Orta Asya ülkelerinin uluslararası ulaşım koridoru projelerine katılımı ulaşım altyapısının dünya ile entegre olması ve standardının yükseltilmesi açısından önemlidir. Bu bağlamda **Avrupa-Kafkasya-Asya Ulaşım Koridoru** (*TRACECA: Transport Corridor Europe-Caucaus-Asia*) ile Orta Asya'nın Hazar Denizi, Kafkasya ve Karadeniz geçişli olarak Avrupa'ya bağlanmasını hedeflemektedir. Amaç ülkeler arasındaki ekonomik ilişkileri, dış ticareti, ulaşımı ve iletişimi geliştirmektir. 2000'li yıllarda **Birleşmiş Milletler Asya ve Pasifik Sosyal Komisyonu**'nun (*UNESCAP: United Nations Economic and Social Commission for Asia and the Pacific*) öncülüğünü yaptığı bir başka projede amaç, kara ile kaplı ve transit konumdaki gelişmekte olan Asya ülkelerinin ulaşım altyapılarını entegre etmek ve yenilemektir. Bu proje kapsamında 3 ulaşım koridoru Orta Asya ülkelerini ilgilendirmektedir. Ulaşım ile ilgili bir başka proje ise Asya Kalkınma Bankası'nın (ADB) **Orta Asya Bölgesel Ekonomik İşbirliği Programı**'nın (*CAREC: Central Asia Regional Economic Cooperation*) ulaşımı ve ticareti kolaylaştırmaya yönelik stratejisidir. Ulaşım ile ilgili 80 projenin 33'ü tamamlanmış, geri kalan 47 projenin 37'sinde çeşitli nedenlerle gecikmeler olmakla birlikte bu projelerin yaklaşık %40'ı tamamlanmıştır (CAREC, 2013). Ayrıca ticareti kolaylaştırma açısından her gümrük kapısında beklemeyi azaltacak tek pencere (*single windows*) sistemini bölge ülkeleri arasında geliştirmek için gerekli altyapının oluşturulması noktasında CAREC'in çalışmaları mevcuttur.

Orta Asya'da ulaşım altyapısına yönelik projeler uzun vadeli projeler olup pek çok ülkeyi kapsadığı için farklı nedenlerle gecikebilmektedir. Bu projelerin tamamlanmasının yanı sıra ticaretin kolaylaştırılmasına yönelik her türlü önlem bölge ülkelerinin hem kendi aralarındaki ticarete hem de dünyanın geri kalan ülkeleri ile olan ticaretine ciddi katkı sağlayacaktır. Lojistik maliyetlerin azaltılması ve ticareti kolaylaştırıcı önlemlerin etkin bir şekilde uygulanmasında bölgesel kuruluşlar ve inisiyatiflere önemli rol düşmektedir. Bu kapsamda ulaşım altyapılarının modernleştirilmesi, ulusal şebekelerin birbirine entegre edilmesi ve diğer ortak projelerde Orta Asya'ya yönelik çalışmaları olan kuruluşların hem kendi üyeleri arasında hem de diğer bölgesel kuruluşlarla etkin işbirliği gereklidir. Dolayısıyla Avrasya Ekonomik Topluluğu (*EurAsEc*), Ekonomik İşbirliği Örgütü (*ECO*), Asya Kalkınma Bankası (*ADB*), BM Asya ve Pasifik Ekonomik ve Sosyal Komisyonu (*UNESCAP*), Karadeniz Ekonomik İşbirliği (*KEİ*) ve diğer bölgesel kuruluşların ortak çalışmaları ulaşım ile ilgili sorunları önemli ölçüde ortadan kaldırabilir. Böylece dış ticaretin önünde lojistik maliyetlerin yüksekliği ile ilgili engeller büyük ölçüde azalacaktır. Diğer yandan transit geçişlerde beklemeleri azaltacak tek pencere sisteminin daha etkili bir şekilde uygulanması, gümrüklerin modernize edilmesi ve bu kapsamda ticaretin kolaylaştırılmasına yönelik önlemler taşıma ve lojistik maliyetleri azaltırken, dış ticaret potansiyelinin daha iyi değerlendirilmesini sağlayacaktır.

## 9 Sonuç

Sonuç olarak soyut dış teorisinin sıfır olarak varsaydığı taşıma (geniş anlamda lojistik) maliyetleri dış ticaret etkileyen ana faktörlerdendir. Bazı neoklasik iktisatçılar taşıma maliyetlerinin dış ticareti etkilediğini ifade etmiş olsalar da taşıma maliyetlerinin dış ticarete etkisi yeni dış ticaret teorilerinde daha kapsamlı ele alınmıştır. Dış ticareti açıklamaya yönelik yeni teoriler taşıma maliyetlerinin malların üretim yerlerini ve dış ticareti etkilediğini belirtmektedirler. Ampirik çalışmalara bakıldığında ise taşıma maliyetlerini etkileyen unsurlar fiziki uzaklık, coğrafya, ülkelerin açık denizlere kıyısının bulunup bulunmaması, taşımacılığın şekli (tekli ve çoklu model) ulaşım ve haberleşme altyapılarıdır. Orta Asya ülkeleri kara ile kaplı bir coğrafyada yer almakta, daha çok hammadde ihracatçı ve düşük katma değerli mallar ihraç etmektedir. Petrol ve doğalgaz gibi hammaddeler en yakın limana kadar karadan boru hatları ve demiryolları ile taşınmaktadır. Düşük katma değerli mallarda havayolu taşıma ücretlerinin yüksekliği nedeniyle dış pazarlara karayolu ile taşınmaktadır.

Orta Asya'da dış ticarette yurtiçi nakliye ve taşımanın maliyeti ülkelere göre 2.300 dolar ile yaklaşık 9.000 arasında değişmektedir. Ülkelere göre farklılık arz etmekle birlikte taşıma maliyetleri toplam ticaret maliyetlerinin yaklaşık %65 ile %90'nını oluşturmaktadır. Gümrükleme ve teknik kontrol ile liman ve çeşitli terminallerdeki elleçleme süre ve maliyetleri, gelişmiş ülkelere göre oldukça yüksektir. Orta Asya ülkelerinde dış ticaret işlemlerinde gerekli belgelerin (evrakların) hazırlanması oldukça uzun süreler almaktadır. Bu sürelerin en kısa olduğu Azerbaycan'da, gerekli evrakların tamamlanması toplam ihracat/ithalat sürelerinin yarısından daha fazladır. Özetle Orta Asya'da dış ticarette sürelerin uzun ve maliyetlerin yüksek olmasının temel sebepleri aşırı bürokrasi, yetersiz ulaşım ve lojistik altyapılarıdır.

Orta Asya ülkelerinin lojistik performans indeks değerleri ile yolsuzluk algılama endeks değerleri gelişmiş ülkelerden oldukça düşüktür. Lojistik performansın düşük olması taşıma ve diğer lojistik maliyetleri artırırken, yolsuzluk endeksindeki düşük değerler de yolsuzluğun ve rüşvetin bölgede yaygın olduğunu göstermektedir. Yetersiz ulaşım altyapısının yanı sıra depolama, elleçleme, gümrükleme ve diğer lojistik hizmetlerindeki altyapının yetersiz oluşu, gümrükler ve diğer resmi işlemlerdeki sürelerin uzun olması, yolsuzlukların yaygınlığı ve diğer etkenler, ticaret maliyetlerini artırmaktadır. Bu ise dış ticareti karlı olmaktan çıkarmakta hatta bazı durumlarda taşıma lojistik maliyetlerin yüksekliği tarifelerden daha fazla dış ticareti etkilemektedir. Lojistik maliyetlerdeki artış ülkeleri uzak mesafedeki ülkelerle ticaret yapma noktasında kararsızlığa itebilmektedir.

Orta Asya'nın kara ile kaplı olması dış ticaretin yanı sıra ekonomik ve sosyal konularda da önemli dezavantajlar yarattığı bir gerçektir. Orta Asya ülkelerinin dış ticaret potansiyellerini daha iyi bir şekilde değerlendirilmeleri için özellikle taşıma maliyetlerinin (daha kapsamlı olarak lojistik maliyetlerini) düşürülmeleri gerekmektedir. Bölge ülkelerinin kendi ulusal projelerinin yanı sıra uluslararası kuruluşların projelerinin tamamlanması taşıma süre ve maliyetlerinde ciddi düşüşler sağlayacaktır. Ayrıca gümrük işlemlerin sadeleştirilmesi, transit ticaretin kolaylaştırılması, taşımacılıkta gümrük kontrollerinin azaltılması dolayısıyla zaman kayıplarının önlenmesi için bölge ülkeleri arasında tek pencere sisteminin etkin bir şekilde uygulanması gerekmektedir. Lojistik hizmetler ve diğer süreçler için ciddi bir sorun olan rüşvet ve yolsuzluğun azaltılması bölge dış ticaretini geliştirecektir. Bölge ülkeleri coğrafyanın yarattığı olumsuzluklara kendileri de yeni engeller çıkarttıkları için hem taşıma ve lojistik maliyetler artmakta hem de dış ticarette istenilen şekilde gelişememektedir. Sonuç olarak bölgelerinin dış ticaretleri önündeki en büyük engellerden bir olan yüksek lojistik maliyetleri azaltmak için bölge ülkeleri arasındaki çok taraflı işbirliğinin geliştirilmesi gerekir. Böylece ulusal şebekelerin yenilenmesi, gelişmiş ülke standartlarına ulaşması ve ülkelerdeki ulaşım ağlarının birbirine bağlanması daha kısa sürede ve etkin bir şekilde gerçekleşecektir. Orta Asya ülkelerinin dünya ile entegrasyonunun önündeki ulaşım engeli büyük ölçüde ortadan kalkacaktır.

# Serbest Ticaret Anlaşması Çerçevesinde Makedonya ile Türkiye'nin Dış Ticaret İlişkilerinin İncelenmesi

# Analyzing the Foreing Trade Relations of Turkey and Macedonia within the Framework of Free Trade Agreement

Ph.D. Candidate Neslihan Koç (Hitit University, Turkey)

## Abstract

Turkey, because of its responsibilities derived from Custom Union with European Union, makes limited Free Trade Agreements (FTAs) with those states which have already signed such agreements with EU. As yet Turkey has signed FTAs with 19 countries including Macedonia. It's expected from FTA's that raise awareness of partner countries about each other's economic and commercial potentials. In this study a general overview will be made to emphasize the relationship between FTAs which Turkey has signed with other countries and increase in Turkey's trade volume in the same period. Subsequently, with regarding the FTA and commercial relations with Macedonia, an assessment will be made by using the lists of countries imports and exports, based on Republic of Turkey Ministry of Economy statistics for the period of 2001-2012.

## 1 Giriş

Türkiye, Avrupa Birliği (AB) ile imzalamış olduğu Gümrük Birliği Anlaşması doğrultusunda, karşılıklı tavizler tanıyarak ticaretini geliştirmek üzere Serbest Ticaret Anlaşmaları (STA) imzalamıştır.

STA ile ülkelerin birbirlerinin potansiyellerinin farkına varmaları mümkün hale gelmektedir. STA'ların temel hedefi, anlaşma yapan ülkeler arasındaki ekonomik ve ticari ilişkilerin güçlenmesidir. Bu durumun siyasi ilişkilere de olumlu yansıması beklenmektedir. Yapılan anlaşmalarla ülkelerin belirli pazarlara bağımlılığının azaltılması, ucuz girdi temini ve ihracatta ürün çeşitliliğinin ve miktarının artırılması yoluyla uluslararası rekabet gücünün arttırılması hedeflenmektedir (Ekonomi Bakanlığı, 2014).

Bu çalışmada, genelde Türkiye'nin imzaladığı tüm STA'ların ve özelde Makedonya ile yapılan STA'nın Türk ithalat ve ihracat hacmine etkisi Ekonomi Bakanlığı verilerinden derlediğimiz tablolar ile değerlendirilmeye çalışılmaktadır. Her ülke ile STA imzalanış ve yürürlüğe giriş tarihleri farklı olmasına rağmen; en son dönemi yansıtan 2001-2012 dönemi verileri ele alınacaktır.

STA imzaladığımız ülkelerden biri de Makedonya'dır. Makedonya ile 2000 yılında yapılan STA, 1992'de EFTA ve 1997'de İsrail'in ardından, Türkiye'nin yaptığı üçüncü STA'dır. Bu nedenle ele alınan dönem verileri, Makedonya ile ilgili değerlendirme yapmak için uygundur.

## 2 Türkiye'nin Serbest Ticaret Anlaşması Yaptığı Ülkeler ve Ticari İlişkiler

Gümrük Birliği, tarafların birbirleriyle aralarındaki uluslararası ticarette gümrük vergilerinin, eş etkili vergilerin, miktar kısıtlamalarının ve her türlü eş etkili tedbirlerin kaldırıldığı, birlik dışında kalan üçüncü ülkelere yönelik olarak ortak gümrük tarifesinin uygulandığı bir ekonomik entegrasyon modelidir (İTO, 1996).

Türkiye'nin AB ile arasındaki Gümrük Birliği Anlaşması uyarınca, AB'nin Ortak Ticaret Politikasını üstlenme yükümlülüğü bulunmaktadır. Anlaşma doğrultusunda AB'nin üçüncü ülkelere yönelik yürüttüğü tercihli ticaret sistemi üstlenilmektedir. Örnek vermek gerekirse imtiyazlı muamelenin mümkün olmaması, daha önce Türkiye'yle sıkı bir ticari ilişki içinde olan ABD'nin, Türkiye'ye uyguladığı bir takım ticareti kolaylaştırıcı önlemleri kaldırmasına yol açmıştır. AB'ye üye olmadan onunla Gümrük Birliği kuran başka bir ülkenin olmaması bu açıdan şaşırtıcı değildir. (Karakaş, 2007) Yine son dönemde AB ile ABD arasında gündeme gelen STA yürürlüğe girerse ABD malları, gümrük vergisine tabi olmadan ülkemize girecek; ancak ABD, Türkiye'ye gümrük vergilerini aynen uygulayacaktır.

Görüldüğü gibi AB'nin, özellikle ticaret hacmi büyük olan ülkelerle yaptığı her anlaşma, ülkemiz gümrük uygulamaları açısından maliyet yaratmaktadır. Bu nedenle, AB'nin STA imzaladığı ülkelerle STA imzalamak, Türkiye açısından önemli bir durumdur. Zaten Türkiye, kendi belirlediği ülkelerle değil, sadece AB'nin anlaşma imzaladığı ülkelerle STA yapabilmektedir (Aydın,2004).

STA'larda malların tercihli rejimden yararlanmaları menşe kurallarına göre olmaktadır. Gümrük Birliğindeki gibi ortak ticaret politikaları ve ortak rekabet kurallarını uygulama zorunluluğu yoktur. Taraflar, üçüncü ülkelere karşı kendi gümrük tarifelerini uygulamaktadırlar (Güzel,2013).

Türkiye, bugüne kadar EFTA (Norveç, İsviçre, İzlanda ve Lihtenştayn'ın oluşturduğu Avrupa Serbest Ticaret Birliği), İsrail, Makedonya, Bosna ve Hersek, Filistin, Tunus, Fas, Suriye, Mısır, Arnavutluk, Gürcistan, Karadağ, Sırbistan, Şili, Ürdün, Lübnan, Mauritius, Güney Kore ve Kosova ile STA imzalamıştır. Suriye ile

yapılan anlaşma, 06.12.2011'de askıya alınmıştır. Mauritius ve Güney Kore ile yapılan STA'lar 2013 tarihinde yürürlüğe girmiştir. Kosova ve Lübnan ile yapılan STA'lar henüz yürürlüğe girmemiş, iç hukuk süreci tamamlandıktan sonra yürürlüğe girecektir (Ekonomi Bakanlığı, 2014a).

*Tablo 1. STA İmzaladığımız Ülkelerin Yıllara Göre İthalatı (2001-2012) Milyon Dolar Kaynak: Ekonomi Bakanlığı, 2014b.*

STA'ların önemli amaçlarından biri, özellikle çevre ve komşu ülke pazarlarına giriş imkânlarını arttırmasıdır. Ekonomi Bakanlığı'nın verilerine göre derlediğimiz Tablo 1'e göre, STA yaptığımız ülkeler arasında en yüksek ithalat hacmi olan ülke Güney Kore'dir. İkinci sırada İsviçre, üçüncü sırada Norveç ve dördüncü sırada Şili bulunmaktadır. Bu açıdan yurtdışından ürün alma potansiyeli en yüksek olan ülkelerin, tablodaki diğer ülkelere göre Türkiye'ye mesafe olarak en uzaktakiler olduğu göze çarpmaktadır.

Aynı tabloya göre (Tablo.1) Güney Kore'den sonra en yüksek ithalat hacmi Türkiye'de gözükmektedir. Bu anlamda Türkiye'nin mevcut ithalat hacminin büyüklüğü nedeniyle, bu durumun anlaşma yapan ülkelere ticari açıdan olumlu yansıması mümkündür.

*Tablo 2. STA İmzaladığımız Ülkelerin Yıllara Göre İhracatı 2001-2012 Milyon Dolar Kaynak: Ekonomi Bakanlığı, 2014b.*

STA yaptığımız ülkelerin ihracat hacimlerine baktığımızda (Tablo.2) sırasıyla Güney Kore, İsviçre, Norveç ve Şili en fazla ihracat yapan ülkelerdir. Bu ülkeler dışında STA yaptığımız diğer ülkelerin ihracat hacimleri, ithalat

hacimleri gibi düşüktür. Yapılan STA'lar, bu ülkeler için ülkelerinin ihracat deneyimlerini ve potansiyellerini artırmak için bir fırsat olarak düşünülebilir. Türkiye gibi kısmen ihracat deneyimi olan ancak dış ticaret açığı büyük olan ülkeler için de bu açığı azaltmaya yardımcı bir yol olarak değerlendirilebilir.

Tablo 1 ve 2'deki verilere göre hesapladığımızda 2001-2012 döneminde Türkiye'nin ithalatının %471 arttığını ihracatının ise %386 arttığını görmekteyiz.

Aynı veriler ışığında dış ticaret dengesine baktığımızda açığın 85 milyar dolara yükseldiğini; ihracatın ithalatı karşılama oranının, ihracat artmasına rağmen ithalatın da artması nedeniyle, 2001'de %75 iken 2012'de %65 seviyelerine indiğini görüyoruz. Zaten 1994, 2001 ve 2009 yılları hariç bu oran hiçbir zaman %70'in üzerine çıkmamıştır.

Tablolara bakarak incelediğimiz dönem için ticaret hacminin çok fazla arttığı ancak ihracatın ithalatı karşılama oranının hiç artmadığı ve düşük seviyelerde kaldığı bir dönem olduğunu söyleyebiliriz. Cari açık sorunu ülkemiz için hala en önemli ekonomik açmazlardan biridir. STA'lara gerçekleştirilecek ihracat artışları bu açıdan önem taşımaktadır.

| Ülkeler | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 |

***Tablo 3.** STA İmzaladığımız Ülkelerden Yapılan Toplam İthalat 2001-2012 Milyon Dolar **Kaynak:** Ekonomi Bakanlığı, 2014c.*

Ekonomi Bakanlığı verilerine dayanarak hazırladığımız Tablo 3'e baktığımızda STA yaptığımız ülkelere 2001 yılında toplam 3,7 milyar dolar seviyesinde olan ithalatımızın %335 oranında artarak, 2012 yılında 16,1 milyar dolara ulaşmış olduğunu görüyoruz. Aynı dönemlerde ülkemiz genel ithalatının (Tablo 1) %471 artış gösterdiğini düşünürsek STA yaptığımız ülkelerin ithalatımızdaki paylarının az olduğunu söyleyebiliriz. Örneğin 2012 için Türkiye'nin toplam ithalatı 236.545 milyon dolarken Tablo 3'te yer alan STA imzaladığımız 22 ülkeden yapılan toplam ithalat yalnızca 16.113 milyon dolardır. Kısaca STA ülkeleri ile ticaretimiz ithalatımızın yaklaşık %6,8'ini oluşturmaktadır.

En çok ithalat yaptığımız STA ülkeleri Tablo 3'e göre sırasıyla Güney Kore, İsviçre, İsrail, Mısır ve Norveç'tir. STA ülkeleri arasından yapılan kıyaslamada zaten bu beş ülke toplam ithalatın %85 gibi çok büyük bir kısmını içermektedir.

Tablo 4, Türkiye'nin STA imzaladığı ülkelere yaptığı ihracat rakamlarını göstermektedir. Tablo 3 ve Tablo 4'ü birlikte değerlendirdiğimizde 2012 için yürürlükteki STA'lar açısından 73 milyon dolarlık bir ticaret açığımızın bulunduğu görülmektedir. Başka bir anlatımla bu ülkelerden daha fazla mal ve hizmet alıp, daha azını satmaktayız.

2012 için Türkiye'nin toplam ihracatı 152.462 milyon dolar, STA ülkelerine ihracatı ise 16.040 milyon dolardır. Bu rakamlara göre hesapladığımızda STA ülkeleri ile ticaretimiz, ihracatımızın %10,5'ine denk gelmektedir.

2001-2012 döneminde ülkemiz ihracatı %386 artarken, aynı dönemde STA yaptığımız ülkelere yapılan ihracattaki artış oranı %458 olmuştur. Kısaca STA ülkelerine yapılan ihracat artış oranı genel artış oranından yüksektir. Bu dönemde STA ülkelerinden yaptığımız ithalatın %335 arttığını göz önüne alırsak, ihracattaki artış ithalattaki artıştan daha büyük olmuştur. Bu hesaplamalardan hareketle, yapılan STA'ların ihracat hacmi artışına katkısı olduğunu söylemek mümkündür. İhracat artışı ithalat artışından fazla olmasına rağmen, toplamda bu ülkelerden yapılan ithalat-ihracat farkının hala ithalat lehine olması ise eleştirilebilecek bir durum olarak karşımıza çıkmaktadır.

Ekonomi Bakanlığı ihracat verilerinden derlediğimiz Tablo 4'e göre en çok ihracat yaptığımız STA ülkeleri sırasıyla Mısır, İsrail, İsviçre, Gürcistan ve Fas'tır.

Bu ülkelerden İsrail, İsviçre ve Mısır, aynı zamanda en çok ithalat yaptığımız ülkeler arasında da yer almaktadır. Bu sıralamadan hareketle bu üç ülke ile yapılan STA'lardan karşılıklı olarak etkin yararlanıldığını söylemek mümkündür.

Mısır ve İsrail aynı zamanda, Türkiye'nin toplamda en çok ihracat yaptığı ilk 20 ülke arasında da yer almaktadır (TÜİK, 2014).

| Ülkeler | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 |

## 3   Türkiye'nin Makedonya ile Arasındaki Serbest Ticaret Anlaşması ve Ticari İlişkileri

Dış ticaret ilişkilerine değinmeden önce iki ülkenin ekonomik verilerine baktığımızda; Makedonya'nın nüfusu, 2 milyon iken Türkiye, 72,5 milyon nüfusa sahiptir. Nüfus gibi yüzölçüm bakımından da Türkiye, Makedonya'dan yaklaşık 30 kat büyüktür. 2012 verilerine göre, Türkiye'de kişi başı GSYİH 8.223 Avro, enflasyon oranı ise %9'dur. Makedonya için ise aynı veriler sırasıyla 3.651 Avro ve %3,3'tür (Avrupa Komisyonu, 2013a ve 2013b).

Makedonya 3 çok taraflı Serbest Ticaret Anlaşmasına sahiptir. Bunlar;

- AB Ülkeleri ile Stabilizasyon ve Katılım Anlaşması (SAA-Stabilization and Association Agreement)
- İsviçre, Norveç, İzlanda ve Lihtenştan ile EFTA (European Free Trade Agreement),
- Arnavutluk, Moldova, Hırvatistan, Sırbistan, Karadağ, Bosna Hersek ve Kosova ile CEFTA (Central European Free Trade Agreement).

Makedonya'nın Türkiye ve Ukrayna ile ikili Serbest Ticaret Anlaşması bulunmaktadır (Pulat,2013).

1996 tarihinde yürürlüğe giren Gümrük Birliği Anlaşması Türkiye'nin AB ile ortaklık ilişkisinde önemli bir aşama olmuş; 2005 tarihinde Türkiye'nin katılım müzakerelerine başlaması kararı alınmıştır. Türkiye aday ülke olarak beklemeye devam etmektedir.

2005 yılında adaylık statüsü kazanan Makedonya, Yunanistan ile yaşadığı isim sorunu nedeniyle katılım müzakerelerine başlayamamaktadır. Makedonya Cumhuriyeti'ni AB, "Eski Yugoslav Makedonya Cumhuriyeti" olarak anmaktadır. Türkiye, Makedonya'yı anayasal ismiyle tanıyan ilk ülkelerden biridir (Pulat,2013).

İki ülkeye ilişkin AB'nin 2013 İlerleme Raporlarındaki ekonomik değerlendirmelerde Türkiye açısından gerileyen büyüme oranı ve yüksek cari işlemler açığına; Makedonya açısından ise yüksek işsizlik oranlarına dikkat çekilmektedir.

İlerleme raporunda, AB'nin Türkiye'nin ihracatındaki payı %38, AB'nin Türkiye'nin ithalatındaki payı ise %37 olarak ölçülmüştür. Türkiye, AB'nin altıncı en büyük ticari ortağı olmaya devam ederken; AB, Türkiye'nin en büyük ticari ortağıdır. Makedonya ise toplam ihracatının %73'ünü AB'ye yapmıştır. Bu açıdan Makedonya, AB ile ticari bütünleşme açısından Türkiye'den daha ileri bir düzeydedir.

Türkiye ve Makedonya, Türkiye'nin AB ile Gümrük Birliği'nden kaynaklanan yükümlülükleri ve Makedonya ile AB arasındaki İşbirliği Anlaşması çerçevesinde aralarındaki ticareti kademeli olarak serbestleştirme kararı almışlardır. 1 Eylül 2000 yılında 4548 sayılı kanunla uygun bulunan "Türkiye ile Makedonya Arasındaki Serbest Ticaret Anlaşması" yürürlüğe girmiştir.

Yapılan anlaşma metnine baktığımızda, ülkemiz tarafından, Makedonya menşeli sanayi ürünleri için uygulanan gümrük vergileri 2003 yılından itibaren; Makedonya tarafından, Türkiye menşeli sanayi ürünleri için uygulanan gümrük vergileri ise 1 Ocak 2008 tarihi itibariyle kaldırılmıştır. İki ülke, belirli sayıda tarım ürünü için tarife kotaları kapsamında veya sınırsız mahiyette tarife indirimi veya muafiyeti tanımıştır.

Belirtilen kanunda anlaşmanın amaçları; tarafların aralarındaki ve üçüncü ülke pazarlarındaki ticaret ve işbirliğini arttırmak, ticarette adil rekabet koşulları yaratmak ve iki ülke halklarının yaşam standartlarını yükseltmek olarak özetlenebilir.

Tablo 1 ve 2'ye göre Makedonya'da 2001-2012 döneminde, ithalatın %284, ihracatın ise %245 arttığı; dış ticaret dengesindeki açığın ise toplam 2,5 milyar dolar olduğu görülmektedir. İhracatın ithalatı karşılama oranı %61 civarıdır. Oransal olarak bakıldığında her iki ülkenin de hem ihracat hem de ithalat açısından büyüdüğünü söylemek yanlış olmaz; ancak rakamsal olarak bakıldığında Türkiye'nin dış ticaret hacmi de açığı da Makedonya'nın yaklaşık 40 katıdır.

2012 verilerine göre Makedonya ile ihracatımız, plastik ve plastikten mamul eşya (%10), nükleer reaktörler, makine ve cihazlar (%8), pamuk (%6), elektrikli makine ve cihazlar (%5), metal cevherleri (%5); ithalatımız ise motorlu kara taşıtları (%29), demir-çelik (%28), pamuk (%9), seramik mamulleri (%6), bakır ve bakırdan eşya (%6), postlar-deriler (%5) ürün gruplarından oluşmaktadır. (Ekonomi Bakanlığı,2014d)

Tablo 3 verilerini Makedonya açısından değerlendirirsek, Makedonya'dan ülkemize yapılan ihracatın 2001'de 9 milyon dolardan 2012'de 103 milyon dolara çıktığını görüyoruz. Makedonya açısından Türkiye'ye ihracat verilerinde yaklaşık 12 kat gibi büyük bir artış olmasına rağmen, Makedonya'nın 2012 yılında toplamda 4 milyar dolar ihracat yaptığı düşünülürse Türkiye'ye yaptığı 103 milyon dolarlık ihracatın yetersiz olduğu söylenebilir. Oransal olarak hesaplarsak Makedonya'nın toplam ihracatı içinde Türkiye'nin payı %2,5'tir.

Tablo 1 ve Tablo 3 2012 yılı rakamları birlikte değerlendirerek Türkiye'nin toplam ithalatı ile Makedonya'dan yaptığı ithalat rakamını kıyasladığımızda %0,04 gibi çok düşük bir orana ulaşmaktayız. Aynı zamanda Makedonya'nın Türkiye'nin STA imzaladığı ülkelerden yaptığı ithalat içindeki payı da oldukça düşüktür (%0,6).

Tablo 4'e baktığımızda Türkiye'nin Makedonya'ya ihracatını, 2001-2012 döneminde sadece 3 kat arttırdığını görüyoruz. Türkiye, toplamda tüm STA yaptığı ülkelere 16 milyar dolarlık mal ve hizmet satarken Makedonya'ya 274 milyon dolarlık ihracat yapmaktadır. Bu hem Türkiye'nin STA imzaladığı diğer ülkelerle hem de Türkiye'nin toplam ihracat hacmi açısından kıyaslandığında oldukça bir rakamdır.

Genel toplamda Türkiye'nin Makedonya'ya yaptığı ihracat, toplam ihracatının %0,18'ini oluştururken tam tersi Makedonya'nın Türkiye'ye yaptığı ihracat toplam ihracatının %2,5'ine denk gelmektedir. Oransal yansımalara baktığımızda yapılan STA'nın Makedonya için ihracat potansiyelini artırmak açısından daha faydalı olduğu sonucuna varılabilir. Ancak yine de tablolardaki rakamlara göre Türkiye, Makedonya'ya 274 milyon dolarlık ihracat yaparken 103 milyon dolarlık ithalat yapmaktadır. Yani iki ülke arasındaki ticari karşılaştırmada aldığından daha fazlasını satan ve bu açıdan ticari fazla veren taraf Türkiye'dir.

## 4    Sonuç

Türkiye, 1995 yılında yaptığı Gümrük Birliği Anlaşması nedeniyle AB'nin üçüncü ülkelere yönelik uyguladığı ticaret politikasını üstlenmek durumundadır. Bu nedenle AB, bir ülke ile STA imzaladığında o ülke için uygulayacağı tavizli gümrük oranlarını, o ülke için Türkiye de uygulamak zorunda kalmaktadır.

Belirtilen bu olumsuzluğu gidermek üzere Türkiye, AB'nin STA imzaladığı ülkelerle müzakere yaparak bir an önce STA imzalamaya çalışmaktadır. İlk 1992 yılında EFTA ile yapılan STA sonrası günümüze kadar çeşitli ülkelerle anlaşma imzalanmıştır.

2001-2012 dönemi için baktığımızda Türkiye'nin hem ihracat hem de ithalat hacminin çok fazla büyüdüğünü söylemek mümkündür. Ancak ithalattaki artış ihracattan daha fazla olduğundan ihracatın ithalatı karşılama oranı düşük seviyelerde seyretmektedir.

Yapılan STA'lar değerlendirildiğinde bu ülkelere yapılan ihracatın ithalattan daha fazla arttığı görülmektedir. Bu ülkelere yapılan ihracat, toplam ihracatın yaklaşık %10'u; ithalat ise toplam ithalatın yaklaşık %6'sını oluşturmaktadır. Bu oranlara göre ihracatın ithalattan fazla olması Türkiye açısından STA'ların faydalı olduğunu göstermektedir.

En çok ihracat yaptığımız STA ülkeleri sırasıyla Mısır, İsrail, İsviçre, Gürcistan ve Fas'tır. En çok ithalat yaptığımız STA ülkeleri ise sırasıyla Güney Kore, İsviçre, İsrail, Mısır ve Norveç'tir. Güney Kore gibi ticaret hacmi çok büyük olan bir ülke ile 2013 yılında STA yaptığımız düşünüldüğünde; bu STA, Güney Kore'den yapacağımız ithalatı daha da arttırıcı yönde etki ederse %10'a %6'lık ihracat-ithalat dengesi ithalat lehine değişebilir.

Makedonya, STA yaptığımız ilk ülkelerden biridir. Makedonya da belirtilen dönemde ithalat ve ihracat hacmini, Türkiye kadar olmasa da, büyük oranda arttırmıştır.

Makedonya'nın toplam ihracatı içinde Türkiye'nin payı yaklaşık %2 civarıyken; Türkiye'nin toplam ithalatı ve ihracatı içinde Makedonya'nın payı ise yaklaşık %0,1'dir.

İthalat hacmi açısından Türkiye daha büyük olduğu için Makedonya'nın ihracat hacmini arttırmak için Türkiye'ye yönelmesi faydalı sonuçlar doğurabilir. Aynı şekilde Türkiye de hem lojistik hem de kültürel olarak kendine yakın bir ülke olan Makedonya ile ihracat ilişkilerini derinleştirmelidir. Sonuçta iki ülke arasındaki ithalat-ihracat dengesi açısından ticari fazla veren taraf Türkiye'dir.

Yaptığı STA anlaşmalarının içeriğini incelersek; genelde Türkiye'nin, anlaşmanın yapıldığı tarihin hemen sonrası gümrük vergilerini indirdiğini, STA yaptığı karşı ülkenin ise, gelecek yıllara yayarak kademeli olarak indirim yaptığını görebiliriz. (Ekonomi Bakanlığı, 2014e) Türkiye'nin, aleyhine olmasına rağmen anlaşmayı bu şekilde kabul etmesinin temel sebebi, gümrük birliği anlaşmasının yarattığı bahsedilen dezavantajdır. Makedonya ile yapılan STA'da da aynı orantısız durum göze çarpmaktadır. Türkiye'nin 2003 yılında kaldırdığı vergiler Makedonya tarafından 2008 yılında kaldırılmıştır. Makedonya'nın Türkiye'ye ihracatını oransal olarak daha fazla arttırmış olmasında bu durumun da etkisi olabilir.

# Kültürel Farklılıkların Ülkeler Arası Mal Akımlarına Etkisi Üzerine Bir Literatür İncelemesi

# Analysing the Effects of Cultural Differences to International Trade in Manufactured Goods: A Literature Survey

Ph.D. Candidate Tuğçe Uğur (Çukurova University, Turkey)

Ph.D. Candidate Mehmet Sedat Uğur (Çukurova University, Turkey)

## Abstract

Linder Theory which is a considerable theory about international manufactured goods trade suggests that international trade in manufactured goods will be more intense between countries with similar per capita income levels than between countries with dissimilar per capita income levels. But in practice, cultural differences between countries may also restrain the density of trade. This literature survey will aim to explain the relationship between income level and culture which may be different for one to another group. G. Hofstede who is an influential cultural anthropologist suggests five different cultural dimension to explain cultural differences between countries. Later, Hofstede calculates the values of different countries in these dimensions. So, in this study, initially, international trade in manufactured goods between similar per capital income levels will be examined. This will be done by comparing per capital income levels of selected countries. OECD data in trade and TÜİK's data (for Turkey) will be used in comparison. Later Hofstede's data will be used. In conclusion, the survey will try to explain how large are the effects of cultural differences between countries with similar income levels in international trade in manufactured goods. Previous studies generally find statistically significant results, but the main framework of these studies suggests controversial results. The study has aimed to commit a literature survey and in this study, comparisons of trade flow between countries are also controversial.

## 1 Giriş

Son yıllarda hızla gelişen teknoloji ile birlikte ortaya çıkan çarpıcı yenilikler ve değişimler, dünya üzerinde yaşayan insanların birbirleriyle etkileşimlerini de önemli ölçüde değiştirmiştir. Küreselleşme olarak adlandırılan bu "yeni dünya düzeni" ile birlikte dünyadaki farklı sosyoekonomik yapılar birbirinin içine girerek bütünleşmeye başlamıştır. Ancak böylesi bir bütünleşmeye rağmen, günümüz dünyasında, ülkeler arasında büyük farklılıkların olduğu da açıktır. Çoğu iktisatçı, ulusların farklı zenginlik düzeylerini yalnızca iktisadi nedenlere bağlarken, diğerleri bunu, coğrafi, hukuki, politik, kültürel, dini veya tarihi olmak üzere birçok farklı nedene bağlamaktadır.

Öyle ki, Landes (1998) de, ulusal ekonomileri başarıya götüren faktörleri incelemiş ve kültürel faktörler tarafından şekillendirilen davranışların bunda etkili olduğu sonucuna ulaşmıştır. O'na göre bunlar, tutumluluk, sıkı çalışma, azim, dürüstlük ve hoşgörüdür ve yabancı düşmanlığı, din hoşgörüsüzlüğü, bürokratik yozlaşma ile zıt davranışlardır. Öyleyse Landes'e göre, iktisadi kalkınmanın öğrettiği, kültürün farklılık yarattığıdır. Aynı düşüncelere Harrison ve Huntington (2000: xiii)'da da rastlanır. Güney Kore ile Gana'nın 1960-1990 yılları arasındaki iktisadi deneyimlerini dikkate alan S. Huntington, kitabın giriş makalesinde şöyle ifade eder:

"1990'ların başında Gana ile Güney Kore ekonomilerinin 1960 yılı verilerine rastladığımda bu iki ülkenin birbirlerine benzerliği beni oldukça şaşırtmıştı (...) Otuz yıl sonra Güney Kore, bir sanayi devi haline gelirken, Gana'da Güney Kore'ninkine benzer hiçbir değişiklik olmamıştı. Kalkınma konusundaki bu olağanüstü farklılıkta kuşkusuz bir çok etmenin rolü vardı ancak bana göre bu açıklamanın önemli bir kısmını kültüre bağlamak gerekmekteydi. Güney Koreliler tutumluluğa, yatırıma, sıkı çalışmaya, eğitime, örgütlenmeye ve disipline önem verirken, Ganalıların farklı değer sistemleri vardı. Dolayısıyla, kalkınmada kültür önemliydi."

Huntington'un yaklaşımı, kendini, kültür üzerine önemli çalışmaları bulunan G. Hofstede'nin, kültürün boyutlarından biri olarak nitelendirdiği uzun-dönemli uyum boyutunda göstermektedir. Buna göre, Konfüçyan etikten beslenen Doğu Asya ülkelerinin ortak bir tarihsel geçmişi bulunmaktadır ve bu tarihsel miras, başarılı iktisadi performanslarında bu ülkelere karşılaştırmalı bir üstünlük sağlamıştır (Hofstede ve Bond, 1988: 6-7).

Dünya üzerindeki tüm ülkelerin farklı ve kendilerine özgü kültürel özelliklerinin olduğu ve Kahn (1979)'ın da bu özellikleri "oldukça yapışkan ve esasta değiştirilmesi zor" olarak ifade ettiği kültürelci yaklaşımdan hareketle, bu farklı ülkelerin birbirleriyle küresel piyasalardaki etkileşimlerini anlayabilmek oldukça önemlidir. Farklı ulusların ikili ticaret ilişkileri, ülkeler arasında önemli bir etkileşim sağlar. Ancak ikili ticaret ilişkilerinin kültürle ilgili olup olmadığı oldukça tartışmalıdır. Yapılan çalışmalarda elde edilen bulgular çoğu kez kültürün dış ticaret üzerindeki rolünü destekleyici (Rauch, 1999; Guo, 2004; Campbell, 2010; Tadesse ve White, 2010), bazen de kültürün yeterli veya önemli olmadığını ifade eden (Kleiman, 1978; Yeganeh, 2011) sonuçlar vermektedir.

## 2 Kültür Üzerine Bir İnceleme ve Ülkeler Arası Kültürel Farklılıklar

Kültür kavramı, tek bir tanıma indirgenemeyecek kadar karmaşık bir kavramdır. Yine de, ortak görüş olarak kültür, bir toplumdaki insanları diğerlerinden ayıran inançlar, değerler, tutumlar ve davranışlar bütünü olarak görülür. Bu bağlamda, kültüre ilişkin kullanımlardan en az iki tanesinin kullanımının çok daha yaygın olduğu görülmektedir. İlki, Aydınlanma felsefesinden miras kalmış bir kullanım olup, Batılı milletlerin kendi medeniyetleri üzerine kurmuş olduklarına inandıkları, ilkçağdan beri birikmiş yazılı mirası ifade eder. Diğeri ise, 1871 yılında Edward B. Tylor tarafından verilen ve daha antropolojik olan bir tanımdır. Buna göre, "bilgilerin, inançların, sanatların, değerlerin, kuralların, örf ve adetlerin, toplumun üyesi olan insan tarafından sonradan kazanılmış bütün kapasite ve alışkanlıkların tümü" kültür diye adlandırılmaktadır. Tylor için burada önemli olan kazanılmış olanlardır. Böylece Tylor, en ilkel hakların, örf ve adetlerini, onların maddi yapısından, bu yapı üzerinde iklimin etkisinden yahut beyinlerinin daha basit farz edilen yapısından çıkartan ırki tasvirlere ait yaygın görüşü reddetmiş olur (Journet, 2009: 15-17).

1896'da Franz Boas'la birlikte kültür kavramı önemini güçlendirmiştir. Her kültürü, dil, inançlar, örf ve adetler, sanat arasında kendini ifade eden ve bir bütünü teşkil eden bir üslupla zenginleşmiş, orijinal bir sentez olarak inceleyen Boas'a göre, her toplumu bizzat kendi özgün kaderi içinde düşünmek ve incelemek mecburiyeti vardır. Çünkü onun kültürü, ancak kendi özelliğine bağlı olarak bulunabilir ve dolayısıyla dünya kültürel alanlara ayrılmıştır. Beşeri gruplar, birbirlerine kültürel mesafeleri içinde, birer dünya görüşüne sahiptirler (Journet, 2009: 18-26). Bu bağlamda ülkeler arasındaki kültür farklılıklarını anlamak önem arz eder. Bu farklılıklar genellikle kimlik, değerler ve kurumlardan oluşur ve hepsinin kökeni de tarihten kaynaklanır (Hofstede vd., 2010: 22).

### 2.1 Kültür Farklılıklarını ve Kültürün Boyutlarını İnceleyen Teoriler

Kültüre yönelik bir araştırmanın temel güdüsü, farklı kültürler arasındaki ilişkileri anlamaya çalışmaktır. Dolayısıyla kültürel teoriler, kültürler arasındaki benzerlikleri ve farklıkları belirlemeyi ve onları sınıflandırmayı hedefler (Guirdham, 2005: 49). Genel olarak antropologlar, kültürü, bireyin mensup olduğu gruptakilerle anlaşabilmek için kullandığı anlama, bilme ve ayırt etme şeklinde anlatır. Bazıları, kültürün her şeyden önce kolektif ve sosyal bir olgu olduğunu düşünmektedirler. Buna göre birey, ele alınan kültürün bir ürünüdür (Bloch, 2009: 75-76). Aynı şekilde Becker (1996: 16)'a göre de bireyler, diğer sosyal sermayelerine göre, kültürleri üzerinde çok daha az kontrole sahiptirler. Etnik kökenlerini, ırkını veya aile geçmişini değiştiremezler, ülke ve dinlerini ise değiştirmeleri oldukça zordur. Bu yüzden de kültür, bireylere yaşamları boyunca "verili" bir gösterge olarak ortaya çıkar.

Kültürel farklılıklar, kültürdeki farklı semboller, kahramanlar, ritüeller ve değerlerden kaynaklanır. Değerler, insan yaşamının erken dönemlerinde elde edilir ve belirli bir durumu diğerlerine tercih etme eğilimini ifade eder. İnsan psikolojisi, gelişim dönemi boyunca çevresinden hızlı ve bilinçsiz olarak gerekli bilgiyi içselleştirir. Bunlar, -dil gibi- sembolleri, -aile gibi- kahramanları, -tuvalet eğitimi gibi- ritüelleri ve en önemlisi değer yargılarını içerir. Bu dönem sonunda insan, farklı ve bilinçli bir öğrenme yoluna geçmiş olur (Hofstede vd., 2010: 9-10). Bu bağlamda, Hofstede'nin 1980 tarihli *Culture's Consequences* adlı kitabı önemlidir. Kitabın temel yeniliği, ulusal kültürleri bir takım boyutlara göre sınıflandırmasıdır (Hofstede vd., 2010: 40). Yine Hall'ın özellikle zamanı dikkate alarak kültürel farklılıklara odaklanan teorisi, Schwartz'ın kültürel değerlerini içeren teorisi gibi uluslararası kültürel farklılıkları inceleyen teoriler, bu çalışmanın öncelikli inceleme alanını oluşturur.

### 2.2 Edward T. Hall'ın Zaman Uyarlaması

Hall (1976)'ın teorisi, kişilerarası iletişim ile kişisel alan ve zaman boyutundaki kültürel farklılıklara odaklanmaktadır. İlk boyut, *bağlam*dır ve Hall, bunu düşük-bağlamlı ve yüksek-bağlamlı kültürler olmak üzere ikiye ayırır. Düşük-bağlamlı kültürler, iletişimin doğrudan ve kati olduğu, hislere ve gerçek niyetlere dayandığı kültürlerdir. İma ve vücut dili nadir olarak kullanılır. Yüksek-bağlamlı kültürlerde ise, aktarılması isteneni çevreleyen bir sosyal işaretler söz konusudur. Burada, kişisel saygınlık, yakın insan ilişkileri ve ortak güven yazılı sözleşmelerden çok daha önemlidir. İkinci boyut ise, kişinin rahat hissedebildiği *kişisel alan* boyutunu ifade eder. Bazı ülkelerde (Finlandiya gibi), insanlar birbiriyle konuşurken aralarında çok daha fazla mesafe bırakırken, diğer bazı ülkelerde ise (Rusya gibi) insanlar, konuşurken birbirilerine çok daha fazla dokunmaya veya yakın durmaya eğilimlidir (Stoll, 2010: 11-12'den aktarıldığı üzere). Son boyut ise, *zamanın kullanılma şekli* üzerinedir. Hall, mono-kronik ve poli-kronik kültürler arasında bir ayırıma gider. Mono-kronik kültürler, ayarlanmış bir zaman skalası içerisinde tek bir zamandaki bir şeye odaklanırlar. Burada insanlar planlarına her zaman uyarlar ve dakiklikleri ile tanınan bu insanlar için zaman, kıt bir kaynaktır. Poli-kronik kültürlerde ise, insanlar aynı anda birçok aktivite ile uğraştıklarından görece daha düzensizdirler ve genellikle plansız hareket ederler. Dolayısıyla insanlar, zaman konusunda çok daha esnektirler (Morden, 1999: 23).

Kültür, özellikle kültürler-arası etkileşim ile birlikte zaman içerisinde değişiklik gösterebileceğinden, ülkeler bir bağlamdan diğerine geçebilir. Bu, Hall'ın boyutlarının olumsuz yönlerinden birisidir. Diğer taraftan Hall'ın teorisinde belirli bir ölçü sisteminin bulunmaması ve yalnızca iki boyuttan birine veya diğerine ait olunması koşulu, ülkeler arasında karşılaştırma yapmayı zorlaştırır (Stoll, 2010: 13). Dolayısıyla ülkeler arası karşılaştırmada Hofstede'nin analizi çok daha anlamlı olacaktır.

### 2.3 Geert Hofstede'nin Kültür Boyutları

Hofstede'nin tanımına göre kültür, bir grubun üyelerini diğerinden ayıran aklın kolektif programlamasıdır. Buna göre, kültür her zaman kolektif bir fenomendir, çünkü kültürün öğrenildiği sosyal çevre içerisinde birlikte yaşanan veya yaşanmış insanlarla paylaşılır ve sosyal oyunun yazılmamış kurallarını inşa eder (Hofstede vd., 2010: 6). 1967-1973 yılları arası Hofstede, en kapsamlı kültürler-arası çalışmayı ortaya koymak üzere 66 ülkedeki 80.000 IBM çalışanı üzerinde anket yapmıştır. Bu araştırma sonucunda kültürler arasında farklılaşan dört boyut elde etmiştir. Bunlar, güç aralığı, belirsizlikten kaçınma, bireycilik-kolektivizm ve erillik-dişiliktir. Daha sonraki çalışmalarıyla birlikte bu dört boyuta uzun-kısa döneme yönelim boyutunu da eklemiştir (Hofstede, 1980; Hofstede, 2009; Hofstede vd., 2010; Morden, 1999: 27; Guirdham, 2005: 49; Stoll, 2010: 13).

*Güç aralığı*, bir ülkedeki kurumların ve örgütlerin daha az güçlü üyelerinin gücün eşit olmayan bir şekilde dağıldığını umduğu ve kabul ettiği şeklinde tanımlanır (Hofstede vd., 2010: 61). Diğer bir deyişle insanlar, otorite ve güç farklılıklarını kabul ederler (Stoll, 2010: 13). Düşük güç aralığına sahip ülkeler eşitlikçiliği kabul ederken, yüksek güç aralığına sahip ülkeler ise, hiyerarşileri kabul eder. Yüksek güç aralığına sahip ülkelerde (Malezya gibi) eşit olmayanlar arasındaki ilişkiler resmi, bilgi-akışı ise çoğu kez sınırlandırılmıştır. Düşük güç aralığına sahip ülkelerde ise (İskandinav ülkeleri gibi) ilişkiler açık ve gayri-resmi, bilgi-akışı fonksiyonel ve sınırlandırılmamıştır (Guirdham, 2005: 50).

| Düşük Güç Aralığı | Yüksek Güç Aralığı |
|---|---|
| Gücün kullanımı meşrulaştırılmıştır ve iyi-kötü ölçütlerine tabi tutulmaktadır. | Güç, toplumun temel gerçeğidir ve meşruluğu geçersizdir. |
| Aileler çocuklarına eşit olarak davranır. | Aileler çocuklarına itaat etmeyi öğretir. |
| Yaşlılara ne saygı duyulur ne de onlardan korkulur. | Yaşlılara saygı duyulur hem de onlardan korkulur. |
| Öğrenci-merkezli eğitim söz konusudur. | Öğretmen-merkezli eğitim söz konusudur. |
| Hiyerarşi, rollerin eşitsizliği anlamına gelir. | Hiyerarşi, var olan eşitsizlik anlamına gelir. |
| Astlara danışmak beklenir. | Astların, yapılması söylenen şeyleri yapması beklenir. |
| Çoğunluğun oyunu ve barış ortamı içerisindeki iktidar değişimlerini ifade eden çoğulcu hükümetler bulunur. | Belirli bir grubun oylarıyla seçimi ve devrim yoluyla değişimi ifade eden otokratik hükümetler bulunur. |
| Yolsuzluk ender görülür, skandallar kariyeri bitirir. | Yolsuzluk sık görülür, skandalların üstü örtülür. |
| Toplumdaki gelir dağılımı az çok eşittir. | Toplumdaki gelir dağılımı hiç eşit değildir. |
| Dinler, inananların eşitliğini vurgular. | Dinler, din adamlarının hiyerarşisini ifade eder. |

**Tablo 1**. *Düşük / Yüksek Güç Aralığına Sahip Toplumlar Arasındaki Temel Farklar* **Kaynak:** *Hofstede, 2009: 4.*

*Belirsizlikten kaçınma*, bir kültürün üyelerinin belirsiz veya bilinmeyen durumlarda kendilerini ne ölçüde tehdit altında hissettiklerini ifade eder (Hofstede vd., 2010: 191). Yüksek düzeyde belirsizlikten kaçınan kültürler, kuralları tercih ederler, gelecekte ne olacağını bilmeyi isterler ve belirsizliği kontrol etmek için prosedürler ayarlarlar. Burada toplumlar, aileler, gruplar ve örgütler dışarıdakilere daha kapalı olmaya, itaate ve bağlılığa önem vermeye, hataları cezalandırmaya ve detaylara dikkat etmeye eğilimlidir. Düşük düzeyde belirsizlikten kaçınan kültürler ise, daha fazla belirsizliğe müsamaha gösterirler ve tepkilerinde daha fazla esnekliği tercih ederler. Burada ise toplumlar dışarıdakileri daha fazla kabul ederler. Kişisel tercihlere ve karar-vermeye, takım-oyununa, inisiyatif ve risk almaya önem verirler (Guirdham, 2005: 50-51; Triandis, 2004: 92).

| Zayıf (Düşük) Düzeyde Belirsizlikten Kaçınma | Güçlü (Yüksek) Düzeyde Belirsizlikten Kaçınma |
|---|---|
| Hayatın yapısındaki belirsizlik kabul edilmiştir ve her yeni gün, olduğu gibi sürmektedir. | Hayatın yapısındaki belirsizlik, savaşılması gereken devamlı bir tehdit gibi görülmektedir. |
| Rahatlık, daha az stres ve kaygı, kendini-kontrol. | Daha fazla stres ve kaygı, duygusallık. |
| Öznel sağlık ve iyi olma dereceleri daha yüksektir. | Öznel sağlık ve iyi olma dereceleri daha düşüktür. |
| Normalin dışındaki insanlara ve düşüncelere müsamaha: farklı olan merak edilir. | Normalin dışındaki insanlara ve düşüncelere hoşgörüsüzlük: farklı olan tehlikelidir. |
| Belirsizlik ve kaos karşısında rahatlık söz konusudur. | Belirginlik ve bütünlüğe ihtiyaç duyulur. |
| Öğretmenler "bilmiyorum" demesini bilir. | Öğretmenlerin tüm soruları bilmesi gerekir. |
| İş değiştirmek sorun değildir. | İşten hoşlanılmasa bile değiştirilmez. |
| Yazılı veya sözlü- kurallardan hoşlanılmaz | Kurallara karşı duygusal bir ihtiyaç söz konusudur. |
| Din, felsefe ve bilimde görecelik ve deneycilik vardır. | Din, felsefe ve bilimde, kesin gerçeklere ve başlıca teorilere inanılır. |

**Tablo 2.** *Zayıf ve Güçlü Belirsizlikten Kaçınan Toplumlar Arasındaki Temel Farklar* **Kaynak:** *Hofstede, 2009: 5.*

*Bireycilik-kolektivizm*'e göre bireyler arasındaki bağın gevşek olduğu toplumlarda bireycilik söz konusudur ve herkes kendisine ve en yakın ailesine bakmalıdır. Kolektivizmde ise insanların doğuştan itibaren güçlü ve birbirine bağlı gruplarla bütünleşmiş toplumlar söz konusudur ve hayatları boyunca sadakatleri sorgulanmadan birbirlerini sürekli olarak korurlar (Hofstede vd., 2010: 92). Bireyciler, kendine yeterliği savunurken,

kolektivistler birbirilerine bağlı rollerine ve gruplarına karşı yükümlülüklerine daha fazla önem verirler. Dolayısıyla bu boyut, insanların birbirileriyle olan ilişkileri ile ilgilidir (Guirdham, 2005: 49).

Hofstede'nin dördüncü boyutu *erillik-dişillik* boyutu ise, cinsiyetin toplumdaki rolünün belirlenmesine odaklanır ve toplumların, cinsiyetler ve onların yerine getirmesi gereken rolleri üzerindeki göreli değer yargıları konusunda yol gösterir (Morden, 1999: 27). Eril toplumlarda cinsiyetlere ait duygusal davranışlar farklıdır: erkeklerin, iddialı, sert ve maddi başarı odaklı olması beklenirken; kadınlar, mütevazi, şefkatli ve daha çok yaşam kalitesi konusunda endişelidirler. Dişil toplumlarda ise, cinsiyetlere ait duygusal davranışlar birbirileriyle örtüşür: hem erkekler hem de kadınların mütevazi, şefkatli ve yaşam kalitesi konusunda endişeli oldukları varsayılır (Hofstede vd., 2010: 140).

| Bireycilik | Kolektivizm |
|---|---|
| Herkes yalnızca kendinden veya en yakın ailesinden sorumludur. | İnsanlar, geniş ailelerde veya kabilelerde doğar ve yaşamları boyunca onlara sadık kalırlar. |
| Ben-bilinci söz konusudur. | Biz-bilinci söz konusudur. |
| Gizlilik (yalnızlık) hakkına önem verirler. | Bir şeye ait olmaya vurgu yaparlar. |
| Diğerleri, birey olarak nitelendirilir. | Diğerleri, grup-içi veya dışındakiler olarak görülür. |
| Kişisel görüş önemlidir: bir kişi bir oy demektir. | Görüşler ve oylar grup-içinde önceden belirlenir. |
| Normların ihlali suçluluk duygusuna neden olur. | Normların ihlali utanç duygusuna neden olur. |
| "Ben" kelimesinin kullanımı vazgeçilmezdir. | "Ben" kelimesinin kullanımından kaçınılır. |
| Eğitimin amacı, nasıl öğrenileceğinin öğrenilmesidir. | Eğitimin amacı, nasıl yapılacağının öğrenilmesidir. |
| İş, ilişkiden önce gelir. | İlişki, işten önce gelir. |

*Tablo 3*. *Bireyci ve Kolektivist Toplumlar Arasındaki Temel Farklar* **Kaynak:** *Hofstede, 2009: 6.*

| Dişillik | Erillik |
|---|---|
| Cinsiyetler arasında minimum duygusal ve sosyal rol farklılaştırmasına gidilir. | Cinsiyetler arasında maksimum duygusal ve sosyal rol farklılaştırmasına gidilir. |
| Erkekler ve kadınlar mütevazi ve şefkatlidir. | Erkekler iddialı ve hırslı olmak zorundadır. |
| Aile ve iş arasında denge söz konusudur. | İş, aileden önce gelir. |
| Zayıfa karşı sempati söz konusudur. | Güçlüye hayranlık söz konusudur. |
| Hem anne hem de baba gerçeklere ve hislere değinir. | Baba gerçeklerle, anne hislerle ilgilenir. |
| Hem erkekler hem de kızlar ağlayabilir ancak ikisi de kavga etmezler. | Kızlar ağlar, erkekler ağlamaz. Erkekler kavga eder, kızlar kavga etmez. |
| Çocuk sayısına anneler karar verir. | Aile büyüklüğüne babalar karar verir. |
| Seçilmiş siyasi mevkilerde birçok kadın bulunur. | Seçilmiş siyasi mevkilerde çok az kadın bulunur. |
| Cinsellik konusunda tabii davranışlar söz konusudur: seks, bir bağ kurma yoludur. | Cinsellik konusunda ahlaki davranışlar söz konusudur: seks, performans sergilemenin bir yoludur. |

*Tablo 5*. *Hofstede'nin Kültür Boyutlarının Ülkeler Arasında Sınıflandırılması* **Kaynak:** *Hofstede, 2009: 4-8.*

Hofstede'nin dört temel boyutuna daha sonra eklenen son boyutu *uzun-kısa döneme yönelim*dir. Bu boyut, insanların bugüne mi yoksa yarına mı daha fazla değer verdiğini gösterir. Hofstede ve Bond (1988)'un çalışmasına dayanan ve Konfüçyan etiğin geleceğe-odaklanan kurallarını temel alan bu yaklaşıma göre, sıkı çalışmanın, tutumluluğun, ısrarın (sebatın), utanç duygusuna sahip olmanın, statüye göre ilişki kurmanın olduğu (Konfüçyan) bir toplum, çok daha fazla geleceğe yönelmiş sayılır. Örneğin, tutumluluk tasarrufa yol açar, bu da sermayenin yeniden yatırımını mümkün kılar ve iktisadi büyüme için gözlemlenebilir bir varlık oluşturur (Hofstede ve Bond, 1988: 17-18). Kısa-döneme yönelimde ise, mevcut dönem içerisindeki sosyal harcamalar ve tüketim, geleneklere saygı ve ihtiyaçların anında tatmini beklentisi daha önemlidir (Hofstede, 2009: 8).

Dolayısıyla uzun-döneme yönelen toplumlar, yaşantılarındaki olayları geleceğe yönelik bir bakış açısıyla değerlendirirken, kısa-döneme yönelen toplumlar, anlık tatminler ve bugünle sınırlı kalmaktadır.

Hofstede'nin analizi, ortaya atılışından bu yana birçok düşünür tarafından desteklenirken, bir kısmı tarafından da reddedilmiştir. Hofstede'nin çalışmasıyla kültürler arasındaki farklı yaklaşımlar ve ulusal kültür profilleri anlaşılır hale gelmiştir. Bu yüzden Hofstede'nin boyutları çok büyük miktarda araştırmanın oluşmasını sağlamış ve tüm sosyal bilimlerde oldukça etkili bir yaklaşım haline gelmiştir (Triandis, 2004: 93). Ancak McSweeney (2002: 112), Hofstede'nin analizindeki verilerin, aşırı derecede fazla kusurlu varsayıma dayandığını ve kültürün de sınırlı olarak tanımlandığını iddia etmektedir. Yine Guirdham (2005: 52) de ele alınan kültürel değerlerin tamamını-kapsayıcı nitelikte olmadığını ve kültürler arası ilişkileri açıklamaya yönelik ilave değişkenlerin bulunması gerektiğini ifade eder. Diğer taraftan Javidan vd. (2006: 909)'ne göre de, araştırmacıların, Hofstede'nin yıllar önce elde ettiği verileri kullanarak ülke niteliklerine ayna tuttuğunu varsayan kültürler-arası çalışmalar yapması doğru değildir. Halihazırda, çok daha güçlü teorileri içeren, daha kapsamlı ve ampirik olarak doğrulanabilir çalışmalar mevcuttur. Onlara göre, bunlardan bir tanesi de kendileri (aynı grup) tarafından hazırlanan GLOBE projesidir.

### 2.4 Robert J. House vd.'nin GLOBE Projesi

Kültürün boyutlarına yönelik bir diğer büyük ölçekli uygulama House vd. (2004) tarafından GLOBE projesi adı altında gerçekleştirilmiştir. 62 farklı kültürden 160 araştırmacı ile yapılan analiz, Hofstede'nin çalışmasının ülkeler arasındaki kültürel dinamikleri anlamak açısından iyi bir başlangıç olabileceğini, ancak yeterli olmadığını savunur. Dolayısıyla da proje temel olarak Hofstede'nin çalışmasının ötesine gitmeyi amaçlar (Javidan vd., 2006: 899). GLOBE, kavramsal olarak Hofstede'nin beş kültürel boyutunu dokuza genişletmiştir. Güç aralığı ve belirsizlikten kaçınma aynı kalırken, kolektivizm kurumsal ve grup-içi, erillik-dişillik ise kendine güven ve cinsiyet eşitliği olmak üzere ikiye ayrılmıştır. Uzun döneme yönelim, geleceğe yönelim adını almıştır. Diğer iki ilave boyut ise, insan odaklılık ve performans odaklılık adı altında incelenmiştir (Hofstede vd., 2010: 40-42).

### 2.5 Shalom H. Schwartz'ın Kültürel Değerleri

Schwartz (1994, 1999)'ın çalışmaları kültürel değerlerle ilgili önemli bir başka çalışmayı ifade eder. Kültürel değerlerin, farklı toplumların üyelerinin davranışlarını nasıl etkilediğini inceleyen Schwartz, çalışmasını 50'ye yakın ülkedeki öğretmenler ve öğrenciler üzerinde uygulamıştır. Schwartz (1994)'ın analizi ilk önce kültürel değerleri, bireyler arası karşılaştırmaya çalışmış, ancak değerler üzerine bireyler-düzeyinde bir teorinin kültürler-arası bir teoriden farklılık göstereceğinden hareketle (Schwartz, 1999: 24), analizini ülke-düzeyine yönlendirmiş ve yedi adet ülke-düzeyinde boyutu içeren farklı bir set oluşturmuştur. Bunlar, muhafazakarlık, hiyerarşi, otorite, etkin otonomi, entelektüel otonomi, eşitlikçi taahhüt ve düzendir (Hofstede vd., 2010: 40).

Schwartz (1999: 31), her boyut seti içerisinde farklı özellikleri ele alır. Öyle ki, muhafazakar değer türü, sosyal düzen, geleneklere saygı, aile güvenliği ve bilgelik gibi değerleri içerir. Aksine otonomi, bireysel tutkuları elde etmeyi amaçlayan değerlere vurgu yapar. Hiyerarşik toplumlarda kültürel vurgu, gücün, rollerin ve refahın eşitsiz dağılımının meşruluğuna iken; eşitlikçi toplumlar, eşitlik, sosyal adalet, özgürlük, sorumluluk, dürüstlük gibi değerlere önem verirler. Son olarak otorite, aktif benlik, hırs, başarı, cesaret, yeteneklilik gibi değerleri karşılarken; düzen, dünyayı olduğu gibi kabul eder ve doğa ile uyumu vurgular (Yeganeh, 2011: 383'den akt.).

Schwartz'ın analizi aynı zamanda ülkelerin kültürel sınıflandırılmasını içerir. Bu, coğrafi yakınlıkla birlikte, ortak tarih, din, kalkınma düzeyi ve diğer kültürlerle iletişim gibi diğer faktörleri de kapsar. Bu bağlamda, Batı Avrupa ülkeleri (yüksek otonomi, eşitlikçilik ve otorite), İngilizce konuşan ülkeler (yüksek otorite ve otonomi), Doğu Avrupa ülkeleri (yüksek düzen, muhafazakarlık), İslam ülkeleri (yüksek hiyerarşi, muhafazakarlık) gibi farklı gruplar oluşturulmuştur. Dolayısıyla da kültürle yakından ilişkili milletler-üstü bir gruplandırma sunmuş olur (Guirdham, 2005: 57-58).

### 2.6 Fons Trompenaars'ın İlişkiler ve Davranışlar Sınıflandırması

Trompenaars ve Hampden-Turner (1997[1993]: 6-8)'e göre kültür, gruptaki insanların problemleri çözme ve ikilemleri giderme yoludur. Her kültür kendini, ikilem olarak ortaya çıkaran belirli problemlerde seçtiği çözüm yollarıyla diğerlerinden ayırır. Bu problemler; i) diğer insanlarla ilişkilerden kaynaklanan, ii) geçen zamandan kaynaklanan ve iii) çevreden kaynaklanan olmak üzere üç başlık altında incelenir. Bu bağlamda diğer insanlarla kaynaklanan ilişkiler boyutunda Parsons ve Shils (1951)'in tanımladığı beş farklı boyut kullanılır. Bunlar; evrenselliğe karşı hususiyetçilik, bireyciliğe karşı kolektivizm, tarafsızlığa karşı duygusallık, özgülüğe karşı yayılmacılık ve kazanılmışa karşı verilmiş olandır (Trompenaars ve Hampden-Turner, 1997[1993] 8-9; Hofstede, 2009: 9). Diğer taraftan zaman boyutunda, kültürler arasında zaman kavramının farklılıklar gösterdiği ifade edilir. Öyle ki, bazı kültürlerde zamanın tekerrürü, bazılarında yeniliği ifade etmesi; farklı toplumlarda geçmiş, şimdiki ve gelecek zaman vurgusu; bazı kültürlerde zamanın harcanmaması gereken kıt kaynak olmasına karşı bazılarında daha rahat bir yaklaşımın benimsenmesi buna örnektir (Guirdham, 2005: 55).

## 3   Uluslararası Ticaret ve Linder Teorisi'nin İncelenmesi

Ülkeler arasındaki ekonomik olayların başında mal alım ve satımları gelmektedir. Mal akımları, uluslararası ekonomik işlem türleri içinde belki de en eskisidir. Teknolojinin, ulaştırma ve haberleşme olanaklarının gelişmesi ve gümrük tarifelerinin çok yanlı biçimde indirilmesi ile birlikte uluslararası mal akımları hızlı biçimde gelişmiştir. Öyle ki buna bağlı olarak, II. Dünya Savaşı sonrası dönemde dünya ticaret hacmi, dünya üretiminden daha hızlı bir biçimde artmıştır (Seyidoğlu, 2007: 3). Teorik olarak da dış ticaret, iktisat literatürü içerisinde yoğun olarak incelenmiştir. Öyle ki, Adam Smith'den David Ricardo'ya, sonraları Eli Heckscher ve Bertil Ohlin'e kadar birçok iktisatçı ülkeler arasındaki ticaret ilişkilerine ilgi duymuşlardır. Bu incelemelerde ise yoğun olarak arz faktörleri dikkate alınmıştır. Aslında Linder Teorisi'nin önemi de buradan kaynaklanmaktadır.

Staffan B. Linder'in 1961 yılında yayımlanan makalesinde ortaya attığı bir teori olarak Linder Teorisi, neredeyse tamamen talebe yönelik bir yaklaşımdır ve tüketicilerin zevklerinin, güçlü bir şekilde gelir düzeyleri tarafından belirlendiğini ifade eder. Buna göre, benzer kişi başına düşen gelir düzeylerine sahip ülkeler arasında mamul mallar ticareti, farklı kişi başına düşen gelir düzeylerine sahip ülkeler arasında olduğundan daha yoğun olarak gerçekleşecektir. Dolayısıyla Linder Teorisi, tüketicilerin tercihlerinin (veya taleplerinin) benzeşmesini ifade eder. Öyle ki, Linder Teorisi'ne göre ticaret, sosyo-ekonomik düzeye uyarlanmış ürün taleplerinin benzer olduğu ülkeler arasında yapılır (Appleyard vd., 2010: 182-183).

Linder Teorisi, birçok ampirik uygulamaya da konu olmuştur. Teori, temelde mamul mallar ticaretine odaklanır ve dolayısıyla öncü ampirik uygulamalar da ülkeler arasındaki mamul mallar ticaret akımlarını içerir. Bu çalışmalarda farklı ampirik metotların uygulanmış olduğu görülmektedir. Öyle ki, Qureshi vd. (1980) ve Kennedy ve McHugh (1980)'de görüldüğü üzere ilk çalışmalar, bir ülke ve onun ticaret partnerleri arasındaki basit korelâsyon analizi üzerinde durmuşlardır. 1960-1975 yılları arasındaki verileri 14 gelişmiş ülkeye uygulamış olan Kennedy ve McHugh (1980)'de görüldüğü üzere bunlar genelde, Linder Teorisi'ni desteklemeyen sonuçlara ulaşmışlardır (Appleyard vd., 2010; Dakal vd., 2009:7). Diğer bazı çalışmalar ise, çoklu regresyonu içeren yerçekimi modellerini kullanmışlardır. Linder Teorisini çok az destekleyen veya hiç desteklemeyen sonuçlara ulaşan Hoftyzer (1984); 13 gelişmiş Avrupa ülkesi, Kanada, Japonya, ABD ve Güney Afrika arasındaki mamul mallar ticareti verileri kullanarak Linder Teorisi'ni destekleyen güçlü sonuçlara ulaşan Thursby ve Thursby (1987) ve yine Linder Teorisi'ni destekleyen kanıtlara ulaşan Bergstrand (1990), bu modele örnek çalışmalardandır (Appleyard vd., 2010; Choi, 2002: 601). Baltagi vd. (2003) ise, ikili ticaret akımlarını analiz etmek için panel verilerle genelleştirilmiş bir yerçekimi modeli tasarlamışlardır ve elde ettikleri sonuçlar, Linder Teorisi'ni destekler niteliktedir. Diğer taraftan ticaret ilişkilerinin hem zaman serisi hem de yatay-kesit unsurlarını panel veri seti kullanarak beş gelişmekte olan Doğu Afrika ülkesi için inceleyen McPherson vd. (2001)'nin çalışması da önemlidir. Bu çalışmada elde edilen sonuçlar, ele aldıkları ülkelerin, kendileri ile benzer kişi başına düşen gelir düzeylerine sahip ülkelerle ticaret ilişkilerinin daha yoğun olduğunu göstermektedir.

## 4   Linder Teorisi ve Kültürel Farklılıkların İlişkilendirilmesi

İkili ticaret ilişkilerinde, ülkeler arasındaki ticaret ilişkilerini belirleyen faktörlerin genellikle iktisadi ve coğrafi olduğu belirtilir. Öyle ki, bu bağlamda ikili ticaret ilişkileri üzerine yapılan ampirik uygulamalarda sıklıkla kullanılan bir yöntem olarak yerçekimi (veya çekim) modeli de, iki ülke arasındaki ticaretin miktarının, doğrudan ekonomik hacmiyle orantılı ve uzaklıkla ters orantılı olduğunu ifade eder (Rauch, 1999: 10). Burada, ekonomik hacmin (kişi başına gelir ile ölçülen) doğru orantılı ve anlamlı bir sonuç vermesi mantıklıdır. Çünkü ekonomik hacmin artışıyla beraber toplam refahın düzeyinin artışının, dış ticaret kapasitesini artırması beklenir. Diğer taraftan Beckerman (1956: 37)'nın da belirttiği üzere, coğrafi olarak birbirine yakın ülkeler, uzağındaki ülkelere göre göreli olarak daha fazla ticaret yapmaya eğilimlidir. Bu da genellikle taşıma maliyetlerine bağlanır. Ancak, coğrafi uzaklık ve ikili ticaret hacmi arasındaki negatif ilişki, yalnızca taşıma maliyetlerinden değil, o ülkeyle ilgili bilgiye ait belirsizliklerden (Huang, 2007) veya ülkeler arası kültürel farklılıklardan kaynaklanan gözlenemeyen maliyetlerden (Linders vd., 2005) kaynaklanmaktadır.

Bu bağlamda, ikili ticaret ilişkilerinde kültürün oynadığı rol da oldukça önemlidir. Linder (1961)'e göre (Kleiman (1978: 275)'den aktarıldığı üzere), "çeşitli kültürel ve siyasi benzerlikler, ticaretin coğrafi yönünü azaltmaksızın değiştirecektir. Örneğin, benzer dil ve kültürel geçmişin İskandinav ülkeleri arasındaki ticaretin yoğunluğunu artırması beklenir." Ülkeler arasındaki kültürel farklılıklar, etkileşimi karmaşık hale getirebilir, güven ve iyi ilişkinin gelişimini engelleyebilir. Böylece işlem maliyetlerini artırarak uluslararası ticaretin meydana gelme olasılığını azaltabilir (Tadesse ve White, 2010: 147). Ticaret ve iktisadi işbirliği, kültürel benzerliğe dayanır. Öyle ki, aynı kültürel kimliğe (dil, din gibi) sahip insanların birbirlerine güvenmeleri ve birbirleriyle iletişim halinde olmaları farklı kültüre sahip olanlardan, çok daha kolay ve etkindir (Guo, 2004: 802; Guiso vd. 2009: 1097,1116).

Kültür ile dış ticaret ilişkisini inceleyen bir çok çalışma, *tablo 6.*'da da görüldüğü üzere, analiz yöntemi olarak basit yerçekimi modelini kullanırlar ve modeli ticaret ortaklarının ortak bir dili, dini veya sömürgecilik geçmişini paylaşıp paylaşmadığını içeren kukla değişkenlerle geliştirirler. Bu çalışmaların bazılarında, Hofstede'nin ve Schwartz'ın kültürel boyutlarına da yer verilmiştir. Ancak bu çalışmalarda elde edilen bulgular belirsizdir.

Srivastava ve Green (1986: 634)'e göre, ülkeler arası ticaret akımlarıyla kültürel benzerlik arasındaki en güçlü ilişki mamul mallar kategorisinde görülmektedir. Bu varsayım, Linder Teorisi ile kültür farklılıklarını ilişkilendirmek açısından önemlidir. Benzer gelire sahip ülkelerin kendileriyle benzer kültüre sahip ülkelerle ticaret yapıp yapmadığını anlamak açısından, hem benzer hem de farklı kültür düzeyine ait ülkelerin Hofstede boyutları ve dış ticaret akımları incelenebilir. Bu görüşten yola çıkan bu çalışmada, karşılaştırmanın çıkış noktası Türkiye olarak ele alınmış, önce Türkiye ile benzer gelir ve benzer kültür düzeyine sahip ülkeler, ardından Türkiye ile benzer gelir ve farklı kültür düzeyine sahip ülkeler incelenmiştir.

| Yazar | Örneklem | Kullanılan Kültür Göstergesi | Yöntem | Bulgu |
|---|---|---|---|---|
| Kleiman (1978) | İspanya ile 18 İspanyolca konuşan Latin Amerika ülkesi | Kültürel bağlar (sömürgecilik) ve dil benzerlikleri | 1960-72 yılları ticaret verilerinin kıyaslaması | 1960'larda kültürel bağlar, dış ticaret üzerinde etkisiz, İspanya'nın hızlı büyümesini kapsayan sonraki on yılda ise oldukça belirgindir. Kültürel bağlar, ticaret için gerekli bir koşul olmakla birlikte, yeterli koşul değildir. |
| Srivastava ve Green (1986) | 45 ihracatçı ve 82 ithalatçı ülke | Din ve dil benzerlikleri | Log-lineer (logaritmik doğrusal) model | Kültürel benzerlikle ülkeler arasındaki ticaret yoğunluğu arasında anlamlı bir ilişki olmasına rağmen, katsayının değeri modeldeki diğer bağımsız değişkenlere kıyasla görece küçüktür. |
| Boisso ve Ferrantino (1997) | 7.943 ikili ihracat akımı | Dilbilimsel uzaklık | Yerçekimi modeli | Dilbilimsel uzaklık arttıkça ticaret azalacaktır. Ancak, dış ticarette kültürel uzaklığın caydırıcı etkisi, 1970'lerin ortasına kadar artmış, sonraları azalmaya başlamıştır. |
| Rauch (1999) | 63 ülke | Ortak dil ve/veya sömürgecilik bağları | Yerçekimi modeli | Ortak dil ve/veya sömürgecilik bağları uluslararası ticaretteki bilgiye yönelik engelleri gidermekte ve özellikle farklılaştırılmış ürünler olmak üzere ikili ticareti artırmaktadır. |
| Guo (2004) | A.B.D ve Çin ile bu ülkelerin ticaret ortakları | Dilbilimsel ve dini benzerlikler | Yerçekimi modeli | Dış ticaret üzerinde kültürün oldukça anlamlı bir etkisi vardır ve 1980'den sonra bu etkiler artmaya başlamıştır. Öyle ki, dil değişkeni 1997'de 1987'ye göre istatistiksel olarak daha anlamlıdır. |
| Linders vd. (2005) | 92 ülke | Ortak dil, ortak din, sömürgecilik geçmişi (Kültürel yakınlık) Kültürel uzaklık (Hofstede'nin kültürel boyutları) | Yerçekimi modeli | Ortak resmi dil, din ve sömürgecilik geçmişine sahip ülke çiftleri araları arasında daha fazla ticaret yaparlar. Kültürel uzaklıkla ikili ticaret arasında pozitif bir ilişki vardır: kültürel olarak farklı ülkeler araları arasında daha fazla ticaret yaparlar. |
| Kang ve Fratianni (2006) | 11 Bölgesel Ticaret Anlaş. üye ülkeleri | Din | Yerçekimi modeli | İki ülke arasındaki ticaret maliyetleri, farklı dini benimsedikleri durumda artmaktadır. Dinlerin farklılığı, farklı ticaret maliyetleri yaratmaktadır. |
| Huang (2007) | | Hofstede'nin belirsizlikten kaçınma endeksi | Yerçekimi modeli | Endeksin katsayısı negatiftir. Belirsizlikten kaçınan ülkeler, daha uzak mesafede olan ülkelerle oransal olarak daha az ticaret yaparlar. |
| Guiso vd. (2009) | | Dini benzerlik, Etnik farklılıklar (genetik uzaklık, bedensel uzaklık), Dil, Ülke-çiftinin savaş geçmişi | Yerçekimi modeli | Ortak dil, güven üzerinde olumlu olarak etkili ancak istatistiki olarak anlamlı değildir. Dini benzerlik, etnik farklılıklar ve savaş geçmişi ise güven ile pozitif ve anlamlı bir ilişki içindedir. Güven, ticareti olumlu etkiler. |
| Tadesse ve White (2010) | A.B.D. ile 75 ticaret ortağı | Kültürel uzaklık (Dünya Değerler Araştırması verileri) | Yerçekimi modeli | A.B.D. ile ticaret ortakları arasında daha fazla kültürel farklılıklar, o ülkeye ihracatı azaltmaktadır. |
| Campbell (2010) | 26 ülke | Göreli zevkler ve piyasaya özgü yaparak öğrenme | Dinamik yerçekimi modeli | Ticaret, kültürden ve kültür yolu ile tarihten etkilenmektedir. |
| Yeganeh (2011) | Kanada ile 53 ticaret ortağı | Schwartz'ın kültürel değerleri, Din, Dil benzerlikleri | Yerçekimi modeli | Dil benzerlikleri ticaret akımları üzerinde pozitif bir etki doğurur; kültürel uzaklık ile din ise istatistiksel olarak anlamsızdır. |

*Tablo 9. Türkiye'yle Benzer Gelir / Benzer ve Farklı Kültür Düzeyine Sahip Ülkelerle Mamul Mallar Ticareti İlişkisinin Karşılaştırılması, bin $, 2011. **Kaynak:** OECD STAN Data.*

Hofstede boyutlarından, Türkiye ile benzer gelire ve benzer kültüre sahip üç, Türkiye ile benzer gelir ve farklı kültüre sahip yine üç ülke çıkarılmıştır. Benzer gelire ait ülkeler ele alınırken, bu ülkelerin kişi başına gelir düzeyleri incelenmiş ve Dünya Bankası verilerine göre Türkiye'nin kişi başına gelir düzeyine yakın ülkeler ele alınmıştır. Benzer kültüre ait ülkeler çıkarılırken ise, kümeleme analizinden yararlanılmış ve Türkiye ile aynı kümede bulunan ülkeler dikkate alınmıştır. Buna göre Türkiye, Brezilya, Bulgaristan ve Hırvatistan'la benzer kültüre; Letonya, Litvanya ve Estonya ile farklı kültüre sahiptir. Ardından, bu ülkelerin Türkiye ile dış ticaret ilişkisine bakılmıştır. Elde edilen sonuçlar, tam bir yargıya varma konusunda yetersiz olmakla birlikte, dış ticarete yönelik eğilimin yine de göreli olarak benzer kültür düzeyine sahip ülkelerle yapıldığını ortaya koymaktadır. Öyle ki Türkiye, benzer kültüre sahip olduğu Bulgaristan ve Brezilya ile en fazla dış ticaret ilişkisini gerçekleştirirken, en düşük mamul mallar ticareti Letonya ve Litvanya ile yapılmaktadır. Bu da Linder Teorisi ile kültür ilişkisini destekler niteliktedir.

Ancak Türkiye'nin mamul mallar ticaretinde büyük yer kaplayan Hollanda, Almanya gibi ülkelerin de Türkiye ile oldukça farklı kültür düzeylerine sahip olduğunu belirtmek gerekir. Farklı gelir düzeylerine sahip olan bu ülkelerle olan ticaret ilişkilerini, Linder Teorisi'ne göre açıklamak güçtür. Bunun altında yatan nedeni, dış ticarette kültür düzeyleri dışındaki ve daha çok Karşılaştırmalı Üstünlük Teorisi mantığında olduğu gibi iktisadi nedenlere bağlamak mümkündür.

## 5 Sonuç ve Değerlendirme

Ülkelerin ikili ticaret ilişkileri üzerine yapılan çalışmalar genellikle iktisadi boyutları anlamaya ve bunları açıklamaya yönelmektedir. Ancak bunun yanında kültürel boyutların da analize dahil edilmesi, dış ticaretin

açıklanmasına katkıda bulunabilir. Bir toplumdaki insanları diğerlerinden ayıran inançlar, değerler, tutumlar ve davranışlar bütünü olarak görülen kültür, bir ulustan diğerine farklılık göstermekte ve ülkeler arasındaki ticaret ilişkilerinde rol oynayabilmektedir. Kültür ile dış ticaret ilişkilerini inceleyen çalışmalar genelde din, dil, sömürgecilik geçmişi, etnik farklılıklar gibi faktörleri ele almaktadır. Ancak son yıllardaki çalışmalar, Hofstede, Schwartz gibi, önceki bölümlerde ele alınan ünlü antropolojistlerin kültürel boyutlarını da modellerine dahil etmektedirler. Genellikle dil, din gibi kültürel faktörlere dayanan çalışmalarda elde edilen sonuçlar istatistiksel olarak daha anlamlıyken, kültürün boyutlarını içeren çalışmaların sonuçları daha belirsiz veya anlamsızdır. Bu bağlamda, incelenen ve çalışmalarda ele alınan kültürel boyutların geliştirilmesi veya güncelleştirilmesi gerekmektedir. Öyle ki, Hofstede'nin boyutları da olmak üzere, kültürel boyutlar sürekli güncellenmektedir.

Uluslararası ticaret akımlarıyla kültürel benzerlik arasındaki en belirgin ilişki, mamul mallar ticaretinde görülmektedir. Bu nedenle benzer kültürlerin ticaret ilişkilerini incelerken Linder Teorisi'nden yararlanmak açıklayıcı olabilmektedir. Öyle ki, tüketicilerin zevklerinin güçlü bir şekilde gelir düzeyleri tarafından belirlendiğini ifade eden bu teoriye göre, çeşitli kültürel ve siyasi benzerliklerin ticaretin coğrafi yönünü değiştirmesi gerekmektedir. Sonuçta, literatürdeki çalışmalar, genel anlamda kültür ile dış ticaret ilişkisini kabul etmektedir ve bu Linder Teorisi için de geçerlidir. Ancak Linder Teorisi'nin haricinde değerlendirildiğinde, farklı gelir düzeylerindeki farklı kültüre sahip ülkelerin dış ticaret ilişkilerine ait bulgular, iktisadi çıkarların ve coğrafi uzaklığın günümüz ekonomileri için çok daha önemli bir rol oynadığını göstermektedir.

# Küresel Krizin Ardından Bankacılık Sektöründeki Son Gelişmeler: Türkiye'deki Bankacılıkla İlgili Yeni Düzenlemelerin Etkileri

# Recent Developments in the Banking Sector following the Global Crisis: The Effects of Regulations in the Banking Sector in Turkey

Asst. Prof. Dr. Emine Fırat (Aksaray University, Turkey)

Prof. Dr. Ekrem Erdem (Erciyes University, Turkey)

## Abstract

Banking sector is susceptible to the social and economic events. With accelerating of the globalization movement in the world, financial crises experienced not only affected one sector, but also showed itself in the world. After financial crises, while banks face to the great hazards, on the other hand, they caught opportunities. For example, the spread of the approach of non-interest banking in the world led Islamic finance sector to grow. The Turkish banking sector, after 2000 November Crisis and 2001February Crisis, also experienced a rapid change process. In the recent years, the structures and banking understandings in the banks in our country changed. In the institutional meaning, a number of innovations, positive or negative, concerning the bank staff and customers, were conducted. As of October 8, 2013, with regulations published in official newspaper, the code on credit cards and banking cards was amended. The regulations conducted, economic and political events engaging in the agenda, and unexpected increase in the exchange rate caused the banks to be influenced and to react rapidly. In our study, the effects of the regulations conducted in the recent times and the economic fluctuations experienced on banking sector were studied. The state of banking sector in Turkey and the regulations conducted in the banking sector were studied in detail, basically using the observation method and by means of examples. As a result in Turkey, in order to provide the economic stability and to be able to sustain it, the banking sector should be powerful.

## 1 Giriş

Son yıllarda küreselleşmenin tüm dünyada yayılmasıyla şirketlerin hatta ülkelerin sermaye yapıları değişmiş ve bilgi teknolojilerinde gelişmeler yaşanmıştır. Küreselleşmenin hız kazanmasıyla da gelişen finansal yapı karışık bir dünyayı da beraberinde getirmiştir. Küreselleşen dünya düzeni ülkelerin finansal yapılarını sürekli olarak değiştirmiş; dünyadaki finansal hareketler hızla artmıştır. Küreselleşmeden etkilenme düzeyleri artan ülkelerde ard arda krizler yaşanmış, yaşanan krizlerden sonra çeşitli istikrar politikaları uygulamaya konulmuştur. İşletmeler ülkelerde yaşanan krizlerden çok çabuk etkilenmiş, kendilerini gittikçe şiddetlenen bir rekabet ortamı içerisinde bulmuştur. Ülkeler dünyadaki yaşanan bu değişmelere ayak uydurmak ve rekabetçi avantajlarını artırabilmek için yeni stratejiler geliştirmişler ve birçok alanda düzenlemeler yapmışlardır. Ancak işletmelerin ve özellikle de üst yönetimin menfaatlerini ön planda tutan ve yasalardaki boşluklardan yararlanan bazı kötü niyetli uygulamalar 1990'lı yıllarda Enron, WorldCom, Arthur Andersen, CMS Energy, Global Crossing, Xerox, gibi çok sayıda finansal skandala ve 2008 yılında da küresel anlamda etki sahibi olan finansal bir krize yol açmıştır. Böyle skandallar özellikle dünya devleri olarak nitelendirilen birçok şirketi iflasa sürüklerken ülkeleri de yatırımcıları da oldukça zor durumda bırakmıştır. Dünya markaları olmuş, kurumsallaşma dereceleri yüksek dev şirketlerde bile bu skandalların yaşanması, finans sektörünün güvenilirliğini sarsmış; etik kavramının önemini iyice ortaya çıkarmıştır. Sarsılan güvenin tekrar tesis edilmesi amacıyla muhasebede sosyal sorumluluk kavramı temelinde, gerek yasal düzenlemelerde gerekse işletme politikalarının oluşturulmasında şeffaflık, dürüstlük, tarafsızlık ve hesap verilebilirlik konularına odaklanıldığı görülmüştür. İşletmelerin ise sarsılan güvenilirlikleri ve zarar gören firma imajlarını sağlamlaştırma amacıyla kurumsal sosyal sorumluluk alanında pek çok çaba içerisine girdikleri gözlemlenmiştir. Ülkelerde ise yeniden düzenlemeler yapılmış, yeni kanunlar çıkartılmış, kanunda değişikliğine gidilmiş ya da çeşitli muhasebe ve finans yöntemlerine gerek duyulmuştur. Dünyada yaşanan gelişmelerin ardından Türkiye'de de bazı düzenlemelerin güncellenmesi ihtiyacı hissedilmiştir.

Bankacılık sektörü; ekonomik, hukuki, sosyal, siyasal ve teknolojik değişimlere karşı çok hassastır ve çok çabuk etkilenmektedir. Dünya ekonomik konjonktüründe yaşanan hızlı dalgalanmalar, sermaye hareketlerini arttırarak bankacılık sektöründe krizlere yol açmıştır. Özellikle yaşanan finansal krizlerin ardından bankacılık sektöründe zor günler yaşanmıştır. Bankacılık krizleri bankaların iflas etmesine ve skandalların yaşanmasına neden olmuş, ülke ekonomileri zarar görmüştür. Türkiye'de de 1990 sonrası yaşanan üç büyük krizin ardından bankalar büyük zarar görmüş, bankacılık ve finans sektörü güvenilirlik açısından sarsılmıştır. Krizlerin ardından bankacılık sektörünün sarsılan güvenilirlikleri ve zarar gören imajlarını sağlamlaştırma çabaları artmıştır. Değişen dünyaya ayak uydurmak için, Türkiye gibi gelişmekte olan toplumlarda yaşanan krizlerin ardından

yeniden yapılandırma programları uygulanmaya çalışılmıştır. Özellikle son yıllarda yaşanan küresel krizin ardından uygulamaya konulan programların başarısının bankacılık sektöründe gerekli değişikliklerin yapılmasına bağlı olduğu anlaşılmıştır. Küresel krizin ardından bankalar değişime ayak uydurmak için teknolojik yeniliklere dayalı, bilgi ve rekabet avantajı sağlayacak politikalar benimsemek zorunda kalmışlardır. Bu nedenle bankalar da hızlı bir değişim sürecine girmiştir. Bankalarda sadece işlem yönünden değil; ürün ve hizmet kalitesi, fiyat, pazarlama, reklam, liderlik, kendini geliştirme, yeniliklere uyum sağlayabilme vb farklı faktörlerin yanı sıra sosyal sorumluluk anlayışı ve kurumsal sosyal sorumluluk konusunda gelişmeler görülmüş çeşitli düzenlemeler yapılmıştır.

## 2    Küresel Kriz ve Bankacılık Sektörü

1990'lı yıllarda bankacılık sisteminde yaşanan krizler genellikle gelişmekte olan ülkelerde görülmüştür. Çünkü geçiş ekonomilerinde bankacılık sistemi henüz gelişmediğinden, mevduatlar devlet güvencesinin kötü kullanıma açıktır. Yaşanan krizlerde banka sahiplerinin topladıkları fonları kendi şirketlerine aktardığı ve banka müşterilerine olan yükümlülüklerini yerine getiremediği görülmüştür. Ayrıca bankacılık sisteminde kamuya ait bankaların görev zararlarının devlete olan maliyetinde gözlenen sürekli artışlar dikkat çekmiştir. Bu durum merkez bankalarının da sağlıklı çalışmasını engellemiştir (Yentürk, Çimenoğlu, 2003). Bu süreci yaşamış ülkelerden biri de Türkiye ekonomisidir. Yaşanan krizler bankaların zayıf yapısını ve kötü kurumsal yönetim uygulamalarının sonuçlarını göz önüne sermiştir. Türkiye'de yaşanan 2001 Krizi, finans ve bankacılık sektörünün önemini daha iyi ortaya çıkarmıştır. Bankacılık krizleri yaşanırken yüksek enflasyon ve faiz oranları spekülatif sermaye hareketlerini hızlandırmış, bütçe açıklarını arttırmıştır. Firmaların yüksek faizler sonucu kredi alma imkânının kısıtlanması, işten çıkarmalara hatta şirket iflaslarına kadar giderek üretim daralmasına sebep olmuş, reel sektörü de olumsuz etkilemiştir (Göktaş, 2000). 22 Kasım 2000 tarihinde bankacılık sektöründe başlayan kriz 19 Şubat 2001 tarihinde döviz krizine dönüşerek ikiz kriz (twin crisses) karakterine bürünen krizlerden sonra yapılacak uygulamaların başında enflasyon ve yüksek faizler ile mücadele yer almış, yıllarca uğraşılmıştır. Yaşanan bu ikiz krizler sonrasında ekonomi %8.5-9 oranında daralmış, ulusal gelir 51 milyar dolar azalmış, kişi başına gelir 725 dolar gerilemiş, 19 banka kapanmış, 1.5 milyon kişi işsiz kalmış, %30'lara düşen enflasyon %70'i aşmış, hazinenin faiz ödemeleri %101 artmış, iç borç stoku 2000 yılının 4 katına ulaşmıştır (Karluk, 2005). Bankacılık sistemi önemli bir yeniden yapılandırma süreci yaşamıştır. Bankalardaki sermaye, risk yönetimi anlayışı, kamusal gözetim ve denetim otoritesinde risk bazlı denetim anlayışı güçlenmiştir (TBB, 2008). Türk bankacılık sistemi 2001 krizinin ağır yaralarını en hızlı saran, değerini de en fazla katlayan sektör olmuştur. Bu süreç içerisinde Türkiye ekonomisinde yapısal reformlar gerçekleştirilmeye çalışılmış, ekonomide kalıcı ve sürekli istikrar hedeflenmiştir (Karaçor, 2006). Türkiye'de yaşanan 2000-2001 krizlerinin finansal nitelikte olması, sermaye hareketlerinin makroekonomik değişkenlerle çok yakından bağlantılı olduğunu ve bankacılık alanında gerektiğinde acil düzenlemelerin yapılması zorunluluğunu göstermiştir (Fırat, 2010).

Yaşanan finansal krizler, para birimi çöküşleri, bankacılık panikleri ve kredilerin temerrüde düşüşleri detayda farklılık gösterse de, finansal krizlerin genel olarak pek az değişkenlik gösterdikleri Eylül 2008 kriziyle bir kez daha görülmüştür (Reinhart, Rogoff, 2009). Soros' a göre "Eylül 2008'de patlak veren finansal krizin başlangıcı, resmen 2007'nin Ağustos ayı olarak tespit edilebilir. Bu tarih FED' in likidite sağlamak için bankacılık sistemine müdahalede bulunduğu dönemdir". Soros şöyle devam etmiştir: "Krizin gelişi yavaştı fakat birkaç yıl öncesinden beri de beklenmekteydi. 2000 yılı sonlarına doğru internet balonunun patlaması esnasında bu finansal krizin temelleri atılmıştı. FED buna, federal fonların faiz oranlarını sadece birkaç aylık bir dönem için %6.5' ten % 3.5'e düşürerek cevap vermişti. Daha sonra 11 Eylül 2001 saldırıları geldi. Ekonominin engellenmiş olmasına karşı, FED faiz oranlarını indirmeye devam etti. Temmuz 2003'te %1'e kadar inerek son 50 yılın en düşük seviyesine indi ve o düzeyde bütün bir sene boyunca kaldı. Peş peşe 31 ay boyunca enflasyona dayalı temel kısa dönem faiz oranı negatif oldu. Ucuz para emlak balonuna, işletmelerin borçlanarak satın alınmasında patlamaya ve diğer aşırılıklara sebep oldu. Para serbest olduğu zaman mantıklı borç vericiler, borç verecek hiçbir kimse kalmayıncaya dek borç verirler. İpotek kredisi verenler, standartlarını yumuşattılar ve işi hareketlendirip finans sağlayacak yeni yollar buldular. Wall Street'teki yatırım bankaları, diğer yatırımcılar için kredi riskini düşürmek için emekli aylıkları ve ortak fon gibi kâr etme maksatlı yeni ve çeşitli teknikler geliştirdiler. Aynı zamanda yapısal yatırım araçları oluşturarak kendi durumlarını bilanço hesapları dışında tuttular" (Soros, 2010). ABD'deki mesken balonu 2005 ya da 2006 yılının bir döneminde bir şekilde kontrolden çıkmıştır. İnsanlar ödeyemeyecekleri ipotekli mesken kredilerini almışlar ve sonunda da geri ödeyememişlerdir. Fakat bu ipotek kredileri eşikaltı menkul değerlere dönüştürülmüş olduğundan küresel mali sistemi bozmuştur. Kötü kredilerin seküritizasyonu krizin başlangıcını oluşturmuştur. Mesken balonu kısmen yüksek riskli ipotek kredilerine dayanıyorsa da meseleler daha yaygın ve geniş boyuttadır; bu sorunlar ekonomideki yıllar öncesine dayanan, derin yapısal değişikliklerde yatmaktadır. Kurumsal yönetim ve çalışanları ücretlendirme planları da bu krizde rol oynamıştır. Senelerdir ABD'deki federal düzenleyici kurumlar, bütün finans sistemini tehlikeli bir şekilde kırılgan ve çöküşe yatkın hale getiren yeni bir gölge bankacılık sisteminin yükselişini görmezden gelmişlerdir (Roubini, Mihm, 2012). Ekonomik danışma konseyi eski başkanlarından Martin Feldstein 1997'den 2006'ya kadar 9 trilyon dolar nakdin mesken kaynaklı tüketim harcamalarından geldiğini belirtmiştir (The Economist,

2005). Hudson Enstitüsü'nden mesken piyasasında çift basamaklı fiyat artışlarının, spekülasyonu teşvik ettiği, 2005'e kadar bütün mesken alımlarının %40'ı, ikametgâh olarak değil, ikinci bir ev sahibi olma veya yatırım gayesiyle gerçekleştiği belirtilmiştir (Mason, Rosner, 2007). Eylül 2008'de patlayan finansal kriz, belli bir şirket veya finansal sistemin belli bir bölümüyle sınırlı kalmamıştır. Bu kriz bütün sistemi bir çöküşün eşiğine getirmiş ve büyük güçlüklerle bastırılabilmiştir. Bu durum uzun vadeli sonuçlar doğurmuştur (Soros, 2010). Konut piyasalarında patlak veren 2008 mali krizi, dünya çapında hemen hemen her yerde finansal faaliyetleri tehdit altına sokmuştur. Küresel finansal sistem devlet müdahalelerinin karmaşık bir bileşimi sonucunda kısmen istikrara kavuşturulmuştur. Harvey'e göre, sermaye kriz eğilimlerini hiçbir zaman çözmemektedir, bunları sadece oradan oraya taşımaktadır. Mali krizin yükü bankalardan kamu borcuna aktarılmıştır. ABD'de ve Avrupa'da artan kamu borcu kemer sıkma tedbirleriyle kamu hizmetlerini kısarak, azaltılmıştır. 2008 finansal krizinin reel sonucu işsizlik olmuştur. Diğer taraftan kısmen toparlanma eğilimindeki ekonomiler de "istihdamsız toparlanma-büyüme" adı verilen bir sürece girmiştir. Resesyonlar, işsizlik ve dış ticaretin çöküşü giderek küresel ekonomiyi sarmıştır. Keynesgil politikalar, canlandırma politikaları, para basmalar ve merkez bankalarının piyasalara likidite pompalaması ile kriz aşılmaya çalışılmıştır (Harvey, 2012). Eylül 2008'deki mali kriz sadece Wall Street'in görüntüsünü değiştirmekle kalmamış, diğerlerinden farklı sonuçlar doğurmuştur. Batmasına göz yumulamayacak büyüklüğe, türlü birleşmelerle ulaşan spekülatörlerin kontrolündeki bazı kurumlar hükümetler-merkez bankaları destekleriyle adeta krizden daha da güçlenerek çıkmışlardır. 2008 küresel krizinden hisse senedi piyasası "ne banka ne de emniyetli bir kasadır" dersi çıkarılmıştır (Freeland, 2011). 2008 ve sonrasında FED Amerika ve hatta dünya tarihinde görülmemiş tutarlarda kredi limitleri tahsis ederek yatırım bankaları, sigortacılar, hedge fonları, para piyasası fonları ve diğerlerine devasa paralar aktarmıştır. 2009'da Başkan Obama yönetimi, vergi indirimini de içeren, ABD tarihinde görülmemiş en büyük teşvik kanununu onaylanmıştır. Ekonomi politikaları (hükümetin para arzı üzerindeki çok sayıda kontrol kolu) ile mali politikalar (hükümetin harcama ve vergilendirme araçları) uygulanmıştır (Roubini, Mihm, 2012). Yani bu finansal kriz yakın tarihlerde meydana gelen diğer krizlere benzememektedir (Soros, 2010).

Türkiye'nin yaşadığı krizlerin ardından uygulamaya koyduğu Güçlü Ekonomiye Geçiş Programının uygulamasında ilerlemeler kaydedilmiş ancak ortaya çıkan küresel kriz sonucu program riskli ve uzun bir sürece yayılmıştır. Güçlü Ekonomiye Geçiş Programı sonrasında sermaye yeterliliği açısından güçlü bir yapıya sahip olan Türk bankacılık sektörü global krizden etkilenmiştir. Ancak Türk bankacılık sektöründe o dönemlerde mortgage kredilerinin verilmemesi ve bu krizin global bir kriz olması Türk Bankaları'nın 2001 Krizi'ndeki kadar riske girmesini engellemiştir. Küresel kriz süresinde kredi verme konusunda başarılı bir performans sağlayan bankalar kredi bulma konusunda zorlanmışlardır. Küresel krizle birlikte artan finansal piyasalar, yeni finansal araçlar, kur riskleri banka ve şirket bilançolarının küçülmesine yol açmış, Türkiye'yi de diğer ülkeler gibi bir takım önlemler almaya zorlamıştır. Özellikle son yıllarda bankalar zor dönemler geçirmiş, hızlı bir değişim sürecine girmiştir. 2001 Krizi'nden dersini alan Türk Bankalarının 2008 krizi karşısında kırılganlığı azaltılmış, sermaye rasyoları yükseltilmiş, sağlıklı bir yapıya kavuşturulması için yeni düzenlemeler yapılmıştır.

| (milyon TL) | 2011 | 2012 | Değişim (%) |
|---|---|---|---|
| Şube Sayısı | 10.517 | 11.066 | 5,22 |
| Personel Sayısı | 195.292 | 201.474 | 3,16 |
| Toplam Özvarlık Büyüklüğü | 144.650 | 181.882 | 25,73 |
| Toplanan Fonlar | 707.510 | 783.888 | 10,79 |
| Kullandırılan Fonlar | 708.771 | 289.597 | 17,03 |
| Net Kar | 19.844 | 23.576 | 18,80 |
| **Bankacılık Sektörü Aktif Büyüklüğü** | **1.217.711** | **1.370.614** | **12,55** |

*Tablo 1. Bankacılık Sektörünün Çeşitli Göstergeleri (2011-2012)* **Kaynak: BDDK.**

Tablo 1'den görüleceği gibi Türk bankacılık sektörün aktif büyüklüğü, 2012 yılında %12,6 oranında artarak bir trilyon 371 milyar liraya ulaşmıştır. Toplam çalışan sayısı ise 201 bin 474 kişidir. 2012 yılı sonu itibariyle şube sayısında %5'i ve personel sayısında da %3'ü aşan bir büyüme görülmüştür. Bu rakamlar da gösteriyor ki, bankacılık sektörü, şube sayısı ve istihdam edilen çalışanlarla Türkiye ekonomisine önemli bir katkı sağlamaktadır. Türk bankacılık sisteminin Aralık 2012 itibariyle varlık büyüklüğü büyüme göstererek 1 trilyon 371 milyar TL'ye (771 milyar dolar) ulaşmıştır. Bunda, 2011 yılı ortasından Merkez Bankası'nın piyasalarda likiditeyi artırıcı, fonlama maliyetini düşürücü politikası önemli rol oynamıştır (TKBB, 2012).

## 3  Türk Bankacılık Sektöründeki Son Gelişmeler

Son yıllarda bankacılıkla ilgili yeni regülasyonlara gerek duyulmuştur. Bu düzenlemeler makro ve mikro olmak üzere ikiye ayrılmıştır. Bankaların yapısal değişiklikleri ile ilgili düzenlemeler yapılmıştır. Örneğin banka maliyetlerinin sınırlanması ve mevduat sahiplerini korunması için yapılan mikro ölçekli regülasyonlar olabileceği gibi bankacılık sistemini bütünsel olarak korumayı ve sistematik banka krizlerinin maliyetini ve ortaya çıkma sıklığını düşürmeyi amaçlayan makro ölçekli regülasyonlar yapılmıştır (Köksal, 2013). BDDK, 1

Şubat tarihi itibariyle kredi kartı ve tüketici kredileriyle ilgili yeni önlemler almıştır. Buna göre 1 Şubat 2014 tarihinden itibaren; mal veya hizmet alımı sonrası belli bir ücret karşılığı borcun taksitlendirilmesi veya ödemenin ertelendiği dönemler de dahil olmak üzere, kredi kartları ile gerçekleştirilecek mal ve hizmet alımları ile nakit çekimlerinde taksitlendirme süresi dokuz ayı geçemeyecektir. Telekomünikasyon, kuyumculuk, gıda ve akaryakıt harcamalarına taksitlendirme yapılamayacaktır. Kredi kartında taksit sayısı en fazla 9 ay olacaktır. Taksit sınırını delmek için 'taksit erteleme' yapılamayacaktır. Cep telefonu alımında taksit artık yasaklanacaktır. Gıda harcamalarında taksit yasağı restoranlarda yemeği de kapsayacaktır. Akaryakıt ve kuyumculukla ilgili harcamalarda da taksit yasağı olacaktır. Taşıt kredisi 50 bin liraya kadar olan araçlarda yüzde 70'i kadar kredi çekilebilecektir. Kalan tutar peşin ödenecektir. Taşıtta vade 48 ayı aşamayacaktır. İhtiyaç kredisinde en fazla 36 ay vade yapılabilecektir. Kontör alınacak ama taksit olmayacaktır (Resmi Gazete, 2013). 2010 yıl sonu itibarıyla bireysel kredi kartı alacaklarının %44,4'ü taksitli alacaklardan oluşmaktayken, 2013 yılı Eylül ayında söz konusu oran %57,7'ye yükselmiştir. Aynı dönem dönemde ağırlıklı ortalama taksit sayısı ise 2010'da 6,6'dan 2013 Eylül'de 6,9'a yükselmiştir. Bu dönemde bireysel kredi kartı sahiplerinin yüksek taksit sayısıyla daha fazla taksitli alışveriş yaptıkları görülmektedir (BDDK, 2013). Yapılan bu değişiklikle kredi kartında taksit imkanının kalkması perakende satışının düşmesine yol açacağı kaygısıyla bazı çevrelerin tepkisine yol açmıştır.

Bireysel krediler ve kredi kartlarına ilişkin cari açıkla mücadele kapsamında sektöre yönelik getirilen son düzenlemeler bireysel kredi ve kredi kartlarında talebi olumsuz yönde etkilemiştir. Özellikle mayıs ayında piyasalarda yaşanan dalgalanmaların hemen ardından yükselen kredi faizleri talepte hemen etkisini gösterirken, maliyetlerdeki artış tüketicinin kredi talebini daraltmıştır. Son aylarda bir toparlanma olsa da bireysel kredilerde eskisi gibi hızlı bir ivme öngörmeyen Finansbank Bireysel Bankacılık ve Ödeme Sistemleri Genel Müdür Yardımcısı Erkin Aydın, 2014 yılı öngörüleri için şunları söylemiştir "Son regülasyonların kredi kartı borçlanması üzerinde etkisi olacak. Gelecek yıl Türkiye'de bankacılık sektöründe kredi büyümesinin dış finansman koşullarının daha olumsuz seyretmesi ve yurtiçinde Merkez Bankası'nın uyguladığı parasal sıkılaşma sebebiyle %15 seviyelerine yavaşlayacağını tahmin ediyoruz. Banka olarak ise kredilerde %25 büyümeyi hedefliyoruz. Mevduatlardaki büyüme de kredi büyümesine yakın yani %22 oranında gerçekleşebilir". Erkin Aydın, bireysel kredilere getirilen kısıtlamaların senet ile alışverişi yeniden gündeme getireceğini söylemiş, risklerinin olduğunu belirtmiştir. Senetle finansmanı engellemek için satış noktasından tüketici kredisi verilebilmesinin önünün açılması gerektiğini savunmuştur (Akşam, 2013). Bankacılık sisteminin sağlıklı bir yapıya kavuşturulması ve istikrarlı işleyişinin sağlanması olan Basel Bankacılık Denetim Komitesi'nin çalışmaları bankalarda kurumsal yapının dünyada ve Türkiye'de yaygınlaşmasına önemli katkılar sağlamaktadır. Basel Bankacılık Denetim Komitesi, sağlam kurumsal yönetim uygulamalarının üye ülkelerdeki bankalar tarafından benimsenmesini sağlamaları konusunda bankacılık otoritelerine yardımcı olmuştur (BIS, 1999). Küresel bankacılık sisteminin düzenlemesine ilişkin 1988 yılında ortaya konulan BASEL I, 2004 yılında revize edilen BASEL II'yle, sermaye gerekliliklerinin yanında denetleme süreçlerinin iyileştirilmesi ve piyasa disiplinin devreye sokulması amaçlanmıştır. 2008 krizinde bu düzenlemenin yetersiz kaldığı anlaşılmış, 2010 yılında BASEL III üzerinde uzlaşılmıştır. Bankacılık sektöründeki BASEL kuralları, bankacılık ilişkisi açısından düzgün bir rekabet ortamının sağlanmasında çok önemli bir paya sahiptir. Ancak krizlerde batan işletmelerin çoğunun büyük ölçekli, kurumsallaşma dereceleri yüksek ve kurumsal yönetim anlayışını benimsemiş olmaları; etik ve ahlak konusundaki eksikliklere de işaret etmektedir (Gökgöz, 2012). Yeterince şeffaf olmayan finansal raporlar, üst düzey yöneticilerinin teşvik edildiği sistemler nedeniyle iyice yanıltıcı hale getirilerek tarafsızlık ve dürüstlük ilkelerinden sapmalara ve belirli bazı grupların kayırılmasına neden olmuştur (Arı, 2008). Yaşanan skandallar ve krizlerin sebeplerini ortadan kaldırarak tekrarlanmalarının önüne geçebilmek amacıyla küresel çapta bazı çabaların gösterildiği söylenebilir. Pek çok ülke yasal düzenlemelerdeki değişikliklerle finansal raporların güvenilirliklerini artırarak özellikle denetim konusunda ilerlemeler kaydetmişlerdir (Arı, 2008). 2008 yılının ardından yine yenilenen yasal düzenlemelerle finansal raporlamanın sarsılan güvenilirlik düzeyinin artırılması amaçlanmıştır. Bu bağlamda ülkemizde de UFRS, TFRS ve TMS konularında çalışmalar yapılarak önemli aşamalar kaydedilmiştir. Türk Ticaret Kanunu'nda yapılan ve 2013 yılı itibariyle yürürlüğe giren düzenlemelerde özellikle kamuyu aydınlatma üzerine vurgu yapılarak şeffaflık ve kurumsal yönetim anlayışının benimsendiği görülmektedir (Güneş, 2003). Türkiye'deki son günlerde yaşanan ekonomik ve siyasi çalkantılar makro ekonomik problemleri de beraberinde getirmiştir. Son zamanlarda yaşanan karmaşıklıklar, etik ve ahlak kavramlarının üzerinde durulması gerektiği gerçeğini ortaya çıkarmıştır.

Son yıllarda Türk bankalarının ileri teknoloji kullanımları artmış, Türk bankacıları ülkeler tarafından aranılan elemanlar haline gelmişlerdir. Türkiye kredi kartı ve benzer bireysel bankacılık ürünleri ile geç tanışmakla beraber bunları iyi teknoloji ve yaygın kullanımla çok güzel geliştirmiştir. Bankalar, bu değişim sürecinde uyum içerisinde çalışan ve entegre olmuş alternatif dağıtım kanallarıyla birlikte derin bir müşteri deneyimi oluşturmayı tercih etmiştir. Kârı artırmak için ise çapraz satış fırsatlarından yararlanılmıştır. Müşteri sayısını korumak ve artırmak için müşteri ihtiyaçları yeni ürünlerle karşılanmaya çalışılmıştır. Bu anlamda bankalar müşterilerine 7/24 hizmet veren giderek artan alternatif dağıtım kanalları ürünleri sunmaktadır. Son yıllarda satışlardan ziyade, özellikle satış sonrası hizmet ve müşterilerle olan ilişkinin önem kazandığı görülmektedir (Kuveyt Türk, 2012). 2012 yılı verilerine göre finansal sektörünün sayıca en büyük müşteri kitlesi sırasıyla banka kartı müşterileri, mudiler, kredi ve kredi kartı müşterilerinden oluşmaktadır. Bireysel emeklilik sistemi, katılım fonu ve hisse

senedi yatırımcı sayısı, önceki yıllara göre artış göstermesine rağmen, müşteri büyüklüğü bankacılık sektörüne göre oldukça düşük seviyede seyretmiştir. Finansal sektördeki teknolojik gelişmelerle birlikte mobil ve internet bankacılığı üzerinden gerçekleştirilen finansal işlem hacmi artmıştır. 2012 yılı verilerine göre; internet bankacılığı işlem hacmi %17, mobil bankacılık işlem hacmi %143 yıllık büyüme göstermiş, aynı dönemde çağrı merkezi finansal işlem hacmi %79 azalmıştır. Aracı kurumlar aracılığıyla internet üzerinden işlem yapan yatırımcı sayısı ve işlem hacmi artarken, işlem hacmi, yatırım araçlarının piyasa değerine paralel seyretmektedir. Yatırımcıların yatırım davranışlarının izlenmesinde önemli bir veri olduğu düşünülen ve internet üzerinden yapılan kaldıraçlı işlemlerin sayısı bir önceki çeyreğe göre %61,3, işlem hacmi %44,8 oranında artış göstermiştir (BDDK, 2012). Deloitte, "Deloitte Center for Banking Solutions" raporunda bankaların şubesiz bankacılık kanallarını geliştirirken karşılaşabilecekleri sorunlar, müşterilerin alternatif dağıtım kanallarına yönelmesinin şube kaynaklı kar büyümesini zorlaştırması, bankacılık işlemlerin birçoğunun uzaktan yapılabilmesinin banka süreçleri ve müşteri servislerini her geçen gün şubeden bağımsız hale getirmesi, günümüz teknolojilerini kullanan müşterilerin iyi bir iletişim ve çok kanallı bankacılık hizmeti almak istemeleri, kitle etnik gruplarının özel hizmet tercihleri olarak sıralanmaktadır.

Globalizasyon ile başta bankacılık, finansal endüstrinin birçok üründe de olumlu gelişmeler göstermiş olup, tipik, sırdaş, tutucu, muhafazakar ve güvenilir bankacı fikrinden çok, satan, pazarlayan, aktif, iletişim içinde bambaşka bir bankacı profili çizmiştir. Günümüzde bankacılık para biriktirenlerin tasarruflarını koruyan, onların sırrını saklayan, bu tasarruflarını güvenli yatırımlara yönlendiren eski usul bankacılığa dönmektedir ancak bu arada teknolojinin nimetlerinden de sonuna kadar yararlanılmaktadır. Globalizasyon en başta bankacılık sektöründe bir eşit oyun sahasında, kurallara bağlanarak yürütülebilir, aksi takdirde çok büyük problemler, ekonomik ve sosyal problemler çıkacaktır. Dünyanın finans alanında asgari kurallarda birleşmesi gerekmektedir (Gelecek Gündemde, 2014). Günümüzde bankaların performansı ölçülürken finansal kriterlerin yanında; değer yaratma, memnuniyet sağlama, toplumsal konulara katkı vb kriterlere de büyük önem verilmektedir. Dolayısıyla kurumsal sosyal sorumluluk düzeyleri işletmelerin başarıları üzerinde etki sahibi olan önemli bir faktör olarak karşımıza çıkmaktadır (Kaygusuz, 2005).

Bankacılık açısından bakıldığında, kurumsal sosyal sorumluluk ve finansal raporlama arasındaki bağıntının önemi daha da belirginleşmektedir. Kurumsal sosyal sorumluluk gereğince bankaların güvenilir finansal raporlar üreterek bunları iç ve dış kullanıcılarla paylaşmaları; hesap verilebilirlik, şeffaflık, tarafsızlık ve dürüstlük açılarından bir gerekliliktir. Ayrıca bankalar tarafından sürdürülen sosyal sorumluluk projeleri toplumun kendilerine duyduğu sempatiyi etkilemektedir. Bu da işletme itibarı ve marka değeri açılarından rekabetçi avantajlar sağlayarak tercih edilmeleri konusunda önemli katkılar ortaya koymaktadır (Çalışkan, İçke, 2009). Günümüzde bankaların hızla değişen hizmet yapılarının yanı sıra son zamanlarda toplumsal değer yargıların önemsenerek, sosyal sorumluluk projelerine önem verdiği görülmektedir. Bankacılık sektörü içinde bulunduğu topluma ve dünyaya karşı sorumluluğunun farkında olarak var olan değerlerine sahip çıkmak ve yaşatmak adına önemli sosyal sorumluluk projelerine destek vermektedir. Sosyal sorumluluk ve sponsorluk çalışmalarında özel bankalar dikkat çekmektedir. Bankaların en büyük desteği eğitim, spor ve çevre ile ilgili projelere ve etkinliklere verdiği görülmektedir. Son yıllarda bankaların tümü sosyal sorumluluk alanında çeşitli projeler üretip, başarılara imza atmıştır.

Bankacılık Düzenleme ve Denetleme Kurulu'nun (BDDK), "Bankacılıkta Yapısal Gelişmeler" dergisinde yer alan değerlendirmede, 2001 Krizi sonrasındaki 10 yılda büyük ölçekli bankaların sektördeki paylarının sürekli artarken, diğer banka gruplarının paylarının azaldığı belirtilmiştir. Derginin, BDKK'nın internet sitesinden yayımlanan Aralık-2011 sayısındaki değerlendirmede, Türk bankacılık sektörünün aktif büyüklüğünün %92'sinin mevduat bankaları, %4,6'sının katılım bankaları ve %3,4'ünü kalkınma ve yatırım bankalarından oluştuğu kaydedilmiştir. Son yıllarda mevduat bankalarının payında gözlenen azalışa paralel olarak katılım bankalarının payında istikrarlı bir artış görüldüğü ifade edilen dergide, "Ölçek açısından son 10 yıllık dönem incelendiğinde, büyük ölçekli bankaların payının sürekli arttığı, buna mukabil diğer banka gruplarının paylarının azaldığı görülmekle birlikte, 2011 büyük ölçekli bankaların sektör payı azalırken orta ölçekli bankaların lehine bir değişim gözlenmektedir" değerlendirmesine yer verilmiştir (Haber 7, 2014). Banka şubelerinin yurt içi dağılımında ağırlığını İstanbul oluşturmuş, Marmara Bölgesinde önemli bir yoğunlaşma görülmüştür. Sektördeki bankaların 34 farklı ülkede yurtdışı organizasyonu mevcut olup, 2011 yılında özellikle Bahreyn ve Irak'ta yeni şubeler açılmıştır. Türk bankacılık sektörü pek çok gelişmiş ekonomiye göre risklilik düzeyini düşük tutmuş, sektörde sağlam kalmak için uğraşmıştır. Bankaların yüksek aktif büyüme hızı ise sektörün hala çok büyük bir potansiyelinin bulunduğunu göstermektedir (BDDK, 2011).

2012 yılında finansal sektörün aktif büyümesi ve örgütsel genişlemesi devam etmiştir. Finansal ürünlerin çeşitliliği artmış, yasal düzenlemeler yapılmıştır. Küresel piyasalarda toparlanma süreci devam etmiş, iyi performans sergileyen ve büyüme potansiyeli olan finans sektörüne yabancı sermayenin ilgisi devam etmiştir. Teknolojik alt yapının iyileştirilmesi ve operatörlerin finansal kurumlarla uyumlu çalışabilmesi için müşteri potansiyelinin artması amaçlanmıştır. SPK tarafından yapılan yeni düzenlemelerin yurtiçi borçlanma piyasalarını özendirmesi ve yabancı kurumsal yatırımcıların ilgisini artırması amaçlanmıştır (BDDK, 2012). 2012 yılı raporlama döneminde 49 olan banka sayısı, Eylül ayında Bank Of Tokyo Mitsubishi UFJ Turkey A.Ş.'nin

faaliyet izni almasıyla birlikte 50'ye yükselmiştir. Eylül 2013 itibarıyla sektör 11.767 adet şube ve 212.554 personel ile faaliyetini sürdürmektedir. Bankacılık sektörünün toplam kredileri 2012 yıl sonuna göre 195,7 milyar TL artarak Eylül 2013 itibarıyla 990,4 milyar TL seviyesine ulaşmış ve 1 trilyon TL'ye oldukça yaklaşmıştır. 2013 yılı Mayıs ayında FED açıklamaları sonrası artan volatilite ve Ağustos ayında TCMB'nin borç verme faiz oranını %7,75'e yükseltmesine paralel olarak faiz oranlarında bir miktar yükselme görülmüştür. Söz konusu artış, kredi hacmindeki büyümeyi bir miktar sınırlandırmıştır. Sektörün özkaynakları bir yıllık dönemde %12,3 (21 milyar TL) oranında artarak, Eylül 2013 dönemi itibarıyla 189 milyar TL düzeyine ulaşmıştır. Özkaynaklardaki artışın temel nedeni, dağıtılmayarak banka bünyesinde bırakılan kârın eklendiği yedek akçelerdir. Eylül 2013 itibarıyla bankacılık sektörünün yasal sınır ve hedef rasyonun üzerinde seyreden SYR'si, sektörün riskleri yönetebilecek güce sahip olan özkaynak yapısını koruduğunu göstermektedir. TCMB'nin 27.05.2013 tarihinden itibaren Kredili Mevduat Hesaplarında (KMH) uygulanacak akdi ve gecikme faiz oranlarının kredi kartı işlemlerinde uygulanacak akdi ve gecikme faiz oranlarını geçemeyeceği yönündeki düzenlemesinin etkisiyle KMH faiz gelirlerinin toplam faiz gelirleri içerisindeki payı, Mayıs 2013 dönemindeki %4,43 düzeyinden Eylül 2013 döneminde %3,50 düzeyine gerilemiştir (BDDK, 2013). Eylül 2013 döneminde en fazla şube ile faaliyet gösteren bankalar %45,1 pay ile özel bankalar (5.303 adet), %28,3 pay ile kamu bankaları (3.329 adet) ve %18,3 pay ile yabancı bankalar (2.154 adet) olarak sıralanmaktadır. Sektörde banka başına düşen şube sayısı 240'tır. Yalnızca mevduat (TMSF bankaları hariç) ile katılım bankaları göz önüne alındığında, bu sayı 345'e yükselmektedir. Banka başına en fazla şube kamu bankaları (1.110 adet) ve özel bankalardadır (482 adet). Sektörün şube başına personel sayısı 18'dir. TMSF grubu hariç tutulduğunda, şube başına en fazla personel istihdam eden banka grubu kalkınma ve yatırım bankaları (124 kişi) ve yabancı bankalardır (20 kişi). Sektör genelinde yurtiçi şubeleşme yaygın olup, Eylül 2013 itibarıyla en fazla şubeleşme sırasıyla Marmara Bölgesi (%41,8), İç Anadolu Bölgesi (%17,3) ve Ege Bölgesi'ndedir (%13,9). Bir yıllık dönemde 875 adet şube artışı gerçekleşmiş, söz konusu artışın 322 adeti yılın üçüncü çeyreğinde gerçekleşmiştir. Üçüncü çeyrekteki şube artışının tamamı yurtiçinde, %37,7'si Marmara Bölgesi'nde, %18,2'si İç Anadolu Bölgesi'nde, %13,7'si Ege Bölgesi'nde olmak üzere yeni açılan şubelerden kaynaklanmıştır. En fazla şube açılışı İstanbul, Ankara ve İzmir'de gerçekleşmiştir. Eylül 2013 itibarıyla sektörde 38.611 adet ATM, 2,84 milyon adet POS ve 74.642 adet sanal POS ile hizmet verilmektedir. Bir yıllık dönemde ATM sayısında %14,6, POS sayısında %11,5 ve sanal POS sayısında %15,2 oranında artış olması, bankacılık hizmetlerine olan erişimin yaygınlaşmaya devam ettiğini göstermektedir. Off-shore şubeler dahil 83 adet yurtdışı şube ve 10 adet temsilcilikle toplamda 17 ülkede faaliyet gösteren sektörün, iştirakler de dahil edildiğinde faaliyet gösterdiği yabancı ülke sayısı 33'e yükselmektedir (BDDK, 2013). Tablo 2'den görüleceği gibi 2012 yılında bankacılık sektörü kaldıraç oranı ortalaması %8,3 olarak gerçekleşerek gelişmiş ülkeler ortalamasının üzerinde kalmıştır. Bankacılık sektöründe en geniş anlamda sağlıklı bir bilanço yapısına sahip olup olmadığına işaret eden temel gösterge olan sermaye yeterliği rasyosu %17,9 düzeyinde gerçekleşmiştir. Finansallaşma düzeyinin göstergelerinden biri olarak kabul edilen toplam aktif/GSYİH oranının mevcut düzeyinden (yaklaşık %100) daha yukarılara çıkarılmasında söz konusu sağlam bilanço yapısı ve özelde de güçlü sermaye bileşimi vazgeçilmez bir yer tutacaktır. Türkiye ekonomisinin ciddi bir daralma yaşadığı dönemde, kredilerin takibe dönüşüm oranı %5 düzeyinin üzerine çıkmışken, 2012 yılı sonu itibariyle söz konusu değer %2,9 olarak gerçekleşmiştir (TKBB, 2012).

*Tablo 2. Bankacılık Sektöründe Seçilmiş Rasyolar (%) **Kaynak: TKBB, BDDK.***

   Tablo 3'de görüleceği üzere, dünya ekonomisine artık, gelişmekte olan ülkeler damgasını vurmaktadır. Dünya finans sistemi ise faizsiz bankalarla yeni bir döneme girmiş görünmektedir. The Banker dergisi tarafından yapılan ve bu alanda önde gelen ilk 20 ülkeyi inceleyen çalışmada finansal varlıkların toplamı bir trilyon 275 milyar ABD dolarına ulaştığı görülmektedir. Söz konusu 20 ülke arasında İran 465 milyar, Malezya 221 milyar ve S. Arabistan da 185 milyar ABD doları ile ilk üç sırada yer alan ülkeler olarak karşımıza çıkmaktadırlar. Yaklaşık 1,3 trilyon dolar olarak gerçekleşen 2012 yılı global faizsiz bankacılık işlemlerinde en büyük payın %35,8 ile yani yaklaşık 465 milyar dolarlık hacimle İran'da olduğu görülmektedir. İran'ı, %32,0 ile Körfez ülkeleri (Suudi Arabistan, Birleşik Arap Emirlikleri, Kuveyt, Bahreyn ve Katar), %17 ile Malezya, %3,1 ile Türkiye ve %8,4 ile dünyanın diğer ülkeleri takip etmektedirler. Özellikle Ortadoğu ve Kuzey Afrika bölgesinde faizsiz bankacılık alanında gelişme potansiyelinin daha büyük olduğu görülmektedir (TKBB, 2012).

| Sıra | Ülke | Finansal Varlık Toplamı | Kurum Sayısı | Sıra | Ülke | Finansal Varlık Sayısı | Kurum Sayısı |

*Tablo 3. Dünyada Faizsiz Bankacılık (2012 - milyon USD)* **Kaynak: TKBB, The Banker.**

Faizsiz bankacılık, 2008 küresel finans krizinden sonra dünyada daha dikkat çekici duruma gelmiştir. 2008 küresel kriz, finans sektördeki oluşan büyük bir balondan ve bu balonun içinde sorunlu varlıkların birikmesinden kaynaklanmıştır. Faizsiz bankacılık sisteminde alacağın menkul kıymetleştirilmesi olmadığından riski yüksek olan finansal işlemler ve spekülasyon yoktur. Bu nedenlerden dolayı sadece Müslüman ülkelerde değil, gelişmiş ülkeler tarafından bile krizden çıkış yolu olarak, krizden fazla etkilenmeyen faizsiz bankacılık (İslami bankacılık) sistemi önerilmiştir (TKBB, 2010). TKBB, Küresel finans krizinden geleneksel bankaların büyük bir kısmı etkilenirken faizsiz bankacılık kesiminin başarıları dikkat çekmiştir. Ernst & Young'ın "Dünya İslami Bankacılık Rekabet Raporu 2013'e göre; global faizsiz finans endüstrisi, son 4 yılda ortalama %19 oranında büyüme gerçekleştirmiştir. Faizsiz finans sistemi, 2012 yılında da performansını sürdürmüştür. Kuveyt Finance House'a göre global faizsiz finans hacmi, 1,6 trilyon dolara ulaşmıştır. Faizsiz finans sistemindeki genişleme, bankacılık ile sınırlı kalmamıştır. Sukuk işlemleri, faizsiz sigortacılık ve faizsiz yatırım fonlarında da hızlı bir büyüme görülmüştür. Faizsiz finans sisteminin 2013 yılında 2 trilyon dolara, 2020 yılında ise 4 trilyon dolara ulaşacağı tahmin edilmektedir (TKBB, 2012). Son 10 yılda katılım bankaları Türk finans sistemi içindeki payını ve etkinliğini arttırmıştır. Sektörde faaliyet gösteren 4 katılım bankası, yeni açtıkları şubelerle Türkiye'nin tümüne yayılmış, %23'lük artışla toplam fon hacmini 49,1 milyar liraya çıkarmıştır. Sektör bu kaynakların tamamını reel sektöre ve bireysel finansman olarak aktarmıştır. Yurtdışı açılımını 2012 yılında da sürdüren katılım bankaları, bir yandan da sermaye piyasasındaki pozisyonunu güçlendirmiştir. Özkaynaklarını %19,1 oranında artırarak 6,2 milyar liradan 7,4 milyar liraya yükselten katılım bankalarının toplam aktifleri ise, 56,1 milyar liradan 70,2 milyar liraya yükselmiştir. Bu rakam, sektörün %25 gibi bir büyüme gerçekleştirdiğine işaret etmektedir. Son 2 yılda özellikle Türk özel bankalarının gerek yurt içinde gerekse de yurt dışında ihraç etmeye başladıkları bono ve tahvillerin bu bankaların bilançoları açısından önemlerinin arttığı görülmektedir. Örnekleri katılım bankaları için de görülmeye başlanan menkul kıymet ihraçları önümüzdeki dönemde önemli bir fon kaynağı olabilecektir. Özellikle Türkiye'de kira sertifikası olarak adlandırılan sukuk gibi dünya finansal sistemi tarafından da tanınan ve benimsenen menkul kıymetlere yöneldikçe katılım bankalarının mevcut performanslarını daha da ilerletmelerinin mümkün olduğu görülecektir. Türkiye faizsiz bankacılık, sukuk, faizsiz yatırım fonları ve faizsiz sigortacılık dahil faizsiz finans endüstrisinin tüm alanlarında çekim merkezi haline gelebilir (TKBB, 2012). 2012 yılı faizsiz bankacılık açısından yeni ürünlerin ve yeni uygulamaların hayata geçirildiği bir yıl olmuştur. Faizsiz bankacılık sektörüne devletin de girdiği görülmektedir. Bu durum, faizsiz bankacılık için yeni bir dönemece işaret etmektedir. Örneğin, Türkiye, Halkbank ve Ziraat Bankası üzerinden hayata geçirilmeye hazırlanan, İslami fon ve sermayeye hitap edecek katılım bankaları kurmayı hedeflemektedir (Memurlar, 2014). Vakıf Katılım ve Halk Katılım adları verilecek olan bankaların açılışı için çalışmalara başlanmıştır. Vakıfbank ve Halkbank'ın marka değerinden, katılım bankacılığının ise potansiyel müşteri kitlesinden faydalanacak bir formül geliştirilmiştir. Bu bankaların marka bilinilirliğinden yararlanılarak faizsiz bankacılık hizmetlerinin devlet eliyle verileceği anlamına gelmektedir. Vakıf Katılım ve Halk Katılım adında kurulacak olan iki yeni kamu bankasına yeni lisans verilerek kurulması amaçlanmaktadır. Bu hamleyle devlet de katılım bankacılığına başlamış olacaktır. Buna göre her iki banka da katılım bankacılığı için sıfırdan yeni lisans alarak iki yeni banka kurulacaktır. Böylelikle 49 bankanın ve 4 katılım bankasının faaliyet gösterdiği sektöre 2 yeni banka daha eklenecektir. Sektörde 4 katılım bankası aktif olarak faaliyet göstermektedir. 2012 sonu itibariyle, katılım bankalarının toplam bankacılık sektörü içindeki payı %5 civarında görülmektedir. Katılım bankalarının toplam aktif büyüklüğü ise geçen yılın sonunda 70 milyar TL'yi aşmıştır (İşkur, 2014). Aşağıdaki tablolardan görüldüğü üzere katılım bankalarının aktif toplamı 2012 yılı sonu itibariyle yaklaşık 70 milyar TL'ye ulaşmıştır. Aktiflerin bankacılık sektöründeki oranı 2006 ve 2012 yılları arasında % 2.94'den %5.35'e

yükselmiştir. 2012 yılında %12,6'lık artışla 1,2 trilyon liradan 1,4 trilyon liraya yükseldiği görülmüştür. TKBB'nin verilerine göre katılım bankaları, 2012 yılında 49,9 milyar TL fon kullandırmıştır. 2011 yılında bu rakam, 41,1 milyar TL seviyesindeydi. Böylece kullandırılan fon bakımından katılım bankalarının toplam sistem içindeki payı, %5,8'den %6'ya yükselmiştir. Katılım bankalarının kredi ve mevduat toplamlarının da 2006 yılından bu yana giderek arttığı gözlemlenmiştir. Katılım bankalarının 2006 yılında özkaynaklar toplamı % 2.65 iken 2012 yılı sonunda bu oran artarak % 4.09'a yükselmiştir. Katılım bankaları, 2012 yılında toplanan fon hacmini toplam 49,2 milyar liraya yükseltmiştir. Bu rakamın, 2011 yılında 39,9 milyar TL seviyesinde olduğu görülmektedir. Sektörün toplam özkaynakları ise %19,1'lik artış oranıyla 6,2 milyar TL'den 7,4 milyar TL seviyesine ulaşmıştır. Kullandırılan kredilerde bu %6'ya ulaşmıştır. Katılım bankalarının toplam karı 2012 yılında %13,9'luk artışla 804 milyon TL'den 916 milyon TL'ye yükselmiştir. Böylece katılım bankacılığının net kar rakamı, bir milyar TL sınırına dayanmıştır (TKBB, 2012).

| Yıl | Krediler | Toplam Aktifler | Toplanan Fonlar | Özkaynaklar | Kâr/Zarar | Aktif Kârlılığı (%) | Özkaynak Kârlılığı (%) |
|---|---|---|---|---|---|---|---|
| 2006 | 9.242.922 | 13.656.867 | 11.223.641 | 1.560.934 | 399,993 | 2.93 | 25.63 |
| 2007 | 13.828.649 | 19.240.210 | 14.762.224 | 2.363.110 | 526,683 | 2.74 | 22.29 |
| 2008 | 17.442.361 | 25.636.561 | 18.890.304 | 3.728.020 | 646,583 | 2.52 | 17.34 |
| 2009 | 23.616.324 | 33.691.636 | 26.595.558 | 4.421.997 | 707,517 | 2.10 | 16.00 |

*Tablo 5. Katılım Bankalarının Toplam Bankacılık Sektörü Büyüklükleri İçindeki Payı* **Kaynak: BDDK, TCMB.**

Bankaların ülke ekonomisindeki rolü dikkate alındığında, kurumsal yönetim uygulamalarının önemi daha da artmaktadır. Bankalar iyi yönetildiklerinde, sermayeyi verimli bir şekilde dağıtacak ve kendilerinin kredi vererek fon sağladığı firmaların üzerinde daha etkili olabileceklerdir. Bankalar kaynak aktarım sürecinde talep edebilecekleri norm ve standartlar aracılığıyla reel sektörün yönetim anlayışını değiştirebilirler. Diğer taraftan banka yöneticileri kendi kişisel çıkarlarını ön plana almak yerine hissedarların ve mevduat sahiplerinin çıkarlarını gözetmelidir. Böyle bir durumda, bankalar toplumun tasarruflarını verimli bir şekilde değerlendirecek ve firmalara kurumsal yönetim konusunda örnek olacaklardır. Bankacılıkta kredi kalitesini belirlemek çok kolay değildir. Daha önce aldıkları kredileri geri ödeyemeyen müşterilere tekrar kredi vererek problemleri gizleyebilirler. Bankaların ekonomideki önemi ile banka varlık ve faaliyetlerinin şeffaflığının az olmasından dolayı, hükümetler bankaları yasa ve yönetmeliklerle kontrol altında tutmaya çalışmaktadırlar. Diğer sektörlerde devlet müdahalesinin az olduğu ülkeler bile, bankacılık sektörüyle ilgili çok sayıda yasal düzenleme getirmişlerdir. Bankaların kurumsal yönetiminin değişimi önemli bir konu haline gelmiştir (Saygılı, 2003). Türkiye'de kurumsal yönetimle ilgili olarak Türkiye Sanayici ve İşadamları Derneği (TÜSİAD) bünyesinde kurulan Kurumsal Yönetim Çalışma Grubu çalışmalarını sürdürmekte olup, 2003 yılında TKYD kurulmuş ve SPK halka açık şirketlere bir öneri olarak kurumsal yönetim ilkelerini belirlemiştir. Türk Ticaret Kanunu'nda (TTK) denetim ve şirket iflasları yeniden ele alınmış, kurumsal yönetim ilkeleri temelinde değişiklikler yapılmıştır. Ayrıca Borsa İstanbul (BİST) adını alan İstanbul Menkul Kıymetler Borsası Kurumsal Yönetim Endeksini uygulamaya koymuştur (Gökgöz, 2012).

## 4   Sonuç ve Değerlendirme

Küreselleşme ve finansallaşma sürecinde, her defasında sık sık finansal spekülasyonlara dayalı krizler oluşmuş ve nihayetinde patlayarak küresel ekonomik krize dönüşmüştür. Eylül 2008'deki yaşanan küresel kriz herkesin krizle ilgili düşünce şeklini değiştirmiştir. Dolayısıyla kurumsal sosyal sorumlulukta önemle vurgulanan; şeffaflık, hesap verilebilirlik, dürüstlük ve tarafsızlık gibi etik ve ahlaki konuların önemi daha belirgin hale

gelmiştir. 2008 küresel finansal kriziyle birlikte yıkılmaz kuruluşlar devri (Enron, Lehman Brothers vb.) gerçekten bitmiştir. Fortune 500 şirketler grubu ve eski yöneticileri arasında beklenmeyen çöküşler, milletlerarası iş çevresinin artan finans sektörü tasallutunun altında olduğunun en iyi belgesi olmuştur. Merck finans müdürü Judylewent adeta Wall Street'e kayıtsız şartsız inananlara yönelik bir uyandırma çağrısı yapmıştır: "Muhasebe sistemi gerçekte hiçbir şeyi göstermez…" (Kurtoğlu, Fırat, 2014)". Muhasebe ve raporlama açısından standardizasyon eksikliği hilelerin engellenememesine ve kolayca yapılabilmesine yol açmıştır. Yaşanan skandallarda bağımsız denetim ve derecelendirme kurumlarının, işletmelerin çoğunluk hisselerine sahip hissedarlar ve tepe yöneticilerinin öne çıktığı görülmüştür.

ABD'li avukatlık şirketi Labaron Sucharow tarafından gerçekleştirilen bir anket, Wall Street yöneticilerinin % 25'inin başarıya ulaşmasının görevi kötüye kullanmaktan geçtiğine inandığını ortaya koymuştur. Labaton Sucharow ortaklarından Jordan Thomas şöyle demiştir: "Görevi kötüye kullanmak, mali hizmetler uzmanları için alışılagelmiş ve kabul edilir bir olgu halini aldığında, bu durum finansal sistemimizin bütünlüğü ve saygınlığı için yıkıcı bir tehdit oluşturur (Kurtoğlu, 2013)". Finansal sektörün doğası gereği ulusal regülasyonlar; düzenleme, denetim, kontrol ve yaptırım açılarından yetersiz kalmıştır

Yaşanan skandallar ve krizlerin sebeplerini ortadan kaldırarak tekrarlanmalarının önüne geçebilmek amacıyla küresel çapta bazı çabaların gösterildiği söylenebilir. Ancak işletmelerin çoğunun büyük ölçekli, kurumsallaşma dereceleri yüksek ve kurumsal yönetim anlayışını benimsemiş olmaları; etik ve ahlak konusundaki eksikliklerin halen devam ettiğini göstermektedir (Gökgöz, 2012).

Küresel kriz sonrasında başta Amerika'da uygulanan halihazırdaki istikrar politikalarıyla kriz atlatılmış gibi görünmektedir. Ancak Eylül 2008'de ABD'de bankacılık finans sistemini felç eden "mortgage krizi" ve ardından dünyayı saran küresel mali-reel sektör tabanlı buhran 310 milyon nüfuslu ABD'nin üçte birini fakirlik girdabının içine çekmiştir. İnfowar Temmuz 2012 raporunda OECD, üye ülkelerdeki toplam işsiz sayısının 48 milyona çıktığına dikkat çekerek Euro bölgesindeki işsizlik oranının % 11.1'e çıktığını, ABD'deki işsizlik oranının % 8.25 olarak gerçekleştiğini kaydetmiştir (İnfowar.com/ 26 Temmuz 2012). Son yıllarda küresel krizle sarsılan dünya ekonomisi savaşlar, doğal afetler, skandallar, siyasi gerginliklerle birlikte 2014 yılına kötümser bir tablo ile girmiştir. Ülkeler bu süreçte çok daha büyük sorunlara maruz kalmıştır. Bu yüzden ülkeler gelecek yıllarda büyüme hızının düşmesi sebebiyle işsizlik, dış ödemeler dengesindeki bozulmalar, cari açık, bütçe açıkları, kamu borçları, enflasyon gibi makro ekonomik tehlikelerle mücadele etmek için çaba göstermek zorundadırlar.

Küresel kriz sonrasında Türkiye ekonomisi sadece bölgesinde değil, dünya genelinde de dikkate değer bir performans göstermiştir. Bu süreç içerisinde bankacılık sektörü hızla gelişmiş, sermaye yapıları ve karlılıkları artmış ve bankacılık anlayışları değişmiştir. Ülkemizde yaşanan finansal krizler, bir yandan bankacılık sektörünü zayıflatırken diğer taraftan da son yıllarda bankaların yeni fırsatlarla karşılaşmasına imkân tanımıştır. Dünyada her geçen gün daha fazla dikkat çeken katılım bankacılığının, bankacılık sistemindeki büyüme ve güçlenmeyle birlikte finansal krizler karşısındaki dayanıklılığı ve esnekliği daha belirgin hale gelmiş, dünyada olduğu gibi Türkiye'de de bankacılık sistemindeki önemi ve payı artmıştır. Katılım bankalarının ve ürünlerinin de desteklenerek bu büyüme oranlarının bundan sonra da sürdürülmesi gerekmektedir. Öte yandan bankalar mevcut hizmet kalitesini sürdürürken alternatif dağıtım kanallarını da arttırmışlardır. Bir yandan finansal sorumluluklarını bilerek karlılıklarını arttırmışlar diğer yandan da sosyal sorumluluk projeleriyle yeni bir bankacılık anlayışı getirmişlerdir. Bankacılık sektörü ve reel sektör yeniden yapılandırma süreci içerisinde birlikte hareket etmiş, marka değeri ve itibarı üzerinde rekabetçi avantaj elde etmiş ve makroekonomik dengelerin düzeltilmesinde büyük rol oynamışlardır. Ancak yapılan bazı regülasyonlar ve gündemi meşgul eden birtakım ekonomik ve siyasal olaylar bankacılık sektörünü olumsuz yönde etkilemiştir. Günümüzde artan rekabet şartları, dövizde açık pozisyon tutma tutkusu, artan riskler, ürün hedefli yaklaşım, bireysel hedef geçekleştirmeleri, azalan marjlar neticesinde daralar karlar, daha çok satış baskısı gibi temel eğilimler bankaları zorlamasına rağmen Türk bankacılık sektörü global pazarda daha güçlü olarak ilerlemektedir. Bu yüzden ekonomik istikrarın sürdürülmesinde bankacılık sektörünün payı unutulmamalı, gereken önem verilmelidir.

# Son Finansal Kriz Öncesi ve Sonrası Para Politikalarında Gelişmeler ve Merkez Bankalarının Değişen Rolü

# Developments in Monetary Policies before and after the Recent Financial Crisis and the Change in the Role of Central Banks

Asst. Prof. Dr. Zekayi Kaya (Çankırı Karatekin University, Turkey)

Asst. Prof. Dr. Erkan Tokucu (Kafkas University, Turkey)

## Abstract

During the historical process, application of the monetary policies and the roles of the central banks have changed within the framework of the developments in the world economy, problems encountered and the economic policies as a solution to these problems. The financial crises after 1990 and the recent financial crisis as the biggest experienced one after 1930s, caused an increase in the importance of the task of providing financial stability besides price stability and in this context in the function of "lender of last resort" of the central bank. The crisis required using new policy instruments in addition to interest rate instrument which was not sufficient enough in providing financial stability and the roles of the central banks in providing financial stability changed. In this study, applications of monetary policies and the changing role of the central banks will be examined. Within this framework, traditional and non-traditional instruments will be explained and the problems that can be confronted by a central bank when providing price stability besides financial stability will be remarked.

## 1 Giriş

Merkez Bankalarının tarihsel olarak temelde üç farklı dönemde üç amaca yöneldikleri görülmektedir. Bu dönemlerden birincisi, "Victoria Çağı" olarak adlandırılan çağdır ki kabaca 1840-1914 dönemini kapsar. Bu dönemde para politikalarına yüklenen temel amaç, altın standardının geçerli olduğu bir sistemde hem altın standardını devam ettirmek hem de finansal istikrarı devam ettirebilmektir. Bu çağ para politikalarında önemli yerleri olan Walter Bagehot ve Henry Thornton'un da içinde yer aldığı çağdır (Goodhart, 2010). Savaşlardan veya altının tükenmesinden dolayı oluşan finansal panikler sırasında likidite buharlaştığında önemli Merkez Bankalarının finansal sisteme likidite enjekte etmesi bekleniyordu. Bu panikler genellikle İngiltere Merkez Bankası (BoE)'nın altın standardını geçici olarak rahatlatmak amacıyla aldığı kararların hemen öncesinde kısa süreler halinde oluşmaktaydı. Thornton (1802) ve Bagehot (1873), BoE'ye ödeme gücü olan ve geçici likidite problemlerine sahip alıcılara likidite sağlamak amacıyla son kredi mercii politikasını tavsiye etti. Aynı şekilde, Amerika Birleşik Devletleri'nde de, özellikle finansal panikleri ve faiz oranları ile banka başarısızlıklarıyla ilişkili olumsuz gelişmeleri engellemek için Federal Reserve Sistemi (FED) kurularak sistemin aksamadan çalışmasını sağlamak için önlemler alınmaya çalışıldı (Cukierman, 2013).

Merkez Bankaları ve para politikaları için ikinci dönem Büyük Buhran ve II. Dünya Savaşı sonrası 1940'lardan 1960'ların sonlarına kadar kamu müdahalelerinin geçerli olduğu ve reel ekonominin istikrarına önem veren Keynesyen politikaların uygulandığı dönemdir. Bu dönemde ilk defa Phillips (1958) tarafından tahmin edilen ve enflasyon ile işsizlik arasında değiş tokuşu ifade eden negatif eğimli Phillips Eğrisi istikrar politikaları için temel bir araç haline geldi ve para ve maliye politikasından oluşan bir karma yaklaşım ile bir istikrar paketi hazırlandı (Cukierman, 2013). 1930 sonrası dönem yaşanan piyasa başarısızlıklarından dolayı, Merkez Bankalarına güven kaybının yüksek olduğu dönemdir. Dolayısıyla para politikalarının yürütülmesinde hükümetler insiyatifi ellerine almış ve dönemin başında, altın standardı terk edildiği için faiz oranlarını baskı altında tutmayı hedefleyen bir para politikası stratejisi benimsemişlerdir.

Üçüncü dönem, neo liberal politikaların hâkim olmaya başladığı 1980'lerden sonraki dönemdir. Bu dönemin temel özelliği ise bağımsız Merkez Bankalarının kendileri tarafından belirlenen araçlarla para politikalarını yürüttükleri dönemdir. 1980'lerle birlikte, devlet önemli oranda piyasalardan çekilmeye başlamış ve serbest piyasa ekonomisinin hâkim olması için gerekli yasal düzenlemeler yapılmaya başlamıştır (Goodhart, 2010).

Çalışma, özellikle üçüncü dönemde geçerli olan Merkez Bankacılığı ve uygulanan para politikalarını incelemektedir. 1980 sonrasında finansal piyasalardaki hızlı gelişmelerden dolayı Merkez Bankacılığında ve para politikalarını teknik uygulamalarında çok hızlı değişimler olmuştur. Bankacılık sistemindeki düzenlemelerin kaldırılması, banka dışı finansal aracılığın gelişmesi ve buna bağlı olarak yeni finansal araçların türetilmesi para politikalarının etkinliğini ve para politikalarındaki değişimi yakından etkileyen gelişmelerdir (Ho, 2008). Son finansal krize kadar birçok Merkez Bankası fiyat istikrarını sağlamayı birincil amaç olarak kabul etmekte, finansal istikrara da katkıda bulunacak şekilde politikaları takip edeceğini belirtmekteydi. Ayrıca fiyat istikrarının sağlandığı bir ekonomide finansal istikrarın da sağlanacağı beklentisi hâkimdi. Ancak son finansal kriz döneminde fiyat istikrarının sağlanmasının finansal istikrar için de yeterli olmadığı ve krizin reel ekonomiler

üzerindeki olumsuz etkilerinin giderilmesi için kısa vadeli politika faiz oranları üzerinden yürütülen para politikalarının çalışmadığı anlaşıldı. Bu bağlamda fiyat istikrarı ve finansal istikrar olarak ikili bir hedefin aynı anda sağlanabilmesi için Merkez Bankaları hem kurumsal yapılarında hem de para politikası uygulamalarında bir takım değişikliklere gittiler.

Çalışmada, 1980 sonrasında krize kadar olan süreçte uygulanan para politikalarının genel çerçevesi hakkında bilgi verilecek ve geleneksel olmayan para politikalarına niçin ihtiyaç duyulduğu, bu politikaların nasıl uygulandığı hakkında bilgiler verilecektir. Bu bağlamda miktarsal genişleme ve vade dönüşümünden oluşan bilanço uygulamaları, faiz taahhüdü politikası ve koridor uygulamaları anlatılacaktır.

## 2 Finansal Krizden (2007-2009) Önce ve Sonra Merkez Bankalarının Rolü

Merkez Bankalarının rolleri 1980'li yıllarda finansal piyasalarda meydana gelen gelişmelerle değişikliğe uğramış olsa da değişmeyen geleneksel rolleri de olmuştur. Merkez Bankaları finansal krizden önce ve sonra sahip oldukları geleneksel roller şunlardır: 1) Son Kredi Mercii Düzenlemeleri 2) Ödeme Sistemlerinin Gözetimi

1) Son kredi mercii düzenlemeleri acil duruma sahip ilgili finansal kurumlar için kullanılmalıdır. Bu rolün kullanımının nedenlerinden biri "özel iş modeli veya yatırım stratejilerinin bir sonucu olarak ödeme güçlüğü ile karşılaşan finansal kurumların problemleridir." Diğer neden bozulan ve aksayan fon piyasalarının yenilenmesidir (Ojo, 2011). Finansal kriz sırasında Merkez Bankalarının zayıflıklarından birisinin sınırlı bir zaman için son kredi mercii olarak geleneksel rolünü gerçekleştirememeleri olduğu ortaya çıktı. Bu çerçevede, İngiliz bankası Northern Rock'a hücumu başlatan problemlere neden olan en önemli örneklerden biri İngiltere Bankasıydı.

2008 son aşamalarından sonra, geleneksel olmayan önlemler gelişmiş ekonomiler tarafından başlatıldı. Bu önlemler olağanüstü şartlarda –özellikle daha uzun sürelerden oluşan vadede ve seçilmiş kredi piyasalarına müdahalede– bankalara likidite tedarikini kapsamaktadır (Ojo, 2011).

2) Likiditenin son sağlayıcıları olarak Merkez Bankaları eşsiz bir yere sahiptir. Bunun sonucu olarak ödeme sistemlerinin gözetmeni olma geleneksel rolünün bir uzantısı olarak sayılabilen sistemik riskin gözetimi sorumluluğuna sahiptirler (Ojo, 2011).

Merkez Bankaları ödeme sistemlerinin gözetmeni rolüyle ilişkili olarak geniş bir bilgi ve uzmanlığa sahiptirler. Bu bilgi ve uzmanlığı elde etme yollarından dolayı makro-ihtiyat denetimi sorumluluğuna sahiptirler. Bankacılık sektöründe hükümet ve özel sektör tarafından çıkarılan kısa vadeli yükümlülükler halk tarafından likit kısa vadeli tasarruflarının oluşturduğu talep için yeterli olmayabilir. Bu durumda Merkez Bankalarının bir likidite tedarik yolu olarak vade dönüşümü ile bankaların likidite riskini azaltabilme rolleri vardır. Aynı zamanda bankaların likidite risklerini yönetmede "Merkez Bankası rezerv hesabı"nı kullanmasına izin verebilirler. Bu işlem bankaların normal gün içi değişmeleri de kapsayan sıradan ödeme ihtiyaçlarını karşılamalarına imkân sağlayan bir tedariktir (Ojo, 2011).

### 2.1 Finansal Krizden Önce Merkez Bankalarının Rolü

Kriz öncesi son yirmi yıl içinde fiyat istikrarı Merkez Bankalarının temel amacı olmuştur. Merkez Bankaları bu amacı faiz oranları aracılığıyla elde etmeye çalışmıştır. Bir para politikası aracı olarak politika faiz oranını sadece gelecekteki kısa vadeli faiz oranı beklentilerini etkilemek için kullanırlar. Bu yolla az veya çok tahmin edilebilir şekilde uzun dönem faiz oranları ve varlık fiyatları düzenlenebilir.

Makroekonomik ve finansal istikrarı sağlarken Merkez Bankalarının rolü belli değildi. Ticari bankaların mevduat ve borç uyumsuzluklarından dolayı bankalara hücum durumunda mevduat sigortası ve Merkez Bankalarının acil likidite yardımı sağlayıcıları (son kredi mercii) rolü kullanılmıştır. Bunlar bankacılık sektöründe bir ahlaki tehlike problemine neden oldu. Bundan dolayı bireysel bankalar seviyesinde sermaye gereklilikleri gibi mikro-ihtiyat araçlarının kullanımı ile düzenleme ve denetim ihtiyacı vardı.

Merkez Bankaları, bilançolarının büyüklüğü ve bileşimi ile çok fazla ilgilenmediler. Tedavüldeki para yani dolaşımdaki banknotlar en önemli yükümlülüğüydü ve resmi mevduatlar Merkez Bankası bilançolarında nadiren yükümlülüklerin çok büyük bir oranına sahip olmuştur. Merkez Bankaları döviz (uluslararası rezervler) ve yerli para (daha çok devlet tahvilleri ve bankalardan bazı alacaklar) karışımı olarak varlıklara sahipti.

Yükselen piyasa ekonomilerinde Merkez Bankalarının döviz kuru ve döviz rezervlerini yönetmek, yerel para tahvil piyasalarını geliştirmek, devlet borçlarını yönetmek ve ihtiyati denetimi gerçekleştirmek gibi çok sayıda görevleri olmuştur (Hannoun, 2010).

Ağustos 2007 öncesi yıllarda Merkez Bankaları operasyonel bağımsızlıkla birlikte para politikasını yönetmede temelde başarı sağladılar. Bir enflasyon hedefini elde etmek için kısa dönem resmi faiz oranını kullanıyorlardı. Bu yolla fiyat istikrarının elde edilmesi finansal istikrarı garantilememektedir. Finansal istikrarın sağlanması amacı için makro-ihtiyat ve düzenleyici araçlar geliştirilmektedir (Goodhart, 2011).

Merkez Bankaları "en son kredi mercii" şeklinde bir bireysel bankaya veya "Açık Piyasa İşlemleri (APİ)" yoluyla piyasanın tamamına likidite sağlamak için geleneksel istikrar araçlarına sahip olmuşlardır. Bunlar likidite

yönetimi için kullanılan araçlar olduğundan finansal istikrar otoritesi, likidite yönetimi ve Merkez Bankası bilançosu üzerinde kontrole sahip kurum Merkez Bankası olabilirdi.

Normal şartlar altında APİ piyasa faiz oranlarını bu faiz oranından ayrı olarak oluşturulmuş resmi faiz oranı çizgisine doğru yönlendirmek için kullanılır. Fakat finansal sıkıntı ve kriz şartlarında likidite yönetimi resmi faiz oranlarından bağımsız hale gelir (Goodhart, 2011). Bu durum, faiz oranları sıfır seviyesinde olduğu durum dışında faiz oranları sıfır seviyesinin üzerinde olduğu zaman da geçerlidir. Faiz oranlarının pozitif olduğu bu durumda, kısa–vadeli faiz oranlarını yönetmek için faiz koridorunu uygulamaya fırsat veren bir dizi özgürlük vardır. Koridor sisteminde, likidite politikası ve faiz oranı politikası geniş bir alanda bağımsızca yönetilebilir.

## 2.2 Finansal Krizden Sonra Merkez Bankalarının Rolünde Değişim ve Makro-İhtiyati Denetim

Merkez Bankaları fiyat istikrarını sağlamada en son finansal krize kadar başarılı olmuşlardır. Krizden sonra, fiyat istikrarını elde etmenin aynı anda finansal istikrarı sağlamada yeterli olmadığı Merkez Bankaları tarafından anlaşıldı. Sonra Merkez Bankaları finansal istikrar üzerinde öncekinden daha çok odaklanma eğiliminde olmuşlardır. Finansal istikrar hedefini fiyat istikrarı, çıktı ve döviz kuru istikrarı hedeflerine ek olarak bir diğer hedef olarak göz önünde tutmaya başladılar (Tokucu, 2012).

Merkez Bankalarının gerçek sorumlulukları; sürekli likiditenin geçerliliğini garantilemek, ödeme sisteminin iyi performansını sağlamak ve para politikasının aktarımını gözetmek olduğu için finansal istikrardan kısmen sorumludur. Birçok Merkez Bankası etkin bir denetim ve düzenleme desteğiyle finansal istikrarı korumaya katkıda bulunmaktadır (Mohamed, 2012).

Varlık fiyatları, kredi artışları ve parasal toplamlar finansal istikrarsızlıkların göstergeleridir. Son kriz sırasında ve sonrasında, kısa vadede fiyat istikrarı var olsa bile Merkez Bankalarının aşırı kredi genişlemesine ve varlık fiyat artışlarına karşı koymak gibi bir role sahip olduğu anlaşılmıştır. Merkez Bankaları global finansal sistemin çöküşünü önlemek için finansal piyasalara müdahale ettiler. 2008'in son aylarında krize cevap olarak gelişmiş ülkelerce bilanço politikaları başlatıldı veya genişletildi. Fakat yükselen piyasa ekonomilerinde Merkez Bankaları kriz öncesinde çoktan bilançolarını genişletmişlerdi. Bazı gelişmiş ülkelerde Merkez Bankaları fiyatlardan miktarlara kaymaya neden olan geleneksel olmayan politikalara odaklandı. Bu politikalar, sıfır faiz oranına yaklaşılmasına sebep olan geleneksel olmayan parasal gevşeme politikasının yanında uygulandı (Hannoun, 2010). Makro-ihtiyat politikaları geleneksel olmayan önlemler olarak ilk gelişmiş ekonomilerce başlatıldı. Bu önlemler olağanüstü şartlarda (daha uzun sürelerden oluşan vade ve ikincil piyasanın likiditesini desteklemek amacıyla seçilmiş kredi piyasalarına müdahale ve finansman şartlarını geliştirmek amacıyla tahvillerin kesin alımı) bankalara likidite tedarikini kapsamaktadır (Yellen, 2011).

Döviz rezervleri çok yüksekti. Yüksek seviyeli rezervler bankacılık sisteminin likiditesini ve banka kredisini etkiledi. Varlıklar ve yükümlülükler arasında bir uyumsuzluk vardı. Çünkü yabancı para varlıklarının karşılığı olarak Merkez Bankası yerel para yükümlülüklerinin ölçeği bankacılık sisteminin hacmine göre büyüktü. Birçok yükselen piyasada Merkez Bankalarınca zorunlu karşılıklar artırılarak bu nötralize edildi.

Yükselen piyasa ekonomilerinin döviz rezervlerinde artış dünyada gösterge tahvillere ve politika faiz oranlarına talebi artırdı. Düşük politika faiz oranları gelişmiş ülkelerde tahvil piyasa getirilerini düşürdü ve bazı ülkelerde varlık fiyatlarında büyümeyi teşvik etti. Büyük döviz rezervlerinin sonucu olarak yerli para değer kazandı ve bu rezervler krizden önce yükselen piyasa ekonomilerine likit döviz varlıklar sağladı. Ancak Eylül 2008 Lehman Brothers'ın çöküşünden sonra kriz vurdu ve bankalar ve şirketler için kısa vadeli dolar yükümlülüklerini çevirmeleri zorlaştı. Bu, yükselen piyasa ekonomilerinin döviz rezervlerini büyük oranda elden çıkarmasına ve dövizin değer yitirmesine neden oldu (Hannoun, 2006).

Basel Bankacılık Denetim Komitesi Basel III'ün bir parçası olarak yeni bir makro-ihtiyati düzenleme rejimini tasarladı. Makro-ihtiyat politikası ve araçları Basel III'de konjonktür karşıtı sermaye yükümlülükleri ve ileriye dönük tedarik olarak yer almıştır (Yellen, 2011). Merkez Bankalarının makro-ihtiyat yapısı, makro-ihtiyat denetimi ve düzenlemesini oluşturmada anahtar bir role sahip oldukları iddiası şu nedenlere dayandırılmaktadır:

Makro-ihtiyat önlemlerinin geliştirilmesi ve yapılandırılması güvenilir analitik ve tahmin becerilerini gerektirmektedir. Merkez Bankaları, ekonominin tümü ve belirli piyasa bölümleri ile ilgili sahip oldukları geniş ve sağlam bilgileriyle önemli bir rol oynamaktadır. Merkez Bankalarının bilgi avantajı, makro-ihtiyat politikası ve para politikası arasındaki etkileşimden dolayı makro-ihtiyat önlemlerini şekillendirmede önemlidir. Merkez Bankaları ve düzenleyici otoriteler arasında yakın işbirliği ve etkin bilgi paylaşımı makroekonomik politika ve bireysel finansal kurumların düzenlenmesi arasında bir ilişki oluşturmak için çok önemlidir (Ojo, 2011).

Son finansal krizden sonra ulusal denetimciler ve Merkez Bankaları arasında roller ve sorumluluklar değişti ve yeniden tanımlandı (Ojo, 2011). Kriz, Merkez Bankalarına ihtiyati düzenleme ve denetimde daha fazla rol vererek (Almanya, Fransa, Birleşik Krallık), karar vermede resmi rol vererek (Birleşik Krallık) ve makro ihtiyati risk uyarılarında rol vererek (Avrupa Sistemik Risk Kurulu yoluyla AB'nde) Merkez Bankalarının rolünü güçlendirdi. Bazı ülkeler, finansal sistemde ortaya çıkan sistemik riskleri daha etkili teşhis ve tespit etmek amacıyla kuruluşlar arası koordinasyon ve yönetimi güçlendirmek için yeni sistemik risk "konseylerini" (örneğin, Fransa, Almanya, İtalya, Meksika, Birleşik Devletler) çoktan başlattı (Vinals, 2010). Birçok ülkede Merkez Bankalarına çok sayıda önemli rol transfer edilmesine rağmen finansal istikrarı sağlamada roller ve

sorumluluklarla ilgili iki farklı tartışma bulunmaktadır: Bazı Merkez Bankacıları ve ekonomistlere göre, Merkez Bankaları organizasyonel ve operasyonel yapılarında yapılacak bir değişimle birlikte sadece fiyat istikrarını değil aynı zamanda finansal istikrarını da sağlayabilirler. Tam aksi, diğerleri Merkez Bankalarının sadece fiyat istikrarı hedefine sahip olması gerektiği ve finansal istikrar sorumluluğunun yeni bir organizasyona verilmesi gerektiği fikrini savunmaktadırlar (Tokucu, 2012).

Literatürde para politikası ile bankacılık düzenleme ve denetim fonksiyonlarının bir Merkez Bankasında birleştirilmesinin mi yoksa ayrı kurumlar tarafından mı gerçekleştirilmesinin iyi olacağı konusunda bir uzlaşma yoktur. Para politikası ile makro-ihtiyat politikasının bir Merkez Bankasında birleştirilmesinin iyi olacağı iddiası üç ana nedene dayanmaktadır. Bunlardan birincisi, Merkez Bankaları makroekonomik gelişmeleri izlemede avantaja sahip olmalarıdır. İkincisi, makro-ihtiyati sorumlulukları Merkez Bankasında merkezileştirme Northern Rock'ın kurtarılmasında yaşandığı gibi bir kriz sırasında ayrı birimlerin faaliyetlerinin koordinasyonunda yaşanan problemleri önleyecekti. Üçüncüsü, para politikası kararları kaldıraç (borcun öz sermayeye oranı) ve risk alma için potansiyel sonuçlara sahiptir (Galati ve Moessner, 2011).

Makro-ihtiyat politikaları sistemik riski azaltarak finansal istikrarı sağlamaya çalışmaktadır. Doğrudan sorumlu olsun ya da olmasın sistemik riskin ve makro finansal bağlantıların analizinde Merkez Bankasının uzmanlığı makro-ihtiyat politikalarının ayarlanmasında faydalıdır (Fujita, 2010).

BIS (2011)'de belirtildiği gibi para politikası ile mikro ve makro-ihtiyat politikaları arasında koordinasyon sağlamak için tartışılmakta olan dört farklı kurumsal düzenleme seçeneği vardır. Birinci seçenek, makro-ihtiyat politikasının farklı kurumların ortak sorumluluğuna verilmesidir. Bu, ya bir Makro-İhtiyat Politikası Komitesi oluşturarak ya da makro-ihtiyat politikası kararlarının farklı kurumlar tarafından alınabildiği bir düzenlemeyle gerçekleştirilebilir. İkinci seçenek, ayrı bir makro-ihtiyat politikası otoritesi oluşturmaktır. Üçüncü seçenek, makro-ihtiyat politikası sorumluluğunun Merkez Bankasına ve mikro-ihtiyat politikasının sorumluluğunun ayrı bir kuruma verildiği kurumsal bir yapıdır. Dördüncü seçenek, her iki mikro ve makro-ihtiyat politika otoritelerinin tamamıyla Merkez Bankalarına verilmesidir (Özatay, 2012).

## 3 Finansal Kriz Öncesi Para Politikaları

1980'lerin ortalarında Amerika Birleşik Devletleri ve İngiltere, Monetarist karakterli para politikalarından vazgeçtiler. Bunun temel nedenlerinden birisi, Monetaristler tarafından istikrarlı ve öngörülebilir olduğu ileri sürülen para talebinin istikrarlı olmadığının anlaşılmasıdır. Bunun para politikaları açısından anlamı şudur: eğer para talebi istikrarlı ve öngörülebilir değil ise Merkez Bankası para arzını para talebine göre ayarlayamayacak yani kurala dayalı bir şekilde uygulanan parasal büyüklüklerin kontrolüne dayalı Monetarist para politikaları etkin olamayacaktır. Para talebindeki istikrarın kaybolması aslında finansal piyasalardaki hızlı gelişmelerin bir sonucudur. Finansal piyasalardaki hızlı gelişmeler ayrıca para arzının dışsallığını da azaltmış yani para arzını temsil eden ve faiz oranı eksenine paralel olan doğru pozitif eğimli olmaya başlamıştır. Para arzının içselleşmesi olarak adlandırılan bu süreç parasal büyüklüklerin ara hedef olarak seçilmesini zorlaştırmış ve Monetarist politikalardan vazgeçilmesine neden olmuştur (Palley, 2005).

Monetarist para politikalarının etkinliğini kaybetmesi, para politikalarında yeni arayışlara yol açmış ve Keynesyen makro teoriye mikro temeller kazandırmak için çalışan Yeni Keynesyen görüşler gündeme gelmiştir. 1980'lerin sonrası ve 1990'ların başlarından itibaren hâkim olmaya başlayan ve birçok ülkede politika yapıcılar tarafından kabul gören Yeni Keynesyen yaklaşım içerisinde para politikalarında enflasyon hedeflemesi rejimi olarak bilinen görüş geliştirilmiştir (Clarida, vd, 1999; Woodford, 2003). Enflasyon hedeflemesinin bu mikro temelli versiyonunda bağımsız bir Merkez Bankası, kısa dönemli faiz oranlarını enflasyon ve üretim açıklarının sosyal maliyetlerinin ağırlıklı bir doğrusal kombinasyonunu minimize edecek şekilde ayarlamaktadır. Burada enflasyon açığı, gerçekleşen enflasyonla hedeflenen enflasyon arasındaki farkı ifade ederken, üretim açığı fiili çıktı ile potansiyel çıktı arasındaki farkı ifade etmektedir.

John Taylor'un 1990'ların başında geliştirdiği ve kendi adıyla anılan Taylor Kuralı basit bir araç kuralıdır ve para politikaları uygulanırken Merkez Bankasının nasıl davranacağını gösterir. Kural basitçe aşağıdaki gibi gösterilebilir:

$i = i_{reel} + a(Y-Y^*) + b(\pi - \pi^*)$

i: Merkez Bankası tarafından belirlenecek nominal faiz oranlarını

$i_{reel}$: reel faiz oranlarını

a: Merkez Bankasının çıktıdaki sapmaya verdiği ağırlığı

(Y-Y*): fiili üretim ile potansiyel üretim arasındaki farkı yani çıktıdaki sapmayı

b: Merkez Bankasının enflasyondaki sağmaya verdiği ağırlığı

$(\pi - \pi^*)$: gerçekleşen enflasyon ile hedeflenen enflasyon arasındaki farkı

ifade etmektedir. Çıktıda ya da hedeflenen enflasyonda bir sapma meydana geldiğinde Merkez Bankası kısa vadeli politika faiz oranlarını kullanarak tepki verecektir.

Aslında 1990'lardan sonra hâkim olmaya başlayan iktisat ekolü Yeni Keynesyenlerin önemli bir yer tuttuğu ve Yeni Uzlaşı olarak adlandırılan ekoldür. Ekol içerisinde Yeni Keynesyenlerin önemli bir ağırlığı vardır ancak

Yeni Klasik ve Monetarist öğelere de yer verilmektedir. İktisat okullarında 1960'lardaki ilk sentezin - Neo Klasik Sentez Okulu - ardından 1990'lardan sonra kurulan bu yeni sentez Arestis ve Sawyer'e göre Yeni Keynesyen yaklaşımın genişletilmiş halidir (Arestis ve Sawyer, 2006).

Yeni uzlaşı çerçevesinde para politikaları, yukarıda da değinildiği üzere, Taylor Kuralı çerçevesinde faiz oranlarının, enflasyondaki ve çıktıdaki sapmaya göre ayarlanmasına dayanmaktaydı. Bu şekilde uygulanan para politikalarıyla fiyat istikrarının elde edileceği, fiyat istikrarına bağlı olarak da finansal istikrarın, ödemeler dengesinin ve diğer amaçların kendiliğinden sağlanacağı beklentisi vardı. Maddeler halinde özetlemek gerekirse, 1990'lardan sonra hâkim olan Yeni Uzlaşı Okulu'nun 2008'de Amerikan eşik altı krizi baş gösterene kadar para politikasıyla ilgili geleneksel görüşleri aşağıdaki gibiydi (Cukierman, 2013):

- (Reel) faiz oranı ana politika aracı ve para politikasının duruşu için yeterli bir istatistiktir.
- Merkez Bankası fiili enflasyonu enflasyon hedefinden uzaklaştıracak noktaya kadar balonları karşılamalıdır.
- Enflasyon hedeflemesi rejimi altında, finansal istikrar ve ihtiyati gözetimlerin önemi daha azdı. Bu yaklaşımın kurumsal bir kanıtı (göstergesi) finansal denetimin 1990'ların ikinci yarısında İngiltere Bankası'ndan ayrı bir birime – Finansal Hizmetler Otoritesi'ne – transferiydi.
- Bununla ilişkili olarak, finansal sistemik riske akademisyenler arasında genel olarak çok az önem verildi.

Yeni Uzlaşı yaklaşımı çerçevesinde fiyat istikrarı birçok Merkez Bankası için birincil hedef durumundaydı. Bir ekonomide fiyat istikrarı sağlanırsa finansal istikrarın da dâhil olduğu diğer hedeflere kendiliğinden ulaşılacağına inanılıyordu. Ancak fiyat istikrarının sağlandığı bir ekonomide finansal istikrarın da sağlanacağı şeklindeki görüşün yanlış olduğu yaşanan son finansal krizden sonra net bir şekilde anlaşılmış oldu. Dolayısıyla Merkez Bankaları finansal istikrara yönelik olarak da politika geliştirmek zorunda kaldılar ve para politikası stratejilerini buna göre ayarlamaya başladılar.

### 3.1 Finansal Kriz Sırasında Kısa Vadeli Faiz Oranlarının Yönetimine Dayalı Politikaların Tıkanması ve Geleneksel Olmayan Para Politikalarının Gerekliliği

Merkez Bankaları normal koşullarda, parayı arz eden tekel konumundaki yapılarından dolayı kısa vadeli politika faiz oranlarını ve politika faiz oranları üzerinden de piyasalardaki diğer faiz oranlarını rahatlıkla değiştirebilmektedir. Ekonomide genişletici etkiler meydana getirmek için bir Merkez Bankasının yapması gereken faiz oranlarını artırıcı ya da düşürücü para arzı ayarlamaları yapmaktır. Merkez Bankasının bu tür bir politikası tüketim ve yatırım maliyetlerini faizler üzerinden artırıp azalttığı için iktisadi faaliyetler üzerinde kesin etkiler meydana getirmektedir (Peersman, 2013).

2007-2008 finansal krizi, politika faizine dayalı para politikalarının kriz dönemlerinde çalışmadığını göstermiş dolayısıyla Merkez Bankalarının uyguladıkları para politikalarında bir takım değişiklikler yapılmasını zorunlu kılmıştır. Kriz sırasında Merkez Bankaları normal zamanlarda uyguladıkları politikalardan ayrılarak yeni politikaları uygulamışlardır ancak bütün Merkez Bankalarının birebir aynı politikaları uyguladıkları söylenemez. Her Merkez Bankası, ülkenin içinde bulunduğu koşullara bağlı olarak bir politika seti oluşturmuştur. Bu bağlamda uygulanan politikalar kredi desteğinden miktarsal genişlemeye, döviz piyasasına müdahaleden menkul kıymetler piyasasına müdahaleye kadar genişletilebilir. Tüm bu uygulamaların ortak noktası finansal sektörün daha iyi çalışmasını sağlamak, reel ekonomilerde finansal kaynaklı krizlerin çıkmasını engellemek ve fiyat istikrarını sağlamaktır (Trichet, 2013).

Merkez Bankaları hem para politikalarını daha etkin yürütebilmek hem de finansal istikrara katkıda bulunmak için yeni arayışlara girmişlerdir. Bu bağlamda sadece Taylor Kuralı çerçevesinde ve fiyat istikrarı amacına odaklanmış bir para politikası stratejisiyle, hem krizin etkilerini atlatmak hem de finansal istikrarı sağlamanın zor olduğunu görmüşlerdir (Clews, vd, 2010).

Kısa vadeli faiz oranlarının yönetilmesine dayalı geleneksel para politikalarının kriz dönemlerinde çalışmaması iki nedene bağlanmaktadır. Birincisi birçok ülkede faiz oranlarının neredeyse sıfır düzeyine kadar çekilmesinden dolayı para politikaları açısından daha fazla manevra alanının kalmamasıdır. İkincisi, kısa dönemli faiz oranları üzerinden çalıştırılan aktarma kanallarının krizden dolayı beklenen performansı göstermemesidir (Smaghi, 2009). Ancak kısa dönem politika faiz oranlarının sıfır düzeyine inmesi Bernanke ve Reinhart'a (2004) göre para politikalarının iflas ettiği şeklinde yanlış bir kanıya yol açmamalıdır. Bu durumlarda para politikası yine çalıştırılabilir ve iktisadi faaliyetler etkilenebilir. Bernanke ve Reinhart, politika faiz oranları çok düşük olduğunda ya da sıfır düzeyine indiğinde bile Merkez Bankalarının para politikalarını üç şekilde yine de yürütebileceğini ileri sürmektedir.

- Yatırımcılara faiz oranlarının gelecekte şuan beklendiğinden daha düşük olacağına dair teminat verilmesi (faiz taahhüdü)
- Merkez Bankası'nın bilanço kompozisyonunu değiştirerek piyasadaki menkul kıymetlerin nispi arzını değiştirmek (vade dönüşümü).
- Merkez Bankası bilançosunu faiz oranlarını sıfır düzeyinde sağlayacak düzeyden daha fazla genişletmek (Miktarsal genişleme - Quantitative Easing)

Aslında hem geleneksel hem de geleneksel olmayan para politikalarının temel amacı iktisadi birimlerin yatırım ve tüketim kararlarında önemli bir yeri olan reel faiz oranlarını etkilemektir. Reel faiz oranları, nominal faiz oranları ile beklenen enflasyon arasındaki fark olarak tanımlanabilir. Geleneksel para politikaları, nominal faiz oranlarını etkileyerek reel faizleri etkilemekteydi. Fakat politika faiz oranları sıfır düzeyine indiği için nominal faizleri bu yolla etkileyebilmenin sınırına gelinmiş oldu ve geleneksel olmayan para politikaları devreye girdi. Geleneksel olmayan para politikaları da sonuçta reel faiz oranlarını değiştirmeye yönelik girişimler olarak tanımlanabilir. Geleneksel olmayan para politikalarında reel faiz oranları iki şekilde etkilenmeye çalışılır. Birincisi nominal faiz oranlarını orta ve uzun vadede düşürücü politikalar uygulamak, ikincisi ise enflasyonist beklentileri artırmaktır (Evans, 2011). Her ikisi uygulamada başarılı olmaları durumunda reel faiz oranlarının düşmesine ve iktisadi faaliyetlerin artmasına katkıda bulunacaktır. Özellikle bilanço politikalarını bu bağlamda düşünmek gerekir. Geleneksel olmayan para politikaları bağlamında geliştirilen yeni uygulamalardan bilanço uygulamaları, faiz koridoru sistemi, faiz taahhüdü politikaları hakkında bilgi verilecektir.

### 3.2 Bilanço Uygulamaları

Bilanço uygulaması, Merkez Bankalarının kendi bilanço büyüklüğünü ya da kompozisyonunu değiştirerek uyguladıkları politikalardır. Eğer bir Merkez Bankası piyasalardan varlık alıyor karşılığında nakit para veriyorsa bilanço genişleyecektir. Bunun yanında eğer bir Merkez Bankası piyasadan aldığı riskli ve likiditesi düşük varlıkları alıyor karşılığında riski oldukça düşük ve likiditesi yüksek kamu iç borç kâğıtlarını veriyorsa aktifindeki varlıkların kompozisyonu yani bilançonun kompozisyonu değişecektir. Her iki politikaya birden kredi genişlemesi (credit easing) politikası denebilir ve bu politikalar ekonomiyi farklı kanallardan etkilerler.

Miktarsal genişleme (quantitative easing) olarak adlandırılan politikada Merkez Bankaları, kendi bilanço büyüklüklerini kullanarak, politika faiz oranları sıfır düzeyine bile inse, iktisadi faaliyetleri canlandırabilirler. Merkez Bankası, bankalardan ve finansal kurumlardan önemli miktarda varlık alarak hem bilançosunu hem de parasal tabanı genişletmektedir (Peersman, 2013).

Miktarsal genişleme politikaları ilk kez Japonya tarafından uygulanmıştır. Japonya 1990'larda yaşadığı resesyondan kurtulmak için önce geleneksel para politikalarını uygulamış, bu çerçevede faiz oranları sıfır düzeyine kadar düşmüştür. Bu uygulamanın ardından Japon Merkez Bankası (BoJ) yüklü miktarda menkul kıymet almaya başlamış ve bu alımlarla birlikte sistemdeki likiditenin artırılması ve varlık fiyatlarının yükseltilmesi hedeflenmiştir. Bankaların ellerinde likidite arttıkça fazla likiditenin piyasaya kredi olarak verileceği beklenmiştir. Japonya'nın uyguladığı bu politika son finansal krizle birlikte aralarında uygulama farklılıkları olmakla birlikte İngiltere, ABD ve Avrupa Merkez Bankaları tarafından uygulanmıştır (Joyce, vd, 2006).

İngiltere Merkez Bankası krizin etkilerinin atlatılması amacıyla miktarsal genişlemeye dayalı para politikası uygulayan Merkez Bankalarından birisidir. İngiltere Merkez Bankası, para politikalarını yürütürken iki temel amaca yönelik olarak bu politikaları uyguladığını belirtmektedir. Bunlar fiyat istikrarını sağlamak ve finansal istikrara katkıda bulunmak. Bu amaçlara ulaşabilmek için ise, ekonomideki ve finansal piyasalardaki hızlı gelişmeler karşısında para politikası uygulamalarında sürekli değişikliğe gitmektedir ve özellikle son finansal krizin ardından bu değişiklikler oldukça fazladır. Değişen şartlara uygun araçlarla aynı anda fiyat istikrarına ve finansal istikrara odaklanabilmekte ve özellikle finansal istikrara katkıda bulunmak amacıyla finansal kurumların likiditelerini artırmaya yönelik esnek bir yapı geliştirmiş olmaktadır (Clews, vd, 2010). Bu anlayış çerçevesinde BoE, Mart 2009'dan itibaren para politikalarını bir taraftan piyasa faiz oranlarının politika faiz oranına yakın olacak şekilde belirlemeye çalışırken diğer taraftan varlık alımına dayalı politikaları da (miktarsal genişleme politikalarını) yürütmeye başlamıştır. Banka, Varlık Alım Desteği (Asset Purchase Facility) çerçevesinde ve açık piyasa işlemleri vasıtasıyla bu politikaları uygulamaya başlamıştır. Bu tür bir politikayı uygulayarak Banka, orta vadeli enflasyon hedefiyle uyumlu nominal bir talep düzeyinin elde edilmesini hedeflemiştir. Bu amaçla yüklü miktarda varlık Banka tarafından satın alınmıştır ve Bankanın kendisi tarafından belirlenen rezerv miktarı para politikasının temel aracı haline gelmiştir. Merkez Bankası, miktarsal genişleme politikasını uygularken genellikle banka dışı kesimden varlık satın almıştır (Joyce, 2012) ancak bankalar bu işlemler sırasında büyük oranda aracılık faaliyetinde bulunmuştur. BoE'ye (2010) göre Banka'nın bu şekilde varlık satın alması ekonomiyi iki kanaldan etkileyecektir. İlk olarak varlık alımından dolayı piyasaya fazla miktarda para sürüldüğü için piyasaya çıkan bu fazla para mal ve hizmet talebini artıracaktır. İkinci olarak piyasaya sürülen bu fazla likidite mal ve hizmet talebine yönelmeyip diğer varlıkların alımı için kullanılsa bile diğer varlıkların talebi fiyatları artacak buna karşılık bu varlıkların faiz oranları düşecektir. Faizlerdeki düşme dolaylı olarak toplam talebi yine etkilemiş olacaktır.

Bilanço genişlemesi ya da bilanço kompozisyonunun değişmesi finansal piyasalarda varlıkların riskini, vadesini ve getirisini değiştirebildiği için bu tür politikalar etkin olmaktadır. Ayrıca önemli oranda bir miktarsal genişleme genişletici maliye politikası etkisi de yapabilir. Şöyle ki Merkez Bankası piyasadan önemli oranda kamu borç kâğıdı alıp karşılığında para verdikçe bu kâğıtların faizleri yani kamu borçlanmasının maliyeti düşecek ve ekonomide genişletici etkiler meydana getirecektir (Peersman, 2013).

Krizin başlamasıyla birlikte miktarsal genişleme politikaları Amerikan Merkez Bankası FED tarafından da uygulanmıştır. QE1, QE2 ve QE3 olarak adlandırılan politikalar Büyük Hacimli Varlık Alım Programları (Large Scale Assets Purchasing Programs - LSAP) çerçevesinde ilk kez Kasım 2008 ve Mart 2009 yılında uygulamaya başlamıştır. Uygulamalarda alınan kâğıtlar acente garantili ipoteğe dayalı menkul kıymetler (agency guaranteed mortgage-backed securities–MBS), acente borçları (agency debts) ve Hazine kâğıtlarıdır (Treasury Securities) (Kohn, 2010). İlk uygulamada FED 1,45 trilyon dolar değerinde MBS ve 300 milyar dolarlık uzun vadeli Hazine kâğıdı satın almıştır ve QE1 programı Mart 2010 tarihinde sona ermiştir. Kasım 2010 tarihinde başlatılan QE2 programı çerçevesinde 600 milyar dolarlık uzun vadeli Hazine kâğıdı alınmış ve bu program Haziran 2011 tarihine kadar devam etmiştir. En son olarak Eylül 2012 tarihinde uygulamaya konulan program QE3 olarak adlandırılan programdır. Son programın bitiş tarihi uygulamaya başlandığında belirtilmemiş yani açık uçlu olarak bırakılmıştır. Program çerçevesinde önce her ay 40 milyar dolarlık bir MBS alınacağı belirtilmiş daha sonra program her ay 45 milyar dolarlık Hazine bonosu alınacak şekilde değiştirilmiştir. Bu programlardan dolayı FED'in bilançosu üç kat büyümüştür (Peersman, 2013).

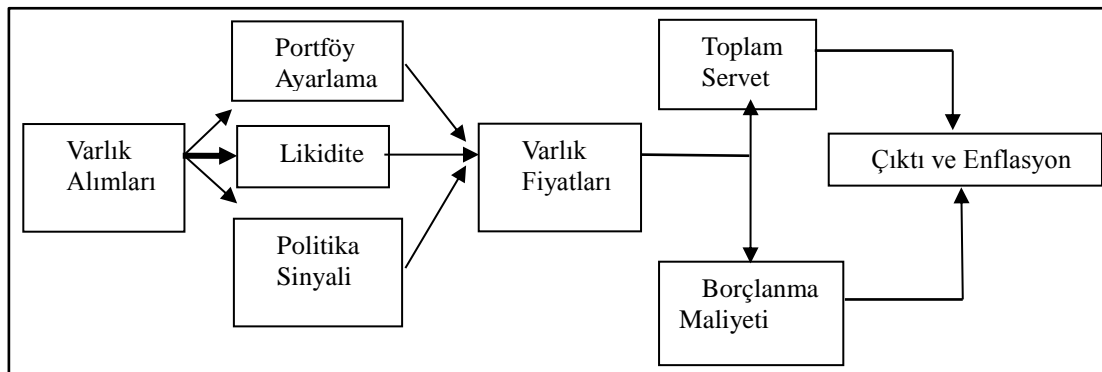
FED'in bilanço politikası çerçevesinde uygulamaya başladığı bir diğer politika bilanço kompozisyonunu değiştiren ancak bilançonun büyüklüğünü değiştirmeyen vade değişim ya da vade uzatma operasyonlarıdır ki bu uygulamaya vade uzatma programı (maturity extended program) ya da operation twist olarak adlandırılmaktadır. Bu uygulamada Merkez Bankası piyasadaki uzun vadeli kamu kâğıtlarını satın alıp kısa vadeli kâğıtları satmaktadır. Alınan kâğıtlarla satılan kâğıtlar birbirine eşit olduğu için bilanço genişlemesi olmamış ancak kompozisyon değişmiştir (Joyce, vd, 2012). Bu uygulama Eylül 2011 tarihinde başlatılmış ve Haziran 2012 tarihinde genişletilmiştir. Uygulama çerçevesinde 667 milyar dolar tutarında kısa vadeli Hazine kâğıdı satılarak karşılığında uzun vadeli kâğıtlar satın alınmıştır.

Avrupa Merkez Bankası (ECB) de genişletici politikalar uygulamıştır. Ancak bu çerçevede yaptığı varlık alımları sınırlıdır ve kesin alım (outright purchase) şeklindedir. Mayıs 2009 ve Ekim 2012 tarihleri arasında yaptığı ipotekli varlık (covered bonds) alımlarında toplam 76,4 milyar Euro'luk alım yapmıştır. Ayrıca Mayıs 2010 ile 2012'nin yaz aylarında ikincil piyasalara müdahale ederek 219,5 milyar Euro değerinde kamu iç borç kâğıdı satın almıştır. Amaç hem derinliği ve likiditeyi artırmak hem de Euro krizini istikrara kavuşturmaktır (Peersman, 2013).

Bilanço politikalarının hangi kanallardan geçerek reel ekonomiyi etkilediğine dair çalışmalar devam etmektedir (Peersman, 2013; Joyce, vd, 2012; Bowdler ve Radia, 2012). Bu çalışmalarda Merkez Bankalarının varlık alımlarının reel ekonomiyi nasıl etkilediği aşağıdaki gibi gösterilmektedir (Bowdler ve Radia, 2012).

Bilanço uygulamasında, yukarıda da belirtildiği üzere, hem varlık alımı hem de vade dönüştürme işlemleri vardır. Bu uygulamalarda asıl amaç varlıkların getirisini ve fiyat yapısını bozarak toplam talebi etkilemeye çalışmaktadır. Amaç geleneksel modellerdeki gibi doğrudan kısa vadeli faizleri düşürmek değil (faizler zaten sıfır düzeyine düşmüş durumdadır), varlıkların getirilerini değiştirerek uzun vadeli faiz oranlarını düşürmek ve piyasaya çıkan fazla paranın likidite tuzağına düşmeden kredilere yönelmesini sağlamaktır.

Miktarsal genişleme uygulamasına gidildiğinde, para diğer finansal varlıkların mükemmel bir ikame edicisi değilse, piyasaya çıkan aşırı miktardaki para yatırımcıların portföylerinde bir dengesizliğe yol açacak ve yatırımcılar bir portföyü yeniden dengeleme sürecine girecektir. Bu süreçte portföydeki fazla para diğer finansal varlıkların alımına kayacağı için diğer varlıkların fiyatları yükselip getirileri (faiz oranları) azalacaktır. Faiz oranlarındaki azalma ise ekonomide bir canlanmaya neden olacaktır (Bernanke ve Reinhart, 2004).



**Şekil 1.** *Varlık Alımları Aktarma Kanalı* **Kaynak:** *Bowdler ve Radia, 2012.*

Şekilden de görüldüğü üzere, varlık fiyatlarının yükselmesi ve getirilerinin azalması bir taraftan kredi koşullarını iyileştirmekte diğer taraftan fiyatları yükselen varlıkları ellerinde tutan hanehalklarının bir sermaye kazancı elde etmelerine yani servetlerinin artmasına neden olmaktadır. Artan servetin bir kısmının tüketim harcamalarına gitmesi toplam talebi ve Gayri Safi Yurt İçi Hasılayı artıracaktır (Joyce, vd, 2012).

Varlık alımları ayrıca toplam likiditeyi artırmakta ve ileriye dönük politika sinyali de vermektedir. Artan likidite borçlanma maliyetlerini düşürmekte ve politika sinyali uzun vadeli faizlerin düşeceğini haber vermektedir. Dolayısıyla kriz döneminde yapılmak istenen toplam çıktı düzeyini artırmak için serveti artırmak ve borçlanma maliyetlerini düşürmektir. Örneğin FED, piyasada uzun vadeli kâğıtları satın alıp bunların miktarını azaltarak bu varlıkların fiyatlarını artırıp getirilerini düşürmeyi amaçlamıştır. Dolayısıyla bu uygulama uzun vadeli faiz oranlarının düşmesine yol açacağı için piyasaya uzun vade için bir anlamda faizlerin düşük olacağı sinyalini vermiştir.

Bilanço kanalının etkin çalışması için Merkez Bankası tarafından alınan ve satılan varlıklar arasında ve banka mevduatları arasında tam ikamenin olmaması gerekir. Aksi halde Merkez Bankasının kısa vadeli kâğıtlarla uzun vadeli kâğıtları değiştirmesi ya da varlıklarla banka mevduatlarını değiştirmesi aktarma kanallarını harekete geçirmeyecek ve piyasa üzerinde hiçbir etki meydana getirmeyecektir. FED'in alımlarını yaptığı borç kâğıtları kısmen birbirlerini ikame etmesine rağmen bu politika yine de başarılı olmuştur. Çünkü kriz sürecinde özel sektör uzun vadeli varlıklardan ziyade kısa vadeli varlıkları tercih ettiği için FED'in uzun vadeli varlıkları alması piyasa faiz oranlarını düşürmede başarılı olabilmiştir (Kohn, 2010).

### 3.3 Faiz Taahhüdü Politikası

Merkez Bankalarının başarısı açısından iletişim oldukça önemlidir. Ekonomide işler kötüye gittiğinde ya da geleneksel para politikaları çalışmadığı zaman bile iyi bir iletişimle piyasa Merkez Bankasının istediği yöne yönlendirilebilir. Örneğin kriz dönemlerinde kısa vadeli faiz oranlarının nasıl bir seyir izleyeceği belirsizleşmektedir. Merkez Bankasının gelecekte faiz oranlarını artırıp artırmayacağı belli olmadığında iktisadi birimlerin geleceğe dair öngörüleri bozulmakta ve geleceğe ilişkin sağlıklı finansal ve reel yatırım kararları verilememektedir. Ancak Merkez Bankasının, faiz oranlarının gelecekte alacağı değerlere ilişkin önceden bazı taahhütlerde bulunması piyasayı yönlendirici etki yapacak ve uzun vadeli faiz oranlarına bir istikrar kazandıracaktır.

Hisse senedi ipotekli senetler gibi uzun ömürlü finansal varlıkların fiyatlandırılması kısa dönem faiz oranlarının cari düzeyine olduğu kadar gelecekte beklenen düzeylerine bağlı olarak gerçekleştirilmektedir. Bir Merkez Bankası kısa vadeli faiz oranlarının gelecekteki seyrine ilişkin bir taahhütte bulunduğunda bu varlıkların fiyatlarını ve iktisadi faaliyetleri de etkilemiş olmaktadır (Bernanke ve Reinhart, 2004). Ayrıca uzun vadeli faiz oranları, şimdiki ve öngörülen kısa vadeli faiz oranlarının ağırlıklı ortalamasıdır. Uzun vadeli faizlerin artmayacağının garanti edilmesi geleceğe dair beklenti oluşturan birimlerin faiz beklentilerini düşürmesine yol açacaktır. Dolayısıyla kısa vadeli faiz oranlarının şimdiki değeri sıfır düzeyine inmiş bile olsa faiz oranlarının gelecekte hızlı bir şekilde yükselmeyeceğinin Merkez Bankası tarafından ilan edilmesi piyasalardaki ekonomik aktiviteyi yine de canlandıracaktır (Evans, 2011). FED bu işlevi her FOMC (Federal Open Market Committee) toplantı metninde faizlerin gelecek dönemlerde yükselmeyeceği yönündeki beyanıyla yerine getirmeye çalışmıştır (Kohn, 2010).

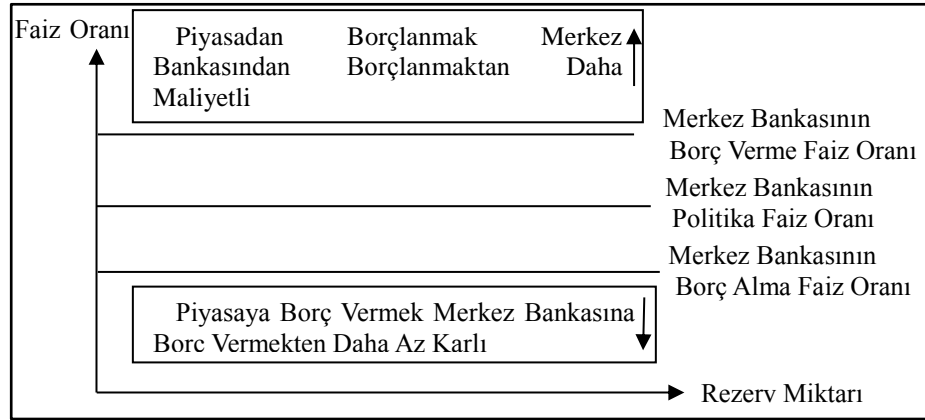
Reel faiz oranları çerçevesinde beklenen enflasyona ilişkin ya da fiyat düzeylerine ilişkin açıklamalar da etkili olacaktır. Yukarıda da belirtildiği üzere, reel faiz oranı nominal faiz oranıyla beklenen enflasyon arasındaki farka eşittir. Kriz dönemlerinde politika faiz oranları ve nominal faiz oranları neredeyse sıfır düzeyine indiği için kısa vadeli faizleri kullanarak reel faiz oranlarını daha da fazla düşürmek imkansız olmaktadır. Bu durumda reel faiz oranlarını düşürmek için beklenen enflasyon oranları kullanılabilir. Beklenen enflasyon oranının artacağına dair bir beklentinin Merkez Bankası tarafından piyasaya duyurulması, gelecekte mal ve hizmetlerin fiyatları daha da yükseleceği için şimdiki tüketim ve yatırım harcamalarını artıracaktır. Bunun yanında beklenen enflasyonu artması reel faiz oranlarını düşüreceği için harcamalar artabilecektir. Beklenen enflasyona ilişkin yapılabilecek bir diğer uygulama ise fiyat düzeyleri için belirli bir düzeyin hedeflenmesi ve bu hedefin piyasaya duyurulmasıdır (Evans, 2011). Hem beklenen enflasyonu artırıcı hem de fiyat düzeyine ilişkin hedeflerin duyuruların yapılması reel faiz oranlarının gelecekteki seyri hakkında bir yol haritası çizeceği için tüketim ve yatırım kararlarının da sağlıklı bir şekilde verilmesini sağlayacaktır.

Merkez Bankasının faiz taahhüdü politikasının başarılı olması için Bankanın güvenilir olması yani verdiği sözü yerine getirileceğine dair kamuoyunda bir inancın olması gerekir. Örneğin FED, finansal krizin ilk günlerinde kısa vadeli faiz oranlarının sıfır düzeyine yaklaştığı günlerde yaptığı açıklamada faiz oranlarının yakın gelecekte değişmeden kalacağını duyurdu. Daha sonraki açıklamalarında da faiz oranlarının gelecekte değişmeyeceğinin garantisini verdi. Faiz oranlarındaki değişimin ise ekonomideki kalıcı iyileşmeler elde edildikten sonra olacağını belirterek faiz oranlarına ilişkin bir öngörünün yapılabilmesini mümkün kıldı. Faiz açıklamaları uzun vadeli kâğıtlardaki faizlerin ve bunlarla bağlantılı olarak kredi faizlerinin de düşmesine yol açarak iktisadi faaliyetlerin canlanmasına neden oldu (Peersman, 2013).

### 3.4 Faiz Oranı Koridoru (Operational Standing Facilities)

Faiz koridoru sisteminin temel amacı, Merkez Bankalarının enflasyon hedeflemesi yaklaşımı içerisinde hem fiyat istikrarına hem de finansal istikrara yönelik politika uygulayabilmelerinin sağlanmasıdır. Ekonomilerin her geçen gün finansal istikrarı tehdit eden gelişmelerle daha çok karşılaşmaları, Merkez Bankalarının fiyat istikrarı ile beraber finansal istikrara da odaklanmalarına yol açmıştır. Ancak fiyat istikrarı için geliştirilen araçların

finansal istikrar için de yeterli olmaması Merkez Bankalarının araç sayısını artırmalarını ve para politikasının operasyonel çerçevesini genişletmelerini zorunlu kılmıştır. İktisat politikalarında Tinbergen Yasası olarak bilinen bir yasaya göre amaç sayısı arttıkça araç sayısının da artması gerekmektedir (Joyce, vd, 2013). Yani Merkez Bankalarının araç setlerini genişletmeleri ve birden fazla politika aracını devreye sokmaları gerekmiştir (Başçı ve Kara, 2011).



*Şekil 2. Simetrik Koridor Uygulaması **Kaynak:** Bank of England, 2010.*

Koridor sistemi sayesinde Merkez Bankaları, koridorun sınırlarından birisini finansal istikrar için, diğerini fiyat istikrarı için kullanabilir. Ayrıca, koridor sistemi sayesinde bir Merkez Bankası, likidite yönetimi ile faiz politikasını da birbirinden ayırabilmektedir. Bankaların likidite yönetiminin rahat bir şekilde gerçekleştirilmesi, finansal istikrar açısından önemlidir. Koridor sistemi sayesinde Merkez Bankası, bankaların likidite ihtiyaçlarını karşılamalarına yardımcı olur ve rezerv talebinde öngörülemeyen büyük miktardaki dalgalanmalar önlenebilir (Clews, vd, 2010).

Koridor uygulaması Şekil 2 yardımıyla açıklanabilir. Koridorun üst sınırı Merkez Bankasının bankalara borç verirken uyguladığı faiz oranını (borç verme faiz oranı), alt sınırı ise bankaların fazla rezervleri için Merkez Bankasının bankalara ödediği faiz oranını (borç alma faiz oranı) temsil etmektedir. İki nokta arasındaki faiz oranı ise Merkez Bankasının belirlediği faiz oranıdır. Merkez Bankası belirlediği alt ve üst sınırlar sayesinde bankalararası piyasadaki faiz oranlarının dalgalanmasını engellemekte, bankalara borç alma ve borç verme kolaylığı sağlamakta ve bu şekilde finansal istikrara ve fiyat istikrarına katkıda bulunmaktadır. Şekil 2 simetrik koridor uygulamasını ifade etmektedir yani alt ve üst sınırların politika faiz oranına uzaklığı eşittir. Koridorun simetrik ya da asimetrik olup olmaması Merkez Bankalarının tercihlerine bağlı olarak belirlenir. Örneğin Kanada'da Merkez Bankası simetrik uygulamayı tercih ederken Türkiye'de asimetrik uygulamayı tercih edilmektedir (Tokucu, 2013).

Ancak piyasalardaki bazı gelişmeler koridor uygulamasında taban uygulaması olarak adlandırılan uygulamayı da mümkün kılmaktadır. Özellikle ekonomideki likiditenin önemli oranda arttığı dönemlerde piyasadaki aşırı likidite Merkez Bankasının ilan ettiği politika faizlerini tutturmasını engellemektedir. Bu durumda, politika faiz oranı ile Merkez Bankasının borç alma faiz oranı birbirine eşit hale gelmekte ve likiditenin bol olduğu bir ortamda faizleri yönetmek daha kolay olmaktadır.

*Şekil 3. Taban Koridor Uygulaması **Kaynak:** Bank of England, 2010.*

Örneğin İngiltere Merkez Bankası'nın, Mart 2009 tarihinden itibaren başlattığı varlık alımı piyasadaki likidite miktarının önemli oranda artmasına yol açmış, bu likidite artışı Banka tarafından belirlenen faiz oranlarının elde

edilememesine neden olmuştur. Bu durumda Banka, koridor sisteminde taban sistemi olarak ifade edilen sisteme geçmiş ve politika faiz oranıyla borç alma faiz oranını birbirine eşitlemiştir (Bank of England, 2010). Bu durumda piyasadaki likidite miktarı ne olursa olsun politika faiz oranı belirli bir düzeyin altına düşmeyecektir. Böylece Merkez Bankası hem likidite politikasını hem de faiz politikasını birbiriyle çatışmayacak şekilde yürütebilecektir. Şekil 3, bu durumu göstermektedir. Şekilden de görüleceği üzere, rezerv arzının artması koridorun alt sınırını aşağı doğru itmemektedir. Dolayısıyla Banka, rezerv yönetimi ile faiz yönetimini aynı anda yapabilmektedir. Taban koridor sistemini İngiltere gibi Norveç Merkez Bankası da uygulamaktadır (Tokucu, 2013).

## 4 Sonuç

Son finansal kriz finansal istikrarı sağlamakla görevli diğer kurumlar yanında Merkez Bankalarının fonksiyonlarında ve kullandıkları araçlarda değişime neden oldu. Merkez Bankalarının fiyat istikrarının sağlanması amacı ile birlikte finansal istikrarın sağlanmasında da fonksiyonları arttı. Merkez Bankaları geleneksel araçların dışında geleneksel olmayan yeni araçlar kullanmaya başladılar.

Finansal küreselleşme süreci ile birlikte sermaye hareketlerinin artması, yeni finansal tekniklerin ve araçların kullanılması para politikalarının etkinliğini olumsuz yönde etkilemiştir. Bu durum daha önce kullanılan geleneksel olan ve olmayan araçların yetersiz kalmasına yol açmıştır. Bunun sonucunda Merkez Bankaları tarafından finansal istikrarın sağlanması için 90'lı yıllarda yeni bir araç olarak politika faiz oranı kullanılmaya başlandı. Merkez Bankalarının politika faizine dayalı para politikalarının son kriz döneminde çalışmadığı görülünce geleneksel olmayan yeni politikalar uygulamışlardır. Bilanço uygulamaları, faiz koridoru sistemi ve faiz taahhüdü politikaları finansal kriz sonrası uygulanan parasal politikalardır. Bu politikalar Merkez Bankalarının finansal istikrarın sağlanmasında doğrudan ne kadar önemli bir role sahip olduklarını göstermiştir. Bunun dışında Merkez Bankaları sahip oldukları bilgi ve veri avantajı ile finansal istikrar komiteleri gibi makro-ihtiyati denetim kurullarında etkin bir rol üstlenmişlerdir.

# Küresel Finans Krizi ve Finansal İşlem Vergilerinin İstikrarlandırıcı Etkisi

# The Global Financial Crisis and the Stabilizing Effect of Financial Transaction Taxes

Asst. Prof. Dr. Deniz Aytaç (Hitit University, Turkey)

## Abstract

With the liberalization policies that started in the 1980s, almost a race began in lifting the barriers to capital movements, particularly in developing countries, with the aim of achieving capital inflows from countries with a savings surplus to countries with a current deficit. However, the crises that broke out one after another in the liberalized financial markets in the 1990's and the global crisis that occurred in the 2007-2008 period as a result of increased volatility in short-term capital movements and of excessive credit growth have raised again the need to bring short-term capital movements under control. The present study discusses the feasibility of financial transaction taxes as a stabilizer in the economy due to the need to mitigate the destructive impacts of financial crises and to finance the economic damage after the crisis or, in other words, the increased need for fiscal consolidation resulting from the crisis. In the light of the findings obtained, it has been noted that financial transaction taxes applied at a low rate in financing the increased public debt on account of the support provided to the financial sector because of the crisis constitute an important item of revenue due to the high volatility in short-term capital movements. In this context, it has been concluded that financial transaction taxes, although difficulties are encountered in their application, can have a considerable stabilizing effect in the future, taking the periodical nature of financial crises into account.

## 1 Giriş

Gelişmiş ülkelerde başlayan ve 1980'lerde gelişmekte olan ülkeleri de etkisi altına alan liberalizasyon ve küreselleşme politikaları yurtiçi finans piyasaları ve sermaye hareketleri üzerindeki engellerin kaldırılması hedefine yönelmiştir. Komünikasyonda gerçekleşen yeniliklerle birlikte özellikle finansal piyasalarda işlemler kolay, hızlı ve ucuz hale gelmiş, söz konusu piyasalardaki tek sınırlama ulusal regülasyonlar düzeyinde kalmıştır. Liberalizasyon Politikaları ile giderek azalan kısıtlamalar, uluslararası finansal akımların tüm dünya ekonomileri ve piyasaları arasında rahatça hareket etmesine olanak sağlamıştır (Tobin, 1996). Bu paralelde, uluslararası finans piyasalarında sermaye hacmi ve sermaye akımları giderek artan boyutlara ulaşmıştır. Fakat Tobin (1996) bu artışta dikkatleri net sermaye akımlarına yönelmesi gereği üzerinde çekmiş ve bu noktada önemli olanın gayri safi işlem miktarı yerine net sermaye akımlarındaki artışın sağlanması olduğunu, aksi halde akımların krizlerin, resesyon, depresyon ve işsizliğin sebebi olacağını vurgulamıştır. Bu kapsamda liberalizasyon, dışa açılma politikalarını takip eden 1990'lı yıllarda Asya, Latin Amerika Ülkeleri ve Türkiye gibi ülkelerde görülen ve son olarak 2008 yılında küresel bazda spekülatif sermaye akımlarına bağlı olarak ortaya çıkan önemli finansal krizler spekülatif sermaye akımlarının önlenmesi amacını yeniden gündeme getirmiştir. Bu kapsamda hem finansal istikrarsızlıklarla mücadele edebilmek hem de istikrarsızlıkların devlete getirdiği yükü hafifletmek amacı ile uygulaması tartışılan çözüm önerilerinin başında finansal işlem vergileri gelmektedir. Bu kapsamda bu çalışmada da öncelikle finansal krizler ve kamusal maliyetlerine değinildikten sonra bir çözüm önerisi olarak finansal işlem vergilerine ve yapısal özelliklerine değinilecek ardından ülke uygulamaları ele alınacaktır.

## 2 Kısa Vadeli Sermaye Akımları, Finansal Kriz ve Kamusal Maliyetler

Üretim faktörlerinin herhangi bir engele takılmadan dolaşabilmesi olarak tanımlayabileceğimiz küreselleşme ve küreselleşme süreci içinde en mobil üretim faktörü olan sermaye ülkeler arasında doğrudan sermaye yatırımları ve portföy yatırımları olarak uzun ve kısa vade de yer değiştirebilmektedir.

Gelişmekte olan ülkeler için özellikle önemli olan, yatırım amacı güderek ülke ekonomisini canlandıran uzun vadeli sermaye hareketleri şeklinde gerçekleştirilen doğrudan yatırımlar, 1970 sonrasında yaşanan ikinci küreselleşme döneminde geri plana düşmüş, hızla büyüyen sermaye hareketleri hacmi görece olarak daha kısa vadeli ve spekülatif nitelik kazanmıştır (Berksoy, 2005). Bu süreçte sıcak para olarak da tanımlanan, kısa vadeli olarak menkul kıymetlerin satın alınması ile ülkeye gelen sermaye olan ve faiz veya gelir artışı farkı alabilmek için ülkelere giriş yapan portföy yatırımlarında (Eğilmez ve Kumcu, 2011) ise spekülatif beklentilere bağlı olarak 1990'lı yıllarda önemli artışlar gözlenmiştir. Spekülatif nitelik taşıyan kısa vadeli sermaye hareketlerindeki bu artışla birlikte herhangi bir spekülatif durumda sıcak paranın ülkeyi terk etmesi tehdidi özellikle gelişmekte olan ülkelerde kriz riskini artıran bir durum halini almış ve Şekil 1'de görüldüğü üzere sermaye hareketleri 2001-2002 yıllarındaki kriz ortamı ve 2008 küresel krizinde büyük düşüşler göstermiştir.

*Şekil 1. Yükselen Piyasalarda ve Gelişmekte olan Ülkelerde Net Finansal Akımlar* **Kaynak**: *IMF(2012)*

1992-93 döneminde Avrupa Para Siteminin krizi spekülasyonun gücünün gelişmiş ülkelerin Merkez Bankalarının mücadele gücünü aşabileceğini göstermiş, 1994-1995 Meksika, 1997-1998 Asya krizleri ile genel kanının aksine yatırımcıların ciddi ekonomik güçlük beklentileri karşısında kısa vadeli sermayelerini olabildiğince hızlı olarak ülke dışına çıkararak geride ekonomik yıkıntılar bıraktıkları gözlenmiştir (Jetin;2009). 2000 yılının Mart ayında Amerika'da patlayan spekülasyon balonu ve finansal skandallar sonrasında yaşanan 2008 küresel finans krizi finans sektörüne kamunun verdiği desteğin giderek artmasına sebep olmuştur. Böylece özellikle gelişmekte olan ülkelerde ekonomik büyüme için gerekli olan dış finansman ani giriş çıkışlar nedeni ile ülkelerin ekonomik performanslarının, sermaye hareketlerine karşı aşırı duyarlı bir nitelik kazanmasına yol açarak, bu ülkelerin finansal şoklara karşı kırılganlığını arttırmıştır (Keskin, 2009). Yaşanan finansal krizler ve özellikle 2008 küresel finans krizi kamunun piyasaya müdahalesini gerekli kılmış finansal istikrarın sağlanabilmesi için gelişmiş ülkelere gelişmekte olan ülkelere göre çok daha büyük kamu fonlarını finans sektörü kurtarma programlarına ayırmak durumunda kalmıştır.

IMF'nin tahminlerine göre, krizin başlangıcından 2011 yılı sonuna kadar olan dönemde gelişmiş ülkelerin finans sektörüne verdiği net destek tutarı toplamda 1 Trilyon 200 Milyar ABD Doları ile GSYH'nin yaklaşık % 5 seviyesine ulaşmıştır. Finans sektörüne doğrudan verilen bu destekler dışında, sağlanan hazine garantileri ve kamulaştırmalar nedeniyle kamunun üstlendiği mali yükümlülüklerin toplam maliyetinin 11 Trilyon ABD Doları (8 Trilyon Doları ABD'ye ait) seviyesinde olduğu tahmin edilmiştir (Güler, vd. 2012). Kamunun üstlendiği yükümlülükler paralelinde bütçe açıkları ve borçlanma gereksinimi de hızla yükselmiş ve OECD tahminleri doğrultusunda 2007 yılında bütçe açığına eşit olan borçlanma ihtiyacı 2009 yılında 7 kat artmıştır (TUAC, 2012). Bu durumun bir yansıması olarak Şekil 2 'de görüldüğü üzere kamu net borçlanma ve borç verme oranlarında 2009 yılında hızlı bir düşüş yaşanmış ve oranlar 2013 yılında dahi 2000'li yılların başındaki seyrine ulaşamamıştır.

| | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 |

*Şekil 2. Kamu Net Borçlanma ve Borç Verme Oranları* **Kaynak**: *IMF(2012)*

Yaşanan finansal krizler ve sonucunda ortaya çıkan ekonomik istikrarsızlık ve artan kamu borçları beraberinde finans sektöründe istikrarlandırıcı ve kamu sektörü için kaynak yaratıcı düzenlemeler ilgiyi arttırmıştır. Bu düzenlemeler arasında dönemler itibari ile iktisadi açıdan tartışılan Finansal işlem vergileri de ilk sıralarda yer almaktadır.

## 3   Finansal İşlem Vergileri

Gerek kısa vadeli sermaye hareketlerindeki spekülasyonun neden olduğu finansal krizlerin önlenmesi ya da en azından ortaya çıkacak ekonomik hasarın azaltılmasında ve bu hasarın finansmanında kullanılacak kamu fonlarının yaratılmasında dönemler itibari ile tartışmaya açılan temel konuların başında Tobin vergileri ve buna bağlı olarak gelişen Finansal İşlem Vergileri gelmektedir.

Finansal İşlem vergileri ilk olarak Keynes tarafından ortaya atılmıştır. Keynes 1936'daki çalışmasında finansal piyasalar üzerinde kısa dönemde spekülasyonun uzun döneme göre daha yüksek olduğunu ve bu nedenle kısa dönemli sermaye hareketleri maliyetini arttıracak bir verginin uzun dönmeli sermaye hareketlerini teşvik edeceğini belirtir. Bu bağlamda Keynes Londra Borsasında spekülasyonun New York Borsa'sına oranla düşük olma nedeninin de Londra Borsasında finansal işlemlere uygulanan damga vergisinin yarattığı maliyetten ileri geldiğini savunur (McCulloch, Pacillo, 2011, Jetin, 2009). 1953 yılındaki çalışmasında Friedman spekülasyonun piyasa üzerinde saptırıcı etkisinin olmadığını savunsa da 1971 yılında Bretoon Wood's sisteminin çöküşünden sonra Tobin 1978 yılındaki çalışmasında mali krizlerle mücadelede piyasalardaki volatilitenin azaltılması gerektiğini bunu sağlanması için ise spekülasyonların azaltılması gerektiğine dikkat çeker. Tobin'e göre mali krizlerin temelinde yatan en önemli nedenler yüksek hacimli döviz spekülasyonu ve dövizde yapılan günlük alım-satım işlemlerinin dünyadaki tüm borsalarda oluşan işlem hacminden daha fazla olmasıdır, bu nedenle Tobin spekülasyon maliyetlerini yükseltip kısa vadeli spekülasyonlardaki kar elde etme olasılığını azaltmak önerir. (Karagül, 2010). Tobin'in mali krizlerle mücadelede temel önerisi piyasalardaki volatilitenin azaltılmasıdır. Uzun döneme göre volatilite üzerinde daha etkili olan kısa dönem işlemlerinin vergilendirilmesi ile bu işlemlerin maliyetinin arttırılması spekülatif işlemleri azaltacaktır. Spekülatif işlemlerin azalması sonucu volatilitenin düşmesi, finansal istikrarın ve güvenin sağlanmasına ve elde edilen vergilerle devlet için ek kaynak yaratılmasına olanak sağlayacaktır (Tobin, 1978).

Tobin vergisinden yola çıkılarak kısa vadeli işlemlerin vergilendirilmesine dayanan Finansal işlem vergilerinin temel çıkış noktası piyasa volatilitesi ile spekülasyon arasındaki ilişki olsa da makro modeller kapsamında iki değişken arasındaki ilişkinin varlığı ve yönü konusunda literatürde (Friedman, 1953.) fikir birliğine varılamamıştır. Bu nedenle yeni yaklaşımlar finansal işlem vergilerinin etkisi ve düzenlenmesi kapsamında, spekülasyon ve volatilite arsındaki ilişkiyi piyasa ve tacir açısından ele alan mikro modellere yönelimi sağlamıştır (Frankel ve Rose,1994).

Mikro modeller; Heterojen Ajan Modeli (Heterogeneous Agent Model), Sıfır İdraklı Ajan Modeli( Zero Intelligence Agent Model), Oyun Teorisi (Game Theory Approach) ve Laboratuvar deneylerinden oluşmaktadır. Bu çalışmanın da temeli olan mikro modellerin genel kabul noktası geleneksel yaklaşımdan farklı olarak rasyonel birey ve piyasa yaklaşımından uzaklaşmalarıdır. Makro temelli klasik literatür finans piyasaların gelecek hakkında rasyonel beklentilere sahip rasyonel ekonomik ajanlar yardımı ile optimize olduğunu varsayar. Yeni nesil mikro modeller ise finansal piyasaları mikro yapısal özellikleri ile ele alır ve bu modellerde finansal piyasa ajanları rasyonel değildir (McCulloch, 201). Piyasa ve piyasa ajanlarının bu irrasyonel yapısı bir çeşit piyasa başarısızlığı yaratmakta (Wei ve Kim, 1997), negatif dışsallıklara sebebiyet vermektedir (Palley, 1999). Mikro modeller de piyasadaki alıcı ve satıcılar tam ve mükemmel bilgiye sahip olmayan irrasyonel ajanlardır. Mikro modellerde irrasyonelite kabulü bilgi edinme maliyetlerinin yüksek olmasından kaynaklanır. Bu doğrultuda Mikro modeller kapsamında en çok çalışmanın yapıldığı model olan Heterojen ajan modeli finansal piyasa ajanı olarak temelde iki tür tacirin varlığından söz eder. Bunlardan ilki fundemantalist tacirlerdir (fundamentalist traders). Söz konusu tacirler ticari stratejilerini, gelecekteki varlık fiyatları, kazançları, makro ekonomik büyüme, kur gibi ekonomik faktörler üzerine temellendirir. Diğer grupta yer alan gürültücü tacirler (noise traders) ise beklenti ve ticari stratejilerini geçmiş örneklere göre oluşturur. Bu yapı içinde piyasadaki volatilite; piyasa tacirleri içinde volatiliteyi yükselten gürültücü tacirlerin volatiliteyi düşüren köktenci tacirlere görece oranına bağlıdır. Bu kapsamda finans piyasalarına giriş maliyetlerini yükselten bir işlem vergisi uygulaması gürültücü tacirlerin piyasadaki görece oranını ve dolayısı ile kısa dönemli spekülatif işlemleri azaltarak volatilitenin düşmesini sağlayabilecektir (McCulloch, 2011). Bu varsayım doğrultusuna mikro modellerin kullanıldığı çalışmalarda elde edilen sonuçlar Tablo 1'de görülmektedir.

Tablo 1'de elde edilen bulgular ışığında mikro modeller kapsamında finansal işlemler üzerinde uygulanacak bir verginin volatilite üzerinde olumlu etki yaratabileceği ve finansal işlem vergilerinin fiyat dalgalanmalarının azaltılmasında bir araç olarak kullanılabileceği görülmektedir. Bu kapsamda önem kazanan nokta ise finansal işlem vergilerinin yapısı olacaktır. Tablo 2'de farklı yazarlar tarafından önerilen farklı finansal işlem vergisi uygulama örnekleri bulunmaktadır. Tablo 'da görüldüğü üzere uygulamada ilk farklılaşma hangi finansal enstrümanların vergi kapsamına dahil olacağı ve başarılı bir vergilendirme için vergi oranlarının ne olması

gerektiği konusunda ortaya çıkmaktadır. Literatür vergi konusu içinde yer alması gereken finansal işlemler bakımından farklılaşmaktadır. Finansal işlem vergilerinin temelini oluşturan Tobin vergileri döviz piyasasındaki spot işlemlerin vergi kapsamı içinde yer alması gerektiği üzerinde dururken, literatür ilerleyen süreç içinde çeşitlenen finansal enstrümanlar doğrultusunda vergiye konu olan finansal işlem türlerinin genişletilmesi doğrultusunda bir yol izlemiştir. Bu paralelde Pollin 2005 yılındaki çalışmasında tüm gelecek kontratların (future contract) ve devlet tahvillerinin de vergi kapsamında yer alması gerektiğini savunmuş, Baker vd. (2009) ise tezgah üstü piyasalarda işlem gören finansal türevlerinde vergiye dahil edilmesini önermiştir. Bu noktada diğer bir sorun ise uygulanacak vergi oranlarında ortaya çıkmaktadır. Birden fazla finansal işlemi kapsayan vergiler her enstrüman için aynı mı olmalıdır? Bu soruya farklı yanıtlar verilmekle birlikte en uygulanabilir yanıt Avrupa Parlamentosu tarafından getirilmiştir. Parlamento 2010 yılındaki raporunda tezgâh üstü piyasalarda işlem gören türev ürünlerin içerdiği sistemik risk ve şeffaf olmayan yapıları nedeni ile daha yüksek oranda vergilendirilmesini ve vergilemede bu kriterlerin göz önüne alınmasını tavsiye etmektedir (McCulloch, 2011).

Literatürde finansal işlemler vergisi için önerilen oranlar geniş bir aralıkta değişmekte ve piyasanın normal işleyişini etkilemeyecek ve likidite sorunlarına yol açmayacak optimum vergi oranı belirlenmeye çalışılmaktadır. Bu kapsamda finansal işlemler vergisi için % 0,5 ile % 0,01 arasında değişen farklı oranlar uygulanması önerilmektedir (Güler, vd., 2012).

Finansal işlem vergilerinde bir diğer önemli nokta ise verginin uygulama alanıdır. Her ne kadar uygulama alanı genişledikçe vergi hasılat rakamları artsa da, literatürde uygulama alanı sınırı noktasında bir uzlaşı bulunmamaktadır. Bu noktada temel eğilim ise finansal işlem vergilerinin tek taraflı uygulanması durumunda yatırımcıların başka ülkelere yönelimini doğurması nedeni ile finans merkezlerinin bulunduğu, finansal işlemlerin yoğunlaştığı ülkelerin söz konusu vergi uygulamasına dahil olması ve piyasa bazından ziyade ulusal ya da bölgesel bazda uygulamaların tercih edilmesidir (Dodd, 2003).

| Yazarlar | İşlem Vergilerinin Volatiliteye Etkileri |
|---|---|
| Hau (1998) | Volatilite düşer. |

Bu kapsamda finansal işlem vergileri, vergiye konu olacak finansal enstrümanları genişliğine, verginin uygulama alanına ve vergi oranlarına bağlı olarak 5.6 Milyar Dolar ile 1 Trilyon Dolar arasında değişen vergi hasılatı ile, özellikle finansal istikrarsızlıklar sonucu artan kamu açık ve borçlanmaları açısından önemli bir gelir kaynağı oluşturabilmektedir ( Bakınız Tablo 2).

## 4  Finansal İşlem Vergilerine Temel Eleştiri Noktaları

Finansal işlem vergilerinin volatilitede yarattığı azalma ve buna bağlı olarak finansal piyasalarda sağlayabileceği istikrar ve vergi hasılatı nedeni ile özellikle finansal krizler sonrasındaki dönemlerde uygulama önerisi olarak gündeme gelse de birçok iktisatçı ve uluslararası kurumun tarafından eleştirilere de konu olmuştur. Bu temel eleştirilerin başında; finansal işlem vergilerinin ticaret hacmini düşürmesi, piyasa likiditesinde ve etkinliğinde yarattığı negatif etkidir (TUAC, 2012). Bu eleştirilerin yanı sıra verginin uygulama alanının ulusal düzeyle sınırlı tutulması yatırımların diğer ülke piyasalarına kaymasına neden olabileceği görüşü özellikle gelişmekte olan ülke ekonomilerinin bu kaçıştan olumsuz etkilenebileceği düşünüldüğünde bir diğer olumsuzluk olarak karşımıza çıkmaktadır. Eleştirilerin diğer bir hareket noktası ise finansal işlem vergilerinin ileri doğru yansıma riski karşısında tüm maliyetin hanehalkı (tüketici) tarafından yüklenilmesidir.

## 5  Finansal İşlem Vergisinde Uygulama Örnekleri

Finansal işlem vergileri yukarda değinilen eleştirilere rağmen birçok ülkede uygulama olanağı bulmuş bir vergi türdür. Finansal işlem vergilerinin ülkeler tarafından uygulamada tercih edilmelerinin nedenleri; vergi uygulama ve toplama maliyetlerinin düşük olması, kamu geliri yaratma, ekonomik istikrar sağlama özelliklerinden ileri gelmektedir (Shome, 2011). Tablo 3'de görüldüğü üzere farklı ekonomilere sahip ülkelerde uygulama olanağı bulan finansal işlem vergilerinin konusuna dahil olan işlemler ülkelere göre değişse de ortak özellikleri, ad valorem bir vergi olması, genellikle düz oranlı ve tek taraflı olarak uygulanmasıdır ( Almanya, Belçika, Ekvator, Hindistan Japonya ve Tayvan'da vergi oranları finansal işlemlere göre değişebilmektedir.).

| Ülke | Sermaye İşlemleri | Türevler | Bonolar | Hazine Bonoları | Nakit İşlemler |

***Tablo 3****:Fianasal İşlem Vergisi Uygulamasında Seçilmiş Ülke Örnekleri **Kaynak: Mc Culloch,2011, Shome, 2011.***

Ülke uygulamalarında görülen farklılıklar nedeni ile ekonomik ve mali hedeflere tam olarak ulaşılması tartışmalı hale gelse de, finansal işlem vergisi uygulayan tüm ülkelerde kamu gelirleri için önemli bir kaynak olmaktadır. Gelir yaratma hedefi dışında ekonomik istikrarın sağlanmasında Brezilya 2009 yılında Finansal işlem vergisi oranlarını artırma yoluna gitmiş, Belçika ise 2004 yılında uygulamaya koyduğu ikili finansal işlem vergileri ile istikrarda önemli katkılar sağlayabilmiştir (Shome, 2011, Mc Culloch, 2011).

## 6  Sonuç:

Dönemler itibari ile dünya ekonomisinin karşı karşıya kaldığı ve gerek özel gerekse kamu sektörünün yüksek maliyetlere katlandığı kriz dönemleri özellikle finansal piyasalardaki istikrarın sağlanması ve devletin krizler nedeni ile artan finansman açıklarının kapatılabilmesi açısından finansal işlem vergileri önemli bir iktisadi mali enstrüman olabilmektedir. Literatürde böyle bir verginin birçok açıdan eleştirilere konu olmasına rağmen ilerleyen çalışmalarda yapılabilecek bir fayda maliyet analizi vergiler konusundaki yargıların netleşmesine olanak sağlayacaktır. Fakat bugünkü bilgiler ışığında finansal işlem vergisi uygulamaları risk barındıran finansal piyasaların regülasyonunda düşük maliyet özelliği ile önemeli bir araç olabilecektir. Süreç içinde vergi konusunu

genişlemesi ile birlikte çok düşük oranda uygulanan işlem vergileri önemli vergi hasılatlarının sağlanmasına olanak verebilmektedir. Bu noktada daha etkin alternatiflerin geliştirilmesi sürecinde finansal işlem vergilerinin piyasalara ve kamu bütçelerine olumlu katkılar sağlayabileceği düşünülmektedir.

# Küresel Finans Krizi ve Bu Krizden Çıkarılacak Kurumsal Yönetim Dersleri

# Global Financial Crisis and Corporate Governance Lessons from the Crisis

Ph.D. Candidate Cüneyd Ebrar Levent (Istanbul Aydın University, Turkey)

## Abstract

The mortgage crisis, started in 2007 in USA, turned into global financial crisis at the end of 2008. This crisis is assumed to be the largest crisis after The Great Depression occurred in 1929. Global Financial Crisis spread out from USA to developed countries and eventually other countries. Some financial institutions went bankruptcy and some of rest has been survived with governments' financial supports. Crisis affected the real economy after financial markets, due to crisis production and employment decreased all over the countries. Excess liquidity, deterioration of the mortgage loans structure, excessive increases in house prices, securitization of subprime mortgages, lack of transparency, expansion of derivative markets, ineffectiveness of credit rating agencies and delay of regulatory agencies' intervention are assumed as "reasonable reasons of the crisis. Before all these reasons, deregulation in financial market in USA is the main reason of this crisis. Corporate governance is against decontrol and lack of transparency which cause crisis. Corporate governance focuses on four pillars, which are fairness, transparency, accountability and responsibility. These four principles are associated with measurement and development of performance of government and companies. In this study, we looked from corporate governance window to the global financial crisis, and expressed lessons and advices to be determined. With effective corporate governance, it is expected to add value to stakeholders and being responsible to social values.

## 1 Giriş

2007 yılının ortalarında ABD'de ipotekli konut piyasasında (mortgage) başlayan kriz, 2008 yılının son çeyreğinde dünyadaki hemen hemen tüm ülke ekonomilerini etkileyen küresel bir krize dönüşmüştür. Bu kriz, 1929 yılında yaşanan Dünya Ekonomik Bunalımı'ndan (Büyük Buhran) sonra dünyanın yaşadığı en büyük kriz olarak kabul edilmektedir.

Finansal kriz, finansal piyasaların birbiriyle içiçe olması nedeniyle, çok hızlı bir şekilde ABD'den önce gelişmiş ülkelere, sonra gelişmekte olan ülkelere, ardından da diğer ülkelere yayılmıştır. Yüksek riskli finansal varlıklardaki sıkıntıların düşük riskli finansal varlıklara da yayılacağı korkusu, bozulmayı daha da derinleştirmiştir. Sıfır riskli olarak kabul edilen sermaye piyasası araçlarının durumu dahi tartışılır hale gelmiştir. Bazı finansal kuruluşlar batmış, bazıları ise hükümetler tarafından verilen mali desteklerle kurtarılmıştır. Portföyünde bu tür kuruluşların finansal varlıklarını bulunduran şirketlerin mali yapıları da krizden ciddi şekilde etkilenmiştir. Kriz, bu ve diğer sebeplerden dolayı finansal piyasalarla sınırlı kalmayıp, reel sektörü de etkisi altına almış; mal, hizmet ve işgücü piyasalarında özetle üretim ve istihdamda ciddi daralmalara yol açmıştır.

Krizin "görünen" nedenleri olarak likidite bolluğu ve ipotekli konut kredilerinin yapısının bozulması, konut fiyatlarındaki aşırı artışlar, menkul değerleştirme ve menkul değerlerin fonlanmasında yaşanan sorunlar, şeffaflık eksikliği, kredi türev piyasalarının genişlemesi, kredi derecelendirme kuruluşlarının etkinliğindeki yetersizlik ve düzenleyici denetleyici kuruluşların müdahalede gecikmesi sayılabilir. (Marşap ve Narin, 2010). Fakat bütün bunların ardındaki ana neden, Reagan döneminde ABD finans sektörü üzerindeki denetimin kaldırılması olarak belirtilmektedir (Hiç, 2009).

Kurumsal yönetim (corporate governance), krizlere neden olan bu denetimsizliğin ve şeffaflıktan kaçma uygulamalarının karşısında olan bir anlayıştır. Dar anlamda kurumsal yönetim; hissedarların kendi haklarını etkin olarak kullanmasına imkan veren sistemlerin kurularak şirketlerin yönetilmesidir. Şirketlerde bu konuda sorumlu organ yönetim kuruludur.

Ancak, kurumsal yönetim kavramı geniş olarak tanımlandığında, kurumsal yönetim yalnızca yönetim kurulu tarafından yerine getirilen faaliyetler olarak görülmemektedir. Geniş anlamda kurumsal yönetim; yönetim kurulu, pay sahipleri ile şirket üst düzey yönetimi arasındaki ilişkileri düzenleyen bir sistemdir. (Brandas, 2011) Şirketler tarafından uygulanan kurumsal yönetim uygulamalarının başarısı değerlendirilirken, bu üç kesim arasındaki ilişkilerin çerçevesi net olarak ortaya konulmalıdır. Yönetim kurulu, pay sahipleri ile üst düzey yönetim arasındaki ilişkileri kuran ve kurumsal yönetimin başarısında önemli yükümlülükleri bulunan bir organdır (OECD Principles of Corporate Governance, 2004).

Kurumsal yönetim alanında dünyada bir çok çalışma yapılmaktadır. Bu çalışmalar tüm dünyada geçerli olabilecek tek bir kurumsal yönetim modeli olamayacağını ortaya koymaktadır. Her ülkenin, her sektörün kendine özgü şartları, doğruları vardır. Bu yüzden Anglo-Saxon(Amerikan), Anglo-Saxon(İngiltere-İrlanda) ve

Continental (Alman) modelleri gibi birbirinden ayrılmış kurumsal yönetim modelleri bulunmaktadır. (Bevan,2009) Ancak tüm modellerde ve bir çok çalışmada adillik, şeffaflık, hesap verebilirlik ve sorumluluk kavramları kurumsal yönetimin vazgeçilmez ilkeleri olarak belirtilmektedir.

Özellikle 1997 Güneydoğu Asya Krizi'nden sonra OECD gibi uluslararası kuruluşlar, kurumsal yönetime ilişkin çalışmalara başlamıştır. 1999 yayımlanan, 2004'de güncellenen OECD Kurumsal Yönetim İlkeleri de adillik, şeffaflık, hesap verebilirlik ve sorumluluk ilkelerine dayanmaktadır.

Ülkemizde ise Sermaye Piyasası Kurulu, 2005 yılında yayımladığı SPK Kurumsal Yönetim İlkeleri'nde bu dört temel ilkeyi şöyle tanımlamaktadır (SPK, 2005).

Adillik (Eşitlik); şirket yönetiminin tüm faaliyetlerinde, pay ve menfaat sahiplerine eşit davranmasını ve olası çıkar çatışmalarının önüne geçilmesini ifade eder.

Şeffaflık; ticari sır niteliğindeki ve henüz kamuya açıklanmamış bilgiler hariç olmak üzere, şirket ile ilgili finansal ve finansal olmayan bilgilerin, zamanında, doğru, eksiksiz, anlaşılabilir, yorumlanabilir, düşük maliyetle kolay erişilebilir bir şekilde kamuya duyurulması yaklaşımıdır.

Hesap verebilirlik; yönetim kurulu üyelerinin esas itibarıyla anonim şirket tüzel kişiliğine ve dolayısıyla pay sahiplerine karşı olan hesap verme zorunluluğunu ifade eder.

Sorumluluk; şirket yönetiminin anonim şirket adına yaptığı tüm faaliyetlerinin mevzuata, esas sözleşmeye ve şirket içi düzenlemelere uygunluğunu ve bunun denetlenmesini ifade eder.

Gerek OECD gerekse SPK Kurumsal Yönetim İlkeleri, hisseleri menkul kıymetler borsalarında işlem gören şirketler üzerine odaklanmaktadır. Ancak, hisseleri menkul kıymetler borsalarında işlem görmeyen şirketlerde de, örneğin özel ve kamu işletmelerinde, kurumsal yönetim ilkelerinin yararlı bir araç olabileceği görülmektedir.

Bu çalışmada Küresel Finans Krizi'ne, kurumsal yönetim penceresinden bakılmış, krizin nedenleri, etkileri bu açıdan incelenmiş, krizden çıkarılacak kurumsal yönetim dersleri üzerinde durulmuştur. Kurumsal yönetimin yerine getirilmesi ile hem paydaşlara değer oluşturulacağı ve hem de toplumsal değerlere saygılı olunacağı beklenmektedir.

## 2　Kurumsal Yönetim Perspektifinden Küresel Finans Krizi

### 2.1　Krize Zemin Hazırlayan Faktörler

1980'lerden itibaren yaşanan küreselleşme süreci, en çok, ürün ve emeğe göre daha hızlı hareket eden sermaye piyasalarını etkilemiştir. Malların, hizmetlerin, paranın hızlı ve sürekli bir biçimde akışını sağlamak için bunların önündeki engeller kaldırılmaya çalışılmış, deregülasyon kavramı etkinlik kazanmaya başlamıştır. Deregülasyon mal ve hizmetlerde kaliteyi ve verimliliği arttırabilirken, finans sektöründe denetimsiz dev alanlar meydana getirmiştir. ABD'de Reagan ve İngiltere'de Thatcher bu denetimsizliği savunmuş, gelişmekte olan ülkelere de bu serbestliği önermişlerdir.

ABD'de finansal piyasalarda fiili olarak denetimin kaldırılması, deregülasyon görüşünün hakim olması, Reagan döneminde hız kazanmıştır. Ticari bankalar görünüşte özerk bir denetime tabi idiler ve sıkıntıya düşen bankaları kurtarmak için bir sigorta fon bile mevcuttu. Ama bu mekanizmalar, kriz öncesinde ve kriz süresince çalışmadı.

Deregülasyon, bankaların bazı uygulamalarında gevşek denetleme yapılmasını bile engellemiş; resmi mali tablolarda görülmeyen yükümlülüklerle dolu gölge bankacılık (shadow banking) ortaya çıkarmıştır. Gelişmekte olan bazı ülkelerde ise bu gölge bankacılığın sebebi liberalleşmenin getirdiği deregülasyon değil, kanun ve kuralların doğru tanımlanmamasından veya uygulanmamasından kaynaklanan denetimsizliktir.

Denetimsizliğe karşı çıkanlar da olmuştur. ABD'de ticari bankalar dışındaki kurumların da ticari bankalardaki gibi bir denetime dahil edilmesi için arada sırada ortaya çıkan ve Temsilciler Meclisi'ne ve Senato'ya intikal eden teşebbüsler, finans kurumlarının etkin lobi faaliyetleri ile bertaraf edilmiştir (Hiç, 2009).

Bu denetimsizlik yüzünden Küresel Finans Krizi'nin ana nedeni olarak kurumsal yönetim eksikliğini göstermek yanlış olmaz. OECD Kurumsal Yönetim İlkeleri'nde "Etkin Kurumsal Yönetim Çerçevesi Temelinin Tesisi" başlığı altında denetimin gerekliliği vurgulanmıştır. Buna göre denetim, düzenleme ve yürütme erkleri, profesyonel ve nesnel bir şekilde görevlerini yerine getirebilmelerini sağlayacak yetki, güvenilirlik ve kaynaklara sahip olmalıdır. Aynı zamanda, getirdikleri kurallar yerinde, şeffaf ve tamamen açıklanmış olmalıdır (OECD Principles of Corporate Governance, 2004).

Küreselleşme süreci ile uluslararası finansın önündeki engellerin kalkmasıyla finansal sermayenin serbest ve büyük bir hızla dolaşımı mümkün hale gelmiştir. Büyük devletlerde yaşanan finansal sıkıntıların, hızla kriz olarak diğer ülkelere yayılması bunun sonucudur. Ayrıca engellerin kalkması, serbestçe ülkeleri dolaşan kısa vadeli sermaye akımlarını (sıcak para) doğurmuştur. Gerek sermayenin hızlı hareketi, gerekse sıcak para, son yirmi yılda yaşanan çok sayıdaki bölgesel krizin sebeplerinden biri olarak karşımıza çıkmıştır.

## 2.2 Krizin Nedenleri

ABD'de 2000 yılı Mart ayında teknoloji ağırlıklı işletmelerin hisselerinin işlem gördüğü borsa olan NASDAQ'da yaşanan büyük değer kaybı, dot.com balonunun patlaması anlamına geliyordu. NASDAQ Composite endeksi, 5000'li seviyelerden hızla düşmeye başladı, bu düşüş Ekim 2002'de 1160 ile en dip seviyesini gördü. Kısa süre içindeki yaklaşık %80'e varan bir düşüş, aslında bir şeylerin iyi gitmediğinin bir göstergesi idi.

Küresel Finans Krizi'nin nedenlerini incelerken,11 Eylül 2001 saldırısını da dikkate almak gerekir. Bu saldırı sadece toplumsal ve siyasi değil, finansal çöküntüye de sebep olmuştu. Öyle ki New York borsasında hisse senetlerinin fiyatlarında iki hafta içinde %15 düzeyinde bir gerileme olmuştu. Bunun ardından "Finansal 11 Eylül" olarak da adlandırılan Enron skandalı patlak verdi. Enron şirketinin denetçi firması, Enron'un iştiraklerindeki bir bölüm borç ve zararlarının Enron'un mali tablolarında yer alması gerektiğini kamuoyuna duyurmak zorunda kaldı. Bu, aslında enerji piyasasından çok büyük zararlar yazan ve bu zararları çeşitli finansal türev araçları kullanarak ve muhasebe hilelerine başvurarak kapatan Enron'un, yan şirketler kanalıyla yaptıklarının ve yasal ve yasadışı bazı muhasebe uygulamalarının ortaya çıkması anlamına geliyordu. Zirvede piyasa değeri 70 milyar doları aşan şirket, Aralık 2001'de iflasını açıklamak zorunda kaldı. 2001'de yaşanan bu iki büyük olay hem finansal piyasalarda hem de halkta güven kaybına neden oldu.

Kurumsal yönetim kavramının da dünyada daha yoğun bir şekilde tartışılması ve öneminin anlaşılması bu olaylarla artmıştır. OECD kurumsal yönetim ilkeleri dış denetçilerin, sadece şirkete değil paydaşlara karşı da sorumlu olması gerektiğini ortaya koymuştur.

ABD ekonomisi ciddi hasarlar içerisindeyken, ekonomi yönetimi bu olumsuzlukların giderilmesine yönelik para musluklarını sonuna kadar açmıştı. Gevşek para politikası, 2008 krizinin mortgage krizinden likidite krizine dönüşmesine neden olmuştur. FED 2001 yılı başında politika faizini çok hızlı bir şekilde indirmiştir. Resesyon endişelerini yok etmek adına o kadar hızlı bir indirime girmiştir ki, %6 seviyelerinde olan faizi 2001 Aralık ayında %1.75'e kadar düşürmüştür. Haziran 2003 de mortgage faiz oranları 45 yılın en düşük seviyesini görmüştür.

Faizlerin gayrimenkul fiyat artışının altına düşmesi, borçlanarak gayrimenkule yatırım yapmayı kazançlı hale getirmiştir. ABD taşınmaz mal piyasasında fiyatlar kısa bir sürede ikiye katlanmış, yalnız konut sahibi olmak isteyenler değil, yatırımcılar ve spekülatörler de karlı bir alan olarak gördükleri için gayrimenkul piyasasına yönelmişlerdir (Arpalı, 2013).

Gayrimenkulu yatırım amacıyla değil de barınma ihtiyaçlarını karşılamak için almak isteyen, alt gelir grubundaki kişiler için faiz oranlarının düşmesi, kredileri cazip hale getirmiştir. Alt gelir grubunun konut edinebilmesi için getirilen vergi avantajları gibi kolaylıklar, ipotekli konutlara talebi arttırmıştır. 2006 yılında ev sahipliği oranı alt gelir grubunda ciddi şekilde artarak, Afrika kökenli Amerikalılarda yüzde %48,2'ye, Asya kökenli Amerikalılarda yüzde 60,8'e ve Hispanik kökenli Amerikalılarda yüzde %49,7'ye yükselmiştir. Bu gruplara açılan kredilere çoğunlukla ilk iki yılı sabit faiz ödemeli, geri kalan yıllarda ise piyasa faiz oranlarına endeksli değişken faiz uygulanmıştır.

Burada kurumsal yönetim açısından önemli olan husus, kredilerin hangi alt gelir gruplarına verildiği değil, bu krediler verilirken maruz kalınan risklerdir. İşi, geliri, varlığı ve verecek teminatı olmayan kişilere verilen krediler (NINJA Credits: No income, no job, no asset), küresel kriz olarak geri dönmüştür. Bu kişilerin iş ve gelirleri ile gerçek dışı beyanda bulunmaları kurumsal yönetim ilkelerinde yer alan sorumluluk ilkesi gereği kredi verenlerin sorumluluğunu kaldırmamaktadır. Bu kuruluşlar yalan beyanlara göz yumarak sadece hissedarlarına değil, tüm topluma karşı suç işlemişlerdir. İşin başka bir boyutu ise kredilerin başka bir finans kuruluşuna veya türev enstrümanına devredilmesiyle aslında riskin sıfırlanmış olmamasıdır.

2004-2006 arası ABD'de faiz oranlarının %1,5'dan %5'e yükselmesi, sabit faiz döneminde olan kişileri bu dönemde etkilememiş, ancak 2006 yılı sonlarından itibaren alınan kredilerin yapısı sabitten değişkene dönünce ve kişilerin gelirleri de aynı dönem içerisinde artmayınca, kredi geri ödemelerinde zorluklar ortaya çıkmıştır. Alt gelir grupları aldıkları bu kredileri ödeyemez duruma gelmişlerdir. Bankaların hacizli konutları satışa arz etmeleriyle, zaten şişmiş ve aşağı gelmeye başlamış olan konut fiyatlarındaki düşüş hızlanmıştır. Konut fiyatlarında ciddi şekilde düşme olunca ve kredili evlerin değeri, kredi ödemelerinin net bugünkü değerinin altında kalınca, kredi alanlar kredi geri ödemelerinden vazgeçmişlerdir. Haciz-kredi-ev fiyatları döngüsü ABD'yi mortgage krizine taşımıştır. 2007'de yaklaşık 1,3 milyon konut haczedilerek, ipoteğin paraya çevrilme sürecine tabi tutulmuştur.

Piyasaları en derinden etkileyen olay ise 20 Temmuz 2007 tarihinde mortgage varlıklarına yatırılan fonları yöneten Bear Stearn'in çökmesi olmuştur. Her ne kadar Bear Stearn fonlarını kurtarmaya çalışsa da zararlardan kurtulamamıştır. Fonları yaklaşık %90 değer yitirmiştir. Bütün bu yaşananlar, küresel krizde kurumsal yönetim eksikliklerini açıkça ortaya koymuştur.

## 2.3 Krizin Boyutu ve Etkileri

ABD'deki kriz, mortgage piyasası ile sınırlı kalmayıp, takip eden süreçte bir likidite krizine dönüşmüş ve önce Avrupa'ya ardından da tüm dünyaya yayılarak küresel bir boyuta ulaşmıştır. Şubat 2008'de İngiltere'de Northern

Rock Bankası, Eylül 2008'de ise ABD'de Freddie Mac ve Fannie Mae devletleştirilmiştir. Bu olaydan bir hafta sonra ise kriz, büyük yatırım bankası Lehman Brothers'ın iflasıyla birlikte farklı bir sürece girmiştir. Güven ortadan kalkmış, her şirket, her devlet sorgulanır olmuştur. Piyasalar "too big to fail" (batmayacak kadar büyük) anlayışının geçerli olamayabileceği gerçeği ile soğuk bir duş almıştır. Sadece 2008 Eylül-Ekim ayları arasında

- ABD'de AIG, Wachovia Bank
- İngiltere'de HBOS Bank, Bradford&Bingley Bank, Royal Bank of Scotland, Llyods TSB ve Barclays
- Benelüx ülkelerinde, Dexia Group, (Türkiye'de Denizbank'ın eski sahibi)
- Almanya'da Hypo Real Estate Holding
- İsviçre'de UBS
- İrlanda ve İngiltere'de muhtelif bankalar

ya devletleştirilmiş, ya kurtarılmış, ya da başka kurumlar tarafından satın alınmıştır. Aynı dönemde Hollanda ve Fransa gibi ülkeler de çeşitli özel bankalara sermaye yardımı yapmışlardır.

Tüm dünyayı etkisi altına alan bu kriz, tarihte ilk defa küresel bazda tüm ülkelerin krizin etkilerinin azaltılması konusunda neredeyse ortak kararlar almasına ve uygulamaya koymasına neden olmuştur. ABD'de bir kaç sene önce kavramsal olarak bile hayal edilemeyecek devletleştirme ve şirket kurtarma uygulamaları yapılmıştır.

Krizin bir başka boyutu da türev piyasalarıdır. Genellikle ciddi bir denetime tabi olmayan gölge bankacılık kurumları tarafından subprime konut kredilerini de içeren varlıklara dayalı olarak ihraç edilen türev, türevin türevi, türevin türevinin türevi niteliğindeki borçlanma senetleri, rating (kredi derecelendirme) şirketlerince de yüksek notlarla süslenmiş, hem yüksek getirili ve hem de yüksek rating notuna sahip senetler, düşük getirilerin hakim olduğu bir konjonktürde, tüm dünyaya pazarlanmıştır. (Demirdizen, 2011)

Krizin küresel boyuta ulaşmasında türev araçlarının karmaşıklığı kadar, bunları not veren derecelendirme kuruluşlarının da büyük ihmali vardır. "Kurumsal yönetim çerçevesi, analiz veya tavsiyelerin güvenilirliğini zedeleyecek maddi çıkar çatışmalarından bağımsız bir şekilde, analizciler, brokerler, kredi derecelendirme kuruluşları ve diğer kişi veya kuruluşlarca yatırımcılar tarafından alınan kararlarla ilgili analiz veya tavsiyelerin hazırlanmasını sağlayan etkin bir yaklaşımla desteklenmelidir." (OECD Principles of Corporate Governance, 2004) Krizde derecelendirme kuruluşlarının bağımsızlıklarının kalmadığı tartışma konusu olmuştur.

Çürük ipotek krizi olarak finans sektöründe başlayıp ülkelerarası finansal ilişkiler sonucu yayılma eğilimi gösteren kriz kimi finans şirketlerinin batması veya batmamak için işten işçi çıkarmalarına neden olmuştur. İşten çıkarılan işçiler gelirlerini kaybettiklerinden, işten çıkarılma korkusundaki işçiler ise işten çıkarılmaları durumda yaşamlarını sürdürebilmek için tasarrufa yöneldiklerinden harcamalarını kısmışlar; kısılan harcamalar şirketlerin satışlarını daha da düşürüp yeni işten çıkarmalara zemin hazırlamıştır. Böyle bir kısır döngü, ekonomik bunalımın derinleşmesine neden olmuştur (Ertuna, 2009).

## 3 Krizden Çıkarılacak Kurumsal Yönetim Dersleri

### 3.1 Düzenleyici ve Denetleyici Kurumlar

Küresel Finans Krizi'nin ana nedeni, yukarıda belirtildiği gibi finans sektöründeki denetimsizlik ve düzenleme eksikliğidir. Bu krizden alınması gereken en önemli ders de bu eksikliklerin giderilmesidir. OECD Kurumsal Yönetim İlkeleri'ne göre "Kurumsal yönetim, makro ekonomik politikalardan, ürün ve faktör piyasalarındaki rekabet düzeyine kadar firmaların faaliyetlerini biçimlendiren bir dizi unsurdan oluşan daha geniş bir ekonomik çerçevenin içinde yer almaktadır. Kurumsal yönetimin çerçevesi, aynı zamanda yasal, düzenleyici ve kurumsal faktörlere dayanır." ve "Hükümetlerin piyasaların etkin biçimde çalışmasına izin verecek şekilde yeterli esnekliği sağlamak için verimli bir düzenleyici çerçeve oluşturmak açısından ve gerek hissedarların gerekse diğer paydaşların beklentilerine cevap vermek açısından önemli bir sorumluluğu vardır." Aynı ilkelerde düzenleyici şartların kanunlara uygun, şeffaf ve uygulanabilir olması gerektiği üzerinde durulmuştur. Ekonomiyi büyütmek adına finansal piyasaların başıboş bırakılmasının, aşırı riskli işlemlere, usulsüzlere, yolsuzluklara ve sonunda krizlere yol açtığı açıkça görülmüştür. Krizlerin tekrarlanmaması için, başta ABD olmak üzere tüm ülkelerde finansal kurumların yeniden yapılandırılmasına önem verilmelidir.

OECD Kurumsal Yönetim İlkeleri'nin birinci maddesi şöyledir: "Kurumsal yönetim çerçevesi, şeffaf ve etkin piyasaları teşvik etmeli, kanunlara uygun olmalı ve farklı denetim, düzenleme ve yürütme erkleri arasında sorumluluk dağılımını açıkça yapmalıdır." Etkin bir kurumsal yönetim çerçevesi için tüm piyasa katılımcılarının güvenebilecekleri uygun ve etkili hukuki, düzenleyici ve kurumsal bir temelin oluşturulması gereklidir. Düzenleyici kurumlar, ne içerdiği bilinmeyen, şeffaf olmayan türev araçları ile ilgili sadece bir ülkede değil tüm dünyada azaltıcı tedbirler üzerinde çalışmalıdır.

2000 yılından sonra Enron, Parmalat gibi bir bakıma denetim skandalları yaşanmasına rağmen, bu konuda yeterli tedbirlerin alınmadığı krizde görülmüştür. Denetleyici kurumlar, bankaların aşırı risk almasını, işi, geliri, varlığı olmayan hatta müflis kişilere NINJA kredileri vermelerine göz yummuşlardır. Bu konuda da çıkarılacak dersler olduğu görülmektedir.

Devletin denetim ve kontrol fonksiyonlarını, özerk veya bağımsız kurumlara devretmesiyle sorumluluğunun kalmadığını düşünmesi de başka bir yanlış olmuştur. Lehman Brothers'ın batmadan önceki dönemde 50 milyar dolar tutarında bir fonu bilanço dışında tutarak işletmesi, finans kesiminde olsun, kamu kesimi denetim mekanizmalarında olsun, tam bir başı bozukluk göstergesi olmuştur. (Demirdizen, 2011)Hatta bazı gelişmiş ülkelerin deregülasyon rüzgarına kapılıp, denetim alanındaki konularda bile çekimser kalması, gelişmelere geç tepki vermesi de üzerinde çalışılması gereken bir konudur.

Kurumsal yönetim çerçevesinin geliştirilmesinde ulusal yasa koyucular ve denetim organları, etkin uluslararası diyalog ve işbirliği ihtiyacına ve sonuçlarına gereken önemi vermelidir. Bu şartların karşılanması halinde kurumsal yönetim sistemi, denetim mekanizmalarının aşırıya kaçmasını engelleyecek, girişimciliği destekleyecek ve gerek özel gerekse kamu kuruluşlarında zararlı çıkar çatışmalarının ortaya çıkma riskini azaltacaktır.

### 3.2  Derecelendirme Şirketleri

Derecelendirme şirketlerinin özellikle iki açıdan krizde ciddi hataları ve sorumlulukları olmuştur:

1-İpotekli konut kredilerinde bankaların riskli kişilere kredi vermelerindeki ihmallerini görmemişlerdir. Bankalara kredi derecelendirme notları verirken, bu durumu dikkate almadan kredi müşterilerinden kopuk bir çalışma sergilemişlerdir.

2-Karmaşık, riskli türev ürünlerine yüksek kredi notları vermişlerdir.

Diğer yandan derecelendirme kuruluşları firmaların finansal problemlerini her zaman tespit edememektedir. Bazen de sorunu kısmen veya çok gecikmeli olarak görmektedir. Finansal kriz öncesinde de derecelendirme kuruluşları çok etkin çalışamamıştır. Ancak finansal kriz başladıktan sonra sorunlu menkul kıymetlerin kredi notları düşürülmüştür.

Sorunun çıkar çatışması boyutu da mevcuttur. Çıkar çatışmasının yaşanabileceği OECD Kurumsal Yönetim İlkeleri'nde de öngörülmüş, şirketlerden potansiyel çıkar çatışmalarına karşı nasıl bir sistem oluşturduklarını açıklamalarını tavsiye etmiştir. Kredi derecelendirme kuruluşları, gelirlerinin büyük kısmını sermaye piyasası aracı ihraç eden kurumlardan karşılamaktadır. Piyasada finansal araçların sayısının artması, bu kuruluşların da gelirlerinin artması anlamına gelecektir. Bu kurumların karmaşık ve riskli türev araçlarına normal piyasa şartlarında olumsuz not vermeleri, soruna bu açıdan bakıldığında mantıklı gözükmemektedir.

Kredi derecelendirme alanında başka bir sorun da, sektörün % 95'inden fazlasını üç firmanın kontrol etmesidir. (Şekil 1) Bu firmalar bütün hatalarına rağmen bu sektörde kalmaya devam etmektedir. Enron krizinde Moody's, S&P ve Fitch, Enron'u, çöküşünden ancak beş gün önce yatırım yapılabilir seviyesinden aşağı düşürmüştür. 2008 krizinde buna benzer belki binlerce vaka olduğu söylenebilir.

***Şekil 1****.Kredi Derecelendirme Kuruluşlarının Pazar Payı (2011 sonu)* ***Kaynak: FT, 2014***

İflas etme noktasına gelen Yunanistan'a krizden hemen önce yatırım yapılabilir denmesi, bu kuruluşların yetersiz mi yoksa taraflı mı sorusunu akla getirmektedir. Siyasiler ve işadamları bu konudaki serzeniş ve eleştirilerinde gayet haklıdır. Ne Enron ne Parmalat skandallarından ne de finansal krizlerden ders alınmadığı görülmektedir. Ancak derecelendirme kuruluşlarının "ıslah"ı siyasi söylemlerle veya alternatif derecelendirme kuruluşları kurma tehditleri ile değil, soruna uluslararası çözüm arayarak olacaktır. Bu ise bir devletin değil, tüm dünyanın sorunudur.

### 3.3  Risk Yönetimi

Küresel krizden alınması gereken diğer bir kurumsal yönetim dersi de risk yönetimidir. Risk konusunu bir kaç açıdan incelemek gerekir:

1-Yanlış beyanda bulunan riskli kişilere gereğinden çok fazla kredi verilmesi, hem kredi verenleri hem de bu kredileri kullananları krizde zor durumda bırakmıştır. Alt gelir grubundaki kişilere verilen ipotek kredileri (subprime ipotek) beş yılda üç kattan fazla artarak 600 milyar doları bulmuş, toplam ipotek içindeki payı ise %8.6'dan %20'ye ulaşmıştır (Tablo 1).

2-Bankaların bu kredileri menkul kıymetleştirerek riski dağıtmaları, finansal sistem için yeni ve çok daha büyük riskler doğurmuştur. Tablo 1'den görüleceği gibi 2001 yılında menkul kıymetleştirme oranı %50 iken, 2008 yılında bu oran %80'e çıkmıştır.

| Yıllar | Toplam İpotek | Subprime İpotek | Subprime / Toplam İpotek (%) | Subprime Dayalı Çıkarılan Menkul Kıymetler | Subprime İpoteklerin Menkul Kıymetleştirme Oranı(%) |
|---|---|---|---|---|---|
| 2001 | 2.215 | 190 | 8.6 | 95 | 50.4 |
| 2002 | 2.885 | 231 | 8.0 | 121 | 52.7 |
| 2003 | 3.945 | 335 | 8.5 | 202 | 60.5 |
| 2004 | 2.920 | 540 | 18.5 | 401 | 74.3 |
| 2005 | 3.120 | 625 | 20.0 | 507 | 81.2 |
| 2006 | 2.980 | 600 | 20.1 | 483 | 80.5 |

*Tablo 1: İpotekler ve Subprime İpoteklerin Menkul Kıymetleştirilmesi (milyar $) **Kaynak:** Duman, 2011*

3-Finans kuruluşlarının veya finans sektörü dışındaki şirketlerin, ipotek kredisi veren bankaların hisse senetlerini veya menkul kıymetleştirilen ürünlerini almalarıyla üstlendikleri risk.

4-Şirketlerin, finansal hiç bir menkul kıymet satın almadığı halde mortgage krizinin önce likidite krizine sonra risk finansal krize ve en sonunda reel sektör krizine dönüşmesinden dolayı maruz kaldığı risk.

OECD tarafından Şubat 2009'da yayımlanan "Corporate Governance Lessons From the Financial Crisis" raporunda kurumsal yönetim uygulamalarındaki hatalar ve zayıflıkların finansal krizlere neden olan önemli faktörlerden olduğu ve kurumsal yönetim uygulamalarının, finansal hizmet şirketlerinde aşırı risk alma davranışlarını engelleyemediği belirtilmektedir. Raporda finansal krizleri destekleyen bazı kurumsal yönetim zayıflıkları olarak risk yönetimiyle ilgili aşağıdaki hususlara yer verilmiştir (Kirkpatrick, 2009):

- Risk yönetim sistemlerinin başarısız olması,
- Risk yönetimiyle ilgili bilginin üst yönetimle veya yönetim kuruluyla paylaşılmaması
- Risk yönetiminin şirket geneli yerine aktivite bazlı olarak kalması

Küreselleşmenin etkisiyle önümüzde yıllarda da krizlerin yaşanması kaçınılmazdır. Bu yüzden birlikler, devletler, kurumlar ve şirketler için riski erken teşhis edebilecek mekanizmaların kurulması hayati öneme sahiptir.

Ülkemizde halka açık şirketlerin SPK Kurumsal Yönetim İlkeleri gereğince, "Riskin Erken Saptanması Komitesi" kurmaları zorunlu hale getirilmiştir. Buna göre;

"Riskin erken saptanması komitesi; şirketin varlığını, gelişmesini ve devamını tehlikeye düşürebilecek risklerin erken teşhisi, tespit edilen risklerle ilgili gerekli önlemlerin alınması ve riskin yönetilmesi amacıyla çalışmalar yapmakla sorumlu olup, risk yönetim sistemlerini en az yılda bir kez gözden geçirir." (Resmi Gazete, 2014).

Bu komitenin etkin bir şekilde işletilmesi, kağıt üzerinde kalmaması, şirketler için krizlere hazırlıklı olmak açısından büyük yararlar sağlayacaktır.

### 3.4 Paydaş Haklarının Korunması ve Şeffaflık

Evrensel kurumsal ilkeleri adillik, şeffaflık, sorumluluk ve hesap verebilirliktir. Küresel krizden alınacak bir diğer ders de, bu dört ilke ile ilgili olan paydaş haklarının korunmasına önem verilmesidir. Global dünyada artık bir şirket sadece devlete vergi yönünden hesap veren bir konumdan çıkmıştır. Kurumsal yönetim perspektifine göre bir şirket, bireysel-kurumsal yatırımcılarına (azınlık hissedarlarına), çalışanlarına, müşterilerine, tedarikçilerine, kreditörlerine, sigortacılara, denetim şirketlerine, medyaya, devlete ve topluma karşı sorumludur ve şeffaf olmak zorundadır.

İçeriği belli olmayan türev araçları, bilanço harici işlemler, şirketlerin ve menkul kıymetlerin olduğundan farklı şekilde şişirilmesi, finansal tabloların gerçeği yansıtmaması şeffaflık problemi olarak küresel krizde ortaya çıkmıştır. Yapılacak düzenlemelerde paydaşların korunması esas alınmalı, hesap verebilirlik sağlanmalıdır.

### 3.5 Yönetici Sorunları

Küresel kriz, sadece mortgage, merkez bankası veya bankalar krizi değildir. Üst düzey yöneticilerin kendi çıkarları doğrultularında hareket etmeleri yüzünden aslında batmaması gereken bir çok şirket iflas etmiştir. Üst düzey yöneticilerin bu tür davranışları kurumsal yönetimin adillik ilkesine aykırıdır. Muhasebe oyunlarına başvurmaları, net değerini kendilerinin bile bilmediği türev enstrümanları ile gerçek durumu gizlemeleri ile şeffaflık ilkesine, denetimden kaçma, denetçi firmaları manipüle etme ile hesap verebilirlik ilkesine ve menfaatleri korumak için mevzuata aykırı kararlar almaları, ödenmeyeceğini bildikleri kredileri bile menkul kıymetleştirmeleri ile sorumluluk ilkesine aykırı hareket etmişler, kendilerine güvenen yatırımcılarını zor durumda bırakmışlardır. Krizleri meydana getiren bu tür sorumsuz davranışların önlenmesi için şirketlerde kurumsal yönetim uygulamaların tesis edilmesi bir zorunluluk haline gelmiştir.

## 4    Sonuç

Küresel Finans Krizi, 1929'daki Büyük Buhran'dan sonra dünya ekonomisinin gördüğü en büyük kriz olarak kabul edilmektedir. 1929'dan farklı olarak bu kriz sadece belli başlı ülkelerle sınırlı kalmamış, neredeyse tüm dünyada olumsuz hatta yıkıcı etkilere sebep olmuştur. 2008'in son çeyreğinde dev şirketler için kullanılan "batmayacak kadar büyük" sözünün tarihe gömüldüğü görülmüştür. İpotekli konutlardaki sıkıntılar olarak başlayan kriz, önce likidite krizine, sonra finansal krize ve en sonunda herkesi içine çeken reel sektör krizine dönüşmüştür.

Kurumsal yönetim kavramı geçmişte, OECD ilkeleri giriş kısmında da belirtildiği gibi menkul kıymetler borsalarında işlem gören şirketlere odaklanmasına karşın özellikle krizden sonra tüm şirketleri, kamu kurumlarını hatta devletleri de içine alacak şekilde genişlemiştir. Bu çalışmada da kurumsal yönetim en geniş çerçevede incelenmiştir.

Sermayenin hızlı dolaştığı ve dolaşmaya devam edeceği küreselleşme döneminde, yeni krizler yaşanma ihtimali yüksektir. Piyasalara enjekte edilen para, üretim sektörlerine değil tekrar sermaye piyasalarına dönmüş durumdadır. Hisse senedi fiyatları gelişmiş ülkelerde rekorlar kırmaya devam etmektedir. Sektörü canlandırmak adına ABD'de mortgage kredisi almak isteyenler için gerekli olan minimum kredi notları düşürülmektedir. Özetle 2008'de patlayan balon şişmeye devam etmektedir. Tedbirlerin, denetimlerin çok sıkı olduğu, biraz gevşetmek gerektiği krizin üzerinden 10 yıl daha geçmemişken yüksek sesle konuşulmaya başlamıştır.

Denetlenemez bir alanın, kişinin, kurumun hesap da vermeyeceği, aynı zamanda şeffaf da olmayacağı son derece açıktır. Bu durumda adil olmaktan da, sorumlulukların yerine getirilmesinden de bahsetmek imkansızdır. Teorik açıdan bakıldığında, "denetimden kaçma" kurumsal yönetimin dört ilkesinin de çiğnenmesine neden olmaktadır. Krizlerin sadece denetimlerle önlenemeyeceği açıktır, ancak denetimsiz piyasaların da bizleri patlaması kaçınılmaz "balon"larla, "toksit varlıklar"la karşı karşıya bıraktığı da unutulmamalıdır.

Şirketlere kredi veren bankalar, müşterilerinin kurumsal ve iş ahlakına sahip olmalarını arzu ederken, kendileri etik dışılığın çok ötesinde suçlara imza atmaktadır. 2013 yılının son ayında Deutsche Bank'dan RBS'ye 6 banka ve finans kuruluşuna kartel oluşturup YenLibor ve Euribor'u manipüle etmekten 1.7 milyar euro ceza verilmiştir. Küresel kriz döneminde gerek ABD'de gerekse Avrupa Birliği'nde libor ve döviz kuru bağlantılı manipülasyonlar için telaffuz edilen cezaların miktarının 40 milyar doları aştığını belirtilmektedir. (Borsa Uzmanları Derneği Basın Bülteni, 2014) Küresel finansal krizin ve bu krizleri ortaya çıkan öncü krizlerin boyutları düşünüldüğünde, bu cezaların buzdağının sadece görünen yüzü olduğunu söylemek yanlış olmaz. Kurumsal yönetimin dört ilkesinden biri hesap verebilirlikse, ne kadar büyük olursa olsun her kurumun, otoritenin hatta devletlerin sorumlu oldukları paydaşlarına hesap verebilir hale getirilmeleri gerekmektedir.

Yukarıda belirtildiği gibi yaşanan kriz ne ilktir ne de son olacaktır. Ancak yapılabilecek olan bu tür krizlerin bunalıma dönüşmesinin engellenmesidir. Bu ise hem şirket hem de devlet bazında risklerin farkında olmak, riski erken saptayarak doğru değerlendirebilmek ve riski doğru yönetebilmek ile olur. Krizden çıkarılması gereken en önemli kurumsal yönetim derslerinden birisi budur.

# Küresel Kriz Sonrasında Cari Açık ve Kredi Hacmi Arasındaki İlişki: Türkiye Örneği

# Relationship between Current Account Deficit and Credit Volume after the Global Financial Crisis: The Case of Turkey

Asst. Prof. Dr. Sinem Yapar Saçık (Karamanoğlu Mehmetbey University, Turkey)
Ebubekir Karaçayır (Karamanoğlu Mehmetbey University, Turkey)

## Abstract

An important macroeconomic variable, current account deficit as percentage of gross domestic product is considered as an indicator of an economic crisis when it is above 5%. In the economies where current account deficit is a problem, source of current account deficit should be determined for the solution. In the case of an interaction between credit expansion and current account, policies using a credit mechanism can be applied to stabilize the current account balance. In order to determine the relationship between current account deficit and credit volume before and after the financial crisis, visual graphics based on data will be utilized. This paper analysis the cointegration, long and short run causality relationship between current account deficit and consumer credits for Turkey over the period 2004Q3-2013Q3. The results of Johansen cointegration test indicate a cointegration between these variables. The empirical results show that there is bidirectional long and short run casuality relationship among variables. After the financial crisis of 2008, the increase in credit expansion increased domestic consumption depending on imports causing deterioration in current account deficit. There are difficulties of low finance qualities of this current account deficit and the realization of structural transformation in favor of exports in short term. Targeting a continuing economic growth increases energy dependency and import of investment goods, so puts credit mechanism policies forward to fight with current account deficit. Limiting the credit volume more than necessary to reduce current account deficit can worsen the various macroeconomic variables.

## 1 Giriş

Önemli bir makro ekonomik değişken olan cari açık/GSYİH çoğu zaman %5 düzeyinin üzerinde olduğunda ekonomik kriz göstergesi olarak kabul edilmektedir. Cari açığın sorun olduğu ekonomilerde çözümüne yönelik, oluşan cari açıkların kaynağının saptanması gerekmektedir. Cari açık probleminin çözümüne yönelik olarak, bu problemin nedenlerinin ortaya konulması önemlidir. Literatürde cari açığı döviz kuru, reel faiz oranı, ekonomik büyüme ve kredi hacmi gibi birçok değişken ile ilişkilendiren çok sayıda çalışma vardır. Kredi genişlemesi ile cari işlemler arasında bir etkileşimin olması halinde cari işlemler dengesinin sağlanmasına yönelik kredi mekanizması politikaları uygulanabilmektedir.

Türkiye'nin de içinde olduğu birçok gelişmekte olan ülke ekonomisinde dışa açılma süreci sonrasında gerçekleşen ekonomik krizlerin öncesi ve sonrasında benzer ekonomik gelişmeler yaşanmaktadır. Kriz yılı öncesinde sermaye giriş ve kredi genişlemesi artarak, cari işlemler dengesi kötüleşmektedir. Kriz yıllarında ise, sermaye çıkışları ve kredi daralması yaşanarak cari işlemler dengesinde iyileşme gerçekleşmekte, kriz yılları sonrasında da kriz yılı öncesine göre benzer yapıya geri dönülmektedir. Küresel kriz sonrasında da, sermaye girişi ve kredi genişlemeleri yurtiçi talep kaynaklı ekonomik büyümeye bağlı olarak, cari işlemler dengesinde açıklara neden olmakta ve ekonomik kırılganlığı arttırmaktadır.

2008 küresel krizi sonrası Türkiye ekonomisi yurt içinde kolay ve ulaşılabilir kredi imkanları ile birlikte ekonomik büyüme sürecine girmiştir. Bu dönemde kredi genişlemesindeki artış ithalata bağımlı iç tüketimi arttırarak cari açığın artmasında etkili olmuştur. Yüksek cari açıkların ülkemizde yaşanan ekonomik krizlerde etkili olduğu kabul edilmektedir. Oluşan bu cari açıkların ise finansman kalitesinin düşük olması ve kısa dönemde dış ticarette yapısal dönüşümün ihracat lehine gerçekleşmesinin zorluğu bilinmektedir.

Ekonomik büyüme hedefleri doğrultusunda enerji bağımlılığı ve yatırım ve aramalı ithalatında artışın devam ediyor olması cari açıkla mücadele amacıyla kredi mekanizması politikalarını öne çıkarmıştır. Bankaların kredi hacminin gerekli ölçüde sınırlandırılmasına yönelik düzenlemeler, finansal kaynaklı olası ekonomik krizleri engelleyebileceği düşünülmektedir. Cari açığı azaltmak için kredi hacminin gereğinden daha çok daraltılması ise farklı makro ekonomik dengesizliklere neden olabilir. Piyasada egemen olan KOBİ'lere (Küçük ve Orta Ölçekli İşletmeler) sağlanan işletme kredilerini sınırlandıran politikalar, toplam üretimin azalmasına ve işsizliğin artmasına neden olabilir.

## 2   Literatür Taraması

Literatürde, cari açık ve kredi hacmi arasındaki ilişkiyi inceleyen bazı çalışmalar kronolojik sıra gözetilerek özetlenmiştir. Telatar (2011), çalışmasında Granger nedensellik testi ile krediler ve cari açık arasındaki ilişkiyi test etmiştir. Türkiye ekonomisinin incelendiği bu çalışmada 2003-I ile 2010-IV çeyrek dönemi kapsayan seriler kullanılmıştır. Çalışma sonucunda toplam kredilerden cari açığa doğru anlamlı bir nedensellik ilişkisine ulaşılamazken, tüketici kredilerinden cari açığa doğru pozitif bir ilişki bulgusuna ulaşılmıştır. Munzam karşılık oranlarının krediler açısından selektif bir yaklaşım ile uygulanarak, tüketici kredilerinin azaltılması çalışmanın önemli politik tavsiyelerindendir.

TCMB (2011), çalışmasında çeşitli grafik ve analizler kullanılarak özellikle küresel kriz sonrasında cari açık ve krediler arasındaki ilişki saptanmaya çalışılmıştır. Banka kredilerinin eğilim anketine de başvurulan bu çalışmada küresel kriz sonrasında cari açık ile tüketici kredileri içerisinde başta taşıt kredileri olmak üzere güçlü bir ilişkinin varlığı ifade edilmiştir. Togan ve Berument (2011), çalışmada VAR (Vektör Autoregressive) modeli çerçevesinde sermaye hareketleri, krediler ile cari işlemler dengesi arasındaki ilişkileri analiz etmiştir. 2010 yılı için cari işlemler dengesi/GSYİH'nın artmasında etkili olan temel değişkenin sermaye hareketleri olduğu bulgusuna ulaşılmıştır.

Özülke (2011), çalışmasında 2005-2011 yılları arasında cari açık ile tüketici kredileri arasındaki ilişkiyi araştırmıştır. 2010 ve 2011 yıllarında yüksek cari açıkların kredi genişlemesi veya tüketici kredisi genişlemesinden kaynaklı olduğunu söylemek için yeterli kaynağın olmadığı bulgusuna ulaşılmıştır. Ferrero (2012), çalışmada birçok gelişmiş ve gelişmekte olan ülkeler için kredi faiz oranları ve koşullarına göre değişen konut fiyatları ile cari açık arasındaki ilişkiyi ifade etmiştir.

Göçer, vd, (2013), çalışmalarında Türkiye'deki yurtiçi kredi hacmi ile cari işlemler açığı arasındaki ilişkiyi araştırmıştır. 1992-I ve 2012-III çeyrek dönemi kapsayan seriler kullanılmış olup Carrion-i Silvestre (2009) çoklu yapısal kırılmalı birim kök testi ve Maki (2012) çoklu yapısal kırılmalı eşbütünleşme yöntemine başvurulmuştur. Çalışma sonucunda kredi hacmi artışı ile cari işlemler açığı arasında pozitif ve istatistiki olarak anlamlı bir ilişkinin var olduğu tespit edilmiştir.

BDDK (2013), çalışmada 2002 -2012 yılları arasında çeyrek dönemli veri seti ile uygulama yapılmıştır. Çalışmada eş bütünleşme, nedensellik testleri ve Vektör hata düzeltme modeline başvurulmuştur. Çalışma sonucunda cari açık ile bireysel krediler arasında uzun dönemli ve ters yönlü bir ilişki saptanmıştır. Bireysel krediler içerisinde cari açıkla en güçlü ilişki kredi kartlarında yaşanırken bunu sırasıyla konut ve ihtiyaç kredileri izlemiştir. Aizenman, vd, (2013) çalışmalarında 2005 ve 2012 yılları arasında çeyrek dönemler itibariyle 36 ülke için gayrimenkul değerlenmesi, cari açık ve kredi büyümesi arasındaki ilişkiyi araştırmıştır. Çalışma, küresel kriz öncesi ve sonrasında incelenen ülkeler için gayrimenkul değer artışı, cari açık ve kredilerdeki büyüme (cari açık ve kredilerin GSYİH'e oranı) arasında pozitif bir ilişkinin varlığını desteklemektedir.

Ganioğlu (2013), çalışmada gelişmekte olan ve gelişmiş ülkelerde cari işlemler dengesizlikleri ve hızlı kredi genişlemeleri ile yaşanan finansal krizler arasındaki ilişkiyi araştırmıştır. Çalışmada panel logit veri tekniği kullanılarak, 1970-2008 dönemini kapsayan seriler kullanılmıştır. Hem gelişmiş ülkelerde hem de gelişmekte olan ülkelerde cari işlem dengesizlikleri ve hızlı kredi genişlemesinin finansal kriz olasılığını arttırma konusunda güçlü olduğu bulgusuna ulaşılmıştır.

## 3   Cari Açık ve Krediler İlişkisi

Türkiye'de önemli düzeylere ulaşan cari açığın yapısal kaynaklı olması ve ekonomik büyüme hedefleri nedeniyle kısa sürede çözülemeyeceği bilinmektedir. Yüksek faiz oranları nedeniyle sermaye girişinin yoğun olduğu dönemlerde TL' değerlenme dış ticaret açığını arttırmaktadır. Bu dönemlerde yapısal olarak var olan cari açık konjonktürel olarak da etkilenmektedir. Konjonktürel dalgalanmaların önüne geçilmesi makroekonomik dengelerin kötüleşmesini engellemek amacıyla önemlidir. Şekil-1'den anlaşılacağı üzere net açılan krediler ile cari açık arasında güçlü bir ilişkinin varlığı konjonktürel nedenlerden kaynaklı cari açığın sınırlandırılabilmesi için kredilerin önemli bir araç olduğuna işaret etmektedir. Kredi geri dönüşlerinin ideal düzeyde olması, ekonomik krize neden olan bozulmaların önlenmesi amacıyla kredi politikaları önemli gözükmektedir (Kara, vd, 2013).

Şekil-1 incelendiğinde net açılan krediler ve cari açık arasında ters yönlü paralel bir seyir söz konusudur. Ayrıca söz konusu eş anlı hareketin, net açılan tüketici kredileri ve enerjiden arındırılmış cari açık arasında da geçerli olduğu görülmektedir. Küresel krize yakın dönemde kredi genişlemesi ve cari açık hızlı bir şekilde artarken, küresel krizin yaşandığı yıl bu göstergelerde hızlı bir yön değiştirme, kredilerin azalma şoku ve cari işlemler dengesinde ciddi toparlanmalar gerçekleşmiştir. Küresel krizden hemen sonra kredi genişlemesi ve buna bağlı olarak cari işlemler dengesinde bozulmalar başlayarak, bu göstergeler küresel kriz öncesi döneme yakınsamıştır. 2010 yılı sonunda kredi genişlemesini sınırlandıran düzenlemeler cari açığın artışını kısa süreli olarak frenlemiş daha sonra ekonomik büyüme hedefleri doğrultusunda artan krediler cari açığın artmasında etkili olmuştur.
***Şekil 1****: Net Açılan Krediler ve Cari İşlemler Dengesi (Çeyrek Dönemler İtibariyle Yıllıklandırılmış)* ***Kaynak:***
***BDDK, TCMB, TUİK***

Toplam krediler içerisinde önemli bir paya sahip olan tüketici kredileri, bankalar tarafından kolay erişilebilir dış finansman kaynaklarına bağlı olarak artmaktadır. Yurt içi talepteki canlanma ve olumlu finansal süreç ile birlikte tüketici kredi talebinin, tüketici kredi arzı ile karşılanması tüketici kredi hacminde belirgin bir şekilde artış yaratmaktadır (Özlale, 2012). Kısa vadeli sermaye girişlerinin etkisinde değerlenen TL ise, tasarrufların azalmasında etkili olup tüketici kredisindeki genişleme ve düşük rekabet gücü kanalıyla ithalatın ve dolayısıyla cari açığın artmasında etkili olmuştur (Eşiyok, 2012).

***Şekil 2****: Tüketici Kredileri ve Cari İşlemler Dengesi (Çeyrek Dönemler İtibariyle Yıllıklandırılmış)* ***Kaynak:***
***TCMB, BDDK***

Tüketici kredileri bilindiği üzere geniş bir kitle tarafından talep edilmektedir. Tüketici kredilerinin düşük tutarlı ve piyasada bütün sektörlerde istihdam eden kişilerce talep edilmektedir. Bu durum, bankacılık sistemi için riskin geniş kitlelere yayılarak, kredi takibini azaltmakta, tüketici kredi arzını ise arttırmaktadır. Şekil-2'de tüketici kredilerinin genel olarak küresel kriz yılı haricinde artış eğiliminde olduğu görülmektedir. Tüketici kredilerindeki bu artışın hane halkı ve firmaların ithalata bağlı tüketimlerini arttığı ve yurtiçi özel tasarrufların azalmasında etkili olarak cari açığı arttırıcı etkisi bulunmaktadır.

Cari açığın fazla verdiği dönemlerde, iç tasarruf birkimini arttırmak ve tüketimi azaltmak için özellikle tüketici kredilerinde kredi koşulları zorlaştırılmaktadır. Kredi kartı harcaması, ihtiyaç, taşıt ve konut kredilerini içine alan tüketici kredilerinde uygulanan bu politikaların yansıması hanehalkı ve firmalara üzerinde çok yönlü olmaktadır.
**Şekil 3**: *Net Açılan Konut Kredisi ve Cari Açık/ GSYİH (Çeyrek Dönemler İtibariyle Yıllıklandırılmış)* **Kaynak: BDDK, OECD**

Şekil-3'te görüldüğü üzere tüketici kredileri içerisinde önemli paya sahip konut kredileri, cari açık /GSYİH ile özellikle küresel kriz sonrası yıllarda paralel bir seyir izlemiştir. Küresel krizden sonra, faiz indirimleri ve konut kredilerini teşvik edici düzenlemeler, özel kesim tasarruf yatırım açığının artmasına neden olarak cari açık/ GSYİH'da artış meydana getirmektedir (Eğilmez, 2013). Kredi tutarının teminat olarak alınan konutun değerine oranı %75'e yükseltildiği 2010 yılı sonrasında ise konut kredilerinde yaşanan düşüşün cari işlemler dengesi/GSYİH'nın düşmesinde etkili olduğu görülmektedir (BDDK, 2014).

**Şekil 4:** *Net Açılan Taşıt Kredisi ve Cari Açık/ GSYİH (Çeyrek Dönemler İtibariyle Yıllıklandırılmış)* **Kaynak: BDDK, OECD**

Şekil 4'te tüketici kredilerinde içerisinde yer alan taşıt kredileri ile cari açık /GSYİH arasında paralel bir seyir gözlemlenmektedir. Taşıt kredileri ithalat içerisinde önemli paya ulaşan otomotiv sektörüne olan talebi doğrudan etkileyerek cari açık üzerinde etkili olmaktadır. Ayrıca taşıt kredilerinde yaşanan artış konut kredilerinde olduğu gibi özel kesim tasarruf açığına neden olarak cari açık/ GSYİH'nin artmasında etkili olduğu görülmektedir.

Şekil-5'te görüldüğü üzere küresel kriz sonrasında net açılan işletme kredilerinde hızlı bir artış yaşanırken, cari açık/GSYİH'de ise kötüleşme görülmektedir. 2011 yılının ikinci çeyreğinde incelenen dönem içerisinde cari açık/GSYİH'nın en yüksek olması gerekiyor (%10), net açılan işletme kredilerinin ise en yüksek (33 milyar $) olduğu görülmektedir. Bu durum Şekil-3 ve Şekil-4'te tüketici kredileri içinde de benzer olduğu görülmektedir. Net açılan konut kredisi (11 milyar $), net açılan taşıt kredisi (1.2 milyar $) incelenen dönem içerisinde 2011 yılının ikinci çeyreğinde yüksek değerlere ulaştığı görülmektedir. Finansal istikrarın sağlanarak makroekonomik değişkenlerin kötüleşmesini engellemek amacıyla TCMB, kredilerin sınırlandırılmasına yönelik olarak para politikalarını uygulamak durumunda kalmıştır (TCMB, 2012).

Türkiye'de cari açığın nedenleri bilindiği üzere dışa açılma döneminden itibaren ithalatın ihracata göre oldukça hızlı artmasından kaynaklanmaktadır. Türkiye ekonomisinde özellikle 2003 yılından sonra ithal sanayi malları yerli aramalı mallarına ikame edilerek, sanayi üretimi ithalata bağımlı hale gelmiştir. (Yeldan, 2010). Toplam ithalatın hacminin içerisinde aramalı ithalatının ağırlıkta olması, ithalattaki artışın girdi talebinden

olduğunu göstermektedir. İhracat içerisinde ise ithalat girdi oranlarının yüksek olması bu dönemde ekonomik büyümenin aramalı ithalatı ile bağlantısını göstermektedir (Telatar ve Terzi, 2009). İşletme kredileri kullanarak ithal aramalı talep eden firmalar ise dolaylı olarak ekonomik büyümeye katkı yapmaktadır.

***Şekil 5:*** *Net Açılan İşletme Kredisi ve Cari Açık/ GSYİH (Çeyrek Dönemler İtibariyle Yıllıklandırılmış)* ***Kaynak: BDDK, OECD***

Cari açığın işletme kredi hacmi ile gereğinden fazla sınırlandıran politikaların uygulanması durumunda sermaye kaynaklarının üretim faaliyetlerine aktarılması sorunu yaşanacaktır. Dış ticaret yapısından ötürü ise işsizlik, üretimin azalması gibi ekonomide bazı dengesizlikler oluşabilecektir. Bu nedenle cari açıkları azaltmak için işletme kredilerini sınırlamaya yönelik politikalar yerine üretim yapısını değiştiren, ithal girdi bağımlılığını azaltan yöntem ve teşvikler daha rasyoneldir.

Küresel ekonomik krizin ardından, Türkiye'nin de üye olduğu Basel Bankacılık Denetim Komitesince, bankaların hızlı kredi genişlemesinin önüne geçebilmek amacıyla, 2010 yılında koruyucu ve sermaye tamponu uygulamalarını da içine alan Basel III hedefleri belirlenmiştir (TCMB, 2011). Sermaye tamponu uygulamasını tesis eden Basel III kriterlerinin uygulamasının küresel ekonomiye etkilerini en aza indirebilmek amacıyla uzun bir geçiş süreci planlanmaktadır. Türkiye'de Basel III'e geçiş süreci 2013 yılında başlamış olup, tam anlamıyla uygulanması 2019 yılına kadar sürmesi beklenmetedir (BDDK, 2013).

Basel III kriterleri bankacılık kredileri üzerinde doğrudan etkili olurken kredi mekanizması ile cari işlemler dengesi üzerinde de dolaylı olarak etkili olması beklenmektedir. Kredi kullanabilmek için firmalar şeffaf yönetim anlayışını belirleyerek, kayıt dışından uzaklaşıp sermaye yeterliliğini arttırmak durumunda kalacaklardır. Bankalar ise firmalar arasında seçim yaparak, istenilen kriterleri sağlayan firmalara düşük maliyetli kredi imkanı tanıyacaktır (Kaderli, vd, 2013). Kredi arz ve talebinde bu şekilde dengenin sağlanması özellikle işletme kredi hacminin kısıtlanmasına yönelik politikaların oluşturduğu dengesizliklere göre piyasada daha çok etkinlik sağlayacaktır.

## 4   Veri ve Metodoloji

Cari açık/ GSYİH (CA) ve Net açılan Tüketici Kredileri/ GSYİH (TUK) modelde kullanılan değişkenlerdir. Türkiye ekonomisinde 2004III-2013III çeyrek dönemlik veri seti kullanılan bu çalışmada her iki değişken için census yöntemi ile mevsimsellikten arındırma işlemi yapılmıştır. CA değişkeni OECD, TUK değişkeni ise BDDK ve TCMB verilerinden alınmıştır.

Türkiye ekonomisinde cari açık ile toplam krediler içerisinde önemli paya sahip olan tüketici kredileri arasındaki ilişkinin sınanması amacıyla aşağıdaki ekonometrik metodlar kullanılmıştır.

- Birim Kök Testi
- Johansen Eşbütünleşme Testi
- Vektör Hata Düzeltme Modeline Dayalı Granger Nedensellik Analizi

## 5   Ampirik Bulgular

Zaman serilerinde sahte regresyon ihtimaline karşı birim kök testi yapılmaktadır. Bu nedenle Augmented Dickey- Fuller (ADF) ve Phillips-Perron (PP) testleri uygulanarak sonuçlar Tablo 1'de özetlenmiştir.

| Değişkenler | ADF | | | | PP | | | |
|---|---|---|---|---|---|---|---|---|
| | Seviye | | I. Fark | | Seviye | | I. Fark | |
| | Sabit | Sabit ve Trend | Sabit | Sabit ve Trend | Sabit | Sabit ve Trend | Sabit | Sabit ve Trend |
| CA | -1.6031 | -3.1466 (2) | -4.9660* | -4.8709* | -1.9235(2) | -2.3082 (2) | -4.9599 (2)* | -4.8709* |
| TUK | -2.6602 | -2.7783 | -6.6870* | -6.6017* | -2.7046(1) | -2.8316 (1) | -6.6822 (1)* | -6.5975 (1)* |
| * %1 düzeyinde istatistiksel olarak anlamlılığı ifade etmektedir. | | | | | | | | |

***Tablo 1:*** *Birim Kök Testi Sonuçları*

ADF ve PP testinde CA ve TUK değişkenleri düzey değerlerinde durağan çıkmazken, birinci farkı alındıktan sonra durağan hale gelmiştir. Tüm değişkenlerin birinci derecede durağan olması eşbütünleşme testinin uygulanabilmesine imkan vermektedir. Değişkenler arasında uzun dönem ilişkinin sınanması, eşbütünleşme testinin uygulanmasını gerektirmektedir. Eşbütünleşme testine yönelik olarak öncelikle Tablo 2'de optimum gecikme uzunluğu seçilerek VAR modeli tahmin edilmiştir.

| Gecikme | LogL | LR | FPE | AIC | SC | HQ |
|---|---|---|---|---|---|---|
| 0 | 198.0402 | NA | 4.68E-08 | -11.2023 | -11.11342 | -11.17162 |
| 1 | 236.0056 | 69.42246 | 6.72E-09 | -13.14318 | -12.87655 | -13.05114 |
| 2 | 243.9265 | 13.57854* | 5.39e-09* | -13.36723* | -12.92284* | -13.21382* |
| 3 | 246.5301 | 4.16576 | 5.88E-09 | -13.28743 | -12.66529 | -13.07267 |
| 4 | 251.6264 | 7.571688 | 5.59E-09 | -13.35008 | -12.55019 | -13.07396 |

* Belirlenen uygun gecikme uzunluğu

***Tablo 2:*** *Var Modeli Gecikme Uzunluğu Belirleme Kriter Sonuçları*

LR (Likelihood Ratio), FPE (Final Prediction Error), AIC (Akaike Information Criteria), SC (Schwarz), HQ (Hannan Quinn) kriterlerine göre optimum gecikme uzunluğu 2 olarak belirlenmiştir. CA ve TUK arasında uzun dönemli ilişkinin varlığını tespit etmek için Johansen eşbütünleşme testi kullanılmış olup test sonuçları Tablo 3'te sunulmuştur.

| Hipotez | Özdeğerler | İz İstatistiği | İz Kritik Değer (%5) | Maximum özdeğer istatistiği | Max Kritik Değer (%5) |
|---|---|---|---|---|---|
| $H_0$:r=0 | 0.500661 | 32.48285 | 20.26184 | 25.69536 | 15.8921 |
| $H_0$: r≤1 | 0.167603 | 6.787491 | 9.164546 | 6.787491 | 9.164546 |
| r: Eşbütünleşme vektör sayısını ifade etmektedir | | | | | |

***Tablo 3:*** *Johansen Eşbütünleşme Test Sonuçları*

Johansen eşbütünleşme testi sonucuna göre, en fazla bir eşbütünleşme vektörü olduğunu öngören hipotez %5 anlamlılık düzeyinde, iz istatistiği ve maksimum özdeğer istatistiğinin kritik değerlerden küçük çıkması nedeniyle reddedilememektedir. Bu sonuç uzun dönemde serilerin birlikte hareket ettiklerine yönelik bulguya işaret etmektedir. Değişkenler arasında, CA değişkenine göre normalize edilmiş eşbütünleşme ilişkisinden elde edilen paremetre tahminleri Tablo 4'te sunulmuştur.

| CA=0.0348+ 4.1981TUK |
|---|
| (0.0115)    (0.4922) |
| Parantez içindeki değerler standart hatalardır |

***Tablo 4:*** *Eşbütünleşme ilişkisinin tahmini*

| Bağımlı değişken | Kısa dönem nedensellik | | Uzun dönem nedensellik |
|---|---|---|---|
| | Açıklayıcı değişken | | |
| | D(CA) | D(TUK) | Hata Düzeltme Katsayısı ECT(-1) |
| D(CA) | | 3.634897 [0.0566]*** | -0.121549 (-1.88308)*** |
| D(TUK) | 4.743607 [0.0294]** | | 0.174728 (2.91317)* |

t değerleri parantez içerisinde, olasılık değerleri köşeli parantez içerisinde yer almaktadır. *,**,** sırasıyla %1, %5 ,%10 anlamlılık düzeyinde nedensellik olduğunu göstermektedir.

***Tablo 5***: *VECM modeline dayalı Granger nedensellik testi sonuçları*

Elde edilen sonuçlara göre TUK değişkeninin işareti pozitif ve % 1düzeyinde istatistiksel olarak anlamlıdır. Uzun dönemde Türkiye'de tüketici kredilerindeki artışın cari açığın artmasında etkili olduğu bulgusuna

ulaşılmıştır. TUK değişkeninde 1 birimlik artış CA değişkenini ortalama olarak 4.2 birim arttırdığı görülmektedir. Değişkenler arasında uzun dönemli bir ilişkinin bulunması neticesinde, değişkenler arasında nedenselliğin yönü ve vektör hata düzeltme modeli (VECM) oluşturtulabilmektedir. Eşbütünleşik serilerde, seriler arasında nedensellik analizinin VECM modeli ile yapılması uygun olup, VECM modeline dayalı Granger nedensellik test sonuçları tablo 5'te sunulmuştur.

Granger nedensellik testi sonucunda kısa dönemde nedensellik ilişkisinin, %5 anlamlılık düzeyinde CA değişkeninden TUK değişkenine ve %10 anlamlılık düzeyinde TUK değişkeninden CA değişkenine doğru olduğu tespit edilmiştir. Kısa dönemde değişkenler arasında çift yönlü bir nedensellik ilişkisi vardır. Uzun dönemde ise değişkenlerin hata düzeltme katsayılarının istatistiki olarak anlamlı olması uzun dönemde değişkenler arasında çift yönlü nedensellik ilişkisinin var olduğu anlamına gelmektedir. Türkiye'de uzun ve kısa dönemde çift taraflı nedensellik ilişkisinin tespiti, tüketici kredilerindeki artışın cari açığı artırıcı etkisi olduğu gibi, cari açıktaki artışında tüketici kredilerini arttırıcı etkide bulunduğu anlamına gelmektedir.

## 6 Sonuç

Çalışmada Türkiye ekonomisinde krediler ile cari açığın paralel seyri farklı grafiklerle incelenmiştir. Çalışmanın uygulama bölümünde ise cari açık ile toplam krediler içerisinde önemli paya sahip tüketici kredileri arasındaki ilişki, Türkiye ekonomisi için 2004III-2013III çeyrek dönemlik seriler kullanılarak sınanmıştır. Johansen eşbütünleşme testine göre cari açık ile tüketici kredilerinin uzun dönemde birlikte hareket ettikleri bulgusuna ulaşılmıştır. Eşbütünleşik bulunan bu değişkenler arasında nedensellik yönünü bulmak için yapılan vektör hata düzeltme testi ve bu teste bağlı granger testleri sonucunda değişkenler arasında kısa ve uzun dönemde çift yönlü nedensellik ilişkisi tespit edilmiştir.

Cari açık ile kredi hacmi arasındaki ilişkinin varlığı, cari açık gibi önemli bir sorunun çözümünde sadece kredi hacminin azaltılması politikasının etkili olacağı anlamına gelmemelidir. Yapısal nedenlerle var olan cari açık konjonktürel nedenlerden dolayı arttığı zaman finansal istikrarsızlıklara neden olarak, makro ekonomik dengelerde bozucu etki yaratmaktadır. Bu nedenle cari açığın konjonktürel nedenlerle çözümüne yönelik olarak kredi politikası kullanılırken, yapısal bozukluklar için ise üretimde teknolojiyle dönüşümün yaşandığı katma değer yaratan sektörlere yatırım yapılmalıdır.

Konjonktürel nedenlerde artan cari açığın çözümüne yönelik, ülke içerisinde bankaların dönemselliğe bağlı olarak kullanacakları ilave sermaye tamponu, likidite yeterliliği ve risk bazlı olmayan kaldıraç uygulamalarını içeren Basel III'ün uygulanması ise son derece önemlidir. Bu kriterlerin uygulanması, küresel ticarete zarar vermeden ilgili yasal mevzuatın tamamlanması beklenmelidir. Basel I ve II'ne göre daha kapsamlı olan Basel III'ün mevcut ticari bankalarının yönetim anlayışlarının şekillenmesi ile birlikte finansal piyasalarda olumlu etki oluşturacağı düşünülmektedir.

Parasal otoriteler ve düzenleyici kuruluşlarca, ekonomik büyümenin iç talebe bağlı olduğu dönemlerde yoğun tüketime konu olan ürünlerde taksit sayısının azaltılmasının cari açıkta olumlu etkisi olacağı düşünülmektedir. Kredilerin sınırlandırılması, iç talebi azaltarak üretim ve tüketimi dengelemektedir. Kredi hacminin daraltılması ile iç tasarrufların arttırılmasının cari açıkların kapatılmasında etkili olacağı beklenmektedir.

Kredi hacmin sınırlandırılması uygulanmasının genel olarak olumlu sonuçlar üretebileceğinin yanında bir takım olumsuz sonuçları da beraberinde getireceği unutulmamalıdır. Tüketici kredilerin sınırlandırılmasının sektörde egemen olan KOBİ gelirleri ve buna bağlı üretim ve işsizliğe neden olarak bir takım dengesizlikler yaratabilir. Tüketici kredilerinin kısıtlanmasın bir diğer olumsuz etkisi ise ülke içerisinde tüketim alışkanlığının devam ediyor olmasıdır. Kredi sınırlandırılması nedeniyle tüketicilerin alışkanlıklarından vazgeçmemesi, üreticilerin ise satışlarını arttırmak istemeleri, geleneksel yöntemlerin ticarette ödeme aracı olarak kullanılmasında etkili olacaktır. Geleneksel ödeme araçlarının daha çok tercih edilmesi sonucunda riskin firmalar tarafından üstleneceği, bankaların aracı durumlarını kaybedeceği unutulmamalıdır.

Türkiye'de kredi kartı kullanıcı ve pos işyeri sayıları incelendiğinde, kredi kartının piyasada yoğun şekilde tercih edilen bir ödeme aracı olduğu görülmektedir. Kredi kartı kullanımını azaltma yönündeki uygulamalar tüketim alışkanlığı nedeniyle harcamaların azalmayarak çek, senet gibi geleneksel ödeme araçlarının tercihini arttıracaktır. Geleneksel ödeme araçlarının yaygın olarak kullanılması sonucunda piyasada bir takım belirsizlik ve olumsuz riskler oluşabilecektir.

Cari açık ve kredi genişlemesi finansal krizler ile yakından ilgili olup takip edilmesi gereken iki önemli göstergedir. Cari açık ile cari açığın kontrolü için uygulanacak kredi ve kredi çeşidi politikası öncesinde ekonomik kazanç ve kayıplar dikkate alınarak ayrıntılı ve geniş kapsamlı politik analizler yapılmalıdır.

## Abstract

Financial liberalization politics are utilized to cope with the economic dimension of globalization. They had important roles in occurrence and outspread of financial crises; and economic crises were triggered by the spread of financial crises to real economy. Because of financial liberalization; financial sector grew disproportionately developing faster than real economy. As the financial tools and methods got diversified, the sanction power of national regulations weakened due to the global dimension and a functional auditing mechanism could not be established. This enabled creative accounting practices and financial reporting manipulations and caused financial reports to become misleading and decreased their reliability. It is claimed by many researchers, that financial reporting again played an important role in the occurrence and spreading of the 2008 crisis, despite the fundamental amendments laid down with IFRS in 2003 and the continual updates. This study, which is displaying the characteristic features of a qualitative research, is carried out mainly by literature review. A wide and comprehensive investigation is meticulously executed on IFRS versions and drafts, the related legislation and regulations and the results of the some important researches about the allied subjects. The role of financial reports in occurrence of financial crises has been displayed. The effects of IFRS on financial reports are explored especially in terms of realism, transparency and reliability. The adequacies of the regulations are discussed, the risky points are spotlighted and proposals are put forward to minimize these risks in accordance with the principals of corporate governance.

## 1 Giriş

Küreselleşen pazarların yarattığı ortama uyum sağlanabilmesi için gelişmiş ve gelişen ülke ekonomilerinde 1990'lı yılların ortalarından itibaren finansal serbestleşme politikalarının uygulanması yaygınlaşmıştır. Bu politikalar finans sektörünün etkinliğini artırmıştır. Mevcut finansal enstrümanların yanında türev ürünleri ve yeni nesil finansal enstrümanların kullanımı yoğunlaşmıştır. Finansal enstrümanların uluslararası pazarlarda işlem görmesi ve finans sektörünün küresel doğası nedeniyle ulusal regülasyonlar; düzenleme, denetim, kontrol ve yaptırım açılarından yetersiz kalmıştır. Muhasebe ve finansal raporlama açısından yani teknik anlamda bir standardizasyon yoksunluğu ise hataların engellenememesine ve hilelerin kolayca yapılabilmesine yol açmış, 2000'li yıllara finansal skandallarla girilmiştir. Bu skandallar, ülkelerin kendi yasal ve teknik düzenlemelerini sorgulamalarına neden olurken uluslararası standartların gerekliliğine olan inancı da kuvvetlendirmiştir (Parlakkaya ve Çetin, 2010; Erol, 2008; Grant ve Visconti, 2006; Melis, 2005a).

Uluslararası uyumsuzlukların giderilerek muhasebe bilgileri ve finansal raporların okunmasında yanlış anlaşılmaların önüne geçilebilmesi, yaratıcı muhasebe uygulamaları ve finansal tablo manipülasyonları yoluyla yapılan hilelerin engellenebilmesi, böylelikle piyasaların güvenliğinin ve yatırımcıların haklarının korunabilmesi amacıyla hükümetler ve uluslararası birliklerin desteğiyle meslek örgütleri tarafından standardizasyon çalışmaları yapılmıştır. Bu çabalar sonucunda 2001'de Uluslararası Muhasebe Standartları (UMS) ve 2003 yılında da Uluslararası Finansal Raporlama Standartları (UFRS) yayınlanmış ve gelişmeler paralelinde ihtiyaç duyuldukça güncellenmiştir (IFRS, 2014; Özyürek, 2012; Karacan ve Güngör, 2008; Aksoy, 2005a).

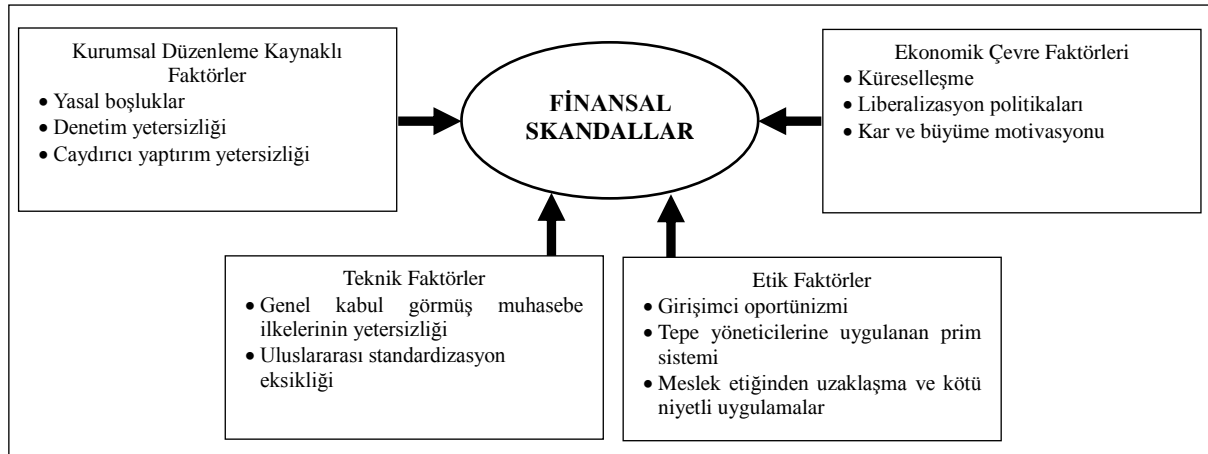
Pek çok ülke tarafından genel kabul görerek uygulanan ve sürekli güncellenen UFRS'nin varlığına rağmen 2008 yılında finansal raporlama manipülasyonu temeline dayanan skandallar ortaya çıkmış; bu skandallar kısa zamanda finans sektörünün tamamını etkisi altına alarak önce bir finansal krize neden olmuş, ardından da reel sektöre yansıyarak ekonomik krizin oluşmasında büyük rol oynamıştır. Sektörler arası bağlar ve küresel bağımlılık gibi faktörler yayılma ve yansıma sürecinde etki sahibi olmuşlardır (Gökgöz, 2012; Er, 2011; Syllignakis ve Kouretas, 2011; Can, 2010; Parlakkaya ve Çetin, 2010; Akgüç, 2009).

Bu araştırmanın ilk adımında finansal raporlama ile finansal skandallar ve finansal krizler arasındaki ilişkinin netleştirilebilmesi amacıyla finansal raporlara karşı gelişen güvensizliğin sebepleri ortaya konulmuştur. Ardından UFRS ile getirilen düzenlemeler ve yenilikler özetlenmiş; 2008 finansal krizi üzerinden bunların yeterlilikleri

sorgulanmıştır. Daha sonra kurumsal yönetim anlayışının finansal raporlamayı ele alışı irdelenerek finansal raporların güvenilirliğinin artırılmasında kurumsal yönetim temelli bazı öneriler sunulmuştur.

## 2 Finansal Raporlara Karşı Güvensizliğin Nedenleri: Finansal Skandallar

Yeni milenyuma finansal skandallarla girildiği söylenebilir. ABD'de Enron, Arthur Andersen, WorldCom, Global Crossing, Adelphia, Pasific Gas, Kmart Corp ve NTL; Avrupa'da Parmalat ve Ahold; uzak doğuda Yanguanxia gibi skandallar 2001-2003 arasında finans dünyasının gündemini meşgul etmiş, çok büyük maddi zararlara yol açmıştır (Dinç ve Varıcı, 2012; Gacar, 2012; Kayacan, 2006). Birbiri ardına yaşanan skandalların temel sorumluları olarak işletmelerin çoğunluk hisselerine sahip hissedarlar ve tepe yöneticileri öne çıkmaktadır. Oportünist tutumlarla kazançlarını nasıl olursa olsun maksimize etme peşinde koşan sermaye sahipleri ile finansal başarı odaklı teşvik ve prim sistemi altında çalışan tepe yöneticileri; yasal boşluklar, genel kabul görmüş muhasebe ve finansal raporlama ilkelerindeki muğlaklıklar ile standardizasyon sorunları ve denetimdeki zayıflıklardan yararlanarak yasa ve etik dışı davranmışlardır (Uysal, 2004; Buchanan ve Yang, 2005; Özbirecikli, 2006; Kula vd, 2008; Atmaca, 2012; Gökgöz, 2012). Skandalların ortak noktaları; bilinçli yapılan muhasebe hileleriyle finansal tabloların gerçekçilikten uzaklaştırılmalarıdır (Dalğar ve Pekin, 2011; Erol, 2008). Skandalların sonuçları, bağımsız denetim ve derecelendirme kurumlarının rolleri yüzünden finans sektörünün tümünü etkilemiş, finansal raporların güvenilirliğini derinden sarsmıştır (Aksoy, 2005b; Özbirecikli, 2006; Arı, 2008; Uzay ve Gönen, 2010; Süer, 2003). Skandalların oluşmasında pay sahibi faktörler Şekil 1'de gösterilmektedir.



***Şekil 1.*** *Finansal Skandallarda Pay Sahibi Faktörler*

2000'li yılların başındaki skandalların nedenleri ve yapılan usulsüzlükler birbirine benzemektedir. Genellikle borçların olduğundan az gösterilmesi ile hâsılatların, gelirlerin, FVÖK'nın, varlıkların, özkaynakların şişirilmesi ve aktifleştirilen giderlerin olduğundan daha yüksek değerlerle kaydedilmesi gibi yöntemler kullanılmıştır (Grant ve Visconti, 2006). Skandallarda adı geçen işletmeler Özel Amaçlı Girişimler (ÖAG) vasıtasıyla örgütsel ve finansal yapılarını karmaşıklaştırmışladır. Bu karmaşık yapı iz sürülmesini engelleyerek; finansal tabloların makyajlanmasında, usulsüz bazı ilişkili taraf işlemlerinin gerçekleştirilmesinde ve offshore eylemlerinde kolaylık sağlamıştır (Dinç ve Varıcı, 2012; Gacar, 2012; Melis, 2005a; Süer, 2003).

İlk skandal ABD'de yaşanan Enron vakasıdır. Fırsatları değerlendirmek isteyen Enron, çok sayıda ÖAG kurarak esas faaliyet alanını genişletmiş, tüm ABD'ye ve bazı Avrupa ülkelerine yayılmıştır. Firma finansal raporlamasında yasadaki boşlukları değerlendirerek görünürde yasa dışına çıkmadan sadece etiğe aykırı yöntemlere başvurmuş, bazen de yasa dışı yöntemleri gizlice kullanmıştır. İlişkili taraf işlemleri gerçekleştirmiş, muhasebe hileleriyle varlık-kaynak yapısını olduğundan daha güçlü, faaliyet sonuçlarını daha karlı göstermiştir. Hisse senetlerinin değeri çok yükselmiş, tepe yöneticileri ellerindeki senetleri yüksek fiyatlarla satarak büyük karlar elde etmişlerdir. Bu satışların ardından fiyatlar düşmüş, aslında finansal açıdan zaten batık durumdaki olan şirket iflasını açıklamıştır. Bu durum bazı işlemler karşılığında kendilerine usulsüzce verilen hisse senetlerine sahip çalışanlar ve diğer azınlık hissedarlar için felaketle sonuçlanmıştır. Enron'un bağımsız denetimini gerçekleştiren Arthur Andersen adlı denetim kurumunun tüm süreçteki usulsüzlüklerden haberdar olduğunun, hatta yardım ettiğinin ortaya çıkması ise skandalın boyutunu derinleştirmiş ve etkilerini kuvvetlendirmiştir (Saltoğlu, 2003; Atmaca, 2012; Dinç ve Varıcı, 2012; Gacar, 2012; Aksoy, 2005a; Süer, 2003).

Diğer bir meşhur skandal ise; bir Avrupa Birliği (AB) ülkesi İtalya'da 2003 sonunda açığa çıkan Parmalat olayıdır. Parmalat ulusal bir süt ve gıda üreticisi olarak faaliyete başlamış, zamanla ÖAG'ler kurarak 30'dan fazla ülkede çeşitlendirilmiş gıda pazarlayıcısı konumuna gelmiştir. Kurucu aile baştan beri yönetim ve denetim kurulu üyeliklerine, yakın akrabalık bağları bulunan kişileri getirerek şirket kontrolünde mutlak hakimiyet ve gizlilik sağlamıştır. Şirket aşırı borçlanmış fakat ÖAG'lerin sağladığı iz sürmeyi zorlaştıran karmaşık yapı ve

bazı finansal tablo manipülasyonları sayesinde kaynak yapısındaki riskleri ve varlık yapısındaki değişimleri gizlemiştir. Özellikle de offshore işlemleriyle firmanın içi mali anlamda boşaltılmıştır. Vadesi gelen bonoların ödenememesi ve var olduğu beyan edilen mevduatın ilgili banka tarafından yalanlanması sonucunda firma 2003 Aralık ayında iflasını açıklamıştır. Azınlık hissedarlar ve alacaklılar için büyük bir yıkıma uğrarken çoğunluk hissedarlar servetlerini artırmışlardır. Soruşturma derinleştikçe şirketin 1984'ten beri finansal tablo manipülasyonlarına başvurduğu ve aslında 1998'den beri fiilen iflas etmiş olduğu kanıtlanmıştır. Ayrıca Parmalat'ın bağımsız denetim işlemlerini yürüten denetçilere geçerli ve tutarlı bilgiler sunmadığı, denetçi firmaların da gerekli özeni göstermedikleri belirlenmiştir (Buchanan ve Yang, 2005; Melis, 2005a; Melis, 2005b; Göçen, 2010; Dalğar ve Pekin; 2011; Atmaca, 2012; Güneş vd, 2012).

ABD ve Avrupa'nın yanı sıra uzak doğu ülkelerinde yaşanan olaylar, finansal skandallar sorununu küresel boyuta taşımıştır. Finansal raporların gerçekçiliği hakkındaki şüpheler güçlenerek güvensizliğe dönüşmüştür. Bağımsız denetim kurumlarının skandallardaki etkin rolleri ortaya çıkmış ve bunlar şirketlerin tepe yönetimleriyle birlikte temel sorumlular olarak suçlanmışlardır. Denetime karşı güvenin de azalmasıyla finans sektörü ve finansal sistemin tamamının zan altında kaldığı ileri sürülebilir. Ayrıca küresel faaliyet düzeylerine rağmen muhasebe bilgileri ve finansal raporların ülkelere göre farklı yasal çerçeve ve standartlara tabi olmasının uluslararası ticarette karışıklıklara ve yanlış anlaşılmalara yol açtığı yönündeki tartışma şiddetlenmiş; bu sıkıntıların giderilmesi ihtiyacı belirginleşmiştir. Bu ihtiyaç ve skandallar, uluslararası muhasebe ve finansal raporlama standartlarının gerekliliğine olan inancı güçlendirerek bu konuda yapılan çalışmalara karşı ilgi ve katılımcılığı artırmıştır (Atmaca, 2012; Gacar, 2012; Gökgöz, 2012; Dalğar ve Pekin, 2011; Dinç ve Varıcı, 2012; Er, 2011; Uzay ve Gönen, 2010; Erol, 2008; Karacan ve Güngör, 2008; Poroy Arsoy, 2008; Aksoy, 2005a).

## 3 Skandallar Sonrasında Yaşanan Gelişmeler: 2001–2008 Arası Dönem

İşletmeler, sektörel örgütler, mesleki kuruluşlar ve hükümetler skandalların temel kaynaklarını ortadan kaldırmak için kurumsal yönetim anlayışı, yasal düzenlemeler ve standardizasyon odaklı çabalar içine girmişlerdir. Skandalların oluşmasında kötü şirket yönetiminin büyük payı nedeniyle "Kurumsal Yönetim" popülarite kazanmıştır. Kurumsal yönetimin benimsetilebilmesi ve boşlukların giderilebilmesi için mevcut yasalar güncellenmiş, yeni yasalar çıkarılmıştır ve uygulama standardizasyonuna yönelik adımlar atılmıştır.

### 3.1 Kurumsal Yönetim

Kurumsal yönetim, işletmenin iç ve dış çevredeki tüm paydaşlarıyla ilişkilerini eşitlik-adillik, şeffaflık, hesap verilebilirlik ve sorumluluk ilkeleri temelinde kapsamlı biçimde düzenlemektedir. İlk amacı şirket ortaklarının haklarının korunmasıyla ilgilidir. Üst düzey yöneticilerle çoğunluk hissedarların, küçük pay sahiplerini ve yatırımcıları şirketin durumu ve değeri konusunda aldatmalarını veya yanlış yönlendirmelerini engelleyerek güvenilir bilgiler üretilmesini amaçlar. İkinci amacı finansal performans odaklı teşvik ve prim sistemleri uygulanan tepe yöneticilerinin yanlış yöne sapmalarının engellenmesidir. Kişisel mali amaçlarını usulsüz biçimde doğrudan gerçekleştirmeye çalışmak yerine; şirket değerini maksimize ederek dolaylı yoldan gerçekleştirmeleri yönünde teşvik eder (Poroy Arsoy, 2008; Gökgöz, 2012). Türkiye Kurumsal Yönetim Derneği'ne (TKYD) göre kurumsal yönetim; şirketlerin finansal kaynaklar ve insan kaynakları için cazip hale gelmelerine, performanslarını etkinleştirmelerine, hedef ve amaçlarına ulaşmalarına, yasal gereklilikleri yerine getirmelerine ve sosyal beklentileri tatmin etmelerine yönelik yasalar ve diğer mevzuatla gönüllü özel sektör inisiyatiflerini içeren bir kavramdır (Dalğar ve Pekin, 2011).

Kurumsal yönetimin dört temelinden birincisi eşitliktir. Paydaşlara eşit davranılmadığı görüşü güven ve prestij kaybına yol açarak işletmeyi destek ve ilgiden mahrum eder. Bu ilke çoğunluk hissedarların kayırılmaması; tüm paydaşlara eşit muamele yapılmasıdır (Kayacan, 2006; Pamukçu, 2011). Şeffaflık ilkesi; ticari sırlar dışındaki bilgilerin en düşük maliyetle, zamanında, doğru, tam, erişilebilir, anlaşılabilir ve yorumlanabilir biçimde kamuya sunulmasıdır. İşletmenin hissedarlık yapısı, yönetimi ve faaliyet sonuçlarıyla ilgili güvenilir ve kıyaslanabilir bilgiler sunulması işletme değerini oluşturan unsurlardan biridir. İşletmeyle çıkar ilişkisi bulunan vergi otoritesi, mesleki kuruluşlar, sektörel örgütler, kreditörler, yatırımcılar, rakipler vb çevrelere değerlendirme yapabilmeleri için imkân sağlanır. Güvenilir bilgilerin açıkça paylaşılması yolsuzlukların engellenmesine de katkı sağlar (Hatunoğlu ve Güneş, 2012; Özsözgün Çalışkan ve Güler, 2013)Yöneticiler, şirketin tüzel kişiliği ve hissedarlar arasındaki ilişki hesap verilebilirlik ilkesiyle açıklanmaktadır. Yöneticiler kararları ve sonuçları hakkında hissedarlara ve tüm paydaşlara karşı hesap vermekle yükümlüdür. (Gökgöz, 2012; Pamukçu, 2011). Sorumluluk ise diğer tüm ilkelerin hem çıkış noktası hem de kapsayıcısıdır. Şirket tüzel kişiliğinin, yöneticilerinin ve ortaklarının yasalara, mevzuata, düzenlemelere, topluma, etik ve ahlaki değerlere uygun biçimde hareket etmeleri anlamına gelir. Çoğunluk hissedarlarla ailevi bağları ya da akçalı ilişkileri olmayan profesyonel yöneticilere yönetim kurulunda yetkili pozisyonlar sağlanarak işletme içi ve dışı sorumluluklarda titizlik gösterilmelidir (Şenturan, 2006; Dalğar ve Pekin, 2011; Özsözgün Çalışkan ve Güler, 2013).

Başlangıçta büyük şirketlere etkin yönetsel yapılar geliştirme ve paydaş ihtiyaçlarını karşılamada yol gösteren öneriler niteliğindeki kurumsal yönetime duyulan ilgi 1990'ların sonunda artmıştır. OECD 1999'da rehberlik etmek amacıyla kurumsal yönetim ilkelerini yayınlamıştır. Basel Komitesi'ne göre tutarlı bilgiler üretilmesini ve

bunların akışını sağlayarak şirketlerdeki çıkar çatışmalarını minimize eder; etik kavramının etkinliğini artırır; şirket değerlerini ve stratejisini tanımlar; sorumlulukları netleştirir; karar verme sürecini sağlamlaştırır; bağımsız denetim işleviyle güvenilirliği artırarak riskleri en aza indirger (Pamukçu, 2011; Göçen, 2010). 2000'li yılların başındaki finansal skandalların sebeplerinin kötü yönetime dayandığı belirlenince kurumsal yönetim kavramına gösterilen ilgi büyümüştür. Artan ilgi, kavram hakkında yapılan çalışmaların yeniden derlenip düzenlenmesi ihtiyacını doğurmuş, çalışmaların koordine edilmesi ve yönlendirilmesi amacıyla uluslararası örgütlerce bazı girişimlerde bulunulmuştur. Kurumsal yönetimin hedefleri OECD'nin 2004 yılı güncellemelerinde uluslararası bir temel oluşturması için netleştirilmiştir.

Türkiye'de kurumsal yönetimle ilgili ilk çalışma, Türkiye Sanayici ve İşadamları Derneği (TÜSİAD) bünyesinde kurulan Kurumsal Yönetim Çalışma Grubu tarafından 2002'de "Kurumsal Yönetim–En İyi Uygulama Kodu" adıyla yayınlamıştır. 2003 yılında TKYD kurulmuş ve Sermaye Piyasası Kurulu (SPK) halka açık şirketlere bir öneri olarak kurumsal yönetim ilkelerini açıklamıştır. İstanbul Menkul Kıymetler Borsası 2005'te kurumsal yönetim ilkelerini uygulayan işletmeler için Kurumsal Yönetim Endeksi hakkında bir çalışma başlatmış ve 2007'den itibaren bu endekse yer vermiştir (Pamukçu, 2011; Gökgöz, 2012). SPK, OECD'nin tanımlarına dayanan Kurumsal Yönetim İlkeleri çalışmasında aşağıdaki hedefleri belirlemiştir (Kayacan, 2006; Göçen, 2010; Dalğar ve Pekin, 2011; Hatunoğlu ve Güneş, 2012;):

- Pay sahiplerinin haklarının korunması, eşit ve adil muamele görmeleri
- Şeffaflık düzeyinin ticari sırları ifşa etmeyecek biçimde artırılması
- Muhasebe sistemindeki eksiklik ve aksaklıkların giderilerek gerçekçi bilgilerin üretilmesi
- İlgili yasaların güncellenmesi, yaptırımların ve uygulanmalarının geliştirilmesi
- Yönetim kurullarının çeşitli çıkar çevrelerinin baskısından arındırılarak bağımsızlaştırılması
- Rekabetin teşvik edilmesi
- Haksız kazançların engellenmesi

### 3.2 Yasa ve Mevzuat Düzenlemeleri

İlk önemli finansal skandalın ABD kökenli olması ilk yasal düzenlemenin de ABD'de de gözlenmesine neden olmuştur. ABD Sermaye Piyasası ve Menkul Kıymetler Kurumu'nun (SEC) yönlendirmesiyle 2002'de çıkarılan Sarbanes-Oxley (SOA) yasasıyla kurumsal yönetimin uygulanabilmesi için gerekli çerçeve oluşturulmuştur. Finansal raporlama ve denetim süreçleri yeniden düzenlenerek bazı eksiklikler giderilmiş ve cezai yaptırımlar ağırlaştırmıştır. Bağımsız denetim zorunlu kılınmış ve bağımsız denetçilerin de denetlenmesi için bir kamu gözetim kurulu meydana getirilmiştir. Genel amacı; bağımsız denetim raporlarının doğru ve gerçekçi bilgileri yansıtması yoluyla kamu çıkarını gözetmek olan bu kurulun özel amacı ise yatırımcıların güvenliğini sağlamak için bağımsız denetçilerin de denetlenmesidir. Bu yasanın; kurumsal yönetimin temel ilkeleri doğrultusunda tespit edilen konular ve risk esaslı denetim yaklaşımı üzerine odaklandığı söylenebilir (Uysal, 2004; Özbirecikli, 2006; Uzay vd, 2009; Uzay ve Gönen, 2011).

AB'de muhasebe ilkelerinin standardizasyonu çabaları birliğin yapısı, içeriği ve üye sayısı değiştikçe güncellenerek yönergeler halinde yayınlanmıştır. 8. Yönerge ile dış denetim ve denetçi nitelikleri konusunda uluslararası diğer uygulamalarla standardizasyon sağlanması hedeflenmiştir. 1994'te denetim mesleğinin eğitim ve yetkinlikle ilgili ayrıntıları tespit edilmiştir (Çalışkan, 2006). Finans sektöründeki muhtemel bazı sıkıntıları da öngören AB; Basel Bankacılık Denetim Komitesi'nin çalışmaları sonucunda, riskleri minimize etmek amacıyla özellikle bankaların sermaye yapılarını düzenleyen uluslararası standartları belirleyerek 1988 yılında Basel Kriterlerini yayınlamıştır. Bu kriterler sadece bankalar değil, bankalardan kredi sağlayan işletmelerin durumunu da içermektedir. 1999'da bu kriterlerde bazı değişiklikler yapılmıştır. Ancak özellikle Enron olayı sonrasında "her farklı bünye için tek bir beden" olarak nitelenebilecek bu kriterlerin farklı ölçeklere uyumunu sağlamak ihtiyacı doğmuştur. 2001 ve 2003 yıllarında yeniden güncellemelere gidilmiştir (Kaderli vd, 2013).

Enron olayını takiben İtalya'da Parmalat, Hollanda'da Ahold ve Almanya'da da Balsam, Flowtex, Hypo-Bank, Bankgesellschaft Berlin gibi skandalların yaşanması AB'deki yasal yapı ve yaptırımların durumunun, finansal raporların güvenilirliğinin ve denetim konularının sorgulanmasına neden olmuştur (Hellwig, 2007). Parmalat skandalına Enron olayının Avrupa'daki muadili olarak bakılmaktadır (Stoltenberg vd, 2005). İlk etapta Basel kriterlerine ilişkin istişari metinler hazırlanarak finans sektörü açısından çeşitli önlemler alınmıştır. Ardından üye ülkelerin kurumsal yönetim ilkelerine odaklanıp kendilerine uygun biçimde çeşitli tedbirler geliştirerek finansal raporlamaya olan güveni artırma çabaları içerisine girdikleri görülmüştür. Örneğin Almanya'da 2003'te Alman 10 Adım Programı ile kurumsal yönetimin uygulanabilmesine yönelik bir aşama kaydedilmiştir (Gökgöz, 2012; Eckert vd, 2004). İtalya'da ise Vietti Reformu olarak adlandırılan öneri parlamentoya sunularak Parmalat skandalına neden olan unsurların giderilmesi için yine kurumsal yönetim tabanlı yasal bir düzenlemeye gidilmiştir (Buchanan ve Yang, 2005). 2006'da 8. Yönerge revize edilerek denetim, denetim kurumları ve denetçinin niteliği tekrar tanımlanmış; uluslararası denetimin yeni koşullarına uyum sağlanması için şeffaflık ve tarafsızlıkla ilgili yeni düzenleme ve yaptırımlar getirilmiştir. Üye ülkelerin üçüncü ülkeler ve kamu gözetim kurumları arasındaki iş birliğine bir temel oluşturulmuştur. Ayrıca gerek üye ülkelerin gerekse diğer ülkelerin düzenleyici kurumları arasında da bir uyum sağlanmıştır (Uzay ve Gönen, 2011; Çalışkan, 2006).

AB'deki yeni düzenlemelerin bir diğer nedeni de SOA'ya uyum zaruretidir. Pek çok ABD firması AB'de ve pek çok AB firması da ABD'de faaliyet sürdürmektedir. ÖAG'lerin, şubelerin, ortaklıkların ve işbirliklerinin bulunması; bunların birbirleriyle üst düzeyde ticari ilişkiler sürdürmeleri ve ilişkili taraf işlemleri yapmaları; uluslararası bağımsız denetim, danışmanlık ve derecelendirme kurumlarının faaliyetleri sebebiyle AB düzenlemelerinin SOA ile uyumlu hale getirilmesi gerekmiştir (Hellwig, 2007).

Türkiye'de de bazı düzenlemelerin güncellenmesi ihtiyacıyla Türk Ticaret Kanunu'nda (TTK) denetim ve şirket iflasları yeniden ele alınmış, kurumsal yönetim ilkeleri temelinde değişiklikler yapılmıştır (Ataman Erdönmez, 2003). Meydana gelen skandallar ve AB uyum süreci çerçevesinde TTK'nda ilgili kurumlar tarafından belirlenecek muhasebe standartlarına riayet edilmesi ve halka açık şirketlerin bağımsız denetim konusunda AB direktiflerine ve uluslararası standartlara uymaları gerektiği vurgulanmıştır (Aksoy, 2005b; Kayacan, 2006; Özbirecikli, 2006; Şenturan, 2006; Şahin ve Pazarçeviren 2007; Karacan ve Güngör, 2008).

### 3.3 Uluslararası Finansal Raporlama Standartları

Dünyada Anglo-Sakson ve Kıta Avrupası olmak üzere temelde iki farklı finansal raporlama yaklaşımı bulunmaktadır (Demir, 2009). Bunlar Tablo 1'de özetlenmiştir. Farklı muhasebe uygulamaları ve finansal raporlamanın temel nedeni ülkelerin vergi kanunlarındaki farklılıktır (Özkök, 2000). Anglo-Sakson yaklaşımını izleyen ABD merkezli Uluslararası Muhasebe Standartları Kurulu (IASB) ile İngiltere ve ABD kökenli Finansal Muhasebe Standartları Kurulu (FASB) uluslararası muhasebe uygulamalarına rehberlik etmişlerdir. IASB'nin standartları ilke bazlı olup finansal raporlamayla ilgili muhasebe işlemlerinin özünü betimlemektedir. FASB standartları ise kural bazlı bir yaklaşımla; muhasebeyle ilgili her türlü işlemin uygulama esaslarını ve şeklini tespit eder. FASB tarafından geliştirilmiş olan Genel Kabul Görmüş Muhasebe İlkeleri (US-GAAP) pek çok ülke tarafından örnek alınmıştır. US-GAAP serbest piyasa ekonomisi koşullarına uygunluğu ve algılanan yüksek güvenilirlik düzeyi sebebiyle ABD tarafından muhasebe standartları açısından yeterli görülmekteydi. Bu nedenle ABD ve US-GAAP temelli standartları benimsemiş ülkeler, ilk etapta uluslararası standartlarla ilgili çalışmalara ilgi göstermemişlerdir. Ancak Enron olayı ile başlayan skandallarla US-GAAP'ın yeterli gelmediği görülmüş ve ABD başta olmak üzere diğer US-GAAP taraftarı ülkelerin de uluslararası çabalara karşı tutumu değişmiştir. İlke bazlı UFRS'nin katı kurallara dayanan US-GAAP'a göre küresel koşullara daha uygun olduğu görüşü bu değişiklikte, etki sahibidir (Aksoy, 2005a; Ulusan, 2005; Uysal, 2006; Poroy Arsoy, 2008).

| Konu | Anglo-Sakson Uygulamaları | Bazı Kıta Avrupası Uygulamaları* |
|---|---|---|
| Amortisman | Kullanım ömrü | Vergi kuralları |
| Yasal yedekler | Yok | Var |
| Finansal kiralama | Aktifleştirilir | Nadiren aktifleştirilir |
| Nakit akış tabloları | Düzenlenir | Nadiren düzenlenir |
| Gizli yedekler | Yok | Var |
| Kuruluş ve örgütlenme giderleri | Gelir tablosunda gider olarak gösterilir | Aktifleştirilir |
| * Kıta Avrupası'na örnek ülkeler olarak Belçika, Fransa, Almanya ve İtalya sayılabilir. | | |

**Tablo 1.** *Anglo-Sakson ile Kıta Avrupası Muhasebe Uygulamaları Karşılaştırması* **Kaynak:** *Demir, 2009.*

Uluslararası standardizasyona olan inanç artınca hükümetler, komiteler, kurumlar ve örgütlerin çabaları da artmıştır. Uluslararası Menkul Kıymetler Örgütü (IOSCO) ve IASB bu çabalarda daha etkin roller oynamışlardır. 2000'de Basel Komitesi UFRS çalışmalarını, UFRS'nin içeriğini ve uygulanmasını desteklediğini açıklamış; aynı yıl IOSCO ve AB 2005'ten itibaren UFRS'nin uygulanması yönünde karar almışlardır. 2001'de IOSCO üyesi olan SEC'in UFRS'yi tavsiye etmesi; ABD ve İngiltere, Kanada, Avustralya ve Yeni Zelanda'dan oluşan grubun destek kararı almasında etkili olmuştur. 2002'de Uluslararası Muhasebeciler Federasyonu (IFAC) UFRS'yi kabul etmiş ve IASB ile FASB arasında yapılan Norwalk Anlaşmasında UMS/UFRS ile US-GAAP arasındaki uyumsuzlukların ve farklılıkların giderilmesi yönünde uzlaşılırken, uyumlaştırma yerine "yakınsama" teriminin kullanımı yaygınlaşmıştır. Uyumlaştırma veya harmonizasyon; farklı muhasebe uygulamalarının tekdüzenleştirilmesidir. Yakınsama; standart hazırlayıcı kurumların birbirlerinin standartlarına uygunluk düzeylerinin artırılmasıdır. Aynı yıl içerisinde AB parlamentosu üye ülkelerin 2005'ten itibaren UFRS'ye uygun hareket etmelerini yasalaştırmıştır. Yine 2002'de 16. Dünya Muhasebeciler Kongresi'nde mesleğin küreselleşme karşısındaki durumu masaya yatırılmış; tek standarda olan ihtiyaç vurgulanarak UFRS lehine çıkarımlar yapılmıştır. 2006 dönem sonu itibariyle dünyada 69 ülkede UFRS uygulanması zorunlu kılındığı, 5 ülkede zorunlu hale getirilmesi önerildiği, 21 ülkede ihtiyari biçimde uygulanmasına müsaade edildiği ve 36 ülkede de uygulanmasına izin verilmediği görülmüştür (Aslan, 2004; Aksoy, 2005a; Ulusan, 2005; Türker, 2006; Uysal, 2006; Aysan, 2007b; Demir, 2009; Durak ve Balsarı, 2011). IASB tarafından UFRS ile ilgili yapılan düzenlemeler aşağıdaki tabloda özetlenmiştir.

Türkiye Muhasebe Standartları Kurulu (TMSK) 2002'de Türkiye Finansal Raporlama Standartları'nı (TFRS) yayınlamış ve küresel uyum sürecine destek vermiştir. SPK 2003'te UFRS ile uyumlu standartlar hazırlayarak 2005'ten itibaren geçerli olmak üzere halka açık şirketler için zorunlu kılmıştır. Bankacılık Denetleme ve Düzenleme Kurumu (BDDK) da 2006'da bankacılık sektörü için TFRS uygulamalarını gereklilik haline

getirmiştir. Türk Ticaret Kanunu (TTK) bu gelişmeler çerçevesinde yenilenmiş ve UFRS ile uyumlu standartlar yasalaştırılmıştır (Kayacan, 2006; Bekçi, 2007; Şahin ve Pazarçeviren, 2007; Karacan ve Güngör, 2008)

| Yıl | Açıklama |
|-----|----------|
| 2003 | İlk UFRS nihai metni yayınlanmıştır. |
| 2004 | Güncellemeler sonucunda UFRS 2,3,4,5,6 yayınlanmıştır. |
| 2005 | UFRS 7 yayınlanmıştır. |
| 2006 | UFRS 8 yayınlanmıştır. |
| 2007 | KOBİ'ler için ayrı bir UFRS taslak önerisi sunulmuştur. |

## 4  2008 Krizi ve Finansal Raporlama

Finansal skandallardan sonra getirilen yasal düzenlemelere, artırılan denetim düzeylerine, muhasebe ve finansal raporlama standardizasyon çabalarına karşın; bu krizin yaşanması büyük hayal kırıklıkları yaratmıştır. Hatta bu konuda çekilen Inside Job adlı film 8 milyon ABD dolarına yakın hâsılat elde ederek 2011yılı en iyi belgesel film dalında Akademi ödülü almıştır.

### 4.1 2008 Kriz Sürecine Genel Bakış

Finansal serbestleşme politikaları ve küreselleşmenin getirdiği yeni koşullarla baş edebilmek için faiz ve vergi indirimleri uygulayan ABD; tüketimi teşvik ederek tasarruf oranlarını düşürmüştür. İnşaat sektörünü canlandırmak amacıyla, konut kredilerine zayıf taahhüt şartları uygulanarak talep artırılmış, konut fiyatları yükselmiştir. Bu krediler menkul kıymetleştirilerek uluslararası finansal enstrümanlar içerisinde kullanılmıştır. Yetersiz denetim ve derecelendirme kurumlarının yanıltıcılığı bu enstrümanlara talebi artırmıştır. (Can, 2010; Parlakkaya ve Çetin, 2010; Syllignakis ve Kouretas, 2011). Petrol fiyatları yüzünden yükselen faizler konut piyasasını durgunlaştırmıştır. Faiz ve enflasyon artışları kredi ödemelerinin aksamasına neden olunca hükümet likidite sağlayarak piyasayı rahatlatmaya çalışmıştır. Ancak kreditörler bu riskli ürünleri pazarlamaya ve bağımsız derecelendirme kurumları yüksek notlar vermeye devam ederek etik ve yasa dışı davranmışlardır (Guo vd, 2011; Er, 2011, Köse, 2012). Bu enstrümanların sigortalanarak uluslararası pazarlarda işlem görmeye devam etmeleri ve bazı kamu kurumlarınca da satın alınmaları, mevcut sıkıntıyı büyüterek yaymıştır. Batmamaları için bazı büyük finans kurumları ve yatırım bankalarının ABD hükümetince devralınması ve bazılarının iflasıyla etik dışı uygulamalar açığa çıkmış, finans sektörüne duyulan güven tekrar sarsılarak panik içerisine girilmiştir. Panik artarak finansal krize dönüşmüş; sektörler arası bağlar ve daralan kredi imkânları yüzünden de reel sektöre yansıyarak ekonomik kriz haline gelmiştir. IMF verilerine göre 2008 Krizi dünyada 6 ila 11 trilyon ABD doları arasında bir zarara neden olmuş; değişik bölgelerde farklı şiddetlerde hissedilmiş ve sayısız işletmenin batmasına yol açarak milyonlarca insanı işsiz bırakmıştır. Kriz sürecinin; muhasebe hileleri ve finansal raporlama manipülasyonlarıyla başladığı, bunların ifşasıyla finansal kriz aşamasına girildiği, küreselleşme nedeniyle finansal krizin yayıldığı ve reel sektöre yansıyarak ekonomik krize sebep olduğu dile getirilmektedir. Dolayısıyla finansal krizin finansal skandallara tepki olarak doğduğu ve ekonomik krizin de finansal krize dayandığı söylenebilir (Akgüç, 2009; Er, 2011; Korkmaz ve Tay, 2011; Gökgöz, 2012; Köse, 2012).

### 4.2 Finansal Raporlamanın Kriz Üzerindeki Rolü ve UFRS Hakkındaki Tartışmalar

Krizin nedenleri üzerinde bir uzlaşı bulunmamakta; ancak muhasebe ve finansal raporlamanın krizi tetikleyerek büyük etki sahibi oldukları belirtilmektedir. Sürecinin başlangıcı düşünüldüğünde bu görüş mantıklıdır (Akgüç, 2009; Er, 2011). Yine de krizin temelde; likidite bolluğu, menkul kıymetleştirme, şeffaflık, derecelendirme kurumları ve denetim kurumlarının yanıltıcı açıklamalarından kaynaklandığı ileri sürülebilir (Korkmaz ve Tay, 2011). Likidite bolluğu dışındakilerin tümü muhasebe ve finansal raporlamayla ilgilidir. Bunlar; düzenleyici kurumların tam bağımsız olmamaları, muhasebenin temel kavramlarından uzaklaşma, ihtiyatlılık ve muhafazakârlık kavramlarına aykırı hareket etme, yaratıcı muhasebe uygulamaları, gerçeğe uygun değer yönteminin kötü niyetle kullanımı, şeffaflık sorunu ve yetersiz denetim, tablo ve raporların yanıltıcılığı olarak özetlenebilir (Can, 2010; Gökgöz, 2012).

Finansal tablo manipülasyonları; gelir, gider, varlık ve kaynakların muhasebeleştirilmesi, finansal tablo kalemlerinin sınıflandırılması ve örtülü kar aktarımı yollarıyla yapılmaktadır. Bunlar; kar yönetimi, karın istikrarlı hale getirilmesi, yaratıcı muhasebe uygulamaları, agresif muhasebe ve finansal hile gibi yöntemlerle gerçekleştirilmektedir (Dalğar ve Pekin, 2011). Standardizasyon çabalarına, yasal ve teknik düzenlemelere karşın krizde bu faktörlerin büyük rol oynaması tüm düzenlemelerin tekrar ele alınmasına neden olmuştur. G20 toplantılarında şeffaflık ve sorumluluk bilincinin güçlendirilmesi; yasal yaptırımların, finansal piyasa bütünleşmelerinin ve işbirliğinin artırılması kararlaştırılmıştır. Düzenleme sisteminin yeniden belirlenmesi, tepe yöneticilerinin primlerine yeni kurallar getirilmesi, sermaye yapılarının güçlendirilmesi, offshore'a karşı tedbir alınması ve muhasebe standartlarının küreselleştirilmesi kararları alınmıştır. Türkiye 'de G20 üyesi olduğundan bu anlaşmalara katılmıştır (Er, 2011). Kriz sonrası UFRS'nin yasal olarak zorunlu olduğu ülke sayısı yükselmiştir (Durak ve Balsarı, 2011). Ayrıca finansal raporları düzenleyenleri, bağımsız denetçileri ve

derecelendirme kurumlarını kapsayan cezai yaptırımlar da artırılmıştır (Uzay ve Gönen, 2010). Türkiye'de de krizden çıkarılan dersler yeni TTK düzenlemelerine şeffaflık ilkesi ekseninde kurumsal yönetim düzenlemeleri şeklinde yansımıştır. Yeni TTK UFRS ile uyumlu muhasebe standartlarına riayet edilmesini ve bağımsız denetimi zorunlu kılmıştır (Hatunoğlu ve Güneş, 2012; Pamukçu, 2011).

UFRS'nin 2008 yılı itibariyle kullanımı Şekil 2'de görülmektedir. Koyu alanlar UFRS'nin zorunlu tutulduğu veya izin verildiği, gri tonlar UFRS ile yakınsama yapılan ve UFRS'nin tavsiye edildiği ve beyaz alanlar da yasaklandığı ülkeleri göstermektedir. UFRS geçiş süreci bazı ülkelerde yasal yapı, toplumsal alışkanlıklar, kültürel faktörler vb nedenlerle daha zor olmaktadır. Bazı standartların teknik açıdan uygulanması güçtür. Ayrıca beşeri ve mali kaynak sıkıntıları yüzünden genellikle sadece sermaye piyasalarına kayıtlı işletmelerce uygulanmaları öngörülmüş; çoğu ülkelerde KOBİ'ler kapsam dışı tutulmak zorunda kalınmıştır (Aysan, 2007a; Varıcı, 2009; Durak ve Balsarı, 2011).

***Şekil 2.** 2008 İtibariyle Dünyada UFRS Kullanımı, **Kaynak:** Durak ve Balsarı, 2011: 11*

Muhasebe ve finansal raporlamanın krizdeki rolleri nedeniyle UFRS yoğun eleştirilere hedef olmuştur. Özellikle ilişkili taraf işlemleri açısından eksikliği ve gerçeğe uygun değerleme (GUD) konusundaki muğlaklığı vurgulanmıştır. Bu bağlamda yapılan çalışmalar sonucunda UFRS 9 ve 13 yayınlanmıştır (Parlakkaya ve Çetin, 2010; Dinç ve Varıcı, 2012). Finansal enstrümanlar, türev işlemleri, hisse bazlı ödemeler, işletme birleşmeleri ve konsolidasyon gibi faktörlerin finansal raporlamada yol açtığı sorunlar gerek eski standartların güncellenmesi gerekse yeni standartlarla giderilmiştir (Can, 2010; Er, 2011). Standartların sadece büyük işletmelere değil, ekonomilerde öncü konumunda olan KOBİ'ler tarafından da uygulanmasının gerekliliği iyice anlaşılmış ve KOBİ'lerle ilgili uluslararası standartların önemi daha iyi anlaşılmıştır. Türkiye'de de KOBİ'ler için UFRS 2009'da yayınlanmıştır (Demir, 2009; Güneş vd, 2012). Eleştiriler ve gelişmeler doğrultusunda diğer boşlukları tamamlamak, eksiklikleri gidermek ve ileride çıkabilecek sorunlara karşı tedbir almak amacıyla güncellenen ve yeni eklenen standartlar Tablo 3'te yıllar ve ana temaları itibariyle sunulmuştur.

| Yıl | Standart | Konusu | Açıklama |
|-----|----------|--------|----------|
| 2008 | UFRS 1 | İlk uygulama | Güncellendi |
| | UFRS 2 | Hisse bazlı ödemeler | Güncellendi |
| | UFRS 3 | İşletme birleşmeleri | Güncellendi |
| | UFRS 7 | Finansal araçlar: Kamuya açıklama | Güncellendi |
| | UMS 1 | Finansal tabloların sunumu | Güncellendi |
| | UMS 27 | Konsolide ve bireysel finansal tablolar | Güncellendi |
| | UMS 32 | Finansal araçlar: Sunum ve açıklama | Güncellendi |
| | UMS 39 | Finansal araçlar: Muhasebeleştirme ve ölçme | Güncellendi |
| 2009 | UFRS 1 | İlk uygulama | Güncellendi |
| | UFRS 2 | Hisse bazlı ödemeler | Güncellendi |
| | UFRS 9 | Finansal araçlar: Sınıflandırma ve ölçme | UMS 39'un yerine getirildi |
| | UMS 24 | İlişkili taraflar ile ilgili açıklamalar | Güncellendi |
| | UMS 32 | Finansal araçlar: Sunum ve açıklama | Güncellendi |
| 2010 | UFRS 1 | İlk uygulama | Güncellendi |
| | UFRS 7 | Finansal araçlar: Kamuya açıklama | Güncellendi |
| | UMS 12 | Gelir vergisi | Güncellendi |
| | UFRS 9 | Finansal araçlar: Sınıflandırma ve ölçme | Güncellendi |
| 2011 | UFRS 10 | Konsolide finansal tablolar | Yeni yayın |
| | UFRS 11 | Müşterek anlaşmalar | Yeni yayın |
| | UFRS 12 | Diğer işletmelerdeki menfaatlerin açıklanması | Yeni yayın |
| | UFRS 13 | Gerçeğe uygun değerleme | Yeni yayın |
| 2014 | UFRS 14 | Düzenleyici tehir hesapları | Proje sürüyor |

## 5 Sonuç ve Öneriler

Mevcut ekonomik sistemin doğası zaman zaman skandal ve krizler yaratmaktadır (Akgüç, 2009). Bunlar yaşandıkça elbette muhasebe ve finansal raporlama temelli faktörler tekrar sorgulanacak, daha güvenilir uygulamalara ulaşmak için yeni yasal ve teknik düzenlemeler arayışı içine girilecektir. Farklı yasal düzenlemeler finansal raporlamada da farklılık yarattığından yasal düzenlemelerin de küresel bazda mümkün olduğunca uyumlaştırılması veya yakınsanması gerekmektedir (Demir, 2009). Ancak unutulmamalıdır ki muhasebe bilgi sisteminin işi bilgi üretmektir. Bu bilgileri zamanında, tam ve gerçekçi bir biçimde sağlamakla yükümlüdür. Bunu yerine getirebilmesi için de muhasebe ve finansal raporlamayla ilgili kurallar belirlenirken mecburen bazı esneklikler tanınmaktadır. Bu esnekliklerin kötü niyetle kullanılarak hilelere alet edilmesi standartların suçu değildir. Kabahat güvenilir ve gerçekçi bilgiler üretebilecek yetenekteki sistemleri yanıltıcı hale getiren insan faktöründe aranmalıdır. İşletme sahiplerinin, çoğunluk hissedarlarının, üst düzey yöneticilerinin ve denetçilerin skandal ve krizlerdeki rollerinin muhasebe ve finansal raporlama standartlarının yetersizliğinden çok önde geldiği söylenebilir (Kula, 2008; Gökgöz, 2012). Bu noktada başta sosyal sorumluluk olmak üzere muhasebenin temel kavramlarından uzaklaşılmasının olumsuz etkisi daha iyi anlaşılmaktadır (Can, 2010).

Krizle ilgili dile getirilen diğer bir nokta da şeffaflık sorunudur. Aslında UFRS ilk haliyle bile bilinen hilelerin önlenmesi ve yanlış yönlendirmelerin önüne geçilmesi amacıyla üst düzey bir şeffaflık öngörmektedir (Poroy Arsoy, 2008). Ancak kötü niyetli uygulamalar ve asimetrik bilgi sorunları nedeniyle arzulanan şeffaflık sağlanamamıştır (Er, 2011). Bu durum finansal raporların yanıltıcılığını artırarak bağımsız denetçilere arzuladıkları güvenilir bilgileri sağlayamamaktadır. Buna bazı denetçilerin ilgisizlikleri, özensizlikleri hatta işbirlikleri de eklenince denetim başlı başına bir sorun kaynağı olarak karşımıza çıkmaktadır (Erol, 2008; Uzay ve Gönen, 2010; Özyürek, 2012). Bağımsız denetimin kalitesinin artırılması ve derecelendirme kurumlarının daha dikkatli davranmalarını sağlamak için yasal yaptırımların ağırlaştırılması ve kamu gözetim kurullarının daha güçlü yetkilerle donatılması düşünülebilir (Acar ve Senal, 2011; Köse, 2012).

Etkin bir iç kontrol mekanizması kurulabilmesi için işletmelerin gizleyecek her hangi bir suçlarının olmaması gerekmektedir. Bu da kurumsal yönetim kavramının özümsenerek hareket edilmesiyle mümkün olabilir. Bu ilkeleri benimseyerek kurumsal yönetim hedefleri doğrultusunda hareket edecek işletmeler yeterli şeffaflığı sağlayarak finansal raporlamanın güvenilirliklerini artıracaklardır. Dolayısıyla kurumsal yönetimin teşvik edilmesi hatta bazı koşullar altında zorunlu kılınması için yeni TTK'da olduğu gibi diğer kanunlarda da gerekli bazı düzenlemeler yapılabilir (Göçen, 2010; Pamukçu, 2011; Hatunoğlu ve Güneş, 2012). Paydaşlara tam ve zamanında bilgi sunmak konusunda ise interaktif bir iletişim aracı olan internet kavramı kullanılabilir (Özsözgün Çalışkan ve Güler, 2013).

# Küresel Krizin Türkiye'deki İnşaat Sektörü Üzerindeki Etkileri

# The Impacts of Global Financial Crisis on Construction Sector in Turkey

Asst. Prof. Dr. Fatih Kürşat Fırat (Aksaray University, Turkey)

Ph.D. Candidate Esra Soyu (Aksaray University, Turkey)

## Abstract

The global crisis in United States began as the form of the mortgage crisis in the housing market. Profound effects the financial crisis emerged in 2008 spread rapidly throughout the world as a result of globalization and also its effects were felt in our country. Both in earlier crises and the emergence and spread of the global economic crisis in the cyclical indicators are known to play an important role. There are different opinions on this subject in the literature. It is seen that there is a relation between the global crisis in the financial sectors and the construction sector based on mostly housing industry. Especially in the developing countries like Turkey, the construction sector, which is an important contribution to the economic growth, is seen negatively affected by the global crisis. The aim of this study is to analyze the variations occurred in the construction industry during the 2008 global economic crisis and is to introduce how the construction sector is affected by the crisis. Here, Turkey's main economic indicators during the crisis are examined considering the construction sector and GDP growth rates. As a result of this study, it is put forward that the construction sector in Turkey is one of the sectors most affected by the global crisis.

## 1 Giriş

Bütün dünyayı etkisi altına alan küreselleşme hareketleri ile ülkeler hızlı bir değişim sürecine girmişlerdir. Küreselleşen dünyanın yarattığı ortama uyum sağlanabilmesi için gelişmiş ve gelişmekte olan ülkelerde finansallaşma politikalarının uygulanması yaygınlaşmıştır. 2008 krizi ABD mortgage piyasasında başlamış, kısa zamanda finans sektörünün tamamını etkisine alarak reel sektöre yansımış, küresel bir krize dönüşmüştür.

Finansal serbestleşme politikalarıyla küreselleşmenin getirdiği yeni düzene ayak uydurabilmek için ABD'de mesken balonu 2005 ya da 2006 yılının bir döneminde bir şekilde kontrolden çıkmıştır. İnşaat sektörünü canlandırmak amacıyla zayıf teminat şartları uygulanarak insanlar ödeyemeyecekleri ipotekli mesken kredilerini almışlar ve sonunda da geri ödeyememişlerdir. Fakat bu ipotek kredileri eşikaltı menkul değerlere dönüştürülmüş olduğundan küresel mali sistem bozulmuştur. Kötü kredilerin seküritizasyonu, görünen ve objektif başlangıcı oluşturmuştur. Yetersiz denetim ve derecelendirme kurumlarının yanıltıcı uygulamaları sonrasında finans sektörüne karşı duyulan güven sarsılmıştır. Mesken balonu kısmen yüksek riskli ipotek kredilerine dayanıyorsa da meseleler daha yaygın ve geniş boyuta ulaşmıştır. Bu meselelerin kökenleri de yıllar öncesine dayanan, derin yapısal değişikliklerde yatmaktadır. Onlarca yıldır mesken edinmeyi teşvik eden hükümet politikaları da kusurlu görülmektedir. Senelerdir ABD'deki federal düzenleyici kurumlar, bütün finans sistemini tehlikeli bir şekilde kırılgan ve çöküşe yatkın hale getiren yeni bir gölge bankacılık sisteminin yükselişini görmezden gelmişlerdir. Bu yeni finansal kurumlar sadece FED değil, Çin gibi yükselen ekonomilerin sağladığı kolay para ve kolay kredinin de sırtından geçinmiştir. Bağımsız derecelendirme kurumları yüksek notlar vermeye devam ederek bilinçli bir şekilde etik ve yasa dışı davranmışlardır. Yüksek riskli ipotekli mesken kredileri sistemin bütününü etkilemiştir. En büyük ve yıkıcı finansal felaketlere, yüksek riskli ipotek krediler, spekülatif balonların yanı sıra bir çok faktör de etkili olmuştur (Roubini, Mihm, 2012). Konut piyasalarında patlak veren 2008 mali krizi, dünya çapında hemen hemen her yerde finansal faaliyetleri tehdit altına sokmuştur. Küresel finansal sistem devlet müdahalelerinin karmaşık bir bileşimi sonucunda kısmen istikrara kavuşturulmuştur. Mali krizin yükü bankalardan kamu borcuna aktarılmıştır. ABD'de ve Avrupa'da artan kamu borcu kemer sıkma tedbirleriyle kamu hizmetlerini kısarak, azaltılmıştır. 2008 finansal krizinin reel sonucu işsizlik olmuştur. Diğer taraftan kısmen toparlanma eğilimindeki ekonomiler de "istihdamsız toparlanma-büyüme" adı verilen bir sürece girmiştir. Resesyonlar, işsizlik ve dış ticaretin çöküşü giderek küresel ekonomiyi sarmıştır. Keynesgil politikalar, canlandırma politikaları, para basmalar ve merkez bankalarının piyasalara likidite pompalaması ile kriz aşılmaya çalışılmıştır (Harvey, 2012). IMF verilerine göre 2008 Krizi dünyada 6 ila 11 trilyon ABD doları arasında bir zarara neden olmuş, birçok işletmenin batmasına yol açarak milyonlarca insan işsiz kalmıştır.

Ülkelerin temel amaçlarından birisi de iktisadi büyümenin sağlanmasıdır. Küresel finansal kriz hem gelişmiş ülkeleri hem de gelişmekte olan ülkeleri ekonomik büyüme açısından olumsuz etkilemiştir. İnşaat sektörü ise gerek konjonktürel göstergeler bakımından gerekse ekonomik büyüme yönünden önemli bir sektördür. 2008 yılında başlayan küresel ekonomik krizden tüm sektörler etkilenmiştir. Ancak küresel krizin ortaya çıkışı inşaat ve konut sektörüyle ilgili olması bakımından inşaat sektörü daha fazla etkilenmiştir. Özetle, küresel ekonomik krizin ortaya çıkması ve yayılmasında inşaat sektörü ve sektörün alt sektörleri önemli bir yere sahiptir (Özdemir, Kılıç, 2011). Türkiye Güçlü Ekonomiye Geçiş Programı sonrasında Türk inşaat sektöründe 2002-2007 tarihleri

arasında altyapı projelerinin ve konut talebinin arttığı bir dönem yaşamıştır. Konut talebinin 2006'nın ikinci yarısında azalmasıyla inşaat sektöründeki büyüme hızı 2007'den itibaren gerilemeye başlamıştır. 2008 yılında ise inşaat sektörü, küresel krizden olumsuz etkilenmiş ve konut talebinin gerilemesi ile oldukça küçülmüştür. Türkiye'de inşaat sektörü küresel kriz nedeniyle durgunluk yaşamıştır. Bu süreçte inşaat faaliyetleri azalmış, inşaat malzemesi üretim ve ihracatı gerilemiş, konut stoklarında önemli ölçüde artış olmuş, konut fiyatları dibe vurmuş ve istihdamda azalmalar meydana gelmiştir. En önemli istihdam alanlarından biri olan konut ve emlak piyasasında krizin oluşması işsizliğin ve hane halkının borçluluk oranının artmasına sebep olmuş, ardından konut fiyatları hızla düşmüş, mortgage yükümlülüklerinin yerine getirilememesinden kaynaklanan suçların ve icraların artmasına neden olmuştur (Sancak vd, 2011). Küresel krizle birlikte konut kredilerinin verilmesi açısından bankacılık sektörü önemli bir yere sahip olmuştur. Sermaye yeterliliği açısından güçlü bir yapıya sahip olan Türk bankacılık sektörü global krizden olumsuz bir şekilde etkilenmiştir. Türk bankacılık sektöründe o dönemlerde mortgage kredilerinin verilmemesi ve bu krizin global bir kriz olması nedeniyle Türk bankaları 2001 Krizi'ndeki kadar riske girmemiştir. Kredi verme konusunda başarılı bir performans sağlayan bankalar kredi bulma konusunda zorlanmışlardır. Banka ve şirket bilançolarının küçülmesi, Türkiye'yi de diğer ülkeler gibi bir takım önlemler almaya zorlamıştır.

Son yıllarda Türkiye'de inşaat sektörünün artan talebe bağlı olarak hızlı bir büyüme eğilimi içerisine girdiği görülmektedir. Ayrıca Türkiye'de inşaat sektöründeki ana sermayeye yapılan yatırımların arttığı ve inşaat malzemeleri sektörünün giderek büyüdüğü görülmektedir. Toplu konut projelerinin hayata geçirilmesiyle gittikçe ağırlaşan konut ihtiyacı sorunu da çözülmeye çalışılmaktadır.

## 2   Küresel Krizin Nedenleri ve Sonuçları

Kriz kavramını önceden öngörülemeyen ya da beklenilmeyen anlarda ortaya çıkan, ortaya çıktığı yerlerde ise makroekonomik yönden olumsuz etkilere yol açan bir kavram olarak tanımlamak mümkündür. Güncel olan olayları göz önünde bulundurduğumuz zaman "her sorun bir krizdir" demek yanlıştır, kriz olarak değerlendirebilmek için aniden ortaya çıkması ve ciddi sorunlara yol açması gerekmektedir (Bostan, Bölükbaşı, 2011). Tarih boyunca çok sayıda ekonomik kriz yaşanmıştır. Bu krizler genel olarak incelendiğinde ortaya çıkış nedenleri finansal kesimdeki yapısal ve ekonomik bozukluklar olarak görülmektedir.

Ekonomik krizler, herhangi bir mal, hizmet, üretim faktörü veya döviz piyasasındaki fiyat ve/veya miktarlarda kabul edilebilir bir değişme sınırının ötesinde gerçekleşen şiddetli dalgalanmalar olarak tanımlanabilir.

Finansal krizler ise döviz ve hisse senedi piyasaları gibi finans piyasalarındaki şiddetli fiyat dalgalanmaları veya bankacılık sisteminde bankalara geri dönmeyen kredilerin aşırı derecede artması sonucunda yaşanan ciddi ekonomik sorunlar olarak kabul edilebilir (Kibritçioğlu, 2001). Finansal kriz ekonomik kriz ile ilişkilidir ancak finansal krizler finansal piyasalarda meydana gelen aksaklıklar ve başarısızlıklar, ekonomik krizler ise genel olarak ekonominin bütününde meydana gelen ani ve öngörülemeyen durumlar sonucu ortaya çıkmaktadır. Özellikle 1980 sonrası dönemde ülkelerin finansal liberalizasyon sürecine girmesi ve 1990'larda küreselleşmenin etkisiyle uluslararası finansal piyasaların oluşması, uluslararası sermaye hareketlerinin gerçekleşmesi "finansal kriz" kavramını gündeme getirmiştir (Bostan, Bölükbaşı, 2011).

Finansal krizlerin, bankacılık krizi, döviz krizi ve borsa krizi olmak üzere üçlü bir ayrıma tabi tutulması olasıdır. Sabit kur uygulaması olan ekonomilerde yaşanan döviz krizleri ödemeler dengesi krizlerine yol açarken, dalgalı kur sisteminin uygulayıcısı olan ekonomilerde yaşanan döviz kaynaklı krizler, döviz kuru krizi olarak adlandırılır. Menkul kıymet piyasaları ve döviz piyasalarında görülen şiddetli fiyat dalgalanmaları kriz olarak nitelenmektedir. Bankacılık sisteminde kredilerin geri ödenmesinde yaşanan ciddi sorunlar, batık kredi oranlarını yükseltici, böylelikle banka bilançolarını dejenere edici etkiye sahip olduklarından yine kriz olarak adlandırılırlar. İnsanoğlu tarih boyunca çeşitli faktörlerin neden olduğu değişik boyut ve derinlikte krizlerle karsı karşıya kalmıştır. Gerek nüfusun kaçınılmaz artışı, gerekse tüm dünya ülkelerinin ekonomilerinin gelişimi, teknolojik olanaklarla birleşince küreselleşme dediğimiz olgu ile karşılaşılmıştır. Küreselleşme ile geçmişte dar bir alanı etkileyen krizler, tüm dünya ülkelerini istisnasız etkiler hale gelmiştir (Günay, Kesimli, 2011).

2000'li yıllara geçildiğinde dünyada hızlı ekonomik büyüme, likidite genişlemesi, iyimserlik piyasalarda özellikle taşınmaz mal (gayrimenkul) piyasasında hızlı fiyat yükselişine, balon ya da köpüğün oluşmasına yol açmıştır (Akgüç, 2009). 2000 yılından 2006 yılının sonlarına kadar finansal piyasadaki bu likidite genişlemesi sürekli olarak yükselmiştir. Kriz öncesindeki bollaşan bu likiditenin karlı operasyonlara dönüştürülmesi banka sisteminin karşılaştığı en önemli sorunlardan birisi olmuştur. Bu operasyonların başında konut kredileri (mortgage kredileri) gelmektedir. 2008 yılının ikinci yarısında küresel boyuta ulaşan bu krizin temelleri ABD'de atılmıştır. ABD'de ortaya çıkan ve tüm dünyayı olumsuz etkileyen emlak sektörüne ilişkin sorunların temeli, beş yıl önce bazı finansal kuruluşların kredibilitesi zayıf olan kişilere de mortgage kredisi vermeye başlaması ile atılmış ve finansal kesim üzerine büyük bir risk almıştır. ABD'deki bankalar, ekonomiyi inşaat sektörü aracılığı ile canlandırmak için, ödeme gücü ve kredibilitesi görece düşük riskli kişi ve kurumlara, subprime mortgage kredileri vererek, yüksek riskli kredilerin boyutunu 1.5 trilyon dolara yükseltmişlerdir. Bankalar daha sonra daha fazla kredi verebilmek için, bu riskli gruba verilen kredilerden doğan alacaklarını teminat göstererek, emlak

tahvilleri çıkarıp bunları piyasadaki benzerlerine göre daha yüksek faizle (riski büyük olduğu için), ağırlıklı olarak riskli yatırımlardan yüksek kârlar elde etmeyi hedefleyen hedge fonlara satmışlardır. Ayrıca ipotekli gayri menkuller üzerinden, emlak fiyatlarının artan kısmına yeni ipotekler yapılarak, yeni kredilerin alınması reel karşılığı olmayan kredi hacmini artırmıştır. ABD'deki mortgage piyasasında verilen kredilerin yaklaşık üçte birinin değişken faizli krediler olması da mali piyasaları zor duruma sokmuştur (Susam, Bakkal, 2008). Bankalar herhangi bir işi, geliri veya varlığı olmayan kişilere bile kredi vermeye başlamışlardır. Kamuoyunda NINJA (No income, no job, no asset) kredileri olarak bilenen bu uygulamalar varlık fiyatlarının özellikalede konut fiyatlarının çok hızlı bir şekilde artmasına yol açmıştır. Bir kısım konut kredisinde başlayan geri ödeme problemleri sonucunda banka portföylerindeki hacizli konut sayısı artmaya başlamıştır. Bankaların bu konutları piyasaya arz etmesi konut fiyatlarında düşüşe yol açmıştır. Bu durumda halen kredisini ödemekte olan bazı konut kredisi kullanıcılarının ellerindeki evlerin değeri kalan kredi ödemelerinin net bugünkü değerinin altında kalmıştır. Dolayısıyla bu kişiler de evlerinin anahtarlarını bankalara göndererek kredi geri ödemelerinden vazgeçmişlerdir. Burada asıl çarpıcı olan şey kredi geri ödemelerinin bankalar tarafından diğer mali kuruluşlara satılması ve bu evleri teminat olarak alan sermaye piyasası araçlarının yaygınlığıdır. Bu nedenle zararlar domino taşları gibi bir mali kuruluştan diğerine sirayet ederek büyümüş ve mali sistemin temel taşları niteliğindeki kuruluşların iflasına yol açmıştır (Alantar, 2008). 2008 krizinin diğer bir nedeni de son dönemde ABD ekonomisinin çok yüksek düzeyde cari açık vermesidir. ABD'de cari açığın oluşmasının nedeni, artan yatırım talebinin, iç tasarruflar tarafından karşılanamamasıdır. Büyüyen ABD ekonomisinde, artan taleple birlikte ithalatın da artması sonucu, ülkenin cari açığı hızla artmaya başlamıştır. ABD'nin cari işlemler açığı 2005 yılında 805 milyar dolar (GSYİH'nın % 5.9' u), 2006 yılında 812 milyar dolar (GSYİH'nın % 6'sı) ve 2007 yılında ise 738 milyar dolar (GSYİH'nın % 5.1'i) olarak gerçekleşmiştir. Bu da ABD ekonomisini daha kırılgan bir hale getirmiştir (Göçer, 2012).

Dünyada 2007 yılında başlayan ve hızla yayılan küresel krizin bütün ülkeleri derinden etkilediği ve hemen hemen tüm dengeleri değiştirdiği söylenebilir. Bu kriz, 1929'da yaşanan büyük buhran dâhil, diğer krizlerden oldukça farklı ve dünyada bugüne kadar yaşanan ilk gerçek küresel krizdir. Bu krizin, iki önemli unsuru ortaya çıkardığı görülmektedir. Bunlardan birincisi; küresel kapitalizmin ülke çıkarları söz konusu olduğu zaman ulusallaşma karşısında yenik düşmesidir. Ülkeler kendi çıkarları söz konusu olduğunda, ekonomik ve siyasi kararlarına devletçi taraflarını daha fazla yansıtırlar. Kriz sürecinde özellikle gelişmiş ülkelerin piyasalara müdahaleleri, kurtardıkları ve devletleştirdikleri kurumlar bunun bir göstergesidir. Bu süreç sonucunda pek çok ülke, özellikle ABD, ülkedeki en büyük mali kurumların pek çoğunu kontrol ediyor olacaktır. İkincisi ise; önümüzdeki yıllarda ABD Dolarının serbest düşüşünün devam edebilecek olması ve dünyanın uluslararası rezerv para birimi olma özelliğini çok büyük ölçüde yitirmesi mümkündür (Öztürk, Gövdere, 2010).

Küresel piyasalarda yaşanan gelişmeler gelişmekte olan ülkelerin finansal piyasalarını da etkilemektedir. Bu ülkelerin finansal kuruluşlarının Amerika'daki yüksek riskli aktiflere ve bu aktiflerle ilgili menkul kıymetlere olan erişimi sınırlı olmakla birlikte, söz konusu gelişmeler bütün gelişmekte olan ülke ekonomilerini etkilemiştir. Gelişmekte olan ülkeler yatırımcıların risk alma iştahlarının azalması nedeniyle dış finansman açısından ciddi daralma yaşamaktadır. Yüksek gelir grubundaki bankalar ve yatırım fonları gelişmekte olan ülkelerden fonlarını çekmişler ve riskli aktif kategorisindeki bu varlıkları daha likit enstrümanlara çevirmişlerdir. Riskli aktiflerin bu satışları hisse senedi fiyatları, tahvil piyasası ve ülke paraları üzerinde dramatik etkiler yaratmış, aynı zamanda bu ülkelerde kredi koşullarının daralmasına yol açmıştır (Erdönmez, 2009).

Finansal kriz ayrıca gelişmekte olan ülke ekonomilerinin büyüme ve enflasyon rakamlarını dış ticaret, kredi ve sermaye hareketlerindeki değişimle etkilemiştir. Dünyada meydana gelen kredi daralması ve likidite sorunu karşısında firmalar ve devlet borçlanma maliyetleri artmış, hızla hareket eden yabancı sermaye kurlar üzerinde oynaklıklara yol açmış, emtia fiyatlarındaki artış ise dış ticaret rakamlarını düşürerek yatırım ve karlılık oranlarında düşüşlere yol açmıştır (Erdoğan, Mangır, 2011).

Finansal kriz açısından Türkiye ekonomisine bakıldığında, Türkiye'de krizlerin yeni yaşanan bir durum olmadığı görülmektedir. Cumhuriyet kurulduktan sonra pek çok krizle karşı karşıya kalınmıştır. 1970'li yıllarda yaşanan dünya petrol ve döviz krizleri Türkiye ekonomisini olumsuz etkilemiş, ihracatı arttırma çabaları yetersiz kalmış, ithalat ve dış borçlanmanın aşırı bir şekilde arttığı görülmüştür. Bunun sonucunda Türkiye, işsizlik, enflasyon, bütçe açıkları gibi sorunlarla karşı karşıya kalmıştır (Fırat, 2012). Türkiye ekonomisine 1999 ve 2001 krizlerinin etkisi çok fazla olmuştur. 2001 krizi Türkiye ekonomisinin ve özel sektörün zayıflıklarından kaynaklanmıştır. 2008 yılındaki finansal kriz ABD'de başlamış olup, batı Avrupa ekonomilerini etkilemiş ve etkisi tüm dünyayı sarmıştır. Küresel ekonomik kriz tüm dünyayı etkilediği gibi Türkiye ekonomisini de olumsuz etkilemiştir (Sayılı, Uyanık, 2012).

Küresel ekonomik krizin Türkiye ekonomisi üzerindeki ilk etkisi finansal piyasalarda görülmüştür. İMKB bileşik fiyat endeksi 2008 yılı ocak ayında yaklaşık 43.000 iken aynı yılın Eylül ayında 36.000'e, Aralık ayı içerisinde de 27.000'e düşmüştür. Küresel ekonomik kriz önce borsada ortaya çıkmakta daha sonra da reel ekonomide kendini göstermektedir. Türkiye ekonomisinde 2007 yılından itibaren tarım, sanayi ve hizmetler sektöründe büyüme hızları düşmüş, buna bağlı olarak da GSYH'da azalma meydana gelmiştir. 2007 yılı sonunda %4,7 olan GSYH büyüme hızı 2008 yılı ağustos ayı sonunda %0,9'a düşmüştür. İşletmelerin talep yetersizliği

nedeniyle kapasite kullanım oranları da düşmüştür. Reel ekonomide diğer bir gösterge de açılan ve kapanan iş yeri sayısı ile istihdamdaki durumdur. 2007 yılı ekim ayından 2008 yılı ekim ayına kadar açılan işyeri sayısı %9,4 oranında azalırken, kapanan işyeri sayısı %64 oranında artmıştır. Aynı şekilde 2007 yılı sonunda işsizlik oranı %9,2 iken, Ağustos 2008'de %9,8'e yükselmiştir (Yıldırım, 2010). Krizin Türkiye'yi derinden etkilemesinin bir nedeni de kriz öncesinde ihracatın büyük bir bölümünün Avrupa ve ABD'ye yapılıyor olmasıdır. Krizle birlikte bu ülkelerde yaşanan olumsuz durumlar talep daralmasına yol açmıştır. Bu da Türkiye'nin hem ihracatını hem de üretimini olumsuz etkilemiştir. Çünkü bu ülkelerde ekonomi durgunluğa girmiş, reel gelirlerinin düşmeye başlamasıyla ihracat düşüş göstermiştir. 2008 finansal krizinin etkisiyle dünya ekonomisinde bir talep daralması yaşanmıştır. Bu daralma sonucunda üretilen mallar satılamaz hale gelmiş, fabrikalar üretime ara vermiş ve çok sayıda işçi çıkartılmıştır. Bu kez de ülkelerde iç talep düşmüş ve kriz daha derinden hissedilmeye başlamıştır (Göçer, 2012).

Küreselleşmiş finansal piyasalar arasındaki sıkı bağlantılar nedeni ile ABD mortgage piyasalarında başlayan ve daha sonra likidite krizine dönüşen bu sorun ABD bankalarının borç verme riskini yabancı yatırımcılara aktarması sonucu başta Avrupa olmak üzere tüm dünyaya yayılmıştır (Susam, Bakkal, 2008).

Gelişmiş ülke piyasalarında yaşanan bu gelişmelere paralel olarak, uluslararası sermaye akımlarının yön değiştirmesi ve küresel ekonominin yavaşlamaya başlamasıyla birlikte, 2008 yılının ikinci yarısından itibaren gelişmekte olan ülkeler de belirgin olarak krizin etki alanına girmişlerdir. Türkiye'nin de dahil olduğu gelişmekte olan ülkeler, yatırımcıların risk iştahındaki azalma sonucu sermaye çıkışına maruz kalmış ve bu nedenle para birimlerinde ve yatırım araçlarında önemli değer kayıpları yaşanmıştır. Küresel krizin yol açtığı kredi daralmasının ülkelerin büyüme oranları üzerindeki etkileri giderek daha belirgin hale gelmiştir. Gelişmiş ülkeler başta olmak üzere birçok ekonomide büyüme beklentileri azalmış ya da daralma beklentisine dönüşmüştür. Diğer taraftan, küresel ekonomide beklenen bu yavaşlama ve emtia fiyatlarındaki düşüş eğilimi, gelişmiş ve gelişmekte olan ülkelerin enflasyon oranlarına olumlu olarak yansımıştır. Küresel krizin ardından diğer ülkelerde olduğu gibi Türkiye'de de enflasyon oranları düşmüş, dış finansman imkanları azalmış ve sermaye çıkışları ivme kazanmıştır (TCMB, 2008).

## 3 Türkiye'de Konjonktürel Göstergeler

Konjonktür, genel olarak refah ve bunalım dönemlerinin birbirini izlemesi şeklinde tanımlanmaktadır. Konjonktür, canlanma, refah veya gelişme, duraklama ya da gerileme, daralma ya da bunalım olarak dört evreden oluşmaktadır (Unay, 2001). Konjonktürün çöküş evresinden sonra, dönemin şartlarına göre canlanma görülmektedir. Beklentiler iyidir, yatırımlar caziptir, yatırımlar üretimi, istihdamı ve milli geliri arttırmaktadır. Çöküş aşamasındaki negatif hava tamamıyla yok olmuştur. Refah evresi aşılınca geri dönüş başlamaktadır. Gerileme evresi çok yavaş veya negatif büyüme hızı ile düşük istihdamın gözlendiği, yatırımların düştüğü depresyonist bir süreçtir. Düşen gelirler talebi daha da düşürmekte, fiyatlar ve karlar düşmektedir. Yatırımı kredilerle finanse etme olanağı kalmamaktadır (Parasız, Bildirici, 2006). Duraklama ve kriz kavramlarının zaman zaman birbirinin yerine kullanıldığı gözlemlenmektedir. Duraklama ile genelde kısa dönemde görülen şiddetli dalgalanmalar ifade edilmektedir. Eğer duraklama giderek uzuyorsa ve bu nedenle de daha büyük önem kazanıyorsa kriz kavramı kullanılmaktadır (Unay, 2001). Bu dönemde ise milli gelir daralmaya başlar, yatırım yapma olanağı kalmaz, üretim, istihdam ve gelirler düşme eğilimi gösterir. Sonuç olarak iflaslar başlar ve ekonomik göstergeler hızla değişir.

| Yıllar | Tüfe % | Cari İşlemler Dengesi Milyar $ | İşsizlik oranı % | İhracat Milyar Dolar | İthalat Milyar $ | GSYİH | GSYİH Sabit Fiyatlarla % (1998) | Gelişme Hızı Sabit Fiyatlarla % (1998) |
|--------|--------|-------------------------------|------------------|----------------------|------------------|-------|--------------------------------|----------------------------------------|
| 1998 | 90,7 | -2,5 | 6,9 | 269,7 | 45,9 | 70,203 | -2,7 | 3,7 |
| 1999 | 70,5 | 4,0 | 7,7 | 265,8 | 40,6 | 67,841 | -3,4 | 4,7 |

| 2010 | 6,4 | -48,4 | 9,8 | 113,8 | 185,5 | 105,886 | 9,2 | 7,7 |

*Tablo1: Türkiye Ekonomisine 1998-2010 Yıllarına Ait Bazı Ekonomik Veriler **Kaynak:** Hazine Müsteşarlığı*

20. Yüzyıl versiyonu Neoliberalizmin sanayileşme, totaliteralizm, teknoloji ve paraizmin etkisindeki küreselleşmeye rağmen 21. yüzyılın ilk yarısında ekonomi yeni bir canlanma ve değişim döneminin eşiğine gelinmiştir (Kurtoğlu, Fırat, 2014). Türkiye ekonomisi 1980'lerden sonra konjonktürel dalgalanmalar açısından incelendiğinde, krizlerle dolu bir süreç yaşandığı görülmektedir. Türkiye'de 1990'lardan sonra yapısal ve finansal sorunlar yaşanmaya başlamıştır. Bu sorunlar ard arda krizlerin ortaya çıkmasına neden olmuştur. Bu sorunların başında enflasyon, kamu finansman açığı, cari açık ve bu açığın kapatılması amacıyla yapılan borçlanma gelmektedir. Türkiye'de uzun yıllardır devam eden kronikleşmiş enflasyonu düşürmek için birçok istikrar programları uygulanmaya çalışılmıştır. Kriz dönemlerinde uygulanan programlarda yıllarca kamu finansman açığı borçlanmayla kapatılmıştır. Bu durum dış ticaret açığının büyümesine ve cari işlemler açığına sebep olmuş ve sonucunda yine borçlanma ihtiyacı doğmuştur. Ekonomik krizlerin yanlış politika ve geçici yöntemlerle çözülemez boyutlara getirilmesi, toplumun büyük maliyetlerle karşılaşmasına neden olmuştur. Türkiye'de 1994, 2000 ve 2001 krizleri, konjonktürel dalgalanmalara karşı ülke ekonomisinin yapısının güçlü ve istikrarlı olması gerektiğini ortaya koymuştur. Ayrıca Türkiye gibi gelişmekte olan ülkelerde sermaye karlılığına bağlı dalgaların küreselleşme ile bağlantılı olduğu görülmüştür (Fırat, 2012). Türkiye uzun yıllardır yaşadığı krizlerle birlikte ekonomik yönden hep ayakta kalma mücadelesi vermiştir. Bu süreç için her defasında hazırlanan programlar hep eksik kalmış ve yeni bir krizle birlikte yeni programlara ihtiyaç duyulmuştur. Krizler atlatılıp, büyüme üzerinde bir denge sağlanmışken, 2007 yılının dördüncü çeyreğinde başlayan finansal krizle birlikte büyüme oranları yine sekteye uğramıştır. Küresel krizin olumsuz yansımaları Türkiye'de büyük ölçüde hissedilmiştir. Türkiye'de küresel krizin ardından cari açığın artarak devam ettiği, işsizlik oranının ve dış borcun arttığı görülmüştür.

Küresel finansal kriz hem gelişmiş ülkeleri hem de gelişmekte olan ülkeleri büyük oranda etkilemiştir. Durum Türkiye açısından da incelendiğinde farklı bir şey söylemek mümkün değildir. Bu yıllarda meydana gelen krizlerin etkisiyle büyüme oranları düşmüştür.

## 4 Küresel Krizin Türkiye'de İnşaat Sektörü Üzerindeki Etkisi

2008 yılında başlayan küresel ekonomik krizden inşaat sektörünün nasıl etkilendiği açıkça ortadadır. İnşaat sektörünün küresel kriz açısından iki önemli rolü vardır. İlki dünyada küresel ekonomik krizin ortaya çıkışının inşaat ve konut sektörü ile ilgili olmasıdır. İkincisi ise, inşaat sektörünün gerek ülke ekonomisinin büyümesine olan etkileri gerekse de ülkenin istihdamına olan önemli katkıları nedeniyle dünyada olduğu gibi Türkiye'de de ekonominin lokomotif sektörlerinden birisi olmasıdır. Özetle, küresel ekonomik krizin ortaya çıkması ve yayılmasında inşaat sektörü ve sektörün alt sektörleri önemli bir yere sahiptir (Özdemir, Kılıç, 2011).

| Yıllar | GSYH Gelişme Hızı (%) | İnşaat Sektörü Gelişme Hızı (%) |
|---|---|---|
| 2005 | 8.4 | 9.3 |
| 2006 | 6.9 | 18.5 |
| 2007 | 4.7 | 5.7 |
| 2008 | 0.7 | -8.1 |
| 2009 | -4.8 | -16.1 |
| 2010 | 9.2 | 18.3 |
| 2011 | 8.8 | 11.5 |
| 2012 | 2.2 | 0.6 |
| 2013 | 3.6 | 2.2 |

*Tablo 2: GSYH ve İnşaat Sektörünün Gelişme Hızları **Kaynak:** TÜİK verilerinden derlenmiştir.*

Türkiye'de yaşanan 2001 krizinin ardından inşaat sektörü hızla küçülmüştür. İnşaat sektörü 2002 yılından itibaren uygulanan Güçlü ekonomiye geçiş programı ile toparlanma sürecine girmiştir. Tablo 2'den görüldüğü üzere, 2004 yılından itibaren sektör rekor oranda büyüme göstermiştir. 2006 yılında yüzde 18,5 büyüyen sektör, 2007 yılından itibaren durgunluk sürecine girmiştir. 2007 yılında konut talebindeki azalma, seçim dönemi, ekonomik ve siyasi belirsizlikler inşaat sektöründe durgunluğa yol açmıştır. 2006'daki yüksek performanslı büyümenin ardından sektör 2007 yılında yüzde 5,7 oranında büyüyebilmiştir. 2007 yılı Ağustos ayında ABD'deki mortgage krizi ile başlayan finansal kriz, 2008 yılı Eylül ayından itibaren global bir ekonomik krize dönüşmüş olup, inşaat sektörü olumsuz etkilenmiştir. Ülkemizde de 2007 yılında başlayan durgunluk 2008 yılında ekonomide çarkların tersine dönmesine yol açmıştır. 2009 yılında genel ekonomi küçülmeye devam etmiş olup, inşaat sektörünün gelişme hızı düşmüştür (İntes, 2011).

| Yıllar | Kredi (Milyar TL) | Pay (%) |
|--------|-------------------|---------|
| 2004 | 4,6 | 4,7 |
| 2005 | 7,3 | 4,9 |
| 2006 | 10,8 | 4,8 |
| 2007 | 17,6 | 5,9 |
| 2008 | 27,1 | 6,8 |
| 2009 | 30 | 6,9 |
| 2010 | 36,4 | 6,5 |
| 2011 | 49,3 | 6,6 |
| 2012 | 59 | 6,9 |
| 2013 | 85 | 7 |

*Tablo 3: Yıllara Göre İnşaat Sektörü Kullandırılan Kredi Kaynak: Zaman, 2014*

Tablo 3'de, inşaat sektöründeki gelişmelerin, bankacılık sektöründe verilen konut kredi oranlarını etkilediği görülmektedir. 2008 Küresel kriz itibariyle bireysel konut kredi borcu 27,1 milyar liraya ulaşmıştır. Bu rakam tüm sektörlerin içinden yüzde 6,8 pay almaktadır. Küresel kriz sonrasında tabloya bakıldığı zaman bireysel konut kredi borcunun arttığı görülmekte olup, bu rakam 2013 yılında 85 milyar liraya ulaşmıştır. Tüm sektörlerin içinden aldığı pay ise yüzde 7 oranında artmıştır. Sonuç olarak inşaat sektörünün artan borç yükünün bankacılık sektörüne olan etkileri değerlendirildiğinde, inşaat sektörünü tehdit edecek olumsuz unsurların bankaları da etkilediği görülmüştür.

|  | 2006 | 2007 | 2008 | 2009 | 2010 |
|--|------|------|------|------|------|
| İnşaat | 18.5 | 5.7 | -8.1 | -16.1 | 18.3 |
| Sanayi | 8.3 | 5.8 | 0.3 | -6.9 | 12.9 |
| Ticaret | 5.8 | 5.3 | -1.5 | -8.6 | 11.5 |
| Tarım | 1.4 | -6.7 | 4.3 | 3.6 | 1.6 |
| GSYH | 6.9 | 4.7 | 0.7 | -4.8 | 9.2 |

*Tablo 4: GSYH ve Sektörlerin Büyüme Hızları (%) Kaynak: Devlet Planlama Teşkilatı ve TÜİK verilerinden derlenmiştir.*

Genel anlamda, inşaat sektörüne girdi olan inşaat malzemeleri üretimi yapan sektör, imalat sanayi içinde değişik alt sektörlerde yer almaktadır. İmalat sanayi demir-çelikten çimentoya, seramikten kiremit ve tuğlaya, yalıtımdan yapı kimyasallarına, aydınlatma ve elektriğe kadar, inşaat sektörünün yanı sıra başka alanlara da girdi sağlamaktadır.

Ekonomik kalkınmada ve sürdürülebilir istihdamın sağlanmasında inşaat malzemeleri sanayisinin önemli bir yeri vardır. İnşaat sektörü çeşitli yatırımları ile etkin bir gelişme perspektifine sahiptir. Bu yapısı ile inşaat malzemeleri sanayi sektörünü direkt olarak etkilemektedir (Bayülken, Kütükoğlu, 2011). Küresel kriz inşaat sektörünü derinden etkilemiştir. İnşaat sektörü yıllar itibariyle keskin bir düşüş sergilemiştir. İnşaat sektörü sanayi üzerinde olumsuzluk yaratan en önemli sektör olmuştur. Sanayi sektörü büyüme hızı önce yavaşlamış sonra hızlı bir şekilde düşüş göstermiştir. Konut piyasalarında başlayan bu kriz aynı zamanda sadece sanayi sektörünü değil, diğer tüm sektörler üzerinde etkili olmuştur.

Tablo 4 den görüldüğü gibi krizin Türkiye ekonomisine yansımaya başladığı 2008 yılı ve tamamen etkilediği 2009 yılında, sektörlerin GSYH içindeki payları değişmiştir. Krizin ABD ekonomisinde de kaynağı olan inşaat sektörü Türkiye ekonomisinde de krizden en çok etkilenen sektör olmuştur. İnşaat sektörünün GSYH içindeki payının krizin Türkiye ekonomisine yansıdığı ilk yıl olan 2008 yılında %13,8 gerilemesi bu durumun bir göstergesi olarak tablodan net olarak görülmektedir. Buna ek olarak 2009 yılında tüm sektörlerin GSYH' ya katkılarının gerilemesi küresel ekonomik krizin Türkiye ekonomisindeki etkilerinin anlaşılması açısından önemlidir. Tablo incelendiğinde 2009 yılında % 8 oranında gerileme ile yine krizin en derin etkilerinin görüldüğü sektör inşaat sektörü iken bunu %7,1'lik gerileme ile sanayi sektörü izlemektedir. Sanayi sektöründeki söz konusu gerileme şüphesiz ithalat yapılamamasına bağlı üretim gerilemeleridir. Küresel ekonomik krizden en az etkilenen ve 2009 yılında negatif değer almayan tarım sektöründe 2009 yılındaki iklim koşullarının iyi olmasına bağlı üretim artışları söz konusu durumun bir nedenidir (Yılmaz, Kurt, 2012).

## 5  Sonuç

Dünyanın süper gücü olarak tanımlanan ABD, 1929 Buhran'ından sonra yaşanan en büyük krizin patlak verdiği ülkedir. 2008 finansal ekonomik kriz, finans sektöründen başlayıp reel kesime sıçramış ve daha sonra sektör ayrımı yapmadan gelişmiş ve gelişmekte olan ülkeleri derinden etkilemiştir. Uluslararası piyasalar açısından etkisi uzun yıllar devam eden ve bütün dünya ekonomisini olumsuz etkileyen küresel kriz, ABD konut

kredisine ilişkin konjonktürün tersine dönmesi, yüksek riskli kredilerin ödenmesinde güçlük yaşanması, bu durumun çoğu yatırımcıyı olumsuz etkilemesi ve kredi piyasalarına olan güvenin azalması açısından dünya ekonomisinde büyük tedirginlik yaşatmıştır. 2008 küresel krizin Türkiye ekonomisi üzerindeki etkisi gelişmiş ülkeler kadar yıkıcı olmamıştır. Ancak ekonomik daralma, üretimde azalma ve dış ticaret hacminde düşüşler yaşanmıştır. Bu gibi olumsuz etkiler neticesinde Türkiye'de de diğer ülkeler gibi bir takım istikrar politikaları uygulamaya koymuş ve krizden kurtulma yollarını denenmiştir. Çalışmanın genelinden de anlaşılacağı üzere 2008 yılında meydana gelen küresel krizden tüm dünya piyasaları olumsuz etkilenmiş ve bu durum nispeten Türkiye'yi de etkilemiştir. Krizle birlikte yani 2007, 2008 ve 2009 yılları verilerine bakıldığında GSYH gelişme hızında ciddi düşüşler yaşanmıştır. Aynı yıllarda inşaat sektörü gelişme hızına bakıldığında GSYH gelişme hızıyla paralel bir durum görülmektedir. 2007 yılında inşaat sektörü gelişme hızı %5.7 iken, 2008 yılında %-8.1'e ve 2009 yılında ise %-16.1'e düşmesi Türkiye'deki inşaat sektörünün küresel krizden ciddi boyutlarda etkilendiğini göstermektedir.

Küresel krizle birlikte inşaat sektörü de durgunluk ve gerileme sürecine girmiştir. İnşaat faaliyetleri azalmış, konut satışları düşmüş ve istihdam sorunu baş göstermiştir. İnşaat sektörü, konjonktürel göstergelerin en önemlilerinden olup, ekonominin diğer sektörleriyle bir bağlantı içeresindedir. İnşaat sektörü diğer sektörler tarafından üretilen nihai mal ve hizmetleri kullanmaktadır. Bu bakımdan sektörler arasında en önemli konumdadır. Diğer sektörler ile olan yoğun ilişkisi nedeniyle, inşaat sektöründe yaşanan olumlu ya da olumsuz bir gelişme diğer sektörleri de kısmen etkileyecektir. Bu nedenle ekonomiyi dengede tutabilmek ve büyüme hızında bir istikrar sağlayabilmek için inşaat sektörü önemli bir makroekonomik politika aracı olarak görülmeli ve kalkınma stratejileri kapsamında inşaat sektörüne önemli ölçüde roller yüklenmelidir.

Son yıllarda Türkiye ekonomisindeki istikrarın devam etmesiyle inşaat sektörü ciddi bir büyüme göstermiştir. Türkiye'de inşaat sektörünün gelişmesi için, gerekli altyapı tamamlanmalı, büyümenin sürekliliği için faaliyetler artırılmalıdır. Türkiye'de tüketicilerin konut satın alma isteği, hükümetin nispeten karayolları ve demiryollarına verdiği önem ve özel sektörün yatırım yapma eğilimi giderek artmaktadır. Bu nedenle son yıllarda inşaat sektörünün büyümeye devam etmesi beklenmektedir. Sektörün büyümesinin sürekliliğini sağlayabilmek için firmalar desteklenmeli, yasal düzenlemeler yapılmalı, sektördeki kurumsal yönetim anlayışı geliştirilmeli, doğru piyasa analizleri yapılmalı, büyük ve yetkin uluslararası firmalarla işbirliği yapılmalı ve kalite standartları yükseltilmelidir. Gelecekte Türk inşaat sektörünün, küresel rekabette önemli bir yere sahip olması için gerekli adımlar atılmalıdır.

# Finansal İstikrarın Sağlanmasında Finansal Regülasyon: Seçilmiş AB Ülkeleri ve Türkiye Uygulaması

# Financial Regulation in Achieving Financial Stability: Selected EU Countries and Turkey Comparison

Ph. D. Candidate İsmail Ciğerci (Afyon Kocatepe University, Turkey)

Dr. Cem Gökce (Afyon Kocatepe University, Turkey)

## Abstract

Financial stability means the stability in payment systems and also means resistance against shocks in financial markets and in foundations being active in such markets. Stability in financial markets usually brings along the financial system's stable action, accordingly the allocation of sources in economy in a productive way and the management and distribution of risks in a suitable way. It is, however, a certain fact that financial instability causes important problems in economy. Such instabilities cause financial crisis and so, high costs of the financial crisis emphasizes the importance of financial stability. One of the most common methods used to prevent financial instability is the ''financial regulation''. Financial regulations are the rules and limitations laid down by the public to the financial spies' economic decisions and actions in order to increase its own social purpose function. Financial regulatory services are composed of three parts: to observe the actions of financial foundations, to discipline them, and to coordinating them. Since financial markets are of more importance in economy comparing to other markets, financial regulation is different from the other regulations as well. The purpose of the financial regulation implemented for the financial markets is to equalize the distribution of the data owned by individuals who are transacting in the financial system. In this research, the importance of financial regulations in achieving financial stability is being emphasized and selected-EU countries and Turkey will be compared.

## 1   Giriş

Regülasyon kelimesi sözlük anlamı itibariyle ayarlama, düzenleme, denetleme, yönlendirme gibi anlamlar içermesinden dolayı hukuk bilimiyle iç içe olmasının yanında diğer bilim dalları ile de yakından ilişkilidir. Kavram iktisadi literatür açısından ele alındığında genel olarak özel sektörün ekonomik faaliyetlerinin toplum refahını artıracak şekilde düzenlenmesi anlamına gelmektedir (Francis, 1993). Ancak hemen belirtmek gerekir ki özellikle iktisat literatüründe regülasyon kavramının belirgin bir tanımı bulunmamaktadır. Günümüzde regülasyon kavramı özerk kurumlarca yapılan düzenleme, denetleme ve yönlendirme faaliyeti anlamı taşımaktadır. Özellikle petrol krizleri sonrası ve 1980'lerin başlarında kamu otoritesinin yönlendirici ve denetleyici rolleri ön plana çıkmıştır. Aynı zamanda hem düzenleyen hem de düzenlenen olmaz görüşünün ehemmiyetinin artmasıyla birlikte kamunun ekonomik faaliyetleri doğrudan veya dolaylı olarak yerine getirmesi yerine, düzenleyici faaliyetin kamu yararı gözeten ve kamunun öncülüğünde kurulan özerk kurumlarca yerine getirilmesini savunanların sayısı son dönemlerde artış göstermiştir (Ulusoy, 2003). En yalın ifadeyle regülasyon, finansal piyasalarda, bayındırlık hizmetlerinde, rekabet ve ulaşım gibi alanlarda ki piyasada yer alan aktörlerin daha etkin ve verimli bir şekilde çalışmalarını sağlayan, kamu müdahalesinin ne zaman, nereye ve ne ölçüde olacağına dair uygulamaları kapsayan kurallar bütünüdür.

Finansal regülasyonlar, globalleşen finansal yapı sonrası finansal sistemlerde ortaya çıkan ekonomik aksaklıklara çözüm yolu bulmak veya üretmek gerekçesiyle meydana gelen düzenlemelerdir. Başka bir ifade ile finansal regülasyon, kamu kesiminin düzenleyici otorite olması nedeniyle finansal piyasada yer alan aktörlerin ekonomik kararlarına ve davranışlarına kendi sosyal amaç fonksiyonunu artırmak amacıyla koyduğu kurallar ve kısıtlamalardır (Yay, vd., 2004). Bu bağlamda finansal düzenleyici işlemlerin ana çerçevesini, finansal kurumların davranışlarını izleme, disipline etme ve koordine etme şeklinde çizmek mümkündür. Ekonomi içerisinde finansal piyasaların rolü diğer piyasalara göre daha fazla olduğu için, finans piyasalarına uygulanan regülasyonlar diğer piyasalara uygulananlara göre farklılık göstermektedir. Bu farklılığın en önemli nedenleri, finansal piyasaların ekonominin geneli üzerindeki etkilerinin diğer piyasalara oranla yüksek olması ve hükümetlerin uyguladığı para politikaları ile yakın ilişkisinin olmasıdır. Bu faktörlerden dolayı finansal piyasalarla ilgili düzenlemelerde, piyasaların etkinliğinin sağlanmasının yanı sıra makro ekonomik amaçlara (işsizlik, enflasyon, ödemeler dengesi, vb.) ulaşmada ve para politikalarının etkinliğinin artırılmasını da göz önünde bulundurulmalıdır (Gowland, 1999). Finansal piyasalara uygulanan finansal regülasyon, finansal sistemde işlem yapan bireylerin sahip oldukları bilgilerin dağılımında eşitlik sağlanması amaçlanmaktadır (Kane, 2001).

Finansal regülasyon nedenlerine göre iki ayrı şekilde ele alınabilir. Bunlardan ilki, kaynak tahsisinde piyasa aksaklıklarını azaltmak amacına dönüktür. Diğeri ise, finansal sistemin istikrarının ve özellikle küçük mevduat

sahiplerinin korunmasını amaçlayan ve liberalizasyon programları çerçevesinde bir çok ülkede finansal krizlere tepki olarak güçlendirilen ihtiyatlı regülasyon kavramıdır (Brownbridge ve Kirkpatrick, 1999).

Finansal piyasalarda bankalar ve diğer finansal aracılar şeklinde bir ayrıma gidildiğinde, bankacılık alanındaki düzenlemeler sistematik riskleri ortadan kaldırma veya en aza indirmek anlayışı üzerine kurulmalıdır. Sermaye piyasasına yönelik düzenlemeler ise daha liberal bir yapıya sahip olup, bunlar; yatırımcıların korunması ve piyasa katılımcıları arasında eşit rekabet koşullarının sağlanmasına bağlanmıştır (Nieto, 2001).

Finansal regülasyonun üzerinde önemle durduğu konular (Llewellyn, 2001);

- Sermaye yeterlilik oranlarının belirlenmesi, aşırı risk alma üzerine getirilen sınırlamalar ve birbirine bağlı krediler üzerine konulan kısıtlamalar,
- Finansa kurumlarına yönelik bilgilerin şeffaf olması ve finansal işlemlerin yapılmasına ilişkin kurallar,
- Menkul kıymet ve sigortacılık işlemlerini yapma izninin hangi bankalara verileceğine ilişkin kurallar,
- Kime banka sahibi olma izni verileceğine ilişkin kurallar olarak sıralamak mümkündür.

Piyasa aksaklıklarının önlenmesi ya da kamu yararının gerçekleştirilmesi için finansal regülasyonlara ihtiyaç vardır. Piyasalara yapılan kamu müdahalesi, piyasanın aksayan yönlerinin düzeltilmesi, kaynak tahsisinde etkinliğin sağlanması, doğal tekeller ve tam rekabet piyasasından sapmalar ve piyasa mekanizmasının optimal kaynak dağılımı konusunda etkinliği sağlayamamasından kaynaklanmaktadır (Baştürk, 1999).

Kronolojik açıdan finansal regülasyonun nedenler ele alındığında günümüzdeki düzenlemeler nedenlerinde değişim yaşandığı görülmektedir. Özellikle küreselleşme sonucu yaşanan dünyada meydana gelen gelişmeler ve piyasalarda yaşanan teknolojik gelişmeler bu değişimin temel noktaları olmuştur. 1970'li yıllarda uygulanan regülasyonlar daha çok finansal kurumlar tarafından yürütülen işlemlerin miktarlarını ve fiyatlarının kontrolünü kapsayan piyasa güçleri, piyasa girişleri ve sermaye dağılımı üzerinde önemli kısıtlamalar ve kontroller şeklindeydi. Aynı dönemde uygulanan finansal regülasyonların gerekçesi olarak, bu piyasaların öneminden kaynaklanan sosyal hedefler, ekonomik büyüme ve kaynak dağılımın devlet eliyle gerçekleşmesini, sistematik riskler ve tüketicinin korunması olmuştur. Yine bu dönemde finansal istikrarın sağlanması amacıyla piyasaya girişler ve rekabet üzerindeki kısıtlamaları kullanılırken, bankalar ve diğer finansal kurumlar üzerine uygulanan kontroller makroekonomik politikaların hayata geçirilmesinin bir aracı olarak kullanılmıştır (Edey ve Hviding, 1995).

Finansal regülasyonların en önemli amaçlarından birisi de finansal piyasaları, bütün bankacılık sektörünü etkileyecek sistemik risklere karşı korumaktır. Bu sistemik krizlerin nedenleri ise, regüle edilmemiş bankalarda bulunan mevduat tabanının istikrarsız oluşu, piyasada bulunan iştirakçilerin bir veya birkaçının yükümlülüklerini yerine getirmemesidir. Finansal regülasyonlar, sistemik risklerin kabul edilebilir bir düzeyde tutulmasını amaçlamaktadır. Bu amacı gerçekleştirmek için uygulanan regülasyon politikalarının piyasa aktörlerinin davranışını en az düzeyde etkilemesi gerekmektedir (Alp, 2000). Sistemik risklerin en aza indirilebilmesi için, bankaların, diğer finansal ve mali kurumların güvenilir ve alanlarında uzman düzenleyici kurumlar tarafından denetlenmesi ve elde edilen sonuçların kamuoyu ile paylaşılması gerekmektedir (Edey ve Hviding, 1995).

Tüketicilerin korunması finansal regülasyonun diğer bir amacıdır. Uygulanan regülasyonlar tüketicileri finansal piyasalardaki iştirakçilerin fırsatçı davranışlarına karşı korumaktadır. Böyle bir regüle piyasalarda güven unsurunun oluşmasına katkıda bulunur. Piyasalarda güven unsurunun oluşabilmesi için, piyasada var olan aktörlerin yeterli bilgiye sahip olmaları gerekmektedir. Şayet tüketiciyi koruma amacına sahip regülasyonlalar uygulanmaz ise, tüketiciler finansal ürünler ya da hizmetler için doğru tercihte bulunamayacaklardır. Bu bilgi eksikliğini ortadan kaldırmak için regülasyon yapan kurumlar çoğunlukla finansal piyasalarda yer alan firmalara güvenilirlik testleri uygulayarak kalitelerinin tespitini yaparlar. Yapılan bu güvenilirlik testlerinin yanı sıra belirli çalışma kuralları koyarak firmaların asimetrik bilgileri kendi çıkarları doğrultusunda kullanmalarına engel olurlar (Herring ve Sanomero, 1995).

Finansal regülasyon, finansal piyasalarda yer alan taraflara gerekli bilgilerin doğru bir şekilde ve zamanda iletilmesini sağlayarak güvenilir bir ortamın kurulmasına da yardımcı olur. Uygulanan regülasyon politikaları tüketiciyi sadece firmaların tekelci fiyatlandırmalarından korumakla kalmaz, bunun yanı sıra finans sektörü ve ekonomin diğer sektörleri için kaynak tahsislerinin verimliliğini artırmak güdüsüyle de hareket eder (Herring ve Santomero, 1995).

## 2 Bazı Avrupa Ülkelerinde Finansal Regülasyon Uygulamaları

### 2.1 İtalya'da Finansal Regülasyon

Autorita Amminisatrative Indipendite (AAI) olarak adlandırılan İtalyan Bağımsız Düzenleyici Kurumları altyapı dışındaki sektörlerde 1980'lerin başlarından itibaren oluşmaya başlamıştır. 1981 yılında Sigorta Enstitüsü (ISVAP), 1974 yılında kurulup 1985 yılında bağımsız kurul statüsü kazanan Ulusal Borsa Komisyonu (CONSOB) kurulmuştur. İtalya'da düzenleyici kurum uygulamaları 1990'ların başından itibaren altyapı sektörlerine taşınmıştır. 1995 yılında enerji piyasasını düzenlemek adına İtalyan Elektrik ve Gaz Düzenleyici Kurumu (Autoria), telekomünikasyon sektörünün düzenlenmesi ve denetlenmesi için 1997 yılında İletişim

Düzenleyici Kurumu (AGCOM), rekabet yasalarının uygulanmasından sorumlu olmak üzere 1990 yılında İtalyan Rekabet Otoritesi (AGCM) kurulmuştur (TÜSİAD, 2002).

İtalyan bağımsız düzenleyici kurumlar, ilgili sektörde yasa yerine geçen düzenlemeler yapabilmekte, lisans verme, fiyat ve tarife belirleme, sektörün işleyişi ile ilgili ortaya çıkabilecek problemleri çözme, idari para cezası verme ve lisans iptali gibi yaptırımlar belirleme ve uygulama yetkileri kullanılabilmektedir. Ayrıca bunların yanı sıra bağımsız ve düzenleyici kurumların vermiş olduğu kararlara karşı yapılacak itirazlar yargı yolu başvurmak yerine sektörlere özgü Ombudsman Daireleri oluşturmuştur (TÜSİAD, 2002).

1980'li yılların ortalarından itibaren İtalya Bankacılık sisteminde liberalleşme yönünde önemli yapısal değişiklikler gerçekleştirilmiştir. Bankacılık alanındaki düzenleme ve denetleme yetkisi İtalya Merkez Bankası'na aittir. Bankacılık sistemindeki faaliyetlerin düzenlenmesinde kamu otoritesinin gücü oldukça fazladır. Küçük bankalardan oluşan çoklu bir yapıya sahip olan İtalyan Bankacılık sisteminde banka birleşmeleri ve devralmaları da söz konusudur (Erdönmez ve Tülay, ).

Bankacılık sisteminin daha etkin ve rekabetçi bir yapıya kavuşması için bir takım önlem alınmıştır. Bu önlemlerden ilki, küçük bankaların birleşmeleri diğeri ise özelleştirmesi sağlanacak devlet bankalarının borsa da kotasyonudur. Küçük bankaların birleşmesi ile daha geniş bir alanda hizmet verilebileceği amaçlanmıştır. Şayet bu birleşmeler politik baskılar sonucu oluyor ise bu durum piyasa dengesi üzerinde olumsuz sonuçlar meydana getirecektir. Genel anlamda İtalyan bankacılık sistemine bakıldığında belli bir potansiyele sahip ancak eski ve yetersiz bir yapıya sahip olduğu için, özellikle uluslararası rekabete açılmak için alınan bu tedbirlerin bir an önce yerine getirilmesi gerekmektedir (Balak ve Seymen, 1996).

Genel anlamda İtalya'daki düzenleyici kurumlar dağınık bir yapı içindedir. Bu dağınıklığı ortadan kaldırmak için "Konsolide Finansal Aracılık Kanunu" çıkarılmış, bu kanun ile düzenleme ve denetleme konusundaki yetki ve görevlendirmede bulunarak dengeleyici bir sistem kurmak hedeflenmiştir. Adı geçen bu kanunda Merkez Bankası'na risk limitleri ve mali istikrar konusunda, Ulusal Borsa Komisyonu'na ise şeffaflık ve uygun yönetim konusunda yetki ve görevler yüklemiştir. Bankalarla ilgili düzenleme ve denetleme görevleri ağırlıklı olarak Merkez Bankası tarafından yerine getirilmektedir (Er, 2007).

## 2.2 Almanya'da Finansal Regülasyon

Almanya liberilizasyon sürecin Avrupa'nın öncü ülkelerinden biridir. Liberilizasyon öncesi dönemde düzenleyici faaliyetler merkezi yönetim ve eyalet yönetimleri arasında paylaştırılmış olup, bağımsız düzenleyici kurumlar kendilerine has bir gelişim süreci göstermiştir. Bu paylaşımdan dolayı federal devlete bağlı düzenleyici kurumların sayısı oldukça azdır. Telekomünikasyon ve posta sektörlerini birlikte düzenleyen Telekomünikasyon ve Posta Düzenleyici Otoritesi (RegTP); Federal İlaç ve Tıbbi Cihazlar Enstitüsü (BfArM) ve finans sektörünü bütün alt sektörler ile birlikte düzenleyen Federal Finansal Denetleme Otoritesi (Bafin) dışında federal yönetime bağlı düzenleyici kurum bulunmamaktadır. Avrupa'nın en eski kurumu olan ve bütün sektörler üzerinde çok geniş düzenleyici ve yaptırım gücü bulunan Federal Kartel Otoritesi'ni (Bundeskartellamt) de bu kurumlar ilave etmek yerinde olacaktır (TÜSİAD, 2002).

Federal Finansal Denetleme Otoritesi 2002 yılında faaliyete geçmiş olup, daha önce federal daireler tarafından düzenlenen bankacılık, sigortacılık sektörleri ile sermaye piyasalarını aynı çatı altında toplayan düzenleyici bir kurumdur (TÜSİAD, 2002). BaFin, Federal Maliye Bakanlığı'nın altında bağımsız bir otorite olarak yer almaktadır. BaFin'in görevi, bankacılık sektöründeki varlıkların güvenliğini tehlikeye sokabilecek, bankacılık mesleğinin düzenli biçimde yönetilmesini engelleyecek veya ulusal ekonomi için problem yaratacak durumlara ve gelişmelere karşı önlem almaktır (Balak ve Seymen, 1996).

Alman bankacılık sisteminin en belirgin özelliği sektör içerisinde yer alan evrensel bankaların üstünlüğüdür. Hukuki yapıları, büyüklükleri, yönetim şekilleri ve organizasyon yapıları farklılıklar göstermektedir. Bunun yanında kredi kurumları tek çatı altında toplanarak her türlü bankacılık işlemlerini gerçekleştirebilmektedirler (Erdönmez ve Tülay). Alman bankacılık sistemi önceleri Fransa bankacılık sistemine benzer bir yapıda Bankacılık Gözetim Bürosu tarafından yapılan düzenleme ve genellikle Bundesbank tarafından yapılan denetim sistemi ile 2002 yılında İngiltere bankacılık sistemine doğru geçiş yapmıştır. Böyle bankacılık, sigortacılık ve sermaye piyasaları BaFin'in çatısı altında toplanmıştır (Er, 2007).

Almanya'da kamu otoritesi yasal bir denetleme uygulaması ile kalmayıp bunun yanında finansal denetim de uygular. Sigortacılığın düzgün olarak işlemesi yasal denetimin amacı iken, sigorta poliçeleri arasında yer alan yükümlülüklerin herhangi bir zamanda tamamlanması ve sigorta şirketlerinin düzenlenmesi finansal denetimin amacıdır. Alman yasalarında yer alan sigorta denetiminin özelliği, hayat ve sağlık sigortasında biriken fonların bu sigortacılığın diğer bölümlerinde meydana gelen kayıpların giderilmesi için kullanılmasının önüne geçilmesi anlamına gelmektedir (Grote, 2006).

Tahvil İhracı Yasa'sı finansal hizmetlerin düzenlenmesine dayanan en önemli yasadır. Bu yasa son dönemlerde finansal piyasalarda yaşanan uluslararası para akışının deregülasyonu, bilgi ve ticarete sistemlerinin tanıtımının iletişim teknolojisindeki ilerlemeye dayanması gibi temel sorulara cevap vermiştir. Federal düzeyde tahvil ihracının gözetimini gerçekleştiren federal piyasa denetim yetkisinin oluşturulmuş olması bu yasanın en önemli özelliğidir (Grote, 2006).

Finansal denetim yetkisi iki ana kategoride ele alınabilir. Birinci grupta, bireyler ve denetim piyasasında yer alan şirketler ile yürütülen rekabetçilerdir. Diğer grupta ise, geniş anlamda kural koyan güçlerden oluşmaktadır. Birinci grupta yer alan güçler klasik olarak idari güçlere bağlı olan güçlerdir. İdari güçler, bireysel firmaların işletilmesi ve ticaret halindeki işlerin yürütülmesini gerçekleştirir. İdari güçler tarafından verilen yetkiler denetim elemanlarının güvenilir olmayan bireyleri ve firmaları piyasadan uzak tutmak için potansiyel piyasalarda kontrol sağlamalarına izin verir. Dolayısıyla sigorta denetimlerinde olduğu kadar bankalar ve finansal hizmet veren diğer kuruluşlar kendilerine yetki verilmediğinden işlerini yerine getiremezler. BaFin yalnızca bir idari otorite değil aynı zaman da düzenleyici bir role de sahiptir. Alman düzenleyici kültürü içinde BaFin önemli bir role sahiptir. Bu kültür büyük ölçüde yasal çerçevede kaynaklanmaktadır. Çünkü Alman anayasası meclise yasama yetkisinin yanı sıra yasal müdahale yetkisi de sunmaktadır (Grote, 2006).

### 2.3 Fransa'da Finansal Regülasyon

Bilindiği üzere Fransa kamu idare sisteminde tarihsel merkeziyetçi bir yapıya sahiptir. Fakat bu şablon özellikle alt yapı sektörlerinde AB düzeyindeki gelişmelere paralel olarak yavaş yavaş değişmeye başlamıştır. Bu bağlam da Fransa'da kurulan düzenleyici kuruluşlar şunlardır: 1996 yılında çıkarılan bir yasayla telekomünikasyon sektörünü rekabete açan ve bu sektördeki gerekli düzenlemeleri yapmak için kurulan Telekomünikasyon Düzenleyici Otoritesi (ART) ; elektrik sektörünü düzenleyen Elektrik Düzenleme Komitesi (CRE) 2000 yılında çıkarılan yasayla kurulmuştur. Bunların yanında radyo ve televizyon yayınlarını denetleyen Radyo ve Televizyon Yayın Konseyi (CSA), sermaye piyasalarını denetleyen Sermaye Piyasası Düzenleme Komisyonu (COB),1986 yılında bağımsız bir otorite olarak kurulan Rekabet Konseyi bulunmaktadır (TÜSİAD, 2002).

Fransa devletinin bankacılık sistemiz üzerindeki ağırlığı oldukça fazladır. 1984 yılında yapılan reformalar ile bankacılık sistemindeki hizmet çeşitliliği artmıştır. Bankalar Kanunu ve Mali Faaliyetlerin Modernizasyonu Kanunu ile sektörün denetim; kurumsal ve operasyonel olarak ikiye ayrılmış, kredi kurumlarının ve yatırım şirketlerinin düzenli denetlenmesi konusunda Merkez Bankası'na önemli bir rol verilmiştir. Sektörle ilgili kurumsal denetimin ve gerekli mevzuatın hazırlanması Kredi ve Menkul Kıymet Ulusal Konseyi tarafından gerçekleştirilmektedir. Bu konsey, Bankacılık ve Finansman İşleri Düzenleme Komitesi, Kredi Kurumları ve Yatırım İşletmeleri Komitesi ve Bankacılık Komisyonundan oluşmaktadır. Bu komite ve komisyonlar idari birer organ olup kendilerine ait bütçeleri bulunmamaktadır. Bankacılık Komisyon'u Ulusal Planın hazırlanmasında danışmanlık yapmakta, Cumhurbaşkanı ve Parlamentoya bankacılık ve finans sisteminin işleyişi hakkında her yıl rapor sunmaktadır. Bu konsey ve komitelerin kararları, Eyalet Konseyi tarafından veto edilebilmektedir. Eyalet Konseyi Fransa'nın en yüksek yargı organı olarak görev yapmaktadır (Acar ve Tülay, 2000).

Fransa'da bankacılık sektörü Fransız Bankalar Kanunu'na göre; Bankalardan, Yardımlaşma ve Kooperatif Bankalarından, Tasarruf Bankalarından, Belediye Kredi Bankalarından, Finans Şirketlerinden ve Uzman Finans Kurumlarından oluşmaktadır. Bunun yanında Fransız bankacılık sektörüne düzenleme ve danışma otoriteleri olarak ve aynı kanuna göre kurulan; Finans ve Bankacılık Düzenleme Komitesi, Kredi Kurumları ve Yatırım Şirketleri Komitesi olmak üzere üçlü bir yapı söz konusudur. Finans ve Bankacılık Düzenleme Komitesinin; bankaların kurulması için gerekli olan sermaye tutarının belirlenmesi, yeni şubelerin açılması ve bankacılık sektöründe faaliyet gösterebilmek için gerekli olan şartların belirlenmesi, müşteri ilişkilerini düzenleyen kurallar ve kredi kurumlarının faaliyetleri için gerekli kılavuzların hazırlanması, muhasebe kurallarının resmi olarak ilanı ve yönetim standartlarının oluşturulmasına yönelik bir takım görevleri mevcuttur. Bu görevlerin yanı sıra kredi kurumlarının ve yatırım şirketlerinin iç yönetimlerine ait genel kuralları belirlemekle de görevlidir (Güçlü, 2006).

Kredi kurumlarına yönelik lisansların verilmesi veya bu lisansların iptal edilmesi, Fransa'da faaliyet gösteren kredi kurumlarının listelerini yayımlamak, AB içerisinde yer alan Fransız Kredi Kuruluşlarının topluluk içerisindeki yayılma süreçlerine ilişkin faaliyetler ve Fransa'da yer alan yabancı kredi kuruluşlarının kuruluş aşamalarının incelenmesi Kredi Kurumları ve Yatırım Şirketleri Komitesi'nin görevleri arasında yer almaktadır. Bu görevlere ilave olarak portföy yönetimi ile ilgilenen yatırım şirketleri hariç, tüm yatırım şirketleri ve kredi kurumlarına faaliyet izni verme görevini de yerine getirmektedir.

Bankacılık Komisyonunun görevi, komisyon tarafından çıkarılan düzenleme ve kararlara uymakta zorunlu olan kredi kuruluşlarının muhasebe kayıtlarını denetlemektir. Bankacılık Komisyonu, portföy yönetimi ile ilgilenen yatırım şirketleri hariç, tüm yatırım şirketleri ve kredi kurumlarına organizasyon ve iç yönetimle ilgili yasal mevzuat ve denetim kriterlerine uyup uymadıklarını denetlemekle görevlidir. Ayrıca Bankacılık Komisyonu gerekli görüldüğü takdirde disiplin cezası da verebilmektedir. Bu sayılan komite ve komisyonlara Maliye Bakanı ya da Merkez Bankası Başkanı başkanlık etmektedir (Güçlü, 2006).

## 3 Türkiye'de Finansal Regülasyon

Türkiye'de bağımsız düzenleyici kurumlar 1980'li yılların ilk yıllarında başlayan liberalleşme politikalarının devlet örgütlenmesindeki etkisiyle oluşturulmaya başlanmıştır. Bu süreç içerisinde ekonomik istikrarsızlıklardan dolayı uluslararası finans kuruluşlarına bağımlılık bu kurumların gelişimini doğrudan etkilemiştir. Avrupa

Birliği'ne uyum süreci ve IMF ile Dünya Bankasıyla birlikte kamu yönetiminde köklü değişimi öngören ilişkiler Türkiye'de sayıları giderek artan üst kurul oluşturma sürecinin yaşanmasına neden olmuştur. 1990'ların sonlarına doğru Dünya Bankası, ekonomik kalkınmadaki başarısızlıkta neden olarak gördüğü devlet için farklı bir rol tanımı yapmıştır. Tartışmanın odak noktasında devletin küçültülmesi değil, aksine piyasanın etkinliği açısından müdahale biçimlerinin yeniden düzenlenmesi söz konusu olmuştur. Bu bağlamda piyasanın belirleyiciliğine olanak tanıma çerçevesinde üst kurullar oluşturulmaya çalışılmıştır (Uyanık, 2002). Bu bağlamda Bağımsız Düzenleyici Kurumlar, yeni kamu yönetimi ve düzenleyici iktisat yazınındaki son gelişmeler çerçevesinde piyasa tökezlemelerinin hüküm sürdüğü alanlarda ekonomik düzenlemeleri yapmak ve uygulamak konusunda öne çıkan kamu yönetimi organlarıdır (TÜSİAD, 2002).

KATIRCIOĞLU (2002), Türkiye'de siyaset, bürokrasi, özel kesim ve mali piyasalar arasındaki ilişkilerin yaratmış olduğu problemlerin çözümü için gerçekleştirilen yapısal reform araçlarından biri olarak Bağımsız Düzenleyici Kurumlar'ı görmektedir. BDK'ların oluşturulma aşamalarında yukarıda sayılan çıkar çevrelerinin etkili bir lobicilik faaliyeti yapmaları da beklenmelidir. Şöyle ki, ekonominin büyük bir kısmını oluşturan sektörleri düzenlemek ve denetlemekle görevli bulunan düzenleyici kurumlar yönetişim sisteminin sağlıklı ve istikrarlı bir yapıya kavuşturulması ve aynı zamanda kamu yönetiminin, siyasetin, mali piyasaların ve şirketlerin yönetim sistemlerin yeniden yapılanmasına hem neden hem de yardımcı olacaktır (TÜSİAD, 2002).

Bağımsız düzenleyici kurumların genellikle idari ve mali açıdan özerk olarak faaliyet göstermeleri, yani merkezi idare yapısının dışında kalmaları, kendine verilen görevleri yerine getirirken dışsal bir müdahaleye maruz bırakılmamaları, karar organlarının işin uzmanı kişilerden oluşması ve görev süreleri boyunca prensip olarak görevden alınmamaları, yürütme işlerinin yanı sıra kısmen de olsa yasaman ve yargı fonksiyonlarına benzer görevler yüklenmeleri gerekmektedir (TÜĞEN, 2006).

Bu açıklamalar çerçevesinde Türkiye'de ismi Düzenleyici ve Denetleyici Kurumlar olan bağımsız düzenleyici kurumlar kuruluş tarihlerine göre şöyledir:

- 1981 yılında Sermaye Piyasası Kurulu (SPK),
- 1994'de Radyo Televizyon Üst Kurulu (RTÜK),
- 1994 yılında Rekabet Kurumu (RK),
- 1999 yılında Bankacılık Düzenleme ve Denetleme Kurumu (BDDK),
- 2000 yılında Telekomünikasyon Kurumu (TK),
- 2001 yılında Enerji Piyasası Düzenleme Kurumu (EPDK),
- 2001 yılında Şeker Kurumu (ŞK),
- 2002 yılında Tütün, Tütün Mamulleri ve Alkollü İçkiler Piyasası Düzenleme Kurumu (TTMAPDK),
- 2002 yılında Kamu İhale Kurumu (KİK)'dur.

Finansal piyasaların düzenlenmesinde ikili bir yaklaşım benimsenmektedir. Birinci yaklaşımda, sermaye piyasaları, bankacılık ve sigortacılık sektörlerinin ayrı ayrı düzenlenmesi ve denetlenmesidir ki bu yaklaşım Türkiye'de de uygulanmaktadır. İkinci yaklaşım ise, finansal piyasaların bütününün tek bir kurum tarafından düzenlenmesi ve denetlenmesidir. Her iki yaklaşımında kendine has avantajları ve dezavantajları bulunmaktadır. Hemen belirtmek gerekir ki teknolojik gelişmelerde yaşanan hızlı değişim, sektörün gözetiminde ve denetiminde koordinasyon problemini de ortaya çıkarmıştır. Dolayısıyla konuya uluslararası uygulamalar açısından bakıldığında mali piyasaları ayrı ayrı düzenleyen kurumlar tek çatı altında toplama yönündeki eğilim giderek artış göstermiştir (TÜSİAD, 2002).

Türkiye'de sermaye piyasalarının düzenlenmesi ve denetlenmesi özellik 1980 sonrası yaşanan liberalleşme hareketleri ile hız kazanmıştır. Sermaye Piyasası Kurumu Teşkilat, Görev ve Çalışma Esasları Yönetmeliği, kurumun varlık nedenini şöyle ifade etmiştir: "menkul kıymetler ve sermaye piyasasıyla ilgili kuruluşlar hakkında kamunun aydınlatılmasını, ortaklıklarda mülkiyetin yaygınlaştırılmasını, menkul kıymetler borsasının çalıştırılmasına, gelişmesine ve yaygınlaşmasına elverişli bir ortamın hazırlanmasını sağlayıcı düzenleme, denetleme, inceleme, araştırma ve açıklamalar yaparak, başta sanayi kuruluşlarının hisse senetleri olmak üzere tasarrufların menkul kıymetlere yatırılmasını özendirmek, sermaye piyasasındaki sağlıksız gelişme eğilimlerini önlemektir".

Sermaye Piyasası Kanunu'na göre SPK'nın görevleri şöyledir:

- Sermaye piyasası araçlarının ihracını, halka arz ve satışını düzenlemek ve denetlemek,
- Sermaye piyasası kurumlarının mali bünyeleri ve kaynaklarının kullanımı ile ilgili standart rasyoları genel olarak ya da faaliyet alanları veya kurum türleri itibariyle belirlemek,
- Sermaye piyasasında, bağımsız denetim faaliyetine ilişkin esasları belirlemek,
- Sermaye piyasasında faaliyet gösteren kurumlar borsalar ve teşkilatlanmış diğer piyasaların faaliyetlerini izlemek ve denetlemek,
- Sermaye piyasasını ilgilendiren her türlü yayın, duyuru ve reklamları izlemek, yanıltıcı ilan ve reklamları yasaklatarak gereği yapılmak üzere ilgili kuruluşlara bildirmek,
- Vadeli işlem sözleşmeleri ve bunların işlem göreceği borsalarda faaliyet gösterecek kurumları düzenlemek,

- Menkul kıymetlerin ödünç alma ve verme, açığa satış ve repo işlemlerini düzenlemek,
- Dışarıda yerleşik kişilerin Türkiye'de sermaye piyasası araçlarının ihraç ve halka arzı konusunda gereken düzenlemeleri yapmak,
- Sermaye piyasası araçlarının takası, saklanması ve kaydi değer haline getirilmesi ve derecelendirilmesini düzenlemek ve denetlemek,
- Sermaye piyasasının gelişmesini teminen yeni sermaye piyasası kurumlarına ilişkin kuruluş, faaliyet, tasfiye ve sona erme esaslarını belirlemek ve bunları denetlemektir.

Görüldüğü üzere Sermaye Piyasası Kurumu'nun düzenleme, kayda alma, gözetim ve denetleme gibi fonksiyonları bulunmaktadır.

Bankacılık Düzenleme ve Denetleme Kurumu, 4389 sayılı Bankalar Kanunu ile sektörde düzenlemeler yapmak, bunların uygulanmasını sağlamak, uygulamayı denetlemek ve sonuçlandırmak, tasarrufların güvence altına alınmasını temin etmek ve Kanunla verilen diğer görevleri yapmak ve yetkileri kullanmak üzere 1999 yılında kamu tüzel kişiliğine haiz, idari ve mali özerkliğe sahip olarak kurulmuştur. Kurum tasarruf sahiplerinin haklarını ve bankaların düzenli ve emin bir şekilde çalışmalarını tehlikeye sokacak ve ekonomide zararlar meydana getirebilecek her türlü işlem ve uygulamaları önlemek, kredi sisteminin etkin bir şekilde çalışmasını sağlamak üzere ihtiyaç duyulan karar ve önlemleri almak ve uygulamakla yetkili ve yükümlü kılınmıştır (TÜSİAD, 2002).

Bankacılık Düzenleme ve Denetle Kurumunun varlık nedenleri olarak, günümüzde devletler, bankacılık sektörünü sağlam bir yapıya kavuşturmak için krizlerin ortaya çıkmasına yol açacak risklerin en aza indirilmesini hatta ortadan kaldırılmasını amaçladığı söylenebilmektedir. Küreselleşmenin en çok etkilediği sektörlerin başında gelen bankacılık sektörü krizlerin de en çok etkilediği sektördür. Bu krizler sonucunda bankacılık sektöründe yeniden yapılanma kaçınılmaz hale gelmiştir. Buna paralel olarak bankacılığa yönelik yeni düzenlemelerin yapılması gündeme gelmiş ve bankalara yönelik denetim sistemlerinin etkinliği de uluslararası düzeyde tartışılmaya başlanmıştır (Tiryaki, 2012).

Türkiye'de özellikle 1990'lı yıllarda yaşanan çeşitli ekonomik krizler ve son olarak Kasım 2000 ve Şubat 2001'de yaşanan krizlerin ardından mali sisteme olan güven tamamıyla sarsılmış ve yukarıda belirttiğimiz küresel ölçekteki düşüncelerin de etkisiyle krizlerden ötürü büyük zarar gören bankacılık sektörüne yönelik yeniden yapılandırma sürecine ağırlık verilmiştir.

Yapılan düzenlemelerde Avrupa Birliği direktifleri ile Basel Bankacılık Gözetim Komitesi'nin belirlediği "Bankacılıkta Etkin Gözetim ve Denetime İlişkin Temel Prensipler" esas alınmıştır. Bunun yanı sıra, Türkiye ile Uluslararası Para Fonu (IMF) arasında imzalanan Stand-by Anlaşması'nın da bankacılık alanındaki düzenlemeler üzerinde etkisi olmuştur. Çünkü IMF "Enflasyonla Mücadele ve Yeniden Yapılandırma Programı"nı desteklemek için Türkiye'den yapısal reformlar yapılmasını ve Bankalar Kanununun değiştirilmesini istemiştir.

Ülkemizde BDDK öncesi bankacılık sektörünün denetlenmesi Hazine Müsteşarlığı ve Merkez Bankası (TCMB) tarafından yapılmaktaydı. Bu iki kuruluş dışında da bağımsız denetim kuruluşları tarafından bankaların her yıl denetlenmesi bir zorunluluk arz ediyordu. Hazine Müsteşarlığı, Banka ve Kambiyo Genel Müdürlüğü aracılığıyla bankalara lisans verme, gözetim ve denetleme görevlerini bankaların hesaplarına ve Bankalar Yeminli Murakıpları'nın raporlarına dayanarak yapmaktaydı. Bankalar Yeminli Murakıpları ise; bankaları yeniden denetleyerek hukuka uygunluklarını ve performanslarını incelemekte ve raporlar hazırlamakla görevliydi. Bankaların durumunun kötüye gittiğinin anlaşılması üzerine bankalar Hazine'nin gözetimine alınmakta ve gerekli önlemler Hazine tarafından alınmaktaydı.

Ancak bankacılık sektöründe ortaya çıkan sorunların çözümünde siyasi baskılardan uzak ve uygun önlemlerin alınmadığı yönündeki düşünceler uzun süren tartışmalar yaşanmasına sebep olmuştur. Bankaların bu mağduriyetlerinin giderilmesi amacına yönelik olarak 4389 sayılı Kanun ile BDDK kurulmuş ve sektöre yönelik tüm yetkiler bu çatı altında birleştirilmiştir.

Bankacılığı uluslararası standartlarda bir yapıya kavuşturmak amacına yönelik olarak, 23.06.1999 tarihinde, 4389 sayılı Bankalar Kanunu ve bu kanunda yapılan değişiklikleri kapsayan 4491 ve 4672 sayılı kanunlar yürürlüğe girmiştir. 4491 ve 4672 sayılı Kanunlarla değişikliğe uğrayan 4389 sayılı Bankalar Kanunu, bankaların denetiminde reform olarak kabul edilebilecek düzenlemeler içermekte ve önemli bir dönüm noktası olmuştur. Bu Kanun ile bankaların kuruluşu, yönetimi ve denetimi, gerek uygulamada karşılaşılan sorunlar, gerekse uluslararası alanda meydana gelen gelişmeler dikkate alınarak yeniden düzenlenmiştir. Böylece bankacılık mevzuatı, Avrupa Birliği'nin bankacılık ile ilgili düzenlemelerine ve uluslararası standartlara büyük ölçüde uyumlu hale getirilmiştir (Erdal, 2002).

BDDK'nın temel misyonu; bankaların ve özel finans kurumlarının piyasa disiplini içerisinde sağlıklı, etkin ve dünya ölçeğinde rekabet edebilir bir yapıda işleyişi için uygun ortamı yaratmak ve bu sayede ülkenin uzun vadeli ekonomik büyümesine ve istikrarına katkıda bulunmaktır. Bankacılık Düzenleme ve Denetleme Kurumu üstlendiği söz konusu misyonu yerine getirmek için gerekli düzenleyici ve denetleyici çerçeveyi yaratacak, uygulayacak ve geliştirecektir. Bu bağlamda Kurumun temel hedeflerini şu şekilde sıralayabiliriz:

- Sektörün etkinliğini ve rekabet kabiliyetini artırmak,
- Sektöre güveni kalıcı kılmak,
- Sektörün ekonomi üzerinde yaratabileceği zararları asgariye indirmek,
- Sektörün dayanıklılığını geliştirmek,
- Tasarruf sahiplerinin hak ve menfaatlerini korumaktır.

## 4 AB Ülkeleri ve Türkiye Karşılaştırması

Avrupa Birliği'nde finansal gözetim ve denetim ulusal çerçevede ve Euro bölgesinde Avrupa Merkez Bankası (ECB) alt koordinatörlüğünde gerçekleştirilmektedir. Birlik ülkelerinin farklı regülasyon uygulamaları ve sermaye piyasalarındaki gelişmişlik düzeyindeki farklılıklar birliğin Parasal Birlikteliği açısından çeşitli sorunlar meydana getirmektedir. Birliğe üye ülkelerde regülasyon uygulamaları, merkez bankaları regulator birimler ya da her ikisinin ortaklaşa düzenlemelerinden oluşmaktadır. Finansal regülasyon uygulamasında İtalya'da Merkez Bankası esas düzenleme otoritesi olarak benimsenirken, Almanya ve Fransa'da ise bağımsız regülasyon birimleriyle yönlendirilmektedir (Taşar, 2009).

Avrupa Birliği'nde düzenlemeyi yapacak en uygun kurumsal yapının belirlenmesi tartışma konusu olmuştur. Merkez Bankalarının "lender of last resort (LOLR) fonksiyonu regülasyon görevinin merkez bankalarına ait olma noktasında sağlam bir gerekçe oluştururken görev sınırlarını belirgin bir şekilde tespit edilmesini zorunlu hale getirmektedir. Görev sınırlarının belirlenmesindeki zorluklar ve bankacılık krizleri, piyasa yapısını çok iyi bilen, muhtemel gelişmeleri öngörebilecek uzmanlık sahibi özel regülatör birimlerini vazgeçilmez bir statüye kavuşturmaktır.

Almanya, Fransa ve İtalya'da, kamu bankacılığı açısından Birlik içerisindeki önemli örneklerdir. Alman bankacılık sisteminde, kamu bankaları ticari bankacılık ve konut sektörü başta olmak üzere sübvanse edilen belirli sektörlerde işlevlerini yerine getirmekte, kamu bankaları kapsamına; tasarruf bankaları, belediye bankaları ve federal devlet bankerleri girmektedir. Fransa'da kamu bankacılığı uygulaması, sosyalist hükümetlerin ekonomi politikalarına dayanmakta, İtalya'da ise kamu bankacılığı sermaye paylarının ya tamamı ya da çoğunluğu devlete ait olan bankalar olmak üzere iki farklı grup oluşturmaktadır (Tunay, 1998).

Türkiye'nin bankacılık sektöründeki aktif yoğunlaşması, Almanya, Fransa ve İtalya gibi gelişmiş ülkelere daha yüksek bir seviyededir. Küresel finansal kriz benzeri bir süreci 2001 Ekonomik Krizi'yle yaşayan Türkiye; bankacılık düzenlemeleri yönünden küresel ölçekte bir örnek oluşturmaktadır. 2001 Krizi sonrasında oluşturulan regülasyon otoritesi BDDK uygulamaları; Türkiye'de Küresel Kriz'in en azından finansal olarak yaşanmasını büyük ölçüde engellemiş, iflas ve kapanma düzeyinde bir bankacılık krizi yaşanmamıştır (Taşar, 2009).

## 5 Sonuç

Düzenleyici devlette, devletin düzenleyici rolü genişlerken devletin doğrudan üretimde yer alması ve işveren ve mülkiyet sahibi olması gerilemektedir. Bu anlamda devlet; ekonomik faaliyetleri yeniden düzenleyen stratejik bir öneme kavuşurken aynı zamanda rekabet gücünü koruyan, rekabeti düzenleyen ve piyasanın işleyişini tehlikeye düşürecek risklerin oluşmasını da engellemeye çalışan bir hal almıştır. Düzenleyici devlet anlayışı ile devlet hizmet sağlayıcı özelliğini bırakarak hizmeti gördüren bir konuma geçmektedir.

Bu yeni anlayış ile birlikte devlet, Neoliberal bir anlayış doğrultusunda piyasa lehine düzenleyici karakteri ile ön plana çıkmaya başlamıştır. Düzenleyici devlet, gücünü bağımsız düzenleyici kurumlarından alır. Düzenleyici devleti işlevsel kılmak amacıyla bu kurumların kurulmasında büyük fayda bulunmaktadır.

Özellikle ekonomik istikrarın sağlanmasında ve bu istikrarın sürdürülebilmesinde bağımsız kurumlara büyük rol düşmektedir. Çünkü bilindiği üzere bir ekonomide arzu edilmeyen en önemli husus ekonomik krizin meydana gelmesidir. Düzenleyici kurumlar, ekonomide özellikle de finans kaynaklı bir kriziz meydana gelmesini engelleyecek riskleri ortadan kaldırma konusunda büyük sorumluluk sahibidirler.

Ülke ekonomilerinde kıt olan kaynaklar nedeniyle finansal piyasaların kullanımı ulusal kalkınmayı gerçekleştirecek projeler noktasında büyük öneme sahiptir. Bu nedenle birçok ülke finansal piyasaların serbestleşmesi hareketlerine yönelmiş ve finansal piyasalarda piyasa ekonomisinin kendine has kurallarını oluşturmak için çaba sarf etmişlerdir. Finansal piyasaların yapısından kaynaklanan piyasa aksaklıkları nedeniyle, bu piyasalarda tam rekabetin oluşması için kamu müdahalesinin varlığı inkar edilmemiştir.

Bankacılık piyasasının düzenlenmesi hem finansal sistemin hem de ekonominin işleyişinin düzgün olması açısından önemlidir. Bankalar ekonomik büyümenin finansmanında tasarrufların toplanması açısından önemli rol oynarlar. Bir sektörün etkinliğinde ve gelişmesinde rekabet önemli iken, bankacılık sektöründe düzenleme rekabet ile yer değiştirmiştir. Bankacılık düzenlemeleri, haksız rekabeti ortadan kaldırarak, rekabetin tesis edilmesi veya rekabete uygun bir ortamın yaratılmasıdır denilebilir.

# Reflections of Public Disclosure and Transparency Principles to Accounting Information System in Corporate Governance Basic

Emine Kalaycı (Karamanoğlu Mehmetbey University, Turkey)
Dr. Rabia Özpeynirci (Karamanoğlu Mehmetbey University, Turkey)

## Abstract

Financial crises occurred in international markets and costs of these crises to investors at microeconomic level and to whole country at macroeconomic level caused institutional administration to have more interest. There are some regulations in this area to follow events in the world closely and to increase the contributions of capital markets on economic development. Background of institutional administration is regulated by Capital Market Legislation, Turkish Trade Legislation, International Reporting Standards and Turkey Accounting Standards. These regulations stand out in accounting primarily. Accounting transactions have great importance with its decisive role about researching financial positions of entrepreneurs and implementing other financial responsibilities. Transparence which is the one principle of institutional transparence included corporate governance, explaining, responsibility has important role to achive this regulations. Transparence term has enhanced its importance in capital markets last years. Transparence is necessary to protect investor rights and get public trust. Corporate transparance is directly related with accountancy application and provided by the standart of accountancy which is admitted in international area. This study aims to uncover the relationship between the accounting system and the principle of transparency corporate governance. For this purpose, primarily corporate governance principles transparency and variable laws on emphasis at the same time will be included secondary data.

## 1 Giriş

Globalleşme süreci ile birlikte ekonomik işbirlikleri en üst seviyelere ulaşmış ve bir ülkede meydana gelen gelişmeler diğer ülkeleri de zamanla etkisi altına almaya başlamıştır. Hızlı bir değişim sürecine tanık olduğumuz günümüz iş dünyasında, ekonomik ve sosyal alanlarda ortaya çıkan sorunlar, yaşanan uluslararası finansal krizler, skandallar bilgilerin güvenilirliğine gölge düşürmüştür. Yaşanan bu skandallar ve krizler neticesinde şirketlerin faaliyetlerinin eksik ve yanıltıcı bir şekilde kamuoyuna aktarılması, şirketlerin kamuoyu önündeki güveninin sarsılmasına neden olmuştur. Sarsılan bu güvenin kazanılması amacıyla Kurumsal Yönetim anlayışı doğmuş ve küresel alanda ülkeler kendi sosyal ve ekonomik yapılarını göz önünde bulundurarak kendi değerlerine uygun Kurumsal Yönetim uygulama rehberleri yayınlamışlardır.

İşletmeler etkili bir yönetim sergileyebilmek, güvenilir ve sağlam yapılar oluşturabilmek için güvenilir, doğru, şeffaf ve zamanlı bilgi sistemine ihtiyaç duymaktadırlar. Kurumsal Yönetim İlkeleri ile yönetilen şirketlerin muhasebe bilgi sistemlerinin hazırladığı bilgilerin, rekabet ortamında şirketlere daha fazla fayda sağlayacağı görülmektedir. Bu nedenle Dünya da pek çok ülke değişik kurumlar tarafından belirlenmiş Kurumsal Yönetim ilkelerini göz önünde bulundurarak kendi Kurumsal Yönetim ilkelerini oluşturmuş ve finansal piyasalarda şeffaflığa katkıda bulunacak Kurumsal Yönetim yapılarını kurmuşlardır. Aynı zamanda tüm Kurumsal Yönetim ilkeleri finansal raporlamada şeffaf, hesap verilebilir, doğru, eş zamanlı ve hızlı bilgi sunumuna değinmiştir.

Bu çalışmanın amacı, muhasebe bilgi sisteminin etkinliği ile Kurumsal Yönetimin şeffaflık ilkesi arasındaki ilişkiyi ortaya koyabilmektir. Bu amaçla öncelikle Kurumsal Yönetim ilkelerinden şeffaflığın, Dünya'daki Kurumsal Yönetim İlkeleri içinde nasıl şekillendiğine ve Uluslararası Finansal Raporlama Standartlarındaki Kurumsal Yönetimin önemine değinilerek, Türk Ticaret Kanunu'ndaki Kurumsal Yönetim ilkelerine ilişkin düzenlemeler ile literatür taramalarına yer verilmiştir.

## 2 Kurumsal Yönetim

Küreselleşmenin ve bilgi ekonomisinin her geçen gün daha yoğun hissedildiği günümüzde pek çok yeni kavram ve anlayış ortaya konulmakta ya da mevcut kavramlar yeniden tanımlanmaktadır. Kurumsal Yönetim kavramı da bunlardan biridir.

1970 ve 1980'li yıllarda ABD'de, 1990'lı yılların başından itibaren ise ABD dışındaki ülkelerde de ortaya çıkan Kurumsal Yönetim, hızlı bir şekilde iş dünyası, uluslararası organizasyonlar, hükümetler ve akademik çevrelerden kabul gören, bir yönetim felsefesi haline gelmiştir. Başlangıçta büyük ekonomilere sahip ülkelerde görülmeye başlanan Kurumsal Yönetimin özünde, şirketlerin hissedarlarına ve diğer paydaşlara en yüksek yarar sağlayacak şekilde yönetilmeleri yer almaktadır (Pamukçu, 2011).

Kurumsal Yönetim ortaya çıktığı ilk yıllarda işletmelerin yönetilmesi ve kontrol edilmesi için oluşturulan bir sistem olarak tanımlansa da ilerleyen zamanlarda bu tanım daha da genişletilmiştir. Dünya Bankası Kurumsal Yönetimi; "bir kurumun beşeri ve mali sermayeyi çekmesine, etkin çalışmasına ve böylece de ait olduğu toplumun değerlerine saygı gösterirken uzun dönemde de ortaklarına değer katmasına olanak tanıyan her türlü kanun, yönetmelik, kod ve uygulamalar" olarak tanımlamaktadır (World Bank, 1999). Ekonomik İşbirliği ve Kalkınma Örgütü' nün (OECD) tanımına göre ise Kurumsal Yönetim; bir şirketin yönetimi, yönetim kurulu, hissedarları ve paydaşları arasındaki bir dizi ilişkiyi kapsar ve işletmenin amaçlarına ulaşmasına yardımcı olur, şeklinde tanımlamıştır (OECD, 2004).

Uluslararası Kurumsal Yönetim Ağı  (ICGN: The International Corporate Governance Network), Kurumsal Yönetim reformu ile ilgilenen büyük uluslararası yatırımcıların dünyadaki Kurumsal Yönetim uygulamalarına ilişkin olarak, uluslararası iletişim ve işbirliğini artırmak için 1995 yılında kurulmuş, kar amacı gütmeyen bir organizasyondur. Uluslararası Kurumsal Yönetim Ağı'nın; Kurumsal Yönetime ilişkin uluslararası görüş alış verişi yapabilmek için yatırımcılara yol gösteren bir ağ oluşturmak, Kurumsal Yönetim ilke ve uygulamalarını incelemek, Kurumsal Yönetim ilke ve rehberlerine bağlılığı geliştirmek ve teşvik etmek ve genel olarak Kurumsal Yönetimi teşvik etmek, olmak üzere dört temel amacı bulunmaktadır (ICGN,2013). Uluslararası Kurumsal Yönetim Ağı'nin bu çalışmaları OECD ilkelerinin geliştirilmesine katkı sağlamış ve 1999 yılında yayımladıkları bir beyanat ile OECD'nin Kurumsal Yönetim ilkelerini desteklediklerini ve bu alanda bir kilometre taşı olarak kabul ettiklerini beyan etmişlerdir (OECD, 2004).

Türkiye Kurumsal Yönetim Derneği (TKYD) ve Deloitte'e göre Kurumsal Yönetim, bir şirketin hak sahipleri ve kamuoyunun menfaatlerine zarar vermeyecek şekilde, mali kaynakları ve insan kaynaklarını kendine çekmesini, verimli çalışmasını ve bu sayede hissedarları için uzun dönemde ekonomik kazanç ortaya çıkararak istikrar sağlamasını mümkün kılan kanun, yönetmelik ve gönüllü özel sektör uygulamalarının bileşimidir (TKYD ve Deloitte, 2014).

Kurumsal Yönetim, şirketlerin faaliyetlerinde taraflara karşı sorumluluklarının bilincinde olarak, şirketin değerini ve verimliliğini arttıran, şirket ortaklarına, hissedarlarına ve çalışanlarına karşı önceden planladığı hedefleri belirten, bunu yaparken söz konusu taraflarla yasalara uygun, etik değerler çerçevesinde çalışmalarda bulunan bir sistemdir (Öztürk ve Demirgüneş, 2008). Kurumsal Yönetim kavramı "işletmenin stratejik yönetimi ile sorumlu üst yönetimin, bu görevlerini ve sorumluluklarını yerine getirirken, işletme üzerinde kendilerini belirli nedenlerle hak sahibi gören pay sahipleri, çalışanlar, tedarikçi, müşteri ve diğer toplumsal kurumlarla olan ilişkiler bütünü" olarak da tanımlanabilir (Ülgen ve Mirze, 2004).

Amerika'da yaşanan Enron ve Arthur Andersen, İtalya'da yaşanan Parmalat, muhasebe skandalları, şirketlerdeki yönetim ve denetim eksikliklerini gündeme getirmiş ve Kurumsal Yönetimin önemi ve gereği daha da belirgin olarak ortaya çıkmıştır. 2008 yılının Eylül ayında ABD'de başlayan ve tüm Dünyaya yayılan ekonomik kriz ve aynı yılın Kasım ayında yapılan G20 zirvesinde yine aynı durum tespit edilmiş ve konuya ilişkin tavsiyelerde bulunulmuştur (Yücel, 2013. Küçüksavaş, 2005).

Dünyada 100'ün üzerinde farklı Kurumsal Yönetim düzenlemesi olup bu düzenlemelere her geçen gün de yenilerinin eklenmesinden dolayı, dünya üzerinde her ülkenin uygulayabileceği standart bir kurumsal yönetim modeli mevcut değildir (TSB, 2011). Her ülkedeki Kurumsal Yönetim ilkeleri ülkelerin yönetim biçimine, hukuki altyapısına, kültürel yapısına ve şirket yapılarına bağlı olarak değişmektedir.

OECD Kurumsal Yönetim İlkeleri esas alınarak Türkiye'de ilk çalışma Türkiye Sanayici ve İşadamları Derneği (TÜSİAD) tarafından oluşturulan Kurumsal Yönetim Çalışma Grubu tarafından 2002 yılında yapılmıştır. Kurumsal Yönetim Çalışma Grubu üyeleri, 2003 yılında Türkiye Kurumsal Yönetim Derneği (TKYD)'nin kuruluşunu gerçekleştirerek, Kurumsal Yönetim anlayışının Türkiye'de daha iyi tanınması ve gelişmesine katkı sağlamışlardır. Aynı yıl Sermaye Piyasası Kurulu (SPK), Kurumsal Yönetim İlkeleri Rehberi ile mevcut hukuki düzenlemelere prensipleri ilave etmiştir. Bu kapsamda rehber, mevcut mevzuat ve uygulamada Kurumsal Yönetim konusunda oluşan eksikliği gidermeyi ve boşlukları doldurmayı amaçlamıştır. 2004 yılında SPK'nın Uyum Beyanı düzenlemesi ile halka açık şirketler, kurumsal yönetim ilkelerine ne ölçüde uymakta olduklarını ve uymadıklarını, uymadıkları unsurlar ile ilgili gerekçelerin neler olduğunu faaliyet raporlarında açıklamakla yükümlü tutulmuştur. OECD'nin Kurumsal Yönetim İlkelerini 2004 yılında yeniden düzenlenmesinden sonra, SPK 2005 yılında ek bir düzenleme ile ilkelerde değişiklikler yapmıştır. Türkiye'de Kurumsal Yönetimi teşvik edici nitelikte diğer bir önemli gelişme de 1985 yılında ilk olarak İstanbul Menkul Kıymetler Borsası (İMKB) adıyla açılan 2013'te ismi Borsa İstanbul (BIST) olarak değişen kurum tarafından Kurumsal Yönetim Endeksi'nin oluşturulmasıyla kaydedilmiştir. BIST Kurumsal Yönetim Endeksi'nin amacı, payları Borsa İstanbul pazarlarında işlem gören ve Kurumsal Yönetim ilkelerine uyum notu 10 üzerinden en az 7, her bir ana başlık itibarıyla 10 üzerinden en az 6,5 olan şirketlerin fiyat ve getiri performansının derecelendirilmesidir (BIST, 2014, TKYD,2014, Küçüksözen ve Küçükkocaoğlu, 2005).

 Bu endekste yer alan Kurumsal Yönetim İlkelerine uyum/derecelendirme notu, SPK tarafından belirlenmiş derecelendirme kuruluşları listesinde bulunan derecelendirme kuruluşlarınca, şirketin tüm kurumsal yönetim ilkelerine uyumuna ilişkin yapılan değerlendirme sonucunda verilmektedir. Kurumsal yönetim derecelendirme

notu, şirketlerin pay ve menfaat sahiplerine verdikleri önemin, kamuyu zamanında ve doğru aydınlatma faaliyetlerinin, yönetim kurulunun faaliyetlerinin genel kredibilitesi ve pay ve menfaat sahipleri ile ilişkiler hakkında bir görüştür. SPK'nın belirlediği derecelendirme kuruluşları tarafından bir bütün olarak tüm kurumsal yönetim ilkelerine uyum ile pay sahipleri, kamuyu aydınlatma ve şeffaflık, menfaat sahipleri ve yönetim kurulu ana bölümleri itibariyle ayrı ayrı olmak üzere verilen not derecelendirme notudur. Şirketlerin Kurumsal Yönetim değerlemeleri eşitlik, şeffaflık, hesap verebilirlik ve sorumluluk olarak adlandırılan dört temel ilke çerçevesinde çeşitli kriterler göz önünde bulundurularak yapılır (BIST, 2014). Kurumsal yönetimin bu dört temel ilkesi, performans ölçümü ve geliştirilmesi esasına dayalı olarak birbirleriyle ilişkilendirilmekte ve böylece, şirketlerin hissedarları için değer yaratırken, toplumsal değerlerle de uyumlu olması beklenmektedir (Denetimnet, 2014).

Kurumsal Yönetim ile amaçlanan, ilgili tarafların karşılıklı hak ve yükümlülüklerinin belirlenmesi ve yatırımcı için gerekli güvenin sağlanmasıdır. Bununla birlikte, Kurumsal Yönetim, şirketlerin şeffaflık, hesap verebilirlik, eşitlik ve sorumluluk ilkeleri etrafında yeniden yapılanmalarını gerektiren ve en genel ifadeyle, kurumları yönlendirme sistemi olarak tanımlayan bir anlayıştır. Bu amaca dönük mekanizmaların oluşturulması doğrultusundaki arayışlar ortaklık içinde eşitlik, şeffaflık, hesap verebilirlik gibi kavramların öne çıktığı, hakim gücün kötüye kullanımının önlenmeye çalışıldığı yönetimsel ve denetimsel tasarımları temel varsaymaktadır (Abdioğlu, 2007). Bu bağlamda Kurumsal Yönetim uygulamalarının başarılı olabilmesi bazı ilke ve kurallara sahip olmasını gerektirmektedir.

Kurumsal Yönetim ilkeleri, işletmelerin üst düzey yönetiminin, işletmelerin faaliyetlerine ilişkin kararları verirken nelere dikkat etmeleri, kararları nasıl, ne zaman ve kimlere açıklamaları ile ilgili kurallar toplamıdır. Genel kabul gören yaklaşımlar çerçevesinde Kurumsal Yönetim ilkeleri; şeffaflık, hesap verebilirlilik, eşitlik ve sorumluluk olmak üzere dört temel unsur üzerine oturtulmakta olup, bu temel unsurlar iyi bir Kurumsal Yönetim sistemi için olmazsa olmaz kavramlar olarak değerlendirilmektedir. (Darman, 2004, Abdioğlu, 2007, Ararat,2003, Canbaloğlu, 2011, SPK, 2005, TYKD,2014).

Kurumsal Yönetim ilkelerinden şeffaflık ilkesi, şirketle ilgili olarak ticari sırlar dışında kalan tüm finansal ve finansal olmayan bilgilerin zamanında, doğru, anlaşılabilir, kapsamlı ve kolayca analiz edilebilir bir biçimde sunulmasını ifade eder (SPK, 2005). Aynı zamanda şeffaflık ilkesi şirket yönetiminin, tüm faaliyetlerinde pay ve menfaat sahiplerine eşit davranması ve olası çıkar çatışmalarının önüne geçilmesini de ifade eder. Şirketle ilgili menfaat sahipleri, pay sahiplerinin yanı sıra çalışanları, müşterileri, alacaklıları, tedarikçileri, devleti ve potansiyel yatırımcıları içermektedir (Derin, 2006). Şeffaflık kavramı ile şirketin mali durumu ve operasyonel faaliyetleri kadar mülkiyet ve yönetim yapısı, kurumsal amaçları, karşılaşabileceği tahmin edilebilir riskler hakkındaki bilgilerin de doğru, zamanında ve eşit olarak ulaşılabilecek şekilde kamuya açıklanması amaçlanmaktadır. Bir başka deyişle şeffaflık; ticari sır niteliğindeki bilgiler dışında işletme ile ilgili finansal ve finansal olmayan bilgilerin, zamanında, doğru, eksiksiz, anlaşılabilir, yorumlanabilir, düşük maliyetle, kolay erişilebilir bir şekilde kamuya duyurulması yaklaşımıdır. Şeffaflık ilkesi bağlamında işletmelerin kamuyu aydınlatmalarının geliştirilmesi, işletme ile menfaat ilişkisi içerisinde bulunan bütün kesimlere bilgi akışının sağlanması ve hızlandırılması amaçlanmıştır (Paslı, 2004, Karayel, 2009).

Kurumsal yönetimin dayandığı temel ilkelerden bir tanesi de hesap verebilirliktir. Yönetim Kurulu üyelerinin esas itibariyle anonim şirket tüzel kişiliğine ve dolayısıyla pay sahiplerine karşı olan hesap verme zorunluluğunu ifade etmektedir. Pay sahiplerinin seçilmiş temsilcileri olan yönetim kurulu üyelerinin kararlarında kendi çıkarlarını gözetmekten kaçınacak şekilde dürüst ve dikkatli davranmaları beklenir. Bu beklentinin gerçekleşebilmesi ise yöneticilerin iş ve işlemlerinin sonuçlarına ilişkin olarak pay sahiplerine hesap vermelerini gerektirmektedir. Hesap verebilirlikteki esas amaç yönetim ve denetimin daha etkin hale getirilmesiyle birlikte işleyen ulusal ve uluslararası bir yapının oluşturulmasıdır. Hesap verebilirlik ilkesi; işletmenin yönetimine ilişkin kural, kaide ve yükümlülüklerin açıkça belirlenmesi, yönetim ve paydaşların çıkarları arasındaki paralelliğin şirket yönetim kurulu tarafından gözlemlenmesidir (Coşkun, vd, 2005, Kayacan, 2006, Karayel, 2009).

Sorumluluk ilkesi; işletmenin faaliyetlerinin mevcut mevzuata, şirket sözleşmesine ve şirket içi düzenlemelere uygunluğunu ve bunun denetlemesini ifade eder (SPK, 2005). Bunun ötesinde yöneticilerin pay sahipleri dışındaki menfaat sahiplerinin çıkarlarının da karar alma sürecinde dikkate alınması ve bu gruplar ile işbirliği içinde olunması anlayışını içermektedir. Sorumluluk kavramı aynı zamanda şirketin sosyal yönünü de ön plana çıkarmaktadır. Buradan hareketle şirket, eğitim, insan hakları, çevre, gelecek nesiller gibi çok daha geniş bir alana yayılan sosyal sorumlulukları bulunan bir organizasyon olarak kabul edilmektedir. Sorumluluk ilkesi, yönetim kurulunun ortaklık üzerinde etkin gözetim-denetim ve pay sahiplerine karşı yönetim kurulunun sorumluluk sağlaması amacını taşımaktadır. En geniş anlamda bu ilke şirket faaliyetlerinin mevcut mevzuata, toplumsal ve etik değerlere uygunluğunun sağlanması olarak tanımlanabilir (Şehirli, 1999, Erdoğan, 2009).

Kurumsal Yönetim ilkelerinden eşitlik ilkesi ise, şirketteki tüm paydaşların haklarının korunması ve tedarikçilerle yapılan tüm anlaşmaların hayata geçirilmesini ifade etmektedir (TÜSİAD, 2013). Yani aynı gruptaki hissedarlara eşit davranılmalı, aynı cinsten hissedarlara eşit oy hakkı sağlanmalıdır. İşletme yöneticileri faaliyetlerini yaparken her aşamada alınan kararlardan etkilenen tüm menfaat sahiplerine adil yönetimin gereği olarak eşit yakınlıkta olmalıdırlar. Şirket yönetiminin, tüm faaliyetlerinde pay ve menfaat sahiplerine eşit davranması ve olası çıkar çatışmalarının önüne geçilmesini ifade eder. Pay sahiplerinin korunmasına yönelik

olarak yöneticilerin ya da çalışanların usulsüz işlemlerinin önlenmesi, piyasada fırsat eşitliğini bozucu eylemlerin yasaklanması, pay sahiplerinin aktif bir şekilde ortaklık yönetimine katılmasını sağlayıcı düzenlemeler yapılması ve belli grupların menfaatlerinin ön plana çıkmasını önlemeye yönelik girişimler, bu ilkenin yerleşmesi için gereken başlıca unsurlardır (Derin, 2006). Aynı zamanda eşitlik ilkesi, şeffaflık temelinde iyi yönetim ve denetimle, menfaatlerin ideal noktada uyum içerisinde bir araya getirilmesi gerektiği şeklinde de açıklanabilir (Paslı, 2005).

## 3  Kamuyu Aydınlatma Ve Şeffaflık

Uluslararası finansal piyasalarda yaşanan finansal krizlerin arkasında yatan önemli nedenlerden biri de ülkelerin ve şirketlerin Kurumsal Yönetim politikalarının yetersiz olmasıdır. Bu yetersizlikler Kurumsal Yönetim kavramının önemini gün geçtikçe artırmıştır. Şeffaflık, devletin hedeflerini, bu hedeflere ulaşmak için oluşturduğu politikaları ve bu politikaların yarattığı sonuçları izlemek için gerekli olan bilgiyi düzenli, anlaşılabilir, tutarlı ve güvenilir bir biçimde sunmasıdır. Şeffaflıktan söz edebilmek için, kamusal otoritelerin yalnızca ne yaptıklarının değil, aynı zamanda ne yapmaya niyetli olduklarının kamuoyu tarafından önceden bilinmesi, bilgi ve belgelerin vatandaşların erişebileceği ve etkin bir biçimde kullanabileceği şekilde düzenli, tutarlı ve anlaşılır olması gerekmektedir (İşcan ve Kaygın, 2010).

Şeffaflığın yerine getirilmesi sürecinde, şeffaflık kavramının tamamlayıcısı olarak karşımıza kamuyu aydınlatma kavramı çıkmaktadır. Kamuyu aydınlatma, kurumsal şeffaflık ilkelerine uygun olarak sermaye piyasalarını düzenleyici kurumların zorunlu tuttuğu finansal bilgilerin ve bu bilgilerin dışında kalan diğer finansal ve finansal olmayan bilgilerin, şirket tarafından kamuya açık ve anlaşılır biçimde sunulmasıdır (Arsoy, Poroy, 2008). Kamuyu Aydınlatma ve Şeffaflık Kurumsal Yönetimin en önemli ilkelerinden biri olduğu için doğrudan muhasebe uygulamaları ile de ilişkilidir.

Finansal bilgilerin hazırlanmasında güvenilir şeffaf yol haritaları çizen Uluslararası Muhasebe Standartları Kurulu (UMSK) tarafından yayınlanan Uluslararası Finansal Raporlama Standartları (UFRS), Finansal Muhasebe Standartları Kurulu (FASB) tarafından yayınlanan Amerikan Genel Kabul Görmüş Muhasebe Standartları, Muhasebe Standartları Kurulu (ASB) tarafından yayınlanan İngiliz Genel Kabul Görmüş Muhasebe Standartları, şirketlerin açıklayacakları finansal bilgileri "Genel Amaçlı Finansal Tablolar" olarak sınırlandırmıştır (Arsoy, Poroy, 2008).

UMSK tarafından yayınlanan Kavramsal Çerçeve'de finansal tabloların, "çeşitli kullanıcıların ekonomik kararlar verirken faydalanmaları için işletmenin finansal durumu, finansal sonuçları ve finansal durumundaki değişiklikler hakkında bilgi sağlamak" olarak belirtilen amacı, özel amaçlı bilgilerin standartların kapsamı dışında tutulduğunu açıkça ortaya koymaktadır.

Uluslararası Finansal Raporlama Standartları'nın (UFRS) gelişmesi ve uluslararası arenada genel kabul görmeye devam etmesi, düzenleyici otoritelerin ülkelerinde UFRS'nin benimsenmesine ilişkin kararlarının konuyla ilgili araştırmacıların ana inceleme konuları arasında en öne çıkmasına neden olmuştur. Çeşitli ülkelerde yapılan UFRS, kamuyu aydınlatma/şeffaflık konularındaki çalışmaların bazılarını inceleyecek olursak:

Aksu ve Kösedağ'ın incelemeye alınan çalışmalarında, kapitalizasyon oranı büyük ve likit İMKB şirketlerinin finansal performansları ile şeffaflık puanları arasındaki ilişki incelenmiştir. Çalışma sonucunda özellikle yönetim kurulu ve idarî yapı kategorisinde yüksek puana sahip şirketlerin hisse senetlerinin daha yüksek getiriyi sağladıkları ve karlılığa ilişkin performanslarının daha fazla olduğu ortaya konmuştur. Ayrıca, mali tabloların hazırlanmasında UFRS'yi kullanan şirketlerin daha yüksek şeffaflık puanlarına sahip olduğu belirtilmiştir. Buna göre, UFRS uygulamasının şeffaflığa ve kamuyu aydınlatmaya bağlılığın güvenilir bir delili olduğu değerlendirilmiştir. Aynı zamanda araştırmacılar, şeffaflık puanları ile performans arasında zayıf bir ilişki olduğunu ve "UFRS'nin gönüllü olarak erken uygulanmasının"  bu zayıf ilişkiyi kuvvetlendirdiğini ifade etmişlerdir (Aksu ve Kösedağ, 2005).

Frost, Gordon ve Hayes çalışmalarında, Dünya Borsalar Federasyonu'na (WFE) üye 50 adet borsa üzerinde kamuyu aydınlatma/şeffaflık ve piyasa likiditesi arasında ki ilişkiyi sorgulamışlardır. Yazarlar, borsaların kamuyu aydınlatma sistemlerine odaklanmış, böylece borsalar ve hükümet politikaları ile likidite gibi piyasa kalitesinin etkenleriyle ilişkili sonuçlar arasında ki ilişkiyi gözlemlemişlerdir. Çalışma sonucunda, borsa büyüklüğü, hukuki altyapı ve piyasa gelişimi ve bilgi ortamına ilişkin diğer değişkenlerin kontrol edilmesi halinde, kamuyu aydınlatma/şeffaflık sisteminin sıkılığının piyasa likiditesiyle olumlu yönde ilişkisi bulunduğunu ortaya çıkarmışlardır (Frost, vd, 2002).

Chipalkatti' nin Hindistan' da yapmış olduğu çalışmasında yatırımcılarına daha şeffaf bilgi sunan bankaların piyasa disiplini tarafından ödüllendirildiği teorisinin sektör bankaları açısından geçerli olmadığı tezi öne sürülmüştür. Aksine, kamuyu daha iyi aydınlatan kamu bankalarına karşı piyasanın olumsuz tavır aldığı ve bu bankaların piyasa likiditelerinin düştüğü ifade edilmiştir. Çalışmada, bankacılık sektörünün hükümetlerden ve bürokratik kesimden bağımsız bir şekilde gözetimini yürütecek bir kurumun önemi vurgulanmış ve oluşturulacak söz konusu bir bağımsız kurumun bu standartların uygulamasını denetlemesinin sağlanması önerilmiştir (Chipalkatti, 2002).

Samir ve arkadaşları çalışmalarında çeşitli ülkelerden topladıkları verilerden hareketle UFRS uygulayan şirketlerin ithalat hacminin daha yüksek olduğu ve hisse senetlerinin çok sayıda yabancı borsaya kote edilmiş olduğu görülmektedir. Söz konusu çalışmada, düşük borç/özsermaye oranına sahip olunmasının UFRS uygulamasıyla ilişkili olduğu belirtilmiştir (Samir vd, 1999).

Dünyanın önde gelen derecelendirme kuruluşlarından Standard & Poors'un gelişmiş ülkelerde ve finansal piyasalarda yaptığı araştırmalar neticesinde oluşturduğu bir dizi şeffaflık sıralaması dünyada yatırımcılar tarafından dikkatle incelenmektedir. Türk şirketlerinin şeffaflık ve kamuya açıklama standartlarını araştırmak üzere 2004 yılında başlattığı çalışmaların sonuçları "Kurumsal Yönetim: Türkiye Şeffaflık ve Kamuya Açıklama Araştırması (Corporate Governance: Turkish Transparency and Disclosure Survey)"başlıklı raporu yayımlanmışlardır. Bu çalışma 3 ana başlık altında şirketlerin kamuya yeterince açıklama yapıp yapmadıkları konusuna odaklanmıştır. Bu ana başlıklar sırasıyla "Mülkiyet yapıları ve pay sahiplerinin hakları, finansal şeffaflık ve finansal durum ve yönetim kurulu, üst yönetim yapısı ve yönetim süreçleri"dir. Araştırma 10 puan üzerinden değerlendirilmiştir. Türk şirketleri, mülkiyet yapıları ve pay sahiplerinin hakları başlığında 4, finansal şeffaflık başlığında 7, ortalama şeffaflıkta 5, yönetim kurulu, üst yönetim yapısı ve yönetim süreçleri başlığında ise 3 puan almıştır. Araştırma sonuçlarına göre; finansal şeffaflığa ilişkin başlıklarda kamuya açıklama düzeyi en yüksek, buna karşılık yönetim kurulu, üst yönetim yapısı ve yönetim süreçleri başlıklarında kamuya açıklamalar en düşük seviyededir. Raporda ki bu durumun, Türkiye'deki bağlayıcı düzenlemelerin çoğunlukla mali durumun kamuya açıklanması yönünde ki zorunluluklardan oluşması nedeniyle şaşırtıcı olmadığı gözlemlenmektedir (Sabancı, 2008).

Kısaca Kurumsal Yönetim anlayışı içinde şeffaflık; işletmenin finansal performansı, yönetimi ve hissedarlık yapısı hakkında yeterli, doğru ve kıyaslanabilir bilginin zamanlı bir şekilde açıklanması seklinde tanımlanabilir. Bir başka deyişle şeffaflık; ticari sır niteliğindeki bilgiler hariç olmak üzere işletme ile ilgili finansal ve finansal olmayan bilgilerin, zamanında, doğru, eksiksiz, anlaşılabilir, yorumlanabilir, düşük maliyetle, kolay erişilebilir bir şekilde kamuya duyurulması yaklaşımıdır.

Aynı zamanda Kurumsal şeffaflığın benimsenmesi çabaları sadece şirket düzeyinde değil finansal raporlama sürecinde yer alan tüm taraflarca yürütülmektedir. Sermaye piyasalarında kamu güveninin, hesap verilebilirlik kültürünün, şeffaflık, eşitlik ve sorumluluk ilkelerinin tam anlamıyla yerine getirebilmesi bilgi kullanıcılarının bu ilkeleri gözardı etmemesiyle gerçekleşmektedir.

## 4    Kamuyu Aydınlatma ve Şeffaflık Açısından Muhasebe Bilgi Sisteminin Rolü

Sistemler, bir sonuç elde etmeye yarayan yöntemler düzeni veya belirli bir amaç için oluşturulan ve özel bilgi gerektiren kurumsallaşmış faaliyetlerin tamamıdır. Bilgi ise, herhangi bir konu hakkında açıklamalar sunan veriler bütünüdür. Bu verilerin belirli bir amaç doğrultusunda toplanması, depolanması ve işlenmesini sağlayan sistemler bilgi sistemlerini oluşturmaktadır (Dinç ve Abdioğlu 2009). İşletmeler etkili bir yönetim sergileyebilmek, güvenilir ve sağlam yapılar oluşturabilmek için güvenilir, doğru, şeffaf ve zamanlı bir bilgi sistemine ihtiyaç duymaktadırlar. Muhasebe bilgi sistemi; yönetimin varlıklar üzerindeki yönetim sorumluluğunu yerine getirmek, işletme eylemlerini anlamlı kılmak ve geleceğe ilişkin işletme eylemlerini planlamak için gerekli bilgileri sağlamaya yönelik bir sistem olarak tanımlanabilir (Sürmeli vd, 2001). Muhasebe bilgi sistemi, işletmenin mali durumu ve faaliyet sonuçları ile ilgilenen farklı kişi ve kurumlara bilgi sağlayan bir sistem olmasından dolayı, farklı gereksinimleri karşılayabilmesi doğru, güvenilir ve zamanında bilgilerle rapor hazırlamasıyla mümkündür. Bütün bunlar için, muhasebenin genel kabul görmüş ilkelerinden faydalanılmaktadır. Bu ilkelerin amacı; muhasebe bilgi sisteminde muhasebe uygulamalarındaki farklılıkları azaltmak, işletme içi ve işletmeler arası karşılaştırmaya uygun mali tabloların elde edilmesine olanak sağlamaktır (Dinç ve Abdioğlu 2009).

Günümüzde yaşanan küreselleşme ile birlikte farklı ülkelerde bulunan işletmelerle ilgili çıkar grupları, finansal raporlama karşılaştırmaları yaparak yatırım kararları vermektedirler. Bu karşılaştırmaları yapabilmeleri için muhasebe bilgi sisteminin hazırlayacağı finansal raporların şeffaf, sorumlu ve karşılaştırılabilir olması gerekmektedir. Bu kapsamda işletmelerin muhasebe bilgi sisteminden beklentileri ancak işletmelerde geçerli bir kurumsal yönetim anlayışı ile mümkün olabilecektir.

Kurumsal Yönetim anlayışı işletmelerde muhasebe bilgi sisteminin sağlıklı bilgi üretiminde birincil rol oynamaktadır. Kurumsal Yönetim anlayışının ilkelerinden şeffaflık ilkesini ele alacak olursak; uygulanan muhasebe politikaları ve düzenlenen faaliyet raporlarının gerçeğe uygun bir şekilde kamuya açıklanması istenmektedir. Yani bilginin stratejik değerinin onun kalitesinde gizli olduğu düşüncesi esas alındığında, kurumsal yönetim anlayışının muhasebe bilgi sisteminin ürettiği bilgiye kalite sağladığı anlaşılmaktadır (Özdemirci ve Cengiz, 2008).

Türkiye'de muhasebe bilgi sistemi Cumhuriyet'in ilanından sonra 1926 yılında kabul edilen Türk Ticaret Kanunu ile başlamıştır.1950 yılında gerçekleştirilen vergi reformu ile de Türk vergi sistemine beyan esası getirilmiştir. Bu esasta işletmeler, Vergi Usul Kanunu uyarınca belirlenen muhasebe usul ve esaslarına uymak zorunda kalmışlardır. Yeniden 1981 yılında yürürlüğe giren 2499 Sayılı Kanunun uygulama alanı dar olmakla

beraber, "Genel Kabul Görmüş Muhasebe Kuralları" mevzuat içerisinde yer almıştır. 1984 yılında 233 Sayılı Kanun Hükmünde Kararname ile iktisadi devlet teşekküllerinde "Tekdüzen Muhasebe Sistemi" uygulaması başlatılmıştır. 1989 yılında ise "Serbest Muhasebecilik, Serbest Muhasebeci Mali Müşavirlik ve Yeminli Mali Müşavirlik Kanunu" ile meslek odaları kurulmuş; muhasebe mesleği disiplin altına alınmıştır. 1994 yılında Tekdüzen Muhasebe Sistemi uygulamaya konulmuştur. Ülkemizde muhasebe alanındaki gelişmelerin kilometre taşlarından birisi olan Türkiye Muhasebe Standartları Kurulu ile 1999 yılında kurulmuştur. Bu kurul sayesinde dünya uygulamasıyla da paralellik sağlanmıştır (Yücel, 2013).

2011 yılında çeşitli nedenlerle Türkiye Muhasebe Standartları Kurulu kaldırılarak ülke çapında tek yetkili merci olarak Kamu Gözetimi, Muhasebe ve Denetim Standartları Kurumu kurulmuştur. 2013 yılında yayımlanmış olan tam set Türkiye Muhasebe Standartları/Türkiye Finansal Raporlama Standartları Kavramsal Çerçeve ve TMS 1' de finansal tabloların, daha önce bahsettiğimiz gibi ne şekilde olması gerektiği açıkça ortaya konulmaktadır (TMS/TFRS, 2013).

Kurumsal Yönetim İlkelerine göre yönetilen ve faaliyetleri yürütülen işletmelerin muhasebe bilgi sistemlerinin kanunlarını ve yeni düzenlemeleri göz ardı etmesi düşünülemez bir gerçektir. Bu bağlamda Türk Ticaret Kanunu şirketlere Kurumsal Yönetim İlkeleri temelinde yapılanmaları için zorunlu kurallar getirmiştir. Bu düzenlemelerin en önemlisi Uluslararası Finansal Raporlama ve Türkiye Muhasebe Standartlarına uyum ile ilgili getirilen düzenlemelerdir. Bu bağlamda Küçük ve Orta Ölçekli (KOBİ) işletmelere yönelik olarak geliştirilen ve Türkiye Finansal Raporlama Standartlarının basitleştirilmiş şekli olan KOBİ'ler için Muhasebe Standartları, Kurumsal Yönetim İlkeleri'nin küçük ve orta boy işletmeler tarafından da uygulanması yönünde bir zorunluluğu ifade etmektedir (Kayacan, 2006).

Türk Ticaret Kanunu'nun (TTK) 1524. Maddesi, Kurumsal Yönetim İlkeleri ile ilgili en önemli düzenleme olup şeffaflığın en üst düzeyde sağlanmasını amaçlamıştır. Bu madde elektronik işlemler ve bilgi toplumu hizmetlerine ilişkin bilgileri kapsayarak, sermaye şirketlerine web sitesi zorunluluğu getirerek, bu web sitesinde işletme ile ilgili her türlü bilginin kamuya duyurulmasını amaçlamıştır. Bu madde ile Kurumsal Yönetim İlkelerinden şeffaflık ilkesinin önemi vurgulanmış aynı zamanda şeffaflığın ileri düzeyde uygulamaya girmesi sağlanmıştır. 1524 no'lu maddeye göre şirketlerin internet sitesinde yayınlaması zorunlu olan bilgiler şunlardır (Yeni TTK, 1524).

a) Şirketçe kanunen yapılması gereken ilanlar.

b) Pay sahipleri ile ortakların menfaatlerini koruyabilmeleri ve haklarını bilinçli kullanabilmeleri için görmelerinin ve bilmelerinin yararlı olduğu belgeler, bilgiler, açıklamalar.

c) Yönetim ve müdürler kurulu tarafından alınan; rüçhan, değiştirme, alım, önerilme, değişim oranı, ayrılma karşılığı gibi haklara ilişkin kararlar; bunlarla ilgili bedellerin nasıl belirlendiğini gösteren hesapların dökümü.

d) Değerleme raporları, kurucular beyanı, payların halka arz edilmesine dair taahhütler, bunlara ait teminatlar ve garantiler; iflasın ertelenmesine veya benzeri konulara ilişkin karar metinleri; şirketin kendi paylarını iktisap etmesi hakkındaki genel kurul ve yönetim kurulu kararları, bu işlemlerle ilgili açıklamalar, bilgiler, belgeler.

e) Ticaret şirketlerinin birleşmesi, bölünmesi, tür değiştirmesi hâlinde, ortakların ve menfaat sahiplerinin incelemesine sunulan bilgiler, tablolar, belgeler; sermaye artırımı, azaltılması dâhil, esas sözleşme değişikliklerine ait belgeler, kararlar; imtiyazlı pay sahipleri genel kurulu kararları, menkul kıymet çıkarılması gibi işlemler dolayısıyla hazırlanan raporlar.

f) Genel kurullara ait olanlar dâhil her türlü çağrılara ait belgeler, raporlar, yönetim kurulu açıklamaları.

g) Şeffaflık ilkesi ve bilgi toplumu açısından açıklanması zorunlu bilgiler.

h) Bilgi alma kapsamında sorulan sorular, bunlara verilen cevaplar, diğer kanunlarda pay sahiplerinin veya ortakların aydınlatılması için öngörülen hususlar.

i) Finansal tablolar, kanunen açıklanması gerekli ara tablolar, özel amaçlarla çıkarılan bilançolar ve diğer finansal tablolar, pay ve menfaat sahipleri bakımından bilinmesi gerekli finansal raporlamalar, bunların dipnotları ve ekleri.

j) Yönetim kurulunun yıllık raporu, kurumsal yönetim ilkelerine ne ölçüde uyulduğuna ilişkin yıllık değerlendirme açıklaması; yönetim kurulu başkan ve üyeleriyle yöneticilere ödenen her türlü paralar, temsil ve seyahat giderleri, tazminatlar, sigortalar ve benzeri ödemeler.

k) Denetçi, özel denetçi, işlem denetçisi raporları.

l) Yetkili kurul ve bakanlıkların konulmasını istedikleri, pay sahiplerini ve sermaye piyasasını ilgilendiren konulara ilişkin bilgiler. İnternet sitesinin bilgi toplumu hizmetlerine ayrılmış bölümü herkesin erişimine açıktır. Bu Kanun ve ilgili diğer kanunlarda veya idari düzenlemelerde daha uzun bir süre öngörülmedikçe, şirketin internet sitesine konulan bir içerik, üzerinde bulunan tarihten itibaren en az altı ay süreyle internet sitesinde kalır; aksi hâlde konulmamış sayılır. Finansal tablolar için bu süre beş yıldır.

Yeni TTK madde 1524'ün yukarıda sıralanan bendlerinin, işletmeleri Kurumsal Yönetim ilkelerine göre yönetilen ve faaliyetlerini yürüten, aynı zamanda muhasebe bilgi sistemlerini de buna uygun hale getiren işletmeler haline dönüştüreceği açıkça görülmektedir.

Yeni TTK'da Türkiye'deki tüm şirketlere İnternet sitesi kurma mecburiyeti getirilmiş ve şirketlerin İnternet sitesi üzerinden adeta bilgi hizmeti vermesi öngörülmüştür. Burada belirtilen bilgi hizmetleri, toplumun şirket ve şirket faaliyetleriyle ilgili bilmek istediği her türlü doğru bilgiye ulaşması anlamındadır. Şirketlerin bütün finansal tabloları, yönetim kurulu faaliyet raporları ve denetim raporu gibi belgelerinin internet sitelerine konulması mecburi koşulmuştur (ey.com, 2014). Bu durum işletmelerin şeffaflık, hesap verebilirlik, eşitlik ve sorumluluk ilkelerinin göz ardı edemeyeceğini göstermektedir.

Kurumsal Yönetim ilkelerinden "şeffaflık" TTK'nın temel taşlarından birini oluşturmaktadır. TTK ile gerçek ve tüzel kişilerin münferit ve konsolide finansal tablolarını düzenlerken Kamu Gözetimi, Muhasebe ve Denetim Standartları Kurumu tarafından yayınlanan Türkiye Muhasebe Standartlarını uygulayacakları hükme bağlanmıştır (TTK, Madde 88). Bu uygulama ile tüm işletmelerin muhasebeleştirme ve raporlamalarının şeffaflık ilkelerine göre yapılması amaçlanmaktadır.

Muhasebe uygulamalarının çağdaş özellikleri, bilgi ve raporlama sisteminde ortaya çıkmakta ve bu bilgilerin güvenilir, kolay anlaşılabilir ve ulaşılabilir olması önem arz etmektedir. Kurumsal Yönetim büyük ölçüde, bu özelliklere sahip bir bilgi sistemi olan muhasebeden güç almaktadır (Aysan, 2007).

İşletmelerin başarılı olmaları, dünyadaki gelişmelere ayak uydurabilmeleri, kurumsal olarak yönetilebilmeleri ve üst yönetimin yerinde kararlar alabilmeleri ancak etkin bir muhasebe sisteminin varlığına ve muhasebe bilgi sistemince üretilen bilgilerin etkin bir şekilde kullanılmasına bağlıdır. Tüm yapılan çalışmalar göz önüne alındığında, başarılı bir Kurumsal Yönetim uygulaması, doğru ve güvenilir bilgiyi zamanında ve uygun olarak sunan muhasebe bilgi sistemiyle mümkün olabilmektedir.

## 5   Sonuç

Kurumsal Yönetim anlayışı, işletmelerin tüm faaliyetlerini çevreleyen bir yapıyı ortaya koyarak belirli ilkeler ve kurallar çerçevesinde şirketlerin yönetilmesi gerekliliğine vurgu yapmaktadır. 2000'li yıllardan bu yana Dünya'da; birçok alanda gündeme gelmeye başlayan, Uluslararası Kurumsal Yönetim Standartları 2011 yılında yayınlanıp 2012 yılında yürürlüğe giren yeni Türk Ticaret Kanunu ile birlikte, özellikle ihracata yönelik dış pazarlara açılmak isteyen ve kurumsallaşma yolundaki işletmeler için önemli bir duruma gelmiştir. Kurumsal Yönetim anlayışında kamunun aydınlatılması ve şeffaflık kavramları şirketlerin pay sahiplerine yönelik olarak bilgilendirme politikalarına sadık kalarak periyodik finansal tablo ve raporlarda yer alan bilgilerin doğru açık ve şeffaf bir şekilde kamunun aydınlatılmasını öngörmektedir. Son yıllarda yaşanan krizler ve skandallar mikro düzeyde yatırımcılara makro düzeyde ise tüm ülkeye verdiği zararlar, Kurumsal Yönetim ilkelerinden en çok kamuyu aydınlatma ve şeffaflık ilkesinin önem kazanmasına neden olmuştur. Bu bakımdan işletmelerde etkin bir Kurumsal Yönetim anlayışının geçerliliği, büyük ölçüde iyi bir muhasebe bilgi sisteminin kurulmasına bağlıdır. Aynı zamanda Kurumsal Yönetim ve uygulama mekanizmaları güvenilir bir muhasebe bilgi sisteminden güç alacaktır.

Kurumsal Yönetimin temel unsurlarından biri olan şeffaflık, işletmenin çıkar gruplarının işletmeyle ilgili finansal ve finansal olmayan bilgi ihtiyacının karşılanması gerektiğini söylemektedir. Muhasebe bilgi sistemi, TMS 1 standardı ile finansal tabloları sıralarken dipnotları da içine alarak işletmeyle ilgili tarafların bilgi ihtiyacını tam olarak karşılamayı hedeflemiştir. Muhasebe bilgi sistemi işletme ile ilgili tarafların bilgi ihtiyacını finansal tablolar ile karşılarken, TMSK yayınladığı Kavramsal Çerçeve ile finansal tabloların temel niteliksel özelliklerini; ihtiyaca uygunluk ve gerçeğe uygun şekilde sunum ve destekleyici niteliksel özelliklerini; karşılaştırılabilirlik, doğrulanabilirlik, zamanında sunum ve anlaşılabilirlik olarak belirtmekle aynı zamanda Kurumsal Yönetimin işletmelerde uygulanmasının da temelini atmış olmaktadır.

Günümüzde meydana gelen gelişmelere ayak uydurabilmek için yeniden düzenlenen TTK'nun da Kurumsal Yönetim anlayışının bütün ilkeleri göz önüne alınarak özellikle şeffaflık ve beraberinde denetimi de ön plana çıkararak hazırlandığı görülmektedir. Bununla beraber muhasebe standartları ile finansal raporlama standartlarının ilanı da şirketlerde Kurumsal Yönetimin daha kolay benimsenmesine zemin hazırlamıştır.

Sonuç olarak bir işletmenin muhasebe bilgi sisteminin ürettiği bilgiler, işletmenin Kurumsal Yönetim uygulamalarının başarısı ile bağlantılıdır. Kurumsal Yönetim anlayışı, işletmelerde muhasebe bilgi sisteminin sağlıklı bilgi üretmesinde birincil etkendir diyebiliriz. Yani Kurumsal Yönetim anlayışının şeffaflık ilkesi gereğince, uygulanan muhasebe politikaları ve düzenlenen faaliyet raporlarının gerçeğe uygun bir şekilde kamuya açıklanması gerekmektedir. Bu noktada Yeni TTK ve muhasebe standartları da Kurumsal Yönetim anlayışı ile örtüşmektedir.

# 2008 Küresel Ekonomik Krizinin Türkiye İmalat Sanayi Sektörünün Performansı Üzerine Etkisi: Borsa İstanbul Firmalarında Bir Uygulama

# Effect of 2008 Global Economic Crisis on Turkey's Manufacturing Sector's Performance: An Application on the Borsa Istanbul Campanies

Assoc. Prof. Dr. S.Serdar Karaca (Gaziosmanpaşa University, Turkey)

Müge Sağlam (Karamanoğlu Mehmet Bey University, Turkey)

Eray Baysa (Cumhuriyet University, Turkey)

## Abstract

In this study we analyzed the effect of 2008 financial crisis on firm performance. With this aim we used manufacturing sector in Turkey. In our study we used 119 firms traded on Borsa Istanbul and quarterly data belong to 2004-2012 period. In this study we examined the period before and after 2008 crisis. We applied one sample kolmagorov-smirnov test to know whether the data has normal distribution. Also we used T-Test Analysis to compare average of the data. At the result of analysis financial ratios that accounts receivable turnover, liquidity, net working capital, short term debt / Total Debt, Financial Leverage Ratio, founded different in before and after year 2008, according to year 2008.

## 1 Giriş

ABD de konut kredilerindeki özensizlik ve şişkinlik ile başlayan finansal problemler derinleşerek devam etmesiyle birlikte ikincil piyasanın gelişmesi için oluşturulan Freddie Mac ve Fannie Mae'nin devlet kontrolüne geçmiştir. Ardından büyük yatırım bankası Lehman Brothers ABD İflas Yasasının 11'inci maddesi kapsamında iflas başvurusunda bulunmuş, Merrill Lynch çok düşük bir bedelle Bank of Amerika ya satılmış ve dev sigorta şirketi AIG operasyonlarını devam ettirebilmek için FED'den önemli tutarda kredi kullanmak durumunda kalmıştır. Krizin İngiltere, Avrupa ve gelişmekte olan ülkelerde de hissedilmesi ve küresel bir boyut kazanmasının ardından yaklaşık 700 milyar dolarlık kurtarma paketi (bailout bill) ilk etapta ABD meclisinden geçerek onaylanmıştır (Alantar, 2008).

Kredi piyasalarında işlemler durmasına, borsalardaki aşırı değer kayıplarına ve ulusal-uluslararası birçok firmanın ödeme güçlüğüne düşmesine neden olmuştur. Tüm uluslararası finans piyasalarını da tehdit eder hale gelmiştir. Finansal kriz gelişmiş ülkelerde başlamışıyla birlikte 2008 yılının sonlarından itibaren gelişmekte olan ülkeleri de bütünüyle etkilemeye başlamıştır. Birçok gelişmekte olan ülke borsalarında ciddi değer kayıpları olmuş, ülke paraları değer yitirmiş, ülke tahvilleri ve ticari bonolarda risk primleri artmış, aynı zamanda bu ülkelere olan yabancı sermaye akımları ve banka borçlanmaları önemli oranda düşmüştür. Merkez bankaları hızlı kredi büyümesi ve aktif fiyatlarında oluşan riskleri görememiş ya da gerekli önlemleri yeterli oranda ele alamamıştır. Uluslararası piyasalarda yaşanan gelişmeler karşısında finansal sisteme olan güvenin tekrar artırılması için ABD ve Avrupa'da merkez bankaları ve hükümetleri tarafından çok sayıda önlem alınmış ve trilyon dolarları bulan kurtarma paketleri açıklanmıştır.

Bununla birlikte ABD ve AB ülkelerinin ekonomilerinde ciddi daralmalar ortaya çıkmıştır. Bunlar özetlenecek olursa, OECD 2009 yılı raporunda, ABD ekonomisinin 2008'in son çeyreğinde % 6,2 ve 2009'un ilk çeyreğinde % 5,7 oranında küçülmüş olması bu öngörüyü destekleyen ve krizin derinliğini açıkça ortaya koyan gelişmelerdir. Diğer taraftan, 2008 başlarından sonra istihdamda başlayan azalma yıl ortalarından sonra hızlanmış ve 2009 yılında yaklaşık 750 000 bin civarına ulaşmış ve toplam işsiz sayısı 6 milyonu geçmiştir. İşsizlik oranı % 5 ten % 9 dolaylarına yükselmiştir. Benzer gerilemeler, sanayi sektöründe, dış ticaret açığında ve verimlilik üzerinde de çarpıcı şekilde görülmüştür.

Bu bağlamda, Türkiye'nin de bu krizden etkilenen başlıca ülkeler arasında görülmesi doğaldır.2001 Türkiye ekonomik krizinin finans sektöründeki etkileri henüz atlatılmışken 2008 yılında başlayan dünya çapında etkili kriz, ülkede GSYH artış hızında, cari dengede, net sermaye hareketlerinde, döviz kurundaki değişim oranında ve Türkiye borsasında olumsuz sonuçlar doğurmuştur (Aydoğmuş, 2009).

Bu çalışmada da, Borsa İstanbul' da imalat sektöründe işlem gören 119 firmanın ekonomik bazı ekonomik göstergelerinin 2008 Dünya ekonomik krizinden önceki ve sonraki durumları ortaya konulmuştur. İstatistiki olarak da desteklenen sonuçlar literatür desteği ve oluşturulan öngörüler ile yorumlanmaya çalışılmıştır.

## 2 Literatür

2008 finansal krizi ile ilgili literatürde çok sayıda çalışma bulunmaktadır. Krizin küresel etkileri ve dolayısıyla zararları birçok araştırmacının ilgisini çekmiştir. Aşağıda çalışmamızda amaçladığımız; krizin etkisinin finansal oranlar üzerindeki etkisini kanıtlamak üzere olan hipotezimiz ile yakından ilişkili olduğunu düşündüğümüz çalışmalara yer verilmiştir.

Uyar ve Okumuş (2010) yaptıkları çalışmada, İMKB'ye kayıtlı 124 imalat firmasının krizden ne derece etkilendiği sorusuna yanıt bulmak için yaptıkları çalışmalarında, söz konusu firmaların 2005-2008 yılları arasındaki finansal tablolarını incelemiş ve çalışma sonucunda, likidite, karlılık ve faaliyet oranları açısından imalat sektörünün krizden negatif yönde etkilendiği sonucuna ulaşmışlardır.

Abdioğlu ve diğ. 2001 ve 2008 krizlerini karşılaştırdıkları, her iki dönemde de faaliyet göstermiş ve İMKB'ye kayıtlı 131 firmanın oranlarını karşılaştırmak suretiyle ve de şirketlerin ilgili dönemler arasında finansal oranları açısından farklılıklarının olup olmadığını tespit etmeyi amaçladıkları çalışmalarında, parametrik (eşleştirilmiş t-testi) ve parametrik olmayan (wilcoxon işaret testi) istatistik yöntemleri kullanmışlardır. Çalışma sonucunda her iki dönem içinde firmaların finansal oranları arasında anlamlı bir farklılık tespit edememişlerdir.

Gençtürk ve diğ (2011) finansal krizlerin, işletmelerin finansman kararlarına nasıl etki ettiğini araştırmak amacı ile yaptıkları çalışmalarında, İMKB'de 1992 -2009 yılları arasında sürekli olarak işlem gören 77 şirketin birleştirilmiş bilanço verileri doğrultusunda ilgili kaynak (pasif) hesaplarının toplam kaynaklar (pasif) içerisindeki payını yıllar itibariyle ortaya koymuşlar ve değişmeleri Excel yardımıyla analiz edilmiştir. Araştırmanın sonucunda kriz dönemlerinde işletmelerin borçlanma eğilimlerinin arttığı ancak bu eğilimin uzun vadeli borçlanma şeklinde gerçekleştiğini tespit etmişlerdir.

Emir ve diğ (2011) çalışmalarında, 2008 yılında yaşanan küresel ekonomik krizin tekstil, gıda, içki ve tütün sektörleri üzerinde yarattığı etkiyi finansal oranlar aracılığıyla ortaya koymaya çalışmışlardır. İMKB'de işlem gören firmalar üzerinde gerçekleştirilen çalışmada kriz yılı, kriz öncesi (2004-2007) ve kriz sonrası (2009-2010) dönem karşılaştırmalı olarak incelenmiştir. 23 adet gıda firması ve 28 adet tekstil firmasının bilanço ve gelir tablolarında yer alan finansal veriler kullanılarak yapılan oran analizi ve bağımlı örneklem t-testi sonucunda tekstil sektörü verilerinin genel olarak kriz öncesi ve kriz sonrası arasında anlamlı bir farklılık taşıdığı dolayısıyla krizden etkilendiği ancak gıda, içki ve tütün sektörünün kriz öncesi ve kriz sonrası dönem bakımından anlamlı bir farklılık taşımadığı dolayısıyla krizden etkilenmediği sonucuna varılmıştır. Tekstil sektöründe likidite oranları, faaliyet oranları, karlılık oranları ve mali yapı oranları bakımından genel olarak olumsuz yönde değişimler yaşandığı görülürken gıda sektöründe ise başta likidite oranları olmak üzere belirli oranlarda kriz yılında yaşanan düşüşlerin kriz sonrasında genel olarak kriz öncesi trendi yakaladığı görülmüştür.

Müslümov ve Karataş (2001), Asya krizinin Türk imalat sektörü üzerindeki etkilerini incelemek amacıyla,

İMKB'de kayıtlı olan çimento, tekstil ve gıda sektöründe faaliyet göstermekte olan toplam 70 firmanın finansal tablolarını incelemişlerdir. İnceleme sonuçlarına göre; gıda ve çimento firmalarının karlılık oranları krizden etkilenmemiştir. Ancak çalışma sonucunda görülmüştür ki tekstil sektörü söz konusu krizden etkilenmiştir.

Karahan ve Özduran (2012) 2008 küresel krizinin tekstil sektörü üzerindeki etkilerini mali oranlar yardımıyla bulmaya çalıştıkları çalışmalarında, İMKB'ye kayıtlı 27 tekstil firmasının 2006-2010 yılları arasındaki verilerini baz almışlardır. Tüm değişkenlerin bağımlı örneklemler t testi ile analiz edildiği çalışma sonucunda firmaların likidite oranlarında düşüş gözlemlemişlerdir. Ancak bu düşüşü, gelişmekte olan ülke standartlarında oranın değerinin 1.5 olması nedeniyle olumlu yorumlamışlardır. Ayrıca çalışmalarında faaliyet oranlarında ve borçluluk oranlarında artışlar meydana geldiğini gözlemlemişlerdir. Karlılık oranlarındaki değerlerin negatif olması sonucunda ise işletmelerin zarar ettiği sonucuna ulaşmışlardır.

Çalışmamıza yakın olduğunu düşündüğümüz diğer çalışmaların sonuçları ise şöyledir;

Bostan ve Bölükbaş (2011) yaptıkları çalışmada 2008 küresel finansal krizin Türkiye bankacılık sektörüne olan etkilerini incelemişlerdir. Kriz dönemi ve sonrasında Türk bankacılık sektörünün aktif karlılığa bakıldığında 2007'de % 2.8 olarak gerçekleşen söz konusu oranın 2008'de % 2'ye gerilemiş, alınan önlemler neticesinde 2009'un sonlarına doğru toparlanma eğilimine girmiş olduğunu görmüşlerdir. Bankacılık sektöründe bir diğer karlılık ölçütü olan öz kaynak karlılığına bakıldığında ise bu oranın 2007'de % 21,8 iken 2008'de % 16,8'e gerilemiş olduğunu ancak kriz sonrası dönemde öz kaynak karlılığının da toparlanma eğilimi göstermiş olduğu sonucuna ulaşmışlardır.

Selçuk (2010) yaptığı çalışmada 2008 krizinin Türkiye finansal sektörü üzerindeki etkilerini incelemiş ve 2 önemli etkiden söz etmiştir. Çalışmasının sonucunda krizden sonra özellikle 2010 yılında bankacılık sektörünün karlılık oranlarında, bir önceki yılın aynı dönemlerine göre %21,6lık bir artış gerçekleştiğini söylemiştir. Bankacılık sektöründeki mevduat ve kredilerin gelişimini BDDK'dan elde ettiği sonuçlara göre yorumlayan Selçuk, çalışma sonucunda; Küresel krizin finans sektörü açısından iki önemli etkisini öngörmüştür. Bunlardan ilki, uluslararası piyasalardan sağlanan fonların önemli ölçüde azalması ve maliyetlerinin yükselmesi; bir diğeri

ise, küresel çapta ve özellikle ihracatın büyük kısmının gerçekleştirildiği Avrupa'da yaşanacak bir ekonomik durgunluğun Türkiye ekonomisini ve dolayısıyla Türk finans sektörünü benzer şekilde yavaşlatması olduğudur.

Hepektan ve Çınar (2011), 2008 küresel finansal krizin Türkiye reel sektörüne etkilerini incelemiş ve hem ihracat hem de yurtiçi talebin ciddi şekilde azalmasının bir sonucu olarak reel sektörün geleceğinin ciddi tehditler altında olduğu sonucuna varmışlardır. Çalışmalarında kukla değişken kullanarak kurdukları modelli inceleyen Hepektan ve Çınar, kurdukları modelin sanayi üretimi üzerindeki değişimini açıklamak için, aylık ortalama efektif USD ve kukla değişken (krizin ortaya çıktığı ağustos 2007'ye kadar 0 ve daha sonraki aylar için 1 alınarak) kullanarak, krizin ortaya çıkmasından sonraki sanayi üretimi değişimi araştırmışlardır. Değişkenlere ilişkin birim kök testlerinden genişletilmiş Dickey-Fuller (ADF) testi uygulayıp daha sonra elde ettikleri regresyon sonucuna göre ise; krizin ortaya çıktığı aylardaki sanayi üretiminin, krizden önceki aylara göre daha düşük olduğu sonucuna varmışlardır.

## 3 Veri Seti ve Uygulama

Araştırma Borsa İstanbul'da işlem gören ve imalat sektöründe faaliyet gösteren 119 firma üzerinde gerçekleştirilmiştir. Firmalara ait veriler 2004-2012 yıllarına aittir. Firmalara ait verilerin elde edilmesinde FİNNET Mali Analiz programından yararlanılmıştır. SPSS 16 istatistik programı ile veriler analiz edilmiştir. Çalışmada 2008 yılı temel alınarak önceki ve sonraki yılların ortalama verilerine, öncelikle non parametrik test olan one sample kolmagorov-smirnov testi uygulanarak verilerin normal dağılım gösterip göstermediğine bakılmıştır. Daha sonra paried sample statistic bağımlı örneklem t testi uygulanmıştır. Aşağıda analizde kullanılan finansal oranlar ve yıllara ait verileri Tablo 1'de verilmiştir.

| Oran Grubu | Oran Adı | Yıllar | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 |
| Likidite oranları | Cari Oran | 1.63 | 1.65 | 1.63 | 1.72 | 1.59 | 1.63 | 1.69 | 1.56 | 1.54 |
| | Asit-test Oranı | 0.89 | 0.78 | 0.75 | 0.79 | 0.92 | 1.05 | 1.09 | 0.98 | 0.93 |
| | Net İşletme Sermayesi Oranı | 0.18 | 0.18 | 0.20 | 0.22 | 0.21 | 0.22 | 0.24 | 0.24 | 0.22 |
| | Stok Devir Hızı | 4.95 | 4.93 | 5.09 | 4.94 | 4.59 | 4.54 | 5.29 | 4.78 | 4.52 |

*Tablo 2: One-Sample Kolmogorov-Smirnov Test Sonuçları*

Kolmogorov-smirnov (k-s) testi, örnek verinin belli bir dağılıma (uniform, normal) uyup uymadığını incelemek için kullanılmaktadır. Bu test yardımıyla bir örneklemden toplanan verilerin normal dağılım sergileyip sergilemediğini incelemek mümkündür (Altunışık vd, 2010). Değişkenlerimizin normallik testi sonuçları aşağıda Tablo 2'de verilmiştir:

H0: normal dağılıyor

H1: normal dağılmıyor

Her bir değişken için k-s normallik testi z değeri ve sig. sonuçlarına bakılacak olursa tüm değerlerin >p=0.05 ölçüt değerinden yüksek olduğu görülür. Bu noktada tüm değişkenlerin normal dağılım gösterdiğini söyleyebilir ve H0 hipotezini kabul edebiliriz. Normal dağılım gösteren değişkenler için uygulanacak t-testleri 3 şekilde karşımıza çıkmaktadır. Bunlar;

**Tek grup "t"-Testi (one-sample test)** Bu test genellikle herhangi bir konuda belirli öngörülerde bulunulduğunda bu öngörünün doğruluk derecesini test etmek amacıyla uygulanır.

**Bağımsız iki grup arası farkların testi (Independest Samples "t" test)** Bir araştırmada çoğu kez farklı ana kütleden elde edilen gruplar arasında karşılaştırmalar yapmak gerekir. İşte bu gibi analizler T testi ile yapılır.

**Eşleştirilmiş iki grup arasındaki farkların testi (Paired-Samples "t" testi)** Bağımsız iki grup için farkların testi konusu incelenirken grupların birbirlerinden bağımsız evrenlerden geldiği varsayımı kabul edilmekte idi. Ancak özellikle kontrollü ve deneysel çalışmalarda aynı deneklerin farklı durumlarda nasıl davrandıklarının incelenmesine gerek duyulabilir. Amaç farklı iki koşulda elde edilen sonuçların farklı olup olmadığını araştırmaktır (net1)

T-testi türlerinin tanımlarına genel olarak bakıldığında, 2008 yılındaki küresel finansal krizin imalat firmalarının finansal oranlarına etkide bulunduğunu, 2008 öncesi ve 2008 sonrası finansal oranlar arasında farklılık olduğuna dair hipotezimizi test etmek için paired-sample t testi türünü kullanmalıyız. Kriz öncesi, kriz dönemi ve sonrası koşullar farklı olarak değerlendirilmiş bu bağlamda paired-samples t testi uygulanmıştır. Analiz sonuçları aşağıdaki Tablo 3'te görüldüğü gibidir:

| | | Paired Differences | | | | | t | df | Sig. (2-tailed) |
|---|---|---|---|---|---|---|---|---|---|
| | | Mean | Std. Deviation | Std. Error Mean | 95% Confidence Interval | | | | |
| | | | | | Lower | Upper | | | |
| Pair 1 | aktifdh - 2aktifdh | -0,07837575 | 0,68513968 | 0,16148897 | -0,41908769 | 0,262336199 | -0,485 | 17 | 0,634 |

| Pair 11 | DÖVDH - 2DÖVDH | 0,125619014 | 1,26037757 | 0,29707384 | -0,50115201 | 0,752390035 | 0,423 | 17 | 0,678 |
| Pair 12 | KO - 2KO | -6,01289379 | 7,31044289 | 1,72308791 | -9,64829152 | -2,37749607 | -3,49 | 17 | 0,003 |
| Pair 13 | DUVDH- 2DUVDH | -0,62999889 | 1,56955647 | 0,36994801 | -1,41052096 | 0,15052318 | -1,703 | 17 | 0,107 |
| Pair 14 | uvb/aktif - 2uvb/aktif | 0,011321152 | 0,03611399 | 0,00851215 | -0,00663791 | 0,029280215 | 1,33 | 17 | 0,201 |

***Tablo 3:*** *Paired Sample T Testi Sonuçları*

H0: Değişkenler arası anlamlı farklılık vardır.

H1: Değişkenler arası anlamlı farklılık yoktur.

Analiz sonuçlarına göre; işletmenin alacaklarını yılda kaç kez tahsil ettiğini öğrenmede kullanılan alacak devir hızı, stokların yeteri kadar likit olmadığı düşünülüp dönen varlıklardan çıkarılması suretiyle elde edilen ve işletmenin kısa süreli borçlarını ödeme gücünü ölçen likidite(asit-test) oranı, varlıkların devamlı sermaye ile finanse edilen kısmını göstermeye yarayan net işletme sermayesi oranı, kısa vadeli borç payını gösteren kvb/toplam borç oranı ve de aktiflerin finansmanının ne ölçüde borç ne ölçüde öz kaynak olduğunu gösteren kaldıraç oranı değişkenlerinin "sig." değerlerine bakıldığında, tüm değişkenlerin değerlerinin p=0.05 değerinden küçük olduğu görüyoruz. Dolayısıyla tüm değişkenlerin 2008 yılındaki finansal krizden etkilendiğini ve değişkenler arası anlamlı farklılık olduğu hipotezini kabul edebiliriz. Diğer tüm değişkenlerimiz için analiz

sonuçlarına bakıldığında "sig." değerleri 0.05 ölçüt değerinden büyüktür. Bu koşullar altında, H1: değişkenler arası anlamlı farklılık yoktur hipotezini kabul etmemiz gerekir.

## 4 Sonuç

2008 küresel finansal krizin, Türkiye'de faaliyet gösteren ve hisse senetleri Borsa İstanbul'da işlem gören imalat firmaları üzerine etkisi olduğunu kanıtlamayı amaç edindiğimiz bu çalışmada; firmaların finansal oranları aracılığı ile kriz etkisini tespit etmeye çalıştık. Bu bağlamda eşleştirilmiş iki grup arasındaki farkı bulmada kullanılan Paired Samples T Testi kullanılmıştır. Krizin etkisinin tespiti için 2004-2012 yılları arasındaki veriler kullanılmıştır. Analizler sonucunda 2008 yılı öncesi ve sonrasında 2008 yılına göre, firmaların alacak devir hızı, likidite, net işletme sermayesi, kısa vadeli borç/toplam borç, kaldıraç oranı finansal oranlarının farklı olduğu görülmüştür.

2008 yılı öncesinde işletmenin kısa vadeli yükümlülüklerini ödeme gücünü gösteren likidite oranlarının daha yüksek olduğu görülmüştür. Likidite oranları 2008 yılında düşme eğilimine girmiştir ki, bu da bize firmaların kısa vadeli yükümlülüklerini karşılamada sıkıntıya girdiklerini göstermektedir. Kıyaslanan bir diğer oran grubu olan faaliyet oranları, işletmelerin varlıklarını ne kadar etkin kullandığını gösterir. Bu oran grubu ne kadar düşerse işletmenin varlıklarını o derece daha az etkin kullandığı sonucuna ulaşılır. Türkiye imalat firmalarının kriz etkisiyle varlıklarını yönetmede sorun yaşadıkları yine çalışmamız sonucunda görülmüştür. 2008 yılında firmaların mali yapı oranlarında artış meydana gelmiştir. Bu, firmaların borç yükünün arttığını, dönen varlıkların finansmanının borçlarla edinildiğini göstermektedir. Satış oranlarındaki düşmelere bağlı olarak firmalar, finansmanda dış borçlanmaya gitmişlerdir.

2008 yılı karlılık oranlarında ise düşüş meydana gelmiştir. Faiz oranlarındaki artış ve satışlardaki düşme, firmaların karlılık oranlarını da doğal olarak etkilemiştir. 2008 yılından önce daha iyi olan finansal oranlar 2008 yılı sonrası 2009yılı ve 2010 yılı ilk çeyreğinde 2008 yılına benzer özellikler göstermiştir. 2010 yılının 2. Çeyreğinde krizin etkisinden sıyrılmaya başlayan imalat sektörü firmalarının finansal oranları da 2008 yılına göre farklılık göstermiştir.

# Türkiye ve Geçiş Ekonomilerinde Sosyal Entegrasyon
# Social Integration in Turkey and Transition Economies

Prof. Dr. Nuray Gökçek Karaca (Anadolu University, Turkey)

## Abstract

In this study, social integration of Turkey was examined in comparison with the Central and Eastern Europe (CEE) countries and Commonwealth of Independent States (CIS). To examine social integration of Turkey in comparison with transition economies, we benefited from the Social Integration Dimensions which was developed by UNDP. As a comparison of Turkey with EU countries, we can say that Turkey has lower employment, youth unemployment, satisfaction with freedom of choice, satisfaction with job, trust in people, satisfaction with community, perception of safety and higher trust in national government than EU countries. Except the employment, youth unemployment and trust in national government, there is no certain difference between CEE and CIS countries that the performance of countries varies from indicator to indicator.

## 1 Giriş

Berlin Duvarı'nın yıkılması ve Sovyet Sosyalist Cumhuriyetler Birliği'nin dağılmasının ardından dünya ekonomisinde köklü değişimler yaşanmış ve bu değişimler Yeni Ekonomik Düzen'in tamamlayıcısı olmuştur (Güler, 2012). Yeni ekonomik düzen ve neoliberal iktisat politikalara uyum sağlayabilmek için, geçiş ekonomisi sürecini yaşayan ülkeler ekonomik ve sosyal yönden çeşitli reformlar uygulamışlardır. Ancak geçiş ekonomisi ülkelerinin farklı ekonomik, sosyal ve kültürel yapılara sahip olmaları bu değişimi etkileyerek, ülkeler arasında farklı gelişme performanslarının görülmesine neden olmuştur.

Sosyalist bir düzenden serbest piyasa ekonomisine geçişle birlikte ekonomik yaşamda meydana gelen değişimler beraberinde sosyal yaşamda da değişimlere yol açmaktadır. Bu bağlamda sosyal entegrasyon göstergeleri olarak belirlenen ülkelerin istihdam ve işsizlik düzeyleri, bireylerin yaşam memnuniyeti, tercihlerindeki özgürlükler, iş memnuniyetleri, toplumda insanlara güven, ulusal hükümete güven, ekonomik durum algısı, cinayet oranları, intihar oranları ve bireylerin güvenlik algısı değerlendirilerek bireysel, toplumsal ve ekonomik alanda mevcut durumun ve algıların ortaya konulması uygulanacak politikalar açısından önem arz etmektedir.

Bu çalışmanın amacı öncelikle sosyal entegrasyon kavramını açıklayarak, Türkiye ile kendisi gibi AB'ye aday olan geçiş ekonomilerinin karşılaştırmasını yapmak ve AB üye olan geçiş ekonomilerinin sosyal entegrasyon verilerini değerlendirerek Türkiye ile Geçiş Ekonomilerinin durumunu ortaya koymaktır.

## 2 Sosyal Entegrasyon

### 2.1 Sosyal Entegrasyon Kavramı

Küreselleşme süreciyle birlikte entegrasyon olgusu önem kazanmış ve entegrasyon kavramını açıklamaya yönelik çeşitli çalışmalar yapılmıştır. Etzioni'ye göre entegrasyon, farklı devletlerden oluşan bir kurumun, zorlama araçlarını kullanma yetkisini ele geçirmesi, karar verme mekanizmasına sahip olması ve bu devletlerin vatandaşları için siyasi bir kimlik oluşturabilmesi durumu olarak ifade edilirken, Haas'a göre entegrasyon, farklı ulusal ortamlara sahip politik aktörlerin bağlılıklarını, beklentilerini ve politik eylemlerini, kurumları üye devletler üzerinde yetkiye sahip yeni bir merkeze kaydırmaları için ikna edilmeleri süreci olarak tanımlanmaktadır. Daha çok siyasi entegrasyonu tanımlayan bu tanımların yanında entegrasyon, kapsayıcı sistemin dağınık unsurlarının tutarlı bir yapılanma içerisinde bütünün uyumlaştırılmış bileşik birimleri biçimine dönüştürülmeleri olarak da genel bir tanımla ifade edilebilir. Bu bağlamda entegrasyonu siyasal entegrasyon, ekonomik entegrasyon ve sosyal entegrasyon gibi çeşitlendirmek mümkündür (Yapıcı, 2007).

Sosyal entegrasyon kavramı sosyal bütünleşme olarak da ifade edilmekle birlikte çeşitli şekillerde tanımlanabilmektedir. Bazılarına göre sosyal entegrasyon, tüm insanlar için eşit fırsatlar ve haklar anlamına gelirken, bazıları için yaşam değişikliklerinin geliştirilmesinde daha entegre edilmiş bir yaşam anlamına gelmektedir. Kimilerine göre ise artan sosyal entegrasyonun istenmeyen tekdüzelik dayatma görüntüsü ile olumsuz bir çağrışımı vardır. Kimilerine göre olumlu ya da olumsuz düşünülse de sosyal entegrasyon belirli bir toplumda insan ilişkilerinin kurulu desenini açıklamaktadır (UNRISD, 1994). Sosyal entegrasyon barışçı toplumsal ilişkileri sağlamak ve sürdürmek için katılımın sağlandığı dinamik bir süreçtir (UN, 2014).

Sosyal bütünleşmenin sosyal yapıdaki önem derecesine göre iki şekli önem arz etmektedir. İlki kültür unsurlarının her birinin ayrı birer fonksiyon ifa ederek, cemiyeti işleyen bir bütün haline getirmek üzere bir araya gelmeleri halinde fonksiyona dayanan ve temelinde modern iş bölümü olan fonksiyonel bütünleşme, diğeri ise toplumun bütün sosyal gruplarını, organizasyonlarını ve kurumlarını bir mana etrafında birleştirebilmeye dayanan kültürel bütünleşmedir (Yıldırım, 2001).

Toplumun ahenkli işleyen bir bütün olarak kalabilmesi, toplumsal düzenin korunması ve çözülmenin engellenmesi, sosyo-ekonomik gelişmenin sağlanması onun bütünlük halinin korunmasıyla mümkündür. Sosyal bütünleşmeyi sağlayan faktörler ise değerlerde anlaşma, işlevlerin paylaşımı ve farklı kültürlere sahip bireylerin katılımı olan özsel faktörler ile toplum üyelerinin karşı karşıya kaldığı dışsal baskı, tehdit ve tehlikeler, statü farkları, yaptırımlar ve hukuk kurallarını içeren yardımcı faktörler olarak iki başlık altında ele alınabilir (Türkkahraman ve Tutar, 2009). Bu faktörlerde olabilecek farklılıklar sosyal bütünleşmenin önünde engel olabilecek etkilere yol açabilecektir.

Sosyal çözülmeler fertler arasında olabileceği gibi toplumlar arasında da görülebilmektedir. Çözülmeyi doğuran en önemli faktörler; sosyal ilişkilerde ve aile yapısında karşılıklı saygı ve değerlerin zayıflaması, değerler ve normların etkinliğini yitirmesi, kültürün taşıyıcısı dilin bozulması, yetersiz sosyalleşme, iletişimsizlik, ideal birliğin kaybolması, etnik taleplerin uzlaştırılamaması, din ve mezhep anlaşmazlıklarını giderici çalışmaların yetersizliği, din ve vicdan hürriyetinin kullanılamaması, ekonomik istikrarsızlık, eğitim ve öğretimin milli olma niteliğini yitirmesi, değişen sosyal yapıya uygun müesseselerin getirilmemesi (Türkkahraman ve Tutar, 2009) örnek olarak verilebilir.

Sosyal dışlanma ise sosyal çözülmeler neticesinde sosyal kutuplaşmalar, sosyal eşitsizlikteki artış, artan işsizlikle bağlantılı olarak ortaya çıkan ve normal vatandaşlık faaliyetlerine katılmada yetersizlik veya daha özel durum olarak kurumlara veya ekonomik büyüme ve süreçlere katılmada yetersizlik olarak karşımıza çıkmaktadır (Gökçek Karaca, 2003). Başka bir deyişle sosyal dışlanma bireyin veya toplumun eşitsizlik, yoksunluk, tercihler veya toplum değerleri gibi olgularla birlikte dışlanmasını ifade etmektedir.

### 2.2 İnsani Gelişme Raporunda Sosyal Entegrasyon Göstergeleri

İnsani Gelişme Raporu'nda sosyal entegrasyon, dört boyut ile ifade edilmektedir. İlk boyut istihdam, savunmasızlık ve eşitlik, ikinci boyut bireysel refah algılamaları, üçüncü boyut toplum algılamaları ve dördüncü boyut kişi güvenliğidir. İstihdam, savunmasızlık ve eşitlik boyutunun göstergeleri; istihdam, genç işsizliği, çocuk işgücü ve eşitsizliğe bağlı olarak İGE'deki kayıp, bireysel refah algılamaları boyutunun göstergeleri; yaşam memnuniyeti, tercih özgürlüğü memnuniyeti ve iş memnuniyeti, toplum algılamaları boyutunun göstergeleri; kişilere güven, toplum memnuniyeti ve ulusal hükümete güven ve son olarak kişi güvenliği boyutunun göstergeleri ise; sağlık algısı, cinayet oranı ve intihar oranı olarak belirtilmektedir.

İstihdam, savunmasızlık ve eşitlik boyutunda istihdam göstergesi nüfus içerisinde 25 ve daha üzeri yaşta istihdam edilenlerin yüzde oranını, genç işsizliği göstergesi 15-24 yaş aralığındaki işsiz nüfus yüzdesini, çocuk işgücü göstergesi yaşları 5-11 arasında olan çocuklardan referans haftasında en az bir saat ekonomik aktivitede bulunan veya en az 28 saat ev işi yapan veya yaşları 12-14 arasında olan çocuklardan referans haftasında en az 14 saat ekonomik aktivitede bulunan veya en az 28 saat ev işlerinde çalışan çocuk yüzdesini ifade etmektedir. Eşitsizliğe bağlı olarak İGE'deki kayıp göstergesi potansiyel insani gelişmede eşitsizliğe bağlı kayıplardır ve insani gelişme endeksi ve eşitsizliğe uyarlanmış insani gelişme endeksi arasındaki fark yüzdesi alınarak hesaplanmaktadır.

Bireysel refah algılamaları boyutunda yaşam memnuniyeti göstergesi 0-10 arasında değer almakta olup, "0" değeri en az memnuniyeti, "10" değeri ise en yüksek yaşam memnuniyeti derecesini ifade etmektedir. Tercih özgürlüğü memnuniyeti göstergesinde kişilere, ülkenizde hayatınızla ilgili yaptığınız tercihlerdeki özgürlüğünüzden memnun musunuz yoksa memnun değil misiniz? sorusu sorulmakta ve verilen evet cevabına göre yüzde değer belirlenmektedir. İş memnuniyeti göstergesi işinizden memnun musunuz yoksa memnun değil misiniz? sorusuna verilen cevaplardan elde edilen yüzde değeri ifade etmektedir.

Toplum algılamaları boyutunda kişilere güven göstergesi, insanlarla ilişkilerinizde dikkatli olmak zorunda mısınız? veya çoğu kişiye güvenilebilir mi? sorusuna verilen evet cevaplarından elde edilen yüzde değeri ifade etmektedir. Toplum memnuniyeti göstergesinde, yaşanılan yerdeki ekonomik durumun iyiye gidip gitmediği sorgulanmakta ve verilen evet cevabına göre değer hesaplanmaktadır. Ulusal hükümete güven göstergesinde ise, ülkenizde ulusal hükümete güven duyuyor musunuz? sorusuna verilen cevaplardan evet cevaplayanların yüzde değeri hesaplanmaktadır.

Kişi güvenliği boyutunda güvenlik algısı göstergesinde ise, yaşadığınız yerde gece yürürken kendinizi güvende hissediyor musunuz? sorusuna verilen cevaplardan evet cevaplayanların yüzde değeri hesaplanmaktadır. Cinayet oranı göstergesinde 100,000 kişideki kasıtlı cinayet oranı ifade edilmektedir. İntihar oranında ise 100,000 kişide kadın ve erkek olarak intihar sayısına göre hesaplanan intihar oranı belirtilmektedir( HDR, 2014).

## 3 Türkiye ve Geçiş Ekonomilerinde Sosyal Entegrasyon Göstergeleri

### 3.1 Türkiye'de Sosyal Entegrasyon Göstergeleri

Türkiye'de ekonomik, bireysel ve toplumsal algılamalar ile kişi güvenliği boyutlarının belirtildiği sosyal entegrasyon göstergeleri Tablo 1'de yer almaktadır.

| Boyutlar | Göstergeler | Değerlendirme ölçütü | Değer |
|---|---|---|---|
| İstihdam, Savunmasızlık ve Eşitlik | İstihdam (25 ve üzeri – 2011) | (%) | 48.8 |
| | Genç İşsizliği (15-24 yaş / 2005 – 2011) | (%) | 20.7 |
| | Çocuk İşgücü (5-14 yaş 2001 – 2010) | (%) | 3.0 |
| | Eşitsizliğe Bağlı Olarak İGE'deki Kayıp 2012 | (%) | 22.5 |
| Bireysel Refah Algılamaları | Yaşam Memnuniyeti 2007 - 2011 | (0-10) | 5.3 |
| | Tercih Özgürlüğü Memnuniyeti | (%) Memnunluk | 44.0 |
| | İş Memnuniyeti 2007-2011 | (%) Memnunluk | 71.2 |
| Toplum Algılamaları | Kişilere Güven 2011 | (%) Evet Cevaplayan (2007-2011) | 8.0 |
| | Toplum Memnuniyeti | | 78.9 |
| | Ulusal Hükümete Güven | | 60.0 |
| Kişi Güvenliği | Güvenlik Algısı | | 51.0 |
| | Cinayet Oranı 2004-2011 | /100000 | 3.3 |
| | İntihar Oranı//100,000 kişide) (2001-2010) | Kadın | - |
| | | Erkek | - |

*Tablo 1. Türkiye'de Sosyal Entegrasyon Göstergeleri **Kaynak: Human Development Report 2013***

Tablodaki verilerden görülebileceği üzere, Türkiye'de 25 yaş ve üzeri istihdam oranı %48, 15-24 yaş arası genç işsizliği %20.7, 5-14 yaş arasındaki çocuk işgücü oranı %3.0 ve eşitsizliğe bağlı olarak İGE'deki kayıp miktarı %22.5'tir.

Bireysel refah algılamaları değerlendirildiğinde yaşam memnuniyeti göstergesi bakımından Türkiye, %5.3 değeri ile orta seviyelerde memnuniyet göstermektedir. Bireylerin hayatları ile ilgili tercihlerindeki özgürlüğünde memnuniyet derecesi ise %44'tür. İş memnuniyeti açısından ise %71.2 iş memnuniyeti görülmektedir.

Toplum algılamaları değerlendirildiğinde kişilere güven göstergesinde Türkiye %8'lik bir oranla oldukça düşük bir güven değeri göstermektedir. Ekonomik durumun iyiye gidip gitmeme algısında ise %78.9 evet cevabı verilmiştir. Ulusal hükümete güven duyuyor musunuz sorusunda ise %60.0'lık bir oran ulusal hükümete güven duyduğunu belirtmektedir.

Kişi güvenliği boyutunda ise %51.0 oranında kişi gece yürürken kendini güvende hissetmektedir. 100,000 kişide cinayet oranı ise 3.3'tür. İntihar oranı bakımından ise herhangi bir değer belirtilmemiştir.

### 3.2 Geçiş Ekonomilerinde Sosyal Entegrasyon

Geçiş ekonomilerinde ekonomik, bireysel ve toplumsal algılamalar ile kişi güvenliği boyutlarının belirtildiği sosyal entegrasyon göstergeleri Tablo 2'de yer almaktadır. Tabloda CEE ve CIS ülkeleri gruplandırılarak ayrı olarak belirtmektedir.

İstihdam ölçütü bağlamında veriler incelendiğinde genel anlamda CIS ülkelerinde istihdam yüzdesinin CEE ülkelerinden daha yüksek olduğu dikkati çekmektedir. CEE ülkeleri arasında istihdamda birinci sırada %59.7 oranla Çek Cumhuriyeti yer alırken, AB'ye aday Bosna Hersek %37.2 ve Makedonya %43.4 ile son sıralarda yer almaktadır. CIS ülkeleri arasında ise, Kazakistan %75.0, Azerbaycan %70.8, Kırgızistan %70.4 ve Tacikistan %70.3 ile yüksek istihdam oranına sahipken, Moldavya %43.9 ve Ermenistan %47.3 ile düşük istihdam oranına sahip CIS ülkeleridir.

Tablo 2 incelendiğinde genç işsizliğinin en fazla yaşandığı CEE ülkesi AB aday ülkeler olan Bosna Hersek ve Makedonya'dır. Bosna Hersek'te %60.0, Makedonya'da %55.7 genç işsizliği görülmesinin yanında istihdam oranı da düşüktür. CEE ülkeleri arasında genç işsizlik oranı düşük olan ülkeler % 16.8 ile Slovenya ve %18.1 ile Çek Cumhuriyetidir. CIS ülkeleri arasında ise elde edilen veriler bazında en yüksek genç işsizliği %57.4 ile Ermenistan'da, en düşük genç işsizliği ise %5.0 ile Kazakistan'da görülmektedir.

Eşitsizliğe bağlı olarak insani gelişme endeksindeki kayıp oranlarına göre en düşük değere ise %5.4 kayıpla Çek Cumhuriyeti ve %5.8 kayıpla Slovenya sahiptir. En yüksek kayıp oranına ise %17.1 ile Kırgızistan sahiptir.

Bireysel refah algılamaları boyutunda 1'den 10'a kadar olan yaşam memnuniyeti ölçütüne göre CEE ve CIS ülkeleri arasında ilk sırayı 6.3 puan ile Çek Cumhuriyeti, ikinci sırayı 6.0 puan ile Slovenya ve üçüncü sırayı 5.9 puan ile Slovak Cumhuriyeti almaktadır. Yaşam memnuniyeti ölçütünde 3.9 puan ile Bulgaristan, 4.2 puan ile Gürcistan ve Makedonya en düşük puana sahip ülkelerdir.

Group headers — İstihdam, Savunmasızlık ve Eşitlik (İstihdam … Eşitsizlik); Bireysel Refah Algılamaları (Yaşam … İş memnuniyeti); Toplum Algılamaları (Kişilere güven … Güvenlik algısı); Kişi güvenliği (Cinayet oranı, İntihar oranı).

| Ülkeler | İstihdam (25 ve üzeri) 2011 (%) | Genç İşsizliği 15-24 yaş 2005-2011 (%) | Çocuk İşgücü (5-14 yaş) 2001-2010 (%) | Eşitsizliğe bağlı olarak İGE'deki kayıp 2012 (%) | Yaşam memnuniyeti 2007-2011 (0-10) | Tercih özgürlüğü memnuniyeti (%) Memnunluk | İş memnuniyeti 2007-2011 (%) | Kişilere güven 2011 | Toplum memnuniyeti | Ulusal hükümete güven | Güvenlik algısı (%) Evet cevaplayan (2007-2011) | Cinayet oranı 2004-2011 /100000 | İntihar oranı K (/100,000, 2001-2010) | İntihar oranı E |

***Tablo 2.** Geçiş Ülkelerinde Sosyal Entegrasyon Göstergeleri **Kaynak:** Human Development Report 2013*

Bireysel refah algılamalarından, hayatla ilgili yapılan tercihlerdeki özgürlükten memnuniyet derecesini gösteren tercih özgürlüğü memnuniyetinde CEE ülkeleri arasında Slovenya diğer CEE ülkelerine göre sahip olduğu %90.0 memnunluk oranıyla diğer ülkelerden ayrılırken, Polonya'nın da %80.0 memnuniyetle oldukça yüksek bir değere sahip olduğu görülmektedir. En düşük memnuniyet oranına sahip ülkeler ise AB aday ülkelerden %33.0 ile Bosna Hersek başta olmak üzere %46.0 memnuniyet oranıyla Arnavutluk ve Hırvatistan'dır. CIS ülkeleri arasında ise, Ermenistan %41.0 memnuniyetle son sırada olmak üzere Azerbaycan'da %49.0 memnuniyetle diğer ülkelerden daha düşük değere sahiptir. CIS ülkeleri arasında Özbekistan %90.0 memnuniyet oranıyla diğer ülkelerin sahip olduğu memnuniyet oranlarına göre oldukça yüksek bir değere sahiptir.

Bireysel refah algılamalarından iş memnuniyeti ölçütüne göre veri elde edilebilen ülkeler arasında en yüksek değere sahip ülke %93.6'lık oranla Türkmenistan'dır. Özbekistan %87.3 ve Slovenya'da %85.0 oranla yüksek iş memnuniyetine sahip ülkeler arasındadır. En düşük iş memnuniyetine sahip ülke ise %45.4 memnuniyet ile Ermenistan'dır.

Toplum algılamaları bakımından kişilere güven ölçütünde "evet" cevaplayanların genel olarak ülkeler bazında düşük olduğu görülmektedir. Kişilere güvene en az "evet" cevabı veren ülke %7 ile Arnavutluk iken en yüksek orana sahip ülkeler %34.0 oranla Beyaz Rusya ve Kırgızistan'dır. Toplum memnuniyeti ölçütünde ise genel anlamda "evet" cevaplayanların oranı yüksektir. Ülkeler arasında en düşük değerler %52.7 evet cevabı ile Ermenistan, %61,7 ile Bosna Hersek ve %67.7 ile Arnavutluk ülkelerinde görülmektedir. Ulusal hükümete güven ölçütünde elde edilebilen veriler ışığında genel anlamda CEE ülkelerinde CIS ülkelerine oranla daha düşük bir katılım bulunmaktadır. Ülkeler arasında ulusal hükümete güven ölçütüne evet diyenlerin oranı %11.0 ile Letonya'da ve %12.0 ile Romanya'da en düşük seviyelerdedir. AB üye ülkeler arasında en yüksek oran %42 ile Estonya'ya aittir. En yüksek ulusal hükümete güven oranına sahip ülkeler %89.0 katılım ile Tacikistan ve %74.0 ile Azerbaycan'dır.

İnsan güvenliği bakımından güvenlik algısı ölçütünde ülkeler arasında en yüksek "evet" cevaplayan ülke %91'lik oranla Gürcistan'dır. Güvenlik algısı yüksek diğer ülkeler ise ikinci sırada %85.0 ile Tacikistan ve üçüncü sırada %84.0 ile Slovenya'dır. Güvenlik algısının en düşük olduğu ülke %39.0 ile Litvanya iken, arkasından %40.0 ile Rusya Federasyonu gelmektedir.

Ülkelerin cinayet oranları incelendiğinde 100,000 kişide en yüksek cinayet oranına sahip ülke 20.1 ile Kırgızistan dikkati çekmektedir. Kırgızistan'dan sonra 10.2 oranı ile Rusya Federasyonu ve 8.8 oranı ile Kazakistan gelmektedir. En düşük cinayet oranına sahip ülke 0.7 oranla Slovenya'dır.

Ülkelerdeki intihar oranlarını değerlendirdiğimizde ise kadın ve erkek olarak ayrı ele alındığı ve erkeklerin kadınlara oranla daha çok intihar oranına sahip olduğu görülmektedir. Kadınlarda intihar oranında ilk sırada 10.6 oranı ile Macaristan, ikinci sırada ise 10.4 oranı ile Litvanya gelmektedir. Erkeklerde ise intihar oranında ilk sırada 61.3 oranı ile Litvanya, ikinci sırada ise 53.9 oranı ile Rusya Federasyonu gelmektedir. İntihar oranının en düşük yaşandığı ülke ise 0.3 kadın ve 1.0 erkek oranıyla Azerbaycan'da görülmektedir.

### 3.3 Sosyal Entegrasyon Bağlamında Türkiye ve Geçiş Ekonomileri Karşılaştırması

Sosyal entegrasyon göstergelerinde mevcut durumun ortaya konulması ve geliştirilmesi gereken konuların belirlenmesi açısından Türkiye ile özellikle kendisi gibi AB aday geçiş ülkeleri ile AB üye geçiş ülkelerinin karşılaştırmasının yapılması büyük öneme sahiptir.

25 yaş ve üzeri istihdam oranı bakımından Türkiye %48,8'lik istihdam oranı ile genel anlamda CEE ve CIS ülkelerinden düşük istihdam oranına sahiptir. İstihdam oranları bakımından TUIK verilerine göre (TUIK, 2014) iyileşme sağlanmış olduğu görülse de AB üye ülkelerin istihdam oranına göre değerlendirme yaptığımızda, iyileştirme yapılması gereken bir konu olarak karşımıza çıkmaktadır. Bu konuda özellikle kayıtdışı istihdam oranlarının düşürülmesi, istihdam oranlarında iyileşmenin sağlaması yanında çalışma hayatındaki birçok yapısal sorunun giderilmesinde büyük önem taşımaktadır. Sosyal güvenlik açıklarının karşılanması, vergi gelirleri, iş sağlığı ve güvenliği gibi temel sorunların çözümlenmesinde önemli katkılar sağlayacaktır (Demircan, 2012). Genç işsizliği bakımından değerlendirme yapıldığında ise Türkiye'nin genel olarak AB üye ve aday CEE ülkelerinden daha az genç işsizlik oranına sahip olduğu görülmektedir.

Eşitsizliğe bağlı olarak insani gelişme endeksindeki kayıp oranlarına göre Türkiye, CEE ve CIS ülkelerine oranla %22.5'lik oranla daha yüksek bir kayba sahiptir.

Türkiye ve geçiş ekonomileri bireysel refah algılamaları boyutu bakımından değerlendirildiğinde, Türkiye 5.3'lük puan ile Arnavutluk ile aynı olmak üzere diğer AB aday ülkelerden daha yüksek yaşam memnuniyetine sahiptir. Bireylerin hayatlarındaki tercih özgürlüklerinde ise Türkiye, CIS ülkelerinden Ermenistan ve CEE ülkelerinden Bosna Hersek dışında diğer ülkelerden daha düşük bir memnuniyet göstermektedir. Bu bakımdan Türkiye'deki bireyler tercihlerinde çokta özgür olduklarına katılmamaktadırlar. İş memnuniyeti açısından ise Türkiye %71.2 memnuniyetle, Romanya dışında AB üye ülkelerden daha düşük bir iş memnuniyetine sahip olduğu görülmektedir.

Toplum algılamaları boyutunda kişilere güven duyma göstergesinde ise en az "evet" cevabı veren ülkeler %7 ile Arnavutluk ve %8 ile Türkiye'dir. Bu bağlamda Türkiye ve Arnavutluk, diğer AB aday ve AB üye ülkelere göre kişilere güvenin oldukça az olduğu ülkeler olarak toplum algısı ortaya koyduğu görülmektedir. Toplum memnuniyeti göstergesinde Türkiye, diğer AB aday ülkelere göre ekonomik durumun iyiye gittiği yönde daha yüksek bir algıya sahiptir. Ulusal hükümete güven ölçütünde ise Türkiye, AB üye ülkelerden oldukça yüksek bir değer ile %60.0'lık bir evet katılımı sağladığı görülmektedir.

Kişi güvenliği boyutu bakımından değerlendirme yapacak olursak, Türkiye'nin %51.0 oranıyla genel olarak geçiş ülkelerine göre daha düşük bir güvenlik algısına sahip olduğu görülmektedir.

## 4 Sonuç

Değerlendirme kapsamına alınan CEE ve CIS ülkeleri ile Türkiye'nin sosyal entegrasyon göstergeleri irdelendiğinde AB üye ve aday CEE, CIS ülkeleri ve Türkiye arasında görülen farklılıkların göstergeler bazında farklılaştığı ve gruplar arasında bazı göstergeler dışında net bir ayırımın olmadığı görülmektedir. Toplumların kendi bünyelerinde bile farklı kültürel, ekonomik ve sosyal yapılar barındırdıkları düşünülecek olursa ayrı toplumlarda farklı sosyal entegrasyon göstergeleri görülmesi oldukça doğaldır. Fakat önemli olan sosyal entegrasyonda görülen farklılıkların sosyal dışlanmışlığa ne kadar etki ettiğidir.

İnsani gelişme raporunda sosyal entegrasyon göstergeleri bakımından genel anlamda en dikkat çekici noktalar, insani gelişme endeksi sıralamasında daha geride kalan CIS ülkelerinin istihdam, genç işsizliği ve ulusal hükümete güven göstergelerinde CEE ülkelerine göre daha iyi durumda olduğudur. Yaşam memnuniyeti, tercihlerdeki özgürlükler, iş memnuniyeti, kişilere güven, toplum memnuniyeti göstergelerinde ise belirgin bir fark bulunmamakta ve ülkeler kendi grupları içinde bile çok farklı değerler alabilmektedirler.

Türkiye'nin AB üye ülkelere göre iyileştirme sağlaması gereken konular ise istihdam, eşitsizliğe bağlı olarak insani gelime endeksindeki kayıpların azaltılması ile birlikte tercihlerde özgürlüklerin sağlanması ve iş memnuniyetinin arttırılmasına yönelik bireysel refah algılamalarının iyileştirilmesi ve toplumda kişilere güven ve güvelik algısının artırılmasıdır.

İnsani gelişme raporunda sosyal entegrasyonu tanımlayan göstergelerde ifade edildiği üzere sosyal entegrasyonu sadece istihdam, işsizlik gibi ekonomik verilerle değerlendirmek mümkün değildir. Bir toplumda ekonomik gelişmişlik kadar yaşam memnuniyeti, iş memnuniyeti, tercihlerdeki özgürlükler gibi bireysel değerlerden, toplumda güven algısı gibi toplumsal değerlere kadar bir bütün olarak değerlendirmek gerekmektedir.

Daha önce de değinildiği üzere sosyal çözülmeler sadece fertler arasında değil toplumlar arasında da görülebilmektedir. Bu nedenle sosyal entegrasyon bileşenlerinden birinde olabilecek bir çözülme bireysel olarak sosyal dışlanmışlığa neden olabileceği gibi toplumsal olarak da sosyal dışlanmalara neden olabilecektir. Bu bağlamda sosyal bütünleşmeyi etkileyen tüm faktörler bir bütün halinde değerlendirilmeli ve uygulamaya konulacak politikalar sosyal dışlanmışlığı en aza indirecek şekilde modellenmelidir.

# Türkiye'de 2002-2012 Döneminde Hekim Yoğunluğu ve Sayıları: Makro Sağlık İnsangücü Planlaması Açısından Bir Değerlendirme

# Density and Number of Physicians in Turkey for the Period of 2002-2012: An Evaluation of Macro Health Manpower Planning

Assoc. Prof. Dr. Gülsün Erigüç (Hacettepe University, Turkey)

## Abstract

Health care delivery requires a sufficient number of manpower. It is recognized that the shortage of health workforce is the most important issue for the health sector. Health manpower distribution should be in a balanced across the country. National human resources for health policies require evidence-based planning. Health manpower planning involves issues such as planning, employment and management of workforce. The main objectives of this study are determine physician numbers, compare the data to OECD and other countries, distribution of physicians, proportion of health employees to each other. The main criteria used in health manpower planning are that the numerical situation of manpower, while the other is distinguishes of manpower according to the regions, provinces and institutions. The Ministry of Health of Turkey Health Statistics Year Books (last one published in 2013 for 2012 data) and the other statistics were used for obtaining data. In Turkey, physicians total has increased by 41,1%, in this period. Specialist physician increased by 54, 2%, general practitioner 25, 8%, medical residents 33, 4%. In 2002, 62, 4% of physicians total were working in the Ministry of Health while 21.9% universities, 15.7% private sector. In 2012, 56.8% of physicians total were working in the Ministry of Health, 20.8% universities, 22.4% private sector. In 2002, Turkey had 139 physicians per 100.000 populations while the number is 172, in 2012. According to the tenth five-year development plan, the number of physicians per 100.000 people are estimated to be 176 for 2013, while 193 for 2018.

## 1 Giriş

Bir ülkenin, belirlenen sağlık hedeflerine ulaşabilme yeteneği, büyük ölçüde, o ülkede sağlık hizmetlerinin örgütlenmesinden ve sunumundan sorumlu olan kişilerin bilgi, beceri, motivasyon ve dağılımına bağlıdır. Sağlık, emek-yoğun bir hizmet sektörü olarak insanın insana hizmet sunduğu, öznesi insan olan bir alandır ve en önemli varlığı insangücüdür. Toplum ve birey sağlığının geliştirilmesi için, her sağlık sisteminde sağlık insangücü merkezde yer alır. Bu bakımdan sağlık hizmetlerinin etkili, verimli ve kaliteli bir şekilde sunulması için uygun sayıda, yeterli ve gerekli bilgi, beceri ve yeteneklere sahip insangücünün doğru zamanda ve doğru yerde istihdam edilmesi gerekir. Her bir sağlık girişimi bilgiye dayalıdır. Sağlık çalışanları bu bilginin kullanıcılarıdır. Sağlık çalışanları, bu bilgiyi sağlık eylemine bağlayan insan unsurudur ve sistemin temel değerlerini yaratırlar. Eğer bir ülkede uygun bilgi ve beceri mevcut olmazsa, önemli sağlık hizmetlerinin sunumu olumsuz etkilenecektir. Dünya Sağlık Örgütü (DSÖ) 2006 Raporunda sağlık çalışanlarının önemini oldukça net olarak ortaya koymaktadır. Çeşitli çalışmalar sağlık çalışanlarının sayısı ile nüfusun sağlık ile ilgili çıktıları arasında doğrudan ve pozitif bağlantı olduğunu kanıt göstermektedir. Buna göre, sağlık çalışanlarının yoğunluğu arttıkça, bebek, çocuk ve anne ölümlerinde azalma olduğu, dolayısıyla hayatta kalma olasılığının arttığı görülmektedir. Sağlık çalışanlarının sayısı ve kalitesinin, bağışıklama alanında, temel sağlık hizmetlerinde, bebek çocuk ve anne sağkalma oranları ile olumlu ilişkili olduğuna dair çok sayıda kanıtlar vardır. Hekimlerin kalitesi ve dağılımı (yoğunluğu), kalp-damar hastalıklarına ilişkin pozitif çıktılarla bir ilişki olduğunu göstermiştir (WHO, 2006; WHO, 2010; Erigüç, 2012).

Sağlık hizmetlerinin hakkaniyete uygun yani herkese ve ihtiyaç duyduğu anda verilebilmesi için, bu hizmetleri yürütecek sağlık insangücünün, çağdaş sağlık hizmeti ihtiyaçlarını karşılayabilecek bilgi, beceri ve tutumlarla donatılmış olarak sağlık sorunlarını takım anlayışı içinde çalışarak çözebilecek şekilde evrensel niteliklere ve ülke gerçeklerine göre yetiştirilmesi, üretken bir şekilde değerlendirilmesi ve ülke çapında dengeli bir şekilde planlanması ve istihdam edilmesi gerekmektedir. Kaynakların etkili ve verimli kullanılması, kaynak israfının önlenmesi ve sunulacak sağlık hizmetinin ihtiyacı karşılar nitelikte olabilmesi için, insangücü planlamasına ihtiyaç vardır (T.C. Yüksek Öğretim Kurulu [YÖK], 2014). Sağlık insangücü planlaması yapılırken, çok sayıda değişken göz önünde bulundurulmalıdır. DSÖ bu değişkenleri, demografik veriler, ekonomik veriler, toplumun sağlık durumu ve sağlık gereksinimi, sağlık hizmetlerinin kullanımı, sağlık insangücünün durumu, sağlık sisteminin özellikleri ve sağlık insangücünün eğitimi olarak belirlemiştir (WHO, 1978). Buna göre sağlık insangücü planlamasının başlangıç aşamasını halen mevcut insangücü ve hizmetlerle ilgili sağlık insangücü durumunun ortaya konması oluşturmaktadır (YÖK, 2014).

Bu çalışmanın amacı, sağlık insangücü planlaması bakımından, Türkiye'deki sağlık insangücünü hekimler kapsamında incelemektir. Buna göre araştırmada 2002-2012 yıllarında hekim sayıları ve dağılımları, sağlık

çalışanlarının birbirlerine göre sayı ve dağılımları, OECD ve diğer ülkeler ile karşılaştırmalar yapılması amaçlanmıştır.

## 2 Sağlık İnsangücü Planlaması

DSÖ sağlık insangücünü "esas itibarıyla sağlığı geliştirme amacı taşıyan eylemlerde bulunan tüm kişiler" olarak tanımlar. Bu tanıma göre sağlık insan kaynakları, hekim, hemşire, eczacı ve diş hekimi gibi klinik personeli içerdiği gibi, doğrudan sağlık hizmeti vermeyen fakat sağlık sistemi için gerekli olan yönetim ve destek personelini de içerir (WHO, 2006; WHO, 2010).

Türkiye'de Sağlık Eğitimi ve Sağlık İnsangücü Durum Raporu'nda (YÖK, 2014) sağlık insangücü, "kamu ya da özel tüm sağlık kesiminde toplumun ihtiyaç duyduğu sağlık hizmetini üreten personelin tamamı" olarak tanımlanır. Sağlık insangücü planlaması da "topluma bugün sunulan ve gelecekte sunulacak sağlık hizmetlerini gerçekleştirmek üzere sağlık çalışanlarının yeterli nicelikte, yüksek nitelikte, düzgün bir dağılımla, yerinde bir zamanlama ile ve doğru bir şekilde istihdam edilmesi" olarak tanımlanmaktadır. Bu tanımdan hareketle sağlık insangücü planlaması; toplumun kısa, orta ve uzun vadede ortaya çıkacak gereksinimleri öngörülerek, coğrafi, ekonomik ve sosyokültürel özellikler ile maliyet/etkin sağlık hizmeti sunumu arasındaki oran dikkate alınarak sağlık hizmeti sunacak insangücünün planlanması, istihdamı ve yönetimi olarak ifade edilebilir (YÖK, 2014).

Başka bir tanımda ise sağlık insangücü planlaması, stratejik bir yaklaşım içerisinde toplumun sağlıkla ilgili gereksinimleri ve başvuruları göz önüne alınarak, sağlık kurumlarının amaçları, hedefleri ve olanakları çerçevesinde, sağlık alanında çalışanların yeterli nicelik, yüksek nitelik, düzgün bir dağılım, doğru bir zamanlama ve tam olarak istihdamı amacıyla yapılan planlama olarak değerlendirilmiştir. Sağlık insangücü planlaması da hizmet ve personel arasındaki ilişkileri dikkate alarak, sağlık işgücünün üretimi, kullanımı ve yönetimi ile ilgili tüm eylemleri koordine etmek için sistematik bir girişim olarak tanımlanmıştır (Üner, Usubütün, 2012).

Türkiye'de Sağlık Eğitimi ve Sağlık İnsangücü Durum Raporu'nda da değinildiği gibi, sağlık insangücü planlaması yapılırken önce genel olarak bir durum saptaması yapılması ve bilgi toplanması gereklidir. Doğru bir planlama yapılabilmesi için gerekli ölçütler ve ön veriler çeşitli başlıklar altında toplanmaktadır. Sağlık insangücü ile ilgili başlıca veriler arasında genel olarak sağlık insangücünün sayısal durumu, sağlık insangücünün bölgelere, illere ve kurumlara göre dağılımı gibi ölçütler yer almaktadır (YÖK, 2014). Aşağıdaki bölümde bu kapsamdaki bilgilere yer verilecektir.

## 3 Türkiye'de 2002-2012 Döneminde Hekimler ile İlgili Veriler

2011 ve 2012 Sağlık İstatistikleri Yıllığı'ndan (T.C. Sağlık Bakanlığı [SB], 2012 ve T.C. Sağlık Bakanlığı, 2013) derlenen verilere göre, Türkiye'de tüm sektörlerde 2002-2012 yılları arasındaki toplam hekim sayıları, uzman, pratisyen ve asistan hekim ayırımına göre, yıllık artış oranları hesaplanarak aşağıda Tablo 1'de sunulmaktadır. 2002 yılı için 91.949 olan toplam hekim sayısı, 2012 yılı için 129.772 olarak görülmektedir. 2002-2012 arasında toplam hekim sayısı artışı % 41.1 olarak hesaplanmıştır. Aynı yıllar için artış oranı uzman hekimler için %54.2 olurken, pratisyen hekimler için % 25.8 olarak gerçekleşmiştir.

| Yıllar | Uzman Hekim | Yıllık artış % | Pratisyen Hekim | Yıllık artış % | Asistan Hekim | Yıllık artış % | Toplam Hekim | Yıllık artış % |
|---|---|---|---|---|---|---|---|---|
| 2002 | 45.457 | | 30.900 | | 15.592 | | 91.949 | |
| 2003 | 47.108 | 3,6 | 32.019 | 3,6 | 15.339 | - 1,6 | 94.466 | 2,7 |
| 2004 | 48.687 | 3,4 | 32.579 | 1,7 | 15.844 | 3,3 | 97.110 | 2,8 |
| 2005 | 49.477 | 1,6 | 34.886 | 7,1 | 16.490 | 4,1 | 100.853 | 3,8 |
| 2006 | 52.868 | 6,9 | 33.383 | - 4,3 | 18.224 | 10,5 | 104.475 | 3,6 |
| 2007 | 54.439 | 2,9 | 34.559 | 3,5 | 19.404 | 6,5 | 108.402 | 3,7 |
| 2008 | 56.973 | 4,7 | 35.763 | 3,5 | 20.415 | 5,2 | 113.151 | 4,4 |
| 2009 | 60.655 | 6,5 | 35.911 | 0,4 | 22.075 | 8,3 | 118.641 | 4,8 |
| 2010 | 63.563 | 4,8 | 38.818 | 8,1 | 21.066 | - 4,6 | 123.447 | 4,1 |
| 2011 | 66.064 | 3,9 | 39.712 | 2,3 | 20.253 | - 3,9 | 126.029 | 2,1 |
| 2012 | 70.103 | 6,1 | 38.877 | - 2,1 | 20.797 | 2,7 | 129.772 | 2,9 |
| 2002- 2012 artış % | | 54,2 | | 25,8 | | 33,4 | | 41,1 |

***Tablo 1.** Yıllara Göre Hekim Sayıları, Tüm Sektörler, Türkiye, 2002-2012 **Kaynak:** T.C. Sağlık Bakanlığı*

2012 yılı için hekimlerin sektörlere ve unvanlarına göre dağılımı aşağıda Tablo 2'de sunulmaktadır. Gerek toplam hekim sayısı, gerekse uzman, pratisyen ve asistan hekimlerin önemli bir bölümü Sağlık Bakanlığı'nda bulunmaktadır (T.C. Sağlık Bakanlığı, 2013).

| | Uzman Hekim | Pratisyen Hekim | Asistan Hekim | Toplam Hekim |
|---|---|---|---|---|
| Sağlık Bakanlığı | 34.069 | 32.457 | 7.137 | 73.663 |
| Üniversite | 13.544 | 215 | 13.238 | 26.997 |
| Özel Sektör | 21.252 | 6.184 | 0 | 27.436 |
| Diğer | 1.238 | 21 | 417 | 1.676 |
| Toplam | 70.103 | 38.877 | 20.792 | 129.772 |

***Tablo 2.*** *Hekimlerin Sektörlere ve Unvanlara Göre Dağılımı, Türkiye, 2012* ***Kaynak:*** *T.C. Sağlık Bakanlığı*

   2011 ve 2012 Sağlık İstatistik Yıllığı'ndaki (T.C. Sağlık Bakanlığı, 2012 ve T.C. Sağlık Bakanlığı, 2013) verilere göre hazırlanan Şekil 1'de yıllara ve sektörlere göre toplam hekim oranının dağılımı sunulmaktadır. 2002-2012 yılları arasında oranlar değişmekle beraber hekimlerin önemli bir bölümünün Sağlık Bakanlığı'nda görev yaptığı görülmektedir.

| 2011 | 126.029 | 21.099 | 124.982 | 110.862 | 51.905 | 26.089 | 209.126 |
| 2012 | 129.772 | 21.404 | 134.906 | 122.663 | 53.466 | 26.571 | 209.736 |

***Tablo 4.*** *Sağlık Personeli Sayısı, Türkiye, 2002- 2012* ***Kaynak****: TÜİK*

2012 yılı için hekimlerin Sağlık Bakanlığı bünyesindeki birimlere dağılımı Tablo 3'de sunulmaktadır. Buna göre hekimlerin % 63'ü hastanelerde görev yapmaktadır (T.C. Sağlık Bakanlığı, 2013).

TÜİK (2014) verilerine göre 2002-2012 yıllarında Türkiye'deki toplam sağlık personeli sayıları aşağıda Tablo 4'de sunulmaktadır. Bu yıllar içinde sağlık personeli sayısında sayısal artış eğilimi olduğu görülmektedir.

**Şekil 2.** *İBBB-1'e göre 100.000 Kişiye Düşen Toplam Hekim Sayısı, Tüm Sektörler* **Kaynak:** *SB*

**Şekil 3.** *İBBS-1'e göre uzman, pratisyen ve asistan hekim dağılımı, tüm sektörler, (%), 2012* **Kaynak:** *SB*

2002 ve 2012 yılları için Türkiye'de bölgelere göre 100.000 kişiye düşen toplam hekim sayısı karşılaştırması Şekil 2'de sunulmaktadır. Buna göre bölgelere göre yıllar itibarıyla farklılar görülmektedir. Türkiye genelinde 2002 yılında 139 olan sayı, 2012 yılında 172 olarak görülmektedir.

2012 yılında bölgelere göre uzman, pratisyen ve asistan hekimlerin dağılımı Şekil 3'de gösterilmektedir. Türkiye genelinde uzman hekim oranı % 54, pratisyen hekim oranı % 30 ve asistan hekim oranı % 16 olarak gerçekleşmiştir (T.C. Sağlık Bakanlığı, 2013).

İllere göre bir değerlendirme yapılacak olursa, TÜİK verilerine göre, toplam hekim sayısının (129.772) illere göre dağılımına bakıldığında en fazla doktorun İstanbul'da (26.587), ardından sırasıyla Ankara (15.262) ve İzmir'de (9.068) olduğu, en az doktor sayısının ise Bayburt'ta (101) olduğu görülmektedir. Ardından sırasıyla

Tunceli (114), Ardahan (139), Kilis (171) ve Gümüşhane (181) illeri hekim sayısı en az olan iller olarak görülmektedir (TÜİK; 2014).

2002-2012 yılları için Türkiye'de sağlık personeli başına düşen kişi sayıları ve hekim başına düşen kişi sayısı aşağıda Tablo 5'de sunulmaktadır (TÜİK, 2014).

| Yıllar | Hekim | Hekim başına düşen hasta müracat sayısı | Diş Hekimi | Hemşire | Sağlık Memuru | Ebe | Eczacı |
|---|---|---|---|---|---|---|---|
| 2002 | 718 | 1 352 | 4 032 | 912 | 1 317 | 1 591 | 2 961 |
| 2003 | 708 | 1 372 | 3 769 | 898 | 1 165 | 1 605 | 2 989 |
| 2004 | 697 | 1 574 | 3 785 | 894 | 1 111 | 1 567 | 2 996 |
| 2005 | 680 | 1 856 | 3 778 | 877 | 1 105 | 1 575 | 3 013 |
| 2006 | 664 | 2 082 | 3 785 | 840 | 1 028 | 1 560 | 2 999 |
| 2007 | 648 | 2 298 | 3 642 | 742 | 884 | 1 488 | 2 928 |
| 2008 | 628 | 2 419 | 3 562 | 712 | 794 | 1 491 | 2 869 |
| 2009 | 607 | 2 489 | 3 499 | 685 | 770 | 1 460 | 2 859 |
| 2010 | 591 | 2 454 | 3 406 | 636 | 735 | 1 450 | 2 754 |
| 2011 | 587 | 2 681 | 3 505 | 592 | 667 | 1 425 | 2 835 |
| 2012 | 583 | 2 733 | 3 533 | 561 | 617 | 1 414 | 2 846 |

***Tablo 5****. Sağlık personeli başına düşen kişi sayısı ve hekim başına düşen kişi sayısı, TÜİK*

Şubat 2014 tarihinde yayınlanan (YÖK, 2014) ve Aralık 2013 itibarıyla Türkiye'deki hekim sayıları ile ilgili veriler sunan rapordan yapılan derlemeler, aşağıda Tablo 6'da sunulmaktadır. Yayınlanan son veriler olduğundan burada yer verilen bu rapordaki veriler, değişik bir kategoride olduğundan ayrı bir tablo olarak sunulmuştur.

| | Hekim sayısı | Pratisyen hekim sayısı | Uzman hekim sayısı |
|---|---|---|---|
| Sağlık Bakanlığı | 74.562 | 32.119 | 34.815 |
| Üniversite | 28.283 | 219 | 14.810 |
| Özel | 26.538 | 3758 | 22.780 |
| Toplam Hekim (Aktif çalışan) | 129.383 | 36.096 (Asistan dahil değildir) | 72.405 |

***Tablo 6.*** *Aralık 2013 itibarıyla Türkiye'deki Hekim sayıları* ***Kaynak: YÖK***

100.000 kişiye düşen toplam hekim sayıları bakımından yapılan uluslararası karşılaştırmalar aşağıda Şekil 4'de yer almaktadır. 2011 verilerine göre Türkiye'deki hekim sayısının 172 olduğu görülmektedir.

***Şekil 4.*** *100.000 Kişiye Düşen Toplam Hekim Sayısının Uluslararası Karşılaştırması,* ***Kaynak: SB, *YÖK***

Yukarıda Şekil 4'de verilen bilgilere ilave olarak 2014 yılında yayınlanan raporda, Aralık 2013 itibarıyla Türkiye'de ve AB üyesi ülkelerde 100.000 kişiye düşen hekim sayısı karşılaştırıldığında, bu sayının AB üyesi ülke ortalaması 346, DSÖ Avrupa Bölgesi Ortalaması 334, Türkiye'de ise 171 olduğu görülmektedir. Türkiye'de sayının 2001 verilerine göre 172 iken, 2013 verilerine göre 171'e düştüğü görülmüştür. Öte yandan Raporda Türkiye'deki 100.000 kişiye düşen hekim sayısı, AB üyesi ülkeler ortalamasının yarısından daha az olarak değerlendirilmektedir. Avrupa ülkelerinde ve Türkiye'de 100.000 kişiye düşen pratisyen hekim sayıları şöyledir: Türkiye: 48, DSÖ Avrupa Bölgesi Ortalaması: 61, AB Ortalaması: 79. Türkiye'de, DSÖ Avrupa Bölgesindeki

ülkelerde ve AB üyesi ülkelerde 100.000 kişiye düşen aktif çalışan uzman hekim sayıları Türkiye: 96+27 (asistan) 123, AB Ortalaması: 267, DSÖ Avrupa Bölgesi Ortalaması: 273. Buna göre raporda, Türkiye'de 100.000 kişiye düşen aktif çalışan uzman hekim sayısının Avrupa Bölgesi ülkeleri ve 27 AB üyesi ülkeler ortalamasından oldukça düşük olduğu değerlendirmesi yapılmaktadır (YÖK, 2014).

Seçilmiş çeşitli OECD ve Avrupa ülkelerindeki 100.000 kişiye düşen hekim sayıları karşılaştırıldığında, elde edilen bilgiler Şekil 5'de sunulmaktadır. Buna göre Türkiye'deki sayısal durum çoğu ülkeden daha az hekim sayısına işaret etmektedir.

**Şekil 5**. *Çeşitli Ülkeler ve Türkiye'de 100.000 Kişiye düşen hekim sayıları* **Kaynak:** *YÖK*

OECD 2013 Raporunda, OECD ve gelişmekte olan ülkeler arasında kişi başına düşen hekim sayısının yaygın olarak değiştiğine vurgu yapılmakta, 2011 yılında, Yunanistan kişi başına düşen hekim sayısının en yüksek (1.000 nüfus başına 6.1) olduğu ülke olarak görülmekte, ardından Rusya Federasyonu ve Avusturya'nın geldiği belirtilmektedir. Şili, Türkiye ve Kore 1.000 kişi başına yaklaşık iki hekim sayısı ile OECD ülkeleri arasında kişi başına düşen doktor sayısının en düşük olduğu ülkeler olarak gösterilmektedir. OECD ortalaması ise 3.2 hekim olarak görülmektedir. Kişi başına düşen hekim sayısı Endonezya, Hindistan ve Güney Afrika'da, bazı gelişmekte olan ülkelerden çok daha düşük, 1.000 nüfus başına bir hekim sayısından daha az olarak gösterilmektedir. 2000 ve 2011 yılları arasında, OECD ülkelerinin çoğunda hekim sayısı, gerek mutlak sayı ve gerekse kişi başına temelinde büyüdüğüne dikkat çekilen Raporda, bu büyüme oranının, Avustralya, Birleşik Krallık ve Yunanistan'ın yanı sıra, özellikle 2000'e daha düşük seviyelerde başlayan ülkelerde (Türkiye, Kore ve Meksika) hızlı olduğuna vurgu yapılmaktadır.

## 4　Sonuç

Bir toplumdaki sağlık hizmetlerinin sunumunda sağlık insangücü en önemli varlıktır. Sağlık insangücünün etkili, verimli ve kaliteli bir sağlık hizmeti sunabilmesi için sağlık insangücünün yetiştirilmesi, istihdamı, planlanması, belirgin başlıklar olarak görülmekte, ayrıca sağlık insangücünün ülke çapındaki dağılımının önemsenmesi gerektiği düşünülmektedir. Sağlık insan kaynağına yönelik makro (ülke çapında) planlamaların yapılmaması ya da yetersiz planlamalar ve uygulamalar, ülkedeki sağlık hizmetinin sunumunda sorunlara, eksik ya da gereksiz insangücüne ve dengesizliklere neden olabilir. Üner ve Usubütün (2012) tarafından belirtildiği gibi sağlık planlarının kapsamlı bir parçası olması gereken ve giderek önem kazanan sağlık insangücü planlaması, sağlık sistemlerinin ve toplumun sağlık düzeyinin geleceği açısından olması gereken bir konudur.

DSÖ, sağlık insangücü kapsamına hangi alanların dahil edildiği konusunda, her ülkenin kendi koşullarına göre çeşitli düzenlemelerin söz konusu olabileceğine dikkat çeker. Sağlıkta insan kaynakları özel ya da kamu sektöründe, tam ya da yarı zamanlı çalışan, tedavi edici, koruyucu, rehabilite edici bakım hizmetlerinin yanı sıra sağlık eğitimi, geliştirilmesi ve araştırma gibi sağlık sisteminin farklı alanlarında çalışanları da kapsar. Ayrıca sağlık hizmeti sunumu için eğitim ve öğretim aldığı halde ulusal sağlık işgücü piyasasında işe alınmamış kişileri de kapsar (örneğin işsiz, göç etmiş olan ya da kişisel sebeplerden dolayı işgücü piyasasından çekilmiş kişiler) (WHO, 2010). Bu çalışmada başlıca ölçütleri ele alınan çok çeşitli veriler, makro insangücü planlayıcıları için gerekli ve önemli verilerdir. Bu verilerin erişilebilirliği yönündeki gayretler sürmektedir.

Bu çalışmada ele alınan sağlık insangücüne ilişkin temel ölçütler kapsamında genel bir değerlendirme yapılacak olursa, elde edilen sayısal ve oransal artışlara rağmen, Türkiye'de hekim sayısının düşük olduğu yönündeki verilerin ve değerlendirmelerin hala gündemde olduğu söylenebilir. Hekimlerin ülke çapındaki

dağılımında, bölgelere, illere göre yapılan dağılımlarda bazı olumsuzlukların ve dengesizliklerin olduğu görülmektedir. Bunun yanı sıra, sağlık insangücü planlamasında etkili olabilecek sağlık hizmetlerinin sunumu ve kullanımına ilişkin değişkenlerin de gündemde tutulması ve yapılacak değerlendirmelerde bu parametrelerin de ele alınması gerektiği vurgulanmalıdır. Sağlık insangücünün makro ölçekte yani ülke çapında çok boyutlu bir bakış açısıyla ele alınması gerektiği düşünülmektedir.

# Refah Devleti Anlayışı Çerçevesinde Geçiş Ekonomilerinde Sağlık Harcamaları

# Health Expenditures in Transition Economies within the Framework of Welfare State

Asst. Prof. Dr. Özgür Emre Koç (Hitit University, Turkey)

## Abstract

Within the historical framework the public sector has attached a special importance at presenting health services which have priority in cultural and economic areas of society. Being healthy of each citizen in the society contributes to progress and development of the society. It is well known that one of the fields of activities of public sector is to increase welfare of its citizens. States are adopting policies within their own economic structure to realize social welfare. Particularly after II. World War, these policies have gained a new dimension with the developing understanding of welfare state. The concept of welfare state is based on active and comprehensive interferences of state to economy with the aim of providing social prosperity to its citizens with maximum advantage. The welfare state, with its institutionalizing structure, has been an important instrument for social politicises towards social services and combating against poverty. The fundamental chracter of a social welfare state is to present circumtances which enhance life conditions of each citizens and to provide full employment with expenses on social security, health and education. In this study it is aimed to analyze health expenditures of countries, known as transition economies and they are still in their transition period, within the framework of public services providing by a welfare state. A comparison will be made the data on health expenditures in developed economies and evaluating the results.

## 1 Giriş

Günümüzde sağlık hizmetleri, toplumların ekonomik ve sosyal alanlarda gelişme göstermesi için sunulması zaruri mal ve hizmetler içinde kendine önemli bir yer edinmiştir. Bu hizmetlerin sağlıklı bir şekilde sunumu elbette ki toplumda yaşayan bireyler açısından son derece büyük bir önem arz etmektedir.

Devletler, gerek ekonomik kalkınmayı sağlamak ve gerekse geleceklerini planlama konusunda istekli olan ve akılcı davranan insanları yetiştirmek için sağlık hizmetlerinin yaygınlaştırılmasına ve iyileştirilmesine büyük önem vermektedir. Günümüzde devletler tarafından sağlık hizmetlerine yönelik harcamalarının payı yükselmektedir. 19. yüzyılda gelişmeye başlayan refah devleti anlayışı sağlık hizmetlerine ve bu hizmetlere yönelik harcamalara önem vermiştir.

Bu çalışmada, sağlık hizmetlerinin ekonomik önemi doğrultusunda refah devletleri ve geçiş ekonomisi ülkelerindeki durum açıklanmaya çalışılacaktır.

## 2 Refah Devleti Kavramı

Refah devletinin gelişim süreci devletin toplumsal refah alanında düzenlemeler yapmasıyla başlamıştır. Refah devletinin ortaya çıkışı ve gelişimi, 17. yüzyılda İngiltere'de yürürlüğe konan Yoksulluk Yasası'na, 1870'li yıllarda Almanya'da yoksulluk ve sosyal güvenlik alanında yapılan ilk düzenleme olan Bismarck dönemi sosyal güvenlik yasalarına dayanmaktadır.

Refah devletinin gelişimini dört evreye ayırmak mümkündür. İlk dönem, "başlangıç ve deneyim kazanma" dönemidir ve 1870'lerde başlamıştır. 1930 ve 1940'lı yıllara kadar uzanan ikinci dönem uygulamaları "pekiştirme-sağlamlaştırma" dönemidir. Üçüncü dönem, 1950'lerden 1970'lerin ortalarına kadar uzanan "büyüme-yayılma" dönemidir. 1970'lerde başlayan ve halen sürmekte olan dördüncü dönem ise "sorgulama ve yeniden biçimlenme" dönemidir (Koray, 2000).

I. ve özellikle II. Dünya savaşı boyunca ve savaştan sonra devletler artan sosyal sorunlarla mücadele etmeye başlamışlardır. Savaşların ortaya çıkardığı yıkım ve ekonomik krizler, devletin sosyal alana ve ekonomiye müdahalesine süreklilik arz eden bir karakter kazandırmıştır. Refah devleti, II. Dünya Savaşı sonrası dönemde, özellikle Batı Avrupa ülkelerinde 1945'ten 1970'li yılların sonuna kadar "otuz muhteşem yıl" ya da "çeyrek yüzyıllık altın çağ" olarak adlandırdıkları başarılı bir dönem geçirmişlerdir (Hobsbawm, 2007).

Refah devleti temel olarak bireyin yaşamının tüm yönleri ile ilgilenen, bireylere ekonomik ve sosyal imkânlara ulaşmada eşit şans tanıyan, vatandaşlarına asgari bir yaşam standardını sağlayan devleti ifade etmektedir. Refah devletinin temel belirleyicisi, ülkede yaşayan kişilerin barınma, sağlık, eğitim ve istihdam gibi en temel ihtiyaçlarının sağlanmasının devletin görevleri arasında olmasıdır. Refah devletinde toplumun sosyal ihtiyaçlarının sağlanması için kamu kaynakları etkin bir şekilde kullanılır. Bazı durumlarda devlet söz konusu sosyal hizmetleri kendi kurduğu kurumlar ile doğrudan kendisi sunmaktadır (Seyidoğlu, 1999).

Dolgoff ve Feldstein (2007); ister sosyal ister mali ister mesleki olsun tüm insanların bu sistemlerden farklı, fakat fonksiyonel olarak benzer şekilde yararlandıklarını ve bu refah devleti uygulamalarından faydalandıklarını ifade etmiştir (Eser vd, 2011).

## 3  Refah Devletinin Özellikleri

Refah devleti birçok amaca hizmet eden bir yapıyı ifade etmektedir. Refah devletinin amaçları; fakirliği önlemek, gelir dağılımında adaleti ve eşitliği sağlamak, ekonomik etkinliği sağlamak, ekonomik büyüme ve kalkınmayı sağlamak, sosyal denge ve uyumu sağlamak, tam istihdam ve fiyat istikrarının geçekleşmesi olarak sıralanabilir. Bu sayılan amaçları gerçekleştirmek için refah devletinin sahip olduğu araçlar; regülasyonlar ve fiyat kontrolleri, doğrudan kamusal üretim, kamu harcamaları, kamu gelirleri, para ve kredi politikası, sosyal politika araçları olarak sıralamak mümkündür.

Refah devleti, bireyi toplumun merkezine koymaktadır. Devletin amacı, bireye hizmet ederek maddi ve manevi açıdan bireyin gelişimini sağlayacak imkânları sunmaktır. Devlet sahip olduğu yetkileri, siyasi ya da ekonomik iktidarını değil, bireyi ve böylece toplumu daha güçlü hale getirmek için kullanır (Aktan ve Özkıvrak, 2009).

Refah devleti, vatandaşların belirli bir yaşam seviyesinin altına düşmeden hayatlarını devam ettirebilmeleri, pozitif haklar ve negatif ya da seçim haklarından tam anlamıyla yararlanabilmeleri için bireylerin sosyal ve ekonomik haklarla desteklenmesi temeli üzerine kurulmuştur.

Refah devletinin ilkelerini ise şu şekilde belirtebiliriz (Galbraith, 2004, Duman, 1997):

- Refah devleti gözetim ve denetimi altında kapitalist düzenin işleyişini sağlamaya çalışmaktadır.
- Bireyci siyasal demokrasinin kurumlarını korurken sosyal ve ekonomik hayata müdahale ve denetim için yeni görevler yüklenir.
- Kişiyi sosyal ve ekonomik baskılardan kurtararak özgürleştirmeye çalışır.
- Devlet, ekonomik ve sosyal hayatı tek başına yönetmez. Sosyal ve ekonomik hayatta demokratik düzeni, toplum ile birlikte kurar.
- Sosyal refah devleti; eğitim, sağlık, konut, geçinme vb gibi temel ihtiyaçları karşılamakta ve sosyal, ekonomik ve kültürel haklarla bireyleri özgürleştirmekte ve asgari yaşam koşulları oluşturmaktadır.
- Toplumdaki sınıf farklılığını göz önünde tutarak fakir ve muhtaçlara öncelik vererek toplumsal refahı arttırmayı ve sağlamayı bir borç bilir.
- Piyasa ekonomisinde kuracağı denetim sistemi ile tıpkı bir hakem devlet gibi tekellerin, tröstlerin ve kartellerin oluşmasını engelleyerek sağlıklı bir rekabet oluşmasını sağlar.
- Sosyal güvenliği sağlar.
- Adil gelir dağılımını sağlamak için uygun maliye politikaları ve özellikle vergi politikasını uyumlaştırmaya çalışmaktadır.
- Demokrasiyi gerçekleştirerek halkın yönetimde söz sahibi olmasını sağlar.
- Bireylerin sadece yasa önünde eşitliğini kabul etmekle kalmaz şans ve olanak eşitliğini de sağlamaya çalışır. Bu anlamda sosyal ekonomik faktörlerin yarattığı eşitsizlikleri düzeltmeye çalışır

## 4  Geçiş Ekonomileri Kavramı

Geçiş ekonomisi terimi yıllardır uygulanan merkezi planlı sisteminin terk edilerek, piyasa ekonomisi sistemini kurmaya çalışan eski sosyalist ülkelerini ifade etmek için kullanılmaktadır. Piyasa ekonomisi yönüne doğru yaşanan süreç genel olarak geçiş süreci olarak adlandırılmaktadır. Bu geçiş süreci doğal olarak çok yönlü olmakla birlikte ekonomik dönüşüm açısından "Merkezi Planlama Ekonomisi"nden "Piyasa Ekonomisi"ne geçiştir.

Geçiş ekonomileri kavramı, özellikle Sovyetler Birliği'nin dağılmasından sonra hem iktisat hem de kamu yönetimi literatüründe yaygın olarak kullanılan bir kavram haline gelmiştir. Bunun en önemli nedeni Sovyetler Birliği'nin yıkılmasıyla kurulan, yaklaşık 25 ülkenin serbest piyasa ekonomisine geçiş çabasını idari ve iktisadi tercih olarak benimsemiş olmalarıdır. Bu ülkelerin, ekonomilerini serbest piyasa ekonomisine dönüştürme çabalarından dolayı geçiş ekonomileri olarak adlandırılmıştır (Turan, 2007).

Geçiş ekonomilerini özetle üç gurupta sınıflandırmak mümkündür. Birinci Gurupta Merkezi Doğu Avrupa ülkeleri (Baltık ülkeleri dahil) yer almaktadır. Bu ülkelerin diğer ülkelere göre reformları daha radikal biçimde uyguladıklarını ve daha başarılı olduklarını söyleyebiliriz. Avrupa Birliği'ne üye olan bu ülke gurubun da özellikle 1990'lı yılların ortalarından itibaren ekonomik, sosyal ve kültürel alanda önemli gelişmeler görülmektedir. İkinci Grupta Bağımsız Devletler Topluluğu ile eski Sovyetler Birliği Cumhuriyetleri'nin oluşturdukları devletler yer almaktadır. Aynı değişim sürecinden geçseler de ülkeler arasında farklılıklar bulunmaktadır. Örneğin; Beyaz Rusya, Özbekistan ve Türkmenistan diğer ülkelere göre daha az radikal reform sürecini uygulamışlardır. Geçiş sürecini daha zor bir dönem olarak yaşamışlardır. Üçüncü Grupta Çin ve Vietnam yer almaktadır. Çin'de reformlar 1978 yılında başlamıştır. Reformun ilk yıllarında sosyo-ekonomik gelişmeler

düşük düzeyde olmasına rağmen son zamanlarda büyük hızla büyümektedir. Günümüzde planlı ekonomi sistemini uygulayan iki ülke bulunmaktadır. Bunlarda Küba ve Kuzey Kore Cumhuriyetleridir (Altay, 2002).

Kapalı bir ekonomik sistemden yeni çıkan geçiş ülkelerinde, planlı sistemin yapısından kaynaklanan sorunlar nedeniyle, ekonomik etkinlik için piyasa ekonomisi uygulaması karşısında başarısız olmaları doğal karşılanabilir. Bu ekonomiler 1990'lı yıllardan bu yana devletin ekonomik sistemini değiştirmek amacı ile bir çok reform uygulamaya çalışmışlardır. Ancak eski sistemin genel özellikleri, uygulanan reformların başarısı üzerinde olumsuz etkilerde bulunmaktadır (Peter, 2012).

Havrylyshyn ve Wolf; geçiş sürecinin özelliklerini şöyle sıralamaktadır (Havrylyshyn ve Wolf, 1999):

- Ekonomiyi daha aktif hale getirmek, fiyatları ve piyasayı serbestleştirmek ve buna orantılı olarak kaynakların yeniden tahsisi yapılması,
- Makroekonomik istikrar için, piyasa merkezli ve dolaylı araçların geliştirilmesi,
- Ekonomi de verimlilik artışı için belli bir zaman sıkı bütçe politikası uygulanması,
- Mülkiyet hakları, yasal hükümleri ve şeffaf pazar giriş düzenlenmelerini korumak için kurumsal ve yasal çerçeve oluşturulmasıdır.

## 5 Refah Devleti ve Geçiş Ülkelerindeki Sağlık Harcamaları

Toplumların, ekonomik ve sosyal açıdan gelişmeleri ülkelerin sağlık sistemlerine bağlıdır. Sağlık hizmetlerinin tüm topluma yaygınlaştırılması ve bireyler tarafından kolayca ulaşılabilmesi; verimli bir sağlık hizmeti ile mümkündür. Dünya Sağlık Örgütü (WHO), "sağlık yalnız hastalık veya sakatlığın olmayışı değil, aynı zamanda bedensel, ruhsal ve toplumsal yönden de tam bir sıhhat durumu" olarak tanımlanmıştır (Koç, 2007).

Sağlık hizmetleri bireyin ve toplumun sağlığını korumak; bedenen, ruhen ve sosyal yönden ortaya çıkacak olan hastalıkları tedavi edip insanları mutlu kılmak için yapılan tüm faaliyetleri kapsamaktadır. Bu faaliyetler, ana-çocuk sağlığı, aile planlaması, çevre sağlığı, tıp eğitimi, ilaç, medikal araç ve gereç üretimi gibi, sağlıklı kişilerin sağlığını koruyan, hastaları iyileştiren ve kişilerin yaşam kalitelerini sağlık yönünden yükseltilmesi niteliğindeki hizmetleri kapsamaktadır.

Yakın geçmiş zamana kadar sağlık hizmetleri, piyasa ekonomisinin ve hayır kurumlarının faaliyet alanı içindeydi. Ancak Sosyal Devlet anlayışının kabulü ile birlikte sağlık hizmetleri de kamu sektörünün öncelikli faaliyet konularından biri haline gelmiştir. Sağlık hizmetleri kamu sektörü/devlet tarafından, toplumsal faydayı gerçekleştiren bir kamusal hizmet olarak düşünülmüş ve toplumda yaşayan bireylerin sağlıklı bir hayat sürmeleri için yapılması zorunlu bir faaliyet olarak değerlendirilmiştir. Bunun nedeni olarak da toplum içerisinde yaşayan ve farklı gelir gruplarına ait bireylerin özelliklede ödeme gücü düşük olan bireylerin bu hizmetten faydalanamıyor olması kabul edilmiştir.

***Tablo 1:*** *Geçiş Ekonomilerinde Kişi Başına Düşen Sağlık Harcaması (ABD Dolar)* ***Kaynak:*** *World Bank.*

Sağlık harcamalarına ilişkin refah devletleri ve geçiş ekonomisi ülkelerinin bir mukayesesini yaptığımız zaman elde edilen sonuçlar oldukça şaşırtıcıdır. Özellikle geçiş ekonomisi ülkelerinden olmasına rağmen AB'ye üye

olmuş ya da potansiyel üye konumundaki ülkeler ile Rusya Federasyonu'ndan ayrılarak bağımsızlığını kazanmış ve geçiş sürecini yaşayan ülkeler arasında dahi sağlık harcamaları bakımından belirgin farklılıkların olduğu gözlenmiştir.

Tablo 1'den de anlaşılacağı üzere, kişi başına en düşük sağlık harcaması düşen ülkelerin başında Arnavutluk gelmektedir. Arnavutluk'u, Tacikistan, Özbekistan, Kırgızistan takip etmektedir. Görülmektedir ki; bu ülkelerde kişi başına düşen sağlık harcamaları 100$'dan daha az bir miktara denk gelmektedir.

***Tablo 2:** Gelişmiş Ülke Ekonomilerinde Kişi Başına Düşen Sağlık Harcaması (ABD Dolar) **Kaynak:** World Bank, Data: Health.*

Gelişmiş ülke ekonomilerin de kişi başına düşen sağlık harcamalarının dağılımını gösteren yukarıdaki tabloya göre; en düşük harcama İspanya ve Portekiz'de görülmektedir. Adı geçen ülkelerdeki toplam kişi başı düşen sağlık harcamalarının ortalaması 2,500 $'dır. Tablo 2'de gösterilen ve refah devleti kapsamında değerlendirilebilecek olan ülkeler arasında sağlık harcamaları bakımından en dikkat çekici ülkeler hiç kuşkusuz ki Norveç, Lüksemburg, İsviçre ve ABD'dir. ABD dışındaki bu ülkelerde bu kadar yüksek oranda kişi başı harcamanın ortaya çıkmasında bu ülkelerdeki nüfusun düşük olduğunu da unutmamak gerekir. Nüfus yoğunluğu yüksek olmasına rağmen ABD, Büyük Britanya, Almanya, Fransa, Kanada ve Hollanda gibi ülkelerdeki toplam kişi başı düşen sağlık harcamalarının ortalaması 5,500 $ civarındadır.

***Tablo 4:*** *Refah Devletlerinde Toplam Sağlık Harcamaları İçinde Kamu Kesiminin Payı (%)* ***Kaynak:*** *World Bank, Data: Health.*

Toplumun ekonomik gelişmişliği ile beşeri sermayenin unsurlarından biri olan sağlık hizmetleri arasında yakından bir ilişki bulunmaktadır. Sachs'a göre; sağlığın ekonomik büyüme ve kalkınma sürecine dair en önemli ekonomik etkisi beşeri sermaye ve girişim sermayesi üzerinde görülmektedir. Sağlığın kendisi daha öne uygulanan ekonomi politikalarından etkilenmekte ve aynı zamanda toplumun beşeri sermaye ve teknoloji düzeyini etkilemektedir. Bunun sonucunda da kişi başına düşen gelirin artmasına ve yoksulluğun azalmasına neden olabilmektedir (Sachs, 2001).

Günümüzde, hem gelişmiş hem de gelişmekte olan ülkelerde, sağlık alanındaki iyileşmelerin ekonomik verimliliği ve büyümeyi önemli ölçüde etkilediğinin anlaşılması (Çetin ve Ecevit, 2010) üzerine, kamu kesiminin sağlık harcamaları da önemli bir role sahip olmuştur.

Tablo 3'den görüleceği gibi geçiş ülkelerinde kamu kesiminin sağlık harcamaları konusunda bir ağırlığı bulunmaktadır. Ancak refah devletleri ile karşılaştırdığımızda bu durumun yetersiz kaldığını söylememiz gerekmektedir. Geçiş ülkeleri olmasına rağmen Hırvatistan ve Çek Cumhuriyeti'nde kamu kesiminin refah devletleri ortalamasını yakaladığını, AB'ye üyelik sürecinde olan veya üye olmuş geçiş ülkelerinde ise bu başarının yakalanamadığını görmekteyiz.

*Tablo 6: Gelişmiş Ülkelerde Sağlık Harcamalarının GSYİH İçindeki Payı (%) **Kaynak:** World Bank.*

Sağlık harcamaları, çalışma gücünü koruyarak ve gelecekte oluşabilecek sağlık sorunlarını azaltarak veya ortadan kaldırarak, bireylerin gelecekte ortaya çıkabilecek olası sağlık harcamalarından tasarruf sağlamaktadır. Bu şekilde sağlık hizmetlerine yönelik yapılacak olan sağlık yatırımları, beşeri sermayeyi artırarak ülke kalkınmasında önemli bir rol üstlenmektedir (Yumuşak, Yıldırım, 2009).

Ekonomik gelişmişlik düzeylerine bağlı olarak ülkelerin, sağlık için ayrılan kaynaklarını arttırması sonucunda bireylerin yaşam kalitesinin yükseldiği görülmekte ve bunun sonucunda da sağlık hizmetlerinin gelişimi ekonomik büyümeyi de hızlandırmaktadır.

Tablo 5'e göre; Sırbistan ve Bosna-Hersek'in diğer geçiş ülkelerinden ayrıldığı ve oldukça yüksek bir orana sahip olduğu görülmektedir. AB üyesi olan geçiş ülkeleri, AB'ye üye olan gelişmiş ülkelerinin gerisinde yer almaktadır. AB veya G-8 üyesi ülkelere ait sağlık harcamalarının GSYİH'ya oranları ortalama %10 civarındadır.

*Tablo 7: Geçiş Ülkelerinde Doğumda Yaşam Beklentisi **Kaynak:** World Bank, Data: Health.*

Toplumların sağlık durumlarının göstergesi olarak kullanılan diğer bir ölçüt ise ortalama yaşam süresidir. Ortalama yaşam süresinin az gelişmiş toplumlarda daha düşük olduğu görülmektedir. Ortalama yaşam süresi beşeri sermayeyi önemli ölçüde etkilemektedir. Çünkü ortalama yaşam süresinin uzamasıyla birlikte insanların aktif çalışma sürelerinde de bir artış ortaya çıkmaktadır. Her insanın beşeri sermaye bağlamında belli bir yatırıma sahip olduğu kabul edilirse, beşeri sermayenin sabit sermaye yatırımından yararlanma süresi artacak ve böylece yatırımın verimliliği artacaktır (Yumuşak, Yıldırım, 2009).

Gelişmiş ülkelerde ortalama yaşam süresi 80 yıl olmasına rağmen gelişmiş düzeyi daha düşük olan geçiş ekonomilerinde ortalama yaşam süresi daha düşüktür. Özellikle de Kazakistan, Türkmenistan Kırgızistan gibi Türki Cumhuriyetleri'nde durum oldukça vahimdir. Bu ülkelerde ortalama yaşam süresi 70 yılı bile bulamamaktadır.

## 6 Sonuç

Toplumların gelişmişlik düzeyleri ve ekonomik büyüme-kalkınma hedeflerini gerçekleştirebilmesi büyük olasılıkla çalışan ve üreten bir nüfusa sahip olmalarına bağlıdır. İşgücünün üretken ve verimliliği de hiç kuşkusuz toplumda sunulan sağlık hizmetleri ile yakından ilişkilidir. Gerek koruyucu sağlık hizmetlerinin ve gerekse tedavi hizmetlerinin etkinliği hastalıklardan korunma ve tedavi süreleri üzerinde etkili olması bireylerin üretkenliği ve verimliğini arttırıcı bir rol oynarken ülke ekonomilerinde gelişmesine katkı sağlamaktadır.

II. Dünya Savaşı sonrası oluşan refah devleti anlayışı ve sonrasında oluşan sosyal devlet anlayışı ile birlikte gelişmiş ülkelerde beşeri sermaye yatırımlarına önem verilmiştir. Refah devleti olarak ifade edebileceğimiz gelişmiş ülkelerde gerek kişi başına düşen sağlık harcamalarının ve gerekse sağlık harcamalarının GSYİH içindeki payının yüksekliği bu durumu desteklemektedir.

Geçiş sürecinde olan ülkeler açısından, AB üyesi olan veya potansiyel üye konumundaki ülkelerin gelişmiş ülkeler seviyesinde uzak olmakla birlikte bu ülkeleri yakalama arzusunda olduğunu söylemek kanaatimizce uygun olacaktır. Ancak hemen belirtmemiz gerekir ki, nüfus yoğunluğu düşük olan bu geçiş ülkelerinin yine nüfusu düşük olan refah devletlerinin oldukça gerisinde kaldığı gözlenmektedir.

Geçiş ülkeleri arasında durumu en kötü olan ülkeler Rusya Federasyonu'ndan ayrılarak bağımsızlığını kazanan ve Türki Cumhuriyetler olarak adlandırılan Orta Asya ülkeleridir. Bu ülkeler, eski rejimden kalma alışkanlıklarından kurtulamamış ve gerekli reform çabalarından istenilen düzeye gelememiş olmaları onlar diğer geçiş ekonomilerinden en az 20 yıl daha geride olmasını etkileyen en önemli faktör olduğu kanaatindeyiz.

# Türkiye'de Bölgesel Bebek Ölüm Hızlarının Sağlık Ekonomisi Perspektifinden Karşılaştırmalı Analizi
# Comparative Analysis of the Inter-Regional Infant Mortality Rate from the Perspective of Health Economics in Turkey

Asst. Prof. Dr. Emin Barlas (Gaziosmanpaşa University, Turkey)
Ph.D. Candidate Fatih Şantaş (Hacettepe University, Turkey)
Ph.D. Candidate Ahmet Kar (Hacettepe University, Turkey

## Abstract

Being healthy is a condition which all individuals and all countries are willing to achieve. However, health is a difficult concept to define and describe. Countries that are striving to achieve better status of health allocate an increasing part of their national income to health sector and expect to get these expenditures' worth. Health economy is an important tool that can be utilized in determining the effect of expenditures on the status of health and improving the effectiveness of expenditures. Thus, health economics is being used both in micro and macro scales. One of the important criteria showing the health status and development of countries is infant mortality rate. Turkey is among the countries which closed the gap between itself and the developed countries in terms of infant mortality rate. In this study, velocity ratio between 2006 and 2012 in Turkey had been calculated in order to compare them with those of the developed countries. In order to compare Turkey's regional infant mortality rates, territorial velocity ratios had been calculated, Turkey Health Statistics Annual data belonging to the years 2009, 2010, 2011 and 2012 had been used to carry out various statistical analyses in order to determine the factors affecting infant mortality rate. Although Turkey had improved itself in terms of infant mortality rates, there are still things to be achieved at the scale of the country and the regions.

## 1 Giriş

Sağlık anlaşılması ve ölçülmesi zor bir kavramdır. Çok uzun bir süre sağlık, hastalığın yokluğu şeklinde negatif bir şekilde tanımlanmış ve bu görüş özellikle tıp meslek mensuplarınca kabul görmüştür. Sağlığın pozitif bir şekilde tanımlanması ise sağlığın klasikleşen bedensel, ruhsal ve sosyal yönden iyi olma hali olarak Dünya Sağlık Örgütü tarafından yapılmıştır. Sağlık ve sağlık statüsünün belirleyicileri olarak çeşitli sınıflamaların yapıldığı görülmektedir. Blum, Roemer ve Lerer tarafından sağlık statüsünün belirleyicileri olarak çeşitli sınıflandırmalar yapılmıştır. Bu modellerin ortak özelliği, ülkelerin sağlık statülerini iyileştirmelerinde sağlık hizmetlerinin yanında çevre, davranış ve genetik gibi faktörleri mutlaka göz önüne almalarının gerekli olmasıdır.

Sağlığın bir ülkenin hem gelişmesinde hem de gelişmişliğinin göstergesi olması açısından önemli işlevleri bulunmaktadır. Bu nedenle hem bireylerin hem de ülkelerin bütçelerinden sağlık ve sağlık sektörü için önemli harcamalar yapılmaktadır. En öz bir şekilde ekonomi kurallarının sağlık sektörüne uygulanması olarak tanımlanan sağlık ekonomisi, sağlığa ayrılan kaynakların verimli ve etkili şekilde kullanımında önemli roller üstlenmektedir. Sağlık ekonomisi, sağlığa bakış açısının farklılığından dolayı ekonomi biliminin gecikmiş bir dalı olmuş ve ancak 1960'lı yıllardan sonra gelişmeye başlamıştır.

Ülkelerin gelişmişlik düzeyini belirlemede çeşitli araçlardan yararlanılmaktadır: Kişi başına GSMH, işsizlik oranı, yoksulluk göstergeleri, okuryazarlık oranı bunlardan bazılarıdır. Son yıllarda ülkelerin gelişmişliklerini gösteren önemli göstergelerden birisi de bebek ölüm hızıdır. Bebek ölüm hızı önem verilen ve tüm ülkelerde düşürülmeye çalışılan bir göstergedir. Bu nedenle 2000 yılında düzenlenen Birleşmiş Milletler Binyıl Zirvesi'nde bebek ve çocuk ölümlerinin azaltılması Binyıl Kalkınma Hedefleri arasında yer almıştır. Ülkelerin genel sağlık sistemleri, ekonomik yapıları, eğitimleri gibi birçok faktöre ilişkin çıkarım bebek ölüm hızlarına bakılarak yapılabilir. Dünya geneli incelendiğinde önemli düşüşler sağlansa da halen ortalama binde 35 gibi yüksek bir bebek ölüm hızı olduğu görülmektedir. Bebek ölüm hızının hem dünyanın gelişmiş ülkelerine hem de ülkelerin kendi içlerindeki gelişmiş bölge ve şehirlerine gidildikçe anlamlı şekilde azalması bebek ölümünün birçok faktörün sonucunda ortaya çıktığı gerçeğini göstermektedir.

Türkiye 2013 yılı itibariyle 1,99 kadın başına toplam doğurganlık hızına, erkeklerde 74,7, kadınlarda 79,2 ortalama yaşam beklentisine, binde 11,2 nüfus artış hızına, 76 milyon nüfusa sahip; 2012 yılı itibariyle GSYH'sının % 5,4'ünü sağlık sektörüne ayırmış, kişi başı 566 $, toplamda 76 milyon TL sağlık harcaması yapmış, 0,40'lık Gini katsayısı ve 10 bin doların üzerinde kişi başı geliri olan bir ülkedir (TÜİK, 2012). Türkiye 2000'li yılların başından itibaren hem ekonomik gelişimini hızla tamamlamaya çalışan hem de 2003 yılında uygulamaya konulan Sağlıkta Dönüşüm Programı'nın ardından sağlık statüsünde yüksek iyileştirmeler sağlayan ve sağlamaya devam eden bir ülkedir. Türkiye'nin yüksek iyileştirme sağladığı alanlardan birisi de ana-çocuk sağlığı ve daha özelde bebek ölüm hızıdır.

Bu çalışmada, son altı yılda binde 22'lerden binde 7'ye kadar bebek ölüm hızını düşürmeyi başaran Türkiye'nin bebek ölüm hızı gelişmiş ülkelerle karşılaştırılmış, bebek ölüm hızında bölgeler arası eşitlikte mevcut durum ortaya koyulmuş, Türkiye'deki bebek ölüm hızını etkileyen değişkenler ve bu değişkenlerin etkisi incelenmiştir. Çalışma, Türkiye'nin bebek ölüm hızını daha da aşağılara indirmesi ve bölgeleri açısından var olan farklılığı gidermesi açısından çeşitli önerilerin yer aldığı tartışma bölümüyle tamamlanmıştır.

## 2 Sağlık ve Sağlık Ekonomisi

Sağlık, kişilerin çalışma durumları, arkadaş ve aileleri ile eğlenme, oyun oynama gibi yaşamlarının her alanını etkiler (Le Grand, 1982). Ancak bu kadar önemli bir kavram olmasına rağmen sağlığın herkesin üzerinde uzlaştığı bir tanımı yoktur. Ulaşılması zor olmasına ve üzerinde çok çeşitli tartışmalar yapılmasına rağmen sağlık kavramının tanımı en geniş bir şekilde 1948 yılında Dünya Sağlık Örgütü (DSÖ) tarafından yapılmıştır. DSÖ sağlığı, *"sadece hastalık ya da sakatlığın olmayışı değil fiziksel, ruhsal ve bedensel yönden tam bir iyilik halidir"* şeklinde tanımlamıştır.

Sağlığı etkileyen faktörlerle ilgili olarak çeşitli sınıflandırmalar mevcuttur. Henrick L. Blum oluşturduğu sağlık modelinde sağlığı etkileyen dört temel faktörü belirlemiştir: Çevre, davranış, kalıtım ve sağlık hizmetleri. Bir diğer sınıflamada sağlığın sosyal belirleyicileri ortaya konarak sağlık ve sağlık statüsünün hangi faktörlerden etkilendiği tespit edilmiştir. Bu doğrultuda sağlığın sosyal belirleyicileri şunlardır: Sosyal yapı, stres, erken yaşam, sosyal dışlanma, çalışma koşulları, işsizlik, sosyal destek, alışkanlık, gıda ve ulaşım (Wilkinson ve Marmot, 2003).

Sağlık statüsü, çok geniş bir kavramdır ve yalnızca hastalığın olup olmaması ile ilgili değildir (Byrne, 2003). Sağlık statüsü kavramı, birey ya da hastanın sağlık durumunu ve düzeyini göstermede kullanılan bir kavramdır. Sağlık statüsü ölçümünde geleneksel sağlık göstergeleri olarak mortalite, morbidite, doğumda beklenen yaşam süresi gibi ölçümler kullanılmaktadır. Modern ölçüm yöntemleri olarak da çeşitli endeksler, profiller ve hastalıklara özgü ölçekler kullanılmaktadır (Çelik, 2013).

Hangi açıdan tanımlanırsa tanımlansın ya da nasıl ölçülürse ölçülsün kişilerin sağlıklarını korumanın ve sağlık statülerini iyileştirmenin bir maliyeti bulunmaktadır ve bunu yapmanın yolu da ekonomik mal niteliğinde olan sağlık mallarının kullanılmasıdır. Sağlık ekonomisi genel ekonomi kurallarının sağlık sektörüne uygulanması olarak tanımlanabilir. Diğer bir tanımla sağlık ekonomisi, sağlık sektörüne ayrılan kaynakların en ekonomik (verimli, etkili, rasyonel) şekilde kullanılarak en yüksek düzeyde sağlık hizmeti üretmek ve bunu toplumu oluşturan sosyal gruplar ve fertler arasında en iyi şekilde bölüştürmektir (Çelik, 2013; Deloitte, 2008). Sağlık ekonomisinde piyasada üretilen sağlık mal ve hizmetlerinden sağlık kuruluşundaki tıbbi hizmetin etkililiğine kadar çok geniş bir yelpazedeki konular incelenmektedir (Dewar, 2010).

Sağlık ekonomisi, eldeki kaynaklar ile elde edilmesi olası en fazla sağlık getirisinin sağlanması yönünde yapılması gereken seçimlere yol göstermeyi amaçlar. Sağlık ekonomisinin gelişimine neden olan faktörler şöyle sıralanabilir (Fuchs, 1974):

- İnsan istekleri ile karşılaştırıldığında mevcut kaynaklar kıttır. Bu gerçek tüm istek ve ihtiyaçların karşılanamayacağını göstermektedir. Ancak yine de mevcut kaynaklar her zaman doğru kullanılmamaktadır.
- Kaynaklar alternatif kullanım alanlarına sahiptir. Bu gerçek alternatif maliyet olarak bilinmektedir. Örneğin daha fazla doktorun yetiştirilmesi daha az öğretmen, bilim adamı ya da yargıcın yetiştirilmesinin kabul edilmesi anlamına gelmektedir.
- Her insan farklı istek ve ihtiyaçlara sahiptir ve her insanın kendi isteği diğerlerinin isteğine göre daha önemlidir. Sağlık en önemli amaçtır demek her zaman için doğru olmayabilmektedir. Örneğin fazla yemek ya da sigara kullanımı sağlıklı olmaya tercih edilebilmektedir.

Sağlık hizmetlerinin arz ve talep tarafında belirsizlik hâkimdir. Kişiler tam olarak ne zaman sağlık hizmetlerine ihtiyaç duyacaklarını kestirememekteler ve talep tesadüfi olarak ortaya çıkmaktadır. Aynı şekilde sağlık hizmetlerinin arz tarafında da belirsizlik mevcuttur. Çoğu sağlık hizmeti için talep esnekliği katıdır. Bu nedenle kişiler fiyatı ne olursa olsun ihtiyaç duydukları sağlık hizmetini almak zorundadırlar. Asimetrik bilgi nedeniyle sağlık hizmetleri talebinde hekimin rolü fazladır. Sağlık sektörü hem emek hem de teknoloji yoğun bir sektör olduğu için sektörde maliyetler sürekli artmaktadır. Sağlık hizmetlerinin bir bölümü toplumsallık niteliği göstermekte bu nedenle dışsallık durumunun göz önüne alınması nedeniyle bu tür hizmetler genellikle devlet tarafından karşılığında bedel alınmadan sunulmaktadır. Sağlık sektörü rekabette sınırlamaların yoğun olduğu bir sektördür. Bir sağlık kurumunun açılması için bir takım koşulların yerine getirilmesi, sağlık sektöründe reklamın yasaklanmış olması rekabette sınırlamayı göstermektedir (Mooney, 1992; Alkan, vd, 2011).

Sağlık sektörüne ayrılan kaynakların kıt olması, sağlık sektöründe de üretim ve dağıtımın olması, sağlık sektöründe de rasyonel hareket edilmesi gereği ve fiyatın sağlık hizmetleri kullanım düzeyini etkilemesi nedeniyle sağlık sektörü için ekonomi kuralları geçerlidir (Çelik, 2013). Etkili ve verimli sağlık hizmeti sunumu

gerçekleştirebilmek, sağlık sektörü için harcanan her bir kuruşun karşılığını alabilmek için sağlık sektöründe hem makro hem de mikro aşamalarda ekonomi biliminden yararlanılmalıdır.

## 3 Sağlık Ekonomisi ile Yakından İlişkili Kavramlar

### 3.1 Eşitlik (Equality)

Genellikle eşitlik denildiği zaman, matematiksel olarak eşitlik kast edilmektedir. Sağlıkta eşitlik, kişilerin aynı uzunlukta yaşam süresine ve yaşam sürelerinde aynı sağlık statülerine sahip olma durumudur (Gaikodi, vd, 2000). Sağlık hizmetlerinde eşitlik diğer bir şekilde şöyle tanımlanmaktadır: Eşit ihtiyaçlar için mevcut sağlık hizmetlerine eşit ulaşım, eşit ihtiyaçlar için eşit kullanım, herkes için eşit kalitede hizmettir. Sağlık hizmetlerinde eşitliğin önemli olmasının iki önemli nedeni vardır: Birincisi, dezavantajlı grupların daha az yaşama olasılıklarının olması, ikincisi ise, dezavantajlı grupların hastalıkları daha ağır bir biçimde yaşamalarıdır (Whitehead, 2000). Sağlıkta eşitsizlik ise, sosyal açıdan dezavantajlı olan grupların kaçınılabilir sağlık farklılıklarının olmasıdır (Braveman, 2003).

### 3.2 Hakkaniyet (Equity)

Etik bir çerçevede değerlendirilen ve sosyal adalet anlamına gelen hakkaniyet kavramı dağıtım adaleti prensiplerine dayanmaktadır. Sağlıkta hakkaniyet, sağlıkta haksız farklılıkların olmaması anlamına gelmektedir (Braveman ve Gruskin, 2003). Bir diğer tanımla sağlıkta hakkaniyet, ideal olarak herkesin tam sağlık potansiyeline ulaşması ve hiç kimsenin sosyal konumu ya da diğer sosyal faktörler nedeniyle tam sağlık potansiyeline ulaşmada dezavantajlı olmamasıdır (Whitehead ve Dahlgren, 2007). "*Sağlıkta adaletsizlik ise, doğal değil, toplumsal nedenlerden kaynaklanan; doğal nedenlerin ise ancak toplumsal nedenler dolayısıyla etki gösterdikleri; önlenebilir, önlenebilir oldukları için kabul edilemez nitelikte olan; bireysellikten ziyade toplumsal bir bağlam içinde saptanması, ele alınması, savaşılması gereken; bu nedenle de tüm bu süreçte ekonomi, sosyoloji, politika gibi sağlık dışı disiplinlerin de etkinliğinin gerektiği; yalnızca, sosyal, politik ve ekonomik değil, aynı zamanda ahlaki bir sorun olarak kavranması gereken; toplumsal gruplar arasındaki sağlıkla ilgili farklılıklardır*" (Belek, 1998). Sağlıktaki eşitsizliklerin üç özelliğe sahip olmaları durumunda, sağlıkta hakkaniyetsizlikten bahsedilebilir: Eşitsizliklerin sistematik olması, sosyal olarak üretilmiş ve haksız olmasıdır (Whitehead ve Dahlgren, 2007).

Sağlıkta hakkaniyet denildiğinde yatay ve dikey hakkaniyet söz konusu olmaktadır. Sağlık maliyetlerinin ve sağlıktan elde edilecek faydanın benzer sosyo-ekonomik gruplar ya da sağlık yapısına sahip olan birey/hane halkları arasında dağıtılması yatay hakkaniyet, fayda ve maliyetin farklı sosyo-ekonomik gruplar veya sağlık durumuna sahip olanlar arasında dağıtılması dikey hakkaniyettir. Erişim, finansman, harcama ve sağlık göstergelerinde hakkaniyet sağlanması durumunda, sağlıkta hakkaniyet hedefine ulaşılabilir. Sağlık hizmetlerine erişim, sağlık hizmetlerinde finansman ve harcamada hem yatay hem de dikey adaletin sağlanması sağlıkta adalet için gerekli iken, sağlık göstergelerinin tüm toplum için benzer hale getirilmesi sağlıkta adaletin varlığının göstergesi olmaktadır (Lundberg ve Wang, 2006).

### 3.3 Erişim (Access)

Erişim, sağlık sisteminin önemli bir sorunudur. Sağlık hizmetlerinin erişilebilir olmaması özellikle kırsal kesimde düşük sağlık statüsüne ve sağlık hizmetinden memnuniyetsizliğe neden olmaktadır. Sağlık hizmetlerine erişim, fiziksel erişim ve efektif erişim olmak üzere ikiye ayrılmaktadır: Fiziksel erişim, hasta yatağı, doktor ve hemşire gibi unsurların ulaşılabilirliği ile ilgilidir. Efektif erişim ise, fiziksel imkânlara, ihtiyacı olan kişilerin ne kadar kolay ulaşabildiği ile ilgilidir. Sağlık hizmetinin erişilebilir olması için fiziksel olarak mevcut olmasının yanında efektif olarak da ulaşılabilir olması gerekir. Maliyet, yeterli kalitede olmayan hizmet, ulaşım için geçen süre gibi bazı unsurlar efektif erişimi engelleyebilmektedir (Roberts, vd, 2004). Sağlık hizmetlerine erişim bir vatandaşlık hakkıdır ve eşit istihdam ve eğitim hakları için de temel oluşturmaktadır. Çoğu durumda düşük gelirli insanlar, sakatlar ve bazı azınlık gruplar sağlık hizmetine erişememektedir. Sağlık hizmetlerinin erişilebilir olmaması sağlık eşitsizliklerine neden olmaktadır. Özellikle sağlık hizmetlerine fiziksel erişimin olmaması, kişilere sağlık hizmetleri de dâhil olmak üzere diğer ihtiyaçları için harcayacakları gelirlerinin sağlık hizmetlerine ulaşım (yol parası vb.) için harcamalarına yol açmaktadır (Civil Rights, 2011).

Sağlık hizmetinin erişilebilir olduğunu söyleyebilmek için üç özelliği bünyesinde barındırması gerekir: Sağlık hizmetinin mevcut, uygun ve elde edilebilir (finansal açıdan) olmasıdır (NPCC, 2004).

### 3.4 Yoksunluk (Deprivation)

Yoksunluk, birey, hane ya da grupların genel toplum veya ülke seviyesine göre gözlenebilir ve kanıtlanabilir dezavantajlı durumda olmalarıdır (Townsend, vd. 1988). Diğer bir tanımla yoksunluk, birey ve ailelerin maddi ve sosyal koşullarının genel topluma göre yetersiz olması durumudur. Yoksunluk, maddi ve sosyal yoksunluk olmak üzere ikiye ayrılmaktadır. Maddi yoksunluk, yetersiz gıda, giyim, barınma, sanitasyon, su, hane malvarlıkları, yetersiz fiziksel ve ruhsal sağlık, hava ve gürültü kirliliğinin yoğun olduğu, yetersiz dinlenme ve alış-veriş olanaklarının kısıtlı olduğu bir çevrede yaşama, kötü çalışma koşulları gibi faktörleri içerirken; sosyal yoksunluk ise, yetersiz eğitim, istihdam olanakları ve hakları, ayrı ebeveynler, yetersiz eğlenme olanakları,

cinsiyet ve ırksal ayrımcılık nedeniyle toplumla bütünleşememe ve sosyal kurumlara katılım şartlarının yetersizliği gibi faktörleri içermektedir (McIntyre, 2000; Seals, 2010).

Yoksunluğu ölçmeye yönelik olarak çeşitli endeksler geliştirilmiştir. Yoksunluk endekslerinden, yoksunluk ile düşük sağlık statüsü arasındaki ilişkinin araştırılması ve sağlık programları ve hizmetleri için yapılacak kaynak tahsisinin belirlenmesinde yararlanılmaktadır (McIntyre, 2000).

- Yoksunluğu ölçmede yararlanılan endekslerden bazıları şunlardır (Testi, vd, 2004):
- Jarman Az Gelişmiş Bölge Skoru
- Townsend Yoksunluk Endeksi
- Carstairs Yoksunluk Endeksi
- MATDEP ve SOCDEP
- Çoklu Yoksunluk Endeksi
- İtalyan Önerisi

## 4 Bebek Ölüm Hızı

Bir toplumun gelişmişliğini ve kalkınmışlığını gösteren en önemli göstergelerden birisi bebek ölüm hızıdır (Özbaş, vd, 2012). Bu nedenle 2000 yılında düzenlenen Birleşmiş Milletler Binyıl Zirvesi'nde, beş yaşından önceki çocuk ölümlerinin 1990 ile 2015 yılları arasında üçte iki oranında azaltılması Binyıl Kalkınma Hedefleri arasında yer almıştır (Eryurt ve Koç, 2009). Günümüzde ülkeler, kendilerinin GSMH sıralamasında kaçıncı sırada olduklarından ziyade dünya ülkeleri içinde bebek ölümleri açısından nerede olduklarına daha fazla önem vermektedirler. Bebek ölümleri kamu sağlığının önemli bir göstergesidir. Yüksek bir oran yetersiz düzeyde koruyucu sağlık hizmeti, düşük eğitim düzeyi, dengesiz gelir dağılımı, çevre kirliliği, gürültü gibi elverişsiz sosyo-ekonomik göstergelerin varlığına işaret eder (Çelik, 2013).

Bebek ölüm hızı ülkeler arası karşılaştırmalar yapmada ve bir ülkenin sağlık hizmetleri, ana-çocuk sağlığı hizmetleri gibi konularda önemli fikirler vermektedir. Bebek ölüm hızı bir yıl içinde bir yaşına girmeden ölen bebeklerin o yılda canlı doğan bebek sayısına bölünmesiyle bulunmaktadır. Bebek ölüm hızı bölgelere göre ya da tüm ülke için ayrı ayrı hesaplanabilmekte ve canlı doğan her 1000 bebekten kaçının bir yaşını doldurmadan öldüğünü göstermektedir. Bebek ölümlerinin nedenlerinin daha ayrıntılı bir şekilde öğrenilmesi için neonatal ve postneonatal bebek ölüm hızları hesaplanmaktadır. Neonatal bebek ölüm hızı 0-28 günlük iken ölen bebeklerin o yıldaki canlı doğum sayısına bölünmesiyle bulunur. Neonatal bebek ölümlerinin nedeni doğum öncesi (antenatal) etmenlerdir. Postneonatal bebek ölümleri bir yıl içinde 29-365 günlük iken ölen bebeklerin o yıldaki canlı doğum sayısına bölünmesiyle bulunur. Postneonatal bebek ölümleri bağışıklama, beslenme, anne eğitimi gibi çeşitli etmenler yardımıyla önlenebilmektedir (Tezcan, 1992; Çelik, 2013; Çelik, vd, 2012; Kim ve Saada, 2013).

### 4.1 Dünyada Bebek Ölümü

Binyıl Kalkınma Hedeflerinde belirlenen bebek ve beş yaş altı çocuk ölümlerinin azaltılması hedefine paralel olarak dünyada bu oranlarda önemli gelişmeler kaydedilmiştir. Örneğin 1990 yılında binde 90 olan beş yaş altı ölüm hızı 2012 yılında binde 48'e indirilmiştir. Ancak bu oran halen yüksektir ve bölgesel ve ülkesel eşitsizlikler bulunmaktadır. Bu nedenle bebek ölüm hızına ilişkin çalışmalara devam edilmelidir (Child Mortality Report, 2013).

Tablo 1 ve Tablo 2'de çeşitli sınıflandırmalara göre bebek ölümüne ilişkin rakamlar verilmiştir.

| Bölge | Bebek Ölüm Hızı (%o) | | Bebek Ölüm Sayısı (000) | |
|-------|------|------|------|------|
| | 1990 | 2012 | 1990 | 2012 |
| Afrika | 105 | 63 | 2,182 | 2,036 |
| Amerika | 34 | 13 | 535 | 201 |
| Doğu Akdeniz | 76 | 44 | 1,056 | 692 |
| Avrupa | 26 | 10 | 339 | 117 |
| Güney-Doğu Asya | 83 | 39 | 3,182 | 1,403 |
| Batı Pasifik | 40 | 14 | 1,554 | 350 |
| Dünya | 63 | 35 | 8,851 | 4,801 |

*Tablo 1. Dünyada Çeşitli Bölgelere İlişkin Bebek Ölüm Rakamları* **Kaynak:** *Child Mortality Report 2013.*

Tablo 1 incelendiğinde bebek ölümüne ilişkin rakamlar tüm bölgelerde hem oransal hem de mutlak anlamda azalmıştır. Dünya genelinde 22 yılda yaklaşık binde 30'luk bir iyileşme sağlanmıştır. Ancak başta Afrika bölgesi olmak üzere bölgelerde bebek ölüm rakamları halen yüksektir. Tablodan bebek ölümünün gelişmiş bölgelere doğru gidildikçe azaldığı görülmektedir.

Tablo 2'de gelir düzeylerine göre dünyada bebek ölümünün yaşadığı seyir görülmektedir. 1990'dan 2012 yılına kadarki dönemde tüm gelir grubundaki ülkelerde bebek ölümünde önemli düşüşler kaydedilmiştir. Ancak bebek ölümü halen hem yüksek düzeyde gerçekleşmekte hem de tablodan görüldüğü gibi gelir düzeyleri arasında önemli farklılıklar bulunmaktadır. Bebek ölümünün düşük ve orta gelirli ülkelerde yüksek gelirli

ülkelere göre binde 35 daha fazla olması bebek ölümünün azaltılmasında gelişmenin ve ekonomik zenginliğin önemini ortaya koymaktadır.

| Bölge | Bebek Ölüm Hızı (‰) | | Bebek Ölüm Sayısı (000) | |
|---|---|---|---|---|
| | 1990 | 2012 | 1990 | 2012 |
| Düşük Gelirli | 104 | 56 | 2,045 | 1,486 |
| Orta Gelirli | 62 | 34 | 6,625 | 3,237 |
| *Düşük Orta Gelirli* | 82 | 46 | 4,440 | 2,631 |
| *Yüksek Orta Gelirli* | 42 | 16 | 2,185 | 606 |
| Düşük ve Orta Gelirli | 69 | 39 | 8,669 | 4,723 |
| Yüksek Gelirli | 12 | 5 | 182 | 78 |
| Dünya | 63 | 35 | 8,851 | 4,801 |

**Tablo 2.** *Gelir Durumlarına Göre Dünyada Bebek Ölümünün Dağılımı* **Kaynak:** *Child Mortality Report 2013.*

### 4.2 Türkiye'de Bebek Ölümü

Türkiye özellikle 2003 yılında başlatılan Sağlıkta Dönüşüm Programı ve elde ettiği ekonomik gelişme ile birlikte bebek ölüm hızında kayda değer gelişme sağlamış ve gelişmiş ülkelerin bebek ölüm hızına yaklaşmıştır. Şekil 1'de Türkiye'nin ve Üst gelir grubu ülkelerin 2006-2012 yıllarını kapsayan bebek ölüm hızları görülmektedir. Şekil 1 incelendiğinde 2006 yılında binde 22,3 olan Türkiye geneli bebek ölüm hızı 2012 yılında binde 7,4'e düşmüştür; bu süreç içerisinde üst gelir grubu ülkelerdeki bebek ölüm hızının ise binde 6'dan binde 5'e gerilemiş olması ülkemizle üst gelir grubu ülkeler arasındaki makasın kapanmasına olanak sağlamıştır.

**Şekil 1.** *Türkiye Geneli ve Üst gelir Grubu Ülkelerin Bebek Ölüm Hızları*

## 5 Gereç ve Yöntem

### 5.1 Araştırmanın Amacı

Bu araştırmanın amacı bebek ölümünde önemli iyileşme kaydeden Türkiye'nin bebek ölüm hızında ülke içi eşitliğin olup olmamasının ortaya konulmasıdır. Ayrıca Türkiye'deki bebek ölüm hızını etkileyen değişkenleri incelemek ve Türkiye bebek ölüm hızının gelişmiş ülkelerle karşılaştırılması hedeflenmiştir. Dolayısıyla bu ilişkileri araştırmak üzere araştırmada aşağıdaki sorulara yanıt aranacaktır:

1. Türkiye'nin bebek ölümü hızlar oranındaki seyri nasıldır?

2. Türkiye'nin bölgelerindeki bebek ölümü hızlar oranındaki seyri nasıldır?

3. Türkiye'nin bölgelerindeki bebek ölümünün ilişkili olduğu faktörler nelerdir ve bebek ölümü üzerindeki en önemli faktör/faktörler nelerdir?

### 5.2 Veri Kaynakları ve Değişkenlerin Seçimi

Araştırmada kullanılan veriler T.C. Sağlık Bakanlığı tarafından her yıl yayınlanan Sağlık İstatistikleri Yıllıklarından elde edilmiştir. Sağlık İstatistikleri Yıllığı'nın yayınlanması bir yıl geriden gitmektedir. Şu an en son 2012 Sağlık İstatistik Yıllığı yayınlanmış ve 2013 yıllığının ise Ekim 2014'de yayınlanması beklenmektedir. Araştırmamızın önemli amaçlarından birisi Türkiye'de bebek ölüm hızının bölgesel olarak karşılaştırılmasıdır. Sağlık İstatistik yıllıklarında 2009 yılından itibaren İstatistiki Bölge Birimleri Sınıflaması (İBBS)'na göre hesaplanmış bebek ölüm hızı ve ilgili değişkenlere ilişkin veriler yer almaya başlamıştır. Bunun sonucu olarak araştırmada 2009-2010-2011-2012 yıllarına ilişkin Sağlık İstatistik Yıllıklarından elde edilen veriler kullanılmıştır. Bağımlı değişken olarak bebek ölüm hızı, bağımsız değişkenler olarak sağlık istatistik yıllarında

yer alan, bebek ölüm hızını etkilediği düşünülen sağlık kurumlarında gerçekleşen doğum oranları, antenatal bakım alma, bir milyon kişiye düşen ultrason cihaz sayısı, yüz bin kişiye düşen ebe ve hemşire sayısı ve birinci basamakta hekime müracaat sayısı seçilmiştir.

### 5.3 Veri Analizi

Araştırma kapsamında elde edilen verilerin analizinde 2013 Microsoft Office Excel ve SPSS 20.0 paket programından yararlanılmıştır. Türkiye'nin geneli ve bölgeleri için bebek ölümü hızlar oranının hesaplanmasında excelden yararlanılmıştır. Bölgelere ilişkin bebek ölüm hızıyla ilgili olan ve etkileyen değişkenlerin belirlenebilmesi için Korelasyon Analizi ve Regresyon Analizi yapılmıştır.

## 6  Bulgular

Türkiye geneli için hesaplanan Türkiye bebek ölümü hızlar oranı eğilimi Şekil 2'de verilmiştir. Şekilde 2006 yılından 2012 yılına kadar olan Türkiye geneli bebek ölüm hızının Dünya Sağlık Örgütünün Üst Gelir Grubu Ülkeler olarak sınıflandırdığı kesimin bebek ölüm hızına oranlanmasıyla elde edilmiş olan hızlar oranı seyri gösterilmiştir.

*Şekil 2. 2006-2012 Yılları Türkiye Bebek Ölümü Hızlar Oranı Eğilimi*

Şekil 2 incelendiğinde 2006 yılında 3,72 olan hızlar oranı sürekli bir azalış izleyerek 2012 yılında 1,48'e gerilemiştir. Bu durum ülkemizdeki bebek ölüm hızının üst gelir grubu ülkelerin bebek ölüm hızına yaklaştığını göstermesine rağmen halen daha üst gelir grubundaki ülkelerin bebek ölüm hızının yaklaşık bir buçuk katı yükseklikte bir orana sahip olduğumuzu da göstermektedir.

Tablo 3'te Türkiye'nin İİBS'ye göre ayrıldığı on iki bölge için bebek ölümü hızlar oranı hesaplanmıştır. Tablo incelendiğinde 2009 yılında Türkiye İBBS' ye göre hızlar oranı dağılımı incelendiğinde Orta Doğu Anadolu ve Güney Doğu Anadolu Bölgelerinde bebek ölümü hızının üst gelir grubu ülkelerin bebek ölüm hızının yaklaşık üç katı yükseklikte olduğu görülmektedir.

2010 yılına gelindiğinde ise Orta Doğu Anadolu Bölgesinde bir önceki yıla göre hızlar oranında iyileşme görüldüğü ancak Güney Doğu Anadolu Bölgesinin bebek ölüm hızının halen Türkiye'nin en yüksek hızlar oranına sahip olduğu görülmektedir.

2011 yılı hızlar oranı incelendiğinde Orta Doğu Anadolu bölgesinde bebek ölüm hızının üst gelir grubu ülkelerdeki bebek ölüm hızının üç katı yükseklikte olduğu görülmektedir. Batı Anadolu, Batı Karadeniz ve Ege bölgelerinde ise üst gelir grubu ülkelerin bebek ölüm hızının altında oranlar görülüyor olması ülkemizde bölgeler arasındaki bebek ölüm hızı farklılıklarını ortaya koymaktadır.

2012 yılı hızlar oranı incelendiğinde Orta Doğu Anadolu bölgesinde bebek ölüm hızının üst gelir grubu ülkelerdeki bebek ölüm hızının iki katından daha fazla yükseklikte olduğu görülmektedir. Bu bölgeyi Kuzey Doğu Anadolu bölgesi takip etmiştir. 2012 yılında 2011 yılına göre bebek ölümü bölgelerde bebek ölümünün azaldığı görülmekle birlikte Kuzey Doğu Anadolu ve Ege bölgelerindeki artış dikkat çekicidir.

Tablo 4'te bölgesel bebek ölümü hızının, sağlık kurumlarında gerçekleşen doğum oranları, antenatal bakım alma, bir milyon kişiye düşen ultrason cihaz sayısı, yüz bin kişiye düşen ebe ve hemşire sayısı, birinci basamakta hekime müracaat sayısı gibi değişkenlerle ilişkisini gösteren korelasyon analizi sonuçları görülmektedir.

| | Hızlar Oranı | | | |
|---|---|---|---|---|
| **Bölgeler** | **2009** | **2010** | **2011** | **2012** |
| Orta Anadolu | 2,17 | 2,12 | 1,54 | 1,44 |
| Doğu Karadeniz | 1,65 | 1,78 | 1,08 | 1,38 |
| Batı Anadolu | 1,93 | 1,78 | 0,88 | 1,12 |
| Kuzeydoğu Anadolu | 2,97 | 2,56 | 1,76 | 2,10 |
| İstanbul | 1,60 | 1,5 | 1,40 | 1,10 |
| Batı Karadeniz | 1,97 | 1,88 | 0,96 | 1,40 |
| Akdeniz | 2,60 | 2,1 | 1,18 | 1,38 |
| Ege | 1,62 | 1,76 | 0,98 | 1,16 |
| Ortadoğu Anadolu | 3,02 | 2,78 | 3,22 | 2,22 |
| Batı Marmara | 1,38 | 1,52 | 1,62 | 1,28 |
| Güneydoğu Anadolu | 3,02 | 2,82 | 2,88 | 2,12 |
| Doğu Marmara | 1,58 | 1,5 | 1,16 | 1,18 |

*Tablo 3. Türkiye İBBS'ye Göre Hesaplanmış Bebek Ölümü Hızlar Oranı*

| Değişkenler | 2009 | 2010 | 2011 | 2012 |
|---|---|---|---|---|
| Sağlık Kurumlarında Gerçekleşen Doğum Oranları | -0,820** | -0,775** | -0,789** | -0,897** |
| Antenatal Bakım | -0,820** | -0,938** | -0,873** | -0,928** |
| Bir Milyon Kişiye Düşen Ultrason Cihaz Sayısı | -0,486 | -0,481 | -0,298 | -0,552 |
| Yüz Bin Kişiye Düşen Ebe ve Hemşire Sayısı | - | -0,397 | -0,514 | -0,311 |
| Birinci Basamakta Hekime Müracaat Sayısı | -0,746** | -0,649* | -0,728** | -0,793** |

\*\*$p<0.01$; \*$p<0.05$

*Tablo 4. Değişkenlerin Bebek Ölüm Hızı ile Yaptıkları Korelasyon Değerleri*

Tablo 4 korelasyon analizi tablosu incelendiğinde 2009 yılında sağlık kuruluşlarında gerçekleşen doğum oranları ile bebek ölüm hızı arasında ($r= -0,820$) negatif ve yüksek; antenatal bakım ile ($r= -0,820$) negatif ve yüksek; birinci basamakta hekime müracaat sayısı ile ($r= -0,746$) negatif ve yüksek ilişki bulunmuştur. Bir milyon kişiye düşen ultrason cihaz sayısı ile bebek ölüm hızı arasındaki ilişki istatistiksel olarak anlamlı değildir ve yüz bin kişiye düşen ebe ve hemşire sayısı 2009 yılında İİBS'ye göre hesaplanmadığı için analize dahil edilmemiştir.

2010 yılında sağlık kuruluşlarında gerçekleşen doğum oranları ile bebek ölüm hızı arasında ($r= -0,775$) negatif ve yüksek; antenatal bakım ile ($r= -0,938$) negatif ve çok kuvvetli; birinci basamakta hekime müracaat sayısı ile ($r= -0,649$) negatif ve orta düzeyde ilişkiler bulunmuştur. Bir milyon kişiye düşen ultrason cihaz sayısı ve yüz bin kişiye düşen ebe ve hemşire sayısı ile bebek ölüm hızı arasındaki ilişki istatistiksel olarak anlamlı değildir.

2011 yılında sağlık kuruluşlarında gerçekleşen doğum oranları ile bebek ölüm hızı arasında ($r= -0,789$) negatif ve yüksek; antenatal bakım ile ($r= -0,873$) negatif ve yüksek; birinci basamakta hekime müracaat sayısı ile ($r= -0,728$) negatif ve yüksek ilişkiler bulunmuştur. Bir milyon kişiye düşen ultrason cihaz sayısı ve yüz bin kişiye düşen ebe ve hemşire sayısı ile bebek ölüm hızı arasındaki ilişki istatistiksel olarak anlamlı değildir.

2012 yılında sağlık kuruluşlarında gerçekleşen doğum oranları ile bebek ölüm hızı arasında ($r= -0,897$) negatif ve yüksek; antenatal bakım ile ($r= -0,928$) negatif ve çok kuvvetli; birinci basamakta hekime müracaat sayısı ile ($r= -0,793$) negatif ve yüksek ilişkiler bulunmuştur. Bir milyon kişiye düşen ultrason cihaz sayısı ve yüz bin kişiye düşen ebe ve hemşire sayısı ile bebek ölüm hızı arasındaki ilişki istatistiksel olarak anlamlı değildir.

Tablo 5'te bebek ölüm hızı ile korelasyon analizi sonucunda istatistiksel olarak anlamlı ilişki bulunan sağlık kurumlarında gerçekleşen doğum oranları, antenatal bakım ve birinci basamakta hekime müracaat sayısının bebek ölüm hızı üzerindeki etkilerini ortaya koymak amacıyla yapılan regresyon analizinin sonuçları görülmektedir.

Tablo 5 regresyon modeline ilişkin istatistiksel tahminler modellerin anlamlı ve kullanılabilir olduğunu göstermektedir (2009 yılı $F=14,787$, $p<0,05$; 2010 yılı $F=22,109$, $p<0,05$; 2011 yılı $F=12,790$, $p<0,05$; 2012 yılı $F=44,775$, $p<0,05$). Bir regresyon modelinin sağlıklı sonuçlar vermesinin şartları bağımsız değişkenlerin birbirleriyle düşük ilişkili olup, bağımlı değişkenle yüksek ilişkili olması ve artıkların ilişkili olmamasıdır. Bu sebeple dört regresyon modelinin varyans şişme değerleri (VIF) ve Durbin-Watson d istatistiği hesaplanmış ve bulunan sonuçlar regresyon modellerinin kullanılabilir olduğunu göstermiştir.

***Tablo 5.*** *Değişkenlerin Bebek Ölüm Hızı Üzerindeki Etkisinin Yordanmasına İlişkin Regresyon Analizi Sonuçları*

2009 yılı için yapılan regresyon analizi sonuçları incelendiğinde her üç değişken bebek ölüm hızındaki toplam varyansın % 76'sını açıklamaktadır. Sonuçlara bakıldığında sağlık kurumlarında gerçekleşen doğum oranları ve antenatal bakım alma oranı arttıkça bebek ölüm hızı düşmektedir. Standardize edilmiş regresyon katsayılarına (β) bakıldığında bebek ölüm hızını en iyi yordayan değişkenin sağlık kurumlarında gerçekleşen doğum oranları olduğu ifade edilebilir.

2010 yılı için yapılan regresyon analizi sonuçları incelendiğinde her üç değişken bebek ölüm hızındaki toplam varyansın % 89'unu açıklamaktadır. Sonuçlara bakıldığında antenatal bakım alma oranı arttıkça bebek ölüm hızı düşmektedir. Standardize edilmiş regresyon katsayılarına (β) bakıldığında bebek ölüm hızını en iyi yordayan değişkenin antenatal bakım almanın olduğu söylenilebilir.

2011 yılı için yapılan regresyon analizi sonuçları incelendiğinde her üç değişken bebek ölüm hızındaki toplam varyansın % 82'sını açıklamaktadır. Sonuçlara bakıldığında antenatal bakım alma oranı arttıkça bebek ölüm hızı düşmektedir. Standardize edilmiş regresyon katsayılarına (β) bakıldığında bebek ölüm hızını en iyi yordayan değişkenin antenatal bakım almanın olduğu çıkarımı yapılabilir.

2012 yılı için yapılan regresyon analizi sonuçları incelendiğinde her üç değişken bebek ölüm hızındaki toplam varyansın % 94'ünü açıklamaktadır. Sonuçlara bakıldığında sağlık kurumlarında gerçekleşen doğum oranları ve antenatal bakım alma oranı arttıkça bebek ölüm hızı düşmektedir. Standardize edilmiş regresyon katsayılarına (β) bakıldığında bebek ölüm hızını en iyi yordayan değişkenin antenatal bakım almanın olduğu ifade edilebilir.

## 7   Tartışma ve Sonuç

Bu çalışmanın temel amacı Türkiye'nin bölgesel bebek ölüm hızını etkileyen faktörleri, bu faktörlerin etkisini ve bölgesel bebek ölüm hızındaki eşitliği belirlemektir. Bu amaçla 2009-2010-2011-2012 sağlık istatistik yıllıklarından bölgesel bebek ölüm hızları ve bebek ölüm hızını etkilediği düşünülen sağlık kurumlarında gerçekleşen doğum oranları, antenatal bakım alma, bir milyon kişiye düşen ultrason cihaz sayısı, yüz bin kişiye düşen ebe ve hemşire sayısı ve birinci basamakta hekime müracaat sayısı verileri elde edilmiştir.

Araştırma kapsamında elde edilen bağımsız değişkenlerin bağımlı değişkenle olan ilişkilerinin tespit edilmesi amacıyla korelasyon ve regresyon analizleri yapılmıştır. Korelasyon analizi sonucunda bebek ölüm hızıyla sağlık kurumlarında gerçekleşen doğum oranları, antenatal bakım alma ve birinci basamakta hekime müracaat sayısı arasında istatistiksel olarak anlamlı ilişkiler bulunmuştur. Bağımsız değişkenlerin bağımlı değişken üzerindeki etkisinin belirlenmesi amacıyla regresyon analizi yapılmıştır. Araştırma sonuçlarına göre bağımlı değişkendeki varyansın 2009 yılında yüzde 76'sı, 2010 yılında yüzde 89'u, 2011 yılında yüzde 89'u ve 2012 yılında yüzde 94'ü üç bağımsız değişken tarafından açıklanmıştır. Ayrıca araştırma sonucunda ulaşılan bir diğer sonuç, Türkiye'nin bölgesel bebek ölüm hızları birbirinden farklılık göstermekte ve bebek ölüm hızları bölgelerin gelişmişliği ile pozitif korelasyon göstermektedir.

Araştırma sonuçları incelendiğinde sağlık kurumlarında gerçekleşen doğum oranı, antenatal bakım alma ve birinci basamakta hekime müracaat sayısı arttıkça bebek ölüm hızı azalmaktadır. Bu nedenle bebek ölüm hızını gelişmiş ülkelerin seviyesine yakınlaştıran Türkiye'nin bebek ölüm hızını daha da düşürmesi için yapması gereken bu hizmetlere olan erişimi daha da artırmaktır. Ancak erişimin artırılması geniş kapsamlı çalışmaları gerektirmektedir. Çünkü sağlık kurumlarında gerçekleşen doğum oranı, antenatal bakım alma ve birinci basamakta hekime müracaat sayısının eğitim düzeyi, gelir ve gelir dağılımı, sigorta kapsamında olma gibi faktörlerle ilişkisi bulunmaktadır. Bu nedenle bebek ölümünün azaltılması için sağlık hizmetlerinin yanında genel eğitim düzeyinin ve anne eğitim ve bilincinin artırılması, ülkedeki gelir dağılımının daha adil bir hale getirilmesi, sigortalı birey sayı ve oranının artırılması gerekmektedir. Böylece hem genel bebek ölüm rakamları daha da aşağıya çekilmiş olacak hem de bölgesel olarak bebek ölüm hızları birbirine daha yakınlaşacaktır.

# Kişi Başına Sağlık Harcamalarının Sağlık Göstergeleri Üzerindeki Etkileri: MINT ve BRIC Ülkelerinin Karşılaştırmalı Analizi

# The Effect of Health Expenditure per Capita over Health Indicators: Comparative Analysis of MINT and BRIC Countries

Asst. Prof. Dr. Volkan Öngel (Beykent University, Turkey)

Asst. Prof. Dr. Erkut Altındağ (Beykent University, Turkey)

Ph. D. Candidate Gökten Öngel (Beykent University, Turkey)

## Abstract

Major positive effect on health indicators of a country is seen to arise from the increase in their income within historical perspective. But according to many studies in the literature the impact of such changes vary depending on the country's overall level of development. In terms of the positive changes over the health indicators of a country can be said to affect the developmental processes in the same way especially in developing countries. In this context, our study highlights the recent and emerging economies of two groups of countries; BRIC (Brazil, Russia, India, and China) and MINT (Mexico, Indonesia, Nigeria, Turkey). The relationship between health expenditure per capita and life expectancy at birth time and mortality rates of children under age 1 are analyzed retrospectively.

## 1 Giriş

Günümüzde sağlık ve eğitim gibi unsurların özellikle beşeri sermaye üzerinde yarattıkları gelişim sebebiyle, ülkelerin kalkınmalarında önemli olduğu şeklinde genel bir kabulün olduğu söylenebilmektedir. Bu unsurlar içerisinde sağlık, kişilerin uzun ve hastalıklardan uzak kaliteli bir yaşam sürmelerini sağlaması durumunda, bireylere almış oldukları eğitimi yüksek oranda ve uzun süreler verimli olarak kullanma imkanı sunması açısından büyük önem taşımaktadır. Uzun süre sağlıklı yaşam süren eğitimli bireylerin, ülkelerin kalkınma hızlarını çalışma yaşamlarında ki verimliliklerinin artmasıyla olumlu yönde etkileyecekleri öne sürülebilir. Dünyanın gelişmekte olan ekonomileri içerisinde yer alan Brezilya, Rusya, Hindistan, Çin (BRIC) ve Meksika, Endonezya, Nijerya, Türkiye (MINT) açısından da eğitimli ve sağlıklı toplumlar önümüzdeki yıllarda ekonomik açıdan önemli bir avantaj olabilir.

Bu çalışmada BRIC ve MINT ülkelerinin 2007-2012 yılları arasındaki 6 yıllık dönemde kişi başına sağlık harcamalarındaki değişimlerin doğumda beklenen yaşam süresi (DBYS) ve 1 yaş altı çocuk ölüm hızı (ÇÖH) üzerindeki etkileri retrospektif olarak incelenmiştir. Dünya Bankası resmi verilerine dayanılarak oluşturulan veri setleri SPSS 17 programı kullanılarak analiz edilmiş ve aralarındaki ilişki ortaya koyulmaya çalışılmıştır. Çalışmanın amacı kişi başına sağlık harcamaların ele alınan değişkenler üzerinde ülke grupları temelinde etkilerinin ne şekilde olabileceğini göstermektir. Çalışma BRIC ve MINT ülkelerinin ilgili değişkenlerine ait Dünya Bankası tarafından yayınlanan veriler ile sınırlandırılmıştır. İki ülke grubunun seçilmesinin sebebi ilgili ülkelerin orta vadede dünyanın en büyük ekonomileri içerisinde yer almalarının beklenmesidir. Çalışmada öncelikle, ekonomi ve sağlık ilişkisi ele alınmıştır. Sonrasında araştırmanın metodolojik kısmına yer verilmiş, tartışma ve sonuç kısmıyla çalışma tamamlanmıştır.

## 2 Ekonomi – Sağlık İlişkisi

Dünya Sağlık Örgütü tarafından "kişilerin sadece hasta veya sakat olmama hali değil, bedenen, ruhen ve sosyal yönlerden tam bir iyilik içinde bulunması halidir" şeklinde tanımlanan sağlığın sadece bireysel olarak değerlendirilmesi mümkün olmamaktadır. Negatif dışsallık olarak bilinen etkiyle sağlıklı olmayan bireylerin diğer insanlara da hastalıklarını taşımaları söz konusu olmaktadır. (Boyacıoğlu ve Taşkın, 2012) Bu sebeple sağlık hizmetlerinin kesintisiz ve eksiksiz olarak sağlanması ülkeler açısından büyük önem arz etmektedir. Fakat bu hizmetleri sağlamak çok kolay olmamaktadır. Bunun en büyük sebebi ortaya çıkan ekonomik maliyetlerin karşılanma güçlüğüdür.

Dünya Sağlık Örgütü'nün yayınlamış olduğu istatistiklerde 2000-2010 yıllarında tüm dünyada yapılan sağlık harcamalarının artışı göz önüne alındığında, tüm dünyada toplam sağlık harcamalarının gayri safi yurt içi hasılaya oranının %8,2'den %9,2'e yükseldiği görülmektedir. Aynı dönemde kişi başına sağlık harcamaları ele alındığında ortalama 564$ olan harcamaların 1017$'a yükseldiği görülmektedir. Dünya genelindeki ortalama harcama artışının %80 civarında olduğu görülmektedir. Fakat MINT ve BRIC ülkelerin de içinde yer aldığı düşük, ortanın altı ve ortanın üstü gelir grubunda yer alan ülkeler incelendiğinde ilgili artışların %100'ün üzerinde gerçekleştiği görülmektedir. (WHO 2013, 140-141)

Ülkelerin ekonomik gelişmeleri ve sağlık düzeylerinin çalışan verimliliği üzerinde yarattığı olumlu etkiler ve kaynakların israfı arasında karşılıklı bir ilişkinin olduğu iddia edilebilmektedir. Aşağıda yer alan Tablo 1'de sağlık göstergelerindeki iyileşmenin ekonomik olarak yaratabileceği faydaların türü ve etkileri yer almaktadır. Buna göre ortaya çıkan faydaların ekonomi üzerindeki en belirgin etkileri emek-saat arzının miktar ve emek-saat başına ürün kalitesinin artışı şeklinde özetlenebilmektedir.

| Faydanın Tanımı | Faydanın Türü | Faydanın Ekonomik Etkisi |
|---|---|---|
| - Hastalıkların neden olduğu erken ölümlerin sayısının azaltılması (Doğumda beklenen yaşam süresinin uzaması)<br>- Nüfus içerisinde hastaların ve sakatların sayısını azaltmak (Morbidite oranlarının azaltılması)<br>- Verimliliği düşüren zafiyet ve halsizliğin azaltılması | - Emek – saat olarak mutlak artış<br>- Emek – saat olarak nispi artış<br>- Emek – saat başına üretken kapasitenin artışı | - Emek – saat arzının miktar olarak artışı<br>- Emek – saat başına ürünün kalite açısından artışı |

*Tablo 1: Toplumun Sağlık Durumunu İyileştiren Yatırımların Sağladığı Parasal Faydalar* **Kaynak: (Günsoy 2005, 40)**

Kişi başına düşen gelirin artması, sosyal değer yargılarının değişmesi, kentleşme, eğitim düzeyinin yükselmesi, yaşam süresinin uzaması, teknolojik gelişmeler, demokratik düzenin yaygınlaşması ve yeni kazanımlar sağlık harcamalarının artışına sebep olan etmenler olarak sınıflandırılabilmektedir. (Işık 2005, 210) Sağlık harcamalarının genel olarak sağlıkta yarattığı iyileşme ile ölüm oranlarını düşürdüğü fakat yaşam beklentisindeki değişim ile GSYİH içindeki sağlık harcamaları arasında çok küçük bir ilişkinin olduğu şekilde sonuçları olan çalışmalar bulunmaktadır. (Tüylüoğlu ve Tekin 2009, 12)

Bir ülkede bebek ölüm hızının yüksek olması, özellikle koruyucu sağlık hizmetleri ve eğitim konusunda yetersiz düzeyde bulunulduğu, ekonomik durum, gelir dağılımı, beslenme, barınma koşulları, çevre kirliliği, gürültü, sanitasyon, vb. gibi elverişsiz sosyo-ekonomik göstergelere sahip olunduğu konusunda ön fikir sağlamaktadır. (Çelik 2011, 30-31) Bu noktada asıl önemli olan soru sadece sağlık harcamalarında meydana gelen değişimlerin bebek ölüm oranları üzerinde ne derecede etkin olabileceğidir.

## 3   Araştırmanın Metodoloji

BRIC VE MINT ülkeleri ile ilgili karşılaştırmalı analiz yapmak için her iki ülke grubu ile bağlantılı veriler incelenmiştir. Bunlar doğumda beklenen yaşam süresi (yıl), 1 yaş altı çocuk ölüm hızı (her 1000 canlı doğumda) ve kişi başına sağlık harcamaları değişkenleri olarak belirlenmiştir. Hem ortalama, medyan ve standart sapma gibi testler uygulanmış, hem de daha kapsamlı T testi, Tek Yönlü Anova gibi teknikler de kullanılmıştır. Bu analizlerin tamamı SPSS 17 programı ile gerçekleştirilmiştir. Bu bağlamda ortaya çıkan sonuçlar, rakamlar ile birlikte yorumlanmaya çalışılmıştır. Her iki ülke grubunun da 6 yıllık bir periyotta yer alan istatistiki bilgileri araştırmaya dâhil edilmiştir. Ülke grupları ve ülkeler arasındaki ilişkiler dışında ek olarak Türkiye'de sağlık alanında ortaya çıkan tablonun olumlu ve olumsuz yönleri de irdelenmiştir.

İlk olarak BRIC ülkeleri ile ilgili rakamlara bakıldığında Tablo 2'de görüldüğü üzere beklenen yaşam süresinde Çin'in diğer ülkelere oranla önde olduğu görülmektedir. Ortalama yaşam süresinde Hindistan 66 yıl ile son sıradaki yerini alırken, diğer ülkelere oranla kişi başına düşen sağlık harcamalarında grup içerisinde en yakın harcama düzeyine sahip olduğu Çin'in beşte birinden daha az harcama yaptığı (61 dolar) görülmektedir. Bu da bebek ölümlerindeki % 4,4'lük yüksek oranı açıklamak için önemli bir veridir. Kişi başı sağlık harcamalarında ilk sırada 1056 $ ile Brezilya yer almaktadır. Ancak bebek ölümlerindeki en düşük oran binde 9 ile Rusya'ya aittir.

Türkiye'nin içinde bulunduğu grupta (MINT) kişi başı yapılan sağlık harcamaları ortalaması 343 dolar iken, Türkiye'de bu rakam 625 dolardır. BRIC ülkeleri arasında ise Brezilya ve Rusya 870 ve 660 dolarlık kişi başı yapılan sağlık harcaması ile listenin en üstünde yer almaktadırlar.

BRIC ülkeleri ile ilgili yapılan değerlendirmelerin başında ortalama yaşam süresi ile ilgili olan bölüm gelmektedir. Eldeki veriler 6 yıllık periyoda yaşam süresindeki artışla ilgili olarak en çok Rusya'nın gelişme gösterdiğini kanıtlamaktadır. Rusya 1,16'lık standart sapma değeri ile diğer ülkeleri bu anlamda geride bırakmıştır. Ortalama yaşam süresi 2007 yılında 67 iken 2012 yılında bu rakam 70'e yükselmiştir. Özellikle 1998 yılında yaşadığı kriz sonucu ekonomik küçülmeye giden Rusya'da son dönemde istikrarlı bir sağlık politikası izlenmiş, güçlenen ekonomi içerisinde sağlığa ayrılan pay da yaklaşık %40 artmıştır. Bebek ölümleri konusunda da Rusya'nın BRIC ülkeleri içerisinde en düşük değerlere sahip olduğunu belirtmek gerekir.

Araştırma sonuçlarına bakıldığında bir başka dikkat çekici özellik ise Hindistan'da bebek ölümlerinin oranı yaklaşık %4.8 iken, ortalama yaşam süresi bakımında Rusya ile arasında çok belirgin bir fark olmamasıdır. Yapılan istatistiki analizde Rusya'da 6 yıllık periyoda ortalama yaşam süresinin arttığı gözükse de, araştırmayı kapsayan dönemin başında Hindistan ile neredeyse aynı süreyi paylaştıkları görülmektedir. Hindistan ile Çin ortalama yaşam süresi bakımından neredeyse oldukları yerde saymıştır. Bir karşılaştırma yapıldığında ülke

nüfuslarının buna etken olduğu düşünülmektedir. Brezilya'da kişi başına düşen sağlık harcaması 870 $ dolar ile her iki ülke grubu içerisindeki en yüksek rakamdır. Çin'deki kişi başına düşen sağlık harcaması Brezilya'ya göre dörtte bir kadardır. Sağlık harcamaları göreceli olarak yüksek olan ülkelerin yaşam süreleri daha uzundur şeklindeki önerme bu aşamada kabul edilmemektedir (p<0.05). Bununla birlikte, aynı anlamlılık düzeyinde tüm sağlık harcamalarındaki oransal artış, yaşam süresi ile yüksek korelasyon ilişkisi içerisinde değerlendirilebilir. Bu da sağlık harcamalarına yapılan yatırımın insan ömrüne doğrudan bir etkisi olduğunu göstermektedir. Bu tespit her iki ülke grubu için de geçerlidir.

| Doğumda Beklenen Yaşam Süresi (yıl) | | | | | | | |

*Tablo 4: MINT* Ülkeleri İle İlgili Önemli İstatistikler *Kaynak: data.worldbank.org (24.04.2014)*

MINT grubunda yer alan ülkeler içerisinde en yüksek kişi başı sağlık harcaması Türkiye'den sonra Meksika'ya aittir. Ancak bu durum doğumda beklenen yaşam süreleri göz önüne alındığında Meksika'nın daha yüksek bir ortalamaya sahip olduğu gerçeğini değiştirmemektedir. Bunun nedenlerinden biri yapılan harcamanın satın alma gücü paritesine göre değerlendirildiğin de Türkiye'ye oranla daha yüksek kalmasından

kaynaklanabilir. Ayrıca diğer etkenler olan coğrafik konum, endüstrileşme oranı ve eğitim seviyesi de belirleyici olabilmektedir. Endonezya'da sağlık harcaması kişi başı 79,3 dolar iken Nijerya'da bu rakam 83,6 dolardır. Ayrıca her iki grup içerisinde en düşük DBYS 51 ile Nijerya'ya aittir. Nijerya'daki iç savaş ve Afrika kıtasının yaşadığı sağlık sorunlarının bir kısmının ülkede de yaşanması bu oranı bir hayli aşağıya çekmiştir. Diğer bir deyişle, sağlık harcamalarına yapılan yatırım bu ülkede DBYS için birinci öncelikli belirleyici değildir. Ülkenin ekonomik, coğrafi ve siyasi yapısı bu aşamada daha öncelikli etkenlerdir. Sağlık harcamalarındaki yaklaşık %20'lik artış ancak barış ortamında ve diğer parametreler sabit iken değerlendirilmelidir.

| Doğumda Beklenen Yaşam Süresi | Ortalama | Std. Sapma | Std. Hata | Minimum | Maksimum | Sig. |
|---|---|---|---|---|---|---|
| Endonezya | 70 | 0,63246 | 0,2582 | 69 | 71 | |
| Meksika | 76,5 | 0,54772 | 0,22361 | 76 | 77 | 0 |
| Nijerya | 51 | 0,89443 | 0,36515 | 50 | 52 | |
| Türkiye | 74,1667 | 0,75277 | 0,30732 | 73 | 75 | |

*Tablo 5: MINT ülkelerindeki yaşam süreleri ile ilgili temel istatistiki bilgiler*

Önemli konu başlıklarından birisi olan bebek ölümlerine bakıldığında Nijerya ve Hindistan'da karşılaşılan tablo çok vahimdir. Söz konusu oranların yüksekliğini sadece sağlık harcamaları ile ilişkilendirmek doğru olmayabilecektir. Ancak diğer ülkelerin ortalamalarının bir hayli üstünde olması Dünya Sağlık Örgütü tarafından dikkatle takip edilmektedir. Ülkelerdeki fakirlik, iç savaş durumu, insana verilen değer gibi kriterlerin de hesaplanması gerekmektedir ve bu nedenle tablodaki oranlar tek bir değişkene bağlanamaz. Sağlık harcamaları ve sağlık sistemi, sonuca sebep olan bağımsız değişkenlerden sadece birisidir.

## 4  Tartışma ve Sonuç

Eldeki literatür bilgileri ve araştırma kapsamında yapılan temel testler sonucunda ortaya çıkan tabloda BRIC ve MINT olarak adlandırılan ülke gruplarındaki bazı istatistiksel göstergeler değerlendirilmiştir. Bu kapsamda, her iki grup da karşılıklı olarak incelendiğinde en uzun doğumda beklenen yaşam süresinin 77 yıl ile Meksika'da olduğu Türkiye ve Çin'in bu ülkenin arkasında yer aldıkları görülmektedir. Kişi başına sağlık harcamalarında Brezilya ve Rusya'dan sonra üçüncü sırada yer alan Türkiye'nin 1 yaş altındaki çocuk ölümlerinde Rusya'dan sonra Çin ile birlikte en düşük oranlara sahip olduğu görülmüştür. Özellikle ekonomik yapıların değişmesi, teknolojideki yenilikler ve kapitalist ekonomik sistemin dünyada hakim olması sebebiyle hızla değişen sağlık sektöründe baz alınan kritik değerler bu çalışma kapsamında incelenmiş olup kişi başına makul düzeydeki sağlık harcamaları ile bebek ölüm oranlarının minimum seviyede tutulması şartı gelişmişlik göstergeleri içerisinde büyük öneme sahiptir. Özellikle son yıllarda Dünya Sağlık Örgütü'nün de bebek ölümleri konusunda önleyici hekimlik ve aşı kampanyalarını yürütmesi de bunun bir kanıtıdır. Ülkelerin çeşitli coğrafik ve ekonomik gruplara ayrılması çağımızın gerekliliklerinden birisidir. Bu kapsamda yapılan MINT – BRIC sınıflaması da bizlere karşılıklı bir kıyaslama yapmak için önemli veriler sunmuştur. Bu sınıflandırmada Türkiye'nin konumu bizler açısından en önemli değerlendirme unsurlarından birisi olacaktır.

2002-2006 yıllarında OECD ülkelerinin tamamından daha yüksek oranda büyüyen Türkiye'nin 2050 yılında 4.45 trilyon dolar gayri safi hasıla oranına sahip olacağı tahmin edilmektedir. Özellikle son yıllarda Türkiye'nin uyguladığı sağlıkta reform ve dönüşüm programı ile amaçlanan yüksek hizmet kalitesi ve hasta memnuniyeti hedefine ulaşılması için sağlık harcamalarının göreceli olarak daha yüksek tutulması gerekmektedir. 1960 yılında 48 olan ortalama yaşam süresinin geçen 54 yılda neredeyse yarı yarıya artmış olması sevindirici bir gelişme olmakla birlikte sağlık sisteminde yaşanan yapısal sorunların olması bir sonraki seviyeye geçilmesi konusundaki en büyük engeldir. Bilinçli sağlık politikalarının uygulanması, teknolojideki gelişmeler, sağlık hizmetlerine hızlı ulaşım, bürokratik engellerin azaltılması, insana ve insan haklarına verilen önemin artması ve eğitim seviyesinin yükseltilmesi ile birlikte Türkiye'deki sağlık sisteminin kalitesinin arttırılması mümkün olabilecektir. Son dönemde Türkiye'den yaşanan maden kazası gibi endüstriyel felaketler de ortalama yaşam süresini azalttığı gibi ülkelerin sağlık politikalarını direkt olarak etkilemektedir.

Vatandaşlarının sağlıklı olması, bir ülkenin en önemli gelişmişlik göstergelerinden birisi olmakla birlikte ekonomik ve sosyal gelişimin ve fakirliğe karşı verilen mücadelenin en önemli kriterlerinden birisidir. Sağlık hizmetlerine ulaşım ve yüksek kalitedeki sağlık hizmetleri de bu kriter üzerinde direkt olarak etkilidir. Aynı zamanda ortalama yaşam süresi, bebek ölüm oranlarındaki azalış ve kişi başına yapılan sağlık harcamaları da o ülkenin sağlık sisteminin yapısını ve kalitesini belirleyen diğer unsurlardır. Tüm dünyada sağlık hizmetlerine ayrılan bütçe artmakta, ayrıca kişi başına yapılan harcamalar da artmaktadır. Ortalama yaşam süresi uzadığı için de sağlık hizmetleri giderek önem kazanmaktadır. Bu araştırmada incelenen iki farklı ekonomik grup üzerinde yorum yapmak gerekirse, Hindistan, Endonezya ve Nijerya gibi ülkelerin bağlı oldukları coğrafik veya ekonomik gruplara bakmaksızın çok hızlı bir şekilde sağlık sistemlerini geliştirmeleri ve sağlığa daha fazla bütçe ayırmaları gerekmektedir. Siyasi dalgalanmalar ve iç savaş gibi etkenler de kontrol edilebilir hale geldiğinde sağlık alanındaki reformlar hızlanacaktır. Türkiye için söylenebilecek en önemli tespit ise kişi başı düşen sağlık

harcamalarındaki artışın henüz yeterli olmadığı ve özellikle bebek ölümlerinde istenilen düzeye gelinememesidir. Son yıllarda uygulanmaya çalışılan reform paketi hızlandırılmalı ve yapı içerisindeki muğlak noktalar giderilmelidir. Sağlık çalışanlarının gelecekle ilgili kaygılarının olması reform paketinin uygulanmasını yavaşlatmaktadır. Sadece kendi içerisinde bulunduğu ekonomik grupta değil, dünyada söz sahibi olmak isteyen bir süper güç haline gelmek isteyen bir ülkenin gelecekle ilgili planlamasını yaparken daha iyi durumda olan devletleri ve sağlık sistemlerini örnek alması ve uygulamaya koyarken de ulusal koşulları değerlendirerek adım atması gerekmektedir. Böylece teknolojinin de tıp alanında hızla ilerlemesi sayesinde sağlıklı ve refah bir toplum olma yolunda ilerlenebilir.

# Bölgesel Ekonomik Politikalarda Devletin Değişen Rolü

# Changing Role of the State in Regional Economic Policies

Assoc. Prof. Dr. Seyhan Taş (Kahramanmaraş Sütçü İmam University, Turkey)

Dr. Mehmet Akif Kara (Kahramanmaraş Sütçü İmam University, Turkey)

Sena Türkmen (Kahramanmaraş Sütçü İmam University, Turkey)

Enver Günay (Kahramanmaraş Sütçü İmam University, Turkey)

## Abstract

It is observed that regional economic policies, which are applied to reduce the regional imbalances and to improve the income and employment in underdeveloped regions, tend to change in time. This change in turn brings out the concept of regional competition. This change also reflects the state's policy tools, while the concept of regional efficiency becomes to be determinative in state's regional economic policies in addition to the concept of regional equality. In this context the public policies of regional level can be said as following: first to develop regional infrastructural investments, second; to support the small and medium sized firms and the clusters around them which can stimulate internal potential of the region, and to develop the technological and innovative frames of the firms. Similar changes occur in Turkey as well together with the European Union membership process, while the concept of regional competition begins to shape the regional economic policies with the legal and institutional arrangements. In this study, we tried to assess the changing role of the state, especially from the point of Turkey, in the regional development policies.

## 1 Giriş

Özellikle II. Dünya savaşı sonrası gündeme gelen bölgesel ekonomik politikalar, nüfusun ve ekonomik aktivitelerin, bölgelerin tamamında daha eşit dağılımını sağlayarak bölgesel dengesizlikleri gidermeyi amaçlamaktadırlar. Hem ekonomik hem de sosyal gerekçelerle uygulanan bu politikalar, kaynakların ya da ekonomik aktivitelerin dağılımı ya da yeniden dağılımını sağlayabilmekte ve aynı zamanda bölgesel potansiyelin gelişimini teşvik edebilmektedirler.

Genellikle kamunun yönlendirdiği bölgesel ekonomik politikaların başlangıçta karar alma ve uygulama sürecinin merkezi yönetimin planlamacıları ve kalkınmacılarınca gerçekleştirildiği, sürece yerel ve bölgesel aktörlerin dahil edilmediği ya da katılımlarının çok düşük düzeyde kaldığı görülmektedir. Ayrıca bu ekonomik politikalar, ekonomik aktiviteleri geri kalmış bölgelere çekebilmek amacıyla temelde finansal destek, teşvik paketleri ve sübvansiyonları politika aracı olarak ön plana çıkarmışlardır. Ancak izlenen bu politikaların beklentileri tamamıyla karşılayamaması, 1970'li yıllarda gündeme gelen ekonomik kriz ve artan küreselleşme olgusu, bölgesel ekonomik politikalarda ve bu politikalardaki devletin rolünde bazı değişimleri gündeme getirmiştir. Bu değişimlere bağlı olarak kamu, bölgelerin rekabetçi yapısını geliştirerek ekonomik aktiviteleri çekebilmek ve bölgesel kalkınmayı gerçekleştirebilmek amacıyla temel arz koşullarını geliştirici politikalara odaklanmaya başlamıştır. Aynı zamanda bu politikalar, merkezi yönetimin yanında yerel aktörleri de ön plana çıkarmış ve bu aktörlerin yerel kalkınmadaki sorumluluklarını artırmıştır.

Bölgesel ekonomik politikalarda devletin değişen rolünü belirlemeyi amaçlayan bu çalışmada, öncelikle bölgesel ekonomik teori ve politikalarda devlete yönelik bakış açısı ortaya konulmaya çalışılmakta, daha sonra bölgesel ekonomik politikaların gelişimi ve bu politikalarda devletin değişen rolü tartışılmaktadır. Ayrıca devletin değişen bölgesel ekonomik politikalarına bağlı olarak günümüzde ön plana çıkan politika araçları ve bu politika araçlarının etkinliği incelenmekte ve son olarak da Türkiye'de kamunun izlediği bölgesel ekonomik politikalardaki değişim analiz edilmektedir.

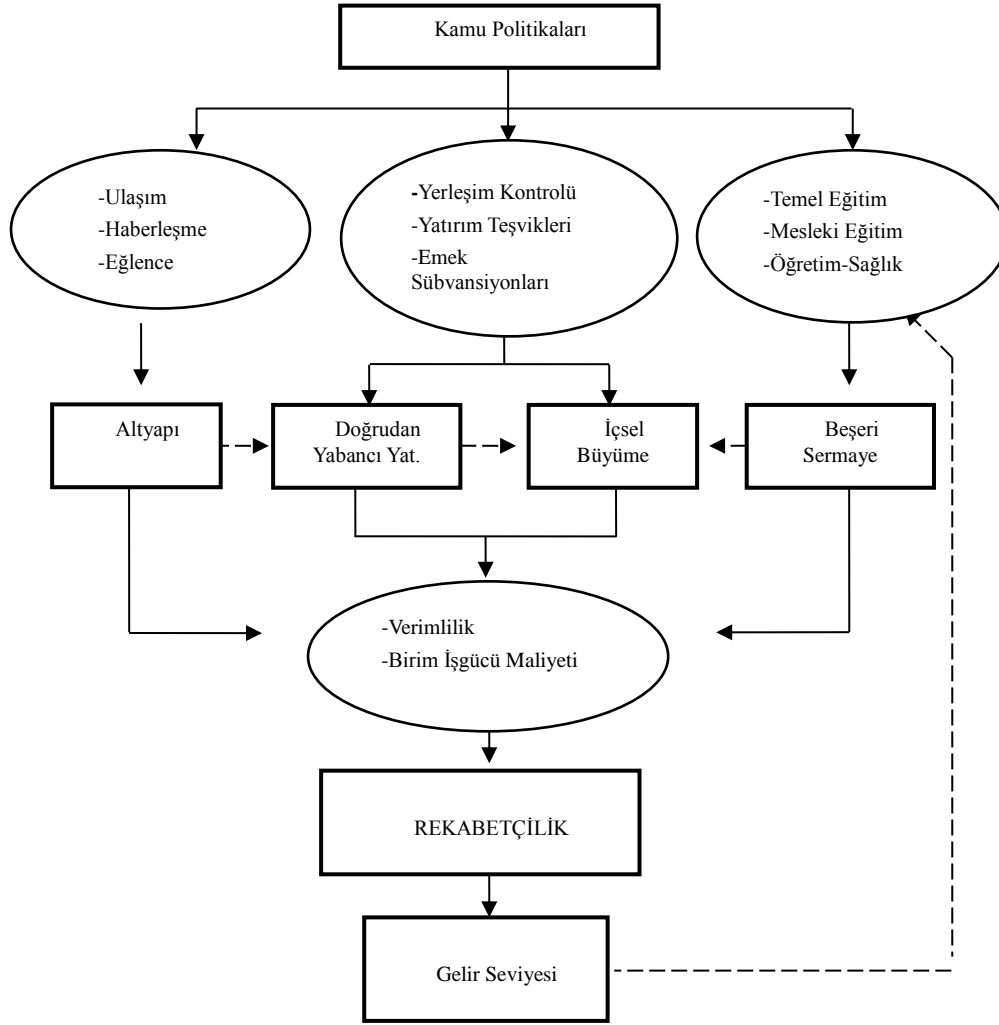
## 2 Bölgesel Ekonomik Teori ve Politikalarda Devlet

Ekonomik aktivitelerin mekânsal dağılımını ve bölgesel gelişimi açıklamaya çalışan, kuruluş yeri teorileri ve bölgesel kalkınma ve büyüme teorilerinde, bölgesel kalkınmanın gerçekleştirilmesi ve kalkınma farklılıklarının giderilmesinde devlete önemli vurgular yapıldığı görülmektedir. Örneğin kuruluş yeri teorilerinden dışsal ekonomilerin bir türü olan ve dinamik dışsallıklar içerisinde değerlendirilen Porter (1998) dışsallığında, alıcı ve satıcıların kümelenme içerisinde, devletin ya da diğer kamusal kurumların alt yapı yatırımları ve eğitim programlarından yararlanma yoluyla verimlilik artışları sağlayabileceği belirtilmektedir. Ayrıca Porter (2000) bölgesel rekabet yapısının ve kümelenmenin gelişiminde kamusal kurumların, alt yapı yatırımlarının ve kamusal düzenlemelerin önemine vurgu yapmaktadır. Bölgesel kalkınma ve büyüme teorilerinden ihraç temelli teoride North (1955) merkezi ve yerel yönetimlerin ulaşım alt yapısı ve diğer alt yapı yatırımlarının, ulaşım maliyetleri ve diğer maliyetleri azaltarak bölge ihracatının rekabetçi pozisyonunu artırabileceğini ifade etmektedir. Aynı şekilde Perroux tarafından gündeme getirilen büyüme kutbu yaklaşımında, diğer pek çok faktöre ilave olarak

kutup tarafından sunulan ekonomik ve sosyal alt yapının, kutbun yaratabileceği bir cazibe olduğu belirtilmektedir (Capello, 2007). Yeni kurumsal ekonomi yaklaşımında, bölgelerin kamusal ve kamusal olmayan kurumsal yapılarının bölgelerin ekonomik performansı üzerindeki etkileri belirlenmeye çalışılarak, bir anlamda devletin de bölgesel bazda kurumsal gelişmişliğinin önemine dikkat çekmektedir (Storper, 1997 ; Amin ve Thrift, 1994 ; North, 1994). Diğer yandan neo klasik büyüme modelinin yakınsama varsayımına göre, bölgesel dengesizlikler geçicidir ve piyasa güçlerinin işleyişini engelleyici bir unsur söz konusu değilse bölgesel yakınsama eğilimi başlayabilecektir (Martin ve Sunley, 1998). Ancak Myrdal (1957)'ın öncülük ettiği birikimli nedensellik yaklaşımına göre ise, piyasa güçleri bölgesel dengesizlikleri azaltmaktan ziyade artırma eğilimindedir ve gelişen bölgelerdeki ekonomik aktivitelerin, diğer bölgelerdeki verimli üretim faktörlerini çekmeleriyle gelişen bölgelerde büyüme, geri kalmış bölgelerde ise durgunluk ya da gerileme sürekli hale gelebilecektir. Myrdal (1957) ayrıca bölgesel dengesizliklerin olumsuz etkilerini ortadan kaldırıcı ve bölgesel eşitliği sağlayıcı devlet politikalarının önemine de vurgu yapmaktadır. Aynı zamanda neo klasik yaklaşımın yakınsama varsayımıyla ilgili uygulamalı çalışmalarda, bazı ülkelerde yakınsamanın gerçekleşmediği bazılarında ise oldukça yavaş gerçekleştiği belirlenirken (Martin ve Sunley, 1998), Sala-i Martin (1996)'de, şu an göreceli olarak geri kalmış bölge, daha öncede göreceli olarak geri kalmış bir bölgeyse, kamu politikaları yoluyla bu bölgelerin kötü koşullarından kurtarılması gerekliliğini vurgulamaktadır. İçsel büyüme modelleri çerçevesinde Barro ise, alt yapı yatırımları şeklindeki verimli kamu harcamalarının faktör verimliliğini artırabileceği tespitinde bulunmaktadır (Barro ve Sala-i Martin, 1995).

## 3 Bölgesel Ekonomik Politikaların Gelişimi ve Bu Politikalarda Devletin Değişen Rolü

Bölgesel dengesizliklerin giderilmesiyle ilgili kamu müdahaleleri aslında yeni bir politika değildir. Bu politikalar, özellikle II. Dünya Savaşı sonrası başta B.Avrupa olmak üzere birçok ülkede, bölgelerarası ekonomik ve sosyal fırsat eşitsizliklerini ortadan kaldırmak amacıyla uygulanmaya başlanmıştır. O dönemde pek çok ülkede bölgesel problemlerin şiddetinin artması, tarım ve geleneksel ağır sanayi üretimindeki azalma, hem problemli bölgelerdeki işsizlik hem de büyük kent merkezlerine yönelik göçler ve buralarda ortaya çıkan enflasyonist baskılar, Avrupa'nın çeşitli bölgelerindeki eşitlik ve dağılım sorunları, bölgesel ilgiyi politik ajandada ön plana çıkaran nedenler olmuştur. Böyle bir ortamda bölgesel politikaların ulusal kalkınmayı artırabileceği, daha zengin ve kalabalık bölgelerde enflasyon ve diğer baskıları kontrol altına alarak, problemli bölgelerde işsizliği önleyebileceği savunuluyordu. Keynesgil bakış açısıyla şekillenen bu politikalar, politika araçlarındaki farklılıklara rağmen, genel olarak gelişmiş bölgelerdeki kaynakların bir kısmının geri kalmış bölgelere kaydırılması ve bu bölgelerdeki faaliyetlerin desteklenerek bölgesel eşitliğin sağlanması mantığına dayanmaktadır. Bu konudaki düzenlemelerin yapısının da merkeziyetçi olduğu görülmektedir. Politikaların belirlenmesi, yardım alacak bölgelerin tespiti ve araçların dağıtımı, merkezi yönetimce üstlenilmiştir (Bachtler ve Yuill, 2001). Bu geleneksel politikalar şüphesiz az gelişmiş bölgelerde gelir ve istihdamın artışına katkıda bulunmuş, ancak daha gelişmiş bölgelerle karşılaştırıldığında, verimlilikte sürekli bir artış sağlamak ve yerel kaynakların harekete geçirilmesine dayanan kendi kendine sürdürülebilir büyümeyi teşvik etmekte başarısız olmuştur (Amin, 1999). Bazı bölgelerdeki bireyler arası yetenek ve eğitim zayıflıkları diğer yandan zayıf yerel ekonomik yapı, politikaların başarı şansını zayıflatmıştır. Ayrıca bu dönemde yerel ekonomik, sosyal, politik ve kurumsal koşullar göz önünde bulundurulmaksızın, dünyanın farklı bölgeleri için standartlaştırılmış ekonomik politikaların uygulamaya konulma eğilimi de, bu politikaların başarısızlıklarının bir başka nedenidir. Spesifik olarak başarılı olmuş politikaların, ulusal, bölgesel ve yerel yapıdaki farklılıklara bağlı olarak değiştirilmeksizin, transfer edilebileceği ve uygulanabileceği düşünülmüştür (Pike vd., 2008).

1970'li yıllardaki ekonomik bunalımla birlikte bölgesel politikaların da önemi azalmaya başlamıştır. Bu yılların sonlarından itibaren özellikle gelişmiş ülkelerde aktif devlet müdahalelerine karşı bir hareket başlamış, ekonomik politikalar; özelleştirmeye, düzenlemelerin kaldırılması ve piyasaların serbestleştirilmesine odaklanır iken, pek çok ülkede bölgesel politikaların etkisi sorgulanmaya ve yeniden değerlendirilmeye başlanmıştır (Bachtler ve Yuill, 2001). Merkezi yönetimler aktif bölgesel politikalardan çekilirken, ekonomik kalkınmada yerel sorumluluklar ve aynı zamanda kamu, özel sektör ve farklı sivil toplum örgütlerinin işbirliği gündeme gelerek yerel aktörler ön plana çıkmıştır (Eraydın, 2004). Bu dönüşüm bölgelerin sahip oldukları kurumsal yapı içerisindeki rekabetçi avantajlarını geliştirebilmeleri için politik gücün yerelleşmesini gerekli kılarken (Webb ve Collis, 2000 ), hem merkezi hem de yerel yönetimlerin bölgesel ekonomik kalkınmadaki yeni rolünü de gündeme getirmiştir (Eraydın, 2007). Yaşanılan değişim süreci aynı zamanda bölge kaynaklarının harekete geçirilmesi mantığına dayanan içsel büyümeye dayalı bölgesel gelişme (Endogeneous Regional Development) yaklaşımını ön plana çıkarmıştır. Yaklaşım, içsel büyüme kuramının bölgeye uyarlanmasına bağlı olarak bölgelerin kendilerine özgü bilgi kaynaklarının ve bölgedeki yığılmaların ortaya çıkardığı dışsallıkları gündeme getirmektedir (Eraydın, 2004 ).


**Şekil 1**. *Kamu Politikaları ve Bölgesel Gelişim (Taylor, 2001)*

Aynı zamanda 1980'li yıllarda, özellikle üretim ve finanstaki artan küreselleşme, bölgelerin uluslararası rekabete maruz kalmasına ve devletlerin yatırımların akışkanlığı üzerindeki kontrol yetkisinin azalmasına yol açmıştır (MacKinnon vd., 2002). Küreselleşme aynı zamanda, bazı bölgelerin mevcut ekonomik yapıları ve rekabet gücü dolayısıyla, bu bölgelerde büyümeye katkı sağlayıcı şekilde firmalar, sermaye ve uzman işgücü için çekicilik yaratırken, diğer bölgeler, mevcut yapıdan yararlanamamalarının dışında, var olan yerel sermayenin, firmaların ve eğitimli işgücünün avantajlı bölgelere yönelmesiyle karşı karşıya kalmışlardır (Helmsing, 2001). Dolayısıyla bu süreçte bazı bölgeler, teknolojik koşullar, sermaye ve pazar anlamında da küresel kaynaklara daha kolay ulaşarak bölgesel gelişim için fırsatlar yaratabilmişlerdir (Casanova, 2004; Gordon, 1999 ). Küreselleşmenin zorladığı bölgesel rekabet içinde ön plana çıkan anahtar kavramlar ise bölgelerin öğrenme süreçleri ve yenilikçi kapasiteleridir (Hudson, 1999; Begg, 1999; Benz ve Fürts, 2002; Diez, 2002 ). Yenilikçi kapasite, AR-GE ya da hayat tecrübesiyle elde edilen bilginin bireysel yeterlilikle uygulanması ve bölgesel üretim ortaklarının oluşturduğu dinamik yapı ve etkileşim olarak tanımlanabilir (Lamboy, 2002). Ekonomik aktivitelerin bölgesel yoğunluğunun da yenilik temelli ekonomiler için en uygun yapıyı oluşturduğu ifade edilirken, firmaların ve bölgelerin yenilikçi kapasitelerinin, bölgelerin geleceğinin önemli bir belirleyicisi olduğu belirtilmektedir (Asheim ve Dunford, 1997).

Bu çerçevede geleneksel bölgesel ekonomik politikalarla, yeni bölgesel ekonomik politikalar arasında da bazı temel farklılıkların varlığı görülmektedir. Geleneksel yaklaşımlarda kalkınma stratejilerinin karar alma ve uygulama sürecinin merkezi yönetimin planlamacıları ve kalkınmacılarınca gerçekleştirildiği, sürece yerel ve bölgesel aktörlerin dahil edilmediği ya da katılımlarının çok düşük düzeyde kaldığı görülmektedir. Yeni yaklaşımlarda ise, her bölgenin rekabetçi avantajlarını ve ekonomik potansiyelini harekete geçirici yerel aktörler ön plana çıkmaktadır. Geleneksel ekonomik politikalarda merkezi yönetimin kurumları belirleyici olur iken, yeni yaklaşımlarda tüm aktörleri içeren yatay ve dikey koordinasyonun boyutu çok daha önemli hale gelmektedir. Yatay koordinasyon kalkınma konularıyla ilgili olarak özel aktörleri ve yerel kamusal aktörleri kapsar iken dikey koordinasyon, yerel, bölgesel, ulusal ve uluslararası kurumların uyum ve işbirliğini gerektirmektedir. Bu

politikalar arasındaki bir başka farklılıkta, kalkınma yaklaşımının uygulama biçimiyle ilgilidir. Geleneksel yaklaşımlar özel endüstriyel sektörlerin desteklenmesine odaklanarak ekonomiye dinamizm katmaya çalışmaktadırlar. Yeni yaklaşımlar ise ekonomik kalkınmanın başarılabilmesi için bölgesel bir yaklaşım geliştirmişlerdir. Bu kalkınma stratejisinin inşası, yerel ekonomik potansiyelin belirlenmesi ve her bölgenin ekonomik sosyal ve kurumsal koşullarının teşhis edilmesine dayanmaktadır. Diğer yandan geleneksel ekonomik politikalar ekonomik aktiviteleri geri kalmış bölgelere çekebilmek amacıyla temelde finansal destek, teşvik paketleri ve sübvansiyonları ön plana çıkarırken, yeni yaklaşımlar ekonomik aktiviteleri çekebilmek ve bölgesel kalkınma için temel arz koşullarını geliştirici politikalara odaklanmışlardır (Pike vd, 2008).

Bölgesel politikalardaki bu değişimin örneklerini Avrupa Birliği (AB) ülkelerinde görmek mümkündür. 1980 öncesi dönemde batı Avrupa ülkelerinde politik vurgularda önemli farlılıklar olmasına rağmen bölgesel politikalardaki yaklaşım geniş ölçüde benzerdi. Ana politik amaç farklı ülkelerde ve bölgelerde istihdam, gelir, altyapı ve yaşam standartlarındaki farklılıkların eşitlenmesiydi. Ekonomik büyümenin yavaşladığı, düşük gelir ve yüksek işsizliğin olduğu bölgelerde uygulanan bölgesel politikaların araçları; Finansal teşvikler (Krediler, vergi ayrıcalığı, amortisman indirimi, Taşınma maliyetlerine destek, ulaşım, istihdam ve kiralama sübvansiyonları vb.), alt yapı yatırımları (özellikle kırsal ve nüfusun az olduğu bölgeler), Özel sektör ve kamu kurumlarının yerini değiştirme yoluyla, kalabalık bölgelerden iktisadi faaliyetleri farklı bölgelere yönlendirme şeklindeydi(Bachtler ve Yuill, 2001:8). 1980 sonrası ise AB bölgesel politikalarındaki reform çabaları, geleneksel bölgesel politikaları daha yerel ve daha geniş bölgesel kalkınma yaklaşımlarıyla tamamlamış veya bu politikaların yerini almıştır. Bölgeler artık merkezi yardımların pasif alıcısı değil, aynı zamanda ekonomik kalkınmanın aktif olarak başlatıcılarıdır (Bachtler vd., 2001 :1). Bu çerçevede bölgesel politikaların eyleme dönüşmesinde yerelleşme önemli bir kavram olarak karşımıza çıkmaktadır. Yerel aktörler yerel şartları, beklenti ve ihtiyaçları en iyi anlayabilen yapılar olarak görülürken, yerel seviyede verilen yetkilerin sadece merkezi politikaların gelişimini sağlamadığı, aynı zamanda demokrasiyi, fırsat eşitliğini ve sosyal kaynaşmayı artırdığı ifade edilmektedir. Bu yüzden yerel ve bölgesel yönetimler, yerel ajanlar ve diğer yerel aktörler Avrupa'nın değişik bölgelerinde, ekonomik düzenleme ve sosyal kalkınmada anahtar ortaklar olarak ön plana çıkmaya başlamışlardır. Dolayısıyla yerel kalkınma politikaları ve yerel girişimler daha güçlenmişler, AB ve birlik içerisindeki ülke stratejileriyle entegre olmuşlardır (OECD, 2004:2-4). Ayrıca bölgesel ekonomik politikaların temeli olarak bölgesel rekabetin desteklenmesi öngörülmüştür. Temel vurgu, bölgesel uyum ayarlanarak, gelir ve istihdam gibi bölgesel dengesizlik politikalarından başka, kentlerin çok merkezli gelişiminin desteklenmesi, özel problemli bölgeler ve coğrafi handikap içerisindeki bölgelere yoğunlaşılmasıdır. Diğer yandan bölgesel ekonomik politikalarının geleceğinde önemli bir rol üslenecek, yenilik ve bilgi ekonomileri, erişebilirlik, istihdam, eğitim ve adaptasyon, sosyal kapsam, çevre ve risk önleme gibi temel ekonomik konuların geliştirilmesi de hedeflenmiştir (Bachtler ve Wishlade, 2004 :1-2 ).

AB ve birlik içerisindeki bölgesel ekonomik politikaları son yıllarda etkileyen ve belirleyen faktörleri de şu şekilde ifade etmek mümkündür (Bachtler vd., 2001 :6-9);

- Uluslar arası rekabetçi baskılardaki artış
- Mekansal problemlerin daha yerel ve kompleks olmaya başlaması
- Bölgesel problem ve farklılıklara yaklaşımda, yönetimin yerelleşmesine artan ilgi
- AB rekabetçi ve yapısal politikalarının etkisindeki artış
- Rekabetçi yapıyı destekleyen politika önceliklerindeki yükseliş
- Geleneksel politika araçlarındaki azalma
- Bölgesel yardım alanlarının sınırlandırılması
- Yerel kalkınma girişimlerini artırmak
- Artan mekânsal odaklanma ve sektörel hedefler
- Yönetim tarzında değişim (Yerelleşme, Rasyonalizasyon, İşbirliği, Koordinasyon)
- Sürdürülebilirlik ve sosyal kapsama artan ilgi

Diğer yandan yeni bölgesel kalkınma yaklaşımlarının ise her ortam ve koşulda uygulanabilir olmadığı da literatürde zaman zaman ifade edilmektedir (Asheim ve Isaksen, 1997; Lovering, 1998; Amin, 1999; Eraydın, 2004; Tekeli, 2004; Dulupçu, 2005).

Yeni bölgesel kalkınma politikalarının gelişmiş ülke ve bölge deneyimlerinden hareketle gündeme gelen yaklaşımlar olduğu ve az gelişmiş ülkeler için ise geçerliliğinin tartışmalı olduğu belirtilmektedir. Az gelişmiş ülkelerin yeni bir öğrenme, yenilik ve yapısal dönüşüm içeren bu politikaları uygulamakta dezavantajlı olduğu noktalar vardır. Öncelikle öğrenmenin geçmişten gelen bilgi birikimine dayalı bir süreç olduğu ve dolayısıyla da geçmişten gelen bilgi birikimi, nitelikli beşeri sermayesi ve bunun için gerekli altyapısı olmayan ülke ve bölgelerin kendi iç dinamiklerine dayalı bir bölgesel kalkınma gerçekleştirmelerinin zor olduğu ifade edilmektedir (Eraydın, 2004). Aynı zamanda az gelişmiş ülkelerdeki yetersiz beşeri sermayenin bilgi ve yenilik temeline dayalı becerilerinin geliştirilebilmesi de, eğitim ve öğretim sisteminin güncelleştirilmesine bağlıdır ki kaynak yetersizliği dolayısıyla bu da mümkün olmamaktadır (Dulupçu, 2005). Tekeli (2004)'ye göre de yeni bölgesel teoriler gelişmiş bir bölgenin gelişmesini açıklayan yaklaşımlardır ki bu yaklaşımların geri kalmış bir

bölgenin gelişmesini yönlendirmede kullanılması kolay değildir. Bir bölgenin geri kalmışlığını açıklayan sebepler ortaya konmadan sadece gelişmiş bölge deneyimlerini uygulamak başarı sağlamayabilir. Daha da önemlisi gelişmiş bölgelerin gelişmesinin gözlenmesiyle geliştirilen bu politikalar, gelişmesi başlamış bir bölgenin gelişmesinin nasıl sürdürülebileceğini açıklar. Ancak geri kalmış bölgelerin temel problemi gelişmenin sürdürülebilmesi değil gelişmenin nasıl başlatılacağıdır. Modern kuramlar, bir bölgenin neden geri kaldığına, gelişmenin nasıl başlatılacağına yoğunlaşmamaktadır. Gelişmesi kilitlenmiş, kaynakları yeterli olmayan, ortalama bir bilgi ve becerisi olan nüfusa sahip bir bölgenin dıştan yeterli bir teşvik olmadan sadece kendi iç kaynaklarıyla kısa sürede kalkınabileceğini iddia etmek güçtür. Bu durumda iç dinamikleri ön plana çıkaran yaklaşımların geçerlilik alanlarının ve hangi gelişmişlik düzeyinden sonra geçerli olduğunun da belirlenmesi gerekmektedir.

Dolayısıyla bölgesel politikalardaki dönüşümün ana çerçevesi tüm bölge türlerinde aynı derecede uygulanabilir değildir. Diğer yandan bölgesel yapılanmanın ortaya çıkardığı sınırlamaların bu politikaları uygulamayı güçleştirdiği söylenebilir. Bu sınırlamalar ise, kırılgan yapıya sahip firmalar, zayıf yerel ekonomik entegrasyon, sınırlanmış çeşitlilik, bölgesel yenilik ve öğrenme kapasitesi, devletin bağımlılığı ve kurumsal kapalılık şeklinde ifade edilebilecektir (Amin, 1999). Asheim ve Isaksen (1997)'e göre de, içsel büyümeye dayalı bölgesel kalkınma politikalarının uygulanabilirliği, sosyo-ekonomik ve sosyo-kültürel yapıyla ilgilidir ki, burada da göreceli olarak gelişmiş bölgeler ve tekno-ekonomik ve kurumsal yapısı etkili gelişmiş ülkeler ön plana çıkmaktadır. Az gelişmiş bölgelerde ekonominin geliştirilmesi ve sosyal kalkınmada hala devlete önemli görevler düşmektedir. Alt yapının mekânsal dağılımı, AR-GE ve ekonomik kalkınmanın diğer ön koşullarının oluşturulabilmesi için bu bir zorunluluktur. Endüstriyel politikaların bölgeselleşmesi, çağdaş dünya ekonomilerindeki rekabet gücü için zorunluluk arz edebilir, ancak bu ne fonksiyonel ne de coğrafi olarak bölgesel eşitsizliğin elimine edilmesinde ya da rekabet edebilirliğin tüm boyutlarının oluşturulmasında yeterli olamayabilecektir.

Bu çerçevede günümüzde bölgesel ekonomik politikaları şekillendiren bölgesel rekabet kavramına bağlı olarak da, devletin bölgesel ekonomilerdeki rolünün, bölgelerin rekabet gücünü artırmaya ve bölgesel etkinlik yoluyla bölgesel gelişimi sağlamaya yöneldiği söylenebilecektir. Artık kamunun bölgesel ekonomik politikalarında, bölgesel eşitlik yanında bölgesel etkinlikte, önemli bir kavram olarak ortaya çıkmaktadır.

## 4   Türkiye'de Devletin Bölgesel Ekonomik Politikalarındaki Değişim

Türkiye'de ise Cumhuriyet'in ilk yıllarından itibaren, dengeli bir bölgesel kalkınmaya yönelik politikalar izlenilmeye çalışılsa da, bu çabalar daha çok planlı ekonomi dönemiyle birlikte yoğunluk kazanmıştır. Kamu açısından, dengeli bir bölgesel kalkınmadan kasıt ise, kaynak dağılımını en iyi yansıtan bir yerleşme sisteminin kurulması olmalıdır. Özellikle bölgesel dengesizliklere bağlı olarak, önceleri mal, hizmet ve istihdam olanakları nedeniyle cazibe merkezleri konumundaki büyük kentlerde, nüfusun düzensiz ve hızlı birikimi nedeniyle oluşan negatif dışsallıklar, diğer yandan da geri kalmış bölgelerde ortaya çıkan ekonomik ve sosyal sorunlarla birlikte, bu sorunları besleyen göçler, kamu müdahalesini zorunlu kılmaktadır. Bu çerçevede kamunun, büyük kentlerde, alt yapı tesislerini yenilemesi ve genişletmesi, geri kalmış bölgelerde ise kalkınmanın başlatılabilmesi için kamu yatırımlarının artırılması, toplumsal bir sorumluluk haline gelmektedir (Dinçer vd, 2003).

Türkiye'de bölgelerarası gelişmişlik farklılıklarının giderilmesi, bölgesel ve yerel kalkınmanın hızlandırılması ve sürdürülebilir dengeli bir gelişimin sağlanabilmesi için planlı ekonomi döneminden günümüze uygulanan bölgesel politikaların ana çerçevesini ise, bölgesel kalkınma planları ve kalkınmada öncelikli yöre uygulaması olarak ikiye ayırarak incelemek mümkündür (DPT, 2007b ; Uzay, 2005);

*Bölgesel Kalkınma Planları:* Kalkınma planları çerçevesinde bölgelerarası gelişmişlik farklılıklarının azaltılması, geri kalmış yörelerde yaşayan nüfusun refah düzeyinin yükseltilmesi. Metropollere yönelik göç eğilimlerinin istikrarlı bir yapıya kavuşturulması ve plansız kentleşme nedeniyle oluşan sorunların çözülmesi amacıyla çeşitli dönemlerde muhtelif bölgesel kalkınma planları hazırlanmıştır. Bu kapsamda, Güneydoğu Anadolu Projesi (GAP), Zonguldak-Bartın-Karabük Bölgesel Gelişim Projesi (ZBK), Doğu Karadeniz Bölgesel Gelişme Planı (DOKAP), Doğu Anadolu Projesi (DAP) ve Yeşilırmak Havza Gelişim Projesi (YHGP) uygulamalarına devam edilmektedir.

*Kalkınmada Öncelikli Yöreler (KÖY):* Kamunun az gelişmiş bölgeler lehine uyguladığı bu politika kapsamında da, özel sektör teşvik uygulamaları, çalışanların ücretlerini iyileştirmeye yönelik uygulamalar, tarımsal ve mesleki amaçlı kredi destekleri, yatırımlara finansman desteği ve devletin alt yapı yatırımları gündeme gelebilmektedir.

Diğer yandan bölgesel planlama ve kalkınmada öncelikli yöre uygulamasında devletin aktif olarak bu politikalarda varlığını ve bu politika araçlarının kullanımında belirleyici olduğunu görmekteyiz. Bölgesel politikaların iktisadi boyutları yanında, sosyal boyutlarının da olması kamunun bu politikaları yönlendirmesinin temel nedeni olmuştur. Nitekim dengesizliklerin azaltılmasında devlet sadece iktisadi karlılıkla değil, aynı zamanda toplumsal fayda yaklaşımıyla kaynaklara yön verme ihtiyacı duymaktadır. Şunu da ifade etmek gerekir ki bölgesel gelişmede kamu müdahaleciliği esas olmakla birlikte, bölgesel gelişimin sürekliliği ve başarısı için

özel sektörün de sürece dahil olması gerekmektedir. Bununla birlikte kamunun dengesizlikleri gidermek amacıyla kaynak dağılımına yön vermediği durumlarda piyasa güçlerinin bunu tek başlarına başarmaları güç gözükmektedir. Dolayısıyla geri kalmış bölgelerin bölgesel gelişme sürecine katılabilmeleri, bu bölgelerin özel sektör yatırımlarına ilaveten kamunun yatırım harcamaları ve diğer harcama kalemlerinden daha fazla pay almasını zorunlu kılmaktadır (Dinçer vd, 2003). Ancak yapılan çeşitli ekonometrik çalışma sonuçlarından da hareketle, geleneksel politika araçlarının uygulanmasında devletin beklenildiği ölçüde başarı sağlayamadığı gözlenmektedir.

Bu ekonometrik çalışmalardan biri olan Güven (2007)'in 1979–2000 dönemini kapsayan çalışmasında iller, teşvikten yararlanan ve yararlanamayan olarak ikiye ayrılmış ve iki grup arasındaki toplam eşitsizlik ve toplam eşitsizliğe her bir grubun katkısı belirlenmeye çalışılmıştır. Genel olarak iller arası ve gruplar arası gelir dağılımında adaletsizlik olduğu ancak bu adaletsizliğe en büyük katkıyı sağlayan unsurun teşvikten faydalanacak iller arası eşitsizlik olduğu ifade edilirken, teşvikten faydalanacak illerin kendi aralarındaki eşitsizliğin diğer iller ile aralarındaki eşitsizlikten fazla olduğu belirlenmiştir. Ayrıca elde edilen bulgulara göre teşvikli grubun grup içi eşitsizliğe katkısının teşviksiz grubun katkısından fazla olduğu ve teşvik kapsamına alınan il sayısının artırılmasının teşvikli grubun grup içi eşitsizliğe olan katkısını daha fazla artırdığı ifade edilmektedir. Teşvik kapsamına alınan illerin hemen hemen tamamının bugüne kadar uygulanan KÖY politikalarından yararlanan iller olduğu ve dolayısıyla geçmişten beri uygulanan teşvik politikalarının iller arası gelir eşitsizliğini önlemede başarılı olmadığı sonucuna ulaşılırken, teşviklerden yararlanacak illerin seçiminde uygulanan kriterlerde hassasiyet sağlanması gerektiği belirtilmektedir. Ayrıca teşvik kapsamında sosyo-ekonomik kriterlere göre birbirinden çok uzak illerin seçilmesinin iller arası gelir yakınsamasına izin vermeyebileceği ve her il için aynı derecede teşvik uygulamasının doğru olmayacağı, düşük gelirli iller için farklı ekonomik politikalar geliştirmenin daha rasyonel olacağı ifade edilmektedir.

Öztürk (2005)'ün 1965–2001 dönemini kapsayan çalışmasında ise, farklı istatistikî bölge birimleri sınıflandırmasına bağlı olarak bölgesel eşitsizliğin boyutları gelir açısından belirlenmeye çalışılmıştır. Çalışmada 1965–1986 yılları arasında bölgesel gelir eşitsizliğinde önemli artışlar görüldüğü ve Türkiye'de bölgesel kalkınmaya yönelik politikaların geri kalmış bölgelerin kalkınmasında ve genel olarak bölgesel dengesizliğin giderilmesinde bu dönem için beklenen olumlu gelişmeyi sağlayamadığı sonucuna ulaşılmıştır. 1986 yılından sonra bölgelerarası gelir eşitsizliğinde azalma olduğu ifade edilirken bunun nedeni olarak da artan kitlesel göçlere bağlı olarak, göç alan bölgelerin kişi başına düşen gelirinde bir azalma, sürekli göç veren bölgelerin kişi başına düşen gelirinde bir artış olabileceğine vurgu yapılmaktadır. Diğer yandan 1980'li yılların ortalarından itibaren GAP'ın uygulamaya konulması, terörle mücadele kapsamında Doğu ve Güney Doğu Anadolu'ya büyük miktarlarda kaynak aktarılması ve Anadolu'da yeni sanayi odaklarının ortaya çıkmasının da gelir farklılığının azalmasında rol oynayabileceği ileri sürülmektedir. Ayrıca 1990'lı yıllarda bölgesel gelir eşitsizliğinde bir azalış eğiliminin görülmesinin, bölgesel dengesizliklerin azalması anlamına gelmeyebileceği, farklı sosyo-ekonomik göstergeler dikkate alındığında en yüksek değeri alan illerin ülkenin batısında yoğunlaştığı belirtilmektedir.

Erlat (2005)'ın Coğrafi bölgelerin kişi başına gelirlerinin kişi başına düşen milli gelire, illerin kişi başına gelirlerinin de hem kişi başına milli gelire hem de kendi coğrafi bölgelerinin kişi başına düşen milli gelirlerine yakınsayıp yakınsamadıklarını 1975-2001 dönemi için belirlemeye çalıştığı çalışmasında ise illerin ve bölgelerin bir kısmının yakınsadığı belirlense de büyük çoğunluğunun yakınsamadığı sonucuna ulaşılmıştır.

Filiztekin (2005)'de Türkiye'de uzun ve kısa vadeli bölgesel büyüme dinamiklerinin sektörel yapıdan nasıl etkilendiğini belirlemeye yönelik olarak yaptığı ekonometrik çalışmasında, Türkiye'de bölgesel büyüme oranlarında ciddi farklılıklar olduğunu, uzun vadede iller arasında mutlak bir yakınsamanın olduğunu ifade etmenin mümkün olmadığını, dolayısıyla Türkiye'de bölgesel eşitsizliğin artma eğiliminde olduğu, en iyimser haliyle ise azalmadığı sonucuna ulaşılmıştır. Diğer bir bulguda sektörel yapının bölgesel büyüme dinamikleri üzerinde hem kısa hem de uzun vadede önemli bir etkisinin olduğu yönündedir. Bir bölgenin hangi sektörde yoğunlaştığı ya da uzmanlaşma olup olmadığı, bölgesel büyüme dinamiklerinin önemli bir belirleyicisi olduğu ifade edilmektedir. Örneğin tarım sektörünün yakınsama konusundaki olumsuz sonuçlar açısından önemli bir rol oynadığı ve iktisadi verimlilik bakımından geri kalan illerin hemen hemen büyük çoğunluğunun tarım ağırlıklı bir yapıya sahip oldukları belirtilmektedir.

Karaca (2004)'nın bölgelerarası gelir farklılıklarının azalıp azalmadığına yönelik 1975-2000 Dönemini kapsayan atmış yedi il bazındaki çalışmasında ise, iller arasındaki gelir farklılıklarında bir azalma değil artış olduğu sonucuna ulaşılmıştır. Buna bağlı olarak, uygulanmakta olan bölgesel politikaların sorgulanması gerektiği ifade edilirken, teşvik kapsamında desteklenen il sayılarındaki artışın bu politikaların etkinliğini azalttığına vurgu yapılmaktadır.

Akdede ve Erdal (2004)'ın Yaptığı çalışmada da Türkiye'deki coğrafi bölgeler ve bu bölgelerdeki şehirlerarasında kişi başına gelir farklılıklarının zamanla azalıp azalmadığına, aynı zamanda kamu yatırımlarının bu farklılıkları gidermede bir işlevi olup olmadığını incelemişlerdir. Çalışma sonucunda en düşük kişi başına gelir seviyesi ile kişi başına düşen en yüksek kamu yatırımlarına sahip, Karadeniz, Doğu Anadolu ve Güney Doğu Anadolu bölgelerindeki şehirlerarasında kamu yatırımlarının şehirlerin birbirine yakınsamasına katkıda bulunduğu tespit edilmiştir.

Karaçay-Çakmak ve Erden (2004)'de kamu yatırımları, teşvik ve kredilerin, özel sektör imalat yatırımları üzerindeki etkilerini belirlemek suretiyle devletin bölgesel kalkınmadaki rolünü ortaya koymaya yönelik yaptıkları çalışmada, Avrupa Birliği bölgesel istatistik sistemine uygun olarak 12 bölgeden oluşan Düzey 1 sınıflandırmasını esas almışlardır. Çalışma sonuçlarına göre bölgesel düzeyde kamu yatırımları ile özel yatırımlar arasında tamamlayıcılık olmadığı ancak bu yatırımların göreli olarak azgelişmiş Orta Doğu ve Güney Doğu Anadolu bölgelerinde, özel yatırımları pozitif etkilediği belirlenmiştir. Diğer bir kamu destekleme politikası olan teşvikler için istatiksel olarak anlamlı bir sonuç bulunamazken, kredilerin özel imalat yatırımlarını artırdığı belirlenmiştir. Sonuç olarak bölgelerarası eşitsizliğin giderilmesi ve bölgesel kalkınmanın gerçekleştirilmesi sürecinde kamu yatırımları ve kredilerin anlamlı bir politika olduğu ifade edilmektedir.

Bu çalışmaların hemen hemen tamamında karşımıza çıkan ortak sonuç, Türkiye'de uygulanan bölgesel politikaların bölgesel dengesizlikleri gidermede beklenen ölçüde başarı sağlayamadığı ve bölgesel politikaların yeniden gözden geçirilmesi şeklindedir.

Diğer yandan Türkiye'de uygulanan bölgesel ekonomik politikalarda, zaman içerisinde bazı değişimler gerçekleşmiştir. Örneğin Türkiye ekonomisinde 1980'li yıllarda yaşanan ekonomik politikalardaki değişim ve ihracata dayalı bir kalkınma modelinin uygulanmaya başlanması, ekonomik faaliyetlerin ve sanayinin mekânsal dağılımında bazı değişimleri gündeme getirirken, bu değişimlerin başında da, içsel dinamikleri ile başarı gösteren, yeni sanayi odaklarının orta çıkışı gelmektedir (DPT, 2000). Türkiye açısından içsel bölgesel kalkınma yaklaşımlarının temellerine rastlanabileceği bu dönemde, yerel düzeyde ekonomik entegrasyonu sağlayarak, dünya piyasalarında çok uluslu şirketlerle rekabete girebilen bazı KOBİ kümelenmelerinin dinamik bir üretim organizasyonu oluşturduğu görülmektedir. Hiyerarşik yapılarıyla ölçek ekonomileri mantığı üzerine kurulu büyük firmalar, uluslararası rekabet baskısı altında, talep değişimleri ve dalgalanmaları karşısında güçlük yaşarken, esnek üretim süreçleri ve teknolojileri temelinde yapılanmış ve ortak bir mekânda kümelenmiş KOBİ'ler, avantajlı konuma gelmişlerdir. Belirli sektörler de uzmanlaşmış ve kendi aralarında entegrasyonu sağlamış bu KOBİ kümelenmelerinin bulunduğu küçük ve orta boy bazı kentler, dünya pazarlarında dış rekabete girişerek, ülkenin dışa açılımında önemli bir rol üstlenmişlerdir. Ülkenin çeşitli bölgelerinde yer alan ve kendi iç dinamikleriyle gelişme gösteren bu kentler (Denizli, Gaziantep, Afyon, Çorum, Kayseri ve Kahramanmaraş gibi) yeni sanayi odakları diye tanımlanmıştır (Dinçer vd, 2003). Ayrıca Sekizinci Beş Yıllık Kalkınma Planı'nda, ülkemizde içsel bölgesel gelişime örnek gösterilebilecek yeni sanayi odaklarına atıf yapılarak, bu odakların oluşumu ve gelişimine katkı sağlayacak, eğitim ve danışmanlık hizmetleri, Ar-Ge ve teknoloji desteği verilerek, işbirliği ve ortaklıklar oluşturulmasına, girişimciliğin ve kurumsallaşmanın geliştirilmesine yönelik faaliyetlere ağırlık verileceği belirtilmektedir (DPT, 2001). İçsel bölgesel kalkınma politikalarına esas vurgu ise, Dokuzuncu Kalkınma Planı'nda yapılırken, içsel bölgesel kalkınma politikalarının ve politika araçlarının bu kalkınma planında, bölgesel politikalarımızı şekillendirdiği görülmektedir. Bu politikalar, yerel dinamiklere ve içsel potansiyele dayalı kalkınma anlayışı içerisinde, kamu kesimi özel sektör ve sivil toplum örgütleri arasında işbirliği ve ortaklıkların desteklenerek, ağsal ilişkilerin artırılması, özellikle az gelişmiş bölgelerde uzmanlaşmayı destekleyecek programlar oluşturulması, farklılaştırılmış KOBİ politikalarının uygulamaya konulması ve kümelenmelerin desteklenmesi, yenilikler ve yeni teknolojilere erişimin kolaylaştırılması şeklinde karşımıza çıkmaktadır (DPT, 2007a).

Ayrıca 1990'lı yıların sonlarından itibaren Türkiye'nin bölgesel politikalarının şekillenmesinde, AB bölgesel politikalarına uyumun ön plana çıktığı görülmektedir. 1999 yılında Helsinki'de yapılan Avrupa Konseyi sonucunda, Türkiye'nin AB üyelik sürecinin başlamasıyla birlikte Türkiye, gerçekleştirdiği kurumsal ve yasal bazı düzenlemeler ile AB bölgesel politikalarına uyum sağlamaya çalışmıştır. Bu süreçte ilk olarak bölgesel politikaların belirlenmesi, bölgesel istatistiklerin toplanması ve AB bölgesel istatistik sistemine uygun karşılaştırılabilir istatistikî veri tabanı oluşturulmasını sağlayan, İstatistikî Bölge Birimleri Sınıflandırması (NUTS), 2002 yılında bir yasayla kabul edilmiştir. 2004 ve 2005 yılında İl Özel İdaresi Kanunu, Belediye Kanunu, Büyükşehir Belediye Kanunu'nda yapılan değişikliklerle yerel yönetimlerin kalkınma konusundaki yetki ve sorumlulukları da artırılmıştır. Kaynakların etkin kullanımıyla bölgesel gelişmeyi hızlandırmak ve işbirliğini artırmak amacıyla kalkınma ajanslarının kurulmasına yönelik kanun da Şubat 2006 yılında yürürlüğe girmiştir (Kayasü ve Yaşar, 2006). Yine AB uyum süreci dikkate alınarak 16 Temmuz 2009 tarihli Resmi Gazete'de yayımlanan Yatırımlarda Devlet Yardımları Hakkında Karar ile yeni yatırım teşvik sistemi yürürlüğe girmiştir (Yavan, 2010). Diğer yandan bu teşvik sisteminde, 1 Ocak 2012 tarihi itibariyle bazı değişiklikler gündeme gelmiş, bölgesel teşvik uygulamalarıyla yeni bir bölgesel harita hazırlanmış ve il bazında teşvik sistemine geçilmiştir. Desteklenecek sektörler güncellenirken, destek unsurlarında oranlar ve süreler itibariyle değişime gidilmiş, öncelik arz eden yatırım alanları belirlenmiştir (Ekonomi Bakanlığı, 2012: 9).

Bu sürecin, AB bölgesel politikalarının ana çerçevesinin yerel birimlere dayanması nedeniyle, Türkiye'nin merkezi yönetiminin ve bölgesel politikalarının daha fazla yerelleşmesini ve bölgeselleşmesini gündeme getirebileceği belirtilmektedir. Ancak bununla beraber Türkiye'nin politik yapısında belirleyici olan üç temel faktörün de, merkezi gücün yerelleşmesine, kamu, özel sektör ve sivil toplum işbirliğine dayalı bölgesel kalkınma stratejilerinin düzenlenmesine kolaylıkla müsaade etmeyebileceği de ifade edilmektedir. Bu faktörler

ise; ülke politikasında hayati rol oynayan güvenlik, geleneksel merkeziyetçi devlet ve kayırmacı ilişkiler şeklinde sıralanmaktadır (Ertugal, 2005).

## 5 Sonuç

Günümüzde bölgesel farklılıkları giderici ve bölgesel gelişimi sağlayıcı olan, bölgesel ekonomik politikaların başarısında, devletin önemli bir aktör olduğu görülmektedir. Devlet bölgesel ekonomik politikalar bağlamında, üretimi ve işgücü verimliliğini artırıcı alt yapı yatırımlarıyla, kurumsallaşma ve yabancı yatırımlar için bölgelerin cazip hale getirebilmektedir. Ayrıca son yıllarda ön plana çıkan içsel bölgesel kalkınma politikaları çerçevesinde, yerel potansiyelin harekete geçirilmesini sağlayabilecek kümelenmelerin desteklenmesiyle ve bölgelerin teknoloji ve yenilikçi yapılarının teşvik edilmesiyle, özellikle de dezavantajlı bölgelerin gelişimine katkı sağlayabilecektir. İzlenen bu politikalar, sadece geri kalmış bölgelerdeki bazı faaliyetlerin desteklenmesi ve kaynakların bu bölgelere aktarılmasının dışında, bölgesel rekabet gücünü artırmayı hedefleyen politikalar şeklinde karşımıza çıkmaktadır.

Her ne kadar bu politikaların içerisinde yer alan içsel bölgesel kalkınma politikalarının uygulanmasıyla ilgili olarak literatürde zaman zaman yaşanan tartışmalarda, yerel potansiyelin harekete geçirilmesi yaklaşımıyla devletin pasifleştirildiği ve gelişmiş ülkeler için uygun olan bu yaklaşımın az gelişmiş ülkelerde geçerliliğinin sorgulanabileceğine yönelik bir bakış açısı olsa da, içsel bölgesel kalkınma politikalarının uygulanması, devletin dışlanması anlamına gelmemektedir. Devlet özellikle içsel potansiyeli harekete geçirici dışsal müdahalelerle, bölgesel düzeyde verimlilik artışları sağlayarak, kendi kendini besleyen bir kalkınma sürecine katkı sağlayabilecektir.

1980'li yıllardan itibaren bölgesel ekonomik politikalar ve bu politikalarda devletin değişen rolünü farklı ülke uygulamalarında görmek mümkündür. Örneğin AB ülkelerinde bölgesel ekonomik politikalarda yerelleşme ve bölgesel rekabet önemli kavramlar olarak karşımıza çıkarken, yerel aktörlerin bölgesel kalkınmada yetki ve sorumluluklarının arttığı görülmektedir.

Türkiye'de ise geleneksel olarak uygulanan bölgesel ekonomik politika araçları olan, bölgesel kalkınma planları ve kalkınmada öncelikli yöre uygulamasında devletin aktif varlığı görülürken bu politika araçlarının bölgesel dengesizlikleri gidermede ve bölgesel kalkınmanın gerçekleştirilmesinde beklentilere cevap veremediği görülmektedir. Özellikle 1980-2000 yıllarını kapsayan verilerle yapılan ve Türkiye'de uygulanan bölgesel ekonomik politikaların bölgesel gelir yakınsamasına katkısını belirlemeye yönelik ekonometrik çalışma sonuçlarına bakarak bu yargıya ulaşmak mümkündür

Diğer yandan özelliklede Türkiye'nin AB üyelik süreciyle birlikte, bölgesel ekonomik politikalarında, yasal ve kurumsal anlamda bazı değişimler meydana gelmiştir. AB bölgesel ekonomik politikalarının temelinin bölgelerin rekabetçi yapısını geliştirmeye yönelik olmasının da etkisiyle, kamunun uyguladığı bölgesel ekonomik politikalarda, bölgesel eşitlik politikalarına ilaveten, bölgelerin rekabetçi gücünü artırmaya yönelik politikalarında, önem arz etmeye başladığı görülmektedir. Bu çerçevede bölgelerin rekabetçi yapısını artırabilecek politikalar açısından, ülkemizde kamunun özelliklede geri kalmış yörelerde, ekonomik ve sosyal alt yapı yatırımlarını artırmasına, yerel potansiyeli harekete geçirici biçimde, kurumsal yapının ve kümelenmelerin desteklenmesine, bölgelerin yenilikçi ve teknolojik kapasitelerinin geliştirilmesine yönelik politikalara ağırlık vermesi gerekmektedir. Bu politikalar aynı zamanda bölgelerin uluslararası yatırımcılar için cazip hale gelmesini teşvik eder iken, bu politika ve politika sonuçlarının birikimli süreci de, bölgesel etkinliğin artmasına yardımcı olabilecektir.

# Tüketim Fonksiyonu ve Türkiye için Gelir-Tüketim İlişkisinin Ampirik Analizi

# Consumption Function and the Empirical Analysis of the Relationship between Income and Consumption for Turkey

Asst. Prof. Dr. Utku Altunöz (Sinop University, Turkey)

## Abstract

The relationship between income and consumption is one of the most important subjects of economics that became the subjects of many study. In this study, Absolute Income Theory of Keynes for Turkey is predicted by using the data in period 1987 – 2012 and the method of cointegration. Before the econometric analysis, the function of consumption, consumption theories, studies involving these theories and its critics were examined. After that, variables were examined the unit root situations. Two variables do not take action together and it is seen that they do not affect each other when the long term relations and the short term dynamics are examined.

## 1 Giriş

Tüketim, insan ihtiyaçlarının doğrudan doğruya giderilmesi için mal ve hizmet kullanımıdır (Ross, 1964). Tüketici (consumer), hangi maldan ne kadar satın alacağına karar veren ekonomik birimdir. Tüketici, amaca göre sadece birey olabileceği gibi, çoğu kez de hane halkı olabilir. Örneğin bir otomobil, ev ya da arsa satın alırken bireysel karar yerine, çoğu kez hane halkının kararı gerekmektedir. Ancak lokantada yemek tercihini tüketici olarak birey vermektedir (Yaylalı, 1994). Klasik iktisatçılar tüketimi, tüketim mallarının satın alınması olarak değerlendirmişler ve tüketim olgusu üzerinde fazla durmamışlar, daha çok gelirin paylaşımı ve üretim konularını incelemişlerdir. Tüketimin önemine ilk kez Keynes değinmiştir. Tüketimi açıklarken harcamaları esas almıştır (Keynes, 1969).

Tüketim harcamaları; mikro iktisadi açıdan tüketicinin fayda maksimizasyonu, makro iktisadi açıdan ise, istihdamı ve milli geliri belirleme noktasında, toplam talebin en önemli bileşenini oluşturması bakımından önem arz etmektedir. Keynes'e göre tüketim harcaması, belli bir dönemde yapılan toplam satışlar ile müteşebbislerin birbirlerine yaptıkları toplam satışlar arasındaki farktır.

Tüketim harcamalarını etkileyen önemli faktörleri şu şekilde sayabiliriz.

Ekonomik faktörler

Nüfusla ilişkili faktörler

Davranışsal faktörler

Tüketim harcamalarının bu kadar çok üzerinde çalışılan bir konu olmasının nedeni, tüketimin insan hayatında çok önemli bir yere sahip olmasıdır. İktisat politikalarının yararlı ve etkin olabilmesinin yolu, güvenilir bir makro ekonomik modelde geçmektedir. Tüketim fonksiyonu konusunu kapsayan birçok model bulunmasına rağmen, söz konusu modellerin ekonometrik bakımdan test edilişlerinde ve verilerin elde edilişinde birçok zorluk yaşanmaktadır. Bu nedenle her ülke, kendi ülkesine uygun verileri kullanarak, ülkelerindeki tüketim davranışlarını en iyi şekilde açıklayacak makro ekonomik modeller geliştirmelidirler.

## 2 Teorik Literatürde Tüketim Fonksiyonu

Tüketim fonksiyonu teorilerinin esin kaynağı, farklı gelir gruplarındaki kişilerin tüketim eğilimlerinin ne olduğu sorusuna aranan cevaptır. İktisat literatüründe temel olarak mevcut dört teorinin de ortak yönü, tüketimi belirleyen temel unsur olarak geliri kabul etmeleridir. Bununla birlikte gelir, farklı iktisat ekollerinde farklı isimlerle karşımıza çıkmaktadır. Keynes (1936)tarafından ortaya atılan mutlak gelir teorisinde cari mutlak gelir olarak karşımıza çıkan gelir kavramı, Milton Friedman'ın (1957) sürekli gelir teorisinde, uzun dönemde normal olarak kazanılacağı ümit edilen sürekli gelir olarak karşımıza çıkmaktadır. Benzer şekilde Franco Modigliani ve Albert Ando (1963)'nun birlikte geliştirdikleri hayat devresi teorisine göre ise beklenen gelir kavramını görürken James Duesenberry (1949)`nin nispi gelir teorisinde kişinin toplum içinde nispi durumuna bağlı "nispi gelir" kavramını görmekteyiz.

### 2.1 Mutlak Gelir Hipotezi (Absolute Income Hypothesis)

Keynesyen teoride, tüketim harcamaları cari gelirin bir fonksiyonudur. Buna göre gelir arttıkça tüketim de artacak, ancak bu artış gelirdeki artıştan daha düşük olacaktır. Yine Keynesyen İktisat, gelir arttıkça, ortalama tüketim eğilimin de azalacağını öngörmektedir. Mutlak Gelir hipotezi olarak da adlandırılan bu teori, tüketim ile gelir arasında oransal bir ilişki olmadığını, diğer bir ifadeyle tüketimin gelirin sabit bir oranı olmadığını ifade etmektedir.
***Şekil 1:*** *Tüketim Fonksiyonunun Grafiksel Gösterimi*

Şekil 1 C eğrisi üzerindeki de E noktasında gelir seviyesi $OY1$ kadardır. Bu noktada, ortalama tüketim eğilimi $= OC1/ OY1$ ve marjinal tüketim eğilimi $= \Delta C / \Delta Y = ER / RE0$ olduğu yerde ortalama tüketim eğilimi > marjinal tüketim eğilimidir. Burada izlenen oransız tüketim fonksiyonudur. 45 derecelik doğrunun C eğrisi ile kesiştiği $OY0$ gelir seviyesi olan $E0$ noktasında ortalama tüketim eğilimi $APC=OC0 / OY0$. Şekilde $OY0$ seviyesinin altındaki gelir seviyesinde tüketim gelir seviyesinden fazla olmaktadır. Bu alanda, ortalama tüketim eğilimi 1 den büyük durumdadır. $OYo$ seviyesinin üzerindeki bir gelir seviyesinde ise tüketim artışı gelir seviyesinden daha azdır bu nedenle ortalama tüketim eğilimi düşüş eğiliminde olup 1 den küçük durumdadır.

Keynes'e göre tüketim harcamaları istikrarlı gelir istikrarsızdır. Milli gelir artıkça tüketim artar ama ortalama tüketim azalır. Yani gelirdeki artıştan daha az tüketim yaparız.

Keynes'in mutlak gelir hipotezini ileriye sürerken dikkate aldığı gelir düzeyi cari kullanılabilir gelirdir. Ve kısa dönem itibari ile istikrarsız bir büyüklük niteliğindedir.

Keynes'in tüketim fonksiyonunda tanımladığı tüketim kalıbı istikrarlı bir nitelik taşır. Tüketim kalıbının istikrarlı olması; milli gelirdeki değişmelerin, toplumun toplam tüketimini izlemek sureti ile tahminini sağlar. Yani mpc sabit olduğu için tüketimin belirlenmesi ile milli geliri bulabiliriz.

Keynes'e göre bireyin geliri artıkça tüketimi de artar. Ancak tüketim artışı gelir artışının gerisinde kalır.

Keynes'e göre marjinal tüketim eğilimi ve marjinal tasarruf eğilimi sabit değer taşır.

Tüketim Bulmacası

Simon S. Kuznets (1946) uzun dönemde ulusal kullanılabilir gelirden ortalama tüketim eğiliminin gelir artıkça değişmediğini, özellikle mutlak gelir hipotezinin öngördüğü biçimde azalmadığını ortaya koydu. Bu durum literatürde tüketim bulmacası olarak adlandırılmaktadır.

Mutlak gelir hipotezinin ortalama tüketim eğilimi ve marjinal tüketim eğilimi hakkında bazı tespitleri mevcuttur. Ortalama tüketim eğilimi, kullanılabilir gelir arttıkça azalmaktadır. Ortalama tüketim eğilimi, marjinal tüketim eğiliminden büyüktür. (Bocutoğlu, 2010). Marjinal tüketim eğilimi sıfırdan büyük ve birden küçük bir değer olup, kullanılabilir gelir değişmeleri karşısında sabittir. Bununla birlikte marjinal tüketim eğilimi, ortalama tüketim eğiliminden küçüktür.

## 2.2 Nispi Gelir, Sürekli (Yaşam Boyu) Gelir ve Hayat Devresi Hipotezi

J.Duesenberry tarafından ortaya atılan; kısa ve uzun dönem tüketim fonksiyonlarını bağdaştırmaya çalışan nisbi gelir hipotezi, bireylerin tüketim ve tasarruf davranışlarının içinde yaşadıkları toplumsal çevreden büyük ölçüde etkilendiği ve tüketimin; toplumun psikolojik ve sosyal özelliklerine göre şekillendiği varsayımından yola çıkmaktadır. Keynes'in hesaba katmadığı insan psikolojisinin tüketim üzerindeki etkisi söz konusu hipotezde önem arz etmektedir. Duesenberry'e göre ailelerin tüketim harcamaları, cari gelirlerine göre değil içinde yer aldıkları nispi gelir gruplarına bağlıdır. Bununla birlikte nispi gelir dağılımındaki yerlerinin değişmesi, tüketim davranışlarını da farklılaştıracaktır (Duesenberry, 1949).

Bireylerin içinde bulundurdukları sosyal çevreyi etkileme eğilimleri vardır. Duesenberry' de Keynes gibi servet ve mirası göz önünde bulundurmaz. Tüketimi gelirin bir fonksiyonu olarak ele alır.

Monetarist iktisatçı Milton Friedman (1957) tarafından oluşturulan hipotezde uygulanan tüketim fonksiyonu;

$$C = \bar{C} + cY \qquad\qquad (1.2)$$

Şeklinde tüketim fonksiyonudur. Burada, C Ele alınan zaman birimi içerisinde gerçekleşen toplam tüketim miktarı olup hesaplanan tüketimi ifade etmektedir. $\bar{C}$ , otonom tüketim miktarını ifade etmektedir. Başka bir ifadeyle Milli gelir düzeyinden bağımsız olan yani gelir düzeyindeki değişmelerden etkilenmeyen tüketim harcamalarıdır. c marjinal tüketim eğilimidir. Marjinal tüketim eğilimi (MPC) $= \Delta C / \Delta Y$"dir. Gelirde meydana gelen bir artışın ne kadarının tüketime gideceği anlatılmaktadır. Marjinal tasarruf eğilimi (MPS) ise $\Delta S/\Delta Y$"dir. Gelirde meydana gelen bir artışın ne kadarının tasarrufa gideceği anlatılmaktadır. Tasarruf, kullanılabilir gelirin harcanmayan kısmıdır. Y ise kullanılabilir gelirdir. Bireyin tüketimi sadece cari dönemde elde ettiği gelire

bağlanmayıp yaşam boyu hipotezinde olduğu gibi ileri dönemde elde etmeyi umduğu gelire de bağlıdır. Uzun dönemli gelir beklentisi vardır.

Tüketim= Cari dönemdeki gelir+ Uzun dönemdeki gelir beklentisi

Friedman, sürekli geliri bireyin yaşı, mesleği sağlık durumu, eğitimi vb pek çok faktörün göz önüne alınmasıyla bireyin planlanan dönem içerisinde kazanmaya devam edeceğini düşündüğü gelirlerin ağırlıklı ortalaması olarak kabul etmektedir. Diğer bir deyişle geçmiş şimdiki ve gelecekteki gelirlerin ortalamasıdır. Sürekli gelir ve sürekli fiyatlar geçmiş dönemde oluşmuş gelir ve fiyatlara ilişkin gözlemlere dayanır. Friedman' a göre sürekli gelir servet düzeyine bağlıdır. Servet ise geniş anlamıyla tüm tüketile bilinir gelir ve hizmet kaynaklarını kapsar. Dolayısıyla servete üretken olan insanı da kattığımızda servetin anlamı genişler.

Franco Modigliani ve Alberto Ando (1963) tarafından geliştirilen ve fertlerin tüketim ve tasarruf davranışlarının hayat devresindeki pozisyonuna bağlılığını belirlemeye çalışan bir teoride. Hayat devresi hipotezinde, tüketim sadece cari gelire değil, aynı zamanda beklenen ortalama gelir ve cari servete bağlı olmaktadır. Ortalamam beklenen gelirde bir değişme olmadığı durumda tüketim cari gelirdeki değişmelere tepki göstermediğini ileri sürmektedir.

Modigliani'nin yaşam boyu hipotezine göre bireyin psikolojik eğilimine göre gençlik orta yaş ve yaşlılık dönemlerinde tasarrufları farklı farklı ortaya çıkar.

Modigliani'ye göre bireyin yaşamı 3'e ayrılır.

Gençlik Dönemi: Bireyler gençlik dönemlerinde daha az gelir elde ederler ama tüketimleri fazladır. Bu durumda ya tasarruf çözerler ya da borçlanırlar. Gençlik döneminde (–) tasarruf vardır. Çünkü gelirleri yok denecek kadar azdır.

Orta Yaş Dönemi: Bireyler daha fazla tasarruf yapma eğilimi gösterirler. Çünkü hem geçmişteki borçlarını ödemek, hem de yaşlılık dönemindeki harcamalarını karşılamak zorundadırlar.

İleri Yaş Dönemi: Emeklilikle birlikte bireyler birikimlerini harcar ve tasarrufa geçer.

**Şekil 2:** *Hayat Devresinin grafiksel Gösterimi*

Şekil 2 de tasarruf ve tüketim eğrilerinin kesiştiği birinci noktaya kadar olan ve söz konusu eğrilerin arasında kalan alan (-) tasarruftadır. (Gençlik Dönemi) Tasarruf eğrisinin tüketim eğrisini kestiği noktaların arasında kalan alanda (+) tasarruflar mevcuttur. (Orta yaş dönemi) 2. Noktadan sonraki iki eğri arasında kalan alan ise (-) tasarrufun olduğu ileri yaş dönemidir.

## 3   Tüketim Fonksiyonu Konusunda Literatür Taraması

Gelir ve tüketim ilişkisinin teorik anlamda zengin bir konu olması nedeniyle yapılan çalışmaların da çeşitliliği dikkatlerden kaçmamaktadır. Bazı çalışmalar tüketim fonksiyonu ile ilgili hipotezlerin doğruluğunu test ederken bazı çalışmalar ise ülkeler ve şehirler için gelir tüketim davranışlarını test etmektedirler. Çalışmamızın literatür taramasında bu çalışmaların hepsine örnek olacak çalışmalar seçilmiştir.

Klein ve Liviatan (1957), Londra'da 305 farklı aileyi kapsayan çalışmalarında aile bütçesi anketi uygulaması yoluna gitmişlerdir. Söz konusu çalışmada mirasa konan ailelerin harcamalarında paralel bir artış olduğu sonucuna ulaşmışlardır.

Eisner (1958), ABD aile bütçesi anketinin verileri ile yapmış olduğu çalışmada sürekli gelir teorisinin geçerli olduğu sonucuna varmıştır.

Campbell-Mankiw (1990) A.B.D. ekonomisi için çeyrekli (kişi başına) verilerle, 1953-1986 dönemini kapsayan bir çalışma yapmışlardır. Bu çalışma sonucunda cari gelir 1 dolar arttığında tüketimde yaklaşık 0.50 dolar artış olduğu sonucuna ulaşmışlardır. Bu önemli duyarlılığı nedenini kişilerin bekleyişlerini Rasyonel

Bekleyişlere göre değil de uyarlayıcı bekleyişlere göre şekillendirmeleri ve bu nedenle sürekli geliri, cari gelirlerine aşırı ağırlık vererek tahmin etmelerine dayandırmışlardır.

Özer (1992), Erzurum ilinde 400 hane halkına uyguladığı anketler yardımıyla hane halklarının yaşam standartlarını belirlemiştir. Çalışmada belirlenen 5 farklı tüketim fonksiyonu Sıradan En Küçük Kareler yöntemiyle tahmin ederek gelir hipotezleri test edilmiş ayrıca doğrusal modelin en iyi model olduğuna karar verilmiştir.

Aşırım (1996), Türkiye'de tüketicilerin Hayat Devresi Hipotezine uygun davranıp davranmadıklarını test ettiği çalışmasında Türkiye'yi temsil eden bir tüketim modeli oluşturmuştur. Türkiye için sadece tüketimin bir dönem gecikmelisinin tüketimi tahmin etmede tahmin gücü olduğu sonucuna ulaşmıştır. Yani tüketiciler, her bir çeyrekte bir önceki çeyrekte planladıkları kadar tüketimde bulunmak istemektedirler.

Sachs ve Larrain (1993)'e göre ise Keynes'in eşitliğinin en önemli problemi, faiz oranlarının ve gelecekteki gelirin bugünkü tüketim üzerindeki rolünü ihmal etmiş olmasıdır.

## 4   Türkiye İçin Gelir Tüketim İlişkisinin Tahmini

Tüketim harcamalarıyla ilgili olarak ortaya konulan bu dört hipotez de temel bağımsız değişken olarak geliri almışlardır. Bu ortak nokta dışında çok ciddi farklılıklar izlenmektedir. Tüketim harcamalarında servet, fiyat, yaş cinsiyet vb. birçok değişken etkin rol oynasa da tüketim davranışlarını etkileyen en önemli değişkenin gelir olduğu kabul edilmektedir. Bununla birlikte dünyanın çeşitli ülkelerinde tüketim fonksiyonu konusunda yapılan ampirik çalışmalarda çoğunlukla hayat devresi ve sürekli gelir hipotezini kullandıkları izlenmektedir. Çünkü tüketim teorileri kendi içlerinde tutarlı olmakla birlikte çeşitli kısıtlardan dolayı ampirik tahminleme yapılırken problemler yaşanmaktadır. Bu problemlerin başında modele dâhil edilemeyen değişkenler nedeniyle modelin eksik spesifikasyonu gelmekte, bu durumda da sahte regresyon sorunu ve ölçme hataları oluşabilmektedir.

Çalışmamızda alışılagelmiş hayat devresi ve sürekli gelir hipotezi yerine mutlak gelir teorisine ilişkin tüketim fonksiyonunu tahmin etmek suretiyle teorinin Türkiye için gelir-tüketim ilişkisini açıklamada ne kadar etkili olduğu tahmine edilmeye çalışılacaktır. Araştırmada TÜİK'den elde edilen 1987:2012 tarihlerini kapsayan üçer aylık zaman serisi verileri kullanılacaktır. Çalışma modelimiz, üssel bir büyümeye sahip olan serinin sonunda doğrusal bir yapıya sahip olması nedeniyle logaritmaları alınmıştır.

$$InC_t = a + blnY_t + \varepsilon_t \tag{1}$$

1 numaralı modelde $InC_t$ nihai özel tüketim harcamalarını, $lnY_t$ ise gayri safi yurt içi hasılayı ifade etmektedir.

Ekonometrik Zaman serileri açısından en çok tartışılan unsurlardan biri, serilerin durağan olup olmadığıdır. Ortalaması ve varyansı zaman içinde değişmeyen ve iki dönem arasındaki kovaryansı, kovaryansın hesaplandığı döneme değil de yalnızca iki dönem arasındaki uzaklığa bağlı olan ve dönemler arasında değişmeyen olasılıklı bir süreç durağandır (Gujarati, 1999). Uzun dönemde durağan seriler dalgalanmalar gösterse de aynı ortalamayı koruyan bir yapıdadırlar. Bütünleşme düzeyleri sıfırdır. Durağan bir süreç zaman içinde değişmemeli ve sonlu bir ortalamada ve sonulu bir varyantsa olmalıdır. Bu durumda, serinin ortalaması ve varyansı birbirinden bağımsız olmaktadır. Yani serinin ortalaması varyansa göre değişmemeli, varyans ortalama etrafında salınım göstermelidir. Bununla birlikte durağan bir süreç, geçmişten bağımsız bir kovaryansa sahip olmalıdır.

Granger ve Newbold (1974)'un durağan olmayan zaman serileriyle çalışılması halinde sahte regresyon problemiyle karşılaşılabileceğini göstermesinden bu yana, zaman serilerinin kullanıldığı çalışmalara bu serilerin durağanlığının araştırılmasıyla başlanması standart bir hal almıştır. Zaman serilerinin durağanlığının araştırılmasında en çok kullanılan yöntem ise Dickey ve Fuller (1981) tarafından geliştirilen genişletilmiş Dickey-Fuller (augmented Dickey-Fuller; ADF) birim kök testidir.

| Değişkenler | Augmented Dickey-Fuller Birim Kök Testi | | | | | | | | Sonuç |
|---|---|---|---|---|---|---|---|---|---|
| | Sabit ve Trendli | Olasılık | Sabit ve Trendsiz | Olasılık | Sabitsiz ve Trendsiz | Olasılık | Serinin Birinci Farkı | Olasılık | |
| Inc | -2.2132 | 0.2333 | -0.49211 | 0.9211 | 3.0122 | 0.9892 | -7.212 | 0.00 | I (1) |
| Iny | -2.7662 | 0.2711 | -0.64211 | 0.8321 | 4.0122 | 0.9762 | -7.871 | 0.00 | I(1) |

*Tablo 1: ADF Birim Kök Test Sonuçları*

Tablo 1 de izlendiği gibi değişkenler kendi seviyelerinde durağan değillerdir. Bu nedenle birinci dereceden farkları alınarak durağan hale getirilmiştir. Başka bir ifadeyle değişkenlerin bütünleşme dereceleri birdir. Her iki seride aynı dereceden durağan (bütünleşik) olduğundan, aralarında uzun dönem denge ilişkisinin varlığının test edilmesi gerekir. Bu bağlamda değişkenlerin eşbütünleşik olup olmadıklarını test edebilmek için uygulamamızda öncelikle Engle- Granger ve daha sonra Johansen eşbütünleşme testleri dikkate alınmıştır. Eşbütünleşme kavramı ilk olarak Granger (1981) tarafından geliştirilmiştir (Utkulu, 1997). Sonraki yıllarda yapılan Engle ve Granger'ın tanımına göre, Xt ve Yt gibi ilk farkları durağan olan iki zaman serisinin doğrusal bileşimleri durağan ise (bu iki serinin oluşturduğu regresyon denkleminin hata terimi durağan ise) bu seriler birbirleriyle eşbütünleşiktir. Aynı

zamanda bu iki seri arasındaki fark zamanla artma veya azalma eğiliminde değildir (Engle ve Granger, 1991). İlave olarak değişkenler arasında uzun dönemli gerçek ilişki mevcuttur ve sahte regresyon sorunu yoktur. Değişkenlerin eşbütünleşik olup olmadıklarını test edebilmek için uygulamamızda öncelikle Engle- Granger ve daha sonra Johansen eşbütünleşme testleri dikkate alınmıştır. Engle ve Granger'ın 1987'de geliştirdikleri İki Aşamalı Modelleme Yöntemine göre, değişkenlerin eşbütünleşik olması için modelin hata teriminin durağan olması ve Hata Düzeltme Mekanizmasının (ECM) çalışması gerekmektedir.

Bu yöntem iki aşamadan oluşmaktadır (Engle ve Granger, 1991,s. 81-112). Engle Granger iki aşamalı yaklaşımında aynı entegre derecesine sahip değişkenlerin EKK tahmini yapıldıktan sonra bu tahmin sonucunda ede edilen kalıntılara birim kök testi uygulanır. Eğer kalıntılar durağan ise bu modeldeki değişkenlerin koentegre oldukları ve uzun dönemde birlikte dengeye gelecekleri söylenebilir. Birinci aşama, uzun dönem denkleminin En Küçük Kareler Yöntemi (EKKY) ile tahminlimesindir:

$$X_t = \beta Y_t + u_t$$

denklemde $X_t$ ve $Y_t$ I(1)'dir. Bu serilerin eşbütünleşik olmaları için gerekli koşul bu regresyondan elde edilen hata teriminin durağan olmasıdır. Burada boş hipotez eşbütünleşme ilişkisi yoktur; alternatif hipotezi ise eşbütünleşme ilişkisi vardır şeklindedir. Boş hipotezin reddedilmesi durumunda eşbütünleşme vardır alternatif hipotezi kabul edilir ve ikinci aşamaya geçilir. İkinci aşamada ise kısa dönem denklemi tahminlenir:

$$\Delta X_t = \alpha_1 \Delta Y_t + \alpha_2 u_{t-1} + \varepsilon_t$$

$\Delta$ değişkenlerin birinci farkını ve $\varepsilon_t$ ve $u_t$ hata terimlerini temsil etmektedir. Tahmin edilen $\alpha_2$ katsayısı sıfır ile bir arasında; negatif işaretli ve istatistikî olarak anlamlı ise eşbütünleşme ilişkisi söz konusudur. Uzun dönem ile kısa dönem arasında nedensellik bağını kuran mekanizma ise ECM'dir. ECM, iki zaman serisinin birinci farklarının zaman içinde birbirinden uzaklaşmasını engellemektedir ve seriler düzeyde durağan olmadıkları halde farkları durağandır ve seriler artık modellenebilmektedir. Granger Temsil Teoremi (GRT)'ne göre, eğer değişkenler eşbütünleşik ise ECM çalışır ve ECM çalışıyor ise değişkenler eşbütünleşiktir (Engle ve Granger, 1987).

| Model: $InC_t = 0,58211 + 0,72122\, InY_t + \varepsilon_t$ |
|---|
| $R^2 = 0,961242$ |
| Düzeltilmiş $R^2 = 0,961021$ |
| Durbin Watson istatiği = 0.412177 |
| Hata Terimi İçin Birim kök İstatistiği = -4,21125 |
| %5 Hata Seviyesinde Kritik Değer = -4.312 |

*Tablo 2: Engle-Granger Eşbütünleşme EKK Sonuçları ve Kalıntıya Yapılan Birim Kök Test Sonucu*

Eşbütünleşmenin varlığının test edilmesi amacıyla başvurulan bir diğer test de Johansen eşbütünleşme testidir. Engle-Granger eşbütünleşme testi, iki aşamalı eşbütünleşme testi iki değişkenli durumlar için daha tutarlı sonuçlar vermesine rağmen, Johansen eşbütünleşme testi ile çalışma güçlendirilmiştir. uygun olan gecikme sayısını bulmak için yapılan VAR yönteminin sonucunda gecikme sayısı 1 dir. SC bilgi kriteri esas alınmıştır.

| Maksimum Öz Değer Testine Göre Eşbütünleşme | | | |
|---|---|---|---|
| Ho | H1 | Test İstatistiği | % 5 Kritik Değer |
| r=0 | r≥1 | 8,21612 | 14,09 |
| r≤1 | r≥2 | 0,17912 | 3,91 |
| İz Değer Testine Göre Eşbütünleşme | | | |
| Ho | H1 | Test İstatistiği | % 5 Kritik Değer |
| r=0 | r≥1 | 8,421231 | 15,21 |
| r≤1 | r≥2 | 0,17912 | 3,91 |

*Tablo 3: Johansen Eşbütünleşme Testi Sonuçları*

Tablo 3 teki test istatistikleri ile %5 yanılma düzeyindeki tablo değerlerinin karşılaştırılması ile gelir ve tüketim arasında uzun dönemli bir ilişki olmadığını görmekteyiz. Bundan dolayı H0: r =0 denklemi oluşturulamaz. H1: r≤ 1 de ise en az bir eş bütünleşme denklemi yazılabilir. hipotezlerden de anlaşıldığı gibi; test istatistikleri tablo değerinden küçüktür. Böylece eşbütünleşme denklemi oluşturulamaz şeklindeki yokluk hipotezi kabul edilmek zorundadır.

Çalışmada, değişkenler arasındaki nedensellik ilişkisi ve ilişkinin yönü, "Granger Nedensellik Testi" yardımıyla araştırılmıştır (Granger, 1969). Nedensellik testi iki değişken arasında bir sebep-sonuç ilişkisinin olup olmadığını, eğer varsa ilişkinin yönünü test etmek amacıyla kullanılmaktadır. Granger nedensellik testi, kolay uygulanabilmesi sebebiyle en çok tercih edilen yöntemlerden biridir. Ayrıca, 1980'lerin sonunda ortaya çıkan eş-bütünleşme literatürü, nedensellik testi ile ilgili teorik çalışmaların yeniden gözden geçirilmesine katkıda bulunmuştur.

| Yokluk Hipotezi | Gecikme uzunluğu | F İstatistiği | Olasılık Değeri |
|---|---|---|---|
| Gelir değişkeni tüketim değişkeninin nedenseli değildir | 1 | 0,29132 | 0,59121 |
| Tüketim değişkeni gelir değişkeninin nedenseli değildir | 1 | 0,091312 | 0,81213 |

*Tablo 4: Granger Nedensellik Testinin Sonuçları*

Tablo 4'de olasılık değerlerine bakıldığında sistemde yer alan gelir ile tüketim değişkenleri arasında nedensellik ilişkisi olmadığını rahatlıkla söyleyebiliriz. Çalışmamızda son olarak içsel değişkendeki değişimi VAR sistemindeki diğer değişkenler tarafından ne kadar açıklanabildiğini tespit etmek için kullandığımız varyans ayrıştırması yapılmıştır.

| Dönem | Standart Hata | Tüketim Harcaması | Gsyih |
|---|---|---|---|
| 1 | 0,02412 | 100 | 0 |
| 2 | 0,02412 | 97 | 3 |
| 3 | 0,02412 | 97 | 3 |
| 4 | 0,02412 | 97 | 3 |
| 5 | 0,02412 | 97 | 3 |
| 6 | 0,02412 | 97 | 3 |
| 7 | 0,02412 | 97 | 3 |
| 8 | 0,02412 | 97 | 3 |
| 9 | 0,02412 | 97 | 3 |
| 10 | 0,02412 | 97 | 3 |

*Tablo 5: Tüketim Harcamaları Değişkeninin Varyans Ayrıştırma Tablosu*

Tablo 5'e bakıldığında 1. Dönemde tüketim harcamaları değişkeninin varyansının %100'ü değişkenin kendisi tarafından açıklandığını görmekteyiz. Bu oran tüketim değişkeninin dışsal değişken olduğunun göstergesidir.

| Dönem | Standart Hata | Tüketim Harcaması | Gsyih |
|---|---|---|---|
| 1 | 0,02312 | 74 | 26 |
| 2 | 0,02312 | 71 | 29 |
| 3 | 0,02312 | 71 | 29 |
| 4 | 0,02312 | 71 | 29 |
| 5 | 0,02312 | 71 | 29 |
| 6 | 0,02312 | 71 | 29 |
| 7 | 0,02312 | 71 | 29 |
| 8 | 0,02312 | 71 | 29 |
| 9 | 0,02312 | 71 | 29 |
| 10 | 0,02312 | 71 | 29 |

*Tablo 6: Gayri Safi Yurt İçi Hasıla Değişkeninin Varyans Ayrıştırma Tablosu*

Tablo 6 ya bakıldığında baktığımızda değişkenin varyansının % 70 üzerinde değişkenin kendisince açıklandığı izlenmektedir. Kısacası tablo 5 ve 6 ya göre tüketim değişkeninin çoğunlukla kendi gecikmeli değerlerinin etkisi altında kaldığı da görülmektedir. Her iki tablodan da elde edilen sonuçlara bakıldığında; gelir değişkeninin tüketim değişkenini açıklamada yetersiz olduğudur.

## 5  Sonuç

TCMB'den elde edilen zaman serisi verileri yardımıyla gelir ile tüketim arasındaki ilişkiyi açıklamaya yönelik olarak ortaya konulan mutlak gelir teorisine ilişkin tüketim fonksiyonunu tahmin etmek suretiyle teorinin Türkiye için gelir-tüketim ilişkisini açıklamada ne kadar etkili olduğu uygulamanın amaçları arasında yer almaktadır. Türkiye ekonomisinin 1987-2012 yılları için eldeki mevcut veriler kullanılarak ekonometrik tekniklerle gelir tüketim ilişkisi test edilmiştir. Tüketim fonksiyonunun teorik çerçevesi incelendiğinde literatürde, tüketim fonksiyonu ile ilgili yapılan bir dizi çalışma olduğu ve bu çalışmaların bazılarının birbirini tamamlayıcı varsayımlara, bazılarının ise diğerlerinden çok ayrılan varsayımlara sahip oldukları görülmektedir. Öncelikle serileri mevsimsel etkiden arındırıp sonrada birim kök testi ADF ile durağan hale getirilmiştir. Her ikisi de birinci dereceden durağan çıkmıştır. Bu işlemlerden sonra serilerin uzun dönem boyunca nasıl hareket ettiklerini incelemek için E-G eşbütünleşme testi ve Johansen eşbütünleşme testi uygulanmış ve sonucun eş bütünleşik olmadığı görülmüştür. Bunun anlamı ise uzun dönemde birlikte hareket etmedikleridir. Yapılan Granger nedensellik testinde de serilerin birbirinin nedeni olmadığı sonucuna ulaşılmıştır.

Eşbütünleşme testlerinden sonra, tekrar seriler arasındaki ilişkiyi inceleme adına varyans ayrıştırmasına bakılmıştır. Varyans ayrıştırmasında tüketim değişkeninin çoğunlukla kendi gecikmeli değerlerinin etkisi altında kaldığı görülmektedir. Sonuç olarak bu çalışma bizlere gösterdi ki gelir değişkeninin tüketim değişkenini açıklamada tek başına yetersiz olduğu gerçeği yadsınmamalıdır.

# Orta Asya Ülkelerindeki Teknik Değişim

# Technical Change in Central Asian Countries

Dr. Mediha Tezcan (Anadolu University, Turkey)

## Abstract

There has always been technical change since the beginning of mankind, and its importance continues in the present age. These days, the technology levels of these countries determine their competitive advantage within the international market. During the course of this paper, technical change in Central Eurasian countries will be examined. In the first part of the study, technology and innovation will be examined theoretically. The economies of the Central Eurasian countries of Kazakhstan, Kyrgyzstan, Uzbekistan, Tajikistan and Turkmenistan will be introduced in the second section of the paper. Following this, technical change in the countries of Central Eurasia will be scrutinised under three groups. These are namely technological research and development, innovation and adaptation of technology. Technical change will be analyzed through data on innovation and technology, as published by the United Nations Development Programme in their "Human Development Report 2013". During the final section of this paper, comparisons will be made between the countries of Central Eurasia and Turkey and other regions in the world according to the level of technical changes which have been determined to have taken place in the Central Eurasia region. The advantages of preparing joint regional development plans including the technological development of the Central Eurasian countries will be discussed as a result of this comparison.

## 1 Giriş

Coğrafyanın birbirine sıkı sıkıya bağladığı topraklardaki Orta Avrasya devletlerin birçoğu, ortak dil, kültür ve tarihe sahiptirler. Bu ülkelerin sahip oldukları ortak özellikleri, bölgesel güç oluşturmaları için gerekli olan üstünlüklerdir. Bu ülkelerin ekonomi, teknoloji, enerji, finans, çevre, nüfus ve kültürel yapıları gibi birçok alanda ortak akademik araştırmalar yapılarak, bölgesel kalkınma planları hazırlanmalıdır.

İnsanlığın başlangıcından beri var olan teknik değişim/inovasyon/yenilik, içinde bulunduğumuz çağda da önemini sürdürmektedir. Günümüzde ülkelerin sahip oldukları teknoloji düzeyleri, ülkelerin uluslararası pazarlardaki rekabet üstünlüklerini belirlemektedir. Bildiride Orta Avrasya ülkelerindeki teknik değişim incelenmiştir. Çalışmanın birinci kısmında teknoloji ve yenilik teorik olarak incelenmiştir.

Bildirinin ikinci kısmında, Orta Avrasya ülkeleri; Kazakistan, Kırgızistan, Özbekistan, Tacikistan ve Türkmenistan ekonomileri tanıtılmıştır. Ardından Orta Avrasya ülkelerindeki teknik değişim incelenmiştir. Orta Avrasya ülkelerindeki teknik değişim üç grup altında incelenmiştir. Bunlar; teknolojik araştırma ve geliştirme, innovation ve teknolojiye uyumdur. Teknik değişim, United Nations Development Programının yayınladığı "Human Development Report 2013"daki, yenilik ve teknoloji verileri aracılığı ile incelenmiştir.

Bildirinin sonuç kısmında ülkelerin sahip oldukları teknik değişim doğrultusunda bölgenin teknik değişim düzeyi tespit edilerek, Türkiye ve dünyadaki diğer bölgelerle karşılaştırılmıştır. Karşılaştırmaların sonucunda ülkelerin sahip oldukları teknik değişim düzeyleri doğrultusunda, ortak olarak hazırlayacakları Orta Avrasya ülkelerindeki teknolojik gelişmeyi içeren bölgesel kalkınma planlarının sağlayacağı avantajlar tartışılmıştır.

## 2 Teknik Değişim

Teknoloji karma bir disiplindir ve eğitim, iktisat, sosyoloji, felsefe, iletişim, tıp, fen bilimleri gibi birçok bilim dalının önemli bir faktörüdür. Teknolojiye ait farklı tanımlar bulunmaktadır.

Teknoloji insanın; tabiatı, toplumu kontrol etmek, değiştirmek için, hem kendi hem de toplumsal aklı ve belleği kullanarak elde ettiği sonuçlardır. Teknoloji ya da teknikler bilgisi bir "şeyin" (bu şey bir maddi ürün, bir hizmet, hatta bir güzel sanat icrası da olabilir) nasıl üretildiği, nasıl tüketildiği veya nasıl kullandığına dair sistematik, belli bir sistem veya disiplin çerçevesinde sunulmuş bilgiler demetidir (Türkcan, 2011). Teknoloji; yararlı ürünler üretmeye ve yeni ürünler tasarlamaya yarayan bilgiler bütünüdür (Yücel, 2006).

Teknoloji; bilimsel bilgiden yararlanarak yeni bir ürün geliştirmek, üretmek ve hizmet desteği sağlamak için gerekli bilgi, beceri ve yöntemler bütünüdür (Yörükoğulları, 2013). Bilimsel bilgi ile teknolojik bilgi arasındaki "organik" bağlar nedeniyle, çok kesin "saf bilim-saf teknoloji" ayrımı yapmak neredeyse imkânsızdır. Bir icadın, bir buluşun, üretime, kullanıma başarıyla uygulanmasına da "yenilik" denir (Türkcan, 2011). Yenilik; yeni fikirlerin uygulamaya konulması ve ticarileştirilmesi sürecidir (Özdaşlı, 2010).

Teknolojideki değişim; yenilik veya inovasyon kelimeleri ile yaygın olarak kullanılmaktadır. İnovasyon (innovation), Latince kökenli bir sözcüktür. İnovasyon kelimesinin Türkçe karşılığı yeniliktir. Yenilik kelimesi hem yenilik özelliğini (yenilenmeyi), hem de önemli bir iktisadi değere sahip olma (dönüştürme/yeniliği) özelliğini kapsamalıdır.

Turanlı ve Sarıdoğan (2010), inovasyon tanımındaki en kritik nokta şu şekilde açıklamaktadırlar: "Ortaya çıkan yeniliğin, önemli bir iktisadi değere dönüştürülmesi süreci/sonucu olmasıdır. Çünkü inovasyon'un iktisadi açıdan, mikro iktisadi (firma-sektör) ve makro iktisadi (ülke-toplum) açısından anlamı, sözcük anlamındaki anlamından daha kapsamlıdır. İktisat biliminin temel amacını, basitçe, insan (bireysel ve toplumsal) refahının artması için iktisadi sorunların tanımlanması ve çözümlenmesi olarak kabul edersek, insan (bireysel ve toplumsal) refahının artmasına, önemli düzeyde katkı sağlayacak şekilde dönüştürülmüş her türlü yeni gelişme, insanlar ve iktisat bilimi açısından inovasyon özelliği arzeder".

İktisatçılar, her zaman, teknolojik yeniliğin iktisadi bir gelişme için çok önemli olduğuna dikkat çekmişlerdir. Klasik iktisatçılara göre kapitalist bir ekonomiye dinamizm sağlayan yaratıcılık, yenilenme ve teknolojik değişimdir (İnal, 2012). Adam Smith; makinelerin gelişmesi ve iş bölüşümünün özel buluşları nasıl teşvik edeceğinden bahsetmiştir. Karl Marx, sermaye mallarında teknolojik yeniliklerin önemini vurgulayarak "burjuvazi, üretim araçlarında sürekli bir devrim yapmadıkça yaşayamaz" fikrini savunur (Freeman, vd, 2003). Joseph Schumpeter, 1934 ve 1947 yıllarında yayınladığı eserlerinde, yenilik kavramına yeni bir boyut kazandırmıştır. Schumpeter; bir ekonomik aktivite olarak teknolojik yeniliği çevreleyen süreçleri incelemiş ve teknolojik değişmeyi yönlendiren prensipleri bir piyasa kurgusu ile açıklamaktadır.

Schumpeteryen bakış açısı ile ekonomik büyüme; yenilikçilerin tekelci güçleri temelinde teknolojik olarak ileri ürünleri ortaya çıkardıkları ve yeni ürünlerin eski ürünlerin yerini, yeni tekniklerin, eski tekniklerin yerini ve yeni kurumların eski kurumların yerini aldığı, bir sürekli yaratıcı yıkım sürecidir. Ekonomik büyüme; ne sermaye birikimidir ne de mistik bir teknolojik değişme sonucunda üretim fonksiyonundan bir kaymadır; ekonomik büyüme yapısal değişmedir (Yeldan, 2011).

Schumpeter, ekonomik büyümenin yenilikler tarafından; kendisinin "yaratıcı yıkım" olarak adlandırdığı yeni teknolojilerin, eskisinin yerini aldığı dinamik bir süreç yoluyla harekete geçildiğini savunmaktadır (OECD, 2005).

Schumpeter teknolojik değişmeyi yönlendiren prensipleri bir piyasa kurgusu ile açıklamaktadır. Teknolojik yeniliğin piyasada yaptığı değişiklik şu şekilde kurgulanabilir:

Yeni bir malın, yeni bir üretim metodunun sunulması; yeni bir pazarın açılması, yeni bir hammadde kaynağının bulunması ya da piyasada yeni bir pazar örgütlenmesini de kapsar (bir monopolün kırılması ya da oluşması gibi). Müteşebbis; ortaya çıkardığı teknolojik yenilik sayesinde normalin üstünde "süper normal" bir kâr marjı sağlar ve monopol konumuna gelir. Bu yeniliğin zamanla diğer firmalarca da adapte edilmesiyle beraber kâr; normal düzeye iner ve bu durum, başka bir müteşebbis tarafından başka bir teknolojik yenilik yaratılana kadar devam eder. Bu da ekonomide iş çevrimlerine sebep olmaktadır. Dolayısıyla, girişimcilerin olağanüstü gayretleri ile ortaya çıkan teknolojik yenilik, ekonominin içsel bir unsuru olarak, ekonomik gelişmenin dinamiğini sağlayan en önemli faktör konumuna yerleştirilmiştir (Ansal, 2004).

İkinci Dünya Savaşı'ndan sonra Robert M. Solow, teknolojinin iktisadi büyüme için önemini vurgulayan önemli iktisatçılardan biridir. 1980'li yıllarda ise Paul Romer'in teknolojik yenilikleri öne çıkaran içsel büyüme modelinin, iktisat bilimine yeni boyutlar kazandırdığı kabul edilmektedir (Bülbül, 2010).

İnovasyonun ekonomiye etkileri şu şekilde sıralanabilir (Yorgancılar, 2011): Verimliliğin artması, yeni istihdam alanları yaratılması, uluslararası rekabet üstünlüğünün sağlanması, ulusal güvenlik ihtiyacının giderilmesi, iletişim ve hizmet sektörünün geliştirilmesi, kaynak kullanımında etkinliğin sağlanması, çevre koşullarının iyileştirilmesi, sosyal ve beşeri kalkınmanın sağlanması ve büyüme ve kalkınma sürecinin hızlandırılmasıdır.

Bilim ve teknoloji politikaları, bütün dünyada ülkelerin refah seviyesini doğrudan etkileyen sosyal ve siyasi gidişine yön veren, gelişim ve değişim şartlarını ortaya çıkaran politikalar olmuştur. Teknolojinin bu etkinliği nedeniyle bütün ülkeler teknolojiyi üretmek, elde etmek, kullanmak ve yaymak için her türlü çabayı göstermektedirler.

## 3  Orta Avrasya Ülkeleri

Coğrafyanın birbirine sıkı sıkıya bağladığı topraklardaki Orta Avrasya devletlerin birçoğu, ortak dil, kültür ve tarihe sahiptirler. Bu ülkelerin sahip oldukları ortak özellikleri, bölgesel güç oluşturmaları için gerekli olan üstünlüklerdir. Anadolu, Kafkasya ve Orta Asya coğrafyası tarih boyunca insanlığın yerleştiği ekonomik ve jeopolitik açıdan önemli bölge olmuşlardır.

### 3.1  Orta Asya Bölgesi Ülkeleri

Orta Asya, Asya kıtasının iç kesimidir. Orta Asya; Afganistan ve Pakistan'ının kuzeyi, Çin'inin batısı, Moğolistan ve Rusya'nın bir kısmı ile kuzeydoğusunda İran'ı çevreleyen bölgedir. Orta Asya bölgesinde beş ülke yer almaktadır. Bunlar; Kırgızistan, Kazakistan, Özbekistan, Türkmenistan ve Tacikistan'dır (Encyclopædia Britannica, 2014).

Coğrafyanın birbirine sıkı sıkıya bağladığı topraklardaki Orta Avrasya devletlerin birçoğu, ortak dil, kültür ve tarihe sahiptirler. Bu topraklar Türk halklarının anayurtlarıdır.

Geçmişte Sovyet Sosyalist Cumhuriyetler Birliği'nin (SSCB) bir parçası olan Orta Avrasya ülkeleri 1991 yılında Sovyetlerin dağılmasının ardından bağımsızlıklarını ilan etmişlerdir (Encyclopædia Britannica, 2014).

Günümüzdeki bağımsız olan yedi Türk devletlerinin üçü; Kazakistan, Kırgızistan ve Özbekistan Orta Asya bölgesinde yer almaktadır.

### 3.2 Orta Avrasya Ülkelerinin Ekonomileri

Aynı coğrafi alanda yan yana yer alan Orta Asya ülkeleri ekonomileri farklı özelliklere sahiptir. Bu ülkelerin ekonomileri dört unsurla tanıtılarak, küçük bir karşılaştırılma yapılabilir. Karşılaştırılması yapılacak unsurlar şunlardır; 2012 yılına ait; nüfus, GSYİH, GSYİH büyüme oranı, kişi başına gelir düzeyi ve enflasyon oranıdır (Tablo 1.). Ülkeler arasındaki karşılaştırma Dünya Bankasının ilgili ülkelere ait yayınladığı veriler aracılığı ile yapılmıştır (World Bank, 2014).

| Ülkeler | Nüfus (Milyon) | GSYM (Cari ABD $ Milyar) | GSYH Büyüme (%) | Enflasyon (%) |
|---------|---------|---------|---------|---------|
|         | 2012 yılı | 2012 yılı | 2012 yılı | 2012 yılı |
| Kazakistan | 16.80 | 203.5 | 5.0 | 5.1 |
| Kırgızistan | 5.582 | 6.475 | -0.9 | 2.7 |
| Özbekistan | 29.78 | 51.11 | 8.2 | N/A |
| Tajikistan | 8.009 | 6.972 | 7.5 | 5.8 |
| Tükmenistan | 5.173 | 35.16 | 11.1 | N/A |
| Türkiye | 74.00 | 789.3 | 2.2 | 8.9 |

*Tablo 1. Orta Asya Ülkelerine Ait Ekonomik Göstergeler Kaynak: The World Bank.*

2012 yılında Özbekistan 29.780.000 kişi ile nüfusu en yüksek Orta Asya ülkesi iken, Türkmenistan 5.173.000 kişi ile nüfusu en düşük Orta Asya ülkesidir. Türkiye 2012 yılında 74.000.000 kişi ile Orta Avrasya ülkelerinden daha fazla nüfusa sahiptir.

2012 yılında Kazakistan 203,5 milyar ABD Doları ile en yüksek GSYH sahip Orta Asya ülkesi iken, Kırgızistan 6.475 milyar ABD Doları ile en düşük GSYH sahip Orta Asya ülkesidir. Türkiye 2012 yılında 789,3 milyar ABD Dolar GSYH ile Orta Avrasya ülkelerinden daha fazla GSYH sahiptir.

2012 yılında Orta Asya ülkelerinin en yüksek GSYİH büyüme oranı % 11,1 ile Türkmenistan iken, Orta Asya ülkelerinin en düşük GSYH büyüme oranı -% 0,9 ile Kırgızistan'dır. 2012 yılında Türkiye kişi başına GSYH 10,830 ABD Doları ile Orta Avrasya ülkelerinin kişi başına düşen gelir düzeyini geçmiştir.

2012 yılında Orta Asya ülkelerini en yüksek yüksek enflasyon oranı % 5,8 ile Tacikistan iken, Orta Asya ülkeleri içinde en düşük enflasyon oranı % 2,7 ile Kırgızistan'dır. 2012 yılında Türkiye % 8,9 oranındaki yüksek enflasyon oranı ile Orta Avrasya ülkelerinin enflasyon oranlarının çok gerisinde kalmıştır.

## 4   İnsani Gelişim

Gelişme, bir ülkenin ekonomik, sosyal, kültürel, siyasal ve teknolojik açıdan ilerlemesini gösterir. Toplumsal değerler ve ekonomi arasındaki ilişkiyi inceleyen sosyo-ekonomik gelişme ise, iktisadi büyümeyi, yapısal ve insani gelişmeyi ve ölçülebilen sosyal değişmeleri kapsamaktadır (Şeker, 2001). Sosyo-ekonomi, ekonomik değişimlerin toplum üzerindeki etkilerini inceler.

İnsani gelişme, insanların hak ettikleri bir yaşam için karar ve seçeneklerini arttıran kendilerine sunulmuş fırsatlardır. İnsan birey olarak vatandaşı olduğu ulusun zenginliğidir. İnsani gelişme, insanların ihtiyaçlarını karşılamak amacıyla yaratılan olanaklardır. Toplumsal gelişme ise, toplumların sosyo-kültürel anlamda ilerlemelerini ifade eder. Toplumu oluşturan bireylerin bir bütün olarak yaşam koşullarının iyileştirilmesi ve toplumsal değerler açısından daha üst seviyeye ulaştırılması anlamına gelmektedir (Nartgün, vd, 2013).

Bir ülkenin sosyo-ekonomik gelişmişlik düzeyini ölçmeye yönelik birçok endeks bulunmaktadır. Bunların en önemlisi Birleşmiş Milletler Gelişme Programı (UNDP) tarafından hazırlanan İnsani Gelişme Raporudur.

Birleşmiş Milletler Gelişme Programı (UNDP) tarafından 1990 yılından itibaren düzenli olarak İnsani Gelişme Raporu (İGR) hazırlanıp yayınlamaktadır. 2013 yılı İGR dünyadaki çoğu ülkeyi kapsamaktadır ve 20 ayrı dile çevrilerek yayınlanmıştır (UNDP, 2013).

1990 yılında ilk kez yayınlanan HDR, insanın seçenekleri ve yapabilirliklerini genişletmek esasında, ekonomik ve sosyal ilerlemenin bir öngörüsü olarak hazırlanır. O tarihten sonra önemli ilerlemeler oldu: birçok gelişmekte olan ekonomi hızlı büyüdü ve insani gelişmenin standartlarını arttırdı (UNDP, 2013).

İGR ülkelere ait; önemli gelişme sorunlarını, eğilimlerini ve politikalarını bilimsel yöntemlere dayalı ve bağımsız olarak hazırlanıp yayınlanmaktadır. İGR'ları ilk kez yayınlandığı yıldan itibaren hükümetler, akademik çevreler, uluslararası kuruluşlar, sivil toplum kuruluşları, politikacılar ve medya tarafından, kalkınma politikaları hazırlamak, ülkelerin farklı alanlardaki insani gelişmişlik düzeylerini karşılaştırmak gibi çok değişik amaçlar için yaygın bir biçimde kullanılmaktadır (Gürses, 2009).

2013 yılı İGR üç başlık altında toplam 14 ayrı alandaki istatistiksel tablolara dayalı olarak hazırlanmıştır. Bu geniş kapsamlı istatistik tabloların konuları şunlardır (UNDP, 2013):

İnsani gelişim endeksler:

1. İnsani Gelişme Endeksi ve bileşenleri

2. İnsani Gelişme Endeks trendleri, 1980-2012

3. Eşitsizlik düzeltilmiş İnsani Gelişme

Deneysel endeksler:

4. Cinsiyet Eşitsizliği Endeksi

5. Çok Boyutlu Yoksulluk Endeksi

İnsani gelişim göstergeleri:

6. Kaynaklara hâkim olmak

7. Sağlık

8. Eğitim

9. Sosyal bütünleşme

10. Mal ve hizmetlerin uluslararası ticaret akımları

11. Uluslararası sermaye akımları ve göç

12. İnnovasyon ve teknoloji

13. Çevre

14. Nüfus eğilimleri.

Bu 14 ayrı istatistik araştırmada temel amaç, insani gelişmeyi ölçmektir.

Birleşmiş Milletler dünyadaki 187 ülkenin İnsani Gelişmişlik İndeksini gelişmişlik düzeylerine göre dört gruba ayırarak sıralamıştır. Bunlar (UNDP, 2013):

1. Grup: Çok yüksek insani gelişmişlik indeksi: 47 ülkeyi kapsamaktadır.
2. Grup: Yüksek insani gelişmişlik indeksi: 47 ülkeyi kapsamaktadır.
3. Grup: Orta seviyede insani gelişmişlik indeksi: 47ülkeyi kapsamaktadır.
4. Grup: Düşük insani gelişmişlik indeksi: 46 ülkeyi kapsamaktadır.

2013 yılı İGR'a göre Orta Avrasya ülkelerinin 187 ülke içinde gelişmişlik sıralaması tablo 2 de yer almaktadır.

Orta Avrasya ülkeleri "çok yüksek insani gelişmişlik indeksine" ve "düşük insani gelişmişlik indeksine" sahip ülkeler arasında yer almadıkları görülmektedir (Tablo 2.)

| Ülkeler | Ülkelerin IGE sırası 2012 yılı | IGE Grupları |
|---------|-------------------------------|--------------|
| Kazakistan | 69 | Yüksek insani gelişmişlik |
| Tükmenistan | 125 | Orta seviyede insani gelişmişlik |
| Özbekistan | 114 | Orta seviyede insani gelişmişlik |
| Kırgızistan | 125 | Orta seviyede insani gelişmişlik |
| Tajikistan | 102 | Orta seviyede insani gelişmişlik |
| Türkiye | 90 | Yüksek insani gelişmişlik |

*Tablo 2. İGE ülkeler ve sıralamaları Kaynak: 2013 Human Development Report.*

Orta Avrasya ülkeleri "çok yüksek insani gelişmişlik indeksine" ve "düşük insani gelişmişlik indeksine" sahip ülkeler arasında yer almadıkları görülmektedir.

2012 yılında "yüksek insani gelişmişlik indeks" grubu içinde 69'cu sırasında yer alan Kazakistan Orta Avrasya ülkeleri arasında en yüksek insani gelişmişlik indeksine sahiptir. 2012 yılında "Orta seviyede insani gelişmişlik indeks" grubu içinde Kırgızistan ve Türkmenistan aynı 125 sırada yer alarak Orta Avrasya ülkeleri sonuncusu olmuşlardır. 2012 yılında Türkiye "yüksek insani gelişmişlik indeks" grubu içinde 90'cı sırada yer alarak, Kazakistan'ın gerisinde kalmıştır.

## 5 Orta Avrasya Ülkelerinin Teknoloji ve İnovasyon Yapısı

2013 yılında UNDP'nin yayınladığı İGR'da insani gelişme göstergeler başlığı altında yer alan "teknoloji ve inovasyon" göstergesi yer almaktadır. Teknoloji ve inovasyon gösterge tablosu; ilerleyen insan gelişimini araştırmak ve geliştirmek teknolojileri etkin bir şekilde kullanmak ve benimsemek için ülke kapasitelerini oluşturmaya yönelik yapılan yatırımların önemini gösterir.

İGR'ki teknoloji ve inovasyon isimli gösterge bir istatistiki tablosudur. Teknoloji ve inovasyon göstergesi üç ayrı başlıktan oluşmaktadır. Bunlar; "araştırma ve geliştirme", "inovasyon" ve "teknolojiye uyum"dur.

Orta Avrasya ülkelerinin sahip oldukları teknoloji ve inovasyon verileri 2013 yılında UNDP'nin yayınladığı İGR'daki insani gelişme göstergesindeki "teknoloji ve inovasyon" isimli istatistiki tablodaki verilere dayanılarak analiz edilmiştir.

Bu çalışmada, ülkeler arasında karşılaştırma yapılırken, okuyucuya kolay inceleme imkânı sağlaması için, "Teknoloji ve inovasyon" tablosundaki üç başlık, üç ayrı tabloya ayırarak incelenmiştir.

### 5.1 Orta Avrasya Ülkelerinde Araştırma ve Geliştirme

İGR teknoloji ve inovasyon isimli istatistiki tablonun birinci başlığının adı; araştırma ve geliştirmedir. Araştırma ve gelişmeyi üç bölümde inceliyor, bunlar; "araştırma ve geliştirme harcamaları", "araştırma ve geliştirme araştırmacıları" ve "bilim ve mühendislik mezunlarıdır" (Tablo 3.).

| | Araştırma ve Geliştirme | | |
|---|---|---|---|
| | Harcama (GSMY'nın %) | Araştırmacılar (Milyon kişi başına) | Bilim ve Mühendislik mezunları[a] (Toplamın %) |
| | 2005-2010[b] | 2002-2010[b] | 2002-2011[b] |
| Kazakistan | 0.2 | .. | .. |
| Tükmenistan | .. | .. | .. |
| Özbekistan | .. | .. | 21.1 |
| Kırgızistan | 0.2 | .. | 15.2 |
| Tajikistan | 0.1 | .. | 26.0 |
| Türkiye | 0.8 | 803.9 | 20.9 |

**Dipnot** a: İmalat ve inşaat mezunları dâhildir, b: Veriler, belirtilen dönemde mevcut en yakın yıla ait olanlardan bahseder.

*Tablo 3. Araştırma ve Geliştirme **Kaynak:** 2013 Human Development Report.*

*Araştırma ve geliştirme harcamaları:* Yeni uygulamalar için bilgiyi ve bilgi kullanımını artırmak için yaratıcı çalışmalar hakkında cari ve sermaye sarfiyatları (hem kamu, hem de özel) sistematik olarak üstlenilmiştir. Bu, temel araştırma, uygulamalı araştırma ve deneysel geliştirmeyi kapsar.

Orta Avrasya ülkelerinin 2005-2010 yılları arasında gayrı safi milli hasılasının (GSMH) yüzdesi olarak araştırma ve geliştirme harcaması Kazakistan ve Kırgızistan % 0.2'lik harcamaya sahip ülke iken, Tacikistan % 0.1'lik harcama oranı ile diğer ülkelerin gerisinde kalmıştır. Türkiye % 0.8 ile Orta Avrasya ülkelerinden daha yüksek harcama oranına sahiptir.

İGR'da, 2005-2010 yılları arasında, "Çok yüksek insani gelişmişlik indeks" sıralamasında 16. sırada yer alan İsrail, GSMH'nın % 4.3'nu araştırma ve geliştirme harcamasına ayırarak dünyanın en yüksek harcamasına sahip ülkesi olmuştur. Orta Asya ülkeleri ve Türkiye'deki araştırma ve geliştirme harcamaları, İsrail'in harcamasının çok gerisinde kalmaktadır.

*Araştırma ve geliştirme araştırmacıları:* Yeni bilgi, ürün, süreç, yöntem veya sistemlerin anlayışı veya oluşturulması ve ilgili projelerin yönetimini yapan profesyonelleri kapsar. Araştırma ve geliştirme yapan yüksek lisans doktora öğrencileri de (ISCED97 seviye 6) dâhildir.

Orta Avrasya ülkelerinin, 2002-2010 yılları arasında, araştırma ve geliştirme araştırmacı sayılarına ait ilgili tabloda veri bulunmamaktadır. Türkiye'deki milyon kişi başına düşen araştırma ve geliştirme araştırmacıların sayısı 803.9 kişidir.

İGR'da, 2002-2010 yılları arasında, "Çok yüksek insani gelişmişlik indeks" sıralamasında 21. sırada yer alan Finlandiya, milyon kişi başına 7,647.4 araştırmacı sayısı ile dünyanın en fazla araştırmacısına sahip ülkesidir. Finlandiya'daki araştırmacı sayısı Türkiye'nin yaklaşık dokuz kat fazlasıdır.

*Bilim ve mühendislik mezunları:* Bilim ve mühendislik alanında, bir düzey veya alt düzeyli eğitiminin son yılını başarılı bir şekilde tamamlayan insanları kapsar.

Orta Avrasya ülkelerinde, 2002-2011 yılları arasında, bilim ve mühendislik mezunları toplamının % 26,0 oranı ile Tacikistan en yüksek orana sahip ülke iken, % 15,2 oranı ile Kırgızistan en düşük orana sahip ülkedir. Türkiye ise % 20,9 oranı ile Orta Avrasya ülkelerinden daha yüksek yüzde orana sahiptir.

İGR'da, 2002-2011 yılları arasında, "Düşük insani gelişmişlik indeks" sıralamasında 164. sırada yer alan Cibuti Cumhuriyeti, bilim ve mühendislik mezunları toplamının % 46.5 ile dünyanın en fazla bilim ve mühendislik mezunlarına sahip ülkesidir. Cibuti Cumhuriyetindeki bilim ve mühendislik mezunları toplamının yüzdesi, Orta Avrasya ülkeleri ve Türkiye'nin yaklaşık iki kat fazlasıdır.

### 5.2 Orta Avrasya Ülkelerinde İnovasyon

İGR teknoloji ve inovasyon isimli istatistiki tablonun ikinci başlığının adı; inovasyondur. İnovasyon iki bölümde incelenmiştir, bunlar; "sakinlere ve yerleşik olmayanlara verilen patentler" ve "imtiyaz ve lisans ücreti makbuzlardır" (Tablo 4).

*Sakinlere ve yerleşik olmayanlara verilen patentler:* Bir ülke sakinleri, o ülkenin ikamet edenleridir. Yerleşik olmayanlar ise; o ülkenin vatandaşı olmayanları ifade eder. Bir şey yapmanın yeni yolunu sağlayan ya da bir

problem için yeni teknik çözüm sunan bir ürün ya da işlem olan, bir buluş için verilen münhasır hakların sayısıdır, 1 milyon kişi başına olarak dile getirilmiştir.

| | İnovasyon | |
| | Ülke sakinleri ve ülkede yerleşik olmayanlara verilen patentler (Milyon kişi başına) | İmtiyaz ve lisans ücret gelirleri (Sermaye başına ABD $ ) |
| | 2005-2010[b] | 2005-2011[b] |
| Kazakistan | 10.9 | 0.0 |
| Tükmenistan | .. | .. |
| Özbekistan | 7.0 | .. |
| Kırgızistan | 20.4 | 0.3 |
| Tajikistan | 0.4 | 0.1 |
| Türkiye | 9.0 | .. |

**Dipnot** b: Veriler, belirtilen dönemde mevcut en yakın yıla ait olanlardan bahseder.

*Tablo 4. Inovasyon **Kaynak:** 2013 Human Development Report.*

Orta Avrasya ülkelerinde 2005-2010 yılları arasında milyon kişi başına ülke sakinleri ve yerleşik olmayanlara verilen 10.9 patent ile en yüksek sayıya sahip olan ülke Kazakistan iken, 0.4 patent ile en az patente sayısına sahip olan ülke Tacikistan'dır.

İGR'da, 2005-2010 yılları arasında, "Çok yüksek insani gelişmişlik indeks" sıralamasında 10. sırada yer alan Japonya, her milyon kişi başına ülke sakinleri ve yerleşik olmayanlara verilen 1,759.9 patent sayısı ile bu alanda dünya birincisi olan ülkedir. Orta Avrasya ülkeleri ve Türkiye'deki her milyon kişi başına ülke sakinleri ve yerleşik olmayanlara verilen patent sayısı, Japonya'nın patent sayısının çok gerisinde kalır, karşılaştırması yapılamaz.

*İmtiyaz ve lisans ücret geliri:* Soyut, üretilmemiş, finansal olmayan varlıklar ve mülkiyet haklarının (patent, telif hakları, ticari markalar, endüstriyel işlemler ve ayrıcalıklar gibi) yetkili kullanımı ve lisans anlaşmaları yoluyla üretilmiş ilk tiplerin (film ve el yazımları gibi) orijinallerinin kullanımı için sakinler ve yerleşik olmayanlar arasındaki ödemeler ve makbuzlardır.

Orta Avrasya ülkelerinde, 2005-2011 yılları arasında, sermaye başına ABD Doları olarak imtiyaz ve lisans ücret gelirleri; Kırgızistan'ının 0.3, Tacikistan'ının 0.1 iken, diğer ülkelere ait veri bulunmamaktadır.

İGR'da, 2005-2010 yılları arasında, "Çok yüksek insani gelişmişlik indeks" sıralamasında 26. sırada yer alan Lüksemburg, sermaye başına ABD Doları olarak imtiyaz ve lisans ücret gelirleri 890.0 ile bu alanda dünya birincisidir. Orta Asya ülkeleri ve Türkiye sahip olduğu imtiyaz ve lisans ücret gelirleri, Lüksemburg'un sayısının çok gerisindedir, karşılaştırması yapılamaz.

### 5.3 Orta Avrasya Ülkelerinde Teknolojiye Uyum

İGR "teknoloji ve inovasyon" isimli istatistik tablonun üçüncü başlığının adı; teknoloji ve adaptasyondur. Teknoloji ve adaptasyon beş bölüme ayrılarak incelenmiştir, bunlar; "elektrifikasyon oranı", "kişisel bilgisayar", "internet kullanıcıları", "sabit geniş bant internet abonelikleri" ve "sabit ve mobil telefon aboneleridir" (Tablo 5.).

| | Teknolojiye Uyum | | | | |
| | Elektrik kullanım oranı (Nüfusun %) | Kişisel bilgisayarlar (Her 100 kişi başına) | Internet kullanıcıları (Her 100 kişi başına) | Sabit geniş bant internet aboneleri (Her 100 kişi başına) | Sabit ve mobil telefon aboneleri (Her 100 kişi başına) |
| | 2009 | 2005-2011[b] | 2010 | 2010 | 2010 |
| Kazakistan | .. | .. | 33.4 | 8.9 | 143.7 |
| Tükmenistan | .. | 7.3 | 2.2 | 0.0 | 73.7 |
| Özbekistan | .. | 3.1 | 19.4 | 0.3 | 80.0 |
| Kırgızistan | .. | 1.9 | 19.6 | 0.3 | 105.8 |
| Tajikistan | .. | 1.3 | 11.5 | 0.1 | 91.7 |
| Türkiye | .. | 6.4 | 39.8 | 9.7 | 107.2 |

**Dipnot** b: Veriler, belirtilen dönemde mevcut en yakın yıla ait olanlardan bahseder.

*Tablo 5. Teknolojiye Uyum **Kaynak:** 2013 Human Development Report.*

*Elektrifikasyon oranı:* Elektriğe erişebilen insan sayısı, toplam nüfusun yüzdesi olarak ifade edilir. Bu, (hem şebeke açık hem de şebeke kapalı) piyasada satılan elektrik ve kendi kendine üretilen elektriği içerir, ancak yetkisiz bağlantıları içermez.

Orta Avrasya ülkelerinde 2005-2011 yılları arasında elektrifikasyon kullanım oranına ait bilgi bulunmamaktadır. İGR'da verilerin yokluğunda elektrifikasyon oranı, % 99,7 olduğu varsayılmıştır (UNDP, 2013).

*Kişisel bilgisayarlar:* Tek bir kişi tarafından kullanılmak üzere tasarlanmış müstakil bilgisayar sayısı, her yüz kişiden kaçı bilgisayara sahiptir olarak hesaplanmıştır.

Orta Avrasya ülkelerinde 2005-2011 yılları arasında, Türkmenistan her yüz kişiden 7.3'cü kişisel bilgisayara sahipliği ile en yüksek sayıya sahip ülke iken, 1.3 ile Tacikistan en düşük sayıya sahip ülkedir. Türkiye'de her yüz kişinin 6.4'dü kişisel bilgisayara sahiptir.

İGR'da, 2005-2010 yılları arasında, "Çok yüksek insani gelişmişlik indeks" sıralamasında 9. sırada yer alan İsviçre her yüz kişiden 95.6' kişisel bilgisayara sahip olmasından dolayı, bu alanda dünya birincisidir. Orta Asya ülkeleri ve Türkiye'deki her yüz kişi başına kişisel bilgisayar sayısı, Lüksemburg'un sayısının çok gerisinde kalmıştır, karşılaştırması yapılamaz.

*Internet kullanıcıları***:** Dünya çapında ağa erişimi olan kişiler, her yüz kişiden kaçının internet kullanıcısı olduğu hesaplanmaktadır.

Orta Avrasya ülkelerinde 2010 yılında Kazakistan'da her yüz kişiden 33,4'dü internet kullanırken, Türkmenistan'da her yüz kişiden 2,2'si internet kullanmaktadır. Türkiye'de ise her yüz kişiden 39,8'si internet kullanmaktadır.

İGR'da, 2010 yıllında "Çok yüksek insani gelişmişlik indeks" sıralamasında 13. sırada yer alan İzlanda her yüz kişiden 95.6'sı internet kullanıcısı ile bu alanda dünya birincisidir. İzlanda'daki internet kullanıcısı sayısı, Orta Asya ülkeleri ve Türkiye'deki internet kullanıcı sayısının yaklaşık iki katıdır.

*Sabit geniş bant internet abonelikleri:* Bir veya her iki yönde eşit veya saniyede 256 kilobit'ten daha büyük hızlarla kamu internetine geniş bant yüksek hızda erişim, her yüz kişiden kaçı abone olduğu hesaplanmaktadır.

2010 yılında Kazakistan her yüz kişiden 8,9'zu sabit geniş bant internet abonesi ile Orta Avrasya ülkeleri arasında en yüksek sayıya sahip ülke iken, Tacikistan'da her yüz kişiden 0,1'ri sabit geniş bant internet abonesi ile en düşük sayıya sahip ülkedir. Türkiye'de ise her yüz kişiden 9,7'si sabit geniş bant internet abone sayısı ile Orta Asya ülkelerinden daha fazla abone sayısına sahiptir.

İGR'da, 2010 yıllında "Çok yüksek insani gelişmişlik indeks" sıralamasında 24. sırada yer alan Lintenştayn, her yüz kişiden 63.8'zı sabit geniş bant internet abone sayısı ile dünya birincisidir. Lintenştayn'daki sabit geniş bant internet abone sayısı, Orta Asya ülkeleri ve Türkiye'deki sabit geniş bant internet abone sayısının yaklaşık yedi katıdır.

*Sabit ve mobil telefon aboneleri***:** Telefon hatları ve mobil abonelerinin toplamı, her yüz kişiden kaçının abone olduğu hesaplanmaktadır.

2010 yılında Kazakistan her yüz kişiden 143,7'si sabit ve mobil telefon abonesi ile Orta Avrasya ülkeleri arasında en yüksek sayıya sahip ülke iken, Kırgızistan her yüz kişiden 105,8'si sabit ve mobil telefon abone sayısı ile en düşük sayıya sahiptir. Türkiye'de ise her yüz kişiden 107,2'si sabit ve mobil telefon abone sayısı ile Orta Asya ülkelerinden daha fazla abone sayısına sahip ülkesidir.

İGR'da, 2010 yıllında "Çok yüksek insani gelişmişlik indeks" sıralamasında 13. sırada yer alan Hong Kong, her yüz kişiden 256.9'zu sabit ve mobil telefon abone sayısı ile bu alanda dünya birincisidir. Hong Kong'daki sabit ve mobil telefon abone sayısı, Orta Asya ülkeleri ve Türkiye'deki sabit ve mobil telefon abone sayılarından fazladır.

Orta Avrasya ülkeleri ve Türkiye'nin teknoloji ve inovasyon yapıları dünya ülkeleri ile karşılaştırıldığında, bu ülkelerin dünya teknoloji ve inovasyon yapılarının çok gerisinde kaldığı görülmektedir.

Orta Avrasya ülkeleri ve Türkiye'nin küresel rekabet ortamında, ekonomik büyüme ve uluslararası rekabeti sürekli sürdürebilmeleri teknoloji ve inovasyon politikalarını birlikte planlamaları, birlikte uygulamaları ve birbirlerine destek olmaları ile gerçekleşebilir.

Orta Avrasya ülkelerinin birçoğu, ortak dil, kültür ve tarihe sahiptirler. Ortak değerlere sahip bu ülkeler ve Türkiye ortak teknoloji ve inovasyon planları hazırlamaları ve uygulamalarında birbirlerine destek olmaları, ekonomik ve bölgesel jeopolitik güç oluşturmalarına imkân sağlayacaktır.

## 6 Sonuç

Anadolu, Kafkasya ve Orta Asya coğrafyası, tarih boyunca insanlığın yerleştiği ekonomik ve jeopolitik açıdan güçlü bölgeler olmuşlardır. 20. Yüzyılın başlarında dünyada petrol ve doğalgazın öneminin artması, petrol ve doğal gaz zengini Orta Asya coğrafyasının önemini artırmıştır. Bu coğrafyanın önemi, içinde bulunduğumuz 21.yüzyılda daha belirgin hale gelmiştir ve Orta Avrasya ülkelerinin ekonomik gelişme kapasiteleri dikkat çekmektedir.

Coğrafyanın birbirine sıkı sıkı bağladığı Orta Asya topraklarındaki devletlerin birçoğunun ortak dil, kültür ve tarihe sahip olmaları, bu ülkelerin ekonomi, finans, enerji ve jeopolitik sorunlarını ortak bir platformda tartışmaları ve çözüm aramaları gerekmektedir.

Teknik gelişmeler insanlığın başlangıcından beri var olagelmiştir. Bilgiyi beceriye dönüştüren ve geliştiren teknoloji, artık hayatımızın evrim sürecinde önemli parçalarından biri olmuştur. Devletlerin bilim ve teknoloji politikaları üretmeleri, uluslararası rekabet ve ekonomik gelişme açısından kaçınılmaz bir ihtiyaç haline gelmiştir.

Günümüzde ülkelerin ekonomik gelişmişlik sınıflandırılmaları, bilgi birikimi ve yeni teknoloji üreten ve üretmeyen ülkeler olarak gruplandırılmaktadırlar. Bilim ve teknoloji alanındaki üstünlükler, dünyada gelir dağılımının yeniden dağılımını ve toplumsal refahın yükseltilmesini etkilemektedir.

Orta Avrasya ülkeleri ve Türkiye'nin teknoloji ve inovasyon yapıları karşılaştırıldığında; bu ülkelerin dünyadaki teknoloji alanında çok yüksek insani gelişmişlik düzeyindeki ülkelerinin çok gerisinde yer aldıkları görülmektedir. Orta Avrasya ülkelerinin teknoloji ve inovasyon düzeylerini yükseltmeleri yönelik girişimlere ihtiyaç duyulmaktadır.. Bu yüzden Orta Avrasya ülkeleri ve Türkiye'nin uluslararası rekabeti sürekli sürdürebilmeleri için planlı teknoloji ve inovasyon politikaları uygulamaları gerekmektedir.

Orta Avrasya ülkelerinin birçoğu, ortak dil, kültür ve tarihe sahiptirler. Ortak değerlere sahip bu ülkeler ve Türkiye ortak teknoloji ve inovasyon planları hazırlamaları ve uygulamaları, birbirlerine destek olmaları, ekonomik ve bölgesel jeopolitik güç oluşturmalarına imkân sağlayacaktır.

## Abstract

Together with the destruction of Berlin Wall in 1989 and fall of The Soviets 1991, one of the basic problems of transition economies is the matter of high inflation. The underlying factor of the high and/or hyperinflation process is the rupture of input relations and its negative supply shocks. Emergence of inflationary structure brought irregularity in macroeconomic indicators, too. Many structural adjustments were created in order to lighten the effects of transition process; and improvements were tried to be done in economic indicators such as inflation interest, budget balance and foreign debt which is the reflection of current deficit. In efforts for improving basic economic indicators Maastricht criteria were accepted as the basic criteria due to the fact that they are compulsory for membership process for some transition economies and others optionally accepted them as they are examples. Therefore, in this study based on Maastricht criteria, the convergence of transition economies to these criteria were accepted as success indicator and concordantly it was studied in which proportion the policy implementations are/aren't successful or whether they correspond to theoretical expectations. In this study it was aimed to test the matter of fact which is accepted as criteria convergence in literature and with panel data analysis it was tried to reveal whether convergence come true in terms of criteria. Hence, the difference between the countries that provided discipline and those do not provided it is found and its effects to development performance is clearly determined.

## 1 Giriş

II. Dünya Savaşı sonrasında Avrupa ulusları, çatışmacı anlayışı elimine etmenin de ötesinde, güçlerini birleştirerek, bunu ortak siyasal-ekonomik hedefler için kullanma yolunu açmaya çalışmışlardır. Zira her iki dünya savaşı sonunda Avrupa, ekonomik ve siyasi açıdan dünyanın merkezi olma özelliğini kaybetmiş ve paralelinde Avrupa ekonomileri çökerek büyük refah kayıpları yaşamıştır. Ortaya çıkan tüm bu olumsuzluklar birleşik bir Avrupa'nın kurulması yönünde görüş birliği oluşturmuştur. Bu amaçla Fransız dışişleri bakanı Schuman ve Alman dışişleri bakanı Monnet 9 Mayıs 1950'de ortak bir bildiri yayınlayarak Alman-Fransız kömür-çelik üretiminin tek bir elden yürütüleceğini ve oluşturulan birliğe diğer Avrupa ülkelerinin katılımına da açık olduğunu açıklamışlardır. Kurulan bu birlik ile savaş endüstrisinin temelini teşkil eden iki madde; kömür ve çelik ortak bir yönetim tarafından kontrol edileceğinden, olası bir silahlanmanın önüne geçilmiş oluyordu. 18 Nisan 1951'de İtalya, Belçika, Hollanda ve Lüksemburg'un oluşturulan bu birliğe katılmalarıyla Avrupa Kömür-Çelik Topluluğu'nun (AKÇT) temeli atılmış ve böylece bölgeselleşmenin en basit aşaması olan "tercihli ticaret anlaşması"na benzer yapı tesis edilmiştir. Bu altı ülke kömür-çelik alanındaki işbirliklerini daha ileri taşıyarak 25 Mart 1957'de Roma anlaşmasıyla Avrupa Ekonomik Topluluğu (AET) ve Avrupa Atom Enerjisi Topluluğunu kurmuşlardır.

1968 yılına gelindiğinde bu altı ülke aralarındaki gümrükleri kaldırmış ve ortak gümrük tarifesini (OGT) uygulamaya koyarak "Ortak Pazar"ı tesis etmişlerdir. Aralık 1969'da ise La Haye'de toplanan üye devletler Avrupa Ekonomi ve Para Birliği'nin kurulmasına karar vermişlerdir. Bu karar uyarınca hazırlanan Werner raporu (1970) ile ekonomik ve parasal birliğin 10 yıl içinde gerçekleştirilmesi amaçlanmış; topluluk içindeki sermaye hareketlerinin serbestleştirilmesi ile tek bir para ve tek bir Merkez Bankası kurulması önerilmiştir. AET üyelerinin 1970 yılına kadar parasal konularda bir düzenleme yapmamalarının temelinde ise; (i) uluslararası parasal sistem olan Bretton Woods sisteminin başlangıçta istikrarlı olması, (ii) II. Dünya Savaşı sonrası yıkılan Avrupa ekonomilerinin ABD ile ekonomik ve parasal açıdan mücadelede yeterli olmamaları ve (iii) AET üyelerinin parasal politikalarda, sınırlı bir diyalogun ötesinde bir yaklaşıma yer vermemeleri yatmaktadır. Ancak, 1968-1969 döneminde para piyasalarında yaşanan olumsuzlar AET üyelerini bir önlem almaya itmiştir; Fransız Frangında devalüasyon, Alman Markında ise revalüasyon meydana gelmiştir. Bu durum ise ulusal para birimlerinde istikrarı ve Ortak Tarım Politikası (OTP) kapsamındaki ortak fiyat sistemini olumsuz etkilemeye başlamıştır. Ortaya çıkan olumsuzlukları aşabilmek amacıyla AET üyeleri parasal açıdan da çeşitli düzenlemeler yapma yoluna gitmişlerdir. Bu çerçevede 1971 yılında imzalanan Smithsonian Anlaşması, 1972'deki tüneldeki yılan uygulaması, 1973-1976 arasında uygulanan tünelsiz yılan uygulamaları ile Avrupa para sisteminin istikrarı

sağlanmaya çalışılmıştır. 1978 yılından yayınlanan Bremen raporu ile Avrupa Para Sistemi (APS) belirlenmiş ve 1979'da bu sistem yürürlüğe girmiştir. APS ile Avrupa para birimi olan ECU ve döviz kuru mekanizması oluşturularak parasal istikrar sağlanmaya çalışılmıştır. 1989 yılı Aralık ayında Strazburg'da yapılan doruk toplantısında, ekonomik ve parasal birlik kurulması için gerekli düzenlemeleri yapmak için hükümetler arası konferanslar yapılmasına karar verilmiştir. Bu hükümetler arası görüşmeler yaklaşık bir yıldan fazla süre devam etmiş ve 7 Şubat 1992'de imzalanan ve "Avrupa Birliği anlaşması" olarak adlandırılan Maastricht Anlaşmasıyla ekonomik ve parasal birliğin koşulları ve aşamaları belirlenmiş, tek bir Avrupa parası ve Merkez Bankası kurulması kararı alınmış, topluluktan Avrupa Birliği (AB) sürecine geçilmiştir.

1993 yılı Haziran ayında gerçekleştirilen Kopenhag Zirvesi'nde de AB'ye üye olmak isteyen ülkelerin belli bazı kriterleri yerine getirmesi gerekliliği vurgulanmıştır. Kopenhag Kriterleri olarak ifade edilen bu kriterler, siyasi, ekonomik ve uyum kriterleri olmak üzere üç gruptur: a) Siyasi Kriterler: Adaylık başvurusu yapan ülkede hukuk devleti, insan hakları ve azınlık haklarına saygı gösterilmesinin yanında demokrasinin de garanti altına alındığı kurumsal bir yapının varlığı gerekli görülmüştür b) Ekonomik Kriterler: Piyasa ekonomisine sahip ve düzenli çalışan bir ekonomi ile AB içindeki rekabetçi yapıyla mücadele edecek kapasitenin varlığı c) Uyum Kriterleri: Siyasi, ekonomik ve parasal birlik amaçları doğrultusunda üyeliğin getirdiği yükümlülükleri yerine getirmek şeklinde sıralanabilir. Bu üç temel kriterden ekonomik boyutta olanları ise "Maastricht Kriterleri" olarak adlandırılır olmuştur. Böylece Maastricht Anlaşması AB'ye üyesi ve ilerde üye olacak ülkelerin sağlamak zorunda oldukları ekonomik ve parasal kurallar bütünü olarak tanımlanır. Söz konusu kriterler enflasyon, faiz, döviz kuru ve mali disiplin konularından oluşmaktadır.

Bu çalışmada, mali ve parasal konularda standartlar getiren Maastricht Kriterleri eşik değer alınarak, AB'ye üye ülkelerde bu eşik değere ne nispette uyulduğunun tespit edilmesi planlanmaktadır. Dolayısıyla Maastricht Kriterlerine yaklaşan ülkeler, AB para ve mali politikalarında disiplini sağlayan ülkeler olarak nitelendirilebilirken, uzaklaşan ülkelerin ise tam tersine disiplinden saptıkları söylenebilir. 28 üyeye ulaşmış bir toplulukta, topluluğun hayatiyetini sürdürülebilmesi, koyduğu ilkelere bağlı kalmakla aynı anlama gelir. Çalışmada kriter koşulları baz alınarak, yakınsama-ıraksama hipotezlerinin tespiti amacıyla ekonometrik analizler yapılacaktır. Bu çerçevede 1993'de yürürlüğe giren Maastricht Antlaşması ile ortaya konulan kriterler tanıtılarak, büyüme teorisinde Solow tarafından geliştirilen, ekonomik büyümede gelir yakınsaması hipotezi ele alınacaktır. Uygulama bölümünde ise gelir yakınsaması hipotezinin kriter yakınsamasına uyarlaması yapılarak, AB içerisinde koşulların sağlanıp sağlanmadığı belirlenerek, AB içindeki geçiş ekonomilerinin bu yakınsama sürecinde diğer üye devletlerle karşılaştırıldığında performansının nasıl olduğu ortaya konacak ve AB'nin uzun vadeli genişleme sürecinin dikey mi yoksa yatay mı olup olmayacağı tartışılacaktır. Ayrıca Türkiye'nin de aday olduğu süreçte, gelecekte olası politikalar hakkında bir fikir sahibi olunabilecektir.

## 2 Maastricht Kriterleri

7 Şubat 1992'de imzalanan ve 1 Ocak 1993'te yürürlüğe giren Maastricht Antlaşması ile Ekonomik ve Parasal Birliğin koşul ve aşamaları belirlenerek, birliğe üye ülkelerin ekonomi politikalarının yakınlaştırılması hedeflenmiştir. Bu kapsamda 1 Temmuz 1990'da başlayan ilk aşamada ekonomik ve parasal birliğe ulaşmada öncelikli olarak ekonomi ve maliye politikalarının koordineli bir şekilde uyumlaştırılarak ülkelerin ekonomik performansların yakınlaştırılması hedeflenmiştir. Bunun için parasal açıdan serbestliğin olduğu tek bir mali alanın kurulması, ECU'nun özel kullanımının önündeki bütün engellerin kaldırılması ve üye ülkelerin Avrupa Para Sistemine katılmaları hedeflenmiştir. Söz konusu hedefler gerçekleştiğinde sermaye hareketleri üzerindeki sınırlamalar kalkmış ve tam liberilizasyon sağlanarak üye ülkelerin ekonomi ve maliye politikaları birbirine yakınlaştırılmıştır. 1 Ocak 1994'te başlayan ikinci aşamada üye ülkelerin para politikalarında koordinasyonun artırılması ve ECU'nun kullanımının genişletilmesi hedeflenmiştir. Yine bu dönemde ekonomik ve parasal birlik yolunda son aşamada kurulacak Avrupa Merkez Bankası için gerekli ortamın sağlanması için ön hazırlık olarak Avrupa Para Enstitüsünün kurulması, Merkez Bankalarının özerkleştirilmesi ile son aşama için gerekli önlemler ve çalışmaların yapılması öngörülmüştür. Tek paranın kullanılacağı, Avrupa Merkez Bankasının AB para politikasını yürüteceği ve Avrupa Merkez Bankaları sisteminin oluşturulacağı bu son aşamanın en erken 1 Ocak 1997'de, en geç ise 1 Ocak 1999'da başlaması kararı alınmıştır (Güran, 1999; Günay ve Özen, 2002).

Maastricht Kriterleri ile para ve maliye politikalarının üye ülkeler tarafından kullanımı belli ölçüde kısıtlandığından, üye ülkeler birlik politikası çerçevesinde bütçe ve fiyat istikrarının sağlanması hedefine odaklanırlar. Maastricht Antlaşmasıyla AB üyesi bir ülke parasal birliğe girebilmek için "yakınlaşma kriterleri"ni sağlaması gereklidir. Üye bir ülkenin parasal birliğe katılabilmesi için belli bir ekonomik gelişmişlik düzeyine ulaşması gerekli şartlardandır (Savaş, 1999). AB'ye aday ülkeler içinde ekonomik düzenlemelerde yol gösterici olan Maastricht Antlaşması'nda "Yakınlaşma Kriterleri" olarak adlandırılan kriterler şunlardır (Maastricht Treaty, Title-VII, Article: 121; Bayraktutan ve Bayraktar, 2004):

• Enflasyon: Üye ülkede yıllık ortalama enflasyon, AB'de en düşük enflasyona sahip üç üye ülke enflasyon ortalamasını 1,5 puandan fazla geçmemelidir.

• Bütçe Açıkları: Üye ülke bütçe açıkları kendi GSYİH'nın %3'ünü aşmamalıdır.

• Faiz Oranları: Üye ülke devlet tahvili faiz oranı, en düşük enflasyona sahip üç üye ülkenin devlet tahvili faiz oranı ortalamasını 2 puandan fazla geçmemelidir.

• Kamu Borçları: Üye ülke kamu borç stoku, GSYİH'nın %60'ını geçmemelidir.

• Döviz Kurları: Üye ülkeler Avrupa Para Sistemi Döviz Kuru Mekanizmasına dahil olmalı ve ulusal para son iki yılda normal dalgalanmaya bırakılmalıdır. Ayrıca ulusal paranın dalgalanma sınırı devalüe edilmeden (+/-) %15'i aşmamalıdır. Bu kriter ile AB'ne üye ülkelerin paraları arasında istikrar sağlanması amaçlanmaktadır.

Yakınlaşma kriterlerinin temel amacı, sürdürülebilir kamu maliyesi politikaları ile ekonomiyi düzenlemektir. Bu kapsamda orta vadede kamu açıkları GSYİH'nın %3'üne, kamu borçları ise kısa sürede GSYİH'nın %60'ına düşürülecek ve devam eden süreçte azalan bir trend içine alınacaktır. Uluslararası bir anlaşma olan Maastricht Antlaşması ile AB'nin ekonomik ve siyasal birliğe götürülmesinde önemli bir adım atılmıştır. AB'nin Anayasası niteliği taşıyan Maastricht Antlaşması, Avrupa Tek Pazarı'ndan sonra yapılan tek Avrupa yolundaki önemli ilerlemelerden biridir (Sakal, 2000). Maastricht Antlaşması'yla mali disiplinin, parasal disiplinin ve fiyat istikrarının sağlanmasında toplam beş kriter belirlenmiştir.

| Bütçe Açığı/GSYİH Oranı (%3) | Mali disiplin amaçlı |
|---|---|
| Kamu borç stoku/ GSYİH oranı (%60) | Mali disiplin amaçlı |
| Enflasyon oranı (En düşük üç üye ort. +1,5 puan) | Parasal disiplin amaçlı |
| Faiz oranları(Enflasyon oranı en düşük üç üye faiz ort. +2 puan) | Parasal disiplin amaçlı |
| Döviz kurları | Parasal disiplin amaçlı |

***Tablo 1.*** *Maastricht kriterleri ve kriterlere ilişkin açıklamalar*

Avrupa Birliği'ne üye olan ülke hükümetleri imzaladıkları Maastricht Antlaşmasıyla, ulusal iktisat politikaları üzerindeki yetkilerini belli bir düzeyde sınırlamışlardır. Ekonomik ve Parasal Birlik kurulması kapsamında gerekli olan bu sınırlama ile AB üyesi ülkelerde bütçe açıkları GSYİH'nın %3'den; toplam kamu borçları ise GSYİH'nın %60'ından fazla olmamalıdır. Birlik üyesi ülkelerde enflasyon ve uzun vadeli devlet tahvil faizleri belli sınırlar içerisinde olmak zorundadır. Maastricht Antlaşmasıyla, üye ülkelerin makroekonomi yönetiminde keyfiyetine son vererek, mali ve parasal disiplinin sağlanması amaçlanmaktadır. Avrupa Birliği'ne girmek isteyen aday ülkelerin etkin para ve maliye politikaları uygulayarak, Maastricht Kriterlerine ulaşması büyük önem taşımaktadır.

Genel olarak değerlendirildiğinde Maastricht Kriterleri ile kamu kesiminin borç stoku ve bütçe açığına belli bir kısıtlama sağlanırken; enflasyon, uzun vadeli faiz oranları ve yerel paranın değer kaybına (kazancına değil) da düzenleme getirilmektedir. Milli gelir artışı, istihdam ya da bölüşüm hedefleri gibi sosyal içerikli veya kamu kesiminin düzenleyici rolü üzerine herhangi bir sınırlama Maastricht Kriterlerinde mevcut değildir. Benzer şekilde fiyatların serbest piyasa mekanizmaları içinde oluşması, kişi başına milli gelirin en az ne kadar olması gerektiği ya da finansal sistemin milli gelire oranının ne olması gerektiği gibi maddi refah veya ekonomik-finansal gelişmişlikle ilgili konulara yer verilmez. Serbest piyasa uygulaması çerçevesinde, kamunun ekonomideki payı ve müdahalelerinin azaltılması gibi kısıtlamalar da Maastricht Kriterlerinde yer almaz. Maastricht Kriterleri sadece kamu borç stoku ve bütçe açığının azaltılmasını düzenleyen maliye politikası ile uzun vadeli faiz oranları, enflasyon ve devalüasyon uygulamalarını içeren para politikalarını kapsamaktadır (İnan, 2005).

AKÇT'den AET'ye ve AET'den de AB'ye geçiş süreçlerinde çok uluslu, ancak tek bir ülke gibi politika üretebilme adına alınan kararlar arasında bir uyum arayışının olduğu dikkat çekmektedir. Kuruluşunda Roma Anlaşması'nın olduğu birliğin üyeleri Almanya, Fransa, İtalya ve Benelüks ülkeleri (Hollanda, Belçika ve Lüksemburg)'dir. Daha sonra 1973'te İngiltere, Danimarka ve İrlanda'nın, 1981'de Yunanistan'ın, 1986'da İspanya ve Portekiz'in, 1995'de Avusturya, İsveç ve Finlandiya ile 15 ülkeye ulaşılmıştır. 2004'te Slovakya, Slovenya, Estonya, Polonya, Çek Cumhuriyeti, Letonya, Litvanya, Macaristan, Malta, Güney Kıbrıs Rum Yönetimi'nin, 2007'de Romanya ve Bulgaristan'ın, son olarak da 2013'te Hırvatistan'ın katılımı ile 7 kez genişleme sürecine girmiş ve üye sayısını 28'e çıkarmıştır. 28 üyeli AB'nin Maastricht kriterleri çerçevesinde genel görünümü aşağıdaki gibi özetlenebilir (Eurostat, 2013);

• Enflasyon oranları incelendiğinde AB genelinde enflasyonun istikrarlı olduğu ve son dönemlerde azalma eğilimine girdiği görülmektedir. Bu durumda özellikle 2009 krizinde azalan tüketici talebinin fiyatlar genel düzeyi üzerindeki baskıyı azaltmasının büyük rol oynadığı düşünülmektedir.

• Uzun dönemli faiz oranları incelendiğinde AB üyesi ülkelerde ve genel olarak AB ortalamasında bir düşüş görülmektedir. Bu durum AB'ye yeni katılan üyelerde de geçerliliğini korumaktadır. Genel olarak 2009 yılındaki kriz döneminde birlik üyesi gelişmiş ülkelerde faiz oranları düşerken, yeni üye olan veya gelişmekte olan üye ülkelerde faiz oranları yükselmiştir.

• Kamu kesimi bütçe dengesi açısından AB genelinde bütçe açıklarının giderek arttığı söylenebilir. Özellikle 2009 yılındaki kriz döneminde bütçe açıkları tavan seviyelere ulaşmış ve sonrasında ise bir düzelme oluşmuştur.

- Kamu kesimi borç stoku, AB genelinde 2003-2012 döneminde genel olarak artmıştır. Özellikle 2009 krizinin bu duruma etkisi büyük olmuştur. Pek çok AB üyesi ülke, eşik sınır olan %60 düzeyinin oldukça üzerine çıkılmıştır. Bu dönemde ekonomik krizden büyük ölçüde etkilenen Yunanistan ve İtalya'da kamu borç stoku %170'lere kadar yükselmiştir.

## 3 Yakınsama Hipotezi ve Literatür Özeti

Ülke ekonomilerinin gelir düzeyleri birbirinden farklıdır. Ancak, birbirleriyle ilişki düzeyi yüksek olan ülkelerde gelir düzeylerinin birbirine yakın olduğu görülmektedir. Bu nedenle ülkeler arasında bir yakınsama olgusunun varlığı Solow'un (1956) ekonomik büyüme çalışmasıyla başlamıştır. Solow büyüme modelinde, üretim sürecinde kullanılan sermaye miktarının artmasına bağlı olarak, azalan verimler kanununun geçerli olması nedeniyle, büyüme oranında bir azalmanın meydana geleceği öngörülür. Dolayısıyla zaman içerisinde, azgelişmiş ülkelerde yüksek ve gelişmiş ülkelerde ise düşük büyüme oranlarının gerçekleşeceği ileri sürülür (Öztürk, 2013).

Yakınsama hipotezini test eden ilk çalışmalardan birisi Baumol (1986)'un çalışmasıdır. Bu çalışma yatay kesit verileri ile 1870-1979 zaman diliminde, 16 gelişmiş ülke üzerinde yakınsama hipotezini test etmiş ve anlamlı sonuçlar elde etmiştir. Çalışmada belli bir dönemde kişi başı gelir büyüme oranıyla başlangıç gelir düzeyi arasındaki ilişki incelenmiştir. Daha sonra DeLong (1988), Dowrick ve Nguyen (1989), King ve Rebelo (1989), Barro (1991), Barro ve Sala-i Martin (1990, 1992), Mankiw, Romer ve Weil (1992), Sala-i Martin (1996a, 1996b), gibi birçok araştırmacı çeşitli zaman dilimleri ve farklı ülke verileriyle yakınsama hipotezini test eden çalışmalar yapmışlardır. Bu çalışmalarda genellikle literatürde beta ve sigma yakınsaması olarak ifade edilen analizler kullanılmaktadır (Ceylan, 2010). Beta yakınsaması, ülkeler arasındaki başlangıç gelir düzeyi ile ortalama büyüme arasındaki negatif ilişkiyi test eden bir analiz mahiyetindeyken; daha çok bölgeler arası yakınsama analizlerinde kullanılan sigma yakınsamasında ise; alınan değişkenin logaritmasının standart sapmasına ait dağılım, zaman içinde azalma eğilimi gösteriyorsa, yakınsamanın varlığı kabul edilmektedir.

Daha sonra geliştirilen modellerde kişi başına gelir serilerinin durağan olup olmamasına göre yakınsama olgusunun araştırıldığı zaman serisi yöntemleri yer almaya başlamıştır. Bu yaklaşımda şayet seriler durağansa, verilerin uzun dönemde ortalamalara yönelmesinden dolayı yakınsamanın gerçekleştiği kabul edilmektedir. Durağan olmayan serilerde ise meydana gelen şoklar sonucunda ortalamadan uzaklaşılır ve seriler arasında ıraksamanın oluştuğu ileri sürülmektedir. Son dönemde geliştirilen panel veri yaklaşımında ise Islam (1995) ile Lee, Peseran ve Smith (1997) testlerin gücünü artıran panel veri regresyonu ile yakınsamanın varlığını incelemişlerdir. Bazı çalışmalarda ise zaman serisi analizi panel veri üzerinde uygulanmış ve yakınsama hipotezi panel birim kök testleri ile test edilmiştir.

Çalışmamızda AB'nin önemli ekonomik kriterlerinden olan Maastricht Kriterlerine göre mevcut durumunun analiz edilmesi amaçlanmaktadır. Böylece Maastricht Kriterlerinin üye ülkeler açısından AB standartlarına yaklaşıp yaklaşmadığı araştırılacaktır. Genellikle gelir yakınsaması olarak yapılan çalışmalardan farklı olarak Maastricht Kriterlerinden olan enflasyon, faiz oranı, bütçe açığı ve kamu borç stoku kriterlerindeki değişimin üye ülkelerde AB adaylık sürecinin de etkisiyle standartlara yaklaşma şeklinde mi, yoksa ıraksama şeklinde mi gerçekleştiği araştırılacaktır. Böylece üye ülkelerde gerçekleştirilen reformların ekonomik açıdan AB standartlarına yaklaşma eğilimi sağlayıp sağlamadığı görülecektir.

Bernard ve Durlauf (1995) 15 OECD ülkesi için 1900-1987 dönemi reel kişi başına gelir değişkenini eşbütünleşme analizi kullanarak inceledikleri çalışmalarında ülkeler arası yakınsama değil, ıraksama oluştuğu sonucuna ulaşmışlardır (Saraçoğlu ve Doğan, 2005: 2).

Oxley ve Greasley (1997) İsveç-Danimarka, Belçika-Hollanda, Fransa-İtalya ve Avustralya-İngiltere için 1900-1987 dönemi kişi başına reel gelir değişkenini kullandıkları çalışmalarında ADF-Perron birim kök testleri ile ülkeler arasında yakınsama olup olmadığını incelemişlerdir. Elde edilen sonuçlara göre söz konusu ülkeler arasında bir gelir yakınsamasının varlığı tespit edilmiştir.

Tsionas (2000) çalışmasında 1960-1997 dönemi 15 Avrupa ülkesinin kişi başına çıktı, kişi başına gelir ve toplam faktör verimliliklerinde yakınsama olup olmadığını ADf, PP, KPSS ve Bayesian test yöntemleri ile araştırmıştır. Elde edilen sonuçlara göre PP test sonuçları ıraksamanın, KPSS ve Bayesian test sonuçları ise yakınsamanın gerçekleştiğini göstermektedir.

Datta (2003) 15 OECD ülkesi için 1950-1998 dönemi kişi başına gelir değişkenindeki değişimi Kalman-Filtre yöntemiyle incelemiştir. Elde ettiği sonuçlar ülkeler arasında bir gelir yakınsaması olduğu yönündedir.

Bentzen (2005) ise 20 OECD ülkesinin kişi başına gelir değerlerinin ABD gelirine yakınsayıp yakınsamadığını ortalama eğim ve QLR test yöntemiyle 1950-2000 dönemi verileriyle incelemiştir. Elde edilen sonuçlar söz konusu ülkelerin ABD'ye yakınsadığını göstermektedir.

Tunay ve Silpagar (2007) panel birim kök testi ve dinamik panel veri modelleri yardımıyla Türkiye'de farklı coğrafi bölgeler arası enflasyon yakınsaması olgusunu test etmiştir. Çalışma sonucunda farklı coğrafi bölgeler arasında enflasyon yakınsaması olgusu tespit etmişler ve yakınsama sürecinin oldukça hızlı olduğu görülmüştür.

Chong vd. (2008) ise 12 OECD ülkesinin gelir düzeylerinin ABD'ye yakınsayıp yakınsamadığını 1950-2000 dönemi verilerini kullanarak araştırmışlardır. Elde edilen sonuçlara göre Avusturya, Hollanda, Avustralya ve İngiltere'nin ABD'ye gelir yakınsaması içinde oldukları sonucuna ulaşmıştır.

Ceylan (2010) 25 OECD ülkesine ait imalat sanayisindeki birim emek maliyetlerinin yakınsamasına dair birim kök testleri yardımıyla bir araştırma yapmakta ve 1970:1-2009:2 arası zaman diliminde anılan ülke gurubu için birim emek maliyetlerinin yakınsadığı sonucuna varmaktadır.

Ceylan vd. (2013) yakınsama hipotezini 1950-2008 dönemi ve 21 OECD ülkesinde ADF ve KSS test yöntemleri kullanarak incelemişlerdir. Çalışmalarında ADF testi için her OECD ülkesinin fiili GDP serilerinin ABD'nin GDP serilerinden farkını ifade eden serilerde yakınsamanın olmadığı anlamına gelen birim kökün varlığı ortaya konulmuştur. KSS testi kullanılarak yapılan analizlerde, yani doğrusal olmayan test sonuçlarına göre seçilmiş OECD ekonomileri arasında doğrusal olmayan çıktı yakınsaması kanıtlarını destekleyerek, serilerde birim kökün varlığını ifade eden boşluk hipotezi reddedilmiştir.

Öztürk (2013) Türkiye'nin 1950-2008 döneminde Avrupa Birliği'ne kişi başına gelir bağlamında yakınsama gösterip göstermediğini araştırdığı çalışmasında zaman serisi analizleri ile hem stokastik yakınsama hem de β-yakınsamasını test etmiştir. Elde edilen sonuçlar, Türkiye'nin Avrupa Birliği'ne, kişi başına gelir açısından bir yakınsama gösterdiği yönündedir.

## 4   Veri Seti, Yöntem ve Uygulama

Ekonomik araştırmalarda zaman kesitinin analizlerde yetersiz olduğu durumlarda başvurulan panel veri kullanımı, hem zaman serisi ve yatay kesit bilgilerini bir arada içerdiği için araştırmacıya daha fazla gözlemle çalışma imkânı sunarken, aynı zamanda serbestlik derecesinin artmasına da neden olmaktadır. Ayrıca panel veri ile çalışılması çoklu doğrusal bağlantının derecesini azaltıp, çalışmaların güvenilirliğini de arttırmaktadır (Yerdelen, 2012a). Bu bağlamda AB ülkeleri için Maastricht Kriterlerine yakınsamaya ait yapılacak analizde panel birim kök testleri kullanılacaktır.

Kriterlere yakınsama olgusunun analizlerine geçilmeden önce, yakınsamanın zaman serisi boyutunun açıklanmasında fayda vardır. Bernard ve Durlauf (1996) zaman serisi bağlamında yakınsamayı tanımlarken, iki ülkeli (i ve j ülkeleri) basit bir modelde, "t" zamanından başlayarak "t+n" zamanında gerçekleşecek yakınsamanın var olması için, bu iki ülke arasındaki gelir farkının sonlu olmayan bir periyotta (n→∞) sıfıra eşitlendiği denklem ile belirtmiştir (1 nolu eşitlik). Aynı zamanda bu durum, Bernard ve Durlauf tarafından durağan durum olarak da kabul edilmiştir.

$$\lim_{n\to\infty} E(Y_{i,t+n} - Y_{j,t+n} | I_t) = 0 \qquad (1)$$

Çok ülkeli modellerde ise bu tip bir yakınsamadan ziyade; yakınsamanın daha çok örneklem ortalamasından sapmalarla ölçülebileceği görüşü benimsenmiştir. (Nahar ve Inder, 2002). Bu genellemeden yola çıkan Ceylan (2010) seçilmiş ülke gurubunun belli bir ortalamaya ya da grup trendine yakınsamasına dair eşitliği oluşturmuştur (2 nolu eşitlik). Bu denklemde a(t+n) değişkeni grup ortalamasını ifade ettiği gibi en iyi performansa sahip ülkenin verisini de temsil edebilmektedir.

$$\lim_{n\to\infty} E(Y_{i,t+n} - a_{t+n}) = \mu_i \qquad (2)$$

(2) nolu eşitliğe göre tüm ülke gurubu benzer davranış kalıbına sahip olmadıkça "$\mu_i$" değeri sıfırdan farklı olmaktadır. Çalışmada kullanılacak Maashtrict Kriterlerine ait verilerin yakınsaması incelenirken, (2) nolu eşitlik baz alınacaktır. (2) nolu eşitlikteki $a_{(t+n)}$ değeri AB üyeleri için belirlenen kriteri ifade etmekte ve $Y_{(i,t+n)}$ değeri ise kullanılacak değişkenin ilgili ülke ve zaman dilimindeki değerini belirtecektir. Örneğin enflasyon oranına ilişkin Maastricht Kriteri test edilirken, gruptaki ülkelerin enflasyon oranları ile kriter tarafından belirlenen en düşük üç ülkeye ait enflasyon oranı ortalaması arasındaki farkın, zaman içinde azalması kritere yakınsama olarak kabul edilecektir. Bu denklemin test edilmesi için de panel birim kök testlerinden faydalanılacaktır.

Panel veri analizlerinde, değişkenlerin durağanlığının sınanmasında kullanılan birim kök testleri birimler arası korelasyon açısından 1. Kuşak ve 2. Kuşak panel birim kök testleri olarak ikiye ayrılmaktadır. 1. Kuşak testler birimler arasında korelasyon olmadığını varsaymakta ve korelasyon durumunda testlerin güçleri zayıflamaktadır. Buna karşılık 2. Kuşak testler ise birimler arasında korelasyonun varlığı durumunda kullanılmaktadır. 1. Kuşak testlerden Levin, Lin ve Chu (LLC), Harris ve Tzavallis (HT), Breitung, Hadri Panel birim kök testleri sadece dengeli panel veri setlerine uygulanabilirken, Im, Paseran ve Shin (IPS), Fisher testleri her bir birim için farklı gecikme uzunluğu ile dengesiz verilerde de kullanılabilmektedirler. Veriler arasında korelasyon yoksa, Im, Paseran ve Shin ve Fisher testleri daha kuvvetli kabul edilmektedirler. Ayrıca panelde durağan ve durağan olmayan seriler birlikte yer alıyorsa, Fisher testleri hem sıfır hem de alternatif hipotez ayrımlarında daha güçlü olduğu için seçilebilir (Yerdelen, 2012b).

Çalışmada Maastricht kriterlerine yakınsama olgusu hem AB üyesi 28 ülke için hem de bu 28 üye içerisinde Geçiş Ekonomileri olarak sınıflandırılan guruba dahil olan ülkeler için ayrı ayrı yapılmıştır. Yakınsamayı test etmek için yöntem kısmında değinildiği üzere panel birim kök testleri kullanılmaktadır. 28 AB ülkesini içeren analiz için kullanılan veri seti, verilere ilişkin açıklamalar ve her bir değişken için alınan dönem Tablo 2'de

verilmektedir. Veriler Eurostat veritabanından ve ilgili ülke merkez bankalarının internet sitelerinden faydalanılarak elde edilmiştir.

| Değişkenler | Kodu | Açıklama | Ülkeler | Zaman Periyodu |
|---|---|---|---|---|
| Enflasyon | INF | i ülkesi t yılı enflasyon oranı-(t yılı en düşük üç üye ülke enflasyon oranı ortalaması +1,5) | 28 AB üye Ülkesi | 1999-2013 |
| Faiz | FAİZ | i ülkesi t yılı faiz oranı-(t yılı en düşük üç üye ülke enflasyon oranı faiz ortalaması +2) | 24 AB üye Ülkesi* | 2001-2013 |
| Bütçe Açığı | DEFİ | i ülkesi t yılı bütçe açığı - (%3) | 27 AB üye ülkesi** | 1999-2012 |
| Kamu Borç Stoku | DEBT | i ülkesi t yılı kamu borç stoku - (%60) | 27 AB üye ülkesi** | 1999-2012 |

\* Bulgaristan, Hırvatistan ve Romanya için anılan periyoda ilişkin veri setinde eksik bulunduğu için; Estonya'nın ise uzun dönemli devlet tahvili çıkartmaması dolayısıyla bu kriter için gerekli verisi olmadığından analiz dışı bırakılmışlardır.
\*\* Hırvatistan'a ait verilerde eksiklik bulunması nedeniyle analiz dışında bırakılmıştır

***Tablo 2.** 28 üye ülke için yapılan panel birim kök testlerinde kullanılan verilere ilişkin bilgiler*

Maastricht Kriterlerine yakınsamanın varlığı için; ekonometrik varsayımları birbirinden farklı olan, birinci kuşak ve ikinci kuşak birim kök testleri, iki farklı yöntemi içerecek şekilde uygulanmıştır. Serilerin birim kök içermemesi, yani serilerin durağan olması yakınsamanın varlığına işaret olarak kabul edilirken, serilerin birim kök içermesi yakınsamanın olmadığını ifade edecektir. Bu bağlamda yapılan birim kök testleri Tablo 3'de gösterilmektedir. Testler Stata 12.0 paket programı kullanılarak elde edilmiştir (HT testinde birimler arası korelasyonun varlığını gidermek için ayrıca demean komutu kullanılmıştır).

|  | t/z istatistik değerleri | |
|---|---|---|
| Değişkenler/Testler | Harris ve Tzavallis | Pesaran's CADF test |
| INF | -11,9340* | -2,278** |
| FAİZ | -8,9239* | -1,744 |
| DEFİ | -2,6243* | -1,82 |
| DEBT | 0,1359 | -1,342 |

\* 0.01,\*\*0.05 ve \*\*\*0.10 anlamlılık düzeylerini simgelemektedir

***Tablo 3.** AB üye ülkelerin tümü için yapılan birim kök testleri*

Birinci kuşak birim kök testlerinden Harris ve Tzavalis (HT) testinin birim köke ilişkin hipotezleri; "$H_0$: serilerde birim kök vardır, $H_1$: serilerde birim kök yoktur" şeklindedir (Harris ve Tzavalis,1999).

Birinci kuşak testlerden HT testi veri seti dengeli panel olduğu durumlarda kullanılabilmektedir. Ayrıca bu test, panel verilerle yapılan çalışmalarda, zamanın (T), yatay kesitten (N) küçük olduğu durumlarda diğer birinci kuşak panel birim kök testlerinden daha güvenilir sonuçlar ortaya çıkarmaktadır. Çünkü HT testi, T'nin sonlu, N'in ise sonsuza gittiğini varsaymaktadır. Dolayısıyla N>T veya T'nin küçük olduğu (10 ile 15'den) durumlarda HT testi daha güvenilir sonuçlar vermektedir. Ayrıca zaman boyutu kısa olduğunda HT testi küçük örneğin getirdiği dezavantajlardan kaçınmak için varyans formüllerinde T yerine T-1 kullanarak anlamlılık gücü azalsa da, örnek özelliklerini iyileştirebilmektedir (Stata User Manuel, 2014).

İkinci kuşak testlerden Pesaran CADF testi, birimler arası korelasyonu önlemek için, Genişletilmiş Dickey Fuller (ADF) regresyonunun gecikmeli yatay kesit ortalamaları ile genişletilmiş halini kullanmaktadır. Ayrıca HT testi gibi T'nin sabit olduğu varsayımında da kullanılabilmektedir (Yerdelen, 2012b).

Maastricht Kriterlerine ilişkin Tablo 3'de verilen, HT ve Pesaran CADF test sonuçları incelendiğinde;

- HT testine göre enflasyon kriteri açısından, 28 üye ülkenin 1999-2013 zaman aralığında %1 anlamlılık düzeyinde durağan olduğu, yani kriter yakınsamasının gerçekleştiği görülmektedir. Seriler arasında korelasyonun var olduğu kabul edilerek yapılan Pesaran CADF testine göre %5 anlamlılık düzeyinde durağanlığın olduğu anlaşılmaktadır.

- Faiz kriterinde yakınsamanın 2001-2013 dönemi itibariyle 24 ülke için HT testinde %1 anlamlılık düzeyinde gerçekleştiği, fakat CADF testinde yakınsamanın olmadığı görülmektedir.

- Bütçe açığı için yapılan panel birim kök test sonuçlarına göre, yakınsamanın faizlerdeki gibi HT testinde %1 anlamlılık düzeyinde gerçekleştiği ama CADF testinde gerçekleşmediği görülmektedir.

- Kamu borç stoku kriteri açısından sonuçlar değerlendirildiğinde hem HT hem de CADF test sonuçlarına göre serilerin birim kök içerdiği, dolayısıyla Hırvatistan dışındaki 27 AB ülkesi için 1999-2012 döneminde kamu borç stokuna ait Maastricht kriterine yakınsamanın gerçekleşmediği görülmektedir.

Çalışmada ayrıca AB içinde Geçiş Ekonomileri olarak adlandırılan gruba dahil 11 ülke (Bulgaristan, Hırvatistan, Çek Cumhuriyeti, Estonya, Macaristan, Letonya, Litvanya, Polonya, Romanya, Slovakya ve

Slovenya) için de Maastricht Kriterlerine yakınsama, panel birim kök testleri ile irdelenmiştir. Kullanılan veri setine ilişkin bilgiler Tablo 4'te verilmektedir.

| Değişkenler | Kodu | Ülkeler | Zaman Periyodu |
|---|---|---|---|
| Enflasyon | INF | 11 AB Üyesi Geçiş ekonomisi | 1999-2013 |
| Faiz | FAİZ | 7 AB Üyesi Geçiş ekonomisi* | 2001-2013 |
| Bütçe Açığı | DEFİ | 10 AB Üyesi Geçiş ekonomisi** | 1999-2012 |
| Kamu Borç Stoku | DEBT | 10 AB Üyesi Geçiş ekonomisi** | 1999-2012 |

* Bulgaristan, Hırvatistan ve Romanya için anılan periyoda ilişkin veri setinde eksik bulunduğu için; Estonya'nın ise uzun dönemli devlet tahvili çıkartmaması dolayısıyla bu kriter için gerekli verisi olmadığından analiz dışı bırakılmışlardır.

** Hırvatistan'a ait verilerde eksiklik bulunması nedeniyle analiz dışında bırakılmıştır

***Tablo 4.*** *AB üyesi Geçiş ekonomileri için yapılan panel birim kök testlerinde kullanılan verilere ilişkin bilgiler*

Geçiş ekonomileri için elde edilen panel verilerde T>N durumu söz konusu olduğu için HT testine ek olarak 1. Kuşak testlerden Breitung panel birim kök testleri de yapılabilmektedir. Breitung panel birim kök testi de HT gibi dengeli panel durumunda kullanılabilmektedir. Ayrıca hata terimlerinin birimler arası korelasyonuna dirençli t istatistikleri hesaplayabilmekte ve T>N durumunda Monte Carlo benzetimleri ile diğer tüm birim kök testlerinden daha güçlü sonuçlar ortaya çıkarabilmektedir (Yerdelen, 2012b). Geçiş ekonomileri üzerine yapılan panel birim kök testlerine dair istatistikler Tablo 5'de verilmektedir.

|  | t/z istatistik değerleri | | |
|---|---|---|---|
| Değişkenler/Testler | Harris ve Tzavallis | Breitung | Pesaran's CADF test |
| INF | -7,6517* | -5,6402* | -2,757* |
| FAİZ | -9,4880* | -3,3687* | -2,117 |
| DEFİ | -2,0215** | -1,8447** | -2,080 |
| DEBT | -0,8517 | -2,0095** | -1,883 |

* 0.01,**0.05 ve ***0.10 anlamlılık düzeylerini simgelemektedir

***Tablo 5.*** *AB üyesi Geçiş ekonomileri için yapılan birim kök testleri*

Maastricht Kriterlerine ilişkin Tablo 5'de verilen, Geçiş Ekonomileri açısından birim kök test sonuçları incelendiğinde;

- HT, Breitung ve CADF testlerine göre enflasyon kriteri açısından, AB üyesi 11 geçiş ekonomisi için %1 anlamlılık düzeyinde $H_0$ hipotezi reddedilebilir, yani kriter yakınsaması 1999-2013 dönemi için söz konusudur.

- Faiz kriterinde (%1 anlamlılık düzeyinde) ve bütçe açığı kriterinde (%5 anlamlılık düzeyinde) yakınsamanın, HT ve Breitung testleri açısından söz konusu olduğu, fakat seriler arasında güçlü korelasyonun varlığı durumunda uygulanan CADF testine göre, bu kriterler için yakınsamanın olmadığı görülmektedir.

- Kamu borç stoku kriteri açısından sonuçlar değerlendirildiğinde; hem HT hem de CADF test sonuçlarına göre serilerin birim kök içerdiği ve böylece kamu borç stokuna ait kritere yakınsamanın gerçekleşmediği görülmektedir. Ancak, Breitung testine göre yakınsamanın bu kriter açısından %5 anlamlılık düzeyinde gerçekleştiğini söylemek mümkündür.

## 5  Sonuç ve Değerlendirme

Bu çalışmada mali ve parasal konularda standartlar getiren Maastricht Kriterlerinin getirmiş olduğu eşik değerler dikkate alınarak, AB'ye üye ülkelerin bu eşik değerlere ne kadar uyum gösterdikleri inceleme konusu yapılmıştır. Özellikle dünyadaki son finans krizinin başta borçluluk yapısı olmak üzere birçok ülkede ihlal edildiği ortaya çıkarken, bu durumun hem birliğin geleceği açısından hem de diğer üye ülkeler açısından bir tür fayda-maliyet analizi yapılır olması sonucunu doğurmuştur. Zira kriterlerden sapma birliğin adeta yumuşak karnı olarak geleceğini sorgulatabilmekte; böylece üye ülkeler arasında standartlarda esnemelerin varlığına işaret etmektedir. Diğer bir ifadeyle kriterlerden uzaklaşan ülkelerin bir tür mali ve parasal disiplinden saptıkları söylenebilir ki, bu durum da 28 üyeye ulaşmış bir toplulukta topluluğun hayatiyetini sürdürülebilmesini sorgulatabilir.

AB içerisinde kriterlere uyulup uyulmadığı sorusunun cevabının araştırıldığı bu çalışmada ele alınan 4 temel kriter açısından Maastricht Kriterlerine yakınsamanın her kriterde söz konusu olmadığı tespit edilmiştir. Özellikle yeni üyeler birliğe üyelik aşamasında bu kriterleri sağlamak yönünde önemli adımlar atmakta; sıkı bir denetimden geçirilmekte ve bu durum da topluluk bünyesinde kriter yakınsaması için olumlu sonuçlar doğurmaktadır. Diğer bir ifadeyle tüm AB ülkeleri için söz konusu olan düşük enflasyon ve faiz oranları

açısından yakınsamanın anılan dönem için geçerlilik arz ettiği belirlenirken, kamu borç stoku için yakınsamanın değil, ıraksamanın varlığı tespit edilmiştir. Özellikle küresel krizin AB ülkelerinin birçoğunda ortaya çıkardığı olumsuz etkilere ek olarak Yunanistan, İspanya ve Portekiz'in krizle birlikte iyice büyüyen dış borçlarının, bu yakınsamanın gerçekleşmemesinde etkili olduğu düşünülebilir.

Ayrıca üye ülkeler içindeki 11 geçiş ekonomisi için kriterlere uyma durumunun AB genelinden daha da güçlü olduğu görülmektedir. Planlı ekonomiden serbest piyasaya geçiş yapan bu guruptaki ülkelerin AB'ye üyelik süreciyle AB'nin ortak ekonomi politikalarına güçlü bir şekilde adapte olduğu dikkat çekmektedir. Bunun yanı sıra geçiş ekonomileri için AB genelinden farklı olarak kamu borç stoku açısından da yakınsamanın varlığı tespit edilmiştir. Bu da göstermektedir ki, AB'ye uyum sürecini iyi değerlendirerek mali ve parasal disiplini sıkı sıkıya sağlayan bu guruptaki ülkelerin üyelik sürecine paralel olarak Maastricht Kriterlerinden herhangi bir esneme göstermedikleri dikkat çekmiştir. Geçiş ekonomilerinde gözlenen sıkı disipline karşılık Birliğin daha eski üyesi olan Yunanistan, İspanya ve Portekiz'in sapma göstermesi, Birlik içerisinde bir tür ayırımcılık ya da kontrollerde esnemenin varlığına işaret etmektedir.

Özetle AB'nin yeni üye ülkelerde bütün kriterler açısından başarı sağladığı; buna karşılık görece daha eski üyelerden başta Yunanistan, İspanya ve Portekiz olmak üzere bir kısım ülkelerde borç stoku açısından kriterlerden sapmanın ortaya çıktığı tespit edilmiştir. Bu durum belki de ayırımcılık ya da denetimsizliğin yansımaları olarak ortaya çıkarken; 28 üyeye ulaşan birlikte yatay entegrasyon sürecinin, yani yeni üye alımlarıyla genişlemelerin devam etmesine yoğunlaşmaktan çok, dikey entegrasyon sürecine, yani birlik içerisinde başta borç stoku olmak üzere kurumsallaşma ve durağanlaşan ekonomik büyümeden daha yüksek ve güçlü büyüme gibi konulara ağırlık verileceği gibi bir sinyal ortaya çıkarmaktadır. Dolayısıyla yatay entegrasyon sürecinde beklemede olan Türkiye'nin ve diğer aday ülkelerin çok yakın olmayan bir gelecekte üyeliğinin ancak söz konusu olabileceği söylenebilir.

# Türkiye ve Geçiş Ekonomileri Arasında Nüfus Trendlerinin Karşılaştırılması

# The Comparison of Population Trends between Turkey and Transition Economies

Yunus Serhat Çayır (Anadolu University, Turkey)

## Abstract

In this study, Turkey is compared to the Central and Eastern Europe (CEE) countries and the Commonwealth of Independent States (CIS) countries with regard to the population trends by means of data from HDI Report developed by UNDP. Population trends include total population, population annual growth, urban population, median age, total dependency rate, total fertility rate in HDI. The data indicates that the rate of median age in Turkey is lower than CEE countries and many of Commonwealth of Independent States (CIS) in 2010. Moreover, the rate of total fertility is higher in CIS countries than in the CEE countries in 2012. The rate of annual growth of population is lower in CEE countries than in the CIS countries in the period of 2000/2005 and 2010/2015. Only Turkey has tendency to reduce the rate of annual growth of population among CIS countries. Total dependency rate is higher in CIS countries (%46) than in the CEE countries (%44) in 2012. With %46.8 an overall dependency rate Turkey is located in the middle range among CIS countries. Urban population rate (% of total) is lower in CIS countries (%54, 69) than in CEE countries (%61.45) in 2012. Tajikistan has the lowest urban population rate among the CIS and CEE countries. Turkey's (%72, 5) urban population rate is located in one of the top positions among CIS and CEE countries.

## 1 Giriş

Demografi, (nüfus bilimi) insan nüfusunun, büyüklüğünü, yapısını ve dağılımını inceleyen bilim dalı olarak tanımlanmaktadır (Tansel ve Hoşgör, 2010). Türkiye'de nüfusa (demografi) ilişkin veriler, Türkiye İstatistik Kurumu'ndan elde edilerek nüfus projeksiyonları adı altında; toplam nüfus, ölümler, toplam doğurganlık hızı, doğuşta beklenen yaşam süresi, nüfus artış hızı, bebek ölüm hızı, kaba doğum hızı, kaba ölüm hızı gibi başlıklar altında incelenmektedir. Nüfusa ilişkin ülkelerin politika üretilmesi, mevcut nüfus eğilimlerinin tespit edilmesi, ayrıca nüfus eğilimlerine dayanarak geleceğe ilişkin öngörüde bulunulmasında nüfus projeksiyonlarından yararlanılır (TÜİK, 2014).

Birleşmiş Milletler Kalkınma Programı tarafından hazırlanan İnsani Gelişme Raporları (HDR), 1990 yılından bu yana yayınlanmaktadır. İnsani Gelişme Raporlarında geliştirilen İnsani Gelişme Endeksi'nde ülkelerin kalkınma düzeyleri gelir, eğitim, sağlık, nüfus, yaşam beklentisi, bilgi teknolojileri gibi birçok değişik konularda karşılaştırılabilmektedir (Serel ve Serel, 2005).

Son zamanlarda gelişmiş ve gelişmekte olan ülkelere bakıldığında dünya nüfusunun yaşlanmakta olduğu görülmektedir. Buna, beklenen yaşam süresindeki artış ve doğum oranlarının azalması gibi durumların etki ettiği görülmektedir (Yumurtacı, 2013).

Bu durum, Birleşmiş Milletler Kalkınma Programı tarafından 1990 tarihinden günümüze kadar her yıl yayınlanan İnsani Kalkınma Raporu'ndaki parametrik göstergelerden de anlaşılmakta olup; bu raporda toplam nüfus, yıllık nüfus artış hızı, kentsel nüfus, medyan yaş, toplam bağımlılık oranı, toplam doğurganlık oranı gibi başlıklar altında ele alınmaktadır (UNDP, 2014).

İnsani Gelişim Raporu-2013'e bakıldığında; ülkemizin 2012 yılındaki nüfusunun 74 milyon civarında iken 2030 yılı için 86.7 milyon olarak öngörüldüğü, yıllık artış hızının 2000-2005 döneminde %1,4 iken 2010/2015 döneminde ise %1,1 olarak öngörüldüğü, ortanca yaşın (median age) ise 2000 yılında 24,5'ten 2010 yılında 28,3'e yükseldiği görülmekte olup demografik göstergelerin değişkenlik gösterdiği demografik değişim sürecinin devam ettiğini düşündürmektedir (UNDP,2014).

Günümüzde bir çok ülke büyük bir demografik geçiş sürecinden geçmektedir. Bu süreç, yüksek doğurganlık ve yüksek ölüm oranlarından doğum ve ölüm oranlarının düşüşe geçtiği bir süreci tanımlamaktadır (Ataman Dönmez, 2007).

Geçiş ekonomileri, Uluslararası Para Fonu (IMF) tarafından şu şekilde sınıflandırılmıştır (IMF, 2014):

Avrupa ve Eski Sovyetler Birliği Ülkeleri(Central and Eastern European Economies- CEE): Arnavutluk, Bulgaristan, Hırvatistan, Çek Cumhuriyeti, Makedonya, Macaristan, Polonya, Romanya, Slovak Cumhuriyeti, Slovenya.

Baltık Ülkeleri (Baltics): Estonya, Letonya, Litvanya.

Bağımsız Devletler Topluluğu (Commonwealth of Independent States- CIS): Ermenistan, Azerbaycan, Beyaz Rusya, Gürcistan, Kazakistan, Kırgızistan, Moldova, Rusya, Tacikistan, Türkmenistan, Ukrayna, Özbekistan.

Asya'da Geçiş Ekonomileri (Asia Transition Economies): Kamboçya, Çin, Laos, Vietnam.

Bu çalışmada, Asya'daki geçiş ekonomileri çalışma kapsamında ele alınmayacak olup, IMF sınıflandırmasında yer alan Baltık Ülkeleri (Baltics) ise Avrupa ve Eski Sovyetler Birliği Ülkeleri (CEE) ile birlikte ele alınacaktır.

Bir başka kaynak olan, Transition Report-2004'te Geçiş Ekonomileri; Arnavutluk, Ermenistan, Azerbaycan, Beyaz Rusya, Bosna Hersek, Bulgaristan, Hırvatistan, Çek Cumhuriyeti, Estonya, Makedonya, Gürcistan, Macaristan, Kazakistan, Kırgızistan, Litvanya, Letonya, Moldova, Polonya, Romanya, Rusya, Sırbistan-Karadağ, Slovakya, Slovenya, Tacikistan, Türkmenistan, Ukrayna ve Özbekistan'ı kapsamaktadır (EBRD,2014). Yine bu çalışmada adı geçen ülkelerden sadece Sırbistan- Karadağ, nüfus trendleri çalışmamızda değerlendirilmeye alınmayan ülkedir.

Bu çalışmada, Türkiye ile AB'ye aday veya AB üyesi olan geçiş ekonomilerinin nüfus trendlerini karşılaştırmak ve Türkiye ile geçiş ekonomilerinin durumunu ortaya koymak amaçlanmaktadır.

## 2 İnsani Gelişme Raporu-2013'deki (HDR) Nüfus Trendleri

Konularına göre ülkelerin parametreleri, toplam nüfus, yıllık nüfus artış hızı, kentsel nüfus, medyan yaş, toplam bağımlılık oranı, toplam doğurganlık hızını şeklinde ele alınacaktır.

### 2.1 Toplam Nüfus

| Ülkeler | Toplam Nüfus | |
|---|---|---|
| Merkez ve Doğu Avrupa Ülkeleri | 2012 Yılı | 2030 Yılı |
| Arnavutluk | 3.2 | 3.3 |
| Bosna Hersek | 3.7 | 3.5 |
| Bulgaristan | 7.4 | 6.5 |
| Çek Cumhuriyeti | 10.6 | 10.8 |
| Estonya | 1.3 | 1.3 |
| Hırvatistan | 4.4 | 4.2 |
| Macaristan | 9.9 | 9.6 |
| Makedonya | 2.1 | 2.0 |
| Letonya | 2.2 | 2.1 |
| Litvanya | 3.3 | 3.1 |
| Polonya | 38.3 | 37.8 |
| Romanya | 21.4 | 20.3 |
| Slovak Cumhuriyeti | 5.5 | 5.5 |
| Slovenya | 2.0 | 2.1 |
| Bağımsız Devletler Topluluğu Ülkeleri | | |
| Azerbaycan | 9.4 | 10.8 |
| Beyaz Rusya | 9.5 | 8.9 |
| Ermenistan | 28.1 | 33.4 |
| Gürcistan | 4.3 | 3.8 |
| Kazakistan | 16.4 | 18.9 |
| Kırgızistan | 5.4 | 6.7 |
| Moldova | 3.5 | 3.1 |
| Özbekistan | 28.1 | 33.4 |
| Rusya Federasyonu | 142.7 | 136.4 |
| Tacikistan | 7.1 | 9.0 |
| Türkmenistan | 5.2 | 6.2 |
| Ukrayna | 44.9 | 40.5 |
| Türkiye | 74.5 | 86.7 |

*Tablo 1. Toplam Nüfus **Kaynak:** UNDP, 2013*

Tablo 1'deki mevcut veriler toplam nüfus bakımından incelendiğinde CIS ülkelerinde, 2012 yılındaki nüfusu 142.7 milyon olan Rusya Federasyonu'nun en yüksek nüfusa sahip ülke olduğu ve 2030 yılında dramatik bir şekilde nüfusunun 136.4 milyona düşeceği tahmin edilmektedir. CIS ülkelerinde, 2012 yılındaki nüfusu 3.5 milyon ile Moldova'nın en düşük nüfusa sahip ülke olup, 2030 yılı için nüfusunun 3.1 milyona düşeceği tahmin edilmektedir. CIS ülkelerinin 2012 yılı nüfus verileri ile 2030 yılına ait tahminlerine bakıldığında Beyaz Rusya, Gürcistan, Moldova, Rusya ve Ukrayna'nın toplam nüfuslarının düşme eğiliminde olacağı tahmin edilmektedir.

CEE ülkeleri arasında ise, 2012 yılındaki nüfusu 38.3 milyon olan Polonya'nın en yüksek nüfusa sahip olduğu görülmekte ve 2030 yılında Polonya nüfusunun 37.8 milyona düşeceği tahmin edilmektedir. CEE ülkelerinde en düşük nüfusa sahip olan ülkenin 2012 yılı için 1.3 milyonluk nüfusu ile Estonya olduğu görülmektedir.

Estonya'nın 2030 yılı için nüfusunun 1.3 milyon olarak stabil kalacağı tahmin edilmektedir. CEE ülkelerinin 2012 yılı nüfus verileri ile 2030 yılına ait tahminlerine bakıldığında Bulgaristan, Hırvatistan, Makedonya, Macaristan, Letonya, Litvanya, Polonya, Romanya'nın nüfuslarının düşme eğiliminde olacakları tahmin edilmektedir.

2012 yılındaki nüfusu 74.5 milyon olan Türkiye'nin nüfusunun 2030 yılında 86.7 milyon olacağı, gerek CEE ülkeleri gerekse de CIS ülkeleri arasında (toplam 27 ülke arasında) nüfus artış miktarının en yüksek olacağı tahmin edilen ülke olacağı dikkati çekmektedir. Türkiye'nin CEE ülkeleri arasında Arnavutluk, Çek Cumhuriyeti, Slovenya ile CIS ülkeleri arasında ise Azerbaycan, Kazakistan, Kırgızistan, Özbekistan, Tacikistan, Türkmenistan olmak üzere toplam ülkenin 10 ülkenin 2012 yılındaki nüfuslarının 2030 yılında artma eğilimi göstereceği, bunun dışında kalan diğer 17 ülkenin nüfuslarının düşeceği ya da durağan kalacağı tahmin edilmektedir.

### 2.2 Yıllık Nüfus Artış Hızı

| Ülkeler | Yıllık Nüfus Artış Hızı | |
|---|---|---|
| Merkez ve Doğu Avrupa Ülkeleri | 2000/2005 Yılları | 2010/2015 Yılları |
| Arnavutluk | 0.5 | 0.3 |
| Bosna Hersek | 0.5 | -0.2 |
| Bulgaristan | -0.7 | -0.7 |
| Çek Cumhuriyeti | 0.0 | 0.3 |
| Estonya | -0.4 | -0.1 |
| Hırvatistan | -0.3 | -0.2 |
| Macaristan | -0.2 | -0.2 |
| Makedonya | 0.3 | 0.1 |
| Letonya | -0.7 | -0.4 |
| Litvanya | -0.5 | -0.4 |
| Polonya | -0.1 | 0.0 |
| Romanya | -0.4 | -0.2 |
| Slovak Cumhuriyeti | 0.0 | 0.2 |
| Slovenya | 0.2 | 0.2 |
| Bağımsız Devletler Topluluğu Ülkeleri | | |
| Azerbaycan | 1.1 | 1.2 |
| Beyaz Rusya | -0.5 | -0.3 |
| Ermenistan | -0.1 | 0.3 |
| Gürcistan | -1.2 | -0.6 |
| Kazakistan | 0.3 | 1.0 |
| Kırgızistan | 0.4 | 1.1 |
| Moldova | -1.7 | -0.7 |
| Özbekistan | 0.9 | 1.1 |
| Rusya Federasyonu | -0.4 | -0.1 |
| Tacikistan | 0.9 | 1.5 |
| Türkmenistan | 1.1 | 1.2 |
| Ukrayna | -0.8 | -0.5 |
| Türkiye | 1.4 | 1.1 |

*Tablo 2. Yıllık Nüfus Artış Hızı* **Kaynak: UNDP, 2013**

Tablo 2'deki mevcut veriler yıllık nüfus artış hızı açısından incelendiğinde CIS ülkelerinde, 2000/2005 yılları arasında %-1.7 olan Moldova'nın yıllık nüfus artış hızının büyüme hızının 2010/2015 yılı için %-0.7 olarak gerçekleşeceği tahmin edilmekte olup, bu parametrenin de belirtilen yıllar arasındaki dönemde artma eğilimindeki en yüksek fark olması nedeniyle dikkate değer bir veridir. Yine CIS ülkelerinde, 2000/2005 yılları arasında yıllık nüfus artış hızı % 0.9 olan Tacikistan'ın 2010/2015 dönemi için yıllık nüfus artış hızının %1.5 olarak gerçekleşeceğinin tahmin edildiği ve bunun da tahminlerdeki en yüksek artış olduğu görülmektedir.

CEE ülkelerinde yıllık nüfus artış hızı 2000/2005 yılları arasında %0.0 olan Çek Cumhuriyetinin yıllık nüfus artış hızının 2010/2015 arası dönemlerdeki yıllık nüfus artış hızının 2010/2015 dönemi için %0.3 en yüksek artış değerine sahip olacağı öngörüsü dikkati çekmektedir. CEE ülkeleri arasında 2000/2005 yılları arasındaki dönem ve 2010/2015 yılları arasında döneme bakıldığında ise Arnavutluk, Bosna Hersek, Makedonya için yıllık nüfus artış hızının düşüş eğilimi göstereceği tahmin edilmektedir. CEE ülkelerinde yıllık nüfus artış hızının 2000/2005 yılları arası dönem ve 2010/2015 yılları arasındaki dönemde yıllık nüfus artış hızının stabil (durağan) olacağı tahmin edilen ülkeler Bulgaristan, Macaristan ve Slovenya'dır.

2000/2005 yılları arasındaki dönemde yıllık nüfus artış hızı %1.4 olan Türkiye'nin 2010/2015 yılları arasındaki dönemde yıllık nüfus artış oranının %1.1 olacağının tahmin edildiği, bu değerin de CEE ülkelerindeki daha yüksek bir artış oranına sahip olduğu dikkati çekmektedir. Türkiye'nin CIS ülkeleri arasındaki kıyaslamasını yaptığımızda ise; Tacikistan'ın 2010/2015 arası dönemde yıllık nüfus artış hızının Türkiye'den daha yüksek olacağı tahmin edilmektedir. Türkiye'nin 2000/2005 ve 2010/2010 yılları arası döneme bakıldığında CIS ülkeleri arasında yıllık nüfus artış hızının düşme eğilimi gösterdiği tek ülke olduğu dikkati çekmektedir.

### 2.3 Kentsel Nüfus

| Ülkeler | Kentsel Nüfus (Toplamın %'si) | |
|---|---|---|
| Merkez ve Doğu Avrupa Ülkeleri | 2000 Yılı | 2012 Yılı |
| Arnavutluk | 41.7 | 54.5 |
| Bosna Hersek | 43.0 | 48.8 |
| Bulgaristan | 68.9 | 73.7 |
| Çek Cumhuriyeti | 74.0 | 73.4 |
| Estonya | 69.4 | 69.5 |
| Hırvatistan | 55.6 | 58.1 |
| Macaristan | 64.6 | 69.9 |
| Makedonya | 59.4 | 59.4 |
| Letonya | 68.1 | 67.7 |
| Litvanya | 67.0 | 67.2 |
| Polonya | 61.7 | 60.8 |
| Romanya | 53.0 | 52.8 |
| Slovak Cumhuriyeti | 56.2 | 54.7 |
| Slovenya | 50.8 | 49.8 |
| Bağımsız Devletler Topluluğu Ülkeleri | | |
| Azerbaycan | 51.4 | 53.9 |
| Beyaz Rusya | 70.0 | 75.5 |
| Ermenistan | 64.7 | 64.1 |
| Gürcistan | 52.6 | 52.9 |
| Kazakistan | 55.7 | 53.5 |
| Kırgızistan | 35.3 | 35.4 |
| Moldova | 44.6 | 48.4 |
| Özbekistan | 37.4 | 36.2 |
| Rusya Federasyonu | 73.4 | 74.0 |
| Tacikistan | 26.5 | 26.5 |
| Türkmenistan | 45.9 | 49.0 |
| Ukrayna | 67.1 | 69.1 |
| Türkiye | 64.7 | 72.5 |

*Tablo 3. Kentsel Nüfus **Kaynak:** UNDP, 2013*

Tablo 3'deki mevcut veriler kentsel nüfus açısından incelendiğinde CIS ülkelerinde 2012 yılında kentsel nüfus oranının en yüksek olduğu ülke %75.5 ile Beyaz Rusya şeklinde gerçekleşmiştir.2012 yılında kentsel nüfusun en düşük olduğu CIS ülkesi, %26.5 ile Tacikistan olmuştur. 2000 yılında %55.7 iken 2012 yılında %53.5'lik kentsel nüfus oranı ile kentsel nüfus oranının en yüksek oranda düşüş gösterdiği ülke Kazakistan olmuştur. CEE ülkelerinde 2012 yılında kentsel nüfusun CIS ülkelerinde en yüksek olduğu ülke %73.7 ile Bulgaristan olurken en düşük kentsel nüfusa sahip ülkenin ise %48.8 ile Bosna Hersek olduğu dikkati çekmektedir. CEE ülkelerinde 2000-2012 yılları arasında kentsel nüfus oranında en yüksek artışın olduğu ülke Arnavutluk olmuştur. 2000 yılından 2012 yılına gelindiğinde kentsel nüfus oranının düşüş eğilimi gösterdiği CEE ülkeleri Çek Cumhuriyeti, Letonya, Polonya, Romanya, Slovakya, Slovenya şeklinde gerçeklemiştir. 2000 ve 2012 yıllarında kentsel nüfus oranının aynı kaldığı ülkeler tek CEE ülkesi, Makedonya olmuştur.

Türkiye ise 2012 yılında %72.5'lik kentsel nüfus oranı ile CIS ülkelerinde kentsel nüfus oranının en yüksek olduğu 3. ülke olmuştur. Türkiye'yi CEE ülkeleri ile kıyasladığımızda; Türkiye'nin 2012 yılındaki kentsel nüfus oranının %72.5 olduğu ve Bulgaristan(%73.7) ve Çek Cumhuriyeti'nin(%73.4) kentsel nüfus oranının Türkiye'den yüksek olduğu, diğer CEE ülkelerinin hepsinin kentsel nüfus oranının Türkiye'den düşük olduğu görülmektedir.

### 2.4 Medyan Yaş

| Ülkeler | Medyan Yaş | |
|---|---|---|
| Merkez ve Doğu Avrupa Ülkeleri | 2000 Yılı | 2010 Yılı |
| Arnavutluk | 27.4 | 30.0 |
| Bosna Hersek | 35.1 | 39.4 |
| Bulgaristan | 39.7 | 41.6 |
| Çek Cumhuriyeti | 37.4 | 39.4 |
| Estonya | 37.9 | 39.7 |
| Hırvatistan | 39.1 | 41.5 |
| Macaristan | 38.5 | 39.8 |
| Makedonya | 32.5 | 35.9 |
| Letonya | 38.1 | 40.2 |
| Litvanya | 35.9 | 39.3 |
| Polonya | 35.3 | 38.0 |
| Romanya | 34.7 | 38.5 |
| Slovak Cumhuriyeti | 33.6 | 36.9 |
| Slovenya | 38.0 | 41.7 |
| Bağımsız Devletler Topluluğu Ülkeleri | | |
| Azerbaycan | 25.6 | 29.5 |
| Beyaz Rusya | 36.3 | 38.3 |
| Ermenistan | 30.3 | 32.1 |
| Gürcistan | 34.4 | 37.3 |
| Kazakistan | 27.7 | 29.0 |
| Kırgızistan | 22.5 | 23.8 |
| Moldova | 32.3 | 35.2 |
| Özbekistan | 20.9 | 24.2 |
| Rusya Federasyonu | 36.5 | 37.9 |
| Tacikistan | 18.5 | 20.4 |
| Türkmenistan | 21.6 | 24.5 |
| Ukrayna | 37.7 | 39.3 |
| Türkiye | 24.5 | 28.3 |

*Tablo 4. Medyan Yaş **Kaynak:** UNDP, 2013*

Tablo 4'deki mevcut veriler medyan yaş açısından incelendiğinde; 2000- 2010 arası dönemde ülkelerin tümünün medyan yaş parametrelerinin yükselme eğiliminde olduğu görülmektedir. CEE ülkelerinde 2010 yılında medyan yaşın en yüksek olduğu ülke 41.7 ile Slovenya'dır. CEE ülkelerinde 2010 yılında medyan yaşın en düşük olduğu ülke 30.0 ile Arnavutluk'tur. CIS ülkelerinde ise, 2010 yılında medyan yaşın en yüksek olduğu ülke 39.3 ile Ukrayna'dır. 2010 yılında medyan yaşın en düşük olduğu CIS ülkesi 20.4 ile Tacikistan olmuştur. 2010 yılında Türkiye'de medyan yaş 28.3 olarak gerçekleşmiş olup Türkiye, CEE ve CIS ülkeleri toplamında 27 ülke arasında 22. sırada yer almıştır. CEE ve CIS ülkeleri arasında medyan yaşı 2000 yılında 35.1 olan Bosna Hersek'in 2010 yılında medyan yaşı 39.4'e yükselerek 27 ülke arasındaki en yüksek artışı gerçekleştirmiştir. 2000- 2010 yıllarında en düşük medyan yaşı artışı (CEE ve CIS ülkeleri toplamında) Macaristan ile Kırgızistan ülkelerinde gerçekleşmiştir.

### 2.5 Toplam Doğurganlık Hızı

| Ülkeler | Doğurganlık Oranı(Kadınlar için) | |
|---|---|---|
| Merkez ve Doğu Avrupa Ülkeleri | 2000 Yılı | 2010 Yılı |
| Arnavutluk | 2.2 | 1.5 |
| Bosna Hersek | 1.4 | 1.1 |
| Bulgaristan | 1.2 | 1.5 |
| Çek Cumhuriyeti | 1.1 | 1.5 |
| Estonya | 1.3 | 1.7 |
| Hırvatistan | 1.4 | 1.5 |
| Macaristan | 1.3 | 1.4 |
| Makedonya | 1.7 | 1.4 |
| Letonya | 1.2 | 1.5 |
| Litvanya | 1.3 | 1.5 |
| Polonya | 1.3 | 1.4 |
| Romanya | 1.3 | 1.4 |
| Slovak Cumhuriyeti | 1.3 | 1.4 |
| Slovenya | 1.2 | 1.5 |
| Bağımsız Devletler Topluluğu Ülkeleri | | |
| Azerbaycan | 2.0 | 2.2 |
| Beyaz Rusya | 1.2 | 1.5 |
| Ermenistan | 1.7 | 1.7 |
| Gürcistan | 1.6 | 1.5 |
| Kazakistan | 1.9 | 2.5 |
| Kırgızistan | 2.7 | 2.6 |
| Moldova | 1.6 | 1.5 |
| Özbekistan | 2.7 | 2.3 |
| Rusya Federasyonu | 1.2 | 1.5 |
| Tacikistan | 4.0 | 3.2 |
| Türkmenistan | 2.8 | 2.3 |
| Ukrayna | 1.1 | 1.5 |
| Türkiye | 2.4 | 2.0 |

***Tablo 5.*** *Toplam Doğurganlık Hızı **Kaynak:** UNDP, 2013*

Tablo 5'deki veriler toplam doğurganlık hızı açısından incelendiğinde; 2000- 2010 yılları arasındaki dönemde ülkelerin doğurganlık oranlarının değişkenlik gösterdiği görülmektedir. CEE ülkelerinde 2000 yılında doğurganlık hızının en yüksek olduğu ülke 2.2 ile Arnavutluk iken 2010 yılında toplam doğurganlık hızının en yüksek olduğu ülke 1.7 ile Estonya olmuştur. CEE ülkelerinde 2000 yılında toplam doğurganlık hızının en düşük olduğu ülke 1.1 ile Çek Cumhuriyeti olurken 2010 yılında toplam doğurganlık hızının en düşük olduğu ülke 1.1 ile Bosna Hersek olmuştur. CIS ülkelerinde ise 2000 yılında toplam doğurganlık hızının en yüksek olduğu ülke 4.0 ile Tacikistan iken 2010 yılında doğurganlık hızının en yüksek olduğu ülke 3.2 ile yine Tacikistan'dır. CIS ülkelerinde 2000 toplam doğurganlık hızının en düşük olduğu ülke 1.1 ile Ukrayna iken 2010 yılında toplam doğurganlık hızının en düşük olduğu ülkeler 1.5'lik bir oran ile Beyaz Rusya, Gürcistan, Moldova, Rusya Federasyonu ve Ukrayna olmuştur. CEE ülkelerinin 2010 yılı toplam doğurganlık hızlarına bakıldığında Türkiye'nin 2.0'lık bir değerle bütün CEE ülkelerinden daha yüksek doğurganlık oranına sahip olduğu anlaşılmaktadır. 2010 yılında CIS ve CEE ülkelerinin toplam doğurganlık oranlarına bakıldığında ise Türkiye 2.0'lık doğurganlık hızı ile 27 ülke arasında en yüksek doğurganlık hızına sahip 7. ülke olmuştur.

### 2.6 Toplam Bağımlılık Oranı

| Ülkeler | Toplam Bağımlılık Oranı | |
|---|---|---|
| Merkez ve Doğu Avrupa Ülkeleri | 2000 Yılı | 2012 Yılı |
| Arnavutluk | 59.6 | 46.1 |
| Bosna Hersek | 44.5 | 40.5 |
| Bulgaristan | 47.7 | 47.3 |
| Çek Cumhuriyeti | 43.7 | 42.9 |
| Estonya | 49.8 | 50.0 |
| Hırvatistan | 48.4 | 47.9 |

*Tablo 6.* *Toplam Bağımlılık Oranı* **Kaynak:** *UNDP, 2013*

Tablo 6'daki veriler toplam bağımlılık oranı açısından incelendiğinde CEE ülkelerinde 2000 ve 2012 yıllarının toplam bağımlılık oranlarının Estonya ve Slovenya hariç diğer tüm ülkelerde düşüş eğiliminde seyrettiği görülmektedir. CEE ülkelerinde 2000 ve 2012 yıllarının toplam bağımlılık oranlarına bakıldığında toplam bağımlılık oranındaki en yüksek artışın olduğu ülke Slovenya olmuştur. CIS ülkelerinde ise bütün ülkelerinde toplam bağımlılık oranlarının düşüş eğiliminde olduğu, en yüksek düşüş oranı ise Özbekistan'da gerçeklemiştir. CIS ülkelerinde 2000 yılında toplam bağımlılık oranının en yüksek olduğu ülke %84.9 ile Tacikistan olmuştur. 2012 yılında toplam bağımlılık oranının en yüksek olduğu ülke %65.3 ile Tacikistan olmuştur.

CIS ve CEE ülkelerinde 2010 yılında ülkelerin toplam bağımlılık oranlarına bakıldığında Türkiye'nin %56.0'lık toplam bağımlılık oranı ile 27 ülke arasında en yüksek toplam bağımlılık oranına sahip 7. ülke olmuştur. 2012 yılında ülkelerin toplam bağımlılık oranlarına bakıldığında Türkiye'nin %46.8'lik toplam bağımlılık oranı ile 27 ülke arasında en yüksek toplam bağımlılık oranına sahip 9. ülke olmuştur.

## 3  Sonuç

Değerlendirme kapsamına alınan CEE ve CIS ülkeleri ile Türkiye'nin nüfus trenleri karşılaştırıldığında CEE ve CIS ülkeleri arasında çeşitli farklılıkların bulunduğu, ayrıca CEE ve CIS ülkelerinin kendi içinde de nüfus trendlerinin değişkenlik gösterdiği görülmektedir.

Ülkelerin 2012 yılı toplam nüfusları ve 2030 öngörülerine bakıldığında gerek CEE ülkeleri gerekse de CIS ülkelerinde nüfusların artma ve azalma yönünde değişkenlik gösterdiği, Türkiye'nin ise 2012 nüfusu 74.5 milyon iken, 86.7 milyonluk 2030 yılı öngörüsüne göre en yüksek artışa sahip olacağı görülmektedir. Türkiye'nin nüfusunun değerlendirmeye alınan bütün ülkeler arasındaki en yüksek artışa sahip olacağı öngörülmektedir.

CIS ülkelerinin toplam bağımlılık oranlarının CEE ülkeleri ile karşılaştırıldığında, 2010-2012 yılları olarak belirtilen dönemlerde CIS ülkelerindeki toplam bağımlılık oranlarının daha yüksek düzeyde azalma eğilimi gösterdiği görülmektedir. Buna rağmen Türkiye'de 2012 yılı toplam bağımlılık oranına bakıldığında nüfusun %46.8'inin bağımlı olduğu, bağımlı kesimin toplamda nüfusun yarısına yakınını oluşturduğu görülmektedir.

Ülkemizde toplam bağımlılık oranının bu kadar yüksek olması nedeniyle çocuk ve yaşlı gibi nüfus kitlelerine yönelik politikalara önem verilmesi gerekmektedir.

Ülkelerin toplam kentsel nüfuslarına bakıldığında, CEE ülkelerindeki kentsel nüfus oranının CIS ülkelerindekine oranla daha yüksek olduğu görülmektedir. Türkiye'nin 2012 yılı kentsel nüfus oranının %72.5 olduğu, bu oran içerisindeki yaşlı ve çocuk nüfusunun da artmakta olduğu düşüncesiyle yerel yönetimlerce yaşlıların ve çocukların gereksinimlerine uygun hizmet üretimine önem verilmesi gerekmektedir.

Ülkelerin medyan yaşı (median age) karşılaştırıldığında, gerek CEE ülkeleri gerekse de CIS ülkelerinde 2000 yılı ve 2010 yılı verilerinde ülkelerin medyan yaşının artma eğiliminde olduğu görülmektedir. Ayrıca CEE ülkelerinin medyan yaş ortalaması CIS ülkelerinin medyan yaş ortalamasından daha yüksektir. CEE ülkelerinde, ülkeler arası medyan yaş birbirine benzerlik göstermekteyken, CIS ülkelerinin kendi arasındaki medyan yaş verileri daha değişkenlik göstermektedir. Türkiye'nin 2000 yılı medyan yaşı 24,5 iken 2010 yılı medyan yaşı 28.3 olmuştur. Nüfusumuzun giderek yaşlanmakta olduğu izlenimi veren bu veriler nedeniyle üretilecek politikalarda yaşlılara da önem verilmesi gerekmektedir.

Mevcut veriler ışığında ele alınan ülkelerin nüfuslarının genelinin artmakta ve nüfuslarının yaşlanmakta(medyan yaşa göre) olduğu izlenimi edinilmiş olup politika yapıcıların ve hizmet sunucuların bu durumu dikkate alarak sosyal hizmete ilişkin hizmetlerin üretilmesi, planlaması ve sunumunda yaşlılara odaklanılması gerekmektedir.

# Türkiye'de Kadın Yoksulluğu

# Women's Poverty in Turkey

Prof. Dr. Seda Şengül (Çukurova University, Turkey)
Prof. Dr. Mahir Fisunoğlu (Çukurova University, Turkey)

## Abstract

Poverty is a persisting problem in the world. Therefore an examination of the women poverty is a very important field. Women living in poverty are increased as a following reason: 1) a growth of female-headed households, 2) intra-household inequalities and bias against women. For this reason the alleviation of poverty requires determining the women poverty levels. The data used in this study is obtained from the project on Household Income, Consumption, Saving Behavior and Poverty Level in Adana Province conducted the authors of this study and financed by Scientific and Technological Research Council of Turkey. Probit model is used for determining the women poverty in Turkey. The results of this study are described the women poverty levels in Turkey based on the determinants of poverty on some socio- demographic characteristics of female-headed households. In the light of findings some policy prescriptions will be determined for reducing deprivation and vulnerability of women poverty and intra-household inequalities in Turkey.

## 1 Giriş

Yoksulluk toplumsal bir sorun olmakla birlikte kadınlar, yoksulluğu çok yönlü yaşamaktadırlar. Toplumda genel olarak, kadın ile erkek arasında ve kadınlar arasında var olan yapısal eşitsizlikler kadının yoksulluğu deneyimleme biçimlerini farklılaştırmaktadır (Uçar, 2011; Şener;2009;Bradshaw ve Linnekar, 2003). Kadınlar, eğitim, sağlık hizmetleri, istihdama katılım gibi toplumsal yaşamın tüm alanlarındaki hak ve fırsatlara eşitsiz erişmektedirler.

Kadın yoksulluğu, 1995'te 4. Dünya Kadın Konferansı Eylem Planında "yoksulluğun kadınlaşması" ifadesi olarak yerini almıştır. Yoksulluğun kadınlaşması kavramı ilk olarak Birleşik Devletlerde yalnız yaşayan kadınların ya/ya da tek ebeveynli ailelerin (kadın ve çocuk) daha yoksul olduğuna ilişkin ampirik çalışmaların sonucunda ortaya çıkmıştır. Aile yapısının değişmesi, boşanmaların artması, evlilik dışı çocuk sahibi olma oranının artması ve çocuk bakımını kadınların üstlenmesi gibi nedenler yoksulluğun kadınlaşmasını açıklamak için kullanılmıştır (Mclanahan ve Kelly, 1999). Toplum içinde kadınlar ve çocuklar yoksullaşma riski karşısında daha dezavantajlı bir konumda yer almaktadırlar. Kadınların, toplumsal cinsiyet eşitsizliğine uğramaları, hem ev işleri, çocuk ve yaşlı bakımından sorumlu olmaları, hem eğitimsiz ya da düşük eğitimli olmaları, hem de iş ve çalışma hayatında deneyimsiz olmaları gibi nedenler, kadınların yoksulluk riskini diğer kesimlere göre daha da artırmaktadır (Şener, 2009). Bu nedenle, kadınlar yoksulluğa daha fazla maruz kalmakta ve yoksulluğu daha derin yaşamaktadırlar. Dolayısıyla, yoksulluk bir kadın sorunudur. Yoksulluğun hedef aldığı en önemli kitleyi dünyanın hemen her yerinde yoksulların, işsizlerin, topraksız ve mülksüzlerin çoğunluğunu oluşturan kadınların ve çocukların oluşturduğu bilinmektedir. Hanehalkı içinde kaynakların kadınlar ve çocuklar aleyhine dağılımı kadının yoksulluğunu derinleştirmektedir. Kadın işgücü piyasalarında var olan ayrımcılıktan da etkilenmektedir. Kadının toplumdaki rolü erkeğe yardım olarak algılanmakta, geliri olan kadınlar gelirlerini kullanma serbestliğine çoğu zaman ya sahip değiller ya da gelirlerini kendi kişisel refahlarını geliştirici yönde kullanma konusunda daha az istekli, ancak hanedeki diğer bireylerin refahını geliştirme yönünde kullanmada da daha çok istekli durumdadırlar. Dünyada 2.8 milyar yoksul insan olduğu, bunlar içerisinde mutlak yoksul olarak kabul edilen (günde bir dolardan daha az gelirle geçinen) yoksulların sayısının ise 1,3 milyar olduğu bilinmektedir. Mutlak yoksulların üçte ikisini de (950 milyon) kadınla oluşturmaktadır. Bütün yoksullar içinde ise kadınların oranı %70 civarındadır. Bu oranlar ülkeden ülkeye ve bölgeden bölgeye değişmekle beraber, hemen hemen bütün ülkelerde kadınların daha yoksul oldukları ve daha zor şartlarda yaşadıkları görülmektedir. Türkiye'deki durum da bundan pek farklı değildir. Türkiye'de 2007 yılında kadınların %18.83'ü yoksuldur (TÜİK, 2009).

Bu nedenle, kadın yoksulluğunun incelenmesi kadın yoksulluğunu etkileyen etmenlerin belirlenmesi önemlidir. Bu çalışmada, Türkiye geneli için veri temini zor olduğundan ve Adana kentsel kesimi için detaylı verilenin mevcut olması nedeniyle Adana kentsel kesiminde kadınların sosyo-ekonomik durumlarına göre yoksulluğun boyutunu belirleyerek, özelde Adana kentsel kesiminde, genelde Türkiye'de kadın yoksulluğunu azaltacak politikaların neler olabileceğini ortaya koymak amaçlanmıştır.

## 2 Çalışmada Kullanılan Veriler ve Uygulanan Yöntemler

### 2.1 Veri Kaynağı ve Yoksulluk Sınırının Hesaplanmasında Kullanılan Yöntem

Araştırmada kullanılan veriler, TÜBİTAK tarafından desteklenen "Adana İli Seyhan ve Yüreğir İlçe Merkezlerinde Hanehalkı Gelir, Tasarruf Eğilimleri ve Yoksulluğun Ölçülmesi" başlıklı projenin verileridir.

Veriler; Kasım 2007, Nisan 2008, Kasım 2008 ve Mayıs 2009 dönemlerinde her biri 1250 hanehalkı ile yapılan anketlerin verileridir.

Bu çalışmada Şengül ve Fisunoğlu'nun (2012) çalışmalarında kullandıkları yoksulluk sınırı kullanılmıştır**.**

### 2.2 Adana Kentsel Kesiminde Kadın Yoksulluğunun Belirleyicilerinin Tahmininde Kullanılan Yöntem ve Değişkenler

Adana kentsel kesimde kadın yoksulluğunun belirleyicileri Probit modeli ile tahmin edilmiştir. Probit modelin bağımlı değişkeni; dul/boşanmış ya da evlenmemiş kadın yoksulluk sınırı kadar bir gelire sahip ise 1 değerini, yoksulluk sınırının üzerinde bir gelire sahip ise 0 değerini almıştır. Gözlenemeyen (gizli-latent) bir değişkenin olduğu varsayılan Probit modeli aşağıdaki şekilde oluşturulur.

$$y_i^* = x'\beta + \varepsilon \qquad \varepsilon \sim N(0,\sigma) \tag{1}$$

Burada, $y_i^*$ gözlenemeyen değişkendir. Gözlenebilir $y_i$ ile gözlenemeyen $y_i^*$ arasındaki ilişki aşağıda verilmiştir (Maddala, 1987; Long, 1997; Greene, 2002).

$$y_i = \begin{cases} 1 & if \quad y_i^* > 0 \\ 0 & if \quad y_i^* \leq 0 \end{cases} \tag{2}$$

Probit modeli en yüksek olabilirlik (maximum likelihood) yöntemiyle kestirilmiştir.

Modelde kullanılan bağımsız değişkenler ise toplam harcamanın logaritması, hanehalkı reisi kadının öğrenim düzeyi (kadının okur-yazar değil ya da diplomasız okur-yazar olması durumu (referans değişken), kadının ilkokul öğrenim düzeyinde olması ya da ortaokul-lise öğrenim düzeyinde olması durumlarıdır), hanedeki çocuk sayısı (0-6 yaş grubunda yer alan çocuk sayısı, 7-14 yaş grubunda yer alan çocuk sayısı ve 15 ve 15 yaş üstü birey sayısı), hanede kadından başka gelir getirici bir işte çalışan bireylerin var olma durumunu ifade eden kukla değişken (hanede kadın dışında çalışan birey var ise 1, yok ise 0 değerini alan kukla değişken), haneye ayni yardım yapılması durumu, haneye aylık toplam harcamasının %5'i kadar gelir transfer edilmesi durumu, hanehalkı reisi kadının yaşı, hanehalkı reisi kadının yaşının karesi ve anket dönemleri için oluşturulan dönemsel kukla değişkenlerdir.

## 3 Adana Kentsel Kesimde Kadın Yoksulluğu

Adana kentsel alan için hesaplanan mutlak yoksulluk sınırları Tablo 1'de verilmiştir. Adana kentsel alanda Rothbarth Eşdeğerlik Ölçeğine göre temel gereksinmeler yoksulluk sınırı Kasım 2007'de 511,034 TL iken Mayıs 2009 döneminde 855,832 TL'dir (Şengül ve Fisunoğlu, 2012).

| Dönemler | Yoksulluk sınırı (TL/ay) |
|---|---|
| 2007 Kasım | 511,034 |
| 2008 Nisan | 743,184 |
| 2008 Kasım | 791,950 |
| 2009 Mayıs | 855,832 |

***Tablo 1.*** *Adana Kentsel Alanda Mutlak Yoksulluk Sınırı*

Tablo 2 incelendiğinde Adana kentsel kesiminde kadınların %52,7'sinin, erkeklerin %47,3'ünün yoksul olduğu görülmektedir. 0-14 yaş grubundaki bireylerin %24,7'si yoksulluk riski altındadır. 0-14 yaş grubundaki kadınların %24,9'u, bu yaş grubundaki erkeklerin %24,5'i yoksuldur. 0-14 yaş grubunda yoksulluk riski altında bulunan bireylerin cinsiyete göre dağılımı önemli bir farklılık göstermemektedir. Ancak, 65 yaş ve üstü yaş grubundaki kadınların %40,4'ü, erkeklerin %22'si yoksuldur. 65 yaş ve üstü yaş grubunda kadın yoksulluğunun erkek yoksulluğundan daha fazla olduğu söylenebilir (Şengül ve Fisunoğlu, 2012) (Tablo 2).

| Yoksul | Toplam yoksul | Kadın yoksul | Erkek yoksul |
|---|---|---|---|
| 0–14 | 24,7 | 24,9 | 24,5 |
| 15–64 | 19,2 | 21,2 | 17,3 |
| 65+ | 33,3 | 40,4 | 22,0 |
| Toplam | 16,0 | 52,7 | 47,3 |
| Hiç evlenmemiş | 17,6 | 19,4 | 15,9 |
| Evli | 20,4 | 20,5 | 20,3 |
| Eşi ölmüş | 29,4 | 30,3 | 20,0 |
| Boşanmış | 42,4 | 45,7 | 30,8 |
| Ayrı yaşıyor | 33,3 | 36,3 | 1,2 |
| Toplam | 12,4 | 21,5 | 18,6 |

***Tablo 2.*** *Adana Kentsel Kesiminde Cinsiyete, Yaş Gruplarına ve Medeni Duruma Göre Yoksulluk (Anket Dönemlerinin Ortalaması-%) H: Yoksul Oranı; I: Yoksulluk Açığı Oranı; FGT: Foster, Greer ve Thorbecke Endeksi, yazarlar tarafından hesaplanmıştır.*

Medeni duruma göre yoksulluk incelendiğinde hiç evlenmemiş olan bireylerin %17,6'sı, eşi ölmüş bireylerin %29,4'ü, boşanmış bireylerin %42,4'ü yoksuldur. Ayrıca, hiç evlenmemiş kadınların %19,4'ü, eşi ölmüş kadınların %30,3'ü, boşanmış olan kadınların %45,7'si, eşinden ayrı yaşayan kadınların %36,3'ü yoksuldur. Bu oranlar erkeklerde daha düşüktür (Tablo 2).

### 3.1 Adana Kentsel Kesiminde Kadın Yoksulluğunun Belirleyicileri

Adana kentsel kesiminde yoksulluk sınırı altında kalan kadınların (evlenmemiş/boşanmış/dul) yoksulluk düzeylerini belirlemek üzere kullanılan Probit modelinin sonuçları Tablo 3'te sunulmuştur. Değişkenlerin önemli bölümü teorik beklentiyle uyumlu ve istatistiksel olarak anlamlı elde edilmiştir (Tablo 3).

| Değişkenler | Katsayı | Z İstatistiği |
|---|---|---|
| **Sabit** | 9,318 | 6,128* |
| **Toplam harcamanın logaritması** | -0,925 | -10,501* |
| **Kadının eğitim düzeyi** | | |
| **İlkokul** | 0,218 | 5,108* |
| **Ortaokul-Lise** | 0,243 | 3,234* |
| **Çocuk sayısı** | | |
| **0-6** | 0,469 | 6,981* |
| **7-14** | 0,0959 | 3,349* |
| **15-+** | -0,0127 | -2,159 |
| **Kadının yaşı** | -0,412 | -6,423* |
| **Kadının yaşının karesi** | 0,0012 | 2,027* |
| **Hanenin ayni yardım alması durumu** | -0,101 | -7,834* |
| **Hanenin toplam harcamasının %5'i kadar gelir transfer edilmesi durumu** | -0,227 | -6,012* |
| **Hanede çalışan birey sayısı** | -0,129 | -2,269* |
| **Dönem kuklası** | | |
| **2.Dönem** | 0,008 | 2,189* |
| **3.Dönem** | 0,019 | 3,128* |
| **4.Dönem** | 0,022 | 4,328* |
| **-Log-likelihood** | 2249,13 | |

*Tablo 3. Probit Modelinin Tahmin Sonuçlar  * 0,05 anlamlılık düzeyi*

Hanelerin toplam harcamasının artması durumunda yoksul kadın oranı azalacaktır. Toplam harcamanın %1 oranında artması durumunda yoksulluk sınırı altında kalan kadın oranında %9.25 azalma olacaktır.

Kadının ilkokul ve daha düşük (okur-yazar değil da diplomasız okur-yazar) öğrenim düzeyinde olması ile ortaokul-lise öğrenim düzeyinde olması yoksulluk sınırlarının altında kalan kadın sayısında artışa önemli bir artışa neden olacaktır. Bu bulgu, yoksulluğun düşük eğitim düzeyi ile doğrudan ilişkili olduğunu, yoksulluğun azaltılmasında öğrenim düzeyinin yükseltilmesine yönelik politikalara öncelik verilmesinin önemli olduğunu göstermesi bakımından önemlidir.

Kadının küçük çocuğunun olması ve çocuk sayısının fazlalığı kadının yoksulluğunu artırıcı yönde, 15 yaş ve daha büyük yaştaki çocuk sayısının varlığının da kadın yoksulluğunu azaltıcı yönde etki edeceği belirlenmiştir. 0-6 yaş grubundaki çocuk sayısı değişkeninin parametre değeri 0,469, 7-14 yaş grubundaki çocuk sayısı değişkeninin parametre değeri de 0,0959 bulunmuştur. Dolayısıyla küçük yaşta çocuğu olan kadınların yoksullaşma olasılıklarının daha yüksek olduğu söylenebilir. Ayrıca, ülkemizde kreş gibi gündüz çocuk bakım evleri yetersiz sayıdadır, var olan yetersiz sayıdaki gündüz çocuk bakım evlerine de fiyatlarının yüksekliğinden dolayı ancak, yüksek gelir grubundaki ailelerin çocukları gidebilmektedir. Kadının 15 yaş ve daha büyük yaşta çocuğunun olması kadın yoksulluğunu azaltıcı etkiye sahip olma nedeninin 15 yaş ve daha büyük yaştaki çocukların işgücü pazarına katılmalarıyla ilişkili olduğu söylenebilir. Nitekim hanede kadın dışında çalışan bireyin olmasının da kadın yoksulluğunu %12,9 oranında azalttığı saptanmıştır. İşgücü pazarında yer alan kadınlar genellikle niteliksiz işlerde ve düşük ücretlerle çalışabildiklerinden, ailede kadına ek olarak gelir getiren bireylerinde olması, hem kadının üstlendiği aileyi geçindirme yükünün paylaşılmasına hem de yoksulluğun azalmasına neden olacaktır.

Kadın hanehalkı reisinin yaşı yoksulluk üzerinde negatif etkiliyken, kadının yaşının karesi pozitif yönde etkili olduğu belirlenmiştir. Bu bulgu kadının yaşlı olduğu hanelerde yoksulluğun artacağını göstermektedir. Ayrıca, bu çalışmada kadının yaşlanmasıyla birlikte kadının yoksulluk düzeyinin de artacağı belirlenmiştir. Bu çalışmada 65 yaş ve daha büyük yaştaki kadınların yaklaşık %40'nın yoksul olduğu saptanmıştır. Kadın işgücü piyasasında çoğunlukla kayıt dışı sektörlerde düşük ücretle, kötü koşullarda, geçici, yevmiyeli, yarı zamanlı, sosyal güvenceden yoksun olarak çalışmaktadır. Düşük eğitim düzeyi ve düşük sosyal beceri nedeniyle erkeğe bağımlı

olarak yaşamını sürdüren kadının belirli bir yaştan sonra çalışma olanakları hiç kalmamaktadır. Aynı zamanda kısıtlı iş olanaklarına ilave olarak ülkemizde yaşlı bakım hizmetleri sağlayan kurumların ihtiyacı karşılayacak sayıda olmaması, var olanlarında pahalı olması nedeniyle yoksulluk kadın için yaşla birlikte daha ciddi bir sorundur.

Hanenin ayni yardım almasının yoksulluk sınırı altında kalan kadın oranında önemli bir düşüşe neden olacağı saptanmıştır. Hanenin ayni yardım alması yoksulluk sınırının altında kalan kadın oranını yaklaşık %10,1 oranında azaltacaktır. Hanehalkına toplam harcamasının %5'i kadar nakit desteği yapılması durumu da yoksul kadın oranında yaklaşık %22 azalmaya neden olacaktır. Bu bulguya dayanarak, yoksulluğu azaltmada nakit desteğinin etkisinin ayni yardımların etkisinden daha yüksek olacağı söylenebilir.

Dönem kuklaları dünya ve ülke genelinde olduğu gibi Adana kentsel kesimde de yoksul kadın oranının dönemler itibariyle artacağını göstermektedir.

## 4 Sonuç

Dünya'da ve Türkiye'de sosyal, ekonomik, kültürel, yasal vb birçok açıdan kadınlar yoksulluk ve yoksunluk içerisindedir. Geleneksel yapı içerisinde baba veya eş tarafından korunacakları varsayılan kadınlar, bir nedenle bu korunmadan faydalanamamaktalar, herhangi bir donanıma sahip olmadan çocuklarıyla veya yalnız yaşamlarını sürdürmeye çalışmaktadırlar (Bora, 2007). Yoksulluğun kadınlaşması nedeniyle; dul, boşanmış veya kocasından ayrı yaşayan ya da hiç evli olmayan kadınlar, diğer bir deyişle hanehalkı reisi olan kadınlar yoksulluktan çok etkilenmektedir.

Kadınlar, işgücü piyasasına katılımda çoğunlukla kayıt dışı sektörlerde düşük ücretli, kötü koşullarda, geçici, yevmiyeli, yarı zamanlı sosyal güvenceden yoksun olarak çalışmaktadır. Ayrıca, kadının geleneksel yapıdan dolayı çocuk ve yaşlı bakım hizmetlerini üstlenmesi, kadına yönelik cinsiyet ayrımcılığı, eğitim seviyesinin düşüklüğü gibi sosyo-ekonomik nedenlerden dolayı kadın toplumun güçsüz kesimini oluşturmaktadır. Dolayısıyla kadınlar hem kronik hem de geçici yoksulluğu yoğun olarak yaşamaktadırlar. Yoksullukla mücadeleye ilişkin politikaların belirlenmesinde kadın yoksulluğu üzerinde odaklanması önem taşımaktadır. Bu nedenle bu çalışmada, Tübitak tarafından desteklenen "Adana İli Seyhan ve Yüreğir İlçe Merkezlerinde Hanehalkı Gelir, Tasarruf Eğilimleri ve Yoksulluğun Ölçülmesi" başlıklı projenin verileri kullanılarak, Adana kentsel kesimde hanehalkı reisinin kadın olduğu hanelerde yoksulluğun belirleyicilerini ortaya koymak amaçlanmıştır. Bu çalışmanın bulguları kadın yoksulluğu ile ilgili ulusal ve uluslararası literatürü destekleyici niteliktedir. Çalışmada genel yoksullukta olduğu gibi kadın yoksulluğunun da giderek artış gösterdiği bulgusu uygulanan politikaların yoksulluk sorununu çözmede yetersiz kaldığını göstermesi bakımından önemlidir.

Bu çalışmada ilkokul ve/veya ortaokul öğrenim düzeyindeki kadınların okur-yazar olmayan ya da diplomasız okur-yazar olan kadınlardan daha yoksul olduğu saptanmıştır. Okur-yazar olmayan ya da diplomasız okuryazar olan yoksul kadınların işgücü piyasasında gündelikli olarak ev içi hizmetlerinde çalışabilmeleri, okur-yazar olmayan ya da diplomasız okur-yazar yoksul kadınları ilkokul, ortaokul öğrenim düzeyindeki kadın yoksullardan daha avantajlı duruma getirmektedir. Çünkü ülkemizde istihdam olanaklarının yetersiz düzeyde olması, kayıtdışı sektörde var olan kısıtlı iş olanaklarından da erkeklerin yararlanması, ilkokul-ortaokul öğrenim düzeyindeki kadınları işgücü piyasasında iş bulabilme şanslarını ortadan kaldırmaktadır. Düşük öğrenim düzeyindeki yoksul kadınlar için yoksulluk döngüsü kırabilmek amacıyla meslek edindirme kursları ve mikro krediler sağlanarak kadınların işgücü piyasasına katılımları sağlanmalıdır.

Kadın yoksulluğunu ağırlaştıran noktalardan biri çocuğun kadının sorumluluğunda olması, çocuğun beslenmesinden, okula gönderilmesinden, giydirilmesinden kadınların sorumlu olmasıdır. Nitekim bu çalışmada da küçük yaşta çocuğa sahip kadınlarda yoksulluk oranının daha yüksek olduğu saptanmıştır. Bu çocuklar için gelecekte yoksulluğun müebbet bir yoksulluğa dönüşmesini önlemek için bu çocukların eğitim olanaklarından yaralanmaları için tüm okul masrafları ücretsiz olarak karşılanmalı, bu çocukların okullarında başarı olabilmeleri için yeterli beslenmeleri sağlanmalıdır.

Kadının yaşlanmasıyla birlikte yoksulluk riskinin artacağı bu çalışmanın önemli bulgularındandır. Çalışabilir yaşta olan kadınların formel sektörde iş olanaklarının yetersiz olması ve düşük eğitim düzeyleri nedeniyle sosyal güvenceden yoksun işlerde çalışmaları ya da hiç çalışmamaları (sadece ev içi hizmetlerde çalışmış olması) bu kesimi yaşlandıklarında yoksullukla mücadele etmede yalnız, çaresiz ya da yoksul olan çocuklarının bakımına muhtaç bırakmaktadır. Yoksulluk riski yüksek olan yaşlılara yönelik yaşlı bakım evleri açılmalı, yaşlılara yönelik hizmetlere ağırlık verilmelidir. Toplumun en güçsüz kesimini oluşturan yaşlıları, çocukları ve kadınları koruyucu, destekleyici sosyal politikalar oluşturmaya öncelik verilmelidir.

Kadın yoksulluğu ile mücadele için kadının kişisel özelliklerini güçlendirme çalışmalarına da ağırlık verilmelidir. Kadının güçlenmesi kadının yapabilirliklerinin farkına varmasını, hayatı üzerine düşünmesini ve müdahale etmesini beraberinde getirecektir. Yoksulluk elbette salt bir kadın sorunu değildir ancak kadınların daha yoksul olmasının ve etkilerini daha derinden hissetmesinin gerisinde hem toplumsal düzlemde hem de hane içinde kadınla erkek arasında var olan eşitsiz ilişkileri bulunmaktadır(Şener, 2009). Toplumda, toplumsal cinsiyete bakış açısını değiştirmeye yönelik tedbirler alınmalıdır.

# Küreselleşme Sürecinde Yoksulluk: Türkiye'de ve Dünyadaki Perspektifi

# Poverty in the Process of Globalization: Its Perspective in Turkey and in the World

Asst. Prof. Dr. Gülşen Sarı Gerşil (Celal Bayar University, Turkey)

Hülya Yeşilyurt (Celal Bayar University, Turkey)

## Abstract

A country's wealth and poverty are opposite to each other, but they are two inseparable important elements. The more the subject how to increase the welfare of the country is important, the more the distribution of this welfare among country members, especially. Although the observed increase in global prosperity with 21st century in especial that adopted neo-liberal policies in all over the world has caused to further deepening of the phenomenon of poverty. This case has given rise that concept of the "Poverty" has been discussed intensively workers in manufacturing is important. So, issues of fair distribution of income and prevention of poverty should be handled as interdisciplinary, mainly including social policy. That socio-economic and political structure of societies are different has been complicated to have a common definition on the concept of poverty. The World Bank, based on the absolute poverty approach, has made a research to determine the poverty line in the world (by getting base the ones who reap a profit below $ 1) and has determined that the poor class has remained in "minority" compared to world population. As it appears; more than half of the world population is below of the poverty line in reality. While seen daily increases in the welfare of the world countries, given the impression that poverty decreases does not reflect the reality. In this study, why poverty cannot be prevented besides causes of increase will be examined; this dangerous situation rapidly increasing in Turkey and in the world will be analyzed.

## 1 Giriş

Bir ülkenin refahı ve yoksulluğu, birbirine ters ancak birbirinden ayrılmaz iki önemli unsurdur. Yine ülke refahının nasıl arttırılacağı konusu ne kadar önemliyse, bu refahın ülke bireyleri, özellikle de üretimde çalışanlar arasında dağılımı bir o kadar önemlidir. Bu nedenle adil gelir dağılımı ve yoksulluğun önlenmesi başta sosyal politika olmak üzere disiplinler arası ele alınmalıdır.

Toplumların sosyo-ekonomik ve siyasal yapısının farklı olması, yoksulluk kavramı üzerine ortak bir tanımda bulunmayı zorlaştırmaktadır. Dünya Bankası, mutlak yoksulluk yaklaşımından yola çıkarak, dünyada (1$'ın altında kazanç sağlayanları baz alarak) yoksulluk sınırını belirlemek üzere bir araştırma yapmış ve yoksul sınıfının dünya nüfusuna oranla "azınlık" ta kaldığını belirlemiştir.

Görülen o ki; dünya nüfusunun yarıdan fazlası aslında yoksulluk sınırının altındadır. Her geçen gün dünya ülkelerinin refahında artış görülürken, yoksulluğun azaldığı izlenimi uyandırılması, gerçeği yansıtmamaktadır. Tam tersi yoksulluk giderek artmaktadır. Bu çalışmada, yoksulluğun artış nedenlerinin belirlenmesinin yanı sıra neden önlenemediği incelenecek; Türkiye'de ve Dünya'da hızla artan bu tehlikeli durumun analizi yapılacaktır.

## 2 Genel Olarak Yoksulluk Kavramı Ve Türleri

### 2.1 Küresel Yoksulluk

Yoksulluk İnsanlık tarihinin en eski olguları arasındadır. Hemen hemen her dönemde ülkelerin en önemli sorunlarının başında yer almaktadır. Özellikle küreselleşmenin nimetlerinden faydalanan zengin ülkelerin, devletin sosyo ekonomik açıdan müdahalesinin olmaması gerektiği görüşleri ve neo liberal politikaları nedeniyle, yoksulluğun daha da derinleşmesini kaçınılmaz hale getirmiştir. Bu durum uluslararası örgütlerin yapmış olduğu araştırma raporlarında da açıkça görülmektedir. 1960'da, en zengin 20 ülkedeki kişi başına düşen GSMH, en yoksul ülkedekinin iki katı iken, 1995'de bu farklılık % 37 oranında artmıştır. Yani kalkınma uçurumu iki kat daha artmıştır. Bu bağlamda 80'den fazla ülke, 20 yıl öncesiyle karşılaştırıldığında, daha düşük kişi başına milli gelire sahiptir (Sengenberger, 2003.2).

Küreselleşmeden yararlar sağlayan gelişmiş ülkelerde dahi üzerinde düşünülmesi gereken belirsizlikler bulunmaktadır. Japonya on yıldır süregelen bir durağanlıktan kurtulmaya çalışmaktadır. Avrupa ülkeleri ise yavaş büyüme, kronik işsizlik, ücretlerde ve çalışma hayatına ilişkin kazanımlarda ciddi düşüş yaşamaktadır. Amerika ise, 1960'larda başlayan büyüme hızında son on yıldır ücretlerde meydana gelen aşınmayı engelleyememektedir (Şenkal, 2007, 145).

Küreselleşmenin aydınlık ve karanlık iki yüzü bulunmaktadır. Aydınlık yüzü, zenginlik ve refah iken, karanlık yüzünün sosyal politika ile ilgili olduğu söylenebilir. Küreselleşme ile toplumsal ve bölgesel eşitsizlikler daha da

derinleşirken, çalışan kesimin daha önce elde ettiği kazanımlar neredeyse "haksız talepler" olarak değerlendirilmektedir (Koray, 2001, 31). Küreselleşmenin tüm olumlu ve olumsuz boyutlarına rağmen, yeryüzünde tek bir küresel- toplum olduğunu ve bizim "küresel bir köyde" yaşadığımız gerçeğini unutmamalıyız. Ancak beklide en önemli sorun yaşadığımız toplumun küreselleşememesidir (Koray, 2000,3).

## 2.2  Yoksulluk Kavramına Yönelik Yaklaşımlar

Yoksulluk ülkelerin sosyo-kültürel yapılarına göre farklılıklar göstermektedir. Bu nedenle yoksulluk kavramının tanımlanması oldukça güçtür. **Yoksul kavramı,** yeterli düzeyde parası olmayan veya konforlu bir şekilde yaşamak için gerekli olan araçlara sahip olmayan kişidir. **Yoksulluk kelimesi** ise, yaşamın gerektirdiği olanaklardan yoksun olma durumunu ifade etmektedir (Zengingönül, 2007). Çok boyutlu bir yapıya sahip olması nedeniyle, yoksulluğu tanımlayabilmek ve ölçebilmek kolay görülmekle birlikte karmaşık ve zor bir olaydır(United Nations, 1997). Öncelikle yoksulluğu ortaya çıkaracak çok sayıda gösterge vardır. Örneğin, gelir ve tüketim seviyesi, sosyal göstergeler, gittikçe artan risklerle karşılaşma olasılığı gibi. Bu nedenle olaya farklı açılardan yaklaşmak mümkündür. Sosyal siyaset açısından yoksulluk, insan haysiyetine ve şahsiyetine yaraşır bir hayat düzeyinin altında, maddi yönden tam anlamıyla veya nispi olarak yetersiz olma durumudur (Seyyar, 2002).

Liberalizmin öncülerinden John Locke ve 17. yy. liberal kuramcılarının öncelikli olarak yoksulluk sorununa çözüm ararken, özel mülkiyet haklarını savunarak bunun yoksulları dışlamaması gerektiğini, sürdürülebilir yaşam hakkının sosyal düzenin güvenliği açısından gerekli olduğu ve bunun toplumun, yoksulların refahını sağlayacak bir artış yaratılmasıyla sağlanabileceği yaklaşımını ileri sürmüştür (Şenses, 2002). Yoksulluk sorununa, 18. ve 19. yy da sanayileşmeye dayalı kapitalizm damgasını vurmuştur.

Endüstrileşmeyle birlikte, işgücünün büyük oranda kırsal olması, kırsaldan kente göçün kırsalla bağı sürecek şekilde gerçekleşmesi ve bunun sağladığı destek mekanizmaları, kentte barınılabilecek, hemşehrilerin yaşadığı gecekondu bölgelerinin oluşmasına neden olmuştur. Ancak bu desteklerin azalması ya da ortadan kalkmasıyla (ailelerin bütün olarak göçmesi, kırsalla bağın tamamen koparılmak zorunda kalması, kırsal kaynakların azalması, gecekondulaşmanın arsa rantlarının yükselmesi nedeniyle imkânsızlaşması gibi) yoksulluk daha görünür bir hal almaya başlamıştır. Böylelikle geçici yoksulluktan kalıcılığa dönüşen bir yoksulluğa geçilmiştir (Şener, 2010)

Yoksulluğun tanımı yapılırken, üzerinde durulması gereken önemli bir nokta ise, yoksulluk sadece ekonomik ve sosyal kıstaslara göre değil siyasal ve kültürel kıstaslara göre de değişiklik göstermektedir. Yoksullukla ilgili kavramlar ışığında, yoksulluk türlerine de açıklık getirmek gerekir.

## 2.3  Yoksulluk Türleri

**Mutlak Yoksulluk;** Mutlak yoksulluk, "birey veya hanehalkının yaşamını sürdürebilecek asgari refah düzeyini yakalayamaması durumudur" (TÜSİAD, 2000). Bu yoksulluk biçiminde bireyin ihtiyaçlarını asgari düzeyde karşılayıp karşılamadığı esas alınmakta ve karşılayamaması halinde yoksul olarak kabul edilmektedir (Tokol ve Alper, 2014). Birinci dereceden yardıma muhtaç olarak algılanması gereken bu kişiler temel insani ihtiyaçlarını bile karşılayamamakta, hatta bu duruma düşen bir kişiye dışarıdan yardım edilmediği takdirde ölüm riskiyle karşı karşıya gelmesi de kaçınılmazdır. Mutlak yoksulluğun ortaya çıkarılması bireylerin yaşamlarını sürdürebilmeleri için gerekli olan minimum tüketim ihtiyaçlarının belirlenmesidir. Bu düzey ulusal gelir düzeylerinden bağımsız olarak, 1$'dan aşağı gelir düzeyine sahip olanların sayısı şeklinde belirlenmektedir (World Bank, 2000). Mutlak yoksullukta yoksulluk sınırı, gıda ve temel ihtiyaçlar temel alınarak belirlenmektedir.

Gıda Yaklaşımı: Dünya Bankası'nın çalışmasına göre bir insanın hayatta kalabilmesi için gerekli günlük kalori miktarı 2400 k/cal olup, bu kalori değerine karşılık gelen besin değerini alamayan kişiler yoksul olarak kabul edilmektedir (DPT, 2001). Tüm nüfus için önerilen kişi başına günlük alınması gereken kalori miktarı esas alınarak, bunun altında kalori alan fertler bir yoksulluk çizgisi oluştururlar. Bu gösterge eş zamanlı karşılaştırmalar için yoksulluk kavramını nesnel olarak yansıtsa da, bu yöntemin sakıncası, tüm nüfus için aynı kalori normlarının kullanmasıdır. Mutlak yoksulluk sınırının gıda harcamalarına ek olarak temel gereksinimleri de hesaplanabilir (İnsel, 2001).

Temel İhtiyaçlar Yaklaşımı: Temel ihtiyaçlar yaklaşımı, gıda yaklaşımına göre daha geniş bir yoksulluk tanımını esas almaktadır. Genellikle sadece gıda yaklaşımına göre belirlenen yoksulluk sınırı "açlık sınır" olarak ifade edilirken, temel ihtiyaçlar yaklaşımına göre belirlenen ise, "yoksulluk sınırı" olarak ifade edilmektedir (Tokol ve Alper, 2014). Günümüzde bir çok az gelişmiş ülkelerde bu yaklaşım baz alınarak mutlak yoksulluk sınırı hesaplanmaktadır.

**Göreli Yoksulluk;** Göreli yoksulluk ise bireyin belirli yaşam düzeyine sahip olarak yaşamını sürdürebilmesi için gerekli mal ve hizmetleri karşılayacak gelir düzeyinin altında bir gelire sahip olmasıdır. Başka bir ifade ile nispi yoksulluk bireyin, toplumun ortalama refah düzeyinin altında bir gelire sahip olmasıdır(Es ve Güloğlu: 2009). Towsend nispi yoksulluğu kişinin temel ihtiyaçlarını mutlak olarak karşılayabilmesi fakat toplumun genel refah düzeyinin altında kalıp sosyal ve kültürel olarak topluma katılmasının engellenmesi şeklinde tanımlar. Bu tanıma göre nispi yoksullar, temel ihtiyaçlarını mutlak olarak karşılayabilen ancak kişisel kaynakların

yetersizliği nedeniyle toplumun genel refah düzeyinin altında kalan ve topluma sosyal açıdan katılmaları engellenmiş olan kişileri kapsamaktadır (Towsend 1985).

Gelişmekte olan ülkelerde mutlak yoksulluk yaygın iken gelişmiş ülkelerde buna çok fazla rastlanmamaktadır. Bu nedenle gelişmiş ülkelerde yoksulluktan bahsedildiğinde çoğu kez göreli yoksulluk anlaşılmaktadır (Tokol ve Alper, 2014).

**Objektif/ Subjektif Yoksulluk;** Objektif yoksulluk; refah ölçütü olarak asgari ihtiyaç düzeyinin normatif yaklaşımla belirlenmesini ifade eder. Subjektif yoksulluk ise, bireylerin kendi tercihlerine göre oluşturdukları ihtiyaç bilişimini esas alarak öznel gerçekliği soyutlayan yaklaşımlardan uzaklaşmaktadır (Zengingönül, 2007). Subjektif yaklaşımın en önemli katkısı toplumun kabul edebileceği bir asgari hayat düzeyinin belirlenmesinde uzmanlar yerine bunu en iyi bilen fertlerinin görüşlerini dikkate almasıdır (Şenses, 2002). Diğer bir ifadeyle; yoksullar belirlenirken kişilerin kendilerini yoksul hissedip hissetmediği esas alınmaktadır.

**İnsani Yoksulluk;** Gelir yoksulluğunda, yoksulluk sınırı olarak bir asgari gelir ve tüketim düzeyi söz konusu iken; insani yoksullukta yaşam süresinin kısalığı eğitim ve sağlık hizmetlerinden yoksunluk, iş olanaklarından yoksunluk vb. temalar incelenmektedir.

İnsani gelişme ve insani yoksulluk kavramları temelde Amartya Sen'in "Yapabilirlikten Yoksunluk Yaklaşımı"na dayanmaktadır. 1998 yılı Nobel Ekonomi Ödülü sahibi olan Sen, "yapabilirlikten yoksunluk" ile yoksulluk ve kalkınma yaklaşımlarına yeni bir bakış açısı getirmiştir (Sam, 2008). İnsani gelişme kavramına, Birleşmiş Milletler Kalkınma Programı (UNDP), yoksulluk ve yoksulluğun ölçülmesi yaklaşımlarını genişleterek katkıda bulunmuştur. UNDP'nin 1997 İnsani Gelişme Raporu ile ilk defa *"İnsani Yoksulluk"* kavramını ortaya çıkarmıştır. İGR 1990 yılından bu yana UNDP tarafından her yıl yayımlanmaktadır. UNDP hazırladığı söz konusu raporlarda; insani gelişme kavramını, kişi başı gelir hesaplarının ötesine giderek insan kaynaklarının gelişimini insanı insan yapan özgürlük, kişilik gibi unsurları ve insanın temel gereksinimlerine ulaşma düzeyini bir arada değerlendirmekte ve böylece kalkınma içindeki insanın rolünü ele almaya çalışmaktadır. Temel insan yeteneklerini sürdürebilecek olan mal, hizmet ve altyapıya -enerji, hijyen, eğitim, iletişim, içme suyuna- erişimin yokluğu ya da kısıtlanması yoksulluğun "insani" boyutu olarak nitelendirilmektedir (Bayındırlık ve İskan Müdürlüğü, 2009).

İnsani gelişme; kişilerin seçeneklerini artırma sürecidir. Seçenekler sonsuz ve değişken olabilir. Ancak bu aşamada üç temel seçenek vardır: bilgi edinme, uzun ve sağlıklı bir yaşam, tatminkâr bir yaşam sürme, diğerleri ise siyasi özgürlük, insan hakları, öz saygınlık vb. insani gelişme ile kişisel gelir yanında, kredi olanaklarına, kamu mallarına ve verimli üretim araçlarına erişim, akraba ve arkadaşlardan sağlanan transferler gibi insanların kaynaklara erişim düzeyinin bir bütün olarak değerlendirilmesini amaçlamaktadır. İnsani Gelişme Endeksi hesaplama yöntemi üç kritere dayanır. Refah standardı, eğitim standardı ve sağlık standardı olmak üzere üç kriter kullanılmaktadır. Refah standardı tatminkâr bir yaşam sürmeyi sağlayacak kaynaklara ulaşmaya, sağlık standardı uzun ve sağlıklı bir yaşama, eğitim standardı ise bilgi edinmeye karşılık gelmektedir.

## 3  Yoksulluğa Neden Olan Faktörler

Küreselleşme süreci ile birlikte rekabetin hızla artması ve neo-liberal politikaların tercih edilmesi evrensel bir sorun olan yoksulluğun daha fazla derinleşmesine yol açmıştır. Uluslararası kuruluşların yoksulluğun nedenleri ve çözümlerine ilişkin yoğun çabalarına rağmen tatmin edici bir çözüme ulaşılamamıştır. Yapılan araştırmalar yoksulluğun belli başlı nedenlerini ortaya koymaktadır;

*Gelir Dağılımdaki Dengesizlikler;* tarım sektöründen endüstri sektörüne geçişle birlikte; kırsal alanda önemli erozyonlar kaçınılmaz bir şekilde gerçekleşmiştir. Bu bağlamda kırsalda geçimini sağlayamayan insanların şehirlere akın etmesiyle birlikte şehirlerdeki istihdam düzensizliği, destekleyici sosyal ilişkilerin yetersiz olmasıyla birlikte sosyal bir problem olan yoksulluk belirgin hale gelmiştir (Buğra, 2005). Bu anlamda yoksulluk her ülkede görülmekle birlikte az gelişmiş ve gelişmekte olan ülkelerde daha ciddi boyutlara ulaşmıştır (Şenses, 2003).

Bununla birlikte, yoksulluğun genel nedeni olarak; gelirin üretim faktörleri arasında dengesiz dağılımı toplumda yoksulluğa neden olabilir. Özellikle tekelci piyasalar, baskı gruplarının etkisi ve bölgesel farklılıklar gibi faktörler, kaynakların adil dağılımını etkiler ve toplumdaki mevcut yoksulluk sınıfının genişlemesine neden olur (Akçacı ve Kocağ, 2012). Bu nedenle, gelir eşitsizliğine neden olan tüm faktörlerin aynı zamanda yoksulluğa da neden olduğu söylenebilir. Gelir dağılımının yapısı ve zaman içinde değişimi yoksulluk hakkında önemli işaretler vermekte ve bu söz konusu eşitsizliğin ülkenin artan refahının da eşitsiz dağılımına temel oluşturmaktadır. Küreselleşme sürecinde artan eşitsizlikler günümüzde yoksulluğun ulaştığı boyutların en önemli nedenidir (Danzinger ve Gottschalk, 1986).

*Hanehalkı Büyüklüğü ve Yapısı:* Türkiye'de iki veya daha fazla çocuk sahibi olan ailelerin yoksulluk riski diğer gruplara göre daha fazladır. Bu da göstermektedir ki hanehalkı fert sayısı arttıkça yoksulluk riski artmaktadır (Tüsiad, 2000). 2009 yılında hanehalkı büyüklüğü 3 veya 4 kişi olan hanelerde bulunan fertlerin yoksulluk oranı % 9,65 olurken, 7 ve daha fazla olan hanelerde fertlerin yoksulluk oranı % 40,05 olarak

hesaplanmıştır. 7 ve daha fazla kişiden oluşan hanelerden kentsel yerlerde oturanlar için yoksulluk riski % 25,21 iken kırsal yerlerde bu oran % 54,06'dır (Topgül, 2013). Hanehalkının büyüklüğü kadar yapısı da yoksulluk açısından belirleyicidir. Yapılan çalışmalar özellikle tek ebeveynli yaşlı veya aile reisi kadın olan hanehalklarının diğerlerine oranla daha fazla yoksulluk riski taşıdığını göstermektedir (Tokol, 2014; Sapancalı,2005/3).

Çalışma hayatında kadınlara karşı ayrımcılığın söz konusu olması ve kadınların çocuk ve yaşlı bakımını üstlenmek zorunda kalmaları vb. nedenlerle daha az ya da elverişsiz işte çalışmaları hanehalkını yoksulluk riskiyle karşı karşıya bırakabilmektedir. Diğer yandan aile reisinin eğitim düzeyi, yaş faktörü, özürlü ferdi vb. faktörler yanı sıra ailedeki çocuk, yetişkin ve yaşlı vb. nedenler yoksulluk açısından risk taşımaktadır.

***İşgücü Piyasalarına Bağlı Nedenler:*** Bilgi toplumuna geçişle birlikte bazı mesleklerin kaybolması, işsizlik, esnek çalışma, kısmi süreli çalışma, kayıt dışı istihdam vb. işgücü piyasasına bağlı nedenler yoksulluk riskini arttırmaktadır. Marksist düşünceye göre, yoksulluğun temel nedeni olarak işçilerin emeğinin tam karşılığını alamamalarıdır. Kapitalist bir yapının sonucu olarak işçilerin çalışmaları sonucunda elde edilen gelirin büyük bir kısmı kapitalistlerin cebine girmektedir. Böyle bir gelir dağılımı işçi sınıfının çalışmasının karşılığını alamamasına ve yoksulluğa düşmesi sonucunu doğurmaktadır (Yıldırım, 2010). Çalışanlar arasında yoksulluğun nedenleri olarak belirtilen; düşük ücretler, kısmi süreli çalışmalar ve uluslararası rekabet, ücretler üzerinde ciddi bir baskı oluşmasına yol açmış ve işgücü piyasasında özellikle niteliksiz işgücünün durumu olumsuz etkilenmiştir (Şenses, 2002). Uluslararası şirketlerin rekabeti arttırmak amacıyla esnek çalışma biçimlerine geçmeleri formel işlere göre enformel ve güvencesiz düşük ücretlerle istihdamın artması ile bu tür çalışanlar için yoksulluk riskini de beraberinde getirmiştir.

***Enflasyon:*** Yoksulluk açısından en önemli sakıncalardan biri de sabit gelirlilerin satın alma güçlerinin azalarak refah düzeylerinin düşmesi; yani enflasyondur. Özellikle düşük gelirli grupların enflasyon nedeniyle ciddi bir refah kaybı yoksullaşmaları anlamına gelmektedir. Gelirlerinin büyük bir kısmının tüketim için harcamalarına rağmen ihtiyaçlarının tamamını karşılayamama durumuna düşmeleridir.

***Diğer Faktörler:*** Genel olarak, ülke yakınındaki savaşlar, ülke içinde yaşanan kargaşalar, genel ekonomik krizler, doğal afetler ve salgın hastalıklar vb. makro ölçekli olağan dışı gelişmeler yoksulluğu arttırmakla kalmadığı gibi bireysel veya hanehalkı düzeyinde yaşanan ani olumsuzluklar aile reisinin ölümü, uzun süreli hastalıklar vb. yoksulluğa sebep olmaktadır.

Yetersiz üretimin ve bunun doğal sonucu olan yoksulluğun nedenleri olarak; adaletsiz vergi sistemi, yüksek faiz ve rant ekonomisi, bireyler arasındaki yetenek farklılıkları, piyasada tekelleşme ve işsizlik gibi faktörlerde sayılabilir (Tireli ve Coşkun, 2009).

## 4 Türkiye'de Yoksulluk ve Boyutları

Türkiye'de yoksulluk algısı, kafamızı çevirip görebileceğimiz kadar somuttur. Ancak buna ilişkin kurumsallaşmış ve organik de olsa örgütlenmiş bir sosyal yapı bulunmamaktadır. Bunun en önemli nedenleri arasında son 20 yılda kentleşme olgusunda hızla artan bir mekânsal ayrışmanın göze çarpmasıdır. Ülkemizde yoksulluğun temel nedenleri arasında, uygulanan ekonomik ve sosyal politikaların başarısızlığı, yoksulluk sorununu gittikçe arttırırken gecekondularda yaşayan bireyler yanında aile kurumları ve toplumun tamamı bu olumsuz koşullardan paylarına düşeni almaktadırlar. Bunların başında, aile içi ilişkilerin olumsuz etkilenmesi, yetersiz beslenmeye dayalı fiziksel zayıflık ve hastalıklara yakalanma riskinin yüksek olması, suç işleme, alkol, sigara vb. kötü alışkanlıklar edinme, en temel ihtiyaçların bile karşılanamaması yetersiz eğitim vb. gelmektedir.

Türkiye'nin gelir dağılımı incelendiğinde belirgin bir adaletsizlik söz konusudur. Zengin ile yoksul arasındaki makasın son ekonomik kalkınma politikaları nedeniyle arttığı gözlenmektedir. Ulusal yoksulluk sınırına göre, yoksulluk oranları Türkiye'de 2008 yılında yapılan ankete göre; ulusal yoksulluk sınırının altındaki nüfusun %17,1' den 2009 yılında bu oranın artarak % 18,1'e yükselmiş olmasıdır (The World Bank, 2014).

Yoksulluk göstergelerinin yöntem ve yaklaşıma bağlı olarak değişmesi, yoksulluk ölçüm yöntemlerinin irdelenmesini gerektirmektedir. Türkiye İstatistik Kurumu da uluslararası platformdaki sürekli gelişmelerden söz ederek ülkemiz yoksulluk göstergelerinin yeniden değerlendirilmesi, harcamaya dayalı yoksulluk göstergelerinin ülkemizin sosyal ve ekonomik yapısını ortaya koyacak ve uluslararası karşılaştırmalara elverecek şekilde revize edilmesi gerektiğini belirtmiştir. Bu konuda çalışmaların devam ettiği, çalışmalar sonuçlandırılıncaya kadar 2010 yılından başlayarak mutlak yoksulluk, harcamaya dayalı göreli yoksulluk oranlarının yayınlanmayacağı duyurulmuştur (TÜİK, 2012).

2011 yılında ülkemizde, kişi başına günlük olarak Satın Alma Gücü Paritesi (SGP)'ye göre 2,15 $'ın yoksulluk eşiği olarak temel alınması durumunda yoksul fert oranı %1,4'e gerilemiştir. Bir önceki yılda aynı ölçüte göre, yoksul olan fert oranı % 2,1 iken bu yıl %33,33 oranında bir azalış göstermiştir. Uluslararası yoksulluk çalışmalarında kullanılan ölçüt olan 2,15 $ ve 4,3 $'ın aslında değer olarak birbirine olan oranı 2 iken, bir başka ifade ile 4,3 $'ın 2,15 $'lık yoksulluk eşiği değerinin iki katı kadarken, ülkemiz genelinde yoksul fert oranına yapmış olduğu etki dikkati çekmektedir. Yoksulluk eşiğinin ülke genelinde 4,3 $ olarak alınması durumunda

yoksul olan fert oranı 19,93 kat artış göstermektedir. Bu sonuca göre ülkemizdeki fertlerin %2,65'inin günlük olarak yapmış olduğu harcamanın 4,3 $'ın altında olduğunu söylemek de mümkündür (Tablo 1).

| Yöntemler | Fert yoksulluk oranı (%) | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 (*) | 2008 | 2009 | 2010 | 2011 | 2012 |
| **TÜRKİYE** | | | | | | | | | | | |
| Kişi başı günlük 2,15 $'ın altı [1] | 3,04 | 2,39 | 2,49 | 1,55 | 1,41 | 0,52 | 0,47 | 0,22 | 0,21 | 0,14 | 0,06 |

| Kişi başı günlük 4,3 $'ın altı [1] | 38,82 | 32,18 | 32,62 | 26,59 | 25,35 | 17,59 | 15,33 | 11,92 | 9,61 | 6,83 | 5,88 |

(1) 1 $'ın satın alma gücü paritesi (SGP) üzerinden karşılığı olarak karşılığı olarak 2002 yılı için 0, 618 TL; 2003 yılı için 0,732 TL; 2004 yılı için 0,780 TL; 2005 yılı için 0,830 YTL, 2006 yılı için 0,921 YTL, 2007 yılı için 0,926 YTL, 2008 yılı için 0,983 YTL, 2009 yılı için 0,917 TL, 2010 yılı için 0,990 TL ve 2011 yılı ve 2012 için de 1,004 TL kullanılmıştır.
(*) 2007 yılından itibaren yeni nüfus projeksiyonları kullanılmaktadır.

***Tablo 1.****Yoksulluk sınırı yöntemlerine göre fert yoksulluk oranları **Kaynak:** TÜİK, 2011 Yılı Yoksulluk Çalışma Sonuçları*

2012 yılında, 2002 yılından bu yana gözlemlenen eğilimin hala geçerliliğini koruduğu ve günlük SGP'ye göre 2,15 $'ın baz alındığı yaklaşıma göre kırsal kesimdeki yoksulluk oranı kentsel kesim yoksulluk oranının 21,00 katı daha yüksek iken, günlük yoksulluk eşiğinin 4.3 $ olması halinde de kırsal kesimdeki yoksul fert oranı kentsel kesimdeki yoksul fert oranından 7,27 kat daha yüksektir. Kentsel kesimde her onbin kişiden ikisinin günlük harcaması 2,15 $'ın altında iken, kırsal kesimde her bin kişiden 4'ünün günlük harcaması 2,15 $'ın altındadır. Yoksulluk eşiğinin SGP'ye göre 4,3 $'a çıkarılması halinde kentsel kesimde her onbin kişiden 9'unun günlük harcaması, kırsal kesimde de her yüz kişiden 6'sının günlük harcaması 4,3 $'ın altındadır (Tablo 1).

Genel olarak değerlendirdiğimizde Türkiye'de yoksulluğu tetikleyen unsurlar: işsizlik, yoksul bireyin özellikleri, ülkede yaşanan ekonomik krizler, bireyler arasındaki gelir dağılım dengesizlikleri, sosyal güvencesizlik ve çeşitli ekonomik politikalar, yolsuzluklar, kayıt dışı ekonomi vb.' dir. Diğer ülkelerde olduğu gibi Türkiye'de de yoksulluk profilini belirlemek, birden fazla kıstası göz önünde bulundurmakla mümkündür. Ülkemizde var olan yoksul kesimin profilini belirlerken bireyden kaynaklı sebeplerin yanında dış etmenler de etkili olmaktadır. Fertlerin yaşı, cinsiyeti, öğrenim ve çalışma durumu gibi kendinden kaynaklı olabileceği gibi, doğal afetler, zorunlu göç vb. dış etmenlerden kaynaklı yoksulluğa rastlamak mümkündür (Sosyal Hizmet Uzmanı, 2014) .

## 5 Küresel Yoksulluk ve Boyutları

Küreselleşme süreci ile birlikte yoksulluğun hızla artması; Birleşmiş Milletlerin Kalkınma Programları, Dünya Bankası'nın Raporları, OECD Raporları uluslar üstü disiplinler tarafından yoksulluğa ilişkin araştırmaların derinleştirilmesi ve boyutlarının belirlenerek çözüm yollarının aranmasını hızlandırmıştır.

Günümüzde dünya nüfusunun %10'u toplam dünya gelirinin yüzde yetmişten fazlasını oluşturmaktadır. Altı milyar iki yüz milyona sahip dünya nüfusunun 2,5 milyarı – yaklaşık yarısı günlük 2$ yoksulluk sınırının, 1 milyarı – yaklaşık altıda biri günde 1$ yoksulluk sınırının altında yaşamaktadır. Yoksullukla birlikte ülkeler ve bölgeler arasındaki eşitsizliğin boyutları da giderek artmaktadır. Ortalama olarak yoksul ülkeler zengin ülkelerden daha yavaş büyüme oranına sahip olduğu için ülkeler arasındaki makas giderek artmaktadır. 1960 yılında en zengin 20 ülkenin geliri, en fakir 20 ülkenin gelirinden 18 kat fazla iken, 1995'te bu oran 37 ile yaklaşık ikiye katlanmıştır (Arpacıoğlu ve Yıldırım, 2011). Bu da göstermektedir ki; insanlığın dörtte birini oluşturan sanayileşmiş kesim, dünya zenginliğinin %85'ini elinde tutmaktadır.

Küreselleşme süreciyle birlikte, gelirler arasındaki fark, hem toplumların farklı sınıfları arasında, hem de ülkeler arasında gittikçe açılmaktadır. Bir başka ifadeyle ekonomik küreselleşme sürecinin yarattığı kazançların ve kayıpların paylaşımı bölgesel bloklar, devletler, şirketler, toplumlar ve bireyler arasında adaletli gerçekleşmemektedir (Selamoğlu, 2000).

İnsani gelişmeyi, sağlık ve eğitim gibi gelişmenin ekonomik olmayan göstergelerini de dikkate alarak, insani gelişme endeksi ile ölçen 2013 İnsani Gelişme Raporuna (Tablo 2) göre; çok yüksek insani gelişmeye sahip ilk 5 ülke; Norveç, Avustralya, ABD, Hollanda, Almanya. Yüksek insani gelişmeye sahip ilk 5 ülke; Bahreyn, Bahamalar, Rusya, Uruguay, Karadağ. Orta düzey insani gelişmeye sahip ilk 5 ülke; Tonga, Belize, Dominik Cumhuriyeti, Fiji, Samoa. Düşük insani gelişmeye sahip ilk 5 ülke; Kongo Cumhuriyeti, Solomon Adaları, Sao Tome ve Principe, Kenya, Bangladeş (Undp, 2014a). Türkiye ise insani gelişme endeksi sıralamasında; yüksek insani gelişme endeksinde 0.722 endeks değeri ile 90.sıradadır. Bu da göstermektedir ki; Beyaz Rusya, Karabağlar, Bulgaristan, Kazakistan, İran, Azerbaycan, Ermenistan'ın gerisinde; Sri Lanka, Cezayir, Tunus gibi

ülkelerin üstündedir. Ancak UNDP'nin 2010 verileri ile karşılaştırıldığında 2012 de 0.007 indeks artışı göstermektedir (Undp, 2014b).

| Çok Yüksek Düzey | Yüksek Düzey | Orta Düzey | Düşük Düzey |
|---|---|---|---|
| Norveç | Bahreyn | Tonga | Kongo Cumhuriyeti |
| Avustralya | Bahamalar | Belize | Solomon Adaları |
| ABD | Rusya | Dominik Cumhuriyeti | Sao Tome ve Principe |
| Hollanda | Uruguay | Fiji | Kenya |
| Almanya | Karadağ | Samoa | Bangladeş |

*Tablo 2. İnsani Gelişmişlik Açısından Ülkeler* **Kaynak:** *UNDP, the 2013 Human Development Report*

Gelirdeki artış farklılıkları yoksulluk azalmasını doğrudan doğruya etkilemektedir. Temel şartlar altında, nüfus artmaya devam ettikçe ve 2030 'da muhtemelen 130 milyondan fazla yoksul insanın olacağı Hindistan'da nüfus hala yüksekken, gelir yoksulluğu Çin' de neredeyse ortadan kaybolmuş fakat sahra altı Afrika' da çok az miktarda azalma göstermektedir. Hızlandırılmış ilerleme durumunda, yoksul insan sayısı çok hızlı düşmektedir ve bazı ülkelerin bölgelerinde neredeyse kaybolmaktadır. Esas olarak 2050'ye kadar yoksulluğu azaltmak iddialı politika ölçütlerine bağlıdır (Tablo 3).

| Region or Country | 2010 | 2020 | 2030 | 2040 | 2050, base case | 2050, accelerated progress |
|---|---|---|---|---|---|---|
| Arab States | 25 | 19 | 17 | 16 | 17 | 1 |
| EastAsia and the Pacific | 211 | 74 | 42 | 29 | 29 | 9 |
| China | 94 | 13 | 5 | 1 | 1 | 0 |
| Europe and Central Asia | 14 | 2 | 3 | 3 | 4 | 1 |
| Latin America and the Caribbean | 34 | 29 | 26 | 27 | 32 | 13 |
| South Asia | 557 | 382 | 243 | 135 | 81 | 13 |
| India | 416 | 270 | 134 | 53 | 21 | 2 |
| Sub-Saharan Africa | 371 | 333 | 297 | 275 | 267 | 60 |
| World | 1212 | 841 | 627 | 485 | 430 | 96 |

**Not:** Aşırı yoksulluk satın alım gücü paritesi 1,25 $ bir gün olarak tanımlanır.

*Tablo 3. Seçilmiş bölge ülkelerinin, günümüz ve ileriye dönük tahmini aşırı yoksul kişi sayısı 2010-2050(milyon)*
**Kaynak:** *Uluslararası Vadeli (2013) için Pardee Center tabanlı HDRO hesaplamaları*

Dünyada yoksulluğun dağılımı uluslararası karşılaştırmalarda kullanılan mutlak yoksulluk sınırı olan kişi başına günde 1.25$ ve 2$'a göre dünyadaki yoksulluğun dağılımı gösterilmektedir. Her iki sınıra göre dünyada yoksulluğun en yaygın olduğu bölgeler Güney Asya ve Sahra Altı Afrikası iken, yoksulluğun en düşük olduğu bölgeler ise Avrupa ve Merkez Asya olarak görülmektedir (Tablo 4).

| Coğrafi Bölgeler | Satın alma gücü paritesine göre günde 1.25 $'ın altında gelir elde edenler (%) 2010 | Satın alma gücü paritesine göre günde 2$'ın altında gelir elde edenler (%) 2010 |
|---|---|---|
| East Asia & Pacific | 12.5 | 29.7 |
| Europe & Central Asia | 0.7 | 2.4 |
| Latin America & Caribbean | 5.5 | 10.4 |
| Middle East & North Africa | 2.4 | 12.0 |
| South Asia | 31.0 | 66.7 |
| Sub-Saharan Afrika | 48.5 | 68.9 |

*Tablo 4. Dünyada Yoksulluk* **Kaynak:** *World Bank*

Küresel zenginlik bilişim ve teknolojik beceriler gibi insani koşullar son 21.yüzyılda inanılmaz ilerleme göstermesine karşın yoksulluğun şiddetle artması; küresel kazanımların eşit dağılmadığının bir göstergesidir. En zengin 20 ülkenin ile en fakir 20 ülke geliri arasındaki farkın son 40 yılda ikiye katlamıştır (Taş ve Özcan, 2012).

| En Yoksul 10 Ülke | Kişi Başı Milli | En Zengin 10 | Kişi Başı Milli Gelir $ |
|---|---|---|---|
| Malavi | 830 | Norveç | 58500 |
| Togo | 820 | Singapur | 46940 |
| Mozambik | 770 | ABD | 46870 |
| Sierra Leone | 750 | İsviçre | 46460 |
| Orta Afrika Cum. | 730 | Hong Kong | 43960 |
| Nijer | 680 | Avusturya | 37680 |
| Eritre | 630 | İrlanda | 37350 |
| Brondi | 380 | Danimarka | 37280 |
| Liberya | 300 | Kanada | 36220 |
| Kongo Dem. Cum. | 290 | Finlandiya | 35660 |

*Tablo 5. Kişi Başına Düşen Milli Gelir Düzeyleri Bakımından Dünyanın En Yoksul ve En Zengin 10 Ülkesi (Kişi Başına Düşen GSMH ($), 2008, Satın Alma Gücü Paritesi İle).* **Kaynak:** *World Bank, World Development Report 2010.*

Tablo 5'den de anlaşılacağı üzere dünyanın en yoksul ülkelerinde kişi başına düşen GSMH 1000 doların altındadır. Dünya Bankası verilerine göre 2008 yılı itibariyle dünyanın en yoksul ülke sıralamasında kişi başına düşen GSMH oranı en düşük olan 290 dolarla Kongo Demokratik Cumhuriyeti yer almaktadır. Yine 2008 yılı Dünya Bankası verilerine göre dünyanın kişi başına düşen GSMH rakamı en yüksek olan ülke ise 58500 dolar ile Norveç'tir. Dünyanın en yoksul ve en zengin ülkesi arasındaki kişi başına düşen GSMH rakamlarına bakıldığında aradaki inanılmaz fark göze çarpmaktadır. Bu demek oluyor ki, GSMH bakımından dünyanın en zengin bölgesi en yoksul bölgesinden yaklaşık 200 kat daha büyüktür (Taş ve Özcan, 2012).

Dünya Bankası ve UNDP başta olmak üzere uluslar arası kuruluşların yayımlamış oldukları yoksulluk araştırmaları da yoksulluğun çeşitli ülkelerde ulaştığı bu yüksek düzeyi gözler önüne sermektedir (DPT, 2001, World Bank, 2014).

Bu bağlamda küreselleşmenin yol açtığı ekonomik büyüme yoksulluğun azalmasına neden olurken, gelir dağılımı adaletsizliğinin artması ise yoksulluğun artmasına yol açmaktadır. Nihai olarak yoksulluğu azaltma etkileri büyüme modelinin gelir dağılımı adaletsizliğini nasıl etkilediğine bağlıdır. Yoksulluğun azaltılmasında etkinliğin sağlanması için yüksek büyüme ve büyüme kazançlarının adaletli bir şekilde dağıtılması gereklidir (Yaşar ve Şahbaz, 2013).

## 6 Sonuç

Yoksulluğun, Dünya Bankası tarafından yapılan Dünya Kalkınma Raporunda ana tema olarak işlenmesi, yoksulluk çalışmalarını da hızlandırmış, konunun salt ekonomik bir sorun olmanın ötesine geçmesiyle uluslararası kuruluşların da konuya ilgileri artmıştır. Yoksulluk sorununu ortadan kaldırabilmek, daha mutlu ve refah bir yaşam gerçekleştirebilmek her dönemde kamu politikalarının başlıca amacı olmuştur ve bu politikalarının sürdürülebilir bir hale getirilmesi tüm dünya ülkeleri için oldukça büyük önem taşımaktadır. Uluslararası düzeyde yoksullukla mücadelenin önemli yol göstericisi Dünya Bankasının yoksulluk konulu raporudur. Yirminci yüzyılın ikinci yarısından itibaren yaygın küreselleşme söylemi içerisinde, büyük refah artışı ile birlikte zenginlik dönemini yaşadığı iddia edilen dünyamızda yoksulluk, hem az gelişmiş hem de gelişmiş ülkelerde en önemli sorunlardan biri haline gelmiştir. Yoksulluk, tüm dünyada olduğu gibi Türkiye'de de göz ardı edilemeyecek ve kısa zamanda çözüme ulaştırılması gereken bir gerçektir.

Aslında dünyamızın karşı karşıya bulunduğu yoksulluk ve gelir dağılımı adaletsizliği sorununun boyutlarını aşağıda sunulan bazı dünya gerçeklerine baktığımızda tüm açıklığı ile görmek mümkün olacaktır: Dünyanın yarısı yaklaşık 3 milyar insan günlük 2$'ın altında bir gelirle yaşıyor. Dünyanın en yoksul 48 ülkesinin GSMH'sı dünyanın en zengin 3 insanının servetlerinin toplamından daha azdır. Yaklaşık 1 milyar insan 21.YY'a bir kitabı okuyamadan ya da isminin bile yazamadan girdi. Dünyada her yıl harcanan paranın %1'inden daha azı ile bütün çocuklar okula gidebilirlerdi. Dünyanın en zengin ülkesi, endüstrileşmiş ülkeler içinde zengin-yoksul arasındaki farkın en büyük olduğu ülke. Gelişmiş ülkelerdeki nüfusun %20'si dünyadaki malların %86'sını tüketiyor. Birkaç yüz milyarderin serveti dünyanın en yoksul 2,5 milyar insanınkine eşit. UNICEF verilerine göre, dünyada yoksulluk yüzünden her gün 30 bin çocuk hayatını kaybediyor. Dünyadaki 2,2 milyar çocuğun bir milyarı yoksul. Dünyada temel hakkından yoksun olan çocuk sayısı 121 milyon. Gelişmekte olan ülkelerde yaşayan 1,1 milyon insan yeterli suya 2,6 milyon insan da temel sağlık hizmetlerine ulaşamıyor. Dünya nüfusunun yalnızca %12'si suyun %85'ini kullanıyor ve bu %12 üçüncü dünya ülkelerinde yaşamıyor (Gündoğan, 2008).

Ülkeler arasındaki ve ülkeler içindeki eşitsizlikleri artıran neo-liberal küreselleşme, yoksulluk, işsizlik ve sosyal dışlanma ile kendini gösteren küresel bir sosyal krizi besleyerek, hem 'zengin kuzey'de hem de 'fakir güney'de sorunların derinleşmesine neden olmuştur. Bütün bu gelişmeler, toplumda düzensiz, güvencesiz ve düşük ücretli çalışmayı yaygınlaştıran, işçi sınıfının geniş kesimlerini yoksulluğa sürükleyen bir süreç yaratmıştır (Erdoğdu, 2004).

Küreselleşmenin bir sonucu olarak Türkiye'de de, yoksulluk ve yoksulluğu önlemenin, ekonomik ve sosyal politikaların başlıca konusu haline geldiği gözlemlenmektedir. Ancak, Türkiye'de sosyal politika, öncelikli olarak sosyal yardımlar yoluyla yoksulluğu azaltma çabası içindedir ki, bu durumun klientalizmi ortaya çıkardığı görüşlerine yol açmakta ve başta esnek çalışma biçimlerinin yaygınlaştırılması olmak üzere aktif işgücü politikaları ile istihdam yaratma çabalarına odaklandığı görülmektedir (Gersil ve Eryılmaz, 2014).

Yoksullukla mücadele edebilmek için sosyal güvenlik tabanı genişletilmelidir. Bunun için hem bağımlı nüfus, hem de kayıt dışı çalışma azaltılmalıdır. Avrupa Birliği'nde yetişkin nüfusun %80'i çalışırken Türkiye'de %54'ü çalışmaktadır. Veriler Türkiye'de hem işsizliğin hem de bağımlı nüfusun yüksek oranda olduğunu göstermektedir. Bu nedenle bireyin çalışıyor olması gelirin birden fazla kişi tarafından kullanılması nedeniyle yoksulluğu önlemek için yeterli görülmemektedir. Sorunun çözümü için işgücüne katılımı çok düşük seviyede gerçekleşen kadınların istihdama katılımını artıracak önlemler alınmalıdır (Şener, 2010). Avrupa Birliği üye devletlerinin de katıldığı Lizbon, Nice ve Stockholm Avrupa Konseyi toplantılarının ortak kararları arasında; Yoksulluk ile sosyal dışlanmanın önlenebilmesi için kesinlikle istihdamın desteklenmesi gereğini kabul etmiştir (Kapar, 2005).

# Mikro Kredi ve Yoksulluğun Azaltılması: Makedonya ve Türkiye Karşılaştırması

# Microcredit and Poverty Reduction:Comparison of Macedonia and Turkey

Assoc. Prof. Dr. İlhan Ege (Mersin University, Turkey)

## Abstract

In the recent years income instability and poverty is imortnat problem in the world. Aproximately more than one out of five people in the World live in poverty. Microcredit is an effective tool to support the poor help themselves out of the poverty. The aims of this study are explaining poverty in Macedonia and Turkey and comparing Macedonia to Turkish microcredit systems. This study is completed through an extensive literature review of academic articles, and methodologies employed by Macedonia and Turkey microcredit models. The performance of system are studied and compared with the various parameters. The various parameters deals with poverty such as financial structure, gini coefficient and efficiency. Poverty is important problem for undeveloped countries. Microcredit has played an important role in the reduction of poverty. Finally, as the paper shows and the available data appears to confirm success to fighting poverty with microcredit experience of Macadonia and Turkey. And this paper is answered to question: Which is success to fight the poverty, Macedonia or Turkey?

## 1 Giriş

Genel anlamda yoksulluk kavramı; "toplumda bireylerin temel gereksinimlerini karşılayabilecek yeterli ve düzenli bir gelire sahip olmamaları" durumunu ifade etmektedir. Ancak belirtilen temel gereksinimler ve bu gereksinimleri karşılayacak gelir düzeyi bireyden bireye; toplumdan topluma ve zamana göre farklılık göstermektedir. Toplumlar yoksulluğun ortadan kaldırılması ile ilgili olarak, yoksulluğu algılama biçimlerine göre bir takım politikalar geliştirmekte ve uygulamadırlar (Ege, 2012).

Yoksulluğun azaltılmasına yönelik üç temel yaklaşım ileri sürülmektedir (Wilcox, 1969, 363-364, Aktaran: İkizoğlu, 2000: 92):

Yoksulların ihtiyaçları, onlara para, hizmetler veya diğer yardımlar şeklinde verilerek karşılanabilir.

Yoksula, işe girmeye yönelik destekte bulunulabilir.

Bireylerin istihdamı, bireyler ihtiyaç duyulan becerilerle donatılarak ve iş piyasasında etkililiği geliştirilerek kolaylaştırılabilir.

Özellikle 1900'lerin ikinci yarısından sonra gerek ülkelerin tek başlarına gerekse Birleşmiş Milletler, Dünya Bankası ya da OECD gibi uluslararası kuruluşların gelişmekte olan ülkelerdeki yoksullukla mücadelenin ve bu ülkelerde sürdürülebilir kalkınmanın sağlanması amaçlarıyla makro düzeyde hazırladıkları stratejilerin geçen zaman zarfında anlamlı başarılar kaydedememesi bir yandan söz konusu stratejilerin yeniden gözden geçirilmesi ile sonuçlanırken diğer yandan ülkelerin arzulanan amaçlara istikrarlı bir biçimde ulaşmalarını hedefleyen yeni yaklaşımların doğuşuna zemin hazırlamıştır. Bu yeni yaklaşımlardan biri de mikro finansman uygulamalarıdır (Oktayer ve Çak 2007).

Mikro kredi uygulamalarının temel amacı geliri artırmak ve yeterki sermayeye sahip olmayan kadınlar ve küçük ölçekli işletmelere başta kredi olmak üzere finansal hizmetler sağlayarak finansal piyasaları genişletmektir (De Aghiona ve Morduch, 2000: 402, Aktaran; Ege, 2009, 408). Mikro finansnman yoksuluğun yoksuluğu bireylere veya ailelere verilen finansal hizmetleri kapsamaktadır. Mikro finansman kapsamına sadece mikro kredi hizmetleri değil bazı sigortacılık ve bankacılık hizmetleri de girmektedir.

Mikro kredi uygulamalarının Dünya'daki gelişimine bakıldığında yoksul kadınların finansmanının sağlamasıyla başladığı ve yayıldığı görülmektedir. 1970'li yıllarda, Bangladeş, Brezilya ve diğer birkaç ülkede uygulanan deneysel programlar mikro işlere yatırım yapmalarını sağlamak üzere yoksul kadın gruplarına küçük krediler vermişlerdir. Bu programların uygulanmasının kadınlardan başlanmasının nedeni, ekonomik kalkınma hedeflerinin gelişmiş yaşam standartlarını, yoksulluğun ortadan kaldırılması, onurlu bir iş bulmayı ve eşitsizliğin azlatılmasını içermesidir. Çünkü kadınlar yoksulların, işsizlerin ekonomik ve sosyal ezilmişlerin büyük bir kısmını oluşturmaktadır (Ege, 2008, 854).

Bu çalışmanın amacı yoksulluk bağlamında Makedonya Cumhuriyeti (Makedonya) ile Türkiye Cumhuriyeti'nin (Türkiye) mevcut durumunun karşılaştırılması ve yoksullukla mücadele de mikro kredi sistemlerinin karşılaştırılmasıdır.

## 2 Türkiye ile Makedonya Ekonomik Göstergeler

Dünya Bankası'nın verileri Tablo 1'de incelendiğinde Makedonya'nın GSYIH'nın Türkiye'ye göre çok düşük olduğu görülmektedir. Buna rağmen 2003 yılından itibaren yıllar itibariyle GSYİH'sı artmıştır. Türkiye'nin kişi başına milli geliri Makedonya'nınkinden çok fazla olmakla birlikte Makedonya'nın milli gelirdeki artış hızı Türkiye'den fazladır. Fakat Makedonya'nın GSYİH'sındaki büyüme oranında ise durum tam tersidir. Hatta 2012 yılında Makedonya'nın GSYİH'sındaki büyüme oranı negatif olmuştur. İki ülkenin ortalama yaşam ömürleri ise aynıdır.

| | Makedonya | | | | Türkiye | | | |
|---|---|---|---|---|---|---|---|---|
| | **2003** | **2004** | **2011** | **2012** | **2003** | **2004** | **2011** | **2012** |
| **Nüfus** | 2.080.866 | 2.085.728 | 2.103.890 | 2.105.575 | 65.938.265 | 66.845.635 | 73.058.638 | 73.997.128 |
| **GSYİH (milyon $)** | 4.756,2 | 5.514,3 | 10.439,1 | 9.612,5 | 303.005,3 | 392.166,3 | 774.775,2 | 789.257,5 |
| **Kişi Başına Milli Gelir ($)** | 6.200 | 6.800 | 11.550 | 11.540 | 8.760 | 10.150 | 17.810 | 18.390 |
| **GSYİH'nda Büyüme (Yıllık %)** | 2,8 | 4,6 | 2,8 | -0,3 | 5,3 | 9,4 | 8,8 | 2,2 |
| **Yaşam ömrü (Yıl)** | 73,8 | 74 | 74,9 | 75 | 71,6 | 72 | 74,5 | 74,9 |

*Tablo 1: Ekonomik Göstergeler* **Kaynak:** *Worldbank,, 2014*

Şekil 1 incelendiğinde yukarıda belirtildiği gibi Makedonya'nın GSYIH'nın artışı Türkiye'den fazla olduğu görülmektedir.

*Şekil 1: Makedonya ve Türkiye'nin Yıllık GSYİH'nındaki Artış (%)*

## 3 Makedonya ve Türkiye'de Yoksulluğun Azaltılması

Makedonya'da aslında yoksulluk yeni bir oldu değildir. 1990'ların öncesinde de Makedonya Cunhuriyeti, Yugoslavya'nın en fakir devletlerinden biri idi ve Belgrad Hükümeti ciddi anlamda destekler yapıyordu. Yugaslavya'dan bağımsızlık ilanından sonra, federal destekler azalması, komşularla olan çatışmalar ve sosyalist sistemden olan ekonomik dönüşüm nedeniyle çok keskin bir ekonomik daralma olmuştur. Enflasyon oranları hızla yükselmiş, reel maaşlar azalmış ve işsizlik artmıştır. Yoksulluk oranı 1991 yılında nüfusun %4'ü iken 1996 yılında %20'ye çıkmıştır. 1996 yılında ülke büyük bir resesyona girmiş ve çok az bir pozitif büyüme oranı yakalamışlardır (%1). 1997 ve 1998 yıllarında yoksulluk azalmış fakat Kosova krizi nedienyile bu dönem kısa sürmüştür (Worldbank, 2014).

Makedonya nüfusunun %40'ı kırsal alanlarda yaşamaktadır ve bunların üçte ikisi ise fakir insanlardır. Bu kişiler tarım ve hayvancılık ile uğraşmaktadırlar. 2010 yılı itibari ile toplam Makedonya'nın nüfusu 2.060.563 kişi iken kırsal nüfus 661.440 kişidir ve bu kırsal nüfusun yaklaşık 140.886 kişisi fakir insanlardır (Rural poverty portal, 2014).

Küresel kriz Makedonya'daki yoksulluğu daha arttırmıştır. Makedonya İstatistik Kurumu tarafından sunulan verilere göre Makedonya'da halkın yüzde 28'i yoksulluk koşullarında yaşarken, yüzde 32'sinin de iş bulamadığı kaydedildi (Yenişafak, 23.01.2010). İşsizlik oranı yüzde 33'ü aşmıştır ve vatandaşların yaklaşık üçte birinin yoksulluk sınırının altında yaşamaktadır (TEPAV, 2011).

Gelir dağılımındaki eşitsizliği ölçmede kullanılan araçlardan birisi de "Gini Katsayısı"dır. bu katsayısı 0 ile 100 arasında bir değer alır ve eğer gelir eşit bir şekilde dağılıyorsa 0 değerini alır, eğer tüm gelir bir kişi tarafından alınıyorsa Gini Katsayısı 100'e eşit olur. Böylece Gini katsayısın artması gelir eşitsizliğinin arttığını, azalması ise gelir eşitsizliğinin azaldığını gösterir. Tablo 2'de gini katsayısına bakıldığında oranın Türkiye'ye gore düşük olduğu görülmektedir. Tablo 2'deki veriler göstermektedirki gelir adaletsizliği açısından Makedonya, Türkiye'ye göre daha iyi durumdadır. Bu dikkat çekici bir durumdur.

| Gini Katsayısı | 2009 | 2010 |
|---|---|---|
| Türkiye | 43,2 | 43,6 |
| Makedonya | 38,7 | 40,0 |

*Tablo 2: Gini Katsayısı **Kaynak:** Worldbank, 2014.*

Son yıllarda ekonomik olarak kalkınmanın yeterli olmadığı, bir ülkenin gelişmiş bir ülke olarak tanımlanabilmesi için, yoksulluk, işsizlik gibi sosyal sorunlarında çözülmesi gerekliliği ortaya çıkmıştır. Bu nedenle de Birleşmiş Milletler Kalkınma Programı (UNDP) tarafından İnsani Gelişme Endeksi (İGE) oluşturulmuş ve yayınlanmaktadır. Bu endeks gelişmeyi, sadece gelir ile değil, sağlık, eğitim gibi göstergeler ile birlikte ölçmeye çalışmaktadır. Tablo 3'de görülmektedirki, İnsani Gelişme Endeksinde'ki Türkiye'nin sırası 90 iken Makedonya'nın sırası 78 olmaktadır. Bu durumda Gini kastayısındaki durumla benzerlik taşımaktadır.

|  | 2012 |
|---|---|
| Türkiye | 90 |
| Makedonya | 78 |

*Tablo 3: İnsani Gelişme Endeksi Sıralaması **Kaynak:** UNDP, Human Development Report 2011, 2011, NewYork, USA.*

Türkiye, Avrupa Birliği ve aday ülkeler ile 3 Avrupa Serbest Ticaret İşbirliği (EFTA) ülkesinin yer aldığı 33 ülke için satınalma gücü paritesine gore yapılan gayrisafi yurt içi hasıla endeksine gore Makedonya 33. sırada yer alırken Türkiye ise 32 sırada yer almaktadır. 100 tam puan üzerinden yapılan değerlenirmede Türkiye'nin puanı 31 iken Makedonya'nın puanı ise 26'dır (Milliyet, 16.06.2006).

Türkiye'de mikro finans uygulamaları Ziraat Bankası'nın küçük çiftçiye verdiği krediler ve Halk Bankasının KOBİ'lere ve ev hanımlarına verdiği krediler ile başlamıştır. Fakat bu çalışmalar dar kapsamlı çalışmalardır. Türkiye'de ilk olarak mikro finans çalışmaları Kadın Emeğini Değerlendirme Vakfı (KEDV) tarafından 1995-1997 yıllarında başlamıştır. Fakat 1999 yılındaki deprem nedeniyle bu projeye ara verilmiştir (KEDV, 2014). Daha sonra ise Mikro finans uygulamalarının temelini oluşturan mikro kredi uygulaması Türkiye'de 18 Temmuz 2003 tarihinde Diyarbakır'da 6 yoksul kadının her birisine 500 TL olmak üzere toplam 6 bin TL verilerek Türkiye İsrafı Önleme Vakfı (TİSVA) tarafından başlatıldı (İSRAF, 2014).

Makedonya'da ise Türkiye ile aynı dönemlerde mikro kredi uygulamaları başlamıştır. Temmuz 2003'de mikro finans bankaları kanununa dayalı olarak 5 milyon avro sermaye ile ProCredit Bank Macedonia kurulmuş ve Ekim 2003 faaliyet başlamıştır. Daha sonra KfW, European Bank for Reconstruction and Development (EBRD), International Finance Corporation (IFC) ve Internationale Micro Investitionen (IMI) ortak olmuştur. Bankanın adı değişerek ProCredit Holding AG olmuştur. 2004 yılında ise bankanın sermayesi 9 milyon avroya çıkmış ve Nederlandse Financierings-Maatschappij voor Ontwikkelingslanden NV (FMO) ortak olmuştur (KFW-Entwicklungsbank, 2006).

Türkiye'de Kadın Emeğini Değerlendirme Vakfı'nın (KEDV), Türkiye İsrafı Önleme Vakfı'nın (TİSVA) Türkiye Grameen Mikro Kredi Projesi ve bazı İl Özel İdarelerinin uygulamaları vardır. Türkiye'nin ilk mikro kredi kuruluşu KEDV tarafından Haziran 2002'de kurulmuş olan Maya'dır. Türkiye'deki uygulamalar ise İl Özel İdaresi Kanunu'na konulan bir maddeye dayanılarak yürülmektedir (Ege, 2007: 203). Makedonya'da hukuki düzenlemeler bankalar kanununda yer almıştır. Fakat Türkiye'de ayrı bir hukuki düzenleme olmadığından mikro finans kuruluşlarının ayrı bir kuruluş olarak Türkiye'de kurulması mümkün değildir. Bu nedenle Türkiye'de uygulamalar proje odaklıdır.

Türkiye'de projelerin denetimleri projeyi yöneten kuruluşun hukuki yapısına göre yapılmaktadır. Eğer projeyi yürüten Kadın Emeğini Değerlendirme Vakfı (KEDV) veya Türkiye İsrafı Önleme Vakfı (TİSVA) gibi bir Vakıf ise Vakıflar Kanunu'na göre, bir dernek ise Dernekler Kanunu'na göre veya bir İl Özel İdaresi ise İl Özel İdaresi Kanunu'na göre denetimler yapılmaktadır. Makedonya'da ise bankalar kanununa bağlı bir mikrofinans kanunu vardır.

Makedonya'da gerek sivil toplum kuruluşları, gerekse devlet tarafından mikrofinansman uygulamaları yapılmakta ve ülke deki yoksullukla ciddi şekilde mücadele edilmektedir. Bu çalışmalar sonucunda Horizonti Mikrokredi Vakfı 2011 yılında Mikrofinans en iyi uygulama ödülü almıştır. 2013 yılında ise Moznosti Mikrofinans kuruluşu Mikrofinans en iyi uygulama ödülünü almıştır. Bu kuruluşun kredi veye mevduat hizmeti yaptığı 7.499 aktif müşterisi, 34,5 milyon dolar kredi portföyü ve 39,8 milyar dolarlık varlığı vardır. (Microdinero, 2013).

## 4 Sonuç

Sosyalizm sonrasında geçiş ekonomilerinde başta kadınlar olmak üzere yoksulluğun azaltılmasında mikro kredi önemli bir yöntemdir. Fakat dil başta olmak üzere, kültürel farklılıklar programların gelişmesini etkilemektedir. Bu doğrultuda Makedonya'nın çok uluslu ve çok kültürlü yapısı da mikro kredi uygulamalarını etkilemektedir. Nikola Gruevski, Makedonya'nın şimdiki Başbakan'ıdır ve milliyetçi söylemler de bulunmaktadır. Bu da Makedonya'daki Arnavut ve Türkler tarafından bazı durumlarda tepki almakta, Yunanistan ile olan anlaşmazlıklarda devam etmektedir. Yoksullukla mücadele de mikro kredi uygulamalarını bu politik değişimlerde etkilemektedir.

Makedonya tarımsal ekonomiden çıkamamıştır ve nüfusun büyük kısmı tarım sektöründen çalışmaktadır. İthalatın %95'i ise sanayi ürünlerinden oluşmaktadır. Ülkenin coğrafi yapısı ve yabancı sermaye ile ilgili hukuki düzenlemelerin yetersizliği nedeniyle yabancı yatırımcının ülkeye gelişi yetersizdir. Zaten buna bağlı olarak ülkenin endüstrisi gelişememektedir. Ülkenin en fazla ithalat ve ihracat ilişkisi Almanya, Yugoslavya, Rusya, Ukrayna ve Yunanistan ile olmaktadır. Türkiye, Makedonya ile olan ekonomik ilişkileri son yıllarda artmakla birlikte yeterli düzeyde değildir.

Makedonya'daki mikro kredi sistemi, dünyadaki sistemin geliştiği ülkelerde olduğu gibi mikro finansman kuruluşları temellidir. Türkiye'deki sistem ise hukuki düzenlemeler yapılmadığı için sivil toplum kuruluşları ve kamu ağırlıklıdır. Türkiye'deki system denetim açısından da yetersizdir. Makedonya, Avrupa Birliği'ne üye olduğunda ise alacağı yardımlarla mikro kredi sistemi daha da gelişecektir.

Türkiye ile Makedonya arasında tarihsel bağlar vardır. Makedonya'ya Türkiye ve Türk millet her zaman politik olarak da kültürel olarak da destek olmaktadır. Fakat Makedonya'nın ekonomik olarak dönüşümünde Türkiye'nin maddi destek anlamında olamasa da deneyim ve bilgi paylaşımı açısından destek olması gereklidir. Zaten veriler göstermektedirki Makedonya'nın ekonomik olarak gelişimine devam etmesi ve gelişim hızını artırması önemli bir husustur.

# Türkiye ve Geçiş Ekonomilerinde Çok Boyutlu Yoksulluk ve İnsani Gelişme

# Multi-dimensional Poverty and Human Development in Turkey and Transition Economies

Prof. Dr. Nuray Gökçek Karaca (Anadolu University, Turkey)

Ph. D. Candidate Berrin Gökçek (Anadolu University, Turkey)

## Abstract

The main objective of this research is to determine and evaluate the multidimensional poverty and human development in Turkey in comparison with the Central and Eastern Europe (CEE) countries and Commonwealth of Independent States (CIS) countries which is called Transition Economies. For this purpose, in this study, human development and multidimensional poverty in Turkey were examined in comparison with the Central and Eastern Europe (CEE) countries and Commonwealth of Independent States (CIS) countries. In this study, carried out through comparative relation scanning model and literature model, the sample group was established the Central and Eastern Europe (CEE) countries and Commonwealth of Independent States (CIS) countries with Turkey. The research data was collected through Human Development Index (HDI) and Multidimensional Poverty Index (MPI) developed by UNDP. The findings from this study revealed that CEE countries which are the member of EU have higher human development rate than EU candidate countries and CIS countries. In addition, Turkey has the highest rate of GNI per capita and poverty as well as the lowest education index in comparison with the other EU candidate countries. In this study, these results is tried to be analyzed in the lights of index data and potential effects of the existing differences between countries.

## 1 Giriş

İnsanların genel anlamda temel gereksinimlerini karşılayamama durumu olarak ifade edilen yoksulluk, ilk çağlardan bu yana özellikle sanayi devrimi sonrası ve küreselleşme ile birlikte gelir dağılımındaki eşitsizliklerin artmasıyla toplumlar için büyük bir sorun haline gelmiş ve çözümü yolunda birçok araştırma yapılmış ve çeşitli politikalar uygulamaya konulmuştur.

Yoksulluk konusunda uygulamaya geçirilen politikalar ve alınan sonuçlar yoksulluğun hem gelişmiş ülkeler hem de gelişmekte olan ülkeler açısından temel bir sorun olduğunu göstermiş ve yollukla mücadele ulusal boyutun dışına çıkarak uluslararası bir boyut kazanmıştır (Erkul, 2013). Bu bağlamda yoksullukla ilgili çeşitli yaklaşımlar ileri sürülerek, yoksulluğun farklı boyutları ele alınmıştır.

Yoksullukla ilgili yaklaşımlardan ilki geçim sağlamak için gerekli gelirden yoksun bulunmak anlamına gelen gelir yoksunluğu iken ikincisi ise, hem ekonomik hem de ekonomik olmayan sosyal, kültürel, eğitim vb. gereksinimleri karşılamaktan ve teknolojik imkanlara erişim vb. olanaklardan yoksun olma anlamına gelen çok boyutlu ve insani yoksulluktur (Busilacchi, 2003). Yoksulluğun milli gelir seviyesi yüksek olan ülkeler için de sorun olması, gelir dışında farklı ölçütler kullanılarak değerlendirme yapılması gereğini ortaya koymuştur. Bu amaçla 1997 yılından itibaren Birleşmiş Milletler Kalkınma Programı tarafından gelirin yanı sıra eğitim ve sağlığa ilişkin göstergeleri de dikkate alan İnsani Gelişme Endeksi (İGE) yayımlanmaktadır. Yoksullukla ilgili yeni mücadele politikalarının geliştirilmesi ihtiyacı, yoksulluk ölçütleriyle de ilgili çalışmaları beraberinde getirmiş ve 2010 yılında Alkire ve Santos tarafından İnsani Gelişme Endeksi'ne benzer bir şekilde yoksulluğun etkisini ve yoğunluğunu da kapsayan Çok Boyutlu Yoksulluk Endeksi (ÇBYE), İnsani Gelişme Raporları'nda yerini almıştır.

Ülkelerinin farklı ekonomik, sosyal ve kültürel yapılara sahip olmaları ülkeler arasında farklı gelişme performanslarının görülmesine neden olmaktadır. Özellikle sosyalist bir düzenden neoliberal bir düzene geçen ülkeler açısından değerlendirdiğimizde yeni ekonomik düzenle birlikte sosyal yapıda meydana gelen değişimler insani gelişmişliği ve yoksulluğu çeşitli yönlerle etkilemektedir. Bu nedenle ülkelerin eğitim, sağlık ve yaşam standartlarında başka bir deyişle kalkınma süreçlerinde aldıkları yol ile yoksulluk ve yoksunluğun ne derece yoğun olduğu değerlendirilerek, gerekli önlemlerin alınması gerekmektedir.

Bu çalışmanın amacı Türkiye ile kendisi gibi AB'ye aday olan geçiş ekonomileri ile AB üyesi geçiş ekonomilerinin karşılaştırmasını yapmak ve insani gelişme ve çok boyutlu yoksulluk gibi sosyal ve ekonomik göstergelerle Türkiye ile Geçiş Ekonomilerinin durumunu ortaya koymaktır.

## 2   Türkiye ve Geçiş Ekonomilerinde Çok Boyutlu Yoksulluk

### 2.1  Çok Boyutlu Yoksulluk Endeksi

Çok Boyutlu Yoksulluk Endeksi (ÇBYE), yoksun olma yoğunluğuna göre düzenlenmiş çok boyutlu olarak yoksul olan nüfusun yüzdesini ifade etmektedir. ÇBYE aynı zaman zarfında insanların yüz yüze kaldığı ciddi yoksunlukları göstermek için tasarlanan yeni bir ölçüdür. Yeni geliştirilen bu endeks hem ülkeler ve bölgeler arasında ve dünya çapında hem de etnik grup, kırsal/kentsel konumlar ve diğer kilit hane halkı ve toplum özellikleri açısından ülkeler içinde karşılaştırmaya olanak vermektedir (UNDP, 2014).

ÇBYE'de yoksulluğun boyutları İnsani Gelişme Endeksine benzer şekilde sağlık, eğitim ve yaşam standartları olarak üç boyutta gösterilmektedir. Her boyutun kendi alt göstergeleri bulunmaktadır. Tablo 1'de Çok Boyutlu Yoksulluk Endeksinin boyutları ve göstergeleri ağırlıkları bazında yer almaktadır.

| Boyutlar | Boyutların Ağırlıkları | Göstergeler | Göstergelerin Ağırlıkları | Göstergelerin % Ağırlıkları |
|----------|------------------------|-------------|---------------------------|------------------------------|
| Sağlık | 1/3 | Beslenme | 1/6 | 16.7% |
|  |  | Çocuk Ölümü | 1/6 | 16.7% |
| Eğitim | 1/3 | Okullaşma Yılı | 1/6 | 16.7% |
|  |  | Çocukların Okullara Devamlılığı | 1/6 | 16.7% |
| Yaşam Standardı | 1/3 | Pişirme Yakıtı | 1/18 | 5.6% |
|  |  | Tuvalet | 1/18 | 5.6% |
|  |  | Su | 1/18 | 5.6% |
|  |  | Elektrik | 1/18 | 5.6% |
|  |  | Yer (Zemin) | 1/18 | 5.6% |
|  |  | Varlıklar | 1/18 | 5.6% |

*Tablo 1. ÇBYE Boyutları, Göstergeleri ve Ağırlıkları* **Kaynak: OPHI, 2014a; HDR 2014b**

Tablo 1'de görüldüğü üzere sağlık boyutu beslenme ve çocuk ölümü, eğitim boyutu okullaşma yılı ve çocukların okullara devamlılığı, yaşam standardı boyutu ise pişirme yakıtı, tuvalet, su, elektrik, yer ve varlık göstergelerinden oluşmaktadır. Beslenme göstergesi, yetersiz beslenen en az bir hane halkı bireyi olmasını; çocuk ölümü göstergesi, hane halkında bir veya daha fazla sayıda çocuk ölümü olmasını; okullaşma yılı göstergesi, hane halkı bireylerinden hiçbirinin beş yıllık eğitimi tamamlamamış olmasını; çocukların okullara devamlılığı göstergesi, hanede en az bir okul çağındaki çocuğun okula devam etmemesi durumunu; pişirme yakıtı göstergesi, hane halkının yakacak olarak tezek, odun veya karbon içeren maddeler kullanmasını; tuvalet göstergesi, yeterli tuvalet imkânının olmamasını; su göstergesi, temiz içme suyu erişimine sahip olunmamasını; elektrik göstergesi, elektrik olmamasını; yer göstergesi, hane halkının kirli, çamurlu veya gübreden bir zemine sahip evi olmasını; varlık göstergesi, hane halkının araba, kamyon veya benzer motorlu bir araca sahip olmaması veya bisiklet, mobilet, radyo, televizyon, telefon veya buzdolabından birine sahip olmamasını ifade etmektedir (OPHI, 2014b; Erkul, 2013).

Çok boyutlu yoksulluk endeksine göre bir hane halkının yoksul olarak nitelendirilebilmesi için hane halkı yoksunluk değerinin %33,3'ün üzerinde olması gerekmektedir. ÇBYE, belirtilen göstergeler çerçevesinde hesaplanan yoksul nüfus oranı ve yoksunluğun yoğunluğunun çarpılmasıyla hesaplanmaktadır (OPHI, 2014a; HDR, 2014b). ÇBYE, yoksunluktan kaç kişinin ve ortalama kaç yoğunlukla karşılaştıklarını belirlemesi bakımından İnsani Yoksulluk Endeksi yerine daha gelişmiş bir endeks olarak karşımıza çıkmaktadır.

### 2.2  Türkiye'de Çok Boyutlu Yoksulluk

Yoksulluk tüm dünyada olduğu gibi Türkiye için de önemli sorunlardan bir tanesidir. Yoksulluğun boyutlarını ortaya koymak üzere Türkiye İstatistik Kurumu (TUİK) tarafından çeşitli yoksulluk araştırmaları yapılmaktadır. Tablo 2'de TUİK tarafından 2012 yılında yapılan yoksulluk araştırması sonuçları yer almaktadır. Tabloda 2007 yılından itibaren verilerde görülen büyük farklılık 2007 yılından itibaren yeni nüfus projeksiyonlarının kullanılması kaynaklıdır.

Tablo 2'deki veriler incelendiğinde satın alma gücü paritesine göre (SGP) kişi başı dolar cinsinden yoksulluk sınırlarına göre, yoksulluk oranlarının düştüğü görülmektedir. Kişi başı günlük harcaması, cari SGP'ne göre 2.15 doların altında kalan fert oranı 2011 yılında %0.14 iken, bu oran 2012 yılında % 0.06 olarak tahmin edilmiştir. Yoksulluk sınırı, cari SGP'ye göre 4.3 dolar olarak alındığında ise 2011 yılında %2.79 olan yoksulluk oranı, 2012 yılında %2.27 olarak belirlenmiştir.

Cari satınalma gücü paritesine göre 4.3 dolar sınırı itibariyle kırsal yerleşim yerlerinde yaşayanlarda 2011 yılında %6.83 olan yoksulluk oranı, 2012 yılında %5.88 olarak tahmin edilmiştir. Aynı yoksulluk sınırına göre kentsel yerlerde yaşayanların 2011 yılı için %0.94 olan yoksulluk oranı, 2012 yılında ise %0.60 olarak belirlenmiştir. Tablodan da anlaşılacağı üzere kırsal yerlerde yaşayanların yoksulluk oranları tüm yıllar bazında kentsel yerlerden daha fazla olduğu görülmektedir.

| Yöntemler | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 (1) | 2008 | 2009 | 2010 | 2011 | 2012 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| TÜRKİYE | | | | | | | | | | | |
| Kişi başı günlük 2,15 $'ın altı | 3.04 | 2.39 | 2.49 | 1.55 | 1.41 | 0.52 | 0.47 | 0.22 | 0.21 | 0.14 | 0.06 |

***Tablo 2.*** *Yoksulluk Sınırı Yöntemlerine Göre Fert Yoksulluk Oranları* ***Kaynak:*** *TUİK, 2012 Yoksulluk Çalışması.*

Çok boyutlu yoksulluk endeksi kriterlerine göre Türkiye'de yoksulluğu değerlendirecek olursak, yoksul nüfus yüzdesi, yoksun olma yoğunluğu, yoksulluğa karşı savunmasız nüfus, şiddetli yoksulluk yaşayan nüfus yüzdesi ve eğitim, sağlık ve yaşam standardına göre yoksunlukların dağılımı Tablo 3'de gösterilmektedir.

| Çok Boyutlu Yoksulluk Endeksi | Çok Boyutlu Yoksulluktaki Nüfus | | Yoksulluğa karşı savunmasız nüfus yüzdesi | Şiddetli yoksulluk yaşayan nüfus | Yoksunluklar Dağılımı | | |
|---|---|---|---|---|---|---|---|
| | Yoksul nüfus | Yoksun olma yoğunluğu | | | Eğitim | Sağlık | Yaşam standardı |
| Değer | (%) | (%) | (%) | (%) | (%) | (%) | (%) |
| 0.028 | 6.6 | 42.0 | 7.3 | 1.3 | 42.3 | 38.4 | 19.2 |

***Tablo 3.*** *Türkiye Çok Boyutlu Yoksulluk Endeksi ve Göstergeleri (2003)* ***Kaynak:*** *HDR 2013*

Tablo 3 incelendiğinde yoksunlukların dağılımı bakımından %42.3'lük bir oranla en yüksek yoksunluk boyutunun eğitim olduğu görülmektedir. İkinci olarak %38.4'lük oranla sağlık boyutundaki yoksunluklar gelmektedir. Çok boyutlu yoksullukta yoksul nüfus oranı %6.6 ve yoksun olma yoğunluğu %42 olarak belirlenmiş ve bu sonuçlara göre çok boyutlu yoksulluk endeksi 0,028 olarak hesaplanmıştır. Çok boyutlu yoksulluğun Türkiye'de bölgesel olarak değerlendirmesi Tablo 4'te verilmektedir.

| Bölge | Çok Boyutlu Yoksulluk Endeksi | Çok Boyutlu Yoksulluktaki Nüfus | Yoksun Olma Yoğunluğu | Yoksulluğa karşı savunmasız nüfus yüzdesi | Şiddetli yoksulluk yaşayan nüfus | Nüfus Dağılımı |
|---|---|---|---|---|---|---|
| Orta | 0.012 | 3.4% | 36.7% | 7.3% | 0.1% | 22.1% |
| Doğu | 0.093 | 20.6% | 45.2% | 14.1% | 6.2% | 20.0% |
| Kuzey | 0.011 | 3.0% | 37.5% | 9.1% | 0.0% | 7.8% |
| Güney | 0.019 | 5.1% | 37.9% | 5.9% | 0.4% | 13.2% |
| Batı | 0.008 | 2.2% | 35.4% | 3.7% | 0.1% | 37.0% |

***Tablo 4.*** *Türkiye'de Bölgesel Olarak ÇBYE* ***Kaynak:*** *OPHI Country Briefing 2013*

Bölgesel olarak değerlendirme yaptığımızda çok boyutlu yoksulluğun en fazla doğu bölgesinde, en az batı bölgesinde yaşandığı görülmektedir. Doğu bölgesinden başlayarak sırasıyla güney, orta, kuzey ve batı olarak yoksulluk oranı azalmaktadır. Yoksun olma yoğunluğu doğu dışındaki bölgelerde yakın olmakla birlikte çok boyutlu yoksulluktaki nüfusun farklılaşması çok boyutlu yoksulluk endeksinin farklı değerler almasına neden olmaktadır. Tablodaki verilerden de açıkça görülebileceği üzere en fazla yoksulluk yaşayan nüfus doğu bölgesinde yer almaktadır. Bu nedenle özellikle doğu bölgesini hedef alan politikalar geliştirilmesi yoksullukla mücadele konusunda öncelikli olarak gereklidir.

### 2.3 Geçiş Ekonomilerinde Çok Boyutlu Yoksulluk

Geçiş ekonomileri, sosyalizme dayalı merkezi planlama sistemiyle idare edilen ülkelerin serbest piyasa ekonomisine geçmesini ifade etmektedir (Akalın, 2002). Sosyalist ülkelerde ekonominin neredeyse tamamının kamulaştırılması ve özel mülkiyete çok sınırlı pay tanınması, üretim gerçekleştirilen kamu kuruluşlarının tekelleşmesi ile fiyatların merkezi idare tarafından kontrol edilmesi, dışa kapalı ekonomik politikalar izlenmesi

ile diğer ekonomiler ile rekabet edilememesi, sosyal güvenlik alanında yapılan harcamaların önemli boyutta artması ve siyasi bir araç haline gelmesi ve tüm bu etkenlerle bütçe açıklarının artması, ekonomik dengenin bozulması, yüksek enflasyon gibi ciddi sorunlar yaşanması, sosyalist ülkeleri yeni arayışlara ve sonucunda piyasa ekonomisine yöneltmiştir (Tandırcıoğlu, 2002). Geçiş ekonomilerindeki bu değişim hükümetler tarafından uygulanan yapısal ve kurumsal reformlarla ve farklı ekonomik yaklaşımlarla sağlanmıştır. Fakat kurumsal ve ekonomik altyapının yeteri düzeyde olmaması piyasa ekonomisinin etkin bir şekilde işleyişinde engel oluşturmuştur (Staehr, 2005).

Günümüzde geçiş ekonomilerine ilişkin ülkelerin gelir durumları, coğrafi konumları veya ülkelerin geçiş sürecindeki ilerleme durumlarına göre çeşitli gruplandırmalar söz konusudur (Kesici, 2008). Yapılan çalışmada geçiş ekonomileri CEE ve CIS olarak aşağıdaki gibi iki kategoride ele alınmaktadır;

a)Merkez ve Doğu Avrupa Ülkeleri (CEE)

-AB üye geçiş ekonomileri: Bulgaristan, Çek Cumhuriyeti, Estonya, Hırvatistan, Macaristan, Letonya, Litvanya, Polonya, Romanya, Slovak Cumhuriyeti, Slovenya

-AB aday ve olası aday geçiş ekonomileri: Arnavutluk, Bosna Hersek, Makedonya

b)Bağımsız Devletler Topluluğu Ülkeleri (CIS)

Azerbaycan, Beyaz Rusya, Ermenistan, Gürcistan, Kazakistan, Kırgızistan, Moldavya, Özbekistan, Rusya, Tacikistan, Türkmenistan, Ukrayna.

CEE ve CIS ülkeleri dışında Çin, Kamboçya, Laos ve Vietnam Asya'da yer alan diğer geçiş ekonomileridir.

Yoksulluk özellikle ekonomi politikalarında köklü değişimler yaşayan Geçiş Ekonomileri için de önemli sorunlar arasında yer almaktadır. Geçiş ekonomilerinde çok boyutlu yoksulluk endeksi, yoksul nüfus yüzdesi, yoksun olma yoğunluğu, yoksulluğa karşı savunmasız nüfus, şiddetli yoksulluk yaşayan nüfus yüzdesi ve eğitim, sağlık ve yaşam standardına göre yoksunlukların dağılımı Tablo 5'te gösterilmektedir.

Tablo 5'te görülebileceği üzere, ÇBYE ve boyutları bakımından aralarında farklılıklar olabileceği varsayımı ile geçiş ekonomileri kendi arasında gruplandırılmıştır. Birinci grupta, CEE ülkeleri, ikinci grupta ise CIS ülkeleri yer almaktadır. Ayrıca CEE ülkeleri de kendi içinde AB'ye üye olan, AB üyeliğine aday olan ve AB üyeliğine olası aday olan ülkeler şeklinde üç gruba ayrılarak incelenmiştir. Araştırmaların ülkelerde farklı yıllarda gerçekleştirilmesi ve bazı ülkelerin verilerindeki eksiklikler nedeniyle tablodaki veriler üzerinden karşılaştırma yapmayı güçleştirmektedir. Bu sebeple aynı tarihli ülkeler hakkında bir fikir vermekle birlikte net bir karşılaştırma yapmak mümkün değildir.

Tablo 5 incelendiğinde, ÇBYE bakımından mevcut veriler arasında CEE ülkelerinden Estonya başta olmak üzere Hırvatistan ve Macaristan, CIS ülkelerinden ise Tacikistan başta olmak üzere, Azerbaycan ve Kırgızistan en yüksek değerler olarak belirgin bir şekilde diğer ülkelerden ayrılmaktadır. İnsani gelişme endeksi bakımdan oldukça iyi seviyede olan Estonya, çok boyutlu yoksullukta CEE ülkeleri arasında oldukça yüksek bir değere sahiptir. Estonya açısından yoksunlukların dağılımına baktığımızda en çok yoksunluk yaşanan boyutun eğitim boyutu olduğu görülmektedir. CIS ülkeleri arasında en yüksek çok boyutlu yoksulluğa sahip olan Tacikistan'da yoksunluk boyutları arasından sağlık yoksunluğu başta olmak üzere yaşam standardı ve eğitim boyutları kapsamında da yoksunluklar yaşandığı görülmektedir.

Çok boyutlu yoksulluktaki yoksul nüfus yüzdeleri değerlendirildiğinde CEE ülkeleri arasında en yoksul nüfusa sahip ülke %7.2 ile Estonya, CIS ülkeleri arasından ise %17.1'lik bir oranla Tacikistan'dır. Yoksun olma yoğunluğunda ise CEE ülkeleri arasında Makedonya %40.9 ile en yüksek, CIS ülkeleri arasında ise %40 ile Tacikistan en yüksek değere sahiptir. Ülkeler bazında genelde yoksun olma yoğunlukları benzemekle birlikte çok boyutlu yoksulluktaki yoksul nüfus oranlarının değişkenlik göstermesi ülkeler arasında çok boyutlu yoksulluk endeksinin farklılaşmasına neden olmaktadır.

Yoksulluğa karşı savunmasız nüfus verileri incelendiğinde %7.4 ile Arnavutluk, %7.0 ile Bosna Hersek ve %6.7 ile Makedonya, başka bir deyişle AB aday CEE ülkeleri yoksulluğa karşı savunmasız nüfus yüzdesinde en yüksek değerlere sahip olduğu görülmektedir. CIS ülkeleri bakımından ise %23.0 ile Tacikistan ile %12.5 ile Azerbaycan en yüksek yoksulluğa karşı savunmasız nüfus yüzdesine sahiptir.

Yoksunlukların eğitim, sağlık ve yaşam standardı boyutlarına göre dağılımı değerlendirilirse, en göze çarpan değerler Çek Cumhuriyeti'nde %99.9 ile sağlık boyutu, Estonya'da %91.2 ile eğitim boyutu, Macaristan'da %95.6 ile sağlık boyutu, Letonya'da %88.0 ile sağlık boyutu, Rusya Federasyonu'nda %84.2 ile eğitim boyutu ve Ukrayna'da %91.1 ile sağlık boyutundaki yoksunluk dikkati çekmektedir.

| | İGE | Çok Boyutlu Yoksulluk Endeksi | | Çok Boyutlu Yoksulluktaki Nüfus | | Yoksulluğa karşı savunmasız nüfus yüzdesi | Şiddetli yoksulluk yaşayan nüfus | Yoksunluklar Dağılımı | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | Yoksul nüfus | Yoksun olma yoğunluğu | | | Eğitim | Sağlık | Yaşam standardı |
| Ülkeler | 2012 | Yıl | Değer | (%) | (%) | (%) | (%) | (%) | (%) | (%) |
| Merkez ve Doğu Avrupa Ülkeleri | | | | | | | | | | |
| Arnavutluk | 0.749 | 2008 2009 | 0.005 | 1.4 | 37.7 | 7.4 | 0.1 | 32.0 | 44.9 | 23.0 |

***Tablo 5.*** *Geçiş Ekonomilerinde ÇBYE ve Göstergeleri* **Kaynak: HDR 2013**

### 2.4 Türkiye ve Geçiş Ekonomilerinde Çok Boyutlu Yoksulluk Karşılaştırması

Türkiye'nin özellikle CEE ülkelerinden AB'ye aday ülkeler ile AB üyesi ülkelere göre durumunun değerlendirilmesi, üyelik sürecinde olan Türkiye için önem arz etmektedir. Bu bağlamda Türkiye ve Geçiş Ekonomileri karşılaştırması yapılmıştır.

ÇBYE bakımından değerlendirme yapılacak olursa 0.028 endeks değeri ile Türkiye, AB üyesi ve AB aday ülkeleri arasında en yüksek yoksulluk endeksine sahip ülke olduğu görülmektedir. 104 ülkenin yer aldığı ÇBYE'ye bakıldığında 2012 yılında Türkiye 42. sırada yer almaktadır (TUIK, 2014). Türkiye'nin ÇBYE'de diğer ülkelere göre yüksek bir değere sahip olmasının nedeni yoksun olma yoğunluğundaki yükseklik ve çok boyutlu yoksulluktaki yoksul nüfus oranının fazla olmasıdır. Çok boyutlu yoksulluktaki yoksul nüfus yüzdeleri değerlendirildiğinde Türkiye %6.6 oranla Estonya dışındaki AB üye ve diğer aday ülkelerden daha yüksek yoksul nüfusa sahiptir. Yoksun olma yoğunluğunda ise yine Türkiye %42.0 oranla CEE ve CIS ülkeleri arasında ilk sırada yer almaktadır.

Yoksulluğa karşı savunmasız nüfus verileri incelendiğinde Türkiye %7.3 ile AB aday ülke verileri ile yakın, AB üyesi ülkelere göre ise oldukça yüksek nüfus yüzdesine sahiptir. Şiddetli yoksulluk yaşayan nüfus verilerinde ise Türkiye %1.3 oranla Tacikistan'dan sonra ilk sırada yer almaktadır.

Genel anlamda bir değerlendirme yapılacak olursa; Türkiye, çok boyutlu yoksullukta AB aday ve AB üyesi ülkelere göre oldukça yüksek bir oranda çok boyutlu yoksulluğa sahip olduğu görülmektedir. Bu nedenle en

başta eğitim alanında olmak üzere sağlık ve yaşam standardı boyutlarında da politikalar uygulayarak yoksunları en aza indirecek çözümler ortaya konulmalıdır.

## 3 Türkiye ve Geçiş Ekonomilerinde İnsani Gelişme

### 3.1 İnsani Gelişme Endeksi

İnsani Gelişme Endeksi (İGE), Birleşmiş Milletler Kalkınma Programı tarafından 1990 yılından itibaren yayımlanan, insan kaynaklarının gelişimini, insanı insan yapan, kişilik gibi unsurları ve insanın temel gereksinimlerine ulaşma düzeyini bir arada değerlendiren ve böylece kalkınma içindeki insanın rolünü ele alan bir endekstir (Demir, 2006). İGE, sağlık, bilgi ve yaşam standardı boyutlarının ortalama gerçekleşmesini ölçen bileşik bir endekstir. Bu üç boyutu ölçmek için kullanılan değişkenler ise 1990 yılından 2010 yılına kadar sırasıyla doğumda beklenen ortalama ömür, yetişkinlerde okur-yazarlık oranı ile brüt okullaşma oranı ve satın alma gücü paritesine göre uyarlanmış Gayri Safi Yurtiçi Hasıla (GSYH) iken, 2010 yılında sırasıyla doğumda beklenen yaşam süresi, beklenen okullaşma yılı, ortalama okullaşma yılı ve kişi başına Gayri Safi Milli Gelir (GSMG) olarak belirlenmiştir (Demir Şeker, 2011; HDR, 2014b). Tablo 6'da İGE hesaplamasında kullanılan ölçütler ve hesaplama yöntemindeki değişikler yer almaktadır.

| Boyutlar | Önceki | | | 2010 | | |
|---|---|---|---|---|---|---|
| | Göstergeler | Dönüşüm | | Göstergeler | Dönüşüm | |
| | | Minimum | Maksimum değer | | Minimum | Maksimum (gözlemlenen değerler) |
| Sağlık | Doğumda beklenen yaşam süresi (yıl) | 25 | 85 | Doğumda beklenen yaşam süresi (yıl) | 20 | 83.2 |
| Bilgi | Yetişkin okur yazarlık (%) | 0 | 100 | Beklenen Okullaşma Yılı | 0 | 20.6 |
| | Bütünleşik brüt okullaşma oranı (%) | 0 | 100 | Ortalama Okullaşma Yılı | 0 | 13.2 |
| Yaşam Standardı | Kişi başı GSYH (SGP ABD$) | 100 | 40,000 | Kişi başı GSMG (SGP ABD$) | 163 | 108,211 |
| Birleştirilmiş | Aritmetik ortalama | | | Geometrik ortalama | | |

***Tablo 6.** İGE Hesaplamasında Kullanılan Ölçütler **Kaynak:** Demir Şeker, 2011*

İGE değeri 0 ile 1 arasında olup; 0'a yakın değerler insani açıdan daha düşük gelişmişlik seviyesini, 1'e yakın değerler ise yüksek gelişmişlik seviyesini ifade etmektedir.

### 3.2 Türkiye'de İnsani Gelişme

Türkiye'de insani gelişme endeksi, göstergeleri ve hesaplanan sağlık, eğitim ve gelir endeks değerleri 2005-2012 yılları bazında Tablo 7'de gösterilmektedir.

| YIL | İnsani Gelişme Endeksi | Sağlık endeksi | Doğumda yaşam beklentisi (yıl) | Eğitim endeksi | Beklenen okullaşma yılı | Ortalama okullaşma yılı | Gelir endeksi | Satın Alma Gücü Paritesi cinsinden kişi başına Gayri Safi Gelir |
|---|---|---|---|---|---|---|---|---|
| 2005 | 0.684 | 0.822 | 72.1 | 0.560 | 11.7 | 6.1 | 0.698 | 11320 |
| 2006 | 0.694 | 0.828 | 72.5 | 0.574 | 12.1 | 6.1 | 0.706 | 11941 |
| 2007 | 0.702 | 0.833 | 72.8 | 0.585 | 12.4 | 6.2 | 0.711 | 12348 |
| 2008 | 0.704 | 0.838 | 73.2 | 0.588 | 12.3 | 6.3 | 0.710 | 12259 |
| 2009 | 0.709 | 0.843 | 73.5 | 0.604 | 12.9 | 6.4 | 0.700 | 11499 |
| 2010 | 0.715 | 0.847 | 73.7 | 0.608 | 12.9 | 6.5 | 0.712 | 12440 |
| 2011 | 0.720 | 0.851 | 74.0 | 0.608 | 12.9 | 6.5 | 0.722 | 13344 |
| 2012 | 0.722 | 0.855 | 74.2 | 0.608 | 12.9 | 6.5 | 0.726 | 13710 |

***Tablo 7.** Yıllar bazında Türkiye'de İGE ve Bileşenleri **Kaynak:** TUIK*

Tablo 7'deki veriler incelendiğinde genel anlamda tüm göstergelerde iyileşme sağlandığı ve insani gelişme endeks değerinin de yükselme eğiliminde olduğu görülmektedir. 2005 yılında 0.684 olan insani gelişme endeksi

2012 yılında 0.722'ye yükselmiştir. Sağlık boyutu olarak değerlendirdiğimizde doğumda beklenen yaşam süresinin yıllar bazında arttığı ve 2012 yılında 74.2'ye yükseldiği görülmektedir.

Türkiye'deki insani gelişmeyi eğitim boyutu bakımından değerlendirdiğimizde 2010 yılına kadar endeks değerlerinde artış olduğu fakat 2010 yılı itibari ile yükselme eğiliminin durduğu görülmektedir. 2010 yılından itibaren insani gelişme endeksinin hesaplama yönteminde yapılan değişiklikler nedeniyle endeks değerlerinde de değişimler gözlenmiştir. Özellikle eğitim endeksi için değerlendirme yapacak olursak 2010 yılından önce yetişkin okur yazarlık göstergesi kullanılırken 2010 yılından sonra stok bir değişken olan beklenen okullaşma yılı değişkenin kullanılmaya başlanması ve değişkenin kısa vadede çok fazla değişmemesi eğitim endeksinin yükselme eğiliminde olmasını engellemiştir. Aynı zamanda 2010 yılından önce kullanılan yetişkin okur-yazarlık oranının 15 yaş ve üstü için hesaplaması yapılırken, 2010 yılı itibariyle kullanılmaya başlanan ortalama okullaşma yılı oranının 25 yaş ve üstü için hesaplanması da endeks değerlerini etkilemiştir. Türkiye, eğitim göstergelerinde önemli iyileştirmeler sağlasa da 25 yaş ve üstü ortalama okullaşma yılının birkaç yıllık gelişmelerle çok fazla değişmesi mümkün değildir (Demir Şeker, 2011). Bu nedenle insani gelişme endeksi olması gereken düzeyden daha düşük olarak gerçekleşmektedir.

Gelir endeksi bakımından 2008- 2009 kriz yıllarında satın alma gücü paritesi cinsinden kişi başına gayri safi gelirde bir azalma yaşansa da sonraki yıllarda yükselme eğiliminde olduğu görülmektedir.

Türkiye, 2013 yılı İnsani Gelişme Raporu'nda 0.722 insani gelişme endeksi ile 90. sırada ve yüksek insani gelişme kategorisinde yer almaktadır.

### 3.3 Geçiş Ülkelerinde İnsani Gelişme

Geçiş ekonomilerinde insani gelişme endeksi ve göstergelerinden doğumda yaşam beklentisi, ortalama okullaşma yılı, beklenen okullaşma yılı ve kişi başı gayri safi milli gelir verileri Tablo 8'de gösterilmektedir.

| | İnsani Gelişme Endeksi | | Doğumda Yaşam Beklentisi | Ortalama Okullaşma Yılı | Beklenen Okullaşma Yılı | Kişi Başı Gayri Safi Milli Gelir |
| | Sıralama | Değer | | 25 yaş ve üstü | | 2005 PPP $ |
| Ülkeler | 2012 | 2012 | 2012 | 2010 | 2011 | 2012 |
| Merkez ve Doğu Avrupa Ülkeleri | | | | | | |
| Arnavutluk | 70 | 0.749 | 77.1 | 10.4 | 11.4 | 7,822 |
| Bosna Hersek | 81 | 0.735 | 75.8 | 8.3 | 13.4 | 7,713 |
| Bulgaristan | 57 | 0.782 | 73.6 | 10.6 | 14.0 | 11,474 |
| Çek Cumhuriyeti | 28 | 0.873 | 77.8 | 12.3 | 15.3 | 22,067 |
| Estonya | 33 | 0.846 | 75.0 | 12.0 | 15.8 | 17,402 |
| Hırvatistan | 47 | 0.805 | 76.8 | 9.8 | 14.1 | 15,419 |
| Macaristan | 37 | 0.831 | 74.6 | 11.7 | 15.3 | 16,088 |
| Makedonya | 78 | 0.740 | 75.0 | 8.2 | 13.4 | 9,377 |
| Letonya | 44 | 0.814 | 73.6 | 11.5 | 14.8 | 14,724 |
| Litvanya | 41 | 0.818 | 72.5 | 10.9 | 15.7 | 16,858 |
| Polonya | 39 | 0.821 | 76.3 | 10.0 | 15.2 | 17,776 |

*Tablo 8. Geçiş Ekonomilerinde İnsani Gelişme Endeksi ve Göstergeleri. **Kaynak: HDR 2013***

Tablo 8'den görülebileceği üzere, genel anlamda CEE ülkelerinin insani gelişme değerinin CIS ülkelerinden daha yüksek olduğu görülmektedir. İGE bakımından CEE ülkeleri arasında Slovenya, Çek Cumhuriyeti ve Estonya ilk üç sırada, Bosna Hersek, Makedonya ve Arnavutluk son üç sırada yer almaktadır. Son üç sırada yer alan ülkelere bakıldığında, CEE ülkeleri içinde AB'ye üye olmayan ülkeler olduğu dikkat çekmektedir. CIS ülkeleri arasında ise Beyaz Rusya, Rusya Federasyonu ve Kazakistan ilk üç sırada yer alırken, Tacikistan, Kırgızistan ve Özbekistan son üç sırada yer almaktadır.

İnsani Gelişme Raporu'na göre ülkelerin 2011- 2012 yıllarındaki İGE sıralamaları değerlendirildiğinde CEE ülkelerinden Makedonya'da 2 puanlık gerileme, CEE ülkelerinden Arnavutluk, Ermenistan, Bosna Hersek, Hırvatistan, Romanya, CIS ülkelerinden ise Azerbaycan ve Kazakistan'da 1 puanlık bir gerileme yaşanırken, CIS ülkelerinden Gürcistan'da 3 puanlık yükselme, CEE ülkelerinden Litvanya'da 2 puanlık yükselme, CEE ülkelerinden Letonya ve Estonya, CIS ülkelerinden ise Beyaz Rusya, Tacikistan ve Özbekistan'da 1 puanlık yükselme görülmektedir.

İGE göstergelerinden doğumda yaşam beklentisi ölçütü bakımından CEE ülkeleri arasında Slovenya 79.5 ile en yüksek değere, Litvanya ise 72.5 ile en düşük değere sahiptir. CIS ülkeleri arasında ise Ermenistan 74.4 ile en yüksek, Kazakistan ise 67.7 ile en düşük doğumda yaşam beklentisi değerine sahiptir. Genel olarak değerlendirdiğimizde CEE ülkeleri CIS ülkelerinden daha yüksek doğumda yaşam beklentisine sahiptir.

Ortalama okullaşma yılı verileri incelendiğinde CEE ülkeleri arasında Çek Cumhuriyeti 12.3 ve Estonya 12.0 değeriyle en yüksek ortalama okullaşma yılı ile diğer ülkelerden ayrılırken, Makedonya 8.2 ve Bosna Hersek 8.3 değeriyle en düşük ortalama okullaşma yılına sahip ülkelerdir. CIS ülkeleri arasında ise Gürcistan 12.1 değeriyle en yüksek okullaşma yılı ile diğer ülkelerden ayrılırken, Kırgızistan 9.3, Moldavya 9.7, Tacikistan 9.8 ve Türkmenistan 9.9 değeriyle en düşük okullaşma yılına sahip CIS ülkeleridir.

İGE göstergelerinden beklenen okullaşma yılı ölçütü bakımından CEE ülkelerinden Slovenya 16.9 değeriyle diğer ülkelere göre en yüksek beklenen okullaşma yılı oranına sahip iken, Arnavutluk 11.4 ile en düşük beklenen okullaşma yılı oranına sahip ülkedir. Tablo 8'den de görülebileceği üzere CEE ülkeleri arasında AB aday ülkeleri AB üye ülkelere oranla daha düşük beklenen okullaşma yılı oranına sahiptir. CIS ülkeleri bakımından ise Kazakistan 15.3 ile en yüksek beklenen okullaşma yılı oranına sahipken, Tacikistan 11.5 ile en düşük beklenen okullaşma yılı oranına sahip ülkedir.

Kişi başı gayri safi milli gelir ölçütüne göre ise, CEE ülkeleri arasında Slovenya 23,999$ ve Çek Cumhuriyeti 22,067$ ile ilk iki sırada, Arnavutluk 7,822$ ve Bosna Hersek 7,713$ ile son iki sırada yer almaktadır. CEE ülkeleri arasında AB üye ülkelerin kişi başı gayri safi milli gelirlerinin AB aday ülkelerden oldukça yüksek seviyelerde olduğu görülmektedir. CIS ülkeleri arasında ise Rusya Federasyonu 14,461$ ve Beyaz Rusya 13,395$ ile ilk iki sırada, Kırgızistan 2,009$ ve Tacikistan 2,119$ ile son iki sırada yer almaktadır. Tablo 7 incelendiğinde genel anlamda CIS ülkelerini CEE ülkelerinden daha düşük kişi başı gayri safi milli gelire sahip olduğu görülmektedir.

### 3.4 İnsani Gelişme Ölçütü Bağlamında Türkiye ve Geçiş Ekonomileri Karşılaştırması

2012 yılı İGE sıralamasında Türkiye, 187 ülke arasında 90. sırada yer almakta (TUIK, 2014b) ve CEE ülkeleri arasında AB üye olan ve aday ülke statüsündeki ülkelerden daha düşük İGE değerine sahip olduğu görülmektedir. İnsani gelişme endeksi göstergeleri bağlamında değerlendirme yapılacak olursa; doğumda beklenen yaşam göstergesi bakımından Türkiye, genel olarak insani gelişmişliği yüksek CEE ülkeleri seviyesine yakın ve benzer olmakla birlikte, AB aday CEE ülkelerinden daha düşük doğumda beklenen yaşam göstergesi değerine sahip olduğu görülmektedir. CIS ülkeleri bazında ise Ermenistan dışında diğer ülkeler Türkiye'den daha düşük doğumda beklenen yaşam göstergesi değerine sahiptir.

Ortalama okullaşma yılı göstergesi bakımından Türkiye, CEE ve CIS ülkelerinden oldukça düşük bir değere sahiptir. Aynı şekilde beklenen okullaşma yılı göstergesi bakımından da Türkiye, AB üyesi CEE ülkelerinden ve Arnavutluk dışındaki AB aday ülkelerden daha düşük beklenen okullaşma yılı değerine sahiptir. Daha önce de değinildiği üzere eğitim göstergelerinde yapılan değişiklikler hesaplama sonuçlarını etkilemiş ve özellikle okullaşma oranlarının arttığı ama mevcut okullaşma oranının nispeten düşük olduğu ülkeler için bu değişkenin kullanılması bu ülkelerin İGE değer ve sıralamalarını olumsuz yönde etkilemiştir. Buna karşın, okur-yazarlık oranının oldukça yüksek olduğu ülkeler ise yeni değişkenin ayırt edici özelliğinin fazla olması nedeniyle daha üst sıralara çıkabilmişlerdir. Önceki yıllarda 15 yaş ve üstü için okur-yazarlık oranı alınırken, 2010 yılı raporunda 25 yaş ve üstü için ortalama okullaşma yılı alınmaya başlanması ise okur-yazarlık ve okullaşma oranı son dönemlerde artış gösteren ülkelerin aleyhine olmuştur (Demir Şeker, 2011).

Kişi başı gayri safi milli gelir göstergesi bakımından Türkiye, Rusya Federasyonu dışında CIS ülkelerinden ve AB aday CEE ülkelerinden daha yüksek kişi başı gayri safi milli gelire sahiptir. Ancak göstergelerin endeks değerine etkisini değerlendirecek olursak; doğumda yaşam beklentisi bakımından aynı gelişmişliğe sahip ülke olan Romanya'nın Türkiye'den daha düşük gelir düzeyine sahip olmasına rağmen, eğitim göstergeleri bakımından daha ileri düzeyde olması nedeniyle insani gelişmişlik sıralamasında 56. sırada yer alırken, Türkiye 90. sıralara gerilemektedir. Yine aynı şekilde gelir düzeyi bakımından benzer nitelikte olan Beyaz Rusya, Türkiye'den daha düşük doğumda yaşam beklentisi göstermesine rağmen Türkiye'deki eğitim endekslerinin

daha düşük olması nedeniyle insani gelişme sırlamasında 50. sırada yer alarak Türkiye'nin oldukça ilerisinde yer almaktadır. Bu nedenle eğitim göstergelerine yansıyacak şekilde bir iyileşme yaşanması, insani gelişmişlik sırlamasında Türkiye'nin konumunu daha ileriye taşıyacağı açıktır.

## 4 Sonuç

Değerlendirme kapsamına alınan CEE ve CIS ülkeleri ile Türkiye'nin çok boyutlu yoksulluk ve insani gelişme göstergeleri irdelendiğinde AB üye ve aday CEE, CIS ülkeleri ve Türkiye arasında farklıklar olduğu, bu farklılıkların sadece gruplar bazında olmayıp gruplar içinde de önemli ölçüde değişkenlik gösterdiği görülmektedir.

Ülkelerin çok boyutlu yoksulluklarının ölçülmesinde verilerin yetersizliği ve farklı yılları kapsaması karşılaştırma olanağını sınırlasa da aynı yılı kapsayan veriler ve ülke bazında değerlendirme yapılmasında fikir vermektedir. Bu bağlamda Türkiye en yüksek çok boyutlu yoksulluk endeksine sahip ülke olarak karşımıza çıkmaktadır. Aslında AB'ye üye olan Estonya, Türkiye'ye oranla daha yoksul nüfusa sahip olmasına rağmen yoksunluğun yoğunluğu bakımından Türkiye'den daha düşük bir değere sahip olması nedeniyle endekste Türkiye'ye yakın olmakla birlikte daha düşük bir değer göstermektedir. Türkiye'deki yoksunlukların dağılımı açısından eğitim ve sağlık yoksunluğu ağırlıklı olarak dikkati çekmektedir. Bu sonuçlar eğitim ve sağlık alanında uygulanan politikaların etkinliğinin arttırılması veya yeni politikalar geliştirilmesi gereğini ortaya koymaktadır. Daha önce de değinildiği üzere Türkiye'deki çok boyutlu yoksulluğu bölgesel olarak değerlendirdiğimizde yoksulluğun daha çok doğu bölgelerinde ve kırsal alanlarda yoğunlaştığı görülmektedir. Yoksulluğun nedenleri arasında gelir dağılımındaki eşitsizlikler, hızlı nüfus artışı, istihdam yetersizliği, göç, işsizlik, enflasyon ve ücret politikaları, fırsat eşitliğinin sağlanmasına yönelik olmayan eğitim politikaları, işgücü piyasasında örgütlenme düzeyinin yetersizliği, mevcut sosyal güvenlik sistemindeki aksaklıklar (Gökçek Karaca, 2008 ) gibi nedenlerin olduğu düşünülürse özellikle bu bölgelerde kalkınmayı arttıracak istihdam, eğitim, nüfus, göç ve sosyal güvenlik alanında etkin politikalar oluşturulması gereği açıktır.

Ülkelerin sağlık, bilgi ve yaşam standardının ortalama gerçekleşmesini ölçen insani gelişme endeksinde ise genel anlamda CEE ülkelerinin CIS ülkelerinden daha iyi durumda olduğu dikkati çekmektedir. CIS ülkeleri genel olarak daha düşük kişi başı gayri safi milli gelir, doğumda yaşam beklentisi ve okullaşma yılına sahiptir. 90. sırada yer alan Türkiye ise AB aday ülkelerden daha yüksek kişi başı gayri safi milli gelire sahip olmakla birlikte daha düşük doğumda yaşam beklentisi, ortalama okullaşma yılı ve beklenen okullaşma yılına sahiptir. Türkiye'nin AB üye ülkeler sıralamasına ulaşabilmesi için eğitim göstergelerinde mutlaka iyileştirme yapılması gereklidir.

Geçiş ekonomilerinin ve aynı zamanda Türkiye'nin farklı ekonomik, sosyal ve kültürel yapıya sahip olmaları doğası gereği ülkelerin farklı performans özellikleri göstermelerine neden olmaktadır. Altyapısı daha güçlü olan, değişime daha kolay adapte olabilen, reformlar gerçekleştirebilen, gelişme için yeni politikalar üretebilen veya politikalarını istikrarlı bir şekilde etkin olarak uygulayabilen ülkelerin daha iyi bir ilerleme sağlayabilecekleri açıktır. Bu bağlamda ülkelerin verilerini gerçekçi bir yaklaşımla değerlendirmesi ve iyileştirme yapılması gereken konularda etkin reformlar uygulaması gereklidir.

Son olarak söylemek gerekirse; UNDP tarafından hazırlanan İnsani Gelişme Raporları ve kapsamına alınan göstergeler ışığında ülkeler arasında değerlendirme yapmak mevcut durumun analiz edilmesi ve gelişimin sağlanmasında kuşkusuz çok önemlidir. Ancak endekslerde yer alacak göstergeler ve hesaplama yöntemlerinin belirlenmesinde zamanla değişikliklere gidilmesi, kriterlerin değiştirilmesi gösterge değerlerini de etkilemektedir. Bu bağlamda ülkelerin gelişmişlikleri ve kalkınmışlıklarında sıralamaların değişebileceği unutulmamalıdır.

# Yoksullukla Mücadelede Sosyal Koruma Harcamalarının Rolü

# The Role of Social Protection Expenditure in the Fight against Poverty

Ph.D. Candidate Gülferah Bozkaya (Kahramanmaraş Sütçü İmam University, Turkey)

## Abstract

The concept gradually accumulate wealth in the world and intensifies poverty and insecurity are increasing to the same extent. When we look at the past, present and edit the markets cannot self-cleaning, as they cannot, by themselves can be considered as social justice has been seen cannot produce. Social justice-seeking different genders, groups and generations ensures the promotion of equality between the values. The realization of social justice on a global scale before everything redistribution of income from the rich to the poor is mandatory. Redistributing income in various forms of social protection social justice, provide more in several sizes. Avoidance of poverty by helping individuals develop their individual autonomy, dignity, protects and supports integration with the community. Whatever the economic power and productivity of individuals worthy of human dignity to have a minimum standard of social life provides guaranteed by the state. Spread evenly across society for education and health facilities and offers high standards. Social protection expenditure used in the creation of the European Union using ESSPROS method a methodology that has been guiding international social protection expenditures to produce an international comparison also provides the opportunity to do. In the light of current international developments in the field of social policy, social protection expenditure in Turkey will be evaluated in a comparative perspective.

## 1 Giriş

Birey, insanlık tarihinin her döneminde kendisini yoksulluğa iten ve geleceğini tehdit eden olaylardan korunma duygusu ve gayreti içerisinde olmuştur. Hastalık, sakatlık, yaşlılık ve işsizlik gibi insanların karşı karşıya kalabileceği olayların, açlık ve yoksullukla aynı anlama geldiği dönemlerde, bireyin gelecek endişesinden arınarak özgürlüğüne kavuşması ve kişiliğini geliştirmesi mümkün değildir. İlkel toplumlarda, yaşam mücadelesinde yenik düşen yaşlı insanların bir dağın tepesine götürülerek ölüme terk edilmeleri ya da yeterli yiyecek bulunamaması nedeniyle ırmak kenarlarında yeni doğmuş bebek cesetlerine rastlanılması, yoksulluğun, güvensizliğin ve çaresizliğin bir sonucudur. Tarihin sonraki aşamalarında belki bu kadar ürkütücü boyutta olmayacaktır ancak yoksulluk sorunu ve güvenlik arayışı toplumlar ve bireylerin yaşamları üzerinde etkili olmaya devam edecektir. Ekonomik ve teknolojik alandaki gelişmeler sosyal alandaki gelişmelerle tamamlanmadıkça, sosyal tehlikeler ve bunların doğurduğu yoksulluk sorunu varlığını koruyacaktır.

Sosyal devlet, kapsamlı bir düşünce olarak Aydınlanma felsefesine, eşitlik ve ilerleme düşüncesine, bunlara bağlı olarak ortaya atılan insan hakları anlayışına dayanmaktadır. Bu anlamda sosyal devlet genel olarak yurttaşların sosyal durumlarını iyileştirmeyi, onlara belirli bir yaşayış düzeni sağlamayı ve onları sosyal güvenliğe kavuşturmayı kendisi için ödev bilen devlet anlayışıdır. Sosyal devlet, toplumun tüm üyelerine onurlu bir yaşamın her zaman bir hak olarak sağlanması gerektiği fikrine dayanmaktadır. Bu hak onların müşterek servete olan katkılarına bakılmaksızın sağlanmalıdır. Onurlu bir yaşamın toplumun tüm üyelerine bir hak olarak sağlanması fikri, sosyal devletin görev alanıyla yakından ilişkilidir. Sosyal devletin oldukça geniş olan görev alanı, genel olarak beş başlıkta toplanmaktadır. Bunlar: sosyal güvenlik, eğitim, sağlık, gelirin yeniden dağıtımı ve sosyal refah hizmetleridir. Devletin bu alanlarda yapmış olduğu harcamalar ya da bütçeden ayırmış olduğu pay, sosyal devlet nitelemesinin önemli bir göstergesidir. Bu anlamda devletin "sosyal" nitelemesinin sınanması açısından, sosyal güvenlik, eğitim, sağlık ve soysal refah harcamalarına bakmak önemli bir niceliksel kolaylık sağlar. Bu ön kabulde hareketle, bu çalışmada ülkemizde "sosyal koruma" (sosyal güvenlik harcamaları ile konut, işsizlik, sakatlık, malullük ve hastalık yardımları gibi), "eğitim" ve "sağlık" alanında devlet tarafından yapılan harcamalar analiz edilmiştir.

Türkiye'de yoksulluk ve sosyal koruma harcamaları ilgili olarak yapılan çalışmalar çoğunlukla yoksulluğun tanımlayıcı analizi üzerine yoğunlaşmakta, yoksullukla mücadelede kullanılan sosyal koruma harcamalarının etkilerinin incelendiği analitik çalışmalar çok sınırlı kalmaktadır. Sözü edilen bu kısıtlı alana katkı sağlamak için çalışmada amaç, ilk olarak yoksulluk kavramına ve sosyal politika aracı olarak sosyal koruma harcamalarının içeriği belirlenecektir. Üçüncü bölümde yapılan sosyal koruma harcamalarının yoksullukla mücadeledeki etkileri ile Türkiye'deki ve Dünya'daki son durumu incelenecektir.

## 2 Yoksulluk ve Sosyal Koruma Harcamaları

### 2.1 Yoksulluk Kavramı ve Sınıflandırılması

İnsanlık tarihinin en eski sorunlarından biri olan ve günümüzde de büyük bir hızla artmaya devam eden yoksulluk, basit olarak, insanların temel gereksinimlerini karşılayamama, asgari yaşam standartlarına ulaşamama durumu olarak tanımlanabilir. Yoksulluk her ne kadar eski bir sorun olsa da, bu sorunun giderilmesi için yapılan çalışmalar, eski zamanlara dayanmamaktadır. Köleliğin normal karşılanması, halktan ayrı yaşayan burjuva ve soylu sınıfları, gelişmemiş ve planlanmamış ekonomik yapılar, savaşlar, gelişmemiş hukuk ve demokrasi kalıpları gibi sebeplerden dolayı yoksulluk eski dönemlerde daha normal karşılanıyor olsa da, zaman içerisinde insan haklarının önem kazanması, gelişen ekonomik yapılar ve insanların bilinçlenmesiyle birlikte, üzerinde önemle durulmaya başlanan bir sorun haline gelmiştir (Turgut,2011).

Yoksulluk; insanın ihtiyaçlarını asgari düzeyde karşılamaya yetecek bir gelire sahip olmaması, normal kabul edilecek bir yaşam standardının altında bulunması halidir. Yoksulluk denilince aklımıza çoğu zaman fakirlik, açlık, muhtaçlık, yoksunluk, kendi temel ihtiyaçlarını karşılayamama, düzenli bir hayat standardının olmaması durumu gelir. Genel anlamda yoksulluk, toplumsal refah düzeyi, toplumun yaşam standardının mutlak veya göreli olarak minimum bir düzeyinin altında kalan kişinin statüsü olarak tanımlanır (TÜSİAD, 2000).

**Mutlak yoksulluk- Göreli Yoksulluk**; Mutlak yoksulluk hane halkı veya bireyin yaşamını sürdürebilecek asgari refah düzeyini yakalayamaması durumudur Başka bir deyişle mutlak yoksulluk, İnsanın yaşayabilmesi için gerekli temel ihtiyaçlarını karşılayamayacak durumda olma halidir. Burada önemsenmesi gereken iki faktör vardır: Asgari tüketim miktarı ve bu miktarı gerçekleştirmeye yarayacak olan asgari ürün fiyatı. Bu iki faktör belirlenerek yoksulluk sınırı çizilir. Asgari tüketimi sağlayacak ürün maliyeti, hane halkının hayatta kalabilmesine imkan tanıyan bir parasal değer olarak önemlidir ve bu sebeple de yoksulluk sınırını oluşturmaktadır. Belirlenen sınırın altında yaşamak söz konusu olamayacaktır (Şenses, 2003).

: Göreli yoksulluk, toplumun ortalama refah düzeyinin elli bir oranının altında olma durumunu tanımlar. Yoksulluk çizgisinin belirlenmesinde referans noktası, birey veya hane halklarının ortalama refah düzeyidir. Refah ölçüsü olarak tüketim düzeyi veya gelir düzeyi seçilebilir. Fakat yoksullukla ilgili gelişmiş ülkelerdeki çoğu araştırmada yoksulluğun belirlenmesinde tüketim yerine toplam gelir alır (TÜSİAD, 2000).

**Gelir Yoksulluğu-İnsani Yoksulluk**; gelir yoksulluğu, yaşamı sürdürmek ya da asgari geçim standardını karşılamak için kişi veya hane halkının temel gereksinimlerin karşılanması bakımından yeterli miktarda gelirin elde edilememesi durumu olarak tanımlanabilir. İnsani yoksulluk kavramı, insani gelişme ve insanca yaşam için parasal olanakların yanı sıra temel gereksinimlerin karşılanabilmesi için iktisadi, sosyal ve kültürel bazı olanaklara sahip olmanın da gerekli olduğu fikrine dayanır (Aktan, 2002).

**Kırsal Yoksulluk-Kentsel Yoksulluk**; kırsal yoksullar bağımsızlık, güvenlik, öz saygı, kimlik, sosyal ilişkilerin samimiyeti ve yakınlığı, karar alma özgürlüğü ve hukuki ve siyasi haklar gibi yoksulluğun daha çok kalitatif boyutuna önem verirlerken kentsel yoksullar, yetersiz gelir, yetersiz tüketim düzeyi gibi kantitatif boyutu önemsemektedirler (Masika vd.,1997).

Yoksulluğun meydana gelme derecesini belirleyen faktörleri dört ana başlıkta toplamıştır. Bunlar; Temel İhtiyaçlar yaklaşımı, Gıda-Gelir oranı yaklaşımı, Ortalama gelirin yüzdesi yaklaşımı, Yüzdelik dilimler yaklaşımı.

*Temel İhtiyaçlar yaklaşımı**, asgari düzeyde gıda ve gıda dışı ihtiyaç setinin karşılanması gerektiğini varsayar.

*Gıda-gelir oranı yaklaşımı**, tüketimle ilgili davranış kalıplarını ortaya çıkarmayı amaçlayan bir gıda-gelir oranını belirler. Bu yöntem yoksulluk sınırı hesaplanmasındaki asgari besin gereksinimini belirlemede ortaya çıkan problemlerden kaçınır ve yoksulluk sınırını belirtmek için gerçek harcama kalıplarını kullanır.

*Ortalama gelirin yüzdesi yaklaşımında** ortalama gelirin belirli bir yüzdesi yoksulluk sınırı olarak belirlenir ve bu hattın altında kalanlar yoksul olarak belirlenir.

*Yüzdelik dilimler yaklaşımı**, nüfusu gelir düzeyine göre derecelendirir ve gelir dağılımındaki en düşük yüzdelik dilimler itibariyle yoksullar belirlenir (Turgut,2011).

Yoksulluk birçok nedene bağlı olarak ortaya çıkabilir. Fakat neticesi genellikle aynıdır. Diğer bir ifadeyle, çeşitli sebeplerden dolayı kişilerin gelirlerinde veya harcama bütçelerinde meydana gelen azalmalar, onları yoksulluk seviyesine düşürmektedir (Sarısoy, Koç, 2010). Bunlar kısaca şöyle sıralanabilir:

• **Doğal Afetler:** Doğal afetler (deprem, sel, fırtına, yangın, vb.) insanların yaşam standartlarını çeşitli düzeyde etkilediği için, yoksulluğun nedenlerinden biri olduğu söylenebilir.

• **Savaş, İç Çatışma ve Terörizm:** Savaş/iç çatışma ile yoksulluk ilişkisi, bir taraftan kamu kaynaklarını söz konusu savaşın/çatışmanın finansmanı için kullanmak suretiyle sosyal nitelikli kamu harcamalarının azaltılması, diğer taraftan da bu sebeple insanların sağlık, sahip olduğu servet gibi, yaşamını sürdürmede önemli bir yeri olan değerlerin yitirilmesi, yine bu süreçte bakıma ihtiyacı olan kişi sayısının artması şeklinde açıklanabilir.

• **Kaynak Dağılımındaki Çarpıklıklar:** Gelirin üretim faktörleri arasında dengesiz dağılımı toplumda yoksulluğa neden olabilir. Özellikle tekelci piyasalar, baskı gruplarının etkisi ve bölgesel farklılıklar gibi faktörler, kaynakların adil dağılımını etkiler ve toplumdaki mevcut yoksulluk sınıfının genişlemesine neden olur.

• **Ekonomik Krizler:** Ekonomide çeşitli faktörle bağlı olarak ortaya çıkan olumsuzluklar kişilerin elde ettiği gelir miktarını azaltmaktadır. Özellikle yoksulluk sınırının hemen üzerinde yer alan kişiler bu gelir düşüşüne bağlı olarak, insanca yaşamanın gerektirdiği harcamaları yapacak gelirden mahrum kaldıkları için yoksul duruma düşebilirler.

• **Küresel Sermaye Hareketliliğindeki Değişmeler:** Günümüzde artan rekabet şartlarında varlığını devam ettirmek isteyen işletmeler faaliyetlerini daha uygun koşulların olduğu diğer ülkelere veya aynı ülke içinde değişik bölgelere kaydırabilirler. Bu hareketlilik işletmelere önemli faydalar sağlarken, bu işletmenin faaliyetleri sonucunda doğrudan veya dolaylı olarak fayda elde edenler bundan mahrum kalırlar (DPT, 2001).

• **Sağlık Koşulları:** Sağlık koşulları ile yoksulluk arasındaki ilişkiyi, insanların sağlık sorunları nedeniyle çalışma güçlerini kısmen veya büyük ölçüde yitirmeleri, diğer taraftan da gerek kamu kaynaklarının gerekse kişisel gelirin büyük bir bölümünün sağlık harcamalarının finansmanında kullanılması nedeniyle, kişilerin yaşam standartlarını yükseltecek harcamalardan mahrum kalmaları şeklinde açıklayabiliriz.

• **Eğitim İmkânlarından Mahrum Kalmak:** Eğitimli bir insan genellikle gelişen ekonomik ve sosyal şartlara karşı kendini daha iyi korur ve fırsatları daha iyi değerlendirir.

• **Ekonomik Gelişmeler:** Ekonomik gelişmeler insanlara bir taraftan yeni fırsatlar sunarken, diğer taraftan da onların harcama bütçelerinin genişlemesine neden olur. Fırsatlardan yararlanma ile harcama bütçesindeki genişleme arasındaki fark birbirine yakın olduğu ölçüde kişilerin yaşam standartlarında çok önemli bir değişim meydana gelmez. Ancak tersi durumda, bir dönem varlıklı olarak kabul edilen kişiler bu farkın açılmasıyla bir süre sonra yoksul duruma düşebilirler.

• **Kültürel İhtiyaçların Karşılanamaması:** 1997 yılında Birleşmiş Milletler Kalkınma Programı (UNDP) tarafından geliştirilen "insani yoksulluk" kavramının bir parçası olarak dikkate alınan kültürel ihtiyaçlar, yoksulluğun belirlenmesinde gösterge olarak kabul edilmektedir. Bu faaliyetler sayesinde kişiler sosyal ortama ve hayata tam olarak intibak etmekte ve toplumla bütünleşmektedir.

• **Emeğin Yeterli Düzeyde Nitelikli Olmaması:** Özellikle az gelişmiş ve gelişmekte olan ülkeler ile nüfus artış hızı yüksek olanlarda, çalışma çağındaki işgücünün büyük bir bölümünün belli bir uzmanlık alanı yoktur. Bu yüzden hem iş bulmakta zorlanılabilmekte hem de düşük ücretlerle çalışma kabul edilebilmektedir (Sarısoy, Koç, 2010).

### 2.2 Sosyal Koruma Harcamaları Kavramı ve Kapsamı

Devlet fikri toplumların gelişimine paralel bir seyir izleyerek esrarlı, uzak ve korkutucu olarak algılanma biçiminden toplumda daha insani bir kimlikle görünmeye başlamış, korkutucu baba kimliğine bürünmüş olan imajına sonradan annenin müşfik görüntüsü de eklenmiş; koruyucu güven verici bir devlet görüntüsü vatandaşların zihnine yerleşmiştir. Vatandaşların artan istekleri devleti müdahaleci olmaya doğru itmiş ve refah devletinin temelleri atılmıştır.

Devlete daha az sorumluluk yükleyen devlet anlayışından çok geniş bir faaliyet alanı tanıyan devlet anlayışına kadar farklılıklar gösteren refah devleti yaklaşımları söz konusudur. Güvenli geliri artıran ve yoksulluğun azaltılmasının yanında nüfusun çoğunluğuna sosyal hizmetler sağlayan refah devleti (Lindbeck, 2004), geliri toplumun finanse eden durumdaki üst gruplarından alıp (genelde aktif üyelerinden); güvence altına alınmış alt gruplarına (örneğin; hasta, yaşlı, özürlü, işsiz, yoksula) dağıtan mekanizmalarıyla vatandaşlarına asgari bir yaşam düzeyi sağlayabilecek bir geliri garanti etmeyi, gelir eşitsizliğini gidermeyi, kişilerin ve ailelerin çeşitli sosyal sorunlarının üstesinden gelebilmelerini, yapılmadığı taktirde kişisel/ailevi sorunlara yol açabilecek olan risklerin azaltılmasını (hastalık, yaşlılık ve işsizlik gibi) ve bütün vatandaşların en iyi sosyal şartlara sahip olmasını sağlamayı amaçlar (Cichon, 1996)

Sosyal koruma harcamalarını 1) sağlık 2) sigorta ve emeklilik ödemeleri 3) sosyal hizmetler ve sosyal yardımlar olarak üç alt kaleme ayırmak mümkündür. Sosyal koruma harcamalarının izlenmesinde uluslararası olarak kullanılan iki yöntem bulunmaktadır. Bunlardan birincisi AB'nin kullandığı ESSPROS ikincisi ise OECD'nin kullandığı Sosyal Harcamalar Veri Tabanı (SOCX) ve Uluslararası İş Örgütü (ILO)'nun metodu yöntemleridir (Yentürk,2012). Bu metodolojilerin arasındaki ana fark; sosyal riskin tanımı, sosyal korumanın toplumun hangi kesimine ve nasıl sağlandığı, nüfusun tamamını mı kapsadığı yoksa sadece belli bir kesime yönelik olarak mı geliştirildiği gibi konuları nasıl teorize ettikleri noktasında ortaya çıkmaktadır(Buğra ve Adar,2007) .

ESSPROS metodolojisine göre üretilen sosyal koruma istatistiklerinde sosyal koruma harcaması "çeşitli risk ve ihtiyaçlarının yükünü azaltmak üzere hane halklarına yapılan ayni ya da nakdi transferler"dir. ESSPROS yöntemi üretim ile değil yeniden dağıtım ile ilgilidir. Bu yöntemde sosyal koruma harcamaları, yararlanıcının harcanabilir gelirinde bir artışa neden olabilmek üzere sağlanan tüm faydalar (*benefits*) şeklinde tanımlanmaktadır. ESSPROS metodolojisinde kamu sosyal koruma harcamaları hesaplanırken kamunun "Genel

Devlet"e dahil olan kurumlar hesaba katılmaktadır. Dikkate alınacak kurumlar arasına münhasıran sosyal hizmet veren kurumlar olacağı gibi (örneğin, sosyal güvenlik ve emeklilik kurumları, sosyal yardım kurumları), sosyal hizmeti bir tamamlayıcı iş olarak yapan kurumların (örneğin Vakıflar Genel Müdürlüğü) sosyal koruma harcamaları da dahil edilmektedir. Sosyal koruma gerektiren alanlar hastalık, tedavi, özürlülük, yaşlılık, aile, çocuk, işsizlik, konut ve sosyal dışlanma olarak tanımlanmıştır. Bunlar, korunan kişilere doğrudan nakit ödemeleri, bu kişilerin yaptıkları harcamaların geri ödenmesi ve bu kişilere mal ve hizmet yardımlarını içermektedir. Harcama kalemleri açısından ele alındığında ESSPROS, idari giderleri, diğer sosyal harcama birimlerine transferleri ve diğer harcamaları da hesaplamaya dahil etmektedir. İdari giderler hesaplanırken örneğin bir devlet hastanesinde çalışan doktor, hemşire ve personelin maaşları katılırken Sağlık Bakanlığı'ndaki personelin maaşları katılmamaktadır, çünkü bunlar konuya "özel hizmet" değil "genel hizmet" sunmaktadırlar (Yentürk,2012).

Bu bağlamda, SOCX ve ESSPROS metodolojileri arasındaki fark oldukça marjinal kalmaktadır. Her iki metodoloji de, yaşlılık, sağlık, işsizlik, hastalık ve özürlülük yardımları ile malullük yardımları, konut ve aile yardımları kategorilerinde veri derlemektedir. Ancak, bu kategoriler arasında içerik ve kapsam açısından bir takım farklar bulunmaktadır.

| OECD kategorizasyonu | ESSPROS – Sosyal Yardım Kategorileri | Sorunlar |
|---|---|---|
| Yaşlılık + Çalışamaz durumda olanlara yönelik (yaşlılara yönelik hizmetler) | Yaşlılık | |
| Özürlülere yönelik yardımlar (özürlülere yönelik maddi yardımlar + iş kazaları ve hastalık+ özürlülere yönelik hizmetler) | Özürlülük | İş kazaları ve hastalık kategorisi, ESSPROS'ta açıkça tanımlanmamıştır |
| Sağlık + Çalışamaz durumda olanlara yönelik yapılan yardımlar (hastalık) | Hastalık / Sağlık | OECD, hastalık ve sağlık istatistiklerini ayrı ayrı vermektedir. |
| Malüllük | Malüllük | |
| Aile | Aile/Çocuk | |
| İşsizlik | İşsizlik | Kapsam ve tanımdan kaynaklanan farklar mevcuttur. |
| Konut | Konut | |
| Diğer öngörülemeyen risk durumları | Sosyal Dışlanma | |
| İşgücünü aktifleştirmeye yönelik programlar | | Kapsamdan kaynaklanan birtakım farklar mevcuttur |
| Sosyal harcamalar idari giderleri kapsamaz. | Sosyal harcamalar idari giderleri kapsa | ESSPROS'ta ayrı bir kategori olarak yer almamaktadır |

*Tablo 1. SOCX VE ESSPROS Veri Tabanlarının Karşılaştırması, **Kaynak:** OECD (2007), Sosyal Harcamalar Veritabanı (SOCX), 1980-2003,*

İki metodoloji arasında öne çıkan en önemli farklardan bir tanesi Aktif İş Gücü Piyasası Programları (AİPP) için yapılan harcamaların hesaplamalara dahil edilip edilmediği ile ilgilidir. SOCX, AİPP'yi başlı başına bir kategori olarak değerlendirirken, bu tip programlar ESSPROS'ta yer almamaktadır. Bu tür harcamalar tarihsel olarak toplam kamu sosyal harcamalarının küçük bir kısmını oluştursa da, sosyal politikada yaşanan gelişmeler bağlamında giderek daha önemli bir kalem haline gelmektedir. OECD ve EUROSTAT'ın, AİPP için ortak bir veri tabanı hazırlamaya karar vermiş olması sadece bu artan önemin bir göstergesi değildir, aynı zamanda iki metodoloji arasındaki yakınlaşmanın da arttığına işaret etmektedir. SOCX ve ESSPROS arasındaki bir diğer ayrım, idari ve diğer giderlerle ilgilidir. SOCX, bu tip giderleri hesaplara dahil etmezken, ESSPROS sosyal harcamaların bir parçası olarak kabul etmektedir (Buğra ve Adar,2007).

ILO tarafından kullanılan metodolojinin diğer metodolojilerden temel farkı, aslında bir yaklaşım farkıdır. ILO metodolojisinde, sosyal harcamaların özellikle refah rejimleri gelişmemiş ülkeler için eğitim harcamaları ve temel gıda maddelerine verilen sübvansiyonlar gibi kalemleri de kapsayacak biçimde genişletilmesi gerektiğini varsayılmaktadır. . Eğitim harcamalarının kamu sosyal harcamaları içine dahil edilip edilmemesi, özellikle gelişmiş refah devletleri ile refah rejimlerinin fazla gelişmemiş olduğu ülkeler arasındaki sosyal farklara ışık tutması açısından önemli bir tartışmadır. İlk gruba dahil ülkeler için ki bunlar çoğunlukla OECD ve AB üyesi

ülkelerdir, eğitimin bireyi belirli risk durumlarına karşı korumaktan farklı bir işlevi olduğu için hesaplamalara dahil edilmemesi meşru bir argümandır. Öte yandan, refah rejimlerinin gelişmediği pek çok ülke için, eğitim hizmetlerine erişememe durumunun, yoksulluğun ve sosyal dışlanmanın nesilden nesile aktarılmasına yol açması kaçınılmazdır. Bunun yanı sıra, bu ülkelerde okul, bir eğitim kurumu olmanın ötesinde, çocuk yoksulluğunun farklı tezahürlerinin teşhis edilmesine ve bunlarla mücadele edilmesine zemin oluşturabilecek bir "sosyal bir refah alanı" işlevi görebilir ve bu çok önemlidir (Buğra ve adar,2007).

## 3 Sosyal Yardımların Yoksullukla Mücadeledeki Rolü

Ekonomik gelişme sürecinde, sosyal koruma giderek yaygınlaşırken, klasik gelişme kuramı, ekonomik büyüme sonucunda, tüm çalışanların er yada geç kurumsal ve güvenli bir istihdama ulaşabileceklerini kabul etmektedir. Fakat gelişmekte olan ülkeler ile birlikte geçiş halindeki ve bazı gelişmiş ülkelerdeki deneyimler, bu kuramsal beklentiyi doğrulamaktadır. Yüksek büyümenin görüldüğü bir çok ülkede, büyümeye bağlı olarak, insanlara daha az güvence sunan istihdamın ve çalışma koşullarının yaygınlaştığı bilinmektedir (Ginneken,2003).

Refah devleti kavramının genellikle sosyal devlet ile beraber tanımlandığı görülmektedir. Refah devleti, devletin genel olarak yoksulluk sorununa ve daha özel olarak da çalışma yaşamına sosyal politika ve hukuk araçlarını kullanarak müdahalede bulunması, sosyal adaleti sağlamak için yoksullar ve çalışanlar lehine faaliyetlerde bulunması anlamına gelmektedir. Sosyal devletin temel öğeleri, "yaşayabilme güvenliği", "tam istihdam" ve "çalışma gücünün korunması"dır (Gökçeoğlu Balcı,2007). Yoksulluğa ve işsizliğe karşı mücadele, kişilere asgari bir geçim düzeyinin sağlanması, sosyal güvenlik sistemi ve sosyal yardımlar, eğitim, sağlık, konut politikaları gibi uygulamalar sosyal devletin ve geniş anlamda sosyal politikanın temel uygulama alanlarıdır. Bu uygulamaların ulaştığı düzey ve sağladığı güvenlik de toplumun refah toplumu olarak ulaştığı gelişme düzeyini göstermektedir( Koray,2005).

Refah devletinin gelişim sürecinde genel olarak dört aşamadan söz edilmektedir: Başlangıç ve deneyim kazanma dönemi olarak değerlendirilen ilk dönem 1870'lerde başlamaktadır. Bu dönemde işçi sınıfı ve işçi hareketi büyürken, güçlenen ve hak arayan işçi sınıfı ile birlikte toplumsal çözülme ve tıkanıklıklar da yaşanmıştır. Bu sorunlara çözüm oluşturma noktasında siyasal haklar üzerinde durulmuş, sınıf ve kitle partileri güç kazanmıştır. Bu nedenle de işçi sınıfı ve yoksullar üzerinde yoğunlaşan sosyal güvenlik gibi politikalara ihtiyaç duyulmuştur. Bu politikaların arkasındaki temel düşüncede özgürlük, eşitlik ve güvenlik kavramlarını bir araya getirerek bunlar arasında toplumsal bir uzlaşma sağlamak yer almaktadır. Dönemin en önemli gelişmelerinden biri, 1870'li yıllarda Bismark tarafından çıkarılan bir düzenleme ile meslek riskleri ve iş kazaları karşısında sorumluluğun işverene ait olduğunun kabul edilmesi olmuştur. Bu amaçla yardımlaşma ve dayanışma sandıkları kurulmuş ve bugünkü sosyal sigortalar sisteminin temeli atılmıştır. 1889'da ilk emeklilik sigortası sistemi kurulmuştur. Aslında sosyal güvenlik alanında yoksullara ilişkin ilk yasal düzenlemeler XVII.yy.'da İngiltere'de başlatılmıştır. Ancak bu düzenlemelerde, yoksulların durumlarının iyileştirilmesi ve onlara yardım edilmesi yerel yönetimlerin sorumluluğu olarak görülmüş ve merkezi devlete bu konuda etkin bir rol verilmemiştir. Dolayısıyla yoksulluk sorunu da yaygın olarak devam etmiştir (Sallan Gül,2006).

1930'larda başlayıp 1940'ların sonlarına kadar uzanan ikinci aşama, getirilen uygulamaları pekiştirme ve sağlamlaştırma aşamasıdır. Dünya savaşlarının yaşandığı bu dönemde, bir taraftan ekonomik sorunlar ağırlaşırken, diğer taraftan toplumsal güçler arasında uzlaşma ve dayanışmanın önemi ön plana çıkmıştır. Toplumsal uzlaşmayı sağlamaya yönelik politikalar bu dönemde de önemini korumuştur. Üçüncü aşama, 1950'lerden başlayıp 1970'lerin ortalarına kadar uzanan büyüme ve yayılma dönemidir. Bu dönem, ekonomik büyümenin istikrarlı bir şekilde devam ettiği ve Keynesyen politikalarla refah devletinin gelişmesi için uygun koşulların mevcut olduğu bir dönemdir. İkinci Dünya Savaşı'ndan sonra görülen hızlı ekonomik büyüme, refah devletinin maddi kaynaklarını yaratırken; güçlenen işçi sınıfı, emekten yana siyasi partilerin iktidara gelmesi ya da sendikal mücadele yolu ile etkin bir baskı grubu olarak gelirin yeniden paylaşımında önemli bir rol oynamıştır. Gerçekten savaş sonrası dönemde, özellikle Batı Avrupa'da hem refah devleti gelişmiş hem de işçi sınıfı açısından toplumsal uzlaşmanın koşulları sağlanmıştır. Batı Avrupa toplumları açısından ortak özellikler taşıyan bu dönem, uygulanan ekonomi politikaları nedeniyle, "Keynesyen Refah Devleti" olarak da adlandırılmaktadır. Refah devletinin ve sosyal politikaların yayılma dönemi olan bu dönemde yüksek bir istihdam düzeyi sağlandığı gibi ücretlilerin ücret ve çalışma koşulları iyileştirilmiş, kapsam bakımından zengin sosyal güvenlik uygulamaları görülmüştür.

Devlet, ekonomideki aşırı dalgalanmaların, toplumsal açıdan yaratabileceği olumsuz sonuçları hafifletmek ve kontrol edebilmek için para, vergi, harcama ve gelir transferi politikaları aracılığıyla etkin bir rol üstlenmiştir. Refahın sağlanmasında devletin belirleyici işlevlerinden biri de yoksullara ve bakıma muhtaç olanlara yönelik yardımları doğrudan yürütmesi olmuştur. Bu sayede işsizliğin ve yoksulluğun toplum için bir tehdit olmasının önüne geçilmek istenmiştir. Bu dönemde, ekonomik istikrar, refah-sosyal güvenlik ve sosyal yardım programları evrensel bir nitelik kazanmış ve kurumsal temelleri daha da güçlendirilmiştir ( Sallan Gül,2006). 1970'lerin ortalarına gelindiğinde olumlu seyreden bu süreçte bir takım sıkıntılar ortaya çıkmaya başlamıştır. Ekonomik

yaşamda, Keynes'in talep yönlü politikalarla tam istihdamın sağlanacağına yönelik görüşlerini sarsan gelişmeler görülmüştür. Bu yıllarda yüksek işsizlik ve enflasyonun bir arada yaşanması Keynesyen reçetelerin yetersizliğini ortaya koymuştur. Sadece ekonomik alanda yaşanan gelişmeler değil, bilgi ve iletişim teknolojilerindeki gelişmeler de üretim sürecindeki yapılanmayı emek aleyhine değiştirmiştir. Avrupa'da işsizlik ve yoksulluk oranlarının giderek artması, ekonomik büyüme ve tam istihdamın birlikte gerçekleştiği Keynesyen Refah Devleti döneminin artık gerilerde kaldığını göstermiştir. Ekonomik büyüme oranlarının düşmesi, nüfusun yaşlanması, aile yapısındaki değişiklikler, kadınların işgücüne katılım oranlarının yükselmesi gibi gelişmeler sosyal harcamaların artmasına neden olmuştur. Refah devleti uygulamalarının devletlerin bütçeleri üzerinde giderek ağırlaşan yüklere ve finansal darboğazlara neden olduğu yolunda yaygın bir görüşün bulunması, 1980'li yıllardan itibaren liberal söylemlerin yeniden gündeme gelmeye başlamasıyla da desteklenmektedir (Korpi,2003).

Başlangıcından bu yana ilk kez, Batı Avrupa refah devletleri sürdürülemez ve hatta üretkenliğe engel olarak görülmektedir. Özellikle refah devleti ve yoksulluk arasındaki ilişki büyük çaplı araştırmaların konusu olmuştur. Yapılan bazı araştırmalar refah devleti harcamalarını artırmanın yoksulluğun azaltılması yönünde her zaman olumlu sonuçlar yaratmayacağına işaret etmektedir (Callinton vd., 2007).

Ancak, konuyla ilgili araştırmaların olduğunu, bir diğer ifadeyle refah devleti önlemlerinin etkin bir şekilde yoksulluğu azalttığını ortaya koymaktadır. Refah devletinin yoksulluğu nasıl etkilediğini anlamaya katkıda bulunan büyük çaplı araştırmalardan biri de David Brady tarafından yapılmıştır. 1967-1997 döneminde on sekiz Batı Avrupa ülkesinde refah devleti ve yoksulluk arasındaki ilişkiyi inceleyen çalışmasında Brady, liberal ekonomik eleştiri, refah devletinin farklı özellikleri, refah devleti türlerindeki çeşitlilik, tarihsel bakış açısı ve yoksulluğun ölçümü gibi daha önceki araştırmaların yer vermediği hususları da çalışmasına dâhil etmiştir. Brady, bu değişkenlerin de hesaba katılmasıyla daha güvenilir sonuçlara ulaştığını iddia etmektedir. Brady, araştırması sonucunda, sosyal güvenlik transferleri ve kamu sağlık harcamalarının yoksulluğun azaltılmasında en etkili önlemler olduğunu tespit etmiştir. Araştırma sonuçları, ayrıca liberal ekonominin; ekonomik büyüme, işsizlik ve üretkenlikle ölçülen ekonomik performansın yoksulluğun azaltılmasında refah devletinden daha büyük bir etkiye sahip olduğu yönündeki iddiasını desteklememektedir. Ekonomik büyüme yoksulluğu azaltmaktadır ancak bunun etkisi refah devletine göre daha azdır. Araştırma, refah devleti önlemlerinin üretkenliği engelleyerek yoksulluğu artırdığına ilişkin herhangi bir kanıta da sahip değildir (Brady,2005).

Sosyal politikaya ilişkin uygulamalar sosyal devlet, sosyal koruma, refah toplumu vb ifadelerle kavramsallaştırılmaktadır. Avrupa ülkelerinde ve OECD tarafından yapılan araştırmalarda sosyal koruma kavramına sıkça rastlanılmaktadır. Sosyal koruma, devletin yurttaşları için olanaklı kıldığı sigorta ve diğer faydalar da dahil olmak üzere tüm koruma mekanizmaları olarak tanımlanmaktadır. Türkiye'de bu alandaki farklı kavramsallaştırmalar birbirlerinin yerine kullanılabilmektedir. Sosyal güvenliğin "bireylerin ve ailelerin ekonomik ve sosyal risklerle karşılaşmaları durumunda gereksinim duydukları destek ve dayanışmanın, kamu programları aracılığıyla kurumsallaştırılmasıdır" biçiminde tanımlandığı ve bu haliyle sosyal korumayı karşıladığı görülmektedir (Lindert,2002). Harcamalar söz konusu olduğunda da sosyal koruma harcamaları ile kamu sosyal harcamaları birbirlerinin yerine geçebilmektedir. Sosyal politikanın toplumsal refahı artırmayı hedefleyen politikalar bütününü, sosyal güvenlik veya sosyal korumanın ise içinde sosyal sigorta, sosyal yardım ve sosyal hizmetleri barındıran politikaları tanımladığı söylenebilir. Türkiye'de sosyal koruma mekanizmaları içerisinde sosyal sigortalar(SGK), sosyal hizmetler (SHÇEK); işsizlik (İŞKUR) ve sosyal yardım programları (SYDGM, Vakıflar Genel Müdürlüğü, SHÇEK, Belediyeler) yer almaktadır. Mekanizmalardan her biri diğerini etkilemekte ve biçimlendirmektedir (OECD, 2009).

|  | 2008 | 2009 | 2010 | 2011 | 2012 |
|---|---|---|---|---|---|

*Tablo 2. Sosyal Koruma Harcamalarının GSYH'ye Oranı, **Kaynak:** TÜİK,2014*

### 3.1 Türkiye Sosyal Koruma Harcamalarının Gelişimi

Sosyal koruma harcamaları 2012 yılında 188 004 milyon TL olarak hesaplanırken, bu harcamaların %98,3'ünü (184 807 milyon TL) sosyal yardımlar oluşturmaktadır. Sosyal yardımlarda ise en büyük harcama 99 106 milyon TL ile yaşlılara/emeklilere yapılan harcama olmuştur. Bunu, 52 574 milyon TL ile hastalık/sağlık bakımı harcamaları takip ederken; en düşük harcama ise 50 milyon TL ile konut yardımı harcamalarında gerçekleşmiştir.

Sosyal koruma harcamalarının Gayri Safi Yurtiçi Hasıla (GSYH) içindeki payına risk/ihtiyaç grupları bazında bakıldığında, yaşlı/emeklilere yönelik yapılan harcamaların %7 ile en büyük paya sahip olduğu görülmektedir. Bunu %3,7 ile hastalık/sağlık bakımı harcamaları ve %1,1 ile dul/yetim harcamaları takip etmektedir.

Sabit fiyatlarla 2008 ve 2012 yılları arasında GSYH %15,5 artarken, sosyal koruma harcamaları %32,2 artış göstermiştir. Artışa risk/ihtiyaç grupları bazında bakıldığında, en büyük artışın %162,4 ile işsizlere yönelik harcamalarda gerçekleştiği gözlenirken; bunu sırasıyla, %102,9 ile engelli/malül harcamaları, %74,7 ile sosyal dışlanma başka yerde sınıflandırılamayan harcamalar ve %48,6 ile aile/çocuk harcamaları takip etmiştir. Buna karşın, konut yardımı harcamalarında düşüş gözlenmiştir.

***Tablo 3.*** *AB ülkelerinde Sosyal Koruma Harcamaları, % GSYH **Kaynak:** EUROSTAT, 2014*

### 3.2 Sosyal Koruma Harcamaları ile İlgili Uluslararası Karşılaştırmalar

Türkiye'nin bu kılavuz çerçevesinde hesaplanan sosyal koruma harcamaları ile Eurostat veri tabanında verilen AB ülkelerinin sosyal koruma harcamaları karşılaştırıldığında, Türkiye'nin en son sırada yer aldığı görülmektedir. Tabloda yer alan ülkelerin kişi başına milli gelirleri ve ekonomik gelişmeleri dikkate alındığında Türkiye'nin sosyal koruma harcamalarının, belirli bir süre içerisinde, en azından Bulgaristan'ın üzerine çıkması hedefi konulabilir.

Sosyal koruma harcamalarının GSYH'ya oranının düşük olmasının yanı sıra, Türkiye'nin sosyal koruma hizmetlerinin içeriği ve kapsamı bakımından önemli eksiklikleri olduğu vurgulanmaktadır. Türkiye'nin onaylamış olduğu uluslararası sözleşmelerden bir kısmı sosyal yardımlar ve sosyal hizmetler alanındaki uluslararası yükümlülüklerinin hukuki temelini oluşturmaktadır. Bu alanda onaylanmış olan başlıca sözleşmeler, Birleşmiş Milletler Ekonomik Sosyal Kültürel Haklar Sözleşmesi ve Avrupa Sosyal Şartı'dır. Avrupa Sosyal Şartı Türkiye tarafından 1964 yılında imzalanmış ve 7 Ağustos 1989 tarihinde Bakanlar Kurulu Kararı ile onaylanmıştır. Gözden Geçirilmiş Avrupa Sosyal Şartı ise, 9 Nisan 2007 tarihinde Bakanlar Kurulu tarafından onaylanarak yürürlüğe girmiştir. Avrupa Sosyal Şartı'nın uygulanmasını denetlemekle görevli Avrupa Sosyal Haklar Komitesi, Türkiye'ye ilişkin çeşitli yıllarda yazılmış gözlem sonuçları raporlarında istatistiki veri eksikliğinden, yardımların bir hak olarak düzenlenmemiş olmasına, yürürlükteki sosyal yardım ve hizmetlerin yeterli olmamasından kurumlararası koordinasyon eksikliğine, sosyal açıdan hizmete ihtiyaç duyanların ihmal edildiğinden yoksulluk ve sosyal dışlanmayla mücadelede ulusal bir stratejinin eksikliğine kadar çeşitli eleştirilere yer vermektedir.

Dünya Sağlık Örgütü'nün verilerine göre, 2000 ve 2008 yılında satın alma gücü paritesine bağlı hesaplanan kişi başına düşen kamu sağlık harcaması Tablo 20'de verilmektedir. Bu tablodan görülen en önemli sonuçlardan birisi tabloda yer alan bütün ülkelerde kamu sağlık harcamalarının artığıdır. Bunun en temel nedenleri olarak, sağlığa daha çok kaynak ayrılmasının yanı sıra, sağlık hizmeti talebinin artması, yeni teknolojilerin kullanılmaya başlamasıyla teşhis için gerekli maliyetin artması, yaşam süresinin yükselmesi gibi etkenler sayılmaktadır (Yentürk,2012).

## 4  Sonuç

Çalışma hayatı son yirmi yıl içinde bütün dünyada bir dönüşüm geçirmektedir. Bu dönüşümde öne çıkan gelişmeler arasında artan işsizlikle birlikte yoksulluğun önemli bir soruna dönüşmesi yer almaktadır. Bu süreç, büyümeyle istihdam ve istihdamla bireyin geçimi arasındaki ilişkinin eskisi kadar güçlü olmadığı bir gelişmeye işaret etmektedir. Bir diğer ifadeyle, hem ekonomik büyümenin kendiliğinden istihdam artışına yol açacağı hem de işi olan herkesin yoksulluktan kurtulacağı varsayımları artık geçerli değildir. Primli sisteme dayalı sosyal sigorta ayağının ağırlıkta olduğu mevcut sosyal güvenlik sistemlerinin bu gelişmeler karşısında yoksulluk ve sosyal dışlanma sorunuyla etkin bir şekilde mücadele edememesi, Avrupa ülkelerinde asgari gelir güvencesi hakkını ve bu yöndeki uygulamaları gündeme getirmiştir. Kaynağındaki nedenlere bağlı olarak, yoksullukla mücadelenin ekonomik ve sosyal politikaların birlikteliği ve eşgüdümü içinde çok boyutlu yürütülmesi gerekmektedir. Yoksullukla mücadelede, sürdürülebilir ve güçlü bir ekonomik büyümenin gerekli olduğu muhakkaktır.

Ancak bu büyümenin yaratacağı istihdamın, getireceği gelir ve sağlayacağı güvenlik açısından kişileri yoksulluktan riskinden uzak tutan bir niteliğe sahip olması gerekmektedir. Türkiye'de yoksullukla işsizlik arasındaki kuvvetli bağın, kayıt dışı istihdamın ve çalışan yoksulların varlığı ekonomik büyümenin hem yeterli düzeyde istihdam yaratamadığına hem de yaratılan işlerin kişileri yoksulluktan kurtarma noktasındaki yetersizliğine işaret etmektedir. Bu gelişmeler karşısında, sosyal yardım politikasının yoksullukla mücadelede etkin bir araç olarak devreye girmesi gerekmektedir. Yoksulluk sınırının altında yaşamlarını sürdüren kişiler için uygulama alanı bulan asgari gelir güvencesi hakkının bu politikanın önemli bir bileşeni olacağı düşünülmektedir.

Yıllık programlardan elde edilen uzun dönemli sosyal harcamaların gelişimi incelendiğinde, 1999 yılında eğitim hariç sosyal harcamaların GSYH'ya oranı yüzde 8'lerden 2003 yılında yüzde 11 civarına yükselmiş ve 2009 krizi öncesine kadar yüzde 11,5'e tırmanmış, 2010 sonrasında da yüzde 13'e çıkmıştır. Bu çalışmadan elde edilen sonuçlara göre de, Türkiye'nin sosyal koruma harcamalarının GSYH'ya oranı, 2006-2008 döneminde yüzde 11,5 civarındadır. Bu harcamalar 2010-2011 yılında yüzde 13 civarına çıkmıştır. Öncelikle, bunun çok önemli bir artış olduğunu vurgulamakta yarar var. Benzer sonuçların elde edildiği kendi çalışmamızın sonuçlarına dayanarak, bu artışın gelecekteki seyri ile ilgili öngörülere baktığımızda, 2012-2014 arası dönem için bir artış öngörülmediği anlaşılmaktadır. Türkiye'nin en azından kişi başına milli gelirinin daha yüksek olduğu AB ülkelerinin sosyal koruma harcamalarının GSYH'ya oranına çıkabilmesi için sosyal koruma harcamasının GSYH'ya oranını yüzde 18'e yükseltebilmelidir. Türkiye'nin, yoksulluk ve sosyal dışlanmayla mücadelede ulusal bir strateji geliştirmesi çok önemlidir. Bu strateji kapsamında olması gereken ve harcamalara etkisi olacak iki önemli konudan söz edelim: Birincisi yoksullara vatandaş olma hakkından kaynaklanan düzenli gelir desteği verilmesi, ikincisi ise böyle bir stratejinin mutlaka koruyucu, önleyici çalışmalar ve sosyal hizmetlerle desteklenmesidir. Türkiye'deki sosyal koruma sisteminin en eksik halkalarından birisi, dünyada en yaygın olarak

uygulanan, vergilerden sağlanan ve vatandaş olma hakkından kaynaklanan bir düzenli gelir desteğinin olmamasıdır ve bütçeden 2012, 2013 ve 2014 yılları için bu konuda ayrılan ya da ayrılması planlanan ek bir kaynak olmadığı görülmektedir. Türkiye'de yardımların yoksullara ulaştırılma yöntemi, insanlık onurunu kırmadan, kriterleri objektif ve şeffaf, yasa ile belirlenmiş bir hak olarak, temel gelir desteği yoksullukla mücadelenin bir unsuru olmalıdır.

# Geçiş Ülkelerinde İktisat Eğitiminde Dönüşüm ve Uluslararası Görünürlük: Balkan İktisatçıları Örneği

# Transformation in Economics Education in Transition Countries and International Visibility: The Case of Balkan Economists

Prof. Dr. Murat Çokgezen (Marmara University, Turkey)
Asst. Prof. Dr. Jale Çokgezen (Marmara University, Turkey)

## Abstract

In the socialist era, economists, like other scientists, had limited connections to the West and their work rarely appeared in international journals due to methodological differences between the Western and the socialist scholars in social sciences, inadequacies in English, and other legal restrictions. After the collapse of socialism, legal barriers were lifted but the new republics still needed new economists equipped with the requirements of the new economic order based on private property and market mechanisms. To this end, they reorganized their economics curricula, published new textbooks, and trained students and academics. Aim of this study is to discuss impact of policies adopted in economics education by transition countries on publication performances of economists in former socialist countries in Balkan region. In this regard, articles published by the economists of former socialist countries in the Balkans between 1990 and 2013 are examined. The articles published in journals indexed by Scopus database are classified on the bases of countries, dates, authors, affiliations, journals and subjects. Long term trends derived from these classifications are interpreted. The results of this study show that number of publications by Balkan economists in Scopus economics journals increased gradually over 1990-2013 period: Particularly, increasing number of regional journals indexed in the Scopus soared the international publications of the Balkan economists. Overwhelming majority of these works are in English, published in regional journals and are about regional issues. The study also revealed that most of the contributors are affiliated to big, old, public universities of the region.

## 1 Giriş

Avrupa kıtasının doğusundaki ülkelerin büyük çoğunluğu yirminci yüzyılın yaklaşık yarısını sosyalist bir rejim altında geçirdiler. Bu ülkelerin hükümetleri, her alanda kendi vatandaşlarının batı dünyası ile ilişkileri sınırlamaya çalıştılar. Bu durum akademik dünya için de geçerliydi. Batı ile temas içinde olan akademisyenlere hep şüpheyle bakıldı. Batılı fikirlere ulaşım engellendi (Sinitsiya,1999; Polyak 2001). Bu baskılar, özellikle ideolojik yönü daha ağır basan sosyal bilimlerde, temel ve uygulamalı bilimlere göre daha fazlaydı (Kirtchik, 2012). Batı ülkelerinde konferanslara giden, o ülkelerde yayın yapan araştırmacılara şüphe ile bakıldı. Bu nedenle sosyalist ülkelerin araştırmacıları yayınlarını genellikle kendi ülkelerinde yaptılar. Tabii sosyalist ülke bilim adamlarının yayın yaparken batı ülke dergilerini tercih etmemesinin tek sebebi üzerlerindeki siyasi baskılar değildi. Özellikle sosyal bilimlerdeki batı ile metodolojik farklılıklar veya sosyalist ülke bilim adamlarının batı dilleri –özellikle İngilizce- konusundaki yetersizlikleri de sosyalist ülke akademisyenlerinin kendi ülkelerinde yayın yapma tercihlerinde etkili oldu.

Sosyalist sistemin yıkılmasıyla birlikte eski sosyalist ülkelerde hem siyasi alanda hem eğitim alanında bir dönüşüm yaşanmış, batı ülkeleri ile ilişkileri kısıtlayan politikalar yerini batı ile işbirliği politikalarına bırakmıştır. Bu çalışmanın amacı eski sosyalist ülkelerde siyasal ve eğitim alanında yaşanan dönüşümün bu ülke araştırmacılarının yayınlarının uluslararası görünürlüğünü nasıl etkilediğini araştırmaktır. Bu maksatla Avrupa'nın güneydoğusunda yer alan ve Balkanlar olarak adlandırılan bölgede yer alan 9 eski sosyalist ülkenin (Bulgaristan, Romanya, Hırvatistan, Sırbistan, Bosna, Arnavutluk, Makedonya, Moldova ve Karadağ) ekonomi dergilerinde 1980-2013 yılları arasında yaptıkları yayınlar sayıları, yayınların yapıldığı dergiler ve yayın yapan kurumlar bazında değerlendirilmiştir.

Çalışmanın ilk bölümünde, sosyalist dönem ve sonrasında ekonomi eğitimindeki temel dönüşüm ele alınmıştır. Takip eden bölümde yapılan araştırmanın metodolojisi ve temel bulguları yer almaktadır. Son bölümde ise konu hakkında elde edilen bulguların genel bir değerlendirmesi yapılmıştır.

## 2 Sosyalizmden Kapitalizme Geçiş ve İktisat Eğitiminde Dönüşüm

Sosyalist ülkelerdeki iktisat eğitimi ideolojik ağırlıklıydı. Öğrencilere Marksizm, komünist parti tarihi ve marjinalizm ile sosyalizmin bir kombinasyonu olan "sosyalist sistemin optimal işleyiş sistemi" gibi konular öğretilmekte iken, öğrenciler batıdaki iktisat eğitimin temelini oluşturan firma teorisi, fayda fonksiyonu, kamu tercihi gibi konulardan hiç haberdar değillerdi. Akademisyenler ise iki temel alanda yoğunlaşmışlardı: politik iktisatçılar ve matematiksel iktisatçılar. Sosyalist iktisatçıların büyük çoğunluğunun ilgilendiği politik iktisat, iktisadi sorunları Marksist-Leninist ideoloji ve deskriptif bir yöntemle açıklamaya çalışmaktaydı. Matematiksel

iktisat ise yüksek düzeyde matematik ama çok az sözel açıklama gerektiren çok teknik, az ideolojik bir disiplindi. Bu nedenle matematiksel iktisatçılar batı dünyasında daha fazla kabul gördüler, çalışmaları batı dillerine çevrildi, batı dergilerinde yayınlandı (Brue ve MacPhee, 1995;Alexeev, Gaddy ve Leitzel, 1992).

Sosyalizmin terk edilip özel mülkiyet ve piyasa ekonomisine dayalı bir rejimin benimsenmesiyle birlikte eski sosyalist ülkelerde yeni düzene uyarlanmış yeni bir ekonomi eğitimine ve yeni sistemin gerektirdiği niteliklerle donanmış iktisatçılara ihtiyaç vardı. Bu ihtiyacı karşılamak amacıyla benzer adımlar attılar. Bu adımlarda, önceki dönemin aksine, yabancı ülke hükümetleri, NGO'lar ve yardım programları ile yoğun bir işbirliği içindeydiler (Kirtchik, 2012; Silova ve Steiner-Khamsi, 2008).

Bu ülkelerdeki temel reform paketi ders programlarının yeniden düzenlenmesi, öğrenci değerlendirme sistemine yeni standartlar konulması, ders kitapları yayınının liberalizasyonu ve özelleştirilmesi ve okulların yeniden organizasyonunu içermekteydi. Öğrencilerin yurtiçi ve yurt dışında eğitilmesinde yeni kitapların basılmasında, okulların ve programların yeniden düzenlenmesinde yabancı partnerlerin finansal ve teknik desteğinden önemli ölçüde yararlanıldı. Bu çerçevede, burslar verildi, ortak ya da değişim programları yapıldı ve yeni eğitim ve araştırma merkezleri oluşturuldu (Kirtchick, 2012).

Kuşkusuz, bütün bu çabalar eski eğitim düzeninin tamamen tasfiye edilip yerine yenisinin geçmesine yol açmadı. Yeni sistemin gerekleri ile donanmış, yurt içinde ya da yurt dışında eğitim görmüş yeni nesillerin sayısı hızla artsa da eski düzenden kalanlar anahtar pozisyonları tutmaya devam ettiler. Yani eski anlayıştan keskin bir kopuş değil, yeni düzene tedrici bir geçiş gerçekleşti (Androushak ve Yudkevich, 2012; Pleskovic et al., 2002; Kirtchik, 2012; Coupe, 2008). Sosyalizmin çöküşünden sonra kurulan kurumlarda bu geçiş daha hızlı oldu (Pleskovic et.al., 2002).

## 3 Balkan İktisatçıların Yayın Performansları (1980-2013)

Çalışmada Balkan iktisatçıların 1980-2013 yılları arasındaki yayınlarına ulaşmak için Scopus veri tabanı kullanılmıştır. Scopus, uluslararası yayıncı Elsevier tarafından yayınlanan, farklı disiplinlerden yaklaşık 20.000 dergiyi kapsayan bir bibliyografik veri tabanıdır. İncelenen 9 ülkedeki kurumlardan birine mensup araştırmacıların Scopus'ta endeksli ekonomi dergilerinde yaptığı her bir yayın o ülkenin yayın stoğuna katkı yapmıştır.

Scopus veri tabanında 1980-2013 yılları arasında Balkanlarda incelenen Balkan ülke adresli 2316 yayın bulunmuştur. Yayın sayılarının zaman içindeki gelişimine bakıldığında hızlı bir artış görülmektedir. 1980-1989 yılları arasında 9 ülkenin yayınladığı toplam makale sayısı sadece 17 iken bu sayı 1990-1999 döneminde 55'e yükselmiştir. Ancak yayın sayılarındaki esas artış 2000'li yılların ikinci yarısında gözlenmiştir. 34 yıl içinde yayınlanan toplam 2322 makalenin yarısından fazlası son 4 yıl içinde yayınlanmıştır (Tablo 1). 2000'lerin ortasından itibaren gözlenen hızlı artış bölge iktisatçılarının en fazla yayın yaptığı, bölge ülkelerinde yayınlanan dergilerin aynı dönemde Scopus veri tabanına dahil olmasıyla açıklanabilir. Örneğin, bölge iktisatçılarının en fazla yayın yaptığı dergilerin ilk dört sırasında yer alan dergiler (Tablo 2) 2007 yılından itibaren Scopus'ta indekslenmeye başlamıştır. Benzer durum diğer dergiler için de geçerlidir. Scopus'a dahil olan dergi sayısı arttıkça uluslararası yayın sayılarında da hızlı bir artış gözlenmiştir. Bu nedenle, Balkan ülkelerinde yayınlanan dergilerin yaygın kabul görmüş indekslere dahil olmasının bölge iktisatçılarının uluslararası görünürlüğüne olumlu katkı yaptığını söylemek yanlış olmaz.

Yapılan yayınlara en büyük katkı Romanya'dan gelmiştir. Toplam yayınların yaklaşık %52'si Romanya'daki üniversitelere mensup akademisyenler tarafından gerçekleştirilmiştir. Bu ülkeyi sırayla Hırvatistan, Sırbistan ve Bulgaristan izlemektedir. Diğer ülkelerin katkısı yaklaşık %5 düzeyindedir. Daha fazla katkı yapan ülkelerin diğerlerine göre daha büyük bir nüfusa sahip ve ekonomik olarak daha iyi durumda olduğu dikkat çekmektedir (Tablo 1). Ayrıca bu ülkeler en fazla sayıda Scopus'ta endekslenen dergiye sahip ülkelerdir.

Makalelerin dergilere göre dağılımına bakıldığında (Tablo 2), ilk üç sırayı Romanya'da yayınlanan dergilerin (sırayla Amfiteatru Economic, Economic Computation and Economic Cybernetics Studies and Research ve Romanian Journal of Economic Forecasting) aldığı görülmektedir. İlgili dönemde yayınlanan toplam 2316 makalenin yaklaşık %30'u (703 adet) bu üç dergide yer almaktadır. Bu dergileri Hırvatistan'da yayınlanan iki dergi (sırasıyla Ekonomski Pregled, Ekonomska Istrazivanja) takip etmektedir. Toplam yayınların %13 kadarı (314 adet) bu iki Hırvatistan orijinli dergide yer almaktadır. Bu dergileri altıncı sırada Ukrayna orijinli Actual Problems of Economics takip etmektedir. Yedinci sırada Belgrat Üniversitesi, Ekonomi Fakültesi (Sırbistan) tarafından yayınlanan Economic Annals bulunmaktadır. Bu dergilerin ortak özelliği bölge ülkelerinde yayınlanmaları ve İngilizce yanında bölge dillerinde (Bölgedeki birçok dil gibi Slav kökenli olan Rusça da bölge dili olarak kabul edilebilir) yayınlanmış makaleleri de kabul etmeleridir. Ayrıca bu özelliklere sahip dergilerin sayısı bunlarla sınırlı değildir. Listenin alt sıralarında, içinde yüzlerce makalenin yayınlandığı Privredna Kretanja I Ekonomska Politika (Hırvatistan) ve Ikonomicheski Izsledvania (Bulgaristan) gibi dergiler de bulunmaktadır.

Yayın yapılan dergilerin çoğunluğu bölge ülkelerinde yayınlanan ve yerel dillerde yayınlanmış makaleleri de kabul eden dergiler olsalar da incelenen yayınların büyük çoğunluğu İngilizce olarak yayınlanmıştır. Bu durum

bölge araştırmacılarının bilim dünyasının ortak lisanı olan İngilizce konusunda önemli bir ilerleme kaydettiğini göstermektedir.

| | Bulgaristan | Romanya | Hırvatistan | Sırbistan | Bosna | Arnavutluk | Makedonya | Moldova | Karadağ | Toplam |
|---|---|---|---|---|---|---|---|---|---|---|
| 2013 | 15 | 200 | 66 | 52 | 1 | 5 | 13 | 3 | 4 | 359 |
| 2012 | 21 | 191 | 98 | 79 | 8 | 5 | 15 | 2 | 0 | 419 |

| 2006 | 8 | 12 | 15 | 1 | 1 | 2 | 2 | 2 | 0 | 43 |
| 2005 | 2 | 2 | 4 | 0 | 0 | 0 | 0 | 0 | 0 | 8 |
| 2004 | 1 | 5 | 2 | 3 | 0 | 0 | 0 | 0 | 0 | 11 |
| 2003 | 7 | 3 | 2 | 0 | 0 | 0 | 0 | 0 | 1 | 13 |
| 2002 | 7 | 3 | 2 | 0 | 0 | 1 | 1 | 0 | 0 | 14 |
| 2001 | 6 | 1 | 2 | 0 | 0 | 0 | 0 | 0 | 0 | 9 |
| 2000 | 3 | 4 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 8 |
| 1990-1999 | 28 | 10 | 7 | 0 | 0 | 3 | 7 | 0 | 0 | 55 |
| 1980-1989 | 7 | 1 | 2 | 7 | 0 | 0 | 0 | 0 | 0 | 17 |
| Toplam | 184 | 1198 | 529 | 279 | 29 | 28 | 54 | 10 | 11 | 2322 |

*Tablo 1. Makalelerin yıllara ve ülkelere göre dağılımı*

| 1 | Amfiteatru Economic (Romanya) | 290 |
|---|---|---|
| 2 | Economic Computation and Economic Cybernetics Studies and Research (Romanya) | 231 |
| 3 | Romanian Journal of Economic Forecasting (Romanya) | 182 |
| 4 | Ekonomski Pregled (Hırvatistan) | 179 |
| 5 | Ekonomska Istrazivanja (Hırvatistan) | 135 |
| 6 | Actual Problems of Economics (Ukrayna) | 95 |
| 7 | Economic Annals (Sırbistan) | 84 |
| 8 | Transformations in Business and Economics (Litvanya) | 59 |
| 9 | European Research Studies Journal | 56 |
| 10 | Nonlinear Analysis Real World Applications | 55 |

*Tablo 2. En fazla yayın yapılan on dergi*

Yoğunlukla yayın yapılan dergilerin bir başka özelliği, bölge ülkelerinin ekonomik sorunları ve sosyalizmden geçiş deneyimleri ile ilgili yazıların ağırlıklı olarak yer aldığı dergiler olmalarıdır. Bölgede yayınlanan dergiler dışında Economics of Transition (11 makale), Eastern European Economics (38 makale), Post Communist Economies (24 makale) gibi bölge ya da geçiş sorunları ile ilgili uluslararası dergilerde önemli ölçüde yayın yapılmıştır. Bu ülkelerin Avrupa Birliği'ne üyelik görüşmelerine başlaması ve bazılarının üye olmasıyla birlikte European Research Studies Journal gibi Birlik ile ilgili konularda da önemli ölçüde yayın yapılmıştır. Bunların yanında Economic Computation and Economic Cybernetics Studies and Research ve özellikle Nonlinear Analysis Real World Applications gibi matematik ağırlıklı dergilerin ilk 10 dergi içinde yer alması eski dönemden kalma matematiksel iktisat alanındaki geleneğin sürdüğünü göstermektedir.

Yayın yapılan dergilerin ülkelere göre dağılımına bakıldığında benzer eğilimler gözlemlenmektedir (EK-1). Bulgar, Hırvat, Romen ve Sırp araştırmacıların en fazla yayın yaptığı dergiler kendi ülkelerinde yayınlanan dergilerdir (Sırasıyla Ikonomicheski Izsledvania, Ekonomski Pregled, Amfiteatru Economic, Economic Annals). Bunun yanında nüfusun çoğunluğunu Romenlerin oluşturduğu ve Romence'nin resmi dil olduğu Moldova'da iktisatçılar en fazla bir Romen dergisinde (Romanian Journal of Economic Forecasting) yayın yapmışlardır. Sosyalizm döneminde Yugoslavya çatısı altında birlikte yaşamış ve etnik ve kültürel ortaklıkları olan ülkelerin de Yugoslavya'nın dağılmasından ve her birinin bağımsız bir ülke olmasından sonra da bağlarının sürdüğü görülmektedir. Örneğin Bosna'lı iktisatçılar en fazla bir Hırvat dergisinde (Ekonomska Istrazivanja), Karadağlılar bir Sırp dergisinde (Economic Annals) yayın yapmışlardır. Ayrıca Hırvat dergisi Ekonomska Istrazivanja Makedon iktisatçıların da en fazla yayın yaptığı dergiler sıralamasında ikinci sırada yer almaktadır.

Tablo 3 incelenen 9 ülkenin her birinde en fazla yayın yapan üniversiteleri göstermektedir. Listeden yer alan üniversitelerin tamamı ilgili ülkenin köklü, büyük ölçekli kamu üniversiteleridir. Sahip oldukları öğretim üyesi sayısının büyüklüğü düşünüldüğünde bu kurumların en fazla yayını yapıyor olmaları anlaşılabilir. Bu

üniversiteler yanında, Makedonya'daki University American College Skopje ve Bulgaristan'daki American University in Bulgaria gibi daha yeni (kuruluş tarihleri sırasıyla 2005 ve 1991) özel üniversitelerin de kendilerini göstermeye başladıkları görülmektedir.

| University of Sarajevo | 15 | Bosna |
|---|---|---|
| University of Tirana | 9 | Arnavutluk |
| University of Montenegro, | 4 | Karadağ |
| State University of Moldova | 2 | Moldova |
| SS Cyril and Methodius University | 24 | Makedon |
| University of Belgrade | 107 | Sırbistan |
| University of Zagreb | 117 | Hırvatistan |
| Bulgarian Academy of Sciences | 36 | Bulgaristan |
| Academy of Economic Studies, Bucharest | 380 | Romanya |

*Tablo 3. Her ülkenin en fazla yayın yapan üniversitesi*

## 4   Genel Değerlendirme ve Sonuç

Sosyalizm döneminde siyasi baskılar yabancı dil sorunları ve metodolojik farklılıklar nedeniyle Balkan ülkelerinin iktisatçıları batı ülkelerinde nadiren yayın yapabilmekteydiler.

Sosyalist sistemin terk edilmesiyle siyasi baskılar kaldırıldı, batı tarzı iktisat eğitim benimsendi, akademik camianın ortak lisanı olan İngilizce yaygın olarak öğretilmeye başlandı. Bu dönüşüm hareketiyle birlikte bu ülkelerin uluslararası yayın sayısında hızlı bir artış meydana geldi. 1990-1999 yılları arasında yapılan toplam yayın sayısı yaklaşık 50 iken, yayın sayısı 2007 yılında yılda 50'ye, son yıllarda ise yılda 400'lere yükseldi. Yayın sayısındaki bu hızlı tırmanışın en önemli sebebi uluslararası indekslere dahil olan bölge orijinli dergi sayısının artmasıydı.

Ülke bazında bakıldığında, yayınların en çok yapıldığı ülke Romanya'dır (% 50'den fazlası). Bu ülkeyi Hırvatistan, Sırbistan ve Bulgaristan izlemektedir. Diğer ülkelerin katkısı oldukça düşük düzeydedir. Yayın katkısı yüksek olan ülkeler ekonomik refah, nüfus ve Scopus'ta endekslenen dergi sayısı açısından diğerlerinin çok ilerisindedir.

Yayınların önemli bir kısmı İngilizce dilinde yapılmaya başlandı. Ancak, hala yapılan yayınların önemli bir kısmı ya araştırmacının kendi ülkesinde ya da diğer bölge ülkelerinde –özellikle de kültürel bağların olduğu ülkelerde- yayınlanan dergilerde yer almaktadırlar. Uluslararası saygınlığa sahip, yüksek etki faktörlü dergilerde yapılan yayınların sayısı çok sınırlıdır.

Yayınların çoğu bölge ile ilgili konular, geçiş sorunları ve AB'ne entegrasyon ile ilişkilidir. Ayrıca sosyalist dönem geleneğinden kalan matematiksel iktisat geleneğinin hala bu ülkelerde etkili olduğu görülmektedir.

Yapılan yayınlara en büyük katkı ülkenin eski, büyük kamu üniversitelerinden almıştır ancak yeni, küçük, özel üniversitelerin katkısı da giderek artmaktadır.

# Türkiye ve AB Ülkelerinde Dışa Açıklığın İstihdam Üzerine Etkileri

# Effects of Openness on Employment in Turkey and EU Countries

Prof. Dr. Zekai Özdemir (Istanbul University, Turkey)

Asst. Prof. Dr. İlkay Noyan Yalman (Cumhuriyet University, Turkey)

Asst. Prof. Dr. Çağatay Karaköy (Cumhuriyet University, Turkey)

## Abstract

According to the general theory, it is recognized that exports increase employment. Recently, in the world economy, increasing unemployment, foreign trade of the impact on employment has led to new research. Many of the aforementioned studies validating the theory, some of them have different results. In recent studies in Turkey was a different result. In this study, Turkey and the European Union countries in terms of trade effect on employment will be examined. For this purpose, employment and foreign trade data for the years 2000-2012 using a panel data analysis will be done. Exports, imports, wages, and production depending on the change in employment and the interaction will be investigated. Depending on available data at the sectoral level, there will be a distinction. Especially in the last ten years, the recession and rise in unemployment in Europe will be discussed with the relevant dynamics. In Turkey, the current account deficit, growth, unemployment issues are noteworthy. European Union accession process, Turkey and the European Union countries in the comparison will be significant in the economic indicators.

## 1 Giriş

Geçmişten bugüne kadar geçen süre içerisinde, dünya ekonomisindeki yeri ve önemi gittikçe artan dış ticaretin istihdam üzerindeki etkisi, uluslararası ticaret teorilerinde tartışma konusu olmuştur. Dış ticaret, ülkelerin üretim faktörlerindeki eksikliklerini ülke dışından temin ederek iç üretimlerini sürdürmek için gerekli sermaye, ara girdi ve teknolojiyi uluslararası piyasalardan uygun koşullarda temin etme imkanı vermektedir. Heckscher-Ohlin-Samuelson (H-O-S) yaklaşımında, üretim faktörü donanımı farklılığı dolayısıyla, dış ticaretin sektörler genelinde istihdam üzerindeki etkisini ortaya çıkarmaya yönelik öneriler sunulmuştur. Ticaret engellerinin kaldırılması durumunda, ithal ikameci sektörlerin üretimleri ve dolayısıyla istihdam düzeyi azalırken, ihracat yapan sektörlerin üretimleri ve dolayısıyla istihdam düzeyi artar. Dünya ticaret hacminin büyümesi ile birlikte bir yandan üretim hacminin giderek değişmesi, diğer yandan da gelişmiş ve gelişmekte olan ülkelerde ekonomik gelişmelere rağmen işsizliğin büyük boyutlara ulaşmış olması, dış ticaret ve istihdama etkileri konusunu ilgi çekici hale getirmektedir. Ancak konuyla ilgili olarak literatürde fazla çalışma bulunmamaktadır. Dolayısıyla bu çalışmada, Türkiye ve Avrupa Birliği ülkeleri açısından istihdam üzerinde dış ticaretin etkileri incelenmiştir. Bu amaçla 1990-2012 yıllarına ait istihdam ve dış ticaret verileri kullanılarak panel veri analizi yapılmıştır.

Çalışmada özellikle son on yılda Avrupa'da yaşanan durgunluk ve işsizliğin artmasıyla ilgili dinamiklere, Türkiye'de ise cari açık, büyüme ve işsizlik konularına dikkat çekilmiştir. Avrupa Birliğine giriş sürecinde Türkiye ile Avrupa Birliği ülkelerinin ekonomik göstergelerindeki karşılaştırmalar önemlidir. Böylece dışa açıklığın istihdamı artırıcı, işsizliği düşürücü etkisi ortaya konulmaya çalışılmıştır.

## 2 Literatür Özeti

Neo-klasik yaklaşıma göre ülkelerin dış ticarete yönelmelerinin iki temel sebebi, arz ve talep koşullarındaki farklılıklardır. Ülkelerin arz koşullarının farklılığının kaynağında ise üretim teknolojilerinde ve faktör donatımlarındaki farklılıklar bulunmaktadır. Üretken kaynaklar ülkeler arasında eşit bir şekilde dağıtılmadığından, ülkelerin faktör yapısı farklılık göstermektedir. Doğal kaynaklar, sermaye, emek, teknoloji gibi temel üretim faktörlerinin ülkeler arasında gerek kalite gerek miktar yönünden farklılaştığı görülmektedir (Ayaş, Çeştepe 2010). Dolayısı ile ülkeler arasında maliyet farklılıkları serbest piyasa koşulları altında dış ticaretin oluşmasına sebep olmaktadır. Üretim faktörleri yönünden kıt olan mal ve hizmetler ithal edilerek fazla olanlar ise ihraç edilmektedir.

Ekonomik büyümenin sağlanması ve devam ettirilmesi tüm ülkeler için en önemli hedeflerden birisidir. Gelişmiş ülkeler mevcut durumlarını korumayı hedeflerken, gelişmekte olan ülkeler ekonomik kalkınmayı destekler bir büyüme sağlamayı amaçlamaktadırlar. Bu bağlamda neoklasik ekonomi modellerin istihdam ve işsizlik, ticaret politikalarından ziyade makroekonomik değişkenler üzerinde durmuşlardır. Buna göre, neoklasik yaklaşımda, kısa dönemde ekonomik aktiviteler makroekonomik politika şokları tarafından etkilenmektedir. Fakat uzun dönemde bu etkinin arz ve talep ilişkisi ile ortadan kalkacağı diğer bir deyişle piyasaların temizleneceği düşünülmektedir. Buna karşılık yapısalcı görüş ise ticaret politikaları ile istihdam üzerinde geçici

değil kalıcı etkilerin oluşabileceğini savunmaktadır. Bu anlamda yapısalcılar, kısa dönemde ticaret politikaları ile oluşabilecek dengesizlikleri öne çıkarmaktadırlar (Karaçor,.Saraç 2011).

Teorik yaklaşımlardaki farklılıklara rağmen uygulamalı çalışmaların büyük bölümünde dış ticaretin istihdam üzerinde olumlu etkileri olduğu görülmektedir. Benzer şekilde 1980 sonrası ihracata yönelik sanayileşme stratejisini benimseyen Türkiye'de dış ticaretin istihdam üzerindeki çalışmaların yeterli düzeyde olmasa da Tablo l'de belirtildiği üzere yabancı literatürdeki benzer sonuçlara ulaştığı görülmektedir.

| Yazar (lar) | Kapsam ve Dönem | Yöntem | Sonuç |
|---|---|---|---|
| Sachs ve Shatz (1994) | ABD (1990) | Regresyon Analizi | Dış ticaretin nitelikli işgücü istihdamını artırdığı fakat niteliksiz işgücü istihdamını azalttığını ortaya koymuşlardır. |
| Krugman (1995) | ABD (1960-1993) | Çekim Modeli | Gelişmekte olan ülkeler ile yapılan ticaretin istihdamı %1.43 oranında azalttığını tespit etmiştir. |
| Messerlin (1995) | Fransa (1980-1992) | Borjas, Freeman ve Katz Yöntemi | Dış ticaretin istihdam üzerinde her yıl ortalama %8'lik bir artışa neden olduğunu ortaya koymuştur. |
| Şenesen (1998) | Türkiye (1973-1990) | Girdi-Çıktı Yöntemi | Ülkenin istihdam oluşturabilme kapasitesinin beklenildiğinin aksine azaldığı sonucuna ulaşmıştır. |
| Bernard ve Jensen (1999) | ABD (1984-1992) | Simülasyon Analizi | İhracat yapan firmaların ihracat yapmayan firmalara göre daha fazla istihdam artışı sağladığını tespit etmişlerdir. |
| Greenavvay vd. (1999) | İngiltere (1979-1991) | Dinamik Panel Veri Analizi | İhracattaki yüzde bir oranındaki artışın istihdamı kısa dönemde %3,8; uzun dönemde ise %4.71 oranında azalttığını belirlemişlerdir. |
| Slaughter (2001) | ABD (1961-1991) | Panel Veri Analizi | Niteliksiz işgücü talep esnekliğinin kesin bir şekilde dış ticaretten kaynaklanmadığını belirlemiştir |
| Fu ve Balasubramanyam (2004) | Çin (1987-1998) | Dinamik Panel Veri Analizi | İhracattaki yüzde birlik bir artışın istihdamı yüzde 0.10 oranında artırdığı bulgusunu elde etmişlerdir. |
| Welsum ve Reif (2006) | 14 OECD Ülkesi (1996-2003) | Dinamik Panel Veri Analizi | İhracattaki bir birimlik artışın istihdamı yüzde 0.90 oranında artırdığı sonucuna ulaşmıştır. |

## 3   Araştırmanın Yöntemi

Ekonomik araştırmalarda farklı veri türleri kullanılmaktadır. Bu veri türleri ancak yapılarına uygun modellerle incelenebilmektedir. Ekonomik değişkenler arasındaki ilişkiler incelenirken istatistiksel ve ekonometrik olarak yatay kesit verileri, zaman serileri veya yatay kesit verileri ile zaman serilerinin birleşiminden oluşan panel verilerden yararlanılmaktadır. Zaman serisi ve yatay dikey kesit verileri ile ayrı ayrı analizler yapılabilmektedir. Zaman boyutuna sahip kesit serilerini kullanarak ekonomik ilişkilerin tahmin edilmesi yöntemine *panel veri analizi* adı verilmektedir. Bu analizde zaman serileri ile kesit serileri bir araya getirilerek, hem zaman hem de kesit boyutuna sahip veri seti oluşturulmaktadır. Günümüzde birçok çalışmada zaman ve yatay kesit verilerinin birleştirilmesi ile elde edilen veri setleri oluşturulmaya başlanmıştır (M.V.Pazarlıoğlu, Ö.K. Gürler 2007). Panel veri sadece yatay kesit ya da sadece zaman serisi ile karşılaştırıldığında çeşitli avantajlara sahip bulunmaktadır. Panel veri kullanmanın avantajları şunlardır. Panel veri modellerinde gözlem sayısı kesit ve zaman serilerine göre daha fazla olacaktır. Bu durumda elde edilecek parametre tahminleri daha güvenilir olacak ve tahmin edilen modeller daha az kısıtlayıcı varsayıma dayanacaktır. Oysa sadece zaman serisi veya kesit verisi ile yapılan çalışmalarda, sapmalı sonuçlar elde etme riski söz konusu olacağından birimlerin farklıları ayrıntılı olarak kontrol edilemez. Ayrıca panel veri modelleri tamamıyla kesit ya da zaman serilerinden daha karmaşık davranış modellerinin kurulmasına ve test edilmesine olanak tanır. Bununla birlikte dışlanan değişkenler, zaman serisi veya yatay kesit verisi kullanılarak yapılan çalışmalarda tahmin sonuçlarında sapmaya yol açarken; dışlanan değişken veya değişkenlerin birimlere veya zamana göre değişmeyen değişkenler olması durumunda, panel veri kullanımı sapmanın kontrol altına alınmasını sağlamaktadır. Panel veri kullanmanın diğer bir avantajı da; yatay

kesit verisi kullanılarak yapılan tahminlerde, sadece birimler arasındaki farklıklar incelenebilirken, panel veri kullanılarak hem birimler hem de bir birim içerisinde zaman içerisinde meydana gelen farklılıklar birlikte incelenebilmektedir. Panel veri ekonometrisinde yatay kesit veriler ve zaman serisi verilerinin panel sistemine çevrildikten sonraki aşaması sabit etkiler veya tesadüfi etkiler modeli tarafından açıklanıp açıklanmadığının tespit edilmesidir (Alptekin 2010).

## 4 Sabit Etkili Modeller

Panel veri kullanılarak yapılan çalışmalarda birimler arasındaki farklılıklardan veya birimler arasında ve zaman içinde meydana gelen farklıklardan kaynaklanan değişmeyi, modele dahil etmenin bir yolu; mevcut değişmenin regresyon modelinin katsayılarının bazılarında veya tümünde değişmeye yol açtığını varsaymaktadır. Katsayıların birimlere veya birimler ile zamana göre değiştiğinin varsayıldığı modellere "Sabit Etkili Modeller" denmektedir. Modelin genel formülasyonu, birimler arasındaki farklılıkların sabit terimdeki farklılıklarda yakalanabildiğini varsaymaktadır (Pazarlıoğlu, 2007). Bu amaçla panel veri modeli kukla değişken yardımıyla tahmin edilmektedir.

## 5 Tesadüfi (Rassal) Etkili Modeller

Panel veri analizi ile yapılan çalışmalarda birimlere veya birimlere ve zamana bağlı olarak ortaya çıkan farklılıklardan kaynaklanan değişim tesadüfi etkiler modeli kullanılarak da incelenebilmektedir. Bu modele göre, birimlere veya birimlere ve zamana bağlı olarak meydana gelen değişkenler modele hata teriminin bir bileşeni olarak dahil edilmektedir. Bunun amacı sabit etkili modellerde karşılaşılan serbestlik derecesi kaybının önlenmek istenmiş olmasıdır (Baltagi, 2005:13). Çünkü tesadüfi etkiler modelinde önemli olan birime veya birime ve zamana bağlı olarak ortaya çıkan katsayıların bulunması değil birime veya birime ve zamana özel hata bileşenlerinin bulunmasıdır. Ayrıca tesadüfi etkiler modelinde sadece gözlenen örnekteki kesit, birimler veya zamana göre meydana gelen farklılıkların etkisini değil, örnek dışındaki etkileri de dikkate almaktadır (Alptekin 2010).

## 6 Hausman Testi

Birim veya birim ve zaman farklılıklarını temsil eden katsayıların yani tesadüfi etkili modelin hata terimi bileşenlerinin modeldeki bağımsız değişkenlerden ilişkisiz olduğu hipotezinin geçerliliği Hausman tarafından önerilen test istatistiği ile incelenebilmektedir (Grene. 2003). Bu durumda sabit etkili model parametre tahmincileri ile tesadüfi etkili modelin parametre tahmincileri arasındaki farkın istatistiksel olarak anlamlı olup olmadığının incelenmesi gerekmektedir. İki model arasında tercih yapabilmek için Hausman Test İstatistiği kullanılmaktadır. Hausman Test İstatistiği. "Tesadüfi Etkiler Tahmincisi Doğrudur" sıfır hipotezi altında κ serbestlik dereceli ki-kare dağılımı göstermektedir. Gerçekleşmesi durumunda tesadüfi etkili modelin hata terimleri bileşenlerinin bağımsız değişkenler ile ilişkili olmadığı kararı verilebilecektir. Bu durumda sabit etkili model tercih edilecektir (Pazarlıoğlu ve Gürler, 2007).

## 7 Veriler ve Model

Çalışmada, Türkiye ve Avrupa Birliği ülkeleri açısından istihdam üzerinde dış ticaretin etkisi incelenmiştir. Bu amaçla 1990-2012 yıllarına ait sabit sermaye yatırımları, işsizlik, büyüme ve dış ticaret verileri kullanılarak panel veri analizi yapılmıştır. Bu doğrultuda Türkiye ve Avrupa birliği ülkelerinin (29 ülke) işsizlik oranları 1990-2012 yılları, sabit sermaye yatırımları, büyüme ve dışa açıklık oranları dünya bankası data bankasından alınarak düzenlemiştir. Model ise şu şekilde oluşturulmuştur.

$$Y_t = \alpha_0 + \beta_o \ SBTSRMYYAT_{t-1} + \beta_1 \ BUYUME_t + \beta_2 \ DISACIK_t + u_t$$

| Bağımsız değişken | Sabit Etkiler | Tesadüfi (Rassal) Etkiler |
|---|---|---|
| Sabit | 3.48 (8.558505) | 3,34(7,906396) |
| SBTSRMYYAT | 0.25 (1.466291) | 0,25(1,456221) |
| BUYUME | 00.013 (0.286993) | 0.0075(0,169683) |
| DISACIK | 1.86 (0.180895) | 1.60(2,232354) |
| Gözlem Sayısı | 589 | 589 |
| Düzeltilmiş R Kare | 0.127698 | 0.006379 |
| F İstatistik | 3.776735(0.000000) | 2.258403(0,080591) |
| Hausman Testi | | 9.747895(0,0208) |
| Durbin-Watson | 1.947580 | |

**Not:** Sırasıyla %1 ve %5 düzeyinde istatistiksel anlamlılığı belirtmektedir. Parantez içerisindekiler t-istatistik değerini göstermektedir. Hausman testi parantez içi ise olasılık değeridir.

*Tablo 2: 1990-2012 Dönemi Panel Verileri Tahmin Sonuçları*

Burada sabit sermaye yatırımlarını SBTSRMYYAT, gayri safi yurt içi hasıladaki artışı BUYUME, ihracat ve ithalatın gayri safi yurt içi hasılaya oranlanması sonucunda dışa açıklığı DISACIK ve hata terimleri gösterilmektedir. İşsizlik oranlarını, sabit sermaye yatırımları ve dışa açıklığın düşürmesi beklenmektedir.

Birim ve zaman farklılıklarını temsil eden katsayıların başka bir ifadeyle tesadüfi etkiler modelinin hata bileşenlerinin modeldeki bağımsız değişkenlerden ilişkisiz olduğu hipotezinin geçerliliği, Hausman tarafından önerilen test istatistiği ile incelenmektedir. Bu durumda sabit etkiler modeli parametre tahmincileri ile tesadüfi etkiler modelinin parametre tahmincileri arasındaki farkın istatistiki olarak anlamlı olup olmadığının incelenmesi gerekmektedir. İki model arasında tercih yapabilmek için Hausman test istatistiği kullanılmaktadır(Umutlu, Yılmaz, Günel, 2011).  Hausman testini yapabilmek için önce denklem tesadüfi olarak tahmin edilmeli daha sonra bu tahmin üzerinden test yapılarak sabit etkiler modelinin mi yoksa tesadüfi etkiler modelinin mi kullanılacağına karar verilmelidir.

- H0: Tesadüfi etkiler mevcuttur
- H1: Tesadüfi etkiler yoktur.

| Test özeti | Ki- Kare İstatistiği | Ki-Kare Bağımsızlık Derecesi | Olasılık |
|---|---|---|---|
| Cross-Section Random Effects | 9.747895 | 3 | 0.0208 |

*Tablo 3: Hausman Test*

Bu durumda yapılan hausman testi sonuçlarında olasılık değerinin sıfıra yakın olması H0 hipotezini %1 anlamlılık değerine reddederek, sabit etkiler yönteminin kullanılması gerekliliğini ortaya koymaktadır

## 8   Sonuç

Bu çalışmada 1992-2012 yılları arasında Türkiye ve Avrupa ülkeleride dış ticaretin, sabit sermaye yatırımlarının ve dışa açıklığın işsiliğin azaltılması yönünde etkilerinin olacağı düşünülerek panel veri analizi ile test edilmiştir. Yapılan analizler sonucunda üretimin istihdam üzerine olumlu etkileri ve dolayısıyla işsizliği azaltıcı yönde olduğu gözlemlenmiştir. Bu sebeten dışa açıklığın ve sabit sermaye yatırımlarının artırılması yönünde politilkarın desteklenmesi gerekmektedir. İhracatın artırılmasına yönelik teşviklerle istihdam yaratılabileceği düşünülmektedir.

1980 sonrası dışa açık bir politika izleyen Türkiye dış ticaretinde liberalleşmesi amacıyla 1996 yılında Avrupa ile gümrük birliği anlaşması imzalamıştır. Bu sayede sanayi mallarındaki gümrük sıfırlanmıştır. Türkiye daha çok emek yoğun üretim yapma şansına kavuşarak istihdam yaratıcı etkilerini orta vadede görmüştür. Bu bağlamda Avrupa Birliği ülkeleri Türkiye için önemli ticari bir partner konumundadır, İhracatımızın Türkiye İstatistik Kurumu rakamlarına gore; 2013 yılı itibari ile 58 miyar doları Avrupa Birliği ülkelerine aynı zamanda ithalatımızın da 84 milyar doları Avrupa Birliği ülkelerinden olduğu dikkate alındığında, Avrupa içinde Tükiye'nin önemli bir pazar olduğu sonucu ortaya çıkmaktadır. Avrupa Birliğinin ekonomik anlamdaki sıkıntılarının 2013 itibari ile ortadan kalkmaya başlaması, hem Türkiye hem de Avrupa Birliği ülkeleri için olumlu gelişmelere neden olmaktadır. Sonuç olarak çalışmada yapılan analizler göstermektedir ki, Avrupa Birliği ve Türkiye ekonomilerinin dışa açıklıkları istihdam yaratıcı etkiye sahiptir.

# Eğitimdeki Gelişme ve Koşullar Bakımından Türkiye ve Geçiş Ekonomileri Karşılaştırması

# A Comparison of Turkey and Transition Economies in terms of Educational Development and Conditions

Asst. Prof. Dr. Erol Karaca (Anadolu University, Turkey)

## Abstract

The main objective of this research is to determine and evaluate the dimensions of educational development in Turkey in comparison with the Central and Eastern Europe (CEE) countries and Commonwealth of Independent States (CIS) countries. For this purpose, in this study, Turkey is compared to the Central and Eastern Europe (CEE) countries and the Commonwealth of Independent States (CIS) countries with regard to the educational development and conditions. In this study, carried out through comparative relation scanning model and literature model, the sample group was established the Central and Eastern Europe (CEE) countries and Commonwealth of Independent States (CIS) countries with Turkey. The research data was collected by means of data from HDI Report developed by United Nations Development Programme (UNDP). On the base of data obtained from report, the study concluded that the lowest rate of adult literacy and population with at least secondary education belongs to Turkey. The rate of enrolment in primary education, however, is higher in Turkey than most of the CEE and CIS countries. This affirmative data can be attributed to the high rate of young population and/or education campaigns in Turkey since the lowest rate of secondary education and the highest level of primary school dropout rate is also seen in Turkey. In addition, performance of 15-year old students in reading, mathematics and science is generally lower in Turkey, CEE and CIS countries than in OECD countries.

## 1 Giriş

Bilindiği üzere eğitim fırsat eşitliğinin sağlanması açısından önemli bir araç ve kalkınmışlık göstergesidir. Bu özelliği nedeniyle günümüzde yapılan teorik çalışmalarda eğitimin büyüme ve kalkınma konusundaki önemine dikkat çekilmekte ve eğitimde fırsat eşitliği sağlanması yönünde etkin politikalar üretilmesine vurgu yapılmaktadır. Beşeri sermaye ve sosyal sermaye ile ilgili alanyazın bir arada incelendiğinde eğitimin sosyalleşmeyi sağlamak bakımından taşıdığı önem ortaya çıkmaktadır. Okullaşma ve özellikle eğitime yönelik kamu harcamaları yoluyla daha çok öğrencinin eğitim sistemi içinde yer alması eğitimden elde edilecek faydanın da artmasına yol açmaktadır. Makro ekonomik boyutta ekonomik büyüme ve kalkınma, gelirin yeniden dağıtımı gibi konularda olumlu etkileri olan eğitim, bireysel açıdan da yaşam kalitesini artırıcı bir unsur olarak karşımıza çıkmaktadır (Gradstein ve Justman, 2002). Hatta günümüzde eğitim, kişi başına düşen milli gelir kadar ülkelerin gelişmişlik düzeyinin saptanmasında etkili bir ölçüt olarak karşımıza çıkmaktadır. Nitekim Birleşmiş Milletler Kalkınma Programı (UNDP)'na göre ülkelerin sosyo-ekonomik gelişme düzeylerinin sadece kişi başına düşen milli gelirdeki artışla, başka bir deyişle ekonomik büyümeyle ölçülmesi doğru değildir. Ülkelerin sosyo-ekonomik gelişmişlik düzeylerinin saptanmasında kişi başına düşen milli gelire ilaveten eğitim standardının ve sağlık standardının da dikkate alınması gerekmektedir.

Bir ülkenin refah ve mutluluğu, o ülke insanlarının sürekli eğitim alarak sahip oldukları bilgi ve becerileri geliştirmelerine ve buna bağlı olarak ekonomik büyümeye yapacakları katkıya bağlıdır. Ülkenin sahip olduğu işgücünün nitelik ve verimini artırması, sürdürülebilir ve sosyal ekonomik kalkınmanın desteklenmesi, değişimin ve gelişimin anahtarı olan eğitimin görevidir (Ereş, 2005; Nartgün-Kösterelioğlu-Sipahioğlu, 2013). Bu bağlamda sosyo-ekonomik gelişmenin en önemli itici gücünün ve verimlilik artışının en önemli unsurunun, toplumun ve işgücünün eğitim düzeyi olduğu söylenebilir. Eğitimin büyüme ve kalkınmaya olan etkisi uluslararası karşılaştırmalar yoluyla da saptanmış olup, gelir düzeyi yüksek olan ülkelerin eğitim düzeylerinin de yüksek olduğu görülmüştür (Ünal,1996). Sonuç olarak ülke kalkınmasında eğitimin önemi vazgeçilemez bir gerçektir (Nartgün-Kösterelioğlu-Sipahioğlu, 2013: 82).

UNDP'nin1990 yılından bu yana yayınladığı İnsani Gelişme Raporlarında ülkelerin sosyo-ekonomik gelişmişlik düzeylerini karşılaştırmak için geliştirdiği İnsani Gelişme İndeksi (HDI), "sağlık", "eğitim" ve "refah" olmak üzere üç standart ve bu standartları belirleyen dört ayrı ölçüt esas alınarak hesaplanmaktadır. Sağlık standardını belirleyen ölçüt, "doğumda yaşam beklentisi"; eğitim standardını belirleyen ölçüt, "beklenen okullaşma yılı" ve "ortalama okullaşma yılı"; refah standardını belirleyen ölçüt ise, "kişi başına düşen milli gelir düzeyi"dir.

Ülkeler için hesaplanan HDI'nın alabileceği en yüksek değer "1", en düşük değer ise "0"dır. Yukarıda değinilen refah, sağlık ve eğitim standartları ve bu standartları belirleyen ölçütler çerçevesinde insani gelişmişliğin yüksek olduğu ülkelerde, GDI değerinin "1"e yaklaştığı; buna karşın insani gelişmişliğin düşük olduğu ülkelerde ise, HDI değerinin "0"a yaklaştığı görülmektedir. Ülkeler için hesaplanan 2013 yılı HDI değeri

0,805-1 arasındaki ülkeler çok yüksek insani gelişme düzeyine, 0,712-0,796 arasındaki ülkeler yüksek insani gelişme düzeyine, 0,536-0,710 arasındaki ülkeler orta insani gelişme düzeyine ve 0,304-0,534 arasındaki ülkeler ise düşük insani gelişme düzeyine sahiptir (UNDP, 2013).

Günümüzde geçiş ekonomileri genel olarak gelir durumları, coğrafi konumları veya geçiş sürecindeki ilerleme durumlarına göre, "Merkez ve Doğu Avrupa Ülkeleri (CEE)" ve "Bağımsız Devletler Topluluğu Ülkeleri (CIS)"şeklinde iki gruba ayrılır (Kesici, 2008). Bu iki grupta yer alan ülkelere ilaveten Çin, Kamboçya, Laos ve Vietnam da Asya'da yer alan diğer geçiş ekonomileridir.

Bu çalışmanın amacı, Türkiye'de eğitimde yaşanan gelişmelerin insani gelişmişliğe etkisinin, Birleşmiş Milletler Kalkınma Programı (UNDP) tarafından geliştirilmiş 2013 yılı İnsani Gelişme İndeksine göre geçiş ekonomileri ile karşılaştırmalı bir değerlendirmesini yapmaktır. Bu amaç doğrultusunda aşağıdaki sorulara cevap aranmıştır:

- Türkiye'de eğitimde yaşanan gelişmelerin insani gelişmişliğe etkisi nasıldır?
- Geçiş Ekonomilerinde eğitimde yaşanan gelişmelerin insani gelişmişliğe etkisi nasıldır?
- İnsani gelişmişliğe eğitimin etkisi bakımından Türkiye ve geçiş ekonomileri arasında bir fark var mıdır?

## 2 Yöntem

Türkiye'de eğitim alanında yaşanan gelişmeler ile eğitim koşullarının yaşam kalitesi ile ilişkisinin, 2013 yılı İnsani Gelişmişlik İndeksine göre geçiş ekonomileri ile karşılaştırmalı bir değerlendirmesine yönelik bu çalıma, karşılaştırmalı türden ilişkisel tarama modelindedir. Ayrıca alan yazın taraması ve belge incelemesi ile yürütülen bu çalışmada, UNDP'nin 2013 yılı İnsani Gelişme Raporu, Dünya Ekonomik Forumu tarafından hazırlanan Küresel Rekabetçilik Raporu, OECD raporları ile bazı ülkelerin İstatistik Kurumları'nca hazırlanan raporları inceleme konusu yapılmıştır.

## 3 Bulgular

### 3.1 Türkiye'de Eğitimde Yaşanan Gelişmelerin İnsani Gelişmişliğe Etkisi

Küreselleşme, yaşam boyu eğitime artan gereksinim, iletişim teknolojilerindeki hızlı ve yoğun gelişmeler, diğer bütün kurumlar gibi eğitim kurumlarını da büyük ölçüde etkilemiştir. Bu gelişmeler, kuşkusuz eğitim kurumlarını ortaya çıkan bilgi toplumu yapısına uygun evrensel değerlere açık bilgi üretimine katkıda bulunabilen, bilgiyi yaratıcı biçimde kullanabilen, daha nitelikli insan yetiştirme zorunluluğu çerçevesinde etkilemektedir. Bu etkinin doğal bir sonucu olarak, tüm eğitim kurumları gibi öğretmen yetiştiren kurumlarda, programlarını gereksinimlere uygun ve daha işlevsel hale getirmek zorunda kalmaktadır. Bu kapsamda odaklanılan konunun kalite olduğu ve eğitimde kalite artırma çalışmalarının tüm ülkeler gibi Türkiye'nin de gündeminde olan önemli bir konu olduğu görülmektedir (Karaca, 2008). Eğitimdeki kalite arayışlarına rağmen Türkiye'nin Küresel Rekabetçilik Raporuna göre sıralamada düşüş gösterdiği başlıca alanlar arasında eğitim de yer almaktadır (Çoban, 2013). Tablo 1'de de görülebileceği üzere Türkiye'nin rekabetçilik düzeyi çerçevesinde eğitim bileşenleri bağlamında 144 ülke içindeki sıralaması son derece düşüktür.

| Eğitim Alt Bileşenleri | 144 Ülke İçindeki Sıralaması |
|---|---|
| Ortaöğrenim okullaşma oranı | 93 |
| Yükseköğrenim okullaşma oranı | 56 |
| Eğitim sisteminin genel kalitesi | 82 |
| Matematik ve fen eğitimi kalitesi | 100 |
| Yönetim okulları kalitesi | 97 |
| Okulların internete erişimi | 68 |
| Araştırma ve eğitim hizmetlerinin erişilebilirliği | 77 |
| İşbaşı eğitimin yaygınlık düzeyi | 65 |

*Tablo 1. Türkiye'nin Rekabetçilik Düzeyi Çerçevesinde Eğitim Bileşenleri **Kaynak:** Küresel Rekabetçilik Raporu*

Aynı şekilde OECD'nin "Education at a Glance (Bir Bakışta Eğitim) raporunun sunmuş olduğu göstergeler ve karşılaştırmalar da, Türkiye eğitim sisteminin kalite sorunlarını açık bir şekilde gözler önüne sermekte ve son 40 yıllık dönemde nüfusun kentlileşme oranında yaşanan büyük değişimin eğitim düzeyleri üzerindeki etkisinin yok denecek kadar az olduğunu, genel eğitim düzeyindeki gelişimin sınırlılık düzeyini net bir şekilde ortaya koymaktadır (Çoban, 2013). OECD'nin Bir Bakışta Eğitim raporuna göre Türkiye'nin eğitim düzeylerine ve kalitesine ilişkin analiz özeti verileri Tablo 2'de gösterilmiştir.

UNDP'nin İnsani Gelişme Raporlarına göre ülkelerin kalkınmışlık düzeylerinin ölçülmesi bakımından önemli bir standart olan eğitim kriterlerine göre Türkiye'nin yıllar itibariyle kaydettiği gelişme Tablo 3'te gösterilmektedir.

| Gösterge | Türkiye (%) | OECD Ortalaması (%) | Türkiye'nin Sıralamadaki Yeri |
|---|---|---|---|
| Okullaşma Oranları | | | |
| 3 yaş (okul öncesi eğitim) | 4 | 66 | 33/36 ülke |
| 4 yaş (okul öncesi eğitim ve ilköğrenim) | 17 | 81 | 38/38 ülke |
| 5-14 yaş (tüm düzeyler) | 94 | 96 | 37/39 ülke |
| İlköğrenim Mezunu ve Altı Nüfusun Toplam Nüfusa Oranı | | | |
| 25-64 yaş | 58 | Yetersiz veri | 2/39 ülke |
| Ortaöğrenim Mezunu ve Altı Nüfusun Toplam Nüfusa Oranı | | | |
| 25-64 yaş | 31 | 74 | 36/40 ülke |
| 25-34 yaş | 42 | 82 | 35/36 ülke |
| 55-64 yaş | 19 | 62 | 34/36 ülke |
| Yükseköğrenim Görmüş Nüfusun Toplam Nüfusa Oranı | | | |
| 25-64 yaş | 13 | 31 | 37/41 ülke |
| 25-34 yaş | 17 | 38 | 35/37 ülke |
| 55-64 yaş | 9 | 23 | 34/37 ülke |
| Yükseköğrenim Giriş Oranları | | | |
| Mesleki Programlar | 28 | 17 | 10/33 ülke |
| Üniversiteler | 40 | 62 | 31/36 ülke |
| Mezuniyet Oranları | | | |
| Mevcut genç nüfus içinde ortaöğrenimi tamamlaması öngörülenlerin oranı | 54 | 84 | 26/27 ülke |
| Mevcut genç nüfus içinde yükseköğrenimi tamamlaması öngörülenlerin oranı | 23 | 39 | 26/28 ülke |
| Herhangi Bir Şekilde Eğitim Görmeyen ya da Çalışmayan Nüfusun Toplam Nüfusa Oranları | | | |
| 15-29 yaş (2005 verisi) | 43,6 | 15,0 | 1/32 ülke |
| 15-29 yaş (2010 verisi) | 36,6 | 15,8 | 1/32 ülke |

*Tablo 2. OECD'nin Bir Bakışta Eğitim Raporuna Göre Türkiye'nin Eğitim Düzeylerine ve Kalitesine İlişkin Analiz Özeti Verileri* **Kaynak:** *OECD; Çoban, 2013; Yılmaz, 2013.*

| Yıl | HDI Sıra | HDI Değeri | Eğitim İndeksi | Beklenen Okullaşma Yılı | Ortalama Okullaşma Yılı |
|---|---|---|---|---|---|
| 2005 | 94 | 0.684 | 0.560 | 11.7 | 6.1 |
| 2006 | 92 | 0.694 | 0.574 | 12.1 | 6.1 |
| 2007 | 84 | 0.702 | 0.585 | 12.4 | 6.2 |

| 2009 | 79 | 0.709 | 0.604 | 12.9 | 6.4 |
| 2010 | 83 | 0.715 | 0.608 | 12.9 | 6.5 |
| 2011 | 92 | 0.720 | 0.608 | 12.9 | 6.5 |
| 2012 | 90 | 0.722 | 0.608 | 12.9 | 6.5 |

*Tablo 3. Yıllar İtibariyle Türkiye'de İGE ve Eğitim Bileşeni* **Kaynak:** *UNDP, 2013; TÜİK, 2014.*

Türkiye, 2013 yılı İnsani Gelişme Raporu'nda 0.722 insani gelişme endeksi ile 90. sırada ve yüksek insani gelişme kategorisinde yer almaktadır.

Tablo 3'teki veriler incelendiğinde, genel olarak tüm göstergelerde bir yükselme olduğu söylenebilir. Nitekim 2005 yılında 0.684 olan insani gelişme indeksi değeri her yıl yükselerek 2012 yılında 0.722'ye ulaşmıştır. Bu bulgu, Türkiye'nin yüksek insani gelişme düzeyine sahip ülkeler grubunda yer alan bir ülke olduğunu göstermektedir. Benzer şekilde 2005 yılında 0.560 olan eğitim indeksi değerinin 2010 yılına kadar her yıl yükselerek 0.608'e ulaştığı ancak bu artışın 2010 yılından itibaren durduğu görülmektedir. Kuşkusuz bu durumun ortaya çıkmasında, 2010 yılından itibaren İnsani Gelişme İndeksinin hesaplama yönteminde ve özellikle eğitim indeksi göstergelerinde yapılan değişiklikler etkili olmuştur. Eğitim indeksi göstergesi olarak 2010 yılından önce "yetişkin okur-yazarlık" kullanılırken, 2010 yılından sonra stok bir değişken olan "beklenen okullaşma yılı" göstergesi kullanılmaya başlanmıştır. Beklenen okullaşma yılının kısa dönemde çok fazla değişmemesi, eğitim indeksinin yükselme eğiliminde olmasını engellemiştir. Ayrıca 2010 yılından önce kullanılan yetişkin okur-yazarlık oranının 15 yaş ve üstü için hesaplaması yapılırken, 2010 yılı itibariyle kullanılmaya başlanan ortalama okullaşma yılı oranının 25 yaş ve üstü için hesaplanması da endeks değerlerini etkilemiştir. Türkiye eğitim göstergelerinde önemli iyileştirmeler sağlasa da 25 yaş ve üstü ortalama okullaşma yılının birkaç yıllık gelişmelerle çok fazla değişmesi mümkün değildir (Demir Şeker, 2011). Bu nedenle insani gelişme endeksi olması gereken düzeyden daha düşük olarak gerçekleşmektedir.

### 3.2  Geçiş Ekonomilerinde Eğitimde Yaşanan Gelişmelerin İnsani Gelişmişliğe Etkisi

UNDP'nin 2013 yılı İnsani Gelişme Raporuna göre ülkelerin kalkınmışlık düzeylerinin ölçülmesi bakımından önemli bir standart olan eğitim standardı göstergelerine göre geçiş ekonomilerinin kaydettiği gelişme Tablo 4'te gösterilmektedir.

| Ülkeler | İnsani Gelişme Endeksi | | Ortalama Okullaşma Yılı | Beklenen Okullaşma Yılı |
|---|---|---|---|---|
| | Sıralama | Değer | 25 yaş ve üstü | |
| | 2012 | 2012 | 2010 | 2011 |
| **Merkez ve Doğu Avrupa Ülkeleri (CEE)** | | | | |
| Arnavutluk | 70 | 0.749 | 10.4 | 11.4 |
| Bosna Hersek | 81 | 0.735 | 8.3 | 13.4 |
| Bulgaristan | 57 | 0.782 | 10.6 | 14.0 |
| Çek Cumhuriyeti | 28 | 0.873 | 12.3 | 15.3 |
| Estonya | 33 | 0.846 | 12.0 | 15.8 |
| Hırvatistan | 47 | 0.805 | 9.8 | 14.1 |
| Macaristan | 37 | 0.831 | 11.7 | 15.3 |
| Makedonya | 78 | 0.740 | 8.2 | 13.4 |
| Letonya | 44 | 0.814 | 11.5 | 14.8 |
| Litvanya | 41 | 0.818 | 10.9 | 15.7 |
| Polonya | 39 | 0.821 | 10.0 | 15.2 |
| Romanya | 56 | 0.786 | 10.4 | 14.5 |
| Slovak Cumhuriyeti | 35 | 0.840 | 11.6 | 14.7 |
| Slovenya | 21 | 0.892 | 11.7 | 16.9 |
| **Bağımsız Devletler Topluluğu Ülkeleri (CIS)** | | | | |
| Azerbaycan | 82 | 0.734 | 11.2 | 11.7 |
| Beyaz Rusya | 50 | 0.793 | 11.5 | 14.7 |
| Ermenistan | 87 | 0.729 | 10.8 | 12.2 |
| Gürcistan | 72 | 0.745 | 12.1 | 13.2 |
| Kazakistan | 69 | 0.754 | 10.4 | 15.3 |
| Kırgızistan | 125 | 0.622 | 9.3 | 12.6 |
| Moldavya | 113 | 0.660 | 9.7 | 11.8 |
| Özbekistan | 114 | 0.654 | 10.0 | 11.6 |
| Rusya Fed. | 55 | 0.788 | 11.7 | 14.3 |
| Tacikistan | 125 | 0.622 | 9.8 | 11.5 |
| Türkmenistan | 102 | 0.698 | 9.9 | 12.6 |
| Ukrayna | 78 | 0.740 | 11.3 | 14.8 |

***Tablo 4.** Geçiş Ekonomilerinde İnsani Gelişme Endeksi ve Göstergeleri **Kaynak: UNDP, 2013.***

Tablo 4 incelendiğinde, Slovenya, Çek Cumhuriyeti, Estonya, Slovakya, Macaristan, Polonya, Litvanya, Letonya ve Hırvatistan'ın ülkeler için hesaplanan 2013 yılı HDI değerine göre çok yüksek insani gelişme düzeyine sahip ülkeler grubunda; Beyaz Rusya, Rusya Federasyonu, Romanya, Bulgaristan, Kazakistan, Arnavutluk, Gürcistan, Makedonya, Ukrayna, Bosna Hersek, Azerbaycan, Ermenistan'ın yüksek insani gelişme düzeyine sahip ülkeler grubunda; Türkmenistan, Moldova, Özbekistan, Kırgızistan ve Tacikistan'ın orta insani gelişme düzeyine sahip ülkeler grubunda yer aldıkları görülmektedir (UNDP, 2013). Bu bulgu, genel olarak CEE ülkelerinin insani gelişme değerinin CIS ülkelerinden daha yüksek olduğunu ortaya koymaktadır. Yine insani gelişmişlik bakımından en yüksek insani gelişme düzeyine sahip ülkeler grubunda yer almasa da CEE ülkelerinin hepsinin insani gelişme düzeylerinin yüksek olduğu görülmektedir. HDI bakımından CEE ülkeleri arasında Slovenya, Çek Cumhuriyeti ve Estonya ilk üç sırada, Bosna Hersek, Makedonya ve Arnavutluk son üç sırada yer almaktadır. Yüksek insani gelişme düzeyine sahip olmakla birlikte bazı CIS ülkelerinin gerisinde kalan CEE ülkelerinin ortak özelliğinin AB'ye üye olmayan ülkeler grubunda yer alması dikkat çekicidir. HDI bakımından CIS ülkeleri arasında ise Beyaz Rusya, Rusya Federasyonu ve Kazakistan ilk üç sırada yer alırken, Tacikistan, Kırgızistan ve Özbekistan son üç sırada yer almaktadır.

İnsani Gelişme Raporu'na göre ülkelerin 2011- 2012 yıllarındaki HDI sıralamaları değerlendirildiğinde, CEE ülkelerinden Makedonya'da 2 puanlık gerileme, CEE ülkelerinden Arnavutluk, Ermenistan, Bosna Hersek, Hırvatistan, Romanya'da CIS ülkelerinden ise Azerbaycan ve Kazakistan'da 1 puanlık bir gerileme yaşanırken, CIS ülkelerinden Gürcistan'da 3 puanlık yükselme, CEE ülkelerinden Litvanya'da 2 puanlık yükselme, CEE ülkelerinden Letonya ve Estonya, CIS ülkelerinden ise Beyaz Rusya, Tacikistan ve Özbekistan'da 1 puanlık yükselme görülmektedir.

HDI göstergelerinden "ortalama okullaşma yılı" verileri incelendiğinde CEE ülkeleri arasında Çek Cumhuriyeti 12.3 ve Estonya 12.0 değeriyle en yüksek ortalama okullaşma yılı ile diğer ülkelerden ayrılırken, Makedonya 8.2 ve Bosna Hersek 8.3 değeriyle en düşük ortalama okullaşma yılına sahip ülkelerdir. CIS ülkeleri arasında ise Gürcistan 12.1 değeriyle en yüksek okullaşma yılı ile diğer ülkelerden ayrılırken, Kırgızistan 9.3, Moldavya 9.7, Tacikistan 9.8 ve Türkmenistan 9.9 değeriyle en düşük okullaşma yılına sahip CIS ülkeleridir.

HDI göstergelerinden "beklenen okullaşma yılı" ölçütü bakımından CEE ülkelerinden Slovenya 16.9 değeriyle diğer ülkelere göre en yüksek beklenen okullaşma yılı oranına sahip iken, Arnavutluk 11.4 ile en düşük beklenen okullaşma yılı oranına sahip ülkedir. Tablo 4'ten de görülebileceği üzere CEE ülkeleri arasında AB aday ülkeleri AB üye ülkelere oranla daha düşük beklenen okullaşma yılı oranına sahiptir. CIS ülkeleri bakımından ise Kazakistan 15.3 ile en yüksek beklenen okullaşma yılı oranına sahipken, Tacikistan 11.5 ile en düşük beklenen okullaşma yılı oranına sahip ülkedir.

## 4 İnsani Gelişmişliğe Eğitimin Etkisi Bakımından Türkiye ve Geçiş Ekonomileri Karşılaştırması

İnsani gelişmişliğe eğitimin etkisi bakımından Türkiye'nin geçiş ekonomileri ile karşılaştırması 2013 yılı İnsani Gelişme Raporu bağlamında, ortalama okullaşma yılı ve beklenen okullaşma yılı göstergeleri, eğitime erişim ve okullaşma oranları, öğrencilerin matematik, fen ve okuma yetkinlik düzeyleri, eğitim kalitesinden memnuniyet ve ilköğrenim bırakma oranı bakımından yapılabilir.

UNDP'nin 2013 yılı İnsani Gelişme Raporuna göre eğitim standardı bağlamında eğitime erişme, toplam kayıt oranı, öğrencilerin matematik, fen ve okuma yetkinlik düzeyleri göstergelerine göre Türkiye ve geçiş ekonomilerinin kaydettiği gelişme Tablo 5'te gösterilmektedir.

### 4.1 Ortalama Okullaşma Yılı ve Beklenen Okullaşma Yılı Göstergeleri Bakımından Karşılaştırma

Tablo 3 ve Tablo 4'teki veriler incelendiğinde, Türkiye'nin HDI eğitim standardı göstergelerinden ortalama okullaşma yılı (6,5) bakımından da CEE ve CIS ülkelerinin çok gerisinde olduğu görülmektedir. Türkiye'nin ortalama okullaşma yılı bağlamında en yakın olduğu ülke olan Bosna Hersek'te bile ortalama okullaşma yılının 8,3 olduğu görülmektedir. Aynı şekilde beklenen okullaşma yılı göstergesi bakımından da Türkiye, AB üyesi CEE ülkelerinden ve Arnavutluk dışındaki AB aday ülkelerden daha düşük beklenen okullaşma yılı değerine sahiptir. Daha önce de değinildiği üzere eğitim göstergelerinde yapılan değişiklikler hesaplama sonuçlarını etkilemiş ve özellikle okullaşma oranlarının arttığı ama mevcut okullaşma oranının nispeten düşük olduğu ülkeler için bu değişkenin kullanılması bu ülkelerin HDI değer ve sıralamalarını olumsuz yönde etkilemiştir. Buna karşın, okur-yazarlık oranının oldukça yüksek olduğu ülkeler ise yeni değişkenin ayırt edici özelliğinin fazla olması nedeniyle daha üst sıralara çıkabilmişlerdir. Önceki yıllarda 15 yaş ve üstü için okur-yazarlık oranı alınırken, 2010 yılı raporunda 25 yaş ve üstü için ortalama okullaşma yılı alınmaya başlanması ise okur-yazarlık ve okullaşma oranı son dönemlerde artış gösteren ülkelerin aleyhine olmuştur (Demir Şeker, 2011)

### 4.2 Eğitime Erişim ve Okullaşma Oranları Bakımından Karşılaştırma

Tablo 5'teki veriler incelendiğinde, Türkiye'nin (90,8) okur-yazarlık oranı bakımından hem CEE ve hem de CIS ülkelerinin çok gerisinde olduğu görülmektedir. Türkiye'nin okur-yazarlık oranı bağlamında en yakın olduğu ülke Arnavutluk'tur. Bu ülkede bile okur-yazarlık oranı 95,9'dur. Okur-yazarlık oranı bakımından ilk sırada yer alan ülkeler ise Estonya ve Letonya'dır (99,8). HDI sıralaması bakımından CEE ve CIS ülkeleri arasındaki farklılık, okur-yazarlık oranı açısından söz konusu değildir. Zira okur-yazarlık oranının CIS ülkelerinde de de CEE ülkeleri gibi yüksek olduğu görülmektedir. Bu bulgu, CIS ülkelerinde HDI sıralamasında eğitimden çok diğer insani gelişmişlik standartlarının etkili olduğunu ortaya koymaktadır.

Tablo 5'te ortaöğretim ve üstü eğitime erişebilirlik incelendiğinde, Kazakistan, Çek Cumhuriyeti (99,8), Kazakistan (99,3), ve Slovakya (98,8) gibi geçiş ekonomilerinin ilk sıralarda yer aldığı; Hırvatistan (64,4), Makedonya (78,6) ve Polonya (80,0) gibi geçiş ekonomilerinin ise son sıralarda yer aldığı görülmektedir. Türkiye'de ise ortaöğretim ve üstü eğitime erişebilirlik yüzdesi ise 34,5'tir. Bu bulgu okur-yazarlık oranında olduğu gibi ortaöğretim ve üstü eğitime erişebilirlik bakımından da Türkiye'nin geçiş ekonomileri ortalamasının çok altında olduğunu ortaya koymaktadır.

2013 İnsani Gelişim Raporu'na göre Türkiye'de, ilköğrenimde net okullaşma oranı % 102,0; ortaöğrenimde net okullaşma oranı % 78,00 ve yükseköğrenimde %45.80 olarak saptanmıştır. İlköğrenimde net okullaşma oranı bakımından geçiş ekonomileri ortalamasının üzerinde olmakla birlikte ortaöğrenimde ve yükseköğrenimde geçiş ekonomilerinin gerisinde yer almaktadır. Türkiye ilköğrenimde net okullaşma oranı bakımından geçiş ekonomileri ortalamasının üzerinde bir oran sergilemekle birlikte, ilköğrenim bırakma oranının yüksekliği de dikkat çekicidir. Bosna Hersek'ten sonra ilköğrenim bırakma oranının en yüksek olduğu ülke Türkiye'dir.

| Ülkeler | Eğitime Erişim | | Toplam Kayıt Oranı (%) | | | Öğretmek İçin Eğitilmiş İlkokul Öğretmeni (%) | Ortalama Skor | | | Ortalamadan Sapma | | | Eğitim Kalitesinden Memnuniyet (%) | İlköğrenim Bırakma Oranı (%) |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Yetişkin Okur-yazarlık Oranı (15 yaş ve üzeri) | Ortaöğretim ve Üstü (25 yaş ve üzeri) | İlköğrenim | Ortaöğretim | Yüksek öğrenim | | Okuma | Mat. | Bilim | Okuma | Mat. | Bilim | | |
| Merkez ve Doğu Avrupa Ülkeleri (CEE) | | | | | | | | | | | | | | |
| Arnavutluk | 95.9 | 81.7 | 87.0 | 89.0 | 18.4 | - | 385 | 377 | 391 | 100 | 91 | 89 | 54.7 | 4.8 |
| Bosna Hersek | 97.9 | - | 88.0 | 90.0 | 35.9 | - | - | - | - | - | - | - | 67.9 | 26.8 |
| Bulgaristan | 98.4 | 92.6 | 103.0 | 88.0 | 53.0 | - | 429 | 428 | 439 | 113 | 99 | 106 | 35.4 | 6.2 |
| Çek Cum. | - | 99.8 | 106.0 | 90.0 | 60.7 | - | 478 | 493 | 500 | 92 | 93 | 97 | 71.4 | 0.4 |
| Estonya | 99.8 | 94.5 | 99.0 | 104.0 | 62.7 | - | 501 | 512 | 528 | 83 | 81 | 84 | 49.5 | 1.6 |
| Hırvatistan | 98.8 | 64.4 | 93.0 | 95.0 | 49.2 | - | 476 | 460 | 486 | 88 | 88 | 85 | 63.7 | 1.0 |
| Macaristan | 99.0 | 94.8 | 102.0 | 98.0 | 61.7 | - | 494 | 490 | 503 | 90 | 92 | 86 | 56.4 | 2.3 |
| Makedonya | 97.3 | 78.6 | 89.0 | 83.0 | 40.4 | - | - | - | - | - | - | - | 61.6 | 2.5 |
| Letonya | 99.8 | 98.4 | 101.0 | 95.0 | 60.1 | - | 484 | 482 | 494 | 80 | 79 | 78 | 51.0 | 5.4 |
| Litvanya | 99.7 | 90.2 | 97.0 | 98.0 | 77.4 | - | 468 | 477 | 491 | 86 | 88 | 85 | 51.1 | 1.6 |
| Polonya | 99.5 | 80.0 | 97.0 | 97.0 | 70.5 | - | 500 | 495 | 508 | 89 | 88 | 87 | 60.8 | 2.4 |
| Romanya | 97.7 | 86.8 | 96.0 | 95.0 | 63.8 | - | 424 | 427 | 428 | 90 | 79 | 79 | 45.3 | 4.9 |
| Slovak Cum. | - | 98.8 | 102.0 | 89.0 | 54.2 | - | 477 | 497 | 490 | 90 | 96 | 95 | 58.4 | 2.3 |
| Slovenya | 99.7 | 95.6 | 98.0 | 97.0 | 86.9 | - | 483 | 501 | 512 | 91 | 95 | 94 | 72.6 | 0.5 |
| Bağımsız Devletler Topluluğu Ülkeleri (CIS) | | | | | | | | | | | | | | |
| Azerbaycan | 99.8 | 92.7 | 94.0 | 85.0 | 19.3 | 100 | 362 | 431 | 373 | 76 | 64 | 74 | 53.0 | 3.6 |
| Beyaz Rusya | 99.6 | - | 100.0 | 96.0 | 83.0 | 99.8 | - | - | - | - | - | - | 55.4 | 0.3 |
| Ermenistan | 99.6 | 94.4 | 103.0 | 92.0 | 51.5 | 77.5 | - | - | - | - | - | - | 45.7 | 2.3 |
| Gürcistan | 99.7 | 91.0 | 109.0 | 86.0 | 28.2 | 94.6 | - | - | - | - | - | - | 65.7 | 3.8 |
| Kazakistan | 99.7 | 99.3 | 111.0 | 100.0 | 40.8 | - | 390 | 405 | 400 | 91 | 83 | 87 | 49.9 | 0.2 |

| Türkiye | 90.8 | 34.5 | 102.0 | 78.0 | 45.8 | - | 464 | 445 | 454 | 82 | 93 | 81 | 54.3 | 8.2 |

**Tablo 5.** *Geçiş Ekonomilerinde ve Türkiye'de İGE Eğitim Standardı Göstergeleri* **Kaynak: UNDP, 2013.**

**4.3 Öğrencilerin Matematik, Fen ve Okuma Yetkinlik Düzeyleri Bakımından Karşılaştırma**

OECD tarafından yürütülen Öğrenci Değerlendirme Programı(PISA) testleri farklı ülkelerden 15 yaşındaki öğrencilerin matematik fen ve okuma yetkinlik düzeylerini ortaya koymakta ve karşılaştırmaktadır. 2010 yılı sonunda yayınlanmış olan 2009 testi sonuçlarına göre Türkiye'nin 2003 yılından günümüze değin belirli bir ilerleme gösterdiğini ortaya koymaktadır. Buna rağmen Türkiye en düşük 1 ve en yüksek 6 ile puanlanan test sonuçlarına göre halen matematik, fen ve okuma alanlarında 2. düzeyde bulunmaktadır (Çoban, 2013: 23). 2013 yılı UNDP İnsani Gelişme Raporuna göre Türkiye okuma, matematik ve fen alanlarında verisi bulunan tüm CIS ülkelerinin, CEE ülkelerinden ise Arnavutluk, Bulgaristan ve Romanya'nın önünde, buna karşın diğer CEE ülkelerinin gerisinde yer almaktadır.

Tüm eğitim göstergeleri bakımından Türkiye hemen hemen geçiş ekonomilerinin gerisinde ve çoğu zaman geçiş ekonomileri ortalamasının altında yer alan bir ülke olmasına rağmen eğitim kalitesinden memnuniyet bakımından geçiş ekonomileri arasında önemli bir fark olmadığı ve hatta birçok ülkenin önünde yer aldığı görülmektedir.

## 5 Sonuç

2013 yılı İnsani Gelişme Raporuna göre Türkiye, 187 ülke arasında 90. sırada yer almakta ve hem tüm CEE hem de bazı ülkeler hariç CIS ülkelerinden daha düşük HDI değerine sahiptir. HDI sıralamasında Türkiye sadece CIS ülkelerinden Türkmenistan, Moldova, Özbekistan, Kırgızistan ve Tacikistan'ın önünde yer almaktadır.

CEE ve CIS ülkeleri ile Türkiye'nin insani gelişme göstergeleri incelendiğinde, AB üye ve aday CEE, CIS ülkeleri ve Türkiye arasında farklıklar olduğu, bu farklılıkların sadece gruplar bazında olmayıp gruplar içinde de önemli ölçüde değişkenlik gösterdiği, genel anlamda CEE ülkelerinin daha düşük kişi başı gayri safi milli gelir, doğumda yaşam beklentisi ve okullaşma yılına sahip CIS ülkelerinden daha iyi durumda olduğu görülmektedir. HDI sıralamasında 90. sırada yer alan Türkiye ise AB aday ülkelerden daha yüksek kişi başı gayri safi milli gelire sahip olmakla birlikte daha düşük ortalama okullaşma yılı ve beklenen okullaşma yılına sahiptir.

Türkiye'nin geçiş ekonomilerinden CEE ülkelerinin sıralamasına ulaşabilmesi için eğitim göstergelerinde mutlaka iyileştirme yapması kaçınılmazdır. Zira geçiş ekonomilerinin çoğundan daha yüksek kişi başı gayri safi yurt içi gelire sahip olmakla birlikte daha düşük ortalama okullaşma yılı ve beklenen okullaşma yılına sahip olması Türkiye'nin HDI sıralamasını düşürmektedir. Buna karşın HDI sıralamasında Türkiye'nin önünde yer alan CIS ülkelerinde ise HDI sıralamasını eğitimden çok diğer insani gelişmişlik standartlarının belirlediği görülmektedir.

Türkiye'nin HDI sıralamasını etkileyen eğitim indeksi değerleri düşüklüğünün hiç kuşkusuz en önemli nedeni, geçiş ekonomilerine, özellikle CEE ülkelerine göre Türkiye'de GSYH'den eğitime ayrılan payın düşük olması ve Türkiye'nin bu ülkelerin çok üzerinde nüfusa sahip olmasıdır. Hiç kuşkusuz bu durum Türkiye'de kişi başına düşen eğitim harcamalarının miktarını düşürmekte ve buna bağlı olarak Türkiye'nin HDI sıralamasını etkileyen okullaşma ve okur-yazar oranı gibi eğitim indeksi değerleri de söz konusu ülkelerle karşılaştırıldığında daha düşük çıkmaktadır.

Fırsat eşitliğinin sağlanması açısından önemli bir araç ve kalkınmışlık göstergesi olan eğitimin geçmişte olduğu gibi bugün ve gelecekte de önemini koruyacağı açıktır. Zira bir ülkenin eğitim düzeyi ne kadar yüksekse, ekonomik ve sosyal kalkınmışlık düzeyi de o oranda yüksektir. Bu bağlamda Türkiye'nin ekonomik ve sosyal kalkınma açısından eğitime daha fazla kaynak ayırması gerektiği açıktır. Geçiş ekonomileri ile karşılaştırıldığında, Türkiye'nin, kalkınmışlık göstergesi olan HDI sıralamasında üst sıralarda yer alabilmesi, eğitime vereceği öneme ve yapacağı katkılara bağlıdır.

# Türkiye'de Son On Yıllık Süreçte Tarım Sektöründeki Değişimlerin Genel Ekonomik Göstergelerle Değerlendirilmesi

# The Evaluation of the Changes in the Agricultural Sector with Common Economic Indicators in Turkey in the Last Decade

Assoc. Prof. Dr. Sibel Tan (Çanakkale Onsekiz Mart University, Turkey)

## Abstract

Agriculture is an important sector in the Turkish economy in terms of population and employment, nutrition, agricultural production, domestic consumption, its contribution to industry, national income and balance of payments. By current economic indicators in Turkey, while its share in national income is 9.0%, its share in employment is 23.6%. Although the share of agriculture in GDP decreased in Turkey in the last decade, the rate of growth of agricultural sector increased. Whereas cultivated fields and the number of livestock declined, vegetative production and animal production increased significantly. Moreover, the rate of total employment increased, but the rate of agricultural employment decreased. In addition, the use of machine in agriculture increased and the wage of employees in agriculture increased considerably, as well. On the other hand, agricultural support policies in the last decade witnessed with major reforms and important support policies were implemented in many areas. In 2013, the share of agricultural subsidies in gross domestic product increased compared to the previous year and an increase in the 2014 budget was targeted. In this study, agriculture-related indicators in Turkey in the last ten years will be evaluated and the last ten-year change and the reasons of this change will be examined. In the light of these changes, agricultural recommendations in terms of future oriented agricultural plans and programs will be presented.

## 1 Giriş

Tarım sektörünün, yalnız bitkisel ve hayvansal üretim faaliyetinde bulunarak ülke nüfusunun gıda ve diğer tarımsal kökenli ihtiyaç maddelerini karşılayan, ihtiyaç fazlasının da ihracatına olanak sağlayan bir uğraşı olarak görülmesi, önemli bir eksikliktir (Erkuş vd., 2005). Tarımsal yapıdaki bir ekonomiden, sanayileşmiş bir ekonomiye geçilirken tarım sektörü başlıca dört fonksiyonu yerine getirmelidir. Tarım her şeyden önce ülke nüfusunun gıda maddeleri ihtiyacını karşılamalıdır. Tarım, ithalat için gerekli döviz talebine katkıda bulunmak üzere bir üretim fazlası oluşturmalıdır. Ekonominin diğer sektörlere sermaye ve işgücü transferini de üstlenen tarım, ülkede üretilen sanayi malları için talep potansiyeli de oluşturmalıdır (Cinemre ve Kılıç, 2011). Dolayısıyla Türkiye ekonomisinde tarım; nüfus ve istihdam, beslenme, tarımsal üretim, yurt içi tüketim, tarımın sanayiye olan katkısı, milli gelir ve ödemeler dengesi açısından önemini sürekli koruyan bir sektör konumundadır.

Türkiye sahip olduğu coğrafik konum, iklim yapısı ve ürün çeşitliliği açısından zengin bir tarımsal potansiyele sahiptir. Fakat üretimin kayıt altına alınmaması, üretici örgütlerinin yeterince aktif olmaması, istikrarlı olmayan tarım politikaları ve planlı olmayan üretim modelleri sektörde önemli problemlere sebep olmaktadır. İç ve dış talebe uygun planlı bir üretim modelinin benimsenmemesi bazı ürünlerde arz fazlası oluşturup üretici fiyatlarının düşmesine neden olurken bazı ürünlerde arz açığı olması ve bu açığın ithalat yoluyla kapatılmasına neden olmaktadır.

Diğer taraftan tarımdaki makine kullanımına bağlı olarak iş gücü fazlasının oluşması ve kırsal kesimde yaşayanların gelir seviyelerindeki düşüşler kırsal kesimden kente göçü kontrolsüz bir şekilde körüklemiştir. Ekonomik göstergeler incelendiğinde tarımın GSYİH'daki payının ve istihdam içerisindeki payının giderek azaldığı gözlenmektedir. Bu durum Avrupa Birliği (AB) uyum sürecinde gelişmiş AB ülkelerindeki rakamlarla mukayese edildiğinde olumlu gibi algılansa da diğer sektörlerin istihdam kapasitesi kırsal kesimden göç edenlerin ihtiyaçlarına cevap vermediği sürece sağlıklı bir değişim olduğu söylenemez.

Türkiye'de bir taraftan halkın beslenme ihtiyaçlarının karşılanması, diğer taraftan AB uyum süreci ve diğer uluslararası tarımsal oluşumlara uyum sağlamak açısından tarımsal göstergelerin iyi incelenmesi olumlu ve olumsuz gelişmelerin irdelenmesi gerekmektedir. Ekonomik göstergeler ışığında uygulanacak üretim politikaları, istihdam politikaları, fiyat politikaları, tarım politikaları ve diğer sosyal politikalar ülke tarımının geleceği açısından önemlidir.

Bu çalışmanın ikinci bölümünde tarımda arazi kullanımı, üçüncü bölümünde temel tarımsal ürünlerin üretim miktarları, dördüncü bölümde tarımda makine kullanımı, beşinci bölümde GSYİH'da tarımın payı ve büyüme

oranları, altıncı bölümde istihdam ve tarım ilişkisi, yedinci bölümde dış ticarette tarımın payı, sekizinci bölümde tarımsal üretim değerleri, dokuzuncu bölümde ise Türkiye'de uygulanan tarım politikaları incelenmiştir. Çalışmanın tamamında sayılan bu göstergelerle ilgili on yıllık değişim ve bu değişimin sebepleri irdelenmiştir. Çalışmanın sonuç bölümünde elde edilen bulgular özetlenerek, ülke tarımının geleceği açısından öneriler sunulmuştur.

## 2  Tarımda Arazi Kullanımı

Ülkemizde nüfus artışı ve hızlı kentleşmeye bağlı olarak arazi kullanımında maksimum sınıra gelinmiştir. Diğer taratan artan nüfusa bağlı olarak gıda maddeleri üretiminin de artış göstermesi gerekmektedir. Dolayısıyla tarım arazilerinin amaç dışı kullanımının önlenmesi tarımsal üretimin geleceği açısından son derecede önemlidir. Nitekim kırsal kesimde tarım arazilerinin etkin ve verimli kullanılmaması sonucu yoksulluk kaçınılmaz hale gelmekte ve tarımla uğraşan kesimin göç etmesine neden olmaktadır (Topçu ve Çelik, 2012). Tablo 1.'de Türkiye'de ürün gruplarına göre arazi kullanımı ve on yıllık değişimi gösterilmiştir. Tablodan da görüldüğü gibi Türkiye'de toplam tarımsal arazi 38.428 bin hektardır. Toplam arazinin %41'i ekilen arazi,%38'i çayır ve meralar, %11'i nadasa bırakılan, %8'i meyve bahçesi, %2'si sebze bahçelerinden oluşmaktadır. Son on yıllık değişim incelendiğinde toplam tarımsal arazilerde %5, ekilen alanlarda %10, nadas alanlarında %17, sebze alanlarında %11 oranında azalma görülmüştür. Diğer taraftan meyve alanlarında %19 artış olurken çayır ve mera arazilerinin büyüklük olarak değişmediği görülmektedir. Özellikle 2005 sonrası yaşanan küresel iklim krizi ve uluslararası piyasalardaki konjüktürel dalgalanmalar bu dönemde kırsal kesimden göçü tetikleyerek ekim alanlarındaki azalmaya sebep olduğu söylenebilir. Diğer taraftan Türkiye'de arazi kullanımı, tarımsal işletmelerin küçük ve parçalı yapısı üretimi olumsuz yönde etkilemektedir. Toplam işletme sayısı 2001 tarım sayımına göre 3.1 milyon olup bu işletmelerde arazilerin parça sayısı ortalama 4-5 parçadır. Ortalama işletme genişliği ise 6 he. civarında olup AB ortalamasının yaklaşık üçte biri kadardır (Taşdan, vd., 2008).

| Yıllar | Toplam | Ekilen Alan | Nadas | Sebze | Süs Bitkileri | Meyve | Çayır ve Mera |
|--------|--------|-------------|-------|-------|---------------|-------|---------------|
| 2003 | 40.644 | 17.408 | 4.991 | 911 | | 2.717 | 14.617 |
| 2005 | 41.223 | 18.005 | 4.876 | 894 | | 2.831 | 14.617 |
| 2007 | 39.505 | 16.945 | 4.219 | 815 | | 2.909 | 14.617 |
| 2009 | 38.911 | 16.217 | 4.323 | 811 | | 2.943 | 14.617 |
| 2011 | 38.231 | 15.692 | 4.017 | 810 | 4 | 3.091 | 14.617 |
| 2013 | 38.428 | 15.618 | 4.148 | 808 | 5 | 3.232 | 14.617 |
| Değişim (%) | -5 | -10 | -17 | -11 | | 19 | 0 |

**Tablo 1.** *Yıllar İtibariyle Tarımsal Arazi Kullanımı(1000 he.)* **Kaynak:** *Türkiye İstatistik Kurumu (TUİK)*

## 3  Tarımsal Üretim

### 3.1  Tahıl Üretimi

Tarımın ülke ekonomisindeki yeri ve önemi incelendiğinde tarımın en önemli işlevinin halkın beslenme ihtiyacını karşılamak olduğu görülmektedir. Diğer taraftan toplam üretim değeri içerisinde bitkisel üretim ve hayvansal üretimin oluşturduğu pay ülke ekonomisi açısından önemlidir. Türkiye'de toplam ekim alanlarının %75'ini tahıllar oluşturmaktadır. Türkiye İstatistik Kurumu (TUİK) 2013 rakamlarına göre son on yılda buğday ekim alanlarında %15, arpada %20, pamukta %29 ve şekerpancarı ekim alanlarında ise %8 oranında bir azalma meydana gelmiştir. Diğer taraftan mısır ekim alanlarında %18, ayçiçeği ekim alanlarında ise %12 oranında artış meydana gelmiştir. Ekim alanlarındaki bu değişime bağlı olarak tahıl üretimindeki on yıllık değişim tablo 2.'de gösterilmiştir. Tablodan da görüldüğü gibi son on yıl içerisinde mısırda %111, ayçiçeğinde %90, şekerpancarında %31, buğday üretiminde ise %16 oranında artış meydana gelmiştir. Diğer taraftan pamuk üretiminde %4, arpa üretiminde ise %2 oranında bir azalma meydana gelmiştir. Ekim alanlarındaki azalmaya karşı üretimde artış meydana gelmesi tarımda teknolojik gelişmeye ve verimlilik artışına bağlıdır. Mısırda ve ayçiçeğindeki artış hem bu ürünlerde arz açığını kapamaya dönük tarım politikalarına hem de teknolojik gelişmelere bağlıdır. Pamuğun ekim alanlarında ve üretimindeki azalış Türkiye'nin tekstil sektöründe yaşadığı krizlere bağlı olarak ortaya çıkmıştır.

| Yıllar | Buğday | Arpa | Mısır | Ayçiçeği | Pamuk (Kütlü) | Şekerpancarı |
|--------|--------|------|-------|----------|---------------|--------------|
| 2003 | 19.000.000 | 8.100.000 | 2.800.000 | 800.000 | 2.345.734 | 12.622.934 |
| 2005 | 21.500.000 | 9.500.000 | 4.200.000 | 975.000 | 2.240.000 | 15.181.247 |
| 2007 | 17.234.000 | 7.306.800 | 3.535.000 | 854.407 | 2.275.000 | 12.414.715 |
| 2009 | 20.600.000 | 7.300.000 | 4.250.000 | 1.057.125 | 1.725.000 | 17.274.674 |
| 2011 | 21.800.000 | 7.600.000 | 4.200.000 | 1.335.000 | 2.580.000 | 16.126.489 |
| 2013 | 22.050.000 | 7.900.000 | 5.900.000 | 1.523.000 | 2.250.000 | 16.483.306 |
| Değişim (%) | 16 | -2 | 111 | 90 | -4 | 31 |

**Tablo 2.** *Yıllar İtibariyle Tahıl Üretim Miktarları (ton)* **Kaynak:** *Türkiye İstatistik Kurumu (TUİK)*

### 3.2 Meyve Üretimi

Türkiye'de meyve üretimi son yıllarda artış gösteren tarımsal faaliyet alanlarından biridir. Bu artışın sebebi Türkiye'nin sahip olduğu çeşitlilik ve üretim potansiyelidir. Diğer taraftan meyvecilikte dünyada rekabet üstünlüğü olması ve özellikle AB ülkelerine yapılan meyve ihracatının son yıllarda artması meyve üretimini olumlu yönde değiştirmiştir. Tablo 3.'de de görüldüğü gibi son on yılda zeytin üretimi %97, portakal üretimi %43, çay üretimi %36, elma üretimi %20, üzüm üretimi ise %11 oranında artış göstermiştir.

| Yıllar | Üzüm | Elma | Zeytin | Portakal | Fındık | Çay |
|--------|------|------|--------|----------|--------|-----|
| 2003 | 3.600.000 | 2.600.000 | 850.000 | 1.250.000 | 480.000 | 869.000 |
| 2005 | 3.850.000 | 2.570.000 | 1.200.000 | 1.445.000 | 530.000 | 1.192.004 |
| 2007 | 3.612.781 | 2.457.845 | 1.075.854 | 1.426.965 | 530.000 | 1.145.321 |
| 2009 | 4.264.720 | 2.782.365 | 1.290.654 | 1.689.921 | 500.000 | 1.103.340 |
| 2011 | 4.296.351 | 2.680.075 | 1.750.000 | 1.730.146 | 430.000 | 1.231.141 |
| 2013 | 4.011.409 | 3.128.450 | 1.676.000 | 1.781.258 | 549.000 | 1.180.000 |
| Değişim (%) | 11 | 20 | 97 | 43 | 14 | 36 |

***Tablo 3.*** *Yıllar İtibariyle Bazı Meyvelerde Üretim Miktarları (ton)* ***Kaynak:*** *Türkiye İstatistik Kurumu (TUİK)*

### 3.3 Sebze Üretimi

Ülkemizde meyve üretimindeki olumlu artışa rağmen bazı sebzelerin üretiminde azalmalar meydana gelmiştir. Bu azalmaların sebebi sebzede uluslararası kalite ve standartlara uyum sağlayamadığımız için bu ürünlerin dış ticaretinde meydana gelen daralmalardır. Türkiye'de çeşitli sebzelerin üretim miktarları Tablo 4.'de verilmiştir. Tabloya göre son on yılda domates üretiminde %20, soğan üretiminde %9, artış görülürken karpuz üretiminde %8, kavun ve hıyar üretiminde %2 oranında azalış meydana gelmiştir. Domates ve soğan üretimindeki artış iç talepteki değişmelere bağlı olduğu gibi bu ürünlerin ihracatında meydana gelen artışlar da bu ürünlerin üretimini pozitif yönde etkilemiştir.

| Yıllar | Domates | Hıyar | Kavun | Karpuz | Soğan (kuru) |
|--------|---------|-------|-------|--------|--------------|
| 2003 | 9.820.000 | 1.783.120 | 1.735.000 | 4.215.000 | 1.750.000 |
| 2005 | 10.050.000 | 1.745.000 | 1.825.000 | 3.970.000 | 2.070.000 |
| 2007 | 9.936.552 | 1.670.459 | 1.661.130 | 3.796.680 | 1.859.442 |
| 2009 | 10.745.572 | 1.735.010 | 1.679.191 | 3.810.205 | 1.849.582 |
| 2011 | 11.003.433 | 1.749.174 | 1.647.988 | 3.864.489 | 2.141.373 |
| 2013 | 11.820.000 | 1.754.613 | 1.699.550 | 3.887.324 | 1.904.846 |
| Değişim (%) | 20 | -2 | -2 | -8 | 9 |

***Tablo 4.*** *Yıllar İtibariyle Bazı Sebzelerde Üretim Miktarı (ton)* ***Kaynak:*** *Türkiye İstatistik Kurumu (TUİK)*

### 3.4 Hayvansal Ürünler

Türkiye'de son yıllarda hayvan sayılarında azalma meydana gelirken verimlilikteki artışlara bağlı olarak üretim miktarları artış göstermektedir. Tablo 5.'de çeşitli hayvansal ürünlerin üretiminde son on yılda meydana gelen değişim incelenmiştir. Tabloya göre en fazla üretim artışı yaş ipek kozasında (%184), sonra sırasıyla tavuk etinde (%180), kırmızı ette (%110), sütte (%83), balda (%48), kıl üretiminde (%33) ve yapağı üretiminde (%25) olmuştur. Hayvansal ürünlerin genelinde meydana gelen bu artışın tersine tiftik üretiminde %50 oranında bir azalma meydana gelmiştir. Tiftik üretiminde meydana gelen azalmanın temel sebebi tiftik keçisi sayısının giderek azalmasıdır. Dokuma sanayinde tiftik yerine diğer sanayi ürünlerinin kullanılması tiftik keçisi üretimini negatif yönde etkilemiştir. Diğer taraftan uygulanan tarımsal destekler kapsamında hayvancılığa dönük uygulamaların artması hayvansal üretimi pozitif yönde etkileyen bir başka unsurdur.

| Yıllar | Kırmızı Et | Süt | Tavuk Eti | Bal | Yaş İpek Kozası | Yapağı | Kıl | Tiftik |
|--------|-----------|-----|-----------|-----|-----------------|--------|-----|--------|
| 2003 | 366.962 | 10.611.011 | 872.419 | 69.540 | 169 | 46.456 | 2.741 | 333 |
| 2005 | 409.423 | 11.107.897 | 936.697 | 82.336 | 157 | 46.176 | 2.654 | 302 |
| 2007 | 575.622 | 12.329.789 | 1.068.454 | 73.935 | 125 | 46.752 | 2.536 | 237 |
| 2009 | 412.621 | 12.542.186 | 1.293.315 | 82.003 | 136 | 40.270 | 2.002 | 174 |
| 2011 | 776.915 | 15.056.211 | 1.613.309 | 94.245 | 151 | 46.586 | 3.062 | 194 |
| 2013 | 915.844 | 17.401.262 | 1.723.919 | 89.162 | 134 | 51.180 | 3.570 | 200 |
| Değişim (%) | 110 | 83 | 180 | 48 | 184 | 25 | 33 | -50 |

***Tablo 5.*** *Yıllar İtibariyle Hayvansal Üretim Miktarları (ton)* ***Kaynak:*** *Türkiye İstatistik Kurumu (TUİK)*

## 4  Tarımda Makine Kullanımı

Tarımda ekonomik optimizasyon tarımda teknoloji kullanımının temel nedenidir. Ekonomik optimizasyonda üretici birim alandan ve birim hayvandan elde edeceği verimliliği artırmayı ve maliyeti düşürmeyi

hedeflemektedir. Ülkemizde son yıllarda tarımda makinalaşma üretim ve zaman verimliğini artıran unsurlardan biri olmakla beraber köyden kente göçün de temel sebeplerinden biridir. Tablo 6.'da Türkiye'de son on yılda traktör sayısında ve biçerdöver sayısındaki değişim verilmiştir. Tabloya göre 2003 yılından günümüze kadar traktör sayısında %22 oranında, biçer döver sayısında ise %32 oranında bir artış meydana gelmiştir.

| Yıllar | Traktör sayısı | Biçer Döver |
|---|---|---|
| 2003 | 997.620 | 11.721 |
| 2005 | 1.022.365 | 11.811 |
| 2007 | 1.056.128 | 12.775 |
| 2009 | 1.073.538 | 13.360 |
| 2011 | 1.125.001 | 14.313 |
| 2013 | 1.213.560 | 15.486 |
| Değişim (%) | 22 | 32 |

*Tablo 6. Yıllar İtibariyle Alet Makine Varlığı (adet)  Kaynak: Türkiye İstatistik Kurumu (TUİK)*

## 5   Gayri Safi Yurt İçi Hasıla (GSYİH) ve Tarım

Tarımın Türkiye ekonomisindeki önemi nispi olarak azalmış görülmektedir. Cumhuriyetin ilk kurulduğu yıllarda tarımın GSYİH'daki payı %42.8 iken 1970'li yıllarda %36.0, 1985 yılında %25.0, 1990 yılında %16.0, 2000 yılında %13.5 oranında gerçekleşmiştir (Miran, 2006). Tablo 7.'de verilen son on yıllık değişim incelendiğinde ise 2003 yılında %11.1 olan değer, 2012 yılında %9.0'düşmüştür. Tarımın büyüme hızı ise 2003 yılına -%2.2 iken, 2012 rakamlarına göre %5 artış göstererek %3.1 oranında gerçekleşmiştir. On yıllık süreç içerisinde tarımda büyüme oranın en yüksek olduğu yıllar 2005 ve 2011 yılları olmuştur.

Türkiye'de çeşitli dönemlerde yaşanan ekonomik krizler diğer sektörlerde olduğu gibi tarım sektöründe de olumsuz etkiler oluşturmaktadır. Nitekim 2001 yılında yaşanan ekonomik krizin ardından büyüme oranı    -%5.7 olurken tarım sektöründe büyüme oranı -%8.1 olarak gerçekleşmiştir. Yine aynı şekilde 2006 yılında başlayan "Küresel İklim Krizi" ile birlikte dünya ekonomisi 2007-2008 yıllarında büyük değişimlere sahne olmuştur. "Gıda Krizi" olarak adlandırılan 2007 yılında başlayan ve 2008 yılı yaz aylarına kadar devam eden gıda fiyatlarındaki aşırı artış dönemi 2008 sonbaharında yerini "Küresel Mali Krize" bırakmıştır (Dellal ve Keskin, 2008). Dolayısıyla tarımda büyüme oranın 2007 yılında -%7.0 olmasının sebebi de dünya çapında yaşanan küresel mali krizdir.

| Yıllar | Toplam Gayrisafi Yurt İçi Hasıla | Sektör Payı (%) | Büyüme hızı (%) |
|---|---|---|---|
| 2003 | 8.475.962.713 | 11,1 | -2,2 |
| 2005 | 8.701.634.939 | 10,2 | 6,6 |
| 2007 | 9.275.243.584 | 8,6 | -7,0 |
| 2009 | 9.393.296.070 | 9,8 | 3,7 |
| 2011 | 8.736.944.153 | 8,9 | 6,2 |
| 2012 | 9.141.423.592 | 9,0 | 3,1 |
| Değişim (%) | 25 | - 2 | 5 |

*Tablo 7. Yıllar İtibariyle GSYİH ve Tarımın Payı (1987 Temel Fiyatlarıyla) Kaynak: Türkiye İstatistik Kurumu*

## 6   İstihdam, İşgücü Ücretleri ve Tarım

Ekonomik yaşamın yaratıcısı insan olduğu için, nüfus ve ekonominin ilişkisi oldukça fazladır. Nüfus bir yandan çeşitli ihtiyaçlarımızı karşılayan mal ve hizmetler için talep oluştururken, öte yandan üretimin önemli bir öğesi olan işgücü arzını sağlar (Rehber ve Çetin, 1998). Dolayısıyla kırsal nüfus ve istihdam ekonomik gelişme açısından önemli bir dinamiktir. Tablo 8. Türkiye'de yıllar itibariyle toplam istihdam ve toplam istihdam içinde tarımın payını göstermektedir. Toplam istihdam 2013 rakamlarına göre yaklaşık 25.5 milyon kişi iken tarımsal istihdam 6 milyon kişi civarındadır. Son on yıllık değişim incelendiğinde toplam istihdamda %30 oranında bir artış olmuştur. Diğer taraftan tarımın toplam istihdam içerisindeki payının %5.5 oranında bir azalma ile %29.1'den %23.6'ya düştüğü görülmektedir. Bu rakamlara göre sanayi ve hizmetler sektöründe istihdamın tarım sektörüne göre daha fazla arttığını söylemek mümkündür. Türkiye'de kırsal kesimdeki nüfusun toplam nüfus içindeki payının azalmasında uygulanan kırsal kalkınma politikalarının sanayi sektörünü kapsaması ve tarımsal mekanizasyondaki gelişmeler olduğu söylenebilir. Diğer taraftan miras hukukuna bağlı olarak parçalanan işletmelerde üretici gelirlerinin yeterli olmayışı üreticileri göçe zorlamıştır (Işın, vd., 2014).

Diğer taraftan tarım tarımda ücretler diğer sektörlere göre hem daha düşük hem de ödeme şekilleri açısından farklıdır. Tablo 9.'da Türkiye'de son on yılda mevsimlik ve sürekli tarım işçilerinin ücret dağılımı verilmiştir. Tabloya göre mevsimlik tarım işçilerinde kadınların günlük ücreti son on yılda 9 Liradan 33 Liraya yükselmiş yani %252 oranında artmıştır. Mevsimlik erkek işçilerin günlük ücreti ise 12 liradan 43 TL'ye yükselmiş yani

%259 oranında artmıştır. Mevsimlik işçilerin günlük ücret ödemeleri ortalaması 2003 yılında 11 TL iken 2013 yılında 38 TL olmuş ve %269 oranında artış göstermiştir. Sürekli tarım işçilerinin aylık ücretleri ise kadınlarda 232 TL'den 858 TL'ye çıkmış ve %269 oranında artmıştır. Erkeklerde 306 TL'den 1128 TL'ye, ortalama olarak ise 297 TL'den 1090 TL'ye yükselmiş ve sürekli tarım işçilerinin ortalama ücreti aylık olarak son yılda %267 oranında yükselmiştir.

| Yıllar | Toplam İstihdam (1000 kişi) | Tarımsal İstihdam (1000 kişi) | Tarımın Payı (%) |
|---|---|---|---|
| 2003 | 19.632 | 5.713 | 29,1 |
| 2005 | 20.423 | 4.907 | 24,0 |
| 2007 | 21.194 | 5.016 | 23,7 |
| 2009 | 22.594 | 5.683 | 25,2 |
| 2011 | 24.821 | 6.097 | 24,6 |
| 2013 | 25.524 | 6.015 | 23,6 |
| Değişim (%) | 30,0 | 5,3 | -5,5 |

**Tablo 8.** *Yıllar İtibariyle İstihdam ve Tarımın Payı (1000 he.)* **Kaynak:** *Türkiye İstatistik Kurumu (TUİK)*

| | Mevsimlik Tarım İşçilerinin Ortalama Günlük Ücretleri (TL) | | | Sürekli Tarım İşçilerinin Ortalama Aylık Ücretleri (TL) | | |
|---|---|---|---|---|---|---|
| | Kadın | Erkek | Ortalama | Kadın | Erkek | Ortalama |
| 2003 | 9 | 12 | 11 | 232 | 306 | 297 |
| 2005 | 13,62 | 18,06 | 15,34 | 314,41 | 403,49 | 391,49 |
| 2007 | 19,17 | 25,94 | 22,19 | 550,19 | 706,39 | 693,70 |
| 2009 | 22,65 | 32,21 | 27,19 | 650,32 | 835,99 | 806,33 |
| 2011 | 28,52 | 38,41 | 32,91 | 748,14 | 1021,76 | 978,97 |
| 2013 | 33 | 43 | 38 | 858 | 1128 | 1090 |
| % değişim | 252 | 259 | 260 | 269 | 269 | 267 |

## 7   Dış Ticaret ve Tarım

Türkiye'de yıllar itibariyle ithalat ve ihracat oranları artış göstermektedir. Tablo 10.'da Türkiye'de dış ticarette tarımın payı yıllar itibariyle gösterilmiştir. Uluslararası Standart Sanayi Sınıflamasına göre Türkiye'de son on yılda toplam ithalat %263 oranında, tarımsal ithalat %206 oranında artmıştır.

| Yıl | Toplam ithalat (1000 $) | Tarım (1000 $) | % | Toplam İhracat (1000 $) | Tarım (1000 $) | % |
|---|---|---|---|---|---|---|
| 2003 | 69.339.692 | 2.537.855 | 3,7 | 47.252.836 | 2.201.436 | 4,7 |
| 2005 | 97.539.766 | 2.765.260 | 2,8 | 73.476.408 | 3.468.315 | 4,7 |
| 2007 | 139.576.174 | 2.934.996 | 2,1 | 107.271.750 | 3.883.465 | 3,6 |
| 2009 | 201.963.574 | 6.433.040 | 3,2 | 102.142.613 | 4.536.473 | 4,4 |
| 2011 | 185.544.332 | 6.490.029 | 3,5 | 134.906.869 | 5.352.613 | 4,0 |
| 2013 | 251.650.823 | 7.776.120 | 3,1 | 151.812.239 | 5.912.976 | 3,9 |
| Değişim (%) | 263 | 206 | -0.6 | 221 | 169 | -0.8 |

**Tablo 10.** *Yıllar İtibariyle Dış Ticarette Tarımın Payı(Uluslararası Standart Sanayi Sınıflamasına (USSS, Rev.3))* **Kaynak:** *Türkiye İstatistik Kurumu (TUİK)*

Tarımın ithalattaki payı ise 2003 yılında %3.7 iken 2013 yılında bu değer %3.1'e düşmüştür. Diğer taratan Türkiye'de son on yılda ihracat %221 artarken, tarımsal ihracat %169 oranında artmıştır. Tarımın İhracattaki payı 2003 yılında %4.7 iken, 2013 yılında %3.9'a düşmüştür. Tarımsal ürünlerin ihracatında ilk sırayı AB ülkeleri alırken domates salçası, çeşitli konserveler, yaş meyve sebze ve unlu mamuller önemli tarımsal ihraç ürünleridir.

## 8   Tarımsal Üretim Değeri

Tarım sektöründeki ekonomik değişimleri incelemede önemli bir gösterge de tarımsal üretim değeridir. Son on yılda tarımsal üretim değeri, bitkisel ve hayvansal üretimin payları tablo 11.de görülmektedir. Tabloya göre 2003 yılından 2013 yılına kadar tarımsal üretim değeri %194 oranında artış göstermiştir. Tarımsal üretim değeri içerisinde bitkisel üretimin payı %59'dan %44'e düşerken, hayvansal üretim değeri %41'den %56'ya

yükselmiştir. Tarımsal üretim değeri içerisinde hayvancılığın payının artması uygulanan hayvancılık politikalarındaki değişimle direk ilgili bir konudur.

| | Tarımsal ÜD (Milyon TL) | Bitkisel Üretim Payı (%) | Hayvansal üretim Payı (%) |
|---|---|---|---|
| 2003 | 68.393 | 59 | 41 |
| 2005 | 88.365 | 58 | 42 |
| 2007 | 104.375 | 54 | 46 |
| 2009 | 123.024 | 55 | 45 |
| 2011 | 191.628 | 46 | 54 |
| 2013 | 200.767 | 44 | 56 |
| Değişim (%) | 194 | -16 | 16 |

*Tablo 11. Yıllar İtibariyle Tarımsal Üretim Değeri **Kaynak:** Türkiye İstatistik Kurumu (TUİK)*

## 9 Tarım Politikaları ve Destek Miktarındaki Değişim

Tarım sahip olduğu dezavantajlı özellikler dolayısıyla gelişmiş ülkeler başta olmak üzere tüm ülkelerde destekleyici politikalarla korunan sektörlerin başında gelmektedir. Tüm ülkelerde olduğu gibi ülkemizde de, uygulanan tarım politikalarının üretici gelir ve refah seviyesini artırma, fiyat istikrarı sağlama, ucuz gıda temini ile tüketici refahını artırma, kendi kendine yeterlilik sağlama, kırsal kalkınma ve döviz tasarrufu sağlama gibi çeşitli amaçları vardır (Tan, 2011).

Türkiye'de planlı dönemle birlikte çeşitli destekleme politikaları ile tarım korunmuştur. Mevcut destekleme politikaları ile tarımda istenilen hedeflere ulaşılmadığı için 7. ve 8. Beş Yıllık Kalkınma Planlarında politikalarda reforma gidilmesinin gereği vurgulanmış, IMF ile imzalanan borçlanma sözleşmesine de bağlı olarak 2000'li yıllardan itibaren Türkiye'de yeni bir tarım politikası süreci başlamıştır. Tüm destekler yerine üreticiye verilen desteklerin Doğrudan Gelir Desteği (DGD) altında toplanması 2000 yılı ile 2008 yılları arasında uygulanmıştır. Bu destekleme modelinin 2008 yılında sona ermesi ile mazot, gübre, toprak analiz destekleri, organik tarım ve iyi tarım uygulamaları destekleri, ayçiçeği, pamuk, soya gibi ürünlerde prim destekleri ve hayvancıkla ilgili çok kapsamlı desteklemeler gündeme gelmiştir. Tarıma aktarılan destekler yıllar itibarıyle artış gösterme eğilimindedir. Son on yıllık değerlendirileme yapılacak olursa tarıma aktarılan destekler 2003 yılında 2,80 milyar TL iken bu değer 2012 yılında 15 milyar TL'ye ulaşmıştır. Diğer taraftan son on yıl içerisinde Ziraat Bankası ve tarım kredi kooperatifleri tarafından verilen toplam tarımsal kredi miktarı 529 milyon TL'den 22,1 milyar TL'ye ulaşmıştır. Bu dönemde kredi faiz oranlarında düşüş, kredilerin geri dönüş oranlarında ise artış gözlenmiştir (GTHB, 2013). On yıllık süreçte organik ve iyi tarım uygulamalarının yaygınlaştırılması, örtüaltı sebzeciliğin geliştirilmesi, tohumculuk politikaları ve gen kaynaklarının korunması ile ilgili politikalar önemli bitkisel üretim politikalarıdır. Diğer taraftan EBK ve SEK'in yeniden düzenlenerek, Et ve Süt Kurumu Genel Müdürlüğü olarak yeniden yapılandırılması, hayvancılığa sıfır faizli kredi uygulaması, hayvancılıkta gen kaynaklarının korunması ve çeşitli ıslah politikaları, yem bitkileri destekleri, mera ıslah çalışmaları önemli hayvancılık politikaları arasında sayılabilir. Yine son on yılda kırsal kalkınma politikaları ülkemizde giderek önem kazanmıştır. Ulusal ve uluslararası kaynaklardan hibe destekli projelere önemli miktarda kaynak aktarılmış, bu politikalarla kırsal kesimde özellikle tarıma dayalı sanayinin gelişmesi hedeflenmiştir.

Türkiye'de yukarıda ifade edilen tarım politikası değişiklikleri yanı sıra Tarım Havzaları Üretim ve Destekleme Modeli, 2010 yılında yürürlüğe giren en önemli politikalardan biridir. Veri tabanı, talep tahmini, havza, destek ve portal (sistem taşıyıcısı) olmak üzere beş bileşenden oluşan bir uygulamadır. Tarım havzaları üretim ve destekleme modelinden destek alabilmenin ön koşulu, belirtilen havzalarda üretimin gerçekleştirilmesi ve Çiftçi Kayıt Sistemine (ÇKS) olmasıdır (Karaman ve Yavuz, 2012).

## 10 Sonuç ve Öneriler

Bu çalışmada Türkiye'de tarımsal ekonomik göstergelerin son on yıllık değişimi incelenmiştir. Elde edilen sonuçlara göre toplam tarımsal alanlarda %5, ekim alanlarında ise %10 oranında bir azalma meydana gelmiştir. Ürünler itibarıyle son on yılda buğday ekim alanlarında %15, arpada %20, pamukta %29 ve şekerpancarı ekim alanlarında %8 oranında bir azalma olurken, mısır ekim alanlarında %18, ayçiçeği ekim alanlarında ise %12 oranında artış olmuştur. Ekim alanlarındaki değişimle birlikte son on yıl içerisinde mısırda %111, ayçiçeğinde %90, şekerpancarında %31, buğday üretiminde ise %16 oranında üretim artışı meydana gelmiş, pamuk üretiminde %4, arpa üretiminde ise %2 oranında üretim düşmüştür. Meyve üretim miktarlarında genel bir artış, sebze üretiminde ise azalmalar oluşmuştur. Bitkisel üretimde olduğu gibi hayvansal üretimde de hayvan sayısında azalmaya rağmen artışlar meydana gelmiştir. Tavuk etinde %180, kırmızı ette %110 ve sütte %83 oranındaki artışlar memnun edici gelişmelerdir. Kümes hayvanlarında ve büyükbaş hayvancılıktaki olumlu gelişmeler küçükbaş hayvancılıkta kaydedilememiştir.

Teknolojik gelişmelere bağlı traktör sayısında %22 oranında, biçerdöver sayısında ise %32 oranında bir artış meydana gelmiştir. Ulusal hesaplar incelendiğinde GSYİH'da tarımın payı on yılda %11.1'den %9.0'a düşerken,

tarım sektörünün büyüme hızı 2003 yılına -%2.2 iken, 2012 rakamlarına göre %5 artış göstererek %3.1 olarak gerçekleşmiştir. Ülkemizde son on yılda toplam istihdamda %30 oranında bir artış olmuş, tarımın toplam istihdam içerisindeki payının %5.5 oranında bir azalma ile %29.1'den %23.6'ya düşmüştür. Tarımda istihdam azalırken işgücü ücretlerinde önemli artışlar olmuş, mevsimlik ve sürekli işgücü ücretlerinde %200 üzerinde artış meydana gelmiştir. İthalatta tarımın payı azalırken ihracatta tarımın payı artmıştır. Uygulanan tarım politikalarında değişim ve reformlar önem kazanmış, tarıma aktarılan destekler 2003 yılında 2,80 milyar TL iken bu değer 2012 yılında 15 milyar TL'ye ulaşmıştır.

Tarımla ilgili genel göstergeler incelendiğinde son on yılda tarımda genel olarak olumlu gelişmeler gözlenmiştir. Fakat ekilen alan ve tarıma dayalı istihdamdaki düşüşler, tarımdaki yapısal problemleri de dikkate aldığımızda tarıma cazibesini kaybeden bir sektör görünümü kazandırmıştır. Ekim alanlarındaki azalmaya bağlı olarak üretim miktarının artışı sektördeki teknolojik ve verimlilikle ilgili gelişmelere bağlıdır. Yine aynı şekilde hayvan sayısındaki azalmaya rağmen üretim miktarlarındaki artışlar verimli ırkların arttığının bir göstergesidir.

Bu verilerin ışığında tarımsal arazilerin korunması ve kullanılmasına ilişkin, arazi toplulaştırma çalışmalarının yaygınlaştırılması, işletme ölçeğinin genişleterek daha rekabetçi bir işletme yapısının oluşturulmasına dönük politikalar en öncelikli tarım politikaları olmalıdır. Kırsal kalkınmada Avrupa Birliği (AB) Ortak Tarım Politikası ile uyumlu bir şekilde strateji geliştirmek, kırsal kesimde nüfusun bulunduğu yerde kalkınmasını sağlayacak politikalar yine bu çalışmada öneri olarak sunulabilir. Ayrıca Havza Bazlı Destekleme Modeli kapsamında, iç ve dış talebe uygun bir üretim deseni oluşturmak hem planlı üretim açısından hem de rekabet edebilirlik açısından son derece önemlidir.

# Türkiye'de Organik Tarım Potansiyelinin Kırsal Kalkınmadaki Rolü: Gökçeada Örneği

# The Role in the Rural Development of Organic Agriculture Potential in Turkey: The Case of Gökçeada

Asst. Prof. Dr. Şermin Atak (Çanakkale Onsekiz Mart University, Turkey)
Assoc. Prof. Dr. Sibel Tan (Çanakkale Onsekiz Mart University, Turkey)
Asst. Prof. Dr. Ümran Şengül (Çanakkale Onsekiz Mart University, Turkey)

## Abstract

Organic agriculture in Turkey has been put on the agenda in accordance with external demands since 1980. These demands initially started with traditional products such as raisin and fig and then the number of requested products has increased rapidly. Including the transition process, approximately 24,354 farmers produced 665.550 tons organic products in 251.899-hectare field in Turkey. Gökçeada, becoming an organic island, is a region where significant projects are implemented. With a total of 101 varieties of organic products, Gökçeada has a potential of up to 50% of the number of varieties in Turkey. On the other hand, 390 producers carry out organic agricultural activity on the island. Gökçeada has 1.35% of the organic agriculture land of in Turkey and 1.47% of the production. The positive effects of organic agriculture on rural poverty reduction and on the environment and its effect on tourism potential will be examined by using field studies conducted on the island as a method in this study. In the light of the findings, policy and strategy recommendations on the development of Gökçeada with organic agriculture will be conveyed. In this study, the institutional structure of organic agriculture in Turkey and Gökçeada, government policies towards organic agriculture, the importance of the organic agriculture in terms of the projects conducted and rural development will be examined. Results of the study Gökçeada going to have rural development strategies about future.

## 1 Giriş

Dünya'daki hızlı nüfus artışı ve teknolojik çağı takiben küresel düzeyde yaşanan çevre kirliliği ve bu kirliliğin su ve toprak kaynaklarında oluşturduğu riskler, tarımda alternatif üretim yaklaşımlarını ortaya çıkarmıştır. Toplumun insan ve çevre sağlığı konusundaki endişelerinin tarıma yansıması organik tarım faaliyetlerinin gündeme gelmesine sebep olmuştur. Bu faaliyetlere bağlı olarak dünyadaki organik tarım pazarı genişlemekte ve organik tarım ticareti giderek önem kazanmaktadır (Everest vd., 2010).

Türkiye'de organik tarım dış talepler doğrultusunda 1980 yılından itibaren gündeme gelmiştir. Bu talepler başlangıçta kuru üzüm ve incir gibi geleneksel ürünlerle başlamış olup daha sonra ürün sayısı hızla artmıştır. Türkiye'de 2012 rakamlarına göre 204 çeşit organik ürün, 54.635 üretici, 702.909 hektar organik tarım alanı ve 1.750.127 ton üretim mevcuttur (TUİK, 2014). Gökçeada Türkiye'de organik ada olma yönünde önemli projelerin uygulandığı bir bölgedir. Toplam 101 organik ürün çeşidi ile Türkiye'deki çeşit sayının %50'si kadar bir potansiyele sahiptir. Diğer taraftan adada 390 üretici organik tarım faaliyeti yapmaktadır. Gökçeada organik tarımda alan olarak Türkiye'nin %1.35'ini, üretim olarak da %1.47'sine sahiptir (Everest vd., 2010).

Gökçeada eski adı ile "İmroz" Çanakkale iline "Bozcaada" ile birlikte 1927 yılında çıkarılan Kanun ile özel bir statüdeki Mahalli İdare yapısına sahip olmuştur. Buna göre Bozcada ve Gökçeada Çanakkale vilayetine bağlı olan bir nahiyedir. Ayrıca günümüzde Gökçeada'nın ve Bozcaada'nın özel statüsünün yeniden düzenlenerek gelirlerinin artırılmasına yönelik yasa değişikliği önerisi TBMM'de komisyonundadır. Gökçeada'nın kırsal kalkınma potansiyelinin geliştirilmesinde kalkınma çabalarını bütünleşik olarak planlamak ve organik tarım ile çevreyle dost, Gökçeada'lı halkının katılımını sağlayacak sürdürülebilir programların geliştirilmesi gerekmektedir. Diğer taraftan Türkiye'nin Uzun Vadeli Kırsal Kalkınma Stratejisinde güçlü yönler arasında yer alan "organik tarım potansiyelinin bulunması", fırsatlar arasında yer alan "organik ürünlere olan talebin artırılması", "kırsal turizm talebinin artma eğilimi" geliştirilebilecek bütünleşik projeler açısından destekleyici bir niteliğe sahiptir (DPT, 2006).

Gökçeada'da organik tarımın kurumsal yapısı, uygulanan devlet politikaları, yapılan projeler kırsal kalkınma açısından önem taşımaktadır. Gökçeada'da zeytincilik, meyvecilik, hububat ve sanayi bitkilerinin organik üretimi ile ilgili faaliyetlerle dost olan büyükbaş ve küçükbaş hayvancılık, yem bitkilerinin yetiştirilmesi gibi çoğunluğu ada içinde tüketilen üretimler gerçekleştirilmektedir (Gökçeada Belediyesi, 2014).

Yukarıdaki bilgiler ışığında Türkiye'de özellikle kırsal kalkınma programları açısından organik tarım önemli bir konudur. Çalışmada organik ada olma yolunda çok çeşitli projelerin uygulandığı Gökçeada örnek olarak incelenmiştir. Çalışmanın ikinci bölümünde kırsal kalkınma politikaları açısından organik tarım ve bütünleşik

politikalar, üçüncü bölümünde kırsal kalkınma politikalarının sürdürülebilirliğinde halkın katılımı incelenmiştir. Dördünce bölümde ise sonuç ve öneriler sunulmuştur.

## 2 Kırsal Kalkınma Politikaları Açısından Organik Tarım Ve Bütünleşik Politikalar

"Birleşmiş Milletler Toplumsal Gelişme ve Kalkınma Bildirgesi "ne göre kalkınma toplumsal gelişme ve ekonomik kalkınma birbiri ile ilişkili olup toplumun çeşitli yönlerini içine alan bütünleşmiş bir kalkınma stratejisini vurgulamaktadır. Bildirge her hükümete halkın toplumsal gelişme ve refahını sağlama, kapsayıcı kalkınma planlarının bir parçası olarak toplumsal kalkınma önlemlerini alma, tüm ulusal çabaları bu amaç yönünde özendirme, eşgüdümleme, bütünleme ve toplumsal yapıda zorunlu değişmeleri başlatma ödev ve sorumluluğunu vermektedir (Birleşmiş Milletler Toplumsal Gelişme ve Kalkınma Bildirgesi, Md.8, 1969). Bildirge uluslararası düzeyde gelişmişlik düzeyleri arasındaki farkları gidermeye yönelik bir hedef ile ulus devletlerin kendi potansiyellerinden yararlanmalarını öngörürken ve bu sürecin hükümet politikalarının bir parçası olarak yürütülmesinin önemine vurgu yapan ilk belge niteliğini taşımaktadır. Buna göre toplumsal barışının sağlanması toplumsal gelişme ve kalkınma ile gerçekleşebilecektir. Hükümetlere verilen bu görevi sürdürecek kamu idarelerinin toplumların yaşam standartlarını yükseltmeleri için toplumsal kalkınma önlemlerinin planlanması gerektiği vurgulanmaktadır.

Bununla beraber 1995 Yılındaki Kopenhag Toplumsal Kalkınma Deklarasyonu da sürdürülebilir kalkınmanın sağlanmasında yerli toplulukların ekonomik ve toplumsal gelişimlerini, kimlik, gelenek, toplumsal örgütlenme, kültürel değerlerine tam saygı göstererek kabul etmek gerektiğine (Birleşmiş Milletler Kopenhag Toplumsal Kalkınma Deklarasyonu Md.26, 1995) işaret etmektedir.

2000 yılındaki Birleşmiş Milletlerin Milenyum Raporu ile ise birlikte dikkat çektiği duruma bağlı olarak "yoksulluklerın azaltılması", "çevrenin sürdürülebilirliğinin arttırılması" gibi konularda "Bin Yıl Kalkınma Hedefleri" oluşturulmuş ve özellikle gelişen şartlar ile birlikte kırsal kesimlerin yoksulluklarına dikkat çekilmiştir. Ülkeler ve hükümetler bu süreçten sonra "Bin Yıl Kalkınma" hedeflerine uygun bir biçimde kırsal kalkınma politikalarını yapılandırmak zorundadırlar. Ancak bu güne kadar sürdürülen uygulamaların yeterli olmadığı görülmektedir. Birleşmiş Milletler Kalkınma Programı, Kalkınma Bakanlığı aracılığı ile GAP bölgesinde Bin Yıl Kalkınma Hedefleri ile ilişkilendirmiş olduğu "Organik Tarım Küme Projesi" ile yoksulluğun azaltılması başlığı ile ilgili çalışmalar yürütmektedir (UNDP, 2014). Uluslararası alanda da hedeflenen toplumsal kalkınmanın gerçekleştirilmesi için ulusal politikalarda da kırsal alanlardaki yoksulluğun azaltılması, bütünleşik programlar yoluyla kırsal kalkınmanın ve çevresel sürdürülebilirliğin sağlanmasına yönelik stratejilerin uygulanması ile gerçekleştirilebilir.

Organik tarım kırsal yoksulluğun azaltır, çevre üzerine olumlu etkiler oluşturur. Ekoturizm potansiyelini arttırır. Ekoturizm; içinde doğa turizmini de barındıran ayrıca içinde organik tarımsal üretimin süreçlerine de yer veren bir turizm alanıdır. Organik etiket almış tüm doğal ürünler organik ürün olarak tanımlandığı gibi ekoturizm faaliyetlerinden bazıları da doğa turizmi olarak ifade edilebilir. Yerel Kalkınma için Stratejik Planlama Çalıştay'ında Bimonte, "İtalya'ya Doğa Turizmi için gelen turistlerin Sahil Turizmi için gelen turistlere nazaran daha fazla çevre bilincine sahip, gelir düzeyleri daha yüksek ve ekonomik krizlerden etkilenmeyen sürekli bir turizm kapasitesine sahip ziyaretçiler olduklarını" belirtmiştir (Yerel Kalkınma İçin Stratejik Planlama, 2005). Dünya'nın çeşitli ülkelerinde yaşanan deneyimlerin Gökçeada'da oluşturulabilecek "organik tarım-ekoturizm" bütünleşik kırsal kalkınma politikasına örnek oluşturabilecek bir niteliğe sahip olduğu söylenebilir. Üstelik "doğa turizmi" ile ilgilenenlerin yöresel ürünlerden tükettikleri ve yöresel özellikli alanlarda konakladıkları görülmektedir. Bu durum yerel ekonomi için son derece teşvik edicidir.

Gökçeada dışına yönelmiş ulusal ve uluslararası nitelikte pazarlanabilir "ekolojik ürünler" ve "ekopazarlar" oluşturulması bütünleşik politikaları destekleyebilecek niteliktedir. Özellikle Gökçeada'nın organik ürünlerin coğrafi olarak isimlendirilmesi konusunda yeterli potansiyele sahip olduğu görülmektedir. Tarihsel kimliğinden de beslenen bir nitelikle ekolojik pazarlarda ses getirebilecek bir nitelikte "Imbrasos" yani destanlardaki bolluk adası kavramının karşılandığı bir "organik ürün talebi" oluşturabilmeye imkan tanıyacaktır.

Gökçeada'daki ev pansiyonculuğu geçim kaynakları arasında yer almaktadır. Ev pansiyonculuğunun "Yeni Bademli Köyü" ve "Uğurlu Köyü" sakinleri tarafından gerçekleştirildiği görülmektedir. (Gökçeada Belediyesi, 2014). Organik tarımsal faaliyeti gerçekleştiren köylülerin ev pansiyonculuğu ile ilgilenmesi bütünleşik kırsal kalkınma faaliyetleri açısından hem kırsal kalkınmaya katkı sağlayacak hem çevreyi ve doğal kaynakları koruyacak hem de 1992 Rio Zirvesi çıktıları arasında yer alan "yerli halkların kültürlerini korumak" ve "yerel bilgiden yararlanmak" gerektiği konularına uyum sağlamaktadır.

Bununla birlikte ekoturizm faaliyetleri ile bağdaşabilecek kültür turizmi faaliyetlerinin adanın potansiyeli gereği bütünleştirilmesi gerekmektedir. Geçmişten günümüze adayla kültürel ve ailevi bağlarını sürdüren Gökçeadalıların ve Çanakkalelilerin çabalarının dahil edilmesi ve gerekmektedir. Günümüz şartları içinde kırsal kalkınmanın sürdürülmesinde Gökçeada'nın doğal kaynaklarının sürdürülebilirliğini sağlamanın yanında ve tarihsel dokusunu koruyan ve öne çıkaran politikanın geliştirilmesine ihtiyaç vardır.

Diğer yandan, Zeytinli Köyünde Gökçeada'ya özgü nam salmış olan Dibek Kahvesi, Eşelek Köyünde ziraat ve hayvancılık ürünlerinin çardaklarda satılması organik tarım ürünlerinin üretimi ve ticaretini ifade ederken, Rum vatandaşların yaşadığı Tepeköy'de yaz aylarındaki Meryem Ana etkinlikleri Kültür turizmi boyutunu, Gökçeada Sörf Okulu, spor ve eğitim turizmi boyutunu ifade etmektedir. Organik tarımsal faaliyetlerle birlikte yürütülebilecek bütünleşik ekonomik faaliyetler olarak "spor, sağlık, eğitimi kültür turizmi" Gökçeada'ya özgü bir bütünleşik kırsal kalkınma programı geliştirmek için yeterli deneyimin oluşturulmasını sağlamıştır. Ayrıca Gökçeada'nın mitolojiden bugüne kadar çeşitli dönemlerdeki stratejik konumu adayı çok önemli bir konuma getirmiştir.

## 3 Kırsal Kalkınma Politikalarının Sürdürülebilirliğinin Sağlanmasında Halkın Katılımı

Ulusal Kırsal Kalkınma Stratejisi, kırsal kalkınmanın artırılmasında "katılımcılık, sahiplenme ve işbirliği" bilincinin arttırılması öncelikler arasında yer almaktadır. Buna göre ulusal kalkınma stratejisinde yerel girişimlerin kurumsallaşması ve yerel aktörlerin aktif görevler alması desteklenmektedir (DPT, 2006). Kırsal ve Toplumsal Kalkınmanın sağlanmasında halkın katılımı boyutu son derece önemlidir. Barselona Belediyeler Birliği Temsilcisi Barnet'in 2005 yılında Pendik Belediyesi tarafından düzenlenen Çalıştay'da ifade etmiş olduğu gibi "toplumda katılımcı bir kültür yoksa bunu bir gecede yaratmak çok zordur ve karar verme süreçlerine halkın katılımı bir öğrenme sürecini gerektirir" (Yerel Kalkınma İçin Stratejik Planlama, 2005).

Kent konseyleri, hemşerilerin katılımının daha geniş kesimlere yaygınlaştıran bir katılım mekanizmasıdır. Kent konseylerinde belirlenen ya da kent konseylerinin desteğini alan çalışmalar meclis tarafından da desteklendiğinde uygulamaların kolaylaştırılmasını sağlayabilirler. Kent Konseyinde yer alan sivil toplum kuruluşları, meslek odaları, mahalle ve köy muhtarları, kamu kurum ve kuruluşlarının temsilcileri projenin belediye meclisinden daha geniş bir kesim tarafından desteklenmesini yaygınlaştırılmasını sağlayabilirler. Çanakkale Sivil Toplum ve Sivil İnisiyatiflerin faaliyetleri bakımından etkin bir ildir. Uluslararası deneyimlerden yararlanmış ve kendi potansiyelini katılımcı ve işbirliğine yönelik mekanizmalara aktarabilmiştir.

Ancak Çanakkale'nin "aktif katılımcılık" deneyimi çok daha eskidir. Katılımcı iyi yönetişim uygulamaları açısından pilot uluslararası bir proje içinde yer alan "Çanakkale Kent Konseyi" Türkiye'deki yerel yönetişim uygulamaları içinde yer alarak deneyimleri ile bugün 5393 sayılı Belediye Kanunun Kent Konseyleri ile ilgili maddesinin bağlı mevzuatın geliştirilmesine katkıda bulunmuştur (Göymen, 2010). Günümüzde Gökçeada 2013 yılı itibarı ile Belediye Nüfusu 6454 kişi olup toplam nüfusun %73,1'ini oluşturmaktadır. Gökçeada'nın toplam nüfusu ise 8830 dur. Buna bağlı olarak Gökçeada 5000 nüfusun üzerinde bir yer olarak 5293 Sayılı Belediye Kanuna bağlı olup katılımı Kent Konseyleri aracılığı ile gerçekleştirmekle yükümlüdür. Çanakkale nüfusu 2013 yılı itibarı ile 502.308' dir. 50.000 nüfusu geçtiği için de özellikle stratejik planlama yapmak zorunluluğundadır (Çanakkale Valiliği, 2014). 5393 sayılı Belediye Kanunu'na göre Gökçeada'nın vizyonunu oluşturmak hemşerilerin görevidir. Buna göre Gökçeada da kent vizyonunun geliştirilmesi, sürdürülebilir kalkınmanın sağlanması, çevreye duyarlı, dayanışmacı, ve katılımcı bir yöntemle ve hemşehrilik bilincinin geliştirilmesi ve kırsal kalkınmada "ortak akıl" oluşturması ve "ortak adım" atılması gerekmektedir.

Gökçeada Tarımsal Kalkınma Projesi Kapsamında DPT, İçişleri Bakanlığı, Çevre Bakanlığı ve Savunma Bakanlığı katkılarıyla Gökçeada'nın tamamen bir "Organik Ada" olma çabaları devam etmektedir. Gökçeada'nın "Organik Ada" olarak tanımlanması uzun süredir tarımsal ilaçların çok az kullanılması ile paraleldir. (Everest vd., 2010). Projenin merkezi idare tarafından başlatılması ile birinci adım atılmıştır. İkinci adım ise kent konseyi tarafından projenin desteklenmesidir. Yerel Yönetimlerin 29 Mart 2014 Seçimleri bir fırsat niteliğinde olup Kent Konseyi Yönetmeliği'ne göre seçimlerden sonra tekrar kent konseyinin toplanması yürütme kurullarını oluşturması ve meclise yön verecek alt çalışma gruplarını oluşturması gerekmektedir. Çanakkale'de yer alan sivil toplum kuruluşları ve sivil inisiyatiflerin bu tür çalışmaları desteklemesi gerekmektedir. Örneğin "Ekolojik Yaşam İnisiyatifi", ÇAYEK 2012 yılından bu yana doğa dostu üreticiler ile bireylerin bir araya gelmesini sağlayacak etkinlikleri geliştirirler. İki haftada bir araya gelen inisiyatif, sosyal medya üzerinden haberleşir ve organik tarım ve ekoturizm faaliyetleri gerçekleştirirler. ÇAYEK'in de çalışma grupları içinde yer alması gerekmektedir.

Sürdürülebilirlik kaynakların korunması açısından önemlidir. Bununla birlikte bu çalışmalar uzun vadeli bir planlamayı ve müdahalelere direnç geliştirmeyi gerektirmektedir. Organik tarımsal faaliyetler birkaç yıl denenip bırakılacak ve sonra tekrar denenebilecek faaliyetler değildir. Bütünleşik kırsal kalkınma hedefleri projenin sürekliliğini sağlarken sürdürülebilir olmayı da kolaylaştırabilmektedir. Buna bağlı olarak kirleten sanayilerin ve madencilik faaliyetlerinin ve Gökçeada'nın kalkınma politikalarından uzaklaştırılması, ekoturizm, bütünleşik katı atık yönetimi, organik gıdaların etkilenmesi ve pazarlanması, ekolojik ve sportif eğitimler ve bilimsel araştırma faaliyetlerinin geliştirilmesi gerekmektedir.

Gökçeada 50.000 nüfusa ulaşmadığı için stratejik plan yapma zorunluluğu olan Belediyeler arasında yer almamaktadır. Ancak Çanakkale İl Özel İdaresinin Gökçeada'yı da içine alan bir stratejik plan yapması zorunludur. Ancak bir engel olmadığı için tüm kurumları ile birlikte "Organik Ada" olması sebebi ile nüfus şartı

aranmaksızın bir stratejik plana sahip olması gerekmektedir. Bununla beraber kent vizyonunu belirleme süreci mutlak stratejik planın varlığını gerekli kılmaz. Yine de de Gökçeada'nın Vizyonuna Kırsal Kalkınmada Organik Tarım ve Bütünleşik Yaklaşımları önermek son derece önemli olabilecektir. Organik Ada konusunda bilgilenen halkın daha "yeşil bir yaşam" tercih ederek katkıda bulunmasını sağlanabilecektir.

Gökçeada'nın Organik Ada misyonunu devam ettirmesi ve buna uygun bir vizyon oluşturması Grant'ın "Yeşil Pazarlamanın Manifestosu" kitabında yer aldığı gibi "yeşil bir tüketim gerçekleştirmeyi", "yeşil meydan okumalar gerçekleştirmeyi" sağlayabilecektir. Özellikle halkın baskısının yeşil tercihlerin geliştirilmesinde çeşitli düzenlemeler getirilmesini sağlaması mümkündür (Grant, 2007). Görüldüğü üzere kırsal kalkınma politikalarının sürdürülebilirliğini sağlanmasında katılımcı mekanizmaların hayata geçirilmesi mevzuata yansıtılmış durumdadır. Buna göre hemşerilerin kentlerin vizyonunun belirlenmesi ve bu vizyona sahip çıkılmasında görev ve sorumlulukları bulunmaktadır.

## 4   Sonuç

Gökçeada coğrafik yapısı, ülke açısından taşıdığı stratejik önem, kültür ve turizm bakımından önemli bir potansiyele sahiptir. Bu potansiyelin değerlendirilmesi için zeytincilikle başlayan organik tarım faaliyetlerinin giderek her alanda geliştirilmesi ve bu faaliyetin kırsal turizm çalışmaları ile desteklenerek adanın cazibe merkezi haline getirilmesi gerekmektedir. Konuya kamu yönetiminin katılımcı politikaları açısından bakıldığında ise Gökçeada'nın organik tarımla kalkındırılması konusunda halkın projeye katılımının sağlanmasının son derece önemli olduğu görülmektedir. Buna bağlı olarak Gökçeada'nın kent vizyonunun ve bu vizyona bağlı stratejilerinin "Organik Ada" yapılanmasına uygun olarak belirlenmesi gerekmektedir.

Buna göre kamu sivil ve özel sektör ortaklığının geliştirilmesi, merkezi hükümetin ve yerel yönetimlerin birlikte hareket etmesi İl "Organik Ada" uygulamasının Türkiye''nin Ekolojik Tarımsal Potansiyelinin Kalkınma indeksi açısından çok düşük seviyede bulunan Gökçeada'nın bütünleşik kırsal kalkınmada temel ve sürükleyici bir faktör haline gelmesi ve bu sayede hem adanın tarihi, doğal potansiyellerinden yararlanma imkânını sunması, hem de kentsel katılımcı mekanizmalarının işletilmesi ile yöre halkının kalkınma çabalarını benimseyerek aktif katılımın sağlanması mümkün hale gelebilecektir.

# Avrasya Ekonomileri için Feldstein-Horioka Bilmecesi

# The Feldstein-Horioka Puzzle for Eurasian Economies

Asst. Prof. Dr. Serap Bedir (Erzurum Technical University, Turkey)

Asst. Prof. Dr. Dilek Özdemir (Atatürk University, Turkey)

Prof. Dr. Kerem Karabulut (Atatük University, Turkey)

## Abstract

The presence of a relation between saving and investment which has been debated in the empirical literature following the pioneering of Feldstein-Horioka (1980) is paramount to the determination of economic policies. Feldstein-Horioka (1980) stated that the relationship between saving and investment depends on the degree of international capital mobility. A high correlation between saving and investment is often taken as evidence of capital immobility. The purpose of this study is to empirically test the validity of the Feldstein-Horioka puzzle. The model developed within the context of the theoretical framework was estimated by means of panel ARDL (auto-regressive distributed lag bound test) approach which is a panel vector error correction method using the data for Eurasian economics for the period 1992-2011. The data is taken from World Development Indicators. The short-run analysis supports the Feldstein-Horioko hypothesis and captured from error correction model (ECM). The results of the bounds test suggest that there is a long run relationship between savings and investment. Therefore, the Feldstein–Horioko correlations are not a puzzle for our sample because of the low correlation and high capital mobility.

## 1 Giriş

Bretton Woods sisteminin çöküşü ve tüm dünyada sermaye hareketlerini kısıtlayan uygulamaların terk edilmesi uluslararası ekonomik sistem açısından yeni bir dönemin başlamasına sebep olmuştur. Bu çerçevede, uluslararası sermaye hareketliliğinin iktisat politikalarının belirlenmesinde oynadığı rol de giderek önem kazanmıştır. Sermaye hareketliliği, tüm dünya ekonomileri için önemli bir role sahiptir. Dünya tasarrufunun etkinliği, sermayenin ekonomiler arasında tam hareketli olmasına bağlıdır. Ulusal ekonomilerin para ve maliye politikalarının ne derecede etkili olacağı ve söz konusu politikaların makroekonomik değişkenleri hangi yolla etkileyeceği sermaye hareketliliğinin derecesi ile yakından ilişkilidir. Ayrıca sermaye hareketliliğinin derecesi, iç tasarruftaki artışın iç yatırım üzerindeki uyarıcı etkisini, ekonomide meydana gelen şokun geçiciliğini ve vergi yükünün dağılımını belirlemede de etkili olmaktadır.

Bu çalışmada, Avrasya ekonomileri kapsamında yatırım tasarruf ilişkisinin incelenmesi amaçlanmıştır. Bu ilişki, Feldstesin ve Horioka (1980) hipoteziyle yurtiçi tasarruflar ve uluslararası sermaye arasında var olduğu savunulan ilişki kapsamında değerlendirilmiştir. Çalışmanın ilk bölümünde Feldstesin ve Horioka (FH) hipotezine ait kavramsal çerçeve anlatılmıştır. İkinci bölümünde FH bilmecesine yönelik yapılan ampirik çalışmalar özetlenmiştir. Üçüncü bölümde veri ve yöntem anlatıldıktan sonra dördüncü bölümde elde edilen bulgulara yer verilmiş ve genel değerlendirme ve sonuç kısmıyla çalışma sonlandırılmıştır.

## 2 Teorik Çerçeve

İktisat yazınında 1980 yılından itibaren başlayıp günümüze kadar sürmekte olan tartışmanın temeli Feldstein ve Horioka tarafından yayınlanan "Yurtiçi Tasarruf ve Uluslararası Sermaye Akımı" (Domestic Saving and International Capital Flows) adlı makaleye dayanmaktadır. Feldstein ve Horioka (1980) çalışmalarında yurtiçi tasarruf-yatırım ve sermaye hareketleri arasındaki ilişkiyi, OECD üyesi olan 16 sanayileşmiş ülkenin 1960-1974 dönemi verilerini kullanarak tahmin etmeye çalışmışlardır. FH (1980)'e göre, sermayenin tam hareketli olduğu bir dünyada, yurt içi yatırım ve yurt içi tasarruf arasında herhangi bir ilişkinin bulunmaması gerekmektedir. Çünkü yurtiçi tasarruf dünya yatırım olanaklarına bağlı iken yurtiçi yatırım dünya sermaye havuzundan finanse edilecektir. Dolayısıyla eğer sermaye ekonomiler arasında tam hareketli ise, her bir ülkenin tasarrufunda meydana gelen artış, dünya ülkelerinin toplam yatırımını arttıracaktır. Yatırımdaki bu artış, ülkelerin sahip oldukları başlangıç sermaye stokları ve sermayenin marjinal verimlilikleri ile orantılı olarak ülkelere dağılacaktır (Kibritçioğlu ve Ninjbat, 2006). Uluslararası sermaye hareketliliğinin düzeyi, yatırım ve tasarruf arasındaki ilişkinin belirleyicisidir.

Feldstein ve Horioka (1980), yatırım ve tasarruf arasındaki ilişkiyi belirleyebilmek için aşağıdaki modeli kullanmışlardır:

$$\left(\frac{I}{Y}\right) = \alpha + \beta \left(\frac{S}{Y}\right)_i + u_i \qquad\qquad i = 1, 2, \ldots, N \qquad\qquad (1)$$

(1) nolu eşitlikte $Y$, Gayrisafi yurtiçi hasılayı; $I$, yatırımı; $S$, tasarrufu göstermektedir. $\beta$, tasarruf oranı katsayısıdır ve tasarruf saklama katsayısı (saving retention coefficient) olarak ifade edilmektedir. $\beta$ katsayısının

yüksek tahmin edilmesi bir ülkede düşük sermaye hareketliliğine ve yurtiçi tasarrufla yatırımlar arasındaki ilişkinin güçlülüğüne; düşük tahmin edilmesi ise, bir ülkede yüksek sermaye hareketliliğini ve tasarruf yatırım arasındaki ilişkinin zayıflığını göstermektedir. Dolayısıyla $\beta$ katsayısının sıfır olması mükemmel bir sermaye hareketliliğini gösterirken, $\beta$ katsayısının 1 olması sermaye hareketsizliğini göstermektedir.

Küçük ülke varsayımında iç tasarruftaki artışın iç yatırımı etkilememesi, diğer bir deyişle $\beta$ katsayısının sıfır çıkması beklenirken, büyük ülke varsayımında $\beta$'nın değeri söz konusu ülkenin sermayesinin dünya sermaye stoku içindeki oranına bağlı olarak belirlenecektir. Ancak OECD ülkeleri için $\beta$ değerinin ülkeden ülkeye değişecek olsa da ortalama olarak 0.10'un altında çıkması beklenmektedir.

Feldstein-Horioka (1980)'ın yapmış olduğu çalışmada $\beta$ katsayısı, 15 yılın ortalaması ile yapılan tahminde 0.887, beşer yıllık alt dönemlerin ortalamaları ile yapılan tahminlerde ise 0.871 ve 0.909 olarak bulunmuştur. Çalışmalarının sonuçları, yurt içi tasarruflar ile yatırımlar arasında güçlü bir ilişkinin var olduğu yönündedir. Katsayının bu derece yüksek çıkması sermayenin tam hareketli olduğuna dair ön kabul ile çelişmektedir ve tasarruftaki artışın büyük ölçüde ülke içinde değerlendirildiğini göstermektedir. Bu sonuç, kısa dönemde (likit olarak tutulan) sermayenin hareketli olması ile çelişmediği ancak uzun dönemde sermaye hareketliliğinin sınırlı olduğunun göstergesi olarak algılanması gerektiğini gösterir (Feldstein & Horioka, 1980).

FH (1980) yaptığı çalışma ile ülkelerin iç tasarruf ve yatırımları arasında güçlü ilişkinin bulunmasının sermaye hareketsizliğine gösterge olarak alınması, aynı dönem yapılan başka çalışmalar (Obstfeld,1985;1986, Sachs 1981) ile doğrulanmamıştır. Aksine, sermayenin uluslararasında yüksek derecede hareketli olduğunu göstermişlerdir. Literatürde "Feldstein-Horioka bilmecesi" olarak bilinen bu durum ekonomi yazınında pek çok araştırmaya ve tartışmaya neden olmuştur.

## 3 Literatür Özeti

Literatürde FH bilmecesine ait pek çok çalışma bulunmaktadır. Bir kısım literatür FH bilmecesinin çözümü için yapılan çalışmalardan oluşurken, bir kısım literatür FH bilmecesini çeşitli ülke grupları ve dönemler için yeniden tahmin etmişlerdir. FH bilmecesinde $\beta$ katsayısının sermaye hareketliğinin derecesini gösterdiğini kabul etmeyen ve çalışmada katsayının yüksekliğini ülke büyüklüğüne, verilerde ortalama alınmasına, kamu müdahalesinin etkisine, politika rejim değişikliğine, reel getirideki farklılığın etkisine, ülkenin dış borç ödeyebilme kısıtının etkisine, tasarrufun içselliği ve dışarda bırakılmış değişkenlerin etkisine bağlayarak açıklayan çalışmalarların yanında, sermayenin tam hareketli olduğu modellerin geliştirildiği çalışmalar da mevcuttur (Kibritçioğlu & Ninjbat, 2006). Bu çalışmalar, sermayenin hareketsizliği önerisini kabul etmezken ve sermayenin hareketli olmasına rağmen iç yatırım ve tasarrufun ilişkili olabileceğini iddia etmektedirler. Dolayısıyla FH bilmecesi, çeşitli ülke grupları ve dönemler için farklı yöntemlerle tahmin edilmiş ve farklı sonuçlar elde edilmiştir. Çalışmalarda yatay kesit, zaman serisi ve panel veri teknikleri kullanılmıştır.

Feldstein (1983) Murphy (1984), Penati & Dooley (1984), Obstfeld (1986), Feldstein &Bacchetta (1991), Golub (1990), Tesar (1991), Obstfeld (1995), Coakley vd. (1995), Obstfeld ve Rogoff (2000), OECD ülke grubu için yatay kesit tekniğini kullanarak FH (1980) sonuçlarını destekleyen çalışmalardır. Dooley vd. (1987), Wong (1990), Bayoumi (1990), Vamvakidis & Wacziarg (1998) ise çalışmalarında yatay kesit verilerini kullanarak, gelişmiş ve gelişmekte olan ülke ayrımına gitmişlerdir. Gelişmiş ülke gruplarında FH sonuçlarını destekleyen, gelişmekte olan ülkeler grubunda ise $\beta$ katsayısının OECD ülkelerindekinden çok daha düşük olduğunu tespit etmişlerdir.

Zaman serisi çalışmalarında Esen vd. (2012), 1975-2009 zaman aralığında Türkiye için, Nasiru & Usman (2013) 1980-2011 dönemi Nigerya için, İyidoğan ve Balıkçıoğlu (2010) 1968-2008 döneminde Türkiye için FH hipotezini destekleyen dolayısıyla FH(1980) sonuçlarını desteklemeyen çalışmalardır. Güzel ve Özdemir (2011) hem Japonya hem de ABD için, Erden (2005) Türkiye için sonuçların bir puzzle olduğu yani yatırımlarla tasarruflar arasında güçlü bir ilişki olduğu dolayısıyla FH (1980) sonuçlarını destekleyen çalışmalardır. Özmen ve Parmaksız (2003) 1948-1998 zaman aralığında İngiltere için yaptıkları çalışmada tüm örneklem için FH (1980) sonuçlarını desteklerken örneklemi alt dönemlere ayırdıklarında, 1948-1979 zaman aralığında FH (1980) sonuçlarını desteklerken ($\beta$:0.85) 1980-1998 zaman aralığında ($\beta$:0.31) desteklememektedir.

Panel çalışmaları ise Tablo 1'de özetlenmiştir.

## 4 Veri ve Metodoloji

### 4.1 Veri

FH hipotezi test edilirken, Feldstein ve Horioka (1980) tarafından geliştirilen (1) nolu eşitlikteki model kullanılmaktadır. Bu çalışmada da, 1992-2012 döneminde 24 Avrasya ülkesi için FH hipotezi test edilmiştir. Çalışmada bağımlı değişken (yurt içi yatırım/GSYİH) "YAT" ve bağımsız değişken (Yurt içi tasarruf/GSYİH) "TAS" olarak adlandırılmıştır. Çalışmada kullanılan veriler Dünya Bankası tarafından yayınlanan Dünya Kalkınma Göstergeleri (World Development Indicators)'nden derlenmiştir.

| Çalışma | Veri | Ülke | Yöntem | Sonuç (β katsayısı) | | | |

### 4.2 Metodoloji

Panel veri analizinde seriler arasındaki eşbütünleşme ilişkisinin hangi yöntemle belirlenebileceğinin tespiti için öncelikle serilerin bütünleşme derecelerinin belirlenmesi gerekmektedir. Bu bağlamda panel veri literatüründe testler öncelikle yatay kesit bağımlılığı (YKB) dikkate alıp almamasına göre birinci ve ikinci kuşak testler olarak ikiye ayrılır. Birinci kuşak birim kök testleri, paneli oluşturan yatay kesitlerin hata terimlerinin bağımsız olduğunu ve açıklayıcı değişkenlerden eşit katsayılarla etkilendiğini varsaymaktadır. Dolayısıyla, YKB olması durumunda birinci kuşak testler sapmalı sonuçlar verecektir. Bu nedenle, öncelikle YKB'nın test edilmesi gerekmektedir.

Bir ülke yüksek düzeyde entegreyse ve ekonomik ilişkilerdeki küreselleşme derecesi yüksekse, YKB'ın göz önünde bulundurulması önemlidir. YKB, zamanın herhangi bir noktasında i ülkesinde meydana gelen şokun zamanın o noktasında veya gelecekte j ülkesini etkilemesidir (Nazlıoğlu vd, 2011). Eğer $\in (u_{it,}u_{js)\neq}0$ ise yatay kesit bağımlılık vardır denir. YKB, Pesaran (2004)'e göre aşağıdaki şekilde test edilebilir:

$$CD = \sqrt{\frac{2T}{N(N-1)}}\left(\sum_{i=1}^{N-1}\sum_{j=i+1}^{N}\hat{\rho}_{ij}\right) \Rightarrow n(0,1)$$

Pesaran (2004) CD testi, hem $N \to \infty$ hem de $T \to \infty$ koşullarında geçerlidir ve küçük örneklem özellikleri güçlüdür (Pesaran, 2004). $CD_{LM}$ testine ait hipotezler aşağıdaki şekilde ifade edilebilir:

$H_0 : \rho_{ij} = \rho_{ji} = $ cor ( $u_{it}$ , $u_{jt}$ ) =0, $i \neq j$ (Yatay kesitler arasında bağımlılık yoktur).

$H_a : \rho_{ij} = \rho_{ji} \neq 0$, $i \neq j$ (Yatay kesitler arasında bağımlılık vardır).

Pesaran vd. (2008), Monte Carlo denemelerinde LM testlerinin küçük örneklemlerde ve ortak faktör 0'a yaklaşırken gücünün yüksek olduğunu, ancak CD testinin gücünün daha az olduğunu göstermiştir. Bu nedenle, N>T iken kullanılabilecek $LM_{adj}$ testini geliştirmiştir (Pesaran vd., 2008). Dolayısıyla CD test sonuçlarını teyit etmek için $LM_{adj}$ testi de yapılmıştır.

$$LM_{adj} = \sqrt{\frac{2}{N(N-1)}}\sum_{i=1}^{N-1}\sum_{j=j+1}^{N}\frac{(T-k)\,\hat{\rho}_{ij}-\mu T_{ij}}{\vartheta T_{ij}} \to d\ N(0,1)$$

Yatay kesit bağımlılığın/bağımsızlığın tespitinden sonra değişkenlerin homojen olup olmadıkları incelenmelidir. Çünkü değişkenlerin homojen ya da heterojen olması uygulanacak birim kök ve eşbütünleşme testlerinin biçimini değiştirmektedir. Çalışmada homojenliğin testi için Pesaran vd. (2008) tarafından geliştirilen ve N>T veya T>N durumlarında kullanılabilen $\tilde{\Delta}$ ve $\tilde{\Delta}_{adj}$ testleri kullanılmıştır (Pesaran ve Yamagata, 2008).

$$\tilde{\Delta}= \sqrt{N}\left(\frac{N^{-1}S\grave{-}k}{\sqrt{2k}}\right) \qquad\qquad \tilde{\Delta}_{adj}= \sqrt{N}\left(\frac{N^{-1}S^{\sim}-k}{\sqrt{2k}}\right)$$

Delta testlerine ilişkin hipotezler aşağıdaki şekilde ifade edilebilmektedir:

$H_0 : \beta_1 = \beta_2 = \ldots. = \beta_n = \beta$ (tüm $\beta_i$'ler için- Homojenite)

$H_a : \beta_1 = \beta_2 = \ldots. \neq \beta_n$ (en az bir i için- Heterojenite)

Başlangıç testlerinden elde edilen sonuçlara göre değişkenlerin durağanlığını test etmek için birinci kuşak ve heterojen birim kök testleri kullanılmalıdır. Bu amaçla Im, Peraran ve Shin (IPS-2003), Fisher ADF (Maddala ve Wu-1999) ve Choi (2001) testleri kullanılmıştır.

Eşbütünleşmenin varlığı farklı yöntemlerle test edilebilir. Ancak, öncül testler doğrultusunda yatay kesit bağımlılığı dikkate almayan ve N>T spesifikasyonuna uygun olan testlerin seçimi önemlidir. Bu amaçla çalışmada, Westerlund (2005) Panel CUSUM testi ve Westerlund (2008) Durbin-Hausman Panel Eşbütünleşme (DH) testi kullanılacaktır.

Westerlund (2005) Panel CUSUM testi, "*Ho=Eşbütünleşiktir*" hipotezini test eder ve küçük örneklemlerde gücü yüksektir. Yatay kesit bağımsızlık varsayar ve test istatistiği aşağıdaki gibidir:

$$CS_{NT} \equiv \frac{1}{N}\sum_{i=1}^{N}\left(\max_{t=1,..,T}\frac{1}{w_{il.2}T^{1/2}}|S_{it}^*|\right)$$

Westerlund (2008) tarafından geliştirilen DH testi, hem panel (DH$_p$) hem de grup (DH$_g$) için sonuç verir. DH$_p$ testi, otoregresif parametrelerin sektörler arasında değişmediğini varsayar ve *"Ho= Eşbütünleşme yoktur"* hipotezini test eder. Ho hipotezinin reddi, panelin tümünde eşbütünleşme ilişkisi olduğunu ima eder (Bayar ve Tokpunar, 2014). DH$_g$ ise, katsayıların kesitler arasında değişmesine izin verir ve *"Ho=Eşbütünleşme yoktur"* iken *"H$_a$=en az bir grupta eşbütünleşme vardır"* şeklindedir. Dolayısıyla, Ho hipotezinin reddi, en az bir grupta eşbütünleşmenin olduğu biçiminde yorumlanır. DH$_p$ test istatistiği yatay kesin bağımlılık/bağımsızlık altında kullanılabilir ve test istatistiği aşağıdaki gibidir (Westerlund, 2008):

$$DH_g = \sum_{i=1}^{n}\hat{S}_i\,(\tilde{\emptyset}i - \hat{\emptyset}_i)^2 \sum_{i=2}^{T}\hat{e}_{it-1}^2 \qquad ve \qquad DH_p = \hat{S}_n\,(\tilde{\emptyset}i - \hat{\emptyset}_i)^2 \sum_{i=1}^{n}\sum_{i=2}^{T}\hat{e}_{it-1}^2$$

### 4.3 ARDL Yaklaşımı

Öncül testler sonucunda değişkenlerin maksimum bütünleşme derecelerinin I(1) olduğu, yatay kesit bağımlılığın olmadığı ve heterojenliğin varlığı nedeniyle panel ARDL yöntemi kullanılmıştır. Pesaran vd. (1999), bir panel hata düzeltme modeli olan Panel Kendine Bağlaşımlı Gecikmesi Dağıtılmış (Panel Autoregressive Distributed Lag-PARDL) metodunu geliştirmiştir (Nazlıoğlu, 2011). FH hipotezini test etmek için (1) nolu eşitlikte gösterilen modelin panel ARDL versiyonu aşağıdaki gibi yazılabilir:

$$YAT_{it} = \alpha_i + \sum_{j=1}^{p} \beta_{ij} YAT_{it-j} + \sum_{j=0}^{q} \delta_{ij} TAS_{it-j} + \varepsilon_{it} \qquad (2)$$

i=1,2,……,N yatay kesit sayısını ve t=1,2,…….,T zaman boyutunu göstermektedir. Daha sonra (2) nolu eşitlik hata düzeltme modeli biçiminde yazılarak kısa ve uzun dönem parametreler tahmin edilmektedir. Panel ARDL modeline ilişkin hata düzeltme formları aşağıdaki gibidir:

$$\Delta YAT_{it} = \alpha_i + \sum_{j=1}^{p-1} \beta_{ij} \Delta YAT_{it-j} + \sum_{j=0}^{q-1} \delta_{ij} \Delta TAS_{it-j} + \sigma_i YAT_{it-1} + \varphi_i TAS_{it} + \varepsilon_{it} \qquad (3)$$

Burada $\Delta$ birinci derecede fark işlemcisini, $\sigma_i = -(1 - \sum_{j=1}^{p} \beta_{ij})$ hata düzeltme katsayısını, (2) nolu eşitlikte değişkenlerin düzeyleri üzerine konulan parametreler uzun dönem katsayıları; (3) nolu eşitlikte birinci fark üzerine konulan parametreler kısa dönem katsayılarını göstermektedir. Negatif işaretli ve istatistiksel olarak anlamlı olan hata düzeltme katsayısı ($\sigma$) yatırım ve tasarruflar arasında uzun dönemli ilişkinin varlığına işaret ederken aynı zamanda bir şok meydana geldiğinde tasarruf oranının dengeye yakınsadığını gösterir.

Pesaran vd. (1999), ARDL modeli için Mean Group (MG-Ortalama Grup) ve Pooled Mean Group (PMG-Havuzlanmış Ortalama Grup) olmak üzere iki grup tahminci geliştirmişlerdir (Pesaran vd, 1999). MG tahmincisi ARDL spesifikasyonunun parametreleri üzerine hiçbir kısıt koymaz ve uzun dönem parametrelerini bireysel ARDL tahminlerinden elde edilen uzun dönem parametrelerinin ortalamasından türetir. Bu tahmincinin temel eksikliği belirli parametrelerin paneli oluşturan birimler arasında aynı olmasına izin vermemesidir (Güler, 2011). Bu eksiklik PMG kullanılarak giderilebilir. Pesaran vd. (1999), PMG tahmincilerini elde etmek için hata terimlerinin normal dağılım gösterdiği varsayımı altında bir maksimum olabilirlik yaklaşımı uygulamışlardır. Uzun dönem parametreler ve her bir grup için hata düzeltme katsayılarını yoğunlaştırılmış logaritmik olabilirlik fonksiyonunu maksimize ederek hesaplamışlardır. PMG tahmincilerinin elde edilmesinde Newton-Raphson veya geriye-ikame algoritmaları kullanılmaktadır. Uzun dönem parametreler havuzlandırılmış maksimum olabilirlik yöntemiyle bu şekilde elde edildikten sonra kısa dönem parametreler ve hata düzeltme katsayıları paneldeki her bir ülke için EKK regresyonları kullanılarak tahmin edilmektedir (Nazlıoğlu-2011). Dolayısıyla PMG tahmincisi, parametrelerin kısa ve uzun dönemde ülkeler arasında farklı olduğunu kabul eden MG tahmincisinin aksine, parametrelerde uzun dönem homojeniteye ve kısa dönemde heterojeniteye izin veren bir yöntemdir. Pesaran vd (1999) MG veya PMG tahmincileri arasında seçimin Hausman testi ile yapılabileceğini belirtmektedirler. PARDL tahmininde hem PMG hem de MG tahmini için uygun gecikme sayısının belirlenmesi gerekmektedir. Gecikme uzunluğunun tespiti Akaike veya Schwarz bilgi kriterlerine göre yapılabilmektedir.

## 5  Ampirik Bulgular

Yatay kesit bağımlılık ve homojenlik testlerine ait sonuçlar Tablo 2'de verilmiştir. CD ve LM testi sonuçlarına göre, "*Ho=Yatay kesit bağımlılık yoktur*" hipotezi kabul edilmiştir. Yani paneldeki ülkelerden birisinde bir şok meydana geldiği zaman diğer bir ülkeye geçmeyecektir. Bu nedenle bu aşamadan sonra yatay kesit bağımlılığı dikkate almayan yöntemler kullanılmıştır.

| Değişken | $CD$ (Pesaran, 2004) | | $LM_{adj}$ (PUY, 2008) | | Homojenlik Testi | |
|----------|----------|------|-----------|------|------------------|--------------------|
|          | Statistic | Prob | Statistic | prob | $\widetilde{\Delta}$ | $\widetilde{\Delta}_{adj}$ |
| YAT      | -0.500   | 0.309 | -1.147   | 0.874 | 10.093 | 10.902 |
| TAS      | -1.203   | 0.114 | 0.874    | -1.143 | (0.000) | (0.000) |

**Not:** *CD ve LM testleri, (sabit+trend)'li model için yapılmıştır. Parantez içindeki değerler, olasılık değerlerini göstermektedir.*

***Tablo 2.** Yatay Kesit Bağımlılık ve Homojenlik Testleri*

Eğim katsayısının homojen mi heterojen mi olduğunun tespiti için Pesaran ve Yamagato (2008)'in $\widetilde{\Delta}$ ve $\widetilde{\Delta}_{adj}$ testleri yapılmış ve "*Ho=Homojenlik*" hipotezi reddedilmiştir. Bu nedenle, birinci kuşak ve heterojenliği dikkate alan yöntemlerle kısa ve uzun dönem ilişkiler tespit edilmeye çalışılmıştır. Bu bağlamda, yatay kesit bağımsızlığı ve heterojenliği dikkate alan Im, Peraran ve Shin (IPS-2003), Fisher ADF (Maddala ve Wu-1999) ve Choi (2001) testlerine ait sonuçlar Tablo 3'de verilmiştir.

| Değişken | IPS | | Fisher ADF | | Choi | |
|---|---|---|---|---|---|---|
| | Sabitli | Sabit+Trendli | Sabitli | Sabit+Trendli | Sabitli | Sabit+Trendli |
| YAT | -1.93 (0.027) | -1.82 (0.035) | 65.07 (0.051) | 73.50 (0.010) | -1.86 (0.032) | -1.70 (0.045) |
| TAS | -5.57 (0.000) | -4.54 (0.000) | 133.18 (0.000) | 105.96 (0.000) | -4.73 (0.000) | -4.02 (0.000) |
| ΔYAT | -11.55 (0.000) | -8.03 (0.000) | 211.71 (0.000) | 151.26 (0.000) | -10.70 (0.000) | -7.45 (0.000) |

*Not: Δ, fark işlemcisidir. Parantez içindeki değerler, olasılık değerlerini göstermektedir. Maksimum gecikme uzunluğu 3 ve optimal gecikme uzunluğu için Schwarz bilgi kriteri kullanılmıştır.*

***Tablo 3.** Birim Kök Test Sonuçları*

Birim kök test sonuçlarına göre, her üç testte de %1 önem düzeyinde *YAT* değişkeni fark durağan I(I) ve *TAS* değişkeni düzeyde durağan I(0) çıkmıştır.

Eşbütünleşmenin test edilmesi için yatay kesit bağımlılığı dikkate almayan ve N>T spesifikasyonuna uygun olan Panel CUSUM ve $DH_p$ testleri yapılmıştır. Eşbütünleşme test sonuçları Tablo 4'de verilmiştir.

| Test | Test İstatistiği | Prob | Test | Test İstatistiği | Prob |
|---|---|---|---|---|---|
| Durbin Hausman_g | 5.184 | 0.000 | Panel CUSUM (DOLS ile) | 1.365 | 0.086 |
| Durbin Hausman_p | 7.971 | 0.000 | Panel CUSUM (FMOLS ile) | 2.046 | 0.020 |

*Not: Panel CUSUM testi (Sabit+Trend)'li model için tahmin edilmiştir.*

***Tablo 4.** Panel Eşbütünleşme Test Sonuçları*

Eşbütünleşme testi sonuçlarına göre: Hem panel hem de gruplar/kesitler için sonuç veren DH testine göre "*Ho=Eşbütünleşme yoktur*" hipotezi %1 önem düzeyinde reddedilmiştir. Eşbütünleşme ilişkisini varlığı, Ho hipotezi değiştirilerek Panel CUSUM testi ile tekrar sınanmış ve "*Ho=Eşbütünleşme vardır*" hipotezi %1 önem düzeyinde kabul edilmiştir.

Tasarruf ve yatırım için tanımlanan hata düzeltme modellerinin hangi yöntemle tahmin edileceğini belirlemek için Hausman testi yapılmış ve test istatistikleri Tablo 5'de gösterilmiştir. Buna göre, hem tasarruf hem de yatırım için tanımlanan modellerde uzun dönem katsayılarının homojen olduğu hipotezinin reddedilemeyeceği diğer bir ifadeyle PMG tahmincisinin daha etkin olduğu görülmüştür. Dolayısıyla, uzun dönem katsayısı tüm ülkeler için aynıdır ve tasarruf-yatırım arasında pozitif yönlü bir ilişki vardır. Bu sonuç, FH hipotezinin ele alınan dönemde geçerli olduğunu göstermektedir. Diğer bir ifadeyle, uluslararası sermaye hareketlerinin uzun dönemde artmasına paralel olarak iç tasarruf ve iç yatırım arasındaki ilişki zayıflamaktadır. Tasarruflarda %1'lik artış yatırımları %0.078 kadar artırmaktadır.

Tasarruf ve yatırım arasındaki ilişkinin testi, hata düzeltme modelinden elde edilen hata düzeltme katsayılarının işaretine ve istatistiki anlamlılığına bakılarak yapılmaktadır. Buna göre, negatif ve anlamlı katsayı yatırım-tasarruf arasındaki ilişkiyi vermektedir. Tablo 5'de verilen hata düzeltme katsayısı negatif ve %5 önem düzeyinde istatistiki olarak anlamlıdır. Buna göre, yatırım ve tasarruflar arasında uzun dönemli ilişki vardır ve aynı zamanda bir şok meydana geldiğinde tasarruf oranı dengeye (0.312 hızla) yakınsamaktadır. Şokun düzeltilme süresi ise ortalama olarak 3 yıldır.

*Tablo 6. Diagnostik Test Sonuçları*

Hata düzeltme modelinden elde edilen kısa dönem katsayılar ise, tasarruf ve tasarrufun birinci ve ikinci farklarının yatırımlar üzerinde %5 anlamlılık düzeyinde etkili olduğunu göstermektedir. Benzer şekilde uzun dönem katsayısı %5 düzeyinde anlamlıdır ve dolayısıyla kısa dönemde tasarruf ve yatırımlar arasındaki ilişki uzun dönemde de devam etmektedir.

Diagnostik test sonuçları Tablo 6'da verilmiştir. Buna göre, bireysel denklemlerde otokorelasyon ve değişen varyans sorunu görünmemektedir.

## 6   Sonuç

Bu çalışmada, 1992-2012 periyodunda yıllık veriler kullanılarak "Feldstein-Horioka hipotezi Avrasya ekonomileri için panel ARDL yaklaşımı ile test edilmiştir. Öncelikle uygun yöntemin belirlenmesi amacıyla öncül testler yapılmıştır. Yatay kesit bağımsızlığının ve heterojenliğin tespitinden sonra birinci kuşak birim kök testleri ile serilerin bütünleşme dereceleri tespit edilmiştir. Yatay kesit bağımsızlığını dikkate alan ve N>T spesifikasyonuna uygun olan Panel CUSUM ve DH testleri ile eşbütünleşme ilişkisi tespit edildikten sonra ARDL yaklaşımı ile kısa ve uzun dönem ilişkiler belirlenmeye çalışılmıştır. Hausman testi sonucunda parametrelerde uzun dönem homojeniteye ve kısa dönemde heterojeniteye izin veren PMG tahmincisinin daha etkin olduğu sonucuna ulaşılmıştır. PMG tahmin sonuçlarına göre yatırım ve tasarruflar arasında uzun dönemli ilişki bulunmuş ve aynı zamanda bir şok meydana geldiğinde tasarruf oranı dengeye (0.312 hızla) yakınsadığı sonucuna ulaşılmıştır.

PMG tahmincisine göre iç yatırım ve tasarruf ilişkisini gösteren $\beta$ katsayısı 0.078 bulunmuştur. Elde edilen tasarruf oranı katsayısı 24 Avrasya ekonomisi için sermayenin hareketli olduğunu göstermektedir. Dolayısıyla $\beta$ katsayısı Feldstein ve Horioka'nun, sermayenin tam hareketli olduğu bir dünyada, yurt içi yatırım ve yurt içi tasarruf arasında herhangi bir ilişkinin bulunmaması gerektiği hipotezini desteklemektedir. Sonuç olarak 24 Avrasya ekonomisinde hem kısa hem de uzun dönemde tasarruflar ülke içinde değerlendirilmemektedir.

# Balkan Ülkelerinde Feldstein–Horioka Paradoksu: Bir Panel Eşbütünleşme Analizi

# The Feldstein–Horioka Puzzle in Balkan Countries: A Panel Co-integration Analysis

Prof. Dr. İbrahim Örnek (Kahramanmaraş Sütçü İmam University, Turkey)
Ph.D. Candidate Selen Utlu (Gaziantep University, Turkey)
Dr. Mustafa Baylan (Kahramanmaraş Sütçü İmam University, Turkey)

## Abstract

As the capital markets of developing countries have become highly integrated into the global market in recent years, the determination of the degree of capital mobility has gained importance. The purpose of this study is to determine the degree of integration of capital markets 10 developing Balkan countries (Macedonia, Romania, Greece, Serbia, Croatia, Bosnia-Herzegovina, Bulgaria, Albania, Hungary and Slovenia) to integration of international capital markets the using of annual data in 1990-2012 period. Based on investment-saving co-integration, the degree of international capital mobility has tried to expose, using panel co-integration analysis. In the context of the results found, full capital mobility has not been observed in the countries concerned of during the period examined.

## 1 Giriş

1970'li yıllardan günümüze dünya ekonomisine yön veren en önemli olgu küreselleşmedir. Bu yıllardan itibaren ulusal finansal piyasaların entegrasyonu tüm dünyada yayılmaya başlamıştır (Krebs 2005). Birçok ülkede, finansal piyasalarda serbestleşmeler gerçekleştirilmiş ve sermaye kontrolleri kaldırılmıştır. 1980'lerden sonraki dönemde gelişmiş ve gelişmekte olan ülkeler, mali sistemlerini serbestleştirmek amacıyla bir dizi reform hareketini başlatmışlardır. Faiz oranlarının serbest bırakılarak kredi tavanlarının kaldırılması, bankaların Merkez bankasında tutmak zorunda oldukları munzam karşılık oranlarının düşürülmesi, bankacılık sektörünün yabancı ve yerleşiklere açılması ve sermaye hareketlerinin serbestleştirilmesi söz konusu reformların bazılarıdır. Bu tür politikalar, genel olarak finansal serbestleşme politikaları adıyla anılmaktadır (Oktayer vd.2007). Bu duruma bağlı olarak dünya ekonomisinde finansal sermaye hareketlerindeki kısıtlamaların kaldırılmasına paralel olarak gelişmiş ve gelişmekte olan ekonomiler arasındaki bütünleşme derecesi ve sermaye akımlarının miktarında artış yaşanmıştır. Özellikle 90'lı yıllardan sonraki birçok gelişmekte olan ülke "kaynak yetersizliği"ne dayanan düşük yatırımın yol açtığı istikrarsız büyüme oranlarının çözümü olarak uluslararası sermaye hareketlerini çekmeyi hedefleyen istikrar politikaları uygulamışlardır.

Finansal serbestleşme politikalarının temelini McKinnon-Shaw'un 1970'lerin başlarında ortaya attıkları finansal serbestleşme teorisi oluşturmaktadır. Yazarlar devletin finansal sistem üzerindeki ağırlığının olmadığı, etkin çalışan finansal sistemlerin ise ekonomik büyüme üzerinde çok olumlu bir etki yaratacağını belirtmişlerdir. Etkin işleyen bir finansal sistemin tasarrufların yatırıma dönüşmesi sürecinde daha alternatifli ve uzun dönemli bir büyüme süreci yaratacağını savunmuşlardır (Balassa, 1989). McKinnon-Shaw'a göre finansal serbestlik, tasarruf ve yatırım davranışlarını uyarmak suretiyle ekonomik büyümeyi hızlandıracaktır. Faizler kanalıyla yurtiçi tasarrufların artırılması bu modelin temelini oluşturmaktadır. Buna göre, finansal serbestliğin sağlanması ile faiz oranları serbest bırakılacak ve ekonomideki tasarruf düzeyi artacaktır. Ödünç verilebilir fonlar piyasasında yaşanan bu gelişme ise yatırımları artırmak suretiyle ekonomik büyümeyi sağlayacaktır. Bir ekonomideki toplam tasarruf düzeyi toplam yatırım düzeyinin temel belirleyicisidir. Yatırım harcamalarının verimlilik ve reel gelirdeki büyümenin sağlanmasında önemli bir faktör olduğu dikkate alındığında, yeterli düzeyde tasarruf arzının varlığı ekonomilerin gelişmesi ve refah artışının sağlanmasında büyük önem taşımaktadır (Eraltaş vd., 2013).

Sermayenin ekonomiler arasında hareket etmesi dünya tasarrufunun etkin kullanılması için bir ön koşul olarak kabul edilmektedir. Ayrıca ulusal ekonomiler açısından da uygulanan para ve maliye politikalarının etkinliği ise uluslararası sermaye hareketlerinin derecesiyle ilgilidir. Gelişmekte olan ülkelere girişi ve çıkışı hızlanan uluslararası sermaye, tasarruf ve yatırım konusunda eksiklikleri olan ülkelerde uzun süreli kalması durumunda pozitif dışsallıklar sağlamıştır.

Dünya ekonomisine yön veren küreselleşme olgusu ve bunun ülke ekonomilerine yansımaları göz önüne alındığında tasarruf ve yatırım arasındaki ilişkinin incelenmesi önemli hale gelmiştir. Feldstein -Horioka (1980) çalışmalarında yurtiçi tasarruf ve yatırımlar arasındaki ilişkinin uluslararası sermaye hareketliliği hakkında bilgi vereceğini ileri sürmüş ve bu iki değişkenin ilişkili olmaması sermaye hareketliliğinin göstergesi olarak yorumlamışlardır. Bu çalışma, sermaye hareketliliğini test etmek için bir metod önermektedir. Temel düşünce şu şekildedir; sermaye hareketlilik düzeyi düşük olan bir ülkede (örneğin kapalı bir ekonomide), bütün yurtiçi

tasarruflar yurtiçi yatırımları finanse etmek için kullanılacak ve ülkedeki yatırımların seviyesi, ülkedeki tasarrufların seviyesine bağlı olacaktır. Diğer yandan, eğer ülkede sermaye hareketliliğinin derecesi çok yüksek ise, tasarruflardaki azalış ülke içine yapılacak olan sermaye akışı ile dengelenirken, yurtiçi tasarruflardaki artış da dünyanın başka bir yerindeki yatırımlara akacak ve diğer ülkeler için kullanılacaktır. Böylece ülkenin yatırım seviyesi, ülkedeki tasarrufların seviyesinden bağımsız olacaktır (Rye vd., 2003).

Feldstein ve Horioka (1980) tarafından ortaya koyulmuş olan bu sonuç tartışmanın tetiklenmesine yol açmıştır. Zira iktisatçılar arasında kabul gören ortak bir görüşe göre, özellikle 1970 sonrası dönemde sanayileşmiş ülkelerin başını çektiği birçok ülkede, yurtiçi ve uluslararası finans piyasalarında gerçekleşen düzenlemeler sonucunda finansal entegrasyon sürecinin hızlandığı gözlenmektedir. Dolayısıyla serbest döviz kuru uygulamalarından bu yana finansal entegrasyonun yüksek olması ve giderek de artmakta olmasından dolayı, uluslararası sermaye hareketliliğinin de yüksek olduğu varsayılmaktadır.

Feldstein ve Horioka (1980)'de ülkelerin iç tasarrufu ve yatırımı arasında güçlü bir ilişki bulunması ve bu sonucun "sermayenin hareketsiz" olduğunu göstermesi yanında aynı dönem için yapılan diğer çalışmalar (Sachs, 1981; Obstfeld, 1985) sermayenin uluslararasında yüksek derecede hareketli olduğunu göstermiştir. Bu durum literatürde "Feldstein-Horioka Paradoksu" olarak adlandırılmıştır. Feldstein-Horioka Paradoksu literatürde geniş yer bularak, uluslararası sermaye hareketliliğini açıklamaya yönelik önemli tartışmalar başlatmıştır. Ülke tasarrufları ve yatırımları arasındaki dengesizlik bir ülkeden diğer ülkeye reel kaynakların (mal ve hizmet) aktarımı ile finanse edilmektedir. Net uluslararası sermaye akımı da ülkelerin tasarruf ve yatırım dengesizliğinin yol açtığı ödemeler dengesi açıklarını finanse etmektedir. Dolayısıyla uluslararası sermaye akımı ekonomik etkinliğin iyileştirilmesinde önemli bir rol oynamaktadır. Bu yüzden, tasarruf ve yatırım arasındaki ilişkinin sermaye hareketliliği üzerinde bir etkisi olduğu ve bu etkinin incelenmesi gerektiği ortaya çıkmaktadır.

Literatürde yurtiçi tasarruflar ile yurtiçi yatırımlar arasındaki ilişkinin var olup olmadığı eğer böyle bir ilişki varsa ilişki varsa ne kadar güçlü ve ne anlam ifade ettiği ile ilgili tartışma olduğu gözlenmektedir. Bu paradoksun çözümü iç tasarrufları destekleyen ekonomi politikalarının tasarruf-yatırım korelasyonunun derecesine bağlı olması açısından önem taşımaktadır (Telatar vd., 2007).

## 2 Teorik Yapı

Feldstein ve Horioka (1980) yatırım-tasarruf ilişkisinin uluslararası sermaye hareketliliğinin derecesini ölçtüğünü ileri sürmüşlerdir. Feldstein ve Horioka'nun yaptıkları çalışma, ulusal tasarruf ve yatırımlar arasındaki yüksek korelasyonun, uluslararası ekonomi için de hesaplanmasına dayanır. Sermaye hareketliliğinin mükemmel olduğu bir dünyada, yatırımlar dış tasarruflarla finanse edilebileceğinden, yatırımlar ve tasarruflar arasındaki ilişki zayıf olacaktır (Baiand ve Zhang, 2010).

Feldstein ve Horioka, bu açıklamalara dayanarak ve sanayileşmiş ülkelerin verilerini kullanarak bir ülkedeki yüksek yatırım oranları ile yüksek tasarruf oranlarını ilişkilendirmişlerdir. Feldstein ve Horioka gayrisafi tasarruf – gayrisafi yurtiçi yatırımın cari hesap bilançosunda birtakım değişiklikler ortaya çıkaracağı hipotezinden hareket etmişlerdir. Böylece cari hesap ile ulusal tasarruflardan yurtiçi yatırımların çıkartılması ile elde edilen sonuç birbirine eşit olduğu sonucunu saptamışlardır. Mükemmel entegre olmuş piyasalar olmasa da bu piyasalarda cari hesap açığına bir sermaye girişi denk gelecektir ve ülkenin tasarruf kararları yatırım kararlarından ayrılacaktır. Diğer bir ifadeyle Feldstein ve Horioka'nın iddiasına göre, sanayileşmiş ülkelerde dahi sermaye hareketliliğinin sınırlandırılması söz konusu olduğunda, ulusal tasarruf oranlarındaki değişme aynı miktarda yurtiçi yatırım oranlarındaki değişme ile sonuçlanacaktır. Bununla birlikte, "Dünyada tam bir sermaye hareketliliği söz konusu ise yurtiçi tasarruflar ve yurtiçi yatırımlar arasında bir ilişki yoktur. Çünkü ülkelerdeki yatırımlar dünya çapındaki sermaye havuzundan finanse edilirken, her ülkede yaratılan tasarruflar da yeni yatırımlar için dünya çapındaki fırsatları değerlendirecektir." (Feldstein, Horioka, 1980, Parasız ve Başoğlu, 2000,)

Sermaye denetimlerinin azaltıldığı ve dalgalı kur rejiminin uygulandığı bir döneme ait OECD ülke verileri ile yaptığı çalışmada, yurtiçi yatırım ile yurtiçi tasarruf arasındaki güçlü bir pozitif ilişki elde etmiştir. Bu durum, tam sermaye hareketliliğiyle birlikte artan finansal bütünleşmeden beklenen sonucunun (yurtiçi yatırımlar ile yurt içi tasarruflar arasında ilişkinin zayıflayacağı) gerçekleşmediğini göstermektedir.

Feldstein ve Horioka, yatırımlarla tasarruflar arasındaki ilişkiyi 1960-1974 dönem ortalamasını esas alan yatay kesit veri analizini 16 OECD ekonomisi üzerine uygulamışlardır. Çalışmalarında tahmin ettikleri model aşağıdaki gibidir (Murthy, 2009):

$$(I/Y)_i = \alpha + \beta (S/Y)_i + \mu_i \qquad (1)$$

Burada yatırım (I) ve tasarruf (S) oranlarını gösterilmektedir. ($\beta$) ise tasarrufları tutma katsayısını göstermektedir (Murthy, 2009). Regresyon denkleminde tasarrufu yurtiçinde tutma katsayısı $\beta=1$ olması finansal bütünleşme olmadığı hipotezi ile tutarlı bir sonuçtur. Finansal bütünleşme, yurtiçi yatırımların yurtdışı tasarruflarca da finanse edilebilmesini sağlayabildiği gibi yurtiçi tasarrufların da yurtdışı yatırımlar için kaynak olabilmesini sağlar. Diğer taraftan eğer ülkede sermaye hareketliliği varsa iki olasılık söz konusudur. Birinci

durumda, yurtiçi tasarruflar yatırımlardan fazladır ve ülke yurtiçi tasarrufların yatırımlarını aşan kısmıyla diğer ülkelerin yatırımlarını finanse etmiş olur. Böyle bir durumda β<1 olması beklenir. İkinci durumda, yurtiçi tasarruflar yatırımlardan daha azdır ve ülke yurtiçi tasarruf açığını dış yatırımla finanse eder. Bu ikinci durumda ise β>1 olması beklenir. Fakat her iki durumda da β katsayısının birden uzaklaşması sermaye hareketliliğinin ölçüsü olabilecektir (Gomes vd., 2008).

Feldstein-Horioka (1980) yapmış olduğu çalışmada "β" katsayısı, 1960-1974 yılları arasının ortalaması ile yapılan tahminde 0,88, beşer yıllık alt dönemlerin ortalamaları ile yapılan tahminlerde ise 0,87 ve 0,90 olarak bulunmuştur. Feldstein-Horioka (1980) çalışmasının sonucunda "β"tahmininin, hem 15 yıllık dönem için, hem de beşer yıllık alt dönemler için bu derecede yüksek çıkması, sermayenin tam hareketli olduğuna dair genel görüş ile çelişmekte ve tasarruftaki artışın büyük ölçüde ülke içinde değerlendirildiğini göstermektedir. Sonucun, kısa dönem (likit olarak tutulan) sermeyenin hareketli olması ile çelişmediği; ancak uzun dönemde sermaye hareketinin sınırlı olduğunun göstergesi olarak algılanması gerektiği belirtilmektedir (Eraltaş vd. 2010). Feldstein-Horioka (1980) OECD ülkeleri için, tasarruf ve yatırım oranları arasında bir ilişki olduğunu ve bu yüzden sermayenin hareketli olmadığını ifade etmişlerdir (Murthy, 2009:177). Kapalı bir ekonomide ise yatırımlar tasarruflarla finanse edilmek durumundadır. Ancak bir kısım yatırımın dış tasarruflarla finanse edilebilir olmasından dolayı tasarruf ve yatırım birbirinden bağımsız bir şekilde hareket edebilir. Bu yüzden Feldstein ve Horioka'ya göre, yüksek yatırım-tasarruf ilişkisi ortaya çıkmışsa, sermaye hareketli olmayabilir (Levy, 2004). Ancak, OECD ülkelerindeki finansal piyasalardaki güçlü entegrasyon, sermaye kontrolünün kaldırılması, mevcut hazır bilgiye her an ulaşılması ve finansal piyasaların deregülasyonu ile birlikte bu ülkeler arasındaki mevcut faiz oranı farklılıklarının bulunması, Feldstein-Horioka'nın bulgularıyla çelişmektedir (Murthy, 2009).

Uluslararası sermayenin hareketli olduğu tezine aykırı bir sonuç ortaya koyan Feldstein-Horioka paradoksu, farklı yaklaşımlarla pek çok kez ele alınarak yeniden yorumlanmış ve özellikle yöntem açısından birçok eleştiriyle karşılaşmıştır. Feldstein-Horioka paradoksu çözümünde araştırmalara konu olan zaman aralıkları büyük önem kazanmaktadır. Özellikle 1980 sonrası yapılan çalışmalarda genel olarak uluslararası sermaye hareketliliğinin özellikle gelişmiş ülkelerde yüksek olduğu sonucuna ulaşılmıştır. Feldstein-Horioka paradoksu getirilen çözüm önerilerinin temelinde, finansal serbestleşmeye bağlı olarak, dönem farklılıkları, sermaye sahiplerinin davranışlarındaki değişim, kamu müdahalelerinin giderek azalması ve uygulanan rejim döviz kuru rejimleri olduğu görülmektedir (Erataş vd., 2013).

## 3 Ampirik Literatür

Feldstein ve Horioka'nın (1980) yatırım ve tasarruflar arasındaki bağlantıyı sermaye akışkanlığıyla ilişkilendiren alanında öncü olan çalışması, günümüze kadar devam eden canlı ve çok boyutlu bir tartışma başlatmıştır. Özellikle sanayileşmiş ülkelerde sermaye piyasaların oldukça entegre olduğu görüşü bu sonuçlara ciddi bir şüphe ile yaklaşılmasını sağlamıştır. Böylece başta OECD ülkelerinin olduğu birçok değişik ülke için, çeşitli dönem aralıklarında, değişik ekonometrik yöntemler kullanılarak birçok çalışma yapılmıştır. Feldstein (1983), Feldstein ve Horioka (1980) çalışmasındaki dönem aralığını 1960-1979 dönemine kadar genişletmiş ve benzer sonuçlara ulaşmıştır. Ayrıca Dooley vd. (1987) ile Feldstein ve Bacchetta (1989), Murphy (1984), Obstfeld 1986), Miller (1988), Tesar (1991), Bodman (1995), Coakley vd. (1996) ve Jansen (1996) gelişmiş ve gelişmekte olan ülkeler için yapmış oldukları analizde, yine Feldstein ve Horioka (1980) sonuçlarını destekleyen bulgular elde etmişlerdir. Bu çalışmaların bir kısmı aşağıdaki tabloda yer almaktadır.

| Yazar(lar) | Ülke(ler) | Dönem ve Değişken(ler) | Yöntem | Bulgular |
|---|---|---|---|---|
| Feldstein ve Horioka (1980) | 16 OECD Ülkesi | - 1960 - 1974, <br>- Yatay kesit veri <br>- S, I | EKK | Tasarruf tutma katsayısı <br> β =0.89 |

## 4   Ekonometrik Analiz

### 4.1  Değişkenler ve Model

Ülke tasarrufları ve yatırımları arasındaki dengesizlik bir ülkeden diğer ülkeye reel kaynakların aktarımı ile finanse edilmektedir. Net uluslararası sermaye akımı da ülkelerin tasarruf ve yatırım dengesizliğinin yol açtığı ödemeler dengesi açıklarını finanse etmektedir. Dolayısıyla uluslararası sermaye akımı ekonomik etkinliğin iyileştirilmesinde önemli bir rol oynamaktadır. Bu yüzden, tasarruf ve yatırım arasındaki ilişkinin sermaye hareketliliği üzerinde bir etkisi olduğu ve bu etkinin incelenmesi gerektiği ortaya çıkmaktadır.

Bu çalışmanın amacı, 1990- 2012 dönemi için gelişmekte olan 10 Balkan ülkesinin (Makedonya, Romanya, Yunanistan, Sırbistan, Hırvatistan, Bosna – Hersek, Bulgaristan, Arnavutluk, Macaristan ve Slovenya) sermaye piyasalarının uluslararası sermaye piyasalarına olan entegrasyon derecesini belirlemektir. Yatırım, tasarruf eşbütünleşmesinden yola çıkarak uluslararası sermaye hareketliliklerinin derecesi, panel veri analizi kullanılarak incelenmiştir. Çalışmada kullanılan değişkenler yıllık veriler kullanılarak E-Views 8 paket programında analiz edilmiştir. Çalışmada kullanılan veriler ve açıklayıcı bilgiler Tablo 2.'de gösterilmektedir. Tüm değişkenlerin logaritmik dönüşümleri kullanılmıştır.

| Değişken | Açıklama | Dönem | Kaynak |
|----------|----------|-------|--------|
| logI | Yurtiçi Yatırımların GSYH içindeki oranı | 1990- 2012 | Dünya Bankası World Development Indicators |
| logS | Yurtiçi Tasarrufların GSYH içindeki oranı | 1990- 2012 | Dünya Bankası World Development Indicators |

*Tablo 2.Modelde Kullanılan Değişkenler*

$$logI_{it} = \alpha_{it} + \beta logS_i \qquad\qquad (2)$$

$(i= 1,...,7)$ ve $(t = 1990,....2012)$

Yukarıdaki denklemde $i$ genel olarak ele alınan ekonomik karar birimi olan ülkeyi yani yatay kesit birimlerini, $t$ ise zamanı ifade etmektedir. Bundan dolayı $i$ indisi yatay kesit boyutu göstermekte, $t$ indisi ise zaman boyutunu belirtmektedir.$\alpha_i$, $t$ zaman ve $i$ yatay kesitine bağlı olarak tahmin edilen bireysel etkileri de kapsayan sabiti tanımlamaktadır (Baltagi, 2005). Denklem (2)'deki modelin tahmininde öncelikle, her bir değişkenin zaman serisi özellikleri araştırılarak panel birim kök analizi yapılacak, ardından panel eşbütünleşme testleri yapılarak eşbütünleşme parametreleri elde edilecektir.

### 4.2  Yöntem

Uluslararası karşılaştırmaların yapıldığı analizlerde genel olarak panel veri ekonometrisi kullanılmaktadır. Ele alınan konularda, hem zamanlar hem de ele alınan birimler arası farklılıklar birlikte incelenebilmektedir (Cameron ve Trivedi, 2005). Panel veri, t zamanlı ve k değişkenden oluşan bir data setini, n tane yatay kesit (firma, sektör) için oluşturulmakta ve böylelikle zaman ve grup etkilerinin modele dahil edilmesini sağlamaktadır. Zaman serisi analizinde olduğu gibi, panel veri modellerinde de değişkenlerin birim kök içerip içermediği araştırılmalıdır. Engle ve Granger (1987), serilerin düzeylerinde durağan olmamaları durumunda klasik regresyondan elde edilecek olan katsayıların geçersiz olacağını ortaya koymuşlardır. Durağan olmayan serilerle çalışıldığında seri arasındaki uzun dönemli ilişki ortadan kaybolmakta ve seri arasındaki ilişkinin doğruyu yansıtmadığı görülmektedir. Serilerin durağanlıklarının araştırılması için uygulamada birçok birim kök testi kullanılmaktadır Im, Pesaran ve Shin (1997), Maddala ve Wu (1997), Levin vd. (2002), Hadri (2000) ve Choi (2001) tarafından geliştirilen testler birinci nesil birim kök testlerine örnek olarak gösterilebilir (Güloğlu ve İspir, 2009).

Bu çalışmada Im, Pesaran ve Shin (2003) tarafından ortaya konulan panel birim kök testi tercih edilmiştir. Diğerlerinden farklı olarak bu test, panele özgü sonuçlar elde edebilmek için ilk olarak her bir yatay kesiti için ayrı ayrı birim kök olup olmadığını test ettiği için panel veri setindeki heterojen yapı dikkate alınmaktadır (Güloğlu ve İspir, 2009).

$$\Delta y_{it} = \alpha_i y_{it-1} + \sum_{j=1}^{p} \beta_{ij} \Delta y_{it-j} + X_{it}\delta_i + \varepsilon_{it} \qquad (3)$$

burada X sabit ve/veya deterministik trend değişkenlerini temsil etmektedir.

$H_0$: $\beta_i = \beta = 0$ bütün yatay kesitler için

$H_1$: $\beta_i = \beta < 0$ en az bir yatay kesit için

Seviye değerlerinde durağan olmayan değişkenlerin birinci farklarında birim kök sorunu ortadan kaldırılarak durağan hale getirilmesiyle, uzun dönemli ilişkisinin analizi için eşbütünleşme testleri yapılmalıdır. Çalışmada Pedroni (1999) eşbütünleşme testinden yararlanılacaktır. Bu test, eşbütünleşme vektöründeki heterojenliğe izin veren bir testtir. Bu dinamik ve sabit etkilerin panelin kesitleri arasında farklı olmasına izin vermesinin yanı sıra

alternatif hipotez altında eşbütünsel vektörün kesitler arasında farklı olmasına da izin vermektedir. (Güvenek ve Alptekin, 2010:181).

Pedroni (1999) panel eşbütünleşme testinin sıfır hipotezi, değişkenlerin eşbütünleşik olmadığını belirtirken alternatif hipotezi ise tek bir eşbütünleşik vektörün olduğunu belirtmektedir.

$$y_{it} = \alpha_i + \delta_{it} + \beta_{1j}X_{1i,t} + \beta_{2j}X_{2i,t} + \ldots\ldots + \beta_{mj}X_{mi,t} + \varepsilon_{it} \qquad (4)$$

$$t=1,\ldots T \; i=1,\ldots,N \; m=1,\ldots,M$$

Burada T zaman boyutunu, N paneldeki birimlerin sayısını, M açıklayıcı değişken sayısını, $\delta_{it}$, panelin birimleri için spesifik olan deterministik zaman trendlerini, $\alpha_i$ ise birimler arasında değişime imkan veren sabit etki parametresini göstermektedir.

Pedroni (1999) tarafından hesaplanan yedi tane (Panel-ν , Panel-ρ , Panel-*PP*, Panel-*ADF,* Group- ρ , Group– *PP,* Group-*ADF*) değişik eşbütünleşme istatistiği vardır. Bu 7 tanesinin 4 tanesi grup içi istatistiği, 3 tanesi ise gruplar arası istatistik adını alır. Grup içi istatistik, her bir yatay kesit için kalıntılardan (1 dönem gecikmeli) elde edilen otoregregsif katsayının üst üste yığılmasıyla elde edilirken, gruplar arası istatistik ise otoregresif katsayıların N üzerinden ortalamasının alınmasıyla elde edilir (Pedroni, 2004).

Değişkenler arasında eşbütünleşmenin olduğu sonucuna varıldıktan sonra, eşbütünleşme parametrelerinin tahmin edilmesi gereklidir. Çalışmada uzun dönemli eşbütünleşme parametrelerini test etmek için Pedroni (2000 ve 2001) tarafından geliştirilen grup-ortalama panel FMOLS ve DOLS metodları kullanılacaktır. İki değişken eşbütünleşik iken açıklayıcı değişkenler ve hata terimleri arasında ilişki ortaya çıkmakta ve içsellik problemi yaratmaktadır. Bu durumda değişkenler asimptotik özelliklerini kaybetmektedir. Bu sorunların üstesinden gelinebilmesi için FMOLS (Fully Modified Ordinary Least Squares) ve DOLS (Dynamic Ordinary Least Squares) yöntemleri önerilmiştir. Bu yöntemlerin ikisi de içsellik sorununun ortadan kaldırılması için değişkenlerle ilgili çeşitli dönüşümler yapmaktadır (Berke, 2012). FMOLS yöntemi standart sabit etkili tahmincilerdeki (otokorelasyon, değişen varyans gibi sorunlardan kaynaklı) sapmaları düzeltmektedir. Mark ve Sul (2003), geliştirdikleri DOLS yönteminin küçük örneklem (sınırlı T) ve heterojen yapı olması halinde de etkin tahminciler verdiğini belirtmişlerdir (Mark ve Sul, 2003:657). FMOLS tahmin prosedürü tek bir eşbütünleşik vektörün varlığını varsaymaktadır ((Phillips ve Hansen (1990), Hansen (1992)). FMOLS tahmincisi, eşbütünleşik denklem ve stokastik şoklar arasındaki uzun dönem korelasyonun neden olduğu tahmin problemlerinden kaçınmak için yarı parametrik bir düzeltme yöntemi kullanmaktadır. Sonuç olarak tahminci, asimptotik $\chi^2$ dağılımı kullanarak standart Wald testlerine izin veren tamamen etkin ve asimptotik olarak yansızdır. DOLS tahmin prosedürü ise bağımsız değişkenin gecikme (lags) ve öncüllerini (leads) eşbütünleşme denklemine eklemektedir (Stock ve Watson, 1993).

### 4.3 Bulgular

Değişkenlerin birim kök testleri, Im, Pesaran ve Shin (2003) (IPS) tarafından ortaya konulan panel birim kök testleri yardımıyla test edilecektir.

| Değişkenler | Sabit Terimli | Sabit Terimli ve Trendli | Sonuç |
|---|---|---|---|
| *ln*I | -1.33829[0.3692] | -0.95794[0.2741] | Durağan Değil |
| *ln*S | 3.14819 [0.8746] | -0.17896[0.2098] | Durağan Değil |
| Δ*ln*I | -7.26004[0.0006] | -2.76302[0.0000] | Durağan |
| Δ*ln*S | -4.94349[0.0000] | -3.86974[0.0000] | Durağan |

Köşeli parantez içindeki değerler p (olasılık) değerlerini göstermektedir.
Optimal gecikme uzunluğu Schwarz Kriteriyle belirlenmiştir.

*, **, ve *** sırasıyla % 1, % 5 ve % 10 seviyesindeki anlamlılığı göstermektedir

***Tablo 4.*** *Panel Eşbütünlesme Testi Sonuçları*

Analizde durağanlığı test etmek amacıyla (IPS) birim kök testi uygulanmıştır. Tablo 3'den de görüldüğü gibi değişkenlerin seviyelerine uygulanan birim kök test sonuçlarında t istatistikleri ve olasılık sonuçları ekonometrik

analizde kullanılacak olan seriler düzeyde (I(0)) durağan olmadığını göstermekte ve seriler birim kök problemi içermektedir. Bu nedenle serilerin birincil farkları araştırılmıştır. Değişkenler için serilerin birincil farklarına bakıldığında elde edilen sonuçta yatırım ve tasarruf serilerinin birincil farklarının durağan oldukları (I(1)) görülmüştür. Değişkenler I(1)'de durağan olduğundan dolayı panel eşbütünleşme tekniğine geçilmiştir.

Tablo 4.'de görüldüğü gibi tasarruflarla yatırımlar arasındaki uzun dönemli ilişkiyi araştırdığımız Pedroni eşbütünleşme testine göre $H_0$ hipotezi (seriler arasında eşbütünleşme yoktur) reddedilmiştir. Analizlerde kullanılan değişkenlerin uzun dönemde eşbütünleşik oldukları Panel-*ADF* dışındaki istatistikler tarafından doğrulanmıştır. Dolayısıyla alternatif hipotez (seriler arasında eşbütünleşme vardır) kabul edilmiştir ve uzun dönemde yatırımlar ve tasarruflar arasında eşbütünleşme olduğu sonucuna ulaşılmaktadır. Dolayısıyla panel eşbütünleşme test sonuçlarına göre gelişmekte olan 10 Balkan ülkesi için, yatırım ve tasarrufun birlikte hareketi söz konusudur ve yapılan analizler uzun dönemli bir ilişkinin varlığı kabul edilmektedir. Değişkenler arasındaki eşbütünlesmenin belirlenmesinden sonra, eşbütünleşme parametreleri tahmin edilecektir.

| lnI | | lnS | |
|-----|------|-----|-----------|
| Panel DOLS | 0.58 | | (20.18)** |
| Panel FMOLS | 0.49 | | (17.56)* |

Parantez içindeki değerler t-istatistikleridir. * ve ** sırasıyla % 1 ve % 5 seviyesindeki anlamlılığı temsil etmektedirler

**Tablo 5**.Panel Eşbütünleşme Parametreleri

Değişkenler arasındaki eşbütünlesmenin belirlenmesinden sonra, eşbütünleşme parametreleri tahmin edilmiştir. Tablo 5.'deki Panel DOLS ve Panel FMOLS'den elde edilen eşbütünleşme parametreleri, tasarrufun (lnS)yatırımı (lnI) pozitif ve istatistiksel olarak anlamlı bir şekilde etkilediğini göstermektedir. Panel FMOLS bize uzun dönemde tasarruflardaki artışın, yatırımı panel genelinde pozitif bir şekilde etkilediğini göstermektedir. Panel genelinde tasarruf tutma katsayısı katsayısı 0,49 olarak hesaplanmıştır. Yani 10 Balkan ülkesi genelinde tasarruftaki%1'lik bir artış, yatırım üzerinde uzun dönemde %0,49'luk bir artışa neden olmaktadır. Panel DOLS test sonuçları panel bazında değerlendirildiğinde uzun dönemde tasarruftaki artış, yatırımları panel genelinde pozitif bir şekilde etkilemektedir. Panel genelinde tasarruf tutma katsayısı 0,58 olarak hesaplanmıştır. Yani 10 Balkan Ülkesi genelinde tasarruftaki%1'likbir artış, yatırım üzerinde uzun dönemde % 0,58'lik bir artış meydana getirmektedir. Panel eşbütünleşme parametreleri incelenen ülke grubu için yatırımlar ile yurtiçi tasarruflar arasında güçlü bir ilişkinin varlığını ortaya koymaktadır.

## 5 Sonuç

1980'li yıllarda dünya ekonomisinde başlayan finansal küreselleşme, gelişmiş ülkelerin uluslararası finans piyasalarındaki kontrollerin kaldırılmasına yönelik politikaları ve buna bağlı olarak gelişmekte olan ülkelerde istikrar amaçlı yapısal uyum programları ile hız kazanmıştır.1990'lı yıllara gelindiğinde mal ve hizmet piyasalarının yanı sıra, ulusal sermaye piyasalarının da küreselleşme süreci başlamıştır. Bu geçiş sürecinde uluslararası sermaye piyasalarında en büyük paya sahip olan ticari banka kredileri, yerini tahvil ve hisse senedine yönelik portföy yatırımlarına bırakmıştır (Öztekin ve Erataş, 2009).Uluslararası sermaye hareketlerini kısıtlayıcı kontrollerin olmaması durumunda tam sermaye hareketliliği beklenir. Söz konusu hareketliliğin derecesini ölçmekte kullanılan, yaklaşımlar içinde tasarruf ve yatırımlar arasındaki karşılıklı ilişki önemli bir yer tutmaktadır. Dış ticaretin ve uluslararası sermaye hareketlerinin önündeki kontrollerin olmadığı bir ekonomide yurtiçi tasarruflar ile yurtiçi yatırımların birbirine eşit olmadığı ve arasındaki ilişkinin neredeyse yok denecek düzeyde olduğu varsayılır. Feldstein ve Horioka'nın, uluslararası sermayenin ne ölçüde hareketli olduğunu saptayabilmek amacıyla 1980 yılında yaptıkları çalışmada elde ettikleri bulgular bu varsayımların tekrar gözden geçirilmesine sebep olmuştur. Literatürde Feldstein-Horioka paradoksu olarak bilinen çalışmanın sonuçlarına göre yurtiçi tasarruflar ve uluslararası sermaye akımları arasında güçlü bir ilişki vardır. Ayrıca yurtiçi tasarruflardaki artışı önemli ölçüde yurtiçi yatırımlara dönüşmektedir.

Bu çalışmada 1990-2012 dönemi için gelişmekte olan 10 Balkan ülkesinin sermaye hareketliliğinin derecesi yatırım, tasarruf eşbütünleşmesinden hareketle analiz edilmiştir. Elde edilen bulgular, zaman serileri bağlamında ülkelere göre değişmekle birlikte, panel veri bağlamında ele alınan ülkeler ve örneklem dönemi bazında yatırım ve tasarrufların eşbütünleşik ve istatistiksel olarak anlamlı sonuçlar bulunmuştur. Değişkenler arasında tespit edilen uzun dönem eşbütünleşme ilişkisinin katsayıları ise FMOLS ve DOLS yöntemleri ile araştırılmıştır. Panel FMOLS bize uzun dönemde tasarruflardaki artışın, yatırımı panel genelinde pozitif bir şekilde etkilediğini göstermektedir. Panel genelinde tasarruf tutma katsayısı 0,49 olarak hesaplanmıştır. Yani 10 Balkan Ülkesi genelinde tasarruftaki%1'lik bir artış, yatırım üzerinde uzun dönemde %0,49'luk bir artışa neden olmaktadır. Panel DOLS test sonuçları panel bazında değerlendirildiğinde uzun dönemde tasarruftaki artış, yatırımları panel genelinde pozitif bir şekilde etkilemektedir. Panel genelinde tasarruf tutma katsayısı0,58 olarak hesaplanmıştır. Yani 10 Balkan ülkesi genelinde tasarruftaki%1'likbir artış, yatırım üzerinde uzun dönemde % 0,58'lik bir artış meydana getirmektedir. Panel eşbütünleşme parametreleri incelenen ülke grubu için yatırımlar ile yurtiçi tasarruflar arasında güçlü bir ilişkinin varlığını ortaya koymaktadır. Bu da yurtiçi tasarrufların yatırımları yaklaşık olarak %49 - %58 oranında finanse ettiği kalan kısmı ise dış finansmanla karşılandığını göstermektedir.

Diğer bir ifade ile bu ülke grubunda sermaye hareketliliğinin tam olmadığı ve kısmi bir sermaye hareketliliğinin varlığından bahsedilebilir.

# Merkezi Yönetimin Vergi Gelirlerini Yerel Yönetimlere Dağıtımı: Küreyerelleşme

# Distribution of Tax Revenue of Central Government to Local Governments: Glocalization

Asst. Prof. Dr. Fatih Kaplanhan (Yıldırım Beyazıt University, Turkey)
Ph.D. Candidate Cem Korkut (Yıldırım Beyazıt University, Turkey)

## Abstract

Main questions of this study are "How much autonomy?" and "Has autonomy take to feudalism?" Although the resolution of issue according to effective, efficient, rational and fair principles about the income distribution between the central administration and the municipalities is a precondition of permanent and efficient services of local governments.This study aims to identify regional goverments tasks and improve services of central governments with taxes (VAT) distirbution method. We also aim to increase taxes that are collected from regional governments with the method of glocalization. In addition, if sharing criteria was different, it would how a change between the years 2003-2011 will be investigated. During the comprehensive analysis of these years with public revenues on the basis of VAT, local government's expenditure, criteria/data to be applied in the share of public revenues to municipalities whether changing the method financing of municipalities can make local governments more efficient and productive will be explored. In a political structure that municipalities are financed from the center, it is very difficult to find an appropriate combination between equality and justice in the distribution of income. Local governments must have privileges which is proportionate with responsibilities on own mandates and source of income for producing to serve as an effective and efficient local services. The results show that if the central governments give budget to regional government according to taxes that are collected in this region, productivity of taxation increase and regional government can collect taxes easier.

## 1 Yerel Yönetim Olarak Belediyeler

Belediyeler ve diğer yerel yönetimler, sorumlu olduğu yerel toplumun müşterek gereksinimlerini karşılamak amacıyla kurulan, ekonomik, sosyal, kültürel standartları yükseltme amacı güden ve yetkilerin; yerel düzeyde, topluluğa en yakın yönetim birimince, kamu yararı doğrultusunda kullanıldığı, kamu tüzel kişiliğini haiz özerk ve demokratik idarelerdir. Belediyeler, demokrasinin yerel bazda yerleşmesi ve ekonominin gelişmesi açısından merkezi yönetimden sonra ikinci derecede vazgeçilmez öneme sahip kurumlardır. Ülke yönetiminde merkezi ve yerel yönetimler birbirleriyle çelişen değil, aynı amaca hizmet eden ve doğal olarak birbirlerini destekleyen birimlerdir. Merkezi ve yerel yönetimler arasında bir hiyerarşik bağ bulunmamakla birlikte, yerel yönetimlerin sahip oldukları özerklik, onların başına buyruk ve tam bağımsız olduklarını göstermez.

İnsanların birlikte yaşamaları sonucunda tarihsel süreçte bazen devlet ile birlikte hatta bazen devletten önce yerel yönetimler; karşılanması gereken toplumsal ihtiyaçları ve toplumsal düzeni sağlamak için yine insanlar tarafından oluşturulmuştur. Yerel yönetimlerin varoluşu genel olarak iki sebebe dayandırılabilir.(Fidan, 1997). Birincisi sosyal olgu sonucu ortaya çıkan komün en eski yerel yönetimdir. Belediyelerin varoluşunun ikinci sebebi ise idari nedenlerdir. Genel olarak topluluklar ortak yaşamın gerektirdiği bir kısım ihtiyaçlarını örgütsüz yöntemlerle karşılayamamış, bu zorluğun doğal bir sonucu olarak devletin kendisi; siyasi nedenler ile kendi sınırları içinde il ve bölge idareleri oluşturmuştur.

### 1.1 Belediye ile Merkezi Yönetim Arasındaki Görev ve Gelir Paylaşımı

Merkezi yönetim ile belediyeler arasındaki ilişkilerin siyasal, idari ve mali olmak üzere üç yönü vardır. Bu üç tür ilişkiyi birbirinden ayırmak mümkün değildir. Çünkü bunlar birbirlerini yakından etkiler ve belirlerler. Gelişmiş ülkelere nazaran geri kalmış ve gelişmekte olan ülkelerin imkânlarının sınırlı olması, belediyelerle merkezi yönetim arasında işbirliğinin, işbölümünün ve kaynakların yerinde kullanılmasının önemini daha da artırmıştır. Bu işbölümünün iyi bir şekilde yapılamamış olması gelişemeyen ülkeler için gelişememelerinin sonucu olduğu kadar sebebi de olabilir.

Türkiye'de yerel yönetimlerin üstlendikleri hizmetlerin başka ülkelere göre çok sınırlı düzeyde olduğu, merkez yönetimi ile yerel yönetimlerde çalışan kamu personeli oranlarının karşılaştırılmasından da anlaşılmaktadır. Bazı ülkelerde kamu personellerinin merkezi yönetim ile yerel yönetimler arasındaki dağılımı şu şekildedir;
***Şekil 1.*** *Seçilmiş Bazı Ülkelerde Kamu Personeli Merkezi – Yerel\* Dağılımı, (OECD, 2012)*

\*: Yerel yönetim istatistikleri Federal ülkelerde eyaletler, bölge idareleri ve yerel yönetimleri kapsarken, üniter ülkelerde bölge idareleri ve diğer yerel yönetim birimlerini içermektedir.

Türkiye'de belediyeler, tüm kamu personelinin % 12,19'unu çalıştırmakta iken, bu oran Japonya'da % 85,28, ABD'de % 87,72, Norveç'te %64,84 ve İsveç'te ise % 82,08 dolaylarındadır (Gurria, 2011).

Halkın ihtiyaçlarını en yakın gözle görebilen kurum yerel yönetimlerdir. Yerel yönetimler halkın ihtiyaç ve isteklerine hızlı ve kalıcı çözümler getirebilir, gerektiğinde diğer karar organlarıyla köprü vazifesini kurabilirler. Gelişen teknoloji ve artan nüfus ile yerel yönetimlere büyük bir görev düşmektedir. Teknolojinin ve nüfusun sürekli artması sebebi ile yerel yönetimlerinde sürekli personel sayılarını, donanımlarını, niteliklerini artırması gerekmektedir.

Kamu hizmetlerinin devlet ile belediyeler arasında paylaştırılması bu kamu idareleri arasında sıkı mali ilişkileri de beraberinde getirmiştir. Toplumsal hayatın zorunlu kıldığı ortak ihtiyaçların bir kısmının görülmesi görevi belediyelere verilirken, bunlardan doğacak olan kamu yüklerini karşılayacak araçların da kendilerine temin edilmesi gerekmektedir. Diğer bir ifade ile kamu hizmetlerinin paylaştırılmasına paralel olarak; kamu kaynaklarının da devlet ile belediyeler arasında paylaştırılması gerekir. Kamu hizmetlerinin bir kısmının yerel idarelere verilmesi, bu hizmetlerin yapılması için gerekli olan mali araçları hangi kaynaklardan karşılayacaklarının da belirlenmesini getirir. Bu da kamu gelirlerinin merkezi yönetim ile belediyeler arasında mali bir paylaşıma tabi tutulmasının belli kurallara bağlanması zorunluluğunu ortaya çıkarır. Aslında kamu hizmetlerinin paylaşımı ve dağıtımı ile gelir kaynaklarının paylaşımı ve dağıtımı aynı meselenin idari ve mali iki yanını birden düzenlemenin zorunluluğunu kendiliğinden ortaya çıkarır (Başaran, 2008).

### 1.2 Gelir Paylaşımının Temel Nedenleri

Son yıllarda özellikle de yirminci yüzyılın ikinci yarısından sonra, merkezi yönetimlerin halkın huzur ve asayişi ile ilgili görevleri daha çok üstlendikleri görülmektedir. Bundan dolayıdır ki yerel sorunlar ve yerel politikalar gittikçe daha çok önem kazanmakta ve ülke çapında da yaygınlaşmaktadır. Günümüzde yerel yönetimlerin görevleri ve etkinlikleri yerel yönetimlerin boyunu aşmaktadır. Hızlı haberleşme ve ulaşım imkânları; plânlı milli ekonomi politikası, siyasi partilerin gerçek ve tüzel sosyal refah programları ve yerel yönetimlerin birbirinden farklı olmaları gibi nedenler, yerel yönetimlerin önemini gün geçtikçe artırmaktadır. Bütün bu gelişmeler merkezi ve yerel yönetimler arasındaki ilişkilerin ve işbirliğinin daha iyi anlaşılabilmesi için mali paylaşımı ortaya çıkaran nedenlerin incelenmesini gerektirmektedir (Bülbül, 2011). Bu nedenler; gelir dağılımı adaleti sağlanması, standart hizmet sunumunun sağlanması, mali dengesizliklerin giderilmesi, dışsallıkların içselleştirilmesi, erdemli malların üretiminin teşvik edilmesi, hukuki etkinliğin sağlanması, idari etkinliğin sağlanması ve geleneksel ve tarihsel faktörler olarak özetlenebilir.

### 1.3 Gelir Paylaşımının Temel İlkeleri

Adalet ilkesi; kısaca hakka ve hukuka uygunluktur. Etkinlik ilkesi ise sınırlı kaynaklar çerçevesinde yönetimlerin ihtiyaç olan mal ve hizmetleri maksimum düzeyde üretmesidir ki devletin mali işlevlerinin başında kaynakların ilgili yerlere etkin olarak tahsisini sağlamak gelmektedir. Eşitlik ilkesi ile ulusal bütünlüğün bozulmaması için bölgeler arasındaki dengesizliklerin giderilmesi hedeflenmektedir. Klasik iktisat teorisine göre

bölgeler arasında ekonomik kaynaklar eşit olarak dağılmış olsa da, kaynakların marjinal verimliliğin yüksek olduğu yerlere doğru kayacağı ve bu kaymanın marjinal verimlilikler eşitleninceye kadar süreceği öngörülse de, eşitlik-etkinlik ve eşitlik-adalet çelişkisi tartışmalı bir konu olsa da eşitlik ilkesi gelir dağılımında en önemli ilkelerden birisidir. Açıklık ilkesi uyarınca belediyelerin hizmetlerini kesintisiz ve verimli yapmasını sağlamak ancak gelirlerinin belirli olması ile mümkün olacaktır. Yeterlik ilkesine göre ise belediyeler tahsis edilecek vergiler, bu idarelerin, gelir ihtiyaçlarını karşılayacak türde ve etkinlikte olmalıdır. Bir diğer ifade ile idareler arası vergi paylaşımı yapılırken, belediyelere yeterli gelir kaynağı sağlanmalı ve bu paylaşım yerel özerkliği zedelememelidir. Belediyelere mali ihtiyaçlarını karşılamaya yetecek vergiler bırakılırken bu vergilerin oranlarının kolayca düzenlenmesi ve matrahlarının esnek olması belediyelerin kaynak ihtiyacının karşılanmasında önemli katkılar sağlayabilecektir. İdari uygunluk ilkesine göre, hangi verginin kime bırakılacağı belirlenirken; merkezi yönetim veya belediyelerin vergi kapasitesini kavrayabilme yeteneğini, vergi konusunu etkin olarak izleyip izleyemedikleri ve vergilerin tahsilinde gerekli yeterliliğe sahip olup olmadıkları dikkate alınacak ve vergiler bu ilkeler dikkate alınarak idareler arasında paylaşılacaktır.

### 1.4 Gelir Paylaşımına Etki Eden Faktörler

Merkezi yönetim ile belediyeler arasındaki gelir bölüşümünün belli ve kesin kurallara bağlanmış, çoğunlukla benimsenip birçok ülkede uygulamaya konulmuş kararlı, devamlı ve standart bir şekli bugün için mevcut değildir. Her devletin kendi coğrafi ve siyasi yapısına göre kendine has değişen gelir paylaşım modeli vardır.

GBVG'nin belediyelere dağıtılmasında nüfus kriterinin yanı sıra, gelişmişlik endeksi, köy sayısı, yüzölçümü ve kırsal alan nüfusu gibi yeni kriterler belirlenmesine karşın, nüfus hala belirleyici bir göstergedir. Türkiye'deki mevcut düzenlemede, yerel yönetimlerin gelir kapasite farklılıkları, nüfus yoğunluğu, yaşlı nüfus, eğitim çağındaki nüfus ve turistik özellikler gibi belediyelerin harcama miktarına etki edecek faktörler göz önünde bulundurulmamıştır.

Bu faktörler; devlet yapısındaki farklılıklar, milli gelir düzeyindeki farklılıklar ve merkezden yönetim ile yerinden yönetim anlayışı farklılıkları olarak sıralanabilir.

### 1.5 Gelir Paylaşımında Dikkate Alınan Başlıca Kriterler

Dikey ve yatay idari ve mali paylaşımda, gelirlerin merkezi yönetim ile yerel yönetimler arasındaki tahsisi; idarelerin gelir kaynaklarını tamamlayıcı ve yönetimler arasındaki gelir farklılıklarını giderici bir fonksiyon görür. İdari ve mali paylaşım uygulamasında belirli faktörler rol oynar. Bu faktörler; denkleştirme fonu, potansiyel ihtiyaç ve potansiyel vergi gücüdür.

Denkleştirme fonu (Kestane, 1996) daha çok mali yardım ve bağış sisteminde ağırlığı olan bir faktördür. Paylaşımı yapılacak gelirler bu fonda biriktirilir. Denkleştirme fonunun kaynağı ise vergilerden ayrılan yüzde payları ile bütçeden ayrılan ödeneklerden oluşmaktadır.

Potansiyel ihtiyaç, potansiyel vergi gelirinin belirlenmesi sonucunda ortaya çıkacak olan açığa göre belirlenir. Potansiyel ihtiyacın belirlenmesinde birçok kriter kullanılmasına rağmen ana kriter nüfustur. Kişi başına ihtiyaç nüfus ile çarpılarak potansiyel ihtiyaç belirlenir. Nüfus kriterine yardımcı kriterler arasında ise öğrenciler ve göçmenler kriteri verilebilmektedir. Potansiyel vergi gücü, merkezi ve yerel yönetimlerce toplanan vergiler toplamından oluşmaktadır. Önemli olan gelir kaynaklarında bir homojenliğin ve devamlılığın olmasıdır. Bu üç (nüfus, öğrenci ve göçmenler) kritere göre yerel yönetimlerin ihtiyaçları olan gelirler belirlendikten sonra, bu ihtiyaçların karşılığı olan gelirlerin paylaştırılmasında hangi kriterin kullanılacağı önemlidir. Uzun yıllardır tartışılan bu kriterler; her ülkede siyasi, idari yapı ve değer yargılarına göre farklılık göstermesine rağmen başlıcaları şunlardan oluşmaktadır; nüfus başına göre, yerel tahsilâta göre, öğrenim çağında olan çocuk sayısına göre, işsizlerin adedine veya sosyal yardıma muhtaç olanlara göre, belediye alanına göre, belediye yollarının uzunluğuna göre, mesken sayısına göre, sosyoekonomik gelişme endeksine göre.

### 1.6 Belediyelerin Başlıca Gelirleri

Belediyelerin gelirlerini, ekonomik gelişmişlik düzeyi ve devlet yapısı ne olursa olsun bütün ülkelerde kaynakları bakımından üç başlıkta incelemek mümkündür. Kaynaklardan birisi yerel kaynaklardan elde edilen öz gelirlerdir. Bunlar belediye yönetimlerine tahsil etme yetkisi tanınmış vergiler, harçlar katılım payları, ücretler ve belediyelere ait taşınmazların satılması ve kiralanması yoluyla elde ettiği gelirler ve işletme karlarıdır. İkincisi transfer niteliği taşıyan gelirlerdir. Bu kaynak merkezi yönetim gelirlerinden aldığı pay ile yardım ve borç şeklindeki aktarmadan oluşmaktadır. Üçüncü gelir kaynağı ise belediyelerin bankacılık sektörü ile mali piyasadan aldığı kredilerdir.

## 2 KDV Vergisi ve Uygulamaları

Katma Değer Vergisi (KDV), üretim tüketim zincirinin her aşamasında, malların ve hizmetlerin satışından alınan ve vergi indirimine imkân tanımak suretiyle değer artışını temel alan, gayri şahsi, çok aşamalı, genel bir satış vergisidir.

Katma değer vergisini bir harcama vergisi olarak ilk kez öneren Alman sanayici Wilhelm Von Siemens olmuştur (Jenkins, 1998). Von Siemens ilk kez 1918 yılında Almanya'da uygulanan muamele vergilerinin

kaldırılarak KDV uygulamasına geçilmesini savunmuştur. Fransa'da ise o tarihlerde Maliye Bakanlığı'nda çalışan Maurice Laure bu verginin öncülüğünü yapmış, daha sonra da KDV projesini hazırlamıştır. KDV'yi ilk uygulayan devlet 1954 yılında Fransa olmuştur (Organ, 2013). Maliye tarihinin en hızlı yayılan vergisi unvanını kazanan KDV, 1968 yılından itibaren, başta Almanya olmak üzere AB'ye üye diğer ülkelerde yürürlüğe konulmuştur. KDV'nin AB'ye üye ülkelerde hızla yayılmasının temel nedeni, Avrupa Topluluğu'nu kuran 1957 tarihli Roma Antlaşması'nın 99. maddesinin dolaylı vergilerin uyumlaştırılmasına ilişkin hükmüdür.

Vergilendirmede ilke olarak "vergi ödeme gücü" esas alınmakta olup, bunun göstergelerinden biri elde edilen "gelir" iken, diğer bir göstergesi, bu gelirin harcanmasıdır. Dolayısıyla doğrudan doğruya kişilerin elde ettikleri gelirlerin vergilendirilmesi yanında, harcamaların da vergilendirilmesi yoluna gidilmektedir. Harcamaların vergilendirilmesi ise ya üretim veya üretimin her safhası ya da tek tek belirtilmiş mal ve hizmetler vergi kapsamına alınmak suretiyle gerçekleştirilmeye çalışılmaktadır. KDV konusu ve kapsamı itibariyle muamele vergilerinden olup, teorik ve teknik üstünlükleri ile bu vergilerin en gelişmiş olanıdır. Çok aşamalı ve yayılı satış vergisi niteliğinde olup; mal veya hizmetin her el değiştirilmesinde eklenen değer üzerinden tarh edilen bir satış vergisidir (Arslan, 1983).

KDV, genel bir vergidir ve konusu mal ve hizmet teslimi olan her işlem bu vergi kapsamına dâhildir; üretim ve dağıtımın perakende satış dâhil her aşamasına uygulanmaktadır. Basit biçimde tanımlanırsa; KDV, bir işletmenin diğer firmalardan aldığı mal ve hizmetlere eklediği değer üzerinden alınan bir vergidir. KDV, tek bir aşamada alınmakta olan muamele vergilerine (istihsal vergisi, satın alma vergisi vs.) göre çok aşamalı bir vergi ve tek aşamalı vergilere göre geniş kapsamlı bir vergidir (Saraçoğlu, 2006).

## 2.1 Bazı Ülkelerde KDV Uygulaması

ABD'de genel bir satış ya da KDV mevcut değildir. Bunun yerine eyaletler, sınırları içindeki mal ve hizmet teslimlerinden nihai safhada bir satış vergisi alırlar. Satış vergisinin KDV'den farkı satış vergisinin belirli bir mal veya hizmet üzerinden belirli bir oranda tek bir seferde yani sadece nihai tüketiciden alınmasıdır. Yeniden işlemek ve/veya satmak üzere mal alan mükellefler muafiyet belgelerini ibraz etmek zorundadırlar. Üç farklı satış vergisi mevcuttur: Satılan malların miktarı üzerinden hesaplanan satıcı vergisi (vendor tax), perakende satışı vergilendiren tüketici vergisi (consumer tax) ve her ikisinin bileşiminden oluşan bir satış vergisi (combination vendor-consumer tax). Alkollü içkiler ve tütün vergisi dışındaki satış vergileri genellikle eyaletler ve mahalli yönetimlerce tahsil edilmektedir. Eyaletlerin toplam gelirleri içinde satış vergilerinin payı ortalama %25 olup, vergi gelirleri içinde önemli bir yere sahiptir (Rodibaught, 2013).

Avrupa Birliği'nde (AB) vergilerin; ülkeler arası mal hareketlerinde rekabeti bozucu etki yapmaması ve tarafsız kalması anlayışı, AB'deki ortak vergi düzenlemelerinin temel felsefesini yansıtmakta ve birlik içerisinde, vergilerin üye ülkeler arası ticarette nötr kalmasını sağlayacak şekilde ortak düzenlemeler oluşturulmaktadır (Bilici, 2007). Son yarım asırda; vergi konusundaki en önemli gelişim olarak görülen KDV 1960'lı yıllarda 10'dan daha az ülkede uygulanmakta iken 2012 yılında 150'den fazla ülkede uygulanmakta, dünya vergi gelirlerinin yaklaşık %20'sini oluşturmakta ve 4 milyardan fazla insanı etkilemektedir. Avrupa Birliği üyesi ülkelerin tamamında uygulanan KDV'nin gelirlerinin tüm vergi gelirlerine oranı %15'ten fazladır (OECD, 2012).

Türkiye'de vergilendirmede genel ilke olarak "ödeme gücü" esas alınmaktadır. Vergi ödeme gücünün göstergelerinden biri elde edilen "gelir" iken, diğeri ise bu gelirin harcanmasıdır. Bu nedenle kişilerin doğrudan elde ettikleri gelirlerin vergilendirilmesi yanı sıra, harcamaların da vergilendirilmesi yoluna gidilmektedir. KDV konusu ve kapsamı itibariyle muamele vergilerinden olup (Saraçoğlu, 2006), teorik ve teknik üstünlükleri ile harcamalar üzerinden alınan bu vergi çok aşamalı ve yayılı satış vergisi niteliğinde olup, harcamalar üzerinden alınan vergiler içinde en gelişmiş ve modernidir. Katma değer vergisinde ithalat, üretim, dağıtım ve hizmet sektörleri her el değiştirme aşamasında vergilendirilmekte, işletme girdileri için yüklenilen vergiler hazineye borçlanılan vergilerden indirilmektedir. Böylece ithalat, üretim ve dağıtım sürecinin her aşamasında ürüne eklenen değer üzerinden vergi alınmaktadır.

## 2.2 KDV Uygulamasının Nedenleri

KDV uygulamasına geçilmesinde çeşitli nedenler bulunmaktadır. Bu nedenlerin başında bu verginin çekiciliği yanında, kaldırılan gider vergilerinin olumsuz etkileri de gelir. KDV'den önce, üretim aşamasını kavrayan toplu muamele vergileri uygulanmaktaydı. Bu vergilerin, üretimin vergilendirilmesine dönük olması nedeniyle, üretim yapan firmalar üzerinde baskı yaratarak kaynak dağılımını olumsuz yönde etkilediği ve üretim yapan firmalarda finansman sıkıntısına neden olduğu bilinmekteydi (Aydemir, 1996).

Diğer yandan, belli üretim aşamalarının yüksek oranlarda vergilendirilmesi, vergi kaçakçılığına neden olmakta, bu durum ise gelir ve kurumlar vergileri matrahlarının aşınmaları sonucunu doğurmaktaydı. KDV'den önceki vergi sisteminde; ekonomik gelişmenin gerisinde bulunan kaldırılan gider vergileriyle ekonomide genel talep düzeyinin vergi yoluyla kontrolü sağlanamamakta ve verginin tüketim üzerindeki etkisinden yeterli ölçüde faydalanılamamaktaydı. Bu sebeple sanayi üzerinde yoğunlaşan vasıtalı vergilerin yükünü ileri kademelere kaydırarak gelir ve kurumlar vergilerinin etki alanı dışında kalan vergi potansiyelini de harcamalar sırasında kavrayıp vergi gelirlerini artırmak için KDV'ye geçmek zorunlu hale gelmişti. Türk Vergi sistemindeki üç

reformdan birisi olarak kabul edilen KDV, vergi sisteminin sadeleşmesine de yardımcı olmuştur. Oto-kontrole de imkân veren KDV, bu sayede gelir ve kurumlar vergisine ilişkin kazançların da kayıt altına alınmasına yardımcı olmaktadır (Güngör, 2012).

KDV nihai olarak harcama üzerinden alındığı için toplam talebi kontrol özelliğine sahip olması ve enflasyonist baskıyı önlemede de araç olarak kullanılabilmesi KDV uygulamasına geçilme nedenlerinden biridir. KDV'den önce uygulanan sistem, ekonomik kaynakların etkin dağılımını olumsuz etkilemekte idi. KDV'nin üretim aşamasından tüketim aşamasına kadar uygulanabilme özelliği, kaynak dağılımının etkin bir şekilde dağılımına neden olmaktadır.

### 2.3 KDV Uygulamasının Etkileri

Tüketim vergilerinin tüketici tasarrufları üzerindeki etkileri doğrudan değil verginin, bireyin tüketimi üzerindeki etkisi dolayısıyla dolaylı yoldan olmaktadır. Tüketim vergilerinin bu arada bir tüketim vergisi olan KDV'nin tüketici talep ve tasarrufu üzerindeki etkisini belirleyen pek çok etmen vardır. Talebin yansıtıldığı piyasa çeşidi, talep edilen malların fiyat esneklikleri, tüketicinin gelir düzeyi gibi faktörler vergilemenin tasarruflar üzerindeki etkisini belirler. KDV, gelirlerini harcamaktan ziyade tasarruf edenleri, gelirlerini artırma yönünde etkilerken gelirlerinin büyük bir kısmını tüketen kesimin vergi yükünü artırmaktadır ya da özellikle tüketim veya gider vergilerinde görülen tersine artan oranlı etki KDV uygulanmasında da görülecek ve uygulanan vergi oranı aynıyken kişilerin gelirlerinin artmasına bağlı olarak vergi yüklerinde azalma meydana gelecektir. Yani gelir dağılımı eşitliği bağlamında; tüketim eğilimi yüksek olan kesimden tasarruf eğilimi yüksek olan kesime doğru, dolaylı bir gelir transferi söz konusudur.

Az gelişmiş ülkelerde dolaylı vergiler ağırlıktadır. Dolaysız vergilerin önemli bir kısmını ise sabit ve dar gelirli yükümlüler ödemektedir. Ekonomik kalkınmanın finansmanında vergi politikası benimsendiğinde, zorunlu olarak dolaylı vergilerin de arttırılması gerekecektir. Dolaylı vergilerin arttırılması, vergi sistemindeki adaletsizliği arttıracak ve bu durum vergi yükümlülerinin tepkisine yol açacaktır (Aktan, 1989). Dolaylı vergiler yatırımların teşviki açısından dolaysız vergilere göre daha etkindirler. KDV uygulamasıyla yatırım malları bünyesindeki fiyatı artıran vergi etkisi hafifletilerek veya yok edilerek yatırımcı için büyük darboğaz olan finansman ihtiyacını hafifletmek ve yatırımcıyı bu konuda cesaretlendirmek mümkün olabilmektedir. KDV sisteminde; amortismana tabi iktisadi kıymetlere ait KDV'nin indirim konusu yapılabilmesi ve teşvik edilmek istenen yatırım mallarına ait verginin ertelenebilmesi veya taksitlendirilmesi de yatırıma teşvik edici özelliklerdir. KDV'nin tasarrufları artırıcı etkisi sebebi ile de dolaylı olarak yatırımlar artacaktır.

Vergilerden ve vergi politikalarından çeşitli nedenlerle bozulan fiyat istikrarının yeniden sağlanmasında KDV'den yararlanmak mümkündür. Zira vergiler; ekonominin bünyesinde mevcut, ekonomideki konjonktür hareketlerini hafifleten, dolayısıyla fiyat istikrarını korumaya çalışan istikrar kuvvetlerinden birisidir. Vergilerin otomatik istikrar sağlama özelliğinin farkı; diğer otomatik stabilizatörler gibi ekonomideki enflasyonist ve deflasyonist eğilimleri hafifletmesi için hiçbir yasama tasarrufuna, idari karara, iktisadi teşhise, bu teşhise uygun iktisadi mali tedbirlere ihtiyaç göstermemesidir. Bu anlamda KDV'nin otomatik istikrar sağlama gücünün diğer vergilerle kıyaslandığında özellikle fiyat istikrarını sağlamada ve enflasyonla mücadelede oldukça etkili olduğu görülecektir (Danninger, 2008). Ancak KDV'nin bahsedilen fiyat istikrarı üzerindeki bu olumlu etkisinin yanında ilk etkisinin fiyatlar genel seviyesini artırıcı yönde olacağı gerçeği unutulmamalıdır. Özellikle ekonomik daralma dönemlerinde veya enflasyonla etkin mücadelenin amaçlandığı dönemlerde KDV uygulaması veya KDV oranlarının artırılması enflasyon rakamlarının yükselmesine ve ekonomik daralmanın artmasına neden olacaktır.

Bir ekonomide milli gelir artışı toplumsal kalkınmanın nicel göstergesidir. Oysa bu artışa rağmen, toplumun sosyal sınıfları arasında gelir adil olarak dağılmıyorsa, toplumda nitel kalkınma gerçekleşmiyor demektir. Vergiler kamu harcamalarının finansmanında olduğu kadar gelir dağılımının düzeltilmesinde de bir araç olarak kullanılabilir. Gelir dağılımındaki eşitsizliğin giderilmesi noktasında, KDV'nin gelir dağılımı üzerindeki olumlu etkisi olduğu dikkate alınarak, genel bütçe vergi gelirleri içerisindeki KDV payının daha fonksiyonel kullanılması ve kamu harcamalarının gelir dağılımı eşitsizliğini azaltıcı transferlere yoğunlaştırılması daha yararlı olacaktır.

Vergilerin yapısal uyarlığının tam ve etkin olabilmesi için vergi kaçakçılığının en az düzeyde olması ve toplumca kabul edilebilir düzeyde olması gerekir. Ancak bu takdirde milli gelirdeki artışın ile orantılı olarak vergi gelirlerinde artma görünür. Bugün yeni olan, dünya ölçeğinde küreselleşme sonucu rekabet koşullarının sertleşmesiyle kayıt dışı ekonominin haksız rekabete neden olan bir unsur olarak ortaya çıkmasıdır. KDV lokomotif etkisi özelliği olan bir vergi türü olması sebebiyle mükelleflerin gelir ve kurumlar vergisi hâsılatını da kontrol altına almaktadır. KDV'nin yukarıda sayılan; bütün kesimlere hızlı nüfuz etmesi, tarafsız olması, geniş tabanlı olması, indirim mekanizmasının olması, şeffaf olması, belge düzenini olması, oto kontrol sisteminin olması, lokomotif etkisinin olması gibi özellikleri ile kayıtdışı ekonomi ile mücadelede yararlanılması oldukça yararlı ve önemli sonuçlar verecektir (Schneider, 2011 ve 2013, McGee, 2008).

## 3　Yerel Yönetimlerin Finansman Sorununa Çözüm Arayışları

Belediyeler, kanunlarda gösterilen yerel nitelikli altyapı, çevre, eğitim, sağlık, kültür ve sosyal yardım gibi birçok hizmetin üretim ve sunumundan sorumlu kuruluşlardır. Kentli nüfusun göç ve doğumlar nedeniyle gittikçe arttığı günümüz dünyasında belediye hizmetlerine olan talebin niteliği ve niceliği hızla artmaktadır.

Bununla birlikte belediyelerin birçoğu mali yetersizlikler nedeniyle artan talebi karşılamada ciddi zorluklarla karşılaşmaktadır. Özellikle büyük sermaye, ileri teknoloji ve uzmanlık gerektiren projelerin hayata geçirilmesinde ciddi sıkıntılar yaşandığı bilinmektedir. Bu nedenlerle belediyelerin birçoğu ekonomik, teknik, sosyal ve ticari nitelikli yatırımlarını sürekli ertelemek durumunda kalmaktadır. Projelerin hayata geçirilmesinde yaşanan gecikmeler yerel kaynakların etkin şekilde değerlendirilmesini önlemekte ve yerel ekonominin gelişmesini olumsuz yönde etkilemektedir (Hillman, 2003).

Belediyelerin yaşadıkları finansman sıkıntısına birçok öneri getirilmiştir. Bunlardan bazıları; MTV ve trafik harçlarının yerel yönetimlere bırakılması, belediyelerin topladığı vergilerin oranlarında artış yapılması, yerel yönetimlerin mali özerkliğinin artırılması, yeni vergi türleri (konaklama vergisi, hemşehri vergisi, meslek vergisi gibi) konulması vb. önerilerden oluşmaktadır. Niteliği ve niceliği artan yerel yönetim hizmetlerinin kaliteli, etkin ve ucuz hizmet sunmak için önerilen alternatif finansman modeli de özelleştirme'dir (Bozloğan, 1997). Belediyeler için bir diğer alternatif finansman kaynağı ve önerisi de borçlanma'dır. Belediyelerin borçlanma yolu ile finans sağlaması zaman zaman belediyeler ile merkezi yönetimi karşı karşıya getirse de belediyelerin artan sorumluluk ve hizmetlerini yürütmede yaşadıkları finansal sorunlar bu türden bir fon sağlamalarını zaruri hale getirmektedir.

## 4　Yeni Bir Çözüm Önerisi

Bu çalışmanın çatısını Türkiye'de GBVG'den belediyelere pay verilmesi esasına dayanan mevcut gelir paylaşımı yönteminin yerine, yerel gelirleri artırıcı ve belediyelerin ulusal katma değer oluşumuna katkısını (bir diğer deyişle ekonomik performansını) öne çıkartan yeni bir paylaşım modeli önerisi oluşturmaktadır. Çalışmada; belediyelere GBVG'den pay vermek yerine KDV gelirlerinin il sınırları içerisindeki (dâhilde) KDV tahsilatı ve ihracat performansı gibi kriterler esas alınarak merkezi idare ve belediyeler arasında paylaşılması önerilmektedir. Bu öneri çerçevesinde katma değer vergilemesinin belediyelere tamamen bırakılmasının doğurabileceği kaynak sapmaları, idari maliyetler, vergi ihracı ve benzeri sorunların ortaya çıkması da önlenmiş olmaktadır.

Önerinin Kurumsal ve Yasal Altyapısı

Dahilde KDV gelirlerinden belediyelere ayrılan payların tahakkuk ve tahsisata esas olmak üzere;

Belediye ve il nüfusları　: Her yılın ocak ayından geçerli olmak üzere İçişleri Bakanlığı tarafından, Türkiye İstatistik Kurumundan alınmak suretiyle,

İllerin dâhilde KDV Gelirleri　　　　　　: Her ay Maliye Bakanlığınca,

İllerin İhracat rakamları　　　　　　　　: Her ay Ekonomi Bakanlığınca,

İllerin Gelişmişlik endeksi sıralamasını　: Her yıl Kalkınma Bakanlığınca

İller Bankası ve Maliye Bakanlığına bildirilir.

### 4.1　Öneride Belediye Paylarının Hesaplanması ve Oranı

Belediyelere sınırları içerisindeki dahilde KDV tahsilâtı toplamı üzerinden pay verilir. Bu pay, illerin sınırlarındaki dahilde KDV tahsilâtı toplamından, asgari geçim indirimi, red ve iadeleri düşüldükten sonra kalan net tutar üzerinden hesaplanır.

İl sınırları içerisindeki dahilde KDV tahsilâtı toplamının; yüzde 50'si belediyelere, yüzde 50'si merkezi havuza ayrılır. Havuza ayrılan %50'lik payın; %40'ı illerin nüfusunun ülke nüfusuna oranına göre, %30'u İl ihracatının ülke ihracatına oranına göre ve kalan %30'u Kalkınma Bakanlığı'nın en son yaptığı gelişmişlik endeksindeki sınıflandırılan beş gruba %6'şar paylar halinde taksim edilir. Bu tahsisat, her grup içinde, ilin grup nüfusuna oranına göre hesaplanır.

Belde, köy, mahalle veya bunların bazı kısımlarının bir belediyeye katılması veya birleşmesi halinde bu belediyelerin payı, katılma veya birleşmenin fiilen gerçekleştiği tarihi takip eden ocak ayının birinci gününden itibaren yeni nüfuslarına göre hesaplanır.

### 4.2　Öneride Payları Tahsisi

4.2. maddeye göre yapılan hesaplama neticesinde İller Bankası tarafından illere pay edilir.

Büyükşehir belediyelerinde; il için hesaplanan pay, ilçelere nüfusuna göre %40 büyükşehir payı ayrıldıktan sonra büyükşehir ilçe belediyelerinin hesabına İller Bankası tarafından aktarılır.

Büyükşehir olmayan illerde; il payına düşen tutarları ilçeleri arasında nüfus, yüzölçümü, ilçenin gelişmişlik durumuna paylaştırılır.

Dağıtılan belediye paylarındaki artış, bir önceki yılın aynı ayında tahakkuk eden tutarların yüzde 20'sinden fazla olamaz. Fazla olan tutarlar, artış oranı yüzde 20'den az olan büyükşehir belediyelerine bu oranı aşmamak üzere, nüfus esasına göre dağıtılır. Bakanlar Kurulu bu oranı bir katına kadar artırmaya veya kanuni haddine indirmeye yetkilidir.

## 5 Önerinin Olumlu Yönleri

Önerinin olumlu yönleri vergi bilincinin artması ve kayıtdışı ekonomide azalma, Yerel hemşehrilik bilincinin artması ve yerel ürünlere talebin artması, Yerel üretimin teşvik edilmesi ve yerel kalkınmanın artması, Gelir dağılım adaletinin artması, Yerel yöneticiler düzeyinde popülist uygulamalar yapılamaması, Belediyelerin bütçe açıklarını kapatma gayretinin artması, Vergi ilkelerine uygun olması, önerinin çoğaltan etkisinin olması başlıkları altında incelenecektir.

### 5.1 Vergi Bilincinin Artması ve Kayıt Dışı Ekonomide Azalma

Vergi ahlakı ve bilincinin bu özelliklerinden yola çıkarak; GBVG payı yerine belediyelerin sınırlarındaki dâhilde KDV tahsilâtının yarısını alması önerisi ile vergi bilincinin artacağı ve dolayısıyla kayıt dışı ekonominin azalacağı kuvvetle muhtemeldir. Nitekim (önerideki gibi) mali yerelleşme konusunda Almanya'da yapılan bir çalışmada (Werner, 2013) yerel idare için toplanan vergilere karşı vergi mükelleflerinin vergiye gönüllü uyumunun ve vergi ahlakının; merkezi yönetim için toplanan vergilere nazaran daha yüksek olduğu sonucuna varılmıştır. Bu bağlamda belediyelere vergileme yetkisi, tahsil yetkisi, vergi oranı ve konusunu belirleme, değiştirme yetkisi verilmesi hususundan daha önemli olan husus vergilerin merkezi yönetim ile belediyeler arsında paylaşılmasıdır. Yani vergi ödeyen halkın ödediği verginin bir bölümünün kendi bölgesinde, belediye sınırlarında kendisine yatırım veya hizmet olarak döneceğini bilmesidir.

### 5.2 Yerel Hemşehrilik Bilincinin Artması ve Yerel Ürünlere Talebin Artması

Bu öneri ile ülke genelinde hemşehrilik bilincinin artacağı öngörülmektedir. Hemşehrilik bilincinin etnik milliyetçilik yapılmadan geliştirilmesi amaçlanmaktadır. Böylece birçok negatif dışsallığı görülen etnik milliyetçilikten, mali milliyetçiliğe geçilebilinecektir. Ayrıca hemşehrilik bilincinin gelişmesi, yerel ürünlere talebin artmasına sebep olacak böylece yurtiçi sanayinin korunması ve gelişmesi ve ülke kaynaklarının daha rasyonel kullanılması sağlanabilir.

### 5.3 Yerel Üretimin Teşvik Edilmesi ve Yerel Kalkınmanın Artması

Yerel yönetimin kendi sınırlarındaki KDV tahsilâtının yarısını alması önerisi ve ihracat performansı kriterinin de genel bütçeden alacağı payda etkili olması belediyelere gelirlerini artırma imkânı verecektir. Belediyelerin, daha etkin strateji planları yapılarak yerel dinamikleri ile yerel potansiyelleri ortaya çıkaracağı, belediyeler tarafından yerel sermaye canlanmasının hedefleneceği ve belediyeler tarafından yapılan yatırım teşviklerinin daha esnek, etkin olacağı öngörülmektedir. Belediyeler bölgelerindeki üretimi, ihracatı teşvik ettiği, kayıt dışı ile mücadele ettiği, bölgesine yatırımcıyı çektiği ölçüde bölgede ödenen KDV artacak ve belediyenin geliri artmış olacaktır.

### 5.4 Gelir Dağılımında Adaletin Artması

Türkiye'deki katma değerin üçte birinden fazlasının batı bölgelerimizde üretildiği ve ödenen vergilerin neredeyse tamamına yakın bir kısmının yine bu bölgelerdeki vatandaşlar tarafından ödendiği göz önüne alındığında; yerel yönetimlerimize hizmetlerini yerine getirirken merkezi yönetim vergi gelirlerinden ayrılan payların da önemli ölçüde batıdan doğuya doğru bir kaynak transferini gösterdiği açıktır. Bu öneri ile belediyelerin kendi sınırlarındaki KDV tahsilâtının yarısını alması ve ihracat performansı kriterinin de etkili olduğu daha adil bir gelir dağılımı önerilmiştir. Bölgeler arası eşitsizliğin artmaması, sosyal adaletin de sağlanması için, 81 ilin dâhilde KDV tahsilâtının bir kısmı da nüfus ve sosyo-ekonomik gelişmişlik sıralamasına göre değerlendirilecektir.

### 5.5 Yerel Yöneticiler Düzeyinde Popülist Uygulamalar Yapılamaması

Bu öneri belediyelerin sorumluluklarını artıtacak ve sorumluluğu artan yerel yöneticiler popülist politikalar yapamayacaktır. Gösteriş ve yoğun sosyal reformlarla motive edilen popülist politikalar nihai olarak etkin ve verimli olmadıkları için başarısızdırlar. Başarısız olduklarında yola çıkarken lehlerine oldukları gruplara korkulacak maliyetler yüklerler. Bu öneride belediye finansmanına yerel KDV ile doğrudan katkısı olacak fertlerin daha rasyonel olacağı, haklarını daha çok arayacağı ve yerel siyasetçilerin sorumluluğu artacağı içinde popülist uygulamalar yapamayacağı öngörülmüştür.

### 5.6 Belediyelerin Bütçe Açıklarını Kapatma Gayretinin Artması

Yerel yönetimlerin borçlarının büyük bir bölümünün belediyelerin borçları olması, belediye borçlarının büyük bir bölümü ise büyükşehir belediyelerinin borçları olması ve bu borçların büyük bir kısmının da kamu borcu olması bağlamında; GBVG payı yerine belediyelerin sınırlarındaki dâhilde KDV tahsilâtının yarısını aldığı öneri ile belediyelere hem borçlanma ihtiyacı duymayacakları kadar finansman sağlayacak hem bölgelerinde üretimi ve yatırımı teşvik ederek (KDV tahsilâtının artması ile) gelirlerini artırma imkânı sağlayacak hem de belediyelerin bütçe açıklarını kapatma gayretinin artacağı öngörülmüştür.

### 5.7 Vergi İlkelerine Uygun Olması

Öneri; il sınırları içerisindeki dâhildeki KDV tahsilâtından yerel yönetime pay verdiği ve aylık bir vergi olduğu için vergi gelirlerinin istikrarı ilkesine en uygun vergi türü olduğu düşünülmüştür. Ayrıca adalet, etkinlik, görünürlük, iktisadilik ve özerklik ilkeleri de bu öneride sağlanmaktadır.

## 6  Sonuç

Türkiye'deki mevcut yönetimler arası gelir paylaşımı sisteminde, belediyeler ülke genelindeki bütün vergi gelirlerinden pay almaktadır. Ayrıca büyükşehir belediyelerine sınırları içerisinde toplanan genel bütçe vergi gelirlerinden ilave bir pay verilmektedir. GBVG, belediyeler arasında dağıtılırken belediyelerin; yüzölçümü, gelişmişlik endeksi ağırlıklı olarak da nüfus kriteri dikkate alınmaktadır. Bu nedenle mevcut sistem belediyelerin ulusal hâsılaya katkılarını dikkate almamakta, ekonomik performansı artırmaya yönelik çabaları olumsuz yönde etkilemektedir.

KDV'nin yerelleştirilmesinin makroekonomik etkileri bağlamında; önerinin (tüketim, tasarruf ve yatırım açısından) ekonomik büyüme ve kalkınmaya, (adalet ve eşitlik) açısından gelir dağılımına, (merkezi yönetim bütçe dengesi ve fiyat istikrarı, enflasyon, kayıtdışı ekonomi konuları açısından) makro ekonomik istikrara şu şekilde katkıları olacaktır;

Ekonomik büyüme ve kalkınma üzerindeki etkileri açısından; öneri ile verginin toplanmasına ve toplanan verginin belediyenin hizmet götürdüğü bireylere tekrar adil bir şekilde dönmesi ile verginin verimliliği artacağı öngörülmektedir. Mal ve hizmetlerin talep elastikiyetlerine göre KDV oranlarının titizlikle belirlenmesinin ülke genelinde ekonomik büyüme ve kalkınmaya olumlu etkisi olacaktır. Şöyle ki; talep elastikiyeti düşük olan mal ve hizmetlerde KDV oranının (merkezi idare tarafından) yüksek olarak belirlenmesi durumunda veri gelir düzeyinde tüketim harcamalarını artıracağından tasarruflarda azalma meydana gelecektir. Ancak talep elastikiyeti yüksek olan mal ve hizmetlerde KDV'nin yüksek olması durumunda veri gelir düzeyinde tüketim harcamaları azalacağından tasarruflarda artış meydana gelecektir. Yani gelir dağılımı eşitliği bağlamında; tüketim eğilimi yüksek olan kesimden tasarruf eğilimi yüksek olan kesime doğru, dolaylı bir gelir transferi söz konusu olacaktır. Bu sebeple tasarruflarda bir artış meydana gelecektir. Ülke genelinde artan tasarruflar yatırıma dönüşecektir ve ayrıca KDV sisteminde; amortismana tabi iktisadi kıymetlere ait KDV'nin indirim konusu yapılabilmesi ve teşvik edilmek istenen yatırım mallarına ait verginin ertelenebilmesi veya taksitlendirilmesi de yatırıma teşvik edici özelliklerdir.

Gelir dağılımı üzerindeki etkileri açısından; verginin mali güce göre alınması ilkesi ile verginin genelliği ve eşitliği ilkeleri birbirleriyle çelişen yapıdadır. Önemli olan, bu iki ilke arasında içinde bulunulan koşullara en uygun, hukuken en doğru ve ekonomik olarak da en yararlı dengenin kurulabilmesidir. Vergide genellik ve eşitlik ilkesinin, anayasanın 10'uncu maddesinde belirtilen yasa önünde eşitlik kavramı ile çakıştığı ifade edilmiştir. Adalet ve eşitlik ilkelerini; vergi toplama ve toplanan vergilerin dağıtılması açısından ayrı ayrı incelemek gerekmektedir.

Vergi toplarken; vergi yükünün, mükelleflerin kişisel ve ekonomik durumlarına göre eşit bir şekilde dağıtılması anlamında vergide eşitlik ilkesi benimsenmeli. Adalet ilkesinin zedelenerek vergi gelirlerinin azalmaması için toplanan vergilerin kamu hizmetlerinin görülmesi için dağıtımı esnasında ise adalet ilkesi benimsenmesi gerekmektedir.

Mevcut genel bütçe vergi gelirlerinden pay dağıtılması modelinin; büyükşehir olan illere fazladan pay verilerek eşitlik ilkesi zedelenmektedir. İllerin sadece nüfus, yüz ölçümü, gelişmişlik endekslerine bakılarak dağıtılması ise adalet ilkesini zedelemektedir. Mevcut GBVG pay verilmesi uygulaması büyükşehir olan belediyeler lehine, büyükşehir belediyesi olmayan iller aleyhine gelir dağılımını bozucu etki yaparak köylerden şehre aşırı göç ile makro ekonomik dengesizliklere sebep olmaktadır.

Öneride bütün vergi gelirlerinden değil sadece en geniş vergi tabanı olan KDV'den pay verilerek eşitlik ilkesi benimsenmiş. Dağılımda da büyükşehir belediyesi olup olmadığına bakılmaksızın illerin kendi sınırları içindeki KDV'den pay verilerek ve illerin ülke ihracatındaki payları da dikkate alınarak adalet ilkesi benimsenmeye çalışılmıştır.

Makroekonomik istikrar üzerindeki etkileri açısından; önerinin ekonomik büyüme ve kalkınma üzerinde, gelir dağılımı üzerinde, olumlu etkileri olsa da merkezi yönetim bütçesi üzerinde kısa vadede olumsuz etkisi olacaktır. Ayrıca fiyat istikrarı ve enflasyon bağlamında; özellikle ekonomik daralma dönemlerinde veya enflasyonla etkin mücadelenin amaçlandığı dönemlerde talebin kısılması amacıyla veya başka makro ekonomik amaçlar için KDV oranlarının artırılması enflasyon rakamlarının yükselmesine, makro ekonomik dengelerin bozulmasına, ekonomik daralmanın artmasına ve nihai olarak vergi gelirleri azaldığı için yerel yönetim paylarının da azalmasına neden olacaktır.

İllerde kişi başı ihracat, kişi başı ödenen KDV ve illerin gelişmişlik düzeyleri farklı olduğu için öneride; her ilde bireylerin merkezden aldığı (dahilde KDV) vergi payı farklı olacaktır. Ekonomik olarak gelişmiş iller ile

ekonomik olarak az gelişmiş iller arasındaki olumsuz tablo; sadece merkezi idarenin gayreti ile değil ekonomik olarak az gelişmiş il belediyeleri ile merkezi idarenin birlikte gayreti ile daha hızlı olumlu yönde düzelecektir.

Öneri ile merkezi yönetim tarafından toplanan vergilerin daha adil dağılımı sağlanmaya çalışılarak verginin bilincinin ve vergi verimliliğinin artırılması amaçlanmaktadır. Bunların yanında belediyelerden daha nitelikli veya nicelikli hizmet almanın yolu vergi bilincinin artması ile mümkün olacağı yargısının kişi, firma ve kurumlarda oluşması amaçlanmaktadır. Bu şekilde ekonomiye olumsuz etkileri olan etnik milliyetçiliğin, ekonomiye olumlu etkileri olacak mali milliyetçiliğe dönüşmesi beklenmektedir.

Vergi bilincinin artması, vergi verimliliğinin artması, mali milliyetçiliğin oluşması ülke genelinde kayıt dışı ekonominin azalmasına ve dahilde KDV gelirlerinin artmasına neden olacaktır. KDV; lokomotif etkisi özelliği olan bir vergi türü olması sebebiyle iktisadi mükellef olan nihai tüketiciye KDV'yi ödetirken, kanuni mükelleflerin de gelir ve kurumlar vergisi hâsılatını kontrol altına almaktadır. KDV'nin bu özelliklerinden dolayı öneri ile kayıtdışı ekonomi ile mücadelede olumlu ve önemli sonuçlar verecektir.

# Finansal Kriz ve Maliye Politikası: AB Üyesi Balkan Ülkeleri Üzerine Bir Değerlendirme

# Financial Crisis and Fiscal Policy: An Assessment of the EU-Member Balkan States

Dr. Servet Akyol (Akdeniz University, Turkey)

## Abstract

The objective of this paper is to study the economic and social results of the post-crisis fiscal policies concerning the Balkan States that are members of the EU. The global crisis, which broke out in the US in 2008, had a deep effect on both developed and developing countries. Until today different policies have been put on the agenda in order to eliminate or alleviate the impacts of the crisis. In this context, bailout and stimulus packages were firstly implemented. Stimulus packages were replaced by austerity policies because of the increasing public debt and budget deficit after 2010. Fiscal policy focused on reducing the debts instead of supporting the economic activities. This study is based on historical and descriptive method. It examines the development of post-crisis fiscal policies in the Balkan States that are members of the EU. In this study, public expenditure, public debt, public deficit and unemployment rate are used as the main indicators. The effects of fiscal policy will be compared between countries. This study also suggests that although the crisis resulted from financial sector, burden of crisis was transferred to public sector. Moreover, in many countries, because of its increasing deficit and debt burden, public sector became depended on financial sector that was rescued before. After the crisis, fiscal policies has led to significant economic and social costs in the Balkan States that are members of the EU.

## 1 Giriş

Küresel krizinin ABD'de ortaya çıkıp diğer ülkelere yayılmasıyla birlikte, sorun krize nasıl tepki verileceği ve acil olarak etkilerinin nasıl ortadan kaldırılacağına dönüşmüştür. Kriz karşısında ülkelerin verdiği ilk tepki kurtarma paketlerinin uygulanması biçiminde gerçekleşmiştir. Özellikle ABD ve İngiltere'de büyük ölçekli banka, sigorta ve finansal kurumların kurtarılması büyük miktarlardaki kamu kaynaklarının kullanılmasını gerektirmiştir. Gelişmiş ülkelerin hazine ve merkez bankaları finansal sistemi kurtarmak amacıyla büyük miktarlarda kaynak aktarmışlardır. Bu kurumlar, küresel finansal sisteme yaklaşık 21 trilyon enjekte etmişlerdir. Bu rakam ABD'nin GSYİH'nın bir buçuk katına eşittir (McNally, 2013:54). Bu politika krizin yarattığı panik ortamının bir ölçüde yumuşatılması ve finansal sektörün kurtarılmasını sağlamıştır.

Ancak, kurtarma ve canlandırma paketlerinin mali yükünün kamu kesimine aktarılması birçok ülkede kamu dengelerinin büyük oranda bozulmasına yol açmıştır. Bu yeni durum karşısında kamu kesiminin sorunlarını ortadan kaldırmak amacıyla mali kemer sıkma (fiscal austerity) politikaları uygulamaya konmuştur. Ancak mali kemer sıkma politikalarının beklenen düzeyde bir iyileşme sağlamaması, düşük büyüme ve yüksek işsizlik gibi sorunların devam etmesine yol açmıştır. Bununla birlikte, 2010 sonrasında küresel krizin bir Euro bölgesi krizine dönüşmesi ve durgunluğun ikinci evresine girilmesi Avrupa bölgesinde kriz karşısında yeni politikaların uygulanmasını beraberinde getirmiştir. Bu gelişme özellikle Avrupa Birliği (AB) çevre ülkeleri olarak nitelendirilen Yunanistan, Portekiz, İspanya, İrlanda ve İtalya gibi ülkelerin yanında Balkan ülkelerini de derinden etkilemiştir. 2012 sonrasında AB krizin derinleşmesiyle birlikte ülkelerin bir mali tuzak (fiscal trap) riski ile karşı karşıya kalabilecekleri tartışılmaktadır.

Krizin etkisi AB'nin 'süper çevresi' olarak tanımlanan Balkan ülkelerini de etkilemiştir. Özellikle Euro Bölgesi krizinden sonra bu ülkeler açısından ekonomik durum giderek kötüleşmiştir. AB'ye üye Balkan ülkelerinin kriz karşısındaki politikalarını gelişmiş ülkelerden ayıran en temel nokta kurtarma paketlerinin gündeme gelmemesidir. Ancak gerek ülkelerin yapısal gerekse bölgesel ve küresel ilişkilerden kaynaklı olarak krizin bu ülkelere yansıması oldukça şiddetli olmuştur. Kriz karşısında ülkeler farklı yoğunlukta ve derecede politika önlemleri uygulamasına rağmen, genel olarak çevrim yönlü (pro-cyclical) politikaların izlendiği söylenebilir. Çevrim karşıtı politikalardan farklı olarak bu önlemlerin başta kamu kesimi olmak üzere ekonomik faaliyetlerin azalmasına ve toplumsal eşitsizliklerin artmasına yol açtığı söylenebilir. Başka bir deyişle, kemer sıkma politikalarının odağına kamu sektörünün yerleştirilmesi, bu politikaların ekonomik ve siyasal sonuçları toplumun önemli bir bölümüne ağır yükler getirmesine neden olmuştur.

Bu çalışmanın amacı AB'ye üye Balkan ülkelerinin kriz karşısında uyguladıkları maliye politikalarının gelişimini, bunların ekonomik ve toplumsal sonuçlarını incelemektir. Balkan ülkeleri kapsamına hangi ülkelerin girdiği konusu siyasal, coğrafi ve kurumsal olarak farklılık göstermektedir. Bu nedenle, çalışma için AB'ye üye Balkan ülkeleri olarak Yunanistan, Bulgaristan, Hırvatistan ve Romanya inceleme kapsamına alınmıştır. Çalışmanın devamında ilk olarak küresel finansal kriz karşısında maliye politikalarının evrimi ele alınmaktadır.

İkinci olarak küresel krizin AB'ye yayılması incelenirken, sonraki bölümün konusunu krizin AB'ye üye Balkan ülkelerine etkileri incelenmektedir. Bu ülkelerde krize karşı maliye politikalarının gelişimi ve etkilerinin ele alındığı dördüncü bölümün konusunu oluşturmaktadır. Sonuç bölümünde ise genel bir değerlendirme yer almaktadır.

## 2 Küresel Finansal Kriz Sonrasında Maliye Politikalarının Gelişimi

Bu çerçevede 2008 yılından günümüze, özellikle gelişmiş ekonomilerde ve Euro krizi ile birlikte bölge ülkelerinde, krize karşı maliye politikaların gelişimi dikkat çekmektedir. Birinci dönem, kriz sonrası dünya ekonomisinin daha önce yaşadığı Büyük Buhran döneminin bir benzerinin yaşanmaması için kurtarma paketlerinin ve harcama artışı/vergi indirimini içeren canlandırma paketlerinin uygulandığı dönemdir. Ülkeler zorunluluk derecelerine göre, finansal sistemlerini tamamen çökme riskinden kurtarmış ve şiddetli özel talep sorununu azaltmak için kamu harcamalarını arttırmışlardır. Parasal otoriteler ise faiz oranlarını tarihsel düzeylere düşürmüş, bankalar arası piyasa finansmanının aniden kesilmesine karşılık limitsiz ölçüde likidite sağlamışlardır. Bu politikaların önemli bir bölümü farklı ülkelerde eş zamanlı olarak uygulanmıştır (Calcagno, 2012: 24). Öyle ki, yaşanan tıkanıklığı aşmanın yolu olarak harcama artışı, vergi indirimi ve transfer uygulamaları talebi artırmaya yönelik kamu politikaları olarak gündeme gelmiştir. Bu gelişmeler, 2008 krizine yönelik uygulanan politikaların Keynesyen yaklaşımın geçerliliğini gösterdiği biçimde yorumlanmaktadır (Palley, 2009).

İkinci dönem genel olarak 2010-2012 yıllarını kapsamaktadır. Bu dönemde artan kamu borçları ve bütçe açıkları nedeniyle canlandırma paketlerinin yerini mali kemer sıkma politikaları almıştır. Başka bir deyişle, mali kemer sıkma politikalarının yeniden ortaya çıkarılmasının bir nedeni de durgunluk ve finansal krizden kaynaklanan bütçe açıklarındaki ani yükseliştir. Maliye politikası ekonomik faaliyetleri desteklemek yerine borçların azaltılmasına yönlendirilmiş, mali konsolidasyon yani mali dengede iyileşmeyi hedefleyen politikalar ön plana çıkmıştır. Burada vurgulanması gereken nokta, krizin nedeni olmayan kamu kesimi ve kamu dengelerine yönelik bir mali kemer sıkma politikalarının gündeme getirilmesidir. Bilindiği üzere, kriz finansal sektörden kaynaklanmıştır, kamu kesimi ya da kamu kesimi dengelerinin bozulması krizin nedeni değil, bir semptomu olarak değerlendirilebilir (Zezza, 2012). Bununla birlikte, kriz öncesi dönemde gelişmekte olan ülkelerin önemli bir bölümünde kamu kesimi dengesi ve borç/GSYİH verileri de oldukça iyi bir görünüm sergilemektedir. Örneğin, 2002 ve 2007-2008 arasında birçok ülkede mali dengeler düzelmiş, ortalama olarak Afrika, Batı Asya ve Bağımsız Devletler Topluluğu kriz arifesinde mali fazla elde etmişlerdir. Asya ve Latin Amerika ülkelerinde ise mali hesaplar kabaca dengeli bir durumdadır. Mali canlandırma paketlerinden sonra ortaya çıkan yüksek mali açıklar ve hızla artan borç oranları krizin sonucu olarak değerlendirilebilir (Calcagno, 2012: 27).

Üçüncü dönem 2012 yılından günümüze kadar geçen dönemi kapsamaktadır. Bu dönemin temel özelliği düşük büyüme oranları söz konusu iken sıkı maliye politikası uygulamalarının kendi kendini besleyen bir işleyişle mali tuzak sürecine neden olabileceği yönündeki düşüncelerdir (Hannsgen ve Papadimitriou, 2012; Göker, 2014). Böyle bir durumun günümüz ekonomilerini tehdit ettiği söylenebilir. Bu tehdit, harcama kesintileri ve/veya vergi artışları ile bütçe açığı/GSYİH oranının düşürülmesini hedeflemesine rağmen, bu uygulamanın talebin düşmesine yol açarak hem 'nin, hem de vergi gelirlerinin azalması sonucu, hedeflenenin aksine bütçe açığı/ oranının artması, durgunluğun devam etmesi olarak karşımıza çıkmaktadır.

Bu süreçte, maliye politikaları açısından üzerinde durulması önemle gereken nokta 2010 yılından itibaren gelişmiş ve gelişmekte olan ülkelerde mali canlandırma paketlerinden mali kemer sıkma politikalarına geçilmesidir. Bu durum küresel finansal krizin ikinci evresinin Euro bölgesinde yaşanmasıyla birlikte hem AB üyesi hem de üye olmayan ülkeler açısından merkezi bir konuma gelmiştir. Bu dönemdeki maliye politikalarının temel amacı, mali dengenin sağlanması ve borç oranlarının düşürülmesine odaklanmaktadır. Mali kemer sıkma politikalarının yeniden tartışılmasının gerisinde ise harcama kesintilerinin vergi artışlarına göre mali dengeyi daha fazla düzeltici etkilerinin olduğu düşüncesidir (Alesine ve Ardagna, 2009; IMF, 2010; Perotti, 2011). Bazı farklılıklara rağmen bu yaklaşımlar, mali dengeyi sağlamak için ülkelerin vergi artışlarından ziyade kamu harcama kesintilerini uygulamasının daha etkili olacağını iddia etmektedir. Mali kemer sıkma politikalarının etkili olacağını iddia eden çalışmalar 1980'li ve 1990'lı yıllarda gözlenen başarı örneklerinden hareket etmektedir. Kriz sonrasında kurtarma/canlandırma paketleri ile ekonomilerde görece iyileşmelerin başlaması, krizin kökenlerinin unutulmasına ve kamu açıkları ve yüksek kamu borçlarının bir sorun olarak gündeme gelmesine yol açmıştır. Gerek teorik çalışmalar gerekse uygulamalar mali kemer sıkma politikalarının günümüzde şiddetli bir biçimde tartışılmasına neden olmaktadır. Özellikle akademik yazında mali kemer sıkma politikalarında vergi artışları yerine harcama kesintilerine gidilmesinin daha fazla düzetici bir etkiye sahip olacağı yönündeki düşünceler tartışmaların en can alıcı bölümünü oluşturmaktadır. Ancak bu politikaların kapsamı, teorik çerçevesi ve siyasal içeriğine yönelik eleştirilerin varlığı (Jayadev ve Konczal, 2010; Baker, 2010; Sawyer, 2012; Arestis, 2012; Gravelle ve Hunerfold, 2013) bu tartışmaların günümüzde ve yakın gelecekte de devam edeceğini göstermesi açısından oldukça önemlidir.

## 3 Küresel Finansal Krizin Avrupa Birliğine Yayılması

Küresel finansal kriz 2009 yılında Avrupa Birliği ülkelerinde büyüme oranlarında önemli bir azalma ve işsizlik oranlarında hızlı bir artış olarak etkisini göstermiştir. Ancak krizden çıkış sürecinde çevre ülkelerin artan borç stokları ve kamu açıkları, ABD krizinin çevre ülkeler merkezli AB krizine dönüşmesine neden olmuştur. Kriz, AB'ye üye ülkelerin ödemeler dengesini bozmasına karşın, parasal birliğin varlığı nedeniyle ülkeler kendi maliye politikalarından sorumlu olduğu için krizin derinleşmesine yol açtığı söylenebilir. Avrupa'daki durgunluk, Euro Bölgesinde 2008'in ikinci çeyreğinde reel/GSYİH'nin %1,5 düşmesiyle başlamış ve 2009'un ikinci çeyreğinde sona ermiştir. 2009 yılının üçüncü çeyreğinde ise reel tekrar artmaya başlamıştır. Ancak, İrlanda ve Portekiz gibi, bazı ülkeler zaten 2007'de durgunluk yaşadıkları için, ABD'nin artışının devam etmesine rağmen, bu ülkelerin büyüme göstergelerinde bir düzelme ortaya çıkmamıştır. 2011 sonunda, reel GSYİH kişi başına İrlanda'da %13, Yunanistan'da %15, İtalya'da %7 ve İspanya ve Portekiz'de %5 azalış sergilemiştir. Fransa hala toparlanmaya sahipken, Almanya ve Avusturya ve bazı Doğu Avrupa ekonomileri şoktan sonra çıktı artışını başarabilmiştir.

AB içinde krizden en fazla etkilenen çevre ülkeleri Yunanistan, İspanya, Portekiz, İtalya ve İrlanda'dır. Bu ülkelerin kriz öncesi ve sonrasındaki kamu dengelerini ve brüt borçları incelendiğinde, kriz öncesi 2007 yılına bakıldığında Yunanistan hariç, diğer ülkelerin kamu dengelerinin kötü olmadığı söylenebilir. İrlanda ve İspanya'da kamu fazlası mevcuttur, İtalya ise %-1,6'lık oranıyla Maastricht Kriterlerinin altındadır. Ancak krizden sonra tüm ülkelerde kamu dengesi ciddi ölçüde bozulmuştur. Kamu borcunun GSYİH'ya oranına bakıldığında, İrlanda ve İspanya'nın kriz öncesinde borç yükünün Maastrich kriterinin çok altında olduğu, fakat krizi izleyen beş yıl içinde bu ülkelerin kamu borcunun GSYİH'ya oranının hızla arttığı görülmektedir. Yunanistan ve İtalya ise kronik kamu borç sorunu yaşayan ülkelerdir. Bu iki ülkede kriz öncesi %100'lere ulaşan kamu borcu/GSYİH'nın, kriz sonrasında önemli oranda artış gösterdiği gözlenmektedir. Portekiz'de ise kriz öncesinde %70'lere yaklaşan oran, kriz sonrasında artarak %120'lere yükselmiştir.

Ekonomik krizden daha fazla etkilenen ülkelerin kamu açıklarının hızla artmasının arkasındaki önemli bir unsur da Euro Bölgesini düzenleyen Avrupa antlaşmalarının katılımcı ülkelerin hükümet açıklarının doğrudan müdahale ederek fonlamasının Avrupa Merkez Bankası ile engellenmiş olmasıdır. Bu anlaşmalar hükümetlerin bütçe açıklarının belirli bir düzeyin altında tutulmasını öngörmektedir. Bu kurumsal düzenlemeler hükümetlerin yürürlükte olan faiz oranlarında piyasada fonları artırmak zorunda kaldıkları anlamına gelir. Yunanistan'nın kamu açıklarının kontrol edilmez bir biçime dönüşmesi piyasaların Yunanistan tahvili almak için artan prim talebini gündeme getirmiştir. Benzer bir durum, her ne kadar daha az da olsa, İrlanda, Portekiz, İspanya ve İtalya gibi çevredeki diğer ülkeler içinde geçerli hale gelmiştir. Yunanistan'ın kamu borcu, kriz öncesi dramatik bir biçimde artmamıştır, parasal birliğe katılmadan önce zaten yüksek düzeylerdedir. Gerçek problem borcun büyüklüğü değildir, fakat çok hızlı artan borç servisinin maliyetidir (Zezza, 2012:40).

## 4 Krizin AB'ye Üye Balkan Ülkelerine Etkileri/Yayılması

Küresel krizin AB'yi etkilemesiyle birlikte Balkan ülkeleri hem küresel finansal krizin genel etkilerinden hem AB ile olan ilişkilerinden hem de Yunanistan'ın borç krizinden kaynaklı olarak önemli ölçüde etkilenmiştir. Kriz Balkan ülkelerini ticaret, yabancı sermaye akımı, bankacılık ve işçi dövizleri gibi kanallardan etkilemiştir.

### 4.1 Finansal Kriz Öncesi AB'ye Üye Balkan Ülkelerinin Genel Durumu

2000'ler AB'ye üye Balkan ülkeleri açısından güçlü büyüme performansının sergilendiği bir dönemi ifade etmektedir. 2002-2007 yılları arasında bu ülkelerin ortalama büyüme oranları AB-27 büyümesinin oldukça üzerinde seyretmiştir. Bu dönemde AB'ye üye Balkan ülkelerinin yıllık ortalama büyüme oranı %5,3 iken AB-27 ülkelerinin yıllık ortalama büyüme oranı %2,4'te kalmıştır. Bu gelişmenin temel belirleyicileri, makroekonomik istikrar, artan doğrudan yabancı sermaye akımları, işçi dövizleri ve AB ile bütünleşmeye yönelik reformlar konusunda sağlanan başarılardır. 2007'de AB'ye katılan Bulgaristan ve Romanya bazı problemlerle karşılaşmış, ancak özellikle AB yapısal fonları ve AB üyeliği tarafından bir ölçüde korundukları söylenebilir.

Bu dönemde büyüme kalıplarına bakıldığında genel olarak ticarete ve finansal açıklığa dayalı, hızlı kredi genişlemesi ve artan yabancı sermayenin etkili olduğu gözlenmektedir. Bununla birlikte, 2000'lerin başından beri bu ülkelerde sürdürülen büyüme modeli ticaret ve cari işlemler açığını arttırmış ve tüketim kalıpları büyük ölçüde yabancı borçlanmaya dayalı hale gelmiştir. Diğer yandan, yüksek işsizlik oranları, düşük istihdam oranları ve kayıtdışı ekonomik faaliyetlerin varlığı da önemli yapısal sorunlar olarak varlığını sürdürmüştür. Ülkelerin geçirdiği yapısal değişim, emek tasarruf eden sektörlerin birçoğunda, hizmetlerin hızla genişlemesine yol açarken, bir sanayisizleşme sürecinin de yaşanmasına yol açmıştır (Bartlett ve Uvalic, 2013:1).

### 4.2 Krizin Avrupa Birliği'ne Üye Balkan Ülkelerine Etkileri

Küresel krizin önce AB'yi, hemen ardından da Balkan ülkelerini derinden etkilediği gözlenmektedir. Bu krizin farkı, bölgesel olmayan küresel bir kriz olmasıdır ve merkezden kaynaklanmasına karşın, Avrupa'nın çevresi için ağır sonuçlar yaratmasıdır. Küresel talepteki yavaşlama, FDI akımlarındaki azalış, portföy yatırımları, işçi dövizlerindeki daralma ve kredi düşüşü tüm Balkan ülkelerini etkilemiştir. Bununla birlikte, döviz cinsinden özel

kesim borcu, konut piyasası balonu, döviz kurunun değerlenmesi ve cari işlemler açığını da kapsayan birikmiş dengesizlikler bu ülkelerin krizden farklı ölçülerde etkilenmelerine yol açmıştır. Bununla birlikte, AB'nin kurtarma paketleri ve politika araçları desteğinden yoksun olması AB üyesi Balkan ülkeleri üzerinde krizin etkisini kolaylaştırmıştır (Onaran, 2011; Sanfey, 2011; Bartlett ve Prica, 2013).

Krizin AB'ye üye Balkan ülkelerine yönelik etkisinin Yunanistan hariç, göreli bir gecikme ile ortaya çıktığı ve AB krizinin derinleşmesiyle bu etkinin giderek ağırlaştığı söylenebilir. Örneğin, 2008 yılında GSYİH artış oranı Romanya'da %7,3, Bulgaristan'da %6,2 Hırvatistan'da %2,1 olarak gerçekleşmiştir. Öyle ki, IMF'nin gelecek iki yıla ilişkin tahminleri oldukça iyimserdir ve 2010'da Batı Balkan ülkelerinin hepsinde reel artışının pozitif olacağını öngörmektedir. Ancak IMF'nin tahminlerinin aksine, küresel krizin 2010 yılının başlarında Euro Bölgesi krizine dönüşmeye başlamasıyla krizinin Balkan ülkelerine etkisi artan biçimde ağırlaşmış ve büyüme oranları negatife dönmüştür. Nisan 2012'de, IMF Euro Bölgesi için 2012 yılına yönelik %0,3 daralma beklentisini revize etmiştir. Bu daralma kısa sürede genel olarak Balkan ülkelerine özel olarak da AB'ye üye devletlere hızla yayılmıştır.

Euro Bölgesi krizinin AB üyesi Balkan ekonomileri üzerindeki etkileri dış ticaret, işçi dövizleri, finansal sektör ve doğrudan yabancı sermaye akımları, işsizlik gibi toplumsal alanlarda izlenebilir. Dış ticaret açısından dikkat çeken nokta ülkeler arasındaki küresel bir bağımlılık olmakla birlikte, karşılıklı bağımlılık iki yönlüdür. Birincisi, AB'ye üye Balkan ülkelerinin AB üyesi ülkelerle olan ilişkisi iken ikincisi bu ülkelerin komşuları ile olan ilişkileridir. Bu bağlamda, Yunanistan'ın ihracatında en büyük paya sahip üç ülke İtalya, Almanya ve Bulgaristan iken, Bulgaristan'ın ihracatında en büyük paya sahip üç ülke ise Almanya, Yunanistan, İtalya'dır. Romanya'nın ihracatında en büyük paya sahip üç ülke ise Almaya, İtalya ve Fransa'dır (Lessenski, 2010:12-13). Ticaret ikili bir yönelime sahip olması Balkan ülkelerini önemli ölçüde etkilemiştir. Örneğin Hırvatistan'ın Euro Bölgesine olan ihracatı %10'dan daha fazla azalırken, diğer ülkelerde azalma daha küçük düzeylerdedir, fakat ihracat gelirleri önemli ölçüde azalmıştır. Hırvatistan'ın Euro Bölgesine olan ihracatı 2012'de bir önceki yıla göre %14,2 oranında azalmıştır (Bartlett ve Prica, 2013:373).

Balkan ülkelerinin geneli açısından özellikle işçi dövizleri özgün ve önemli bir kaynak niteliğindedir. Bu kalem kriz sonrasında azaldığı için ülkelerin cari işlemler açığının artmasın da neden olmaktadır. Tablo1'den izlenebileceği gibi, 2005-2008 döneminde AB'ye üye Balkan ülkelerinin hepsinde artış eğilimi sergilemektedir. 2008 yılında işçi dövizlerinin GSYİH'ye oran olarak Hırvatistan'da %2,4, Bulgaristan'da %5,4, Yunanistan'da %0,9 ve Romanya'da %4,8 düzeyindedir. 2009 yılında ise bir önceki yıla göre işçi dövizlerinde Hırvatistan'da %10, Bulgaristan'da %17, Yunanistan'da %25 ve Romanya'da %47 oranında azalmıştır. Euro Bölgesi krizinin derinleşmesiyle birlikte işçi dövizlerindeki azalmanın devam edeceği beklenebilir.

| | Hırvatistan | Bulgaristan | Yunanistan | Romanya |
|---|---|---|---|---|
| 2005 | 1,222 | 1,613 | 1,220 | 4,733 |
| 2006 | 1,134 | 1,716 | 1,543 | 6,718 |
| 2007 | 1,394 | 2,132 | 2,484 | 8,542 |
| 2008 | 1,602 | 2,634 | 2,687 | 9,381 |
| 2009 | 1,436 | 2,181 | 2,009 | 4,928 |

*Tablo 1: AB üyesi Balkan ülkelerinde İşçi Dövizleri (2005-2009, milyon $)* **Kaynak: (Lessenski, 2010)**

Krizin etkilerinin gözlendiği bir diğer nokta ise sermaye hareketleri azalması ve doğrudan yabancı sermaye akımlarındaki keskin azalmadır. 2008 yılına kadar yabancı sermayenin en fazla tercih ettiği ülkelerden biri Hırvatistan'dır. Ancak bu durum büyük ölçüde özelleştirme süreci ile ilgilidir ve doğrudan yabancı sermaye akımlarının en fazla yoğunlaştığı alan bankacılık ve telekominikasyon sektörleridir. Bölgede bankacılık açısından dikkati çeken nokta sektörün kontrolünün büyük ölçüde yabancı bankalara ait olmasıdır. Bankaların yabancılar tarafından devralınması borçla-finanse edilen tüketim artışında patlamaya ve ülkelerin kredi genişlemesine dayalı finansallaşmasına neden olmuştur. Bu aynı zamanda, hanehalkı tüketim mallarının kitlesel ithalatına ve konut fiyatlarında sürdürülemez bir dalgaya yol açmıştır. Bölgedeki bankaların büyük bir bölümü Euro Bölgesinde yerleşik ana bankalara bağlıdır. Bu nedenle kredi daralması Euro Bölgesi krizinin ilerlemesiyle devam etmiştir. Örneğin, Hırvatistan'da kredi artışı 2008'de %11,6 iken, 2012'de sıfır düzeyine kadar gerilemiştir (Bartlett ve Prica, 2013:373-7).

Ekonomik krizin etkilerini en sert hissedildiği alanlardan bir tanesi de emek piyasasıdır. Kriz sonrasında işsizlik oranı sadece Balkan ülkelerinde değil gelişmiş ülkelerin birçoğunda da yükselmiştir. Bu problem, bölgedeki ülkelerde, Avrupa'daki sanayileşmiş ülkelerin tersine, 'otomatik istikrarlaştırıcıların' eksikliğinden dolayı Balkanlarda daha ağır olmuştur. Bir bütün olarak Euro Bölgesinde, işsizlik oranı 2012 ortasında %11,2'ye ulaşmıştır. İşsizlik oranı 2012 yılında Yunanistan'da %24,5'e, Hırvatistan'da %15,9'a, Bulgaristan'da %12,3'e çıkmıştır. Genç işsizlik oranları ise daha dramatik bir biçimde artmıştır. 15-25 yaş arası genç işsizliği Euro Bölgesinde %22,8 iken bu oran Hırvatistan'da %43'e, Yunanistan'da %55,3'e, Bulgaristan'da %28,1'e ve Romanya'da %22,7'ye ulaşmıştır.

## 5   Krize Karşı Maliye Politikası Örnekleri

Küresel kriz karşısında hem gelişmiş hem de gelişmekte olan ülkelerin öncelikli politika tepkisi kurtarma/canlandırma paketleri biçiminde hayata geçirilmiştir. Bu politikaların kamu kesimine yüklediği maliyetler nedeniyle kriz bir kamu kesimi krizine dönüşmüştür. Büyüme oranlarındaki yavaşlamayla ek olarak kamu borçları ve bütçe açıklarının artışı biçiminde açığa çıkan dengesizliklerin çözümü olarak kemer sıkma paketleri uygulanmıştır. Bir bütün olarak kemer sıkma politikaları bir yandan kamu kesimini finansal piyasalara daha bağımlı hale getirirken, diğer yandan da kamu harcamalarında kesintiye gidilmesine ve buna bağlı olarak mali alanın daha da daralmasına ve özellikle emek piyasası, eğitim ve sağlık gibi sosyal sektörleri derinden etkilemiştir. AB'ye üye Balkan ülkeleri açısından bu sürece bakıldığında birkaç nokta dikkat çekmektedir. Bunların ilki, bu ülkelerde açığa dayalı harcama politikasının kullanılmamış olmasıdır. İkincisi maliye politikası önlemleri sıklıkla çevrim yönlü olması ve bu politikaların mali problemlerin artmasına neden olmasıdır (Davras, 2010; Zaidi ve Rejniak, 2010). Son nokta gerek ülkelerin kriz karşısında uyguladığı politikalar konusunda gerekse krizden etkilenme dereceleri arasında önemli farklılıkların ortaya çıkmasıdır. Bu bağlamda, Bulgaristan'ın hem uyguladığı politika hem de kriz etkileri açısından göreli olarak daha yumuşak bir süreç geçirdiği söylenebilir. Buna karşın, Yunanistan, Hırvatistan ve Romanya hem krizden daha fazla etkilenmiş hem de kriz karşısında daha sert politikaları uygulamıştır.

### 5.1  Bulgaristan: Krize Ilımlı Tepkiler

Doğu Bloku'nun çözülmesiyle 1990 yılında geçiş ekonomileri arasında yer alan ülke, 2007 yılında AB'ye üye olmuş ancak Euro bölgesine dışında kalmıştır. Bulgaristan 1990'larda geçiş sorunlarını derinden yaşamış ve 1989-1994 döneminde ülke GSYİH'sı kümülatif olarak %5,7 oranında azalmıştır. Geçiş krizi 1990'ların sonundan itibaren yerini toparlanmaya bırakarak, hızlı bir borç konsolidasyonu başka bir deyişle mali dengede iyileşme sağlanmıştır (Staehr, 2010:677).

Bulgaristan ekonomisinin makroekonomik göstergeleri Tablo 2'den izlenebilir. Ülke 2000'lerin başından itibaren kriz etkilerinin ortaya çıktığı 2009 yılına kadar güçlü bir büyüme performansı sergilemiş, GSYİH yıllık ortalama %6,4 oranında artmıştır. Makroekonomik göstergeler açısından cari işlemler açığı ve özel sektör borcu hariç, kamu kesimi borcu, bütçe dengesi, doğrudan yabancı sermaye ve işsizlik oranlarında önemli gelişmelerin olduğu gözlenmektedir. Bulgaristan 2004-2008 yılları arasında kamu borcu ve bütçe dengesi açısından olumlu bir görünüm sergilemiştir. 2009 yılında krizin etkilerinin açığa çıkmasıyla birlikte GSYİH %-5,5 oranında küçülürken, 2010-2012 döneminde ekonomi toparlanma sürecine girememiş, büyüme oranları oldukça düşük düzeylerde seyretmiştir. Uluslararası ticaretin çöküşü ihracatı olumsuz etkileyerek AB ülkelerine olan ticaretin (toplam ihracatın üçte ikisi) %23 oranında azalmasına neden olmuştur. Krizin etkilerin en fazla görüldüğü alan cari işlemler açığı ve doğrudan yabancı sermaye akımlarıdır. Kriz öncesinde de artış eğiliminde olan cari işlemler açığı 2008 ve 2009 yıllarında GSYİH'nın neredeyse dörtte birine ulaşmıştır. Bulgaristan'ın 2000'lerde büyüme modelinde önemli bir yere sahip olan doğrudan yabancı yatırımlar bankacılık, inşaat ve emlak alanlarında yoğunlaşmıştır. 2007 yılında GSYİH'nın %29,4'üne ulaşmışken, bu oran 2008'de %19, 2009'da %7 ve 2010'da %3,2'ye kadar gerilemiştir. Doğrudan yabancı sermayenin aradan geçen beş yıla rağmen eski düzeylerine ulaşması oldukça zor görünmektedir (Totev ve Sariiski, 2010:67).

Bulgaristan'ın kriz karşısında uyguladığı politikalar incelendiğinde birkaç nokta dikkat çekmektedir. İlk olarak, gelişmiş ülkelerin birçoğunda doğrudan banka ve finansal sektör varlıklarını kurtarmaya yönelik uygulamaların olmayışı büyük maliyetlerin ortaya çıkmasını engellemiştir. İkincisi, kriz karşısında maliye politikası önlemleri büyük ölçüde çevrim yönlü (pro-cyclical) ve sıkı bütçe anlayışına dayanmaktadır. Bilindiği gibi, çevrim yönlü daraltıcı maliye politikaları genelde istihdam yerine mali dengeye önem vermektedir. Bu amaçla sübvansiyonlar azaltılmakta ya da kaldırılmakta, işten çıkarmalar ve ücretlerin düşürülmesi benimsenmekte, tüketim vergileri arttırılmakta, emeklilik ve sağlık gibi uygulamalarına yönelik düzenlemelerin yanında emek piyasası için esnekliğinin arttırılmasına yönelik politikalar uygulanmaktadır. Son olarak krizin kamu maliyesine etkileri işsizlik ve sosyal yardımlar bağlamında dolaylı olmaktadır.

| | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 |
|---|---|---|---|---|---|---|---|---|---|
| GSYİH artışı ( %) | 6.7 | 6.4 | 6.5 | 6.4 | 6.2 | -5.5 | 0.4 | 1.8 | 0.8 |
| Bütçe Dengesi  (GSYİH %) | 1.9 | 1.0 | 1.9 | 1.2 | 1.7 | -4.3 | -3.1 | -2.0 | -0.8 |
| Cari işlemler dengesi (GSYİH %) | -5.3 | -6.4 | -11.6 | -17.6 | -25.2 | -23.1 | -8.9 | -1.5 | 0.1 |
| Doğrudan Yabancı Sermaye (GSYİH %) | 10.2 | 14.9 | 23.5 | 29.4 | 19.0 | 7.0 | 3.2 | 3.5 | 3.7 |
| Kamu Borcu  (GSYİH %) | 37.0 | 27.5 | 21.6 | 17.2 | 13.7 | 14.6 | 16.2 | 16.3 | 18.5 |
| Özel Sektör Borcu (GSYİH %) | 58.7 | 74.5 | 93.7 | 130.1 | 137.8 | 142.9 | 140.6 | 133.4 | 131.8 |
| Kamu Harcamaları (GSYİH %) | 38.6 | 37.3 | 34.4 | 39.2 | 38.4 | 41.4 | 37.4 | 35.6 | 35.9 |
| İşsizlik oranı  (%) | 12.1 | 10.1 | 9.0 | 6.9 | 5.6 | 6.8 | 10.3 | 11.3 | 12.3 |
| Genç işsizlik oranı  (%) | 24.3 | 21.0 | 18.3 | 14.1 | 11.9 | 15.1 | 21.8 | 25.0 | 28.1 |

*Tablo 2: Bulgaristan'ın makroekonomik göstergeleri, 2004-2013* **Kaynak:** *European Commission (2014)
Statistical Annex of Alert Mechanism Report*

Bulgaristan hükümeti düşük bütçe açığının sürdürmek için kemer sıkma önlemleri ve sosyal koruma sistemini için gerekli finansal kaynakları önemli ölçüde azaltmıştır. Kriz öncesinde ve krizin erken evresinde GSYİH'ya oranla %40'larda olan kamu harcamaları azalarak 2010-2011 döneminde %35'lere gerilemiştir. Ekonomik büyümenin kriz sonrasına düşük düzeylerde seyretmesi ve kriz zamanındaki sosyal katkı paylarının toplanmasındaki güçlükler yaşam standardının iyileştirilmesi ve sosyal koruma sistemine yönelik olanakları sınırlandırmıştır (Todorov, 2013:73). Kamu kesimi borcu kamu harcamalardan farklılık göstermektedir. 2004 yılında kamu borcunun GSYİH'ya oranı % 37 iken, bu oran 2008 yılında %13,7'ye kadar gerilemiştir. Ancak kriz sonrasında bu olumlu gelişme kısmen tersine dönerek 2010'da kamu boru/GSYİH oranı %16,2'ye ve 2012'de ise %18,5'e yükselmiştir. Kamu kesimi dengeleri açısından kriz sonrası duruma bakıldığında önemli bir bozulma olarak değerlendirilebilir. Ancak AB makroekonomi kriterleri açısından ülkenin kamu kesimi dengelerinin ılımlı ve kabul edilebilir bir düzeyde olduğu söylenebilir. Kriz ve maliye politikalarının olumsuz etkilerinin en fazla görüldüğü alan bütçe dengeleridir. Bulgaristan 2004-2008 döneminin tamamında bütçe fazlası vermiştir. Bu gelişme 2009 yılından sonra tersine dönmüş, 2008 yılında GSYİH'ya oranla %1,7 bütçe fazlası veren ekonomi 2009 yılında bütçe açığı %-4,3'sıçramış ve gelecek üç yılda azalmakla birlikte devam etmiştir. Bununla birlikte, 2010-2012 döneminde Bulgaristan'ın bütçe açıklarının düzeyi Maastricht Kriterleri'ni aşmamıştır. Kriz karşısında uygulanan politikaların sonuçlarından bir tanesi de işsizlik oranlarının kötüleşmesidir. 2007-2008 yıllarında işsizlik oranı %6'lara kadar gerilemişken, krizi izleyen üç yılda bu oran %12'lere yükselmiştir. Genç işsizlik oranlarındaki durum daha ciddi düzeylerdedir. 2004 yılında %243,3 olan bu oran 2008'de %11,9'a kadar gerilemiş, ancak krizle birlikte 2004 düzeylerini aşarak 2011'de % 25,0 ve 2012'de %28,1 çıkmıştır. Sonuç olarak, Bulgaristan kriz karşısında mali konsolidasyon politikaları ile kamu borcu ve bütçe açıklarının düşük düzeylerde tutmayı başarmasına rağmen, büyüme performansı ve işsizlik oranlarında bir iyileşme sağlayamamıştır.

## 5.2 Hırvatistan: Derinleşen Durgunluk ve Bozulan Mali Dengeler

AB'nin en yeni üyesi olan Hırvatistan, Yugoslavya'nın parçalanmasıyla bağımsızlığını kazanmış, 1990'larda ahbap-çavuş kapitalizminin (crony capitalism) krizi ile sonuçlanan bir süreçten sonra 2000'lerde Avrupalılaşma patikasına girmiştir (Franičević, 2013; Ralchev, 2010). Tablo 3'den de izlenebileceği gibi, 2004-2008 döneminde ülke iyi bir makroekonomik performans sergilemiştir. Bu dönemde GSYİH yıllık ortalama %4,1 oranında artmıştır. Hırvatistan'ın cari işlemler açığı 2004'te GSYİH'ya oranı %-4,3'ten 2008'de %-8,8'e çıkmıştır. Buna karşın aynı dönemde kamu borcu ve bütçe açığının GSYİH'ya oranı azalmıştır. 2005'te kamu borcunun GSYİH'ya oranı %38,3'ten 2008'te %33,5'e, bütçe açığı ise %-6,5'ten 2008'de %-2,1'e düşmüştür. Bulgaristan'ınki kadar yüksek olmamakla birlikte, doğrudan yabancı sermaye yatırımları 2004'te GSYİH'nın %2,6'dan 2008'de %8,7'ye çıkmıştır. 2000'lerdeki büyüme döneminden sonra, ülke hem küresel kriz hem de Euro Bölgesi krizinden kaynaklı olarak derin bir kriz sürecine girmiştir. Aslında Hırvatistan ekonomisindeki problemlerin önemli bir bölümü çeşitli kurumsal ve yönetimsel zayıflıklarla ilgilidir. Reformların gerçekte uygulanmayıp yüzeysel kalması, yeni yasaların uygulanmasında vazgeçilmesi ya da zayıf bir biçimde uygulanması, adalet, bürokrasi, yolsuzluk ve örgütlü suçların varlığı temel sorunlardır.

| | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 |
|---|---|---|---|---|---|---|---|---|---|
| GSYİH artışı ( %) | 4.1 | 4.3 | 4.9 | 5.1 | 2.1 | -6.9 | -2.3 | -0.2 | -1.9 |

| Genç İşsizlik oranı (%) | 32.8 | 31.9 | 28.8 | 24.0 | 21.9 | 25.1 | 32.6 | 36.1 | 43.0 |

***Tablo 3:*** *Hırvatistan'ın makroekonomik göstergeleri, 2004-2013* ***Kaynak:*** *European Commission (2014) Statistical Annex of Alert Mechanism Report*

Hırvatistan'ın kriz karşısında uyguladığı politikalara bakıldığında kabaca iki evreden söz edilebilir (Franičević, 2013:76). Kemer sıkma politikalarının ilk evresi 2009-2010 dönemini kapsamaktadır. Bu evrenin temel özelliği IMF'nin yardımından kaçınan Hırvatistan hükümetinin aniden Nisan 2010'da 'Ekonomik Toparlanma/iyileşme Programı' ilan etmesidir. Ancak bunun öncesinde Hırvatistan hükümeti uluslararası sermaye piyasalarına başvurarak 2 milyar Euro borçlanmıştır. Bu programın temel amacı devletin ekonomiden geri çekilmesi, gerekli yapısal reformların uygulanması, işsizlik yardımlarında kesintiler, emeklilik reformu kamu yönetiminin rasyonelleştirilmesi ve etkinleştirilmesi, bütçe harcamalarının kısılması, vergi sisteminin basitleştirilmesi, devlet yardım sisteminin reforme edilmesini sağlamaktır. Toparlanma programına ilave olarak bir 'Mali Sorumluluk Yasası' (Fiscal Responsibility Law) kabul edilerek, hükümetin temel bütçe dengesi sağlanıncaya kadar %1

oranında kamu harcamalarının azaltılması benimsenmiştir. Bu politikalara ilişkin beklentiler ekonomik büyümenin sağlanması, mali durumu düzelmesi ve yüksek rekabet yeteneğinin ortaya çıkması yönündeydi (Ott, 2010:73).

Beklentilerin aksine kriz sonrasında uygulanan politikalara rağmen, 2009 yılında %-6,9 oranında küçülen ekonomi, 2010'da %-2,3, 2011'de %-0,2 ve 2012'de ise %-1,9 oranında küçüldü. 2013 yılında da GSYİH'nın %-1,3 oranında azaldığı tahmin edilen ülke, kriz sonrasındaki beş yıllık zaman dilimi içinde beklenen toparlanmayı gerçekleştiremedi. Bununla birlikte, kamu kesimi dengelerinin de hızla kötüleştiği söylenebilir. 2008 yılında bütçe açığının GSYİH'ya oranı %2,1 iken bu oran, 2010'da %5,3'e ve 2012'de ise %7,8'e yükselmiştir. Ülkenin kamu borcunun GSYİH'ye oranının 2008-2012 döneminde ciddi biçimde arttığı gözlenmektedir. Öyle ki, bu oran 2008 yılında %33,5 iken 2012'de %55,5'e yükselmiş, dört yılda kamu borçları yaklaşık %66 oranında artış göstermiştir. Hırvatistan Balkan ülkeleri ile karşılaştırıldığında kamu harcamalarının yüksek düzeylere sahip olması açısından dikkat çekmektedir. Kriz sonrasında da kemer sıkma kapsamında kamu harcamalarının azaltılması öngörülmesi amaçlanmış olmasına rağmen, siyasal ve sosyal nedenlerden dolayı bu kısmen gerçekleştirilebilmiştir. 2008 yılında kamu harcamalarının GSYİH'ya oranı %40,1 iken, bu oran 2010'da %46,9'a, 2011'de %47,9'a kadar çıkmış, ancak 2012 yılında %45,5 düzeyine gerilemiştir.

Kemer sıkma politikalarının ikinci evresi 2012 ve sonrasını kapsamaktadır. Ülke ekonomisi 2009'dan itibaren kümülatif olarak %10'lara ulaşan bir küçülme, mali ve dış açıkların artışı ve sosyal kesimlerin kötüleşmesiyle karşı karşıya kaldı. Ancak, 2012 Mart'ında durgunluğun derinleşmesiyle birlikte KDV kamu harcamalarını sürdürmek için %23'ten %25'e çıkarıldı.

Ülkede derinleşen krizin toplumsal maliyetini gösteren bir diğer gelişme ise emek piyasası ile ilgilidir. Balkan ülkelerindeki işsizlik oranları, Euro krizi nedeniyle daha da kötüleşen AB çevre ülkelerinin oranlarından daha da kötü düzeylere ulaşmıştır. Bir bütün olarak AB'de işsizlik oranı 2012 ortasında %11,2 düzeyinde iken, bu oran Hırvatistan'da 15,9'dur. Genç işsizlik oranlarındaki artış ise oldukça dramatiktir. 2007-2008 yılları arasında %20'lerde seyreden genç işsizlik oranı, 2012'de %40'lara çıkmıştır. Bu oran Euro bölgesinde %22,4'tür. Krizin işsizlik oranları üzerindeki etkisi cinsiyet temelinde daha da yıkıcı olmuştur. Hırvatistan'da erkeklerdeki işsizlik oranı kadınlara göre üç kat daha fazla artmıştır. Benzer şekilde krizin farklı sektörlere olan etkisi dikkat çekmektedir. Kadınların yoğun olarak çalıştığı yönetim, eğitim ve sağlık hizmetleri gibi kamu sektöründen ziyade ticaretteki daralma nedeniyle imalat ve inşaat daha çok etkilenmiştir (Bartlett ve Uvalic, 2013:6; Franiĉević, 2013:78). Sonuç olarak, Hırvatistan'ın kriz karşısında uyguladığı politikalar bazı geçici rahatlamalar sağlamış olsa da, bunların uyumlu bir kriz karşıtı politikalar olduğu söylenemez.

### 5.3 Romanya: Yoksul Ülkede Kemer Sıkma

Romanya, Avrupa ülkeleri içinde en yoksul ikinci ülke olarak 2007 yılında AB üye olmuş ancak Euro bölgesi dışında kalmıştır. Ülke 2000'lerde yüksek büyüme oranlarını yakalamış, ancak bu süreci artan cari işlemler açığı ile sürdürebilmiştir. Buna karşılık, bütçe açıkları ve kamu borçları verileri görece ılımlı bir düzeylerde seyretmiştir. 2002-2008 döneminde ekonomik büyümenin temel yönlendiricisi yıllık %10-15 artan hanehalkı tüketimidir. Bununla birlikte, brüt sabit sermaye oluşumu yıllık %20-30 oranında artan spekülatif konut ve otomobil parçası endüstrideki yatırımlardan kaynaklanmaktadır. Bu hızlı büyüme 2005'te %16 oranında bir sabit verginin uygulanmasıyla desteklenmiştir. Sonuç olarak, Tablo 4'dende takip edilebileceği gibi, GSYİH reel artışı 2004-2008 yılları arasında ortalama %6,8'e ulaşmıştır. Bu süreçte, Romanya ekonomisi önemli miktarda sermaye akışına maruz kalmıştır. Yabancı sermaye akımı finansal gelişme ve ekonomik büyüme ile güçlü bir biçimde ilişkili olduğu için ekonomik büyümeyi teşvik etmektedir. Ülkeye gelen büyük miktardaki doğrudan yabancı yatırımlar ülkenin daha yüksek sermaye birikiminden faydalanmasına olanak sağlamıştır. Diğer yandan da, sermaye hareketliliğinin varlığı Romanya ekonomisi için bir risk potansiyeli oluşturmaktadır. Özellikle ulusal paraya yönelik spekülatif saldırılar, portföy yatırımcılarının beklenmedik davranışları nedeniyle makroekonomik istikrarsızlığa neden olmaktadır.

| | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 |
|---|---|---|---|---|---|---|---|---|---|
| GSYİH artışı (%) | 8.5 | 4.2 | 7.9 | 6.3 | 7.3 | -6.6 | -1.1 | 2.2 | 0.7 |

**Tablo 4:** *Romanya'nın Makroekonomik Göstergeleri, 2004-2012* **Kaynak:** *European Commission (2014)*
*Statistical Annex of Alert Mechanism Report*

Kriz öncesinde Romanya ekonomisine hakim olan politika çevrim yönlü maliye politikasıdır. Romanya 2004-2008 arasında ihtiyatsız maliye politikasını tercih etmiş, otoriteler 'iyi zamanların' sonsuza kadar süreceğine ve aşırı hükümet harcamalarının kabul edileceğine inanmışlardır. Üstelik 2008'in bir seçim yılı olması ve ulusal bütçe üzerinde ekstra bir yük oluşturmuştur. Romanya'nın kriz öncesi durumuna bakıldığında şu noktalar dikkat çekmektedir; cari işlemler dengesizlikleri, bütçe açıklarının artışı, zayıf maliye politikası ve mali düzenlemelerin zayıf bir biçimde uygulanması, yüksek orandaki eşitsizliğin giderek artışı ve kısa vadeli özel kesim borcu ile düşük kamu borç düzeyi ve birim emek maliyetlerinin artışı.

Küresel kriz ve Euro Bölgesi krizinin Romanya ekonomisinin krize girmesi konusunda dikkat çeken nokta krizin kötü yurtiçi politikalardan kaynaklandığı, küresel krizin krizi tetiklediği yönündedir (Voiena, 2013; Voinea ve Ion, 2013). Başka bir deyişle, kötü yurtiçi politikaların reel kriz üreticisi olduğu, dışsal kriz mekanizmalarının yani küresel krizin yayılması etkisinin krizi tetiklemesidir.

Romanya hükümeti Şubat 2009'da krizin olumsuz etkilerine karşı koymak için 13 milyar € canlandırma paketi açıklamıştır. Bunun önemli bir kısmı (10 milyar € fazlası) altyapı yatırımları için ayrılmış ancak, çok az proje gerçekleştirilmiş, ekonomiye katkısı ise sınırlı düzeylerde kalmıştır. Romanya hükümeti canlandırma paketinden iki ay sonra Nisan 2009'da IMF ile stand-by anlaşması imzalamıştır. IMF ile yapılan anlaşma 20 milyon euroluk borcun AB, Dünya Bankası ve IMF tarafından karşılanmasını öngörmüştür. Stand-by anlaşmasını 2011'deki ihtiyati anlaşma izlemiştir. Romanya hükümetinin IMF'ye Niyet Mektubunda anlaşılacağı üzere çıkış stratejisi olarak uzun vadede tasarrufların arttırılması, kamu sektörü reformu ve kamu mali finansmanı kalitesinin geliştirilmesine dayandırılmaktadır (Voinea ve Ion, 2013:150). Bu çabalara karşın, 2008'de %7,3 gibi oldukça yüksek bir büyüme performansı sergileyen ülke 2009'da %-6,6 gibi keskin bir oranda küçülmüş, kriz öncesi de zaten artmakta olan bütçe açığının GSYİH'ya oranı %5,7'den %9'a sıçramış ve kamu borcu/GSYİH oranı %13,4'ten %23,6'ya çıkmıştır. Beklenen iyileşmenin sağlanamaması nedeniyle 2010 ortasında Romanya hükümeti IMF gözetimi altında sert önlemleri uygulamaya karar vermiştir. Bu çerçevede Katma Değer Vergisi oranı %19'dan %24 çıkartılmış, tüm ücretler nominal olarak %25 ve bütün sosyal yardım ödemeleri %15 oranında azaltılmış ve kamu sektöründen kitlesel işten çıkarmalar başlamıştır. Kamu sektöründe maaşların %25 azalmasıyla birlikte, krizin etkilerini ortadan kaldırmak için diğer önlem, sendikaların gücünün zayıflatılması ve işçilerin işten çıkarılma maliyetinin azaltılması içeren, Emek Yasasının esnekleştirilmesidir (Voinea ve Ion, 2013:153). Romanya hiçbir banka kurtarma operasyonu yapmaması ve ülkenin kamu borcu oldukça düşük düzeylerde olmasına rağmen, kemer sıkma politikaları Avrupa'nın herhangi bir yerindekinden daha sert bir biçimde uygulanmıştır. Romanya örneğindeki kemer sıkma politikasının tipik ortodoks yaklaşımlarda olduğu gibi, harcama kontrolüne odaklandığı ve düşük reel ücretlerin ihracatte rekebeti sağlayacağını savunan parasalcı bir yaklaşım örneği olarak değerlendirilebilir (Voinea, 2013:1000).

Romanya'nın kriz karşısında uyguladığı sert kemer sıkma politikaları sonucunda 2011'de %2,2 ve 2012'de %0,7 gibi küçük bir düzelme göstermiştir. Buna karşın, kamu borcu/GSYİH oranı 2010'da %30,5'ten 2012'de %37,9'a yükselmiştir. Kemer sıkma politikalarının belki de en açık başarısı kamu harcamalarının azaltılmasında görülmektedir. 2009'da kamu harcamalarının GSYİH'ya oranı %41,1'de 2011'de %39,5'e ve 2012'de ise %36,6'ya düşmüştür. Mali dengenin sağlanması açısından bakıldığında bütçe açıklarının GSYİH'ya oranı 2009'da %9'a kadar çıkmasına rağmen, bu oran 2011'da %5,6'ya 2012'de ise %3'e kadar gerilemiştir. Sonuç olarak ülkenin kamu borcu iki kar artmış ve dış finansmana artan bağımlılık devam etmiştir. Başka bir deyişle, ekonomik sorumluluk ve riskler özel sektörden kamu sektörüne taşınmıştır.

Kriz karşısında gündeme gelen sert kemer sıkma önlemlerinin AB'nin en yoksul ülkesinde uygulandığı dikkate alındığında bu politikaların toplumsal etkilerinin çok derin olabileceği söylenebilir. Başka bir deyişle, kemer sıkma önlemleri ve hükümetin durgunluğa karşı genel tepkisi gelir eşitsizliği, yolsuzluk ve mali kaçınma gibi Romanya ekonomisi ve toplumunda yapısal farklılıkları derinleştirmiştir. Romanya Kamu harcamalarında etkinliğin geliştirilerek ekonomik büyümenin başarılabileceği yönündeki genişlemeci mali daralma olasılığının Romanya için uygulanabilir olmadığı söylenebilir.

### 5.4 Yunanistan: Borç Krizi ve Derinleşen Durgunluk

1981'de AB'ye üye olan ve 2000'lerde parasal birliğe katılan Yunanistan Balkan ülkeleri arasında bu açıdan en dikkat çeken ülkedir. 2000 yılıyla beraber Yunanistan, etkili bir uyum programıyla, bütçe açıklarını ve enflasyon oranlarını, 1980'lerin çift haneli rakamlarından Mastricht kurallarının katı sınırlarının içerisine çekmeyi başarmıştır. 2005 yılına gelindiğinde Yunanistan sosyal ve ekonomik anlamda tam bir başarı öyküsü olarak görülmektedir. Siyasal ve ekonomik zorluklara rağmen Yunanistan, ekonomi politik açısından Avrupa gelişim seviyelerine uyum sağlayabilmiş ve çekirdek Avrupa'nın haritasına sıkıca eklemlenebilmiştir. Tablo 5 Yunanistan'ın makroekonomik verilerini göstermektedir. 2004-2007 yılları arasında Yunanistan yıllık ortalama %4 büyüme artışı yakalamıştır. Ancak, yüksek bütçe açığı (%6) ve cari işlemler açığı (%10'lar), GSYİH'nin %100'üne ulaşan kamu borcu ve GSYİH'nin %45'lerine ulaşan kamu harcamaları seviyeleri dikkate alındığında ülkenin mali dengelerinin bozuk olduğu söylenebilir. Ülke 2008'de krizin etkilerini hissetmeye başladı ve 2009'da %3,1'lik küçülme Euro Bölgesi'nin genel ortalaması olan %4'ün ancak yarısı kadardı. Ancak, Yunanistan mali dengesi de hızla kötüleşerek kamu açıkları GSYİH'nin %13,5'ine ve kamu borcu da GSYİH'nin %129'ına yükselmiştir.

| | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 |
|---|---|---|---|---|---|---|---|---|---|
| GSYİH artışı (%) | 4.4 | 2.3 | 5.5 | 3.5 | -0.2 | -3.1 | -4.9 | -7.1 | -6.4 |
| Bütçe Dengesi (GSYİH %) | -7.5 | -5.2 | -5.7 | -6.5 | -9.8 | -15.7 | -10.7 | -9.5 | -9.0 |
| Cari işlemler Dengesi (GSYİH %) | -5.8 | -7.6 | -11.4 | -14.6 | -14.9 | -11.2 | -10.1 | -9.9 | -2.4 |
| Doğrudan Yabancı Sermaye (GSYİH %) | 0.9 | 0.3 | 2.0 | 0.7 | 1.3 | 0.8 | 0.1 | 0.4 | 0.7 |
| Kamu Borcu (GSYİH %) | 98.6 | 100.0 | 106.1 | 107.4 | 112.9 | 129.7 | 148.3 | 170.3 | 156,9 |
| Özel Kesim Borcu (GSYİH %) | 77.5 | 88.9 | 97.1 | 106.3 | 118.1 | 122.2 | 127.6 | 129.2 | 129.1 |
| Kamu Harcamaları (GSYİH %) | 45.5 | 44.6 | 45.3 | 47.5 | 50.6 | 54.0 | 51.4 | 52.0 | 53.6 |
| İşsizlik oranı (%) | 10.5 | 9.9 | 8.9 | 8.3 | 7.7 | 9.5 | 12.6 | 17.7 | 24.3 |
| Genç işsizlik oranı (%) | 26.9 | 26.0 | 25.2 | 22.9 | 22.1 | 25.8 | 32.9 | 44.4 | 55.3 |

***Tablo 5:*** *Yunanistan'ın makroekonomik göstergeleri, 2004-2012* ***Kaynak:*** *European Commission (2014) Statistical Annex of Alert Mechanism Report*

Yunanistan'ın borç krizi, temelde ülkenin bütçe politikalarından ve mali disiplin konusunda yaşadığı sorunlardan ileri gelmektedir. Yunan hükümetleri uzun yıllardır devam eden kamu borç yükü sorununu mali disiplini sağlayarak hafifletmek yerine, Avro bölgesinin sağladığı düşük faize dayanan finansman ile borçları çevirmeye çalışmıştır. Kriz ortaya çıktığında krizin sorumlusu olarak kamu çalışanlarının maaşları ve sosyal harcamalar olarak gösterilmektedir. Buna karşılık, ülke ekonomisinin kayıt dışı ekonomi ve yolsuzluk açısından Avrupa ülkeleri arasında en önde olması, vergi gelirlerinin ve sosyal katkıların Avro alanında yer alan AB üyelerinin (AB-16) ortalamasından çok altında yer alması, ülkenin GSYİH'ye oran olarak dünyada en fazla askeri harcama yapan ülkeler arasında yer alması gibi noktalar göz ardı edilmektedir. Bütçe açığı sorunu ile birlikte cari açık sorunu yaşayan ülkelerin öncelikle attığı adımlardan bir tanesi kur ayarlamaktır. Ancak Avrupa Ekonomik ve Parasal Birliği üyeleri, birliğe üye olmaktan dolayı borç krizine karşı para politikası yolu ile çözüm şanslarını kaybetmişlerdir. Bu açıdan Yunanistan da ne kur ayarlamasına giderek rekabet gücünün arttırmak, ne de para basma yoluyla borcu finanse etmek gibi seçeneklere sahiptir (Dağdelen, 2011:7-11).

Yunanistan'ın yaşadığı kriz doğrudan Avrupa Parasal Birliğini tehdit ettiği için AB ve uluslararası kurumların baskıyla bir istikrar ve kemer sıkma politikası gündeme gelmiştir. Nisan 2010'da Yunan hükümeti Avro alanında bulunan diğer ülkelerden ve IMF'den finansal destek talebinde bulunmuş, Avrupa ülkeleri IMF'nin de destek vermesi koşulu ile Yunanistan'a finansal destek vermeyi kabul etmiştir. 2 Mayıs 2010 tarihinde ise Yunanistan'ın Avrupa Komisyonu, IMF ve Avrupa Merkez Bankası ile toplam 110 milyon Euro'luk finansal destek paketi üzerinde uzlaştıkları ve bu kapsamda IMF ve Yunanistan'ın 30 milyon Avro'luk stand-by anlaşması yaptıkları kamuoyuna duyurulmuştur. Yunanistan Avrupa Komisyonu, IMF ve Avrupa Merkez Bankası ile yaptığı üç yıllık stand-by anlaşmasının koşullarına bakıldığında, AB'nin mali disiplin sorununu işgücü verimsizliği, sosyal harcamaların ve kamu personel ücretlerinin yüksekliği ile ilişkilendirdiği ve sözkonu krizin faturasının doğrudan doğruya emek kesimine çıkardığı açık biçimde anlaşılmaktadır. Bu anlaşmaya göre öncelikle kamu kesimi ücretlerinin düşürülmesi, sosyal harcamaların azaltılması ve kalıcı bir sosyal güvenlik reformunun gerçekleştirilmesi şart koşulmuştur. Aynı anlaşmanın bir diğer önemli koşulu, Yunanistan ekonomisinin daha rekabetçi bir yapıya kavuşturulmasıdır. Bunun için üretim maliyetlerinin yeniden kontrol edilerek azaltılması ve enflasyonun düşürülmesi, bu sayede genel fiyatlar açısından rekabetçi konuma yükseltmesi koşut olarak öne sürülmüştür. Bu uzlaşma ile Yunanistan ekonomisinin istikrara kavuşturulması, rekabet gücünün arttırılması ve piyasaya olan güvenin yeniden tesis edilerek 2014 yılında kamu bütçe açığının GSYİH'ye oranının %3 düzeyine düşürülmesi hedeflendiği iddia edilmiştir.

Kemer sıkma önlemleri kapsamında vergi artışları getirilmekte (alkol sigara ve petrol vb), ücretler acilen %7 oranında azaltılmakta ve beş yıllık bir süre için dondurulmakta, kamu işçilerinin 2aylık ikramiyelerinin %30 azaltılmakta, ücretli izin ödemeleri ve diğer ikramiyeler azaltılmakta; kamu sektöründeki sözleşmeli ve geçici işçiler işten çıkarılmakta (150.000 kişi); kamudan emekli olan her beş kişinin yerine sadece bir kişinin işe alınması ve emeklilik yaşının artırılması öngörülmekte; aralarında Olympia Havayolları, su hizmetleri, elektrik üreticileri, toplu taşıma, posta idaresi ve limanlarında bulunduğu çok sayıda devlet kuruluşu kısmen ya da tamamen özelleştirilmesi benimsenmektedir. Ayrıca, rüşvet ve vergi kaçırmaya karşı bir savaş stratejisi başlatılmıştır (Albo ve Evans, 2012:331; Sadiku vd,. 2014:33; Monastiriotis, 2013:5).

Mali dengeyi sağlamaya yönelik sert kemer sıkma politikası bütçe açığının 2009'da %15,7'den 2010'da %10,7'ye düşürülmesini yol açmış, ancak ekonomideki küçülme derinleşerek %3'den %4,9'a çıkmıştır. Kamu harcamalarındaki artış eğilimi bir ölçüde azaltılabilmiştir. 2009'da GSYİH'nın %54'e çıkan kamu harcamaları 2011'de %52'ye gerilemiştir. Ancak, kamu borçlarındaki artış eğilimim hızlanarak devam etmiştir. 2009'da GSYİH'nın % 129,7 olan kamu harcamaları, 2011 yılında %30 artarak %170,3'çıkmıştır.

2012 Ekiminde ülkenin alacaklılarıyla Şubat 2012'de yapılan ikinci kurtarma paketi altında yeni bir anlaşmaya varıldı. Bu önlemler daha önce yasalaşan ya da üzerinde anlaşılan önlemlerle beraber sert bir biçimde korunması planlanmıştır. Paketin kapsamı sosyal faydalarda daha fazla kesinti, yakıt vergilerinde artış, maaşların tamamının verilmemesi ve emekli maaşlarından daha fazla kesinti ve 2012 yılında 15,000 kamu çalışanının işten çıkarılmasını içermektedir. Bir bütün olarak ele alındığında Ocak 2010-Ocak 2013 arasında emeklilik ve kamu sektörü ödemeleri ortalama %25 düşerken, etkin vergi oranları %20'den fazla bir artış göstermiştir. Kamu sektörü istihdamı dondurulmuş ve iş hukuku yasalarında ki kısıtlamalar kapsamlı bir şekilde kaldırılmıştır. Aynı zamanda özel sektördeki ücretler de %15 azalmıştır (Monastiriotis, 2013:6-7)

Yunanistan borç krizinin bir önemli özelliği de Balkanlara olan etkisidir. Bir bütün olarak Euro bölgesi ve Yunanistan borç krizinin etkisi, ulusal ekonomilerin durumu ve sektörlerin yapısına bağlı olarak Batı Balkan ülkelerine etkileri farklı olmaktadır. 2010 yılında Yunanistan'da başlayan borç krizi, Batı Balkan ülkelerine küçük bir zaman farklı ile ulaşmış, böylece bu ülkeler Yunanistan ve Euro bölgesindeki finansal türbülansın etkilerine duyarlı hale gelmiştir. Bu durum temelde, bölgenin bankacılık sisteminin toplam varlıklar içinde Yunanistan kökenli bankaların payı ve ülkeler arasında finansal bütünleşme ve yüksek miktardaki ticaretten kaynaklanmaktadır (Sadiku vd,. 2014:28). Kriz nedeniyle Yunan bankaları Balkanlardaki işlemlerinden fonlarını geri çekmeye başlamış bu ise ülkelerin kredi daralması ile karşı karşıya gelmesine yol açmıştır. Yunanistan ekonomisinin 2013 yılında küçülmeye devam etmesi Balkan ülkelerinin de büyüme performansını olumsuz yönde etkilemektedir (Panagiotou, 2013:94)

Kuşkusuz, kriz sürecini ve kemer sıkma politikalarını en derinden yaşayan ülke Yunanistan'dır. 2008-2013 döneminde ekonomi kümülatif olarak % 25.1 oranında küçülmüştür. Bu ülkenin derin bir durgunluk içinde olduğunu göstermesi açısından önemlidir. Krizin başlangıcından sonraki üç yılda, GSYİH'nin % 20'si kadar bir mali kemer sıkma programı uygulanmıştır. Bu derece büyük ve yoğun önlemlere rağmen kemer sıkma önlemleri çok küçük ve sınırlı zaman diliminde etkili olabilmiştir. Buna karşın, ülkenin siyasal ve toplumsal yapısına önemli maliyetler yüklemiştir. 2012 yılında bütçe açığının GSYİH'ya oranı %9, kamu borçları ise %156,9'a gerilemiş olmasına rağmen, 2013 yılında artarak %171,8'e sıçramıştır. Emek piyasası krizin ve kemer sıkma politikalarının etkilerinin en sert hissedildiği alandır. 2008 yılında %7,7 olan işsizlik oranı üç kat artarak 2012'de %24,3 sıçramıştır. Genç işsizlik oranı da benzer bir eğilim sergilemektedir. 2008'te %22,1 olan genç işsizlik oranı, 2012'ye gelindiğinde %55,3'e çıkmıştır.

## 6   Sonuç ve Değerlendirme

Küresel finansal krizi, ABD'de finansal sistemde ortaya çıkmış, etkileri kısa sürede başta AB ülkeleri olmak üzere dünyanın geri kalanına hızla yayılmıştır. Finansal sistemlerde yaşanan panik karşısında hükümetler ve merkez bankaları, finansal sektöre büyük miktarlarda likit kaynak transfer etme yolunu tercih etmiştir. Bu durum ülkelerin kamu açıklarının ve borçlarının genel olarak artmasına yol açmıştır. Dolayısıyla, bu kurtarma stratejilerinin uygulanmasıyla ekonomilerde gözlenen göreli canlanmalar krizin neden ortaya çıktığı sorusunu arka plana itmiş, yüksek kamu borç ve kamu açıkları bir sorun olarak gündeme gelmiştir. Bu durum kamu borçları ve açıkları karşısında hükümetleri finanse etme rolünü krizi yaratan finansal sektöre bırakılmasına neden olmuştur.

Kriz Avrupa Birliğinde tüm ülkelerde özellikle 2009 yılında büyüme oranlarında ciddi bir azalma, işsizlik oranlarında hızlı bir artış olarak etkisini göstermiştir. Ancak krizden çıkış sürecinde çevre ülkelerin artan borç stokları ve kamu açıkları, ABD krizinin çevre ülkeler merkezli AB krizine dönüşmesine neden olmuştur. Bu gelişme AB'nin süper çevresi olarak adlandırılan Balkan ülkelerinde de devam etmiştir.

AB'ye üye Balkan ülkeleri açısından vurgulanması gereken ilk nokta bu ülkelerin 2000'lerde yüksek büyüme performansı sergilemiş olmalarıdır. Ancak 2009 yılından itibaren kriz etkileri hissedilmeye başlanmıştır. Bulgaristan hariç, Yunanistan, Romanya ve Hırvatistan krizden en fazla etkilenen ülkeler olmuştur. Özellikle Yunanistan 2008-2013 ve Hırvatistan 2009-2013 yıllarının tamamında ekonomiler küçülerek bir uzun bir durgunluk evresine girmiştir. Romanya ise 2009-2010 yıllarında, Bulgaristan ise 2009 yılında daralma yaşamış, ancak 2010 sonrasında güçlü bir toparlanma gözlenmemiştir.

Ülkelerin kriz karşısındaki politikalarının çevrim yönlü olduğu ve bunların içinde Bulgaristan'ın daha ılımlı bir politika izlediği gözlenmektedir. Buna karşın, Romanya ve Yunanistan'ın çok daha sert kemer sıkma politikası uyguladığı, bu politikaların kısa süreli mali dengelerde bir iyileşme sağladığı ancak bunun geçici olduğu söylenebilir. Kemer sıkma politikaları hakkında vurgulanması gereken en önemli nokta krizin ekonomik ve toplumsal yükünün kamu kesimi aracılığıyla başta kamu çalışanları olmak üzere toplumun büyük bir bölümüne aktarılmış olmasıdır. Benzer şekilde, devlet kriz karşısında bankacılık ve finansal sektör için son borç başvuru merci görevini yerine getirirken, emek açısından böyle bir politika gündeme gelmemiştir.

AB'ye üye Balkan ülkelerinde uygulanan kemer sıkma politikalarının amacı kriz sonucunda artan bütçe açıkları ve kamu borç oranının düşürülmesidir. Ancak ekonomilerin durgunluk döneminde yüksek işsizlik oranlarına rağmen uygulanan bu politikalar başarısız olmuş, büyüme oranlarının düşmesine, işsizlik oranlarının artmasına, kamu borç oranının daha da yükselmesine yol açmıştır. Özellikle Yunanistan ve Hırvatistan'da mali

tuzak riskinin gündeme geldiği söylenebilir. Bu nedenle, makro politikaların hedefi borç oranını düşürmek yerine istihdam kayıplarını telafi etmek, işsizlik oranlarını düşürmek, yeni iş alanları yaratmak olmalıdır.

# Türkiye ve Avrasya Ülkeleri Ekonomilerindeki Finansal Risklerin Reel Ekonomik Büyümeye ve Devlet Borçlanmasına Etkileri: 2000-2013

# Effects of Financial Risks in Turkish and Eurasian Economies on Real Economic Growth and Public Sector Borrowing: 2000-2013

Dr. Yusuf Ziya Tengiz (Kadir Has University, Turkey)

Dr. Emine Şule Göksenli (Yeditepe University, Turkey)

Dr. Ali Göksenli (Istanbul Technical University, Turkey)

## Abstract

The effects of global and economical crisis on Turkey and Eurasian countries depend strongly on countries' dependence ratio of foreign trade, on integrations and economic structure. Real economic growth of Russian and Belarus economies is affected by Euro and US-dollar rate of exchange (RoE), Kazakhstan's economy by Euro RoE, Turkmenistan's by Euro exchange and interest and Turkish economy by Euro RoE and consumer price index (CPI). The effect of public borrowings ratio on gross domestic product is affected in Russian economy by Euro RoE, CPI and interests 1 and 2, in Kazakhstan economy by US dollar RoE and interest, in Belarus economy by US dollar RoE, interest and CPI, in Turkmenistan's by Euro RoE and interest and Turkish economy by interest and CPI. Russia must regulate improving economy politics in Euro exchange, interest and CPI indicators to increase real economical growth and decrease ratio of public borrowings on gross domestic product. Kazakhstan must focus on Euro RoE, US dollar RoE, interest and CPI indicators. The same situation is valid for Belarus. Turkmenistan must give importance to Euro exchange and interests in its politics of economy. Turkey must take Euro exchange, CPI and interests into consideration. Thereby real economy growth will increase and ratio of public borrowings on gross domestic product will decrease. To decrease shocks against fragility, to develop global competition strength and decrease of foreign-source dependency, Turkey and Eurasian countries must develop new strategies and constitute and develop economy politics for global competition capacity.

## 1 Giriş

2000 yılından itibaren yaşanan küresel ekonomik krizler, ülke ekonomilerin makroekonomik temelleri üzerinde büyük erozyonlara sebep olmuştur. Küresel ekonomik krizler, ülkelerin özellikle döviz, faiz ve enflasyon dengelerini alt üst etmektedir. Özellikle gelişmekte olan ülkelerde ekonomik kırılganlığı arttırmaktadır. Bu durumda finans piyasaları, temel işlevini ve istikrarını kaybetmektedir. Finans piyasalarındaki yüksek dalgalanmalar da finans ve reel sektörü olumsuz etkilemektedir. Örneğin özel sektör firmaları ve bankalar, döviz üzerinden borçlandıkları için yerel para birimlerinde hızla borçları artmaktadır. Bunun yanında üretim yapan firmaların hammadde fiyat artışları sebebiyle maliyetleri de artmaktadır. Tüm bu değişimler, hem ülke ekonomisini, hem de faaliyet gösteren kurumları olumsuz etkilemekte ve ülke ve kurumların rekabet avantajını kaybetmelerine sebep olmaktadır.

Özellikle 2008 yılında yaşanmış olan ekonomik krizlerin temelinde finansal riskler yatmaktadır. Finansal riskler olarak fiyat riski, döviz kur riski ve faiz riski dikkate alınmıştır. Finansal risklerin yüksek olması sebebiyle ekonomiler, dışsal şoklardan dolayı büyük zararlara uğramaktadır. Finansal risklerin belirlenmesi ile birlikte gerekli tedbirler alındığı takdirde reel ekonomik büyüme sağlanabilmekte ve borçlanma istikrarlı hale gelebilmektedir. Türkiye'nin, Avrasya Ülkeleri ile yoğun dış ticaret hacmi olması sebebiyle Türkiye'nin de finansal risklerden zarara uğraması, birçok Avrasya Ülkesini olumsuz etkileyecektir. Bu sebepten dolayı Türkiye ekonomisindeki finansal riskler de bu çalışmada analiz edilmiştir.

Çalışmanın amacı, finansal kırılganlığı yüksek olan Avrasya ekonomilerinde ve Türkiye ekonomisinde finansal risklerin belirlenmesi ve bu risklerin, reel ekonomik büyümeye ve borçlanmanın, GSYİH'a oranına olan etkilerin ortaya konulmasıdır. Finansal risklerin, reel ekonomik büyümeye ve borçlanmaya olan etkilerini belirlemek için regresyon analizi kullanılmıştır. Modelde, reel ekonomik büyüme ve borçlanmanın, GSYİH'a oranı bağımsız değişken, finansal riskler de bağımlı değişken olarak belirlenmiştir.

## 2 Avrasya Ülkeleri

Avrasya ülkeleri, şu ülkelerden oluşmaktadır:

| | |
|---|---|
| 1)Azerbaycan | 2) Özbekistan |
| 3)Beyaz Rusya | 4) Rusya Federasyonu |
| 5) Gürcistan | 6) Tacikistan |

| | | | |
|---|---|---|---|
| 7) Kazakistan | | 8) Türkmenistan | |
| 9) Kırgızistan | | 9) Kırgızistan | |
| 10) Ukrayna | | 11) Moldova | |

Çalışmada kişi başına GSYİH'sı en yüksek ilk 4 ülke, analiz kapsamına alınmıştır. Avrasya ülkelerinin 2013'de kişi başına GSYİH'sı, tablo 1'de gösterilmiştir.

| Ülke | Kişi Başına GSYİH (US-$) | Ülke | Kişi Başına GSYİH (US-$) |
|---|---|---|---|
| Rusya Federasyonu | 6.834,00 | Gürcistan | 2.070,85 |
| Kazakistan | 5.190,71 | Moldova | 1.038,40 |
| Belarus (Beyaz Rusya) | 4.858,44 | Özbekistan | 845,74 |
| Türkmenistan | 3.269,66 | Kırgızistan | 574,82 |
| Azerbaycan | 3.214,30 | Tacikistan | 462,48 |
| Ukranya | 2.094,12 | | |

*Tablo 1. Avrasya ülkelerinde kişi başına GSYH **Kaynak: IMF-Raporu***

Türkiye'nin 2013 yılında kişi başına GSYH'si ise 8.492,6 US-$'dır. Tablo 1'de açıklandığı gibi analizde, Türkiye ile birlikte kişi başına GSYH'da ilk 4 Avrasya ülkesinde olan Rusya Federasyonu, Kazakistan, Beyaz Rusya, Türkmenistan kullanılacaktır.

## 3  Finansal Riskler

### 3.1  Genel Açıklama

Gelişen ve değişen ticaret ilişkileri içerisinde, risk de çeşitli boyutlarda kendisini göstermiştir. Genel anlamda risk, nesnel olarak belirlenebilen kaybetme olasılığı olarak tanımlanmaktadır. Teorik olarak risk, beklenilen değer ile gerçekleşen değer arasındaki hem olumlu hem de olumsuz sapmaları içermesine rağmen; genellikle risk kavramı olumsuz (aleyhte) sapmalar olarak algılanmaktadır. Günlük yaşamın hemen her alanında kullanılan risk kavramı, çalışmada beklenilen değer ile gerçekleşen değer arasındaki fark olarak değerlendirilecektir.

Çalışmada finansal riskler kapsamında ülke ekonomilerini etkileyen 3 ana risk unsuru analiz edilecektir:

1) Döviz Kur Riski
2) Faiz Oranı Riski
3) Fiyat Riski (Enflasyon Riski)

### 3.2  Döviz Kur Riski, Faiz Oranı Riski ve Enflasyon Riski

Döviz kurlarında meydana gelen beklenmedik dalgalanmaların işletmelerin ve ülke ekonomilerin mali durumu üzerinde yarattığı olumsuz etkiye döviz kuru riski (foreign exchange risk) denmektedir. Ekonomik anlamda kur riski döviz kurunda meydana gelen dalgalanmaların bir sonucu olarak, yurt dışındaki yatırımın veya bir işlemin değerindeki kâr veya zarar miktarı olarak tanımlanabilir (Williams, 2002).

Faiz oranı riski, piyasadaki faiz oranlarında olabilecek beklenmedik bir değişiklikten olumsuz etkilenme durumudur (Bieke; Barckow; 2002). Enflasyon riski (fiyat riski), maden/ hammadde/mamul ve ticari malların fiyatlarındaki beklenmedik dalgalanmalardan kaynaklanan zarardır (Bolak, 2004).

## 4  Türkiye ile Avrasya Ülkeleri Ekonomilerinde Finansal Risklerin Reel Ekonomik Büyümeye ve Ülke Borçlanmasına Etkileri: 2000-2013

### 4.1  Araştırma Yöntemi ve Veri Toplanması

Çalışma için ilgili veriler, çeşitli kaynaklardan derlenmiştir. Özellikle ilgili ülkelerin Merkez Bankaları, IMF'in ülke raporları ve OECD verileri kullanılmıştır. Araştırma yöntemi olarak "Doğrusal Olmayan Regresyon Analizi" kullanılmıştır. Regresyon analizi, bir değişkenin bir veya daha fazla değişkenle arasındaki ilişkinin matematik bir fonksiyonla ifade edilmesidir (Keskintürk; Şahin, 2009). Bağımlı değişkenin, bağımsız değişken veya değişkenlerin doğrusal bir fonksiyonu olmadığı modeller "doğrusal olmayan (nonlinear)" modeller olarak adlandırılmaktadır. Doğrusal olmayan modellerin tahminlenmesi doğrusal (linear) modellerden çok daha zordur. Bu modellerde doğrusal modellerde oluğu gibi bağımsız değişkenlerin basitçe listelenmesi yerine, regresyon eşitliğinin yazılması, parametre işlemlerinin tanımlanması, bunlar için başlangıç değerlerinin seçilmesi ve parametrelere bağlı olarak modele ait türevlerin belirtilmesi gerekmektedir (Yakupoğlu, Çiğdem, 1999).

Regresyon analizinde reel ekonomik büyüme ve devlet borçlanmasının GSYİH'a oranı, bağımsız değişken ve döviz kuru( € ve $), faiz oranı ve enflasyon, bağımlı değişken olarak kullanılmıştır. Araştırma sonucunda ilgili ülkelerin regresyon analizi için gerekli veriler, aşağıdaki tablolarda gösterilmiştir. Regresyon analizi için Rusya'nın, Türkiye'nin, Belarus'un, Kazakistan'ın ve Türkmenistan'ın verileri, tablo 2'de gösterilmiştir.

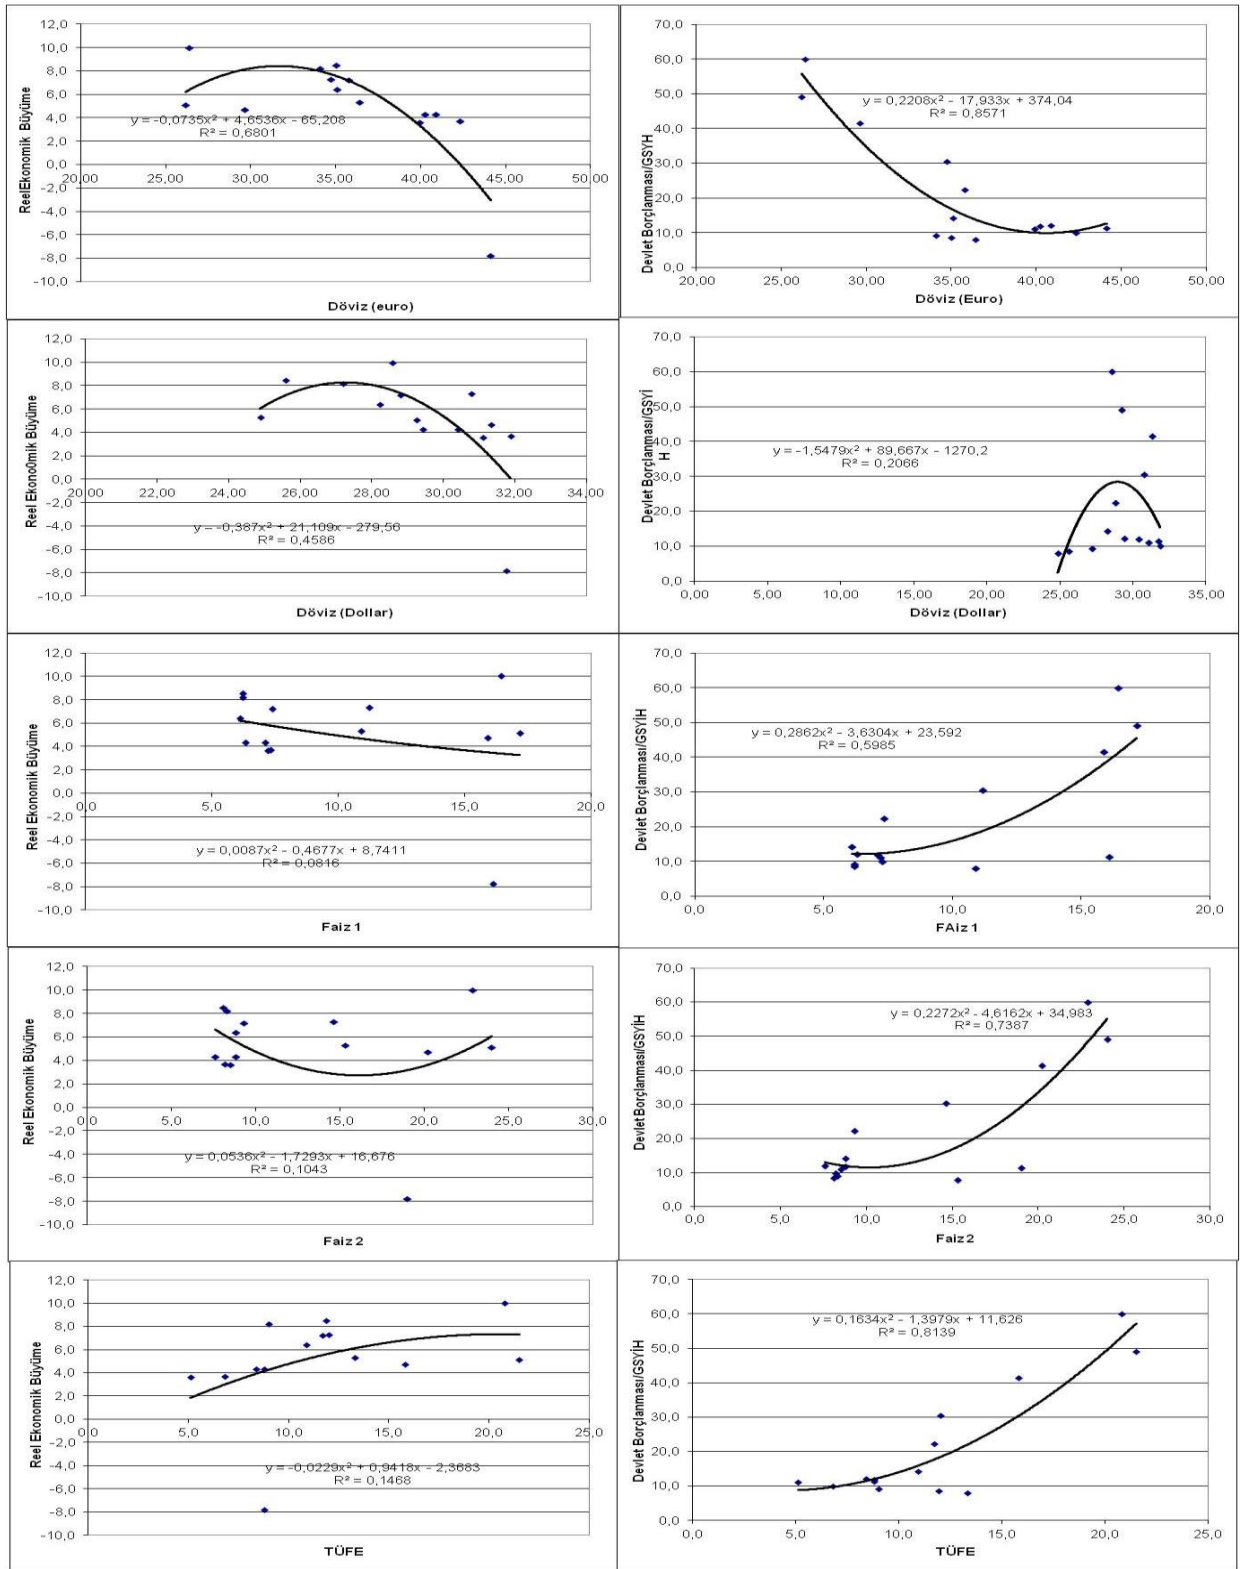
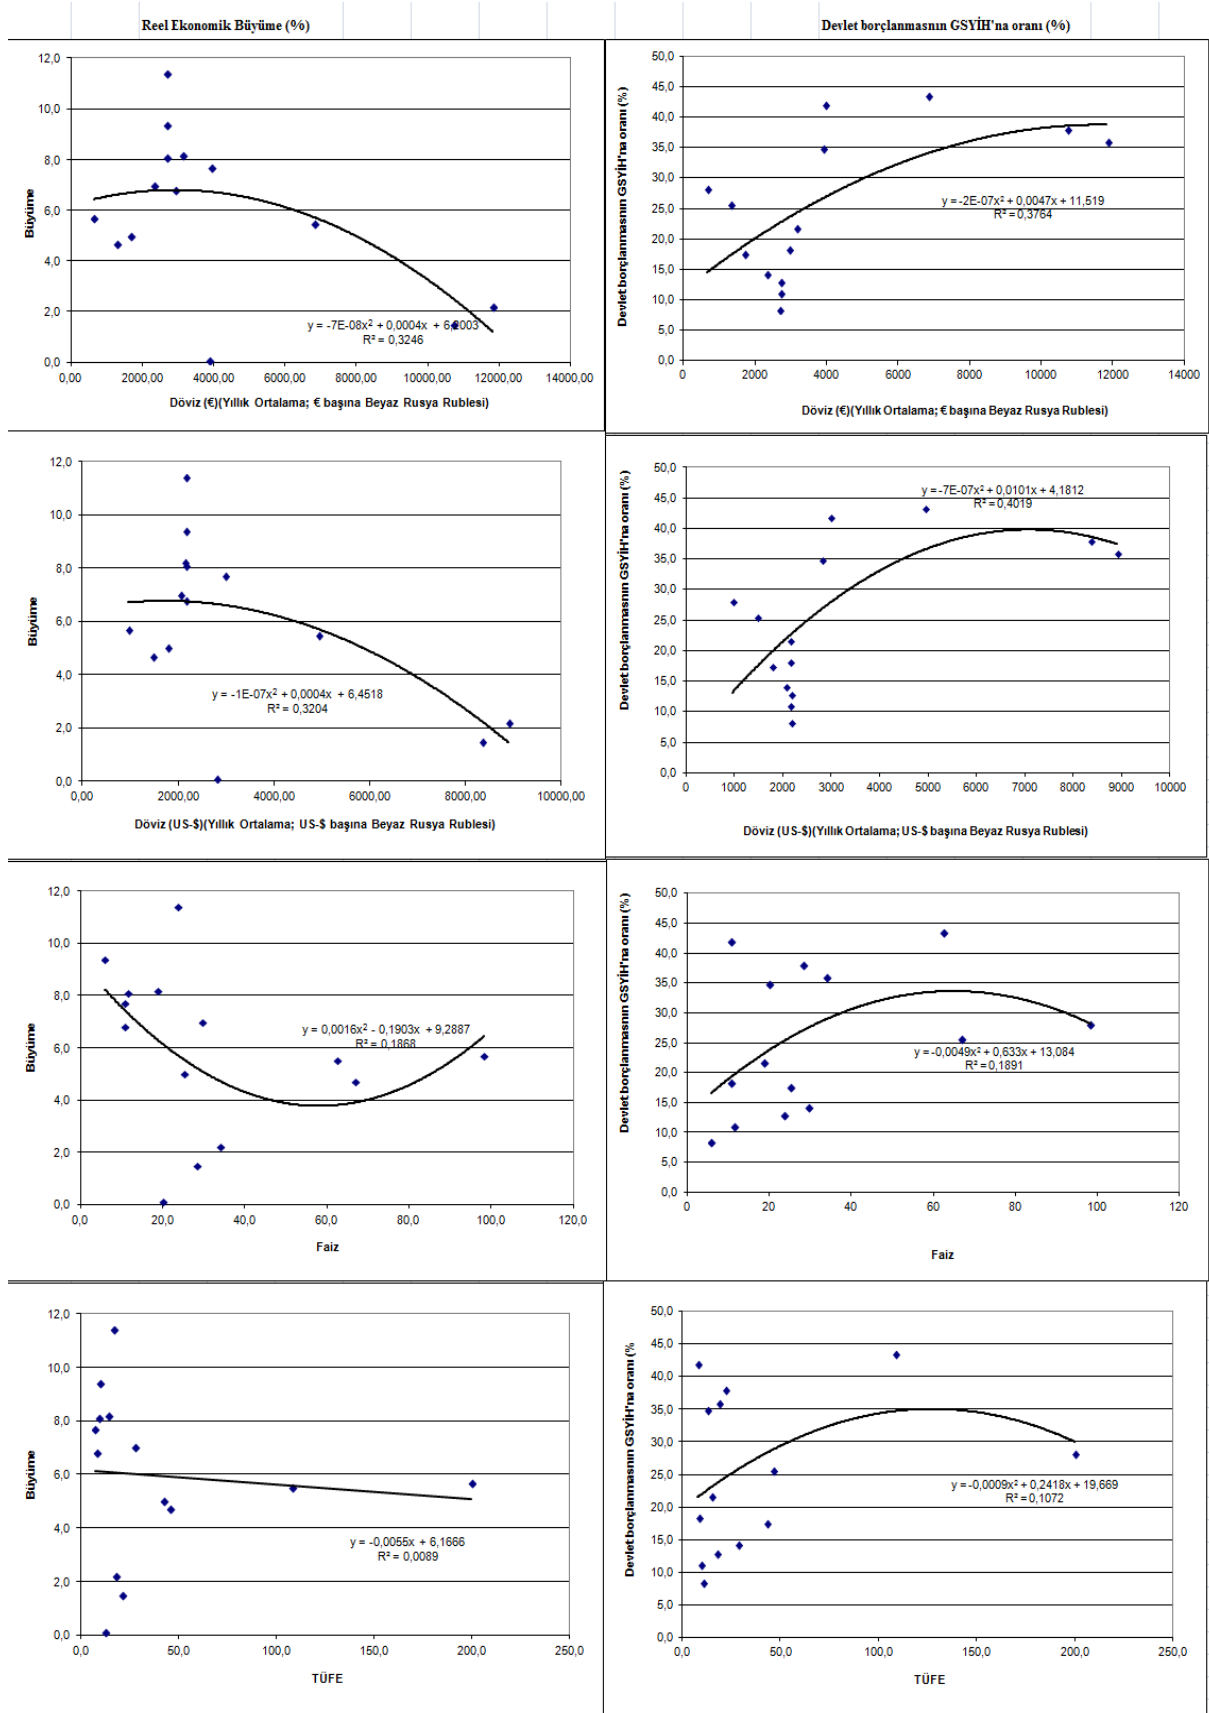
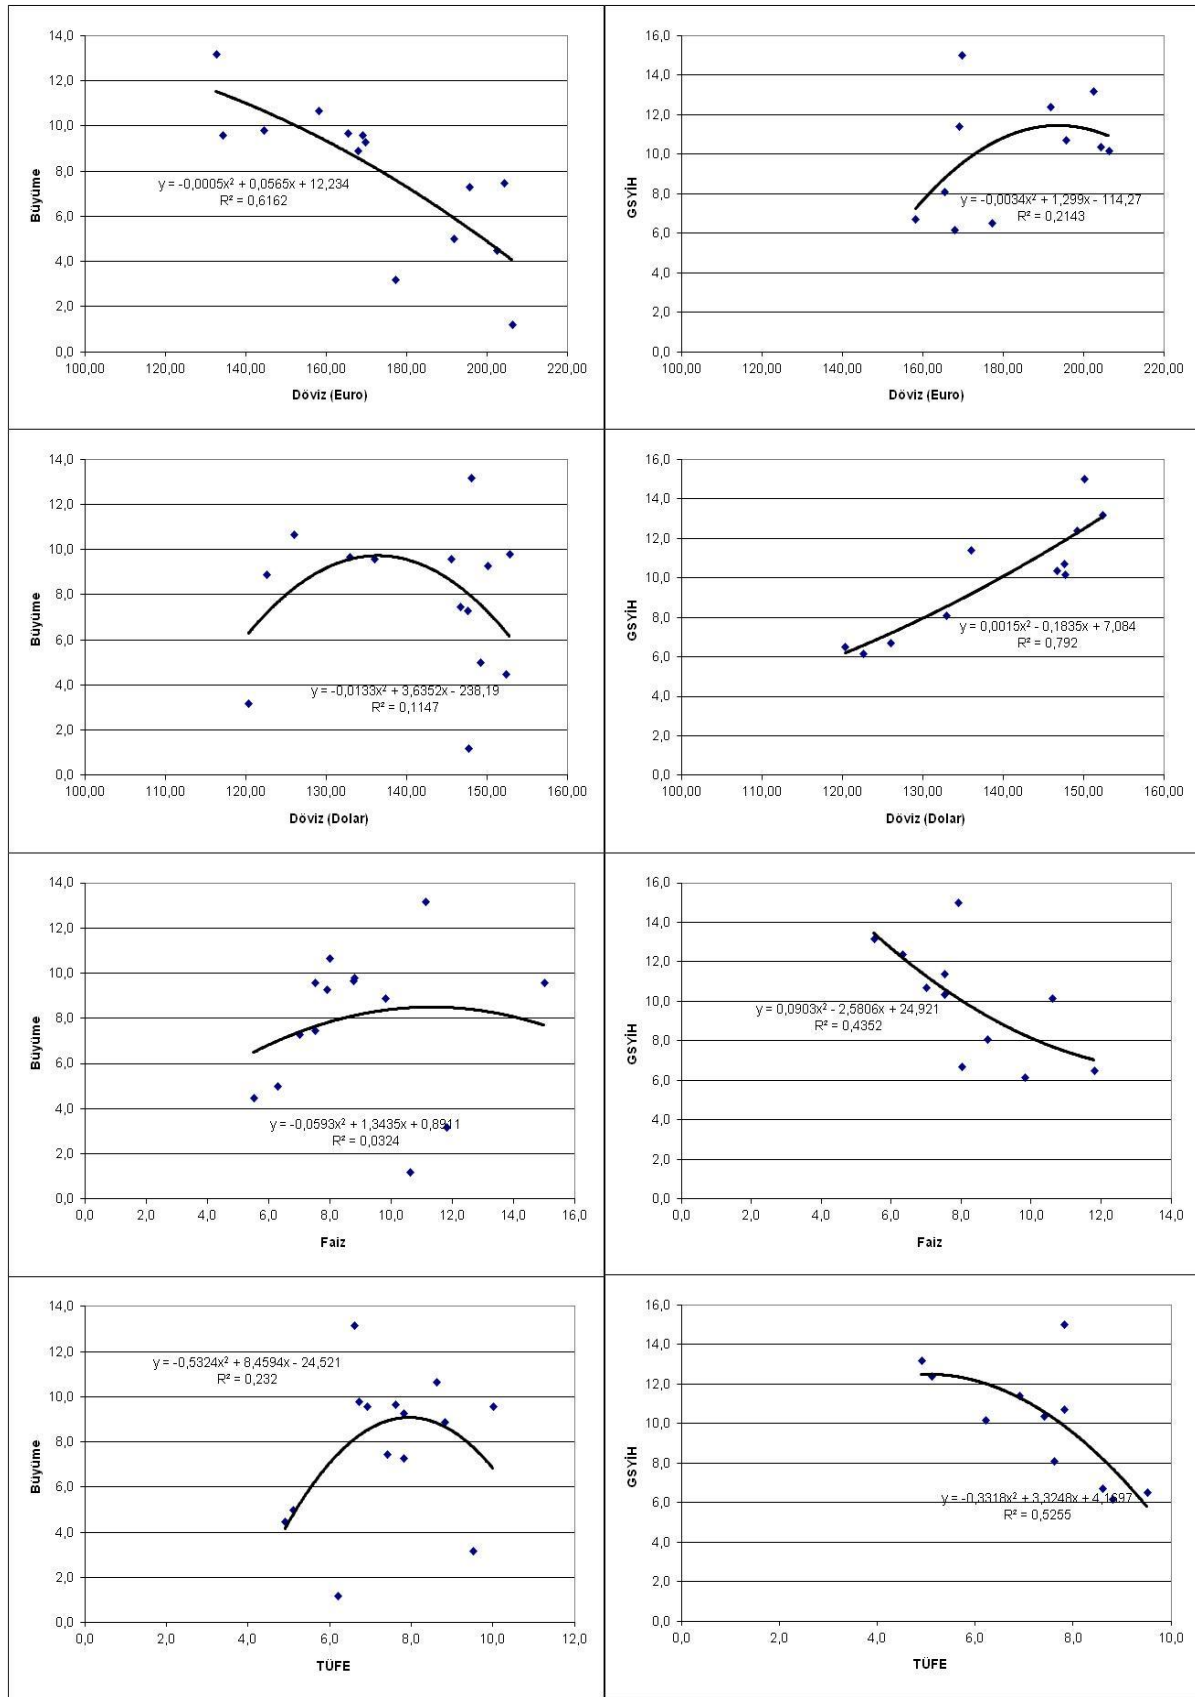
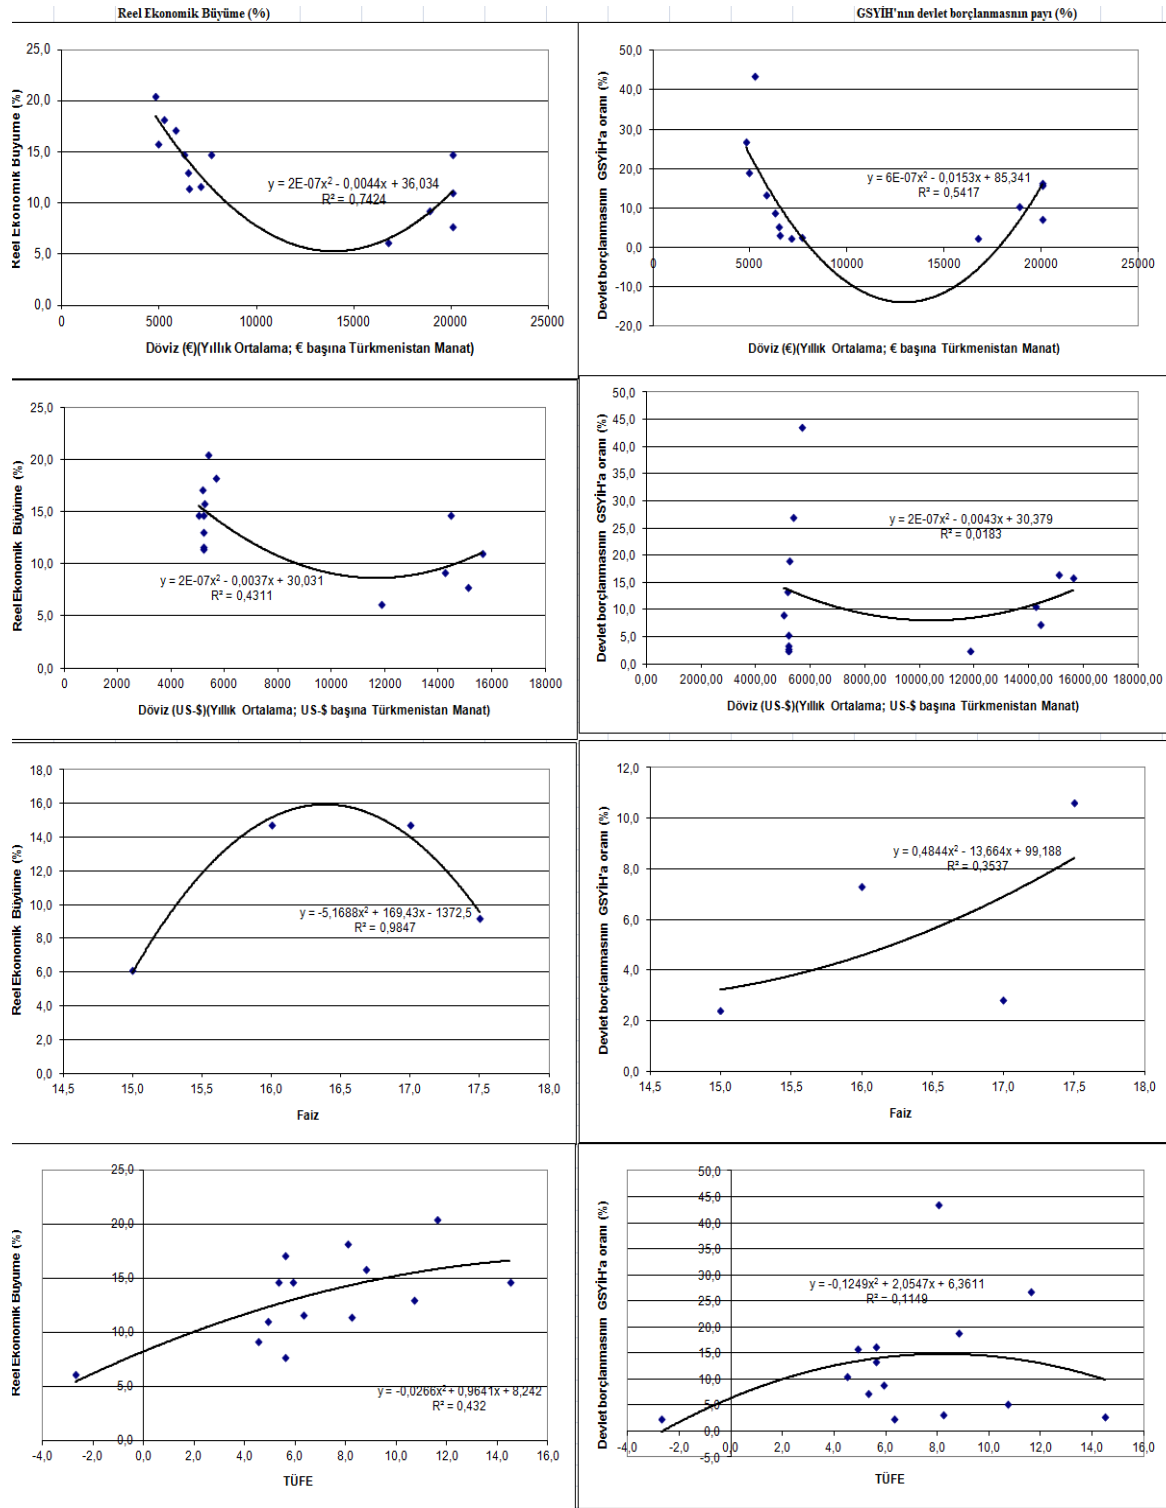
**4.2 Türkiye ve Avrasya Ülkelerinde Finansal Risklerin Reel Ekonomik Büyümeye ve Devlet Borçlanmasının, GSYİH Oranına Etkileri: 2000-2013**

Bu bölümdeki çalışmada elde edilen temel sonuçlar, ülkelerin ekonomik yapılarına ve dışa bağımlılık ve entegrasyonlarına göre farklılık göstermiştir. Rusya'nın reel ekonomik büyümesini ve devlet borçlanmasının, GSYİH oranını etkileyen faktörlerin regresyon sonuçları, Şekil 1'de gösterilmiştir.


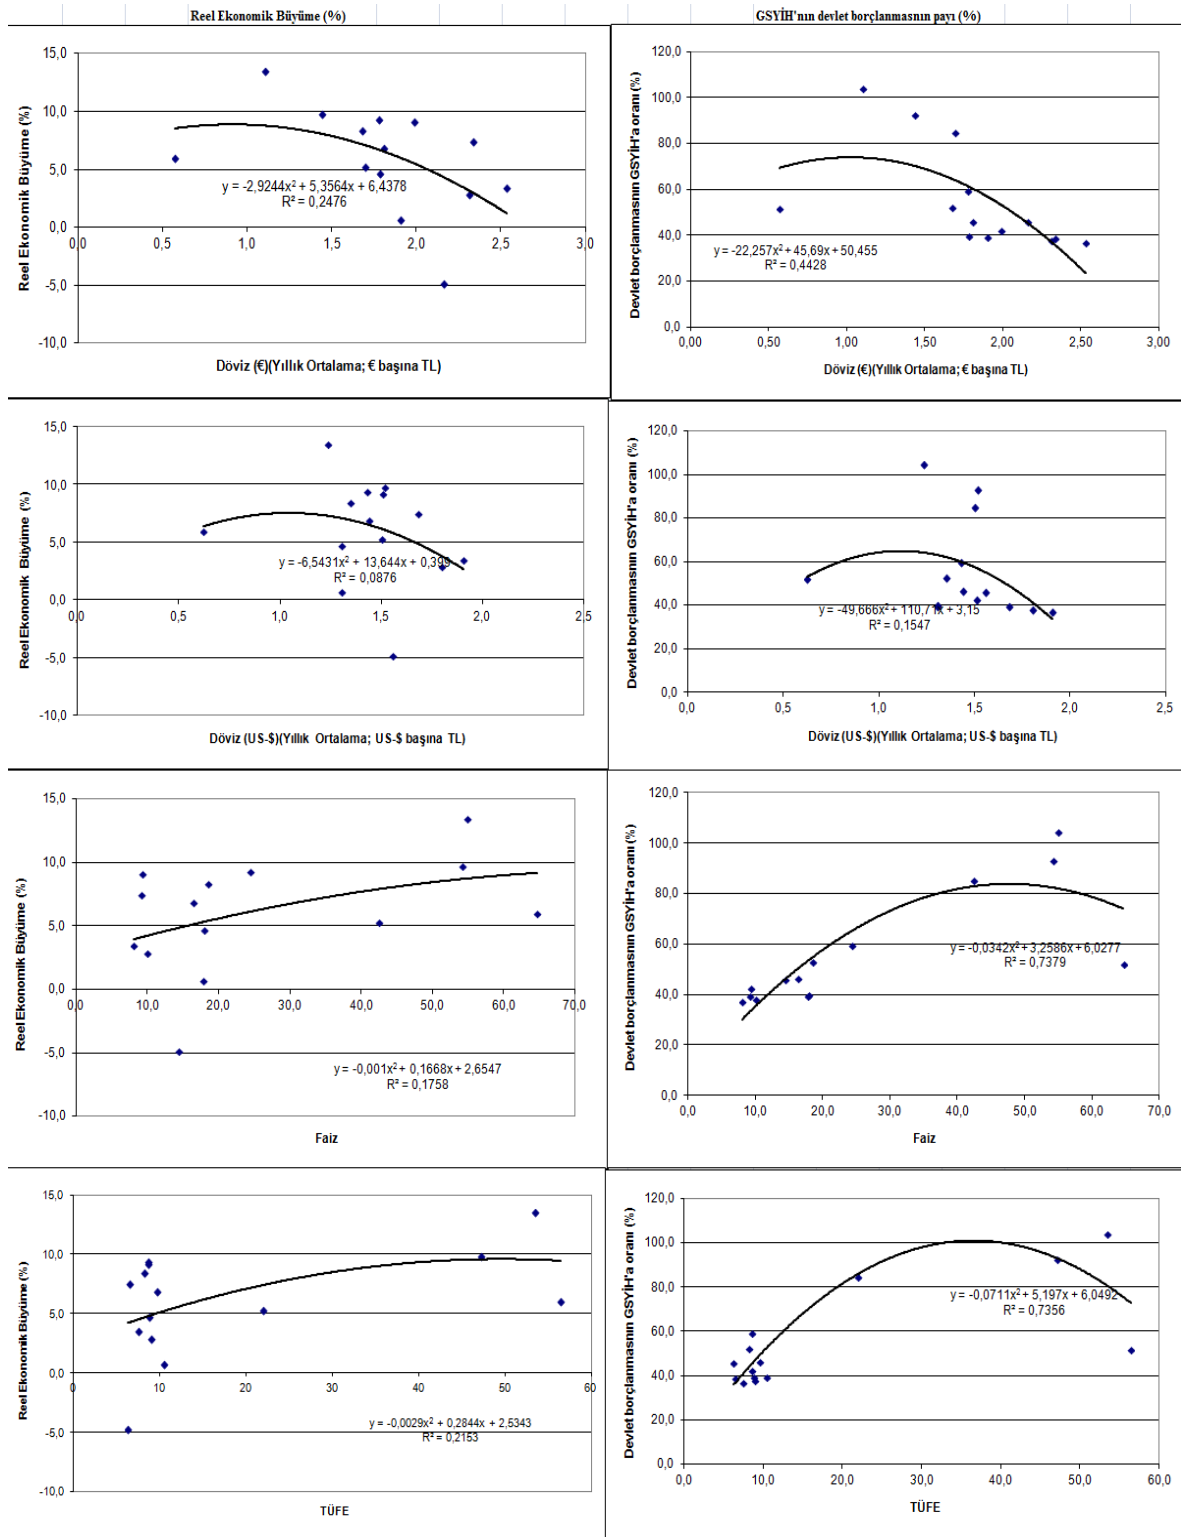


**Şekil 1:** *Rusya'da Reel Ekonomik Büyümeyi ve Devlet Borçlanmasının GSYİH Oranını Etkileyen Finansal Riskler*

Kazakistan'ın reel ekonomik büyümesini ve devlet borçlanmasının, GSYİH oranını etkileyen faktörlerin regresyon sonuçları, Şekil 2'de gösterilmiştir.




**Şekil 2:** *Kazakistan'da Reel Ekonomik Büyümeyi ve Devlet Borçlanmasının GSYİH Oranını Etkileyen Finansal Riskler*

Belarus'un reel ekonomik büyümesini ve devlet borçlanmasının, GSYİH oranını etkileyen faktörlerin regresyon sonuçları, Şekil 3'de gösterilmiştir.


**Şekil 3:** *Belarus'da Reel Ekonomik Büyümeyi ve Devlet Borçlanmasının GSYİH Oranını Etkileyen Finansal Riskler*

Türkmenistan'ın reel ekonomik büyümesini ve devlet borçlanmasının, GSYİH oranını etkileyen faktörlerin regresyon sonuçları, Şekil 4'de gösterilmiştir.

**Şekil 4:** *Türkmenistan'da Reel Ekonomik Büyümeyi ve Devlet Borçlanmasının GSYİH Oranını Etkileyen Finansal Riskler*

Türkiye'nin reel ekonomik büyümesini ve devlet borçlanmasının, GSYİH oranını etkileyen faktörlerin regresyon sonuçları, Şekil 5'de gösterilmiştir.

**Şekil 5:** *Türkiye'nin Reel Ekonomik Büyümeyi ve Devlet Borçlanmasının GSYİH Oranını Etkileyen Finansal Riskler*

Rusya ekonomisinde reel ekonomik büyümeyi etkileyen unsurlar döviz € ve döviz US-$'dır. Reel ekonomik büyüme ile döviz € ve döviz US-$ bir noktaya kadar (+) yönlü doğrusal ilişki gösterirken bu noktadan sonra (-) yönlü ilişki göstermiştir. € ve US-$ kuru arttıkça Rusya'da reel ekonomik büyüme düşmektedir. Faiz 1, faiz 2 ve TÜFE için reel ekonomik büyüme ile uyum iyiliği uygun olmadığı için analizde kullanılmamıştır. Devlet borçlanmasının, GSYİH'ya oranını etkileyen unsurlar ise döviz €, Faiz 1, Faiz 2 ve TÜFE'dir. Döviz € arttıkça, Devlet borçlanmasının, GSYİH'ya oranı azalmaktadır. Faiz 1, Faiz 2 ve TÜFE arttıkça Devlet borçlanmasının, GSYİH'ya oranı artmaktadır.

Rusya ekonomisinde Euro kurları, Faiz 1, Faiz 2 ve TÜFE düştüğü taktirde reel ekonomik büyüme artar ve Devlet borçlanmasının, GSYİH'ya oranı azalır.

Kazakistan ekonomisinde reel ekonomik büyümeyi etkileyen unsur döviz €'dur. Döviz US-$, faiz ve TÜFE için reel ekonomik büyüme ile uyum iyiliği uygun olmadığı için analizde kullanılmamıştır. Devlet borçlanmasının, GSYİH'ya oranını etkileyen unsurlar ise döviz US-$, faiz ve TÜFE'dir. Döviz US-$ kuru arttıkça Devlet borçlanmasının, GSYİH'ya oranı artmaktadır. Faiz ve TÜFE arttıkça Devlet borçlanmasının, GSYİH'ya oranı azalmaktadır.

Belarus ekonomisinde reel ekonomik büyümeyi etkileyen unsurlar döviz € ve döviz US-$. Euro ve US-$ kurları arttıkça, reel ekonomik büyüme düşmektedir. Faiz ve TÜFE için reel ekonomik büyüme ile uyum iyiliği uygun olmadığı için analizde kullanılmamıştır. Devlet borçlanmasının, GSYİH'ya oranını etkileyen unsurlar ise döviz € ve döviz US-$. Euro ve US-$ kurları arttıkça Devlet borçlanmasının, GSYİH'ya oranı da artmaktadır. Faiz ve TÜFE için Devlet borçlanmasının, GSYİH'ya oranı ile uyum iyiliği uygun olmadığı için analizde kullanılmamıştır.

Türkmenistan ekonomisinde reel ekonomik büyümeyi en çok etkileyen unsurlar döviz € ve faizdir. Euro kuru ile reel ekonomik büyüme arasındaki ilişki, bir noktaya kadar (-) yönlü iken bu noktadan sonra ilişki, (+) yönlü olarak gelişmektedir; aralarında doğrusal ilişki bulunmamaktadır. Benzer gelişim, faiz için de geçerlidir. Faiz ile reel ekonomik büyüme arasındaki ilişki, bir noktaya kadar (+) yönlü iken bu noktadan sonra ilişki, (-) yönlü olarak gelişmektedir; aralarında doğrusal ilişki bulunmamaktadır. Reel ekonomik büyüme ile TÜFE arasında (+) yönlü doğrusal bir ilişki bulunmaktadır. Faiz arttıkça reel ekonomik büyüme de artmaktadır.

Türkmenistan ekonomisinde Devlet borçlanmasının, GSYİH'ya oranını etkileyen unsurlar ise döviz € ve faizdir. Euro kuru ile Devlet borçlanmasının, GSYİH'ya oranı arasındaki ilişki, bir noktaya kadar (-) yönlü iken bu noktadan sonra ilişki, (+) yönlü olarak gelişmektedir; aralarında doğrusal ilişki bulunmamaktadır. Faiz ile Devlet borçlanmasının, GSYİH'ya oranı arasında doğrusal (+) yönlü bir ilişki bulunmaktadır. Faizler arttıkça Devlet borçlanmasının, GSYİH'ya oranı da artmaktadır.

Türkiye ekonomisinde reel ekonomik büyümeyi en çok etkileyen unsurlar döviz € ve TÜFE'dir. Reel ekonomik büyüme ile döviz € arasında (-) yönlü ilişki vardır; Euro kuru düştükçe reel ekonomik büyüme artmaktadır. Reel ekonomik büyüme ile TÜFE arasında (+) yönlü ilişki vardır; TÜFE düştükçe reel ekonomik büyüme de azalmaktadır. Türkiye ekonomisinde Devlet borçlanmasının, GSYİH'ya oranını en çok etkileyen unsurlar faiz ve TÜFE'dir. Her iki unsurun da Devlet borçlanmasının, GSYİH'ya oranı ile doğrusal ilişkileri bulunmamaktadır. Faiz ve TÜFE ile Devlet borçlanmasının, GSYİH'ya oranı arasındaki ilişki (+) yönlü iken bir noktadan sonra ilişki, (-) yönlü olmaktadır.

### 4.3 Genel Sonuçların Değerlendirilmesi

Çalışmada elde edilen temel sonuçlar, küresel ekonomik krizlerin Türkiye ve Avrasya Ülkeleri üzerindeki etkileri, ülkelerin ekonomik yapılarına ve dışa bağımlılık ve entegrasyonlarına göre farklılık göstermiştir. Rusya ekonomisinde reel ekonomik büyümeyi Euro ve US-$ kurları etkilerken, Kazakistan ekonomisinde Euro kuru, Belarus ekonomisinde Euro ve US-$ kurları, Türkmenistan'da Euro kuru ve faiz ve Türkiye'de Euro kuru ve Tüfe etkilemektedir. Rusya ekonomisinde Devlet borçlanmasının, GSYİH'ya oranını etkileyen unsurlar Euro kuru, faiz 1, faiz 2 ve TÜFE iken Kazakistan ekonomisinde US-$ kuru, faiz ve TÜFE; Belarus'da US-$ kuru, faiz ve TÜFE; Türkmenistan'da Euro kuru ve faiz ve Türkiye'de de faiz ve TÜFE etkilemiştir.

Rusya, reel ekonomik büyümeyi arttırmak ve Devlet borçlanmasının, GSYİH'ya oranını düşürmek için özellikle Euro kuru, faiz ve TÜFE göstergelerinde iyileştirici ekonomik politikalarını düzenlemelidir. Kazakistan ise Euro kuru, US-$ kuru, faiz ve TÜFE göstergelerinde yoğunlaşmalıdır. Aynı durum, Belarus için de geçerlidir. Türkmenistan ise ekonomi politikalarında Euro kuruna ve faizlere ağırlıklı önem verilmelidir. Buna karşın Türkiye'de Euro kuru, TÜFE ve faizler, ekonomi politikaları oluşturulurken dikkate alınmalıdır. Böylece reel ekonomik büyüme artmakta ve Devlet borçlanmasının, GSYİH'ya oranı azalmaktadır.

Finansal risklerin belirlenmesi ile birlikte gerekli tedbirler alındığı taktirde reel ekonomik büyüme sağlanabilmekte ve borçlanma istikrarlı hale gelebilmektedir. Ayrıca cari açık azalmakta, refah artmakta ve borçlanma azalmaktadır. Bunun sonucunda gelen finansal istikrar, Avrasya'nın ekonomik yapısını güçlü hale getirecektir. Finansal risklerin belirlenmesi ile alınacak olan ekonomik önlemler, güçlü bir Avrasya ekonomisini sağlayabilmektedir. Güçlü bir Avrasya ekonomisi de küresel yapının şekillendirilmesinde önemli bir rol üstlenebilecektir.

## 5 Sonuç

Çalışmada elde edilen temel sonuçlar, küresel ekonomik krizlerin Türkiye ve Avrasya Ülkeleri üzerindeki etkileri, ülkelerin ekonomik yapılarına ve dışa bağımlılık ve entegrasyonlarına göre farklılık göstermiştir. Rusya ekonomisinde reel ekonomik büyümeyi Euro ve US-$ kurları etkilerken, Kazakistan ekonomisinde Euro kuru, Belarus ekonomisinde Euro ve US-$ kurları, Türkmenistan'da Euro kuru ve faiz ve Türkiye'de Euro kuru ve Tüfe etkilemektedir. Rusya ekonomisinde Devlet borçlanmasının, GSYİH'ya oranını etkileyen unsurlar Euro

kuru, faiz 1, faiz 2 ve TÜFE iken Kazakistan ekonomisinde US-$ kuru, faiz ve TÜFE; Belarus'da US-$ kuru, faiz ve TÜFE; Türkmenistan'da Euro kuru ve faiz ve Türkiye'de de faiz ve TÜFE etkilemiştir.

Rusya, reel ekonomik büyümeyi arttırmak ve Devlet borçlanmasının, GSYİH'ya oranını düşürmek için özellikle Euro kuru, faiz ve TÜFE göstergelerinde iyileştirici ekonomik politikalarını düzenlemelidir. Kazakistan ise Euro kuru, US-$ kuru, faiz ve TÜFE göstergelerinde yoğunlaşmalıdır. Aynı durum, Belarus için de geçerlidir. Türkmenistan ise ekonomi politikalarında Euro kuruna ve faizlere ağırlıklı önem verilmelidir. Buna karşın Türkiye'de Euro kuru, TÜFE ve faizler, ekonomi politikaları oluşturulurken dikkate alınmalıdır. Böylece reel ekonomik büyüme artmakta ve Devlet borçlanmasının, GSYİH'ya oranı azalmaktadır.

Türkiye'nin ve Avrasya Ülkeleri'nin şoklara karşı kırılganlıklarını azaltmak, küresel rekabet güçlerini arttırmak ve dışa olan bağımlılıklarını azaltmak için küresel anlamda rekabet güçlerini arttırıcı ekonomik politikalarını oluşturmak ve geliştirmek için stratejiler oluşturmalıdırlar.

# Bazı Güney ve Doğu Avrupa Geçiş Ekonomilerinin Mali Reformlarının Karşılaştırması

# Comparison of Fiscal Reforms in Some South and East European Transition Economies

Asst. Prof. Dr. Funda Diril (Dokuz Eylül University, Turkey)

## Abstract

The aim of this paper is to compare fiscal reforms of some of the transition economies in Balkans including The Republic of Macedonia. Since 1990's former planned economies, which are in the process of economic transformation into market economy have carried out several reforms. During this economic transformation process both the effects and the results of these reforms vary according to the difference between the needs of structural change in each country. In this study, some of the selected transition economies in Balkans are analyzed: Some of the recent members of European Community in Balkans and The Republic of Macedonia are examined in comparison. Analysis of fiscal reforms of these transition economies are evaluated in several headings in reference to the macroeconomic statistics created by international organizations such as OECD, EC and IMF and policy suggestions are proposed accordingly. The government deficit, government debts and tax policy are the significant part of these reforms. Several strategies are implemented in developing support systems for competitive environment and private ownership. Economic shrinkage, current account deficit, low foreign capital and government deficit indicate economic weakness in these countries. The Czech Republic, Bulgaria, The Republic of Macedonia, Romania and Hungary face fiscal problems such as economic shrinkage, debt service and government deficit during the transition process. As being the candidate country for European Union accession; The Republic of Macedonia is approaching to the Maastricht Criteria and has better outcomes in public debt compared to the other countries given above.

## 1 Giriş

Çalışmamızda, Güney ve Doğu Avrupa üye ve aday ülkelerin yapısal dönüşüm sürecinde mali reformlarına ilişkin karşılaştırma yapılması amaçlanmıştır. 1990'ların başında yapısal dönüşüm yaşamalarının ardından, ekonomik ve sosyal hayatta başarıyı sağlamak için sürdürülebilir bir mali yapıya ihtiyaç duyan ülkelerin küresel krizin de dahil olduğu dönemler itibariyle ekonomilerine yansıyan etkiler değerlendirilmiştir. Kamu mali disiplin öncelikli olmak üzere, piyasa ekonomisine geçiş sonrası ekonomik büyüme ve kalkınma, kaynakların etkin kullanımı, istihdamı arttırma gibi önemli temel ekonomik hedefler çerçevesinde karşılaşılan sorunlar irdelenmiştir. Ekonomik ve mali kurumların yeniden yapılandırma çalışmaları sürerken, kamu harcamaları, borçlanma, bütçe açıkları ele alındığında, her ülkenin kendine özgü farklı sorunları olduğu görülmüştür. Günümüz itibariyle izlenen mali politikalara rağmen ekonomik ve hukuksal belirsizlikler ve risklerin devam ettiği izlenerek çalışma konumuz ülkeler için önerilerde bulunulmuştur.

## 2 Seçilmiş Güney Avrupa Ülkelerinin Temel Ekonomik ve Mali Veriler Çerçevesinde Küresel Krizin Etkilerinin Değerlendirilmesi

İnceleme konusu ülkeler öncelikle temel makroekonomik göstergeleri ve ülkelerin küresel krizin etkisinde karşılaştıkları durumlar ele alınmaktadır. Daha sonra ülkelerin mali durumları karşılaştırmalı olarak değerlendirilmektedir.

### 2.1 Çek Cumhuriyeti

1989'da Çekoslovakya serbest piyasa ekonomisine dönüş yapmış, 1 Ocak 1993 tarihinde ülke Çek Cumhuriyeti ve Slovakya olmak üzere iki ülkeye ayrılmıştır. Geniş çaplı ekonomik reformlar ile Çek Cumhuriyeti Mayıs 2004 tarihinde Avrupa Birliği'ne katılmıştır (The Economist Intelligence Unit, 2011). Çek ekonomisi, küresel krizin etkisi ve ihracat talebindeki keskin daralmanın da sonucu olarak, uzun bir dönemden sonra ilk defa 2008 yılı son çeyreğinde küçülmeye başlamıştır. 2008 yılında büyüme % 2.1 ile sınırlı kalmıştır. 2009 yılında % 4.1 oranında ekonomik daralma göstermiştir. Ekonomik büyümeye ilişkin makroekonomik istikrar, ülkenin dış ticaret yapısındaki köklü değişiklik, vasıflı iş gücü ve uygun yatırım ortamının oluşması yanında doğrudan yabancı sermaye girişinin büyümeyi sağlayan avantajlar olduğunu görmekteyiz. Ekonomi son üç yılda ortalama % 6'nın üzerinde büyümüştür (Bektaşoğlu, 2011).

Çek ekonomisinde büyük payı bulunan Alman ekonomisi ile ihracatının % 83'ünü gerçekleştirdiği AB ülkelerindeki ciddi talep daralması etkili olmuştur. Dış ekonomik koşullardan etkilenmesi sonucu olarak da büyüme oranı düşmektedir. Büyüme hızındaki yavaşlama işsizliği de beraberinde getirmektedir. Ekonomideki belirsizlikler reel sektörü tasarruf tedbirleri almaya zorlamaktadır. Ülkenin temel sorunu kamu harcamalarından

dolayı sürekli artan borçlar ve bütçe açığı olduğu gözlemlenmektedir (T.C. Dışişleri Bakanlığı, 2001; Central Intelligence Agency, 2014). Mevcut reformlara rağmen, sağlık ve sosyal güvenlik reformlarının hala gerçekleştirilmemesine bağlı olarak, bütçe açığının, ülkenin uzun dönemli ekonomik istikrarı ve AB kriterlerine ulaşılması açısından bir tehdit olduğu değerlendirilmektedir (Bektaşoğlu, 2011). Çek cumhuriyeti incelenen ülkeler arasında kişi başına düşen GSYİH oranı bakımından 2201-2012 yılları arasında en iyi ülke konumundadır. Küresel krizden ekonomik altyapısının güçlülüğüne de bağlı olarak diğer bölge ülkelerine göre en az düzeyde etkilenmiştir Ancak yine de krizin etkileri ve ekonomideki riskler devam etmektedir.

### 2.2 Bulgaristan

Bulgaristan, bağımsızlığını kazanmasının ardındaki ilk yıllarda 1989 sonrasında ciddi yönetim sorunları yaşamıştır. Ekonomisini büyük çapta Almanya'ya endeksleyen Bulgaristan, 1997 IMF ile anlaşarak başlattığı reformlarla, gerekli özelleştirmeler yapmıştır. Bulgaristan da makroekonomik ve mali istikrar bakımından, 2008 yılı GSYH'nin reel büyüme oranı - 6,0%, yıllık enflasyon değişim oranı - 7,8%, işsizlik oranı - 6,3%, son 5 yıl için bütçe fazlası 3,0% olup döviz riski bulunmayıp, sabit BGN (Bulgar Levası) – EURO döviz kuru pozisyonundadır. Sabit kur sistemine geçen ülkenin, enflasyonu ve bütçe açığını da kontrol altına aldığı görülmüştür (Taylan, 2011). 1992-2001 yılları arasında ülkeye yapılan toplam yabancı yatırımın yaklaşık %32'si,(1,448 milyon dolar) özelleştirme uygulamaları neticesinde sağlanmıştır (Karagöz, 2009). Küresel mali krizin etkisiyle iç ve dış ticaret hacmi, yatırımlar azalmış tüm sektörlerde hissedilecek şekilde ekonomide daralma olmuştur. Bulgaristan'ın 2007 yılında AB üyeliğiyle birlikte ekonomik performansının arttığı görülmektedir. Ülkede yatırımların artmasına rağmen ücretlerdeki düşüklük, üretim artışında yavaşlama, artan rekabet ortamında güç kaybına sebep olmuştur (Economic Intelligence Unit, 2011).

Ülkede makroekonomik dengesizlikler yanında dış ticaret açıkları ve kurumlardaki yapısal sorunlar ile, Bulgaristan tam da AB ye katılma dönemine denk gelen ekonomik kriz sırasında birçok dengesizliğin biriktiği bir dönem tecrübe etmiştir. Yüksek yabancı sermayenin içe akışı ekonomideki aşırı ısınmaya ve sabit varlık değerlerinde devamlı bir artışa neden olmuştur. 2009 ve sonrası cari durum düzelse de dış borç stoku yüksek seyretmiştir. Dış borçlarda daha çok azalma için sürdürülebilir dış rekabet gücü ve yüksek ihracat performansı gerekmektedir. Kısa ve orta vadede bazı sektörlerdeki yatırım ve büyüme sınırlı kalmıştır (Central Intelligence Agency, 2014). Ayrıca iç piyasadaki daralma potansiyel büyümeyi de olumsuz etkilemiş, İşsizlik hızla artmıştır. Özellikle aktif iş gücü piyasası ve beşeri sermayeye ilişkin politikalar da uzun süre gelişme kaydedilememiştir. Büyük dış borçlar ekonomide kırılganlığa sebep olmaktadır. Maliyet rekabeti çok önemli bir konudur. Özellikle öncesinde cari bütçe açığı yüksek olan ülkeler için önemlidir. Bulgaristan, Macaristan gibi dış sürdürülebilirliğini koruması gereken ülkeler için veya ihracat payları düşen ülkeler için borç yapısı büyük önem arz etmektedir (European Commission, 2011).

| Kurumlar Vergisi | % 10 | Toplam vergi gelirleri/GSHY(%) | - 2011 | 26.9 |
|---|---|---|---|---|
| Katma Değer Vergisi | % 20 | Dolaylı vergi gelirleri | - 2011 | 54.2 |
| Gerçek Kişilerin Gelir Vergisi | % 10 | Direk vergiler/Toplam vergiler(%) | - 2011 | 18.9 |
| Sosyal Güvenlik Vergisi | % 28,5 | Direkt vergi gelirleri/GSYH(%) | - 2011 | 5.2 |
| Stopaj Vergisi | % 15 | Dolaylı vergi gelirleri/GSYH(%) | - 2011 | 14.8 |

*Tablo 1. Bulgaristan Vergi Gelirleri Ve Oran Yapısı, **Kaynak:** KPMG, taxrates. cc, Eurostat 2012.*

Bulgaristan, Güney ve Doğu AB ülkeleri içerisinde vergilendirme konusunda en fazla uyum çalışmaları gösteren ülke durumundadır. Ülkede, istihdam amaçlı düşük vergileme, teknoloji alanında, araştırma ve geliştirme faaliyetlerinde reel sektöre ciddi anlamda vergi kolaylıkları sağlanmaktadır (European Commission, 2011).

Bulgaristan'da 1995 sonrasında GSYH payı olarak vergi gelirleri düşük tutulmuştur. Küresel krizin ardından 2009'da tüm vergilerin oranı düşmüştür. 2011'de vergi gelirleri/GSYH %27'ye ulaşmıştır. Dolaylı vergilerin GSYH payı Avrupa ortalaması %13.4'e yakınlaşarak Bulgaristan 5.sırayı almıştır. Direkt vergilerin GSMH oranı Avrupa ortalamasına göre düşük görülmektedir. Sosyal güvenlik katkılarının payı son yıllarda azalmaktadır. Son 10 yıl itibariyle vergi stratejisine bakıldığında, direkt vergilerin azaldığı endirekt vergilerin arttırılması önünde olmuştur (Eurostat Statistical Book, 2012). Bulgaristan'da vergi mevzuatına bakıldığında, işlenmemiş tarım ürünlerinde indirim, emlak vergisi istisnasına yönelik eşiğin azaltılması, taşıtlarda ÖTV'nin kaldırılması denizcilere yönelik teşvikler ve iş bulmaya yönelik vergi kolaylıkları görülmektedir. Diğer yandan, elektrik, kömür ve sigaradaki ÖTV'nin arttırılması, kumar ve piyango kazançlarının vergilendirilmesi, lüks tüketime ilişkin vergilerin arttırılması yönünde vergi önerilerinin olduğu görülmektedir (Bakar ve Tokatlıoğlu, 2012). Ülkede yasal düzenlemeler ile vergi oranlarında yapılan azalış ile küresel krizin etkisi sonucu vergi oranlarındaki azalış arasında ilişkili bulunmamaktadır. Dış ticarette oluşan açık, katma değer vergisinde yapılan %20 oran artışı ile karşılanmak üzere bir vergi düzenlemesine gidilmiştir (Eurostat Statistical Book, 2012).
### 2.3 Makedonya

2000 yılında yüzde 4.5 oranında büyümüş olan Makedonya ekonomisi, iç istikrarsızlıklardan son derece olumsuz etkilenmiş, mali yapı ve ödemeler dengesi bozulmuş, reform sürecinde bir duraklama yaşanmış ve

GSYİH, yüzde 4.5 oranında küçülmüştür. Buna rağmen enflasyonun kontrol altında tutulabilmesi ve döviz kurunun istikrarını koruması olumlu olarak değerlendirilmektedir. İlerleyen yıllarda ise Makedon ekonomisinin hızla toparlandığı görülmektedir. İç koşulların istikrar kazanması, bölgesel ekonomilerin gelişmesi ve hizmet sektörünün güç kazandığı görülmüştür (Dış Ekonomik İlişkiler Kurulu, 2011).

2008 yılı sonunda başlayan ve 2009'da dünya ülkelerinin neredeyse tümüne etki eden küresel ekonomik ve mali kriz Makedonya'da çok etkili olmamıştır. Bunun nedeni, Makedon ekonomisinin ve özellikle finans piyasasının küresel ekonomiye henüz entegre olamamasının sağladığı avantajdır. Bununla birlikte Makedonya ekonomisinin, 1991'de ülkenin bağımsızlığını kazandığı dönemlerdeki ekonomik büyüklüklerine ancak ulaşmakta olduğu da dikkat çekicidir (Görgün, 2011). Sınai üretimdeki (özellikle demir-çelik sektöründe) artış ve düşük faiz oranları sayesinde artan yatırımlar, büyümenin itici gücü olmaktadır. Bununla birlikte yatırım ortamının istenen seviyeye gelmemiş olması ve uygulanmakta olan sıkı mali politikalar büyümenin hızını kesen etkenler olarak görülmektedir (Dış Ekonomik İlişkiler Kurulu, 2011). 2009 yılı genelinde küresel krizin etkisiyle Makedonya ekonomisinde negatif büyüme görülmüştür. Planlı bir kalkınmadan ziyade kısa sürede gerçekleştirilecek hedefler izlenmiştir. Ülkede kuvvetler ayrılığı prensibinin işlememesi sonucunda yargı kararlarına güven duyulmaması ve yönetimde eksikliği görülen şeffaflık gibi sorunlar nedeniyle özellikle turizm sektöründe yabancı yatırımcı çekilmesi konusunda büyük sıkıntılar yaşanmaktadır. Buna rağmen, ülkede kriz dönemi sonrası yıllarda makroekonomik düzeyde başarılar da elde edilmiştir. Enflasyon 2011'de %3,9 olarak gerçekleşmiş, kamu bütçe açığı da sadece GSYİH'nın % 2,5 olarak gerçekleşmiştir. Para birimi sabit ve Euro'ya karşı istikrarlı kalmıştır. Ancak, 2012'de yaşanan Avrupa Bölge krizi ülkeyi ciddi şekilde etkilemiştir. 2011 yılında GSYİH'da % 2,9 oranında büyüme kaydederek, güneydoğu Avrupa ülkeleri arasında en güçlü performansı gösteren ülke, 2012'nin ikinci yarısından itibaren düşüşe geçmiştir. İhracat talebinde daralma, yabancı yatırımlarda düşüş ve iç sermaye akışı talebinde yaşanan gerileme ülkenin büyüme hedeflerini de etkilemiştir (Balkansiad, 2010).

Ağır işleyen bürokrasi, sıkça değişen mevzuat ve güven duyulmayan yargı sistemi, olası yabancı yatırımcıların Makedonya'da gerçekleştirmeyi öngördüğü yatırım kararlarını bir kez daha değerlendirme gereği duymalarına neden olabilmektedir. Bununla birlikte, bölgedeki diğer ülkeler ile benzer sorunlar ve iş kültürü içinde olan, Makedonya'nın genel olarak diğer bölge ülkelerinden daha iyi durumda olduğu belirtilmelidir. Yasal ve düzenleyici çerçeve oldukça müsait olmakla birlikte, rüşvet, bürokrasi alanındaki sorunlar ve kurumlararası iletişim eksikliği ve kanunların uygulanmasındaki endişeler yerli ve yabancı yatırımcıları tedirgin eden hususları oluşturmaktadır. Kurumsal kapasite eksikliklerine rağmen, birçok değişiklik yasalarla düzenlenmiş ve uygulamaya alınmıştır (Pulat, 2013).

***Şekil 1.*** *Makedonya Temel Makroekonomik Göstergeler* **Kaynak:**
*Makedonya Cumhuriyeti Devlet İstatistik Kurumu*

Makedonya Cumhuriyeti'nde doğrudan vergiler (kurumlar vergisi, kişisel gelir vergisi, emlak vergisi) ve dolaylı vergiler (KDV ile ÖTV) uygulanmaktadır. 1 Ocak 2008 yılında Makedonya tüm vergiler için %10'luk bir düz oran uygulanmıştır. Kurumlar ve gelir vergisi oranlarında Avrupa'daki en düşük vergi oranına ulaşılmıştır. Taşınmaz mallar, güvenlik harcamaları ve iştirakler kişisel gelir vergisinden muaf tutulmuştur. Emlak Vergisi %0,1-0,2, gayrimenkul satış vergisi ise %2-4 gibi çok düşük oranlarda uygulanmaktadır (Balkansiad, 2010). Ülke ekonomisinin hemen her alanının ciddi olarak modernleştirilmesi, geliştirilmesi ve özellikle bürokrasi ve özel sektörde hakim olan ağır iş kültürünün profesyonelleştirilmesi yönündeki ihtiyaç devam etmektedir. Kamu bürokrasisi ve yargı sisteminde ciddi aksamalara işaret edilmektedir. Bu anlamda birçok ihalenin ertelenmesi ya da sonra yeniden projelendirmek üzere iptal edilmesi uygulamaları örnek gösterilmektedir (Balkansiad, 2010).

### 2.4 Romanya

Romanya ekonomisinde 2000'li yılların ortalarında yaşanan kriz sırasında konjonktür yanlısı bir mali politika izlenmiştir. 2009 yılında ekonomide % 71'lik sert bir düşüş ve daralma ile mali durumun kırılganlığını ortaya

çıkarmıştır. Nitekim borçları birleştirme ve iyileştirme çalışmaları ile devletin ciddi bir borç yönetimi başlattığı görülmektedir. 2010 yılında başlatılan mali konsolidasyon ile borçlarda kısa vadesinin uzatılması ve yapılan düzenlemeler sonucu Devlet, yapısal olan bütçe açığını düşürmede hissedilir bir ilerleme kaydetmiştir. 2008' de bütçe açığı GSYİH'nın %8.5'i iken, 2010 yılında %5.1'e, 2011 yılında ise bu oran %2.8'e düşmüştür. Bununla bütçenin hem gelir hem gideri üzerinde düzenlemeler ele alınmıştır. Kamu çalışanlarının sayısı azaltılmış, maaşlar düşürülmüş, ücret ödemesi sayılan bazı ödemeler (çeşitli bonuslar) iptal edilmiştir (Canagarajah, vd, 2012). Gelir vergisi değişiklikleri sebebiyle nispeten düşük seviyelerde kalan ücret baskısı ve tam zamanlı istihdamdaki yavaş iyileşmenin, enflasyonun düşük seviyelerde kalmasına katkı sağlaması hedeflenmiştir. 2009'da yaşanan daralmanın ardından, pozitif büyüme kaydedilmiştir. İyileşme güçlü ihracat performansına dayalı olarak da gerçekleşmiştir. İhracattaki artışın, iç talepteki yavaş iyileşme sebebiyle baskılanmış olan ithalat artışını aşacağı ve cari işlemler dengesine olumlu katkısı amaçlanmıştır (Avrupa Komisyonu Ekonomik ve Mali Konular Genel Müdürlüğü, 2011).

Rekabet ve ihracat performansı bazı ülkelerin ekonomik görüntüleriyle doğrudan orantılı olmaktadır. Özel sektördeki finansal yapının yetersiz olması, mali konsolidasyon ihtiyacı, net ihracat düzeyi, ihracata dayalı yatırımlar orta dönemli ekonomik büyümeyi destekleyen önemli bileşenlerdir. Birim işgücü maliyetler de rekabet ve işsizlikten en çok etkilenen unsur olarak üye devletlerin düzenlemelerinde konu olmaktadır. Avrupa birliği ve Avronun kullanıldığı bölgelerde 2013 yılında konsolidasyon çabaları güçlü iken, 2014 yılında kamu borç oranının artması halinde konsolidasyon hızının azalması beklenmektedir. Konsolidasyon çabaları ve ekonomik iyileşme bütçe açıklarının azalmasında önemli bir rol oynamaktadır. Bu hususta 2013 yılında üye ülkelerin çabaları ve yapısal düzenlemeler kayda değer görülmüştür (European Commission, 2011).

Romanya vergi sisteminde %16'lık düz gelir vergisi oranı uygulamaktadır (KPMG, 2012). KDV oranları ve sosyal sigorta primlerinin arttırılması ile gelirlerde bir artış sağlanmıştır. Yerel yönetim borçları durdurulmuş, merkezi hükümet harcamaları ciddi oranda azaltılmıştır. Orta vadede 2013-2016 yılları arasında bütçenin denge yapısının pozitif olması öngörülmektedir. Konvarsiyonel mali dengenin, yapısal bütçe açığından daha düşük olması amaçlanmaktadır. Çünkü ekonomi orta vadede olumsuz bir üretim açığıyla çalışmakta ise de 2012'den sonra ileriye doğru konversiyonel bütçe açığının GSYİH'nın % 3'ünden düşük olması ile istikrarlı bir büyüme programı sağlanmış olacaktır (Canagarajah v.d., 2012).

### 2.5 Macaristan

1989 ve 1990'lı yıllarda Macaristan'da siyasi ve ekonomik dönüşüm başarılı bir şekilde gelişmiştir. Bu dönemde kamu mülkiyetinin satışı seklinde özelleştirme başlatılmıştır. Ekonomide özel mülkiyetin yaygın hale getirilmesinde, sermayenin yetersizliği, ekonomide etkinliğin sağlanması, rekabetin arttırılması, kamu payının düşürülmesi, kamu harcamalarının azaltılması ve yeni iş imkânlarının yaratılması gibi faktörler etkili olmuştur

(Karagöz, 2009). Ancak süreç içinde özel sektördeki yapısal sorunlar ve finansal yetersizlik ve ihracatı canlandıracak ölçüde üretimin olmaması borçlanmaların artmasına sebep olmuştur. Ekonomiye borçların sürdürülebilirliğine ilişkin düzenlemeler için bankaların çalışma ortamlarının geliştirilmesi gerekmiştir. Diğer yandan kamu kesimi yüksek miktarda borçlanmak durumunda kalmıştır. Mali dengesizlik, mevcut iyileştirmelere karşın, zayıflatılmış döviz kuru, zayıf büyüme potansiyeli ve yüksek finansman maliyeti borçların azalmasını engellemiştir. Ülkede orta vadeli amaçlara ulaşılamaması ile birlikte mali dengesizlik ve risklerin devam ettiği görülmektedir (Worldbank CIA Factbook, 2014).

Macaristan'ın ciddi bütçe açıkları bulunmamakla birlikte yapısal dengesi, borç azalışını riske edecek şekilde zayıflamaktadır. Makroekonomik dengesizliklerin politikalar ile düzenlenmesi gerekli görülmüştür. Özellikle uluslararası platformda olan olumsuzluklar nedeniyle zaten kırılgan bir yapıya sahip olan mali sektördeki borçların durumu ve ihracat potansiyeline daha fazla dikkat etmeyi gerekli kılmaktadır. Bu sayede önemli risklerin ekonomik fonksiyonlar üzerinde bulunan yan etkilerinin azalacağı beklenmektedir (European Commission, 2011).

## 3 Seçilmiş Güney Avrupa Üye ve Aday Ülkelerin Genel Mali Durum Karşılaştırması

AB'nin Mali Kuralı olarak da adlandırılan Maastricht Kriterleri, AB üyesi ülkelerin Avrupa Para Birliği'ne katılabilmeleri için üzerinde anlaşılan açık ve net şartlardır. Bu şartların iki yönü bulunmaktadır. Mali disiplin için gerekli olanlar ile parasal disiplinin sağlanmasına ilişkin şartlardır. Mali disiplin için gerekli olan iki şarta göre, bir ülkenin bütçe açığının GSYH'ya oranı yüzde 3'ü aşmaması, kamu borçlarının GSYH'ya oranının da yüzde 60'tan fazla olmamasıdır. Parasal disiplinin sağlanmasında da üç konu önemli görülmüştür. Enflasyon faiz oranı ve döviz kurları (Dikbaş, 2010). Bu kıstaslar da dikkate alınarak AB'ne üye ve aday olanlar arasında belirlediğimiz ülkelerin mali durumlarıyla ilgili değerlendirmelerde bulunulmuştur.

### 3.1 Seçilmiş Ülkelerin Kamu Borç Yapısı ve Bütçe Açıklarının Maasricth Kriterlerine Uygunluğu

2013 yılı itibariyle Bulgaristan'da kamu borcu GSYİH oranı olarak yüzde 18 düzeyinde olmuştur. Bulgaristan'ın izlediği mali reformlardaki başarısının bir göstergesi olarak 2009-2012 yılları arasında kamu borçlarını kontrol altına aldığını göstermektedir. IMF tarafından yayımlanan 2010 Makedonya Raporunda,

ülkenin ekonomi yönetimine getirilen en ciddi eleştiri dış borçlarla ilgili olmuş ve hükümetin ve özel sektörün 2009 boyunca tehlikeli düzeyde borçlanmaya gittiği belirtilmiştir (balkansiad, 2012).

***Şekil 2.*** *Maasricht Kriterlerine göre Ülkelerin Kamu Borçlarının Görünümü,* ***Kaynak:*** *Eurostat,2013,(Erişim:2014).*

Çek Cumhuriyeti, Romanya ve Bulgaristan Maastricht Kriterlerine uygunluğu sağlarken Macaristan kriterin çok üzerinde borçlanmış, Yunanistan ise üye ülke olarak kriteri çok aşan orandaki borç krizinde olduğu görülmektedir.

***Şekil 3.****Kamu Borç Stoku/GSYİH (%),2003-2012,* ***Kaynak:*** *Knoema, IMF,2013,(Erişim:5.1.2014)*

Şekil 3 de AB üye ve aday konumunda olan, Türkiye'nin de dahil edildiği, 2003-2012 yılları arasında, altı ülke için kamu borç/GSYİH verileri izlenebilmektedir. Yakın coğrafyada bulunan ve AB kriterlerine uyum sürecini sağlamayı amaç edinmiş olan bu ülkeler için mali yapı değerlendirildiğinde, finansman ihtiyacının dış borçlanmayla çözümü sonucu, artan borç stokları bütçe açıkları hacmini genişletmiştir. Bununla birlikte, vergi yönetimi ve vergi tahsilatının yetersiz kalması, verginin tabana yayılamaması gibi nedenler de bütçe açıklarını

arttırmıştır. Piyasa ekonomisi kurallarına uyum sürecinde mali disiplinin sağlanması açısından bütçe harcamalarını kısıcı ve vergi gelirlerini artırıcı politikalar izlenerek mali dengelerde olumlu gelişmeler elde edilebilmiştir. Maastricht kriterlerine uygunluğu sağlayamayan Macaristan'ın çok yüksek düzeyde borçlanma trendi izlenmektedir. Bulgaristan yıllar itibariyle kamu borçlarında ciddi bir düşüş ile son yıllar itibariyle en az borçlu ülke konumuna ulaştığı görülmektedir.

**Şekil 4.***Cari İşlemler Dengesi GSYİH (%),2004-2012,* **Kaynak:** *Knoema,2013,IMF*

Ekonomik istikrarın sürdürülebilirliği bakımından cari işlemler dengesi hesabı önemli bir husustur. Para ve maliye politikalarının etkisinde olan bu hesap, dış borçların yüksekliği, bütçe açıklarının fazla olması ile birlikte değerlendirildiğinde anlamlı sonuçlar vermektedir. Nitekim enerji kaynaklarında dışa bağımlılık, tasarrufların yetersizliği, yatırımların dışa bağımlı olması, artan faizlerin döviz kuruna etkileri ile ihracattaki daralma şeklinde sayılabilen farklı bileşenlerin ülkelerin karşılaştığı benzer mali sorunları olarak görülebilmektedir.

**Şekil 5.***Maasricht Kriterlerine Göre Ülkelerin Bütçe Açıkları,* **Kaynak:** *Eurostat,2013,(Erişim:2014).*

2012 yılında AB-27 ülkelerinden seçtiğimiz ülkeler arasında bütçe açığı bakımından, Yunanistan ve Romanya ilk sıralardayken onları Çek Cumhuriyeti, Macaristan, Bulgaristan izlemektedir. AB-27 ülkeleri ortalaması olarak 2011 yılında %1,6 olan GSYİH büyüme oranı, 2012 yılında -%0,2 olarak gerçekleşmiştir. Bulgaristan, 2010-2011 döneminde, zayıf iç talebe karşın yüksek ihracata dayalı olarak büyüme kaydetmiştir. İç talep, ekonomideki olumlu gelişmelere ve tüketici güvenini artıran mali politikalar ile desteklenebilmektedir. Bütçe açığı, güçlü iç talep, ithalattan beslenen KDV artışı ve toplanan vergi gelirindeki yükselmeye bağlı olarak düzelme göstermiştir. Kamu borç stokunun/ GSYH oranının 2013'te bir önceki yıla göre azalma kaydetmiştir. Çek ekonomisi 2012 yılında daralmış ve dört çeyrek boyunca küçülmeye devam etmiştir. Bu gerilemenin ana etkeni olarak çeşitli olumsuz faktörlerden etkilenen iç talep olarak ifade edilmiştir. Devam eden mali sıkılaşma tedbirlerine ek olarak enerji ve gıda fiyatlarında yaşanan yükselişler ile düşük ücret artışları hane halkının tüketim harcamalarını geriletmiştir. Bütçe açığında 2011'de gerçekleşen önemli ölçüdeki daralmanın ardından bütçe gelirlerindeki azalmaya paralel olarak, 2012 yılında bütçe açığı/GSYH oranı yükselmiştir. Kiliselere

yönelik mali destekler hakkındaki yasanın yürürlüğe girmesi AB fonlarının kullanılmasındaki usulsüzlükler sebebiyle ödenen cezaların bu oranda etkili olduğu ileri sürülmektedir (Bektaşoğlu, 2011).

***Şekil 6.****Seçilmiş Ülkeler İçin GSYİH Reel Artışı (% ) – 2013 verileri, **Kaynak: IMF, TÜİK, Kalkınma Bakanlığı,2013.(Erişim:2.1.2014)***

Şekil 6'daki veriler paralelinde ülkelerin mali durumu incelendiğinde iç talep, ihracat ve yatırımlardaki artışın ekonomik büyümeye olumlu katkı sağladığı düşünülmektedir. Bütçede, gelir attırıcı ek tedbir olarak vergi gelirleri içinde özel tüketim vergilerinin arttırılması dikkat çekicidir. Yunanistan, 2012 yılındaki daralmanın ve devam eden kamu maliyesinde daraltıcı tedbirlerinin etkisiyle ekonominin 2013 yılında % 4,2 oranında küçüleceği öngörülmüştür. 2013 yılında faiz dışı bütçe dengesine ulaşılmasını, 2014 yılında ise faiz dışı bütçe fazla verilmesini hedeflenmektedir. 2013 yılında genel bütçe açığının (bankaların sermayelendirilmesi hariç) ihtiyari tedbirler neticesinde daha da azalarak GSYH'nin % 6,75'i civarında gerçekleşmesi beklenmektedir. Yüksek kamu borçları, negatif ya da nominal GSYH büyümesi ve bankaların yeniden sermayelendirilmesinin yarattığı maliyetler neticesinde 2012 yılında % 88 civarında gerçekleşen kamu borcu/GSYH oranının 2014'de % 100'ün üzerine tırmanacağı öngörülmektedir. Macaristan ekonomisi 2012 yılında % 1,7 küçülmüş ve iç talep % 3 daralmıştır. Yatırımların GSYH'ye oranı son yıllar azaldığı devam görülmektedir (Avrupa Komisyonu Ekonomi ve Mali Konular Genel Müdürlüğü, 2013). İncelenen ülkeler arasında Makedonya üye ülkeler karşısında GSYİH reel büyüme artışı ile ekonomik iyileşme trendi içinde olan ülke olarak yer almaktadır.

## 4   Mali Reformlara İlişkin Değerlendirme

Piyasa ekonomisini başarısızlığa uğratan, dolayısıyla devlet müdahalesini gerekli kılan önemli bir neden piyasada gelir ve servet dağılımının dengesiz olmasıdır. Özel kesimdeki bu "adaletsizlik" kamu kesiminde de oluşabilmektedir. Devlet yönetiminde oluşan kamusal güç ve yetki dağılımındaki dengesizlikler ile ilgili görülen başlıca sorunlar; kamu kesimindeki merkeziyetçi yapı, hukuk sisteminde kuvvetler ayrılığı prensibinin geçerliliğinin olmaması ve yürütmenin gücü kendi elinde bulundurması, yürütme organı olan hükümette güç ve yetkinin tek kişi elinde (parti ve hükümet başkanı) bulunması, iktidarın kişiselleşmesi, politikada Şeffaflık (açıklık) olmaması gibi hususlar sayılabilmektedir. İlaveten, kamu ekonomisinde alınan karar ve yapılan uygulamalarda kısa vadeli düşünme alışkanlığı sonucu, siyasal iktidarlar için uzun dönemde ekonomiye büyük katkıları olabilecek yatırım projelerinin uygulanması yerine, kısa dönemde seçmenlere direkt fayda sağlayabilecek projeler uygulanması daha rasyonel görünmekle birlikte kaynakların verimsiz kullanımı ile birlikte kamu harcamalarında israfa neden olmaktadır (Aktan, 2011).

Mali reformların başarısı mali disiplinin sağlaması ile mümkün olabilmektedir. Mali disiplinin sağlanmasında Maastricht kriterlerine uyum süreçlerinin dikkatli bir şekilde planlanması, bütçe politikalarının bu amaca yönelik ele alınması ve borç yönetiminin etkinliğinin sağlanması gerekmektedir. Dış ticaret ile cari işlemler açıklarının fazla olması iç dengeleri bozmakta ve bunun doğrudan mali açıklar üzerinde etkili olduğu görülmektedir. Ekonomik ve mali istikrarın en önemli şartlarından biri iç dengelerle birlikte dış dengelerin de kontrollü bir şekilde sürdürülebilmesidir. Dış dengelerin kontrolünde ihracat teşvikleriyle birlikte dışa bağımlılığın, aşırı ithalatın, önüne geçilecek tedbirler alınması gerekmektedir. Bütçe dengesi bakımından harcamaların kontrollü bir seyir izleyerek vergi ve diğer gelir kaynaklarının arttırılması gerekmektedir. Ancak vergilemede temel ilkelere bağlı kalınarak, mükellef-devlet ilişkisinde vergi uyumu ve bilincinin arttırılması gözetilmelidir. Bu anlamda genel teşvik mevzuatı gözden geçirilmeli, ülkenin kalkınma ve istihdam politikaları ile eş güdüm içinde

politikalar yürütülmelidir. Sermayenin mobilitesini hızlandırmak ve ülkeye daha fazla yabancı sermayenin girişini arttırmak için Maastricht kriterlerine uyum çerçevesinde iyi bir borç yönetimi tüm ülkeler bakımından öncelikli bir husustur. Borçların vade yapısında değişiklik ile birlikte bazen de iç piyasadan daha fazla fonun devlet kontrolüne geçmesi ve faiz oranlarının yükselmesi söz konusu olabilmektedir. Bu şekilde konsolidasyon ile ekonomi rahatlatılırken, konversiyon ile yüksek faiz oranları düşürülerek likidite artırılıp enflasyon önlenmeye çalışılır. Borçların sürdürebilirliği hedeflenirken, orta ve uzun vadede borçlanma tercihinde bulunulur. Doğrudan yabancı yatırımlar sadece cari işlemler açığının dengelenmesi açısından değil, ekonomik büyümenin de temel taşlarından birisi olarak mali disiplinin desteklenmesinde finansal önemli bir unsurdur.

Çalışma konumuz olan ülkeler, cari işlemler hesabı açığı, kısa dönemde çevrilemeyecek kadar çok dış borçlar ve zayıf bankacılık sisteminin neden olduğu sorunlarla karşılaşmışlardır. Gelişmekte olan bu ülkelerin mali disiplin sağlamadan sadece para politikası uygulaması ciddi başka sorunlara neden olmaktadır. Nitekim gelişmekte olan ülkelerin sahip olduğu borcun büyük bir miktarı döviz cinsinden olmaktadır. Yüksek ve değişken enflasyon geçmişi, borç sözleşmelerinin vadesinin çok kısa olmasına sebebiyet vermektedir. Bu kurumsal özelliklerin sonucu olarak genişlemeci para politikası uygulamasından kaçınılmalıdır. Aksi durumda beklenen enflasyonun hızla yükselmesi iç paranın devalüasyonuna neden oluşturabilecektir. Devalüasyon, firma ve bankaların bilânçolarının bozulmasına yol açtığı gibi borç yüklerinin artması, net değerlerinin düşmesi ile sonuçlanmaktadır. Ayrıca enflasyon artışı ve faiz oranlarındaki yükselme, firmaların nakit sıkıntısına da yol açmaktadır. Öte yandan borç sözleşmeleri çok kısa vadeli olduğu için genişlemeci para politikasından kaynaklanan fiyat yükselişi ile birlikte firmaların reel borç yükünün azalmasında- net değer üzerinde -önemli bir olumlu etki oluşmamaktadır. Gelişmekte olan ülkelerdeki genişlemeci para politikasının net sonucu, hane halklarının, firmaların ve bankaların bilânçolarına zarar vermesi biçiminde ortaya çıkabilmektedir (Pıçak vd. 2009). Bu ülkelerde, sermaye birikiminin yetersizliği, iç ve dış talepteki değişimler, risk ve belirsizlik unsurları piyasa ekonomisinde başarısızlığa getirebilmektedir. Bu bakımdan, ekonomik büyüme ve kalkınmanın devlet tarafından desteklenmesi kaçınılmaz olur. Piyasa kurallarına uyum sağlamaya çalışan ve ekonomik istikrar yakalama çabasında olan inceleme konusu ülkeler için vergi teşvikleri, harcama eğilimi yüksek olan düşük ve orta gelirli tüketiciler üzerinde yoğunlaşması istenmektedir. Vergileme ilkelerinin zedelenmemesi ve ülkede vergi adaleti bakımından teşvikler uzun döneme yayılmamalıdır. Ayrıca, vergi gelirlerinde kısa dönemde meydana gelebilecek azalışlar dikkate alınarak bütçe dengesi korunmalı ve kamu harcamaları da azaltılmalıdır (Bakar, Tokatlıoğlu, 2012). Ekonomide, kısa dönemli canlanma, uzun dönemli mali disiplin ile genel denge bakımından önemli avantajlar elde edilmesi mümkün olabilmektedir.

Dünyada gelir vergisiyle ilgili genel eğilim vergi matrahının genişletilmesi yasal vergi oranı ve dilim sayılarının azaltılması ve bu yolla tarifenin düzleştirilmesi şeklindedir. Bu konuda iki temel eğilim olduğu söylenebilir. Vergilendirilebilir kapasite olarak anılan ilk yaklaşımda artan oranlı vergi sisteminde aileye sağlanan vergi kolaylıklarından yüksek gelir gruplarının daha çok faydalandığı ileri sürülmekte ve bu kolaylıkların mükelleflerin gelir düzeyine göre verili gelir düzeyinde ailelerin boyutlarına göre farklılaşması gereği ifade edilmektedir. Sosyal refah olarak anılan yaklaşımda bu tür yardımlar yatay adaletten çok yolsuzlukla mücadeleyle daha çok ilgili olduğu ve aslında hedefe ulaşmayan vergi indirim ve mahsuplardan ziyade nakit transferlerle ailenin desteklenmesi gerektiği savunulmaktadır (Çevik, 2005).

Avrupa Birliği'nin enerji konusunda dışa bağımlılığın artmış olduğu bilinmektedir. AB enerji gereksiniminin %50'sini ithal etmekte, önümüzdeki 20-30 yıl içinde bu rakam %70'ler düzeyine çıkacağı öngörülmektedir. Dışa bağımlılığın, AB için ekonomik, sosyal ve ekolojik riskleri bulunmaktadır (Özdemir ve Bağıran, 2006). Bu anlamda vergi mevzuatında teşvik sistemi ile yerli yabancı yatırımların arttırılması desteklemek mümkündür. Günümüzde Yenilenebilir enerji - rüzgardan, güneş ışığından ve biyo kütlelerden sağlanan enerji - gelişimi AB enerji politikasının önemli bir hususudur. Bu alanda yatırım teşvikleri ve vergi indirimlerini kapsayan yenilenebilir enerji kaynak finansman sistemleri oluşturulmuştur. Son 4 yıldır ekonomisi sürekli küçülen, 2011 de ise tarihinin en önemli ekonomik krizini yaşayan Yunanistan'ın yenilenebilir enerji sektörü buna rağmen büyümüştür. Yunanistan'ın elektrik üretim kapasitesinin 2011 yılında %44 oranında arttığı belirtilmektedir. Gelişmiş Avrupa ülkelerinde sabit fiyat garantisi, yatırım teşvikleri ve vergi muafiyeti, katma değer vergisinde indirimler uygulanmaktadır. Söz konusu alanda, Romanya ve Bulgaristan'da yenilenebilir kaynaklara ilişkin ciddi adımların atıldığı yasal düzenlemeler bulunmaktadır (Özdemir ve Bağıran, 2006; Tanla, 2006).

## 5   Sonuç ve Değerlendirme

Piyasa ekonomisine geçişte inceleme konumuz olarak seçtiğimiz Güney ve Doğu Avrupa Birliği üye ve aday ülkeleri birbirinden çok farklı büyüme ve yapısal reform performansları göstermişlerdir. Ancak ortak görülen sorunlar ve izlenen stratejileri değerlendirmek mümkün görülmüştür. Geçiş ekonomilerinin piyasa kurallarıyla tanışma sürecinde fiyat kontrollerinin kalkması ve özelleştirme çalışmaları ile birlikte yabancı yatırımlara yönelme, borç yönetimi, bütçe ve cari açıkları giderme ve makroekonomik göstergeleri iyileştirme alanında benzer sorunlar ile karşılaştıkları izlenmiştir. Devletin ekonomideki payı azalırken bazı ülkelerde kontrollü bir

geçiş yaşanmış diğerlerinde ise daha fazla serbestleşme uygulamaları içinde reformlar yapılmıştır. Avro bölgesinde olmasa dahi ülke ekonomilerinde küresel krizin olumsuz etkisi hissedilmiştir. Krizin etkileri ülkelerin farklı dönemlerinde ve farklı etkiler doğurmuştur. Piyasa ekonomisine uyum ve AB kriterlerine uygunluğun sağlanması noktasında mali dengesizlikler ve ekonomik risklerin devam ettiği görülmektedir. Kamu borcu/ GSYİH oranının düşürülmesi, bütçe açıklarının azaltılması, eğitim ve sağlık harcamaları öncelikte olmak üzere kalkınma carilerini destekleyen düzenlemelerin yapılması önemli mali konuların başında gelmektedir.

Ülkelerin genel anlamda ihtiyaç duyduğu reformlara bakıldığında, ekonomik ve mali yapının güçlendirmesi çerçevesinde, bankacılık sisteminin yetersizliği, bütçe açıkları, muhasebe sistemlerinin zayıflığı, yatırımların yetersizliği, iç talepteki daralma, reel sektördeki finansal sıkıntılar, yapısal uyum zorluğu, teknolojik ve bürokratik engellerin giderilmesine ilişkin kamu mali disiplini ve yasal düzenlemeler konusu dikkat çekmektedir.

Buna göre, mali reformların sürdürülmesinde izlenmesi gerekli stratejiler aşağıda gibi sıralanmaktadır:

- İyi bir borç yönetimi yanında bütçe, hazine, mali dış kurumlara ilişkin yeniden yapılandırma çalışmaları çerçevesinde bu kurumlara güç kazandırılmalı, mali disiplin ve mali saydamlık oluşturulmalıdır. İlaveten, finansman kaynaklarını değerlendirirken, kamu kaynaklarının etkin kullanımı sağlanmalı, para yöneten tüm kurumlar, aracı kurumlar şeffaflaşmalı aynı zamanda ekonomide devalüasyon olduğunda fiyat istikrarı ve makro istikrar sağlanması amacıyla para politikaları yanında mali politikaların da eşgüdüm içinde izlenmesi gerekli görülmektedir.
- Kurumların yasal güvence içinde olmaları için öncelikle yasama, yürütme, yargı alanında kuvvetler ayrılığı prensibi korunmalı ve reformlar bu temelde gerçekleştirilmelidir.
- İstihdam olanaklarına olumlu katkısı için emek gücü vergilemesinde vergi indirim ve mahsup düzenlemelerinin yapılması, refah düzeyi düşük olan bölgeler ile yüksek teknolojik alanlarına istihdam sağlanması amacıyla vergisel avantajlar oluşturulmalıdır.
- Gelir arttırıcı vergisel düzenlemeler yapılırken diğer taraftan ülkede vergi bilinci oluşturulmalıdır. Bu anlamda, vergi kaçırma ve kayıtdışılığın önlenmesine yönelik yasal düzenlemeler sürdürülmelidir.
- Uluslararası kabul gören denetim standartları paralelinde tüm kurumlarda yapılandırılma ve güçlendirme çalışmaları teşvik edilmelidir. Böylece artan rekabete dayanıklılığı ve gelişimi sağlayan bir yapı ile gerçeğe uygun ve şeffaf olan yapıların kurumsallaşma çalışmaları birlikte sürdürülmelidir.

Uygulanan tedbirler ve düzenlemeler neticesinde, kamu mali yapısında elde edilecek başarı kalkınma ve büyümenin sürekliliği yanı sıra dışarıdan ucuz ve özel finansman bulma imkânının da arttırmasına imkan sağlayacağı görüşündeyiz.

Reform politikaları gerçekleştirilirken, ekonomik istikrar ve büyüme hedeflerinden vazgeçmeden, piyasayı rekabetçi ve etkin hale getirecek yasal ve kurumsal düzenlemelere önem ve öncelik verilmelidir. Geçiş sürecinin sosyal maliyetleri olarak ortaya çıkan işsizlik, gelir dağılımındaki dengesizlikler ile yolsuzluk, rüşvet ve yaşam kalitesinin azalması gibi sorunların çözümü öncelik kazanmaktadır. Ayrıca, Ekonomik kalkınma düzeyinin yükseltilmesine yönelik; kaynak dağılımında etkinliği sağlamak, harcama programlarının verimliliğini artırmak, hesap verilebilirliği sağlamak amacıyla bütçe reformunun hızla tamamlanması önem arz etmektedir. Orta vadede bölge ülke ekonomilerinin kalıcı bir makroekonomik istikrar sağlamasının, yatırımcıları teşvik eden reformları gerçekleştirmesinin, ekonomilerin hızla iyileşmesinde yol gösterici bir güç olacağı kanısındayız.

# SSCB Sonrası Petrol İhraç Eden Ülkelerde Petrol Gelirlerinin Yaşam Standartlarına Etkisi

# The Impact of the Oil Revenues on the Standard of Living in Oil-Exporting Countries of the Former Soviet Union

Prof. Dr. Cihan Bulut (Qafqaz University, Azerbaijan)

Assoc. Prof. Dr. Fakhri Hasanov (Qafqaz University, Azerbaijan)

Ph.D. Candidate Elchin Suleymanov (Qafqaz University, Azerbaijan)

## Abstract

The aim of our study is to examine the impact of the oil revenues on the standard of living in oil-exporting countries of the former Soviet Union and to make policy suggestions based on the obtained findings. It has been explain that resource dependency adjust the structure of these countries' economies, which leads to income inequality compensation changes in different sectors of the economy. Characteristic of resource- rich of post-Soviet oil exporters countries - Russia, Kazakhstan and Azerbaijan have been analyzed. It has been demonstrated that dependency on resources modifies the structure of these countries' economies, which leads to income inequality based on employment via a mechanism of labor compensation changes in different sectors of the economy. We are going to employ co-integration and error correction methods in our empirical analysis. Is there a long-run relationship between the oil revenues and the standard of living in oil-exporting countries of the former Soviet Union; What is the role of dynamics of the oil revenues in the standard of living in the short run; What is the magnitude of speed of adjustment from the short-run fluctuation towards long-run equilibrium of the system; What is the direction of long- and short-run causality in the oil revenues - standard of living relationship.

## 1   Giriş

Eneri kaynakları ile zengin olan ülkeler eğer bu kaynakları verimli değerlendiriyorlarsa o zaman ülke vatandaşların yaşam standardı yükselmektedir. Petrol ve diğer enerji resursları ile zengin ülkelerde nüfuzun sosyo-ekonomik gelişimi bu kaynaklardan elde edilen gelirlerin nasıl harcanması ile doğrudan irtibatlıdır. Çünkü özellikle enerji resurslarının ihracı ülke GSMH artırdığından dolayısıyla nüfuz başına gelir artışına neden olmaktadır. Bir çok enerji kaynakları ihraç eden ülkenin bütçe gelirlerinin önemli kısmını bu kaynakların ihraç gelirleri sağlamaktadır. Bu gelirlerin artması genel olarak yaşam kalitesine pozitif katkısı gözlemlenmektedir.Yaşam kalitesi literatürde genellikle sağlık, eğitim, ulaşım, barınma, eğlenme ve gıda gibi konuları kapsamaktadır. Bu konular genellikle tasarruf hacmi, gelir düzeyi ve istihdamla doğrudan alakalıdır ( Alesina & Rodrik, 1994). Petrol kaynaklarına sahip olan ülkelerde petrol gelirlerinin nüfuzun yaşam kalitesine etkisi her zaman merak edilen konulardan olmuştur. Bu ilişkinin düzgün bir sistem kurulmamasından dolayı "resurs laneti" nedeniyle bazı ülkelerde özellikle Nijerya, Cezayir, Ekvator, Venezüella kimi ülkelerde tam tersi bir durum ortaya çıkmış olsa da bu ekonomik sistemin düzgün yönetilememesinin sonucudur. İngiliz iktisatçı R. Auty 1970-85 yıllarda petrol ihraç ülkelerde yaşam standartlarını önemli ölçüde azalma olduğu gerçeğini belirterek "kaynak laneti ', kavramını öne sürmüştü. (Auty, 2001) J. Sachs ve E. Warner tarafından da 1970-90'lı yılları kapsayan ülke bazlı araştırma yapılarak bazı ülkelerde enerji ihraç gelirleri ile ekonomik kalkınma arasında bariz bir negatif korelasyon olduğu öne sürülmüştür (Sachs & Warner, 1995). M. Corden göre doğal kaynakların ihracatına dayalı bir ekonomi kısa dönemde bir ekonomik sıçrama gözlemlense de uzun dönemde ekonomik durgunluğa ve büyüme hızının azalmasına neden olduğunu ireli sürmüştür (Corden,1984). Bu ülkelerde "kaynak lanetinin" ülkede sağlam bir ekonomik yapı kurmaya engel olduğu ireli sürülmüştür.

Hollanda Hastalığı tarihi olarak 16. yüzyıl İspanya'sıyla ilişkilendirilen, ancak ismi 1970'lerde konulmuş olan bir ekonomik olgudur. Ekonomide yaşanan bu süreç ilk olarak 1960'lı yıllarda Kuzey Denizi'nde Hollanda'da doğal gaz bulunması sonucunda gözlemlenmiştir. Dünya literatürüne geçen bu tecrübe The Economist Dergisi tarafından 1970'lerin sonlarında "Hollanda Hastalığı" olarak adlandırılmıştır. Hollanda'da 1960'larda bulunan doğalgaz rezervleri sayesinde, 1970'lerin sonlarına gelindiğinde ülke enerji ihracatçısı haline gelmişti. Ülkeyi döviz açısından zenginleştiren bu "fırsat" bir süre sonra ekonomik bir "hastalık" olmaya başlamıştı. Çünkü Hollanda para birimi Guilder'in reel değer kazancı ihracatçı (ve ithalatçı) sektörlerde yerli üreticiyi olumsuz etkilemişti. Sonuçta, tekstil sanayisi neredeyse tamamen ortadan kalkmıştı. Ardından otomotiv, gemi yapımı, metal işleme alt sanayiler de önemli ölçüde zayıflamıştı. Yaşanan bu süreç üzerine iktisatçılar, doğal kaynak girdilerinin sanayileşmeyi azalttığına (de-industrialisation) dikkat çekmişlerdi.Literatürde Hollanda Sendromu, Hollanda Hastalığı (Dutch Disease) ya da Petrol Laneti (Oil Curse) olarak adlandırılan bu durum, mevcut olduğu ülkenin dengesiz ekonomik büyümesine işaret etmektedir (Aras& Süleymanov, 2010). Hollanda Hastalığı kavramı , petrol sektörü ve petrol dışı ticari sektörlerle, dış ticarete konu olmayan sektörler arasındaki dengesiz kalkınma üzerine odaklanmaktadır (Aras& Süleymanov, 2010). Doğal kaynaklara sahip ülkelerin diğer ülkelere

göre daha hızla kalkınmaları gerekirken, gerçekte bunun tersinin yaşanması ekonomi bilimcilerini düşündüren bir paradoks olmuştur. Stiglitz'e göre bu paradoksa yol açan nedenlerin bir kısmı ekonomi kaynaklıdır. Petrolden elde edilen gelir, yerel para biriminin aşırı değerlenmesine yol açarak yerli üreticileri ihracat yapamaz ve ithalatla rekabet edemez hale getirmekte, bunun sonucunda yatırım yapılamamakta, işsizlik dolayısıyla yoksulluk oranı artmaktadır. Hollanda Hastalığı İngiltere, Norveç, Meksika, Nijerya gibi ülkeler petrol üretimi, Kolombiya kahve üretimi, Fil Dişi Sahilleri kahve, kakao ve orman ürünleri üretimi, Zambiya ve Zaire ise demir filizi üretimi ile ilgili olarak yaşamıştır. Gelir dağılımında adaletsizlik, makroekonomik istikrarsızlık, ekonomik ve siyasal kurumların yetersizlikleri gibi kaynak ihraç eden ülkenin bir çok sorunu ortaya çıkmıştır. Bir çok ekonomicilere göre kaynak zengini ülkelerin piyasa istikrarsızlığının aradan kaldırılması için devlet müdahalesi belli süre gerektirir. Aynı zamanda kaynak gelirleri kamu sektörünün hizmetlerinin verimsiz ve kalitesizliyi ile yanı sıra yolsuzluk rüşvet ve bir sıra olumsuz durum ortaya çıkarmaktadır. Aynı zamanda nüfuzu az olan ülkelerde gelir patlaması gözlenirken bir çok ülkelerde bölgeler arası eşitsizlikler sektörler arası eşitsizlikler gözlenmektedir. Aynı zamanda diğer sektörlerin gelişmemesi resursların bittiğinde ülkenin ekonomisini tehdit etmektedir.GSMH içerisinde resurs ihraç gelirlerinin önemli yer tutması bu tarz ülkeler için tehdit sayılabilir.

## 2 Post Sovyet Petrol İhraç Eden Ülkelerin Genel Ekonomik Durumu

Sovyet Sosyalist Cumhuriyetler Birliği'nin 1991 sonrası dağılması akabinde bağımsızlığını elde eden ülkeler sahip oldukları doğal kaynaklarını dış piyasalara çıkarmağa yönelik bir politika izlemeye başlamışlardır. Bu politikalar sonucunda enerji kaynaklarına sahip olan Rusya, Kazakistan ve Azerbaycan kendine özgü enerji politikalarını uygulamaya koyarak büyük kazançlar elde etmişlerdir. Bu kazançların bir kısmı yeniden enerji

sektörüne yatırılsa da, önemli bir kısmı nüfuzun yaşam kalitesinin artırılmasına yönelik projelere yönlendirilmiştir. Bu ülkelerde petrol üretimi hacmi son yıllarda ortalama yedi-on kat artarken aynı zamanda Azerbaycan'da petrol tüketimi, 1991 yılına göre 5 kat , Kazakistan ve Rusya için 4 kat artmıştır. Ülkenin ekonomisinin doğal kaynakların çıkarılması yeteneğine sahip olması ve sadece bunların tüketim fazlaları ihraç edilmektedir. 2013 senesi sonu itibariyle Moskova tarafından bölgede petrol ve gaz sektörüne yatırım tutarı yaklaşık on milyar dolar arasında olmuştur. Bu yatırımların yaklaşık %80-'i Kazakistan (7 milyar) ve Özbekistan'a (1 milyar) gerçekleştirilmiştir.

Genel olarak bakıldığında Post -Sovyet mekanı SSCB dağıldıktan sonraki dönemde de dünyanın önemli enerji aktörleri olarak öz stratejik konumunu kaybetmedi.Dünyanın doğal gaz ve ham petrol kaynaklarının önemli kısmı olan bu coğrafyalar ve özellikle Rusya sahip olduğu zenginlikleri siyasi bir baskı unsuru olarak kullanmış ve hale kullanmaktadır. Özellikle Avrupa enerji arz güvenliyi konusu her zaman Rusya'nın tehdidi altındadır. Avrupa'nın bir çok ülkesinin önemli oranda petrol ve doğal gazı Rusya tarafından sağlanmaktadır. Bu nedenle Avrupa Birliği zaman-zaman Rusya'nın tekelinden kurtulmak için alternatif kaynakların bulunması için farklı kaynaklara yönelmek isteseler de mevcut durumda bunun zor ve imkansız olduğunu vurgulamak lazımdır. Bu konuda özellikle Avrupa'da ABD gibi alternatif enerji kaynaklarına özellikle şelf gazına yönelik çalışmalar pozitif bir sonuç verebileceğini vurgulamak mümkündür. 2013 verilerine göre yıllık 150 milyar metre küp doğal gaz ihraç eden Rusya bunun 140 milyarını Avrupa Birliğine satmaktadır. Henüz buna alternatif kaynak mevcut değildir.

1991 sonrası ortaya çıkan yüksek oranlı enflasyon Rusya parası" Ruble"ni eritti ve alım gücünü büyük ölçüde azaldı. 1998-1999 yıllarında ortaya çıkan Rusya krizi sonrası ruble %66 devalüasyona uğradı, enflasyon %80'leri buldu ve Rusya ekonomisi yeniden önemli oranda küçüldü. 2008 küresel finans krizi sonrası petrol fiyatlarının düşmesi, ihracat gelirlerini azalttığından, Rusya ekonomisini ve yaşam kalitesini negatif olarak etkiledi. Rusya 2012'de Dünya Ticaret Örgütünün üyesi oldu ve ülkeler arası ticari kısıtlamalar kısmen azaldı. Son yıllarda Rusya'da güçlü bir orta sınıf oluşumu, işsizliğin azalması, yaşam standartlarının yükselmesi hükümetin uyguladığı ekonomik programların hedefleri arasındaydı. 2014 itibariyle Rusya dünyanın petrol üretiminde birinci, doğal gaz üretiminde ikinci ülkesi olup, bu piyasaların önemli aktörüdür. Rusya 17.1 milyon km2 alanı, 145 milyon nüfusu ile Avrasya coğrafyasının önemli bir ekonomisidir.2013 verilerine göre GSMH hacmi yaklaşık 2500 milyar $ olup dünyanın sekizinci büyük ekonomidir. İşgücü 76 milyon kişi olup, kişi başına düşen geliri yaklaşık 18 000$'dır. 2013 verilerine göre ihracatı 530 milyar $ olup, başlıca ihracat yaptığı ülkeler Hollanda, Çin, İtalya, Almanya sayılır.İhraç ürünlerinin büyük hacmi petrol ve doğal gaz hammaddesidir. Rusya'Nin ithalatı 340 milyar $ olup başlıca ithalat yaptığı ülkeler Çin, Almanya ve Ukrayna'dır. Resmi işsizlik oranı yaklaşık %6 çıvarındadır. Devlet borcu GSMH'nın %8'si kadardır. Enflasyon son yıllarda azalmıştır ve %5'dir. Para birimi rubledir. Yaklaşık olarak 32 ruble=1$ olan Rusya'nın döviz ve altın rezervi 540 milyar $ olup, dış borcu 640 milyar $. civarındandı. Rusya'nın hedefleri rekabet gücü olan şirketlerin sayısının artması, kamu mülkiyetinde olan şirketlerinin özelleştirilmesi, verimsiz ve pahalı işçiliğin ucuzlatılması, yatırımların korunması, hukuk ve mahkeme sisteminin güvenilir olması ve Avrupa standartlarına uygun hukuk sisteminin oluşturulmasıdır. AB ülkelerinden Almanya, İtalya, Fransa ve Hollanda Rusya ile ilişkileri her yıl daha da geliştirmektedir, Rusya bu ülkelerden modern teknolojiyi elde etmeyi planlamakta, bu ülkeler de Rusya'nın petrol, gaz, maden kaynaklarını satın alarak kullanmaktadır. Rusya Beyaz Rusya, Kazakistan, Azerbaycan, Türkmenistan, Özbekistan, Ermenistan gibi eski Sovyetler Birliği ülkeleriyle de ilişkilerini BDT çerçevesinde daima geliştirmektedir. Rusya'da devlet ihaleleri, izin ve faaliyet ruhsat alımları için onayı veren kurumların fazlalığı, arsa imar ve tapu belgelerinin alım zorluğu, inşaat işleri usulsüzlük ve yolsuzluk yapılan ve ya en çok bürokrasisi gündeme gelen alanlar olarak sıralanabilir. 2013 Dünya Bankası ülke raporlarına göre Rusya vatandaşlarının %70'inin tasarruf yapamadığı ve nüfusun %13'ünün fakirlik sınırları altında gelirinin olduğu gösterilir. Tasarruf sahipleri çoğunlukla ruble (%88) veya $ ve € olarak (%12) tasarruf ettiği belirtilmektedir. Tasarruf yapanlar yaşlı, iyi tahsilli, para kazanan kesimlerdir. Biriktirilecek paranın ev, eğlence, sağlık, tahsil ve otomobil satın almada kullanılması planlanmaktadır. Finansal araçlara ve piyasasına güven fazla değildir Rus ailelerin harcama ve tasarruf rakamlar yaklaşık olarak gıda (%34), tasarruf (%12), ev (%11), eğlence (%6), sağlık (%5), otomobil (%5) şeklinde sınıflandırılabilir.

Post-Sovyet ülkeleri arasında önemli petrol ihracatçısı olan diğer ülke Kazakistan'dır. 2.724,9 bin km2 yüzölçümü ile dünyanın en büyük coğrafyasına sahip ülkelerden olan Kazakistan'ın nüfuzu yaklaşık 17 milyon civarıdır. Milli para birimi Tenge (01 Mart 2014 itibarıyla 1 USD = 150 Tenge civarı) olan ülkenin GSYİH 180 milyar dolar civarındadır.2013 verilerine göre ülkenin toplam ihracat hacmi 90 milyar dolar seviyelerinde olup yaklaşık 40 milyarlık ithali iki defadan çok üstelemektedir. Hidrokarbon kaynakları bakımından eski SSCB ülkeleri arasında Rusya'dan sonra ikinci sırada yer alan Kazakistan bu özelliği sayesinde dünya enerji pazarının başlıca aktörlerinden birisi konumundadır. "BP Statistical Review of World Energy" raporuna göre, 2013 yılının sonu için Kazakistan'ın sahip olduğu kanıtlanmış petrol rezervlerinin miktarı 40 milyar varil (yaklaşık 6 milyar ton) olup, dünya rezervlerinin yüzde 3'unu oluşturmaktadır (Gizitdinov, 2011). Diğer taraftan, Hazar'ın Kazakistan kısmında tahmin edilen rezerv miktarının 17 milyar tona yakın olduğu ihtimal edilmektedir. Aynı kaynağa göre, Kazakistan'ın keşfedilmiş doğalgaz rezervleri 1,8 trilyon m3 veya dünya rezervlerinin yüzde biri

civarındadır. Kazakistan Post-Sovyet ülkeleri arasında en fazla kişi basına milli gelire ve çalışanların aldığı ücret hacmine sahip bağımsız ülkedir. Ekonomisinin büyük bölümünü doğal kaynaklar ve özellikle petrol sektörü kapsamaktadır. Bağımsızlığın ilk yıllarında önemli üretim kaybına uğrayan sanayi ve tarım sektörü 2000'li yıllarda karbohidrojen rezervleri alanında her gün artarak devam eden yatırımlar hesabına yeniden yükselişe geçmiştir. Hazırda sanayi üretiminin önemli kısmı petrol sanayinin payına düşmektedir. Enerji sektöründeki hızlı gelişme diğer yan sanayi sektörlerine de hız kazandırmış, özellikle de metallurji ve demir-çelik üretiminde büyük artım hızı yaşanmıştır. Kazakistan'da hizmet sektörü hızla büyüse de, genellikle orta ve küçük ölçekli isletmeler ağırlıklıdır.Kazakistan'ın gaz üretimi, kanıtlanan gaz rezervi 1,840 milyar metreküp olmasına rağmen 2008 yılında kendi iç tüketiminin altındaydı. Doğal gaz üretiminin 2007'deki seviye olan yılda 30 milyar metreküpten ülkenin batısındaki üretimin yanı sıra Hazar'ın Kazak ve Türkmen sektörlerindeki üretimlerin bir sonucu olarak 2020 yılında yılda 115 milyar metreküpe çıkacağının öngörülmüştür. Tengiz, Karacaganak ve Kaşhagan'daki yeni keşifler Kazakistan'a kanıtlanmış rezervlerini 3 milyar metreküpe çıkarma olanağı beklenmektedir. Doğal gaz rezervlerine bakıldığı zaman, toplam olarak 104 trilyon kübik fitlik bir rezerv söz konusudur. Bunun 36 trilyon kübik fitlik bölümü Hazar'ın kıyıya yakın bölgesinde, 68 trilyon kübik fitlik bölümü ise Hazar'ın açık deniz bölgesinde yer almaktadır. Ülke geniş ve verimli topraklara sahip olduğundan dolayı tarım en fazla istihdam sağlayan ikinci sektördür. Kazakistan dünyanın baslıca buğday üretici ve ihracatçı ülkelerindendir. Kazakistan hükümetinin başlıca amacı, petrol gelirlerini kullanarak, ekonominin enerji dışındaki sektörlerini de kalkındırarak sektörsel çeşitlilik sağlayarak, ekonominin petrole ve dolayısıyla dünya petrol fiyatlarına olan bağımlılığını azaltmaktır. Bu amaç doğrultusunda 2003 yılında açıklanan ve 2015 yılına kadar olan dönemi kapsayan Modern Sanayi Kalkınma Stratejisi ile Kazakistan GSYH' sindeki büyümenin devamlı bir önceki yıla göre yıllık yüzde 8'in üzerinde tutulması ve ekonominin çeşitlendirilmesi hedeflenmektedir. Söz konusu stratejik program dahilinde turizm, petrol ve doğalgaz ekipmanı, gıda, tekstil, taşımacılık ve lojistik sektörleri öncelikli sektörler olarak belirlenmiştir. Günümüzde yeni teknolojiler kullanılarak bu sektörlerde yatırım projelerinin geliştirilmesi ve hayata geçirilmesine yönelik çalışmalar yapılmaktadır Bağımsızlıktan bu yana doğrudan yabancı yatırımların çekilmesi konusunda önemli başarı sağlayan Kazakistan, Orta Asya'daki toplam doğrudan yabancı yatırımların yüzde 80'den fazlasını çekmiştir (Kara & Yeşilot, 2011). Doğrudan yabancı yatırım artısı basta Kaşagan yatakları olmak üzere hidrokarbon alanlarındaki gelişmeler sayesinde ölmüştür. Kazakistan Milli Bankası verilerine göre, 30 Eylül 2013 tarihi için ülkedeki yabancı yatırımların toplam hacmi 160 milyar dolar olup, bunun 93 milyar dolarını doğrudan yabancı yatırımlar teşkil etmektedir. Hollanda, İsviçre, Fransa, İngiltere ve ABD en büyük yabancı yatırımcı ülkelerdir. 2013 verilerine göre ihracatında ilk beş ülke Çin % 18,8, İtalya % 17,2, Rusya % 8,5 , Hollanda % 7,6, Fransa % 6 , İsviçre % 5,7, İthalatındaki ilk beş ülke Rusya % 42,8 , Çin % 13,3, Almanya % 5,6 , Ukrayna % 4,7, İtalya % 3 , Türkiye % 2.

Post Sovyet önemli petrol ihracatçısı olan üçüncü ülke Azerbaycan'dır. 9.2 milyon nüfuza sahip olan Azerbaycan'ın 2013 verilerine göre GSYİH yaklaşık 80 milyar dolar, kişi başına düşen gelir yaklaşık sekiz bin dolar olan Azerbaycan Rusya ve Kazakistan'dan sonra üçüncü önemli petrol ihracatçısıdır. Para birimi manat olan Azerbaycan'da 1 ABD doları 1 mart 2014 Merkez Bankası kuruna göre 0.78 manattır. 18 Ekim 1991 de bağımsızlığını ilan ettikten sonra ekonomisinin liberasyonu ve serbest piyasa ekonomisine geçmek maksadıyla bir çok önemli reformlara imza atmıştır (Aras& Süleymanov, 2010). Ekonomik hedeflerin gerçekleştirilmesinde ülkenin en önemli kaynakları ise Hazar'daki petrol ve doğal gaz rezervlerinden oluşan enerji kaynaklarıydı. Dünyada ilk defa denizden petrol çıkarılması da Hazar'da gerçekleşmiştir. 1872 yılından itibaren Avrupa'nın petrolcüleri bölgedeki petrol sahalarına ilgi duymaya başlamışlardır. 1873 yılında Nobel Kardeşler petrol sektörüne yatırım yapmaya başlamışlardır. 1877'de Nobel Kardeşlerin sipariş ile dünyada ilk petrol gemisi inşa edilerek kullanılmaya başlamıştır. Bu nedenle ekonomik hedeflere ulaşma adına Hazar enerji kaynaklarının en etkin biçimde kullanılması gerekmekteydi. Zira Azerbaycan, ekonomik, siyasi ve sosyal açılardan yeniden yapılanma, kalkınma, gelişme ve bağımsızlık adına, Hazar enerji kaynaklarından 1994 yılından itibaren faydalanmaya başlamıştır. Enerji kaynaklarının üretim ve dünya piyasalarına ihracına ilişkin çok önemli projelere karar verilerek önemli adımlar atılmıştır. Petrolün 2006 yılında, doğal gazın ise 2007 yılında ihracına başlanmasıyla ülke ekonomisi enerji kaynağı gelirlerinden önemli bir düzeyde faydalanmaya başlamıştır. Bu kaynaklar sayesinde sahip olunan gelirlerin verimli şekilde kullanılmasıyla petrol-dışı sektörün gelişimi, hızlı büyüme ve reel gelirdeki artışın temini, petrole dayalı tek yönlü ekonomiden vazgeçilmesi Azerbaycan için çok önemlidir. Azerbaycan, Hazar petrol ve doğal gazının dünya piyasalarına ihracında öncü ülke rolü oynamaktadır. Bakü-Supsa, Bakü-Novorossiysk ve Bakü-Tiflis-Ceyhan petrol boru hatları ve Bakü-Tiflis-Erzurum doğal gaz boru hattıyla Azerbaycan, bölgedeki ekonomik ve stratejik önemi çok büyük olan projelerin çıkış noktasını oluşturmaktadır. Kazakistan petrolünün ve Türkmenistan doğal gazının da Hazar geçişli, BTC ve BTE hatları ile dünya piyasalarına ihracı durumunda, Azerbaycan sadece enerji ihraç eden değil aynı zamanda enerji ihraç koridorunda yer alan bir ülke olarak da ekonomik ve stratejik açıdan daha önemli hale gelecektir. 2012 başı itibariyle, Azerbaycan`ın kanıtlanmış petrol rezervlerinin 7 milyar varil (1 milyar ton) olduğu ve toplam dünya petrol rezervinin %0,7`ini oluşturduğu görülmektedir. Kanıtlanmış doğal gaz rezervlerinin ise, 2,40 trilyon metre küp ve dünya toplam doğal gaz rezervlerinin %1,7`sini oluşturduğu yayımlanan istatistiklerce ilan edilmiştir. (Suleymanov & Zeynalov, 2012) Azerbaycan`ın toplam enerji kaynaklarının kazanç patlaması bakımından değerlendirilmesi amacıyla, yıllar içerisinde petrol ve doğal gaz üretim ve tüketimi önem arz etmektedir.2011

yılında, ekonomide oluşan GSYİH`nin %74,3`ü petrol sektörünün payına düşmüştür. 2014 yılında, Çırak petrol yataklarının üretime başlamasıyla birlikte, petrol sektöründen kaynaklanan büyüme artışının tekrar yüksek rakama ulaşması beklenmektedir. BTC'den günlük ihraç hacmi 1 milyon varile, diğer bir ifadeyle yıllık 50 milyon ton seviyesine 2009 yılı başlarında ulaşılmış sonraki yıllarda kısmen azalma olsa da bu hacim yıllık 40-50 milyon ton civarında olmuştur. 2011'den itibaren petrol ihracında azalmalar başlamıştır. Petrol ihraç miktarının artması ile birlikte ülke dahilindeki yatırımların da artmaya başlamıştır. 2007 yılında dahili yatırımlar, yabancı yatırımlardan daha fazla olmuş, toplam yatırımlar içerisinde enerji sektörüne yapılan yatırımlar önemli yer tutmuştur. Azerbaycan'da petrol ve doğal gaz sektörünün gelişmesinin diğer iktisadi alanlardan daha iyi olması nedeniyle, diğer yeraltı kaynaklarının araştırılma ve üretimine gereken önem verilmemektedir. 2013 verilerine göre Petrol Fonunda ve Merkez Bankasında yaklaşık 50 milyar dolar civarında petrol geliri toplayan Azerbaycan geride kalan yüz milyar dolar civarındaki petrol gelirini 2009 yılından bütçe gelirlerinin yarısını oluşturan transferlere, içmeli su ve diğer altyapı projelerine ve Karabağ sorunu sonrası ülke nüfuzunun yaklaşık beşte birini oluşturan bir milyon civarında mültecilerin konut sorunlarına ve yurt dışına eğitim amacıyla gönderilen öğrencilere harcandı.

## 3 Post-Sovyet Petrol İhraç Eden Ülkelerde Petrol Gelirlerinin Yaşam Standartlarına Etkisi

Bireyin, ailenin veya ülkelerin ekonomik refah düzeylerini ölçmek için kullanılan bir kavram olan yaşam standardı sosyal devlet anlayışıyla ortaya çıkmış kavramlardandı. Yaşam standardı gıda, konut, giyim, sağlık-bakım, eğitim, v.s. gibi zorunlu kabul edilen ihtiyaçları karşılayacak mal ve hizmetlerin, kişilerce tükettikleri miktar ve kalitesine bağlı hesaplanan kavramdır. Hayat standardı genellikle kişi başına düşen milli gelir rakamlarıyla ifade olunur (Aliev, 2013). Yaşam standardı kavramı, tek-tek kişilerin satın aldığı ürünlerin yanı sıra, kamu tesisleri ile devletin sağladığı topluca tüketilen hizmetler gibi mal ve hizmetleri de kapsar. Belirli bir grubun, örneğin bir ülke halkının yaşam standardından söz ederken, gerçek tüketim standartlarının ortalama değeri ile bu ortalamanın hangi miktarlar arasında değiştiğinin karşılaştırılması gerekir. Yaşam standardı kavramı, tek tek kişilerin satın aldığı ürünlerin yanı sıra, kamu kurumlarının sağladığı hizmetler gibi topluca tüketilen mal ve hizmetleri de kapsar. Bu tanımıyla yaşam standardı, gerçekte ulaşılmış olan tüketim standardı anlamına gelen kişisel ekonomik refahtan ayırt edilmelidir. Yaşam standardı bireyin doğrudan denetimi altında olmayan kamu hizmetleri ile bireylerin içinde yaşadığı ortamın niteliği gibi refah etkisi uyandıran mal ve hizmetleri de kapsadığından, harcanabilir gelirle de karıştırılmamalıdır. Bazı sosyologlara göre bir kişinin yaşam standardı (beklentileri anlamında) büyük ölçüde, kendisiyle aynı gelir düzeyindeki kişilerin tüketim kalıbının etkisi altındadır ve bu nedenle gelir düzeyi değiştikçe bireyin yaşam standardının da değişmesi beklenebilir. Bu genel sorunlar yanında, yaşam standardının hangi nicel göstergelerle belirleneceği konusunda da farklı ölçütler ileri sürülebilir. İnsani Gelişme Göstergesi (*Human Development Index*), yaşam kalitesini ölçen önemli göstericilerinden sayılır. Ülkeler için yaşam uzunluğu, eğitim ve yaşam düzeyi, okur yazarlık oranı doğrultusunda hazırlanan bir ölçümdür. İnsanların düzgün yaşaması, özellikle çocuk ve kadın hakları için de bir rapor hazırlanmaktadır. Bu araştırma sonucunda bir ülkenin gelişmiş, gelişmekte olan ya da gelişmemiş bir ülke olduğu; bunun yanı sıra ekonomisindeki etkinin yaşam niteliği ne düzeyde etkilediğini gösterir. İlk olarak Pakistanlı ekonomist Mahbub ul Haq tarafından 1990 yılında geliştirilmiştir ve 1993 yılından Birleşmiş Milletler Gelişme Programı tarafından yıllık Gelişme Raporu olarak yayınlanmaktadır. İnsani Gelişme Göstergesi ülkelerde üç başlıca gelişimleri göz önünde tutar:

- Uzun ve sağlıklı bir yaşam; ölçümü ortalama yaşam süresi ile yapılır.
- Bilgi, ölçümü okur yazar oranı (2/3'ü) ve ilkokul, lise ve üniversite kayıtları yüzdesi (1/3'ü) ile yapılır.
- Ölçülebilir yaşam düzeyi,

Kişi başına düşen gayri safi milli hasıla ve alım gücünün Amerikan Doları olarak mükayesesi. The Economist Intelligence Unit" tarafından hazırlanan ve 2005 yılını kapsayan yaşam kalitesi endeksinde ülkelerdeki bireylerin yaşamlarını etkileyebilecek çeşitli faktörler göz önüne alınmıştır. Bunlar Sağlık, Toplumsal Yaşam, Aile Hayatı, Ekonomik durum, İklim ve coğrafya, Siyasi düzen, Özgürlükler ve güvenlik, İş güvenliği, İşsizlik oranları, gender eşitliyi kimi konulardır.

| Dünya Sıralaması | Ülkeler | İGE (HDI) Reytingi | Beklenen Yaşam Süresi (Yıl) | Ortalama Eğitim Süresi (Yıl) | Ortalama Eğitim Süresi (Yıl) | Kişi Başına Milli Gelir (GNI) (2005 PPP $) | Gelir Dışı İGE Değeri |

*Tablo 3:* *Post-Sovyet Petrol İhraç Eden Ülkelerin Yaşam Standartları Göstergeleri.* **Kaynak** *Human Development Report 2013*

Gelir dışındaki göstergeler arasında protein gibi belli besinlerin tüketimi, ortalama ömür süresi ve güvenli su kaynaklarına erişebilme olanağı gibi temel gereksinimlerin düzeyi sayılabilir. Güvenilir bir nüfus sayımı bile yapamayan yoksul ülkelerin varlığı göz önüne alınırsa, çeşitli uluslar ve yöreleri karşılaştırırken bu göstergelerin kullanılması yanıltıcı olabilir. Gayri safi yurtiçi hasıla ( GSYİH ) normal olarak bir ülkede ekonomik refah ve yaşam standartlarının bir göstergesi olarak bilinmektedir. Normal şartlarda eğer enerji ihraç gelirleri yurt dışında yatırımlara harcanmazsa genellikle ülke içerisinde doğrudan ve ya dolaylı yatırıma dönüşür. Bu yatırımların çarpan ve hızlandıran etkisi kişilerin gelirlerini dolayısıyla yaşam kalitesini artırır. Bu zaman enflasyonun kontrol edilmesi şarttır. Yoksa gelir artışının satın alma gücüne yansımaması söz konusu olabilir.

| Sıra | Ülke veya bölge | Hayat Kalitesi Puanı (10 üzerinden) |
|------|-----------------|-------------------------------------|
| 86   | Azerbaycan      | 5.377                               |
| 96   | Kazakistan      | 5.082                               |
| 105  | Rusya           | 4.796                               |

*Tablo 4: Post-Sovyet Petrol İhraç Eden Ülkelerin Hayat Kalitesi: **Kaynak** Human Development Report 2013*

Kazakistan ve Azerbaycan'da petrol gelirlerinin büyük kısmı Petrol Fonuna yönlendirilmekte ve bu kazanımların bir kısmı gelecek nesillere miras olarak biriktirilmesi düşünülür. Fakat gelirlerin önemli bir kısmı ise nüfuzun yaşam standart'ının artırılmasına etki eden projelere harcanmaktadır. Örneğin her iki ülkede oluşturulmuş ipotek fonu aracılığıyla belli ölçüde konut problemleri çözülmüştür. Aynı zamanda devletin bizzat nüfusun sosyal olarak yardıma muhtaç kısmının konut ve diğer ihtiyaçları bu kaynak kullanılarak karşılanmaktadır. Özellikle Azerbaycan'da Karabağ savaşı sonucu nüfusun yaklaşık yüzde 20-sini oluşturan mültecilerin hem barınma, hem de diğer yaşam standartlarını artırıcı ihtiyaçları bizzat petrol gelirleri kullanılarak karşılanmıştır. Son beş yıl zarfında Azerbaycan'da mülteci kampları, devlet tarafından yapılan ve onlara karşılıksız olarak verilen konutlara dönüştürülmüştür. Petrol gelirlerinin yaşam standartlarına etkisinin bir başka somut örneği her iki ülkenin Petrol Fonunun finanse ettiği öğrencilerin yurt dışında yüksek eğitim için gönderilmesi programıdır. Kazakistan'da 20000, Azerbaycan'da 5000 kişinin 2015 yılına kadar bu kaynaktan yararlanacağı doğrultusunda devlet programları kabul edilmiş ve hazırda uygulanmaktadır. Bu projenin Azerbaycan'da sloganı "petrol altınının, insan altınına dönüştürülmesi "olması taktir edilen bir durumdur. Özellikle eğitim seviyesinin yükselmesi yaşam kalitesini artırmaktadır. Bir başka istikamet istihdam nedeniyle yaşam kalitesinin artırılmasına yönelik yatırımcılara güzeşteli kredi ve fon sağlanmasıdır. Burada maliyeleşme direk az faizli ve uzun döneme kredi vermek ve ya kamu ortaklığı şeklinde finans ortağı olmaktır. Her üç ülkede bu şekilde önemli projeler yapılmış ve bunu koordine eden kurumlar oluşturulmuştur.

## 4 Sonuç

Dünya enerji tüketiminde petrolün payı 1938'de %21, 1950'de %30, 1960'da %35, 1970'de %45, 1980'de %45, 1990'da %40 olarak gerçekleşmiştir. 2000 yılında %40 civarında gerçekleşen oranın 2010 yılı itibariyle %50'nin üzerinde olan.Son üç asır itibaren petrol kaynaklarına sahip olmak, petrol üretimini elde tutmak, petrol taşıma güzergâhlarını denetim altında bulundurmak ve bu amaçla uluslararası politikalarda başarılı olmak devletlerin temel amaçları arasında olmuştur. Bu bakımdan tarihi süreçte önemli birçok sosyo-politik olayın arka planında enerji kaynaklarının kullanımı veya elde edilmesi ile ilgili çıkar çatışmaları 21. yüzyılda da varlığını devam ettirecektir. Yukarıda sıralanan hedeflere ulaşmak için, ülke kaynaklarının yine ülke ihtiyaçları esas alınarak en etkin şekilde kullanılması ve küreselleşen finansal piyasalardaki fonlardan daha çok doğrudan yatırım şeklinde yararlanılması gerekmekteydi. Rusya Kazakistan ve Azerbaycan'ın sahip oldukları petrolün ihracı ülkeye büyük hacimli petrol gelirleri getirmeye başladı. Bu gelirlerin bir kısmı liberal ekonomik yapının kurulması için eski mirasın ve hantallığın onarımı için harcansa da önemli bir hacmi nüfusun yaşam standardının iyileştirilmesine harcanmıştır ve harcanmaktadır. Doğrudur bu konuda tam başarılı olunduğunu vurgulamak zor olsa da ölçülebilir bir yaşam standardına ulaşıldığı söylenebilir. İnsan inkişaf raporu 2013 e göre her üç ülke inkişaf etmiş ülkeler grubunda yer alarak çok inkişaf etmiş ülkeler grubunun hemen ardında yer almaktadır. 55-82 yerleri arasında olan Rusya, Kazakistan ve Azerbaycan yakın 5 yılda ilk lige yükselmeği hedeflemektedirler. Özellikle kişi başı GSMH hacminin hızla yükselmesi bu hedefin yakın yıllarda gerçek olabilirliğini gösterir. Ekonominin yapısı inşaat, ticaret, finans ve hizmet sektörü petrol gelirlerine bağlı olarak bir patlama göstermektedir. Fakat petrol gelirleri özellikle tarım ve diğer az gelirli sektörlere olumsuz etki etmekte bu sektör çalışanlarının diğer sektöre kaymalarına neden olmaktadır. Petrol sektöründe çalışanların maaşlarının diğer sektörlere göre dengesizliyi bir başka olumsuz sonuçlardandır. Ayrıca, yüksek nitelikli personel enerji sektörüne yönelmektedir. Ne yazık ki, ülkelerin her üçünde ekonomik büyüme aynı oranda yaşam kalitesine yansımamaktadır. Azerbaycan, Kazakistan ve Rusya'nın üçünde de refah düzeyi ve gelir dağılımında eşitsizlik önemli bir sorun olarak kalmaktadır. Gini katsayısı bu durumu net yansıtmasa da, diğer ölçümlerde bu açık olarak görülmektedir. Her üç ülkede yoksulluk büyük ölçüde azaltılsa da temel sorun ihraç hacminde petrolün hacminin fazlalığı ve bölgeler arası altyapı ve ekonomik durumun farklılığıdır. Bir ülkenin resurs zenginliyi sosyal ve ekonomik kalkınma üzerinde olumlu bir etkiye sahip olabilir, büyük ihracat gelirleri ekonomik kalkınma için büyük fırsatlar sunmaktadır. Önemli olan bu fırsatları toplumun ekonomik ve sosyal kalkınması

hedefi olarak kullanmaktır. Öte yandan, petrol ihracat gelirleri bölgeler arasında adil bir şekilde harcanmıyorsa bu merkeze doğru göç sorununu da beraberinde ortaya çıkarmaktadır. Bu ülkenin konjonktür yapısı üzerinde olumsuz etki yapmakta ve bütün sanayinin küçük bir alana temerküzleşmesine neden olur. Örneğin Azerbaycan'da ülke ekonomisinin yüzde 90-ı Bakü bölgesinde cemleşmiş ve diğer yerlerden hızlı bir göç sorun olarak ortaya çıkmıştır. Petrolun tükenen olması bu ülkelerin alternatif ekonomik yapının oluşturulmasını zaruri etmekte, endüstriler turizm, tarım ve benzeri işleme sanayi pahasına daha iyi gelişecektir. Sonuç olarak petrol gelirlerinin bu ülkelerin yaşam standardını önemli ölçüde artırdığı ve bu sürecin yakın yıllarda da devam edeceğini vurgulamak mümkündür. Fakat bu sürecin olumsuz taraflarının da göz ardı edilmemesi ve bu konuda negatif durumların da hızlıca aradan kaldırılması önemlidir.

# Doğal Kaynak Zenginliği ve Ekonomik Büyüme İlişkisinde Yönetişim Göstergelerinin Aracılık Etkisi: MENA ve Hazar Ülkelerinden Ampirik Bulgular

# Mediating Effect of the Governance Indicators in the Relationship between Natural Resources Abundance and Economic Growth: Empirical Evidence from the MENA and Caspian Countries

Prof. Dr. Harun Bal (Çukurova University, Turkey)

Dr. Mehmet Demiral (Çukurova University, Turkey)

Ph.D. Candidate Emrah Eray Akça (Çukurova University, Turkey)

## Abstract

This study purposes to identify the relationship between gross domestic product (GDP) and natural resources abundance, focusing on the mediator roles of governance indicators for selected 21 MENA and Caspian countries. Governance indicators used in the study are World Bank's six global governance indicators. Annual panel data for the period of 1996-2012 are used. In this context, the study estimates the impact of crude oil production per capita (independent variable) on GDP per capita (dependent variable) at first, and then hierarchical panel regression analyses are conducted to determine the mediator variable roles of the governance indicators in this relationship. Sobel test is also applied to confirm whether the mediation effect is significant. Results from the pairwise panel regression analyses reveal that crude oil production per capita is negatively associated with all worldwide governance indicators, mostly with control of corruption, voice and accountability and regulatory quality. The progressive improvements of all dimensions of governance indicators, especially control of corruption, rule of law and government effectiveness, seem to promote GDP per capita. Results from the hierarchical regression analysis demonstrate that governance indicators play an important role as a partial mediator in the relationships crude oil production and GDP per capita. This evidence supports that weak governance indicators tend to hinder natural resources abundance to contribute economic growth. Overall findings highlight the increasing importance of policies intending to reduce corruption and violence, together with stimulating legitimacy, transparency and institutional quality for the countries investigated.

## 1 Giriş

Doğal kaynak varlığının ekonomik büyüme üzerine olası etkileriyle ilgili temelde iki farklı yaklaşım söz konusudur. Birinci yaklaşımda zengin doğal kaynak donanımı ülke ekonomisi için bir talih (*blessing*) olarak değerlendirilirken, ikinci yaklaşımda ise söz konusu ülke için bir talihsizlik (*curse*) olarak nitelendirilmektedir (bkz. Sachs ve Warner, 1997, 1999, 2001; Gylfason, 2001; Frankel, 2010). Birinci yaklaşıma göre teorik olarak, zengin doğal kaynaklara sahip olan ülkelerin daha hızlı büyüme performansı göstermesi beklenmektedir. 1800'lü yıllarda genel olarak doğal kaynaklar ve 1900'lü yıllarda ise özellikle petrol kaynakları bakımından zengin ülkelerin diğer ülkelere kıyasla daha hızlı zenginleştiklerine ilişkin örnekler de mevcuttur (Bal, 2011).

İkinci yaklaşım, zengin doğal kaynak donanımının büyümeyi engelleyici bir etkisi olduğunu öne sürmektedir. 1950'li yıllardan sonra gelişmekte olan ülke (GOÜ)'leri de kapsayan çalışmalar, doğal kaynak donanımı ve ekonomik büyüme arasındaki ilişkide açık bir paradoksa işaret etmektedir. Bu paradoks, doğal kaynak donanımı bakımından zengin olan ülkelerin nispeten daha az doğal kaynağa sahip ya da doğal kaynak yoksunu olanlarla karşılaştırıldığında daha düşük büyüme oranlarına sahip olduklarını ifade etmektedir. Bu durum, 'kaynak talihsizliği' terimi ile literatüre girmiştir. Kaynak talihsizliği tezinin temelinde, 1974-1985 yılları arasında emtia fiyat şokları tarafından tetiklenen ve birçok GOÜ'deki uzun süreli büyüme çöküşleriyle sonuçlanan gelişmeler yer almaktadır (Pessoa, 2008; Auty, 2007).

Doğal kaynakların bir nimet olmaktan ziyade bir talihsizlik olduğu bulguları, özellikle 1970 ve 1980'li yıllarda daha belirgin bir şekilde gündeme gelmeye başlamıştır. Çalışmaların bir kısmı, doğal kaynak talihsizliğinin nedenleri konusunda kurumsallaşmanın önemine dikkat çekmişlerdir. Doğal kaynak zenginliğinin, mevcut kaynaklar üzerinde bir kontrol mücadelesi ve iç huzursuzluğa neden olarak kötü kurumsallaşmaya ve dolayısıyla daha düşük büyümeye yol açtığı ifade edilmektedir. Burada, doğal kaynaklardan elde edilen büyük rantların hükümetleri ve özel kuruluşları rant kollamaya, yozlaşmaya ve yolsuzluğa yöneltmesi üzerinde durulmaktadır (Oomes ve Kalcheva, 2007; Bal, 2011). Buna göre doğal kaynak zenginliğinin ekonomik büyümeyi teşvik etmesi biçimindeki doğrudan pozitif etki, doğal kaynak zenginliğinin aynı zamanda kurumsal yapıları bozması ile gelişen olumsuz dolaylı etkiler nedeniyle azalabilmekte ya da ortadan kalkabilmekte ve hatta negatif bir etkiye dönüşebilmektedir. Bir başka deyişle gelişen bu ilişkilerde yönetişim göstergelerinin aracı etkileri belirleyici olmaktadır.

Doğal kaynak zenginliğinin ekonomik büyümeye olan etkilerinin, küresel yönetişim göstergelerinin aracılık rolü kapsamında incelendiği bu çalışma şu şekilde organize edilmiştir. İlk olarak, 1990 sonrası yapılan ampirik çalışmalardan bir literatür incelemesi sunulmaktadır. Sonrasında, teorik açıklamalar ve ampirik model ile veri setleri ve analiz yöntemleri açıklanmaktadır. Ulaşılan ampirik bulgular ortaya konulduktan sonra çalışma, sonuçlara ilişkin özet değerlendirmeler ile tamamlanmaktadır.

## 2 Literatür Sunumu: Kaynak Talihsizliği ve Kurumsal Yapıların Etkileri

Geleneksel yaklaşımda, sezgisel olarak bir ülkenin üretim faktörlerindeki artışın ekonomik büyümeye katkı sağlaması beklenmektedir. Bununla birlikte, paradoksal bir biçimde, doğal kaynak zenginliğinin ekonomik büyümeyi artırmasından çok, onu engellediği yönünde ampirik bulgulara ulaşan çalışmalar geniş bir literatür oluşturmuştur (Sachs ve Warner, 1997, 1999, 2001; Auty, 1990; Gelb, 1988; Gylfason vd., 1999; Bulte vd., 2005). Doğal kaynak donanımı ile ekonomik performans arasındaki negatif ilişki, Sachs ve Warner (1997, 1999, 2001)'in çalışmalarından elde edilen bulguların da etkisiyle daha da güçlenmiştir. Bu paradoksal bulgu 'kaynak talihsizliği' ifadesiyle literatüre girmiştir (bkz. Lederman ve Maloney, 2007).

Kaynak zenginliği ve ekonomik büyüme arasındaki bu negatif ilişkinin gelişim kanalları bakımından bozulan ticaret hadlerine dikkat çeken Singer (1950) ve Prebish (1950) tezi ile Bhagwati (1958)'nin yoksullaştıran büyüme tezi ön plana çıkmaktadır. Teorik açıklamalar ise Rybczynski (1955) teoremi'ne kadar gitmektedir. Rybczynski teoremine göre, mal fiyatları sabitken, üretim faktörlerinden birinin donanımı ya da arzındaki bir artış (azalış) o faktörü yoğun olarak kullanan malların üretimini mutlak olarak artırırken (azaltırken), diğer malların üretimi mutlak olarak azalacaktır (artacaktır) (Rybczynski, 1955). Bunun uygulamadaki örneği Hollanda Hastalığı'dır: Hollanda'da üretim faktörü olarak petrol arzının artması, diğer sanayilerdeki faktörleri çektiği için petrol ihracatı artarken diğer sanayilerin (özellikle imalat sanayilerinin) üretimi ve ihracatı daralmaktadır (Feenstra, 2004). Hollanda hastalığı hipotezinin dikkat çektiği konu imalat sanayilerinde görülen gerilemedir. İmalat sanayinin gerilemesine bağlı olarak büyümenin yavaşlayacağı öne sürülmektedir. Hollanda Hastalığı birçok araştırmacı tarafından kaynak talihsizliğinin nedenleri arasında gösterilmektedir (Bal, 2011). Hollanda hastalığı ve kaynak talihsizliğinin etkileri aşağıda Tablo 1'de karşılaştırılmaktadır.

| | | Kaynak Talihsizliği | |
|---|---|---|---|
| | **Etkiler** | **Yok** | **Var** |
| **Hollanda Hastalığı** | **Yok** | Ekonomide genel büyüme ve ihracat farklılaştırması | Ekonomide durgun büyüme, fakat ihracat farklılaştırması |
| | **Var** | Ekonomide genel büyüme, fakat imalat sanayilerinde ciddi daralma | Ekonomide durgun büyüme ve imalat sanayilerinde ciddi daralma |

***Tablo 1****: Kaynak Talihsizliği ve Hollanda Hastalığı Etkilerinin Karşılaştırılması.* ***Kaynak:*** *Larsen, 2006: 612.*

Tabloya göre, hem kaynak talihsizliği hem de Hollanda hastalığı durumunda ekonominin genel olarak büyümesi ve ürün çeşitlendirmesine dayalı bir ihracatın aynı anda gerçekleştirilmesi söz konusu değildir. Kaynak talihsizliği durumunda durgun bir büyümeye karşılık, ihracat çeşitlendirmesi ve Hollanda hastalığı durumunda ise, ekonominin genel olarak büyümesine karşın imalat sanayinin güçlü bir şekilde daralması söz konusudur. Aynı zamanda hem kaynak talihsizliği hem de Hollanda hastalığı durumunda durgun büyüme ve imalat sanayinin güçlü bir şekilde daralması birlikte gerçekleşmektedir. Bu kapsamda kaynak talihsizliğinde dikkat çeken konu büyüme performansının düşük olmasıdır.

İlgili literatürde kaynak talihsizliğinin belirtilerinin, etkilerinin ve sonuçlarının farklı göstergeler üzerinden yoğun bir biçimde ele alındığı görülmektedir. Öncelikle doğal kaynak zenginliği ile ekonomik büyüme arasında negatif ilişki bulan çalışmalar dikkat çekmektedir. Sachs ve Warner (1999), Latin Amerika ülkelerinde doğal kaynak sektöründe meydana gelen bir canlanmanın, genellikle kişi başına GDP'de azalmayla birlikte gerçekleştiği sonucuna varmışlardır. Sonrasında Leite ve Weidman (1999), Gylfason (2001), Isham vd. (2005) ve Bulte vd. (2005) yaptıkları çalışmalarda farklı ülkeler için kaynak talihsizliği bulgularını destekler biçimde doğal kaynak bolluğu ve ekonomik büyüme arasında negatif bir ilişki bulmuşlardır. Bir kısım çalışma ise yine büyüme ile bağlantıları kapsamında refah ve yaşam standartları bakımından kötü performansa dikkat çekmektedir. Gelb (1988) ve Karl (1997), petrol ihracatçısı ülkeleri ele aldıkları çalışmalarda, doğal kaynak ihracatından elde edilen yüksek gelirlerin refahta düşüşe yol açması paradoksuna dikkat çekmişlerdir. Caselli (2006), 1950'li yılların sonunda Nijerya'da olağanüstü miktarda gerçekleşen petrol keşfini takiben, kişi başına gelirdeki büyüme oranının sıfır olduğu ve günlük 1 dolardan daha az gelirle geçimini sürdüren nüfusun toplam nüfus içindeki payının %36'dan %70'e yükseldiğini belirtmektedir.

Bazı çalışmalar, ülkelerin ihracatlarında petrol başta olmak üzere doğal kaynak yoğun uzmanlaşma yapılarına dikkat çekerken, başka çalışmalar uygulanan yanlı ve etkinlikten uzak politikalara odaklanmaktadır. Başka çalışmalar ise sorunun nedenlerini araştırmışlardır. Lal (1993), genel olarak, kaynak zengini ülkelerin düşük büyümeye yol açan politikalar izledikleri ve doğal kaynak yoksunu olan ülkelerin emek zengini olan ülkelerden

daha hızlı bir gelişme süreci yaşadıkları sonucuna ulaşmıştır. Yine Lal (1993), kaynak zengini ülkelerin istihdam yaratmak amacıyla ekonomilerini dışa kapalı bir hale getirme eğiliminde olduklarını ifade etmiştir.

Doğal kaynak zenginliğinin ekonomik büyüme ve ihracat performansını tek başına belirlemekten uzak olduğu ve farklı faktörlerin etkili olduğu, özellikle kaynak donanımları bakımından yoksul olan Doğu Asya ve zengin olan Latin Amerika ülkeleri karşılaştırmalarında kendini göstermektedir. 1950'lerde sanayileşmiş ülkeler dışında dünyanın en gelişmiş bölgesi olan ve 1970'lere kadar diğer GOÜ'lerin gerisinde olmayan Latin Amerika ülkelerinin birçok GOÜ'lerden daha yüksek büyüme performansı göstermelerine rağmen 1970'lerden sonra Doğu Asya ülkelerinin çok gerisine düşmesi, doğal kaynak donanımlarının ekonomik büyüme üzerine olan etkilerini daha da tartışmalı duruma getirmiştir. Bu nedenle doğal kaynak zenginliğine dayalı sanayileşme modelinin geçerli olmadığı görülmektedir. Latin Amerika'nın geri kalmasının temel nedenleri arasında gösterilen makroekonomik istikrarsızlıklar, küresel ticaret sistemine düşük entegrasyon ve yetersiz reformların yanında dikkat çekilen bir konu da düşük kaliteli kurumsal yapılardır (Elson, 2006).

Doğal kaynak talihsizliğinin kurumsallaşma yoluyla açıklanmasına bir örnek Ross (2001)'un çalışmasıdır. Doğal kaynak zenginliği ve siyasi rejimler arasındaki ilişkiyi araştıran Ross (2001), petrol ve mineral zenginliğinin daha az demokratik rejimlere yol açtığı sonucuna ulaşmıştır. Buradaki mekanizma iki önemli kanal aracılığıyla gelişmektedir. Birincisi, petrol gelirlerinin düşük vergilendirme ve rejimi koruyucu harcamalar yoluyla otoriter rejimleri sürdürmek için kullanıldığını ifade eden 'rantçı devlet etkisi' dir. İkincisi ise, petrol zengini ülkelerdeki otoriter rejimlerin, petrol gelirlerini yoğun bir şekilde savunma ve güvenlik harcamaları için kullanarak iktidarda kalmayı amaçladıklarını ifade eden 'baskı etkisi' dir. Bu bağlamda doğal kaynak zenginliği sadece daha düşük büyümeye neden olmakla kalmamakta, aynı zamanda demokrasinin ve bireysel özgürlüklerin gelişmesini de engellemektedir. 1950-1990 arasında 141 ülkeyle ilgili verileri inceleyen Wantchekon (1999), birincil ürün ihracatının GDP içindeki payıyla ölçülen doğal kaynak bağımlılığındaki %1'lik bir artışın, otoriter yönetim olasılığını yaklaşık %8 artırdığını ve kaynak zengini ülkelerin demokrasiye geçişte başarısız deneyimler yaşadıklarını ifade etmiştir. Afrika'yla ilgili benzer bulgulara ulaşan Jensen ve Wantchekon (2004), bu bölgedeki kaynak zengini ülkelerdeki yönetimin daha otoriter olma eğilimini ve söz konusu ülkelerin demokrasiye geçtikten sonra da rejimde kırılmalar yaşadıklarını belirtmişlerdir. Pessoa (2008), siyasi otorite ve kurumların büyüme başarısızlıklarını açıklamaktaki rolünü araştırdığı çalışmasında, kaynak zenginliği ve büyüme arasındaki negatif ilişkide kötü kurumsal yapıların olumsuz etkilerini destekler nitelikte bulgular elde etmiştir. Bununla birlikte Pessoa (2008), kötü kurumların doğrudan kaynak talihsizliğine neden olmadığını, buna karşın iyi kurumların büyümeyi artırabileceğini belirtmiştir.

Leite ve Weidman (1999), yakıtlar, yakıt dışı mineraller, gıdalar ve tarımsal ham maddeler olarak sınıflandırdıkları doğal kaynaklardan gıda ve tarımsal ham maddelerin aksine yakıt ve yakıt dışı minerallerin yolsuzluğu teşvik ettiği bulgularına rastlamışlardır. Yakıt ve yakıt dışı mineral sektörlerinin her ikisi de gıda ve tarımsal ham maddelerin aksine, yüksek sermaye/emek oranına sahip oldukları için yolsuzluk üzerinde benzer etkiler doğurduğu sonucuna varmışlardır. Petermann vd. (2007), yolsuzluk ve maden kaynakları arasındaki ilişkiyi inceledikleri çalışmada, yakıt ve yakıt dışı mineral ihracatının yolsuzluk üzerinde farklı etkiler yarattığı sonucuna varmışlardır. Yakıt ihracatındaki artışın yolsuzluğu ve yakıt dışı mineral ihracatının ise özellikle elmas ve altın gibi yüksek değerli mineraller ihraç eden fakir ülkelerde yolsuzluğu artırdığını göstermişlerdir. Ayrıca kişi başına gelirdeki artışla ifade edilen ekonomik gelişmenin ilk aşamalarında yolsuzluğun artma eğiliminde olduğu, ancak daha sonraki evrelerde azaldığını belirtmişlerdir.

Doğal kaynak zengini ülkelerin gelir ve ekonomik büyümeye performanslarını karşılaştıran çalışmalarda genel olarak yönetişim göstergelerinin ayrı ayrı etkilerinin incelendiği görülmektedir. Kolstad ve Soreide (2009), kaynak zengini ülkelerin kötü bir ekonomik performans sergilemelerinin temel nedeni olarak yolsuzluğu göstermiş ve kaynak zengini ülkelerdeki yolsuzluğun rant kollama ve kayırmacılık olarak iki şekilde ortaya çıktığını ifade etmişlerdir. Elde edilen rantların bir sonucu olarak bireyler, zaman ve becerilerini daha verimli bir şekilde kullanmak yerine bu gelirlerden en büyük payı alabilme yarışı içine girmektedirler. Hükümetler iktidarda kalabilmek için destekçilerine kayırmacılık (nepotizm, kronizm) yapabilmektedir. Bu durumun bir sonucu olarak da kamu gelirleri yanlış bir şekilde tahsis edilmekte ve hesap verebilirlik azalabilmektedir. Busse ve Gröning (2010), doğal kaynak ihracatının yolsuzluğu artırdığı yönünde bulgular elde etmelerine rağmen, diğer yönetişim göstergeleriyle ilgili kesin sonuçlar elde etmemişlerdir. Gerring ve Thacker (2004), herhangi bir ülkenin bölgesel yönetiminin üniter ya da federal oluşunun ve yürütme organının parlamenter ya da başkanlık sistemi oluşunun siyasi yolsuzluk üzerindeki etkisini araştırmışlardır. Araştırma sonucunda, parlamenter hükümetin yolsuzluğu azaltmakta daha etkin olduğunu destekler bulgular elde etmişlerdir. Kunicova ve Rose-Ackerman (2005), nispi temsil sisteminin çoğunlukçu sisteme göre rant kollamaya ve yolsuzluğa daha yatkın olduğu ve nispi temsil sisteminin başkanlık sistemiyle birleştiğinde rant kollama faaliyetlerinin daha da arttığı sonucuna varmışlardır. Zengin doğal kaynaklara sahip olan bir ülke için iktidarda kalmanın önemi de daha fazla olmaktadır. Bu durum sırasıyla kaynakların dağıtımı için kullanılan siyasi teşvikleri ve siyasi kayırmacılığı (partizanlık) güçlendirmektedir. Mehlum vd. (2006a, 2006b), kaynak zengini ülkelerin büyüme performanslarındaki değişkenliğin başlıca nedeni olarak, kaynak gelirlerinin kurumsal düzenlemeler yoluyla nasıl dağıtıldığı üzerinde durmuşlardır. Farklı yönetim şekilleri göz önüne alındığında, ülkelerin ani kaynak gelirlerine verdikleri tepkinin

de farklı olabileceği anlaşılmaktadır. Kaynak talihsizliğinin başkanlık sistemiyle yönetilen demokratik ülkelerde var olduğu, fakat parlamenter sistemle yönetilen demokratik ülkelerde geçerli olmadığı ifade edilmektedir. Bir ülkenin sahip olduğu doğal kaynakların büyümeye etkisi değerlendirildiğinde, söz konusu ülkenin parlamenter ya da başkanlık sistemiyle yönetilmesinin, demokratik ya da despot bir rejimle yönetilmesinden daha etkin bir rol oynadığı belirtilmektedir. Ayrıca nispi seçim sisteminin geçerli olduğu ülkelerdeki doğal kaynakların, çoğunlukçu seçim sisteminin geçerli olduğu ülkelerdekine nispeten büyümeyi daha fazla azaltma eğiliminde olduğu ifade edilmektedir.
Hausmann ve Rigoban (2003), kaynak gelirleri üzerindeki ortak kullanım probleminin ya da mülkiyet haklarıyla ilgili belirsizliklerin, mevcut kaynaklar üzerinde daha düşük ekonomik büyümeye neden olabilen verimsiz mücadelelere neden olabileceğini öne sürmüşlerdir. Bulte vd. (2005), doğal kaynak bolluğu ve refah arasındaki ilişkiyi araştırdıkları çalışmada, kaynak zengini ülkelerin nispeten daha düşük insani gelişim seviyesine sahip oldukları sonucuna varmışlardır. Doğal kaynak donanımı ve refah arasındaki doğrudan ilişkiyi destekleyecek sağlam kanıtlar bulmamalarına rağmen, kurumsal nitelik vasıtasıyla bu ilişkiyi güçlü bir şekilde ortaya koymuşlardır. Isham vd. (2005), daha fazla birincil ürün ihraç eden ülkelerin yönetişim göstergelerinin daha kötü olduğu sonucuna varmışlardır. Papyrakis ve Gerlagh (2006), doğal kaynakların rant kollama ve yolsuzluk faaliyetlerine yol açmasından dolayı kurumsal niteliği azalttığını öne sürmüşlerdir. Robinson vd. (2006), doğal kaynak zengini ülkelerdeki politikacıların, gelecekteki neslin ihtiyaçlarını önemsemeyerek aşırı kaynak çıkarımını teşvik ettiklerini ifade etmişlerdir. Kaynak gelirlerindeki ani artışlar, iktidarda olmanın önemini artırdığı ve siyasetçilere seçim sonuçlarını etkilemekte kullanabilecekleri kaynaklar yarattığı için, kaynak gelirlerinin ekonominin geri kalanına yanlış bir şekilde dağılımının söz konusu olduğunu belirtmişlerdir. Mehlum vd. (2006a, 2006b), doğal kaynak donanımının ilgili ülkenin kurumsallaşmasında kötüleşmeye yol açtığının doğrudan güçlü kanıtları olmasa bile, etkin olmayan verimsiz kurumların doğal kaynak bolluğundan elde edilen kazançları ortadan kaldırabilen rant kollama faaliyetlerini önleyemeyeceğini iddia etmişlerdir.

Yang (2010), doğal kaynak zengini GOÜ'lerde kurumsal niteliğin kaynak talihsizliğine neden olmakta çok etkili olmadığı, buna karşın kaynak zenginliğinin negatif etkilerini yok etme konusunda kurumsal niteliğin önemli bir rol oynayabileceği sonucuna varmıştır. Williams (2011), nispeten yeni bir şeffaflık endeksi ve panel verileri kullanarak doğal kaynak ihracatı gelirlerinden şeffaflığa doğru güçlü ve negatif bir nedenselliğin olduğunu tespit etmiştir. Ayrıca, şeffaflıktan yoksun olmanın ekonomik büyümede azalışa yol açacağını ortaya koymuştur. Acemoglu vd. (2001), kurumsal niteliğin bir ölçümü olarak yatırımcılar için kamulaştırma riski faktörünü, Rodrik vd. (2002), hukuk kurallarının uygulanabilirliği ve mülkiyet haklarının korunması faktörlerini, Acemoglu vd. (2003) ise ülke yönetimi üzerindeki kısıtlamaların boyutu faktörünü kullanmışlardır. Bu çalışmalardan çıkan sonuç, zayıf kurumsallaşmaların eşitsizliğe ve zaman zaman diktatörlüklere neden olduğu ve ülkeyi yolsuzluk ve yağmalanmaktan korumak için savunmasızlığa ittiğidir. Wantchekon (1999), Ross (2001), Jenson ve Wantchekon (2004)'un çalışmalarında, petrol üretimine olan bağımlılık ile otoriter rejim arasında pozitif bir ilişki olduğu sonucuna varılmıştır. Metcalf ve Wolfram (2010), siyasi açıklık ve petrol üretimindeki değişkenlik arasında belirgin bir şekilde negatif ilişki bulmuşlardır. Ayrıca değişkenliğin otoriter rejimlerde demokratik rejimlere göre daha fazla olduğu sonucuna ulaşmışlardır. Otoriter rejimlerin genellikle petrol zengini ülkelerde daha uzun süre yönetimde kaldığı görülmektedir. Bu sonuçlardan yola çıkan birçok çalışma, 1960'lardan itibaren kaynak zengini GOÜ'lerin nispeten kaynak yoksunu olan GOÜ'lere göre daha yavaş bir şekilde büyüdüklerini ampirik olarak ortaya koymuşlardır (Lederman ve Maloney, 2007).

Gittikçe sayıları artan bu çalışmalara rağmen, doğrudan doğal kaynak zenginliği ile ekonomik büyüme arasındaki ilişkileri ve bu ilişkilerde kurumsal yönetişim göstergelerinin aracılık etkisini ele alan çalışmaların sayısı oldukça azdır. Ayrıca mevcut çalışmalarda aracılık etkisinin boyutlarının ve anlamlılığının yeterince ve net olarak ortaya konulmadığı görülmektedir. Literatürdeki bu boşluktan yola çıkarak hazırlanan bu çalışma, farklı bir yöntem ve güncel veri setleriyle literatüre az da olsa bir katkı sağlamayı amaçlamaktadır.

## 3 Teorik ve Ampirik Çerçeve

Bu çalışmada doğal kaynak donanımlarının ekonomik büyüme üzerine olan etkileri kurumsal yönetişim göstergelerinin aracılık etkileri kapsamında incelenmiştir. Kaynak talihsizliği literatüründe yer alan yönetişim göstergelerinin dolaylı etkileri (bkz. Mehlum vd., 2006a, 2006b) ve Baron ve Kenny (1986)'nin klasik aracılık ilişkisi yaklaşımından yola çıkarak çalışmanın teorik modeli şu şekilde oluşturulmuştur.

$$\begin{bmatrix} M: Aracı\ Değişken \\ (Küresel\ Yönetişim\ Göstergeleri - WGI) \end{bmatrix}$$

$$\uparrow (-) \qquad\qquad\qquad \downarrow (+)$$
$$\uparrow \qquad\qquad\qquad\qquad \downarrow$$

$$\begin{bmatrix} X: Bağımsız\ Değişken \\ (Doğal\ Kaynak\ Zenginliği\ \text{-}\ COPPC) \end{bmatrix} \Rrightarrow \begin{matrix}(+)\\ \Rrightarrow\\ (-)\end{matrix} \Rrightarrow \begin{bmatrix} Y: Bağımlı\ Değişken \\ (Ekonomik\ Büyüme\ \text{-}\ GDPPC) \end{bmatrix}$$

$$\Rightarrow: Doğrudan\ etki; \quad \rightarrow: Dolaylı\ etki$$

Modelde, bağımsız değişken olan doğal kaynak zenginliği, kişi başına toplam ham petrol üretimi (*COPPC*) ve bağımlı değişken olan ekonomik büyüme performansı ise kişi başına GDP miktarı (*GDPPC*) ile temsil edilmiştir. Modelde bu iki değişken arasındaki ilişkide kurumsal yönetişim göstergelerinin (*WGI*) aracılık etkisi incelenmektedir. Buna göre daha önceki çalışmaların ampirik bulgularından yola çıkarak doğal kaynak zenginliğinin küresel yönetişim gösterilerini ve böylece ekonomik büyüme performansını olumsuz etkilemesi beklenmektedir. Küresel yönetişim göstergelerinin gelişmesinin ise ekonomik büyümeyi artırması beklenmektedir. Doğal kaynak zenginliğinin ekonomik büyümeye olan doğrudan etkileri ise aracı değişkenlerin ve diğer açıklayıcı faktörlerin dolaylı etkilerine bağlı olarak belirsiz olmaktadır. Böylece, doğal kaynak zenginliğinin ekonomik büyümeyi artırması ya da azaltması, aracı değişkenlerin etkilerine bağlı olmaktadır.

Bir değişkenin aracı değişken olabilmesi için dört temel özelliği taşıması gerekmektedir (Baron ve Kenny, 1986): i) Öncelikle bağımsız değişken, aracı etkisi beklenen değişkeni anlamlı bir biçimde etkilemelidir. ii) Aracı etkisi beklenen değişken bağımlı değişkeni anlamlı bir biçimde etkilemelidir. iii) Bağımsız değişken, bağımlı değişeni doğrudan anlamlı bir biçimde etkilemelidir. iv) Dördüncü ve son koşul olarak aracı değişken bağımsız değişken ile birlikte tahmin edilen regresyon modeline dahil edildiğinde, bağımsız değişkenin bağımlı değişken üzerindeki etkisi azalmalı ya da tamamen ortadan kalkmalıdır. İlişki tamamen ortadan kalkarsa "tam aracı değişken", ilişkinin azalması durumunda ise "kısmi aracı değişken" özelliği ortaya çıkmaktadır. Baron ve Kenny (1986)'nin bu yöntemi özellikle bir potansiyel aracı değişkenin olması durumunda daha etkin sonuçlar ortaya koymaktadır. Bu kapsamda, Baron and Kenny (1986)'nin klasik aracılık testine göre dört regresyon modeli şu şekilde oluşturulmuştur.

$$WGI = \beta_1 + aCOPPC + \varepsilon_1 \qquad\qquad (1)$$

$$GDPPC = \beta_2 + bWGI + \varepsilon_2 \qquad\qquad (2)$$

$$GDPPC = \beta_3 + cCOPPC + \varepsilon_3 \qquad\qquad (3)$$

$$GDPPC = \beta_4 + c'COPPC + b'WGI + \varepsilon_4 \qquad (4)$$

Burada aracı değişken olan *WGI* küresel yönetişim göstergelerini; bağımsız değişken olan *COPPC* kişi başına ham petrol üretimini ve bağımlı değişken olan *GDPPC* kişi başına GDP miktarını göstermektedir. $\beta$ lar regresyon sabitlerini ve $\varepsilon$ lar model uyum hatalarını; *a*, *b*, *c* ile *b′* ve *c′* ise ele alınan üç değişken arasındaki regresyon katsayılarını göstermektedir. Buna göre, *GDPPC* bağımlı değişkeni ile *COPPC* değişkeni arasındaki ilişkide *WGI* değişkeninin aracılık etkisinin olması için denklem (1), (2) ve (3)'te a, b, ve c katsayıları anlamlı olmalı ve denklem (4)'teki model tahmininde c′ katsayısı azalmalı (kısmi aracılık etkisi) ya da tamamen ortadan kalkmalıdır (tam aracılık etkisi).

Bir aracılık etkisinin bulunması durumunda bu etkinin istatistiki olarak anlamlı olup olmadığının doğrulanması Sobel (1982) testi aracılığıyla yapılmaktadır. Buna göre denklem (3)'teki *c* nin büyüklüğü ile denklem (4)'teki *c′* nün büyüklüğü *z-testi* ile şu şekilde karşılaştırılmaktadır:

$$z = \frac{a.b}{\sqrt{b^2 s_a^2 + a^2 s_b^2}}$$

Burada, *a* bağımsız değişken ile aracı değişken arasındaki standartlaştırılmamış (ham) regresyon katsayılarını, $s_a$ ise *a* nın standart hatasını (denklem 1) göstermektedir. Yine *b*, bağımsız değişkenin de bağımlı değişkenin bir tahmincisi olarak modele girmesi durumunda, aracı ve bağımsız değişken arasındaki standartlaştırılmamış regresyon katsayısını (denklem 4) ve $s_b$ ise *b* nin standart hatasını göstermektedir. Elde edilen *z* değeri %5 anlam düzeyinde kritik değerden (+/-1,96) büyük (küçük) ise aracılık etkisinin anlamsız (anlamlı) olduğu belirlenebildiği gibi, doğrudan *p (<0,05)* değerine bakılarak da değerlendirme yapılabilmektedir.

## 4  Veri Seti, Yöntem ve Ampirik Bulgular

Çalışmada, küresel yönetişim göstergeleri (*WGI*) verilerinin varlığına bağlı olarak, 1996-2012 dönemi kapsamında 14 yıllık panel veriler kullanılmıştır. Dizi genişliğinin yüksek olması amacıyla değişkenler bakımından heterojen bir yapıda 16 MENA ülkesi (B.A.E, Bahreyn, Cezayir, Fas, Irak, İsrail, Katar, Kuveyt, Libya, Mısır, Suriye, Suudi Arabistan, Tunus, Türkiye, Umman ve Yemen) ve 5 Hazar ülkesi (Azerbaycan, İran, Kazakistan, Rusya ve Türkmenistan) olmak üzere toplam 21 ülkeli (*N=294*) panel veri analizi yapılmıştır. Panel veri analizi, kesit ve zaman serisi gözlemlerini birleştirdiğinden gözlem sayısının daha fazla olması, çoklu bağlantı sorununun nispeten az olması, kısa zaman serisi ve/veya yetersiz kesit gözleminin var olduğu durumlarda da analiz yapılmasının mümkün olmasının yanında, değişkenlere ilişkin heterojenliklere olanak vermesi gibi bazı faydalar sağlamaktadır (Gujarati, 2003; Hsiao, 2003; Baltagi, 2005).

Ülkelerin yönetişim ve kurumsal yapılarına ilişkin alt göstergeleri Dünya Bankası (WB)'nın küresel yönetişim göstergeleri (WB-WGI, 2014) ve Politik Risk Servisi (PRS Group, 2014) tarafından yayınlanan politik risk ve uluslararası ülke risk rehberi gibi farklı veri kaynaklarından elde edilebilmektedir. Bu iki kurumun kapsam ve yöntem bakımından birbirine benzeyen göstergeleri, 6 temel kategoride ve çok sayıda alt gösterge ile

hesaplanmaktadır: i) ifade özgürlüğü ve hesap verebilirlik (siyasette askeri unsurların varlığı ve demokratik hesap verebilirlik), ii) siyasi istikrar ve şiddetsizlik (hükümet istikrarı, yurtiçi anlaşmazlıklar, yurtdışı anlaşmazlıklar, etnik ve dini problemler), iii) hükümetin etkinliği (bürokratik kalite), iv) düzenleme kalitesi (yatırım ortamı), v) hukukun üstünlüğü ve vi) yolsuzluğun kontrolü. Buna göre yönetişim göstergeleri, kanun ve diğer yazılı hükümet yaptırımlarının yanında, ahlak anlayışlarını, gelenek-görenekleri ve kurumsal yapıları da içine alan geniş kapsamlı bir kavramdır.

Petrol ve doğal gaz gibi değerli enerji kaynakları ülkelerin doğal kaynak donanımlarını gösterirken, kişi başına GDP ülkelerin temel refah göstergesidir. Bu kapsamda çalışmada bir bakıma doğal kaynak donanımlarının ülke refahına etkileri de incelenmiş olmaktadır. Çalışmada kullanılan veriler ile açıklamalarına ve veri kaynaklarına ilişkin bilgiler aşağıdaki tabloda özetlenmiştir.

| Zaman Serisi | Değişken | Açıklama | Kaynak |
|---|---|---|---|
| Ek. Büyüme | *RGDPPC* | Kişi Başına Reel GDP, TÜFE Bazlı, (log) | WB-WDI |
| Ortalama Küresel Yönetişim Göstergeleri | *AWGI* | Altı Küresel Yönetişim Göstergeleri Ortalaması (i. *İfade özgürlüğü ve hesap verebilirlik*, ii. *Şiddet/terör bakımından huzur ve politik istikrar*, iii. *Hükümet etkinliği*, iv. *Düzenleme kalitesi*, v. *Hukuk düzeni/hukukun üstünlüğü*, vi. *Yolsuzluk kontrolü*). *-2,5<AWGI<2,5; (+2,5 ile pozitife dönüştürülmüştür: 0<AWGI<5* (Log) | WB-WGI |
| Doğal Kaynak | *COPPC* | Ham petrol kaynakları üretimi, Kişi başına varil (log) | US-EIA |
| Modifikasyon verileri | | TÜFE, Nüfus | WB-WDI |

***Tablo 2:*** *Kullanılan Değişkenler, Açıklamaları ve Veri Kaynakları*

Çalışmada ilk önce serilerin durağanlıklarının kontrolü için Levin, Lin ve Chu (2002) panel birim kök testi uygulanmıştır. Çalışmanın amacına uygun olarak genel (ortak) birim kök sürecini dikkate alan bu test sonuçları aşağıdaki tabloda görüldüğü üzere değişkenlerin seviyede durağan olduğunu göstermektedir.

| Değişken | Trendsiz | | | Trendli | | |
|---|---|---|---|---|---|---|
| | *Test ist.* | *p* | *N* | *Test ist.* | *p* | *N* |
| *RGDPPC* | -7,945** | 0,000 | 257 | -2,620** | 0,004 | 267 |
| *COPPC* | -6,927** | 0,000 | 265 | -4,8751** | 0,000 | 264 |
| *AWGI* | -3,341** | 0,000 | 265 | -3,029** | 0,001 | 269 |
| *WGI-I: İfade özgürlüğü ve hesap verebilirlik* | -4,845** | 0,000 | 264 | -3,706** | 0,000 | 269 |
| *WGI-II: Huzur ve politik istikrar* | **0,838** | 0,799 | 259 | **-3,728**** | 0,000 | 267 |
| *WGI-III: Hükümetin etkinliği* | -2,650** | 0,004 | 266 | -7,977** | 0,000 | 267 |
| *WGI-IV: Düzenleme kalitesi* | -5,477** | 0,000 | 263 | -6,537** | 0,000 | 269 |
| *WGI-V: Hukuk düzeni/hukukun üstünlüğü* | -6,024** | 0,000 | 265 | -4,979** | 0,000 | 266 |
| *WGI-VI: Yolsuzluğun kontrolü* | -6,706** | 0,000 | 264 | -6,943** | 0,000 | 270 |

Değişkenlere ilişkin Schwarz Bilgi Kriteri (SIC)'ne göre maksimum gecikme uzunluğu trendsiz süreçlerde 0-2, trendli süreçlerde 0-1 aralığındadır. ** %1 anlam düzeyinde serilerin durağan olduğunu göstermektedir.

***Tablo 3:*** *Panel Birim Kök Test Sonuçları*

| Bağımlı Değişken | Katsayı | *t* | *p* | *F* | *R²* | İlişki ve anlamlılık |
|---|---|---|---|---|---|---|
| **AWGI** | **-0,031** | **-3,641** | **0,000**** | **13,261** | **0,043** | ***(-) anlamlı*** |
| *WGI-I* | -0,058 (2) | -6,679 | 0,000** | 44,616 | 0,132 | ***(-) anlamlı*** |
| *WGI-II* | -0,008 | -1,035 | 0,301 | 1,071 | 0,000 | (-) anlamsız |
| *WGI-III* | -0,021 | -2,629 | 0,009** | 6,915 | 0,023 | ***(-) anlamlı*** |

| *WGI-VI* | -0,066 (1) | -2,398 | 0,017* | 5,752 | 0,015 | ***(-) anlamlı*** |

*,** sırasıyla regresyon katsayılarının %5 ve %1 düzeyinde anlamlı olduğunu göstermektedir.

***Tablo 4****: Doğal Kaynak Zenginliğinin Ortalama Kurumsal Yönetişim Göstergelerine Etkisi, İkili Panel Regresyon Analizi (Bağımsız Değişken: COPPC)*

Daha önceki çalışmalarda doğal kaynak zenginliği ile kurumsal ve yönetişim yapılarının kalitesi arasında elde edilen negatif ilişkilere bağlı olarak bu çalışmada ilk olarak *COPPC* değişkeninin altı kurumsal gösterge ve bu göstergelerin basit ortalamaları alınarak elde edilen *AWGI* değişkenine olan etkilerini görmek için ikili panel regresyon analizi yapılmıştır.

Tablo 4'deki sonuçlara göre COPPC değişkeninin 6 küresel yönetişim göstergesinin ortalamasından elde edilen AWGI değişkenini anlamlı bir biçimde negatif etkilediği görülmektedir. Alt yönetişim göstergelerinde ise WGI-II: Huzur ve politik istikrar ile WGI-V: Hukuk düzeni/hukukun üstünlüğü boyutları dışında yine anlamlı bir biçimde negatif etkilediği görülmektedir. Buna göre ele alınan ülkeler kapsamında doğal kaynak zenginliğinin yönetişim kalitesini bozma eğiliminde olduğu görülmektedir.

Aşağıdaki tabloda ise küresel yönetişim göstergeleri ile kişi başına GDP arasındaki regresyon sonuçları görülmektedir. Buna göre hem alt boyutlarında hem de genel ortalama bakımından küresel yönetişim göstergelerinin kişi başına GDP'yi anlamlı bir biçimde etkilediği görülmektedir. Sonuçlara göre ele alınan ülkelerde yönetişim kalitesinin artmasının ekonomik büyüme performansını ciddi bir biçimde artıracağı anlaşılmaktadır.

| Bağımsız değişken | Katsayı | *t* | *p* | *F* | $R^2$ | İlişki ve anlamlılık |
|---|---|---|---|---|---|---|
| **AWGI** | **1,762** | **12,355** | **0,000\*\*** | **152,668** | **0,343** | *(+) anlamlı* |
| *WGI-I* | 0,989 | 6,482 | 0,000** | 42,022 | 0,125 | *(+) anlamlı* |
| *WGI-II* | 0,331 | 6,415 | 0,000** | 41,1630 | 0,123 | *(+) anlamlı* |
| *WGI-III* | 2,118 (3) | 15,018 | 0,000** | 225,557 | 0,435 | *(+) anlamlı* |
| *WGI-IV* | 1,267 | 11,172 | 0,000** | 124,825 | 0,299 | *(+) anlamlı* |
| *WGI-V* | 2,195 (2) | 17,244 | 0,000** | 297,389 | 0,504 | *(+) anlamlı* |
| *WGI-VI* | 2,469(1) | 18,110 | 0,000** | 328,006 | 0,529 | *(+) anlamlı* |

\*,\*\* sırasıyla regresyon katsayılarının %5 ve %1 düzeyinde anlamlı olduğunu göstermektedir.

***Tablo 5****: Küresel Yönetişim Göstergelerin Kişi Başına GDP'ye Etkisi, İkili Panel Regresyon Analizi (Bağımlı değişken: GDPPC)*

Doğal kaynak zenginliğinin bir taraftan büyümeyi doğrudan hızlandırması, diğer yandan kurumsal yapıyı bozması nedeniyle de dolaylı olarak büyümeyi engellemesi, yönetişim göstergelerinin aracılık etkisinin belirlenmesinin önemini ortaya koymaktadır.

Aşağıda Tablo 6'da ortalaması alınarak topluluştırılmış 6 küresel yönetişim göstergesinin, doğal kaynak zenginliği ve kişi başına GDP arasındaki doğrudan ilişkide oynadığı aracı değişken rolünün belirlenmesi için hiyerarşik regresyon analizi sonuçları sunulmuştur. Tabloda tahmin edilen (1) numaralı modelde doğal kaynak zenginliğinin yönetişim göstergelerini anlamlı bir biçimde kötüleştirdiği görülmektedir. (2) numaralı modelin tahmin sonuçları ise, kurumsal göstergelerin iyileşmesinin anlamlı bir biçimde kişi başına geliri de artırdığını göstermektedir. (3) numaralı modelde ise, doğal kaynak zenginliğinin ekonomik büyümeyi artırma eğiliminde olduğu görülmektedir. Tahmin edilen (4) numaralı modelde ise, aracı değişkenin de açıklayıcı değişken olarak modelde tahmin edilmesiyle birlikte (3) numaralı modelde elde edilen katsayının (*0,205*) azaldığı (*0,141*) görülmektedir. Buna göre ele alınan ülkeler kapsamında doğal kaynak zenginliğinin, kurumsal yönetişim yapılarını bozması nedeniyle kişi başına geliri azaltma biçiminde dolaylı etkisine rağmen, pozitif doğrudan etkileri sayesinde halen ekonomik büyümeyi artırabildiği görülmektedir. Bu nedenle sonuçlar kısmi aracılık etkisini ortaya koymaktadır. Yapılan Sobel (1982) testine göre, kurumsal yönetişim yapılarının aracılık etkisinin istatistiki olarak anlamlı olduğu doğrulanmıştır.

***Tablo 6:*** *Hiyerarşik Regresyon Analizi ve Sobel Testi Sonuçları*

## 5   Sonuç ve Değerlendirmeler

Çalışmada 16 Orta Doğu ve Kuzey Afrika (MENA) ülkesi ile Hazar denizini çevreleyen 5 Hazar ülkesinden oluşan 21 ülke seti için, 1996-2012 dönemini kapsayan yıllık panel verilerle, kişi başına ham petrol üretimi ile kişi başına reel GDP arasındaki regresyon ilişkisinde küresel yönetişim göstergelerinin aracılık etkisi incelenmiştir. Sırasıyla, panel birim kök testleri, ikili regresyon model tahminleri ile çoklu ve hiyerarşik regresyon analizleri uygulanmıştır. Son olarak aracılık etkisinin anlamlılığı ise Sobel testi ile belirlenmiştir.

Çalışmada elde edilen sonuçları şu şekilde özetlemek mümkündür:

i). Kişi başına ham petrol üretimi, basit ortalaması alınarak tek seride topluluştırılmış küresel yönetişim göstergelerini anlamlı bir biçimde negatif etkilemektedir. Buna göre petrol üretimine bağlı olarak doğal kaynak zenginliği arttıkça ülkelerin yönetişim göstergeleri bozulma eğilimindedir. Kişi başına ham petrol üretiminin fazla olduğu ülkelerde, ayrıştırılmış alt göstergelerde en çok sırasıyla yolsuzluk kontrolü, ifade özgürlüğü ve hesap verebilirlik ile düzenleme etkinliğinin bozulma eğiliminde olduğu görülmektedir.

ii). Hem ortalama hem de 6 alt boyutta incelenen küresel yönetişim göstergelerindeki iyileşmenin kişi başına GDP'yi anlamlı bir biçimde artırdığı belirlenmiştir. Özellikle yolsuzluğun önlenmesi, hukuk sisteminin gelişmesi ve hükümet düzenlemelerinde etkinlik kişi başına düşen GDP'yi, dolayısıyla refahı artıracaktır.

iii). Yapılan hiyerarşik regresyon analizinde kişi başına düşen ham petrol üretiminin, istatistiki olarak anlamlı bir biçimde, kişi başına düşen GDP miktarını olumlu etkilediği, ancak küresel yönetişim göstergelerini olumsuz etkilediği belirlenmiştir. Kişi başına petrol üretiminin, küresel yönetişim göstergelerini kötüleştirerek kişi başına GDP'yi azaltmasına rağmen, halen doğrudan kişi başına GDP'yi iyileştirdiği görülmektedir. Bu durum küresel yönetişim göstergelerinin kısmi negatif aracı değişken özelliğine işaret etmektedir. Yapılan Sobel testiyle kısmi aracılık etkisinin de anlamlı olduğu bulgusuna ulaşılmıştır.

iv). Bu ülkeler için petrol üretiminin yönetişim göstergelerine olan negatif etkisi giderilebilirse ya da en arzu edilen biçiminde pozitif etkisi sağlanabilirse kişi başına düşen petrol üretiminin temsil ettiği doğal kaynak zenginliğinin, kişi başına GDP ile temsil edilen büyüme ve dolayısıyla refahı daha da artıracağı görülmektedir. Bu nedenle incelenen ülkeler için hükümet politikalarının doğrudan ekonomik kararlara müdahalelerinin, kurumsal yönetişim göstergelerini iyileştirmeye yönelik uygulamalara kayması gerekliliği kendini göstermektedir. Ayrıca hükümet politikaları ve düzenlemelerine ilişkin uygulama süreçlerinin şeffaf, etkin, hesap verilebilir ve hukuki olmasının önemi de kendini göstermektedir.

# Toplumsal Bir Mesele Olarak Yolsuzluk ve Büyüme İlişkisi: Türkiye Örneği

# The Relationship between Corruption and Economic Growth as a Social Issue: A Case Study on Turkey

Assoc. Prof. Dr. Neşe Algan (Çukurova University, Turkey)
Asst. Prof. Dr. Başak Gül Aktakas (Çukurova University, Turkey)
İpek Tekin (Çukurova University, Turkey)

## Abstract

The present study aims to investigate the relationship between corruption and economic growth by taking the driving force of education into account. A significant contribution of the education level to the reduction process of corruption is expected to occur. For this reason, the number of those who are convicted of corruption offenses depending on their educational status for Turkey are to be taken into account, whereas the effect of education being a separate variable on growth and corruption will not be considered. In this regard, Vector Error Correction (VECM) model will be used as a method for the years between 1980-2011 and the relationship between corruption and economic growth will be analyzed. The contribution of the study to the literature is to reveal the impact of those who cause corruption depending on their education level on growth by undertaking the education levels separately. According to the empirical findings, considering corruption convicts who are literate but not graduated from a school and those having graduated from primary and secondary education, it was observed that corruption affects growth in a negative way. In contrast, given the corruption crimes which were committed by the graduates of both high school and vocational school at high school level and higher education, it was determined that there is a positive relationship between corruption and economic growth.

## 1 Giriş

Yolsuzluğun önemi, özellikle ekonominin en temel yapılarını doğrudan veya dolaylı olarak etkilemesinde ortaya çıkmaktadır. Ekonomik büyüme açısından meydana getirdiği sonuçlar ise bu etkilerin en önemlisi ve en çok incelenen konu olarak karşımıza çıkmaktadır.

Yolsuzluk genel anlamıyla, bir şeyi çarpıtma veya iyi durumdan kötü duruma doğru değişim olarak tanımlanabilir. Spesifik olarak ise, yolsuzluk var olan yerleşik kuralları, kişisel kazanç sağlamak amacıyla ihlal etmek anlamına gelmektedir. Diğer bir ifadeyle yolsuzluk, yasadışı yollarla servet veya güç kazanmak için kamu yararı pahasına özel kazanç elde etmektir (Maiyaki, 2010). Benzer şekilde Dünya Bankası da yolsuzluğu, bir devlet dairesinin kişisel çıkarlar için kullanılması, suistimal edilmesi olarak tanımlamaktadır. Söz konusu tanımlar ve benzerleri, yolsuzluğu olumsuz bir olgu olarak ele almasına karşın, tersi görüşlerin de literatürdeki yerini aldığı görülmektedir. Buna göre, yolsuzluk, büyümeyi canlandırıcı bir etki olarak ortaya çıkmaktadır. Bunu da daha çok en önemli bileşenlerinden biri olan rüşvet kanalı ile gerçekleştirmektedir. Bu suç türünün, özellikle bürokrasi ve zaman kaybı gibi maliyetleri minimize etmek amacı ile tercih edildiği görülmektedir (Leff, 1964; Nye, 1967; Huntington, 1968; Beck ve Maher, 1986; Egger ve Winner, 2005).

Yolsuzluğun büyümeyi ne şekilde ve ne kadar etkilediği konusunda ise ölçüm meselesi gündeme gelmektedir. Yolsuzluğun ölçümü için yolsuzluk algılama endeksi (CPI) ve uluslararası şeffaflık endeksi (transparency international-TI) gibi çeşitli endeksler kullanılabilmektedir. Yolsuzluğun ölçümünde kullanılan duyarlı göstergelerden biri kamu faaliyetlerinde adaletsizliklere ilişkin algıdır. Diğerinde ise yolsuzluk uzman görüşüne dayalı, gündemden ve toplum algısından bağımsız olup uluslararası bir karşılaştırmayı dikkate almaktadır.

Türkiye için yapılan ve 1980-2011 dönemini ele alan çalışmamızda ise farklı olarak, herhangi bir endeks kullanılmamış olup, suç sayıları dikkate alınmıştır. Yolsuzluk kapsamında kullanılan suçlar çeşitlilik arz etmekle beraber, bu çalışmada verilere erişilebilirlik yönünden rüşvet, zimmet, irtikap ve sahtecilik suçları göz önünde bulundurulmuştur. Bu suçların toplamı yolsuzluk suçu olarak kabul edilmiş, ekonomik büyüme üzerindeki etkisi ekonometrik olarak analiz edilmiştir. Çalışmanın literatüre katkısı ise, söz konusu suç rakamlarının bireylerin *eğitim durumlarına göre* spesifik olarak ele alınmış ve anlamlılığının test edilmiş olmasıdır. Eğitim durumlarının göz önünde bulundurulması ile eğitimin büyüme üzerindeki olumlu katkısının farklı bir kanaldan gösterilmesi amaçlanmaktadır. Buna göre, eğitim seviyesi yükseldikçe yolsuzluk suçundan hüküm giymiş olan suçluların sayısındaki azalma yolu ile büyüme üzerinde olumlu bir etki meydana gelmesi beklenmektedir.

## 2 Teorik Çerçeve

Literatürde genel olarak üç farklı yolsuzluk kavramı kullanılmaktadır: Geniş çaplı veya politik yolsuzluk, küçük çaplı veya bürokratik yolsuzluk ve yasal yolsuzluk. Yolsuzluğun belirleyici faktörleri ise takdir hakkı,

ekonomik rant ve yasama sisteminin bütünlüğüdür. Takdir hakkı, kanunları yerine getirmek için yetki sahibi olan kişileri ifade etmektedir. Ekonomik rant, finansal kaynaklar veya hizmetler elde edebilmek için bir kişi veya kurum tarafından bir kamu görevlisine teklif edilen yan ödemedir. Yasama sisteminin bütünlüğü ise, tespiti ve cezalandırılması mümkün olmayan yolsuzluk eylemlerine dayanmaktadır (Halkos ve Tzeremes, 2010). Bununla birlikte pek çok ülkenin resmi yasalarıyla tanımladıkları yolsuzluk kavramı, uygulama konusunda birbirinden farklılık göstermektedir. Bu nedenle dünyanın her bölgesinde yolsuzluk kavramının farklı seviyelerde var olduğu kabul edilir ve her ülke buna yönelik olarak kendi yasalarını çıkarır veya ilan eder. Bu durum yolsuzluğun subjektif bir kavram olması anlamına gelmektedir. Yani bir toplumun normları ve özellikleri açısından önem arz eden bir durum, başka bir toplum için geçerli olmayabilecektir (Maiyaki, 2010).

Diğer taraftan yolsuzluğun sonuçlarına ilişkin yapılan teorik analizlerde iki farklı görüş ortaya atılmaktadır. Bunlardan birincisi yolsuzluğun ekonomik kalkınma ve büyüme için bir engel oluşturduğu yönündedir. İkincisi ise firmaların, çeşitli türlerde gerçekleşen hükümet başarısızlıklarını bertaraf ederek verimlilik artışını sağlayabilmeleridir. Lui (1985) yolsuzluğun bürokraside kaybedilen zamandan tasarrufu sağlayarak etkinlik ve büyüme sağlayabileceğini öne sürmektedir. Leff (1964) ve Lui (1985) ayrıca yolsuzluğun her durumda net sosyal maliyet yaratmadığını, zira rüşvet verenlerden bürokratlara transfer ödemesi şeklinde gerçekleştiğini ve devletin ekonomiye müdahalesinin yarattığı dara kaybını azalttığını iddia etmektedir (Ehrlich ve Lui, 1999). Bir uzlaşı olmamakla birlikte, genel olarak, bir yolsuzluk dengesinin ideal durum olarak kabul edilen kamu mallarının rekabetçiliğinden ziyade daha düşük bir büyüme oranına yol açtığı ortaya koyulmaktadır (Coppier vd., 2013; Hodge vd., 2011; Dridi, 2013). Bu noktadan hareketle, yolsuzluğun ekonomik büyüme üzerinde yol açtığı negatif etki birkaç şekilde gerçekleşebilmektedir. İlk olarak, yolsuzluk bir vergi olarak hareket edebilir ve bu nedenle yatırım için daha düşük teşvikler sağlayabilir. İkinci olarak, yolsuzluk Murphy vd. (1991)'de de ifade edildiği üzere kalifiye işgücünün üretken faaliyetlerden ziyade kendisi için rant sağlayan işlerle uğraşmasına yol açabilir. Son olarak yolsuzluk, rüşvet alan politikacıların büyük çaplı üretken olmayan projelere yatırım yapması nedeniyle, kamu harcamalarının bileşimini bozabilmektedir (Coppier, vd, 2013). Mauro (1995) de yolsuzluğun yatırımlar üzerindeki negatif etkisini vurgularken, Wei (2000), Polajeva (2009) ise yolsuzluğun ek vergi işlevi görmesi nedeniyle doğrudan yabancı yatırımları azalttığını öne sürmektedir. Benzer şekilde Shera (2011) de yolsuzluğun devletin vergi toplama kapasitesini, vergi gelirlerini ve doğrudan yabancı yatırımları azaltması yoluyla ekonomik büyümeyi olumsuz etkilediğini iddia etmektedir.

Yolsuzluk sorunu arz ve talep perspektifinden de ele alınabilmektedir. Yolsuzluk seviyesi arttıkça, bürokratların yolsuzluk "arz etme" eğilimleri artacak, çünkü yakalanma ve cezalandırılma beklentisi azalacaktır. Talep yönünden ise, genel yolsuzluk vakalarında bir artış, rüşvet almaya açık bir görevli bulmanın işlem maliyetini düşürecek, bunun sonucunda rüşvet teklifleri artış gösterecektir. Her iki durumun net sonucu ise, yolsuzluğun göreli maliyetindeki küçük kaymaların ülkenin yolsuzluk dengesinde kalıcı ve büyük değişimlere yol açmasıdır (Truex, 2010; Johnson vd, 2011).

Bir diğer açıdan yolsuzluk, toplumun eğitim seviyesini azaltma eğilimindedir. Zira harcanabilir gelir düzeyini azaltmakta ve dolayısıyla eğitime yapılan yatırımların önünü kesmektedir. Diğer taraftan, eğitim düzeyi yolsuzluğu etkilemekte, eğitim düzeyi yüksek olan seçmenler daha yüksek üretim ve neticede yolsuzluk rantı oluşturmaktadır. Ancak siyasal katılım ve elit tabakanın mücadelesi yolsuzluk yapan görevlilerin tespiti ve cezalandırılması riskini artırmaktadır. Yolsuzluk yapan hükümetler için bu tehlike yeterince büyüktür ve yolsuzluğu önleyecek kurumsal reformların yapılması çıkarlarına olacaktır (Eicher vd., 2009).

Netice itibariyle, dar anlamda yolsuzluk, yağlama mekanizmasına uygun olarak büyüme üzerindeki pozitif etkisi ile girişimciler için tercih edilebilir görünse de geniş anlamda ve uzun vadede düşünüldüğünde zararlarının çok daha fazla olduğu/olacağı aşikardır. Yolsuzluk olayının ortaya çıkmasının meydana getireceği sonuçlar hem firmanın itibarı ve oluşacak müşteri kaybı, hem de cezai anlamdaki kaybı nedeni ile başlangıçtaki kazanç düşüncesi ile kıyaslanamayacak ölçüdedir (Aidt, 2009; Gürbüz ve Dikmenli, 2009). Bununla birlikte, yolsuzluk, mülkiyet haklarını aşındıran, siyasi kurumlara zarar veren ve ekonomik gelişmenin doğasını karmaşık hale getiren olumsuz bir yapı olarak karşımıza çıkmaktadır (Hodge vd., 2011). Ayrıca küresel boyutta tüm ülkelerde bir hastalık halini alan ve hiçbir kıta, bölge veya etnik gruba özgü olmayan bir özelliğe sahiptir. İnançlar, dini değerler ve siyasal sistem karşısında azalmakta ve kadın-erkek, genç-yaşlı toplumun tüm kesimini olumsuz bir şekilde etkilemektedir (Maiyaki, 2010).

## 3 Literatüre Genel Bir Bakış

Yolsuzluğun ekonomik büyüme üzerindeki etkisinin araştırıldığı ampirik literatür, 20.yy'ın sonlarından itibaren yolsuzluğa ilişkin yeni ve güvenilir verilere ulaşılabilirliğin artmasının da etkisiyle epey gelişme göstermiştir. Buna rağmen literatürde bu ilişkinin yönüne, büyüklüğüne ve anlamlılığına dair bir uzlaşı söz konusu değildir. Yapılan uygulamalı çalışmaların birçoğunda negatif ilişki gözlenirken, bazılarında yolsuzluğun büyüme üzerindeki pozitif etkisine dikkat çekilmektedir. Bazı çalışmalara göre ise bu iki değişken arasında anlamlı bir ilişki gözlenememektedir. Öte yandan, söz konusu çalışmaların birçoğu yolsuzluk ve büyüme arasında doğrudan bir etkileşimden ziyade, aktarma kanalları aracılığıyla dolaylı bir etkiye de işaret etmektedir.

Yolsuzluk birçok açıdan farklılık gösteren ülkeleri farklı yollarla etkilediğinden elde edilen bulgular da çeşitlilik arz etmektedir.

Bürokratik yolsuzluk ve büyüme arasındaki ilişki Ehrlich ve Lui (1999) tarafından bir içsel büyüme modeliyle araştırılmıştır. İçsel büyüme modeline göre beşeri sermaye yatırımı ekonomide büyümenin kaynağıdır ve yolsuzluk politik sermaye yatırımını artırdığından üretken birimler beşeri sermayeye yatırım yapmamakta, dolayısıyla büyüme azalmaktadır. Yani yolsuzluk ve kişi başına gelir arasında negatif ilişki olduğu sonucuna ulaşılmıştır. 152 ülke için 1960-92 dönemini ele aldığı çalışmasında Ehrlich ve Lui, kamu büyüklüğünün büyüme oranını anlamlı bir şekilde negatif etkilediği sonucuna ulaşmıştır. Ayrıca yolsuzluğun görece yoksul ve demokratik ülkelerde negatif etkisi olduğunu, aynı etkinin otokratik ve daha zengin ekonomilerde görülmediğini ifade etmektedir.

Aliyu ve Elijah (2008) ise yolsuzluğu da içerecek bir içsel büyüme modeli kullanarak yaptıkları çalışmalarında, Nijerya'da yolsuzluğun ekonomik büyüme, beşeri sermayenin gelişimi ve toplam istihdam üzerinde olumsuz bir etki meydana getirdiği sonucuna ulaşmıştır.

Mauro (2002)'nın çalışmasına bakıldığında, üretim fonksiyonuna, Barro (1990) ve Murphy vd. (1993) çalışmalarında olduğu gibi kamu harcamalarını ve politik istikrarsızlıkları ayrı ayrı dahil ederek iki farklı model sunduğu görülmektedir. İlkinde, tüm diğer insanlar devletten çalınca herhangi bir birey de rant kollama faaliyetlerine daha çok, üretken faaliyetlere daha az zaman ayırma eğiliminde olacaktır. İkincisinde ise devletin yaptığı yolsuzluğun etkisine bakılmaktadır (büyük çaplı yolsuzluk). Analiz sonuçlarına göre, verimliliğin düşük olduğu ve kamu kesiminin büyük olduğu ülkelerde büyümenin düşme ve yolsuzluğun yaygınlaşma olasılığı daha yüksektir.

Johnson vd. (2011)'nın çalışmaları ise yolsuzluğun dolaylı kanallar üzerinden büyümeyi nasıl negatif etkilediğini göstermektedir. Söz konusu çalışmada, en küçük kareler yöntemiyle Amerika için 1970-2000 dönemini kapsayan bölgesel bir yatay kesit analizi yapılmış, yolsuzluğun bölgesel ekonomik büyüme üzerindeki etkisi, çalışan başına sermaye düzeyi de hesaba katılarak incelenmiştir. Elde edilen sonuçlara göre, yolsuzluk büyümeyi yatırım üzerindeki negatif etkisi yoluyla dolaylı yoldan etkilemektedir. Büyümedeki değişimin yarısı bu iki değişken tarafından açıklanabilmektedir. Bunun yanında, eğitim düzeyi, nüfus, nüfusun büyümesi ve maliye politikaları kontrol edildiğinde, yolsuzluğun tahmin edilen etkisi azalmakta, ancak istatistikî anlamlılığı değişmemektedir. Bu durumda yolsuzluktaki bir standart sapmalık artış, büyümeyi bir standart sapmanın yaklaşık üçte biri kadar azaltmaktadır.

Polajeva (2011) ise yolsuzluğu azaltmaya yönelik stratejilerin devlet kurumlarının gelişmişliğiyle alakalı olduğunu vurgulamaktadır. Zayıf kurumlara sahip devletlerde yolsuzluk nispeten fazla olacak, bu da ekonomik büyüme üzerinde engel teşkil edecektir. Geçiş ekonomilerinde kurumlar pek gelişmediğinden, gelişmiş ekonomilere nazaran yüksek ekonomik büyümeyi sağlamada sorun yaşamaktadırlar.

Benzer şekilde Halko ve Tzeremes (2010), 79 ülkeyi gelişmişlik düzeylerine göre ayırarak panel veri analiziyle yolsuzluğun ekonomik üzerindeki dolaylı etkisini, kurumsal istikrar üzerindeki doğrudan etkisi yoluyla araştırmıştır. Sonuçlara göre ülkelerin yolsuzluk algılama düzeyleri ile ekonomik etkinlikleri arasında U ilişkisi olup, yolsuzluğun azalması ülkelerin kurumları üzerinden ekonomik etkinliklerini artırmaktadır. CPI (yolsuzluk algılama endeksi) sırasıyla 1, 3, 6 ve 10 iken, ekonomik etkinliğin CPI esnekliği 0.752, 0.68, 0.643 ve 0.75 olmaktadır. Bir ülke CPI'ı ortalamanın üzerine çıkarsa (5'ten büyük) bunun ekonomik etkinliğe katkısı artmaktadır.

Yolsuzluğun ekonomik büyümeyi etkilediği aktarma kanallarını belirlemeyi amaçlayan Dridi (2013), 1980-2002 dönemi ve 82 ülke için yolsuzluğun büyümenin bazı belirleyicileri (yatırım, beşeri sermaye, politik istikrarsızlık, enflasyon, kamu harcamaları ve dışa açıklık) üzerindeki etkisini açıklayan ve eşanlı denklem sistemlerine dayanan Tavares ve Wacziarg (2001) yöntemini kullanmıştır. Elde edilen bulgulara göre yolsuzluğun büyüme üzerindeki negatif etkisi, beşeri sermaye ve politik istikrarsızlık üzerindeki etki aracılığıyla gerçekleşmektedir.

Yolsuzluğun yatırımlar üzerindeki etkisini ülke bazında inceleyen birçok çalışmanın aksine Asiedu ve Freeman (2009) firma düzeyindeki etkiyi incelemiştir. Geçiş ekonomilerinde firma düzeyinde yatırımların yolsuzluklardan olumsuz etkilendiği tespit edilmiştir. Regresyonda yer alan diğer değişkenler arasında (firma büyüklüğü, firma sahipliği, sanayi, büyüme, enflasyon, dışa açıklık) yatırım büyümesinin bu ülkelerde yolsuzluğun en önemli belirleyeni olduğu sonucuna ulaşılmıştır. Latin Amerika ve Sahraaltı Afrika ülkeleri içinse anlamlı bir sonuç bulunamamıştır.

Johnson vd. (2014) ise yolsuzluğun maliyetinin devletin ekonomiye müdahalesi ölçüsünde olup olmadığını Amerika için 1975-2007 dönemi en küçük kareler yöntemiyle bölgesel düzeyde analiz etmiştir. Bazı kontrol değişkenlerin de kullanıldığı (çalışan başına fiziki ve beşeri sermaye, nüfus ve büyümesi, maliye politikası, coğrafi bölge) analizden elde edilen bulgulara göre, yolsuzluk ve büyüme arasında negatif, ekonomik serbestlik ve büyüme arasında ise pozitif ilişki vardır. Ekonomik serbestlik düzeyi azaldıkça negatif büyüme etkisi düşmekte, ekonomik serbestlik ortalama düzeyinin üzerindeyken yolsuzluk büyüme için risk oluşturmaktadır.

Wright ve Craigwell (2013), 42 gelişmekte olan ülke ve 1998-2009 dönemi için ekonomik büyüme ve yolsuzluk arasındaki nedenselliği lineer ve lineer olmayan panel yöntemleriyle analiz etmiştir. Lineer panel yöntemi ile yolsuzluktan büyümeye doğru güçlü bir ilişki bulunmuştur. Etki-tepki analizi çerçevesinde ise, bir standart sapmalık yolsuzluk şoku ekonomik büyümeyi üçüncü dönemde 0.026 değiştirmektedir. Kurumsal gelişmişliğin gelişmekte olan ülkelerde özellikle büyüme dönemleri ve sonrasında yolsuzluk kayıplarını azaltacağı da vurgulanmıştır.

Yine aktarma kanallarını araştıran Hodge vd. (2011)'nin elde ettiği sonuçlara göre, yolsuzluk büyümeyi yatırımlar, beşeri sermaye ve politik istikrarsızlık kanalları yoluyla olumsuz etkilemektedir. Öte yandan, kamu harcamalarını azaltıp dışa açıklığı artırarak büyümeyi olumlu etkilemektedir. Yolsuzluğun büyüme üzerindeki negatif etkisi kamu kesiminin küçük veya yüksek derecede düzenlemelerin olduğu ekonomilerde azalmaktadır. Bulgulara göre, yolsuzlukta yüzde 75'lik dilimden (Guatemala) yüzde 25'lik dilime (Japonya) geçiş yüzde 0.629'luk ekstra büyüme sağlamaktadır.

Jimenez (2011) her ülke için 1980-2005 CPI ortalamalarını kullanarak, yatay kesit analizi ile Sahraaltı Afrika ve Güney Asya ülkelerinde yolsuzluğun ekonomilerin etkinliğini ve toplam faktör verimliliğini nasıl etkilediğini incelemiştir. Dışa açıklık, beşeri sermaye, çalışan başına sermaye donanımı gibi kontrol değişkenleri de modele ekleyerek, yolsuzluğun verimliliği etkilediği aktarma kanallarını analiz etmiştir. Bulgular, yolsuzluğun ekonomide etkinliği ve toplam faktör verimliliğini negatif etkilediğini, yolsuzluğun teknolojik gelişme üzerindeki negatif etkisinin ise beşeri sermaye üzerindeki etkisi yoluyla gerçekleştiğini göstermektedir.

Lisciandra ve Millemaci (2013) de İtalya için yaptığı bölgesel panel veri analizinde yolsuzluk endeksi yerine kayıt altındaki yolsuzluk kapsamındaki suç sayısını kullanmıştır. Yolsuzluk ve büyüme arasındaki ilişkiyi tahmin ettiği çalışmasının sonuçlarına göre, yolsuzluk katsayısı tüm spesifikasyon ve tahminciler için negatif ve istatistiksel olarak anlamlı bulunmuştur.

Öte yandan, bir takım çalışmalara göre yolsuzluğun büyüme oranı gibi bazı temel makroekonomik değişkenler üzerinde herhangi bir etkisinin olup olmadığı net değildir. Örneğin, en çok referans gösterilen çalışmalardan Mauro (1995) yolsuzluk ve ekonomik büyüme arasında güçlü bir korelasyon bulamamıştır. Svensson (2005) de güncellenmiş veri setiyle aynı sonuca ulaşmıştır (Johnson, vd., 2011).

Karagöz ve Karagöz (2010)'ün yolsuzluk, ekonomik büyüme ve kamu harcamaları ilişkini Türkiye için test ettikleri çalışmaları da bu sonuçları destekler niteliktedir. Buna göre, büyüme ve yolsuzluk arasında büyümeden yolsuzluğa doğru bir nedensellik ilişkisi mevcutken, tersi bir durum söz konusu değildir. Elde edilen tahmin sonuçlarına göre, büyüme yolsuzluğu pozitif bir şekilde etkilemektedir. Bunun arkasında yatan sebebin, gelir dağılımındaki adaletsizlikler olduğu düşünülmektedir.

Swaleheen (2011), içsel yolsuzluk olgusu ile birlikte ekonomik büyüme konusunu panel veri yöntemi ile ele aldığı çalışmasında, sabit etki modeline göre, yolsuzluğun kısmi etkisinin kişi başına reel gayri safi yurt içi hasıla üzerinde istatistiki olarak anlamlı olmadığı sonucuna ulaşmıştır.

Bununla birlikte, yolsuzluğun ekonomik büyüme üzerinde pozitif bir etkisi olduğu yönünde çalışmalar da konuyu başka bir platforma taşımaktadır. Nye (1967)'nin, yolsuzluk ve siyasal kalkınma ilişkisini fayda-maliyet analizi çerçevesinde ele aldığı çalışmasında, az gelişmiş ülkelerde yolsuzluğun maliyetinin faydasını aşabileceği yönünde bir sonuca vardığı görülmektedir.

Benzer şekilde, Acemoğlu ve Verdier (1998), mülkiyet hakları, yolsuzluk ve yetenek dağılımını genel denge analizi ile inceledikleri çalışmalarında, sözleşmelerin yatırım desteği için gerekli olduğu bir ekonomiyi dikkate almışlardır. Elde ettikleri bulgulara göre, bir miktar yolsuzluğa izin verilmesi optimal olabilirken, mülkiyet haklarını tamamıyla yürürlüğe koymak olmayabilir. Az gelişmiş ülkelerde mülkiyet haklarının yürürlüğe konulması yolsuzluğa nazaran daha az tercih edilebilmektedir. Burada bir fırsat maliyeti durumunun söz konusu olabileceği ifade edilmektedir. "Bedava öğle yemeği yoktur" şeklindeki alternatif seçimi bağlamında hem yolsuzluğun azaltılması, hem yatırımın artırılması, hem de daha iyi bir yetenek dağılımının belirli bir aralıkta gerçekleşme olasılığı değerlendirilmektedir.

Sun (1999), Rusya ve Çin için yolsuzluğun etkisini değerlendirdiği çalışmasında, yolsuzluğun Çin'de Rusya'ya göre daha az bir yıkıcılığa sahip olduğu sonucunu elde etmiştir. Yolsuzluk ılımlı etkiyi, siyasi reformun gecikmesine yardımcı olarak meydana getirmektedir. Buna karşın, çalışmada yolsuzluğun sebep olduğu ekonomik ve sosyal problemler göz ardı edilmemiştir.

Swaleheen ve Stansel (2007) ise ekonomik serbestliği açıklayıcı değişken olarak almakta, 60 ülke için panel veri analizi yapmaktadır. Sonuçlar, genel kabul görmüş yolsuzluğun büyümeyi azalttığı fikriyle örtüşmemekte, ekonomik serbestliğin yüksek olduğu ülkelerde yolsuzluğun ekonomik büyümeyi artırdığı görülmektedir. Ekonomik serbestinin düşük olduğu ülkelerde, yolsuzluğun artması daha az rekabet ve daha az serbest döviz anlamına geleceğinden büyümenin de düşmesine sebep olacaktır. Netice itibariyle yolsuzluğu azaltmanın yolu ekonomik özgürlükleri arttırmaktadır.

Eicher vd. (2009), yolsuzluğu azaltmanın bir diğer yolunun da eğitim olduğunu çalışmaları ile ortaya koymuşlardır. Eğitim ve yolsuzluk arasındaki etkileşimin kurumsal reformları ve ekonomik gelişmeyi nasıl

etkilediğini inceleyen Eicher vd. (2009)'e göre, düşük ve yüksek eğitim seviyesi yoksulluk tuzağından çıkabilirken, orta düzeyde eğitime sahip ekonomiler yoksulluk tuzağında kalacaktır. Çünkü bu düzeydeki eğitimin yeterince yolsuzluk rantı yaratırken, gözlemleme yeteneği oluşturmayacağı ifade edilmektedir.

Truex (2010) da sosyal normların temel etkeni olan eğitimin yolsuzluk davranışının belirlenmesinde bir yolsuzluk dengesine sürükleyebileceğinden söz etmektedir. Eğitimli insanların artması bir toplumda yolsuzluk davranışlarının daha az kabul edilebilir olacağı anlamına gelmektedir. Nitekim Nepal için yapılan bir yolsuzluk anketi sonuçlarına göre, "büyük çaplı" yolsuzluk/rüşvetçilik kabul edilemezken, "küçük çaplı" yolsuzluk hoşgörüyle karşılanabilmektedir. Bulgular göstermektedir ki, gelişmekte olan ülkelerde eğitim olanaklarının artması, yolsuzluk normlarının varlığını ve yolsuzluğun kendisini azaltıcı etki yaratmaktadır.

## 4  Yöntem ve Veri Seti

Bu çalışmada yer alan model için izlenecek yöntem, serilerin kısa ve uzun dönemli ilişkilerini ölçmek üzere yapılacak olan durağanlık testi ve serilerden elde edilecek sonuçlara da göre eş-bütünleşme testlerinin yapılması şeklinde olacaktır. Bu testlere ilave olarak, uzun dönemli ilişki çıkması durumunda hata düzeltme modeline yer verilecektir. Bu bağlamda, izlenen ekonometrik yöntem, Augmented Dickey Fuller (ADF) ve Phillips-Perron (PP) birim kök testleri ve Vector Auto Regression (VAR) Modelinin uygulanması ile birlikte elde edilen sonuçların uygunluğuna göre, Johansen – Juselius (JJ). eşbütünleşme analizi ve buradan da elde edilecek sonuçlara göre hata düzeltme modelinin (HDM) uygulanması şeklindedir.

Yolsuzluk ve ekonomik büyüme ilişkisinin Türkiye için test edildiği çalışmada, zaman serisi yöntemi tercih edilmiş ve tüm tahminler E-views 7.1 programı kullanılarak yapılmıştır.

Çalışmada kullanılan veri seti 1980-2011 dönemini kapsamak üzere yıllık serilerden oluşmaktadır. Elde edilen veriler, Türkiye İstatistik Kurumu (TUİK) ve Dünya Bankası'ndan elde edilmiştir. Buna göre, bağımlı değişken olarak alınan ekonomik büyüme değişkenini temsilen 2005 sabit fiyatları baz alınarak hesaplanan kişi başına gayri safi yurt içi hasıla (GSYİH) oranı, Dünya Bankası veri tabanından elde edilirken, bağımsız değişkenler olarak eğitim durumuna göre yolsuzluk suçunu işlemiş olan hükümlü sayılarının kendi nüfus değerleri içerisindeki payları dikkate alınarak oluşturulan seriler için TUİK veri tabanı kullanılmıştır. Buna göre, okuma yazma bilen fakat bir okul bitirmeyenler, ilköğretim mezunları, orta öğretim mezunları (lise ve dengi meslek okulu mezunları) ile yüksek öğretim mezunu olmalarına göre yolsuzluk suçundan hüküm giymiş olanlar dört ayrı grupta ele alınarak bağımsız değişkenler oluşturulmuştur. TUİK veri tabanında yer alan suç türleri kapsamında yolsuzluk şeklinde ayrı bir suç türü mevcut değildir. Yolsuzluk adı altında bir veri seti olmayışından dolayı bu suçu temsilen kamu idaresinin güvenilirliğine ve işleyişine karşı suçlar kapsamında ele alınan suçlardan zimmete para geçirmek, rüşvet, irtikap ve sahtecilik suç türleri toplamı alınarak bir yolsuzluk verisi oluşturulmuştur.

Tüm seriler logaritmaları alınmış şekilde modele dahil edilmişlerdir. Buna göre çalışmada kullanılan model aşağıdaki eşitlikle ifade edilebilir:

$$lngsyh = \beta_0 + \beta_1 lnoku + \beta_2 lnilko + \beta_3 lnorto + \beta_4 lnyuk + e_t \qquad (1)$$

Bağımlı değişken (gsyh): Kişi başına gayri safi yurt içi hasıla

Bağımsız değişkenler;

oku: Okuma yazma bilen fakat bir okul bitirmeden yolsuzluk suçundan ceza infaz kurumuna girmiş hükümlü sayısı / Okuma yazma bilen fakat bir okul bitirmeyen kişi sayısı

ilko: İlköğretim mezunu yolsuzluk suçundan ceza infaz kurumuna girmiş hükümlü sayısı / İlköğretim mezunu kişi sayısı

orto: Orta öğretim mezunu yolsuzluk suçundan ceza infaz kurumuna girmiş hükümlü sayısı /Orta öğretim mezunu kişi sayısı

yuk: Yüksek öğretim mezunu yolsuzluk suçundan ceza infaz kurumuna girmiş hükümlü sayısı / Yüksek öğretim mezunu kişi sayısı

$e_t$: Hata terimini ifade etmektedir.

Ele alınan model için yapılacak olan ampirik uygulamada katsayıların alacağı değerlerin şu şekilde olması beklenmektedir: $\beta_1<0$, $\beta_2<0$, $\beta_3>0$ ve $\beta_4>0$. Bu şekilde henüz üzerinde tam bir uzlaşı sağlanamamış olan yolsuzluk ile büyüme ilişkisini ele alan literatürün, hem negatif hem de pozitif yönlü bir sonuç elde edilerek çalışmamızı desteklemesi amaçlanmaktadır.

## 5  Ampirik Uygulama

### 5.1  Birim kök test sonuçları;

Tablo 1'de çalışmada ele alınan model için Genişletilmiş Dickey-Fuller (ADF) ve Tablo 2'de Phillips-Perron (PP) birim kök testi sonuçlarına yer verilmiştir. Bu bağlamda, lngsyh, lnoku, lnilko, lnorto ve lnyuk değişkenleri

öncelikle seviyede durağanlık testine tabi tutulurken, bu testler sonucu tüm değişkenlerin seviyede durağan çıkmaması üzerine birinci farkları alınarak durağanlık testleri yapılmıştır. Bunun sonucunda tüm değişkenlerin birinci farkları alındığında durağan oldukları sonucu elde edilmiştir.

| | Düzey | | Birinci Fark | |
|---|---|---|---|---|

*Tablo 3.* *Johansen ve Juselius (1990) Eş-Bütünleşme Testi*

Schwarz, Akaike (AIC) ve Hannan-Quinn bilgi kriteri (HQ) ile birlikte diğer tüm kriterlere göre gecikme uzunluğu 1 olarak bulunmuştur. İncelenen model ile ilgili olarak otokorelasyon, normallik ve değişen varyans sorunu yoktur. Ancak uzun dönem eş-bütünleşme katsayılarının tahmini için seçilen Hata Düzeltme Modeli'nde hata düzeltme katsayısına ait t-istatistiğinin anlamlı olmaması sonucu analize bir gecikme sayısı daha eklenerek devam edilmiştir. Dolayısıyla gecikme uzunluğu olarak 2 alınmış ve eş-bütünleşme testi ile hata düzeltme modeli bu şekilde analize dâhil edilmiştir. Gecikme uzunluğunun iki olarak alınması durumunda da otokorelasyon, normallik ve değişen varyans sorunlarına rastlanmamıştır. Uygulanan model, Akaike ve Schwarz bilgi kriterlerine göre incelendiğinde hem iz hem de maksimum öz-değer testleri için bir tane eş-bütünleşme ilişkisi olduğu sonucu elde edilmiştir. Buna göre, mevcut değişkenler arasında 1980-2011 dönemi için en azından 1 tane uzun dönem ilişki olduğu sonucu ortaya çıkmaktadır.

lngsyh'ye göre normalize edilmiş eş-bütünleşme denklemi şu şekildedir:

**LNGSYH = -0.066455(LNOKU)-1.480904(LNİLKO)+0.497186(LNORTO)+0.660154(LNYUK)        (1)**

1 nolu eşitlikte yer alan eş-bütünleşme vektör katsayılarının gösterdiği üzere, okuma yazma bilen, ancak bir okul bitirmemiş olanlar ile ilköğretim mezunu olup yolsuzluk suçundan hüküm giyenler, kendi eğitim durumlarına göre toplam nüfus içerisinde değerlendirildiklerinde eş-bütünleşme testi sonuçlarına göre, yolsuzluk ile ekonomik büyüme arasında negatif bir ilişki söz konusudur. Buna göre, okuma yazma bilen, ancak bir okul bitirememiş yolsuzluk suçu hükümlülerinin kendi eğitim durumlarına göre toplam nüfus içerisindeki payı yüzde bir arttığında büyüme %0.06 oranında azalacaktır. Aynı şekilde, ilköğretim mezunu yolsuzluk suçu işlemiş olanların kendi eğitim durumlarına göre toplam nüfus içerisindeki payı yüzde bir arttığında, ekonomik büyüme

%1.48 oranında azalacaktır. Buna karşın, orta öğretim ve yüksek öğretim mezunları aynı şekilde değerlendirilerek analize dâhil edildiğinde yolsuzluk ile ekonomik büyüme arasındaki pozitif ilişki dikkati çekmektedir. Orta öğretim mezunu yolsuzluk suçluları kendi nüfus toplamları içerisinde değerlendirildiğinde, bu orandaki %1'lik bir artışın büyümeyi %0.49 oranında artırdığı, yüksek öğretim mezunu yolsuzluk suçu hükümlülerinin kendi eğitim durumlarına göre toplam nüfus içerisindeki payı dikkate alındığında ise bu orandaki yüzde 1'lik bir artışın büyüme üzerinde %0.66'lık bir artış meydana getirdiği görülmektedir. Elde edilen tüm sonuçlar, istatistiki olarak anlamlıdır.

### 5.3 Uzun dönem eş-bütünleşme katsayılarının tahmini;

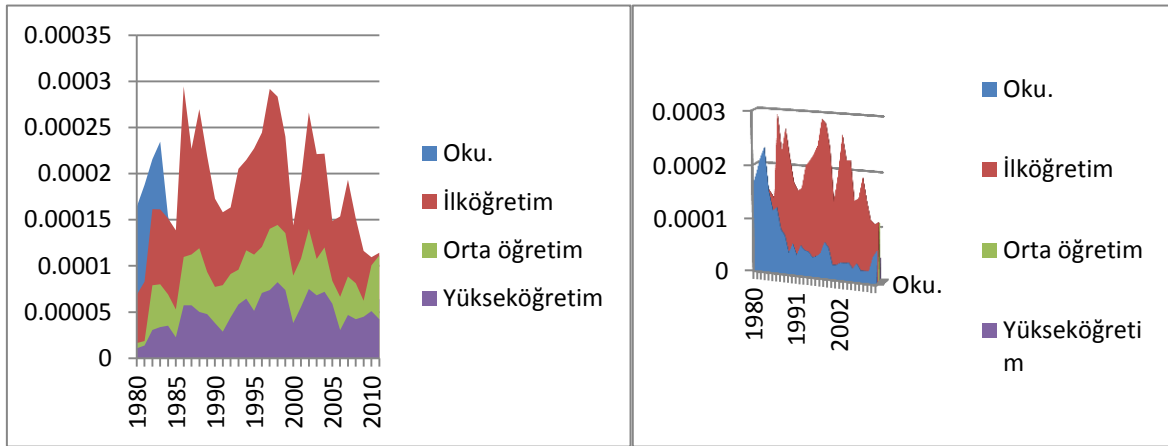
***Tablo 4.*** *Hata Düzeltme Modeli*

Tablo 4'den görüleceği üzere, hata düzeltme katsayısının değeri -0.182289'dur. Bu sonuç, uzun dönemle kısa dönem arasındaki dengesizliği giderecek mekanizmanın çalıştığını göstermektedir. Bu durum, kişi başına gayri safi yurt içi hasıla ile diğer değişkenler arasındaki dengesizliğin her yıl %18'inin düzeleceğini göstermektedir. Diğer bir deyişle, Hata Düzeltme Mekanizması çok yavaş işlemektedir. Dolayısıyla, uzun dönem dengesi çok uzun bir zaman sonra tekrar yakalanabilecektir.

Yapılan ampirik analiz sonucu elde edilen sonuçlar, katsayıların alması beklenen değerleri ile uyumludur. Ancak, yolsuzluğun büyüme üzerinde olumlu bir katkısı vardır hükmüne varabilmek için bu doğru orantının arkasındaki nedenler ayrıntılı bir şekilde araştırılmalıdır. Yolsuzluk ve büyüme arasındaki pozitif ilişkiyi destekleyen çalışmalara literatür incelemesinde yer verilmiştir. Bu bağlamda, Türkiye için yolsuzluk ve büyüme ilişkisindeki doğru yönlü ilişkinin itici gücünün eğitim olduğu düşünülmektedir.

Şekil 1'de eğitim durumlarına göre yolsuzluk suçundan hüküm giymiş olanların yine eğitim durumlarına göre toplam nüfus içerisindeki payları verilmiştir. Görüleceği üzere, eğitim seviyesi arttıkça yolsuzluk suç sayısında da gözle görülür bir azalış meydana gelmektedir.


***Şekil 1.*** *Eğitim durumlarına göre yolsuzluk suçundan hüküm giymiş olanlar / Eğitim durumlarına göre toplam nüfus*

Şekil 1, elde edilen uzun dönem katsayıları arasındaki negatif ve pozitif farklılaşma hakkında bir fikir sahibi olmamızı sağlamaktadır. Eğitimin, ekonomik büyüme üzerindeki pozitif etkisi ve mevcut uygulamamızda da eğitim seviyesi arttıkça yolsuzluk suçu işleyenlerin sayısının azalması bakımından, orta öğretim ve yüksek öğretim mezunu yolsuzluk suçu hükümlüleri bağlamında yolsuzluğun, büyüme üzerinde olumlu bir katkı sağlamasının makul bir sonuç olduğu düşünülmektedir. Bir diğer deyişle, orta öğretim ve yüksek öğretim mezunu kişilerin yapmış oldukları yolsuzluklar, ülke ekonomisi üzerinde olumsuz bir etki meydana getirmeyecek kadar küçük görünmektedir.

Bununla birlikte, yolsuzluk ile ekonomik büyüme arasındaki pozitif ilişkinin arkasında yolsuzluk suçunun en önemli bileşenlerinden biri olan rüşvetin bir katkısının olabileceği de göz önünde bulundurulmalıdır. Rüşvet, bir suç olarak değil mevcut işleyişin bir parçası olarak görülmektedir. Tarhan vd. (2006)'nin bir olgu olarak yolsuzluğu ele aldıkları ve nedenleri, etkileri ve çözüm önerileri üzerinde durdukları çalışmada, Dünya Bankası ve Avrupa İskan ve Kalkınma Bankası tarafından ortaklaşa olarak 1999'da 26 ülkede 4000'den fazla şirketi kapsayan bir saha çalışması kapsamında yönetişimin kalitesi ve şirket-devlet ilişkileri ile ilgili bir araştırma sonucuna yer verilmiştir. Türkiye'de yerleşik 150 şirketle yapılan görüşme sonucunda elde edilen bulgulara göre, kamu görevlilerine lisans ve gümrük işlemlerinin kolaylaştırılması, ihalelerin kazanılması veya bazı kamu hizmetlerinden yararlanma karşılığında rüşvet verildiği iddia edilmiştir. Türkiye'de şirketlerin yıllık gelirlerinin yaklaşık %2,5'undan fazlası rüşvet olarak verilmektedir. Türkiye'de rüşvet suçunun sektörel dağılımında en çok paya %22,6 ile gümrük işlemlerinin sahipken bunu %21.6 ile lisans işlemleri, % 21 ile kamu sözleşmeleri ve %14.2 ile çeşitli kamu hizmetlerinin sağlanması takip etmektedir. Mevcut çalışma kapsamında, Türkiye Ekonomik ve Sosyal Etüdler Vakfı (TESEV)'nın yolsuzluğu, "emanet edilmiş yetkiyi özel yarar sağlamak için kullanmak" şeklinde tanımlayan araştırma raporu sonuçlarına göre ise araştırmaya katılanların dörtte üçü, rüşvetin, bir tür bahşiş olduğu ya da memur maaşlarının düşüklüğü gerekçesiyle mazur görülmesini desteklerken, katılımcıların yaklaşık yarısından fazlası rüşvetin ahlaki bozulmanın sonucu olduğunu düşünmektedir. Bu tarz bulgular neticesi, işlerin bir an önce hızlanması mantığına sahip özel veya tüzel kişilerce bürokratik maliyetlerin azaltılması ve bir an önce faaliyete başlanması güdüsü ile rüşvet suçunun içselleştirildiğini söylemek mümkündür.

## 6 Sonuç

Sosyal Bilimlerin pek çok dalının ortak konusu haline gelmiş olan yolsuzluk meselesinin, ekonomi üzerindeki yadsınamaz etkisi nedeniyle de iktisat literatüründe oldukça geniş bir yer tuttuğu görülmektedir. Ancak sorun şu ki, ahlaki olarak değerlendirildiğinde ayıp, hukuken değerlendirildiğinde suç olan bir mesele aynı zamanda iktisaden olumlu bir etken olarak da görülebilmektedir. Bunun arkasında pek çok nedenin bulunduğu aşikardır.

Türkiye'de yolsuzluk-ekonomik büyüme ilişkisinin 1980-2011 dönemi için ele alındığı mevcut çalışmada, yolsuzluk konusu hem sonuçları hem de nasıl en aza indirgenebileceği yönü ile araştırılmaya çalışılmıştır. Alışılagelidiği üzere beklenen sonuç, yolsuzluğun büyümeyi negatif etkilemesi iken, çalışmamızda literatüre de bir katkı olarak eğitim vasıtası ile bu olumsuz durumun nasıl pozitife dönüştürülebileceği ortaya konmaya çalışılmıştır. Vektör Hata Düzeltme Modeli'nin kullanıldığı ampirik uygulama sonuçlarına göre, eğitim seviyesi düşük kişilerce işlenen yolsuzluk suçu, büyüme üzerinde negatif bir etkiye sahipken, eğitim düzeyinin artması ile birlikte yolsuzluk suçunda bir azalış meydana gelmektedir. Bunun bir neticesi olarak, orta öğretim ve yüksek öğretim mezunu yolsuzluk suçundan hüküm giymiş olanlar bağlamında bakıldığında yolsuzluk ve ekonomik büyüme arasında pozitif bir ilişki olduğu görülmektedir. Ancak, ilgili literatür ve ülke koşulları değerlendirildiğinde bunun bir sebebinin de rüşvetin bir anlamda bir yaşam biçimi haline dönüştürülmüş olması

ve bürokratik engeller ve zaman kaybı gibi maliyetlerin bu yolla önüne geçilerek, bir an önce işi başlatma ve ekonomide faaliyet gösterme yolu ile büyümeye olumlu bir katkı sağlandığının düşünülmesi de hayret verici görünmemektedir.

# Türkiye'de Enflasyon Belirsizliğinin Enflasyon, Büyüme, Faiz Oranı ve Döviz Kuru Üzerine Etkileri

# Effects of Inflation Uncertainty on Inflation, Growth, Interest Rate and Exchange Rate in Turkey

Prof. Dr. Nezir Köse (Gazi University, Turkey)

Ph. D. Candidate Mehmet Kenan Terzioğlu (Gazi University, Turkey)

## Abstract

In this study, the effects of inflation uncertainty to inflation, economic growth, real exchange rate and interest rate is investigated in the framework of BEKK-MGARCH and DCC-MGARCH models by using the 1987Q1–2013Q3 quarterly periods data in the perspective of Turkey's economic structure. High inflation periods before 2003 and low inflation periods after 2003 was evaluated separately by means of slope dummy variable. The findings show that during both high and low inflation periods inflation uncertainty does not affect the exchange rate and has an increasing effect on inflation. Whereas, it is found that while the effect of inflation uncertainty on economic growth is positive during the periods of high inflation, its effect turns negative in low inflation periods Moreover, it is determined that inflation uncertainty has an reducing impact on interest rate in high inflation periods and its effects become positive in low inflation periods.

## 1 Giriş

Fiyat istikrarın önemli bir göstergesi olan enflasyon belirsizliği, maliye ve para politikası değişkenlerinin yanı sıra ekonomik büyüme vasıtasıyla reel sektör üzerinde de etkili olmaktadır. Yüksek-istikrarsız enflasyonun neden olduğu enflasyon belirsizliğindeki artışlar reel ekonomik faaliyetler üzerinde olumsuz bir etkiye sahip olduğundan, düşük-istikrarlı enflasyon ile sürdürülebilir kalkınmayı sağlamak makroekonomik politika yapıcılarının temel amaçlarından biri haline gelmiştir. Özellikle gelişmekte olan ülkelerin yaşadıkları önemli ekonomik sorunların başında enflasyon gelmektedir. Enflasyon ile sorun yaşayan ülkelerde enflasyon belirsizliği ile reel ve nominal ekonomik büyüklüklerin etkileşimlerini araştırmak ekonomi politikasının şekillendirilmesi açısından önem arz etmektedir. Türkiye'de yıllarca enflasyonist bir yapının gözlemlenmesi, meydana gelen krizler ve finansal istikrarın bir türlü sağlanamaması politika yapıcıları ve ekonomik aktörleri karşı karşıya getirmektedir. Finansal faaliyetleri zorlaştıran enflasyonun etkisi para politikaları ile azaltılmaya çalışılsa da makroekonomik dengesizlikler ve risk yönetimindeki eksikliklerinden dolayı enflasyonla mücadelede sınırlı düzeyde başarı elde edilmektedir.

Türkiye'de 2002 yılından itibaren örtülü olarak uygulanan enflasyon hedeflemesi rejimine geçiş dönemi 2006 yılı olmuştur. 2002 yılından önce yüksek ve kronik olarak seyreden enflasyon oranları 2003 yılından itibaren tedricen azalmış ve 2005 yılından itibaren tek haneli rakamlara ulaşmıştır. Bu nedenle, hem yüksek hem de düşük enflasyonla karşı karşıya kalmış olan Türkiye ekonomisi için enflasyon belirsizliğinin reel ve nominal etkilerini araştıran ampirik bir çalışma bilgi verici olmaktadır. Böylece hem yüksek hem de düşük enflasyon dönemleri için enflasyon belirsizliğinin etkilerinde meydana gelebilecek olan olası farklılıklar belirlenebilmektedir.

Bu çalışmada, Türkiye verileri kullanılarak enflasyon belirsizliğinin enflasyon, reel gayrisafi yurt içi hâsıla, mevduat faiz oranı ve reel efektif döviz kuru üzerindeki etkileri ampirik olarak incelenmektedir. Ekonomik performans ve para politikası değişkenleri olarak 1987Q1 – 2013Q3 çeyreklik dönemlerini kapsayan reel gayrisafi yurt içi hâsıla, mevduat faiz oranı ve reel efektif döviz kuru kullanılmıştır. Çalışmada Türkiye'de finansal piyasalar için önem teşkil eden enflasyon modellenmiş ve enflasyon belirsizliğinin seçilmiş olan ekonomik performans ve politika değişkenlerini nasıl etkilediği çok değişkenli genelleştirilmiş otoregresif koşullu değişen varyans (MGARCH) modeli kullanarak tespit edilmiştir. Böylece çok değişkenli yapıda ifade edilen denklemler sistemi yardımıyla mümkün olan tüm etkileşimler bir arada ele alınmakta ve tam bilgi ile çözümler elde edilmektedir. Ayrıca 2003 yılı öncesi ve sonrasını ayırt etmek için tanımlanan eğim kukla değişkeni yardımıyla enflasyon belirsizliğinin etkileri hem yüksek hem de düşük enflasyonlu dönemler için ayrı ayrı değerlendirilmiştir.

Çalışma, enflasyon belirsizliğini ele alan bazı ampirik çalışmalar hakkında bilgilerden oluşan literatür bölümü ile başlamakta ve kullanılan modelin tanımlanması, model üzerine tesis edilen ampirik bulguların elde edilmesi ile devam etmektedir. Çalışma elde edilen ampirik bulgulara dayalı değerlendirmelerin verildiği sonuç bölümü ile son bulmaktadır.

## 2 Literatür

Enflasyonu azaltmak için politika yapıcılar tarafından keyfi politika araçlarının kullanılması güncel enflasyon ile beklenen enflasyon arasındaki farkı genişlettiğinden ve gelecek enflasyon belirsizliğine neden olduğundan, Friedman(1977) çalışmasında enflasyon seviyesinin enflasyon belirsizliğiyle pozitif ilişkili olduğunu savunmaktadır. Enflasyon yüksekken politika yapıcılar deflasyon politikaları uygulayabilmekte veya ortaya çıkacak ekonomik durgunluktan çekindikleri için bu tür politikalardan kaçınabilmektedir. Ekonomik aktörler politika yapıcıların gelecek tercihlerini bilmediklerinden, Friedman(1977) çalışmasında yükselen belirsizliğin kaynakların etkin dağılımında önemli rol oynayan fiyatların bilgi içeriğini saptırdığını göstermektedir. Enflasyon belirsizliğinin yüksek olduğu durumda ekonomik aktörler gelecekteki fiyat seviyelerini tam olarak öngörememektedir. Ball(1992) enflasyon ve enflasyon belirsizliği arasındaki ilişkiyi gelecek para politikaları çerçevesinde incelemiş ve enflasyondaki artışın belirsizliği arttırdığını savunmuştur. Bununla birlikte Cukierman ve Meltzer(1986) enflasyon oranı ve enflasyon belirsizliği arasında ters nedensellik olduğunu varsaymaktadır.

Büyüme ve enflasyon belirsizliği arasındaki ilişki incelendiğinde ampirik çalışmalar farklılık göstermektedir (Davis ve Kanago,1996). Geleneksel görüş enflasyon ve büyümenin pozitif bir ilişki içinde olabileceğini ifade ederken yüksek enflasyonun ekonomiye yüklediği maliyetler dikkate alındığında enflasyon ve büyüme arasındaki ilişki uzun ve orta dönemde negatif olmaktadır. Enflasyon toplam faktör verimliliğini azaltmakta, yatırımlar üzerindeki belirsizlikleri artırmakta ve kredi dağılımının etkinliğini bozarak büyümeyi negatif yönde etkilemektedir (Bruno ve Easterly, 1998). Bazı çalışmalarda enflasyon belirsizliğinin büyüme üzerine negatif etkisi olduğuna dair sonuçlar bulunsa da, diğerleri pozitif ya da hiçbir birliktelik olmadığını göstermektedir. (Çağlayan, Kandemir ve Mouratidis,2011). Okun(1971) ve Friedman(1977) çalışmalarını takip ederek farklı ülkeler için enflasyon belirsizliğinin büyüme üzerindeki etkisi incelemiştir. Levine ve Zervos(1996) ılımlı enflasyonun büyümeyi negatif olarak etkilemediği sonucuna ulaşmıştır. Ghosh ve Phillips (1998) ise ılımlı enflasyon oranlarının büyümeyi negatif olarak etkilediğini tespit etmiştir. Andres ve Hernando (1999) enflasyon ve büyüme arasında uzun dönemli negatif bir ilişkinin olduğunu göstermektedir. Fountas, Karanasos ve Kim(2002) enflasyon belirsizliği ve büyümesi arasındaki bağı G7 ülkeleri için incelemiştir. Elder(2004), Birleşik Devlet verilerini kullanarak enflasyon belirsizliğinin büyüme üzerindeki etkisini araştırmıştır.

Kirmanoğlu(2001) Türkiye'de enflasyonun özel yatırımları ve ekonomik büyümeyi olumsuz yönde etkilediğini vektör otoregresif model yapısını kullanarak göstermiştir. Neo-klasik model çerçevesinde Çetintaş (2003), Türkiye ekonomisinde enflasyon ve büyüme arasında uzun dönemde negatif bir ilişkinin olduğunu bulmuştur. Artan(2006), 1977-2001 dönemlerini kapsayan çalışmasında gelişmiş ve gelişmekte olan grup içinde yer alan bazı ülkeler için enflasyonun büyümeyi negatif etkilediğini göstermiştir. Taban(2008) ARDL modeli kullanarak Türkiye'de enflasyonun büyümeyi hem uzun hem de kısa dönemde negatif etkilediği sonucuna varmıştır.

Piyasa ekonomisinin diğer önemli bir faktörü olan faiz ile enflasyon arasında ilişkinin yönü konusunda farklı bulgular elde edilmektedir. Genel olarak, enflasyon ile faiz oranı arasındaki ilişki Fisher etkisi ile açıklanabilmektedir. Bonham (1991) ve Wallace ve Warner (1993) enflasyon ve faiz oranları arasında stokastik trend yapısı olduğunu göstermişlerdir. Panopoulou (2005), 14 OECD ülkesinde uzun dönemli Fisher etkisini destekleyen sonuçlar elde etmiştir. Hawtrey (1997) Fisher etkisini destekleyen bulgular ortaya koyarken Koustas ve Serletis (1999) Fisher hipotezini desteklememektedir. Keynesyen görüşte faizdeki değişimler para arzı ve para talebi ile ilişkilendirilmektedir. Faiz oranlarındaki artış fiyatların arz yönünde yükselmesine neden olmaktadır. Bu durumda maliyetler artmakta ve maliyet artışları fiyatlara yansıyarak maliyet enflasyonu oluşturmaktadır. Yatırımcıların risksiz alanlara kayması sonucunda ise üretimde azalma gözükmektedir. Risksiz alana kayan ve tahvillere yönelen yatırımcıların gelirlerindeki artış harcamaları arttırdığından talep enflasyonuna neden olmaktadır.

Gelişmekte olan ülkelerin ekonomilerinde meydana gelen döviz kurundaki dalgalanmalar fiyatları büyük ölçüde etkilemektedir. Döviz kuru ve enflasyonla ilişki içinde olan ekonomik değişkenlerin etkileşim yönü gelişmekte olan ülkelerin politika oluşumu açısından önem arz etmektedir. Dış ekonomideki istikrarsızlık iç ekonomik göstergeler aracılığıyla iç piyasalarda dengesizliğe yol açmaktadır. Döviz kurundaki değişikliklerin ithalat fiyatlarına yansıması ve ithalat fiyatlarındaki değişikliklerin tüketici ve üretici fiyatlarına yansımasıyla döviz kuru ve enflasyon arasındaki ilişki açıklanabilmektedir. Türkiye gibi ülkelerde ithalata bağımlı üretim gerçekleştiği için kurda meydana gelen farklılaşma ithal malların fiyatlarını ve üretim maliyetlerini etkilemektedir. Döviz fiyatında meydana gelen artış fiyatlar genel seviyesinde artış yönünde eğilime sebep olmaktadır. Döviz kurunun geleceğe dönük ve beklentilere bağlı olarak belirlenmesi, politika yapıcıların bu değişkendeki değişimlere ve enflasyon belirsizliğine dikkat etmesini gerektirmektedir. Leigh ve Rossi (2002) Türkiye'de döviz kurlarının fiyatlar üzerindeki etkisinin bir yıldan fazla sürede hissedildiği sonucuna ulaşmıştır. TCMB Para Politikası Raporu (2003)'nda dalgalı kur rejimi sonrasında kur-enflasyon ilişkisinin kısmen zayıfladığı sonucuna ulaşılmıştır. Işık, Acar ve Işık (2004) Türkiye'de enflasyon ve döviz kuru değişkenleri arasında uzun dönemli bir ilişki olduğunu göstermiştir. Yanar(2008) dalgalı döviz kurunun enflasyonu arttırdığını ve yüksek enflasyon oranının döviz kuru rejimlerinin esnekliklerinin artması ile birlikte arttığını tespit etmiştir.

Peker ve Görmüş (2008) döviz kuru değişkeninin enflasyonun açıklayıcılarından biri olduğunu tespit etmiştir. Bal (2012) döviz kuru ve enflasyon(TEFE) arasında uzun dönem denge ilişkisinin varlığını göstermiştir.

Enflasyon belirsizliğinin etkilerini araştıran ampirik çalışmalardan elde edilen sonuçlar, örneklem periyodu, kullanılan ekonometrik yöntem, enflasyon belirsizliğinin ölçülmesindeki farklılaşmalar gibi çeşitli faktörlere duyarlıdır. Diğer bir ifadeyle, elde edilen sonuçlar hem enflasyon belirsizliğinin ölçümü üretirken kullanılan yöntemlere hem de belirsizliğin ekonomik değişkenlere etkisini incelemek için kullanılan modele bağlı olmaktadır.

## 3   Yöntem

Oynaklık bireysel yatırımcıların ve finansal kurumların karşılaştığı riskin sayısal bir ölçüsü olduğundan finansal verilerin dikkat çeken özelliklerinden biri olmaktadır. Finansal değişimlerin zaman içinde birlikte hareket etmesinden dolayı finansal ekonometride getirilerin ikinci dereceden momentlerin bağımlılığını öngörebilmek ve tahmin edebilmek önemlidir. Finansal varlık oynaklıklarının zaman içinde birlikte hareket ettiği bulgusundan hareketle geliştirilen çok değişkenli GARCH modelleri etkinlik kazanımları sağlamaktadır. Çok değişkenli GARCH yaklaşımı çeşitli piyasalar ve varlıklar arasındaki koşullu varyans ve kovaryanslar arasındaki zaman bağımlılığını dikkate almaktadır. Çok değişkenli GARCH modelleri, temel olarak tek değişkenli GARCH modellerine oldukça benzemelerine rağmen aralarındaki tek önemli fark; çok değişkenli modellerin kovaryanslarının zaman içinde nasıl hareket ettiğini gösteren denklemleri tanımlamaktadır. Bu değişimleri ortaya çıkarabilmek için tek değişkenli modelleme yerine çok değişkenli bir modelleme çerçevesinden incelemek daha gerçekçi sonuçlara ulaşılmasını sağlamaktadır. Finansal açıdan bakıldığında ise risk yönetimi açısından daha iyi kararlar alınmasını sağlamaktadır.

Çok değişkenli genelleştirilmiş otoregresif koşullu değişen varyans (MGARCH) modelleri varyans ve kovaryansların vektör ARMA biçimindeki bilgi setine bağlı olmasını ve hem varyans hem de kovaryansların modellenmesini gerektiren çok değişkenli finansal modellerinin çözülmesini sağlamaktadır. MGARCH modellerinin geliştirilmesi finansal modellemedeki boyut sorununu çözmeye çalışmaktadır. Tek değişkenli ARCH/GARCH yaklaşımı çeşitli piyasalar ve varlıklar arasındaki koşullu varyans ve kovaryanslar arasındaki zaman bağımlılığını dikkate almamaktadır. Zaman bağımlılığını açıklamak üzere, Bollerslev ve diğerleri (1988) tek değişkenli ARCH/GARCH modellerini VEC parametrizasyonu adı altında çok değişkenli modellere genişletmişlerdir. VEC-GARCH modeli, çok fazla sayıda parametre tahmini gerektirdiğinden ve kovaryans matrisinin pozitif tanımlılığı her zaman sağlanamadığından uygulanabilirlik açısından sorunlar taşımaktadır. VEC-GARCH modeline alternatif olarak geliştirilen model, koşullu varyans matrisinin pozitif tanımlı olmasının garantilendiği bir yapıya sahip olması gerekmektedir.

Tek değişkenli GARCH modelinden n değişkenli modele doğru genişleme, n boyutlu sıfır ortalamaya sahip tesadüfi değişkenlerin($\varepsilon_t$) koşullu varyans-kovaryans matrisinin bilgi setindeki elemanlara bağlı olmasını gerektirmektedir. $\mathcal{F}_{t-1}'$e göre $H_t$ ölçülebilir ise çok değişkenli GARCH modeli

$\varepsilon_t | \mathcal{F}_{t-1} \sim N(0, H_t)$

olarak yazılmaktadır. $H_t$ varyans matrisi olduğundan, pozitif tanımlılığın sağlanması gerekmektedir. Uygulanabilirlik açısından modele faktör ya da diyagonal parametre matrisi şeklindeki yapılar ilave edilebilmektedir. Bu model sınıfı koşulsuz moment, ergodiklik ve durağanlık koşullarının teoriksel yapısını kolaylaştırmaktadır (He ve Terasvirta, 2002a). $H_t$'nin pozitif tanımlılığını parametreler üzerinde ciddi sınırlandırmalar yapmadan VEC temsilinde sağlamak zor olduğundan VEC-GARCH modelin sınırlandırıcı bir versiyonu olarak tanımlanan Baba-Engle-Kraft-Kroner (BEKK) modeli kullanılmaktadır(Engle ve Kroner, 1985). BEKK modelinin parametreleri VEC modelinde olduğu gibi $H_t$'nin elemanlarındaki farklı gecikme terimlerinin doğrudan etkisini göstermemektedir. BEKK-GARCH modelinin koşullu kovaryans matrisleri yapısal olarak pozitif tanımlılığı sağlamaktadır. $C_0^*$, $A_{ik}^*$ ve $B_{ik}^*$ $n$ x $n$ parametre matrisler, $C_0^*$ üçgen, $C_{1k}^*$ $J$ x $n$ parametre matrisleri ve $K$ toplama limit sürecin genellenebilirliğini belirlemek üzere,

$$H_t = C_0^{*'}C_0^* + \sum_{k=1}^{K} C_{1k}^{*'} x_t x_t' C_{1k}^* + \sum_{k=1}^{K} \sum_{i=1}^{q} A_{ik}^{*'} \varepsilon_{t-i} \varepsilon_{t-i}' A_{ik}^* + \sum_{k=1}^{K} \sum_{i=1}^{p} B_{ik}^{*'} H_{t-i} B_{ik}^* \tag{1}$$

BEKK(1,1,K) modeli yazılabilmektedir. (1) eşitliği zayıf koşullar altında pozitif tanımlı olmaktadır. Bununla birlikte model, tüm pozitif tanımlı diyagonal temsilleri ve neredeyse tüm pozitif tanımlı VEC temsillerini kapsadığı için yeterince genel olmaktadır. BEKK modeli doğrudan, A ve B matrisleri olmak üzere, model yapısı üzerine odaklanır. Bunun ana avantajı, $H_t$'nin pozitif tanımlı olmasını gerektiren bir kısıt gereksinimi bulunmamasından dolayı, parametrelerin kolay tahmin edilir olmasıdır. Bir dezavantaj ise, parametrelerin modele matrisler şeklinde ve transpoze olarak girmesinden dolayı; $H_t$ üzerindeki etkilerin kolay yorumlanabilir olmamasıdır. A matrisi, modeldeki ARCH etkisini ölçerken, B matrisin her bir elemanı ($b_{ij}$), "i" değişkenden "j" değişkenine koşullu varyansdaki devamlılığı temsil etmektedir.

Koşullu varyans ve korelasyonları kullanarak koşullu kovaryansların doğrudan modellenmesi göreli olarak yeni bir yaklaşım olarak ortaya çıkmaktadır. Koşullu korelasyon modelleri parametrelerin tahmininde ve yorumlanmasında çok daha kullanışlı bir alternatif olmaktadır. Tek değişkenli GARCH modellerinin doğrusal

olmayan kombinasyonları olan modeller bir yandan bireysel koşullu varyansların diğer taraftan da bireysel seriler arasındaki koşullu korelasyon matrisinin ya da başka bir bağımlılık ölçüsünün ayrı ayrı belirlemesine olanak sağlamaktadır. Zamana bağlı korelasyonlar genellikle getirilerin çapraz çarpımı ve karelerinde doğrusal olan çok değişkenli GARCH modelleri ile hesaplanmaktadır. Dinamik Koşullu Korelasyon (DCC) modeli koşullu korelasyonların zaman içinde değişimini dikkate almaktadır. DCC olarak adlandırılan çok değişkenli modeller, korelasyonlar için cimri(basit) parametrik modeller ile ilgili tek değişkenli GARCH modellerinin esnekliğine sahiptir. Diğer bir ifadeyle, DCC tahmin edicileri tek değişkenli GARCH'ın esnekliğine sahip olan fakat çok değişkenli GARCH'ın karmaşıklığından sakınmaktadır. Doğrusal olmamakla birlikte olabilirlik işlevine dayanan tek değişkenli ya da iki adımlı yöntemlerle hesaplanabilmektedirler. Koşullu korelasyonları doğrudan parametrize eden bu modeller ilki bir dizi tek değişkenli GARCH tahmini ve diğeri korelasyon tahmini olmak üzere iki adımda tahmin edilebilmektedir. Bir çok durum altında iyi işledikleri ve mantıklı ampirik sonuçlar verdikleri gözlemlenmektedir.

$\varepsilon_t = D_t^{-1} r_t$ ve $D_t = \text{diag}\{\sqrt{h_{i,t}}\}$ olmak üzere, $R = E_{t-1}(\varepsilon_t \varepsilon_t') = D_t^{-1} H_t D_t^{-1}$ koşullu korelasyonları içeren bir korelasyon matrisini göstermek üzere

$$H_t = D_t R D_t \tag{3}$$

sabit koşullu korelasyon (CCC) tahmin edicisinin genelleştirilmiş hali olan dinamik koşullu korelasyon modeli

$$H_t = D_t R_t D_t \tag{4}$$

şeklinde gösterilmektedir. Dinamik koşullu korelasyon modelinde tek fark R'nin zamanla değişim göstermesidir. R'nin parametrizasyonu koşullu varyansların bütünlük içinde olmasının dışında H ile aynı gerekliliklere sahiptir. Olası en basit ve en iyi yöntem normalleştirilmiş kalıntıların geometrik ağırlıklı ortalaması olarak ifade edilen üstel düzleştirmedir. Diğer bir alternatif ise GARCH(1,1) modeli kullanılarak elde edilmektedir.

$$q_{i,j,t} = \bar{\rho}_{i,j} + \alpha(\varepsilon_{i,t-1}\varepsilon_{j,t-1} - \bar{\rho}_{i,j}) + \beta(q_{i,j,t-1} - \bar{\rho}_{i,j})$$

ifadesi yazıldığında,

$$q_{i,j,t} = \bar{\rho}_{i,j}\left(\frac{1-\alpha-\beta}{1-\beta}\right) + \alpha \sum_{s=1,\infty} \beta^s \varepsilon_{i,t-s}\varepsilon_{j,t-s}$$

elde edilmektedir. Çapraz çarpımın koşulsuz beklentisi $\bar{\rho}$ olmak üzere varyanslar $\bar{\rho}_{i,j} = 1$'dir. $\mathcal{Q}_t = |q_{i,j,t}|$ kovaryans matrisi, pozitif tanımlı ve pozitif yarı tanımlı matrisin ağırlıklı ortalaması olduğu için korelasyon tahmin edicisi

$$\rho_{i,j,t} = \frac{q_{i,j,t}}{\sqrt{q_{i,i,t}q_{j,j,t}}}$$

pozitif tanımlı olmaktadır. S, epsilonların koşulsuz korelasyon matrisi olmak üzere bu tahmin edicilerin matris formu

$$\mathcal{Q}_t = (1-\lambda)(\varepsilon_{t-1}\varepsilon_{t-1}') + \lambda\mathcal{Q}_{t-1} \tag{5}$$

$$\mathcal{Q}_t = S(I - \alpha - \beta) + \alpha(\varepsilon_{t-1}\varepsilon_{t-1}') + \beta\mathcal{Q}_{t-1} \tag{6}$$

şeklinde yazılmaktadır. Koşulsuz momentler basit korelasyon matrisine uyarlandığı sürece korelasyonları parametrelendirmek için daha karmaşık pozitif tanımlı çok değişkenli GARCH modelleri kullanılabilmektedir.

## 4 Model ve Veriler

$\pi_t$ enflasyon, $b_t$ gayri safi yurtiçi hasıla, $d_t$ döviz kuru ve $f_t$ faiz ve $h_t$ enflasyon belirsizliğini göstermek üzere çok değişkenli genelleştirilmiş otoregressif koşullu heteroskedastisite (MGARCH) model yapısı

$$\pi_t = \alpha_0 + \alpha_1 D_k + \sum_{i=1}^p \alpha_{1i}\pi_{t-i_{t-i}} + \sum_{i=1}^p \alpha_{1i} b_{t-i} + \sum_{i=1}^p \alpha_{2i} d_{t-i} + \sum_{i=1}^p \alpha_{2i} f_{t-i} + \delta_1 h_t + \gamma_1 D_k h_t + \varepsilon_{1t}$$

$$b_t = \beta_0 + \beta_1 D_k + \sum_{i=1}^p \beta_{1i}\pi_{t-i} + \sum_{i=1}^p \beta_{2i} b_{t-i} + \sum_{i=1}^p \beta_{3i} d_{t-i} + \sum_{i=1}^p \beta_{3i} f_{t-i} + \delta_2 h_t + \gamma_2 D_k h_t + \varepsilon_{2t}$$

$$d_t = c_0 + c_1 D_k + \sum_{i=1}^p c_{1i}\pi_{t-i_{t-i}} + \sum_{i=1}^p c_{2i} b_{t-i} + \sum_{i=1}^p c_{3i} d_{t-i} + \sum_{i=1}^p c_{4i} f_{t-i} + \delta_3 h_t + \gamma_3 D_k h_t + \varepsilon_{3t}$$

$$f_t = k_0 + k_1 D_k + \sum_{i=1}^p k_{1i}\pi_{t-i} + \sum_{i=1}^p k_{2i} b_{t-i} + \sum_{i=1}^p k_{3i} d_{t-i} + \sum_{i=1}^p k_{3i} f_{t-i} + \delta_4 h_t + \gamma_4 D_k h_t + \varepsilon_{4t}$$

$$\varepsilon_{1t} = h_t * \eta_t, \left(\eta_t = \frac{u_{t-1}}{\sqrt{h_{t-1}}}\right)$$

şeklinde ifade edilmektedir. Bu eşitliklerde yer alan $D_k$ kukla değişkeni aşağıdaki gibi tanımlanmıştır:

$$D_k = \begin{cases} 1, & 2003 - 2013 \text{ yıllarının çeyreklik dönemlerinde} \\ 0, & \text{diğer dönemlerde} \end{cases}$$

Çalışmada ele alınan değişkenlerin volatilitesi ve ko-volatilitesi BEKK ve DCC formları kullanılarak kısıtlanmaktadır. Tam bilgi maksimum olabilirlik tahmininde BFGS optimizasyon algoritması kullanılmıştır. Katsayı tahminlerini belirlemede sayısal optimizasyon algoritması olarak iterasyon rutinlerini kullanılmakta ve tahmin edilen katsayılarda değişim olduğu zaman yakınsamanın olduğu varsayılmaktadır. Model

çözümlemesinde kullanılan 1987:Q1 – 2013:Q3 dönemine ait tüketici fiyat endeksi (TÜFE), reel gayrisafi yurt içi hâsıla (RGSYİH), reel efektif döviz kuru (REDK) ve on iki aylık mevduat faiz oranları (MFO) TCMB'nin elektronik veri dağıtım sisteminden (EVDS) alınmıştır. Reel gayri safi milli hasıla ve tüketici fiyat endeksinin mevsimsel değişime sahip olması nedeniyle ilgili değişkenler mevsimsel etkiden Tramo/Seats yöntemi ile arındırılmıştır. Çalışmada yer alan değişkenlerin logaritmik birinci sıra farkları alınarak 100 ile çarpılmıştır. Böylece değişkenlerin tamamı yüzde değişimler olarak ifade edilmiştir. Ampirik araştırmalarda kullanılan değişkenlerin zamana göre eğilimleri Grafik-1'de verilmiştir.

**Şekil 1.** *Değişkenlerin Zamana Göre Eğilimleri*

Şekil-1 incelendiğinde 2003 yılı öncesi yüksek düzeyde seyreden enflasyonun 2003 yılından sonra düşme eğilimine girdiği görülmektedir. Ayrıca 1994, 2001 ve 2008 yıllarında meydana gelen finansal krizlerin etkisi nedeniyle oluşan yapısal kırılmalar değişkenlerin tamamında gözlemlenmektedir. Buna karşın çalışmada kullanılan modelin yapısı gereği yapısal kırılmaları temsil eden bir kukla değişkenin modele katılmasına ihtiyaç duyulmamıştır.

## 5   Ampirik Bulgular

Değişkenlerin durağanlığını araştırmada sabit ve trend içeren Augmented Dickey-Fuller (ADF) eşitliği kullanılmıştır. ADF birim kök testinde en uygun gecikme uzunluğunun belirlenmesinde Schwarz Bilgi Kriterinden (SBC) yararlanılmıştır. ADF birim kök testine ek olarak Philips-Perron(PP) ve Kwaitowski, Phillips, Schmidt and Shin (KPSS) testleri de yapılarak sonuçların daha sağlam (robust) olması sağlanmıştır. Birim kök testi sonuçları Tablo 1'de gösterilmektedir.

| | ADF Test Sabit ve Doğrusal Trend | | KPSS Test Sabit ve Doğrusal Trend | | PP Test Sabit ve Doğrusal Trend | |
|---|---|---|---|---|---|---|
| | t-istatistik | t-kritik | LM istatistik | LM - kritik | t-istatistik | t-kritik |
| $\pi_t$ | -4.43 | -3.45* | 0.17 | 0.21** | -8.55 | -3.45* |
| $b_t$ | -7.27 | -3.45* | 0.08 | 0.14* | -11.74 | -3.45* |
| $d_t$ | -10.50 | -3.45* | 0.15 | 0.21** | -14.91 | -3.45* |
| $f_t$ | -9.28 | -3.45* | 0.07 | 0.14* | -9.23 | -3.45* |

**Tablo 1.** *ADF Durağanlık test sonuçları ( \*0.01 , \*\*0.05 ve \*\*\*0.10 test kritik değerleri için kullanılmıştır).*

ADF, KPSS ve PP birim kök test sonuçları incelendiğinde enflasyon oranı ile gayri safi yurtiçi hâsıla, döviz kuru ve faiz serilerindeki değişim oranlarının birim köke sahip olmadığı yani durağan olduğu sonucuna ulaşılmıştır. MGARCH modellemesini gerçekleştirmek için ilk adım incelenen verideki serisel korelasyonu test ederek ortalama denklemin belirlenmesidir. Serinin artıklarında herhangi bir ARCH etkisinin kalıp kalmadığını tespit etmek için LM testi uygulanmıştır. Tablo 2'de gösterildiği üzere getirilerin normal dağılım göstermediği

Jarque-Berra test istatistiği ve veri setinde yüksek düzeyde ARCH yapısının varlığının bulunduğu ARCH Langrange çarpan testiyle gösterilmiştir.

| Değişkenler | $\pi_t$ | $b_t$ | $d_t$ | $f_t$ |
|---|---|---|---|---|
| JB | 6.634(0.036) | 16.091(0.000) | 53.319((0.000) | 262.734 (0.000) |
| ARCH-LM | 10.48123 (0.0053) | | | |

***Tablo-2.*** *Modelde kullanılan verilere ilişkin normallik ve ARCH etkisi varyasımı*

Kurulan modele ilişkin koşullu ortalama ve varyans-kovaryans matrisini tahmin etmek için ilk önce MGARCH model yapısına sahip güvenilir tahminler elde eden ve diğer model yaklaşımlarına göre yorum kolaylığı sağlayan BEKK model tanımlaması incelenmiştir. Son tahmin hata kriteri (FPE) göz önüne alınarak üç gecikmeli VAR yapısına sahip bir model kurulmuştur. Model parametre tahminleri maksimum olabilirlik tahmin yöntemi kullanılarak çözülmüştür. $(Z_t) = (\pi_t, b_t, d_t, f_t)'$ enflasyon oranı, büyüme, döviz kuru ve faizdeki değişimler için zaman serilerini göstermek üzere VAR(3) modelinin artıkları için dört boyutlu BEKK modeli

$$H_t = C'C + \sum_{i=1}^{q} A_i' \mathcal{E}_{t-i} \mathcal{E}_{t-1}' A_i + \sum_{i=1}^{q} B_i' H_{t-i} B_i \qquad \mathcal{E}_t = H_t^{1/2} v_t$$

şeklinde tanımlanmıştır. $H_t$ , $Z_t$'nin koşullu kovaryans matrisi, $\{C, A_i, B_i\}$ parametre matrisi ve $cov(v) = I_n$ olmak üzere $v_t$ dört boyutlu beyaz gürültü serisidir. BEKK model yapısı pozitif tanımlılığı içinde barındırdığı için ek bir kısıt koyulmasına ihtiyaç duyulmamaktadır. Tahmin edilen BEKK modeline ait parametre tahminleri Tablo3.'de gösterilmiştir. Parametrelerin büyük çoğunluğunun istatistiksel olarak anlamlı olduğu görülmüştür. BEKK model yapısına ait katsayı matrisleri

$$A = \begin{bmatrix} -0.275 & -0.077 & -0.094 & 0.856 \\ 0.176 & -0.335 & -0.894 & -2.210 \\ 0.082 & 0.051 & 0.138 & 1.250 \\ 0,020 & 0.010 & -0.158 & 0.581 \end{bmatrix}, B = \begin{bmatrix} -0,001 & -0.067 & 0.383 & -0.057 \\ 0.060 & -0.082 & 0.186 & 0.110 \\ 0.053 & 0.056 & 0.493 & -0.223 \\ 0.036 & -0.008 & -0.025 & 0.061 \end{bmatrix} \text{ ve }$$

$$C = \begin{bmatrix} 3.2571 & 0 & 0 & 0 \\ -0.553 & 1.934 & 0 & 0 \\ -2.571 & 0.380 & 4.609 & 0 \\ 5.262 & -2.968 & -1.843 & 0.001 \end{bmatrix} \text{ olarak hesaplanmıştır.}$$

Enflasyon oranı, büyüme, dolar ve faiz serileri için güçlü ARCH ve GARCH etkisinin varlığını gösteren varyans-kovaryans denkleminin katsayıları, bireysel ve çapraz şoklar ve aynı zamanda bireysel ve çapraz oynaklık dağılımları için önemlidir. Tahmin edilen ARCH ve GARCH parametrelerinin katsayılarının sırasıyla %56 ve % 38'i anlamlıdır. Faiz serisinin kendi şoklarının dağılımı yüksek ve anlamlı bulunmuştur ki bu da kuvvetli ARCH etkisinin varlığını göstermektedir. Bireysel şok dağılımlarının etkileri -0.34(büyüme) ve 0.58(faiz) aralığında bulunmaktadır. Çapraz şok etkileri incelendiğinde ise geçmiş şokların diğer ekonomik büyüklükleri etkisi olduğu gözlemlenmektedir. Enflasyon serisindeki çapraz şoklara bakıldığında, faizin 0,85 katsayısıyla anlamlı etkisi görülmektedir. Büyüme serisindeki çapraz şoklar incelendiğinde ise enflasyon ve faizin sırasıyla 0,08 ve 1,25katsayısıyla anlamlı olduğu gözlemlenmektedir. Döviz serisinde enflasyon ve faizin anlamlı etkisine rastlanırken faiz serisinde enflasyon ve döviz kurunun anlamlı etkileri tespit edilmektedir. Parametrelerin GARCH serisi incelendiğinde ise enflasyon, büyüme, dolar ve faiz için gecikmeli oynaklık dağılımlarının etkisinin sırasıyla -0.001; -0,082; 0,493 ve 0,061 olduğu tespit edilmiştir. Bu geçmiş oynaklık şoklarının döviz ve faiz serilerinin kendilerinde gelecek oynaklıklarının tespitinde diğer parametreler göre kendi geçmiş şoklarının daha etkin olduğunu göstermektedir. GARCH parametrelerinde çapraz oynaklık kapsamında enflasyon serisinde döviz kurunun, büyüme serisinde döviz kuru ve faiz serisinin ve son olarak döviz serisinde faizin etkisinin anlamlı olduğu bulunmuştur. Bu durumda enflasyon serisinin gelecekte meydana gelecek oynaklığına en büyük etkiyi döviz kuru yaparken, büyüme serisinin gelecek oynaklığına en büyük etkiyi döviz serisi, döviz kurunun gelecekteki oynaklıklarına en büyük etkiyi ise faiz serisi yapmaktadır.

ARCH ve GARCH katsayılarının toplamı her bir serinin kendi oynaklığın genel kalıcılığı ölçmekte ve sırasıyla -0,27; -0,42; 0,63; 0,64 değerlerine eşit olmaktadır. Otokorelasyon fonksiyonu çizimleri tüm zaman serileri için kritik değerlerin içinde olarak gözlemlendiğinden, uyarlanan modelin tanılama testi içi artıkların genişliği, standart normal dağılımda beklendiği gibi daha yakın bulunmaktadır, Bununla beraber karesel artıkların ACF tablosu incelendiğinde bazı gecikmelerde otokorelasyonlar göze çarpmaktadır. Bu yüzden BEKK modeli için uygulanan tanı testi artıkların ak-gürültü olması özelliği göz önüne alındığında modelin eksik belirlenmiş olabileceğini düşündürmektedir. Bu yüzden enflasyon belirsizliğinin ekonomik değişkenlere olan etkisini belirlemek için model yapısı dinamik koşullu korelasyon modeli olarak da incelenmiştir.

Seçilen değişkenler arasında güçlü zaman-bağımlı korelasyon olması dinamik yapıya yönlendirmektedir. Çalışma kapsamında kurulan DCC modeli koşullu korelasyonla ilgili olarak dört zaman serisinin sabit olmayan kesişimlerinin (etkileşimlerinin) bulunduğunu ve bu korelasyonun o andaki korelasyonlara üç gecikme ile etki ettiğini ifade etmektedir. VAR artıklarının dörtlü zaman serilerinin her biri tek boyutlu GARCH modeli kullanılarak modellenirse ancak bu keşişim etkisi yok edilebilmektedir. Sabit ve diğer tüm gecikmeli

parametrelerin sıfıra eşit olduğu boş hipotezi reddedildiğinden sabit korelasyona sahip olunmadığı ve dinamik bir yapıdan bahsedilebileceği söylenebilmektedir.

| C(4,4) | 0.001* | A(3,3) | 0.138 | B(2,2) | -0.082*** | | |
| A(1,1) | -0.275* | A(3,4) | 1.250* | B(2,3) | 0.186* | | |

**Tablo 3.** *BEKK Model Tahmin Sonuçları ( \*0.01 , \*\*0.05 ve \*\*\*0.10 test kritik değerleri için kullanılmıştır).*

Tablo 4'de korelasyon parametre tahminleri ve GARCH modeline ilişkin parametre tahminleri verilmiştir. Elde edilen parametre tahminlerinin birçoğu istatistiksel olarak anlamlı bulunmuştur. Korelasyon parametreli incelendiğinde değişkenler arasındaki korelasyonun bir kısmının düşük ve anlamlı olduğunun gözlemlenmesi aralarında zaman-bağımlı korelasyon olduğu tanısını güçlendirmektedir. $H_t = D_t R_t D_t$ dinamik koşulu korelasyon model yapısı Tablo 4'de gösterilen DCC model parametre tahminlerine göre

$$Q_t = (1 - 0.021 - 0.074)\bar{Q} + 0.021 u_{t-1} u'_{t-1} + 0.074 Q_{t-1}$$
$$h_{11t} = 12.130 - 0.124\varepsilon_{1,t-1}^2 + 0.025 h_{11,t-1}$$
$$h_{22t} = 3.734 + 0.055\varepsilon_{2,t-1}^2 + 0.160 h_{22,t-1}$$
$$h_{33t} = 33.851 + 0.151\varepsilon_{1,t-1}^2 + 0.127 h_{11,t-1}$$
$$h_{44t} = 8.093 - 0.017\varepsilon_{2,t-1}^2 + 3.408 h_{22,t-1}$$

şeklinde hesaplanmıştır.

Artıkların ve artıkların karesinin otokorelasyon fonksiyonuna bakıldığında otokorelasyon sorununun olmadığı gözlemlenmiştir. DCC modeli enflasyon, büyüme, döviz kuru ve faiz arasındaki korelasyonun dinamik yapısını daha kesin olarak sağlamaktadır. Bu sonuçlar dikkate alındığında enflasyondaki belirsizliğin etkisi DCC modeli kullanılarak değerlendirilebilir. DCC modeli sonuçlarına göre, hem yüksek hem de düşük enflasyon dönemlerinde enflasyon belirsizliğinin döviz kurunu etkilemediğini buna karşın enflasyon üzerindeki etkisinin pozitif yönde olduğu belirlenmiştir. Ayrıca enflasyon belirsizliğinin ekonomik büyüme üzerindeki etkisi yüksek enflasyonlu dönemlerde pozitif iken düşük enflasyonlu dönemlerde negatif olarak tespit edilmiştir. Elde edilen bulgular, enflasyon belirsizliğinin faiz oranı üzerinde yüksek enflasyon dönemlerinde azaltıcı, düşük enflasyonlu dönemlerde ise arttırıcı etkisi olduğunu göstermiştir.

## 6   Sonuç

Enflasyon belirsizliği üzerine yapılan ampirik çalışmalar, tek boyutlu ya da en fazla iki boyutlu MGARCH yöntemi üzerine tesis edilmektedir. Bu çalışmada enflasyon belirsizliğinin enflasyon, ekonomik büyüme, döviz kuru ve faiz üzerindeki etkisi dört boyutlu MGARCH modeli çerçevesinde araştırılmıştır. Çalışma kapsamında yer alan değişkenler arasındaki zamana bağımlı korelasyon çok boyutlu olarak ele alınmaktadır. Parametre tahmini için VAR(3) modeli oluşturulduktan sonra artık karelerinde otokorelasyonun olması nedeniyle dört boyutlu MGARCH modeline geçiş yapılmıştır.

Enflasyon, büyüme, dolar kuru ve faiz arasındaki ilişki MGARCH modellerinin iki sınıfından olan BEKK ve DCC modelleri için incelenmiştir. BEKK tanımlamasına göre değişkenlerin kendi gelecek oynaklarında kendi geçmiş oynaklık şoklarının daha etkili olduğu sonucuna ulaşılmıştır. Bununla birlikte BEKK modelindeki artık kareler otokorelasyonlu olduğundan eksik tanımlama hatası ortaya çıkmıştır. Bu nedenle, modelde güçlü zaman bağımlı korelasyon yapısını yansıtmak için DCC model tanımlaması kurgulanmıştır. DCC model tanımlaması zaman içindeki dinamik korelasyonlar hakkında ilave bilgiler sağlamıştır. Ayrıca bu tanımlamadan elde edilen artıkların ak-gürültü özelliğini barındırdığı da tespit edilmiştir. Dolayısıyla enflasyon belirsizliğinin enflasyon, ekonomik büyüme, döviz kuru ve faiz üzerindeki etkileri DCC model tanımlaması dikkate alınarak incelenmiştir.

2003 yılı sonrası için "bir" diğer dönemlerde "sıfır" olarak tanımlanan kukla değişken ile enflasyon belirsizliğinin çarpımından oluşan etkileşim terimine ait katsayılar istatistiksel olarak anlamlı bulunmuştur. Bu sonuç, enflasyon belirsizliğinin enflasyon, ekonomik büyüme ve faiz üzerindeki etkisinin 2003 yılı sonrası ve öncesinde farklılaştığına işaret etmektedir. Diğer bir ifadeyle yüksek ve düşük enflasyonlu dönemlerde enflasyon belirsizliğinin reel ve nominal ekonomik göstergeler üzerindeki etkileri aynı olmamaktadır. Türkiye verileri ile yapılan ekonometrik analizler bu yapısal değişimi destekleyen bulgular vermiştir. 2003 öncesinde enflasyon belirsizliği enflasyon ve ekonomik büyümeyi pozitif yönde etkilerken faizi negatif yönde etkilemektedir. Buna karşın reel efektif döviz kuru üzerinde bir etkiye sahip değildir. 2003 sonrası dönemde ise enflasyon belirsizliği enflasyon ve faizi pozitif yönde etkilerken ekonomik büyümeyi negatif yönde etkilemektedir. Buna karşın reel efektif döviz kuru üzerinde bir etkiye sahip değildir.

2003 öncesi ve sonrası dönemde enflasyon belirsizliği arttığında enflasyonun da artması beklenen bir sonuçtur. Çünkü enflasyon belirsizliğinin artması "beklenmeyen enflasyonun yükselmesi" demektir. Gerçekleşen enflasyon beklenen enflasyonla beklenmeyen enflasyonun toplamından oluştuğundan beklenmeyen enflasyonun artması enflasyonun artmasına yol açacaktır.

2003 öncesi ve sonrası dönemde enflasyon belirsizliğindeki artış reel kur üzerinde bir etkiye sahip değildir. Her iki dönem için de enflasyon belirsizliğindeki artışın yurt içi fiyatları arttırdığı bulgusu veri iken nominal döviz kuru da artmakta diğer bir ifadeyle nominal döviz kurunda yeterli intibak sağlanmaktadır. Bu durumun bir sonucu olarak enflasyon belirsizliğindeki artış reel kur üzerinde bir etki yaratmamaktadır. Türkiye'de 2003 öncesi dönemdeki kur rejimi (Aralık-1999 ile Şubat-2001 arasındaki dönemler hariç) "enflasyon kadar devalüasyon" ana fikrine dayanan bir sistem iken 2003 sonrasında örtük ve açık enflasyon hedeflemesi rejimleri altında esnek kur sistemi uygulanmıştır. Enflasyon belirsizliğinin reel kur üzerinde etkisinin olmaması 2003 öncesi ve sonrası dönemin tamamında nominal döviz kurunun gerekli intibakları sağladığını göstermektedir.

2003 öncesi dönemde enflasyon belirsizliğindeki artış ekonomik büyümeyi arttırıcı etki yapmaktadır. 2003 öncesi dönem Türkiye'de yüksek enflasyonun hakim olduğu bir dönem olup yüksek enflasyonun egemen olduğu bir ortamda enflasyon belirsizliğindeki artış mal ve hizmetlere yönelik talebi yani toplam talebi arttırır. Çünkü yüksek enflasyon ortamlarında tüketim harcamaları tasarruf amacıyla yapılmaktadır. Diğer bir ifadeyle yüksek enflasyon dönemlerinde reel varlıkların getirisi yükselmektedir. Bu ise bireylerin ellerindeki para ile reel varlıklar arasındaki ikame ilişkisinin yüksek olmasına yol açmaktadır. Bu durumda bireyler elde tutmak istemedikleri parayı hızlı biçimde mal piyasalarına yönlendirmektedir.

2003 sonrası dönemde ise enflasyon belirsizliğindeki artış ekonomik büyümeyi azaltıcı etki yapmaktadır. 2003 sonrası dönem enflasyonun giderek düştüğü ve tek hanelere gerilediği bir dönemi temsil etmektedir. Enflasyonun giderek ve sürekli düşmesi ekonomik birimler açısından mal fiyatlarını izlenir hale getirmekte ve fiyatların eskisi gibi artmaması ya da birçok fiyatın neredeyse aynı düzeyde kalması ekonomik birimler için alışıldık bir duruma gelmekte ve böyle bir ortamda tüketim harcamaları tasarruf amacıyla yapılmamaktadır. 2003 sonrası dönemde finansal piyasalarda ortaya çıkan gelişmeyle birlikte paranın reel varlıklardan daha çok finansal varlıkların yakın bir ikamesi haline geldiğini söylemek yanlış bir tespit olmayacaktır. Yani enflasyon belirsizliğinin arttığı dönemlerde bireyler elde tutmak istemediği parayı hızlı biçimde mal piyasalarına değil finansal piyasalara yöneltmektedir. Bu ise toplam talebin dolayısıyla ekonomik büyümenin azalması demektir. Buna ek olarak çalışmadan elde edilen enflasyon belirsizliği-nominal faiz oranı ilişkisine ait bulgular enflasyon belirsizliği-ekonomik büyüme ilişkisine ilişkin bulguları desteklemektedir. Çünkü 2003 sonrası dönemde tüketim harcamaların kredi ile finanse edilme oranının artması (en yaygın örneği kredi kartıdır) tüketim harcamalarını faize duyarlı hale getirmiştir. Dikkat edilecek olursa bulgularımızdan bir diğerine göre 2003 sonrası dönemde enflasyon belirsizliğindeki artış nominal faizleri arttırıcı etki yapmaktadır. Bu anlamda 2003 sonrası dönemde enflasyon belirsizliğindeki artış yurt içi faizleri arttırarak toplam talep üzerinde ve dolayısıyla büyüme üzerinde olumsuz etki yaratmaktadır.

2003 öncesi dönemde enflasyon belirsizliğindeki artış nominal faiz oranını azaltıcı etki yapmaktadır. 2003 öncesi dönem için enflasyon belirsizliğinin nominal faiz üzerindeki etkisinin olumsuz olması yani enflasyon belirsizliği arttıkça nominal faizlerin azalması ilk bakışta çelişkili görünmekle birlikte bu sonuç 2003 öncesi dönemin özelliklerini iyi anlatan bir sonuçtur. Çünkü 2003 öncesi dönemde piyasa faiz oranlarını belirleyen temel olgu devletin borçlanma ihtiyacındaki şiddetli artıştır. Devletin borcunu ödemek için borçlanmak durumunda olması piyasa faiz oranını belirleyen temel faktör durumundadır. Ve çok daha önemli olmak üzere bankalar devleti finanse eden temel aktörler haline gelmiştir. Mevduatların bankalar açısından bir fon kaynağı olduğu dikkate alınırsa enflasyon belirsizliğindeki artışın mevduat faiz oranlarını azaltıcı etki yapması bankaların kar marjını arttırma davranışının bir yansımasıdır. Çünkü 2003 öncesi dönemde bankalar topladıkları mevduatı devlete borç olarak veren bir yapıya bürünmüşlerdir.

Türkiye'ye en fazla sermaye girişi 2003 sonrası dönemde yaşandığı için 2003 sonrası dönemde enflasyon belirsizliğindeki artış nominal faiz oranını arttırıcı etki yapması beklenen bir sonuçtur. Bu dönem Türkiye'de iç faizlerin dış faizlere duyarlılığının son derece yüksek olduğu, iç faizlerin belirlenmesinde dış faizlerin çok önemli hale geldiği bir dönemdir. Finansal piyasalarda fon arzının büyük ölçüde Türkiye'ye yönelik sermaye akımları tarafından şekillendiği bir dönemdir. Ve Türkiye'ye yönelik sermaye akımları büyük ölçüde sıcak para akımlarından oluşmaktadır. Bu anlamda enflasyon belirsizliği arttıkça sıcak para akımlarının azalması nedeniyle nominal faizler artmaktadır.

# Beşeri Sermaye ve Ekonomik Büyüme İlişkisi: BRICS Ülkeleri ve Türkiye Örneği

# The Relationship between Human Capital and Economic Growth: Cases of BRICS Countries and Turkey

Prof. Dr. Harun Bal (Çukurova University, Turkey)
Assoc. Prof. Dr. Neşe Algan (Çukurova University, Turkey)
Ph.D. Candidate Müge Manga (Çukurova University, Turkey)
Ediz Kandır (Çukurova University, Turkey)

## Abstract

Endogenous growth theories have implied that human capital is an important factor that determines economic growth. This implication has revealed the need for policies that involving human capital as well as classical production factors. This means, physical capital is not enough alone for economic growth. This study aims to analyze the causality between human capital and economic growth in Turkey and BRICS countries. To this aim, by using Panel Data Analysis, which is an important econometric technique, the degree of the relationship between growth and human capital, in the long run, between the years 1995-2011 is analyzed. As a consequence of the analysis we expect to conclusion that there's a positive and the high correlation relationship between human capital and economic growth. In our analysis, we obtained the result that, there's a long-run relationship between human capital and economics growth in BRICS countries and Turkey. In this context, we came to the conclusion that human capital is an important factor that stimulate economic growth.

## 1   Giriş

Beşeri, sosyal sermaye ve teknoloji gibi kavramların, emek ve fiziksel sermaye gibi bazı kavramlara kıyasla ekonomi literatürüne girişi daha geç olmuştur. Neo-Klasik iktisat teorileri, iktisadi büyümenin kaynağının sadece fiziksel sermaye yani niceliksel kaynaklar olduğunu ileri sürmüştür. Neo-Klasik iktisadın bu eksikliğini giderip beşeri sermaye kavramının ekonomik büyümedeki önemini ortaya koyan, içsel büyüme teorileri ise beşeri sermayenin fiziki sermaye kadar önemli bir üretim faktörü olduğunu savunmuş ve böylece beşeri sermayenin iktisat literatüründeki temeli atılmıştır. Diğer bir ifadeyle, yeni büyüme teorileri olarak ifade edilen içsel büyüme teorileri büyümeyi, beşeri sermaye, teknolojik gelişme ve araştırma geliştirme gibi faktörlerden yararlanarak açıklamaya çalışmıştır (Eser ve Gökmen, 2009). OECD'nin tanımına göre beşeri sermaye, ekonomik faaliyetlerle ilgili olarak bir bireyde olabilecek bilgi, beceri ve diğer özellikleri yardımıyla kişinin üretken olarak ortaya koyabileceği tüm nitelikleri içermektedir (Başol, 2013). Çalışmada, Türkiye ve BRICS (Brezilya, Rusya, Hindistan, Çin ve Güney Afrika) ülkelerindeki 1995-2011 yılları için beşeri sermaye endeksi ile büyüme arasındaki ilişki panel veri analizi ile test edilmiştir.

Bu çalışma beş bölümden oluşmaktadır. Giriş bölümünde, beşeri sermayenin genel bir tanımı yapılmaktadır. İkinci bölümde, beşeri sermaye kavramı ile ilgili detaylar verilip sonrasında ise beşeri sermaye kavramı ekonomik büyüme ile birlikte ele alınıp genel hatlarıyla verilmektedir. Üçüncü bölümde, BRICS ülkeleri ve Türkiye'deki beşeri sermaye ve ekonomik büyüme kavramlarının detayları verilmektedir. Çalışmanın dördüncü bölümünde, 1995-2011 yılları arasında BRICS ve Türkiye'deki beşeri sermaye ve ekonomik büyüme arasındaki ilişkiyi gösteren panel veri analizi sonuçlarına yer verilmektedir. Çalışmanın son kısmında ise analiz sonucunda elde edilen verilere de dayanarak Türkiye ve BRICS üzerine bazı değerlendirmeler yapılmaktadır.

## 2   Beşeri Sermaye Kavramı

Beşeri sermaye, üretim sürecine katılan işgücüne ait olan ve diğer üretim faktörlerinin daha verimli ve etkin kullanılmasına imkan sağlayan bilgi, beceri, tecrübe ve dinamizm gibi pozitif değerlerin bütünü olarak tanımlanmaktadır. Bu değerler, yeni teknolojilerin icat edilmesine etkin kullanılmasına ve benimsenmesine neden olarak, ekonomik büyümeyi arttırıcı bir unsur haline gelmektedirler. Bir başka ifadeyle, söz konusu değerler, ülke ekonomisinin daha hızlı gelişmesine katkıda bulunmaktadırlar (Eser ve Gökmen, 2009).

Beşeri sermaye kavramının geçmişi, klasik iktisadın ortaya çıktığı 1776 yılına kadar uzanmakta ve daha sonrasında, kavram bilimsel bir teori haline gelmiş bulunmaktadır (Fitzsimons, 1999, Akt; Dae-Bong, 2009). Adam Smith, beşeri sermaye kavramını tanımlarken, vasıfsız emek ve beşeri sermaye arasında bir ayırıma gitmiş ve yetenekli bireylerin sadece kazanç elde etmekle kalmayıp, topluma da fayda sağladıklarını belirtmiştir. Ayrıca, emeğin iki grupta sınıflandırıldığını, bunlardan birisinin eğitim ve deneyimden yoksun işgücünden, diğerinin ise eğitimli ve beceri sahibi işgücünden meydana geldiğini vurgulayarak, eğitimsiz ve tecrübesiz işgücünün fiziksel güç gerektiren işlerde, eğitimli ve beceri sahibi işgücünün ise, eğitim ve becerilerine uygun işlerde

görevlendirilmesi gerektiğini ileri sürmüştür. Smith, becerisiz ve becerili işgücünün eşit muamele görmemesi gerektiğini, işlerinin de uygun şekilde ayrılması gerektiğini belirterek, bunun emeğin üretken gücünden faydalanmak için tek yol olduğunu da vurgulamıştır (Awan, 2012). Beşeri sermaye kavramının iktisat literatürüne ilk girişi, Smith, Mill ve Marshall'ın çalışmalarıyla gerçekleşmiştir. Bugünkü beşeri sermaye kavramı, Denison (1962), Schultz (1968) ve Becker (1964) tarafından geliştirilmiştir (Eser ve Gökmen, 2009). Beşeri sermaye kavramının bir teori olarak belirmesinin ardından Schultz, beşeri sermayeyi, bir ülkenin ekonomik büyümesi için gerekli ve önemli faktörlerden birisi olarak tanımlamıştır (Dae-Bong, 2009). Beşeri sermaye, akademik alanların bakış açılarına göre, farklı şekillerde sınıflandırılabilmektedir. Bu sınıflandırmalardan ilki, bireysel yönleri dikkate almaktadır. Schultz (1961), beşeri sermayeyi, klasik görüşteki emek gücü kavramına karşı, bir çeşit mülkiyet olarak nitelendirmekte ve insanın kapasitesini, tüm diğer servet biçimlerinden daha önemli bir kavram haline getirmektedir. Birçok araştırmacı, insan kapasitesini bireyin sahip olduğu bilgi ve beceri olarak gördüklerinden dolayı bu görüşü kabul etmektedirler (Beach, 2009, Akt; Dae-Bong, 2009).İkinci sınıflandırma beşeri sermayenin kendisine ve biriktirilmesine dayalıdır. Bu bakış açısı, zorunlu eğitim, zorunlu eğitim kapsamı dışında kalan eğitim kademelerinde ve mesleki eğitim gibi faaliyetlerden elde edilen bilgi ve becerilere vurgu yapmaktadır (De la Fuente ve Ciccone, 2002, Akt; Dae-Bong, 2009).Bu bakış açısının en önemli eksikliği, insanların kendi deneyimleriyle elde ettikleri bilgiyi ihmal etmesidir. Üçüncü sınıflandırma ise, üretim odaklı beşeri sermaye görüşüne dayanmaktadır. Romer (1990), beşeri sermayeden, ekonomik üretkenliğin temel kaynağı olarak bahsetmektedir. Rosen (1990), beşeri sermayenin, insanların üretkenliklerini arttırmak için kendilerine yaptıkları bir yatırım olduğunu belirtirken, Frank ve Bemanke (2007), beşeri sermayeyi, eğitim, deneyim, hizmet içi eğitim, zeka, enerji, çalışma alışkanlıkları, güvenilirlik ve insiyatif alma gibi, çalışanın marjinal ürün değerini etkileyen faktörlerin bir bileşimi olarak görmektedir.

Sonuç olarak, beşeri sermaye, hem belirli değerleri üreten araçsal bir kavramı, hem de kendi kendini yenilemeyi ifade eden içsel anlamı aynı anda kapsamaktadır (Dae-Bong, 2009).Bu çerçevede beşeri sermaye, iktisadi değer üretmek için hayati öneme sahip olduğu düşünülen, yetenek, bilgi ve bireysel özelliklerin toplamı olarak düşünülebilir. Bir başka ifadeyle, beşeri sermaye, işgücünün sahip olduğu ve niteliğini belirleyen, eğitim, hizmet içi eğitim ve deneyim sonucunda elde ettiği özelliklerdir. Modern Teori, beşeri sermayeyi, ekonomik büyümeye önemli ölçüde katkı yapan bir unsur olarak kabul etmektedir (Awan, 2012).

Beşeri sermaye tanımlaması yapılırken, beşeri sermayenin oluşmasında eğitimin temel bir role sahip olduğu göze çarpmaktadır. Beşeri sermaye birikimi, ilk, orta ve yükseköğretimi içeren örgün eğitim, örgün olmayan ya da işbaşında eğitim ile oluşmaktadır. Örgün olmayan eğitim, çeşitli kuruluşlarda istihdam edilmek, yetişkin eğitim programlarına katılmak ya da çeşitli kültürel, politik ve sosyal gruplara katılmak yoluyla, kişinin kendisini geliştirmesi ise, kişinin kendi inisiyatifini kullanarak, çeşitli kurslara katılması, okuması ve informal iletişim kanalları kurmasıyla mümkündür (Yaylalı ve Lebe, 2011).

Beşeri sermaye, ekonomik büyümeyi açıklamada anahtar bir faktör konumunda bulunmakta, çalışanın daha fazla çıktı elde etmesini mümkün kılmaktadır (Bergheim, 2005, Akt; Qadri, 2011).Beşeri sermaye, işgücünün üretkenliğini artırdıkça, emek talebi ve dolayısıyla istihdam da artarak, fiziki sermayenin optimum şekilde kullanılabilmesini sağlayacaktır. Bir ekonomide beşeri sermayede görülen artış fiziki sermaye artışını cazip hale getirerek üretim artışına yol açacaktır (Abbas, 2000 ve 2001, Akt; Qadri, 2011).

Sağlık ve beslenme de, beşeri sermayenin önemli bileşenlerini oluşturmakta olup, daha sağlıklı bir işçi, üretim sürecine daha fazla katkıda bulunabilmektedir. Tüm diğer faktörler veri kabul edildiğinde, daha sağlıklı işgücüne sahip olan bir toplum, daha fazla üretim yapabilmektedir. Sağlıklı bir kişinin daha fazla ve kolay öğrenebilmesi, sağlığın, eğitimin getirisini belirlemede önemli bir rolü olduğunun bir göstergesidir. Bu şekilde, sağlık, bir taraftan fiziksel dayanıklılığı arttıracak, diğer taraftan eğitimden daha fazla öğrenme elde edilmesi yoluyla üretim miktarında artış sağlayabilecektir. Beslenme de, üretkenlik, çıktı miktarı ve ekonomik büyümeyle güçlü bir bağa sahip, bir beşeri sermaye yatırımı olarak kabul edilmektedir. Özellikle ekonomik büyüme yönünden bakıldığında, eğitim ve sağlık birbirlerini desteklemektedir; eğitimli olmak gibi sağlıklı olmakta ekonomik büyüme için önemli bir faktördür (Qadri, 2011).

## 2.1 Ekonomik Büyüme Modelleri ve Beşeri Sermaye

Beşeri sermayenin iktisat literatüründe önemli bir yer kazanmasında, 1960-1990 yıllarını kapsayan dönemdeki çalışmaların rolü oldukça büyüktür. Neo-klasik iktisat temelli beşeri sermaye yaklaşımları, bu kavramın önemini arttırmıştır. Neo-klasik modelin eksik yönlerinin, içsel büyüme modeliyle tamamlanması neticesinde, beşeri sermaye kavramının literatürdeki yeri sağlamlaşmıştır (Yaylalı ve Lebe, 2011).

*Neo-klasik büyüme modeli*, 1950'lere kadar, modelin en önemli temsilcilerinden olan Alfred Marshall'ın, "emeğin diğer üretim faktörleri gibi, bir alışverişe konu olamayacağı" görüşüne bağlı kalması, beşeri sermaye kavramının gelişmesine uzun süre engel olmuştur. 1950'lere gelindiğinde, Solow'un çalışmalarıyla birlikte bu düşünce değişmeye başlamıştır. Solow (1957) tarafından temelleri atılan Cobb-Douglas üretim fonksiyonu ile yapılan analizlere göre, nüfus artış hızı ve teknolojik gelişme ekonomik büyümeyi belirleyen "dışsal" değişkenlerdir. Ancak, neo-klasik model, teknolojik değişmenin nedenlerinden çok sonuçları üzerinde durmuş ve teknolojik yenilikler dışsal bir etken olmanın ötesine geçememiş ve Solow'un modelinde, nereden geldiği belli

olmayan teknolojik değişiklikler bu nedenle sistem dışı kalmıştır. Neo-klasik iktisatta, beşeri sermayenin de fiziksel sermaye kadar önemli bir üretim faktörü olduğu kabul edilmektedir. Ancak, beşeri sermayenin yalnızca bir üretim faktörü olarak görülmesi ve kalkınmaya yönelik açıklamalara katılmaması önemli bir eksiklik olarak göze çarpmaktadır.1980'li yıllardan itibaren geliştirilmeye başlanan *içsel büyüme modellerinin* bu eksikliği giderdiği düşünülmektedir. İçsel büyüme modellerinde, ekonomik büyümenin teknoloji ve bilgide kaydedilen ilerlemelere bağlı olmasının arkasında yatan önemli neden, beşeri sermayenin bilgi ve yetenekler tarafından içerilmiş olmasıdır (Yaylalı ve Lebe, 2011).

Niceliksel büyümeye önem veren neo-klasik modeller 1980'lerin ortalarına kadar egemen olmuştur. Bu yaklaşımın ardından, kökenleri A. Smith, J. Schumpeter, N. Kaldor ve K. Arrow'a kadar uzanan yeni yaklaşımlar ortaya çıkmıştır. Öncülüğünü Paul M. Romer ve Robert E. Lucas'ın yaptığı bu yaklaşımlar, *içsel büyüme modelleri* olarak adlandırılmaktadır ve büyümeyi endojen (içsel) unsurlarla açıklayan bu yaklaşımlarda beşeri sermaye etkin bir role sahip bulunmaktadır (Yaylalı ve Lebe, 2011).

Modellerin, sermayenin getirisine ilişkin varsayım farklılıkları, neo-klasik büyüme modelleri ile içsel büyüme modelleri arasındaki en temel farklardan birisidir. Neo-klasik büyüme modelleri sermayenin azalan getirisini kabul ederken, içsel büyüme modelleri, beşeri sermayeye dayanarak, sermayenin artan getirisinin olabileceğini ve söz konusu artan getiri sayesinde, uzun dönemde, büyümenin yavaşlamayacağını ileri sürmektedir. İçsel büyüme modelleri ise, ekonomik büyümenin içsel iktisadi temelleri (teknoloji, beşeri sermaye) olduğunu savunmaktadır. Neo-klasik modellerin aksine, ülkeler arası gelir düzeylerinin kendiliğinden birbirine yakınlaşacağı tezini kabul etmeyen içsel büyüme modelleri, az gelişmiş ülkelerin gerekli önlemleri almamaları halinde, gelişmiş ülkelerle aralarındaki gelişmişlik farkının daha da büyüyeceğini ileri sürmektedir. İçsel büyüme teorisi, neo-klasik modelin eksiklerini tamamlamak amacıyla ortaya konulmuştur (Yaylalı ve Lebe, 2011).

Beşeri sermaye, ekonomik büyümeye iki şekilde katkıda bulunmaktadır. İlki, bireyde varlık bulan beşeri sermaye, o bireyin üretkenliğini arttırmaktadır. İkincisi, bireyde varlık bulan beşeri sermaye, diğer tüm üretim faktörlerinin üretkenliğine katkı yapmaktadır. Bu iki etki sırasıyla, beşeri sermayenin *içsel* ve *dışsal* etkileri olarak adlandırılmaktadır (Lucas, 1988, Akt; Tilak, 2002). Doğu Asya'da, eğitimin, gerek içsel gerekse dışsal etkileri bakımından beşeri sermayenin ekonomik büyümeye katkısının oldukça önemli olduğu genel kabul görmektedir(Emi 1968, Akt; Tilak, 2002).Eğitim, Doğu Asya ekonomilerinin ekonomik kalkınmasında önemli rol oynamıştır. Ayrıca, eğitimin, eşit gelir dağılımına da katkıda bulunduğu belirlenmiştir. Ortalama yaşam beklentisi ve fiziksel yaşam kalitesi gibi göreli olarak yüksek sosyal sermayenin gelişimi de, eğitimin ekonomik büyüme etkisine bağlanmaktadır (Paganek, 1988, Akt; Tilak, 2002).

Genel olarak, beşeri sermaye yatırımları, ekonomik büyümeyi şu yollarla etkilemektedir;

- Beşeri sermaye yatırımlarının üretkenlik artışına katkı sağlaması.
- Beşeri sermayenin teknolojik değişikliklerin gerçekleştirilmesinde ve yayılmasında kilit bir role sahip olması.
- Beşeri sermayenin, diğer faktörlere kıyasla, yatırımlar açısından, gerek bireysel gerekse bütünsel açılardan, çekiciliği.
- Beşeri sermaye stokunun niteliğini ve niceliğini arttırmaya yönelik politikaların sosyal bütünleşmeyle uyumlu olması (Awan, 2012).

## 3 BRICS Ülkelerinde ve Türkiye'de Beşeri Sermaye ve Ekonomik Büyüme İlişkisi

BRICS (Brezilya, Rusya, Hindistan, Çin ve Güney Afrika) olarak adlandırılan ve 2000'li yıllarda hızlı bir büyümenin gerçekleştiği beş gelişmekte olan ülke, 2008 krizi ve ardından gelen ekonomik küçülme dönemi sırasında gösterdikleri parlak performans ve esneklik nedeniyle dikkat çekmektedirler (Vandemoortele vd. 2013).

2001 yılında, BRIC (Brezilya, Rusya, Hindistan ve Çin) hızlı büyüyen ekonomiler olduğu vurgulanmış, 2050 yılına kadar, bu ekonomilerin G7 ülkelerine yetişeceği tahmininde edilmektedir. Bu ekonomileri tanımlamada GSYİH'nın temel faktör olarak önemi, 2010 yılında, Güney Afrika'nın da bu gruba dahil edilmesiyle daha da artmıştır. BRICS ülkelerinin ihracata dayalı ekonomileri birbirlerinden farklılıklar göstermektedir. Brezilya, Rusya ve Güney Afrika, maden ve enerji ihracatçısı ülkelerdir ve geçtiğimiz on yılda, bu ürünlerin yükselen fiyatları, bu ülkelerin ekonomik gelişmelerine katkı yapmıştır (petrol ve doğal gaz, Rusya ihracatının % 58'ini oluşturmaktadır).Çin, imalat, Hindistan ise hizmet sektörlerindeki paylarını arttırabilmek amacıyla, işgücü maliyetlerini düşük tutma çabası içinde bulunmaktadırlar (Centre for The Study of Governance Innovation, 2013).

Beşeri sermaye kavramı, emek fazlalığına sahip olan ülkeler için çok daha fazla önem kazanmaktadır. Brezilya, Çin, Hindistan ve Rusya gibi ülkelerde, emek, fiziki sermayeye göre daha bol bir üretim faktörüdür.Bu beşeri kaynak, eğitim, hizmet içi eğitim, sağlık gibi girdilerin kullanılması yoluyla beşeri sermayeye dönüştürülebilmektedir.Bu süreç, "beşeri sermaye oluşumu" olarak adlandırılmaktadır. Bu ülkelerde maddi sermayenin kıt olması sorununun çözümü, beşeri sermaye oluşumunun hızlandırılmasıyla mümkün

olabilmektedir. Dönüşümün hızlandırılması ise, eğitim ve sağlık sektörlerine yapılan kamu ve özel yatırımların arttırılmasıyla mümkündür (Awan, 2012).

Brezilya, Rusya, Hindistan ve Çin, ekonomik büyümelerini hızlandırmak için politik yapılarında köklü değişimlere gitmişlerdir. Bu ülkelerin ortak yönlerinden birisi de, ekonomik reform ve dönüşüm zamanı bakımından, birbirlerine yakın zaman dilimi içinde bulunmaları olmuştur (Özsoylu ve Algan, 2011).

***Tablo 1.****BRICS ve Türkiye'de Beşeri Sermaye Kalkınma Endeksi Göstergeleri (1995-2011)* ***Kaynak: (Feenstra vd., 2013)***

BRICS ve Türkiye'deki beşeri sermaye kalkınma endekslerinin verildiği Tablo 1'e göre, yıllar itibariyle mevcut ülkelerin her birinin beşeri sermaye endekslerinin yıllar itibariyle arttığı açık bir şekilde görülmektedir.2011 yılı göz önüne alındığında, mevcut ülkeler arasında en büyük beşeri sermaye endeksine sahip olan ülkenin Rusya olduğunu göstermektedir. Rusya'yı sırasıyla, Güney Afrika, Çin, Brezilya, Türkiye ve Çin takip etmiştir.

Beşeri sermaye gelişimi bu ülkelerde farklılıklar göstermektedir. Gerçekleştirilen ekonomik reformlar, bu ülkelerin ekonomileri üzerinde köklü etkiler yaratmıştır. Çin, Hindistan ve Brezilya'da beşeri sermaye yatırımları, bu ülkelerin sosyal ve ekonomik göstergelerinde önemli ve olumlu gelişmeler elde edilmesini sağlamıştır. Ancak, Rusya'da, ekonomik reformlarda istenilen sonuçlar sağlanamamıştır. Reformlar öncesi dönemde, mesleki eğitim, statü, işyerinde özgürlük, daha yüksek iş tatmini ve daha iyi çalışma koşulları gibi önemli maddi olmayan faydalar sağlamıştır.2000 yılından itibaren, maddi olmayan faydaların çoğu ortadan kalkmış, eğitimin bireysel getirisi de düşük kalmıştır. Bunların sonucu olarak, beşeri sermaye sıralamasında Rusya, beşeri sermaye yönünden, ABD'den % 70-80 kadar daha geride kalmıştır. Bu durumun nedenleri, çeşitli eğitimle meslekler arasında yanlış eşleştirmeler, düşük ücretler ve Rusya'dan gelişmiş ülkelere doğru "beyin göçü" önemli etkenler olmuştur. Çin ve Hindistan sanayi ürünleri ihracatından büyük kazançlar elde ederken, Rusya petrol ve doğalgaz satışından gelir sağlamaktadır. Güney Afrika ekonomisi, altın ve elmas madenlerine önemli ölçüde bağlıdır. Artan mal fiyatları Brezilya'ya önemli kazançlar sağlamaktadır. Ancak, bu ülkelerde milyarderlerin sayısındaki artış, gelir dağılımı eşitsizliğinin bir göstergesidir. Ancak, bu ülkelerin ortak özelliklerinden birisi, gelir dağılımı eşitsizliğinin devam ediyor olmasıdır ve gelir dağılımı eşitsizliği bu ülkelerin önünde duran önemli bir sorundur (Awan, 2012).

Güney Afrika, Apartheid (Irk ayrımı) politikasının sona ermesinden sonra, eğitimin, ekonomik büyüme ve etnik gruplar arasındaki eşitsizliğin azaltılmasının en önemli aracı olduğunu fark etmiştir. Dünya Bankası 2010 yılı verilerine göre, Güney Afrika, GSYİH'sının % 5 kadarını eğitim harcamalarına ayırmıştır. Bununla birlikte, beşeri sermayenin başlangıç seviyesi Güney Afrika'da hala düşük düzeyde bulunmaktadır (Deutsche Bank, 2005). Özellikle beşeri sermaye ve yapısı olarak, diğer ülkelerden önemli farklılıklar göstermektedir.

Beşeri sermaye potansiyeli açısından, Türkiye'nin olumlu görünümünün bir takım nedenleri bulunmaktadır; Bunlar; doğurganlık oranının yüksekliği, çalışma çağındaki nüfusun artıyor olması, genç ve donanımlı nüfusun beyin göçü yoluyla ülke dışına çıkışının düşüklüğü, Türkiye'nin beşeri sermaye potansiyeli avantajlı bir durum yaratmakla birlikte, donanım eksikliği ve yetersizliği vardır ve potansiyelin ekonomik büyümeye etkisinin yetersiz kalmasına neden olmaktadır. Ancak her şeye rağmen, 2050 yılında Türkiye'nin, Avrupa'daki nitelikli işgücünün % 19'una sahip olacağı tahmin edilmektedir(Ederer vd. 2011, Akt; Owings vd. 2012).

Yüksek beşeri sermaye potansiyeline karşın, Türkiye bu potansiyeli ekonomiye dönüştürmede bir takım sorunlarla karşı karşıya bulunmaktadır. Bu sorunlar; Türkiye, büyük miktarda niteliksiz işgücüne ve yüksek bir genç işsizlik oranına sahiptir. Türkiye, %55 düzeyindeki orta öğretim mezun oranıyla, OECD ülkeleri arasında, son sıralarda yer almaktadır (OECD, 2011, Akt; Owings vd. 2012).

Türkiye'nin bir diğer sorunu, öğrencilerin örgün eğitimde elde ettiği bilgi ve becerilerle ilgili eğitim-sanayi ihtiyacı uyumsuzluğudur. Genellikle, örgün eğitimde, öğrenciler, yüksek bilgi ve yüksek teknolojiye dayalı ekonomide rekabet edebilecek bilgi ve yeteneklerle donatılamamaktadırlar. Bu durum, özellikle imalat sanayisinde, hem lise, hem de üniversite mezunları için geçerlidir. Türkiye meslek okulu mezunlarının işsiz kalma riskinin en yüksek olduğu altı OECD ülkesinden birisi durumundadır (Scarpetta ve Sonnet, 2011, Akt; Owings vd. 2012).

Kültürel faktörler önemli ölçüde eğitimi, bir başka deyişle, beşeri sermayeyi önemli ölçüde etkilemektedir. Cinsiyet ayrımcılığı, bölgesel farklılıklar ve refah düzeyi okullaşma üzerinde etkilidir(Egin, 2010, Akt; Owings

vd. 2012).Cinsiyet ayrımı ve bölgesel eşitsizlikler, çocukların okullaşmaları üzerinde engel teşkil etmektedir(UNESCO, 2010, Owings vd. 2012).

Türkiye'de beşeri sermayenin ekonomik büyümeye katkısının ve var olan beşeri sermayenin potansiyelinin arttırılabilmesi için eğitim yolu ile yüksek kalitede nitelikli işgücünün oluşturulmasına yönelik düzenlemeler, beşeri sermaye potansiyelinin üretkenliğinin artmasına neden olacaktır. Yapılan çalışmalara gore Türkiye'de beşeri sermaye, ekonomik büyüme üzerinde pozitif etki yaratmaktadır ancak beşeri sermaye, uzun dönemde Türkiye'nin ekonomik büyümesini pozitif yönde etkilemekle birlikte, beşeri sermayenin fiziki sermayeye yaptığı katkının, gelişmiş ülkelere kıyasla düşük kaldığı gözlenmektedir. Bu düşüklüğün nedenlerinden ilki, beşeri sermayenin, ekonominin ihtiyaçlarına cevap verebilecek niteliğe ve dağılıma sahip olmaması, diğer neden ise, BRICS ülkelerindeki boyutta olmasa da, beyin göçü Türkiye'nin beşeri sermayesi açısından önemli bir konu durumundadır (Çakmak ve Gümüş, 2005).

## 4   Ampirik Analiz ve Bulgular

Çalışmanın bu kısmında, BRICS ülkeleri ile Türkiye'nin beşeri sermaye endeksi ile büyüme arasındaki ilişkisinin boyutu 1995-2011 yılları için panel birim kök ve panel eşbütünleşme testleri ile belirlenmektedir. Beşeri sermaye endeksinin belirlenmesinde, okullaşma yılı (Barro/Lee, 2012) ve eğitimin geri dönüşü (*eğitimin getirisi, eğitimin özel- sosyal faydalarını ve işgücünün verimliliğini ifade etmektedir.)* (Psacharopoulos, 1994), esas alınmıştır (Feenstra vd., 2013). Ekonomik büyüme göstergesi olarak ise, ülkelerin 2005 yılı sabit fiyatıyla reel GDP (2005US$) değerleri kullanılmıştır. Ekonomik büyüme üzerine, beşeri sermaye ve sabit sermayenin etkisini kıyaslamak amacıyla modelde yer alan sabit sermaye, 2005 yılı sabit fiyatları ile alınmış olup, modelde yer alan her değişkenin logaritması alınarak analize dahil edilmiştir. Tam logaritmik şekilde oluşturulan modelde yer alan sabit sermaye ve GDP değişkenleri Dünya Bankasından alınmıştır.

| Yazar | Yıllar | Uygulanan Ülke/ler | Ekonometrik Yöntem | Bulgular |
|---|---|---|---|---|
| In ve Doucouliagos (1997) | 1949-1984 | ABD | Granger-Nedensellik | Ekonomik büyüme ile beşeri sermaye arasında çok kuvvetli nedensellik ilişkisi tespit edilmiştir. |
| Asteriou ve Agiomirgianakis (2001) | 1960-1994 | Yunanistan | Granger-Nedensellik | Ekonomik büyüme ile beşeri sermaye arasında çift yönlü nedensellik ilişkisi bulunmuştur. |
| Chuang (2000) | 1952-1995 | Tayvan | Eşbütünleşme-Nedensellik | Beşeri sermaye ile büyüme arasında ilişki olduğunu tahmin ederken, ihracatında beşeri sermayeye etki ettiği tahmin edilmiştir. |
| Narayan-Smyth (2004) | 1960-1999 | Çin | Eşbütünleşme-Nedensellik | Uzun dönemde, beşeri sermayeden ihracata doğru, kısa dönemde ise, ihracat ve beşeri sermaye arasında iki yönlü nedensellik vardır. |
| Yaylalı-Lebe (2011) | 1938-2007 | Türkiye | Eşbütünleşme-VAR | Beşeri sermayeden-İktisadi büyümeye doğru nedensellik söz konusudur. |
| Levin-Rault (1997) | 1965-1984 | 30 sanayileşmekte olan ülke | Panel verileri analizi | Uzun dönemde ekonomik büyüme için beşeri sermaye ile ihracat arasındaki ilişkinin önemli olduğu sonucuna ulaşılmıştır. |
| Ay ve Yardımcı (2008) | 1950-2000 | Türkiye | VAR | Uzun dönemde fiziksel ve beşeri sermaye birikiminin ekonomik büyüme ve verimliliği pozitif yönde etkilediği tespit edilmiştir. |
| Çalışkan vd, (2013) | 1923-2011 | Türkiye | Eşbütünleşme | Yapılan analiz sonucunda, eğitimdeki gelişmelerin ekonomik büyümeyi olumlu etkilediğini gösteren bulgulara ulaşılmıştır. |
| Cortes-Jimenez vd. (2009) | 1960-2004 | İspanya ve İtalya | Eşbütünleşme-Nedensellik | Her iki ülke için beşeri sermaye ve ihracat arasında çift yönlü nedensellik olduğu sonucuna ulaşılmıştır. |
| Nişancı (2005) | 1962-2003 | Türkiye | VECM | İhracat ve milli gelir arasında tek yönlü ilişki; beşeri sermaye, ithalat ve sabit sermaye yatırımları arasında ise çift yönlü nedensellik tespit edilmiştir. |

*Tablo 2. Beşeri Sermaye ve Ekonomik Büyüme Üzerine Yapılan Bazı Çalışmaların Detayları*

Beşeri sermaye ile ekonomik büyüme arasındaki ilişkinin analizi ile ilgili olarak yapılan çalışmaların çoğu, bu iki değişken arasında pozitif yönlü bir ilişkinin olduğunu ifade etmektedir. Yapılan çalışmalar, bu çalışmalarda

hangi yöntemlerin kullanıldığı ve elde edilen sonuçlarla ilgili olarak Tablo 2'de bazı çalışmalara yer verilmektedir.

Ekonomik analizlerde kullanılan veriler, piyasa koşullarının hızlı ve bazı durumlarda istikrarsız değişiminden dolayı çeşitlilik göstermektedir. Son yıllarda ekonometrik yöntemlerde sıkça kullanılan analizlerden biri, zaman boyutuna sahip kesit serileri kullanarak ekonomik ilişkilerin tahmin edildiği panel veri analiz yöntemidir (Güvenek ve Alptekin, 2010). Panel veri analizinin avantajları, bireysel heterojeniteyi kontrol edebilmesi, daha bilgilendirici olması, daha çok serbestlik derecesi ve etkinlik sağlaması, değişkenler arasında daha az çoklu doğrusallığa yol açması, daha iyi bir dinamik uyum sağlayabilmesi, yatay kesit ve zaman serisini birlikte tanımlayabilmesi, etkilerini ölçebilmesi ve yatay kesit veya zaman serisi yöntemine göre daha karmaşık modelleri analiz etme imkanını vermesi şeklinde ifade edilebilir (Baltağı, 2005).

Mevcut analiz için öncelikle panel birim kök testleri uygulanmaktadır. Panel birim kök testlerinde karşılaşılan ilk sorun, paneli oluşturan yatay kesitlerin birbirinden bağımsız olup olmadıklarıdır. Yapılan analizde birim kök testi olarak, son yıllarda yapılan panel veri analiz yöntemlerinde sıklıkla karşılaşılan, ortak birim kök testlerinden Levin, Lin ve Chu-LLC (2002) ve bireysel birim kök testlerinden Im, Pesaran ve Shin-IPS (2003) testleri kullanılmaktadır. Tablo 3'te sırasıyla beşeri sermaye endeksi, GDP ve sabit sermaye için yapılan birim kök testi sonuçları gösterilmektedir.

***Tablo 3.****Birim Kök Testi Sonuçları*

Tablo 3'te yer alan parantez içindeki değerler olasılıkları (P-values), köşeli parantez içinde yer alanlar ise serilerin istatistik (statistic) değerlerini göstermektedir. Optimal gecikme uzunluğu Schwarz Bilgi Kriterine göre 1 olarak belirlenmiştir. LLC'de temel hipotez "en az bir birim kök vardır" şeklindedir. IPS'de ise temel hipotez "hiçbir birim durağan değildir" ve alternatif hipotez de "birimlerden en az biri durağandır" şeklindedir.

LLC ve IPS testlerinden faydalanılarak değişkenlerin seviyelerinde durağan olmadığı görülmüştür. Durağan olmayan seriler üzerine eşbütünleşme yapılabilmesi için öncelikle serileri Schwarz Bilgi Kriteri (SBC) ile serilerin birinci dereceden farkları I(1) alınarak seriler durağan hale getirilmiştir. Serilere uygulanan birim kök testi sonrasında, serilerin aralarında uzun dönemli ilişki olup olmadığını gösteren eşbütünleşme testi yapılması gerekmektedir. Bu çalışmada, eşbütünleşme testi olarak Pedroni tarafından oluşturulup geliştirilen panel eşbütünleşme ve Kao testleri kullanılmaktadır. Pedroni eşbütünleşme testi denklem (1)'deki gibi artıklardan oluşacak şekilde ifade edilir. Denklemde yer alan T gözlem sayısını, M regresyondaki değişkenlerin sayısını, N paneldeki yatay kesitlerin toplam sayısını, $\beta_{1i}$, $\beta_{2i}$, $\beta_{mi}$ ise eğim katsayıları ifade etmektedir (Pedroni, 1999).

$$Y_{i,t} = \alpha_i + \delta_{it} + \beta_1 iX1_{i,t} + \beta_2 iX2_{i,t} + ... + \beta_{mi}Xm_{i,t} + e_{i,t} \qquad t=1,...,T \qquad m=1,...,M \qquad i=1,...,N \quad (1)$$

Pedroni 1997'deki çalışmasında, iki değişkenli regresyon modellerinde hızlı bir gelişme göstererek 1999'daki çalışmasında çok değişkenli regresyon modellerine odaklanmıştır. Pedroni Eşbütünleşme testi, eşbütünleşme vektöründeki heterojenliği dikkate almaktadır ve bu test hem dinamik ve sabit etkilerin panelin kesitleri arasında hem de eşbütünleşik vektörün kesitler arasında farklı olmasına olanak sağlamaktadır (Gül ve Kamaca, 2012). Pedroni testinde hipotezler,

"Ho: Koentegrasyon yoktur"

"H1: Koentegrasyon vardır"şeklinde sınanır. Tablo 4'te HCI, GDP ve PC arasında uzun dönemli ilişki olup olmadığını gösteren Pedroni panel eşbütünleşme testi sonuçları verilmektedir.

| LnGDP= $\beta_0 + \beta_1 HCI + \beta_2 PC + ut$ | | |
| --- | --- | --- |
| | Test İstatistiği | P-değerleri |
| Panel v istatistiği | 0.257288 | 0.3985 |
| Panel rho- istatistiği | -1.15691 | 0.1237 |
| Panel PP- istatistiği | -1.872440 | 0.0306 |
| Panel ADF istatistiği | -1.894158 | 0.0291 |
| Grup p- istatistiği (Parametrik olmayan) Phillips ve Perron tipi r- istatistiği | -0.225309 | 0.4109 |
| Grup t- istatistiği (Parametrik olmayan) Phillips ve Perron tipi t- istatistiği | -1.634112 | 0.0511 |
| Grup t- istatistiği (Parametrik) Dickey Fuller tipi t istatistiği | -1.713682 | 0.0433 |

*Tablo4.Pedroni Panel Eşbütünleşme Sonuçları*

Pedroni panel eşbütünleşme testinde dördü grup içi, üçü ise gruplar arası yaklaşımı ifade eden 7 farklı yaklaşım yer almaktadır. Beşeri sermaye endeksi, GDP ve fiziksel sermaye arasındaki uzun dönemli ilişkiyi gösteren Tablo 4'e göre, grup içi ve gruplar arası yaklaşımlardan iki tanesinde %5 anlamlılık düzeyine kadar anlamlı olduğu kabul edilmiştir. Yani 7 farklı Pedroni yaklaşımından dört tanesi kabul edilmiştir. Ancak Pedroni tarafından yapılan araştırmaya göre, eğer panelin zaman boyutu kısa ise (örneğin 20'den az) panel adf ve group adf istatistikleri daha iyi sonuçlar vermektedir (Dökmen, 2012). Dolayısıyla panel verinin zaman boyutu kısa (T=17) olduğu için bu test istatistiklerine bakarak karar vermek doğru olacaktır. Bu sebeple açık bir şekilde "H0: Eşbütünleşme yoktur" hipotezi red edilebilmektedir. Çünkü söz konusu test istatistikileri değişkenler arasında eşbütünleşme ilişkisini doğrulayan, anlamlı sonuçlar vermektedir.

Pedroni panel eşbütünleşme testi sonuçlarının desteklenmesi açısından Engle-Granger temelli Kao testinden faydalanılabilir.

Kao panel eşbütünleşme testi, DF ve ADF testi kullanılarak oluşturulan, bireysel sabit varken Schwarz kriteri ve uzun dönem varyansı bulmak için Newy-West tahmincileri kullanılarak oluşturulan bir testtir (Çınar, 2011,). Tablo 5'te Kao panel eşbütünleşme testi sonuçlarına yer verilmiştir.

Tablo 5'te yer alan Kao testi sonuçlarına göre, H0: Koentegrasyon yoktur, hipotezi red edilip, alternatif hipotez (Koentegrasyon vardır) kabul edilmiş ve değişkenler arasında uzun dönemli ilişki olduğu tahmin edilmiştir.

| | t-istatistiği | Anlamlılık (P-values) |
| --- | --- | --- |
| ADF | -3.501038 | 0.0002 |

*Tablo 5.Kao Panel Eşbütünleşme Sonuçları*

*Tablo 6.Panel FMOLS Sonuçları*

Pedroni ve Kao için eşbütünleşme testleri ile uzun dönemde beşeri sermaye, GDP ve fiziksel sermaye arasında ilişki oluğunun tespit edilmesi sonrasında, eşbütünleşme ilişkisinde bağımsız değişken olan beşeri sermayenin katsayılarının tespit edilmesi gerekmektedir. Bu çalışmada Pedroni (2000) tarafından geliştirilen FMOLS (Fully Modified Ordinary Least Squares) kullanılmaktadır. FOLMS için ilk olarak, model her bir yatay kesit için FMOLS tahmincisi elde edilmektedir. Daha sonraki aşamada ise, her bir yatay kesite ait FMOLS tahmininden elde edilen eşbütünleşme katsayılarının ortalaması alınmaktadır (Öztürk vd, 2012). Grup ortalama panel FMOLS katsayısı her ülke için ayrı ayrı hesaplanan FMOLS değerlerinin ortalaması alınarak hesaplanmaktadır. Tablo 6'da panel FMOLS yönteminden elde edilen sonuçlara yer verilmektedir.

Tablo 6'da yer alan sonuçlar incelendiğinde, BRICS ülkeleri ve Türkiye 'deki GDP, beşeri ve sabit sermaye arasında beklentilere uygun olarak pozitif yönlü bir ilişki çıkmıştır. Genel olarak bu ülkelerde oluşan beşeri sermayedeki %1'lik bir artış BRICS ülkeleri ve Türkiye'de GDP'yi %2.81 oranında arttırmaktadır. BRICS ve Türkiye için elde edilen sonuçların tamamı en az %5 düzeyinde anlamlı çıkmıştır. Ülke bazında incelendiğinde, beşeri sermaye ile GDP arasındaki ilişkinin yüzdesel büyüklüğü açısından Rusya'nın ilk sırada, Rusya'dan sonra sırasıyla Hindistan, Çin, Türkiye, Brezilya ve Güney Afrika ülkeleri yer almıştır. Panel ortalamasına göre, GDP ile beşeri sermaye arasındaki ilişkinin Brezilya, Türkiye ve Güney Afrika'da ortalamanın altında olduğu görülmektedir. Sabit sermayedeki % 1'lik artış ise, GDP'de %0.62 oranında artış yaratmaktadır. Sabit sermaye ile GDP arasındaki fark bakımından Brezilya ön sırada yer almıştır. Brezilya'dan sonra sıralamaya bakıldığında,

genel olarak ülkeler arasında oransal olarak bir yakınlık olduğu görülmektedir. Sabit ve beşeri sermaye ile GDP arasındaki ilişkinin yönü ise beklentilere uygun olarak pozitif yönlü olarak tahmin edilmektedir.

## 5 Sonuç

Bu çalışmada BRICS ülkleri ve Türkiye üzerine 1995-2011 yılları için ekonomik büyüme ile beşeri sermaye arasındaki ilişki panel birim kök ve panel eşbütünleşme yardımıyla analiz edilmektedir. Yapılan panel birim kök testi sonrası serilerin tamamı birinci düzeyde durağan I(1) çıkmıştır. Seriler için yapılan birim kök testi sonrasında, Pedroni ve Kao panel eşbütünleşme testi uygulanmış ve seriler arasında uzun dönemli ilişki varlığı tespit edilmiş ve yapılan FMOLS testi ile de eşbütünleşme vektörü katsayıları tahmin edilmiştir. Genel olarak analiz sonuçları incelendiğinde, ülkeler için beşeri sermaye ve ekonomik büyüme arasındaki uzun dönemli ilişki istatistiksel olarak anlamlı ve pozitif yönlü çıkmıştır. Beşeri sermaye ile fiziksel sermayenin GDP üzerindeki arasındaki etkileri kıyaslandığında, elde edilen sonuçların literatürde sıkça karşılaşılan ekonomik büyümenin sadece fiziksel sermaye temelli olmadığını, beşeri sermayenin de önemli bir itici güç olduğunu ifade eden içsel büyüme modellerini destekler niteliktedir.

Beşeri sermayenin ekonomik büyümeyi harekete geçiren bir olgu olması beşeri sermayenin gelişmesine önem verilmesi gerektiğini açıkça ortaya koymaktadır. Özellikle gelişmiş ülkeleri yakalama hedefindeki ülkelerin beşeri sermaye faktörünü daha fazla dikkate alması gerekmektedir. Eğitim, ekonomik büyümeyi sağlamanın ötesinde, bireysel gelir düzeyini yükseltmesi, gelir dağılımını iyileştirmesi ve yoksulluğu azaltması gibi birçok önemli görevi yerine getirmektedir. Bu çerçevede, beşeri sermayeyi geliştiren alanlarda iyileştirmeler yapılmalı, eğitimin kalitesinin arttırılması ve beşeri sermayenin getirisini arttıracak ilave önlemlerin alınması önerilmektedir.

# Kitle Kültürü Ortamında Stratejik Tutarsızlık ve Örgütsel İkiyüzlülük: Kredi ve Yurtlar Kurumuna Bağlı Yurtlarda Bir Araştırma

# Strategic Inconsistency and Organizational Hypocrisy in an Environment of Mass Culture: A Research on Dormitories of "Credit And Dormitories Institution"

Prof. Dr. Feyzullah Eroğlu (Pamukkale University, Turkey)

Dr. Şeyma Gün Eroğlu (Pamukkale University, Turkey)

## Abstract

Societies with mass culture adopt organizational structures and management behaviors which are not based on rational thinking and scientific mentality. In contrast with the appearance of contemporary management approaches and applications, these societies are in a widespread management populism. In this context, the web pages, formal records and expressions of organizations about management contain items that sound and look "charming". However, in the actual operation and management; management behaviors with serious internal management pathologies are dominant. While strategic plans and items of organizations in mass societies are equipped with concepts about contemporary management approaches, a post-modern process where all these concepts are meaningless is effective. For example, there might be serious inconsistencies among "vision, mission and values" stated in formal expressions and the organization's actual management behaviors. If the impression shows that these inconsistencies are not incidental and temporary; but intentionally constructed by management; this situation should be accepted as organizational hypocrisy. The research part of this study planned to be conducted in dormitories of "Credit and Dormitories Institution" in Denizli, which were observed to be suitable for theoretical and conceptual explanations of the subject. The survey prepared to test the trust perceptions of the management officers and inhabitant university students did not accepted by the general management of Credits and Dormitories Institution so the research could not be done by that way. Instead, the information about strategic items on the organization's web page was collected. The real and actual operations on these subjects were compared according to ethics approach.

## 1 Kitle Kültürü Ortamında Egemen Davranış Biçimleri

İnsanların tabiatta hazır buldukları nesneler ile doğuştan getirdikleri davranış özellikleri dışında, tabiata ve hayata katılan her şeye kültür denilmektedir. Geçmişten beri insanlar, kendilerine bir yaşam alanı olarak sunulan tabiattan esinlenerek elde ettikleri bilgi malzemeleri ile yeni cisimler ve aletler yapmışlardır. Ayrıca, insanların sosyal bir varlık olması birlikte yaşamaya dair birçok ilke ve kurallar ile çok sayıda etkinliğin gerçekleştirilmesine neden olmuştur. Bütün insanlar, kendileri için yaratmış oldukları çeşitli kültür öğeleri üzerinden hayatlarını yaşarlar. Her kültür öğesinin ortaya çıkışı ve niteliği, kendine ihtiyaç duyan insanların böyle bir öğeyi yaratma konusundaki algılamaları, istek ve arzuları ile bu konulardaki bilgi ve becerileriyle yakından ilgilidir. Bu bağlamda, rasyonel düşünme ve isabetli akıl yürütme kapasitesi yüksek olan toplumlar, başta bilimsel bilgi olmak üzere, felsefe, hukuk, sanat ve ahlaki bilgiler gibi nitelikli bilgiler üretirler ve bu bilgi malzemeleri ile tabiata ve hayata katma değeri yüksek kültür öğeleri katarlar. Buna karşılık, rasyonel düşünceden uzak ve sıradan bir bilinçle hayatını yaşayan toplumlar ise kendi algılama ve alışkanlıklarına uygun düşen sıradan bir kültür düzeyi ile hayatlarını yaşamak zorunda kalırlar.

Her toplumun genel kültür sistemi, kendi içinde çok sayıdaki kültür öğeleri ile çok yönlü alt kültür sistemlerinin bir üst bileşimi olarak teşekkül eder. Bu bağlamda, her genel kültür sisteminin içindeki kültür oluşumlarını, özgünlük ve yetkinlik bakımından üç kategoriye ayırmak mümkündür. Bunları, kalite ve yetkinlik açısından yukarıdan aşağıya doğru bir kültür piramidi şeklinde sıralamak mümkündür. Medeni ve gelişmiş bir toplumun kültür piramidinin en üstünde yüksek kültür, ortasında halk (folklorik) kültürü, alt kademede ise popüler kültür öğeleri yer almaktadır (Batmaz, 1981). Yüksek kültür öğeleri arasında, bilimsel zihniyet ve yöntemle elde edilmiş bilimsel bilgiler, teknik ve tıp bilgisi, felsefe bilgisi, sanat bilgisi, entelektüel düşünce ve etik değerler, birlik olma ruhunu ve sosyal bütünleşmeyi öngören inanç sistemleri gibi kaliteli ve yaratıcı yönleri yüksek olan kültür etkinlikleri sayılabilir. Örneğin, bilimsel ve entelektüel düşünceye dayalı bilgilerin kullanımıyla yöneticilerin sorun çözme kapasitelerini artırıcı, yönetilenlerin ise üretkenlik ve verimliliklerini yükseltmeye yönelik yaklaşımlar ortaya konabilir. Halk kültürü içerisinde ise genel kültürün önceki nesiller tarafından yaratılıp sonraki nesillere sosyal miras yoluyla devrettiği, yaşanılan hayatta da halihazırda işlevi olan, özellikle orta sınıf halk tarafından paylaşılan geleneksel kültür öğeleri sayılabilir. Bu öğelerden bazıları, halk müziği ve oyunları, geleneksel yemekler ve kıyafetler, bayram-nişan-düğün-doğum-ölüm gibi sosyal olaylardaki

geleneksel tutum ve davranışlardır. Popüler kültür kapsamına ise nitelikli bilgilere dayanmamasından dolayı modern olma niteliği bulunmayan, ama geleneksel olma değeri de olmayan, özgünlük ve yetkinlik açısından son derece zayıf kültür öğeleri girmektedir. Mesela insanların üretim kapasitelerini geliştirme ya da sorunlarını çözme kapasitelerini artırmaya yönelik hiçbir katkısı olmadan, sadece boş "vakit geçirmeye" yarayan magazinsel bilgi ve eğlence öğeleri popüler kültür kapsamındadır.

Günümüzdeki bütün kültür sistemleri, bu üç alt kültür diliminin farklı bileşimlerinden meydana gelmektedir. Genel kültür sistemini meydana getiren bu kültür kategorilerinden yüksel kültür diliminin baskın olduğu, geleneksel halk kültürünün onu takip ettiği ve popüler kültür öğelerinin nispeten az bulunduğu bir model, en ideal milli kültür bileşimi sayılmalıdır. Bu bağlamda, modernleşme eşiğini aşmış ve gelişmiş Batı ülkelerinde, bilimsel bilgi, teknoloji, felsefe, sanat ve hukuk bilgisi gibi nitelikli bilgilerin, bir şekilde üretim süreçlerine ve sosyal hayata daha fazla katılmasından dolayı hatırı sayılır bir oranda yüksek kültür öğelerinin oluşumu gerçekleşebilmektedir. Buna karşılık, en az yüksek kültür öğelerinin, biraz halk kültürünün ve çoğunlukla popüler kültür diliminin yaşandığı bir kültür sistemi, en niteliksiz genel kültür modellerinden biri olarak ortaya çıkacaktır. Aslında, popüler kültür öğelerinin, toplumun her tür ve düzeydeki davranış düzlemlerinde yaygınlaştığı bir genel kültür modeline "kitle kültürü" denilmektedir. Kitle kültürü, toplumun üretim kapasitesini genişletecek ve yaşanılan hayata anlamlı ölçüde katkı sağlayacak kabiliyette ve yeterlilikte olamayan öğelerden oluşmaktadır. Ayrıca, niteliksiz ve sıradan bilgilere dayalı kültür malzemeleri aracılığıyla milli kültürün özellikle yüksek kültür öğelerini bozucu ve kirletici etkilere sahiptir. Bu çerçevede, milli ve genel kültür piramidindeki özgünlük ve yetkinlik açısından üst düzeyde bulunan yüksek ve halk kültür öğelerinin aleyhine olacak şekilde, en alt düzeydeki niteliksiz "popüler kültür" malzemeleri aşırı bir şekilde genişlemektedir.

Modernleşme çabalarında başarısız olmuş, ancak geleneksel kültür sisteminin çözülmesiyle birlikte, "iki arada bir derede kalmış" olan milli kültür sistemlerinin çoğunluğunda yaşandığı gibi Türkiye'de de büyük ölçüde köy ve kır kökenli "yeni kentli" kitle toplulukları arasında, kitle kültürü hızla yayılmıştır. Kitle kültürünün yaygınlaşmasında, eğitim ve kültür düzeyleri nispeten düşük olan kesimlerin, kalabalıkların davranışlarını sorgulamadan taklit ediyor olmalarının büyük bir payı vardır. Hızlı ve kapsamlı kültür değişmelerinin varlığı karşısında, geleneksel davranış kalıplarının yetersiz kalması, buna karşılık yeni hayat tarzına gereken uyumu davranışsal olarak göstermeye yarayacak olan modernleşme süreçlerinin ve tavırlarının geliştirilememesi, bir yığın insanın olaylar karşısındaki reaksiyonlarını kalabalıkların akışına ve güdümüne bırakmalarına yol açmaktadır.

Kitle kültürü insanları, konumları ve durumları ne olursa olsun, sıradan, akli denetimden yoksun, kişisel sorumluluk ve inisiyatiften uzak, bir tutarsızlıklar ve ikiyüzlülük sarmalı içinde kendilerini yığınların akışına bırakmışlardır (Eroğlu, 2013; Türkdoğan, 1988):

**Davranışların Sıradanlaşması:** Kitle kültürü taşıyıcısı bireyler, çeşitli olaylar ve durumlar karşısında, hangi davranışları göstereceklerine dair bir seçim yapmaları söz konusu olduğu vakit, kendi tercihlerine dayalı bir davranış göstermek yerine, çoğunlukla çevredeki kalabalık ve yığınların yaptıklarını yapmaya özenirler. Bu bağlamda, kitle insanlarının, kendi hareket tarzlarının ve tavırlarının "öznesi" olma niteliğini sağlayacak olan "nitelikli bilgi" sistemlerinden yoksun olmaları yüzünden, içinde yaşadıkları yığınların egemen davranışlarına katılmak suretiyle kendilerini çeşitli davranış seçenekleri arasında "herkesin" ya da "el-âlemin" gidişatına bırakmanın aymazlığını yaşamalarına sebep olmaktadır. Bireylerin, çeşitli belirsizlikler karşısında nispeten "özne" olma tavırlarını gösterebilmeleri ve seçkin hareket tarzlarını tercih edebilmeleri için olaylar ve olgular karşısında, sebep-sonuç ilişkilerini düşünebilmeleri, analiz yapabilmeleri ve sonuçlar hakkında bir takım öngörülerde bulunma kabiliyetlerinin gelişmiş olması gerekir. Böyle bir analitik karar verme ve tavır sergilemek, hiç kuşkusuz ilgili harekete dair asgari düzeyde de olsa nitelikli bilgi ve tecrübe gerekmektedir. Oysa kitle kültürü kişileri, kendilerine özel ve özgün tutumlar geliştirmek yerine, kalabalık ve yığınların içerisinde kişiliklerini gizlemeyi ve sıradanlaşmayı bir yaşam tarzı haline getirirler.

**Aklın Yerine Duyguların Egemenliği:** Yüksek kültür düzeyinin ağırlıkta olduğu milli kültürlerdeki normal insan davranışlarında, mantıkilik öğesi, duygusallık boyutundan daha ön plandadır. Kitle kültüründeki toplam davranışlarda, çoğunlukla aklın önceliği yerine aşırı ve abartılmış bir duygusallık yaygınlık kazanmıştır. Bu çerçevede, kitle kültürü taşıyıcısı olan kişilerin bireysel akıl ve yetenek düzeyleri ne olursa olsun, içinde yer aldıkları kitleyi meydana getiren kalabalıkların zeka ortalamasını geçmeyen tutum ve davranışlar sergilemekten kendilerini alıkoyamazlar (Türkdoğan, 1988).

**Kişisel Sorumluluk ve İrade Gelişmemiştir:** Yüksek kültürün hakim olduğu milli kültürlerde, ortalama bireylerin rasyonel bilgi sistemleri daha gelişmiş olması nedeniyle çoğunlukla sorumluluğunu üstlenmekten çekinmeyecekleri alternatif davranışlar arasından kendileri için en uygun olanı seçme eğilimini gösterirler. Buna karşılık, kitle kültürü taşıyıcısı kişiler, kalabalık ve yığınların basmakalıp davranışlarına yönelmek suretiyle "el ile gelen düğün-bayram" kolaycılığına ve kurnazlığına saklanırlar.

**İletişimde Tutarsızlık ve İkiyüzlülük Egemendir:** Yüksek kültürün hakim olduğu milli kültürlerde, insanların çoğunlukla zihinlerindeki duygu ve düşünceleri, aslına yakın bir şekilde söyleme dönüştürdükleri, ayrıca söylemleri ile davranışları arasında da büyük bir uyumluluk olduğu görülür. Kitle kültürlerinde ise

kişilerin çoğu, iletişim süreçlerinde yaygın bir şekilde başkalarına yalan söyleme, insanları aldatma, gerçekleri çarpıtma ve gizleme ile söylem ve eylemlerinin birbirini tutmaması gibi iletişim tutarsızlıkları gösterirler.

**Güçlü ve Egemen Olana Tapınma:** Yüksek kültürün hakim olduğu milli kültürlerde, ortalama bireyler, kurumsal ve geleneksel düzen içerisindeki meşru otoriteye, belirli bir hukuki ve ahlaki ilkeler çerçevesinde itaat ederler. Bu durum, bütün milli kültürlerinde kamu düzeni bakımından temel davranış biçimidir. Fakat kitle toplumundaki kitle kültürü taşıyıcısı kişiler, kendilerine göre güçlü ve gösterişli olan, özellikle cezalandırma ve nemalandırma araçlarını ellerinde bulunduran kişi, grup ve zümrelere karşı, körü körüne bir bağımlılık sergilerler.

## 2 Kitle Kültürü ve Yönetim Davranışları

İnsanların, içgüdüsel ve refleksiv davranışlarının dışındaki bütün eylemlerinin arka planında, çoğunlukla içinde yaşadıkları fiziki ve kültürel çevrelerden öğrendikleri ve etkileştikleri kültür öğeleri vardır. Her birey için içgüdüsel ve refleksiv davranışlar, kendi biyolojik ve genetik yapısı itibarıyla bir veri olmasına karşılık; sonradan öğrenilen kültürel öğelerin düzeyi ve niteliği, kişiden kişiye ve kültürden kültüre değişmeler gösterir. Genelde sosyalleşme ve kültürlenme süreçleri ile özelde ise eğitim ve öğrenim süreçlerinde, çoğunlukla yüksek kültür öğeleriyle daha fazla etkileşim içerisinde bulunan bireylerin, katma değeri yüksek bir nitelikli bilgi sistemine ve hareket tarzına sahip oldukları görülür. Buna karşılık, hayat şartları gereği kitle kültürü ortamında büyüyen ve yaşayan kişiler, özel bir eğitim ve çabaları söz konusu değilse, her türlü ilişkilerini çoğunlukla kitle kültürünün egemen davranış kalıplarıyla yürüteceklerdir.

Toplam insan davranışları içerisinde, en rasyonel ve kaliteli hareket tarzları arasında, yönetim ve organizasyon etkinlikleri başta gelmektedir. Bütün yönetim ve organizasyon teorileri, yönetim ve örgüt sisteminin içinde yer almış olan bireylerin, iş ve görevlerine dair yetki ve sorumluluklarını etkili bir şekilde yerine getirebilmeleri için belirli bir yetenek, bilgi ve niteliğe sahip olmaları gerektiği varsayımına dayanmaktadır. Günümüzde özellikle katma değeri yüksek olan iş örgütleri ve birimlerinde çalışan insanlardan eskiye nazaran daha fazla bilgi ve vasıf düzeyi istenmektedir. Bu bağlamda, nitelikli bilgiler tarafından desteklenmiş olan yüksek kültür mensubu bireyler, yönetim ve örgüt sistemlerinin karar ve icra birimlerinde daha etkili olmakta ve başarılı sonuçlar almaktadırlar. Küresel rekabetin hızlanması ve örgüt faaliyetleri ile ilgili iç ve dış çevre değişkenlerinin çoğalmasıyla birlikte, stratejik yönetim süreçlerine dair etkinliklerin stratejik planlarının tasarlanmasından başlayarak nihai kontrol mekanizmasının oluşturulmasına kadar her düzeyde yer alan insan kaynağının, yüksek kültür derecesine sahip bireyler olması beklenir. Modern toplumlardaki demokratik ve katılımcı yönetim yaklaşımlarının, kavramsal anlamına uygun biçimde uygulanabilirliği, her hâlükârda karar alma mekanizmalarında ve icracı konumunda olan çalışanlar için en azından ilgili yönetim davranışlarına dair bir yüksek kültüre sahip olmaları arzu edilir. Çünkü günümüzün her şeyin hızla değiştiği rekabetçi ortamında, her tür örgüt yöneticisi, her an önceden tahmin edilmeyen yeni bir olay ve durumla karşı karşıya kalabilir. Bu noktada, çalışanlar yüksek bir kültüre ve nitelikli bilgi setine sahip ise üstlenmiş olduğu iş ve görevlere dair isabetli ve doğru kararlar verebilirler.

Kitle kültürü taşıyıcısı kişiler, karar mekanizmalarının başında oldukları vakit, isabetli ve doğru karar almak için gerekli olan nitelikli bilgilerden yoksun olmanın kaçınılmaz bir sonucu olarak, kuvvetle muhtemeldir ki kişisel sorumluluk ve inisiyatif almaktan da çekineceklerdir. Uygulamada, geleneksel yönetim davranışlarının geçerli olduğu otoriter ve hiyerarşik kültürlerde, karar verme merkezlerinde ve icra organlarında nispeten belirli bir kurumsallaşma ve yönetim kalıplarının oluşumu, hiç olmazsa belirli bir süreliğine yönetici yetersizliğini tolere edebilir. Halbuki her şeyin her an değişir olduğu piyasalarda, önemli karar merkezlerinde ve icra organlarında bulunan yöneticilerin yetersizliği, başında bulundukları örgütleri topyekun bir krizin içine sokmaktadır. Bu durumda, kitle kültürü taşıyıcısı kişiler, yüksek statü ve ekonomik imkanlarından yararlanmak amacıyla politik mülahazalarla bir şekilde icra organlarında ve birimlerinde yer aldıkları vakit, iş ve görevlerini etkili ve üretken bir şekilde yerine getirmek yerine, kuvvetle muhtemeldir ki iş hayatında "çalışıyormuş" ya da "çaba gösteriyormuş" gibi davranış görüntüleri üretmeye yöneleceklerdir. Bu yetersiz yöneticiler, büyük bir ihtimalle örgütün stratejik yönetim hedeflerini, vizyonunu, misyonunu ve temel değerlerini, göze ve kulağa son derece hoş gelecek söylemlerle süslerken, ilgi çekici "hizmet görüntüleri" üretmek suretiyle gösterişli "törenlerle" göz doldurmayı tercih ederler. Çünkü kitle kültürünün egemen olduğu toplumlarda, egemen yöneticiler için bir alışkanlık haline gelen en yaygın icraat, hizmetlere dair görüntü ve imaj üretmek için her fırsatta "tören" yapmaktır. Bir kısım kitle ahalisi için hayatın en belirgin uğraşı ise çalışmak ve üretmek yerine, hizmetlere dair görüntü ve imaj üretmeye yeltenen yöneticilerinin çoğunlukla kendileri için yarattığı rant ve avantaların peşinde koşmak ve onlara her fırsatta şirinlik yapmaktır.

Kitle kültürü egemenliği altındaki toplumlardaki örgüt yöneticilerinin, çoğunlukla gerekli olan yetenek, bilgi ve şahsiyet eksikliklerinden dolayı yönetim ve örgüt süreçlerine dair sorunları çözme kapasiteleri de yetersiz kalmaktadır. Yönetim kadrolarının yetersizliği ve ikiyüzlülüğü, bir süre sonra örgütsel yetersizliğe ve ikiyüzlülüğe dönüşmektedir.

## 3 Stratejik Tutarsızlık ve Örgütsel İkiyüzlülük

Yaygın kitle kültürü ortamında büyüyen ve yaşayan kişiler, büyük ölçüde yüksek kültür örneklerinden mahrum oldukları için ister yönetici kademesinde bulunsunlar, isterse alt basamaklarda yönetilen konumunda olsunlar, iletişim süreçleri ile iş ve görevlerine dair etkinliklerde çok sık olarak çelişkili ve tutarsız davranışlar gösterirler. Her kültür düzeyinde ve düzleminde, çok farklı sebeplere bağlı olarak insan hayatında ve davranışlarında çelişkiler ve tutarsızlıklar meydana gelebilir. Önemli olan hiç olmaması değil, karşılaşıldığında bu durumların düzeltilmesi konusunda çaba gösterilmesi ve azaltılması hususunda özenli hareket edilmesidir. İnsan hayatındaki iletişim ve davranış tutarsızlıklarının giderek çoğalması karşısında kişilerin bu durumları düzeltme yönünde çaba göstermek yerine, bütün bunlardan kendilerine çıkar ve yarar sağlama kurnazlığına yönelmeleri yaygın bir ikiyüzlülük olarak nitelendirilebilir. Kitle kültürü ortamında büyüyen ve yaşayan kişiler, çoğunlukla iş ve çalışma hayatlarında da, bilerek ya da bilmeyerek çelişkili ve tutarsız davranışlara sık sık başvurmaktadırlar.

Kişiler arası ilişkilerde ikiyüzlülük, hayata ve geleceğe dair beyan edilen söylem ve iddialar ile bu beyanlara dair eylem ve fiili durumların birbiriyle çoğunlukla çelişir olması halidir. Gerçekte, kişiler arası ilişkilerdeki hayata ve geleceğe dair beyan edilen bu söylem ve iddialara dair performans arasındaki çelişki ve açıklık, bir davranışsal açıklık/mesafe olarak ölçülebilir (Fassin ve Buelens, 2011). Bireysel anlamda ikiyüzlü kimse, olduğundan daha yüksek ahlaki düzeye sahipmiş izlenimi vererek erdem, fedakârlık, sadakat, bağlılık, idealizm ve sempatik ilgi gibi değerleri kullanmak suretiyle çeşitli hile ve kurnazlık yoluyla kendisi için çıkar sağlayıcı sonuçlar elde etmeye çalışan kişidir (Fernando ve Gross, 2006). İkiyüzlülük (hypocrisy), çoğunlukla çifte standart ve aldatmanın (duplicity) bir şekli olarak anlaşılır (Lipson, 2008).

İkiyüzlülüğün karşıtı doğruluk/samimiyettir. Doğruluk, genel olarak, gerçekleri gizlememek ya da beyanlar ile gerçek duygular arasındaki uyum olarak tanımlanabilir. Kişiler arası ilişkilerin sürekliliği, büyük ölçüde güvenilir olmasına bağlıdır. Bu çerçevede, doğruluk/samimiyet, sadece kişiler arası ilişkilerin sürekliliği ve güvenilirliği için zorunlu olmayıp, bütün biçimsel olmayan gruplar ya da biçimsel organizasyonlar için gerekli olan bir davranış tutarlılığıdır. Örgütlerin stratejik planları ve değerleri bir anlamda örgütlerin söylem ve iddialarını temsil ederken örgütlerin stratejik uygulamaları ise faaliyet raporları şeklinde fiili ve somut durumu yansıtır. Stratejik değerleme ve kontrol, örgüt stratejilerinin odaklandığı amaçlar ve değerlerin örgütün diğer alt amaçları arasındaki tutarlılık ile stratejik öğelerin amaç, kapsam ve yöntem bütünlüğünün ne derecede sağlanmış olup olmadığının ortaya konmasıdır (Ülgen ve Mirze, 2004). Örgütsel doğruluk ise örgütün söylemleri ile pratiği arasındaki uygunluk derecesini gösterir ve örgütün üstlendiği misyon açıklamaları ve değer deklarasyonu konusunda ne kadar doğru olduğuyla ilişkili önemli bir gösterge olarak kabul edilmektedir. Eğer örgütlerin, örgüt içi ve dışı paydaşlar ile bütün kamu oyuna yansıttıkları kimlik ile fiili/gerçek kimlikleri birbiriyle uyuşmuyorsa; bu örgütlerin performansları konusunda da hedeflerinden uzaklaşma ve taahhütlerini yerine getirmede bir başıbozukluk algılamasıyla karşı karşıya kalınmış demektir (Fassin ve Buelens, 2011). Bu bağlamda örgütsel ikiyüzlülük, söylemler, kararlar ve davranışlar arasındaki çatışmalardan ve farklılıklardan meydana gelir ve kurumsal ortamlardaki aktörler ve örgütler üzerindeki baskılardan kaynaklanır (Lipson, 2007). Örgütsel ikiyüzlülük, kolektif bir aktör olarak bir kurumun söylemleri (bu kuruma ait kabul edilmiş amaçları, idealleri ve politikaları) ile gerçekte yapmış olduğu uygulamalar arasındaki aykırılığı yansıtır. Başka bir deyişle örgütsel ikiyüzlülük, sözler ile eylemler ya da açıkça kabul edilmiş normlar ile davranışlar arasındaki kopuşu ifade eder (Lipson, 2007).

Genel anlamda örgütsel ikiyüzlülük, sözler (örgüt grupları içinde ya da arasında az ya da çok informal sözbirliği veya münakaşalar), kararlar (örgüt hiyerarşisinde kayıt altına alınan resmi kararlar, stratejik planlar, vizyon, misyon, temel değerler ve politikalar ile genellikle onaylanmış yazılı dökümanlar ve içerik planları) ve davranışlar (informal olarak yapacaklarını söyledikleri veya formal olarak kabul ettiklerinin aksi olarak örgüt aktörlerinin yaptıkları) arasındaki tutarsızlıklarda ya da kesilmelerde/kopmalarda kendini gösterir (Perez ve Robson, 1999). Örgütlerin temel stratejik faaliyetlerinin kaynağı olarak görülebilecek olan kurumsal sosyal sorumluluk ve temel stratejik öğelerle ilgili söylemleri ile davranışları arasındaki önemli bir farklılığın olması, bir anlamda örgütsel ikiyüzlülük olarak bilinir ve bu durum örgütsel güvenilirlik ve meşruiyet için potansiyel bir tehdit unsuru oluşturur (Christensen, 2013).

Örgütsel ikiyüzlülük, birkaç şekilde tanımlanabilir: Birincisi, yöneticiler tarafından teori ve pratikteki farklılıklardan kaynaklanan tutarsızlıklar; ikincisi, kabul edilmiş değerler ve prensiplerden farklı olarak gerçekleşmiş olan davranışlar; üçüncüsü ise örgütün tek bir norm sistemi kabul etmesine rağmen, örgütte çoklu norm sisteminin geçerli olması (Fernando ve Gross, 2006), başka bir deyişle, örgütsel disiplinin bozularak, örgütteki organ ve birimler ile kişiler arasındaki ilişkilerde bir kaos ortamının gerçekleşmesidir. Aslına bakılacak olursa, kitle toplumu özellikleri gösteren veya kitle kültürünün yaygın olduğu toplumlarda, genel anlamda var olan disiplinsizlik ve başıbozukluk çerçevesinde, bu tür ülkelerin örgütlerinde sözü edilen birkaç örgütsel ikiyüzlülüğün tamamı, farklı derecelerde olsa bile birlikte olmalıdır.

Örgütsel ikiyüzlülük konusundaki çalışmalarıyla tanınmış biri olarak literatürde sıkça yer alan Brunsson'un yaklaşımında, örgütler açık sistemler olarak görülür, örgütlerin katı ve kesin sınırlara sahip olmadığı düşünülür ve örgütler çevreleri ile olan etkileşimleriyle değerlendirilir. Bu yaklaşımda açık sistemler olarak değerlendirilen

örgütlerde, örgütsel ikiyüzlülük, genellikle, birleştirilmiş veya ayrıştırılmış iç örgütsel unsurların bir bölümü üzerindeki zıt çevresel baskılara örgütlerin farkında olmadan yöntemsiz ve plansız cevap vermelerinden kaynaklanan bir durum olduğu düşünülmektedir (Lipson, 2007).

Örgütler, çevrelerine farklı değer ve kimlik mesajları sunabilir. Bu mesajlar, örgütün farklı imajlara sahip olmasına yol açabilir. Bu bağlamda, örgütün faaliyetlerini yürüttüğü sosyo-kültürel ortamda, özellikle yakın paydaş çevrede çok yaygın bir kitle kültürü oluşumu bulunması durumunda, örgütlerin stratejik öğeleriyle ilgili beyan ve söylemlerine rağmen, çevreye uyum çabaları sırasında fiili durum ve pratiklerinde çok ciddi tutarsızlıklar gerçekleşebilmektedir. Brunsson'un örgütsel ikiyüzlülüğün, gittikçe istikrarsız hale gelen taleplerle karşı karşıya kalan örgütlerin, bulundukları ortamda meşruiyet elde etmenin doğal ve etkili bir yolu olduğunu iddia etmesinin bu durumdan kaynaklandığı düşünülebilir (Wæraas, 2008).

## 4 Çalışmanın Metodu ve Örnek Seçimi

Bu çalışmada, büyük ölçüde emik-etik yaklaşım olarak bilinen veri toplama tekniği kullanılmıştır. Emik yaklaşım, araştırılmak istenen sosyal olay ve olguların fiilen içinde yer almış olan kişilerden, bizzat yaşadıkları sosyal olay ve olgular hakkındaki duygu, düşünce ve izlenimlerini almak şeklinde "yerli görüş açısını" temsil eden bir gözlem tekniğidir. Etik yaklaşım ise araştırmacının incelemeye çalıştığı sosyal olay ve olgulara dair çıkarımlarında ve değerlendirmelerinde, doğrudan kendisinin derin gözlem ve tecrübelerinden yararlanılması tarzında bir gözlem tekniğidir (Gözlemcinin bakış açısı) (Türkdoğan, 1995)

Bu çalışmanın bir kısım temel teorik iddiaları, bir kamu örgütü olarak Kredi Yurtlar Kurumu üzerinden test edilmeye çalışılmıştır. Çalışmanın kavramsal çerçevesine temel teşkil eden iddialarına ve ön kabullerine göre, nispeten az gelişmiş toplumlarda kitle kültürü gölgesi altında yürütülen yönetim ve örgütsel faaliyetlerde, yönetim tarzı ne kadar mükemmel tasarlanırsa tasarlansın, çoğunlukla fiili durumda, stratejik tutarsızlık ve çelişkiler ile söylem ve eylem farklılığı gibi birbirine zıt yönetim davranışları çok sık meydana gelmektedir. Yönetim tarzını, çoğunlukla üst düzey yöneticiler yapılandırmış olsalar bile, örgütsel faaliyetlerin yürütücüsü ve hizmetten yararlananların büyük ölçüde "kitle kültürü" taşıyıcısı bir "kitle" olması durumunda, planlanan yönetim tarzının ötesinde paralel bir örgütsel süreç meydana gelmektedir.

Bu örneğin seçiminde, KYK'nın web sayfasında son derece tumturaklı stratejik öğelere ve değerlere yer verilmiş olması etkili olmuştur. Özellikle bu tür söylemlerin mevcut olgularla ne derecede desteklenip desteklenmediği hususu bizzat kurumla ilgili en önemli paydaşlardan olan Denizli Bölge Müdürlüğüne bağlı birimlerde çalışan personel ile yurtlarda barınan öğrenciler üzerinde yapılması tasarlanan anket ve mülakat teknikleriyle ortaya konmaya çalışılmıştır.

Bu çalışmanın kavramsal çerçevesine zemin teşkil eden örgütün stratejik öğeleri (örgütün vizyon ve misyonu, temel değerleri v.b.) ile ilgili bilgiler, KYK'nın web sayfasından elde edilmiştir. Çalışmanın maksadına uygun bir analiz yapma imkanı verecek şekilde örgütün "faaliyet raporları" ve diğer bilgiler, yine aynı yerden ve "bilgi edinme yasası" yoluyla temin edilmeye çalışılmıştır. Araştırma yapılmak üzere seçilmiş olan KYK Denizli Bölge Müdürlüğünde, kurumun en iddialı temel değer olarak vurguladığı **"GÜVENİLİRLİK"** konusunda, örgütte çalışan personel ve yurtlarda barınan öğrenciler üzerinde anket ve mülakat teknikleri kullanılmak suretiyle bir tutum araştırması yapılması düşüncesi ne yazık ki en üst düzeydeki yöneticiler tarafından engellenmiştir. Bu bağlamda, KYK 'nın 2013 yılına dair faaliyet raporunun edinilmesi konusunda 25.02.2014 tarihli bilgi edinme başvurusuna, 28.02.2014 gün ve 33499127-622.03-3-560-2911 sayılı yazısıyla KYK'nın 2013 Yılı İdare Faaliyet Raporunun 2014 Nisan ayının sonuna doğru çıkacağı belirtilmiştir. 21.02.2014 tarihinde KYK Denizli Bölge Müdürlüğüne, çalışanlar ve öğrenciler üzerinde yapılması planlanan ilgili araştırmanın anket ve mülakat soru örnekleri ekiyle başvurulmuştur. Ancak, KYK Denizli Bölge Müdürlüğü, 11.03.2014 gün ve 51973304-46-514/703 sayılı yazısıyla böyle bir araştırmanın yapılmasının Genel Müdürlük tarafından uygun bulunmadığını bildirmiştir. Bu çerçevede, Kurumun Genel Müdürlük sayfasında yer verdiği stratejik öğeleriyle ilgili fiili durum ve gerçekliğin ne derecede uyumluluk ve tutarlılık göstermiş olduğuna dair değerlendirmeler, web sayfasındaki geçmiş yıllara ait faaliyet raporları ile örgütte fiilen çalışan örgüt mensuplarının iç gözlemlerinden elde edilen görüşlere dayandırılacaktır.

## 5 KYK'nın Temel Stratejik Öğeleri ve Araştırma Bulguları Üzerine Genel Bir Değerlendirme

Bu araştırmaya temel teşkil edecek olan KYK'nın başlıca stratejik öğelerine, kurumun web sayfasındaki "Hakkımızda" penceresinden erişilmiştir (www.kyk.gov.tr, 2014).

**KYK Misyonu:** "Sosyal devlet anlayışı ve insan odaklı yaklaşımlarla yükseköğrenim öğrencilerinin öğrenimlerine destek olmak ve kişisel gelişimlerine katkıda bulunmak için, kredi/burs, barınma, beslenme hizmetleri ile sosyal, kültürel ve sportif faaliyetler sunmak".

**KYK Vizyonu:** "Geliştirdiği uygulama ve yöntemlerle sunduğu hizmetleri en üst düzeye taşıyan kurum olmak".

**KYK Temel Değerleri:** "Güvenilirlik, tarafsızlık, öğrenci odaklılık, sosyal sorumluluk ve duyarlılık, gelişim odaklılık, işbirliğine açık olma, şeffaflık, çözüm odaklılık".

**KYK Kuruluşu ve Yönetim Yapısı:** 1961 Anayasasının 50'nci maddesi uyarınca, 22 Ağustos 1961 tarihinde yürürlüğe giren 351 sayılı Kanun ile Yüksek Öğrenim Kredi ve Yurtlar Kurumu kurulmuştur.

**KYK Organları:** Genel Kurul, Yönetim Kurulu ve Genel Müdürlüktür. Genel Kurul; Kurumun üst karar organıdır. Kurumun ilgili olduğu Bakan, Genel Kurulun tabii başkanıdır. Yönetim Kurulu, Genel Kurula karşı icra, Genel Müdürlüğe karşı karar, Genel Müdürlük ise Kurumun yürütme organıdır.

**KYK Teşkilat Şeması:** Kurumun teşkilat şeması, geleneksel yönetim ve organizasyon teorisinin en bariz özelliği olan merkeziyetçi, otoriter, hiyerarşik ve dikey bir örgüt yapısıdır (Bakınız:http://www.kyk.gov.tr/Dosyalar/Dosya/TeskilatSemasi.pdf).

KYK'nın temel stratejik öğelerinden misyonun anahtar kavramları, "sosyal devlet", "insan odaklı yaklaşımlar", "öğrencilerin kişisel gelişimi", "kredi/burs, barınma, beslenme hizmetleri ile sosyal, kültürel ve sportif faaliyetler" gibi, son derece göz alıcı ve gönül okşayıcı etkinlikler olarak dikkat çekmektedir. KYK'nın 2012 yılına ait faaliyet raporunda ilk dikkat çeken husus, önceki yılların faaliyet raporlarının ilk sayfalarında bulunan kurumun "Atatürk ve kızlı-erkekli genç profilli logosu" ile "Atatürk'ün gençliğe hitabesi" ve "Gençliğin Atatürk'e cevabı" kısımlarının kaldırılmış olmasıdır. 2012 yılına ait faaliyet raporuna göre, kurumun misyonu standart alınmak suretiyle inceleme yapıldığı vakit, en önemli güçlü yanının "kâr amacı gütmeyen, sosyal devlet amaçlı kurum olması, öğrenci ihtiyaçlarının yurtların içerisinde bulunan işletmelerde karşılanabilmesi (kantin, lokanta, kuaför, fotokopi, çamaşırhane, terzi vb.), barınan öğrencilere beslenme yardımı yapılması, belli özellikli öğrencilere burs, öğrenim ve katkı kredisi ve yurt için öncelik tanınması ve durumuna göre ücretsiz barınma ve beslenme hizmeti verilmesi, öğrencilerin serbest zamanlarının sosyal, kültürel ve sportif faaliyetlerle desteklenmesi hizmetleri" olduğu beyan edilmektedir (www.kyk.gov.tr, 2014). Buna karşılık, KYK'nın misyonu kapsamında yer verilmiş olmasına rağmen fiili olarak gerçekleştirmede yetersiz olduğu en dikkat çeken hususlar şunlardır: bazı yurt binalarının fiziki yapısı ile sosyal donatım alanları yetersizdir. Örneğin, son on yılda üniversite sayısı %120'ye yakın, öğrenci sayıları %100 artarken devlet yurtlarının yatak kapasitesi artış oranı %30 oranında kalmıştır (Bostan, 2014). Ayrıca, hizmet verilen bazı yurt binalarının kiralık olması, bazı yurtlarda öğrenci odalarının kalabalık olması, öğrencilere yeterince psiko-sosyal danışmanlık ve destek hizmeti verilememesi, öğrencilerin kişisel gelişimine yönelik yeterince internet donanımlı kütüphane bulunmaması, müzik-resim ve diğer sanat dallarıyla ilgili kurs ve atölyelerin olmaması da dikkat çeken hususlardandır. İlgili faaliyet raporu, KYK'nın misyonu üzerinden değerlendirilecek olursa, kurumun maddi ve fiziki hizmetlerinde dahi önemli eksiklikler varken, "insan odaklı" ve "kişisel gelişim" gibi son derece nitelikli hizmetlerin verilmesine dair sosyal ve kültürel bir alt yapının olmadığı anlaşılmaktadır.

KYK'nın temel stratejik öğelerinden vizyon, kurumun uygulama ve hizmetleri ile ilgili bakış açısı olarak çok geniş ve üst düzeyde beyan edilmiş olmasına rağmen, 2012 faaliyet raporundaki veriler göz önüne alındığı zaman mevcut uygulama ve hizmetlerin 53 yıllık bir kamu kurumu için çok yetersiz ve zayıf kaldığı söylenebilir.

KYK'nın stratejik tutarsızlık açısından en dikkate değer temel çelişkileri, çoğunlukla "temel değerler" başlığı altında beyan edilen konular üzerinde yoğunlaşmaktadır. Bu bağlamda, çalışan personel ve yurtlarda barınan öğrencilerin, kurumu ne derecede "güvenilir" bulduklarıyla ilgili bilimsel araştırmaya izin verilmemiştir. Kurumun ne derecede şeffaf olduğu yazılı basında çıkan şu enformasyondan gayet açık bir şekilde anlaşılmaktadır. Buna göre, öğrenci yurtlarında sözleşme ile iş yapan kantin, lokanta vb. gibi işletmecileriyle ilgili olarak kurumda çalışanlar, kurum tarafından çıkarılmış olan "Üçüncü Taraf Personeli Güvenlik Taahhütnamesinin" gereği olarak, çalışma kapsamında edinilen ve üretilen her türlü bilgi varlığını sır olarak saklama yükümlülüğüne tam olarak uyacaktır (Takan, 2014). Kurumun temel değerlerinden biri olarak, "işbirliğine açık olma" konusundaki söylemine rağmen, hiçbir haklı gerekçe olmaksızın sadece bilimsel amaçlarla yapılacak olan bir çalışmaya izin vermemesi, kurumun bu konuda da "söylemi" ile "eylemi" bir olmamak şeklinde bir çelişki yaşadığını göstermektedir. Aynı şekilde, kurumun Türkiye'de yaklaşık 4 milyon örgün eğitimde okuyan üniversite öğrencisinden ancak %8'ine barınma imkanı sağlayabilmesi (Takan, 2014), temel değerleri arasında bulunan "öğrenci odaklılık ile sosyal sorumluluk ve duyarlılık" ilkeleriyle tutarsız ve çelişkili bir sonuçtur.

KYK'nın idari yapısının Gençlik ve Spor Bakanlığı'na bağlı bir kamu kurumu olması nedeniyle özellikle üst düzey yöneticilerinin kariyerinde belirli bir siyasi duruş olması beklenir. Ancak, bu tür uzman kurumların üst düzey yöneticilerinin siyasi iktidara yakınlıkları yanında, bulundukları mevki ve makamlar için son derece ehil ve liyakatli olmaları zorunluluğu vardır. KYK'nın kendi çalışanlarından bir isim olarak Hasan Şen'in, kurumun üst düzey yöneticilerinin kurumu yönetme ve yönlendirme konusunda ne derecede ehil olduklarına dair son derece dikkat çekici iç gözlemleri mevcuttur. Türk-Eğitim-Sen'in yöneticilerinden olan Şen, Genel Müdürlüğe yeni atanan üst düzey yöneticilerin yurtçuluk konusunda tecrübe sahibi olmamalarına işaret ederek, danışmadan aldıkları kararlarla hem kurum çalışanlarını, hem de yurtlarda barınan öğrencileri ciddi sıkıntılara soktuklarını iddia etmektedir. Ayrıca, makul ve haklı bir gerekçeye dayanmaksızın "kız" ve "erkek" yurtlarının ayrı kampüslere alınmasının, yine hem çalışanlara, hem de "kızlı-erkekli" öğrencilere, gerçekte yaşanması

gerekmeyen birçok ilave sıkıntı yarattığını belirtmektedir (Şen, 2014). KYK'nın teşkilat şeması, kurumun tipik bir siyasi iradeye dayalı bürokratik bir örgüt olmasının doğal bir sonucu olarak, merkeziyetçi, otoriter, hiyerarşik ve dikey bir örgüt yapısını temsil etmesi son derece normal bir durumdur. Türkiye'deki kitle kültüründen beslenen siyasi irade yanında, kurumda çalışan her düzeydeki insan gücünün yönetim davranışları ile kurumun hizmetlerinden yararlanan öğrenci kitlesinin de büyük ölçüde ülkede yaygın ve egemen olan bu kültürün taşıyıcısı olduğu açıktır. Modern yönetim ve örgüt teorisinin temel kavramlarından biri olan "durumsallık" yaklaşımı çerçevesinde, bu kültür şartları altında bulunan sektör ve çalışma alanlarında en uygun "örgüt şeması", yukarıda söz edilen merkeziyetçi ve hiyerarşik örgüt yapısıdır. Esas olarak burada şaşırtıcı ve çelişkili olan durum, KYK'nın mevcut yönetim ve örgüt şartlarına göre uygun düşecek bir "temel değerler" sistematiği oluşturmak yerine, gerçekte bulunmayan ama son derece "demokratik" ve "katılımcı" bir örgüt "varmış imajını" verecek tarzda bir temel değerler listesi verilmesidir (Bakınız: www.kyk.gov.tr/tr/Temel-Degerlerimiz/Hakkimizda).

## 6   Sonuç

Günümüzde, hizmet sektöründe rekabet etmek ve geniş bir toplum kesimine "memnuniyet hissi" yaşatmak durumunda olan örgütlerin, üst düzey yöneticilerinden başlayarak yukarıdan aşağıya doğru, her kademedeki çalışanının yapmakta olduğu iş ve görevine dair yetki ve sorumluluğunu hakkıyla ifa ediyor olması beklenir. Bu bağlamda, yönetim ve örgüt süreçlerinde bir şekilde yer alan bireylerin, üstlenmiş oldukları iş ve görevlerin rutin kısımlarını yapabilmek ve çeşitli belirsizlikler karşısında isabetli iş davranışları geliştirebilmek için nispeten "özne olma" tavırlarını göstermeleri gerekir. Çalışma hayatına dair davranışlar hakkında nispeten "özne olmak", çeşitli olaylar ve olgular karşısında sebep-sonuç ilişkilerini düşünebilme, analiz yapabilme ve sonuçlar hakkında bir takım öngörülerde bulunma kabiliyetlerine sahip olmak demektir. Böyle bir analitik karar verme ve tavır sergileme, hiç kuşkusuz ilgili harekete dair hiç olmazsa belirli düzeyde de olsa nitelikli bilgi ve tecrübe gerektirmektedir.

Kitle kültürü egemenliği içerisinde bulunan az gelişmiş ülke toplumlarında ortalama kişiler, herhangi bir konuda kendilerine özgü ve özgün tutumlar geliştirmek yerine, çoğunlukla ait oldukları kalabalık ve yığınların içerisinde kişiliklerini gizlemeyi ve sıradanlaşmayı bir yaşam tarzı haline getirirler. Yüksek kültür bileşenleriyle desteklenmiş bir milli kültür oluşumundan yoksun olan bir kitle kültürü toplumumda, biçimsel olarak eğitim ve öğrenim düzeyleri yüksek olan kişilerin eylemlerinde bile, sıradanlık, aşırı duygusallık, sorumluluktan kaçış, ikiyüzlülük ve güçlü olana tapınma gibi çok yaygın davranış kalıpları dikkat çekmektedir. Bu yaygın ve egemen davranış kalıpları, otoriter ve bürokratik yönetim yapılarından tutunuz demokratik ve katılımcı yönetim anlayışlarına kadar her tür yönetim sistem ve mekanizmasının işlerliğini ve işlevselliğini etkisiz hale getirmektedir.

Kitle kültürü egemenliği içerisinde bulunduğuna dair çok kuvvetli emareler ve veriler bulunan Türkiye'de, kamu ve özel sektöre ait her türlü örgütte çok sık "stratejik planlama" yapılmakta ve çoğunlukla web sayfalarında son derece tumturaklı bir şekilde beyan edilmektedir. Bu çerçevede, çeşitli kamu ve özel sektöre ait örgütlerde yapılmış olan "örgütsel davranışlar" ile ilgili bilimsel araştırmalarda elde edilen olumsuz sonuç ve bulgular, ülkemizdeki yönetim ve organizasyon etkinliklerinde çok ciddi bir "stratejik tutarsızlık" ve "stratejik çelişki" olduğunu ortaya çıkarmıştır. Bu bağlamda, bu çalışmada ileri sürülen temel varsayımlar ve iddialar doğrultusunda bir kamu kurumu olan KYK'da yapılan bilimsel araştırmanın sonucunda, kurumun stratejik tasarımı ve temel stratejik öğeleri ile kurumun fiili işleyişi arasında çok açık tutarsızlıklar olduğu ve aşırı bir çelişki yaşandığı anlaşılmaktadır.

Her yönetim ve örgüt sisteminin, yönetmesi ve organize etmesi beklenen etkinlikleri, amaç ve maksadına uygun bir şekilde yürütmesi için bütün bu iş ve görevleri yerine getirebilme yetenek, bilgi, beceri ve cesaretine sahip şahsiyetlere ihtiyacı vardır. Çağdaş örgütlerin ve toplumların, sorun çözme kapasitesi yüksek, güvenilir ve şeffaf yönetim sistemleri kurmalarında, birçok etken yanında bu kurum ve örgütlerde her türlü bilimsel araştırmaya çok açık destek verilmesinin büyük bir rol oynadığı çok bilinen bir gerçektir.

# Firma Devralmalarının Firmanın Sektör İçindeki Performansı Üzerindeki Etkisi: Borsa İstanbul Uygulaması

# The Influence of Acquisitions on a Firm's Performance within a Sector: An Application on Istanbul Stock Exchange

Assoc. Prof. Dr. İbrahim Halil Ekşi (Kilis 7 Aralık University, Turkey)

Ph. D. Candidate Nasara Banu Güzel (Kilis 7 Aralık University, Turkey)

Ph. D. Candidate Rabia Ecem Küçüktaşdurmaz (Kilis 7 Aralık University, Turkey)

## Abstract

In recent years it have seen a significant increase in the number of business mergers and acquisitions. There are number of reasons led to this trend. Amongst them it is the need to increase the firm financial performances. This paper mainly is focuses on other different effects of mergers and acquisitions on the financial performance of businesses. In this study, looking at Turkish stock exchange listed firms that have experienced acquisitions or mergers and the effects of such mergers on their performance. In this context, it be looked at textile firms and firms based on stone and land work that experienced acquisitions in 2010. The firms are Altinyildiz in textile and Çimbeton in the mining sectors respectively. Having look at the financial performances of these firms in their respective sectors before the acquisitions (2007, 2008, 2009), the acquisitionsin 2010, 9 rates were used the in TOPSIS method. According to findings, the acquisitioned firm's show that they have positive effects on the financial performances of the firms. It is observed that there are differences in sectors' period and degrees. In this case, it's possible to explain the sectoral dynamics and acquisions of the firms' integration.

## 1 Giriş

Son yıllarda artan teknolojik gelişmeler, küreselleşme ile birlikte rekabet düzeyinin uluslararasılaşması, ülkelerarası ekonomik sınırların ortadan kalkması, liberalizasyon çalışmalarının yaygınlaşması, müşteri talep ve eğilimlerinin farklılaşması gibi nedenler firmaları her alanda olduğu gibi finansman alanında da etkilemektedir. Firmalar da, söz konusu farklılaşan çevre koşullarına uyum sağlayabilmek ve bu koşulların ortaya çıkardığı fırsatlardan yararlanmak, tehditlerden ise sakınmak amacı ile farklı pazarlama, finans ve üretim teknikleri ile yeniden yapılanma çalışmalarına ağırlık vermek durumunda kalmışlardır. İşte şirket birleşme ve devralmaları da bu çerçevede, çeşitli güdülerle ortaya çıkan bir gelişmedir.

Şirket birleşme ve devralma faaliyetinin, devralan firmanın kendi sektörü içindeki finansal performansı üzerinde bir etkisinin olup olmadığını araştırmak üzere hazırlanan bu çalışmada, literatür taramasının ardından, Rekabet Kurulu'ndan alınan rapordan hareketle, 2010 yılında, devralma faaliyetini gerçekleştiren halka açık firmalardan, taş ve toprağa dayalı sanayi sektöründe faaliyet gösteren Çimbeton AŞ ile tekstil ve hazır giyim sanayi sektöründe faaliyet gösteren Altınyıldız AŞ'nin birleşme öncesi ve sonrası sektör içindeki finansal performansları analiz edilmiştir. Bu çerçevede, söz konusu iki sektörde faaliyet gösteren diğer halka açık firmaların verileri de analize dahil edilmiş ve analiz TOPSİS yöntemi ile gerçekleştirilmiştir.

## 2 Şirket Birleşme - Devralmaları ve Teorik Çerçeve

Birleşme, iki firmanın bir çatı altında bir araya gelerek kaynaklarını tek bir firmada topladıkları ve birleşen örgütler olarak orijinal bir isim altında faaliyetlerini sürdürdükleri bir bütünleşme yöntemidir. Birleşmelerde birleşen firmalar yeni bir tüzel kişilik haline gelirken satın almalarda işletmelerden biri diğer bir işletmenin varlıklarını kontrolü altına alacaktır (İlkarslan ve Aşıkoğlu, 2012:60). Bu arada, birleşme kavramı ile neredeyse aynı anlamda kullanılan diğer bir kavram da devralma kavramıdır. Söz konusu iki kavram da, genellikle birbirlerinin yerine kullanılmaktadır. Konuşma dilinde, ikisi de aynı anlamda kullanılmakta iken, akademik çevrede, birleşme veya devralmaları birkaç farklı anlamda da kullanabilmektedirler (Trivedi ve diğerleri, 2013:4).

İçsel bir gelişme stratejisi olarak birleşme ve devralmalar, serbestleşme, özelleştirme ve globalizasyon artan politikaları ile beraber dünya üzerindeki çok farklı ülke tarafından uygulanmaktadır (Trivedi ve diğerleri, 2013:5). Bununla birlikte, birleşme ve devralmaların tarihi 1900'lü yılların başına kadar uzanmakla birlikte, özellikle 1993 yılından itibaren gerçekleştirilen birleşme ve devralmaların boyutu ve sıklığı çok dikkat çekmektedir (Şahin ve Yılmaz, 2008:68).

Firmalar arası birleşme ve devralma faaliyetleri farklı şekillerde gerçekleşmektedir. Devralmalar, dostça bir yaklaşımla, düşmanca bir yaklaşımla ve özel bir firmanın bir kamu kurumunu devralması şeklinde olmak üzere üç şekilde de gerçekleşebilmektedir (Aggarwal ve diğerleri, 2012:8). Bununla birlikte, tüm birleşme ve devralmalar olumlu sonuçlanmayabilmektedir. Başarısız birleşme ve devralmaların birçok nedeni bulunmakla

birlikte, en önemli nedenleri arasında güven eksikliği ve yönetim kararlarındaki yetersizlik gelmektedir. Bunların dışında, fazla ödeme, entegrasyon sorunları, üst düzey personel motivasyonu ve hedef firmanın uygunluğu da önemli olan diğer değişkenlerdir (Trivedi ve diğerleri, 2013:12)

## 3 Literatür

Literatürde, firma birleşme ve devralmaları ile ilgili olarak, olayın başta ekonomik, finans, hukuk ve pazarlama olmak üzere, diğer boyutları ile ilgili araştırmalar bulmak mümkündür. Olayın çok boyutlu olması biraz da, birleşme ve devralmaların gerekçelerinin fazlalığıdır. Aggarwal ve diğerleri (2011) çalışmalarında birleşme ve devralmaların nedenlerinden bazıları olarak, tedarikçilerin ele geçirilmesi, üretim araçlarının geliştirilmesi (ölçek ekonomisinden yararlanmak), piyasayı geliştirme stratejilerinin geliştirilmesi ve finansal dayanıklılığın artırılmasını saymıştır. İlarslan ve Aşıkoğlu (2012) da, birleşme ve devralmaların nedenleri olarak benzer şekilde, küreselleşme, büyüme isteği, sinerji, çeşitlendirme, vergi avantajları ve diğer nedenler olarak saymıştır.

Finans literatüründe ise, özellikle birleşme ve devralmaların devralan firmanın finansal performansı ve hisse senedi getirisi üzerindeki etkileri araştırılmıştır. Firma birleşmelerinin finans boyutu ile ilgili olarak, birleşmelerin borsa fiyatları üzerindeki etkisi ise, Nelson (1959) çalışmasına kadar uzanmaktadır (Cook, 2007:628).

Literatürde, firma birleşmeleri ile ilgili olarak yapılan çalışmalardan bazıları şunlardır:

Nelson (1959), ABD'de 1895-1905 periyodunda, birleşme aktiviteleri ile borsa fiyatları arasındaki ilişkiyi incelemiş ve bu ilişkiyi 0.613 olarak gözlemlemiştir (Cook, 2007:630),

Athanasoglou ve Brissimis (2004) çalışmasında ise, birleşme – devralmaların Yunanistan bankacılık sektöründeki maliyet ve karlılık etkinliği üzerindeki etkisini incelemek için gerçekleştirilmiştir. Araştırma sonuçlarına göre en başarılı birleşme – devralmaların küçük ölçekli bankalarda gerçekleştiği gözlemlenmiştir,

Cook (2007)'nin çalışmasında da, İngiltere'den derlenen veriler, ARDL ve GARCH yöntemleri ile analiz edilmiş ve birleşme aktiviteleri ile sanayi üretimi arasında ilişki araştırılmıştır. Sonuçlarına göre, birleşme aktiviteleri ile borsa fiyatları arasında önemli ilişkiler gözlemlenirken, sanayi üretimi ile ilişki gözlemlenememiştir,

Yeh ve Hoshıno (2007) ise, çalışmalarında, Tokyo Borsasında 1970-1994 periyodunda, 86 birleşme faaliyetini araştırmışlardır. Sonuçlarına göre, birleşme faaliyetlerinin firma performansını azalttığı gözlemlenmiştir,

Kruse ve diğerlerinin (2007) çalışmasında ise, , 1969 – 1999 periyodunda, Tokyo Borsasındaki üretim firmalarındakini 69 birleşmenin uzun vadeli performansı incelenmiştir. Araştırma sonuçlarına göre, tüm örnek hacminde faaliyetlerde gelişme gözlemlenmiştir,

Mehrotra ve diğerleri (2008) ise, 1982-2003 periyodundaki 91 birleşmenin etkisini analiz etmişlerdir. Çalışmanın sonuçları Japonya'daki birleşme uygulamalarının ABD'dekinden çok farklı olduğu gözlemlenmiştir,

Pinto (2010) çalışmasında, birleşme aktivitelerinde piyasa büyüklüğü asimetrisinin ve firma maliyetlerinin etkisini araştırmıştır. Büyük ve küçük ülkedeki birleşme kararları oyun simülasyonları ile modellenmiştir. Çalışmanın bulgularına göre, büyük ülkedeki şirketler, küçük ülkedeki firmalara göre birleşme konusunda daha teşvik edici olarak gözlemlenmiştir,

Zhu (2011) çalışmasında, 1980-2005 periyodunda tamamlanan 1900 birleşme ve devralma olayını incelemiş ve birleşme ve devralmaların hissedar değeri üzerinde yoğunlaşmıştır. Çalışma sonucunda, yatırımcıların, birleşme veya devralma öncesi birleşmelerin, kullanılan sermayeyi nasıl etkileyeceğinin ve büyük ölçekli birleşme ve devralmalarda hisse senedi sahiplerinin korunmasında nasıl yardımcı olunabileceği konusunda tam anlamı ile farkına olmadıkları ortaya konulmuştur,

Monteiro ve diğerleri (2012) ise çalışmalarında, Euro bölgesindeki 13 AB ülkesinde 2001-2010 periyodunda meydana gelen toplam 980 işlemin analizini regresyon analizi yardımı ile yapmışlar ve sonuç olarak, uluslar arası vergi arbitrajı ve hedef ülkenin vergi mevzuatının zorluk derecesinin düşük oluşu, muhasebe bilgilerinin kamuoyuna açıklama yükümlülüğü, her bir ülkenin bürokrasi seviyesi ve kurumsal yönetişim standartları ile iki ülke arasındaki birleşme benzeri iki taraflı ticari ilişkiler gibi konuların önemini gözlemlemişlerdir,

Akinbuli ve Kelilume (2013) Nijerya'daki bankalar üzerindeki çalışmasına göre, birleşme ve devralmaların, firmaların finansal sorunlarına ilk bakışta tam anlamı ile çözüm olmadığını gözlemlemişlerdir. Bunun yanında, bazı firmalarda büyüme ve karlılığı harekete geçirebilirken, kısa vadede faaliyet etkinliği kötüleşebildiği ve birleşme ve devralmaların finansal sorunlara geçici bir çözüm olduğu ve faaliyet disiplinsizliğine çözüm olamadığı gözlemlenmiştir,

Tambi, çalışmasında, Hindistan firmalarının birleşme performanslarını incelemek amacı ile, toplam performans geliştirme, ölçek ekonomisi, operasyonel sinerji ve finansal sinerji değişkenleri kullanılarak t testi ile analiz edilmiştir. Analiz sonuçlarına göre Hindistan firmalarının dünya firmalarına paralel şekilde hareket ettiği ve birleşmelerin pozitif performans geliştirmede başarılı olamadığı tespit edilmiştir,

Yılgör (2002) ise, çalışmasında, firma birleşmelerinin şirket etkisinden çok rekabet düzeyi, sektörel yoğunlaşma ve piyasa üzerindeki etkisini incelemiştir. Araştırma sonuçlarına göre, firma birleşmelerinin sektörel yoğunlaşmayı artırdığı, büyük ölçekli firmaların daha da büyümesine ve küçük ölçekli firmaların piyasadan silinmesine neden olduğu gözlemlenmiştir,

Yörük ve Ban (2006) İMKB'de işlem gören firmaların birleşme öncesi ve sonrası hisse senedi fiyatları ele alınıp, firmaların aşırı kazançları hesaplanmış ve yatırımcı açısından getiri değişimleri saptanan farklı zaman aralıklarında, analiz edilerek değerlendirilmiştir. Analiz sonuçlarına göre İ.M.K.B.'da işlem gören firmaların hisse senetlerine, birleşme öncesi yatırım yaparak uzun vadede normalin üzerinde bir getiri elde edilemeyeceği, ancak birleşme öncesi çok kısa vadede T±5 gün, yatırım yapılarak normalin üzerinde bir getiri elde edilebileceği görülmüştür,

İlarslan ve Aşıkoğlu (2010) çalışmalarında, 2004-2005 yılları arasında İMKB'ye kote imalat sanayindeki firmaların 17'sinin gerçekleştirmiş olduğu birleşme ve satın alma işlemleri incelenmiştir. Oran analizi sonucunda birleşen/satın alan firmaların finansal performans düzeyinde bir artış gözlemlenmiştir,

Kırkılak ve Demirkaplan (2010) çalışmalarında, İMKB'de işlem gören finansal olmayan firmaların birleşme duyurularından önce ve sonra hisse senedi getirileri kümalatif ortalama anormal getiriler (CAARs) yöntemi kullanılarak 1997-2006 yılları arasında incelenmiştir. Sonuçlarına göre, birleşen firmaların birleşmeyen firmalara göre uzun dönemde daha iyi performans gösterdiklerini ortaya koymaktadır,

Yılmaz (2010) ise doktora tez çalışmasında, 2002-2008 döneminde İMKB'de gerçekleşen firma birleşme ve devralmaları konu etmiştir. Bulgular, 2002-2008 döneminde hisse senetleri İMKB'de işlem gören firmaların tarafı olduğu birleşme ve devralmalarda, hedef firma hisse senetlerinde işlemin *açıklanmasından* önce istatistiksel olarak anlamlı pozitif aşırı getiriler oluştuğunu göstermiştir.

## 4 Uygulama Veri ve Yöntemi

Bu araştırmanın amacı, firma birleşme veya devralmalarının firmaların finansal performansları üzerindeki etkisini belirlemektir. Bu amaçla, Borsa İstanbul'da faaliyet gösteren imalat firmalarından Taş Ve Toprağa Dayalı Sanayi ve Tekstil Ve Hazır Giyim Sanayi sektöründe faaliyet gösteren firmalardaki devralmaların, devralan firmanın faaliyette bulunduğu sektör içindeki finansal performansı üzerindeki etkisi incelenecektir.

Bu amaçla öncelikli olarak, Türkiye'deki birleşme ve devralmaları onaylayan kurum olan Rekabet Kurumu'ndan 2007-2012 periyodunda, devir işlemi gerçekleştirmiş firmalar belirlenmiştir. Birleşme veya devralma yapan işletmeler arasından, karşılaştırma kolaylığı ve anlamlılığı açısından sanayi sektörü içindeki alt sektörlerde faaliyet gösteren firmalardan Borsa İstanbul'da kote olan firmalardan, Taş ve Toprağa Dayalı Sanayi içinde faaliyet gösteren Çimbeton AŞ, ve Tekstil ve Hazır Giyim Sektöründe faaliyet gösteren Altınyıldız AŞ firmaları seçilmiştir. Çimbeton AŞ. Rekabet Kurumu'nun 8.4.2010 tarih ve 10-29/443 167 sayılı karar ile Merve İnşaatı; Altınyıldız AŞ ise 30.9.2010 tarih ve 10-62/1289-489 sayılı karar ile Ak-Al Tekstil'i devralmıştır.

Veri seti Çimbeton A.Ş. ve Altınyıldız A.Ş. firmalarının faaliyet gösterdiği, Taş ve Toprağa Dayalı Sanayi ve Tekstil sektöründe ve Hazır Giyim Sektöründe faaliyet gösteren Ek 2'de belirtilmiş firmaların 2007-2009 yıllık mali tablolarından elde edilen ve Ek 1'de belirtilen ve her firma için hesaplanmış 9 adet rasyodan oluşturulmuştur.

Elde edilen rasyolar, firmaların performanslarını en iyiden en kötüye doğru sıralayan çok kriterli karar verme yöntemi olan Technique for Order Preference by Similarity to Ideal Solution (TOPSİS) yöntemiyle analiz edilerek firmanın sektör içerisindeki performans sıraları belirlenecektir. TOPSİS analizinde Microsoft Office Excel programından yararlanılmıştır. Çalışmada kullanılan değişkenler (Ek 1) ve analiz kapsamındaki firmalar (Ek 2) çalışmanın sonunda Ekler kısmında verilmiştir.

### 4.1 Topsis Analizi

Çalışmanın bu kısmında imalat sistemleri, teknoloji yatırımlarının değerlendirilmesi, su ve tarım yönetimi, enerji planlaması, firma performansının ölçülmesi gibi çok farklı alanlarda kullanılan çok kriterli karar verme yöntemlerden biri olan, pozitif ideal çözümden en kısa mesafe ve negatif ideal çözümden en uzak mesafe alternatiflerinin seçilmesine dayan TOPSIS metodu kullanılmıştır.

Hwang ve Yoon (1981) tarafından geliştirilen bu yöntemdeki tek varsayım, her ölçütün ya monoton artan ya da monoton azalan tek yönlü bir faydası olduğu varsayımıdır. TOPSIS işlemi, aşağıda kısaca açıklanan uygulama aşamalarından oluşmaktadır:

**Adım 1: Karar Matrisi Oluşturularak Normalize Edilmiş Değerlerin Hesaplanması**

Önce satırlarında üstünlükleri sıralanmak istenen karar noktaları, sütunlarında ise karar vermede kullanılacak değerlendirme faktörlerinin yer aldığı A başlangıç matrisi oluşturulur.

$$A_{ij} = \begin{bmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m1} & a_{m2} & \cdots & a_{mn} \end{bmatrix}$$

$A_{ij}$ matrisinde m alternatif sayısını, n kriter sayısını göstermektedir. A matrisinin elemanlarından yararlanılarak ve aşağıdaki formül kullanılarak normalize edilmiş değerler hesaplanır.

$$r_{ij} = \frac{a_{ij}}{\sqrt{\sum_{i=1}^{m} a_{ij}^2}} \qquad i=1,....,m \qquad j=1,....,n \qquad (1)$$

$$R_{ij} = \begin{bmatrix} r_{11} & r_{12} & \cdots & r_{1n} \\ r_{21} & r_{22} & \cdots & r_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ r_{m1} & r_{m2} & \cdots & r_{mn} \end{bmatrix}$$

**Adım 2: Ağırlıklandırılmış Normalize Edilmiş Karar Matrisinin Hesaplanması**

Önce değerlendirme faktörlerine ilişkin ağırlık dereceleri ($W_j$) belirlenir. Daha sonra bir önceki aşamada hesaplanan normalize edilmiş değerler, $W_j$ değerleri ile çarpılarak ağırlıklandırılmış normalize edilmiş değerler bulunur.

$$V_{ij} = W_j r_{ij}, \qquad i=1,2,....,m \qquad j=1,2,....,n \qquad (2)$$

Burada $W_j$, $j$'inci kriterin ağırlığıdır.

**Adım 3: Pozitif-İdeal Çözümün ve Negatif-İdeal Çözümün Belirlenmesi**

Ağırlıklı normal değerlere göre pozitif-ideal çözüm ($A^+$) ve negatif-ideal çözüm ($A^-$) değerleri bulunur. $A^+$ ve $A^-$ ağırlıklandırılmış normalize edilmiş değerler cinsinden tanımlanır.

$$A^+ = \left\{ V_1^+, V_2^+, ........, V_j^+, ........, V_n^+ \right\} \qquad (3)$$

$$A^- = \left\{ V_1^-, V_2^-, ........, V_j^-, ........, V_n^- \right\} \qquad (4)$$

Formüllerde $j_1$ fayda (maksimizasyon), $J_2$ ise kayıp (minimizasyon) değerini göstermektedir. Gerek ideal gerekse negatif ideal çözüm seti, değerlendirme faktörü sayısından yani m elemandan oluşmaktadır. Ulaşılabilir bütün en iyi ölçüt değerlerinin bileşimi pozitif-ideal çözümdür. Negatif-ideal çözüm ise ulaşılabilir en kötü ölçüt değerlerinden oluşur. Burada, $V_J^+$, bütün mümkün alternatifler arasında $j$'inci değer için en iyi değer, $V_J^-$ ise bütün alternatifler arasında $j$'inci ölçüt için en kötü değerdir.

**Adım 4: Alternatifler Arasındaki Mesafe Ölçülerinin Hesaplanması**

Alternatifler arasındaki mesafe, n boyutlu Öklit (Euclidean) Uzaklık Yaklaşımından yararlanılarak bulunmaktadır. Her alternatifin pozitif-ideal çözümden olan mesafesi ($S_i^+$) ve negatif-ideal çözümden olan mesafesi ($S_i^-$) aşağıdaki formüller yardımıyla hesaplanır.

$$S_i^+ = \sqrt{\sum_{j=1}^{n} (V_{ij} - V_j^+)^2} \quad , \qquad i=1,2,....,m \qquad (5)$$

$$S_i^- = \sqrt{\sum_{j=1}^{n} (V_{ij} - V_j^-)^2} \quad , \qquad i=1,2,....,m \qquad (6)$$

Burada hesaplanacak $S_i^+$ ve $S_i^-$ sayısı, karar noktası sayısı kadar olacaktır.

**Adım 5: Pozitif-ideal Çözüme Olan Benzerliğin Hesaplanması (İdeal Çözüme Göreli Yakınlığın Hesaplanması)**

Her bir karar noktasının ideal çözüme göreli yakınlığı ( $C_i^+$ ) ya da diğer bir ifadeyle Pozitif-ideal çözüme olan benzerlikler; aşağıdaki formül yardımıyla hesaplanır.

$$C_i^+ = \frac{S_i^-}{S_i^- + S_i^+} \qquad\qquad i = 1, 2, ...., m$$

(7)

$C_i^+$ değeri $0 \le C_i^+ \le 1$ aralığında değer alır. $A_i = A^+$ olduğu zaman $C_i^+ = 1$ olur ve ilgili karar noktasının ideal çözüme, $A_i = A^-$ olduğu zaman $C_i^+ = 0$ dır ve ilgili karar noktasının negatif ideal çözüme mutlak yakınlığını gösterir.

**Adım 6: Her Bir Alternatifin Göreceli Sıralamasının ve Puanının Bulunması**

Alternatifler $C_i^+$ ye göre azalan sırada sıraya dizilerek tercih sırası belirlenir. Maksimum $C_i^+$ ye sahip, diğer bir deyişle ideale en benzer alternatif seçilir.

**4.2 Araştırmanın Bulguları**

TOPSİS analizi ile araştırdığımız ilk sektör olan Tekstil ve Hazır Giyim sektöründe faaliyet gösteren Altınyıldız AŞ'nin de dahil olduğu firmaların birleşme öncesi performansları Tablo 1'de verilmiştir:

| İŞLETME ÜNVANI | 2007 | | 2008 | | 2009 | |
|---|---|---|---|---|---|---|
| | Dereceler | Etkinlik Sırası | Dereceler | Etkinlik Sırası | Dereceler | Etkinlik Sırası |

*Tablo 1. Tekstil Sektörünün 2007 – 2008 ve 2009 Yılı Etkinlik Verileri*

Tablo 1'den de görüldüğü gibi, Altınyıldız Tekstil, devralma öncesi aynı sektörde faaliyet gösteren 8 firma içinde, 2007 yılında 7. 2008 ve 2009 yıllarında ise, 8. sırada yer almaktadır.

Sektördeki firmaların devralmanın gerçekleştiği yılı takip eden 2011 ve 2012 yıllarına ait etkinlik skorları Tablo 2'de gösterilmiştir.

| İŞLETME ÜNVANI | 2011 | | 2012 | |
|---|---|---|---|---|
| | Dereceler | Etkinlik Sırası | Dereceler | Etkinlik Sırası |

*Tablo 2. Tekstil Sektörünün 2011 ve 2012 Etkinlik Verileri*

2010 yılında gerçekleştirilen devralma sonrasında Altınyıldız A.Ş. 2011 yılında sektörde 8. sırada yer alırken, 2012 yılında önemli bir gelişme göstererek sektörde 3. sıraya yükselmiştir. Altınyıldız A.Ş.'nin Ak-Al Tekstil'i devralmasını takip eden yıl olan 2011 yılında sektördeki performansı aynı kalmış, fakat devralmanın etkileri 2012 yılında etkisini göstererek firmanın sektörde önemli bir konuma geldiği görülmüştür.

Araştırmamıza konu olan ikinci sektör Çimbeton AŞ'nin yer aldığı Taş ve Toprağa Dayalı Sanayi sektörüdür. Bu sektörde faaliyet gösteren firmaların TOPSİS yöntemi ile belirlenmiş finansal performans etkinlik derecelere ve sektördeki sıralamalı Tablo 3 ve Tablo 4'de verilmiştir.

**Tablo 4.** *Taş ve Toprağa Dayalı Sektörün 2011 ve 2012 Etkinlik Verileri*

Tablo 3 Taş ve Toprağa Dayalı Sanayi Sektöründe faaliyet gösteren Çimbeton A.Ş.'nin 2010 yılında Merve İnşaatı devralma işleminin gerçekleştirilmesinden önceki üç yıl olan 2007, 2008 ve 2009 yıllarındaki sektörün etkinlik derecelerini ve etkinlik sıralamalarını göstermektedir.

Tablo 3'e göre araştırmaya konu olan sektördeki 24 firma içinde, Çimbeton AŞ', devralma öncesi performans sıralamasında 2007 yılında 4. iken, 2008 yılında 22. ve 2009 yılında ise 23. sıraya kadar gerilemiştir. Çimbeton A.Ş. 2007 yılında sektör içerisinde önemli bir konumda iken, bu durum takip eden iki yılda önemli düşüş göstermiş ve sektörün en alt sıralarına kadar gerilemiştir.

Çimbeton A.Ş.'nin 2010 yılında Merve İnşaatı devralma işlemini takip eden 2011 ve 2012 yıllarına ait sektörde yer alan firmaların etkinlik dereceleri ve etkinlik sıraları Tablo 4'de sunulmuştur. Çimbeton AŞ, devralma yılı olan 2010 yılından itibaren özellikle 2011 yılında 6. sıraya kadar yükselmiştir. 2012 yılında ise, devralma öncesi kadar olmasa da, yine gerileyerek 18. Sırada yer almıştır.

## 5 Araştırma Bulgularının Yorumlanması, Sonuç ve Öneriler

Birleşme ve devralma ile ilgili gerek yurt içi ve gerekse yurt dışındaki çalışmalarda, birleşme ve devralmaların özellikle finansal performans üzerindeki etkisi üzerinde durulmuş ve bu konuda farklı sonuçlara ulaşıldığı gözlemlenmiştir. Bu konudaki farklılıkların nedeni olarak, örneklem (ülke ve sektör) ve zaman faktörleri neden olarak gösterilebilir. Bu farklılıklardan hareketle, bu çalışma, sektör farklılıklarının, devralma performansı üzerindeki etkisi olabileceğinden hareketle yapılmıştır. Bu amaçla, bu çalışma, BİST'te tekstil sektöründe faaliyet gösteren Altınyıldız AŞ ve taş-toprak sektöründe faaliyet gösteren Çimbeton AŞ'nin 2010 yılında gerçekleştirdikleri devralma faaliyetlerinin kendi sektörleri içinde, her iki firmanın finansal performansları üzerinde etkili olup olmadığının belirlenmesi amacıyla gerçekleştirilmiştir. Çalışmada, devralma öncesi olarak 2007-2008 ve 2009 yılları; devralma sonrası olarak da, 2011 ve 2012 yılları esas alınmıştır. KAP'tan Altınyıldız AŞ. dahil toplam 8 tekstil firmasının; Çimbeton dahil toplam 24 adet taş-toprak firmasının 5 yıllık mali tablolarından hareketle, likitide, mali yapı, karlılık ve devir hızı anlamında 9 tane oranı hesaplanmış ve TOPSİS yöntemi ile analiz edilmiştir.

Analiz sonuçlarına göre devralma gerçekleştiren firmalar, devralma öncesinde sektör içinde neredeyse son sıralarda yer almakta iken, devralma ile birlikte firmaların sektör içindeki performanslarında gözle görülür bir iyileşme görülmüştür. Ancak, söz konusu iyileşmenin derecesi ve zamanı sektörler itibariyle farklılık göstermektedir. Diğer bir ifade ile, devralmanın sektör içindeki performansa etkisi, Çimbeton AŞ'de devralmayı takiben 2011 yılında hemen gözlemlenirken, Altınyıldız AŞ'de bu olumlu gelişme 2012 yılında gözlemlenmiştir. Bunlardan hareketle, literatürde de benzer sonuçlarla karşılaşılan devralmanın farklı etkileri, çalışmamamızda da gözlemlenmiştir.

Çalışmamız, devralmanın sektör içindeki firma finansal performansı üzerinde, farklı zamanlarda da olsa olumlu etkisinin görülmesi çalışmamızın en önemli bulgusudur. Bununla birlikte, devamla faaliyetinin sektörler itibariyle farklı zamanlarda olumlu etkisini göstermesi, sektörel dinamiklerle ve devralınan firmanın etkisinden kaynaklabilecek bir durumdur. Yani, devralınan firmanın, devralan firma ile ilgili her anlamda entegrasyonu, önemli bir konu olarak karşımıza çıkmaktadır. Ancak çalışmamızın en önemli kısıtının devralma periyodu ve sektör sınırlılığı göz önüne de alınmalıdır. Bununla birlikte, sektörün genel performansı ve sektördeki firmaların performansları da ayrıca dikkate alınmalıdır. İleriki çalışmalarda, farklı sektör, ülke ve periyodu değiştirmek ve farklı analizlerle çalışmayı genişletmek mümkündür.

# Türkiye'deki Konut Fiyatlarının Tahmininde Hedonik Regresyon Yöntemi ile Yapay Sinir Ağlarının Karşılaştırılması

# Comparision of Hedonic Regression Method and Artificial Neural Networks to Predict Housing Prices in Turkey

Asst. Prof. Dr. Fatih Ecer (Afyon Kocatepe University, Turkey)

## Abstract

Owner-occupied housing is both a place to live and also the most important asset in many households' portfolio. Accurately predicting of house prices is therefore of great interest to the general public. This paper aims to compare the housing price prediction accuracies of Hedonic Model (HM) and Artificial Neural Networks (ANNs). In order to achieve this aim, two techniques' prediction results were compared by using four performance criteria: RMSE, MAE, MAD, and Theil's U statistic. This study uses the HM and ANNs to empirically determine the house prices in Turkey. HM is the standard technique for modeling the behavior of house prices over the past three decades and is based on micro economic theory. The non-linear relationship between house price and its determinants can be modeled by an ANN, so it is employed in this paper as an alternative method. Empirical results revealed that ANNs performed better than HM in house price predictions, indicating that ANNs could be useful for prediction of house prices. More clearly, the performance criteria from the ANNs are smaller than those from the HM by roughly 60-90%. For instance, the ANN model has about 77 percent lower RMSE, 91 percent lower MAE, 64 percent lower MAD, and 77 percent lower Theil's U statistic than those of the HM.

## 1 Giriş

Konut, bireylerin içinde yaşadığı mekanlardır. Ayrıca içinde yaşayan insanlara ekonomik ve toplumsal faydalar sağlayan dayanıklı bir tüketim malı ve bir yatırım aracıdır (Keleş, 2006; Sing vd. 2006). Pek çok insan için sahip oldukları konutlar portföylerindeki en değerli maddi varlıklardır (Schulz ve Werwatz, 2004). Gelişmiş ülkelerde emlak sektörü hanehalkı zenginliğine en büyük katkı sağlayan unsur olduğu gibi hükümetlerin vergi geliri içinde önemli bir paya da sahiptir. Bu bakımdan konut fiyatları politikacıların, bankacıların, emlakçıların ve ev sahiplerinin en çok ilgilendikleri konulardan biridir (Selim, 2009).

Türkiye'de çoğu insan ev sahibi olmayı istemektedir ve bir konut almanın yapılabilecek en önemli ve karlı yatırım olduğunu düşünmektedir. Dünyanın yaygın emlak ağlarından ERA'nın Avrupa 2006-2007 raporuna göre Türkiye'deki konut sahipliği oranı % 68'dir. Bu oran ABD'de % 70, İngiltere'de % 67, Almanya'da ise % 40 seviyesindedir. Türkiye'de konut satışları özellikle mortgage yasasının kabul edilmesinin ardından önemli bir artış göstermiştir. Şekil 1'de son yıllarda ülkemizde gerçekleşen konut satışlarına ilişkin grafik verilmiştir. Buna göre 2008 yılında 427105 adet, 2009 yılında 531746 adet, 2010 yılında 360357, 2012'de 701621 adet ve 2013'te ise 1157190 adet konut satışı gerçekleşmiştir (TÜİK, 2014).

***Şekil 1.*** *Türkiye'deki konut satış sayıları* ***Kaynak:*** *TÜİK.*

Konut fiyatındaki değişmeler sosyo-ekonomik koşulları ve gelecekteki ulusal ekonomik koşulları etkilemektedir. Konut fiyatları konut talebine bağlı olarak değişir. Talebin kısa zamanda karşılanamaması halinde fiyatlar artar (Hott, 2011; Kim ve Park, 2005). Konut fiyatlarının doğru tahmin edilmesi konut piyasasındaki faaliyetler açısından önemlidir. Konut alanlar ve satanlar konutların gerçek değerini bilmek isterler. Yatırım araçları arasında konuta yatırım yapmak isteyenler için de konut fiyatının gerçekçi tahmin edilmesi oldukça önemlidir (Bin, 2004). Konut fiyatı tahmin problemlerinde kullanılan yöntemler geleneksel ve gelişmiş

yöntemler olarak ikiye ayrılabilir. Regresyon analizi temelli bir yöntem olan hedonik model, geleneksel yöntemler sınıfında yer alır. İnsan düşünme sürecini taklit eden yöntemler ise gelişmiş yöntemler kategorisine girer. Yapay sinir ağları (YSA), bulanık mantık ve ARIMA gelişmiş yöntemler kategorisinde yer alan yöntemlerin başlıcalarıdır (Pagourtzi vd., 2003).

Çoklu regresyon tekniklerini kullanan hedonik modeller konut fiyatlarının belirlenmesinde sıklıkla kullanılmaktadır (Coulson ve McMillen, 2008; Fletcher vd., 2004; Kiefer, 2011; Kiel ve Zabel, 2008; Stadelmann, 2010). Hedonik modelle, bir malın özelliklerinin fiyat üzerindeki etkisi araştırılır. Hedonik model yardımıyla bir malın özellikleri ile fiyatı arasında ilişki kurarak, ilave bir özelliğin malın fiyatı üzerindeki etkisi belirlenmeye çalışılır. Diğer bir ifadeyle ilave özellikler ile malların farklılaştırılması sağlanır (Ünlükara, 2008). Bağımlı ve bağımsız değişkenler arasındaki ilişkilerin basitçe tahmin edilmesinde hedonik model oldukça uygun olmakla birlikte konut fiyatının tahmininde yararlanılan değişkenler arasındaki doğrusal olmayan ilişkiler sebebiyle hedonik modeller gerçekçi sonuçlar verememektedir. YSA, bu tür sorunların çözümünde başvurulabilecek alternatif yöntemlerden birisidir (Kauko, 2003). YSA modellerinden en popüler olanı danışmanlı, ileri beslemeli ve geriyayılım (backpropagation) algoritmasını kullanan bir model olan Çok Katmanlı Algılayıcılardır (MLP). Pek çok benzerliklerin olması sebebiyle MLP modeli çoklu regresyon analizinin geliştirilmiş bir formu olarak görülmektedir (Tay ve Ho, 1992).

Bu çalışmada hedonik model ile YSA yöntemleri kullanılarak İzmir'de 2013 yılında satılan konutlardan rasgele bir örneklem oluşturulmuş ve konutların fiyatı tahmin edilerek yöntemlerin performansları karşılaştırılmıştır. Çalışmanın özgün yanı YSA modellerinin konut fiyatının tahmininde kullanılabilecek güçlü modeler olduğunun belirlenmiş olmasıdır.

Çalışma 7 bölümden oluşmaktadır. Sonraki bölümünde konuyla ilgili yapılmış çalışmalardan bahsedilmiştir. 3. bölümde konut fiyatının tahmininde kullanılan yöntemlerden hedonik model ile YSA kısaca ele alınmıştır. 4. bölümde konut fiyatının tahmininde kullanılan veri seti ve değişkenler açıklanmıştır. 5. bölümde yöntemlerin tahmin performansları karşılaştırılmıştır. 6. bölümde elde edilen bulgular ortaya konulmuş ve son bölümde sonuçlar değerlendirilmiştir.

## 2   Literatür araştırması

Hedonik modelle ilgili ilk çalışmaları Lancaster (1966) ve Muellbauer (1974) yapmıştır. Hedonik fiyat teorisine ilişkin kapsamlı değerlendirmeler ise Rosen'in (1974) çalışmasına dayanır. Ayrıca, Bhattacharya ve Kim (2011), Boelhouwer vd. (2004), Clapp ve Giaccotto (2002), Costello ve Watkins (2002), Curtis (2011), Hamnett (2009), Kim ve Cho (2010) ile Watson (2010) konut fiyatının belirleyicilerine ve tahminine yönelik çalışmalar yapmışlardır.

Konut fiyatları, fiyatın konutun özellikleri tarafından belirlendiği hedonik modellerle tahminlenebilir (Bourassa vd., 2007). Konut fiyatları belirlenirken konutun özellikleri ve çevresi dikkate alınır. Satın alınması düşünülen konutlar konutun bulunduğu mevki, yapısal özellikleri, yakın çevresi ve kamu hizmetinden yararlanabilme olanakları göz önünde bulundurularak değerlendirilir (Kain ve Quigley, 1975). Şehir merkezine yakınlık, ulaşım olanaklarının olması ve çeşitliliği, düşük vergiler, kamu hizmetlerinin kalitesi, eğitim kurumlarına yakınlık, çevrenin sosyo-ekonomik özellikleri, doğa güzellikleri gibi etmenlerin konut fiyatını arttıran özellikler olması beklenebilir (Kiefer, 2011; Stadelmann, 2010).

Maclennan (1977), hedonik modelin uygulamalarını ele aldığı çalışmasında konut fiyatını belirleyen etmenleri araştırmış ve özellikle çevresel faktörlerin fiyat üzerindeki etkisini belirlemeye çalışmıştır. Adair vd. (2000), İrlanda Belfast'ta 2648 konut üzerinde yaptıkları çalışmada ulaşım olanaklarının konut fiyatı üzerindeki etkisini araştırmışlardır. Elde edilen sonuçlara göre ulaşım imkanlarının konut fiyatına etkisi şehir merkezinde çok az iken özellikle alt gelir grubunun yaşadığı dış mahallelerde önemli sayılabilecek bir düzeyde bulunmuştur. Stadelmann (2010), Zürih kentine bağlı 169 belediyedeki konutları değerlendirdiği çalışmasında bir hedonik modelle 33 değişken kullanarak hangi değişkenlerin konut fiyatının belirlenmesinde daha önemli olduğunu araştırmıştır. Araştırmanın sonuçları şehir merkezine ve alışveriş merkezlerine yakınlık ile hava kirliliği seviyesinin konut fiyatının en önemli belirleyicileri olduğunu göstermiştir. Selim (2008), yaptığı çalışmada Türkiye'de konut fiyatlarını belirleyen faktörleri analiz etmiştir. Buna göre konut fiyatlarını etkileyen en önemli özellikler konutun tipi, yapı türü, oda sayısı, konutun büyüklüğü, konutun su sistemi, havuz ve doğal gaza sahip olmasıdır. Cingöz (2011), konut fiyatının belirleyicileri üzerine yaptığı çalışmada konutun bulunduğu semtin, şehir merkezine olan uzaklığın, sitede havuz, gölet, spor alanı, tenis kortu, güvenlik ve park bulunmasının, konutun manzaraya sahip olmasının, büyüklüğünün, oda sayısının ve yakınında hastane bulunmasının konut fiyatına etki eden en önemli faktörler olduğunu belirlemiştir.

Konut fiyatını tahmin etmeye yönelik yapılan ve YSA modellerinin kullanıldığı çalışmaların büyük çoğunluğu YSA modellerinin konut fiyatlarını tahmin etmede diğer modellerden daha iyi performans sergilediğini göstermektedir. Bununla birlikte az sayıda da olsa bazı çalışmalar ise tersi görüşü savunmaktadır. Örneğin Allen ve Zumwalt (1994), Lenk vd. (1997), Worzala vd. (1995) bu çalışmalardan bazılarıdır.

## 3 Konut fiyatının tahmininde kullanılan yöntemler

Bu bölümde çalışmada konut fiyatının tahmin edilmesinde yararlanılan yöntemlerden hedonik model ile YSA kısaca ele alınmıştır.

### 3.1 Hedonik model

Hedonik yaklaşımda bir ürünün özelliklerinin fiyat üzerindeki etkisi araştırılmaktadır. Diğer bir ifadeyle hedonik model, bir ürünün özellikleriyle fiyatı arasında ilişki kurarak ek bir özelliğin ürünün fiyatı üzerindeki etkisinin belirlenmesinde kullanılır. Regresyon analizi, ürün piyasasında hedonik yaklaşım olarak adlandırılmaktadır. Regresyon modeli bağımlı ve bağımsız değişkenler arasındaki ilişkilerin yorumlanmasına olanak verir. Modelin yapısının basit olması ve hesaplama kolaylığı sağlaması onu cazip ve güçlü yapan iki unsurdur. Bununla beraber doğru fonksiyonu belirlemenin zorluğu ise zayıf tarafıdır. $Y$ bağımlı değişkeni, $X_i$ $i$. bağımsız değişkeni ve $\beta_i$ $i$. bağımsız değişkenin katsayısını göstermek üzere hedonik model (1) nolu formülle ifade edilebilir:

$$Y = \beta_0 + \sum_{i=1}^{n} \beta_i X_i + \varepsilon \tag{1}$$

Görüldüğü gibi hedonik modelin yapısı çoklu regresyon modeliyle aynıdır. Ancak hedonik yaklaşımda farklı fonksiyonel yapılar kullanılabilmektedir. En çok kullanılan fonksiyonel yapılar lineer form, doğal logaritma, logaritma ve kök dönüşümüdür.

Bununla birlikte hedonik modele getirilen bazı eleştiriler de vardır. Bu eleştiriler genellikle arz ve talebin belirlenmesi, hedonik modelin fonksiyonel formu ve bağımsız değişkenlerin belirlenmesiyle ilgilidir (Selim, 2009).

### 3.2 Yapay sinir ağları (YSA)

YSA, insan beyninin öğrenme sürecini taklit ederek oluşturulmuş bilgisayar sistemleridir. Kendilerine gösterilen örnekler ile eğitilebilirler ve bu sayede benzer konularda karar verebilirler. Bir YSA girdi, gizli ve çıktı katmanı olmak üzere üç katmandan oluşur. Her katmanda ise nöronlar bulunur.

Bir nöron önce kendine gelen girdileri ve onların ağırlık değerlerini alır. İkinci aşamada net girdiyi hesaplar. Net girdi, her girdi değeriyle kendi ağırlığının çarpılıp toplanmasıyla elde edilir. Rumelhart vd. (1986), net girdinin şu şekilde bulunduğunu belirtmişlerdir:

$$Net = \sum_{i=1}^{n} G_i A_i \tag{2}$$

Elde edilen net girdi değeri hiperbolik tanjant, sigmoid, eşik, doğrusal gibi isimler alan aktivasyon fonksiyonları yardımıyla dönüştürülür ve böylece bir çıktı üretilir. Hiperbolik tanjant fonksiyonu (3) nolu formülle ifade edilebilir ve $(-1,1)$ arasında değerler alır.

$$\tau(x) = \frac{e^x - e^{-x}}{e^x + e^{-x}} \tag{3}$$

Aktivasyon fonksiyonu yardımıyla çıktının üretilmesi ise matematiksel olarak şöyle gösterilebilir:

$$Ç = f(Net) \tag{4}$$

Çalışmada YSA modellerinden biri olan MLP modeli kullanılmıştır. Literatürde en çok kullanılan YSA modellerinden biri olan MLP modeli ileri beslemeli bir ağ olup Rumelhart vd. (1986) tarafından geliştirilmiştir. MLP modeli danışmanlı öğrenme stratejisini kullanır. MLP ağlarını eğitmek için geriyayılım algoritması kullanılır. Bu algoritma hatayı geriye doğru yayarak en aza indirir.

Girdi ve çıktı parametreleri arasında kesin bir fonksiyonel ilişki kurulamadığından dolayı YSA kara kutuya benzetilmektedir (Kauko vd., 2002). YSA modelleri hedonik modelle aynı girdi ve çıktı parametrelerini kullanır. Dolayısıyla bu çalışmada girdi parametreleri olarak konutun özellikleri, çıktı parametresi olarak ise fiyatın logaritması kullanılmıştır.

## 4 Konut fiyatının tahmini

Türkiye'nin nüfus bakımından üçüncü büyük kenti olan İzmir'de 2010'da 39702 adet, 2011'de 34828 ve 2012'de 46429 adet ve 2013'te ise 72421 konut el değiştirmiştir (TÜİK, 2014). Çalışmada İzmir'de 2013 yılı Ocak-Temmuz ayları arasında satılan ve rastgele örnekleme yöntemiyle belirlenen 610 konut veri setini oluşturmuştur. Konutların satış fiyatının yanında yaşı, oda sayısı, kaçıncı katta bulunduğu, büyüklüğü, kilerinin olup olmadığı gibi konuta ilişkin pek çok özellikle ilgili bilgiler derlenmiştir.

### 4.1 Veri seti ve değişkenler

Veri setinde yer alan konutların sahip olduğu 83 özellik ise tahmin modellerinde bağımlı ve bağımsız değişkenlerdir. Bu değişkenler kısaca şu şekilde özetlenebilir:

*Fiyat:* Konutun fiyatı;

*Büyüklük:* m² cinsinden konutun büyüklüğü;

*Oda sayısı:* Konutta bulunan oda sayısıdır. Bu sayı belirlenirken salon, oda sayısına dahil edilmiştir. Örneğin 3+1 tipi bir konut 4 odalı olarak değerlendirilmiştir;

*Yaş:* Konutun yaşı;

*Kat:* Konutun kaçıncı katta bulunduğu;

*ADSL, duşakabin,…,şofben:* Konutun iç özelliklerini gösteren kukla (ikili) değişkenler;

*Asansör, jeneratör,…, yüzme havuzu:* Konutun dış özelliklerini gösteren kukla değişkenler;

*Alışveriş merkezi, denize yakınlık,…, üniversite:* Konutun konumunu gösteren kukla değişkenler;

*Anayol, dolmuş,…,iskele:* Konutun ulaşım imkanlarını gösteren kukla değişkenler;

*Deniz manzarası, doğa manzarası, şehir manzarası:* Konutun manzarasına ilişkin kukla değişkenler;

*Bahçeli, dubleks:* Konut tipini belirten kukla değişkenler;

*Kuzey cephe,…, batı cephe:* Konutun cephesini belirten kukla değişkenler.

Değişkenler kümesinde yer alan kukla değişkenler, eğer konut belirtilen özelliğe sahipse "1" aksi halde "0" değerini alan değişkenlerdir. Örneğin "otobüs durağı" değişkeni bir kukla değişkendir ve konutun yakınında otobüs durağı varsa "1", yoksa "0" şeklinde ifade edilmiştir. Çalışmada fiyat, büyüklük, oda sayısı, yaş ve kat değişkenleri haricindeki değişkenler kukla değişkenlerdir.

Tablo 1'de sürekli değişkenlerin tanımlayıcı istatistikleri görülmektedir. Konutların satış fiyatı 55000 TL ile 475000 TL arasında değişmekte olup satış fiyatı ortalaması yaklaşık 185000'dir. Konut büyüklüğü ortalaması 125 m²'dir. Yaş ortalaması yaklaşık 12 olup en yaşlı konut 32 yaşındadır. Konutların kimi zemin katta kimi ise 20. kattadır. Bazı konutlar şehir merkezinde, bazıları denize sıfır konumda, bazıları doğa manzaralı, bazıları okullara yakın, bazıları anayol üzerinde, bazıları ise terasa sahiptir.

| Değişken | Ortalama | Standart sapma | Minimum | Maksimum |
|---|---|---|---|---|
| Bağımlı değişken | | | | |
| *Fiyat* | 185181.23 | 82832.27 | 55000 | 475000 |
| Bağımsız değişkenler | | | | |
| *Büyüklük* | 125.10 | 35.83 | 46 | 450 |
| *Oda sayısı* | 3.73 | 0.69 | 1 | 8 |
| *Yaş* | 11.65 | 9.92 | 1 | 32 |
| *Kat* | 3.55 | 2.42 | 0 | 20 |

***Tablo 1.*** *Sürekli değişkenlere ilişkin istatistikler*

## 5 Modellerin tahmin performanslarının karşılaştırılması

Çalışmada en uygun modele karar vermek için farklı hedonik modeller kurulmuş ve en iyi modelin logFiyat modeli olduğu belirlenmiştir.

Modellerin tahmin doğruluklarını karşılaştırmak amacıyla performans ölçütleri olarak da adlandırılan hataların kareli ortalamasının karekökü (RMSE), ortalama mutlak hata (MAE), medyanın mutlak sapması (MAD) ve Theil U değerlerinden yararlanılmıştır.

### 5.1 Hedonik model

Hedonik model % 95 güven düzeyinde Tablo 2'de verilmiş olan bağımsız değişkenleri kapsayan bir model olarak kurulmuştur. Hedonik modelin formu,

$$\log Fiyat = \beta_0 + \beta_1 X_1 + ... + \beta_{81} X_{81} + \varepsilon \tag{5}$$

şeklinde olup $X_1$'den $X_{81}$'e kadar olan değerler 81 bağımsız değişkene, $\beta_1$'den $\beta_{81}$'e kadar olan değerler ise bağımsız değişkenlerin katsayılarına karşılık gelmektedir. Ayrıca hedonik modelin tahmininde en küçük kareler (EKK) yöntemi kullanılmıştır. Tablo 2'de aynı zamanda regresyon katsayıları, standart hatalar ve anlamlılık düzeyleri de bulunmaktadır. Tablo 2'de yer alan bağımsız değişkenlerin YSA modelinde de kullanıldığını belirtmekte yarar vardır.

***Tablo 2.** Hedonik modelin tahmincileri*

Hedonik modele göre konutun büyüklüğü, konutta duşakabin, giyinme odası, kiler, ebeveyn banyosu, gömme dolap, ankastre mutfak, panjur, jakuzi, şofben, asansör olması ile konutun bulunduğu sitede kapalı garaj ve yüzme havuzu olması, konutun ilköğretim okuluna ve iskeleye yakınlığı ile deniz manzarasına sahip olması konut fiyatını etkilemektedir. Ayrıca bu değişkenlerden konutun büyüklüğü, konutta duşakabin, giyinme odası, ebeveyn banyo, gömme dolap, ankastre mutfak, panjur, jakuzi, asansör, açık yüzme havuzu olması ile konutun iskeleye yakınlığı ve deniz manzarasına sahip olması konutun fiyatını arttırmaktadır. Hedonik modele ilişkin ANOVA testi sonuçları ise Tablo 3'te özetlenmiştir. ANOVA testi sonuçları modelin bir bütün olarak anlamlı olduğunu göstermiştir.

| Model | Kareler toplamı | Ortalama Kareler | F | p |
|---|---|---|---|---|
| Regresyon | 13.845 | 0.167 | 16.662 | 0.000 |
| Hata | 5.266 | 0.010 | | |
| Toplam | 19.111 | | | |

### 5.2 Yapay sinir ağları

Çalışmada YSA modellerinden biri olan MLP modeli tercih edilmiştir. MLP modelinde kullanılan bağımlı ve bağımsız değişkenler, karşılaştırmanın sağlıklı bir şekilde yapılabilmesi için hedonik modelde kullanılanlarla aynıdır. Diğer bir ifadeyle logFiyat bağımlı değişken olup konuta ilişkin diğer 81 özellik ise bağımsız değişkenler olarak modelde yer almıştır. Ayrıca, bu değişkenlerin birçoğu YSA ile konut fiyatının belirlendiği diğer çalışmalarla örtüşmektedir (Din vd., 2001; Do ve Grudnitski, 1992; Hatzichristos ve French, 2003; Kauko vd., 2002; Lenk vd., 1997; McCluskey ve Borst, 1997; Nguyen ve Cripps, 2001; Pagourtzi vd., 1995; Tay ve Ho, 1992; Visit vd., 2004). Çalışmada çok sayıda mimari denenerek en az hataya sahip model elde edilmeye çalışılmıştır. Bu modelde bir gizli katman olup gizli katmanda 3 nöron bulunmaktadır. Hem gizli katmanda hem de çıktı katmanında hiperbolik tanjant fonksiyonu kullanılmıştır. Öğrenme oranı 0.2 olup momentum katsayısı ise 0.6'dır. Çalışmada en iyi tahmin performansını gerçekleştiren YSA modelinin mimari yapısı Şekil 2'de verilmiştir. Şekil 2'de yuvarlaklar nöronları, çizgiler ise ağırlıkları göstermektedir. İleri beslemeli bir ağ olan bu modelde girdi katmanı, bir gizli katman ve çıktı katmanı yer almaktadır.

**Şekil 2.** *YSA mimarisi*

## 6 Tartışma

Kullanılan iki modelin tahmin doğruluklarını karşılaştırmak için dört farklı performans ölçütü kullanılmıştır: RMSE, MAE, MAD ve Theil U değeri. Hata değerleri üzerine kurulu olan bu değerlerin sıfıra yakın çıkması, modelin tahmin performansının mükemmele yakın olduğunu ifade etmektedir. $y_i$ konutun gerçek fiyatını, $\hat{y}_i$ konutun modellerle tahmin edilen fiyatını, $n$ gözlem sayısını, $e_i$ $i$. konutun gerçek fiyatı ile tahmin edilen fiyatı arasındaki farkı (hata) göstermek üzere performans ölçütleri matematiksel olarak şöyle ifade edilebilir:

$$RMSE = \sqrt{\frac{1}{n}\sum_{i=1}^{n}\left(y_i - \hat{y}_i\right)^2} \tag{6}$$

$$MAE = \frac{1}{n}\sum_{i=1}^{n}\left|y_i - \hat{y}_i\right| \tag{7}$$

$$MAD = medyan\left(\left|e_i - medyan(e_i)\right|\right) \tag{8}$$

$$Theil \quad U = \sqrt{\frac{\sum_i\left(y_i - \hat{y}_i\right)^2}{\sum_i(y_i)^2}} \tag{9}$$

Tablo 4, performans ölçütlerinin hesaplamalar sonucu bulunan değerlerini göstermektedir. RMSE değeri hedonik modelde 2.2871, MLP modelinde ise 0.5188'dir. MLP modelinin RMSE değeri hedonik modelinin RMSE değerinden % 77.32 daha düşüktür. MAE değeri hedonik modelde 2.1938, MLP modelinde ise 0.2016 olup MLP modelinin RMSE değeri hedonik modelinin RMSE değerinden % 90.81 daha düşüktür. MAD değerleri karşılaştırıldığında hedonik modelin MAD değerinin 0.3790, MLP modelinin MAD değerinin ise 0.1360 olduğu görülmektedir. Buna göre MLP modelinin MAD değeri hedonik modelin MAD değerinden % 64.11 daha düşüktür. Benzer şekilde Theil U değerleri karşılaştırıldığında Theil U değerlerinin hedonik model ve MLP modeli için sırasıyla 0.4374 ve 0.0992 olduğu görülmektedir. Buna göre MLP modelinin Theil U değeri

hedonik modelin Theil U değerinden % 77.32 daha düşüktür. Bulgulara göre dört performans ölçütü için de MLP modelinin hedonik modelden daha iyi performans sergilediği görülmektedir. Çünkü MLP modelinden elde edilen RMSE, MAE, MAD ve Theil U değerleri hedonik modelden elde edilen değerlere göre daha küçüktür. MLP modelinin hedonik modelden daha iyi performans sergilemesi, MLP modelinin konut fiyatını hedonik modelden daha doğru tahmin ettiği şeklinde yorumlanabilir.

Ayrıca, MLP modeline göre konut fiyatını etkileyen değişkenler, yüzme havuzu, konutun deniz kenarında olması, şehir merkezine yakın olması, hırsız alarmının olması, gömme dolaba sahip olması, yaşı, tren istasyonuna yakınlığı, bulunduğu sitede güvenliğin olması, deniz otobüsüne yakınlığı, cami, üniversite ve sağlık ocağına yakınlığı, cadde üzerinde olması, ankastre mutfağa, ses yalıtımına ve ısıcama sahip olması, kablo TV, hidrofor ve çelik kapının olması ve terastır.

|  | Hedonik model | MLP | Fark (%) |
|---|---|---|---|
| RMSE | 2.2871 | 0.5188 | 77.32 |
| MAE | 2.1938 | 0.2016 | 90.81 |
| MAD | 0.3790 | 0.1360 | 64.11 |
| Theil U | 0.4374 | 0.0992 | 77.32 |

*Tablo 4. Hedonik model ile MLP modellerinin tahmin performansları*

## 7  Sonuç

Türkiye'de pek çok insan ev sahibi olmak istemektedir ve bir ev satın almanın yapılabilecek en karlı yatırım olduğunu düşünmektedir. Türkiye, yaklaşık % 70 konut sahipliği oranı ile dünyada en yüksek konut sahipliğine sahip ülkelerden biridir. Türkiye'de konut piyasası hızla büyümektedir ve konut fiyatları ev alan ve satanlar açısından oldukça önemli bir konudur.

Konut fiyatı belirlenirken konuta ilişkin pek çok özelliğinin fiyat üzerinde etkili olduğu bilinmektedir. Konutun yaşı ve metrekare olarak büyüklüğü ile konut fiyatı arasında doğrusal olmayan bir ilişkinin olduğu geçmişte yapılan çalışmalarda ortaya konulmuştur. Bu nedenle konut fiyatını tahmin ederken lineer yaklaşımları kullanmak elde edilen tahmin sonuçlarına olan güveni sarsmaktadır. Doğrusal olmayan ilişkileri modelleyebilme yeteneğine sahip olan YSA, çalışmada hedonik yaklaşıma alternatif olarak kullanılmıştır.

Bu çalışmada, İzmir'in Karşıyaka ilçesinde 2013 yılı Ocak-Temmuz ayları arasında satılmış olan 610 konutun verileri kullanılarak konut fiyatı tahminlemesi yapılmıştır. Konut fiyatı tahmininde hedonik model ile YSA modellerinden MLP modeli kullanılmıştır. Hedonik modele göre konutun büyüklüğü, konutta duşakabin, giyinme odası, kiler, ebeveyn banyo, gömme dolap, ankastre mutfak, panjur, jakuzi, şofben, asansör, kapalı garaj ve açık yüzme havuzu olması, ilköğretim okuluna ve iskeleye yakınlığı ile deniz manzarasına sahip olması konut fiyatını etkileyen en önemli değişkenler olarak bulunmuştur. MLP modelinde ise, konut fiyatını etkileyen değişkenler, yüzme havuzu, konutun deniz kenarında olması, şehir merkezine yakın olması, hırsız alarmının olması, gömme dolaba sahip olması, yaşı, tren istasyonuna yakınlığı, bulunduğu sitede güvenliğin olması, deniz otobüsüne yakınlığı, cami, üniversite ve sağlık ocağına yakınlığı, cadde üzerinde olması, ankastre mutfağa, ses yalıtımına ve ısıcama sahip olması, kablo TV, hidrofor ve çelik kapının olması ve terastır. İki modelin tahmin doğrulukları karşılaştırıldığında MLP modelinin hedonik modelden daha iyi tahmin yaptığı sonucuna ulaşılmıştır.

Elde edilen sonuçlar konut fiyatını tahmin ederken MLP modelinin hedonik modelden daha doğru tahmin gerçekleştirdiğini göstermiştir. Tahmin doğruluklarını karşılaştırmak amacıyla yararlanılan dört performans kriteri gözönünde bulundurulduğunda MLP modelinden elde edilen değerlerin hedonik modelden elde edilenlere kıyasla yaklaşık % 60-90 daha küçük olduğu bulunmuştur. Çalışmada elde edilen bulgular daha önce yapılmış pek çok çalışmanın sonucunu desteklemiş ve konut fiyatını tahmin etme hususunda YSA metodolojisinin üstünlüğünü pekiştirmiştir. Özetle söylemek gerekirse konut fiyatını tahmin etmede YSA güçlü bir potansiyele sahiptir ve konut fiyatlarının tahmin edilmesinde rahatlıkla kullanılabilir. Bununla birlikte bu noktada vurgulanması gereken husus en iyi tahmin sonucunu veren modelin ancak deneme yanılma yoluyla oluşturulabileceğidir. Deneme yanılma yöntemi kullanılmadan elde edilen sonuçlara dayanarak YSA modellerinin üstünlüğünden bahsetmek büyük bir yanılgıdır. Çalışmanın kısıtı ise konut fiyatını etkileyebileceği düşünülen ekonomik faktörlerden faiz oranı ve döviz kurlarının tahmin modellerinde yer almamasıdır.

# Metal (Çelik) Kullanım Yoğunluğu Hipotezinin Türkiye Ekonomisi için Sınanması

# Intensity of Metal (Steel) Use Hypothesis: A Test for Turkish Economy

Assoc. Prof. Dr. Fikret Dülger (Çukurova University, Turkey)

Ph. D. Candidate Salih Gencer (Çukurova Universiy, Turkey)

Ph. D. Candidate Almıla Burgaç (Çukurova University, Turkey)

## Abstract

The quantity of steel consumed can be considered as an indicator of industrial development as nations move to higher stages of industrialization, since the steel consumption has been thought to be closely linked to the rate of economic growth, which influences the level of activity in steel intensive sectors (Huh, 2011). After the World War II, the worldwide metal consumption increased rapidly and, this led to a concern about the supply of metals and a fear of early depletion (Wårell, 2014). As part of a broader effort to develop simple but accurate techniques for forecasting the future demand for metals, the International Iron and Steel Institute (1972) and Malenbaum (1973) suggested the intensity of use hypothesis during the 1970s. This hypothesis maintains that the intensity of metal use is a function of economic development as measured by real GDP (Guzmán et al. 2005). Intensity of use curve rises, peaks, and then decline as per capita income increases. For this hypothesis the intensity of metal use depends on the economic development in a country and changes over the development stages of the economy. Therefore the relationship between intensity of metal use and economic development exhibits an inverted U-shaped pattern. The main purpose of this study is to test the intensity of (steel) use hypothesis for Turkey during the period 1955-2012 using the cointegration technique with structural break. Given the dataset and time series techniques used, results indicate that the steel consumption and real GDP have the long-run relationship.

## 1  Giriş

Çelik ekonomik kalkınmanın motoru ve ekonomide karşılaştırmalı üstünlük için önemli role sahip bir temel girdidir (Yellishetty, vd, 2010). Ekonomik kalkınma çelik yoğun sektörler üzerinde etkili olacağından çelik tüketimi ile ekonomik kalkınma birbirleriyle yakından ilişkilidir. Bu bağlamda, çelik tüketim miktarının bir ülkenin sanayileşme evreleri boyunca sanayileşmesinin bir göstergesi olarak kabul edilebileceği de ifade edilmektedir (Huh, 2011). Özellikle, İkinci Dünya Savaşı sonrasında metal talebindeki artışlar dünya metal tüketiminde sürekli artışları beraberinde getirmiştir. Bu da metallerin arzı hakkında ve yakın gelecekte tükenmesi yönündeki endişeleri ortaya çıkarmıştır (Wårrel,2014).

II. Dünya Savaşı sonrası dünyada Gayri Safi Yurtiçi Hasıla (GSYİH) oldukça hızlı bir artış göstermektedir. Benzer şekilde, çoğu ülkenin bu dönemlerde savaş süresince oluşan tahribatları onarmasından dolayı, metal kullanımında özellikle çelik tüketiminde yadsınamaz bir artış söz konusu olmuştur. EK *Tablo 1*'de 1950 yılından itibaren günümüze kadar 10'ar yıllık periyotlarla dünyada hem GSYİH'daki değişim hem de dünyada çelik tüketimindeki değişim yer almaktadır.

1951-1960 ve 1961-1970 dönemlerinde hem gelirdeki hem de çelik tüketimindeki artış oldukça yüksek olmasına karşın 1971-1980 ve 1981-1990 dönemlerinde gelirdeki ve çelik tüketimindeki büyüme oranı oldukça düşmüştür. 1970'lerde ortaya çıkan petrol krizleri bütün ekonomileri etkilemiş ve bunun sonucu olarak 1973 ve 1979 sonrasında kişi başı metal tüketimi önemli düzeyde azalmıştır. 1980 ve 1990'larda düşük büyüme oranı gözlenmesine karşın metal tüketimindeki düşüş devam etmiştir. Bu dönemde uluslararası borç krizinden dolayı gelişmekte olan ülkelerde, ekonomik büyümedeki düşüşle birlikte, gelişmiş ülkelerde metal kullanım yoğunluğu da düşmüştür (Tilton, 1990). Dünyada ekonomik büyümede bu dönemde gözlenen düşüşler nedeniyle metal kullanımındaki düşüşün geçici olacağı tahminleri yapılırken, metal talep büyümesindeki azalış kalıcı olarak ortaya çıkmıştır (Radetzki ve Tilton, 1990). 2000'li yıllardaki artış ise Çin ve Hindistan vb. gibi ekonomilerindeki çok hızlı büyümelere bağlanmaktadır.

1970'lerde, metallerin gelecekteki talebine ilişkin tahmin çabaları sürerken Uluslararası Demir ve Çelik Enstitüsü (1972) ve Malenbaum (1973) böyle bir tahminde kullanılmak üzere basit ama etkin bir yöntem olarak Metal Kullanım Yoğunluğu Hipotezi'ni önermişlerdir. Bu hipotez, genel olarak reel GSYİH birimi başına tüketilen metal miktarı olarak ölçülen metal kullanım yoğunluğunun kişi başına reel gelir ile ölçülen ekonomik kalkınmanın bir fonksiyonu olduğunu savunmaktadır (Guzmán, vd, 2005).

Kullanım yoğunluğu hipotezine göre, düşük kişi başına gelir düzeylerinde yurtiçi üretim genellikle tarım, hayvancılık ve emek yoğun imalat sektörleri v.b gibi düşük metal yoğunluklu sektörlere dayalıdır. Böyle bir

üretim yapısı içerisinde kişi başı gelir düzeyindeki artışlar tüketici tercihlerinde metal yoğun sektörlere doğru bir kaymayı doğuracaktır. Çünkü artan refah düzeyi ile birlikte tüketicilerin talepleri artık altyapı, imalat sanayi, inşaat, makine-teçhizat ve dayanıklı tüketim mallarına yönelmiştir. Bu sanayileşme evresinde metal tüketimindeki büyüme ekonomik büyümeden daha yüksektir ve doğal olarak bu dönemde metal kullanım yoğunluğu artmaktadır. Ancak, zamanla kişi başı gelir düzeyindeki artışlar metal kullanım yoğunluğunda bir azalışa yol açacaktır. Yurtiçi üretim yapısının ileri teknoloji ve hizmetler sektörüne doğru kayma gösterdiği bu son aşamada metal tüketimindeki büyüme ekonomik büyümenin gerisinde kalmaktadır (Crompton, 1999). Bu hipotez, kalkınma ile birlikte metal kullanım yoğunluğunun önce artması, sonra azalarak artması ve belirli bir tepe noktasından sonra ise tersine döndüğü diğer bir ifadeyle metal kullanım yoğunluğu ve kalkınma arasındaki ilişkinin ters U-şeklinde bir eğilim sergilediğini ifade etmektedir.

Kullanım yoğunluğu hipotezinin test edilmesine yönelik son dönem çalışmalar, çelik tüketimi ve ekonomik büyüme arasındaki ilişkiye odaklanmaktadır (Evans, 2011). Yapılan çalışmalarda çelik tüketimi ve reel gelir arasında uzun dönemli ilişkinin desteklenmesine yönelik sonuçlar karışıktır. Ghosh (2006) Hindistan için ekonomik büyüme ve çelik tüketimi arasında eşbütünleşme ve Granger nedenselliğini sınanmakta ve çelik tüketimi ile ekonomik büyüme arasında uzun dönemli ilişki bulamazken ekonomik büyümeden çelik tüketimine doğru bir nedenselliğin olduğuna ilişkin sonuca ulaşmıştır. Diğer yandan Huh (2011) Kore ekonomisi için, Cromptom (2000) Japonya için, Evans (2011) İngiltere için Coccia (2012) Çin, İtalya, ABD, Japonya, İngiltere, Almanya, Fransa ve İtalya için destekler sonuca ulaşmışlardır. Wårell (2014)'de 61 ülke için kullanım yoğunluğu hipotezini test etmiş ve bu ülkeleri düşük, orta (Türkiye'de dahil) ve yüksek gelir grubu olarak sınıflandırmıştır. Sonuçlara göre orta gelir grubu için kullanım yoğunlu hipotezinin geçerli olduğu bulgusuna ulaşılmıştır.

Bu çalışmanın amacı, çeşitli zaman serisi metotlarını kullanarak, Türkiye ekonomisi için metal (çelik) kullanım yoğunluğu hipotezini 1955-2012 dönemini kapsayan veri seti ile sınamaktır. İzleyen bölümde kullanım yoğunluğu hipotezine ilişkin teorik açıklamalara yer verilmiş, üçüncü bölümde ise literatür taraması sunulmuştur. Dördüncü bölümde veri seti ve ekonometrik yönteme ilişkin açıklamalar yer alırken uygulamalı analiz sonuçları beşinci bölümde sunulmuştur. Çalışma bulguların tartışıldığı sonuç bölümüyle sonlandırılmıştır.

## 2 Kullanım Yoğunluğu Hipotezi

Kullanım yoğunluğu hipotezi, bir ülkenin metal tüketiminin modellenmesinde, ülkenin ekonomik kalkınma evreleri boyunca üretimini gerçekleştirmek üzere metal gereksinimindeki değişimleri temel almaktadır (Crompton,1999). Metallerin gelecekteki talebine ilişkin tahminde bulunma çabalarının sonucu olarak basit ama etkin bir yöntem olarak Uluslararası Demir ve Çelik Enstitüsü (1972) ve Malenbaum (1973) tarafından önerilen Kullanım Yoğunluğu Hipotezine göre, kullanım yoğunluğu, metal kullanımının milli gelire oranı olarak tanımlanmaktadır. Bu tanımdan hareketle, metal kullanımındaki değişme kullanım yoğunluğundaki ve milli gelirdeki değişmeye bağlanmaktadır (Guzmán, vd, 2005, UNCTAD, 2005). Herhangi bir metale ilişkin kullanım yoğunluğu aşağıdaki biçimde formüle edilebilir:

$$IU_t = \frac{C_t}{GSY\dot{I}H_t} \tag{1}$$

Burada $IU$, ilgili metale ilişkin kullanım yoğunluğunu; $C$, ilgili metalin tüketimini; $GSY\dot{I}H$ ekonomik faaliyet hacminin göstergesi olarak reel GSYİH'yı; $t$ ise zaman indisini göstermektedir. Buna göre, metal kullanım yoğunluğu GSYİH birimi başına tüketilen fiziki metal miktarını ifade etmektedir ve herhangi bir dönem için ağırlık birimi ton cinsinden ifade edilen metal tüketim miktarının sabit fiyatlarla GSYİH değerine oranlanmasıyla elde edilmektedir (Rebiasz, 2006). Hipoteze göre, bir ülkedeki ekonomik kalkınma düzeyi o ülkenin metal kullanım yoğunluğunu açıklamaktadır. Ekonomik kalkınmanın bir göstergesi kabul edilen kişi başı reel gelir dikkate alındığında, metal kullanım yoğunluğunun kişi başı reel gelirin bir fonksiyonu olduğu ifade edilmektedir:

$$IU_t = f(KBGSY\dot{I}H_t) \tag{2}$$

Burada $KBGSY\dot{I}H$ kişi başı reel GSYİH'yı temsil etmekte ve belirli bir dönemdeki reel GSYİH değerinin toplam nüfusa oranlanmasıyla elde edilmektedir (Wårrel ve Olson, 2009).

Metal kullanım yoğunluğundaki değişimler kişi başı reel GSYİH'nın bir fonksiyonu olarak ifade edilirse ters U-biçimli bir eğri elde edilmekte ve bu eğri metal kullanım yoğunluğu ile kişi başı reel gelir arasındaki ilişkiyi göstermektedir. Kişi başı reel gelir düzeyine göre metal tüketim yoğunluğunun gelişimini gösteren kullanım yoğunluğu eğrisi *Şekil 1*'de gösterilmiştir.

Kullanım yoğunluğu ile kişi başı reel gelir düzeyi arasındaki ters U-biçimdeki ilişkinin açıklaması kullanım yoğunluğu hipotezinin teorik temellerini oluşturur. Roberts (1985), ters U-biçimini üç argümandan hareketle açıklamaktadır. Söz konusu eğilimleri açıklamada kullandığı argümanlardan biri talep kaymalarına ilişkindir. Buna göre, bir ülkenin kalkınma sürecinde nihai ürün bileşimi önce sanayi mallarına doğru ve sonra yüksek kalkınma düzeylerine ulaşıldığında da görece daha az mineral yoğun malları içeren hizmetlere doğru kayma gösterecektir. Böylece sanayileşme açısından önemli olan bir materyalin kullanımı, toplam çıktıya göre önce

artıp sonra azalmaktadır. İkinci argümanı, üretimdeki teknik etkinlikten kaynaklanmaktadır. Emek verimliliğinde veya toplam faktör verimliliğindeki artış veri birim girdi başına daha fazla üretim olarak ortaya çıkmaktadır. Böylece, belirli bir kalkınma aşamasına ulaşılmasından sonra, kullanım yoğunluğu azalmaktadır. Kullanım yoğunluğu eğrisinin sergilediği eğilimi açıklayıcı üçüncü argümanı ise girdiler arası ikameye dayandırılmaktadır. Buna göre, arz ve talep koşulları, teknolojik değişmeler ve göreli girdi fiyatları girdilerin ikame edilebilirliğini arttırmaktadır. Kullanım yoğunluğu açısından, teori, yeni daha ucuz ve kaliteli girdilerin ikame özelliğini arttırması bağlamında kullanım yoğunluğunun düşmesine neden olacağını öngörmektedir (Roberts, 1985).

**Şekil 1**. *Metal Kullanım Yoğunluğu Eğrisi*

Türkiye açısından çelik kullanım yoğunluğu eğrisi aşağıda *Şekil 2*'de verilmiştir. Buna göre kişi başı GSYİH ile Çelik Kullanım Yoğunluğu arasında doğrusal bir ilişkinin devam ettiğini, diğer bir ifade ile kalkınmışlık düzeyi açısından Türkiye ekonomisinin kalkınmakta olan ekonomi görünümünü devam ettirdiğini söyleyebiliriz.

**Şekil 2**. *Türkiye'nin Çelik Kullanım Yoğunluğu Eğrisi*

## 3  Literatür Özeti

Crompton (1999), Güney Doğu Asya ülkeleri verilerini kullanarak çelik tüketiminin 2005 yılı için tahminini yapmayı amaçlamıştır. Vektor Oteregrasyon Analizi (VAR) modelinin kullanıldığı çalışmada tahminler hem yüksek hem de düşük GSYİH büyümesi (ekonomik büyüme) senaryoları altında gerçekleştirilmiştir. Sonuçlar 1980'lerin ortalarından itibaren gözlenen çelik tüketimindeki güçlü büyümenin 2005 yılına kadar devam etmesi gereğini göstermiştir. Crompton (2000), kullanım yoğunluğu hipotezini Japonya'da son dönemde gözlenen ham çelik tüketimindeki düşüşün nedenlerini ortaya koyabilmek ve bu bulgular eşliğinde 2005 yılı tüketimi için tahminlerde bulunmayı amaçlamıştır. Endüstri bazında çelik tüketimini çıktı birimi başına kullanılan ortalama çelik miktarı, GSYİH'ya göre göreli endüstri çıktısı ve GSYİH olarak ayrıştırmıştır. Her endüstri için bu belirleyicilerin tahmini daha sonra endüstri ve toplam çelik tüketiminin tahminde bulunmak üzere kullanılmıştır. Analizlerde bu şekilde ayrıştırmaya gidilmesinin rasyoneli her endüstri için ham çelik tüketimi belirleyicilerinin ayrı ayrı sınanması amacı olduğu belirtilmiştir. Ayrıca, böyle bir ayrıştırma ile çelik tüketimindeki son dönem azalışların kaynaklandığı sektörlerin ortaya koyulabilmesi de mümkündür. Sonuçlar, Japonya'da çelik tüketiminin azalışında düşük GSYİH büyümesi ve yurtiçi üretimin çelik yoğunluğundaki sürekli azalışların ortak etkisine işaret etmiştir.

Abbott, vd, (1999), İngiltere ekonomisi için çelik talebinin tahminine katkıda bulunmak amacıyla bir çelik talebi modeli geliştirmeye çalışmıştır. Yazarlar, Evans (1996)'nın modelini çeliğin tamamlayıcı bir ürün olduğu varsayımıyla ve talebinin motorlu araçlar ve inşaat endüstrilerinin çıktılarına da bağlı olduğunu kabul ederek genişletmişlerdir. Johansen (1988) sınama sonuçları değişkenler arasında uzun dönemli ilişkinin varlığını göstermiştir. Bu bağlamda, çalışmada bu tahmin modelinin üreticiler tarafından kapasite kullanımı ve yatırım kararları için kullanılabileceği önerilmiştir.

Guzman, vd, (2005), Japonya'da bakır kullanım yoğunluğundaki düşüşlerin nedenlerini ortaya koymak üzere, 1960-2000 döneminde bakır kullanım yoğunluğu eğrisini (eğrideki zaman içerisindeki kaymaları da dikkate alarak) tahmin etmiştir. Tahmin sonuçları, kişi başı gelir düzeyindeki artışların incelenen dönemde Japonya'da bakır kullanım yoğunluğunu arttırdığını ortaya koymuştur.

Ghosh (2006), 1951/1952-2003/2004 dönemi verileriyle Hindistan için çelik tüketimi ile ekonomik büyüme arasındaki eşbütünleşme ve nedensellik ilişkisini iki değişkenli VAR kapsamında sınamıştır. Durağan olmadıkları tespit edilen seriler arasında eşbütünleşme ilişkisi bulunamamıştır. Nedensellik analizi sonuçları ise ekonomik büyümeden çelik tüketimine doğru tek yönlü nedenselliğin varlığını ortaya koymuştur. Böylece çalışmada gelirdeki büyüme daha yüksek düzeyde çelik tüketiminin nedenseli olarak gösterilmiştir.

Rebiasz (2006), çelik tüketimindeki değişimleri 1974-2003 döneminde Polonya ekonomisi için sınamıştır. Seçilmiş sektörler için çelik kullanım yoğunluğu ve ilgili sektör üretiminin toplam GSYİH içerisindeki payını gösterebilmek üzere oluşturulan regresyon denklemleri tahmin edilmiştir. Çalışma Polonya'da tahmin edilen ekonomik büyümenin çelik kullanım yoğunluğunda makul-ılımlı bir düşüşe neden olacağı bulgusuna ulaşılmıştır.

Evans (2011), 1953-2010 döneminde İngiltere için çelik tüketimi ile ekonomik büyüme arasındaki ilişkiyi incelemiştir. Önceki çalışmalarda denge ilişkisinde yapısal kırılma/kırılmaların dikkate alınmadığına işaret eden yazar, ARFIMA (kendiyle bağlaşımlı kesirli bütünleşik hareketli ortalama) yaklaşımına dayalı olarak çelik talebinin modellenmesinin güvenilirliliğine ve etkinliğine vurgu yapmıştır. Analiz sonucunda, çelik tüketimi ile reel milli gelirin kesirli eşbütünleşik olduğu ve denge hatalarının durağan olmadığı ancak ortalamaya dönüş sergilediği tespit edilmiştir. Bu nedenle İngiltere'deki çelik tüketiminin ekonomik büyüme ile olan ilişkisinde denge patikasına geri döneceği bulgusuna ulaşılmıştır.

Huh (2011), VAR ve Vektör hata düzeltme modeli (VECM) aracılığıyla çelik tüketimi ve çelik tüketen sektör çıktıları arasındaki kısa ve uzun dönemli nedensellik ilişkilerini Kore ekonomisi için 1975-2008 döneminde analiz etmiştir. Sonuçlar çelik tüketimi ile GSYİH arasında GSYİH'dan toplam çelik tüketimine doğru uzun dönemli bir ilişkiyi ortaya koymuştur. Yassı ürünler tüketimi ile çelik tüketen sektörler arasındaki nedensellik sonuçlarına göre ise çelik tüketimi ve ekonomik büyüme arasında uzun dönem denge ilişkisi tespit edilmiştir. Değişkenler arasındaki nedenselliğin yönü konusunda ise çalışmada, yassı ürünler tüketiminin otomobil çıktısının; gemi sanayi çıktısının yassı ürünler tüketiminin; yassı ürünler tüketiminin işlenmiş metal ürünleri çıktısının nedenseli oldukları bulgularına ulaşılmıştır.

Dobrotă ve Căruntu (2013), ham çelik üretimi ile ekonomik büyüme arasındaki ilişkiyi Çin, Japonya, Ukrayna, Rusya, ABD ve Kore ekonomileri için 1991-2011 dönemi verileriyle incelemiştir. Çalışmada, pozitif bir ekonomik büyümeye çelik üretimindeki büyümenin eşlik ettiği bulgusuna ulaşılmıştır.

Jaunky (2013), bakır tüketimi ile ekonomik büyüme arasındaki ilişkiyi 16 gelişmiş ülke için 1966-2010 dönemi verileriyle, panel veri yöntemleri aracılığıyla araştırmıştır. Panel birim kök ve eşbütünleşme sınamaları sonucunda değişkenlerin birinci dereceden bütünleşik seriler oldukları ve aralarında eşbütünleşme ilişkisi bulunduğu gösterilmiştir. VECM çerçevesinde nedenselliğin incelenmesi sonucunda Finlandiya, Fransa ve İngiltere için uzun dönemde ekonomik büyümeden bakır tüketiminde doğru tek yönlü bir nedensellik tespit edilmiştir. İspanya için ise bakır tüketiminden ekonomik büyümeye doğru tek yönlü bir nedensellik ilişkisi tespit edilmiştir. Panel nedensellik sınaması ise ekonomik büyümeden bakır tüketimine doğru tek yönlü uzun dönem nedensellik ilişkisinin varlığını göstermiştir.

Wårrel (2014), kullanım yoğunluğu hipotezini 61 ülke için 1970-2011 döneminde test etmiştir. Kulanım yoğunluğu hipotezinin tüm panel için geçerli olmadığını ancak panelin düşük, orta ve yüksek gelir grubu ülkeler olarak sınıflandırılıp tahmin edilmesi durumunda hipotezin orta gelir grubu için geçerli olduğunu ortaya koymuştur. Bu bulgular orta gelir grubundaki ülkelerin belirli bir sanayileşme evresinden daha çok hizmetlere dayalı bir ekonomiye geçişlerinin bir göstergesi olarak yorumlanmıştır.

## 4 Veri Seti ve Ekonometrik Yöntem

Bu çalışmada açıklanan teorik model çerçevesinde, Türkiye ekonomisi için metal (çelik) kullanım yoğunluğu hipotezi incelenmektedir. Ekonometrik model hipoteze uygun olarak, Evans (2011) takip edilerek aşağıdaki şekilde tanımlanmaktadır.

$$steelcon_t = \alpha + \beta\, gdp_t + \varepsilon_t \tag{3}$$

Modeldeki değişkenlerden *steelcon* çelik tüketimini; *gdp* Türkiye'nin gayri safi yurt içi hasılasını (1998 fiyatlarıyla) ifade etmektedir. Tüm veriler 1955-2012 dönemine ait yıllık veriler olup Türkiye'nin reel GSYİH verisi Kalkınma Bakanlığı'ndan çelik tüketim verileri ise Kalkınma Bakanlığı ve Türkiye Çelik Üreticileri Derneği'nden alınmıştır. Tüm değişkenlerin doğal logaritması alınarak kullanılmıştır.

Zaman serileri yöntemine uygun olarak ilk aşamada serilerin durağanlığını sınamak için Genelleştirilmiş Dickey-Fuller (1981) (*ADF*) ve Kwiatkowski-Phillips-Schmidt-Shin (1992) (*KPSS*) birim kök testleri

kullanılmaktadır. Değişkenler arasındaki uzun dönemli ilişki ise Engle-Granger (1987) eşbütünleşme yöntemi ve yapısal kırılmaları dikkate alan Gregory-Hansen (1996a, b) (G-H) eşbütünleşme yöntemleri kullanılarak incelenmiştir. G-H yapısal kırılmanın varlığında standart (geleneksel) eşbütünleşme testlerinin değişkenler arasında uzun dönemli ilişkinin araştırılmasında yetersiz kalacağını belirtip, yapısal kırılma altında uzun dönemli ilişkiyi belirlemek için dört model geliştirmiştir. Boş hipotez uzun dönemli ilişkinin olmadığını belirtirken alternatif hipotez ise yapısal kırılma altında uzun dönemli ilişkinin var olduğunu belirtir. Geliştirilen modellerde birinci model düzeyde kırılmayı, ikinci model ise trend varken düzeyde kırılma ile uzun dönemli ilişkiyi test etmektedir. Üçüncü model rejim değişikliği modelidir. Dördüncü model ise hem rejim değişikliğini hem de trendde kırılma varken değişkenler arasında eşbütünleşme ilişkisini sınamaktadır. Bu modellerde yapısal kırılma zamanı ise içsel olarak belirlenmektedir.

Yapısal kırılmaların modele dahil edilmesini sağlayan kukla değişkenler şu şekilde tanımlanır;

$$\varphi_{t\tau} = \begin{cases} 0 \,, eger \ t \leq [T\,\tau], \\ 1 \,, eger \ t > [T\,\tau]. \end{cases}$$

Burada $T$ gözlem sayısını, $\tau$ en yakın tamsayıyı belirtirken 0 ile 1 arasında değer alıp, $[T\,\tau]$ kırılmanın gerçekleştiği gözlemi göstermektedir. Gregory–Hansen (1996a, b) tarafından geliştirilen dört model aşağıdaki gibidir

Düzeyde Kırılma (C)

$$y_{1t} = \mu_1 + \mu_2\varphi_{t\tau} + \alpha^T y_{2t} + \varepsilon_t, \qquad\qquad t=1,......T. \qquad\qquad (4)$$

Kırılmadan önce sabit terim $\mu_1$, kırılmanın sabit terimde yaptığı değişim ise $\mu_2$ ile gösterilmektedir. $\alpha^T$ ise bağımsız değişkenlerin katsayılarını ifade etmektedir.

Trendli Düzeyde Kırılma (C/T)

$$y_{1t} = \mu_1 + \mu_2\varphi_{t\tau} + \beta t + \alpha^T y_{2t} + \varepsilon_t, \qquad\qquad t = 1,......T. \qquad\qquad (5)$$

Bu model sabitte kırılma modelinden farklı olarak trendin varlığında sabit terimdeki kırılmayı dikkate almaktır.

Rejim Değişikliği (C/S):

$$y_{1t} = \mu_1 + \mu_2\varphi_{t\tau} + \alpha_1^T y_{2t} + \alpha_2^T y_2\varphi_{t\tau} + \varepsilon_t, \qquad\qquad t=1,......T. \qquad\qquad (6)$$

Rejim değişikliği modelinde $\mu_1$ ve $\mu_2$ sabitte kırılma modeli ile aynıdır. $\alpha_1^T$ rejim değişikliğinden önceki eğim katsayılarını ve $\alpha_2^T$ ise kırılma döneminden sonraki eğim katsayılarındaki değişimi göstermektedir. Kırılma döneminin belirlenmesiyle parametrelerde ne yönde bir değişim olduğu ve rejim kaymasının olup olmadığı bu model ile ortaya konulmaktadır.

Rejim Değişikliği ve Trendde Kırılma (C/T/S)

$$y_{1t} = \mu_1 + \mu_2\varphi_{t\tau} + \beta_1 t + \beta_2 t\varphi_{t\tau} + \alpha_1^T y_{2t} + \alpha_2^T y_2\varphi_{t\tau} + \varepsilon_t, \qquad t=1,......T. \qquad (7)$$

Sabit terim, rejim değişikliğinden önceki eğim katsayıları ve trend katsayısı sırasıyla $\mu_1$, $\alpha_1^T$, $\beta_1$ ile ifade etmektedir. $\mu_2$, $\alpha_2^T$ ve $\beta_2$ ise kırılmadan sonraki ilgili değişimleri göstermektedir. İncelenen dönem içerisindeki kırılma zamanı, örneklemin başından ve sonundan belirli bir yüzde ( örnek olarak %15) atılarak her bir nokta için tahmin edilen $Z_t$, $Z_\alpha$ ve $ADF$ istatistik değerlerinin minimum olduğu nokta olarak belirlenir (Gregory-Hansen,1996:104-106).

Gregory-Hansen eşbütünleşme testinde $Z_t$, $Z_\alpha$ ve $ADF$ aşağıdaki gibi tanımlanmaktadır;

$$Z_t^* = \min_{\tau \in T} Z_t(\tau),$$

$$Z_\alpha^* = \min_{\tau \in T} Z_\alpha(\tau),$$

$$ADF^* = \min_{\tau \in T} ADF(\tau).$$

## 5  Analiz Sonuçları

### 5.1  Birim Kök Analiz Sonuçları

Analizlerde kullanılan serilerin durağan olup olmadıklarını saptamak için uygulanan $ADF$ ve $KPSS$ birim kök testlerinin sonuçları *Tablo 1*'de verilmektedir. Her iki test sonucuna göre çelik tüketimi ve reel gelir serilerinin birim kök içerdiği, bütün serilerin birinci farklarının ise durağan olduğu sonucuna ulaşılmaktadır.

| Değişkenler | | ADF Model A | | Model B | | KPSS | |
|---|---|---|---|---|---|---|---|
| | k | $t_{(\gamma)}$ | k | $t_{(\gamma)}$ | | $\eta_\mu$ | $\eta_\tau$ |
| steelcon | 1 | -2.17 | 1 | -0.95 | | 0.91** | 0.22** |
| gdp | 0 | -2.56 | 0 | -0.97 | | 0.93** | 0.20* |
| dsteelcon | 0 | -9.85** | 0 | -9.91** | | 0.10 | 0.08 |
| dgdp | 0 | -7.73** | 0 | -7.70** | | 0.13 | 0.05 |
| Kririk (**) | 1% | -4.06 | | -3.50 | | 0.74 | 0.21 |
| Değerler (*) | 5% | -3.46 | | -2.89 | | 0.46 | 0.14 |
| (#) | 10% | -3.15 | | -2.58 | | 0.34 | 0.11 |

Model A sabit ve trendli, Model B: sabitli modeli göstermektedir. *k* gecikme sayısını göstermekte ve gecikmeler *ADF* için *AIC*'e göre belirlenmektedir.

*Tablo 1. ADF ve KPSS Birim Kök Testleri*

### 5.2 Engle-Granger ve Gregory-Hansen Eşbütünleşme Testinin Sonuçları

(3) no'lu eşitlik Engle-Granger eşbütünleşme yöntemiyle tahmin edilmiş sonuçlar *Tablo 2*'de verilmiştir. Eşbütünleşme testi için hata terimlerinin durağanlığı sabitsiz ve trendsiz model üzerinden yapılmıştır. Eşbütünleşme sonucuna göre değişkenler arasında uzun dönemli ilişkinin olmadığını ifade eden boş hipotez reddedilememiştir.

Kırılma noktası parantez içinde gösterilmiştir. *k* gecikme sayısıdır ve gecikmeler 8'den azalarak anlamlılığı % 5 önem düzeyinde *t* testine göre belirlenmiştir.

*Tablo 3. Gregory-Hansen Eşbütünleşme Sonuçları*

Yapısal kırılmayı dikkate alarak uzun dönemli ilişkinin varlığını sınayan G-H testinin sonuçları *Tablo 3*'te sunulmaktadır. Buna göre, Türkiye ekonomisi için metal (çelik) kullanım yoğunluğu hipotezinin test edildiği düzeyde kırılma, trendli düzeyde kırılma ve rejim değişikliği modelleri için *ADF* ve $Z_t$ test istatistiğine göre %1 anlamlılık düzeyinde dahi eşbütünleşme ilişkisinin olmadığı yoluk hipotezi reddedilmiştir. $Z_\alpha$ test istatistiğine göre ise her üç model için %5 anlamlık düzeyinde değişkenler arasında uzun dönemli ilişkinin varlığı kabul edilmektedir. Rejim değişikliği ve trendde kırılma modeline göre ise *ADF* ve $Z_t$ test istatistiğine göre uzun dönemli ilişkinin varlığı kabul edilirken $Z_\alpha$ test istatistiğine göre uzun dönemli ilişki bulunamamıştır. Buna göre, *ADF* test istatistiğince belirlenen kırılma dönemleri düzeyde kırılma modelinde (C) 1966, trendli düzeyde kırılma (C/T) ve rejim değişikliği ve trendde kırılma (C/T/S) modellerinde 1988 ve rejim değişikliği modelinde (C/S) ise 1977 dönemleridir. İçsel olarak belirlenen kırılma dönemleri demir-çelik sektöründe gözlenen

gelişmelere bakıldığında oldukça anlamlıdır. 1965 yılında Ereğli Demir Çelik fabrikası açılmış olması ve onu takip eden dönemde kırılmanın bulunması önemlidir. Ayrıca 1977 yılında İskenderun Demir Çelik fabrikasının kurulması sektördeki önemli bir gelişme olurken, 1988 yılı ise dünyada yaşanan çelik krizi ile yakından ilişkilidir.

| Düzeyde Kırılma | $steelcon = -12.34 + 0.36dum + 1.57gdp$ <br> (-23.51)    (6.07)        (48.80) |

**Şekil 3.** *Düzeyde Kırılma Tahmin Grafiği*

steelcon= -37.96 - 0.21dum - 0.05trend+ 3.16gdp
**Şekil 4.** *Trendli Düzeyde Kırılma Tahmin Grafiği*

G-H eşbütünleşme sınamasında C, C/T, C/S ve C/T/S için uzun dönemli ilişkinin varlığını gösteren kanıtlara ulaşıldıktan sonra modeller *ADF* test istatistiğine göre belirlenen kırılma dönemleri göz önüne alınarak Sıradan En Küçük Kareler (EKK) yöntemi ile tahmin edilmiştir. Tahmin sonuçları *Tablo 4*'de yer almakta ve tahmin edilen modellere ilişkin grafikler ise *Şekil 3*, *4*, *5* ve *6*'de gösterilmektedir. C modelinde kırılma dönemini ifade eden kukla ve gelirin katsayısı istatistiksel olarak anlamlıdır. C/T modelinde ise kırılma dönemi, trend ve gelirin

katsayıları anlamlıdır. Trendin katsayısının negatif olması metal kullanım eğrisinin tersine dönmesine ilişkin öncü olarak değerlendirilebilir. C/S modelinde gelirin katsayısı hem rejim değişikliğinden önce hem de sonrasında anlamlı bulunmuş ancak rejim değişikliğinden sonra gelirin katsayısı düşüş göstermiştir. Bu değişim de kullanım yoğunluğu hipotezi bağlamında, kişi başına reel gelir artmasına bağlı olarak, gelir esnekliğinin oldukça düştüğünü ve Türkiye ekonomisinin kalkınma evreleri açısından yeni bir patikaya girmesi yönünde öncü gösterge olarak değerlendirilebilir. C/T/S modelinde ise kukla değişken ve rejim değişikliği öncesi trendin katsayısı (%5 anlamlılık düzeyinde) istatistiksel olarak anlamsızdır. Trendin katsayısı rejim değişikliği sonrası anlamlı ve negatifken, gelirin katsayısı rejim değişikliği öncesi ve sonrasında anlamlı ve pozitiftir. C, C/T, C/S ve C/T/S modellerine ait grafiklere bakıldığında (*Şekil 3*, *4*, *5* ve *6*) tahmin edilen modelin gerçeğe ne kadar yakın olduğu açıkça görülmektedir.

## 6  Sonuç

Bu çalışmada, zaman serisi metotları kullanarak, Türkiye ekonomisi için metal (çelik) kullanım yoğunluğu hipotezi 1955-2012 dönemini kapsayan veri seti ile incelenmiştir. Çalışmada öncelikle analize konu serilerin durağanlıkları birim kök testleri aracılığıyla araştırılmıştır. Sonuçlar serilerin düzey değerlerinde durağan olmadıklarını ancak birinci farklarında durağan hale geldiklerini göstermiştir. Bu bulgular ışığında seriler arasında eşbütünleşme ilişkisinin olup olmadığı ilk olarak geleneksel Engle-Granger (1987) eşbütünleşme yöntemine göre sınanmış, ancak ilişkinin varlığına yönelik sonuca ulaşılamamıştır. Daha sonra uzun dönemli ilişkinin araştırılmasında yapısal kırılmayı dikkate alan Gregory-Hansen (1996a, b) test sonucu ise yapısal kırılma altında değişkenler arasında uzun dönem denge ilişkisinin varlığını göstermiştir. Analizde kullanılan veri seti ve ekonometrik yöntemlere dayalı olarak, gelir ve çelik tüketimi arasında uzun dönemli bir ilişkinin

olduğuna yönelik güçlü bulgulara ulaşılmıştır. Türkiye ekonomisinin kalkınma evreleri açısından bakıldığında, uygulanan yapısal kırılma modelleri anlamlı işaretler vermektedir. Özellikle C/S modelinde birinci rejimde gelir esnekliği katsayısı 2.08 iken ikinci rejimde 1.51'e düşmüş olması kullanım yoğunlu hipotezi açısından hipotezi destekleyen önemli bir ipucu olarak değerlendirilmektedir. Bütün olarak sonuçlar bize, bu hipotez bağlamında, Türkiye ekonomisinin orta gelir tuzağında, kalkınmakta olan bir ülke görünümünde olduğu konusunda da ipuçları vermektedir.

# Konya Ayakkabıcılık Kümelenmesinin Rekabetçilik Analizi

# Competitiveness Analysis of the Konya Footwear Cluster

Asst. Prof. Dr. Mustafa Atilla Arıcıoğlu (Necmettin Erbakan University, Turkey)

Muhittin Koraş (Konya Clustering Association, Turkey)

Ph. D. Candidate Mustafa Gömleksiz (Necmettin Erbakan University, Turkey)

## Abstract

Since the beginning of 1980's advancements in studies on competitiveness and clustering in global scale have also affected the manufacturing sector in Turkey at the beginning of 2000's. In several debates, it has been strongly emphasized that measurement of both competitiveness and clustering in regional level is a necessity for analyze and implementation processes. This study aims to investigate clustering tendency of footwear manufacturers and to analyze competition power of firms in Konya province in Turkey. For this purpose, footwear industry in the province is analyzed by Porter's Diamond Model. In addition to Porter's Model, effect of government factor was included in the analysis. Furthermore, a SWOT analyze was performed through workshops with manufacturers. In regard to competitiveness analysis of footwear industry in Konya, it is shown that the industry has an intermediate competition power. According to analysis, physical conditions of the industry is favorable in context of factor requirements, while lack of human resources is seen as a serious problem in labor-intensive sectors. Also, knowledge spillovers depending upon density and availability in conventional relationships are regarded as an important advantage.

## 1 Giriş

Sosyal, ekonomik ve politik alanları yeniden şekillendiren küreselleşme, ekonomik inanç ve paradigmaları değiştirerek dünyanın dönüşümüne gerekçe oluşturmaktadır. 1980 yılların sonundan Porter, rekabet üstünlükleri üzerine yaptığı çalışmalarda Marshall'dan bu yana süregelen tartışmalara yeni bir yön vererek, kümelenme kavramını rekabetçilik için önemli bir araç olarak ileri sürmüştür. Küme teorisi üzerine son 30 yıldan bu yana hem akademik hem de uygulamadaki çalışmalar giderek artan oranda gelişmiş ve gelişmekte olan ülkelerin yanı sıra bölgelerin rekabet gücü içinde bilgi sunmaya devam etmektedir. Özellikle Avrupa Birliğinin bölgesel kalkınma politikaları için önemli bir araç olan kümelenme diğer taraftan firma rekabetçiliği ve sektör yetkinliğinin anlaşılması ve ölçülmesi için de yaygın olarak kullanılmaktadır. Türkiye'deki örneklerde akademik ve kamu çalışmaları ilk adımda öne çıkmış daha sonra birkaç iyi uygulama ve başarılı proje yürütülmesi ile kullanılmaya başlanmıştır. Ancak kısa bir süre içerisinde ortaya çıkan yaygınlık aynı zamanda araç ve amaç niteliğinin karıştırılmasına neden olmuşsa da süreç içiresinde olumlu gelişmeler öngörülmektedir.

## 2 Rekabetin Değişimi ya da İşbirliği Örneği Olarak Kümelenme

Rekabet ve işbirliği üzerine yürütülen literatür çalışmaları firmalar, bölgeler, sektörler ve ülkeler açısından rekabet düzeyini mikro, mezzo ve makro düzeyde ele alarak açıklamaya çalışmaktadır. Bunun en önemli gerekçesi, rekabetin anlaşılmasında ve yönetilmesinde işletmelerin kendi başlarına hareket etme yönünde inisiyatif kullanmaları ve işletmelerin fiziksel kaynaklar ile varlıklara sahip olmanın ötesinde hayatlarını sürdürmelerini sağlayan rakipleri ve paydaşlarıyla işbirliği sürecini yönetmek zorunda olmalarıdır (Raco, 1999: 951-968). Diğer bir deyişle, firmaların birbirleriyle rekabet ederken işbirliğini ne oranda öğrendikleri onların sürdürülebilir bir başarısı için sahip oldukları bir diğer başarı ölçütüdür. Çünkü bu durum işletmelerin temel yetkinlik, teknolojik gelişim, ürün yönetimi ve bilgi paylaşımı konusundaki becerilerini gösterir (Garcia ve Velasco, 2002: 8-10; Avrupa Komisyonu, 2000: 22-24). Rekabetin yapısal anlamda giderek farklılaşması ve yeni araçların kullanım biçimlerinin de bu farklılığı oluşturacak yeni argümanlara ihtiyaç duyması sektör ve sektör deki özellikle KOBİ'ler açısından dikkate alınması gereken önerilerdir. Çeşitli yöntem ve araçlar kullanılarak öğrenilmeye çalışılan rekabet ve işbirliği kavramları, farklı bakış açılarına rağmen ortak bir hareket alanı ya da ortak bir çıktı değeri olarak kümelenme kavramında kesişmektedirler. Bu da kümelenmenin özellikle 1990'ların başından beri yaygın bir kullanım alanına sahip olmasını sağlamaktadır (Çivi, 2001,21-38,Kostov ve Lingard, 2004: 12; Grootaert ve Bastelaer, 2002:6; Beddig ve Clarisse, 2008: 24-28). Kümelenme de özellikle son 30 yıl içerisinde öne çıkan önemli argümanların başında gelmektedir. Kümelenme ile hem işbirliği gücünü he de sektörel rekabet düzeyi öğrenme imkânı bulunmaktadır. Porter (2000: 15)'a göre kümelenme için ilk olarak birbirleriyle bağlantılı şirketler, özel tedarikçiler, hizmet sağlayıcılar, ilgili sektörlerde firmalar ve ilgili kurumların coğrafi yoğunlukları çerçevesinde ve belirli bir alanda birbirleriyle rekabet ve işbirliği yapmaları gerekmektedir. Bu ilişki düzeyleri, yatay (tedarikçi ve sağlayıcı) veya dikey (ilgili sanayi ve ilgili kurumlar) biçimde karşımıza çıkmaktadır. İkinci olarak ele alınan bölgedeki firmaların rakip firmalarla işbirliği yapabilmesi gerekir. Üçüncü olarak da, firmaların belirli bir alanda (özel pazar veya endüstri) yoğunlaşmış olmalıdır. Gerek rekabet gerekse kümelenme süreci ile ilgili Porter (1996: 26-29, 1998: 80, 2000: 15-34)

tarafından yapılan çalışmalarda özellikle rekabet avantajının sağlanması ve üstünlük için önerilen stratejik araç olarak kümenin, farkındalık yaratmak ve maliyet odaklılık için önemli bir araç olduğu görülmektedir. Bu bağlamda Porter tarafından geliştirilen ve kullanılan Elmas Modeli, mikro, mezzo ve makro düzeydeki rekabet analizleri için öncelikli ve açıklayıcı bir araç olarak kullanılmaktadır (Çivi, 2001).

## 3   Konya Ayakkabıcılık Sektörünün Rekabetçilik Analizi

Konya Ayakkabı üreticileri, Türkiye'deki erkek ayakkabı pazarında %20'lik paya sahiptir. Aykent Ayakkabıcılar Sanayi Sitesindeki firmalardan farklı ölçekteki 400 civarındaki firma üretici olup, diğerleri malzeme, yarı mamul ve mamul ürün satıcısıdır (Konya Sanayi Odası, 2011: 22). Yaklaşık 2 yıl önce bir proje kapsamında kümelenme çalışmasına başlayan Konya Ayakkabı Kümesi firmaları çalışma sonunda ulaşmak istedikleri hedef ve yöntem konusunda belirsizlik yaşamışlardır. Ortak marka, tedarik, eğitim gibi konularda çalışma başlatan ayakkabı kümesinin süreci konusunda da belirsizlik görülmektedir (Konya Ayakkabıcılar Odası, 2012; Shoecoll, 2011).

### 3.1 Amaç ve Yöntem

Çalışmanın amacı, Konya Ayakkabıcılık Sektörünün Rekabet gücünü ölçerek, geliştirilecek yol haritası için sektörün yapısını ortaya koyabilmektir. Bu amaçla analiz için Porter tarafından geliştirilmiş olan Elmas Modeli kullanılmıştır. Konya sanayisinde faaliyet gösteren ayakkabı üreten işletmeleri işbirliği ve rekabetçi avantaj sağlama amacı ile 2012 yılında yürütülen proje ile kümelenme çalışmalarını başlatmıştır. Ayakkabıcılık sektörünün rekabet gücü ve kümelenme yapısını analiz etmek olup, çalışmanın adımları üç boyuttan oluşmakta olup, bunlar: a- Ayakkabı kümesinin stratejisini belirlemek amacı ile SWOT analizini yapmak, b- Konya Ayakkabı Kümesine İlişkin Stratejik Başarı Faktörleri ve Değer Zincirini ortaya çıkarmak ve c- Konya Ayakkabı Kümesinin rekabet gücünü belirmek adına Porter rekabet analizi yaparak, rekabet için kümelenme eğiliminin ne olduğunu ortaya koymaktır. Amacı gerçekleştirmek adına Ayakkabı Kümesi toplantıları çerçevesinde üreticiler, tedarikçiler, paydaşlar ve ilgili STK yöneticileri/temsilcileri katılmışlardır. Çalışmada sektörün analizi ve yapısal çözümlemesi için ikincil veriler de kullanılmıştır. Firmaların yapısal durumlarının analizi, misyon ve vizyonun belirlenmesi bu kapsamda ele alınmıştır. Çalışmada açık uçlu mülakat soruları kullanılarak birebir görüşmeler ve workshop tekniğinden yararlanılmıştır. Bu amaçla farklı ölçeklerdeki sektör temsilcileri, tedarikçiler ve diğer paydaşlar ile yapılan görüşmeler sonucunda (her bir çalışma katılımcı sayısı 15-60 civarında değişmekte olup, 6 farklı çalışma yapılmıştır) sektöre ilişkin misyon, vizyon, anahtar başarı faktörleri, değer zinciri çalışmaları yürütülmüş ve nihayetinde rekabet süreci ile ilgili toplanan veriler analiz edilmiştir. Porter elmas Modeli analizinde incelenen her bir unsur alt başlıklar çerçevesinde üç farklı ölçekte değerlendirilmiştir. Veri analizi sonucunda yüksek (+), orta (/) ve düşük (-) seviyelerin her biri faktör değerlendirilmesinde: Örneğin; yerel rekabet yüksek (+) ya da küresel rekabet (-) düşük olarak kullanılmıştır. Elde edilen sonuçlar, modeli gösteren görsel çalışma üzerinde gösterilmiştir.

### 3.2 Konya Ayakkabıcılık Sektörü ve Aykent Ayakkabı Sanayi Bölgesi

Konya'da ayakkabı üretimi geleneksel bir üretim alanı olarak varlığına başlamış ve özellikle 1900'lü yıllardan itibaren belirgin bir biçimde örgütlenme sürecine girmiştir. İlk olarak 1930'larda resmi nitelikli bir çalışma süreci başlatılmış ve 1955'de ise bir çatı örgüt kurarak dernekleşmeyi gerçekleştirmişlerdir. Konya'nın çeşitli bölgelerinde faaliyet gösteren ayakkabıcılık ile ilgili faaliyet gösteren firmalar 2003 yılında birlikteliklerini fiziksel mekâna taşıyarak AYKENT Ayakkabıcılar Sanayi Sitesinde toplanmışlardır. Söz konusu firmaların toplam 80 Milyon Çift/Yıl üretim kapasitesi bulunmakla birlikte, %45 kapasite (36 Milyon Çift/Yıl) ile çalışmaktadırlar. Sektörde 15.000 civarında çalışan bulunmaktadır (Konya Ayakkabıcılar Derneği, 2011; Konya Ayakkabıcılar Odası, 2012).

Sektörün gelişmesi için eğitime ciddi yatırım yaparken bu süreçte proje temelli çalışmalarının yanı sıra kamu ve üniversite ile ortaklaşa çalışmalar yürüterek, eğitim faaliyetlerinin kurumsal bir yapıya bürünmesi yönünde önemli adımlar atmışlardır. 2002-2003 eğitim ve öğretim sezonunda Konya Meram Atatürk Kız Teknik ve Anadolu Kız Meslek Lisesi bünyesinde Ayakkabı ve Saraciye Teknolojisi Bölümünün, ayrıca ayakkabıcılık meslek dalının üniversite seviyesinde bir eğitiminin olması için yapılan çalışmalar sonucunda Selçuk Üniversitesi Teknik Bilimler Yüksek Okulu Bünyesinde Ayakkabıcılık Bölümü açılması hususunda YÖK'ten onay alınmış ve 2006-2007 Eğitim ve Öğretim sezonunda 30 kişilik kontenjan ayrılarak eğitim ve öğretime başlanılmıştır. Selçuk Üniversitesi Teknik Bilimler Meslek Yüksek Okulu bünyesinde Ayakkabı Tasarım ve Üretim Programı ile sektörün eleman ihtiyacı giderilmeye çalışılırken, bölüm bazındaki işbirliği ile sektörün dinamikleri harekete geçirilmeye çalışılmaktadır. Eğitim alanı ile ilgili oldukça önemli bir diğer gelişme ise Konya Büyükşehir Belediyesi, MEB ve Konya Ayakkabıcılar Odası arasındaki protokolle hayata geçirilen Ayakkabıcılık Mesleki Eğitim Merkezi'dir (Konya Sanayi Odası, 2011: 25; Konya Ayakkabıcılar Derneği, 2011; Konya Ayakkabıcılar Odası, 2012).

### 3.3 Konya Ayakkabı Kümesinin Elmas Modeli ile Rekabet Analizi

Konya Ayakkabıcılık sektörünün SWOT Analizine yönelik gerçekleştirilen çalışma üç oturumdan oluşmuştur. İlk oturumda sektör temsilcileri, ikinci oturumda tedarikçiler ve müşteriler, üçüncü oturumda ise paydaşlar;

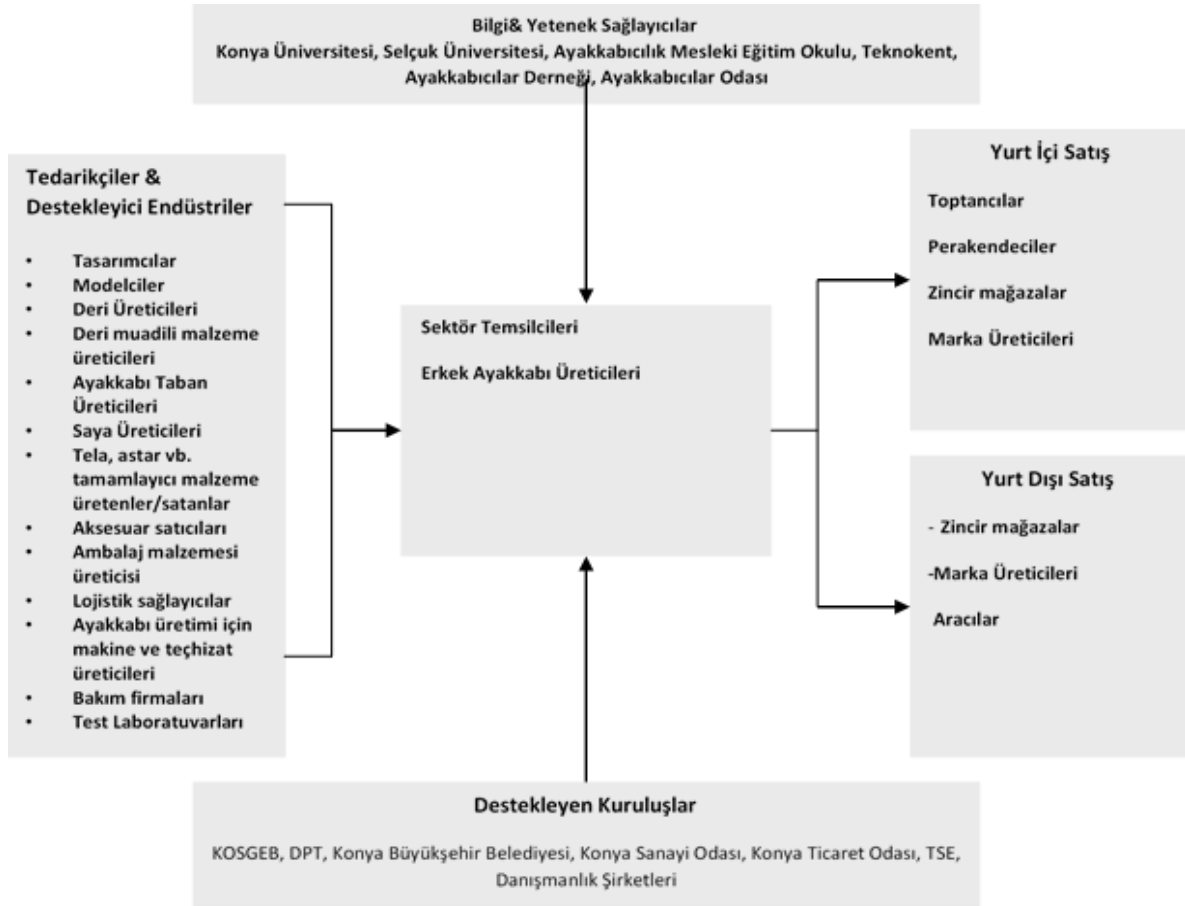
STK'lar, üniversiteler ve sektöre ait danışmanlık hizmeti veren firma temsilcileri yer almıştır (İlgili analize ait sonuçlar çalışmanın Ek kısmında verilmiştir).

| Güçlü Yönler | Zayıf Yönler |
|---|---|
| -Ayakkabı yapımında geleneğin olması | -Zayıf pazarlama bilgisi |
| -Aile işletmeleri/miras | -Modanın yeterince izlenmemesi |
| -Finansal kaynaklar/rezervler | -Ürün gelişiminde tekdüzelik |
| -Etkin girişimcilik tutumunun olması | -Tasarım becerilerinin yetersizliği |
| -Üretimde uzmanlık | -Pazardan kopyalama yolu ile tasarım elde edilmesi |
| -Ürün odaklılık | -Düşük verimlilik |
| -Yerel toptancılar | -Tahsilat sürelerinin uzunluğu |
| -Donanımlı fabrikalar | -Niteliksiz işgücü |
| -Marka adına üretim yapma yeteneği | -Kalite güvencenin bulunmaması |
| -Düşük stok ve girdilerin hızlı tedariki | -Ar Ge Testlerine Ulaşmadaki güçlük |
| -İşletmelerin bilişim teknolojisi yatkınlığı | -Teknolojik bilgi eksikliği |
| -İşletmeler arasında ağ bulunması | -Üretim yönetimindeki zayıflık |
| -Yeterli yerel hizmet erişimi | -Bayan işçilerin düşük istihdamı |
| -Modern teknolojiye açıklık | -Kayıt dışına kayma eğilimi |
| -Kanaat önderleri ve girişimcilerin bulunması | -Yarı mamul birikimi |
| -Temel gruplar arasında bilgi paylaşımının bulunması | -Makine bakımlarında yetersizlik |
| -Büyük markalara fason üretim yapmak | -Uygulamada maliyet sisteminin bulunmaması |
| | -Fabrika teslim fiyatlarındaki yükseklik |
| | -Çok düşük ihracat |
| | -Yabancı dil yetersizliği |
| | -Bankacılık hizmetlerini yeterince ve etkin olarak kullanmama |
| | -Sektörde firma devir hızının yüksek olması |
| **Fırsatlar** | **Tehditler** |
| -Coğrafi konumu | -Uzak Doğu'dan ithalat |
| -Geniş bir yerleşim yeri olması | -Derinin döşemede kullanılması |
| -Göreli düşük ücret ve işgücü maliyeti | -Yüksek amortisman |
| -Yerel nüfusun yoğunluğu | -Küçük yaşta çalışanlar |
| -Standartların oluşumu | -Zaman temelli ücretlendirme |
| -Artan tüketim eğilim | -Diğer sektörlerdeki ücret uygulamaları |
| -Destekleyici sanayi ve hizmetin bulunması | -Katı atık dönüşümü ve yok edilmesi |
| -Marka oluşturma fırsatı | -Ekonomik dalgalanma ve bunun pazara etkisi |
| -Otomatik deri kesim bulunması | -Piyasaların Sertifika Talepleri ve Standart geliştirmeleri |
| -AB Pazarına yakınlık | -Yeni neslin değişim istekliliğindeki hız |
| -Arap Pazarına yakınlık | -Mesleki eğitime yönelik uygulama ihtiyaçlarının giderek artması |
| -Rus pazarının eğilimi | -AB deki atık madde yönetmeliklerinin değişmesi |
| -Oda destekleri | -Rekabet yapısındaki farklılaşma |
| -Diğer sektörlerdeki iyi üretim uygulamalarından yararlanma | -Kurumsal ve profesyonel yönetim biçimine sahip işletme sayısının azlığı |
| -AB projelerinden yararlanma | -Satış vadelerinin uzun olması |
| -Yerel bir eğitim merkezinin olması | |
| -Lojistik | |
| -Kümelenme destekleri | |
| -İklim | |

*Tablo 1. Konya Aykent Ayakkabıcılık Sanayi Bölgesi SWOT Analizi*

Konya'nın her geçen gün büyüyen bir ulaştırma ağının merkezinde olması küme oyuncularının pazar ve kaynaklara ulaşmasını kolaylaştırmaktadır. Sanayi altyapısı güçlü ve geniş bir iş gücü havuzuna sahiptir. Bölge üniversiteleşme sürecinde niceliksel ve niteliksel olarak önemli bir ivme yakalamıştır. Ancak, küme ortaklarının inovasyon, teknoloji transferinin (ve daha uzun vadede Ar-Ge'nin) gerçekleştirilmesini teşvik eden ve özendiren mekanizmalar ve kurumlar dâhil olmak üzere daha gelişmiş faktör şartlarına erişimi bulunmamaktadır. Pazar temelli rekabet olgusu bağlamında sektörün hizmet ettiği müşteri farklılığı dikkate alındığında; fiyat temelli rekabetten Ar-Ge ve İnovasyon temelli üstünlüğe ulaşmak, yönetim uygulamaları (geleneksel tedarikçi uygulamaları) ile bağlantılı olumsuz imajı (gerçek ya da algılanan) ortadan kaldırmak isteyen bir küme için faktör şartlarına erişimin sağlanması önemlidir. Bu bağlamda kümenin faaliyet bulunduğu yapının değer zinciri de şu şekildedir:

İş kümelerinin rekabet güçlerinin analizi sırasında Porter'ın Rekabet Elması modelinden yararlanılmıştır. Aşağıda detayı verilen bu çerçeve; dört ana, iki yan parametre kullanarak iş kümesinin rekabet gücünü incelemektedir (Porter, 2010: 238-252).

*Faktör (girdi) Koşulları:* Faktör (girdi) Koşulları parametresi çerçevesinde [ihtisaslaşmış] işgücü, hammadde, bilgi kaynakları, fiziki altyapı, finansman gibi iş kümesinin rekabetçiliğini etkileyen unsurlar analiz edilmektedir.


**Şekil 1.** *Konya Ayakkabıcılık Kümesi Değer Zinciri*

*Talep Koşulları:* Rekabet Elması yaklaşımı, talep koşulları parametresi çerçevesinde yerel (ulusal veya bölgesel) talebin doğasını ve yapısını incelemektedir. Özellikle yerel talebin incelenmesinin nedeni yerel talebin bazı özelliklerinin iş kümeleri için rekabetçi üstünlükler sağlaması olarak özetlenebilir. Örneğin, yerel talebin sofistike (beklentisi yüksek) olması iş kümesindeki firmaların daha yenilikçi ürünler geliştirmesi yönünde baskı oluşturur ve küresel rekabet ortamında iş kümesi firmalarının bazı yönelimleri daha erken fark ederek önlem almalarını sağlayabilir. Yerel talebin büyüklüğü veya büyüme potansiyeli de iş kümelerinin rekabetçi kapasiteleri üzerinde etkili olabilir.

*İlgili ve Destek Sektörler:* Bir iş kümesinin rekabet gücü o iş kümesi ile ilgili ve/veya destek sektörlerin rekabetçiliği ile doğrudan alakalıdır. Dünyanın en iyi otellerine sahip bir turizm iş kümesi, diğer hizmet sektörlerinin rekabetçi olmadığı bir coğrafyada faaliyet gösteriyorsa, söz konusu hizmet sektörlerinin rekabetçi olduğu turizm iş kümelerine göre daha dezavantajlı bir durumda olacaktır.

*Şirket stratejileri ve rekabet (iş) ortamı*: Rekabet elmasının bu boyutu iş kümesini oluşturan firmaların izledikleri stratejiler ve birbirleri ile nasıl bir rekabet içinde olduklarını incelemektedir. Yapıcı ve yoğun bir rekabet ortamı firmaların rekabetçiliklerini olumlu etkiler. Yerel iş ortamının kalitesi (girişimcilik seviyesi, yabancı sermaye vb.) de bu parametre altında incelenmektedir.

*Devlet (kamu):* İş kümelerinin rekabetçilikleri kamusal politikalarla ve kamusal kurumların (merkezi ve yerel) iş kümesinin ihtiyaçlarına duyarlılıkları ile yakından ilgilidir.

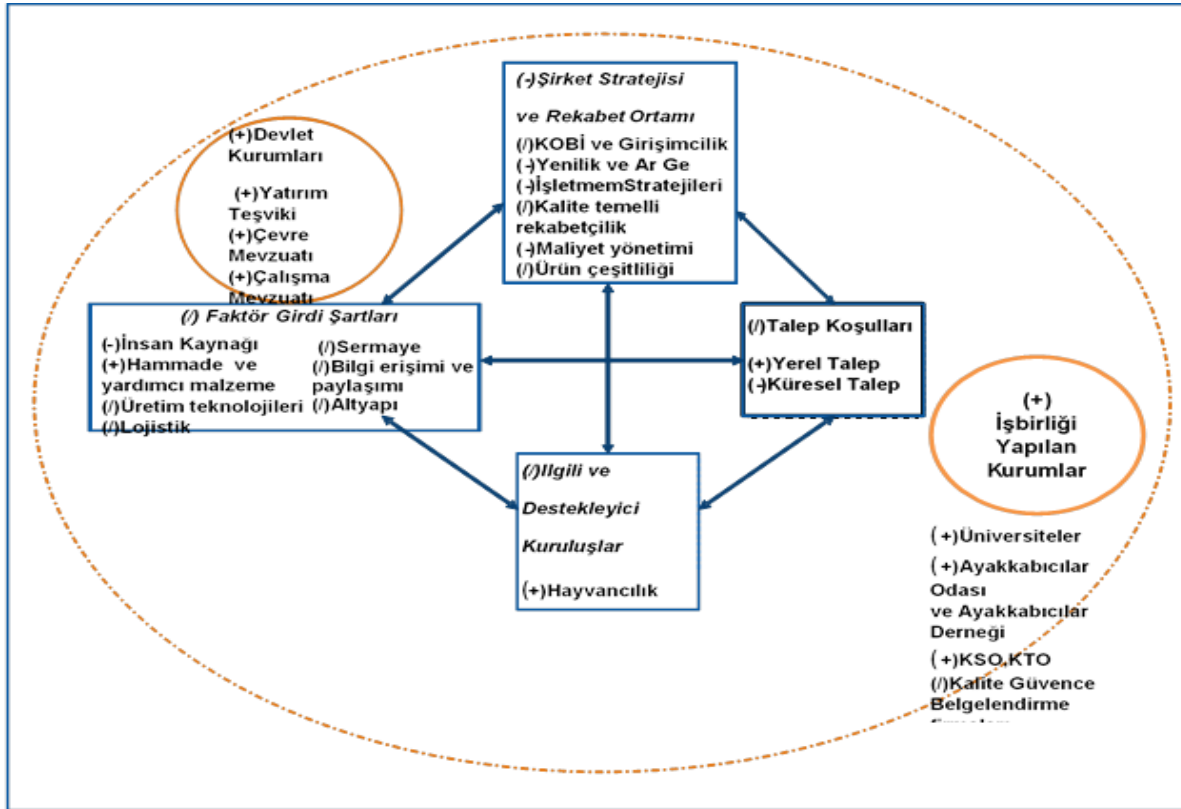
*İşbirliği Yapılan Kurumlar:* İş kümelerinde firmalara ve kamu kurumlarına ek olarak iş birliği yapılan kurumlar olarak ifade edilebilecek birçok kurum ve kuruluş yer almaktadır. Türkiye'de bu tür kurumların arasında üniversiteler, odalar, birlikler, dernekler, vakıflar, federasyonlar, organize sanayi bölgeleri, araştırma kurumları ve benzeri yapılar yer almaktadır.

*Faktör Koşulları:*

*İnsan Kaynağı:* Sektör emek yoğun bir çalışma biçimini benimsemişken, özellikle saya işçiliğinde bu durum daha ön plana çıkarken, nitelikli insan gücü bulma konusunda önemli sorunlar yaşanmaktadır. Bu konuda özellikle bayan işçilerin bulunamaması ve ayakkabı üretiminde usta çırak ilişkisine bağlı geleneğin sona ermesi, yetişmiş elemanların bölge tercihlerinde farklı illere yönelmesi anılan sorunun büyümesine neden olmaktadır.

Tasarımın sektör için fark oluşturan temel unsur olmasına karşılık bu konuda yeterli tasarımcı bulunmaması ya da bulundurulmaması bir başka sorun olarak ortaya çıkmaktadır. İşgücündeki sorunun özellikle pazarlama, satış

başta olmak üzere beyaz yakalı çalışanlar içinde geçerli olduğu görülmektedir (ABİGEM, 2009: 16). Diğer taraftan dünya genelinde bir sorun olarak görülen çocuk çalışanlarının geçmiş dönemde bölgede de yaşanmış olması önemli bir imaj problemi oluşturmaktadır.



**Şekil 2.** *Konya Ayakkabı Sektörü Rekabet Elması*

Bir diğer problem ise iş ve işçi güvenliği ile ilgili izlenen politikalar olup bunların iyileştirilmesi ile ilgilidir. Son olarak izlenen ücret politikalarındaki tercihler bu yönde önemli bir sorun olarak görülmektedir. Ayakkabı üretiminde entegre üretimin dışında özellikle ürünün farklı parçalarının ayrı üretiminden sonra tamamlanması, her bir parça için farklı atölyeleri ve işçilik gereksinimi ortaya çıkarmakta olup, sermaye sorunlarına bağlı olarak işgücünün istihdamında bir başka politika sorunu ortaya çıkmaktadır. Bu sorunlara rağmen Dernek ve Oda tarafından yapılan mesleki eğitim çalışmaları, Selçuk Üniversitesi Teknik Bilimler MYO bünyesinde açılan Ayakkabıcılık Bölümü süreç için oldukça olumlu gelişmeler olarak karşımıza çıkmaktadır.

*Hammadde ve Yardımcı Malzeme:* Temel girdi olan deri ve deri ürünlerinin yanı sıra, ayakkabı imalatında kullanılan girdilerin çok fazla olması sektörde büyük oranda yan sanayiye bağımlılığı da beraberinde getirmektedir. Sektör girdileri itibari ile deri, tekstil, metal, plastik gibi birçok işkolu ile ilişki içindedir. Ayrıca bu alanda faaliyet gösteren firma sayısının fazlalığı da pazarlamada yoğun bir rekabetin yaşanmasına yol açmaktadır (Gaziantep Ticaret Odası, 2011:7). Deri kullanımı ile ilgili doğrudan ilişkili sektörün yani hayvancılığın ülkedeki gelişimi ya da daralmalar ayakkabıcılık sektörünü etkilerken, son dönemde bu konuda önemli bir iyileşme olduğundan söz edilmektedir(Türkiye İhracatçılar Meclisi, 2011). Bu durum sektör temsilcileri açısından olumlu durum olarak değerlendirilmekle birlikte sektörle ilgili yapısal sorunların çözümlenmesi gerektiği vurgulanmaktadır. Diğer taraftan diğer girdi ile ilgili Uzak Doğu ile diğer ülkelerin malzemeleri arasındaki fiyat farkının kimi ürünlerde azaldığı ancak tercihi etkilediği görülmektedir.

*Üretim Teknolojisi:* Konya'da ayakkabı imalatı yapan firmaların çok büyük bir kısmı mikro ve küçük ölçekli işletmeler olup, geleneksel yöntem ile emek yoğun bir biçimde üretim sürecini yönetmektedirler. Orta ölçekli olan işletmeler sayısal olarak yüksek olmamakla birlikte teknoloji yoğun kullanarak sektörde daha etkin bir Pazar payına ulaşmaktadırlar (KSO, 2011: 14; ABİGEM, 2009: 11). Bu durum rekabet sürecinde de dikkate alındığında ulusal pazarda benzer üretim biçimleri diğer bölgelerdeki benzer ölçekteki işletmelerde de kullanıldığı için aşılabilir bir durum olarak görülmekle birlikte, uluslararası pazarda maliyet ve teknoloji faktöründen dolayı rekabet gücünü olumsuz yönde etkilemektedir. Emek yoğun sektörlerde daha önce belirtilmiş olan nitelikli işgücü probleminin yaşanması ise üretimde bir başka önemli engel olarak görülmektedir.

Lojistik: İşletmelerin ağ ilişkilerin etkilemede önem arz eden bir diğer bulgu alt yapı durumlarını saptamaya yöneliktir. Konya Sanayi Odası (2007) tarafından ortaya konulan Saha Araştırma Raporundaki bulgulara bakıldığında; Konya Sanayi Bölgelerindeki işletmelerin %78,8'lik bir kısmı dağıtım, satış ve teslimatla ilgili bir

sorun yaşamadıklarını belirtmektedirler. Kalan %20,4 ise bu soruyu evet şeklinde cevaplamaktadırlar. Bu cevapların ışığı altında pazar yapısı ve dağıtım kanallarının fiziki durumu ele alındığında, sorun yaşamadıklarını belirten firmaların Konya içerisinde ve ulusal pazarda dağılımı yönlendirdikleri olasıdır. Bununla birlikte uluslararası pazara çıktı sağlayanların zaman zaman sorunla karşılaştıkları öngörülse bile hedef pazara ulaşmada tanımlanması zor güçlükler çekmedikleri görülmektedir. Bu da Konya merkezli olarak lojistik ile ilgili ileri sürülen sorunların kısmen de olsa aşıldığını ortaya koymaktadır. Konya'nın taşımacılık alt yapısını incelendiğinde bölge kara, hava ve demir yolu taşımacılığında önemli bir dezavantajlarla karşı karşıya bulunmamaktadır. Özellikle son yıllardaki demiryolu ve karayolu yatırımları coğrafi avantaja sahip bölgenin lojistik bakımdan ilerlemesine dikkat çeken bir katkı sağlamaktadır. İnsan taşımacılığının yanı sıra yük taşımacılığı açısından incelendiğinde çevre bağlantı yollarının genel anlamda nitelikli olduğu ve sorunlu olanların da düzenlenmeye devam edildiği görülmektedir. Yukarıda da belirtildiği gibi Mersin ve Antalya liman bağlantılarının karayolu aracılığı ile sağlanmaktadır. Demiryolu taşımacılığında ise yeterli derecede alt yapıya sahiptir ve özellikle geleceğe yönelik planlara baktığımızda demiryolu taşımacılığı daha avantajlı bir konuma geleceği görülmektedir.

*Sermaye:* Küçük ölçekli bir işletme için yüksek sermaye gereksinimi bulunmaması ve tedarik ağının oldukça geniş bir yan sanayi içermesi spin off sürecini kolaylaştırmaktadır. Diğer taraftan büyük işletme kurmak veya büyüyen işletmeler için sermaye gereksinimi önemli bir sorun olarak karşımıza çıkmaktadır. Fiyat temelli rekabetin benimsenmesi, tahsilat sürelerinin çok uzun olması (birebir görüşmelerde kimi firmalar 24 aya kadar uzadığını ifade etmektedirler), gecikmiş ya da ödenmeyecek alacakların artması, ithal ürün baskısı gibi nedenler güçlüğün ve sermaye birikimindeki engellerin nedeni olarak ortaya çıkmaktadır.

*Bilgi erişimi ve paylaşımı:* Ayakkabıcılık sektöründe bilginin niteliği birçok sektöre göre farklılıklar içermektedir. Sektörde farkı ortaya koyacak en önemli unsurların başında gelen tasarımın üretmek yerine kopyalama ile üretilmesi, ürün genişliğinde taklit ve kopyalama yöntemlerinin dünyada yaygın olarak kullanılması bilginin niteliğini ve kullanımını değiştirmektedir. Bu bağlamda Aykent sanayi bölgesindeki firmalarda bu süreçten bağımsız ve kayıtsız olarak hareket etmemektedir. Ancak müşteri niteliği, sektördeki gelişimler ve uluslararası süreçle ilgili olarak firmaların dernekleşme yolu ile paylaşım platformu oluşturdukları bunun yanı sıra ülke genelindeki çatı kuruluş niteliğinde yer alan STK'lar yolu ile bilgiye eriştikleri, yerel ve ulusal üniversitelerle de bu konuda bilgi paylaşımına girdikleri görülmektedir. Özellikle mesleki eğitim konusundaki çabalar bilginin bu boyuttaki paylaşımını göstermektedir (Konya Ayakkabıcılar Odası, 2012).

*Altyapı:* Sitede ayakkabı tedarik sürecinde yer alan firmaların sayısı 974 olup, bu ayakkabı ve malzemesi üreten-satan firmaların yanı sıra yiyecek, içecek, vb. sosyal hizmet veren firmalar da bulunmaktadır. Aykent dışında ise 50 ayakkabı üreticisi ve 50 sayacı firma bulunmaktadır. Ayrıca şehrin toplamında 200 civarında ayakkabı satıcısı firma bulunduğu bilinmektedir.

### Talep Koşulları:

*Yerel ve Ulusal Talep:* Konya ayakkabı üreticileri erkek ayakkabısı üzerine üretim yapmaktadırlar. Ülkedeki erkek ayakkabısı talebinin %20'sine yakının karşılayan bölge, markalara üretim yapmanın yanı sıra zincir mağazalara (FLO, Ayakkabı Dünyası, Adese vb. gibi) üretim yapmakta ve perakendecilere üretim yaparak nihai talebe ulaşmaya çalışan firmalar, talebin artmasına karşın tahsilat ve pazarlamada etkin tanıtım gibi nedenlerle yeterince pazar büyüklüğüne ulaşamamaktadırlar (Merve Kundura, 2011; MÜSİAD, 2009).

*Küresel Talep:* Konya ayakkabıcılık sektörü üretim değerleri açısından uluslararası ölçekte kendine bulabilecek kapasiteye sahip olmasına karşılık, yetkinlik ve yapısal anlamda rekabet edebilme gücüne henüz sahip görülmemektedir. Orta Doğu, Kuzey Afrika, Balkanlar ve Rusya alanında önemli bir pazar bulunmasına, Avrupa pazarı için mekânsal avantaj sağlayabilecek yapıya sahip olmasına karşılık kurumsal sorunların devam etmesi ve sürdürülebilir bir ihracat stratejisi geliştirilmediğinde dolayı bu avantajını yeterince kullanamamaktadır. Nitekim 2011 yılında 1.099 Milyon USD olan ihracat, 2012 yılında 1.067 USD olmuştur (Türkiye İhracatçılar Meclisi, 2012).

### Şirket Stratejisi ve Rekabet Ortamı:

*KOBİ'ler ve Girişimcilik:* Sektörde Kobi sayısının oldukça yaygın olduğu görülmekle birlikte, bunlar içerisinde özellikle küçük ve mikro işletmelerin yaygın olduğu dikkati çekmektedir. Diğer taraftan mikro işletme kurmada emek yoğun işletmelerin yer alması ve tedarik zincirindeki çeşitlilik yavrulama (spin off) sürecini arttırmaktadır. Bu da işletmelerin büyümek yerine yayılmasına ve girişimcilik kültürünün özellikle küçük işletmelerin kurulmasına yönelik artmasına neden olmaktadır. Ancak kurulduğu kadar sürdürülebilirliğinin sağlandığını söylemek ise o denli kolay değildir.

*Yenilik ve Ar-Ge:* Birçok sektörde olduğu gibi ayakkabıcılık sektöründe de rekabetçiliği yakalamanın en önemli unsurlarından birisi olan yenilikçilik ve ARGE çalışmaları olup, bu konuda ortak laboratuvar girişimi bilgi faktörünü yaratma konusunda ortaya konulan önemli ve somut bir adımdır. İlk aşamada ilgili kuruluşlar tarafından (TSE) karşılığını bulmasa da laboratuvar yönündeki talebin devam etmesi önemlidir. Laboratuvarın oluşumunda hedef kitle olarak sektördeki uluslararası standartların sanayi değerlerinin göz önüne alınması, bu alanda faaliyet gösteren firmaların rakip bölgeler ve firmalar karşısında da avantajlı bir konuma sahip olmalarına

imkân verecektir. Yeni ürün gelişimi ve marka yatırımında Ar Ge ve yenilikçilik yönündeki yatırımdan daha çok taklit ve benzeştirme yönünde eğilimin baskın olduğu, bunun da farklılık oluşturmada en çok iç pazar açısında katkı sağladığı görülmektedir (Konya Sanayi Odası, 2011: 14). Kümenin rekabetçilik anlayışını geliştirmede ve rakiplerini öğrenmede verilen eğitim programları ve işbirlikçi anlayış içerisinde firmaların elde ettikleri bilgileri kullanabilme becerisi gelişmesi umulmaktadır. Ancak kümelenme çalışmalarının sürdürülebilirliği ise belirsizliğini korumaktadır. Bu adımın kısa ve orta vadede artarak, gelişerek ve geri besleme süreci daha doğru bir biçimde denetlenerek sürdürülmesi, bir taraftan kümenin diğer yandan işletmelerin stratejik yol haritaların belirlemesinde ve kullanmasında katkı sağlayacaktır.

*İşletme Stratejileri:* İç rekabetin yoğun olduğu sektörde, bu rekabetin fiyat odaklı olması yenilikçiliği engellemektedir. Büyük bir kısmının; aile işletmesi olması, kurumsallaşma yönünde istekli olmamaları, rekabette öne geçmek için kısa vadeli çözüm aramaları ya da yenilikçi/Ar Ge odaklı çalışmaları tercih etmemeleri, strateji üretme yerine kısmen taktiksel planlara ve Operasyonel çalışmalarla hayatlarını sürdürmeyi hedeflemeleri, aklın stratejik çalışması yerine pazarın kurnazlıklarından karlılık beklemeleri ve nihayetinde büyümek ile gelişmek arasındaki farklılığı göz ardı ederek büyüme planları yapmaları, hem iç pazarda ama daha da önemlisi uluslararası alanda rekabet gücü kazanmalarını engellemektedir.

*Maliyet yönetimi:* İşletmelerin hemen hemen tümünde maliyet yönetiminin bulunmadığı görülmektedir. Firmalar ürün ve hizmet oluşumu ile ilgili olarak bilimsel bir maliyet politikası yerine göreceli bir fiyat-maliyet ilişkisi ile süreci yönetmeye çalışmakta, fiyat odaklı rekabetin olduğu sektörde uzun vadeli tahsilatlar nedeni ile maliyetin belirlenme biçimi belirsizleşmektedir (ABİGEM, 2009: 18).

*Ürün çeşitliliği:* Rekabetteki önemli araçlardan birisi olan ürün çeşitliliği, sektör açısından fiyatlandırmaya hem de biçime/stile dayalı olarak tanımlanmaktadır. Sektörde bir diğer ayrım olan müşteri temelli ayrım açısından bakıldığında ise kadın ve çocuk ayakkabıları modaya dayalı ürün yenilemesinin sıklığı, üretim maliyetinin daha yüksek olması gibi nedenlerle tercih edilmemekte, onun yerine erkek ayakkabısında üretim tercih edilmektedir. Rekabet açısından bu yoğunluk katkı sağlamaktadır. Ancak üründeki stil ve fiyat çeşitliliği açısından istenilen seviyeden uzak olunması; orta ve orta altı tercihi ile sınırlı sayıda stil üretimi dezavantaj olarak tanımlanabilir.

*Marka ve Pazarlama:* Firmalar kendi markalarına yaratmak yerine başka markalara üretim yapmayı tercih etmektedirler. Bunların önemli bir kısmı ulusal markalar olmakla birlikte, uluslararası markalarında bölgede üretildiği bilinmektedir (ABİGEM, 2009: 20). Pazarlama ve satış konusunda yatırım yapmaktan kaçınan ve sadece bazı (fabrika üretimi) firmaların bu konuyu sınırlı düzeyde de olsa ele almasında tedarikçilik rolünün öne çıktığı görülmektedir. Hedef pazarın ağırlıklı olarak yurt içi satışlar ve bölgesel dağılım olarak tanımlanması bu konudaki çalışmaların yetersiz düzeyde olduğunu göstermektedir.

### İlgili ve Destekleyici Sektörler:

*Hayvancılık:* Türkiye'de sektörün yaşadığı kimi dalgalanmalar, yerli üretim ve ithalat gibi tercihlerin kullanılması, bölgesel özelliklere göre farklı hayvan tiplerinin yetiştiriciliği, teşviklerin son yıllarda artması gibi birçok unsur üzerinden yürütülen çalışmalar sektörün ne denli önemli olduğunu ortaya koymaktadır. Özellikle ayakkabı sektörünün varlığını doğrudan ve yüksek önem düzeyinde etkileyen sektörde, ülkemizde 1995 yılından sonra özel sektör firmaları tarafından damızlık hayvan yetiştiriciliği yapan işletmelerin sayıları her yıl artmaktadır. Bu işletme sayılarının artması ile ülkemizde aile işletmeciliği şeklinde sürdürülen hayvan yetiştiriciliği yerini daha profesyonel ve büyük kapasiteli işletmelere devretmeye başlamıştır. Bu olumlu gelişme ayakkabıcılık sektörü içinde önemli bir fırsat ve katkı haline dönüşecektir (Tarım İşletmeleri Genel Müdürlüğü, 2012; Bayraç ve Çemrek, 2011:1-20). Bunların yanı sıra bölgeye yeni teşvik mevzuatına bağlı olarak çok sayıda hayvancılık yetiştirme tesisisin kurulmasının ötesinde Konya Şeker tarafından kurulan ve kapasite olarak ülkenin en yüksek kapasitesine sahip et işleme tesislerinden birisi olması da önemli bir faktör olarak görülmelidir (Konya Şeker, 2012).

*Lojistik:* Konya'nın karayolu ve demiryolu gelişiminin son yıllarda önemli bir gelişme göstermesinin yanı sıra lojistik köy kurma çalışmalarının başlaması bölgenin uluslararası entegrasyonu için önemli bir katkı sağlayacaktır. Ancak projelendirme sürecinin uygulamaya geçişle ilgili koordinasyonundaki belirsizlik katkının gecikmesine neden olmaktadır. Bunun yanı sıra liman bağlantıları yönündeki yatırımlar 5 yıla kadar tamamlandığında Konya, dış ticaret açısından katma değer sağlayacak hale gelecektir.

### İşbirliği Kurumları:

*Üniversiteler:* Bölgede ikisi kamu ve ikisi de vakıf olmak üzere 4-dört- adet üniversitesi bulunmaktadır. Bunlar içerisinde özellikle Selçuk Üniversitesi Teknik Bilimler MYO bünyesinde Ayakkabıcılık Bölümünün bulunması, bunun yanı sıra Konya Büyükşehir Belediyesi Ayakkabıcılık Mesleki Eğitim Merkezi ve Ayakkabıcılık Meslek Lisesi mesleki eğitim açısından olduğu kadar, sektörel bilgi ve gelişim açısından da önemli katkılar sağlamaktadır.

*Ayakkabıcılar Odası ve Ayakkabıcılar Derneği:* Sektör ile ilgili olarak iki meslek kuruluşunun bulunduğu ve bunların hem işletme sahipleri hem de üçüncü kurum ve kuruluşlar ile sektörün ilişkisini kurmada önemli bir işleve sahip oldukları görülmektedir. Ayakkabıcılar Odasının daha önce kurulduğu ve Dernek kuruluşu ile

birlikte sektör temsilcilerinin işbirliği eğilimlerinin artması beklendiği bilinmektedir. Nitekim kümelenme çalışmalarında bu iki kuruluşun ciddi desteği olmuş, süreçte aktif rol üstlenmişlerdir.

*KSO ve KTO:* Sektör temsilcilerinin belli ölçeğin üzerinde olanların üye oldukları iki önemli kuruluş KSO ve KTO olup, özellikle KSO kümelenme çalışmalarında destek sağlayan kuruluştur. Sektör sorunları ile ilgili olarak farklı biçimlerde destek sağlayan KSO, bölgede rekabet gücünün arttırılması yönünde daha önce benzer proje deneyimlerine sahip bir kuruluş olarak faaliyetlerini sürdürmektedir.

*Kalite Güvence Belgelendirme Çalışmaları:* Sektördeki son yıllarda en önemli farklılık oluşturan ve mevzuatlarla zorunlu hale gelmeye sağlayan önemli bir başka unsur kalite güvence belgeleridir. Hem kurumsal hem de ürün bağlamında belgelendirme sürecine başvuran firmaların yeterli olmadığı orta ve büyük ölçekte firmalar dışında bu çalışmaların yürütülmediği görülmektedir. Belgelendirme ile ilgili önemli bir diğer çalışma ise test laboratuvarları olup bölgedeki TSE yetkilileri ya da İstanbul TESEV aracılığı ile süreç yürütülmektedir (Konya Sanayi Odası, 2011: 10). Aykent'te bir laboratuvar kurulması girişiminde bulunulmuş, ancak olumlu sonuç alınamamıştır. Buna rağmen girişimlerin devam ettiği ifade edilmektedir.

### Devlet Kurumları

*Çevre Mevzuatı:* Ayakkabı üretiminde kullanılan gerek atık malzeme gerekse yardımcı malzemenin çevre açısından tehdit arz eden malzemelere sahip olması ülkemizde de yeni düzenlemeleri zorunlu kılmaktadır. AB Uyum süreci içerisinde tümüyle geri dönüşümün üzerinde durulması ve taban da dâhil olmak üzere bazı aksesuar ve benzeri malzemelerin sanayi atığı olarak benimsenmesi görüşü, üretim sürecinde dikkate alınması gereken faktörler, giderek artan çevre duyarlılığı üreticileri daha dikkatli olmaya zorunlu kılmaktadır (Avrupa İşletmeler Ağı, 2011).

*Çalışma Mevzuatı:* Deri sektörü hem kayıt dışı işçilik hem de düşük ücret politikaları nedeni ile dünyada dikkat çekmektedir. Artan rekabet ile birlikte çocuk işçilikten yararlanarak maliyet düşürme, çalışma ortamının yetersiz kalması ve yabancı işçi çalıştırma politikaları bu sorunlara eklenen yeni başlıklar olarak karşımıza çıkmaktadır. Ülkemizde de benzer sorunlar yaşanmakla birlikte giderek artan iyileşmeye rağmen, hazırlanan raporla ve yapılan çalışmalar başta iş kazaları olmak üzere birçok yeni düzenleme ve yüksek denetimin zorunlu olduğunu ortaya koymaktadır (Çalışma ve Sosyal Güvenlik Bakanlığı, 2006).

*Yatırım Teşviki:* Son dönemde teşvik sistemindeki olumlu değişiklikle birlikte Konya'nın yatırım potansiyeli artmıştır. T.C. Başbakanlık Hazine Müsteşarlığı verilerine göre 2010 yılı Ocak-Ekim aylarını kapsayan dönemde Türkiye genelinde 3.152 adet yatırım teşvik belgesine toplam 44.690 milyon TL'lik teşvik verilirken, 2011 yılı Ocak-Ekim aylarını kapsayan dönemde 3.524 adet yatırım teşvik belgesine toplam 43.096 milyon TL'lik teşvik verilmiştir. Yatırım teşvik belge sayısı önceki yılın aynı dönemine göre %11,8 oranında artış gösterirken, yatırım tutarında aynı dönemde %3,6'lık bir azalış yaşanmıştır. 2010 yılı Ocak-Ekim döneminde 202 adet teşvik belgesi alan Konya, 2011 yılının aynı dönemi itibariyle 177 adet teşvik belgesi almıştır. Söz konusu belgelere ilişkin azalış %12,4 düzeyindedir. Geçtiğimiz yılın ilk 10 aylık toplamına göre bu yıl sabit yatırım tutarı %14,6 oranında azalarak 829 milyon 243 bin 151 TL olarak gerçekleşmiştir. Aynı dönemde istihdam edilen personel sayısı da önceki döneme göre %14 azalarak 4.722 kişi olmuştur (Konya Ticaret Odası, 2011).

## 4 Analiz Sonuçları

### 4.1 Faktör Koşul ve Piyasaları

| Mevcut Durum | Ortalama | Standart Sapma |
|---|---|---|
| 1.1. İhtisaslaşmış beyin gücü (AR-GE, inovasyon, yönetim, pazarlama vb.) | 3,36 | 1,31 |
| 1.2. Nitelikli işgücü | 3,48 | 1,44 |
| 1.3. Küresel teknoloji ve yönelimler ile ilgili stratejik bilgi | 3,08 | 1,18 |
| 1.4. Yeni pazar, müşteri ve iş imkânları ile ilgili bilgi | 3,24 | 1,39 |
| 1.5. Kamusal fonlarla (Türkiye ve/veya AB) uygulanan ARGE ve Teknoloji Transferi programları hakkında bilgi | 3,12 | 1,26 |
| 1.6. İhtisaslaşmış yatırım fonları ve/veya mali kaynaklara erişim | 3,16 | 1,21 |
| **Önem Durumu** | **Ortalama** | **Standart Sapma** |
| 1.1. İhtisaslaşmış beyin gücü (AR-GE, inovasyon, yönetim, pazarlama vb.) | 4,48 | 1,15 |
| 1.2. Nitelikli işgücü | 4,28 | 1,17 |
| 1.3. Küresel teknoloji ve yönelimler ile ilgili stratejik bilgi | 3,80 | 1,22 |
| 1.4. Yeni pazar, müşteri ve iş imkânları ile ilgili bilgi | 3,84 | 1,57 |
| 1.5. Kamusal fonlarla (Türkiye ve/veya AB) uygulanan ARGE ve Teknoloji Transferi programları hakkında bilgi | 3,92 | 1,03 |
| 1.6. İhtisaslaşmış yatırım fonları ve/veya mali kaynaklara erişim | 4,08 | ,70 |

Bu tablolarda kümelenme ve ortaklaşa rekabet açısından faktör koşul ve piyasaların durumu ve faktörlerin hangi seviyede olması istenildiği analiz edilmiştir. Buna göre ihtisaslaşmış beyin gücünün (AR-GE, inovasyon, yönetim, pazarlama vb.) sektördeki mevcut durumda ($\bar{x}$=3.36) yeterli düzeyde bulunduğu fakat mevcut durum

yeterli olsa da ayakkabıcılık sektörü için ihtisaslaşmış beyin gücünün çok önemli ($\bar{x}$=4.48) olduğu ortaya çıkmış ve artırılmasının sektöre büyük yarar sağlayacağı düşünülmektedir. Nitelikli işgücünün de sektördeki düzeyi ($\bar{x}$=3.48) var olan gereksinimi karşılayabilmektedir. Bu konuda kümelenme açısından bir miktar artış olumlu ($\bar{x}$=4.28) etki yaratacaktır. Ayakkabıcılık sektöründe küresel teknoloji ve yönelimler ile ilgili stratejik bilgiler hakkında donanımlı olmak rekabet gücünü ve firmanın sürekliliğini artıracağı gibi sektöründe temellerini oluşturmaktadır. Bu nedenle aşırı olmasa da beklentiler karşılanmakta($\bar{x}$=3.08) ve büyük bir artışa gereksinim duyulmamaktadır($\bar{x}$=3.80). Yeni pazar, müşteri ve iş imkânları ile ilgili bilgi bu piyasada her firmanın kendi çapında gereğince sağlanabilmektedir ($\bar{x}$=3.24). Fakat bu bilgiye ihtiyaç sahip olunuşu, bilgi eksikliği durumunda ne gibi kayıpların oluşacağının farkındalığını azaltmış olabilir. Bu nedenle de bu konu sektörde artışının az olsa da istendiği ($\bar{x}$=3.84) bir noktadadır. Ayrıca kamusal fonlarla (Türkiye veya AB) uygulanan AR-GE ve Teknoloji Transferi programları hakkında bilginin sektörde var olduğu ($\bar{x}$=3.12) ve bu bilginin kümelenmeyi olumlu etkileyeceği saptanmıştır ($\bar{x}$=3.92). Son olarak ihtisaslaşmış yatırım fonları ve mali kaynaklara erişimin olumlu düzeyde olduğu ($\bar{x}$=3.16) ama bunun artışının önem durumunun yüksek olduğu görülmüştür ($\bar{x}$=4.08).

### 4.2 İlgili ve Destek Sektörler

| Mevcut Durum | Ortalama | Standart Sapma |
|---|---|---|
| 2.1. İş geliştirme (danışmanlık, tavsiye vb.) hizmetleri veren kurum, kuruluş ve firmalar. | 3,00 | 1,29 |
| 2.2. AR-GE ve inovasyon konusunda destek veren kurum ve kuruluşlar. | 2,92 | 1,15 |
| 2.3. Eğitim hizmetleri veren kurum, kuruluş ve firmalar. | 2,60 | 1,11 |
| 2.4. "Tasarım" konusunda hizmet veren kurum, kuruluş ve firmalar | 2,96 | 1,27 |
| 2.5. "Pazarlama ve Tanıtım" konusunda hizmet veren kurum, kuruluş ve firmalar | 2,88 | 1,33 |

Bu kısımda kümelenmeyle ilgili ve destek olan sektörlerin var olan yapısal durumu ve olumlu etkilerinin olup olmadığı incelenmiştir. İş geliştirme (bilgilendirme, danışmanlık, tavsiye vb.) hizmetleri veren kurum, kuruluş ve firmalar ne çok ne de az durumdadır ($\bar{x}$=3.00) ve önem düzeyi yüksek seviyede olup kümelenme sürecine olumlu etki yapacağı düşünülmektedir ($\bar{x}$=4.00). AR-GE ve inovasyon konusunda destek veren kurum ve kuruluşlar olumsuz seviyede bulunmuş ($\bar{x}$=2.92) ve bu kurum ve kuruluşların artışının yüksek seviyede beklentisi oluşmuştur ($\bar{x}$=4.32).

| Önem Durumu | Ortalama | Standart Sapma |
|---|---|---|
| 2.1. İş geliştirme (danışmanlık, tavsiye vb.) hizmetleri veren kurum, kuruluş ve firmalar. | 4,00 | 1,15 |
| 2.2. AR-GE ve inovasyon konusunda destek veren kurum ve kuruluşlar. | 4,32 | ,94 |
| 2.3. Eğitim hizmetleri veren kurum, kuruluş ve firmalar. | 4,08 | ,90 |
| 2.4. "Tasarım" konusunda hizmet veren kurum, kuruluş ve firmalar | 4,08 | ,86 |
| 2.5. "Pazarlama ve Tanıtım" konusunda hizmet veren kurum, kuruluş ve firmalar | 4,16 | ,89 |

Ayrıca eğitim hizmetleri veren kurum, kuruluş ve firmalar yetersiz seviyededir ($\bar{x}$=2.60) bu konunun kümelenmeye olumlu etki yaratacağı düşünülmektedir ($\bar{x}$=4.08). Tasarım konusunda kurum, kuruluş ve firmalarında olumsuz düzeyde olduğu ($\bar{x}$=2.96) ve bunlarında artırımının kümelenme yaklaşımını geliştireceği görülmektedir ($\bar{x}$=4.08). Son olarak pazarlama ve tanıtım konusunda hizmet veren kurum, kuruluş ve firmaların yeterli bulunmadığı ($\bar{x}$=2.88) ve yine bu faktöründe olumlu etkisinin olacağına dikkat çekilmektedir ($\bar{x}$=4.16).

### 4.3 Firma Stratejileri, Yerel Rekabet ve İşbirliği Ortamı

| Mevcut Durum | Ortalama | Standart Sapma |
|---|---|---|
| 3.1. Küme aktörleri arasında işbirliği ve diyalog | 3,28 | 1,42 |
| 3.2. Küme aktörleri arasında işbirliği ve diyalogu artıracak programlar | 3,24 | 1,45 |
| 3.3. Uluslararasılaşma ve ihracat için yerel "iş ağları" oluşturma konusunda destek | 3,00 | 1,41 |
| 3.4. Ortak tedarik (hizmet ve/veya ürün) girişimleri için destek | 3,00 | 1,35 |
| 3.5. Kamu ihaleleri için işbirliği ve ortaklıklar | 2,72 | 1,42 |
| 3.6. Çok ortaklı proje ve girişimler için teşvik ve destekler | 2,76 | 1,36 |
| 3.7. "Kritik kütle" (Kümede yeterli sayıda firma bulunması) | 3,08 | 1,382 |
| **Önem Durumu** | **Ortalama** | **Standart Sapma** |
| 3.1. Küme aktörleri arasında işbirliği ve diyalog | 4,40 | ,64 |
| 3.2. Küme aktörleri arasında işbirliği ve diyalogu artıracak programlar | 4,20 | 1,11 |
| 3.3. Uluslararasılaşma ve ihracat için yerel "iş ağları" oluşturma konusunda destek | 4,24 | ,77 |
| 3.4. Ortak tedarik (hizmet ve/veya ürün) girişimleri için destek | 4,00 | 1,04 |
| 3.5. Kamu ihaleleri için işbirliği ve ortaklıklar | 4,04 | 1,05 |
| 3.6. Çok ortaklı proje ve girişimler için teşvik ve destekler | 4,08 | ,86 |
| 3.7. "Kritik kütle" (Kümede yeterli sayıda firma bulunması) | 4,04 | ,84 |

Yukarıdaki tablolarda kümelenme ve rekabetçi işbirliğine yatkınlık bakımından firma stratejileri, yerel rekabet ve işbirliği ortamı değerlendirilmiştir. Küme aktörleri arasında işbirliği ve diyalog bulunmaktadır ($\bar{x}$=3.28) gelişimi ise kümelenmeyi olumlu etkileyecektir ($\bar{x}$=4.40). Küme aktörleri arasında işbirliği ve diyalogu artıracak programlar mevcuttur ($\bar{x}$=3.24) bu programların kümelenmeye olumlu etkisi vardır ($\bar{x}$=4.20). uluslararasılaşma ve ihracat için yerel iş ağları oluşturma konusunda yeterli destek bulunmaktadır ($\bar{x}$=3.00) ve bu destek artırımı olumlu etkiye sebep olacaktır ( =4.24). Ortak tedarik girişimleri için destek de var olan gereksinimi karşılamaktadır ($\bar{x}$=3.00) ve bu destek artışı da aynı şekilde olumlu etkiyi sağlayacaktır ($\bar{x}$=4.00). Kamu ihaleleri için işbirliği ve ortaklıklar istenilen seviyede değildir ( =2.72) ama bunun olumlu etkisi dikkat çekmektedir ($\bar{x}$=4.04). Çok ortaklı proje ve girişimler için teşvik ve destekler sektörde az bulunabilmektedir ($\bar{x}$=2.76) bunun gereksinimi açıkça hissedilmektedir ($\bar{x}$=4.08). Kritik kütle (kümede yeterli sayıda firma bulunması) mevcuttur ( =3.08) ve artışı olumlu etki yaratacaktır($\bar{x}$=4.04).

### 4.4  Talep Koşulları ve Talebin Yapısı

| Mevcut Durum | Ortalama | Standart Sapma |
|---|---|---|
| 4.1. Yerel talep (tüketici ve/veya diğer sektörler) | 3,76 | ,87 |
| 4.2. Ulusal talep (tüketici ve/veya diğer sektörler) | 3,16 | 1,51 |
| 4.3. Kamu ihalelerine "ayrıcalıklı" erişim | 2,68 | 1,49 |
| **Önem Durumu** | **Ortalama** | **Standart Sapma** |
| 4.1. Yerel talep (tüketici ve/veya diğer sektörler) | 4,32 | ,97 |
| 4.2. Ulusal talep (tüketici ve/veya diğer sektörler) | 4,04 | 1,36 |
| 4.3. Kamu ihalelerine "ayrıcalıklı" erişim | 3,80 | 1,47 |

Bu kısımda talep koşulları ve talebin yapısının kümelenmeye etkisi incelenmiştir. Yerel talep tatmin edici düzeyde ($\bar{x}$=3.76) olmasına karşın artışı şiddetle istenmektedir $\bar{x}$ (=4.32). Ulusal talep de olumlu izlenimler bırakmıştır ($\bar{x}$=3.16) ancak bu konuda artış önemli bir olumlu etki yaratacaktır ($\bar{x}$=4.04). Kamu ihalelerine ayrıcalıklı erişim yoktur ($\bar{x}$=2.68) bu durumunda olumlu etkisi kaçınılmazdır ($\bar{x}$=3.80).

### 4.5  İşbirliği Kurumları

| Mevcut Durum | Ortalama | Standart Sapma |
|---|---|---|
| 5.1. Üniversite – ayakkabıcılık işbirliğinin geliştirilmesi için destek ve teşvikler | 3,36 | 1,28 |
| 5.2. Teknoloji transferi için destek | 2,96 | 1,27 |
| 5.3. İhtisaslaşmış işgücü geliştirme ve/veya çekme programları | 2,76 | 1,09 |
| 5.4. İhtisaslaşmış beyin gücü geliştirme ve/veya çekme programları | 2,56 | 1,26 |
| 5.5. Yerel üniversiteler tarafından iş kümesine verilen destek | 2,68 | 1,34 |
| **Önem Durumu** | **Ortalama** | **Standart Sapma** |
| 5.1. Üniversite – sanayi işbirliğinin geliştirilmesi için destek ve teşvikler | 4,48 | ,77 |
| 5.2. Teknoloji transferi için destek | 4,08 | 1,11 |
| 5.3. İhtisaslaşmış işgücü geliştirme ve/veya çekme programları | 4,16 | ,85 |
| 5.4. İhtisaslaşmış beyin gücü geliştirme ve/veya çekme programları | 4,16 | 1,06 |
| 5.5. Yerel üniversiteler tarafından iş kümesine verilen destek | 4,48 | ,71 |

Bu tablolarda kümelenme ve ortaklaşa rekabetin işbirliği kurumlarının etkisi araştırılmıştır. Üniversite-sanayi işbirliğinin geliştirilmesi için destek ve teşvikler yeterli düzeyde bulunmuştur ($\bar{x}$=3.36) kümelenmeye etkisi çok büyük önem teşkil etmektedir ($\bar{x}$=4.48). Teknoloji transferi için destekler istenilen seviyede değildir ancak ufak iyileştirmeler seviyeyi kabul edilebilir seviyeye çekebilecektir ($\bar{x}$=2.96) bunun yanında önem seviyesi olumlu etki yaratmaktadır ($\bar{x}$=4.08). İhtisaslaşmış işgücü geliştirme veya çekme programları olumsuz durumdadır ($\bar{x}$=2.76) ancak önem düzeyi yüksektir ($\bar{x}$=4.16). İhtisaslaşmış beyin gücü geliştirme veya çekme programları yoktur ($\bar{x}$=2.56) bunun sağlanabilmesi olumlu sonuçlar doğuracaktır ($\bar{x}$=4.16). Yerel üniversiteler tarafından iş kümesine destek verilmemektedir ($\bar{x}$=2.68) ancak olumlu etkisi çok yüksek seviyededir.

### 4.6  Kamu Kurumları

Bu son tabloda da kamu kurumlarının kümelenme ve ortaklaşa rekabete etkileri incelenmiştir. İş kümesini tanıyan ve destekleyen kamu kurumları olumsuz seviyededir ($\bar{x}$=2.88) ama önem durumu çok yüksektir ($\bar{x}$=4.20). Cari mevzuatta iş kümesinin rekabetçiliği olumsuzdur ($\bar{x}$=2.68) olumlu etkileri ortak fikir olarak benimsenmiştir ($\bar{x}$=3.32). İdari işlemlere kamu kurumları tarafından destek verilmemektedir ($\bar{x}$=2.68) bu durum ayakkabıcılık firmalarınca tepkiye yol açmakta ve öneminin olumlu etkileri vurgulanmaktadır ($\bar{x}$=4.08). Son olarak kamu kurumları tarafından iş kümesinin daha rekabetçi hale gelmesi için de destek verilmemektedir ($\bar{x}$=2.72) bu durumda tepki çekmekte ve olumlu etkilerinin görülmesi istenmektedir ($\bar{x}$=4.20).

| Mevcut Durum | Ortalama | Standart Sapma |
|---|---|---|
| 6.1. İş kümesini tanıyan ve destekleyen kamu kurumları | 2,88 | 1,23 |
| 6.2. Cari mevzuat iş kümesinin rekabetçiliği… | 2,68 | 1,24 |
| 6.3. İdari (bürokratik vb.) işlemlere kamu kurumları tarafından verilen destek | 2,68 | 1,18 |
| 6.4. Kamu kurumları tarafından iş kümesinin daha rekabetçi hale gelmesi için destek | 2,72 | 1,27 |
| **Önem Durumu** | **Ortalama** | **Standart Sapma** |
| 6.1. İş kümesini tanıyan ve destekleyen kamu kurumları | 4,20 | ,76 |
| 6.2. Cari mevzuat iş kümesinin rekabetçiliği… | 3,32 | 1,21 |
| 6.3. İdari (bürokratik vb.) işlemlere kamu kurumları tarafından verilen destek | 4,08 | ,81 |
| 6.4. Kamu kurumları tarafından iş kümesinin daha rekabetçi hale gelmesi için destek | 4,20 | 1,00 |

## 5  Sonuç ve Öneriler

Konya Ayakkabıcılık sektörüne ilişkin yapılan rekabet analizine göre, sektörün orta düzeyde rekabet gücüne sahip olduğu belirlenmiştir. Yapılan çalışmaya göre Elmas Modelinde yer alan dört ana faktörün yan ısıra Devlet faktörünün sürece olan etkisi de dikkate alınmıştır. Yapılan çalışmaya göre sektör faktör şartlar açısından fiziki şartlar olumlu görülmekle birlikte emek yoğun olan sektörde insan kaynakları konusundaki yetersizlik ciddi bir problem olarak görülmektedir. Bunun dışında sektörün bölgesel yoğunluğa sahip olması ve geleneksel ilişkilerin bulunmasına bağlı bilgi akışının sağlanması önemli avantajlar olarak görülmektedir.

Talep koşulları açısından incelendiğinde ise erkek ayakkabısı konusundaki uzmanlık sektör firmalarının yerel ve ulusal pazarda etkin olduklarını ortaya koymaktadır. Pazardaki imajın olumlu hale gelmesi ile pazardaki etkinliklerinin artacağı ve diğer bölgelere göre ulusal talebi doyurmada avantaj sağlayacakları dikkat çekmektedir. Ancak uluslararası ölçekte aynı avantaja sahip değillerdir. Bu konuda kümelenme çalışmalarının yürütülmesi (projenin kapanış toplantısı yapılmıştır), daha öncesinde deneyimi yüksek olan bir Ayakkabıcılar Odasının bulunması ve Ayakkabıcılar Derneğinin kurulması bağlamında TC Ekonomi Bakanlığı tarafından yürütülen URGE projesi bir fırsat olmakla birlikte bu projeye yeterince ilgi gösterilmemiş olması dikkat çekicidir.

İlgili ve destekleyici kuruluşlar içerisinde hayvancılığın ülke ve bölge genelinde önemli bir ivme kazanması, bölgeye yapılan lojistik alt yapı ve üst yapı yatırımları bölgenin kısa vadede avantajlı orta ve uzun vadede ise rekabette üstünlük sağlayacak hale gelmesine neden olacaktır.

Sektörün en güçlü yanlarından biri dışsal bir faktör olarak İşbirliği Yapılan Kurum/Kuruluşlardır. Özellikle Oda ve Derke başlıkları ile kurulmuş olan STK'lar ile KTO ve KSO gibi yerel ve güçlü yapıların destek olması dikkat çekicidir. Bunun yanı sıra Büyükşehir Belediyesi ve Selçuk Üniversitesinin eğitim yapısının gelişmesine yönelik kurumsal katkıları önemlidir. Hem işgücü hem lobicilik hem de rekabet değerlerine ilişkin önemli bir unsur olan tasarımın üretilmesi yönündeki çabalar sektörün önemli avantajları olarak karşımıza çıkmaktadır. Bunun yanı sıra kalite güvence konusunda ağırlıklı olarak TSE belgesi ile yetinmeye çalışan firmaların bu konuda uluslararası standartları hedefleyerek bunu yaygınlaştırması gerekmektedir.

Sektörün en önemli eksikliği ise strateji üretme gücü ve rekabet için gerekli ortamın üretilmesidir. Fiyat temele rekabete önem verilmesinin yanında özellikle Ar-Ge ve yenilikçiliğe ilişkin yatırım yapılmaması, taklit ve benzeşme yönündeki çabalar sektörün gelişmesine engel olduğu gibi farkındalık yaratılmasını ve rekabet avantajı sağlanmasını engellemektedir. Maliyet yönetimine önem verilmemesi ve bunun her ölçekteki firma için eksiklik olarak ortaya çıkmasının yanı sıra, bilgi birikiminin ve kalite değerlerinin yeterince kullanılamaması avantajın kaybolmasına neden olmaktadır. Nihayetinde pazarlama çalışmalarının daha profesyonel olarak yönetilmesi ve hatta bu konuda işbirliği yapılarak süreç için çaba sarf edilmesi sektörün öne çıkmasına katkı sağlayacaktır. Bir diğer ifade ile marka yatırımı ile bölgedeki üreticilerin fasonculuk stratejisinden zamanla vazgeçmesine neden olacaktır.

Dışsal bir faktör olarak devletin mevzuat ile ilgili rolüne bakıldığında hem iş-işçi güvenliği hem de çevre açısından önemli adımlar atılmış ve bu konuda sektördeki firmalara yönelik denetimler arttırılmıştır. Bu durum beraberinde kalitenin ve sorumluluğun içselleşmesine neden olacaktır. Yatırım teşviki konusunda Konya'nın eskiye göre dezavantajlı olmasına rağmen yapılan yatırımlarda ayakkabıcılık sektörünün etkili olmadığı görülmektedir. Girdi maliyetlerinin artması ve kur politikasına ilişkin devletin politikalarının tüm sektörleri etkilediği unutulmamalıdır. Bu bağlamda STK gücü dikkat çekici olan sektörün lobicilik gücünü kullanarak gerekli avantajlar için çaba sarf etmesi yarar getirecektir. Ayrıca:

- Hindistan, Pakistan ve Brezilya gibi önemli rakiplere karşı yerel avantajlarını kullanarak, özellikle de İtalya'nın daralan üretim yapısına bölgeye kaydırarak sağlanabilecek işbirliği sayesinde pazarda etkinliği arttırmak.

- Yenilikçilik yolu ile ürün işlevi konusunda (taban, saya ya da belirlenecek bir başka parçanın gelişimi) öne çıkacak yatırımlara yönelmek.

- Ortak bir marka ya da belli sayıda firmanın ortak bir marka yatırımı üzerine çaba sarf ederek, tedarik zincirindeki küçük firmaların belki de bir Uzak Doğu modeli gibi birlikteliğinin sağlanması (ki kümelenme çalışmalarında bu çaba ifade edilmekle birlikte proje sona ermiştir).

- Güven sağlayan etkinlikleri içsel ve dışsal faktörleri kullanarak gerçekleştirmek

- Dış ticaret ve küresel rekabet ile ilgili hedefler belirleyerek (yıllık olabilir) bunlara üzerine profesyonel işbirliklerine girmek, hedef ölçümü ve hedef pazar belirleyerek bu alanlara odaklanmak (bu konuda örneğin 10-15 firma hedef bir pazara odaklanarak süreci birlikte yönetebilir ki URGE projesi bu bağlamda devam eden bir fırsattır. Firmalar süreci başlatmıştır.).

- Niş pazarlar üzerine ortak çalışma gerçekleştirmek

- İtalya veya tasarım alanında uzmanlaşmış olan bölgelerle işbirliğine giderek uzun vadeli hedeflerin gerçekleşmesine katkı sağlamak.

- Sürekli mavi yakalı işgücü eksikliğinden şikayet edilmesine karşın aslında başta pazarlama ve finansman olmak üzere bu konuda yabancı dil bilgisine ve mesleki yetkinliğe sahip istihdamı sağlamak/arttırmak veya bu konuda ortak girişimle ve outsourcing ile hizmet satın almak.

- Kısa vadeli taklitçi kazançlar yerine ortak paydaya dayanan kümelenme çalışması gibi çabalarla stratejik adımları doğru biçimde yönetmek

- İşbirlikçi yapının yüksek güven sağlanarak ve örnek işbirlikleri ile başarılı örnekler sağlanması, pazarlama açısından önemli bir avantaj sağlayacaktır.

- Kurumsallaşma konusunda bölgede faaliyet gösteren fabrikaların istekli olması çarpan etkisine bağlı olarak diğer işletmeleri de olumlu yönde etkileyecektir. Bu da stok yönetiminden finansman yönetimine, verimlilikten dağıtım kanalındaki etkinliğe değin birçok zayıflığın planlı bir biçimde giderilmesine neden olacaktır.

- Bölgedeki eğitim tesislerinin etkin bir biçimde çalıştırılarak gerek Oda bünyesinde gerekse Milli Eğitim ve Üniversite işbirliği ile işgücü konusundaki sorunun giderilmesine, tasarım ile ilgili gelişme sağlanmasına ve buna bağlı olarak ortaya çıkan marka fırsatının yakalanmasında önemli bir araç olarak bulunmaktadır.

- Rekabetin algı değişikliği yönündeki gelişmeler açısından firmaların teknolojiyi takip etmesinden bilgi paylaşımındaki tercihleri fırsatlardan yararlanma avantajının ötesinde zayıflıkları gidermek için çok güç bir araçtır. Ancak bu aracın kurumsal ve nitelikli biçimde sonuç odaklı olarak kullanılması gerekmektedir.

- Bölgeye uluslararası yatırımcı aracılığı ile yenilikçilik getirilerek, özellikle KOBİ'lerin bu bağlamda gelişimine katkı sağlanabilir.

- Bölge erkek ayakkabısı ve spor ayakkabı konusundaki tercihinde bu ilişkiler bağlamında yenilikçi bir politika ve strateji bağlamında işbirlikçi rekabete girdiği takdirde yetkinlik kazanmış bir bölge olarak uluslararası alanda önemsenme şansına sahiptir.

# Topluluk Girişimciliği: Denizli Babadağlılar Çarşısı Örneği

# Community Entrepreneurship: The Example of Babadağlılar Bazaar in Denizli

Prof. Dr. Ayşe İrmiş (Pamukkale University, Turkey)

Asst. Prof. Dr. Bilge Akça (Adana Science and Technology University, Turkey)

Hatice Çoban (Pamukkale University, Turkey)

Mehtap Sarıkaya (Pamukkale University, Turkey)

## Abstract

Community entrepreneurship is a kind of entrepreneurial activity for common utilities that is carried out in cooperation with members of that community. Both entrepreneur and enterprise function together for the well being of community members in this kind of entrepreneurship sense since the main aim of community entrepreneurship is contribution to regional economy and social growth. Nevertheless, existence of community entrepreneurship can be possible in the light of an entrepreneurial leader rising from the community. Community entrepreneurship is seen as more essential for developing countries as rising of such countries is possible from below to top. Since entrepreneurs, who has intention to community entrepreneurship, obtain required capital in a different way than the traditional understanding of entrepreneurship. In this way, local people who normally do not prefer to invest in a private enterprise, are convinced to invest in a community enterprise. There are many examples of community entrepreneurship with established businesses in the context of people's sector in Denizli. Babadağlılar Office Block was organized as a model form of community entrepreneurship with the leadership of Kazım Kaynak in 1976. Even though, that was founded in order to market commodities of producers and sellers from Babadag, today, it is an office block in which sellers from Denizli come together to sell textile products usually made in Denizli. Within this scope, interview method is preferred as a research methodology. Interviews were done with Kazım Kaynak's son and Office Block manager. They told how Babadag Office Block emerged and how still operated.

## 1 Giriş

Girişimcilik, ekonomik sistemde meydana gelen değişikliklerle ilgili bir süreçtir. Bu sürecin ana aktörü girişimcilerdir. Girişimciler, bireyler ve toplum için değer yaratan ekonomik fırsatları oluşturan veya çıkan fırsatları değerlendiren ve yenilikler yapan kişilerdir (Muzyka ve diğ., 1995). Girişimcilik ise en genel tanımıyla girişimcilerin bir girişimde bulunmak üzere yerine getirdikleri değişik fonksiyonları içeren bir süreçtir. Girişimciler bu süreç içerisinde risk alan, ön ayak olan, taklit edebilen, yöneten, organize eden, yenilikçi, motive edici, vizyon sahibi ve liderlik vasfı olan kişi olarak görülmektedir. Ancak pek çok yazar girişimcilik ve girişim üzerine tanımlamalar yaparken sürecin farklı fonksiyonlarını öne çıkarmaktadır. Cole'e göre girişimcilik, bir kişi veya bir grup tarafından ekonomik mal ve hizmetin üretimi veya dağıtımı için, kâr amaçlı bir iş birimini başlatmak, korumak veya organize etmek amacıyla girişilen faaliyettir. McClelland'a göre ise girişimcilik, yapılan veya yapılacak olan şeyleri yeni ve daha iyi bir yolla yapabilmektir (Gordon ve diğ., 2009).

Önemli bir ekonomik faktör olarak düşünülen girişimciler ekonomik büyümenin de merkezidirler. Bu önemlerinden dolayı girişimcilerin farklı vasıfları ve fonksiyonları dile getirilmektedir. Kimi yazarlara göre dengeli bir ekonomik büyümenin gerçekleşmesinde girişimcilerin organize eden ve yöneten nitelikleri önemli kabul edilirken, bir kısım yazarlar da girişimcilerin yenilikçi yönü üzerinde durmaktadır. Bygrave ve Hofer'e göre girişimci, fırsatları algılayan ve bu fırsatları değerlendirmek için organizasyon kuran kişi olarak tanımlanmıştır. Shumpeter ise yaptığı tanımda, girişimcilerin yenilikçi yönünü öne çıkarmıştır (Popescu, 2013). Shumpeter'e göre bir girişimci için daha iyi bir durum daha yüksek bir kâra ulaşmayı sağlar. Yenilik süreci sayesinde gerçekleşen gelişmeyle, daha yüksek kâr fırsatını yakalayan girişimci, pazarda da daha iyi bir konumu elde eder. Shumpeteryan modelde yenilik ve girişimcilik ile ekonomik büyüme arasında her üçünün de birbirini etkilediği pozitif yönlü dairesel bir ilişki öne sürülmüştür (Galindo ve Méndez, 2014). Shumpeter'in yenilik anlayışı sadece ürüne mahsus bir yeniliğin çok daha ötesinde yer almaktadır. Yenilik bütün bir girişimsel süreç içerisinde, bu süreci ilgilendiren bütün fonksiyonlar için düşünülmektedir. Hammaddede ve hammaddeye ulaşım kanallarında, örgüt ve örgütleme fonksiyonunda, üretim süreçlerinde, üründe, pazarlama metotlarında ve pazarlama kanallarında, endüstri içerisindeki iş birliklerinde ve bütün olarak rekabet anlayışındaki yenilikler ve farklılaşmalar modern girişimcilik anlayışının özünü oluşturmaktadır.

Girişimciliğin, ülke, bölge ve dünya ekonomisi için taşıdığı önem, girişimcilik sürecinin farklı boyutlarda ele alınmasını ve yeni kavramlarla beraber düşünülmesini sağlamıştır. Bundan dolayıdır ki, iç girişimcilik, kurumsal girişimcilik, sosyal girişimcilik, topluluk girişimciliği gibi birbirinin kapsam alanına girmiş girişimcilik türleri literatürde yer almaktadır.

## 2 Topluluk Girişimciliği

Yoksul toplumlarda veya daha az gelişmiş olan yerlerde faaliyet gösteren girişimcilerin önünde onların gelişimini sınırlayan pek çok engel bulunmaktadır. Sermaye için yetersiz kaynak, kalifiye eleman eksikliği, finansal destek sağlayacak kurumların eksikliği ya da yokluğu, kurumlar arası etkileşimin azlığı, aynı sanayi kolundaki işletmelerin bir araya gelemeyişi, hammadde bulma ve pazarlama konusundaki eksiklikler ve benzeri pek çok sebep, geleneksel anlamdaki girişimciliğin (bireysel girişimciliğin) oluşturulmasında zaman alıcı ve cesaret kırıcıdır. Bu sebeple, işletme sahibi olan ya da olmayı düşünen girişimciler veya bu işletmelerdeki yöneticiler, bölgesel yetersizliklerin ve kısıtların üstesinden gelebilmek için stratejiler geliştirmektedirler. Bu stratejilerden biri de topluluk girişimciliğini oluşturmaktır (Johnstone ve Lionais, 2004). Topluluk girişimcileri kendi işletmelerinin lideri olmanın yanı sıra toplumsal organizasyonun gelişiminde de kritik rol oynamaktadırlar. Bu rollerden biri organizasyonel rol diğeri ise toplumsal roldür. Organizasyondaki liderlik rolünde girişimci çevresel şartlara uyum sağlamaya çalışırken, topluluk girişimciliği rolünde çevresel kuralları ortaya koyup, çevresel şartları değerlendirme yoluna gitmektedirler (Selsky ve Simith, 1994).

Ricasio'ya göre topluluk girişimciliği, asıl amacının sürdürülebilir kalkınma olduğu daha küçük yapılı yerel girişimciliğin akademik dildeki kullanımıdır. Topluluk girişimciliğinin temelinde toplumsal kültür köklerine dayalı işbirliği kavramı yatmaktadır. Özellikle gelişmekte olan ve nispeten yoksul bölgelerde tabandan tavana sağlanan bu girişim türünde topluluğu oluşturanlar yeni bir işletme veya bir örgütlenme meydana getirmek ve yürütmek için müşterek bir girişim içerisine girerler (Simith, 2012). Bu anlamda topluluk girişimciliği, belirli bir çevreyle ilgili olarak mekânsal bağlamdaki kolektif bir harekettir; hesaplı ve kişisel menfaatlerle ilgili bireysel davranışların yanı sıra girişimcilik için ek bir güdüleyici amaç olarak sosyal bağlılığı, bazı durumlarda kâr amacı gütmeyen hedefleri ve faydanın daha geniş bir topluluk içerisinde yaratılmasını ifade eder (Welter, 2011).

Topluluk girişimciliğiyle, küçük bir bölgede daha önceden var olan meşguliyetlerin, o bölgede yaşayan ve ortak çıkarları olan yerleşik topluluk tarafından yenilikçi bir şekilde yeniden yapılandırılması sağlanmaktadır. Yapılan çalışmalarda, topluluk girişimciliğinin başarısının, ilgili yerleşim yerindeki yerel sorunlara duyarlı olunması ve bu yerleşim yerinin kaynak, imkân ve tecrübelerinin girişimciliğe kanalize edilmesiyle gerçekleştiği görülmektedir. Bu yönüyle başarılı bir topluluk girişimciliği, topluma hem ekonomik hem de sosyal fayda sağlamaktadır (Haugh ve Pardy, 1999). Keza, topluluk girişimciliğinin en önemli amaçlarından biri de toplumun fayda elde etmesini sağlamak olması sebebiyle, topluluk girişimciliği projelerine çoğu zaman kalifiye teknisyenler, uzmanlar, iş adamları vb. gönüllü olarak katılmaktadırlar. Bu açıdan topluluk girişimcileri hem gönüllü olarak çalışan elemanlardan yardım almakta hem de profesyonel önerilerden faydalanmaktadırlar. Yapılan araştırmalarda da, herhangi bir kriz durumunda, gönüllü çalışanlar pazardaki değişimlerin etkilerini hafifletmektedirler (Johnstone ve Lionais, 2004).

Topluluk girişimciliğini kişisel kâra odaklı geleneksel girişimcilikten ayıran en önemli vasıf, topluluk girişimciliğinde, topluluğun hedefleri takip edilerek yeni fırsatların yakalanmaya çalışılması ve toplumun geneli açısından toplumsal bütünleşmeye yönelik, sürdürülebilir gelişmenin amaçlanmasıdır. Bu amaç doğrultusunda, topluluk girişimlerinde, topluluğun hedefleri, geleneksel meslek uygulamalarıyla birleştirilmektedir (Yurtseven ve Kaya, 2010). Topluluk girişimciliğinin bu özelliği onun, çoğu zaman sosyal girişimcilikle karıştırılmasına sebep olmaktadır. Sosyal girişimcilik sosyal değer yaratmaya odaklı, sosyal girişimci, sosyal girişim, pazar yönelimi ve sosyal yenilik kavramlarına dayalıdır (Choi ve Majumdar, 2014). Dess'e göre sosyal girişimlerde esas olan "sosyal misyondur". Sosyal girişimler toplumun ihtiyaçları için sorumluluk ve risk alarak, kârı takip etmekten ziyade temel amaç olarak sosyal değişimin yaratılması ve kendi müşteri grubunun gelişiminin sağlanması için çalışırlar (Özdevecioğlu ve Cingöz, 2009). Sosyal girişimcilikte sosyal problemler, özgeciliğin ve hayırsever bağışların ötesine geçilerek daha sürdürülebilir ve birbirine geçmiş çözümlerle desteklenir. Sosyal misyonun gerçekleştirilmesine yönelik olarak da ekonomik ve girişimsel faktörler, fırsatların algılanması ile değerlendirilir (Aslan ve diğ., 2012). Hâlbuki sosyal girişimde olması gereken temel özellikler topluluk girişimciliğinde yoktur. Topluluk girişimciliğinde yeni yollarla da olsa piyasaya dayalı bir örgütlenmeye gidilmekte ve işletme kurulmaktadır. Topluluk girişimciliği vakıf gibi çalışmaktan ziyade işletme mantığına odaklandığı için sosyal girişimcilikten ayrılmaktadır. Topluluk girişimciliği geleneksel girişimciliğin araçlarıyla sosyal girişimciliğin amaçlarına ulaşmaya çalışmaktadır (Johnstone ve Lionais, 2004).

Topluluk girişimciliğinin temel olarak beş özelliğinden bahsetmek mümkündür. Bunlardan ilki, topluluk girişimciliğinin topluluğun katılımına bağlı olmasıdır. Girişimcilikte topluluğun söz sahibi olması onun girişimle ilgili sosyal, kültürel, ekonomik ve çevresel sorunlar hakkında ve ihtiyaçların ne olduğu konusunda daha gerçekçi sonuçlara ulaşmasını sağlar. Bir diğer özelliği, topluluk girişimciliğinin hedeflerinin çeşitliliğidir. Bu tür girişimler sadece ekonomik sürdürülebilirlik ve kâr amaçlarının değil aynı zamanda toplumsal, ekonomik, çevresel ve kültürel pek çok hedefi gerçekleştirmek üzere yola çıkmaktadırlar. Üçüncü özelliği, topluluk girişimciliğinin gerçekleşme ihtimalinin o girişime katılan topluluk üyelerinin becerilerine dayalı olmasıdır (Peredo ve Chrisman, 2006). Dördüncü özelliği ise topluluk girişimciliğinin gerçekleşmesi için, yerel gelişmeyi sağlamak üzere mevcut yerel kaynakların girişime kanalize edilmesi gereğidir. Çünkü topluluk girişimi hem toplumu hem de kişisel girişimleri teşvik eden bir ağ sistemi oluşturmaktadır (Borch ve Førde, 2008). Yüksek

kâr elde etmektense ekonomik sürdürülebilirliği daha önemli gören topluluk girişimciliğinin bir diğer özelliği ise topluluk girişimcilerinin, müşterilerini, diğer örgütleri tercih etmek yerine topluluk girişimlerinden alışveriş etmeye ikna edebilmeleridir. Kilkeny ve arkadaşlarının yaptığı çalışmada (1999), topluluk içerisindeki grupların karşılıklı fayda sağlamaya yöneldiklerini görülmektedir. Başka bir ifadeyle, bir topluluğun üyeleri, topluluk girişimciliğine olan müşteri sadakatlerini artırarak toplumlarına fayda sağladıklarının farkına varmaktadırlar (Johnstone ve Lionais, 2004).

Topluluk girişimciliğinin ortaya çıkmasında rol oynayan pek çok faktörün dört başlık altında toplanması mümkündür (Peredo ve Chrisman, 2006).

1. Toplumsal ve Ekonomik Sıkıntılar: Ekonomik krizler ve bireysel imkânların eksikliği, toplumsal parçalanma süreçleri, topluma veya toplumun temelini oluşturan alt gruba yabancılaşma, çevresel bozulma, savaş sonrası yeniden yapılanma ve büyük işletmelerin pazardaki stratejilerine cevap verme ihtiyacı topluluk girişimlerinin ortaya çıkmasında rol oynayan sosyal ve ekonomik sebeplerdir. Bu faktörler genellikle birbiriyle ilişkilidir ve pek çok toplumda aynı anda bir kaçının meydana gelmesi muhtemeldir.

2. Artan Öğrenme: Helmsing'e göre topluluk girişimciliği kolektif bir deneyime dayalı sürecin sonucunda oluşmaktadır. Yaşanan deneyimler toplumun bilgi birikiminin artmasına fırsat vermektedir ve bu bilgi birikimi topluluklara böyle bir girişim kurma konusunda avantaj sağlamaktadır.

3. Toplumsal Sermayeye Bağlı Olması: Topluluk girişimciliği için topluluğun kendisi en büyük ve değerli sermayedir. İnsanlar daha iyi işler yapabilmek, kıt ve fakirleşmiş kaynakları etkin kullanmak, pazarlara daha çok girebilme imkânı oluşturmak gibi sebeplerle toplumsal ilişki ağlarını ve toplumsal sermayeyi bir araya getirmenin yolu olarak topluluk girişimciliğini görmektedirler.

4. Topluluğun Büyüklüğü: Geniş toplulukların, küçük topluluklara nazaran daha avantajlı olduğu söylenebilir. Topluluğa dahil olan her yeni insan toplumsal ağdaki potansiyel ilişki sayısını artırarak toplumsal sermayeye katkı verebilmektedir. Ancak yapılan çalışmalarda toplumsal girişimcilikte orta büyüklükteki bir topluluğun daha başarılı olduğu sonucu ortaya çıkmıştır.

## 3 Bir Topluluk Girişimciliği Örneği Olarak Denizli Babadağlılar Çarşısı

Babadağlılar Çarşısı 1975-1976 yıllarında bir topluluk girişimi modeli şeklinde, kendisi de Babadağlı olan Kâzım Kaynak önderliğinde, diğer Babadağlı tüccarların bir araya gelip örgütlenmesi neticesinde oluşan bir girişimdir. İlk kuruluşu itibariyle sadece Babadağlı olan ve toptancılık yapan tüccarların örgütlenmesiyle oluşan bu girişimin gayesi, bir taraftan Denizli'de o döneme göre daha modern ve müşterilerin daha rahat edecekleri bir alışveriş alanı oluşturmak ve böylece Denizli iline faydalı olmak, diğer taraftan da Babadağlı üreticilerin ve tüccarların işlerini kolaylaştırıp tedarik kaynaklarına daha rahat ulaşabilmeleri, daha rahat pazar bulabilmeleri ve daha fazla kazanç elde etmelerini sağlamaktır.

### 3.1 Araştırmanın Kapsamı ve Yöntemi

Araştırmanın amacı, bir topluluk girişimi olarak örgütlenen Babadağlılar Çarşısının kuruluşunu, zaman içerisindeki yapılanmasını ve değişimini incelemektir. Bu bağlamıyla bir topluluk girişimciliği modeli olduğu düşünülen Babadağlılar Çarşısının kuruluşu ve işleyişi ile günümüze yansıyışı araştırmanın kapsamını oluşturmaktadır. Araştırma yöntemi olarak nitel araştırma teknikleri kullanılmıştır. Yukarıda da ifade edildiği gibi topluluk girişimciliği kolektif bir öğrenmeye dayalıdır ve toplumsal sermayeye bağlıdır. Bu sebeple ilk olarak, bir topluluk girişiminin arka planını oluşturan şartlar itibariyle, Denizli'deki üretim ve sanayi geçmişi ve geleneği ile Denizli'nin bir ilçesi olan Babadağ'ın üretim ve ticaret geçmişi ve geleneği incelenmiştir. Daha sonra, Babadağlılar Çarşısının kuruluşu ve günümüze kadar gelişini irdelemek üzere Babadağlılar Çarşısı Müdürü Mehmet Kaynak ile merhum Kâzım Kaynağın oğlu ve hali hazırda Babadağlılar Çarşısı Yönetim Kurulu Başkanı Mustafa Kaynakla ve Babadağlılar Çarşısında dükkân sahibi olan veya dükkân işleten beş esnafla mülakat yapılmıştır. Mehmet Kaynak ile Mustafa Kaynak mülakat esnasında isimlerinin kullanılmasına izin vermekle beraber, mülakat yapılan esnaftan bir kısmı kendi isimlerinin ve dükkân isimlerinin yayınlanmasına izin vermemiştir. Bu sebeple esnaf isimleri araştırma bulguları anlatılırken kodlanarak kullanılacaktır.

### 3.2 Denizli İlinin Üretim ve Sanayi Geçmişi ve Geleneği

Denizli ilinin üretim geleneği Selçukluların 1100 yılında Denizli'ye yerleşmesinden kısa bir süre sonra Ahi Kaysar'ın öncülüğünde bugünkü Yeşilyuva kasabasında başlayan deri üretimine kadar uzanmaktadır. Daha Sonra Ahi Evran bu işi Denizli'ye taşıyarak, işin sürdürülme görevini Ahi Sinan'a bırakmıştır. Ahilik terbiye ve eğitimi, Denizli'deki üretim kültürünün gelişmesinde ve günümüze taşınmasında uzun sure önemli bir rol oynamıştır (İrmiş ve diğ., 2010). Osmanlı Devleti döneminde de dericilik devam etmekle beraber, bu dönemde Denizli'nin en bilinen üretim konusu basmacılık ve kuşakçılık olmuştur. Cumhuriyetin ilk dönemlerinde tüccarlar, dokuma ustalarına girdi ve makine temin ederek, hatta üretimin yapılabilmesi için küçük atölyeler açarak yaptırdıkları üretimi bizzat kendileri pazarlamışlardır. Ancak 1940'lı yıllardan sonra dokumacılıktaki gelişme ve mamullerinin kıymetlenmesiyle Denizli dokumacıları, kendi nam ve hesaplarına tamamen bağımsız

çalışma yoluna gitmişlerdir. Üretim geleneğini ve uzmanlaşmasını ağırlıklı olarak dokumacılıkta sürdüren Denizli'de tekstil, bir sanayi koluna dönüşmüş olmakla beraber tarihsel bir süreklilikle dokumacılık hâlâ evlerde ve evlerin altındaki atölyelerde gerçekleştirilmektedir (Cillov, 1949).

Denizli tekstil sanayindeki asıl büyük gelişme, 1980'li yıllarda Türk ekonomisinin dışarıya açılmasıyla gerçekleşmiştir. Daha önceden dokumacılık konusunda Denizli'nin en önemli ilçelerinden olan Babadağ, Kızılcabölük ve Buldan'da evlerde veya evlerin altında kurulan atölyelerde yapılan üretim sanayie taşınarak fabrikalarda yapılan üretime dönüşmüştür. 1990'lı yıllarda üretimde kullanılan teknolojide yenilenme gerçekleşmiş, 2000'li yıllarda ise üretilen ürünlerin dizaynı ve kalitesinde önemli yenilikler ve gelişmeler kaydedilmiştir. Ancak Denizli tekstil sanayicisi henüz pazarlama konusunda küresel piyasalarda kendi markasıyla rekabet edebilecek anlamlı bir pazarlama atılımını gerçekleştirememiş, yurt dışındaki işletmelere ve onların markalarına fason üretim yapmanın ötesine geçememiştir. Denizli tekstil sanayi yurt dışına fason üretim yaparak, özellikle, havlu ve bornoz konusunda küresel şebeke organizasyon içerisinde kendine yer edinirken, Babadağ, Kızılcabölük ve Buldan'da hâlihazırda devam eden üretimle, Denizli tekstil sanayine ara mamul temin edilmektedir. Aynı zamanda Babadağ çarşısı ve benzeri toptan ve/veya perakende satış yapan tekstil dükkânları da mamullerini bu ilçelerdeki dokuma tezgâhlarına üretim yaptırarak temin etmektedir.

### 3.3 Babadağ İlçesinin Üretim ve Ticaret Geçmişi ve Geleneği

Denizli tekstil sanayinin ve tekstil ticaretinin önemli tedarik alanlarından biri olan Babadağ ilçesi aynı zamanda sanayici ve ticaret erbabı yetiştirme konusunda da büyük öneme sahiptir. Dağlık bir arazide yer alan Babadağ ilçesinde tarım ve hayvancılık oldukça kısıtlı düzeyde gerçekleşmektedir. Ancak, ilçedeki hemen hemen her evin altında yer alan küçük atölyelerde aile nüfusuna ve ailenin ekonomik durumuna göre sayısı belirlenen dokuma tezgâhlarında gün boyunca bizzat aile bireyleri tarafından üretim yapılmaktadır. Öyle ki, Babadağ ilçesindeki evlerin önemli bir kısmı sürekli çalışan tezgâhların titreşiminden dolayı yana doğru eğik durumdadır. Babadağ ilçesinde dokumacılık çok yaygın olmakla beraber pamuk yetiştirmeye uygun coğrafi yapısının olmaması, hammaddenin çevre illerden karşılanmasıyla mümkün olmuştur.

Babadağ ilçesinde 1930'lu yıllarda kutil-sedirlik, döşemelik kumaş, perdelik, elbiselik kumaşlar, fitilli, ipekli, potlu çarşaflar dokunmaya başlanmıştır. Üretimin miktarı ve niteliğindeki asıl artış, elektrikli tezgâhlara geçilmesiyle olmuştur. Babadağ ilçesindeki üretim ve iş yapma geleneği, tamamen ev içi veya evin altında, eve dahil edilmiş atölyelerde gerçekleşmektedir. Sağlıklı olan yaşlılar ve çocuklar da dahil, ailenin bütün fertleri gün boyu tezgâhlarda nöbetleşe çalışarak üretime katkı vermişlerdir (Ateşok, 2005). 1995 yılında, Babadağlı bir sanayici olan Mehmet Küçüker'le yapılan mülakatta, M. Küçüker, daha önceden Babadağ'da dokumacılığı, evde ve evin altındaki atölyede yaptığını, sanayileşme sürecindeki atılımın ardından üretimi Denizli'ye, kaydırdıklarını ve fabrika üretimine geçtiklerini ifade etmiştir. M. Küçüker Babadağ'daki üretimlerini anlatırken, lastik çizme olmadığı için ipliklerin boyama işlemi sürecinde, ipleri yıkama işini ayaklarına teneke giyerek derede yaptığını, üretimi ise evde ve evin altındaki atölyede bütün aile bireyleriyle gerçekleştirdiklerini, hatta misafirlerini de atölyede işe devam ederken ağırladıklarını anlatmıştır (İrmiş, 1995). Keza, Sabah Gazetesine verdiği röportajda Ali Helvacı (kendisi o dönemin Babadağ Belediye Başkanıdır), Babadağlıların üretim, ticaret ve sanayi içerisindeki rollerini şöyle özetliyor: "Bizim en büyük şanssızlığımız olan tarım arazisine sahip olmamamızı bir şans haline dönüştürdük. Dede mesleği dokumacılığı geliştirdik, en kaliteli malları ürettik, kendi pazarımızı yarattık, kısaca hem üretici hem de kendi mallarımızın tüccarı olduk. İlçeye elektrik gelmesi ve tezgahların otomatiğe çevrilmesi ile birlikte üretilen mallar çoğaldı, tüccarlar sermayesini oluşturdu ve Denizli'ye göç ederek kendi fabrikalarını kurdular" (Sabah, 2003).

Babadağlıların bir topluluk olarak kendi içlerinde örgütlenmeleri ve işbirlikleri sadece aile bireyleriyle ve ev içerisinde olmamıştır. Babadağlı işadamları ve tüccarları Babadağlılar olarak da kendi aralarında bir takım iş birlikleri ve örgütlenmeler gerçekleştirmişlerdir. Meselâ, Babadağ Dokumacılar Kooperatifinin üye sayısı 1943 yılında 1390'dır (Ateşok, 2005). Günümüzde de varlığını sürdüren BASİAD (Babadağlı Sanayici ve İş Adamları Derneği) ve Babadağlılar Çarşısı ile hem Babadağ için hem de Denizli sanayi için önemli işbirlikleri ve bir kısım girişimler gerçekleştirilmiştir. Ancak, Babadağlı girişimcilerin en bilinen işbirliği örneği geçmişten gelen, daha sonra Denizli'de de yaygınlaşan ve günümüzde çok az sayıda olmakla beraber hâlâ kullanılan "Babadağ Senedidir". Babadağ senedi 20. Yüzyılın başında Babadağ'da tekstil tüccarları arasındaki alışverişte kullanılan ve tamamen güven esasına dayanan, bu güvenden dolayı da tüccarlara karşılıklı itibar katan bir pusuladır. Mal alan tüccar herhangi bir kâğıda borçla ilgili rakamı yazarak kaşeler ve dokumacıya verir. Dokumacı bu pusulayla, dokuma için gerekli olan ipliği tedarikçiden alır. Tedarikçi, dokumacının kendine borcunu, dokumacıya mal sipariş etmiş olan tüccardan, pusulayı göstererek alabilir. Bu yöntem literatürde "Tekstilde Babadağ Modeli" olarak yer almıştır (Yavuzçehre ve Özgür, 2006) 1980'li ve 1990'lı yıllarda da Denizli girişimcileri arasında yaygınlaşan ve bilinen bu model Denizli tekstil sektörünün gelişmesinde de önemli rol oynamıştır.

## 4 Mülakat Çalışmasından Elde Edilen Bulgular

### 4.1 Babadağlılar Çarşısı'nın Kuruluşu ve Yönetimi

Babadağlılar Çarşısı'ndaki ilk mülakat çarşının yöneticisi Mehmet Kaynak'la yapılmıştır. Mehmet Kaynak'ın aktardığı bilgilere göre Babadağlılar Çarşısı Kazım Kaynak'ın önderliğinde biraraya gelen "Babadağ'ın ileri gelenlerinin el vermesi" sonucunda yapılmıştır. Çarşının planı mimar Cengiz Bektaş tarafından çizilmiş ve inşaatı 1976 yılında tamamlanmıştır. Babadağlılar Çarşısı 2012 yılında tescil edilmiştir. Esnafın çoğunluğu Babadağlıdır ve dükkânların sahipliği genellikle babadan oğula geçmektedir. Babadağlı esnafa göre çok daha az miktarda olmakla beraber, Babadağlı ve Kızılcabölüklü esnaf da son 15-20 yıldır, çarşıda bulunmaktadır. Bununla beraber Denizli dışından esnafı Çarşı'ya dahil etmemeye çalışmaktadırlar. Bütün dükkân sahiplerinin ferdi tapusu mevcuttur ve dükkânların %60'ı bizzat dükkân sahibi olan esnaf tarafından işletilmektedir. Dükkânların geri kalan kısmı ise kiraya verilmiştir. Aynı zamanda, dükkân sahiplerinin bir kısmı aslında tekstil üretimi yapan, ürünlerini Babadağlılar Çarşısındaki dükkanlarında perakende veya toptan satan ve satış işlemini de dükkânda maaşlı görevlendirdikleri bir kişiye yaptıran sanayicilerdir.

Mehmet Kaynak çarşının yönetimiyle ilgili şu bilgileri vermiştir: "Babadağlılar Çarşısında toplam 8000 pay bulunmaktadır. Babadağlılar Çarşısını yönetmek üzere yönetim kurulu üç yılda bir toplanır. Müdür olarak yönetim kurulunun kararlarını yerine getirmekteyim. Her dükkân genel giderlere katılmakla mesuldür ve aidat verir. Aidatlar dükkânın yerine ve büyüklüğüne göre belirlenir. Bu çarşıyı Kâzım Kaynak yaptırdı, oğlu Mustafa Kaynak da şu anda yönetim kurulu başkanlığını yürütüyor ve bırakmasını istemiyoruz".

Mehmet Kaynak'ın ısrarla üzerinde durduğu hususlardan biri de dükkânlardaki çalışanlarla ilgilidir. "Yanımızda çalışanlar da genellikle Babadağlıdır. Babadağlı olan işletme sahipleri Babadağlıları çalıştırmak ister. Babadağlı olmak bizim için referanstır. Kendisine dükkânın anahtarını veririz. Kolay kolay personel devri olmaz, aynı işyerinde yıllarca çalışırlar. Asgari ücret uygulanır ancak ücretlendirme yapılırken tecrübe de göz önünde bulundurulur". Mehmet Kaynak'a Babadağlılar Çarşısı'nın toplam cirosunun ne kadar olduğu sorulmuş fakat toplam ciroyu bilmediği ve tahmin edemediği, "her kasanın kendine çalıştığı" ifade edilmiştir.

Mehmet Kaynak'tan alınan bilgi doğrultusunda, Babadağlılar Çarşısı yönetim kurulu başkanı ve girişimin önderi olan Kâzım Kaynak'ın oğlu Mustafa Kaynak ile mülakat yapılmıştır. Babadağlılar Çarşısı yapılırken henüz 17-18 yaşında olduğunu, okuldan sonraki zamanını işyerinde geçirdiğini, dolayısıyla Babadağlılar Çarşısının yapımına yakından şahit olduğunu hatta inşaat yapılırken kamyonların geliş-gidişiyle ilgilendiğini, inşaatta çalışan işçilerin puantajlarını tuttuğunu söyleyen Mustafa Kaynak'ın Babadağlılar Çarşısı'nın kuruluşuyla ilgili anlattıkları şunlardır:

Babadağlılar Çarşısı diye bilinen yer 1975 senesinde, içinde bir kıraathane olan geri kalanı mezbelelik, adını şu an unuttuğum bir kişinin adeta işgalinde olan bir yer idi. Mülkün sahipleri mülkün uzağında, ulaşım ve iletişimin bugüne göre o dönemlerde çok zor olmasından dolayı mülkleriyle ilgilenemedikleri için Denizli'de bir adam tabir yerindeyse, burayı kendisi için kullanıyor, kahveye, kıraathaneye kiraya veriyor. Kirayı alıyor cebe katıyor, mülk sahiplerinin hiç bir şeyden haberi olmadığı için 1 liralık da maddi menfaatleri olmuyor. Yani işgal dediğim o. Yerin sahibi, Denizli'nin ilk milletvekillerinden, adını hatırlamıyorum, soyadı Başkaya olan bir beyefendi. Kendisinin ölümünden sonra evlatlarına kalmış. Bizim işyerimiz de bunun hemen karşısında olduğu için rahmetlik babamın dikkatini çekiyor bu yer. Burada Babadağlı hemşerileriyle beraber, ortak bir organizasyon fikri oluşuyor kafasında. 5-10 arkadaşıyla bu fikri konuştuktan sonra onlardan da olumlu geri dönüş olunca yerin gerçek sahipleriyle temasa geçiyorlar. Varislerin adına yetkili olduğu için kendisi de varislerden biri olan ve o günkü görevi Gümrükler Genel Müdürü olan Enver Başkaya beyefendiyle, temasa geçiliyor. Bir telefon görüşmesinden sonra Ankara'ya gidildi. Ben de gittim oraya, babam beni de götürdü. Denizli'den dört arkadaş bir de ben beş kişi gittik. Enver Bey'in evinde bizi ağırladılar. Gerekli görüşmeler yapıldı, rakamlar alındı verildi. Daha sonra, Enver Bey, diğer kardeşleriyle görüştükten sonra bu yerin satışı gerçekleşti. Yer satın alındı. Yer satın alındıktan sonra 15-18 ortağı vardı, Babadağlılardan oluşan. Kiminin iki, kiminin üç payı vardı. O günkü yasaların müsaade ettiği bir şekilde adi komandit bir şirket kuralım dendi. Cengiz Bey, o zaman için gündemde olan bir mimardı. Cengiz Bey, çarşının mimarı oldu. Amerika'da bir müzede olan, merdivensiz bodrumdan çatıya kadar çıkılabilen bir proje uygulandı. İnşaat o günkü teknolojinin imkânlarıyla yapıldı. Biraz zor yapıldı. Buranın hafriyatı için o zaman dozer, kepçe olmadığından Dinar'dan ekskavatör getirtildi. Herhangi bir araç olmadığı için de trenle getirildi. Paletli bir ekskavatördü. Onun istasyondan Babadağlılar İş hanına getirilmesi epeyce bir zaman aldı. Trafik durdurularak araç taşındı. Onun dışında, çarşı bodruma kadar indiği için kanalizasyon sorun oldu. Ulu Caminin kanalizasyonundan faydalanıldı. Yine alet edevat olmadığından biraz zor oldu. Kastamonu ve Tokat'tan kanalizasyon için gerekli tüneli açmaya köstebek denilen işçiler getirildi, onlar bu işi yaptı. Yani alet olmadığından hep insan gücü ile yapıldı. Betonlar bile üst katlara tenekeler içinde insanların omuzunda ya da vinçle çıkarıldı. Orayı herhangi bir müteahhide vermedik. Daha uygun, daha kaliteli yapmak için sürveyan diye tabir edebileceğimiz bir inşaat ustasıyla işe başladık. Malzemeleri bizatihi babam aldı. Usta bütün organizasyonu yapıyordu, işçilerini getirtiyordu. Kerestesi için rahmetli babam hususi Eskere'ye (Denizli Beyağaç İlçesinde Eskere Orman İşletme Müdürlüğü) gitti. Birinci elden, ucuz ve kaliteli kereste için ihaleye girdi. Babam iyi bir marangoz da buldu geldi, işleri o yaptı. 76

senesinin Ağustos ayında bina bitti. İş hanının açılışı için her türlü hazırlık yapıldı. Dana kesildi, yemekler hazırlandı. Ancak açılışın olduğu sabah, Denizli depremle uyandı. Kesilen dananın etleri, zannediyorsam yetiştirme yurduna verildi. O depremde, sıvasında bile çatlağı olmayan 5-10 binadan biridir.

Babam rahmetli, çarşıda bir kata kuyumcuları, bir kata manifaturacıları, bir kata tuhafiyecileri getirmek istedi. Zaman içinde geldiler fakat pek verim alınamadı. Babam kapalı bir alanda, yan yana, katlı ve dükkânların yakın olduğu bir yer düşünmüştü. Müşteriler, Kaleiçinde (Kaleiçi, Denizli'nin eskiden beri var olan alışveriş alanlarından biri olup, meselâ kuyumcular bir yerde, manifaturacılar bir yerde, toplamıştır ve yokuş yukarı gidilerek alışveriş yapılır) sıcakta soğukta mesafeler çıkarak buldukları manifaturacılar, kuyumcular kısımlarını Babadağlılar Çarşısında içeride ve daha rahat bulacaklardı. 76'lı yıllardan 90'lı yıllara kadar Babadağlılar Çarşısı, toptan ticarete yönelik bir yer olarak devam etti. Perakende olarak sadece tuhafiye, konfeksiyon ve birkaç ayakkabıcının olduğu bir yerdi. 90'lı yıllardan sonra, yerli turizmin gelişmesiyle birlikte Babadağlılar Çarşısı tamamen perakende ticarete dönüştü. Denizli ilçelerinde üretilen ürünlerin pazarlandığı bir yer haline geldi. Tabi bunda geçen zamanın da etkisi oldu. Eskiden çarşının önüne kamyon park etmek, mal indirmek-bindirmek kolaydı. Trafiğin oluşmasıyla bu zorlaştı. Böylece Babadağlılar Çarşısı Denizli'de, ilçelerinde üretilen tekstil ürünlerinin satışının yapıldığı bir yer haline geldi. Yerli malı denilince akla gelen yer oldu.

Babadağlılar Çarşısı ilk kurulduğunda dükkânları paylaşalım diye bir düşünce, hiç bir bölünme yoktu ve ortak üzerine gidiliyordu. 15-16 sene böyle gitti. Kiralar toplanıyor, hisse sahiplerine dağıtılıyordu. Hem ortak olup hem kiracı olan da vardı. Ama bazı ortaklar atacağız, satacağız dediler. Babamın fikri anonim şirkete çevirelim, satmak isteyen hisselerini satsın ve burası birlik içinde devam etsin diyeydi ama herkes mülkünü bilsin dediler ve bölündü. Babamın fikri paylaşım değildi, buranın kendi içinde dönen bir şirket haline gelmesiydi. Bazı ortaklar diğerlerini bir şekilde etkiledi".

Babadağlılar Çarşısının yönetim kurulunda hangi konular üzerine kararlar alınıyor sorusuna Mustafa Kaynak, "Mevcut işleyiş, hanın temizliği, ısıtması, aydınlatması gibi mevcut bir iş yerinde olması gereken sorunlar, koridordaki malın fazlalığı, koridoru daraltması, reklamın yapılması, çarşıya daha fazla insanın gelmesi gibi sorunlar geliyor" şeklinde cevap verdi.

### 4.2  Babadağlılar Çarşısı'daki İşleyiş

Babadağlılar Çarşısı yukarıda da belirtildiği üzere ilk kuruluş aşamasında ve daha sonraki 15-16 yıllık süreç içerisinde sadece Babadağlı esnafın, bir topluluk halinde dükkân sahibi olması üzerine düşünülerek dizayn edilmiş bir organizasyon şeklinde çalışmıştır. Keza Esnaf A, bu durumu "Burası yapılırken tamamı Babadağlılarındı, şimdi de esnafın çoğu Babadağlı, hele dükkân sahiplerinin neredeyse tamamı Babadağlı. Kiracıların bir kısmı Denizli'nin başka ilçelerinden" diyerek teyit etmiştir. Esnaf B ile yapılan mülakatta, Babadağlıların bir topluluk halinde yaptıkları işbirliğiyle ilgili sorulan soruya "Babadağlılar birbirini tutar, birbiriyle yardımlaşır" şeklinde cevap verilmiştir. Kendisi de Babadağlı olan esnaf B, akrabalarından üç kişiyi yanında çalıştırdığını, üçünün de daha sonra çarşıda dükkân açtığını belirtmiştir.

Babadağlılar Çarşısının en önemli özelliklerinden biri çoğunlukla geleneksel ürünler satması olarak bilinmektedir. Bununla beraber, Çin ve Hindistan'dan getirilen ürünler de dikkati çekecek kadar önemli ölçüde Babadağlılar Çarşısı'nda satışa çıkarılmıştır. Babadağlılar Çarşısı Müdürü Mehmet Kaynak Çin malının satışıyla ilgili, "her malın kendine göre bir alıcısı var, oradan gelenle burada yapılan çok farklı, burası geleneksel Denizli ürünlerinin satışıyla bilinir" diyor. Dükkânında tamamen Denizli'de üretilen ve ağırlıklı olarak Denizli'ye mahsus motifleri olan ürünler satan ve dedesinin tezgâhında yıllarca çalışmış, işini büyük bir sevgi ve ilgiyle yaptığını söyleyen üniversite mezunu Esnaf C'ye göre de, "Denizli'de bu iş bu çarşıdan başka yerde olmaz".

Mülakat yapılan esnafların her biri ürünlerinin yarısından daha fazlasını toptan sattıklarını, geri kalan kısmını perakende sattıklarını ifade etmişlerdir. Yapılan mülakatlarda Babadağlılar Çarşısı esnafının toptancı bulmak için pazar aramadıkları, reklam yapmadıkları, hatta çoğunun internet sayfasının bile olmadığı, Türkiye'nin pek çok yerinden ama özellikle sahillerden gelen toptancıların gelip sipariş verdikleri ve mamul satın aldıkları belirtilmiştir. Esnafın ürün tedariki ise hâlâ geleneksel yollarla olmaktadır. Mülakata katılan esnaflar, Babadağlılar Çarşısındaki tekstil ürünü satan dükkân sahiplerinin, ürün tedarikleri için Babadağ, Kızılcabölük ve Buldan ilçelerinde, bir miktar da Denizli içinde bulunan ev tipi üretim yapan "tezgâhlara" sipariş verdiklerini ifade etmişlerdir. Dükkânında ürünlerini tedarik ettiği dokumacıların tezgahları başında çalışırken çekilmiş fotoğraflar bulunan Esnaf D bu durumu ve tezgâh sahipleriyle ilişkilerini şöyle anlatmaktadır: "Bize iş yapan 25 tane el tezgâhı-makine tezgâhı var. Tezgâhlar dokumacılara ait, 12-15-20 senelik dokumacılarımız var. Dokumacılarla herhangi resmi bir sözleşmemiz yok, resmî bir sözleşme yapmak etik gelmez. Sadece ağızla verilen bir söz var".

### 4.3  Babadağlılar Çarşısı'nda Gelenekler ve İş Değerleri

Topluluk girişimciliğinin önemli özelliklerinden biri de o yöreye ait gelenekleri ve kültürel vasıfları devam ettiriyor olmasıdır. Yıllarca yaptığı asıl işi medikal üzerine olan fakat çocukları büyüdükten sonra medikal işini onlara bırakarak kendisi Babadağlılar Çarşısı'nda dükkân açan ve ev ev gezerek satın aldığı tamamen Denizli'ye mahsus geleneksel ürünleri günümüz moda anlayışına göre usta veya sanatkar dediği kişilere modernize ettiren Esnaf A, yaptığı işi "kültür hizmeti yapıyorum, genel olarak masrafı çıkartıyor" diyerek tanımlıyor. Esnaf E ile

yapılan mülakatta ise, 15 yıl öncesine kadar Yusuf Ahmet Hoca isimli kişinin her sabah gönüllü olarak çarşıya geldiği, iş başlamadan önce bütün esnafı toplayarak dua ettiği ve işe bu duadan sonra başlandığı öğreniliyor.

Yapılan mülakatlarda, Babadağlı tüccar ve üreticileri tarafından eski zamanlardan beri kullanılan ve bugün Babadağlılar Çarşısı'nda çok az miktarda bile olsa hâlâ devam eden geleneklerden birinin de Babadağlılar çekinin kullanımı olduğu öğrenilmiştir. Mehmet Kaynak, Babadağlılar çekinin ne olduğu ve nasıl kullanıldığıyla ilgili şöyle bilgi vermektedir: "Bankacılık alanındaki yeni düzenlemeler nedeniyle kullanımı çok azaldı. Bu yıl sadece iki tane kullandık. Normal bir kâğıdın arkasına ödeme yapılması gereken miktar ve ödeme tarihi yazılır. Çeki veren de bunu takvimine işaretler. O çeki elinde bulunduran pusulayla geldiğinde ödeme gerçekleştirilir. Ancak 5000 TL'nin üzerindeki meblağların bankacılık sistemi üzerinden gönderilmesi gerektiğinden eskisine göre kullanımı hayli azaldı. Ayrıca büyük fabrikaların düzenli muhasebe sistemleri olduğundan, gayri resmi belgeleri kabul etmiyorlar. Öncelikle çeki verenin esnaf içinde tanınırlığının olması gerekir". Esnaf D'de hâlâ Babadağlılar çekini kullandığını söylüyor: "Önceden Babadağ çekini çok kullanırdık ama şimdi senede 5-6 defa kullanıyoruz. Hem yazdım hem de aldım".

Genel olarak iş değerleriniz nelerdir sorusuna Esnaf A, "AVM'lerde satış yapan esnafın sadece kuralları var, orada Avrupa kültürünün mirası var. Burada Türk kültürünün, Denizli kültürünün, Babadağlılar Çarşısı kültürünün mirası var" cevabını vererek, Babadağlılar Çarşısı iş değerlerinin, Çarşının girişindeki tabelada yazılanlardan öğrenilebileceğini belirtiyor. Çarşının ana giriş kapısında büyük bir tabelada her müşterinin ve çarşıya her sabah giren esnafın okuyabileceği şekilde yer alan yazı şöyledir:

<div align="center">

Besmele çek gir çarşıya, selamı da unutma ha

Kiloyu eksik çekme ha, metreyi kısa tutma ha

Halka hizmet eylemektir, Hakk'a hizmet eylemek

İyi belle sen bu sözü, sakın yabana atma ha

Alış derken, veriş derken, ölçü, tartı, satış derken

Paraya pula tapma ha, insanlığı unutma ha

</div>

<div align="right">

M. Ali İlhan Canbaba

</div>

Esnaf E, iş değerlerinden bahsederken daha ziyade, müşteri ilişkileri üzerinde duruyor: "Müşteriyi kandırmak yok, müşteri devamlılığı esastır. Bizde müşteri müşteriyi getirir. Müşterinin akrabası gelir, biz ona veresiye mal veririz, meselâ Adana'da iş kurar, daha sonra bize ödeme yapar". Esnaf A ve Esnaf E'nin bahsettikleri bu olumlu vasıflara rağmen her iki esnaf da iş değerleriyle ilgili soruyu cevaplandırırken sonunda, mülakata katılan diğer esnaflar gibi iş değerlerinin artık eskisi gibi olmadığının altını çiziyor. Esnaf D, "ürünlerimiz geleneksel ama iş değerlerimiz artık çok da geleneksel değil" diyor. Keza, Babadağlılar Çarşısı Yönetim Kurulu Başkanı ve Babadağlılar Çarşısı'nın yapım aşamasından itibaren tanığı olan Mustafa Kaynak, iş değerleriyle ilgili değişimden "Genel ahlakla iş ahlakı birbirinden ayrılmaz. O günkü ahlak anlayışıyla bugünkü ahlak anlayışı aynı olmadığından, derler ya eski çamlar bardak oldu. O günkü ahlak var olsa da eskisi gibi değil. Bunun adına modernleşme diyorlar" şeklinde bahsediyor. Babadağlılar Çarşısı Müdürü Mehmet Kaynak ise iş değerleriyle ilgili mevcut durumu ve eskisine göre değişimi şöyle anlatıyor: "Bizim nesil pek değişmedi ama sonraki nesil değişti. Çünkü onlar ipliğe dokunmadı. Biz pamuk ipliklerinin içinde yattık. Makine çalışırdı, annem çalışırdı. Biz köşede oynar ya da ona yardım ederdik, ipliği takardık. Şimdi ise öyle değil. O sıcaklık var gene ama eskisi gibi değil. Yaşadıklarınızı sonraki nesle anlattığınızda etkisi azalıyor. Buradan çıkıp büyük fabrika kuranlar Babadağlılar Çarşısı'nın değil, fabrikanın başında duruyor. Geriden gelenler de bizi izlemiyor".

## 5 Sonuç

Topluluk girişimciliği bir topluluğun ortak yararı için o topluluğun üyeleriyle beraber iş birliği içerisinde girişimsel faaliyetlerin gerçekleştirilmesidir. Bu tür bir girişimcilik anlayışında, hem girişimci hem de girişim, topluluk üyelerinin iyiliği için ve ağırlıklı olarak da ekonomik gelişme ve kalkınma için birlikte hareket etmektedir. Topluluk girişimciliğinin amacı, yerel ekonomiye ve sosyal gelişmeye katkı sağlamaktır. Topluluk girişimciliğinin başarısı da, mevcut topluluğun becerilerine, hedeflerin çeşitliliğine ve topluluğun katılımına dayanır. Gelişmekte olan ülkelerde ilerleme tabandan tavana sağlanabileceği için topluluk girişimciliği bu tür toplumlarda çok daha önemli görülmektedir. Çünkü topluluk girişimciliğinde girişime niyetlenen girişimciler gerekli olan sermayeye geleneksel girişimcilik anlayışından daha farklı bir yolla ulaşabilmektedirler. Ayrıca topluluğun üyeleri topluluk girişimciliğine olan sadakati artırmaktadır. Böylece, özel bir girişime yatırım yapamayan yöre insanı topluluk girişimine yatırım yapmaya ikna olabilmektedir.

Babadağlılar Çarşısının kuruluş yılları (1975-1976) Türkiye'nin ekonomik açıdan oldukça sıkıntılı dönemlerine rastlamaktadır. Ancak, ellerindeki birikimi o dönemlerde Halk Sektörleri örnekleriyle yatırıma çevirme tecrübesini yaşayan Denizli ilinde (İrmiş ve diğ., 2013) Babadağlı esnaflar, kendi aralarında dayanışma ve işbirliğine giderek bir topluluk sinerjisi oluşturmuş ve kazançlarını artıracak, daha etkili tedarik ve pazarlama avantajını kazanacak bu gün adı literatürde topluluk girişimi olarak adlandırılan girişim türüne yönelmişlerdir.

Topluluk girişimciliğinin önemli özelliği girişimin, o yörenin geleneklerine dayalı ve çoğu zaman geleneksel üretimi ve kaynaklarıyla bütünleşmiş bir nitelik taşımasıdır. Girişimin ilk yıllarında sadece tekstil ürünlerinin değil pek çok farklı ürünün pazarlanması için kurulan Babadağlılar Çarşısı, kısa sure içerisinde Denizli'deki tekstil ürünlerinin toptan ve perakende satışlarının yapıldığı bir organizasyon haline gelmiştir. Denizli'de uzun yıllardır var olan tekstil üretiminin yerli tüketiciye ulaştırılması, kaliteli yerel üretimin pazara sunulması, yerli üreticinin kalkınması ve gelişmesi gibi amaçlarla varlığını devam ettiren Babadağlılar Çarşısı topluluk girişimciliğinin önemli örneklerinden biridir. Babadağlı girişimcilerin ortak çabalarıyla kurulmuş olan çarşı, topluluğun katılımıyla kurulmuş olması, yerel ürünlerin halka tanıtılması yoluyla hem ekonomik hem de sosyal bir gelişim fırsatı sunması, girişime ortak olanların çabalarıyla geliştirilmesi, toplumsal ve bireysel girişimciliği teşvik etmesi bağlamında topluluk girişimciliğinin dört temel özelliğini de taşımaktadır.

Topluluk girişimciliğinin ekonomiye en önemli katkısı, bireylerin kişisel girişimleriyle daha iyiyi yapmakta zorlandıkları girişimsel faaliyetleri toplu halde çok daha etkin ve verimli hale getirmeleri böylece ekonomide daha fazla değer yaratabilmeleriyle ilgilidir. Denizli'de tekstil üretimi yapan Babadağlı girişimciler toptan ve perakende satışlarını daha rahat ve daha çok yapabilecekleri bir pazarlama alanına Babadağlılar Çarşısı'yla kavuşmuşlardır. Ancak zaman içerisinde bu avantaj sadece Babadağlı girişimcilerin ve esnafların bir topluluk girişimi olmaktan çıkmış, geleneksel üretim yapan Buldan ve Kızılcabölüklü esnafların da faydasına dönüşmüştür. Babadağlılar Çarşısı geleneksel üretimin devamlılığını teşvik eden ve bunu modern pazarlama anlayışıyla sunan bir "geleneksel ürün odaklı topluluk girişimi" haline gelmiştir. Açıktır ki, böyle bir girişimin ekonomik faydası sadece Babadağlılar Çarşısı'ndaki esnafa mahsus değildir. Esnaf, mülakatlarda da görüldüğü üzere ürünlerini daha ziyade Babadağ, Buldan ve Kızılcabölük ilçelerinde geleneksel ürünleri ev tipi üretim ile tezgâhlarında gerçekleştiren dokumacılara yaptırmaktadırlar. Böylece tekstilden elde edilen gelir sadece büyük işletmelerin elinde değil, aynı zamanda tabana yayılarak daha geniş bir topluluğun elinde toplanmakta, kent ekonomisine daha geniş bir alanda fayda sağlamaktadır.

Babadağlılar Çarşısı'nın bir diğer önemli faydası, Denizli ve Babadağ üretim geleneğiyle hem ürünler ve ürünlerdeki motifler bağlamında hem de iktisadi davranış bağlamında Türk kültürüne yaptığı hizmettir. Babadağlılar Çarşısı'nın girişindeki sözler gerçekte, tipik bir Ahi kültürünün ifadesidir. Keza Babadağ çeki, güven esasına dayalı kültürün devamlılığında iktisadi bir davranış olarak çok az sayıda dahi olsa hâlâ devam etmektedir. Esnaf C, mülakatta iş değerleriyle ilgili konuşulurken şöyle demektedir: "Önemli olan kendi değerlerimiz, Fransa, Almanya umurumda değil, ben Avrupalı değilim, ben Türküm".

Babadağlılar Çarşısı ile bir fayda da doğrudan müşteriye sağlanmaktadır. Tekstil satın alırken bir başka yer aramayan müşteri, doğrudan çarşıya gelerek, çok çeşitli olan ürünleri, çok daha ucuz fiyatlarla toptan veya perakende satın alabilmektedir. Bu durum sadece Denizli müşterisi için değil aynı zamanda Türkiye'nin pek çok yerinde tekstil ticareti yapan toptancılar için de söz konusu olmaktadır. Toptancılar, tedarikçi bulmak için çok fazla zaman harcamadan Babadağlılar Çarşısı'nda tedarik için sipariş verebilmektedirler. Üstelik çarşı içerisinde çok sayıda satıcının olması aralarında rekabet yaratmakta ve ürünlerin pahalıya satılmasının da önüne geçmektedir.

Bir topluluk girişimciliği niteliği taşıyan Babadağlılar Çarşısı'nın gelecek zamanlara taşınması, geleneks, selliğini modern üretim ve pazarlama araçlarıyla tamamlamasını gerektirmektedir. Modern pazarlamanın sınır tanımadığı günümüzde özellikle internetten yapılacak reklamlar, çarşının çok daha fazla tanınıp daha geniş bir pazar edinmesini sağlayabilecektir. Ancak, bir topluluk girişimciliğinin yöre halkı ve yönetimleri tarafından da desteklenmesi önemlidir. Babadağlılar Çarşısı'nın etrafının otomobil park etmeye, toplu turist getirmeye daha uygun hale getirilmesi, en azından mevcut durumunun muhafaza edilmeye çalışılması, çarşının geleceği için oldukça önemli görülmektedir. Hızla yaygınlaşan ve daha ziyade küresel sermayenin pazar alanı olan AVM'ler yerine bu tür geleneksel üretimi küresel alana yayabilme potansiyeli olan girişimlerin teşviki ülke sermayesine ve ekonomik kalkınmaya katkıda bulunacaktır.

# Ekonomik Büyüme ve Kalkınmada Girişimciliğin Rolü ve Önemi

# The Importance and Role of Entrepreneurship in Economic Growth and Development

Prof. Dr. Asım Günal Önce (Dokuz Eylül University, Turkey)

Prof. Dr. Mehmet Marangoz (Muğla Sıtkı Koçman University, Turkey)

Ph.D. Candidate Nedret Erboy (Muğla Sıtkı Koçman University, Turkey)

## Abstract

Economic growth leads to with increased prosperity with increasing of income levels of people living in a country. Economic development involves social and cultural developments in the economy along with prosperity. Entrepreneurship which is involved in factors of production, labor, capital and technology and brings them together and it takes risks and assess opportunities has an important role in economic growth and development. The basic elements of a country's economic development are individuals who have an entrepreneurial spirit. They are driving force of growth and prosperity. The impact on entrepreneurs' on economic development can be associated with their inventions / scientific research and invention through their innovations, the ability of adaptation innovations, by way of competition raise efficiency, providing employment, making business opportunities and their increasing of production and commercial activities where they are established. In the economies, entrepreneurs increase profits in terms of production volume, stimulating competition and in parallel with leads to the decline prices. In this context, the country's economic growth and development, remaining prosperity affects well-being and quality of life of individuals, their economic prosperity and their social and cultural development. In this study, the role and importance of entrepreneurship in a country's economic growth and development and socio-economic development will be examined in the context of various parameters and in terms of these parameters the relationship between entrepreneurial activity and economic growth will be highlighted.

## 1 Giriş

Sanayi toplumundan bilgi toplumuna geçiş sürecinde beşeri sermaye, artık kalkınmayı sağlama anlamında fiziki sermayeden daha önemli bir hale gelmiştir (Acar, 2006). Gelir yaratıcı ekonomik faaliyetlere katkı sağlayan bireylerdeki bilgi, beceri ve benzer nitelikler olarak tanımlanan beşeri sermaye, insana yapılan yatırımlarla artmakta ve üretim sürecinin vazgeçilmez bir girdisi olmaktadır (Çakmak ve Gümüş, 2005). 1970'lerde yaşanan piyasa istikrarsızlıkları kitlesel üretimin önemini kaybetmesi ve esnek üretim yöntemlerinin gelişmesi sonucunu doğurmuştur. 1980'lerde yaşanan stagflasyon ve yüksek işsizlik oranları ilgiyi arz yönlü iktisada kaydırmış ve toplam arzı etkileyen faktörler anlaşılmaya çalışılmıştır. 1980'lerden sonra gelişmiş ülkelerde küçük işletmelerin toplam işletmeler içindeki payı çoğu sektörde genişlerken büyük işletmelerin payı azalmıştır. Bu olgu girişimciliğe olan ilginin yeniden canlanmasının ilk nedenidir. İkinci olarak, batı ülkelerindeki işsizlik sorununun makro iktisadi politikalarla aşılamaması, küçük ve yeni işletmelere yönelik ilgiyi artırmıştır. Küçük ve yeni işletmelerin öneminin artması ise girişimcilik olgusunu ön plana çıkarmıştır. (Işık vd., 2011).

Üretim faktörleri arasında yer alan toprak, emek, sermaye ve teknolojiyi bir araya getiren, risk alan, yenilikleri yakalayan, fırsatları değerlendiren ve dolayısıyla ülke ekonomilerinin motor görevini üstlenen üretim faktörü girişimciliktir (Eren vd., 2012). 18. yy.'dan itibaren iktisat teorisinin gündeminde bulunan girişimcilik faktörü piyasa ekonomileri içerisinde her zaman önemli bir yere sahip olmuştur (Yıldız ve Alp, 2012). Teknolojik gelişme ve küreselleşme ekonomik değişimin temel sürükleyicileridir (Işık vd., 2011). Günümüzde yaşanan bu gelişmeler eşliğinde eskinin büyük ve hantal işletmelerinin yerini, hızlı ve esnek yapıya sahip, değişimlere kolay adapte olabilen küçük ve orta ölçekli işletmeler almaya başlamıştır (Pişkinsüt, 2011) ve bununla birlikte girişimciliğin önemi artmıştır. Bu bağlamda ülkelerin ekonomik olarak büyümesi ve kalkınması, refahın artması ve fiyatların düşmesi ile bireylerin yaşam kaliteleri ve ekonomik refahları etkilenmektedir. Bu çalışmada, bir ülkenin ekonomik büyüme ve kalkınmasında ve sosyo-ekonomik gelişmesinde girişimciliğin önemi ve rolü çeşitli parametreler çerçevesinde incelenmektedir.

## 2 Girişim ve Girişimcilik

Girişimciliğin tanımı ilk kez 18. Yüzyılın başlarında Fransa'da Richard Cantillon tarafından yapılmıştır. Bu tanıma göre girişimci, henüz belirginleşmemiş bir bedelle satmak üzere üretim girdilerini ve hizmetlerini satın alan ve bunlardan hareketle katma değer yaratarak üretimde bulunan kişidir (Gerni ve diğerleri, 2013). Schumpeter girişimciliğin inovasyon yönüne odaklanmıştır. Schumpeter'e göre girişimci, inovasyon yapan yenilikçi bir ekonomik aktördür (Işık vd., 2011). Burns'ün (2001) girişimcilik tanımında ise girişimci, kar elde

etmek amacıyla değişim ve fırsatları kullanan ya da değişim ve fırsat yaratmak için yenilik yapan kişidir. Bunu da, yüksek düzeyde risk ve belirsizliği göze alarak ekonomik kaynakları düşük üretkenlik alanından yüksek üretkenlik ve getiri alanına taşıyarak yapmaktadır. Girişimcilerin; mevcut veya kendi oluşturduğu fırsatları kullanabilmek için ihtiyaç duyulan kaynakları temin ederek eldeki kaynaklarla birleştiren ve bunları üretime dönüştürmek için organize eden, bir iş kurmanın bütün aşamalarında kendiliğinden inisiyatif alan ve liderlik özellikleri gösteren, bu aşamalardaki riskleri hesaplayıp bunlarla ilgili tedbirleri alarak yoluna devam eden, sürekli yenilik arayan ve bu arayışta müşterilerin beklentilerine duyarlı olmanın ötesinde kendisi beklenti oluşturan niteliklerinin öne çıkabileceği söylenebilir (KOSGEB, 2013). Yapılan araştırma ve tanımlarda girişimcide var olması gereken dört önemli unsur, risk, yaratıcılık süreci, proaktiflik ve rekabetçi davranıştır. Risk; girişimciler için getiriyi maksimum sağlayacağına olan inancın ve rasyonel mantıkla girişimin desteklenmesi anlamına gelmektedir. Bu nedenle girişimcinin faaliyet gösterdiği alanda karşılaşabileceği bazı riskleri göz önünde bulundurması ve bu risklere katlanması gerekmektedir. Yaratıcılık Süreci; girişimcinin yaratıcılığını kullanarak yenilik sağlayacak ve değer yaratacak çıktıların oluşturulma sürecini ifade etmektedir. Proaktiflik; yeni bir ürün veya hizmetin ortaya çıkarılması aşamasında veya sonrasında karşılaşılabilecek problemleri öngörerek harekete geçme ve önlem alma becerisini ifade eder ki girişimcinin sahip olması gereken en önemli özellikler arasında yer alır. Böylelikle ne istediğini bilen, hedefe yönelik harekete geçmekten sakınmayan ve hata yapma korkusu taşımayan girişimcilerin başarı olasılığı artmaktadır. Rekabetçi Davranış; girişimciliği tetikleyen ve her aşamada pazarda tutunabilmek için rakiplerini ve müşterilerini kontrol etmesini sağlayıcı davranışlar sergilemesini sağlar. Rekabet baskısı ile girişimciler, pazardaki gelişmeleri takip ederek kendilerini sürekli iyileştirmek ve yenilemek durumunda kalmaktadırlar. Her ne kadar girişimcilik kişiye özgü doğuştan niteliklere bağlı olarak açıklansa da, toplumun kültürel ve sosyo- ekonomik değişkenleri ile de iç içe yer almaktadır. Bu nedenle girişimcilerin ülke ekonomisindeki sayıları, nitelikleri ve yerleri ne kadar artarsa, toplam istihdam, yatırım ve katılımdaki oranları da o kadar olumlu düzeyde etkilenmekte ve sonuçta kalkınmaya katkı sağlayabilmektedir (Pişkinsüt, 2011). Bu çalışmada da girişimciliğin ekonomik gelişme ve kalkınma ile sosyal gelişme üzerindeki etkileri ele alınacaktır.

## 3   Girişimcilik ve Ekonomik Büyüme ve Kalkınma

Ülkelerin ekonomik büyüme ve kalkınması o ülkede gerçekleşen girişimcilik faaliyetlerine bağlıdır. Çünkü girişimciler yeni işler yaratır, birçok yeni ürün ve servis sağlar rekabeti artırır, teknolojik değişim sayesinde verimliliği artırır ve bireylerin hayatlarına pozitif yönde etki etkilerler (GEM, 2013). Girişimci, ekonomik kaynakları, en verimli sahalara yönelterek üretim kaynaklarını, ortaya koyduğu yeni tarzlarla birleştirerek üretimin faktörlerine dönüştürmektedir (Yalçıntaş, 2010). Bundan dolayı girişimciler yaşadıkları topluma karşı önemli misyonlar üstlenirler ve üstlendikleri misyonlar onları toplumsal ve ekonomik kalkınma için önemli kılar. Bu misyonlar şunlardır (İraz, 2005):

- Az gelişmiş ülkelerde en önemli sorunlarda birisi işsizliktir ve bu sorun yeni yatırımların yapılmamasından kaynaklanır. İşsizlikten kurtulmanın en etkin yolu kişilerin kendi işlerini kurmalarıdır. Dolayısıyla girişimci sayısı ne kadar artarsa, istihdam oranı da o kadar artacaktır.
- Girişimci sayısının artması toplumsal refah düzeyi ve yaşam kalitesini de artıracaktır.
- Girişimciler hem bilim ve teknolojiyi kullanarak, hem de bu alanlara kaynak aktararak bilim ve teknolojinin gelişmesine öncülük ederler.
- Girişimciler yurtdışında, kendi ülkelerinin reklamlarını yaparlar.
- Girişimciler kullanılmayan potansiyelleri kullanarak, bunların atıl olmalarını önlerler.

Carree vd. (2002), yapmış oldukları çalışmalarla uzun dönemde girişimcilik ve ekonomik büyüme arasında bir ilişkinin olduğunu ve optimum girişimcilik faaliyetinin gerçekleşmediği bir ülkenin düşük oranda bir makro ekonomik büyüme göstereceğini savunmaktadırlar. Örneğin, 1970 ve 80'lerdeki düşük orandaki iş sahipliği yüksek düzeyde işsizliğe yol açmıştır. Yüksek işsizlik oranı, girişimciliğin düşük maliyetlerinden dolayı bireyleri kendi işlerini kurmaya itebilmektedir. Bununla birlikte, kendi işini kurma denge oranını aşarsa, bu durumun artan rekabetten dolayı karların azalması sonucunu getireceğini ve sonuçta başarısızlıkların, yüksek oranda çıkışların ve daha az girişlerin görüleceği beklenmektedir. Yani, optimum orandaki girişimcilik faaliyetleri ülke ekonomisinin büyümesini sağlamaktadır (Aslan, 2009). Girişimcilik faaliyetleri, ülkelerde ya da bölgelerde ekonomideki endüstri yapısını değiştiren temel faktördür. Ekonomik büyüme ve endüstrideki yapısal değişim arasındaki ilişkinin varlığı, Schumpeter zamanlarına kadar gitmektedir ve geleneksel Schumpeteryen görüş açısından bakıldığında ekonomik büyüme düzeyi, endüstrinin kıt kaynaklarını en etkili biçimde kullanmasıyla meydana gelmektedir (Carre ve Thurik, 2003). Dolayısıyla, endüstri yapısındaki bir değişiklik büyüme oranlarına yansımaktadır. Endüstri yapısındaki değişikliği sağlayan en önemli unsurlardan biri de küçük firmalardır. Küçük firmaların sayısı arttıkça (yani girişimcilik arttıkça) endüstrinin yapısında gelişme görülmektedir (Aslan, 2009). Girişimcilik, işletmeciliğin ve toplumun yapısında bir değişimi başlatır ve geliştirir. Bu değişim büyümeyi ve üretimi artırır. Bu değişim ve gelişmeyi kolaylaştıran anahtar yenilikçiliktir. Girişimci yeni düşüncelerin oluşturulması, yayılması ve uygulanmasını hızlandırır. Ayrıca yeni endüstrilerin doğmasına yol açar. Yeni teknolojileri kullanan sektörlerde verimliliği artırır ve hızla büyüyen sektörler üzerinden ekonomik

büyümeyi hızlandırır. Dolayısıyla girişimci ekonomik faaliyetlerin düzenlenmesinde, istihdam oluşturulmasında ve üretim faaliyetlerinde anahtar faktördür (Öztürk, 2008). Girişimci yenilik faaliyetlerini yüklenirken yeni kar fırsatları oluşturma arayışındadır. Bu fırsatlar verimlilik artışının bir nedeni veya sonucu olabilir. Her iki durumda da girişimcilik ile ekonomik büyüme arasında doğrusal bir ilişki vardır. Girişimcilerin artması ekonomik büyümeyi artırır, ekonomik büyümenin artması da girişimcilere yeni fırsatlar sağlayarak yeni girişimcilerin ortaya çıkmasına neden olur. Bu süreç kendi kendini besler (Işık vd., 2011). Küresel Girişimcilik İzleme (GEM) raporlarında (2013) girişimcilik ve ülkenin gelişmişliği arasında U şekli ilişkisi olduğu vurgulanmaktadır. Yani, Az gelişmiş ülkelerde insanlar çalışacakları iş bulamadıklarından dolayı kendi işlerini kurmaya gideceklerdir. Dolayısıyla düşük ve orta gelirli ülkelerde girişimcilik oranları yüksek olacaktır. Yüksek gelirli ülkelerde ise bireyler kurulmuş olan şirketlerde rahat bir şekilde iş bulacaklarından girişimcilik faaliyetine yönelmeyecekler ve girişimcilik oranları düşük kalacaktır (GEM, 2013). Stel, Carree, ve Thurik (2004) girişimciliğin ekonomik büyümeyi farklı yollarla etkilediğine dikkat çekmektedir (Akt. Çokgezen, 2012). Girişimciliğin ekonomik büyüme ve kalkınmaya etkilerini aşağıdaki gibi açıklayabiliriz.

*Girişimciler yeni ürünler ve üretim süreçleri ile piyasaya girerler:* Girişimciler tarafından gerçekleştirilen yenilik faaliyetleri ve artan rekabet ekonomik büyüme açısından çok önemlidir (Marangoz, 2008). Artan rekabet ortamında farklılıklar yaratabilmek ancak girişimcilik düzeyine bağlıdır. Bu nedenle girişimde bulunma ve yenilik oluşturma (yeni ürün veya teknoloji geliştirme) ekonomik dinamizmin temellerini oluşturmaktadır. Oluşturulan yenilikler ekonomik büyümeyi ve verimliliği artırarak istihdam üzerinde de olumlu etkiler meydana getirmektedir (Gerni vd, 2013). Girişimciliğin ekonomik kalkınma üzerinde olumlu bir rol oynadığına ilişkin ilk sistematik katkılar 20. Yüzyılın başında Schumpeter ile başlamaktadır. Schumpeter (1963) girişimciliğin ekonomik kalkınma üzerindeki etkisini, girişimcilerin yenilikleri adapte etme yeteneği ile ilişkilendirir. Yenilikçilik, yeni ürünlerin piyasaya çıkartılması, yeni üretim tekniklerinin kullanılmaya başlanması, yeni piyasalara girilmesi, yeni hammadde veya yarı mamul kaynaklarının bulunması veya piyasanın yeniden organizasyonu (tekelleşme veya bir kartelin bozulması) şeklinde olabilir. Girişimcilerin belirtilen yöntemler aracılığı ile yenilikleri kolaylıkla adapte etmelerinin arkasındaki temel motivasyon kar etme güdüsüdür. Çünkü adapte edilen yenilikler, maliyetleri düşürecek ve/veya gelirleri arttıracaktır (Çokgezen, 2012). Her tür yenilik, örgütün fonksiyonlarını ve kaynak dağılımlarını etkileyeceği ve iyileştireceği için önemlidir. Bununla birlikte, doğal olarak radikal yenilikler potansiyel olarak daha çok kazanç ya da toplumsal fayda getirecekleri için bu tür girişimcilik daha cazip olacaktır. Bu yüzdendir ki, yeni teknolojileri geliştiren girişimcilik tüm ekonomi programlarında en ön sırayı alan girişimcilik türü olmuştur. Yeni teknolojilere dayanan girişimcilik üç sebepten dolayı daha çok kazanç ve toplumsal fayda oluşturmaktadır. Bunlar (TÜSİAD, 2002); (1) Yeni endüstrilerin doğmasına yol açar, (2) teknolojileri kullanan sektörlerde verimliliği artırır ve (3) hızla büyüyen sektörler oldukları için ekonomik büyümeyi hızlandırır. Küresel Yenilikçilik Endeksi adıyla (GII) 21 temel göstergeye dayanarak ülkelerin yenilikçilik endeksleri hesaplanmaktadır. Tablo 1'de Ülkelerin yenilikçilik endeksleri ile GEM'in 2013 raporundan yer alan 67 ülkeden gelişmişlik düzeylerine göre seçilen 14 ülkenin girişimcilik ile yenilikçilik sıraları karşılaştırmalı olarak verilmiştir.

| Ülkeler | Yenilikçilik Endeksi | Yenilikçilik Sırası (142 Ülke Arasından) | Girişimcilik Endeksi (70 Ülke Arasında) |
|---|---|---|---|
| **Gelişmiş Ülkeler** | | | |
| ABD | 60.3 | 5 | 12.7 |
| Kanada | 57.6 | 11 | 12.2 |
| İsrail | 56.0 | 14 | 10.0 |
| Portekiz | 45.1 | 34 | 8.2 |
| **Gelişmekte Olan Ülkeler** | | | |
| Şili | 40.6 | 46 | 24.3 |
| Kolombiya | 37.4 | 60 | 23.7 |
| Peru | 36 | 69 | 23.4 |
| Panama | 31.8 | 86 | 20.6 |
| Türkiye | 36.0 | 68 | * |
| **Az Gelişmiş Ülkeler** | | | |
| Uganda | 31.2 | 89 | 25.2 |
| Angola | 23.5 | 135 | 22.2 |
| Zambiya | 26.8 | 118 | 39.9 |
| İran | 27.3 | 113 | 12.3 |
| Hindistan | 36.2 | 66 | 9.9 |
| Cezayir | 23.1 | 138 | 4.9 |

*GEM tarafından Türkiye için 2013 girişimcilik endeksleri hesaplanmamıştır.

**Tablo 1.** *Ülkelerin Girişimcilik ve Yenilikçilik Endeksleri* **Kaynak:** *GEM, 2013 ve GII, 2013'den derlenmiştir.*

Küresel Yenilikçilik Endeksi 2013 raporuna göre en yenilikçi 142 ülke arasında 11. sırada yer alan girişimcilik düzeyi yüksek olan Kanada'da girişimciler tarafından yenilikçi faaliyetlerin yapıldığı gözlemlenmektedir. Yenilik odaklı ekonomiye sahip olan Kanada %12.2'lik girişimcilik notu ile girişimcilik faaliyetlerinin fazla

olduğu gelişmiş ülkeler arasında yer almaktadır. GCI 2013 raporuna göre Kanada'da yeniliklerin yapılması ve uygulanmasında üniversite-sanayi işbirliği oranı oldukça yüksektir. ABD ise küresel yenilikçilik açısından 5. sıradadır. Tablo 1'den görüldüğü gibi girişimcilik düzeyi yüksek olan ülkeler yenilikçi faaliyetlere daha fazla önem vermektedirler. Gelişmekte olan ülkeler içinde yüksek girişimcilik notuna sahip olan ülkeler yenilikçilik açısından aynı ekonomik düzeye sahip olan ülkeler arasında daha üst sıralarda yer almaktadırlar. Verimlilik odaklı ekonomiye sahip olan gelişmekte olan ülkeler için de girişimcilik düzeyi ile yenilikçilik arasında pozitif yönlü bir ilişkinin olduğunu söylemek mümkündür. Az gelişmiş ülkelere bakıldığında ise yine aynı eğilim görülmektedir ancak ekonomik düzeyi düşük olan her ülke girişimcilik düzeyi ile yenilikçilik arasında doğru orantının olduğunu söylemek mümkün değildir. Yine Tablo 1'e bakıldığında girişimcilik oranı olarak daha düşük nota sahip olan İran yenilikçilik alanında Angola'dan daha üst sırada yer almaktadır. Bu ülkeler arasında %39.9 girişimcilik oranına sahip olan Zambiya diğer az gelişmiş ülkelere göre yenilikçilik açısından alt sıralarda yer almaktadır. Bu verilere göre yenilikçilik faaliyetlerinde Türkiye ise 2012'deki 74'üncülükten, 2013'te 68'inciliğe yükselmiştir.

*Girişimciler rekabet aracılığıyla etkinliği arttırırlar:* Rekabet gücü, istihdam yaratma, pazarda varlığını sürdürerek yarattığı istihdamı sürekli kılma/artırma ve nitelikli mal üretimiyle ekonomik gelişmeye katkıda bulunma becerisini gerektirmektedir. Bununla birlikte, rekabet artışı ile verimlilik artışı, birbirini etkileyen bir döngü yaratmakta; rekabet nedeniyle işletmeler, tüketicinin istemine yanıt verecek daha nitelikli mal üretimi için işgücünün ve üretimin verimliliğini artırırken, verimlilik artışı, pazarda rekabetin daha fazla ivme kazanmasına etki etmektedir. Bu süreç, daha nitelikli, ucuz ve çeşitli mal üretimi ile tüketiciye fayda sağlamakta ve ekonomide canlılığı korumaktadır (Güner, 2010). Girişimciler, piyasadaki rekabet baskısını artırarak, diğer firmaların verimliliklerini ve etkinliklerini iyileştirmeye ya da yeniliklere yönelmeye zorlar; piyasa ekonomisinin temel unsuru olarak elde ettikleri başarılar topluma zenginlik ve yeni iş olanakları, tüketicilere de tercih çeşitliliği sağlar (Marangoz, 2008). Dünya Ekonomik Forumunun hazırladığı 2013-2014 Küresel Rekabet Raporu'nda (GCI) 148 ülkenin rekabetçilik endeksleri hesaplanmıştır. Tablo 2'de ülkelerin rekabet endeksleri ile girişimcilik endeksleri verilmektedir.

| Ülkeler | Küresel Rekabetçilik Endeksi | Rekabetçilik Sırası (148 Ülke Arasında) | Girişimcilik Endeksi (GEM 2013) |
|---|---|---|---|
| **Gelişmiş Ülkeler** | | | |
| ABD | 5,48 | 5,00 | 12,70 |
| Kanada | 5,20 | 14,00 | 12,20 |
| Singapur | 5,61 | 2,00 | 10,70 |
| İsrail | 4,94 | 27,00 | 10,00 |
| Hollanda | 5,42 | 8,00 | 9,30 |
| İrlanda | 4,92 | 28,00 | 8,20 |
| Portekiz | 4,40 | 51,00 | 8,20 |
| İsviçre | 5,67 | 1,00 | 8,20 |
| İsveç | 5,48 | 6,00 | 8,20 |
| Çek Cumhuriyeti | 4,43 | 46,00 | 7,30 |
| Yunanistan | 3,93 | 91,00 | 5,50 |
| Almanya | 5,51 | 4,00 | 5,00 |
| İtalya | 4,41 | 49,00 | 3,40 |
| **Gelişmekte Olan Ülkeler** | | | |
| Şili | 4,61 | 34,00 | 24,30 |
| Kolombiya | 4,19 | 69,00 | 23,70 |
| Peru | 4,25 | 61,00 | 23,40 |
| Panama | 4,50 | 40,00 | 20,60 |
| Türkiye | 4,45 | 44,00 | * |
| **Gelişmemiş ülkeler** | | | |
| Uganda | 3,45 | 129,00 | 25,20 |
| Angola | 3,15 | 142,00 | 22,20 |
| Zambiya | 3,86 | 93,00 | 39,90 |
| İran | 4,07 | 82,00 | 12,30 |
| Hindistan | 4,28 | 60,00 | 9,90 |
| Cezayir | 3,79 | 100,00 | 4,90 |

***Tablo 2.*** *Küresel Rekabetçilik Endeksleri ve Girişimcilik Endeksleri* **Kaynak:** *GEM, 2013 ve GCI, 2013'den derlenmiştir.*

Dünya Ekonomik Forumunun hazırladığı 2013-2014 Küresel Rekabet Raporu'na göre rekabet gücü sıralamasında dikkate alınan 148 ülke arasında küresel rekabetçilik endeksi açısından İsviçre ilk sırada yer almaktadır (GCI, 2013). Latin Amerika'da ise Şili lider ülkedir ve 34. sıra ile en rekabetçi ekonomi konumundadır. Şili aynı zamanda %24.3'lük girişimcilik endeksi ise verimlilik odaklı gelişmekte olan ekonomiler arasında girişimcilik faaliyetinin en fazla gerçekleştiği ülkeler arasındadır. Küresel Rekabet Gücü

Endeksi'nde ABD sıralamada son dönemlerdeki düşüşünü terse çevirerek, 2013 - 2014 yılı hesaplamalarına göre 2 sıra yükselerek dünyanın en rekabetçi 5. ülkesi olarak yer almıştır. Türkiye ise 2012-2013 döneminde rekabet gücü sıralamasında 2011-2012 dönemine göre 15 basamak birden atlayarak 59'unculuktan 44'üncülüğe yükselmiştir. Dünya Ekonomik Forumu'nun 2013-2014 raporuna göre Türkiye ekonomisinin 2011'de yüzde 8,4 büyüdüğünün altı çizilerek, finansal sektörün güvenilir, iş dünyası açısından da rahat ulaşabilir durumda olduğu vurgulanmıştır (Ulengin vd., 2012).

*Girişimciler müşteri istek ve ihtiyaçlarını belirlerler:* Yeni ürünleri piyasaya sürerek neyin yaşayabilir olduğu, tüketicilerin neyi tercih edecekleri konusundaki anlayışımızı geliştirirler. Bu öğrenme süreci ürün-piyasa kombinasyonlarına ulaşmamızı kolaylaştırır.

*Girişimciler gelirleri ile çabaları arasında güçlü bir ilişki olması nedeniyle daha uzun süre ve daha etkin çalışırlar:* Girişimcilerin sahip olduğu risk alma ve belirsizlikler ile baş etme özellikleri önemli makro ekonomik sonuçlar doğurmaktadır. Risk yönetimi ve belirsizlikleri tolere edebilme yeteneği küçük ve orta ölçekli işletmelerin faaliyet süresini artıran nedenlerden birisi olarak görülebilir (Topyaka, 2013). GEM'in 2013 verilerine göre toplam 67 ülke arasında araştırma yapılmıştır. GEM'in 2013 raporunda kurulu işletme sahipliği (3.5 yıl ve daha kısa süreli) oranlarına bakıldığında gelişmemiş ülkeler arasında Uganda ve Gana ön plana çıkmaktadır. Uganda %36.1 oran ile ilk sırada yer alırken Gana %25.9 ile ikinci sıradadır. Girişimcilik faaliyetleri ile karşılaştırıldığında Uganda ve Gana'nın girişimcilik endeksleri az gelişmiş ülkeler arasında oldukça yüksektir. Tablo 3'e bakıldığında az gelişmiş ülkeler arasında kurulu işletme sahipliği ile girişimcilik arasında pozitif yönlü bir ilişkinin olduğunu söylemek mümkün değildir. Bu durum gelişmiş ülkeler içinde geçerlidir. Fakat aynı durum gelişmekte olan ülkeler için geçerli değildir. Yüksek girişimcilik düzeyinde olan ülkelerde kurulu işletme sahipliği oranları yüksektir. GEM 2013 raporunda Türkiye yer almamaktadır.

| Ülkeler | Kurulu işletme Sahipliği Oranı (3.5 yıldan daha az süreli) | Girişimcilik Endeksleri |
|---|---|---|
| **Gelişmiş Ülkeler** | | |
| ABD | 7,50 | 12,70 |
| Kanada | 8,40 | 12,20 |
| İsrail | 5,90 | 10,00 |
| Portekiz | 7,70 | 8,20 |
| İsviçre | 10,00 | 8,20 |
| **Gelişmekte Olan Ülkeler** | | |
| Şili | 8,50 | 24,30 |
| Kolombiya | 5,90 | 23,70 |
| Peru | 5,40 | 23,40 |
| Panama | 3,50 | 20,60 |
| **Az Gelişmiş Ülkeler** | | |
| Uganda | 36,10 | 25,20 |
| Gana | 25,90 | 25,80 |
| Angola | 8,50 | 22,20 |
| Zambiya | 16,60 | 39,90 |
| İran | 10,60 | 12,30 |
| Hindistan | 10,70 | 9,90 |

*İstihdam Yaratma;* küreselleşmenin arttığı ve rekabetin yoğunlaştığı ekonomi ortamında birçok ülke ekonomik sorunlarla karşılaşmaktadır. Bunların başında istihdam sorunu vardır. Girişimciler yeni işletmeler kurarak istihdam yaratmakta böylelikle ekonomiye ivme kazandırmaktadırlar (Marangoz, 2008). Girişimciliğin doğası itibariyle her zaman büyük sermayeyi gerektirmemesi, küçük sermayeyle de iş kurma olanağı vermektedir. Bu da toplumsal çevrenin caydırıcı olmaması ya da girişimcilik karşıtı etkin kültürel kodların var olmaması halinde geniş bir toplumsal kesimin iş kurmaya yönelmesini mümkün kılmaktadır. Geniş bir toplumsal kesimin kamuda çalışmak yerine, kendi işini kurması öncelikle devletten iş talebinde bulunma yoğunluğunun azalmasına neden olmaktadır. Bu durum, bir yandan devletin ana işveren olmaktan çıkmasına zemin hazırlarken, diğer yandan, genel istihdam hacminin yükselmesine yol açmaktadır (İlhan, 2004). İnsanların ihtiyaçlarını gidermek üzere üretim faktörlerini yani emek, sermaye ve doğal kaynakları bir araya getirerek mal ve hizmet üretmeye çabalayan girişimci, emeği de bir faktör olarak değerlendirmekte, onun emeğinden yararlanmakta ve buna karşılık emeğe yaratılan değerden bir pay vermektedir. Girişimcilik faaliyetleri sonucunda oluşan yeni pazarlar, endüstri kolları ve yeni iş sahaları istihdam olanağını artırmakla beraber, çalışanların üretkenliğe yöneltilmesi sonucu hem o bölgenin yerel ekonomisi hem de ülke ekonomisi gelişimini sürdürebilmektedir (Marangoz, 2008).

Ayrıca girişimciler, yeni iş olanakları yaratarak öğrenci ve ev hanımları gibi kesimlere yarı zamanlı, kadınlara, azınlıklara, işten çıkarılan ya da emekli olanlara ve düşük eğitim seviyesinde olanlara iş olanakları yaratırlar (Güney, 2008). Ekonomik İşbirliği ve Kalkınma Örgütü (OECD)'nün 34 ülke üzerinde yaptığı araştırma sonucunda 2013 İstihdam Görünümü Raporuna göre ülkelerin işsizlik oranları ve girişimcilik endeksleri Tablo 4'de görülmektedir.

| Ülkeler | İşsizlik Oranları (2012 Verileri) | Girişimcilik Endeksleri |
|---|---|---|
| **Gelişmiş Ülkeler** | | |
| ABD | 8,10 | 12,70 |
| Kanada | 7,20 | 12,20 |
| Singapur | 2,00 | 10,70 |
| İsrail | 6,90 | 10,00 |
| Hollanda | 5,30 | 9,30 |
| İrlanda | 14,80 | 9,20 |
| Portekiz | 15,90 | 8,20 |
| İsviçre | 2,90 | 8,20 |
| İsveç | 8,00 | 8,20 |
| Çek Cumhuriyeti | 7,00 | 7,30 |
| Yunanistan | 24,30 | 5,50 |
| Almanya | 5,50 | 5,00 |
| İspanya | 25,10 | 5,20 |
| Japonya | 4,40 | 3,70 |
| **Gelişmekte Olan Ülkeler** | | |
| Şili | 6,40 | 24,30 |
| Meksika | 5,00 | 14,80 |
| Estonya | 10,10 | 13,10 |

| Polonya | 10,10 | 9,30 |
| Slovakya | 14,00 | 9,50 |

* GEM tarafından Türkiye için 2013 girişimcilik endeksleri hesaplanmamıştır.

***Tablo 4.*** *İşsizlik Oranları ve Girişimcilik Endeksleri **Kaynak:** OECD, 2013 ve GEM, 2013'den derlenmiştir.*

Avusturya, Japonya, Kore, Norveç ve İsviçre gibi ülkelerde işsizlik oranı %5'in altında iken, OECD tahminlerine göre 2013 ve 2014 yıllarında en fazla istihdam artışı Meksika ve İsrail'de yaşanacaktır. Türkiye ise en fazla istihdam artışı sağlayan üçüncü ülke konumunda olacaktır (OECD, 2013). Gelişmiş ülkelere bakıldığında işsizlik oranları ile girişimcilik faaliyetleri arasında ters orantının olduğunu söylemek mümkündür. Ülkelerin girişimcilik düzeyleri azalırken işsizlik oranlarında artış olduğu gözlenmektedir. Yaşanan ekonomik krizlerle birlikte özellikle Yunanistan ve İspanya'da bu oran %25'i aşabilmektedir. Gelişmiş ülkeler arasında %12.7 ile en yüksek ikinci girişimcilik endeksine sahip olan ABD'nin 2013 Mart ayına ait işsizlik oranı %6.7'dir (BLS, 2014). Gelişmekte olan ülkelerde ise aynı durum söz konusudur. Ülkelerin girişimcilik faaliyetleri azalırken işsizlik oranlarının yükseldiği gözlemlenmektedir. Girişimcilik oranlarında daha büyük bir artış gösteren ülkeler, işsizlik oranlarında da daha büyük düşüşler sağlama eğilimindedir. Türkiye'de ise 2012 yılında işsizlik oranı 8.2 iken GEM'in araştırmalarına göre 2012 yılındaki girişimcilik oranı %12.2'dir.

*Yeni Endüstrilerin Doğması;* girişimlerin artması, kaynakların ekonomik verimliliği düşük alanlardan, verimliliği yüksek alanlara kaymasında en önemli faktörlerden biridir. Girişimcilerin getirdiği yenilikçi ve yaratıcı düşünceler, ülke ekonomisinde yeni sektörlerin doğmasına sebep olarak ekonomik büyümenin lokomotifi olmaktadır (Öztürk, 2008). Girişimciler günümüzde sadece yeni firmalar değil, daha da önemlisi tamamıyla yeni endüstriler oluşmaktadır. Yeni oluşan endüstrilerden bazıları kişisel bilgisayarlar, biyoteknoloji, kablosuz TV ve cep telefonlarıdır. Bu endüstrilerde çalışan hızla büyümekte ve ekonominin vazgeçilmez yeni aktörleri haline gelmektedir**.**

*Refah Düzeyinin Yükseltilmesi;* Toplumda girişimcilik ruhunun geliştirilmesi ve girişimciliğin desteklenmesi ülkenin refah düzeyinin artırılmasında önemli rol oynayacaktır (TÜGİAD, 1993). Girişimci hem iş hayatının hem de toplumun yapısını harekete geçirir ve değiştirir. Girişimciliğin önemi, girişimcilerin toplumun ihtiyaçlarını belirleyip, bunu yatırıma, sonucunda da toplumsal refaha dönüştürmelerinde yatmaktadır. Çünkü yatırım neticesinde istihdam ve gelir düzeyi yükselmekte, bireylerin ve genel olarak toplumun refah düzeyi artmaktadır. Girişimcilik faaliyeti olmadan, sürdürülebilir ekonomik gelişmeden söz etmek mümkün değildir. Bir ekonomide ne kadar fazla girişimcilik olursa, o kadar fazla ekonomik gelişme sağlanabilir. Ayrıca, bir yenilik ve büyüme yönelimli olmaya odaklanılmadıkça girişimcilik faaliyetleri, sürdürülebilir ekonomik gelişmenin gerçekleşmesine öncülük edecektir (Marangoz, 2008). Legatum Enstitüsü ülkelerin ekonomi, girişimcilik ve fırsatlar, devlet, eğitim, sağlık, güvenlik, bireysel özgürlük ve sosyal sermaye alt endeksleri kullanarak 142 ülkenin refah düzeylerini belirlemek için her sene rapor hazırlamaktadır. Tablo 5'de Legatum Ensitüsü'nün hazırladığı Refah Endeksleri 2013 raporundan alınan veriler ile ülkelerin girişimcilik düzeyleri karşılaştırılmıştır.

| Ülkeler | Refah Endeksleri | | | | | | | | Ülkelerin Refah Endeksleri Sıralaması (142 Ülke arasından) | Girişimcilik Endeksleri |
|---|---|---|---|---|---|---|---|---|---|---|
| | Ekonomi | Girişimcilik ve fırsatlar | Devlet | Eğitim | Sağlık | Güvenlik | Bireysel Özgürlük | Sosyal Sermaye | | |
| **Gelişmiş Ülkeler** | | | | | | | | | | |
| ABD | 24 | 13 | 11 | 5 | 2 | 31 | 16 | 9 | 11 | 12.7 |
| Kanada | 4 | 16 | 8 | 3 | 11 | 7 | 1 | 6 | 3 | 12.2 |
| Singapur | 3 | 12 | 13 | 37 | 18 | 13 | 53 | 34 | 18 | 10.7 |
| Hollanda | 20 | 8 | 10 | 12 | 7 | 17 | 14 | 5 | 9 | 9.3 |
| İrlanda | 33 | 14 | 14 | 11 | 15 | 5 | 8 | 11 | 12 | 9.2 |
| Portekiz | 63 | 31 | 37 | 33 | 29 | 19 | 20 | 43 | 27 | 8.2 |
| Çek Cumhuriyeti | 38 | 27 | 35 | 24 | 27 | 23 | 50 | 46 | 29 | 7.3 |
| Yunanistan | 80 | 48 | 52 | 34 | 23 | 43 | 134 | 107 | 54 | 5.5 |
| **Gelişmekte Olan Ülkeler** | | | | | | | | | | |
| Şili | 30 | 38 | 24 | 59 | 49 | 37 | 27 | 67 | 35 | 24.3 |
| Kolombiya | 47 | 63 | 60 | 80 | 80 | 130 | 51 | 53 | 67 | 23.7 |
| Peru | 48 | 77 | 79 | 81 | 84 | 91 | 70 | 113 | 75 | 23.4 |
| Türkiye | 70 | 54 | 50 | 89 | 55 | 99 | 130 | 128 | 87 | * |
| Güney Afrika | 85 | 41 | 53 | 91 | 105 | 106 | 82 | 65 | 77 | 10.6 |
| Bosna Hersek | 117 | 91 | 113 | 78 | 61 | 61 | 127 | 104 | 97 | 10.3 |
| **Az Gelişmiş Ülkeler** | | | | | | | | | | |
| Zambiya | 103 | 110 | 87 | 110 | 134 | 117 | 59 | 56 | 107 | 39.9 |
| Malawi | 134 | 128 | 70 | 116 | 106 | 114 | 85 | 101 | 119 | 28.1 |
| Uganda | 105 | 112 | 106 | 117 | 126 | 134 | 91 | 51 | 114 | 25.2 |
| Angola | 115 | 126 | 133 | 129 | 131 | 129 | 137 | 97 | 133 | 22.2 |

*GEM tarafından Türkiye için 2013 girişimcilik endeksleri hesaplanmamıştır.

***Tablo 5.** Ülkelerin Refah Endeksleri ve Girişimcilik Endeksleri **Kaynak**: Legatum Enstitüsü, 2013'den derlenmiştir.*

Legatum Enstitüsü'nün 142 ülkede yaptığı çalışmada Uluslararası Refah Endeksi oranlarına göre Türkiye ise 87. sırada yer almaktadır. GEM 2013 girişimcilik endeksleri raporuna göre az gelişmiş ülkeler arasında en yüksek girişimcilik oranlarına sahip Zambiya %39.9'luk girişimcilik oranı ile az gelişmiş ülkelere göre daha yüksek refah düzeyine sahiptir. Seçilen gelişmekte olan ülkelere bakıldığında ise %24.3 girişimcilik oranı ile Şili 35. Sırada, %10.3 girişimcilik oranı ile Bosna Hersek 97. Sırada yer almaktadır. Bu verilere bakılarak ülkelerin girişimcilik faaliyetleri ile refah düzeyleri arasında doğrusal bir ilişkini olduğu söylenebilir. Gelişmiş ülkelerde ise durum farklılık göstermektedir.

*Bölgesel Gelişmişlik Farklarının Ortadan Kaldırılması*; Girişimcilik özelliklerine sahip bireyler yalnızca kendi işletmelerinin başarısında değil aynı zamanda yöresel, bölgesel ve ulusal kalkınmada da etkin bir rol oynar (İraz, 2005). Girişimcilik, kalkınmada geri kalmış bölgelerde toplumsal ve ekonomik uyumun güçlendirilmesine, ekonomik faaliyetlerin canlanmasına ve iş yaratılmasına ya da işsiz veya engelli kişilerin iş yaşamıyla entegrasyonuna da katkıda bulunabilmektedir (Kahya ve İmamoğlu, 2013). Girişimciliğin büyük sermayeyi zorunlu kılmaması, yatırım ve üretim etkinliğinin belli merkezlerde yoğunlaşmasını önleyerek, bu etkinliğin yerel ölçekte de gerçekleştirilmesine olanak tanımaktadır. Bu da yerel ölçekte istihdam olanaklarını arttıracağı için iş bulmak amacıyla merkezi kentsel alanlara yönelik göçün önlenmesini mümkün kılmaktadır. Girişimciliğin, istihdamı arttırıcı role ve göçü önleyici işleve sahip olması, özellikle, işsizlikten ve göçten kaynaklanan kentleşme sorunları yaşayan ülkelerde özendirilmesi gereksiniminin önemini ortaya koymaktadır (İlhan, 2004). Yeni firmaların ortaya çıkışı bölgedeki yerel hizmet arzını, özellikle de perakendecilik faaliyetlerini arttırır. Bu da o bölgeyi daha cazip hale getirir ve yeni firmaların piyasaya girişini teşvik eder. Yeni firmaların ortaya çıkışı insanların motivasyonunu arttırır. Aralarından birinin girişimcilik faaliyetine girişmesi toplumun diğer mensuplarının da onu taklit etmesine, onun yolundan gitmesine neden olacaktır (Kahya ve İmamoğlu, 2013).

Bir ülkede girişimcilik faaliyetlerinin artması hükümetlerin izleyeceği politikalar ile ilişkilidir. Girişimciliğin ortaya çıkışıyla ilgili çevreyi öne çıkaran yaklaşımlarda pazar mekanizmalarının ve devlet/hükümet politikalarının etkili olduğunu vurgulamıştır. Gelişmiş ülkelerde pazar mekanizmaları girişimci sınıfın ortaya çıkışında etkili iken; gelişmemiş ülkelerde, girişimciliğin gelişmesi hükümet politikalarının belirlediği ekonomik güdülere bağlıdır (İGİAD, 2008). Politikalar hangi tip girişimcilik aktivitesini teşvik ediyorsa kaynaklar oraya

doğru yönelecek, ekonomik gelişme üzerindeki etkiler de buna göre belirlenecektir (Çokgezen, 2012). Dış çevre açısından ele alındığında girişimciliği ön plan çıkartmak için makroekonomik istikrar ve denge sağlanması, rekabet ortamı yaratılması, piyasaya giriş ve çıkışlar serbest olması, risk ve ödül arasında denge kurulması, finansmana kolay erişim imkanı olması, piyasa esnek olması, vergilendirmenin adil, basit, tabana yayılmış ver düşük olması ve girişimcinin kapasitesinin artırılması için devlet tarafından destekler verilmesi gerekmektedir (İGİAD; 2008).

## 4 Girişimcilik ve Sosyo - Ekonomik Gelişme

Günümüzde tüm dünyada toplumlar, ekonomik kalkınmalarının yanında sosyal yaşam düzeylerinin de gelişmesini devlet yönetimlerinden eskiye göre daha yoğun bir şekilde talep etmeye başlamışlardır. Sosyal kalkınma için ekonomik kalkınmanın öncül koşul olduğu yadsınamaz bir gerçektir. Bundan dolayı ekonomik büyüme ve kalkınma, toplumların en temel ekonomik ve sosyal hedefleri arasında yer almaktadır. Burada kullanılan araç ülkenin kaynakları, benimsenen ilke ise, ülkenin kaynaklarının tam kapasite ile en verimli şekilde kullanılmasıdır (Özer, 2012). Üretim kaynaklarını yeni bir tarzda birleştirerek kullanılmayan üretim faktörlerinin kullanılmasını sağladığından girişimci, ekonomik kaynakların düşük üretkenlik alanlarından yüksek alanlara aktarılma sürecinde baş aktördür. Bütün bu açılardan bakıldığında girişimcilik sosyal fayda oluşturmanın temel alanı olarak öne çıkmaktadır (Öztürk, 2008). Girişimciliğin sosyal alandaki fonksiyonları birçok teknolojik buluşun toplumun yararı için yenilikçi ürün ya da hizmetlere dönüştürülmesinde, değer yaratmada, toplumsal yapıda da değişimci/yenilikçi bir sürecin başlatılmasında, girişimciliğin risk üstlenme, yenilikçi ve öncü olma niteliğinden dolayı tüm toplumların değişim ve gelişim süreçlerinde işlevsellik göstermektedir (Bozkurt vd., 2012). Bu bağlamda girişimciliğin sosyo-ekonomik gelişme açısından değer yaratma, toplumsal değişim sağlama, topluma dinamizm kazandırma ve topluma prestij ve sosyal sorumluluk sağlama gibi işlevleri vardır.

*Değer Yaratır;* Hills ve LaForge (1992) girişimciliği, fırsatları değerlendirmek için yeni kaynakların bir araya getirilerek değer yaratılması süreci olarak tanımlamaktadır (Koçak, 2003). Bu anlamda girişimcinin değer yaratması ve yarattığı değerle refaha katkıda bulunması girişimciliğin Bjerke ve Hultman (2002)'ın değindiği toplumsal yönünü göstermektedir (Özdemir, 2012). Girişimci kaynakları bulan ve bir araya getiren, organizasyonu kuran ve bu organizasyonda liderlik ve yönlendirme yapan, fırsatları görerek ve/veya fırsatları oluşturarak değer yaratan kişidir. Bu özelliğiyle girişimci ülke ekonomisine üründe, üretimde, teknolojide yenilikler yaparak veya mevcut durumun devamlılığını sağlayarak, istihdam imkânları oluşturarak, sermayenin tabana yayılmasına vesile olarak ve bütün bunlar sonucunda değer yaratarak katkıda bulunmaktadır (Ekmekçi ve İrmiş, 2013). Girişimciliğin gelişmiş ülkelerdeki yükselişini mümkün kılan dinamikler çeşitlilik göstermektedir. Özellikle bireyciliğin yükselmesi, bireysel hak ve özgürlüklerin artışı, iletişim teknolojisindeki gelişmelerin bir sonucu olarak bireyler ve toplumlararası etkileşimin oldukça ileri bir noktaya verilişi, bilgi ve teknoloji sirkülasyonun hızının artması, fırsat eşitliği alanındaki göreli iyileşme, devletin giderek küçülmesi, girişimci kesimin hacminin büyümesi vb. girişimciliğin gelişmesini ve kurumsallaşmasını etkileyen temel dinamikler arasında yer almaktadır. Girişimciliğin gelişmesinde etkili olan bu dinamikler yanında, özelde, yeni tüketim anlayışı da belirleyici bir rol oynamıştır. Sosyo-ekonomik süreçte yerine getirdiği işlevler dikkate alındığında, girişimciliğin, durumsal kazançlardan çok, kalıcı ekonomik değer üretmenin ana belirleyenlerinden olduğu söylenebilir (İlhan, 2004).

*Toplumsal Değişim Sağlar;* Girişimcinin ürettiği mal ve hizmetler toplumda değişime neden olurlar. Girişimci başka ülkelerde ve pazarlarda gördüğü, bulduğu yeni ve farklı ürün ve hizmetleri kendi ülkesine getirerek toplumda değişimin öncüsü olurlar. Risk üstlenme ve yenilikçi olma niteliği nedeniyle girişimciler, toplumların değişim ve gelişme süreçlerinde öncülük ederler. Dünyada yüksek üretim kapasitesine sahip ve sosyal gelişme düzeyi açısından ileri olan bütün toplumlarda girişimciliğin gelişmiş olması ve teşvik görmeye devam etmesi, girişimciliğin ekonomik büyümede olduğu gibi, sosyal gelişmedeki rolünü de ortaya koymaktadır. Bu toplumlarda refah düzeyinin yüksek olduğu, refah dağılımının gelişmemiş toplumlara oranla daha eşit olduğu, sosyal güvenlik kurumlarının gelişmiş olduğu, önemli ölçüde bir işsizlik probleminin bulunmadığı ve toplumsal problemlerin çözüme kavuşturulmasında kurumsal mekanizmaların oluştuğu görülmektedir. Öte yandan, refah devletinin geri çekilmesiyle, söz konusu toplumlarda sivil nitelikli yeni bir toplumsal dayanışma biçiminin ortaya çıktığı da gözlenmektedir. Karşılığında herhangi bir ücret alınmadan, salt yardım amacıyla, çeşitli alanlara mensup profesyonellerin eğitimden sağlığa, gıda yardımından konut edindirmeye varan bir dizi yardım faaliyetinde bulundukları görülmektedir (İlhan, 2004).

*Topluma Dinamizm Kazandırır;* Küçük birikimlerle iş kurmanın kolaylaşması, bireylerde iş kurarak ekonomik kazanç elde etmek suretiyle toplumsal konumlarını değiştirme güdüsü oluşturur. Bireylerin üst toplumsal konumları elde etme çabasına girmeleri ise, toplumsal hareketliliğin hızlanmasına neden olur. Öte yandan, küçük birikimlerin girişimcilik üzerinden değer kazanmasıyla, çok sayıda işletmenin kurulması mülkiyet rejiminin de geniş bir toplumsal taban bulmasını kolaylaştırıcı niteliktedir. Girişimcilik aynı zamanda toplumsal dengeyi oluşturan orta sınıfın hacmini genişlettiği ve bu sınıfı güçlendirdiği söylenebilir. Girişimcilik, bir yandan insan faktörünü ekonomik üretim/hizmet alanına çekerek toplumun enerjisinden yararlanmayı mümkün kılarken, diğer yandan insan faktörünün sosyo-ekonomik süreçte yeni bir anlam kazanmasına kaynaklık etmektedir. İnsan

faktörünün sosyo-ekonomik süreçteki rolünün yeniden tanımlanması, onu üretim sürecinde verimliliğin arttırılmasında olduğu gibi, genel olarak az gelişmişliğin aşılmasında da önemli kılmaktadır. Bu nedenle gelişmiş ülkelerde insan kaynaklarının nitelikli kılınmasına öncelik verilmektedir. Oysa gelişmemiş/azgelişmiş ülkelerde nitelikli insan kaynağının çok sınırlı olduğu görülmektedir. Bu durum, söz konusu ülkelerde nitelikli insan sayısının sınırlılığını geri kalmışlığın ana belirleyenlerinden biri haline getirmektedir. Gelişmemiş/azgelişmiş ülkelerde de girişimcilik yönünde köklü bir dönüşümün gerçekleşebilmesi, girişimciliğe bakış açısının olumlu olmasına bağlıdır. Bu nedenle toplumsal zihniyetin, girişimciliği onaylayıcı ve teşvik edici biçimde dönüştürülmesine gereksinim vardır. Böyle bir dönüşümü sağlamanın yollarından biri de girişimci grubun toplumsal meşruiyet düzeyini yükseltmek ve bu grubu güçlendirmektir (İlhan, 2004).

*Toplumsal Prestij ve Sosyal Sorumluluk Sağlanır;* Girişimci grubun güçlü olması, girişimcilik statüsünün toplumsal prestijinin yükseltilmesinin temel koşullarındandır. Girişimcilik statüsünün sosyal itibar düzeyinin yükseltilmesi, aynı zamanda, girişimci grubun sosyo-ekonomik süreçteki edimleriyle de yakından ilişkilidir. Girişimcilerin sosyo-ekonomik süreçte her şeye rağmen çıkar güdüsüyle eyleme yönelmek yerine, sosyal sorumluluk anlayışıyla hareket etmeleri, faaliyetlerinde toplumu göz ardı etmeyip toplum için ekonomik bir fayda üretmeleri, toplumla aralarında bağlar oluşturmaları, girişimcilere yönelik olumsuz önyargıların yıkılmasında olduğu gibi, girişimci grubun sosyal statüsünün yükselmesini ve girişimci değerler sisteminin toplumda giderek kabul görmesini mümkün kılar (İlhan, 2004).

## 5 Sonuç

Sanayi toplumundan bilgi toplumuna geçişle birlikte bilgiye kolay ve hızlı ulaşım sağlanmakta böylelikle girişimciler ürün, hizmet ve bilgi üretiminde yenilikçi yaklaşımlar kullanarak değişimi hızlandırmaktadırlar. Dolayısıyla girişimcilik ekonomide, yenilik ve bilgi teknolojilerini rekabet edebilmek için kullanarak piyasa sürecine katkıda bulunan ve piyasayı aktif, canlı, geçişken yapan ve sürekli (çoğu zaman sağlanamasa bile) dengeye doğru yönelterek istikrarı tahsis eden bir özelliğe kavuşturur. Keşif, belirsizlik ve risk gibi içerikleri üzerinde toplayarak ekonomik koordinasyonu sağlar ve piyasa dinamizminin temelini oluşturur. Bu dinamizm çerçevesinde bölgesel, ulusal ve uluslararası gelişime ön ayak olur.

Girişimcilik göstergeleri ülkeler arasında büyük farklılıklar göstermektedir. Ülkelerin farklı ekonomik gelişmişlik seviyelerinde olmaları bu farklılıkların nedenlerinden birisidir. İstihdam ve zenginlik yaratma, yenilikler yapma, sosyo-ekonomik ilişkileri geliştirme gibi önemli faaliyetler yürüterek toplumsal faydayı maksimum kılmaya katkıda bulunur. Girişimcilik; rekabet gücü, istihdam yaratma, pazarda varlığın sürdürerek yarattığı istihdamı sürekli kılma ve nitelikli mal üretimiyle ekonomik gelişmeye katkıda bulunma becerisini gerektirmektedir. Bununla birlikte, rekabet artışı ile verimlilik artışı, birbirini etkileyen bir döngü yaratmakta; rekabet nedeniyle işletmeler, tüketicinin istemine yanıt verecek daha nitelikli mal üretimi için işgücünün ve üretimin verimliliğini artırırken, verimlilik artışı, pazarda rekabetin daha fazla ivme kazanmasına etki etmektedir. Bu süreç, daha nitelikli, ucuz ve çeşitli mal üretimi ile tüketiciye fayda sağlamakta ve ekonomide canlılığı korumaktadır (Yıldız ve Alp, 2012). Küresel Rekabetçilik Endeksleri (2013) bu varsayımı doğrular niteliktedir. Gelişmekte olan ülkelerde girişimcilik oranları düştükçe rekabet edebilme güçleri azalmaktadır. İşsizlik oranları ele alındığında ise gelişmekte olan ülkeler açısından girişimcilik faaliyetlerinin artmasıyla işsizlik oranlarının düştüğü gözlenmektedir. Türkiye için girişimcilik endeksleri incelendiğinde girişimcilik 2011 yılında %11.9 olan girişimcilik oranının 2012 yılında %12.2'ye çıktığı ve buna bağlı olarakta istihdam edilenlerin sayısında bir önceki yıla göre artış olduğu gözlenmektedir. Rekabet düzeyi açısından Türkiye 148 ülke arasında 2011-2012 dönemine göre 15 sıra birden yükselerek 44. sırada yer almaktadır.

Girişimciliğin ekonomiye kazandırdığı somut katkılardan biri de yenilik oluşumunu hızlandırmasıdır. Her zaman yeni fırsatları takip eden ve yeni fikir, ürün ve hizmetler oluşturmaya gayret eden girişimciler, bir ülkenin ekonomik yapısının dinamik bir yapı halini almasında çok önemli rol oynar. Girişimcilik ve girişimciliğin bu yenilikçi yönü ile büyüme hızlanmakta, verimlilik ve yeni iş imkânı sayısı artmaktadır (Erkan, 2012). Girişimcilik oranlarında gözle görülür bir artış olan Türkiye'de 2013 yılı yenilikçilik faaliyetlerinde yükselme görülmektedir ve 142 ülke arasında 68. sırada yer almaktadır.

Aynı zamanda girişimcilik refah düzeyinin yükseltilerek geniş bir toplumsal tabana yaygınlaştırılmasında ve orta sınıfın güçlendirilmesinde, bölgesel gelişmişlik farklılıklarının ortadan kaldırılmasında ya da azaltılmasında, katılımcı demokrasinin yerleşmesinde ve genel olarak toplumsal barışın sağlanarak bütünleşmenin güçlendirilmesinde işlevseldir (İlhan, 2004). Uluslararası Refah Endeksi (2013) oranlarına göre gelişmekte olan ve az gelişmiş ülkelerde girişimcilik düzeyi ile refah seviyesi arasında pozitif yönlü bir ilişki olduğu görülmektedir. Girişimcilik oranları azalırken ülkelerin refah seviyeleri de düşmektedir. Türkiye bu çalışmaya göre 142 ülke arasında 87. sırada yer almaktadır.

Piyasa ekonomisi prensiplerinin geçerli olduğu ülkelerde global normlu işletme sayısının artması aynı zamanda anılan ülkelerin ihracatının, tüketim kalitesinin, gayrisafi milli hasılasını arttırması beklenir (Akdemir, 2009). IMF'nin 2013 verilerine bakıldığında gelişmiş ülkeler açısından bu durumun gerçekleştiği görülmektedir. Gelişmiş ülkeler arasında en yüksek girişimcilik oranına sahip olan ABD'nin dünyada ekonomik açıdan ilk

sırada yer aldığı görülmektedir. Gelişmekte olan ülkelere bakıldığında ise Meksika, Rusya, Brezilya gibi girişimcilik düzeyi yüksek olan ülkeler GSYH bakımından dünyanın en büyük 20 ekonomisi içerisinde yer almaktadır. Gelişmemiş ülkeler arasında yer alan Hindistan ise bu listede 10. sırada yer almaktadır (Ekonomistim, 2014).

Bu çalışmada incelenen yenilikçilik, rekabetçilik ve işsizlik oranlarına göre ülkelerin girişimcilik faaliyetleri değerlendirilmiştir. Bu parametreler ışığında girişimcilik oranlarının yüksek olduğu ülkelerde işsizlik oranlarının düştüğü gözlenmektedir. Yeni kurulan işletme sahipliği oranlarına bakıldığında ise pozitif yönlü bir ilişkinin olduğunu söylemek mümkündür. Bu parametreler ülkelerin gelişmişlik düzeylerine göre de farklılık göstermektedirler. Gelişmiş ve gelişmekte olan ülkelerde girişimcilik düzeyi ile ekonomik gelişme ve kalkınma arasında doğru orantı olduğunu söylemek mümkün iken gelişmemiş ülkelerin girişimcilik faaliyetleri yüksek olmasına karşın işsizlik oranlarında artış ve gayri safi yurtiçi hasılalarında düşüş gözlenmektedir. Yapılan karşılaştırmalar sonucunda gelişmiş, gelişmekte olan ve gelişmemiş ülkelerin refah seviyelerine, işsizlik oranlarına, rekabetçilik düzeylerine ve yenilikçi konumlarına göre girişimcilik faaliyetlerinin ekonomik gelişme ve kalkınma üzerinde olumlu etkisinin olduğunu söylemek mümkündür.

Ekonomik gelişme ve kalkınmada belirlenen hedeflere ulaşabilmek için, bu süreçte kullanılacak olan sosyal, ekonomik ve beşeri sermayeye önem vermek gerekmektedir. Belirsizlik ve risk ortamında, bölgesel farklılıkların ortadan kaldırılmasında, yeni ürün/hizmet ve bu ürün veya hizmetlerin üretiminde kullanılan tekniklerin geliştirilmesinde, yeni pazarlar, yeni hammadde kaynakları bularak rekabetin artırılmasında, teknolojiyi ve piyasadaki değişimleri izleyerek değişen koşullara uyum sağlamada, üretilen ürün ve hizmetlerle katma değeri artıran, istihdamı ve gelir düzeyini artıran girişimcilik faaliyetleri ülkelerin ekonomik sistemlerine olumlu yönde etki ederek ekonomik kalkınma ve gelişmeye katkıda bulunacaklardır. Bu çalışmada ülkelerin ekonomik büyüme ve kalkınmasında girişimcilik faaliyetleri birçok parametre ile karşılaştırılarak güçlü bir ekonomi yaratmadaki önemi hem teorik olarak hem de teorinin verilerle desteklenmesi ile açıklanmaya çalışılmıştır. Çalışmada elde edilen bulgulara bakıldığında; girişimcilik, ekonomik büyümenin sağlanabilirliği açısından ülkelerin oldukça önem vermesi gereken bir unsur konumundadır.

# Sürdürülebilir Ekonomik Kalkınma Belirleyicisi Olarak Eko-İnovasyonun Önemi: Dünya ve Türkiye Örneği

# Eco-innovation as a Determinant of the Importance of Sustainable Economic Development: World and Turkey Examples

Prof. Dr. Ahmet İncekara (Istanbul University, Turkey)

Asst. Prof. Dr. Elif Haykır Hobikoğlu (Istanbul University, Turkey

## Abstract

In modern societies, because of the continuity of change and transformation, innovation became one of the hallmarks of community life. Studies which mainly started by engineers in the field of environment, nowadays became a work area in many branches of science. Although eco-innovation has supply or demand side determinants, there are some corporate and political effects. Negative interaction with the environment of the societies of the world has become a risk for the sustainable existence. It also revealed the need for eco-innovation. Eco-innovation examined in four main sectors such as recycling, building and construction, food and beverage, and green businesses. Businesses can also become a part of the transformation and the concept has emerged that called green businesses. Contribute to the formation of eco-labeling has provided public awareness. Netherlands, Germany, France, the United Kingdom and Turkey are examined, said that Turkey's eco-innovation in the early period.

## 1 Giriş

Üretim ve tüketim süreçlerinde dünyamıza vermiş olduğumuz zararlar zaman içerisinde çeşitlilik göstermiştir. Teknolojinin gelişimi bir yandan çevreye duyarlı üretim ve tüketimi kolaylaştırırken, bir yandan da önü alınamaz çevre felaketlerine neden olmuştur. Bu noktada bilimin gelişimi insanlığın yararına mı zararına mı tartışmaları da doğmuştur.

Andersen'e (2008: 3) göre, çevre inovasyonu araştırmaları henüz erken dönemde ve mevcut inovasyon araştırmacılarının çok azı çevresel sorunları üzerine çalışmaktadır. Temelde mühendislik bilimleri sürdürülebilirlik için çözümler üzerine çalışmakla beraber, konsept olarak son yıllarda sürdürülebilirlik için çözümler iktisatçıların da çalışma alanları arasına girmiştir. İktisatçılar, bir disiplin olarak inovasyonu ele almışlar ve eko-inovasyon alanında sürdürülebilir kalkınmada çevrenin varlığı noktasında eko-inovatif çözümlerin oluşmasına katkı sunmuşlardır. Son zamanlarda inovasyon yönetimi alanı, eko-inovasyonda inovatif ürün ve servis geliştirmeye stratejik bir bakış açısı kazandırmıştır.

Yeşil inovasyon, çevre inovasyonu, eko-inovasyon, sürdürülebilir inovasyon, ekolojik inovasyon gibi kavramların kullanılmasıyla birlikte bir kavram kargaşası oluşmakla beraber, temelde ifade edilenin küçük farklılıklara rağmen benzer şeyler olduğu görülmektedir.

***Şekil 1:*** *Eko-inovasyonun teknoloji ve pazar/kullanıcı deneyimleri temelinde sınıflandırılması.* ***Kaynak:*** *Kemp, Rene (2011)*

Fussler ve James (1996: 2) eko-inovasyonu, müşteri ve iş değeri sağlayan çevre etkilerini önemli ölçüde azaltan yeni ürünler ve süreçler olarak tanımlar. Avrupa INNOVA paneli eko-inovasyonun anlamının yaşam

döngüsünde çıktı başına minimum doğal kaynak ve minimum zehirli madde atığı ile insan ihtiyaçlarını karşılayacak ve insanların hayatına bir kalite getirecek yenilikçi ve rekabetçi fiyatlanmış ürünler, süreçler, sistemler, servisler ve prosedürler olduğu sonucuna varmıştır. (Reid & Miedzinski, 2008: 7) OECD eko-inovasyonu, ilgili alternatiflerine göre çevresel gelişmeler öncülük eden yeni veya önemli ölçüde geliştirilmiş ürün ve servisler, süreçler, pazarlama yöntemleri, organizasyonel yapılar ve kurumsal düzenlemelerin oluşturulması ve uygulanması olarak tanımlar (OECD, 2009: 19).

Kemp ve Pearson (2007: 10) MEI (Measuring Eco-Innovation-Eko-İnovasyonun Ölçülmesi) projesinin final raporunda eko-inovasyonu tipoloji olarak dörde ayırmıştır. Bunlar Çevre Teknolojileri, Organizasyonel İnovasyon, Ürün ve Servis İnovasyonu ve Yeşil Sistem İnovasyonlarıdır. Aynı çalışmada, eko-inovasyonun ölçülmesi için üç yöntem olduğu ifade edilmiştir. Bunlar, Anket Analizleri, Patent Analizleri ve Dijital ve Belgesel Kaynak Analizleridir (Kemp & Pearson, 2007: 10).

## 2 Eko-İnovasyonun Belirleyicileri ve Amaçları

Teknolojinin gelişim süreci, firma etkenleri, devlet veya belirli bağımsız kuruluşlarca konulan kurallar, piyasanın durumu gibi faktörler eko-inovasyonun belirleyicileri olmuştur. Green ve arkadaşları (2004: 1047), maliyet tasarrufu, işbirliği ve ağ kurma, verimlilik geliştirmeleri ve kişisel bağlılık için verilen bileşenler içindeki değişimi eko-inovasyonun itici faktörleri olarak belirlemiştir. Horbach (2008: 163) bu faktörleri arz tarafı, talep tarafı, kurumsal ve politik etkiler olmak üzere üç ayırmıştır.

| Arz Tarafı | Teknolojik yeterlilikler<br>Ödenek sorunu ve pazar özellikleri<br>Yol bağımlılıkları (verimsiz üretim sistemleri, bilgi birikimi) |
|---|---|
| Talep Tarafı | (Beklenen) piyasa talebi (talep çekme hipotezi): Devlet,<br>tüketiciler ve firmalar<br>Temiz üretim için ihtiyaç duyulan sosyal duyarlılık, çevre bilinci ve çevre dostu ürünlerin tercihi |
| Kurumsal ve Politik Etkiler | Çevre politikası (teşvik bazlı enstrümanlar veya düzenleyici yaklaşımlar)<br>Mali sistemler<br>Kurumsal yapı: örneğin çevre merkezli gruplar için politik fırsatlar, bilgi akışının organizasyonu, yenilik ağlarının varlığı<br>Uluslararası anlaşmalar |

*Tablo 1: Eko-İnovasyonun Belirleyicileri **Kaynak:** Technopolis Group, 2008*

Çevreye karşı sorumluluğu olan birimin kim veya hangi kuruluşlar olduğu uzun süredir devam eden çevresel tartışmaların temel dinamiklerinden birisidir. Duyarlılık tartışmasının temelini sorumluluğun kim tarafından kime karşı olduğu tartışmasından çok, sorumluluğun ne olduğu oluşturmalıdır. Çünkü mikro düzeyden makro düzeye kişi ve kurumların sorumlulukları değişirken, ilkeler ve sorumlu olunan konuların hedeflerinin aynı kaldığı görülmektedir.

İnsanlar yapmış oldukları faaliyetler ile uzun yıllar boyunca yerel ekosistemleri etkilemişlerdir. Dünya nüfusunun artışı, sanayileşmedeki hızlı gelişme ve enerji tüketiminin artışı gibi nedenlerle iklim değişikliği küresel bir etki alanı oluşturmuştur. İklim değişikliğinin sağlık üzerindeki etkileri gelecek yıllarda nüfusun büyük kesimini etkileyecek ve insanların yaşamları ve refahları artan bir risk altında kalacak (Costello vd., 2009: 1).

WWF 2012 yılı Yaşayan Gezegen Raporu'na göre biyolojik çeşitlilik 1970-2008 yılları arasında %30 oranında düşmüştür. Doğal kaynaklara yönelik talep iki katına çıkmıştır ve faaliyetlerimizi gerçekleştirmek için 1,5 gezegene eş kaynak kullanıyoruz. Yüksek biyolojik çeşitliliğe sahip olan alanlar karbon depolama, yakacak sağlama, temiz su kaynağı akışı ve balık rezervi oluşturma gibi önemli hizmetleri yerine getirmektedir. (WWF, 2012: 2)

Bugün ve gelecek için dünyamızın sürdürülemeyen kalkınmasına yeni bir yön vermek, küresel iklim değişikliklerinin önüne geçebilmek, biyolojik çeşitliliği koruyabilmek, finans ve kaynak yönetim modellerini düzenleyebilmek, daha verimli, akılcı ve çevre dostu üretim ve tüketim yapabilmek için mutlaka eko-inovatif adımların atılması gerekmektedir.

Temiz üretim araç ve yöntemlerinin geliştirilmesi, enerji verimliliğini sağlayacak fikirlerin ortaya konulması, eko-verimliliğin sağlanması ve eko-tasarımın teşviki eko-inovasyonun amaçlarındandır. Eko-verimlilik kısaca bir hizmetin veya ürünün değerinin çevrede oluşturduğu etkiye oranıdır. Sürdürülebilir Kalkınma için Dünya İş Konseyi (WBCSD) eko-verimliliğin yedi elementi olduğunu ifade ediyor (WBSDC, 2000: 15). Bunlar;

- Ürünlerin veya hizmetlerin materyal ihtiyacının azaltılması,
- Ürünlerin veya hizmetlerin enerji yoğunluğunun azaltılması,
- Zehirleyici maddelerin azaltılması,

- Materyallerin geri dönüşümünün artırılması,
- Yenilenebilir kaynakların kullanımının maksimize edilmesi,
- Ürün dayanıklılığını artırmak,
- Ürünlerin veya hizmetlerin servis yoğunluğunu artırmaktır.

Bir işletme oluşturulurken işletmenin altyapısından fiziki imkânlarına, iç dekorasyonundan üretim araçlarına kadar her değerinin çevreye duyarlı şekilde tasarlanması gereklidir. Bununla birlikte örneğin, temizleyiciler ve filtreler gibi boru çıkışı çözümlerin kullanılması çevre duyarlılığını sağlarken, bu çözümler üzerinde geliştirilecek ve çevreyi daha iyi şekilde koruyacak çözümler eko-inovatif adımlardır.

Avrupa Çevre Ajansı'nın çalışmasına göre, 1990'dan itibaren GSMH büyürken enerji yoğunluğu azalmaktadır (European Environment Agency, 2005: 365). Bu olumlu bir gelişmedir. Ancak, toplam enerji tüketiminin artıyor olması enerji verimliliğinin önemini koruduğunu ifade ediyor. Enerjinin kullanıldığı bir alanda, kullanılan enerji miktarını azaltacak, enerjinin elde edilme yollarını değiştirmek veya çeşitlendirmek yolu ile çevreye duyarlı enerji elde etme metotları oluşturacak fikirler, davranışlar veya eylemler eko-inovasyonun amaçlarındandır.

Eko-tasarım, çevreye duyarlı eko-yenilikçi ürünlerin ortaya konulmasıdır. Örneğin, bambu ağacı çok çabuk büyüyen bir ağaçtır. Bambu ağacından yapılan bisiklet, kaplar, bıçaklar, tekstil ürünleri gibi ürünler eko-tasarım kapsamına girmektedir. Bu ürünlerin tasarımı ve kullanımı eko-inovasyonun amaçlarındandır.

Avrupa Komisyonu'na bağlı olarak çalışan Rekabet Edebilirlik ve Yenilik İcra Ajansı (EACI) yayınlamış olduğu raporda (Executive Agency for Competitiveness & Innovation, 2011: 1), eko-inovasyonda dört ana sektörün varlığına işaret eder. Bu sektörler ve 2008 ve 2009 yılları içerisinde Avrupa Birliği'nden toplamda almış oldukları finans desteklerinin yüzdeleri şu şekildedir: Geri Dönüşüm (%43), Yapı ve İnşaat (%10), Yiyecek ve İçecek (%21) ve Yeşil İşletmeler (%25) (Executive Agency for Competitiveness & Innovation, 2011: 1).

Teknolojinin hızlı gelişimi ile birlikte, teknolojik atıkların zaman içerisinde fazlalaştığını görmekteyiz. Avrupa yılda 12 milyon ton elektronik ve elektrikli teçhizat atığı üretiyor ve bu rakamın her geçen gün arttığı görülüyor. (Executive Agency for Competitiveness & Innovation, 2011: 7). Bu alandaki geri dönüşüm/kazanım materyallerin çeşitliliği ve ayrılmasındaki zorluklar nedeniyle zor olarak görünse de, yeni yazılımlar, akıllı sensörler ve radyo frekansı ile algılama yöntemleri ile parçaların ayrılması ve sonrasında dönüştürülmesi/kazanılması mümkün olabiliyor. Bütün bu süreçler eko-inovasyonun bir parçasıdır.

Yapı ve inşaat sektörü Avrupa ekonomileri ve Türkiye ekonomisinin önemli bir parçasıdır. Avrupa Komisyonu Raporu'na göre (EU, 16 Nisan 2013), yapı ve inşaat sektörü Avrupa ekonomisinin gayri safi yurtiçi hasılasının neredeyse %10'unu oluşturuyor ve toplam istihdamın %7'sinden fazlasını karşılıyor (Executive Agency for Competitiveness & Innovation, 2011: 20).

Özellikle, gıda endüstrisinde su ve enerji tasarrufu sağlayacak eko-inovatif çözümlerin geliştirilmesi gerekmektedir. Ayrıca, işletmelerin yiyecek kayıplarını azaltacak, yiyecek atıklarını değerlendirmeye alacak, doğal üretimi teşvik edecek, doğal üretim yöntemlerini geliştirecek eko-inovatif fikirlerin yanı sıra paketlemede dönüştürülebilir ve değerlendirilebilir ürünlerin kullanımının oluşturulması, bu ürünlerle ilgili projelerin üretilebilmesi ve paketleme sürecinden sonra bilgilendirme amaçlı etiketleme çalışmalarının yapılabilmesi önem taşımaktadır.

Sertifikasyonlar, eko-etiketler ve uluslararası standartlar da yeşil işletmelerin oluşumunda önemlidir.

Yeşil İşletmeleri üçe ayırabiliriz. Bunlardan ilki, eko-inovatif fikirler üretmek yolu ile şirketlerin yeşil işletmeler haline gelmesini sağlayan, belirli bir uzman düzeyine ulaşmış danışmanlık şirketleridir. İkincisi, bilgi ve fikirden öte, eko-inovatif ürünler ve hizmetler üretmeye odaklanmış şirketlerdir. Üçüncüsü ise, yapmış olduğu işi eko-inovatif adımlar ile çevreye duyarlı hale getirmeye çalışan işletmelerdir.

Eko-etiketler, ürünlerin üretilmesi ve kullanılması süreçlerinin çevre dostu olması neticesinde ürünlere eklenen etiketlerdir. Bu etiketler, kapsam bakımından çok çeşitlidir. Bağımsız kuruluşlar veya şirketler belirli standartlar ölçütünde etiketleme yapabilirler.

Uluslararası Standartlar Organizasyonu (ISO) çevre etiketlerini üç tipe ayırmıştır (ISO, 2000: 5).

Tip I (ISO 14024) resmi çevresel etiketler bağımsız kuruluşlarca hazırlanır ve bir ürünün veya servisin belirli standartlar çerçevesinde çevreye duyarlı olup olmadığını tespit için kullanılır. Etiket, üzerinde çok fazla detay içermemesine rağmen değerlendirmede ürünün veya servisin yaşam döngüsüne göre birçok kıstas ve gönüllülük temel alınır. Örneğin, Almanya'nın "Blue Angel" (mavi melek), Fransa'nın "NF Environnement" (NF Çevre), Danimarka, İsveç, Finlandiya, İzlanda'nın "White Swan" etiketleri gibi.

Avrupa Birliği çeşitli ülkelerdeki etiketlerin standartlaştırılması amacı ile 23 Mart 1992'de çevre etiket sistemini kurmuştur. Bu etiket, üretim ve tüketim araçlarının çevreye duyarlı olduğunu göstermekte ve "EU flower" (AB çiçeği) olarak bilinmektedir (Avrupa Komisyonu, 16 Nisan 2013).

## 3 Eko-İnovasyon Bağlamında Dünya ve Türkiye Örneği

Hollanda, Birleşmiş Millet Kalkınma Programı tarafından hazırlanan İnsani Gelişmişlik Endeksi'nde Norveç ve Avustralya'dan sonra üçüncü sıradadır. (Birleşmiş Milletler Kalkınma Programı, 16 Nisan 2013). Aynı zamanda, Avrupa'nın altıncı büyük ekonomisidir (Stastics Nedherlands, 2004: 3). 32600 Avro kişi başına gelir ile AB ülkeleri arasında ikinci sıradadır. Eko-İnovasyon performansı AB ortalamasının üstündedir.

*Grafik 2: AB27 Eko-inovasyon Puanlaması 2011, Bileşik Endeks **Kaynak:** Eco-Innovation Observatory*

Su teknolojileri Hollanda'nın ön plana çıktığı alandır. Çoğu Küçük ve Orta Boy İşletmeler tarafından gerçekleştirilmek üzere yaklaşık 1500 organizasyona sahiptir. Kimya, tarım, elektronik, yapı ve enerji sektörleri diğer ön plana çıkan sektörlerdir (Eco-Innovation Observatory, 16 Nisan 2013). Hollanda, güçlü bir araştırma-geliştirme altyapısına sahip olmasına rağmen, eko-inovasyon tartışmaları ve faaliyetlerinin yeterli durumda olduğu söylenemez. Bunda eko-inovasyon politikalarının mevcutta ve vizyon açısından yeterli düzeyde olmamasının etkisinin olduğu da söylenebilir.

Almanya, imalat sanayi açısından ön plandadır. Üretilen ürünler, ihracat temelli ekonomik politika ile dünyanın birçok ülkesine ulaşmakta ve Almanya mekanik mühendislik alanındaki çalışmalara da yön vermektedir. Dönüşüm yönetimi ve sürdürülebilir su teknolojileri eko-inovasyonun temel sürükleyicileridir.

Almanya eko-inovasyon performansı açısında Avrupa Birliği ortalamasının üstünde ve Finlandiya, Danimarka ve İsveç'ten sonra dördüncü sıradadır. Almanya'nın araştırma-geliştirme faaliyetlerinin devamlılığını sağlayacak insan gücü, teknolojisi, eko-inovatif küçük ve orta boy işletmeleri ve patent altyapısı mevcuttur. Politik ve ekonomik istikrarsız ortamı yapısal reformlar ve teşvikleri yavaşlatıyor olsa da kriz döneminde Avrupa'da ayakta kalan bir güç olması, istikrar ortamında eko-inovatif proje desteklerinin artabileceğini göstermektedir.

Fransa, İnsani Gelişmişlik Endeksi'nde dünyada 20. sıradadır ve Birleşmiş Milletler'in 2011 istatistiklerine göre dünyanın beşinci büyük ekonomisidir (Birleşmiş Milletler, 05 Mart 2013). Fransa'nın, eko-inovasyon performansı Avrupa Birliği ortalamasındadır.

Su rehabilitasyonu, atıkların yönetimi ve verimli binaların üretimi Fransa'nın ön plana çıktığı alanlardır. Ayrıca, Fransa kamuoyu ve politiğinde eko-inovasyon tartışılan bir konudur ve belirleyici olmaya başlamıştır. Sera gazı emisyonlarının azaltılması, yenilenemeyen enerji kaynaklarına bağlılığın azaltılması ve biyolojik çeşitliliğin korunmasına yönelik eko-inovatif çalışmalar dikkat çekmektedir. Araştırma-geliştirme harcamalarının ve çevresel istihdamın artan şekilde devam ediyor olması Fransa için umut verici bir gelişmedir.

Eko-inovasyon politikalarının etkin olması, büyük firmaların varlığı, yabancı piyasalarla diyalog ortamı içinde olunması Fransa için önemli avantajlar olarak görünüyor. Çünkü eko-inovatif fikirler ve yatırımların küresel ekonomik ve finansal krizin etkilerinin azalmaya başlaması ile artması beklenmektedir. Ancak, Fransa'nın nükleer enerjiye bağımlı olması, Fransa'nın yenilenebilir enerjilere geçiş sürecini yavaşlatabilir. Küçük ve orta boy işletmelerinin de sürece katılması gerekmektedir.

Türkiye, Birleşmiş Milletler İnsani Gelişmişlik Endeksi'nde 92. sıradadır ve (gayri safi yurtiçi hasılaya göre) dünyanın en büyük 18. ekonomisidir. Türkiye'de inovasyon yeni bir kavram olarak görülmektedir ve kamuoyunda dikkatleri üzerine çekmeye başlamıştır.

Türkiye'de eko-inovasyon alanındaki çalışmalar ve yasal altyapıda yapılan değişiklikler temelde Avrupa Birliği'ne üyelik süreci çerçevesinde ilerlemektedir. Dünya Bankası istatistiklerine göre araştırma-geliştirme

harcamalarının Gayri Safi Yurtiçi Hasıla içerisindeki payı artmaktadır (2009 rakamlarına göre GSYH'nin %0.85'i) (Worldbank, 16 Nisan 2013). Ancak, bu oran birçok Avrupa ülkesinin gerisindedir. Araştırma-geliştirme yatırımlarının artmasının eko-inovatif yatırımları da artıracağı olası bir beklentidir. Türkiye'nin gelişen bir ekonomiye sahip olması ve Avrupa Birliği'nin destekleri genellikle küçük ve orta boy işletmeler için veriyor olması Türkiye için bir fırsat olabilir.

EIP (Entrepreneurship and Innovation Programme-Girişimcilik ve İnovasyon Programı) kapsamında Türkiye'den dokuz proje kabul almıştır. Bu projeler, yapı endüstrisi, KOBİ işletme ağı çalışmaları, AB Eko-Etiketi ve Kadın Girişimciliği gibi alanlardadır.

Türkiye'de yatırım açısından sektör-üniversite işbirliklerinin, araştırma-geliştirme bütçelerinin ve fikri mülkiyet haklarının korunmasının yeterli düzeyde olmaması süreçleri yavaşlatan unsurlar olarak dikkat çekmektedir.

## 4   Sonuç

Eko-inovasyon, dünyamızın sürdürülebilirliğinin sağlanması ve yaşanabilirliğinin iyileştirilmesi için büyük önem taşımaktadır. Bu nedenle de mikrodan makroya yapılacak her çalışma değerlidir. Bu çalışmaların yapılabilmesi için de sivil toplum ve hükümetlerin eko-inovatif adımları gündem maddesi olarak ele alması gereklidir.

2009'da meydana gelen küresel ekonomik kriz eko-inovasyon çalışmalarını olumsuz etkilemekle beraber, kriz sonrasında odak noktanın ekonomizmden sorumlu yatırımcılığa dönüşmesi ile birlikte araştırma-geliştirme bütçelerinin de artması da beklenmektedir.

Eko-inovasyonda ön planda olan ülkelerin araştırma-geliştirmeye hem fikri hem de maddi olarak değer veren, insani gelişmişlik endeksinde ön planda olan, büyük ekonomilere sahip ve hukuksal alt yapısı güçlü ülkeler olduğu dikkat çekmektedir.

Sürdürülebilir kalkınma sağlamada çevresel zararların ortadan kaldırılması kaynakların etkin kullanılması ve üretilen ürünün etkin kullanımını sağlayan süreçlerin optimum kaynak kullanımı çerçevesinde yeniden değerlendirilerek çözüm yolları üretecek bir sistemin kurulması önemlidir.

# Bilgi Ekonomisi ve Türkiye

# Knowledge Economy and Turkey

Ph. D. Candidate Burcu Baydar (Istanbul Aydın University, Turkey)

## Abstract

In this study, concept of knowledge economy has been held from the point of innovations it has brought, main features and factors and also the analysis of knowledge economy from Turkey's perspective. Knowledge society has been started with the development of the first computer and evolved with the improvements in knowledge and communication sectors. In this process, relations with production, consumption and distribution which are main factors of economy and whole economic structure have been changed as to be based on knowledge. Strategic factor has become the knowledge. The new economy called knowledge economy is a web economy which is the main determiner in competitiveness and productivity. "Knowledge Assesment Methodology" has been developed by World Bank in order to measure the progress of countries towards becoming a knowledge economy. Also another indicator "Network Readiness Index" was developed by World Economic Forum. Therefore, in this study, the place of Turkey in becoming a knowledge society has been analysed by comparing Turkey with other countries in the world. Strength and weaknesses, opportunities and threats have also been analysed in terms of knowledge economy for Turkey.

## 1 Giriş

İnsanlık tarihini pek çok şekilde bölümlemek mümkündür. Çağımızın önemli yönetim bilimcileri arasında yer alan Alvin Toffler'e göre tarih 3 bölümde ele alınmalıdır ve kendi deyimi ile bunlar dalgalar olarak nitelendirilmektedir. Bu dalgalar: 1. Dalga: Tarım Toplumu 2. Dalga: Sanayi Toplumu 3. Dalga: Bilgi Toplumudur. (Toffler, 1984) Tarihin ilk sahnesinden bu yana tarım, insan ihtiyaçlarının giderilmesinde önemli bir yer tutmuş, toprağını en verimli şekilde kullanabilen toplumlar diğerleri üzerinde bir güç alanı oluşturmuştur. Sanayi toplumunun dayanak noktası makineleşme olmuştur. İçinde bulunduğumuz bilgi toplumu çağında servis/bilgi teknolojileri ön plana çıkmıştır. Bilgi toplumu, bilgi sayesinde teknolojinin değişim ve dönüşümüne sahne olmaktadır. Üretim ilişkileri ve ticari ilişkiler değişmekte, ortaya çıkan hız, sağlanan verim teknolojik gelişme ile birbirini desteklemektedir. Ülkelerin bilgi ve iletişim teknolojilerini ne denli yoğun bir biçimde kullandığı ve üretiminde nasıl bir katkısı olduğunu ölçümlemek, ülkelerarası karşılaştırmalı bir analiz yapabilmek için zorunlu hale gelmiştir. Ekonomik, toplumsal ve sosyal hayatın modernizasyonu olarak adlandırılabilecek bu süreçte Türkiye, değişime ayak uydurmak ve sürecin avantajlarından yararlanıp rekabetçi olmak için belirli yapılanmalar içerisine girmiştir. Türkiye'nin ilerlemesinin değerlendirilmesi açısından bu gelişmeler ve bunların ölçümlenerek değerlendirilmesi, dünyadaki diğer ülkelerle karşılaştırma yapılabilmesi büyük önem taşımaktadır (Çirasun, 2011)

## 2 Tarım, Sanayi ve Bilgi Toplumu Tanımları

2,5 milyon yıllık insanlık tarihinde insan toplulukları avcılık toplayıcılıktan tarıma geçtiklerinde yani yiyecek olarak tüketebilecekleri bitkileri yetiştirmeye başladığında, sosyal ve ekonomik olarak devrimsel dönüşümler yaratan bir süreç başlatmışlardır. Toprak en önemli kaynak haline gelmiş, insanlar bilgi birikimleri ve kullanabildikleri teknoloji ile toprağı işleyerek yerleşik yaşama geçmiştir. Ekonomik üretim, doğal kaynak olan toprağın sahibinin yönetiminde ve kölelerin bağımlı emek gücü vasıtası ile gerçekleştirilmiştir (Şen, 2003). Bunun ardından gelen pusulanın icadı ticareti hızlandırmış, yeni kıtaların, yeni yerlerin keşfini kolaylaştırmıştır. Coğrafi keşifler ve madenciliğin önü açılmıştır. Tarıma dahil edilen yeni topraklar ve kaynaklar üretime sokulmuş, sulama teknikleri ve toprağın sabanla sürülmesi ile verim artışı elde edilmiştir. Ticaret yaygınlaşmış ve para temel değişim aracı olmuştur. Ancak tarıma dayalı ekonomilerde yeryüzündeki toprak ve kaynakların nihai bir sınırı bulunduğundan, nüfus artışına paralel bir verim artışı garanti edilememektedir. Sonuç olarak "Azalan verimler kanunu" bu ekonomik yapının çökmesinde etkili olmuştur (Çirasun, 2011).

Sanayileşme ve sanayi devrimi ilk olarak İngiltere'de başlamıştır. Tarımdaki mekanizasyon ile beraber yeni kıtaların keşfi ve sömürgecilik ile fazla ürünü elden çıkarmaya yardımcı pazar genişlemesi ve beraberinde gelen sermaye teşkil oranındaki artış, sanayi devrimine neden olan başlıca etkenler olarak gösterilmektedir. Sanayi toplumunu hazırlayan ekonomik ve toplumsal hayata etki eden sanayi devrimi bazı kaynaklarda otomasyon ve mekanizasyon olarak safhalandırılsa bile (Kuyucuklu, 1985), bazı kaynaklarda emekle çalışan makina, buharla çalışan makina ve elektrikle çalışan makina olmak üzere üç safhaya ayrılmıştır (Dinçer ve Fidan, 1996). Bu gelişmeler maddi üretimin hem hacmini hem niteliğini değiştirmiştir. Enerjiyi ucuza mal etmek ve kolaylıkla uzak yerlere taşımak mümkün olmuştur. Elektrik enerjisinin gelişim gösterdiği bu yıllarda bilim adamı, mühendis ve işadamı arasındaki işbirliği çerçevesinde bilim adamı ve mühendislerin geliştirdiği projeler, girişimci işadamları tarafından desteklenmiş, işbirliği geliştirilmiştir (Rondo, 2002). Ancak şehirlerin

kalabalıklaşması ile beraber yeni kurumlar ortaya çıkmış ve sosyal sınıf ayrımı artmıştır, politik ve ekonomik eşitsizlik oluşmuştur. Sanayi devrimi Fransa'da gerçekleştirilen politik devrim ile tamamlanmıştır.

Sanayileşmenin getirdiği üretim artışı en başta, azalan verimler kanununun sanayide sözkonusu olmayacağını, sanayi mallarının sabit maliyetlere göre üretileceğini işaret etse de, bir süre sonra sanayi mallarının da azalan verimler kanununa bağlı olarak üretildiği kabul edilmiştir. Bunun için bebek endüstrilerin korunması ve prim, vergi kolaylıkları v.b. araçlar ile teşviki gibi politikalar uygulanmıştır. Sanayi toplumunun başlıca reel iktisat ve dış ticaret politikalarını bunlar oluşturmaktadır (Acar, 2000).

İkinci dünya Savaşı zamanında Amerika birleşik Devletlerinde atom bombası yapmak amacı ile başlatılan Manatthan projesi kapsamında ihtiyaç duyulan simülasyon hesaplamalarını yapabilecek bir makine gereksinimi ortaya çıkmıştır. 1942 yılında ABD Savunma Bakanlığı ile Pennsylvania Üniversitesi arasında yapılan anlaşma ile çalışmalar başlatılmış ve 1945 yılında ilk programlanabilir bilgisayar olan ENIAC'ın geliştirilmesi ile bilgi çağı başlamıştır denebilir. Bilgisayarın akademik dünya, iş dünyası ve bireysel yaşamda kullanımı zamanla artmış, toplumsal ve ekonomik yapıda büyük değişiklikler görülmeye başlamıştır.

Bilgi toplumu ile değişen ekonomik koşullar ile Toffler'ın deyimiyle birinci dalga yani tarım ve tarımsal faaliyetler olabildiğince azalmıştır. Tarımın yerine sanayi geçmiş, tarımın sektörel ağırlığı azalmış, sanayi toplumundaki çalışan sanayi isçisi de sanayileşmenin had safhaya ulaşması ile değerini kaybetmiş, yerine bilim üreten profesyonellerden oluşan bir mesleki ve teknik sınıf ortaya çıkmıştır. Bu durumda Drucker'in deyimi ile "Bilgi İşçileri" denilen bir sınıf meydana gelmiştir.

Bilgi'yi esas alan yeni toplum bilincine dair birçok tanım yapılmıştır. Örneğin Amitai Etzioni Modernist Dönem / Modernlik Sonrası Çağ; George Lichteim Burjuvazi Sonrası Toplum; Peter F. Drucker Kapitalist Ötesi Toplum / Bilgi Toplumu / Öğrenen Toplum; Alvin Toffler Üçüncü Dalga; Herman Kahn Ekonomi Sonrası Toplum; Bengsghir Bilgi, İletişim, Uzay ve Elektronik Çağı; Yoneji Masuda, Enformasyon Toplumu / Enformasyon Uygarlığı gibi.

Bilgi toplumu kavramını ortaya koyan ilk düşünürlerden Japon Yoneji Masuda ortaya koymuştur. 'ya göre bilgi toplumunun özellikleri aşağıda verilmiştir:

- Bilgi toplumunun gelişme dinamiğini bilgisayar teknolojisi yönlendirmektedir. Simgesi bilgisayar ağları ve bu ağlarla oluşsan kamusal alt yapıdır.
- Bilgi toplumunda önde gelen sektör entelektüel sektörlerdir.
- Bilgi toplumunda sosyo ekonomik sistem 'gönüllü bir sivil-toplumdan oluşmaktadır.
- Bilgi toplumu sanayi toplumundan farklı olarak çok merkezlidir.
- Bilgi toplumunun siyasal sistemi 'katılımcı demokrasi'dir.
- Bilgi toplumu, dayanıklı tüketim malı üretip tüketen sanayi toplumunun aksine yüksek seviyede kitlesel bilgi üreten bir toplumdur.
- Sanayi toplumunda temel değerler maddi ihtiyaçların tatminine dayanırken bilgi toplumunda temel değerler 'amaçlara ulaşmanın verdiği tatmin'e dayanır (Masuda, 1990).

Özellikle belirtmek gerekir ki, bu toplumda amaç bilgiyi etkili, verimli ve kaliteli olarak kullanabilecek işgücüne sahip olabilmektedir. Bilgi toplumunda 'bilgi'nin merkezi bir konuma sahip olması itibariyle sanayi toplumundan farklı olarak mavi yakalılar denilen işçi kesimi yerine beyaz yakalıların sayısı yani nitelikli işgücü gereksinimi artmıştır. Bilginin yoğun olarak üretildiği bu bilgi toplumunun ekonomik sisteminde bireylerin kendilerini kanıtlama ihtiyaçları sadece ulusal sınırlar içinde kalmayıp küresel düzeyde söz konusu olmaktadır. Bilgi toplumu özetle, "stratejik üretim faktörünün bilgi olduğu toplumsal yapı" olarak tanımlanmaktadır (Taşçı, 2007).

## 3 Bilgiye Dayalı Ekonomi

Sermayenin önemli olduğu sanayi toplumundan, enformasyonun önemli olduğu bilgi toplumuna geçen dünyada verimlilik ve inovasyon büyümenin en temel unsurlarındandır. Bilgi toplumunun içinde bulunduğu koşullar, bilgi ekonomisini yaratmıştır. Bilgi ekonomisinde bilgiyi üretme, kullanma, yönetme kapasitesi verimliliğin ve rekabet gücünün ana belirleyicisi haline gelmiştir. Bilgi ekonomisi küreseldir ve bir ağ ekonomisidir. OECD, bilgi ekonomisini "üretim ve dağıtımda bilginin kullanıldığı ekonomi" olarak tanımlamaktadır (OECD, 1996).

Bilgi ekonomisinin özellikleri Don Tapscott tarafından aşağıdaki gibi ifade edilmiştir:

- Bilginin temel üretim faktörü olması: Bilgi ekonomisinin en önemli kaynağı bilgidir. Bilgi ekonomisinde bilginin yaratılmasında hem bilgi işçisinin hem de bilgi tüketicisinin payı büyüktür. Tüketici fikirleri, teknolojik ürünlerin bir parçası haline geldiği için ürün ve hizmetlerin bilgi içeriği genişlemekte, son dönemlerde akıllı ürün adı verilen ürünler piyasaya sürülmektedir.
- Bilgi ekonomisi, dijital bir ekonomidir: Bilgi analog yapı yerine dijital sistemler kullanıldığı ve elektronik ağlar üzerinde iletilebildiği için yeni olanaklar sunmaktadır. Günümüzde her tür bilgi; ses, yazı, görüntü,

hareketli obje şeklinde bilgisayarlar ve internet aracılığı ile hızlı, ucuz ve güvenilir bir şekilde alıcılarına ulaştırılabilmektedir.

- Bilgi ekonomisinde sanallaşma önemli bir rol oynamamaktadır: Bilginin niteliği, analogdan dijitale doğru bir değişim gösterdikçe fiziki varlıklar, sanal hale gelmektedir. Sanallaşma da ekonominin yapısını değiştirmekte, kurumsal yapılanma ve işleyişi etkilemekte, ekonomik faaliyetlerin doğasına etki etmektedir (Tapscott, 1998).

Bilgiye dayalı ekonomilerde görülen en önemli özelliklerden biri, firmaların tek başlarına değil, firmalar topluluğu halinde üretim yapma eğilimleridir. Bir çok küçük ve orta boy firma, büyük bir firmanın yönetiminde ortak üretim yapmalarıdır. Uzun dönemde ölçek ekonomilerinin yerini alan (scope) ekonomileri almaktadır. İkinci özellik olarak üretimde pek az enerji kullanma eğilimidir. Kısa dönemde artan verimler eğilimi güçlenirken, uzun dönemde firmalar topluluğu büyüyerek alan ekonomilerinin ve artan getirinin ortaya çıkma eğilimini arttırmaktadır. Bunlardan başka birbirleri ile koordineli çalışan az sayıdaki uzman ve nitelikli iş gücü kullanımı, emeğin sabit tesisler üstündeki etkinliğini güçlendirerek artan verime yol açmaktadır. Ayrıca gelişen teknoloji ve talep yapısındaki değişim üretim yapısını da ciddi anlamda değiştirmiştir. Bilgi toplumu artan verimlerin, artan getirinin ve alan ekonomilerinin toplumu olacaktır (Acar, 2000).

## 4 Bilgi Ekonomisinin Getirdiği Önemli Değişiklikler

Bilgi ve iletişim teknolojilerinde yaşanan gelişmeler bütün ekonomik birimleri etkilemektedir. Ekonomik yapı çok dinamik, karmaşık ve öngörülmesi zor bir hale gelmektedir. Ekonominin üç ana unsuru olarak nitelendirilen üretim, tüketim, dağıtım ilişkileri ve piyasa yapısı bilgiyi temel alarak yeniden yapılanmaktadır. Bu yapılanma klasik üretim süreçlerinin sürekli olarak iyileştirilmesi; mevcut bilgi kullanılarak yeni ve farklı üretim süreçlerinin, mal ve hizmetlerin elde edilmesi; tamamen yeni bir bilginin geliştirilerek kullanılması şeklinde olabilmektedir.

Üretim faktörleri kullanıldıklarında tüketilirken, bilgi tüketilememektedir. Üretim faktörü bilgi olduğunda, üretim fonksiyonu TÜ = f (K,L) şeklinde ifade edilirken, TÜ = F (K,L,I) şekline dönüşmüştür. (TÜ = Üretim, K= Üretime katılan sermaye miktarı, L = Üretime katılan emek miktarı, I = Information (teknolojik gelişme katsayısı) (bilgi katsayısı)) Ayrıca bilgi üretim faktörü olduğunda, artan verimler kanunun geçerli olduğu görülmektedir ve geleneksel üretim daha verimli hale gelmektedir.

**Şekil 1:** *Üretimde Bilgi ve iletişim teknolojilerinin kullanılması sonucu artan verimlerin geçerli olması.* **Kaynak:** *Acar, 2000*

Tüketiciler açısından bakıldığında, tüketiciler mal ve hizmetleri daha çabuk, zaman ve mekanla sınırlı olmaksızın alabilmekte, tüketici davranışları dijital ortamlarda daha iyi analiz edilir hale gelmektedir. Ekonomi, tüketici güdümüne girmektedir. Piyasaya giriş ve çıkış engelleri azalmakta ve bilgi rekabet unsuru haline gelmektedir (Kara, 2005) Pazar şartlarına daha hızlı adapte olan, değişimi yönetebilen ve sadece yerel değil küresel pazarda da yer alabilen yenilikçi ve girişimci bilgi merkezli işletmeler başarılı olabilmektedir. Sınırlar ortadan kalktığı için, küresel firmalarla rekabet edebilecek yenilikçi ürün ve hizmetlerin ortaya konulması zorunluluk haline gelmektedir.

Bunlara ek olarak fiziksel uzaklıkların ekonomik etkisi ve bilgiye erişim maliyeti bilgi ve iletişim teknolojileri sayesinde düşmektedir. Bu sayede yeni işletme kuruluş maliyetleri düşmekte ve yeni pazarlarda rekabet etmek şansı yükselmektedir. İşletmelerin başarı ölçütü de sanayiye dayalı ekonomilerde maddi olarak "kar" ile ölçülürken, artık "piyasa değeri" ile ölçülür hale gelmiştir. Eskiden kıt kaynak olarak finansal sermaye görülür iken, artık nitelikli insan kaynağı kıt kaynak durumuna gelmektedir (Taşçı, 2007). Bilgi işçisi olarak tanımlanabilecek türdeki işgücünün talebinde artış görülmektedir. Bunlarla birlikte bilgi ve iletişim teknolojilerinin yüksek kalitede düşük maliyetli ürünlerin ortaya çıkabilmesi için işbirliği olanakları da yaratmaktadır (Avrupa Komisyonu, 2001).

Bilgi ekonomisinde görülen değişikliklerin bir tanesi de hizmet sektörünün ön plana çıkmasıdır. Bilgi toplumu ile birlikte hizmet sektöründe eğitim, sağlık gibi insani hizmetlerin, bilişim teknolojilerinin ve bilimsel gelişmeye yönelik araştırma geliştirme faaliyetlerinin giderek önem kazandığı görülmektedir. Bilginin ön plana çıktığı ekonomik modelin, mevcut iş süreçlerini ve meslekleri daha nitelikli olmaya zorladığını söylemek mümkündür (Meçik, 2013)

## 5 Bilgi Ekonomisinin Unsurları ve Değerlendirilmesi

Karar vericilerin bilgi ekonomisi ve bilgi toplumu için hedef belirlerken ülkelerinin bilgi ve iletişim teknolojileri açısından durumlarını değerlendirebilmeleri gerekmektedir. Bu konuda kullanabilecekleri çeşitli endeksler bulunmaktadır. Bu endeksleri geliştiren kuruluşlar McConnell Uluslararası teknoloji politikası ve yönetim danışmanlık şirketi (MI, a global technology policy and management consulting firm), Harvard Üniversitesi Uluslararası Gelişim Merkezi (the Centre for International Development at Harvard University), the Economist Intelligent Unit, Birleşmiş Milletler Ticaret ve Gelişim Konferansı (the United Nations Conference on Trade and Development (UNCTAD), Birleşmiş Milletler Gelişim Programı (the United Nations Development Program (with its Technology Achievement Index )), Dünya Ekonomi Forumu (World Economic Forum), the Mosaic Group ve Dünya Bankası (the World Bank)dır. Bu çalışmada Dünya Bankası ve Dünya Ekonomik Forumu tarafından ölçülen Bilgi Ekonomisi endeksi ve Ağyapılar İçinde Olmaya Hazırlık Endeksi-AHE (Networked Readiness Index) verileri kullanılmıştır (Beig, vd, 2007).

- Dünya Bankası tarafından, bilgi ekonomisinin temel unsurları ekonomik teşvikler ve kurumsal rejim, eğitim, yenilik, bilgi ve iletişim teknolojileri olarak ele alınmaktadır (Dünya Bankası, 2010). Dünya Bankası tarafından, Kalkınma İçin Bilgi (Knowledge for Development - K4D) programında kullanılmak üzere geliştirilen Bilgi Değerlendirme Metodolojisi (Knowledge Assesment Methodology-KAM), bu unsurları kullanarak ülkelerin bilgi ekonomisine geçiş yolunda karşılaşabilecekleri problem ve fırsatları belirlemelerini sağlamayı hedefleyen bir metottur. Bu unsurlar kısaca aşağıda özetlenmiştir:

- Ar-Ge ve yenilik(çilik): Yerel ve küresel yeniliklerin geliştirilmesi ve ticarileştirilmesini hedefleyen yenilik politikalarının, Ar-Ge sistemini de içeren, kurumların ve destek mekanizmalarının yer aldığı Ulusal Yenilik Sistemi. Burada önemli göstergelerden bazıları patent sayıları, telif ücreti ödemeleri ve bilimsel yayınların sayısıdır

- Eğitim: Bilgi ekonomisinin en önemli unsuru olan bilgi uzmanları, teknoloji okuryazarı işgücü ve nitelikli insan kaynağının yetiştirilmesinde kamu ve özel kesim eğitim kurumlarını kapsayan, yenilikçi ve dinamik bir eğitim sistemi (David ve Foray, 2002). Burada önemli göstergelerden bazıları yetişkin okuryazarlık oranı, ortaöğrenime katılım, yüksek öğretime katılımdır.

- Bilgi ve iletişim teknolojileri: Burada önemli göstergelerden bazıları telefon aboneliği sayısı, bilgisayar sayısı, internet kullanımıdır.

- Bilgi ekonomisinin içinde gelişebileceği uygun iş ortamı: Burada önemli göstergelerden bazıları tarifeli ve tarifesiz engeller, yapılan düzenlemelerin kalitesi ve uygulanabilirliği, özel sektöre verilen yerel krediler, bir işi başlatmak için geçen gün sayısı, yerel rekabetin yoğunluğu, politik istikrardır (Dünya Bankası, 2010).

Ayrıca, ülkelerin yenilik, eğitim, bilgi ve iletişim teknolojileri verileri bir araya getirilerek Bilgi Endeksi denilen bir endeks oluşturulmaktadır. Buna bilgi ekonomisinin bir diğer unsur olan ekonomik ve kurumsal rejime ilişkin göstergeler de eklenerek Bilgi Ekonomisi Endeksi elde edilmektedir. Buradaki amaç, bilgi temelli göstergeler yolu ile ekonomik performansın ortaya konulması ve karşılaştırma yapma imkanının elde edilmesidir. Bilgi ekonomisi performansları, bilgi değerlendirme metodolojisinin temel skor kart, bilgi ekonomisi endeksi ve özel skor kart modelleri kullanılarak ölçülmektedir. Temel skor kart bilgi ekonomisinin dört temel unsurunun kullanarak performans tespit etmektedir. Bilgi Ekonomisi Endeksi, bir ülkenin veya bölgenin bilgi ekonomisindeki genel gelişmişlik düzeyini göstermektedir. Özel skor kart modeli daha esnek bir kıyaslama yapmak istendiğinde kullanılmaktadır.

Kalkınma dinamiklerini etkilemesi sebebi ile bilgi ve iletişim teknolojilerinin bir ülke içinde kullanımına dair başka bir performans analizi, Dünya Ekonomik Forumu (Forum) tarafından geliştirilen "Ağyapılar İçinde Olmaya Hazırlık Endeksi-AHE" ile yapılmaktadır. Endeks, ülkelerin bilgi ve iletişim teknolojilerini kullanmaya hazırlıklı olma düzeylerini ölçmeyi hedeflemektedir. Ülkelerin bu teknolojileri birey, iş dünyası ve kamu yönetimi bağlamında ne denli içselleştirdiklerini ölçümleyen çalışmalardan biridir (Dünya Ekonomi Forumu, 2014). Ölçüm yöntemi yapılandırıldığından bu yana evrimleştirilmiş, daha kapsayıcı hale getirebilmek için çalışmalar yürütülmüştür. Bu endeks Çevre Koşulları, Hazırlıklı Olma, Kullanım ve Yaratılan Etki olmak üzere aşağıda alt bileşenleri ile verilen 4 adet unsura sahiptir.

- Çevre Koşulları: Politik ortamın ve düzenleyici ortamın uygunluğu; İş dünyası ve yenilikçilik koşulları

- Hazırlıklı Olma: Altyapı ve dijital içerik; Erişebilirlik ve alım gücüne uygunluk; Beceriler ve yetenekler

- Kullanım: Bireysel Kullanım, İşletmelerin kullanımı; Kamu yönetiminin kullanımı

- Yaratılan Etki: Ekonomiye etkiler; Topluma etkiler

Endeksin ilk yayınlandığı 2001 yılından bu yana Türkiye analiz kapsamına alınmış ülkeler arasında yer almaktadır (Karaata, 2012).
## 6 Bilgi Ekonomisi ve Türkiye

Türkiye için Toffler'in tanımladığı birinci, ikinci ve üçüncü dalgaların hepsi de aynı anda mevcuttur. Türkiye, korumacılık ve teşvik tedbirleri gibi politikalar sayesinde genç bir sanayi ülkesi olabilmiştir. Kısmı değişimini azalan verimler kanununa borçludur. Azalan verimler kanunu, gelişmekte olan ülkelere katma değeri yüksek malları üretmeyi öğrenme şansı tanımaktadır. Ancak bilgi toplumunda artan verimler kanunu geçerlidir. Bunun için katma değeri yüksek mal üretiminde uzmanlaşılması, bilgi sayesinde üretimin daha verimli bir hale getirilmesi gerekmektedir (Acar, 2000).

T.C Başbakanlık Türkiye Yatırım ve Destek Tanıtım Ajansı'nın resmi web sayfasındaki açıklamaya göre, Türkiye bilgi ve iletişim teknolojileri sektörünün gelecekteki rolünün günümüze kıyasla çok daha önemli olacağının farkındadır. Bu gelişme ve büyümenin beraberinde getirmiş olduğu çağın gereklerine uygun çözüm arayışları ve günümüz ekonomik ve sosyal yaşamının bu en güncel ve hızlı çözümlere bir an önce erişebilmesi, bilgi ve iletişim sektörünün temelini oluşturmaktadır ve bu çözüm arayışlarında hem zamanın hem de maddi kaynakların en verimli düzeyde kullanılması esas alınmaktadır. Bu açıdan, Türkiye son yıllarda bilgi ve iletişim teknolojileri sektörüne olan ilgisini daha da artırmış ve gelecekte sektör üzerinde söz sahibi olmak için gerekli çalışmaları başlatmıştır. Bu çalışmaların en belirgin olanları yatırımcılara yönelik olarak çıkarılan yeni teşvikler ve Ar-Ge Kanunu'dur. Gelecek ile ilgili yapılan tahminler şu şekildedir:

- Genç nüfus arttıkça ve online pazar genişledikçe, cep telefonu abone sayısının 2017 yılına kadar 75 milyona ulaşması beklenmektedir.
- Türkiye'de donanım, yazılım, bilgi iletişim hizmetleri ve telekomünikasyon hizmetlerine yönelik harcamaların 2016 yılına kadar 25 milyar ABD dolarına yükselmesi beklenmektedir.
- Türkiye'de bilgi ve iletişim teknolojileri harcamalarının dünya ortalamasından daha hızlı büyüyeceği tahmin edilmektedir. Sektördeki büyük potansiyel ve geniş iç piyasa göz önünde bulundurulduğunda, sektörün 2012-2017 döneminde % 7,4 'lük yıllık bileşik büyüme oranı ile büyümesi beklenmektedir.
- Türkiye'deki hanelerin yarısından fazlasında internet erişimi bulunan bilgisayar mevcuttur; önümüzdeki beş yıl içinde bu oranın % 65,6'ya yükselmesi beklenmektedir.
- Türkiye'de internet kullanıcılarının oranı % 42 civarındadır; bu oranın 2017 yılında % 47'nin üzerine çıkacağı tahmin edilmektedir.
- Türkiye'nin, Cumhuriyetin 100. yılının kutlanacağı 2023 yılına yönelik iddialı vizyonu gereği bilgi ve iletişim teknolojileri sektörüne ilişkin yüksek hedefler öngörülmektedir. Bu hedefler arasında aşağıdakiler yer almaktadır:
- Geniş bant abonelerinin sayısının 30 milyona çıkarılması
- 14 milyon haneye 1000 Mbps hızında internet bağlantısı sağlanması
- Sektörün GSYİH içindeki payının % 2,9'dan % 8'e çıkarılması
- E-dönüşüm alanında en büyük 10 ülkeden biri haline gelmek
- Nüfusun % 80'ine bilgisayar kullanma becerisi kazandırılması
- TGB'lerde faaliyet gösteren şirket sayısının 5500'e; çalışan sayısının 65.000'e; ihracatın ise 10 milyar ABD dolarına yükseltilmesi
- Bilgi ve iletişim teknolojileri sektörü büyüklüğünün her yıl yaklaşık % 15 oranında bir pazar büyümesi ile 160 milyar ABD dolarına ulaştırılması
- Ar-Ge harcamalarının GSYİH payının % 0,85'ten % 3'e çıkarılması (T.C. Başbakanlık Türkiye Yatırım Destek ve Tanıtım Ajansı, 2014).

Uluslararası yatırımcılar derneğinin "2023 Hedefleri Yolunda Bilgi Ve İletişim Teknolojileri, Eylül 2012" raporuna göre, Türkiye'de Bilgi ve iletişim sektörünün 1 birim büyümesinin ekonominin bütününde 1,8 birimlik büyüme etkisi yaratacağı beklenmektedir. 2011 yılında küresel düzeyde Bilgi ve İletişim sektör büyüklüğü 4,1 trilyon dolar düzeyine ulaşmıştır. Türkiye'deki sektörün büyüklüğünün ise 30,3 milyar dolar düzeyinde olduğu tahmin edilmektedir. Ekonomik büyüklük olarak dünyanın 17. Ekonomisi olan ülkemizin dünya genelindeki payı %1 düzeyinde olmasına rağmen, küresel bilgi ve iletişim teknolojileri pazarından aldığı payın %0,75'te kalması, sektörün büyüme potansiyeline işaret etmektedir. Türkiye'deki pazarın alt sektörleri incelendiğinde küresel pazardaki payı %0,4 olan bilgi teknolojileri sektörünün büyüme potansiyelinin daha yüksel olduğu görülmektedir. 2023 yılında hedeflenen 2 trilyon dolarlık GSYİH içinde Bilgi ve İletişim teknolojilerinin payının hedeflenen %8 oranına ulaşması durumunda sektörün sadece toplam faktör verimliliği artışı yolu ile sağlanacak katkının 71 milyar dolar düzeyinde olacağı tahmin edilmektedir (YASED Uluslararası Yatırımcılar Der., 2014).

Ekonomik gelişme ile bilgi yakından ilişkilidir. Bilgi Ekonomi İndeksi (BEI) ile ölçülen bilgi birikimi ile kişi başına düşen gayri safi milli hasıla arasındaki ilişki pozitiftir. Şekil 2'de görülen regresyon testine göre, BEI ile ekonomik performans arasındaki ilişkinin yaklaşık %85 olduğunu göstermektedir.

### 6.1 Türkiye ve Dünya Bilgi Ekonomisi Karşılaştırmaları

Ülkelerin uzun dönem büyüme performanslarındaki farklılıkların arkasında yatan nedenler, yatırım (sabit sermaye ve Bilgi iletişim teknolojileri sektörü), yaygın eğitim, yenilik ve yapısal değişme olarak dört ana başlık altında toplanmaktadır. Bu başlıklar itibariyle Türkiye'ye baktığımızda,

- Hem sabit sermaye hem de bilgi ve iletişim sektörü yatırımlarının yeterli seviyede olmadığını,
- Ar-Ge harcamalarının hızlı gelişen ülkelerin gerisinde seyrettiğini, yenilik yaparak üretimde verimlilik artışlarına gidilememiş olduğunu,
- Beşeri sermayenin eğitim düzeyini yükseltmede başarılı olunamadığını,
- Üretim yapısında yüksek teknolojili ürünlere yönelimin sınırlı kaldığını ve düşük teknolojiye dayalı üretim yapısının devam ettiği görülmektedir. Aşağıda Türkiye Bilgi Ekonomi Endeksi grafiği ve tablosu yer almaktadır.

**Şekil 3.** *Türkiye ve Dünya Ülkeleri Bilgi Ekonomisi Endeks karşılaştırması* **Kaynak:** *Dünya Bankası, 2014.*

| Endeks | Türkiye | Dünya Ülkeleri |
|---|---|---|
| 1.Bilgi Ekonomisi Endeksi (3, 4, 5, 6 maddelerinin ortalaması) | 5,16 | 5,12 |
| 2.Bilgi Endeksi (4, 5, 6 maddelerinin ortalaması) | 4,81 | 5,01 |
| 3.Ekonomik Teşvikler ve Kurumsal Rejim | 6,19 | 5,45 |
| 4.Eğitim | 4,11 | 3,72 |
| 5.Yenilikler | 5,83 | 7,72 |
| 6.Bilgi ve İletişim Teknolojileri | 4,5 | 3,58 |

## 6.2 Türkiye'nin Bilgi Ekonomisi açısından GZFT (Swot) analizi

Gelişmiş ülkelerin tecrübeleri göstermektedir ki, başarılı bir bilgi ekonomisine sahip olabilmek için, ulusal yenilik sistemi, insan gelişmesi, etkili bir eğitim sistemi ve enformasyon-ulaştırma teknolojileri, işletme çevrelerinin birbirlerini yeterli şekilde etkilemeleri ve birbirlerine paralel olarak gelişmeleri gerekmektedir (Dünya Bankası, 2004). Tablo 3'te Türkiye'nin bilgi ekonomisi açısından GZFT analizi yani güçlü, zayıf yönler, fırsat ve tehditler yer almaktadır.

| Güçlü Yanlar | Zayıf Yanlar |
|---|---|
| • Aktif nüfus<br>• Kobi potansiyeli<br>• Yeniliklere açıklık<br>• Coğrafi konum<br>• Etkileşime eğilimli toplum<br>• Girişimci ruh<br>• Yeni teknolojileri kullanmaya isteklilik<br>• Teknoloji temelli iletişime duyulan güven | • Yetersiz hukuksal yapı<br>• Yaratıcılık ve innovasyon eksikliği<br>• Sermaye yetersizliği<br>• Yüksek üretim maliyetleri<br>• Devlet müdahaleciliği<br>• Beşeri sermaye<br>• Altyapı yetersizlikleri<br>• Coğrafi dengesizlikler<br>• Ekonomik ve siyasal istikrarsızlık<br>• Bilim, teknoloji, üretim döngüsünün sağlanamaması<br>• Standartlardan uzak düşük kaliteli üretim yapılması<br>• Sınırlı işbirlikleri<br>• Kayıtdışı ekonomi<br>• İnelastik işgücü pazarı<br>• Türkçe içeriğin yetersiz olması<br>• Yabancı dil kullanım yetersizliği<br>• Yaşamboyu eğitim eksikliği |
| **Fırsatlar** | **Tehditler** |
| • AB adaylığı süreci<br>• Finansal Sistemin gelişimi<br>• Bilgi ve iletişim teknolojilerinin hızlı elde edilmesi<br>• Servis sağlayıcılığı ve dış kaynak kullanımına yönelik küresel talep<br>• Bilgi ve iletişim teknolojilerinin lokasyondan bağımsız sunulabilmesi<br>• Aracıların ortadan kalkması<br>• Küresel şirketlerin pazardaki rolü<br>• Kobi'lerin dış pazarlara açılabilmesi<br>• Maliyet avantajına göre kaynak kullanım olanağı<br>• Uzun vadede yeni iş olanaklarının varlığı<br>• Ekonominin daha büyük bir bölümünün kayıt altına alınması<br>• Kamu maliyesinde sağlanan etkinlik ve şeffaflığın yatırımcı güvenini yaratması<br>• Azgelişmiş bölgelerin yeniliklere kolay erişmesi<br>• İş kurma ve hayata geçirme sürecinin kolaylaştırılması<br>• Artan verimler sayesinde kişi başı GSYMH'nın arttırılması | • Küresel şirketlerin pazara girmesi<br>• Bilinçsiz teknoloji yatırımları<br>• Geç hareket edilmesi<br>• Sayısal uçurum<br>• Düşük verimlilik nedeni ile rekabet avantajının kaybı<br>• Talep edilen işgücü profilinin arzındaki yetersizlik<br>• Küresel rekabet<br>• Enformasyonda küresel avantajların gerisinde kalınması<br>• Beyin Göçü<br>• İş süreçlerinin BİT kullanacak şekilde değiştirilmesindeki zorluk |

*Tablo 3. Türkiye Bilgi Ekonomisi GZFT Analizi **Kaynak:** Özsağır, 2007.*

"Atılım için Bilişim, Türkiye Ekonomisi için Bilgi ve İletişim Teknolojileri Sektörü-Atılım Stratejisi 2023" raporuna göre, Türkiye'nin bilgi ve iletişim sektörü (BİTS) 'teki rekabet gücü zayıfken diğer bazı gelişmekte olan ülkelerin rekabet gücü yüksektir. Güney Kore, Singapur ve Brezilya bir değişim göstermez iken, Çin'in ve son üç yılda Hindistan'ın rekabet gücünde ciddi artışlar olmuştur. Türkiye'de BİTS üretkenliği, toplam özel sektör üretkenliğinin dört katıdır. Bu önemine rağmen, Türkiye'deki üretkenlik artışında BİTS'in yapabileceği katkının gerçekleşmemiş olduğu görülmektedir. Bu sonuçtan BİTS'in üretkenlik artışına bir etkisi yoktur sonucu çıkarılmamalıdır çünkü bunun altında yatan temel neden, BİTS'in toplam ekonomi içindeki payının küçük olması ve bu küçük olan payın incelenen dönemde artmak yerine azalmasıdır. Ayrıca, hane halklarında ve girişimlerde BİTS ürün ve hizmetlerinin kullanımı diğer ülkelerle karşılaştırıldığında yaygın değildir. OECD ülkelerinde BİTS uzmanlarının toplam istihdam içindeki payı % 2 ile % 5 arasında değişirken Türkiye'de sadece % 1,7'dir. Bilgi ve iletişim teknolojileri uzmanlarını ve BİTS araçlarını kullananları da içeren genel BİTS istihdamının toplam içindeki payına bakıldığında OECD ülkelerinde % 20 olan bu oranın Türkiye'de % 11 civarında olduğu görülmektedir. Önemine rağmen, BİTS'in Türkiye'de toplam özel sektör içerisindeki payının oldukça düşük olması, sektörün gelişmesini sağlayacak politikaları önemli kılmaktadır (TÜBSİAD Bilişim Sanayicileri Derneği, 2014).

Ayrıca Avrupa Birliği Komisyonu tarafından yenilikçiliği ölçmek için kullanılan, 25 göstergeye göre derlenen Yenilikçilik Birliği Skor Tahtası'na göre Türkiye 2006 yılından beri sürekli artan bir performans sergilese de halen yenilikçilik bakımından düşük olarak kategorilendirilen ülkeler arasında yer almaktadır. Şekil 3'te Türkiye ve diğer ülkelerin yenilikçilik açısından sıralaması görülmektedir.

**Şekil 3.** *Yenilikçilik Karşılaştırması* **Kaynak:** *Avrupa Komisyonu, 2014.*

## 7 Sonuç

İnsanlığın içinde bulunduğu çağ olarak kabul edilen bilgi çağında toplumunda en önemli kurumlar bilgi üreten kurumlardır diyebiliriz. Bunlar da üniversite ve araştırma ile ilgili kuruluşlardır. Türkiye'de son yıllarda sayıları giderek artan üniversiteler, bilgi toplumu olmanın bir olarak kabul edilebilir. Bununla birlikte ekonomik alanda ön planda olan sektörler bilime dayalı, bilime öncelik tanıyan sektörlerdir. İnsan sermayesi bu toplumda ana kaynaktır. Toffler "Rethinking the Future" adlı kitabında "21. yüzyılın cahili okuyup yazamayanlar değil, aynı zamanda öğrenemeyen, unutamayan ve yeniden öğrenemeyenler olacaktır." demektedir. Bu açıdan bakıldığında ana kaynak olan insan'ın iyi eğitimli ve öğrenmeye açık, hevesli olması, teşvik edilmesi, ortam yaratılması büyük önem taşımaktadır. Türkiye'nin bilgi toplumunda gelişmesi ve rekabet avantajına sahip olabilmesi için kültürel ve zihinsel üretime ağırlık vermesi gerekir. Vatandaşlarını iyi eğitimli, uzmanlaşmış, yaratıcı düşünebilen, problem çözme yeteneğine sahip hale getiren devletler yeni çağın hakimi olacakları için, Türkiye'nin eğitimsiz işgücünü azaltarak geleceği bugünden dikkatli ve akılcı bir şekilde tasarlamaya başlaması gereklidir. Bilim ve eğitim politikaları ilerleme için kritik öneme sahiptir.

Bilgi Ekonomisi Endeksi unsurlarına göre Türkiye bilgi ve iletişim sektörü yatırımlarını hızlandırmalı, ar-ge harcamalarını arttırmalı, yenilik yaparak üretimde verimlilik artışına gitmeli, gereken nitelikli insan kaynağına sahip olmak için eğitim düzeyini yükseltmeli ve üretim yapısında yüksek teknolojili ürünlere yönelmelidir.

Modern teknolojiyi üreten, piyasaya rakibi olmayan nitelikli yeni mallar sunan, Ar-ge yapan, uluslararası fonları yönlendirecek sermaye birikimine sahip olan, moda ve marka yaratarak tüketiciyi yönlendirebilen, nitelikli ve eğitimli, öğrenmeye açık ve hevesli işgücüne sahip ülkeler katma değeri yüksek olan malın üretiminde uzmanlaşmaktadırlar. Türkiye'nin de izlemesi gereken yol budur.

# Ekogirişimcilik ve Bankalar

# Ecoenterpreneurship and Banks

Nilüfer Işık (DenizBank, Turkey)

## Abstract

When we get into the heart of the economy, the production of goods and services consists of inputs of natural resources, capital, labor and initiative. Therefore, the value attributed to the production of each input is different. With booming economy and developing markets, natural source and entrepreneurship directed large and small company's innovative mindset in order to increase production. This situation in the country increased competitiveness along with development of the economy. However it is overlooked that "Natural Resources" used as an input in the economy is processed unconsciously. At this point innovation, whose importance is realized more with the Innovation Economy, has developed and Eco entrepreneurship, which is one of the contemporary concepts, emerged. In the markets, entrepreneurs hoping to find new ways to create untouched markets, generated Eco entrepreneurship, which we will hear more in the future. In this study, it is tried to draw the attention of investors and companies to "Eco entrepreneurship", and banks to their share in the market with this concept.

## 1 Giriş

İlk olarak çevrenin önemine dikkat çeken kişi Thomas Malthus'dur. 1798 yılında yayınlanan Principal Of The Population kitabında çevre arazı olarak algılanmaktadır. Kapasite zamanla savaş gibi faaliyetlerle artabilir ama daha sonra tekrar yerine gelir. Malthus'un ön göremediği tek şey aslında teknoloji dolayısıyla yenilikleri ortaya çıkaran girişimcilerdir. 19. yy'ın ikinci yarısında teknolojinin gelişimi hızlandı ve beslenme de onu izledi. Fakat 1820'lerde orman sayısı fazla iken daha sonrasında nüfus arttıkça beslenme ve yerleşim de hızlandı. Dolayısıyla ormanlar tahrip edilerek yaşam alanı olarak kullanılmaya başlandı. Söz konusu yaşam alanları yetmeyince de göçler başladı. Görüldüğü gibi belirli bir politikanın uygulanması mevsimlerdeki sistemin değişmesine neden olarak yavaşlamasına da neden olur. Toplumda çevrenin değişmesine iki şekilde tepki verir. Bunlar;

Pozitif Geribesleme: Kendi kendini güçlendiren devrelerdir. Yeni yatırım, yeni karlara; yeni yatırım da yeni yatırımcılara neden olur.

Negatif Geribesleme: Kendi kendini sınırlayan devrelerdir. Dünya yaşayan bir organizmadır ve kompleks bir geri besleme sistemine sahiptir.

Piyasa mekanizmasını ekonomik ve çevresel uyuma yol gösteren bir alet gibi düşünebiliriz. Sürdürülebilir büyümeyi sağlarken kullanılan aletlerden biridir. Eğer çevreyi yok sayarsak geri dönüşü olmayan sonuçlara katlanmak zorunda kalırız. Böyle bir durum olmayacağı gibi çevreye verilen değer günden güne artmaktadır. Bu konuda da girişimcilere oldukça önemli bir rol düşmektedir.

## 2 Tanım Olarak Girişimcilik

En genel ifade ile girişimci, kar amacıyla riski üzerine alan kişi olarak tanımlanabilir. Girişimci, mal ve hizmet üretimi yapabilmek için, üretim öğelerini en iyi koşullar altında bir araya getiren kişidir. Riski üzerine alarak, başkalarının ihtiyaçlarını karşılamak amacıyla, üretim öğelerinin alımını yapar, bunların bir araya getirilmesi imkânını sağlar. Kar amacı güder, ancak tek amaç para kazanmak değildir. Ekonomik bir değer ortaya koymaksızın, çeşitli yollardan, başkaları tarafından ortaya konulan ortak değerleri kendi tarafına aktarmanın adı girişimcilik değildir. Ayrıca girişimci, yönetici demek değildir. Girişimcilik için en temel 3 faktör; yetenek, cesaret ve bilgidir. Daha geniş kapsamda girişimcide olması gereken özelliklere bakacak olursak;

- Kendine güven duymalıdır, aynı zamanda güvenilen biri olmalıdır.
- Geri adım atabilmeli ve yeniden başlayabilmelidir.
- Sonuçları değerlendirebilmelidir. Mesleki riskleri üstlenebilmelidir.
- Yaratıcı olmalıdır.
- Cesaretli olmalıdır.
- Bireysel ve aynı zamanda da toplumsal olmalıdır.
- İyimser ve fikir sahibi olmalıdır.
- Sürükleyici ve güdüleyici olmalıdır.
- Başarı için yönlenmiş olmalıdır.
- Fırsatlardan yararlanabilmelidir.
- Yeniliklere açık olmalıdır.
- İşini seven biri olmalıdır.

## 3   Girişimcilikten Ekogirişimciliğe Geçiş

Yukarıda da belirtilenlere ek olarak girişimciler kendi istekleri doğrultusunda, piyasaya dışarıdan gözlemci olarak katıldıkları için, toplumun ihtiyaçlarını daha kısa sürede ve net bir şeklide ortaya koyabilmektedir. Bu bağlamda Girişimciler Bilgisayar Hackerler gibi çalışarak sistemdeki boşlukları bulup, buradaki talepleri karşılamak adına piyasalarda yeni alanlar yaratabilmektedir.

## 4   Mali Piyasalar ve Ekogirişimcilik

Bundan on yıl önce mal ve hizmet üretimi aşağıdaki denklem ile açıklanmakta olup, Doğal kaynaklara atfedilen değer her zaman sabit sayılıyordu. Ama günümüzde Doğal Kaynaklar üretimi belirleyen ana faktörlerin başında gelmektedir.

Doğal kaynaklar + Sermaye + Emek + Girişimci = Mal veya Hizmet Üretimini oluşmaktadır.

Girişimciler tarafından gözler önüne serilen bu alan mali piyasaların başrolünde olan bankalarında dikkatini çekmiştir. Buna göre bankaların çevresel projeleri desteklemesi fayda & maliyet analizine dayanır. Buna göre;

$$NPV \rangle 0$$
$$(PVB/PVC) \rangle 1$$
$$PVB \rangle PVC$$

NPV: Net Şidiki Değer
PVB: Faydaların Şimdiki Değeri
PVC: Malivetlerin Simdiki Değeri

Sözkonusu projenin Net Şimdiki Değeri, sıfırdan büyükse,

Faydanın Şimdiki Değeri, maliyetin şimdiki değerine bölündüğünde birden büyükse

Ve Projenin Faydasının şimdiki değeri maliyetinden fazla ise proje desteklenir.

Ayrıca projelerin değerlendirilmesi iskonto oranı ile de alakalıdır. Buna göre;

- İskonto oranı yüksek olduğunda, gelecekteki tüketimin değeri düşer.
- İskonto oranı düşük olduğunda, gelecekteki tüketimin değeri artar.
- İskonto oranı eşit olduğunda, gelecekteki tüketimin değeri şimdiki değere eşit olur.

Kamu sektörünün özel sektörden daha az maliyetli olduğu varsayılır. Bu da özel sektörün uygulayamayacağı uzun vadeli projelerin kamu sektörü tarafından yürütülmesine neden olur. Çünkü yüksek iskonto oranı ile uzun vadeli projeler karlı çıkmaz uzun vadeli düşük iskontolu projeler kullanılır.

Fakat herhangi bir projede yararlı/ zararlı çıkanlar olacaktır. Tıpkı Kaldor – Hicks Teorisi gibi, eğer bir uygulamada yararlananlar zarar görenlerin zararını tanzim ediyor ve daha iyi bir duruma getiriyorsa etkin kaynak tahsisi sağlanmış ve uygulanmış olduğunu gösterir.

Çevre projelerinde birçok tehlikeli atık ya da tehlikeli kimyasal, risklerini azaltacak bazı önlemler alınarak kullanılabilirler. Atıldıklarında da bu maddeler direk kullanıcılar tarafından kontrol edilemezler. Bunun için aşağıdaki değerleme yöntemleri kullanılır.

Kaynakta azaltma /önleme: Atıktan kaçınmanın en iyi yolu, kaynağında üretilememesi veya en az atık üretilmesidir.

Geri dönüşüm: Atıkların tamamının veya içindeki kullanılabilir maddelerin geri kazanımı ya da tekrar kullanılmasıdır.

Bertaraf: Atık oluşumunun kaçınılmaz olduğu ve yukarıda belirtilen işlemlerin uygulanamadığı durumlarda değerlendirilmeyen atıklar yakma, depolama gibi yöntemlerle ortadan kaldırılır.

## 5   Bankalar Ve Ekogirişimciler

Günümüzde birçok finansal kuruluş çevrenin ekonomiye katkısını kavramasına rağmen gerekli önemleri alamamaktadır. Bunun nedeni çevreyle ilgili yatırımlar halen büyük bir risk taşımaktadır. Maliyetlerin yüksek oluşu, tüketimde talebin belirsiz oluşu bunlardan sadece bir kaçıdır. Dolayısıyla ekogirişimcileri üç şekilde tanımlaya biliriz.

Kendi işinin patronu: Makul yaşam standardında, mevcut sermayesini büyütmekte isteksiz olan, küçük işletmelerdir.

Fırsatçı: Bulunduğu sektörde kar sağlamak amacıyla işini sürdüren girişimcilerdir.

Başarılı İdealist: Dünyayı değiştirme arzusu sayesinde piyasa yaratma gücüne ve inancına sahip kişilerdir.

Uluslararası arenada eko girişimcilik adına faaliyette bulunana firmalar doymuş oldukları piyasa şartlarında kendilerini başarılı idealistte olduğu gibi dünyayı daha iyi bir yer haline getirmeyi vizyon haline getirmişlerdir. Buna en büyük örnek Body Shop'un "Dünyamızı Koruyoruz" projesinde şampuanlar, nemlendiriciler ve vücut ürünleri için geri dönüştürülmüş plastik şişeler kullanarak her yıl dokuz milyon şişenin kullanılmasının önüne geçmeleri ve tüketicilerin desteğiyle daha çok plastiğe el sürülmemesi sağlanmaktadır. Asaş Ambalaj da ise dört yıl içinde çevresel iyileştirme ve geliştirme faaliyetlerine dört milyon euro harcama yapmıştır. Firma atıkların

bertarafından ziyade geri kazanılarak değerlendirilmesini, şirket ve ülke ekonomisine katkıda bulunma açısından esas aldığını belirtmiştir.

## 6  Firma Örneği

Onbeş yıldır sektörde faaliyet gösteren A Firması gelişen piyasalara uyum sağlamak, girişimci ruh ile grubu bünyesinde Biyogaz tesislerinde katı atıkların üretmiş olduğu metan gazından elektrik üreten grup firması kurmuştur. Bulunduğu ilde de Belediye ile yaptığı anlaşma ile on yıl elektrik üretiminde anlaşmışlardır. Firmanın mali açıdan kredilendirilmesinde dikkat edilen unsurların başında mali veriler gelirken, firmanın devletten aldığı teşvik ve desteklemelerde finansal analize katılmaktadır. Bugün birçok banka Enerji alanını Niş sektör olarak belirlerken, bu konuya hem temkinli hem de istekli davranmaktadır. Çünkü biliyorlar ki zamanında bu alanda kendini gösteremeyen bankalar Enerji pastasından pay alamayacaktır. Geçtiğimiz 4-5 yıl içinde enerji sektörüne yaklaşık 10 milyar dolar finansman sağlayan bankacılık sektöründe; Finans Sektörünün önce gelen Bankaların yaptığı açıklamaya göre;

- Denizbank 2009 yılında enerji projelerine tahsis ettiği kredilerin toplam hacminin 700 milyon dolar seviyelerindedir. Kriz dönemi ile karşılaştırıldığında son dönemlerde bankaya ulaşan enerji projelerine yönelik kredi taleplerinde bir artış olduğunu belirtilmiştir.
- Yapı Kredi 2010 yılında 70'in üstünde proje finansman kredisinde risk bakiyesi 3 milyar 500 bin dolara ulaşmış ve termal ile yenilenebilir enerji santralleriyle büyük ölçekli baraj ve hidroelektrik santral projelerinin finansmanına destek sağlamıştır.
- Garanti Bankası 4 bin megavat gücündeki enerji projesine toplam 3,2 milyar dolar kredi tahsis eden bankanın proje finansmanı kredileri içinde enerji kredilerinin payının yüzde 28'lere ulaştığını belirtmiştir.
- Akbank enerji sektöründe yapacağı uzun vadeli yatırımları için kredi taleplerini finansal olarak inceleyen, konusunda uzman bir ekiplerinin bulunduğunu belirtmiştir.
- Halk Bankası uygun görülen projelere yaklaşık 230 milyon dolar tutarında orta ve uzun vadeli finansman desteği sağlamıştır.

## 7  Sonuç

Arne Nass'a göre çevre, insanların çevreye verdiği araçsal değerden bağımsız, özünlü bir değere sahiptir. Yani kendine özgü bir değere sahiptir. Piyasa koşulları bizi ekoloji alanına değer vermeye zorlar. Aksi takdirde çevrenin değeri sıfır olarak gözükür ve çevresel politikalar yanlış olarak işletilebilir. Bunu korumak için fayda maliyet analizini kullanırız.

Kar amacı benimseyen / benimsemeyen firmalar, toplumlar, devletler, piyasalar bilinçlendikçe çevreye verilen değer artacaktır. Bugün sadece firma tanıtımlarında çevre bilinci sosyal sorumluluk gibi gözükürken gelecekte sosyal zorunluluk halini alacaktır. Bu konuda uzman olan Body Shop gibi kozmetik markalarından tutunda ASAŞ gibi paketleme sektöründe öncü olan firmalar zamanla artacak ve bankalar da Niş sektör olarak belirledikleri Enerjinin her alanında yer almak isteyecektir. Geleceği gören ekogirişimciler, finansal kuruluşların farkındalığını artıracaktır. Erken kalkan yol alır deyiminden gidersek. Enerji sektöründe yoğunlaşan finansal kuruluşlar ileride bu sektörde kalıcılığı artıracaktır.

# Bütçe Açığı ve Enflasyon: Türkiye İçin Bir Sınır Testi Yaklaşımı

# Fiscal Deficit and Inflation: New Evidences from Turkey Using a Bounds Testing Approach

Asst. Prof. Dr. Serap Bedir (Erzurum Technical University, Turkey)
Asst. Prof. Dr. Arzu Tural Dikmen (Atatürk University, Turkey)

## Abstract

A well-established theory in macroeconomics is that governments running persistent deficits have sooner or later to finance those deficits with money creation, thus producing inflation. The fiscal view of inflation has been especially prominent in the developing country literature, which has long recognized that less efficient tax collection, political instability, and more limited access to external borrowing tend to lower the relative cost of seigniorage and increase dependence on the inflation tax. For this reason, the main factors which affecting inflation rate in developing countries are extremely important for policy makers as when the causes of inflation are correctly specified the appropriate policy change can be easily diagnosed and effectively implemented. The purpose of this study is to test the empirical relationship between inflation and the budget deficit for the Turkish economy by an autoregressive distributed lag model (ARDL) analysis for the period 1970–2010. The data is taken from Republic of Turkey Ministry of Development and World Bank's Database. The empirical findings indicates that fiscal deficit is one of the important variables of the price level along with other variables like interest rates, exchange rate, per capita income, trade of GDP. The short-run analysis captured from error correction model (ECM). The results of the bounds test suggest that there is a long run relationship between fiscal deficit and inflation. These findings drive important inferences for implications of monetary and fiscal policies.

## 1 Giriş

Enflasyonla bütçe açıkları arasındaki ilişki uzun yıllardan beri tartışma konusudur. Bu ilişkinin niteliği hakkındaki görüşler zaman içinde değişmiştir. Genel olarak, Ricardocu Denklik bağlamında geleneksel modeller fiyat düzeyinin belirlenmesinde para politikasının etkin olduğunu ve bireylerin rasyonel beklentilere sahip olduğunu kabul ederler. Bunun sonucu olarak da maliye politikasının toplam talep ve dolayısıyla fiyatlar genel düzeyi üzerinde bir etkisinin olmadığını varsayarlar. Örneğin, Klasik iktisatçılar enflasyonu klasik miktar teorisi ile açıklamaya çalışırlar ve enflasyonun temel belirleyicisinin parasal faktörler olduğunu ve maliye politikasının etkisinin olmadığını savunurlar. Buna karşılık Keynes, klasiklerin aksine ekonominin talep yanına ağırlık verir ve kamu harcamalarındaki artıştan veya vergi gelirlerindeki azalmadan kaynaklanan bütçe açıklarının talebi arttırarak enflasyonu etkileyebileceğini savunur. Keynes'e göre devlet artan kamu açıklarını borçlanarak veya merkez bankası kaynaklarına başvurarak finanse edebilir ki her iki yöntemde enflasyonu arttırır.

Friedman'ın öncülüğünde gelişen parasalcı görüşe göre ise, bütçe açıkları, parasal büyüme ve enflasyon arasında karşılıklı bir ilişki vardır. Özellikle gelişmekte olan ülkelerde bütçe açıklarının parasallaşması enflasyonun temel nedenidir (Koru ve Özmen, 2005). Çünkü istihdam, toplam talep, üretim, reel faiz ve fiyat gibi reel değişkenler temelde parasal değişmelerden etkilenirler. Para miktarı değiştiğinde bu değişkenler kısa dönemde değişse de uzun dönemde hepsi denge değerine geri dönerler ve değişen sadece fiyat gibi nominal değişkenler olur. Dolayısıyla, parasalcı görüş enflasyonu kamunun bazı hedefleri gerçekleştirmek için başvurduğu bir yöntem olarak ifade eder.

1980'li yıllarda enflasyonun temel nedeni olarak görülen para politikaları sorgulanmaya başlanmıştır. Sargent ve Wallace (SW) (1981)'a göre, monetarist aritmetik hükümetin zamanlar arası bütçe kısıtını reddettiği için yanıltıcı bilgi verebilir. Sıkı para politikası sürdürülemez borç finansmanı sürecine neden olur ve uzun vadede enflasyon artmış olur. Bu doğrultuda, enflasyon mali yönlü parasal bir fenomendir (Koru ve Özmen, 2005). Çünkü sürekli bütçe açıkları veren bir hükümet er ya da geç bu açıkları para basarak finanse etmek zorunda kalacak ve böylece enflasyonist süreç yaratılmış olacaktır. Bu teori, enflasyonu besleyen ve sürekli kılabilen diğer mekanizmaların önemini ihmal etmez, ancak teorinin temelinde mali dengesizlik olduğunu ileri sürer. Bu görüş özellikle daha az etkin vergi sistemine sahip, politik istikrarsızlık ve sınırlı dış borç imkanı nedeniyle daha az maliyetli senyoraja başvuran ve enflasyon vergisine bağımlılığı artan gelişmekte olan ülkelerin literatüründe yaygındır (Catao ve Terrones, 2005).

SW'ye göre, bir hükümet sürekli bütçe açığı veriyorsa para politikası mali politikanın güdümü altında kalır. Çünkü mevcut açıklar parasallaşma ile ya da borçlanarak karşılanabilir. Parasal genişlemenin enflasyonist etkileri vardır ve hükümet bu nedenle borçlanma yolunu seçebilir. Bu durumda, borç miktarındaki sürekli artış borç faiz oranlarını, faiz ödemelerini ve sonuçta borç stokunu arttırır. Hükümet bu durumda vadesi gelen borçlarını ödeyebilmek için tekrar borçlanacak ve bu süreç sonunda parasal tabanı genişletmek zorunda

kalacaktır. Bu durumda enflasyon artacak ve bu artış, açıkların ilk aşamada para ile finansmanı durumunda ortaya çıkacak artışından çok daha yüksek olacaktır.

SW'nin görüşleri Leeper (1991), Sims (1994) ve Woodford (2001) tarafından öne sürülen ve enflasyonu mali bir fenomen olarak gören fiyat düzeyinin mali teorisi (FDMT) görüşü ile devam etmiştir. Bu görüş enflasyonun, fiyat düzeyini etkileyen para ve maliye politikalarının karşılıklı etkileşiminin bir sonucu olduğunu ve kamu açıklarının sürdürülebilir ve zamanlar arası bütçe kısıtının dengede olması gerektiğini önerir (Jalil, vd, 2014).

FDMT'ne göre, Ricardocu olmayan dünyada paranın fiyat düzeyinin belirlenmesinde önemli bir etkisi yoktur. Bir hükümet sürekli bütçe açıkları veriyorsa piyasa bütçe açıklarındaki artışların gelecek dönemlerde bütçe fazlası ile kapatılamayacağını, parasal tabandaki genişleme ile fiyat artışlarının yaşanacağını ve böylelikle kamunun reel borç yükünün azalacağını ileri sürer. Ancak, bu defa kamu harcamalarındaki artış nedeniyle bütçe açıkları, toplam talep ve fiyatlar genel düzeyi artacaktır. Bu aşamada SW'ye paralel olarak Woodford (2001) hükümetin kamu harcamalarını nasıl finanse ettiğine bağlı olarak enflasyon düzeyinin belirleneceğini öngörür. Dolayısıyla, Woodford'a göre enflasyon para arzının değil borç stokunun bir fonksiyonudur. Bu nedenle enflasyonla mücadele eden hükümetin, para politikasına değil mali politikaya ağırlık vermesi gerekir.

Özetle, kamu açıkları-enflasyon ilişkisinin temel belirleyicisi açıkların finansman şeklidir. Kamu harcamaları ile kamu gelirleri arasındaki dengesizlikten kaynaklanan bütçe açıklarının karşılanması için para basımı (senyoraj), vergileme ve borçlanma temel finansman yöntemlerindendir. Bu yöntemlerin her birinin ekonomi üzerinde etkileri ve maliyetleri farklı olabilmektedir. Bütçe açıklarının iç borçlanmayla finanse edilmesi uzun dönemde tıpkı vergi artışları gibi etki yaratmaktadır (Barro, 1974). R. Barro tarafından ileri sürülen Ricardo-Barro denkliği, bireylerin cari dönemde borçlanmada ortaya çıkan bir artışın, uzun dönemde borcun geri ödenmesinde vergilerin arttırılması ile kendisinin servet stokunun düşeceğini düşünerek, iç borçlanma döneminde elde ettiği faiz geliri nedeniyle tüketimini değil, tasarrufunu arttıracağı şeklinde açıklanabilir. Burada dikkat edilmesi gereken husus, bireylerin borçlanma senetlerini servetlerinin bir parçası olarak görüp görmedikleridir. Eğer büyüme oranı, faiz oranlarından yüksekse iç borçlanma senetleri servetin bir parçası olarak kabul edilecek; bu durum tüketimin artmasına neden olacaktır. Aksi taktirde, borçların geri ödenmesi sonucu elde edilecek gelirler bir servet artışı olarak algılanmayacak; bu nedenle de uzun dönemde gelecek kuşaklara aktarılacak vergilerin karşılanması için tasarruflar arttırılacaktır (Kesbiç, vd, 2005). Dış borçlanma ile finansman yoluna gidilmesi durumunda ise, artan ithalatla malların arzı arttırılarak enflasyonist baskının etkisi azaltılabilir. Ancak, borç yoluyla sağlanan kaynakların kullanımı ve borç ödemelerinin yerine getirilmesinde ortaya çıkan etkilerin de göz önüne alınması gerekir (Günaydın, 2004). Bütçe açığının finansmanı iç ve dış borçlanma ile karşılamak istemeyen hükümetin uygulayabileceği bir yöntemde parasallaşma yoluyla açıkların finansmanıdır. Yukarıda bahsedildiği gibi bu finansman yöntemi enflasyonda bir atışa neden olacaktır.

Sonuç itibariyle, hükümetin açıkları nasıl finanse edeceği konusu önemlidir. Çünkü enflasyona neden olan faktörlerin bilinmesi, uygun politikaların geliştirilmesine ve uygulanmasına yardımcı olacaktır. Dolayısıyla, büyük bütçe açıklarının ortadan kaldırılması, enflasyonun düşürülmesi için gerekli bir koşul olduğu görüşü yaygındır. Bu bağlamda, mali düzenlemelerden yoksun ve kısa ömürlü stabilizasyon programları enflasyonun düşürülmesinde başarısız kalmaktadır. Calvo ve Vegh (1999)'in belirttiği gibi, başarılı olmuş programlar çok önemli mali düzenlemeler içeren programlar olmuştur (Kesbiç, vd, 2005). Bu çalışmanın temel amacı, Türkiye için enflasyon üzerinde reel ekonomik unsurları da içerecek bir modelle mali faktörlerinde enflasyonu etkileyip etkilemediğini ve Türkiye'de uzun dönemde kronik bütçe açıklarının enflasyonla ilgili olup olmadığını tespit etmektir. Bu amaçla Türkiye'de 1970–2010 dönemine ait veriler kullanılarak zaman serisi analizi yapılmıştır. İkinci bölümde literatür incelemesi ve üçüncü bölümde veri ve metodolojiden bahsedilmiştir. Çalışmanın dördüncü bölümünde ampirik bulgulara yer verilmiş ve son kısımda sonuçlar özetlenmiştir.

## 2   Literatür Özeti

Bütçe açıkları ile enflasyon arasındaki ilişkiyi inceleyen geniş bir literatür vardır. Friedman (1956) enflasyonun parasal bir olgu olduğunu söyler. İlerleyen dönemde ise, öncelikle Sargent ve Wallace (1981) ve daha sonra Leeper (1991) ve Sims (1994) enflasyonu mali bir fenomen olarak gören FDMT görüşünü ileri sürmüşler ve kamu harcamaları ile vergiler dışsalsa açıkların borçlanarak finansmanının sürdürülemez olduğunu ve sonunda merkez bankasının para basarak açıkları finanse etmek zorunda kalacağını belirtmişlerdir. Böylece, para arzı artacak ve enflasyon bunu takip edecektir. Bu görüş, ilerleyen dönemde açık ekonomiler ve alternatif finansman yöntemleri için genelleştirilmiştir (Metin, 1998). Daha sonra yapılan birçok çalışma ile enflasyonun sadece parasal faktörlerle açıklanamayacağı ve mali faktörlerinde dikkate alınması gerektiği görüşü yaygınlaşmıştır. Literatürde bu farklılıklar nedeniyle konu güncelliğini korumuş ve bütçe açıkları ve enflasyon arasındaki ilişkiyi ifade eden farklı görüşler farklı ülke grupları ve dönemler için sürekli test edilmiş; ancak sonuçlarda ortak bir bulgu elde edilememiştir. Bu bağlamda literatür bütçe açıkları ile enflasyon arasında anlamlı ilişki bulan ve bulmayan çalışmalar olarak gruplandırılmıştır. Bütçe açıkları ve enflasyon arasında ilişki bulan çalışmalar Tablo 1'de özetlenmiştir.

Bütçe açıkları ve enflasyon arasında ilişki bulamayan çalışmalar ise şöyle özetlenebilir: Abızahdeh ve Yousefi (1998), 1951–1986 döneminde ABD için yaptıkları analizde bütçe açıkları ile enflasyon arasında anlamlı bir ilişki bulamamışlardır. Akçay vd, (2001), 1970–2000 döneminde Türkiye için yaptıkları çalışmada bütçe açıklarının uzun dönemde enflasyon üzerinde etkisinin olmadığını bulmuşlardır. Koru ve Özmen (2003), 1983–1999 döneminde Türkiye'de bütçe açığı, parasal büyüme ve enflasyon arasındaki ilişkiyi inceledikleri çalışmalarında parasalcı ve FDMT'ni destekleyen sonuçlara ulaşamamışlardır. Altıntaş, vd, (2008), 1992–2006 dönemi için Türkiye'de bütçe açıkları ve enflasyon arasındaki uzun dönem ilişkinin varlığını ARDL analizi ile test etmişler ve bir ilişkinin olmadığı sonucuna ulaşmışlardır. Özmen ve Koçak (2012), 1994–2011 döneminde Türkiye'de enflasyon, bütçe açığı ve para arzındaki ilişkiyi ARDL analizi ile tahmin etmişler ve anlamlın bir ilişki bulamamışlardır.

***Tablo 1*** *Bütçe Açığı ve Enflasyon Arasında İlişki Bulan Çalışmalar*

## 3 Veri ve Metodoloji

Bu çalışmada 1970-2010 döneminde Türkiye ekonomisi için enflasyon ve bütçe açıkları arasındaki kısa ve uzun dönem ilişkiler ARDL yaklaşımı ile test edilecektir. Bu amaçla öncelikle çalışmada kullanılan veriler tanıtılacak ve ardında kısaca metodolojiden bahsedilecektir.

### 3.1 Veri

Daha öncede ifade edildiği gibi, fiyat düzeyi sadece para politikası tarafından değil para ve maliye politikalarının karşılıklı etkilerinin bir sonucudur. Dolayısıyla enflasyonu etkileyen birçok mali ve parasal faktör vardır. Bu çalışmada kullanılan model, enflasyona neden olan hem iç hem de dış faktörleri içerecek şekilde oluşturulan karma bir modeldir. Ayrıca, model bütçe açıkları ve para arzı dışında enflasyonu etkileyen diğer bazı mali faktörleri de içerdiği için enflasyonu etkileyen faktörlerin belirlenmesi açısından önemlidir.

Kullanılan modelde yer alan ve (1) nolu eşitlikte gösterilen değişkenler sırasıyla şunlardır: Enflasyonu temsilen tüketici fiyat endeksi (*enf*) kullanılmıştır. Modelde yer alan (*bd*) konsolide bütçe gelir-gider farkının GSMH'ya oranını; (*açık*) ihracat ve ithalat toplamının GSYH içindeki payını; (*dk*) döviz kurunu ve (*Z*) Türkiye'de enflasyonla ilgili olduğu düşünülen diğer değişkenleri temsil eder. Bu grup içinde, (*kbg*) 2005 sabit fiyatlarıyla kişi başına GSYH'yı; (*m2y*) M2'nin GSYH içindeki payını; (*i*) mevduat faiz oranını; (*petfiy*) ham petrol varil fiyatını ($); (*topborç*) toplam borç servisinin GSMH içindeki payını; (*kamuborç*) kamu ve kamu garantili borç servisinin GSYH'daki payını ve (*kamutük*) kamunun genel tüketim harcamalarının GSYH içindeki payını göstermektedir. Çalışmada kullanılan 1970–2010 dönemine ilişkin veriler Kalkınma Bakanlığı tarafından yayımlanan Ekonomik ve Sosyal Göstergeler ve Dünya Bankası tarafından yayınlanan Dünya Kalkınma Göstergeleri (World Development Indicators)'nden derlenmiştir. Ayraca, bütçe dengesi haricindeki değişkenlerin doğal logaritmaları alınmıştır.

### 3.2 Metodoloji

Engle-Granger'ın (1987) yılındaki makalesinden bu yana değişkenlerin düzeyleri arasında eşbütünleşme ilişkisinin test edilmesi önem kazanmıştır. Eşbütünleşme ilişkisinin varlığı regresyondan elde edilen kalıntılara dayalı Engle-Granger iki aşamalı yaklaşımı; indirgenmiş rank regresyonlarına dayalı Johansen sistem yaklaşımı veya temel bileşenler yöntemine dayalı Stock-Watson (1988)'ın stokastik ortak trend (sistem) yaklaşımı ile test edilebilmektedir. Ancak bu yaklaşımların hepsinin ortak özelliği, üzerinde çalışılan değişkenlerin hepsinin birden I(1) olduğunu varsaymasıdır. Bu durum analizlerde kullanılan değişkenlerin bütünleşme testlerinin eşbütünleşme analizlerinden önce yapılmasını zorunlu kıldığından, belirli miktarda bir belirsizliği de beraberinde getirir.

Pesaran vd, (2001) İngiltere üzerine yaptıkları çalışmada ilk kez sınır testi analizlerini (autoregressive distributed lag-ARDL) uygulamışlardır (Pesaran, vd, 2001). ARDL yaklaşımında kısıtsız hata düzeltme modeli kullanıldığından, Engle-Granger testine göre daha iyi istatistiksel özelliklere sahiptir ve küçük örneklerde Johansen ve Engle-Granger testlerine göre daha güvenilir sonuçlar verir (Direkçi ve Kaygusuz, 2013). ARDL süreci üç asamadan oluşmaktadır. İlk aşamada, değişkenler arasında uzun dönemli bir ilişki bulunup bulunmadığı aşağıdaki kısıtsız hata düzeltme modeline uygulanan F testi ile araştırılmaktadır.

$$\Delta lnenf_t = \beta_0 + \sum_{i=1}^{p} \beta_1 \Delta lnenf_{t-i} + \sum_{i=0}^{p} \beta_2 \Delta bd_{t-i} + \sum_{i=0}^{p} \beta_3 \Delta lndk_{t-i} + \sum_{i=0}^{p} \beta_4 \Delta lnaçık_{t-i} + \sum_{i=0}^{p} \beta_5 \Delta Z_{t-i}$$
$$+ \theta_1 lnenf_{t-1} + \theta_2 bd_{t-1} + \theta_3 lndk_{t-1} + \theta_4 lnaçık_{t-1} + \theta_5 Z_{t-1} + \varepsilon_t \qquad (1)$$

Bahmani vd, (2003) yaptıkları çalışmada sınır testi için kullanılan F testinin, gecikme uzunluğuna karşı duyarlı olduğunu ortaya koymuşlardır. Bu sebeple eşbütünleşme ilişkisinin varlığını sınamak amacıyla öncelikle (1) nolu eşitlikte kullanılan farkı alınmış değişkenlerin gecikme uzunluğunu gösteren değerine karar vermek gerekmektedir. Bu amaçla literatürde Akaike (AIC) ve Schwarz (SIC) gibi bilgi kriterleri kullanılmaktadır (Direkçi ve Kaygusuz, 2013).

Gecikme uzunluğunun belirlenmesinden sonra, test edilecek hipotez " $H_o = \theta_1 = \theta_2 = \theta_3 = \theta_4 = \theta_5 = 0$ " yani "*Uzun dönemli bir ilişki yoktur*" şeklindedir ve kullanılan istatistik $\theta_1, \theta_2, \theta_3, \theta_4$ ve $\theta_5'in$ birlikte anlamlılığına ilişkin F istatistiğidir. Pesaran değişkenlerin düzeyleri arasında eşbütünleşme ilişkisi yoktur varsayımı altında her iki test istatistiğinin dağılımının, açıklayıcı değişkenlerin I(0) ya da I(1) olmalarından bağımsız olarak standart dağılımlara uymadığını göstermiştir. Dolayısıyla, analizinde iki uç durum için asimtotik kritik değerler üretmiştir. Açıklayıcı değişkenlerin I(0) olduğu durumda üretilen kritik değerin soluna düşen bir F istatistiği eşbütünleşme ilişkisinin olmadığı, değişkenlerin I(1) olması durumunda ise üretilen kritik değerin sağına düşen F istatistiği eşbütünleşme ilişkisinin olduğu anlamındadır. Eğer hesaplanan F istatistiği bu iki kritik değer arasına düşerse uzun dönem ilişkisi hakkında herhangi bir karar verilememektedir.

Değişkenler arasında bir uzun dönem ilişki elde edildikten sonra ikinci aşamada ARDL (*p, q₁, q₂, q₃, q₄, q₅*) şeklindeki uzun dönem denklemi tahmin edilmektedir. Parantez içindeki değerler, her bir değişken için istatistikî kriterlere göre belirlenen uygun gecikme sayılarıdır. Buna göre, tahmin edilecek uzun dönem denklemi şöyledir:

$$lnenf_t = \beta_0 + \sum_{i=1}^{j} \beta_1 lnenf_{t-i} + \sum_{i=0}^{k} \beta_2 bd_{t-i} + \sum_{i=0}^{l} \beta_3 lndk_{t-i} + \sum_{i=0}^{m} \beta_4 lnaçık_{t-i}$$
$$+ \sum_{i=0}^{n} \beta_5 Z_{t-i} + \varepsilon_t \qquad (2)$$

Bu modelde yer alan parametreler kullanılarak Bardsen (1989)'in izlemiş olduğu yöntemle uzun dönem katsayıları elde edilebilir. Örneğin bütçe dengesi değişkeni için uzun dönem katsayısını elde etmek için aşağıdaki formül kullanılabilir:

$$\emptyset = \frac{\sum_{i=0}^{k} \beta_2}{1 - \sum_{i=1}^{j} \beta_1}$$

Uzun dönem tahminleri elde edildikten sonra değişkenler arasındaki kısa dönem ilişkisi ise hata düzeltme modelinin tahmini ile yapılır.

$$\Delta lnenf_t = \beta_0 + \sum_{i=1}^{p} \beta_1 \Delta lnenf_{t-i} + \sum_{i=0}^{p} \beta_2 \Delta bd_{t-i} + \sum_{i=0}^{p} \beta_3 \Delta lndk_{t-i} + \sum_{i=0}^{p} \beta_4 lnaçık_{t-i}$$
$$+ \sum_{i=0}^{p} \beta_5 \Delta Z_{t-i} + \emptyset ecm_{t-1} + \varepsilon_t \qquad (3)$$

Hata düzeltme katsayısı *(ecm)*, kısa dönemde meydana gelen dengeden sapmalardan sonra tekrar dengeye dönülüp dönülmediği, dönülüyorsa sapmanın ne kadarının telafi edildiğini göstermektedir. Son olarak, ARDL modeli tahmin edildikten sonra otokorelasyon, değişen varyans ve normallik testleri ile modelin iyiliği ve uyumu kontrol edilmelidir. Bu amaçla Breusch-Godfrey'in seri otokorelasyon LM testi; White'in değişen varyans testi ve Jarque-Berra normallik testi yapılabilir. Ayrıca CUSUM ve CUSUMQ testleri ile de modelin istikrarlı olup olmadığı kontrol edilebilir.

## 4  Ampirik Sonuçlar

ARDL modelleri hem uzun dönem hem de kısa dönem ilişkiyi aynı anda sunması bakımından avantajlıdır. Ayrıca, modelde kullanılacak değişkenlerin I(0) ya da I(1) olup olmamasına bağlı olmadan sınır testini uygulamak mümkündür. Bu sebeple sınır testini uygulamadan önce değişkenlerin durağanlık mertebelerini belirlemeye gerek yoktur. Fakat Pesaran vd, (2001)'deki kritik değerler, değişkenlerinin I(0) ya da I(1) olmasına göre tablolaştırıldığından, değişkenlerin I(2) olma ihtimaline karşı sınanması gerekmektedir. Bu nedenle öncelikle serilerin birim kök özellikleri incelenecek ve ardından ARDL tahmin sonuçları verilecektir.

| Değişken | Düzey | | Birinci Fark | |
|---|---|---|---|---|
| | **Sabit** | **Sabit ve Trend** | **Sabit** | **Sabit ve Trend** |
| Lnenf | -0.058 (0.94) | -1.134 (0.91) | **-2.593 (0.10)** | **-2.515 (0.31)** |
| bd | -1.977 (0.29) | -2.134 (0.51) | **-6.126 (0.00)** | **-6.047 (0.00)** |
| lnaçık | -1.789 (0.38) | -2.151 (0.50) | **-5.391 (0.00)** | **-5.354 (0.00)** |
| lndk | -0.402 (0.89) | -0.709 (0.96) | **-2.909 (0.05)** | -2.872 (0.18) |
| lnkbg | -0.387 (0.90) | -2.788 (0.20) | **6.328 (0.00)** | **-6.232 (0.00)** |
| lnm2y | 0.521 (0.87) | -3.033 (0.13) | **-8.323 (0.00)** | **-8.484 (0.00)** |
| lni | -1.284 (0.62) | -0.222 (0.99) | **-5.324 (0.00)** | **-6.072 (0.00)** |
| lnpetfiy | 2.275 (0.18) | -2.325 (0.41) | **-5.543 (0.00)** | **-5.546 (0.00)** |
| lntopborç | **-2.985 (0.04)** | -3.069 (0.12) | - | - |
| lnkamuborç | -2.552 (0.11) | -1.513 (0.80) | **-6.731 (0.00)** | **-7.962 (0.00)** |
| lnkamutük | -1.262 (0.63) | -1.684 (0.73) | **-5.841 (0.00)** | **-5.900 (0.00)** |

**Not:** ADF testinde uygun gecikme uzunluğu Schwarz bilgi kriterine göre ve maksimum gecikme uzunluğu otomatik olarak belirlenmiştir. Parantez içerisindeki rakamlar, olasılık (p-value) değerlerini göstermektedir.

***Tablo 2**. Modelde Yer Alan Değişkenler İçin ADF Testi*

### 4.1 Birim Kök Testi

Modellerde yer alan değişkenlerin I(2) olup olmadığının tespiti için ADF testi yapılmış ve sonuçlar Tablo 2'de verilmiştir. ADF test sonuçları, toplam borç değişkeninin düzey durağan ve diğer değişkenlerin fark durağan olduklarını göstermektedir. Diğer bir ifadeyle, birim kök testi sonucunda maksimum bütünleşme derecesinin I(1) olduğu belirlenmiştir. Bu nedenle, değişkenler arasındaki uzun dönem ilişkisinin varlığının ARDL yöntemi ile test edilmesine karar verilmiştir.

### 4.2 ARDL Sınır Testi Yaklaşımı

Birim kök testi sonuçlarına dayanarak eşbütünleşme ilişkisinin araştırılması için Pesaran vd, (2001) tarafından önerilen ARDL sınır testi uygulanmıştır. Pesaran ve Shin (1997), Akaike ve Schwarz kriterlerinin performanslarının küçük örneklemlerde birbirine yakın olduğunu, ancak Schwarz kriterinin çoğunlukla daha iyi performans gösterdiğini ifade etmiştir (Pesaran ve Shin,1997:3). Bu nedenle ARDL tahminlerinde gecikme uzunluğu Schwarz bilgi kriterine göre belirlenmiştir. ARDL tahminlerine ilişkin gecikme uzunlukları ve eşbütünleşme test sonuçları Tablo 3'de verilmiştir.

| Değişken | M 1 | M2 | M3 | M4 | M5 | M6 | M7 | M8 | M9 |
|---|---|---|---|---|---|---|---|---|---|
| lnenf | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 2 |
| bd | 4 | 4 | 4 | 0 | 0 | 3 | 2 | 4 | 0 |
| lnaçık | 1 | 1 | 1 | 0 | 1 | 2 | 1 | 1 | - |
| lndk | 0 | 0 | 0 | 1 | 0 | 1 | 2 | 0 | - |
| lnm2y | - | 0 | - | - | - | - | - | - | 0 |
| lni | - | - | 0 | - | - | - | - | - | - |
| lnpetfiy | - | - | - | 4 | - | - | - | - | - |
| lnkbg | - | - | - | - | 4 | - | - | - | - |
| lnkamuborç | - | - | - | - | - | 4 | - | - | - |
| lntopborç | - | - | - | - | - | - | 4 | - | - |
| lnkamutük | - | - | - | - | - | - | - | 2 | - |
| **F İstatistikleri** | **5.56** | **5.02** | **7.10** | **1.81** | **5.99** | **10.77** | **7.81** | **7.43** | **0.89** |

**Not:** Tüm modeller sabitlidir.

***Tablo 3.*** *ARDL Gecikme Uzunlukları ve Eşbütünleşme Test Sonuçları*

Eşbütünleşme olup olmadığını test etmek için kullanılan F istatistikleri, Tablo 4'yer alan Pesaran kritik değerleriyle karşılaştırılmış ve Model 4'ün haricindeki tüm modellerde %5 önem düzeyinde istatistiğin, üst sınır değerinden büyük olduğu görülmüştür. Dolayısıyla, enflasyon ile diğer değişkenler arasında "*uzun dönemli bir ilişki yoktur*" hipotezi reddedilmiştir. Değişkenler arasındaki eşbütünleşme ilişkisi belirlendikten sonra uzun dönem ARDL modeli tahmini yapılmış ve sonuçlar Tablo 5'de verilmiştir.

| | Sınırlar | k=3 için | k=4 için |
|---|---|---|---|
| Sabitli | **I(0)** | 3.23 | 2.86 |
| | **I(1)** | 4.35 | 4.01 |
| Sabitli ve Trendli | **I(0)** | 4.01 | 5.07 |
| | **I(1)** | 3.47 | 4.57 |
