklerle cinsel ilişkiye girmek isteyenler için ekonomik bir pazar yaratmaktadır. Örneğin 18 yaşından küçüklerin cinsel istismarının hukuki olarak yasaklanmadığı veya kovuşturulmadığı ülkelere, ucuz hava yolculukları ile gidilen turistik gezileri düzenlenmektedir. Şekil 3'de küreselleşme ile artan çocuk pornografisi de dikkat çekmektedir.
Şekil 3: *Çocuk Prografisi Payları (2009) **Kaynak:** UNODC, 2010: 13*

Organ ticareti: Organlarını (sadece böbreklerin de değil, kalp, karaciğer, doku) kullanmak amacıyla insanların ticareti, hızla büyüyen bir suç alanıdır. Birçok gelişmiş ülkede, yaşlanan nüfus ve diyabetin artışı ile tetiklenen organ nakli ihtiyacı, tıp alanındaki nakil için gereken koşulların azaltılması ile, suç örgütleri için paha biçilmez bir alan haline gelmesine neden olmaktadır. Suç örgütleri, çaresiz hastalar ile bazen gönüllü bezen gönülsüz potansiyel donörler arasında bağlantı kurarak para kazanmaktadırlar. Nakil işlemleri genellikle tıbbi takip koşullarından uzak, kötü koşullarda yapıldığı için, gönüllü olsa bile dönerlerin sağlıkları, hatta hayatları risk altında kalmaktadır. Fakat bu endüstri sadece organlarla sınırlı değil. Taşıyıcı annelikten, kan ve doku nakline, hatta tıp fakültelerinin ihtiyacı olan vücut ve iskeletlerin teminine oldukça geniş bir yelpazeyi içeriyor. Bu alanda Hindistan adı ençok geçen ülke olarak dikkat çekmektedir. Örneğin, Hindistan 1985'de insan kalıntılarının ihracatını yasaklayıncaya kadar bu alandaki en büyük tedarik kaynağı idi (Scott, 2007).

Yasaklama tedarik piyasasının çökmesine neden olduktan sonra, Batılı ülkeler Çin ve Doğu Avrupa'ya döndü. Bununla birlikte Batı Bengal karaborsa satıcıları, eski usul yöntemlerle, mezar soygunları ile tedarik ediyor olabilirler (Scott, 2007). Burada dikkat edilmesi gereken nokta, insanların yasal bağışçılarda olabilecekleridir.

Dğer bir ifade ile insan bedeninin parçalarının nakillerinin insan ticaretine konu olabilmesi için, nakil olan bireylerin rızasının olmaması gerekmektedir. Örneğin Tablo 3'de, eğer yasal mirasçılarının bilgisi dışında insan bedeninin parçalarını temin ediyorlarsa, mezar soyguncuları, morglar ya da cenaze evleri yasal olmayan yerler arasında düşünülebilir. Bunun dışında örneğin kan çiftliği, kaçırılmış bireyleri zorla bir yerde tutarak belirli aralıklarla kan satışı yapmak için onlardan zorla kan alan bir ticaret fikridir. Çin'de idam mahkumlarının bedenlerinden yararlanıldığı benzer şekilde çıkan haberler arasındadır.

İnsan Bedeninin Parçaları	Fiyatı	Temin Noktaları
İskelet	2 993-5 500 dolar	Mezar soygunculuğu; yasal bağışlar.
Kan	Hindistan: Yarım litresi 25 dolar ABD: yarım litresi 337 dolar	Kan bağışlayanlar; Hindistan'da kan çiftliği
Saç	308 dolar	Dolaysız satışlar; Hint tapınakları
Kornea	24 400 dolar	Morglar; hayatını kaybedenlerden
Kalp	Yasal:997 700; yasa dışı: 119 000	Çinli mahkûmlar;
Karaciğer	557 100 dolar - 157 000 dolar	İdam mahkûmları; Filipinlerde satış
Böbrek	Hindistan: 15 000 dolar; Çin: 62 000 dolar; ABD: 262 900 dolar	Hayatını kaybedenlerden, yasal bağışçılar; idam mahkûmları, organlarını satanlar
Rahim (taşıyıcı annelik olarak)	Hindistan. 20 000 dolar – 30 000 dolar	Bazı ülkelerde yasal
Kemik	5 465 dolar	Cenaze evleri, morglar, ölümlerinden sonrasını planlayan yasal bağışçılar

Tablo 3: Organ Borsası *Kaynak: Koçak, 2011.*

4 İnsan Ticaretinin Belirleyenleri

Insan ticareti, diğer ticaret alanları gibi fayda maliyet analizi yapılan bir alandır. Diğer bir ifade ile insanları sömürü aracı olarak alan satan insan tacirleri, sadece piyasa koşulları kâr için uygun olursa, seks sömürüsü ya da organ sömürüsü için insan satacaktır. Kanıtlar, insan tacirlerinin organize suç şirketlerine dahil olduklarını ve kâr amacı güden işadamları gibi hareket ettiklerini göstermektedir (Jakobsson ve Kotsadam, 2011: 88).

Tablo 3'de organ piyasasının fiyat koşullarının kâr için uygun olduğu görülmektedir. Ekonomik ya da seks sömürü için piyasa koşulları ülkeden ülkeye değişmektedir. Örneğin ticari seks endüstrisi için, piyasa kimi ülkeler de tamamen yasaklanmış kimi ülkelerde tamamen serbest bırakılmış kimi ülkelerde kısmen düzenlenmiştir. Örneğin Almanya'da 2002'den beri fahişelik düzenli vergiye konu bir iş kabul edilmektedir. Düzenlemeden günümüze Avrupa'nın en büyük fuhuş piyasalarından biri olarak ayrıca dikkat çekmektedir (Cho, Dreher ve Neumayer, 2013: 75). İsveç 1999'da ticari seksin bütün türlerini yasaklamıştır. Danimarka ise, bireysel ve kendi hesabına çalışanlar tarafından yapılan fuhuşa izin vermektedir. Fakat genelev ya da herhangi bir seviyede işverenin bulunduğu örgütlü bir fuhuş illegal kabul edilmektedir. Ya da çok bilinen Hollanda, Amsterdam'da belli bir bölgede, işverenlerinde bulunduğu cinsel ticarete belgeli olarak izin vermektedir. Yasaklamaların olduğu ülkelerde fuhuşa katılan taraflar, özellikle arz edenler cezalandırılır; düzenlemenin yapıldığı ülkelerde ise, fuhuşun piyasasının nasıl sunulacağı düzenlenmektedir; legalleştirme durumunda ise, satın alıcılar için cezalar düşünülmüştür (Jakobsson ve Kotsadam, 2011: 90-91).

Farklı şekillerde düzenlenmiş bu piyasa yapıları, insan ticareti ile ilişkisi açısından çok tatışılmaktadır. Örneğin Agnatise (2004) fuhuşu yasaklamanın insan ticaretini ile mücadele de kanun gücünün ellerini bağladığını düşünmektedir (Cho, Dreher ve Neumayer, 2013: 88). Hughes (2000: 651) kanıtların seks endüstrisinin legalleşmesinin bu sektörünün ihtiyacı olan kadınların talebini karşılamak için ticaretin artmasına neden olduğunu gösterdiğini düşünmektedir. Farley (2009: 313) benzer şekilde fuhuşun legalleştiği yerlerde, bu bölgelere yönelik ticaret artışı olduğunu iddia etmektedir. Aksine Cho, Dreher ve Neumayer (2013: 67) fuhuşun legalleşmesinin seks çalışanları için çalışma ve güvenlik şartlarını geliştirdiğini, piyasa fiyatını düşürmesi nedeniyle de kadın ticaretini azaltıcı etkisi olduğunu düşünmektedirler. Bununla birlikte yaptıkları ampirik çalışmada, legal fuhuş deneyimine sahip olan ülkelerde, ölçek ekonomisinin çalışması nedeniyle daha büyük ticaretle yüzyüze kaldıklarını düşünmüşlerdir (Cho, Dreher ve Neumayer, 2013: 76).

Ayrıca hukuki düzenleme piyasanın fiyat yapısını değiştirmektedir. Bir mal ve hizmet için olası piyasanın yasaklanması, arz maliyetlerini arttırıcı unsur olarak yansımaktadır. Diğer bir ifade ile fiyat artmakta ve tüketilebilir miktar düşmektedir. Bununla birlikte karaborsa kartellerinin kurulmasına, sunulan hizmetin kalitesinin düşmesine, hatta şiddet kullanımının artmasına ya da resmi görevlilere verilen rüşvet nedeniyle yozlaşmanın artmasınada neden olabilir.

Ekonomi içinde ayrıca arz ve talep taraflarını harekete geçiren yapıda önemlidir. Bir insan tacirinin yasaklanmış ya da belli düzenlemelerle legalleşmiş bir piyasada devam etmesini sağlayan piyasanın potansiyel karlılığıdır. Kâr hasıla ve maliyet arasındaki ilişkiye bağlı olduğu için, hasıla fiyata ve satış miktarına, onlarda piyasanın talep yapısına diğer bir ifade ile hedef ülkedeki kişi başına gelire bağlı olarak düşünülebilir.

İnsan ticaretinin maliyetleri arasında, menşe ülkedeki bireyin hedef ülkeye ulaştırılması için gerekenler, örneğin sahte pasaport belgeleri, sınırı aşmak için gereken düzenlemeler, ya da hedef ülkedeki sahte firmalar vb. bulunabilir. Bu nedenle kaçakçılık genellikle organize suç örgütleri ile yakın ilişkili kabul edilmektedir.

Sosyologlar ve ceza konusunda araştırmalar, bireyleri çeken ve iten bazı faktörlerin, işgücü piyasasında bireyi, insan ticareti ve sömürü için uygun ve savunmasız yaptığını düşünmektedirler (Tablo 4). Örneğin özellikle kadınlar için uygun ve yeterli ücret içeren işlerin azlığı, bulundukları ülkede politik yapının bozulmuş olması, onları kendi ülkesinden uzaklaşmaya hazır hale getirmektedir; ülkelerinden itmektedir. Küreselleşme, ekonomik ve politik istikrarsızlık, hastalıklar, ailelerin parçalanması, savaş gibi pek çok neden yüzünden Dünyanın her tarafında savunmasız insanlar var (Wheaton vd, 124) ve pek çok neden yüzünden insan ticareti için uygun adaylar haline geliyorlar. Bu ülke içinde ya da ülkeler arasında, tacirler tarafında ulaşılan savunmasız insan sayısının artmasına neden olmaktadır. Bireylerin gitmek istedikleri ülkedeki daha iyi yaşam koşulları, daha iyi işler de onlar için çekici faktörler olarak işlemektedir.

İten Faktörler	Çeken Faktörler	
İstihadam yetersizliği, Eğitimsizlik, Çevresel bozulma, Doğal afetler Zulüm, savaş, Huzursuzluk, Politik istikrarsızlık.	Ekonomik eşitsizlik (evsahibi ülke zengin olarak görülüyor); Daha iyi yaşam kalitesi; Girmek için fırsat (göç konusunda yolsuzluk ya da yasal boşlukları); Gözenekli sınırları; Yasadışı göç için cezaların caydırıcı olmaması.	Joudo Larsen, Lindley, and Putt (2009).
Cinsiyet, Yaş, Eğitim, Çocuksayısı, Sosyal statü, Hanehalkı kombinasyonu, Aile refahı	Yerel ekonomi Kültür, Politik istikrar Küreselleşme, Bilgi	Othman (2006)

Tablo 4: Bireylerin Karar Vermesinde Etkenler

Bütün bu faktörlerle birlikte, maliyetlere katkı yapan, liberal fuhuş düzenlemeleri de düşünmek gerekmektedir. SSCB dağılmadan önce, ekonomik huzursuzlukların olduğu Afrika, Latin Amerika insanları için kaçılan yerler haline gelmiştir. Gitmek için seçilen ülkeler ise, insan kaçakçılarının, gerek sınırlardan geçerken sorun yaşamadığı, gerek daha sonraki sömürü için uygun ortamın bulunduğu ülkeler arasından seçilmektedir. Bu günümüz dünyasında geçiş ekonomileri için Türkiye, Rusya ve çeşitli Avrupa ülkeleri gibi görülmektedir. Tablo 5'de seçilmiş ülkeler için insan ticaretinin yolları görülmektedir.

Tabloya göre Rusya ana transit yolu olarak dikkat çekmektedir. Dağılan SSCB'nin eski üye devletlerinin insanlarının önce Rusya'ya, oradan da satın almak ve kullanmak için yeterince parası olan Batı Avrupa'ya ya da ABD'ye aktığı görülmektedir. Türkiye'nin de Rusya gibi ana arter olmamakla birlikte, bu ticarette benzer bir tarnsit rol üstlenmiş görülmektedir. Hem Rusya hem de Türkiye için, insan tacirliğinin yöntemlerini kolaylaştırıcı bazı özellikler taşıdıkları söylenebilir.

5 Sonuç

Güvenlik açıkları daha iyi bir yaşam ya da baskı veya yoksulluk kaçmak ihtiyacı için arzuyu içermektedir. Gelişmekte olan pek çok ülkelerin insanlarının ihtiyaçlarını karşılamaktaki yavaşlıkları, sıradan insanların yaşamlarını savunmasız hale getirmektedir. Bu durumu düzeltmek ya da daha doğru bir ifade ile düzenleyebilmek, insan ticaretinin çok yönlü yapısını anlamaktan geçmektedir.

Çevrenin Ceza Hukuku Yoluyla Korunması Kapsamında Çevrenin Kirletilmesi Suçları

Protection of the Environment through Criminal Law and Crimes of Pollution

Asst. Prof. Dr. Nazmiye Özenbaş (Anadolu University, Turkey)

Abstract

Environmental problems due to economic growth and development policies in the last century ignorant to humanitarian values has become a risky issue for the future of humanity. Since 70's it become a debatable problem in the international arena and due to the search of solutions for the environmental problems, right to environment has stated as a part of fundamental human rights and protected with law. Recently with the emphasis to the preventive functions of criminal law actions against the right of living in a healthy and balanced environment has started to be described as crime and are becoming subject to penalty in the criminal codes. With this study we will analyze crimes of polluting the environment.

1 Giriş

Geçtiğimiz yüzyılda kapitalizm ile birlikte teknoloji ve sanayileşmenin hızla gelişmesi, bazı gelişmiş ülkelerin çevreye ilişkin değerleri gözardı eden ekonomik büyüme ve kalkınma politikaları ve küreselleşme olgusu, hızla artan nüfus, buna bağlı olarak artan üretim ve tüketim faaliyeti, kaynakların bilinçsizce ve acımasızca kullanılması çevrede de acımasız tahribatlar yaratmıştır. Bu sorunlar öylesine ciddi boyutlara ulaşmıştır ki insanoğlunun sahip olduğu hakların en temeli olan "hayat hakkını" tehdit eder hale gelmiştir (Kaboğlu, 1996, s.9).

Zamanla, bu durum karşısında ülkelerin yapılan uluslararası toplantılar ile kalkınma ile doğal kaynaklar dengesinin korunması gerektiği ve çevreyi dışlamayan sürdürülebilir bir kalkınmanın mümkün olduğu anlayışını benimsediklerini görmekteyiz. Çevre gerek uluslararası, gerekse anayasalarda yer alan hükümlerle ulusal düzeyde tanınmış bir hak konumuna gelmiştir.

Çevre sorunlarının devletleri karşı karşıya getirecek ölçüde büyümesi, gelişmiş-gelişmemiş ülkeler çatışması, gelişmiş ülkelerin gelişmemiş ülkelerin doğal kaynaklarını sömürmesi ve bu ülkeleri sanayi ve nükleer artıklarını bıraktıkları çöplük olarak görmeleri gibi uluslararası çevre ihlalleri, devletlerin sağlıklı ve düzenli bir çevrede yaşama hakkının öznesi olarak ortaya çıkmalarına neden olmuştur (Özdek, 1993, s. 111-112)

Geldiğimiz noktada ise özel hukuka ve idare hukukuna ilişkin yaptırımların çevrenin korunmasında gerektiği ölçüde etkili olamaması üzerine, çevreyi ciddi biçimde tehlikeye sokan ve ona zarar veren, bu yolla insan sağlığını ve hayatını tehdit eden fiillerin suç olarak ceza kanunlarında düzenlenmesi ve ciddi cezai müeyyidelere bağlanması gerektiği düşüncesi hâkim olmaya başlamıştır (Şen, 1994, s. 77-78).

Türkiye'nin de taraf olduğu Avrupa Birliği Konseyi'nin 27 Ocak 2003 tarih ve 2003/80/JHA sayılı Çevrenin Ceza Hukuku Yoluyla Korunması Hakkındaki Yönerge, Avrupa Birliği üyesi devletlere çeşitli çevre suçlarını ceza kanunlarında düzenleme ve bunlar için özgürlüğü bağlayıcı cezalar ve tüzel kişilere özgü yaptırımlar öngörme yükümlülüğü getirmektedir (Erman, 2004, s. 187). Bu kapsamda korunan hukuksal yarar açısından çevreye ayrı bir değer atfedilmiş ve 2005 yılında yürürlüğe giren 5237 sayılı Türk Ceza Kanunu'nda önceki (765 sayılı) TCK'da olmayan yeni suç tipleri olarak çevreye karşı suçlar düzenlenmiştir.

2 Çevre Hakkı

2.1 Çevre Hakkının Tarihsel Gelişim Süreci

1970'li yıllarda ekonomik büyümeyi tek amaç olarak belirleyen anlayış sonucu ortaya çıkan çevre sorunlarının insanlık bakımından çok ciddi problemleri beraberinde getireceği ve bu konuda önlem alınması ve ülkelerin bu kapsamda ortak bir mücadele yürütmesi gerekliliği hususu üzerinde durulmaya başlanmıştır. Bu kapsamda ilk kez Haziran 1972'de Birleşmiş Milletler tarafından Stockholm'de Çevre ve Kalkınma Konferansı düzenlenmiştir. Konferans sonunda yayınlanan ve Türkiye'nin de taraf olduğu Stockholm Bildirgesi'ne göre; "İnsan, kendisine onurlu ve iyi bir yaşam sürmeye olanak veren nitelikli bir çevrede, özgürlük, eşitlik ve tatmin edici yaşam koşulları temel hakkına sahiptir...". Böylece çevre hakkı bir insan hakkı olarak ilk kez uluslararası bir belgede tanınmıştır (Şen, 1994, s. 34; Keleş ve Ertan, 2002, s. 98).

28 Ekim 1982 tarihinde Birleşmiş Milletler Genel Kurulu'nda kabul edilen Dünya Doğa Şartı, çevre hakkının uygulamaya geçirilmesi konusunda devletlerin yükümlülüklerini ve bireylerin katkılarını belirleyerek daha somut ilkeler öngörmüştür (Kaboğlu, 1996, s. 18; Keleş ve Ertan, 2002, s. 99, 214).

Birleşmiş Milletler öncülüğünde Haziran 1992'de Rio de Janerio'da toplanan Çevre ve Gelişme Konferansı sonunda yayınlanan Rio Bildirgesi'nin 1. maddesinde "insanlar sürekli ve dengeli kalkınmanın merkezindedir. Doğa ile uyum içerisinde sağlıklı ve verimli yaşama hakları vardır" ifadesine yer çevre hakkı vurgulanmıştır (Kuzu, 1997, s. 92-93). Bu konferans sonunda Türkiye tarafından da imzalanan "Biyolojik Çeşitlilik Sözleşmesi", yeryüzündeki bitki ve hayvan türleri ile doğal kaynakların korunmasını öngörmektedir. "İklim Değişikliği Çerçeve Sözleşmesi" ise; küresel ısınma ile atmosferde sera etkisi yaratan gaz emisyonlarının azaltılmasını öngörmektedir. Söz konusu sözleşmeye Türkiye 2004 yılında taraf olmuştur (Ceylan, 2008, s. 7).

İklim Değişikliği Çerçeve Sözleşmesi'ne bağlı olarak Aralık 1997'de Japonya'nın Kyoto kentinde gerçekleştirilen III. Taraflar Konferansı sonunda kabul edilen Kyoto Protokolü ile özellikle gelişmiş ülkelere seragazı azaltımı konusunda yükümlülükler getirilmiştir. Türkiye ise İklim Değişikliği Çerçeve Sözleşmesi'ne başlangıçta taraf olmadığı için Kyoto Protokolü'ne de taraf olmamıştır(Ceylan, 2008, s. 7).

Birleşmiş Milletler Avrupa Ekonomu Komisyonu (UNECE) tarafından Haziran 1998'de hazırlanarak imzaya açılan, herkesin çevreyle ilgili bilgilere serbestçe ulaşma, çevreyle ilgili konularda karar alma surecine katılma ve yargı yoluna başvurma haklarını güvence altına alan ve bu amaca ulaşmak için taraf devletlere somut yükümlülükler yükleyen Çevresel Konularda Bilgiye Erişim, Karar Sürecine Halkın Katılımı ve Yargıya Başvuru Sözleşmesi'ne (http//www.unece.org/env/pp/documents/cep43e.pdf) ise Türkiye henüz taraf olmamıştır.

Avrupa Konseyi bünyesinde ise gerek 1950'de kabul edilen İnsan Hakları ve Temel Özgürlükleri Koruma Sözleşmesi'nde (Avrupa İnsan Hakları Sözleşmesi) ve Ek protokollerde, gerek 1961'de kabul edilen Avrupa Sosyal Şartı'nda sağlıklı ve düzenli bir çevrede yaşama hakkı, özgün bir insan hakkı olarak tanınmamıştır (Kaboğlu, 1996, s. 137). Ancak Avrupa İnsan Hakları Mahkemesi (AİHM) içtihatlarında çevre hakkı, Sözleşme'nin yaşam hakkı (m. 2), özel yaşam ve aile yaşamına saygı (m. 8), aşağılayıcı muamele yasağı (m. 3), mülkiyet hakkı (1 no.lu Ek Protokol, m.1) gibi diğer haklar aracılığıyla dolaylı olarak korunmaktadır (Keleş ve Ertan, 2002, s. 94-95).

2.2 Çevre Hakkının Kime Ait Olduğu Sorunu

En genel anlamıyla insan hakları, devlet tarafından güvence altına alınsın ya da alınmasın, insanlığın ulaştığı her gelişme aşamasında, bütün insanların hiçbir ayrım gözetmeksizin sadece insan oluşlarından dolayı insan onurunun gereği olarak, insanın kendine özgü doğasını gerçekleştirmek ve onurlu bir yaşam sürdürmek için sahip oldukları tüm hakları ifade etmektedir (Gemalmaz, 1997, s. 326-349).

Çevre hakkı ise üçüncü kuşak insan haklarındandır. 20. yüzyılın son çeyreğinde ortaya çıkan üçüncü kuşak haklar, tüm insanlığın yan yana geldiği takdirde çözebileceği, yoksa tek tek insanların ya da ülkelerin üstesinden gelemeyeceği sorunlardan kaynaklanan ve konularını evrensel değerlerin oluşturduğu haklardır.

Çevre hakkı, en genel anlamıyla çevrenin korunması ve geliştirilmesidir (Ceyhan, 2008, s. 22). Diğer bir ifadeyle bu hakkın konusu, insan ve diğer canlıların yaşamını sürdürdüğü ve kısa ya da uzun dönemde etkileşim içinde bulunduğu yaşam çevresidir (Keleş ve Ertan, 2002, s. 82).

Sağlıklı ve düzenli bir çevrede yaşama hakkının en başta ve en açık yararlanıcıları bireylerdir. Tüm bireylerin sağlıklı ve düzenli bir çevrede yaşama hakkının yararlanıcısı (alacaklısı) olmasının somut anlamı, sağlıklı ve düzenli bir çevrede yaşama hakkının ihlali halinde, çevreye olumsuz bir müdahalede bulunulduğunda veya hakkın gerçekleştirilmesi için olumlu bir müdahaleye gerek duyulduğunda, herkesin, tüm bireylerin tek tek haklarını hakkın yükümlüsüne (muhatabına) karşı ileri sürebilmeleridir (Özdek, 1993, s. 107).

Hukuksal metinlerde yer alan "herkes, sağlıklı ve dengeli bir çevrede yaşama hakkına sahiptir" ifadesindeki "herkes" ibaresi, sadece tek tek bireyleri değil, birey topluluklarını ve tüzel kişiliği olan kamusal ve özel kuruluşları da kapsar (Keleş ve Ertan, 2002, s. 84-85). Bu durum çevre ile ilgili karar alma süreçlerine halkın katılımını sağlıklı ve düzenli bir çevrede yaşama hakkının etkin bir şekilde kullanılmasını hayata geçirilmesini sağlamak bakımından önemlidir.

Bugünkü kuşakların sağlıklı ve dengeli bir cevrede yaşamlarını sürdürebilmeleri için tanınan sağlıklı ve düzenli bir çevrede yaşama hakkı, aynı zamanda gelecek kuşakların da çıkarlarını gözetmektedir. Bugünkü kuşakların, gelecek kuşaklara bugünkünden aşağı olmayan bir biyolojik çeşitlilik ve zenginliği güvence altına alan nitelikli toprağı iletme ödevi vardır (Kaboğlu, 1991, s. 123).

Çevre sorunlarının devletleri karşı karşıya getirecek ölçüde büyümesi, gelişmiş-gelişmemiş ülkeler çatışması, gelişmiş ülkelerin gelişmemiş ülkelerin doğal kaynaklarını sömürmesi ve bu ülkeleri sanayi ve nükleer artıklarını bıraktıkları çöplük olarak görmeleri gibi uluslararası çevre ihlalleri, devletlerin sağlıklı ve düzenli bir çevrede yaşama hakkının öznesi olarak ortaya çıkmalarına neden olmuştur (Özdek, 1993, s. 111-112).

Bireyler, topluluklar ve devlet sağlıklı ve düzenli bir çevrede yaşama hakkının alacaklısı olduğu kadar borçlusudur da. Yalnız gelecek kuşaklar, hakkın gerçekleştirilmesinden sorumlu tutulamazlar. Ancak en önemli ve öncelikli muhatap devlettir. Devlet, gerek ulusal gerek uluslararası alanda çevrenin koruyuculuğu ve iyileştirilmesi ödevlerini üstlenir; sağlıklı ve düzenli bir çevrede yaşama hakkının gerçekleştirilmesini gözetir (Özdek, 1993, s. 113).

3 Türk Hukukunda Sağlıklı Ve Düzenli Bir Çevrede Yaşama Hakkı

Türk hukukunda sağlıklı ve düzenli bir çevrede yaşama hakkı ilk kez, 1982 Anayasası'nın 3. bölümünde düzenlenen Sosyal ve Ekonomik Haklar ve Ödevler başlığı altındaki 56. maddesiyle anayasal bir hak olma niteliğini kazanmıştır. Söz konusu maddeye göre:

"Herkes, sağlıklı ve dengeli bir çevrede yaşama hakkına sahiptir.

Çevreyi geliştirmek, çevre sağlığını korumak ve çevre kirlenmesini önlemek Devletin ve vatandaşların ödevidir.

…

Devlet, bu görevini kamu ve özel kesimlerdeki sağlık ve sosyal kurumlarından yararlanarak, onları denetleyerek yerine getirir."

Çevre ile ilgili bu hükmün amacı, insan haysiyetine uygun bir hayatın sağlanabilmesidir (Şen, 1194, s. 49).

Sağlıklı ve düzenli bir çevrede yaşama hakkının 1982 Anayasası ile tanınmasından sonra çıkarılan 9.8.1983 tarih ve 2872 sayılı Çevre Kanunu çıkarılmıştır. Bu kanun, kirleten öder ilkesi, çevre zararlarının tazmininde kusursuz sorumluluk kuralı, çevresel etki değerlendirmesi gibi kavramların Türk Çevre Hukukuna kazandırılmasını sağlayan kanun olmuştur. Kanunun amacı bütün canlıların ortak varlığı olan çevrenin, sürdürülebilir çevre ve sürdürülebilir kalkınma ilkeleri doğrultusunda korunmasını sağlamaktır.

Çevre kanunu dışında çevreyi korumaya yönelik pek çok yasal düzenleme yapılmıştır. Kültürel çevre ile ilgili 2863 sayılı Kültür ve Tabiat Varlıklarını Koruma Kanunu, 2873 sayılı Milli Parklar Kanunu, 2960 sayılı Boğaziçi Kanunu, 2634 sayılı Turizmi Teşvik Kanunu, 3621 sayılı Kıyı Kanunu, 3194 sayılı İmar Kanunu, 618 sayılı Limanlar Kanunu, 167 sayılı Yeraltı Suları Kanunu, 3167 sayılı Kara Avcılığı Kanunu, 6831 sayılı Orman Kanunu, 1380 sayılı Su Ürünleri Kanunu gibi birçok kanun, çevreyle ilgili doğrudan ya da dolaylı hükümler içermektedir.

Bunun dışında çevrenin korunması ve geliştirilmesine yönelik pek çok da yönetmelik çıkarılmış durumdadır (Çevresel Etki Değerlendirmesi Yönetmeliği, Atık Yağların Kontrolü Yönetmeliği, Tarımsal Kaynaklı Nitrat Kirliliğine Karşı Suların Korunması Yönetmeliği gibi).

Tüm bu düzenlemeler çerçevesinde, çevreye karşı gerçekleştirilen ihlaller karşısında hukuki ve idari nitelikte yaptırımlar uygulanması söz konusu olmaktadır. Bunun dışında ceza kanunlarında da çevreye yönelik fiillerin suç olarak düzenlenip cezai yaptırımlarla karşılanması da mümkündür. Bu hususu daha ayrıntılı olarak özellikle Türk Ceza Hukuku kapsamında aşağıda inceleyeceğiz.

4 Türk Ceza Kanunu'nda Çevrenin Korunması

4.1 Genel Olarak

Önceleri sadece idari, siyasi ve ekonomik bazı müdahalelerin çevreyi korumada yeterli olabileceği savunulmuş ise de, bu gün artık çevreye yönelik ihlallerin sadece belli kişilere karşı değil kamuya ve topluma karşı işlenmiş suçları oluşturabileceği ve bu suçlarda gerçek mağdurun toplum olduğu (Toprak, 1988-1989, s. 100) ceza hukukunun bu alanda da etkili olması gerektiği ve ceza hukukunun müdahalesinden vazgeçilemeyeceği genellikle kabul edilmektedir (Toroslu, 1981, s. 153; Turgut, 2001, s. 613 vd).

Ülkemizde 765 sayılı Türk Ceza Kanunu döneminde derli toplu çevre ceza normlarına yer verilmemiş; ancak çevreyi kirletme ve bozma fiillerinin halkın sağlığını tehlikeye düşürmesi haline ilişkin 369 (yangın çıkarmak), 394 (halkın içeceği suları zehirleyerek veya bozarak umumun sıhhatini tehlikeye düşürmek), 526 (yetkili makamların emir ve talimatlarına aykırı davranmak) gibi münferit hükümler bulunmakta idi.

Avrupa Birliği Konseyi'nin 27 Ocak 2003 tarihli ve 2003/80/JHA sayılı "Çevrenin Ceza Hukuku Yoluyla Korunması Hakkında Yönerge"nin yürürlüğe girmesinden sonra pek çok üye devlet, bunu iç hukukuna geçirmiş veya iç hukukunda bulunan çevre suçları hükümlerini Yönerge ile uyumlu hale getirmiştir.

Türk Ceza Hukuku'na çevrenin korunmasına ilişkin suç tipleri, 2004 yılında hazırlanan 5237 sayılı TCK ile ilk kez açıkça ceza hukukumuza girmiştir. Kanun'un Topluma Karşı Suçlar başlıklı 3. kısmında ayrı bir bölüm halinde Çevreye Karşı Suçlar düzenlenmiştir. Bu suçlar, "çevrenin kasten kirletilmesi" (m. 181), "çevrenin taksirle kirletilmesi" (m. 182), "gürültüye neden olma" (m. 183), "imar kirliliğine neden olma" (m. 184) suçlarıdır. Ayrıca Kanun'un 1. maddesinde "kamu sağlığı ve çevre"nin korunması, kanunun amaçları arasında sayılmıştır.

Çevre suçlarında ihlaller genelde üç aşamada gerçekleşmektedir. Birinci aşamada çevre üzerinde herhangi bir tehlike veya zarar yaratan eylemin varlığı aranmamakta, sadece ihlali oluşturan davranışın varlığı yeterli görülmektedir (Turgut, 2001, s. 638). Bu aşamada "daha ziyade bazı engel suçlar yaratan veya objektif hedefi bakımından doğanın bütünlüğüne zarar vermeye elverişli davranışları yasaklayan" ceza normları söz konusudur (Toroslu, 1981, s. 154). Çevreyi kirletici nitelikte veya çevre için tehlike yaratan maddelerin üretilmesi, ticari amaçla bulundurulması veya ülkeye sokulmasının yasaklandığı ceza normları örnek olarak verilebilir. Bu tip

fiillerin yasaklanmasındaki amaç, çevre ve insan üzerinde henüz bir zarar gelmeden önüne geçmektir (Şen, 1994, s. 154).

İkinci aşamada, yine çevreyi kirletme tehlikesini önleme amacını güden tedbirlere aykırılık fiilleri yer almaktadır. Bu anlamda "belirli bir sanayi faaliyetini icra edebilmek, sanayi artıklarını atabilmek ve tesislerin durumunu tespit edebilmek için belli bir yetkilendirme veya izne sahip olma yükümlülüğünü ihlal eden davranışları yahut bu faaliyetlerin icrası ile ilgili olarak kanun veya idari makamlar tarafından konan tedbir kurallarının ihlalini cezalandıran normlar" gündeme gelmektedir (Toroslu, 1981, s. 154). Böylece soyut ya da potansiyel bir tehlike önlenmek istenmektedir. İlgili kanunlarla belirlenen teknik usullere aykırı olarak kirletme (m. 181, f. 1), atık veya artıkları izinsiz olarak ülkeye sokma (m. 181, f. 2), ilgili kanunlarla belirlenen yükümlülüklere aykırı olarak gürültüye neden olma (m. 183), yapı ruhsatı almadan veya ruhsata aykırı olarak bina yapma (m. 184) suçları birinci ve ikinci aşamaya ilişkin suçlara örnek olarak verilebilir.

Üçüncü aşama ise, bizatihi çevreyi kirletici faaliyetin gerçekleştirilmesidir. Öncelikle kirletici maddelerin atılması veya salınması ile buna bağlı olarak zararlı sonucun ortaya çıkması halinde devreye giren suç tipleri bu kapsamdadır (Toroslu, 1981, s. 155). Ne var ki bu aşamada çoğu zaman zararın ortaya çıkmış olması, çevrenin kirletilmiş veya bozulmuş olması nedeniyle artık ceza normunun önleyici rolünün gerçekleşme olanağı kalmamış olmaktadır.

Çevreye karşı suçlar ile korunan hukuki yarar hava, toprak, su, bitki örtüsü, hayvan türleri gibi doğaya ilişkin ekolojik menfaatler ile yaşam ve sağlık gibi insanı esas alan hukuksal menfaatlerdir (Ünver ve Nuhoğlu, 1999, s. 40).

4.2 Çevrenin Kasten ve Taksirle Kirletilmesi Suçları (TCK m. 181 ve 182)
Genel Olarak

5237 sayılı TCK'nın 181. maddesinde çevrenin kasten kirletilmesi, 182. maddesinde ise çevrenin taksirle kirletilmesi düzenlenmiştir. Madde metinleri şu şekilde kaleme alınmıştır:

"Çevrenin kasten kirletilmesi

Madde 181- (1) İlgili kanunlarla belirlenen teknik usullere aykırı olarak ve çevreye zarar verecek şekilde, atık veya artıkları toprağa, suya veya havaya kasten veren kişi, altı aydan iki yıla kadar hapis cezası ile cezalandırılır.

(2) Atık veya artıkları izinsiz olarak ülkeye sokan kişi, bir yıldan üç yıla kadar hapis cezası ile cezalandırılır.

(3) Atık veya artıkların toprakta, suda veya havada kalıcı özellik göstermesi halinde, yukarıdaki fıkralara göre verilecek ceza iki katı kadar artırılır.

(4) Bir ve ikinci fıkralarda tanımlanan fiillerin, insan veya hayvanlar açısından tedavisi zor hastalıkların ortaya çıkmasına, üreme yeteneğinin körelmesine, hayvanların veya bitkilerin doğal özelliklerini değiştirmeye neden olabilecek niteliklere sahip olan atık veya artıklarla ilgili olarak işlenmesi halinde, beş yıldan az olmamak üzere hapis cezasına ve bin güne kadar adlî para cezasına hükmolunur.

(5) Bu maddenin iki, üç ve dördüncü fıkrasındaki fiillerden dolayı tüzel kişiler hakkında bunlara özgü güvenlik tedbirlerine hükmolunur.

Çevrenin taksirle kirletilmesi

Madde 182- (1) Çevreye zarar verecek şekilde, atık veya artıkların toprağa, suya veya havaya verilmesine taksirle neden olan kişi, adlî para cezası ile cezalandırılır. Bu atık veya artıkların, toprakta, suda veya havada kalıcı etki bırakması halinde, iki aydan bir yıla kadar hapis cezasına hükmolunur.

(2) İnsan veya hayvanlar açısından tedavisi zor hastalıkların ortaya çıkmasına, üreme yeteneğinin körelmesine, hayvanların veya bitkilerin doğal özelliklerini değiştirmeye neden olabilecek niteliklere sahip olan atık veya artıkların toprağa, suya veya havaya taksirle verilmesine neden olan kişi, bir yıldan beş yıla kadar hapis cezası ile cezalandırılır".

Çevre kirliliği gündelik hayat içinde bireylerin mutat faaliyetleri sebebiyle olabileceği gibi, gerçek veya tüzel kişilerin ticari ve sınaî üretim faaliyetleri sonucu da ortaya çıkabilir.

Çevre üzerinde çok büyük olumsuz etkiler yaratmayan ve daha çok gerçek kişilerin evsel ve bireysel atık ve artıklar ile gerçekleştirdikleri kirletme fiilleri, genellikle 5326 sayılı Kabahatler Kanunu ve 2872 sayılı Çevre Kanunu kapsamında idari yaptırım gerektiren fiiller olmaktadır.

Kabahatler Kanunu'nun "çevreyi kirletme" başlıklı 41. maddesinde, evsel ve bireysel atık ve artıkların toplanmasına veya depolanmasına özgü yerler dışına atılması, hayvan kesimine tahsis edilen yerler dışında hayvan kesilmesi veya kesilen hayvan atıklarının sokağa veya kamuya ait sair alanlara bırakılması, inşaat atık ve artıklarının bunların toplanmasına ve depolanmasına özgü yerler dışına atılması, kullanılamaz hale gelen veya ihtiyaç fazlası ev eşyasının bunların toplanmasına ilişkin olarak belirlenen günün dışında sokağa veya kamuya ait sair bir yere bırakılması, kullanılamaz hale gelen motorlu kara veya deniz nakil araçları ya da bunların mütemmim cüzlerinin sokağa veya kamuya ait herhangi bir yere bırakılması fiilleri kabahat olarak tanımlanmış ve bu fiiller karşılığında idari para cezası öngörülmüştür. Ancak bireysel kirletme fiilleri de somut olayın

şartlarına göre suç teşkil edebilir. Ya da fiil, bazen hem suç hem de kabahat oluşturabilir. Bu durumda Kabahatler Kanunu m. 15 f. 3 hükmü uyarınca sadece suçtan dolayı yaptırım uygulanır. Ancak, suçtan dolayı yaptırım uygulanamayan hallerde, kabahat dolayısıyla yaptırım uygulanabilir.

Çevre üzerinde asıl önemli olumsuz etkiler yaratan ve çevre unsurlarını çoğu zaman uzun vadede telafisi güç, hatta imkânsız zararlara uğratan, insan ve diğer canlı yaşamını tehdit eden kirletme fiilleri ise, ticari ve sınai faaliyetler sebebiyle ortaya çıkmaktadır. Ceza hukukunun ilgi alanı içinde bulunan fiiller daha çok bu tarz fiillerdir.

Suçla Korunan Hukuki Değer

Çevrenin kasten ve taksirle kirletilmesi suçları ile korunan hukuki değer, sağlıklı ve dengeli bir çevrede yaşama hakkıdır (Anayasa m. 56). Çevrenin kirletilmesi fiillerinin suç olarak tanımlanması ile Devlet, Anayasa'nın 56/2. maddesinde kendisine yüklenen "çevreyi geliştirmek, çevre sağlığını korumak ve çevre kirlenmesini önlemek" görevini yerine getirmiş olur. Böylece çevre kirliliğinin önlenmesi ile sağlıklı ve düzenli bir çevrede yaşama hakkının güvence altına alınması da sağlanmıştır (Parlar ve Hatipoğlu, 2010, s. 294).

Suçun Maddi Konusu

Çevrenin kasten ve taksirle kirletilmesi suçlarında, suçun konusu atık ve artıklarla kirletilen çevreyi oluşturan toprak, su ve havadır. Yani kirletme eyleminin üzerinde gerçekleştiği toprak, su ve hava gibi alıcı ortamlardır. Sucun işlenmesi ile bu çevre unsurları saldırıya uğramaktadır. Alıcı ortamlar olan toprak, su ve hava, aynı zamanda kendilerine bağlı canlı hayatının devam ettiği ortamlar olduğundan, bu ortamlarda yaşayan insanlar ile hayvanlar, bitkiler ve diğer mikroorganizmalar da sucun konusuna dahil edilmelidir (Kayan, 2008, s. 130-131).

Fail ve Mağdur

Kanun koyucu TCK 181 ve 182. maddelerde tarif edilen çevrenin atık ve artıklarla kirletilmesi suçlarında fail bakımından belli bir sıfat veya nitelik aramamaktadır. Bu suçların faili herkes olabilir.

Ceza sorumluluğunun şahsiliği kuralı gereği, tüzel kişilerin suç faili olması mümkün değildir (Özen, 2003, s. 65) ve tüzel kişiler hakkında ceza yaptırımı uygulanamaz. Ancak tüzel kişiler hakkında suç dolaysıyla kanunda öngörülen güvenlik tedbiri niteliğindeki yaptırımlar, kanunda özel olarak belirtilen hallerde uygulanabilir. Çevrenin kirletilmesi eylemlerinin bir özel hukuk tüzel kişisinin faaliyeti çerçevesinde ve tüzel kişinin yararına işlenmesi halinde, tüzel kişi hakkında TCK'nın 60. maddesinde öngörülen güvenlik tedbirleri uygulanacak; faaliyet izninin iptaline ve suçun işlenmesi ile elde edilen ekonomik kazancın müsaderesine karar verilecektir.

TCK sistematiğinde "Topluma Karşı Suçlar" kısmında düzenlenen çevre suçlarının mağduru belirli bir kişi değildir. Bu suçlarda toplumu oluşturan herkesin yanı sıra, belirli bir kişi veya kişiler de suçun işlenmesiyle haksızlığa uğramış, mağdur edilmiş olabilir (Kayan 2007, s. 40).

Suçun Maddi Unsuru

Çevrenin kasten kirletilmesini düzenleyen TCK m. 181 f. 1'deki suç tipinde fiil, "ilgili kanunlarla belirlenen teknik usullere aykırı olarak ve çevreye zarar verecek şekilde, atık veya artıkları toprağa, suya veya havaya kasten çevreye zarar verecek şekilde verilmesi"dir.

TCK m. 182 f. 1'deki suç tipinde fiil, "çevreye zarar verecek şekilde, atık ve artıkların toprak, su veya havaya taksirle verilmesi"dir.

181. maddenin 2. fıkrasındaki fiil ise, "atık ve artıkların izinsiz olarak ülkeye sokulması"ndan ibarettir.

Bu suç tipleri, yapılması yasaklanan veya yapılmaması istenen bir hareketin yapılması şeklinde olduğundan icrai suçlardır. Ancak sadece irai hareketlerle işlenmeleri söz konusu olmayıp, ihmal suretiyle icrai nitelikte de gerçekleştirilebilirler.

Maddede sözü edilen atık ve artığın ne olduğu TCK'nın herhangi bir maddesinde tanımlanmamıştır. Ancak Çevre Kanunu'nun "Tanımlar" başlıklı 2. maddesine göre, "atık; herhangi bir faaliyet sonucunda oluşan, çevreye atılan veya bırakılan her türlü maddeyi" ifade eder. Çevre Kanunu'nda artık tanımlanmamıştır. Ancak genellikle bir sanayi faaliyeti sonunda yararlanılması mümkün olmayan ve çevreye bırakılan maddelere artık denir (Parlar ve Hatipoğlu, 2010, s. 298).

Suçun oluşabilmesi için atık ve artıkların alıcı ortamlara verilmesi kanunlarla belirlenen teknik usullere aykırı olarak yapılmalıdır. Eğer atık veya artıklar kanunlarla belirlenen teknik usullere uygun olarak doğal ortama bırakılırsa, suçun oluştuğundan söz edilemez. Ancak ne Çevre Kanunu'nda ne de diğer ilgili kanunlarda atık ve artık maddelerin güvenli bir şekilde çevreye zarar vermeden doğal ortama verilmesi, bertaraf edilmesi ve imhasına ilişkin teknik usuller doğrudan düzenlenmiş değildir. Yaşadığımız çağda çevre ve insan hayatı bakımından tehlike yaratan atık ve artıkların sayısı ve çeşidi kadar teknolojik gelişmelerle bunların nasıl bertaraf edileceği zaman içinde sürekli değişmektedir ve bu yüzden atık ve artıkların imhası ve bertarafına ilişkin teknik usullerin kanunlarla belirlenmesi çok güç, hatta imkânsızdır (Kayan, 2008, s. 142; Yaşamış, 2005, s. 140). Çünkü çevre sorunlarının doğası gereği teknik usuller son derece ayrıntılıdır ve günün koşullarına göre sürekli yenilenmek ve değişmek zorundadır. Bu nedenle tüm dünyada yönetmelik ve standart gibi ikincil mevzuat

metinleriyle düzenlenirler (Endüstri Tesislerinden Kaynaklanan Hava Kirliliğinin Kontrolü Yönetmeliği (22.07.2006, RG 26236), Bitkisel Atık Yağların Kontrolü Yönetmeliği (19.04.2005, RG 25791) gibi).

Atık ve artıkların teknik usullere aykırı olarak doğal ortama verilmesi fiilin cezalandırılabilmesi için yeterli değildir. Fiilin "*çevreye zarar verecek şekilde*" olması da gereklidir. Bundan kasıt, fiilin çevresel varlıkları (toprak, su, hava) zarar tehlikesi ile karşı karşıya bırakmış olmasıdır. Kirliliğin çevreye zarar verecek boyutta olması yeterli olup, bu zararın gerçekleşmesi şart değildir (Parlar ve Hatipoğlu, 2010, s. 298). Bu nedenle m. 181 f. 1 ile m. 182 f. 1'de tanımlanan suç tipleri, netice unsuru bakımından somut tehlike suçlarıdır.

Öğretide 181. maddenin metninde açıkça "ilgili kanunlarla belirlenen teknik usuller" ibaresi kullanılarak suçun tanımının yapıldığı, dolayısıyla Çevre Kanunu'na istinaden çıkartılan yönetmeliklerde düzenlenen teknik usullere aykırılığın suçun oluşumu için yeterli olmadığı, teknik usullere ilişin düzenlemenin mutlaka kanunla yapılması gerektiği yönünde görüşler de bulunmaktadır (Ünver, 2005, s. 53).

TCK m. 181, f. 2'de düzenlenen suç tipinde ise fiil, atık ve artıkların izinsiz olarak ülkeye sokulmasıdır. Gelişmiş ülkelerde endüstriyel faaliyet sonucu ortaya çıkan pek çok tehlikeli atık ve artıklar, zehirli kimyasal madde ve atıklar farklı şekillerde gelişmemiş veya çevre duyarlılığı olmayan ya da mevzuat engeli olmayan ülkelere dış ticaret adı altında ihraç edilmekte ve çoğu zaman bu ülkelerde çevre sorunlarına, felaketlerine yol açılmaktadır. Bu anlamda ülkemizde son yıllarda gelişen çevre bilincinin etkisiyle kanun koyucu bu tarz tehlikeli madde, atık ve artıkların ticaretini, ihraç ve ithal edilmesini, taşınmasını ve ülkeden transit geçişini belli koşullar ve izinlere bağlamakta veya yasaklamaktadır. Örneğin tehlikeli kimyasallar ve atıkların ticaretiyle ilgili Çevre Kanunu'nun 13. maddesi, tehlikeli atıkların ithalatını yasaklamıştır. 14.03.2005 tarih ve 25755 sayılı Resmi Gazete'de yayınlanan Tehlikeli Atıkların Kontrolü Yönetmeliği'nin 41. maddesine göre de atıkların, serbest bölgeler dahil Türkiye Cumhuriyeti Gümrük Bölgesine girişi yasaktır. Ancak, sektör itibari ile ekonomik değere haiz atıklar ise izinle ithal edilebilir.

TCK m. 181 f. 2 ile atık ve artıkların izinsiz olarak ülkeye sokulması fiili bir soyut tehlike suçu olarak tanımlanmaktadır. Buna göre atık ve artıkların izinsiz olarak ülkeye sokulması ile çevre açısından tehlike gerçekleşmiş kabul edilmekte ve suç oluşmaktadır. Bu hükümle atık ve artıkların sınır aşan tehlike boyutu gözetilerek, özellikle gelişmiş ülkelerden gelişmemiş ülkelere taşınmasına sıkça rastlanan bu maddelerin ülkemize sokulması önlenmeye çalışılmıştır (Parlar ve Hatipoğlu, 2010, s. 300).

Suçun Manevi Unsuru

TCK m. 181 f. 1.de yer alan atık ve artıkların ilgili kanunlarla belirlenen teknik usullere aykırı olarak ve çevreye zarar verecek şekilde, toprak, su veya havaya verilmesi suçu, kasten işlenen bir suçtur. Buna göre fail, atık ve artıkları alıcı ortamlar olan toprak, su veya havaya verme fiilini bilerek ve isteyerek icra etmeli, ayrıca fiilinin bu konuyla ilgili kanunlarda belirlenen teknik usullere aykırı olduğunu ve çevreye zarar verecek nitelikte olduğunu bilmelidir. Bu suç doğrudan kastla işlenebileceği gibi olası kastla da işlenebilir. TCK m. 181 f. 2.de düzenlenen atık ve atıkların izinsiz olarak ülkeye sokulması suçu da, doğrudan veya olası kastla işlenebilir.

Çevrenin atık ve artıklarla kirletilmesi suçunun taksirli hali m. 182'de ayrıca düzenlenmiştir. Buna göre kendisinden beklenen dikkat ve özen yükümlülüğüne aykırı hareketi neticesinde çevrenin kirlenmesine yol açan fail, taksirli hareketi nedeniyle sorumlu olacaktır.

Suçun Nitelikli Halleri

TCK m. 181 f. 3 ve f. 4.de atık veya artıklarla çevrenin kirletilmesi ile atık veya artıkların izinsiz ülkeye sokulması suçlarının nitelikli halleri düzenlenmiştir.

Üçüncü fıkraya göre, bu suçların konusunu oluşturan atık veya artıkların toprakta, suda veya havada kalıcı özellik göstermesi halinde failin cezası iki katı kadar artırılacaktır. Kalıcı özellik göstermekten maksat, kirletmenin uzun süre devam etmesidir (Parlar ve Hatipoğlu, 2010, s. 301).

Maddenin dördüncü fıkrasında ise, suç konusu atık ve artıkların insan veya hayvanlar açısından tedavisi zor hastalıkların ortaya çıkmasına, üreme yeteneğinin körelmesine, hayvanların veya bitkilerin doğal özelliklerini değiştirmeye neden olabilecek niteliklere sahip olması halinde cezanın ağırlaşacağı ifade edilmiştir. Bu ağırlaştırıcı neden bakımından önemli olan, atık ve artıkların niteliklerinin anılan zararlı neticeyi meydana getirmeye elverişli olmasıdır. Yani bu tür bir zararlı netice ortaya çıkmamış olsa dahi, atığın böyle bir neticeyi doğurmaya elverişli olduğunun tespiti halinde cezanın artırılması gerekecektir.

Suçun Özel Görünüş Biçimleri

TCK'nın 181. maddesinde öngörülen çevrenin kasten kirletilmesi suçu bakımından teşebbüs mümkün iken, 182. maddesinde öngörülen suçun taksirli bir suç olması sebebiyle ve kanunda teşebbüsün sadece kasıtlı suçlarda mümkün olabileceğini ifade etmesi dolayısıyla bu suça teşebbüs mümkün değildir.

Aynı şekilde çevrenin kasten kirletilmesi suçuna iştirak mümkün iken çevrenin taksirle kirletilmesi suçuna iştirak mümkün değildir.

Kanunda çevreyi kirletme suçları bakımından özel içtima kuralları öngörülmemiş olduğundan suçların içtimai konusundaki genel hükümler uygulanacaktır.

Yer Bakımından Uygulama Alanı

Türk Ceza Kanunu'nun 13. maddesinin 1. fıkrasının (d) bendi ile çevrenin kasten kirletilmesi suçunun yabancı bir ülkede işlenmesi halinde failin Türk vatandaşı veya yabancı olmasına bakılmaksızın Türkiye'de Türk kanunlarına göre yargılanacağı hüküm altına alınmıştır. Böylece uluslararası ceza hukuku güvencesi getirilmiş ve Türkiye'nin egemenlik alanı dışında işlenmiş çevreyi kasten kirletme eylemleri bakımından da 181. maddenin uygulanması sağlanmış olmaktadır. Ancak suç nedeniyle Türkiye'de yargılama yapılması Adalet Bakanı'nın talebine bağlı olup, ayrıca fail hakkında yabancı ülkede mahkûmiyet veya beraat kararı verilmemiş olmalıdır.

5 Sonuç

Sanayileşme ve hızlı nüfus artışı ile birlikte, çevresel faktörleri gözardı eden büyüme ve kalkınma politikaları sonucu oluşan çevre kirliliği, bugün insanların hayat ve sağlık haklarını tehdit eder boyutlara ulaşmıştır. Bu durumun farkına varılmaya başlanması ile önce uluslararası boyutta çalışmalar yapılmış daha sonra da anayasalarda sağlıklı ve düzenli ir çevrede yaşama, bir insan hakkı olarak düzenlenmeye başlanmıştır.

Çevreye zarar verici nitelikteki eylemler, önceleri özel hukuk yaptırımları ve idari yaptırımlar ile karşılanırken, çevreyi ciddi biçimde tehlikeye sokan ve insan sağlığına zarar verici nitelikteki bazı fiillerin sadece bu yaptırımlar ile karşılanmasının yetersiz bulunması üzerine, sağlıklı ve düzenli bir çevrede yaşama hakkını garanti altına almak amacıyla ceza kanunlarında çevreye karşı suçlar düzenlenmiştir.

Türk Ceza Kanunu'nda düzenlenen çevreye karşı suçlar arasında Çevrenin Kasten Kirletilmesi (TCK m. 181) ve Çevrenin Taksirle Kirletilmesi (TCK m. 182) suçları da yer almaktadır.

"Çevrenin kasten kirletilmesi" suçunda (TCK m.181), "çevrenin kasten kirletilmesi" ve "atık ve artıkların izinsiz olarak ülkeye sokulması" olmak üzere iki farklı suç tipine yer verilmiştir. Maddenin ilk fıkrasında düzenlenen "çevrenin kasten kirletilmesi" suçunun oluşabilmesi için atık veya artıkların ilgili kanunlarla belirlenen teknik usullere aykırı olarak toprağa, suya veya havaya verilmesi, ayrıca fiilin çevreye zarar verecek şekilde işlenmesi gerekmektedir. Bu noktada belirtmek gerekir ki suçun bağlı hareketli bir suç olarak düzenlenmiş olması hukuksal korumayı zayıflatmaktadır. Suçun serbest hareketli bir suç olarak düzenlenmesi, örneğin atık ve artıkların hukuka aykırı olarak işlenmesi, depolanması, nakledilmesi, imha edilmesi gibi çevre kirliliğine neden olabilecek farklı fiillerin de suç kapsamına dahil edilmesini sağlayabilirdi.

Suçun somut tehlike suçu olarak düzenlenmesi de nedensellik bağının ispatında güçlük yaratmaktadır. Daha güçlü bir hukuksal koruma bakımından suçun, soyut tehlike suçu olarak düzenlenebileceği öğretide savunulmaktadır.

Çevrenin kirletilmesi suçları TCK'nın 13. maddesinin 1.fıkrası ile düzenlenmiş bulunan evrensellik ilkesi kapsamında takip edilebilecek suçlardandır. Bu durum çevrenin kirletilmesi fiillerinin sadece bir ülkenin zararına işlenen fiiller olmadığı gerçeğine de uygun olarak, bu suçların uluslararası alanda takibini mümkün kılması bakımından oldukça önemli bir koruma sağlamaktadır.

Türkiye'de Giderek Artan Hukuka Aykırı Bir Ekonomik Faaliyet Olarak Kredi Kartı Kullanılması Suretiyle Tefecilik

Usury by Using Credit Card as an Increasing Unlawful Economic Activity in Turkey

Assoc. Prof. Dr. Hakan Karakehya (Anadolu University, Turkey)

Abstract

Usury is regulated in article 241 of the Turkish Penal Code as a crime in the field of the economy, industry and trade. The state aims with the regulation to protect continuation of the economic order in the country. Usury by using credit card is one of the most common committing methods of the usury crime in Turkey. Due to this crime, there are many people in the economic difficulties and too much tax losing for the state, recent years in Turkey. Nevertheless usury by the credit card is getting increase with each passing day, because of the easiness, profitability, being risk-free of the action. Increasing controls and reduction to more reasonable levels of the prescribed interest for the credit card debts will be effective in the fight against the crime.

1 Giriş

İnsanların borç alabilecekleri kişi veya kurumlara duydukları ihtiyaç çok eski tarihler de bile varlığını hissettirmiştir. Öyle ki, Eski Mısır'da, Sümerlerde ve Babil İmparatorluğunda borç alıp verme işlemleriyle uğraşan kişiler ticari hayatın ayrılmaz parçası haline gelmişlerdi. İnsanların dokunulmazlıkları olan mabetlerde kendilerini daha güvende hissetmeleri ve din adamlarının da toplumda itimat edilir kimseler olarak görülmelerine bağlı olarak, bu tür borç işlemleriyle ilk olarak din adamları uğraşmıştır. Hatta tapınaklarda yapılacak bazı vadesi gelen borcun tahsil usulleri, alınacak faiz oranları, gibi hususlar Hammurabi kanunlarında ayrıntılı olarak düzenlenmişlerdir (Tarlan, 1987).

Dolayısıyla borç alınacak kişi ve kurumlara duyulan ihtiyacın ticari hayatın başladığı zamanlardan beri varlığını hissettirdiğini söylemek yanlış olmayacaktır. Bu nedenle günümüzde de ticari hayatın temel bir gereksinimi olan bu tür faaliyetlere izin verilsin veya verilmesin, ekonomik hayatın içinde borç verme ve alma faaliyetinin önüne geçmek pek mümkün görünmemektedir. Ancak günümüzde ekonomik faaliyetlerin alanı o kadar çeşitlenmiş ve bu tür faaliyetler toplumsal düzeni o kadar etkiler hale gelmiştir ki; birçok devlet ortaya çıkabilecek kontrolsüz toplumsal hareketlenmelerin önüne geçme gerekçesiyle borç alınıp-verilmesi faaliyetlerini denetim altında tutma eğilimindedir (Özgenç, 2010). Hatta sadece borç alınıp verilmesi değil; toplum içerisinde parasal hareketliliği etkileyen ve ekonomi alanında önemli yansımaları bulunan diğer birçok ekonomik faaliyet de devlet tarafından kontrol altına alınmaya çalışılmakta, devlet denetimi dışında hareket eden kişiler de değişik cezai yaptırımlara muhatap kılınmaktadırlar. Türk hukuk sistemi bakımından Bankalar Kanunu m.151'de düzenlenen izinsiz bankacılık faaliyetinde bulunma ve Türk Ceza Kanunu (TCK) m.241'de düzenlenen tefecilik suçları, bu durumu yansıtan en önemli düzenlemelerdir. Bu düzenlemelerle devlet mevduat toplama, borç verme gibi bir takım eylemlerin, sadece kendi izin verdiği ve dolayısıyla denetleyebildiği kişi ve kuruluşlar eliyle yapılmasına imkan sağlamaktadır. Gerekli koşulları gerçekleştirmeksizin bu tür işlemlerde bulunanlar ise söz konusu suç tiplerinde öngörülen cezai müeyyidelere muhatap olma durumuyla karşı karşıya kalmaktadır.

Biz bu çalışmamızda kazanç elde etmek amacıyla başkasına borç para vermek şeklinde gerçekleştirilen tefecilik suçunun yeni bir işleniş şekli olan kredi kartı tefeciliğini inceleme konusu yapacağız. Bu bağlamda tefecilik suçunun unsurları ve kredi kartı tefeciliğinde bu unsurların ne şekilde meydana geldiği, suçun cezası, suçun kredi kartı kullanılmak suretiyle işlenmesinin boyutları ve son dönemde kredi kartı tefeciliğinde görülen artışın nedenleri çalışmada ele alınacak başlıca konular olacaktır. Çalışma sırasında Yargıtay içtihatlarından faydalanmak suretiyle uygulamadaki durumu tespit etmek ve normatif düzenleme ışığında kendi görüşlerimizi neden-sonuç ilişkisi içerisinde açıklamak ise temel çalışma yöntemimizi oluşturacaktır.

2 Tefecilik Suçuna İlişkin Genel Bilgiler, Suçunun Hukuki Konusu ve Sosyal Bir Vakıa Olarak Kredi Kartı Tefeciliği

Tefecilik suçu yürürlükte bulunan 5237 sayılı Türk Ceza Kanununun 241. maddesinde düzenleme altına alınmıştır. Söz konusu hükme göre; *"Kazanç elde etmek amacıyla başkasına ödünç para veren kişi, iki yıldan beş yıla kadar hapis ve beş bin güne kadar adlî para cezası ile cezalandırılır."* Madde gerekçesinde ise suç tipinin ihdasına ilişkin şu açıklamalar yapılmıştır: *"Madde metninde tefecilik fiili suç olarak tanımlanmıştır. Faiz veya başka bir namla da olsa kazanç elde etmek amacıyla başkasına ödünç para verilmesi, tefecilik suçunu oluşturur. Tefecilik suçu, iktisadi hayatımızda, "senet kırdırma" denen usulle de işlenebilir. Örneğin henüz vadesi gelmemiş bir bononun vadesinden önce başkasına verilerek karşılığında bono üzerinde yazılı meblağdan daha az bir paranın alınması durumunda tefecilik suçu oluşur. Çünkü bu durumda bononun el değiştirmesi,*

kişiler arasında doğmuş olan bir alacak borç ilişkisine dayanmamaktadır. İfade yerinde ise, bu durumlarda, birer ödeme aracı olan bononun veya çekin kendisi satılmakta ve satın alınmaktadır. İzlenen suç politikası gereğince, kazanç elde etmek amacıyla başkasına ödünç para veren kişi cezalandırılmaktadır. Buna karşılık, ödünç para alan kişi cezalandırılmamaktadır."

Suçun hukuki konusu; suçla ihlal edilen hukuki varlık veya menfaattir. Suçun ihlal ediciliği kaynağını hukuki konudan alır. Her suçta nasıl bir fail varsa, bir de hukuki konu vardır (Toroslu, 2005).Yukarıda da açıkladığımız üzere devletler ortaya çıkabilecek olumsuz toplumsal sonuçlarını engellemek amacıyla ödünç para verme işlemlerini kontrol altında tutma eğilimindedirler. Nitekim kamusal bir kontrol mekanizması olmaksızın faiz karşılığı para alınıp verilmesi, sonuçta birçok kişinin ekonomik olarak zora düşmesi sonucunu ortaya çıkartabilecektir (Parlar, 2011). Toplumda bu şekilde zora düşen kişilerin sayısının artmasıyla birlikte ise gerek ekonomik gerekse toplumsal dalgalanmalar ortaya çıkabilecektir. Bu bağlamda devlet kazanç sağlamak amacıyla bu tür faaliyetlerde bulunacak kişi veya kuruluşları kontrol eder ve bunların ödünç para verme işlemlerinde uygulayacakları faiz oranı için sınırlar belirler. Bu bağlamda tefecilik suçunun hukuki konusunu ekonomi alanındaki kamusal düzen oluşturur (Özgenç, 2010). Nitekim suç tipini düzenleyen 241. madde, TCK'nın ikinci kitabının, üçüncü kısmının, dokuzuncu bölümündedir. Bu bölümün başlığı ise *Ekonomi, Sanayi ve Ticarete İlişkin Suçlar*dır.

Kredi kartı tefeciliği ise son dönemde tefecilik suçunun en yaygın işlenme yöntemlerinden birisini oluşturmaktadır. Son dönemde tefecilik suçunun bu yöntemle işlenmesinin boyutlarını göstermesi bakımından şu alıntıyı paylaşmayı uygun buluyoruz: *"Türkiye ekonomisine, yolsuzluk suçları kadar büyük oranda zarar veren tefecilik suçu boyut değiştirdi. Kredi kartı ile pos tefeciliği yaygınlaşmaya başladı. Pos tefeciliği yapan kişilerin, ticari faaliyet adı altında kamufle olabilmeleri ve illegal faaliyetlerini legal gösterebilmelerindeki kolaylık, bu suçun artışında etkili oluyor. Son iki yıl içerisinde tefecilere yönelik toplam bin 165 operasyonda 3 bin 37 şüpheli şahıs yakalandı. Emniyet Genel Müdürlüğü Kaçakçılık ve Organize Suçlarla Mücadele (KOM) Daire Başkanlığı'nın 2010 yılı raporunda, tefeciliğe ilişkin dikkat çekici bilgiler yer alıyor. Son dönemlerde bankalara borcunu ödeyemeyerek kara listeye girmiş olan insanlar, tefecilere giderek yüksek faizlerle borç para aldıkları, ancak sonucunda sahip oldukları tüm mal varlıklarını kaybettikleri ve tefecilik mağduru çok sayıda şahsın ise intihar girişiminde bulundukları ortaya çıktı. Her geçen gün tefecilik yaparak kolay yoldan para kazanacağını düşünen kişiler ile tefecilerin ağına düşen vatandaşların sayısının artması, vergisiz olarak kolay para kazanma hırsını artırdı. Bu durum ise işlerini kanunlara uygun olarak yapan kişileri olumsuz etkiliyor* (Sabah Gazetesi (27.04.2012)."

Gerçekten de daha önceden tefecilik suçu işlenirken ödünç para verilen kişiden bir senet vs. alınır ve bu şekilde tefeci kimse ileride alacağı parayı teminat altına almaya çalışırdı. Senedin tahsil edilememesi durumunda ise bazen çek-senet mafyası denilen örgütsel yapılar olaya müdahil olur ve cebir-tehdit kullanmak suretiyle parayı tahsil ederlerdi. Oysa günümüzde uygulanan kredi kartı tefeciliğinde, tefeci bakımından parayı tahsil edememe gibi bir risk bulunmamaktadır.

3 Kredi Kartı Tefeciliği Bağlamında Tefecilik Suçunun Unsurları

3.1. Genel Olarak

Bir fiilin suç teşkil edebilmesi için tipiklik, hukuka aykırılık ve kusurluluk unsurlarının gerçekleşmiş olması gerekir. Bu bağlamda aşağıda "kredi kartı tefeciliği"nin işleniş biçimi de göz önünde bulundurulmak suretiyle, tefecilik suçunun unsurları inceleme konusu yapılacaktır.

3.2. Tipiklik

Tipiklik, failin gerçekleştirdiği fiilin kanunda yer alan suç tanımı ile örtüşmesini ifade etmektedir. Bu bağlamda gerçekleştirilen fiil suç tanımına uymuyorsa; ortada ihlal edilmiş bir norm ve dolayısıyla suç da olmayacaktır. Tipiklik; "*maddi ve manevi tipiklik*", "*tipik maddi unsur ve tipik manevi unsur*" ya da "*maddi unsurlar ve manevi unsur*" terimleri kullanılmak suretiyle ikiye ayrılabilir. Biz maddi ve manevi unsurların tipiklik içerisinde yer aldığını vurgulaması bakımından "tipik maddi unsur ve tipik manevi unsur" *(der objektive Tatbestand- der subjektive Tatbestand)* şeklindeki kullanıma bağlı kalmayı uygun buluyoruz (Aynı yönde bkz. Stratenwerth, 2000). Suçun tipik maddi unsurunun içerisine suç tanımının içerdiği *suçun maddi konusu*, *fail*, *mağdur* ve *fiil* girmektedir. Suçun tipik manevi unsuru ise fiil ile fail arasındaki psişik bağı ifade etmektedir.

Tipik Maddi Unsur:

Suçun Maddi Konusu: Maddi konu suçun üzerinde gerçekleştirildiği eşya veya kişi olarak ifade edilebilir. Ancak bu, failin fiziki faaliyetinin somut olarak üzerinde gerçekleştiği her kişi ya da eşya değil; sadece suçu düzenleyen normdaki tanımda söz konusu olan kişi veya eşyadır (Toroslu, 2005). Tefecilik suçunun maddi konusunu, kazanç amacıyla ödünç verilen para oluşturur. Kanunda bu husus açıkça belirtildiğinden, kanunilik ilkesi gereği başkaca şeylerin verilmesi bu suça vücut vermez. Bu bağlamda örneğin altın veya gümüşün kazanç elde etmek maksadıyla başkasına ödünç verilmesi tefecilik olmaz (Parlar, 2011). Buna karşın paranın Türk lirası veya başka bir para birimi olmasının önemi bulunmamaktadır. Dolar veya euro gibi yabancı paraların faiz karşılığında verilmesi de tefecilik suçunu oluşturacaktır.

Kredi kartı tefeciliğinde ise bu maddi konu, kart çekildikten sonra mağdura verilen para olarak karşımıza çıkmaktadır.

Fail: Fail, kanunda tanımlanan suç tipini ihlal eden davranışı gerçekleştiren kişidir. Fail, fiilin aktif süjesi olarak ifade edilebilir (Toroslu, 2005). Bu suçun faili herkes olabilir. Bu bağlamda failin kamu görevlisi, kadın veya erkek olmak gibi herhangi bir özel vasıf taşımasına gerek yoktur (Parlar, 2005). Tefeciliğin kredi kartı vasıtasıyla işlenmesinde de özellik arzeden bir durum bulunmamaktadır.

Mağdur: Mağdur suçla korunan hukuki menfaat veya varlığın sahibidir. Mağdur suçun pasif süjesi olarak da ifade edilebilir (Toroslu, 2005). Tefecilik suçunun mağduru ise hem bu tür fiillerin yaygınlaşmasına bağlı olarak ekonomik düzeninin devamlılığı tehlikeye düşecek olan toplum hem de kazanç elde etmek amacıyla kendisine para verilen kimsedir (Meran, 2012). Kredi kartı tefeciliğinde ise mağdur, kredi kartıyla belirli bir para meblağı çekildikten sonra, kendisine karttan çekilen bu meblağın daha azı verilen kişi olarak karşımıza çıkmaktadır.

Fiil: Kanuni tanıma göre tefecilik suçunu oluşturan fiil, başkasına kazanç amacıyla ödünç para vermektir. Bu tanıma ilk bakışta fiil bakımından ödünç para verme ve kazanç sağlama amacı olmak üzere iki belirleyici özelliğin olduğu göze çarpmaktadır. Ödünç verilecek şeyin para olmasının, bu suçun oluşması bakımından zorunlu olduğunu, yukarıda maddi konuya ilişkin açıklamalarımızda belirtmiştik. Bunun dışında kazancın da mutlaka maddi bir kazanç olması gerekir (Özgenç, 2010). Yardım etme duygusunun tatmini, sevap kazanmak, iyilik zinciri oluşturmak gibi manevi kazançlar bu suçun oluşmasına vücut vermez.

Bununla birlikte kazanç için verilenin para olması zorunluyken, maddi kazancın muhakkak para olması gerekli değildir. Ödünç parayı, ödünç verilen miktardan daha fazla değere sahip bir mülkün kendisine vermesi karşılığında veren kişi de bu suçu işlemiş olacaktır (Parlar, 2010). Tefeciliğin kredi kartı vasıtasıyla işlenmesinde halinde ise hem ödünç verilen meblağ hem de kredi kartı borcu olarak bankaya ödenen meblağ, para olarak karşımıza çıkmaktadır.

Tefecilik suçu ödünç paranın borç alana verilmesiyle tamamlanmış olmaktadır. Suçun tamamlanması için ödünç paranın karşılığının elde edilmiş olması şart değildir. Bunun elde edilip edilmemesinin suçun gerçekleşmesi bakımından bir etkisi yoktur (Uğur, 2007). Kredi kartı tefeciliğinde de aynı şekilde tefecilik suçunun tamamlanması paranın borç para alan kişiye verilmesiyle gerçekleşir. Bu konuda sadece anlaşmaya varılmış olması, suçun oluşumuna etki etmez.

Ancak 5237 s. TCK'daki açık düzenlemeye rağmen, tefecilik suçunun oluşumuna ilişkin Yargıtay uygulaması, uzunca bir süre kanuni düzenlemeden farklı gelişti. Nitekim 5237 sayılı TCK'nın 2005 yılında yürürlüğe girmesinden önce, Yargıtay uygulamasında tefecilik suçunun oluşması bakımından, birden fazla kişiye kazanç elde etmek için borç para verilmesi, bu faaliyetin sürekli ve sistemli olarak gerçekleştirilmesi gibi koşullar aranıyordu. Yargıtay tefecilik suçunun oluşması bakımından bu koşulları aramaya, 5237 s. TCK döneminde de devam etti (Örnek olarak bkz. Yargıtay 7. CD. 07.10.2009, 5900/10180). Ancak daha sonra yerinde olarak uygulamasını değiştirerek, kanunda tanımlanan fiilin bir kere gerçekleştirilmesi halinde de tefecilik suçunun oluşacağını kabul etmiştir (Örnek olarak bkz. Yargıtay 4. CD 14.03.2012, E.2011/20476, K.2012/5992)

Kredi kartı tefeciliği genelde şu şekillerde işlenmektedir: "Kredi kartı borcu ya da nakit paraya ihtiyacı olan kişi, pos tefeciye gidiyor. Pos tefeci ile örneğin 8 bin liralık borcu veya nakit para ihtiyacı için pazarlık yapıyor. 12 taksitte ödenmek üzere 10 bin liraya anlaşıyor. Pos tefeci 8 bin lirayı bankaya ödeyip, kredi kartı borcunu kapatıyor veya 8 bin lira nakit parayı o kişiye ödüyor. Aynı kredi kartından 10 bin liralık çekimi 12 ay taksitlendiriyor. Karşılığında 'mal satılmış gibi' belge veriliyor. Vatandaş da 10 bin lira borcunu taksitler halinde ödüyor. Olay kredi kartı faizinden daha düşük olduğu için vatandaşa cazip geliyor. Uzaktan baktığınızda olay mal satışı olarak gözüküyor. Aslında yapılan iş yüzde 25 komisyonla tefecilik oluyor… (Kızılot, 2012)"

Pos makinesinden komisyon olarak ifade edilen faiz ile birlikte toplam miktarı çeken tefeci, artık alacağı parayı da tahsil etmiş olmaktadır. Nitekim bu şekilde para alan kimse tefeciye değil; kredi kartını aldığı bankaya borçlu hale gelmektedir. Bu nedenle tefeciden para alan mağdur, ileride kredi kartı taksitlerini ödeyemezse, hukuki ihtilaf tefeci ile mağdur arasında değil; bilakis mağdur ile banka arasında ortaya çıkacaktır.

Tipik Manevi Unsur

Tefecilik suçu kasten işlenebilen bir suçtur. Ancak burada genel kast da yeterli değildir. Suç tipinde tefeciliğin oluşabilmesi için failin para kazanma amacıyla hareket etmesi aranmıştır. Dolayısıyla bu suçun manevi unsuru kazanç elde etme amacından oluşan özel kasttır (Meran, 2012). Fail bu özel kasta sahip olmaksızın söz konusu suçtan cezai sorumluluğu oluşmaz.

3.3. Hukuka Aykırılık

Ceza normu ile yasaklanmış tipik davranışların gerçekleştirilmesi hukuka aykırılığın karinesini oluşturur. Ancak bazı hallerde hukuk düzeni, tipiklikte formüle edilmiş olan yasağı hukuka uygunluk nedenleri denilen müsaade edici durumların mevcudiyeti halinde kaldırır. Böylece herhangi bir fiilin hukuka aykırı olduğu konusundaki kesin hüküm, ancak herhangi bir hukuka uygunluk nedeninin somut olayda bulunmaması halinde verilebilir (Hakeri, 2007). İlgili kanunlarda öngörülen izinlerin alınması suretiyle, kazanç amaçlı ödünç para verilmesi hukuka uygun olacağından, hukuka aykırılık unsurunun eksikliğinden dolayı tefecilik suçu oluşmaz.

Örneğin bankalar gibi özel kanunla kendilerine verilmiş izne dayalı olarak, kazanç elde etme amacıyla ödünç para veren kurumların eylemleri tefecilik suçunu oluşturmayacaktır. Bu bağlamda bu suç bakımından en sık rastlanan hukuka uygunluk sebebi kanun hükmünü icradır.

3.4. Kusurluluk

Kusurluluk failin fiilinin kınanabilirliğine ilişkin atfedilen değer yargısını ifade etmektedir (Koca-Üzülmez, 2008). Tefecilik suçunda kusurluluk bakımından özellik arzeden bir durum bulunmamaktadır. Dolayısıyla örneğin cebir-tehdit altında bu tür fiilleri işleyen kimseler bakımından kusurun bulunmaması nedeniyle cezai sorumluluk oluşmayacaktır.

4. Suçun Özel Beliriş Biçimleri

4.1. Teşebbüs

Teşebbüs kişinin işlemeyi kastettiği bir suçu elverişli hareketlerle doğrudan doğruya icraya başlayıp da elinde olmayan nedenlerle tamamlayamamasıdır (Hakeri, 2007). Tefecilik suçuna teşebbüs kanaatimizce mümkündür. Konuyu kredi kartı tefeciliği bağlamında ele alırsak, örneğin kazanç amacıyla verdiği parayı kişiye teslim ederken yakalanan kimse tefeciliğe teşebbüsten sorumlu olacaktır. Nitekim suçu işlemeye yönelik olarak doğrudan icra hareketlerine başlamış; ancak fiilini elinde olmayan nedenlerle tamamlayamamıştır.

4.2. İştirak

Suça iştirak, tek bir kişi tarafından işlenebilen bir suçun, birden fazla kişinin bir araya gelmesiyle işlenmesi halinde söz konusu olur (Toroslu, 2005). Tefecilik suçu, tek bir kişi tarafından işlenebilen bir suç olması nedeniyle iştirake müsaittir (Meran 2012). Örneğin ortak çalışan iki kişiden birisi müşteri bulup diğeri pos cihazını kullanmak suretiyle kişileri borçlandırıyorsa müşterek fail olarak cezai sorumluluğa sahip olacaklardır. Benzer şekilde pos cihazına sahip bir işletmeci hiç aklında yokken, arkadaşının bu tür faaliyetlerde bulunması konusundaki telkinleriyle tefecilik yaparsa, arkadaşı azmettiren olarak kendisi ise fail olarak suçtan sorumlu olacaklardır. Kredi kartı tefeciliğini yapanların yanında genelde müşteriyle bankaya gidip kart borcunu sıfırlayan yardımcıları da vardır. Bu kişiler de tefecilik fiiline yardım eden olarak cezai sorumluluğa sahiptirler.

4.3. İçtima

Kanunda tanımlanan suça ilişkin fiillerin bir defa gerçekleştirilmesi tefecilik suçunun meydana gelmesi bakımından yeterlidir. Dolayısıyla işlenen her bir fiil, fail bakımından kural olarak kanunda belirlenen cezanın ayrı ayrı uygulanmasını gerektirir. Kredi kartı tefeciliği üzerinden örneklerimize devam edersek, on farklı kişiye, kredi kartı vasıtasıyla kazanç elde etmek için para veren kimse, on kez tefecilik suçunu işlemiş olacaktır ve fiiller nedeniyle ayrı ayrı cezalandırılacaktır. Bununla birlikte fiilin zincirleme suç şeklinde de işlenmesi mümkündür. Örneğin bir kişiye kredi kartı vasıtasıyla kazanç elde etmek için para vermeye karar veren fail, bu tek suç işleme kararı kapsamında farklı zamanlarda bu kişiye karşı kredi kartı vasıtasıyla tefecilik suçunu işlese, zincirleme suç hükümlerinin uygulanması gerekecektir (TCK m.43). Bu bağlamda tek suç işleme kararı kapsamında işlenen fiiller için faile tek bir suçun cezası verilecek, daha sonra ceza, kanunda belirtilen oranlar dahilinde arttırılarak belirlenecektir.

Bankalar Kanununun 151. maddesinde düzenlenen, izinsiz bankacılık faaliyetinde bulunma suçu kapsamındaki hareketlerden birisi olarak tefecilik sayılabilecek fiillerin işlenmesi söz konusu olabilir. Nitekim izinsiz bankacılık faaliyetinde bulunan gerçek veya tüzel kişilerde kazanç amacıyla ödünç para verme işlemleri gerçekleştirilebilirler. Bu durumda tefecilik eylemleri izinsiz bankacılık faaliyetini oluşturan eylemlerden birisi olduğu için failin sadece izinsiz bankacılık faaliyetinde bulunma suçundan cezalandırılması gerekir (Karakehya, 2008).

5. Cezai Müeyyide ve Takibat

Fiil karşılığında iki yıldan beş yıla kadar hapis ve beş bin güne kadar adli para cezası şeklinde cezai yaptırım öngörülmüştür. Dolayısıyla faile hem adli para cezası hem de hapis cezası uygulanacaktır. Adli para cezası bakımından alt sınır gösterilmediği için TCK'nın 52. maddesi gereğince beş gün adli para cezası şeklinde belirlenen alt sınır geçerlidir (Meran 2012).

Mahkeme hapis cezası ve adli para cezasını belirlerken öncelikle bu sınırlar arasında TCK'nın 61. maddesindeki ilkeleri göz önünde bulundurarak temel cezayı belirleyecek ve yine aynı maddede belirlenen düzenlemeler ışığında arttırma ve indirimlerle sonuç cezaya ulaşacaktır. Sonuç olarak belirlenen gün adli para cezası bakımından ise kişinin ekonomik durumu göz önünde bulundurularak her bir gün için yirmi ile yüz lira arasında bir miktar takdir edilecek, daha sonra bu miktar gün sayısı ile çarpılarak somut para cezasına ulaşılacaktır.

Bununla birlikte suçta kullanılan anapara ve suç kaynaklı olarak ortaya çıkan faiz miktarı da TCK'nın 54. maddesi gereğince müsadere edilecektir (Özgenç 2010).

Suç re'sen takip edilen bir suç olduğu için mağdurun şikayetçi olmasına veya herhangi bir merciin iznine gerek olmaksızın takibat yapılacaktır. Dolayısıyla böyle bir suçun işlendiği şüphesi ile karşılaşan soruşturma organları re'sen harekete geçecek (CMK m.160/1), yeterli delile ulaşılması durumunda yargılamaya başlanacak (CMK m.170/2) ve sonuçta mahkeme fiile ilişkin vicdani kanaate ulaşırsa mahkumiyet hükmünü kuracaktır (CMK m.223/5).

6. Kredi Kartı Tefeciliğinde Son Dönemde Görülen Artışın Nedenleri

Pos tefecilik fiilinde görülen artışın en önemli nedenlerinden birisi bu tür faaliyetlerin oldukça kazançlı olmasıdır. Ciddi anlamda bu işten günde binlerce liralık kazanç sağlayan işletmeler olduğu görülmektedir. Hukuka aykırı bile olsa bu kadar kazançlı bir işin taliplisi de oldukça fazla olmaktadır.

Ayrıca kredi kartı vasıtasıyla tefecilik yapan kişi, faizle para verdiği kişinin kredi kartını, taksitli satış şeklinde pos cihazından geçirdiği anda alacağını tahsil etmiş olduğundan, çek-senet mafyası tarzı yapılanmalara da bu tür tefecilik faaliyetlerinde artık iş düşmemektedir. Bu bağlamda daha önceden bu tür alacakların tahsili bazen cebir ve tehdit kullanımı gerektiren işler olarak görüldüğünden, tefecilik yapanlar daha çok ya çek-senet mafyası tarzı yapılanma içerisinde olan kişiler veya bu tür yapılarla yakın ilişkisi bulunanlar arasından çıkıyordu. Ancak "pos tefecilikte" artık alacağın tahsili sorunu ortadan kalktığı için, bu faaliyet, maddi kayıp açısından risksiz bir iş olarak görülmektedir. Kazancın bu kadar fazla, kayıp riskinin de son derece az olduğu bu işi yapma taliplileri de ister istemez çoğalmakta; bu da söz konusu yöntemle işlenen tefecilik suçlarında ciddi bir artışa neden olmaktadır.

Bununla birlikte bu yolla tefecilik işlemenin son derece kolay oluşu da kişileri tefecilik yapmak konusunda cezbetmektedir. Nitekim fiil, pos cihazı kullanma imkanına sahip herkes tarafından, kartı makineden geçirmek suretiyle rahatlıkla işlenebilecek bir fiildir. Bu basitlik de bu fiile girişenlerin artmasındaki bir diğer önemli nedendir.

Tefecilerin aldığı faizin genelde kredi kartı faizinden daha düşük oranlara tekabül etmesi de, tefecilerden kredi kartı vasıtasıyla para talebinde bulunan kredi kartı borçlularının sayısını arttırmıştır. Bu talebe bağlı olarak oluşan arz da tefeciliğin kredi kartı vasıtasıyla işlenmesinde artışa neden olmaktadır.

7. Sonuç

Tefecilik TCK'nın 241. maddesinde ekonomi, sanayi ve ticarete karşı suçlar arasında düzenlenmiştir. kanunkoyucunun bu suçun ihdası ile korumaya çalıştığı hukuki menfaat ekonomik düzenin korunması ve devamlılığının sağlanmasıdır. Bu suç tipinin kredi kartı vasıtasıyla işlenmesinin boyutları, Türkiye'de son zamanlarda tehlikeli boyutlara ulaşmaya başlamıştır. Fiilin pos cihazına sahip herkes tarafından kolaylıkla işlenebilir olması, kredi kartı çekildikten sonra paranın tahsili bakımından risksiz oluşu gibi nedenlerle, bu tür fiilleri işleyenlerin sayısı giderek daha çok artmaktadır. Büfe, kuyumcu gibi birçok işyerinin bu fiillerin gerçekleştirildiği mekanlar haline geldiği görülmektedir. Hukuka aykırı bir eylem olması nedeniyle devlet denetimi dışında yapılan bu tür işlemler neticesinde, gerek borç para alan şahısların borç batağına düşmeleri gibi bir takım zararlı sonuçlar ortaya çıkabilmekte gerekse de devletin ciddi bir vergi kaybı söz konusu olmaktadır. Yapılacak denetimlerin arttırılması ve kredi kartı faizlerinin daha makul seviyelere çekilmesi ise bu suçla mücadele adına öncelikle alınması gereken önlemlerdir.

Türkiye'de Giderek Artan Hukuka Aykırı Bir Ekonomik Faaliyet Olarak Kredi Kartı Kullanılması Suretiyle Tefecilik

Usury by Using Credit Card as an Increasing Unlawful Economic Activity in Turkey

Assoc. Prof. Dr. Hakan Karakehya (Anadolu University, Turkey)

Abstract

Usury is regulated in article 241 of the Turkish Penal Code as a crime in the field of the economy, industry and trade. The state aims with the regulation to protect continuation of the economic order in the country. Usury by using credit card is one of the most common committing methods of the usury crime in Turkey. Due to this crime, there are many people in the economic difficulties and too much tax losing for the state, recent years in Turkey. Nevertheless usury by the credit card is getting increase with each passing day, because of the easiness, profitability, being risk-free of the action. Increasing controls and reduction to more reasonable levels of the prescribed interest for the credit card debts will be effective in the fight against the crime.

1 Giriş

İnsanların borç alabilecekleri kişi veya kurumlara duydukları ihtiyaç çok eski tarihler de bile varlığını hissettirmiştir. Öyle ki, Eski Mısır'da, Sümerlerde ve Babil İmparatorluğunda borç alıp verme işlemleriyle uğraşan kişiler ticari hayatın ayrılmaz parçası haline gelmişlerdi. İnsanların dokunulmazlıkları olan mabetlerde kendilerini daha güvende hissetmeleri ve din adamlarının da toplumda itimat edilir kimseler olarak görülmelerine bağlı olarak, bu tür borç işlemleriyle ilk olarak din adamları uğraşmıştır. Hatta tapınaklarda yapılacak bazı vadesi gelen borcun tahsil usulleri, alınacak faiz oranları, gibi hususlar Hammurabi kanunlarında ayrıntılı olarak düzenlenmişlerdir (Tarlan, 1987).

Dolayısıyla borç alınacak kişi ve kurumlara duyulan ihtiyacın ticari hayatın başladığı zamanlardan beri varlığını hissettirdiğini söylemek yanlış olmayacaktır. Bu nedenle günümüzde de ticari hayatın temel bir gereksinimi olan bu tür faaliyetlere izin verilsin veya verilmesin, ekonomik hayatın içinde borç verme ve alma faaliyetinin önüne geçmek pek mümkün görünmemektedir. Ancak günümüzde ekonomik faaliyetlerin alanı o kadar çeşitlenmiş ve bu tür faaliyetler toplumsal düzeni o kadar etkiler hale gelmiştir ki; birçok devlet ortaya çıkabilecek kontrolsüz toplumsal hareketlenmelerin önüne geçme gerekçesiyle borç alınıp-verilmesi faaliyetlerini denetim altında tutma eğilimindedir (Özgenç, 2010). Hatta sadece borç alınıp verilmesi değil; toplum içerisinde parasal hareketliliği etkileyen ve ekonomi alanında önemli yansımaları bulunan diğer birçok ekonomik faaliyet de devlet tarafından kontrol altına alınmaya çalışılmakta, devlet denetimi dışında hareket eden kişiler de değişik cezai yaptırımlara muhatap kılınmaktadırlar. Türk hukuk sistemi bakımından Bankalar Kanunu m.151'de düzenlenen izinsiz bankacılık faaliyetinde bulunma ve Türk Ceza Kanunu (TCK) m.241'de düzenlenen tefecilik suçları, bu durumu yansıtan en önemli düzenlemelerdir. Bu düzenlemelerle devlet mevduat toplama, borç verme gibi bir takım eylemlerin, sadece kendi izin verdiği ve dolayısıyla denetleyebildiği kişi ve kuruluşlar eliyle yapılmasına imkan sağlamaktadır. Gerekli koşulları gerçekleştirmeksizin bu tür işlemlerde bulunanlar ise söz konusu suç tiplerinde öngörülen cezai müeyyidelere muhatap olma durumuyla karşı karşıya kalmaktadır.

Biz bu çalışmamızda kazanç elde etmek amacıyla başkasına borç para vermek şeklinde gerçekleştirilen tefecilik suçunun yeni bir işleniş şekli olan kredi kartı tefeciliğini inceleme konusu yapacağız. Bu bağlamda tefecilik suçunun unsurları ve kredi kartı tefeciliğinde bu unsurların ne şekilde meydana geldiği, suçun cezası, suçun kredi kartı kullanılmak suretiyle işlenmesinin boyutları ve son dönemde kredi kartı tefeciliğinde görülen artışın nedenleri çalışmada ele alınacak başlıca konular olacaktır. Çalışma sırasında Yargıtay içtihatlarından faydalanmak suretiyle uygulamadaki durumu tespit etmek ve normatif düzenleme ışığında kendi görüşlerimizi neden-sonuç ilişkisi içerisinde açıklamak ise temel çalışma yöntemimizi oluşturacaktır.

2 Tefecilik Suçuna İlişkin Genel Bilgiler, Suçunun Hukuki Konusu ve Sosyal Bir Vakıa Olarak Kredi Kartı Tefeciliği

Tefecilik suçu yürürlükte bulunan 5237 sayılı Türk Ceza Kanununun 241. maddesinde düzenleme altına alınmıştır. Söz konusu hükme göre; *"Kazanç elde etmek amacıyla başkasına ödünç para veren kişi, iki yıldan beş yıla kadar hapis ve beş bin güne kadar adlî para cezası ile cezalandırılır."* Madde gerekçesinde ise suç tipinin ihdasına ilişkin şu açıklamalar yapılmıştır: *"Madde metninde tefecilik fiili suç olarak tanımlanmıştır. Faiz veya başka bir namla da olsa kazanç elde etmek amacıyla başkasına ödünç para verilmesi, tefecilik suçunu oluşturur. Tefecilik suçu, iktisadi hayatımızda, "senet kırdırma" denen usulle de işlenebilir. Örneğin henüz vadesi gelmemiş bir bononun vadesinden önce başkasına verilerek karşılığında bono üzerinde yazılı meblağdan*

daha az bir paranın alınması durumunda tefecilik suçu oluşur. Çünkü bu durumda bononun el değiştirmesi, kişiler arasında doğmuş olan bir alacak borç ilişkisine dayanmamaktadır. İfade yerinde ise, bu durumlarda, birer ödeme aracı olan bononun veya çekin kendisi satılmakta ve satın alınmaktadır. İzlenen suç politikası gereğince, kazanç elde etmek amacıyla başkasına ödünç para veren kişi cezalandırılmaktadır. Buna karşılık, ödünç para alan kişi cezalandırılmamaktadır."

Suçun hukuki konusu; suçla ihlal edilen hukuki varlık veya menfaattir. Suçun ihlal ediciliği kaynağını hukuki konudan alır. Her suçta nasıl bir fail varsa, bir de hukuki konu vardır (Toroslu, 2005).Yukarıda da açıkladığımız üzere devletler ortaya çıkabilecek olumsuz toplumsal sonuçlarını engellemek amacıyla ödünç para verme işlemlerini kontrol altında tutma eğilimindedirler. Nitekim kamusal bir kontrol mekanizması olmaksızın faiz karşılığı para alınıp verilmesi, sonuçta birçok kişinin ekonomik olarak zora düşmesi sonucunu ortaya çıkartabilecektir (Parlar, 2011). Toplumda bu şekilde zora düşen kişilerin sayısının artmasıyla birlikte ise gerek ekonomik gerekse toplumsal dalgalanmalar ortaya çıkabilecektir. Bu bağlamda devlet kazanç sağlamak amacıyla bu tür faaliyetlerde bulunacak kişi veya kuruluşları kontrol eder ve bunların ödünç para verme işlemlerinde uygulayacakları faiz oranı için sınırlar belirler. Bu bağlamda tefecilik suçunun hukuki konusunu ekonomi alanındaki kamusal düzen oluşturur (Özgenç, 2010). Nitekim suç tipini düzenleyen 241. madde, TCK'nın ikinci kitabının, üçüncü kısmının, dokuzuncu bölümündedir. Bu bölümün başlığı ise *Ekonomi, Sanayi ve Ticarete İlişkin Suçlar*dır.

Kredi kartı tefeciliği ise son dönemde tefecilik suçunun en yaygın işlenme yöntemlerinden birisini oluşturmaktadır. Son dönemde tefecilik suçunun bu yöntemle işlenmesinin boyutlarını göstermesi bakımından şu alıntıyı paylaşmayı uygun buluyoruz: *"Türkiye ekonomisine, yolsuzluk suçları kadar büyük oranda zarar veren tefecilik suçu boyut değiştirdi. Kredi kartı ile pos tefeciliği yaygınlaşmaya başladı. Pos tefeciliği yapan kişilerin, ticari faaliyet adı altında kamufle olabilmeleri ve illegal faaliyetlerini legal gösterebilmelerindeki kolaylık, bu suçun artışında etkili oluyor. Son iki yıl içerisinde tefecilere yönelik toplam bin 165 operasyonda 3 bin 37 şüpheli şahıs yakalandı. Emniyet Genel Müdürlüğü Kaçakçılık ve Organize Suçlarla Mücadele (KOM) Daire Başkanlığı'nın 2010 yılı raporunda, tefeciliğe ilişkin dikkat çekici bilgiler yer alıyor. Son dönemlerde bankalara borcunu ödeyemeyerek kara listeye girmiş olan insanlar, tefecilere giderek yüksek faizlerle borç para aldıkları, ancak sonucunda sahip oldukları tüm mal varlıklarını kaybettikleri ve tefecilik mağduru çok sayıda şahsın ise intihar girişiminde bulundukları ortaya çıktı. Her geçen gün tefecilik yaparak kolay yoldan para kazanacağını düşünen kişiler ile tefecilerin ağına düşen vatandaşların sayısının artması, vergisiz olarak kolay para kazanma hırsını artırdı. Bu durum ise işlerini kanunlara uygun olarak yapan kişileri olumsuz etkiliyor* (Sabah Gazetesi (27.04.2012)."

Gerçekten de daha önceden tefecilik suçu işlenirken ödünç para verilen kişiden bir senet vs. alınır ve bu şekilde tefeci kimse ileride alacağı parayı teminat altına almaya çalışırdı. Senedin tahsil edilememesi durumunda ise bazen çek-senet mafyası denilen örgütsel yapılar olaya müdahil olur ve cebir-tehdit kullanmak suretiyle parayı tahsil ederlerdi. Oysa günümüzde uygulanan kredi kartı tefeciliğinde, tefeci bakımından parayı tahsil edememe gibi bir risk bulunmamaktadır.

3 Kredi Kartı Tefeciliği Bağlamında Tefecilik Suçunun Unsurları

3.1 Genel Olarak

Bir fiilin suç teşkil edebilmesi için tipiklik, hukuka aykırılık ve kusurluluk unsurlarının gerçekleşmiş olması gerekir. Bu bağlamda aşağıda "kredi kartı tefeciliği"nin işleniş biçimi de göz önünde bulundurulmak suretiyle, tefecilik suçunun unsurları inceleme konusu yapılacaktır.

3.2 Tipiklik

Tipiklik, failin gerçekleştirdiği fiilin kanunda yer alan suç tanımı ile örtüşmesini ifade etmektedir. Bu bağlamda gerçekleştirilen fiil suç tanımına uymuyorsa; ortada ihlal edilmiş bir norm ve dolayısıyla suç da olmayacaktır. Tipiklik; *"maddi ve manevi tipiklik"*, *"tipik maddi unsur ve tipik manevi unsur"* ya da *"maddi unsurlar ve manevi unsur"* terimleri kullanılmak suretiyle ikiye ayrılabilir. Biz maddi ve manevi unsurların tipiklik içerisinde yer aldığını vurgulaması bakımından "tipik maddi unsur ve tipik manevi unsur" *(der objektive Tatbestand- der subjektive Tatbestand)* şeklindeki kullanıma bağlı kalmayı uygun buluyoruz (Aynı yönde bkz. Stratenwerth, 2000). Suçun tipik maddi unsurunun içerisine suç tanımının içerdiği *suçun maddi konusu*, *fail*, *mağdur* ve *fiil* girmektedir. Suçun tipik manevi unsuru ise fiil ile fail arasındaki psişik bağı ifade etmektedir.

Tipik Maddi Unsur:

Suçun Maddi Konusu: Maddi konu suçun üzerinde gerçekleştirildiği eşya veya kişi olarak ifade edilebilir. Ancak bu, failin fiziki faaliyetinin somut olarak üzerinde gerçekleştiği her kişi ya da eşya değil; sadece suçu düzenleyen normdaki tanımda söz konusu olan kişi veya eşyadır (Toroslu, 2005). Tefecilik suçunun maddi konusunu, kazanç amacıyla ödünç verilen para oluşturur. Kanunda bu husus açıkça belirtildiğinden, kanunilik ilkesi gereği başkaca şeylerin verilmesi bu suça vücut vermez. Bu bağlamda örneğin altın veya gümüşün kazanç elde etmek maksadıyla başkasına ödünç verilmesi tefecilik olmaz (Parlar, 2011). Buna karşın paranın Türk lirası

veya başka bir para birimi olmasının önemi bulunmamaktadır. Dolar veya euro gibi yabancı paraların faiz karşılığında verilmesi de tefecilik suçunu oluşturacaktır.

Kredi kartı tefeciliğinde ise bu maddi konu, kart çekildikten sonra mağdura verilen para olarak karşımıza çıkmaktadır.

Fail: Fail, kanunda tanımlanan suç tipini ihlal eden davranışı gerçekleştiren kişidir. Fail, fiilin aktif süjesi olarak ifade edilebilir (Toroslu, 2005). Bu suçun faili herkes olabilir. Bu bağlamda failin kamu görevlisi, kadın veya erkek olmak gibi herhangi bir özel vasıf taşımasına gerek yoktur (Parlar, 2005). Tefeciliğin kredi kartı vasıtasıyla işlenmesinde de özellik arzeden bir durum bulunmamaktadır.

Mağdur: Mağdur suçla korunan hukuki menfaat veya varlığın sahibidir. Mağdur suçun pasif süjesi olarak da ifade edilebilir (Toroslu, 2005). Tefecilik suçunun mağduru ise hem bu tür fiillerin yaygınlaşmasına bağlı olarak ekonomik düzenin devamlılığı tehlikeye düşecek olan toplum hem de kazanç elde etmek amacıyla kendisine para verilen kimsedir (Meran, 2012). Kredi kartı tefeciliğinde ise mağdur, kredi kartıyla belirli bir para meblağı çekildikten sonra, kendisine karttan çekilen bu meblağın daha azı verilen kişi olarak karşımıza çıkmaktadır.

Fiil: Kanuni tanıma göre tefecilik suçunu oluşturan fiil, başkasına kazanç amacıyla ödünç para vermektir. Bu tanıma ilk bakışta fiil bakımından ödünç para verme ve kazanç sağlama amacı olmak üzere iki belirleyici özelliğin olduğu göze çarpmaktadır. Ödünç verilecek şeyin para olmasının, bu suçun oluşması bakımından zorunlu olduğunu, yukarıda maddi konuya ilişkin açıklamalarımızda belirtmiştik. Bunun dışında kazancın da mutlaka maddi bir kazanç olması gerekir (Özgenç, 2010). Yardım etme duygusunun tatmini, sevap kazanmak, iyilik zinciri oluşturmak gibi manevi kazançlar bu suçun oluşmasına vücut vermez.

Bununla birlikte kazanç için verilenin para olması zorunluyken, maddi kazancın muhakkak para olması gerekli değildir. Ödünç parayı, ödünç verilen miktardan daha fazla değere sahip bir mülkün kendisine vermesi karşılığında veren kişi de bu suçu işlemiş olacaktır (Parlar, 2010). Tefeciliğin kredi kartı vasıtasıyla işlenmesinde halinde ise hem ödünç verilen meblağ hem de kredi kartı borcu olarak bankaya ödenen meblağ, para olarak karşımıza çıkmaktadır.

Tefecilik suçu ödünç paranın borç alana verilmesiyle tamamlanmış olmaktadır. Suçun tamamlanması için ödünç paranın karşılığının elde edilmiş olması şart değildir. Bunun elde edilip edilmemesinin suçun gerçekleşmesi bakımından bir etkisi yoktur (Uğur, 2007). Kredi kartı tefeciliğinde de aynı şekilde tefecilik suçunun tamamlanması paranın borç para alan kişiye verilmesiyle gerçekleşir. Bu konuda sadece anlaşmaya varılmış olması, suçun oluşumuna etki etmez.

Ancak 5237 s. TCK'daki açık düzenlemeye rağmen, tefecilik suçunun oluşumuna ilişkin Yargıtay uygulaması, uzunca bir süre kanuni düzenlemeden farklı gelişti. Nitekim 5237 sayılı TCK'nın 2005 yılında yürürlüğe girmesinden önce, Yargıtay uygulamasında tefecilik suçunun oluşması bakımından, birden fazla kişiye kazanç elde etmek için borç para verilmesi, bu faaliyetin sürekli ve sistemli olarak gerçekleştirilmesi gibi koşullar aranıyordu. Yargıtay tefecilik suçunun oluşması bakımından bu koşulları aramaya, 5237 s. TCK döneminde de devam etti (Örnek olarak bkz. Yargıtay 7. CD. 07.10.2009, 5900/10180). Ancak daha sonra yerinde olarak uygulamasını değiştirerek, kanunda tanımlanan fiilin bir kere gerçekleştirilmesi halinde de tefecilik suçunun oluşacağını kabul etmiştir (Örnek olarak bkz. Yargıtay 4. CD 14.03.2012, E.2011/20476, K.2012/5992)

Kredi kartı tefeciliği genelde şu şekillerde işlenmektedir: "Kredi kartı borcu ya da nakit paraya ihtiyacı olan kişi, pos tefeciye gidiyor. Pos tefeci ile örneğin 8 bin liralık borcu veya nakit para ihtiyacı için pazarlık yapıyor. 12 taksitte ödenmek üzere 10 bin liraya anlaşıyor. Pos tefeci 8 bin lirayı bankaya ödeyip, kredi kartı borcunu kapatıyor veya 8 bin lira nakit parayı o kişiye ödüyor. Aynı kredi kartından 10 bin liralık çekimi 12 ay taksitlendiriyor. Karşılığında 'mal satılmış gibi' belge veriliyor. Vatandaş da 10 bin lira borcunu taksitler halinde ödüyor. Olay kredi kartı faizinden daha düşük olduğu için vatandaşa cazip geliyor. Uzaktan baktığınızda olay mal satışı olarak gözüküyor. Aslında yapılan iş yüzde 25 komisyonla tefecilik oluyor… (Kızılot, 2012)"

Pos makinesinden komisyon olarak ifade edilen faiz ile birlikte toplam miktarı çeken tefeci, artık alacağı parayı da tahsil etmiş olmaktadır. Nitekim bu şekilde para alan kimse tefeciye değil; kredi kartını aldığı bankaya borçlu hale gelmektedir. Bu nedenle tefeciden para alan mağdur, ileride kredi kartı taksitlerini ödeyemezse, hukuki ihtilaf tefeci ile mağdur arasında değil; bilakis mağdur ile banka arasında ortaya çıkacaktır.

Tipik Manevi Unsur

Tefecilik suçu kasten işlenebilen bir suçtur. Ancak burada genel kast da yeterli değildir. Suç tipinde tefeciliğin oluşabilmesi için failin para kazanma amacıyla hareket etmesi aranmıştır. Dolayısıyla bu suçun manevi unsuru kazanç elde etme amacından oluşan özel kasttır (Meran, 2012). Fail bu özel kasta sahip olmaksızın söz konusu suçtan cezai sorumluluğu oluşmaz.

3.3 Hukuka Aykırılık

Ceza normu ile yasaklanmış tipik davranışların gerçekleştirilmesi hukuka aykırılığın karinesini oluşturur. Ancak bazı hallerde hukuk düzeni, tipiklikte formüle edilmiş olan yasağı hukuka uygunluk nedenleri denilen müsaade edici durumların mevcudiyeti halinde kaldırır. Böylece herhangi bir fiilin hukuka aykırı olduğu konusundaki kesin hüküm, ancak herhangi bir hukuka uygunluk nedeninin somut olayda bulunmaması halinde

verilebilir (Hakeri, 2007). İlgili kanunlarda öngörülen izinlerin alınması suretiyle, kazanç amaçlı ödünç para verilmesi hukuka uygun olacağından, hukuka aykırılık unsurunun eksikliğinden dolayı tefecilik suçu oluşmaz. Örneğin bankalar gibi özel kanunla kendilerine verilmiş izne dayalı olarak, kazanç elde etme amacıyla ödünç para veren kurumların eylemleri tefecilik suçunu oluşturmayacaktır. Bu bağlamda bu suç bakımından en sık rastlanan hukuka uygunluk sebebi kanun hükmünü icradır.

3.4 Kusurluluk

Kusurluluk failin fiilinin kınanabilirliğine ilişkin atfedilen değer yargısını ifade etmektedir (Koca-Üzülmez, 2008). Tefecilik suçunda kusurluluk bakımından özellik arzeden bir durum bulunmamaktadır. Dolayısıyla örneğin cebir-tehdit altında bu tür fiilleri işleyen kimseler bakımından kusurun bulunmaması nedeniyle cezai sorumluluk oluşmayacaktır.

4   Suçun Özel Beliriş Biçimleri

4.1 Teşebbüs

Teşebbüs kişinin işlemeyi kastettiği bir suçu elverişli hareketlerle doğrudan doğruya icraya başlayıp da elinde olmayan nedenlerle tamamlayamamasıdır (Hakeri, 2007). Tefecilik suçuna teşebbüs kanaatimizce mümkündür. Konuyu kredi kartı tefeciliği bağlamında ele alırsak, örneğin kazanç amacıyla verdiği parayı kişiye teslim ederken yakalanan kimse tefeciliğe teşebbüsten sorumlu olacaktır. Nitekim suçu işlemeye yönelik olarak doğrudan icra hareketlerine başlamış; ancak fiilini elinde olmayan nedenlerle tamamlayamamıştır.

4.2 İştirak

Suça iştirak, tek bir kişi tarafından işlenebilen bir suçun, birden fazla kişinin bir araya gelmesiyle işlenmesi halinde söz konusu olur (Toroslu, 2005). Tefecilik suçu, tek bir kişi tarafından işlenebilen bir suç olması nedeniyle iştirake müsaittir (Meran 2012). Örneğin ortak çalışan iki kişiden birisi müşteri bulup diğeri pos cihazını kullanmak suretiyle kişileri borçlandırıyorsa müşterek fail olarak cezai sorumluluğa sahip olacaklardır. Benzer şekilde pos cihazına sahip bir işletmeci hiç aklında yokken, arkadaşının bu tür faaliyetlerde bulunması konusundaki telkinleriyle tefecilik yaparsa, arkadaşı azmettiren olarak kendisi ise fail olarak suçtan sorumlu olacaklardır. Kredi kartı tefeciliğini yapanların yanında genelde müşteriyle bankaya gidip kart borcunu sıfırlayan yardımcıları da vardır. Bu kişiler de tefecilik fiiline yardım eden olarak cezai sorumluluğa sahiptirler.

4.3 İçtima

Kanunda tanımlanan suça ilişkin fiillerin bir defa gerçekleştirilmesi tefecilik suçunun meydana gelmesi bakımından yeterlidir. Dolayısıyla işlenen her bir fiil, fail bakımından kural olarak kanunda belirlenen cezanın ayrı ayrı uygulanmasını gerektirir. Kredi kartı tefeciliği üzerinden örneklerimize devam edersek, on farklı kişiye, kredi kartı vasıtasıyla kazanç elde etmek için para veren kimse, on kez tefecilik suçunu işlemiş olacaktır ve fiiller nedeniyle ayrı ayrı cezalandırılacaktır. Bununla birlikte fiilin zincirleme suç şeklinde de işlenmesi mümkündür. Örneğin bir kişiye kredi kartı vasıtasıyla kazanç elde etmek için para vermeye karar veren fail, bu tek suç işleme kararı kapsamında farklı zamanlarda bu kişiye karşı kredi kartı vasıtasıyla tefecilik suçunu işlese, zincirleme suç hükümlerinin uygulanması gerekecektir (TCK m.43). Bu bağlamda tek suç işleme kararı kapsamında işlenen fiiller için faile tek bir suçun cezası verilecek, daha sonra ceza, kanunda belirtilen oranlar dahilinde arttırılarak belirlenecektir.

Bankalar Kanununun 151. maddesinde düzenlenen, izinsiz bankacılık faaliyetinde bulunma suçu kapsamındaki hareketlerden birisi olarak tefecilik sayılabilecek fiillerin işlenmesi söz konusu olabilir. Nitekim izinsiz bankacılık faaliyetinde bulunan gerçek veya tüzel kişilerde kazanç amacıyla ödünç para verme işlemleri gerçekleştirilebilirler. Bu durumda tefecilik eylemleri izinsiz bankacılık faaliyetini oluşturan eylemlerden birisi olduğu için failin sadece izinsiz bankacılık faaliyetinde bulunma suçundan cezalandırılması gerekir (Karakehya, 2008).

5   Cezai Müeyyide ve Takibat

Fiil karşılığında iki yıldan beş yıla kadar hapis ve beş bin güne kadar adli para cezası şeklinde cezai yaptırım öngörülmüştür. Dolayısıyla faile hem adli para cezası hem de hapis cezası uygulanacaktır. Adli para cezası bakımından alt sınır gösterilmediği için TCK'nın 52. maddesi gereğince beş gün adli para cezası şeklinde belirlenen alt sınır geçerlidir (Meran 2012).

Mahkeme hapis cezası ve adli para cezasını belirlerken öncelikle bu sınırlar arasında TCK'nın 61. maddesindeki ilkeleri göz önünde bulundurarak temel cezayı belirleyecek ve yine aynı maddede belirlenen düzenlemeler ışığında arttırma ve indirimlerle sonuç cezaya ulaşacaktır. Sonuç olarak belirlenen gün adli para cezası bakımından ise kişinin ekonomik durumu göz önünde bulundurularak her bir gün için yirmi ile yüz lira arasında bir miktar takdir edilecek, daha sonra bu miktar gün sayısı ile çarpılarak somut para cezasına ulaşılacaktır.

Bununla birlikte suçta kullanılan anapara ve suç kaynaklı olarak ortaya çıkan faiz miktarı da TCK'nın 54. maddesi gereğince müsadere edilecektir (Özgenç 2010).

Suç re'sen takip edilen bir suç olduğu için mağdurun şikayetçi olmasına veya herhangi bir merciin iznine gerek olmaksızın takibat yapılacaktır. Dolayısıyla böyle bir suçun işlendiği şüphesi ile karşılaşan soruşturma organları re'sen harekete geçecek (CMK m.160/1), yeterli delile ulaşılması durumunda yargılamaya başlanacak (CMK m.170/2) ve sonuçta mahkeme fiile ilişkin vicdani kanaate ulaşırsa mahkumiyet hükmünü kuracaktır (CMK m.223/5).

6   Kredi Kartı Tefeciliğinde Son Dönemde Görülen Artışın Nedenleri

Pos tefecilik fiilinde görülen artışın en önemli nedenlerinden birisi bu tür faaliyetlerin oldukça kazançlı olmasıdır. Ciddi anlamda bu işten günde binlerce liralık kazanç sağlayan işletmeler olduğu görülmektedir. Hukuka aykırı bile olsa bu kadar kazançlı bir işin taliplisi de oldukça fazla olmaktadır.

Ayrıca kredi kartı vasıtasıyla tefecilik yapan kişi, faizle para verdiği kişinin kredi kartını, taksitli satış şeklinde pos cihazından geçirdiği anda alacağını tahsil etmiş olduğundan, çek-senet mafyası tarzı yapılanmalara da bu tür tefecilik faaliyetlerinde artık iş düşmemektedir. Bu bağlamda daha önceden bu tür alacakların tahsili bazen cebir ve tehdit kullanımı gerektiren işler olarak görüldüğünden, tefecilik yapanlar daha çok ya çek-senet mafyası tarzı yapılanma içerisinde olan kişiler veya bu tür yapılarla yakın ilişkisi bulunanlar arasından çıkıyordu. Ancak "pos tefecilikte" artık alacağın tahsili sorunu ortadan kalktığı için, bu faaliyet, maddi kayıp açısından risksiz bir iş olarak görülmektedir. Kazancın bu kadar fazla, kayıp riskinin de son derece az olduğu bu işi yapma taliplileri de ister istemez çoğalmakta; bu da söz konusu yöntemle işlenen tefecilik suçlarında ciddi bir artışa neden olmaktadır.

Bununla birlikte bu yolla tefecilik işlemenin son derece kolay oluşu da kişileri tefecilik yapmak konusunda cezbetmektedir. Nitekim fiil, pos cihazı kullanma imkanına sahip herkes tarafından, kartı makineden geçirmek suretiyle rahatlıkla işlenebilecek bir fiildir. Bu basitlik de bu fiile girişenlerin artmasındaki bir diğer önemli nedendir.

Tefecilerin aldığı faizin genelde kredi kartı faizinden daha düşük oranlara tekabül etmesi de, tefecilerden kredi kartı vasıtasıyla para talebinde bulunan kredi kartı borçlularının sayısını arttırmıştır. Bu talebe bağlı olarak oluşan arz da tefeciliğin kredi kartı vasıtasıyla işlenmesinde artışa neden olmaktadır.

7   Sonuç

Tefecilik TCK'nın 241. maddesinde ekonomi, sanayi ve ticarete karşı suçlar arasında düzenlenmiştir. kanunkoyucunun bu suçun ihdası ile korumaya çalıştığı hukuki menfaat ekonomik düzenin korunması ve devamlılığının sağlanmasıdır. Bu suç tipinin kredi kartı vasıtasıyla işlenmesinin boyutları, Türkiye'de son zamanlarda tehlikeli boyutlara ulaşmaya başlamıştır. Fiilin pos cihazına sahip herkes tarafından kolaylıkla işlenebilir olması, kredi kartı çekildikten sonra paranın tahsili bakımından risksiz oluşu gibi nedenlerle, bu tür fiilleri işleyenlerin sayısı giderek daha çok artmaktadır. Büfe, kuyumcu gibi birçok işyerinin bu fiillerin gerçekleştirildiği mekanlar haline geldiği görülmektedir. Hukuka aykırı bir eylem olması nedeniyle devlet denetimi dışında yapılan bu tür işlemler neticesinde, gerek borç para alan şahısların borç batağına düşmeleri gibi bir takım zararlı sonuçlar ortaya çıkabilmekte gerekse de devletin ciddi bir vergi kaybı söz konusu olmaktadır. Yapılacak denetimlerin arttırılması ve kredi kartı faizlerinin daha makul seviyelere çekilmesi ise bu suçla mücadele adına öncelikle alınması gereken önlemlerdir.

Grev İşçinin Temel Hakkıdır, Engellenemez

Strike is a Fundamental Right for Workers

Prof. Dr. Faruk Andaç (Çağ University, Turkey)

Abstract

Strike is a temporary action for a mass refusal of employees to work in order to ensure that their demands are met. It is called "Strike" in English (which means to break, to burn, to attack) because the first strike events occurred in England as which involved breaking the machines using brake blocks. Workers used to show their reactions towards their employer as by breaking the machines. The same phenomenon existed also in France. Workers in France used to leave their working places all together and go to the Greve area next to River Seine and seek solution to their problems in the cafes. This is how the concept of going on strike, Aller à la Grève (in French), was adopted by Turkish. Strike is a right for workers. It is to leave a workplace unanimously. It is not considered a reason for annulment of employment contract. It is legal and aims to ameliorate the working conditions. Workers should possess the same conditions as their employer in order to determine working conditions by their own free will. Although the employer seems to possess a stronger position as he/she owns the workplace, the workers may possess the same rights as their employers by becoming members of a trade union. When the workers and the employer are unable to reach an agreement on the working conditions, all the workers leave their workplace and go on strike. They partially or completely hamper the activities of the employer. During the strike the workers do not receive their salaries.

1 Giriş

Grev, sendikacılık hareketlerinin başladığı 19. yüzyılın ilk günlerinden bu yana sürekli uygulanan işçilerin barışçıl bir hak arama yoludur. Bugün dünya devletlerinin büyük bir kısmında yasal bir hak haline getirilmiştir. Çalışanların temel hakkıdır. Grev, bir baskı unsuru olarak işçiler için çok önemli bir mücadele aracıdır. Grev, aynı zamanda siyasi bir baskı unsuru olarak toplum için de önemlidir (Güzel,1980:40). Grev genellikle yaşam düzeyini geliştirmek için işçilerin, gerek işverenler ve gerekse ülke yöneticileri üzerinde baskı kurmak amacıyla toplu halde işbirliği yaparak dayanışmayı sağlamalarına imkan vermektedir.

2 Grev Kavramı

Kavram olarak grev, İngilizce "Strike" dir. İngilizcede Strike, aynı zamanda vurmak, çarpmak, saldırmak, hücum etmek, yakmak, çakmak, bulmak, çalmak, etkilemek, etki bırakmak, basmak gibi anlamlarda da kullanılmaktadır. Bunun bu tür anlamlara gelmesinin başlıca nedeni, sanayi devriminin başlamasıyla İngiltere'de XIX. Yüzyılın başlarında emeğin yerini sermayenin (makinenin) almasıyla büyük bir işsizlik ve sefalet başlamış, kapitalist ekonomik sistemin gereği ekonomiye devlet müdahalesi olmamış ve emeği ile çok zor şartlarda çalışmak zorunda kalanlar öfkelerini makinelerden alarak makine kırıcılığı yapmışlardır. Hatta bu kırıcılık hareketlerini sabo ayakkabıları (bir çeşit tahtadan ayakkabı) ile yaptıklarından bu tür hareketlere halen sabotaj denilmektedir. Bu işlemler aslında makinelere karşı değil, kendilerine insanca davranmayan işverenlerine ve ekonomik sisteme isyan etmek idi(Güzel,1980:9-10). Zaten zamanla zorunlu olarak çalışma şartlarında önlemler alınmaya başladıkça bu tür eylemler azalmıştır. Özellikle İngiltere'de 1799 yılında çıkarılan her türlü örgütlenmeyi yasaklayan "Birleşme Yasası (Combination Act)", 1824 yılında yürürlükten kaldırıldıktan sonra sendikal faaliyetler artmaya başlayınca yasal olmayan grevlerde beraberinde artmaya başlamıştır. Fakat bu grevler uzun zaman baskı altında tutulmuştur. Bu nedenle bu grevlere vurmak, kırmak, etkilemek anlamlarına gelen "Strike" denilmektedir. İngiltere'de 1944 yılına kadar grevin yasal bir dayanağı olmamıştır. Ancak uygulanmasını engelleyen bir yasal düzenleme de bulunmamakta idi. 1944 yılında çıkarılan bir özel yasa ile grev tanımlanmış ancak bu yasa da kısa süre sonra yürürlükten kaldırılmıştır. Bugün için grevler halen yargının takdirine bırakılmaktadır(Reisoğlu, 1975:285).

"Grev" sözcüğü Türkçeye Fransızcadan girmiştir. Grev, Fransa'da Paris'te Seine nehri kıyısında kahvelerinde işsiz işçilerin iş bekledikleri veya işvereniyle anlaşamayıp toplu olarak işyerinden ayrılıp gelip oturdukları bir meydanın adıdır. Fransa'da 1789 yılından itibaren gelişen Liberalizm Devrimi ve İngiltere'de 1750 lerden sonra gelişen Sanayi (Makine) Devrimi, Avrupa'da daha önce ev ve el sanatları ile geçimini sağlayan kimselerin işsiz kalmalarına ve kırsal alanlardan sanayi merkezlerine yığılmalarına neden olmuştur. Sanayi merkezlerinde işsiz ve sefalet içerisinde yaşarken işyerlerinde her türlü şartlarla çalışmayı kabul etmek zorunda kalmışlardır. Bu durum Fransa da da kendini göstermiştir. Fransa'da işçiler, çok ağır şartlar altında çalışırken 1864 yılına kadar grev suç (délit de coalition) sayılmakta idi. 1864 yılında çıkarılan bir yasa ile grev suç olmaktan çıkarıldı ancak ceza olarak iş sözleşmesinin feshi şeklinde nitelendirildi. 1946 yılında Fransız Anayasa'sında yapılan değişiklik ile grev bir hak olarak tanındı ve 1950 tarihli yasa ile de grev nedeniyle iş sözleşmesinin feshedilemeyeceği yasallaştırıldı (J.Rivero-J.Savatier,1970:204)(Sur,1987:3).

Fransa'da 1864 yılından önceleri grev yasağının olduğu dönemlerde işçiler işyerlerinde işverenle iş mücadelesine girdikleri zaman, kumsal boş alan anlamına gelen Grev Meydanına gelerek sorunlarına birlikte çözüm aramaya çalışırlardı. Bu nedenle birlikte iş yerini terk edip Grev Meydanına gitmek, "Greve Gitmek" (Aller à la Grève) kavramı olarak Türkçeye girmiştir.

3 Grev Tanımı

Grev, amacına ve uygulama şekillerine göre veya geniş ve dar anlamlarına göre çeşitli şekillerde tanımlanmaktadır. Genellikle "Grev işçilerin, isteklerinin yerine getirilmesini sağlamak amacıyla toplu bir kararla çalışmayı reddedip, geçici olarak işyerini terk etmeleridir" (Sinay,1966:133) (Esener,1978:587) (Talas,1976:456) şeklinde tanımlanmaktadır.

Bu tanıma göre grev, işçilerin işverenlere isteklerini kabul ettirmek amacıyla yapılmaktadır. İşçiler aralarında kararlaştırarak topluca hareket etmektedirler. İşyerinde çalışmayı birlikte reddetmektedirler. İşyerini topluca iş sözleşmesini feshetmeden işi terk etmektedirler.

İşçiler isteklerini işverene kabul ettirmek için işyerinde topluca üretimi yavaşlatmak veya durdurmak şeklinde işverene karşı tehditte bulunmaktadırlar. Bu tehdidi yaparken kendileri de ücretlerinden fedakarlık etmektedirler. Ücretlerinden vazgeçmektedirler, ücret alamamaktadırlar.

4 Grevin Özellikleri

4.1 Grev, İşçiler İçin Bir Haktır

Grev, her emeği ile çalışanlar için değil, sadece İşçi olarak çalışanların başvurması gereken bir eylemdir(Sur,1987:30ve dv.). Çünkü emeği ile çalışan bazı kimseler, örneğin Kamu Çalışanları, daha önceden belirlenmiş olan çalışma şartlarını peşin olarak kabul ederek çalışmaya başlamışlardır. Bu tür çalışanlar, hem çalışma şartlarını önceden bilmektedirler ve hem de iş güvencesine sahiptirler. İşleri süreklidir. İşçiler gibi her an için işsiz kalma ihtimalleri bulunmamaktadır. Kamu Çalışanının, işyerindeki ferdi uyuşmazlıklarını yargı vasıtası ile çözümlemesi gerekir(Esener, 1978:48). Çünkü Kamu Çalışanlarının çalışma şartları yasayla statik olarak önceden belirlenmiş olup, çalışan bu şartları önceden bilmekte ve kabul etmektedir. Diğer taraftan kamu hizmeti gören çalışanların, kendi çıkarlarını sağlamak uğruna, grev esnasında kamu hizmetlerini aksatmaları, toplumun doğal haklarından olan kamu hizmetlerinden yararlanma hakkını engellemektedirler. Buna hakları yoktur. Toplum, başkasının çıkarları uğruna kendisini huzursuz eden olayları hoş karşılamaz. Bu nedenlerle Kamu Çalışanlarının grev haklarından söz etmek kamu yararı ile bağdaşmamaktadır. Özellikle sağlık, eğitim, doğal afet, güvenlik gibi konularda grev düşünülmemelidir.

İşçi ise, **iş sözleşmesi** ile çalışmaktadır (Esener,1978:47)(Andaç,2008:35). Sözleşmeler, Roma Hukukundan bu yana gelen gelenekle kişilerin özgür iradelerine dayanılarak yapılmaktadır(Çağıl,1971:349). İş sözleşmesi de tarafların özgür iradeleri ile yapılan ve iki tarafa borç yükleyen sözleşmedir. İş sözleşmesi, hem iki tarafa borç yüklemekte ve hem de işçinin her an işsiz kalmasını kolaylaştırmaktadır. Çünkü iş sözleşmesi, diğer sözleşmeler gibi tarafların özgür iradeleri ile kabul edildikleri gibi yine özgür iradeleri ile sona erdirilebilmektedir. Bu nedenle işçi iş güvencesine sahip değildir. İşçi, işini kaybetmemek ve çalışma şartlarını da kendi isteklerine uygun duruma getirebilmek için grev yapmak zorundadır.

4.2 Grev, Toplu Olarak İşyerini Terk Etmektir

İşçi, her zaman ekonomik güce sahip olan işveren karşısında, iş sözleşmesi yaparken özgür iradesi ile isteklerini sözleşmeye yansıtamamaktadır. Çünkü işveren işyerinin mülkiyet hakkına sahiptir. İşveren, mülkiyet hakkına dayanarak işletmesinin üzerinde kullanma, yararlanma ve tam tasarruf etme yetkisine sahiptir. İşveren, işletmesinin devamlılığını sağlamak amacıyla çalışma şartlarını tek taraflı belirleme ve kararları tek başına alma imkanına sahiptir ve zorundadır. Bu nedenlerle işletmelerde işverenler bağımsız olarak kendi kararlarını kendileri verebilmekte ve çalışma şartlarını haklı olarak kendileri belirlemek istemektedirler. Böyle olunca bir işçinin, özgür iradesi ile tek başına işverenle iş sözleşmesi yapması her zaman mümkün değildir. Bu nedenle çalışan diğer işçilerle birleşerek müşterek olarak, işverenin karşısına daha güçlü çıkmak zorunda kalmaktadır. Bunun için İşçinin çalışma şartları, işverenle ikinci bir defa daha sendika aracılığıyla pazarlık edilerek toplu iş sözleşmesi ile belirlenmektedir. Yani işçinin çalışma şartları, bireysel iş sözleşmesinin yanında ayrıca işverenle sendika aracılığı ile pazarlık edilerek ikinci bir daha belirlenmektedir. İşçiler, toplu iş sözleşmesi esnasında isteklerini kabul ettiremezler ise, o zaman işverene baskı yapabilmek için işini aksatmak amacıyla topluca işyerini terk edip greve gitmektedirler.

4.3 Grev, İş Sözleşmesinin Feshine Neden Değildir

Daha önceleri özellikle Fransa'da 1864-1946 yılları arasında iş sözleşmesinin feshedileceği şeklinde düşünülmekte idi(Camerlynck/Lyon-Caen,1975:592). Halbuki grev, işçinin doğal temel hakkı olup işverene karşı çalışma şartlarının düzenlenmesinde etkili olmaya çalışmasıdır. İş sözleşmesini feshetmek amacında değildir. Başka bir art niyeti yoktur. Doğal hakkı olan çalışma şartlarının kendi isteğine uygun olarak da düzenlenmesini istemektedir. Tek taraflı işveren isteğine uygun çalışma şartlarının düzenlenmesi, zaten özgür irade ile sözleşme

yapılmasının mantığına da uygun değildir. Bu nedenle ulusal yasalarla grev esnasında iş sözleşmesinin feshedilemeyeceği güvenceye alınmaktadır.

4.4 Grev, Çalışma Şartlarının Düzenlenmesi Amacını Taşır

Grevin amacı, işverenle çalışma şartlarını belirlerken işçinin de kendi isteklerine uygun şartların sözleşmede yer almasını sağlamaktır. Bunu yaparken işvereni etkileyebilmek için toplu halde hareket etmek gerekir. Bunun dışında bir işçinin tek başına grev yapması ne işvereni etkiler ve ne de işçiye yarar sağlar. Üstelik ücret kesintisine veya iş sözleşmesinin feshine fırsat vermiş olur. Bu nedenle toplu hareket etmek gerekir. Amaç, işvereni işçinin isteklerine razı etmektir.

İşçiler tarafından, bir başka işyerlerinde çalışan işçilere destek verebilmek için yapılan "Dayanışma Grevi", siyasi otoriteyi baskı altına alarak işçi isteklerine uygun yasaların oluşturulmasını ve uygulanmasını istemek amacıyla yapılan "Siyasi Grevler", tüm işçileri ilgilendiren haklı isteklerini kabul ettirmek ve kamu oyunu etkilemek amacıyla yapılan "Genel Grevler", diğer taraftan yapılan "Boykotlar", "Öğrenci Gösterileri", bazı toplum örgütlerinin yaptığı "Gösteriler" hem yasalarla desteklenmemektedir ve hem de grev özelliklerini taşımamaktadırlar.

4.5 Grev, Yasal Dayanağa Sahiptir

Grev nitelikli bir eylemin mutlaka yasal dayanağı olmalıdır. Yasal dayanağı olmayan bir eylem, hem toplum tarafından benimsenmez ve hem de amacına çoğu zaman ulaşamaz. Bu nedenle grev, yasal kurallar kapsamında etkili olur. Grevi etkili kılabilmek için ulusal yasalarla desteklenmelidir.

Grevle ilgili bazı uluslar arası kuruluşların kabul etmiş olduğu sözleşmeler de bulunmaktadır. Örneğin Avrupa Konseyi tarafından 1961 yılında Torino'da imzalanıp, 1965 yılında yürürlüğe giren ve 1996 yılında Strasbourg'da (Gözden Geçirilmiş) Avrupa Sosyal Şartı'nın II. Bölümünün 6/4. Maddesine ile Grev için uluslar arası yasal dayanak getirilmiştir. Şöyle ki, *"Menfaat uyuşmazlığı durumunda çalışanların ve işverenlerin, daha önce yapılan toplu sözleşmelerden doğabilecek yükümlülüklere bağlı olmak koşuluyla **grev hakkı** dahil, toplu eylem hakkını tanır."* şeklindedir. Avrupa Konseyi üye devletlerin birçoğu bu 6/4. Madde hükümlerini onaylamıştır. Türkiye'de 2007 yılında onaylamıştır (RG;T:9.4.2007-S:26488). Ancak yine aynı sözleşmenin IV. Bölümünün G/1. Maddesine göre; *"…demokratik bir toplumda başkalarının hak ve özgürlüklerinin korunması ya da kamu yararının, ulusal güvenliğin, halkın sağlığının ya da ahlakın korunması için ve ancak yasayla sınırlamaya ve kısıtlamaya tabi tutulabilir."* şeklinde greve bir sınırlama getirilmiştir(Sur,1987:1dipnot).

1919'da Versailles Barış Anlaşması uyarınca kurulmuş ve 1946 yılında BM'in (Birleşmiş Milletler) uzmanlık kuruluşu olarak, sosyal adalet ilkeleri, evrensel insan ve çalışma haklarının korunması amacıyla kurulmuş olan ILO (International Labour Organisation), çalışma standartlarını sözleşmeler ve tavsiyeler yoluyla oluşturmaktadır. Ancak, grev konusunda ILO'nun Grev Hakkı ile ilgili Sözleşmesi veya Tavsiye Kararı bulunmamaktadır. Halbuki ILO (Uluslararası Çalışma Teşkilatı) "Grev Hakkının" temel bir sendikal hak olduğunu savunmaktadır. Fakat bu hakkın kullanılması ile ilgili bir yasal belgesi bulunmamaktadır. ILO için bu bir eksikliktir. Grev konusu, ILO'da yapılan hazırlık çalışmalarında bir çok kere gündeme gelmiş, ancak nedense Konferans Gündemine alınamamıştır.

1948 yılında Birleşmiş Milletler Genel Kurulunda kabul edilmiş olan "İnsan Hakları Evrensel Bildirisi"nin 23/4. Maddesinde ise "Herkesin, çıkarlarının korunması için sendikalar kurmaya ve bunlara katılmaya hakkı vardır." denilmekte, fakat grev hakkından söz edilmemektedir. Bu da BM için bir eksikliktir.

Türk Anayasa ve İş Hukukunda grev konusunda 1961 yılından bu yana çeşitli şekillerde düzenlemeler yapılmış olup, günümüzde 1982 Anayasa'sının 54. Maddesinde ve 18.10.2012 tarihli ve 6356 sayılı Sendikalar ve Toplu İş Sözleşmesi Kanunu'nun (RG;T:7.11.2012-S:28460) XI. Bölümünde 58. Maddeden itibaren düzenlemeler bulunmaktadır.

5 Sonuç

İşçiler, işverenle çalışma şartları konusunda özgür iradeleri ile başa baş yaptıkları iş sözleşmelerinde, işveren karşısında pazarlık gücü her zaman zayıf kaldığından sendikalaşarak hep birlikte sendika vasıtasıyla işverenle ikinci bir sözleşme yapmaktadırlar. Ancak bu ikinci defa yapılan sözleşme görüşmeleri esnasında taraflar anlaşamadıkları takdirde işçiler greve giderek, işvereni isteklerine razı edebilmek amacıyla, toplu olarak işyerini terk etmek suretiyle işverenin faaliyetini ya kısmen veya tamamen durdurmaktadırlar. Bu davranış, işçilerin temel hakkıdır. Bunu engellemek, işçinin özgür iradesiyle çalışma şartlarını belirlemelerine engel olmaktır. İşçinin özgür iradesini kısıtlamak, demokratik düşüncenin kabul edemeyeceği bir davranıştır. Bu ancak demokrasi dışı ülkelerde uygulanan bir yöntemdir. Saygılarımla.

Kyoto Protokolü Esneklik Mekanizması: Emisyon Ticareti

Flexible Mechanisms of the Kyoto Protocol: Emissions Trading

Prof. Dr. Müslüme Narin (Gazi University, Turkey)

Özet

The growth of the world economy, rapid population growth and urbanization increased the demand for energy. Nowadays, a large part of the growing demand for energy provided by fossil fuels, carbon dioxide and greenhouse gas emissions resulting from the burning of these fuels leading to climate change and global warming. Reduction of greenhouse gas emissions in 1994 to the United Nations Framework Convention on Climate Change, the Kyoto Protocol entered into force in 2005. The Kyoto Protocol, emission volume of the three market-based flexibility mechanisms have to be considered. One of these mechanisms is emissions trading. This study will focus on emissions trading systems and carbon markets. All over the world in recent years, based on the spot and futures contracts are traded on the carbon. In this direction of the world's carbon stocks and its activities will be discussed. Also in 2008, in the aftermath of the global crisis and European Debt Crisis its effects on carbon markets will be investigated.

1   Giriş

Dünya ekonomisindeki büyüme ve nüfus artışı, enerjiye olan talebi hızla artırmaktadır. Günümüzde artan enerji talebinin yaklaşık %70'i fosil yakıtlardan karşılanmaktadır. Fosil yakıtların yakılması sonucu karbondioksit gazı açığa çıkmakta, bu da ısının uzaya çıkışını yavaşlatarak sera gazının oluşumuna neden olmaktadır. Sera gazı emisyonu, iklim değişikliğine, hava kirliliğine yol açarak, bitki ve hayvan türlerini yok etmektedir. Bu olası sonuçların yarattığı endişe, enerji ile ilgili bilimsel çalışmaları hızlandırmıştır. Bu doğrultuda bir yandan hızla yeni ve yenilenebilir enerji kaynaklarına yönelik çalışmalar yoğunlaşmış, öte yandan fosil yakıtların neden olduğu sera gazlarının yol açtığı iklim değişikliğine çözüm aramak üzere Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi (BMİDÇS) ve Kyoto Protokolü gibi uluslararası girişimlerde bulunulmuştur.

Çalışmanın amacı, fosil yakıtların yol açtığı sera gazı emisyonları ve bu emisyonların azaltılması amacıyla oluşturulan BMİDÇS ve Kyoto Protokolü'nü incelemektir. Bu doğrultuda öncelikle dünyada ve Türkiye'de enerji tüketimi ve sera gazı emisyonları ele alınacak, daha sonra BMİDÇS ve Kyoto Protokolü'ne yer verilecektir. Ardından emisyon ticareti sistemleri ve karbon borsaları, son olarak da karbon piyasalarının büyüklüğü üzerinde durulacaktır.

2   Dünyada Enerji Tüketimi ve Karbondioksit Emisyonları

Dünya ekonomisi, 1980'li yıllardan itibaren ortalama %3 civarında büyüme gösterirken, 2008 küresel krizden sonra büyüme hızı yavaşlamış 2011 yılında büyüme hızı %2,7 düzeyinde gerçekleşmiştir. Ayrıca gelişmiş ülkelerin büyüme hızları yavaşlarken hatta düşerken, gelişmekte olan Çin, Hindistan, Türkiye gibi ülkelerin 2008 küresel krizine rağmen büyüme hızları artmaya devam etmiştir (UNCTAD, 2012: 422, 424, 426).

1990 yılında 5 milyar civarında olan dünya nüfusunun 2011 yılında yaklaşık 7 milyara ulaştığı, şehir nüfusunun payının ise 1990 yılına göre oldukça arttığı görülmektedir. Dünya genelinde 1990 yılında %42,9 olan şehir nüfusunun payı 2011 yılında %51,3'e çıkmıştır. Bu pay, özellikle gelişmekte olan ülkelerde çok daha hızlı artmıştır (UNCTAD, 2012: 454, 462, 463, 465, 468).

	1973	2005	2010
Petrol	50,6	39,5	36,1
Kömür	34,9	40,5	43,1
Doğal Gaz	14,4	19,7	20,4
Diğer	0,1	0,3	0,4
Toplam (%)	100,0	100,0	100,0
Toplam Milyon Ton CO_2	15.637	27.136	30.326

Tablo 1. CO2 Emisyonlarının Enerji Kaynaklarına Göre Payları (%) ***Kaynak****: IEA, 2012a: .44.*

Özellikle yükselen piyasa ekonomilerinin hızlı büyümesi, dünya nüfusunun ve şehirleşme oranlarının artışına bağlı olarak enerji tüketimi de hızlı artmıştır. 1973 yılında 4.672 Mtoe olan enerji tüketimi 2010 yılında yaklaşık iki katına çıkarak 8.677 Mtoe'ye çıkmıştır. Bu verilere göre, 1973-2010 döneminde dünya birincil enerji talebi yıllık ortalama %1,7 civarında artmıştır. Artan birincil enerji talebi içerisinde en büyük payı petrol oluşturmakta,

onu doğal gaz ve kömür izlemektedir (IEA, 2012a:.28). Yine aynı dönemde enerji tüketiminin payı OECD ve Avrupa ülkelerinde düşmüş, ancak diğer bölgelerde artmıştır (IEA, 2012: 30).

Petrol, kömür ve doğal gazdan oluşan fosil yakıtların yakılması sonucu oluşan karbondioksit (CO_2) emisyonları ve bu emisyonların enerji kaynaklarına ve bölgelere göre payları Tablo 1'de verilmiştir. 1973 yılında dünya CO_2 emisyonlarının yarısından fazlası petrolden kaynaklanırken, bu pay 2005 ve 2010 yıllarında azalmıştır. Ancak kömür ve doğal gazın payları artmıştır. Öte yandan CO2 emisyonlarına ağırlıklı olarak OECD ülkelerinin neden olduğu, bu ülkeleri tek başına Çin'in izlediği Tablo 2'de görülmektedir.

	1973	2010
OECD	66,1	41,0
Afrika	1,8	3,1
OECD dışı Amerika	2,6	3,5
Asya (Çin Hariç)	3,0	11,1
Çin	5,9	24,1
OECD Dışı Avrupa ve Avrasya	16,2	8,6
Orta Doğu	0,8	5,1
Tankerler	3,6	3,6

Tablo 2. *CO2 Emisyonlarının Bölgelere Göre Payları (%)* ***Kaynak****: IEA, 2012a: 45.*

Enerji talebi ve enerji kaynakları bileşiminde kısa vadeli değişiklikler, büyük ölçüde ekonomik koşullar, enerji fiyatları ve iklim koşullarına bağlıdır. Ancak uzun vadeli trendler, enerji ve iklim değişikliğine ilişkin hükümet politikalarına ilişkin varsayımlarına göre değişen World Energy Outlook (WEO)nun üç farklı senaryosuna göre oluşturulmaktadır. Bu senaryolar arasında da büyük farklılıklar bulunmaktadır. Bu senaryolar içinde Yeni Politikalar Senaryosu ana senaryo olarak dikkate alınmaktadır. Bu senaryonun hükümetlerin en son politikalarına göre uygulandığı varsayılmaktadır (IEA, 2011: 1). Bununla birlikte enerji trendleri bazı temel senaryolar karşısında devam etmektedir. Bunlar; artan gelir ve nüfus enerji talebini artırmakta, enerji piyasa dinamikleri giderek gelişmekte olan ekonomiler tarafından belirlenmekte, fosil yakıtlar dünya enerji talebinin büyük bölümünü karşılamakta ve dünyanın enerji yoksullarına enerjinin sağlaması zor bir hedef olarak kalmaktadır (Tablo 3).

Bu temel trendlerden birincisi, dünya enerji ihtiyacının artıyor olmasıdır. Yeni politikalar ve programlarla enerji tasarrufu teşvik edilse dahi, küresel ekonomideki gelişme ve nüfus artışı enerji talebini artıracaktır. Dünya birincil enerji talebi Yeni Politikalar Senaryosuna göre (uzun dönemde ortalama dünya sıcaklığının 3,5 derece artacağı öngörüsüne paralel olarak) 2010-2035 döneminde %35 artacağı, yıllık ortalama artışın ise yıllık ortalama %1,2 olacağı öngörülmüştür. Mevcut Politikalar Senaryosuna göre enerji talebi % 46,7, yıllık ortalama ise %1,5 oranında, 450 Senaryosuna göre ise %16, 2, yıllık ortalama %0,6 oranında artacağı öngörülmektedir (IEA, 2012b:.50).

			Yeni Politikalar		Mevcut Politikalar		450 Senaryosu	
Yıllar	2000	2010	2020	2035	2020	2035	2020	2035
Kömür	2.378	3.474	4.082	4.218	4.417	5.523	3.569	2.337
Petrol	3.659	4.113	4.457	4.656	4.542	5.053	4.282	3.682
Doğal Gaz	2.073	2.740	3.266	4.106	3.341	4.380	3.078	3.293
Nükleer	676	719	898	1.138	886	1.019	939	1.556
Hidro	226	295	388	488	377	460	401	539
Biyoenerji	1.027	1.277	1.532	1.881	1.504	1.741	1.568	2.235
Diğer Yenilenebilir	60	112	299	710	265	501	340	1.151
Toplam	10.097	12.730	14.922	17.197	15.332	18.676	14.176	14.793
Fosil yakıtların payı (%)	80	81	79	75	80	80	77	63
OECD dışı pay (%)	45	55	60	65	61	66	60	63
CO2 Emisyon (Gt)	23,7	30,2	34,6	37,0	36,3	44,1	31,4	22,1

Tablo 3. *Farklı Senaryolara Göre Dünya Birincil Enerji Talebi ve Enerjiyle İligili CO2 Emisyonları (Mtoe)*
Kaynak*: IEA, 2012b:.51.*

İkinci temel trend, enerji piyasaları dinamiklerinin yükselen ekonomiler tarafından belirlenecek olmasıdır. Küresel birincil enerji talebinde OECD dışı ülkelerin payı 1973 yılında %36 iken, 2000 yılında %45, 2010 yılında %55 olmuş, her bir senaryoya göre de gelecekte artmaya devam edecektir. Bu durum, OECD dışı yükselen piyasa ekonomilerinde nüfus, ekonomik faaliyetler, şehirleşme ve sanayi üretiminde hızlı artışı göstermektedir.

Üçüncü trend, petrol, kömür ve doğal gazdan oluşan fosil yatıklara yönelik dünya enerji ihtiyacının artmaya devam etmesidir. 2010 yılında dünya enerji talebi içerisinde %81 olan fosil yakıtların payı, tüm senaryolarda

temel enerji kaynakları olarak kalmaya devam edecektir. 2035 yılında bu pay, Mevcut Politikalar senaryosuna göre %80, 450 senaryosuna göre %63 oranında gerçekleşecektir.

Dördüncü trend, dünyanın en yoksullarına evrensel enerjinin sağlanması konusunda başarısız kalınmıştır. En son tahminlere göre dünya nüfusunun %20'sini oluşturan yaklaşık 1.3 milyar kişinin elektriğe erişiminin olmadığı, 2.6 milyar kişinin de yemek pişirmek için geleneksel biyokütle enerjisi kullandığı tespit edilmiştir. Bu kişilerin %95'inden daha fazlasının Sahra-altı Afrika ya da gelişmekte olan Asya ülkelerinde olduğu görülmektedir.

Üç senaryoyu önemli ölçüde değiştiren durum ise karbondioksit emisyonlarının seyridir. Tahminlere göre enerji ile ilgili CO_2 emisyonları 2011 yılında 31.2 Gt'ye ulaşmış olup, küresel sera gazı emisyonları içerisinde yaklaşık %62 ile en büyük paya sahiptir (IEA, 2012b: 246). Farklı senaryolara göre enerji ile ilgili CO_2 emisyonları Şekil 1'de görülmektedir. Yeni Politika Senaryosuna göre 2035 yılına kadar emisyonlar artmaya devam edecek, küresel ısınma uzun dönemde ortalama 3,6 derece artacaktır. Yeni politikalar olmazsa küresel ısınma Mevcut Politikalar Senaryosuna göre 5,3 derece, 450 Senaryosunda ise 2 derece artacağı öngörülmektedir.

Note: NPS = New Policies Scenario; CPS = Current Policies Scenario; 450 = 450 Scenario.
Şekil 1. *Farklı Senaryolara Göre Enerji ile ilgili CO2 Emisyonları*   **Kaynak**: *IEA, World Energy Outlook 2012.*

OECD ve OECD dışı ülkelerin farklı senaryolara göre enerjiyle ilgili CO_2 emisyonları Şekil 2'de görülmektedir.
Şekil 2. *Farklı Senaryolara Göre OECD ve OECD Ülkelerinin Enerji ile ilgili CO2 Emisyonları*   **Kaynak**: *IEA, World Energy Outlook 2012, s. 246.*

Ayrıca Atmosferdeki CO_2 emisyonunun ulaşması hedeflenen 450 ppm (part per million: milyonda bir) düzeyine ilişkin geliştirilen 450 Senaryosuna göre, toplam emisyonlar 2020 yılında 31,4 civarına çıkacaktır. Ancak daha sonraki yıllarda CO_2 emisyonları; sanayide, binalarda ve taşımacılıkta fosil yakıt kullanımında verimlilik sağlama, nükleer ve yenilenebilir enerji kaynaklarının payını artırma, elektrik üretiminde ve sanayide CO_2 emisyonları yer altında depolama teknolojisinin (CCS) kullanımıyla azaltılabilecek ve 2035 yılında 22,1 Gt olması hedeflenmektedir (IEA, 2012b: 253).

3   Küresel Isınma ve İklim Değişikliği

Küresel ısınma, dünya çapında genel sıcaklığın artması olarak tanımlanmakta ve atmosferdeki sera gazlarının yoğunluğunun değişmesiyle meydana gelmektedir. Küresel ısınmaya neden olan sera gazları içerisinde en büyük

paya karbondioksit sahiptir. 2010 yılında enerjiye bağlı payı karbondioksit, toplam sera gazlarının yaklaşık %62'ni oluşturmaktadır (IEA, 2012b: 246).

Küresel düzeydeki sıcaklık artışının en büyük etkisi ise iklim sistemi üzerinde meydana gelmektedir. Küresel ısınmaya bağlı olarak ortaya çıkan iklim değişikliği de, atmosfer içinde doğal olarak bulunan ve sera gazları olarak adlandırılan bazı gazların yoğunluklarının değişmesine, buna bağlı olarak da yerkürenin aşırı olarak ısınmaya başlaması ve birtakım ekolojik dengesizliklerin ortaya çıkmasına yol açmaktadır.

Fosil yakıtların yanmasıyla oluşan karbondioksit (CO2) ile arazi kullanımı ve tarım faaliyetleri sonucu açığa çıkan metan (CH4), nitröz oksit (N2O) ve uzun ömürlü sanayi gazlarının atmosferde belli bir konsantrasyonun üzerinde olması sera etkisini artırmaktadır. CO2, sera etkisini yükselten ana gazdır. Sanayi devriminin gerçekleştiği 1850'li yıllardan günümüze CO2 birikiminin yaklaşık 280 ppm'den 380 ppm'e, CH4 birikiminin 715 ppb'den 2.000 ppb'ye ve N2O birikiminin de 270 ppb'den 320 ppb'ye yükseldiği görülmektedir. Artan sera etkisi dünya ortalama sıcaklığını yükseltmekte ve küresel iklim sistemini bozmaktadır (Arı, 2010:8).

Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi (BMİDÇS)'nde iklim değişikliği, "karşılaştırılabilir zaman dilimlerinde gözlenen doğal iklim değişikliklerine ek olarak, doğrudan veya dolaylı olarak küresel atmosferin bileşimini bozan insan faaliyetleri sonucunda iklimde oluşan bir değişikliktir" şeklinde tanımlanmaktadır (EİE, 2013). Sera gazlarının yol açtığı iklim değişikliğine çözüm bulmak üzere BMİDÇS ve Kyoto Protokolü gibi uluslararası girişimlere gidilmiştir.

Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi. Son yıllarda toplumun ilgisini çekmeye başlayan artan sera etkisi ve küresel ısınma, yüz yılı aşkın bir süredir bilinmekte ve incelenmektedir. Atmosferdeki CO_2 emisyonunun artmasına bağlı olarak iklimin değişebileceği görüşü, ilk kez 1896 yılında Nobel Ödüllü İsveçli S. Arrhenius tarafından ortaya atılmıştır (Türkeş, 2006). Bu konuda 1970'li yıllara kadar bilimsel çalışmalar devam etmiş, ancak ilk kez 1979 yılında Dünya Meteroloji Örgütü (WMO) öncülüğünde iklim konferansı düzenlenmiştir. İklim değişimine ilişkin gerçekleştirilen uluslararası iklim rejimi süreci Tablo 4'ta özetlenmiştir.

21 Mart 1994 tarihinde yürürlüğe giren BMİDÇS, sürdürülebilir kalkınmanın kurumsal çerçevesini oluşturan en önemli yapıtaşları arasında yer almaktadır. Bu sözleşmede iklim değişikliğinin ve zararlarının insanlığın ortak kaygısı olduğu, insan etkinliklerinin atmosferdeki sera gazları yoğunluğunu artırdığı ve bunun atmosferde sıcaklık artışıyla sonuçlanarak insanlığa zarar verdiği, küresel sera gazı emisyonunda en büyük payın gelişmiş ülkelerden kaynaklandığı ve iklim değişikliğinin küresel boyutu nedeniyle uluslararası boyutta işbirliğine gidilmesi gerektiği belirtilmektedir (Arıkan, 2006: 5).

Bu sözleşmenin ekindeki listede ülkeler gruba ayrılmış ve sorumlulukları belirlenmiştir. Ek-1 listesinde OECD ülkeleri, AB ve pazar ekonomisine geçiş sürecinde bulunan ülkelerden oluşan 36 ülke yer almaktadır. Bu listede bulunan ülkeler, emisyon azaltımından sorumlu tutulmuştur. Türkiye, özel koşullar tanınarak bu listeye dâhil edilmiştir. Ek-2 listesinde Türkiye hariç OECD ülkeleri, AB-15'den oluşan 25 ülke yer almaktadır. Bu listedeki ülkeler, teknoloji transferi ve mali destek sağlamaktan sorumlu tutulmuştur. Ek-1 dışı ülkeler listesinde ise iki listede yer almayan Çin, Hindistan, Pakistan, Meksika, Brezilya gibi ülkeler yer almakta ve bu ülkelerin yükümlülükleri bulunmamaktadır.

2001 yılında Marakeş'te gerçekleştirilen 7. Taraflar Konferansı'nın (COP7) Türkiye'nin konumu değiştirilmiştir. Sözleşmenin Ek-1 listesinde yer alan diğer ülkelerden farklı bir konumda olan Türkiye'nin özel koşullarının tanınarak, adının Ek-1 listesine alınarak Ek-2 listesinden silinmesi yönünde karar alınmıştır (UNFCCC, 2013). Bu sözleşmeye Türkiye 24 Mayıs 2004 tarihinde resmen taraf olmuştur.

Kyoto Protokolü. Kyoto Protokolü, küresel ısınma ve iklim değişikliği konusunda mücadele vermek amacıyla BMİDÇS içinde imzalanmıştır. 1997 yılında Japonya'nın Kyoto şehrinde imzaya açılan ve 2005 yılında Rusya'nın anlaşmayı onaylaması üzerine yürürlüğe giren Protokol'e günümüzde 191 ülke ve Avrupa Birliği taraf olmuştur (UNFCCC, 2013). Bu Protokol, BMİDÇS'nin sera gazı emisyonlarının azaltılmasına yönelik hukuki açıdan bağlayıcı bir belgesidir. Bu protokolü, Türkiye 26 Ağustos 2009 tarihinde özel şartlı Ek-1 üyesi olarak imzalamıştır.

Kyoto protokolü, ülkelerin ortak ancak farklı sorumlulukları, ulusal ve bölgesel kalkınma öncelikleri, amaçları ve özel koşulları dikkate alınarak, öncelikli olarak gelişmiş (sanayileşmiş) ülkelerin sera gazı emisyonlarını azaltmaları yönünde yükümlülükler getirmektedir. BMİDÇS Ek-1 listesinde yer alan gelişmiş ülkeler, Kyoto Protokolü Ek-B listesinde belirlenen sayısallaştırılmış emisyon sınırlamalarına uymayı taahhüt etmiştir. Bu ülkelerin toplam sera gazı emisyonlarını ilk yükümlülük dönemi olan 2008-2012 döneminde, temel olarak alınan 1990 yılı düzeyinin en az %5 altına indirmesini taahhüt etme zorunluluğu getirilmiştir. Ayrıca Ek-1 taraflarından her biri 2005 yılına kadar bu protokoldeki yükümlülüklerini yerine getirmede gösterilebilir bir ilerleme kaydetmiş olacaktır. Bağlayıcı hedefleri olan ülkeler, dünya karbon salınımının %45'ini temsil etmektedir (UNFCCC, 2013).

7-8 Aralık 2012 tarihinde Katar'ın başkenti Doha'da gerçekleşen BMİDÇS 18. Taraflar Konferansı (COP18) ve Kyoto Protokolü'nün (KP) 8. Taraflar Buluşması (COP/MOP8) görüşmelerinde, uluslararası iklim değişikliği rejimini düzenleyen mevcut tek resmi mekanizma olan Kyoto Protokolü'nün devamı konusunda karar alınmıştır. Bu doğrultuda, Kyoto Protokolü'nün ikinci yükümlülük dönemi 1 Ocak 2013 tarihinde başlayacak 31 Aralık

2020 yılına kadar devam edecektir. Japonya, Kanada, Rusya ve Yeni Zelanda ikinci yükümlülük döneminde yer almayacağını belirtirken, Avrupa Birliği'ne üye 27 ülke, gelişmiş ülkelerden Avustralya, İsviçre, 2020 yılına yönelik emisyon azaltım hedeflerini ortaya koymuşlardır. Türkiye ise birinci yükümlülük dönemine benzer şeklide, henüz bir salım azaltım yükümlülüğü belirtmemiştir (UNFCCC, 2013).

Yıl	Atılan Adım	Önemi
1979	Dünya Meteoroloji Örgütü (WMO) Birinci İklim Konferansı	Fosil yakıtlara bağımlılığın sonucu CO2 gazının tehlikeli olacağı açıklandı.
1988	WMO Hükümetler Arası İklim Değişikliği Paneli (IPCC) Kuruluşu	İklim değişikliği alanında uluslararası bilimsel bir komite kuruldu.
	BM Küresele İklimin Korunması Kararı	Konu ilk defa BM gündemine geldi.
1990	Dünya Meteoroloji Örgütü (WMO) İkinci İklim Konferansı (Cenevre)	1992-Rio'da bir çerçeve sözleşmesinin gereği için Bakanlar Deklarasyonu onaylandı
1991	Birinci Değerlendirme Raporu	
1992	BMİDÇS imzaya açıldı	Sera gazı emisyonlarının iklim sistemi üzerindeki etkisini önlemeyi amaçlayan uluslararası bir anlaşma imzalandı.
	Birleşmiş Milletler Çevre ve Kalkınma Konferansı (Rio)	Rio sözleşmeleri ile çevre ve kalkınma birlikte ele alındı.
1994	Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi yürürlüğe girdi.	BMİDÇS uygulanmaya başlandı
1995	İkinci Değerlendirme Raporu	
1997	Kyoto Protokolü (3. Taraflar Konferansı, COP3)	BMİDÇS'nin Ek-1 ülkelerine zamana bağlı (2008-2012) sayısal emisyon azaltım hedefi verildi.
2001	Marakeş Uzlaşmaları (7. Taraflar Konferansı, COP7)	KP esneklik mekanizmalarının işleyişi belirlendi
2005	Kyoto Protokolü yürürlüğe girmiştir.	Rusya'nın KP'ye taraf olmasıyla, KP yürürlüğe girdi ve taraf ülkelerin KP sorumlukları başladı.
2007	Bali Eylem Planı (13. Taraflar Konferansı, COP13)	2012 yılı sonrasına yönelik iklim değişikliği müzakerelerinin yol haritası çizildi
2009	Kopenhag Mutabakatı (15. Taraftlar Konferansı, COP15 ve MOP5)	2012 yılı sonrası için yeni iklim rejimine yönelik bir anlaşma müzakereye açıldı.
2010	Cancun Mutabakatı, Meksika(16. Taraflar Konferansı, COP16)	2020 yılında kurulması hedeflenen "Yeşil Fon"un resmiyet kazandı.
2011	Durban, Güney Afrika (17. Taraflar Konferansı, COP17)	2012 yılı sonunda ilk yükümlülük dönemi bitecek olan Kyoto Protokolü sonrasında uluslararası iklim değişikliği rejimini şekillendirmek üzere ülkeler bir kararlar paketi üstünde anlaşmaya varıldı.
2012	Doha, Katar (18. Taraflar Konferansı, COP18)	Kyoto Protokolü'nün devamı konusunda karar alındı. Kyoto Protokolü'nün 2012 yılında tamamlanan birinci yükümlülük döneminin ardından ikinci yükümlülük dönemi, 1 Ocak 2013 tarihinde başlayacak 31 Aralık 2020 yılına kadar devam edeceği kararına varıldı.

Tablo 4. Uluslararası İklim Değişikliği Müzakerelerinin Süreci

4 Kyoto Protokolü Esneklik Mekanizmaları

İklim değişikliğine yol açan insan etkinliklerinden kaynaklanan sera gazı emisyonlarının en az maliyetle indirilmesi temel hedef olmuştur. Ancak sera gazı emisyonlarının birim azaltım maliyeti de ülkelere göre farklılık göstermektedir. Kyoto Protokolünde tanınan esneklik mekanizmaları sayesinde Ek-1 ülkeleri, düşük maliyetten yararlanabilecektir. Protokolde tanımlanan esneklik mekanizmaları, Ek-1 ülkelerinin yükümlülüklerini yerine getirmelerine yardımcı olacak teknik ve ekonomik araçlar olup üç başlıkta toplanmıştır. Bunlar; emisyon ticareti (karbon piyasası), temiz kalkınma mekanizması ve ortak yürütme mekanizmasıdır. Bu mekanizmalar aşağıda sıralanmıştır (UNFCCC, 2013).

Temiz Kalkınma Mekanizması (Clean Development Mechanism-CDM): Kyoto Protokolünün 12. maddesiyle düzenlenen bu mekanizma, Ek-1 dışı ülkelerin sürdürülebilir kalkınma ilkesi doğrultusunda Ek-1 ülkelerinin sera gazı azaltımına katkı sağlamalarını amaçlamaktadır. Ek-1 listesinde yer alan tarafların emisyon azaltım taahhüdünü gerçekleştirmek için Ek-1 dışı ülkelerde yapacakları projeler sonucu "Sertifikalandırılmış Emisyon Azaltım Kredisi" (Certified Emissions Reduction Credits-CER) elde edeceklerdir.

2012 yılı itibariyle 78 ülkede CDM projelerinin olduğu ve CDM'de toplam 4.601 kayıtlı projenin bulunduğu, 2012 Eylül ayına kadar yaklaşık 3.275 projeden 1 milyardan fazla sertifikalandırılmış emisyon azaltım birimi (CER) kazanıldığı bildirilmektedir (UNFCCC, 2012: 7).

Ortak Yürütme Mekanizması (Joint Implementation-JI): Kyoto Protokolünün 6. Maddesi ile düzenlenen bu mekanizma, Ek-I listesinde yer alan tarafların emisyonların azaltılmasına veya yutaklar yoluyla sera gazlarının giderilmesine yönelik etkinlikler yürütmesine olanak sağlamaktadır. Bu mekanizma yoluyla gerçekleştirilen projeler sayesinde emisyonlarda kaydedilen azalma miktarı "Emisyon Azaltma Birimi" (Emission Reduction Unit-ERU) olarak adlandırılan bir birimle hesaplanmaktadır. Bu projeden yararlanan taraflar ERU kazanmakta ve kazanılan bu birimler toplam hesaptan düşülmektedir.

Emisyon Ticareti (Emission Trading-ET): Kyoto Protokolünün 17. maddesiyle düzenlenmiş olan mekanizma, Ek-1 ülkeleri arasında emisyon ticaretine izin vermektedir. Dolayısıyla Ek-1 listesinde yer alan ülkelerden biri, Ek-B'de belirlenmiş emisyon azaltım miktarının bir bölümünün ticaretini yapabilecektir. Satılan emisyonlar, satan ülkenin belirlenmiş azaltım biriminden (Assigned Amount Units-AAU) düşürülüp satın alan ülkenin belirlenmiş azaltım birimine eklenmektedir. Emisyon ticareti aynı zamanda ülkelerin emisyonlarını kendi salım yükümlülüklerinin altına düşürme açısından da iyi bir teşvik sağlamaktadır.

Bu protokol kapsamında karbon dinamikleri ikiye ayrılmaktadır. Bunlardan birincisi Cap and Trade (ETS) piyasalarıdır. Bu piyasada talep tarafı, faaliyet alanı nedeniyle sera gazı salınımı yapan bir şirket, kendi sera gazı limitini aşmak durumunda kaldığında bir başka salınım yapan şirketten salınım hakkı alarak limitini genişletebilmekte ve limit aşımına rağmen üretimine devam etmektedir. Arz tarafı ise bir şirket salınım kotasını aşmaz ise aşmadığı miktarı karbon piyasasında satabilmekte veya bir sonraki yıla saklayabilmektedir. İkincisi ise proje temelli piyasalardır. Bu piyasada, salınım yapan bir şirket dünyanın farklı bölgelerinde ve ülkelerinde yapmış olduğu yatırımlar ile elde edeceği kredilerle kotasını genişletebilmekte veya bu kredileri piyasada satabilmektedir.

5 Karbon Piyasaları

Karbon piyasası, karbondioksit başta olmak üzere küresel iklim değişikliğine neden olan sera gazlarının önlenmesi ya da azaltılmasına dönük, tanımlanmış kurlar ve standartlar dahilinde elde edilen karbon kredilerinin, diğer bir deyişle karbon sertifikalarının alınıp satıldığı piyasayı ifade etmektedir. Karbon piyasası, piyasa kuralları doğrultusunda çalışmak koşulu ile emisyonları azaltmada önemli bir araç olarak görülmektedir. Bu piyasa, emisyonları azaltmak için belirlenen limitten fazla salım yapanları cezalandırırken, daha az salanlar ise ödüllendirerek mevcut kaynakların en düşük maliyetle kullanılmasını sağlamaktadır. Ayrıca karbon piyasası, fiyatlandırdığı kirletme birimlerini mülkiyet hakkına dönüştürerek karbonun tüm dünyada ticaretinin yapılmasını mümkün kılmaktadır. Böylece işletmelerin daha az sera gazı emisyonunu teşvik ederek temiz teknolojiyi kullanmaya yönlendirmektedir.

Emisyon Ticareti Mekanizmaları						
	Mekanizma		İlgili KP Maddesi	Proje Bazlı	Ürün Sertifikası	Uygulandığı Ülkeler
Kyoto Protokolü Kapsamındaki Zorunlu Mekanizmalar	Temiz Kalkınma Mekanizması (CDM)		12. Madde	X	CER	Ek-B alıcı Ek-1 dışı ülkeler satıcı

Tablo 5. Emisyon Ticareti Mekanizmaları **Kaynak**: *Mazıbaş, 2013:7.*

Karbon piyasaları, zorunlu (Kyoto Protokolü esneklik mekanizmaları) ve gönüllü olmak üzere iki kategoride incelenmektedir. Zorunlu karbon piyasaları, Kyoto Protokolünde tanımlanan esneklik mekanizmaları ile ülkelerin düşük maliyetle emisyon azaltımı yapabilmesine olanak tanımaktadır. Gönüllü Karbon Piyasaları,

bireylerin, kurum ve kuruluşların, firmaların, sivil toplum örgütlerinin faaliyetleri sonucu oluşan sera gazı emisyonlarının gönüllü olarak azaltımını dengeleyebilmesini kolaylaştırmak amacıyla oluşturulan bir piyasadır.

Ekonomideki dalgalanmalar karşısında AB iklim politikası ve küresel karbon piyasalarının temelini oluşturan AB Emisyon Ticaret Sistemindeki karbon fiyatları 2011 yılı sonuna doğru düşmeye başlamıştır. Fiyatlar düşmesine karşın, işlem hacmi hızla yükseldiği için küresel karbon piyasasının değeri 2011 yılında artmıştır. Piyasanın toplam değeri %11 oranında büyüyerek 176 milyar dolara çıkmış, işlem hacmi de 10,3 milyar ton CO2e'ye ulaşmıştır. Tablo 6'da 2005-2011 döneminde küresel karbon piyasasının piyasa değeri görülmektedir.

	EU ETS Tahsisler	Diğer Tahsisler	Birincil CDM	İkincil CDM	Diğer Offsets	Toplam
2005	7,9	0,1	2,6	0,2	0,3	11,0
2006	24,4	0,3	5,8	0,4	0,3	31,2
2007	49,1	0,3	7,4	5,5	0,8	63,0
2008	100,5	0,1	6,5	26,3	0,8	135,1
2009	118,5	4,3	2,7	17,5	0,7	143,7
2010	133,6	1,3	3,6	20,4	1,2	159,2
2011	147,8	0,1	3,9	22,3	0,9	176,0

Tablo 6. *Karbon Piyasası: Piyasa Değerleri (Milyar Dolar)*   ***Kaynak****: World Bank, 2012.*

2005-2011 döneminde karbon varlık işlemlerinin değeri Şekil 3'te görülmektedir.
Şekil 3. *Karbon Varlık İşlemlerinin Değeri (Milyar Dolar)*   ***Kaynak****: CDC Climat Research, 2013: 29.*
Şekil 4. *Ülke Bazında Satıcılar Tarafından Gerçekleştirilen İşlem Hacmi (MTCO2e)*   ***Kaynak****: World Bank.*

Bu verilerden de görüldüğü gibi, zorunlu piyasaların piyasa değeri ve işlem hacmi gönüllü piyasalarınkinden oldukça fazladır. Özellikle 2008-2009 döneminde ortaya çıkan finansal krizin etkileri karbon piyasalarına da yansımıştır. Ayrıca 2011 yılı da sermaye piyasaları açısından çalkantılı bir yıl olmuştur. Arap Baharı'nın başlaması, Fukushima felaketinin ardından Japonya ve Almanya'da nükleer santrallerin kapatılması, ABD'nin kredi notunun düşürülmesi ile karbonu da kapsayan enerji ile ilgili malların piyasasında dalgalanma artmıştır. Aynı şekilde Yunanistan borç krizi ve bu krizin AB ekonomisine de yayılması yaşanan güven sorununu daha da artırmıştır.

5.1 Zorunlu Piyasalar (Proje Bazlı)

Temiz Kalkınma Mekanizması (CDM), proje temelli uygulamalar arasında en çok kullanılan yöntemdir. Onaylı salınım azaltmaları (CER) birimine dayalı ürün sertifikaları alınıp satılmaktadır. 2002-2011 döneminde ülke bazında satıcılar tarafından gerçekleştirilen işlem hacmi Şekil 4'te görülmektedir.

Ortak Uygulama (JI), emisyon azaltım birimi (ERU) olup, %60'ı Rusya ve Ukrayna'da uygulanmıştır. En çok yatırımı ise Fransa yapmıştır. Ülke bazında devam eden ortak uygulama projesi sayısı Şekil 5'te görülmektedir. Ortak Uygulama (JI) ve CDM kapsamındaki CER ve ERU'lar organize ikincil piyasalarda işlem görmektedir. Yıllık CER ve ERU işlem hacmi Şekil 6'da verilmiştir.
Şekil 5. *Ülke Bazında Devam Eden Ortak Uygulama Projesi Sayıları* **Kaynak***: World Bank, 2012: 59.*
Şekil 6. *Yıllık CER ve ERU İşlem Hacmi (Milyon tCO2e)* **Kaynak***: World Bank, 2012: 38.*
Şekil 7. *AB Üye Ülkelerin EUA Yıllık İşlem Hacmi* **Kaynak***: World Bank, 2012: 32.*

5.2 Zorunlu Piyasalar (Piyasa Bazlı)

Emisyon Ticaret Sistemi (ETS): Kyoto Protokolü'nün 17. maddesinde tanımlanmıştır. Emisyon izinlerini aşan şirketler alıcı, emisyon izinlerinin altında kalanlar ise satıcı konumundadır. Ticareti "Assigned Amount Unit (AAU)" üzerinden EK-I ülkeleri arasında yapılabilmektedir. 2010 yılında 19 milyon ton CO2 salınımına denk gelen AAU ticareti yapılmış, 265 milyon dolarlık işlem oluşmuştur (Mazıbaş, 2013: 12).

AB – ETS ve EUA Piyasası, dünyada en çok işlem gören karbon ürünüdür. EUA işlem hacmi 2011'de %11 artarak 147,8 milyar dolara ulaşmıştır. Birincil piyasada ihraç edilen EUA'ların piyasa değeri, toplam piyasanın %1'lik kısmını oluşturmaktadır. 2008-2011 döneminde AB üye ülkeler tarafından satılan birincil EUA'ların yıllık işlem hacmi Şekil 8'de görülmektedir. EUA piyasasındaki işlemleri %88'i vadeli, %10'u opsiyon, %2'si ise spot piyasalarda gerçekleşmiştir. Gerçekleştirilen işlemlerin %49'u borsalarda, %39'u borsa dışında (over the counter, OTC), %12'si iki taraflı anlaşmalarla sağlanmıştır (Şekil 7).

Karbon Fiyat Mekanizması: Bu mekanizmada Carbon Unit (CU) kullanılarak işlem yapılmaktadır. Bu mekanizma, Avustralya'nın yıllık karbon salınımını 2000 yılındaki salınım seviyesini 2020 yılına kadar %5, 2050 yılına kadar %80 azaltmak amacıyla kurulmuştur. CPM'in Avustralya emisyon salınımının %60'ının sahibi olan 500 işyerini kapsaması beklenmektedir. Fiyatlama üç döneme ayrılmaktadır: Sabit fiyat dönemi 1 Temmuz 2012 olup 23 Avustralya Doları olarak belirlenmiştir. Esnek fiyat dönemi 1 Temmuz 2015 olup, Taban: 15 / Tavan: 25 Avustralya Dolarıdır. Serbest fiyat dönemi ise 1 Temmuz 2018'dir.

5.3 Ülke ve Eyalet Piyasaları

Avustralya Karbon Denkleştirme Programı ve ACCU Piyasası: CPM kapsamına girmeyen ve Kyoto'da tanımlanmayan projeler Avustralya hükümetince desteklenecektir. Çöplüklerden metan salınımının yasaklanması, gübre kullanımı, anız yakılmasının önlenmesi, ağaçlandırma ve teraslama için 250 milyon Avustralya Doları ayrılmıştır (Mazıbaş, 2013: 16).

Kaliforniya Küresel Isınma Çözümleri Kanunu ve CCA Piyasası: 2006 yılında çıkan bu kanun, eyaleti sera gazı salınımını 2020 yılında, 1990 seviyelerine geri çekme konusunda yükümlü kılmıştır. Kaliforniya üst sınır ticareti (cap-and-trade) düzenlemeleri 2011 yılının Ekim ayında yapılmaya başlanmıştır. Eylül 2011'de ICE ve Green Exchange'de işlem görmeye başlamıştır. 2013-2020 döneminde WCI yıllık piyasa dengesi Şekil 8'de görülmektedir.
Şekil 8. *2013-2020 döneminde WCI Yıllık Piyasa Dengesi*   ***Kaynak****: World Bank, 2012: 88.*

Bölgesel Sera Gazları İnisiyatifi ve RGGI Piyasası: ABD'nin 10 eyaletinde enerji üreticilerine karbon salınımını azaltmaları konusunda yaptırımlar getirilmiştir. Yaratılan 925 milyon dolarlık gelirin %48'i enerji verimliliği programlarına, %20'si eyalet genel bütçelerine, %7'si yenilenebilir enerji üretimi kaynaklarına, %11 değişik çevresel faaliyetlere aktarılmıştır. CCx kurulmuş, ancak daha sonra ICE'ye satılarak kapatılmıştır. ICE'de RGGI işlemleri devam etmektedir. 2010 ve 2011 yıllarında ortaya çıkan arz fazlalığı nedeniyle taban fiyat 1,89 dolara düşmüştür. Ayrıca 2009 yılında borsa üzerinde yapılan işlem hacmi %85 iken 2011'de %6 düzeyine inmiştir (Şekil 9).

5.4 Gönüllü Karbon Piyasaları

Gönüllü karbon piyasaları, devletlerin belirlediği politikalar ve hedeflerden bağımsız olarak gönüllülük esasında gerçekleştirilmektedir. Gönüllü projelerin emisyon azaltım kredileri (VER) Kyoto Protokolü kapsamında kurulan uygunluk piyasalarında kullanılamamaktadır. Karbon nötr olmak isteyen organizasyonlar, karbon ayak izlerini hesaplayarak bu emisyonlarını azaltmak ve dengelemek üzere, gönüllü bir standart çerçevesinde sağlanmış emisyon azaltımları sonucu oluşturulan karbon sertifikalarını satın alırlar. 2010-2011

yılları arasında VER piyasasında işlem hacmi 69 MtCO2e'den 87 MtCO2e'ye çıkmış, işlem değeri de 414 milyon ABD Doları'ndan 569 milyon ABD Doları'na ulaşmıştır (World Bank, 2012: 115).

Dünyadaki başlıca karbon piyasalarında işlem gören ürünlerin işlem hacimleri Tablo 7'de görülmektedir.

6　Sonuç

Çevre sorunlarının başında gelen küresel ısınma, atmosferdeki sera gazı emisyonlarının artmasıyla ortaya çıkmaktadır. Bu emisyonların azaltımı için BMİDÇS ve Kyoto Protokolü gibi çözümler önerilmiştir. BMİDÇS ile başlayan bu süreç taraflar toplantıları ile halen devam etmektedir. Kyoto Protokolü bir çevre koruma anlaşması olmakla birlikte, ticari ve ekonomik ilişkilerin sürdürülmesi yönünde şekillenmiş bir anlaşma olma özelliği taşımaktadır.

Kyoto Protokolü'nün ortak uygulama (JI), temiz kalkınma mekanizması (CDM) ve emisyon ticaretinden oluşan esneklik mekanizmaları bulunmaktadır. Söz konusu mekanizmalar, endüstrileşmiş ülkelerin protokol ile belirlenen hedeflerine ulaşmaları için kullanabilecekleri yöntemlerdir. Ortak uygulama yöntemi ile Ek-1 ülkeleri arasında gerçekleşir. Sera gazı emisyonunun azaltılmasını amaçlayan projelere yatırım yapan ülke, emisyon azaltma birimi (ERU) kazanmaktadır. Kazanılan ERU, ülkenin Kyoto hedefine ulaşmasında hesaba katılacaktır.

Temiz kalkınma mekanizması ise Ek-1 ülkelerinin, Ek-1 olmayan ve protokole taraf ülkelerden birinde yapacağı emisyon azaltıcı projeleri sertifikalandırılmış emisyon azaltımı karşılığı (CER) desteklemesidir. Emisyon ticaret sisteminde ise taahhüt edilen emisyon miktarından daha fazla azaltım yapan ülke, bu azaltımı başka ülkeye satabilmektedir. Emisyon indirimleri olan (ERU ve CER), dünyada birçok karbon borsasında işlem görmektedir. Bu ürünler pazarlarda spot veya vadeli işlem ile satılabilmektedir.

2005 yılından itibaren karbon piyasaları çok hızlı büyümüş, 2011 yılı itibariyle değeri 176 milyar dolara yükselmiştir. Yaşanan küresel kriz ve Avrupa borç krizi nedeniyle karbon piyasalarında fiyatlar düşmüş, ancak işlem hacmi artmaya devam etmiştir.

Sonuç olarak sürdürülebilir kalkınmanın bir parçası olarak değerlendirilen karbon piyasaları finansal piyasaların derinleşmesine önemli katkılar sağlaması beklenmektedir.

Türkiye'de Sürdürülebilir Çevre Politikaları: İklim Değişikliği Örneği

Sustainable Environmental Policy in Turkey: Climate Change Case

Asst. Prof. Dr. Abdulmenaf Turan (Yüzüncü Yıl University, Turkey)

Assoc. Prof. Dr. Mahmut Güler (Trakya University, Turkey)

Abstract

Environmental problems have become the main agenda of all countries in the world since 1970's. Various reports have been written, international meetings have been held and various contracts, agreements and action plans were accepted according to these decisions. Each of these arrangements has reflected to policies of countries. The most important issue of international meetings is that environmental values and natural resources should be used rationally and without extravagancy, should be protected and sustained considering the policy of using rights and benefits of current and future generations. In this sense, the concept of "sustainable development" which aims at enabling economic growth and is defined as an environmentalist view in included in the report called Our Common Future which is prepared by Bruntland in 1987 and presented to United Nations Commission of Environment and Development. Later on, this principle was accepted as the main principle of meeting in RIO Summit of 1992. Turkey which is one of the developing countries did not remain out of this process and determined environmental policies in accordance with decisions in global level. Turkey participated in both meetings mentioned above; carried out preparation studies according to these principles and adapted these principles to legal regulations and policies about environmental and economic development. In this study, first of all historical development of sustainable development concept in global sense will be explained and then it will be evaluated how this principle influences environmental policies in Turkey in analytical way together with examples of practice.

1 Giriş

1970'li yıllardan bu yana çevre sorunları dünyanın bütün ülkelerinin ana gündem konularından biri haline gelmeye başlamıştır. Bu konuda çok sayıda raporlar yazılmış, uluslararası toplantılar gerçekleştirilmiş, bu toplantılarda alınan kararlar doğrultusunda çeşitli sözleşmeler, anlaşmalar ve eylem planları kabul edilmiştir. Bu düzenlemelerin her biri ülkelerin uygulamış oldukları politikalara yansımıştır. Bütün bu düzenlemelerin nedeni çevre sorunlarının küresel niteliğe sahip olmalarından kaynaklanmaktadır. Doğal varlıklar üzerinde gelecek kuşakların da söz hakkı sahibi olduğu düşüncesi küresel çevre politikalarının en önemli yanlarından birisidir. Bu bağlamda ekonomik gelişmenin sağlanmasını amaçlayan ve çevreci görüş olarak tanımlanan "sürdürülebilir gelişme" 1987 yılında Bruntland tarafından hazırlanan ve Birleşmiş Milletler Çevre ve Kalkınma Komisyonuna sunulmuş olan Ortak Geleceğimiz isimli raporda yer almıştır. Daha sonra 1992 yılındaki RIO Zirvesi'nde bu ilke toplantının ana ilkesi olarak kabul edilmiştir. BM'nin bu tarihten sonraki bütün toplantılarında da bu ilke ana gündem konusu olmuştur. Gerek 2002 yılındaki Johannesburg Zirvesi gerekse 2012 yılındaki RIO+20 Zirvesi sürdürülebilir gelişmenin sağlanması konusundaki ilkelerin belirginleştiği toplantılar olmuştur. Küresel bir sorun olarak nitelendirilen çevre sorunlarına yönelik politikalar, sorunun doğasından kaynaklanan özelliklerinden dolayı küresel düzeydeki politikaların ülkelerin iç politikalarına dönüşmesini zorunlu kılmıştır. Bundan dolayı herhangi bir ülkenin çevre politikalarını incelerken küresel aktörlerin bu konudaki politika ve eylemlerini esas almak bir zorunluluktur. Sürdürülebilir gelişme kavramı da söz konusu politika ve eylemler sonucunda ortaya çıkmış olan ve yalnızca çevre politikaları alanında değil birçok alanda esas alınan bir ilke haline gelmiştir.

Gelişmekte olan ülkelerden biri olan Türkiye de bu sürecin dışında kalmamış ve küresel düzeyde alınan kararlar doğrultusunda çevre politikalarını belirlemiştir. Çevre politikalarını belirleme konusunda uluslararası düzeyde alınan en önemli kararlardan biri de sürdürülebilir gelişme ilkesinin hayata geçirilmesi olmuştur. Yukarıda adı geçen her iki toplantıya da katılan Türkiye hem bu ilkelere yönelik hazırlık çalışmaları yapmış hem de çevre ve ekonomik gelişmeye ilişkin yasal düzenleme ve politikalarına bu ilkeleri uyarlamıştır. Bu çalışmada ilk olarak sürdürülebilir gelişme kavramının tarihsel gelişimi anlatılacak ardından da bu ilkenin Türkiye'deki çevre politikalarını iklim değişikliği örneğinde nasıl etkilediği analitik bir biçimde değerlendirilecektir. İklim değişikliğine ilişkin sorunlar ile sürdürülebilir gelişme ilkesinin aynı yazı kapsamında ele alınması her iki olgunun da neredeyse eş zamanlı olarak uluslar arası kamuoyunun gündemine gelmesinden dolayıdır. İklim değişikliği aynı zamanda ekonomik kalkınma ile çevre arasındaki çatışmalı sürecin bir tezahürüdür. Çalışmamızın temel varsayımı şudur: İklim değişikliği diğer adıyla küresel ısınma sorunu ancak kuşaklar arası adaleti önceleyen ve sürdürülebilir gelişme ilkesinin uygulanmasıyla mümkün olabilir. Ancak kavrama yüklenen toplumsal, ekonomik ve çevresel sürdürülebilirliğin gerçek anlamıyla tahrif edilmeksizin kullanılması koşuluyla.

2 Küresel Çevre Politikalarının İnşasında Sürdürülebilir Gelişme İlkesi

Sürdürülebilir gelişme kavramının tarihsel ve kuramsal gelişiminden önce değinilmesi gereken önemli kavramlardan biri çevre politikası kavramıdır. Çevre politikası, çevre konularında devletin etkinlikleri için oluşturulan kurumsal yapı ve yöntemler biçiminde dar; toplumun çevreyle olan ilişkisini düzenlemek için belirlenen amaçlar, hedefler, ilkeler ve tercihler ile çevre korunması ve geliştirilmesine dönük olarak alınan önlemler bütünü biçiminde de geniş anlamlı olarak tanımlanmaktadır (Keleş vd., 2012). Bu yönüyle geniş anlamda çevre politikasının insan ve doğa arasındaki ilişkileri düzenleme amacı taşıdığı belirtilebilir. Ancak bunun bir politika haline gelmesi için gerekli olan toplumsal iradenin sağlanmasında devlet en önemli aktördür. Küreselleşme süreci ile birlikte devletin yanısıra uluslararası devlet örgütleri, sivil toplum örgütleri ve ulusaşırı şirketlerin de birer önemli aktör haline gelmiş olduğu görülmektedir. Dolayısıyla hem çevre sorunlarının doğasından kaynaklanan ulusaşırı olma hem de küreselleşme sürecinin de etkisiyle çevre politikalarının oluşturulması ve uygulanması çok aktörlü bir yapının karşılıklı işbirliği ve müzakeresi ile olanaklı hale gelmektedir. Bu politikaların başarıya ulaşması ise belirlenmiş olan ilkelerin uygulanabilir olmasına bağlıdır. Bu ilkeler arasında uygulama olanağı bulan ve kabul gören ve belki de en yaygın olan ilkelerden biri sürdürülebilir gelişmedir. Böylece sürdürülebilir gelişme kavramı uluslararası çevre politikalarının ekonomik araçlarından birine dönüşmüştür (Kaplan, 1999). Kavramın büyüme, kalkınma, eşitlik ve çevreciliğin en acil ve ihtilaflı sorunları arasında bir uzlaşmayı temsil ettiği belirtilmektedir (Hayırsever Topçu, 2008). Ancak bu kavramın tartışılmadığı anlamına da gelmemelidir (tartışmalar için bkz. Kaplan, 1999; Bozlağan, 2004; Hayırsever Topçu, 2008).

Sürdürülebilir gelişme kavramı aslında çevre sorunlarının küresel düzeyde bir sorun olarak kabul edilmesinden sonra ortaya atılmış ise de aslında "ilk kez Federal Almanya'nın Baden bölgesinde 18. yüzyıl sonu ve 19. yüzyıl başında Karaormanların yok edilmesini önlemek amacıyla çıkarılan yasalarda kullanılmış; toplumsal gelişme kavramına da uyarlanan sürdürülebilir gelişme kavramı asıl anlamını 1987 yılında yayınlanan Bruntland Raporu'yla kazanmıştır (Hill, 1993'ten aktaran Kaplan, 1999). Bozlağan (2005), kavramın tarihsel kökenlerinin Ortaçağ'a hatta Antik Yunan dönemine dek götürülmüş olduğunu (Campbell, 1996) ve (O'Riordon, 1998)'e atıfla belirtmekte, ancak kavramın Antik Yunan dönemine dayandırılmasının nesnel olmadığını, Doğu kültüründe de benzer temalar bulunduğunu, kavramın birçok geleneksel kültürden beslendiğini ifade etmektedir. Raporda kısaca tanımlanmakla birlikte kavramın, ekolojik, sosyal ve ekonomik yaşamın tüm alanlarını içine alacak şekilde geniş kapsamlı olduğu ve kavramın bütüncül bir düşünce ve yaşama biçimini öngördüğü söylenmektedir (Bozlağan, 2004). Dünya yoksullarının temel gereksinmelerini karşılama ve bugünkü ve gelecekteki gereksinmeleri karşılayabilme yeteneğine teknolojinin ve toplumsal örgütlenmenin getirdiği sınırlamaları kavramlarına dayanan sürdürülebilir gelişme "bugünün gereksinmelerini gelecek kuşakların kendi gereksinmelerini karşılama olanaklarını onların ellerinden almadan karşılamak" olarak tanımlanmaktadır (Keleş vd., 2012).

1992 yılında Rio'da düzenlenen BM Çevre ve Kalkınma Konferansı'nda ortaya çıkan belgelerden biri olan Rio Bildirgesi'nde yer alan 27 ilke arasında sürdürülebilir gelişme kavramı önemli bir yer tutmuştur. Kalkınma hakkının bugünkü ve gelecek kuşakların kalkınma ve çevre gereksinmeleri arasındaki dengenin kurulaması yoluyla gerçekleştirilmesi, çevrenin korunmasının bağımsız olarak ele alınmaması, kalkınma süreciyle bütünleştirilmesi, tüm dünyada sürdürülebilir gelişmeyi gerçekleştirecek ekonomik büyümenin sağlanması için devletlerin uluslararası ekonomik sistemi harekete geçirmekle sorumlu kılınması doğrudan sürdürülebilir gelişme kavramına ilişkin atıflardır. Öte yandan Konferans'tan sonra bu ilkeleri hayata geçirmek üzere Sürdürülebilir Kalkınma Komisyonu kurulmuştur. Yine Konferans'ın sonucunda ortaya çıkan Gündem 21'in ilkeleri arasında sürdürülebilir gelişme kavramı oldukça önemli bir yer tutmaktadır (Bkz. Keleş vd., 2012). Gündem 21 kavramın yalnızca ekonomik değil diğer açılardan da kullanımına katkıda bulunmuştur. Örneğin, demografik hareketler ve sürdürülebilirlik, sürdürülebilir insan yerleşimlerinin geliştirilmesi, sürdürülebilir dağ yönetimi, sürdürülebilir tarım ve kırsal kalkınma, sürdürülebilir gelişmede kadınlar için küresel eylem, sürdürülebilir gelişmede bilim, sürdürülebilir gelişme için veri ve bilgi alışverişi vs. 2002 yılındaki Johannesburg Zirvesi'nde ise hem sürdürülebilir gelişmenin boyutları ortaya konmak istenmiş hem de yoksulluğun ortadan kaldırılmasının, üretim ve tüketim kalıplarının değiştirilmesinin ve ekonomik-toplumsal kalkınma amaçlarıyla kullanılmasının sürdürülebilir gelişmenin temel koşulları olduğuna dikkat çekilmiş ve devlet ve hükümet başkanlarının sürdürülebilir gelişmeyi ortaklaşa sağlamak ve korumak konusundaki kararlı tutumları sergilenmek istenmiştir (Keleş vd., 2012).

2012 yılında yine BM öncülüğünde düzenlenen RİO+20 Zirvesi "BM Sürdürülebilir Kalkınma Konferansı" olarak adlandırılmıştır. İlginin oldukça yoğun olduğu Konferans'ta sürdürülebilir gelişme ve yoksulluğun azaltılması çerçevesinde yeşil ekonomi ve sürdürülebilir gelişmenin kurumsal çerçevesi tartışılmıştır (Sürdürülebilir Kalkınma, 2012). Zirve'de 283 maddelik "İstediğimiz Gelecek" isimli sonuç bildirgesi kabul edilmiştir. Bildirge'de sürdürülebilirlik kavramının neredeyse bütün alanlara uyarlanmış olduğunu söyleyebiliriz.

Yalnızca Birleşmiş Milletler değil OECD ve Avrupa Birliği gibi örgütlenmelerin de ilkeleri arasında sürdürülebilir gelişme kavramı önemli bir yer edinmiştir. Görüldüğü üzere sürdürülebilir gelişme kavramı

dinamik bir kavram olarak sürekli yenilenmiş ve içeriği bakımından zenginleştirilmiştir. Böylece kavram, "çevre ve kalkınma hareketlerinin başlıca söylemi" haline gelmiştir (Bozlağan, 2005).

3 İklim Değişikliğinin Küresel Bir Çevre Sorununa Dönüşmesi

İklim değişikliği 1970'li yıllarda sorun olarak gündeme gelmiş olmakla birlikte uluslararası bir sorun olarak kamuoyunun dikkatini daha erken bir zamanlarda çekmiştir. Fakat iklim değişimine neden olan gazların azaltımı konusunda ortaya konan önerilerin değişik ulusal çıkarları etkilemesi sonucunda birlik oluşturulamamaktadır. Değişimin olması için, iklim değişikliği yapılacak anlaşmanın içeriği her bir ülkenin kendi özel durumuna uygun olabilecek yapıda olmalıdır. Bu bağlamda 1970'li yıllarda başlayan uluslararası görüşmelerden sorunun çözümüne yönelik tatmin edici bir sonuç alınamamıştır.

Küresel çevre sorunları ve iklim değişimine neden olan atmosferde sera etkisi yapan gazlar gelişmiş ve azgelişmiş ülkeleri karşı karşıya getirmiştir. Gelişmiş ülkeler azgelişmiş ülkeleri; nüfus artışı, yoksulluk, yenilenebilir ve yenilemez kaynakların tahrip edilmesi, yağmalanması gibi sorunların nedeni olarak görmekte ve bunun da iklim değişikliğine neden olan faktörler olduğunu ileri sürmektedirler. Buna karşılık az gelişmiş ülkeler; geniş anlamda çevre sorunlarının kendilerinin az gelişmişliklerinden değil, sanayileşmiş ülkelerin çevreye verdikleri zarardan kaynaklandığını ileri sürmüşlerdir. Bu iki farklı dünyanın çevre konusundaki görüşleri kuzey-güney çekişmesi olarak adlandırılmaktadır. Kuzey'in bakış açısına göre çözümü etkin doğum kontrolü politikası, azgelişmiş ülkelerin dış borçlarından kurtulmaları ve çevre teknolojisinin bu ülkelere transferidir. Güneyin çevre sorunlarının çözümü ise, kendi azgelişmişliklerinin ve Kuzey ülkelerinin savurganca üretim ve tüketim alışkanlıklarının bir sonucudur. Azgelişmiş ülkeler mutlak olarak ekonomik ve toplumsal gelişmeyi gerçekleştirmek istemekte ve Kuzey'in "bedava teknoloji" transferi yapmasını ve dış borçlarını silmelerini beklemektedir (Güler ve Dural, 2007).

3.1 Stockholm Konferansı 1972

Stockholm Konferansı "Birleşmiş Milletler Çevre ve Kalkınma Programı (UNEP) tarafından oluşturulmuştur. Bu konferansta konu ilk kez uluslararası boyutta tartışılmıştır. Geri kalmış ülkeler kirlilikte paylarının olmadığını dolayısıyla her hangi bir sorumluluk yüklenmeyeceklerini belirtmişlerdir. Buna karşın gelişmiş ülkeler "yoksulluğun ortaya çıkardığı kirlilik" kavramını ortaya atıp, gelişmemiş ülkelerin yoksulluğunun kirliliğin ana unsuru olduğunu iddia etmişlerdir.

Stockholm'den sonra Antarktika'da ozon tabakasının hasar görmesinin farkına varılması ve bunun fotoğrafla kanıtlanmasının ardından basın ve kamuoyunun, sorunun uluslararası alana taşıması girişimleri de hızlandırmıştır. Bağlayıcı bir protokol hazırlamak için Nisan 1987'de Cenevre'de gerçekleştirilen toplantıda, 1990'dan başlayarak CFC tüketiminin 1986 düzeyinde dondurulması, 1992'ye kadar % 20 azaltılması üzerine uzlaşma sağlanmıştır. Eylül 1987'de Montreal'de bağlayıcı hükümleri olan bir protokol üzerinde uzlaşılan bir başka konu olmuştur.

3.2 İklim Değişikliği Çerçeve Sözleşmesi (Rio 1992)

Rio toplantısı Avrupa, Kuzey Amerika ve Japonya'nın meydana getirdiği Kuzey ile Afrika, Latin Amerika ve bazı Asya ülkelerinin oluşturduğu Güney konferans boyunca çekişmelerini sürdürmüştür. Toplantının amaçları arasında, küresel ısınma ve sera etkisi yapan gaz emisyonlarının kısıtlanması, ülkelerin sera etkisi yaratan gaz emisyonlarını sınırlaması ve Güney ülkelerine bu yönde maddi yardımı içermiştir. Tartışmalı geçen bu toplantıda somut olarak Avrupa Topluluğu, karbon emisyon düzeylerini 2000 yılına kadar 1990 düzeyinde tutmayı önermiştir. Birçok delege bu sözleşmenin daha işlevsel olabilmesi için, sözleşmeye sera etkisine neden olan diğer gazların emisyonlarını azaltacak maddelerin konmasını önermiştir. Ama dünyanın en çok karbondioksit üreten ülkesi olan ABD, bunun endüstriyel üretimini düşüreceği ve işsizliği arttıracağı gerekçesiyle uzun süre direnmiştir (Güler ve Dural, 2007). İnsan kaynaklı sera gazı salımlarını 2000 yılına kadar 1990 düzeylerine çekme, mali kaynak, teknoloji transferi vb temel konulardaki ana yükümlülük ise, Ek I (OECD ve eski sosyalist Doğu Avrupa ülkeleri) ve Ek II (OECD ülkeleri) taraflarına bırakılmıştır.

3.3 Üçüncü Taraflar Konferansı (Kyoto 1997)

Konferans öncesi Küçük Ada Devletleri Birliği (AOSIS); Ek I Taraflarının CO_2 salımlarını 2005 yılına kadar 1990 yılı düzeyine göre % 20 azaltmalarını" hedefleyen protokol önerisi olmuştur. Buna karşılık AB, karbondioksit (CO_2) ve öteki sera gazı salımlarını 2010 yılına kadar 1990 yılı düzeyinin % 15 altına indirmek olarak açıklamıştır. Bu azaltmanın % 7.5'i 2005 yılına kadar gerçekleştirilmesi öngörülmüştür. AB'nin önerisi birçok ülke tarafından desteklenmesine karşın başta ABD, Japonya, Kanada gibi bazı gelişmiş ülkeler tarafından olumlu karşılanmamıştır. Kyoto'da OECD'nin 24 zengin ülkesi ve eski Sovyetler Birliği'nin Avrupa ülkeleri 2010 yılına kadar sera etkisi yaratan gaz emisyonlarını keseceklerini belirtmişlerdir. Fakat indirim için orman alanlarını geliştireceklerini belirtmişlerdir. Protokol, AB, ABD ve Japonya'ya 1990 yılı emisyon seviyelerine göre % 8, % 7 ve % 6 azaltma yükümlülüğü getirmiştir. Fakat ABD daha Kyoto'da dönemin Başkan Yardımcısı Al Gore'un ağzından ABD'nin niceliksel olarak belirlenmiş olan salım azaltma yükümlülüğü % 7'yi kabul etmeyeceğini açıklamıştır. Sonuç olarak Kyoto Protokol'üne göre, taraf ülkeler insan kaynaklı karbondiokside

eşdeğer sera gazı salımlarını 2008-2012 yılı arasında 1990 yılı düzeyinin en az % 5 altına indirilmesi yükümlülüğü getirmiştir. AB, hem birlik olarak hem de tek tek üye ülkeler açısından % 8'lik bir azaltma yükümlülüğünü almıştır. Bazı taraflar, bu yükümlülük döneminde sera gazı salımlarını arttırma ayrıcalığı alırken (örneğin Avusturalya % 8, İzlanda % 10 ve Norveç % 1 düzeyinde arttırabilecektir), Yeni Zelanda, Rusya Federasyonu ve Ukrayna sera gazı salımlarını 1990 yılı düzeyinde tutabilecektir (Güler ve Dural, 2007).

EK-I Ülkeleri	Ek-II Ülkeleri
AB, Belçika, İngiltere, İtalya, Norveç, Almanya, Danimarka, İrlanda, İzlanda, Portekiz, ABD, Finlandiya, İspanya, Japonya, Yeni Zelanda, Avustralya, Fransa, İsveç, Lüksemburg, Yunanistan, Avusturya, Hollanda, İsviçre, Kanada, Türkiye. Pazar Ekonomisine Geçiş Sürecinde Olan Ülkeler (PEGSÜ): Rusya Federasyonu, Çek Cumhuriyeti, Hırvatistan, Beyaz Rusya, Litvanya, Slovenya, Ukrayna, Polonya, Romanya, Letonya, Slovakya, Bulgaristan, Estonya, Macaristan.	AB, Belçika, İngiltere, İtalya, Norveç, İsveç, Almanya, Danimarka, İrlanda, İzlanda, Portekiz, ABD, Finlandiya, İspanya, Japonya, Yeni Zelanda, Avustralya, Fransa, Lüksemburg, Yunanistan, Avusturya, Hollanda, İsviçre, Kanada.

Tablo 1: *BM İklim Değişikliği Çerçeve Sözleşmesi Ekleri*

Dördüncü Taraflar Konferansı Kasım 1998 Buenos Aires'te, Beşinci Taraflar Konferansı 1999 yılında Bonn'da gerçekleştirilmiştir. Altıncı Taraflar Konferansı Kasım 2000 ve Temmuz 2001'de olmak üzere iki kez yapılmıştır Altıncı TK'nın ilki Lahey'de yapılmış ve konferans ABD ile AB arasında görüş ayrılıklarının keskinleşmesine tanık olmuştur. 2001 yılında yapılan Konferans ilkinin devamı niteliğinde sayılmış ve Bonn'da yapılmıştır. Bu konferansta Kyoto Protokolü'nün yeniden canlandırılması amaç edinilmiştir. Bu da Protokol hükümlerinden ödün verilmesiyle mümkün olmuştur. Ödün, dünya salım miktarının % 55'ni karşılayan ülkeleri kazanmak için verilmiştir. Bonn'da yapılan Taraflar Konferansı'ndan sonra sırasıyla; 2001 yılında 7. TK Fas'ın Marakeş kentinde, 8. TK 2002 yılında yeni Delhi-Hindistan, 9. TK 2003 yılında Milano-İtalya, 10. TK., 2004 yılında Buenos Aires-Arjantin, 11. TK 2005 yılında Montreal-Kanada, 12. TK 2006 yılında Nairobi-Kenya, 13. TK. 2007 yılında Bali-Endonezya, 14. TK. Poznan-Polonya, 15. TK. 2009 yılında Kopenhag- Danimarka, 16. TK. 2010 yılında Meksika, 17. TK. 2012 yılında Güney Afrika Cumhuriyetinde gerçekleştirilmiştir.

Sözleşme Listeleri	Ülkeler	Sorumluluklar
Ek-1	OECD + AB + PEGSÜ (*) (41 ülke) Türkiye (Özel şartları tanınarak)	Emisyon Azaltımı
Ek-2	OECD + AB-15 (24 ülke) Türkiye (hariç)	Teknoloji Transferi ve Mali Destek Sağlamak
Ek-1 Dışı	Diğer Ülkeler (Çin, Hindistan, Pakistan, Meksika, Brezilya, …)	Yükümlülükleri yok…

Tablo 2: *Ülkelerin Hangi Eklerde Olduğu ve Sorumlulukları (*)Pazar Ekonomisine Geçiş Sürecindeki Ülkeler*

Sonrasında, 2009 yılında ülkemiz Kyoto Protokolüne resmen taraf olmuş, ancak, Kyoto Protokolü'nün ilk uygulama döneminin bittiği 2012 tarihine kadar sayısal bir emisyon azaltım ve sınırlama hedefi almamıştır. Uluslararası iklim müzakereleri her yıl gerçekleştirilen taraflar konferansı (Conference of Parties) ismindeki çoklu oturumlu toplantılar yoluyla yürütülmekte olup, toplantı kararları toplantının gerçekleştirildiği yerin ismiyle anılmaktadır. Türkiye'nin Kyoto Protokolüne taraf olduğu 2009 yılından sonra alınan karar metinleri sırasıyla aşağıda sunulmuştur.

3.4 Kopenhag Mutabakatı (COP-15, 2009)
Kopenhag Mutabakatı'nda aşağıda sayılan kararlar alınmıştır:
- Artan ortalama küresel sıcaklığın 2°C nin altında tutulması,
- EK-I ülkelerinin sera gazı emisyonu 2020 hedeflerini; EK-I dışı ülkelerin ise, ulusal programlarına uygun azaltım faaliyetlerini (NAMAs) Sekretarya'ya iletmesi,
- Afrika, Az Gelişmiş Ülkeler ve Küçük Ada Devletlerinin uyum faaliyetlerinin finansmanına öncelik verilmesi,
- Gelişmekte olan ülkelerin uyum ve azaltım faaliyetlerinin finansmanı için 2010-2012 periyodunda 30 milyar ABD dolarlık, 2012-2020 arasında yıllık 100 milyar ABD dolar kaynak sağlaması,

- "Kopenhag Yeşil Çevre Fonu"nun oluşturulması,
- 2015 yılında bu mutabakatın uygulanmasına yönelik değerlendirme yapılması.

3.5 Cancun Anlaşması (COP-16, 2010)

Cancun Anlaşmasında 26/CP.7 kararına atıf yapılarak, ilk defa Türkiye'nin diğer EK-I ülkelerinden farklı koşullarda olduğu tüm ülkeler nezdinde tanınmıştır**.** Anlaşma ile aşağıdaki hususlar karar altına alınmıştır.

- Küresel sıcaklık artışının 2°C derece ile sınırlandırılması,
- Ek I ülkelerinin (Gelişmiş ülkeler) ekonomileri genelinde sayısal azaltım hedefleri almaları ve düşük karbonlu büyüme planları ve stratejileri yapmaları,
- Ek I dışı (Gelişmekte olan ülkeler) ülkelerin destek talep edilen NAMA'lar ve sağlanan destekler için kayıt sistemi kurması, ulusal programlarına uygun azaltım faaliyetleri gerçekleştirmeleri ve düşük karbonlu büyüme planları ve stratejilerini teşvik etmeleri,
- Yeşil İklim Fonu adı altında bir fon kurularak; gelişmekte olan ülkelere kısa dönemde (2012 yılına kadar) 30 milyar dolar, uzun dönemde ise (2020 yılından sonra her yıl) 100 milyar dolar finansman yardımı yapılması,
- İklim değişikliğine uyum konusunda 'Cancun Uyum Çerçevesi' kurulması,
- "Teknoloji İcra Komitesi ve İklim Teknoloji Merkezi ve Ağı" kurulması.

3.6 Durban İklim Konferansı (COP-17, 2011)

Konferans sonucunda; 2012 yılı sonunda ilk yükümlülük dönemi bitecek olan Kyoto Protokolü sonrasında uluslararası iklim değişikliği rejimini şekillendirmek üzere ülkeler bir kararlar paketi üstünde anlaşmaya varmıştır. Kararlar Paketi ile tüm ülke taraflarını kapsayan yasal bir anlaşmanın sağlanmasına yönelik "Durban Güçlendirilmiş Eylem Platformu Geçici Çalışma Grubu" oluşturulmuştur. 2020 yılında yürürlüğe girecek yeni anlaşmaya ilişkin çalışmaların 2015 yılı sonuna kadar tamamlanması hedeflenmiştir. Alınan kararlar şunlardır (İklim.cob,2013):

- Kyoto Protokolünün II. Yükümlülük Döneminin 1 Ocak 2013 tarihinde başlamasına ve yükümlülük döneminin müzakere sürecinde alınacak karar çerçevesinde 5 ila 8 yıl uzatılmasına karar verilmiştir.
- Kanada Kyoto Protokolünden çekileceğini, Rusya ve Japonya Protokolün II. dönemi için taahhüt almayacaklarını açıklamışlardır.
- Gelişmiş ve gelişmekte olan ülkelerin sera gazı emisyon azaltım raporlamaları için çerçeve oluşturulmuştur.
- 2020 yılında yıllık büyüklüğünün 100 milyar ABD dolarına ulaşması hedeflenen Yeşil İklim Fonu işler hale getirilmiştir.
- Teknoloji mekanizmasının 2012 yılından itibaren işler hale getirecek İklim Teknoloji Merkezi ve Ağı'nın yapısı belirlenmiştir.
- Sözleşme altında her ülkenin kendi ulusal koşullarına uygun şekilde katılabileceği, küresel emisyon azaltımlarını maliyet etkin şekilde gerçekleştirmek ve desteklemek amacıyla yeni bir mekanizma tanımlanmıştır.
- İklim değişikliğine uyum konusunda küresel koordinasyonu sağlayacak Uyum Komitesi kurulmuştur

4   Türkiye'de Çevre Politikalarına İlişkin Yasal Düzenlemelerde Sürdürülebilir Gelişme İlkesi

Çevre politikalarının gelişimine geçmeden önce bu konudaki iki temel düzenlemeye değinmek uygun olacaktır. İlki 1982 Anayasası diğeri de 2872 sayılı Çevre Kanunu'dur. 1982 Anayasası'nın 56. maddesinde yer alan "Herkes sağlıklı ve dengeli bir çevrede yaşama hakkına sahiptir. Çevreyi geliştirmek, çevre sağlığını korumak ve çevre kirlenmesini önlemek, devletin ve vatandaşların ödevidir." hükmü ile çevreyi dolaylı olarak ele alan hükümleri çevreye bakış açısına ilişkin değişikliğin de yansımasıdır. Kuşkusuz 1982 Anayasası'nın çevreye ilişkin düzenlemesi yalnızca bu hüküm değildir. Anayasa'da çevreye ilişkin çok sayıda düzenleme mevcuttur. 1982 Anayasası'nın yürürlüğe girmesinden sonra çıkarılmış olan 2872 sayılı Çevre Kanunu da bu konuda atılan ve sürdürülebilir gelişmeye yer veren bir temel düzenlemedir. 2872 sayılı Kanununda (5491 sayılı Kanunla yapılan değişiklik sonucunda) sürdürülebilir kalkınma ve sürdürülebilir çevre kavramları kullanılmıştır (Keleş, 2013).

Keleş'in de (2013) belirttiği üzere çevre ile ilgili ilk yasal düzenlemeler bütün dünyada olduğu gibi ülkemizde de insan ve çevre sağlığının düzenlenmesine ilişkin olanlardır. Bu bakımdan ilk yasal düzenleme 1930 yılında çıkarılan 1593 sayılı Umumi Hıfzısıhha Kanunu'dur. Yine 1930 yılında çıkarılan ve 2005 yılına dek yürürlükte kalan 1580 sayılı Belediye Kanunu'nda da çevre konusunun aynı bağlamda ele alındığı ve kent ve kasabaların sağlık koşullarının iyileştirilmesi konusunda belediyelerin görevli kılındıkları belirtilebilir. 1961 Anayasası'nda da çevre konusu sağlık hakkı başlığı altında "Devlet, herkesin, beden ve ruh sağlığı içinde yaşamasını sağlamakla ödevlidir" şeklinde ele alınmıştır.

1973-1977 yıllarını kapsayan III. Beş Yıllık Kalkınma Planı'nda ise çevre bölümü ilk kez ayrı bir başlık olarak ele alınmış ve kalkınmaya zarar verebilecek çevre politikalarının uygulanmayacağı belirtilmiştir (Keleş vd., 2012). Bu yönüyle sözkonusu planın çevre konusunda negatif bir yaklaşım içerdiği belirtilmektedir (Keleş,

2013). Bu negatif yaklaşımın nedeninin 1972 yılındaki Stockholm Konferansı'nda azgelişmiş ülkelerin tezleriyle uyumluluk gösterdiği söylenebilir (Mengi ve Algan, 2003). Bu yaklaşım 1979-1983 dönemi için hazırlanan IV. Beş Yıllık Kalkınma Planı'nda terk edilmiş ve çevrenin, sanayileşme, tarımda modernleşme ve kentleşme sürecinde önemli bir öğe ve etken olarak dikkate alınması gerektiği; çevre sorunlarının ortaya çıkmadan önce önlenmelerine öncelik verilmesi gerektiği; kirliliğin yoğun olduğu yerlere yönelik projelere öncelik verilmesi gerektiği ve bu süreçte kararların yerel yönetimlere bırakılması ve sivil toplum örgütlerine vurgu bu planın çevreye ilişkin ilkeleri olarak özetlenebilir (Keleş vd., 2012). Bu yönüyle planda önleyici politikalar esas alınmış, 1978 yılında Başbakanlık Çevre Müsteşarlığı kurulmuş ve aynı plan döneminde 2872 sayılı Çevre Kanunu yürürlüğe girmiştir (Mengi ve Algan, 2003). Yine aynı Plan döneminde 1984 yılında Çevre Müsteşarlığı Çevre Genel Müdürlüğü'ne dönüştürülmüştür (Keleş, 2013).

V. Beş Yıllık Kalkınma Planında (1985-1989) ise sürdürülebilir gelişme kavramı kaynakların gelecek kuşakların da yararlanabilmesi için en iyi biçimde korunması ve geliştirilmesi şeklinde yer almıştır (Keleş vd., 2012). Bu planda Ortak Geleceğimiz Raporu'nun etkilerinin olduğu söylenmektedir (Mengi ve Algan, 2003). Bu Plan döneminde 1989 yılında Çevre Genel Müdürlüğü yeniden Çevre Müsteşarlığı'na dönüştürülmüştür (Keleş, 2013).

VI. Beş Yıllık Kalkınma Planı'nda (1990-1194), sürdürülebilir gelişme kavramına doğrudan yer verilmemiş olmakla birlikte söz konusu ilkeyi esas alan bir yaklaşım benimsenmiş ve küresel çevre politikalarının etkileri doğrudan varlık bulmuştur (Keleş vd., 2012; Mengi ve Algan, 2003). Bu Plan döneminin belki de en önemli özelliği 1991 yılında Çevre Bakanlığı'nın kurulmuş olmasıdır.

VII. Beş Yıllık Kalkınma Planı'nda (1996-2000) ise sürdürülebilir gelişme kavramı temel strateji haline getirilmiştir. Bu plan döneminde hazırlanmış olan ve sürdürülebilir gelişme kavramını merkeze alan Ulusal Çevre Stratejisi Eylem Planı (UÇEP) çevre konusundaki uluslararası sorumlulukların belirlendiği bir belgedir. UÇEP, ilgili tüm kurum ve kuruluşların yanı sıra sivil toplum örgütleri, özel sektör temsilcileri ve bilimsel kuruluşlardan çok sayıda temsilcinin katılımıyla hazırlanmış olan bir belge niteliği taşımakta ve sürdürülebilir nitelikte bir ekonomik, toplumsal ve kültürel gelişme sağlanması hedeflenmiştir. UÇEP'in sürdürülebilir gelişme konusundaki politikaları eyleme dönüştürecek öncelikleri belirleyen, Türkiye'nin sürdürülebilir gelişme konusunda küresel ve bölgesel düzeydeki uluslararası sorumluluklarını yerine getirebileceği bir belge niteliğine sahip olduğu belirtilmektedir. Ancak UÇEP'in yasal bir nitelik taşımaması Türkiye'deki resmi politikalarında sürdürülebilir gelişme ilkesinin öncelikli hedefleri arasında yer almadığı şeklinde yorumlanmaktadır (Mengi ve Algan, 2003).Yine aynı dönemde gündeme gelen ve 1996 yılında başlatılan Ulusal Gündem 21 Projesi'nin de sürdürülebilir gelişme konusunda atılmış olan önemli bir adım olduğu ancak bunun da UÇEP gibi yeterince uygulama alanı bulamadığı belirtilmektedir (Mengi ve Algan, 2003).

VIII. Beş Yıllık Kalkınma Planı'nda (2001-2005) sürdürülebilir gelişme konusunda yeterince bir başarı elde edilemediği belirtilmektedir (Keleş vd., 2012). Bu Plan döneminde çevre yönetimi konusunda önemli bir değişiklik gerçekleştirilmiş ve 1991 yılında kurulan Çevre Bakanlığı Çevre ve Orman Bakanlığı haline getirilmiştir (Keleş, 2013).

Son plan olan IX. Kalkınma Planı'nda (2007-2013) sürdürülebilir gelişme konusunda ikircikli ve kararsız bir tutum benimsendiği ve kavramın Plan'ın tümünde yalnızca bir kez kullanıldığı, ancak sürdürülebilirlik kavramının sık sık ama "sürüp gitme, kesintiye uğramama" anlamında kullanıldığı belirtilmektedir (Keleş vd., 2012). Bu Plan döneminde de "12 Haziran 2011 genel seçimlerinden önce Meclis'ten aldığı kanun hükmünde kararname çıkarma yetkisini bakanlık sistemini değiştirmek yönünde kullanan hükümet, seçimlerden önce, kent ve çevre politikalarını yönlendirme konusunda yetkili olmak üzere Çevre, Orman ve Şehircilik Bakanlığı'nın kurulmasına ilişkin kanun hükmünde kararname çıkarmışsa da seçimlerden sonra yeni bir kararname ile bu alanda iki farklı bakanlık kurulmuştur: Çevre ve Şehircilik Bakanlığı ile Orman ve Su İşleri Bakanlığı" (Turan, 2011).

5 Sürdürülebilir Gelişme İlkesi Bağlamında Türkiye'de İklim Değişikliği Politikaları

Günümüzde Türkiye'nin birçok alanda çevre sorunlarına ilişkin politikalar geliştirdiği söylenebilir. Genel olarak ifade etmek gerekirse çevre politikalarında ekonomik kalkınma ile çatışmalı bir politik sürecin yaşandığı belirtilebilir.

Türkiye, Rio'da düzenlenen Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi ve Kyoto Protokolü'nde belirtilen gelişmiş ülkeler grubunda gösterilmesine itiraz etmiştir. Türkiye'nin temel itirazı Kyoto'da Türkiye'nin gelişmiş ülkeler grubundan çıkartılmasına yönelik olmuştur. Fakat Türkiye'nin bu itirazı ABD ve AB tarafından kabul edilmemiştir. Kanada, Avustralya ve bazı OECD üyesi ülkeleri, Türkiye'nin sözleşmenin eklerinden çıkma isteğini anlayışla karşıladıklarını açıklamışlar, ancak Türkiye'nin gönüllü yükümlülük almasını istemişlerdir (Sümer, 1997). Türkiye hem OECD ve eski Doğu Blok'u ülkelerinin bulunduğu Ek I ve yalnızca OECD ve AB ülkelerinin bulunduğu Ek II'de bulunmaktaydı. Dolayısıyla ABD, Japonya ve AB ülkeleri gibi aynı salım indirimine gitmek zorunda kalmıştır. Üstelik iki listede birden yer aldığından pazar ekonomisine geçiş sürecinde bulunana eski Doğu Blok'u ülkelerinin yararlandığı haklardan yararlanamayacağı gibi, gelişmekte olan ülkelerin Sözleşme uyarınca yerine getirmekle yükümlü oldukları akçal kaynak ve teknoloji karşılanmasına da katkıda

bulunma yükümlülüğü altına alınmıştır (Duru, 2000). 1998 Taraflar Konferansında ve yardımcı organlar toplantılarında da istemini tekrarlamış, fakat başta ABD ve AB olmak üzere diğer gelişmiş ülkeler karşı çıkmıştır. Türkiye'nin isteği 2000 Lahey ve 2001 Bonn Konferanslarında da yanıt bulamamıştır.

AB adaylık süreci içinde Türkiye'nin Kophenag kriterlerine uyum sağlamak üzere bir Ulusal Program hazırlaması öngörülmüştür. Bunun üzerine Türkiye Katılım Ortaklığı Belgesi ve Çevre Yönetmeliğini 2001 başlarında onaylamasının ardından, Türkiye, AB müktesebatının üstlenilmesine ilişkin 26 Mart 2001 tarihinde Ulusal Programını Komisyona iletmiştir. Ulusal Programın giriş bölümünde Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi sürecine katılmak üzere çalışmaların sürdürüldüğü ve sera gazı salım envanterlerinin çıkarılacağı belirtilmektedir.

Avrupa Birliği, 2002 tarihinde Johannesburg'da gerçekleşen Sürdürülebilir Kalkınma Dünya Zirvesi'nden önce üyelerinin Kyoto Protokolü'nün onay sürecini tamamlamalarını istemiştir. Temmuz 2001 tarihinde Bonn ve Kasım 2001 tarihli Marakeş anlaşmalarıyla özellikle Kyoto Protokolünün düzeneklerinin uygulama kurallarının belli olması üzerine, üye devletler onay işlemlerine başlamışlardır. AB, Mayıs 2002 tarihinde 15 üye devletin onay işlemlerini tamamlaması sonucunda, Kyoto Protokolünü onayladığını açıklamıştır. Bu çerçevede Türkiye Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesini 16 Eylül 2003 tarihinde TBMM'de 4990 sayılı Kanun ile onaylamış ve 24 Mayıs 2004 tarihi itibarıyla sözleşmeye taraf olmuştur. Türkiye iklim değişikliği konusunda sürdürülen bilimsel ve teknik çalışmaların yanı sıra ulusal çalışmaların daha etkin bir şekilde yürütülmesi, eşgüdüm sağlanması, strateji belirlenmesi ve kararların bir uzlaşmaya dayanarak alınması amacıyla 2001 yılında Başbakanlık Genelgesi ile İklim Değişikliği Koordinasyon Kurulu (İDKK), BM/İDÇS'ne taraf olmamızdan doğan sorumluluklarını göz önüne alarak 2004 yılında yeni bir Başbakanlık Genelgesi ile tekrar düzenlemiştir. Yeni İklim Değişikliği Koordinasyon Kurulu kapsamında, Türkiye'nin Sözleşme Sekretaryasına vermekle yükümlü olduğu Ulusal Bildirimin içeriği dikkate alınarak sekiz adet çalışma grubu oluşturulmuştur. Türkiye AB'ye adaylık süreci ve 2001 tarihinde Marakeş'te gerçekleştirilen 7. Taraflar Konferansı'nda alınan "Türkiye'nin isminin Ek II'den silinmesi ve özgün koşulları dikkate alınarak, diğer Ek I ülkelerinden farklı bir konumda Ek I'de yer alacağı şeklinde özetlenen 26/CP.7 numaralı karar, Türkiye'nin Sözleşmeye taraf olma sürecini belirleyen en önemli gelişme olmuştur (Güler ve Dural, 2007).

Türkiye 5386 Sayılı Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesine Yönelik Kyoto Protokolüne Katılmamızın Uygun Bulunduğuna Dair Kanun'un 5 Şubat 2009'da Türkiye Büyük Millet Meclisi'nce kabulü ve 13 Mayıs 2009 tarih ve 2009/14979 Sayılı Bakanlar Kurulu Kararı'nın ardından, katılım aracının Birleşmiş Milletlere sunulmasıyla 26 Ağustos 2009 tarihinde Kyoto Protokolü'ne taraf olmuştur. Protokol kabul edildiğinde BMİDÇS tarafı olmayan Türkiye, EK-I taraflarının sayısallaştırılmış salım sınırlama veya azaltım yükümlülüklerinin tanımlandığı Protokol EK-B listesine dâhil edilmemiştir. Dolayısıyla, Protokol'ün 2008-2012 yıllarını kapsayan birinci yükümlülük döneminde Türkiye'nin herhangi bir sayısallaştırılmış salım sınırlama veya azaltım yükümlülüğü bulunmamaktadır.

Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi 17. Taraflar Konferansı (COP 17) ile Kyoto Protokolü 7. Taraflar Toplantısı (CMP 7) sonunda 2012 yılından sonra geçerli olacak iklim değişikliği rejiminin belirlenmesine ilişkin bir yol haritası üzerinde anlaşmaya varılmış olmasını Türkiye memnuniyetle karşılamıştır. Durban Taraflar Konferansında ayrıca, özel konumu Marakeş (2001) ve Cancun (2010) Taraflar Konferanslarında tanınmış olan Türkiye'ye, salım azaltımı, iklim değişikliğine uyum, teknoloji geliştirilmesi ve transferi, kapasite oluşturma ve finansman alanlarında sağlanacak desteğin modalitelerinin belirlenmesine ilişkin görüşmelerin sürdürülmesi karara bağlanmıştır. Türkiye iklim değişikliğiyle mücadelede 'ortak fakat farklılaştırılmış sorumluluklar' ve 'her ülkenin kendi imkan ve kabiliyetlerine göre değerlendirilmesi' ilkeleri çerçevesinde, adil, kapsamlı, kurallara dayalı ve hukuken bağlayıcı bir uluslararası düzenlemeye gidilmesini savunmuştur (ÇEVKO, 2013).

Durban'da Taraflar Konferansı ayrıca; Türkiye'nin Sözleşmenin Ek-1 listesindeki ülkelerin konumundan farklı bir konumda olduğunun tanındığı 26/CP.7 ve 1/CP.16 sayılı kararları hatırlatarak, "Taraflar Konferansınca Özgün koşulları tanınan Taraflara, Sözleşmenin uygulanmasına yardımcı olmak için azaltım, uyum, teknoloji geliştirme ve transferi, kapasite geliştirme ve finansman konularında destek sağlanmasına yönelik usulleri tartışmaya devam etmek konusunda anlaşmaya varır." kararı almıştır.

Kopenhag İklim Zirvesi müzakerelerindeki çalışmaların sonucunda oluşturulan içerik daha sonraki yıllardaki Taraflar Konferanslarına taşınmış ve 2010 yılında kabul edilen Cancun Anlaşması ve Aralık 2011 yılında Güney Afrika'nın Durban kentinde yapılan Konferansta kabul edilen kararlar paketi içerisinde bazı kısımları karara bağlanabilmiştir (İklim Cob, 2013).

6 Sonuç Yerine: Sürdürülebilir Gelişme Çevre ile Kalkınma Arasındaki Çatışmanın Çözümü İçin Bir Araç Olabilir mi?

Bu soruya yanıt vermek için öncelikle Kalkınma Bakanlığı tarafından hazırlanan Rio'dan Rio'ya: Türkiye'de Sürdürülebilir Kalkınmanın Mevcut Durumu (2012) isimli taslak rapora değinmek uygun olacaktır. Rapor'da, yoksulluğun giderilmesi, sürdürülebilir üretim ve tüketim ve sürdürülebilir doğal kaynak yönetimi sürdürülebilir

kalkınma için atılması gereken somut konular olarak belirlenmiştir. Bu konular RİO+20'ye hazırlık için belirlenmiş olan öncelikli konularadır. Rapor'da VI. Beş Yıllık Kalkınma Planı'ndan itibaren sürdürülebilir gelişme ilkesine yer verildiği, VII. Beş Yıllık Kalkınma Planı döneminde 1992 Rio Zirvesi ve sonrasındaki gelişmelerin etkili olduğu, Gündem 21, BM Çölleşme ile Mücadele Sözleşmesi, BM İklim Değişikliği Çerçeve Sözleşmesi, BM Biyolojik Çeşitlilik Sözleşmesi gibi zirve çıktılarının Türkiye'nin sürdürülebilir politikalarını etkileyen belgeler olarak nitelendirilmiştir. Türkiye'nin AB'ye üyelik sürecinin de bu politikaları etkileyen önemli bir etmen olduğunun da altı çizilmiştir. Özellikle Gündem 21 ve onunla bağlantılı olana Türkiye Yerel Gündem 21 Programı'nın 2001 yılında en iyi uygulama örneği seçilmesine atıf yapılarak bu bağlamda 5393 sayılı Belediye Kanunu ile kent konseylerinin kuruluşuna yasal zemin hazırlandığı belirtilmiştir. Yine 2004 yılında Ulusal Sürdürülebilir Kalkınma Komisyonu'nun kurulması, 2004-2006 yılları için hazırlanmış olan Ön Ulusal Kalkınma Planı'nın, 2007-2023 yılları için hazırlanmış olan AB Entegre Çevre Uyum Stratejisi ile birlikte yapısal, yönlendirici değişim programlarının (eğitim, sağlık ve sosyal güvenlik) ve yasal değişikliklerin sürdürülebilir kalkınma anlayışına uygun olduğu vurgulanmıştır. Rapor'da dikkat çeken konulardan birisi de iklim değişikliğinin sürdürülebilir kalkınma için en büyük tehdit olarak ifade edilmesidir. Öte yandan iklim değişikliğinin doğal afetlerin oluşturduğu risk düzeyini de etkilediği, bu bakımdan sürdürülebilir kalkınmanın sağlanması açısından iklim değişikliğinin gelecekte ele alınması gereken en önemli konulardan biri olarak saptanmıştır. Çünkü iklim değişikliğinin afet risklerinin mekânsal dağılımını ve sıklığını etkilediği gibi diğer bir çok sosyoekonomik ve çevresel değişken üzerinde de etkili olduğu belirtilmektedir. Bu bağlamda önemli bir sorun alanı olarak görülen iklim değişikliği için 2007 yılında Türkiye'nin İklim Değişikliği Birinci Bildirimi, Ulusal İklim Değişikliği Eylem Planı ve Taslak İklim Değişikliğine Uyum Stratejisi'ni hazırlamış olduğu vurgulanmakta ve söz konusu düzenlemelerde iklim değişikliği sorununun üstesinden gelinmeye çalışıldığı ifade edilmektedir. Rapor'un genel olarak sürdürülebilir gelişme ilkesinin ekonomik, sosyal ve çevresel boyutları esas alınarak hazırlanmış olduğunu belirtebiliriz. Sorunların tespiti konusundaki güçlü yönüne rağmen çevresel sürdürülebilirlik ilkesinin hayata geçirilmesi konusunda ise daha az etkili bir tutumun sergilenmiş olduğunu en azından çevreye bir yaşam alanından çok doğal kaynak olarak bakıldığını belirtmek yanlış olmayacaktır.

Sonuç olarak Türkiye'de, çevre yönetimine ilişkin sorunlar, doğal varlıklar üzerinde baskılar, çevre hakkının kullanımına ilişkin sorunlar ve çevre sorunlarını algılama sorunları gibi sorunların bulunduğunu ve bu sorunların da gelişmekte olan bir ülkenin kalkınma refleksinden kaynaklandığını belirtebiliriz. Sürdürülebilir gelişme ilkesinin çevre ile kalkınma arasındaki çatışmanın çözümü için bir araç olabilmesi için Türkiye'nin kalkınma sorununu aşması gerektiği ise yaygın bir kanıdır.

Küresel İklim Değişikliği Sorununa Çözüm İçin Nasıl Bir Sürdürülebilir Kalkınma Anlayışına İhtiyacımız Var?

What Kind of Sustainable Development do we need for the Solution of Global Climate Change Problems?

Dr. Ayşen Satır (Ministry of Environment and Forestry, Turkey)
Asst. Prof. Dr. Hakan Reyhan (Hitit University, Turkey)

Abstract

The base issue is for sustainable development is removed on discrepancies of arising from ecological, economic and cultural concepts. Sustainability is procurable with balance on this three factor. Setting up this balance is presented to change of life style and economic manner especially development countries. Sustainability manner is not only in countries, but also providing for base on ethics and climate justice based upon rationalism in abroad. For this reason, sustainable development approach have need to review is to remedy of solutions from the point of global climate change/ global warming as known prime environment problems.

1 Giriş

İklim değişimi, etkileri bakımından şu anda dünyada en önemli çevresel, sosyal ve ekonomik tehdidi oluşturmaktadır. İktisadi kalkınma ile insanların refah ve mutluluğunun artırılması hedeflenirken küresel ısınma ve küresel iklim değişikliği ortaya çıkardığı sosyo-ekonomik maliyetlerle bu refah öngörüsünü tehdit etmektedir. Sürdürülebilir kalkınma politikaları ile küresel kaynakların kullanılması sonucu ortaya çıkan net fayda azamileştirilerek ekonomik verimliliğin sağlanması mümkündür. Ancak bu "kaynak kullanımı"nın ne ölçüde olması durumunda ekolojik döngü ve çevresel sürdürülebilirlik sağlanabilir, özel olarak da küresel ısınma engellenebilir? İşte temel tartışma sorusu budur. Bu soruya verilen her cevap birçok farklı sürdürülebilir kalkınma yaklaşımını ve modelini gündeme getirmiştir. Küresel iklim değişikliği sorununa klasik sürdürülebilir kalkınma yaklaşımı ile çözüm bulunabileceği yönündeki değerlendirmelerin genellikle soruna ancak yüzeysel bir çözüm getireceğini düşündürmektedir. Sorunun temelden çözümünün ise daha radikal bir çevreci yaklaşımla mümkün olabileceği düşüncesi, "kalkınma" kavramının kapsamı, içeriği, getirdikleri üzerindeki tartışmaları yoğunlaştırmaktadır.

Bu süreçte küresel iklim değişikliği/ küresel ısınma sorununun ortaya çıkardığı sosyo-ekonomik maliyet sadece klasik sürdürülebilir kalkınma yaklaşımı ile değil, "çevresel adalet", iklim adaleti gibi yeni politik ekoloji kavramlarıyla birlikte politik gündeme taşınmaya başlamıştır. Yani artık anlaşılmaktadır ki, mevcut sürdürülebilir kalkınma perspektifi doğanın/ekolojik sisteminin aldığı yaraları tedavi etmeye yetmemektedir. Temelden çözümcü ve bütüncül stratejilerin geliştirilmesi gerekmektedir. Bu bildiride, küresel iklim değişikliği ve sürdürülebilir kalkınma yaklaşımı arasındaki bağlantı bu yeni eğilim çerçevesinde ele alınacaktır.

2 Çevre Sorunlarına Sürdürülebilir Kalkınmacı Yaklaşım

Birleşmiş Milletler Çevre Konferansı, ekoloji ve kalkınma arasındaki dengeyi ön plana çıkaran "eko kalkınma" politikası çerçevesinde sürdürülebilir kalkınmanın iki temel öğesi olan "insan merkezlilik" ve "gelecek nesillerin kaynaklarının korunması" konularını gündeme getirmiştir. Ancak sürdürülebilir kalkınmanın küresel çapta aktif bir politika hâline dönüşmesi 20 yıllık bir gecikme ile, 1992 Rio Zirve'sinden sonra mümkün olabilmiştir. (Dulupçu, 2010) Dünyadaki "sürdürülemez" kalkınmanın önündeki engellerin başında yoksulluk, nüfus artışı ve etkin olmayan kaynak kullanımı ve zengin ülkelerdeki israfa kaçan tüketim gelmektedir. Yeşil alanların azalması, besin gereksinimini karşılayan arazinin giderek küçülmesi, hava kirliliğinin artışı, ozon tabakasının delinmesi, iklim değişikliği ve ekolojik dengenin bozulması gibi sorunlar, uluslararası ortaklaşa önlem almayı kaçınılmaz hale getirmiştir. (Öğütçü, 2004) Bu süreçte gerçekleşen "tüketim toplumu" eleştirisi ekolojik krizin ağırlıklı olarak sanayileşmiş ülkelerin eseri olduğu ve bu yüzden öncelikle bedel ödemesi gereken ülkelerin bu ülkeler olması gerektiği şeklinde tezahür eden, "sürdürülebilir kalkınmaya yönelik üçüncü dünyacı eleştirel tutumu" kuvvetlendirmiştir. Bu yaklaşıma göre; sürdürülebilir kalkınma politikalarının üçüncü dünyanın yoksul ülkelerinin kalkınma sorununun çözümünü engelleyici boyutta olmaması; dünyasal eşitsizliğin ve yoksulluğun ortadan kaldırılması durumunda bu politikaların dünyada geçerli olabileceği vurgulanmıştır. Özellikle, Üçüncü Dünya'nın etkin sözcülerinden Hindistan Başbakanı İndira Gandhi'nin 1972'deki Stockholm Çevre Konferansı'nda sarf ettiği şu sözler bu eleştirel tutumu çarpıcı bir şekilde özetlemektedir: "Yoksulluk ve karşılanmayan insan gereksinimleri, en önemli kirlenme biçimleri değil midir? Köylerimizde ve gecekondularımızda yaşayan kitlelere, yaşamlarının kaynağında mikroplar içerisinde bulunurken havayı, denizleri ve akarsuları temiz tutmanın zorunluluğunu nasıl anlatabiliriz? Çevreyi, yoksulluk koşulları içerisinde iyileştirmek imkânsızdır" (Keleş-Çoban-Hamamcı, 2009)

Çevre sorunları ve sürdürülebilir kalkınmacı yaklaşım "Sürdürülebilir kalkınmanın çevre sorunlarıyla ilgili dört temel konusu üzerinde yoğunlaşmaktadır: (i) ne ölçüde çevresel koruma gereklidir ve ekonomik kalkınma gibi diğer amaçlarla kıyaslandığında öncelik neye göre verilmelidir? (ii) çevresel eşitlik ve adaletin anlamı; (iii) çevresel amaçları formüle etme, uygulama ve meşrulaştırmada daha kapsayıcı ve katılımcı politika–oluşturma süreçlerinin rolü; (ıv) daha çevre dostu bir ekonomik sisteme yönelmek için gereken siyasal eylemler ve kurumsal yapılanmalar nasıl olmalıdır? üzerinedir. (Jacobs, 2003) Bu yüzden en güçlü ekolojik ortamda farklı doğal sermaye varlıklarının özellikle yenilenemez kaynaklar açısından yenilenebilenlerin ikamesi, piyasa değerlemesine dayanan sürdürülebilir kalkınma, doğal-sermaye açısından yapılan yaklaşımların yetersizliğini gözler önüne sermektedir. (Burkett, 2008) Herhangi bir piyasa-temelli ikame işlemi, parasal fiyatlarla kayıt altına alınamayan fakat önemsenmesi gereken ekolojik kullanım değerlerini hesaba katmayı zorunlu kılmaktadır.

Yoksullukla savaşım, doğal kaynaklardan yararlanma adâleti, nüfus denetimi ve çevre dostu teknolojilerin geliştirilmesi sürdürülebilir kalkınma ile doğrudan ilişkilidir (UNCED, 2013). Çevre sorunları; az gelişmiş ülkelerde; yoksulluk, açlık, nüfus artışı, dengesiz toprak dağılımı, doğal kaynakların tüketimi; gelişmiş ülkelerde ise endüstriyel kirlenme, katı atıklardaki artış, sınırsız tüketim olarak görülmektedir (Merchant, 1992). Söz konusu sorunların açıklanması gelişmiş ülkelerde yaşananların sanayileşme ve kalkınma sonrasında yaşanan sorunlar olduğunu, azgelişmiş ülkelerde yaşanan sorunların ise belirli bir gelişme süreci gerektirdiğini göstermiştir. Bu durum, iktisadî büyüme olgusunda kalkınma ve doğal kaynakların tüketilmesi arasındaki ilişkinin tartışılmasını gündeme getirmektedir. Bir yandan hızlı iktisadi büyümeden kaynaklanan, diğer bir yandan ise yoksulluktan kaynaklanan sorunlar vardır. Yoksulluğu önleme ve iktisadi büyüme stratejileri mevcut sürdürülebilir kalkınma yaklaşımları içerisinde şimdiye kadar yer edinebilmiştir. Ancak, bu çerçevede ele alınan klasik sürdürülebilir kalkınma politikalarının küresel ısınma/küresel iklim değişikliği sorunu gittikçe derinleşirken yeniden değerlendirilmesi gerekliliği de tartışılmaktadır.

3 Sürdürülebilir Kalkınma ve İklim Değişikliği İlişkisi

Sürdürülebilir Kalkınma (SK) kavramının ardında basit ama önemli bir fikir bulunmaktadır: "Günümüzde ve gelecekteki kuşaklar da dâhil olmak üzere herkes için çok daha yüksek bir yaşam kalitesine erişmek felsefesi". Kavram, ilk olarak 1987 Brundtland Raporu'nda *"bugünün ihtiyaçlarının, gelecek kuşakların kendi ihtiyaçlarını karşılama kabiliyetlerinden ödün vermeden karşılanması"* olarak tanımlanmış, 1997 yılında Amsterdam Antlaşmasıyla Avrupa Birliği'nin (AB) temel hedefi haline gelmiştir. Ancak ilk planlı Strateji 2001 Gothenburg Avrupa Konseyi'ne kadar geliştirilememiştir. 2001 Gothenburg Avrupa Konseyinde, AB Ülkeleri, "Daha İyi Bir Dünya İçin Sürdürülebilir Bir Avrupa ve Sürdürülebilir Kalkınma için ise Avrupa Stratejisi*"* hedefiyle SK Avrupa Birliği temelinde aşılması güç fakat gerekli bir sorunsal olduğunu ifade etmişlerdir. Gothenburg Stratejisi ismiyle tanınan bu strateji, 2010 yılına kadar olan dönem için hedefler belirlemiştir. Strateji SK konusunda kilit sayılabilecek öncelikli alanlar; İklim Değişikliği ve Temiz Enerji, Sürdürülebilir Ulaşım, Sürdürülebilir Tüketim ve Üretim, Doğal Kaynakların Korunması, Halk Sağlığı ve Sosyal Refah, Nüfus ve Göç ile Küresel Yoksulluk temalarıdır. (European Commission, 26/7/2013) Sürdürülebilirlik için, başta toplumsal, ekonomik ve siyasal alanlarda olmak üzere, insan yaşamının her alanında yeni düzenlemeler yapılmalıdır. Modern Toplumda Sürdürülebilirlik Arayışları Sanayileşme ve İklim Değişikliği sonuçları bakımından (Kılıç, 2006) neden olmaktadır.

2007 yılında ortaya konulan Sürdürülebilir Kalkınma Stratejisi üzerine ilerleme raporunda, küresel ısınma ve enerjinin de dâhil olduğu öncelikli alanlarda, bu konuda ilerlemenin somut bir eyleme dönüşmediği de ifade edilmektedir (AB-Türkiye Görünüm, 2000). Son 20 yılda dünyada yaşanan gelişmeler ve değişimler bu gündemin daha da güçlendirilmesi ve desteklenmesine olan ihtiyacı artırmıştır (Kalkınma Bakanlığı, 2012). Gerçekte Sürdürülebilir kalkınmanın küresel ısınma ile ilintili olduğu gerçeği ortadadır. Çünkü; küresel ısınma nedeniyle küresel kaynakların birçoğu yok olmakta bir kısmı ise istenilen etkinlikte kullanılamayarak ekonomik verimliliği engellenmektedir. İklim Değişikliği'nin doğrudan ve parasal olarak ölçülebilen zararları UNEP tarafından Johannesburg Zirvesinde yayınlanmıştır. Zirve sonrasındaki değerlendirme raporunda 20. Yüzyıl'daki iklimsel afetlerin yılda %10 hızla şiddetlenip sıklaştığı belirtilerek 1987-2002 döneminde ödenen hasar tazminatlarının 1 trilyon $ düzeyine eriştiği ve 2002 zararının 150 milyar $ olduğu ifade edilmektedir. İklim değişikliği ile ilgili gerekli önlemler alınmadığı takdirde, küresel ısınmanın dünya ekonomisine 2100 yılına kadar birikimli maliyetinin 2 katrilyon $ civarında olacağı öngörülmektedir. Bu büyüklük dünya üretiminde yıllık % 6-8 oranında bir küçülmeye işaret etmektedir. Ortalama 4 derecelik bir ısı artışının yiyecek sektöründe 9,9 milyar €, akaryakıt sektöründe 5,9 milyar € ve bankacılık sektöründe 8,9 milyar € sermayeyi riske atacağı tahmin edilmektedir. Ayrıca küresel ısınmanın çeşitli etkileriyle doğrudan insan sağlığı üzerinde de tehdit oluşturduğu ve artan sayıda ölümlere neden olduğu da ortaya konulmaktadır. (United Nations Environment Programme, 2002) Bütün bu göstergeler çerçevesinde küresel iklim değişikliğinin getirdiği sosyoekonomik maliyetler göz önünde bulundurulduğunda; "sürdürülebilir kalkınma" stratejilerinin, yeni çevre sorunlar dikkate alınarak, "iklim adaleti", "çevresel adalet" vs. gibi kavramlarla –küresel bir düzlem içerisinde- yeniden değerlendirilmesi gerektiği ortadır.

Çevresel adalet fikri, içinde bulunduğumuz çağda etkileri gündelik yaşamda daha fazla belirginleşmeye başlayan ve artık dünya ekonomisinin istikrarı açısından da küresel bir tehdit olarak algılanmakta olan ekolojik krizin nedenleri üzerine odaklanarak bu çerçevede adaletli bir çözüm oluşturulması gerekliliği üzerinden başlayan bir tartışma sürecinde şekillenmiştir. Şöyle ki; daha önce de yer yer belirtildiği gibi, ekolojik krizin oluşmasında en büyük pay sahibi olan sanayileşmiş ülkelerin çözüm sürecinde de en fazla yükümlülüğü üzerlerine almaları gerekliliği, bu fikrin temel argümanı olmuştur. Az gelişmiş ülkelerin kısa sürede çözmek zorunda oldukları kalkınma sorunlarının dünya ekosistemine yeni baskılar oluşturmaması için az gelişmiş ülkelerin ekonomik sorunlarının çözümü konusunda gelişmiş ülkelerin önemli ölçüde yükümlülükler üstlenmesi gerekliliği bu fikir çerçevesinde tartışılmaktadır. Bu açıdan çevresel adalet fikri, sürdürülebilir kalkınma kavramının içeriğinde "sosyal adalet"in daha hissedilir olmasını salık vermektedir (Dobson, 2003).

İklim adaleti kavramını da çevresel adalet fikrinin küresel iklim değişikliği süreci içerisindeki daha özel biçimi olarak değerlendirmek gerekir. Son zamanlarda küresel iklim değişikliğinin yarattığı sonuçlara karşı yeni bir toplumsal hareket olarak da beliren iklim adaleti hareketinin temel varsayımı iklim değişikliğinde en büyük paya sahip olan zengin/sanayileşmiş Kuzey ülkelerinin, az gelişmiş/gelişmekte olan Güney ülkelerine "ekolojik borç" yükümlülüklerinin olduğudur (Roberts-Parks, 2007). Bu çerçevede Kuzey'den Güney'e olan iklim borçlarının tazminatı ve bu bağlamda bir maddi transferin sağlanması; öncelikle Kuzey ülkelerinin ve Güney ülkelerinin seçkin sınıflarının aşırı tüketimleri açısından bir sınırlandırmaların getirilmesi iklim adaleti hareketinin temel argümanlarını oluşturmaktadır (Benlisoy, 2009). Bunların gerçekleşmesi durumunda sürdürülebilir kalkınma politikalarının dünya ekonomisi ve ekosistem açısından daha işlevsel olabileceği düşünülebilir. Ancak mevcut sürüdürlebilir kalkınma anlayışının ortaya çıkardığı sonuçlar bu açıdan bir eksikliğin olduğunu gözler önüne sermektedir.

4   İklim Adaleti Çerçevesinde Sürdürülebilir Kalkınma

Bir yandan sanâyileşme, nüfus artışı ve "daha çok tüketim" eğilimi, diğer yandan doğal kaynakların, enerjinin gelecek nesillerin ihtiyacını karşılayabilecek şekilde dengeli kullanılması ihtiyacı "çevre" ve "kalkınma" konularını zaman zaman birbirlerinin alternatifi durumuna getirmiştir. Bu karşılıklı bağımlılık, kalkınmanın bütün unsurlarının çevresel faktörlerle ilişkisini incelemeyi de gerektirmiştir. Bu yüzden, dünya üzerindeki canlı yaşamı için büyük önem taşıyan konulardan biri olan iklim değişikliğinin; sürdürülebilir kalkınma çerçevesinde ele alınarak irdelenmesi gerekmektedir. Çünkü, zengin ülkelerde mevcut zenginlik büyük toplumsal sorunlara yol açmaktadır. Ekonomik büyüme ile refah değerleri ancak belirli bir seviyeye kadar ilişkilidir. Bu seviyenin üzerine çıkıldığında, aradaki bağlantı görece daha sorunlu bir hal almaktadır. Bu yüzden dünya üzerindeki, aşırı kalkınmanın yol açtığı sorunlara işaret etmek, iklim değişikliğinin kontrol edilmesi açısından değerlendirildiğinde; iklim değişikliğinin küresel iklim adaleti gibi yeni argümanların çevre politikalarına yansıtılması gerekliliğini ortaya koymaktadır.

İklim değişikliğinin yol açtığı sosyoekonomik maliyetlerin giderilmesi doğrultusunda ortaya atılan klasik sürüdürülebilir kalkınmacı stratejilerin mevcut küresel ekonomik adaletsizliği daha da derinleştirdiği görülmektedir. Bu durum iki farklı şekilde kendisini göstermektedir: (1) Sürdürülebilir kalkınma çerçevesinde geliştirilen bütün ülkeleri bağlayıcı ilkelerin kalkınma açığını kapatmak üzere hızlı büyüme arayışı içerisindeki az gelişmiş ülkelerin ekonomilerinin gelişmiş ülke ekonomilere yetişmesinin mümkün olmaması, (2) Gelişmiş ülkelerin kendi karbon açıklarını daraltmak üzere özellikle "kirli üretim" yatırımlarını az gelişmiş ülkelere kaydırarak ciddi bir "karbon ihracı" veya "kirlilik ihracı" oluşturmalarıdır.

Böyle bir sürdürülebilir kalkınma perspektifinde, az gelişmiş ülkelerin kalkınma yarışında geri kalmaları durumunun devam etmesine üstelik ekolojik sistemlerinin de tahrip edilmesine yol açacağı görülmekte ve böylesine bir "adaletsizlik tablosu" içerisinde küresel düzlemde gerçekleşen "çevre adaleti" ve "iklim adaleti" gibi sorgulayıcı-eleştirel hareketlerin doğması kaçınılmaz olmaktadır.

Bu süreçte "adalet" kavramı genişlemiş "iklim adaleti", "çevresel adalet" ve "atmosferik adalet" gibi kavramlar etrafında kümelenen yeni siyasal sistem, yeni demokrasi önerileri gündeme gelmeye başlamıştır. Yeni demokrasi ve yeni siyasal sistem tartışmalarının son çeyrek asırdır iyice yoğunlaşmasında elbette küresel iklim değişiminin yarattığı ekolojik krizin ve bu krizin artık güncel toplumsal ve siyasal yaşamda hissedilir bir etkiye ulaşmasının payı büyüktür. (Wanderheiden, 2008) Örneğin çevre sorunu veya daha özel olarak küresel iklim değişikliği denilen sorunun ekonomi politik bir temele dayandığı, ancak iklim ile ilgili en cesur ekonomik yaklaşımların bile –sürekli büyümekten ve kâr maksimizasyonundan vazgeçmediği için- yeryüzünü korumaktan uzak olduğu ifade edilmiştir. (Foster-Clark-York, 30) Yine bu çerçevede küresel iklim değişikliğinin yol açtığı sorunların kapitalizm dairesinde çözülemeyeceği, çünkü zaten sorunun kaynağının üretimi ve tüketimi sürekli artırmaya dayalı bir sistem olan kapitalizm olduğu vurgulanmıştır. (Çoban, 2010) Buna rağmen küresel iklim değişikliğinin yol açtığı sorunları gidermek üzere şimdiye kadar ortaya konan çözüm çerçevesini genellikle klasik sürdürülebilir kalkınma anlayışı belirlemiş, ancak yine de özellikle üçüncü dünya ülkeleri ve bazı küresel toplumsal hareketler, küresel çevre politikalarına "iklim adaleti" ilkeleri doğrultusunda müdahil olmaya çalışmışlardır.

5 Küresel İklim Değişikliği Sorununa Farklı Çözüm Arayışları

Küresel iklim değişikliğiyle ilgili çözüme yönelik ilk uluslararası girişim 2007 yılında Kyoto Protokolü'nün yürürlüğe girmesiyle gerçekleşti. Dünya ülkelerine, özellikle de sorunun asıl kaynağını teşkil ettiği düşünülen sanayileşmiş ülkelere kürsel ısınmaya neden olan sera gazlarının salınımının azaltılması yükümlüğünü getiren bu antlaşma-özellikle ABD, Çin gibi- sanayi devlerinin muhalefetiyle karşılaştığı için tam anlamıyla yürürlüğe girememiş, bu yüzden Kyoto Protokolü'nün devamı niteliğinde 2007 yılında Bali'de 2009 sonunda yeni bir uluslar arası iklim anlaşması imzalamak için gerekli adımları oluşturmak üzere "Bali Yol Haritası ve Eylem Planı" hazırlanmıştır. (The Worldwatch Institute, 2009) Daha sonra 2009 yılı Aralık ayında Kopenhag İklim Zirvesi yapılmıştır. Özellikle Çin'in uluslararası denetim mekanizmasına itirazları ve sanayileşmiş ülkelerle sanayileşmekte ülkeler çelişkisinden –iklim adaleti taleplerle gerçekleşen toplumsal hareketlerle birlikte- kaynaklanan bazı sıkıntıların yansıdığı zirvenin sonunda kürsel sıcaklık artışının 2 dereceyi aşmasını sağlayacak çalışmalar yapmayı ve gelişmekte olan ülkelere mali yardımlarda bulunmayı içeren "Kopenhag Mutabakatı" imzalanmıştır. Bu mutabakatta yapılacaklar iki başlık altında toplandı: Birincisi, gelişmiş ülkelerin tamamının kendi ülkelerinden kaynaklanan karbon salınımını sınırlandırmaları yönünde –her ne kadar uluslararası yaptırımı olan bir yükümlülük henüz bağıtlanmamış olsa da- bir irade beyan etmeleri; ikincisi de gelişmekte olan ülkelerin küresel ısınmayı önleyici uygulamalara uyum sağlamak üzere sanayi kapasitelerinin adaptasyonunu sağlamak üzere bu ülkelere 2020 yılına kadar uygulamak üzere 100 milyar dolarlık mali yardım programının başlatılmasıdır. Kongre ilk defa bütün ülkelerin küresel iklim değişimine karşı önleyici politikalara katılma iradesi göstermesi bakımından olumlu bulunsa da yine de bu sorunun en büyük kaynağı olarak gösterilen özellikle ABD, Çin gibi sanayileşmiş ülkelerin gevşek tutumu ve bağlayıcılık gücünün zayıf olması açısından eleştirilmiştir. (CnnTürk, 2009). Sonuçta Kopenhag Mutabakatıyla somut bir bağlayıcı metin ortaya çıkmamış mutabakat geleceğe yönelik öngörülerle sınırlı kalmıştır.

2010 Aralık ayında Meksika'nın Cancun kentinde gerçekleşen İklim Zirvesi'nde bu öngörülerin sağlam somut bir plana dönüşmesi hedeflenmekteydi, ancak yine karbon salınım oranlarının düşürülmesiyle ilgili uzun vadeli öngörüler ve temenniler dışında kayda değer somut bir sonuç alınamadı. İklim değişiminin önlenmesi konusunda çok daha radikal, doğrudan doğruya kapitalist sisteme yönelik eleştiriler getiren ülkelerden biri olan Bolivya dışında bütün dünya ülkelerinin sonuç metnini imzaladığı bu zirvede alınan "en geç 2020 yılına kadar "Yeşil İklim Fonu" kurulması ve yoksul ülkelerin desteklenmesi için taraf ülkelerin 100 milyar dolar aktarması" kararı en somut görünen karar olarak algılandı. (http://tr.wikinews.org, 2010) Bu karar, 2012 yılında ilk dönemi bitmiş olan Kyoto protokolü sonrasında küresel iklim rejimini belirlemek üzere toplanan Aralık 2011 Durban İklim Kongresi'nde –öncelikle bu fonu oluşturmak üzere bir organizasyon oluşturmak üzere- uygulamaya geçirilmiştir. (Çevre ve Şehircilik Bakanlığı, 2013) Bu kararlarla birlikte klasik sürdürülebilir kalkınma politikalarının yenilenmesi sinyallerinin verildiğini düşünmek mümkün olmakla birlikte yeterli olmadığı düşünülmektedir. Mevcut politikaların yetersizliğini gösteren sayısal değerler daha dikkatlice incelendiğinde soruna daha somut bir çözüm çerçevesi oluşturabilmek mümkün olabilecektir.

6 Niceliksel Değerlendirme

İklim değişikliği ve çevre sorunun değerlendirilmesi ancak değerlendirme sistemleri içerisinde niceliksel olarak ifade edilebilmektedir. Bu nedenle sürdürülebilir kalkınma aslında bir değişim sürecidir. (Keleş ve Hamamcı,1998:158) Mevcut durumun tespiti ve izlenmesi konusunda yapılan ölçüm sistemlerinin başında sürdürülebilir kalkınma endeksleri, ekolojik ayak izi, Çevresel Performans İndeksi (ÇPE), Çevresel Sürdürülebilirlik Endeksi (ÇSE) , Gerçek İlerleme Göstergesi gibi ölçümler yer almaktadır. 2008 yılı verilerine göre kişi başına düşen küresel yenilenebilir biyolojik kapasite ortalama olarak 2.1 küresel hektar olarak hesaplanmakta iken insanoğlunun küresel ortalama ekolojik ayakizi bu kapasitenin %30 üzerindedir. Küresel ayakizinin yarıdan fazlasını karbondioksit emisyonları yaratmış, Fosil yakıt kullanımından salınan karbondioksit artarken ekosistemlerin karbondioksiti özümseme kapasitesi düşmektedir. Enerjiye bağlı olmayan küresel ayakizi ise henüz kapasitesinin %70'ini kullanmaktadır. Teknolojik gelişmeler her hektardan sağlanan ürünü artırıyor olsa da, geriye kalan %30 rezerv giderek azalmaktadır. (Nükhet Barlas, 2013) Columbia ve Yale üniversiteleri ile Avrupa Komisyonu ve Dünya Ekonomik Formu'nun ortak çalışması ile geliştirilen Çevresel Performans Endeksi (ÇPE) Binyıl Kalkınma Hedefleri raporunda çevresel hedefleri desteklemek ve ülkelerin çevre ile ilgili performansını karşılaştırmak için geliştirilmiştir. ÇPE, 2010 yılı için herbiri farklı ağırlıklara sahip olan 25 adet gösterge 3 seviye için hesaplanmıştır. (Bkz.Tablo 1).

Hesaplanan endekslere göre 2012 yılı için ÇPE Endeksi en yüksek olan ülke 76,69 değeri ile İsviçre olmuştur. İsviçre'yi Litvanya takip etmektedir. Türkiye 44,8 puanla 109. Sırada yer almaktadır.

Bu karşılaştırma 2010 yılı Çevresel Performans Endeksi ile karşılaştırıldığında 93,5 puan ile İzlanda birinci sırada iken Türkiye 60 puan ile 77. Sırada yer almaktadır. Listenin sonunda Angola, Moritanya, Orta Afrika Cumhuriyeti, Sierra Leone ve Tayvan bulunmaktadır. 2010 ve 2012 yılları için hesaplanan Çevresel Performans Endeksi değerleri, ülke sıralamaları ve Çevresel Performans Endeksi puanlamaları yer almaktadır.(Bkz.Tablo 2, Tablo 3).

Amaçlar ve Ağırlıkları (ÇPE'nin %'si)	Politika Kategori ve Ağırlıkları (ÇPE'nin %'si)	Göstergeler ve Ağırlıkları
Çevre Sağlığı 50	Hastalıkların Çevresel Yükü 25	Hastalıkların Çevresel Yükü: 25
		İçme Suyuna Erişim : 6.25
	Su (İnsan Üzerine etkileri)	Kanalizasyon Hizmetlerine Erişim 6.25
	Hava Kirliliği (İnsan Üzerine etkileri)	Binaiçi Hava Kirliliği: 6.25
		Dışı ortam Hava Kirliliği: 6.25
Ekosistem Canlılığı 50	Hava Kirliliğinin Doğa Üzerine Etkileri	Sülfürdioksit emisyonları: 2.1
		Azot oksit emisyonları
		Metan dışı uçucu organic bileşik emisyonları: 0.7
		Ekosistem ozon seviyesi : 0.7
	Suyun Doğa Üzerine Etkileri	Su kalitesi endeksi: 0.7
		Su stresi indeksi: 2.1
		Su kıtlığı endeksi: 1.05
	Biyolojik Çeşitlilik Habitat	Biyom koruması: 1.05
		Kritik habitat koruması: 2.1
	Ormancılık	Deniz koruma alanları : 1.05
		Yetişen stok değişimi: 1.05
	Balıkçılık	Orman örtüsü değişimi : 2.1
		Deniz tropic endeksi : 2.1
		Tarama yoğunluğu : 2.1
	Tarım	Tarımsal su yoğunluğu 2.1
		Tarımsal sübvasyonlar 2.1
		Pestisit düzenlemesi 2.1
	İklim değişikliği	Kişi başına sera gazı emisyonları 12.5
		Elektrik üretimi başına CO_2 emisyonları 6.25
		Endüstriyel karbon yoğunluğu 6.25

Tablo 1 : *Çevresel Performans Endeksi Çerçevesi (2010)* **Kaynak:** *World Economic Forum, Yıkmaz (2011:65)*

2010 ve 2012 yılları arasında ülkelerin ÇPE karşılaştırıldığında Ülkelerin Performans değerlerinin değiştiği hatta gittikçe bu değerin giderek düştüğü gözlenmektedir. Bu sonuç ise kaynakların yeterince etkin kullanılmadığı hatta küresel boyutta çevresel tahribatın şiddetlendiği, iklim değişiminin küresel boyutta değiştiğini de niceliksel olarak ifade etmektedir.

Çevresel Sürdürülebilirlik Endeksi ise (ÇSE) çevresel sürdürülebilirliğin izlenmesine yönelik geliştirilen, geçmişteki ve mevcut durumdaki çevre kirliliği düzeyleri, çevre yönetim faaliyetleri, küresel değerlerin korunmasına yönelik katkılar ve toplumun çevresel performansın artırılma kapasitesi gibi konuları içermektedir. Toblo 2 de belirtildiği gibi ÇSE, gösterge ve değişkenler ile ifade edilerek toplamda 76 veri setinin kullanıldığı 21 gösterge çerçevesinde küresel çapta sorumluluk, çevresel sorunlarla mücadelede kurumsal ve toplumsal kapasite, insanların çevreye yönelik baskılardan zarar görebilirliğinin azaltılması gibi konular dikkate alınarak hesaplanmıştır. (Yıkmaz, 2011:72-73) Sonuçta çevresel adalet kavramını güçlendiren bu niceliksel değerler göstermektedir ki az gelişmiş ülkelerin kısa sürede çözmek zorunda oldukları kalkınma sorunlarının dünya ekosistemine yeni baskılar oluşturmaması için az gelişmiş ülkelerin ekonomik sorunlarının çözümü konusunda gelişmiş ülkelerin önemli ölçüde yükümlülükler üstlenmesi gerekmektedir.

Diğer bir değerlendirme sistemleri içerisinde yer alan Ekolojik ayakizi ise; tabiatın taşıma kapasitesini ölçmek için geliştirilmiş olan bir yöntemdir ve sonuçları bir ülkenin sürdürülebilir kalkınma derecesinin göstergesi olarak kullanılmaktadır. WWF (World Wild Fund)'a göre ekolojik ayak izi 1961 ile 2007 yılları arasında iki katına çıkmış, 2007 yılında insanlığın toplam ayakizi 18 milyar küresel hektar, yani kişi başına 2,7 hektar olarak hesaplanmıştır. Dünyanın biyolojik kapasitesi ise yanlızca 11,9 milyar hektardır, yani kişi başına 1,8 hektardır. Bu yüzden bu şekilde devam edilirse 2030 yılında 2; 2050 yılında ise 2,8 gezene daha ihtiyacımız olacağı düşünülmektedir. (Günsoy, 2006) Dünyada ekolojik ayakizi en yüksek ülkeler Birleşik Arap Emirlikleri, Katar, Danimarka, Belçika, Amerika Birleşik Devletleri, Estonya, Kanada, Kuveyt ve İrlanda'dır. Yapılan hesaplamalar ile bir ABD vatandaşının ekolojik ayakizinin 43 Afrikalı'ya eşit düzeyde olduğunu göstermektedir.

2007 yılı verilerine göre Türkiye'de kişi başına düşen biyokapasite 1,32 hektar iken, ekolojik ayakizi değeri 2,7 hektar olarak hesaplanmıştır. (Günsoy, 2006) 1961-2007 yılları arasında Türkiye'nin ekolojik ayakizinin gelişimi görülmektedir. (Bkz, Şekil 1).

Ülke	ÇPE (Çevresel Performans Indeksi) 2010	ÇPE 2010 Sıralaması
İzlanda	93.5	1
İsviçre	89.1	2
Kosta Rika	86.4	3
İsveç	86.0	4
Norveç	81.1	5
Mauritius	80.6	6

Tablo 3 : Seçilmiş Olan Ülkelerin Çevresel Performans İndeksi (2012) **Kaynak:** *Yale*
Şekil : 1 *Türkiye'nin Ekolojik Ayak İzi (1961-2007)*   ***Kaynak:*** *Çevko, 20/7/2013*

Görüldüğü gibi 1980 li yıllardan itibaren ekolojik ayakizi ile biyolojik kapasite arasındaki fark sürekli açılmaktadır. Gelişmiş ülkelerin ekolojik ayakizi ise ortalama 8-10 hektar düzeyindedir. Bu durum ülkelerin tüketim düzeylerinin yüksek olmasına ve dünya kaynaklarını aşırı derecede baskı altında tuttuklarını göstermektedir. (Günsoy, 2006) Türkiye'nin ekonomik, sosyal ve sera gazlarına ilişkin göstergeleri gerek ekonomik kalkınmışlık düzeyi gerekse sera gazı emisyonları açısından BMİDÇS Ek-1'de yer alan gelişmiş ülklerle benzer durumda olmadığını da göstermektedir.

7   Sonuç

İklim değişikliği, insanların her türlü faaliyeti üzerinde ciddi değişiklikler meydana getirme potansiyeline sahiptir. Dünyanın hemen her bölgesinde doğal kaynaklar ve geçim kaynakları üzerinde önemli değişikler meydana gelebilmekte, küresel ısınma birçok sosyo-ekonomik sorunu da beraberinde getirmektedir. Ekolojik krizin küresel boyutlarının kalkınma ve sürdürülebilirlik kapsamında algılanması ve köklü çözüm önerilerinin geliştirilmesi için, sorunun yeni bir sürdürülebilir kalkınma yaklaşımıyla azgelişmiş ülkeler açısından yeniden değerlendirilmesi gerekmektedir.

Bu durumda, sadece çevresel sürdürülebilirliği değil, bütünüyle dünya ekonomisinin geleceğini de tehdit eden küresel iklim değişikliğini önleyici radikal tedbirler almak, bu doğrultuda küresel çevre politikaları oluşturmak gerekmektedir. Bu amaçla; genel olarak yaşam kalitesi, küresel ihtiyaçlar doğrultusunda önceliklerin belirlenmesi; yoksullar için –önceki büyüme süreçlerinin olumsuz örneklerinden de dersler çıkararak- ekolojik sistemi tahrip etmeden kalkınmanın ve büyümenin yolunun açılması; zenginler için ise yeşil perspektifli, aşırı/sorumsuz üretim ve tüketim sarmalından çıkaran yeni bir sürdürülebilir kalkınma fikrinin geliştirilmesi artık kaçınılmaz hale gelmiştir.

Bu çerçevede küresel iklim değişikliğine/küresel ısınmaya karşı tüm dünya toplumlarının ortak hedefler altında birleşmesi amacıyla ülkelerarası imzalanacak protokoller çerçevesinde yeni politikalar belirlenmelidir. Yeni sürdürülebilir kalkınma yaklaşımı içerisinde ayrıca, sadece küresel aktörlerin ve devletlerin "yeni politika" oluşturma çabalarının ötesinde; toplumların bilinçlenmesine; üretim ve tüketim kültürlerinin değişmesine; yenilenebilir enerji, temiz yakıtlar, suyun tasarruflu kullanımı ve çevre dostu ürünler kullanımı gibi bireysel adımlara da ihtiyaç duyulmaktadır.

Bireyler olarak, en başta tüketim alışkanlıklarını değiştirmek, enerji ve kaynak tüketimini azaltmak gerekmektedir. Eko etiket, yeşil sertifika gibi araçlar ürünlerdeki örünmeyen ayakizini anlamaya yardımcı olacaktır. Bu konuda yapılacak her adım küresel düzeyde iklim değişimini önlemeye katkı sağlayacaktır.

Son yıllarda, ekonomik krizin de etkisiyle gelişmiş ülkelerde görülen küçük düşüşlere ragmen, hızla kalabalıklaşıp endüstriyelleşen dünyamızda toplam enerji talebi de giderek artmaktadır. Mevcut üretim biçiminin bu şekli ile, gelişmiş ülkelerinde yer aldığı çevresel performansları ve sürdürülebilirlikleri de dikkate alındığında yetersiz kaldığını göstermiş, enerji gereksinimimizin çok büyük bir kısmını sağlayan fosil yakıtlardan çıkan sera gazlarının iklimi değiştiriyor olması, önümüze yeni kısıtlar getirmektedir. Temiz enerji teknolojilerinde olumlu gelişmeler sağlanmasına ragmen bunların fosil yakıtların sağladığı enerjiyi sağlaması mümkün gözükmemektedir.

Küresel iklim değişikliği ile mücadele kapsamında alınması gereken önlemler, çevresel adalet çerçevesinde ele alındığında sürdürülebilir kalkınma kavramı daha da işlevsel ve çözüme yönelik hale gelecektir. Zira iklim

değişikliği ile mücadele önlemlerinin uygulanması ile 2030 yılına kadar hava kirliliğinin azaltılmasına önemli katkı sağlayacağı düşünülmekte, hava kirletici emisyonlarını kontrol altında tutmanın toplam maliyetinin 10 milyar Avro'ya düşeceği öngörülmektedir.

Transboundary Environmental Damages in the Black Sea Basin and Regional Liability Regime

Ph.D. Candidate Arda Özkan (Giresun University, Turkey)

Abstract

The Black Sea is a significant basin where transboundary environmental damage activities take place. The environmental problems in the Black Sea are not only on the agenda of six Black Sea littorals, but also the states in the wider Black Sea basin. The large scales of strategic, economical and political problems in the region require entrepreneurship and co operations of the other states on the same platform. This study has two main environmental security dimensions: One of them is identifying the damages and opponents; the other one is the security problem in transboundary environment and the responsibilities of the Black Sea states. In this regard, this study aims to initiate a conversation in precautions against transboundary environmental damages considering the current security risks.

1 Giriş

Çevre sorunları son yılların en çok tartışılan konularından ve günümüze kadar insanlığın karşılaştığı en büyük sorunlardan birisidir. Özellikle son elli yılda boyutları giderek büyüyen ve bütün insanlığı tehdit eder hale gelen çevre sorunlarının çözümüne yönelik gerekli çabalar sarf edilse de, tatmin edici adımların atıldığı pek ileri sürülemez. Geçtiğimiz yıllarda sorunun çözümü konusunda uluslararası düzeyde bazı somut adımlar atılmış ve ülkeler bazında ciddi girişimlerde bulunulmuş olmasına rağmen, bunlar sağlıklı bir çevrede yaşamak ve bu çevreyi gelecek kuşaklara devretmek için yeterli değildir (Ökmen, 2003). Aslında çevre sorunlarının nedenlerinin karmaşıklığı ve sınır tanımama özelliği, küresel çevre politikalarının aktörleri olan ulusal devletler, uluslararası ve ulusüstü örgütlerin yoğun bir biçimde işbirliğini gerektirmektedir (Kaplan, 1999).

Çevre sorunlarına neden olan çevresel zararlar, genel olarak insan faaliyetlerine bağlı ekosistem zararlarını veya insan varlığı için değer taşıyan yapıların ya da doğal kaynakların tükenmesi tehlikesini ifade etmektedir. Sınıraşan nitelikteki çevresel zararlar ise, bir ülkedeki tüm çevresel yıkımların o ülkeyle sınırlı kalmayıp başka ülke topraklarını veya uluslararası alanları olumsuz etkilemesi olarak tanımlanabilir. Nükleer kirlilik, deniz petrol taşımacılığı, tehlikeli madde taşımacılığı veya diğer çevresel kirlilikler sınıraşan çevresel zararlara verilebilecek örneklerdir. Ekonomik, sosyal, kültürel, siyasal ve yönetsel açıdan sınıraşan zararların öne çıkan en temel özelliği küresel düzeyde ortak projelerle ve ülkeler arası işbirliğiyle çözümlenebilecek bir nitelik taşımasıdır.

Sınıraşan nitelikteki çevre sorunları; ulusal, bölgesel ve küresel konseptlere sahiptir. Karadeniz havzası da, çevre sorunlarının küresel, bölgesel ve ulusal nitelikleri olduğunu gözler önüne seren önemli bir örneği oluşturmaktadır. Karadeniz bugün, hem nedenler hem de sonuçlar bağlamında, altı kıyıdaş ülkenin çok ötesinde boyutlara ulaşmış bir çevre felaketi ile karşı karşıyadır. Bölgenin jeo-stratejik, jeo-ekonomik ve jeo-politik önemi, çevre sorunları alanında önemli çıktıları da beraberinde getirmekte ve bu bağlamda yapılması artık zorunluluk haline gelmiş bir takım girişimleri ve işbirliği çabalarını gerekli kılmaktadır. Bu çevresel sorunlar öncelikle ve özellikle kıyıdaş altı ülkenin bölgesel nitelikte ortak sorunudur. Fakat, Karadeniz'in kirliliği sorunu, kıyıdaş ülkelerin olduğu kadar bütün havza ülkelerinin sorunudur ve hızla uluslararası bir nitelik kazanmaktadır (Ökmen, 2011).

Karadeniz havzasında çevresel sorunlara yönelik atılacak en önemli adım, bölgesel işbirliği ve küresel düzeyde bir ortak çalışma anlayışı ve bunun uygulamaya konulmasıdır. Ancak bu anlayış ve çabalar hayata geçirildiği oranda ortak geleceğimizden umutlu olabiliriz (Ökmen, 2000). Atılacak adımların, havzada bulunan ülkeler, uluslararası ve bölgesel oluşumlar tarafından gerçekleştirilmesi gerekmektedir. Özellikle hem kıyıdaş ülkelerde, hem de kıyısı bulunmayan ülkelerde çevre ile ilgili faaliyetlerde bulunan sivil toplum örgütlerinin gerek ulusal, gerek bölgesel ve gerekse küresel düzeydeki çabaları, konumuz açısından çok önemi haiz bir durumu gözler önüne sermektedir.

2 Sınıraşan Çevresel Zararlar

Çevresel güvenliği tehdit eden bir öğe olarak çevresel zararlar, genel olarak insan faaliyetlerine bağlı ekosistem zararlarını veya insan varlığı için değer taşıyan yapıların ya da doğal kaynakların tükenmesi tehlikesini ifade etmektedir (Schacter, 2001). Daha genel bir kavram olan çevresel zararların aksine sınıraşan zararlar, bir devletin diğer devlete karşı doğrudan sorumlu olacağı, dar kapsamlı bir kavramdır (Jain, 2008).

Genel bir tanımla sınıraşan zararlar, bir ülke sınırları içinde meydana gelen diğer bir ifadeyle herhangi bir devletin yol açtığı zararın başka ülke ya da alanları etkilemesini ifade etmektedir. Bir zararın sınıraşan bir nitelik kazanması için dört unsurun bir arada bulunması gerekmektedir (Xanqin, 2003). Bu unsurlar; zararın insan kaynaklı olması, insan faaliyeti sonucu ortaya çıkan zararın fiziksel bir nitelik taşıması, söz konusu fiziksel etkilerin ulusal sınırları aşması, zararın önemli ya da büyük çapta olması olarak sıralanabilir.

Sınıraşan ciddi zarar riski taşıyan faaliyetler ya belirli bir ülke toprağında ya da o devletin yetkisi altında bulunan herhangi bir alanda gerçekleştirilebileceği gibi hiçbir devletin yetki ve egemenliğinin bulunmadığı uluslararası alanlarda da gerçekleştirilebilmektedir (Sürmelioğlu, 2010). Sınıraşan zararlara neden olan faaliyetlerin yol açtığı zararların bir kısmı birden ve genellikle öngörülmeyen bir şekilde ortaya çıkabilmektedir. Nükleer faaliyetler, petrolün deniz yoluyla taşınması, uzay faaliyetleri ve diğer bazı tehlikeli maddelerin üretimi gibi oldukça tehlikeli sonuçlara yol açan faaliyetler bir kaza sonucu ya da bir sürecin sonunda aniden ortaya çıkabilmektedir. Kimi faaliyetlerin yol açtığı zararlar ise aniden değil sürekli artış göstermeye bağlı olarak kümülatif etkileri içine almaktadır. Atıkların nehir ya da denize boşaltılması gibi tekrarlanan faaliyetler, sanayi bacalarından çıkan dumanların salımı gibi aralıksız devam eden bir süreçten kaynaklanan çevresel zararlar söz konusu duruma örnek oluşturmaktadır. Daha çok kirlilik zararı olarak ortaya çıkan bu tür faaliyetlerin sebep olduğu olumsuz etkiler klasik çevre kirliliği (hava, toprak ve su kirliliği) şeklinde kendini göstermektedir (Xanqin, 2003).

Sınıraşan zararlara neden olabilen en tehlikeli kaynak *nükleer kirlenmedir*. Nükleer zarara sebep olabilecek faaliyetler, özellikle açık denizlerde yapılan nükleer denemeler, nükleer santraller, nükleer gemiler ve nükleer maddelerin taşınması sırasındaki sızıntılar ve kazalar ile atılan radyoaktif atıklardır. Nükleer faaliyetler ilk olarak devletlerin askeri güçlerini artırmak amacıyla gerçekleştirilmiştir. Bu faaliyetler insan kontrolü dışında ve geri dönüşümü olmayacak feci sonuçlar doğurabilmektedir. Nükleer gelişmelerin ilk yıllarında bu tür faaliyetlerin yol açtığı zararlar daha çok askeri nükleer silah denemelerinden ve nükleer tesislerden kaynaklanmıştır. Günümüzde ise bu tür eylemler yalnızca askeri amaçlı değil, enerji üretimi gibi barışçıl amaçlarla da kullanılmaktadır. Nükleer enerjinin barışçıl amaçlarla kullanımı da bu yüzden birtakım yıkıcı sonuçlar doğurabilmektedir (Pazarcı, 2005; Görmez, 2007).

Sınıraşan zararlara neden olabilecek önemli kaynaklardan bir diğeri *deniz petrol taşımacılığıdır*. Günümüzde teknolojik gelişmelere bağlı deniz ve denizcilik, yük ve yolcu taşımacılığı öncelikli olmak üzere, gemi inşa sanayi, liman hizmetleri, deniz turizmi, canlı ve cansız doğal kaynakların üretimi gibi yönleriyle başlı başına bir endüstri alanı olduğu kadar ticaret ve hizmet dalını oluşturmakta; aynı zamanda dünya ticaretinin de % 80'ni deniz yoluyla gerçekleştirilmektedir (Devlet Planlama Teşkilatı, 2007). Petrol ise yaygın kullanımı ve sınırlı sayıda devletin bu rezerve sahip olmasından dolayı önemli bir ihracat kaynağıdır. Petrolün önemli ihracat yollarından birisini de deniz yolu taşımacılığı oluşturmaktadır. Deniz taşımacılığı önceki senelere göre önemli oranda arttığı için deniz trafiğindeki ve uluslararası deniz ulaşımındaki tıkanıklığı gidermek amacıyla petrol taşıyan gemilerin tonajları artırılmıştır. Fakat bu durum petrol sızıntılarını da ciddi boyutlara ulaştırmıştır. Denizde özellikle petrol taşımacılığı sırasında meydana gelen çeşitli kazalar sonucu hem kıyı devletlerinin doğal çevre hayatı, hem de açık denizler gibi uluslararası alanlar olumsuz etkilenmektedir (Xanqin, 2003).

Çevre kirliliği ya da *hava, su ve toprak kirliliği* gibi kronik kirlilikler de sınıraşan nitelik gösteren tehditlerdendir. Çevre kirliliği zararlı etkilerin birikimi sonucunda ortaya çıkmaktadır. Bu gibi kirliliğe sebep olan faaliyetlerin yol açtığı zararlar da oldukça ciddi boyutlara ulaşabilmektedir. Hava kirliliği, havada yabancı maddelerin bulunması ya da havanın bileşim maddelerinde önemli bir değişikliğin meydana gelmesini ifade etmektedir. Söz konusu kirlenme insan faaliyetleri sonucu meydana gelerek insan sağlığını ve canlıların yaşamını tehlikeye sokmakta, çevresel dengeyi bozan bir nitelik taşımaktadır (Pazarcı, 2005). Su kirliliği, suyun içerisine su kaynaklarının kullanılmasını bozan veya zarar verme derecesinde kalitesini düşüren organik, inorganik, radyoaktif veya biyolojik herhangi bir maddenin karışmasını ifade etmektedir. Ekonomik kalkınma amacıyla suların kullanımı ve paylaşımı sonucu ortaya çıkan su kirliliği devletlerin karşı karşıya kaldığı ciddi küresel sorunlar oluşturmakta; suların yönetim ve paylaşımı, ilgili devletler arasında uyuşmazlık sebebi olmaya devam etmektedir. Toprak kirliliğinin ise temel kaynağı, evsel atıklar ve sanayi atıkları, tarımda verimliliği artırmak için kullanılan ilaçlama, gübreleme gibi kimyasallar, erozyon ile iklim değişikliğine bağlı ortaya çıkan olumsuz nitelikteki faaliyetlerdir (Görmez, 2007). Toprak kirliliğinin sınıraşan nitelik kazanması özellikle bir devletin başka ülke sınırına yakın bir alanda gerçekleştirdiği faaliyetler sonucunda ortaya çıkmaktadır. Kimyasal atıklar gibi zararlı maddelerin ya da nükleer santral gibi son derece büyük risk taşıyan tesislerin başka ülke sınırına yakın bir alanda kurulması söz konusu sınır ülkelerinde kaygılara sebep olmaktadır (Xanqin, 2003).

Sınıraşan nitelik gösteren son zararlı tehdit ise *tehlikeli diğer maddelerdir*. Kimyasal madde sızıntısı, toksik atıklar ile çevre için tehdit oluşturan kimi tüketim ürünleri de çevre ve insan hayatına tehlike oluşturmaktadır. Bu tür faaliyetler, insan sağlığı ve diğer canlı yaşamını olumsuz etkilemekte ve büyük miktarda zarara sebebiyet vermektedir (Cane, 2001).

3   Karadeniz Havzasında Sınıraşan Çevre Sorunları

Karadeniz'in çevre sorunları çok boyutlu ve karmaşık bir görünüm arz etmektedir. Karadeniz'in yapısal özelliklerinin de etkisiyle çeşitli kaynaklardan gelen kirlilik dışında ve bu kirliliğin de etkisiyle oluşan birçok sorun, üstesinden gelinmesi son derece güç bir boyut kazanmıştır. Karadeniz çevre sorunları, birbirleri ile etkileşim ve sebep sonuç ilişkisi ve karmaşası içinde, Karadeniz'in ekolojik sistemini, biyo-çeşitliliğini, sudaki yaşam olanaklarını, balıkçılık ve turizm gibi sektörleri olumsuz bir şekilde etkilemeye devam etmektedir. Bu çevresel sorunlar kıyıdaş devletlerde sosyal ve ekonomik yapı üzerinde onarılması giderek güçleşen sorunlara yol açmaktadır (Güneş, 2001).

Karadeniz'de gerek deniz, gerekse kara kökenli kirlenme sorunları mevcut olmakla beraber çevre sorunlarını daha vahim hale getiren, akarsular ve diğer kara kökenli boşaltımlar sonucu oluşan kirliliktir (Sorensen, 1995). İki tabakalı yapısı, alt tabakanın yaşam destek unsurlarından tamamen yoksun oluşu ve yarı-kapalı konumu nedeniyle mevcut su miktarının tümüyle değişebilmesi için iki bin yıl gibi bir zaman dilimine ihtiyaç duyulması gibi faktörler (Balkaş, 1990), Karadeniz'i özellikle kara kökenli kirlenmelerde kaydedilen çarpıcı artış karşısında son derece savunmasız bırakmaktadır (Bakan ve Büyükgüngör, 2000). Arıtma işleminden geçirilmeden, doğrudan doğruya veya akarsular vasıtasıyla denize boşaltılan kanalizasyon, tarımsal faaliyetlere bağlı olarak oluşan atıklar, endüstriyel faaliyetler sonucu oluşan kirlilik ile hepsinden daha da tehlikeli olan nükleer kirlenmeler, kara kökenli kirlenmenin çeşitli biçimleri olarak karşımıza çıkmaktadır (Gençkaya, 1993).

Karadeniz'de meydana gelen petrol kirlenmesinin ise bir kısmı kara kökenli olup, nehirler yoluyla taşınmakta veya kıyılardan doğrudan doğruya denize atılmaktadır. Diğer bir kısım petrol kirliliği ise gemilerin normal operasyonları sırasında veya kazalar sonucu meydana gelmektedir. Karadeniz'deki kirliliğin %75'ini oluşturan kara kökenli kirlenmeler içinde petrol kirliği, önemli bir yer tutmaktadır. Yılda 100.000 tona ulaşan kirlilik miktarı, dünyada bugüne kadar meydana gelen en büyük tanker facialarında oluşan kirlilikten daha yüksek bir rakamı ifade etmektedir (BSTDA, 1997). Bu veriler petrol taşımacılığından kaynaklanan kirlenmeyi kapsamadığı için, Karadeniz'deki petrol kirliliğini tam olarak yansıtmamakla beraber, sorunun ciddiyetini ortaya koyması nedeniyle son derece önemlidir (Güneş, 2001).

Karadeniz'de çevre sorunları, hem denizde hem de kıyılarda olmak üzere bu denize kıyısı bulunan ülkelerden kaynaklandığı gibi uluslararası niteliklerde de ortaya çıkabilmektedir Karadeniz havzasında yaklaşık 160 milyon insanın ürettiği büyük miktarlarda fosfor, inorganik azot, petrol, cıva ve DDT için dev bir çöplük olmuştur. Burada dikkati çeken önemli bir nokta, Karadeniz'de çeşitli niteliklerde ortaya çıkan kirlenmede kıyısı bulunan 6 ülke kadar özellikle Avrupa kaynaklı bölgesel ve uluslararası etkenlerin de oldukça önemli bir yere sahip olması gerçeğidir. Konu denize kıyısı bulunan ülkeleri aşmış, bölgesel ve uluslararası bir sorun haline gelmiştir. Orta Avrupa'dan doğan ve Karadeniz'e dökülen Tuna nehri, Orta ve Doğu Avrupa endüstrisinin aşırı kiriyle Karadeniz'e erişmekte ve gerek bitki, gerekse canlı çeşidi açısından zengin bir güzelliğe sahip olan Tuna Deltası'nı tehdit etmektedir (Ökmen, 2011).

Karadeniz'in özellikle enerji kaynaklarının taşınması noktasındaki merkezi konumu, bölgedeki çevre sorunlarının uluslararası niteliğini daha da öne çıkarmaktadır. Biraz önce de bahsettiğimiz gibi, Karadeniz'i, organik ve sınai atıkların kısmen kıyı ama özellikle nehirler yoluyla yarattığı kirlenme ile tankerle petrol taşımacılığından kaynaklanan kirlilik olmak üzere, başlıca iki önemli kirlilik kaynağı tehdit etmektedir. Özellikle Rusya ve Türkiye'den nehirlerle taşınan endüstriyel ve evsel atıklar, özellikle bölgede önemli çevresel sorunlara sebep olmaktadır. Ayrıca, deniz ortamına bırakılan ağır metal konsantrasyonları, denizdeki doğal ortam ve midye vb. canlılar aracılığıyla da insanlar için önemli bir tehdit oluşturmaktadır (Çevik, vd. 2008).

Karadeniz'in jeo-stratejik ve jeo-ekonomik konumu da bu bölgedeki çevre sorunlarının uluslararası boyutunu öne çıkaran önemli bir etkendir. Bu bağlamda kirlenmenin boyutları hızla artmaktadır. Karadeniz ve Azak Denizi'nin, özellikle toprak kaynaklarından ileri gelen kirlenme sonucunda felaket boyutlarında bir ekolojik zarara maruz kaldığını gösteren bilimsel kanıtların sayısı hızla artmaktadır. Bu ekolojik zarar, ötrofikasyona ve patojenik mikroplar ve toksik kimyasal maddeler ile kirlenmeye yol açmıştır. Sonuç olarak, kıyı ülkeleri hemen hemen tamamen tükenmeye yüz tutan değerli su ürünleri kaynaklarından ve çok büyük bir rekreasyon ve turizm potansiyelinden mahrum kalmaktadır (Goyet, 1995).

4   Çevresel Sorumluluk Rejimi

Günümüzde, çevre sorunlarının boyutlarının giderek artması ve sınıraşan bir tehdit durumuna gelmesi sonucu, çevre alanında uluslararası işbirliği önem kazanmaya başlamıştır. Karadeniz Bölgesi'nde yaşayan insanlar için de bu, güncel bir konudur. Karadeniz ve korunmasına ilişkin ortak sorunlar bölge insanlarını birbirine bağlamaktadır. Özellikle petrol ve petrol ürünleri başta olmak üzere, Karadeniz'in değişik yükleri taşımada yoğun bir şekilde kullanılması, gelişigüzel balık avlanması, atık ve kanalizasyon suları, Karadeniz'in ekolojisine olumsuz etkide bulunan unsurlardan sadece birkaçıdır. Gerek altı Karadeniz ülkesinin her birinin özel koşullarından ve gerekse çevre sorunlarının, özellikle sınır tanımaz niteliğiyle uluslararası bir aktör haline gelmesi başta olmak üzere, kendine özgü nitelikleri, konuyla ilgili teorik ve pratik bazı sorunları

güçlendirmektedir. Karadeniz'in, dünya okyanuslarından izole olmuş kapalı bir deniz olması da konuyla ilgili bir sınırlılık olarak, bölgedeki çevre sorunlarını olumsuz olarak etkilemektedir (Doussis, 2006).

Karadeniz'de gerek var olan kirliliğin ortadan kaldırılması, gerekse bu bağlamda ortaya çıkabilecek sorunların önlenmesine yönelik bu faaliyetler bölge yönetimlerinin ve toplumlarının işbirliğini zorunlu kılmaktadır. Bu çerçevede bölgesel ve uluslararası düzeyde ortaya konan ekonomik, sosyal ve hukuki işbirliği çabaları oldukça önemlidir. Bu çabalar, bölge ülkelerinin merkezi ve yerel yönetimlerinden üniversitelere, bölgesel ve uluslararası örgütlerden gönüllü kuruluşlara kadar geniş bir yelpazeyi kapsamaktadır (Ökmen, 2011). BM, AB, OECD ve Avrupa Konseyi gibi kuruluşlar gerek çevre alanındaki faaliyetlerini yoğunlaştırarak, gerekse üye ülkelerini bu faaliyetlere katılmaya teşvik ederek, çevre konusunda küresel bir sistem oluşturma yolunda çalışmalarını sürdürmektedir (Arslan ve Ökmen, 2006).

Çok zengin bir ekosisteme sahip olan Karadeniz'in hem karadan hem de denizden ciddi bir kirlilik tehdidiyle karşı karşıya olması ve bu kirlilikle mücadelenin ancak bölgesel düzeyde sağlanacak işbirliği ile mümkün olabileceğinin anlaşılması üzerine, 1992 yılında Karadeniz'e kıyısı olan 6 ülke Türkiye, Rusya, Romanya, Bulgaristan, Ukrayna ve Gürcistan bir araya gelerek "Karadeniz'in Kirlenmeye Karşı Korunması Sözleşmesi'ni (Bükreş Sözleşmesi) imzalamış ve bu sözleşme daha sonraki yıllarda değişik protokollerle zenginleştirilmiştir. Karadeniz'in çevre sorunlarına ilişkin olarak taraf ülkelerin alması gereken önlemlere esas teşkil eden bu sözleşme ve bağlı protokolleri, Karadeniz kirliliğine karşı çevre hareketlerine ivme kazandıran 1993 tarihli "Odessa Deklarasyonu" ve Karadeniz ekosisteminin rehabilite edilmesi, korunması, kaynakların sürdürülebilir şekilde kullanılması ve geliştirilmesi amacıyla hazırlanan politika ve eylemleri içeren 1996 tarihli "Karadeniz'in Korunması ve İyileştirilmesi Stratejik Eylem Planı" izlemiştir. Bu eylem planı 2009 yılında güncellenerek, kirlilikle mücadelede öncelikler ve eylemler tekrar düzenlenmiştir (Durusu, 2010).

Bilindiği üzere, 1992 yılında Karadeniz'e kıyısı bulunan devletler, Karadeniz'de kirliliğin önlenmesine ilişkin olarak Bükreş'te bir konferans düzenlemişlerdir. Karadeniz'e kıyısı bulunan devletlerin yanında, devlet düzeyinde Ermenistan, Yunanistan, Moldova ve Yugoslavya'nın; uluslararası örgüt düzeyinde ise Tuna Komisyonu, Birleşmiş Milletler Çevre Programı, Uluslararası Denizcilik Örgütü, Uluslararası Meteoroloji Örgütü Birleşmiş Milletler Kalkınma Programı ve Dünya Sağlık Örgütü gibi kuruluşların gözlemci statüsü ile katıldıkları Konferans'ta, Bükreş Sözleşmesi dışında, Sözleşme'ye ek olarak, "Karadeniz Deniz Çevresinin Kara Kökenli Kaynaklardan Kirlenmeye Karşı Korunmasına Dair Protokol", "Karadeniz Deniz Çevresinin Petrol ve Diğer Zararlı Maddelerle Kirlenmesine Karşı Acil Durumlarda Yapılacak İş Birliğine Dair Protokol", "Karadeniz Deniz Çevresinin Boşaltmalar Nedeniyle Kirlenmesinin Önlenmesine Dair Protokol" başlıklı üç ayrı protokol kabul edilmiştir (BSEP, 1993).

Karadeniz ülkelerinin Karadeniz kaynaklarının korunması ve kullanılmasına yönelik genel politikaları ise, Odessa Deklarasyonu'nda ifadesini bulmuştur. Bu belge, 7 Nisan 1993 tarihinde, Odessa kentinde Bulgaristan, Gürcistan, Rusya, Romanya, Türkiye ve Ukrayna çevre bakanları tarafından imzalanmıştır. Bu deklarasyon Karadeniz'in çevresinin korunması amacıyla toplumun bütün kesimlerinin çabalarını birleştirmeye yönelik eylemleri zamanlamalarıyla birlikte gerekçeli olarak düzenlemektedir. Aslında bu deklarasyon, Bükreş Sözleşmesi'nde ifade edilen fikirleri geliştirmekte ve daha somut hale getirmektedir. Özellikle bu konu temelinde GEF (Global Environmental Facility - Küresel Çevre Fonu)'in himayesinde 1993-1996 yılları için sözleşme koşullarını yerine getirmede Karadeniz ülkeleri hükümetlerine yardıma yönelik olarak Karadeniz'in Durumunun Yönetimi ve Korunması Programı'nın (Karadeniz Çevre Programı) temeli atılmıştır. Aslında bu program, Bükreş Sözleşmesi'nin hükümlerinin yerine getirilmesi için etkin bir mekanizma oluşturma konusunda kurumsal bir temel olmuştur (Kuznyetsov, vd., 2000).

5 Sonuç: Havza Ülkelerine Çözüm Önerileri

İlk bakışta ulusal düzeyde görülen çevre sorunları, yaşanan çevresel kirliliğin uzun vadeli olumsuz etkileri nedeniyle sınıraşan bir nitelik göstererek önce bölgesel, sonrasında da küresel sorunlara neden olabilmektedir. Sınıraşan zararlara neden olan faaliyetlerin yol açtığı zararların bir kısmı, örneğin nükleer faaliyetler, petrolün deniz yoluyla taşınması, uzay faaliyetleri ve diğer bazı tehlikeli maddelerin üretimi gibi oldukça tehlikeli sonuçlara yol açan faaliyetler bir kaza sonucu ya da bir sürecin sonunda aniden ve genellikle öngörülmeyen bir şekilde ortaya çıkabilmektedir. Daha çok kirlilik zararı olarak ortaya çıkan faaliyetlerin sebep olduğu olumsuz etkiler hava, toprak ve su kirliliği şeklinde kendini göstermektedir. Kimi faaliyetlerin yol açtığı zararlar ise aniden değil sürekli artış göstermeye bağlı olarak ortaya çıkmaktadır. Atıkların nehir ya da denize boşaltılması gibi tekrarlanan faaliyetler, sanayi bacalarından çıkan dumanların salımı gibi aralıksız devam eden bir süreçten kaynaklanan çevresel zararlar bu duruma örnek oluşturmaktadır. Öte yandan, Karadeniz için genel olarak kara kökenli ve gemi kaynaklı olarak sınıflandırılabilecek temel kirlilik kaynaklarının çok geniş bir havzayı ilgilendirmesi ve oluşan kirliliğin birçok ülkenin ortak sorumluluğunda bulunması konusu da, Karadeniz'deki sınıraşan nitelikteki kirlilikle mücadelede bölgesel işbirliğinin önemini artırmaktadır.

Karadeniz havzasında günümüz gereksinimlerine göre oluşturulan çeşitli mekanizmalar ve yaptırımlar, ancak Bükreş Sözleşmesi'yle kurulan hukuksal çerçeve içerisinde yaşama geçirilebilecektir. 1992 yılında imzalanan

Bükreş Sözleşmesi ile Karadeniz'in kirliliğe karşı korunması amaçlanmış ise de, bu sözleşmeye taraf ülkelerce etkin bir şekilde uygulamaya konulduğu ve Karadeniz'e yönelik kirlilik tehdidi ile etkin bir şekilde mücadele edildiği ileri sürülebilecek bir durum ortada bulunmamaktadır. Bu nedenle, başta Türkiye olmak üzere bölge ülkeleri için çok önemli bir yaşam kaynağı olan ve sayısız olanaklar sunan Karadeniz'in çevre güvenliğinin korunması ve kaynaklarının sürdürülebilir kullanımı konusunda son yıllarda artan bir hassasiyetin oluştuğu gözlenmektedir (Durusu, 2010). Fakat, alınacak önlemlerin Karadeniz'in deniz çevresini korumakta etkili olabilmesi, zaman içinde yitirilen canlı kaynaklarının ve ekosistemin geri kazanılmasına yardımcı olabilmesi tüm Karadeniz ülkelerinin ortak çabasını gerektirmektedir (Sav, 1992). Bu işbirliği içinde, bölge ülkelerinde ve genel olarak çevre konularında faaliyet gösteren gönüllü kuruluşların ayrı bir yeri vardır. Karadeniz'de çevresel kirliliğin önlenmesi konusunda, sivil toplum kuruluşlarının sesi henüz cılız olmakla birlikte, resmi kurumlar ve girişimler yanında ağırlıkları giderek artmaktadır. Kıyıdaş ülkelerin ekonomik ve sosyal kalkınmalarıyla uyum içinde bir çevresel politikanın bölgede hayata geçirilebilmesinde, sivil toplum kuruluşlarına büyük sorumluluklar düşmektedir. Özellikle, sürdürülebilir kalkınma kavramı odaklı politikalar çerçevesinde bunun yapılabilirliği, bu program sayesinde daha da güçlenmiştir (Moomaw, 2006).

Karadeniz havzasında çevresel sorunlara yönelik oluşturulan temel yaklaşımı anlayabilmek için, Karadeniz bölgesinin çevresel yönden sağlıklı kalkınmasını temin etmek amacıyla hukuksal, siyasal ve ekonomik düzeylerde yaptırım araçlarını hazır bulundurmaya yönelik faaliyetleri öngören Karadeniz Çevre Programı'na bakmak gerekmektedir. Karadeniz Çevre Programı, kamunun duyarlılaştırılması ve harekete geçirilmesi, etki yönlendirmeli faaliyetler ve yerel, ulusal çıkarlara önem verilmesi bağlamında hükümet dışı örgütlerin etkin yapısını tanımakta ve Karadeniz'in ekosisteminin bozulması hakkında etkili araştırmalarda bulunan ilgili örgütlerin programlarının hayata geçirilmesine katılımı teşvik etmeyi hedeflemektedir (Ökmen, 2011). Karadeniz'e kıyısı olan Türkiye, Rusya, Ukrayna, Romanya, Bulgaristan ve Gürcistan'ın bir araya gelerek kabul ettikleri ve hukuksal alt yapısını sırasıyla 1992 Bükreş Sözleşmesi, 1993 Odessa Bildirgesi ile 1996 Karadeniz Stratejik Eylem Planı'nın oluşturduğu Karadeniz Çevre Programı ile bölge devletleri, Karadeniz çevre sorunlarına ilişkin ortak önlemler alma çabası içine girmişlerdir (Güneş, 2001). Bu bağlamda, Bükreş Sözleşmesi'ne taraf olan ülkelere ve ayrıca Karadeniz havzasında yer alan ülkelerin hükümetlerine çevre sorunlarına dair işbirliğini gerektiren birtakım tavsiyelerde bulunmak yerinde olacaktır.

Öncelikle, Bükreş Sözleşmesi'ne ve ek protokollere taraf olan devletler ile Sözleşme'ye taraf olmayan Karadeniz havzasında bulunan diğer devletler, iç hukuksal ve kurumsal çerçevelerini düzenlemelidir. Bunun gerçekleşebilmesi için, taraf olunan bölgesel ve diğer uluslararası anlaşmalardaki hükümlerin yerine getirilmesi için güvenilir mekanizmalar geliştirilmeli; ulusal ve bölgesel düzeyde, özellikle de Karadeniz ile ilgili geliştirilen politika ve çevresel nitelikteki düşüncelerin güçlendirilmesi için gerekli adımlar atılmalı; Sözleşme'nin yürütülmesi ve uyuşmazlıkların gözden geçirilmesi için bir mekanizma kurulmalı; Karadeniz'deki mevcut kaynakların sürdürülebilir olmayan aşırı kullanımını önlemek için yapılacak faaliyetler teşvik edilmelidir.

İkinci aşamada, Karadeniz ekosisteminin korunmasını ve sürdürülebilir yönetimini sağlamak için kaynakların ulaşılabilirliğini artırmalı ve olanakları güçlendirmek amacıyla Bükreş Sözleşmesi'ni geliştirmeye yönelik teşvikler ve gerçek mekanizmalar yaratmalı; Sözleşme'nin güncellenmesi için harekete geçmeli ve bu sayede Avrupa Birliği'nin ve diğer bölgesel ekonomik işbirliği organizasyonlarının katılımını sağlamalı; sivil toplumun Avrupa Komşu Ülkeler Politikası'na ve Karadeniz Sinerji İşbirliği İnisiyatiflerine katılımı güvence altına alınmalıdır.

Son olarak, geniş Karadeniz havzasında bulunan tüm devletler, bu bölgelerde yaşayan halkın bilinçlenmesi için çaba göstermelidir. Havza içinde bulunan tüm devletler, çevreye ilişkin konularda bilgiye doğru bir şekilde ulaşılmasına ve adaletin hakim olmasına olanak sağlayacak ortamlar hazırlamalı; sivil toplumun ve Karadeniz bölgesindeki paydaşların, karar alma süreçlerine etkin olarak katılmalarını sağlamalı; sivil toplumun gelişmesini sağlamak için özel çaba harcamalı; bunun için Sivil Toplum Kuruluşları'na ulusal düzeyde destek olmalıdır.

Ekolojik Çevreye Duyarlı İşletmecilik Yaklaşımı: Unilever Örneği

Ecological Environment Friendly Business Approach: The Example of Unilever

Çetin Kalburan (Pamukkale University, Turkey)

Assoc. Prof. Dr. Selçuk Burak Haşıloğlu (Pamukkale University, Turkey)

Abstract

Environmental awareness has increased as a result of disruption of the ecological balance. As consumers' concerns about the natural environment have been increasing with each passing day, consumers act environmentally-friendly in developed societies. In fact, environmental awareness is not only for consumers, but also it is important for companies. Because the companies are required to meet consumers' needs and expectations. Many companies are implementing environmental awareness within the framework of green marketing practices. They also try to be superior to their competitors. In today's world, companies must be sensitive to the ecological environment in order to be able to survive and compete.

1 Giriş

Tüm birey ve kurumların içinde yaşadığı çevreye karşı sorumlulukları bulunmaktadır. Örneğin, bir işletmenin kendi çalışanlarına, pay sahiplerine, ortaklarına olduğu kadar dış çevreye karşı da sorumlulukları vardır. Aktan (2008: 103), çalışanlara, hissedarlara ve yöneticilere karşı sorumluluğu organizasyon içi sorumluluk; diğer altı sorumluluk türünü ise organizasyon dışı sorumluluk olarak tanımlamıştır. Bu doğrultuda işletmelerin başlıca sorumlulukları dokuz tanedir: (1) Çalışanlara karşı sorumluluk, (2) Hissedarlara yönelik sorumluluk, (3) Yöneticilere karşı sorumluluk, (4) Müşterilere (tüketicilere) yönelik sorumluluk, (5) Rakiplere yönelik sorumluluk, (6) Doğaya ve çevreye karşı sorumluluk, (7) Tedarikçilere karşı sorumluluk, (8) Devlete karşı sorumluluk, (9) Topluma karşı sorumluluk. Diğer yandan, Uydacı (2011: 129) işletmelerin genişletilmiş sosyal sorumluluklarının bir alt sistemi olarak pazarlamada sosyal sorumluluğun altını çizmiş ve bu sosyal sorumlulukların istenirse sürdürülebilir gelişmeyle uyumlaştırılabildiğini belirtmiştir.

Pazarlamanın sosyal sorumluluğu ve sürdürülebilir gelişme tüketicinin arzu, istek, ihtiyaçlarıyla ve ürünlerin çevre koruma prensiplerine uygunluğu ile ilgilenir. Bunların yanında sosyal pazarlama ve toplumsal pazarlama uygulamalarının birçoğunda çevreye duyarlı işletmecilik yaklaşımları yer almaktadır.

Kotler'e göre sosyal pazarlama, bireyin, grubun ya da tüm toplumun yararına olan ve hedef kitleyi etkileyen pazarlama uygulamalarıdır. Yani sosyal pazarlama konuları genellikle toplumu ilgilendirmektedir. Çevre kirliliğinin önlenmesi, yaban hayatının korunması, sigara ve alkol kullanımının önlenmesi, aile planlamasının yapılması, bulaşıcı hastalıklardan korunma, göğüs kanserinin erken teşhisi ve tedavisi, alkollü araba kullanmayı önleme, trafikte aşırı hızı önleme, aşı kampanyaları, anne sütüyle besleme ve bunun gibi toplumdaki bireylerin yaşam kalitesini yükseltecek ve refahını sağlayacak konularda davranış değişikliği meydana getirmek sosyal pazarlamanın amaçları arasında yer alır (Eser ve Özdoğan, 2006: 4).

Kotler ve Lee'nin belirttiğine göre, toplumsal pazarlama ise, pazarlama faaliyetleri esnasında sosyal ve etik konuların pazarlamacılar tarafından dikkate alınmasını gerektirmektedir. Bu noktada bazen çatışan, işletme karı, tüketici tatmini ve toplum refahı kavramları arasında denge kurulmalıdır (Korkmaz vd., 2009: 40).

Yeşil pazarlama, toplumsal pazarlamadan doğmuştur. Toplumsal pazarlama, müşterileri sadece memnun etmekle kalmayıp toplumun ilgilerini de göz önüne almayı amaçlayan bir pazarlama yaklaşımıdır. Çevreye duyarlı işletmecilik yaklaşımları da bunlardan biridir. Kotler'e göre toplumsal pazarlamada işletmeler tüketicinin arzu, ihtiyaç ve çıkarlarını rakiplerinden daha etkin bir şekilde tatmin ederken bunu tüketicinin ve toplumun refahını muhafaza edecek veya daha da arttıracak şekilde yerine getirecektir. Toplumsal pazarlama kavramı pazarlayıcılardan, pazarlama faaliyetlerinde sosyal ve ahlaki düşünceler üzerinde durmalarını da ister. Çok defa, işletmeler, birbirleri ile çatışmalı olan kar, müşteri arzularının tatmin edilmesi ve halkın çıkarları ölçütlerini birbirleriyle birleştirip bir denge sağlanacak tarzda hareket etmelidirler (Emgin ve Türk, 2004).

Sosyal pazarlama ve toplumsal pazarlama birbirinden farklı kavramlar olsa da her ikisinin temelinde yatan düşünce sosyal sorumluluk ve etik'tir. Sosyal pazarlama, pazarlama temelli bir yöntem iken toplumsal pazarlama, pazarlama anlayışında gelinen son noktadır; çevreye duyarlılık gibi sosyal sorumluluklar her ikisini besleyen kaynak olarak görülmelidir (Velioğlu ve Çoknaz, 2010: 474).

2 Çevre Kirliliği

Genel anlamıyla çevre; canlıların içinde yaşadığı, hayati bağlarla bağlı oldukları, çeşitli şekillerde etkiledikleri ve etkilendikleri bir ortam olarak tanımlanabilir (Yıldız vd., 2008: 14). Diğer bir tanımla çevre; insan, diğer

canlılar, doğal yapı ve bu yapı üzerine insanlar tarafından eklenen unsurlardan oluşan ve bu unsurların sürekli olarak birbirleriyle karşılıklı etkileşim halinde olduğu sosyal ve fiziki bir sistemdir (Uydacı, 2011: 25).

Çevre kirliliğinin genel tanımı; "insanların etkinlikleri sonunda, ekolojik dengenin bozularak, bazı maddelerin dünyanın bazı katmanlarında/kompartımanlarda birikmesi ve o katmanın doğal kompozisyonunun bozulmasıdır" şeklinde yapılabilir. Çevre kirliliğinin insan merkezli tanımı ise; "insanın yaşadığı ortamda bazı maddelerin miktarının artması ve bu artışın insan yaşamını olumsuz yönde etkilemesidir" şeklinde yapılabilir (Akdur, 2005: 14-15).

Yirmi birinci yüzyılın başlangıcında insanların yeryüzü tarihinde daha önce rastlanmamış büyüklükte çevre sorunlarıyla karşı karşıya olduklarını söylemek yanlış olmayacaktır. Dünya üzerinde yaşamın sürekliliğini sağlayan hava, su ve toprak gibi doğal kaynaklar ürkütücü boyutlarda kirlenmekte veya tükenmektedir. Nüfus hızlı biçimde artmakta ve besin temini için gerekli tarım arazileri, ekolojik dengenin sigortası olan ormanlar ve ana biyolojik sistemler hızla kaybolmaktadır. Gelecek kuşakları tehdit eden zehirli gaz ve atıklar tüm dünyada artmaktadır. İklim değişikliğini doğuran nedenler, ozon tabakasını delecek ve birçok kara parçasını sular altında bırakacak seviyeye getirmiştir. Öncelikle yaşanan tüm bu sorunların yalnızca "teknik" bir sorun olmadığı; bundan öte, daha büyük çaplı "toplumsal" sorunların bir boyutu olduğunu söylemek gereklidir (Karaca, 2008: 20).

Drucker'a göre, globalleşme, ekolojiye uluslar-aşırı bir boyut kazandırmaktadır: "Çevre de artık para gibi, bilgi gibi, ulusal sınırlar tanımamaktadır. Çevreyle ilgili çok önemli ihtiyaçlar –sözgelimi atmosferin ve dünya ormanlarının korunması– ulusal düzeydeki önlemler ve ulusal yasalarla karşılanamaz, karşı tarafta bir rakibin bulunduğu meseleler gibi ele alınamazlar. Bu meseleler için, uluslar aşırı düzeyde uygulanacak uluslar-aşırı politikalar gerekmektedir" (Düren, 2000; 160).

2.1 Hava kirliliği

Hava kirlenmesi, havanın doğal ve beşeri faaliyetler sonucu, atmosfere karışan katı, sıvı ve gaz halinde bulunabilecek kirleticilerin etkisiyle, doğal özelliğini kaybederek, insan ve diğer canlılar ile cansız varlıkları olumsuz yönde etkileyebilecek duruma gelmesi olarak tanımlanabilir (Yıldız vd., 2008: 107).

Hava genel alıcı ortamlardan birisidir. Birçok insan eylemi sırasında havaya çeşitli kirleticiler salınmaktadır. Salınan bu kirleticilerin miktarı havanın kendi kendini temizleme kapasitesini aşarsa bunlar havada birikerek hava kirliliği oluşur. Hava kirliliği, insan sağlığına, hayvan ve bitkilere, eşya ve tarihi değerlere zarar verir. İlk ciddi yerel hava kirliliği olgusu 1909 Glasgow'da yaşanmış ve tanımlanmıştır. Daha sonra Aralık 1930 Belçika'nın Meuse Vadisi'nde, Ekim 1948 Pennsylvania Donova bölgesinde yoğun hava kirlilikleri yaşanmıştır. Aralık 1952'de 4000 kişinin ölümü ile sonuçlanan Londra hava kirliliği, tarihte yaşanan en büyük yerel hava kirliliklerinden biridir (Akdur, 2005: 16-17).

2.2 Su kaynaklarının kirliliği

Su kirliliği, su ortamlarının, çeşitli yollardan karışan bazı maddelerle ilk özelliklerinin ve kalitesinin değişerek insan ve diğer canlıların yaşamını olumsuz yönde etkileyebilecek biçimde bozulmasıdır. Özellikle sanayi atıklarının ve evsel atıkların doğrudan veya dolaylı olarak akarsu, göl ve denizlere boşaltılması, kıyılardaki çarpık kentleşme, tarımda kullanılan mücadele ilaçları ile aşırı gübre kullanılması, deniz taşımacılığı ve deniz kazaları suların kirlenmesine neden olan faaliyetlerdir (Yıldız vd., 2008: 124).

Kazalar dışında su kirlenmesine neden olan faaliyetleri de üç başlık altında da toplamak mümkündür (Uydacı, 2011: 42):

- Tarımsal faaliyetlerin neden olduğu kirlilik
- Sanayi faaliyetlerinin neden olduğu kirlilik
- Yerleşim alanlarından kaynaklanan kirlilik

2.3 Toprak kirliliği

Çevre sorunlarının hemen hepsi, doğal kaynakların yanlış ve bilinçsizce kullanılması sonucu ekolojik dengenin bozulmasıyla ortaya çıkmaktadır. Toprak kirliliği de toprağa karışan zararlı katı, sıvı ve gaz atıklar ve insanların yanlış kullanımı sonucu toprağın doğal özelliğinin değişmesiyle görülür. Toprak kirliliğini doğal ve yapay etmenlerle toprağın fiziksel, kimyasal ve biyolojik özelliklerinin bozulması olarak tanımlamak mümkündür (Yıldız vd., 2008: 139).

Yirminci yüzyılın başından itibaren modern tarıma geçilmesi ve sanayileşmenin hızlanması ile birlikte, toprak kirliliği de bir çevre sorunu olarak ortaya çıkmaya başlamıştır. Daha önceki yüzyıllarda kullanılan güç ve enerji kaynaklarının yetersiz olması, nüfusun azlığı, endüstrinin henüz gelişmemiş olması sebebiyle, diğer çevre faktörlerinde olduğu gibi toprakta da herhangi bir kirlenme söz konusu değildi. Özellikle yirminci yüzyılın ortalarına doğru hızlı nüfus artışı ile birlikte, tarım ve diğer alanlardaki sanayi ve teknolojinin hızla gelişmesine paralel olarak, toprak kirliliği de artmaya başlamıştır (Kurgun vd., 2008: 28).

2.4 Gürültü kirliliği

Gelişigüzel bir yapısı olan ve istenmeyen seslere gürültü, bu seslerin ortamda bulunması olayına da gürültü kirliliği denir. Başka bir tanıma göre ise; ortamda belirli bir şiddetten daha fazla ses bulunması olayına gürültü kirliliği denir. Gürültü kirliliği insan sağlığını ve başarısını önemli oranda olumsuz etkiler. Yaşam kalitesini düşürür. Günümüzde tüm yerleşim birimleri az ya da çok gürültü kirliliğinin etkisi altındadır (Akdur, 2005: 18).

Gürültü doğrudan bir çevresel değerin bozulması sonucunda ortaya çıkmamakta, ancak diğer çevresel değerleri etkileyen sağlık bozucu bir durum olmaktadır (Keleş ve Hamamcı, 2005: 110). Ayrıca Yücel vd.'ne göre, gürültü insanlar üzerinde fiziksel (işitme bozukluğu), fizyolojik (solunum ve kalp atışlarının hızlanması, kan basıncının artışı gibi vücut aktivitelerinde değişmeler), psikolojik (öfkelenme, sıkılma gibi davranış bozuklukları), performans etkileri (konsantrasyon bozukluğu, iş veriminde düşme vb. rahatsızlıklara) ve hatta ciddi beyin tahribatına neden olmaktadır (Üstünay, 2008: 16).

2.5 Radyoaktif kirlenme

Radyoaktif kirlenme hava, su ve toprak gibi alıcı ortamlara radyoaktif maddelerin karışması ile meydana gelir. Radyoaktivitenin doğal kaynağı, yeryüzündeki ve deniz dibindeki kayalar ile atmosfere gelen güneş ışınlarıdır. Diğer radyoaktivite kaynakları ise nükleer silah fabrikaları, nükleer silahlar, bunların denenmeleri ve kullanılmaları ile nükleer enerji santralleri ve atıklarıdır (Yıldız vd., 2008: 143-144).

Teknolojideki çok hızlı gelişmeler sonucu üretilen çeşitli elektronik cihazların (TV, radyo, bilgisayar, röntgen ve tomografi gibi tıbbi cihazlar) yaygınlaşması ile meydana gelen radyasyonun elektromanyetik kirliliğe yol açtığı anlaşılmıştır. Radyoaktif kirleticiler özellikle insan, hayvan ve bitki sağlığına olumsuz etkiler yaparak, çevreyi ve ekolojik dengeyi bozmaktadır (Kurgun vd., 2008: 37-38).

3   İşletmelerin Ekolojik Çevresi

İşletmeler, en genel anlamda, çevreyle çok yönlü alışveriş halinde olan girdi-çıktı süreçlerinden meydana gelmektedir. İşletme ve ekolojik çevre, bu süreci beslemek için, sürecin her aşamasında karşılıklı etkileşime girmektedirler. İşletmecilik faaliyetleri, ekolojik çevre ile etkileşimlerinde genellikle yerel, bölgesel ve global olmak üzere, kademeli olarak yayılan zararlara, başka bir ifadeyle, kirlenmelere neden olmaktadır (Düren, 2000; 192-193).

Ekonomik bir birim olan işletmeler, bir takım sosyal, siyasal ve kültürel faaliyetlerin etkisi altındadır. Bir başka deyişle, faaliyet gösterdikleri çevre ile karşılıklı etkileşim içerisindedir. İşletmeler mal ve hizmet üreten bir kurum olarak işlevlerini yerine getirerek bunun karşılığında kazanç elde ederken aynı zamanda toplumun ekonomik, sosyal ve kültürel ihtiyaçlarına da cevap vermek ve sosyal sorunların çözülmesine yardım etmek gibi geniş bir fonksiyon üstlenmektedir (Yücel ve Ekmekçiler, 2008: 327).

İşletmeleri ve tüketicileri etkileyen dış çevre faktörlerinin en önemlilerinden biri ise dünyanın doğal dengesi ve ekolojiyi oluşturan unsurlardır. Belirli bir dönem, gerek bireylerin bilinçlenme süreci gerekse toplumsal ve ülkesel sorunlar nedeniyle fazla ön planda olamayan ekoloji ve doğal dengenin önemi, son yıllarda daha çok konuşulur hale gelmiştir. İşletmeler üretim stratejilerinde ve ürün tasarımlarında bu konuya dikkat etmekte, tüketiciler ise ürün tercihlerinde ürünlerin çevreye zarar verip vermediklerini incelemektedirler. Üretici ve tüketici arasındaki bu etkileşimin sonucunda çevre bilinci ve doğal dengeyi koruma anlayışı her iki taraf açısından daha belirgin bir şekilde oluşmaya başlamıştır (Çabuk ve Nakıboğlu, 2003: 40).

Anlaşılacağı üzere çevreye duyarlı yaklaşımlar, işletmeler için, günümüz toplumu açısından son derece önemlidir. Bu bağlamda birçok işletme faaliyet ve stratejilerine bu yaklaşımı da dahil etmiştir. Böylece; doğayı koruyan ürünler geliştirmek, yeniden kullanıma sunulabilen ve geri dönüşümlü paketleme, daha iyi kirlenme kontrolü ve daha iyi enerji etkinliği sağlayacak operasyonlar bunlara birer örnektir. Çünkü çevreci pazarlamanın (yeşil pazarlama), bütün çevre yönetiminin bir parçası olarak farkına varılması önemlidir (Keleş, 2007: 22).

4   Çevreye Duyarlı İşletmecilikte Yeşil Pazarlama

Doğal kaynakların saklı olduğu yer olarak çevre; ekonomik gelişmeyi etkileyen ve canlıların hayati ihtiyaçlarını karşılayan bir üretim alanı ve yaşamı doğrudan etkileyen bir estetik unsurudur. Çevrenin sunduğu olanaklar, ekonomik faaliyet sürecinde üretim ve birey tarafından doğrudan tüketim için kullanılmaktadır. Üretim süreci doğada ham madde olarak bulunan kaynakları, mal ve hizmete dönüştürerek kullanıma sunmaktadır. Ekonominin çevre sorunlarına dahil edilmesi kirlenmenin vazgeçilmez bir sonucudur. Üretim mutlaka kirletmektedir ve kirlenmeyi tümüyle ortadan kaldırmak da mümkün değildir (Yıldız vd., 2008: 259-260).

Çevreye duyarlı işletmeciliğin pazarlama uygulaması olan yeşil pazarlama, tüketici davranışlarının çevreye daha duyarlı hale gelmesiyle ortaya çıkmıştır. Bu da pazarlama düşüncesinin çağın ihtiyaçlarına adapte edilmesi sürecinin devamı olarak görülebilir (Karna, 2003: 10).

Yeşil pazarlama toplumun ihtiyaçlarını ve isteklerini tatmin etmeye istekli değişimlerin meydana getirilmesi ve kolayca uygulanması amacıyla doğal çevreye en az seviyede zarar vermek suretiyle oluşturulmuş faaliyetler topluluğudur (Uydacı, 2011: 130).

Yeşil pazarlama, işletmelerin pazarlama stratejilerini, politikalarını ve programlarını doğal çevreyi koruyacak ve geliştirecek biçimde belirlemesi ve bu yönde uygulaması olarak tanımlanabilir. Çevre bilincinin gelişmesi, tüketicilerin çevresel duyarlılığını arttırmıştır. Bu bağlamda çevre dostu ürünlerin tüketiciler tarafından daha fazla tercih edildiği işletmelerce fark edilmiş ve onlar da ürünlerini çevre dostluğu ile uyumlu hale getirmeye başlamıştır. Bu akıma "yeşil pazarlama" denmektedir (İslamoğlu, 2011: 36).

Yeşil pazarlama tanımı değişikliklere ve zaman içindeki oluşumlara uyumlu olmak zorundadır. Dinamik ve global olmalı, çevrede oluşan değişimlere rahatlıkla uyum sağlayabilmelidir. Yeşil tanımı bugünün çevresinde değişik şekillerde algılanabilir. Bugünün yeşil olguları seneler sonra varlığını yitirebilir. Örnek olarak, kloro-floro-karbonlarda olduğu gibi ilk icat edildiğinde bu madde mükemmel olarak nitelendirilmekte, ancak bugünkü teknolojik bilgi ışığında maalesef dünyaya zarar veren tehlikeli bir madde olarak kabul görmektedir (Uydacı, 2011: 127-128).

Peattie yeşil pazarlamayı karlı ve sürdürülebilir şekilde müşterilerin ve toplumun ihtiyaçlarını belirlemek, öngörmek ve tatmin etmeye yönelik sorumlu bütünsel bir yönetim süreci olarak tanımlamaktadır. Ayrıntılı olarak çevresel pazarlamanın temel özellikleri şu başlıklar altında özetlenebilir (Karna, 2003: 11):

- İşletmelerin ve toplumların sosyal, teknolojik, ekonomik ve fiziksel bakış açılarında dengeli bir yaklaşım, bu da işletmelerin bir adım öne çıkmalarına olanak sağlar;
- Kısa vadeli sürdürülemez niceliksel büyüme yerine uzun vadeli niteliksel gelişmeyi amaçlar;
- Önceki indirgemeci, parçalı iş teori ve pratiğini bütüncül bir yaklaşımla tersine çevirmeyi hedefler;
- Tüketicilerin varsayımsal olarak rasyonel ekonomik birimler olarak görülmesi yerine tüketicileri gerçek birer insan olarak görür;
- Tüketicilerin yüzeysel arzuları yerine gerçek ihtiyaçlarını karşılamayı vurgular;
- Tüketicilerin ve toplumun çoklu ve bazen birbiriyle çelişen istek ve ihtiyaçlara sahip olduğunu kabul eder;
- Şirket ve tüm faaliyetleri tüketilen ürünün bir parçası olarak görülür;
- Mevcut ekonominin büyük ölçekli olma ile uzun mesafe özelliklerinin sürdürülebilir olmadığını ve gelecekte küçük ve yerel ekonominin daha güzel olacağını kabul eder;
- Şirketlerin piyasa dışı çıktılarını bünyesinde barındıran eko-performans kavramını; kullanım sırasında ve sonrasında ürün performansını; tedarik zincirinin herhangi bir aşamasındaki ürünün yaratılması ve pazarlanmasına katkıda bulunan şirketlerin çevresel etkilerini benimser;
- Tekno-ekonomik katma değerin yanında sosyo-çevresel değerlerin de üzerinde durur.

Yeşillenme iç veya dış baskıların bir sonucu olarak oluşabilir. Dış baskılar şunlardır (Polonsky ve Rosenberger, 2001: 22):

Tüketici talebinin karşılanması: McDonald's polistiren kapaklı ambalajını tüketicilerin polistiren üretiminde kullanılan kloro-floro-karbon hakkındaki endişelerinden dolayı, çok çevreci bir karar olmasa da parafin kaplı kağıt ile değiştirmiştir.

Bir rakibin yeşillenme eylemlerine karşılık verme: Starkist firması orkinos balıkçılığı sırasında yunuslara verilen zarara karşı "dolphin free" kampanyasını açıkladığında rakiplerinin hepsi aynı şeyi yapmak zorunda kalmışlar ya da pazar paylarını kaybetmişlerdir.

Girdileri değiştirmeye yönelik kanal/tedarikçi istekleri: ISO 14000 uyumlu firmalar tedarikçilerinin çevresel performanslarını değerlendirme ihtiyacı duyarlar. Uygun standartları karşılamaları konusunda tedarikçilere baskı yaparlar.

Yeşil faaliyetlerin gerçekleşmesindeki iç baskılara verilebilecek bazı örnekler şunlardır:

Maliyet: Yeşillenme, daha fazla kaynak verimliliğine, daha az girdi kullanımı ile daha az atığın ortaya çıkması ve üretim sonucu daha az kirlilik meydana gelmesi ile finansal tasarrufa neden olabilir. Dow firması bir tesisinde atıkların aynı tesisin başka bir kısmında yeniden kullanılması amacıyla 250.000 dolarlık bir yatırım yapmış ve yıllık 2.4 milyon dolarlık bir tasarruf sağlamıştır.

Felsefe: Firmalar çevresel hedeflerini diğer kurumsal hedeflerle aynı derecede önemli gördüğünde yeşil konular firmanın stratejilerinde hayata geçecek ve daha sonra taktiksel faaliyetlerine entegre edilecektir. Besin takviyesi ve sağlık ürünleri firması Blackmores'ın kurucusu Maurice Blackmore daha 1967 yılında çevre sorunlarını firmanın faaliyetlerinin temel odağı haline getirmiştir.

Yeşil pazarlama uygulayan işletmeler genellikle şu tip girişimlerde bulunmaktadır (Oyewole, 2001: 240):

- Geri dönüştürülebilir, yeniden kullanılabilir, ışıkta parçalanabilen ve/veya doğada çözünebilir ambalaj ve hammadde kullanmak,
- Kirletici olmayan üretim süreci,
- Aerosol içermeyen hammadde,

- Pestisit içermeyen tarım,
- Gıda korunmasında kimyasal olmayan yöntemlerin uygulanması,
- Daha az hammadde kullanarak daha az hacimli ambalaj ortaya çıkarma,
- Suni olmayan doğal gübre kullanmak vb.

Ayrıca, Oyewole'ya (2001: 240) göre işletmeler yeşil pazarlamanın teknik yönü üzerinde daha fazla odaklanmaktadır. Ancak yeşil pazarlamanın etik yönü de aynı derecede önem taşımaktadır. Yeşil pazarlama, çevre ile birlikte çevre içerisinde bulunan insanları da göz ardı etmemelidir. Diğer bir deyişle çevresel adaletle ilgili olmalıdır.

5 Unilever Örneği

Unilever, Hollandalı margarin üreticisi Margarine Unie ile İngiliz sabun üreticisi Lever Brothers'ın 1930 yılında birleşmesiyle oluşmuştur. Firma gıda ve dondurma, ev bakımı ve kişisel bakım ürünleri olmak üzere onlarca marka ile günümüzde dünyanın 190 ülkesinde tüketiciye ulaşmaktadır (http://www.unilever.com.tr/ aboutus/intro ductiontounilever/).

Unilever'in sürdürülebilirlik faaliyetlerinin ilk adımı, 2005'te Unilever markalarının dünya üzerindeki sosyal, ekonomik ve çevresel etkilerinin ölçümlenmesine olanak tanıyan 'Marka İzi' yaklaşımıyla atılmıştır (http://www.lipton.com.tr/surdurulebilirlik_vizyonu.asp). Unilever, Kasım 2010'da 10 yıllık bir süreci kapsayacak olan "Unilever Sürdürülebilir Yaşam Planı"'nı kamuoyuna duyurmuştur. Plan, değer zincirinin tamamında geçerli olma üzerine vurgu yapmaktadır ve içeriğinde planı destekleyen yaklaşık 60 hedef bulunmaktadır (http://www.unilever.com.tr/sustainable-living/uslp/). Unilever sürdürülebilir yaşam planı üç ana başlık altında toplanmaktadır:

1. Sağlık ve esenliği arttırmak,
2. Yaşam koşullarını iyileştirmek,
3. Çevresel etkiyi azaltmak.

Çevresel etkiyi azaltmaya dair alt başlıklar ise şunlardır:

Sera Gazları Ürünlerin yaşam döngülerinin tamamında 2020 yılına kadar, sera gazı etkisini yarıya indirmek:

- Çamaşır yıkamadan kaynaklanan sera gazı salımlarını azaltmak,
- Üretim sürecimizdeki sera gazı emisyonlarını azaltmak,
- Nakliyeden kaynaklanan sera gazı salımını azaltmak,
- Soğutmadan kaynaklanan sera gazı salımlarını azaltmak,
- Cilt temizleme ve saç yıkama ürünlerindeki sera gazı emisyonlarını azaltmak.

Su Ürünlerin kullanımıyla ilişkili su miktarını 2020 yılına kadar yarıya indirmek:

- Tarımda su kullanımını azaltmak,
- Üretim sürecindeki su kullanımını azaltmak,
- Çamaşır yıkama sürecindeki su kullanımını azaltmak,
- Cilt temizleme ve saç yıkamadan kaynaklanan su kullanımını azaltmak.

Atık Ürünlerin imhasıyla ilişkili atık miktarını 2020'ye kadar yarıya indirmek:

- Ambalajları azaltmak,
- Ambalajları yeniden kullanmak,
- Ambalajları geri dönüştürmek,
- Üretim atıklarınıazaltmak.

Bu hedefler dışında planın "yaşam koşullarını iyileştirmek" başlığı altında çevre ile yakından ilişkisi olan, 2020'ye kadar, tarımsal hammaddelerin %100'ünü sürdürülebilir şekilde tedarik etme ve ofis atıklarının azaltılması hedefleri bulunmaktadır.

Unilever firması konulan hedeflere ulaşılmasında katedilen yolu göstermek amacıyla "Sürdürülebilir Yaşam Planı İlerleme Raporu" raporu yayınlamaktadır. Yukarıda ana başlıkları belirtilen hedeflere ilişkin rapor Tablo 1'de gösterilmektedir (Kavoğlu, 2012: 23).

6 Sonuç

Sonuç olarak, değişen toplumsal evrede tüketicilerin ihtiyaç ve beklentileri de değişmiştir. Elli yıl öncesine kadar sadece ürün odaklı hareket eden tüketiciler, bugün daha fazlasını arzulamaktadırlar. Diğer yandan da rekabet o kadar yoğun seyir etmektedir ki, işletmeler rakiplerinden bir adım önde olmak için büyük çabalar harcamaktadır. Bu aşamada çevreye duyarlılık faktörünün rolü büyüktür. Günümüz tüketicileri ekolojik çevreye

çok daha fazla duyarlıdırlar ve bu duyarlıktan daha fazlasını işletmelerden beklemektedirler. Diğer yandan işletmeler çevreye duyarlılık uygulamalarını yeşil pazarlama çerçevesinde hayata geçirerek bu sayede rakiplerinden üstün olmaya çalışmaktadır. Yeşil pazarlama, işletmelerin doğal çevreye mümkün olduğunca az zarar vermek, hatta katkıda bulunmak suretiyle tüketici tatminini sağlama sürecidir. Günümüzde işletmeler hem ayakta durabilmek, hem de rekabette üstün olabilmek amacıyla ekolojik çevreye duyarlı faaliyetler göstermek zorundadır. Hatta bu faaliyetlerine çevre dostu ürün ve üretim sistemlerini de dahil etmelidirler.

Avrasya Doğal Gaz Boru Hattı Projeleri Özelinde Kafkasya Üzerine Bir Değerlendirme

An Evaluation of Caucasian Countries with respect to Eurasian Natural Gas Pipeline Projects

Ph.D. Candidate Nuri Gökhan Toprak (Kırklareli University, Turkey)

Abstract

Breaking down the natural gas export monopoly of Russia against to the European countries is one the very challenging issues of European authorities in the past thirty years. Despite the introduction of the Norwegian and Algerian gas to the European market in recent years, European countries are still in search of the alternative gas exporter countries to meet their increasing gas consumption. When the expectations of European countries were combined with the relative stabilization of political structure in both South Eastern European and Caucasian countries, the alternative Eurasian natural gas pipeline projects came to the European agenda gradually. In this study, it will be analyzed that both the economic and political situation of Azerbaijan, Georgia and Armenia in terms of their participation to the ongoing Eurasian natural gas projects that plans to deliver natural gas resources of the Caspian Basin to Europe. Within this context, after the brief introduction to explain what those Eurasian natural gas projects are, it will be given information, analyzed and discussed that the current positions of the Caucasian countries against these projects. It is important that the evaluation of the Eurasian Natural Gas Pipeline Projects in the case of the Caucasian countries makes the final step more reliable which will strengthen the economic integration and regional cooperation of Caucasian countries.

1 Giriş

Avrupa ülkelerine Rusya'nın kurmuş olduğu 13 doğal gaz boru hattına alternatif bir boru hattı üzerinden doğal gaz arz etme planı olarak ortaya çıkan Avrasya Doğal Gaz Boru Hattı Projeleri, faaliyete geçebilmek için ilk etapta yaklaşık 8 milyar metreküp doğal gaza ihtiyaç duymaktadır. Uzun vadede ise 40 milyar metreküp kaynağa ihtiyaç duyacak bu projelerde resmi olarak yer alan hiçbir ülkenin bu miktarda doğal gaz kaynağına sahip olmaması, bu ülkelerin ilgisini geniş çapta doğal gaz ihraç edebilecek diğer bölgelerden biri olan Kafkasya'ya kaydırmıştır. AB'nin Kafkasya ülkelerine çeşitli seviyelerde gerçekleştirdiği resmi ziyaretlerle devam eden Avrasya Doğal Gaz Boru Hattı Projelerine iştirakçi ülke bulma girişimleri, daha çok bu bölgelerle ilişkileri daha eski, köklü ve en önemlisi de genellikle olumlu olan Türkiye tarafından gerçekleştirilmektedir.

Çalışmamıza Avrasya Doğal Gaz Boru Hattı Projeleri'nin ilk etabında 'projenin doğal gaz kaynağı' olabilme potansiyeline sahip bir ülke olan Azerbaycan'ın enerji görünümünü ve bu projelerin bir parçası olma ihtimali üzerinden başlayacağız. Azerbaycan ve Türkiye arasında doğrudan bir sınır ilişkisinin olmaması, her iki ülkeye sınırı olan üçüncü bir ülke üzerinden transit geçiş yapılmasını zorunlu kılmaktadır. Bu bağlamda 2005 yılında Bakü-Ceyhan Petrol ve 2007 yılında Bakü-Erzurum Doğal Gaz Boru Hatlarında transit ülke olarak projelere dâhil olan Gürcistan, incelenecek ikinci ülke olacaktır.

Çalışmada son olarak, Ağustos 2008'de Rusya ve Gürcistan arasında yaşanan savaşın, Gürcistan'ın gelecekteki muhtemel bir enerji boru projesinde 'güvenli transit geçiş ülkesi' olarak yer alma ihtimali üzerindeki etkilerini incelenecek; bu noktadan hareketle de bölgedeki diğer ülke Ermenistan'ın, Azerbaycan ve daha doğusundaki doğal gaz kaynağı geniş ülkelere ulaşmada alternatif bir transit geçiş ülkesi olma ihtimali üzerinde durulacaktır.

2 Avrasya Doğal Gaz Boru Hattı Projeleri Hakkında

2.1 Nabucco Doğal Gaz Boru Hattı Projesi

Türkiye-Bulgaristan-Romanya-Macaristan-Avusturya Doğal Gaz Boru Hattı olarak da bilinen Nabucco Doğal Gaz Enerji Boru Hattı Projesi "…ilk etapta güzergâh üzerindeki ülkelerin gaz ihtiyacının karşılanması, takip eden yıllarda ise Avusturya'nın Avrupa'da önemli bir doğal gaz dağıtım noktası olma özelliğinden de faydalanılarak diğer ülkelerin gaz taleplerindeki gelişmelere göre Batı Avrupa'ya ulaşılması amaçlanmaktadır" (BOTAŞ, 2011). İki buçuk milyon ton çeliğin kullanılmasıyla inşa edilecek boru hattının, yaklaşık 3900 kilometre uzunluğunda olması planlanmıştır (Nabucco Gas Pipeline International GmbH, 2011a). Kullanım ömrü 50 yıl olarak öngörülen projenin Haziran 2011'deki yeniden değerlendirme sürecine göre yaklaşık 7,9 milyar avroya mal olması beklenmektedir (Nabucco Gas Pipeline International GmbH, 2011b).

Nabucco Doğal Gaz Enerji Boru Hattı Projesi'ne (Nabucco) ilişkin ilk çalışmalar, Şubat 2002'de BOTAŞ'ın girişimi ve Bulgargaz (Bulgaristan), MOL (Macaristan), TRANSGAZ (Romanya) ve OMV Gas & Power GmbH (Avusturya-Şimdiki OMV Gas) şirketleri ile yaptığı görüşmeler sonucunda oluşturulan çalışma grubu ile başlatılmıştır. 22 Aralık 2003'te Nabucco Projesi'ne iştirak eden beş ortak ve AB Komisyonu arasında, projenin

teknik ve iktisadi fizibilitesinin finansmanının yarısının 'hibe kredi' şeklinde AB Komisyonu tarafından karşılanmasına ilişkin, 'Trans-European Transport Network (TEN) Fonu Hibe Anlaşması' imzalanmıştır.

2004 yılında teknik ve iktisadi fizibilite çalışmaları tamamlanması sonucunda 24 Haziran 2004 tarihinde Nabucco müşterekleri arasında 'Nabucco Company Study Pipeline GmbH' kurulmasını öngören Ortaklık Anlaşması imzalanmıştır. Proje geliştirme sürecinde gelinen aşama göz önünde bulundurularak projenin finansmanını sağlayıp yatırımlarını gerçekleştirmesi amacı ile daha sonra Nabucco Company Study Pipeline GmbH, 28 Haziran 2005'te, 'Uluslararası Nabucco Doğal Gaz Anonim Şirketi'ne (NIC)' dönüştürülmüştür. Bu dönüşümle birlikte her bir transit ülkede Ulusal Nabucco Şirketleri'nin (NNC) kurulmasına da karar verilmiştir. Hâlihazırda Romanya, Macaristan, Avusturya ve Bulgaristan'da NNC kurulumları tamamlanmış olup, Türkiye NNC kurulumlarına dair girişimlerini sürdürmektedir.

'Majör Yeni Şirket Ortağı' adayları içerisinde öncelikli olarak tespit edilen şirketlerin projeye eşit oranda (yaklaşık 16,6%) katılım için görüşmeler 2007 yılı boyunca sürdürülmüş, bu görüşmelerin nihayetinde 05 Şubat 2008 tarihinde Alman RWE Midstream GmbH Şirketi resmi olarak Nabucco Projesi'nin altıncı ortağı olmuştur (Komarek, 2008).

Nabucco'nun teknik çerçevesinin belirginleştirilmesinden sonra, proje kapsamında doğal gaz sevkiyatının başlatılabilmesi için gerekli olan hukuki ve siyasi çerçeve, 'Nabucco Doğal Gaz Boru Hattı Projesi Hükümetlerarası Anlaşması'nın Ankara'da AB Komisyonu Başkanı José Manuel Barroso ile Türkiye, Romanya, Avusturya, Macaristan ve Bulgaristan Başbakanları tarafından 13 Temmuz 2009 tarihinde imzalamasıyla çizilmiştir (T.C. Başbakanlık Basın-Yayın ve Enformasyon Genel Müdürlüğü, 2011).

2.2 Trans Anadolu Doğal Gaz Boru Hattı Projesi

Azerbaycan, Nabucco ve Trans Hazar projeleri ile Avrasya Doğal Gaz Boru Hattı Projelerinde stratejik bir öneme sahip olduğunu göstermiştir. Ancak her iki proje de, nedenlerini Azerbaycan'ın Enerji Görünümü başlığı altında daha detaylı değineceğimiz sebeplerden ötürü, yabancı yatırımcıların altyapı ve know-how desteğine ihtiyaç duymaktadır. Rusya, Avrupalı veya Amerikan yatırımcıların bu desteği sağlamadan önce her iki projeyi de devre dışı bırakacak hamleler gerçekleştirmek için Azerbaycan doğal gazına ön ödemeli teklifler götürmüştür (Hurriyer Daily News, 2010). Bu durum karşısında Azerbaycan 14 Kasım 2008'de, çokuluslu bir enerji zirvesini Bulgaristan, Estonya, Yunanistan, Gürcistan, Macaristan, İtalya, Letonya, Lituanya, Polonya, Romanya, Türkiye, Ukrayna, İsviçre, ABD ve AB Komisyonu'nun temsilcileri ile birlikte Bakü'de gerçekleştirmiştir. Zirvede sonuç olarak, Azerbaycan gazını Avrupa'ya çok yönlü taşımayı destekleyen altyapı çalışmalarına; Hazar Havzası'nın petrol ve doğal gaz kaynaklarının çeşitlendirilmesine destek verilmesine; enerji üreticileri, müşteriler ve transit ülkeler için daha mücadeleci bir ortamın yaratılmasına; Avrupa'nın enerji güvenliği için başta Interconnector Turkey-Greece-Italy (ITGI), Nabucco ve Azerbaycan-Gürcistan ve Türkiye üzerinden geçecek diğer olası doğal gaz projelerinin desteklenmesine karar verilmiştir (Baku Energy Summit Declaration, 2008). Türkmenistan ve Kazakistan zirveye katılmış olsalar da, sonuç bildirgesinde yatırımcı ülkelerin öngördüğü desteklere dair ayrıntılara yer vermemiş olmalarını neden göstererek, ortak bildiriye imza atmamışlardır (Socor, 2008), (United Press International, 2008).

Bakü Zirvesi'nden kısa bir süre sonra 29 Kasım 2008'de Azerbaycan Cumhurbaşkanı İlham Aliyev ve Türkiye Cumhurbaşkanı Abdullah Gül Türkmenistan'a yapmış oldukları ziyarette Bakü Zirvesi sonuçları doğrultusunda niyetlerini belirtmişlerdir. Görüşmeler sonunda resmi bir antlaşma imzalanmamış olsa da Türkmenistan Cumhurbaşkanı Berdimuhammedov Asya ve Avrupa arasında bir köprü vazifesi gören Hazar Havzası'nın önemine dikkat çekmiş ve doğal gaz üretimi ve ulaşımında çeşitlendirmeye gidilmesine sıcak bakabileceğini belirtmiştir (Upstream, 2008). Nitekim 25 Ekim 2011 tarihinde Azerbaycan'ın Şahdeniz II Bölgesi'nin doğal gazının Türkiye'ye ve Türkiye'den de AB'ye ulaştırılmasını öngören Hükümetlerarası anlaşma İzmir'de; Trans Anadolu Doğal Gaz Boru Hattı'nın yapımına ilişkin mutabakat zaptı ise 26 Aralık 2011 tarihinde Ankara'da imzalanmıştır. Söz konusu anlaşmanın Şahdeniz II Projesi kapsamında üretilecek gazın hem Türkiye'de kullanılması hem de bir kısmının Avrupa'ya aktarılmasını öngördüğünü anımsatan Türkiye Enerji ve Tabii Kaynaklar Bakanı Taner Yıldız, mutabakat zaptı ile hükümetler arası anlaşmayı daha somut hale getirdiklerini belirtmiştir (Anadolu Ajansı, 2011). 26 Aralık 2011 tarihinde imzalanan mutabakat zaptında, 'Trans Anadolu ismi verilen söz konusu münhasır boru hattına yönelik çalışmaların ivedilikle başlanılması ve iki ülke tarafından tayin edilen şirketlerin ortak bir konsorsiyum tesis etmeleri' konusunda mutabakat sağlanmış olduğu; bu çerçevede, söz konusu şirket birlikteliği içerisinde SOCAR, BOTAŞ ve TPAO'nun ilk ortaklar olarak yer alacağı; süreç içerisinde diğer uluslararası petrol ve doğal gaz şirketlerinin de şirket birlikteliğine dahil olabileceği belirtilmiştir (Socar Türkiye, 2012).

2.3 Türkiye-Yunanistan-İtalya Doğal Gaz Boru Hattı Projesi

Yaklaşık 2 milyar avroya mal olması beklenen Türkiye-Yunanistan-İtalya Doğal Gaz Boru Hattı Projesi'yle (ITGI), Azerbaycan'ın Şahdeniz II bölgesinden gelecek doğal gazın Türkiye, Yunanistan ve İtalya üzerinden Avrupa'ya dağıtılması planlanmaktadır. Yunanistan'ın DEPA ve İtalya'nın Edison şirketlerinin ortak girişimleriyle başlatılan ITGI projesinin Türkiye ve Yunanistan'ı bağlayan 296 kilometrelik ilk kısmı, BOTAŞ ve DEPA arasında Mart 2002'de imzalanan anlaşma gereği, Eylül 2007'de tamamlanmıştır.

Hattın Yunanistan'dan İtalya'ya uzanan bölümü, Nisan 2005'te DEPA ve Edison arasında imzalanan mutabakat zaptı ile belirlenmiştir. Haziran 2010'da DEPA, Edison ve BOTAŞ arasında imzalanan mutabakat zaptı ile projeye son şekli verilirken, Ocak 2011'de Avrupa Komisyonu Başkanı Jose Manuel Barroso ve Azerbaycan Cumhurbaşkanı İlham Aliyev arasında imzalanan anlaşma ile proje kaynak ülke sorununu çözme yolunda önemli bir adım atmıştır.

ITGI kapsamında Avrupa'ya ulaştırılması gereken 10 milyar metreküp doğal gazın mevcut şartlarda Şahdeniz II tarafından karşılanabilecek olması, projenin gerçekleşmesi için umut vericidir. Bunun ötesinde DEPA yöneticisi Harry Sachinis, Azerbaycan'a yapılacak bir yardımla Şahdeniz II'den yaklaşık 24 milyar metreküp doğal gaz temin edilebileceğini belirtmiştir (Pipelines International, 2011).

2.4   Trans Adriyatik Doğal Gaz Boru Hattı Projesi

870 kilometrelik uzunluğu ile ITGI'den daha kısa bir rotayı takip eden Trans Adriyatik Doğal Gaz Boru Hattı Projesi (TAP) de yaklaşık 10 milyar metreküp doğal gaz kaynağına ihtiyaç duymaktadır (Margheri, 2011). 2003 yılında ilk hali İsviçre merkezli enerji şirketi EGL Grup (şimdiki adı Axpo) tarafından hazırlanan projeye Şubat 2008'de Norveç merkezli Statoil dahil olmuş, daha sonrasında ise projenin Haziran 2008'de Yunanistan ve Arnavutluk üzerinden İtalya'yı kapsamasına karar verilmiştir. Mart 2009'da İtalya ve Arnavutluk hükümetleri TAP için ortaklık anlaşması yaptıktan sonra Ocak 2010'da TAP, Yunanistan, Arnavutluk ve İtalya'da ofisler kurmuştur. 07 Temmuz 2010'da da Almanya merkezli E ON Ruhrgas projeye iştirak etmiştir (Pipeline & Gas Journal, 2010).

Şubat 2012 itibariyle kaynak ülke arayışlarına resmiyet kazandıran TAP, Şahdeniz Konsorsiyumu ile görüşmelere başlamış; konsorsiyum ortakları BP, SOCAR ve Total enerji şirketleri TAP projesinde %50 pay sahibi olma konusunda proje yöneticileri ile anlaşmıştır. 22 Kasım 2012'de TAP, konsorsiyum ile birlikte, Trans Anadolu Doğal Gaz Boru Hattı ortakları ile mutabakat zaptı imzalayarak, iki taraf arasında işbirliği çerçevesinin kurulmasını sağlamıştır (TAP AG, 2013a). Projeye eklenecek İyonya Adriyatik Boru Hattı ile TAP'ın Bosna Hersek, Hırvatistan ve Karadağ'ı da kapsayacak şekilde düzenlenmesi sonucu 12 Haziran 2013 tarihinde bu ülkelerinkine ek olarak Yunanistan, Arnavutluk ve İtalya dışişleri bakanları bir araya gelerek projeye desteklerini açıklamışlardır (TAP AG, 2013b).

3   Avrasya Doğal Gaz Boru Hattı Projeleri Çerçevesinde Kafkas Ülkelerinin Durumu

3.1   Azerbaycan'ın Enerji Görünümü

Bağımsızlığını kazandığı 1991 yılına dek Azerbaycan'da başta Azerbaycan Devlet Petrol Şirketi (SOCAR) olmak üzere, bütün enerji şirketlerinin kamu iktisadi teşebbüsü formunda olması, dolayısıyla serbest piyasa şartlarının gerekliliklerini tam anlamıyla yerine getirebilecek kapasitede veya anlayışta olmaması, zengin petrol yataklarının kapasitesinin altında işletilmesine ve Sovyetlerden kalma enerji boru altyapı ağına bağımlılığı zorunlu kılmıştır (EIA, 2012).

Dört büyük petrol sahasıyla önümüzdeki yirmi yıl boyunca enerji sektörünün petrol ayağını güvenlik altına almış olan Azerbaycan'da doğal gaz için ise daha bulanık bir görünüm mevcuttur. Azerbaycan'daki mazisi petrol kadar eski olmayan, dolayısıyla iktisadi girdi olarak daha az bir paya sahip olan, doğal gazın üretimi için gerekli olan alt yapı çalışmaları yıllar içerisinde oldukça düşük bir oranda gerçekleştirilmiştir (Parini, 2012). Sovyet Dönemi'nde dünyanın en büyük doğal gaz rezervine sahip Rusya'ya ile doğrudan doğal gaz enerji boru hatlarına sahip olmak ve doğal gazın petrole göre iletim ve depolama maliyetlerinin oldukça yüksek olması, Azerbaycan'ın doğal gaz konusunda bu geri kalmışlığının ardında yatan temel sebep olmakla beraber, durum 2007 yılına kadar da değişmemiştir.

Bugün Azerbaycan, Rusya ve İran'ı devre dışı bırakarak Hazar Havzası'nın zengin enerji kaynaklarını ihraç etmek suretiyle alternatif bir doğal gaz iletim projesine dâhil olacaksa, ülke enerji alanına yapacağı altyapı yatırımını arttırmanın yanında uluslararası sermayenin yardımlarına da ihtiyaç duyacağı kesindir. Azerbaycan geçmiş yıllarda petrol sektörüne yıllık bütçesinin yaklaşık %25'lik kısmını (üç milyar dolar Amerikan dolarına yakın) ayırmıştır (Holuj, 2009). Bu oran, başkent Bakü dışında iktisadi bir çeşitliliği ya da kalkınma hareketi gözlemlenmeyen ve toplam nüfusunun yarıya yakını fakirlik sınırında olan Azerbaycan için oldukça önemli bir miktarı oluşturmaktadır. Ancak bu yatırım miktarı Azerbaycan'ın petrol sektörünün serbest piyasada mücadele gücünü arttırmaya yetmemektedir. Bu yüzden Azerbaycan kurmuş olduğu Devlet Petrol Fonu üzerinden 2001 yılında International Monetary Fund (IMF) fonlarına başvuru yapmıştır (IMF Public Information Office, 2002). 2001'den itibaren IMF'de alınan fon yardımı ile sektörün kalkınması için kullanılan miktar 2009 yılında yıllık 18 milyar dolara ulaşarak Azerbaycan'ın genel bütçesinin yarısına yaklaşmıştır. Bu durumda Azerbaycan'ın bütçesinin başat girdisi olan petrol sektörüne bile yatırım yapmakta zorlandığı sonucunu çıkarabiliriz.

Azerbaycan petrol üretimi için gerekli olan finansman desteğini IMF'de alırken, AB ve ABD gibi ülkeye başta doğal gaz olmak üzere uzun vadeli yatırım yapmak isteyen yatırımcılar bu isteklerini gerçekleştirememektedirler. Bu duruma, Azerbaycan'daki çeşitli iç faktörlerin yanında; Karabağ sorunu, Türkiye-Ermenistan, Rusya-Gürcistan arasındaki sorunlar, Kuzey Kafkasya'da yaşanan çeşitli etnik ayrılıkçı hareketler ve İran'ın nükleer programı yüzünden uluslararası sistemden dışlanması gibi dış faktörler neden olmaktadır. Ezcümle,

Azerbaycan'ın enerji sektöründeki sorunları sadece enerji alt yapısında modernleşme ve bunu karşılayacak olan iktisadi yeterliliklerin eksikliğinin ötesinde bir husustur.

3.2 Azerbaycan ve Avrasya Doğal Gaz Boru Hattı Projeleri

Bakü Tiflis Erzurum Doğal Gaz Boru Hattı (BTE) için gerekli olan doğal gaz, 2007 yılında Azerbaycan'ın başat doğal gaz sahası olan Şahdeniz'den pompalanmaya başlanmıştır. Bölgede Gazprom'a ait tekeli yıkmada ilk adım olarak görülen bu proje kapsamında yılda 8,8 milyar metreküp gaz Türkiye'ye gönderilmektedir. BTE'den önce Azerbaycan, Bakü-Astara ve Gazi-Magomed-Mozdok Doğal Gaz Boru Hatları ile sadece Rusya ve İran'a gaz iletimi yapmaktaydı. BTE ise Azerbaycan'a, Gürcistan üzerinden Türkiye'ye gaz iletimini sağlamıştır.

Azerbaycan'ın hâlihazırda doğal gaz rezervi 0,9 trilyon metreküp olarak hesaplanmıştır (British Petroleum, 2013). On beşincisi Bakü'de gerçekleştirilen Uluslararası Hazar Petrol ve Gaz Konferansı'na katılan SOCAR'ın Birinci Başkan Yardımcısı Khoshbakht Yusifzade'nin yaptığı açıklamaya göre de bu rezervin yıllık 27,4 milyar metreküpü üretilebilmektedir (The Economic Times, 2008). Yapılan hesaplamalara göre ise mevcut şartlar altında Azerbaycan'ın rezervi elli yıl daha bu kapasitede bir üretim yapabilecekken, sadece BTE kapsamında yıllık yirmi milyar metreküp üretim yapılabilecektir. Şahdeniz rezervlerine ek olarak bulunan Azeri-Çıralı-Güneşli (ACG Deepwater) sahasındaki doğal gaz rezervi, Azerbaycan'ın bir gaz üreticisi olarak rezerv kapasitesini arttırmıştır. Bu rezervler doğrultusunda gerçekleştirilecek yeni projelerle genel doğal gaz üretiminin mevcudun iki misline çıkartılarak Rus gazına ve Sovyet dönemi boru hatlarına bağımlılığın azalacağı öngörülmektedir (Pitt, 2006). Azerbaycan Rusya'ya olan bu bağımlılığını azaltma yolunda ilerlemek isterken mevcut gaz rezervlerinin üretimine ve dahası geniş kapsamlı olarak ihracata geçebilmesi için dört milyar dolarlık Trans Kafkasya projesi gibi birçok proje için finansmana ihtiyaç duymaktadır. %10'u SOCAR'a ait olan Şahdeniz üretim paylaşım antlaşmasının (PSA) %90'ının altı uluslararası petrol şirketi tarafından üstlenmesi (British Petroleum, 1996) de Azerbaycan'ın gerektiğinde bu ihtiyacının dış yatırımla desteklenebildiğini gösteren iyi bir örnektir.

Azerbaycan'ı gaz üretim seviyesinin belirli bir konuma getirmesini ve daha da ileriye taşımasında motive eden en büyük unsur, kendi kapasitesine ek olarak doğusunda bulunan ülkelerde toplam 7,1 trilyon metreküp doğal gaz rezervinin bulunmasıdır. Doğusunda 'kara ile kuşatılmış' bu ülkelerle enerji ithalatında Rus tekeline bağımlı olmaktan rahatsız olan batısındaki gelişmiş ülkeleri birbirine kavuşturabilecek güzergâh üzerinde olması bu motivasyonunu temel dinamikleridir. Öte yandan, Azerbaycan'ın da kara ile kuşatılmış olması ve mevcut uluslararası siyasi şartları nedeniyle doğal gazını sıvılaştırarak ihraç etmek zorunda kalması, doğal gazın taşıma maliyetini yükseltmektedir. Rusya veya İran üzerinden geçecek bir boru hattının doğal gaz taşıma maliyetini iyice düşürecek olmasına karşın gaz ithal edecek Avrupa ülkelerinin bu iki ülke üzerinden geçecek projelere sıcak bakmaması nedeniyle bu olumsuz durum devam edecek gibi görünmektedir. Öte yandan Rusya, Gazprom'un Ukraynalı ortakları ile kurmuş olduğu RosUkrEnergo şirketi vasıtasıyla Türkmenistan, Kazakistan ve Özbekistan ile imzalamış olduğu ikili anlaşmalar yoluyla Güney Koridor ve Kuzey Akım projelerinde Azerbaycan'ı Ukrayna veya Karadeniz üzerinden devre dışı bırakma yolunda adımlar atmaya başlamıştır (Jeffers, 2011). İktisadi şartlardan ziyade siyasi durum göz önüne alınarak yapılan bu hamleler Azerbaycan'ın ancak doğu batı ekseninde yapılabilecek bir enerji hattının inşasında yer bulabilmesine imkân sağlamaktadır.

Finansal ve siyasal engellerin yanında Hazar'ın statüsü sorunu olarak da bilinen hukuki sorun da Azerbaycan'ın Güney Koridoru yolunda önünde duran bir engeldir. Uluslararası hukuka göre Hazar'ın bir deniz olarak kabul edilmesi durumunda Hazara kıyısı bulunan her ülkeye on iki deniz mili karasuyu hakkı tanınacaktır. Bu durumda Hazar'ın ortasında yaklaşık iki yüz deniz mili kadar da bir münhasır iktisadi bölge oluşacaktır. Öte yandan Hazar'ın bir göl olarak kabul edilmesi durumunda, Hazar'dan elde edilecek gelirlerden projeye dâhil olsun olmasın her sahildar ülke proje gelirlerinden pay alma hakkına sahip olacaktır. Azerbaycan, Rusya ve Kazakistan Hazar'ın statüsü konusunda karşılıklı anlaşmalar yapmışken, Trans Hazar Hattı için Azerbaycan'ın Türkmenistan'la da benzer bir anlaşma yapması da zorunlu gözükmektedir.

4 Gürcistan

4.1 Gürcistan'ın Enerji Görünümü

2011 yılı itibariyle 1 milyar 700 milyon metreküp doğal gaz ithal eden Gürcistan, bu ihtiyacını 70'e yakın gaz dağıtım şirketi ile Azerbaycan ve Rusya'dan temin etmektedir. Ülkenin toplam 6013 kilometre uzunluğa sahip doğal gaz boru hattı sisteminin %19'u 30 yıldan eskiyken, %76'sı 10 ila 30 yıldan önce, %5'i ise 10 yıldan az bir zaman önce inşa edilmiştir (Chikhladze, 2010). Mevcut şartlarda Gürcistan bu boru hatlarının maksimum kapasitesinin ancak %21'ini kullanabilmektedir. Öte yandan Hazar petrolünün Bakü-Novorossisk ve Bakü-Supsa Petrol Boru Hatları ile Karadeniz limanlardan uluslararası müşterilere ulaştırılması, İstanbul ve Çanakkale Boğazlarında oldukça tehlikeli ve yoğun trafiğe neden olmaktadır. 2005 yılında tamamlanan 1768 km uzunluğundaki BTC petrol boru hattı ve 692 kilometre uzunluğundaki BTE doğal gaz boru hattı, Azerbaycan-Gürcistan ve Türkiye'nin iktisadi ve siyasi işbirliğinin birer meyvesi olarak hem bu trafiği azaltma yolunda hem de Gürcistan'ın mevcut doğal gaz altyapısının geliştirilmesinde atılan önemli bir adım olmuştur. Bu meyveden

Gürcistan'ın payına düşen ise yıllık 62,5 milyon Amerikan dolarlık bir gelire ek olarak işsizlik oranlarında yaklaşık %30'luk düşüş gösterebilir (Papava, 2005).

BTC ve BTE'nin gerçekleştirilmiş olması Kafkas ülkelerinden sonra Merkezi Asya ülkeleriyle de gerçekleştirilecek işbirliklerinin zemini hazırlanmıştır. Nitekim 16 Haziran 2006'da Azerbaycan Cumhurbaşkanı İlham Aliyev ve Kazakistan Cumhurbaşkanı Nursultan Nazarbayev'in imzaladıkları Trans-Hazar Petrol Ulaşım Sistemi Mutabakat Zaptı, Kaşagan ve Tengiz sahalarındaki petrolün tankerlerle Hazar Denizi'ni geçerek Azerbaycan'ın Sangaçhal Terminali'ne, Sangaçhal'den de BTC'yle bütünleşerek uluslararası piyasalara ulaştırılmasını öngörmüştür (Today.Az, 2006) (Azernews, 2011).

4.2 2008 Savaşı'nın Gürcistan'ın 'Transit ve Alternatif Enerji Boru Hattı Ülkesi' İmajına Etkisi

2008 yılına gelindiğinde Gürcistan, enerji alanında BTC ve BTE projelerinde yer alarak önemli bir stratejik konum kazanmış durumdaydı. Yıllık 7,23 milyar metreküplük gaz sevkiyatı ile dünya çapında gerçekleştirilen gaz sevkiyatının sadece %1,23'lük kısmını (British Petroleum, 2009) oluşturmasına rağmen BTE, bölgede ABD'nin rakip olarak gördüğü, İran ve Rusya'yı devre dışı bırakarak Avrupa'ya gaz sevkiyatının gerçekleştirilmesiyle, Gürcistan'a stratejik bir konum kazandıran temel etmenlerden biriydi. Gürcistan'ın sahip olduğu bu stratejik avantaj aynı zamanda Gürcistan'ın kırılgan siyasi yapısını, doğal gaz projelerinde devre dışı bırakılan ülkelerin hedefi haline getirmiştir. Ağustos 2008'de İran'a nazaran Gürcistan üzerindeki etkisi daha yoğun olan ve bölgedeki batı yanlısı eğilimleri daha ciddi bir tehlike olarak gören Rusya'nın, Gürcistan'ın Güney Osetya ve Abhazya'da yaşanan etnik çatışmalara müdahil olmasını, bu bağlamda yorumlayan çalışmalar mevcuttur (Nichol, 2009), (Skarbo & Petre, 2008), (BBC News, 2008).

Ağustos 2008'te gerçekleşen savaşın Gürcistan'ın 'Kafkaslardaki güvenli transit enerji koridoru' görüntüsü üzerine doğrudan ve dolaylı bazı etkileri olmuştur. Her ne kadar Rusya'nın enerji boru hatlarını doğrudan işgal ederek çalışmalarını kontrol altına aldığı gözlemlenmese de teknik nedenlerle Bakü-Supsa hattı karşısında dezavantajlı durumda olan Bakü-Novorossiisk hattının savaş boyunca tam kapasiteyle çalışması veya BTC'nin kesintiye uğraması, savaşın bu imajın bozulmasına neden olan doğrudan etkileri olarak sayılabilir. Öte yandan Gürcistan'ın bölgedeki güvenilir ve alternatif transit koridor imajını sarsan bu savaşın, Gürcistan'ın enerji boru hatları üzerine inşa ettiği uzun vadeli iktisadi ve siyasi kalkınma projesini derinden sarstığı gerçeğine ek olarak, dış yatırımların güvenilir bir ortam bulacaklarına dair inançlarının sarsılması Gürcistan'a dolaylı olarak da büyük zarar vermiştir. Öyle ki savaş sırasında gerçekleşen kesintiler Gürcistan'ın projedeki gelirlerinde ciddi bir azalmaya neden olmamış olsa da, yatırımcılar nazarında oluşan güvensizlik imajı nedeniyle, Gürcistan'ın zararının bir milyar doları aştığı düşünülmektedir (Bilefsky, 2008).

4.3 2008 Savaşı Sonrası Gürcistan ve Avrasya Doğal Gaz Boru Hattı Projeleri

2008 Savaşı, AB'nin Türkmenistan'ın zengin doğal gaz yataklarına Nabucco ile Gürcistan üzerinden ulaşma yolunda atmış olduğu önemli adımlar sırasında gerçekleşmiştir. Gürcistan'ın projeye katılma yönündeki istekliliği savaş sonrası dönemde de sürmüş, Ocak 2009'da Gürcistan Cumhurbaşkanı Saakaşvili eski Başbakan Lado Gurgenidze'yi Nabucco başta olmak üzere uluslararası enerji projelerinde temsilci olarak atamıştır (Press Office of the President of Georgia, 2009). 2008 yılında yaşanan savaş Gürcistan'a dışarıdan yatırım çekme konusunda dezavantaj sağlarken, savaş süresince Rusya'nın Gürcistan'a karşı göstermiş olduğu tutum, Nord Stream ve Güney Akım Doğal Gaz Boru Hattı Projeleri vasıtasıyla Rusya ile olan işbirliği devam eden AB ülkelerinin ve Rusya ile İran'ı devre dışı bırakacak tüm projelere destek verebilecek ABD'nin alternatif arayışlarını hızlandırmıştır. Bu bağlamda Kasım 2008'de Bakü'de aralarında Türkiye'nin de bulunduğu ülkelerin katılımıyla gerçekleşen enerji zirvesinde Moskova'nın tekelci politikası ve enerji sektöründe yaratmış olduğu baskı eleştirilirken, Gürcistan'ın bu konudaki önemine yer verilmiştir. Öte yandan 2009'un başında ise ABD ve Gürcistan arasında stratejik ortaklık anlaşmasıyla, Avrasya enerji güvenliğinin özellikle Güney Koridoru ile desteklenmesini de kapsayan 'ortak çıkarlar' konusunda mutabakata varılmıştır (Bureau of European and Eurasian Affairs, 2009).

ABD başta olmak üzere Batılı yatırımcılar Gürcistan'da yaşanan savaş ortamından olumsuz etkilenmiş olsalar da Gürcistan'ın Hazar ve Orta Asya'nın enerji kaynaklarına ulaşmada önemli bir transit konumda bulunuyor olması nedeniyle Gürcistan'ın desteklenmesine devam etme kararı almışlardır. Rus tarafında ise Dışişleri Bakanı Sergey Lavrov Nabucco için "iktisadi açıdan mantıklı görünmeyen açıkça araçsal bir proje" ifadesini kullanmıştır (Lavrov, 2008). Bu noktada görülmektedir ki Gürcistan Savaşı'nın nedenlerinden biri de, bir tarafında ABD ve AB'nin desteklediği ve Türkiye ile Azerbaycan'ın bizzat parçası olduğu enerji boru hattı projeleri, diğer tarafta aynı coğrafyayı stratejik bir arka bahçe olarak gören Rusya'nın bulunduğu, uluslararası çekişmedir (Socor, 2004). Gürcistan'ın, Rusya'nın bu hedefine gerek siyasi gerekse enerji yoluyla iktisadi olarak muhalefeti, Ağustos 2008'deki gibi bir müdahalenin gerçekleşmesinde şüphesiz önemli bir rol oynamıştır.

4.4 Ermenistan'ın Enerji Görünümü

2011 yılındaki 2 milyar 77 milyon metreküplük doğal gaz tüketiminin bir milyar üç yüz milyonuna yakınını Rusya'dan, kalan yaklaşık dört yüz milyon metreküp doğal gazı da İran'dan ithal eden Ermenistan, doğal gaz üretimi yapamayan 'net enerji ithalatçısı' statüsündeki ülkelerden biridir (British Petroleum, 2013). Mevcut enerji altyapısının tamamına yakını Ermeni-Rus ortak girişimi ArmRusGasprom şirketine bağlı olan ülke, başta

elektrik enerjisi ithal ettiği İran ve/veya tarihi-siyasi uyuşmazlıklar nedeniyle ilişkilerinin gergin olduğu Türkiye vasıtasıyla 'transit enerji koridoru' ülkesi olmak istemektedir (Central Intelligence Agency, 2012). Bu bağlamda 1992'de İran ile doğal gaz boru hattı inşası için anlaşan Ermenistan, iki yüz milyon dolara yakın maliyeti olan projeyi ancak 2007 yılında faaliyete geçirebilmiştir. Yüz kırk bir kilometre uzunluğundaki projeyle İran'dan ithal ettiği yıllık dört yüz milyon metreküp doğal gazın tamamını ithal eden Ermenistan'ın, projenin son fazında yalnız İran üzerinden iki buçuk milyar metreküp doğal gaz ithal edebilecek seviyeye gelmesi planlanmaktadır (BBC News, 2007).

Avrasya Doğal Gaz Boru Hattı Projeleri gelecekte ister İran'ın ister Hazar Havzası'nın enerji kaynaklarını kullansın, Ermenistan transit enerji koridoru olarak bu projelerde oldukça stratejik bir konumda olacaktır. Bu bağlamda projelere dâhil olması kuvvetle ihtimal olan Azerbaycan'ın yine projenin esas unsurlarından biri olan Türkiye ile bağlantısını Gürcistan veya Ermenistan üzerinden kurabilecektir. Çalışmamızın bu kısmında Ermenistan'ın Avrasya Doğal Gaz Boru Hattı Projeleri bağlamında nereye oturduğunu göstermeye çalışacağız.

4.5 Ermenistan ve Avrasya Doğal Gaz Boru Hattı Projeleri

Ağustos 2008'deki Gürcistan-Rusya Savaşı, Hazar Havzası ve Kafkasya'nın enerji kaynaklarının Türkiye üzerinden AB'ye ulaştırılmasını öngören Avrasya Doğal Gaz Boru Hattı Projelerinin olası güzergâhında bazı değişiklikleri gündeme getirmiştir (Engdahl, 2009). Gündeme gelen bu değişikliklerden biri, gerek Azerbaycan'ın öz kaynaklarını gerekse başta Türkmenistan olmak üzere Hazar Havzası kaynaklarını Anadolu'ya taşıması beklenen Nabucco Projesi'nin boru hattı güzergâhına, Ermenistan'ın dahil edilmesi fikrinin ortaya çıkmasıdır.

Ermenistan'ın Nabucco ile Avrasya Doğal Gaz Boru Hattı Projelerine dahil edileceğini öngören fikirlerin temel dayanak noktaları iki başlık altında toplanabilir. Bunlardan ilki Ermenistan'ın geniş doğal gaz rezervlerine sahip İran'la arasında inşa etmiş olduğu doğal gaz boru hattıdır. Bu hattın yıllık iki buçuk milyar metreküp doğal gaz sevkiyatına izin veren kapasitesinin arttırılmasıyla, projelerin ilk fazda ihtiyaç duyacağı doğal gazın iletilebileceği bu fikrin esasını oluşturmaktadır. Ancak bu fikrin pratiğe dönüşmesinin önünde duran iki temel engel bulunmaktadır. Bu engellerden ilki Ermenistan enerji altyapısının tümünün Rus-Ermeni ortak girişimi ArmRusGasprom vasıtasıyla Rusya'nın kontrolünde olmasıdır (Akkan, 2009). Yüzde sekseni Ruslara ait bir firmanın altyapısının AB tarafından finanse edilerek yenilenmesi siyasi nedenlerle pek de mümkün görünmemektedir. Öte yandan hattın İran ayağı da yatırıma muhtaçtır. Bu engelin aşılamamasının ardında yatan sebep ise, dünyanın en geniş ikinci doğal gaz rezervine sahip olmasına rağmen, İran'ın kendi doğal gaz altyapısını yenileyememesidir. AB ve ABD haricinde başka bir ülkeden İran'ın doğal gaz iletim altyapısının yenilemesi yönünde gelebilecek olası bir dış yardım da İran Anayasası gereğince engellenmektedir. İran-Ermenistan Doğal Gaz Boru Hattı'nın Avrasya Doğal Gaz Boru Hattı Projelerine eklemlenmesini zorlaştıran diğer bir engel ise AB ve ABD'nin İran'a karşı uygulamış oldukları izolasyon politikasıdır. Bu ülkenin nükleer programının neden olduğu izolasyon, hattın projelere eklenmesini kati surette engellemektedir.

Ermenistan'ın Nabucco ile Avrasya Doğal Gaz Boru Hattı Projelerine dahil olacağını öngören fikirlerden ikincisinin temelinde, Ermenistan ve Türkiye arasında 10 Ekim 2009 tarihinde 'Türkiye Cumhuriyeti ile Ermenistan Cumhuriyeti Arasında Diplomatik İlişkilerin Kurulmasına Dair Protokol'ün imzalanması yatmaktadır. Bu fikre göre, Rusya'nın Avrasya enerji kaynaklarını doğruda veya dolaylı olarak hükmettiği mevcut durumu değiştirmek isteyen ABD, Türkiye ve Ermenistan ilişkilerinin geliştirilmesinde her iki ülkeyi de desteklemektedir. ABD'nin desteği ile diplomatik ilişkileri kuran Türkiye ve Ermenistan, Nabucco'nun gerçekleştirilmesi yolunda sınır kapılarını karşılıklı olarak açabilecek ve Dağlık Karabağ sorununda Ermenistan, Minsk Grubu üyesi Türkiye ile fikir alışverişi yapabilecektir. 2009'da imzalanan anlaşmayla siyasi ilişkiler gibi enerji ilişkilerinin de güçlendirileceği öngörülmüş olsa da Ermenistan-Türkiye yakınlaşmasına Azerbaycan'ın göstermiş olduğu olumsuz tepkinin yoğunluğu, tarafların emellerini gerçekleştirmesini engellemiştir (Cihan Haber Ajansı, 2009). Azerbaycan'ın Türkiye-Ermenistan ilişkileri konusundaki tavrını daha önceden net ve sert bir şekilde ortaya koyuşu ve protokolün imzalanması üzerine çok hızlı bir şekilde Rusya ile doğal gaz anlaşması yapması, Nabucco Projesi özelinde Avrasya Doğal Gaz Boru Hattı Projeleri'nin nasıl hassas bir zeminde olduğunu ve dengeleri göz ardı eden bir adımla nasıl altüst olabileceğini gösteren bir örnek olarak karşımıza çıkmıştır.

5 Sonuç ve Değerlendirme

Çalışmamızın son kısmında, enerji görünümlerini incelediğimiz Kafkas ülkelerini Avrasya Doğal Gaz Boru Hattı Projeleri kapsamında tek tek değerlendirmeye çalışarak, bu ülkelerin projelere iştirak edecek ülkelerle olan işbirliği ihtimalleri üzerinde duracağız. Bu bağlamda değerlendireceğimiz ilk ülke Azerbaycan olacaktır.

Azerbaycan'ın Dağlık Karabağ ve Hazar'ın statüsü gibi yaşamış olduğu uluslararası sorunlar, Rusya'yı devre dışı bırakacak olası bir boru hattı projesinin önünde duran diğer büyük engellerdir. Azerbaycan'ın bu sorunların çözümünde Azerbaycan tezlerine daha mesafeli davranan Rusya'yı ikna etmek yerine AB ve ABD'den siyasi destek alabilmek adına enerji işbirliğini bir alternatif olarak düşünmesi beklenebilir. Bu noktada Azerbaycan'ın Avrasya Doğal Gaz Boru Hattı Projeleri arasında yer alan Nabucco veya benzeri bir başka proje çatısı altında,

batısındaki ülkeler ile işbirliği kurması, siyasi açıdan, olası görünmektedir. Ancak iktisadi açıdan Azerbaycan'ın Rusya'yı tercih etme olasılığı aralarında Türkiye'nin de bu bulunduğu bu ülkeler ile gerçekleştirilecek bir işbirliğinden daha mümkün görünmektedir.

Değerlendirme kısmında ele alacağımızı ikinci ülke olan Gürcistan'ın Azerbaycan ile birlikte Rusya'nın stratejik olarak oldukça önem atfettiği Güney Kafkasya'da, batı ile bütünleşme konusunda oldukça istekli davranıyor olması, bu ülkeyi Rusya'nın açık bir hedefi haline getirmektedir. Türkiye, gerek ABD'nin gerekse AB'nin siyasi ve iktisadi desteğiyle birlikte, Gürcistan'ın alternatif bir enerji transit ülkesi olarak uluslararası enerji boru hattı projeleriyle bütünleşmesi için en somut adım atan ülkedir. Bu yüzden birbirleriyle doğrudan bir çekişme içerisinde bulunmayan Türkiye ve Rusya'nın özellikle enerji boru hatları üzerinden bu coğrafyada da gelecekte bir çekişme içerisinde olacağını söyleyebiliriz.

Dağlık coğrafyaya sahip olmak, doğal gaz rezervlerine sahip olmamak, transit koridor olabilmek için gerekli altyapıya olmamak, Azerbaycan ve Türkiye ile derin siyasi çatışmalara sahip olmak, AB ve ABD tarafından uluslararası alandan izole edilmeye çalışılan İran ile enerji münasebetine sahip olmak gibi oldukça fazla sorunu barındıran Ermenistan'ın Avrasya Doğal Gaz Boru Hattı Projelerine dâhil olması ise, mevcut dinamikler çerçevesinde, kanımızca imkânsız görünmektedir.

Trans-Anadolu Doğal Gaz Boru Hattı Projesi'nden Ekonomik ve Stratejik Beklentiler

Economic and Strategic Expectations of Trans-Anatolian Natural Gas Pipeline Project

Assoc. Prof. Dr. Osman Nuri Aras (Fatih University, Turkey)

Ph.D. Candidate Elchin Suleymanov (Qafqaz University, Azerbaijan)

Assoc. Prof. Dr. Fakhri Hasanov (Qafqaz University, Azerbaijan)

Abstract

The Republic of Azerbaijan is one of the oil and gas rich countries of the former Soviet Union. After the second stage of the Shah Deniz gas field, natural gas extraction and exportation became one of the key elements of Azerbaijan's oil and gas strategy. Diversification of the oil and gas transportation has a great importance in Azerbaijan's energy security policy and in this regard, TANAP is an important project after Baku-Tbilisi-Ceyhan oil pipeline. TANAP is a proposed natural gas pipeline project to transport Azerbaijani natural gas through Turkey to Europe in two directions. The project was firstly announced on 17 November 2011 at the Third Black Sea Energy and Economic Forum in Istanbul. It was launched in 2014 and will be expected to finish in 2018. TANAP will cost seven billion USD and will have the capacity of 23 billion cubic meters by 2023 and 31 billion cubic meters by 2026. This paper analyzes expected strategic and economic outcomes of TANAP.

1 Giriş

Bağımsızlık sonrası Azerbaycan'ın uluslararası şirketlerle petrol ve doğal gaz anlaşmaları yapması ve bu çerçevede ortak faaliyetler gerçekleştirmesi, ülkeye gelişmiş modern teknolojilerin getirilmesine, enerji sektörü altyapısının yeniden kurulmasına imkan sağlamıştır. Sovyetler Birliği döneminde Azerbaycan'ın doğal gaz sektörü petrol sektörünün bir hayli gerisinde kalmıştır(Suleymanov,Zeynalov,2009).Üretimine başlandığı tarihten itibaren Azerbaycan'da en fazla doğal gaz üretimi 17 milyar m^3 ile 1981 yılında gerçekleştirilmiştir.1980'lerde doğal gaz üretimi yıllık olarak 14 milyar m^3'e çıkmıştır. Ancak 1990'dan itibaren üretim önemli düzeyde gerileme kaydederek geçen yüzyılın 60'lı yıllarındaki düzeyine inmiştir. 2007 yılına kadar üretilen doğal gaz ülke içi talebin sadece %40'ını karşılayabilmekteydi (Aras,2008;159). Üretimin ülke içi talebi karşılayacak seviyede olmaması nedeniyle Azerbaycan doğal gaz ithal edilmekteydi. Doğal gaz üretiminin 5-6 milyar metreküpe kadar gerilemesi sonucu, Azerbaycan Sovyetler döneminde Ermenistan ve Gürcistan'a doğal gaz ihraç ederken, 1990'dan itibaren Türkmenistan ve İran'dan doğal gaz ithal etmek mecburiyetinde kalmıştır (Aslanlı , 2004). Ancak bu ülkelerden doğal gaz ithalatını 1995'de durdurmuştur. 2000 yılında ise Rusya'dan ithal etmek üzere anlaşma yapmıştır. Rusya'dan doğal gaz ithali, 2006 yılı sonlarına kadar devam etmiştir.Azerbaycan'ın doğal gaza olan talebinin ülke içi üretim tarafından karşılanması, ancak 2007 yılında "Şah Deniz" yatağından doğal gaz elde etmeye başlanmasıyla mümkün olabilmiştir(Aras, Suleymanov, 2010).Azerbaycan'da 2007 yılında doğal gaz üretimi bir önceki yıla göre yaklaşık %81 artışla 11 milyar metreküp olarak gerçekleşmiştir. 2008 yılındaki üretim artışı ile yıllık üretim hacmi yaklaşık 15 milyar metreküpe yükselmiştir. Yapılan hesaplamalara göre, 2015 yılına kadar Şah Deniz yatağından yılda yaklaşık 30 milyar metreküp doğal gaz elde edilecektir. 2007 yılından itibaren Bakü-Tiflis-Erzurum Doğal Gaz Boru Hattı ile doğal gaz ihracına başlanmıştır.(Sucayev,2003:36-37) "Azeri-Çırak-Güneşli(AÇG)" yataklarında petrol üretimine ve ihracına başlanmasının yanı sıra "Şah Deniz" yatağında da doğal gaz üretimine ve ihracına tam olarak başlanmasının ardından Azerbaycan, petrolün yanı sıra doğal gaz üretimiyle de yüksek düzeyde bir ekonomik kalkınma, yeniden yapılanma ve dünya ekonomisine entegre olma imkânına kavuşmuştur. Aynı zamanda Azerbaycan, Türkiye ve Avrupa ülkelerine doğal gaz ihracında, Rusya, Kuzey Afrika ve diğer doğal gaz üreticilerine rakip olmuştur.

Dünyada enerji ihtiyaçlarının karşılanmasında önemi her gün biraz daha artan doğal gaz, bütün enerji tahmin senaryolarında, özellikle elektrik üretiminde kendisine genişleyen bir yer sağlamaktadır. 2020 yılına kadar, elektrik enerjisi üretimi için kullanılan doğal gaz miktarının, toplam doğal gaz tüketiminin %33'üne ulaşması beklenmektedir. (Suleymanov,Aras , 2012)Doğal gaz, santrallerde ekonomik olarak türbinlerin etkinliğini sağlamasının yanı sıra alternatifler arasında zararlı dışsallığın (çevre kirliliği v.b.) daha düşük olması nedeniyle de tercih edilmektedir.(Sucayev,2003) Doğal gaz yakıldığında, kömür ve petrole göre daha az sülfür dioksit, karbon dioksit ve atık açığa çıkmaktadır. Dünya doğal gaz rezervleri son yirmi-yirmi beş yılda %100'ün üzerinde bir artış göstermiştir. Söz konusu rezerv artışları Eski Sovyet Cumhuriyetleri'nde, Ortadoğu, Güney ve Orta Amerika ile Asya Pasifik bölgelerindeki ülkelerde görülmüştür. Antarktika dışında tüm kıtalarda doğal gaz üretilmektedir. Dünyada doğal gaz kaynaklarının bölgesel dağılımına bakıldığında rezervlerin petrole göre daha geniş bir alana yayıldığı görülmektedir. Ortadoğu, petrol rezervlerinin %65'ine sahip olduğu halde doğal gaz rezervlerinin

%35'ine sahip bulunmaktadır (Suleymanov,Aras ,2012). Sınırlı petrol rezervlerine sahip bazı bölgeler doğal gaz kaynaklarının daha büyük bir kısmına sahiptirler.

Tablo-1: Dünya Doğal Gaz Rezervi (Tcf)   **Kaynak:** *Energy Information Administration.*

Bu bakımdan doğal gaz dünya enerji sahnesine, önemli bir yakıt olarak yeni girmiş sayılabilir. 1938'de kömür birincil enerji tüketiminin yaklaşık 3/4'ünü ve petrol %21'ini oluştururken doğal gazın payı sadece %5.6 idi. 1950'de bu oran %9.7'ye çıkmıştır. 1960'lı yıllarda doğal gaz tüketiminin coğrafi bölgeler itibariyle belirgin bir dağılımı meydana gelmiştir. 1965'de toplam enerji tüketimindeki payı %16'ya yükselmiştir. Bu oran 1970'de %17, 1980'de %19.1, 1990'da %22.2, 1996'da %23.3 olarak gerçekleşmiştir. Günümüzde ise bu oran %25 düzeydedir.Bir yandan dünya doğal gaz tüketimi hızla artış göstermekte, diğer yandan ise doğal gaz tüketiminin dünya enerji kaynakları tüketimi içerisindeki payı yükselmektedir. 1980 yılında 53 Tcf (1 kübik feet = 28,32cm^3; 1m^3 = 35,3 kübik feet), 1990 yılında 73 trilyon kübik feet (Tcf) olan dünya doğal gaz tüketimi, 2000 yılında 85 Tcf (2,4 trilyon m^3) seviyesine yükselmiştir. 2020 yılına kadar doğal gaz tüketiminin 167 Tcf'ye (4,72 trilyon m^3) ulaşması beklenmektedir. Yirmi birinci yüzyılın ilk çeyreğinde Rusya ve Orta Asya ülkeleri ile Ortadoğu bölgesi doğal gazda en önemli arz merkezleri olacaktır. Orta Asya ve Afrika kaynakları artan oranda uluslararası piyasalara çıkarak artan talebi karşılayacaktır. Türkiye ise Orta Asya doğal gazının Avrupa piyasalarına ulaşmasında köprü görevini görecektirBakü-Tiflis-Ceyhan Petrol Boru Hattı ile Bakü-Tiflis-Erzurum Doğalgaz Boru Hattı'nın ardından Azerbaycan'ın Hazar Denizi'nde yerleşen yataklarından üretilen enerji kaynaklarının Türkiye ve Batı piyasalarına nakli amacıyla Türkiye ve Azerbaycan arasında 27 Haziran 2012 tarihinde İstanbul'da yapılan Hükümetlerarası anlaşma ile gerçekleştirilmesine karar verilen üçüncü boru hattı projesi Trans Anadolu Doğalgaz Boru Hattı Projesi (TANAP) olmuştur. TANAP, yaklaşık 1,2 trilyon metreküp doğalgaz potansiyeline sahip olan ve Azerbaycan'ın Hazar Denizi'nde yerleşen Şahdeniz yatağının ikinci aşamasından elde edilecek olan doğalgazın Türkiye ve Avrupa'ya ihracını hedeflemektedir. Kimi ülkeler isteyerek kimi ülkeler istemeyerek, kimi ülkeler içten kimi ülkeler kerhen, kimi ülkeler sesliolarak kimi ülkeler "sükût

ikrardandır" düşüncesiyle sessiz kalarak TANAP'a "evet" demişlerdir. TANAP'a denen bu "evet"ler, tedarikçi, talep edici, taşıyıcı ve bölge yerleşen ya da yerleşmeyen ama enerji kaynaklarının nakline ilgi duyan ülkeler bakımından hem yeni hem de önemli ekonomik ve stratejik sonuçlar ortaya çıkarmıştır.

Bu çalışmada, önce taraflarca Trans Anadolu olarak adlandırılan projenin inşası amacıyla Azerbaycan ve Türkiye arasında hükümetlerarası yapılan anlaşmaya kadar geçen süreç, projenin özellikleri ve aşamaları hakkında genel bilgiler verilecek, daha sonra çeşitli ülkelere bakan yönüyle söz konusu projenin ekonomik ve stratejik sonuçları analiz edilecektir.

2 TANAP'a Giden Süreç

Petrol stratejisinin başarıyla hayata geçirilmesinin ardından Azerbaycan, gaz ihracat politikası ile ilgili stratejik amaçlar belirlemeye başlamıştır. Azerbaycan, hâlihazırda uluslararası piyasalara (Türkiye, Rusya, Gürcistan) gaz ihraç eden, bölge genelindeki tek ülkedir. Bu nedenle de AB tarafından, Güney Gaz Koridoru'nun "sağlayıcı ve iştirakçi"si olarak görülmektedir.Bu strateji doğrultusunda, Azerbaycan, uzun vadede AB için önemli ve stratejik bir doğal gaz ihracatçısı ülke olmayı hedefliyor. Şah Deniz Sahası (SD) alanından Avrupalı son kullanıcılara, değer zincirinin her halkasında yer edinmeyi amaçlıyor.Proje Destek Anlaşması (PDA) üzerine gelişen SD II, 2036 yılına kadar geçerli olup, projenin ömrü bugünden itibaren 24 yıldır O zamana kadar SOCAR'ın (Azerbaycan Devlet Petrol Şirketi) sözleşme koşullarını veya hisse değerlerini mümkün olmayacaktır. Ancak bugün, hızla gelişen maddi gücü ve projedeki stratejik konumu ile değer zincirinde daha fazla hisse satın alması mümkündür. Bu durum, pay sahibi olduğu piyasaya gaz ulaştırarak altyapıyı kontrol etmesi adına SOCAR'a imkân sağlar.Bu aşamada Azerbaycan, net hammadde ihracatçısı olarak Türk-Avrupa sınırında sadece satıcı rolüyle yetinmek istemiyor. Gaz stratejik bir üründür ve bu ürün akıllıca kullanıldığı zaman SOCAR ile Azerbaycan önemli bir jeostratejik ve finansal konuma erişebilir. Gelecekteki muhtemel bağlantıları yönetmek gün geçtikçe daha da önemli hal almaktadır. Bu durum SOCAR'ı gelecek 20 yılki gaz firmaları ve Avrupa'nın temel yapısına bağlanmaktan; bu sayede de ekonomik ve politik manipülasyona maruz kalmaktan korumaktadır(Rzayeva,2012). Güney Kafkasya Boru Hattı (SCP) projesinin büyümesiyle, Azerbaycan potansiyel gaz hacmini kaynağından son kullanıcıya kadar kontrol ederek çıkarlarını korumuş olacaktır. Ancak bu düzenleme gaz ihracını yaygınlaştırma hedefinde olan bir ülkeyi tatmin etmeyecektir. Azerbaycan, gaz kaynakları olan bi SOCAR'ın böyle bir adım atmasının iki sebebi vardır. İlki, ölçeklenebilir altyapının 2017'den sonra SD gazını taşıyabilmesi ve 2025'ten sonra yeni keşiflerden çıkan gazla birlikte Azerbaycan gaz üretiminin her yıl 50 milyar metreküpe çıkması hedefidir(Rzayeva,2012).Bu tasarıların gerçekleşmesi halinde, oldukça yüksek hacimde gaz nakliSOCAR'ın Türk topraklarında, değerler zincirinin alt sıralarındaki çıkarlarını ileride muhafaza edebilmesi için yukarıda bahsedilen stratejinin geliştirilmesi ciddi bir gereklilik halini almıştır. 17 Kasım 2011'de Trans Anadolu Boru Hattı'nın ilanıyla gelen çözüm, Güney Gaz Koridoru'nda kaçınılmaz bir oyun değiştirici olmuştur. Beklenildiği üzere, Azerbaycan ve Gürcistan topraklarındaki yer değişimin ardından boru hattı, SCP'nin geliştirilmesi yoluyla Türk topraklarındaki Doğu Nabucco'yu değiştirecektir.Trans Anadolu Boru Hattı (TANAP) ilk olarak Ekim 2011'de TürkiyeAzerbaycan transitmüzakereleri esnasında "aniden gündeme gelmiş" ve 25 Ekim 2011 tarihinde IGA'daki (Hükümetlerarası Anlaşma) "ilave bir madde" ile güvence altına alınmıştır. Sonrasında 24 Aralık 2011'de TANAP için Mutabakat Zaptı (MOU) ve 26 Haziran 2012'de özel IGA imzalanmışt Her iki tarafın da kabul ettiği üzere, TANAP aracılığıyla Türk piyasasına 6 milyar metreküp gaz ihraç edilmesi şartının metne eklenmesi SOCAR açısından önemliydi. 6 milyar metreküp gaz olmaksızın TANAP'ın hayata geçirilmesi mümkün değildir. Çünkü 56 inç ve 31 milyar metreküp kapasiteli boru hattı, yalnızca 10 milyar metreküplük bir başlangıç hacmi ile ekonomik açıdan uygun olmayacaktır. Bu sebeple Türk Meclisi tarafından onaylanmış olan 25 Ekim 2011 tarihli IGA'nın "transit" başlıklı kısmı ve aynı tarihte imzalanan BOTAŞ-SOCAR Transit Gaz Anlaşması (GTA) gayri resmi manada TANAP projesi için "uygulanamaz" hükmündedir. Azerbaycan ve Türk hükümetlerince TANAP ciddi manada desteklenmektedir. Ayrıca TANAP İngiltere, ABD, AB ve hatta Trans Adriyatik Boru Hattı (TAP) ile Nabucco konsorsiyumları tarafından da desteklenmektedir. BP ise farklı yaklaşımlardan ötürü hem TANAP hem de BOTAŞ şebekesini desteklemektedir.TANAP'a karar verilmesi ve inşasına başlanmasına ilişkin süreçte dikkat çeken dört aşama bulunmaktadır. Aşağıda bu dört aşama ayrı ayrı ele alınacaktır

2.1 Ön Anlaşma

Hazar Denizi'nin Azerbaycan sektöründe yer alan Şahdeniz yatağından ikinci aşama olarak elde edilecek olan doğalgazın hem Türkiye tarafından satın alınması hem de Avrupa piyasalarına Türkiye üzerinden transit olarak naklini öngören Hükümetlerarası Anlaşma, Azerbaycan ve Türkiye arasında 25 Ekim 2011 tarihinde İzmir'de imzalandı.

İzmir-Aliağa'da Azerbaycan Devlet Petrol Şirketi SOCAR ile TURCAS Enerji AŞ tarafından yapılacak olan Star Rafinerisi'nin temel atma töreninin ardından Türkiye Cumhuriyeti Başbakanı Erdoğan ve Azerbaycan Cumhuriyeti Cumhurbaşkanı Aliyev'in de katılımıyla gerçekleştirilen toplantının ardından imzalanan bu anlaşmada, Azerbaycan doğalgazının Avrupa'ya transit taşınmasında iki farklı alternatif dikkate alınmıştır. Söz

konusu alternatiflerden biri Türkiye'nin ulusal doğalgaz iletim sistemi, diğer alternatif ise münhasır bir boru hattının inşa edilmesi olmuştur. Hükümetlerarası anlaşma TANAP'a giden yolun temellerini atmıştır.

2.2 Projenin Kamuoyuna İlk Duyurusu

Trans Anadolu Doğalgaz Boru Hattı bir proje olarak ilk defa 17 Kasım 2011 tarihinde İstanbul'da düzenlenen Üçüncü Karadeniz Enerji ve Ekonomi Forumu'nda Azerbaycan Devlet Petrol Şirketi SOCAR (State Oil Company of Azerbaijan Republic) tarafından kamuoyuna açıklanmıştır. SOCAR Başkanı tarafından yapılan açıklamada, Azerbaycan'ın zengin doğalgaz potansiyelinin uzun vadede Türkiye ve Avrupa piyasalarına arz edilmek üzere, Türkiye'nin doğu sınırından başlayıp batı sınırına kadar uzanan Trans Anadolu Boru Hattı Projesi'ne ilişkin çalışmaların başladığını ifade etmiştir.

2.3 Mutabakat Zaptı

Yapılan ön anlaşmadan yaklaşık iki ay sonra Türkiye Cumhuriyeti Enerji ve Tabii Kaynaklar Bakanlığı ile Azerbaycan Sanayi ve Enerji Bakanlığı arasında, "Trans Anadolu Doğalgaz Boru Hattı" yapımına ilişkin mutabakat zaptı, 26 Aralık 2011 tarihinde Ankara'da imzalandı.

İmzalanan mutabakat zaptı ile Trans Anadolu ismi verilen söz konusu münhasır boru hattına yönelik çalışmaların ivedilikle başlatılması ve iki ülke tarafından tayin edilen şirketlerin ortak bir konsorsiyum tesis etmeleri konusunda mutabakat sağlandı.

Münhasır boru hattının inşasına ilişkin teşkil edilecek olan konsorsiyum içerisinde Azerbaycan Devlet Petrol Şirketi SOCAR ve Türkiye'den Boru Hatları ile Petrol Taşıma Anonim Şirketi BOTAŞ ile Türkiye Petrolleri Anonim Ortaklığı TPAO'nun ilk ortaklar olarak yer alması kararlaştırılmıştır. Mutabakat zaptında süreç içerisinde diğer uluslararası petrol ve doğalgaz şirketlerinin de konsorsiyuma dahil olabilecekleri dikkate alınmıştır.

Böylece imzalanan mutabakat zaptı ile 26 Ekim 2011 tarihli anlaşma daha somut hale getirilmiş oldu.

2.4 Nihai Anlaşma

Azerbaycan'ın Şahdeniz-2 doğalgazının Türkiye ve Avrupa'ya ihracına münhasır yeni bir hattın Trans Anadolu adı altında inşası amacıyla Türkiye ve Azerbaycan arasında tarihi işbirliğine yönelik olarak 27 Haziran 2012 tarihinde İstanbul'da yapılan üç anlaşma ile adım atılmıştır. Söz konusu anlaşmalar projeye ilişkin hükümetlerarası anlaşma, ev sahibi ülke anlaşması ve boru hattına ilişkin mutabakat zaptından oluşmaktadır.

*TANAP Hükümetlerarası Anlaşma:*Sahip olduğu rezerv miktarı bakımından dünyanın önemli doğalgaz yataklarından olan Şahdeniz-2'den elde edilecek doğalgazı Türkiye üzerinden Avrupa'ya ulaştıracak olan TANAP'a ilişkin hükümetlerarası nihai anlaşma ise 27 Haziran 2012 tarihinde İstanbul'da imzalandı.

*Ev Sahibi Ülke Anlaşması:*Türkiye Cumhuriyeti Hükümeti ile Trans Anadolu Doğalgaz Boru Hattı Şirketi arasında,hem Türkiye'nin hem de Avrupa'nın doğalgaz ihtiyacının karşılanması bakımından önemli bir katkıda bulunacak olanTrans Anadolu Doğalgaz Boru Hattı sistemine ilişkin ev sahibi ülke anlaşması Enerji ve Tabii Kaynaklar Bakanı Taner Yıldız ile SOCAR Başkanı Rövnag Abdullayev tarafından imzalandı.

*Hatta İlişkin Mutabakat Zaptı:*Azerbaycan'ın Şahdeniz-2 doğalgaz yatağından elde edilecek olan doğalgazı Türkiye'nin yanı sıra Türkiye üzerinden Avrupa'ya ulaştıracak olan Trans Anadolu Doğalgaz Boru Hattına ilişkin mutabakat zaptı da SOCAR Başkanı Rövnag Abdullayev ile BOTAŞ Genel Müdür Vekili Mehmet Konuk tarafından imzalandı. Anlaşma iki ülke enerji bakanlarının tanıklığında imzalandı.

3 Projenin Genel Özellikleri

TANAP boru hattı, Azerbaycan doğalgazının Gürcistan'dan geçerek Türkiye üzerinden satılmasını ve naklini öngörmektedir. Giriş noktası Türkiye sınırı Türkgözü girişi olan hattın Türkiye içi çıkış noktaları Eskişehir ve Trakya bölgesi olacaktır. Hattın Türkiye'den Avrupa'ya çıkış noktaları ise Yunanistan ve/veya Bulgaristan sınırları olacaktır. Yani hattın Avrupa'ya çıkışına ilişkin güzergâhı henüz tam olarak kararlaştırılmamış olmakla birlikte bir kolunun Yunanistan'a diğer kolunun ise Bulgaristan'a ulaşması düşünülmektedir.

Trans Anadolu Doğalgaz Boru Hattı Projesi'nin yatırım maliyetinin yaklaşık 7 milyar dolar olacağı tahmin edilmektedir. Yıllık kapasitesinin 31 milyar metreküpe kadar çıkması planlanan projenin ilk aşamasının altı yıl içinde tamamlanması hedeflenmektedir.

TANAP için oluşturulan konsorsiyumda Azerbaycan'dan Azerbaycan devlet petrol şirketi SOCAR ile Türkiye'den BOTAŞ ve TPAO ilk ortaklar olarak yer almaktadır. TANAP Konsorsiyumunda Türkiye adına BOTAŞ ve TPAO %20 paya, Azerbaycan adına SOCAR ise %80 paya sahiptir.

Projenin dört aşamada gerçekleştirilmesi öngörülmüştür:

Hattın Faaliyete Geçiş Aşaması: Proje için öngörülen dört aşamanın ilki 2018'de ilk doğalgaz akışıyla gerçekleşecektir. İlk aşamada Şahdeniz doğalgazının Gürcistan'dan geçerek Türkiye'ye satılması öngörülmektedir. Yani boru hattının faaliyete geçeceği ilk aşama olan 2018'de Türkiye yılda 6 milyar metreküp doğal gaz satın alacaktır.

Hattın Kapasitesinde Birinci Artış Aşaması: İkinci aşama olarak 2020'de hattın kapasitesinin yıllık 16 milyar metreküpe ulaşması hedeflenmektedir. Bu aşamada Şahdeniz-2 Konsorsiyumu'nun üreteceği 16 milyar metreküplük doğalgazın, 6 milyar metreküplük kısmı Türkiye'ye satılacak, 10 milyar metreküplük kısmı ise Avrupa'ya ihraç edilecektir.

Hattın Kapasitesinde İkinci Artış Aşaması: Üçüncü aşamada ise 2023 yılında hattın kapasitesinin yıllık 23 milyar metreküp ile ulaşması hedeflenmektedir.

Nihai Aşama: Nihayet dördüncü aşamada 2026 yılında hattın kapasitesinin yıllık 31 milyar metreküpe kadar ulaşması hedeflenmektedir.

Sonraki aşamalarda doğalgaz kaynak ve ihtiyaç değişimine bağlı olarak, TANAP projesi kapsamında doğalgazın yıllık ihracının 50 milyar metreküpe kadar ulaşması hedeflenmektedir.

4 TANAP'ın Ekonomik Sonuçları

Şahdeniz-2 doğalgazının Avrupa piyasalarına nakline ilişkin dört farklı alternatif proje gündeme getirilmişti. Bu projeler "Büyük Nabucco", "Trans-Adriyatik", İTGİ (Türkiye-Yunanistan-İtalya) ve SEEP (Güney Doğu Avrupa) projeleriydi. Avrupa Birliği ve ABD tarafından destek verilen proje ise Büyük Nabucco Projesiydi. Bu projenin finansmanına ilişkin yaşanan sorunların, belirsizliklerin yanı sıra stratejik açıdan yapacağı etkilerden dolayı bazı ülkelerin karşı çıkması, bazı ülkelerinde taraf olup-olmama noktasında görüş beyan etmeme durumu söz konusuydu. Hatta kaynak sağlayıcı ülkelerin başında yer alan Azerbaycan'ın da görüşü ekonomik ve stratejik nedenlerle belirsizlik taşımaktaydı. TANAP'a ilişkin Türkiye ve Azerbaycan arasında yapılan nihai anlaşmanın ardından Nabucco Konsorsiyumu Büyük Nabucco'yu Nabucco Batı Projesi olarak revize etmek zorunda kaldı. Revizyon sonucu 3440 kilometre olarak öngörülen Büyük Nabucco'nun Türkiye kısmının TANAP'a dönüşmesiyle, Nabucco Batı Projesi kısalmış oldu. Nabucco Batı Doğalgaz Boru Hattı'nın öngörülen uzunluğu ise 1300 kilometredir. Nabucco Konsorsiyumu'nun TANAP'a olumlu bakışı ve Avrupa piyasalarına Şahdeniz-2 doğalgazının ihracı amacıyla TANAP'a ek olarak teklif ettiği Nabucco Batı Projesi de Azerbaycan tarafından kabul edilmiş oldu.

Azerbaycan bakımından ise ülkenin sahip olduğu doğalgaz kaynaklarının yeni piyasalara ihracında büyük ekonomik kazanımları beraberinde getirmektedir.TANAP'taki hissenin %80'inin Azerbaycan'a ait olduğu son duruma göre Azerbaycan doğalgazını Türkiye arazisinden kendisi taşımış gibi olacaktır. Zira Azerbaycan doğalgazın Avrupa piyasalarına naklinden elde edilecek geliri de kedisi elde etmek istiyordu. Böylece Azerbaycan'ın uzun yıllar Büyük Nabucco'ya olumlu bakmamasının önündeki ekonomik engellerden biri de aradan kalkmış oldu. Yani Azerbaycan Şahdeniz-2 doğalgazının Avrupa piyasalarına hem satışından hem de naklinden gelir elde edecektir.

Bu projenin gerçekleştirilmesine ilişkin çalışmalar Türkiye'de yeni istihdam imkânlarının oluşması bakımdan önem taşımaktadır. Azerbaycan ve Türkiye işbirliği ile Petkim'de de büyük bir rafineri projesinin temeli atılmıştır. İki büyük proje dikkate alındığındaSOCAR olarak Türkiye'ye Azerbaycan'ın yapacağı yatırım miktarı 17 milyar dolara ulaşacaktır. Böylece Türkiye sanayisine yatırım yapan en büyük ülke Azerbaycan, en büyük şirket de SOCAR olacaktır. Bakü-Tiflis-Ceyhan ve Bakü-Tiflis-Erzurum Boru Hatları'nın ardından, TANAP ve Petkim'de rafineri projesine ilişkin Türkiye ile yaptığı anlaşmalarla Azerbaycan, Türkiye'nin bölgede hem enerji koridoru olma hem de enerji üssü olmasına önemli ekonomik ve stratejik katkıda bulunmuş olmaktadır.

Ekonomik olarak çeşitli açılardan önem taşıyan bu projenin gerçekleşmesidurumunda, bu hattan gelecek doğalgazın bir kısmı (6-10 milyar metreküp) Türkiye pazarında kalacak, önemli bir kısmı (10-25 milyar metreküp) ise Avrupa ülkelerine satılacaktır. Türkiye içi çıkış noktaları dikkate alındığında, Trans Anadolu Hattı Türkiye Ulusal İletim Hattının batı girişini besleyerek, batı bölgesi arz güvenliğini kuvvetlendirecek bir hat olacağı da görülmektedir.

5 TANAP'ın Stratejik Sonuçları

Büyük Nabucco Projesinin, TANAP ve Nabucco Batı olarak iki kısma ayrılmasının ekonomik nedenlerinin dışından stratejik bazı sonuçları da söz konusudur. TANAP başta Türkiye ve Azerbaycan olmak üzere bölge ülkeleri ve Avrupa ülkeleri bakımından çok büyük stratejik öneme sahiptir.

Uygun fiyat ve tanımlanmış doğalgaz kapasitesi dikkate alındığında kaynak ve güzergâh çeşitlendirmesi dolayısıyla enerji arz güvenliğine katkıda bulunması bakımından Türkiye ve Avrupa Birliği ülkeleri için TANAP büyük önem taşımaktadır.

Büyük Nabucco'ya Avrupa Birliği ve ABD'nin destek verirken, Rusya ise hep karşı çıkmıştır. Bu ise hattın temel tedarikçisi Azerbaycan için yönetilmesi zor bir süreci karşısına çıkarmıştı. Adeta iki ateş arasında kalan Azerbaycan'ın Türkiye ile işbirliğine giderek TANAP'ı gündeme getirmesi ve bu projeye ilişkin anlaşmaların imzalanması hem Batı'nın, hem de Türkiye arazisinde Batı'nın stratejik üstünlüğe sahip olmasını istemeyen Rusya'nın Azerbaycan üzerindeki baskısını elimine edici olmuştur. Zira Büyük Nabucco yerine Nabucco Batı'ya "evet" demekle Avrupa'nın taleplerini bir bakıma karşılamış olan Azerbaycan'ın, TANAP çerçevesinde Türkiye

arazisinden doğalgazın nakline Nabucco Konsorsiyumu'nu dahil etmeyerek boru hattını daha çok kendi elinde tutacak olmasıyla da Rusya'yı bir nebze teskin etmiştir. Ancak ne Avrupa Birliği Şahdeniz doğalgazının kendi piyasalarına ihracı konusunda Türkiye arazisinde söz sahibi olabilmiştir, ne de Rusya Şahdeniz doğalgazının Avrupa piyasalarına nakline Türkiye üzerinden engel olabilmiştir. Dolayısıyla Büyük Nabucco'nun TANAP ve Nabucco Batı olarak iki projeye dönüşmesi hem Avrupa Birliği ve ABD'nin hem de Rusya'nın hedeflerine tam olarak ulaşmasına imkân vermemiştir. Aksine projelerin hayatiyet kazanması durumunda Türkiye ve Azerbaycan söz konusu ihraçta daha üstün konuma gelmiş olacaktır. Trans Anadolu Boru Hattı gelecekte Türkmen gazının Türkiye ve Avrupa'ya nakline yönelik alternatif bir hat olma özelliğini de potansiyel olarak taşımaktadır. Dolayısıyla stratejik açıdan düşünüldüğünde zamanla Hazar Havzası doğal gazının, hatta Orta Doğu ülkelerinde üretilecek olan doğalgazın da batı piyasalarına ihracında Türkiye ile birlikte Azerbaycan'ın da söz sahibi olması gibi bir durum da ortaya çıkacaktır.

Nabucco Batı Boru Hattı ile Güney Doğu Avrupa ülkelerinin hemen hemen tümünün doğalgaz ihtiyacının karşılanması hedeflenmektedir. Şahdeniz yatağındaki doğal gaz potansiyeli 1,2 trilyon metreküp olan Azerbaycan'ın sahip olduğu diğer kaynaklardaki doğalgaz potansiyeli ise yaklaşık 2,6 milyon metreküptür.Şahdeniz yatağının yanı sıramevcut ve muhtemel diğer doğalgaz yataklarının potansiyeli de dikkate alındığında Azerbaycan'ın 2020-2025 arasında doğal gaz üretiminin 50 milyar metreküpe ulaşacağı tahmin edilmektedir. Bu tahminler Nabucco Batı vasıtasıyla Avrupa piyasalarına daha fazla miktarda doğalgazın ihracı için Azerbaycan'ı önemli bir doğalgaz tedarikçisi konumuna getirmektedir.

Aslında yukarıda Azerbaycan'ın Şahdeniz-2 doğalgazının hem ekonomik hem de stratejik açıdan kendi ülkesinin menfaatleri istikametinde naklini netice verecek şekilde doğalgaz nakil hattının Büyü Nabucco yerine TANAP olarak gerçekleşmesinde etkin olduğugibi bir sonuca varılmıştır. Böyle bir sonuç, Şahdeniz-2 doğalgazının ihracına münhasır boru hattı konusunda temel belirleyici ülkenin Azerbaycan olduğu gibi bir algıyı da oluşturmakta veya böyle bir algıya da dayanmaktadır. Şayet bölge enerji kaynaklarının üretim ve uluslararası piyasalara naklinde en etken olan gücün Rusya olduğu kabul edildiğinde ise süreç ve sürecin ekonomik ve stratejik sonuçları farklı olmaktadır: Hazar Havzası ve Orta Asya enerji kaynaklarının üretimini ve daha çok uluslararası piyasalara naklini kendi ülke topraklarından geçecek boru hatları ile kontrol etmeyi stratejik hedefleri arasında ön sıraya yerleştiren Rusya, söz konusu stratejik hedefleri doğrultusunda karşı olduğu Büyük Nabucco projesinin gerçekleşmemesi için büyük çaba harcamış ve bölgede aktif bir politika izlemiştir. Rusya'nın izlediği Büyük Nabucco karşıtı politika doğrultusunda bölgede doğalgaz tedarikçisi konumundaki Azerbaycan, Kazakistan ve Türkmenistan ile yapmış olduğu anlaşmalar Büyük Nabucco'ya tedarik konusunda endişeleri artırmıştır. (Gültekin,2012) Yapılan anlaşmaların da verdiği güçle Rusya daha sonra, Ukrayna'yı devre dışı bırakacak şekilde Karadeniz altından geçerek Bulgaristan, Macaristan, Sırbistan ve Slovakya üzerinden Batı Avrupa'ya doğal gaz taşımak üzere Güney Akım adlı Doğalgaz Boru Hattı Projesi'ni inşa etmek üzere harekete geçmiştir. Güney Akım Hattı'nın 900 kilometrelik kısmı Türkiye'nin Karadeniz'deki münhasır ekonomik bölgesinden geçmektedir. Güney Akım'ın Türkiye'nin Karadeniz'deki münhasır ekonomik bölgesinden geçmesi için Türkiye ile anlaşan Rusya, Şahdeniz-2 doğalgazının sadece Azerbaycan ve Türkiye ortaklığı ile Türkiye'nin batı sınırına kadar ulaştırılmasına da kerhen de olsa "evet" demiş, ya da ses çıkarmayarak onay vermiştir. Böyle bir yorum, Azerbaycan'ın gündeme geldiği günden itibaren Büyük Nabucco'ya ilişkin kanaatinin hep belirsizlik taşımasının arakasındaki nedenin, Rusya'nın Büyük Nabucco'ya karşı olduğu sonucunu doğurmaktadır. (Gültekin,2012) Azerbaycan'ın ekonomik menfaatleriyle örtüşecek şekilde TANAP'ın inşasına yönelik Azerbaycan ve Türkiye arasında nihai anlaşmaların atılmasının ise, Rusya'nın Güney Akım konusunda Türkiye ile anlaşmasından sonraya denk gelmesi, süreçte en etkin gücün Rusya olduğu kanaatini ve sonucunu desteklemektedir.Rusya tarafından Nabucco ve TANAP'ı Güney Akım için rakip olarak görülmediği açıklaması yapılmıştır. Şahdeniz-2 doğalgazının Türkiye üzerinden ihracına engel olamayacağını anlayan Rusya, bir yandan Güney Akım için Türkiye'yi ikna etmiş, bir yandan da Şahdeniz gazının Türkiye topraklarından nakline ilişkin boru hattı konusunda Büyük Nabucco'ya göre "ehveni şer" olan ve Rusya'nın stratejik hedefleri doğrultusunda Şahdeniz doğalgazının ihracı konusunda Nabucco Konsorsiyumu'nun Türkiye arazisinde söz sahibi olmasını önleyen, dolayısıyla Büyük Nabucco Hattı'nın yaklaşık %70'ini devre dışı bırakanTANAP'a engel olmayacak şekilde Azerbaycan'a inisiyatif kullanma alanı bırakmıştır.

Projenin sadece Türkiye ve Azerbaycan'ın finans ve teknik imkânlarıyla yürütülecek olması, projeyi Türkiye-Azerbaycan özelinde gerçekleştirilecek bir proje konumuna getirmiştir. TANAP,Türkiye ve Azerbaycan'ın enerji nakli konusunda Avrupa pazarına birlikte çıkması anlamına da gelmektedir.

TANAP önceki Bakü-Tiflis-Ceyhan ve Bakü-Tiflis-Erzurum boru hatlarına ilave olarak Hazar Havzası enerji kaynaklarının Batı piyasasına ulaştırılmasında Türkiye'nin önemli bir alternatif enerji koridoru olduğuna ilişkin konumunu güçlendirmiştir.

Türkiye'nin Büyük Nabucco'da ısrar etmeyerek Trans Anadolu'ya "evet" demesinin, Türkiye'ye bakan yönüyle çeşitli stratejik sonuçları vardır. Bunlardan biri ve en önemlisi; Büyük Nabucco'nun gerçekleşmesinde gösterdiği aktif politika ile Türkiye, Avrupa Birliği'nin enerji arz çeşitliliği ve güvenliğine önemli katkıda bulunduğunu ve bu hususta üzerine düşeni fazlasıyla yapmaya çalıştığını ortaya koyarak, Avrupa Birliği ülkelerinin de Türkiye'nin AB'ye kabulünde olumlu katkıda bulunacak şekilde üzerine düşeni yapmalarını,

böylece AB'ye üyelik konusunda önemli bir mesafe almayı hedefliyordu. TANAP'a "evet" demesiyle Türkiye Büyük Nabucco'ya da "hayır" demiş oldu. Dolayısıyla AB'ye kabul konusunda bir etki unsurundan vazgeçmiş gibi oldu. Aslında yaşanan süreçten anlaşıldığı kadarıyla Türkiye, AB'ye üyeliğini sağlayacak bir etki unsurundan vazgeçmekten daha çok AB'ye üyelikte ısrardan vazgeçmiştir. En azından, yaşanan son ekonomik krizin AB'deki devam eden olumsuz etkileri, Türkiye'yi AB'ye üye olmada eskisi kadar istekli olmamaya yöneltmiş, dolayısıyla Büyük Nabucco yerine TANAP'tan yana tavır almaya yöneltmiştir. Büyük Nabucco yerine TANAP'a "evet" diyen Türkiye, Azerbaycan'ın yanı sıra ve daha çok Rusya ile işbirliğine daha fazla önem verme yolunu da seçmiş oldu. Zira bir yandan Türkiye Rusya'nın Güney Akım projesine "evet" derken, diğer yandan da Rusya Azerbaycan'ın Türkiye ile işbirliği içerisinde TANAP'ı inşasına kerhen de olsa "evet" demiş oldu.

6   TANAP'ın NABUCCO'ya Etkisi

TANAP'ın inşasına ilişkin hükümetlerarası anlaşma, orijinal ya da Büyük Nabucco olarak adlandırılan projenin tamamen rafa kaldırılıp-kaldırılmadığı hususunda önem taşımaktadır.TANAP ile ilgili anlaşmanın imzalanması Nabucco için bir engel teşkil etmemekle birlikte, Büyük Nabucco Projesi yerini Nabucco Batı ve TANAP'a bırakmış olmaktadır.

Avusturya'nın OMV, Almanya'nın RWE, Macaristan'ın MOL, Türkiye'nin BOTAŞ, Bulgaristan'ın Bulgarian Energy Holding (BEH) ve Romanya'nın Transgaz şirketlerinin desteklediği Nabucco Batı Projesi'ne ilişkin teklif 16 Mayıs tarihinde Şahdeniz-2 Konsorsiyumu'na sunuldu. Şahdeniz-2 Konsorsiyumu 28 Haziran 2012'de yaptığı açıklamayla Azerbaycan'ın Şahdeniz-2 yatağından Avrupa'ya doğalgaz aktarımı için Nabucco Batı Projesi'ni uygun gördüğünü açıkladı. Türkiye, BOTAŞ vasıtasıyla Nabucco Batı Projesi'nin ortaklarından birisidir.

1300 kilometre uzunluğundaki Nabucco Batı Doğalgaz Boru Hattı, Türkiye-Bulgaristan sınırı yakınlarından başlayarak, geçiş ülkelerindeki istasyonlar aracılığıyla Bulgaristan, Romanya ve Macaristan üzerinden Avusturya'ya doğalgaz taşıyacaktır.

Büyük Nabucco projesinde yaşanan finansman sorununun Nabucco Batı projesinde yaşanmaması beklenmektedir. Nabucco Konsorsiyumu'nun Azerbaycan doğalgazının Avrupa'ya taşınması için Büyük Nabucco Projesi'nin kısaltılmış ya da küçültülmüş versiyonu olan Nabucco Batı'ya desteği sürmektedir. Nabucco Konsorsiyumu Avrupa Yatırım Bankası (EIB), Avrupa Kalkınma Bankası (EBRD) ve Uluslar arası Finans Kurumu (IFC) ile bir ön anlaşma yapmış bulunmaktadır.

Nabucco Batı ve TANAP'ın birbiriyle bağlı bir tedarik hattı oluşturacaktır. Birbirini tamamlayıcı olmaları yönüyle iki hat birlikte düşünüldüğünde, Avrupa'nın enerji arz çeşitliliği ve güvenliği açısından büyük bir önem taşımaktadırlar.

Nabucco Batı Boru Hattı ile artmakta olan doğalgaz talebini karşılamak amacıyla uzun vadede 23 milyar metreküp doğalgazın Avrupa ülkelerine nakli hedeflenmektedir. Konsorsiyum tedarik ve ihtiyaca bağlı olarak kapasite artımını da dikkate almaktadır.

Nabucco Batı'nın ihraç kapasitesi bakımından hedeflenene ulaşması için Azerbaycan'ın yanı sıra Orta Asya ve Ortadoğu doğalgaz kaynaklarının da tedarik zincirine eklenmesi gerekmektedir. Bu doğrultuda Kuzey Irak'ta keşfedilmeyi bekleyen doğalgaz yataklarının, hatta Türkmen doğalgazının Türkiye üzerinden Avrupa'ya ulaştırılmasına ilişkin adımların atılması gerekmektedir.

Kuzey Irak'ta doğal gazın keşfedilmesi durumunda, bu doğal gazın Türkiye üzerinden Avrupa'ya transferi için elbette yeni bir boru hattına da ihtiyaç duyulacaktır.

7   Sonuç

Kısaca Hazar Havzası, Orta Asya ve Orta Doğu enerji kaynaklarının dünya piyasalarına ihracı ve ihracına münhasır boru hatlarının, ülkelerin ekonomik ve stratejik menfaatlerini maksimize edecek mahiyette rekabete ve mücadeleye konu olması, TANAP ile yeni bir boyut kazanırken, söz konusu rekabet ve mücadele bundan sonra da ülkelerin vizyon ve stratejilerine bağlı olarak devam edecektir.Özellikle Hazar enerji resurslarının farklı güzergahlarla taşınması ülke ekonomisinin bir ülkeden bağımlı olması problemini azaltmaktadır. TANAP konsorsiyumunun şirket olarak Hollanda merkezli işlerini ise Türkiye'de kuracağı şube üzerinden gerçekleştirecektir. Bilerek ya da bilmeyerek, Güney Akım AG firması da yeniden Hollanda'ya taşınacaktır. Rusya ve Gazprom agresif bir şekilde büyük Güney Koridor Projesi'nin bir parçası olan Batı Nabucco Projesi'yle hemen hemen aynı piyasa ve istikamete sahip Güney Akım Projesi'nin gerçekleşmesi için uğraşmaktadır. Güney Koridor'la rekabet içerisinde olan Güney Akım konsorsiyumu, Orta ve Güney Doğu Avrupa piyasasında irtibat halinde olduğu ülkelerle Transit Gaz, IGA ve alım satım anlaşmaları imzalamak için acele etmektedir. Güney Akım ve bazı Orta Avrupa ülkeleri arasında anlaşmalar söz konusudur. Bu ülkeler ya Güney Akım'la birlikte Rusya'ya bağımlılıklarını artırmak istememekte, ya da anlaşmaları olsa bile fizibilite çalışmaları aracılığıyla başlangıç tarihini ertelemekte ve Başlangıç Aşaması Mühendislik Dizaynı (FEED)

sayesinde yeşil ışık yakmak için Rusya'dan ciddi teşvik primleri almaktadırlar. Bulgaristan Nisan ayından Aralık 2012'ye kadar Gazprom'dan %11 gaz indirimi elde etmiştir. Açıkça görülüyor ki bunun karşılığında Rusya, Bulgaristan'dan Başlangıç Aşaması Mühendislik Dizaynı için onay alacaktır.Sırbistan 5 milyar metreküp gaz için 10 yıllığına Gazprom'la bir alım satım anlaşması imzalamıştır. Sonuç olarak Avrupa piyasası gayri resmi biçimde Gazprom ve SD konsorsiyumu arasında bölünmüş durumdadır: Orta Avrupa Gazprom'a ait, Batı Balkanlar ve İtalya ise SD konsorsiyum öncülüğünde BP ve SOCAR'a aittir.Türkiye açısından, hızla büyüyen gaz talebini karşılamak için 6 milyar metreküplük SD II gazı net biçimde yeterli olmayacaktır. Türkiye bu durumdan endişe etmekte ve İran'la Rusya'dan sağlanan gaz teminini çeşitlendirmeyi amaçlamaktadır. Kuzey Irak bu durumda Türk gaz piyasası için anahtar rolü görmektedir. Her ne kadar Irak gazı TANAP'la Türkiye'ye yahut ileri de Batı istikametlere ulaştırılmayacak olsa da, Türkiye şu anda bütünüyle Kuzey Irak gaz sahasına ilişkin gelişmelere odaklanmış durumdadır ve Türk enerji firmaları bu alanlarda devasa yatırımlar yapmaktadırlar.

Avrupa Birliği ve Enerji Arzı Güvenliği Açısından Trans Anadolu Doğalgaz Boru Hattı

Security of Energy Supply for European Union and Trans Anatolian Natural Gas Pipeline Project

Dr. Nuran Belet (Gazi University, Turkey)

Abstract

The fact that global economies are growing rapidly, unequal geographical distribution of energy resources and the fact that no renewable energy resource can compete with oil and natural gas at least in the near future strengthens the energy subject. In this regard, energy demands of the developed countries and the world intensifies on the energy resources of Eurasia Region, especially Caspian Region. The main factor of the energy demand isn't the supply of energy for the least possible cost but the transfer of the needed energy via secure gas pipes so that the national economies can continue producing. Russia is the most important supplier of natural gas for European countries. Eurasian regian and the Caspian Basin countries have become strategic actors in the energy market because of their rich natural gas reserves. Russia's cutting off natural gas to Europe across Ukraine upon the crisis with this country has caused a deep concern. European Union wishes to support security projects for supply synchronically of different countries into which Ukraine and Belarus -those it uses as transit for gas transfer- aren't included because of political and economical reasons to meet its energy demand. In this respect, Turkey plays a key role in supplying energy from this region to minimize the risks of energy supply security. Turkey is located in the center of a geopolitical region which produces oil and natural gas. But it can't make use of its potential. Turkey has to create opportunities to play an active role in various energy projects and pipeline routes. This is an analysis of TANAP project's impacts on European Union's energy supply security, Azerbaijan, Turkey and other countries of the region.

1 Giriş

Dünya ekonomilerinin hızlı büyüme hamlesi içinde olmaları, enerji kaynaklarının eşitsiz coğrafi dağılımları ve hiç bir yenilenebilir enerji kaynağının ticarî ölçekte petrol ve doğalgazla en azından önümüzdeki 60 ve belki de 100 yıl içinde gerçek anlamda rekabet edemeyeceği gerçeği, enerji konusunun gelecekteki önemini daha da pekiştirmektedir. Ekonomik büyüme ve kalkınmanın en önemli kaynaklarından biri kabul edilen enerji ve enerji sektörü; toplumsal yaşam ve ekonomik gelişme üzerindeki doğrudan ve dolaylı etkisi sebebiyle bütün ülkelerin gündeminde önemli bir yer tutmaktadır.

Teknolojik gelişmelerin küresel ölçekte yarattığı değişmeler, enerji ihtiyacını çeşitlendirerek ekonomik rekabet yanında petrol ve doğal gaz rezervlerini yoğun olarak coğrafyasında tutan ülkelere, stratejik ülkeler tanımı getirmiştir. Başta Hazar Bölgesi olmak üzere zengin doğalgaz ve petrol kaynaklarına sahip ülkeler, bunları dünya pazarlarına güvenli ve ekonomik şekilde arz edebilmek amacıyla çeşitli petrol ve doğalgaz boru hattı projeleri geliştirmektedirler. SSCB'nin dağılmasını takiben, elindeki sınırlı rezervler nedeniyle gelişmiş dünya ülkelerinin, özellikle Avrupa'nın, enerji ihtiyacının karşılanması genelde Avrasya bölgesi, özelde de Hazar Bölgesindeki enerji kaynakları üzerinde yoğunlaşmıştır. Bu süreçte öne çıkan unsur, her ne pahasına olursa olsun ucuza kaynak temin etmek değil, ulusal ekonomilerin herhangi bir kesinti yaşanmaksızın üretime devam edebilmeleri için ihtiyaç duyulan enerjinin, güvenli taşıma sistemleri ve güzergâhları yoluyla ülkeye ulaştırılmasıdır. Bu anlamda, enerji arz güvenliği meselesi, 21. yüzyıla damga vuracak en önemli politika değişkeni olacaktır. Haritalar ve sınırlar, yeni enerji güzergâhlarına göre değişecektir.

Bu kapsamda, son 20 yılda en fazla dikkat çeken ülke Türkiye'dir. Türkiye, jeopolitik konumuyla ve transit geçiş ülkesi olarak Hazar Bölgesi petrol ve doğalgaz kaynaklarının Avrupa'ya ulaştırılmasında kilit önemdedir. Türkiye, bu yeni enerji jeopolitiğinin tam ortasında yer almasına   rağmen, bulunduğu coğrafyanın kendisine sunduğu "enerji yıldızı" olabilme potansiyelinden henüz yeterli düzeyde yararlanamamaktadır. Böyle bir konuma sahip olan Türkiye'nin petrol ve doğalgaz fakiri olması, bölgenin jeopolitik konumu nedeniyle yaşadığı çatışmalar pek çok sorunu da beraberinde getirmektedir. Türkiye'nin içinde bulunduğu enerji bölgesinin özellikleri, Türkiye'yi değişik "enerji projelerinde" ve aktif rol alabileceği "fırsatlara" yönelmesini, enerji stratejileri ortaya koymasını   gerekli kılmaktadır. Bu çalışmada bahsedilen enerji stratejilerinden birisi olarak görülen; Azerbaycan doğalgazını Avrupa'ya taşıyacak TANAP- Trans Anadolu Doğalgaz Boru Hattı Projesi – 'nin hayata geçirilmesi ve bunun Avrupa Birliği enerji arz güvenliği olmak üzere, Azerbaycan, Türkiye ve bölgedeki diğer aktör ülkeler açısından etkileri ele alınmaktadır.

2 Enerji Piyasasına Genel Bakış

2.1 Dünya Enerji Dengesi ve Avrasya Bölgesi

Dünya ekonomilerinde, 1973-74 yıllarında OPEC üyesi ülkeler tarafından ham petrol fiyatlarının tek yanlı olarak büyük oranda arttırılması ve bunun uzun dönemli olumsuz ekonomik ve sosyal etkileri nedeniyle enerji ve enerjiye ulaşımın sosyo ekonomik boyutu ve önemi net olarak kavranmıştır. Uluslararası Enerji Ajansı(IEA) ile enerji sistemleri arasında başlatılan büyük dönüşüm özellikle, sanayileşmiş ülkelerin geçmişteki büyük krizlere yakalanma olasılığını düşürmektedir. Bu ülkeler, geçmişte gördükleri yüksek petrol fiyatları nedeniyle yaşadıkları sıkıntıları bertaraf etmek için, alternatif enerji kaynaklarına yönelme çabaları yanında, AR-GE harcamalarını başta enerji sakıngan teknolojilere yönelme ve enerji verimliğini artırmak olmak üzere petrol tüketimlerini azaltıcı politikalar uygulamaktadırlar(Bahgat, 2011).

Enerji piyasalarını dolayısıyla enerji dengesini koruyan ülkeler yüksen piyasa ekonomileridir. Bu ülkeler içinde Asya da özellikle Çin 2035 e kadar %60 lık talep artışı ile enerji kullanımındaki payını en çok arttıran ülke olacaktır. Petrol krizlerini takip eden dönemde, sektörel bazda, petrol kullanımında en büyük pay ve artış ulaştırma sektöründe yaşanmıştır. Rakamlarla ifade edersek, 1973-1999 döneminde, ulaştırma sektörünün dünya toplam petrol tüketimindeki payı % 42'den % 58'e sıçramıştır (IEA, 2005).

Günümüzde, ulaştırma sektörünün dünya genel enerji tüketimindeki payının % 20 olduğu, bunun da 3/4'ünün karayolu taşımacılığına gittiği ve karayollarında seyahat eden taşıtların temel yakıt olarak hâlâ petrol kullanıldığı görülmektedir. Hidrojen, elektrik ya da metanol/ etanol gibi enerji kaynaklarının ulaştırma araçlarında petrolü ikame edecek ekonomik bir alternatif yakıt bulunamadığı veya bu alternatiflere dayalı yakıt hücreleri benzeri bir teknolojik devrim yaşanmadığı sürece, bu yüzyılın en azından ilk yarısında petrolün öneminin azalacağını ileri sürmek mümkün değildir (IEA, 2011). Yakın gelecekte nispi olarak önemi azalacak olmakla birlikte, petrol, büyük otomotiv ve inşaat şirketlerinin hatta ilgili yan sanayilerin öneminde, Asya ve özellikle Çin'in katlanarak artan enerji açlığı devam ettiği sürece siyah altın, dünya enerji dengesinin en önemli bileşenlerinden biri olmaya devam edecektir. Dünyanın 'petrol açlığı', yeni bir kaynağın, Hazar Petrolleri'nin dünya pazarlarına sunulmasının arkasında yer alan en önemli unsurlardan biridir.

2.2 Hazar Bölgesi ve Enerji Dengesi

Hazar Denizi'ne kıyısı olan Azerbaycan, Kazakistan, Türkmenistan, Rusya ve İran ile Bölge hinterlandında yer alan Özbekistan; Hazar Bölgesi'ndeki temel enerji üreticileridir. Ancak, dünyanın önde gelen ham petrol ve doğalgaz üreticilerinden Rusya Federasyonu ve İran'ın, Hazar kıyısında önemli sayılabilecek bir petrol rezervi bulunmamaktadır. Avrasya bölgesi ve özelliklede Hazar kıyısında yaşanan pek çok sorun, Batı Sibirya petrol üretimi giderek pahalılaşan Rusya ile dünya iktisadi sisteminden kopmuş durumda olan İran'ın, Hazar'ı "kurtarıcı" olarak görmelerinden kaynaklanmaktadır (Pala ve Engür, 1998;25). Hazar Bölgesi tanımının, sadece Azerbaycan, Kazakistan, Türkmenistan ve Özbekistan'dan, ya da diğer adıyla "Hazar Dörtlüsü"nden oluştuğunu belirtmekte yarar görüyoruz. Kazakistan tarafından Rusya'ya "sus payı" olarak verilen Kuzeybatı Hazar'daki iki saha da Kazakistan bünyesinde değerlendiriliyor (Pala, 2008; 150).

Hazar Bölgesi diye tanımlanan bölge Orta Doğu'ya nazaran uzun yıllar Sovyet egemenliğinde kalmış olmasından ötürü çok daha bakir olduğu düşünülen ve gelecekte yaşanması beklenen fosil yakıt kaynakları kıtlıklarına karşı dünya petrol ihtiyacını giderebilecek en önemli alternatiflerden birini teşkil etmektedir. Bu alan üzerinde küresel bir enerji mücadelesinin yanında, bölgesel bir rekabetinde olması doğal ve kaçınılmazdır. Bölgenin petrol tarihinden günümüze kadar olan mücadelede siyasi, iktisadi, sosyal ve hukuki yönlerin bütünün etkisi bulunmaktadır. Hazar Havzası'nda petrolün varlığı 8. yüzyıldan beri bilinmekte olup, bu havzadaki en zengin yataklardan birine sahip olan Azerbaycan -Bakü'de 15.yüzyıldan bu yana petrol çıkarılmaktadır. Önceleri sadece gaz lambalarında kullanılmak için sığ kuyulardan elde edilen petrol, Bölge'de 1825'de 120 olan kuyu sayısı, 1840'larda 133'e, 1860'lı yıllara gelindiğinde ise 2272'ye ulaşmıştır. 1872'de yapılan gerekli yasal düzenlemelerin sonrasında, 19. yüzyılın başından itibaren ticari önem kazanmaya başlamış ve kısa süre içinde dünyanın önde gelen petrol üretim merkezlerinden biri haline gelmiştir. *Marco Polo*, **'Seyahatler'**adlı kitabında, 1271-1273 tarihlerinde ziyaret ettiği Kuzey İran'ı anlatırken, '*netf'* in (Petrol), Bakü'de, o zamanın koşullarına göre ticari bir ölçekte işletilmekte olduğundan bahseder ve Bakü'deki bu ticaretin büyüklüğünden ne kadar etkilenmiş olduğunu kayda geçer. 1889 yılında, Nobel Kardeşler bölgede ilk boru hattını da inşa etmişlerdir. Yaklaşık 70 km uzunluğundaki bu hattın yapılma amacı, Bakü-Batum demiryolunun dik yamaçlı dağlık bölgeden geçen kısmında lokomotiflerin 5-6 tanker vagonundan fazlasını çekememesi sebebiyle demiryolunun bu bölümünü 'by-pass' etmekti. Böylece, Nobel kardeşlerden *Alfred Nobel*'in icadı olan dinamit de, boru hattının geçeceği kayalık bölgede güzergah açmak amacı ile ilk defa burada kullanılmış oldu (Pala, 2008;148).

Sovyet Dönemi'nde, rejim nedeniyle bölge dünya pazarında bir rekabet unsuru olamamış, Sovyetler Birliği'nin dağılması sonrasında ise, Hazar'a kıyısı olan Hazar Dörtlüsüne, İran dahil 5 ülkenin enerji pastasından ne nispete pay alacağı meselesi; Hazar Denizinin hukuksal statüsü sorununu da beraberinde getirmiştir. Bu sebeple, Hazar nüfuz mücadelesinin en sert geçtiği bölgelerin başında gelmektedir. Bölgede sürdürülen güç mücadelesi, sadece enerji yataklarından alınacak payları değil, bu havzada üretilecek enerjiyi dünya pazarlarına taşımanın hangi güzergâhlar vasıtasıyla yapılacağını da içermektedir (Yücel, 2008;158).

Sovyetler Birliği'nin dağılmasıyla birlikte, ideolojik rekabet yerini ekonomik rekabete bırakmış, çevresinde yeni bağımsız ülkelerin yer aldığı, petrol ve doğalgaz rezervlerinin önemli bir kısmını barındıran Hazar Havzası, bölgesel ve küresel güçlerin dikkatini çekmiştir. Kafkasya'nın , jeopolitik açıdan büyük önem taşıma nedenleri şu şekilde sıralanabilir; 1. Jeostratejik anlamda Orta Asya'ya giriş kapısıdır. 2. Orta Asya bakımından bölge, Batı pazarına açılan direkt bir geçittir. 3. Orta Asya ile bir bütün olarak ele alındığında bölge önemli miktarda petrol ve doğalgaz potansiyellerine sahiptir. 4. Rusya Federasyonu açısından, Akdeniz ve Basra'ya uzanan jeopolitik bağlantı hattıdır.

Önemli petrol ve doğalgaz rezervlerinin bulunduğu Hazar bölgesindeki devletler enerji piyasası açısından küresel ölçekte önem kazanmaya, stratejik aktörler haline gelmeye başlamışlardır. Ancak, enerjinin paylaşım savaşını veren petrol şirketleri, bulundukları devletlerin dış politikalarında çok etkili oldukları gibi, dünya siyasetine de ekonomisine de az veya çok yön verebilmektedirler. Bu anlamda 21. yüzyılda da şiddetle sürdürülen enerji rekabeti, son yıllarda Hazar bölgesinde giderek artan derecede hissedilmiştir. 21. yüzyılın mücadelesi Avrasya satranç tahtasında oynanacaktır. Bu mücadelenin merkezinde, her zaman olduğu gibi, enerji kaynaklarının öncelikli rolü yer alacaktır. Coğrafi anlamdaki merkezlerden birisi de Hazar Bölgesi olacaktır (Brzezinski, 1998; 72).

Tablo 1. de yer alan Hazar bölgesi doğalgaz rezervlerine göre; önemli bir güç olmasına karşın, bölgedeki petrol ve doğalgaz rezervlerinin büyük kısmı henüz geliştirilememiş ve önemli bir kısmında rezerv tespiti dahi halen yapılmamıştır(Yücel, 2008;165).Bu haliyle Hazar havzasında yer alan dört ülkenin ispatlanmış doğalgaz rezervlerindeki toplamı dünya toplamının nerdeyse %8'ine denk gelmektedir. Bölgeyi yeni boru hatlarının yatırımları açısından cazip kılan unsur ise, bölgedeki mevcut hatların artık ekonomik ve fiziki ömürlerini tamamlamış olmalarıdır. Hazar bölgesindeki petrol ve Doğalgaz boru hatlarının büyük bölümü Sovyetler Birliği döneminde inşa edilmiş olduğundan, çoğu Rusya içlerine dağıtım yapmak amacıyla planlanmıştır. Hatların ihracat amaçlı kullanımı uygun olmayıp, büyük bölümünde de bakımsızlıktan kaynaklanan sorunlar bulunmaktadır.

ÜLKELER	İspatlanmış Rezervler	Dünya Toplam Rezervlerindeki Payı (%)	Dünya Toplam Üretimindeki Payı (%)
Azerbaycan	1	0.5	0.5
Kazakistan	1.3	0.7	0.6
Türkmenistan	17.5	9.3	17.6
Özbekistan	1.1	0.6	1.7

Tablo1. *Hazar Bölgesinin İspatlanmış Doğalgaz Rezervleri, Üretim ve Dünya Toplamı içindeki payı, (%), 2013,* **Kaynak:** *BP Statistical Review of World Energy June 2013, s.20, 24, trilyon metre küp.*

Hazar bölgesinde eski rezervlere ek olarak, zengin yeni hidrokarbon rezervlerinin keşfedilmesi, 21. Yüzyıl'da, bu yeni rezervler, bölgenin ikinci bir Orta Doğu/Basra Körfezi olabileceği düşüncesinin ortaya çıkmasına yol açmıştır. Bulunan enerji rezervlerinin dünyada üçüncü sırada yer alacak potansiyele sahip olduğu belirtilmektedir (Borombaeva, 2002; 14).

Dünya ekonomisi-fosil yakıt evliliği Katolik bir evlilik olup (Pala, 2003;5), Avrupa ve Asya pazarlarının artan ihtiyaçlarını karşılamak üzere, yeni yüzyılın gözdesi Hazar Bölgesi'dir.Bu bölgede yer alan ham petrol ve doğalgaz rezervlerinin hızla geliştirilmesinin Batı açısından önemi daha da artacaktır. Bunun temel nedeni , petrolün, 2020'ye kadar, özellikle kara ve hava taşımacılığı alt sektörlerinin hızla büyüyen enerji talebinin karşılanmasında artan oranda kullanılacağını göstermektedir.Yapılan projeksiyonlara göre, önümüzdeki 20 yıl içinde, dünya petrol tüketiminde gerçekleşecek yaklaşık 2 milyar tonluk (15 milyar varil) ilave artışın % 59'u 'ulaştırma' sektöründen kaynaklanacaktır (IEA, 2001).

Yakın bir gelecekte, petrol potansiyeli açısından Azerbaycan ve Kazakistan'ın, doğalgaz deposu olarak daha çok Türkmenistan ve Özbekistan'ın öne çıkacağını söylemek mümkündür. Yaklaşık 2 Trilyon m³'lük rezerv tespit edilen Şah Deniz keşfi ile birlikte, sadece petrol değil bir doğalgaz ülkesi olacağının da sinyallerini veren Azerbaycan'ı, bu son gruba da dahil etmek yanlış olmayacaktır (IEA, 2011).

2.3 Doğalgaz Rezervleri ve Jeopolitik Etkileri

Önümüzdeki yirmi yılda doğalgaz tüketiminde meydana gelecek artışın kilit sektörü ise 'elektrik' olacaktır. Günümüz global gaz tüketiminde % 35 ile en büyük pay 'elektrik sektörüne' aittir. Özellikle Kombine Çevrimli doğalgaz Türbinleri'nin ısıl verimliliğinde beklenen sürekli iyileştirmeler ve çevre dostu bir yakıt olması nedeniyle 2020'ye kadar, yeni elektrik santrallerinde daha çok doğalgazın tercih edileceği görülmektedir. Bunun sonucu olarak; santrallerden kaynaklanacak doğalgaz talebinin % 4'lük bir yıllık ortalama artış hızıyla büyüyeceği tahmin edilmektedir. Dolayısıyla, doğalgaz rezervlerini ve bulundukları ülkeler de jeopolitik konumları açısından etkileneceklerdir.

Tablo 2'de, özellikle gelişmiş ülkelerin petrol krizleri sonrasında uyguladıkları sanayileşme, enerji ve teknoloji politikalarının enerji tüketimi ve gelecek projeksiyonlarını göstermektedir.Buna göre,1973'de % 53 ile dünya birincil enerji tüketiminde en üst düzeye ulaşan petrol payının, 2005 sonu itibarıyla % 36.4'e gerilediğini

göstermektedir. Fosil yakıtlar arasındaki ikamede kömür ve doğalgaz paylarının önemli ölçüde artarak, global enerji tüketiminden yaklaşık aynı oranda pay aldıkları gözleniyor. Fosil yakıt dışı enerji kaynakları arasında ise en büyük katkının nükleer enerji tarafından yapıldığı görülmektedir. Bu süreçte değişmeyen tek şey fosil yakıt bağımlılığıdır: 1973'de global enerji tüketiminin yaklaşık % 87'sini sağlayan fosil yakıtların payı, 2005'de yani 32 yıl sonra bile, hala % 88'ler düzeyindedir. Aynı tablodan, fosil yakıtların 2020 dünya enerji tüketiminin de en az % 92'sini karşılamasının beklendiği görülmektedir. Önümüzdeki 20 yıl dünya ülkelerinin ne fosil yakıt ne de kömür tüketiminden kolayca vazgeçemeyeceklerini söylemek mümkündür. Üstelik, diğer fosil yakıtların "düşme" eğilimine girip, giderek daha pahalı hale gelecekleri 2050'lerden sonra, tıpkı petrol krizlerinin ardından yaşanan gelişmeler gibi yine kömürün "dengeleyici kaynak" olarak stratejik önemini arttırması beklenebilir. (IEA, 2012)

	1973	2005	2013	2020[2]
Petrol	53	36.4	33	38
Kömür	18	27.8	29	29
Doğalgaz	16	23.4	24	25
Fosil Yakıtlar	87	87.6	91	92
Nükleer	1	5.9	4.6	4
Hidroenerji	2	6.3	6.6	3
Diğer Yenilenebilirler*	10	0.2	1.9	1

Tablo 2. *Dünya Birincil Enerji Tüketiminde Yakıt Payları1, 1973-2020 (%) * Hidrolik hariç, güneş, rüzgar, gel-git, jeotermal, geleneksel ve modern biyolojik yakıtlar.* ***Kaynak:*** *BP Statistical Review of World Energy June 2013 s. 40, (1) trilyon metre küp.(2) Projeksiyon rakamı (IEA, 2012:6-9).*

Petrolün yanı sıra doğalgazın da kolay ve daha düşük maliyetlerde çıkarılması ve taşınması ve petrole kıyasla çevreye daha duyarlı bir enerji kaynağı olması, onun kullanımını giderek daha yaygın hale getirmektedir. Ayrıca, Birim kitle başına düşen ısı enerjisi bakımından doğalgazın petrole yakın olması da piyasa değerini artırmaktadır. Boru hattı sistemlerinin mevcut olduğu ya da kurulabileceği yerlerde, yeni elektrik santralleri gibi pek çok uygulamada yakıt seçeneği olarak daha çok doğalgazın tercih edileceği anlaşılmaktadır(IEA, 2012). Bir anlamda doğalgaz, bugün bir duraklama dönemi geçiren nükleer enerjinin tekrar büyük oranda devreye girene kadar, yani 2050'ler sonrasına kadar, özellikle çevresel açıdan bir 'geçiş yakıtı' görevi üstlenecektir. Doğalgaza, '21. yüzyılın yakıtı' denilmesinin asıl nedeni budur (Pala, 2003;8). Petrol tarihinde her zaman önemli bir rol üstlenmiş olmasına rağmen, Hazar'da büyük ölçekli hidrokarbon üretimi ve dünya pazarlarına taşınması konusu, Sovyetlerin dağılması ve yeni bağımsız devletlerin kendi ayakları üzerinde durmaya çalıştıkları yakın döneme rastlamıştır. Yakın gelecekte 2015 den itibaren yaklaşık 50 yıl sürecek doğalgazın altın çağına geçileceği öngörülmektedir. (IEA, 2012;6-9).

Küresel enerji politikaları ve boru hattı projelerinin hayata geçirilebilmesi uzun dönemli işbirliği ve anlaşmaların imzalanması ile mümkün olabilmektedir. Ancak enerji rezervlerinin durumu ve bölgelerindeki jeopolitik gelişmeler bu anlaşma ve işbirliklerinin çalıştırılmasında ve uzun solukluluğunda bazı sıkıntıları da beraberinde getirebilmektedir.ABD'nin Exxon önderliğinde geliştirilen ShaleGas (Kaya Gazı) teknolojisi sayesinde ABD'nin doğalgaz bağımlılığı değişecek ve kaya gazına dayalı LNG pazarına ihracatçı olarak gireceği, Asya pazarlarına gaz satacağı ve Ruslara rakip olacağı ileri sürülmektedir (The Economist, 2010;67-69).ABD gazı Asya'ya giderse Avrupa'yı Türkiye üzerinden geçen boru hatları besleyecek, yani ABD burada yer almak yerine, sonuçta Hazar ve Orta Doğu gazının Avrupa'ya sokarak Rusya'yı tüm piyasalarda sıkıştırmış olacaktır.

3 Enerji Güvenliği ve Boru Hatları

3.1 Enerji Arz Güvenliği Sorunları ve Mevcut Boru Hatları

Ulusal kaynakları yetersiz ülkeler, gereksindikleri enerjiyi zamanında, kesintisiz ve en güvenli şekilde sağlamak için sürekli yeni arayış içindedirler.11 Eylül sonrasında dünya ekonomilerinin en önemli meselelerden biri "enerji arz güvenliğinin sağlanması"olmuştur. Özellikle enerji ithalatına bağımlılığı artan gelişmiş Batı ekonomileri için Orta Doğu bölgesinin jeopolitik sorunları ve siyasi kaynaklı enerji arz kesintileri karşısındaki tek dengeleyici rezerv alanı Hazar bölgesi görülmektedir. Ayrıca,AB'nin önümüzdeki 15-20 yıl içinde fiziki ve ekonomik ömrünü tamamlayacağı hesap edilen Kuzey Denizi rezervlerine uzun zamandır aramakta olduğu ikame kaynakları, kısa vadede Rusya'da, orta ve uzun vadede ise Orta Asya ve Hazar Bölgesi'nde bulmuştur.

SSCB'nin dağılmasından sonra, bölgenin hızlı değişimlere uğraması, dağılan yapı içindeki ülkelerin yeni rolleri, Batı enerji diplomasisi, ilk önce Hazar'ın enerji kaynaklarını garanti altına alacak üretim-paylaşım anlaşmalarının tamamlanması üzerinde yoğunlaşmıştır. Bu bölgedeki temel üreticilerle 30 yıllık uzun erimli işbirliği imkanları imza altına alınmasıyla ,Batı'nın 15-20 yıllık bir plan dahilinde tedrici olarak Kuzey Denizi kaynakları yerine geçireceği alternatif enerji arz kaynaklarına, Hazar rezervlerine yönelmiştir. 2020 yılında

doğalgaz ihtiyacının % 70'ini ithalat ile karşılayacak olan, günümüzde toplam doğalgaz tüketiminin % 26'sından fazlasını Rusya Federasyonundan sağlayan AB çıkarları açısından, Rus petrol ithalatı da önemli olmakla birlikte, esasen *Rus doğalgazı* stratejik bir parametredir

Rusya'nın Ukrayna ile yaşadığı kriz neticesinde, Ukrayna üzerinden Avrupa'ya sağladığı doğalgazda kesintiye gitmesi ciddi kaygıya neden olmuştur. Avrupa ülkelerinin en önemli doğalgaz tedarikçisi Rusya'dır. Rusya'nın doğalgazda kesintiye gitmesi enerji güvenliği ve gaz tedarikçilerinin çeşitlendirilmesi konusu bir kez daha gündeme getirmiştir. Orta Asya Avrupa açısından en önemli alternatif doğalgaz tedarikçisi konumundadır. Bu bağlamda güvenlik risklerinin minimize edilerek Orta Asya'dan Avrupa'ya petrol ve doğalgaz ihracatının gerçekleştirilebilmesi noktasında Türkiye önemli bir rol oynamaktadır (Erdağ, 2013;869). Söz konusu petrol ve doğalgazın alternatif olarak (İran, Irak) taşınması ekonomik açıdan ciddi yük oluşturacak, hem de güvenlik açısından bazı riskleri de beraberinde getireceğinden (Ayhan, 2009;156), Avrupa diğer ülkelerden geçirebileceği ve çeşitlendirebileceği boru hatlarına yönelmiştir.

3.2 Mevcut Boru Hatları

Avrupa'yı, Rusya başta olmak üzere doğalgaz rezervlerine sahip ülkelere bağlayan boru hatlarının yanı sıra Avrupa ülkeleri arasında da son derece gelişmiş bir boru hattı ağı bulunmaktadır. Fakat bu ağın etkin bir biçimde çalışabilmesi için gaz rezervlerine sahip ülkelerden tedarikin güvence altına alınması gerekiyor. 2013 başı itibarıyla dünyada 1033.4 milyar metreküplük doğalgaz ticaretinin 705 milyar metreküpü boru hatlarıyla, kalan 327.9 milyar metreküpü ise LNG ile yapılmış. Dolayısıyla ticaretin yaklaşık %75'i boru hatları ile kalan % 25 ise LNG ile yapılmaktadır (BP, 2013; 28).

Bölge devletlerinin sahip oldukları enerjinin dünya pazarlarına ulaştırılabilmesi için, son yıllarda, çeşitli boru hatları gündeme gelmiştir. Bunlardan bir kısmının inşaatına başlanmış olup, bir kısmı ise halen proje aşamasındadır. Bunlardan bazıları şunlardır; (1) Bakü-Tiflis-Ceyhan Ham Petrol Boru Hattı Projesi. (2) Bakü-Tiflis-Erzurum Doğalgaz Boru Hattı Projesi. (3) Türkmenistan-Türkiye-Avrupa (Hazar Geçişli) Projesi. (4) Türkiye-Yunanistan Doğalgaz Boru Hattı Projesi. (5) Mavi Akım Doğalgaz Boru Hattı Projesi. (6) Aktau (Kazakistan petrollerinin Bakü-Ceyhan'a aktarılması) Projesi. (7) Orta Asya Doğalgaz Boru Hattı (Centgaz) Projesi (Türkmenistan-Afganistan-Pakistan). (8) Türkmenistan-İran-Türkiye Doğalgaz Boru Hattı. (9) Samsun-Ceyhan Ham Petrol Boru Hattı . (10) Türkmenistan-Çin Doğalgaz Boru Hattı. (11) Kazakistan-Rusya (Atrau-Samara) Ham Petrol Boru Hattı Projesi (Uluatam, 2010;62).

AB arz güvenliğinin sağlanması bakımından bugüne kadar temel olarak aşağıdaki boru hattı projelerini kullanılmıştır: 1)Yamal-Avrupa I, 2)Ukrayna Boru Hatları, 3) Brotherhood,4) Soyuz, 5) NorthernLights (Urengoi-Pomary- Uzhgorod/Trans-Siberya), 6) Mavi Akım (Blue Stream), 7) Bakü-Tiflis-Erzurum (BTE) Doğalgaz Boru Hattı(South CaucasusPipeline), 8)Yeşil Akım (GreenStream), 9)Langeled

Avrupa Birliği, enerji açığını kapatmak ve arz kaynaklarını çeşitlendirmek için birçok büyük çaplı projeyi eşzamanlı olarak desteklemektedir. Bu nedenle Avrupa'ya gaz sevk ederken, siyasi ve iktisadi nedenlerle ihtilaflar yaşadığı Ukrayna ve Beyaz Rusya'nın dâhil edilmediği, farklı ülkelerden geçen güvenli güzergâhların yer aldığı projeleri desteklemektedir. Bunlardan bazıları yapım bazıları ise planlama aşamasında olan boru hatları güzergahlarıdır. Yapılması düşünülen yeni boru hattı projeleri:1)Yamal-Avrupa II, Beyaz Akım (White Stream), 3)Nabucco,4) Kuzey Akım (NordStream),5)Güney Akım (South Stream). Ayrıca, Rus rezervlerinin yanı sıra Türkmen, Kazak ve Azerbaycan gazının da Avrupaya taşınması için , Türkiyenin de dahil olduğu boru hattı projeleri de geliştirilmektedir. Bunlar ise, 1)Türkiye-Yunanistan-İtalya Doğalgaz Boru Hattı (Poseidon), 2)Mavi Akım II (Blue Stream), 3)Trans-Adriyatik Boru Hattı (TAP), 4) TANAP-Trans Anadolu Doğalgaz Boru Hattı.

Avrupa'nın ihtiyaç duyduğu petrol ve doğalgazın Orta Asya'dan taşınması konusunda Türkiye önemli adımlar atmaya başlamıştır. Bakü-Tiflis-Ceyhan petrol boru hattı projesi ile Akdeniz'de önemli bir enerji köprüsü konumuna gelen Türkiye (İpek, 2006), Nabucco projesinin imzalanması ile birlikte Avrupa'ya gaz tedarikinde güvenli bir enerji koridoru oluşturmuştur. Türkiye doğalgaz boru hattı projeleri ile stratejik hamlelerle Rusya gibi büyük oyuncuların arasında yer alamaya çalışarak, gelecek zamanlarda " aktörler" arasında yer almayı amaçlamaktadır. Gerek Bakü-Tiflis-Ceyhan ve gerek Samsun-Ceyhan petrol boru hatları, gerekse Türkiye-Yunanistan-İtalya ve Nabucco doğalgaz boru hattı projeleriyle Orta Asya'daki kaynakların Batı'ya aktarılmasını sağlayacak ülke konumundaki Türkiye, Avrupa Birliği'nin (AB) geleceğe dair enerji planlarında da önemli bir yer tutmaya başladı. Doğalgaz ithalatında büyük ölçüde Rusya'ya bağımlı hale gelen AB, hem bu tekeli kırmak hem de kaynak çeşitliliği yaratmak için en önemli koridor ülkelerden biri olarak Türkiye'yi seçmiş bulunuyor. Türkiye'nin lokasyon itibariyle AB'yi, zengin Orta Asya ve Ortadoğu enerji kaynakları ile buluşturabilecek tek ülke olduğundan; zengin Hazar ve Ortadoğu kaynaklarının Türkiye'nin imza attığı BTC, Şah Deniz, Nabucco ve Türkiye-Yunanistan-İtalya gibi stratejik öneme sahip projelerle Avrupa'ya gitmesi söz konusu olacaktır. Bu projelerin devamı niteliğinde son olarak, Türkiye ile Azerbaycan arasında Şah deniz bölgesindeki doğalgazın Türkiye ve Avrupa'ya ulaştırılması maksadıyla Anadolu Geçişli Doğalgaz Boru Hattı Projesi (TANAP) 2011 yılında imza altına alınmıştır.

4 Avrupa Birliği Doğalgaz Talebi ve Trans Anadolu Doğalgaz Boru Hattı -TANAP

Avrupa Komisyonu 7 Eylül 2011 tarihli COM(2011)539 "The EU Energy Policy: Engaging with Partners Beyond Our Borders" belgesiyle,AB dışındaki ülkelerle enerji alanında kurulacak ilişkilerin temellerini ortaya koymuş ve buna ilişkin öncelikler:1. Enerji iç pazarının harici dünyaya ilişkin yapısının inşa edilmesi, 2.Emniyetli, sürdürülebilir ve rekabetçi enerji piyasasına yönelik işbirliğinin güçlendirilmesi, 3.Gelişmekte olan ülkeler için sürdürülebilir enerjiye erişim imkanlarının geliştirilmesi ve 4.AB politikalarının AB dışındaki ülkelerde daha iyi tanıtımı (Özen, 2012;59) olarak belirlenmiştir.Mevcut boru hatlarının yanı sıra geliştirilen orta ve büyük ölçekli projeler, Avrupa doğalgaz piyasasının ne denli rekabetçi bir yapıya sahip olduğunu net bir biçimde ortaya koymaktadır. Avrupa Birliği'nin hemen hemen tüm politika belgelerinde de belirtildiği gibi, Birliğin birinci önceliği, enerji arz güvenliği ve çeşitliliğini sağlamak**. Bu bağlamda AB'nin Doğu'daki komşu ülkeleri stratejik bir öneme sahiptir.

Boru hattı teknolojisindeki iyileştirmeler ve sıvılaştırılmış doğalgaz kullanımındaki artış, doğalgazı yerel nitelikli bir meta olmaktan çıkarmış, uluslararası ticaretin parçası haline getirmiştir. Doğalgaz, 21. yüzyılın en önemli yakıtı olmaya adaydır. Uluslararası Enerji Ajansı,IEA, doğalgazın, dünya birincil enerji tüketiminden alınan pay itibarıyla 2020 yılında kömürü geçerek, petrolün hemen ardından ikinci sıraya yerleşeceğini öngörmektedir. Dünya birincil enerji tüketiminde % 21'lik pay alan doğalgaz, 2020'de global enerji tüketiminin % 24'ünden sorumlu olacaktır. Temel olarak elektrik üretimindeki artan ağırlığı nedeniyle bu yüzyılın en azından ilk yarısı boyunca en stratejik yakıt haline gelecek doğalgaz, enerji portföyünde kömür ve nükleer enerjinin boşalttığı alanı dolduracaktır (IEA ,2005;80-6).

Dünya petrol üretiminin zirveye (peak) ulaşacağı 2015-2033 zaman aralığı, dünya enerji ihtiyacının karşılanması, enerji kaynaklı global CO_2 emisyonlarının azaltılması ve emisyon ticareti ile Kyoto Protokolü'ne işlerlik kazandırılması sürecinde doğalgazın çok daha aktif rol üstleneceği tarihi bir dönemeç olacaktır. Dolayısıyla, Rusya'nın tekeli *Gazprom*'u kullanarak dünya doğalgaz sahnesinde ve dış politika alanında daha bugünden yakaladığı manivela kabiliyetini, gazın hayati öneme sahip olacağı geleceğe taşıma fırsatı bulacaktır. (Pala, 2003). Doğalgazın gücü, sadece ihracat geliri sağlanmasından ibaret değildir. Fosil yakıtlar arasında en az karbon emisyonuna yol açan doğalgazın anavatanı konumundaki Rusya, önümüzdeki 25 yıl boyunca, fosil yakıt tüketiminden vazgeçemeyen ABD, Japonya ve diğer Batılı ülkelerin en önemli emisyon ticaret ortağı da olacak; böylece daha şimdiden 50 milyar \$'a ulaşması beklenen bu piyasanın kritik bir oyuncusu haline gelerek ülke ekonomisine ilave döviz girdisi sağlayacaktır.

Dünya genelinde de, doğalgazın toplam enerji tüketimindeki payının artması gözlemlenmektedir. Bu sonuç, büyük doğalgaz kaynaklarına sahip ülkelerin, özellikle Rusya'nın, dünya enerji ekonomisinde rolünün giderek yükselmesine sebep olmaktadır. Rusya'nın, Avrasya'nın zengin doğalgaz kaynaklarını kendi tekeline almak isteği, son yıllarda, Kazakistan, Türkmenistan ve Özbekistan gibi zengin doğalgaz kaynaklarına sahip ülkelerle yoğun temaslar içerisine girmesi, bu isteği doğrultusunda ne denli kararlı olduğunu göstermektedir (Ener ve Ahmedov, 2008;6).

Avrupa Birliği 'nin enerji politikasında, petrol ve doğalgaz çok önemli bir yer tutmakla birlikte, topluluğun enerji ihtiyacının büyük bir bölümünü halen petrol karşılamaktadır. Bu oranın gelecekte de önemli ölçüde azalmayacağı ve petrolün birincil enerji kaynağı konumunu sürdüreceği tahmin edilmektedir. Ancak, doğalgaz ise ikinci sıradadır. Bu durumu AB açısından daha da önemli kılan, bu iki kaynak için birliğin dışa bağımlı olmasıdır. AB' nin en önemli enerji sağlayıcıları İngiltere, Danimarka, Norveç, Orta Doğu ülkeleri, Rusya ve Kuzey Afrika ülkeleridir. 2006 sonu verilerine göre AB' nin toplam petrol iç tüketiminin 727 milyon ton olmasına karsın, AB' nin ithalatı 588 milyon ton olup, iç tüketimin % 80' ni karşılamaktadır (Eurostat, Statistical Books Energy, 2007). Bunun dışında, birincil enerji kaynakları içerisinde petrol % 44' lük payla ilk sıradadır. Doğalgaz tüketimi ise % 26'lik bir oranla ikinci sırada bulunmaktadır. Avrupa' nın birincil enerji tüketiminde doğalgazın payı ise, giderek artmaktadır. Doğalgaz payı, 2010 yılında %24'larda olup, 2030 yılında 30,1%'e yükseleceği öngörülmektedir (IEA, 2012).

Rusya'yı Kıta Avrupası'na bağlayan dev boru hatları bulunmasına rağmen Rusya enerji kozunu sık sık doğalgaz tedarik ettiği ülkelere yönelik yumuşak güç olarak kullanmaktadır. Ukrayna ve Rusya arasında 2005-2006'da, 2007-2008'de ve son olarak 2008-2009'da patlak veren enerji krizleri yüzünden Ukrayna'nın yanı sıra, birçok AB ülkesi günlerce gazsız bırakmıştır. Son olarak Haziran 2010'da Belarus'la yaşanan kriz Avrupa'nın enerji konusunda Rusya'ya aşırı derecede bağımlı olmasının doğurabileceği sakıncalı durumu bir kez daha ortaya koymaktadır. Sonuç olarak, Avrupa Birliği arz çeşitliliğini ve güvenliğini sağlamak için son yıllarda Trans-Avrupa Enerji Ağı çerçevesinde birçok strateji ve proje geliştirmekte ve desteklemektedir.

Rusya artan gaz ihtiyacının karşılanmasında en güvenilir kaynak olarak durmakla birlikte, bu ülkeye gaz ithalatı bağlamında aşırı bağımlılık oluşmaması ve alternatif tedarik kaynaklarının devreye konulması stratejisi, Orta Doğu ve Hazar Bölgesi ülkelerindeki zengin doğalgaz kaynaklarının batıya transfer edilmesi ,AB açısından kaçınılmaz bir hedef olarak ortaya çıkmaktadır. Türkiye'nin içinde bulunduğu coğrafyadan ve enerji bölgesine yakınlığı nedeniyle sahip olduğu Jeostratejik avantajı nasıl kullanacağı hep gündem konusu olmuştur.

Başta Azerbaycan olmak üzere, bağımsızlıklarını kazanan bu yeni devletler sahip olduğu doğal kaynaklar nedeniyle uluslararası alanda önemli bir cazibe merkezi haline gelmişlerdir. 2000'li yıllardan itibaren Türkiye'nin bölgede küresel politikalar uygulamak isteyen, tarihsel olarak bölgede bulunmasıyla bölgede söz sahibi olma politika tercihinin arkasından, Bakü-Tiflis-Ceyhan petrol boru hattı projesi (BTC) bölgedeki dengeleri değiştirmiş ve bölgenin enerji politikalarında Türkiye'nin ağırlık kazanmasını sağlamıştır (Erdağ, 2013).Azerbaycan ve Türkiye'nin Avrasya bölge ekonomisindeki rolü onların coğrafi ve jeopolitik konumlarına bağlı olmalarının dışında ayrıca Azerbaycan'ın zengin petrol ve doğalgaz kaynaklarına sahip olmasıyla da ilişkilidir(Ener ve Ahmedov, 2008;1).

4.1 Trans Anadolu Doğalgaz Boru Hattı- TANAP Projesi -

AB'ye Türkiye üzerinden gaz sevkiyatı acısından en uygun coğrafik yerleşimde yer alan ve zengin doğalgaz kaynaklarının bulunduğu bu üç ülke (İran, Irak ve Türkmenistan) ile ilgili belirsizlik ortamının sona ermesi ve bu ülkelerin Türkiye ile birlikte AB'ye gaz ihracını sağlayacak üretim ve taşınmasında gerekli alt yapılarına sahip olmaları yakın gelecekte mümkün görülmemektedir. Dünyadaki en büyük gaz ithalatçısı konumundaki AB'ye doğalgazın Hazar bölgesi ve Ortadoğu ülkelerindeki bu zengin üretim alanlarından boru hatlarıyla iletiminde en elverişli güzergahların Türkiye üzerinden geçişin öngörülmektedir.Dolayısıyla, uluslararası enerji arenasında doğalgaz sektöründe Türkiye'nin rolü daha da öne çıkmaktadır.

Trans Anadolu Doğalgaz Boru Hattı –TANAP-, Azeri gazının yıllık 10 BCM miktarının 2017 yılından itibaren Türkiye üzerinden Avrupa'ya transit edilmesi yönünde, 26 Aralık 2011'de mutabakat zaptı imzalanan, 26 Haziran 2012'de de Hükümetler arası imzaların atıldığı en yeni son proje olmaktadır. Türkiye'nin TANAP projesinin tamamlanması ile birlikte *güvenli enerji koridoru* rolünün daha da güçleneceği söylenebilir (Erdağ, 2013:869)TANAP Projesi, Türkiye ve Azerbaycan'ın bugüne kadar başarı ile yürüttükleri projelerin enerji alanındaki en önemli temsilcilerinden biridir. Tarihten gelen kardeşlik bağlarını bugünün koşullarında "Bir Millet İki Devlet" misyonunla perçinleyerek sürdüren iki ülke için de büyük öneme sahip TANAP Projesi, dünya enerji piyasalarında da ses getirecek dev bir projedir (http://www.tanap.com/tanap-nedir.2013).

Avrupa'nın ve Türkiye'nin doğalgaz ihtiyacını karşılamayı bunun yanı sıra bölgede gaz çeşitliliğinin sağlanmasını hedefleyen TANAP projesi, enerji alanında Bakü-Tiflis-Ceyhan Petrol Boru Hattı ve Bakü-Tiflis-Erzurum Doğalgaz Boru Hattı Projeleri ile ivme kazanan stratejik iş birliklerini daha da kapsamlı hale gelmiştir. TANAP, Türkiye ve Avrupa'nın doğalgaz arzına, Azerbaycan Şah Deniz-2 sahası ve ilave kaynaklardan doğalgaz tedarikiyle büyük katkı sağlayacaktır.Giriş noktası Azerbaycan, Türkiye sınırı Türkgöz girişi olan 56 inçlik hattın, Avrupa'ya çıkış noktaları Yunanistan ve Bulgaristan sınırları, Türkiye içi çıkış noktaları ise Eskişehir ve Trakya bölgesi olacaktır. TANAP Projesi için öngörülen 4 aşamanın ilki 2018'de ilk gaz akışıyla gerçekleşecek. 2020'de yıllık 16 milyar metre küp olacak kapasitenin, 2023'te 23 milyar metre küp, 2026'da ise 31 milyar metre küp seviyesine kadar ulaşması hedeflenmektedir.

Hazar doğalgazını Avrupa pazarlarına taşıma fikrini yeniden gündeme taşıyan Türkiye ve Azerbaycan, Trans Anadolu Doğalgaz Boru Hattı projesini (TANAP) hayata geçirmek için düğmeye basarken, söz konusu proje, Rus doğalgazına olan bağımlılığını azaltma açısından Avrupa'nın önemli bir tercihidir. Avrupa'nın doğalgaz kaynaklarını çeşitlendirme ihtiyacını en uygun şekilde karşılamasının yanında, Türkiye'nin bir geçiş ülkesi olarak sahip olduğu rolü güçlendirmesi bakımından da son derece önemli bulunmaktadır. Ayrıca, proje Rusya'nın etrafından dolaşan bir güney enerji koridoru kurma fikrinin ardındaki "stratejik gerekçeleri canlı tutmaktadır. Bunun yanında , Azerbaycan için yeni ihracat fırsatları ve sabit gelir imkanı sunmanın yanı sıra, dış ilişkilerde arzu edilen çeşitliliği de sağlayacaktır. Rusya halen Türkiye'nin bir numaralı doğalgaz tedarikçisi konumunda. Türkiye, Rus doğalgaz tekeli Gazprom'un en büyük ikinci pazarı. Ancak artık Türkiye de doğalgaz pazarına sağlam bir adım attığından, Rusya, Güney Akımı boru hattına alternatif olarak getirilen projeleri, Avrupa pazarındaki egemenliğine yönelik bir tehdit olarak görebilir.

5 Sonuç

Avrupa Birliği'nin tüm politika belgelerinde de belirtildiği gibi, birliğin birinci önceliği enerji arz güvenliği ve çeşitliliğini sağlamaktır. Bu bağlamda AB'nin Doğu'daki komsu ülkeleri stratejik bir öneme sahiptir. Rusya, Avrupa'nın en büyük petrol ve doğalgaz tedarikçisi olup gelecekte de bu konumunu sürdürecektir. En güvenilir ilave enerji tedarikçileri olan Orta Asya, Karadeniz ve Hazar Denizi bölgelerinin potansiyeli henüz tam olarak keşfedilmemiştir.

Günümüzde, Türkiye'nin enerji terminali olma vizyonu; en kritik enerji kaynakları olarak değerlendirebileceğimiz petrol ve doğalgaz kaynaklarının en zengin olarak Türkiye'nin yakın coğrafyasında yer almasıyla yakın ilişkilidir. Dünyadaki en büyük gaz ithalatçısı konumundaki AB'ye doğalgazın Hazar bölgesi ve Ortadoğu ülkelerindeki üretim alanlarından boru hatlarıyla iletiminde en elverişli güzergahların Türkiye üzerinden geçişi öngören güzergahlar olduğu dikkate alındığında,uluslararası enerji arenasında Türkiye'nin rolünün önem taşıdığı alan olarak doğalgaz sektörü öne çıkmaktadır.

Hazar geçişli bir boru hattının inşasının önünü açacak şekilde bu denizin hukuki statüsünün belirlenmesinde, kıyısı olan ülkelerce uzlaşma sağlanmasına yönelik çabalar AB tarafından devam ettirilmekle birlikte, böyle bir

bağlantının gerçekleşmesinde çıkarı olmayıp tersine olumsuz etkilenmesi daha muhtemel olan İran ve Rusya'nın böyle bir konsensüse varması da zor görünmektedir. Azerbaycan ve Türkmenistan arasında bir ikili mutabakat sağlanarak, iki ülkenin Hazar Denizi'ndeki üretim sahalarının birbirine bağlanması üzerinde durulan bir seçenek konumundadır.

Avrasya ve Hazar bölgesinde gerek Türkiye'nin gaz arzı ihtiyacının karşılanması,gerekse AB'ye gaz sevkiyatı açısından belirsizliği devam etmektedir. Türkmen tarafının konuya yaklaşımı ise kendi sınırları ötesinde aktif bir durumda yer almamak şeklinde olmuş, hatta son derece önemli bir konu olan Hazar Denizi'nin kıyı ülkelerce kullanımına dair statütüsünün belirlenmesinde pasif bir tutum takınmıştır. İran'ın doğalgaz rezervleri açısından Rusya'dan sonra en zengin ülke olması; bu ülkede yabancı sermaye yatırımları açısından teşvik edici bir atmosfer olmaması, ABD ile ilişkilerde gerginlikler sonucu ülkeye uygulanan yaptırımlar gibi olumsuz unsurlara rağmen, İran ile doğalgaz alanında işbirliği çabalarının Türkiye dahil birçok ülke ve enerji şirketleri tarafından sürdürülmesine yol açmaktadır. Irak gazı, Avrupa için en ekonomik alternatiflerden biridir ve ne yazık ki Brüksel'in bu konuda Türkiye'yi de kapsayan hiç bir ciddi girişimi bulunmuyor. Oysa, Irak, yılda 11-12 milyar metreküp gazı hiç bir tüketim ve işleme imkanı bulunmadığı için kuyu başında yakıyor. Kuyu başında yakılan gazın, ITGI yani Türkiye üzerinden Yunanistan ve İtalya'ya uzanacak boru hattını ya da Arnavutluk üzerinden İtalya'ya uzanacak TAP boru hattını tümüyle doldurmaya yetecek düzeydedir.İran gazının önünü kapayan ABD, önümüzdeki 5 yıllık süreçte politik ve ticari koşulların elvermesi durumunda, Rus gaz jeopolitiği açısından kara delik konumundaki Irak'ı sahneye sürebilir. Rusya, Irak gazının fiyatına doğrudan ya da dolaylı olarak müdahale edemeyecektir. Irak gazı, Azerbaycan dışındaki Hazar kaynaklarının önünü kesebilecek konuma gelebilir (Pala, 2010;88-93). Nabucco ve diğer projelerin hayata geçip geçmeyeceğini, AB-Rusya ilişkilerinin seyri ve AB'nin yeniden nükleer enerjiye dönüp dönmeyeceği hususları belirleyecektir. AB içinde son 3 yıldır kapalı kapılar ardında yeni bir nükleer planlama yapıldığı artık bir sır değil. Önümüzdeki 5 yıl içinde ekonomik krizin etkisiyle dibe vuran AB doğalgaz talebinin ciddi oranda artmayacağını, hatta ciddi al ya da öde sorunları yaşanacağını ve ABD menşeli kaya gazı (shalegas) keşfinin doğalgaz arzında "bolluk" yaratacağını da düşünmemiz gerekmektedir.

Türkiye, Avrupa'ya ulasan temel enerji transit güzergâhlarının merkezinde, özel bir konuma sahiptir. Küresel petrol ve doğalgaz rezervlerinin yaklaşık % 70'i Türkiye'ye komşu bölgelerde toplanmaktadır. Enerji arz güvenliğini artırmak için Türkiye'nin coğrafi pozisyonunun tam olarak kullanılması hem Türkiye'nin, hem de AB'nin çıkarınadır.Mühendislik ve boru hattı projeleri özünde bir optimizasyon meselesidir. Küresel ekonomik krizin global kredi havuzundaki finansal kaynaklarını sınırlandırdığı düşünülecek olursa, Avrupa hedefli boru hatlarının da acilen optimize edilmesi, belki tümüyle ya da kısmi olarak birleştirilmesi bu olmuyorsa bazılarından vazgeçilmesi hususları bilimsel açıdan değerlendirilebilir. Proje optimizasyonunu takiben, sınırlı gaz ihracat imkanı, kapasite ve zamanlama dikkate alınarak alternatif gibi gösterilen boru hatları önceliklendirilebilir. Bu sayede hangi projenin, hangi gaz kaynağına dayalı olarak ve hangi yılda devreye alınacağı gerçekçi biçimde ortaya konulabilir. Müşterisi hazır ve daha küçük miktarları garantileyen proje ile başlanır ve böylece Doğu'daki kaynakların önü beklenenden çok daha önce açılabilir. Ardından diğer projeler ve diğer kaynaklar senkronize biçimde devreye alınabilir. Kuşkusuz, bu kritik konuda sadece şirketlere değil, hükümetlere de büyük rol düşecektir.

Sınırlı miktardaki Azeri gazı ve yüksek maliyeti nedeniyle geleceği şimdilik meçhul gözüken Nabucco ise ancak ve ancak Irak gazı ile ciddi bir ivme kazanabilir. Aksi halde, AB'nin meşhur 20-20-20 hedefine *(2020'de enerji üretiminin %20'sini yenilenebilir enerji kaynaklarından sağlamak, karbon emisyonlarını %20 azaltmak);* Nabucco'nun zamanlamasını kapsayan, mesela *"Nabucco beyond 2020"* (Nabucco 2020'den Sonra), başlıklı yeni bir "20" hanesi daha eklemesi, "bir avuç Azeri gazı için" kıyasıya rekabet eden ülkeler ve şirketlerin bekası bakımından çok yerinde bir hareket olacaktır.

Haziran 2013, çok önemli bir dönüm noktasıdır. Azeri gazının TANAP ve TANAP sonrasında hangi proje ile taşınacağına karar verilecektir. Nabucco ile yarışan ve pek çok uzmana göre, en iyi proje olan TAP, Türkiye'nin Balkanlardaki gücünü arttırmak açısından da çok kritiktir. Türkiye TAP projesine ortak olma şansını şimdilik askıya almıştır. Mesele, sadece transit ülke olup, 20 dolara bu gazın ülkemiz üzerinden geçişine izin vermek değildir. Oyunda aktif rol üstlenerek hem üretimde hem taşıma da ama mutlaka gaz ticaretinde pay almadan Türkiye'nin bu süreci karlı kapatması mümkün değildir. Ancak Azerbaycan her açıdan avantajlı çıkacak ve AB arz güvenliğinde Rus gazı ile gaza gaz rekabet yaratarak AB tüketicilerini Rusya tekelinden kurtaracaktır. Beklentiler, Türkiye bu satranç oyununu iyi okuması ve enerji oyununun dikey entegre yapısını dikkate alarak, ve üye olarak girme konusunda kapısında sıkıntılar yaşadığı AB'ye, önemli bir gaz oyuncusu olarak dahil olmasıdır. Bunu Azerilerle yapılması iki arasındaki bağların ülke ekonomileriyle de çok uzun dönemli ve daha sağlam olarak pekiştirilmesidir.

Geçiş Sürecindeki Orta Asya Cumhuriyetlerinde Enerji Tüketimi ve Büyüme İlişkisi

The Relationship between Energy Consumption and Growth in the Transition Economies of Central Asian Republics

Asst. Prof. Dr. Abdullah Özdemir (Adnan Menderes University, Turkey)

Asst. Prof. Dr. Mehmet Mercan (Hakkari University, Turkey)

Mr. Erkan Dendeş (Adnan Menderes University, Turkey)

Abstract

The transition period from the socialist system to the capitalist system is used to describe economies in transition. With the dissolution of the Soviet Union in the 1990s, with Central and Eastern European Countries, the Countries in Central Asia have entered into this process. Central Asian Countries haven't entered into this process providently a lot in transitional stage. At the end of secession process from the Soviet Union, these countries had only limited industrial plants and natural resources. However, reserves of energy resources that these countries have in their economic growth have been a pusher factor. No doubt, increasing energy consumption has a significant effect in the development of the countries. The main purpose of this study is to test the existence of growth relation and energy consumptions in Central Asian Countries that live the transition period accordingly. This study investigates relationship between economic growth and energy consumption for Central Asian Countries over the period 1990-2010 by using panel data analysis. As a conclusion it is reached that there is a significant correlation between energy consumption and economic growth for these countries.

1 Giriş

Enerji, ekonomik ve sosyal kalkınmanın en önemli girdilerinden birisini teşkil etmektedir. Sürdürülebilir kalkınmanın sağlanması ve yaşam standartlarının yükseltilmesinde önemli bir rol oynayan enerjinin dünyanın geleceğinde konumu her geçen gün artmaktadır. Ancak önemli enerji kaynaklarını oluşturan petrol, doğalgaz, kömür gibi fosil yakıtların hızla tükenmekte oluşu ve alternatif enerji kaynaklarının da yetersiz oluşu, bu kaynakların önemini her geçen gün arttırmaktadır. Günümüzde tüm dünyada özellikle ekonomisi hızla büyüyen ülkelerde fosil yakıt tüketimi hızla artmaktadır. Enerjiye olan talebin giderek artmasıyla birlikte 19. yüzyıldan itibaren enerji kaynaklarına sahip olmak, üretimini gerçekleştirmek ve iletim hatlarına sahip olmak büyük ülkelerin temel amaçları arasında yer almıştır. Artan enerji ihtiyacı karşısında, Orta Asya Ülkelerinin enerji rezervleri bakımından zengin olmaları bu sürecin onların lehine olması anlamına gelmektedir.

Bu çalışmanın ana amacı bu doğrultuda geçiş sürecini yaşayan Orta Asya ülkelerindeki enerji tüketimleri ile büyüme ilişkisinin varlığını test etmeye yöneliktir. Bu doğrultuda önce geçiş ekonomisi kavramı ve geçiş sürecinde Orta Asya Ülkeleri üzerinde durulacak, daha sonra dünya enerji kaynakları ile Orta Asya Ülkelerinin enerji kaynakları potansiyeli hakkında bilgi verilecektir. Çalışmanın devamında panel veri analizi ile Orta Asya Ülkelerinde tüketim büyüme ilişkisi ortaya konulmaya çalışılacaktır.

2 Geçiş Ekonomileri

Geçiş sonucunda ekonomik yapı ile üretici ve tüketici davranışlarında temel bir takım değişimler meydana gelmiştir (Yavuz, 2005). Bu değişimin temelini ekonomik faaliyetlerin, fiyatların ve piyasa işlemlerinin serbestleştirilmesi, kaynakların yeniden dağıtılarak etkin kullanılmasının sağlanması, piyasa ağırlıklı araçların geliştirilerek makro ekonomik istikrarın tekrar sağlanması, ekonomik verimlilik sağlanabilmesi için özelleştirmeler ve sıkı bütçe uygulamalarının yapılması oluşturmaktadır. Ayrıca mülkiyet hakları, sağlam ve işleyen hukuki sistem ile şeffaf pazar oluşturulması çalışmalarını da kapsamaktadır (Akar, 2007).

2.1 Geçiş Ekonomileri Tanımı, Kapsamı ve Özellikleri

İktisat Literatürüne 80'li yılların sonunda giren geçiş ekonomileri terimi, merkezi planlamayı terk ederek, piyasa ekonomisi sistemini kurmaya çalışan eski sosyalist ülkeleri ifade etmek için kullanılır (Tandırcıoğlu, 2002). Geçiş ekonomisi ile ifade edilen; bir ülkenin var olan mevcut üretim tarzının rakipleri ile rekabet edememesi neticesinde kısmen veya tamamen çökerek kurumsal yapısını değiştirmeye zorlamasıdır. Başka bir ifade ile Sosyalist veya karma ekonomik yapıdan piyasa ekonomisine geçiş sürecidir (Yavuz, 2005). Özellikle 1980'li yıllardan sonra hızla değişen dünyada oluşan yeni küresel eğilimler ve yeni küresel değerler devletin görevlerini ve ekonomik rollerini de hızla değiştirmiştir. Bunun sonucunda da birçok ülkede korumacı devlet anlayışı yıkılmış ve bunun yerini piyasa ekonomisini benimsemiş dışa açık ve rekabetçi devlet anlayışı almıştır (Uçkaç, 2011)

Geçiş ekonomileri kapsamında 12 Merkezi ve Doğu Avrupa Ülkeleri, 15 eski Sovyetler Birliği Cumhuriyetleri ile Moğolistan, Çin ve Vietnam değerlendirilmektedir. Bu ülkeler gruplandırılacak olursa 1. grupta Bağımsız Devletler Topluluğu (BDT) ile eski Sovyetler Birliği Cumhuriyetleri, 2. grupta Merkezi ve Doğu Avrupa Ülkeleri (Baltık Cumhuriyetleri Dahil) ve 3 grupta ise Çin ve Vietnam yer almaktadır (Altay, 2002). Bu ülkeler arasında bir takım temel farklılıklar bulunmaktadır. Bu temel farklılıklar ekonomik altyapı, politik sistem, coğrafik konum, kurumsal başarı, demokratik kültür ve doğal kaynaklardan kaynaklanmaktadır (Ağcakaya, 2009). Bu farklıklara rağmen geçiş ekonomilerinin başlangıçta şu ortak özellikleri bulunduğu söylenebilir: Emek verimliliği OECD ülkelerinin 1/3'üdür, ücret oranının verimlilik ve beşeri sermaye yatırımıyla ilişkisi yoktur, sanayi sektöründeki ücret farklıkları diğer sektörlere göre daha düşüktür, ücretsiz eğitimin kırsal kesim veya fakirlik açısından soysal ilerlemeye katkısı yoktur, hükümetler genelde işsizliği kabul etmemişler veya etseler bile işsizlik araştırmalarını ele alan politikaları göz ardı etmişlerdir (Akar, 2007).

Geçiş ekonomileri, merkezi planlı ekonomiden piyasa ekonomisine geçiş sürecinde "Big Bang" (Büyük Patlama) ve gradualism (aşamalı) adı verilen iki farklı yaklaşım belirlemiştir. Şok terapi olarak da ifade edilen birinci yaklaşım (Büyük Patlama) Uluslararası Para Fonu (I.M.F.) ve Dünya Bankası tarafından geliştirilmiş olup ekonominin yeniden yapılandırılması için uygulanacak bütün makro ve mikro politikaların hızlı bir biçimde uygulanması gerektiğini ifade etmektedir. İkinci aşama ise merkezi planlı ekonomiden planlı ekonomiye geçiş süreci ve bu süreç içerisinde yapılması gereken reformları aşamalı olarak gerçekleştirilmesi esasına dayanır (Çatalbaş-Yıldırım, 2008).

Şok terapi politikaları, ekonomik koşulları aşırı derecede tahrip olmuş ve reform sürecinin başında radikal ekonomik reformlara taraftar bir politik iklimin hakim olduğu ülkelerce benimsenmiştir. İstikrarlı politik ve makro ekonomik koşulları sağlayan ülkelerde ise aşamalı politikalar uygulanmıştır (Güler, 2012). Bu iki yaklaşımdan birincisini seçen çoğu ülkeler zamanla yaşanan olumsuzluklar nedeniyle birinci yaklaşımı terk ederek ikinci yaklaşımı tercih etmişlerdir (Çatalbaş-Yıldırım, 2008).

Ancak geçen sürede edinilen tecrübeler reformların başarısını etkileyen birçok faktörün olduğunu göstermiştir. Özellikle eski sistemin genel özellikleri, uygulanan reformların başarısı üzerinde hala önemli etkilere sahiptir. Bu özellikler; Komünist partinin siyasi tekeli, sanayi sektöründe bulunan tekelci yapı, ürünlerin kalitesiz oluşu ve tüketim mallarında kıtlık sorunu, bastırılmış enflasyon, mali dengesizlikler ve gevşek bütçe politikası, sanayi sektöründe işsizliği teşvik edici sosyal güvenlik tedbirleri olarak sayılabilir. (Acartürk ve Arslaner, 2004).

Reformların başarılı olması şüphesiz bu unsurların ne ölçüde giderildiği ile ilgilidir. Başka bir değişle, bu unsurların sırasıyla piyasa ekonomisi ortamını yaratacak boyuta çekilmesi gerekmektedir.

Bunun için; Siyasette bulunan tekelci yapının demokratik rekabetçi bir düzene, iktisadi tekelci yapının kırılarak rekabetçi firma düzenine, malların kıtlığının giderilmesinde serbest fiyat düzenine, mali dengesizlikleri azaltan mali disiplin ortamına, enflasyonla mücadele için sıkı para politikası uygulamasına, çalışmayı caydırıcı uygulamaların ortadan kaldırılarak çalışmayı teşvik eden bir yapıya kavuşturulmaları gerekmektedir.

Ancak bunlar yerine getirildiğinde ekonomide merkezi karar alma mekanizması yerine, özgürce ekonomik kararların alındığı liberal bir ekonomik sistemden söz etmek mümkün olabilir (Uçkaç, 2011)

2.2 Geçiş Sürecinde Orta Asya Cumhuriyetleri

Sovyet Sosyalist Cumhuriyetler Birliği'nin dağılmasından sonra ulusal bağımsızlıklarını ilan eden Kazakistan, Kırgızistan, Tacikistan, Türkmenistan, Özbekistan ve Azerbaycan aynı zamanda piyasa ekonomisine geçerek de ekonomik bağımsızlıklarını ilan etmişlerdir. Piyasa sisteminin temel unsuru olan fiyatların serbestçe oluştuğu ve kaynak dağılımını üstlendiği bu sisteme uyum süreci adı geçen ülkeler bazında çok sancılı geçmiştir. Bu ülkeler serbest piyasa ekonomisinin gerektirdiği kurumsal ve hukuki yapıyı oluşturmak için, dış kaynaklardan da yardım alarak, geçiş programları uygulamışlardır (Altınbaş vd., 2008).

Bölgenin ekonomik gelişimini etkileyen ve geçiş sürecinin sancılı olmasına neden olan pek çok faktör mevcuttur. Bu faktörler arasında ekonomik, politik ve coğrafi özellikler sayılabilir. Petrol, doğalgaz, altın ve diğer metalleri içeren önemli doğal kaynaklara sahip oluşu, geniş bir coğrafi alana kapsaması ve sosyalist ekonomik modelin izleri bu özellikler arasında sayılabilir (Çelik, 2007).

Geçiş sürecinin en çarpıcı özelliği ise sürecin başlamasından hemen birçok ülkede gözlemlenen ekonomik duraklamadır. Bu duraklama dönemi üretimde çok büyük miktarlara varan azalmalar ve işsizlikte büyük oranlı artışlarla kendini göstermiştir. Geçişi takiben ekonomik faaliyetlerde yaşanan büyük daralma, uzun yıllar kapitalist ve sosyalist sistemler üzerine araştırmalarda bulunmuş olan Macar asıllı iktisatçı Janos Kornai tarafından "Geçişsel Resesyon" (Transitional Recession) ya da "Geçiş Resesyonu" (Transition Recession) olarak adlandırılmış ve bu kavram, geçiş ekonomileri literatüründe de büyük ölçüde kabul görmüştür (Güler, 2012).

Tablo 1'den de görüldüğü üzere ekonomik durgunluğun en uzun yaşandığı Orta Asya Cumhuriyeti ülkesi 9 yıl ile Türkmenistan olmuştur. Türkmenistan'ı 8 yıl ile Tacikistan ve 7 yıl ile Kazakistan ve Azerbaycan takip etmiştir.

Geçişin yaşandığı ilk yıllarda büyüme oranları bütün Orta Asya Cumhuriyetleri'nde eksi olarak gerçekleşmiş ve bu eksi büyüme 1995 yılında da devam etmiştir. Ekonomik büyümenin eksi çıkmasının en büyük

nedenlerinden birisi şüphesiz yaşanan ekonomik durgunluktur. 2000 Yılında ise % 11,1 ile en fazla büyüme oranına sahip ülke Azerbaycan olurken onu % 9,8 ile Kazakistan ve % 8,3 ile Tacikistan takip etmiştir. 2008 yılında büyüme 2005 yılına oranla Kazakistan'da ve Azerbaycan'da azalma gözlemlenirken diğer ülkelerde ise 2005 yılına göre artış gözlemlemiştir. 2011 yılında en fazla büyüme oranına sahip ülke % 14,7 ile Türkmenistan olmuştur. Türkmenistan'ı sırasıyla % 8,3 ile Özbekistan ve % 7,5 ile Kazakistan takip etmektedir.

Ülkeler	Resesyon Başlangıç	Resesyon Bitiş	Resesyon Süresi
Kazakistan	1989	1995	7 Yıl
Kırgızistan	1991	1995	5 Yıl
Tacikistan	1989	1996	8 Yıl
Türkmenistan	1989	1997	9 Yıl
Özbekistan	1991	1995	5 Yıl
Azerbaycan	1989	1995	7 Yıl

Tablo 3: *Tüketici Fiyatları ile Yıllık Enflasyon (%).* ***Kaynak:*** *World Bank, 2013.*

Geçişin yaşandığı ilk yıllarda enflasyon oranlarının yüksek olduğu görülmektedir. Orta Asya Cumhuriyetlerinde enflasyon 2000 yılından sonra kontrol altına alınabilmiştir. 2011 yılında en yüksek enflasyonun yaşandığı Orta Asya ülkesi % 16,5 ile Kırgızistan olmuştur. Kırgızistan'ı sırasıyla % 12,8 ile Özbekistan ile % 12,4 ile Tacikistan takip etmiştir. Enflasyonun en düşük olduğu ülke % 5,8 ile Türkmenistan'dır.

Ülkeler	1991	1995	2000	2005	2008	2009	2010	2011
Kazakistan	24,9	20,4	18,3	57,1	133,4	115,3	148,0	188,0
Kırgızistan	2,6	1,7	1,4	2,5	5,1	4,7	4,8	6,2
Tacikistan	2,5	1,2	0,9	2,3	5,2	5,0	5,6	6,5

Özbekistan	65	586	558	547	1023	1182	1377	1546
Azerbaycan	1209	397	655	1578	5575	4950	5843	6912

Tablo 5: *Kişi Başı Gayri Safi Yurtiçi Hasıla (Dolar).* ***Kaynak:*** *World Bank, 2013.*

Tablo 4'de Gayri Safi Yurtiçi Hasıla incelendiğinde 1991 yılında 24,9 Milyar $ ile Kazakistan ilk sırada yer alırken onu sırasıyla 13,8 Milyar $ ile Özbekistan ve 8,8 Milyar $ ile Azerbaycan izlemektedir. 2011 yılı itibariyle ilk üç sıra içerisinde yine aynı ülkeler yer almıştır. Tablo 4'de dikkati çeken bir diğer nokta Kırgızistan

ve Tacikistan'ın diğer dört ülkeye nazaran Gayri Safi Yurtiçi Hasılasının oldukça düşük olmasıdır. Bunun nedeni bu iki ülkede doğalgaz ve petrol kaynaklarının çok az olmasıdır.

Tablo 5'de kişi başı gayri safi yurtiçi hasılalar verilmiştir. 1991 yılında en yüksek kişi başı geliri elde eden ülke 1512 Dolar ile Kazakistan'da elde edilmiştir. Kazakistan'ı sırasıyla 1209 Dolar ile Azerbaycan, 848 Dolar ile Türkmenistan ve 576 Dolar ile Kırgızistan takip etmektedir. 2008 yılında yaşanan ekonomik kriz şüphesiz birçok ülkenin ekonomik yapısını etkilemiştir. Nitekim Türkmenistan ve Özbekistan hariç Kazakistan, Kırgızistan, Tacikistan ve Azerbaycan'da 2008 yılında göre 2009 yılında kişi başı gelirde azalmalar meydana gelmiştir. 2011 yılında en fazla kişi başı gelir 11357 Dolar ile Kazakistan'da elde edilmiştir.

3 Orta Asya Cumhuriyetlerinde Enerji

Kazakistan, Türkmenistan, Özbekistan ve Azerbaycan enerji kaynakları bakımından hidrokarbon rezervleri (ham petrol, petrol ürünleri, doğalgaz, LNG ve kömür), Tacikistan ve Kırgızistan ise hidroelektrik potansiyeli açısından önemli ülkeler arasında yer almaktadır (Kuzu, 2012). Tablo 10'da Orta Asya ülkelerinin kanıtlanmış doğalgaz ve petrol rezervleri verilmiştir.

Tablo 6'da 2010 yılı itibariyle enerji üretiminde kaynakların payı incelendiğinde Kazakistan'da en fazla üretilen enerji kaynağı % 80,7 ile kömür, Kırgızistan'da % 91 ile Hidroelektrik, Tacikistan'da % 96,6 ile hidroelektrik, Türkmenistan'da % 100 ile doğalgaz, Özbekistan'da % 73,4 ile doğalgaz ve Azerbaycan'da ise % 81,4 ile doğalgaz olduğu görülmektedir.

Tablo 7 de Orta Asya Cumhuriyetlerinin enerji üretimleri verilmiştir. 2010 yılı itibariyle en fazla enerji üretimi 5,82 katrilyon btu ile Kazakistan olurken onu sırasıyla 2,87 katrilyon btu ile Azerbaycan ve 2,51 katrilyon btu ile Özbekistan takip etmektedir.

Tablo 8'e göre en fazla enerji tüketimi olan Orta Asya ülkesi 2,26 trilyon btu ile Kazakistan olurken onu sırasıyla 2,00 trilyon btu ile Özbekistan ve 0,92 trilyon btu ile Türkmenistan'ın takip ettiği görülmektedir.

Enerji Kaynakları	Kazakistan	Kırgızistan	Tacikistan	Türkmenistan	Özbekistan	Azerbaycan
Petrol	0,8	0,0	0,0	0,0	1,5	0,2
Kömür	80,7	2,3	0,0	0,0	4,1	0,0
Doğalgaz	8,9	6,7	3,4	100,0	73,4	81,4
Hidrolik Enerji	9,6	91,0	96,6	0,0	21,0	18,4
TOPLAM	100,0	100,0	100,0	100,0	100,0	100,0

Tablo 6: *Orta Asya Cumhuriyetlerinin Enerji Üretiminde Kaynakların Payı (2010 Yılı %).* **Kaynak:** *World Bank, 2013.*

Ülkeler	1995	2000	2005	2008	2009	2010
Kazakistan	2,33	3,38	4,86	5,55	5,57	5,82
Kırgızistan	0,13	0,15	0,15	0,12	0,11	0,11

4 Ampirik Analiz

4.1 Veri Seti ve Model

Bu çalışmada, altı Orta Asya Ülkesi'ne ait, 1990-2010 dönemi, yıllık GSYİH (*GDP-kişi başı GDP, 2000 sabit fiyatları*) ve enerji tüketimi (EUSE-kişi başı enerji tüketimi, kg petrol eşdeğeri) verileri kullanılmıştır. Veriler, dünya Bankası web sayfasından temin edilmiştir (World Bank, 2013) Seriler logaritmik olarak analize dahil edilmiştir.

Çalışmamızın ekonometrik modeli:

$$GDP_t = \alpha_0 + \alpha_1 \, EUSE_t + u_t \tag{1}$$

biçimindedir. Analiz için Stata 11 ve EViews 7.1 ekonometrik analiz programlarından yararlanılmış olup, model seçimi ve doğrulama testleri (değişen varyans ve otokorelasyon) için kodlar kullanılmıştır.

4.2 Yöntem

Farklı ülkelere ait verileri bir arada inceleyebilmek için, panel veri analizi yöntemi kullanılmıştır. Panel veri analizi (Baltagi, 2001; Gujarati, 1999):

$$Y_{it} = \alpha + X'_{it}\beta + u_{it} \tag{3}$$

modelinde yer alan hata teriminin (u_{it}) bireysel ve zaman etkileri yönünden bileşenlerine ayrıştırılmasına dayanmaktadır. Modelde *i* ülkeleri, *t* de zamanı göstermektedir. Hata terimi ayrıştırıldığında:

$$u_{it} = \mu_i + \lambda_t + \vartheta_{it} \tag{4}$$

elde edilir. Elde edilen bu son eşitliğe, hata bileşenleri modeli (error component model) denir. Burada μ_i; bireysel etkieri, λ_t ise zaman etkilerini gösterir. $\mu_i, \lambda_t \, ve \, \vartheta_{it} \sim IID(0, \sigma^2)$ (Independent Identically Distributed) yani hata terimlerinin ortalamasının sıfır, varyansının sabit olduğu ve normal dağıldığı (beyaz gürültü sürecine sahip olduğu) varsayılmaktadır.

Panel veri analizinde; önce serilerin durağanlıkları panel birim kök testleriyle incelenmektedir. Sonra bireysel ve zaman etkilerinin türü belirlenmelidir. Açıklayıcı değişkenler arasında, açıklanan değişkenle yakın ilişki içinde olduğu düşünülen ve dolayısıyla içselliğinden şüphelenilen değişken olduğunda, içsellik sınaması yapılmalıdır. Sonrasında model tahmin edilip, modelde değişen varyans ve ardışık içsel bağımlılık (otokorelasyon) sorunlarının varlığı test edilmelidir.

4.3 Seçilmiş Literatür

Enerji tüketimi ile büyüme arasındaki ilişkinin test edildiği çalışmalardan ilki Kraft ve Kraft (1978)'ın ABD için 1947-1974 dönemini kapsayan çalışmalarıdır. Makalede Sims Nedensellik testi uygulanmış ve büyümenin enerji tüketimini etkilediği sonucuna ulaşılmıştır.

Yu and Choi (1985) çalışmalarını Güney Kore ve Filipinler üzerine yapmışlardır. Çalışmalarında Granger nedensellik testi yapmışlar ve büyümenin enerji tüketimini etkilediği sonucuna ulaşmışlardır.

Glasure ve Lee (1987) Güney Kore ve Singapur için 1961-1990 dönemini kapsayan çalışmalarında Hata Düzeltme Modeli ve Ko-entegrasyon analizi yapmışlar ve analizde enerji tüketimi ile büyüme arasında çift yönlü bir ilişkinin olduğu sonucuna ulaşmışlardır.

Masih ve Masih (1998) çalışmalarında Güney Kore ve Singapur için Hata Düzeltme Modeli ve Ko-entegrasyon analizi yapmışlar ve analizde enerji tüketiminin büyümeyi etkilediği sonucuna ulaşmışlardır.

Hondroyiannis vd. (2002) çalışmalarını Yunanistan ekonomisi üzerine ve 1960-1996 dönemi için uygulamışlardır. Çalışmalarında Hata Düzeltme Modelini uygulamışlar ve analizde enerji tüketimi ile büyüme arasında çift yönlü bir ilişkinin olduğu sonucuna ulaşmışlardır.

Fatai vd. (2004) çalışmalarında Endonezya, Hindistan, Tayland, Filipinler ve Güney Koreyi Toda Yamamoto Nedensellik testini uygulamışlardır. Çalışma sonucunda Endonezya ve Hindistan'da enerji tüketiminin büyümeyi etkilediği, diğer ülkelerde ise enerji tüketimi ile büyüme arasında çift yönlü bir ilişkinin olduğu sonucuna ulaşmışlardır.

Zou ve Chau (2006) Çin ekonomisi için 1953-2002 dönemini kapsayan çalışmalarında koentegrasyon testi uygulamışlar, petrol tüketimi ile ekonomik büyümenin aynı yönde hareket ettiği sonucuna ulaşmışlardır.

Belke vd. (2010) 25 OECD ülkesi için 1981-2007 dönemini kapsayan çalışmalarında koentegrasyon testi uygulamışlar, uzun dönem enerji tüketimi ve reel GSMH arasında çift yönlü bir ilişkinin var olduğu sonucuna ulaşmışlardır.

Shaari vd. (2012) Malezya için 1980-2010 dönemini kapsayan çalışmalarında koentegrasyon testi uygulamışlar, uzun dönemde enerji tüketimi ile büyüme arasında bir ilişkinin olduğu sonucuna ulaşmışlardır. Granger Nedensellik testi sonuçlarına göre ise, büyümenin enerji tüketimi üzerinde bir etkisi olduğu sonucunu elde etmişlerdir.

4.4 Panel Birim Kök Analizi

Verinin hem zaman hem de yatay kesit boyutuna ilişkin bilgiyi dikkate alan panel birim kök sınamalarının, sadece zaman boyutuyla ilgili bilgiyi göz önüne alan zaman serisi birim kök sınamalarından, istatistiksel anlamda güçlü olduğu kabul edilmektedir (Im, Pesaran ve Shin,1997; Maddala ve Wu, 1999; Taylor ve Sarno, 1998; Levin, Lin ve Chu, 2002; Hadri, 2000; Pesaran, 2006; Beyaert ve Camacho, 2008). Çünkü yatay kesit boyutunun analize eklenmesiyle, verideki değişkenlik artmaktadır.

Panel birim kök sınamasında karşılaşılan ilk sorun, paneli oluşturan yatay kesitlerin birbirinden bağımsız olup olmadıklarıdır. Panel birim kök testleri bu noktada; birinci kuşak ve ikinci kuşak testler olmak üzere ikiye ayrılmaktadır. Birinci kuşak testler de homojen ve heterojen modeller olmak üzere ikiye ayrılmaktadır. Levin, Lin ve Chu (2002), Breitung (2000) ve Hadri (2000) homojen model varsayımına dayanırken; Im, Pesaran ve Shin (2003), Maddala ve Wu (1999), Choi (2001) heterojen model varsayımına dayanmaktadır. Başlıca ikinci kuşak birim kök testleri ise MADF (Taylor ve Sarno, 1998), SURADF (Breuer et all., 2002), Bai ve Ng (2004) ve CADF'dir (Pesaran, 2006).

Bu çalışmada, analize dâhil edilen ülkeler homojen olmadığı için, Im, Pesaran ve Shin (2003) (IPS) testi kullanılacaktır. Ayrıca test sonuçlarını karşılaştırmak amacıyla Levin, Lin ve Chu (2002) (LLC) testi de yapılacaktır. IPS testi:

$$\Delta Y_{it} = \propto_i Y_{it-1} + \sum_{j=1}^{P_j} \beta_{ij} \Delta Y_{it-j} + X'_{it}\delta + \varepsilon_{it} \tag{5}$$

modeline dayanmaktadır. Burada $\propto_i$; hata düzeltme terimi olup, $|\propto_i|<1$ olduğunda, serinin trend durağan, $|\propto_i| \geq 1$ olduğunda ise birim köke sahip, yani durağan olmadığı anlaşılmaktadır. IPS testi, $\propto_i$ 'lerin yatay kesit birimleri için farklılaşmasına, yani heterojen panel yapısına izin vermektedir. Testin hipotezleri:

H$_0$: $\propto_i = 1$ bütün yatay kesit birimleri için. Yani seri durağan değildir.

H$_1$: $\propto_i < 1$ en az bir yatay kesit birimi için. Yani seri durağandır.

Test sonucunda elde edilen olasılık değeri 0.05'ten küçük olduğunda, H$_0$ reddedilmekte ve serilerin durağan olduğuna karar verilmektedir. IPS panel birim kök testi sonuçları, Tablo 9'da yer almaktadır.

Değişken	LLC		IPS	
	Test İst.	Prob.	Test İst.	Prob.
GDP	-0.88	0.18	-0.12	0.44
EUSE	-7.22	0.00	-5.22	0.00
ΔGDP	-3.91	0.00	-2.56	0.00
$\Delta EUSE$	-2.66	0.00	-3.60	0.00

Tablo 9: *IPS ve LLC Panel Birim Kök Testi Sonuçları*

Not: Panel birim kök sınamasında Schwarz kriteri kullanılmış olup, gecikme uzunluğu 3 alınmıştır.

Tablo 9'daki sonuçlar incelendiğinde, GDP serisinin birinci farkta durağan hale geldiği, LUSE serisinin ise düzeyde durağan olduğu görülmektedir. Yani, incelenen dönemde, makroekonomik değişkenlerden GDP'nin durağan olmadığı ve bu değişkenler üzerine gelen şokların etkisinin, zaman içinde kaybolmadığı görülmüştür.

4.5 Breush- Pagan Lagrange Multiplier (LM) Testi

Analizin bu aşamasında, bireysel etkilerin ve zaman etkisinin türünün (rassal veya sabit olduğunun) belirlenmesi amacıyla, LM testi yapılmıştır. Seçilen ülkeler belirli bir ekonomik grubun üyesi olmadığı için, bireysel ve zaman etkilerinin rassal olabileceği varsayılmıştır. Etkilerin gerçekten rassal olup olmadıklarına, LM testi ile karar verilebilmektedir (Baltagi. 2001:15).

LM testi, LM$_1$ ve LM$_2$ şeklinde ikiye ayrılmaktadır. LM=LM$_1$+LM$_2$'dir. LM$_1$; bireysel etkilerin rassallığını, LM$_2$ de zaman etkilerinin rassallığını test etmektedir.

LM$_1$ testinde; H$_0$: $\sigma_\mu^2 = 0$ (Bireysel etkiler yoktur) hipotezi, LM$_1$ istatistiği ile test edilmektedir. LM$_1$ istatistiği, aşağıdaki formülle hesaplanmaktadır.

$$LM_1 = \frac{N.T}{2.(T-1)} \left[\frac{\sum_{i=1}^{N}(\sum_{t=1}^{T}\hat{u}_{it})^2}{\sum_{i=1}^{N}\sum_{t=1}^{T}\hat{u}_{it}^2} - 1 \right]^2 \tag{6}$$

Burada μ; (4) nolu denklemdeki bireysel etkileri, *N;* yatay kesit (ülke) sayısını, *T*; zaman boyutunu, $\hat{u}$; (3) nolu denklemdeki hata terimlerinin tahminini ifade etmektedir. Bu test sonucunda elde edilen olasılık değeri, 0.01'ten küçük olduğunda, H$_0$ reddedilmekte ve bireysel etkilerin rassal olduğuna karar verilmektedir.

LM$_2$ testinde; H$_0$: $\sigma_\lambda^2 = 0$ (Zaman etkileri yoktur) hipotezi, LM$_2$ istatistiği ile test edilmektedir. LM$_2$ istatistiği, aşağıdaki formülle hesaplanmaktadır.

$$LM_2 = \frac{N.T}{2.(N-1)} \left[\frac{\sum_{t=1}^{T} (\sum_{n=1}^{TN} \hat{u}_{it})^2}{\sum_{i=1}^{N} \sum_{t=1}^{T} \hat{u}_{it}^2} - 1 \right]^2 \tag{7}$$

Burada μ; (4) nolu denklemdeki bireysel etkileri, N; yatay kesit (ülke) sayısını, T; zaman boyutunu, $\hat{u}$; (3) nolu denklemdeki hata terimlerinin tahminini ifade etmektedir. Bu test sonucunda elde edilen olasılık değeri, 0.01'ten küçük olduğunda, H$_0$ reddedilir ve zaman etkilerinin rassal olduğuna karar verilmektedir.

LM=LM$_1$+LM$_2$ testinde;

H$_0$: $\sigma_\mu^2 = \sigma_\lambda^2 = 0$ (Bireysel etkiler ve zaman etkileri yoktur)

H$_1$: $\sigma_\mu^2 \neq 0 \ veya \ \sigma_\lambda^2 \neq 0$ ya da her ikisi de $\neq 0$ (Etkilerden en az biri ya da ikisi de rassaldır).

Elde edilen olasılık değeri, 0.01'ten küçük olduğunda, H$_0$ reddedilmekte ve etkilerin her ikisinin de rassal olduğuna karar verilmektedir. Bu durumda iki yönlü rassal etki modeli ile tahmin yapılmaktadır. Tablo 10 LM testlerinin sonuçları yer almaktadır.

Test	Olasılık Değeri	Karar
LM$_1$	0.00	Bireysel Etkiler Rassaldır.
LM$_2$	1.00	Zaman Etkileri Rassal Değildir.
LM	0.01	Bireysel Etkiler ve Zaman Etkileri Rassaldır.

Tablo 10: *LM Testleri*

Tablo 10'daki sonuçlara genel olarak bakıldığında, bireysel etkilerin rassal, zaman etkilerinin ise rassal olmadığı görülmektedir. Fakat LM testinde ise bireysel ve zaman etkilerinin rassal olduğu belirlenmiş, bu sonuçtan hareketle tahmin, iki yönlü rassal etki modeli ile yapılmıştır.

4.6 Hausman İçsellik Testi

Çalışmanın bu aşamasında, bireysel etkilerle açıklayıcı değişkenler arasında ilişki (içsellik problemi) olup olmadığı, Hausman yöntemi ile test edilmiştir. Testin hipotezleri:

H$_0$: $\text{Cov}(\mu_i, x_{it}) = 0$ İçsellik problemi yoktur.

H$_1$: $\text{Cov}(\mu_i, x_{it}) \neq 0$ İçsellik problemi vardır.

Burada μ_i; (4) nolu denklemdeki bireysel etkileri, X_{it} ise (3) denklemdeki açıklayıcı değişkenleri göstermektedir. Analiz sonucunda elde edilen χ^2 (Chi2=Kikare)'nin olasılık değeri 0.01'ten küçük olduğunda, H$_0$ reddedilmekte ve modelde içsellik probleminin olduğuna karar verilmektedir. İçsellik problemi olduğunda, sabit etkiler modeli kullanılır (Greene, 2003). H$_0$ kabul edildiğinde ise rassal etkiler modeli kullanılmaktadır. Bu tahmin; etkin, sapmasız ve tutarlıdır. Hausman testi, LM testinin bir alternatifi değildir. Ancak, LM testi ile verilen kararın bir sağlaması işlevini de görmektedir.

Hausman testi yapılmış ve Chi2=5.16 ve Chi2 olasılık değeri=0.023 bulunmuş olup, bu değer 0.01'ten büyük olduğu için, H0 hipotezi kabul edilmiş, modelde içsellik sorunun olmadığına karar verilmiştir. Bu durumda, analizin rassal etkiler modeliyle yapılması gerekmektedir ve bu sonuç da LM testi sonuçlarını desteklemektedir.

4.7 İki Yönlü Rassal Etkiler Model Tahmini

Panel veri analizi, iki yönlü rassal etki modeli ile tahmin edilmiş ve elde edilen sonuçlar Tablo 11'de sunulmuştur.

Değişken	Katsayı	Std. Hata	t-İstatistiği	Olasılık Değeri
GDP(-1)	0.5018	0.0771	6.5036	0.000
EUSE	0.2249	0.0716	3.1401	0.002
Sabit Terim	0.0067	0.0042	1.5911	0.114
Tanısal Testler				
R-kare:	0.40		Bağımlı değişken ortalaması	0.003
Ağırlılandırılmış R-kare:	0.38		Bağımlı değişken hatası	0.038
DW	1.96		Denklemin Standart Hatası	0.030
F$_{ist}$	37.03(0.00)		Hata Kareleri Toplamı	0.100
Lagrange Multiplier (LM) Değişen Varyans Testi: prob:0.470				
Karar: (Ho ret), değişen varyans sorunu yoktur.				
Otokorelasyon Testi: prob:0.217				
Karar: (Ho ret), otokorelasyon sorunu yoktur.				

Tablo 11: *Tahmin Sonuçları*

Rassal etki modellerinde, ağırlıklandırılmış istatistik değerleri kullanılmaktadır (Baltagi 2001: 21). Tablo 11'deki ağırlıklandırılmış test istatistiklerine bakıldığında, modelin istatistikî olarak güvenilir olduğu görülmektedir. Modelde otokorelasyon sorunu tespit edilmiş, bağımlı değişkenin gecikmeli değeri modele ilave edilerek bu sorun giderilmiştir. Modelde değişen varyans ve otokorelasyon sorunu olmadığı görüldüğü için, tahmin sonuçları güvenilirdir ve yorumlanabilir.

5 Sonuç

Sovyetler Birliğinin dağılması sonucu bağımsızlıklarını kazanan Orta Asya Ülkeleri hem ekonomi hem de iletişim bakımından daha açık hale gelmişlerdir. Orta Asya ülkelerinin zengin enerji kaynakları rezervlerine sahip olması ve gerçekleştirdiği üretimin tüketimden daha fazla olması bölge ekonomisi ve gelişimi üzerinde büyük etki yaratmaktadır. Özellikle bağımsızlıklarını kazanmalarından sonra Orta Asya Ülkelerinin hızlı ekonomik büyüme sağlayabilmeleri için sahip oldukları enerji kaynakları rezervleri büyük bir rol oynamaktadır.

Orta Asya Ülkelerinde enerji tüketiminin ekonomik büyüme üzerindeki etkisi beklentilerimize paralel olarak pozitiftir ve istatistikî olarak anlamlıdır. Enerji tüketimindeki %1'lik artış ekonomik büyümeyi %0.22 oranında arttırmaktadır. Milli gelir beklentilerinin gelir üzerindeki etkisi arttırıcı yönde ve anlamlı düzeydedir.

Öte yandan Orta Asya ülkelerinin enerji üretimi ve dağıtımında ortak strateji izlemeleri, ortak çıkarların sağlanarak sosyal refahın arttırılması ve dünya enerji piyasasında söz sahibi olmaları sosyal, siyasal ve ekonomik açıdan son derece yararlı sonuçlar doğuracaktır. Ayrıca enerji dışında diğer sektörlerin ekonomik kalkınmada itici rol oynayabilmelerine yönelik çalışmaların biran önce yapılması ve desteklenmesi gerekmektedir.

Elektrikli ve Elektronik Atıkların Geri Dönüşümünde Tüketici Davranışları: İstanbul Örneği

Consumer Behavior in the Recycling of Electrical and Electronic Waste: The Case of Istanbul

Ph.D. Candidate Aslı Okay Toprak (Kırklareli University, Turkey)

Asst. Prof. Dr. Elif Haykır Hobikoğlu (Istanbul University, Turkey)

Ph.D. Candidate Taha Eğri (Istanbul University, Turkey)

Prof. Dr. Zekai Özdemir (Istanbul University, Turkey)

Abstract

An inevitable consequence of the technological advances has increased electrical and electronic equipment consumption at a dizzying manner in the world. Especially advances in personal computer and telephone technology within the impact of the rapid changes in this sector reached enormous figures launched an e-waste production. Therefore, e-waste has become one of the major environmental problems of modern world. Besides the environmental problems they cause e-waste, along with the precious metals they contain they have an economic potential. No doubt the realization of e-waste recycling with the right methods point out both economic and environmental social benefit. However, at this point, both the manufacturers' and end-users' sensitivity loom large. This study was conducted on the basis of end users' awareness of e-waste with a survey conducted on the basis Istanbul.

1 Giriş

Elektrikli ve elektronik araçların üretimi günümüzün en hızla büyüyen endüstrilerden biri olduğundan, yaşanan süreç, e-atık oranlarındaki artışı da beraberinde getirmiştir (Babu, Parande, & Basha, 2007). Elektronik endüstrisi, modern yaşam tarzımızı sürdürebilmemiz için zaruri hale gelen ürünleri üretirken henüz sürdürülebilirliği tam olarak tespit edilmemiş bir üretim alanını da temsil etmektedir (Hester & Harrison, 2009). Nitekim elektrikli ve elektronik araçlar, sürekli gelişme süreci içinde olmaları ve her yeni nesil üründe maliyetlerin düşmesi ile karakterize edilmektedirler (Hester & Harrison, 2009). Bu nitelikleri ile gün geçtikçe artan bir kitlesel tüketim eğiliminin merkezi haline gelen elektronik araçların kullanım sürelerinin kısalması, e-atıkları sanayileşmiş dünyanın en hızlı büyüyen atık kollarından biri haline getirmiştir (Puckett, ve diğerleri, 2002). Özellikle cep telefonları gibi moda trendi yüksek ürünlerinin tasarımsal ömürlerinin kullanım ömürlerine göre çok kısa olması ve eskisi ile yenisi arasındaki değişim süresinin kısalığı bu yüksek tüketim hacmini tetiklemektedir (Hester & Harrison, 2009). Ancak bilgi teknolojilerinin göz kamaştırıcı yükselişinin derinliklerinde karanlık bir taraf da bulunmaktadır (Puckett, ve diğerleri, 2002). Yükselen e-atık dağı istenilen düzeyde geri dönüştürülemediğinden dünya genelinde hem önemli bir kaynak israfına yol açmış hem de dikkat çekici bir çevre sorununa dönüşmüş durumdadır. Bu bağlamda özellikle gelişmiş ülkelerde e-atık geri dönüşümünün kontrollü bir hale gelmesi için çalışmalar yürütülmektedir. Avrupa komisyonu "Waste Electrical and Electronic Equipment(WEEE) (Atık Elektrik Elektronik Cihazları)" yönergesi ile e-atıkların geri dönüşümünü zorunlu hale getirirken, "Restriction of the Use of certain Hazardous Substances (RoHS) (Bazı zararlı maddelerin kullanımının sınırlandırılması) yönergesi ile de elektrikli ve elektronik cihazların üretim sürecinde belirli maddelerin kullanımını kısıtlamıştır. Türkiye'de de bu yönergelere uyumlu yasal düzenlemeler gerçekleştirilmektedir (Yazıcı & Deveci, 2009). Ancak yönergelerin fiili uygulamalarda da yerini bulması için belirli değişkenlerin etkisinin olması gerekmektedir. Widmer e-atık geri dönüşüm sistemlerini karşılaştırırken yapısal anlamda, merkezi ve yerel yönetimlerin işbirliği ve etkinliği, e-atık geri dönüşümü için gerekli alt yapı ve teknik yeterlilik, sanayileşme düzeyi ve sosyal ve kültürel yapıda geri dönüşüm kültürünün yaygınlığı ve çevre bilincini ele almaktadır (Widmer, Oswald-Krapf, Sinha-Khetriwal, Schellmann, & Böni, 2005). Türkiye açısından bu değerlendirme ele alındığında tüketicilerin e-atık geri dönüşümü ile ilgili bilgi ve bilinç düzeylerinin sınırlı olmadı ve e-atık geri dönüşümünü gerçekleştirebilecek tesislerin sınırlılığı önemle üzerinde durulması gereken konulardır. Türkiye'deki son kullanıcıların e-atıkların geri dönüşüm sürecinin önemi hakkındaki bilgilendirilmesi şu aşamada mevcut potansiyelin değerlendirilmesinde önemli bir fark yaratacaktır.

2 E-Atık Tanımı ve Türleri

E-Atıklar, buzdolabı ve klima gibi büyük ev aletlerinden, kişisel bilgisayar ve telefonlara kadar uzanan geniş bir elektronik araç çeşitliliğine sahiptir (Puckett, ve diğerleri, 2002). Bu nedenle, WEEE Direktifi, hane halkının kullandığı tüm elektrikli ve elektronik cihazlarından büyük çaptaki belediye atıklarına kadar geniş bir atık çeşitliliğine sahiptir. Direktifte elektrikli ve elektronik cihazlar 10 ana kategoride sınıflandırılmaktadır (Press, 2003).

- Büyük Ev Eşyaları (Buzdolabı, çamaşır makinesi, bulaşık makinesi vb.)
- Küçük Ev Aletleri (Elektrik Süpürgesi, Tost makinesi vb.)
- Bilişim ve Telekomünikasyon Ekipmanları (Bilgisayarlar, Telefonlar vb.)
- Tüketici Ekipmanları (Video Kameralar, Müzik Enstrümanları vb.)
- Aydınlatma Ekipmanları
- Elektrikli ve Elektronik Aletler (Büyük Sanayi Aletleri hariç olmak üzere matkaplar, testereler vb.)
- Eğlence ve Spor Aletleri ile Oyuncaklar
- Tıbbi Cihazlar
- İzleme ve Kontrol Aletleri (Termostatlar, Isı Ayarlayıcılar vb.)
- Otomatlar

E-atıklar, hem kimyasal hem de fiziksel olarak belediye ya da sanayi atıklarından farklı niteliklere sahiptirler. E-atıklar, çeşitli değerli madenlerin yanında insan sağlığını tehdit eden bileşenleri de içerdiklerinden geri dönüştürmeleri sürecinde çok daha ileri düzeyde ayrıştırma teknikleri kullanılması gerekmektedir (Robinson, 2009).

3   E-Atıkların Çevresel Etkileri

E-Atıkların geri kazanımı sadece bir insan sağlığı ve çevre problemi değil aynı zamanda içeriklerinde barındırdıkları değerli madenler açısından da kaynak israfının önlenmesinde ve ülke kaynaklarının verimli kullanılmasında önemli bir etkendir. Örneğin ortalama 100 gram ağırlığındaki bir cep telefonu ortalama 25 gram değerli maden içermektedir ve bu oranın büyük bir kısmı bakırdan oluşmaktadır dolayısıyla küçük boyutuna rağmen sadece Mobil telefonlarının içerdiği değerli madenler toplamda önemli bir ekonomik kaynağa işaret etmektedir (Press, 2003).

Dünya genelindeki e-atık oluşumuna en fazla katkısı olan ürünlerin ağırlıklı olarak bilgisayarlar ve mobil telefonla olduğu yönünde ortak bir görüş birliği mevcuttur. Herhangi bir ürünün e-atık oluşumuna katkısını hesaplanırken[E=kg/yıl] ele alınan değişkenler; ürünün ağırlığı,[M(kg)], kullanımdaki ürün sayısı[N] ve ortalama kullanım ömrü[L=yıl] şeklinde sıralanmaktadır. E=MN/L şeklinde formülize edilen denklemden yola çıkarak ortalama kullanım ömrü 3 yıl olan bilgisayarın e-atık oluşumuna katkısı ile ortalama kullanım ömrü 10 ile 12 yıl arasında değişen buzdolabının e-atık oluşumuna katkısının farklı düzeyde olduğunu söyleyebiliriz (Robinson, 2009).

Dünya genelinde senede meydana gelen 20-25 milyon ton elektronik atıkların en fazla oluştuğu yerler; teknolojik ürün kullanımının ve kişi başına düşen gelirin yüksekliğinin bir sonucu olarak Avrupa ülkeleri ve ABD'dir (Robinson, 2009). Her yıl ortalama 5-7 milyon ton elektronik atığın oluştuğu ABD'de, oluşan bu atıkların %10'u geri kazanım işlemine tabi tutulmakta ve %30'u depolanmaktadır. Avrupa'daki elektronik atık oluşumunun ise her yıl % 3-5 oranında arttığı gözlenmektedir (W.J.Rankin, 2011). Dünyanın önemli e-atık üretim kaynaklarından biri olan Avrupa ülkelerinde her yıl oluşan 8,7 milyon ton e-atığın 6,6 milyon tonu geri dönüşüme tabi tutulmaktadır. Geri dönüşüm işlemine uğrayan bu e-atıkların %10 bilgisayar ekipmanı, %14'ü ise televizyondur (Çiftlik, ve diğerleri, 2009).

E-atık oluşumundaki bu hızlı artış ve geri dönüşüm oranlarındaki düşük düzey, son yıllarda gelişmeye başlayan çevresel duyarlılık ve sorumluluk anlayışının etkisiyle e-atık önemli bir gündem konusu haline gelmiştir (Hester & Harrison, 2009). Avrupa Birliğinde Elektrikli ve Elektronik cihazların üretiminde tehlikeli maddelerin kullanımını kısıtlayan (2002/95/EC) ve bu tür cihazların toplanması ve geri dönüşümünü teşvik eden (2002/96/EC) mevzuatı 2003 şubat ayından beri yürürlüktedir. Mevzuat tüketiciler için ücretsiz olarak e-atık geri toplama programlarının oluşturmasına imkân sağlamaktadır. Bu programların amacı elektrikli ve elektronik cihazların geri dönüşümünü yaygınlaştırmak ve e-atık geri dönüşüm faaliyetlerine daha geniş toplumsal katılımı sağlamaktadır. Ayrıca WEEE mevzuatı, civa, artı altı değerlikli krom, polibromürlü bifeniller ve polibromine difenil eterler gibi ağır metallerin yerini daha güvenli alternatiflerin almasını da amaçlamaktadır (European Commision, 2013).

Gelişmiş ülkelerdeki mevzuat ve yönetmelikler e-atık geri dönüşümünü kontrol alma çabasının somut bir göstergesidir ancak dünya genelinde artan e-atıkların geri dönüşümünde bazı ülkelerde çocuk işçiler çalıştırılmakta ve bu çocuk işçiler, elektronik cihazların demonte işlemlerinde ve e-atıklardaki değerli madenlerin ayrıştırılmasında sırasında zehirli kimyasallara maruz kalmaktadırlar (Miller & Spooman, 2012). Birleşmiş Milletlerin verilerine göre e-atıkların %70'nin yolculuğu Çin'de sonlanmaktadır (Miller & Spooman, 2012). Çin'in küçük bir liman kenti olan Guiyu'da e-atık geri dönüşümünde çalışanlar genellikle maske ve eldiven kullanmadan havalandırma olmayan odalarda zehirli kimyasallara maruz kalarak çalışmaktadırlar (Miller & Spooman, 2012). Televizyon tüplerinin çekiçlerle parçalanarak kurşun tozunun açığa çıkarılması ve havaya karışması, bilgisayar kablolarının yakılarak bakır açığa çıkarılması, bilgisayara ana kartalarının değerli maden

elde etmek için asit kullanılarak eritilmesi insan ve çevre sağlığı için çok büyük bir tehdit meydana getirmektedir (Miller & Spooman, 2012). Guiyu'daki ilkel e-atık geri dönüşüm metotları;

Dioksin ve ağır metal emisyonları,

Mavi, sarı ve kırmızı tonerlerin yol açtığı zehirlilik,

Hava, su ve toprağa karışan hidrokarbon külleri,

Ağır metal ve hidrokarbon emisyonları,

Nehirlere karışan ağır metallerin ve hidrokarbonların neden olduğu balık türlerinin ve bitki örtüsünün yok olması,

Yer altı sularında kurşun kirliliği gibi sorunlarla karşı karşıya kalmalarına neden olmuştur (Puckett, ve diğerleri, 2002).

AB dışına yasadışı e-atık ticareti ve mevcut uygulamadaki aksaklıklar neticesinde Avrupa Komisyonu giderek artan e-atık geri dönüşüm problemini çözmek adına 2008 yılında direktifi revize etmiştir. Bu yeni düzenleme elektrikli ve elektronik cihaz üretimi yüksek olan üye ülkelerin sorumlu oldukları geri dönüşüm oranlarının yükseltilmesi aracılığı ile her ülkenin ürettiği e-atık oranında geri dönüşüm yapmasını sağlamak şeklinde değerlendirilebilir (Puckett, ve diğerleri, 2002). Daha sonraki süreçte 2012 yılı ocak ve şubat aylarında gerçekleştirilen Avrupa Parlamentosu toplantılarında "Elektrikli ve Elektronik Ekipman Atıklarına Dair Direktif" ve "Atık Yönetimi Direktifinin Uygulanması Bağlamında Alınan AP Kararı" ile üye ülkelerde bazı yeni hedefler belirlenmiştir. Bu çerçevede hedefler aşağıdaki gibi sıralanmaktadır (AB İMMİB, 2013).

Üye ülkelerde 2016 yılında, önceki 3 yıl içerisinde kilo bazında oluşacak e-atıkların %45'nin ve 2019 yılında ise %65'nin toplanması hedeflenmektedir.

10 ülke için 2016 yılındaki hedef %40 oranında geri dönüşüm iken, 2021 yılı için nihai hedef %80 olarak hedeflenmiştir.

Üye ülkelerdeki üreticiler diğer ülkelere elektrikli ve elektronik ürün sattıklarında ilgili üye ülkede direktiflerden sorumlu tutacakları yetkili temsilciyi yazılı olarak atamak zorundadırlar.

Avrupa Atık Yönetim Ajansının kurulum çalışmalarına başlanmıştır.

4   E-Atıkların Ekonomik Etkileri

E-Atıkların geri kazanımı genel olarak birincil kaynakların tüketim hızını azaltması, katı atık miktarının azaltılması, metal dışı malzemenin kazanılması, demir, demir dışı ve değerli madenlerin kazanılması gibi önemli avantajların yaratılmasında faydalı olmaktadır. İkincil kaynak elde edişi olarak ifade edilen e-atık geri dönüşüm işleminden metal elde edilmesi sırasında harcana enerji cevherden metal elde edilmesinde kullanılan enerji miktarından düşük olması nedeniyle önemli bir enerji tasarrufu sağlamaktadır. Dolayısıyla e-atıklardan metal geri kazanımı hem enerji tasarrufu hem de ulusal kaynakların etkin kullanımına katkıda bulunmaktadır (Yazıcı & Deveci, 2009). Ayrıca çeşitli metotların uygulanması amacıyla ileri tekniklerle donatılmış yüksek teknolojik alt yapıya sahip tesisler, nitelikli işgücü için yaratılmış önemli bir istihdam kaynağı olacaktır. Bu anlamda bu tür tesislerin çoğalması hem enerji tasarrufu, hem kaynak verimliliği hem de istihdam yaratma niteliği ile ekonomide genişletici bir etki yaratacaktır. Tablo 2'de birincil kaynaklara kıyasla geri kazanımın sağladığı enerji tasarrufu oranları verilmektedir.

Metal/Malzeme	Enerji Tasarrufu
Alüminyum	95
Bakır	85
Demir ve Çelik	74
Kurşun	65
Çinko	60
Kağıt	64
Plastik	>80

Tablo 1. *Birincil Kaynaklara Kıyasla Geri Kazanımın Sağladığı Enerji Tasarrufu* **Kaynak:** *Ersin Yener Yazıcı, Hacı Deveci, "E-Atıklardan Metallerin Geri Kazanımı", Madencilik, Cilt.48, Sayı: 3, 2009, s.5.*

E-Atıkların geri kazanımında fiziksel yöntemler, Hidrometalurjik yöntemler, Biyometalurjik Yöntemler ve Pirometalurjik yöntemler kullanılmaktadır. E-Atıkların geri kazanımında kullanılacak metot seçiminde yapısal anlamda karmaşık olan elektrikli ve elektronik aletlerin fiziksel ve kimyasal yapısının analizi yapılacak işlemin verimliliği açısından vazgeçilemez bir koşuldur. Tablo 3'de kullanılan metotların avantaj ve dezavantajları verilmektedir (Yazıcı & Deveci, 2009).

	Avantajlar	Dezavantajlar
Fiziksel Yöntemler	Tüm e-atıklarda kullanılabilecek basit prosedürler mevcut.	Değerli metal kaybı yüksek.
Hidrometalurjik Yöntemler	Metal kazanma verimi yüksek, esnek, küçük ölçekte uygulanabilir ve Zaralı gaz çıkışı yok.	Ön hazırlık işlemi gerektiriyor. Atık çözeltinin arıtılması gerekiyor.
Biyometalurjik Yöntemler	Çevresel etkisi düşük. Küçük ölçekli firmaların uygulayabileceği nitelikte.	Liç süresi uzun
Pirometalurjik Yöntemler	Çoğu e-atık türü için uygun	Pahalı ve enerji yoğun bir işlem.

Tablo 2. *E-Atıkların Geri Kazanımında Kullanılabilecek Metotların Karşılaştırılması (Yazıcı & Deveci, 2009)*

E-Atık geri dönüşüm metot seçiminde toplama ve transfer, parçalama ve sınıflandırma, geri kazanım süreci, yakma işlemi ve arazi giderleri ele alınan ve değerlendirilen maliyet kalemleridir. Ancak birçok bilim adamına göre en kötü geri dönüşüm faaliyetinin en verimli madencilik çalışmasında daha iyi sonuç verdiğini iddia etmektedir. Dünya genelinde bakır, altın, alüminyum, plastik ve çelik gibi maddelere olan ihtiyaç her geçen gün arttığından, bu gereksinimi sadece madencilik faaliyetlerinden sağlamak hem finansal açıdan hem de çevre açısından mümkün görünmemektedir (Çiftlik, ve diğerleri, 2009).

5   Türkiye'de E-Atık Geri Dönüşüm Uygulamaları ve Yasal Düzenlemeler

Türkiye'de elektrikli ve elektronik atıklara yönelik ilk çalışma 2004 yılında Marta Projesi adıyla Hollanda hükümeti ile gerçekleştirilmii ardından da WEEE ve RoHS Direktiflerinin uygulanmasına dair UK Department for Business Enterprise and Regulary Reform(BERR) kurumu ile bilgi paylaşımında bulunulmuştur. Şu an halen AEEE ve RoHS Direktifleri ile ilgili çalışmalar devam etmektedir (E-Atık, 2012). 22 Mayıs 2012 tarihli Resmi Gazete 'de yayınlanan ve Mayıs 2013 itibariyle işlevsel olarak yürürlüğe giren Atık Elektrikli ve Elektronik Atıkların Kontrolü Yönetmeliği(AEEE), Türkiye'de e-atıkların geri dönüşümü için insan ve çevre sağlığını gözeten yeni bir sürecin başlangıcını ifade etmektedir. 2002/96/EC-WEEE Direktifine paralel olarak hazırlanan yönetmelik; belediyeleri, Elektrikli ve Elektronik araç üreticilerine, dağıtıcılarına ve tüketicilerine çeşitli sorumluluklar yüklemektedir. Bu süreçte kurulacak olan Bakanlığa rapor sunmakla görevlendirilmiş olan Koordinasyon Merkezlerinin toplanan, geri dönüştürülen ve ihraç edilen e-atık miktarı ve oranı hakkındaki faaliyetleri T.C. Çevre ve Şehircilik Bakanlığı tarafından netleştirildiğinde atık geri dönüşüm sektörünün önemli bir gelişme göstermesi beklenmektedir. T.C. Çevre ve Şehircilik Bakanlığı verilerine göre; Türkiye'de yılda 539 bin ton e-atık oluşmakta ve söz konusu atıkların sadece 20 bin tonu doğru ve sağlıklı yöntemlerle geri dönüştürülmektedir. Bakanlığın açıklamalarında ayrıca en fazla çöpe atılan ürünlerin televizyon ve CRT monitörler olması ve en çok e-atık üreten şehirler sıralamasında İstanbul, Kocaeli ve Ankara yer alması dikkat çekici noktalardır. Türkiye'de ayrıca 2011 yılı sonu itibariyle lisanslı E-atık işleme tesis sayısı 21 olarak açıklanmıştır (Çevre Koruma ve Ambalaj Atıkları Değerlendirme Vakfı, 2013). Türkiye' de e-atıkların toplanması ve çevre ve insan sağlığını dikkate alarak geri dönüştürülmesiyle ilgili son yıllarda önemli adımlar atılmaktadır. Ancak bu sürecin işlemesi ve sürdürebilirliği e-atık üretici ve tüketicilerin çevre bilinci ile doğrudan ilişkilidir ve ancak bu bilinç geliştikçe verimli sonuçlara ulaşmak mümkün olabilecektir.

6   Araştırmanın Amacı ve Metodolojisi

6.1 Araştırmanın Amacı

Bu araştırmanın amacı; İstanbul'da artan e-atık kapasitesinin ekonomiye geri kazanımı ile ilgili bölge potansiyelini ve bölge halkının bu konudaki tutum, davranış, bilgi düzeyini tespit etmektir. Araştırma sonuçları, e-atık geri kazanımı ile ilgili verimli ve uygulanabilir faaliyetlerin gerçekleştirilmesinde, yatırım kararları alınmasında ve bu amaca yönelik politikaların oluşturulmasında yönlendirici olacaktır.

6.2 Araştırmanın Yöntemi

Bu araştırmada, kantitatif araştırma yöntemi ve bu yöntemin yüz yüze anket tekniği uygulanmıştır. Görüşülen bireylerin %78.3' ü ile sokakta, %16.7'si ile evde, %11.0'i ile işyerinde yapılmıştır.

6.3 Araştırmanın Örneklemi

Basit tesadüfi örneklem türüne göre İstanbul genelinde toplam 1092 kişi ile görüşülmüştür.

7 Araştırma Bulgularının Değerlendirilmesi

7.2 Hanehalkının Demografik Özellikleri

Araştırma katılanların %26.4 'sı 25-34, %21,5'i 34-44, %17.7'si 18-24, %17,5'i 55 yaş üstü ve %16.9'u 45-54 yaş aralığındadır. Katılımcıların %50,2' si kadın, %49,8'si erkektir. Katılımcıların %4'ü okur-yazar değil, %4.8'i okur yazar, %29.2'si ilkokul mezunu, %20.3'ü ortaokul ya da ilköğretim mezunu, %27.5'i lise mezunu ve %14.2'si üniversite mezunudur. Katılımcıları iş durumu ise sırasıyla %35.2 ev hanımı, %12.5 eğitimli işçi, %12.1 emekli, %10.1 eğitimsiz işçi, %9 esnaf, %8.2 öğrenci, %4.8 geliri düşük serbest meslek, %3.6 işsiz, %2.8 memur ve %1.7 ise geliri yüksek meslek grubuna mensuptur. Katılımcıların gelir grubu dağılımı %19.7 alt gelir, %2.6 üst gelir ve %77.7 orta gelir grubu şeklindedir.

7.3 Hanehalkının E-Atık Geri Dönüşümü İle İlgili Bilinç Düzeyi

İstanbul genelinde yapılan görüşmelerde; bireylerden elektronik atıklar ve çevre bilinci ile ilgili toplam 14 ifadeyi 5 puan üzerinden değerlendirmeleri istenmiştir.

		Hiç Katılmıyorum	Katılmıyorum	Kısmen Katılıyorum	Katılıyorum	Tamamen Katılıyorum	Toplam	Ortalama
Yaşadığım şehirde merkezi bir geri dönüşüm tesisi kurulursa atıkları oraya bırakırım	Frekans	5	76	226	491	291	1089	3,91

***Tablo-3** İfadelere ne derece katıldığınızı «1.Hiç katılmıyorum- 5.Kesinlikle katılıyorum» belirtir misiniz?*

Anket katılımcılarının elektronik ve çevre bilincini ölçmek amacıyla puanlamalarının istedikleri ifadelerin ilki "*Yaşadığım şehirde merkezi bir geri dönüşüm tesisi kurulursa atıkları oraya bırakırım*" şeklindedir. İfadeye katılıyorum diyenler **%45,1** ile en yüksek orana sahiptir. Tüm katılımcılar arasında bu ifadenin puan ortalaması **3,91** düzeyindedir ve genel olarak katılımcılar ifadeyi "katılıyorum" şeklinde değerlendirmiştir. Dolayısıyla bu ifadeye yaklaşımları ile katılımcıların çevreci ve bilinçli bir eğilim içinde olduklarını söyleyebiliriz.

"*Yaşadığım mahallede geri dönüşüm konteynırları olursa atıkları oralara bırakabilirim*" ifadesine katılıyorum diyenlerin oranı **%43,9**'dur. Tüm katılımcılar arasında bu ifadenin puan ortalaması **3,83** düzeyindedir ve genel olarak katılımcılar ifadeyi "katılıyorum" şeklinde değerlendirmiştir. Dolayısıyla bu ifadeye yaklaşımları ile katılımcıların çevreci ve bilinçli bir eğilim içinde olduklarını söyleyebiliriz.

"E-*atıklar zararlı olduğu için normal çöpe atılmamalıdır*" ifadesine katılımcılar **%47,8** düzeyinde katılmışlardır. Tüm katılımcılar arasında bu ifadenin puan ortalaması **3,61** düzeyindedir ve genel olarak katılımcılar ifadeyi "katılıyorum" şeklinde değerlendirmiştir. Dolayısıyla bu ifadeye yaklaşımları ile katılımcıların çevreci ve bilinçli bir eğilim içinde olduklarını söyleyebiliriz.

"*E-atıklar içerisinde değerli madenler bulunmaktadır*" ifadesine katılıyorum diyenlerin oranı **%46**'dır. Tüm katılımcılar arasında bu ifadenin puan ortalaması **3,42** düzeyindedir ve genel olarak katılımcılar ifadeyi "katılıyorum" şeklinde değerlendirmiştir. Dolayısıyla bu ifadeye yaklaşımları ile katılımcıların çevreci ve bilinçli bir eğilim içinde olduklarını söyleyebiliriz.

"*E-atıklar elle parçalanarak ayrıştırılabilirler*" ifadesinde katılımcılar **%31,2**'si "*katılmıyorum*" görüşünü tercih ederken, katılımcıların **%30,3**'ü "*kısmen katılıyorum*" görüşünü tercih etmişlerdir. Tüm katılımcılar arasında bu ifadenin puan ortalaması **2,70** düzeyindedir ve genel olarak katılımcılar ifadeye "kısmen

katılıyorum" şeklinde değerlendirmiştir. Dolayısıyla bu ifadeye yaklaşımları ile Katılımcıların bu ifadeye yaklaşımlarının çevreci ve bilinçli bir eğilim içinde olmadıklarını söyleyebiliriz.

"*Geri dönüşüm çalışmaları için ek vergi veririm*" ifadesine "*katılmıyorum*" diyenlerin oranı **%46,1**'dir. Tüm katılımcılar arasında bu ifadenin puan ortalaması **2,42** düzeyindedir ve Katılımcıların bu ifadeye yaklaşımlarının çevreci ve bilinçli bir eğilim içinde olmadıklarını söyleyebiliriz.

"*Çevreyi koruma ve geliştirme için fazladan vergi öderim*" ifadesinde en fazla tercih edilen **%49** oranıyla "*katılmıyorum*" seçeneği olmuştur. Tüm katılımcılar arasında bu ifadenin puan ortalaması **2,40** düzeyindedir. Katılımcıların bu ifadeye yaklaşımlarının çevreci ve bilinçli bir eğilim içinde olmadıklarını söyleyebiliriz.

		Hiç Katılmıyorum	Katılmıyorum	Kısmen Katılıyorum	Katılıyorum	Tamamen Katılıyorum	Toplam	Ortalama
Geri dönüşüm için kullanılacak atıkların evimden alınmasını beklerim	Frekans	4	36	229	532	289	1090	3,98
	Yüzde	0,4	3,3	21,0	48,8	26,5	100

*Bu soruya yanıt vermeyenler tabloya dahil edilmemiştir.								

***Tablo.4** İfadelere ne derece katıldığınızı «1.Hiç katılmıyorum- 5.Kesinlikle katılıyorum» belirtir misiniz?*

Ankete katılanların "*Geri dönüşüm için kullanılacak atıkların evimden alınmasını beklerim*" ifadesine katılıyorum diyenlerin oranı **%48,8**, tamamen katılıyorum diyenlerin ise **%26,5**'dur. Cevapların puan ortalaması **3,98** olduğundan genel görüşün "*katılıyorum*" şeklinde olduğunu ifade edebiliriz. Katılımcıların bu ifadeye yaklaşımlarının çevreci olmayan ve bilinçsiz bir eğilim içinde olduklarını söyleyebiliriz.

Ankete katılanların "*Geri dönüşüm için ekstra masraf ödemek istemem*" ifadesine katılıyorum diyenlerin oranı **%48,7**, tamamen katılıyorum diyenlerin ise **%20,5**'dir. Cevapların puan ortalaması **3,82** olduğundan genel görüşün "*katılıyorum*" şeklinde olduğunu ifade edebiliriz. Katılımcıların bu ifadeye yaklaşımlarının çevreci olmayan ve bilinçsiz bir eğilim içinde olduklarını söyleyebiliriz.

Ankete katılanların "*Yeni çıkan ürün kullanmak benim için önemlidir*" ifadesine katılıyorum diyenlerin oranı **%46,5**, tamamen katılıyorum diyenlerin ise **%13,1**'dir. Cevapların puan ortalaması **3,59** olduğundan genel görüşün "*katılıyorum*" şeklinde olduğunu ifade edebiliriz. Katılımcıların bu ifadeye yaklaşımlarının çevreci olmayan ve bilinçsiz bir eğilim içinde olduklarını söyleyebiliriz.

Ankete katılanların "*Geri dönüşüm için mahallemden dışarı çıkmam*" ifadesine kısmen katılıyorum diyenlerin oranı **%35,8**, katılıyorum diyenlerin ise **33,3**'dür. Cevapların puan ortalaması **3,40** olduğundan genel görüşün "*katılıyorum*" şeklinde olduğunu ifade edebiliriz. Katılımcıların bu ifadeye yaklaşımlarının çevreci olmayan ve bilinçsiz bir eğilim içinde olduklarını söyleyebiliriz.

Ankete katılanların "*İstihdam ve ekonominin gelişmesi benim için çevreden önce gelir*" ifadesine katılıyorum ve tamamen katılıyorum diyenlerin toplamı **%33,5**, katılmıyorum diyenler ise **%28,9**'dur. Cevapların puan ortalaması **2,87** olduğundan genel görüşün "*kısmen katılıyorum*" şeklinde olduğunu ifade edebiliriz. Katılımcıların bu ifadeye yaklaşımlarının çevreci olmayan ve bilinçsiz bir eğilim içinde olduklarını söyleyebiliriz.

Ankete katılanların "*Teknolojik ürünlerin fiyatı benim için çevre dostu olmasından daha önemlidir*" ifadesine kısmen katılıyorum diyenlerin oranı **%39** iken Katılmıyorum ve hiç katılmıyorum diyenlerin toplam oranı **%37,5**'dir. Cevapların puan ortalaması **2,78** olduğundan genel görüşün "*kısmen katılıyorum*" şeklinde olduğunu

ifade edebiliriz. Katılımcıların bu ifadeye yaklaşımlarının çevreci olmayan ve bilinçsiz bir eğilim içinde olduklarını söyleyebiliriz.

Ankete katılanların "*E-atıklar sağlığa zararlı değildirler*" ifadesine katılmıyorum şeklinde yanıtlayanların oranı **%45,1** iken kısmen katılıyorum şeklinde yanıtlayanların oranı **%22,1**'dir. Cevapların puan ortalaması **2,29** olduğundan genel görüşün "*katılmıyorum*" şeklinde olduğunu ifade edebiliriz. Katılımcıların bu ifadeye yaklaşımlarının çevreci olmayan ve bilinçsiz bir eğilim içinde olduklarını söyleyemeyiz.

Çevreci ve bilinçli olmayı sorgulayan ifadelerden elde edilen ortalama puan yaş, cinsiyet, eğitim durumu ve gelir gruplarına göre incelenmiştir. Cinsiyete göre ortalama puanların farklılık gösterme durumu t testi ile incelenmiştir. Cinsiyete göre bireylerin çevreci ve bilinçli olmaları bakımından farklılık göstermedikleri görülmektedir. Yaş gruplarına ve eğitim durumuna göre yapılan inceleme ise varyans analizi ile yapılmıştır. Yaş ve eğitim duruma göre elektronik atıklar konusunda bilinç düzeyi ve çevrecilik bilinci farklılık göstermemektedir. İstanbul genelinde elektronik atıklar konusundaki bilinç düzeyi ve çevrecilik anlayışı ortalama bir düzeydedir, 5 puan üzerinden 3,18 olarak hesaplanmıştır. Gelir gruplarına göre yapılan incelemede ise gelir arttıkça çevreciliğin de arttığı görülmektedir.

İstanbul'da bireyin demografik özellikleri çevre bilinci üzerinde etkili faktörler değildir. Gelir düzeyinin çevre bilinci konusunda etkili bir faktör olduğu tespit edilmiştir. Gelir arttıkça çevre bilinci de artmaktadır.

Çevreci ve bilinçli olmayı sorgulayan ifadelerden elde edilen ortalama puan yaş, cinsiyet, eğitim durumu ve gelir gruplarına göre incelenmiştir. Cinsiyete göre ortalama puanların farklılık gösterme durumu t testi ile incelenmiştir. Cinsiyete göre bireylerin çevreci ve bilinçli olmaları bakımından farklılık göstermedikleri görülmektedir. Hurdacıya veya eskiciye verilir	46	14,6
Çöpe atılır	27	8,6
Atık ürünlerin toplanabileceği toplama alanları oluşturulup buralarda toplanabilir	24	7,6
Aldığımız yere iade edilebilir	16	5,1
Depolarda saklanır	10	3,2
Belediyeye verilir	10	3,2
Eşyalar yenilenir	10	3,2
İkinci el kabul eden yerlere satılır	5	1,6
Atık tesisi varsa oraya verilir	4	1,3
İhtiyacı olan birine verilir	2	0,6
Satıp paraya çevrilebilir	2	0,6
	314	100

Tablo.5 *Elektronik eşyaların kullanım ömrü dolduğunda neler yapılması gerektiğini belirtir misiniz?*

Anket katılımcılarına yöneltilen "*Elektronik eşyaların kullanım ömrü dolduğunda ne yapılması gerektiğini biliyor musunuz*" sorusuna %29 oranında biliyorum ve %71 oranında da bilmiyorum şeklinde yanıt alınmıştır. Biliyorum yanıtını veren 314 katılımcıya "*Elektronik eşyaların kullanım ömrü dolduğunda neler yapılması gerektiğini belirtir misiniz?*" sorusunu yöneltildiğinde ise %50,3 gibi yüksek bir oranda "*geri dönüşüme ayrılır*" yanıtı alınmıştır. Diğer yanıtlar sırasıyla %14,6 oranında "Hurdacıya veya eskiciye verilir", %8,6 oranında "çöpe atılır", %7,6 oranında "Atık ürünlerin toplanabileceği toplama alanları oluşturulup buralarda toplanabilir", %5,1 oranında aldığımız yere iade edilebilir şeklinde sıralanmaktadır. Depolarda saklanır, belediyeye verilir ve eşyalar yenilenir cevaplarının her üçünün de oranı %3,2 iken, ikinci el kabul eden yerlere satılır yanıtının oranı 1,6'dır. Atık tesisi varsa oraya verilir yanıtının oranı %1,3, ihtiyacı olan birine verilir ve satıp paraya çevrilebilir yanıtlarını veren her iki grupta da oran %0,6'dır. Genel olarak yanıtları incelediğimizde bilgi sahibi olduğunu ifade eden katılımcıların önemli kabul edilebilecek bir kesiminin e-atıkların bir atık türü olarak geri dönüşüme ayrılması gerektiği konusunda bilgi sahibi olduğu sonucuna ulaşabiliriz.

Baz:1092 Kişi	Frekans	Cevapların Yüzdesi	Deneklerin Yüzdesi*

*Birden çok cevap alınmıştır.			

Tablo.6 Elektronik cihazlarınızı değiştirdiğinizde eski cihazlarınızı nasıl değerlendirirsiniz?

Anket katılımcılarının %50,8'i elektronik cihazlarını değiştirdiklerinde eski cihazlarını eskiciye vererek değerlendirdiklerini ifade etmişleridir. Katılımcıların %16,9'u eski cihazlarını çöpe attığını, %13,6'sı ise ihtiyacı olan birine verdiğini belirtmiştir. Eski cihazlarını ikinci el dükkânlarına satmayı düşünenlerin oranı %10,4 iken eski elektronik cihazlarını geri dönüşüm kutusuna bırakırım diyenler %4,8 gibi bir orana sahiptir.

8 Sonuç

Çevre ve insan sağlığı için oluşturduğu tehdit ve yol açtığı kaynak israfı ulusal ve uluslararası düzeyde etkin bir e-atık geri dönüşüm politikasının gerekliliği konusunu önemli bir gündem konusu haline getirmiştir. Nitekim konunun merkezi ve yerel yönetimler ile sivil kuruluşlar nezdinde yoğun olarak dile getirilmesi de bu durumun en somut göstergelerinden biridir. Ancak söz konusu politikaların uygulanması, yürürlükteki yönetmeliklerin gündelik hayatta karşılığını bulması büyük oranda kişilerin konuya atfettikleri önem ve ilgi ile doğrudan alakalıdır. E-atık konusunda üreticiler kadar son tüketicilere de önemli sorumluluklar düşmektedir. İstanbul halkının e-atık konusundaki çevre bilinç düzeyi ve davranışlarına yönelik yaptığımız anket sonuçlarında hanehalkında merkezi bir geri dönüşüm tesisine atıklarını koyma eğiliminin yanında geri dönüşüm için kullanılacak atıkların evinden alınmasını tercih edenler de olmuştur. Zararlı içerikleri nedeniyle diğer evsel atıklarla birlikte çöpe atılmaması gerektiği konusunda da bilinçli olan katılımcıların yanında e-atıkların elle parçalanabileceğini düşünen katılımcılar da mevcuttur. Sonuçlarda en dikkat çekici nokta katılımcıların çevreyi koruma ve geliştirme adına ek vergi ödemek gibi ekstra ödemelere razı olmamalarıdır. Genel itibari ile İstanbul özelinde e-atık geri dönüşümün önemi ve yaratacağı toplumsal fayda konusunda toplumun daha fazla bilgi aktarımına ihtiyaç duyduğu görülmektedir. Nitekim demografik özellikler çevre bilincinde etkili değilken eğitim düzeyinin bilinçli bir çevre yaklaşımı ile doğrudan ilişkili olduğunu görmekteyiz.

Doğu Akdeniz Enerji Kaynaklarının Güney Kıbrıs Rum Yönetimi Ekonomisine Etkileri

The Effect of Eastern Mediterranean Energy Reserves on Economy of Greek Cypriot Administration of Southern Cyprus

Prof. Dr. Halil İbrahim Ülker (Atılım University, Turkey)
Asst. Prof. Dr. Poyraz Gürson (Atılım University, Turkey)
Mustafa Kemal Topcu (Fibonasi Yönetim Danışmanlık, Turkey)
Asst. Prof. Dr. Turan Erman Erkan (Atılım University, Turkey)

Abstract

Eastern Mediterranean harbors nearly one-sixth or global trade volume. However, challenge in the region is not only related to control over trade route, it is also concerned with sovereignty over energy and events taking place in the Middle East and the North Africa. Situation amid the convergence point among and between Asia, Africa, and Europe, directly control over the Suez Canal and Aegean Sea, and opening point of energy reserves of Middle East and Caucasus to the world empower its strategic position. To this end, geostrategic significance of Cyprus, as a flowing platform and situated in the main heart of Eastern Mediterranean, has been improved with the discovery of hydrocarbon reserves in the region. It was declared that the volume of the reserves is anticipated between 140 and 226 billion m^3. In case Greek Cypriot Administration of Southern Cyprus announced its bailout, financial burden of oil and gas reserves as the last resort could not be taken over by itself. In this sense, Greek Cypriot Administration of Southern Cyprus should be cautious in the use of reserves that are the insurance of public future welfare to exploit them to recover its downturn economy.

1 Giriş

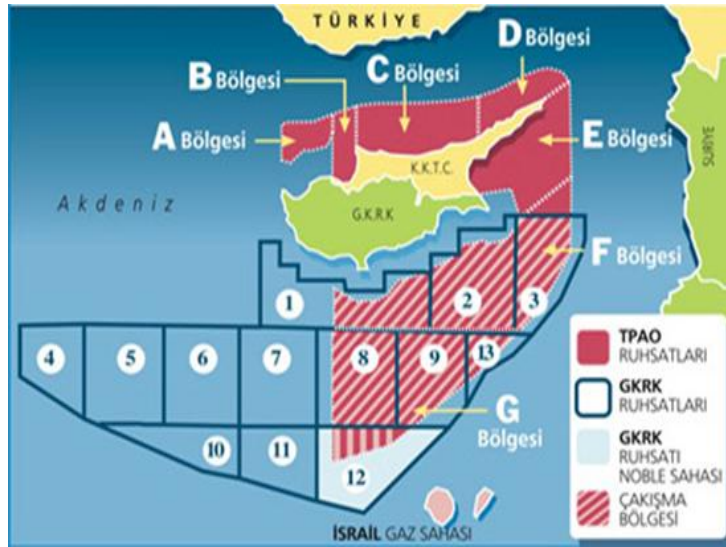
Doğu Akdeniz tarihin her çağında önemini korumuş, zenginlik ve refahın kaynağında yer almıştır (Tarakçı, 2012). Coğrafyasına bakıldığında Süveyş Kanalı, Türk Boğazları ve Ege Denizini içerisinde barındıran Orta Doğunun nabzını tutan bir konuma sahiptir. Orta Doğu petrol rezervlerinin yaklaşık üçte ikisine, doğal gaz kaynaklarının da yüzde kırkına ev sahipliği yapmaktadır (Yıldız ve Yaşar, 2012). Bu nedenle ticaret yolu olma özelliğinin yanında enerji koridoru görevi de bulunmaktadır. Doğu ile Batı arasındaki en kısa deniz yolu olan Süveyş Kanalı'nın barındırması enerji koridoru vasfını güçlendirmektedir. Diğer taraftan Doğu Akdeniz'de ticaret hacmi günlük yaklaşık 3000-4000 gemi kadardır (Yıldız, 2011). Bu haliyle Doğu Akdeniz dünya ticaretinin yaklaşık altıda birine ev sahipliği yapmaktadır. Doğu Akdeniz'deki mücadele yalnızca ticaret yolunun kontrolü ve enerji hakimiyetine dayanan bir mücadele olmamış aynı zamanda Orta Doğu ve Kuzey Afrika'daki gelişmelerle de ilintili olmuştur. Asya, Afrika ve Avrupa kıtalarının birleşme noktasında yer alması, Ege Denizi ile Süveyş Kanalı'nı doğrudan kontrol etmesi ve Orta Doğu ile Kafkasların enerji kaynaklarının dış dünyaya açılış noktası olması stratejik konumunu güçlendirmektedir. Yoğun ticaret trafiği önemini sürekli korumasını sağlamıştır. Aynı zamanda deniz aşırı operasyonlar için ideal bir ileri üs olma özelliği küresel güçlerin bölge üzerinde kendilerini yakın hissettirmeleri açısından mükemmel bir imkan sunmuştur. Özellikle Orta Doğu'daki kriz bölgelerine müdahale için bir sıçrama noktası niteliğindedir (Kuloğlu, 2012).

2 Kıbrıs Adası ve Küresel Bağlamda Önemi

Doğu Akdeniz'deki mücadele yalnızca ticaret yolunun kontrolü ve enerji hâkimiyetine dayanan bir mücadele olmamış aynı zamanda Orta Doğu ve Kuzey Afrika'daki gelişmelerle de ilintili olmuştur. Asya, Afrika ve Avrupa kıtalarının birleşme noktasında yer alması, Ege Denizi ile Süveyş Kanalı'nı doğrudan kontrol etmesi ve Orta Doğu ile Kafkasların enerji kaynaklarının dış dünyaya açılış noktası olması stratejik konumunu güçlendirmektedir. Yoğun ticaret trafiği önemini sürekli korumasını sağlamıştır. Aynı zamanda deniz aşırı operasyonlar için ideal bir ileri üs olma özelliği küresel güçlerin bölge üzerinde kendilerini yakın hissettirmeleri açısından mükemmel bir imkan sunmuştur. Özellikle Orta Doğu'daki kriz bölgelerine müdahale için bir sıçrama noktası niteliğindedir (Kuloğlu, 2012). Nitekim İngilizlerin egemenlik bölgelerinden vazgeçmemeleri, BM'nin Lübnan'da devam eden operasyonları için lojistik maksatlı stratejik liman olarak Kıbrıs'ı kullanması da bu görüşü desteklemektedir. Öte yandan küresel hedefleri olan hiçbir güç Kıbrıs Adasını göz ardı edememektedir (Yılmaz, 2013). Bu anlamda, AB açısından öncelikli konu enerji arz güvenliğini oluşturmaktadır. Avrupa Birliğinin toplam enerji tüketimi içerisinde doğalgaz %24'lük bir yer işgal ederken, Rusya Federasyonun enerji ithalatındaki payı yaklaşık %60'dır (Economist, 2008). Rusya Federasyonuna olan bağımlılığın azaltılması ve arzın çeşitlendirilmesi açısından Doğu Akdeniz olası bir koridor olarak önem taşımaktadır. İsrail'in kendi bölgesinde tespit ettiği rezervler ile GKRY'nin sözde MEB'de bulunan rezervlerin bu amaca hizmet edeceği değerlendirilmektedir. Özellikle bu kaynakların Avrupa üzerinden pazarlanmasının hem güvenliğe hem de

ekonomiye katkısı olacağı aşikârdır. Bu durum Türkiye'nin hem stratejik konumuna, hem bölgesel güç olma hedefine, hem enerji güvenliğinde söz sahipliğine hem de Doğu-Batı arasında enerji düğümü olma pozisyonuna tehdit oluşturmaktadır. Çünkü Kıbrıs hem Mersin Limanını hem de mevcut ve planlı tüm petrol nakil hatlarının buluştuğu İskenderun Limanını kontrol altında bulundurmaktadır.Kıbrıs Adasının Türkiye açısından stratejik önemi; Yunanistan'a karşı sigorta görevi üstlenmesi, Anadolu'nun güvenliğinin sağlanması, Doğu Akdeniz deniz ticaretinde söz sahibi olma, ulaşım ve nakil hatlarının kontrolünden kaynaklanmaktadır (Tarakçı, 2012). Yakın zamanlarda Doğu Akdeniz Türkiye açısından bir sorun bölgesi olarak görülmek yerine ekonomik fırsatlar alanı olarak kabul edilmeye başlanmıştır. Böylelikle Doğu Akdeniz'de ekonomik ve diplomatik varlığını daha da ileri götürmüştür. ABD açısından ise bölgenin önemi asıl adı "Genişletilmiş Orta Doğu ve Kuzey Afrika Bölgesi ile Müşterek Bir Gelecek ve İlerleme için Ortaklık Projesi" olan BOP merkez bölgesi olmasından kaynaklanmaktadır (Yıldız, 2012). Bilindiği kadarıyla proje stratejik enerji kaynaklarının ve ulaşım hatlarının denetim altına tutulmasına yönelik geliştirilmiştir (Günal, 2004:159). Ayrıca ABD'nin Orta Doğu'daki sorunlara askeri güçle müdahale yöntemi Kıbrıs'ın önemini daha da artırmaktadır.

3 GKRY Enerji Kaynakları

Doğu Akdeniz'in kalbinde yer alan ve yüzen bir uçak gemisi niteliğindeki Kıbrıs adasının bölgede keşfedilen hidrokarbon kaynakları ile birlikte jeostratejik önemi bir kat daha artmıştır. GKRY'nin AB üyeliği ve Türkiye-İsrail arasındaki ilişkilerin bozulması GKRY'nin deniz yetki alanlarının belirlenmesine yönelik faaliyetlerinde ayrı bir üstünlük sağlamıştır. GKRY Münhasır Ekonomik Bölgenin (MEB) sınırlarını tek taraflı olarak 2004 yılında ilan etmiş ve aynı yıl Mısır'la, 2007 yılında da Lübnan ile MEB sınırlandırma anlaşmalarını imzalamıştır. Benzer şekilde 2010 yılı Aralık ayında ise İsrail ile anlaşma imzalanmış ve aynı zamanda petrol ve doğal gaz aranması konusunda işbirliği konusunda da anlaşılmıştır. GKRY tarafından 2007 yılında Kıbrıs'ın güneyinde sözde MEB'inde 70 bin km2 bir alanda 13 adet petrol arama ruhsat sahası ilan edilmiştir (Erdurmaz, 2012). GKRY'nin Afrodit olarak isimlendirdiği sahada 2011 yılında petrol arama çalışmaları başlatılmış ve 140 ila 226 milyar m^3 seviyesinde olduğu tahmin edilen doğal gaz rezervi bulunduğu ilan edilmiştir. 12.Parsel olarak da ifade edilen bu saha İsrail'in Leviathan Sahası ile komşudur. Ayrıca 100 trilyon ABD doları değerindeki zengin yataklarda petrol rezervleri bulunduğu ileri sürülmektedir (Dinç, 2012).


Şekil 1 *Arama Bölgeleri*

GKRY Lideri sözde MEB'inden elde edilecek refahtan Ada haklarının eşit bir şekilde yararlanacağını belirtmiştir (Lüle, 2012). Türkiye 1960 anlaşmasına aykırı bulduğu GKRY'nin sözde MEB sınırlandırmaları ve doğal kaynak arama çalışmalarının Ada'da kalıcı bir çözüme kavuşmadan yapılmaması gerektiğini belirtmektedir. GKRY'nin soruna bölgesel nitelik kazandırmak ve uluslararası platforma taşıyarak kamuoyu oluşturmak temelindeki politikaları GKRY'nin 2004 yılında AB üyeliğine Ada'nın tek temsilcisi olarak kabul edilmesiyle meşrulaşmıştır. Benzer şekilde Doğu Akdeniz'de doğal gaz ve petrol rezervlerinin bulunması ve bu imkanın yarattığı işbirliği fırsatları GKRY ile İsrail'i de birbirine yakınlaştırmıştır. GKRY ile İsrail arasında imzalanan doğal kaynakları arama işbirliği anlaşmasıyla da bölgesel ittifak oluşumlarının yolu açılmıştır. İsrail'in Türkiye ile olan ilişkilerinin bozulması da bu sürece katkıda bulunmuştur. İsrail Tamar ve Leviathan havzalarında 2010 yılında doğal gaz tespit etmiştir. Tamar sahasındaki gaz rezervleri İsrail'in 40 yıllık ihtiyacına cevap vereceği bilinmektedir (Kariotis, 2011:48). Leviathan sahasındaki rezervlerin ise Tamar sahasındakinin iki katı olduğu tahmin edilmektedir (Kariotis, 2011:48). Bu sahalardan çıkarılacak gazın GKRY'ye taşınması ve burada LNG haline getirilerek ihraç edilmesi konusu hala gündemdedir.

4 Enerji Kaynakları ve GKRY Ekonomisi

GKRY'nin enerji kaynaklarının üzerinde ısrarla durmasının ana nedenleri arasında yaşanan ekonomik istikrarsızlık ön plana çıkmaktadır. GKRY'nin doğal müttefiki olan Yunanistan'ın ve bağlı olarak AB'nin yaşadığı ekonomik kriz GKRY'yi çok derinden etkilemiştir. Yunanistan'daki krizin ABD kaynaklı küresel krizden kaynaklanmadığı bilinmektedir (Kouretas ve Vlmais, 2010). Yunanistan krizinin temel nedenleri arasında, ekonomik gerilemeden ve reel GSYH'de beklenenden daha büyük bir düşüşten kaynaklanan "ekonomik döngü" etkisi, gelir toplama mekanizmalarının gevşekliğinden ve harcamaların yüksekliğinden kaynaklanan "seçim veya politik döngü" etkisi ve vergileri toplama, harcamaları kontrol etme ve verileri kaydetmeye ilişkin yaygın yapısal yetersizliklerden ve eksikliklerden kaynaklanan "yapısal" etki yer almaktadır (akt. Köse ve Karabacak, 2011: 295). Yine de küresel krizden etkilenen özel sektörün borçlarının devlet tarafından üstlenilmesi de kamu borç stokunun artmasına neden olmuştur (Kouretas ve Vlmais, 2010:391). Bunlarla birlikte sosyal güvenlik reformu gibi yapısal reformların yapılmaması, ulusal rekabet gücünün kaybı ve finansal kaynaklara kolay erişim de krizin derinleşmesinde etken olmuştur (Akram ve ark., 2011:123). 2010 yılı Mayıs ayı içerisinde IMF destekli 110 milyar avro değerinde üç yıl sürecek bir kurtarma paketi onaylanmıştır.

GKRY ise 07 Aralık 2012 tarihinde resmen iflasını açıklamıştır. Vasiliko Elektrik Santralinde 11 Temmuz 2012 tarihindeki patlama sonucu meydana gelen ağır hasar iflas öncesinde GKRY ekonomisini daha da derinden sarsmıştır. AB'den kurtarma yardım paketi almak zorunda kalan GKRY yeni silah alımlarını da durdurmuştur.
Şekil 2 GKRY GSMH Kaynak: GKRY İstatistik Dairesi

GKRY ekonomisi açık bir ekonomi olmasına karşın oldukça dar kapsama sahiptir. GKRY'nin yıllık GSMH'si 24 milyar, kamu kesimi harcamaları ise 11 milyar ABD dolarını bulmaktadır (Hargreaves, 2013). Petrol ve petrol ürünlerinin tamamını ithal etmektedir. Tekstil, kimyasal, elektronik, makine ve otomotiv ürünlerinin %80'den fazlası yurtdışından gelmektedir. Ekonominin yaklaşık %45'i nerdeyse tamamını uluslararası sermayenin oluşturduğu bankacılık kesimi oluşturmaktadır. Kısa zamanda bankacılık kesimindeki sermayenin de %90'ı kaybolmuş vaziyettedir (Smith, 2013). Uluslararası piyasada ülkenin kredibilitesini yitirmesiyle birlikte, GKRY'nin önünde fazla seçenek de bulunmamaktadır. Bu kapsamda turizm sektörü önde bulunsa da avroyla birlikte ücretlerdeki yükseliş sektörü sekteye uğratmaktadır. Diğer bir sektör de Orta Doğu'ya iş yapan şirketlere lojistik ve destek hizmeti sağlanmasıdır. Sözde MEB'inin bir kısmında bulunan doğal gaz rezervi hidrokarbon seçeneğidir (Stambolis, 2013). Elektrik krizi yaşadığı dönemde KKTC'den elektrik almak durumunda kalan GKRY, halk ve kilisenin tepkisini almıştır. Bu nedenle Doğu Akdeniz'de petrol ve doğal gaz aranması "ulusal onur" haline de getirilmiştir (Kutlay, 2012). GKRY açısından petrol ve doğal gaz rezervleri hem bir enerji kaynağı olarak kullanılabilecek hem de ekonomik bir kaynak olacaktır. GKRY'nin ana düşüncesi, yurtiçi Pazar payı çok az olduğundan ihracata yönelik politika şekillendirmektir (Karbuz, 2012:22). Ancak, GKRY'nin içinde bulunduğu istikrarsızlık petrol arama faaliyetlerinin getireceği mali yükü yüklenemeyeceğini göstermektedir. Ancak mevcut finansal durumda GKRY'nin bir an önce eyleme geçmesini gerektirmektedir. Rus enerji devi Gazprom yardım etme karşılığında doğal gazlarının devrine ilişkin bazı teklifler sunduğu da bilinmektedir (Hargreaves, 2013). Projeksiyonlara bakılacak olursa, 2020 yılı itibarıyla, GKRY doğal gaz rezervleri sayesinde ekonomisine yıllık 3 milyar ABD doları doğrudan kazandıran ve 1 milyar ABD dolarlık vergi kazancı yaratan bir konuma kavuşması içten bile değildir (Hargreaves, 2013). Diğer bir beyan ise 25 yıllık dönemde GKRY'nin doğal gaz rezervlerinden kazancının, Avrupa doğal gaz fiyatlarının mevcut seyrini koruyacağı varsayılarak, yaklaşık 50 milyar ABD doları olacağı yönündedir (Stambolis, 2013). GKRY'nin bu projeksiyonları kullanmak suretiyle gaz rezervlerini teminat göstererek kaynak yaratma arayışı bulunduğu tahmin edilmektedir (Stambolis, 2013). GKRY refahının geleceği konumundaki rezervleri kullanırken azami dikkati göstermek durumundadır.

Doğru yapılandırmak şartıyla doğal gaz-para değişimi GKRY için en makul çözüm gibi durmaktadır. Ancak Venezuela ve Meksika gibi ülkelerin yaşadıkları da birer örnek olarak karşımıza çıkmaktadır. Bu ülkeler öz kaynaklarını ve aldıkları dış yardımları rezervleri bulma yolunda israf ettikleri için ellerini güçlü tutamamıştır (Hargreaves, 2013).

5 Sonuç

Doğu Akdeniz'de Türkiye hem siyasi açıdan hem de ekonomik açıdan belirgin üstünlüğü son dönemdeki istikrarlı uygulamaları ile pekiştirmiştir. Elektrik krizi yaşadığı dönemde KKTC'den elektrik almak durumunda kalan GKRY halk ve kilisenin tepkisini almıştır. Bu nedenle Doğu Akdeniz'de petrol ve doğal gaz aranması "ulusal onur" haline de getirilmiştir (Kutlay, 2012). Bu durum GKRY'nin KKTC'ye bağımlı hale getirebilmenin mümkün olduğunu göstermiştir. Türkiye de bu bağlamda boru hatları ile Ada'ya su taşınması, hidroelektrik santrallerin inşası ve petrol boru hattının inşası gibi projelerle KKTC'yi ekonomik olarak güçlendirmeye çalışmaktadır. GKRY'nin içinde bulunduğu istikrarsızlık petrol arama faaliyetlerinin getireceği mali yükü yüklenemeyeceğini de göstermektedir. İsrail'in Leviathan ve Tamar sahalarında elde edeceği gazı GKRY'den ihracına yönelik proje alternatifleri açısından İsrail için maliyeti en düşük ve en karlı yatırım aracı olarak görünmektedir. Alternatifleri Türkiye üzerinden taşımak, Arap gaz boru hattını kullanmak ve Yunanistan üzerinden nakli gerçekleştirmektir. Ne var ki, GKRY'nin hem siyasi istikrarsızlığı hem ekonomik darboğazı İsrail açısından projenin hayata geçirilmesini zorlaştırmaktadır. Ayrıca boru hattının güvenliğinin sağlanması da İsrail için diğer bir zorlaştırıcı etkendir. GKRY ise elindeki mevcut rezervleri doğru kullanarak ekonomik darboğazdan bir çıkış yolu bulabilir gibi görünmektedir. Ancak kendi ekonomisi ne rezervleri çıkarmaya, ne işlemeye ne de transfer etmeye yetecek güçtedir. Yunanistan'ın da ekonomik kriz içerisinde olması GKRY'nin müracaat edeceği ilk kapıyı kapatmaktadır. Ancak Rusya Federasyonu enerji kaynaklarını bir etki aracı kullanma politikası kapsamında GKRY'nin enerji kaynaklarını çıkarma, işleme ve dağıtma işlerini üstlenebilir pozisyondadır. Bu sebeple GKRY'nin alacağı teklifler karşısında dikkatli olması gerekmektedir. Günün kurtarılması karşısında halkın gelecekteki refahından ödün verilmesi söz konusu olabilir.

Только Правильная Политика Вернет Доверие

Only the Correct Policy will Return Trust

Prof. Dr. Turar Koychuev (National Academy of Sciences, Kyrgyzstan)

Prof. Dr. Merim Koichueva (Kyrgyz-Russian Slavic University, Kyrgyzstan)

Abstract

The given paper analyzes and assesses the socio-economic development of the Kyrgyz Republic in period of 22 years. The objects of attention were the problems of market economy, social problems such as poverty, unemployment, internal and external labor migration, issues of active economic policy and its unconditional implementation. The results, obtained from the critical analysis, allow giving recommendations to include in the policy renovation and development components and achieve stable and sustainable growth in economy to ensure an increase in its scale and efficiency.

Прошло почти 22 года, как страна стала суверенной республикой. Стали обвинять во всех грехах, недостатках развития советскую систему. Конечно, авторитарная система изживала себя, но при ней достигнуты были и успехи, и в ней присутствовали определенные привлекательные и положительные черты общественного развития. Исторический объективный анализ пройденного пути еще предстоит обществоведами.

Прослеживая и оценивая состояние, динамику развития стран СНГ, приходится констатировать, что эйфоричное отношение к декларируемой политической демократии, исходя из опыта других стран и еще не осознанной на собственном опыте и не совсем понятой обществом, слепая вера в рыночную экономику и безграмотная ее реализация, не познав ее научные основы, привели к тому, что и в общественно-политическом, государственно-правовом и социально-экономическом устройстве серьезные «недоделки», сдерживающие развитие и искажающие ценности. Скажем, в Кыргызстане до сих пор не достигнута политическая стабильность. Экономика в ряду отсталых экономик мира. Уровень жизни населения низкий. Безработица. Резкий разрыв в доходах социальных слоев, если их сгруппировать по размерам доходов. Отсюда, социальной солидарностью в обществе не «пахнет». Подозрительность и агрессия. Расцветает коррупция. Неподкупная, ради народа работающая власть не проглядывается. Нравственная и моральная распущенность. Криминал. Исчезают патриотизм, чувство родины. Тает доверие общества к власти. Трудоспособная часть населения из года в год покидает страну, уменьшая трудовой потенциал страны. Кто же будет строить будущее страны? Не будем голословными, обратимся к фактам и еще раз к фактам.

Валовой внутренний продукт, по данным Нацсталкома КР («Социально-экономическое положение Кыргызской Республики» (январь-декабрь) 2012), в 2012 году оказался ниже и составил 99,1% объема 2011 года. ВВП в 2011 году по сравнению с 2010 годом возрастал на 6,0%, и, вдруг, в 2012 году последовал провал. Это следствие структурного дисбаланса, когда судьба экономики страны зависима от ограниченного круга производств. Это мягко говоря, а если жестко - от работы одного производства - по разработке золоторудного месторождения «Кумтор». В ВВП республики доля «Кумтора» в 2012 году составила 6,6%. Без «Кумтора» ВВП возрос на 5,0%, т.е. уменьшение общего объема ВВП на 0,9% связано с уменьшением объема производства на «Кумторе». Без учета «Кумтора» объем промышленной продукции возрос на 6,1%, а с «Кумтором» понизился до 79,8% уровня 2011 года. «Кумтор» значительно сократил объем производства. Тем не менее, доля «Кумтора» в объеме промышленной продукции республики составила 37,8%. Неустойчивая работа «Кумтора» ощутимо сказывается на экономике и бюджетной устойчивости страны. Это ненормально, когда одно предприятие делает погоду и свидетельствует об ущербности структуры экономики.

Неустойчивая динамика экономического развития Кыргызстана, когда прирост потом прерывается спадом, связана не только негативами в развитии экономики, но и политической нестабильной ситуацией в стране. Практически политические события и дворцовые перевороты не дают экономике нормально развиваться, и она практически оказывается в состоянии паралича. Бедность не уменьшается, уровень жизни невысокий.

По данным Всемирного Банка из 131 страны, по которым составлен доход о мировом развитии, 35 стран в 2008 г. относились к странам с низкими доходами, валовой национальный доход которых в расчете на душу населения был равен 975 долларам и ниже. Кыргызстан - в числе 26 самых отсталых стран.

Бедность в Кыргызстане прочно заняла свое место в социальной характеристике страны. Трудно предположить, каков реальный уровень бедности населения, а по официальным статистическим данным он составлял: в 2007 г. - 35,0%; в 2008 г. - 31,7%; в 2009 г. - 31,7%; в 2010 г. - 33,7%; в 2011 г. - 36,8%

(«Уровень жизни населения Кыргызской Республики. 2007-2011 гг., 2012). И эти уровни достаточно высокие. Более того, что видно из приведенных данных, проглядывается тенденция повышения уровня бедности. В 2011 г. из 5,6 миллионного населения 2,1 млн. человек находились ниже черты бедности. Опасная ситуация. Возможны социальные конфликты.

Рассмотрим подробнее в разрезе городских и сельских местностей, высокогорных, среднегорных и равнинных районов, по территории страны. В 2011 г. уровень бедности составил: городского населения - 30,7%; сельского населения - 40,4%; в высокогорных районах - 38,8%; среднегорных районах - 38,3%; в равнинных - 36,3%; в Баткенской области - 35,6%; в Джалал-Абадской области - 45,3%; Иссык-Кульской области - 29,5%; в Нарынской области - 49,9%; Ошской области - 44,7%; Таласской области - 50,2%; Чуйской области - 28,6%; в г. Бишкек - 18,4%.

Как показывают данные, заметны различия между городом и деревней, особенно они существенны в разрезе регионов. А «поясные» данные говорят о том, что, на какой бы высоте не жило население, уровень бедности примерно одинаков. Практически вся страна горная, равнины незначительны, в окружении гор и полностью находятся под природно-климатическим воздействием гор.

Уровень бедности существенно различается в домашних хозяйствах в зависимости от количества детей. Так, в 2011 году, по данным выборочного обследования, из всех домашних хозяйств 1 ребенка имели 25,4% домашних хозяйств, 18,0% из них считались бедными; 2 детей имевших 35,1% домашних хозяйств, 37,8 - бедные; 3 детей имели 24,6% домашних хозяйств, 56,3% - бедные; 4 детей имели 10,9% домашних хозяйств, 64,7% - бедные; 5 и более детей имели 3,9% домашних хозяйств, 88,2% - бедные.

Сокращение и ликвидация бедности - наиболее острая социальная проблема. Масштабное проявление бедности связано с экономическим кризисом, негативным структурным развалом - потерей промышленности, потерей рабочих мест и безработицей, безответственностью властей в решении проблем бедности и безработицы и отсутствием глубоко продуманной и принятой стратегии и реализуемой политики.

По данным интегрированного обследования бюджетов домашних хозяйств и рабочей силы в 2011 г., численность экономически активного населения в возрасте 15 лет и старше насчитывала 2,5 млн. человек, из них 2,3 млн. занятых, 212,4 тыс. безработных, или уровень экономической активности составил 64,9% против 64,0% в 2003 г., т.е. практически сильного сдвига нет. Уровень занятости населения несколько больше возрос: если в 2003 г. он был равен 57,7%, то в 2011 г. составил 54,3%. Считается, что уровень достаточно положительный.

Тем не менее, экономически неактивное население в 2011 г. составило 1,3 млн. человек, что составляет 54,0% активного населения. Из экономически активного населения 212,4 тыс. человек - безработные. В сфере занятых - 2,3 млн. человек. Численность населения в 2011 г. составляла 5,5 млн. человек. Значит, на 1 занятого приходилось 2,4 неработающих, включая всех незанятых: экономически неактивных, безработных, пожилых, детей и т.д.

Бедность и безработица обусловили в массовых масштабах трудовую миграцию ресурсов труда в другие страны: и ближнего, и дальнего зарубежья.

По данным Нацстаткома безработных насчитывается в 200 с лишним тыс. человек. Это официально зарегистрированные. В действительности их гораздо больше. К сожалению, налаженного учета нет. Конечно, к числу безработных не отнесли трудовых мигрантов, выбывших из страны. Но они, ведь, выбыли по причине того, что не нашли у себя на родине рабочие места.

Не секрет, что значительную часть мигрантов составляют именно трудовые мигранты (до 500 тыс. человек и более). Они выезжают за пределы страны на свой страх и риск. Среди них есть люди как с профессией и квалификацией, так и без профессии, квалификации и опыта работы. Не все люди с квалификацией находят на новом месте соответствующую профессию и опыт работы, а те, которые без профессии, идут на самые низкоквалификационные, непрестижные работы. Нужда заставляет.

Нередко в республике, как бы «с удовлетворением», отмечают, что трудовые мигранты прислали семьям столько-то (называется сумма до 1-2 миллиардов) долларов в год, и вносят свой «вклад» в благополучие населения. Но почему-то умалчивается, какой ценой в большинстве случаев достаются эти доллары: через унижения, слезы, невыносимые условия труда и быта.

Трудовая миграция наносит вред и семейным отношениям. Дети остаются без присмотра и опеки матерей, либо отцов, которые убывают. Случаются частые семейные разлады. Разрушаются семьи.

Трудовая миграция и экономике наносит вред. Отток профессионалов высоких квалификаций и с опытом тормозит восстановлению и возрождению привлекательных и приоритетных производств, появлению новых современных отраслей. Отток ресурсов трудов вообще понижает возможности обеспечения развития и роста масштабов производства ресурсами труда. Вводит дисбаланс.

В социальном плане трудовые мигранты за рубежом практически бесправны. Они не защищены правовыми законами. У них не такая уж «сладкая жизнь».

В настоящее время экономика республики в таком трудном положении и ожидать, что в ближайшее время она будет способна более или менее обеспечить собственные ресурсы труда рабочими местами не приходится. Возможно, еще длительное время трудовая миграция из Кыргызстана будет вынужденным объективным процессом. Но она не должна оставаться «собственной попыткой» мигрантов на свой страх и риск.

Если государство считает себя государством и представляет себя таковым, уважает собственных граждан и действительно их судьба является объектом внимания, государство должно не только фиксировать, а инициативу мигрирования населения взять «в свои руки», чтобы она носила экономически, социально и в правовом плане благоприятный характер. Государство должно договариваться с соответствующими государствами об условиях труда, быта, социальных и правовых поддержках, чтобы уважались и призывались свободы и права человека. Мигранты вносят свой вклад в экономическое развитие страны - пребывания. И они по праву должны пользоваться всеми условиями жизнеобеспечения так же, как граждане страны - пребывания. Всемирная декларация прав и свобод человека имеет приоритетное значение перед национальными утвержденными документами.

Внешняя миграция действительно положительно сыграет свою экономическую и социальную роль для Кыргызстана, если мигранты найдут достойную сферу приложения своего труда, приобретут знания, высокую квалификацию, опыт, высокую нравственность и культуру, гуманность человеческих отношений, культуру быта, затем привнесут эти качества в Кыргызстан. Государство должно учитывать и эти моменты.

Для того, чтобы трудовые мигранты чувствовали себя в странах пребывания общественно «комфортно», может быть целесообразно ставить вопросы о двойном гражданстве тех, кто хочет этого. Ведь факт, что многие из трудовых мигрантов затем не возвращаются на родину, предпочитая оставаться там, где садаптировались. Так, нужно признать права человека на выбор гражданства.

Серьезную озабоченность вызывает внутренняя миграция. Регионы страны по своему социально-экономическому развитию отличаются друг от друга. Есть развитые регионы, есть отсталые, как и в любой стране в большинстве случаев. В Кыргызстане относительно экономически развитым является Чуйская долина, на которой «расположены» столица Кыргызской Республики Бишкек и Чуйская область. В экономически и социально трудные годы суверенного Кыргызстана в г. Бишкек и Чуйскую область хлынул поток мигрантов из других, экономически менее развитых регионов. Оставляют свою «малую родину» молодежь и взрослые трудоспособного возраста. Кому же поднять экономику отсталых регионов и окраин? Оголяются территории. Это угроза не только экономике, но и национальной безопасности. Поток мигрантов осложняет развитие и г. Бишкек и Чуйской области. Они не могут всех обеспечить рабочими местами и жильем. Возникают сложности, которые прибавляются к «собственным» проблемам.

Чтобы у себя на родине повысить уровень жизни населения и обеспечить рабочими местами ресурсы труда в большей мере, главное - добиться стабильной и устойчиво положительной динамики экономики; обеспечить увеличение ее масштаба и эффективности. А это требует решительного изменения идеологии развития - уповать не на ресурсные возможности (природные и трудовые), а «перевести» ориентацию на инновационные решения и осуществить индустриально-инновационную структурную перестройку экономики. Без такой структурной перестройки невозможно перейти на высокотехнический, наукоемкий, технологически современный путь развития. Продуманно нужно возродить машиностроение, тщательно, с учетом научно-технических достижений, народнохозяйственной структуры экономики для выбора приоритетных, предпочтительных производств машиностроения, которые создадут индустриальную основу инновационной экономики.

Изменение идеологии экономики и ориентация на инновационный путь развития предъявляют высокие требования к качеству ресурсов труда: обученности, квалификации, профессии, опыту. В этом плане предстоит большая работа. За двадцать с лишним лет суверенности мы не улучшили, а ухудшили качество ресурсов труда, начиная от управленцев и инженерно-технических кадров до промышленных и строительных рабочих, сельскохозяйственных работников и представляющих их различные услуги. Предприниматели недостаточно квалифицированные и образованные, еще не сформировались на национальном уровне как дееспособный класс.

Резюме. Безусловно, главной основой «закрепления» кадров у себя в республике, - что важно для повышения уровня жизни народа, сохранения и укрепления государственности, обеспечения социальной солидарности в обществе, политической стабильности в стране, - является оздоровление экономики, достижение ее роста и устойчивости. Дееспособная и волевая власть, адекватно отражающая состояние и направления развития - избранную модель, ориентация идеологии развития на формирование образованного и культурного общества и знаниеемкой экономики, жесткая борьба с коррупцией и ликвидация ее как массового общественно негативного явления, повышение духовности и нравственности в обществе, возрождение и пробуждение активного патриотизма, умение и способность развивать внешние связи и занять свое достойное место в мировом сообществе, - вот те обобщенно

основные факторы достижения прогресса в развитии, что порождает доверие народа к политике и реальным действиям власти.

Рыночный фундаментализм и провал экономических реформ в постсоветском пространстве

The Failure of Market Reforms in post-Soviet Space

Prof. Dr. Khodjamakhmad Umarov (Institute of Economics, Tajikistan)

Abstract

The article is devoted to the false conceptions of economic reforms in the post-Soviet space, which in the aggregate are characterized as market fundamentalism. It revealed the true intentions of the international financial and economic organizations for which market reforms in the former Soviet Union acted as a tool for a complete change in the geopolitical and geo-economic patterns of the planet. Their goal was to transform the post-Soviet space in the mineral-raw-material appendage of the developed capitalist countries. The author considers necessary radical reorientation of economic reform toward a consistent solution of social problems.

В постсоветском пространстве через 20 лет после распада плановой системы сформирована рыночная экономическая система. Становление последней происходила путем проведения рыночных реформ. В разных отраслях реформы проводились по-разному. За некоторыми исключениями сценарии проведения таких реформ разрабатывались на Западе, главным образом в США. Сама рыночная экономика которая сложилась в этих странах представляет из себя конгломерат англо-саксонского типа капитализма добавленными всякого рода рецептами феодального и полуфеодального образца управления и хозяйствования. Теоретические исследования показали что по своему содержанию эти реформы выражали интересы определенных геополитических сил.

Нетрудно ныне убедиться в том, что политическая составляющая экономических реформ преобладала по сравнению с социально-экономическими. Главная цель реформ заключалась в ликвидации социализма как общественной системы, уничтожение СССР и раздел России на многочисленные, слабосвязанные друг с другом государства. Один из ярых антисоветчиков и идеологов разрушения социализма как системы Збигнев Бжезинский в первые годы после развала социализма грозил самым недвусмысленным образом : «Мы уничтожили СССР, уничтожим и Россию…Россия – это вообще лишняя страна…Эта побежденная держава. Она проиграла титаническую борьбу. И говорить «Это была не Россия, а Советский Союз» - значит бежать от реальности. Эта была Россия названная Советским Союзом. Она бросила вызов США. Она была побеждена. Сейчас не надо подпитывать иллюзий о великодержавности России. Нужно отбить охоту к такому образу мыслей…Россия будет раздробленной и под опекой» (Комсомольская правда зарубежом. 3-9 апреля, 2013 года).

В результате реформы не только была уничтожена плановая система. Оказался уничтоженным огромный производственный потенциал. Потери намного превысили те потери, которые были понесены Советским Союзом в годы Великой Отечественной Войны. Такую экономическую катастрофу XX век до того не испытывал.

В отличии от политологов типа Бжезинского среди идеологов – экономистов, прикомандированных из Запада никто не хочет брать ответственность за катастрофические результаты этих реформ.

Во главе реформ стояли международные финансово-экономические организации. Их полномочные представители – советники преимущественно разделяли неоклассические идеи, а точнее идеи монетаристской школы экономической науки. В качестве консультанта в России был направлен известный представитель названной школы профессор Джеффри Сакс. В других постсоветских странах всю работу по реформированию экономики так же консультировали представители монетаристской школы, которые разделяли мнение о всесилии «невидимой руки», о необходимости полного задействования рыночных методов регулирования экономики.

Еще до начала реформ, начиная со второй половины 80-ых годов, различные центры Запада приступили к подготовке лидеров реформ из числа ученых экономистов молодого поколения – выходцев из всех советских республик. Тогдашнее руководство Советского Союза благосклонно относилось к такому мероприятию.

После распада Советского Союза были приняты срочные практические меры для немедленного и необратимого разрушения плановой экономики и административно-командных методов управления. Госпланы бывших союзных республик были трансформированы в министерств экономики, которыми руководили молодые люди, специально подготовленные в роли терминаторов социалистической экономики. Ученые-экономисты, которые были сторонниками рыночных методов регулирования были приглашены в качестве организаторов рыночных реформ. Большинство из этих ученых не обладали

достаточными и глубокими знаниями не только о методах проведения реформ, но и о возможных социально-экономических последствиях таких преобразований.

Различные международные финансово-экономические организации контролировали различные направления реформ, речь идет о таких организациях как Всемирный Банк, Международный Валютный Фонд, Европейский Банк Реконструкции и Развития, Азиатский Банк Развития, а также ПРООН. В процессе реформ был подключен и USAID. В своих действиях они полностью придерживались неолиберальными позициями.

Эти организации не скрывали свои намерения полностью и окончательно отделиться не только с плановой экономикой, но и с государственным регулированием экономики. Была поставлена цель в очень короткие исторические сроки либериализовать внутренний рынок, внешние экономические отношения и регулирование экономики. Под последним они понимали представление полной свободы рыночным силам.

По их замыслу экономический рост должен основываться, главным образом, на частную инициативу, поскольку она способствовала бы использованию сравнительных преимуществ в экономике. Неолиберальные реформаторы, как зарубежные, так и отечественные требовали существенного сокращения присутствия государства в экономике, для того чтобы не допустить дефицита государственного бюджета. Они очень хорошо знали что радикальные трансформационные сдвиги с неизбежностью приведут к резкому сокращению государственных доходов.

Дерегулирование экономии ими рассматривалось как условие для обеспечение гибкости, которая требуется для рыночной реструктуризации и повышения роли рыночных сил в упорядочении хозяйственной активности фирм и компании. Реформаторы постоянно подчеркивали, что либерализация внешней торговли, в особенности импорта призвана создать атмосферу высокой конкурентности во внутреннем рынке и повысить конкурентоспособность отечественных хозяйственных субъектов. Предоставление неограниченной свободы иностранному капиталу в экономике переходных обществ объяснялось необходимостью увеличения доступа последних к зарубежным финансовым ресурсам, привлечение новейших технологий, установление прочных связей с транснациональными корпорациями и мировым рынком, внедрение в постсоветских странах практики современного менеджмента и т.д. (Chandrasekhar C.P., Ghosh Jayati (2011), p.p. 19-31)

Последующие события показали что все эти рекомендации претворившись в реальности способствовали глубокому трансформационному спаду по всему постсоветскому пространству. К тому же они открывали путь для широкого участия криминальных групп в распределении и перераспределении собственности. Ведь здравый смысл говорит, что в течении весьма сжатого времени не представляется возможным формирование прослойки эффективных собственников. Только мафиозными методами можно было передать отдельным лицам громадные производственные мощности, которые в условиях нормальной рыночной экономики можно было бы создать в течении 50 – 100 лет по мере накопления финансовых ресурсов.

Идеологами реформ полностью исключалось идея одновременного осуществления рыночных реформ и положительных темпов экономического роста. Посредством финансовых нажимов правительством постсоветских стран не позволяли использовать другие модели трансформации плановой экономики в рыночной, включая китайскую модель градуалистского типа. В средствах массовой информации была организована наступательная пропаганда метода «шоковой терапии».

Последствие рыночных реформ оказались крайне разрушительными, а социальные результаты этих реформ – катастрофическими, в результате чего все постсоветские страны стали получателями гуманитарной помощи Запада. Идеологи реформ постоянно твердили, что трансформационный спад является неизбежным. Опыт Китая, Вьетнама и Беларусь показывает, что трансформационного спада можно было избежать.

Неолиберальные реформы и жесткие требования международных финансово-экономических организаций относительно быстрого внедрения рыночных методов регулирования привели к полному разрыву хозяйственных связей, из-за которых пострадали самые передовые отрасли экономики постсоветских стран – машиностроения, металлообработка, электротехническая, автомобильная, авиационная промышленность, судостроение, станкостроение и т.д. По всему постсоветскому пространству в начале 90-х годов прокатился процесс деиндустриализации. В течении короткого времени отрасли с высоким уровнем добавленной стоимости, и прежде всего, отрасли обрабатывающие промышленности почти полностью приостановили свою деятельность. В результате во всех этих странах сложился высокий уровень безработицы, которая охватывала основную часть квалифицированных работников и специалистов. Реформаторы оказались не в состоянии создать эффективно действующие рынок труда и рынок капиталов для того, чтобы предотвратить самый глубокий в истории спад экономики.

Из-за неумело осуществленных реформ пострадали крупнейшие предприятия в промышленности, в сельском хозяйстве, в строительстве и транспорте. Идеологами реформ распространялись мифы о ненужности крупных предприятий, которые были построены при социализме, хотя они прекрасно знали, что производственное лицо развитых капиталистических стран определяются именно крупными предприятиями.

Рыночные реформы были полностью лишены человеческого лица. Практически профсоюзы как защитники интересов трудящихся масс были ликвидированы. Если обратить внимание на социальное составляющее реформ, то можно прийти к выводу об отсутствии тезисов об ориентации рыночных реформ на улучшение жизненных условий людей. Практически была ликвидирована система социальной защиты населения, которая была создана при социализме. Массовая безработица сопровождалась обнищанием широких слоев населения, распространением явлении голода и недоедания, резким повышением уровня бедности, быстрым увеличением масштабов внешней трудовой миграции населения, ростом сердечно-сосудистых и психических заболеваний, возрастанием разводов и разрушением домохозяйств.

После распада социализма повсеместное распространение получили коррупция, рейдерство, воровство в крупных масштабах. Всемирный Банк и МВФ очень хорошо знают о существовании коррупции на самом высоком уровне, но делают вид, что в экономике все обстоит нормально. Теневая экономика процветает и расширяет свои горизонты. В некоторых странах масштабы формальной экономики превышают масштабы неформальной экономики. Главными виновниками сложившейся ситуации являются идеологи «шоковой терапии». Они знали, что высокие скорости рыночных реформ с неизбежностью приведут к криминализации экономики, к быстрой концентрации богатства в руках небольшого количества лиц, к обязательному формированию олигархических групп. Нередки случаи неформальных союзов между олигархами и высшими руководителями отдельных стран. Такие союзы наносят огромный ущерб государственным интересам, служат причиной многих отрицательных явлений включая бедность и нищету. Например, в Таджикистане от выплаты налогов освобождена компания IRS, которая является собственностью лиц из высоких эшелонов власти. То же самое относится и к «Kont group», которая является совместным владением одного из бюрократов высшего ранга и иностранного партнера – известного махинатора и манипулятора. В результате рыночных реформ произошло полное изменение в структуре экономики. Если в советское время преобладали отрасли с высоким уровнем добавленной стоимости, то в настоящее время более половины ВВП приходится на сырьевые отрасли. В некоторых странах удельный вес сырьевых отраслей доходит до 80-85 %. В экономической литературе преимущественно сырьевая структура экономики называется колониальной структурой.

Иностранные инвесторы ориентированы на вложение средств в добывающие и сырьевые отрасли экономики, а также на сферу услуг. Основная часть прямых иностранных инвестиций направляется в нефтегазовую отрасль, металлургии, химические и горнорудные промышленности. Исключение составляют автомобильная промышленность, для которой в России и в других постсоветских странах имеется широкая база продаж. В другие отрасли обрабатывающей промышленности практически уничтожены.

Преобладание такой структуры в экономики постсоветских стран выступает в качестве главного фактора несбалансированности между экспортом и импортом. В Таджикистане объемы импорта в 2012 году превысили объем экспорта более чем в 3,5 раза. Благоприятная среда для такого дисбаланса была создана либерализацией и торговлей. Она привела к прекращению деятельности обрабатывающих отраслей, продукция которых подвергается незначительным колебанием цен на мировом рынке. Что касается продукции сельского хозяйства и сырьепроизводящих отраслей промышленности, то на международных рынках они подвергаются существенным колебаниям цен. К тому же диспаритет в ценах между сырьевыми и готовыми товарами из года в год увеличивается. Можно согласится с известным американским экономистом Рави Батра в том, что «постоянный торговый дефицит негативно влияет на собственную промышленность, а также на реальную заработную плату…, более свободная торговля выгодна экспортирующим отраслям промышленности и наносит вред тем, которые конкурируют с импортом» (Рави Батра. (2006), стр.380). Такие страны как Киргизстан, Молдавия и Таджикистан вряд ли в ближайшие годы в состоянии справиться с хроническим отрицательным сальдо торгового баланса. Хронически и растущий дефицит внешней торговли давно привел бы и их финансовому дефолту, если не огромные суммы внешних трудовых мигрантов.

С дефицитом внешней торговли тесно связан феномен сокращения объемов государственного бюджета. Растущее отрицательное сальдо торгового баланса приводит к деиндустриализации, а следовательно, к сужению доходной базы государственного бюджета. По этой причине почти во всех переходных обществах в течении продолжительного времени государственные бюджеты оставались дефицитными, хотя в ряде из них были существенным образом сокращены социальные затраты, чтобы через профицит показать видимость благополучия бюджета.

Заметно сократились государственные затрата на развитие образования, здравоохранения, культуры. Из-за этого растет малограмотность молодого поколения, расширяется деградация образовательной системы, культуры и социальной защиты населения.

Горе-реформаторы чувствуя провал реформ предпринимают попытки для приукрашивания ситуации с экономикой. Официально провозглашаемые темпы экономического роста не соответствуют действительности во многих постсоветских странах. Между этими темпами нормой валовых накоплений никакого соответствия нет. Некоторые лидеры в постсоветских странах преподносят высокие темпы, которые на самом деле являются фальсифицированными для восстановления эффективности своей деятельности, насаждении своего культа и увековечивании своего имени.

По заданию специальных служб Запада организаторы реформ одновременно ведут работу по стимулированию анти российских настроений. Предпринимаются попытки оторвать от России остальные постсоветские страны. Тот же самый Бжезинский еще в 1988 году сумел дать прогнозы будущего России: «Длительные, но так и не ведущие к определенным результатам беспорядки…Дальнейшие уступки и необдуманные перемены…Реформа в экономике, вероятно, лишат советских рабочих главных благ, а именно гарантии занятости и стабильной зарплаты…Усиление среди народов СССР национальных и религиозных конфликтов или сепаратистских устремлений»(Комсомольская правда зарубежом. 3-9 апреля, 2013 года). Оказывается эксперт по коммунизму смотрел в воду.

Таким образом в процессе осуществления рыночных реформ их идеологи и организаторы на целенаправленной основе подготовили и реализовали схему по поддержанию постоянной зависимости постсоветского пространства от мировых геополитических центров. В данном случае, речь идет о международных и региональных финансово-экономических организациях и правительстве США. Судьба приготовила странам постсоветского пространства роль сырьевых придатков развитых стран запада. Однако в этих странах в настоящее время развертывается процесс переосмысления экономических реформ, которые вытекали не просто из неолиберальных концепций, а стали проявлением позиции рыночных фундаменталистов. Нет необходимости давать оценку попыток реформаторов, которые по сути являлись терминаторами переходных экономик. Осуществить эксперимент неограниченной либерализации всей совокупности экономических связей в рассматриваемых странах. При этом они ссылались на огромный исторический багаж классической и неоклассической школы.

Нередко, реформаторы – рыночные фундаменталисты ссылаются на теории «невидимой руки рынка» Адама Смита и сравнительных преимуществ Давида Рикардо. Однако, они не хотят говорить об эпохе интенсивной колонизации Азии, Африки и Америки, и об интересах, которые выражали основоположники классической политической экономии. Учения А. Смита и Д. Рикардо были ярким выражением интереса в метрополе (в данном случае Англии) в отношении недавно захваченных колоний. Они оба были теоретиками поднимающие голову промышленной буржуазии в Британии последние четверти XVII и первой четверти XIX в.в. Идея свободной торговли, которое они выдвигали в условиях огромной технологической разницы между метрополей и колониями способствовал разгрому местных промыслов в колониях и превратили их в исключительных производителях и экспортерах сырья для быстроразвивающейся промышленности Британии. Свобода торговли существовала для метрополей, которая проводила индустриализацию за счет ресурсов колонии. Последние же ввиду технологической и финансово-экономической неконкурентоспособности оказались не в состоянии воспользоваться плодами либерализации торговли (Patnaik, Utsa (2007). p.p. 17-24).

За последние 200 лет социально-экономическая природа либерализации торговли не изменилась, хотя колониальные режимы в настоящее время нигде не существуют. Современные неоклассические теории претерпели риторические изменения, стали более тонкими, более приспособленными к современным изменениям. Они находятся на службе современного колониализма, которая умело модернизировала старые концепции рыночного фундаментализма современным реальностям. Свое концентрированное выражение они нашли в документе под названием «Вашингтонский Консенсус», под которым стоят подписи представителей правительства США, Всемирного Банка и МВФ. ВБ и МВФ будучи самыми влиятельными финансово-экономическими организациями в мире и стали неисправимыми проповедниками и проводниками идеи свободной торговли. Однако их деятельность основывалась на полное отсутствие экономической логики. Известный норвежский экономист Эрик С. Райнерт справедливо заметил, что «слишком поспешное введение свободной торговли убивала промышленность, при этом погибали все виды экономической деятельности, которые имели возрастающую отдачу. Массовая безработица, падение реальной заработной платы и все большее недоедание – все это шло рука об руку со слепой верой в то, что именовалось «свободная торговля» и «силы рынка». На деле они сводились к управляемой свободной торговлей, которая приносила людям только бедность и страдания» (Райнерт Эрик С.(2011), стр. 210.).

Современный финансово-экономический кризис показал несостоятельность неоклассических концепций развития мировой экономики, включая осуществление рыночных реформ в постсоветском

пространстве. Как те, так и другие направлены против жизненно важных интересов человечества. Ныне мировая политическая ситуация втягивается в новый цикл. Имеют место первые признаки поворота к социально-ориентированной рыночной экономике. Отсюда выводы о демократизации международных и экономических отношений, о формировании нового мирового экономического порядка, одинаково выгодного всему мировому сообществу.

«Структурная лестница» устойчивого экономического роста (на примере Республики Молдова)

Structural Ladder of Sustainable Economic Growth: Republic of Moldova Example

Prof. Dr. Tatiana Pyshkina (Academy of Economic Studies of Moldova, Moldova)

Abstract

Using the experience of our prior research, and adapting that experience to the existing conditions in Moldova, this paper links sustainable economic growth with the structure of the economy. We present our Concept of New Structural Development (CNSD), where we outline possibility and mechanism of the transition of the Moldovan economy to the economy oriented on innovations that could deliver the new quality of growth that accompanies sustainable development as oppose to growth without development as it has been the case for the last 20 years. We also present a fragment of the CNSD decision tree in this paper. This Concept is universal for many countries from the point of view of the methodology of choice of structural priorities under the conditions of globalization, and practical recommendations for its application (taking into consideration and adapting for national differences), which makes it suitable for many developing countries.

1   Введение

Одним из основных процессов, воздействующих на все страны в системе единой мировой экономики, является процесс глобализации. Глобализация усиливает неравномерность экономического развития и конкуренцию между государствами. В мировой экономической системе остаются на одном полюсе развитые страны, выступающие в роли «глобализаторов», в то время как на другом концентрируются страны «глобализуемые». Не просматривается тенденции к их сближению и сокращению разрывов в доходах. Более того, наблюдается прямо противоположная тенденция к усилению дифференциации в доходах богатых и бедных стран.

В то же время, в условиях глобализации усиливаются процессы растущей интеграции национальных экономик в движении к единому мировому рынку. Мировой порядок очерчивается вокруг крупных силовых полюсов. На нашем континенте таким полюсом является Европейский Союз (ЕС) с его возрастающей политической и экономической значимостью. Европейская интеграция оказывает определяющее влияние на экономическое, политическое и социальное развитие Республики Молдова. Для Молдовы интеграция в ЕС рассматривается в качестве ключевой цели, для реализации которой необходимо добиться реальных успехов в социально-экономическом развитии и создании конкурентоспособной экономики с тем, чтобы впоследствии стать равноправным членом Европейского Союза.

Для реализации поставленных задач необходимо, изменить структурные приоритеты экономики.Почему именно структурные приоритеты мы считаем одним из ключевых элементов воздействия на экономику?

Структура экономики – это «фундамент» развития любой экономической системы. Устойчивость и качество этого «фундамента», а, следовательно, устойчивость и качество экономического развития, определяются структурными приоритетами, то есть, стратегическими предпочтениями в распределении ключевых факторов экономического роста: капитала, труда, технологий в те или иные сферы деятельности. Структура экономики влияет на объем валового внутреннего продукта, а, следовательно, на уровень жизни населения; определяет возможности выхода на внешние рынки, конкурентоспособность и качество экономического роста той или иной страны: Между структурными приоритетами и экономическим ростом существует функциональная взаимосвязь. В одних случаях (например, в развитых странах) структурные приоритеты меняются вследствие экономического роста. В других случаях (пример Молдовы и многих развивающихся стран) без смены структурных приоритетов невозможен устойчивый экономический рост (может иметь место рост без развития). Почему в контексте глобализации необходимо исследовать структурные приоритеты экономики? Глобализацию мы рассматриваем как расширяющийся «поток», определяющий направленность движения (экономического развития) любой страны в рамках единой закрытой планетарной экономики. Чтобы устойчиво развиваться, каждая страна должна двигаться по «течению», то есть, в русле мировой структурной динамики. Направленность этого движения задается структурными приоритетами. Поэтому мы рассматриваем структурные приоритеты как элемент национальных стратегий, определяющий траекторию, перспективы и качество экономического роста любой страны. Для того чтобы изменить качество роста, необходимо, на наш взгляд, изменить структурные приоритеты экономики.

2   Эффективна ли молдавская экономика?

«Если россияне перестанут пить молдавское вино, экономика Молдовы рухнет». Это утверждение можно было бы считать шуткой, если бы оно ни было так близко к правде, являясь емкой констатацией сложившейся отраслевой структуры молдавской экономики. Сегодня Молдова – самая бедная европейская страна. Валовой внутренний продукт равен 7,166 млрд. долларов США (2011). Это примерно 2,047 доллара на душу населения в год. По индексу развития человеческого потенциала страна на 111 месте из 187 стран (2011г.); по индексу глобальной конкурентоспособности – на 93 из 142 стран (2011-2012гг.) (World Bank, 2012). Молдова, как и другие бывшие социалистические страны, пережила трансформационный кризис, последствия которого оказались самым глубоким по сравнению с другими странами с переходной экономикой. До настоящего времени не удалось достичь уровня производства предкризисного 1990 года. Представленный ниже график иллюстрирует данный вывод.
Рис.1. *Динамика объема реального ВВП Республики Молдова за период 1991-2012гг., в процентах (1990=100%)*

По расчетам экспертов выйти на уровень 1990года Молдове удастся только к 2020 году. Производительность труда в молдавской экономике в 5,6 раза ниже, чем в Венгрии и Словакии, в 3,2 раза ниже, чем в Румынии, на 45% ниже, чем в Украине

Структурные трансформации, которые происходили в стране на протяжении ряда лет, по выражению Дж.Стиглица, позволяют извлечь уроки о том. как не надо проводить рыночные преобразования, хотя в марте 1995г. журнал «The Economist» описал Молдову «как модель правильных реформ»…совершенную лабораторию реформ (UNDP, 2005)

Одной из причин этих неудач явилась ошибочная концепция структурного развития, рекомендованная Молдове на начальном этапе постсоциалистического реформирования, следствием исполнения которой стали негативные деформации отраслевой структуры экономики и снижение экономического потенциала страны. В течение всех лет реформирования в экономике происходили серьёзные количественные и качественные изменения, принявшие форму долговременных тенденций, среди которых разрушение наукоемких отраслей промышленности (электроники, приборостроения), тяжелой индустрии (тракторостроения и ряда других) и интенсивного сельского хозяйства. Страна оказалась "отброшенной" с инвестиционной стадии развития на стадию, движимую факторами производства, на которой она находится по сей день.

Наиболее разрушительным последствием деиндустриализации страны стало снижение потенциального уровня валового внутреннего продукта, и ослабление способности экономики к устойчивому экономическому росту.

Подобное явление в мировой практике считается макроэкономическим нонсенсом, и потому его можно назвать одним из парадоксов молдавской экономики.

С середины 90-х годов Молдова стала страной, чьи граждане активно представлены на рынках труда Европы и России. Количественная оценка масштабов процесса массовой трудовой миграции за рубеж потрясает: более 25 % населения страны покинули ее пределы в поисках работы. Процесс массового

«исхода» трудоспособного населения с национального рынка труда продолжается и сопровождается "утечкой мозгов" из страны и деградацией ее научного потенциала. Это стало одной из самых серьезных негативных долговременных тенденций, характерных для процессов социально-экономического развития Молдовы.

Модель функционирования молдавской экономики сводится к следующей схеме: граждане получают деньги из-за рубежа. Тут же используют их для приобретения товаров и оплаты услуг. При этом более 60 процентов стоимости потребительской корзины составляет импорт.

При незначительном объеме внутреннего производства резко повышается степень зависимости от импорта и внешних кредитов. Объем внешней торговли составляет 110% ВВП. Доля импорта – 80% к ВВП, что значительно превышает допустимый мировой практикой уровень. Основные статьи импорта: минеральные продукты; машины и оборудование; химическая продукция; текстиль. Структура экспорта, как известно, отражает структуру производства: продаем то, что производим. Основными статьями молдавского экспорта являются вино, табачные изделия; продукция растениеводства; текстиль. Около одной пятой всего объема экспорта составляет экспорт вина. При этом около 95% всего винного экспорта предназначено для рынков СНГ. Одним из наиболее конкурентоспособных видов экспорта остается рабочая сила.

В структуре экспорта преобладает продукция с низкой добавленной стоимостью, в структуре импорта – продукция с высокой добавленной стоимостью. Это означает, что при сложившейся структуре производства, сальдо торгового баланса страны не может в принципе быть положительным. Динамика внешней торговли представлена на рисунке №2.
Рис.2. *Динамика внешнеторгового оборота Республики Молдова, в млн. долларов США*

Молдова ни разу, начиная с 1993г., не имела положительное сальдо текущего счета платежного баланса, без которого невозможно обслуживание внешнего долга.

Основой экономического роста молдавской экономики, который начался в 2001 году и составлял в среднем около 5-7% в год, стали три фактора: денежные переводы мигрантов, работающих за границей, рост внешних заимствований; рост налогов на импорт. Приток средств от мигрантов привел к росту потребления, которое стало главным фактором подъема. В последние годы потребление домашних хозяйств устойчиво превышает валовой внутренний продукт за счет отрицательного чистого экспорта и низкого уровня накопления. Безусловно, это бесперспективный путь экономического развития, который не соответствует долгосрочным целям достижения устойчивого экономического роста.

Факторы, которые привели к экономическому росту в Молдове, не могут существовать сколь угодно долго. Речь идет, прежде всего, о денежных переводах, поступающих в страну от молдавских граждан, работающих за рубежом, а также о факторе сравнительного преимущества, которое Молдова имеет благодаря дешевой рабочей силе. Интенсивный отток рабочей силы с национального рынка труда объясняется ее дешевизной внутри страны: 1,5 евро в час(!) Низкий уровень оплаты труда не может рассматриваться как долгосрочный фактор экономического роста

Экономический рост в Молдове является ростом без развития. Он не вызван какими-либо кардинальными переменами в национальной экономике, напротив, происходит на фоне снижения величины ключевых факторов экономического роста - труда, капитала, технологий. Их снижение не компенсируется эффективными технологическими сдвигами. Поэтому можно предположить, что

экономический рост носит адаптационный восстановительный характер и, кроме того, является скорее номинальным, чем реальным .

Экономический рост в Молдове нестабилен. Экономика страны весьма чувствительна к действию внешних факторов, от которых она сильно зависит. Одной из причин этого является моноструктурность производства и, следовательно, экспорта. Неблагоприятные изменения внешних условий создают шоковые ситуации в экономике страны, которые негативно сказываются на качестве и стабильности экономического роста.

Например, российское эмбарго на импорт молдавской алкогольной продукции стало серьезным внешним шоком для национальной экономики, вызвавшим снижение реальных объемов производства в ряде ключевых отраслей промышленности, таких как пищевая, производство технологического и лабораторного оборудования, производство сопутствующих материалов для производства вина, картонной и стеклотары, материалов для бутилирования. В результате появились признаки промышленной стагнации в стране. Еще одним серьезным шоком стал ценовой шок, связанный с повышением цен на природный газ, импортируемый из России, также оказавший дестабилизирующее воздействие на национальную экономику.

Структура экономики, сложившаяся в Молдове за период перехода к рынку, фактически обрекает страну на роль хронического должника и пожизненного европейского аутсайдера с однобокой неэффективной экономикой, чрезвычайно низкой степенью использования человеческого и интеллектуального потенциала, поставщика дешевой рабочей силы на мировой рынок труда. На примере Молдовы подтверждается тот факт, что, хотя в условиях рыночной экономики живет почти все человечество, во всех странах экономика работает по-разному, в зависимости от национальных особенностей, структурных факторов и эффективности управления. Уместно привести фразу, которая достаточно образно характеризует многоликость рынка: ”We're not talking about pulling somebody out of the sea…We're talking about something stronger than that, actually, something even more elemental. The market. Which can also be ruthless, and also be destructive”. Пример Молдовы наглядное тому подтверждение.

Таким образом, на вопрос: «Эффективна ли молдавская экономика?», - нельзя ответить положительно. Способность к реальному экономическому росту ограничена сокращением ключевых факторов экономического роста - труда и капитала, снижением эффективности их использования, неэффективной структурой производства и внешней торговли, не эффективным управлением. В результате в Молдове до сих пор происходит так называемый экономический рост без развития.

3   Сможет ли Молдова стать Силиконовой долиной Европы?

Положение Молдовы в мировой экономике несколько специфично. С одной стороны, это сегодня самая бедная страна в Европе, однако бедность эта своеобразна. На фоне шикарных особняков, современных автомобилей, роскошных гостиниц и ресторанов, столица Молдовы не производит впечатления столицы бедного отсталого государства. Этот факт неоднократно отмечается и иностранцами, посещающими страну. Высокий уровень бедности характерен для сельской местности, где проживает свыше 40 процентов населения .

При низком уровне жизни основной массы населения, уровень общего и профессионального образования рабочей силы в Молдове более высокий, чем в странах с аналогичным уровнем экономического развития. Кроме того, в отсталой в целом экономике, в некоторых ее секторах, созданы серьезные заделы для производства более высокого уровня, чем уровень экономики в целом. Это, прежде всего, касается некоторых инфраструктурных отраслей. Так, в последнее время в Молдове интенсивно развивается сектор информационных услуг, связанный с высокими технологиями, который стал относительно новой статьей молдавского экспорта. Однако, пока доля высоких технологий в экспорте Молдовы незначительна.

Помимо этого, в стране имеются научные разработки в области лазерной технологии и биотехнологии. То есть, еще сохраняются реальные возможности для возрождения на новой технологической основе комплекса наукоемких отраслей (электроника, полупроводники, нелинейная оптика), который был достаточно эффективным в советское время и определял индустриально-аграрный статус Молдовы (в отличие от сегодняшнего аграрно-индустриального).

Молдова могла бы стать Силиконовой долиной Европы, переориентировав структурные приоритеты на инновационную экономику.

3.1 Возможно ?

Возникает вопрос: «Возможно ли в развивающихся странах, в том числе и в Молдове, ориентировать структурные приоритеты на инновационную экономику? На наш взгляд, возможно. Почему? Обоснуем данное утверждение некоторыми выводами, сделанными на основе проведенного нами исследования

динамики, тенденций и влияния мировых структурных приоритетов на экономическое развитие общества в условиях глобализации как нового феномена. (PîșchinaT.(Пышкина),2009).

I. Экономическое развитие общества логично представить как последовательное восхождение по ступеням «структурной лестницы»: от экономики, основанной на факторах, к экономике, основанной на знаниях, или, используя элементы теорий стадий роста М.Портера, от факторной стадии, к стадиям, движимым инвестициями, затем, инновациями, и, наконец, богатством. Этот процесс сопровождается, как правило, отраслевыми структурными трансформациями и изменением отраслевых структурных приоритетов в определенной последовательности – от добычи и переработки сырья, к производству материалоемких и трудоемких товаров, за которыми следуют капиталоемкие, затем техноемкие и наукоемкие и, наконец, исследования и разработки.

2. Эта своеобразная модель движения вверх (к новому качеству развития) по ступеням «структурной лестницы» – от экономики, основанной на факторах, к экономике, основанной на знаниях – отражает, эталонную траекторию (или вектор) мирового структурного развития.

3. Переход в развитии общества на новую ступень «структурной лестницы», фиксируется своеобразным индикатором, роль которого выполняют отраслевые структурные приоритеты мировой экономики. Они же являются и индикаторами глобализации как нового феномена, поскольку непосредственно влияют не только на количественные (объемы мирового производства, мировой торговли), но и на качественные показатели экономического развития, а также и на возможности стран мира к интеграции.

4. Для характеристики феномена глобализации мы предлагаем использовать метафору расширяющегося «потока», определяющего направленность экономического развития любой страны в рамках единой планетарной экономики.

Мы полагаем далее, что каждая страна, особенно развивающаяся и попадающая в категорию «глобализуемых», чтобы выжить в этом «потоке», должна двигаться по «течению», то есть, в русле мировой структурной динамики, соблюдая вектор (направление) мирового структурного развития.

5. Мы считаем также, что в условиях глобализации вектор мирового структурного развития отражает переход мировой экономической системы к инновационно-ориентированной экономике.

6. Переход к инновационно-ориентированной экономике предполагает для каждой отдельной страны коррекцию ее отраслевых структурных приоритетов в соответствии с вектором мирового структурного развития.

Особенно важна такая коррекция для развивающихся стран, так как структурная динамика развитых стран совпадает с мировой структурной динамикой.

7. Мы полагаем, что в условиях глобализации для развивающихся стран становится возможным одновременное прохождение нескольких ступеней «структурной лестницы».

8.”Почему возможно?” Ответ зависит от нескольких причин. Одна из них связана с тем, что условиях глобализации, с учетом ее взаимосвязей с интеграцией, локализацией и регионализацией у многих развивающихся стран, в том числе и у Молдовы, появляются потенциальные «точки роста» сразу по нескольким ступеням «структурной лестницы», которые, при условии использования механизмов инновационного развития, могут повысить конкурентоспособность национальных экономик и изменить качество экономического роста. Так, например, деятельность на национальных рынках транснациональных кампаний распространяет мировые условия конкурентоспособности в национальные экономики, на какой бы ступени структурного развития они не находились.

Однако, необходимо иметь в виду, что на настоящем этапе предпосылки для перехода ряда развивающихся стран, в том числе и Молдовы, на инновационную стадию, и тем более на стадию, движимую богатством, недостаточны. Поэтому, на краткосрочном временном интервале речь может идти только о «встраивании» отдельных элементов инновационной экономики в определенные ступени «структурной лестницы».

3.2 Как?

Ответ на вопрос ”Как реально осуществить процесс одновременного прохождения нескольких ступеней «структурной лестницы»?” зависит от конкретной страны, ее национальной специфики. Для Молдовы, например, возможно достаточно быстро организовать конкурентоспособное производство материалоемких товаров: стройматериалов, химических продуктов, простых металлоизделий, сравнительно простого оборудования, в том числе и для малого бизнеса, а также трудоемких товаров. Молдова, по опыту таких стран как Шри-Ланка, Индонезия, Филиппины могла бы добиться повышения конкурентоспособности в тех отраслях, в которых новые индустриальные страны утратили преимущества из-за роста цены такого фактора, как рабочая сила. Этими отраслями могли бы стать текстильная, швейная, обувная. Реальным для Молдовы является форсированное развитие сферы услуг: страхование, мобильная связь, программное обеспечение, финансовые услуги и др.

Одновременно возможна организация производства техноемких изделий, таких, например, как контрольные и измерительные приборы.

Для производства наукоемких изделий могут использоваться собственные научные заделы, организованы сборочные производства относительно менее сложных и рыночно востребованных видов наукоемкой продукции (например, бытовой электроники). В республике имеются научные разработки в области лазерной технологии и биотехнологии, которые должны также найти промышленную реализацию. Производство всех этих групп товаров должно быть ориентировано не только на внутренний рынок, но и на экспорт.В этих сферах необходима активная политика стимулирования отечественного производителя с учетом так называемого "infant industry argument"и опыта быстро развивавшихся стран (Пышкина,Т,2010). По отдельным позициям возможна активизация научных исследований, совместно с западными учеными, в направлении создания новых инновационных технологий.

Таким образом, исходя из вышеизложенного, мы полагаем, что в условиях глобализации для развивающихся стран приемлема модель структурного развития с одновременным прохождением основных ступеней «структурной лестницы» на основе «встраивания» отдельных инновационных (или квазиинновационных) элементов в определенные ее «ступени».

3.3 История имеет значение

Вторая причина, делающая возможным одновременное прохождение нескольких ступеней «структурной лестницы» связана с "механизм генетической памяти".Дело в том, что путь от факторной стадии к стадии, движимой инвестициями, а затем и инновациями (Пышкина,Т,2006), некоторыми развивающимися странами уже был однажды пройден. Например, Молдова к 1990г. прошла определенные ступени «структурной лестницы» и вплотную подошла к тадии, движимой инновациями

Дело в том, что в Молдове вплоть до 90-х годов интенсивно развивался машиностроительный комплекс отраслей, а также наукоемкие отрасли промышленности, что и определяло индустриально-аграрной статус экономики страны. Однако, после затяжного циклического спада (1991-2000гг.), страна оказалась отброшенной на более низкую, факторную стадию, что проявилось в снижении потенциального уровня выпуска, негативных деформациях отраслевой структуры экономики, связанных с ее деиндустриализацией, и в смене статуса страны с индустриально-аграрной на аграрно-индустриальную. Статистические данные подтверждают этот вывод. Так, например, по индексу человеческого развития, в 1990 г. Молдова находилась на   64 месте среди 174 стран, включаемых в рейтинг-лист ООН. В 1990г. индекс человеческого развития был максимальным для Молдовы   и составлял 0,736 .В 2011г. страна в мировой классификации перешла на 111место

Тем не менее, "механизм генетической памяти", касающийся движения от факторной стадии к инвестиционной, а затем и к инновационной, остался. Сохранились и определенные сравнительные конкурентные преимущества для развития этих отраслей (которые постепенно исчезают), например, квалифицированная и дешевая рабочая сила, а также некоторые элементы материальной индустриальной базы. В настоящее время необходимы определенные усилия для возрождения машиностроительного кластера отраслей на новой технологической основе (инновационной или квазиинновационной). Пример Молдовы не уникален. Он характерен для многих постсоциалистических стран.

Таким образом, исходя из вышеизложенного, мы полагаем, что в условиях глобализации для развивающихся стран приемлема модель структурного развития с одновременным прохождением основных ступеней «структурной лестницы» на основе «встраивания» отдельных инновационных (или квазиинновационных) элементов в определенные ее «ступени». Двигаясь таким образом по структурной лестнице, Республика Молдова может и стать Силиконовой долиной Европы ,придав экономическому росту новое качество – устойчивость и реальное развитие.

4 Методология успеха

Методологической основой алгоритма структурного развития с одновременным прохождением основных ступеней «структурной лестницы» на основе «встраивания» отдельных инновационных (или квазиинновационных) элементов в определенные ее «ступени» являются следующие принципы.

1. Структурная диверсификация через квазииновации. Как показывают исследования, проведенные зарубежными экономистами, механизмы, определяющие экономическое развитие, не обязательно основываются на принципе сравнительного преимущества. Напротив, оказывается, что чем ниже уровень экономического развития страны, тем более широкий спектр видов деятельности необходимо развивать стране, вместо того, чтобы ограничиваться единственным, пусть и достаточно успешным.

На основе анализа моделей отраслевой концентрации и диверсификации по ряду стран, (Imbs, Jean and Wacziarg, Romain, 2003) была установлена одна из казалось бы парадоксальных, с точки зрения

принципа сравнительного преимущества, закономерностей мировой структурной динамики. Суть ее в следующем: высокие показатели отраслевой специализации характерны только для стран с высоким уровнем дохода (Rodrik, D.,2004, 95). Из этого утверждения можно сделать вывод о том, что для развивающихся стран, особенно с низким уровнем дохода, необходима структурная диверсификация производства. При этом, чем ниже уровень экономического развития страны, тем сильнее должна быть степень диверсификации. Этот вывод крайне важен для многих развивающихся стран, включая Молдову. От способности той или иной страны к диверсификации видов деятельности во многом зависят возможности выхода на внешние рынки и национальная конкурентоспособность.

Отметим, что процесс диверсификации не является естественным, внутренне присущим любой экономической системе. Структура экономики любой страны отличается высокой степенью инерционности, поскольку связана с распределением факторов производства и технологиями, а создание новых производств и отраслей требует как перераспределения факторов, так и освоения новых инновационных или, чаще всего, квазиинновационных технологий (особенно для развивающихся стран и стран с низким уровнем экономического развития). Поэтому процесс диверсификации отраслевой структуры предполагает определенные усилия и предпосылки, которые, на наш взгляд, должны создаваться через механизмы государственного воздействия на экономику.

Один из наиболее эффективных способов диверсификации отраслевой структуры, принятых в мировой практике, заключается в адаптации к местным условиям уже апробированных и известных за рубежом технологий. Таким образом, в той или иной стране становится возможным организовать производство так называемых «квазиинновационных» товаров и услуг. Под «квазиинновационными» товарами в данном контексте понимается производство в данной стране уже известного и распространенного на мировых рынках продукта с более низкими издержками. Процесс «запуска» такого продукта начинается, как правило, с адаптации иностранной технологии к местным условиям. Для диверсификации, проводимой на основе квазиинноваций, необходимы, на как минимум, две предпосылки:

-национальные производители должны быть способны адаптировать к местным условиям уже апробированные и известные за рубежом технологии; -производство новых для данной страны «квазиинновационных» товаров должно быть прибыльным .С точки зрения первого условия, в ряде развивающихся стран, включая Молдову, вопрос упирается, с одной стороны, в неадекватную научную базу, а с другой - в недостаток «инноваторов», которыми могли бы стать, прежде всего, транснациональные корпорации и венчурные фонды. Именно эти структуры способны наиболее эффективно реализовать взаимосвязи глобализации и локализации, корректируя при этом структурный вектор национального развития в соответствии с мировой структурной динамикой. Имитация технологий, разработанных в развитых странах, исторически является одним из важнейших факторов, позволяющих развивающимся странам ориентироваться на мировые достижения научно-технического прогресса. Как показывает мировой опыт, квазиинновации стали важным фактором экономического роста во многих странах, например, в Японии, Бразилии, Мексике, Индии, Колумбии, Бангладеш, Пакистане, Чили, Израиле и др.В мире известно немало примеров, когда из эксперимента одного предпринимателя, запускающего квазиинновациоонный продукт, возникала целая отрасль, например, швейная промышленность в Бангладеш, промышленное разведение лосося в Чили или цветов в Колумбии.

Условием диверсификации отраслевой структуры является способность и желание национальных производителей адаптировать к местным условиям уже апробированные и известные за рубежом технологии (квазиинновации). Это невозможно без государственной поддержки. Поэтому необходимо соблюдение второго принципа.

2. Координация усилий бизнеса и государства. Имитационные механизмы, касающиеся производства квазиинновационных товаров, могут обеспечить более низкие издержки и, следовательно, прибыльность квазиинновационного бизнеса, в тех случаях, когда успешно решаются проблемы координации действий государства и бизнес-сектора.

При этом, в мировой практике принято, что издержки по осуществлению квазиинновационной деятельности берет на себя частный предприниматель, в то время как издержки по созданию необходимой инфраструктуры должно взять на себя государство. Недостаток инноваторов в странах с низким уровнем дохода часто связан и с неразвитостью инфраструктурного блока отраслей. В полной мере это относится и к Молдове. Для того, чтобы новые виды деятельности стали прибыльными, необходимы одновременные разнонаправленные инвестиции бизнес-сектора и государства. Считается, что зарождающаяся отрасль требует государственной поддержки в первую очередь, в части развития соответствующей инфраструктуры. Идея координации усилий бизнеса и государства лежит в основе теории кластеров и касается, в первую очередь, развития таких отраслей, как туризм, фармацевтика и биотехнологии. Основной причиной проблем координации считается трудность сопоставления инвестиций с производственными решениями различных предпринимателей. В некоторых случаях, когда производство в определенной отрасли хорошо организовано и отлажено, а доходы от необходимых

инвестиций могут быть локализованы, координация может быть достигнута бизнес - сектором самостоятельно, без особого вмешательства государства. Но чаще, когда новое производство или новая отрасль только начинают развиваться, и необходимо наладить инфраструктуру, участие правительства необходимо.

3. Стимулирование «новых» областей деятельности. В поддержке нуждаются не столько отдельные отрасли, сколько конкретные технологии, в которых присутствует положительная экономия от масштаба и которые не способны развиваться без поддержки извне. Поэтому нужны протекционистские меры, которые должны быть направлены не на отрасль или сектор рынка, а на конкретный вид деятельности (новая технология, особый способ обучения, новый товар или услуга), в котором существует проблема координации.

В соответствие с данным принципом, стимулирующие программы нужны для активизации процессов зарождения новых потенциально конкурентоспособных сегментов отраслей, но не для всего малого и среднего бизнеса. Только такие структурные трансформации способны продуцировать экономический рост и расширить производственный потенциал страны .

4. Целевая компенсация провалов рынка. Суть его заключается в необходимости государственных межотраслевых программ, которые охватывали бы сразу несколько отраслей и напрямую компенсировали бы недоработки рынка. Так, например, в государственной поддержке и специальных программах и субсидиях нуждается инфраструктурная сеть, например, строительство и обустройство дорог, или, например, разработка и реализация современных учебных проектов, а также проектов, направленных на развитие и адаптацию иностранных технологий к местным условиям .

5. Получение мультипликативных позитивных эффектов (информационных, технологических или других) от субсидируемых новых видов деятельности для стимулирования инвестиционной активности во взаимодополняющих отраслях.

6. Динамичность означает, что структурную политику нельзя рассматривать как единовременный акт. Это процесс, требующий постоянной коррекции и обновления целей, приоритетов и инструментов воздействия на экономику. Не существует неизменного трафарета или модели. Со временем меняются приоритеты и целевые установки, однако сам процесс структурных преобразований – это перманентный эволюционный процесс, который отражает мировую структурную динамику.

7. Взаимосвязи глобализации, и регионализации. Для Молдовы учет этих взаимосвязей исключительно важен. Являясь европейской страной, Молдова зависит от развития европейского открытого регионализма , который открывает простор для глобализации в связи с созданием единого экономического пространства в рамках Европейского Союза. Тенденция сближения Молдовы с Западом под влиянием глобальных процессов является, безусловно, перспективной. В тоже время, геополитическое положение Молдовы и близость стран СНГ также должны использоваться для дальнейшего развития и укрепления страны. С другой стороны, закрытый регионализм неизбежен, поскольку неизбежна защита региональных интересов, реализуемая через поиск компромисса между глобальными и региональными интересами и критериями.

Это означает, что цели и результаты структурного реформирования зависят от возможностей и ограничений, определяемых национальными особенностями страны, уровнем ее экономического развития, а также, действиями ее правительства. Национальные государства должны научиться жить в режиме международной конкурентоспособности, не теряя при этом своей уникальности.

8 Взаимосвязи глобализации и локализации. В экономической литературе существует точка зрения на локализацию, как на наиболее перспективную экономическую стратегию глобализации на современном этапе. Более того, применяется и такой термин как «глокализация», означающий глобальную локализацию. Некоторые авторы, однако, полагают, что одним из основных противоречий, присущих процессам глобализации, является парадокс «глобализация-локализация». Дж. Найсбитт в книге «Глобальный парадокс» делает следующий вывод: «Чем выше уровень глобализации экономики, тем большую силу имеют её мельчайшие частицы». В качестве примеров локализации, можно привести деятельность на национальных рынках транснациональных корпораций, эффективно работающих с потребителями, в какой бы стране они ни находились, с учетом адаптации к местным условиям и особенностям. Локализация отражает структурный вектор мирового развития, и призвана реализовать в национальных экономиках мировые условия конкурентоспособности. Стратегия для отдельно взятой страны состоит в том, чтобы найти свое место в условиях глобализации и использовать ее преимущества для получения определенных выгод.

5 Алгоритм перехода к инновационно - ориентированной экономике

Основываясь на результатах проведенного исследования (PîşchinaT,2010) , с учетом изложенных выше принципов, нами разработана Концепция структурного развития (КНСР), с алгоритмом перехода Республики Молдова к инновационно - ориентированной экономике, продуцирующей новое качество экономического роста – рост с развитием. Фрагмент «дерева целей» Концепции представлен на рис.4.

Государственный и частный сектор в системе здравоохранения Кыргызстана и перспектива их сотрудничества

The Public and Private Health Sectors in Kyrgyzstan and Prospects for their Cooperation

Assoc. Prof. Dr. Damira Japarova (Kyrgyzstan-Turkey Manas University, Kyrgyzstan)

Abstract

The public sector does not provide funding for the program of state guarantees. Private sector where high levels of profitability and higher prices. The purpose of public-private partnerships in health care – the preservation and improvement of the health status of the population. In Kyrgyzstan, the investment in health infrastructure of the state are planned. The private investor can build a building and provide meals for patients as required by the hospital. Require opening a public-private laboratories for urgent tests at each hospital and clinic. To finance the public-private partnership in the health sector can be used in co-financing, guarantee the payment rate for OMS services.

Государственный сектор не обеспечивает финансирование Программы государственных гарантий. Частный сектор там, где высокая рентабельность и уровень цен выше. Цель государственно-частного партнерства в здравоохранении - сохранение и улучшение состояния здоровья населения. В Кыргызстане инвестиции в инфраструктуру здравоохранения со стороны государства не планируются. Частный инвестор может построить здание и обеспечивать питание больных стационара согласно требованиям. Необходимо открытие государственно-частных экспресс-лабораторий для срочных анализов при каждой больнице и поликлинике. Для финансирования государственно-частного партнерства в сфере здравоохранения в могут использоваться софинансирование, гарантия выплаты тарифа ОМС за услуги.

Ключевые слова:

Программы государственных гарантий, частный сектор в здравоохранении, государственно-частное партнерство, софинансирование, покупка услуг.

1 Государственный сектор в здравоохранении

В Кыргызской Республике Система здравоохранения включает в себя государственный и частный сектор. Государственный сектор в современных условиях здравоохранения не обеспечивает полностью финансирование Программы государственных гарантий и обеспечения граждан бесплатной медицинской помощью. Система обязательного медицинского страхования в условиях Кыргызстана не выполняет функций страхования. Она превратилась в финансовую организацию по передаче денежных средств лечебно-профилактическим учреждениям за диагностику и лечение больных.

Средства бюджета и дополнительные средства, поступающие от сооплаты пациентов, не позволяют лечебно-профилактическим организациям предоставлять качественные медицинские услуги в полном объеме.

	Сумма, млн сомов		Рост в %	Удельный вес	
	2006	2012		2006	2012
Всего,	2 421,2	9753,8	290	100%	100%
в том числе средства:					
-республиканского бюджета	1454,4	6741,0	363	60,1	69,1
-местного бюджета	312, 0	916,4	194	12,9	9,4
-обязательного медстрахования	393,2	1529,8	289	16,2	15,7
-сооплаты	188,0	350,1	86	7,8	3,6
Специальные средства	73,6	216,5	194	3,0	2,2

Таблица 1. Исполнение консолидированного бюджета за 2006-2012год (Данные МЗ/а)

Как видно из таблицы, доля государственного бюджета продолжает оставаться превалирующим, и из года в год увеличивается. С начала реализации программы «Манас таалими», (2006г.) т.е. второго этапа реформы, общие расходы на здравоохранение увеличились на 3 млд сомов, т. е. на 24,6 %, государственные расходы выросли на 30 %. Следует учесть, что при этом уровень инфляции, за указанный период составил, 50%. (Концепция здравоохранения,2012/а)

Однако государственное финансирование здравоохранения остается недостаточным. Так, не хватает средств для закупки в необходимом количестве лекарственных средств, на модернизацию оборудования, техническое обслуживание и укрепление инфраструктуры, а также повышение профессионального уровня персонала. Дефицит денежных средств, необходимых для реализации Программы государственных гарантий в 2012 году составил 1,5 млрд. сомов. Следует отметить, что 82, 5% из средств «Единого плательщика», в 2012 году были использованы на выплату заработной платы. (Динара Сагинбаева, 2012)

Сокращение финансирования гарантированных государством услуг, в государственных медицинских учреждениях, привело к снижению объемов бесплатной медицинской помощи. Государство декларирует о бесплатных услугах, а пациент, попадая в больницу, должен покупать лекарства, платить за лечение. В условиях высокого уровня бедности, активно развивается тенденция введения платы за услуги населением. Следует отметить, что совмещение в государственных медицинских учреждениях оказания бесплатной медицинской помощи и предпринимательской деятельности, т.е. оказания платных услуг, не позволяет осуществлять эффективный контроль целевого использования бюджетных средств и средств обязательного медицинского страхования.

Во первых, платные медицинские услуги оказались вне сферы управляющего воздействия государства, (прейскуранты есть, но они устарели, объем услуг не предусмотрен). Во-вторых, платные услуги осуществляются на базе государственных медицинских учреждений, т.е. появилась тенденция использования государственного сектора для оказания платных услуг. В этой связи имеют место необоснованные госпитализации в государственной больнице, в так называемых платных палатах. Появилась проблема неээффективного использования ресурсов здравоохранения и дополнительные расходы коммунальных услуг. Все это противоречит оптимизации стационарной помощи.

2 Частный сектор в здравоохранении

В Кыргызстане альтернативой государственному здравоохранению, в настоящее время уже сформировался частный сектор здравоохранения, который берет на себя существенный объем специализированной медицинской помощи населению. Вложены значительные инвестиции в отрасль оказывающую населению медицинскую помощь с применением современных высоких технологий и дорогостоящего импортного оборудования. И в последние годы негосударственный сектор здравоохранения получил интенсивное развитие.

По данным Министерства здравоохранения Кыргызской Республики, в 2011 году зарегистрировано более 700 частнопрактикующих врачей.(*Данные МЗ,2012в*) Оказание медицинских услуг частными медицинскими центрами сосредоточено в крупных городах республики – Бишкек, Ош, Джалал-Абад, Каракол и др. В сельских районах услуги на основе частной практики, не получили широкого развития.

Следуя законам рынка, частный сектор осваивает в первую очередь свободные ниши, где возможна высокая рентабельность и быстрая окупаемость вложенных средств. Основной сегмент, освоенный частными практикующими врачами в республике – это диагностика. В основном, частные медицинские центры предоставляют ультразвуковые, лабораторные, стоматологические и другие услуги. Так, 90 % обследования на компьютерном томографе и более 50 % магнитно-резонансных томограф – исследований в Кыргызстане проводятся частными медицинскими центрами.

Таким образом, частный сектор восполняет пробел, имеющийся в государственном секторе, по предоставлению высокотехнологичных диагностических процедур. Государственные медицинские учреждения часто пользуются услугами медицинских центров, направляя пациентов для прохождения диагностических исследований. И это становится нормой.

И частная компания, мотивированная на результат, по-настоящему обладает эффективным управлением. Частный сектор в здравоохранении снижает нагрузку на государственный сектор, что позволяет провести реструктуризацию государственных организаций здравоохранения, повысить эффективное использование ресурсов. Однако развитие частного сектора невозможно без развития государственного, вместе с тем в современных условиях потенциал частного сектора в Кыргызстане недостаточно востребован государством.

Уровень цен в частных медицинских центрах и кабинетах выше, чем за аналогичные платные услуги в государственных организациях здравоохранения. Так, стоимость компьютерно-томографического исследования в частном медицинском центре в Бишкеке, выше в 2,5-3 раза, а магнитно-резонансного томографа - в 2-2,5 раза. (Концепция здравоохранения, 2012/b). И, несмотря на разницу в ценах, частные медицинские центры пользуются большим спросом среди населения. Это обусловлено хорошим обслуживанием и благоприятными условиями пребывания пациентов, наличием в полном объеме изделий медицинского назначения и применением современных технологий. Основную роль в сложившейся разнице цен играют несколько факторов: уровень оплаты за инфраструктуру, амортизация оборудования, более высокий уровень заработной платы.

Среди отрицательных черт прямых иностранных инвестиций в систему здравоохранения, можно выделить внутреннюю «утечку мозгов», т.е. отток высококвалифицированных специалистов в частные медицинские центры, где заработная плата и условия работы, существенно, лучше, чем в государственных учреждениях. В частных медицинских центрах сосредоточиваются высокоспециализированные технологии и медицинские кадры, что привлекает как население, так и самих медицинских работников. Медицинские работники мигрируют из государственного сектора в частный сектор, из больниц в фармацевтические компании. В результате, сектор общественного здравоохранения, потребность в котором особенно велика у пожилого и отягощенного различными заболеваниями населения, страдает от недоукомплектованности медицинскими кадрами и оборудованием, в нем существуют длинные очереди на госпитализацию и прием специалистов.

Вследствие этого в результате нехватки персонала в государственных лечебных учреждениях, люди вынуждены длительное время ожидать нужные операции, и визиты к нужным для обследования специалистам. Для решения данной проблемы интересным представляется опыт Турции. Врачи, оказывающие медицинскую помощь в учреждениях государственной формы собственности, получают зарплату на основании общегосударственной тарифной сетки. Сверх этого им начисляются дополнительные выплаты из оборотных средств.(Çetin. A, 2007)

Оборотные средства или возобновляемые фонды формируются путем сбора средств в государственных учреждениях. Государственные медицинские учреждения устанавливают финансовые связи с государственными и частными организациями, а также с отдельными гражданами, от которых получают плату за оказанные медицинские услуги. Полученные таким образом доходы распределяются между работниками медицинского учреждения. Вторая часть заработной платы абсолютно независима от государственного участия. Иногда этот дополнительный доход может намного превышает размер основной заработной платы.

Следует отметить, что наблюдается тенденция роста тарифов на медицинские услуги. При низком уровне доходов большинства населения, происходит снижение объемов бесплатной медицинской помощи и расширение системы оплаты медицинских услуг. Таким образом, происходит постепенное формирование двухступенчатой системы здравоохранения, где складывается сектор более качественных платных услуг для состоятельных людей, и низкокачественных бесплатных услуг для тех, кто не может платить.

При предоставлении медицинских услуг, государственный и частный секторы должны конкурировать между собой не только по вопросам качества оказания медицинской помощи, но и стоимости услуг. В этих условиях важно, чтобы конкуренция в сфере оказания медицинских слуг не ухудшала доступ населения к медицинским услугам, не приводила к разложению государственного сектора в здравоохранении.

3 Формы взаимоотношений бюджетных и частных медицинских учреждений

В условиях, когда частные медицинские учреждения получили достаточно широкое распространение, неизбежно возникают различные формы взаимоотношений бюджетных и частных медицинских учреждений. Недостаток денежных средств в государственных бюджетных учреждениях, для обеспечения отрасли, требуют привлечения частных источников финансирования. Одним из путей решения этих проблем стала разработка и использование особой институциональной системы по привлечению частного сектора к строительству и эксплуатации объектов здравоохранения, которая на Западе получила название Public-Private Partnership (PPP) или Государственно-частное партнерство.

Государственно-частное партнерство между государством и бизнесом осуществляется в целях реализации национальных и международных общественно-значимых проектов. Для их осуществления государство использует частный сектор. Государственно-частное партнерство это соглашение о планировании совместной деятельности между государственными и частными секторами о совместном финансировании проектов, эксплуатации и техническом обслуживании объектов. Целью государственно-частного партнерства в здравоохранении является сохранение и улучшение состояния здоровья населения путем создания эффективной, доступной системы предоставления медицинских услуг организациями здравоохранения, независимо от форм собственности.

Государственно-частное партнерство в здравоохранении можно определить как юридически закрепленную на определенный срок, форму взаимодействия между государством и частным сектором в отношении объектов здравоохранения, а также соответствующих медицинских услуг. Обязательным условием государственно-частного партнерства, является софинансирование государством и частными компаниями и разделение рисков между всеми участниками проекта. Иногда проект может финансироваться на 100% частным сектором. Таким образом, в государственно-частном партнерстве происходит объединение ресурсов и потенциалов двух хозяйствующих субъектов, существенное

расширение пространства для свободного движения капитала, проникновение частного сектора в те сферы, которые ранее были для него недоступны.

Передача частным компаниям разработки, строительства, финансирования и обслуживания новых зданий медицинских учреждений, позволит здравоохранительным учреждениям сконцентрироваться на выполнении своей основной функции - предоставлении медицинских услуг.

Государственно-частное партнерство оформляется специальным договором (соглашением, контрактом) между государством и участниками со стороны частного сектора и осуществляется в течение определенного, закрепленного в договоре срока. По завершении проекта партнерство может быть продолжено на основе нового договора.

Государственно-частное партнерство позволяет государству передавать объекты во владение и пользование частному сектору сохраненяя при этом право государственной собственности. Это позволит переложить функции строительства, эксплуатации объектов здравоохранения на частный сектор, что значительно сократит расходы государства и увеличит налогооблагаемую базу. В случае нарушения частной компанией условий контракта, государство можно прерывать действие контракта в и возвращать объект в государственное управление.

Участие бизнеса в проектах государственно-частного партнерства позволяет частной компании получать в долговременное владение и пользование государственными активами здравоохранения, причем часто на льготных условиях. Вкладывая инвестиции в объекты государственной и муниципальной собственности, предприниматель имеет достаточные гарантии прибыльности, поскольку государство как его партнер несет определенные риски по обеспечению минимального уровня рентабельности. При решении наиболее социально значимых проблем здравоохранения государство доплачивает из бюджета частному оператору, при улучшении им качества медицинского обслуживания. (пример: Программы по борьбы с туберкулезом.)

Инициатива создания смешанных частно-государственных структур была выдвинута Всемирной организацией здравоохранения в 1995 году. Целью была разработка эффективных механизмов привлечения государственных и частных поставщиков медицинской помощи для лечения туберкулеза и борьбы с ним в соответствии Международными стандартами лечения.

Экономический эффект для общества состоит в том, что вследствие объединения активов двух секторов государственно-частное партнерство обеспечивает оптимальное разделение обязанностей и лучшее использование активов. Создаются условия и предпосылки для эффективного функционирования объектов здравоохранения, находящихся в государственной и муниципальной собственности. Благодаря совершентсвованию стандартов, повышается качество медицинских услуг, усилится ответственность и улучшится контроль использования ресурсов, используемых в рамках контракта.

Наиболее активно процесс привлечения бизнеса в здравоохранение на партнерской основе, наблюдается в Великобритании и Австралии. В Великобритании государственно-частное партнерство развивается в двух направлениях: строительство и реконструкция основных фондов в отрасли и предоставление медицинских услуг. По официальным данным еще в 2003 году свыше 600 объектов общественной собственности, в том числе - 34 больницы находились в условиях государственно-частного партнерства. В государственно-частных проектах этой страны, на здравоохранение приходится 12% всех инвестиций. (PFI: meeting the investment challenge. 2003). В настоящее время в Великобритании в рамках государственно-частного партнерства 130 больниц финансируется частным сектором, что обеспечивает высокое качество медицинских услуг. (Материалы конференции *2012 г.Красноярск.*).

Далее, медицинские услуги, предоставленные частными компаниями на объектах государственной и муниципальной собственности в соответствии с долгосрочными контрактами, оплачиваются частному сектору постепенно, в течение всего срока контракта (как правило, 30 лет). Платежи производятся каждый год, но только при соответствии оказанной частной услуги принятым в стране стандартам обслуживания в данной области. При этом государство остается ответственным за предоставление населению основных услуг.

Правительство Санкт-Петербурга совместно с Комитетом по здравоохранению города стали одними из первых в области создания государственно-частного партнерства для здравоохранения в Российской Федерации. На основе государственно-частного партнерства развивается несколько сетей гемодиализных центров в регионах РФ. Государство предоставляет помещения для диализного центра на безвозмездной основе и освобождает от уплаты налогов на прибыль и НДС. Эта сфера здравоохранения особо привлекательна для частных инвесторов, что объясняется относительной простотой организации таких центров и их сервисным уклоном, по сравнению с больницами. Как правило частный сервис всегда был лучше государственного.

Следующий важный проект государственно-частного партнерства в системе здравоохранения это сотрудничество клиник «Медси», с правительством Москвы. В 2012г. в обмен на 25% акций объединенной компании, правительство Москвы передало «Медси» 5 поликлиник, 3 стационара и 3

санатория. К участию в партнерстве был приглашен американский инвестиционный фонд ApaxPartners, специализирующийся на медицинских активах, и РФПИ, которые совместными усилиями вложат порядка 6 млрд. долл. в развитие сети. Доли участников распределятся следующим образом: половину получит АФК «Система», четверть – правительство Москвы, по одной восьмой – ApaxPartners и РФПИ.

В Кыргызстане в последнее время наметилась тенденция по привлечению частного сектора в систему оказания медицинских услуг населению. Сотрудничество государственной и частной структуры пока осуществляется эпизодически и носит стихийный характер. Так, государственные медучреждения направляют пациентов в частные центры для лабораторных, ультразвуковых исследований и в центры компьютерной томографии. В проекте предстоит создание централизованной аккредитованной лаборатории для медучреждений Бишкека, оснащенной современным оборудованием для обработки клинических анализов. Кроме того, предлагается открыть экспресс-лаборатории для срочных анализов при каждой больнице и поликлинике.

Закон о Государственно-частном партнерстве, принятый в январе 2012 года открывает возможности для привлечения частного финансирования инфраструктурных проектов. Для Кыргызстана, с низкой эффективностью государственного сектора в здравоохранении, эффект государственно-частного партнерства будет значительно более высоким. Необходимо развивать партнерские отношения частных медицинских организаций здравоохранения и Фонда обязательного медицинского страхования при Правительстве Кыргызской Республики. Это может осуществляться путем оплаты медицинских услуг со стороны государства в форме «государственного заказа», по обеспечению граждан медико-санитарной помощью в рамках Программы государственных гарантий.

Инвестиции в инфраструктуру со стороны государственного сектора не планируются. И в этой связи разработан проект организация питания в Кыргызском научно-исследовательском институте курортологии и восстановительного лечения.

Цель проекта заключается в организации централизованного диетического питания для всех пациентов, а также для сотрудников Института. Планируется, что частный инвестор построит здание современной столовой, которая будет оснащена современным оборудованием, будет удобной для пациентов и сотрудников, и будет обеспечивать сбалансированное питание согласно диетологическим и санитарным требованиям. (Меморандум проекта. *Бишкек, 2012*)

В данном проекте как государственным партнером собственник института, выступает Министерство Здравоохранения. Частный партнер будет отобран в результате открытого местного тендера. Государственный партнер будет закупать услугу у частного партнера: трехразовое питание для пациентов, согласно требованием по энергетической и диетической ценности рациона питания.

Проект рассчитан на 10 лет с последующей передачей здания и оборудования в функциональном состояниигосударству. Частный партнер разрабатывает проект строительства и согласовывает его с государственным партнером. После окончания срока договора, т.е. по истечению 10 лет, частный партнер обязуется передать государственному партнеру здание в отремонтированном состоянии, с оборудованием в рабочем состоянии. При успешной работе государственный партнер может продлить договор на оказание услуг питания.

Итак, при выборе проектов государственно-частного партнерства необходимо разработать те проекты, для которых частный сектор может принести наибольшую пользу по сравнению с традиционным подходом к реализации проектов государством (например, новые технологии, новые методы строительства, передовые методы работы, эффективность управления, сокращение затрат). В здравоохранении это касается организации таких услуг, как питание пациентов, прачечные и стерилизационные услуги, лабораторные услуги. Если частный инвестор принимает на себя капитальные затраты и обслуживание объекта на протяжении всего его дальнейшего существования, он мотивирован оптимизировать совокупные затраты на проект. Поэтому учет затрат на протяжении всех этапов реализации проекта, что является одним из основных условий государственно-частного партнерства.

Важно отметить, что в рамках государственно-частного партнерства, страховые компании, как правило, должны работать совместно с государственным сектором, поскольку они являются основным источником выручки для больниц. При планировании проекта необходимо на основе несколько вариантов, точно сформулировать потребности и ожидаемые выгоды, определить соотношение затрат и выгод.

Источниками финансирования проектов государственно-частного партнерства в Кыргызстане, могут быть строительные и страховые компании, банки, международные финансовые институты, государство и муниципальные органы власти. Также для финансирования партнерства в сфере здравоохранения могут быть использованы такие платежные механизмы, как софинансирование строительства, гарантия выплаты по тарифам обязательного медицинского страхования частным медицинским центрам за оказанные услуги.

Выводы:

В Кыргызстане государственный сектор не обеспечивает финансирование Программы государственных гарантий, что привело к снижению объемов бесплатной медицинской помощи.

Произошел отток специалистов в частные медцентры и для решения проблемы предлагается опыт Турции, где врачи получают зарплату на основании тарифной сетки. Сверх этого им начисляются дополнительные выплаты из оборотных средств.

Государственно-частное партнерство в здравоохранении - это софинансирование и разделение рисков, в отношении объектов здравоохранения и медицинских услуг.

Объединение активов двух секторов обеспечивает оптимальное использование активов.

В Кыргызстане инвестиции в инфраструктуру здравоохранения со стороны государства не планируются, поэтому частный инвестор может построить здание современной столовой и обеспечивать питание согласно диетологическим и санитарным требованиям.

Предлагается партнерство путем оплаты медицинских услуг со стороны государства в форме «государственного заказа», по обеспечению граждан медико-санитарной помощью в рамках Программы государственных гарантий.

Необходимо открыть государственно-частные экспресс-лаборатории для срочных анализов при каждой больнице и поликлинике.

Для финансирования ГЧП в сфере здравоохранения в могут использоваться такие платежные механизмы, как софинансирование строительства, гарантия выплаты тарифа медицинского страхования за услуги частным медицинским центрам.

Налоговая нагрузка как критерий реформы в налоговой системе Кыргызской Республики

The Tax Burden as a Criterion for the Reform in Tax System of the Kyrgyz Republic

Assoc. Prof. Dr. Khicheza Fynchina (Kyrgyz-Russian Slavic University, Kyrgyzstan)

Abstract

The most revealing criterion of effectiveness of tax reforms is the level of the tax burden. Optimal way to estimate sectoral tax burden is to use tax burden coefficient for a newly created value. Other indicators of tax burden differ because of over detailing which doesn't allow making right accentuation in analytical conclusion. This idea is supported by Chick:"in complicated system, the results gained by detailed investigation of particular aspects can't be generalized over the whole issue of the research…" (Chick,1864). Based on this, the analysis of structure and the level of tax burden in different branches of economics of the Kyrgyz Republic for the period of 2005 through 2011 was conducted. It was found that main tax burden carries the industry with big inequality. The main tax burden in Kyrgyzstan falls on mineral resource industry (coefficient of tax burden an average of 30), while in manufacturing industry it is one of the lowest indexes (0,68) and in health care (0,63). The structure of tax burden has changed in relation to the introduction of sales tax. In addition there is a big portion in tax burden among almost all sectors of economics and VAT (for domestic products). The ways to reform the tax system are: the harmonization of indirect taxes (for example through the cancellation of the sales tax while increasing the rate of VAT), review of tax exemptions, conditions and methods of supply, the list of taxable supplies, as well as the principles for determining excise goods.

1 Введение

Известная фраза французского философа XVIII в. Шарля Луи Монтескье: «Ничто не должно столь точно регулироваться мудростью и разумом, как соотношение между той частью, которую забирают у подданных, и той, которую им оставляют» лучше всего предостерегает от несправедливости в сфере налогообложения. Она может вызвать серьёзные негативные социально-экономические последствия. Основополагающий принцип налогообложения должен быть положен при определении основных направлений налоговой политики любого государства.

Кыргызская Республика на пороге вступления в Таможенный Союз. Налоговая система в Кыргызской Республике среди стран СНГ в настоящее время отличается либеральностью. Например, ставки подоходного налога и налога на прибыль установлены в размере 10 процентов, налог на добавленную стоимость – 12 процентов. Кроме того, по последнему налогу имеются освобождения на многие поставки, в частности, это касается реализации и аренды земельных участков, жилых помещений; реализации сельскохозяйственной продукции, лекарственных средств; реализации услуг благотворительных организаций; транспортных пассажирских перевозок, импорта определённого перечня товаров, таких, как детское питание, тех же лекарственных средств, научного оборудования геологических экспедиций, некоторых товарных позиций основных фондов. Относительно узок перечень товаров, облагаемых акцизами. Здесь отсутствуют такие стандартные подакцизные товары, как ювелирные изделия, изделия из меха и др.

Налоговая система Кыргызской Республики постоянно совершенствуется. Последняя реформа осуществлена в 2009 году, итоги которой, если крупно обозначить, заключаются в снижении ставки НДС с 20 процентов до 12, введении налога на недвижимое имущество юридических и физических лиц, отмене налога за пользование автомобильными дорогами и отчислений в фонд предупреждения и ликвидации последствий чрезвычайных ситуаций. Остальные изменения в целом касались совершенствования системы администрирования и систематизации нормативно-правового регулирования в сфере налогообложения.

2 Отраслевая налоговая нагрузка и структура ВВП

Государственная налоговая служба при Правительстве Кыргызской Республики в целях определения эффективности совершенствования налоговой системы сравнивает темпы роста ВВП и налоговых доходов в отраслевом разрезе. Например, определялись отклонения темпов роста ВВП и налоговых поступлений в 2012 г. по сравнению с предшествующим годом по следующим направлениям: промышленность – горнодобывающая промышленность, обрабатывающая промышленность, включая энергетику – строительство и другие отрасли.

	Горнодобывающая промышленность	Обрабатывающая промышленность, включая энергетику	Строительство	Другие отрасли
ВВП	-19,1	-8,1	-12,6	-4,0
Налоговые поступления	-15,8	-22,9	-17,4	-9,2

Таблица 1. *Изменение в темпах роста ВВП и налоговых поступлений по отдельным отраслям экономики Кыргызской Республики в 2012 г. по сравнению с 2011 г.*

Соответственно, делается вывод о снижении налоговой нагрузки на горнодобывающую отрасль и её повышении на обрабатывающую промышленность, включая энергетику, строительство и другие отрасли.

Однако самым показательным для органов налоговой службы КР является всё же налоговая нагрузка субъекта экономики, в качестве которой принимается уплачиваемая сумма налога. При этом используется самый простой метод – метод прямого подсчёта. Он не требует специальных исследований и большой информации. Основан на определении суммы налога, исходя из изменений в налоговой системе по условному предприятию, являющимся типичным, на которого распространяется действие основных налогов. Расчёты делаются и по определённым организациям разных видов деятельности, например, торговли, финансовой организации, предприятия промышленности и других с конкретными цифровыми данными. Расчёты соответственно показывают несомненное снижение налогового бремени: соотношение налоговой нагрузки, рассчитанной по новым и ранее действовавшим условиям налогообложения, колеблются на уровне 60-70 процентов.

Как видно, компетентные органы ограничиваются простейшими расчётами для оценки динамики налоговой нагрузки на макроуровне.

Автором изучены и обобщены мнения разных исследователей по поводу критериев определения налоговой нагрузки (Фынчина, 2008а), а также произведены оценки налогового бремени по отраслям экономики в Кыргызской Республики (Фынчина, 2007 и 2008б). Результаты исследований не имеют однозначной оценки и требуют дальнейших исследований в этой области с тем, чтобы при определении фискальной политики максимально обеспечить реализацию принципа равномерности налогообложения.

Эффективность налоговых реформ можно определить по нескольким критериям. Исходя из цели, которую ставит Правительство Кыргызской Республики – сделать более привлекательным инвестиционный климат в стране – наиболее показательным представляется уровень налогового бремени. В мировой практике с целью расчёта этого показателя сопоставляют налоговые доходы с объёмом ВВП.

Существуют разные точки зрения по поводу оценки такой налоговой нагрузки. Первая – чем ниже доля налоговых доходов в ВВП, тем привлекательнее налоговый климат страны (Шаталов, 2011). Есть мнение, что, «чем выше доля налогов в ВВП, тем больше его объём перераспределяется через систему налогообложения и тем эффективнее налоговая система» (Сайфиева, 2012), при этом оговаривается необходимость проведения комплексного анализа системы налогообложения в разрезе основных видов экономической деятельности и отраслей промышленности, включающий анализ структуры ВВП по видам первичных доходов, их налоговому потенциалу, оценку коэффициента отраслевой налоговой нагрузки и отраслевой структуры налоговых доходов.

Определение автором налоговой нагрузки предприятий разных отраслей экономики Кыргызской Республики по двухпараметрической модели А.В. Игнатова позволило установить зависимость налоговой нагрузки от двух показателей: трудоёмкости и материалоёмкости. Данные построенной матрицы показывали высокий уровень налоговой нагрузки по тем сферам экономики, где большой удельный вес занимает фонд оплаты труда (и соответственно, меньший – материальные затраты), и низкую налоговую нагрузку на предприятиях с маленькой долей фонда оплаты труда и большой долей материальных затрат. Разброс показателей по этим субъектам чрезвычайно большой: от 4,3-8,7 сом. на каждые 112 сом. выручки-брутто до 26,7 сом. (FynchinaKh.,2008в).

Сайфиевой С.Н. предлагается для оценки налогового бремени по отраслям промышленности использовать следующие индикаторы (Сайфиева, 2010а и 2010б. С. 39):

1. Коэффициент налоговой нагрузки (НН) на вновь созданную стоимость – отношение отраслевой налоговой нагрузки к валовой добавленной стоимости (ВДС), позволяет определить влияние налогового бремени на отраслевую продуктивность.

2. Коэффициент НН на прибыль в ВДС – отношение отраслевой НН к величине прибыли в ВДС, позволяет определить соотношение налогового бремени и собственных финансовых источников предприятия, включающих амортизацию и прибыль.

3. Коэффициент НН на чистую прибыль, рассчитанную как разницу между валовой прибылью и потреблением основного капитала, включая скрытую заработную плату. Этот показатель позволяет определить соотношение налогового бремени и чистой прибыли в ВДС каждой отрасли.

В своих расчётах налоговой нагрузки в отраслевом разрезе (Сайфиева, 2012), автор не берет во внимание страховые взносы и налоги, уплачиваемые во внешнеэкономической деятельности, оговаривая затруднённость получения официальной статистической информации последних (добавим, и не только в отношении них, но и по страховым отчислениям, администрируемым социальным ведомством). В других расчётах налоговой нагрузки в разрезе основных видов экономической деятельности и отраслей промышленности (Сайфиева, 2010а и 2010б), названными промежуточными, учтены отчисления на социальные нужды посредством распределения их пропорционально структуре заработной платы наёмных работников за каждый год анализируемого периода.

На наш взгляд, предлагаемая методика в целом отличается излишней детализацией, нагромождением цифр, что не позволяет сделать правильные акценты на аналитических выкладках. Здесь уместны слова В. Чик (американский экономист, последователь теории Кейнса. Основные труды: «Теория монетарной политики» (1977), «Макроэкономика после Кейнса» (1983) и др.), что «в сложной системе результаты, полученные путём детального изучения определённых её аспектов, не могут распространяться на весь предмет исследования… Чем сложнее система, тем меньше мы знаем о всех происходящих в ней процессах. Ни действия агентов внутри системы, ни изучение её извне не могут основываться на полной информации. Совершенное знание недостижимо» (цит. по: Ш. Доу, 2006. С. 63).

Экономический смысл предлагаемых индикаторов эффективности отраслевого совокупного налогообложения, по мнению Сафиевой, заключается в измерении величины ВДС и валовой прибыли в ВДС, перераспределяемых с помощью налогообложения. Представляется, что в основе предлагаемых индикаторов лежит международный подход сопоставления величины налоговых сумм и социальных взносов во внебюджетные социальные фонды к регистрируемому статистикой ВВП (в отраслевом разрезе – валовая добавленная стоимость), а также – на микроуровне – соотношение уплаченных налогов также к добавленной стоимости или чистой прибыли (подробно см. Фынчина, 2008а). И оценка их также нужно делать, следуя международным критериям, отмеченным, как указывалось выше, д.э.н. С.Д. Шаталовым.

Исходя из вышеизложенного, рассчитаны показатели налогового бремени в отраслевом разрезе, по которым можно оценить эффективность развития налоговой системы в Кыргызской Республике.

Произведём оценку налоговой нагрузки по отраслям экономики по общепринятой методике, сравнив налоговый потенциал соответствующей отрасли с отраслевой структурой ВВП. Полученный результат – коэффициент налоговой нагрузки – показывает превышение налоговой нагрузки по отрасли над средней по всем секторам экономики (Сайфиева, 2012. С. 123).

Как видно из табл. 2, выявляется картина, которая разрушает сложившееся представление и не позволяет объяснить явные факты. Основное налоговое бремя несёт промышленность (налоговое бремя стабильно превышает вклад в ВДС отрасли в среднем в 2 раза). Рассматривая промышленность в разрезе, выявляется, что не все её секторы находятся в равном положении. Так, основную налоговую нагрузку в Кыргызстане несёт горнодобывающая отрасль – в 2011 г. коэффициент налоговой нагрузки составил 36,62, в то время как в обрабатывающей промышленности, включающей и переработку сельскохозяйственной продукции, и текстильную и швейную промышленность, и производство древесины и деревянных изделий и др. (разделы 15-37), он один из самых низких (0,68) наряду со здравоохранением (0,63). *Для сравнения:* в Российской Федерации отрасль по добыче полезных ископаемых также несёт самое большое налоговое бремя, равное 1,931, а обрабатывающая – «только» 1,077 (Сайфиева, 2012. С. 124).

Далее по коэффициенту налоговой нагрузки после горнодобывающей промышленности по убывающей располагаются секторы финансовых услуг(2,17), государственного управления (1,76), транспорт и связь (1,58). Наименьшую налоговую нагрузку имеет сельскохозяйственный сектор экономики, определённый государством, как приоритетный, где налоговая нагрузка в анализируемый период несколько выросла и составила от 0,3 до 1 процента.

Следует отметить, что сравнение показателей до и после налоговой реформы 2009 г. не будет в полной мере объективным вследствие, в первую очередь, того, что действие налога на недвижимое имущество, введённое взамен двух оборотных налогов, было приостановлено. Негативное воздействие оказано на экономику страны ипродолжающимся мировым финансовым кризисом, но в большей степени, возможно, повлияли внутриполитические события в 2010 г., в результате которых требовалось предоставления пострадавшим налоговых послаблений или времени на восстановление экономической деятельности, и то, и другое вызвало сокращение налоговой базы и, соответственно, налоговых отчислений. Сравнение показателей 2008 г. и 2011 г. представляется более характерным.

* В отчётности эта позиция за данный период отдельно не выделена, а включена в сектор «Торговля; ремонт автомобилей, бытовых изделий и предметов личного пользования».

** Структура налоговой нагрузки по отраслям «Образование» и «Здравоохранение» определена пропорционально структуре 2007 г.

***Таблица 2.** Расчёт коэффициента налогового бремени по секторам экономики Кыргызской Республики за период 2005-2011 гг. **Источник**: рассчитано автором по Статсборнику Национальные счета Кыргызской Республики 2005-2011 гг.*

Если смотреть из этих позиций, то налоговая нагрузка в горнодобывающей промышленности после реформирования выросла на 18,2 процента, доля же валовой добавленной стоимости выросла только на 0,3 процента.

Политика поддержки приоритетов экономического развития привела к снижению налогового гнёта по предприятиям обрабатывающей промышленности: доля валовой добавленной стоимости выросла на 7 процентов, а налоговая нагрузка снизилась на 0,4 процента.

В сфере производства и распределения электроэнергии, газа и воды также рост доли валовой добавленной стоимости на 1,2 процента сопровождалось снижением налоговой нагрузки на 0,8 процента. Снижение налоговой нагрузки отмечается и по сектору государственных услуг, где доля валовой добавленной стоимости выросла на 0,9 процента, а налоговая нагрузка снизилась на 7,6 процента. В сфере финансовой деятельности произошло усиление налоговой нагрузки. Так, если доля финансовых, страховых и пр. услуг в валовой добавленной стоимости экономики Кыргызской Республики сократилась на 2,6 процента, то повышение налоговой нагрузки составило 1,4 процента. Снижение налоговой нагрузки отмечается и по предприятиям питания, гостиницам (0,4 процента), строительным организациям (0,8 процента).

Доля ВДС по сельскому хозяйству в структуре ВВП к 2008 г. сократилась по сравнению с 2005 г. на 2,7 процента, в то время как доля налоговой нагрузки повысилась на 0,5 процента, превышение коэффициента налоговой нагрузки составило 0,02. Сравнение показателей по данной отрасли экономики 2008 г. (до реформирования налоговой системы) по сравнению с 2009 г. (после реформы в сфере налогообложения) показывает относительно значительное снижение доли ВДС – на 7 п.п., и некоторый рост налоговой нагрузки – на 0,2 п.п.

Таким образом, выявлено относительно большое несоответствие структуры валовой добавленной стоимости по отраслям экономики структуре налоговых доходов (если в РФ коэффициент налоговой нагрузки составляет в среднем от 0,6 до 2 процентов, не считая сельское хозяйство, то в КР – от 0,6 до 40). Вряд ли это объясняется только особенностями действующей модели налогообложения или спецификой национальной экономики.

3 Структура налоговых доходов основных отраслей экономики

При анализе налоговой нагрузки представляется важным оценить влияние каждого из налогов, формирующих её. Понятно, что перечень налогов в разных сферах неодинаков. Принцип дисперсности в налогообложении несколько снижает налоговое бремя предприятий отдельных отраслей экономики.

Следует учесть, что при анализе уровня и структуры налоговой нагрузки в расчётах отражены практически все налоги, в том числе и подоходный налог. В настоящих расчётах не включены налог на добавленную стоимость и акцизный налог на импортируемую продукцию, которые, как указывалось выше, администрируются Государственной таможенной службой Кыргызской Республики. В то же время, есть мнение, что следует исключить из расчёта налоговой нагрузки такие платежи, как налог на добавленную стоимость, подоходный налог с физических лиц, отчисления во внебюджетные социальные фонды. Аргументом здесь служит характеристика этих налогов как транзитных, нейтральных для предприятия, перелагаемых, как правило, на конечных потребителей. Но нейтральных для предприятия налогов просто не существует: они реально уплачиваются за счёт текущих денежных поступлений.

Рассмотрим изменение структуры налоговой нагрузки по угольной и нефтегазовой промышленности в результате налоговой реформы 2009 г. (см. табл. 3).

Вид налога	Угольная и нефтегазовая отрасль				Цветная металлургия

Таблица 3. *Структура налоговых доходов в основных отраслях экономикиКыргызской Республики в 2008 и 2011 гг.* **Источник**: *рассчитано по данным ГНС при Правительстве Кыргызской Республики*

Структура налоговой нагрузки изменилась после реформирования, прежде всего, в связи с введением налога с продаж, составивший относительно большой удельный вес – 19,7 процентов. Но, как и в 2008 г., основную долю в налоговой нагрузке этой отрасли экономики составляет НДС на внутреннюю продукцию (36,4 процента). Почти в 5 раз увеличилась доля налога на доходы нерезидентов.

Следует отметить, что специфику цветной металлургии Кыргызской Республики определяют ЗАО «Кумтор Голд Компани» (КГК) и ЗАО «Кумтор Оперейтинг Компани» (КОК), налоговая нагрузка которых составляет около 90 процентов всех налоговых доходов цветной металлургии Кыргызской Республики. Деятельность данной организации в экономике Кыргызской Республики имеет большое значение. По предварительным данным Национального статистического комитета КР доля «Кумтора» в ВВП страны в 2011 году составила 11,7 процента; доля «Кумтора» в общем объеме промышленного производства - 26,1 процента; доля золота в общем объеме экспорта в 2011 году составила 51,1 процента. Поэтому налогообложение с Кумтор осуществляется по особому контракту – *налог на валовой доход от Кумтор –* налог на основе отдельного соглашения. Соглашение по налогу на валовой доход отКумторпредусматривает перечисление 17 процентов (при подписании соглашения в 2009 г. ставка составляла 13 процентов) от валового дохода деятельности ЗАО КГК и ЗАО КОК от продажи золота и серебра без зачетов. Эти платежи не подпадают под действие НК КР. В соответствии с бюджетной классификацией КР определены как налоги, не распределяемые по категориям.

Все остальные платежи – таможенные сборы, налог с продаж, НДС, акцизный и подоходный налог с работающих, а также лицензионные платежи и отчисления в Социальный фонд – эти организации платят в соответствии с действующим налоговым законодательством Кыргызской Республики. Помимо этого, они производят уплату одного процента от валового дохода в Фонд развития Иссык-Кульской области.

По данным СМИ государственная комиссия по «Кумтору» в одном из своих заключений сделала выводы, что если бы «Кумтор» работал с 2009 года на основе общего налогообложения, то за три последних года бюджет Кыргызстана получил бы на 100 млн. долларов меньше. Между тем определение особых условий налогообложения инициировано самим «Кумтор». Представляется, что особый статус налогообложения имеет политическую подоплёку. Возможно, это имеет и экономические основания, что требует проведения более глубокого и всестороннего анализа, чем было до сих пор. Однако общий анализ можно провести по статистическим показателям. Так, сравнение доли чистой прибыли, как составного элемента ВДС, по *горнодобывающей промышленности* и *сфере торговли и ремонту автомобилей, бытовых изделий и предметов личного пользования* находится в соотношении: в 2008 г. 4,1 и 91 процент, в 2011 г. 41,5 (рост за счёт снижения долей прочих налогов и потребления основного капитала) и 91,1 процент (авторские расчёты по данным СНС КР). Таким образом, можно заключить, что эти вопросы налогообложения являются проблемными и требуют скорейшего разрешения.

Налоговая нагрузка на предприятия пищевой промышленности, кроме алкогольной и табачной, как видно из таблицы, усилилась вследствие введения налога с продаж, доля которого составила более 40 процентов, в два раза увеличилась доля налога на добавленную стоимость. Такие изменения повлекли за собой снижение налога на прибыль и подоходного налога. В 2 раза повысилась доля НДС на производимую продукцию, что связано с ростом налогооблагаемой базы, как с изменением условий налогообложения, так и в связи с ростом объёма продажи. Значительное снижение доли земельного налога объясняется пересмотром в сторону уменьшения зональных корректировочных коэффициентов, учитывающих месторасположение субъекта экономики в населённом пункте.

Структура налоговых доходов по лёгкой промышленности, являющейся флагманом кыргызской экономики, по определению экспертов-экономистов, не внушает оптимизма. Определим вклад этой отрасли промышленности в налоговых поступлениях, администрируемых ГНС КР. До введения новой редакции Налогового кодекса он составлял 33,4 процента, после – 10,7 процента, в 2011 г. – 11,1.

А к 2011 г. возрос не намного – 13,4 процента. Структура налогообложения в лёгкой промышленности более чем на 70 процентов сложилась из вновь введённого налога с продаж. Вызывает вопрос отсутствие корреляции между этим налогом и НДС, налоговая нагрузка по которому сократилась в 1,7 раза, а доля в общей сумме налоговых платежей – более чем в 5 раз.

В производстве строительных материалов изменение структуры налоговых платежей вызвано также налогом с продаж. Но и тем, что в 2008 г. имело место большая переплата по НДС, зачтённая в последующий год.

В электроэнергетике изменения в структуре налоговых взносов коснулись только налога на прибыль, доля которого несколько сократилась за счёт увеличения платежей по НДС и налога с продаж.

Строительство – тот сектор экономики, который в Кыргызской Республике, на наш взгляд, обладает большим налоговым потенциалом. Некоторое усиление налогового администрирования, предусмотренного новой редакцией Налогового кодекса, позволило, по нашему мнению, повысить удельные веса налога на прибыль и подоходного налога более чем в 2 раза, при этом значительную долю в структуре налоговых платежей составил вновь введённый налог с продаж.

Для торговли и предприятий питания основными налоговыми платежами являются косвенные налоги: если в 2008 г. более 60 процентов всех платежей составлял только один налог - НДС, то после реформирования налоговой системы два налога – НДС и налог с продаж – составили уже почти 76 процентов, причём на долю налога с продаж приходится большая доля в размере 41,6 процентов.

Структура налоговых отчислений сектора финансовых услуг сформирована в основном из прямых налогов: налогов на доходы и прибыль (95,3 процента в 2008 г.) – основную долю занимал налог на доходы нерезидентов (34,3 процента), затем налог на прибыль (31,5) и подоходный налог (29,5). После внесения изменений в налоговую систему налоговое бремя в финансовом секторе распределяется более равномерно, однако превалирование доли прямых налогов в структуре налоговых изъятий осталось (37,3:62,8).

4 Выводы

Развитие экономики Кыргызской Республики сопровождается постоянным совершенствованием и системы налогообложения, которое требует проведения анализа эффективности предполагаемых фискальных мер. Исходя из этого проведены расчёты показателей структуры и уровня налогового бремени в отраслевом разрезе, по которым можно оценить эффективность развития налоговой системы в Кыргызской Республике.

В результате проведён анализ большого цифрового массива, отражающего налоговую нагрузку по разным отраслям экономики, и выявлено:

1. Основное налоговое бремя несёт промышленность, внутри которой обнаружена большая неравномерность: высокую налоговую нагрузку в Кыргызстане несёт горнодобывающая отрасль, по которой в анализируемый период коэффициент налоговой нагрузки составил в среднем 30, в то время как в обрабатывающей промышленности он один из самых низких (0,68) наряду со здравоохранением (0,63).

2. Далее по коэффициенту налоговой нагрузки располагаются секторы финансовых услуг(2,17), государственного управления (1,76), транспорт и связь (1,58). Наименьшую налоговую нагрузку имеет сельскохозяйственный сектор экономики, где налоговая нагрузка в анализируемый период составил от 0,3 до 1 процента.

3. Налоговая нагрузка в горнодобывающей промышленности после реформирования выросла на 18,2 процента, доля же валовой добавленной стоимости выросла только на 0,3 процента.

4. Снизилась налоговая нагрузка после реформирования налоговой системы КР в 2009 г. по предприятиям обрабатывающей промышленности: доля валовой добавленной стоимости выросла на 7 процентов, а налоговая нагрузка снизилась на 0,4 процента.

5. Снижение налоговой нагрузки отмечается и по предприятиям питания, гостиницам (0,4 процента), строительным организациям (0,8 процента), где традиционно преобладает малое предпринимательство.

6. Структура налоговой нагрузки изменилась после реформирования, прежде всего, в связи с введением налога с продаж. Высока доля в налоговой нагрузке практически всех отраслей экономики также и НДС (на внутреннюю продукцию). Доли налога на прибыль и подоходного налога меняются значительно по отдельным секторам экономики, изменения по ним вызваны не переменами в схеме налогообложения, а исключительно усилением налогового администрирования, предусмотренного новой редакцией Налогового кодекса.

7. При определении путей дальнейшего реформирования следует исходить из выявленного неравномерного распределения налоговой нагрузки, перераспределения её на сферу торговли и услуг, на предприятия обрабатывающей промышленности, кроме предприятий по переработке сельскохозяйственной продукции.

8. Развитие налогообложения должно сопровождаться ростом налогового потенциала соответствующих отраслей экономики, что не может быть обеспечено без сбалансированности налоговой нагрузки и отраслевой структуры ВДС.

9. Реформирование налоговой системы может идти по пути гармонизации соотношения прямых и косвенных налогов (например, через аннулирование нового оборотного налога – налога с продаж с одновременным повышением ставки НДС), введения прогрессивного налогообложения по прямым

налогам (предусматривающего элемент сверхдоходности и расслоение общества), пересмотра налоговых преференций, условий и методов их предоставления, перечня облагаемых и освобождённых поставок, а также принципов определения подакцизных товаров.

10. Конкретизация путей совершенствования налогообложения и поиск повышения эффективности фискальной политики в Кыргызской Республике требует проведения дополнительного анализа структуры ВДС и ВВП по видам доходов.

О влиянии интеграционных процессов на агарный рынок Казахстана

The effect of integration processes on agricultural market of Kazakhstan

Prof. Dr. Gani Kaliev (Academy of Agricultural Sciences, Kazakhstan)

Ph.D. Candidate Nikitina Galina (Kazakh Scientific Research Institute, Kazakhstan)

Abstract

In the article the authors describe the process of interstate integrat on and show the changes it causes in the agro-food market in Kazakhstan. It is noted that current situation of national food market is unstable, the market is out of balance, that causes price increase in all phases of product movement. The authors also examine the changes of the external trade flows, which clearly defined the growth of imports from the Customs Union countries, which effect is increasing by many kinds of raw materials and food products. The demand is not provided by the domestic commodity producers, in particular on industrial products, as well as existing high wholesale and retail prices in the domestic market, promote the increase its attractiveness and growth of imports. Russian Federation is the main trading partner. The role of Belarus is seen on meat-milk and sugar markets. But the trade balance with both countries on major goods is negative. The surplus is preserved only on grain, vegetables and fruits. As a result, relative balance of supply and demand on food market in Kazakhstan is largely supported by the import of food products, and first of all, industrial products. Current changes are mainly formed under the influence of internal factors, however, and the integration processes affect the status of national market.

1 Введение

Для Казахстана построение интеграционных объединений имеет особое значение, поскольку его участие в международной экономической интеграции является условием обеспечения высокого экономического роста, вхождения его в мировое сообщество в качестве полноправного члена. Республика Казахстан является одним из первых лидеров и активным последовательным организатором интеграционных процессов на постсоветском пространстве. Согласно ранее звучащим заявлениям казахстанских политиков, ни одна из стран нынешнего мира не может существовать обособлено, а потому интеграционные процессы являются жизненно необходимыми. Вместе с тем, власти Казахстана вполне осознают поджидающие нас на интеграционном пути риски. Поэтому во избежание негативных моментов и необходимы четко продуманные и наперед просчитанные ходы.

Особую важность исследованиям процессов интеграции придает тот факт, что в центре внимания оказываются такие существенные проблемы как обеспечение устойчивости развития важнейшей отрасли экономики интегрирующийся стран – аграрной. Выявление положительных процессов, с точки зрения их способности решить данные проблемы, так и отрицательных - усиливающих зависимость от импортных поступлений. Интенсивная интеграция в рамках Единого экономического пространства является наиболее перспективной тенденцией в современный период. Президент Республики Казахстан Н.А. Назарбаев в своем очередном ежегодном послании народу отметил: «Таможенный союз – очень прагматичный проект, решающий экономические задачи наших стран. Единое экономическое пространство (ЕЭП) открывает огромный рынок сбыта для казахстанского бизнеса» (Назарбаев Н.А., 2011).

Поскольку процесс интеграции в межгосударственные объединения изменяет конкурентную среду на товарных рынках и в первую очередь на продовольственном, то дифференциация стран по природным и экономическим условиям производства продовольствия, а также по величине и структуре потребительского спроса на него диктует различные требования к аграрному сектору производства, оказывая при этом различное влияние его развитие.

2 Основы формирования Единого экономического пространства

ЕЭП формируется постепенно и поэтапно с учетом основных принципов и правил ВТО, что означает постепенное повышение уровня интеграции, через синхронизацию осуществляемых сторонами преобразований в экономике, совместных мер по проведению согласованной экономической политики, гармонизацию и унификацию законодательства в сфере экономики, торговли и по другим направлениям,

с учетом общепризнанных норм и принципов международного права, а также опыта и законодательства Европейского союза.

Ввиду множественности различий в уровнях экономического и социального развития, а также в степени единообразия действующего в государствах национального законодательства, формирование Единого экономического пространства происходит в соответствии с заявленными принципами разноуровневой и разноскоростной интеграции, что означает свободу определения государством направления развития интеграции и интеграционных мероприятий, в которых оно будет принимать участие, а также объем такого участия (Соглашение о формировании ЕЭП, 2006).

Основа перехода государств к Единому экономическому пространству условно заложена в едином перечне международных соглашений, устанавливающих основные единые принципы и нормы регулирования интегрируемых сфер экономической жизни. Унификация нормативно-правовой базы, отвечающей национальным интересам каждого государства-участника ЕЭП, является обязательным условием эффективного формирования и развития этого межгосударственного объединения. Поскольку противоречия между странами-участниками могут возникнуть из-за различной направленности политических и экономических интересов суверенных государств. Особое место занимают модельные акты, которые разрабатываются в целях создания единого правового пространства, сближения законодательных решений его государств-участников по наиболее важным, принципиальным вопросам, требующим унификации правового регулирования, устранения противоречий и расхождений.

Использование понятия «согласованная политика» демонстрирует сложность и неготовность в настоящий момент осуществить переход к единой налоговой, денежно-кредитной и валютно-финансовой политике, что совершенно определенно дает нам право говорить о наличии определенных этапов более глубокой интеграции уже на стадии формирования Единого экономического пространства. Поэтому принятые соглашения, касающиеся сферы экономической политики, предусматривают поэтапное введение в действие их положений. Временной период становления межгосударственной экономической организации вроде ЕЭП, по мнению экспертов, исчисляется от 6 до 10 лет (Шибутов М., 2012). В итоге получается, что окончательное формирование ЕЭП произойдет только к 2020 году. Поскольку для развития всей нормативной базы по ЕЭП должны быть еще разработаны почти 70 новых соглашений.

В настоящее время проявляется двойственный характер влияния ЕЭП на аграрный сектор Казахстана. С одной стороны, расширяется поле конкуренции и конкурентная среда, что даст импульс отечественным предприятиям для повышения конкурентоспособности, и, в конечном счете, расширения рынка сбыта своей продукции. С другой стороны, единый экономический режим функционирования производства приведет к усилению присутствия на национальном рынке российской и белоруской продукции, то есть создаст угрозу для поддержания продовольственной безопасности.

Для нашей республики актуальное значение имеет диверсификация и создание совместных производств – это дополнительные рабочие места, технологии, инвестиции. ЕЭП развило и углубило тенденцию на сближение экономик. Начался переток капиталов, а с ними и рабочей силы.

ЕЭП формируется с учетом основных принципов и правил ВТО, что означает постепенное повышение уровня интеграции, через синхронизацию осуществляемых сторонами преобразований в экономике, совместных мер по проведению согласованной экономической политики, гармонизацию и унификацию законодательства в сфере экономики, торговли и по другим направлениям, с учетом общепризнанных норм и принципов международного права, а также опыта и законодательства Европейского союза.

3   Оценка состояния аграрного сектора и рынков Казахстана

Социально-экономическое положение казахстанского аграрного сектора при осуществлении широкой государственной поддержки проявляет темпы роста. Объем валовой продукции сельского хозяйства за последние 10 лет вырос в 4,2 раза (в 2011 г. по сравнению с 2001 г.). При этом значительное влияние оказало повышение цен (в 2,8 раза), поэтому индекс физического объема валовой продукции за это время составил только 1,4 раза, что опережает рост численности населения республики.

Посевная площадь сельскохозяйственных культур увеличилась на 31%. Основу ее занимают зерновые культуры - 77%, и в первую очередь пшеница (65%). Следует отметить, что в 2010-2012 гг. посевы зерновых несколько сократилась (на 6%) за счет пшеницы, ячменя, овса.

Валовой сбор зерновых культур в 2011 г. достиг 26,9 млн, но в 2012 г. отмечалась сильная засуха и производство продукции растениеводства было низким – зерна 12,9 млн тонн. Тем не менее, с учетом переходящих запасов зерна, которые на 01.01.12 г. составили 20,7 млн, в том числе продовольственного зерна – 17,4 млн тонн, данные объемы позволили обеспечить внутренние потребности страны и экспортный потенциал порядка 7,8 млн. тонн (в основном реализовывалась продукция предыдущего года). В русле диверсификации производства в последние годы значительно расширяется производство

масличных культур - в 5,5 раза, что повысило самообеспеченность республики растительным маслом (Сельское, лесное и рыбное хозяйство в Республике Казахстан, 2012).

Темпы роста производства продукции растениеводства достаточно высоки. Однако ясно видна и значительная колеблемость урожаев в зависимости от погодных условий, что снижает устойчивость предложения продукции на рынок. Вместе с тем в структуре посевов все еще не достаточно зернофуражных и крупяных культур, сахарной свеклы, сокращаются площади и производство кормовых культур, снижается производство и фруктов.

Более устойчиво предложение животноводческой продукции, которое обеспечивается в основном ростом поголовья - за последние десять лет в 1,6 раза. Наибольшие темпы отмечаются в овцеводстве и птицеводстве. Следует отметить, что проведенное МСХ РК в 2011-2012 гг. переучет поголовья отдельных видов скота, показал, что их численность в хозяйствах населения преувеличена. В итоге поголовье КРС сократилось на 7,7%, свиней- 10,4%. Это привело к замедлению темпов предложения продукции животноводства на рынок.

Несмотря на все проблемы, производство большинства видов сельскохозяйственной продукции в расчете на душу населения в Казахстане наращивается (таблица 1).

Как видим, уровни среднедушевого производства в Казахстане превышают аналогичный показатель Беларуси и России по продовольственному зерну (даже в условиях жесткой засухи). Российский уровень превышен по овощам, мясу, молоку, но значительно ниже по большинству продуктов белорусских показателей. Производя в 2 раза больше зерна, чем в РБ, наша республика производит, практически в 1,5 раза меньше продукции животноводства в расчете на душу населения. Это позволяет говорить о возможном наращивании присутствия белорусской продукции на нашем рынке.

Продукция	Казахстан				Справочно (2011 г.)	
	2000 г.	2005 г.	2011 г.	2012 г.	Беларусь	Россия
Зерно	777	910	1638	775	886	657
в т.ч. продовольственное	634	843	1410	624	343	489
Картофель	114	116	188	188	812	228
Овощи	104	142	177	180	211	103
Сахарная свекла	18	20	12	9	475	290
Мясо	43	51	57	56	87	43
Молоко	251	314	315	289	690	222
Яйцо (шт.)	114	166	225	219	380	287

Таблица 1 – Производство сельскохозяйственной продукции в Казахстане, кг на душу населения

(рассчитано по данным Казахстан и страны СНГ, 2013)

По продукции пищевой промышленности сохраняются недостаточные объемы переработки сельскохозяйственного сырья - перерабатывается мяса – 26%, молока – 35%, пшеницы – 39%, овощей – 2%. Поэтому мощности перерабатывающих предприятий используются не рационально, сложился низкий коэффициент их использования (мукомольные заводы – 41,4%, крупяные заводы – 30,8, молочные и мясные предприятия – 29-49%). Это приводит к недостаточной выработке продовольствия, уровень которого значительно ниже, чем в других странах Таможенного союза. Явное преимущество имеется по производству муки и макаронных изделий.

В итоге процесс интеграции в межгосударственные объединения изменяет конкурентную среду на товарных рынках и влияет на развитие продовольственного рынка (таблица 2).

Позитивные факторы (возможности)	Негативные факторы (ограничители)
Рост численности населения республики	Потребление продовольствия ниже научно обоснованных норм
Рост номинальных денежных доходов населения	Энергетическая и пищевая ценность потребляемого набора продуктов ниже нормативного уровня
Увеличение покупательной способности населения	Рост цен на факторы производства и дефицит инвестиционных ресурсов в сфере производства продовольствия
Увеличение потребления основных продуктов питания	Индекс цен на продовольствие промышленной выработки по-прежнему опережает рост цен на сельскохозяйственную продукцию
Высокая емкость рынка, расширение спроса, в том числе производственного характера	Высокий удельный вес мелкотоварного и низкоэффективного сектора хозяйствования, низкий уровень товарности сельскохозяйственной продукции,

	(исключая зерно)
Рост цен на мировых рынках повышает конкурентоспособность отечественной продукции	Низкий уровень загрузки перерабатывающих предприятий и узкий ассортимент выпускаемой продукции
Отсутствие ограничений по размерам сельхозугодий, что дает дополнительные ресурсы в случае роста спроса на продовольствие	Недостаточная конкурентоспособность отечественного продовольствия
	Недопустимо высокий объем импорта мяса птицы, мясо-молочных продуктов, сахара, растительного масла, фруктов, овощей и продуктов их переработки

Таблица 2 - Позитивные и негативные факторы развития агропродовольственного рынка Казахстана

Таким образом, усиливается влияние внешних факторов на обеспечение продовольственной безопасности Казахстана и продовольствие становиться основной в международных отношениях. В конечном счете, состояние продовольственной безопасности определяется сочетанием, взаимным влиянием внутренних и внешних факторов. И если в целом продовольственная безопасность в 2012 г. была обеспечена на 67% (Показатели государственной программы по индустриально-инновационному развитию, 2012), то степень самообеспеченности по различным продуктам существенно меняется.

4 Основные торговые взаимоотношения со странами ЕЭП

Сложившиеся на продовольственном рынке Казахстана относительное равновесие спроса и предложения во многом поддерживается импортом продуктов питания. Сальдо торгового баланса складывается отрицательное - 2 млрд. долл. При этом значительными темпами наращивается импорт продовольствия из стран ЕЭП (рисунок 1).

В целом в структуре импорта преобладает продукция глубокой переработки, отмечается чрезмерное давление на национальный рынок импорта белого сахара, при этом отечественное производство продолжает сокращаться - с 384 тыс. до 271 тыс. т за последние три года (Экспорт и импорт Республики Казахстан в разрезе товар-страна, 2009, 2010, 2011, 2012).
Рисунок 1 – Импорт продовольствия и сельскохозяйственного сырья в Казахстан, млн. долл.

Растет импорт растительного масла, и в первую очередь, подсолнечного, не смотря на принимаемые меры по развитию производства масличных культур и их переработки. Тем не менее, спрос на эту продукцию превышает отечественное предложение. Ввоз растительного масла в страну обусловлен рядом причин. Во-первых, недостаточной самообеспеченностью товаром внутреннего рынка из-за недостаточно эффективного использования отечественного сырья, и в частности, семян хлопка, сафлора.

Особое значение на нашем рынке имеет консервированная импортная продукция (овощные, фруктовые, мясные консервы), импорт которых за 2009-2012 гг. значительно вырос.

Более высокий удельный вес занимает импорт молочной продукции . В его ассортименте превалирует молоко и сливки сгущенные и не сгущенные, а также сыры, сливочное масло и молочные жиры. Импорт сухого молока, сгущенных и не сгущенных молочных продуктов растет высокими темпами. При этом следует отметить, что импорт из стран Таможенного союза сливочного масла сократился, что связано с падением спроса на эту продукцию в республике. Кроме того, значителен ввоз пахты, йогурта, кефира и прочей продукции.

Основным торговым партнером является Российская Федерация. Роль Беларуси проявляется на мясомолочном и сахарном рынках. Но при этом сальдо торговли с обеими странами складывается отрицательное. Положительное сальдо сохраняется только по зерну, овощам и фруктам (рисунок 2).
Рисунок 2 - Сальдо торговли агропромышленной продукцией с Россией и Беларусью (2011 г.), тыс. тонн

5 Оценка факторов влияния интеграционных процессов на развитие агропродовольственного рынка Казахстана

На рынке мяса птицы согласно общемировой тенденции, а также вследствие более низких цен, происходит изменение потребительских предпочтений, в сторону увеличения потребления белого мяса птицы. За период 2010-2012 гг. потребление мяса птицы на душу населения возросло на 35%, достигнув величины 16 кг, тогда как потребительский спрос на красное мясо понизился на 7%. В 2012 г. розничная цена 1 кг мяса птицы на рынках республики была ниже говядины на 52%, свинины - 37,8, баранины - 50%.

Важным фактором, влияющим на устойчивость спроса на мясо птицы, является конкурентоспособность отечественного товара, которая в последние годы по отношению к импортируемому из стран ТС товару, повышается. Так, если в 2009 г. индекс конкурентоспособности составлял 0,62, то в 2012 г. уже 1,03. Это следствие снижения стоимости отечественного товара на 20%, при одновременном увеличении стоимости импортируемого товара (на 28,5%). То есть, на внутреннем рынке по стоимости казахстанский товар становится конкурентным российскому, белорусскому.

Однако ориентация на импортную продукцию из стран ЕЭП вызывает снижение прибыли отечественного товаропроизводителя и его мотивации к ведению расширенного воспроизводства, и, следовательно, к насыщению рынка конкурентоспособным по цене и качеству товаром.

Не обеспеченный отечественным товаропроизводителем высокий спрос на мясо птицы, а также сложившиеся более высокие оптовые и розничные цены на внутреннем рынке, способствуют усилению его привлекательности и росту импорта. Резюмируя вышесказанное можно отметить, что на рынке мяса птицы сложилась ситуация, во многом зависящая от импорта (таблица 3).

Характеристика	Внешние факторы	
	позитивные	негативные
Рост спроса, сопровождающийся низкой насыщенностью отечественным товаром (на 54%), ростом импорта, в том числе и из стран ТС и повышением оптовых и розничных цен	физическое насыщение рынка продукцией, позволяющее удовлетворить спрос, согласно изменению потребительских предпочтений; более высокое качество товара, поставляемого из стран ТС; рост конкуренции и привлекательности продукта, вызвавшие повышение конкурентоспособности отечественного товара	чрезмерное давление на отечественного товаропроизводителя, имеющего высокую локальную концентрацию производства при неразвитой логистической связи, сдерживает развитие отечественного производства; более высокое качество продукции из стран ТС, вызывает переориентацию спроса, снижает емкость рынка для отечественной продукции и доходность производства

Таблица 3– Характеристика самообеспеченности мясом птицы и влияние внешних факторов на ее состояние

Факторы, определившие высокую импортную зависимость рынка колбасных изделий в основном характеризуются, низкой насыщенностью отечественным товаром, ростом розничных цен и стабилизацией потребительского спроса. То есть имеют внутреннее происхождение, связанные с сосредоточением производства мяса преимущественно в мелкотоварных хозяйствах населения, не создающих товарных партий качественного сырья для промышленной переработки, не применяющих передовые технологии содержания скота. В итоге за период 2009-2011 гг. цены на говядину повысились на 23,2%, на конину на 21%, на свинину снизились на 7,3%, а на колбасы вареные на 33,5%, на варено-копченые на 58,4%.

Это при низкой платежеспособности основной части населения республики сдерживает спрос на отечественную продукцию и диктует необходимость сокращения производства, которое снизилось на 10%.

Ввоз же более дешевых колбас из России - ниже отпускной цены отечественных предприятий-производителей на 62,6%, позволил ее товаропроизводителям занять лидирующее место на национальном рынке - доля ее товара в емкости внутреннего рынка достигла 45,4%. Ее конкурентные ценовые преимущества обусловлены производством колбас с преимущественным использованием более дешевого мороженого импортного сырья.

Спрос на сливочное масло снижается. Поскольку высокая закупочная цена коровьего молока (за последние три года она повысилась на 47,9%) сдерживает выработку животного масла и провоцирует производство спредов, то есть масла на основе растительных жиров. Цены на эту продукцию не отражают качественные характеристики товара, поскольку сложившаяся потребительская цена в размере 1240 тенге за 1 кг не отвечает по качеству натуральному сливочному маслу.

Кроме внутренних факторов на ситуацию на рынке оказывают влияние и внешние факторы. Более низкая цена импортируемого из стран ТС товара позволяет завоевывать значительную долю национального рынка. В 2011 году ее величина составляла 4328,5 долл. за тонну, что ниже отпускной цены отечественного товаропроизводителя на 17,8%, в том числе из России на 32,7%. Весомая доля продукции из стран Таможенного союза занимает в емкости рынка 23,1%, в том числе товара из Беларуси 15%, а из России 8,3%.

При этом явно выражены конкурентные преимущества белорусского сливочного масла. Из России же преимущественно импортируются спреды, по цене 3483,2 долл. за тонну. Так как отпускная цена российских предприятий-производителей сливочного масла составляет 6585 долл. за тонну или выше стоимости экспортируемого в Казахстан товара в 1,9 раза.

Следовательно, самообеспеченность спроса на сливочное масло низка (66%) и находится под высоким влиянием внешних факторов (таблица 4).

Характеристика	Внешние факторы	
	позитивные	негативные
Сливочное масло		
При снижении спроса, отмечается сокращение отечественного и импортного предложения, замещение натуральной продукции спредами и рост розничных цен	более высокая ценовая конкурентоспособность товара импортируемого из стран Таможенного союза, позволяет сдерживать падение спроса; усиление конкурентной борьбы, создающей импульс для совершенствования отечественного производства	поставка спредов как сливочного масла; высокие цены на не натуральную продукцию не соответствующие его качеству; несовершенство системы ценообразования на импортную продукцию, что не позволяет малообеспеченным слоям населения удовлетворить спрос хотя бы на не натуральную продукцию
Сыры		
Увеличение самообеспеченности, вызванное стабилизацией спроса на основе роста цен, а также отечественного предложения продукции	поставки более конкурентоспособного импортного товара, позволяющего обеспечить физическую насыщенность рынка; высокие потребительские качества импортного сыра, приводят к переориентации спроса	ввоз сырного продукта из России, изготовленного с использованием растительного масла; несовершенство системы ценообразования, не соответствующей принципу цена : качество

Таблица 4 – Характеристика самообеспеченности молочной продукцией и влияние внешних факторов на ее состояние

Стабилизация спроса отмечается на различные сыры, при этом ситуация с самообеспеченностью растет, так как увеличивается отечественное предложение (отмечается рост производства невыдержанных и плавленых сыров) при стабилизации импорта из стран Таможенного союза. При этом цены на продукцию повышаются, что и является основным фактором снижения спроса – так цена предприятий-производителей сыра повысилась на 25,5%, оптовая цена увеличилась на 25,9%, а розничная поднялась на 22,4%, что вызвано недостаточным предложением товарных партий сыро-пригодного молока и ростом издержек.

В итоге сыры, импортируемые из стран ТС, дешевле отпускной цены отечественных товаропроизводителей на 36,1%. Однако средняя отпускная цена сычужного сыра выработанного на российских предприятиях достигает 6156 долл. за тонну или выше стоимости поступающего на казахстанский рынок продукта на 38,5%. Такое не соответствие связано с более низкой закупочной ценой молока в отдельных регионах России, а также осуществлением ввоза сырного продукта, изготовляемого с добавлением растительного масла. В итоге доля ТС в емкости внутреннего рынка достигла 20,3%, что указывает на высокие конкурентные преимущества данного товара, выраженные в более высоком качестве, а по стоимости их товар дешевле отечественного.

В настоящее время Россия претендент на занятие существенной ниши на казахстанском рынке сыров. Однако развитие конкурентной борьбы – важный фактор, влияющий на ситуацию рынка и дающий импульс развитию отечественного производства.

Низкий уровень обеспечения спроса внутренним производством сложился по плодоовощной консервированной продукции. Серьезным фактором, влияющим на изменение ситуации в отечественном овощеводстве, является ценообразование на внутреннем потребительском рынке, на что в свою очередь существенное влияние оказывает организация логистики и импортные поставки – так среднегодовые темпы прироста средней цены реализации снизилась на капусту с 24,0 до 13,6%, на помидоры с 31,2 до 16,7%, на морковь с 39,2 до 10,8%, а отечественное производство свежих овощей увеличилось на 17,1%. В итоге спрос на рынке овощей и продукции их переработки имеет тенденцию роста.

При этом следует отметить, что свежих овощей из Таможенного союза поступает не много (22 тыс. т), но эти страны играют значительную роль на рынке консервированных овощей, импорт которых за последние три года вырос в 1,3 раза. Основным поставщиком является Россия. Значительные объемы импорта консервированной продукции являются следствием состояния отечественной промышленности, которая на фоне низкой товарности и высокой сезонности производства сырья, отсутствия необходимых для переработки сортов находится на низком уровне, вырабатывая всего по 0,5 кг на жителя республики в год.

Отсутствие надежных каналов реализации овощей приводит к экономически необоснованным ценам на сырье и значительно удорожает готовую продукцию, снижая ее конкурентоспособность. Функциони-рование консервных предприятий осложняется и не отрегулированностью экономических отношений между отраслями. В результате в межсезонный период спрос удовлетворяется за счет импорта. Только продукция ТС занимает в емкости национального рынка более 16%.

Подобное можно отнести и к фруктовым консервам, джемам, варенью, производство которых в республике чрезвычайно низкое – 0,04 кг. Имеющийся спрос населения зависит от импорта этой продукции. Из стран Таможенного союза поступает значительное количество фруктовых консервов, занимающих в емкости казахстанского рынка 53% (таблица 5).

Характеристика	Внешние факторы	
	позитивные	негативные
Дефицит отечественного производства, не обеспечивающего растущий спрос населения на консервированные овощи и фрукты, что вызывает рост цен	оптимальное соотношение цены и качества импортного товара, формирует повышение спроса внутри республики	высокая ценовая конкурентоспособность и значительные объемы импорта консервированной продукции, особенно фруктовой, является одним из условий сдерживания развития отечественного производства; при высоких качественных характеристиках импорта происходит переориентация спроса

Таблица 5 - Характеристика самообеспеченности плодоовощной консервной продукцией и влияние внешних факторов на ее состояние

Одной из причин низкого развития выработки фруктовых консервов, является отсутствие положительных тенденций в развитии садоводства и чрезвычайно низкая самообеспеченность фруктами – за последние три года наблюдаем значительное снижение доли отечественной продукции в насыщении внутреннего рынка, которая в 2011 г. составила всего 37,0%.

При этом отмечаем усиление интеграционных связей Казахстана со странами ТС. В 2011 г. на национальный рынок из стран Таможенного союза поступило 18,1 тыс. тонн фруктов, против 1,5 тыс. тонн в 2009 г. Вся продукция завозится из России.

Тем не менее, значительной роли эти связи, так же как и на рынке свежих овощей не играют, поскольку основная масса импортных фруктов поступает из Центрально азиатских стран и Китая.

Однако учитывая состояние садоводства в Казахстане, можно предположить, что импорт его продукции будет наращиваться, в том числе и отдельных видов - из Таможенного союза.

Серьезная ситуация складывается по обеспеченности республики сахаром. Весомое влияние на изменение соответствия спроса и отечественного предложения, в сторону значительного увеличения зависимости внутреннего рынка оказал высокий рост цен на мировом рынке на сахар-сырец. В 2011 году по отношению к 2009 году цена за 1т импортируемого в республику тростникового сахара-сырца повысилась на 56%, что вызвало резкий рост цены отечественных производителей белого сахара (на 60,1%).

Кроме того, выросли объемы поступления более конкурентоспособного сахара-песка из России и Беларуси. Коэффициент соотношения цены белого сахара отечественного товаропроизводителя к российскому товару составил 1,39 и белорусскому 1,31. Доля импорта белого сахара из России в потреблении достигла 31,5%, а из Беларуси только 4,3%, то есть их влияние на рынок принимает чрезвычайный характер (таблица 6).

Характеристика	Внешние факторы	
	позитивные	негативные
Белый сахар		
Значительные диспропорции спроса и предложения отечественного товара	высокие объемы импорта белого сахара из стран ТС, обеспечили физическое насыщение рынка; низкие цены на импортный белый сахар, позволили сохранить экономическую доступность товара	рост цен на мировом рынке на сахар-сырец, снижает эффективность и конкурентоспособность отечественного сахара; высокие объемы импорта готового сахара, оказывают понижающее действие на отечественное производство
Подсолнечное масло		
Высокий спрос на подсолнечное масло не в полной мере удовлетворяется отечественным предложением, что вызывает рост цен на рынке	высокая конкурентоспособность российского товара создает импульс развитию отечественного производства; поставки дешевого импорта, занимающие в емкости рынка более 38%, сдерживают рост цен отечественных производителей, сохраняя экономическую доступность товара	значительные объемы импорта дешевого подсолнечного масла не позволяют в полной мере задействовать имеющиеся мощности масложировой промышленности

Таблица 6 - Характеристика самообеспеченности сахаром белым и подсолнечным маслом и влияние внешних факторов на ее состояние

В основе этого лежит высокий уровень эффективности сахара-песка вырабатываемого из свекловичного сырья, поскольку стоимость свекловичного сырья приобретенного перерабатывающими предприятиями составила 480,2 долл. за тонну, что значительно ниже (на 28,3%) стоимости тростникового сахара-сырца, закупаемого казахстанскими заводами. В итоге полная себестоимость российского сахара-песка выработанного из свекловичного сырья в 2010 г. составила 737,2 долл. за

тонну, что позволило экспортировать в Казахстан белый сахар по стоимости 799,6 долл. за тонну, обеспечив российским товаропроизводителям средний уровень рентабельности в размере 3,5%.

В результате развития конкуренции, позиции казахстанских производителей снизились, поскольку наращивание ввоза белого сахара из РФ с 0,6 до 118 тыс. т, оказало снижающие влияние на цены, - которые стали понижаться до 158 тенге за кг или на 77% к уровню 2010 г. В итоге производство сахара-песка в республике сократилось на 23,9%.

Определяющее влияние на устойчивость конъюнктуры национального рынка оказывают предложение семян масличных культур и цены, поскольку именно низкая урожайность подсолнечника в республике является основой высокой себестоимости и стоимости масличного сырья, вызывая тем самым повышение цены отечественного производителя подсолнечного масла. Например, за период 2009-2011 гг. при снижении урожайности подсолнечника на 19,3% и росте затрат на возделывание 1 га посевов на 14,8%, себестоимость 1 ц семян подсолнечника в сельхозформированиях увеличилась на 42,3%, а цена их реализации возросла на 43,8%. Цена выработанного не рафинированного подсолнечного масла на предприятиях республики повысилась на 41,0%.

Отмечается и значительный разрыв между розничной ценой товара и оптовой, последняя в 1,6 раза выше.

Значительное влияние на удовлетворение спроса на подсолнечное масло оказывает рост поставок из России, объемы которых за последние три года выросли в 1,4 раза. При этом следует отметить, что российская продукция дешевле отечественной на 50,8%, что и формирует на нее спрос.

6 Заключение

Таким образом, формирование Единого экономического пространства стран-участниц Таможенного союза оказывает двойственное влияние на агропродовольственный рынок Казахстана. И суммируя, все выше сказанное, следует отметить, что усиливающееся присутствие импорта на рынке молочной продукции, мяса птицы, колбасных изделий, сахара, плодоовощных консервов, подсолнечного масла приводит к отрицательному влиянию на развитие внутреннего производства и состояние продовольственной безопасности. Поскольку:

• проявилась невозможность защиты внутреннего рынка страны от конкуренции со стороны российских, белорусских товаров. Казахстан до последнего времени сдерживал импорт, прежде всего российских товаров на казахский рынок. В ЕЭП это делать невозможно;

• усиливающиеся влияние импортной продукции, решая проблему насыщения рынка, способствует стагнации отечественного производства. Значительные проблемы создаются в секторе обрабатывающей промышленности. Главная из них - низкая конкурентоспособность большинства ее отраслей и предприятий, устаревшее оборудование, не позволяющее производить продукцию в соответствии с международными стандартами;

• приход импортного продовольствия на внутренний рынок может ослабить позиции отечественных сельскохозяйственных производителей, а затем ускорить рост цен на продовольствие, что неблагоприятно скажется на доходах жителей и ухудшит ситуацию с экономической доступностью продовольствия;

• значительная доля импортируемой продукции по ценам ниже тех, которые обеспечивают прибыльность отечественных предприятий, приведет к сокращению производства, росту безработицы, уменьшению платежеспособного спроса населения;

• возможное выравнивание и рост цен на продовольствие в ЕЭП (хотя и при некотором сохранении их зональности) при низком платежеспособном спросе, сложившимся в республике и пределе ценовой нагрузки, приведет к его снижению, расширению малообеспеченных групп населения.

С другой стороны, импорт продукции, и в первую очередь, промышленной выработки, позволяет:

во-первых, повысить обеспечить физическую насыщенность дефицитных рынков, в первую очередь, продовольствием промышленной выработки;

во-вторых, стимулируется спрос на продовольствие, который отстает от научно обоснованных нормативов, за счет поставки более дешевой продукции;

в-третьих, формируется конкурентная среда, создающая импульсы для повышения конкурентоспособности отечественной продукции.

Следовательно, необходим поиск равновесия между положительными и деструктивными факторами влияния межгосударственной интеграции. В противном случае возможна потеря продовольственной независимости, и впоследствии вытеснить импорт с национального рынка будет практически невозможно.

Значение географических факторов для положения государств их политики и экономики

The Effect of Geographical Factors on State Policies and Economy

Asst. Prof. Dr. Saadat Demirci (Çankırı Karatekin University, Turkey)

Abstract

This study emphasizes environmental, especially spatial and geographical factors and determining and conditioning effects of economical and political behaviors of states. Natural values, location and geography determine policies and economic welfare of states. Various geographic characteristics and climates determine potential power of states. States, that have natural wealth and using will of this wealth, create economical and then political power. The main goal of this study is to analyze the concept of location and relation between power and its components.

1 Введение

Положение страны не смотря на множество спорных вопросов многими исследователями расматривается как важный фактор его перспективного развития. Анализы международной политики и теории международных отношений во многом потверждают влиятельные значения пространствана развитие государства. Оно существенно влияет на развитие всех её подсистем: экономики, политики и демографии. Экономико-географическая составляющая определяет её политическое положение, так как каждая страна испытывает потребность в не только природных ресурсах но и вчеловеческих. Так в исторические времена многие империалистические государства для удовлетворения трудовых ресурсов использовали колониальные системы. Таким образом можно построить цепочку факторов нужных для образования и развития государства. Наиболее важный из них это географический фактор, под ним подразумевается географическое местоположение, климат и оссобенности местной культуры которая устанавливает оссобенности институциональных систем. Главным образом управленческих институтов и оссобенности режимов управления. Внешняя среда через свои составные части влияет на обьект и на государство, которое в свою очередь влияет на собственное окружение. Здесь уместно упомянуть слова Наполеона который определял географию как судьбу, а также слова гениального геополитика Спикмана: " география является базовым фактором для определения международных отношений, ибо он остается самым неизменным. Министры могут сменится, диктаторы умереть тогда как горы остаются на месте".

1.1 Влияние местоположения на внешнюю политику государства.

Местоположение стран имеет большое значение как для внутренней так и внешней политики государств. Зависимость внешней политики от географических особенностей стран можно обьяснить просто.Так страна которая разделяет водные ресурсы вынуждена налаживать хорошие добрососедские отношения с государствами с которыми разделяет береговые зоны. Придерживать ровные дипломатические отношения, чтобы не иметь вопросов по поводу использования вод и её ресурсов.Географическое положение стран определяет также политику безопасности стран. Страны не защищённые отвнезапных нападений морями или неприступыми горамиболее уязвимы чем те страны которые ими окружены. Соответственно политика добрососедских отношений важна как главная составляющая внешней политики.Этокасается и экономики: выгодные природные ресурсы, климат и местоположение определяют экономическое развитие стран, следовательно его политическую мощь и место в мировой политике. Но эта взаимосвязь не всегда успешна, поскольку не всегда богатые запасы природных ископаемых делают их успешнее чем страны не обладающие этими ресурсами. Если проанализировать страны которые не имеют выхода к морю не смотря на богатые природные резервы по экономическим данным относятся к категории беднейших стран, а их правовой статус оценивается как близкий к распаду. Примером этих стран может выступить Афганистан, страны Африки, Сомали, Ливан, Хаити, Йемен, Ирак. Специалисты на этом этапе разделяют данные страны по типу развитости как несостоятельные, страны которые идут к несостоятельности (failingstates), страны рискующие стать несостоятельными, слабые государства, государства изгои (roguestates), распавшие государства(Taşdemir,2013)

Специалисты по странам выдвигают теоретическое различие между распавшими и несостоятельными государствами. Распавшие государства это крайняя форма несостоявшего государства, этот тип государственной формы имеют весьма выгодное значение для экономически состоявшихся стран которые используют эти страны как выгодный рынок для продажи оружия, нередко наркоторговли и во многих случаях дешёвой трудовой силы. Это формулировка нужна была для выяснения положения стран которые

имея природные ресурсы не имеют условий для их выгодного использования. Для полного сравнительного анализа стоит рассмотреть и те страны которые не имеют богатых залежей выгодных полезных ископаемых но не смотря на это сумели организовать имеющиеся в странах ресурсы и обрести стойкую развитую экономику. Таким примером может послужить Норвегия которая в 496 раз богаче Бурунди, где на душу населения приходится 84.290 долларов(Kemal, 2012).Норвегия страна которая после разрыва со Швецией в 1905 году обрела независимость и наравне с Финляндией и Исландией считалась самой бедной страной Европы. Сегодня они стоят на ступенях самых ведущих экономических держав. Многие присчитывают быстрый темп развития экономики Норвегии к богатым ресурсам нефти и газа. Но этот аргумент нельзя отнести к Финляндии и Исландии . Исландия не имеет ничего кроме рыбной продукции а Финляндия лесной промышленности. Что касается Норвегии, то она всегда имела богатые залежи нефти и газа но вышла на мировой рынок лишь тогда когда смогла достигнуть высоких технологических стандартов и роста квалифицированной рабочей силы. Отсюда следует вывод: первичным фактором высокого экономического преобразования Норвегии является квалифицированная рабочая сила, а природные ресурсы вторичным (Sevinçer, 2009).

Опираясь на этот пример можно вывести следующее заключение; выгодные природные ресурсы конечно же являются важным факторомэкономического роста но не единственным и первостепенным, так как без организации квалифицированной рабочей силы и высоких технологий трудно добится эффективных результатов. Видимым пример тому может послужить Ирак который опередив Иран занимает третье место по резервам нефти.По последним данным в Ираке найдены новые залежи нефти которые привели к росту резервов на 25% составив 143 мильярдов и 100 миллионов барелей (www.ydh.com.tr, 2010). Ситуация в Ираке достаточно дает понять второстепенность как выгодных ресурсов так и местоположения.

2 Значение человеческих факторов в развитии экономики и политики стран.

Профессор Кембриджского университета Сир Партха Дасхупта провёл эмперическое исследование для ООН относительно баланса доходов населения . По мнению профессора Дасхупта национальное богатство складывается из совокупности человеческого капитала, всего того что опосредственно человеческим трудом и природных богатств. Надо заметить что финансовые ресурсы не считаются национальным богатством. Специалисты ООН просчитали величину всех этих совокупностей. Сложив в общую сумму национальный доход и разделив его на число населения определили сумму дохода на душу населения. Конечно без усилий можно предположить что самой богатой страной была обьявлена Америка национальное богатство которой на 2008 год была определена как 118 триллион долларов. Это превышает сумму национального дохода в 10 раз. В списке расчётов дохода на душу населения Япония стоит на первом месте. В Японии доход на душу населения составляет 420.000 долларов. Америка с 400.000 долларов на душу населения стоит на втором месте.В Саудовской Аравии на которую приходится 16% мировых резервов нефти доход на душу населения составляет 105 000 долларов. Казалось бы здесь есть какая то ошибка. Всё дело в том, что по мнению профессора Дасгупта человеческий капитал является самым главным источником государства. Это заключение можно потвердить примером Японии которая почти не имеет природных ресурсов и Нигерии которая является одним из самых больших производителей нефти. Природные ресурсы беспорно являются важным элементом национального дохода но не самым главным. Пробелы в отсуствии природных ресурсов, страны обладающие высокой технологией, капиталом и квалифицированной рабочей силой заполняют переработкой сырья извне. Основными факторами которые делают значительными природные ресурсы это потенциал и рост человеческих ресурсов а также развитие технологии. Рост населения способствует расширению рынков а рост технологии эффективному использованию природных ресурсов.

3 Значение институциальных структур для роста экономики и стабилизации государства.

Другой турецко-американский исследовательизучающий взаимодействие человеческих и природных ресурсов и влияние на них социальных и политических факторов Дарон Ажемоглу обращает внимание на важность институциональных структур. Влияние политики как внешней так и внутренней на экономику страны беспорно высока. Ажемоглу здесь подчёркивает оссобую важность устойчивых и ориентированных на нужды населения системы государства основанной на равноправном и демократичном правлении. Ажемоглу считает принуждение и негаранатированность защиты прав является тем самым злом который ведёт к упадку государства. Приводя примеры стран которые долгие годы оказались под колониальным управлением можно заметить следующее, страны колонизаторы используя ресурсы этих стран богатели а колониальные страны даже обретя независимость долгие годыне могли поднять уровень как экономической так и политической системы. Это оправдывается тем, что став независимыми в этих странах всё ещё продолжали действовать жёсткие правила олигархии, где

правовая система защищала теперь уже интересы пришедших на смену новых местных элит. Сомали и Южный Судан не смотря на то что имеют международно признанное правительство практически не имеют власти . Эти страны веками даже после обретения независимости управлялись не центральной властью с международным правопорядком а клановой системой основанной на диктатуре правителя. Здесь уместно вставить цитату профессора Дарона Ажемоглу : " Без централизованного порядка не бывает правопорядка, без правопорядка не бывает настоящей экономики, а без настоящей экономики страна обречена на развал (Аджемоглу, Джеймс 2012).

4 Значение правовых институтов для развития экономики и государства.

Другой пример Колумбии где правопорядки не имеют места ни в одной из систем государства где часть страны находится под контролем левацких партизанских ополченцев. Революционные вооруженные силы Колумбии — Армия народа (FARC), Народно-освободительная армия (EPL), Армия национального освобождения (ELN). Отсутствие государства остро сказывается на цикле жизни стран, где присувствует дефицит здравохранения и институтциализированных прав собственности. Все эти факторы приводят к постепенному упадку государства. Следующий пример Узбекистана страна где хлопок является одним из важных продуктов экспорта государства. С наступлением сентября когда настаёт время сбора урожая школьные скамьи пустеют так как все школьники проводят время на поле собирая урожай который потом будет выгодно продан для того чтобы местная элита получила из этого хорошую прибыль. Страна до сих пор не может выбится из общей нищеты а правовые институты не имеют стойких правовых ценностей которые должнывыступать в защиту прав местного населения. Сегодня доход на душу населения в Узбекистане лишь немногим выше того низкого уровня, который установился на момент развала СССР. После справки всех этих стран можно вывести основной тезис который жирным шрифтом подчёркивает Американско—Турецкий профессор Ажемоглу. Страны системы которых разрушены отсутствием правовых норм и корумпированностью местных властей никогда не поднимутся на ноги. Обьяснение тому очень простое, политический курс правящих элит сама способствует блокировке возможности долговременного экономического прогресса. И делают они это не по ошибке или незнанию а вполне осознанно, поскольку реализуют свои жизненно важные интересы(Аджемоглу, Джеймс, 2012). Отсюда следует основной вывод того что уровень экономического роста стран нельзя искать на стыке лищь экономических, природных или географических факторов. Этот стык приходит на точку соприкосновения политики и права а также уровня культурной системы. Если ещё проще в стране может быть изобилие ресурсов, но без правильной организации структуры правления государств и правовых институтов а также поддержки квалифицированных человеческих ресурсов плюс техники страна не сможет обрести экономической мощи и поднять уровень национального благосостояния (Типатов,2013). Получается что ни географические факторы ни климатические условия и резервы выгодных запасов не могут способствовать самостоятельно росту уровня экономики страны и национального блогосостояния. Иначе сегодня не было бы большого различия в экономике и уровня жизни между Южной и Северной Кореей. Обе эти страны находятся на одном континете с общей географией и климатическими условиями, в одной существует жёсткий контроль , а права отсутствуют. В Северной Корее запрещено частное владение собственностью, все вынуждены работать на государство. Здесь присуствует ещё один пример неэфективности принуждения он уничтожает стимул и приводит к кризису экономики. Главенствующие экономическиеинституты которых учённые экономисты называют "присваюающими" являются главнойсилой разрушающей экономику и препятствующийросту иноваций, при этом сами эти "присваивающие институты" наживаются на разных видах присвоения — будь то добыча полезных ископаемых, эксплуатация принудительного труда или взимание монопольной ренты (Аджемоглу, Джеймс 2012).

5 Заключение

Внешние факторы имеют немаловажную роль в развитии экономики и страны в целом. Быстрому росту национальных доходов способствуют природные ресурсы и выгодные климатические условия создающие благоприятную среду для разработки и производства. Но одних этих факторов не достаточно для экономического роста и стабильности страны. государство может обладать богатыми ресурсами и стоять в списке экономически неразвитых стран не смотря на благоприятные условия и географическое местоположение. За этим критическим разбором стоит основной тезис того, что географические, природные и культурные условия не стоят за процветанием или наоборот крахом страны. Есть масса примеров некогда бедных стран которые сегодня являются ведущими экономическими державами. Замечания по поводу культурного различия тоже не отражают истинных фактов. Уже был приведён пример Южной и Северной Кореи среди которых нет видимых культурных различий. Но есть различия институциональных систем. В одной системе поддерживается частная собственность, в другой она практически запрещена. Отсутствие права на собственность приводит к экономическому развалу. Экономический кризис приводит к низкому уровню жизни и росту коррупции, которая является самым

важным барьером к росту и развитию страны. Страны построенные на эксплуатации теряют свою значимость, терпят крах . Преобразования возможны только тогда когда их начинают требовать, в основном со стороны тех кого не допускали к власти. Не трудно догаться что эти институты не проявляют оссобых рвений к переманам и потому возникают столкновения и войны подобные " арабской весне ".

Водный вопрос Центральной Азии и борьба за региональное лидерство

Water Cooperation in Central Asia and Competition for Regional Dominance

Ph.D. Candidate Dina Kurkova (National Research University, HSE, Russia)

Abstract

This article examines the water related problem in the context of contemporary security relation in Central Asia. The competition for regional dominance has developed in Central Asia for the last decade. The water-related problems are likely to increase tensions in the region, even to begin the wars over water. In this article the author explains why water-related problems in Central Asia can't be solved in medium-term perspective. Global hegemon, the USA, regional hegemons, Russia and China, and regional hegemon challengers, Uzbekistan and Kazakhstan, use fresh water as a weapon to pressure each other. Given the fact that the interaction between these states concerns question not just of water cooperation but also of balance of political, military and economic dominance, the author assumes that the water-related problem in Central Asia can be understood as one tool in hegemonic completion.

1 Введение

Риски, с которым сталкивается сегодня постсоветская Центральная Азия, приводят к тому, что конфликтогенный уровень в регионе достаточно высок. В первую очередь риски центральноазиатского региона принято связывать с угрозами терроризма, экстремизма, в том числе религиозного, и с борьбой за энергетические ресурсы. Однако в последние годы все чаще среди потенциальных угроз называют и проблему обеспеченности водными ресурсами. Для территории с жарким и сухим климатом вопрос обеспечения населения пресной водой всегда был актуальным, особенно в условиях орошаемого земледелия. Но только в начале XXI века споры за доступ к пресной воде стали грозить перетечь в вооруженные конфликты. Истоки этой проблемы уходят в 1930-40-е годы, когда советская власть инициировала создание в регионе электроэнергетической отрасли на базе горных рек. Именно в тот момент были созданы предпосылки для сегодняшнего острого противоречия между интересами низинных, но более развитых в экономическом отношении стран и интересами стран, контролирующих высокогорные районы, где берут свое начало реки, питающие весь регион.

Необходимость поиска компромисса в пользовании трансграничными бассейнами крупных рек не раз вставала перед самыми разными странами. Вопросы регулирования водопользования рассмотрены международным правом, многочисленные международные организации занимаются выработкой возможных вариантов взаимовыгодного решения или, по крайней мере, консенсуса. Такие проекты неоднократно создавались и для Центральной Азии, но не нашли своего воплощения. Уникальность ситуации состоит в том, что страны Центральной Азии уже имеют опыт совместного водопользования в рамках заданной системы. Речь идет о советской эпохе, когда поставки углеводородов и жесткий контроль над режимом водопользования создавали условия для соблюдения относительного баланса интересов. Безусловно, данная система не могла продолжить свое существование после распада СССР и перехода к рыночному хозяйству. Однако она не просто не была модифицирована под новые политические и экономические условия. В настоящий момент можно наблюдать своеобразное отрицание странами региона любой предлагаемой системности в попытке урегулирования водного вопроса. При декларируемой в политической риторике первостепенной важности решения проблемы пользования водными ресурсами вектор принимаемых усилий направлен не на кооперацию, а на индивидуализацию. Очевидно, что, руководствуясь лишь стремлением учесть только собственные национальные интересы, вопросы трансграничного характера решить невозможно. В случае, если бы не существовало предыдущего, советского, опыта взаимодействия стран по этому вопросу, можно было бы предположить, что компромисс действительно не может быть найден, а интересы стран региона строго полярны. В существующей же ситуации объяснением такого рода тактики может служить гипотеза о том, что существуют некие иные интересы, которые препятствуют взаимодействию стран по водному вопросу, а водный вопрос является лишь инструментом в реализации этих интересов, а не собственно приоритетом деятельности. На наш взгляд основной целью в стратегическом взаимодействии центральноазиатских стран является завоевание регионального лидерства, а водноэнергетическая проблема рассматривается как рычаг в этой борьбе.

Соответственно, водный вопрос в ЦАР можно рассматривать как состоящий их двух компонентов – экономико-экологического (ухудшение положения с водными ресурсами в регионе невозможно отрицать)

и политического. Экономико-экологическая компонента определяет силу действия этого рычага в политической борьбе. Чем острее встает водный вопрос, тем эффективнее становится рычаг воздействия. Следовательно, заинтересованность в решении водноэнергетической проблемы в политическом истеблишменте крайне низкая. Водный ресурс исключительно выгодный аргумент в политическом дискурсе, т.к. пресная вода жизненно важна, не имеет альтернативы, не несет на себе стереотипа сырья для торговли и спекуляции. Политическая компонента в водном вопросе выражается в стремлении использовать «водный рычаг» в борьбе за региональное лидерство и тем самым реализовать имеющиеся преимущества. Соответственно, решив вопрос, какая из компонент доминирует, можно будет судить о возможных путях решения водноэнерегетической проблемы в ЦАР и вообще о возможности ее решения.

2 Экономико-экологическая составляющая водноэнергетической проблемы ЦАР

Основной характеристикой водного потенциала Центральной Азии является его неравномерное распределение. При усредненной оценке на регион в целом обеспеченность водными ресурсами можно определить как выше среднего. Однако неравномерность распределения и специфика использования имеющейся пресной воды приводят к фактической ее нехватке. Водный потенциал Центральной Азии обеспечивается в основном стоком двух самых крупных рек региона – Сырдарьи и Амударьи. Особенностью водостока этих рек является тот факт, что ¾ их водостока формируются в высокогорных районах Киргизии (в случае Сырдарьи) и Таджикистана (в случае Амударьи), а в нижнем течении в основном расходуются на орошение сельскохозяйственных земель. Также основные запасы пресной воды Центральной Азии сосредоточены в ледниках (60% из которых контролирует Таджикистан). Кроме того, в регионе имеются крупные озера естественного происхождения (Сарыкамыс, Соленое, Сарез и др.), а также сеть искусственных водохранилищ, каналов, гидроузлов, построенных большей часть в советскую эпоху для обеспечения ирригации и выработки электроэнергии. Таким образом, в ЦА можно четко выделить две группы стран: страны-доноры (Таджикистан и Киргизия – 2 и 3 место по СНГ после РФ по обеспеченности водой), контролирующие истоки основных рек и горные ледники, и страны-акцепторы, получающие пресную воду из рек, берущих начало в соседних странах (Узбекистан, Туркменистан, Казахстан). При этом в экономическом отношении страны-потребители являются экономическими лидерами региона. Именно на них приходится основное потребление пресной воды (более половины потребления пресной воды в регионе приходится на Узбекистан). Кроме того, имеет место столкновение двух традиционных типов хозяйствования: равнинного земледелия и скотоводства, в том числе и высокогорного. Узбекистан и Туркменистан с развитым аграрным сектором, ориентированным на выращивание промышленных культур, вынуждены получать воду от стран, где более 80% территории занимают горные массивы, развито преимущественно скотоводство, а аграрный сектор представляет собой мелкие домохозяйства.

Нехватка пресной воды как для хозяйственных, так и для бытовых нужд населения региона становится все более существенной проблемой в последние десятилетия. Отчасти эта проблема стала следствием введенной советским правительством системы хозяйствования в регионе. Среднеазиатские республики позиционировались как территория для выращивания хлопчатника, необходимого промышленного сырья. Это стимулировало развитие ирригационных систем в регионе, в том числе достаточно передовых для своего времени. Были построены сети каналов (Каракумский, Кызылкумский, Большой Ферганский, Южноферганский, Чуйский и др.), благодаря которым удалось существенно расширить посевные площади региона. Так, если в начале XX в. посевные площади составляли около 2,5 млн. га, то к концу XX в. они превысили 8 млн га. Водопользование в ту эпоху регулировалось центром и ориентировалось на экономическую целесообразность в хлопководстве. Преимущество в пользовании водными ресурсами имели республики, выращивающие хлопчатник. Киргизия и Таджикистан использовали не более четверти собственных водных запасов, а нехватка энергии в зимние периоды компенсировалась поставками углеводородов из соседних республик. Несмотря на то, что кризисные явления в центральноазиатском водопользовании принято связывать прежде всего с постсоветской эпохой, тупик в развитии подобной системы хозяйствования наметился еще в советское время. Расход воды достиг 90% от всей пресной воды региона, поэтому возможности для расширения орошаемых земель существенно снизились. Ирригационная система, модернизированная на уровне гидроузлов и каналов, оканчивалась традиционными арыками с грунтовыми стенами. Около трети воды уходило в почву, засаливая грунты, что еще больше снижало плодородность. Неконтролируемое использование удобрений и пестицидов также способствовало засаливанию и образованию целых озер сточных с полей вод, загрязненных химикатами. Итогом такого подхода стала экологическая катастрофа Аральского моря, когда недостаток стока Амударьи привел к потере более 60% площади моря. Экологические проблемы, доставшиеся центральноазиатским государствам в наследство от советской эпохи, требуют значительных материальных вложений, которые вряд ли будут сделаны в среднесрочной перспективе, учитывая общий невысокий уровень экономического развития региона. Односторонние же усилия не дают нужного эффекта, а зачастую обнуляются действиями соседних стран. Так, приложенные Казахстаном усилия по

оводнению северной части Арала могут быть сведены на нет решением Туркменистана о строительстве водохранилищ в Каракумах.

Помимо экологических проблем на водный вопрос в Центральной Азии имеет огромное влияние, нарастающее демографическое давление в регионе. Особенностью ЦАР является наличие огромных территорий малопригодных для проживания. Это прежде всего горные массивы, пустыни и полупустыни. В результате средняя плотность населения в стране не полностью отражает существующую остроту ситуации. Ярким примером является Узбекистан. Несмотря на большую площадь республики, все население сконцентрировано преимущественно в плодородных долинах рек, где находятся как сельскохозяйственные земли, так и крупные города. Это приводит к тому, что в некоторых районах страны, таких как Каракалпакия, откуда наблюдается стремительный отток населения в связи с опустыниванием и пересыханием Аральского моря, плотность населения составляет всего 6 – 8 человек на 1 кв. км. Тогда как в таких областях, как Ферганская и Андижанская, плотность населения превышает 400 человек на 1 кв. км. В среднем по стране плотность населения составляет 62,9 человек на кв. км. Аналогичная ситуация характерна для Таджикистана, 80% территории которого занимают горные массивы. Основная масса населения сосредоточена в Гиссарской и Вахшской долинах, где средняя плотность населения превышает 200 человек на 1 кв. км., в то время как на Памирском нагорье она меньше 0,5 человека на кв. км. Менее остро демографическое давление ощущается в Киргизии, но и там основная масса населения сосредоточена в долинах, например в Чуйской, где находится Бишкек, там плотность населения превышает 100 человек на 1 кв. км, при средней по стране в 27,9 человек на 1 кв. км. В результате самые густонаселенные районы наиболее чувствительны к нехватке воды, т.к. именно там сосредоточены сельскохозяйственные угодья. При этом в постсоветский период экономики центральноазиатских стран пережили серьезный регресс к аграрно-индустриальному, а в некоторых регионах и к аграрному типу хозяйствования. Население ранее занятое в промышленности или сфере обслуживания в ходе деиндустриализации было вынуждено вернуться к традиционному земледелию. Высокое демографическое давление служит катализатором социальных конфликтов. Общее стремление власти «предъявить счет» за нехватку воды или отсутствие электричества соседнему государству приводит к тому, что социальное напряжение выражается в межэтнических столкновениях. Миграция является тем клапаном, который помогает частично снять демографическое давление. Но, учитывая, что водный вопрос так и не находит своего решения, водный дефицит будет и дальше стимулировать миграцию молодого населения из региона, т.к. сельское хозяйство не сможет обеспечить необходимый уровень жизни, а сокращение посевов промышленных культур неминуемо скажется на производстве.

Безусловно, экологическое и демографическое давление вносят весомый вклад в экономико-экологическую составляющую водного вопроса. Тем не менее основной конфликтный потенциал находится на стыке водного и энергетического вопросов. Единая региональная энергосистема, созданная в советское время, существует до сих пор. Однако принцип цикличности, положенный в её действие, нарушен, что неминуемо приводит к конфликтам. Система была построена на сезонных циклах, при которых ГЭС Киргизии и Таджикистана в теплое время года поставляли электроэнергию в соседние республики, а зимой весь регион получал энергию от ТЭС, расположенных в равнинных республиках, а в Киргизию и Таджикистан поставлялись углеводороды для обогрева. С разрушением единой экономики система циклов не была адаптирована к рыночным условиям и функционированию между независимыми государствами. Сложная экономическая ситуация в стране не всегда позволяла зимой Киргизии и Таджикистану закупать углеводороды в достаточном количестве, особенно в условиях, когда соседние страны (в том числе Узбекистан) сезонно поднимали цены на газ. За неимением собственных источников углеводородов основная нагрузка в холодное время года в этих странах ложится на электроэнергию. В этой связи периодически зимой происходят сбросы воды из высокогорных водохранилищ, что приводит зимой к затоплениям посевных площадей в странах ниже по течению, а летом - к засухам. В результате интересы стран, находящихся выше по течению пришли в противоречие с интересами стран, находящимися ниже по течению. Первые стремятся получить максимальную выгоду от производства и продажи излишков электроэнергии. Вторые требуют соблюдения необходимого режима водостока, чтобы обеспечить ирригацию сельскохозяйственных территорий. В результате сложившуюся ситуацию можно описать как игру с нулевым результатом. Гидроэнергетическая система Киргизии и Таджикистана работает на обеспечение нужд сельского хозяйства соседних стран, что блокирует возможности для наращивания мощностей и экспорта электроэнергии в соседние страны. Страны в нижнем течении Амударьи и Сырдарьи оказались в водной зависимости от своих соседей и, несмотря на свое экономическое превосходство, могут рассчитывать только на добрую волю соседей, периодически оказываясь перед угрозой наводнения или засухи.

Экспортный потенциал и Таджикистана, и Киргизии крайне ограничен. В этой связи их стремление к коммерциализации водной отрасли понятно, т.к. это может дать стабильный приток в бюджет иностранной валюты. Страны-доноры используют на свои нужды только 20% водных ресурсов, остальные 80% безвозмездно потребляются соседними странами. Все республики в нижнем течении рек

негативно воспринимают практику превращения воды в товар, т.к. считают воду всеобщим и жизненно важным достоянием, торговля которым невозможна. Такой подход действительно правомерен, однако в случае Центральной Азии страны низовий рек получают воду через сеть гидротехнических сооружений, находящихся на территории соседних стран, но предназначенных для нужд стран-акцепторов. В результате финансовое бремя поддержания работоспособности системы полностью ложится на плечи стран-доноров. При этом любые попытки стран-доноров модернизировать гидротехнические сооружения на своей территории под свои нужды, т.е. для увеличения производства электроэнергии, воспринимаются странами-акцепторами крайне негативно, т.к. это может привести к изменению режима водообеспечения.

Таким образом, можно заключить, что экономико-экологическая составляющая водной проблемы обладает большим конфликтогенным потенциалом. На самых разных уровнях от угрозы экологической катастрофы до межэтнических столкновений пресная вода в Центральной Азии может стать поводом для конфликта. При этом очевидно, что ни одна из указанных выше проблем не является тупиковой. Часть их них может быть решена путем материальных вливаний (модернизация арычной системы и системы ЖКХ, строительство новых гидротехнических сооружений, экологические мероприятия, препятствующие загрязнению и засаливанию почв и пр.). Другие лежат в плоскости социальных проблем и могут быть решены только в ходе развития экономики и общества. Ключевая же проблема конкуренции гидроэнергетики и сельского хозяйства не является уникальной в мировой истории. Проекты по решению такого рода задач предполагают обычно либо оплату за полученную летом воду (как это и делалось, по сути, в СССР), либо строительство собственных водохранилищ на территории нижних по течению стран (в случае ЦА это низкоэффективный вариант, т.к. большое поверхностное испарение приводит к большой потере воды, тем не менее подобные водохранилища строятся во всех трех низинных странах ЦАР), либо строительство каскадов ГЭС и водохранилищ, где верхние уровни будут использованы для выработки электроэнергии, а нижние для аккумуляции воды в сезон (что требует кооперации и высокого уровня доверия, которого пока невозможно достичь). Однако ни один из возможных вариантов в Центральной Азии не реализуется. Несмотря на явную тенденцию к усугублению ситуации, очевидно желание республик сохранить статус-кво. Отчасти это может быть объяснено трудной экономической ситуацией, в которой оказались центральноазиатские государства после обретения независимости. Водный вопрос в такой ситуации не рассматривается как приоритетный для принятия конкретных мер и поисков решений. В условиях присутствия террористической и экстремистской угроз экологические проблемы, даже непосредственно связанные с таким жизненно важным ресурсом как пресная вода, отодвигаются на второй план. А столкновение интересов гидроэнергетики и аграрного сектора рассматривается в качестве столкновения национальных интересов, выводя этот вопрос из плоскости экономики в политический дискурс. Именно этот переход к политической составляющей делает невозможным решение водного вопроса с помощью проектов, основанных на принципах экономической целесообразности и сотрудничества. Гидроэнергетическая система Центральной Азии изначально создавалась как единая. Более того, до сих пор она продолжает работать как единая для всего региона, хотя все стороны высказывают недовольство результатами ее работы. Безусловно, получение республиками независимости и переход к рыночным отношениями сделали необходим реформирование принципов организации этой системы. Однако уже в течение более, чем 20 лет этого не происходит, а по мере усугубления проблемы правительства всё больше уводят её в область политики.

3 Политическая составляющая в водноэнергетическом вопросе в Центральной Азии

Важнейшей составляющей международных и политических процессов в Центральной Азии на сегодняшний день является борьба за региональное лидерство. В теории международных отношений существует несколько подходов к теории глобального лидерства (hegemony), в соответствии с которым выстраивается глобальная иерархия соотношения сил. Большинство из теорий были выработаны после окончания «холодной войны» и определяли США как глобального гегемона. В связи с тем, что концепция иерархии изначально разрабатывалась в парадигме политического реализма и неореализма, то фактор силы (power) был ключевым для определения места в иерархии. Стоящий на вершине иерархии гегемон исполнял роль мерила силы, соответственно, остальные места в иерархии распределялись относительно его влияния. Концепция регионального лидерства (regional hegemony) была разработана гораздо позже. В данной работе мы будем исходить из концепции многоуровневой иерархии (multi-level hegemony), основываясь на идеях Д. Лемке о мультииерархичной модели (Lemke, 2002) и теории региональных комплексов безопасности Б. Бузана (Buzan and Waever, 2003). Согласно Д. Лемке, глобальная иерархия состоит из параллельных и соподчиненных субиерархий регионального и субрегионального масштаба. Они устроены согласно логике глобальной иерархии, и во главе каждого региона или субрегиона стоит региональный или субрегиональный лидер. Глобальные и региональные лидеры могут вмешиваться в дела нижестоящих иерархий, если существующее положение дел расходится с направлением их развития. В остальных случаях субрегиональные и региональные вопросы решаются собственными лидерами без

вмешательства лидеров, вышестоящих в иерархии силы. (Lemke, 2002) Согласно, Б. Бузану существуют сверхдержавы и великие державы, которые взаимодействуют на глобальном уровне, в то же время существуют региональные державы, чье влияние на локальном уровне может быть чрезвычайно высокими, однако они не включены и не будут включены в круг мировых лидеров. Однако Б. Бузан применяет свою теорию исключительно к вопросам безопасности, не рассматривая экономическое влияние или т.н. «мягкую силу». (Buzan and Waever, 2003) И глобальная, и региональные иерархии периодически переживают трансформации, лидерство в них оспаривается новыми державами, претендующими на первенство (challengers). Соответственно, борьба за лидерство – это тот процесс, в ходе которого определяется структура новой иерархии, причем данный процесс свойственен иерархиям всех уровней. Однако мы предполагаем, что лидеры вышестоящих иерархий могут вмешиваться в борьбу за лидерство в нижестоящих иерархиях.

В данной работе под субрегионом мы будем подразумевать Центральную Азию, под регионом – постсоветское пространство. В субрегиональном масштабе в Центральной Азии в последнее десятилетие имеет место процесс формирования иерархии. Находившиеся сначала под контролем Российской империи, а затем в составе СССР республики обрели независимость в 1990-е гг., и центральноазиатский субрегион выделился на постсоветском пространстве. Первое десятилетие определило векторы развития каждой из республик. Этот период был временем государственного строительства, в процессе которого для некоторых стран Центральной Азии остро стоял вопрос простого выживания. В этот период было задано то направление экономического и общественно-политического развития, которое мы можем наблюдать сейчас. Иерархии в чистом виде на тот момент в субрегионе сформировано не было.

К началу 2000-х годов в Центральной Азии национальные государства в Центральной Азии полностью оформились и начались процессы формирования субрегиональной иерархии. Двумя основными конкурентами являются Казахстан и Узбекистан. Помимо лидерских амбиций, подкрепленных историческими и мифологическими основаниями, эти два государства демонстрируют самые высокие темпы экономического развития в субрегионе. Кроме того, явно авторитарный вектор внутренней политики в этих республиках определяет и внешнеполитические лидерские амбиции. При этом, Узбекистан обладает крайне выгодным геополитическим положением, находясь в самом сердце Центральной Азии и контролируя древние культурные центры. Кроме того, Узбекистан располагает самыми мощными в Центральной Азии военными силами. Это позволяет ему вести независимый от РФ политический курс, избегать в вступления в инициируемые ей интеграционные объединения, в то время как остальные страны Центральной Азии продолжают видеть в России гаранта безопасности, а следовательно вынуждены действовать с учетом ее интересов. Выход Узбекистана из ОДКБ особенно ярко продемонстрировал эту тенденцию. Отсутствие общей границы с Китаем позволяет Узбекистану занимать достаточно гибкую позицию в отношениях с ним и ограничивать его экономическую экспансию в регионе. Дополнительным фактором в стремлении к субрегиональному лидерству Узбекистана является его готовность взаимодействовать напрямую с глобальным лидером – США. Вывод войск из Афганистана в 2014 г. заставляют США искать партнера в Центральной Азии. Именно Узбекистан с его относительно независимой от РФ политикой рассматривается как основной партнер. Казахстан, демонстрируя гораздо более высокие темпы развития, обладая большей территорией и населением, а также большими ресурсами углеводородов, оказался в гораздо более сложной ситуации для выражения своих лидерских амбиций в субрегионе. Тесные связи с соседними Россией и Китаем, необходимые для успешного экономического развития, особенно в энергетическом секторе, связывают Казахстан в наращивании собственного веса в субрегионе, особенно в отношении наращивания военной силы. Таджикистан в силу тяжелой политической и экономической ситуации долгое время не мог претендовать на участие в борьбе за лидерство. Однако с относительным урегулированием ситуации в стране, а также после изменения курса президента Э. Рахмона в сторону более авторитарного, Таджикистан пытается принять участие в борьбе за место в иерархии. Безусловно, он не претендует на место гегемона, его тактика заключается скорее в ослаблении позиции соперников с помощью всех возможных рычагов. Киргизия до середины 2000-х действовала в теоритическом ключе, активно разрабатывая историко-мифологические основания для своего лидерства в субрегионе. Затянувшийся политический кризис и экономическая стагнация полностью лишили Киргизию шансов на повышение своих позиций в иерархии. Она остается аутсайдером региона, и её слабость используют ьрое сильные региональные игроки, Россия и Китай. Особенное положение занимает Туркменистан. Имея достаточно крепкую экономику, основанную на экспорте газа, Туркменистан занимает обособленную позицию и ориентирован на внешние силы, а не на поиск своего места в субрегиональной иерархии.

В результате на субрегиональной арене происходит соперничество трех сил, две из которых (Казахстан и Узбекистан) претендуют на позицию субрегионального лидера, а третья (Таджикистан), не имеющая достаточного потенциала, но обладающая некоторыми рычагами влияния на соперников (в том числе водный вопрос), активно принимает участие в гонке.

Одновременно с субрегиональными акторами в установлении субрегиональной иерархии происходит борьба между региональными лидерами (Россия и Китай) и глобальным лидером (США), пытающимся утвердиться как субрегиональный лидер в Центральной Азии. Влияние регионального лидера, России, в Центральной Азии было традиционно высоким. Хотя сама Россия столкнулась с серьезными трудностями в переходный период после распада СССР, она всегда сохраняла свое присутствие в Центральной Азии в основном в сфере энергетики и в вопросах безопасности. До настоящего времени сотрудничество именно в этих направлениях остается приоритетным. Кроме того, центральноазиатский регион продолжает сохранять для России статус «зоны политических интересов». Политические элиты центральноазиатских стран сменились еще не полностью относительно советского периода, что во многом сближает их с РФ. Россия же реализует свои амбиции регионального лидера, выступая с интеграционными инициативами, целевой аудиторией которых оказываются прежде всего центральноазиатские страны. Китай осуществляет экономическую экспансию в регион и, несмотря на обширные инвестиции (в том числе в энергетическую отрасль), его интересы не входят в прямое противоречие с интересами РФ, которая претендует на политическое влияние. В рамках ШОС Россия и Китай ведут согласованную политику безопасности. Такое комплементарное совпадение позиций РФ и Китая позволяет им вести относительно согласованную политику против попыток глобального лидера США утвердить свое влияние в Центральной Азии. После распада СССР США планомерно пытается усилить свое присутствие в регионе, используя как экономические методы, так и распространяя свое военное присутствие, что противоречит интересам и РФ, и Китая. Борьба с терроризмом и ввод войск в Афганистан позволяли США в начале 2000-х открыть свои военные базы в Узбекистане и Киргизии. В связи с выводом войск из Афганистана в 2014 году США в настоящий момент работают над созданием надежной площадки для установления контроля над центральноазиатским регионом, включая Афганистан. Об этом свидетельствуют и новые стратегии США, такие как «Новый шелковый путь», и усиление инвестиционных потоков в экономики центральноазиатских стран. Каспийские углеводороды являются объектом пристального внимания со стороны США. Казахстан контролирует большую часть углеводородных запасов Каспия на суше в ЦА и все больше открывает рынок добычи этих ресурсов для Китая.

Таким образом, помимо борьбы между субрегиональными претендентами на лидерство в иерархии, в которой принимает участие и региональный лидер РФ, в Центральной Азии развернулась борьба за место в региональной иерархии между глобальным лидером США и региональными лидерами РФ и Китаем. При этом Китай пока занимает сдержанную позицию, действуя преимущественно экономическими методами, а в вопросах безопасности проводя политику, не противоречащую позициям РФ.

В условиях этой борьбы все стороны используют прямо или опосредовано «водный рычаг» для укрепления своих позиций. Связка воды и энергетики расширяет круг заинтересованных сторон и одновременно усиливает эффективность рычага. Активнее прочих проблему водных ресурсов использует Узбекистан, т.к. он является страной-реципиентом, что ставит его в позицию жертвы и служит оправданием агрессивным высказываниям. При этом поддержка со стороны США делает позицию Узбекистана все более сильной и независимой от России. Ослабление собственного влияния на Ташкент и усиление присутствия США в регионе РФ воспринимает достаточно болезненно, что заставляет ее оказывать давление на Узбекистан через лояльных России соседей. В случае с лояльными Киргизией и Таджикистаном самое эффективное воздействие может быть оказано именно через водный вопрос. Одним из примеров использования водного вопроса в условиях борьбы за региональное лидерство можно было наблюдать осенью 2012 года. В конце августа 2012 года помощник по Южной и Центральной Азии Роберт Блейк посетил Узбекистан, где презентовал новую стратегию США «Новый Шелковый путь», которая является реакцией на интеграционные инициативы России в Центральной Азии. Согласно этой стратегии, должны быть усилены связи между Центральной и Южной Азией, в том числе за счет строительства транспортной инфраструктуры и обеспечения транзита энергетических ресурсов. Такой проект, очевидно, входит в конфликт и с российскими инициативами, и с китайскими попытками включить Центральную Азию в зону своего влияния. В ходе визита были заключены договора на 2,8 млрд. долларов прямых инвестиций в экономику Узбекистана, также заключены договоренности о закупках в Узбекистане для американской группировки в Афганистане, кроме того заключен параллельный договор с Южной Кореей о прямых инвестициях в экономику Узбекистана. В неофициальных кругах появилась информация о возможных договоренностях о закупке узбекского урана американцами. Надо отметить, что свой визит в Центральную Азию Р. Блейк начал с Казахстана, однако в итоге презентация стратегии и заключения договоров происходили именно в Узбекистане. Кроме того, Узбекистан получает гарантии о модернизации собственных военных сил за счет техники, которую после вывода войск американская сторона передаст Узбекистану. Уже в начале сентября 2012 г. И. Каримов в ходе своего визита в Казахстан заявляет, что водный вопрос достиг такой остроты, что может быть решен с помощью военных действий. (Inosmi.ru, 2012) Указав, что строительство новых ГЭС коснется не только узбеков, но и казахов, И. Каримов тем не менее не получил поддержки казахского руководства. Менее, чем через две недели, в сентябре 2012 года, президент России В. Путин в Киргизии В. Путин заявляет о

том, что будет поддерживать стремление Киргизии вступить в Таможенный союз и одновременно заключает соглашение о строительстве сразу 2 крупных гидротехнических сооружений в Киргизии Камбар-Атинской ГЭС-1 и Верхне-Нарынского каскада ГЭС, что напрямую затрагивает интересы Узбекистана, т.к. уменьшится сток Нарына, а следовательно, водоснабжение Ферганской долины. (Newsru.com, 2012) Вторым пунктом российского-киргизского диалога было обсуждение российской военной базы рядом с Бишкеком. Уже в октябре 2012 г. В. Путин посещает Таджикистан. Там он заключает договор о продлении российского военного присутствия в Центральной Азии в виде 201 российской военной базы, обещая поддержать таджикские инициативы по строительству средних и малых ГЭС, не упоминая финансирование самого амбициозного таджикского проекта, Рогунской ГЭС. Также В. Путин приглашает Таджикистан присоединиться к Таможенному союзу. (Vedomosti, 2012) Параллельно Китай активизирует свои проекты по строительству ЛЭП «Датка – Кемин», который позволит Китаю получать электричество от каскада Нарынских ГЭС напрямую из Киргизии без транзита через узбекскую территорию. (Kabar.kg, 2012) В результате в ответ на шаги узбекского руководства по сближению в США все соперничающие игроки региона оказали на него давление с использованием двух основных рычагов – усиления военного присутствия и ужесточения позиций по водному вопросу. Уже в декабре 2012 г. И. Каримов заявил, что Узбекистан заинтересован в добрососедских отношениях и военного конфликта в Центральной Азии инициировано не будет. (Rosbalt, 2012) Очевидно, что все участники борьба за регионально лидерство продолжат движение к выбранным стратегическим ориентирам, а водный вопрос наряду с военным присутствием будет использован как инструмент в борьбе.

4   Заключение

   Водноэнергетическая проблема Центральной Азии имеет две составляющие: экономико-экологическую и политическую. Перспективы решения водноэнерегетической проблемы напрямую зависят от того, какова будет доля политической составляющей. Экономико-экологическая составляющая, безусловно, задает остроту проблемы, но с помощью создания совместных консорциумов и определения режима взаимовыгодного пользования водными ресурсами может быть решена. На сегодняшний день основным препятствием к урегулированию водного вопроса в Центральной Азии является отсутствие политической воли к его урегулированию. Это связано с тем, что водный вопрос используется как рычаг влияния на соперников в ходе борьбы за региональное лидерство. Причем этим рычагом пользуются как местные, субрегиональные, игроки, так и игроки более высокого уровня, что продемонстрировано на кейсе о противостоянии блока Узбекистан – США и Россия – Китай – Киргизия – Таджикистан осени 2012 г. Более того, обострение водноэнергетического вопроса в данных условиях является выгодным для всех участников политической борьбы, т.к. это повышает эффективность рычага влияния. Соответственно, ожидать в среднесрочной перспективе урегулирования водноэнергетического вопроса в Центральной Азии не приходится. До тех пор, пока в регионе не сформируется относительно твердая иерархия сил, водный вопрос будет необходим для осуществления давления на соперников. Осень 2012 г. показала, что он с успехом потенциально может быть использован как повод для развязывания краткосрочной войны в регионе. Усиление Узбекистана после вывода американских войск из Афганистана может стимулировать желание этой страны утвердиться на лидерских позициях в регионе с помощью начала военных действий, например, в Ферганской долине с Киргизией. Наращивание российского военного присутствия будет сдерживающим фактором для такого развития событий. Однако во многом среднесрочная перспектива будет определяться и теми силами, которые сменят у власти президента И. Каримова.

Открытая экономика и экономическая интеграция в рамках Евразии

Open Economy and Economic Integration within the Framework of Eurasia

Prof. Dr. Omurbek Karatalov (Kyrgyz-Russian Slavic University, Kyrgyzstan)

Abstract

The Kyrgyz Republic economy openness is studied within the framework of the Eurasia. Insufficient level of the financial and economic standing of Kyrgyzstan is clarified. Reasons for Governmental regulating use in the area of monetary, tax and budget policy in USA have been set up. Conditions of the development of industrial countries economy are under consideration. The necessity of financialisation of all capital of country is defined. Kyrgyzstan public budget's permanent deficiency formation reasons are studied. A necessity of integration economic relations development within the framework of Eurasia is offered. A necessity of sustainable economic relations establishment as well as finding solution for external debt between Kyrgyzstan and Russia have been justified. It is recommended to strengthen effective fight against a scale corruption, «shadow» economy and criminalization of economy and finances. The increase of efficiency and responsibility of top managers of the public administration level have been offered. The necessity of the independent mastering of own gold-mining fields is justified. The need to attract the foreign direct investments to the area of mining and processing industry have been offered. Within the framework of acceleration of economic integration. Needs for the development of exploring and processing of hydrocarbons as well as building of large economic entities especially the hydroelectric power stations, namely Kambar-Ata-1 Hydro-Power Plants have been suggested. By this it is also suggested to Russia to develop this as strategic partner of Kyrgyzstan. Creation of integral customs system and energy cooperation suggested. It should be supported by establishment of unique equivalent among Eurasia states. By this it is to be possible to find acceptable solutions in finance and economy and to form a united economic cooperation considering a sovereignty of each state. It is necessary to develop the identical financial reporting of point-of-sale and payment balances, balance of international investments, compliable national republics and on the whole on Eurasia. To walk away from the calculation and actual use of dollar of the USA in finance and economic operations. Based on econometric prognosis of gross internal product and the public budget of Kyrgyzstan is made calculating on the per to 2025 year.

В ходе развития человеческого общества, возникали все новые проблемы и для своевременного их разрешения государственная власть, пыталась принимать соответствующие меры. Однако отдельные проблемы, финансово-экономического характера оставались решенными не до конца. И правители государства всегда были вынуждены обращаться к экономической науке, такая необходимость особенно остро ощущалась в периоды затяжных мировых кризисов.

Основным стержневым вопросом, для государства, и для предпринимателей, в условиях глобализации мировой экономики, это углубленное освоение рыночных отношений и преодоление кризиса. Научно-обоснованные, практические рекомендации и предложения, направленные на улучшение социально-экономического развития страны - это современные требования открытой экономики для всех игроков рынка, ради достижения поставленных целей.

Необходимость применения данных методик возникла ещё раньше в период первого мирового (1930 г.) и глобального экономического кризиса (2008 г.). Кризис 2008 г. обвалил макроэкономические показатели не только государств Евразии, но и СНГ, находящихся в условиях переходного периода, но и промышленно развитых стран мира. Для выхода из кризиса важная роль принадлежать государству. Например, «Роль государства США чрезвычайна, велика…во внешнеэкономических связях и др. Но главным, несомненно, представляется макроэкономическая регулирующая роль государства как… через отработанные многолетней практикой механизмы косвенного регулирования экономическими процессами - денежно-кредитную…налоговое и бюджетное регулирование…является налоговая политика…». Следовательно, «…регулирование стало органической частью рыночного хозяйственного механизма США. Развитие американского капитализма свидетельствует о чередовании периодов усиления рыночного конкурентного механизма с периодами государственного регулирования экономики» (Экономика США, 2003а).

Если в США в условиях рыночных отношений осуществляется активное государственное регулирование денежно-кредитной и налогово-бюджетной политики, под оком Международных финансовых институтов, последние, не замечая этого процесса, они одновременно активно пересекают стран переходной экономики, которые не нарушали принципы рыночной экономики. Индустриально-

промышленные развитые страны под прикрытием различных специализированных международных институтов с поддержки США, Великобритании, и отдельных стран Евразии обеспечивали развитие экономики своей страны.

Изменение уровня мировой экономики, прежде всего, связано с ростом индексов, формируемых международными рыночными институтами: показателями фондовых рынков мира, повышением цен на энергетические ресурсы, которые положительно воздействуют на состояние экономики индустриально-промышленных стран мира и на этой основе обеспечивают необходимое вложение капитала - индекса развитие человеческого потенциала (далее ИРЧП). Одновременно это положение отрицательно повлияло на финансово-экономическое состояние не только на отдельные страны с очень высоким уровнем развития человеческого потенциала, но и в значительной степени на уровень развивающихся стран и стран с переходной экономикой. Эксперты ООН отследили и рассчитали ИРЧП большинства стран мира на основе показателя ВВП на душу населения по странам мира с учетом уровня развития человеческого потенциала. По их определению ИРЧП является составным показателем, оценивающим уровень средних достижений стран по трем основным направлениям в области развития человеческого потенциала. Разумеется, это - долголетие на основе здорового образа жизни, определяемое с точки зрения продолжительности жизни, знания, измеряемые уровнем грамотности взрослого населения и совокупным валовым коэффициентом поступивших в начальные, средние и высшие учебные заведения; достойный уровень жизни, оцениваемый ВВП на душу населения при паритете покупательной способности долларов США (Copyright, 2010).

Для этого аналитики данной организации в 2003-2010 гг. отобрали почти 170 стран мира по уровню ИРЧП и сформулировали их в четыре группы: к первой группе отнесены страны с очень высоким уровнем; ко второй группе - страны с высоким уровнем; к третьей группе – страны со средним уровнем развития человеческого потенциала, и к четвертой группе – страны с низким уровнем развития человеческого потенциала. В странах первой группы, особенно с очень высоким уровнем развития индустриально-промышленных стран, в основном ежегодно (кроме 2010 г.) обеспечивался устойчивый экономический рост. В то же время в указанном году по сравнению с 2008 г. (кроме США), по этой же группе заметно снизился уровень ВВП на душу населения. Несмотря на это данный показатель этой группы по сравнению с остальными группами оказались заметно выше.

Экономические показатели стран данной группы имеют также положительные изменения по показателям-индексам: экспортно-импортные отношения, отсутствие или незначительная степень коррупции и «теневой» экономики. Необходимое обеспечение этих соотношений способствует укреплению экономики и, соответственно, уменьшается или сокращается до минимума нищета и бедность населения. Таким образом, улучшение условий развития человеческого потенциала в первой группе стран обеспечивалось за счет повышения экономических показателей и улучшения жизненного уровня данной группы стран, но с одновременным ослаблением и ухудшением экономических показателей соответственно в остальных трех группах стран мира.

Большинства страны, входящие во вторую группу с высоким уровнем ИРЧП, за год показали неплохой рост экономических показателей, даже по сравнению с первой группой. Однако объемы ВВП на душу населения оставались значительно ниже по сравнению со странами первой группы. Как известно, что в четвертую группу вошли страны с низким уровнем развития человеческого потенциала. Здесь финансово-экономический рост оказался самым низким по сравнению с остальными группами (первой, второй, третьей) стран мира. Следует заметить, что из всех бывших 15 союзных республик в состав первой группы вошла только (Эстония), во второй - (9 республики: Литва, Латвия, Беларусь, Россия, Казахстан, Азербайджан, Украина, Грузия, Армения) и в третьей - (5 республики: Туркменистан, Молдова, Узбекистан, Кыргызстан, Таджикистан).

Итак, улучшение финансово-экономических показателей любой страны в мире может положительно повлиять на повышение уровня жизни через потребление энергии, обеспечивая сокращение уровня нищеты и бедности населения, и на этой основе произойдет увеличение человеческого развитие в обществе. Основные мировые показатели-индикаторы формируются международными финансово-экономическими институтами, другими рыночными структурами и в основном они могут повлиять непосредственно или опосредованно на уровень социально-экономического развития любой страны мира. В частности, через повышения показателей-индикаторов фондовых рынков мира, уровня цен на энергетические ресурсы, которые положительно воздействуют на состояние экономики индустриально-промышленных стран мира. И на этой основе обеспечиваются необходимое вложение капитала в развитие человеческого потенциала. Одновременно, к сожалению, отрицательно повлияло на финансово-экономическое состояние развивающихся стран и стран с переходной экономики.

Наблюдая за происшедшими событиями необходимо отметить, что любое добро или зло происходили от общества самого, или государства или индивидуума, с помощью человека или с использованием его ума, таланта и профессионального качества. Это происходило по заказу со стороны, либо по отрицательному замыслу самого человека, с применением новейшего вооружения, направленного на

массовое уничтожение всего живого существа. Заранее выработанные сценарии, придуманные спецподразделениями отдельных государств под прикрытием обеспечения национальной безопасности и улучшения обороноспособности, внедрялись в слаборазвитые страны, особенно где имеются значительные топливно-энергетические ресурсы, для их использования или ослабления их экономику, а впоследствии и возможно полного уничтожении, какого либо намека на развитие.

Почти все страны мира имеют министерства обороны (в названиях министерств этого профиля отсутствуют нападающее, т.е. агрессивное направление), так от кого защищаться, от «марсиан»? Если все министерства являются оборонительными и укрепляющими обороноспособность своего государства и обеспечение безопасности страны. «Безопасность – это состояние и тенденции развития защищенности жизненно важных интересов общества, государства и человеческой личности, а также всех их структур от внутренних и внешних угроз» (Вечканов Г.С., 2007a).

Поэтому появились вопросы укрепления уровня обороноспособности каждого государства, и при необходимости для защиты дальнейшего развития демократических принципов управления страной и от распространения религиозного экстремизма, идет усиленная защита отечества. Прорабатываются оперативные планы для ликвидации очагов терроризма/оппозиционеров, правительственных войск, в тех странах, где имеются запасы энергетических ресурсов. Для решения вопросов религии или сохранения мира, создаются новые коалиции, союзы в регионах под координацией сочувствующих или заинтересованных стран. В конечном итоге все эти проблемы подаются в рамках решения проблем для сохранения суверенитета страны, которые участвуют в локальном конфликте, впоследствии в очагах противостоянии почти всё разрушаются, уничтожаются движимые и недвижимые имущества, погибают значительное количество боевиков и правительственных войск, а также мирное население: старики и дети. На этой трагедии отдельные субъекты военно-промышленного комплекса делают деньги. И в финале, после истечения 3-5 лет, начинается процесс восстановления, на, что израсходуются колоссальные средства. Всё это, в конечном счете, делается в рамках улучшения уровня финансово-экономической безопасности и сохранения суверенитета страны.

Подобные «операции» влекут за собой изменение биосферы; нарушение экологического равновесия, учащения возникновения стихийных бедствий: землетрясений, наводнений, изменения климата, массовые эпидемии. Данные факторы отрицательно влияют на состояние здоровья и уровень воспроизводства населения, трудоспособность и продолжительности жизни, а также усиливают процесс роста бедных слоев населения, нищеты и соответственно количество бедных стран мира.

Государство обязано уважать и обеспечивать достойной жизнью в родной стране каждого гражданина находящегося в пределах его юрисдикции, вне зависимости половой, расовой, религиозных, политических или иных убеждений.

Развитие финансово-экономического состояния государства, прежде всего, связано с развитием экономической науки и обеспечением национальной безопасности. Эту закономерность можно проследить на примере Кыргызской Республики (далее КР), образованной в 1990 г. после распада Советского Союза. В условиях суверенитета и освоения рыночной экономики Кыргызстан испытывал и испытывает трудности развития капиталистической системы, вопросов экономики и финансов, обеспечения национальной безопасности, сохранения суверенитета страны и расширения демократических принципов управления обществом.

В Кыргызстане не только среди стран Евразии, но и в странах СНГ низкий уровень показателя ВВП на душу населения, наличие коррупции и «развитие теневой экономики», недостаточный рост основных социально-экономических индикаторов уровня жизни населения, низкий уровень пенсионного и социального обеспечения населения, и другие показатели, негативно отражаются на уровне социально-экономического развития республики. Всё это свидетельствует о недостаточной эффективности и ответственности работы органов государственного управления, регионов, местного самоуправления, правоохранительных органов и судебной власти.

Для улучшения экономических и финансовых показателей и человеческого потенциала необходимо провести изучение, анализ и оценку основных аспектов финансово-экономического состояния страны. Для сохранения и укрепления государственности и общественного строя А. Смит поставил две задачи: «во-первых, обеспечить народу обильный доход или средства существования, а точнее, обеспечить ему возможность добывать себе их; во-вторых, доставлять государству или обществу доход, достаточный для общественных потребностей. Она (политическая экономия) ставит себе целью обогащение, как народа, так и государя» (Смит А., 2009a). Одновременно А. Смит считал, что необходимо организовать защиту и охрану страны и подчеркнул, что «государь со всеми своими судебными чиновниками и офицерами, вся армия и флот представляют собою непроизводительных работников. Они являются слугами общества, и содержаться на часть годового продукта труда остального населения» (Смит А., 2009b).

А. Смит считал, что для обеспечения значительного дохода как для государства, так для общества основным источником является постоянное развитие торговли. Одновременно он указывал на

необходимость введения ограничения на ввоз из-за границы таких продуктов, которые могут быть произведены внутри страны и низкими издержками в расчете на единицу товара. И рекомендовал эти проблемы решить путем регулирования экспортно-импортных отношений (Смит А., 2009c). Указанные составные задачи данного направления впоследствии определяли экономическую и национальную безопасность, которая со времени появления новых государств и до настоящего времени в условиях развития рыночных отношений и глобализации мировой экономики сохраняет свою особую актуальность.

А. Маршал подчеркнул, что возможность прогресса «…в большой мере зависит от фактов и заключений, входящих в компетенцию экономической науки, и именно это составляет главное и высшее предназначение экономических исследований» (Маршалл А., 2008a). В то же время, учитывая причины отставания в развитии экономической науки, он указал, что «…в действительности число ученых-экономистов было всегда невелико по сравнению со сложностью проблем, которые этой науке надлежало решать, и в результате она все еще пребывает почти в младенческом состоянии». Глубже изучив развитие экономической науки и изменения общественных процессов, он указывает, что «…из тех способов производства, распределения и потребления, которыми занимается современная экономическая наука, возникли лишь в самое последнее время». Развивая экономические мысли он делает акцент, что <u>необходимо осуществлять свободное предпринимательство и сохранить безопасности</u> (подчеркнуто О.К.) «…во всех аспектах – политических и социальных – стоит отстаивать любой ценой, за исключением потери безопасности». Далее он подчеркнул, что «…экономисты рассматривали свободное предпринимательство, по существу, не как абсолютное благо, а как меньшее зло с действовавшими в те времена порядками». Он понимал, что все эти действия впоследствии могут способствовать росту накоплению денег и улучшить покупательную способность, которые «…составляют главный стержень, вокруг которого концентрирует свое внимание экономическая наука, объясняется это не тем, что деньги или материальное богатство рассматриваются как главная цель человеческой деятельности или даже как основной предмет исследования экономиста». И он видел, что каждое возрастание богатства, увеличение численности интеллекта, создает условие высокоразвитой организации производства, что способствует производительности капитала и труда (Маршалл А.,b), и это эффективно достигается в отраслях промышленности.

В то же время Дж.М. Кейнс считал, что для преодоления кризиса необходимо обеспечить государственное регулирование, стимулирование производства, снижение процентных ставок. В труде «Мировой денежный рынок и кризис» и в рамках «Трактата о деньгах» он высказал целый ряд идей, отражающих его понимание методов борьбы с кризисом, в частности, он указал на необходимость снижения процентных ставок инвестиций путем государственного вмешательства (Кейнс Дж. М., 2008).

Поэтому без обеспечения соответствующего финансово-экономического уровня невозможно своевременное решение стоящих перед государством задач, как на национальном, так и на международном уровне. И всё это, в конечном счете, направлено на улучшение человеческого общества. Естественно государственная стратегия финансово-экономической безопасности, являясь неотъемлемой частью национальной безопасности любого государства, заключается в обеспечении защиты населения через повышение уровня и качества жизни, эффективное решение открытых внутренних экономических и социальных задач, а также дозированное влияние на мировые процессы с учетом национальных интересов страны, в рамках экономики Евразии. В этой связи наделение государства функциями национальной безопасности является стержневым вопросом. И он непосредственно взаимосвязан и взаимозависим от уровня финансово-экономической безопасности страны. В условиях развития рыночных отношений обоснована взаимосвязь между отраслями экономики и финансовым сектором республики. Поэтому необходимы <u>финансиализации всего капитала</u>, соответственно показатели экономической безопасности в целом по стране в обобщенном виде должны отражаться в показателях финансово – экономической безопасности. Поэтому финансиализация и финансовые механизмы, и инструменты являются основными методами увеличения финансовых ресурсов. «Именно для индустриально-промышленных стран мира финансовые рычаги позволяют государству быстро реагировать на изменения экономического развития. США, как и другие развитые страны, обладают значительной государственной собственностью на финансовые ресурсы (Экономика США, 167b).

Для этого была подписана и утверждена с кыргызской стороной поэтапная программа геологического изучения недр на двух перспективных нефтегазоносных площадях — Кугартская и Участок Восточный Майлису IV. На Кугартской площади будет выполнена сейсморазведка 2D в объеме 450 пог. км и разведочные работы — 523 кв. км. На Участке Восточный Майлису IV запланирована сейсморазведка 2D в объеме 50 пог. км и разведочные работы — 44 кв. км.

Вместе с тем, вышеуказанные тенденции цепного индекса КР, связаны недостаточным ростом финансово-экономических показателей на микро - и макро-уровнях, а также значительные объемы внешних и внутренних долгов. Кроме того, имели место неустойчивости уровня социально-

экономического развития и в отдельные годы общественно-политической ситуации в республике (2005 г. и 2010 г.).

Следовательно, структура национального богатства состоит в основном, из природного и человеческого потенциала, экономических, научно-технических достижений и финансовых ресурсов. Всё эти важные ресурсы, факторы и условия концентрируются в макроэкономических показателях, прежде всего, ВВП и госбюджета страны. Действительно, «показатель ВВП представляет собой ключевой параметр системы национальных счетов США, используемый для измерения и оценки тенденций развития американской экономики в долгосрочном плане. Динамике ВВП отражает колебания и перепады состояния национальной экономики, служит основой для выработки экономической политики страны, своеобразным «компасом» ее фискальной и монетарной составляющих» (Экономика США, 2003с).

В Кыргызстане открытость экономики зашкаливает за 100% (в 2011 г.). В 2000-2011 гг. ВВП вырос в 4,2 раз, в то же время оказание услуг потребителям в структуре ВВП подрос в 5,8 раз, а производство товаров возросло всего лишь 3 раза (Нацстаткомитет КР, 2012). Здесь доминирующим фактором в формировании ВВП оказался оказание услуг и ежегодно возрастало производство товаров и услуг, а также чистые налоги на продукты. В то же время в структуре ВВП по сравнению производством услуг заметно отставало доля производство товаров: с 61% в 2000 г. до 43,6% в 2011 г. За этот период возросла доля услуг - соответственно с 32,1% до 44,9%. Одновременно произошло увеличение суммы чистых налогов на продукты с 6,9% до 11,5%. Причем, темпы прироста производство услуг, начиная с 2009 г. заметными темпами опережали прироста производство товаров. Если такая тенденция будет сохранена и дальше то, забегая вперед можно сказать, что и неизбежны проблемы, как и в предыдущие годы появления отрицательного сальдо торгового и платёжного баланса. Впоследствии снижение поступления твердой валюты от внешнеторговой деятельности, уменьшения доходов госбюджета и вследствие появления его дефицита. И такая цепная реакция ослабевает уровня финансово-экономического состояния КР.

Теперь нам необходимо рассмотреть динамику изменения структуры ВВП в КР. Для чего приводим доли и структуры ВВП по основным отраслям экономики. «Уверенно» сдают свои позиции сельское хозяйство и промышленность – до недавнего времени считающиеся флагманами экономики. Причины общеизвестны: «как следует, реформировались и приватизировались по коррупционной схеме», а также потери внешних вертикально-интеграционных экономических связей со странами дальнего и ближнего зарубежья. Повиляли также результаты уровня эффективность и ответственность руководителей органов государственного управления и других республиканских структур при принятии и применении нормативно-правовых актов, налогово-бюджетного и денежно-кредитного механизмов, создание централизованных фондов и отмывание собственных и заемных финансовых средств Кыргызстана.

Были определены «приемлемые условия (тарифы на лицензии) по проведению геологоразведочных работ и добычи природных ископаемых (в основном в пользу иностранных инвесторов), особенно в горнодобывающей и обрабатывающей промышленности. В частности, по освоению золоторудных месторождений и вывоза, и продажи, не только готового золотого слитка, но и полученных других попутных драгметаллов, и даже в добычи и обработке основной руды. Кроме того, в организации внешней торговли, были установлены приемлемые условия экспортно-импортных поставок, и в этом процессе лоббировали некоторые руководители государственного управления. Впоследствии эти действия отрицательно оказались и на формирование ВВП КР, в том числе на отдельные – ключевые отрасли реального сектора экономики, в частности: сельское хозяйство и промышленность и эти отрасли в структуре ВВП республики в 2000-2010 гг. соответственно снизились с 34,1 до 18,0% и с 25 до 20,7%.

Одновременно следует подчеркнуть, что объем ВВП КР, в том числе уровень промышленности в определенной степени поддерживается результатом работы Кумтор Оперейтинг Компании (далее КОК). Хотя, от этой компании финансово-экономическое состояние республики всё еще прямого эффекта полностью не получает, кроме налоговых, социальных и одноразовых гуманитарных пожертвований жителям КР. В настоящее время (в 2010-2011 гг.) отдельные эксперты считают, что от КОК увеличились поступление налогов от валового дохода по разработке золоторудного месторождения. По данным НСК КР объем указанного налога в 2010 и2011 гг. возрос с 4,4 млрд. сомов до 6,1 млрд. сомов, или соответственно 2,0 и 2,2% к ВВП КР. Однако, удельный вес показанных налогов к налоговым доходам Кыргызстана составляет соответственно всего лишь 11 и 11,4%. [(Справочное: Национальная валюта – сом введена Жогорку Кенешем – (Парламентом) КР от 10 мая 1993 г. Тогда 3,98 сома = за $1)].

Тем более в соответствии со статьей 16 «Запреты и ограничения экспорта и/или импорта исходя из национальных интересов» Закона КР (1997г.) «О государственном регулировании внешнеторговой деятельности в Кыргызской Республике», исходя из национальных интересов, могут быть, установлены запреты и ограничения экспорта и/или импорта товара, работ, услуг, для предотвращения исчерпания невосполнимых природных ресурсов, чтобы обеспечивать национальной безопасности КР (подчеркнуто автором - О.К.). Необходимо обеспечить самостоятельное освоение собственных золоторудных месторождений. Национальное золото - это постоянный источник – инвестиции.

В КР одновременно произошли положительные сдвиги по увеличению доли в структуре ВВП, в частности, в строительстве, торговли, оказание услуги, чистые налоги на продукты и др. Эти тенденции могли бы еще улучшаться, если темпы прироста производительности труда, были бы значительно выше, чем темпы прироста его оплаты сектора экономики и соответственно в целом по стране.

В динамике производство ВВП в целом по стране на душу населения в 2005-2008 гг. (если не считать 2000г.) имеет тенденции роста. Однако, начиная с 2009 г. производительность труда по стране не достаточно выросла. Хотя, за сопоставимый период производство ВВП на душу населения выросло в 3,9 раза. В то же время за изучаемый период среднемесячная номинальная зарплата 1-го работника по КР в основном имеет тенденции роста. Пик прироста заработной платы по сравнению с производительностью труда отмечен в 2005, 2008 и 2011 гг. (соответственно в 2; 1,1 и 1,3 раза), а в остальные годы, начиная с 2008 г. она имела тенденции роста и в целом по стране за изучаемый период увеличилась в 7,8 раза.

Доля промышленной продукции в структуре ВВП в 2000 г. составляла 25% и занимала второе место после сельского хозяйства, а в 2011 г. она снизилась до 20,7%, или на 4,3 процентных пункта. Хотя в данной отрасли также имеются неиспользованные возможности. Заметное изменение произошло в объемах продукции в обрабатывающей промышленности и в отрасли производства и распределения электроэнергии, газа и воды. Недостаточная эффективность производства сектора экономики, прежде всего, было связано с тем, что за изучаемый период в структуре ВВП произошло заметное уменьшение объема и удельного веса товаров, нестабильность вложенных инвестиций. Впоследствии произошло снижение уровня ввода в действие основных фондов, влияние уровня инфляции, некоторый рост уровня внешней миграции, не снижения доли чистого экспорта, а также наличие безработных в республике.

Поэтому нам необходимо в динамике изучить тенденции изменения цепного индекса основных финансово-экономических показателей реального сектора экономики (табл.). За сопоставимый период замечается неустойчивая тенденция роста цепного индекса по вложенным инвестициям в основной капитал и по привлечению ПИИ. В большинстве случаев, наоборот наблюдается снижения уровня этих показателей, особенно, по инвестициям в основной капитал. Вместе с тем ожидается увеличение инвестиции в основной капитал и по привлечению ПИИ со стороны стратегического партнера Кыргызстана - Российской Федерацией намечается крупное вливание для развития отраслей промышленности.

Поэтому Gazprom International, единый оператор зарубежных проектов «Газпрома» России в области поиска, разведки и разработки месторождений углеводородов, завершил оформление лицензионных приложений для продолжения геологоразведочных работ на территории Кыргызстана. Для этого была подписана и утверждена с кыргызской стороной поэтапная программа геологического изучения недр на двух перспективных нефтегазоносных площадях — Кугартская и Участок Восточный Майлису IV. На Кугартской площади будет выполнена сейсморазведка 2D в объеме 450 пог. км и разведочные работы — 523 кв. км. На Участке Восточный Майлису IV запланирована сейсморазведка 2D в объеме 50 пог. км и разведочные работы — 44 кв. км.

Показатель	2000 г.	2005 г.	2008 г.	2009 г.	2010 г.	2011 г.
Инвестиции в основной капитал	137,3	97,1	105,7	130,8	90,8	93,4
Прямые иностранные инвестиции, млн. долл. США (без оттока)	82,5	119,8	198,3	76,3	100,8	77,3
Кредитные вложения в экономику	96,1	129,0	128,3	116,5	106,4	115,8
Ввод в действие основных фондов	277,4	82,9	119,9	105,7	83,9	101,8
Валовой выпуск сельского хозяйства	103,9	95,8	100,8	107,0	97,4	102,3
Продукция промышленности	106,0	87,9	114,9	93,6	109,8	111,9
Среднегодовая численность занятые в экономике	100,2	102,9	101,5	101,5	101,2	101,5
Среднемесячная реальная заработная плата одного работника	98,5	111,8	108,8	107,3	108,0	111,1
Общий объем оборота торговли	107,8	113,5	109,6	100,1	94,4	106,7
Объем услуг	104,4	112,6	113,1	104,5	92,6	109,2
Внешняя миграция	156,7	119,4	81,6	80,9	163,2	83,9
Экспорт товаров	111,2	93,5	140,4	90,6	105,0	127,9
Импорт товаров	92,4	117,2	146,0	74,7	106,0	132,2
ВВП	134,3	115,9	108,4	102,9	99,5	105,7
То же, на душу населения	133,0	109,2	131,7	105,9	108,2	122,6
Доходы госбюджета	128,2	111,5	129,4	119,5	104,1	134,1
Расходы госбюджета	125,6	106,9	125,3	130,2	117,4	132,7

Таблица 1. Уровень цепного индекса основных финансово-экономических показателей КР (к предыдущему году сопоставимых ценах),(%), в

Вместе с тем, вышеуказанные тенденции цепного индекса КР, связаны недостаточным ростом финансово-экономических показателей на микро - и макро-уровнях, а также значительные объемы внешних и внутренних долгов. Кроме того, имели место неустойчивости уровня социально-экономического развития и в отдельные годы общественно-политической ситуации в республике (2005 г. и 2010 г.).

В условиях переходного периода и интенсивного освоения золоторудных месторождений, следовало бы модернизировать формирование отечественной финансовой системы основанной на создание собственных источников инвестиции за счет средств госбюджета, с учетом эффективного использования полезных ископаемых, в рамках продвижения золотого стандарта в экономике и финансов республики.

Вместе с тем вышеуказанные тенденции впоследствии отрицательно воздействовали валового объема продукции сельского хозяйства и выпуска продукции промышленности. Хотя стабилизировалась среднегодовая численность работников, занятых в экономике и имеет тенденции роста среднемесячной реальной заработной платы одного работника. Хотя в отдельные годы обладает тенденции роста внешней миграции, связанные недостаточным развитием отраслей экономики, особенно в сельских районах страны. Численность, безработных за изучаемый период составила свыше 60,0 тыс. чел.

В динамике (кроме 2010 г.) замечается некоторый рост общего объема оборота внешней торговли и объема услуг, которые   в основном были связаны опережающим ростом импорта товаров, над его экспортом. Хотя экспорт товаров (кроме 2005 г. и 2009 г.) также имеет тенденции роста. Однако в целом показатель чистого экспорта был почти всегда отрицательным знаком, что способствовал, вывоза капитала за границу и соответственно, и снизил объемы валовой добавленной стоимости. Впоследствии недостаточно вырос объем ВВП и доходы госбюджета. К сожалению, расходы бюджета имели тенденции роста по сравнению доходной части госбюджета, и в 2009-2011 гг. образовался, значительная сумма дефицита госбюджета, и за счет увеличение неоправданного роста расходов, особенно на содержание госаппарата КР.

Основным источником доходов госбюджета являются: налоговые (почти 70%) и неналоговые доходы (свыше 20%), а также полученные официальные трансферты (более 10%), которые имеют тенденции роста. Если в 2000 г. каждый 8 сом произведенной продукции или оказанной услуги облагался налогом, то начиная с 2005 г. по 2011 г. этот показатель снизился с 6 до 5 сом. Впоследствии вырос налоговая задолженность, наблюдалось увеличение объемов скрытой и не наблюдаемой экономики и ухудшались многие финансово-экономические показатели страны.

Необходимо заметить, что за сопоставимый период из-за ослабления уровня экспортного потенциала в КР коэффициент покрытия импорта экспортом снизился с 91 до 53. Это свидетельствует об увеличении отрицательного сальдо торгового баланса с 49 млн. долл. США до 2015 млн. долл., или в свыше 40 раз. В 2007-2011 гг. внешнеторговый оборот Кыргызстана со странами ближнего и дальнего зарубежья вырос с 3551,2 млн. долл. до 6240,1 млн. долл. США, или в 1,8 раз. В том числе со странами СНГ соответственно с 2091,3 млн. долл. до 2934,6 млн. долл. США, или возрос в 1,4 раз. Из них Российская Федерация с 547 млн. долл. до 1714,0 млн. долл. США, или в 3,1 раз. По внешнеторговому обороту между Кыргызстаном и Россией обеспечен рекордный уровень по сравнению со странами ближнего и дальнего зарубежья, в том числе партнерами по СНГ. Причем удельный вес между двумя республиками в структуре СНГ сохранился почти одном и том же уровне   58,0 и 58,4%. Хотя внешняя торговля дала значительную выгоду для России, которая возросла с 744,2 млн. долл. в 2007 г. до1145,2 млн. долл. США в 2011 г., или за 5 лет выгода в пользу России составила 4082,1 млн. долл. США. А это в условиях рыночных отношений почти равносильно строительству двух Камбаратинских ГЭС для Кыргызстана.

Учитывая традиционные связи между Кыргызстаном (Президент А. Атамбаев) и Россией (Президент В. Путин) в рамках эффективного углубления экономической интеграции стран Евразии и СНГ в строительстве крупных экономико-образующих объектов, в том числе гидроэлектростанций, особенно в строительстве Камбар-Атинская ГЭС-1, которая явиться крупнейшим объектом, с ежегодной потенциальной выработкой электрической энергии порядка 5,1 млрд. кВт.-ч. Уполномоченными организациями сторон по реализации соглашения между правительством КР и правительством РФ о строительстве и эксплуатации указанной ГЭС-1 являются: от кыргызской стороны – ОАО «Электрические станции»; от российской стороны – ОАО «ИНТЕР РАО ЕЭС». Проект реализуется ЗАО «Камбаратинская гидроэлектростанция-1» со следующим распределением долей в уставном капитале: ОАО «Электрические станции» - 50%; ОАО «ИНТЕР РАО ЕЭС» - 50%.

Принят Федеральный закон «О ратификации Соглашения между правительством Российской Федерации и правительством Кыргызской Республики о строительстве и эксплуатации Верхне-Нарынского каскада гидроэлектростанций». Федеральный закон принят Государственной Думой и одобрен Советом Федерации в апреле 2013 г. Соглашением предусматривается реализация проекта строительства и эксплуатации 4-х ГЭС Верхненарынского каскада на территории Кыргызстана (Акбулунская ГЭС, Нарынская ГЭС-1, Нарынская ГЭС-2 и Нарынская ГЭС-3). Для реализации

указанного проекта уполномоченные организации сторон учреждают совместное предприятие с паритетным распределением долей в уставном капитале. Вклад российской уполномоченной организации в уставный капитал ЗАО «Верхне-Нарынские ГЭС» составит 50% от стоимости реализации проекта. Кыргызская сторона в качестве вклада своей уполномоченной организации, в уставный капитал названного ЗАО вносит право пользования земельными участками, отведенными под строительство Верхненарынского каскада ГЭС, и другие активы, в том числе нематериальные, в размере 50% от стоимости реализации проекта.

На период окупаемости проекта за российской стороной закреплено стратегическое и оперативное управление проектом за счет преобладания ее представителей в совете директоров и правлении совместного предприятия. При этом кыргызская сторона передает в доверительное управление российской стороне 25% своих акций ЗАО «Верхне-Нарынские ГЭС». Соглашением предусматривается реализация проекта строительства и эксплуатации на территории КР Камбар-Атинской ГЭС-1 и воздушных линий, обеспечивающих экспорт электрической энергии, вырабатываемой указанной ГЭС, в энергосистемы сопредельных государств. Проект реализуется существующим совместным предприятием — ЗАО «Камбаратинская ГЭС-1».

Следует подчеркнуть, что по итогам 2009-2012 гг. отмечались отрицательные тенденции, влияющие на формирование ВВП и госбюджета КР. Такое нежелательное изменение связано, с тем, что в динамике прослеживалось недостаточное поступление налоговых доходов к ВВП и опережающие расходы госбюджета, над его доходами. Кроме того, произошло заметное снижение коэффициента покрытия импорта экспортом, и впоследствии образован значительный объем дефицита госбюджета, допущено несвоевременное обслуживания графика ГВД. Тем более объемы государственных внешних заимствований в 2000-2011 гг. вырос свыше 2 раз и на душу населения он увеличился с 285 до 509 долл. США. Впоследствии международные инвестиционные позиции КР были ослаблены. За указанный период иностранные активы увеличились в 6,5 раза, одновременно объем внешних финансовых обязательств повысился в 2,8 раз. В итоге чистая международная инвестиционная позиция Кыргызстана сформировалась отрицательная, и её уровень возросла с -1658,8 млн. долл. США до -2772,0 млн. долл. США, или, в 1,5 раза.

Выше отмеченные диспропорции впоследствии ухудшали показателей платежного баланса, особенно счета текущих операций. Кроме того, они были связаны, прежде всего, недостаточным ростом производства конкурентоспособных и экспорта - ориентированных товаров КР. За изучаемый период производство товаров, хотя увеличилось почти 3 раз. К сожалению, их доля в структуре ВВП, снизилась с 61,0% в 2000 г. до 43,6% в 2011 г. За это время, хотя ВВП вырос в 4,2 раз. Одновременно денежная масса возросла почти в 10 раза, и она в отношение к ВВП увеличилась с 12% до 29%. В структуре денежной массы, деньги вне банков в основном имеют тенденцию ежегодного роста и они увеличились в 11,5 раза. Впоследствии скорость обращения М2Х снизилась с 8,9 до 3,8, или на 57,3%, что свидетельствует о снижения уровня мобильности экономики и потребность в деньгах возрастает и для других целей. В этом процессе не исключается участие также коррупционной схемы и «теневой» экономики республики. И естественно, они замедляют скорость оборота денег, и снижаются функции денег, как средства обращения. Вследствие отмечается постоянный рост степени коэффициента монетизации ВВП по денежному агрегату М2, хотя этот процесс отслеживается и со стороны МВФ. Такая тенденция в определенной степени связана с ростом общей суммы импортируемых товаров, розничного товарооборота, уровня инфляции, роста внешних заимствований, а также недоверия отдельных категорий граждан к АКБ.

Хотя, имеет тенденции к снижению средневзвешенная годовая ставка по депозитам АКБ, как в национальной, так и иностранной валюте. Одновременно так же в динамике снижается средневзвешенная ставка по кредитам в национальной и иностранной валюте АКБ. В то же время отклонения ставки по кредитам АКБ по сравнению с депозитами, замечается снижения. Однако данная разница, по сравнению средневзвешенной годовой ставкой по депозитам АКБ, как в национальной, так и иностранной валюте начали расти соответственно с 2,1 до 9,8 раза и с 7,4 до 22,9 раза.

Впоследствии начиная с 2009 г. замечался увеличение процесса дефицита госбюджета (почти 3 млрд. сом, или 1,5% к ВВП КР). В 2010, 2011 и 2012 гг. были допущены суммы дефицита госбюджета соответственно: 10,8, 13,5 и 23,1 млрд. сом, или почти 5% к ВВП КР. Согласно проекту закона «О внесении изменений в закон КР «О республиканском бюджете КР на 2012 год и прогнозе на 2013-2014 гг.», уточненный дефицит республиканского бюджета на 2012 г. составил 21, 7 млрд. сомов, что составил 7,1% к ВВП КР. Для покрытия дефицита бюджета образованного в 2012 г., из всех предусмотренных источников финансирования намеченной Правительством КР (далее ПКР) более эффективным вариантом является обозначенное выделение (в четвертом квартале 2012 г.) стратегическим партнером - Правительством Российской Федерации безвозмездного гранта в размере $25 млн. долл. США (или 1,2 млрд. сомов.) для поддержания бюджетной устойчивости Кыргызстана.

Президентом России подписан Федеральный закон «О ратификации Соглашения между Правительством РФ и Правительством КР об урегулировании задолженности КР перед РФ по ранее предоставленным кредитам». В межправительственном соглашении, которое было подписано в сентябре прошлого года, пересматриваются условия погашения и обслуживания двух долговых обязательств Кыргызстана, общий объем которых составляет 488,9 млн. долл. США (сентябрь 2012 г.). Как уточняет российское агентство РИА «Новости», одна задолженность составляет 188,9 млн. долл. — она, согласно документу, будет списана единовременно в полном объеме в момент вступления в силу соглашения. При этом начисление и выплата процентов на имеющийся остаток долга производиться не будут. Вторая задолженность, в размере 300 млн. долл., будет списываться равными долями в течение 10 лет, начиная с марта 2016 г. Оговаривается, что остаток долга уплачивается кыргызской стороной до марта 2016 г., после чего проценты на остаток не начисляются и не выплачиваются.

Справедливости ради следует подчеркнуть, что при значительном дефиците госбюджета КР в течение многих лет и из-за недостаточного поступления налоговых доходов и незначительного роста объема производство товаров в структуре ВВП страны, опережающего роста импорта товаров по сравнению с ростом экспорта, большие средства были направлены на содержание органов государственного управления. Этот процесс заметно увеличивается, начиная с 1997 г. и по настоящее время. Если в 1995 г. расходы на финансирование государственных услуг общего назначения, оборону, общественный порядок и безопасность составили 19,6% годового бюджета, то в 2007 г. они возросли до 25,1%, или на 5,5 процентных пункта. За этот период в условиях развития рыночных отношений расходы социально-культурной сферы снизились. Расходы бюджета только по двум указанным направлениям составляют свыше 80%. Финансирование секторов экономики в структуре бюджета повысилось. На финансирование производства товаров расходы были мизерными, т.е. средства были распределены по остаточному принципу.

Итак, улучшение финансово-экономическое состояние республики обеспечивается увеличением производства товаров, наращиванием экспортного потенциала, применением эффективного механизма и инструментов финансово-кредитной системы, самое главное искоренением коррупции, контрабанды и других экономических преступлений. Это способствует своевременному погашению внешнего долга, повышению доверия населения к ПКР, а также улучшению уровня экономических показателей страны.

Поэтому необходимо обеспечить динамичный рост основных отраслей реального сектора экономики и важных макроэкономических показателей. При обеспечении этих условий можно улучшить степень показателей, характеризующие состояние экономики и финансов республики и на этой основе можно ослабить влияние глобального финансово-экономического кризиса в КР. Финансово-экономические и правовые механизмы должны инициировать и стимулировать возрождение ключевых отраслей экономики.

Для этого необходимо привести обобщающие основные факторы и условия, обеспечивающие развитие национальной экономики Кыргызстана (рис.). Основными источниками для поддержания национальной экономики является оптимальный уровень инвестиции в основной капитал. Причем в структуре основного капитала должны быть правильное сочетание между объемами внешней и собственной инвестиции в рамках соблюдения национальных интересов республики. Такое сочетание, прежде всего, обеспечивается за счет роста отечественных источников, особенно наращиванием добывающей и обрабатывающей промышленности, в том числе освоением национальных золоторудных месторождений и увеличением запаса собственного золото.

Рисунок 1. *Факторы и условия для обеспечения роста социально-экономического развития Кыргызстана.*

В условиях открытость экономики и дальнейшего развития интеграционных процессов в рамках укрепление экономики государств Евразии, следует поэтапно и на основе приближения относительного уровня финансово-экономического состояние будущих членов таможенного союза необходимо ускорять расширение границы данного союза, и с учетом сохранения суверенитета государств создать единое таможенное, энергетическое и, далее, на основе применение единой эквивалентной денежной единицы для свободного обращения среди государств нового общества и их объединять как добровольное объединение стран (далее ДОС) в условиях продвижения международной интеграции по финансово-экономическим вопросам, и на этой основе затем сформировать единое экономическое пространство (далее ЕЭП) в рамках развития экономики Евразии, и при сохранении функций национальных валют каждого суверенного государства. Поэтапное осуществление этих направлений приближает процесс разработки идентичной финансовой отчетности торгового и платежного балансов, баланса международных инвестиций национальными банками и национальными статистическими комитетами каждой республики Евразии. И отходить от расчетного и фактического использования доллара США в Международных финансово-экономических операциях.

В конечном итоге обеспечивается динамичный рост ВВП на душу населения, создается необходимый уровень госбюджета страны и улучшается баланс международных инвестиционных позиций страны. И создается условия для улучшения финансово-экономической и национальной безопасности каждой страны Евразии, в том числе КР.

В целом макроэкономическая стабильность на 2013-2017 гг. должна отражаться в обеспечении следующих параметров: среднегодовой рост ВВП не ниже 7-9%; уровень инфляции не более 5-7%; уровень дефицита госбюджета к ВВП не более 2-4%; государственный долг к ВВП не выше 35-40%. На основе эконометрики определено, как в отдаленной перспективе предвидится, что предусмотренные узловые макроэкономические показатели в основном будут обеспечены в 2017-2019 гг. В 2017 г. по сравнению с 2011 г. ожидается увеличение ВВП на душу населения республики как минимум свыше в 1,5 раз. Одновременно предвидится рост госбюджета на душу населения республики минимум в 2,1 раза. И на этой основе ожидается улучшение уровня социально-экономического развития, особенно социальной сферы КР.

Заключение

В обобщенном виде теоретические и практические аспекты открытой экономики и экономической интеграции Кыргызстана, прежде всего, зависит в рамках формирования экономики Евразии на основе обеспечения следующих важных направлений:

наличия природно-сырьевого, достаточного экономического, эффективного и конкурентоспособного инновационного потенциала и уровня разработки и применения нанотехнологии в рамках собственных финансовых ресурсов, обеспеченных национальным золотым эквивалентом государств Евразии;

обеспечение реального темпа прироста ключевых секторов экономики, освоения и полная переработка сырьевых ресурсов, уровня развития конкурентоспособного эффективного индустриально-промышленного производства: сельского хозяйства, динамики развития отраслей, обеспечивающих энергетическую, промышленную, продовольственную и экологическую безопасность в рамках ускорения Международной экономической интеграции. И на этой основе создание единое таможенное, энергетическое новое общество, и, применение единой эквивалентной денежной единицы для свободного обращения среди государств Евразии и их объединять как ДОС по финансово-экономическим вопросам и далее сформировать ЕЭП, при сохранении суверенитета каждого государства;

осуществление этих направлений приближает процесс разработки идентичной финансовой отчетности торгового и платежного баланса, баланса международных инвестиций, составляемые национальными банками и национальными статистическими комитетами каждой республики и в целом по Евразии с применением единой эквивалентной денежной единицы. И отходить от расчетного и фактического использования доллара США в Международных финансово-экономических операциях.

внешнеэкономической и внешнеторговой деятельности, которые в определенной степени положительно обеспечивают необходимого уровня торгового и платежного баланса и способствуют привлечению ПИИ для создания крупных бюджете - образующих и конкурентоспособных, особенно для начала в создании совместных экспорта - ориентированных национальных хозяйствующих субъектов;

активности эффективной борьбы масштабной коррупцией, «теневой» экономикой и криминализацией экономики и финансов; повышение эффективности и ответственности работы руководителей государственного управления в обеспечении намеченных параметров социально-экономического развития страны;

улучшения качественного уровня жизни населения, повышения степени человеческого потенциала - главный барометр безопасности;

эффективности развития основных отраслей экономики обеспечивается в рамках одновременного формирования их инфраструктуры - основы динамичного обеспечения роста макроэкономических показателей, из них особенно собственных финансовых ресурсов и улучшения социальной сферы, определяющего социально-экономического развития, сохранения целостность и суверенитета республики;

в отдаленной перспективе предвидится, что предусмотренные узловые макроэкономические показатели в основном будут обеспечены в 2017-2019 гг. В 2017 г. по сравнению с 2011 г. ожидается увеличение ВВП на душу населения республики как минимум свыше в 1,5 раз. Одновременно ожидается рост госбюджета на душу населения республики минимум в 2,1 раза, что обеспечить укрепления национальной экономики страны.

Итак, высокоэффективная работа ключевых отраслей экономики и его инфраструктуры являются основой развития трансформирующейся экономики, финансов и на этой основе обеспечивается динамичный рост валового национального дохода страны, что способствуют ускорению преодоления финансово-экономического кризиса и улучшению жизненного уровня населения республики.
