ARDL tahmin sonuçlarına göre, bütçe açığı değişkeni tüm modellerde pozitif ve anlamlı bir etkiye sahiptir. Ancak etkinin büyüklüğü modelden modele değişmektedir. Bütçe açıkları ve enflasyon arasındaki pozitif yönlü bu ilişki, enflasyonun mali bir olgu olduğunu savunan fiyat düzeyinin mali teorisini desteklemektedir. Ayrıca, Metin (1998), Günaydın (2004), Creel ve Kamber (2004), Catao ve Terrones (2005), Kia (2006), Barışık ve Kesikoğlu (2006), Habibullah (2011), Zouzomi vd, (2011), Bildirici ve Ersin (2005, 2011), Lin ve Chu (2013) ve Jalil vd, (2014)'ın bulgularıyla da uyumludur.

Açıklık değişkeni bütün modellerde enflasyonu uzun dönemde negatif yönlü ve anlamlı bir şekilde etkilemektedir. Bu bulgu, Romer (1993)'in açıklık oranını arttıkça enflasyonun azalacağı önermesini desteklemektedir. Bulgular, Catao ve Terrones (2005), Kia(2006), Lin ve Chu (2013) ve Jalil vd, (2014)'in çalışmalarıyla da uyumludur.

Döviz kuru değişkeni yine uzun dönemde enflasyonu pozitif ve anlamlı bir şekilde etkilemektedir. Uzun dönemde yüksek döviz kurunun enflasyonu arttırdığını ve bu nedenle güçlü paranın daha düşük enflasyona yol açacağı sonucuna ulaşılmıştır. Diğer bir ifadeyle, kur arttıkça yabancı mallar yerli mallara göre daha pahalı olacak ve ithalat maliyetleri artacaktır. Dolayısıyla kur artışı enflasyonu arttıracaktır. Elde edilen bulgular Kia (2006), Boujelbone (2010), Zouzomi vd, (2011), Lin ve Chu (2012) ve Jalil vd, (2014) 'ın çalışmalarıyla da uyumludur.

***Tablo 5.*** *Bütçe Açığı ve Enflasyon İçin ARDL Uzun Dönem Katsayıları*

Para arzı ile enflasyon arasında beklenenin aksine negatif yönlü bir ilişki bulunmuştur. Dolayısıyla, para arzının Türkiye'de enflasyonun belirleyicisi olmadığı dolayısıyla FDMT'nin geçerli olduğu sonucuna ulaşılmıştır. De Fiore ve Liu'ya göre, açık ekonomi durumunda para arzındaki artış, literatürde beklenenin aksine enflasyonu düşürür (Sekmen, 2007). Dolayısıyla bulgular açık ekonomi durumunda De Fiore ve Liu'nun bulgusunu desteklemektedir. Ayrıca ampirik bulgular Kia (2006), Oktayer (2010), Habibullah (2011), Khumalo (2013) ve Lin ve Chu (2013)'nun bulgularıyla da uyumludur.

Mevduat faizleri ile enflasyon arasında pozitif yönlü anlamlı bir ilişki elde edilmiştir. Bu bulgu Fisher Etkisi'ni desteklemektedir ve Kesbiç (2005), Kia (2006), Khumalo (2013) ve Jalil vd, (2014)'nin sonuçlarıyla da uyumludur.

Kamu borç stoku ile enflasyon arasında pozitif yönü ve anlamlı bir ilişki elde edilmiştir. Daha öncede ifade edildiği gibi, özellikle gelişmekte olan ülkelerde bütçe açıkları vergilendirmenin siyasi maliyeti nedeniyle genellikle borçlanarak ya da senyorajla finanse edilir ve zamanla her iki yönteminde enflasyon üzerinde arttırıcı bir etkisi ortaya çıkar. Dolayısıyla elde edilen sonuçlar Kesbiç vd, (2005) ve Jalil vd, (2014)'nin çalışmalarıyla uyumludur.

Kişi başına gelir enflasyonu pozitif yönlü ve anlamlı etkilemektedir. Toplam borç servisi ve kamu tüketimi arasında yine pozitif yönlü ancak anlamsız bir ilişki elde edilmiştir. Petrol fiyatları ile enflasyon arasında ise uzun dönemli bir ilişki elde edilememiştir. Son olarak parasal görüşün Türkiye'de geçerliliğinin tespiti için oluşturulan model tahmini (Model 9) sonucunda enflasyonun parasal bir olgu olduğuna dair uzun dönemli bir bulgu elde edilememiştir. ARDL tahminleri sonucunda modellere ait kısa dönem katsayılarda elde edilmiş ancak bu aşamada çalışmaya eklenmemiştir.

ARDL tahminlerinden elde edilen negatif ve anlamlı hata düzeltme katsayıları (*ecm<sub>t-1</sub>*), uzun dönem katsayıları gibi kısa dönemli bir ilişkinin de varlığını gösterir. Ayrıca, hata düzeltme katsayısı kısa dönemde dengeden sapmaların ne kadarının sonraki dönemlerde düzeltildiğini ve negatif katsayı, kısa dönemde dengeden uzaklaşan bağımlı değişkenin tekrar dengeye döndüğünü gösterir. Dolayısıyla, tüm modellerde hata düzeltme mekanizmasının çalıştığı ve şokun etkisinin ortalama olarak 2 yıl gibi bir sürede giderilerek dengeye dönüldüğü sonucuna ulaşılmıştır.

ARDL modellerine ait diagnostik test sonuçları ile modelin iyiliği ve uyumu kontrol edilmiştir. Breusch-Godfrey seri otokorelasyon LM testine göre modellerde otokorelasyon sorununun olmadığı; White testi sonuçlarına göre değişen varyans sorunun olmadığı ve Jarque-Bera normallik testi sonucunda hata teriminin normal dağıldığı görülmektedir. Dolayısıyla, hata düzeltme modelinin tahminleri bütçe açıklarının enflasyonun nedenlerinden olduğu görüşünü desteklemektedir.

## 5  Sonuç

Bu çalışmanın amacı, Türkiye'de 1970-2010 döneminde bütçe açıklarının enflasyonist bir etkiye sahip olup olmadığını test etmektir. Bu amaçla enflasyon oranını etkileyen iç ve dış faktörleri içeren 9 farklı modelle ARDL tahmini yapılmış ve hem kısa hem de uzun dönemde fiyat düzeyinin mali teorisini destekleyen sonuçlar elde edilmiştir. Ampirik sonuçlara göre, bütçe açıkları, döviz kuru, açıklık, faiz oranları, para arzı, kişi başına gelir, kamu tüketim harcamaları ve borç servisi gibi iç ve dış faktörleri içeren karma model enflasyonu hem kısa hem de uzun dönemde farklı katsayılarla etkilemektedir.

Türkiye'de özellikle 2001 yılından sonra uygulama alanı bulan mali disiplin ve para ve maliye politikalarının sonucu enflasyon oranı ilk defa 2004 yılında tek haneli rakamlara ulaşmıştır. Dolayısıyla, hem eşgüdümlü olarak uygulanan para ve maliye politikalarının enflasyon üzerindeki sonuçları hem de ampirik bulgular doğrultusunda Türkiye'de FDMT'nin geçerli olabileceği düşünülmektedir. Sonuçta bütçe açıklarının ve açıkların finansman şeklinin enflasyonist sürecin belirlenmesinde doğrudan ve anlamlı bir etkiye sahip olduğu düşünülmektedir. Dolayısıyla, enflasyonla mücadelede başarılı politikaların mali düzenlemeler içermesi gerektiği önermesi Türkiye özelinde de geçerlidir. Bu bağlamda, son yıllarda enflasyon konusunda elde edilen başarıda sadece para politikasının değil mali disiplinin de önemli olduğu ve bu sürecin devamı için eşgüdümlü politikaların uygulamasının önemi unutulmamalıdır.

# Cari Açığın Sürdürülebilirliğinde Varlık Talebi Yaklaşımı

# Current Account Deficit Sustainability in the Asset Demand Approach

Prof. Dr. Mahir Fisunoğlu (Çukurova University, Turkey)

Ph.D. Candidate Gürçem Oransay (Çukurova University, Turkey)

## Abstract

Despite moderate views about current deficit presence, which started with liberalization in 80'ies, current deficit problem continues to be one of the most debated economical issues in Turkey alike to other developing countries. Sustainability of current deficit has a critical importance in countries' future decision making processes similar to current deficit itself. This is also important for macroeconomic stability. One of the basic statements for a sustainable current deficit is; current deficit ratio cannot be defined as a critical threshold for all countries as sustainability is related with inter-country dynamics. Due to this reason, the purpose of this study is; identifying current deficit for Turkey by asset demand approach. In this study the presence and direction of relationship between current deficit, asset demand and growth is empirically tested by employing Vector Error Correction Model, has been used to analyze the long term relationship between variables for the period 2001Q4-2012Q2. Before the implementation of model, Dickey-Fuller and Johansen -Cointegration Tests have been applied, which is needed for economical analysis. Initially, a positive relationship between current deficit and asset demand was founded. Since implementation of policies taking the serious consequences of current deficit problem into account is a must, the finds of this study is informative in determining current deficit level that can be sustainable for Turkey and to what extent Turkey is close to the end of its sustainability capacity at the present time.

## 1 Giriş

Son otuz yılda sermaye hareketlerindeki serbestleşme ile birlikte, sabit döviz kurunun terk edilmesi, bilgi teknolojilerinde yaşanan devrim ve işlem hacminin çok büyük oranlarda genişlemesi finansal gelişmenin de hızla artışına neden olmuştur. Bu artış, uluslararası piyasalardan borçlanabilmeyi kolaylaştırarak cari işlemler dengesinde dönüşümlere sebep olmuş, dünyada cari açık veren ülke sayısı hızla artmış ve cari açıklar sürekli hale gelmiştir. Cari açık veren ülke sayısının artması ve açığın sürekli hale gelmesi; bunun yanı sıra makroekonomik performansın en önemli göstergelerinden biri olması, iktisadi kararların ve beklentilerin oluşumunda belirleyici bir role sahip olması ve ülkelerin ekonomik krizler karşısında kırılganlığını arttırması cari açık konusunu, ülke ekonomileri için oldukça önemli bir konuma getirmiştir. Türkiye de dahil olmak üzere birçok ülkede, cari açık sorunu ve bu açığın finansman çeşidine göre sürdürülebilirliği en çok tartışılan konular arasında yer almaktadır (Hakkio ve Rush, 1991; Haug, 1991; Husted, 1992; Edwards, 2001; Liu ve Tanner, 1995).

Bu çalışmanın amacı; cari açığın finansmanı öncelik alınarak, literatürden farklı bir yöntemle cari açığın sürdürülebilirliğini varlık talebi yaklaşımı ile ilişkilendirip, Türkiye ekonomisi için 2002:Q1-2012Q2 dönemi verileriyle ölçmektir. Çalışmanın ilk bölümünde öncelikle cari açık ve sürdürülebilirliği konuları daha sonrasında da Türkiye'de cari açık sorunu ve nedenleri değerlendirilmektedir. Devam eden kısımda ise literatüre doğrultusunda Türkiye ekonomisinin cari açığının sürdürülebilirliği değerlendirilmektedir.

## 2 Cari Açık ve Sürdürülebilirliği Kavramları

Cari işlemler hesabı; yurtiçi tasarruf ve yatırım arasındaki fark olup, yurtiçi tasarruf ve yatırım arasındaki herhangi bir boşluk, yurtdışı tasarruflar ile doldurulur. Bu yüzden cari hesap; bir ülkenin net dış varlık pozisyonunda bir değişikliğin kendi cari açığına eşit olması durumudur (Andersen, vd, 1998). Buna göre borç alan ülke, başka ülkelere talepleri doğrultusunda sahip olduğu hisse senedi, tahvil ve benzeri finansal varlıklarını satarak harcamalarını finanse etmektedir. Gelişmiş ülkelerde de cari açık problemi yaşanmakla birlikte, gelişmekte olan ülkelerde ekonomik gelişmenin gereksinimi olan teknoloji, enerji, ara mal ve yatırım mallarının ithalatını, yapılan ihracat ile karşılamanın güç olmasından dolayı cari açıklar kronik hale gelmekte ve ülkeler dış borçlanma yoluna gitmektedirler.

Cari açığın; ekonomik büyümenin finansmanı olduğu, yabancı paranın ülkeye giriş isteğinin göstergesi olduğu ve finansmanının özel kesimden kaynaklanması koşulu altında olumlu sonuçlar doğuracağı görüşlerinin yanı sıra, finansal kırılganlığın ve dışa bağımlılığın bir göstergesi olduğu ve bu durumun yüksek oranda risk taşıdığı görüşü de oldukça yaygındır. Edwards (2001) kronikleşmiş büyük ölçekli cari açıkların, önemli bir ekonomik sorun olduğunu ve gerekli önlemler alınmadığında daha büyük ekonomik sorunlara sebep olabileceğini belirtmektedir. Pitchford (1990)'a göre ise cari açık ve dış borçlanmadan fayda sağlanabilir. Bunun nedeni

sermaye akımları ile yüksek getiri oranları sağlanarak, ülkeden ülkeye sermaye transfer edilmesidir. Bu akım, borçlanan ülkenin açığını arttırsa da, yurtiçi yatırımları arttırarak verimliliği arttıracak, dünya gelirinin yanı sıra borç veren ülkenin de sermaye gelirini maksimize edecektir. Hakkio (1995), kısa dönemli ya da dönemler arası cari açıkların; ülkeye en yüksek getiri oranından alınabilecek üretim faktörünü sağlayarak, sermayenin yeniden dağılımını gerçekleştirdiği için ciddi bir problem oluşturmasının beklenmediğini belirtmektedir. Ancak büyük ve kalıcı cari açıklar ülke ekonomileri için daha ciddi sorun teşkil edebilir ve bir politika yanıtı gerektirebilir. Özellikle uzun vadede bu açıklar göreceli faiz oranlarını arttırırken, aynı anda daha büyük borç birikimi ile artan faiz ödemeleri ve düşük hayat standardı olarak, gelecek nesiller üzerine aşırı yük bindirmekte ve böylece daha düşük bir hayat standardına neden olmaktadır.

Cari açık ile ilgili elbette birçok farklı ülke örneği ve farklı görüş olmakla birlikte şunu söylemek mümkündür ki; esas üzerinde durulması gereken cari açığın varlığından çok sürdürülebilirliğidir. Çünkü sürdürülebilir bir ekonomik büyüme ve toplumsal refah artışı için, cari işlemler açığının en azından sürdürülebilirliğinin sağlanması büyük önem taşımaktadır (Karunaratne, 2010; Takeuchi, 2010; Holmes, vd, 2011). Cari dengede oluşacak bir açık, yurt içinde tasarruf-yatırım dengesinin bozacak, bu bozulma da ülkedeki yerleşik kişi veya kurumların sahip oldukları dış varlıkların satısıyla ya da yurt dışından borçlanma ile finanse edilecektir. Böylece ülkenin borç yükü artacak, yabancı yatırımcılar bu durumu kriz belirtisi olarak algılayacak ve ülkeden yabancı sermaye çıkısına neden olacaktır. Sonuçta ülkenin dış borçlanması sürdürülemez bir duruma gelebilecektir. Bu nedenle politika belirleyebilme açısından cari işlemler hesabının sürdürülebilirliğinin açıklanması önemlidir (Thanh, vd, 2001).

Taylor (2002) cari açığın sürdürülebilirliğini; ekonominin uzun dönemde özel sektör davranışlarında değişiklik veya politika kaymaları olmaksızın dönemler arası bütçe kısıtını karşılayabilme yeteneği olarak tanımlamaktadır. Ona göre cari işlemler dengesi, rasyonel bireyler tarafından alınan yatırım ve tasarruf kararları ile verimlilik artışı beklentileri, hükümet harcamaları, faiz oranları ve diğer faktörler tarafından yönlendirilen bir denge durumudur.

Aydoğuş ve Öztürkler (2006) cari açığın sürdürülebilirliğinin açığın finansman biçimine bağlı olduğunu vurgularken, Mann (2002) de benzer bir açıklama ile cari işlemler açığının sürdürülebilirliğini hesaplarken, hem yurtiçi hem de yurtdışı finansman kaynakları göz önüne alınması gerektiğini belirtmektedir. Milesi-Feretti ve Razin (1996)'e göre ise sürdürülebilir cari işlemler dengesi, tasarruf ve yatırım gibi yurtiçi ekonomik değişkenlerde tetikleyici geri bildirim etkilerine neden olmamakta ve uluslararası portföyün yeniden dağıtımına yol açacak bir faiz oranı değişikliği gerektirmemektedir. Ayrıca sürdürülebilirliğin borçlu ülkenin ödeme, borç verenlerinse borç verme istekleriyle ilişkili olduğunu vurgulamış ve sürdürülebilirliğin üç kriter ile yorumlanması gerektiğini belirtmiştir. Bunlardan ilki cari açık/GSYİH oranının dengesizliğinin yüksek olması, ikincisi bu dengesizliğin ulusal yatırım oranlarının artışından çok tasarrufların azalmasından kaynaklanması ve üçüncüsü ise ulusal tasarruf oranının düşük olmasıdır. Trehan ve Walsh (1991)'a göre ise, cari açığı durağan tutmak için dönemler arası bütçe kısıtı yeterli bir durumdur. Roubini ve Wachtel'e (1998) göre ülke gelecek dönemlerde cari işlem fazlasına sahip olacaksa çok yüksek cari açıklar bile sürdürülebilir olabilmektedir. Mann (2002) ise cari açıkların sürdürülebilir olmasını bu açıklarının ekonominin yapısında bir değişiklik yaratıp yaratmama durumuna bağlamıştır.

Uygur (2012) farklı sürdürülebilirlik tanımlarını şöyle özetlemektedir:

- İlk tanıma göre eğer bugünkü davranışlar ve politikalar borç ödeme koşuluna engel teşkil etmiyorsa, bunlar sürdürülebilir davranışlar ve politikalardır. Ancak yatırım-tasarruf eşitliğinde hükümet harcamalarının ve politikalarının aynı şekilde kalacağı kabul edilse bile, tasarruf, yatırım, ithalat, ihracat, döviz kuru gibi değişkenlerin gelecekteki davranışları için varsayımlar yapmak pek doğru sonuçlar vermeyebilir.
- İkinci tanıma göre **e**ğer bir ekonomide; özel kesimin tasarruf ve yatırım, ihracat ve ithalat gibi davranışları ve hükümet politikaları aynı kaldığında bir bunalıma neden olacaksa bugünkü cari açık sürdürülebilir değildir.
- Son tanım ise cari açık sürdürülebilirliğinin; yabancılar bu açığı finanse etmek istedikleri ölçüde sürdürülebilir olduğu yönündedir. Yani $B_t$ net dış varlıklar olarak gösterilecek olursa, yabancıların kendileri için artı olan $B_{t+1} - B_t$ değerinin yükseltme talepleri sürdürülebilirliği göstermektedir.

Genel olarak bir ülkede cari işlemler açığının sürdürülebilirliğini hesaplamak karmaşık makroekonomik konular içerdiğinden oldukça güçtür (Kim, vd, 2009).Cari açığın sürdürülebilirliğinin, dönemler arası dış denge kısıtı yaklaşımı doğrultusunda ihracat ve ithalat değişkenleri arasındaki eşbütünleşme ilişkisiyle inceleyen çalışmalar literatürde önemli bir yer tutmaktadır (Trehan and Walsh, 1988; Husted, 1992; Milesi-Ferretti ve Razin, 1996; Edwards, 2001; Fountas ve Wu, 1999; Peker, 2009).Buna göre cari açığın sürdürülebilirliği mal ve hizmet ihracatı ile mal ve hizmet ithalatı, net faiz ödemeleri ve net transfer ödemeleri toplamından oluşan özel ithalat değeri arasında istikrarlı bir eşbütünleşme ilişkisi bulunması önemlidir. Bu yönde yapılan çalışmalardan Calderon, vd, (2001) 30'u Afrika ülkesi olan 64 ülkenin cari işlem açıklarının; ticaret düzeyindeki dalgalanmalarla negatif ilişkili olduğu ve cari açıkların aşırı düzeyde olduğunu bulmuşlardır. Wu, Chen ve Lee (2001), G-7 ülkeleri için yaptığı çalışmada, ihracat ve ithalat miktarları arasında eşbütünleşme ilişkisine

rastlamamış, ancak ihracat ve özel ithalat değerleri arasında istikrarlı bir uzun dönem ilişkisi, yani sürdürülebilir bir cari işlemler dengesi bulunduğu sonucuna varmıştır. Benzer sonucu Fountas ve Wu (1999) ABD ekonomisi için ve Holmes, vd, (2011) de Hindistan için elde etmiştir. Apergis, vd, (2000) ve Baharumshah, vd, (2003) yaptıkları ampirik çalışmada ise cari açığın sürdürülebilirliği için cari dengeyi oluşturan gelir ve gider kalemleri arasında eşbütünleşme ilişkisini incelemiştir.

Literatürde bu konunun Türkiye ekonomisi üzerine incelemesinin olduğu birçok çalışma da mevcuttur (Selçuk, 1997; Yücel ve Yanar, 2005; Akçay ve Özler, 1998; Uygur, 2004; Yamak ve Korkmaz, 2007; Peker, 2009). Çalışmaların ortak vardığı sonuç ise, Türkiye'de cari açıkların yüksek oluşu, sürdürülebilirliği tartışmalarının yanı sıra bu durumun yarattığı kırılganlık ve risklerdir.

## 3  Türkiye'de Cari İşlemler Açığı ve Nedenleri

Türkiye'de, 1980'den sonra dışa açılma süreci başlamış ve 1989'da sermaye hareketlerine getirilen serbesti ile bu süreç hız kazanmıştır. Yaşanan bu gelişmeler Türkiye'de cari açığın da artmasına neden olmuştur. Son 30 yıllık geçmişe baktığımızda ortalama % -1.79 olan cari açık/GSYH oranı, zaman içinde oldukça yükselmiş, 1993 ve 2000 yıllarında yaşanan finansal krizle, sırasıyla % -3,63 ve % -3,7 seviyelerine çıkmıştır.

Yaşanan ekonomik krizin ardından, Şubat 2001'de kurlar dalgalanmaya bırakılmış ve makro ekonomik göstergelerin kalıcı ve sürdürülebilir biçimde düzelmesini hedefleyen yeni bir program uygulamaya konmuştur. Ancak Türk Lirası 2003 yılından bu yana reel anlamda değer kazanmış, dış ticaret açığı artmış ve bu nedenle cari işlemler dengesinde bozulmalara sebep olmuştur. Ayrıca Türkiye 2001 krizinden sonra bütçe açığını düşürerek disipline ettiği kamu maliyesi aracılığıyla enflasyonu ve faizi düşürmeyi başarmış ancak bu işin maliyeti cari açığın büyümesi olmuştur. Çünkü model 2001 krizinden sonra bütçe açıklı büyümeden cari açıklı büyümeye dönmüştür. Aşağıdaki grafik Türkiye'de 2001 yılında yaşanan değişimler sonrası cari açığın yıllara göre nasıl bir seyir izlediğini grafik üzerinde göstermektedir.

***Şekil 1.*** *Türkiye'nin 2000- 2011 Yılları Arası Cari Açık / GSYİH Oranı (%)* ***Kaynak****: IMF, World Economic Outlook, 2011*

Buna göre; 2002 ve sonrası dönemde, cari işlemler açığının GSYİH'ya oranı neredeyse tamamen negatif seyretmiştir.2002 yılında % -0,3, 2003 yılında % -2,5 ve 2004 yılında %-3,7, 2006 yılında ise % 6,1 oranına ulaşmıştır. 2008 yılında 41 milyar dolar olan cari açıkta, 2009 yılında yaşanan küresel kriz nedeni ile bir daralma yaşanmış ve 14 milyar dolara kadar düşmüştür. 2010 yılında ise tekrardan artan cari açık 48,6 milyar dolara yükselmiş ve % -6,5 oranında seyretmiştir.2011 yılında ise 75 milyar doları ile rekor seviyeye ulaşmış ve % 8 seviyesinde gerçekleşerek süreklilik kazanmıştır. Bu sonuçlar doğrultusunda Türkiye'deki cari açığın sürekli olduğu sonucuna ulaşılabilmektedir (Telatar, 2011).

Türkiye'de cari işlemler açığına neden olan başlıca etmenleri dış ticaret açıkları, enerjide dışa bağımlılık ve artan enerji fiyatları, özel tasarruf oranlarının azlığı, doğrudan yabancı sermaye yatırımları ve portföy yatırımlarının kar transferleri, genişletici para ve maliye politikaları ve dış borç stokundaki artış şeklinde saymak mümkündür. Türkiye dışa açılma süreci ile ihraç edilenden daha fazlasını ithal etmeye başlamış ve ithalata bağımlı hale gelmiştir. Bunun nedeni ise ihracatta kullanılacak üretim faktörleri olan ara mal ve enerji ihtiyacını dışarıdan karşılaması vardır. Böylece artan dış ticaret açığı, cari açıkların da artmasına neden olmuştur.

Diğer bir neden olan özel tasarruflardaki düşüşlere baktığımızda, Üçer ve Rijckeghem (2009),Türkiye'de 2001 krizinin ardından özel tasarruflarda yaşanan gerilemenin nedenlerini birkaç maddede belirtmiştir. Buna göre; ilk neden 2001 finansal krizinin ardından beklentilerin olumlu yönde gelişmesi, ikinci neden artan kredi olanakları, üçüncü neden ise Türkiye aleyhine gelişen dış ticaret hadleridir. Ancak bunlar içerisinde en önemli neden

finansal piyasalardaki küreselleşmenin artışı ile özel kesimin kullanabileceği fon olanaklarının artması ve borçlanmayı kolaylaştırması olmuştur. 1992'deki %23 seviyelerinde olan iç tasarruf oranları iç talebin aşırı canlanması sonucu, 2011'de %12,8'lere kadar düşmüş, ancak yatırım/GSYİH oranı ise %23 oranlarında seyretmiştir(IMF, 2011).Yatırımların; tasarrufların iki katı kadar olması finansmanının sağlanması için dış borçlanmaya başvurulduğunu göstermektedir. Bu da cari açığın daha da büyümesine neden olmaktadır.

Cari açığın bir nedeni de son yıllarda artış gösteren doğrudan yabancı sermaye yatırımlarının ve portföy yatırımlarının kar transferleridir. Bu transferler, cari işlemler hesabına kaydedilmekte ve cari açığı arttırıcı rol oynamaktadır. Ekonomik büyümeyi sağlamak amacıyla uygulanan genişletici para ve maliye politikaları ülke içi talebi arttırarak, iç ve dış dengede değişmeler meydana getirip cari açığı olumsuz yönde etkilemektedir (Uğur ve Karatay, 2009).

Türkiye'de cari açığı olumsuz etkileyen dış borç stokunun artışı, bu borçların faiz ödemelerinin de artması anlamına gelmektedir. Her iki ödeme birleştiğinde cari açığın sürdürülebilirliğini zorlaştırmakta ve ülkenin dışarıya bağımlılığını daha da arttırmaktadır. Aşağıda yer alan Tablo.1 Türkiye'nin 2002-2012 yılları arası brüt dış borç stokunu göstermektedir.

| (Milyon $) | Kamu Sektörü | TCMB | Özel Sektör | Toplam Dış Borç Stoku |
|---|---|---|---|---|
| **2002** | 64,533 | 22,003 | 43,061 | 129,597 |
| **2003** | 70,844 | 24,373 | 48,876 | 144,092 |
| **2004** | 75,668 | 21,410 | 63,934 | 161,012 |
| **2005** | 70,411 | 15,425 | 84,672 | 170,508 |
| **2006** | 71,587 | 15,678 | 121,099 | 208,363 |
| **2007** | 73,525 | 15,801 | 161,035 | 250,361 |
| **2008** | 78,306 | 14,066 | 188,739 | 281,111 |
| **2009** | 83,482 | 13,162 | 172,461 | 269,105 |
| **2010** | 89,081 | 11,565 | 191,324 | 291,969 |
| **2011** | 94,281 | 9,334 | 200,747 | 304,361 |
| **2012** | 103,290 | 7,088 | 227,114 | 337,492 |

*Tablo 1. Türkiye Brüt Dış Borç Stoku (2002-2012) **Kaynak**: TÜİK*

Buna göre 2002 yılında 129 milyar dolar olan dış borç on sene içinde üç katına yakın artma göstererek 2012 yılında 337,492 milyar dolar seviyesinde gerçekleşmiştir. On yıllık süreç içerisinde 2009 küresel krizinin yaşandığı dönem dışında dış borç stokunun sürekli olarak artış gösterdiği görülmektedir. Geçmişte yaşanan ekonomik krizlerin ödemeler bilançosu kaynaklı olması ve cari işlemler açığına ilişkin göstergelerin giderek bozulmasının yanı sıra, bu durum cari açık sürdürülebilirliğini de zorlaştıran bir unsur olarak karşımıza çıkmaktadır.

## 4   Teorik Çerçeve

Gourinchas ve Ray (2007) tarafından geliştirilen ve dönemler arası yaklaşımı takip eden modele göre; dönemler arası bütçe kısıtı ve uzun dönemli stabilizasyon koşulu olmak üzere iki temel koşul vardır. Buna göre ülkelerin dönemler arası bütçe kısıtından yola çıkarak iki sonuç elde ederler. İlki net yabancı varlık pozisyonu ve cari açığın gelecekteki dinamikleri arasındaki bağdır. Eğer net dış varlıklar (Net Foreign Assets, NFA) üzerinden sağlanan toplam getirinin sabit olması bekleniyorsa günümüzdeki net dış yükümlülükler, dış ticaret fazlasıyla dengelenmelidir. Günümüzdeki dengesiz olan dışsal kısıtlama uygulamaları ya ticaret dengesinin gelecekteki değişikliği ya da NFA'daki hareketlerle, ya da her ikisinin de tahmin edilmesiyle ifade edilmelidir. Kısa ve orta dönemde birçok ayarlama varlık getirisi üzerinden, uzun dönemde ise ticaret dengesi üzerinden araştırma yapmaktadır.

Uygur (2012)'un cari açığın sürdürülebilirliği için yaptığı tanımların sonuncusu olan varlık talebi yaklaşımında da cari açık; dış varlıklar kanalıyla açıklanmaktadır. Buna göre; $NFA_{t+1} - NFA_t$ net dış varlıklardaki değişmeyi ifade etmekte olup, ek finansman sağlamada yabancıların açık veren ülkenin tahvil, bono, hisse senedi ve fiziki yatırım gibi değerlerini talep etmesi, ayrıca kendileri için artı olan $NFA_{t+1} - NFA_t$ değerinin artması gerekir. Eğer ülkenin net dış varlık pozisyonu pozitif ise yani NFA>0 ise ülke dünyanın geri kalanına kreditör durumundadır. Aynı şekilde eğer net dış varlık pozisyonu negatif ise yani NFA<0 ise ülke net borçlu konumundadır, çünkü dünyanın geri kalanına olan sorumlulukları sahip olduğu hakların üzerine çıkmış demektir (Camarero, vd, 2009).Buradan yola çıkarak denilebilir ki eğer ülkenin $NFA_{t+1}$, değeri, $NFA_t$ değerinden küçükse, ülke cari açık veriyordur. Cari açığını kapatabilmek için ise dış varlıklarından bir kısmını satmak durumunda kalmıştır. Benzer bir çalışmada Edwards (2001), sürdürülebilir cari açık değerini bu yaklaşıma göre hesaplamıştır. Çalışmada açık veren ülkenin eksi olan net dış varlıklarının GSYH'ya oranını cari açık ve uzun dönem büyüme oranı (Y) ile ilişkilendirmiş ve eşitliği şu şekilde kurmuştur:

$$CA = Y.NFA^*$$                                          (1)

Burada NFA* yabancıların tutmak istedikleri açık veren ülke kaynaklı varlıklar olduğundan, yani kabaca o ülkeye vermek istedikleri borç olduğundan, CA oranı sürdürülebilir cari açığı temsil etmektedir. Y ve NFA* veri iken daha yüksek bir cari açık finanse edilemez. Daha yüksek bir cari açığın finansmanı için Y değerinin veya NFA* değerinin artması koşulu geçerlidir (Uygur, 2012). Bu çalışmada da (1) nolu eşitlikten yola çıkılarak Türkiye'nin sürdürülebilir cari açık oranı ve mevcut cari açık oranı 1984-2012 yılları arası için aşağıdaki şekilde belirlenmiştir:

| Yıllar | Hesaplanan Potansiyel Cari Açık | Mevcut Cari Açık |
|--------|--------------------------------|------------------|
| 1984 | 2,4 | -2,4 |
| 1985 | 1,6 | -1,5 |
| 1986 | 3,1 | -1,9 |
| 1987 | 4,5 | -0,9 |
| 1988 | 1,0 | 1,7 |
| 1989 | 0,08 | 0,9 |
| 1990 | 3,0 | -1,7 |
| 1991 | 0,2 | 0,2 |
| 1992 | 1,8 | -0,6 |
| 1993 | 2,9 | -3,6 |
| 1994 | -2,3 | 2,0 |
| 1995 | 3,4 | -1,4 |
| 1996 | 3,2 | -1,3 |
| 1997 | 3,3 | -1,4 |
| 1998 | 0,8 | 0,7 |
| 1999 | -1,3 | -0,4 |
| 2000 | 2,9 | -3,7 |
| 2001 | -3,3 | 1,9 |
| 2002 | 3,4 | -0,3 |
| 2003 | 2,4 | -2,5 |
| 2004 | 3,8 | -3,7 |
| 2005 | 3,0 | -4,6 |
| 2006 | 2,7 | -6,1 |
| 2007 | 1,8 | -5,9 |
| 2008 | 0,2 | -5,6 |
| 2009 | -2,2 | -2,2 |
| 2010 | 3,7 | -6,4 |
| 2011 | 3,4 | -10 |
| 2012 | 3,8 | -7,3 |

*Tablo 2 ve Şekil 2. Yıllara Göre Potansiyel- Mevcut Cari Açık Oranları ve Grafikleri*

Buna göre her yıl için Türkiye'de cari açığın sürdürülebilmesi için bir eşik değer belirlenmiştir. Bu değer tabloda potansiyel cari açık olarak belirtilmiştir. Diğer sütunda ise yıllar itibari ile gerçekleşmiş olan cari açık oranları görülmektedir. Her yıl için oranlar incelenecek olursa 1984-2012 yılları arasında mevcut cari açığın sürdürülebilir düzeylere yakın veya potansiyel cari açık düzeyinin altında seyrettiği yılların 1991, 1998, 1999, 2001 ve 2009 olduğu söylenebilir. Bunun dışında 2008 yılında küresel krizin etkisi ile büyüme oranı düştüğü için potansiyel cari açığın değeri düşük iken, bu olumsuz etkiler mevcut cari açığın daha da artmasına ve eksi değer almasına ve böylece mevcut ve olması gerek açık düzeyi arasındaki farkın artmasına neden olmaktadır. 2001 yılı sonrası hiç cari işlemler hesabında fazla vermeyen Türkiye ekonomisinde son yıllar incelenecek olursa, mevcut ve potansiyel cari açık değerleri arasındaki farkın en fazla arttığı yıllar olduğu göze çarpmaktadır. Bu durum Türkiye'nin sürdürülebilir düzeyin çok üstünde borçlanmakta olduğunu ve ülke kırılganlığını arttıracak bir tehdit oluşturabileceğini gösterir. Aynı şekilde grafiklere bakılacak olursa altta kalan olan mevcut cari açığın üstte kalan alan olan potansiyel açıktan gözle görülür bir farkı olduğu dikkat çekicidir. Cari açığın varlık talepleri ve

büyüme oranları göz önüne alınarak bir sürdürülebilirliği olduğu düşüncesinden yola çıkılacak olursa Türkiye bu değerlerin çok üstüne borçlanma yoluna gidiyor denebilir.

Cari açığın varlık talepleri yardımıyla sürdürülebilirliğinin olup olmamasını bu şekilde basit hesaplama yöntemleri ile incelemenin yanı sıra var olan ilişkinin derecesini ampirik olarak da tespit etme amaçlı Gourinchas ve Ray (2007), Camarero, vd, (2009) ve Edwards (2001)'in çalışmaları doğrultusunda çalışmanın ilerleyen bölümünde aşağıdaki modeli kullanarak tahmin etmek istiyoruz:

$$\frac{CA_t}{GSY\dot{I}H_t} = \beta_0 + \beta_1 \frac{NFA_t}{GSY\dot{I}H_t} + u_t \tag{2}$$

Çalışmanın bundan sonraki bölümünde (2) numaralı denklem doğrultusunda değişkenler arasındaki ilişki zaman serisi yöntemleri ile test edilecektir.

## 5 Veri Seti ve Ekonometrik Analiz

2002:Q1–2012:Q2 dönemini kapsayan bu çalışmadaki değişkenlerden cari açığa ve GSYİH'ya ilişkin veriler Türkiye Cumhuriyet Merkez Bankası Elektronik Veri Dağıtım Sisteminden, net dış varlıklara ilişkin veriler ise IMF-IFS'den alınmıştır. Çalışma için bu yılların incelenmesinin nedeni; Türkiye'nin Şubat 2001'de yaşanan krizin ardından kurların dalgalanmaya bırakılması sonrasında, 2002 yılı itibari ile cari açığın neredeyse tamamen negatif olmasıdır.

Bu çalışmada, zaman serisi uygulamalarından Johansen Eşbütünleşme Testi ve VECM (Vektör Hata Düzeltme Modeli) yöntemlerinden yararlanılarak, Türkiye'nin cari açığı ile sürdürülebilirliğini sağlamada etkisi olan varlık talepleri arasındaki ilişkinin test edilmesi amaçlanmıştır. Çalışmanın analiz kısmında kullanılacak model;

$$\frac{CA_t}{GSY\dot{I}H_t} = \beta_0 + \beta_1 \frac{NFA_t}{GSY\dot{I}H_t} + u_t$$

şeklinde oluşturulmuştur. Buna göre modeldeki değişkenler de aşağıdaki gibidir:

*CA: Cari açık*

*GSYİH: Gayri safi yurtiçi hasıla*

*NFA: Net dış varlıklar*

Hata düzeltme kavramı ilk defa 1964 yılında Sagan'ın değindiği daha sonra 1981 yılında Granger tarafından yaygınlaştırılan bir kavramdır (Gujarati; Şenesen vd, 1999). Kısıtlı bir VAR modeli olan Hata Düzeltme Modelinde nedensellik Engle-Granger (1987) değişkenler arasında uzun dönemli bir ilişki çıkması durumunda kısa dönemde değişkenler arasındaki dengesizliklerin giderilmesi için kullanılabilecek bir hata düzeltme modelinin olduğunu savunmuştur.

Genel hatlarıyla Vektör Hata Düzeltme Modeli (VECM),

$$\Delta Y_t = \alpha_0 + \alpha_1 \Delta X_t + \alpha_2 u_{t-1} + \epsilon_t \tag{3}$$

şeklinde ifade edilebilir. (3) numaralı modelde yer alan **Δ**, ilk farkı, $u_{t-1}$, modelde yer alan kalıntı değerinin bir dönem gecikmelisi yani denge hata teriminin görgül tahminini, $\epsilon$ ise kabul edilen varsayımlar dahilinde hata terimini göstermektedir. Oluşturulan regresyon, $Y_t$'deki değişmeyi, $X_t$'deki değişmeye ve bir önceki dönemin dengeleme hatasına bağlar. Buradaki $\Delta X_t$, $\Delta Y_t$'deki kısa dönem bozucu etkisine ulaşırken, hata düzeltme terimi, uzun dönem dengesine doğru olan yuvarlamalara ulaşmaya çalışır. Bu aşamada modelde yer alan $\alpha_2$, istatistiksel olarak anlamlı ise, $Y_t$'de bir dönemdeki dengesizliğin ne kadarının diğer dönemde düzeltildiğini belirtir (Gujarati; Şenesen vd, 1999).Yani hata düzeltme mekanizmasında hata teriminin gecikme katsayısı negatif ve istatistiksel olarak anlamlı ise hata düzeltme modeli anlamlı olduğu söylenilebilir (Ay ve Özşahin, 2007).

Çalışmanın analiz kısmında öncelikle zaman serileri için standart testler yani birim kök ve eşbütünleşme testleri uygulanmıştır. Analizde sağlıklı sonuçlar alabilmek için serilerin durağanlık sınamaları ADF ve PP birim kök testleri ile yapılarak sahte regresyon riskinden arındırmak hedeflenmektedir. Yapılan birim kök testi sonuçları ise Tablo 3'de gösterilmiştir.

| | ADF TESTİ | | | PP TESTİ | | |
|---|---|---|---|---|---|---|
| | *Düzey* | | *Fark* | *Düzey* | | *Fark* |
| *Değişkenler* | *Trendli* | *Trendsiz* | *Trendsiz* | *Trendli* | *Trendsiz* | *Trendsiz* |
| $\dfrac{CA_t}{GSY\dot{I}H_t}$ | *-3.53* (0.16) | *-3.39* ( 0.11) | *-3.05* ( 0.03) | *-3.56* (0.14) | *-3.42* (0,12) | *-12.07* (0.00) |
| $\dfrac{NFA_t}{GSY\dot{I}H_t}$ | *-1.47* (0.82) | *-0.55* (0.86) | *-5.28* (0.00) | *-1.67* (0,74) | *-0.59* (0,86) | *-5.24* (0.00) |

**Tablo 3.** *Birim Kök Test Sonuçları* **Not:** *Parantez içerisinde yer alan değerler serilerin p (olasılık) değerleridir.*

Serinin durağan olması geçmiş dönemlerde oluşacak şokların etkisinin giderek azaldığını ve kısa dönemde tamamen ortadan kalktığını gösterir. Cari işlemler dengesinin sürdürülebilirliği de genellikle durağanlık testleri ile sınanmaktadır. Bu anlamda cari işlemler dengesinin durağan olması, dış borçların sürdürülebilir olduğunu ima etmektedir. Tablo 3'e bakacak olursak $CA_t$ / $GSYİH_t$ serisinin düzeyde birim kök içerdiği ve durağan olmadığı görülmektedir. Bu sonuçtan Türkiye'de cari açığın sürdürülemez düzeyde ilerlediği yorumu da yapılabilir.

Tablo 3'deki analiz sonuçlarına göre serilerin düzey derecesinden %5 anlamlılık düzeyinde her seri için $H_0$ hipotezleri(Seri birim köke sahiptir, seri durağan değildir), hesaplanan t değerlerinin mutlak değer olarak kritik değerlerinin altında kalması sebebiyle reddedilmiştir. Modern zaman serisi analizlerinin uygulamasında dikkat edilmesi gereken noktalardan biri, "modelde yer alan serilerin tamamının aynı dereceden durağan olması" kuralıdır. Bu sebeple birinci dereceden farkları alınan tüm değişkenlerin $H_0$ hipotezleri red edilip serilerin birinci dereceden I(1)'dir denilebilir. Modelde yer alan değişkenlerin aynı düzeyde durağan olmaları bu değişkenler için eşbütünleşme analizi kullanılmasına imkân sağlamaktadır.

Eşbütünleşme testi, durağan dışı değişkenlerin doğrusal kombinasyonunun uzun dönemde durağan olması sonucunda değişkenlerin birbirleriyle eşbütünleşmeye girmesi ile uzun dönemli ilişkinin var olup olmadığını belirlemeye yarar. Çalışmada, Johansen Eşbütünleşme testi kullanılmaktadır ve yöntem aşağıdaki adımları içermektedir:

$X_t$ (nx1) boyutunda T örneklem sayısını içeren değişkenler vektörünü ve $X_t$'nin $I(1)$ süreci olduğu varsayılırsa değişkenler arasındaki eşbütünleşik vektörler, aşağıdaki hata düzeltme modelinin tahmini yolu ile belirlenebilir:

$$\Delta X_t = A_0 + \prod X_{t-p} + \sum_{i=1}^{p-1} A_i \Delta X_{t-i} + \varepsilon_t \tag{4}$$

(4) nolu denklemde $\Delta X_t$ ve $\Delta X_{t-i}$ vektörleri $I(0)$ iken $X_{t-p}$ vektörü $I(1)$'dir. Bu nedenle değişkenler arasındaki uzun dönemli ilişkinin niteliği $\prod$ matrisinin rankı $r$ tarafından belirlenmektedir. Rank($\prod$)=0 ise eşbütünleşme ilişkisi yoktur ve Rank($\prod$)>0 ise uzun dönemli ilişkiden bahsedilebilir (Haris ve Sollis, 2003). Johansen ve Juselius (1990), eşbütünleşik vektörlerin sayısının belirlenmesi amacıyla önerdiği iki farklı testten biri olan iz testi, $\prod$ matrisinin rankının r'ye eşit veya r'den küçük olduğu boş hipotezi test eder. Maksimum özdeğer testi ise eşbütünleşik vektör sayısının r olduğunu ifade eden boş hipotezi (r+1) olduğunu ifade eden alternatif hipoteze karşı test eder.

Model için otokorelasyon ve değişen varyans sorunu yaratmayan uygun gecikme uzunluğu SC kriterine göre 1 olarak belirlenmiştir. VAR(1) olarak hesaplanan model için eşbütünleşme testi sonuçları Tablo 4'de gösterilmiştir.

| Sıfır Hipotez | Alternatif Hipotez | Öz değerler | İz Değerler | 0.05 Kritik Değerler | Maksimum Öz Değerler | 0.05 Kritik Değerler |
|---|---|---|---|---|---|---|
| $r = 0$ | $r = 1$ | 0.320 | 16.760* | 15.494 | 15.855* | 14.264 |
| $r \leq 1$ | $r = 2$ | 0.021 | 0.904 | 3.841 | 0.904 | 3.841 |
| *%5 önem düzeyinde boş hipotezin reddedildiğini göstermektedir. | | | | | | |

**Tablo 4.** *Model için Yapılan Eşbütünleşme Testi Sonuçları*

Yukarıdaki Tablo 4'de yer alan kısıtsız eşbütünleşme rank testi sonuçlarına göre İz test istatistiği ve maksimum özdeğer istatistiği % 5 önem düzeyinde değişkenler arasında bir eşbütünleşme vektörünün varlığına işaret etmektedir. Bu bağlamda değişkenler arasında bir eşbütünleşme vektörünün varlığı kabul edilmiştir. Söz konusu eşbütünleşmenin varlığının tespit edilmesi sonrasında, cari açığın finansmanında varlık taleplerinin kullanımının uzun dönemdeki esnekliklerini analiz etmek amacıyla VECM kullanılmıştır. Eşbütünleşme ilişkisi ile ortaya çıkan hata düzeltme modeli sistemde oluşabilecek kısa dönemli dinamik sapmaları nispeten düzeltmektedir. Standart testler sonucunda, uygulanan VECM ile hesaplanan ve normalleştirilen katsayılar Tablo 5'te gösterilmiştir.

| CA | NFA* |
|---|---|
| 1000000 | -3.76 |
| | (5.30) |
| | [-0.71] |

**Tablo 5.** *Model için Normalize Edilmiş Denklem*

Eşbütünleşme analizi ile elde edilen uzun dönem esneklikleri;

CA= 1.01+3.76NFA*

Hata düzeltme modeli ile elde edilen esneklik sonuçlarına göre, net dış varlıklar düzeyinde oluşabilecek her %1'lik artış uzun dönemde toplam cari açığın gayri safi yurtiçi hasıla içindeki payını 3.76 oranında arttırmaktadır. Elde edilen sonuç pozitif yönlü olması sebebiyle anlamlıdır. VECM sonucunda iki değişken arasındaki katsayı işaretinin pozitif yönlü çıkması analiz sonuçlarının anlamlılığını destekler niteliktedir.

## 6  Sonuç

Türkiye'de son dönemlerde en çok tartışılan konuların başında, cari işlemler açığı ve bu açığın sürdürülebilir olup olmadığı konusu gelmektedir. Bu çalışmanın amacı da, Edwards (2001) ve Uygur (2012)'un çalışmalarında da yer verdiği bir sürdürülebilirlik hesaplama eşitliğinden yola çıkılarak, Türkiye'nin cari açığının ne kadarının sürdürülebilir olduğunu varlık talebi yaklaşımı ile incelemektir.

Bu eşitlik sonucunda Türkiye'nin mevcut cari açığının, potansiyel yani olması gereken cari açık düzeyinin çok üstünde olduğu ve bu durumda cari açığının sürdürülebilirlikten uzaklaştığı sonucuna ulaşılabilir. Ayrıca varlık talebi ile cari açık arasındaki ilişki, sadece potansiyel cari açık ve mevcut cari açık arasındaki farkı tespit etmede değil, aynı zamanda eşbütünleşme ve hata düzeltme modeli yardımı ile uzun dönem ilişkilerini incelemede de kullanılmıştır. Sonuçlar göstermiştir ki net dış varlık talebinde meydana gelebilecek %1'lik bir artış, cari açığı % 3.76 oranında arttırmaktadır. Bu pozitif ilişki; Türkiye ekonomisinde borç bulabilme ve borcunu finanse edebilme kapasitesinin artmasının daha esnek bir şekilde borçlanmaya gidebilmesinin ve daha büyük cari açıklarla karşı karşıya kalmasının bir sonucu olarak yorumlanabilmektedir. Sağlanacak her türlü dış varlık, Türkiye ekonomisinin daha rahat harcama yapmasına neden olmaktadır. Aynı zamanda bu durum cari açığın bir finansman türünün varlık talebi olduğunu da destekler niteliktedir.

Türkiye'de her geçen gün dış dengesizliğin arttığı bir süreç yaşanırken, dış dengeyi sağlamak için duyulan finansman ihtiyacının kolaylaşmasının, daha fazla dengesizliklere ve sürdürülemeyecek bir cari açığa neden olduğu söylenebilir. Artan küreselleşme ile hızlanan finansallaşma, mevcut dış dengesizliği arttırırken, bir yandan da Türkiye ekonomisinin cari açığının sürdürülemez hale getirerek, dışsal şoklara karşı kırılganlığını arttırdığı gerçeği ile karşı karşıya da bırakmaktadır.

# Gelişmekte Olan Ülkeler Küresel Sermayeyi Çekme Konusunda Niçin Başarısız Olmaktadırlar? Balkan Ülkeleri için Lucas Paradoksunun Yeniden İncelenmesi

# Why do Developing Countries Fail to Attract Global Capital? Reinvestigation of the Lucas Paradox for the Balkan Countries

Prof. Dr. Harun Bal (Çukurova University, Turkey)

Assoc. Prof. Dr. Neşe Algan (Çukurova University, Turkey)

Dr. Mehmet Demiral (Çukurova University, Turkey)

## Abstract

The neoclassical theory predicts that capital should flow from developed (rich) to developing (poor) countries until the differences of investment returns are equalized. However, in his famous example, Lucas (1990) pointed out that, even the marginal product of capital in India was roughly calculated as 58 times that of the United States in 1988, such a capital flow did not occur in practice. This observation is somewhat still exists in general. This study try to find out possible explanations to why Lucas Paradox is still seen in an increasingly integrated world and demonstrate what foreign direct investments (FDIs) really pursue, focusing on selected nine Balkan countries. The study performs gravity model estimation using annual balanced panel data sets covering the period of 2000-2012. Overall results demonstrate that there is some evidence supporting Lucas paradox for the Balkan countries investigated. Main findings show that, regulations, country risk and China's increasing attraction of global FDI tend to hinder Balkan countries' performances, while improvements in human capital, infrastructures and logistic services can help these countries increase their global shares in FDI. Besides, increasing the research and development investment and progress in the path of the European Union membership process seems to promote attracting global FDI.

## 1 Giriş

Birçok gelişmekte olan ülke (GOÜ)'de ekonomik gelişmeyi finanse edecek yurtiçi kaynakların sınırlı ve yetersiz olduğu görülmektedir. Bu nedenle GOÜ'ler doğrudan yabancı sermaye (DYS) yatırımlarını teşvik edecek uygun bir ortamın sağlanmasına yönelik, 1980 yılından sonra hız kazanan reformlar uygulamaktadırlar. Mevcut literatürde DYS yatırımlarının, GOÜ'lerin gerek duyduğu sermayeyi sağlamasının yanında, üretim, ihracat, istihdam, verimlilik ve rekabetçilik artışları sağladığı ve yönetim becerileri ile teknoloji transferi gerçekleştirdiği sonucu vurgulanmaktadır. Ayrıca, özellikle dönüşüm ekonomileri için, küresel piyasalara entegrasyonda da DYS yatırımlarının etkisi büyüktür.

1990'lı yıllara gelindiğinde gelişen küresel değer zincirleri sayesinde, çok uluslu firma (ÇUF)'ların faaliyetleri DYS yatırımlarına farklı bir boyut kazandırmıştır. Bu döneme kadar yaygın olan bağımsız-firmalar arası ticaret, yerini ilişkili-firmalar içi ticaret gelişmelerine bırakmıştır. Bu gelişmelerde önce büyük ÇUF'ların üretim süreçlerini ve aşamalarını yerel avantajlardan yararlanmak için diğer ülkelerdeki bağımsız firmalara taşıması, sonrasında ise bu faaliyetlerini kendi birimlerini taşıyarak gerçekleştirmeleri biçiminde olmuştur. Bununla birlikte firma düzeyinde veriler ABD ve Japonya gibi ülkeler dışında çok kısıtlı olduğundan genel bir ifadeyle DYS yatırımları olarak ele alınmakta ve ülkelerin ödemeler bilançolarında sermaye hareketlerinden izlenen verilerle araştırmalara konu olmaktadır.

DYS yatırımları GOÜ'ler için bu kadar önemli iken onları bir ülkeye çeken faktörlerin belirlenmesine yönelik geniş bir literatür oluşmuştur. Çalışmalarda ayrı ayrı incelenen ekonomik, politik, sosyo-kültürel, coğrafi, kurumsal ve altyapı gelişmelerine ilişkin faktörlerin DYS girişlerini doğrudan etkilediğine ilişkin sonuçlar elde edilmiştir. Elde edilen bu bulgular doğrultusunda özellikle 1970'lerde ve 1980'lerde gerçekleştirdikleri etkin reformlarla DYS yatırımlarından aldıkları dünya payını artırması beklenen GOÜ'lerin, birkaç istisna dışında, henüz potansiyellerine ulaşamadıkları görülmektedir. Ayrıca bu ülkelerden birçoğunun ucuz emek ve doğal kaynak olanakları da sundukları görülmektedir.

Neoklasik büyüme modeli, iki özdeş ve dışa açık ülkenin sadece sermaye stoklarının farklı olması durumunda sermayenin getirisinin de farklı olacağını ortaya koymaktadır. Buna göre sermaye stokuna daha fazla sahip olan zengin ülkede (gelişmiş ülke) sermayenin getirisinin, nispeten daha az sermaye stokuna sahip olan ülkeye (GOÜ) kıyasla daha az olacağından gelişmiş ülkeden GOÜ'ye doğru bir sermaye akışı beklenmektedir. Neoklasik büyüme teorisinin öngörüsünün bir paradoksu biçiminde Lucas (1990)'ın küresel sermayenin GOÜ'lere gitmediğini ortaya koyması ve döneme ilişkin açıklamalar sunmasının üzerinden 24 yıl geçse de günümüzde de gerçekleşen DYS akımları verilerinin bu paradoksu doğruladığı görülmektedir.

Sanayileşmiş ülkelerin doğal olarak 1970'li ve 1980'li yıllarla birlikte yapısal dönüşüm geçirerek küresel imalat sanayii üretiminden çekilmeleri (UNCTAD, 2012) imalat sanayiinde üretim ve DYS yatırımlarını yurtiçine çekme konusunda GOÜ'ler arasındaki rekabeti arttırmıştır. Bu rekabet onların liberal politikalara hız vermelerine neden olsa da DYS akımlarının yer seçimleri bu gelişmelere yeterince hızlı ve büyük miktarda hassasiyet göstermemiştir. Bunun yanında 1990'lı yıllarla birlikte özellikle Çin'e giden DYS yatırımlarının ciddi bir biçimde arttığı görülmektedir (Shatz ve Venables, 2000). Bu başarısına rağmen Çin'de sermaye hareketleri önündeki regülasyonların, daha düşük DYS payına sahip diğer GOÜ'lerden daha fazla olması (OECD, 2014a) literatürdeki tartışmaları, daha farklı belirleyicilerinin incelenmesine yöneltmektedir.

Balkan bölgesi 1990'lı yıllarda yoğun siyasi ve ekonomik istikrarsızlıkların yaşandığı bir bölge olmuştur. Ayrıca Merkez Doğu Avrupa ülkelerine kıyasla Balkan ülkelerinin ekonomik gelişme ve dönüşüm süreci daha yavaş gelişmiştir. Bu olumsuz görüntü, DYS yatırımlarına da yansımış ve literatürde negatif Balkan etkisini ortaya koyan çalışmaların sayısı artmıştır. Buna göre, bölgenin savaş ve kargaşa yönündeki kötü imajı yatırım olanaklarının önüne geçmektedir. Ayrıca piyasaların küçüklüğü, diğer dönüşüm ekonomilerine ve yükselen piyasa ekonomilerine kıyasla yatırım bölgelerine olan uzaklıkları ile kurumsal yapıları bakımından bölgesel bir dezavantajının olduğu görülmektedir (Estrin ve Uvalic, 2013).

Bu çalışmada kısmen ya da tamamen Balkan bölgesinde yer alan dokuz ülke (Arnavutluk, Bosna Hersek, Bulgaristan, Hırvatistan, Yunanistan, Romanya, Slovenya, Makedonya, Türkiye) için DYS yatırımlarının belirleyicileri Lucas paradoksu kapsamında incelenmektedir. Farklı karakteristiklere sahip ülke örnekleri ile AB üyelik süreci dahil çok sayıda faktörün etkileri daha net ortaya konulabilmektedir. Dönüşüm ekonomilerinde DYS yatırımlarına ilişkin mevcut literatürde spesifik olarak Balkan ülkeleri üzerine yapılan çalışmalar nispeten az kalmıştır. Çalışmada çekim (*gravity*) modeli tahminiyle çok sayıda değişken ile Balkan ülkelerinde Lucas paradoksu bulgularının ve DYS yatırımlarının temel belirleyicilerinin incelenmektedir. Bu kapsamda ilk olarak DYS yatırımları ve Lucas paradoksu teorik çerçevesi, sonrasında ise DYS yatırımlarının temel belirleyicilerine ilişkin ilgili literatür gelişimi sunulmaktadır. Veri seti, yöntem ve analiz bulguları kapsamında ampirik çerçeve ortaya konulduktan sonra çalışma, sonuç ve değerlendirmeler bölümü ile tamamlanmaktadır.

## 2 Teorik Çerçeve: Doğrudan Yabancı Sermaye Yatırımları ve Lucas Paradoksu

### 2.1 Doğrudan Yabancı Sermaye Yatırımları

IMF (2004), DYS yatırımlarını kısaca, hisse ya da oy hakkında en az yüzde 10 oranında yurtdışı yerleşiklerin payı olan girişimler olarak tanımlamaktadır. DYS yatırımlarının, geldiği ülkeye, teknoloji transferi ve diğer sektörlere teknolojik yayılma (*diffusion*) sağlayacağı literatürde ulaşılan genel sonuçtur. DYS yatırımlarının günümüzde temel gelişimi çok uluslu firma (ÇUF)'lardır. ÇUF'lar aynı zamanda teknoloji ve modern yönetim sistemlerinin transferiyle GOÜ'ler için yapısal bir dönüşüm fırsatı da sağlamaktadır. Teknoloji ve beceri (*know-how*) transferinin yurtiçi verimlilik seviyesine olan etkisi doğrudan ya da dolaylı olabilmektedir. Doğrudan etkide daha verimli faaliyet gösteren ÇUF'ların geldiği ülkede genel verimlilik seviyesini doğrudan artırması söz konusudur. Dolaylı etkide ise, ÇUF'ların yurtiçi firmaların verimliliğini ya da kalitesini geliştirmesi söz konusudur (Shatz ve Venables, 2000; UNCTAD, 2005; Sönmez ve Pamukçu, 2011; UNCTAD, 2012).

Literatürdeki birçok çalışma, sadece GOÜ'ler için değil gelişmiş ülkeler için de ÇUF'lerin yurtiçi ortalama firmalardan daha verimli olduğunu ve yurtiçi firmalara doğru bir taşma etkisinin geliştiğini ortaya koymaktadır (Girma vd., 2008). Ayrıca DYS yatırımları ekonomilerin ve ihracat sektörlerinin dışa açılmasında büyük öneme sahiptirler. Yine DYS yatırımları ile büyüme arasındaki kuvvetli ilişki dikkat çekmektedir (Gholami vd., 2005). Türkiye ekonomisi üzerine yapılan çalışmalarda da DYS yatırımlarının ve ÇUF'ların, teknoloji ve verimlilik taşmalarının olduğu ulaşılan sonuçlar arasındadır (Taymaz ve Yılmaz, 2008; Sönmez ve Pamukçu, 2011).

### 2.2 Lucas Paradoksu

Lucas (1990), 1909-1958 dönemi verileriyle, Hindistan'daki sermayenin marjinal getirisinin ABD'dekinden yaklaşık 58 kat daha fazla olmasına rağmen, uygulamada ABD'den Hindistan'a beklenildiği bir sermaye akımının gerçekleşmemesini ele almış ve bu paradoksal bulguyu bazı faktörlere bağlamıştır. Neoklasik modelin işlememesinin nedenleri olarak gördüğü bu faktörleri Lucas (1990), beşeri sermaye farklılıkları, beşeri sermayenin dışsal faydaları ve sermaye piyasası eksiklikleri olarak belirtmiştir. Lucas (1990), bu faktörleri model eksiklikleri ve uluslararası sermaye piyasalarının eksiklikleri kapsamında ele almıştır. Model hatalarına ilişkin olarak, beşeri sermaye üretim faktörünün ya da toplam faktör verimliliğini etkileyen diğer faktörlerin modele alınmamasını 'eksik faktör' olarak nitelendirirken, sermaye piyasası eksikliklerini bilgi asimetrisi ve ülkelere özgü riskler olarak değerlendirmiştir. Sonrasında DYS yatırımlarının yer seçimini belirleyen faktörlerin belirlenmesine ilişkin olarak çok sayıda ekonomik, kurumsal, politik, sosyo-kültürel ve coğrafi faktörler incelemeye alınmıştır.

### 2.3 Doğrudan Yabancı Sermaye Yatırımlarının Küresel Seyri

Aşağıdaki grafikte gelişmiş ülkelerin küresel DYS yatırımlarından aldıkları payın genel trend olarak GOÜ lehine azaldığı görülmektedir. 2000'li yıllarla birlikte ise dönüşüm ekonomilerinin de küresel DYS yatırımlarından aldıkları payın artmaya başladığı dikkat çekmektedir. DYS yatırımlarının gelişimi bakımından

GOÜ'ler için 2012 yılı önemli bir yıl olmuştur: 2012 yılında GOÜ'ler küresel DYS yatırımlarından aldıkları pay bakımından ilk kez gelişmiş ülkeleri geride bırakarak payını %52'ye yükseltmiştir. Gelişmiş ülkelerin payı %42'ye gerilemiş ve dönüşüm ekonomilerinin payı ise %6'ya yükselmiştir.

*Grafik 1: DYS Girişlerinin Seyri, % Dünya Payı.* **Kaynak: UNCTAD**

DYS yatırımlarının üretim ya da ihracattan daha fazla bölgesel yoğunlaşma eğiliminde olduğu görülmektedir. Bu eğilim 1990'lara kadar gelişmiş ülkelerde yoğunlaşma biçiminde iken (Shatz ve Venables, 2000) 1990'lı yıllarla birlikte, küresel üretim sitemeinde artan paylarıyla ilişkili olarak GOÜ'lere kaymaya başladığı görülmektedir. GOÜ'ler içinde Asya bölgesi ise ilk sırada yer almaktadır. Özellikle Asya bölgesinde küresel üretim ve ihracat platformu görünümünde olan Çin, gerçekleşen reformlar sayesinde 1990'lı yıllarla birlikte DYS yatırımlarının bir cazibe merkezi haline gelmiştir. Bu durum diğer ülkeler için bir sermaye çıkışı ya da sermaye girişinde bir azalış ile sonuçlanmıştır. Bu nedenle birçok sanayileşmiş ülkede maliyet ve ücret düşüşü yönünde bir baskı oluşurken, Türkiye gibi GOÜ'lerde ise kurumsal yapılar başta olmak üzere DYS yatırımlarını çekici faktörlerin geliştirilmesi gerekliliği daha da belirginleşmiştir (UNCTAD, 2014).

### 2.4 Balkan Ekonomilerinde Doğrudan Yabancı Sermaye Yatırımlarının Seyri

DYS yatırımlarının dönüşüm ekonomilerinde piyasa sistemine geçişe katkı sağlaması beklenmektedir. Balkan ülkelerinin yaklaşık 15 yıl süren dönüşüm süreçlerinde aşağıda tabloda görülebildiği üzere DYS girişleri ciddi anlamda artmıştır. Kişi başına düşen DYS girişi bakımından 1998-1999 döneminden 2012 yılına en çok artış Arnavutluk'ta gerçeklemiştir. Arnavutluk net DYS girişinin GSYH içindeki payı bakımından da sözkonusu dönemde en iyi performans gösteren ülke durumundadır. DYS girişinin dünyadaki yapı bakımından ise iktisadi büyüklüğüne göre beklendiği gibi en yüksek pay Türkiye'ye aittir. Dünya Bankası verilerine göre cari GSYH bakımından 2012 yılında 17. sırada yer alan Türkiye'nin küresel DYS yatırımlarında %1'in altında seyreden payı beklenilenin çok altındadır. Özellikle 1996 yılında AB ile Gümrük Birliği'nin uygulamaya girmesiyle Türkiye'nin coğrafi konumunun yanında, düşük maliyetli, organize ve kalifiye işgücüne ek olarak uzun dönemli piyasa ekonomisi deneyimi sayesinde DYS yatırımlarının ve ÇUF faaliyetlerinin artması beklenmiştir. Buna karşılık yükselen piyasa ekonomilerine kıyasla Türkiye'ye DYS girişlerinin düşük olduğu görülmektedir. Özellikle uzun süren finansal problemler ve makroekonomik belirsizlikler ile kurumsal yapı ve rekabet düzenlemelerindeki eksiklikler, Türkiye'de, DYS yatırımlarını yurtiçine çekmeye yönelik politikaların etkilerini zayıflatmaktadır. Gelen yatırımların büyük çoğunluğunun ise imalat sanayiinden çok üçüncü sektör yani taşıma-ulaştırma, bankacılık ve diğer finansal hizmetler ile ticaret gibi hizmet sektörlerinde yoğunlaştığı görülmektedir (Taymaz ve Yılmaz, 2008; OECD, 2014b).

### 2.5 Çok Uluslu Firma Faaliyetleri ve Yatırım Stratejileri

Özellikle 1980'lerden sonra ÇUF'lar, maliyetleri düşürmek amacıyla, üretim aşamalarını farklı ülkelerde yaparak üretim ağlarını küreselleştirmişlerdir (Hummels vd., 1998; Hummels vd., 2001). ÇUF faaliyetlerinin yaygın olması, veri kısıtı altında ampirik olarak test edilememekle birlikte (Bonturi ve Fukasaku, 1993; Lanz ve Miroudot, 2011), teorik olarak gümrük tarifelerinin ve tarife dışı önlemlerin azalmasını gerektirmektedir. Nitekim ÇUF faaliyetlerinin yaygın olduğu Japonya ve ABD'nin ticaret politikalarına bakıldığında bu ülkelerde nispeten daha liberal uygulamalar görülmektedir.

DYS yatırımlarını açıklayıcı nitelikte dört farklı ÇUF faaliyeti bulunmaktadır (Dunning ve Lundan 2008; Lanz ve Miroudot, 2011): i) Kaynaklara ulaşmak için yapılan DYS yatırımları. Bazı yabancı yatırımlar ev sahibi ülkedeki petrol, madenler ve insan kaynakları gibi üretim faktörlerine ulaşmak için bu ülkelere gitmektedirler. Bu bir dikey DYS yatırımı örneği olup firma içi ticaret söz konusu olabilmektedir. ii) Piyasalara ulaşmak için yapılan DYS yatırımları. Bu durumda ÇUF'lar, üretimini arz edecekleri yeni piyasalara ulaşmak amacıyla hareket etmektedirler. Bu tür faaliyetler yatay DYS yatırımları kapsamına girmektedir. Bu yapıda firma içi ticaret

genellikle görülmemektedir. iii) Etkinlik için yapılan DYS yatırımları. Burada amaç birinci maddede ifade edilen kaynaklara ulaşmak için yapılan DYS yatırımları ile aynıdır. İkisi arasındaki temel fark, kaynaklara ulaşmak için yapılan yatırımlar ilk yatırım iken, etkinlik için yapılan yatırımlar daha önce başka bir yerde faaliyet gösteren bir ÇUF'un faktör donanımına bağlı olarak fiyat farklıklarından yararlanmak için bu faktörlere sahip başka ülkelerde yeni yatırımlar yapmasıdır. Bu DYS türünde de firma içi ticaret eğilimleri bulunmaktadır. iv) Stratejik varlıklara sahip olmak amacıyla yapılan DYS yatırımları. Bu tür yatırımlarda amaç yerel piyasalarda bilgi ve teknoloji ile ikisinin bileşimi inovasyona sahip olmaktır. Bu yatırım türü, firmaların uzun dönemde rekabet gücünü artırması bakımından önemlidir. Yine bu durumda firma içi ticaret eğilimleri az olmaktadır. Bu dört madde, DYS yatırımlarına yön veren sermayenin marjinal verimliliğinin, önemli olmakla birlikte tek belirleyici faktör olmadığını göstermektedir. Bu da yatırımların marjinal verimliliği daha yüksek olan GOÜ'lere niçin daha az gittiğini sorgulayan Lucas paradoksuna yeni açıklamalar getirmektedir.

*Tablo 1: Seçilmiş Balkan ülkeleri İçin DYS Yatırımları Büyüklükleri.* **Kaynak:** *UNCTAD; WB-WDI.*

## 3   İlgili Literatür Gelişimi: DYS Yatırımlarının Temel Belirleyicileri

1990'lı yıllardan itibaren küresel DYS yatırımları paylarını artırma performanslarıyla dikkat çeken yükselen piyasa ekonomilerine (Brezilya, Hindistan, Çin, Rusya, Türkiye, Meksika, Güney Afrika vb.) ilişkin çalışmaların sayısı artmaktadır (örn. Arbatli, 2011; Jadhav, 2012; Priya ve Archana, 2014). Sürekli büyüyen yükselen ekonomilerin daha fazla DYS çekmesine rağmen nedenselliğin yönü çok net değildir. Mevcut literatürde ülkelerin büyüdüğü için mi DYS yatırımlarını çektiği yoksa bu yatırımlar sayesinde mi daha fazla büyüdüklerine ilişkin bulgular net değilse de, iki değişken arasındaki yüksek korelasyon dikkat çekmektedir. Bunun yanında özellikle 2000'li yıllarla birlikte GOÜ'lerin yükselen piyasa ekonomilerinin küresel DYS yatırımlarından aldıkları pay artmıştır. Sezgisel olarak DYS yatırımlarının istikrarlı ekonomik koşulların ve sağlam kurumsal yapıların bulunduğu ülkelere daha fazla gitmesi beklenmektedir. DYS yatırımcılarının, siyasi istikrasızlıkların, katı regülasyonların ve düşük gelişmişlik göstergelerine karşı hassasiyetlerinin fazla olduğu kabul edilmekle birlikte bu argümana da ampirik destek sınırlı kalmıştır (Walsh ve Yu, 2010).

Literatürde daha önceki farklı çalışmalardan elde edilen bulgular kapsamında ülkelere yönelen DYS yatırımlarının temel belirleyicilerini şu şekilde özetlemek mümkündür (Head, 2000; Shatz ve Venables, 2000; Asiedu, 2002; Janicki ve Wunnana, 2004; Gholami vd., 2005; Brada vd., 2006; Arbatli, 2011; Jadhav, 2012; Head ve Mayer, 2013; Priya ve Archana, 2014): i) Lucas paradoksu göstergeleri: Lucas (1990) paradoksal bulguyu beşeri sermaye farklılıklarına dayandırmıştır. Bu kapsamdaki çalışmalar ülkelerin zenginlik göstergesi olarak sermaye yoğunluklarını ve kişi başına gelir değişkenlerini ele alırken, beşeri sermaye göstergeleri ise okullaşma oranı ile eğitim, sağlık ve AR-GE harcamalarıyla açıklanmaya çalışılmaktadır. ii) Açıklık: Ticari açıklık bir ülkenin ticaret engellerini göstermesi bakımından önemlidir. DYS yatırımları ihracat ve ithalat yönlü serbest ticaret politikalarının uygulandığı ülkelere yöneleceklerdir (Resmini, 2000). iii) AR-GE harcamaları: Beşeri sermayeyi temsilen eğitim-öğretim süresinin alınması, kaliteden çok süreyi dikkate aldığı için eleştirilebilmektedir. Bunun için AR-GE harcamalarının GSYH içindeki payı gibi başka göstergelerin de DYS yatırımlarını etkilediği belirtilmektedir. Ancak bu iki değişken arasındaki ilişkinin yönü ve işareti konusunda literatürdeki bulgular net değildir (Kathuria, 2008). iv) Piyasa büyüklüğü ve büyüme potansiyeli: DYS yatırımlarının bir kısmı yeni piyasalara yani talebe ulaşmak amacıyla gerçekleşmektedir. Bu nedenle piyasa büyüklüğünün DYS yatırımlarını pozitif etkilemesi beklenmektedir (Güngör ve Binatli, 2010). Ayrıca büyük piyasalar ölçek ekonomileri sayesinde daha düşük maliyetli üretime olanak tanıyarak rekabet gücünü artırmaktadır. Resmini (2000) ile Bevan ve Estrin (2000) çalışmalarında, Merkez ve Doğu Avrupa ile dönüşüm ekonomileri için nüfus ve ekonomik bakımından büyük ülkelerin daha fazla DYS yatırımları çekme eğiliminde olduklarını ortaya koymuşlardır. v) Faktör fiyatları: Özellikle ucuz üretim faktörlerine (petrol, doğal gaz, işgücü gibi) ulaşmak amacıyla hareket eden DYS yatırımlarının faktör fiyatlarına hassasiyetinin fazla olması beklenmektedir. vi) Ülke riski: Ülkelerin kurumsal yapılarının ortaya çıkardığı riskler DYS yatırımlarının yer seçiminde önemli bir belirleyicidir (Bevan vd., 2004). DYS yatırımcıları karar aşamasında ülkelerdeki risk göstergelerini dikkate almaktadır. vii) Makroekonomik istikrar: Ekonomik riskin de belirleyicisi olan makroekonomik istikrarı temsilen, yaygın olarak işsizlik oranı, döviz kuru, ticari ve cari açık, enflasyon, faiz gibi göstergeler kullanılmaktadır. viii) Ticaret engelleri ve korumacılık: DYS yatımcılarının dikkate aldığı bir diğer konu liberal politikaların varlığıdır. Bu gösterge gümrük tarifeleri ve tarife dışı önemler ile temsil edilebilmektedir. Ancak özellikle 1990'lı yıllarla birlikte tarifelerin, ticaret önünde engel olmaktan çıkmaya başladığı ve ülkelerin tarife oranlarının birbirlerine yaklaştığı görülmektedir. Buna karşın sayıları her geçen gün artan tarife dışı önlemlere ilişkin verilerin elde edilmesi ve veri halinde ölçülebilmesi oldukça zordur. Bu nedenle Güngör ve Binatli (2010)'nın çalışmalarında olduğu gibi bu uygulamaların doğrudan etkilediği ithalat hacmi kullanılabilmektedir. İthalatın artması ticaret engelleri ve korumacılığın az olduğunun göstergesidir. ix) Yığılma ve dışsallıklar: DYS yatırımları daha önce yapılan yatırım miktarından etkilenmektedir. Burada pozitif dışsallıklar ve sürü psikolojisinin etkisi beklenmektedir. Sürü psikolojisi daha önceki yapılan yatırımların yeni yatırımcılar tarafından uygun bir yatırım ortamının olduğu yönündeki değerlendirmelerinden ileri gelmektedir (Walsh ve Yu, 2010). Bazı yatırımlar daha önce yapılan yatırımların miktarını dikkate alabilmektedirler (Güngör ve Binatli, 2010). x) Küresel entegrasyon: Ülkelerin küresel piyasalara açılma yeteneği ve uluslararası işbirliğine katılma seviyesi yatırımları doğrudan etkilemektedir. Bu kapsamda ikili ve çok taraflı ticaret anlaşmaları ülkelere giden yatırımları etkileyebilmektedir. Ele alınan dokuz Balkan ülkesi için bu gösterge, en ileri ekonomik işbirliği seviyesine ulaşmış olan AB üyeliğidir. Ayrıca AB üyelik sürecinin gerekli kıldığı reformlar ve birlik içi ekonomik anlaşmaların DYS yatırımlarını doğrudan olumlu etkilemesi beklenmektedir (Baldwin vd., 1996). xi) Altyapı: Ulaşım ve iletişim ağları ile lojistik hizmetlerinin varlığı ve kalitesi, DYS yatırımlarının yer seçiminde belirleyici faktörler arasında gösterilmektedir (Portes ve Rey, 2005; Arvis vd., 2012). xii). Kültürel benzerlik: Ortak dilin, hukuk sisteminin ve kültürel bağların olduğu ülkeler arasında gelişen ekonomik ilişkilere bağlı olarak DYS yatırımlarının bu ülkeler arasında fazla olması beklenmektedir (Buch vd., 2003). Aynı durum ortak para birimini kullanan ülkeler için de geçerlidir (ITC, 2003). xiii) Mesafe: Özellikle merkezi yönetim anlayışı olan ÇUF'ların yatırımlarını kontrol edebilmek için mesafeyi dikkate aldıkları görülmektedir. Bu nedenle mesafenin DYS yatırım kararlarını olumsuz etkilemesi beklenmektedir. xiv) Doğal kaynak zenginliği: Ülkelerin doğal kaynak donanımları bakımından zengin olması özellikle bu kaynaklara ulaşmak isteyen DYS yatırımlarını ülkeye çekmektedir. xv) İşgücü: Sermaye yoğun ülkelerden gelen DYS yatırımlarının bir diğer amacı emek yoğun üretim aşamalarını GOÜ'lere taşımak suretiyle yatırımlarını artırmaktır. Bunun için Türkiye gibi işgücü arzı yüksek olan ülkelerin bu tür yatırımlardan daha fazla pay alması beklenmektedir. xvi). Döviz kuru: Bir ülkenin ulusal parasının diğer ülke paralarına göre değer kaybetmesinin DYS girişlerini artırması beklenmektedir. Ancak bu durum gelen yatırımların yurtiçi piyasalara mı yoksa yurtdışı piyasalara mı ihracat yapma amacıyla gelmesine ve ithal girdi kullanım yapılarına bağlı olmaktadır (Walsh ve Yu, 2010).

Sayılan bu faktörler DYS yatırımlarını çeken değişkenler olarak dikkate alınırken aynı zamanda yurtdışına iten faktörler olarak ta değerlendirilmektedir. Ülkeler bir yandan yeni yatırımları yurtiçine çekmeye çalışırken diğer yandan mevcut yatırım stoklarının da yurtiçinde kalmasını arzu etmektedir. DYS yatırımlarının ve ÇUF'ların yurtdışına çıkmasının her ne kadar yurtiçi üretimi, istihdamı ve ihracatı azalttığı düşünülse de bu etkinin ampirik çalışmalarda desteklenmesi sınırlı kalmıştır (Lipsey, 2002).

## 4 Ampirik Çerçeve: Veri Seti, Yöntem ve Bulgular

Çalışmada dokuz Balkan ülkesi için DYS akımlarının temel belirleyicileri incelenmiştir. Ayıca Lucas paradoksunun geçerli olup olmadığı bulgularının elde edilebilmesi için gerekli değişkenler de modele eklenmiştir. Yine DYS yatırımlarını hem iten hem de çeken faktörlerin birlikte incelenmesi amaçlanmıştır. Bu amaçlar doğrultusunda çalışmada çekim (*gravity*) modeli tahmin edilmiştir. Çok sayıda değişken kullanılması ve bu değişkenlerin elde edilebilirliğine bağlı olarak 2000-2012 dönemini kapsayan yıllık veriler kullanılmıştır. Bazı serilerde eksik yıllar için veriler basit ortalamaları alınarak dengeli panel verileri oluşturulmuştur. Levin, Lin ve Chu (2002) panel birim kök testi ile tüm değişkenlerin %10 düzeyinde durağan olduğu belirlenmiştir.

### 4.1 Veri Seti

Çalışmada kullanılan değişkenler ve açıklamaları ile veri kaynakları aşağıdaki tabloda sunulmuştur.

| Değişken | Açıklama | Kaynak |
|---|---|---|
| *DYS* | *Kişi Başına DYS Girişi* | *UNCTAD, WIIW, OECD* |
| 1) ÇBRFSS | **Çalışan başına reel fiziki sermaye stoku**. 2005=1 ulusal fiyatlarla 2005=1 USD olarak, milyon USD. | Penn World Table |
| 2) KBBSE | **Kişi başına beşeri sermaye endeksi**. Yıl olarak eğitim süresi ve eğitim getirisine göre. | Penn World Table |
| 3) Açıklık | **Ticari açıklık**. İhracat ve ithalatın toplamının GSYH içindeki payı | Penn World Table |
| 4) AR-GE | **AR-GE harcamalarının GSYH içindeki payı.** | WB-WDI |
| 5) PİYBÜY | **Piyasa büyüklüğü**. USD olarak cari GSYH | WB-WDI |
| 6) FFİY | **Faktör fiyatları**. Ücret ve diğer maliyet göstergeleri bakımından aylık çalışan maliyetleri (2005 fiyatlarıyla USD) | Penn World Table |
| 7) RİSK | **Ülke riski.** *i) Etkin demokrasi ve sorumluluk (siyasette askeri unsurların varlığı ve demokratik hesap verilebilirlik), ii) huzur ve politik istikrar (hükümet istikrarı, yurtiçi anlaşmazlıklar, yurtdışı anlaşmazlıklar, etnik ve dini problemler), iii) hükümet etkinliği (bürokratik kalite), iv) düzenleme etkinliği (yatırım ortamı), v) hukuk düzeni, vi) yozlaşma seviyesi ve engelleyici düzenlemeler*. | PRS Group |
| 8) FİYSEV | **Fiyat seviyesi.** TÜFE | WB-WDI |
| 9) TENKOR | **Ticaret engelleri ve korumacılık**. GSYİH içinde mal ithalatı payı | Penn World Table |
| 10) YIĞDIŞ | **Yığılma ve dışsallıklar**. Kişi Başına DYS yatırım stoku, Cari USD | UNCTAD |
| 11) KÜRENT | **Küresel/Bölgesel entegrasyon**. AB üyeliği (kukla değişken) *0: Potansiyel aday ülkeler (Arnavutluk, Bosna Hersek), 1: Üyelik sürecindeki aday ülkeler (Makedonya ve Türkiye), 2: Üye ülkeler (Bulgaristan, Hırvatistan, Romanya ve Slovenya), 3: Eski üye ülke (Yunanistan).* | EUROSTAT |
| 12) ALTYP | **Altyapı**. Lojistik Performans Endeksi (1<LPE<5) *Endeks hesaplama kriterleri: Gümrük ve sınır yönetimi etkinliği, ticaret ve taşıma altyapı kalitesi, taşıma ve yüklemelerde rekabetçi fiyatların varlığı, lojistik hizmetlerin yeterliliği ve kalitesi, sevk ve teslim işlemlerinin takip ve kontrol edilebilirliği ve gönderilerin alıcılara planlanan veya beklenen teslimat sürelerinde ulaşma sıklığı.* | WB-WDI |
| 13) KULTR | **Kültürel benzerlik**. Konuşulan (resmi ya da değil) ortak dil ve para birimi (kukla değişken) *0: Dil ve para birimi farklı; 1: Sadece ortak dil; 2: Sadece ortak para birimi; 3: Ortak dil ve ortak para birimi* | CIA World Factbook |
| 14) MESAFE | **Mesafe**. ABD, Japonya ve Almanya'ya ortalama uzaklık, km. *2000-2012 dönemi için DYS yatırımlarının en fazla çıkış yaptığı ülkeler sırasıyla ABD, Japonya ve Almanya'dır. Bu nedenle mesafe olarak km cinsinden bu ülkelere olan mesafenin ortalaması alınmıştır.* | CEPII |
| 15) DKZENG | **Doğal kaynak zenginliği**. Kişi başına toplam enerji üretimi | US-EIA |
| 16) İŞG | **İşgücü.** Çalışma çağındaki nüfus | WB-WDI |
| 17) DK | **Döviz kuru.** 1 birim USD karşılığı ulusal para | IMF-IFS |
| 18) ÇİNET | **Çin Etkisi.** Çin'e net DYS girişi, milyar USD | UNCTAD |

*Tablo 2: Kullanılan Değişkenler, Açıklamaları ve Veri Kaynakları*

### 4.2 Yöntem: Çekim (Gravity) Modelleri

Çekim teorisi, Newton'un 17. yüzyılda geliştirdiği cisimler arasındaki çekim gücünün sosyal bilimlere uyarlanmasıdır. Teori en basit şekliyle iki ülke arasındaki her hangi bir değişken (ihracat, ithalat, sermaye, işgücü vb.) akımının bu iki partnerin ekonomik büyüklüğü bakımından pozitif, ancak aralarındaki mesafe bakımından negatif yönde etkileneceği görüşüne dayanmaktadır. Çekim modellerinin uluslararası iktisatta kullanılabileceğini ilk kez ortaya koyan Tinbergen (1962)'den sonra Poyhonen (1963), Linneman (1966) ve Anderson (1979) gibi yazarlar çekim modellerinin ekonometrik olarak ele alınmasında öncü olmuşlardır. İkili DYS akımları verilerinin sınırlı olması nedeniyle çekim modellerinin DSY yatırımlarının belirleyicilerini inceleyen çalışmalarda kullanılması gecikmeli olmuştur. Özellikle 2000'li yıllardan sonra Çekim modellerinin yaygın olarak kullanıldığı görülmektedir (örn. Milner vd., 2004; Portes ve Rey, 2005; Folfas, 2011).

DYS akımları bakımından çekim modeli şu şekilde ifade edilebilmektedir:

$$DYS_{ij} = \frac{CY_i^\alpha Y_j^\beta}{D_{ij}^\theta} \qquad\qquad (3)$$

Burada, $DYS_{ij}$, $i$ ülkesinden $j$ ülkesine DYS akımını ya da her iki yönlü toplam DYS akımını ($DYS_{ij}+DYS_{ji}$); $Y$, ekonomik büyüklüğü (GSYH, nüfus, işgücü, yüz ölçümü vb.) ve $D$ *ise* ülkeler arasındaki mesafeyi göstermektedir. Ülkeler arasında işlem maliyetlerini artıran $D$ nin belirleyicileri ise, mesafe, konuşulan genel dil, tarihi bağlar-sosyoekonomik ilişkiler, coğrafi yapı (tek ada ya da sınır ülkeleri), kurumlar, belirsizlik, altyapı, bölgesel entegrasyonlar, karşılıklı ticaret ya da yatırım anlaşmaları ile tarife ve vergiler gibi DYS akımlarını etkilemesi beklenen faktörlerdir. $C$ çekim sabiti iken; $\alpha$, $\beta$ ve $\theta$ ise sırasıyla $Y_i$, $Y_j$ ve $D_{ij}$ deki değişmelere ilişkin $DYS_{ij}$ nin esneklik katsayılarıdır. $D$ ile ifade edilen faktörlerin olmaması durumunda DYS yatırımları önündeki engeller ve dolayısıyla çekim sıfır olacak ve Lucas paradoksu ortadan kalkarak tek fiyat kanunu işleyecektir. Yani yatırımların tek belirleyicisi sermayenin marjinal getirisi olacaktır. Belirtilen engellerin DYS yatırımlarını tamamen durdurması ise ülkelerin dış kaynak kullanımını ortadan kaldırarak ülkeleri, sadece iç kaynaklarıyla büyümelerini finanse etmek durumunda oldukları otarşik bir yapıya götürecektir.

Çekim modelleri ikili akımlarda kullanılan bir yöntemdir (ITC, 2003). İkili FDI akımları çoğunlukla OECD (2014b) ülkeleri için mevcuttur. Buna karşılık çalışmada incelenen Balkan ülkeleri için ikili akım verilerinde partner olarak AB-15 ülkesi ile ABD ve Japonya olmak üzere 17 ülke alınmıştır.

Çalışmada tahmin edilen çekim modeli, tüm değişkenler doğal logaritmik formda olmak üzere şu biçimde oluşturulmuştur:

$$\ln DYSY_{ijt} = \alpha + \beta_1 \ln \c{C}BRFSS_{it} + \beta_2 \ln KBBSE_{it} + \beta_3 \ln A\c{C}IKLIK_{it} + \beta_4 \ln AR-GE_{it}$$
$$+ \beta_5 \ln P\dot{I}YB\ddot{U}Y_{it} + \beta_6 \ln FF\dot{I}Y_{it} + \beta_7 \ln R\dot{I}SK_{it} + \beta_8 \ln F\dot{I}YSEV_{it} + \beta_9 TENKOR_{it}$$
$$+ \beta_{10} \ln YI\u{G}DI\c{S}_{it} + \beta_{11} \ln K\ddot{U}RENT_{ijt} + \beta_{12} \ln ALTYP_{it} + \beta_{13} \ln K\ddot{U}LTR_{it} + \beta_{14} \ln MESAFE_i \qquad (4)$$
$$+ \beta_{15} \ln DKZENG_{it} + \beta_{16} \ln \dot{I}\c{S}G_{it} + \beta_{17} \ln DK_{it} + \beta_{18} \ln \c{C}\dot{I}NET_{it} + \delta Z_{ijt} + c_{ij} + u_{ijt}$$

Burada $i$ *(1, 2,...,9)*, $j$ *(1, 2,..., 17) ve* $t$ (2000, 2001,...,2012) alt simgeleri sırasıyla DYS yatırımları çeken ülkeyi (*host*), gönderen ülkeyi (*home*) ve zamanı (yıl) göstermektedir. $Z$, DYS yatırımlarının yer seçimini belirleyen diğer değişkenler vektörünü, $c$ ülkelerin konumuna ilişkin özel etkileri ve $u$ ise hata terimini simgelemektedir. Daha önce yapılan çalışmalardan yola çıkarak değişkenlere ilişkin beklentiler şu şekildedir: Fiziki sermaye stoku arttıkça FDI girişi de artıyorsa Lucas paradoksunun geçerli olduğu aksi takdirde ise paradoksun olmadığı sonucuna ulaşılacaktır. Yine beşeri sermaye endeksinin yükselmesi durumunda yatırımların artması beklenmektedir. Açıklık ile DYS yatırımları arasında pozitif yönlü bir ilişki beklenmektedir. AR-GE harcamalarının GSYH içindeki payı arttıkça beşeri sermayenin de artacağından hareketle pozitif bir ilişki, piyasa hacmi ile DYS yatırımları arasında yine pozitif bir ilişki beklenmektedir. Ayrıca altyapı gelişmeleri ve işgücü miktarı ile pozitif ilişki beklenmektedir. ABD, Japonya ve Almanya ile kültürel (ortak dil ve ortak para birimi) benzerliklerin olması da (kukla değişkenler) olumlu etkileyecektir. Bu üç ülkeye olan ortalama (2000-2010 dönemi DYS yatırım miktarlarına göre ağırlık andırılmış) uzaklığın olumsuz etkiler geliştirmesi beklense de ele alınan ülkeler için yakın mesafe değerleri olacağından bu ilişki anlamsız da olabilecektir. Benzer şekilde döviz kurunun etkileri de belirsiz olmaktadır. Bu kapsamda teorik beklentiler ve sezgisel öngörüler gereği $\beta_1, \beta_2, \beta_3, \beta_4,$ $\beta_5, \beta_{10}, \beta_{11}, \beta_{12}, \beta_{13}, \beta_{15}, \beta_{16}$ katsayılarının pozitif işaretli olması beklenmektedir.

Faktör fiyatlarının DYS yatırımlarını negatif etkilemesi beklenmektedir. Politik istikrarı da gösteren ülke riski arttıkça yatırımların azalması beklenmektedir. Temel makroekonomik istikrar göstergesinden olan enflasyon DYS yatırımlarını olumsuz etkilemektedir. Ticaret engelleri de yine olumsuz etkiler ortaya çıkaracaktır. Çin'in bir polar bölgesi olmasının diğer ülkelere gelen yatırımları olumsuz etkilemesi beklenmektedir. Bu kapsamda $\beta_6,$ $\beta_7, \beta_8, \beta_9, \beta_{14}, \beta_{18}$ parametre katsayıları negatif işaretli beklenirken $\beta_{17}$ nin işareti belirsizdir.

Çalışmada panel veriler kullanıldığından, genel tahmin süreci sabit ve rastsal etki yaklaşımına işaret etmektedir. Ancak modelde zamanla değişmeyen değişkenler bulunduğundan sabit etkiler yaklaşımın kullanımı uygun olmamaktadır. Bu durumda rastsal etkiler yaklaşımı kullanılabilir olsa da bu yaklaşım bireysel etkiler ve

bağımsız değişkenler arasında sıfır korelasyon olmasını gerektirmektedir. Ancak modelde yer alan değişkenler için bu koşulun sağlanmadığı belirlenmiştir. Bu nedenle rastsal etkiler yaklaşımının kullanımı da uygun değildir. Bunun yanında Hausman ve Taylor (1981) tahmin yöntemi (H-T) bahsedilen bu durumda da kullanılabilen bir yöntemdir. H-T yöntemi, hem zamanla değişen hem de değişmeyen değişkenlerin olması durumunda kullanılabilmektedir. Ayrıca bu değişkenlerin bireysel etkilerle korelasyonu olsa bile hata terimine göre halen dışsal olmaktadırlar (Hisao, 2003; Folfas, 2011).

### 4.3 Ampirik Bulgular: Çekim Modeli Tahmin Sonuçları

Çalışmada Hausman ve Taylor (1981) yöntemiyle ve panel veriler kullanılarak tahmin edilen çekim modeli sonuçları aşağıda tabloda özetlenmiştir.

| Değişken | Katsayı | p | Değişken | Katsayı | p |
|---|---|---|---|---|---|
| 1) ÇBRFSS | 0,017 | 0,030** | 10) YIĞDIŞ | 0,260 | 0,020** |
| 2) KBBSE | 0,169 | 0,015** | 11) KÜRENT | 0,055 | 0,046** |

*Tablo 3: DYS Yatırımlarının Belirleyicileri: Çekim Modeli Tahmin Sonuçları Özeti*

## 5 Sonuç ve Değerlendirmeler

Bu çalışmada küresel DYS yatırımlarının yer seçimi, Lucas paradoksu kapsamında incelenmiş ve dokuz Balkan ülkesi için AB-15 ile ABD ve Japonya'dan oluşan 17 ülke ile ikili sermaye akımlarının temel belirleyicileri, çok sayıda coğrafi, kurumsal, ekonomik ve politik değişkenler ile analiz edilmiştir. Böylece çok sayıda değişkene ilişkin güncel verilerle Lucas paradoksu Balkan ülkeleri kapsamında yeniden incelenmiştir. 1996-2012 dönem aralığında farklı kaynaklardan elde edilen yıllık panel verilere ilişkin parametre katsayıları kurulan çekim modeli ile tahmin edilmiştir. Elde edilen sonuçları şu şekilde özetlemek mümkündür: i) Kişi başına reel fiziki sermaye stoku ile DYS girişi arasında pozitif ve anlamlı bir ilişki bulunmuştur. Bu değişken sermaye stokunu temsilen kullanıldığından ele alınan ülkeler açısından Lucas paradoksunu destekler bulgulara işaret etmektedir. Ayrıca beşeri sermaye stoku da pozitif ve anlamlı olarak tahmin edilmiştir. Böylece Lucas'ın paradoksu ve ilk açıklamasının çalışmada desteklendiği görülmektedir. ii) Açıklık ve AR-GE harcamaları da net DYS girişlerinin temel belirleyicileri arasındadır. iii) Ülke riskinin ve ticaret engelleri ile korumacılık değişkenlerine ilişkin negatif ve anlamlı katsayılar elde edilmiştir. iv) Ele alınan ülkeler için daha önceki mevcut olan yatırım stokunun yeni yapılan yatırımları etkilediği görülmektedir. v) Altyapı gelişmeleri bu ülkelere gelen DYS yatırımlarını çekme konusunda pozitif katkı sağlamaktadır. vi) Dikkat çeken bir sonuç bu ülkeler için işgücünün yatırımları anlamlı bir biçimde negatif etkilemesidir. Dolayısıyla DYS yatırımları işgücü miktarından çok kalifiye seviyesini dikkate almaktadır. Bu da bir bakıma Türkiye'nin geniş bir işgücüne sahip olmasına rağmen yatırımları yeterince çekememesi ile uyumlu olmaktadır. vii) Dikkat çeken bir bulgu Çin'in küresel DYS yatırımlarından aldığı payı artırmasının Balkan ülkelerine gelen yatırımları olumsuz etkilediğidir. Yani, Çin'in DYS yatırımlarını çekme konusunda ele alınan Balkan ülkelerini daha rekabetçi olmaya zorladığı görülmektedir. viii) Yine AB üyelik sürecindeki gelişmelerin DYS yatırımlarını anlamlı bir biçimde uyardığı görülmektedir. Bu kapsamda Türkiye'nin AB üyelik sürecinde gelişmeler göstermesi ve nihai olarak üye olması küresel DYS yatırımlarından aldığı payı artıracaktır. ix) Mevcut literatürde farklı ülkeleri inceleyen daha önceki çalışmalarda DYS girişlerini etkilediği belirlenen piyasa hacmi, emek maliyeti, fiyat seviyesi, doğal kaynak zenginliği ve döviz kuru gibi faktörlerin ele alınan Balkan ülkeleri için net DYS yatırımları girişini anlamlı bir biçimde etkilemediği sonucuna ulaşılmıştır. DYS yatırımlarının yer seçimini etkiyen çok sayıda faktör olmakla birlikte bu faktörlerin etkileri yatırımların hangi ülkeye geldiği kadar hangi sektörlere geldiğiyle de doğrudan ilişkidir. Örneğin ilksel sektörlere gelen DYS yatırımlarının çok sayıda makroekonomik göstergelere, gelişim trendlerine ya da kurumsal yapılara tepkileri diğer sektörlere gelen DYS yatırımlarından daha az olabilmektedir. Bu nedenle, her ne kadar çalışmada incelenen bazı ülkeler için veri mevcut olmasa da bu faktörlerin sektörel etkilerinin ayrıntılı ve karşılaştırmalı olarak sunulması daha net sonuçlar ve dolayısıyla daha belirgin politik öneriler ortaya koyabilecektir.

# Enflasyon ile İşsizlik Arasındaki Nedensellik İlişkisinin Test Edilmesi: Panel Eşbütünleşme ve Nedensellik Analizi

# The Causal Relationship between Inflation and Unemployment: A Panel Cointegration and Causality Analysis

Ekrem Gül (Sakarya University, Turkey)

Ahmet Kamacı (Artvin Çoruh University, Turkey)

Serkan Konya (Artvin Çoruh University, Turkey)

## Abstract

Central Asian Republics have been facing high unemployment rates and inflation problems since they established. This work is based on the Phillips curve, which deals the opposite relationship between inflation and unemployment. In the article, unemployment rates and Consumer Price Index (CPI) are used. Within this work, the relationship between inflation and unemployment is examined by the panel data analysis for Azerbaijan, Kazakhstan, Kyrgyzstan, Macedonia and Turkey (1996-2012).We acquired the data of this work from the web site of the IMF. Panel Unit Root Tests are used in order to test stagnation of the data. Afterwards Cointegration Test and Panel Causality Test are used. After that panel cointegration and panel causality tests were made to learn if a cointegral relationship was occurred between inflation and unemployment rate or not. As a result of this study we done, the data level is not stable. Because of that reason, we took the difference of them. There is a one-sided causal relation from inflation to unemployment rates in Turkey and other countries.

## 1 Giriş

Enflasyon ve işsizlik, gelişmiş, gelişmekte olan ve az gelişmiş ülkelerin hemen hemen hepsi için en önemli ekonomik sorunların başında gelmektedir. Bu sorunları yaşayıp kurtulmak isteyen her ülke farklı politikalar uygulamaktadır. Ancak bu iki sorundan aynı anda kurtulmak, enflasyonla işsizlik arasındaki ters yönlü ilişkiden dolayı mümkün olmamaktadır. Genel olarak enflasyonla işsizlik arasındaki bu ilişki Phillips eğrisi ile analiz edilmektedir ve yüksek enflasyonun düşük işsizliğe, düşük enflasyon oranının ise yüksek işsizliğe yol açtığını göstermektedir.

Fiyat değişmeleri ile işsizlik ve üretim düzeyi arasındaki ilişkiler uzun yıllardır tartışılmaktadır. Nitekim Hume, Thornton ve Mill'in bu konuda çalışmaları olmuştur, fakat teorik açıklamalardan öte gidememişlerdir. 1926'da I. Fisher "A Statistical Relationship Between Unemployment and Prices Changes" adlı makalesinde fiyat değişmeleri ile işsizlik arasındaki ilişkiyi istatistiksel olarak ele almıştır. Daha sonra Tinbergen 1936'da, işsizlikten ücret enflasyonuna doğru bir nedensellik tespit etmiştir ki, bu çalışma bu konudaki ilk ekonometrik çalışmadır. Daha sonra A.J. Brown, işsizlik ve ücret enflasyonu arasındaki çalışmasında ilk istatistiki dağılım diyagramını çizmiş ve 1957'de de Paul Sultan'ın yapmış olduğu çalışmada fiyat düzeyindeki yıllık değişme ile işsizlik oranı arasındaki değiş-tokuş ilişkisi bir eğri yardımıyla belirlenmiştir. Ancak işsizlik ile enflasyon arasındaki ilişki Phillips ile özdeşleşmiştir (Büyükakın, 2008:134-136).

Alban William Phillips 1958'de yayınlanan "The Relation between Unemployment and The Rate of Change of Money Wage Rates in The United Kingdom: 1861-1957" adlı makalesinde 3 alt döneme ayırarak (1861-1913, 1913-1948 ve 1948-1961) işsizlik oranı ile parasal ücretlerdeki değişme oranı arasında, doğrusal olmayan, ters yönlü ve istikrarlı bir ilişki bulmuştur. Makalenin en ilgi çekici yanı, parasal ücretlerdeki değişme ile işsizlik arasında 96 yıllık bir istikrarın bulunmasıdır. Daha sonra Lipsey, Phillips'in çalışmasını aynı yılları alarak tekrar etmiş ve Phillips ile aynı bulgulara ulaşarak Phillips eğrisinin teorik temelini oluşturmuştur.

Samuelson ve Solow, Phillips eğrisini, enflasyon oranı ile işsizlik oranındaki ilişkiyi gösteren bir grafiğe dönüştürmüştür. Samuelson ve Solow, işsizlik oranının %3'e düştüğünde, fiyat artış oranının %4,5'a çıktığını göstermiştir. Böylece, yüksek istihdam ve üretimin maliyeti, daha yüksek fiyat artışı olmaktadır. Bu yüzden, enflasyonla işsizlik arasındaki kısa dönemde var olan ilişkinin uzun dönemde devam edemeyeceğini ifade etmişlerdir. Çünkü fiyat istikrarını korumak için gerekli olan işsizlik oranı daha düşük ya da daha yüksek olabilmektedir (Samuelson ve Solow, 1960:192-193).

1970'lerde ortaya çıkan stagflasyon süreci ile Phillips eğrisinin istikrarlılığı tartışılmaya başlanmıştır. Bu çerçevede oluşturulan teorileri 3 aşamada ele alabiliriz. İlk olarak, Friedman (Monetarist) ve Phelps (Keynesyen) Phillips eğrisinde kısa ve uzun dönem ayrımına gitmiş, enflasyon ve işsizlik arasında kalıcı (uzun dönemli) bir ilişki olmadığını ve uzun dönemde işsizliğin denge oranına dönme eğiliminde olduğunu iddia etmişlerdir (Akkuş, 2012:116). Phillips eğrisine (Orijinal PE) karşı getirilen bu görüş, Adaptif Beklentiler ilave edilmiş Phillips eğrisi veya "Beklentilerle Geliştirilmiş Phillips Eğrisi" ya da "Uyarlayıcı Beklentiler Hipotezi" olarak anılmıştır. Friedman ve Phelps analizlerine enflasyonist beklentileri de dâhil etmiştir. Beklenen enflasyon

oranındaki değişmelerle, kısa dönem Phillips eğrisi parametrik biçimde kaymaktadır. Friedman ve Phelps, Phillips eğrisinde enflasyonla işsizlik arasında kısa dönemli ilişkinin geçerli olduğunu, ancak uzun dönemde bu ilişkinin geçerli olmadığını göstermişlerdir.

Friedman, Wicksell'in doğal faiz oranına paralel olarak, analizine doğal işsizlik oranı kavramını dâhil etmiştir. Friedman'a göre, bu oran sayısal bir sabit değildir, ama emek piyasasının etkinliği, rekabet ve tekelin kapsamı, farklı mesleklerde çalışmanın engelleri veya teşvikleri gibi reel faktörlere bağlıdır (Friedman, 1976:7). Friedman ve Phelps'e göre, hükümetler, işsizliği doğal oranın altına düşürmek isterlerse gerçekleşen enflasyon oranının beklenen enflasyon oranını aşması gerekir. Dolayısıyla, hükümetlerin bu amaca ulaşmak için para arzını fiili enflasyonun beklenen enflasyonu geçmesiyle sonuçlanacak ölçüde yükseltmesi gerekir. Piyasa işsizlik oranı, doğal orandan daha düşük olduğundan, emeğe yönelik bir talep fazlası olacak, bu da reel ücretlerin başlangıç düzeyine doğru yükselme eğilimine girmesine yol açacaktır. Genişletici politikanın talepte meydana getirdiği artış, firmaları üretimi arttırmaya teşvik edecek ve işçilere daha yüksek ücret ödemeyi kabul edeceklerdir. Bu da ücretleri arttıracağından ücreti yeterli bulmadığı için çalışmayan doğal işsizleri çalışmaya teşvik edecektir (Büyükakın, 2008:145-146 ve Akkuş, 2012:119). Phelps ise, adaptif beklentiler çerçevesinde, Phillips eğrisi ve doğal işsizlik oranı kavramlarını istihdamın zaman içindeki seyri ile ele almıştır. Phelps, aşırı ve eksik istihdam durumunda, adaptif beklentiler mekanizması aracılığıyla, beklenen enflasyon oranının cari enflasyon oranına uyum sağladığını göstermektedir (Phelps, 1967:262-263).

İkinci olarak Lucas'ın Rasyonel Beklentiler İlave edilmiş Phillips eğrisini ele alalım. Lucas, Friedman ve Phelps tarafından ortaya atılan adaptif beklentileri ve doğal işsizlik oranı hipotezini, rasyonel beklentiler varsayımıyla analiz etmiştir. Lucas kurduğu modelde, adaptif beklentiler yerine Muth'un rasyonel beklentiler hipotezinden yararlanmıştır.

Lucas'ın 1972'de yayınlanan "Beklentiler ve Paranın Yansızlığı" adlı makalesinde, kendi yaklaşımıyla Friedman ve Phelps'in yaklaşımları arasında önemli benzerlikler bulmaktadır. Lucas, özellikle Phelps'in yaklaşımında Phillips eğrilerinin Neoklasik bir çerçevede elde edilerek yeni bir enflasyon ve istihdam teorisi öngörüldüğüne vurgu yapmaktadır. Ancak yaklaşımın, Neoklasik bakış açısından tek farkı, tüm işlemlerin tam bilgi altında yapıldığı varsayımının kaldırılmasıdır (Lucas, 1972:104). Çünkü bireyler hata yapabilir ve daha sonra bu hataları düzeltebilirler.

Son olarak ise, Yeni Keynesyen Phillips eğrisini ele alalım. Yeni Keynesyenler, Phillips eğrisine NAIRU ve histeri hipotezi gibi kavramları da dâhil etmiştir. Yeni Keynesyenler tarafından enflasyonu hızlandırmayan işsizlik oranı olarak tanımlanan NAIRU bir ekonomide cari işsizlik oranından yüksekse, enflasyon oranı yükselme eğilimindedir. Tersine eğer NAIRU cari işsizlik oranından düşükse, enflasyon oranı düşme eğilimindedir (Espinosa-Vega ve Russell, 1997:4).

İşsizlik ve enflasyon arasındaki ilişki uzun yıllardır tartışılmaktadır. Günümüzde yapılan çalışmalarda dahi, birçok farklı sonuçlara rastlanmaktadır. Bu nedenle bu çalışmada, Azerbaycan, Kazakistan, Kırgızistan, Makedonya ve Türkiye için 1996-2012 yılları arasında işsizlik ve enflasyon ilişkisi panel veri analizi ile test edilmiştir.

## 2 Literatür Özeti

İşsizlik ve enflasyon arasındaki ilişkiyi ele alan Phillips eğrisi, yüksek enflasyonun düşük işsizliğe, düşük enflasyonun ise yüksek işsizliğe yol açacağını göstermektedir. Kısacası, işsizlik sorunundan kurtulmak isteyen bir ülke enflasyon sorunu ile karşılaşacaktır. Söz konusu ampirik çalışmaların birçoğu bu teoriyi doğrularken, bazıları da, pozitif yönlü veya anlamsız bir ilişki bulmuşlardır. Genel olarak literatür değerlendirildiğinde, işsizlik ve enflasyon arasında, çalışmada ele alınan ülke, dönem ve yöntem bakımından farklılıklar vardır.

Bu çalışmada, Türkiye ile 4 ülke (Azerbaycan, Kazakistan, Kırgızistan ve Makedonya) için işsizlik ile enflasyon arasındaki ilişki incelenecektir. Bu ülkelerin ortak özelliği, yıllarca yüksek enflasyon ve işsizlik sorunu ile mücadele etmeleridir. Bu açıdan çalışmaya temel teşkil edecek literatür araştırması da, konuyu daha çok Türkiye ile gelişmiş ve gelişmekte olan ülkeler özelinde ele alan çalışmalardan oluşturulmuştur (Tablo 1).

Tablo 1'de verilen literatür özetinden açıkça anlaşılacağı üzere çalışmaların büyük bir kısmı işsizlikle enflasyon arasındaki ters yönlü ilişkiyi vererek Phillips eğrisini doğrular nitelikte sonuçlar vermektedir. Bununla birlikte bazı çalışmalarda iki değişken arasında pozitif yönlü ve anlamsız ilişkiler de tespit edilmiştir.

## 3 Ekonometrik Yöntem ve Ampirik Bulgular

Bu çalışmada işsizlik oranı (UNEM) ile enflasyon (TUFE) ilişkileri, Türkiye ile 4 ülke (Azerbaycan, Kazakistan, Kırgızistan ve Makedonya) için Eşbütünleşme ve nedensellik analizleri kullanılarak irdelenecektir. Bu çerçevede söz konusu ülkelerin 1996-2012 arası dönemlere ait verileri, IMF'nin "imf.statistics" isimli veri tabanından alınmıştır. Çalışmaya bu 5 ülkeye ait verilerden hareketle değişkenler arası uzun dönem ilişkileri veren Eşbütünleşme testi ve daha sonra da Granger nedensellik testleri yapılmıştır.

| Yazar (lar) | Ülke (ler) | Yöntem | Değişkenler | Sonuç |
|---|---|---|---|---|
| Tajra (1999) | Brezilya (1994-1999) | Regresyon analizi | İşsizlik oranı ve enflasyon oranı | İşsizlik ve enflasyon oranları arasında ters yönlü bir ilişki tespit etmişlerdir. |
| Vredin ve Warne (2000) | İsveç, İngiltere ve Amerika (1959-1998) | VAR modeli | İşsizlik oranı ve enflasyon oranı | İşsizlikle enflasyon arasında kısa dönemli ilişki bulunmuştur. |
| Eliasson (2001) | Avustralya, İsveç ve Amerika (1977:Q1-1997:Q4) | Regresyon analizi | İşsizlik oranı ve enflasyon oranı | Avustralya ve İsveç'te doğrusal olmayan bir Phillips eğrisi tespit edilmişken, Amerika'da doğrusal bir Phillips eğrisi tespit edilmiştir. |
| Ewing ve Seyfried (2003) | ABD (1954:Q3-1999:Q2) | GARCH modeli | Enflasyon oranı ve çıktı açığı | Kısa dönem Phillips eğrisinin varlığı ispatlanmıştır ve sonuçlar yapışkan fiyatlar dâhil birçok Keynesyen modele uyumludur. |
| Uysal ve Erdoğan (2003) | Türkiye (1980-2002) | Regresyon analizi ve nedensellik testi | İşsizlik oranı ve fiyat düzeyi | 1980-1990 arasında iki değişken arasında pozitif yönlü bir ilişki varken; 1990-2002 arasında iki değişken arasında negatif yönlü bir ilişki tespit edilmiştir. |
| Bhattarai (2004) | İngiltere, İtalya, Norveç, Hollanda, Yeni Zelanda ve Amerika (1970-2002) | Panel veri analizi | İşsizlik oranı ve enflasyon oranı | İşsizlik ve enflasyon oranı arasında Phillips hipotezinin kısmi olarak geçerli olduğunu tespit edilmiştir. |
| Kuştepeli (2005) | Türkiye (1980-2003) | Regresyon analizi | İşsizlik oranı ve enflasyon oranı | Phillips eğrisi hipotezi reddedilmiştir. Enflasyon beklentileri için, enflasyon oranı işsizlikten daha önemli bir göstergedir. |
| Önder (2006) | Türkiye (1987-2004) | Hodrick-Prescott ve Çoklu Yapısal Kırılma Modelleri | Tüketici fiyat indeksi ve işsizlik oranı | Türkiye'de bu dönemlerde Phillips eğrisi doğrusal değildir. Phillips eğrisi hipotezi reddedilmiştir. |
| Çatık ve diğ. (2008) | Türkiye (1996-2007) | ARDL modeli | Enflasyon oranı ve çıktı açığı | Belirtilen dönemlerde Philips eğrisinin Türkiye için geçerli olmadığı sonucuna varılmıştır. |
| Hepsağ (2009) | Türkiye (2000:1-2007:3) | Sınır testi | İşsizlik oranı ve enflasyon oranı | Kısa dönemde bir ilişki yokken, uzun dönemde iki değişken arasında bir değiş-tokuş ilişkisinin bulunduğunu tespit etmiştir. |
| Lim ve diğ. (2009) | Avustralya (1960:Q1-2008:Q4) | Zaman serisi | Ücret enflasyonu ve işsizlik oranı | Dengeli işsizlik oranlarından sapmaların enflasyonist baskı doğuracağını tespit etmiştir. |
| Herman (2010) | Romanya (1990-2009) | Korelasyon | İşsizlik oranı ve enflasyon oranı | Romanya'da, ele alınan dönemlerde, işsizlik ve enflasyon arasında istatistiksel olarak anlamlı bir ilişki tespit edilememiştir. |
| Altay ve diğ. (2011) | G8 ülkeleri (2000:1-2009:4) | Eşbütünleşme ve nedensellik testi | İşsizlik oranı ve enflasyon oranı | Enflasyon ile işsizlik oranı arasında eşbütünleşme ilişkisinin bulunduğunu ve kısa dönemde nedenselliğin yönünün enflasyondan işsizliğe, uzun dönemde ise işsizlikten enflasyona doğru olduğu sonucuna varılmıştır. |
| Arabacı ve Eryiğit (2012) | Türkiye (1991:Q1-2010:Q4) | Regresyon analizi | İşsizlik oranı ve enflasyon oranı | Türkiye için Phillips eğrisi modeli kabul edilmiştir ve ek olarak, reel ekonomik aktivite ve enflasyon arasında istikrarlı bir doğrusal dışı ilişki tespit edilmiştir. |
| Bayrak ve Kanca (2013) | Türkiye (1970-2010) | Eşbütünleşme testi | İşsizlik oranı ve enflasyon oranı | Türkiye'de uzun dönemde Phillips eğrisi geçerli değilken, kısa dönemde enflasyon ile işsizlik arasında bir trade-off'un var olduğu tespit edilmiştir. |
| Kitov ve Kitov (2013) | Japonya (1980-2012) | Regresyon analizi | GSYİH deflatörü ve işsizlik oranı | 2050'ye kadar GSYİH deflatörü negatif olursa (-0,5 ile -2 arasında) 2012-2050 arasında işsizlik oranındaki artış az olacağını (4,3-5,5 arası) tespit etmişlerdir. |

**Tablo 1:** *İşsizlik ve Enflasyon İlişkisi Üzerine Literatür Özeti*

Türkiye ile birlikte diğer 4 ülkenin işsizlik oranı ile enflasyon ilişkilerinin Eşbütünleşme ve nedensellik analizleri ile belirlenmesinden önce değişkenlerin durağanlığını belirlemek ve durağanlık içerip içermediğini tespit etmek amacıyla Im, Pesaran, Shin (IPS), Augmented Dickey-Fuller (ADF) ve Phillips-Perron (PP) testleri yapılmıştır. Verilerin durağanlığını göstermek için Tablo 2'de sabitli yapıda durağanlık sonuçları yer almaktadır.

***Tablo 2:*** *Birim Kök Testi Sonuçları*

Tablo 2'de maksimum optimal gecikme uzunluğu 1 olarak seçilmiştir. Olasılıklar, asimptotik normallik varsayımı altında hesaplanmıştır. Veri setinde söz konusu yıllara ait veriler tam olduğundan "Balanced Örnekleme" seçilmiştir. Tablo 2'deki bulgulara göre, işsizlik oranı ve enflasyon verileri 1. Farkında durağan hale gelmiştir, ancak işsizlik oranı LLC testinde durağan olmamıştır. Seriler durağan hale geldikten sonra Pedroni Eşbütünleşme testi yapılmıştır.

Değişkenler arası uzun dönemli ilişkinin varlığı Pedroni Eşbütünleşme testi ile ölçülmektedir. Pedroni Eşbütünleşme testi sonuçları Tablo 3'de verilmiştir.

***Tablo 3:*** *Pedroni Eşbütünleşme Testi Sonuçları*

Tablo 3'de işsizlik oranı ile enflasyon arasında Eşbütünleşme ilişkisi test edilmiştir. Pedroni Eşbütünleşme Test sonuçlarına göre, 7 testten 5'i %1 anlamlılık düzeyinde anlamlı ve 1 tanesi de %10 anlamlılık düzeyinde anlamlı olduğu görülmektedir. Dolayısıyla seriler arasında uzun dönemli bir ilişki olduğu ve eşbütünleşik olduğu tespit edilmiştir.

Eşbütünleşme testinden sonra değişkenler arası ilişkinin olup olmadığını test etmek için ve eğer varsa bu ilişkinin yönünü belirlemek için Granger nedensellik testi uygulanır. Granger nedensellik testi değişkenler arasında ilişkinin olup olmadığını test etmek ve ilişki varsa bu ilişkinin yönünü belirlemek için kullanılır. Granger tarafından kurulan basit nedensellik modeli şöyledir:

$$Y_t = \sum_{j=1}^{m} C_i X_{t-j} + \sum_{j=1}^{m} d_j Y_{t-j} + \eta_t \qquad (1)$$

Modele göre, X değişkeni Y değişkeninin nedeniyse, X'teki değişmeler Y'deki değişmelerden önce gelmektedir. Granger testiyle tahminden ziyade nedensellik çıkarsaması yapıldığı için değişkenler önceden durağanlaştırılmalıdır (Granger, 1969:431).

Granger nedenselliğinin geliştirilmiş hali Holtz-Eakin, Newey ve Rosen modelidir. Holtz-Eakin ve diğ. (1988) tarafından geliştirilen panel nedensellik modeli en küçük kareler yöntemine dayanır. Holtz-Eakin ve diğ., sabit etkilerden arındırmak için değişkenlerin farkını alarak Granger anlamında nedensellik testi için uyarlanmış ve değişkenlerin fark ya da seviyelerini içeren enstrüman değişken seti kullanılmasını önermiştir (Öztürk ve diğ., 2011:63).

Holtz-Eakin ve diğ. (1988) modeli aşağıdaki şekilde tanımlanmaktadır (Holtz-Eakin ve diğ., 1988:1373):

$$y_{it} = \propto_{0t} + \sum_{l=1}^{m} \alpha_{lt} y_{it-l} + \sum_{l=1}^{m} \delta_{lt} x_{it-l} + \psi_t \mathfrak{f}_i + u_{it} \qquad (2)$$

Denklemde $f_i$ sabit etkileri, $u_{it}$ hata terimlerini göstermektedir. Bu tanımlamada hata terimi $u_{it}$ hata, denklemdeki $y_{it}$ ile korelasyonludur. Farkı alınmış model aşağıdaki şekilde gösterilmektedir (Holtz-Eakin ve diğ., 1988:1373):

$$y_{it} - y_{it-1} = a_t + \sum_{l=1}^{m} \alpha_t(y_{it-l} - y_{it-l-1}) + \sum_{l=1}^{m} \delta_l(x_{it-l} + x_{it-l}) + v_{it} \qquad (3)$$

Denklemden görüldüğü üzere, hata terimleri ile bağımlı değişken arasında ilgileşim sorunu vardır. Bu nedenle Holtz-Eakin ve diğ. tarafından önerilen panel nedensellik sınaması iki aşamalı EKK yöntemine dayanmaktadır (Ağayev, 2010:173). Nedensellik ilişkisi için test edilmesi gereken hipotez:

$H_0 : \alpha_1 = \alpha_2 =, \ldots , = \alpha_m = 0$

$H_0$ hipotezinin reddedilmesi durumunda değişkenler arasında Granger nedensellik ilişkisi tespit edilmektedir (Öztürk ve diğ., 2011:64).

|  | Gecikme | Gözlem Sayısı | F-istatistiği | Olasılık |
|---|---|---|---|---|
| İşsizlik oranı → Enflasyon | 2 | 56 | 2.83722 | 0.0679 |
| Enflasyon → İşsizlik oranı | 2 | 56 | 3.29708 | 0.0450 |

*Tablo 4: Panel Nedensellik Testi Sonuçları*

Tablo 4'de yapılan Panel Granger nedensellik testi sonuçlarına göre, % 5 anlamlılık düzeyinde, enflasyondan işsizliğe doğru nedensel ilişki varken; işsizlikten enflasyona doğru bir nedensel ilişki tespit edilememiştir. Ancak %10 anlamlılık düzeyinde çift yönlü bir nedensel ilişki vardır.

Yapılan Panel Granger nedensellik analizi sonucuna göre; işsizlik oranı ile enflasyon arasında enflasyondan işsizliğe doğru nedensel bir ilişkinin, kısa dönemde bir etkisinin olmamasına karşın, uzun dönemde enflasyonun işsizlik üzerinde etkisi olduğu tespit edilmiştir. Ancak uzun dönemde oluşan bu ilişki, işsizlikteki değişimin enflasyon üzerinde herhangi bir etki oluşturmadığı tespit edilmiştir.

## 4   Sonuç ve Değerlendirme

İşsizlik-enflasyon ilişkisi Phillips eğrisi ile özdeşleşmiştir. Phillips, işsizlik oranı ile parasal ücretler arasında ters yönlü bir ilişki olduğunu göstermiştir. Daha sonra Samuelson ve Solow, enflasyon oranı ile işsizlik oranı arasındaki ilişkiyi inceleyerek Phillips eğrisini grafik ile göstermiştir. Samuelson ve Solow'a göre, işsizlik oranı düştüğünde fiyatlarda bir artış olacaktır.

1970'lerde ortaya çıkan stagflasyon süreciyle Phillips eğrisi çerçevesinde 3 teori oluşturulmuştur. Bu eksende oluşturulan ilk teori, Friedman ve Phelps tarafından geliştirilen adaptif (uyarlayıcı) beklentiler hipotezidir. Bu teori, enflasyonla işsizlik arasındaki kısa dönemli ilişkiyi kabul ederken, uzun dönemde bu ilişkinin geçerli olmayacağı yönündedir. İkinci teori ise, Lucas tarafından geliştirilen rasyonel beklentiler çerçevesinde oluşturulmuş Phillips eğrisidir. Bu teori de, bireylerin hata yapabileceklerini ve daha sonra bu hatayı düzeltebilecekleri varsayımıyla oluşturulan enflasyon ve istihdam teorisidir. Üçüncü ve son teori ise, Yeni Keynesyenler tarafından oluşturulan Yeni Keynesyen Phillips eğrisi ve NAIRU hipotezidir. Enflasyonu hızlandırmayan işsizlik olarak adlandırılan NAIRU, cari işsizlik oranından düşükse, enflasyonun düşme eğiliminde olduğunu göstermektedir.

İşsizlik ve enflasyon arasındaki ilişki uzun yıllardır tartışılmaktadır. Günümüzde yapılan çalışmalarda dahi, birçok farklı sonuçlara rastlanmaktadır. Ele alınan ampirik çalışmaların birçoğu Phillips eğrisini doğrularken, bazıları da, pozitif yönlü veya anlamsız bir ilişki bulmuşlardır. Bu sonuçlarda kullanılan zaman periyotlarındaki farklılıklar, ele alınan ülkelerin ve ekonometrik yöntemlerin farklı oluşu farklı sonuçlar verebilmektedir. Bu çalışmada, Türkiye, Azerbaycan, Kazakistan, Kırgızistan ve Makedonya için işsizlik ile enflasyon arasındaki ilişki incelenmiştir. Çalışmada serileri durağan hale getirmek için öncelikle Panel Birim Kök Testleri yapılmıştır. Daha sonra Panel Eşbütünleşme ve Panel Nedensellik Testleri uygulanmıştır. Yapılan analizler sonucunda, uzun dönemde enflasyondan işsizliğe doğru tek yönlü bir nedensel ilişki tespit edilmiştir.

Prof. Dr. Mehmet Fatih Cin (Çukurova University, Turkey)

## Abstract

The Washington Consensus was accepted as common wisdom on policies for development and growth. The set of policies of the Washington Consensus was applied to structural crisis in Latin America and developing economies. Williamson identified 10 policy instruments whose proper deployment Washington could muster a reasonable degree of consensus. Williamson summarizes the content of the Washington Consensus as macroeconomic prudence, outward orientation, domestic liberalization, and free market policies consistent with neoclassical mainstream economic theory. The policy set was modified to the point that Williamson substituted the original name with a new label "Post Washington Consensus. The "Post Washington Consensus" designated a "new set of policy reforms" for Latin America and Developing Countries. The aim of this paper is to compare the two sets of controversial policies, the "Washington Consensus" and "Post Washington Consensus" and offer an alternative based on the Post Keynesian framework. The goal of Post Keynesian framework is the promotion of sensible prudent economic and social development that is equitable, stable and sustainable. The main purpose of the Post Keynesian policy framework proposed in this paper is to go beyond the Post Washington Consensus by emphasizing the importance of a possible new direction for economic policy for developing countries.

## 1 Giriş

Sanayi devriminin yaşandığı 18. ve 19. Yüzyıllar, başta Amerika Birleşik Devletleri ve Avrupa ülkeleri olmak üzere tüm dünyada üretim-bölüşüm ilişkileri ile sosyal yaşam alanlarında bugünde içinde bulunduğumuz yeni bir sürecin ortaya çıkmasına yol açmıştır. Bu süreç Birinci ve İkinci Dünya Savaşlarıyla beraber 20.yüzyılda da sürerek 21. Yüzyıla kendisini taşımıştır. Bu sürecin iktisadi-sosyal ve siyasi anlamdaki genel adı kapitalizm olmuştur. İktisadi olarak piyasa mekanizmasının ve fiyat sinyallerinin üretim-tüketim ve bölüşüm ilişkilerinde tercih ve karar vermeyi belirlediği bu süreç (sistem), 1929 yılında başlayan ve 1939 yılında İkinci Dünya savaşının başladığı döneme kadar ağır bir krizden geçmiştir. Sistem savaş sonrasında Uluslararası Para Fonu (IMF) ve Dünya Bankası (WB) gibi teknik-politik kurumlar ile Birleşmiş Milletler gibi daha üst örgütlenmeler ile varlığını sürdürmüştür. Bu süreçte ulusal devletlerin kalkınma-büyüme ve korumacı eğilimleri ile sağlık ve eğitim altyapılarına verdikleri öncelikler temel karakteristik özellikler olmuştur. 1970'li yıllar iki petrol krizinin ortaya çıkardığı ekonomik durgunluk ve fiyat artışları gibi aynı sistem içerisinde yeni bir sürecin ortaya çıkmasına yol açmıştır.

Aynı zamanda 1970'lerin sonu ile 1990'ların başlarını kapsayan dönem piyasa mekanizması-fiyat sinyalleri gibi araçlara öncelik veren ve adına neoklasik/neoliberal denilen bir iktisadi ve siyasal anlayışın kalkınma-büyüme stratejisinde egemen olduğu yıllar olmuştur. Bu anlayış ulusal kalkınma stratejilerinde uygulanan ithal ikameci sanayileşme stratejilerinde de köklü bir değişikliği ortaya çıkarmıştır. Artık kişisel girişimler, piyasa liberalizmi, devletin küçültülmesi (belli alanlarda sınırlandırılması), büyüme stratejisinin ihracata dayandırılması ve dış dünyayla entegrasyonun ağırlık kazanması temel değerler dizisi olmuştur (Öniş ve Şenses, 2005).

ABD Hazine Bakanı N. Brady'nin Kasım 1989 yılında düzenlediği bir konferansta (komisyonun organizatörü John Williamson'dur) borç ödeme sorunları olan tüm üçüncü dünya ülkelerine yönelik olarak; yeni krediler, birikmiş borçlarda indirim sağlamak ve borç yükünü azaltmak için yapısal uyum programları çerçevesinde arz yönlü iktisat politikaları önerilmiştir. Bu gelişmeler sonucunda, 1989 yılında kalkınma iktisatçısı John Williamson tarafından "Washington Uzlaşısı" olarak adlandırılan neoklasik/neoliberal bir politika paketi gündeme gelmiştir. Bu paket başta Latin Amerika ülkelerine yönelik politika düzenlemeleri için kullanılmış daha sonra diğer yeni gelişen ekonomiler ve piyasa ekonomisine geçmeye çalışan eski sosyalist ülkelerde uygulamaya sokulmuştur. Washington Uzlaşısı aynı zamanda yeni politikalar içeren "Anti-Washington Uzlaşısı" sürecini de kendi içerisinde başlatmıştır (Marangos, 2008: 228).

Washington Uzlaşısı, merkezi Washington'da bulunan üç önemli kurumun –Dünya Bankası, Uluslararası Para Fonu, ABD Hazine Bakanlığı- ülkelere tavsiye ettikleri ortak iktisat politikalarını ifade eder. Daha sonra bu uzlaşıya Dünya Ticaret Örgütü ve Avrupa Merkez Bankası da katılmıştır (Marangos, 2009: 350). Williamson,

Washington Uzlaşısını makroekonomik tedbirler, dışa uyum, yurtiçi liberalizasyon ve serbest pazar politikaları olarak dört ana bölümde özetlemektedir. Bir anlamda Washington Uzlaşısı neoklasik/neoliberal ortodoks yaklaşımın en küçük ortak paydası olarak tanımlanmış olmaktadır.

## 2 Orijinal Washington Uzlaşısı

1990 yılındaki çalışmasında Williamson, Washington Uzlaşısında geniş bir ölçü olan ve tüm Latin Amerika ülkelerinde tercih edilen 10 politika önerisini şöyle açıklamaktadır (Williamson, 2004-2005: 196):

|     |     |
| --- | --- |
| i. | Bütçe açığı; enflasyon vergisine yol açmayacak kadar az olmalı |
| ii. | Kamu harcamalarının daha hassas ve daha yüksek getiri sağlayacak alanlara kaydırılması (eğitim, sağlık, altyapı gibi). |
| iii. | Vergi reformu; vergi tabanını genişletmek ve marjinal vergi oranını azaltmak |
| iv. | Finansal liberalizasyon; faiz oranlarının piyasada belirlenmesi |
| v. | Geleneksel olmayan ihracatta büyümeyi yeterince teşvik edecek rekabetçi reel kur politikası |
| vi. | Ticaret liberalizasyonu; miktar kısıtlamalarının kademeli olarak %10-20 tarifelerle değiştirilmesi |
| vii. | Doğrudan yabancı yatırımların giriş engellerini ortadan kaldırmak |
| viii. | Devlet işletmelerinin özelleştirilmesi |
| ix. | Yeni firmaların girişini engelleyen veya rekabeti kısıtlayan düzenlemelerin kaldırılması (deregülasyon) |
| x. | Özellikle kayıt dışı sektörler için mülkiyet haklarının güvence altına alınması |

Washington Uzlaşısını oluşturan yukarıdaki on maddenin bir kısmı mali disiplin, kamu sektörü ve kamu bütçesi dengesinin sağlanması iken, bir kısmı da serbest piyasa anlayışının kurumsallaşmasını kapsayan (4.5.6.7. maddeler) maddelerdir. Son iki madde ise daha çok yabancı sermaye yatırımlarını ülkeye çekebilmek, mal ve sermaye akımlarının serbestleşmesini sağlayabilmek amacını gütmektedir. Ancak bu paketi uygulayan birçok ülkenin yeterli iktisadi büyümeye ulaşamadıkları gibi, finansal krizlerden dolayı daha da kırılgan bir duruma geldikleri gözlenmiştir (Rodrik, 2011:152).

**Şekil 1.** *Dış Borç Stokunun GSMG içindeki payı* **Kaynak:** *Dünya Bankası Veri Dağıtım sistemi*

Latin Amerika, Doğu Asya, Rusya ve Türkiye'de sıkça ödemeler dengesi krizleri yaşanmış, özellikle yabancı sermaye giriş çıkışları bu krizlerin en belirgin nedeni olmuştur. Şekil 1, iki ülke grubu ve Çin'in dış borçlarındaki büyüklüğü göstermesi bakımından çarpıcı sonuçlar vermektedir. Washington Uzlaşısı dışında kalan Çin dışında bu sonuçlardan birincisi borçların yüksekliğidir. İkinci sonuç azalma eğilimi göstermesidir. Bu sonucun iki alt sonucundan söz edilebilir. Öncelikle büyüme oranı yükselmiş olabilir. Bu sonuç aynı ülke grupları için Şekil 2'de gösterilen büyüme oranlarına baktığımız zaman pek desteklenmemektedir. İkinci alt sonuç ise daha gerçekçi gözükmekte ve bu ülkelerden gelişmiş merkez ülkelere borç transferinin Washington Uzlaşısıyla artmış olmasıdır.

Özellikle 1994-95 yılında Meksika'da yaşanan "Tekila Krizi" ile tablo daha da kötüleşmiş, bu kriz diğer coğrafyalara da taşınmıştır. Meksika'da yaşanan bu krizde dikkat çekici olan; düşük yurt içi tasarruf oranları nedeniyle yabancı fonlara aşırı bağımlı hale gelen bu ekonominin, yabancı sermaye piyasalarının hareketlerinden önemli oranda etkilenmesidir. Bu nedenle sağlam makroekonomik bir alt yapı ile tamamlanmış olan "yüksek iç

tasarruf" oranlarının, ülkeleri kısa dönemli uluslararası sermaye akımlarındaki dalgalanmalardan kaynaklanan krizlerden koruması beklenmektedir (Naim, 1999:5). Ancak Meksika krizinden iki yıl sonra 1997-98 yıllarında Güney Kore, Malezya, Tayland ve Endonezya, 1998 yılında Rusya ve Brezilya, 2001 yılında Türkiye, 2001-2002 yılında Arjantin'de benzer krizler yaşanmış ve "finansal serbestleştirme" sonucu ortaya çıkan sıcak para hareketleri özellikle gelişmekte olan ülkeler için krizlerin tetikleyicisi olmuştur.

**Şekil 2.** *Gayri Safi Milli Gelire Oranla Dış Borç Stoku* **Kaynak:** *Dünya Bankası Veri Dağıtım Sistemi*

**Şekil 3.** *Yıllık Yüzde Büyüme Oranları (2005 ABD Dolarıyla)* **Kaynak:** *Dünya Bankası Veri Dağıtım Sistemi*

**Şekil 4.** *Mal ve Hizmet Dengesi (GSYİH'nin Yüzdesi)* **Kaynak:** *Dünya Bankası Veri Dağıtım Sistemi*

Yukarıdaki 3 nolu şekil 1990'lı yıllarda hem Doğu Asya ülkelerinde hem de Latin Amerika Ülkeleri'nde tasarruf oranlarının azaldığını, bu azalmanın Latin Amerika Ülkeleri için özellikle çarpıcı olduğunu göstermektedir. Washington Uzlaşısının dışında kalan ve bu politikalara ihtiyatla yaklaşan Çin ise hem yüksek tasarruf oranına sahip olmuş hem de tasarruflarını artırabilmiştir. Tasarruflar bir ülkenin yatırım yapma kapasitesini belirleyen önemli bir kaynaktır. Eğer bir ülkenin yatırımları tasarruflarını aşıyorsa yatırımları finance etmenin iki kaynağı bütçe ile dış ticaret açığıdır. Dış ticaret açığı ise bir süre sonra kapatılamazsa Cari İşlemler Hesabında (CİH) bir açığa neden olur ve bu açık yapısal bir hale gelebilir. Sonrasında ise bu açığın kapatılmasının finansmanı sorunu başlayarak, döviz kuru-faiz oranı ve parasal genişlemeler üzerinde bir baskı oluşturur. Aşağıda 4 nolu şekilde seçilmiş üç önemli Latin Amerika ülkesiyle Türkiye'nin dış dünyayla yaptığı mal ve hizmet dengesinin GSYİH'ya oranı yüzde olarak sunulmaktadır. Bu dört önemli ülkenin de 1989 öncesi fazla veren mal ve hizmet dengesi 1989 Washington Uzlaşısı sonrası hızla negatife dönmüş, 2001 sonrası artma eğilimi gösteren bu oran günümüze kadar hızla azalma eğilimine göstermiştir. Bu olgu aynı zamanda ülkelerin cari açık vermelerinde de esas rolü oynamaktadır.

1990'lı yıllarda yaşanan gelişmeler Washington Uzlaşısı için genel olarak olumlu sonuçlar vermemiş, bu politikaları uygulamayan ülkeler açısından durum en azından daha kötü olmamıştır. Rodrik'e göre, Çin, Hindistan, Şili gibi ülkeler büyürken diğer ülkelerde yaşanan krizlerin önemli nedenlerinden biri reformların tek taraflı olarak devletin rolünün azaltılması ve piyasaların etkinliğinin artırılması şeklinde yapılırken, kurumların ihmal edilmiş olmasıdır. Reel kesimi desteklemeyen kurumlar, ülkelerin dışa açılmasında başarısızlık yaratacaktır (Rodrik, 2006). Bu noktada her ülkenin farklı iktisat politikalarına ihtiyaç duyacağı ve bu nedenle Washington Uzlaşısı içindeki bu maddelerin her ülke için uygun olmayabileceği görüşü ağırlık kazanmış ve bu eleştiriler karşısında II. Washington Uzlaşısı olarak adlandırılan ek 10 maddelik bir reform paketi gündeme gelmiştir.

## 2.1 İkinci Nesil Washington Uzlaşısı

Tasarruf oranları, emeklilik reformu, sermaye kaçışı, şeffaflık ve yönetişim gibi konular 1990'lardan itibaren uzmanlar, politikacılar ve piyasa reformlarıyla ilgilenenler arasında sürekli tartışma odağı olmuştur. Bu terimlerin hiçbiri orijinal Washington Uzlaşısında yer almamıştır (Naim, 1999:5).

Bu ikinci nesil reformlar, "yönetim reformları" başlığı altında şekillenmiştir. İkinci Nesil Washington Uzlaşısı ile ortaya konulan en önemli farklılık, neoliberal reformların, piyasa dışı faktörleri de kapsayacak şekilde genişletilmesi ve sosyal normlara ve kurumsal yapılara önem veren bir yaklaşımın ortaya konmasıdır. Rodrik'e göre birinciye ek olarak ikinci Washington Uzlaşısında yer alan maddeler şunlardır (Rodrik, 2006:978):

    i. Yolsuzluğa karşı önlemler

    ii. Ortaklaşa Yönetim

    iii. Esnek işgücü piyasaları

    iv. DTÖ anlaşmaları

    v. Finansal kural ve standartlar

    vi. İhtiyatlı sermaye hesapları açılması

    vii. Sabit veya dar bir bantta olmayan döviz kuru rejimi

    viii. Bağımsız Merkez Bankası- Enflasyon Hedeflemesi

    ix. Sosyal Güvenlik Ağları

    x. Yoksulluğu azaltma hedefi

Bu çerçeveden bakıldığında, İkinci Nesil Washington Uzlaşısı yaklaşımında, devlet ile piyasanın birbirinin tamamlayıcısı olduğu ve özellikle kalkınma sürecinde devletlerin etkinliğinin pazarın doğru işleyişi için, önemli bir rol oynadığı kabul edilmektedir (Öniş ve Şenses, 2005). Bu gelişmeler ışığında, Dünya Bankası 1985 yılında "yoksulluğa duyarlı büyüme" stratejisini benimserken, 1987 yılında "yapısal uyumun sosyal boyutları" yaklaşımını benimsemiş ve 1989 yılından sonra da "yönetişim" kavramını ortaya koymuştur ( Akçay ve Türkay, 2009: 319). Dolayısıyla minimum devlet anlayışı 1990'larda "devletin yönlendiriciliği" şekline dönüşmüştür.

Rodrik'e göre sanayileşme yoluyla hızlı büyümeyi destekleyen küreselleşmenin gelişmekte olan ülkeleri aynı zamanda ara malı ithalatına bağımlı hale getirebileceği, bu düzende kalkınmanın ise kendiliğinden olmasını beklemenin hayalcilik olacağının altını çizmektedir. Gelişmekte olan ülkelerde en bağlayıcı kısıt finansman azlığıdır. İkinci Washington Uzlaşısında yer alan 5, 6 ve 7. maddeler bu açıdan ani uluslararası finans hareketlerinin sıkıntılarını önlemeye yönelik tedbirlerdir. Bu ülkelerde riski arttıran diğer nedenler enflasyon ve devlet borçlarıdır. Girişimcilerin ilk maliyetlerinin yüksek olması da önemli bir etkendir (Rodrik, 2011:151-153).

Bu durumda öncelikle bu tip ülkelerde ekonomik büyüme üzerindeki engellerin nerede olduğunu anlamak (teşhis) ve bu engelleri aşmaya uygun yaratıcı politikalar tasarlamak gerekmektedir. Ancak, ekonominin dinamik kalmasını sağlamak ve büyümeyi boşa çıkarmamak için teşhis ve politikalar sürecini kurumsallaştırmak gerekmektedir. Rodrik teşhis için aşağıda yer alan tanımlamayı yapmıştır (Rodrik, 2006:983):

Problem: Gelişmekte olan ülkelerde özel yatırım ve girişimciliğin düşük düzeyde olması

| A)Ekonomik faaliyetler için düşük getiri | B) Finansman maliyetinin yüksek olması |
|---|---|
| i) Düşük sosyal getiri | i) Yetersiz uluslararası finansman |
| Fakir coğrafya; düşük beşeri sermaye; yetersiz altyapı | ii) Yetersiz iç finansman: Düşük iç tasarruflar |
| ii) Düşük ödenek | |
| Hükümet hataları (Mikro riskler: mülkiyet hakları, rüşvet, vergiler<br>Makro riskler: finansal; mali istikrarsızlık)<br>Pazar hataları (Bilgilenmede dışsallıklar: kendi başına keşfetme; koordinasyon dışsallıları) | |

***Tablo 1:****Büyümenin Önünde Engel Teşkil Edecek Olguların Teşhisi* **Kaynak:** *Rodrik, D. (2006)*

Tablo 1'de teşhis analizini incelediğimizde, çok temel ancak güçlü bir sınıflandırma görebiliriz. Düşük gelirli bir ekonomide, ekonomik faaliyetler en azından ya finansman maliyetlerinin çok yüksek olmasından ya da özel yatırımların getirilerinin çok düşük olması nedeniyle kısıtlanabilecektir. Şayet problem özel yatırımların düşük getirisi ise, bu da dönüp düşük getiriye veya kamu ve özel getiriler arasındaki farkın büyümesine neden olacaktır.

Teşhis analizinde ilk adım bu koşullardan hangisinin ekonomideki sorunları tam olarak karakterize ettiğini ortaya koymaktır. Ancak bunlar birbirinden kesin ayrılabilecek nedenler değildir. Örneğin Rodrik'e (2006) göre bir ekonomi finans maliyetleri nedeni ile belli bir baskı altında ise, reel faiz oranlarının yüksek olmasını bekleriz. Bu durumda borç almak isteyenler borç verenlerin peşinde olacak ve cari açık, dış borçlanmanın mümkün olduğu oranda artacaktır. Girişimciler için yatırımlar cazip olacaktır. Böyle bir ekonomide –dış yardım ve döviz gelirleri gibi- yatırıma dönüşebilir fonlardaki dışsal bir artış, daha çok tüketim veya gayrimenkul yatırımları yerine öncelikle diğer üretken faaliyetleri teşvik edecektir. Tersine ekonomik faaliyetlerin- özel getirilerin düşük olması nedeniyle- azaldığı bir ekonomide, faiz oranları düşük olacaktır. Bankalar likidite bolluğu içinde olacak yani borç vermek isteyenler, borç almak isteyenlerin peşinde olacak, cari işlemler dengeye yakın ya da fazla verecektir. Girişimciler bu durumda paralarını daha yüksek getirisi olan yerlerde değerlendireceklerdir. Yabancı yatırımlar veya döviz gelirlerinin artması El Salvador, Etiyopya gibi ülkelerde gözlendiği gibi tüketimi veya sermaye çıkışını finanse edecektir.

Williamson 1997 yılında, 1989 yılındaki çalışması üzerine bazı eklemeler yaparak yeniden ele aldığı "Washington Uzlaşısını Yeniden Gözden Geçirme" başlıklı yazısında farklı bir yol izlemiştir. Çalışmada Latin Amerika'nın uygulaması gerektiğine inandığı reformlar yine aynı olmakla beraber bazı düzenlemeler görüyoruz. Bunlar: yüksek tasarruf oranları, kamu harcamalarında öncelikler, vergi reformu, bankacılık denetleme, rekabetçi döviz kuru, ticarette serbestlik, doğrudan yabancı sermaye yatırımları, rekabetçi bir ekonomi, mülkiyet hakları, kurumsal yapılanma, eğitimin arttırılması başlıkları altında toplanabilir (Williamson, 1997).

Orijinal Washington Uzlaşısında ilk madde "mali disiplin" iken, tek başına mali disiplinin büyümeyi uyarıcı etkisinin yetersiz olduğu kabul edilmiştir. Yatırımları ve bu yolla büyümeyi arttırmak için önemli bir araç olarak tasarrufları daha fazla teşvik etmeye ihtiyaç vardır. Buradaki en önemli noktalardan bir tanesi tasarruflardaki artışın kamu sektöründen çok özel sektörden kaynaklanmasıdır. Bu noktada yüksek vergiler bu teşviği azaltacaktır. Etkili bir mali disiplinin, özel kesim tasarruflarında bir artış ile desteklenmesi ve bunu özendirmesi gerekmektedir (Marangos; 2008: 362).

Diğer taraftan dünya ticareti tek taraflı tarife indirimlerinden serbest ticaret bölgeleri ve ikili anlaşmalara dönüşmüştür. Bu gelişmeler dünya ticaretinin liberalleşmesi süreci ile uyumludur. Bu durum Washington uzlaşısının ilk halinden biraz farklıdır. İlk halinde daha çok altı çizilen dışa dönük bir ticaret politikası izlenebilmesi ve yolsuzlukların azaltılabilmesi için ithalat liberalizasyonu ve dış ticaret üzerindeki nicel sınırlamaların kaldırılması gerekliliğidir. Bebek endüstriler ile ilgili kaygılar bu sektörlerdeki geçici korumayı desteklemektedir. Uygulanacak genel bir ortalama tarife (%10-20 civarında) önemli bir maliyet yaratmadan endüstriyel bazda bir çeşitlendirme yaratacaktır. Üzerinde tam uzlaşılamayan konu korumanın yaklaşık üç ile on yıl arasında kaldırılması ile (Dünya Bankasının görüşü), Williamson'ın savunduğu bu sürenin ülkenin makroekonomik koşullarına bağlı olduğu görüşüdür (Marangos; 2008: 359-362).

Doğrudan yabancı sermayenin girişi ile ilgili olarak, yabancı firmaların girişini engelleyen kısıtların kaldırması yerli ve yabancı firmalar arasındaki rekabeti artıracaktır. Yabancı yatırımlar, ihtiyaç duyulan sermayeyi, teknolojiyi ve beceriyi getirirken, iç piyasa için gerekli üretimi yapabilecek ve ihracata katkıda bulunabilecektir. Washington Uzlaşısında ekonomik anlamda bir milliyetçiliğe yer yoktur. Bu reform Latin Amerika ülkelerinde başarılı olduğu için üzerinde tekrar tartışılmamıştır. Aşağıdaki 5 nolu şekil dört Latin Amerika ülkesi için net doğrudan yatırımların GSYİH'ya oranını göstermektedir. Bu çerçevede 1989-2012 dönemi bu ülkelere net sermaye yatırımlarının pozitif olduğunu göstermektedir. Bu ülkeler içerisinde en avantajlı ülkenin Şili olduğu gözükmektedir.
***Şekil 5.*** *Net Doğrudan Yabancı Yatırımların GSYİH'ya oranı* **Kaynak:** *Dünya Bankası Veri Dağıtım Sistemi*

Diğer taraftan eğitim konusunda, ilk konsensusta kamu harcamalarının öncelikli olarak eğitime yönlendirilmesi tavsiye edilmiştir. Daha sonrakinde ise, eğitim kendine özgü bir konu olarak ele alınmıştır. Zira eğitimli bir işgücü, ekonominin hızlı gelişmesinde önemli bir önkoşuldur. İyileştirilmiş bir eğitim ekonomik büyüme, gelir dağılımı ve çevre için özel bir önem taşımaktadır.

## 3   Washington Uzlaşısında Yer Alan Konulara Post-Keynezyen Alternatif Yaklaşım

Washington Uzlaşısına yönelik özel bir politika seti geliştirilmemiş olmasına rağmen dünya ekonomik sisteminin genel işleyişi içerisinde kalmak kaydıyla Post-Keynezyenlerin sistematik alternatif politika önerilerini bulmak mümkündür. Post-Keynezyenlerin kendi aralarındaki teorik uyumu pratik dünyanın gelişmeleri de göz önüne alınarak tartışmalı bir şekilde ilerlemektedir. Ancak Washington Uzlaşısında dile getirilen öneriler konusunda net teorik itirazlarının olduğu da açıktır (Marangos, 2012; Davidson, 2004-2005). Bu itirazların kökeninde Post-Keynezyenlerin iktisada yöntemsel yaklaşımları içerisinde yer alan eleştirel gerçekçilik (critical realism) ve gerçek dünyayı dikkate alan açıklamalara verdikleri özel önemin ayrı bir yeri vardır. Bu nedenle Washington Uzlaşısı içerisinde yer alan politika önermelerine Post-Keynezyenlerin uygulamaya da bağlı olarak teorik karşı çıkışlarının kısa incelemesinin yapılması hedeflenmiştir.

### 3.1  Mali Disiplin

Washington ve Post Washington Uzlaşısındaki mali disipline yönelik önermeleri Post-Keynezyenler kesin bir şekilde kabul etmemektedir. Mali disiplinden kastedilen bütçe açıklarının enflasyon ve ödemeler dengesi açıkları gibi makroekonomik dengesizliklere yol açmasıdır. Bu nedenle bütçe açıklarının kapatılması ve/veya küçültülmesi önerilmektedir. Post-Keynezyenler maliye politikasına önem verdiklerinden bu anlamda bir bütçe disiplinini desteklememektedirler. Kamu harcamaları tam istihdama giden yolda kaçınılmaz bir biçimde gereklidir. Özel kesim yatırımlarının kamu harcamalarıyla dışlanması zorunlu bir sonuç değildir. Tam tersine kamu harcamaları özel kesim yatırımlarını tamamlayıcı bir işlev görebilirler. Bütçe açıklarının faiz oranlarını yükseltmesiyle ilgili ampirik bulgular zayıftır. Merkez bankası para stokunu kredi parası olarak ayarlayabileceğinden faizler (para arzı içselliği) üzerine kamu harcamalarının ilave bir baskı yapması kaçınılmaz değildir. (Nevile, 2003). Kamu açıkları durgunluğu önlemek için verilebilir. Fakat Durgunluğun nedeni değildir (Marangos, 2012).

### 3.2  Kamu Harcamalarının Önceliği

Kamu harcamaları eğitim, sağlık ve alt yapı harcamaları gibi toplumun refahını artıran alanlara öncelikli olarak yapılmalıdır. Harcamalar aynı zamanda verimliliği artırarak özel kesim yatırımlarına ve büyümeye olumlu bir etki yapar. İşsizlerin yeniden eğitimi için oluşturulacak kamu fonları nitelikli işgücünün oluşmasına ve dolayısıyla verimliliğin artmasına yol açar. Toplumsal eğitim alanına yapılacak yatırımlar toplumsal maliyetleri (suçluların azalması gibi) azaltıcı bir etki yapar. Gelir dağılımını düzeltici harcamalar toplam talebin de istikrarlı olmasına neden olur.

### 3.3  Vergi Reformu

Post-Keynezyenler açısından vergi sistemi sadece gelir elde etme yönüyle değil, toplumun kültürel ve sosyal alt yapısını yansıtması bakımından da önem arz eder. Toplumsal yönüyle vergi kaçağının önüne geçmek, bütçe açığının azaltılması için harcamaları düşürmek kadar önemlidir (Marangos, 2012). Post-Keynezyenlerde vergilendirme konusu Polonyalı iktisatçı Kalecki tarafından formüle edilmiştir (Laramie va Mair, 2003):

Kalecki kısa dönem modelinde Milli Gelirin elde edilmesi ve yeniden dağılımı, malların, sermayenin ve gelir gibi değişkenlerin vergilendirilmesinin etkileri üzerinde durmuştur. Kısa dönemde ücret ve karın vergilendirilmesinin karlar üzerine etkisinin uzun dönemde yatırımlar üzerinde etkili olabileceğini göstermiştir. Ücret ve karların vergilendirilmesi iş çevrimlerinin genişliğini ve yatırım oranlarının trendini etkileyebilecektir. Vergi sisteminin etkilediği amortisman ve kar düzeyi gibi iki kanal bulunmaktadır. Vergilendirme teknolojik gelişmeler sonucunda fiziksel ve finansal olarak eskimiş sermaye mallarının daha üretken, daha karlı sermaye mallarıyla değişimini hızlandıracaktır. Karların vergilendirilmesi karların seviyesi üzerinde doğrudan bir etkide bulunurken, milli gelir içinde ücretin payı üzerinde dolaylı bir etkide bulunarak toplam karlılığı belirleyen harcamaları etkileyebilecektir. Bu durum maliye politikasının bir istikrar unsuru olarak kullanılabileceğine işaret etmektedir. Yerel yönetimlerde politik nedenlerden dolayı farklı bir vergilendirme sistemi tercih edilebilir. Ancak kamu gelir ve harcamaları bir bütün olarak bu farklı tercihlerin makro ekonomik etkisinden bağımsız kalamaz.

Kaleckici bu analiz Washington/Post-Washington önermelerinin arz yanlısı iktisat anlayışına dikkate değer bir alternatif bakış açısını temsil etmektedir. Arz yanlısı iktisat gelir dağılımını marjinal verimliliğe bağlarken ekonominin arz yönlü olarak belirli sınırlandırmalar altında olduğunu ifade etmektedir. Ortodoks arz yanlı iktisada göre ücretler emek piyasasında belirlenirken, Post-Keynezyenler reel ücretin mal piyasasında belirlendiğini ileri sürmektedirler. Vergileri değiştirmenin (ücretler ve karlardan alınan vergiler) makroekonomik etkisi iş dünyasının mark –up oranlarına vereceği tepkiye bağlı olarak belirlenir. Bu tepkide monopol derecesine bağlı olarak ücretin ve karın milli gelir içerisindeki payını belirler.

### 3.4 Finansal Serbestleşme

Post-Keynezyenlerin Washington/Post-Washington finansal serbestleşme önermelerine hem teorik hem de uygulama deneyimleri açısından eleştirileri bulunmaktadır. Uzlaşılarda belirtilen finansal serbestleşmeden kastedilen, kredilerin dağılımının ve faizlerin piyasa tarafından belirlenmesidir. Böylece tasarruflar ve sermayenin etkinliğinde pozitif etkilenmeler olacaktır. Bu durum 1950-1970'li yılları kapsayan dönemde özellikle gelişmekte olan ülke merkez bankalarının belirlediği ve göreli düşük tuttuğu faiz oranlarına bir tepki niteliğindedir. Yüksek reel pozitif faizler tasarrufları ve yatırımları artırırken düşük getirili sermayenin de tavsiyesine yol açacaktır. Sermayenin ortalama verimliliği artarken büyüme yükselecektir. Dolayısıyla merkez bankaları kamu otoritesinden bağımsız olmalı, sermaye akımları serbest bırakılmalı, faizler ve krediler piyasa koşullarına bırakılmalıdır. Bir dizi finansal reformlar yapılmalı, enflasyon düşük ve istikrarlı olmalıdır. Oysa bu görüşlerin teorik dayanağı oldukça tartışmalıdır.

Finansal piyasaların serbestleşmesi konusunda üç çekince önemlidir (Arestis, 2004): İlki asimetrik bilgidir. Asimetrik bilgi, ters seçim ve ahlaki bozulmalar ortaya çıkarır. Örneğin yatırımcı yatırımlarının riskini tam bilemez. Kredi kullanmıştır. Kredi kullandıranda yatırımcının riskli bir yatırım yaptığını bilememesi durumunda ahlaki bir bozulma ortaya çıkar. İkincisi belirsizliktir. Bütün kredi piyasası belirsizlik altında çalışır. Tamamen serbest bırakılan bir piyasa belirsizliğin olumsuzluklarını artıracaktır. Bunun için deregülasyon değil daha iyi bir regülasyon önerilebilir. Üçüncüsü, serbestleşme, finansal baskıları, finansal kırılganlıkları ve krizleri artırabilir.

### 3.5 Döviz Kuru

Ortodoks yaklaşım döviz kurlarının mal ticaretine dayalı olarak değiştiğini ve uzun dönemde mal ticaretine bağlı olarak belirlenen kurların ticareti dengeye getirecek uyarlamayı sağladığına yönelik bir yaklaşıma odaklanmış durumdadır. Döviz kuruna Post-Keynezyen yaklaşım sermaye akımlarının ekonomide aktif ve otonom olduğuna ilişkin bir yargı çerçevesinde oluşmaktadır. Post-Keynezyenler ampirik bulgulara da dayanarak ticaretin denge eğilimi göstermediğini ve ulusal paranın değerinin uluslar arası portföy yatırımcılarının kararlarına bağlı olarak belirlendiğini savunmaktadırlar. Paranın değer kaybı/kazancı bu yatırımcıların ulusal varlıklara yönelik talebinin bir sonucu olarak belirlenir. Bu yatırımlarda belirsizlik koşulları altında ticaret dengesinin sağlanmasına değil fakat döviz kurunun oynaklığına yol açarak dengesizliğin sürmesine neden olur. Keynes, Bretton Woods konferansında sermaye hareketliliği üzerinde bir denetimde bulunmalarının ulusların hakkı olduğunu ileri sürmüş, ancak tamamen reddedilmese de genel bir kabul görmemiştir. Fakat son zamanlarda Post-Keynezyenlerin de etkisiyle sermaye kontrolleri yeniden önem kazanmıştır (Harvey, 2003). Döviz kuru rejimi olarak Post-Keynezyenler, ayarlanabilir dalgalı döviz kuru rejiminin gelişmekte olan ülkeler ile sanayileşmiş ülkeler için önerilebileceğini, ancak bu rejimin uygulanabilmesi için sermaye kontrollerinin yapılmasının gerekli olduğunu belirtmektedir (Chang ve Grabel, 2004).

### 3.6 Ticaretin Serbestleşmesi

Post-Keynezyenler bir ülkenin büyüme hızını artırmak için mutlaka dışa açılmalarının gerekmediğini savunurlar. Ülkeler başlangıçta yeni gelişen sanayilerini korumalı ve seçici bir ihracat teşviki uygulamalıdırlar. Hızlı büyüme ve verimlilik artışı ülkelerin dışa açılmasını daha mümkün kılar. Verimlilik artışıyla dışa açılan bir ülkenin yeni gelişen sanayilerini koruma ihtiyacı azalır. Yoksul ülkeler için ödemeler dengesi açıkları büyümenin önünde bir engel oluşturur. Dış açıklar döviz kurunda krizler, enflasyon ve işsizlik yaratarak yoksulluğun artmasına neden olur. Ülkeler ulusal bankacılık sistemi ve iç makroekonomik politikalardan asla vazgeçmemelidir (Marangos, 2012).

### 3.7 Doğrudan Yabancı Yatırımlar

Yabancı sermaye girişlerinin iç yatırımları artırdığına yönelik yeterli bir kanıt bulunmamaktadır (Kregel, 2008). Bunun yerine dış yatırımların istikrarlı olmasına, ülke yatırımlarının toplamı içinde makul bir düzeyde bulunmasına ve kısa dönemli kar getirilerinden ziyade ülkenin kalkınmasına hizmet edecek alanlarda yatırım yapmasına önem verilmelidir. Çin, Kore, Tayvan gibi ülkeler, yabancı yatırımcılara sıkı bir düzenlemeye rağmen başarılı olmuş ülkelere örnek teşkil etmektedir (Marangos, 2012 ve Chang ve Grabel, 2004).

### 3.8 Özelleştirme

Post-Keynezyenlere göre devlet mülkiyetinin bütçe açığı ve kaynakları etkinsiz kullandıkları yönünde evrensel bir kural bulunmamaktadır. Ekonomik kalkınma mutlak olarak devlet mülkiyetinden vazgeçilmesini gerekli kılmamaktadır. Ekonomik büyüme için kamu mülkiyeti önemli bir rol üstlenebilir. Bu elbette ekonominin tamamının devlet kontrolü altında olmasını gerektirmez (Saad-Filho, 2007).

### 3.9 Yeniden Düzenleme

Ücretlerin düşürülmesinin ve esnek işgücü piyasasının verimlilik ve yatırımların karlılığı üzerinde olumlu etkileri yoktur. Bunun yerine yasal olarak iyi düzenlenmiş bir piyasa, tatmin edici asgari ücretler ve güçlü sendikaların yatırımları artırıcı ve yeni teknoloji kullanımını teşvik edici sonuçları olabilir. (Saad-Filho, 2007).

### 3.10 Mülkiyet Hakları

Post-Keynezyen bakış açısı piyasa ekonomisinde mülkiyet haklarına önem vermektedir. Bu nedenle toprak reformu gibi politikaları desteklemektedir. Bu durum Post Washington önerilerine aykırı değildir. Buna rağmen Latin Amerika ülkelerinde devlet öncülüğündeki bir sanayileşmenin daha üstün olduğu görülmektedir (Ocampo, 2004).

### 3.11 Kurumların İnşası

Ekonomik ve sosyal kurumların tarihsel, sosyolojik ve ülkenin içinde bulunduğu siyasal demokratik yapısıyla yakın ilişkisi vardır. Günümüzde piyasa ekonomisini uygulayan gelişmiş ülkelerin kendi içinde de heterojen bir yapı söz konusu olabilmektedir (Chang ve Grabel, 2004; Ocampo, 2004). Anglo-Amerikan Kapitalizm modelinin kendine has kurumları ve düzenlemeleri olabilir. Ancak bu durum piyasa ekonomisini uygulayan her ülke için mutlak bir zorunluluk oluşturmaz. Her ülke kendine özgü kurumları, koşulları topluma eşit yakınlıkta ve demokratik/özgür bir biçimde oluşturmalı ve geliştirmelidir.

## 4 Sonuç

1990'lı yıllar adına Washington Uzlaşısı denilen ve özünde neoliberal politikalar barındıran bir politika demetinin dünya genelinde uygulamaya sokulduğu yıllar olmuştur. Bu politikalardan dağılan iki kutuplu dünya sisteminin sosyalist ülkeler gurubunda yer alan ülkeler de etkilenmiştir. Özünde ülkelerin dış borçlarında azalma, daha yüksek ve istikrarlı bir büyüme, düşük enflasyon ve işsizlik ile mali disiplin öneren bu politikalar genel hatlarıyla başarısız olmuştur. Bu önerilere uymayan ülkeler ise uzlaşıda önerilen hedeflere daha yakın bir konumda bulunmaktadırlar. Metin içinde sunulan 1-2 ve 3 nolu grafikler bu bulguyu destekler niteliktedir. Nitekim başarısızlık bu politikaları öneren kurumların da dikkatini çekmiş ve Post Washington Uzlaşısı olarak adlandırılan 2. Nesil politika önerileri uygulamaya sokulmuştur. Ancak Rodrik'in de belirttiği gibi Uzlaşının ortadan kalktığı ve yerine neyin alacağının tartışıldığı bir döneme girmiş bulunmaktayız (Rodrik, 2006).

Bu politikalar çoğunlukla tek reçete olarak sunulmuş ve alternatifin olmadığı savıyla uygulamaya konulmuştur. Oysa mevcut ekonomik sistem içerisinde Post-Keynezyenlerin, Washington/Post-Washington Uzlaşısına sistematik bir karşı çıkışları söz konusudur. Bu itiraz bütüncül bir alternatifi de bize sunmaktadır: istihdamı optimum seviyesine ulaştırmak için kamu yatırımlarının kullanılması, sanayi politikası uygulamaları, modern bir devlet yaratmak için sosyal politikalar, vergi tabanını genişletmek için modern bir vergi sistemi, gelirin yeniden dağıtılması, sermaye kontrolleri, demokratik mekanizmalarla seçilmiş yönetime ve politikalarına bağımlı bir merkez bankası, kamu mülkiyetinin devam etmesi, ayarlanabilir dalgalı bir döviz kuru sistemi ile sosyal uyumu ve çatışmaları yönetecek içsel kurumların oluşturulmasıdır. Bu önermelerin teorik alt yapısı modern iktisadın doğuşundan itibaren yapılan ve iktisat literatüründe geniş bir yer bulan tartışmalarda mevcuttur. Biz bu kısa çalışmamızda makroekonomik politikaların tüm ülkelerin geneline aynı içerikte ve tek reçete olarak sunulmasının ve politika uygulamalarının ülke ekonomilerine olumlu sonuçlar vermeyebileceğini göstermeye çalışmış durumdayız. Uygulanan politikaların başarısızlığı alternatif önerilere olan ihtiyacı güçlendirmektedir. Şimdilik bu ihtiyaca Post-Keynezyenler ciddi alternatifler sunmuş gözükmektedir.

## Abstract

Adam Smith is known as the founder of economics as a social science and also of economic liberalism (or termed as capitalism after Karl Marx) based on principles of non-intervention and non-protection by the governments to perfectly competitive markets. Over time, economic theory and resulting economic regime evolved: Interventions to improve the welfare of workers; infant-industry argument for limited trade protection; and most importantly, following the 1929 Great Depression, John Maynard Keynes and his macroeconomic system giving rise to less-than-full- employment equilibrium, hence the need for macro-economic level state interventions by means of monetary and fiscal policies. Evidently, liberal economic regime was modified but remained in essence; hence, it proved to be flexible and resilient. On the other hand, Marxist socialism, the doctrinaire challenge to capitalism, had virtually collapsed in the 1990's. The move of even the developing countries towards outward orientation and market economy at the national level is in line with Adam Smith's views; so is the establishment of the European Union and the like at the regional level, as well as the more recent move towards globalisation.

## 1 Adam Smith: Klasik Okul ve Liberal Ekonomik Rejim

A.Smith, 1776 yılında yayınlanan **Ulusların Zenginliğinin Doğası ve Sebeplerini Araştırmak** (tercümesi için: Derin, 1948) adlı kitabı ile iktisadın bir sosyal bilim olarak kabul edilmesinin herkesçe kabul edilen öncüsü ve aynı zamanda "ekonomik liberalizm (*economic liberalism*)"in ya da daha sonraları Karl Marx tarafından ortaya çıkarılacak olan "sosyalizm (*socialism*)"in karşıt deyimiyle "kapitalizm (*capitalism*)"in kurucusu olarak anılır.

A.Smith'in, aralarında David Ricardo, Nassau William Senior, John Stuart Mill ile başlayıp, Alfred Marshall (1890, **İktisadın İlkeleri**) ile biten belli başlı isimlerin de bulunduğu bir gurup iktisatçıdan oluşan takipçileri, "Klasik Okul (*Classical School)*" ya da çıkış yerlerine atıfta bulunularak "Manchester Ekolü" olarak adlandırılır. Oluşturdukları makro-ekonomik sistem de "Klasik Sistem" olarak anılmaktadır. (Klasik Okulun tarihi ile ilgili daha detaylı bilgi için: Schumpeter, 1954 ve 1996; Roll, 1992; Klasik Makro-ekonomik Sistemin teknik detayları için: Hiç, 1994a; Paya, 1997; Ackley, 1961; Branson, 1989; Froyen, 1990)

D.Ricardo, "Malthus'çu nüfus artışı" kuralını (Thomas Robert Malthus, 1798, **Nüfus Artışı Hakkında Araştırma**) benimsemiş ve iktisadi büyümenin eninde sonunda duracağı, ancak bu noktaya daima tam istihdam dengesinde varılacağını gösteren bir ekonomik model ortaya atmıştır. Bu model, A.Smith'in görüşleriyle de uyuşmaktadır.

A.Marshall, "esneklikler" kavramını ortaya atmış ve "kısmi yöntem analizi" kullanmıştır. Buna karşın, Leon Walras (1874, **Saf Ekonominin Bileşenleri ve Sosyal Zenginlik Teorisi**), A.Smith ve Klasik Okulu takip ederek, ekonominin tam istihdam dengesine kendiliğinden otomatik olarak ulaşacağını kanıtlamak için "genel denge yaklaşımı" kullanmıştır.

A.Smith'in, önerilen ekonomik rejimle ilgili, Klasik Okulun diğer üyeleri tarafından da benimsenmiş olan, başlıca görüş ve çıkarımları şu şekilde özetlenmektedir: İlk olarak, işgücü ya da emek piyasası dahil ekonominin tüm piyasa ve sektörlerinde tam rekabet ortamı sağlandığı takdirde tam istihdam dengesine kendiliğinden otomatik olarak ulaşılacaktır. Dolayısıyla, devletin ya da işçi sendikalarının müdahalesi olmadan piyasada oluşan ücret oranları tam istihdam sağladığı için, bu denge, çalışanların refah seviyesini de maksimuma çıkaracaktır. Böylece, devletin fiyatlara ve ücretlere karışması ve genel anlamda, yatırımları ve ekonomik kararları sorgulaması gibi müdahalelere gerek kalmayacaktır.

A.Smith bu durumu "görünmez el (*invisible hand*)" olarak tanımlamış ve tam rekabete dayanan ekonomilerde kendi çıkarları peşinde koşan tüm bireylerin, sonuçta toplumun tamamı için maksimum refahı sağlayacak olan dengeyi otomatik olarak yaratacağını vurgulamıştır. Klasik Okulun Fransa'daki savunucusu olan J.B.Say, (1903, **Politik Ekonomi Tezi**) bu prensipten "piyasalar kanunu (*law of the markets*)" adıyla bahsetmiştir.

İkinci olarak, A.Smith ortaya attığı "mutlak üstünlük (*absolute advantage*)" prensibine dayalı olarak ülkelerin uzmanlaşmaya gitmesi sonucu gönüllü olarak gerçekleştirilen uluslararası ticaretin her iki taraf için de ekonomik

refaha ve iktisadi büyüme oranlarında artışa yol açması açısından "serbest uluslararası ticaret" ilkesini de savunmuştur. Demek ki, verimsiz çalışan yurt-içi sanayileri "koruma"ya gerek yoktur. Ticaretin tamamen serbest bırakılması konusu, kısa bir süre sonra D.Ricardo tarafından "karşılaştırmalı üstünlük (*comparative advantage*)" prensibine dayandırılarak genelleştirilmiştir (1817, **Politik Ekonomi ve Vergilendirmenin İlkeleri**).

Böylece, A.Smith'i izleyerek, tam rekabet şartları altında çalışan piyasaların kendiliğinden otomatik olarak tam istihdama ve dış ticaret dengesine ulaşacağı varsayımına dayanarak güçlü bir "müdahalesizlik (*non-interventionism*)" ve "korumasızlık (*non-protectionism*)" savı oluşturulmuştur.

A.Smith'in **Ulusların Zenginliği** eserinin ortaya çıktığı 1776 yılının özel bir anlamı vardır: Bu tarih, yeni yeni ortaya çıkmakta olan girişimcilerin ya da sanayicilerin, her devletin, kendi çıkarlarını korumak adına, diğer devletlerin menfaatlerini yok sayarak yürürlüğe koyduğu yaygın müdahaleler ve korumalardan çok şikayetçi oldukları bir zamana denk gelmektedir. Sonuç, uluslararası ticaret ve girişimcilerin verdiği kararlar önündeki ciddi engeller yüzünden ticareti, uzmanlaşmayı ve iktisadi büyümeyi en üst seviyeye çıkartma konusunda her açıdan başarısızlıktı. A.Smith tarafından "Merkantilizm (*Mercantilism*)" olarak adlandırılan bu rejim, 15.yüzyıldan 18.yüzyıla kadar uygulanmıştı. Merkantilizmin en önde gelen uygulayıcıları ve yazarları Jean Baptiste Colbert (1619-1683) ve Josiah Child (1630-1699) olarak bilinir. A.Smith'ten önce ise, bu rejime muhalif olan "Fizyokratlar (*Physiocrats*)" iktisadi meselelerin bilimsel açıklamasıyla ile ilgili derli-toplu bir analiz ortaya koyamadıkları için, "*laissez-faire (bırakınız yapsınlar), laissez-passe (bırakınız geçsinler)*" görüşü yeterince benimsenememişti (Schumpeter, 1954 ve 1996). (Merkantilizm ve Fizyokrasi akımları ile ilgili daha detaylı bilgi için: Acar, 2007)

Merkantilistlerin düşünceleri kısaca şu şekildedir: Tüm devletler, ihracatları ile ithalatları arasındaki fark olan ticari fazlaları sayesinde Merkez Bankalarının kasalarına giren altınların miktarı anlamına gelen altın para standardı uygulaması çerçevesinde, kendi zenginliklerini maksimuma çıkartmak peşindedir. Bu sebeple, her devlet ekonomiye çeşitli müdahalelerde bulunarak, ihraç edilebilir ürünlerinin üretimini arttırmaya ve ihracatı teşvik etmeye, ancak aynı zamanda çeşitli koruma tedbirleri aracılığıyla ithalatı kısıtlamaya çalışır. Sonuçta bu müdahalecilik ve korumacılık ilkesi, uygulamada, bir yandan ülke içindeki girişimcilerin ve sanayicilerin kâr arayış hareketlerini boğarken, öte yandan korumacılık uygulayan devletlerin kendileri de dahil olmak üzere, tüm ülkeler arasında ticaretin gelişmesini sınırlayarak ülkelerin gelir artışlarını ve iktisadi büyümelerini de olumsuz etkiler.

Merkantilistlerin bu yaklaşımı uluslararası siyaset alanında da "kolonileşme (*colonialism*)"yi ya da "emperyalizm (*imperialism*)"i desteklemiştir. Tüm büyük Avrupa ülkeleri, onlardan sürekli ucuz hammadde elde etmek ve onlara pahalı işlenmiş mamüller satmak amacı ile az gelişmiş ülkeleri kendi kolonileri haline getirme çabasına girmişlerdir.

Öte yandan, son çeyreğinde **Ulusların Zenginliği** kitabının yazıldığı 18.yüzyılda, teknoloji ve endüstride büyük bir ilerleme, Arnold Toynbee'nin deyimi ile "Sanayi Devrimi (*Industrial Revolution*)" hüküm sürmekteydi. Buhar makinesi bu yüzyılda icat edilmiş, elektrik kullanımı geliştirilmiş; bu sayede buharlı gemiler kullanılmaya başlanmış, demiryolları kurulmuş ve özellikle tekstil ürünleri makinalar tarafından üretilmeye başlanmıştır. Tüm bunlar sanayici ve girişimcilerin sayısını arttırırken, hepsi de devletin piyasalara gereğinden fazla müdahale etmesinden yılmıştı. Müdahalesiz ve korumasız sınai gelişme ve ekonomik rejim çağrısında öncülük yapan ülke İngiltere'ydi. Bu iktisadi gelişimlerin yanında, bu yüzyılın sonlarına doğru (1789-1799) politik düzeyde "demokrasi (*democracy*)"yi hayata geçiren "Fransız devrimi (*French Revolution*)" gerçekleşmişti. Esasen, demokrasi olgusu bundan çok az bir süre önce ABD (Amerika Birleşik Devletleri) ve İngiltere'de ortaya çıkmış, daha sonra diğer bellibaşlı Avrupa ülkelerine yayılmıştı.

Kapitalizm ya da liberal ekonomik rejim, "otoriter (*authoritarian*)" değil, "demokratik" bir politik rejim çerçevesinde en başarılı şekilde uygulanmaktadır. Bunu sebebi basittir: Hükümet yetkilileri, gerçek bir demokratik rejim çerçevesinde, devlet kurumları ve belediyeler ile iş yapmak zorunda olan girişimciler ve yükleniciler arasında ayrımcılık yapmaz ve yapamazlar; aynı şekilde rüşvet de kabul edilemez. Otoriter veya "yarı-demokratik (*semi-democratic*)" rejimlerde ise, ayrımcılık, rüşvet, yolsuzluk, adam kayırma yaygındır; seçilen politikacılar aslında seçilmenin sunduğu olanaklardan yararlanmak için siyasete atılmışlardır.

Şüphesiz ki, A.Smith'ten günümüze ekonomik ve politik hadiseler zaman içinde değişmiş, ekonomik rejim ve ekonomik politikaların uygulanmasıyla birlikte, iktisat teorisi de ilerleme kaydetmiştir. (Bu meselelere ve iktisat teorisindeki gelişmelere aşağıda kısaca değinilecektir.) Bu gelişmelerin sonucu olarak, günümüzde tercih edilen terminoloji "kapitalizm" ya da "liberal ekonomik rejim" değil, kulağa daha az doktriner gelen "piyasa ekonomisi (*market economy*)"dir. Bu piyasa ekonomisi terimi, serbest piyasaların ve özel teşebbüsün daima ekonomik rejimin temel dayanağı olduğu, ancak istikrarlı bir iktisadi büyüme ve daha az adaletsiz bir gelir ve refah dağılımı elde etmek için asgari seviyede devlet müdahalesi ve makul seviyede devlet yatırımlarına da yer verilmesi gerektiği anlamına gelmektedir. Aynı zamanda, uluslararası ticaret alanında asgari seviyede devlet korumasına yer verilmesi gerekmektedir. Esasen, bu "karışım (*mix*)" dolayısıyla, Fransa gibi diğer gelişmiş ülkelere nazaran çok daha liberal bir ekonomik rejim uygulayan ABD bile, mesela Paul Anthony Samuelson'ın standart ders kitaplarında da bulunabileceği üzere, "karma ekonomik rejim (*mixed economic regime*)" uyguluyor

sayılabilir. Bununla beraber, burada belirtilen karma ekonomik rejim terimi, Türkiye'de 1961 yılında planlı ekonomik kalkınma ile birlikte uygulanan "karma ekonomi rejimi" ile hiçbir şekilde karıştırılmamalıdır (Hiç, 1979a). Dolayısıyla, tercih edilen genel terimin günümüzde Uluslararası Para Fonu (IMF), Dünya Bankası (WB) ve diğerleri tarafından da kullanıldığı şekliyle "piyasa ekonomisi" olarak kalması en iyisi olacaktır.

Burada altı çizilmek istenen nokta, zaman içindeki dönüşüm, değişim ve gelişmelere rağmen, A.Smith'in iktisadi prensiplerinin günümüzde bile hala özünü korumasıdır. Başka bir deyişle, kapitalist sistem ya da liberal ekonomik rejim ya da günümüzdeki haliyle piyasa ekonomisi, zaman içinde kayda değer derecede dayanıklı ve gelişmeye açık ya da esnek olarak kalmışken, karşıt ekonomik rejim olan Marksist sosyalizm çökmüştür. Rusya, her ikisini uygulama hususunda pek çok hata yapsa da, yakın bir zamanda piyasa ekonomisi ve demokrasiye geçmiştir. Öte yandan Çin, 1980'lerin ortalarından itibaren iktisadi meselelere karşı pragmatik bir yaklaşım seçerek, Marksizm'in temel şartı olan devletin toprak ve sermaye üzerindeki mülkiyet hakkından zaman içinde vazgeçmiş, özel teşebbüsü ve özel yatırımı ve aynı zamanda gelişmiş ülkelerden gelen doğrudan özel yatırım akışını (*DPI: direct private investments*) desteklemeye yönelmiştir. Bu sebeple, her ne kadar politik diktatörlüğü dolayısıyla "sosyalist" kavramını koruması anlaşılabilir bir durum olsa da, günümüz Çin ekonomisi "karma ekonomi (*mixed economy*)" olarak nitelendirilmelidir (Hiç, 2001; Brown, 2009).

## 2 Liberal Ekonomik Rejim Uygulamalarında Klasik Okulu İzleyen Başlıca Gelişmeler

Şüphesiz ki, A.Smith'ten beri, teknoloji ve ekonomik gelişmeler ilerledikçe, iktisat teorisi ve buna bağlı olarak uygulanan ekonomik rejime bakış açısı da değişmiştir. Buradaki çarpıcı nokta, bu köklü değişimlere rağmen, liberal ekonomik rejimin özünün aynı kalmış, ancak modifiye edilmiş olması ve yukarıda da belirtildiği gibi, günümüzde piyasa ekonomisi olarak adlandırılmasıdır. Bu bölümde, bu değişimler, detaylı analiz yapılmadan ana hatları ile incelenecektir.

### 2.1 Çalışanların Refahını Arttırmak Üzere Yapılan Sosyal Politika Müdahaleleri

Liberal ekonomik rejim uygulanmaya başladıktan ve sanayileşmede ilk büyük atılımlar gerçekleştikten hemen sonra ortaya çıkan ilk acil ve ciddi sorun, düşük ücretler, uzun çalışma saatleri, yetersiz işyeri koşulları ve sosyal güvenceden yoksunluk dolayısıyla çalışanların refah seviyesinin çok aşağılarda olmasıydı. Bu sebeple, hem kurulan işçi sendikalarının, hem de demokratik rejimle yönetilenler de dahil olmak üzere hükümetlerin çabasıyla, asgari ücret, çalışma saat ve günlerinde sınırlama, işyeri koşullarının iyileştirilmesi, sosyal güvenliğin sağlanması ve yaygınlaştırılması gibi amaçlarla işçi sendikaları, grev ve lokavtlar ile ilgili kanunlar ve daha sonra da sağlık ve işsizlik sigortası ile ilgili kanunlar hazırlandı. Bunlara, gelir dağılımını daha da düzeltmek ve fırsat eşitliği sağlamak amaçlarıyla kademeli vergilendirme şeması ve parasız genel eğitim de eklendi.

Marksizm'den demokrasi yelpazesi içinde demokratik sola dönen işçi sendikalarının yanı sıra, bu reformların ilk savunucuları arasında, Robert Owen, Charles Marie Fourier, Louis de Rouvroy duc de Saint Simon gibi, K.Marx tarafından "revizyonist sosyalist (*revisionist socialists*)" ve "sandalye sosyalisti (*chair socialists*)" olarak aşağılanan dönemin sosyal görüşlü işadamları ve entellektüelleri de vardı. Ne var ki, zaman içinde gelişmeler, bu düşünürlerin K.Marx'tan daha gerçekçi olduklarını kanıtlamıştır (Hiç, 1978; Schumpeter, 1954 ve 1996).

Varılan sonuç, A.Smith'in "görünmez el"inin ya da "*laissez-faire (bırakınız yapsınlar)*" prensibinin işgücü ya da emek piyasası ve işçiler açısından tatmin edici bir şekilde çalışmadığıydı. Dolayısıyla, gerek işçi sendikaları gerekse hükümetler, kanunların kendilerine tanıdığı açıkça belirtilmiş haklar çerçevesinde emek piyasalarına müdahale etmek zorunda kaldılar. Bu gelişmelerin ışığında, sağ görüşlü politik partiler ortanın sağına kayarken, Marksizm'den sıyrılan sol kesim, demokrasi ve kapitalizm çerçevesinde, gelir dağılımında daha fazla düzelme ve günümüzde de daha çok fırsat eşitliği ve kişisel özgürlük talep etmeye başladılar. Sonuç olarak, kapitalizm ya da liberal ekonomik rejim, güç ve dayanıklılık kazanmış oldu.

### 2.2 Serbest Uluslararası Ticaret Tezine Bir İstisna Olarak Bebek-endüstri Argümanı ve Az Gelişmiş Ülkelerde Geçici Korumacılık Fikri

Yukarıda tartışılan sorun kadar kritik olmasa da, kısa bir süre sonra ortaya çıkan ikinci önemli sorun, gelişmiş ülkelerde serbest uluslararası ticaret ve daha az gelişmiş ülkelerde ise geçici korumacılık tezleri ile alakalıydı. Başlıca Alman politik iktisatçılarından olan Friedrich List (1841, **Politik Ekonominin Ulusal Sistemi**), İngiltere'ye nazaran daha az sanayileşmiş olan Almanya'nın durumunda, uluslararası ticaretin serbest olmasının, Alman endüstrisinin gelişerek rekabet edebilir bir hale gelmesini engelleyeceğini belirtmiştir ve bu sebeple, Alman endüstrisi gelişip rekabetçi bir yapıya kavuşana kadar geçici bir süre olmak kaydıyla ticarette koruma uygulanması gereğini savunmuştur.

Bu argüman, Klasik Okula J.S.Mill tarafından "bebek-endüstri" terimiyle eklenmiştir. Esasen bu fikir, Almanya'nın yanı sıra, İkinci Dünya Savaşından sonra iktisadi gelişmelerinin henüz başlangıç aşamasında olan daha az sanayileşmiş ülkeler için daha da büyük anlam ifade etmiştir. Burada altı çizilmesi gereken nokta, bu prensibin, genelde az gelişmiş ülke hükümetlerinin içine düştüğü bir hata olarak kalıcı ve tam bir korumacılık için değil, geçici ve giderek azalan bir korumacılık için doğru olduğudur.

### 2.3 Tam Rekabet Şartlarının Fiilen Mevcut Olmaması ve Sektörel Düzeyde Müdahalesizlik Tezi için Çalışabilir Rekabet Fikrinin Kabul Edilmesi

Klasik Okuldaki üçüncü önemli sorun, A.Smith'in "görünmez el"inin fiilen çalışmasını sağlayacak "tam rekabetçi" piyasaların bulunduğunu varsaymalarıydı. Ancak, gerçek sanayi dünyasında, tam rekabet şartlarını oluşturacak ortamı sağlamak zordu. Ayrıca, K.Marx'ın, özel yatırımcıların kısa bir süre içinde tekelciliğe döneceği gibi temel bir görüşü vardı. Buna mukabil, hükümetler uygulamada, Klasik iktisatçılar tarafından savunulduğu üzere, tekellerin, tröstlerin ve kartellerin kurulmasını engelleyici yasalar çıkardı. Teorik açıdan burada önemli olan nokta, bir sektörde bir ürün tipinin tüm sanayiciler tarafından homojen bir şekilde üretilmesi varsayımının hiçbir zaman gerçekleşmediğidir. Bu fiili gözlemlere dayanarak, bu durum, iktisat teorisinin ve uygulanacak liberal ekonomik rejim önerilerinin gerçeğe daha da yaklaşması konusunda Klasik Okulda bir diğer düzeltmeye yol açtı.

Bu yönde öncülük eden çabalar Joan Violet Robinson (1933, **Eksik Rekabet Ekonomisi**) ve Edward Hastings Chamberlin'den (1933, **Tekelci Rekabet Teorisi**) gelmiştir. Öte yandan, Marksist iktisatçılar, tekellerin doğmasının ve güçlenmesinin kaçınılmaz olduğu hususunda ısrar etmekte ve tekelci rekabetin ve oligopolistik şirketlerin reklam harcamalarını bir sosyal israf olarak değerlendirmekteydiler. Sonuçta, Tibor Scitovsky (1951, **Refah ve Rekabet**), Nicholas Kaldor (1939, "**Ekonomide Refah Meselesi**", Economic Journal), John Maurice Clark (1940, "**Çalışabilir Rekabet Kavramına Doğru**", American Economic Review), William J. Fellner (1948, **Azlar Arasında Rekabet: Oligopol ve Benzeri Piyasa Yapıları**) gibi iktisatçıların çabaları sonucunda, bu konuda bir fikir birliğine varıldı. Varılan bu fikir birliği, rekabetçi oldukları sürece oligopolistik piyasaların yanı sıra, tekelci rekabet özellikleri gösteren piyasaların da, devlet müdahalesine gerek olmadan sosyal refahı maksimuma çıkarabilecekleriydi. Gerçekten de, herhangi bir devlet müdahalesi, refahı geliştirmek yerine zarar verebilir.

### 2.4 1929 Büyük Dünya Buhranı, Eksik İstihdam Dengesi ile Çalışan Keynesgil Devrim ve İstikrarlı Büyümeye Ulaşmak için Makro-ekonomik Düzeyde Müdahale İhtiyacı

Karşılaşılan dördüncü büyük sorun, Klasik makro-ekonomik sistemin kendiliğinden otomatik olarak ulaşılan tam istihdam dengesi sonucuna aykırı bir durum olarak, depresyon evresine girildiği dönemde ciddi boyutta işsizlik yaratan konjonktür dalgalanmalarının varolmakta ısrar etmesidir. Klasik Okula göre - er ya da geç iktisadi büyümenin durmasına yol açan Malthus'çu nüfus artışı kuralına dayanan Ricardo'cu iktisadi gelişme modeli hariç olmak üzere - ekonomiler, tam istihdam dengesi üzerinde sınırsız olarak iktisadi büyümeye devam edeceklerdir. Sanayi dünyasında konjonktür dalgalanmalarının fiili olarak varlığı, mesela A.Marshall (1923, **Para, Kredi ve Ticaret**) ve benzer Klasik iktisatçılar tarafından, uygulanan para politikalarında yapılan yanlışlıklar ve bankaların açtığı kredilerin hacmindeki değişiklikler gibi sebeplerle yetersiz bir şekilde izah edilmeye çalışılmıştır.

Yukarıda da bahsedildiği gibi, K.Marx konjonktür dalgalanmalarını kapitalist sistemin kaçınılmaz bir niteliği olarak görmüş, ancak o da bilimsel olarak kabul edilebilir bir açıklama yapamamıştır (Hiç, 1979a ve 1994b). K.Marx'a göre, sonuçta bir buhran kaçınılmazdı. Gerçekten de, 1929 Büyük Dünya Buhranı (*Great Depression*), Klasik iktisat teorisinin konjonktür dalgalanmalarına henüz bilimsel bir açıklama bulamadığı bir dönemde ortaya çıktı. Artan işsizliğe çare olarak, Klasik iktisatçılar sadece işçi ücretlerinin azaltılmasını önerebildiler, ancak bu öneri bu buhrana çare olamadı. Bütçe açıklarını azaltmak amacıyla, hem ABD hem de Avrupa'daki hükümetler vergi gelirlerindeki azalmaya paralel olarak hükümet harcamalarını kıstılar; ayrıca ihracatlarını da azalttılar. Ancak, bütün bu yanlış politikalar yüzünden buhran derinleşti. Nihayet, Franklin Delano Roosevelt Demokrat partinin bir üyesi olarak ilk defa ABD başkanı olduğu 1933 yılından sonra, işçilerin ve çiftçilerin içine düştüğü bu kötü durumu düzeltmek amacıyla "Yeni Düzen (*New Deal*)"i yürürlüğe koydu. Bu politika aynı zamanda belli bir seviyeye kadar buhranın şiddetini de azalttı.

1929 Büyük Dünya Buhranı, Klasik Okula ve onun kendiliğinden otomatik olarak oluşan tam istihdam dengesi sonucuna olan güveni sarstı. Bu durum, Lawrence Robert Klein (1947) tarafından adlandırılan "Keynesgil Devrim"i ortaya çıkardı: 1936 yılında yayınlanan **İstihdam, Faiz ve Paranın Genel Teorisi** adlı kitabında John Maynard Keynes, Klasik makro-ekonomik sistemi bir kenara bırakarak, makro-ekonomik değişkenler arasında daha gerçekçi ve fiili olarak kanıtlanmış ilişkilere dayalı olan kendi sistemini geliştirdi. J.M.Keynes'in vardığı temel sonuç, ekonominin kendiliğinden otomatik olarak tam istihdam dengesine ulaşamayacağıydı. Bunun yerine, ekonomi eksik istihdam dengesine, yani istem-dışı bir işsizliğe meyilliydi. Dolayısıyla, tam istihdam ve istikrarlı iktisadi büyüme hedeflerinin sağlanabilmesi amacıyla hükümet ekonominin işleyişine para politikası ve/veya maliye politikası aracılığı ile makro-ekonomik düzeyde müdahale etmeliydi. Para arzını arttırma yoluyla faiz oranlarını düşürmeyi ve böylece özel yatırımları arttırmayı hedefleyen para politikası, resesyon ile savaşmada daha etkili olabilir, ancak depresyondan kurtulma konusunda etkili değildir. Öte yandan, vergileri düşürme yoluyla harcanabilir kişisel geliri arttırmayı ve böylece özel tüketim harcamalarını yükseltmeyi hedefleyen, ama özellikle hükümet harcamalarını doğrudan arttıran maliye politikası, depresyondan kurtulma hususunda daha etkili bir önlemdir (Hiç, 1994a; Paya, 1997; Ackley, 1961; Branson, 1989; Blaug,1985; Froyen, 1990).

İkinci Dünya Savaşı esnasında ve sonrasında, 1973 OPEC (Petrol İhraç Eden Ülkeler Teşkilatı) Petrol Krizine gelene kadar, tüm Batılı ülkeler Keynesgil makro-ekonomik rejim uyguladı ve hem enflasyonu hem de resesyonu kontrol altında tutarak nispeten istikrarlı büyüme seviyelerinin tadını çıkardılar. Daha sonra varılan fikirbirliğine göre, vergilendirmenin konjonktür dalgalanmalarına ters yönde olacak şekilde esnek bir politika aracı olarak kullanılmasının, özellikle azaltılan vergileri sonradan arttırmanın, siyasi açıdan uygulama güçlüğü yarattığının farkına varıldı. Hükümet harcamalarının bile konjonktür dalgalanmalarına ters yönde olacak şekilde esnek bir politika aracı olarak kullanılması siyasi sorunlar yaratmıştı. Dolayısıyla, pek çok ülke hem enflasyonu hem de resesyonu denetlemede sadece para politikası ile yetindi ve para politikası, istediği zaman hükümetle iletişim kursa da, bağımsız hareket eden bir Merkez Bankası tarafından uygulanmaya başladı.

Keynesgil devrim, Klasik Okul ve devlet müdahalesine yer vermeyen liberal ekonomik rejim açısından ne ifade ediyordu? Şüphesiz ki, 1929 Büyük Dünya Buhranı ile Klasik makro-ekonomik sistemin yanlışlığı, çalışanların refahının kendiliğinden azami seviyeye çıkacağı savında olduğu gibi, fiili olarak kanıtlanmış oldu. Ancak, burada altını çizmek gereken nokta, hükümetlerin piyasalara müdahale etmesi gereğini vurgulayan Keynesgil reçete, esasen, makro-ekonomik düzeyle sınırlıdır. Yoksa, J.M.Keynes ekonominin tüm üretim sektörlerinde çalışabilir rekabet şartlarının hakim olduğunu varsaymış, bu durumda mikro-ekonomik ya da sektörel düzeyde hiçbir müdahaleye gerek görmemiştir. Çalışanlar için yürürlüğe konan refah tedbirleri meselesinde olduğu gibi, makro-ekonomik düzeyle sınırlı kalan Keynesgil müdahaleci politikalar da saf *laissez-faire (bırakınız yapsınlar)* görüşüne önemli istisnalar yaratmış; ancak, bu durum kapitalizm ya da liberal ekonomik rejimi, esasen, kurtarmakla sonuçlanmış ve onu resesyonlar ve depresyonlara olduğu kadar enflasyonlara karşı da dirençli hale getirmiştir.

## 3 Kapitalizmin Başlıca Doktriner Karşıtı: Marksist Sosyalizm ve Çöküşü

Kapitalizme ya da Klasik Okula en ciddi doktriner eleştiri K.Marx'tan gelmiştir. Bunun nirengi taşları K.Marx'ın Friedrich Engels'le birlikte 1848'de yayınladığı **Komünist Manifesto** ve yine K.Marx'ın ilk cildi 1867'de, ikinci cildi 1885'te ve üçüncü cildi ölümünden sonra 1894'te yayınlanan **Sermaye** (*Das Kapital*) adlı eseridir. Bu tarihlere kadar, İngiltere, Almanya, Fransa gibi günümüzün gelişmiş ekonomileri olan ülkeler ciddi problemler yaşıyorlardı. Birtakım sosyal ilerlemelere rağmen, çalışanlar hala tatminkar bir refah seviyesine sahip olamamıştı; ekonomiler de konjonktür dalgalanmaları ve dolayısıyla ciddi oranlarda işsizlik dönemleri ile karşı karşıyaydı.

K.Marx tüm bu problemleri kapitalist sistemin içinden gelen kaçınılmaz bir zayıflık olarak görmekteydi. Devletin, ileri seviyede demokrasilerde bile, kapitalistlerin ya da "burjuvazi (*bourgeoisie*)"nin bir aracı olduğunu ve dolayısıyla, sadece onların ihtiyacına hizmet edip, çalışanların ise lehine davranmadığını iddia ediyordu; öte yandan, ona göre, din ise sadece çalışanları pasifleştirmeye aracılık etmekteydi. Burjuva sınıfı tekelleşmeye doğru giderek daha da zenginleşirken, K.Marx'ın "proleter (*proletariat*)" olarak adlandırdığı çalışan kesim ise gittikçe fakirleşiyordu. Konjonktür dalgalanmaları, kapitalist sistemin doğası gereği kendiliğinden ortaya çıkıyor ve zaman içinde daha da büyüyordu. Sonuçta, büyük bir konjonktür dalgalanmasında ciddi bir ekonomik inişe geçiş ya da buhran yaşandığı bir dönemde, "zincirlerinden başka kaybedecek hiçbir şeyleri olmayan" proleter sınıf isyan edecekti. Bu isyanın sonucu olarak, "sosyalizm" bir sistem olarak kurulacak; üretim araçları olan sermaye ve toprak çalışanlar adına devlet tarafından sahiplenilecek, üretim devlet eliyle yapılacak ve sonuçta ortaya çıkan sosyal refahtan herkes faydalanacaktı. K.Marx, bu "sosyalist devrim"in ilk olarak kapitalizmin olgun seviyede olduğu gelişmiş ülkelerde patlak vereceğini umuyordu. (Marksist modelin teknik bir değerlendirmesi ve yetersizlikleri için: Hiç, 1979a ve 1994b) "Komünizm (*Communism*)" sistemine giden yol olarak Marksist sosyalist devletin kurulmasıyla, özel sektörü oluşturan toprak sahipleri, özel üreticiler ve tüccarlar ile birlikte A.Smith ve Klasik Okul tarafından savunulan kapitalist rejim tarihe gömülecekti. K.Marx'ın görüşüne göre, üretimin devlet elinde toplanması, devlet yatırımları ve merkezi planlama sonucunda eski proleter sınıf bir "cennet (*heaven*)"e kavuşmuş olacaktı.

Oysa ki, zamanın gelişmiş olgun kapitalist ülkeleri yukarıda bahsedilen sosyal politikaları uygulamaya koyarak, demokratik sistem içinde, çalışanların refah seviyesini yükseltmeye başlamış olduklarından, K.Marx'ın bu ülkelerde gerçekleşmesini beklediği "proleter devrim" asla ortaya çıkmadı. Bu gecikme için Marksistler tarafından öne sürülen "bahane" ise, kolonileşme ve bunun olanak sağladığı ganimetlerdi.

Esasen, işçileri ve alt gelir guruplarını temsil eden ve **Komünist Manifesto** yazıldığı zaman başlangıçta Marksizm'i onaylayan işçi sendikaları ve siyasal partiler, bu görüşlerini, kapitalizm ve demokrasi lehine terk ederek, hem adı geçen sosyal gurupların refahını arttırması hem de herkese eşit fırsat tanıması amacıyla etkili sosyal önlemlerin uygulanmasına yönelmişlerdir. Savunulan bu sosyal önlemler; kademeli vergilendirme şeması, ücret yasaları ile işçi sendikaları, grev ve lokavtlar ile ilgili yasalar, sosyal güvenlik sistemi, sağlık, eğitim ve benzerleri ile ilgilidir. Bu değişimler, Rusya'da 1917 yılında başlayan Marksist-Leninist devrim esnasında ortaya çıkmıştır. Daha önceki yıllardaki tartışmalar sırasında, K.Marx tarafından "revizyonist" olarak aşağılanan Eduard Bernstein gibi sosyalistler ve yine K.Marx tarafından "sandalye sosyalisti" olarak aşağılanan Gustav Friedrich von Schmoller, Adolph Heinrich Gotthilf Wagner gibi önde gelen düşünürler, işçi sendikalarının felsefesini

Marksizm'den uzaklaştırarak, reformizme yönlendirmekte anahtar rol oynamışlardır. İngiltere'de, aralarında Beatrice Potter Webb, Herbert George Wells, George Bernard Shaw gibi düşünürlerin de yer aldığı "Fabian sosyalistler (*Fabian socialists*)", sosyalizmi onaylamış ancak proleter devrim fikrini reddetmişlerdir.

Bugün yukarıda sayılan bu sosyal prensipler, hemen hepsi ilk baştaki Marksist sosyalist duruşlarından demokratik sola ve yakın zamanda da merkez sola kaymış olan, Fransız Sosyalist Parti, Alman Sosyal Demokrat Parti, İngiliz İşçi Partisi ve benzerlerinin de içinde yer aldığı "Sosyalist Enternasyonal (*Socialist International*)" tarafından genel olarak kabul edilmiştir. Almanya, Fransa ve İngiltere'deki işçi sendikaları, "Sosyalist Enternasyonel" şemsiyesi altında birleşerek, Marksist sosyalizmi reddedip, bunun yerine kapitalizm, demokrasi ve reformizmi savunduklarından dolayı, genelde oy verenlerin çok küçük bir yüzdesini temsil eden Avrupa'daki komünist partiler, uluslararası boyutta "Komünist Enternasyonel (*Communist International*)" demek olan "Komintern (*Comintern*)" organizasyonu altında buluşmaktalardır. Aynı şekilde, üyesi olan ülkeler içinde yer alan hem merkez sol ve merkez sağ, hem de komünistler ve radikal sağ olmak üzere tüm siyasal partileri kapsayan Avrupa Birliği (*European Union*) de, Maastricht Anlaşması uyarınca, üyesi olan ve tam üyeliğe aday olan tüm ülkelerde demokrasi olmasının ve "çalışabilir" piyasa ekonomisi uygulanmasının gerekliliğini kabul etmiştir.

Öte yandan, Marksist sosyalist ya da komünist devrim, daha az gelişmiş ve daha az sanayileşmiş bir ülke olan Rusya'da, Vladimir Lenin önderliğinde, Birinci Dünya Savaşının (1914-1918) bitmesinden önce ülkede ciddi iktisadi ve sosyal problemlerin olduğu bir zaman olan 1917 yılında ortaya çıkmıştır. Daha sonra, bir diğer komünist devrim olan "Büyük Proleter Kültür Devrimi (*Great Proletarian Cultural Revolution*)", 1988-1976 yılları arasında Mao Zedong liderliğinde Çin'de ortaya çıkmıştır. Birinci Dünya Savaşını takiben, SSCB (*USSR: Soviet Union*) egemenliğine bırakılan Doğu Avrupa (*Eastern Europe*) ve Balkanlar'daki ülkeler de komünizme dönmüşlerdir. Ancak, SSCB'nin zamanın diğer az gelişmiş ülkelerini de komünizme dönüştürme çabası çoğunlukla boşa çıkmıştır. İkinci Dünya Savaşını (1939-1945) takip eden yıllarda, komünist ülkelerin sayısı en zirve noktada, iki büyük ülke olan Rusya ve Çin de dahil olmak üzere, otuz altıya çıkmıştır.

Ancak, Kasım 1989 tarihinde Berlin Duvarı'nın yıkılması ve Ekim 1990 tarihinde Almanya'nın birleşmesinden sonra, Aralık 1991 tarihinde da SSCB yıkıldı. Bu yıkılış, Sovyet iktisadi ve siyasal rejimindeki çöküşün; kapitalist dünyadaki basın ve iletişim teknolojilerindeki gelişmelerin sonucu olarak, Rus halkının, içinde yaşadıkları koşullara karşı Batı ülkelerindeki gelişmelerden haberdar olmasının ve de gelişmesine izin verilmeyen uydu devletlerin, Sovyet Rusya için taşınması çok güç bir yük haline gelmesi gerçeğinin bir sonucudur. Bu çöküşten sonra, ortaya çıkan yeni bağımsız Doğu Avrupa ve Balkan ülkelerinin hemen hemen tamamı piyasa ekonomisini, Batı ile ilişki içinde olmayı ve AB üyeliğini seçmişlerdir.

Günümüzde, Marksist sosyalist ülkelerin sayısı beşe inmiş olup, bunlardan dördü Kuzey Kore, Vietnam, Küba ve Laos gibi nispeten küçük ülkelerdir ve hepsinde komünizmin köklenmiş olması için özel siyasi koşullar vardır. Beşinci ülke olan Çin'de, halen diktatörlük uygulandığı halde, ekonomik rejim komünizmden çok uzaklaşmıştır (Brown, 2009). Vietnam sınırlı seviyede de olsa kapitalizme yönelmiştir, Fidel Castro'nun ölümünden sonra Küba'nın da bu duruma gelmesi beklenmektedir.

## 4   Az Gelişmiş Ülkeler: 1970'lerde ve 1980'lerde Kapalı Ekonomi Modelinden Uzaklaşıp Dışa Açılma ve Piyasa Ekonomisine Yönelme

İkinci Dünya Savaşını izleyen ilk yıllarda, SSCB, "merkezi planlama (*central planning*)" ile hızlı bir iktisadi gelişme ve sanayileşme gösteriyor gibi duruyordu. Uluslararası siyaset alanında, SSCB, gelişmiş Batı ülkelerinden ziyade, az gelişmiş ülkelerde sosyalizmi kurmaya meyilliydi. Bu durum, İkinci Dünya Savaşından sonra SSCB'nin egemenliğine bırakılan ülkelerin etrafında mecazi bir "Demir Perde (*Iron Wall*)" oluşturdu. Ancak, Yugoslavya ve Mısır'ın başını çektiği zamanın pek çok az gelişmiş ülkesi, Batı Dünyası ve SSCB arasında, ama bu her iki dünyadan da bağımsız olarak, bir Üçüncü Dünya olarak yer almayı tercih ettiler. Batı Dünyası ile birlikte olmayı tercih eden birtakım ülkeler, çok-partili demokratik sisteme geçerek, özel sektörü ve DPI akışını destekleyen bir ekonomik rejimi kabul ettiler. IMF ve WB'den ekonomik yardım alabildiler ve NATO'nun askeri koruması altına alındılar. (Türkiye'nin özel durumu için: Hiç, 2008) Bunlara rağmen, bu ülkelerin tümü, geri kalmış iktisadi koşullar içindeydiler ve SSCB'deki merkezi planlamanın başarı elde edeceğine olan genel kanıdan dolayı endişeliydiler. Dolayısıyla, liberal ekonomi ya da kapitalizmin prensiplerini (özel sektöre öncelik vermek olarak yorumlanan) benimsemiş olsalar dahi, fiilen, "ithal-ikameye (*import-substitution*)" dayalı bir sanayileşme, sabit kur rejimi, uluslararası ticarette nicel ithalat kısıtlamalarını ve çoklu ve yüksek oranda gümrük vergilerini de içeren yoğun bir korumacılık, çoklu ihracat teşvikleri, yüksek oranlarda devlet yatırımları (alt-yapı ve üst-yapı yatırımları), ve özel yatırımların yönlendirilmesi ve fiyatlar, vb. dahil tüm iktisadi kararlarda yoğun devlet müdahalesi şartlarını içeren "kapalı ekonomi (*closed economy*)" modelini uygulamışlardır. "Karma ekonomik rejim" ya da "étatisme (devletçilik)" olarak da adlandırılabilecek ve kesinlikle Marksist sosyalizm olmayan olan bu rejim, şüphesiz ki, A.Smith ve Klasik Okul tarafından savunulan liberal ekonomik rejimden ya da bunun modern versiyonu veya gelişmiş şekli olan "piyasa ekonomisi"den çok

uzaktır. Bu rejim, İkinci Dünya Savaşından sonra Batı Dünyası ile birlikte olmayı tercih eden pek çok Asya, Afrika ve Latin Amerika'nın az gelişmiş ülkelerinde ve özellikle Türkiye ve Hindistan'da uygulanmıştır.

Zamanın iktisadi gelişme teorisi de, az gelişmiş ülkelerde geçici bir süre için makro-ekonomik düzeyde devlet müdahalesi ve uluslararası ticarette korumacılık olması gerektiğini savunmaktaydı. İktisadi gelişme teorisinin 1940'lar ve 1960'lardaki Arthur Lewis, Karl Gunnar Myrdal, Ragnar Nurkse gibi başlıca birçok öncüleri, haklı olarak, zamanın az gelişmiş ülkelerindeki ciddi piyasa aksaklıklarına, bunun yanı sıra dışsal ekonomilerin varlığına ve ayrıca da girişimcilerin azlığına dikkat çekmişler; bu sebeple tüm bu düşünürler az gelişmiş ülkelerde devlet müdahalesini ve korumacılığı tavsiye etmişlerdir (Hiç, 1994b ve 2001). Gerçekten de, pek çok gözlemci ve iktisatçı tarafından, az gelişmiş ülkelerdeki hükümetlerin bir yandan ciddi piyasa aksaklıkları ve iktisadi geri kalmışlıkla uğraşırken, diğer yandan SSCB'nin devlet mülkiyeti ve merkezi planlama sayesinde hızlı bir iktisadi gelişme gösterdiği çıkarımı yapılarak; devlet yatırımları, devlet müdahalesi ve korumacılığa geniş yer verilmekle, beraber özel girişimin esas olduğu "karma ekonomik rejim"in uygulanmasının en mantıklı çözüm olduğu kabul edilmiştir (Hiç, 1982). Ancak burada altı çizilmesi gereken nokta, zaman içinde piyasa aksaklıkları azalarak ciddiyetini kaybetmeye, öte yandan girişimciler, özel tasarruflar ve özel yatırımlar artmaya başlayınca, genel olarak az gelişmiş ülkelerdeki hükümetlerin, ekonomi içindeki rollerini zaman içinde azaltma yoluna gitmek yerine, aşırı ve mutlak bir müdahalecilik ve korumacılık içine girerek, ekonomi yönetiminde ciddi bir başarısızlık göstermeleri hususunda ortada pek çok delil olduğudur (Hiç, 2001; Toye, 1993).

Öte yandan, Güney Kore (1945 yılında kuruldu), Tayvan (1949 yılında kuruldu), Singapur ve Şangay, İkinci Dünya Savaşından sonra, her ne kadar müdahalecilik ve korumacılığa yer verseler dahi, ihracata dayalı iktisadi büyüme stratejisini ve DPI akışı teşvikini içeren bir "açık ekonomi (*open economy*)" modelini uygulayan birkaç istisnai ülkeydi (Hiç, 2001; Toye, 1993). Bunlardan Singapur ve Şangay, şehir-devlet olup ve bölgelerinin finans ve ticaret merkezleridir; Güney Kore ve Tayvan ise, ABD'nin, bu ülkelerdeki ucuz yerel iş gücünü kullanıp ürettiği ucuz ürünleri tekrar ABD'ye geri ithal etmesiyle oluşan müsrif Amerikan özel sermayesinden faydalanmaktaydı. Yoksa, o zamanlar, DPI akışları diğer az gelişmiş ülkelere yetecek bir hacimde değildi.

Ne var ki, 1970'lerde, kapalı ekonomi modelinin, sık sık oluşan ödemeler dengesi açıklarının yanı sıra, gelir dağılımını olumsuz etkileyen sürekli ve çok yüksek enflasyon oranları yüzünden iktisadi büyüme hızında yavaşlamaya yol açtığı ortaya çıktı. Dolayısıyla, 1970'ler boyunca ve 1980'lerin başında, az gelişmiş ülkeler, sadece IMF ve WB'nın teşvikiyle değil, aynı zamanda kendi kasıtlı tercihleriyle de piyasa ekonomisi doğrultusunda "dışa açılma (*outward-orientation*)" ve açık ekonomi modeline yöneldiler (Hiç, 2001; Toye, 1993). Bu tarihlere gelindiğinde artık, SSCB'de uygulanan merkezi planlama altında meydana gelen hızlı sanayileşme ve iktisadi büyümenin de şişirilmiş bir değerlendirme ve tahmin olduğu anlaşıldı. Dışa açılmanın ve piyasa ekonomisine yönelmenin gerekliliği, az gelişmiş ülkelerdeki gelişme iktisadı ile ilgilenen Hollis B. Chenery (1979 ve 1983), Joan Violet Robinson ve Moshe Syrquin (1986), Béla Balassa (1989 ve 1982), Anne Osborn Krueger (1983), Jagdish N. Bhagwati (1978 ve 1988), David Little (1982) gibi ileri gelen iktisatçılar tarafından da akılcı bulundu ve teşvik edildi.

Dışa açılmaya doğru bu yönelme, esnek kur ya da piyasa kuru uygulamayı, ithalatta nicel kısıtlamaların ve gümrük vergilerinin ciddi miktarda azaltılmasını, ihracat teşviklerinin azaltılmasını, devletin ve belediyelerin sahip oldukları kurumlar için uygun bir özelleştirme programı oluşturmayı, özel sektör ve DPI akışlarını teşvik etmeyi, devlet eliyle üretimde ve kamu yatırımlarında kısıntıya gitmeyi ve fiyatlar ve diğer iktisadi kararlar üzerindeki devlet müdahalelerini kaldırıp kararları piyasa güçlerine bırakmayı gerektiriyordu (Hiç, 1992 ve 1982). Böylece az gelişmiş ülkeler, bu düzeltmeler ve ilerlemeler sonucunda, günümüzde piyasa ekonomisi olarak adlandırılan A.Smith ve Klasik Okulun temel görüşlerine yaklaştılar.

Yukarıda da belirtildiği gibi, kısa bir süre sonra, Rusya ve Çin'de olduğu gibi, halkın refah seviyesini arttırmaktan çok uzak kalan Marksist sosyalizm, merkezi planlama ve sosyal devlet diktatörlüğünün, kaynakların kullanımında, tüketici olan halkın refahını yükseltmek yerine, askeri birikimleri arttırmaya öncelik vererek, otoriter ve katı bir "polis devletine (*rigid police state*)" dönüştüğü ortaya çıkmaya başladı; ayrıca bu Marksist sosyalist ülkeler, Batı Dünyası ile karşılaştırıldığında, teknoloji ve iktisadi büyümede de geri kalmışlardı. Zaman içinde gelişen basın araçları vasıtasıyla, bu ülkelerde yaşayan halk, ABD ve Batılı ülkelerdeki işçi ve çiftçilerin, komünist devletlerin propagandalarının aksine, daha yüksek bir refah seviyesinden yararlandıklarının farkına vardı. Sonuçta bütün bunlar, 1991 yılında SSCB'nin yıkılmasına yol açtı; dolayısıyla özgür kalan pek çok Doğu Avrupa ve Balkan ülkesi Batı modelini, demokrasiyi ve piyasa ekonomisini seçti. Bunlardan çoğu AB'ne tam üye ya da tam üyelik adayı olarak kabul edildi. Komünist sistemde reform (*Glasnost*) yapamayan Rusya ise, her iki alanda da ciddi eksikleri olsa dahi, demokrasiye ve kapitalist sisteme yöneldi. Öte yandan Çin, Deng Xiaoping ile 1980'lerin ortalarından beri bir pragmatik yaklaşım izlemekte olup, yakın zamanda ise özel sektörü ve DPI akışını teşvik ederek kesinlikle bir karma ekonomik rejime geçmiştir.

Burada altı çizilmesi gereken sonuç, ilk olarak A.Smith ve Klasik Okul tarafından ortaya atılan liberal ekonomik rejim ya da kapitalizm, tarih boyunca dayanıklı ve esnek olduğunu kanıtlamıştır; şöyle ki, zaman içinde gerekliliği görülen düzeltmelere ve piyasa ekonomisi olarak gelişip adlandırılmasına rağmen geçerliliğini sürdürmüş ve dünyada yayılmaya devam etmiştir. Buna karşın, doktriner karşıt bir ekonomik rejim olan Marksist sosyalizm ve merkezi planlama ise çökmüştür. Yukarıda da bahsedildiği gibi, günümüzdeki istisnalar, komünist

olarak kalan Kuzey Kore, Vietnam, Küba ve Laos'un içinde olduğu birkaç ufak devlet ile Venezuela, Arjantin, Bolivya gibi yakın zamanda Amerikan karşıtlığı ve yarı-diktatörlükle beraber katı bir étatisme (devletçilik) ve solculuğa geri dönen birkaç Latin Amerika ülkesidir.

## 5   Günümüzde Devletlerin Makro-ekonomik Düzeyde Müdahale Etmesi yahut Etmemesi Sorusu

A.Smith ve Klasik Okulun kendiliğinden otomatik olarak oluşan tam istihdam dengesi sonucunu fiilen geçerli hale getirmek adına yapılan ilk girişim, makro-ekonomik değişkenler arasında Keynesgil ilişkileri kullanarak, ama bu defa, Keynesgil "tasarruf-yatırım tutarsızlığı"nın varlığına rağmen, ekonomiyi uzun vadede tam istihdam dengesine getirecek olan "Pigou" ya da "refah etkisi" değişkenini özel tasarruf denklemine eklemek şeklinde olmuştur. Bu refah etkisi, ilk olarak Arthur Cecil Pigou (1941, **İşsizlik Teorisi** , 2.ed.) tarafından arz edilmiş, daha sonra Don Patinkin (1965, "**Para, Faiz ve Fiyatlar**", American Economic Review) tarafından kabul edilip geliştirilmiştir ve ilk olarak Sir John Richard Hicks (1937, "**Mr. Keynes ve Klasikler: Bir Yorum Önerisi**", Econometrica) tarafından kullanılmıştır. Bu yeni ortaya çıkan ve 1960'lara kadar akademik çevrelerde itibar görerek tartışılan makro-ekonomik sisteme "Yeni Klasik Sentez (*New Classical Synthesis*)" adı verilmiştir. Ancak, daha sonra yapılan istatistiksel araştırmalar göstermiştir ki, "Pigou etkisi" yok değilse de önemsenmeye değmeyecek kadar azdır. Herşeye rağmen, özellikle ABD ve bunun yanı sıra İngiltere'de, güçlü bir iktisadi ve siyasi muhafazakarlık akımı varlığını sürdürmüştür. OPEC tarafından 1970'li yılların başında arttırılan petrol fiyatlarının yol açtığı "stagflasyon" (stagnasyon artı enflasyon) sonrasında, makro-ekonomik düzeyde devlet müdahalesi gereğine dayanan Keynesgil makro-ekonomik sisteme karşı yapılan eleştiriler, akademik olduğu kadar siyasi çevrelerde de - haksız yere - doruğa çıkmıştır.

Böylece, 1970'lerde, hem daha önce Milton Friedman (ve takipçileri olan Karl Brunner, Allan H. Meltzler, Thomas Mayer) tarafından ortaya atılan "Parasalcılık (*Monetarism*)" özellikle İngiltere'de, hem de "Yeni Klasik Okul (*New Classical School*)" (takipçilerinin en önemlileri olan Robert Joseph Barro, John Benjamin Long, Charles Irwing Plosser, Robert Emerson Lucas Jr., Thomas John Sargent) özellikle ABD'de popülarite kazanmıştır. Bu her iki makro-ekonomik okul da, A.Smith'i temel alan Klasik Okul gibi, ekonominin kendiliğinden otomatik olarak tam istihdam dengesine ulaşacağı sonucunu verirler; dolayısıyla da hem mikro-ekonomik hem de makro-ekonomik düzeyde devletin müdahalesine yer vermemişlerdir; bu ise Keynesgil makro-ekonomik sisteme aksi bir tavsiyedir. Parasalcı Okul, fiyatlardaki bir düşmeyi engellemek amacıyla devletin para arzını ancak artan gelirle birlikte sabit bir oranda arttırması gerektiğini söylemiştir; Yeni Klasik Okul ise devlet tarafından ekonomiye asla müdahale edilmemesini savunmuştur. Öte yandan, "Arz Yanlı İktisat (*Supply-side economics*)" görüşünün takipçileri (Arthur Betz Laffer, Robert Alexander Mundell), vergi oranlarındaki bir azaltmanın, uzun vadede, ürün ve hizmet hacimlerini arttıracağı, bunun da toplam vergi gelirlerini ve genel olarak devlet gelirlerini arttırarak, dolayısıyla iktisadi büyümeye ivme kazandıracağı çıkarımında bulunmuşlardır. Bunun aksine, Keynesgil makro-ekonomik sisteme göre, vergi oranlarındaki bir azaltma, arzı değil talebi arttırmak için kullanılmalı; dolayısıyla vergi indirimi, ellerine geçen ek geliri yatırım olarak değil, tüketim olarak değerlendirecek olan halkın düşük gelir guruplarına uygulanmalıydı. ABD'de, Ronald Reagan'ın başkanlığı döneminde (1980-1989), Yeni Klasik ve Parasalcı görüşlerle birlikte Arz Yanlı İktisat prensipleri uygulanmıştır; ancak, işsizlik, "doğal işsizlik oranı (*natural rate of unemployment*: %4)" seviyesine düşeceği yerde, giderek artmaya devam etmiştir. İngiltere'de de, Margaret Thatcher'in başbakanlığı döneminde (1979-1990) liberal ve parasalcı politikalar uygulanmış, ancak burada da benzer olumsuz sonuçlar gözlemlenmiştir.

Zamanla, 1980'lerden başlayarak, devletlerin makro-ekonomik düzeyde müdahale etmeme prensibinin uygulamada başarısız olduğunun anlaşılması ile birlikte, Keynesgil makro-ekonomik sistem tekrar akademik çevrelerde geniş çapta kabul görmeye başlamıştır. Ancak, Keynesgil görüşün iki yeni versiyonu ortaya çıkmıştır. Bunlardan biri, "Yeni Keynesgil Okul (*New Keynesian School*)" olarak adlandırılarak ABD'de ortaya çıkmış; makro-ekonomik analize önce mikro-ekonomik düzeyde başlayarak, daha sonra, en azından kısa vadede, makro-ekonomik düzeyde Keynesgil eksik istihdam seviyesinde kalma sonucu, yine Keynesgil makro-ekonomik politika reçetelerine başvurmayı tavsiye etmiştir. Yeni Keynesgil iktisatçılar, Yeni Klasik Sentezin uzun vadede başarılı olacağına, ancak bu sürecin, kendiliğinden otomatik olarak oluşacak tam istihdam dengesini bekleyen halk için çok uzun ve bıkkınlık verici olacağına inanmaktaydılar. Yeni Keynesgil iktisatçıların en önde gelenleri arasında Alan Stuart Blinder, John Brian Taylor, Stanley Fischer ve Robert James Gordon yer almaktadır. İkinci versiyon, "Post Keynesgil Okul (*Post Keynesian School*)" olarak adlandırılarak ve İngitere'de ortaya çıkmış; Yeni Klasik Sentezi reddederek, Yeni Keynesgil Okuldan ziyade, orijinal Keynesgil varsayımlara daha yakın bir yer almıştır. Post Keynesgil iktisatçıların öncüleri içinde en önemlileri arasında Roy Forbes Harrod, Joan Violet Robinson, Richard Ferdinand Kahn, Nicholas Kaldor, Michal Kalesci, George Lennox Sharman Shackle ve bunlara daha sonra katılarak Yeni Klasik Sentezi çürüten John Richard Hicks yer almaktadır. Post Keynesgil iktisatçılara sonradan katılanlar içinde en önemlileri arasındaysa Malcolm Charles Sawyer, Victoria Chick, Hyman Philip Minsky, Philip Arestis ve Paul Davidson yer almaktadır. (Güncel makro-ekonomik okulların bir özeti için: Blinder, 1998; detayları için: Hiç-Birol, 2001)

Sonuç olarak, görüldüğü gibi, günümüzde, mikro-ekonomik düzeyde, hem işçiler hem de çiftçiler lehine uygulanan refah seviyesini yükseltici önlemler hariç olmak üzere, rekabetçi piyasaların varolmaları sayesinde, devletlerin müdahale etmemesi prensibini benimseyen A.Smith ve orijinal Klasik Okula dayanan liberal ekonomik rejim ya da kapitalizm ya da bugünkü terimiyle piyasa ekonomisi uygulanmaktadır. Bununla beraber, makro-ekonomik düzeyde ise, tam istihdama ulaşmak, istikrarlı bir iktisadi büyüme sağlamak, enflasyonları olduğu kadar resesyonları ve depresyonları önlemek amacıyla, devlet müdahalesi gereği prensibini benimseyen Keynesgil sistem ve onun politika reçetelerini uygulamak daha gerçekçidir. Esasen, bu makro-ekonomik politika reçetelerini uygulamak, ekonomik rejimin dayanıklılığına da büyük çapta katkıda bulunmuştur; buna karşın, devletin müdahale etmediği durumlarda, makro-ekonomide tam istihdam dengesinin kendiliğinden otomatik olarak oluşması mümkün olmamıştır.

# Geçiş Ekonomilerinde Üçüz Açık Hipotezinin Geçerliliği

# Validity of Triple Deficit Hypothesis in Transition Economies

Asst. Prof. Dr. Dilek Özdemir (Atatürk University, Turkey)

Ph.D. Candidate Özge Buzdağlı (Atatürk University, Turkey)

Prof. Dr. Ömer Selçuk Emsen (Atatürk University, Turkey)

Asst. Prof. Dr. Ahmet Alkan Çelik (Beykent University, Turkey)

## Abstract

Triple deficit hypothesis defined as a status in which budget deficit, current account deficit and saving-investment gap are seen together has become important to explain the equalization problems of the countries in recent years. Also, the cases where saving-investment gaps are equalized by means of external deficit or public deficit is attempted to equalize by means of external deficit define twin deficit. While Conventional Keynesian Approach argues that budget deficit causes current account deficit, Ricardian Equivalence Approach claims that there is no correlation between budget deficit and current account deficit. In this study, the validity of the triple deficit hypothesis for the 17 transition economies between 2003-2011 by means of convenient and uninterrupted data set was analyzed via panel regression models. The data set was collected from World Bank and IMF databases. The data belonging to the variables of current account deficit, budget deficit and saving-investment gap were employed. The findings showed that the triple deficit hypothesis for the 17 transition economies is not valid in the period among 2003-2011. However, some evidence was found about the validity of Ricardian Equivalence Approach and the private sector saving-investment gap was found to be the primary riser of the current account deficit.

## 1 Giriş

Cari açıklar, kamu dengesizliğinin yansıması olan bütçe açıkları ile reel ekonomik büyümenin kaynağı olan tasarruf-yatırım dengesizliğinin sonuçları olarak kabul edilmektedir. Dolayısıyla iç denge göstergelerinden kamu boyutu ve reel büyüme formunun temel kaynağı olan tasarruf ve yatırım olgusu, kısa ve uzun dönemli makroekonomik göstergeler üzerinde ve ekonomik istikrarın sağlanmasında temel belirleyici faktörlerdir ve değişkenler aynı zamanda politika yapıcıların karar almasında önem arz eder. Özellikle son zamanlarda başta yükselen piyasa ekonomileri olmak üzere pek çok ülkenin ifade edilen göstergeler bazında bir denge sağladığını söylemek oldukça güçtür. Politika yapıcıları ülkelerin sürdürülebilirlik özellikleri kaybolmadıkça, mevcut açıkları dikkate alarak ekonomi politikalarını devam ettirmeye çalışmaktadırlar.

Diğer taraftan 1980'lerin başından günümüze dünya ekonomilerinde ortaya çıkan cari açık ve bütçe açığı problemleri bu açıklar üzerine yoğun tartışmalara ve araştırmalara neden olmuştur. Bir ekonomide hem cari açığın hem de bütçe açığının varlığı ise iktisat literatüründe "ikiz açık hipotezi" olarak ifade edilmektedir. Bu iki açık arasında olası beklenen dört tür ilişki söz konusudur (Kouassi, Mougoue, Kymn, 2004). Bunlardan ilki, bütçe açıkları ile cari açık arasında pozitif yönde bir ilişkinin olduğu ve ilişkinin yönünün bütçe açıklarından cari açığa doğru olduğunu ifade eden "Keynesyen Yaklaşımdır". Keynes'e göre, vergilerdeki bir azalma ve/veya kamu harcamalarında bir artışın yaşanması durumunda ortaya çıkabilen bütçe açıkları, reel faizler üzerinde baskı oluşturacak ve bu durum ülkeye sermaye girişini arttırarak ulusal paranın değer kazanmasına yol açacaktır. Değerlenen ulusal para ise dış ticaret dengesinin ülke aleyhine gelişmesine neden olarak cari işlemler dengesinin açık vermesine sebebiyet verecektir (Froyen 1999). İkincisi, cari açıkların bütçe açıklarına yol açmasıdır. Özellikle rekabet gücünün azalmasıyla ortaya çıkan ithalatın yurtiçi kaynak kullanımını düşürmesine paralel olarak gelirlerde yol açtığı düşüşler ve bunun sonucunda kamu gelirlerindeki azalmaların yarattığı bütçe açıklarıdır. Üçüncüsü, bütçe açıklar ile cari açıklar aralarında çift yönlü bir ilişkinin olmasıdır. Dördüncüsü ise bütçe açıkları ile cari açıklar arasında herhangi bir ilişki olmadığını ileri süren "Ricardocu Denklik Yaklaşımıdır". Ricardocu Denklik yaklaşımına göre dış ticaret dengesi, faiz oranları ve yatırım miktarı bütçe açığındaki değişmelerden etkilenmemektedir (Akbostancı, Tunç, 2002). Bütçe açıklarının borçlanmayla finanse edilmesinin vergilerle finans edilmesi arasında herhangi bir fark olmadığı; bu uygulamanın sadece vergi toplamının maliyetini cari dönemden gelecek döneme kaydıracağı ileri sürülmektedir. Rasyonel birey bugün vergi ödemekle yarın vergi ödemek arasında bir fark görmemektedir. Vergilerin zamanlaması kişilerin yaşam boyu bütçe kısıtını etkilememekle beraber onların tüketimlerini değiştirmemektedir (Bernheim, 1987). Dolayısıyla bütçe açıklarının vergilerle veya borçlanma ile finanse edilmesinin ekonomide bir etki yaratmayacağı ifade edilmektedir. Bu dört olasılık doğrultusunda yapılan çalışmalardan bazıları Tablo 1'de özet olarak verilmiştir.

İkiz açık hipotezinden hareketle son yıllarda üzerinde sıkça durulan konulardan bir diğeri de cari açıklar ile bütçe açıklarının temel kaynağının yurtiçi tasarrufların yetersizliğidir. Yurtiçi tasarruf-yatırım açığının varlığında, ikiz açıklara ilişkin analizler ise daha çok yurtiçi literatürde bu kez de "üçüz açık" olarak adlandırılmaktadır.

Üçüz açık analizinde cari açık, bütçe açığı ve tasarruf-yatırım açıkları arasındaki ilişkilere odaklanılmaktadır. İkiz açıkların varlığını sınayan çok sayıda çalışma bulunurken, üçüz açığa ilişkin çalışmaların sayısının oldukça sınırlı oluşu dikkat çekmektedir.

*Tablo 1: Bütçe Açıkları ile Cari Açıklar Arasındaki İlişki Olasılıkları*

Üçüz Açıklar kavramını denklemsel olarak tanımlayabilmek için, öncelikle makroekonomik denge tanımlaması yapmak gerekmektedir; çünkü kavramda adı geçen "açık"lar üç önemli makroekonomik dengenin sağlanamadığını ifade etmektedir. Bu çerçevede tasarruf açığı, bütçe açığı ve cari işlemler açığı arasındaki ilişkinin teorik temeli, milli gelir özdeşliği ile elde edilebilir:

$$Y = C + I + G + (X-M) \qquad (1)$$

(1) no'lu denklemde (Y) milli gelirini, (C) tüketim harcamalarını, (I) yatırım harcamalarını, (G) kamu harcamalarını, (X) mal ve hizmet ihracatını, (M) mal ve hizmet ithalatını, dolayısıyla (X-M) net ihracatı ifade etmektedir. Net ihracat karşılıksız transferler kalemi göz ardı edildiğinde aslında cari işlemler dengesini verir:

$$CA = X-M \qquad (2)$$

Ülke içinde tasarrufların yatırımlardan az olması da cari açığa neden olacaktır.

$$CA = S-I \qquad (3)$$

Tasarruflar özel kesim ve kamu kesimi tasarruflarının toplamından oluşacaktır. Sp; özel kesim tasarrufları Sg; kamu kesimi tasarruflarını göstermektedir.

$$CA = (Sp+Sg)-I \qquad (4)$$

Kamu kesimi tasarrufları açık şekilde yerine yazıldığında (5) nolu özdeşliği elde etmek mümkün olur.

$$CA = Sp + (T-G) - I \qquad (5)$$

$$CA = (Sp-I) + (T-G)$$

$$CA = TA + BA \qquad (6)$$

TA, özel kesim tasarrufları ile yatırımları arasındaki farkı yansıtan tasarruf açığını, BA, kamu gelirleri ile kamu harcamaları arasındaki farkı yansıtan bütçe açığını ve CA ise mal ve hizmet ihracatı ile ithalatı arasındaki farkı temsilen cari işlem açığını ifade etmektedir. (6) no'lu denklem kamu kesimi gelir ve gider dengesi ile özel kesimin tasarruf ve yatırım dengesini toplamının cari dengeye eşit olduğunu göstermektedir. Bu bağlamda yurtiçi yatırımlara kıyasla yurtiçi tasarrufların yetersiz kalmasına bağlı olarak ortaya çıkacak olan tasarruf açığı ikiz açık problemine eşlik ederek üçüz açıkları oluşturmaktadır (Szakolczai, 2006). Denklemin sağ tarafındaki iki dengenin toplamı bir ülkenin iç ekonomik dengesini, sol tarafı ise dış ekonomik dengesini göstermektedir. Yani bir ülkenin iç ekonomik dengesi ile dış ekonomik dengesi birbirine eşittir ve bir ülkenin iç ekonomik dengesi ne kadar açık veriyorsa, dış ekonomik dengesi de o kadar açık veriyor demektir. Bunun anlamı iç ekonomik dengedeki sapmanın dış ekonomik dengesizlikle absorbe edildiğine, yani finanse edildiğine işaret eder. İç ekonomik dengeyi oluşturan öğelerden birinin açık vermesinin yanında cari dengenin de açık vermesi ikiz açık, iç dengelerden her ikisinin açık vermesiyle beraber cari dengenin de açık vermesi ise üçüz açık olgusuyla ifade edilmektedir (Tülümce, 2013).

Çalışmada geçiş resesyonunu ve hiper enflasyonu en dramatik bir şekilde yaşayan eski doğu bloğu ülkelerinden 2003-2011 dönemi kapsamında uygun veri setine sahip 17 geçiş ekonomisi için üçüz açık hipotezinin geçerliliği panel regresyon modelleriyle araştırılmıştır. Bu amaç doğrultusunda çalışma beş bölümden oluşturulmuştur. İkinci bölümde konu ile ilgili literatürde yer alan çalışmalara değinilmekte, üçüncü bölümde çalışmanın uygulama kısmına ait veriler ve yöntem tanıtılmakta, dördüncü bölümde ise uygulama bulgularına yer verilmektedir. Çalışma genel bir değerlendirmenin yapıldığı sonuç bölümüyle tamamlanmaktadır.

## 2 Literatür Özeti

Üçüz açıklarla ilgili olarak kısıtlı sayıda literatürün var olduğu dikkate alındığında, bu tür literatürün daha çok Türkiye ekonomisi özelinde olduğu dikkat çekmektedir. Bu kısıtlı ve Türkiye ekonomisi üzerine literatürün adeta istisnalarından birisi Chowdhury ve Saleh (2007) tarafından yapılan çalışmadır. Her iki araştırmacı da Sri Lanka için üçüz açık hipotezini test etmeyi amaçlamışlardır. 1970-2005 dönemine ait yıllık verilerle gerçekleştirdikleri ARDL analizi sonuçlarına göre, üçüz açık hipotezinin Sri Lanka için geçerli olduğu tespit edilmiştir. Buna göre bütçe açığının ve/veya tasarruf-yatırım farkının azaltılmasının Sri Lanka'da cari açığın giderilmesine yardımcı olacağına vurgu yapılmıştır.

Sürekçi (2011), üçüz açık hipotezini Türkiye için incelediği çalışmasında, 1987:1-2007:3 dönemine ait çeyrek verilerle VAR analizlerini gerçekleştirmiştir. Elde edilen bulgulara göre kamu açıkları ve cari açık arasında ilişkinin var olduğu görülmüş, ancak tasarruf-yatırım oranı ve cari açık arasında herhangi bir nedensellik ilişkisine rastlanılmamıştır. Buna göre yazar üçüz açık hipotezinin Türkiye'de geçerli olmadığı sonucuna ulaşmıştır.

Akıncı ve Yılmaz (2012), Türkiye için üçüz açık hipotezini test ettikleri çalışmalarında, 1975-2010 dönemi için yıllık verilerden yararlanarak ARDL analizi yapmışlardır. Ortaya çıkan sonuçlarda, tasarruf açıkları ile bütçe açıklarının cari açıklar üzerinde hem kısa hem de uzun dönemde pozitif bir etkisinin olduğu görülmüş, dolayısıyla üçüz açık hipotezinin Türkiye ekonomisinde geçerli olduğu kanıtlanmıştır.

Tülümce (2013), Türkiye'de üçüz açık hipotezini test etmek amacıyla, 1984-2010 dönemine ait yıllık verileri kullandığı çalışmasında VAR analizi yapmıştır. Analiz sonuçlarında sadece cari açık ile tasarruf-yatırım açıkları arasında ilişkinin olduğu ve buna karşılık bütçe açığı ile cari açık arasında ilişkinin bulunmadığı görülmüştür. Elde edilen bu bulgular üçüz açık hipotezinin ise Türkiye için geçerli olmadığına işaret etmektedir.

Güder (2013), Türkiye için üçüz açık hipotezini test ettiği çalışmasında 1980-2012 dönemine ait yıllık verilerle VAR analizi gerçekleştirmiştir. Analiz sonuçlarında bütçe açığının hem kısa hem de uzun dönemde özel tasarruf açığını etkilediği görülmüş, özel tasarruf açığının özellikle kısa dönemde cari açık üzerinde etkili olduğu ortaya çıkmıştır. Böylece yazar üçüz açık hipotezinin Türkiye için geçerli olduğu bulgusuna ulaşmıştır.

İnce (2013), Türkiye'de üçüz açık sorununu irdelemek amacıyla yaptığı çalışmasında, 1975-2010 dönemine ait yıllık verileri kullanarak, ARDL eş-bütünleşme ve Toda-Yamamoto nedensellik analizlerini gerçekleştirmiştir. ARDL analizi sonucunda bütçe açığı, dış ticaret açığı ve tasarruf-yatırım açığı arasında eş-bütünleşme ilişkisine rastlanılmamıştır. Nedensellik testi sonuçlarında ise dış ticaret açığından tasarruf-yatırım açığına, dış ticaret açığından bütçe açığına ve tasarruf-yatırım açığından bütçe açığına doğru nedensellik ilişkisi olduğu görülmüştür. Gerek eş-bütünleşme analizleri, gerekse nedensellik analizlerinden elde edilen sonuçlardan Türkiye ekonomisinde üçüz açık olgusunun olmadığı sonucuna varılmıştır.

Tang (2014), üçüz açık hipotezinin Amerika için geçerliliğini test etmek amacıyla 1960:1-2013:1 dönemi için çeyrek verilerden yararlanmıştır. ARDL ve Toda-Yamamoto nedensellik yöntemlerini kullanarak gerçekleştirdiği analiz sonuçlarında bütçe dengesi, cari hesap dengesi ve sermaye ve finans hesabı dengesi arasında uzun dönemli ilişki olduğu görülmüştür. Amerika için üçüz açık hipotezinin geçerli olduğu nedensellik testi sonuçlarıyla da desteklenmiştir.

Dünya genelinde ABD ve Sri Lanka için yapılan analizlerde üçüz açık olgusunun işlediği tespit edilirken; Türkiye ekonomisi üzerine yapılan çalışmalardan bir kısmında üçüz açığın olduğu ve bir kısmında da bu türden bir nedensel ilişkinin bulunmadığı tespit edilmiştir. Türkiye ekonomisi özeli için ortaya çıkan farklılığı kullanılan yöntem ve/veya veri dönemindeki farklılıklarla açıklamak mümkündür.

## 3 Veri ve Yöntem

Bu çalışmada, uygun veri setine sahip 17 geçiş ekonomisi için tasarruf açığı ve bütçe açığının cari açıklar üzerindeki etkilerini araştırabilmek için panel veri analizlerinden yararlanılmıştır. Ele alınan ülkeler, Belarus, Bulgaristan, Hırvatistan, Çek Cumhuriyeti, Estonya, Gürcistan, Macaristan, Kazakistan, Letonya, Litvanya, Moldova, Polonya, Romanya, Rusya, Slovakya, Slovenya ve Ukranya'dır. 2003-2011 dönemine ait yıllık verilerden yararlanılmıştır ve veri seti Dünya bankası ve IMF veri tabanlarından derlenmiştir

Çalışmada, bütçe açığı ile tasarruf açığının cari açıklar üzerindeki etkilerinin araştırılmasında aşağıdaki temel eşitlikten yararlanılmıştır:

$$CA_{it} = \alpha_0 + \alpha_1 BA_{it} + \alpha_2 TA_{it} + u_{it} \qquad (4)$$

Çalışmaya konu olan ve modelin bağımlı değişkenini oluşturan CA, cari açığı ifade ederken, cari açıkların GSYİH içindeki yüzdesi dikkate alınmıştır. BA, bütçe açıklarının da GSYİH'ye oranı ve TA da tasarruf-yatırım farkının GSYİH'ye oranını temsil etmektedir. i alt indisi, ülkeleri; t alt indisi ise yılları göstermektedir. Birim boyutu 17 ülkeden ve zaman boyutu ise 9 yıldan oluşmaktadır. $u_{it}$; hata terimini göstermektedir. Panel data uygulamalarının büyük bir kısmında $\mu_i$'nin gözlemlenemeyen spesifik bireysel etkileri (burada ülkeye özgü etkiyi), $v_{it}$'nin stokastik hata terimini gösterdiği ve $u_{it} = \mu_i + v_{it}$ biçiminde ifade edilen hata terimleri için tek

yönlü modeli kullanılmaktadır. Bununla birlikte hata terimleri için iki yönlü model kullanılması durumunda, denklem $u_{it} = \mu_i + \lambda_t + v_{it}$ biçimini alacaktır. Burada $\lambda_t$ gözlemlenemeyen zaman etkilerini göstermektedir.

Bilindiği gibi panel veriler zaman ve birim boyutunu dikkate aldığından, örneklemdeki gözlem sayısı artmakta ve bu da serbestlik derecesini artırarak bağımsız değişkenler arasındaki çoklu doğrusal bağlantıyı azaltmaktadır. Bundan ötürü uygulanacak testlerin gücünde oldukça büyük iyileşmeler görülmekte ve tahminlerin etkinlikleri artmaktadır (Hsiao, 2003). Tüm bu avantajlarının yanı sıra panel veri modelleri modele dahil edilen kukla değişkenler yardımıyla, yatay kesit birimleri arasındaki bireysel farklılıkları ve zaman boyutundaki zamansal farklılıkları belirleyebilmektedir.

Çalışmada ilk olarak birim ve zaman etkilerin var olup olmadıkları sabit etkiler modeli için F testi; rassal etkiler modeli için ise LR testi uygulanarak araştırılmıştır. Birim ve zaman etkilerine göre tahmin edilmesi gereken modelin tek yönlü mü, çift yönlü mü olduğuna karar verdikten sonra, tahminde kullanılacak modele karar verilir. Rassal etki modelindeki birim etki ile açıklayıcı değişkenler arasındaki korelasyonun sıfır olduğu varsayımı [$H_0$: E($\mu_i$, $X_{it}$)=0], Hausman (1978) testi ile sınanmaktadır. Bu varsayım sağlanamadığında rassal etki tahmincisi olan genelleştirilmiş en küçük kareler tahmincisi, yansız ve tutarlı değildir. Bu nedenle etkilerin rassal olduğu varsayımı altında uygun tahminci seçimi önem arz eder.

Daha sonraki aşamada tahmin edilen modelde otokorelasyon, değişen varyans ve birimlerarası bağımlılık testleri yapılmaktadır. Seçilen model tek yönlü sabit etkiler modeli ise otokorelasyonun varlığı için Baltagi-Wu'nun Yerel en iyi değişmez testi veya Bhargava, Franzini ve Narendranathan'ın Durbin Watson testi yapılır. Diğer taraftan değişen varyansın varlığı için de değiştirilmiş Wald testi uygulanabilirken, birimler arası korelasyonun tespiti için Breush-Pagan Lagrange Çarpanı testi veya Pesaran'ın, Friedman'ın ve Frees'in testi uygulanabilir. Seçilen model tek yönlü rassal etkili model ise otokorelasyonun varlığı için Bhargava, Franzini ve Narendranathan'ın Durbin Watson ve Baltagi-Wu'nun Yerel en iyi değişmez testi ya da Lagrange Çarpanı ve Düzeltilmiş Lagrange Çarpanı testleri yapılırken, değişen varyans için Breush-Pagan Lagrange Çarpanı testi (Wooldridge, 2003) ya da Levene, Brown ve Forsythe'nin testleri, birimler arası korelasyon için Pesaran, Friedman ve Frees'in testi uygulanır. Değişen varyans, otokorelasyon ya da birimler arası korelasyon varsayımdan sapmalarının en az birisinin gerçekleştiği durumda hata terimlerinin varyans-kovaryans matrisi birim matris olma özelliğini kaybetmektedir (Tatoğlu, 2012). Bu durumda varsayımdan sapmaya uygun bir düzeltme yöntemi seçilerek model yeniden tahmin edilir. Huber, Eicker ve White tahmincileri değişen varyans varlığında dirençli tahminciler verirken, Arellano, Froot ve Rogers, Wooldridge ve Newey-West tahmincileri değişen varyans ve otokorelasyonun varlığında dirençli tahminciler vermektedir. Parks-Kmenta, Beck-Katz ve Driscoll-Kraay tahmincileri ise değişen varyans otokorelasyon ve birimler arası korelasyonun varlığında dirençli tahmincileri vermektedir.

## 4   Uygulama

Yöntem bilim olarak belirtilen sakıncaların olup olmadığını tespit etmek amacıyla F, LR ve Hausman testlerinin yapılmasına ihtiyaç vardır. Dolayısıyla uygun panel veri modeline karar veren F testi, LR testi ve Hausman testi sonuçları Tablo 2'de verilmiştir.

| F testi | LR testi | Hausman |
|---|---|---|
| $F_{birim}$ = 35.213 ( 0.0000)* | $LR_{birim}$ =260.034 (0.0000)* | 10.781 (0.0046)* |
| $F_{zaman}$ = 0.805( 0.5996) | $LR_{zaman}$= 7.6236 (0.4711) | |
| $F_{ikiyönlü}$ = 24.7019 (0.0000)* | $LR_{ikiyönlü}$ = 266.429 (0.0000)* | |

**Not: \***, %1 düzeyinde anlamlılığı göstermektedir. Parantezler olasılık değerlerini gösterir.

*Tablo 2: F ve LR ile Hausman Test Sonuçları*

Tablo 2'de görüldüğü üzere hem sabit hem de rassal etki varsayımı altında yalnızca tek yönlü birim etki modeli geçerlidir. Birim etkilerin var olduğu buna karşılık zaman etkilerinin olmadığı, başka bir ifadeyle modelin sadece birim etkilerini içerecek şekilde tek yönlü tahmin edilmesi gerektiği anlaşılmaktadır. Rassal etki varsayımı altında ise Hausman test istatistiği, söz konusu $H_0$ varsayımının sağlanamadığını, bu nedenle modelin sabit etkiler tahmincisi ile tahmin edilmesi gerektiğini ortaya koymaktadır.

Daha sonraki aşamada ise modelde otokorelasyon, değişen varyans ve birimlerarası bağımlılık testleri yapılmıştır. Değiştirilmiş Wald Testi modelde değişen varyansın varlığına işaret etmektedir. Hata teriminde otokorelasyonu test etmek üzere Bhargava, Franzini ve Narendranathan'nin(1982) Değiştirilmiş Durbin Watson testi ile Baltagi-Wu (1999) tarafından önerilen Yerel En İyi Değişmez (LBI) testleri kullanılmaktadır. Bu testler için söz konusu model öncelikle AR(1) kalıntıları kullanılarak sabit etkiler varsayımı ile tahmin edilmektedir. Her iki otokorelasyon test istatistiğinin değeri 2'den küçük olup birinci dereceden otokorelasyonun olmadığını belirten sıfır hipotezini reddetmektedirler (Baltagi, 2005). Son olarak modelde birimlerarası bağımlılığın olup olmadığının test edilmesi için Pesaran ve Friedman'ın testleri kullanılmış ve elde edilen sonuçlara göre birimlerarası bağımlılığın olmadığı şeklindeki sıfır hipotezi kabul edilmiştir. Dolayısıyla değişen varyans ve

otokorelasyonun varlığı altında model Arellano (1987), Froot (1989) ve Rogers (1993) tahmincisi tarafından tahmin edilmiştir.

Tablo 3 üzerinde modelin otokorelasyon ve değişen varyansa karşı düzeltilmiş son hali yer almaktadır. Bu çerçevede bağımlı değişken CA olmak üzere bağımsız değişkenler olan BA ile TA'nın regresyon analizine koşturulması sonucunda üçüz açık hipotezinin geçerli olup olmadığı 17 geçiş ekonomisi üzerine test edilmiş olacaktır.

| Değişken | Katsayı | Standart Hata | t istatistiği | Prob |
|---|---|---|---|---|
| BA | -0.2552914 | 0.1588257 | -1.61 | 0.128 |
| TA | 0.927691 | 0.038492 | 24.10 | 0.000 |
| C | -2.13959 | 0.4233925 | -5.05 | 0.000 |
| N | 153 | | | |
| $R^2$(within) | 0.902 | | | |
| F(2,16) | 1057.01 | | | 0.0000 |
| Değiştirilmiş Wald Testi | 5083.56 | | | 0.0000 |
| Bhargava vd. Durbin-Watson Test İstatistiği | 1.3731647 | | | |
| Baltagi-Wu LBI Test İstatistiği | 1.5557122 | | | |
| Pesaran | 0.849 | | | 0.3957 |
| Friedman | 15.059 | | | 0.5203 |

***Tablo 3:*** *Modelin Sabit Etkiler Tahmin Sonuçları*

Modeldeki değişkenlere ilişkin elde edilen sonuçlara bakıldığında, bütçe açığı ile cari açık arasında bir ilişki tespit edilmemesi sebebiyle söz konusu 17 geçiş ekonomisi için 2003-2011 dönemi için, Ricardian Eşdeğerlik hipotezi doğrulanmıştır. Buna karşılık tasarruf açığının cari açığın temel besleyicisi olduğu belirlenmiştir. Diğer bir ifadeyle geçiş ekonomilerinde üçüz açık olgusunun varlığı tespit edilememiştir.

## 5 Genel Değerlendirme ve Sonuç

1989'da Berlin Duvarının Yıkılması ve 1991'de de Sovyetler Birliğinin çökmesi ile ortaya çıkan geçiş ekonomileri kavramı, genel olarak planlı ve müdahaleci ekonomik sistemden liberal ekonomiye yönelen ülkeleri ifade etmektedir. 1990'ların başında bu ekonomilerde gözlenen en temel olgu, üretim için girdi temini ve çıktılar için pazar sorunun yansımaları, üretimde üst üste gözlenen gerilemeler, yani negatif büyüme skorları ve yüksek-hiper enflasyon olgularıdır. Var olan düzenin değişmesine paralel olarak ortaya çıkan üretim darboğazlarının aşılabilmesi ve sosyo-ekonomik-siyasal anlamda kurumsallaşmanın sağlanabilmesi için iç ve dış kaynak arayışları da kaçınılmaz olmuştur. Düşen yurtiçi gelirler kamu gelirlerini ve tasarruf yapabilme yeteneğini kısıtlarken; yeniden yapılanabilmek amacıyla hem kamu harcamalarında hem de özel yatırım harcamalarında artışlar ise kamu açığı ve tasarruf-yatırım açıklarını beslemiştir. Ortaya çıkan açıklar da başta özelleştirme olmak üzere dış borçlanma bu ülkelerin kaynak yaratma süreçlerinin temelini oluşturmuştur. Dolayısıyla ortaya çıkan yapı açıkların dış kaynaklarla beslenebilirliğine işaret etmektedir.

Çalışmada 17 geçiş ekonomisi için 2003-2011 dönemine ait yıllık veriler kullanılarak, bütçe açıkları ile tasarruf açıklarının cari açıklar üzerindeki etkileri tek yönlü sabit etkiler modeli ile incelenmiştir. Analiz sonuçları, bütçe açıkları ile cari açıklar arasında herhangi bir ilişki olmadığını ileri süren "Ricardocu Denklik Yaklaşımını doğrularken, söz konusu ülkeler için belirtilen dönemde üçüz açığın geçerli olmağı görülmüştür. Bu ekonomilerde cari açıkların tasarruf açıklarından pozitif ve istatistiki bakımdan anlamlı olarak etkilendiği görülürken, artan özel tasarruf açığı cari açığın artmasına neden olmaktadır. Ele alınan veri döneminde geçiş resesyonunun atlatıldığı ve ekonomik anlamda kurumsallaşmanın sağlanarak makro ekonomik istikrara dikkat edildiği açıktır. Bu nedenle öncelikli olarak bütçe dengesinin sağlandığı geçiş ekonomilerinde yüksek büyüme performansı için dış dengeden taviz verildiği gözlenmektedir ki, geçiş ekonomileri özelinde yüksek büyüme ve istihdam artışının sağlanmasında sürdürülebilir bir dış borçluluğun da ekonomi açısından sıkıntı yaratmayacağı ileri sürülebilir.

# Yapısal Şokların Türkiye Ekonomisi Üzerindeki Etkileri

# The Effects of Structural Shocks on Turkish Economy

Ph.D. Candidate Bekir Aşık (Beykent University, Turkey)

## Abstract

This paper investigates the role of the real business cycle dynamic stochastic general equilibrium model with different shocks for a small open economy. The main goal of this study is to compare the effects of different structural shocks on the macroeconomic fluctuations of Turkey. Different types of shocks are employed, such as temporary shocks, trend growth shocks, and world interest rate shock as driving forces. In addition to investigating the effects of different shocks, we consider the effects of working capital requirements and spread as friction. Variance decompositions are computed to assess the role of shocks in macroeconomic fluctuations. I fit the model to the data using Bayesian techniques to determine which shock has the most impact on the business cycles of Turkish economy over the period from the first quarter of 1988 to the last quarter of 2012. The main findings are: (1) output, consumption, and investment growth are mostly driven by the trend growth shocks and temporary shocks are less important. (2) Trade balance growth are driven by world interest rate shocks. (3) Real business model is not successful to replicate the some of the key features of economic fluctuations.

## 1   Giriş

Gelişmekte olan ülkelerdeki iş çevrimlerinin nedenlerinin araştırılmasında, son yıllarda iş çevrimleri literatüründe artan bir ilgi söz konusudur. Gelişmiş ülkelerle kıyaslandığında, gelişmekte olan ülkelerde tüketim gelire nazaran daha oynak ve dış ticaret gelişmeleri ise gelir artışına göre ters yönde hareket eden bir yapıya sahiptir. Gelişmekte olan ülkelerin bu özelliklerini inceleyen araştırmacılar, Mendoza(1991)'nın geliştirdiği modeli baz alarak çalışmalar yapmaktadırlar. Mendoza, adı geçen çalışmasında dışa açık gelişmiş bir ekonomi (Kanada) ile dışa açık gelişmekte olan bir ekonominin (Meksika) özelliklerini dinamik stokastik genel denge yöntemi ile incelemiştir. Menodza (1991) çalışmasının izinden giden Aguiar ve Gopinath (2007) ise geçici ve kalıcı şokların etkilerini inceledikleri çalışmalarında iş çevrimlerinin oluşmasında kalıcı şokların etkili olduğu sonucuna varmışlardır. Aguiar ve Gopinath (2007) çalışmasından sonra gelişmekte olan ülkelere dönük ikiden fazla şokun ve farklı piyasa katılıklarının eklendiği çok sayıda çalışma yapılmıştır. Bu çalışmalarda farklı zaman dilimlerinde ve farklı modeller kullanıldığı için birbirileri ile zıt sonuçlar elde eden araştırmalar da söz konusudur. Gelişmekte olan ülkelerde, iş çevrimlerinde kalıcı şokların etkisinin önemli olduğu sonucu ile çelişen iki araştırma Garcia Cicco et al. (2010) ve Chang and Fernandez (2010)'dur. Cicco et al. (2010)'a göre reel iş çevrimleri modeli, gelişmekte olan ülkelerin temel özelliklerini yakalamakta başarısız olmaktadır. Bu nedenle, finansal katılık ve daha fazla sayıda ekledikleri şok ile oluşturdukları yeni modelin gelişmekte olan ülkelerin iş çevrimi özelliklerini yakalamakta daha başarılı olduğunu ifade etmişlerdir. Chang and Fernandez (2010) ise dünya faiz şokunu ekledikleri modellerine, farklı finansal katılım mekanizmaları ekleyerek, dışa açık küçük bir ekonomi olan Meksika'yı incelemişler ve bu modelin, standart reel iş çevrimleri modeline göre daha başarılı olduğu sonucuna ulaşmışlardır.

Bu çalışma kapsamında da dışa açık küçük bir ülke olan Türkiye'nin iş çevrimi özellikleri dinamik stokastik genel denge modeli Bayesyen teknikler kullanılarak incelenmiştir. Çalışmada, Chang and Fernandez (2010)'un geliştirdiği model baz alınmış ve standart reel iş çevrimleri modeline ülke riski primi ile 'working capital requirements' gibi iki finansal katılık dahil edilmiştir. Bununla birlikte, kalıcı ve geçici şoklara ek olarak dünya faiz şoku da modele dahil edilmiştir.

## 2   Model

### 2.1  Hane Halkları

Küçük dışa açık ekonomide temsili hane halkının tercih fonksiyonu şu şekildedir:

$$E \sum_{t=0}^{\infty} \beta^t U(C_t, h_t, \Gamma_{t-1}) \qquad (1.1)$$

$\beta$, bir ile sıfır arasında değişen iskonto oranını; $C_t$, t dönemindeki tüketimi; $h_t$, t döneminde hane halkı tarafından arz edilen çalışma zamanını; U(.) fayda fonksiyonunu ve E(.) beklenti operatörünü ifade eder.

Fayda fonksiyonun fonksiyonel yazılmış şekli Greenwood, Hercowitz ve Huffman (1988) tarafından geliştirilen fayda fonksiyonu şu şekilde yazılabilir:

$$u(C_t, h_t, \Gamma_{t-1}) = \frac{(C_t - \tau \Gamma_{t-1} h_t^{\omega})^{1-\sigma}}{1-\sigma} \qquad (1.2)$$

Greenwood, Hercowitz ve Huffman (1988)'un geliştirdiği fayda fonksiyonu çalışma saatlerinin oynaklığını, çıktı ve çalışma saatleri arasındaki korelasyonu ve tüketimin oynaklığını gelişmekte olan ülkelerdeki stilize gerçeklere yaklaştırdığı için dışa açık küçük ekonomiler için daha uygundur.

Hane halkları dünya sermaye piyasalarından borçlanabilmektedir ve bütçe kısıtı şu şekilde yazılabilir:

$$W_t h_t + u_t K_t + q_t D_{t+1} = C_t + I_t + D_t \tag{1.3}$$

$W_t$ ücreti, $u_t$ sermayenin kira bedelini, $q_t$ hane halkının borcunun fiyatını ve $D_{t+1}$ ise taahhüt edilen malların sayısını ifade eder. Eşitliğin sağ tarafı ise t dönemindeki harcamaları gösterir.

Modelde sermaye birikim süreci aşağıdaki gibi tanımlanmıştır:

$$K_t = (1-\delta)K_t + I_t - \frac{\phi}{2}\left(\frac{K_{t+1}}{K_t} - \mu\right)^2 \tag{1.4}$$

Sermaye birikim sürecinde $I_t$, yatırımı; $\delta \in (0,1)$ sermayenin yıpranma payını ifade eder.

### 2.2 Firmalar

Firmalar ölçeğe göre sabit getiri varsayımına sahip Cobb-Douglas üretim teknolojisine göre emek ve sermaye kiralayarak üretim yaparlar. Firmaların üretim yaptıkları firmalar tam rekabet piyasasında faaliyet gösterirler ve emek ($h_t$) ve sermaye ($K_t$) kiralayarak üretimlerini ($Y_t$) gerçekleştirirler.

$$Y_t = a_t F(K_t, \Gamma_t h_t) = a_t K_t^{1-\alpha} (\Gamma_t h_t)^\alpha \tag{1.5}$$

Üretim sürecinde çıktı seviyesi $a_t$ ve $\Gamma_t$ gibi iki şok sürecine bağlıdır. Bu iki şoktan $a_t$, geçici süreci ve $\Gamma_t$ ise emek verimliliğinin kümülatif artışını (*labor augmenting productivity growth*) ifade eder.

$W_t$ ücreti, $u_t$ sermayenin gelirini ifade eder.

$$u_t = a_t F_1(K_t, \Gamma_t h_t)$$
$$W_t = a_t F_2(K_t, \Gamma_t h_t)\,\Gamma_t$$

Bu modelde kümülatif emek verimliliğinin kümülatif artışının sabit değil rassal olduğu varsayılmıştır. Bu varsayım ile (1.10) eşitliği şu şekilde değiştirilmiştir:

$$\Gamma_t = g_t\,\Gamma_{t-1} \tag{1.6}$$

$$\ln(g_{t+1}/\mu) = \rho_g \ln(g_t/\mu) + \varepsilon_{t+1}^g \tag{1.7}$$

$|\rho_g| < 1$, $\varepsilon_t^g$ ise sıfır ortalaması ve $\sigma_g^2$ varyansı olan, bağımsız ve benzer dağılım özelliği gösteren bir şoktur. $\mu$ ise emek verimliliği artışının ortalama değerini ifade eder. $\varepsilon_t^g$'nin aldığı pozitif değerler emek verimliliğinin büyümesini geçici olarak uzun dönem ortalamasının üzerinde değer almasına neden olur. Bu tarz bir şok $\Gamma_t$ ile ilişkili olduğu için sonuçta kalıcı bir verimlilik artışına neden olur.

Chang ve Fernandez (2009), Neumeyer ve Perri (2005) ve Uribe ve Yue (2006) çalışmalarında gelişmekte olan ülkelerin ekonomik dalgalanmalarına neden olan önemli unsurların arasında finansal katılık ile ilişkili olan dünya faiz oranlarındaki değişimi gösterirler. Bu durumu test etmek için Chang ve Fernandez (2009) standart modeli geliştirmişlerdir.

Hane halkları borcunun fiyatı şu şekilde değiştirilir:

$$\frac{1}{q_t} = R_t + \kappa(\widetilde{D}_{t+1}/\Gamma_t) \tag{1.8}$$

$R_t$ ülke faiz oranını ifade eder ve şu şekilde formüle edilir:

$$R_t = S_t R_t^* \tag{1.9}$$

$R_t^*$ dünya faiz oranını, $S_t$ ülkeye özgü *spread*'i ifade eder. Bu modelde dünya faiz oranı rassal bir süreç izler ve uzun dönemli $R^*$ değerinin etrafında salınır.

$$\ln(R_t^*/R^*) = \rho_R \ln(R_{t-1}^*/R^*) + \varepsilon_t^R \tag{1.10}$$

$|\rho_R| < 1$ ve $\varepsilon_t^R$; sıfır ortalaması ve $\sigma_R^2$ varyansı olan, bağımsız ve benzer dağılım özelliği gösteren bir şoktur.

Literatürde stokastik trend ve finansal katılıklar ayrı ayrı test edilse de Chang ve Fernandez (2009) her ikisini bir modelde test etmişlerdir. Bu modelde iki türlü finansal katılık çeşidi vardır: bir tanesi ekonominin kendi yapısal sorunlarından kaynaklanan '*spread*', bir diğeri ise '*working capital requirements*' kaynaklanan spread. Bunlardan ilki $\eta$ ile modelde test edilmişken, ikincisi $\theta$ ile tahmin edilmiştir. Literatürde ülke riski sadece geçici şoklara bağlıyken, bu modelde ülke riski hem kalıcı hem de geçici şoklara bağlı olarak tanımlanmıştır. Burada önemli olan ülke riskinin verimlilik artışı ile azalması olgusudur. Verimlilik artışının kalıcı veya geçici şoktan etkilenmesi önemli değildir. Ülke spreadinin toplam faktör verimliliğine (Solow artığı) bağlı formüle edilişi şu şekilde yazılır:

$$log(S_t/S) = -\eta E_t log(SR_{t+1}/SR) \tag{1.11}$$

Eşitlikte, Cobb-Douglas üretim fonksiyonuna göre $SR_t = a_t g_t^\alpha$ ve $SR = \mu^\alpha$.

'*Working capital requirements*' kaynaklanan spread şu şekilde açıklanabilir: firmalar üretime başlamadan önce ücretlerin belli bir miktarını ödemek durumundadır. Bu durumda emek piyasasında denge şartı şu şekilde olmaktadır:

$$W_t[1 + \theta(R_{t-1} - 1)] = a_t F_2(K_t, \Gamma_t h_t)\Gamma_t \tag{1.12}$$

Bu eşitlikte firma çalışanlarını, emeğin marjinal verimini finansal maliyeti de içeren ücrete eşitler. Firmalar hane halklarında borçlanır ve üretim sonucunda ücretin $\theta$ kadar oranında geri ödeme yapacağı varsayılır.

## 3 Ekonometrik Metodoloji:

Tez kapsamında parametreler Bayesyen tahmin teknikleri ile tahmin edilmiştir. Bu tahmin tekniğinin temelinde parametreler tahmin edilirken, Metropolis Hastings algoritması kullanılarak parametrelerin birleşik posterior elde edilmeye çalışılır. Bu bölümde bu algoritma ve tahmin teknikleri açıklanacaktır (Koop, 2004).

Verilerin posterior dağılımları iki unsurdan oluşur: olabilirlik fonksiyonu ve prior dağılımları. Olabilirlik fonksiyonu, verilerin bilinmeyen parametrele koşullu belirlenen birleşik olasılık yoğunluk fonksiyonu olarak adlandırılabilir ve $p(Y|\theta)$ ile gösterilir. Y gözlemlenen veri seti, $\theta$ parametre vektörü olarak adlandırılır. Prior ise araştırmacının verileri görmeden modele ve modelin parametrelerine olan ön bilgisidir. Modellerde parametrelerin prior inançları, prior dağılımları ile ifade edilir ve $p(\theta)$ ile gösterilir. Posterior dağılımı ise hem prior hem de verilere bağlı olan bütün bilgileri özetler. Posterior dağılımı, olabilirlik fonksiyonu ile prior dağılımının birleştirir ve aşağıdaki gibi gösterilir:

$$p(\theta|Y) \propto p(Y|\theta)p(\theta)$$

Metropolis-Hastings algoritması posterior dağlımdan rassal çekimler yaparak posterior mode etrafında birleşik posterior dağılımın Gaussian yakınsamasını türetmeye çalışır.

Metropolis-Hastings algoritmasında yapılan bütün çekimler eşit olarak ağırlıklandırılırlar fakat her çekim otomatik olarak kabul edilmez. Bir başka deyişle, g(.) analiz edilmek istene fonksiyon olsun. Elde etmek istediğimiz tahmin çekimlerin ortalamasına eşittir ve şu şekilde gösterilir:

$$E[g(\theta)|Y] = \frac{1}{S}\sum_{r=1}^{S} g(\theta^{(s)})$$

Tez kapsamında, her model için Metropolis-Hastings algoritması kapsamında 5 birbirinden bağımsız zincir ile 1.000.000 çekim yapılmıştır. Her modelde zincir başına ortalama kabul oranı % 30 civarındadır ve yakınsama için Brooks ve Gelman (1998)'in geliştirdiği metot kullanılmıştır. Başlangıç koşullarından bağımsızlık sağlamak için çekimlerin % 50'si yakılmıştır.

## 4 Model Tahmininde Kullanılan Veriler ve Parametreler:

Modelin tahmininde kullanılan veriler 1988'in birinci çeyreği ile 2012'nin son çeyreğini kapsamaktadır. Veriler International Financial Statistics (IFS) kurumunu internet sitesinden indirilmiştir. Verilerin IFS'ten elde edilmesinin nedeni, Türkiye'deki kurumların 1988'den günümüze makroekonomik serileri kesintisiz yayınlamamasıdır. Türkiye Cumhuriyet Merkez Bankası ve Türkiye İstatistik Kurumu (TÜİK) farklı baz yıllara ait verileri yayınlamakta ancak kesintisiz bir seri elde etme şansı sağlamamaktadır. Buna karşın, IFS ise 2005 bazlı serileri 1988'ten günümüze elde etme olanağını sağlamaktadır. Bu nedenden dolayı modelde kullanılan veriler IFS'ten temin edilmiştir.

Model kapsamında kullanılan gayri safi yurt içi hasıla (GSYİH), hane halkı tüketim endeksi, gayri safi sabit sermaye oluşumu ve net ihracat verileri IFS'ten temin edilmiştir. Veriler Census X-12 yöntemiyle mevsimsel etkilerden arındırılmış ve söz konusu değişkenlerin logaritmik farkları alınarak büyüme oranları elde edilmiştir.

Verileri seçerken verilerin nominal halleri kullanılmış ve GSYİH deflatörü ile reel hale çevrilmiştir. Kişi başına düşen değişkenler ise değişkenlerin TÜİK'ten elde edilen 15-64 yaş arası kurumsal olmayan nüfus verilerine bölünerek elde edilmiştir. Kalibre edilen parametrelere ise Tablo 1'de yer verilmiştir.

| Parametre | Açıklamalar | Mod |
|-----------|-------------|-----|
| $\sigma$ | Dönemler arası İkame Elastikiyeti | 2 |
| $\omega$ | Emek Arzı Elastikiyeti $\left(\frac{1}{\omega-1}\right)$ | 1.6 |
| $\alpha$ | Emeğin Gelirden Aldığı Pay | 0.69 |
| $R^*$ | Dünya Faiz Oranı | 1.00 |
| $\mu$ | Uzun Dönemli Verimlilik | 1.00 |
| $\tau$ | Emek Parametresi | 1.62 |
| $\psi$ | Borca Duyarlı Faiz Parametresi | 0.00 |
| $\beta$ | Iskonto Oranı | 0.97 |
| S | Uzun Dönemli Ülke Faiz Oranı | 1.03 |
| $\delta$ | Sermayenin Yıpranma Oranı | 0.03 |
| d | Borç/GYSİH Oranı | 0.10 |
| R | Ülkeye Özgü Faiz Oranı | 1.03 |

*Tablo 1. Kalibrasyonda Kullanılan Parametreler*

## 5   Model Tahmininde Kullanılan Prior Dağılımları

Tahmin edilen parametrelerin prior dağılımlarını tanımlarken, dinamik stokastik genel denge modelleri için Bayesian literatüründe kullanılan ortak yöntem tercih edilmiştir. Bu yönteme göre [0,1) aralığında yer alan parametre değerleri için beta dağılımı, $\mathbb{R}^+$ düzleminde yer alan parametreler için Gamma dağılım ve şokların standart hataları için ters-gamma (Inverse-Gamma) dağılımı tercih edilir. Priorların ortalamaları ve standart hataları belirlenirken Türkiye için yapılan çalışmalar ve uluslararası literatür göz önüne alınmıştır. Tablo 2 model kapsamında tahmin edilen parametrelerin dağılımlarını, ortalamalarını, standart sapmalarını ve tahmin sonucunda elde edilen posterior dağılımlarını vermektedir.

| Parametre Sembolü | Parametrenin Adı | Prior Dağılımı | Prior Ortalaması | Prior Standart Sapma | Modelin Posterior Ortalamaları |
|---|---|---|---|---|---|
| $\rho_a$ | Geçici Verimlilik Şokunun AR Parametresi | Beta | 0.80 | 0.1 | 0.607 [0.4856-0.7314] |
| $\sigma_a$ | Kalıcı (Trend) Şokun AR Parametresi | Beta | 0.80 | 0.1 | 0.0089 [0.0058-0.0119] |
| $\rho_g$ | Dünya Faiz Şokunun AR Parametresi | Beta | 0.80 | 0.1 | 0.3191 [0.2669-0.3701] |
| $\sigma_g$ | Geçici Verimlilik Şokunun Standart Sapması | Inverse Gamma | 0.02 | 0.02 | 0.0332 [0.0280-0.0384] |
| $\rho_r$ | Kalıcı (Trend) Şokun Standart Sapması | Inverse Gamma | 0.02 | 0.02 | 0.5486 [0.4111-0.6859] |
| $\sigma_r$ | Dünya Faiz Şokunun Standart Sapması | Inverse Gamma | 0.02 | 0.02 | 0.0062 [0.0047-0.0077] |
| $\theta$ | Çalışan Sermaye Kısıtı | Gamma | 1.2 | 0.10 | 1.2002 [1.0332-1.3628] |
| $\eta$ | Ülke 'Spread'i | Gamma | 1 | 0.101 | 0.8654 [0.7158-1.0093] |
| $\phi$ | Sermaye Uyarlama Maliyeti | Unifrom | 0 | 10 | 9.7655 [9.4631-10.000] |
| $\sigma_Y$ | GSYİH için Ölçüm Hatasının Standart Sapması | Inverse Gamma | 0.02 | 0.02 | 0.0094 [0.0062-0.0125] |
| $\sigma_C$ | Tüketim için Ölçüm Hatasının Standart Sapması | Inverse Gamma | 0.02 | 0.02 | 0.0272 [0.0237-0.0306] |
| $\sigma_I$ | Yatırım için Ölçüm Hatasının Standart Sapması | Inverse Gamma | 0.02 | 0.02 | 0.0369 [0.0275-0.0462] |
| $\sigma_{TB/Y}$ | Dış Ticaret Dengesi için Ölçüm Hatasının Standart Sapması | Inverse Gamma | 0.02 | 0.02 | 0.0142 [0.0118-0.0167] |

***Tablo 2.*** *Tahmin Edilen Parametrelerin Prior ve Posterior Dağılımları*

Yapısal şokların otoregresif katsayıları ve standart sapmalar incelendiği zaman verilerin açıklayıcı olduğu anlaşılmaktadır. Tahmin sonuçları incelendiği zaman geçici şok diğer şoklara nazaran daha kalıcı ve oynak olduğu gözlenmektedir. Dünya faiz şoklarının kalıcılığı ve oynaklığı da kalıcı şokun değerlerinkinden daha büyüktür. Bu sonuçlardan hareketle kalıcı şokların etkisinin geçici şoklara göre daha fazla olduğunu ifade edebiliriz.

Çalışan sermaye kısıtı katsayısının posterior değeri (1.20), prior değerinden (1.2) farklı değildir. Posterior dağılımının dar olması, bu parametrenin değerinin hesaplanmasında kullanılan verilerin bilgi içermediği sonucunu doğurmaktadır. Ayrıca ülke spreadi katsayısının posterior ortalaması değeri 0.87'dir ve dar bir dağılıma sahiptir. Bu sonuca göre Solow artığında ifadesini bulan ülkenin yapısal özelliklerinin spread üzerinde anlamlı bir etkiye sahip olduğu ifade edilebilir. Bu sonuçlara ek olarak, sermaye uyarlama maliyetinin yüksek posterior ortalaması, yatırım sürecinde yüksek bir maliyetin olduğuna işaret eder.

## 6 Varyans Ayrıştırması:

Varyans ayrıştırması yapısal şokların GSYİH, hane halkı tüketimi, yatırım ve dış ticaretin büyümesi değişkenleri üzerinde etkisinin anlaşılmasına yardımcı olur. Tahmin sonucunda elde edilen değerler Tablo 3'te gösterilmektedir.

| | $\varepsilon^a$ | $\varepsilon^g$ | $\varepsilon^{R^*}$ |
|---|---|---|---|
| **gy** | 12.07 | 85.95 | 1.98 |
| **gc** | 9.16 | 87.58 | 3.26 |
| **gi** | 14.72 | 68.12 | 17.16 |
| **dnx** | 1.13 | 26.02 | 72.85 |

*Tablo 3. Tahmin Sonucunda Elde Edilen Varyans Ayrıştırması (%)*

Bu sonuçlara göre çıktının büyümesinde kalıcı şokun etkisi, geçici ve faiz şokuna göre çok daha fazladır. Çıktıdaki oynaklığın büyük bir kısmı (yaklaşık % 86'sı) kalıcı şok tarafından gerçekleştirilmiştir. Geçici şokun etkisi, faiz şokuna göre daha fazladır. Tüketim büyümesi üzerinde de ağırlıklı olarak kalıcı şokun etkisi (% 87) vardır. Diğer şokların etkisi, kalıcı şokun etkisi ile karşılaştırıldığında, neredeyse anlamsızdır. Yatırımın büyümesi üzerinde geçici şokun ve faiz şokunun etkisi, çıktı ve tüketim üzerindeki etkilerinden daha fazladır. Buna karşın, kalıcı şokun etkisi diğer iki şoka göre fazladır. Çıktı, tüketim ve yatırım büyümesinde kalıcı şok etkindir ancak bu sonuç dış ticaret büyümesinde farklılık göstermektedir. Dış ticaret büyümesinde faiz şokunun etkisi (% 73), kalıcı şokun etkisinden (% 26) fazladır ve geçici şokun etkisi neredeyse sıfırdır.

## 7 İkinci Momentler:

Modelin tahmin edilmesi sonucu elde edilen ikinci moment değerleri Tablo 4'te verilmiştir. Tahmin sonuçlarına göre tüketim büyümesinin oynaklığı, çıktının büyümesinin oynaklığına göre azdır. Bu hem Türkiye'nin stilize gerçekleriyle hem de dışa açık reel iş çevrimleri modelinin literatürüne aykırı bir sonuçtur. Gelişmekte olan ülkelerin temel özelliklerinden birisi tüketimin büyümesinin oynaklığı, çıktı büyümesinin oynaklığından fazladır (Aguiar and Gopinath (2007); Garcia-Cicco et al. (2010)). Bu nedenle model, bu gerçekliği yakalamakta başarısızdır. Yatırım büyümesinin oynaklığı ise fazladır ve verilerden elde edilen sonuçlara yakın bir değerdir.

Model çıktı büyümesi ile tüketim ve yatırımın büyümesi arasındaki korelasyon değerlerine çok yakın değerler türetemese de aynı korelasyon işaretlerini yakalamıştır. Verilere göre tüketim ve yatırım, çıktı ile pozitif; dış ticaret ise negatif bir ilişkiye sahiptir. Bu sonuçlara ek olarak, model tüketim ve yatırımın büyümesinin dış ticaret büyümesi ile negatif olan ilişkisindeki negatif korelasyonu yakalamıştır.

Çıktı ve tüketim büyümesinin kalıcılığı, Türkiye örneğinde oldukça düşüktür. Model, çıktının ve tüketimin kalıcılığına, nispeten, yakın sonuçlar elde etmiştir. Buna karşılık yatırım ve dış ticaret büyümesinin otokorelasyon değerlerine yakın sonuçlar elde edememiştir.

| | **gy** | **gc** | **gi** | **dnx** |
|---|---|---|---|---|
| **Standard Sapma (%)** | | | | |
| **Veri** | 4.12 | 5.05 | 7.87 | 1.75 |
| **Model** | 3.99 | 3.85 | 8.55 | 1.07 |
| **gy ile Korelasyon** | | | | |
| **Veri** | 1 | 0.84 | 0.79 | -0.29 |
| **Model** | 1 | 0.98 | 0.86 | -0.39 |
| **dnx ile Korelasyon** | | | | |
| **Veri** | | -0.37 | -0.40 | 1 |
| **Model** | | -0.51 | -0.74 | 1 |
| **Otokorelasyon** | | | | |
| **Veri** | -0.02 | -0.05 | 0.19 | 0.13 |
| **Model** | -0.08 | -0.02 | -0.19 | -0.05 |

*Tablo 4. Modelin Tahmini Sonucu Elde Edilen İkinci Momentler*

## 8 Sonuç:

Bu çalışmada reel iş çevrimleri modelinin geçerliliğini dışa açık küçük bir ekonomi olan Türkiye'nin verileriyle test edilmiştir. Modeli test ederken 1988'in birinci çeyreği ile 2012'nin dördüncü çeyreği arasındaki GSYİH, tüketim, yatırım ve dış ticaretin büyümesi verileri kullanılmıştır. Hem kalibrasyon hem de Bayesyen tahmin teknikleri kullanılarak, yapısal şok süreçleri ve parametrelerin posterior dağılımları tahmin edilmiştir.

Tahmin sonuçlarına göre finansal katılıkların dahil edilmiş olduğu reel iş çevrimleri modeli, Türkiye iş çevrimlerini açıklamada başarılı sonuçlar elde edememiştir. Gelişmekte olan ülkelerin en önemli özelliği olan

tüketimin çıktıya göre daha fazla oynaklığı özelliğinin tersine çıktının daha fazla oynak olduğu sonucunu elde etmiştir. Bu sonuç hem reel iş çevrimi literatürüne hem de Türkiye stilize gerçeklerine terstir.

Tahminden elde edilen bir başka sonuç ise kalıcı şokun etkisinin geçici ve faiz şokuna göre daha etkili olduğudur. Çıktı ve tüketim büyümesi üzerinde kalıcı şokun etkisi, diğer şokların etkilerine göre çok daha fazladır. Bu sonuçlar, Aguiar ve Gopinath (2007) çalışmasında iddia edilen, kalıcı şokun etkisinin daha fazla olduğu iddiasını Türkiye verileri ile desteklemektedir.

Çalışmadan çıkan bir başka sonuç ise reel iş çevrimi modeline dahil edilen finansal katılıklardan ülke spread elastikiyetini ölçen parametre değerinin anlamlı olmasıdır. Bu değere göre ülke spreadi, ülkenin temel özellikleri tarafından belirlenir. Bir diğer katılık olan "*working capital requirements*" katsayısı anlamlı bir değer ifade etmemektedir. Bu sonuç, Neumeyer ve Perri (2005)'in bulguları ile çelişmektedir.

Bu sonuçlar bize şunu göstermektedir: Türkiye ekonomisinin iş çevrimlerini açıklamak için daha fazla katılığın ve yapısal şokların dahil edildiği dinamik stokastik genel denge modellerine ihtiyaç vardır.

# Türkiye ve Makedonya Ekonomilerinin Konjonktürel Uyumunu Belirleyen Faktörler

# Identifying the Factors Affecting Business Cycles Synchronization between Turkey and Macedonia Economies

Türker Şimşek (Gaziosmanpaşa University, Turkey)
Emre Aslan (Gaziosmanpaşa University, Turkey)
Atila Karkacıer (Gaziosmanpaşa University, Turkey)
Asst. Prof. Dr. Ahmet Güven (Gaziosmanpaşa University, Turkey)

## Abstract

This study aim to identify the affecting factors about business cycles synchronization between Turkey and its trade partner, Macedonia. For a better understanding of the subject, we give the theoretical and empirical literatures. Countries are faced with crises and recessions because of often fluctuations in the economy. Dynamic structure of economic fluctuations should be analyzed for the combat the crises and recessions. It must be analyzed the relationship between business cycles fluctuations and economic variables with sophisticated econometric methods. Analyzing the business cycles synchronization is important for the sake of stability and determining the prudential policies. We used Panel Generalized Methods of Moments to analyze the business cycles synchronization between Turkey and its trade partner, Macedonia via STATA. Identifying the determinants of business cycles synchronizations between Turkey and Macedonian economies provide the effective economic policies in these countries. Effective economic policy increase the trade volume between Turkey and Macedonia. If we identify the business cycles synchronization correctly, policy makers take an advantage for interventions on economy. After the analyzed, we conclude that there is a business cycles synchronization between Turkey and Macedonia.

## 1 Giriş

Sanayi devrimiyle önem kazanmaya başlayan konjonktürel dalgalanmaların piyasa ekonomilerinde sürekli görülmesi ve bu dalgalanmaların neden ortaya çıktığı konusunda, iktisat okullarının fikir ayrılığına düşmesi konjonktürel dalgalanmalar üzerine olan tartışmaların günümüze kadar sürmesine neden olmuştur.

Ülkeler sürekli ve düzenli refah artışını sağlamak için sahip oldukları kaynakları etkin bir şekilde kullanmak ve ekonomik istikrarı sağlamak isterler. Bunun için de istikrarsızlığa neden olan konjonktürel dalgalanmalardan kaçınırlar.

Ekonomik faaliyetlerde baş gösteren genişleme sürecinden sonra yaşanılan daralma süreci iktisat ile uğraşanların ilgisini çekmiştir. Bu inişli çıkışlı süreci hangi faktörlerin belirlediğinin bilinmesi istikrarı sağlamak için uygulanacak iktisadi politikaların başarısı için önem arz etmektedir. Krize neden olan faktörler bilinmeden uygulanan politikalar ekonomi üzerinde mevcut durumdan daha da kötü sonuçlar doğurabilir.

Ülkede yaşanılan ekonomik dalgalanmalar genel anlamda iki nedenden kaynaklanabilir. Birincisi ülke içi faktörler konjonktürel dalgalanmalara yol açabilir. İkincisi de küreselleşmenin etkisi ile ülke dışındaki faktörler konjonktürel dalgalanmaya sebebiyet verebilir. Küreselleşme, ülkeler arasındaki ekonomik bağlantıyı güçlendirerek bu ülkeler arasındaki konjonktürel dalgalanmaların senkronizasyonunu da artırmaktadır. Kültürel, ekonomik ve sosyal benzerliklerin de ülkeler arasındaki konjonktürel uyumu arttırdığı iddia edilmektedir.

Bu çalışmanın amacı da Türkiye ve Makedonya ekonomileri arasındaki konjonktürel uyumu ve bu uyumun belirleyici faktörlerini tespit etmektir. İki ülke arasındaki konjonktürel uyumu analiz etmek için Spearman sıra korelasyon analizi kullanılmış, sonrasında da uyumu belirleyen faktörleri tespit etmek için Panel GMM metodu tercih edilmiştir.

## 2 Kavramsal Çerçeve

Kısa dönemli dalgalanmalar olan konjonktür hareketleri ekonomideki toplam üretim, işsizlik ve tüketim gibi temel olguları etkileyen dönemsel hareketleri ifade etmektedir. Türkiye ve Makedonya ülkelerinin tarihe dayalı sosyo-kültürel ve ticari ilişkilerinden hareketle iki ülke ekonomileri arasındaki konjonktürel uyum analiz edilmek istenilmiştir.

Konjonktürel uyum denildiğinde ilgili ülke ekonomilerinde yaşanılan konjonktürel değişimlerin birbiriyle uyum halinde olması başka bir ifade ile ekonomilerdeki daralma ve genişleme evrelerinin yakın dönemlerde yaşanılmasını ifade edilmektedir. Türkiye ve Makedonya ekonomilerinin konjonktürel uyumunu ekonometrik

yönden analiz etmeden önce iki ülke arasındaki sosyo kültürel ilişkilerden hareketle ticari ilişkiler hakkında bilgi verilmesi konunun anlaşılması açısından faydalı olacaktır.

## 3   Türkiye Makedonya Arasındaki Sosyo Kültürel İlişkiler

Türkiye, derin tarihsel, kültürel ve duygusal bağları dolayısıyla Balkanlarda barış, refah ve istikrarın sürekliliğini sağlama sürecinin önemli aktörlerinden bir tanesidir. Türkiye hem devlet hem de sivil toplum düzeyinde Balkanlarda ekonomi, ticari, teknik, sosyal, insani, kültürel ve eğitim alanlarındaki çok çeşitli girişimleri gerçekleştirmektedir (Karagül, 2013).

Bağımsızlığının ilanından beri Makedonya'ya uluslararası alanda siyasi, ekonomik ve askeri açıdan destek olan Türkiye, bu ülkeyi Yugoslavya'dan ayrılan diğer ülkelerle eş zamanlı olarak anayasal ismiyle tanıyarak her alanda ilişkilerini geliştirmiştir. Öyle ki, Üsküp ile Ankara arasındaki pozitif ilişkiler, zaman zaman ülkedeki Türkleri ve Arnavutları şaşırtmıştır. Zira Türkiye, Makedonya'nın toprak bütünlüğünü savunurken; geleneksel olarak izlediği Balkanlar'daki Türk ve/veya Müslüman azınlıkları bulunduran ülkelerin içişlerine karışma aracı olarak kullanmama politikasını devam ettirmiştir. Bu açıdan bakıldığında, Türkiye'nin Makedonya'ya yönelik politikasının etnik veya dinsel temelde değil; Makedonya'nın bağımsızlığı ve toprak bütünlüğü ekseninde yoğunlaştığı görülmektedir (Özlem, 2012).

Türk ve Makedon halklarına geleneksel tarihi ve kültürel bağlar çerçevesinde; mevcut dostluk, karşılıklı anlayış ve ortak kültür değerlerinin zenginleştirilmesi ve kültürel alandaki işbirliğinin güçlendirilmesi amacıyla Türkiye Cumhuriyeti ile Makedonya Cumhuriyeti arasında Kültür Alanında İşbirliği Protokolü ile Eğitim Alanında İşbirliğine Ait Protokol 15/10/1993 tarihinde imzalanmıştır. Belirtilen protokollere göre taraflar, iki ülke arasındaki kültürel işbirliğinin geliştirilmesini teşvik edeceklerdir. Müzik, opera, bale, tiyatro ve sinema alanlarında işbirliğinde bulunarak, karşılıklı olarak bu alanlarda yapılacak ortak çalışmaları ve yapımları teşvik edeceklerdir. Bununla birlikte müzeler, kütüphaneler ve diğer kültürel kuruluşlar arasında doğrudan temas ve işbirliği desteklenecektir. Öğretim elemanı ve yayın değişimi dahil iki ülke dil ve kültürlerinin tanıtılması, öğretilmesi ve yaygınlaştırılması konusundaki çalışmalar taraflar arasında desteklenerek teşvik edilecektir (Uluslararası Antlaşmalar, 2014).

İlerleyen yıllar içerisinde her iki devlet arasında kültürel alanda işbirliğini kapsayan anlaşmaların imzalanması devam etmiştir. 2005 yılında ise Türkiye ve Makedonya arasında yapılan bir anlaşmayla Türkiye İktisadi ve Kalkınma İdaresi Başkanlığı'nın (TİKA) Üsküp şubesi açılmıştır. TİKA'nın sosyal yardımları Makedonya'da yaşayan Türk toplumuna yönelik olmaktadır. TİKA, öncelikle eğitim alanında olmak üzere kitap temini, okul onarımı, demirbaş malzeme temini, öğrenci servisi sağlama gibi eğitimin fiziksel altyapısının desteklenmesi için kampanyalar düzenlemektedir (Rahman, 2012). Ayrıca TİKA'nın Makedonya'da bulunduğu faaliyetlerinden bazı örnekler şöyledir (Biçer ve Doğru, 2013):

- Okulların tadilatı ve tefrişi projesi
- Latsa ve Ocalı köyleri içme suyu projesi
- Arıcılığın geliştirilmesi projesi
- Üsküp Mustafa Paşa Camii Restorasyonu
- Araçinova Belediyesi Köprü İnşaatı Projesi

19 Ekim 2005 de Türkiye Cumhuriyeti Kültür ve Turizm Bakanlığı ile Makedonya Cumhuriyeti Kültür Bakanlığı arasında Makedonya Cumhuriyeti'nde yer alan bazı Osmanlı dönemi eserlerinin onarımı ve rekonstrüksiyonuna yönelik yapılan görüşmelere ilişkin mutabakat zaptı imzalanmıştır (Uluslararası Antlaşmalar, 2014).

Bununla birlikte kültürel ilişkiler açısından "2009-2010 Yıllarına Ait Kültürel İşbirliği Programı" çerçevesinde, iki ülke arasında karşılıklı olarak Kültür Merkezleri açılması kararlaştırılarak Türkiye tarafından Üsküp'te Yunus Emre Türk Kültür Merkezi, geçici bir statüde faaliyete başlamıştır. Ayrıca, Makedonya'da yer alan 500'e yakın Türk eserinin korunması, bakım ve onarımlarının yapılması da kültürel ilişkilerimizin önemli bir boyutunu oluşturmaktadır (Biçer ve Doğru, 2013).

## 4   Türkiye Makedonya Arasındaki Ticari İlişkiler

Türkiye, bölgede yer alan ülkelere, yerleşik olduğu coğrafyada tarihsel, kültürel ve duygusal bakımdan güçlü bağlarla bağlıdır. Bu nedenle başta Makedonya olmak üzere bölgede yer alan birçok devletle ikili ve çok taraflı ilişkiler geliştirebilmektedir. Türkiye hem bölgesel hem de küresel kriz ve çatışmalarda bölgesel ve küresel aktörlerin işbirliğini aradığı bir devlet olarak bu bölgedeki istikrara katkı sağlayacak her türlü girişimi destekleme konusunda üzerine düşen görevden kaçınmamaktadır (Karagül, 2013).

Osmanlı tarihinde çok önemli bir yeri olan Balkanlar, Türk dış politikası açısından siyasi, ekonomik, coğrafi, savunma ve güvenlik, ortak kültür ve tarih mirasına sahip olmak gibi nedenlerle önemini her zaman korumuş ve korumaya devam edecek bir bölge olarak kabul edilebilir (Karagül, 2013). Türkiye Makedonya'nın

bağımsızlığından itibaren Makedonya ile ilişkilerini oldukça sıcak ve yoğun tutmuş özellikle de karşılıklı ziyarete büyük önem atfetmiştir. Bu durum hem ülkedeki Türk/Müslüman azınlıklarla olan bağı hem de geçmişten gelen sorunların körüklediği aidiyet sorunsalını çözümünde ciddi birer rahatlama vesilesi olmuştur (Çağ, 2012).

Türkiye ve bölge insanının tarihten gelen bağları son yıllarda tekrar karşılıklı sosyo ekonomik ilişkilerle canlanma eğilimine girmiştir. Bu durumda son yıllarda Türkiye'de AB süreci ve dış politikada yaşanan sosyo ekonomik gelişmelerin balkan devletleri tarafından ilgi ile takip edilmesinden kaynaklanmaktadır. Balkanlardan ülkemize gelen turist sayısındaki artış, üniversite eğitimi için gelen öğrenci sayıları, bu bölgede Türk kültürünün izlerinin yaygınlaşmasında izlenen TV kanalları, Türk dizileri vb. faaliyetler aramızdaki ortak kültürün birer göstergesi olarak ele alınabilir. Bu ortaklık ülkelerin ticari hayatlarına benzer bir etkide bulunarak Makedonya ve Türkiye arasında ilerleyen dönemlerde ekonomik ve ticari ilişkilerin daha da canlanmasına neden olacağı düşünülmektedir.

Türkiye'den bakıldığında küçük bir pazar olarak algılanan Makedonya tek başına değil de, çevresindeki bölgenin potansiyeli ile birlikte değerlendirildiğinde önemi daha iyi anlaşılacaktır. (Doğan, 2011) Bölgedeki devletlerle tarihe dayalı sosyo kültürel geçmiş, günümüzde sosyo kültürel ilişkilerimizin yanında ticari ilişkilerimizin de gelişmesinde önemli bir yere sahiptir.

Makedonya'nın bölge devletleri ve Türkiye ile ticari ilişkileri incelendiğinde Türkiye'nin istenilen düzeye henüz ulaşamadığı görülmektedir. Makedonya, ticaretinin önemli bir kısmını AB ülkeleri ve Batı Balkan ülkeleriyle gerçekleştirmektedir. 2010 yılında Makedonya'nın en çok ihracat yaptığı ülke 615 milyon dolar ve toplam ihracatında %20 lik pay ile Almanya olmuştur. Makedonya'nın ihracat yaptığı ülkeler arasında Türkiye 45 milyon dolar ve %1,5 luk pay ile 10. sırada yer almaktadır. Makedonya'nın 2010 yılında 539 milyon dolar ve toplam ithalattaki %11.1 lik payla en fazla ithalat yaptığı ülke Almanya olurken, Türkiye 234 milyon dolar ve toplam ithalatın %4.6 lık payı ile 9.sırada yer almaya devam etmiştir. Makedonya'ya yönelik ihracatımızda en önemli maddeler tekstil elyafı ve mamulleri, kara ulaşım araçları, metallerden nihai ürünler ve elektrikli makina ve cihazlar üzerinden gerçekleştirilmekte olduğu görülmektedir (Safi, 2012).

Bunun yanında özellikle son dönemde gözlenen başta büyük Türk şirketlerinin Makedonya'ya olan ilgilerinin artmaya başlaması ticari ilişkilerin artması konusunda önemli bir göstergedir. Ancak yeterli, bir gelişim henüz sağlanamamıştır. Makedonya'da doğrudan yabancı sermaye yatırımı gerçekleştiren Türk şirketlerinin sayısı 100 civarında olup bunların önemli bölümü KOBİ niteliğindeki firmalardan oluşmaktadır. Günümüzde Makedonya ekonomisindeki Türk yatırım tutarının 180 milyon doları aştığı düşünülmektedir (Doğan, 2011). Bu miktarların daha da artması için iki ülke arasında karşılıklı hükümet ve iş adamları düzeyinde ziyaretlerin yapılıyor olması ve beraberinde imzalan ikili protokollerin sayısındaki artış ticari ilişkilerimizin güçlendirilmesi için atılan olumlu adımlar arasında yer almaktadır.

Yine bölgede yaşanan uluslararası gelişmeler Türkiye'nin bölge ülkeleri ve Makedonya ile ticari ilişkilerinin gelişmesinde önemli bir yere sahiptir. Bölge ülkelerinin uluslararası teşkilatlara üye olması Balkanlar'ın istikrarının korunması, çatışmaların önlenmesi ve bölge ülkeleriyle sıcak ilişkilerin gelişmesi açısından büyük önem teşkil etmektedir. Uluslararası askeri bir örgütlenme olarak NATO'nun sağladığı güvenlik ve diğer taraftan AB'nin sağladığı ekonomik, siyasi, sosyal bütünleşme, bölgeyi çatışma ve anlaşmazlıklardan uzak tutabilecek önemli etkenlerdendir. Makedonya da bağımsızlığını kazanmasının ardından uluslararası teşkilatlara üye olma isteğini dile getirmiş ve bu yönde politikalar izlemiştir (Adıyaman, 2012). Bu ve benzeri gelişmeler hem bölge düzeyinde hem de Türkiye ile olan ticari ve ekonomik ilişkilerin daha sağlıklı ve uzun ömürlü olması yönünde önemli bir etken olarak karşımıza çıkmaktadır.

## 5  Veri

Türkiye ve Makedonya ekonomilerinin konjonktürel uyumunun araştırılması için iki ülkenin GSYİH verileri kullanılmıştır. Seriler reel hale getirilmiş ve mevsimsellikten arındırılmış bir halde IMF'nin ve Dünya Bankası'nın veri tabanlarından temin edilmiştir. Makedonya ekonomisinin üç aylık GSYİH verileri 2004 yılından itibaren veri tabanlarında incelenmeye başlandığı için 2004:01 ve 2013:04 dönemleri analize dahil edilmiştir. Analiz ülkelerin logaritmik formdaki GSYİH verisinden elde edilen konjonktür bileşeni serileri üzerine uygulanmıştır. Konjonktür bileşeninin elde edilmesi için Hodrick-Prescott filtresi kullanılmıştır. Türkiye ve Makedonya ekonomilerinin konjonktürel hareketinin analizi korelasyon hesaplamasına dayanmaktadır. Ülke GSYİH verilerinin incelenen dönemde normal dağılmamasından dolayı, serilerin normal dağılmasını gerektirmeyen Spearman sıra korelasyon katsayısının kullanılmasına karar verilmiştir. Spearmen korelasyon katsayısının hesaplanması aşağıdaki (1) no'lu denklemde gösterilmiştir.

$$\rho_{xy} = 1 - \frac{6\sum_i (R(X_i) - R(Y_i))^2}{n(n^2 - 1)} \qquad (1)$$

(1) no'lu eşitlikte yer alan R simgesi verinin büyüklük sırasını, X ve Y analiz edilen değişkenleri, n gözlem sayısını göstermektedir. Spearman metodu serilerin ikinci momentlerinin hesaplanması yöntemini kullanmaktadır. Böylece serilerin varyansları bulunmakta ve varyanslar arasındaki doğrusal ilişki elde edilmektedir (Makridakis ve diğerleri,1998).

Spearman sıra korelasyon katsayısı olan (ρ) değeri -1 < p < +1 arasında değer almaktadır. -1 değeri iki değişken arasında negatif yönlü tam doğrusal ilişki olduğunu; +1 değeri iki değişken arasında pozitif yönlü tam doğrusal ilişki olduğunu göstermektedir. Korelasyon katsayısının 0.50 değerinden az olması, ülkeler arasındaki konjonktür hareketleri uyumunun zayıf olduğunu, 0.50-0.70 arasında olması uyumun vasat olduğunu, 0.70-0.90 arasında olması uyumun güçlü olduğunu ve 0.90-1 arasında olması uyumun çok güçlü olduğunu göstermektedir (Kendall,1962).

## 6 Bulgular

Ele alınan dönemde Türkiye ile Makedonya ekonomileri arasındaki konjonktür hareketlerinin korelasyonunu aşağıda yer alan Grafik 1 göstermektedir.

***Grafik 1.*** *Türkiye ve Makedonya Ekonomilerinin Konjonktür Hareketleri Korelasyonu*

İki ülke arasındaki spearman sıra korelasyon katsayısı 0.7 < p < 0.9 arasında olduğu için Türkiye ve Makedonya arasındaki konjonktürel uyumun güçlü olduğunu söyleyebiliriz. Konjonktürel dalgalanmanın güçlü olmasının nedenlerini tespit etmemiz uygulanacak iktisadi politikaların etkinliği açısından önem arzetmektedir. Bu açıdan bir sonraki bölümde konjonktürel uyumu etkileyen faktörler tespit edilmeye çalışılacaktır.

## 7 Türkiye ve Makedonya Arasında Konjonktürel Hareketlerin Uyumunu Belirleyen Faktörler

Türkiye ve Makedonya arasındaki konjonktürel hareketlenmelerin uyumunu belirleyen faktörleri tespit etmek için kullanılacak ekonometrik yöntem Panel Regresyon Modeline dayanmaktadır. Öncelikle literatürde yer alan çalışmalardan yola çıkarak aşağıdaki regresyon modeli oluşturulmuştur.

$$\text{Kor}_{xy,t} = \mu_0 + \mu_1 \text{Kor}_{xy,t-1} + \mu_2 \text{TYO}_{xy,t} + \mu_3 \text{ENİT}_{xy,t} + \mu_4 \text{DİT}_{xy,t} + \mu_5 \text{SEKBE}_{xy,t} + \mu_6 \text{DKOF}_{xy,t} + \mu_7 \text{DOYS}_{xy,t} + \mu_8 \text{FFARK}_{xy,t} + \mu_9 \text{ENFA}_{xy,t} + \mu_{10} \text{MAPB}_{xy,t} + \mu_{11} \text{EDBA}_{xy,t} + \varepsilon_{xy,t}$$

Modelde yer alan x alt indisi Türkiye'yi, y alt indisi de Makedonya'yı ve t simgesi de zamanı göstermektedir.

KOR değişkeni bağımlı değişken olup Türkiye ve Makedonya ülkelerinin konjonktür hareketleri arasındaki korelasyon katsayısıdır. $\mu_0$ modelin sabit parametresidir. $\text{Kor}_{xy,t-1}$ bir dönem gecikmeli korelasyon katsayısının değerini gösterir.

TYO değişkeni Türkiye ve Makedonya arasındaki ticaret yoğunluğunu gösteren endekstir. Aşağıdaki (2) no'lu denklemdeki gibi hesaplanır.

$$TYO_{xy,t} = \frac{X_{xy,t} + M_{xy,t}}{GSYİH_{x,t}} \qquad (2)$$

ENİT değişkeni Türkiye ve Makedonya arasındaki endüstri içi ticaret düzeyini göstermektedir. Bu endeksin hesaplanmasında kullanılan Grubel-Lloyd endeksinin hesaplanışı (3) no'lu eşitlikte verilmiştir. Eşitlikte yer alan k simgesi sektörleri göstermektedir. Sektörel dış ticaret verileri Dünya Bankası veri tabanından elde edilmiştir.

$$ENİT_{xy,t} = 1 - \Sigma \frac{|X_{xy,k,t} - M_{xy,k,t}|}{X_{xy,k,t} + M_{xy,k,t}} \qquad (3)$$

DİT değişkeni Türkiye ve Makedonya arasındaki dikey ticareti göstermektedir. (4) no'lu denklemde nasıl hesaplandığı gösterilmiştir.

$$D\dot{I}T_{xy,t} = \frac{XA_{xy,t} + MA_{xy,t}}{GSY\dot{I}H_{x,t}} \qquad (4)$$

XA Türkiye'nin Makedonya'ya ara malı ihracatını, MA ise Makedonya'dan Türkiye'nin gerçekleştirdiği ara malı ithalatını göstermektedir. Bu veriler IMF ve Dünya Bankası'nın veri tabanlarında yer alan girdi-çıktı tablolarından elde edilmeye çalışılmıştır. Ara malı ithalatı ve ihracatının toplam ithalat ve toplam ihracatın artış hızında büyüdüğü varsayılarak verisine ulaşılamayan yıllardaki aramalı ithalatı ve ihracatı tahmin edilmeye çalışılmıştır.

SEKBE değişkeni Türkiye ve Makedonya arasındaki sektörel benzerlik düzeyini göstermektedir. Sektörel benzerlik aşağıdaki gibi hesaplanmıştır. Y toplam üretim payını göstermektedir.

$$SEKBE_{xy,t} = \Sigma|Y_{x,k,t} - Y_{y,k,t}| \qquad (5)$$

Üç ana sektör üzerinde durulmuştur: Tarım, Sanayi ve Hizmet Sektörü. Ülkeler arasındaki sektörel üretim farklılıkları endeksi de arttırmaktadır. IMF veri tabanından bu veriler temin edilmiştir.

DKOF değişkeni Türkiye ve Makedonya ülke paralarının dolar karşısındaki oynaklık farkını gösterir. (6) no'lu denklemde hesaplanışı gösterilmiştir. $\pi$ simgesi ülkelerin dolar karşısındaki döviz kurunu gösterir. Dünya Bankası'ndan veriler temin edilmiştir.

$$DKOF_{xy,t} = |(\pi_{x,t} - \pi_{x,t-1}) - (\pi_{yt} - \pi_{y,t-1})| \qquad (6)$$

DOYS değişkeni Türkiye ve Makedonya arasındaki dolaysız yabancı sermaye akımları toplamının Türkiye'nin GSYİH'na oranını ifade eder.

$$DOYS_{xy,t} = \frac{DT_{xy,t} + DM_{xy,t}}{GSY\dot{I}H_{x,t}} \qquad (7)$$

DT Türkiye'ye yönelik, DM'de Makedonya'ya yönelik dolaysız yabancı sermaye yatırımını göstermektedir. IMF sitesinden temin edilmiştir.

FFARK değişkeni iki ülke arasındaki faiz oranı farklılığını göstermektedir. Ülke faiz oranı ile libor oranı arasındaki farkın riski yansıttığı kabul edilerek riskin arttığı durumlarda ülke faiz oranının da artacağı beklenmektedir. Faiz oranı i ile gösterilmiştir.

$$FFARK_{xy,t} = \{(i_{x,t} - i_{libor}) - (i_{y,t} - i_{libor})\} \qquad (8)$$

ENFA değişkeni Türkiye ve Makedonya arasındaki enflasyon oranları farkını temsil etmektedir. Bu değişken bize ülkeler arasındaki para politikası benzerliğini gösterecektir. Enflasyon oranlarındaki farkın azalması para politikasının benzerliğine ve konjonktürel uyumun artacağına işaret etmekte olduğu düşünülmüştür.

$$ENFA_{xy,t} = T\ddot{U}FE_{x,t} - T\ddot{U}FE_{y,t} \qquad (9)$$

MAPB değişkeni Türkiye ve Makedonya arasındaki maliye politikası benzerliğini göstermektedir. Maliye politikası benzerliğini ölçmek için ülkelerin merkezi yönetim borçları (MYÖB) kullanılmıştır. Maliye politikasında benzerliğin artması konjonktürel uyumu artırmalıdır.

$$MAPB_{xy,t} = \frac{MY\ddot{O}B_{x,t}}{GSY\dot{I}H_{x,t}} - \frac{MY\ddot{O}B_{y,t}}{GSY\dot{I}H_{y,t}} \qquad (10)$$

EDBA değişkeni Türkiye ve Makedonya'nın enerji konusunda dışa bağımlılığını göstermektedir. Enerjide dışa bağımlılığı yakın seviyede olan ülkelerin konjonktürel uyumunun da benzer olduğu görülür.

$$EDBA_{xy,t} = \frac{EM_{x,t}}{EK_{x,t}} - \frac{EM_{y,t}}{EK_{y,t}} \qquad (11)$$

Son olarak $\varepsilon$ simgesi de modeldeki hata terimini göstermektedir.

## 8  Tahmin Sonuçları

Türkiye ve Makedonya ekonomileri arasındaki konjonktürel uyumu etkileyen faktörleri belirlemek için oluşturulan ekonometrik model, panel-GMM metodu ile tahmin edilmiş ve sonuçlar Tablo1'de gösterilmiştir.

Tabloda parantez içindeki değerler olasılık değerini göstermektedir. * işareti %1, ** %5 ve *** %10 anlamlılık düzeyinde istatistiksel olarak anlamlı katsayıları göstermektedir.

Tablodaki F değeri modelin bütün olarak %5 önem düzeyinde istatistiksel olarak anlamlı olduğunu göstermektedir. AR (1) değeri modelin hata terimleri arasında birinci dereceden otokorelasyon olduğunu ve AR (2) istatistiği hata terimleri arasından ikinci dereceden otokorelasyonun olmadığını göstermektedir. Araç değişkenlerin doğruluğunu tespit etmede kullanılan Sargan ve Hansen testleri sonuçlarına bakıldığında, %5 anlamlılık düzeyinde araç değişkenlerin geçerli olduğu anlaşılmaktadır. Bağımlı değişkenin gecikmesini gösteren $Kor_{t-1}$ değişkeninin %10 önem düzeyinde anlamlı olması değerin modele eklenmesinin doğru bir karar olduğunu bize gösterir. FFARK değişkeni %1 önem düzeyinde istatistiksel olarak anlamlı çıkarak, Türkiye ve Makedonya arasında faiz oranları farkının azaldığını ve konjonktürel uyumun arttığını göstermektedir. ENFA değişkeni de %5 önem düzeyinde anlamlı çıkarak Türkiye ve Makedonya arasındaki enflasyon oranları arasındaki farkın

arttığı ancak istatistiksel olarak anlamlı çıkması ülkelerin farklı şoklara maruz kaldıkları için artan enflasyon oranı farkının konjonktürel uyumu azaltmayıp arttırdığı sonucu ortaya çıkmaktadır. MAPB değişkeni de %10 önem düzeyinde anlamlı çıkarak Türkiye ve Makedonya arasında maliye politikası farklılığındaki artışın konjonktürel uyumu arttırdığı sonucu ortaya çıkar. Bunun nedeni de ülkelerin farklı şoklara maruz kalmaları olabilir. Diğer değişkenlerin istatistiksel olarak anlamlı çıkmaması ilgili değişkenlerle bağımlı değişken arasındaki ilişkinin doğrusal olmamasından kaynaklanabilmektedir.

*Tablo 1: Panel GMM Tahmin Sonuçları*

## 9 Sonuç

Türkiye ve Makedonya arasındaki sosyo kültürel ve ticari ilişkilerin kökeni bölge devletlerinin tarihsel bağlarına kadar uzanmaktadır. Uzun zaman boyunca benzer bir kültürü paylaşan iki devlet arasında geçmişten günümüze miras olarak gelen bu bağlar günümüzde özellikle iktisadi ve sosyal alanda kendini yeniden canlandırma eğilimine girmiş bulunmaktadır. Özellikle iki devlet arasında yaşanan son gelişmeler incelendiğinde bu durum açıkça gözlenmektedir.

Her iki devletin de bu kapsamda karşılıklı attıkları adımlar, ikili anlaşmalar ortak protokoller ve karşılıklı iş birliği faaliyetleri bunun kanıtıdır. Bu durum hem devlet düzeyinde hem de iş adamlarının karşılıklı ilişkilerinin genişlemesine neden olmuştur. Özellikle küreselleşme süreci ile birlikte yaşanan tüm bu gelişmeler iki ülke ekonomisinin birbirlerinden etkilenmesini ve aralarında konjonktürle bir uyumun ortaya çıkmasına neden olmuştur.

Türkiye ve Makedonya arasındaki konjonktürel uyumun 2004 yılından sonra giderek arttığı ve faiz farklılığı değişkeni %1 önem düzeyinde istatistiksel olarak anlamlı çıkarak, Türkiye ve Makedonya arasında faiz oranları farkının azaldığını, enflasyon oranları arasındaki farklılığı ifade eden değişken de %5 önem düzeyinde anlamlı çıkarak Türkiye ve Makedonya arasındaki enflasyon oranları arasındaki farkın arttığı ancak istatistiksel olarak anlamlı çıkması ülkelerin farklı şoklara maruz kaldıkları için artan enflasyon oranı farkının konjonktürel uyumu azaltmayıp arttırdığı sonucu ortaya çıkmaktadır. Maliye politikası benzerliği değişkeni de %10 önem düzeyinde anlamlı çıkarak Türkiye ve Makedonya arasında maliye politikası farklılığındaki artışın konjonktürel uyumu arttırdığı sonucu ortaya çıkmaktadır. Bunun nedeni de ülkelerin farklı şoklara maruz kalmaları olabilir. Diğer değişkenlerin istatistiksel olarak anlamlı çıkmaması ilgili değişkenlerle bağımlı değişken arasındaki ilişkinin doğrusal olmamasından kaynaklanabilmektedir.

Kısaca Türkiye ve Makedonya arasındaki konjonktürel uyumun arttığı gözlenmektedir. Bu artışın Türkiye ve Makedonya arasındaki faiz oranları farkının azalmasına, farklı maliye politikası uygulanılmasına, ticaretin artmasına bağlı olduğu sonucuna ulaşılmıştır. Ayrıca para politikası benzerliğindeki bir artışın da konjonktürel uyumu azalttığı görülmektedir. Bu bulgular altında Türkiye ve Makedonya'da uygulanacak politikalara kara verirken dünya konjonktüre hareketinin de göz önünde bulundurulması gerekir. Ayrıca istatistiksel olarak anlamlı olduğu tespit edilen değişkenler üzerinden iktisadi politikaların izlenilmesi gerek iktisadi politikaların etkinliği gerekse de ülke ekonomisinin refah seviyesi bakımından oldukça önem arz etmektedir.

# Göç Hukuku Açısından Yabancıların Türkiye'de İkameti

# Residence of Foreigners in Turkey with respect to the Immigration Law

Prof. Dr. Çağlar Özel (Hacettepe University, Turkey)

## Abstract

Immigration is an important issue for almost any country with respect to economic and social aspects. However, this situation amounts to a specific importance for Turkey in relation to its geographical and strategic position and current economic opportunities. Because, due to the heavy economic and political instability in the region in which Turkey exists, Turkey has not only become a transit country for irregular migration but also it has turned into a target country. Such situation has brought many economic, social, cultural, legal etc. problems and especially security issues. We, limited to the scope and size of our study, shall focus on one of the most important aspects of mentioned issues, which is *"residence of foreigners in Turkey"*. Within this context, we shall mention mainly the procedure and the conditions, timeline, restrictions, obligations, work permits, permit annulments etc. briefly and shall offer solution to problematic issues.

## 1 Giriş

04.04.2013 tarih ve 6458 sayılı *"Yabancılar ve Uluslararası Koruma Kanunu (YUKK)* (RG, 11.04.2013/28615)"nun yasalaşmasıyla birlikte yabancıların Türkiye'ye girmeleri, kalmaları, çıkmaları ve Türkiye'den koruma istemleri ile benzeri konularda gerek esas ve gerekse usul açısından reform niteliğinde yenilikler yapılmış ve değişiklikler yapılmıştır. Gerçekten bir taraftan konuyla doğrudan veya dolaylı şekilde uygulama alanı olan çeşitli kanunlar ile alt mevzuat açık veya zımni olarak yürürlükten kaldırılarak farklı bir yaklaşımla yeni birçok kurum ve kuruluş oluşturulurken, diğer taraftan mevcutlarında da önemli değişiklikler yapılmıştır.

Tebliğimizde Yabancılar Hukukunun temel süjeleri arasında bulunan ve Ülkemiz açısından da hayati derecede önemli olan *"yabancıların Türkiye'de ikameti"* konusu üzerinde durulacaktır. Bu yapılırken ise, öncelikle *"ikametgâh/yerleşim yeri"* kavramı hakkında genel bir bilgi verildikten sonra, YUKK'nin 11 Nisan 2014 tarihi itibariyle yürürlüğe girecek olan (bkz. md. 125) hükümleri çerçevesinde yabancıların Türkiye'de ikametine ilişkin kurallar incelenecek ve sorunlu noktalar başta olmak üzere kimi tespit, değerlendirme ve önerilere yer verilecektir.

## 2 İkamete İlişkin Genel Bilgiler

Genel olarak *"ikamet"* *"bir yerde oturma, eğleşme"*, *"ikametgâh"* ise, *"konut, yerleşim yeri, yerleşke"* anlamındadır. 22.11.2001 tarih ve 4721 sayılı *"Türk Medeni Kanunu (TMK)(*RG, 08.12.2001/ 24607)" nunda ikametgâh kavramı yerine yerleşim yeri kavramı kullanılmıştır. Buna göre yerleşim yeri *"...bir kimsenin sürekli kalma niyetiyle oturduğu yerdir"* (TMK md. 19/1).İkametgâhın kanun maddesindeki tanımı genel bir tanım değildir. Esas olarak ikametgâh kavramı kanunun genel amacından ortaya çıkmaktadır. İkametgâh kişinin mesleki ve şahsi ilişkilerinin merkezi olan yerdir. Bu durum tüzel kişiler bakımından da geçerli olup tüzel kişinin yönetim merkezi aynı zamanda ikametgâhıdır. (TMK md.51) İkametgâhta temel hareket noktası belli bir yerde iradi olarak ve sürekli şekilde kalma olduğundan, *"...bir öğretim kurumuna devam etmek için bir yerde bulunma ya da eğitim, sağlık, bakım veya ceza kurumuna konulma, yeni yerleşim yeri edinme sonucunu..."* doğurmamaktadır (TMK md. 22). İradi ve sürekli kalma ikametgâha dair en önemli unsur olup doktrinde kabul edilen ikametgâha hâkim olan ilkelerin de temelini oluşturmaktadır. Ancak ikametgâha hâkim olan ilkeler konusunda öğretide bir görüş birliği yoktur. Bir görüşe göre iki diğer görüşe göre üç ilke vardır. Ancak yerleşim yerinin zorunluluğu ve yerleşim yerinin tekliği ilkesinde öğretide uzlaşı vardır. Yerleşim yerinin sürekliliği konusunda uzlaşı yoktur. Bu ilkelere kısaca değinmek gerekir.

**İkametgâhın zorunluluğu ilkesi**; herkesin bir yerleşim yerine sahip olması gerektiğini kabul etmektedir. Kişi kural olarak kendisi belirler ama belirlememişse kanun farazi bir yerleşim yeri varsayar.

**İkametgâhın tekliği ilkesi**; Türk Hukukuna göre herkesin tek bir yerleşim yeri olmalıdır. Kişinin birden fazla evi varsa bunlardan biri yerleşim yeri sayılır.

**İkametgâhın sürekliliği ilkesi**; yerleşim yerinin süreklilik arz ettiğini ifade eder. Bu ilke gereğince yerleşim yeri ancak yeni bir yerleşim yeri edinme amacı olursa yerleşim yerinin değişebileceğini ifade eder. Yani süreklilikten kasıt yerleşim yerinin değişmemesi değil yeni yerleşim yeri edinme amacı olursa değişim gerçekleşmesidir. Amaç kişinin sürekli olarak bir yerleşim yerinin olmasıdır, yerleşim yerinin olmama durumunu hukukumuz kabul etmemiştir.

İkametgâhın gerek Kamu Hukuku, gerekse Özel Hukuk ve bu bağlamda Milletlerarası Hukuk açısından taşıdığı önem nedeniyle TMK' de mutlaka bir yerleşim yeri bulunması (yerleşim yerinin gerekliliği ilkesi) ve bunun tek olması (yerleşim yerinin tekliği ilkesi) ilkeleri benimsenmiştir. Buna göre, bir kimsenin aynı zamanda birden çok yerleşim yeri olamayacağı gibi (TMK md. 19/2), bir yerleşim yerinin değiştirilmesi için yenisinin edinilmesi zorunludur (TMK md. 20/1). Bu nedenle önceki yerleşim yeri belli olmayan veya yabancı ülkedeki yerleşim yerini terk ettiği hâlde Türkiye'de henüz bir yerleşim yeri edinmemiş olan kimsenin hâlen oturduğu yer, yerleşim yeri sayılır (TMK md. 20/1) *[itibari (saymaca) yerleşim yeri]*.

Kanun kişinin hukuki durumunu/statüsünü gözeterek bazı hallerde isteğe bağlı olmaksızın/ yasa gereği ikametgâh kuralını benimsemiştir. Bu çerçevede, *"velâyet altında bulunan çocuğun yerleşim yeri, ana ve babasının; ana ve babanın ortak yerleşim yeri yoksa, çocuğun kendisine bırakıldığı ana veya babanın... diğer hâllerde [ise] çocuğun oturma yeri, onun yerleşim yeri..."* sayılmaktadır (TMK md. 21/1). Bu bağlamda *"vesayet altındaki kişilerin yerleşim yeri"*nin *"bağlı oldukları vesayet makamının bulunduğu yer..."* olduğu kabul edilmiştir (TMK md. 21/2) *(bağımlı yerleşim yeri)*.

*"Yerleşme/ikamet özgürlüğü"* Anayasal bir haktır. Gerçekten 18.10.1982 tarih ve 2709 sayılı *"Türkiye Cumhuriyeti Anayasası (AY)* (RG, 09.11.1982/17863)"nın 23/1. maddesine göre, herkes *"yerleşme özgürlüğü"*ne sahip olup, ancak *"...suç işlenmesini önlemek, sosyal ve ekonomik gelişmeyi sağlamak, sağlıklı ve düzenli kentleşmeyi gerçekleştirmek ve kamu mallarını korumak..."* amaçlarıyla ve kanunla sınırlanabilir (AY md. 23/2). 2001 den önce evli kadının ikametgâhının kocaya bağlı olacağı ve kadının ikametgâh değişikliği belli şartlara bağlanmıştı. Bu hüküm AYM 2.12.1993 tarihli kararıyla hüküm iptal edilmiş 2001 yılında ise madde tamamen değişmiştir.

Medeni Usul Hukuku açısından ikametgâh mahkemelerin yer itibariyle yetkilerini belirlemeye yarar.1 Ekim 2011 tarih ve 6100 sayılı Yeni Hukuk Muhakemeleri Kanunu 6.maddesine göre genel yetkili mahkeme, *davalı gerçek veya tüzel kişinin davanın açıldığı tarihteki yerleşim yeri mahkemesidir.* 19.2.1960 tarih ve 7201 sayılı Tebligat Kanununa göre tebligatların kişinin *yerleşim yerinin bulunduğu yerde* yapılması gerekir.

İcra ve İflas Hukuku bakımından para veya teminat borcu açısından yetkili icra dairesi, borçlunun *yerleşim yerinin bulunduğu yer* icra dairesidir (İİK md.50).

Milletlerarası Özel Hukuktan doğan anlaşmazlıkların çözümü noktasında yabancılık unsuru içerdiğinden dolayı hangi devletin hukukunun uygulanacağı noktasında çıkan belirsizlik taraflardan birinin *yerleşim yerinin bulunduğu yer* hukukunun uygulanmasıyla çözüme kavuşturulur.(MÖHUK md.42)Türk mahkemelerinin milletlerarası yetkisi ise HMK ile çözüme kavuşturulur (MÖHUK md.40).

Yabancılar açısından ise, bu sınırlamalarla kayıtlı kalmaksızın milletlerarası hukuka uygun olarak yine kanunla daha geniş kısıtlamalar öngörülebilir (AY md.16). Nitekim YUKK'nin 18. maddesiyle pasaport ve vizeye dair koşullarının belirlenmesinde, yabancıların Türkiye'ye girişlerinin belli şartlara bağlaması veya kısıtlayıcı her tür önlemin alınması konularda Bakanlar Kurulu yetkili kılınmıştır.

Yabancıların Türkiye'ye girişleri, kalışları ve çıkışları ile Türkiye'den koruma talep edenlere sağlanacak korumanın kapsamına ve uygulanması YUKK kapsamındadır. Dolayısıyla yeri geldikçe değinilecek/işaret edilecek olan ayrık haller dışında yapılacak değerlendirmeler bu kanun çerçevesinde yapılacaktır.

## 3 Yabancılar ve Uluslararası Koruma Kanunu'na Göre Yabancıların İkameti

### 3.1 Genel Olarak

YUKK md. 3/1-ü'ye göre **"yabancı",** "Türkiye Cumhuriyeti Devleti ile vatandaşlık bağı bulunmayan kişiyi" ifade etmektedir. 29.05.2009 tarih ve 5901 sayılı "Türk Vatandaşlığı Kanunu" na (RG, 12.06.2009/27256) göre "Bir yabancı için ikamet...", "...Türk kanunlarına uygun olarak Türkiye'de oturma[k]..." anlamına geldiğine göre, YUKK'nin 125. maddesi gereğince bu Kanun'un tamamen yürürlüğe gireceği 11.04.2014 tarihine kadar 15.07.1950 tarih ve 5683 sayılı "Yabancıların Türkiye'de İkamet ve Seyahatleri Hakkında Kanun" (RG, 24.07.1950/7564) ile 15.07.1950 tarih ve 5682 sayılı "Pasaport Kanunu"(RG, 24.07.1950/7564), bu tarih itibariyle ise YUKK hükümleri uygulama alanı bulacaktır.

Yabancıların Türkiye'de ikameti konusu ise, esas itibariyle YUKK'nin **"Yabancılar"** başlıklı ikinci kısmının **"İkamet"** alt başlıklı ikinci bölümünde yer alan 19-49. maddelerinde düzenlenmiştir. Aşağıdaki açıklamalar esas olarak bu hükümler çerçevesinde yapılacaktır.

### 3.2 Ülkeye Giriş İkamet İzni ve Bu İzinden Muafiyet

Türkiye'ye giriş ve Türkiye'den çıkış sınır kapılarından yapılır. Bunun için geçerli bir pasaport veya pasaport yerine geçen bir belgenin görevlilere ibraz edilmesi gerekmektedir (YUKK md.5, 6/1). Ülkede kalma/yerleşme hakkının prensip olarak vatandaşa ait olması karşısında, Türkiye'ye geldikten sonra burada belli bir süreden fazla kalacak olan yabancının ikamet izni alması zorunludur (YUKK md. 3, 19). Zira Ülkeye gelirken alınan vize yabancıya ya transit geçiş izni sağlamakta ya da Türkiye'de en fazla doksan güne kadar kalma hakkı vermektedir (YUKK md. 3/1-t, 11). Bununla birlikte bazı hallerde bu izinden muafiyet söz konusudur. Buna göre;

-Doksan güne kadar vizeyle veya vizeden muaf olarak gelenler (vize süresi veya vize muafiyeti süresince),

-Vatansız kişi kimlik belgesi sahibi olanlar (ayrıca bkz. YUKK md. 50),

-Türkiye'de görevli diplomasi ve konsolosluk memurları ile bunların ailelerinden Dışişleri Bakanlığınca bildirilenler,

-Uluslararası kuruluşların Türkiye'deki temsilciliklerinde çalışan ve statüleri anlaşmalarla belirlenmiş olanlar,

-Türkiye Cumhuriyeti'nin taraf olduğu anlaşmalarla ikamet izninden muaf tutulanlar,

-5901 sayılı Kanunun 28 inci maddesi kapsamında (çıkma izni almak suretiyle Türk vatandaşlığını kaybedenler ile üçüncü dereceye kadar olan altsoyları) olanlar,

-YUKK'nin 69 uncu maddenin yedinci fıkrası (uluslararası koruma talep eden başvuru sahibi olarak) ile 76 ncı (uluslararası koruma başvuru sahibi olarak) ve 83 üncü (mülteci statüsü sahibi olarak) maddelerin birinci fıkraları kapsamında belge sahibi olanlar,

-Geçerli çalışma izni ile 27.2.2003 tarih ve 4817 sayılı *"Yabancıların Çalışma İzinleri Hakkında Kanun (YÇİHK)* (RG, 06.03.2003/25040)"un 10. maddesine istinaden verilen çalışma izni muafiyet teyit belgesi sahibi olanlar (YUKK md. 27/1),

Hukuki statüsüne göre uygun olan süre zarfında ikamet izni almaksızın Türkiye'de kalma hakkına sahiptir (YUKK md. 20). Örneğin doksan güne kadar vizeyle veya vizeden muaf olarak gelenler vize veya vize muafiyeti süresince ikamet izninden bağışık tutulmuşlardır. Keza Türkiye'de görevli diplomatik memurlar ile uluslararası kuruluşların temsilciliklerinde görevli olanlar (YUKK md. 20/1, c-e) ikamet izninden ayrıcalık sağlayan hukuki durumları sona ermesinden itibaren Türkiye'de kalmaya devam etmek istedikleri takdirde, en geç on gün içinde ikamet izni almak üzere valiliklere başvurmakla yükümlüdür (YUKK md. 20/2).

## 4 İkamet İzninin Türleri

5683 sayılı Kanun'da "ikamet tezkeresi" (karş. YUKK md. 122) olarak anılan "ikamet izin" leri YUKK'nin 30-49. maddelerinde veriliş amacı ve süresine göre; "kısa dönem ikamet izni (md. 31-33)", "aile ikamet izni (md. 34-37", "öğrenci ikamet izni (md.38-41)", "uzun dönem ikamet izni (md. 42-45)", "insani ikamet izni (md.46-47)" ve "insan ticareti mağduru ikamet izni (md.48-49)" olmak üzere altı farklı kategoriye ayrılmıştır. Kanunda her bir ikamet türünün koşulları, süresi, uzatılması, iptali ve sağladığı haklar ayrıntılarıyla düzenlenmiş olup, çalışmamızın amacı ve kapsamı nedeniyle burada daha fazla üzerinde durulmayacaktır. Ancak şu kadarını belirtelim ki, ikamet izninin verilmesine esas olan gerekçenin sona ermesi veya farklı bir gerekçenin ortaya çıkması hâlinde, yeni kalış amacına uygun ikamet izni talebinde bulunularak ikamet izinleri arasında geçişler yapılması mümkündür (YUKK md. 29).

## 5 İkamet İznine İlişkin Prosedür

### 5.1 Başvuru Şekli

5683 sayılı Kanun'dan (md.1) farklı olarak YUKK'ye göre, geçerli bir ikamet izni alabilmek için Türkiye'ye geçerli bir giriş yapılmış olması ön şartı aranmamaktadır. Zira eski sistemde ikamet tezkeresi başvurusu, giriş vizesi alınarak Ülkeye girildikten sonra İçişleri Bakanlığı hiyerarşisi içindeki yetkili emniyet makamlarına yapılmakta iken (md. 3), YUKK ile getirilen usulle kural olarak doğrudan yurtdışından yapılabilen bir başvuru haline getirilmiştir (md. 21). Buna göre ikamet izni almak isteyen yabancı, istemini vatandaşı olduğu veya yasal olarak bulunduğu ülkedeki konsolosluklara yapar. Bu başvuru için yabancının, talep ettiği ikamet izni süresinden altmış gün daha uzun süreli pasaport ya da pasaport yerine geçen belgeye sahip olmaları şartı aranır (YUKK md. 21/1-2).

Başvuru üzerine konsolosluklar, ikamet izni başvurularını görüşleriyle birlikte Göç İdaresi Genel Müdürlüğüne (GİGM) iletir. Genel Müdürlük, gerekli gördüğünde ilgili kurumların görüşlerini de alarak başvuruları sonuçlandırdıktan sonra, ikamet izninin düzenlenmesi ya da başvurunun reddedilmesi için konsolosluğa bilgi verir (YUKK md. 21/4). Bu yolla izin alarak Türkiye'ye gelen yabancılar, giriş tarihinden itibaren en geç yirmi iş günü içinde adres kayıt sistemine kayıtlarını yaptırmak zorundadırlar (YUKK md. 26/2). Belirtelim ki, Türkiye'ye giriş yapacağı tarih itibariyle geçerli bir ikamet iznine haiz olan yabancıların, ayrıca vize almak zorunluluğu bulunmamaktadır.

İkamet izin belgeleri, kalış amacına bağlı şekilde, pasaport veya pasaport yerine geçen belgelerin geçerlilik süresinden altmış gün daha kısa süreli olarak ve her yabancı için ayrı düzenlenir (YUKK md. 23).

Başvurular, en geç doksan gün içinde sonuçlandırılır ve başvurunun reddine ilişkin işlemler de ilgiliye tebliğ edilir (YUKK md. 21/5-6). Bu değerlendirme süreci yapılacak işlemin içeriği ve kapsamı gözetildiğinde oldukça uzundur.

İstisnai bazı hallerde Türkiye içinde ikamet izni başvuruları valiliklere yapılır (YUKK md. 22).

İkamet izin belgeleri her yabancı için ayrı ayrı düzenlenir (YUKK md. 23). Alınan ikamet izni (hangi türde olursa olsun) altı ay içinde kullanılmaya başlanmadığı takdirde geçerliliğini kaybeder (YUKK md. 19).

### 5.2 İkamet İzin Süresi, Bu Sürenin Uzatılması ve Kesilmesi

İkamet izin belgeleri, kalış amacına bağlı şekilde, pasaport veya pasaport yerine geçen belgelerin geçerlilik süresinden altmış gün daha kısa süreli olarak düzenlenir (YUKK md. 23). İkamet izinleri talep üzerinde valiliklerce uzatılabilir. Başvurular ikamet izin süresinin son altmış gününde yapılabilir. İkamet iznini uzatma konusunda başvuruda bulunanlara, harca tabi olmayan bir belge verilir ve bu belgeyle dayanarak ikamet izni süreleri sona erse bile, haklarında karar verilinceye kadar Türkiye'de ikamet edebilirler. Bu düzenleme uygulamadaki belirsizliğin giderilmesini sağlayacak nitelikte olduğundan isabetlidir.

Uzatma istemi kabul edildiği takdirde ek ikamet izni, önceki iznin sürelerinin bitiminden itibaren başlar (YUKK md. 24).

Ülke içinde valiliklerce yapılan ikamet izni talebinin reddi, ikamet izninin uzatılmaması veya iptalinde, yabancının Türkiye'deki aile bağları, ikamet süresi, menşe ülkedeki durumu ve çocuğun yüksek yararı gibi hususlar göz önünde bulundurulur ve gerektiğinde bu kararın verilmesi ertelenebilir (YUKK md. 25/1). Kararlar gerekçeli olur; yabancıya ya da yasal temsilcisine veya avukatına tebliğ edilir ve başta itiraz hakları olmak üzere bütün hak ve yükümlülükleri öğretilir (YUKK md. 25/2).

Tutuklu veya hükümlü olarak ceza veya evlerinde ya da idari gözetim altında geri gönderme merkezlerinde bulunan yabancıların, buralarda geçirdikleri süreler ikamet izni süresinin ihlali sayılmaz (YUKK md. 26/1).

İkamette kesintiler olabilir. Bu bağlamda zorunlu kamu hizmeti, eğitim ve sağlık nedenleri hariç, bir yıl içinde toplam altı ayı geçen veya son beş yıl içinde toplam bir yılı aşan Türkiye dışında bulunmalar ikamette kesinti sayılmakta ve bu süreler ikamet izni başvurularında veya başka bir ikamet iznine geçişlerinde, önceki izin sürelerinin hesabına katılmamaktadır (YUKK md. 28/1).

### 5.3 Yargısal Denetim

Açık düzenleme bulunmamakta ise de, idarenin her türlü eylem ve işlemlerine karşı yargı yolu açık (AY md. 125/1) olduğundan, ikamet izni konusundaki işlemlere karşı da genel hükümlere çerçevesinde idare yargı yoluna başvurulabilir.

## 6 Sonuç

Yabancıların Türkiye'de ikametleri, Yabancılar Hukukuna ilişkin birçok konuda olduğu gibi, 11.04.2014 tarihi itibariyle YUKK hükümlerine göre düzenlenecektir.

Buna göre, Türkiye'de 90 günden veya vize muafiyetinin tanıdığı süreden daha fazla kalmak isteyen yabancılar için vize veya vize muafiyeti yeterli olmayacak ve daha fazla kalabilmek için ikamet izni almak zorunluluğu söz konusu olacaktır.

İkamet veya ikamet yerine geçen iznin (ör. çalışma izni) bulunması hali kişiye vize muafiyeti sağlayacaktır. Ancak Türkiye'ye giriş yapmak amacıyla kullanılabilen vize, yabancıya ikamet hakkı tanımadığı gibi, çalışma hakkı da vermez.

YUKK'nin 21/5 maddesinde 90 gün olarak benimsenen ikamet izni değerlendirme süresi oldukça uzun olup daha kısa süresinin belirlenmesi yararlı olurdu.

5683 sayılı Kanun döneminin (md.1) aksine, ikamet izni alabilmek için Türkiye'de bulunmak zorunlu olmayıp, istisnai bazı haller dışında (YUKK md. 22), doğrudan yurtdışından yapılabilen bir başvuru haline gelmiştir (YUKK md.21). İkamet izninin niteliği, koşulları ve tanıdığı kalış süresi dikkat alındığında vizeye göre daha kapsamlı bir belge olduğundan, bu izne sahip olanlara vize muafiyeti tanınması isabetli olmuştur.

Yeni sistemde amaçları ve süreleri gözetilerek altı faklı türden ikamet izni öngörülmüş ve belli şartlarda birbirleri arsından geçiş yapılabilmesi benimsenmiştir (YUKK md. 29, 30).

İkamet izinlerinin uzatılması sürecinde yabancı hakkında karar verilinceye kadar Türkiye'de ikamet edebilmesini sağlayan belge verilmesi uygulamadaki belirsizliğin giderilmesini sağlayacak nitelikte olduğundan yerindedir.

## Abstract

Intendment of the paper herein, to evaluate of new provisions regarding sales and commercial sales amended by new Turkish Code of Obligations numbered 6098 in the context of Vienna Convention on Contracts for the International Sale of Goods which is effective since 01 January 1988. It has a significance to be able to understand why the provisions of the convention have not been completely quoted to Turkish Code of Obligations. Turkish Code of Obligations' numbered 6098, Vienna Convention on Contracts for the International Sale of Goods and Provisions of Vienna Convention on Contract for the International Sale of Goods (CISG/United Nations Convention), Comparing of civil law, common law, and combinations of these (especially Sales contracts in civil law and sales contracts in common law).During the legislation process of Turkish Code of Obligations' provisions regarding sales, both Vienna Convention on Contracts for the International Sale of Goods (CISG/United Nations Convention) and Swiss law has been constituted a source. The Vienna Convention is effective since 01 January 1988 and Turkey has participated to (CISG) on 01 August 2011 and it has been a part of domestic law. The aim of (CISG) is to eliminate the differences among the countries' laws regarding sales; i.e. it constitutes a linking rule and the rules of sales. Since the Convention has been legislated with the effect of various law families and systems, provisions of the convention have not been completely adopted to code of obligations.

## 1 Giriş

Yeni Türk Borçlar Kanunu satıma ilişkin hükümlerinde değişiklikler yapılırken hem Milletlerarası Mal Satımına İlişkin Viyana Konvansiyonu (CISG) hem de kaynak İsviçre Kanunu'ndan yararlanılmıştır.

1988 yılında yürürlüğe Viyana Konvansiyonuna Türkiye, Ağustos 2011 tarihinde katılarak iç hukukumuzun parçası olmuştur. Viyana Konvansiyonu asıl amacı, satış konusundaki ülkelerdeki mevcut kanunlar arasındaki farklılıkları gidermek; birörnek (Yeknesak) bir bağlama kuralı ve satışa ilişkin kuralları oluşturmaktır. Bu nedenle konvansiyon çeşitli hukuk ailelerinden ve hukuk sistemlerinden derlenerek yapıldığı için konvansiyon hükümlerini olduğu gibi Borçlar Kanunu'na alınmamıştır.

## 2 Taşınır Satışı

Mülkiyeti devir borcu doğuran tipik sözleşmelerin en başında satış sözleşmesi ya da satım sözleşmesi yer alır. Satış sözleşmesi yeni TBK m.207 tanımlanmış olup, buna göre satış sözleşmesi, bir tarafın satılanın veya satım konusunun mülkiyetini devretmeyi üstlendiği buna karşılık diğer tarafın satış bedelini ya da bir bedel ödediği sözleşmeye denir. Biz yazımızda satış sözleşmesine bütün hükümleri değil; sadece yeni Borçlar Kanunu ile getirilen önemli değişiklerden bahsedeceğiz. Bu değişikliklerin başında da yarar ve hasarın intikali, satıcının temerrüdünü düzenleyen TBK. 212 ve 213. madde ile ayıba karşı tekeffül hükümleri yer almaktadır.

### 2.1 Taşınır Satışında Yarar ve Hasarın İntikali

183/I hükmüne göre, yarar ve hasar, halin gereğinden veya özel şartlardan doğan istisnalar dışında kural olarak, sözleşmenin kurulduğu andan itibaren alıcıya geçiyordu. 818 sayılı eski BK'nın 183. maddesinde satımda yarar ve hasar konusu ele alınırken öncelikle parça satımı ve cins satımı ayrımı yapılmaktaydı. Yine eğer cins satımı varsa, bir başka ayrım olan yerinden satım ve gönderme suretiyle satım ayrımı yapılmaktaydı. Parça satımı, yani satım konusu bireysel olarak alıcı tarafından belirlenen bir satım ise, satış sözleşmesi kurulur kurulmaz satılanın yarar ve hasarı alıcıya geçmekteydi. Dolayısıyla satım konusunun mülkiyetini alıcıya geçiren tasarruf işlemi henüz yapılmadan önce satıcıya yüklenemeyen sebeplerle mal telef olursa, alıcı kendi kusuru olmasa dahi kararlaştırılan satış bedelinin tümünü satıcıya ödemek zorundaydı. Dolayısıyla parça satımlarda hasarın ceremesini alıcı çekmekteydi. Bu durumda öğretide şiddetle eleştirilmekte ve bir dizi çözüm geliştirilmekteydi. Örneğin maddede geçen "halin icabından" lafzından hareket ediliyordu; ama bu da çok istisnai bir durum teşkil ediyordu.

Cins satımlarında ise hasarın alıcıya intikali için yalnız satış sözleşmesinin kurulmuş olması yeterli olmayıp, ayrıca satılan çeşidin ayırt edilmiş olması gerekir. Yani cins satımında ayırt etme yok ve hasar gerçekleşirse buna alıcı değil satıcı katlanır.

Eski BK'da bu hükmün kaynağı ise Roma Hukuku'nda "Genus Non Perit", yani "Nevi Telef Olmaz" ilkesi olup buna göre, parça ve sınırlanmış cins borçlarında satım sözleşmesinden sonra alıcı malı teslim almasa bile hasara katlanmaktaydı

Yeni TBK 208/I, parça ve cins borcu ayrımı yapmadan bütün taşınır satımlarında hasar ve yararın teslim ya da zilyetliğin devri anında alıcıya geçeceğini öngörmüştür. Ayrıca, yeni düzenlemeden sonra, cins borçları bakımından "ayırt edilme veya belirleme" kavramları da hukuki önemini yitirmiştir.

TBK m.208/II'ye göre taşınır satışlarında, eğer alıcı satılanın zilyetliğini devralmada temerrüde düşerse, zilyetliğin devri gerçekleşmiş gibi yarar ve hasar alıcıya geçecektir. Aynı kural alıcının taşınmazı teslim almadan kaçınması halinde de uygulanır.

Mesafeli satışlarda, satıcı alıcının isteği üzerine satılanı ifa yerinden başka bir yere gönderirse, yarar ve hasar, satılanın taşıyıcıya teslim edildiği anda alıcıya geçer. Eski BK'da mesafeli satışlarda parça satışı söz konusu ise, satım sözleşmesinin yapıldığı an; cins satışı ise ayırt etme anında hasar alıcıya geçiyordu. Yeni TBK satılanın taşıyıcıya teslim edildiği an denerek, esasen hasarın alıcıya geçtiği anı biraz daha öne almış oluyor.

Böylece yeni TBK madde 208'deki düzenleme ile CISG (Milletlerarası Mal Satımına İlişkin Viyana Konvansiyonu) 66 ila 70. maddelerinde düzenlenen hasarın intikali hükümlerine paralel düzenlemeler getirilmiştir. Zira CISG 69. maddede, alıcının malları teslim aldığı anda hasarın kendisine geçeceği düzenlemektedir.

### 2.2 Taşınır Satışında Satıcının Temerrüdüne İlişkin Hükümler

818 sayılı eski BK 187. maddesinde sadece ticari satımlarda satıcının borçlu temerrüdüne düşmesi halini düzenlemekteydi ve bu durumda alıcının ifadan vazgeçerek olumlu zararını isteyebileceği kabul edilmekteydi. Ancak yeni TBK 212/1 uyarınca, artık sadece ticari satımlar değil, her türlü satımda satıcının borçlu temerrüdüne düşmesi üzerine, alıcının ifadan vazgeçerek olumlu zararını isteyebileceği, kuralı getirilmiştir.

818 sayılı BK 188. maddesinin ikinci fıkrasında, sadece ticari satışlarda satıcının temerrüdü halinde, alıcının ifa yerine isteyebileceği tazminatın, öğretide somut yöntem olarak adlandırılan hesaplama tarzı düzenlemekteydi. Oysa öğretide hesaplama tarzının, adi satışlara da uygulanmasının hakkaniyete daha uygun olacağı ve zararın hesaplanmasındaki fark teorisinin mübadele teorisine tercih edilmesi gerektiği görüşü ileri sürülmekteydi. Örneğin adi satışlarda, taraflar arasında kararlaştırılan malın teslim tarihi özel olarak vurgulanmamışsa, ticari satışlarda olduğu gibi kesin vade değil, belirli vade olarak kabul edilmekte ve bu durumda somut hesaplama yöntemi direkt uygulama alanı bulamıyordu. Zira belirli vadede satıcı sadece ihtarsız temerrüde düşmekte, satıcı gecikmiş olsa da hala aynen ifayı yerine getirebileceği kabul edilmekte ve dolayısıyla satıcı alıcının malı alması için zorlayabiliyordu. Bu gibi nedenlerle adi satışlarda da satıcının temerrüdü halinde, yeni TBK 213 ile alıcıya, somut yönteme göre hesaplanacak zararını satıcıdan isteme hakkı getirildi. Yani artık adi satışlarda satıcının temerrüdü halinde de, zararın hesaplanması ile ilgili TBK m.213 ile soyut ve somut hesaplama yönteminin uygulama imkânı tanınmıştır.

Somut hesaplama yönteminde, zarara uğrayan alıcı, satış sözleşmesinde kararlaştırılan satış bedeli ile teslim edilemeyen eşyayı dürüstlükle iktisap etmek için yaptığı ikame alımda ödediği satış bedeli arasındaki farkı zarar olarak isteyebilecektir. (m.213/II) Soyut hesaplama yönteminde, satış bedeli ile ifa günündeki satılanın piyasa fiyatı arasındaki fark, alıcının zararı olup bunu satıcıdan isteyebilecektir. (m.213/III) Aslında bu hükümler alıcının müspet (olumlu) zararının tazminini hesaplamasıyla ilgili hükümler olup aslında genel hüküm niteliğindedirler.

### 2.3 Taşınır Satışında Zapta karşı Tekeffül

Yeni TBK ile zapta karşı tekeffül hükümlerine ilişkin dikkat çekici bir değişikliğin olduğu söylenemez. Sadece zapta karşı tekeffülde alıcının mahkeme kararını beklemeksizin satılanı üçüncü kişiye vermesini düzenleyen maddede (eski TBK m. 191) değişiklik söz konusudur.

Eski BK m. 191/I 'deki ''sulh akdetmiş'' ifadesi mehaz kanuna uygun olarak TBK 216/II'de ''tahkim yoluna gitmek '' olarak düzeltilmiştir. Ancak doktrinde alıcının dürüstlük kuralına uygun olarak dava sırasında bir sulh akdi yapması halinde de satıcının zapta karşı tekeffül sorumluluğu korur görüşü, mevcuttur.

Yeni TBK m. 216/II'ye göre, ''Satıcının sorumluluğu, alıcının satılanı üçüncü kişiye vermekle yükümlü olduğunu ispat etmesi durumunda da devam eder.'' Eski TBK m. 191'de yer almayan bu 216/II hükmü, doktrinde ve uygulamada da kabul edilmekteydi.

### 2.4 Ayıba karşı Tekeffül

6098 sayılı Yeni Borçlar Kanunu ayıba karşı tekeffülde sorumsuzluk anlaşması ve satıcının ağır kusurunun sonuçları ile ilgili hükümlerde bazı değişikliklerin yapılmıştır. Eski BK m.196, ayıba karşı tekeffülde satıcının sorumluluğunu kaldıran veya sınırlayan sorumsuzluk anlaşması, satıcının satılanı devrederken, satılandaki ayıbı

hile ile gizlemiş olması halinde geçersiz kılınmaktaydı. Yeni TBK m.221 genel hükümlerde düzenlenen TBK madde 115 ile paralel bir düzenleme getirilerek, satıcının hilesi dışında ağır kusurlu olması halinde de sorumsuzluk anlaşmasının geçersiz olacağı düzenlenmiştir. Bununla birlikte özellikle ticari satımlarda, satıcının ayıptan sorumluluğunu ortadan kaldıran anlaşmaları yapamayacağı kuralı getirilmiştir.

Yine eski BK 200. maddede satıcının satılanı alıcıya hileyle (alıcıyı iğfal etmiş olması) devretmesi halinde, alıcıya karşı ayıbı bildirme yükümünü zamanında yerine getirmediği savunmasını yapamayacağı hükmü yeni TBK (m.225) satıcının ağır kusurlu olması şeklinde düzenlenmiştir. Ayrıca yeni TBK 225/II, satıcılığı meslek edinmiş kişilerin bilmesi gereken ayıplarda satıcının hafif ihmali halinde de ayıbın zamanında bildirilmediği savunması yapamayacağı hükme bağlanmıştır.

Maddelerdeki ağır kusur, kastı, dolayısıyla hileyi ve ağır ihmali içerdiğinden ötürü yeni düzenlemelerde tercih edilmiştir.

Ayıba karşı tekeffülde alıcının gözden geçirme ve bildirim yükümlülüğüne ele alacak olursak, Avrupa'da adi satımlar için gözden geçirme ve bildirim yükümlülükleri kaldırılmasına rağmen bu yükümlülüklerin TBK m.223 hükmü ile bütün satışlar için geçerli olduğu öngörülmüştür.

TBK m.223'te gözden geçirme ve satıcıya bildirme ile ilgili düzenlemede, bulunacak ayıbın satıcıya bildirilmesiyle ilgili eski TBK m.198'deki "derhal" şeklindeki ibare, "uygun süre" bir süre içinde şeklinde değiştirilmiştir. Buna göre, alıcı satılanı imkan bulur bulmaz gözden geçirecek bulduğu ayıpları uygun bir süre içinde satıcıya bildirecektir. Ancak 223/II'de olağan gözde geçirmeyle bulunamayacak (gizli) ayıpların ortaya çıkması halinde "derhal" satıcıya bildirileceği hükmü de "uygun süre" olarak anlaşılmalıdır.

Ayıba karşı tekeffülde alıcının seçimlik hakları bakımında, TBK 227/3'te satılan şeyin ayıplı olması durumunda, Tüketicinin Korunması Hakkında Kanunda olduğu gibi, satılanın ücretsiz onarılmasını isteme hakkı, yeni TBK'ya dördüncü bir seçimlik hak olarak eklemiştir. Yalnız onarım isteme hakkının kullanılabilmesi aşırı bir masraf gerektirmemesi şarttır. 3 Liralık saat için 5 Lira tamir parası gibi. Benzer bir hüküm 6502 sayılı yeni TKHK m.11'de yer almaktadır.

TBK 227/1 'de alıcının seçimlik haklarından birisi olarak eski BK 202'den farklı olarak fesih yerine dönme hakkı tanınmıştır. Ancak, dönme hakkının kullanılması "satılanı geri vermeye hazır olma" şartına bağlanmıştır. Bu şartı mutlaka dönme bayanında yer alması gerekli bir geçerlik şartı değil de, dönme hakkının kullanılmasında alıcının yükümlülüğüne vurgu olarak anlamak gerekir. Yoksa TBK 228/1'e göre alıcıya yüklenemeyen bir sebepte dolayı satılan yok olması dönme hakkının kullanılmasını engellemez.

Alıcının seçimlik haklarını düzenleyen TBK 227/II'nin getirdiği en büyük yenilik, genel hükümlere göre tazminat hakkını tanımış olmasıdır. Bu şekilde doktrin ve uygulamada hakim görüş olarak kabul edilen satıcının kötü ifayı düzenleyen TBK m.112 ile TBK m.227'nin yarışabileceğini kanuni kural haline getirmesidir. Ancak ayıba karşı tekeffül kapsamında diğer seçimlik haklardan vazgeçerek tazminat istenilmesi halinde, bildirim şartı yerine getirilmeli ve TBK m.231'deki iki yıllık kısa zamanaşımı süresi içinde tazminat talebinde bulunulmalıdır. Buna karşılık TBK m.227'deki haklar hiç kullanılmadan kötü ifa nedeniyle tazminat istenmesi halinde ise TBK m.112 ve zamanaşımı ile ilgili de TBK m.146 uygulanacaktır.

Böylece ayıba karşı tekeffül hükümlerinde alıcının seçimlik hakların konusunda Tüketici Kanununa da uygun, paralel hükümler getirilmiştir.

Zamanaşımı konusunda değişikliklere bakacak olursak, eski BK m. 207/I'de satıcının ayıbından dolayı sorumlulukta, satılanın alıcıya devrinden başlayarak 1 yıllık süre, yeni TBK m. 231/1 ile 2 yıla çıkarılmıştır. Eski BK m. 207/III'de satıcının alıcıyı iğfal etmesi halinde zamanaşımı süresinden yararlanmayacağı hükmü, TBK m.231'de satıcının ağır kusurlu olması olarak değiştirildi. Böylece ağır ihmali bulunan satıcı hakkında iki yıllık zamanaşımı uygulanmayacaktır. Doktrinde, bu durumda genel zamanaşımı olan 10 yıllık bir zamanaşımı süresinin söz konusu olacağı savunulmaktadır.

## 3 Taşınmaz Satışı

Yeni Türk Borçlar Kanununda taşınmaz satışı düzenlenirken 4721 sayılı Türk Medeni Kanunun 735. ve 736. maddelerindeki düzenlemelerle uyumlu olacak şekilde birtakım yeni maddelerin ihdasıyla birlikte, yarar ve hasarın intikali ve zamanaşımı sürelerinde önemli değişiklikler gerçekleşmiştir.

### 3.1 Taşınmaz Satışı İlişkisi Doğuran Sözleşmeler

Yeni TBK'da taşınmaz satışıyla ilgili, satış ilişkisi doğuran haklar (önalım, geri alım ve alım) ve özellikle önalım hakkı daha detaylı düzenlenmiş ve 5 yeni madde eklenerek Medeni Kanundaki düzenlemelerle uyumlu hale getirilmiştir.

TBK m. 237'de taşınmaz satışı vaadi, geri alım ve alım sözleşmelerinin geçerliliği için resmi şekil; sadece önalım sözleşmesi için adi yazılı şekil aramıştır.

Yeni TBK m. 238'de, önalım, geri alım ve alım haklarının en çok 10 yıllık süre ile kararlaştırılabilecek diye bir üst sınır getirilmiştir. Eski kanunda zaman olarak sadece dürüstlük kuralı ile sınır getirebiliyordu. Yine aynı

maddeye göre bu haklar tapu siciline şerh ettirilebilir ve bu şerhin süresi, TMK 735 ve 736'ncı hükümlere atıf yapılarak 10 yıl olarak belirlenmiştir.

TBK m.239'da aksi kararlaştırılmadıkça, sözleşmeden doğan önalım, alım ve geri alım haklarının devredilemeyeceği, ancak miras yoluyla geçeceği belirtilmiştir.

### 3.2 Akdi Önalım Hakkı

Önalım hakkı kullanılması koşula bağlı bir alım hakkı mahiyetinde olduğu için önalım olayının gerçekleşmesi gerekir. Önalım olayı TBK 240'da belirtilmiştir. Buna göre, "Önalım hakkı, taşınmaz satışında ya da ekonomik bakımdan satışa eşdeğer işlemler (üst hakkı, özel artırma, alım ve geri alım) yapılması halinde kullanılabilecektir."

Önalım hakkının kullanılamayacağı durumlar örnek olarak sayılmaktadır. Bu durumlar, taşınmazın miras paylaşımında mirasçılardan birine özgülenmesi, cebri artırma yoluyla satış, kamu hizmetlerinin yerine getirilmesi ve bunlara benzer amaçlarla edinilmesi.

TBK m. 241/I'de TMK m. 733/II'deki düzenlemeyle paralellik göstererek buna göre, satıcı veya alıcı satış sözleşmesinin yapıldığını ve içeriğini önalım hakkı sahibine noter aracılığıyla bildirmek zorundadır. Önalım hakkı kullanıldıktan sonra satış sözleşmesi ikale sözleşmesiyle ortadan kaldırılırsa ya da alıcının şahsından kaynaklanan sebeplerle onaylanmazsa, bu durum önalım hakkı sahibine ileri sürülemez.

### 3.3 Taşınmaz Satışında Hasar ve Yararın İntikali

Taşınmaz satımında yarar ve hasar ile ilgili kanun maddesine, tescilden sonraki bir zamanda alıcı tarafından teslim alınması için sözleşmeyle bir süre belirlenmişse, eklenerek eski BK'da olmayan bir belirlilik sağlanmıştır. Taşınır satışına paralel bir düzenleme getirilerek hasarın alıcıya intikalini, ifaya bağlayan bir düzenleme söz konusudur. TBK madde 245 uyarınca, taşınmaz satımında yarar ve hasar tescil anında, sözleşmede tescilden sonraki bir tarih kararlaştırılmış ise teslim anında alıcıya geçer. Buna göre, tescille alıcı malik kılınmasına rağmen, taşınmazın alıcıya fiilen teslimi yazılı bir sözleşmeyle ileri bir tarihe atılmışsa, alıcı malik sıfatı taşımasına rağmen hasarı üstlenmiş olmayacak. Yani taşınmaz adına tescilli olmasına rağmen bir deprem, sel, üçüncü kişilerin fiilleri sonucu yangın çıkar taşınmaz hasara uğrarsa alıcı satış bedelini isteyebilir veya ortaya çıkan değer kaybı çerçevesinde para iadesi talebinde bulunabilir.

### 3.4 Taşınmaz Satışında Zamanaşımı

Yeni TBK 244. maddeye göre, "Bir yapının ayıplı olmasından doğan davalar, mülkiyetin geçmesinden başlayarak beş yılın ve satıcının ağır kusuru varsa yirmi yılın geçmesiyle zamanaşımına uğrar." Yeni TBK m.244/3 ile taşınmazın ayıplı olmasından ötürü, satıcının ağır kusurlu olması halinde 20 yıllık yeni bir zamanaşımı süresi getirildi. Böylece taşınmaz satışlarında, taşınmazın ayıplı olmasından ötürü beş yıllık zamanaşımı yanında 20 yıllık zamanaşımı söz konusudur. Burada ağır kusurdan kasıt daha önceden de belirttiğimiz üzere kast, dolayısıyla ihmali ve ağır ihmali de içermektedir. Maddeye bu 20 yıllık zamanaşımı süresinin eklenmesinde Türkiye'nin 27 Ağustos 1999 yaşamış olduğu depremin etkisi olup, bu depremde birçok bina ayıplı olmasına rağmen zamanaşımı süresi kısa olduğundan (5 yıl) satıcıların sorumluluğuna gidilemiyordu.

## 4 Ticari Satış

Tacirler arasında yapılan ticari satışlar, esas itibariyle TBK'nın ilgili hükümlerine tabi olsa da bu tür sözleşmelere uygulanacak bazı özel hükümler yeni Türk Ticaret Kanunu'nun 23. maddesinde de yer almaktadır. Yeni TTK 23. madde oluşturulurken bazı hükümler eklenmiş, bazı hükümler de çıkarılmıştır. Ticari satışlarda 6 aylık zamanaşımı ile eski TK 25/4 maddesi, deniz aşırı satışlar hakkındaki hükümleri saklı tutan eski TK 25/5 yani TTK m. 23'e alınmaması ve kısım kısım yerine getirilecek sözleşmelerde alıcının hakları düzenleyen 25/1'e yeni kanunda ek yapılması gibi.

### 4.1 Ticari Satış Kavramı

Her iki tarafın da tacir olduğu ve onların ticari işletmesiyle ilgili satışlar ticari satış sayılır. Yalnızca taraflardan birinin tacir olduğu satış sözleşmesi ticari iş sayılsa da ticari satış niteliğinde kabul edilmez.

6762 TTK m. 25/5, denizaşırı satışlara (CIF ve FOB) hakkındaki özel hükümleri saklı tutan hükmüne yeni TTK 23'de yer verilmemiştir. Denizaşırı satışlara ilişkin hükümler Inco-terms'lerden alınması ve bunlar sürekli olarak değişmesinden ötürü yeni Ticaret Kanunundan çıkarılmıştır. Zira taraflar çoğu kez sözleşmelerinde bu hükümlere atıf yapmaktadırlar. Dolayısıyla artık TTK'da denizaşırı satışlara ilişkin özel hükümleri saklı tutan bir hüküm olmadığından, bu satışlar Borçlar Kanunu kapsamında değerlendirilecektir.

### 4.2 İfanın Kısım Kısım Yerine Getirilmesi Halinde Sözleşmenin Tamamının Feshi

6102 sayılı TTK madde 23'de, "Sözleşmenin niteliğine, tarafların amacına ve malın cinsine göre, satış sözleşmesinin kısım kısım yerine getirilmesi mümkün ise veya bu şartların bulunmamasına rağmen alıcı, çekince ileri sürmeksizin kısmi teslimi kabul etmişse; sözleşmenin bir kısmının yerine getirilmemesi durumunda alıcı haklarını sadece teslim edilmemiş olan kısım hakkında kullanabilir." olarak düzenlenen bu hüküm, eski TTK'da da yer alıyordu. Kanunun bu hali bazı durumlarda alıcıya zarar vermekte ya da alıcıyı tatmin edememekteydi.

Dolayısıyla Adalet Komisyonunca bu hükme "Ancak, o kısmın teslim edilmemesi dolayısıyla sözleşmeden beklenen yararın elde edilmesi veya izlenen amaca ulaşılması imkânı ortadan kalkıyor veya zayıflıyorsa ya da durumdan ve şartlardan, sözleşmenin kalan kısmının tam veya gereği gibi yerine getirilemeyeceği anlaşılıyorsa alıcı sözleşmeyi feshedebilir." hükmü eklenmiştir. Örneğin takım oluşturan bir durumda, bir ansiklopedide birkaç cildin ya da 24 kişilik bir sofra takımında çorba kâselerinin veya tatlı tabaklarının teslim edilmemesi gibi.

### 4.3 Ticari Satışlarda Ayıp İhbarı

TTK madde 18/III'e göre, tacirler arasında diğer tarafı temerrüde düşürmek, sözleşmeyi fesih veya sözleşmeden dönmeye ilişkin ihbarların noter, taahhütlü mektup, telgraf veya güvenli elektronik imza ile yapılması şarttır. Ancak bu hükümde sayılan hallerden hiçbirinde ayıp ihbarı yer almadığından, yalnızca ayıba yönelik ihbarın TTK madde 18/III hükmüne göre yapılması gerekmez. Hatta burada ispat şartı dahi yoktur. Zira ayıp ihbarı hukuki işlem benzeridir. Ayıp ihbarı tanıkla dahi ispat olunabilir.

### 4.4 Ayıplı Ticari Satışlarda Zamanaşımı

Eski TTK'da ticari satışlarda ayıp dolayısıyla zamanaşımını altı ay olarak düzenleyen 25/4 hükmü 6102 sayılı TTK m.23'e alınmamıştır. Bu nedenle, ayıplı ticari satışlara da adi satışlarda zamanaşımını düzenleyen BK m.223/II hükmü uygulanacaktır. Buna göre ticari satışlarda ayıplı mallara ilişkin zamanaşımı süresi iki yıla çıkarılmış, olmaktadır. Gerçekten de ithalat ülkesi olan Türkiye'de zamanaşımı süresini uzatmak yerinde olmuştur. BK m.231 uyarınca ticari satışlarda da iki yıllık süre kısaltılamaz, uzatılabilir. Yine satıcı satılanı ayıplı olarak devretmekte ağır kusurlu ise iki yıllık zamanaşımı değil, BK m.146'daki genel kural uygulanır.

## 5  Sonuç

6098 sayılı yeni Borçlar Kanunu ile önemli değişiklerin getirildiği özellikle Milletlerarası Mal Satımına İlişkin Viyana Konvansiyonu (CISG), Tüketici Kanunu, Medeni Kanun ve Borçlar Genel Hükümleri ile paralel düzenlemeler getirilerek iç hukuk ve uluslararası hukukla bir uyum sağlanmıştır.

Önemli değişikliklerin başında hasar ve yararın alıcıya artık sözleşmenin kurulduğu anda değil; zilyetliğin devri yoluyla geçecektir. Yine sadece ticari satımlar değil artık adi satımlarda da satıcının temerrüdü halinde alıcının müspet zararını isteyebileceği, dolayısıyla adi satımlarda da soyut ve somut hesaplama yöntemi uygulanacaktır.

Ayıba karşı tekeffülde, satıcının sorumsuzluk anlaşması ve ayıbın zamanında kendisine bildirilmemesi bakımında yeni TBK 221. ve 225. maddelerinde satıcının hilesi yerine, satıcının ağır kusuru; TBK 223.maddesinde gözden geçirme ve bildirim ile ilgili derhal ibareleri uygun süre olarak değiştirilmiş. Ayrıca alıcıya ücretsiz onarım isteme, dönme hakkı ve en büyük yenilik olan tazminat hakkının tanınmış olması ve ayıba karşı tekeffülde satıcının sorumluluk zamanaşımı süresinin 2 yıla kadar uzatılması, ağır kusur halinde daha uzun zamanaşımı süreleri getirilmiştir.

Ticari satışlarda da TTK 23/1/a bendine yerinde bir ekleme yapılmış, zamanaşımı bakımında TBK 223/II hükmüne atıf yapılarak zamanaşımı süreleri uzatılmıştır, tacirler arasındaki ayıp ihbarını herhangi bir şekle bağlamamıştır.

# Uluslararası Ticarette Vesaik Mukabili Ödeme

# Payment against Documents in International Trade

Prof. Dr. Adnan Deynekli (Bahçeşehir University, Turkey)

## Abstract

As compared to internal trade, international trade involves several risks, which can be specified as commercial, physical, political and legal risks. Cash against documents (documentary collection) is a type of payment method applied to reduce the legal risks in a transaction. This payment method is a reassuring way for the Importer, since he is not under any obligation to make a payment before examining the document and confirming its conformance to the terms of order. Cash against documents is more reliable than cash against goods (open account) on the one hand, but less reliable than letters of credit on the other hand. Cash against document is one of the most commonly used payment methods in international trade as it offers a cost-effective and simple system and processes faster than cash against goods. Rules regarding cash against documents are governed by International Commerce Chamber Brochure no. 522 (Uniform Rules for Collection-URC), which is a set of guiding principles with a non-statutory character. There is no specific regulation exists on cash against documents in Turkish Law. In order to apply the rules on cash against documents in a transaction, "documentary collection/cash against documents clause" should be incorporated into the text of contract. Parties to a documentary collection are the Principal (seller/exporter/drawer), the Remitting Bank, the Collecting Bank and the Drawee (buyer/importer).

## 1 Giriş

Ticareti iç ticaret ve uluslararası ticaret olarak ikiye ayırabiliriz. Uluslararası ticarette farklı para birimlerinin kullanılması, gümrük işlemleri, mal teslimi ve ödeme konusunda karşılaşılan sorunlar gözetildiğinde uluslararası ticaretin iç ticarete oranla daha riskli olduğu ortaya çıkmaktadır. Ancak bu olumsuzluklara rağmen uluslararası ticaretin taraflara sağladığı getiri, fiyat avantajı, tekelciliğin önlenmesi gibi konulardaki avantajı nedeniyle giderek artan bir seyir izlediği görülmektedir.

Uluslararası ticaretteki ticari, fiziksel, politik ve hukuki riskler ithalatçı ile ihracatçının temkinli davranarak kendileri için riski daha az yöntemlere başvurmalarına neden olmaktadır. Vesaik mukabili ödeme (belgeli ödeme) uluslararası ticaretteki hukuki riskleri azaltmak için başvurulan bir ödeme yöntemidir. Bu ödeme yöntemi alıcı (ithalatçı) yönünden güven vericidir. Alıcı (ithalatçı), vesaiki inceleyip sipariş şartlarına uygunluğunu tespit etmeden ödeme yapmayacaktır. Uluslararası ticarette mal veya hizmet bedelinin ödenmesinde altı ayrı yöntem kullanılmaktadır. Bunlar peşin ödeme (cash payment), akreditifli ödeme (letter of credit), vesaik mukabili ödeme (cash against documents), mal mukabili ödeme (open account- cash against goods), Kabul kredili ödeme (documents against acceptance), karşılıklı ticaret (counter trade), konsinye ödeme (cosignations)dir.

Vesaik mukabili ödeme, mal mukabili ödemeye (açık hesap) göre daha güvenli ancak peşin ödeme ve akreditifli ödemeye göre daha az güvenlidir. Ancak vesaik mukabili ödeme, basit ve ucuz bir sistem olması ve mal mukabili ödemeye göre daha hızlı işlemesi nedeniyle uluslararası ticarette yaygın olarak kullanılmaktadır. Vesaik mukabili ödeme, bankanın mal bedelini tahsil etmesi karşılığında kendisine tevdi edilen mal ile ilgili belgeleri alıcıya vermesini ifade eder. Aksi kararlaştırılmamışsa vesaik mukabili ödemede mal bedelinin tahsiline ilişkin uygulamalar Milletlerarası Ticaret odasının "Tahsiller İçin Yeknesak Kurallar (URC- 522)'ına uygun olarak yürütülmektedir.

## 2 Vesaik Mukabili Ödeme İle İlgili Kurallar

Türk Hukukunda vesaik mukabili ödemeye ilişkin bir düzenleme bulunmamaktadır. Vesaik mukabili ödemeye Türk Parasının Kıymetini Koruma Hakkında 32 sayılı karara ilişkin 91-32/5 sayılı tebliğin 15. Maddesinde ihracat bedellerinin vesaik mukabili ödeme şekline göre yurda getirilebileceği hükme bağlanmıştır.

Vesaik mukabili ödeme konusunda bir yasaklama bulunmadığından 522 sayılı URC (Uniform Rules Collections) kuralları bizim hukukumuz açısından da uygulanabilecektir. Ancak bu kurallar emredici hukuk kurallarına, kamu düzenine ve hakkaniyete aykırı olması halinde uygulanmayacaktır.

522 sayılı Yeknesak Kurallarda vesaik sözcüğü iki bölümde yer almaktadır.

Yeknesak Kurallarda kelimesi hem mali vesaiki (finansal document), hem ticari vesaiki (commercial documents), hem de bunların ikisini birden ifade ettiği belirtilmektedir (URC m. 2/b).

Mali vesaik, police, bono, çek, adi senet, ödeme makbuzu gibi para tahsilinde kullanılan belgelerdir.

Ticari vesaik ise faturalar, konşimentolar, nakliye belgeleri ve navlun belgeleri gibi belgelerdir. Mali vesaik haricindeki belgeler ticari vesaik olarak anılmaktadır.

Tevdi edilen belgelerin bir arada bulunup bulunmamalarına göre tahsil işlemleri iki bölüme ayrılmaktadır.

Eğer sadece mali vesaik karşılığı tahsil yapılıyorsa belgesiz tahsil veya temiz tahsil (clean collection) denilmektedir. Sadece ticari vesaik karşılığı veya her iki grup belgenin bir arada teslimi karşılığında tahsil yapılıyorsa buna belgeli tahsil veya vesaik karşılığı ödeme denilmektedir (URC m.2/d).

## 3 Vesaik Mukabili Ödeme İşleminin Tarafları

Vesaik mukabili ödeme işleminde asgari dört taraf bulunmalıdır. Bu ödeme işleminin tarafları URC m. 3/ab'de iki bent halinde sayılmıştır. Vesaik mukabili ödeme işleminin tarafları satıcı, tevdi bankası, tahsil bankası ve alıcıdır.

### 3.1 Satıcı (Amir= Principal, ihracatçı= exporter)

Satıcı, bir tahsili işleme alması için bir bankaya tevdi eden taraftır. (URC m. 3/a). Satıcı, müşterisi olduğu bankaya ihraç konusu emtianın bedelinin tahsili için malı temsil eden belgeleri veren kişidir.

Vesaik mukabili ödeme işlemine bankalar aracılık etmesine rağmen prosedür satıcının vereceği talimatlara göre yürütülecektir. Satıcı, anlaşma yaparken alıcıyı araştırmalı, ilk kez mal satılacaksa bilgi toplamalıdır. Ayrıca ihracat yapacağı ülkelerin kambiyo kısıtlamaları olup olmadığını tespit etmelidir.

### 3.2 Tevdi Bankası (Gönderi Bankası- Remitting Bank)

Tevdi bankası satıcının tahsil için verdiği vesaiki, alıcının ülkesinde seçtiği bankaya gönderen bankadır. Tevdi bankası, satıcının tahsil işlemi yapması için görevlendirdiği, satıcının talimatlarını yerine getiren bankadır.

Tevdi bankası, kendisine satıcı tarafından yöneltilen tahsil talimatı ile birlikte mal bedelinin tahsiline ilişkin belgeleri de teslim almalıdır.

### 3.3 Tahsil Bankası veya İbraz Bankası (Alıcının Bankası)

Tahsil bankası, tevdi bankasından vesaiki alarak tahsil işlemini dış ülkede yürüten bankadır. Tahsil bankası, ödeme ya da kabul karşılığında tahsil belgelerini, ithalatçıya (alıcıya) teslim eden bankadır.

URC m. 3/a'da tahsil bankası, tahsil işleminin yürütülmesinde devreye sokulan, ibraz bankası dışındaki herhangi bir banka olarak ifade edilmiştir. Bu düzenlemeden dolayı tevdi bankasının alıcının (ithalatçının) bulunduğu ülkedeki şubesinin tahsil bankası olup olamayacağı konusunda tereddütler ortaya çıkmıştır. Bir bankanın yabancı ülkedeki şubesi ayrı bir banka olarak Kabul edilirse tahsil bankası olarak ibraz bankasının şubesinin seçilmesinde bir engel kalmayacaktır. Tahsil bankası satıcı (amir) tahsil talimatında açıkça belirlemişse bu banka, belirlememişse URC m. 5d uyarınca tevdi bankasının seçtiği banka olacaktır.

İbraz bankası ise, alıcıya belgeleri ibraz eden tahsil bankasıdır. İbraz bankası da aslında tahsil bankasıdır. İbraz bankası aynı zamanda tahsil bankası da olabilir. Uygulamada genellikle tahsil bankası ile ibraz bankası aynı banka olmaktadır.

Tahsil bankası ödemenin yapılacağı ülkede olmaması halinde ibraz bankası olarak farklı bir banka da görevlendirilebilecektir.

### 3.4 Alıcı (Muhatap=Drawee, İthalatçı= Importer)

Alıcı URC m. 3b'de tahsil talimatı uyarınca kendisine ibrazın yapılacağı kişi olarak ifade edilmiştir. Muhatap, satım sözleşmesindeki alıcıdan farklı bir kişi olabilir.

Alıcı kendisine ibraz edilen vesaik karşılığı ödeme yapacak veya poliçeyi Kabul edecek kişidir. Ancak alıcı bu işlemleri bizzat yapmak yerine bir başkasını görevlendirebilir. Bu durumda görevlendirilen kişi ibraz bankasına veya tahsil bankasına başvurup ödeme yaparak vesaiki teslim alabilir.

## 4 Vesaik Mukabili Ödeme Şeklinin Türleri

Vesaik mukabili ödemede vesaikin alıcıya nasıl teslim edileceğini vesaik mukabili ödemenin türleri belirler.

### 4.1 Vesaik Mukabili Ödeme (Documents against Payment)

Bu ödeme türünde alıcı vesaiki alabilmek için tahsil bankasına ödemeyi nakit olarak yapar. Bu ödeme türü vesaik mukabili ödeme türleri içinde en güvenilir yöntemdir. Alıcı, ödemeyi yaptığında vesaik kendisine verilir. Tahsil bankası, alıcıdan tahsil edilen bedeli talimata uygun olarak tahsilat emrini veren bankanın kullanımına hazır tutar. Ödeme şeklinin türü belirtilmemişse tahsil bankası vesaiki alıcıya ancak nakit ödeme karşılığında teslim eder (URC m. 7/6). Ödeme şeklinin türü yönünden çelişki ortaya çıkarsa tahsil bankası sadece nakit ödeme karşılığı vesaiki teslim etmelidir (URC m. 7/a-c).

### 4.2 Poliçe Kabulü Karşılığında Vesaikin Teslimi (Documents against Acceptance)

Bu ödeme türünde satıcı bankasına vesaik ile birlikte police ibraz eder. Banka bu poliçeyi alıcı tarafından kabul edilmek üzere tahsil bankasına gönderir. Tahsil bankası, vesaik ekinde yer alan poliçeyi alıcının kabulü karşılığında vesaiki alıcıya teslim eder.

Poliçenin ne yapılacağı konusunda talimatta bir açıklık yoksa police tahsil bankası tarafından vade tarihine kadar elde tutulur ve vadesinde ödenmesi için alıcıya ibraz edilir. Ödeme yapılmaması halinde protesto edilir. Ödeme yapılması halinde tahsil edilen tutar gönderilir. Satıcı, bu poliçeye tahsil bankası tarafından aval verilmesini isteyebilir. Bu durumda satıcı poliçeyi vadeden önce iskonto ettirerek mal bedelinden yararlanabilir.

### 4.3 Vesaikin Taahhütname Karşılığında Teslimi (Documents against Letter of Undertaking)

Bu ödeme türünde satıcı veya tevdi bankası (gönderen banka) tarafından hazırlanan bir taahhütname karşılığında vesaik alıcıya teslim edilir. Alıcı taahhütnamede mal bedelini belirli bir tarihte ödemeyi taahhüt etmektedir. Bu ödeme türünde nakit ödeme yapılmamakta ve alıcı tarafından kambiyo senedi verilmemektedir. Alıcının taahhüdüne uymaması halinde başvurulacak yollar satıcı açısından güçlük arzedeceğinden bu ödeme yöntemi risklidir. Satıcının alıcıyı çok iyi tanıyor olması ve ona güveniyor olması halinde bu ödeme yöntemi kabul edilmelidir.

### 4.4 Vesaikin Banka Garantisi Karşılığında Teslimi (Document against Payment Guarantee)

Bu ödeme türünde satıcı malı göndermeden önce ödemeyi garanti altına almak için alıcıdan bir bankanın garantisini istemektedir. Bu ödeme yöntemi 522 sayılı Yeknesak Kurallarda düzenlenmemiştir. Alıcı yerine bir banka devreye girerek mal bedelinin ödeneceği konusunda satıcıya garanti vermektedir. Mal bedelinin alıcı tarafından ödenmemesi halinde satıcı garanti veren bankadan mal bedelinin ödenmesini talep etmektedir. Bu ödeme yöntemi vesaik mukabili ödeme yöntemleri arasında satıcıya büyük güvence sağlayan bir yöntemdir.

## 5 Vesaik Mukabili Ödemenin İşleyişi

### 5.1 Alıcı İle Satıcı Arasında Sözleşme Yapılması

Alıcı ve satıcı arasında vesaik mukabili ödeme işleminden tamamen bağımsız olmak üzere bir temel ilişki kurulmalıdır. Alıcı ve satıcı arasındaki temel ilişkide ödemenin nasıl yapılacağı konusunda bir anlaşma bulunuyorsa ödeme bu anlaşmaya göre yapılır. Vesaik mukabili ödeme ayrı bir anlaşma şeklinde yapılabileceği gibi sözleşmede "vesaik mukabili ödeme" klozu yer alabilir.

522 sayılı Yeknesak Kurallarda sözleşmenin şekli konusunda düzenleme bulunmamaktadır. Yeknesak kurallarda ödeme işlemine yönelik düzenleme bulunduğundan temel ilişkinin kurulması konusunda genel hükümler uygulama alanı bulacaktır.

Vesaik mukabili ödeme konusunda ayrı sözleşme bulunmasa bile 522 sayılı Yeknesak Kurallara atıf yapılmışsa vesaik mukabili ödemeye ilişkin kurallar uygulanacaktır.

### 5.2 Sözleşme Konusu Malların Satıcı Tarafından Alıcıya Gönderilmesi

Satıcı sözleşme konusu malları hazırladıktan sonra alıcıya gönderilmek üzere nakliyeciye teslim eder. Satıcı alıcının ülkesine gönderilmek üzere nakliyeciye teslim eder. Satıcı alıcının ülkesine gönderilmek üzere ticari satıma, konşimento, onaylı gümrük faturası, gümrük beyannamesi ve gerekli ise izin belgesi düzenler. Bu belgeler satıcı tarafından tevdi bankasına teslim edilir.

### 5.3 Tevdi Bankasının Belgeleri Göndermesi

Tevdi bankası satıcı tarafından kendisine teslim edilen belgeleri inceler. Bu belgeleri temel ilişkide belirtilen temel ilişkide belirtilen belgelerden olup olmadığını, eksiklik veya yanlışlık bulunup bulunmadığını kontrol eder. Eksiklik ve yanlışlık tespit etmesi halinde satıcıya eksikliği tamamlaması veya yanlışlığı gidermesi için bilgi verir.

Satıcı sözleşme konusu mal ile ilgili belgeler yanında ayrıca tahsil işleminin 522 sayılı Yeknesak Kurallara göre yapılacağı talimatını içeren bir belgeyi de tevdi bankasına vermelidir.

Tahsil talimatı olmasa bile diğer belgelerden ödemenin vesaik mukabili yapılacağı anlaşılıyorsa vesaik mukabili ödeme talimatı verildiği kabul edilmelidir.

Yargıtay satıcı tarafından verilen tahsil talimatının açık ve kesin ifade taşıması gerektiğini kabul etmektedir (Y11. HD, 21.11.2000, 6963/9172).

Satıcının talimat vermesi halinde tahsil talimatında belirtilen ancak talimata eklenmeyen belgelerin (örneğin police, bono, taahhütname) tevdi bankası tarafından hazırlanması mümkündür.

Tevdi bankası kendisine ibraz edilen ve hazırlayacağı belgeleri en hızlı sürede göndermelidir. Banka sadece bu belgelerin gönderilmesinden sorumlu olur. Belgelerin ulaşmasından sorumlu değildir.

### 5.4 Tahsil Bankasının İşlemleri

Tahsil bankası kendisine ibraz bankası tarafından gönderilen belgeleri aldıktan sonra belgelerin tahsil talimatına uygun olup olmadığını inceler. Daha sonra belgelerin kendisine ulaştığını ve tahsil talimatındaki şartları alıcıya bildirir. Tahsil talimatında, alıcı tarafından yapılacak işlemlerin hangi sürede yapılacağı belirtilmelidir. Tahsil talimatında "çabuk", "öncelikle", "derhal" gibi kelimeler kullanılmalıdır. Bu tür ifadeler kullanıldığı takdirde bankalar bu ifadeleri dikkate almalıdır (URC m. 5/b). Tahsil bankası kendisine gelen

belgeleri alındığı şekliyle alıcıya ibraz etmelidir. Ancak tahsil bankası gerekli olması halinde damga pulu yapıştırmaya, tanıtıcı kaşe, işaret veya simge koymaya da yetkilidir.

Yargıtay bir kararında tahsil bankasının görevini ve yetkilerini şöyle ifade etmiştir: "… Muhabir banka, alıcıya vesaikin geldiğini bildirdikten sonra mal bedelini alıcıdan tahsil eder. Mal bedelinin tahsilinden sonra vesaiki alıcıya teslim edilir. Muhabir banka mal bedelini satıcının bankasına transfer eder. Satıcı mal bedelini bankasından alır ve alıcı da malı gümrükten çeker…" (11. HD, 22.1.2007, 2005-13656/586).

### 5.5 Ödeme

Alıcı ödemeyi tahsil bankasına yaparak vesaiki teslim alır. Ancak ödemeyi nakit yapabileceği gibi poliçeyi kabul şeklinde, taahhütname vermek şeklinde veya banka garantisi vererek yapabilir. Belirtilen bu ödeme şekillerinden biri ile ödeme yapan alıcı, vesaiki tahsil bankasından alır. Ödeme nakit yapılmışsa, tahsil bankası aldığı bedeli gecikmeden talimat aldığı tarafın kullanımına hazır tutmalıdır (URC m. 16/a). Tahsil bankası mevcut anlaşmaya göre tahsil edilen bedelden masraf, komisyon düşebilir.

Tahsil bankasının ödemeyi gecikerek yapması halinde satıcı 6098 sayılı Türk Borçlar Kanunu'nun 508/II. maddesi uyarınca tahsil bankasından ödeme tarihinden itibaren faiz isteyebilir.

Vesaik mukabili ödeme yerel para üzerinden yapılabileceği gibi (URC m. 17), yabancı para üzerinden de yapılabilir (URC m. 18). Ödemede kullanılacak yabancı paranın cinsi nasıl ve kim tarafından belirleneceği konusunda sözleşmede hüküm varsa bu hüküm uygulanmalıdır.

Vesaik mukabili ödemeden ancak tahsil talimatında açık yetki verilmişse kısmi ödeme yapılabilir (URC m. 19). Bankaya bu konuda açık yetki verilmemişse bankanın kısmi ödeme karşılığında vesaiki alıcıya teslim etmemesi gerekir. Aksi halde bankanın ödenmeyen kısımdan sorumluluğu doğabilir.

Alıcı sözleşme konusu malın bedelini ödemezse veya belgeleri almazsa belgeler satıcıya geri gönderilir. Satıcı bu durumda alıcının ülkesinde başka bir alıcı bularak onunla ticari ilişkiye girebilir. Satıcı ayrıca 6098 sayılı Türk Borçlar Kanunu'nun borçlu temerrüdüne ilişkin hükümlerine dayanarak alıcı hakkında dava açabilir.

## 6 Vesaik Mukabili Ödemede Bankaların Yükümlülükleri

Tevdi bankası ve tahsil bankası satıcı ve alıcı arasındaki ilişkide vesaik mukabili ödeme işleminde aracı olarak görev yapmaktadır. Bankalar yukarıda açıklandığı gibi ibraz edilen belgeleri inceleyecek, bu belgeleri ilgili diğer bankaya gönderecek, belgeleri alıcıya ibraz edecek, belgelerin karşılığında alacağın tahsilini sağlayacak ve tahsil edilen paranın satıcıya ulaşmasını sağlayacaktır.

6098 sayılı Türk Borçlar Kanunu'nun 115. Maddesinin 3. Fıkrasına göre "uzmanlığı gerektiren bir hizmet, meslek veya sanat, ancak kanun veya yetkili makamlar tarafından verilen izinle yürütülebiliyorsa, borçlunun hafif kusurundan sorumlu olmayacağına ilişkin önceden yapılan anlaşma kesin olarak hükümsüzdür." 818 sayılı Borçlar Kanunu'nun 99. Maddesi bu durumda hakime yetki tanımışken, 6098 sayılı TBK hafif kusurundan sorumlu olmayacağına ilişkin önceden yapılan anlaşmaların kesin olarak hükümsüz olduğunu kabul etmiştir. Türk Hukuku açısından kuşkusuz bu hüküm gözetilecektir.

### 6.1 Bankaların Tahsil Talimatına Bağlı Olması

Tevdi bankası ve tahsil bankası vesaik mukabili ödeme işlemini yürütürken satıcının tahsil talimatını gözetmelidir. Bankalar, yeterli özeni göstermemeleri, iyiniyetli hareket etmemeleri halinde sorumlu tutulmayacaktır.

Tahsil bankası nakit ödeme talimatı almasına rağmen bono kabul ederek vesaiki alıcıya teslim etmişse talimata aykırı hareket etmesinden dolayı sorumlu tutulur (19. HD 2.4.2003, 2002-7-188/4425)

### 6.2 Bankaların Hesap Vermesi

Vesaik mukabili ödeme işlemine aracılık eden tevdi bankası kendisine talimat veren satıcıya karşı vekalet sözleşmesinden dolayı hesap verme yükümlülüğü altındadır (TBK m. 508).

Tahsil bankası, tahsil ettiği bedeli gecikmeksizin havale etmesi gerekir (URC m. 16/II).

### 6.3 Bankaların Vesaike İlişkin Yükümlülüğü

Bankalar, tahsil talimatı ekinde verilen belgeleri kontrol etmelidirler (URC m. 12).

Ödeme, police karşılığında yapılacaksa poliçenin kabulünün usulüne uygun olup olmadığını denetlemelidir (URC m. 22). Bu görevinde gerekli dikkat ve özeni göstermeyen banka poliçedeki bedelin ödenmemesi halinde sorumlu tutulabilecektir.

Ancak bankaların inceleme yükümlülüğü sınırlıdır. Vesaik mukabili ödemede bankalar belgeleri incelerken ölçü olarak "yeterli özen" ve "iyi niyet" dikkate alınmalıdır.

Vesaik mukabili ödeme işlemine aracılık eden bankaların bu işlemlere ilişkin bildirim yükümlülükleri de bulunmaktadır. Bildirim yükümlülüğüne ilişkin düzenlemeler 522 sayılı Yeknesak Kuralların 1/c,10/c, 12/a, 20/c, 21/b ve 26. maddelerinde yer almaktadır.

Bankalar tahsil talimatı ekinde teslim edilen belgelerin geçerli olup olmadığından sorumlu değildir. Bankalar belgelerin geçerli olmamasından dolayı sorumluluk yüklenemez (URC m. 13).

## 7 Vesaik Mukabili Ödemede Taraflar Arasındaki İlişkinin Hukuki Niteliği

Vesaik mukabili ödeme yönteminde taraflar arasında uyuşmazlıklar çıkabilir. Bu uyuşmazlıklar taraflar arasındaki ilişkinin hukuki niteliğine göre çözümlenmelidir.

Vesaik mukabili ödemede alıcı ile satıcı arasında uluslararası bir ticari satım sözleşmesi ilişkisi kurulmaktadır.

Satıcı ile tevdi bankası arasındaki ilişkinin hizmet akdi olduğu konusunda görüşler varsa da vekalet ilişkisi olduğunun kabulü bu yöntemin işleyişine daha uygundur (15. HD 16.2.2004, 2003-4030/722).

Satıcı ile tahsil bankası arasındaki ilişkinin alt vekalet ilişkisi olduğu kabul edilebilir.

Bankalar arasındaki ilişkinin alt vekalet olduğu 522 sayılı Yeknesak Kuralların 5/d maddesi hükmünden çıkarılabilir. Bu ilişkinin hizmet edimini içeren iş görme sözleşmesi olduğu veya tahsil bankasının tevdi bankasının ifa yardımcısı olduğu şeklinde de görüşler bulunmaktadır.

Alıcı ile tevdi bankası arasında doğrudan bir ilişki bulunmamaktadır.

Alıcı ile tahsil bankası arasında, vesaikin teslimi karşılığında ödeme yapılması nedeniyle bir ilişki doğmaktadır.

## 8 Sonuç

Vesaik mukabili ödeme yönteminde ihracatçı ile ithalatçı arasında, ihracatçı ve ithalatçı ile bankalar arasında sorunlar çıkabilir. Özellikle bankaların belgeleri incelerken ve teslim ederken yeterli özeni göstermemesi sorumluluklarına neden olabilir. Bankalar sorumluluktan kurtulmak için sözleşmelere sorumsuzluk kayıtları koymaktadır. Vesaik mukabili ödeme yönteminde çıkan uyuşmazlıklar ihracatçı ile bankalar, ithalatçı ile bankalar ve bankaların kendi aralarındaki ilişkinin hukuki niteliğine göre çözümlenmelidir. Vesaik mukabili ödeme yönteminde 522 sayılı kurallar uyuşmazlıkları önemli ölçüde azaltmaktadır. Bu nedenle uluslararası ticarette akreditiften sonra en yaygın kullanılan ödeme yöntemi haline gelmiştir.

# Göç Hukukundaki Güncel Gelişmeler Üzerine Bazı Tespit ve Değerlendirmeler

# Some Assessments and Evaluations on Current Developments in the Immigration Law

Assoc. Prof. Dr. Çetin Arslan (Hacettepe University, Turkey)

## Abstract

Immigration has presented itself in every chapter of the history with regards to its social, economic, political and legal aspects. However, with special regards to the global and regional instability which has come into focus and become chronic, it has gained vital importance for almost all developed and developing countries. Mentioned issue has transformed into a specific and extraordinary situation for Turkey which is situated at the intersection of the continents, Asia and Europe. Because Turkey has not only become a transit country for irregular migration but also it has turned into – *if we may say so*- the focus point of this vicious circle. The legislator who is aware of this situation, has brought upon essential amendments and innovations and also has concluded international, regional and bilateral agreements. We, within the scope and size of our study, shall examine certain issues which we deem important within the context of *Foreigners and International Protection Law* No. 6458 dated 04.04.2013 within the light of Constitution, European Convention on Human Rights and the jurisprudence of European Court of Human Rights and shall discuss some existing and potential problems in addition to suggestions for solution.

## 1 Giriş

Göç sosyal, ekonomik, siyasi ve hukuki boyutuyla tarihin her döneminde önemli bir olgu olarak karşımıza çıkmıştır. Ancak özellikle son yıllarda belirginleşen ve kronik bir hal alan küresel ve bölgesel istikrarsızlık nedeniyle hemen bütün gelişmiş ve gelişmekte olan ülkeler için hayati önemi haiz bir sorun haline gelmiştir. Anılan mesele, Asya ve Avrupa kıtalarında birleştiği noktada konumlanan Türkiye için ise, özel ve olağanüstü nitelikte bir niteliğe bürünmüştür. Zira Türkiye ekonomik, coğrafi ve stratejik konumu nedeniyle düzensiz göç açısından transit ve hedef ülke olmasının ötesinde *-deyim yerindeyse-* bu konudaki kısırdöngünün ister istemez odak noktası haline gelmiştir. Zikredilen durumun farkında olan yasa koyucu, konuyla ilgili olarak bir taraftan mevzuatında köklü değişiklik ve yeniliklere giderken, diğer taraftan uluslararası, bölgesel ve ikili antlaşmalar yapmaktadır. Biz, çalışmamızın kapsamı ve hacmi itibariyle, göç hukukuna ilişkin bazı önemli kavramlara değindikten sonra Anayasa, Avrupa İnsan Hakları Sözleşmesi ve Avrupa İnsan Hakları Mahkemesi içtihatları ışığında *"Türk Göç Hukuku"* mevzuatını sil baştan oluşturan 04.04.2013 tarih ve 6458 sayılı *"Yabancılar ve Uluslararası Koruma Kanunu (YUKK)"* hükümleri bağlamında önemli gördüğümüz bazı konuları irdeleyerek, çözüm öneriyle birlikte mevcut ve olası kimi sorunlar üzerinde duracağız.

## 2 Göç Hukukuna İlişkin Bazı Temel Kavramlar

### 2.1 Göç, Düzensiz Göç, Göçmen ve Mülteci

Demografi biliminin tarihçesine ve esasen kuramsal temeline baktığımızda, *"odak nokta"* olarak ortaya çıkan konunun *"nüfus artışı"* olduğu görülür**.** Nüfus artışının nedenleri olarak ise, -genellikle- *"doğurganlık hızı"*nın yüksekliği, *"ölüm oranı"*nın düşüklüğü ve *"düzensiz göç"* olguları gösterilir (Danış, -). *"Doğurganlık hızı"*nın yüksekliği, *"ölüm oranının düşüklüğü"* ülkeden ülkeye değişilebilen ve nispeten ulusal yönlü olan konular iken, *"düzensiz göç"* hukuki, sosyal ve ekonomik yönleriyle uluslararası boyutlu bir *"sorun"*dur.

*"Göç"* (İng. migration) genel olarak; *"sosyo-ekonomik ve politik sebeplerle bireylerin veya toplulukların bir ülkeden başka bir ülkeye, bir yerleşim yerinden başka bir yerleşim yerine gitme işi; taşınma, hicret, muhaceret"* olarak tanımlanmaktadır. *"Düzenli göç"* (İng. regular migration) anlamındaki bu kavramın karşıtı olan *"düzensiz göç"* (İng. irregular migration) ise, gönderen/kaynak, geçiş/transit ve hedef ülkenin hukuk normları açısından yasalara aykırı şekilde gerçekleşen ülkeye giriş, ülkede kalış ve ülkeden çıkışları ifade etmektedir. 04.04.2013 tarih ve 6458 sayılı *"Yabancılar ve Uluslararası Koruma Kanunu"* (RG, 11.04.2013/28615) md. 3/1-ı'ya göre ise *"göç"; "...Yabancıların, yasal yollarla Türkiye'ye girişini, Türkiye'de kalışını ve Türkiye'den çıkışını ifade eden düzenli göç ile yabancıların yasa dışı yollarla Türkiye'ye girişini, Türkiye'de kalışını, Türkiye'den çıkışını ve Türkiye'de izinsiz çalışmasını ifade eden düzensiz göçü ve uluslararası korumayı..."* kapsayan bir kavram olarak kabul edilmiştir.

Göç olgusunun merkezinde yer alan *"göçmen/ muhacir"* (İng. immigrant) kavramı sözlükte çeşitli nedenlerle (ör. ekonomik, siyasi, sosyal, dini vb.) ülkesinden ayrılarak, yerleşmek amacıyla başka ülkeye giden kişi, aile ya da topluluk (Aybay, 2001; TDK; Çelikel, 1997; Arslan, 2003) olarak açıklanırken; 19.09.2006 tarihli ve 5543 sayılı *"İskân Kanunu"*nun (RG, 26.09.2006/26301) 3/1-d maddesinde, *"Türk soyundan ve Türk kültürüne bağlı*

*olup, yerleşmek amacıyla tek başına veya toplu halde Türkiye'ye gelip bu Kanun gereğince kabul olunanlar…"* şeklinde tanımlanmıştır. Kendi vatanını terk ederek başka bir ülkeye gitme unsurunun ortak payda olması nedeniyle çoğu zaman "göçmen" kavramıyla karıştırılan "mülteci (İng. refugee)" ise, genel olarak "iltica eden, sığınan, himaye isteyen, diğer bir ülkeye/ memlekete kaçıp sığınan kimse" (Redhouse, 2000; Doğan, 1990; Arslan, 2003) şeklinde açıklanırken; hukuk terimi olarak, "herhangi bir cezai takibat veya mahkûmiyetten kurtulmak ve suçluların iadesi hükümlerine tabi olmamak gayesiyle vatandaşı olmadığı devlet ülkesine kaçan kişi…" (Türk Hukuk Kurumu, 1998) anlamına gelmektedir. 5543 sayılı Kanunla yürürlükten kaldırılan 14.6.1934 tarihli ve 2510 sayılı İskân Kanunu'nda ise "Türkiye'de yerleşmek amacı ile olmayıp, bir zorunlulukla geçici olarak oturmak üzere sığınanlar" mülteci olarak kabul edilmişlerdir. Keza tarafı bulunmamız nedeniyle Türk Hukuku için bağlayıcı olan başka bir tanım ise, 1951 tarihli "Mültecilerin Hukuki Statüsüne İlişkin Sözleşme"de (RG, 5.6.1961, 10898) mevcut olup, buna göre "ırkı, dini, tabiiyeti, belli bir toplumsal gruba üyeliği veya politik fikirleri yüzünden, zulme uğrayacağından haklı sebeplerle korktuğu için vatandaşı olduğu ülkenin dışında bulunan ve bu ülkenin korumasından faydalanamayan ya da faydalanmak istemeyen ya da ifade edilen korku nedeniyle dönmek istemeyen her kişi" mültecidir (Odman, 1995; Arslan, 2003). Bu açıklamalardan da anlaşılacağı üzere, uluslararası hukukta kendine özgü bir anlamı ve buna bağlı sonuçları olan "mülteci" kavramı ile özellikle ülkeyi terk etme unsuru nedeniyle sebebiyle özdeş olarak kabul edilen "göçmen" kavramlarının tamamen farklı içerik ve sonuçları mevcuttur (Arslan, 2003).

### 2.2 Vatandaşlık, Vatandaş ve Çifte ve Çok Vatandaşlık

*"Vatandaşlık/yurttaşlık",* devletle birey arasındaki karşılıklı hak, görev ve yükümlülük ilişkilerini belirleyen hukuki ve siyasi bağdır. *"Vatandaş/yurttaş"* ise, devlete vatandaşlık bağlı ile tabi olan gerçek kişidir (Aybay, 2001; Doğan, 1999; Arslan, 2003). Nitekim 1982 tarihli T.C Anayasası'nın (RG, 09.11.1982/17863-M) 66. maddesi Türk vatandaşlığını -dolaylı şekilde- *"Türk devletine vatandaşlık bağı ile bağlı olan herkes Türk'tür. Türk babanın veya Türk ananın çocuğu Türk'tür..."* şeklinde tanımlamıştır (Arslan, 2003).

Bir kimsenin birden çok vatandaşlığı olabilir. Bu durumda kişinin vatandaşlıklardan hiçbiri T.C'ye ilişkin değilse *"yabancı"*dır (Özbek, 2012). Bununla birlikte kişinin vatandaşlıklarından biri Türk vatandaşlığı ise, çifte veya çok vatandaşlığa sahip bu şahıslar, Türk Hukuku bakımından vatandaş statüsündedirler. Zira Anayasa ve Vatandaşlık Kanununda çifte vatandaşlığa engel bir hüküm bulunmadığından Türk vatandaşının aynı zamanda yabancı bir devletin uyruğu olmasında hukuki bir engel bulunmamaktadır. Dolayısıyla Türk vatandaşlarının sahip olduğu tüm haklardan, bu bağlamda ülkeye girme, ülkede kalma/yaşama ve mevzuata uygun olarak ülkeden çıkma hakkına sahiptirler (Arslan, 2003).

### 2.3 Yabancı, Özel Statülü Yabancı ve Vatansız

*"Yabancı",* bir devletin ülkesinde bulunmasına/yaşamasına rağmen o devletin vatandaşlığına sahip olmayan kişidir (Çelikel, 1997; Arslan, 2003). Bu çerçevede yabancı, başka bir devletin yurttaşı olabileceği gibi vatansız veya biri Türk vatandaşlığı olmamak üzere birden çok vatandaşlığı olan bir şahıs ya da mülteci de olabilir (Çelikel, 1997; Özbek, 2012; Arslan, 2003).

Diplomatik temsilciler, NATO mensupları vb. kişiler ulusal ve uluslararası hukuktan kaynaklanan bazı hak ve ayrıcalıklara sahip olduğundan *"özel statülü yabancı"* olarak nitelenmektedirler (Özbek, 2012; Arslan, 2003). Türk vatandaşlığını kaybedenler sonuç itibariyle yabancı olmakla birlikte, doğumla Türk vatandaşlığını kazanmış olup da sonradan izinle Türk vatandaşlığından çıkan kimseler ve bunların mirasçıları, milli güvenlik ve kamu düzenine ilişkin hükümler ile TVK' nin 33 ve 35. maddeleri saklı kalmak koşuluyla Türkiye'de ikamet, seyahat, çalışma, miras, taşınır ve taşınmaz mal edinimi ve ferağı konularında Türk vatandaşlarının sahip olduğu haklardan yaralanmayı sürdürdüklerinden (TVK md.29), bu kimseler de özel statülü yabancı olarak nitelenebilir (Arslan, 2003).

*"Vatansız"* ise, bir devletle vatandaşlık bağı bulunmayan veya mevzuatına göre vatandaş sayılmayan kimsedir (Çelikel, 1997).

## 3 "Yabancılar ve Uluslararası Koruma Kanunu" ve Değerlendirme

### 3.1 Genel Olarak

Coğrafi, ekonomik, sosyal ve siyasi yapısı itibariyle geçmişte ve günümüzde (ve muhtemelen gelecekte) temel gündem başlıklarından birini oluşturan göç olgusu ülkemizde YUKK yasalaşıncaya değin temel bir kanun ile değil, yönetmelik, genelge, tebliğ vb. ikincil mevzuatla düzenlenmiş ve kendine özgü bir disiplin ortaya çıkarılmıştır (Şeker, vd, 2014). Bu bağlamda ifa edilen iş ve işlemler 15.07.1950 tarih ve 5682 sayılı *"Pasaport Kanunu (PK)"*(RG, 24.07.1950/7564), 15.07.1950 tarih ve 5683 sayılı *"Yabancıların Türkiye'de İkamet ve Seyahatleri Hakkındaki Kanun (YİSK)"*(RG, 24.07.1950/7564), 25.03.2005 tarihli *"Başbakanlık Oluru"* ile yürürlüğe giren *"Türkiye'nin İltica ve Göç Ulusal Eylem Planı"* ve farklı tarihlerde merkez ve taşra teşkilatına gönderilen Emniyet Genel Müdürlüğü (Yabancılar, Hudut, İltica Daire Başkanlığı) değerlendirmelerini içeren iç yazışmalar/genelgeler çerçevesinde yürütülmüştür. Dolayısıyla bu dönemde görev yapan kolluk görevlileri ile diğer paydaşların görev tanımını yeknesak ve sistemli çizecek yeterli kaynaklar bulunduğu söylemek güçtü.

Anılan fiili ve hukuki durum kurumsal bir göç yönetiminin gelişip oluşmasını engellemiş, bu durum ise kamu hizmetinin tek elden, istikrarlı ve nitelik ve nicelik açısından kaliteli bir şekilde sunulamamasına yol açmıştır.

Kanunun 122 nci maddesi, 123 üncü maddesinin birinci, ikinci, beşinci ve yedinci fıkraları ile 124 üncü maddesi hariç olmak üzere Beşinci Kısmı yayımı 04.04.2014 tarihinde, diğer hükümleri ise yayımı tarihinden bir yıl sonra, yani 05.04.2014'te yürürlüğe girmiştir (YUKK md. 125). Böylece YİSK ile PK'nin 4 üncü, 6 ncı, 7 nci, 8 inci, 9 uncu, 10 uncu, 11 inci, 24 üncü, 25 inci, 26 ncı, 28 inci, 29 uncu, 32 nci, 33 üncü, 35 inci, 36 ncı, 38 inci ve ek 5 inci maddeleri, 5 inci maddesinin birinci ve ikinci fıkraları ile 34 üncü maddesinin birinci fıkrasının ikinci cümlesi yürürlükten kaldırılmıştır (YUKK md. 124).

### 3.2 Kanun'un Sistematiği

YUKK beş kısım, bu kısımlar içindeki 16 bölüm ve biri geçici olmak üzere toplam 127 maddeden oluşmaktadır. Bu çerçevede Birinci Kısım "Amaç, Kapsam, Tanımlar ve Geri Gönderme Yasağı", İkinci Kısım "Yabancılar", Üçüncü Kısım "Uluslararası Koruma", Dördüncü Kısım "Yabancılar ve Uluslararası Korumaya İlişkin Ortak Hükümler", Beşinci Kısım ise "Göç İdaresi Genel Müdürlüğü" başlığını taşımaktadır. Aşağıda kanunun kısım olarak benimsediği sistematik esas alınarak özellikle önemli ve/veya sorunlu noktalarda dikkat çekmek suretiyle söz konusu hükümlere ilişkin kısa açıklamalar yapılacaktır.

### 3.3 Birinci Kısım: Amaç, Kapsam, Tanımlar ve Geri Gönderme Yasağı

İki bölüm ve dört maddeden oluşan bu kısmın birinci bölümünde amaç (md. 1), kapsam (md. 2) ve tanımlar (md. 3), ikinci bölümünde ise geri gönderme yasağı (md. 4) düzenlenmiştir.

Amaç ve kapsam konusundaki maddelerinin yeni nesil kanunların hemen hepsinde yer alan olağan hükümlerdir. Ancak kanunun yorumlanıp uygulanmasında tereddütleri ve yanlışlıkları önlemek, yeknesaklığı sağlamak açısından oldukça önemli işlevleri bulunan çeşitli kavramların tanımlanması oldukça yerinde olmuştur. Böylece ilgili mevzuatın değişik hükümlerinde doğrudan veya dolaylı olarak tanımlanan ya da hiç değinilmeyen "göç", "çocuk", "refakatsiz çocuk" "ikamet adresi", "ikamet izni", "seyahat belgesi", "sınır kapısı" uluslararası koruma", "vatansız kişi", "vize", "vize muafiyeti", "yabancı" yabancı kimlik numarası" vs. kavramlarının neyi ifade ettiği açıklanmıştır.

İkinci bölümü oluşturan 4. maddede "geri gönderme yasağı" konusunda temel bir ilke, deyim yerindeyse ilkesel bir duruş benimsenmiştir. Bu yaklaşımın gereği olarak ise, Kanun kapsamındaki hiç kimsenin *"...işkenceye, insanlık dışı ya da onur kırıcı ceza veya muameleye tabi tutulacağı veya ırkı, dini, tabiiyeti, belli bir toplumsal gruba mensubiyeti veya siyasi fikirleri dolayısıyla hayatının veya hürriyetinin tehdit altında bulunacağı bir yere..."* gönderilemeyeceği hüküm altına alınmıştır. Bu hüküm esasen Anayasa, AİHS ve AİHM'nin yerleşik kararlarının bir gereği olarak ortaya çıkmış olup, kanunun temel felsefesini de ortaya koyması açısından yerinde bir düzenlemedir.

### 3.4 İkinci Kısım: Yabancılar

Bu kısmın "Türkiye'ye Giriş ve Vize" başlıklı Birinci Bölümünde "Türkiye'ye giriş ve Türkiye'den çıkış (md. 5), "Belge kontrolü (md. 6)", "Türkiye'ye girişlerine izin verilmeyecek yabancılar (md. 7)", "Uluslararası koruma başvurusuna ilişkin uygulama (md. 8)", "Türkiye'ye giriş yasağı (md. 9)", "Türkiye'ye giriş yasağının tebliği (md.10)", "Vize zorunluluğu, vize başvurusu ve yetkili makamlar (md. 11)", "Vize muafiyeti (md. 12) ", "Sınır kapılarında verilen vizeler (md. 13)", "Havalimanı transit vizeleri (md. 14)", "Vize verilmeyecek yabancılar (md. 15)", "Vizenin iptali (md. 16)", "Vize işlemlerinin tebliği (md. 17), "Bakanlar Kurulunun vize ve pasaport işlemlerinde yetkisi (md. 18)" konuları hüküm altına alınmıştır.

Kanunun yürürlüğe girmesiyle 5682 sayılı Pasaport Kanunu'nun ilgili hükümleri ile 5683 sayılı Yabancıların Türkiye'de İkamet ve Seyahatleri Hakkında Kanun'un bütünü yürürlükten kalkacak, mülga hale gelecektir. 11 Nisan 2014 tarihinde mülga hale gelecek düzenleme ve mevcut uygulama ile karşılaştırmalı olarak bakıldığında, yeni düzenlemenin çok daha kazuistik bir metot izlediğini söylemek mümkündür. 6458 sayılı Kanun, vize konusunda çok daha ayrıntılı düzenlemeler getirmiş ve vize işlemlerini detaylı ve somut bir yasal bir zemine oturtmuştur (Teksoy, 2013).

### 3.5 Üçüncü Kısım: Uluslararası Koruma

Kanunun ruhunu ve temelini oluşturan en önemli fasılların başında gelen bu kısmın "Uluslararası Koruma Çeşitleri, Uluslararası Korumanın Haricinde Tutulma" başlıklı Birinci Bölümde "Mülteci (md. 61)", "Şartlı mülteci (md. 62)", "İkincil koruma (md. 63)" ve "Uluslararası korumanın haricinde tutulma (md. 64)"; "Genel Usuller" başlıklı İkinci bölümünde "Başvuru (md. 65)", "Refakatsiz çocuklar (md. 66)", "Özel ihtiyaç sahipleri (md. 67)", "Başvuru sahiplerinin idari gözetimi (md. 68)", "Kayıt ve kontrol (md. 69)", "Başvuru sahibinin bilgilendirilmesi ve tercümanlık (md. 70)", "İkamet zorunluluğu ve bildirim yükümlülüğü (md. 71)", "Kabul edilemez başvuru (md. 72)", "İlk iltica ülkesinden gelenler (md. 73)", "Güvenli üçüncü ülkeden gelenler (md. 74)", "Mülakat (md. 75)", "Uluslararası koruma başvuru sahibi kimlik belgesi (md. 76)", "Başvurunun geri çekilmesi veya geri çekilmiş sayılması (md. 77)", "Karar (md. 78)", "Hızlandırılmış değerlendirme (md. 79)", "İdari itiraz ve yargı yolu (md. 80)", "Avukatlık hizmetleri ve danışmanlık (md. 81), "Şartlı mültecinin ve ikincil koruma statüsü sahibinin ikameti (md. 82)", "Uluslararası koruma statüsü sahibi kimlik belgesi (md. 83)",

"Seyahat belgesi (md. 84)", "Uluslararası koruma statüsünün sona ermesi (md. 85)", "Uluslararası koruma statüsünün iptali (md. 86)", "Gönüllü geri dönüş desteği (md. 87)"; "Haklar ve Yükümlülükler" başlıklı Üçüncü Bölümünde "Hak ve yükümlülüklere ilişkin genel ilkeler (md. 88)", "Yardım ve hizmetlere erişim (md. 89)", "Yükümlülükler (md. 90)"; "Geçici Koruma ve Uluslararası Korumaya İlişkin Diğer Hükümler" başlıklı Dördüncü Bölümde ise "Geçici koruma (md. 91), "Uluslararası koruma süreçlerinde iş birliği (md. 92)", "Menşe ülke bilgisi (md. 93)", "Gizlilik ilkesi ve kişisel dosyaya erişim (md. 94)", "Kabul ve barınma merkezleri (md. 95)" konuları vazedilmiştir.

"Uluslararası koruma", mülteci, şartlı mülteci veya ikincil koruma statüsünü kapsayan yeni ve şemsiye bir kavramdır (md. 3/1-r). Kanun'un 61 ila 64. maddelerinde kimlere mülteci, şartlı mülteci veya ikincil koruma statüsü verilebileceği ve uluslararası koruma kapsamına alınmayacak kişiler detaylı bir şekilde açıklanmıştır. 65. madde, uluslararası başvuru konusunda oldukça detaylı bir düzenleme getirmekte, bununla sürecin sağlıklı bir şekilde işlemesini hedeflemekte ve ayrıca başvuru sahiplerinin hak kaybına uğramaması için bir nevi önlem almaktadır. Takip eden 2 maddede, refakatsiz çocuklar ve özel ihtiyaç sahipleri için özel düzenlemeler bulunmaktadır.

68. maddede başvuru sahiplerinin sadece başvuru yapmaktan ötürü idari gözetim altına alınamayacağı belirtilmiş, idari gözetimin istisnai bir işlem olduğu vurgulanmıştır. Maddenin ikinci fıkrasında kimlerin hangi koşullarda idari gözetim altına alınabileceği bentler halinde ayrıntılı bir şekilde düzenlenmiştir.

Başvuru sahipleri, başvuru esnasında, başvurusunun değerlendirilmesi sürecindeki hak ve yükümlülükleri, yükümlülüklerini nasıl yerine getireceği ve bu yükümlülüklere uymaması ya da yetkililerle iş birliğinde bulunmaması hâlinde ortaya çıkabilecek muhtemel sonuçlar hakkında bilgilendirilirler. Gerek duyulan hallerde tercümanlık hizmeti sağlanacağı madde 70'te öngörülmektedir. Başvuru sahibinden bu süreçte bir kabul ve barınma merkezinde ya da belli bir adreste kalması istenebilir. Başvuru sahibinin adres kayıt sistemine yerleşim merkezini bildirme yükümlülüğü de bulunmaktadır.

Kanun'un 72. maddesinde ise, hangi başvuruların 'kabul edilemez' sayılacağı maddeler halinde sayılmış ve başvurunun kabul edilemez sayılması halinde ilgilinin, yasal temsilcisinin veya avukatının bu konudan haberdar edileceği düzenlenmiştir.

Koruma başvurusu sahiplerine 6 aylık geçici bir süreyle kimlik belgesi verilmektedir (md 76). 78. maddede de başvuruların en geç 6 ay içinde neticelendirilmesi öngörülmektedir. Ancak, her iki madde de 6 aylık bir süre öngörmekle birlikte bu sürelerin uzatılabileceğini de hükme bağlamış, bunun sonucunda başvuru süreci ucu açık bir süreç haline dönüşmüştür. Bunun başvuru sahipleri açısından hak kaybına ve mağduriyete sebebiyet vermemesi sağlanmalıdır.

Başvuru sürecinde alınan kararlara karşı idari yargıda itiraz ve yargı yoluna başvurmak mümkündür (md 80) ve başvuru sahipleri avukat yardımından faydalanabilme imkânına sahiptir (md 81). Avukatlık ücretlerini sağlayamayacak durumda olan başvuru sahipleri ise adli yardım mekanizmasından yararlanabilmektedir. Avukatla temsil imkânı sağlanması ve bu konuda adli yardım mekanizmasının işletilmesi kanımızca, hukuki sürece hâkim olmayan başvuru sahipleri açısından mağduriyetleri önleyebilecek olumlu bir düzenlemedir.

85 ve 86. maddelerde ise, uluslararası koruma statüsünün sone erdiği ve iptal edileceği durumlar düzenlenmiş ve bu konuda ilgililer açısından öngörülebilirlik sağlanmıştır. İlgililer açısından hak kaybı doğuran durumlarda, idari iş veya işlemin yasal bir zemininin olması ve bu yasal dayanağın ilgililer tarafından öngörülebilir olması hukuk devleti ilkesinin de bir gereğidir.

88. madde ise uluslararası hukuk bakımından önem arz etmekte ve karşılıklılık şartının uluslararası koruma statüsü sahibi kişiler açısından aranmayacağını öngörmektedir. Ancak buna bir sınır çizmekte ve başvuru sahibine, başvurusu reddedilen veya uluslararası koruma statüsü sahibi kişilere sağlanan hak ve imkânların, Türk vatandaşlarına sağlanan hak ve imkânlardan fazla olacak şekilde yorumlanamayacağının altını çizmektedir.

### 3.6 Dördüncü Kısım: Yabancılar ve Uluslararası Korumaya İlişkin Ortak Hükümler

Bu bölümde Üçüncü Kısımda yer alan "Yabancılar" ile Dördüncü Kısımda düzenlenen "Uluslararası Koruma" konuları açısından geçerli olan ortak hükümler vazedilmiştir. Bu çerçevede "Uyum (md. 96)", "Davete uyma yükümlülüğü (md. 97)", "Taşıyıcıların yükümlülükleri (md. 98)", "Kişisel veriler (md. 99)", "Tebligat (md. 100)", "Yetkili idare mahkemeleri (md. 101)" ve "İdari para cezası (md. 102)" mevzuları hüküm altına alınmıştır.

Görüldüğü üzere, 96. madde ile yabancıların Türkiye'de karşılaşacakları sosyal sorunların önüne geçebilmek amacıyla projeler yapılması hedeflenmiş ve bu konuda Genel Müdürlüğün uyum faaliyetleri planlayabileceği öngörülmüştür. Yabancılara yönelik olarak, ülkenin siyasi yapısı, dili, hukuki sistemi, kültürü ve tarihi ile hak ve yükümlülüklerinin temel düzeyde anlatıldığı kurslar hazırlanabilecek ve bu kurslar sayesinde karşılıklı uyum sağlanabilecektir. 97. maddede ise belli sorunların ortaya çıkması halinde (örneğin, Türkiye'de kalışı hakkında inceleme ihtiyacının doğması veya hakkında sınır dışı etme kararı alınma ihtimalinin bulunması hallerinde) yabancıların inceleme amacıyla Genel Müdürlüğe davet edilebileceği ve davet edilme durumunda yabancıların bu davete uyma yükümlülüğünün bulunduğu hükme bağlanmıştır. YUKK'nin 98.maddesinde taşıyıcılar için de

belli yükümlülükler öngörmekle birlikte, bu konuda ayrıntılı düzenleme yapmamakta, detayları Ulaştırma, Denizcilik ve Haberleşme Bakanlığınca çıkarılacak ikincil düzenlemelere bırakmaktadır.

99. madde "Yabancılara, başvuru ve uluslararası koruma statüsü sahiplerine ait kişisel veriler, Genel Müdürlükçe veya valiliklerce ilgili mevzuata ve taraf olunan uluslararası anlaşmalara uygun olarak alınır, korunur, saklanır ve kullanılır." hükmünü getirmek suretiyle yabancıların kişisel verilerini uluslararası standartlarda koruma altına almaktadır.

Kanun'un 102.maddesi ise, Türkiye'ye yasa dışı giren veya Türkiye'yi yasa dışı terk eden ya da buna teşebbüs eden, Türkiye'ye girişleri yasaklanmış olmasına rağmen Türkiye'ye girebilmiş olan ve tanınan sürede Türkiye'den ayrılmayanlar hakkında idari para cezası öngörmekte ve bu idari para cezalarının tebliğ tarihinden itibaren 30 gün içerisinde toplanması konusunda valilik ve kolluk birimlerini yetkilendirmektedir.

### 3.7 Beşinci Kısım: Göç İdaresi Genel Müdürlüğü

Bu Kısımda Kanunla öngörülen hükümlerin uygulanması ve yaşama geçirilmesi için oluşturulan idari ve teknik alt yapının bir ifadesi olan Göç İdaresi Genel Müdürlüğüne ilişkin hükümlere yer verilmiştir. Bu çerçevede "Kuruluş, Görev ve Yetki" başlıklı Birinci Bölümde "Kuruluş (md. 103)", "Görev ve yetki (md. 104)"; "Göç Politikaları Kurulu" başlıklı İkinci Bölümünde "Göç Politikaları Kurulu ve görevleri (md. 105)"; "Merkez, Taşra ve Yurt Dışı Teşkilatı" başlıklı Üçüncü Bölümünde "Teşkilat (md. 106), "Genel Müdür (md. 107)", "Hizmet birimleri (md. 108)", "Taşra teşkilatı (md. 109), "Yurt dışı teşkilatı (md. 110)", "Çalışma grupları ve düzenleme yetkisi (md. 111)" ve "Yöneticilerin sorumlulukları ve yetki devri (md. 112)"; "Sürekli Kurul ve Komisyonlar ile Geçici Komisyonlar" başlıklı Dördüncü Bölümde "Sürekli kurul ve komisyonlar (md. 113)", "Göç Danışma Kurulu (md. 114)", "Uluslararası Koruma Değerlendirme Komisyonu (md. 115)", "Düzensiz Göçle Mücadele Koordinasyon Kurulu (md. 116)"; "Atama ve Personele İlişkin Hükümler" başlıklı Beşinci Bölümde "Atama ve görevlendirme (md. 118)", "Personele ilişkin hükümler (md. 119)", "Kadrolar (md. 120)", "Geçici komisyonlar (md. 117)"; "Çeşitli Hükümler"in düzenlendiği Altıncı Bölümde ise "Yönetmelik (md. 121)", "Atıf yapılan hükümler (md. 122)", "Değiştirilen hükümler (md. 123)", "Yürürlükten kaldırılan mevzuat (md. 124)", "Geçiş hükümleri (Geçici Madde 1)", "Yürürlük (md. 125)", "Yürütme (md. 126)" konuları hüküm altına alınıştır.

YUKK'nın 103. maddesiyle İçişleri Bakanlığı'na bağlı bir Göç İdaresi Genel Müdürlüğü kurulmuş ve bu konuda mevzuatı geliştirme, resmi politika ve stratejileri belirleme görevi de aynı kanunun 104. maddesi ile bu kuruma verilmiştir. Bunun yanı sıra, madde 105 ile Türkiye'nin göç politika ve stratejilerini belirlemek, uygulanmasını takip etmek üzere bir Göç Politikaları Kurulu oluşturulması öngörülmüştür. Göç İdaresi Genel Müdürü de bu Kurul'un bir üyesidir. Bu düzenleme ile Genel Müdürlük ile Kurul arasında bir bütünlük ve sağlıklı bilgi alışverişi sağlanması hedeflenmiş görünmektedir. Kanunun takip eden maddelerinde ise, Müdürlük, Bakanlık ve diğer birimlerin görev ve yetkileri açıkça ve ayrıntılı bir biçimde düzenlenmiş; böylelikle, bu birimlerin yapacakları iş ve işlemler yasal zemine oturtulmuştur. Genel Müdürlük yurt içinde taşra teşkilatına sahip olmakla birlikte, yurtdışı teşkilatı kurmaya da yetkilidir. Bu sayede, yurtdışındaki göç konusundaki uygulamalar takip edilebilecek, mevzuatlar arasında uyumlaştırma çabalarında bulunulabilecek ve yardım ve işbirliği söz konusu olduğunda daha aktif ve etkin bir çalışma söz konusu olabilecektir.

Kanun'un 114. maddesi ile kurulan Göç Danışma Kurulu'nun beş üyesi sivil toplum kuruluşları temsilcisidir. Ayrıca Kurul, uzman kişilerden görüş alabilme yetkisini de haizdir. Bu düzenleme ile Kanun'da var olan mevzuat maddelerinin uygulanılması ile yetinilmeyeceği, geliştirme amacı ile hareket edildiği ve bu konuda uzman kişilerin görüş ve desteklerine açık olunduğu imajı çizilmektedir. Ayrıca, düzensiz göçün sosyal bir sorun olması sebebiyle, Kurul'da sivil toplum kuruluşlarından temsilcilerin bulunması bu sosyal soruna daha yakından bakılmasını ve derinlemesine irdelenmesini sağlayabilecektir.

Kanun'un 116. maddesi ile Düzensiz Göçle Mücadele Koordinasyon Kurulu kurulmuştur ve bu Kurul'un iki üyesi Genel Kurmay Başkanlığı ve Milli İstihbarat Teşkilatı'nın temsilcileridir. Bu düzenlemede, düzensiz göçün ulusal güvenliği tehdit eden ve etkili bir şekilde mücadele edilmesi gereken yönünün göz önünde bulundurulduğu görülmektedir.

## 4   Sonuç

Düzensiz göç ve benzeri nüfus hareketleri, gerek ferdi gerekse toplu olsun, her zaman ve her ülkede önemli bir sorun olagelmiştir. Zira düzensiz göç, ekonomik, sosyal, kültürel ve güvenlikle ilgili yapıları temelden etkileyen olumsuz bir olgudur. Dolayısıyla konu hemen her ülkede göçle "mücadele" temeline dayanan katı kuralların hüküm sürdüğü kanun, tüzük yönetmelik vs. ile düzenlenmiştir.

Belirlilik ve bağlayıcılık ilkeleri de gözetildiğinde kanunlarla düzenlenmesi gerekirken, daha çok ikincil nitelikteki mevzuat çerçevesinde yürütülen göç alanı, YUKK ile olması gerektiği şekilde kanun ve kanuna uygun olarak hazırlanan düzenlemelerle yürütülerek, uluslararası hukuk ve insan hakları standartlarına uyumlu bir göç sistemi oluşturulmaya çalışılmıştır. Bu çerçevede, gerek ulusal ve gerekse uluslararası boyutuyla temel bir sorun hâline gelen düzensiz göçle mücadelenin hukukî alt yapısı tekrar yapılandırılarak etkinleştirilmek istenmiş;

düzenli göç açısından ise bürokratik işlemlerin sadeleştirilerek tutarlılık ve güvene dayanan kurumsal bir göç yönetimi tasarlanmış ve bunun etkin ve yönetilebilir bir şekilde hayata geçirilmesini de sağlamak üzere idarî ve fizikî altyapı öngörülmüştür.

Sonuç itibariyle yukarıda aktarılmaya çalışılan hükümler, Anayasa, AİHS ve konuyla ilgili diğer insan hakları belgeleri ile AİHM içtihatlarına uygundur. Dolayısıyla uygulanmasında bir sorun yaşanmadığı takdirde, oldukça yüksek standartlı bir statü öngörülmüştür. Bununla birlikte YUKK ile yabancılar için sağlanan olanakların hayata geçirilebilmesi için gerçekçi mali kaynak bulmak zorunludur. Oysa mevcut ve müstakbel ekonomik sorunları ve kıt kaynaklarıyla Türkiye'yi -*deyim yerindeyse*- göçmen cenneti yapabilecek bu hükümlerin yaşama geçirilmesi pek olası gözükmemektedir.

# Karşılaştırmalı Hukukta Anayasa Mahkemelerinin Yapısı: Makedonya, Türkiye, Almanya, Avusturya, Fransa, İtalya ve İspanya

# Structure of the Constitutional Courts in Comparative Law: Macedonia, Turkey, Germany, Austria, France, Italy and Spain

Asst. Prof. Dr. Ebru Karaman (Beykent University, Turkey)

## Abstract

When the legislative has delimited rights and freedoms illegally, Constitutional Court should step in as an efficient assurance and this forcefulness is undoubtedly related to the structure of the Constitutional Court. The Constitutional Court's organization and election of the members of the Constitutional Court and status have a great importance for freedom of the Court. As a matter of fact, the only way to protect people's fundamental rights and freedoms is possible with independent verdict. Judiciary which fulfills the function of judgment behalf of the nation and the judges who hold the judicial power, have an indispensable importance. The assurance of people's right and freedoms could be provided only, when the court has accomplished their mission away from all kinds of pressure and influence. The freedom of judges also means their appointments, employee rights and working condition therefore; in first place, the organization of the Turkish Constitutional Court (General Assembly, Department, Division, Commission), then the election of members of the Turkish Constitutional Court and the status are compared with the regulation of Macedonia, Germany, Austria, France, Italy and Spain.

## 1 Giriş

Demokrasi ve hukuk devletinin birbirini tamamladığı ve her ikisinin de vazgeçilmez konumda kabul edildiği günümüzde, bireyin hak ve özgürlüklerinin devlet iktidarı karşısında güvence altına alınması bir zorunluluk olarak kendisini göstermektedir. Hak ve özgürlüklerin güvence altına alınması, bunların anayasa olarak adlandırılan ve hukuk düzeninde normal kanunlardan daha zor biçimde değiştirilebilen metinlerde ideal bir şekilde düzenlenmesi ile gerçekleştirilmektedir. "Katı" özelliği yanında anayasalar, normlar hiyerarşisinin en üstünde yer alan, yasama, yürütme ve yargı organları için bağlayıcı güçte temel metinler olarak, aynı zamanda bireylerin özgürlüklerini de devlet organlarına karşı güvence altına almaktadırlar (Hakyemez, 2009).

Anayasa hükümlerine, her ne kadar normal kanunlardan daha zor değiştirilebilen metinler oldukları için, yasama çoğunluğu tarafından rahatlıkla müdahale edilemeyecekse de; anayasada güvence altına alınan hak ve özgürlüklere yönelik önemli tehditlerden birisi, yasama organının anayasaya aykırı kanun çıkarması ile gündeme gelebilmektedir. İşte bu amaçla, yasama organına karşı anayasa mahkemeleri birer güvence unsuru olarak siyasal sisteme monte edilmişlerdir. Anayasaya uygunluğun yargısal denetimini gerçekleştiren mahkemeler, bireyin anayasada güvence altına alınan özgürlüklerini özellikle yasama çoğunluğuna karşı korumaktadırlar (Gülsoy, 2007).

Yasama organının, hak ve özgürlükleri anayasal güvencelere aykırı biçimde sınırladığı durumlarda, Anayasa Mahkemesinin etkin bir güvence olarak devreye girmesi gerekmektedir. Anayasa Mahkemesi'nin, temel hak ve özgürlüklerin korunmasındaki etkinliği, hiç şüphesiz Mahkeme'nin yapısıyla doğrudan ilgilidir. Anayasa Mahkemesi'ni oluşturan bölümlerin yapısı (Mahkeme teşkilatı) ile Anayasa Mahkemesi'nin üyelerinin seçimi ve statüleri, Mahkeme'nin bağımsızlığı açısından büyük önem taşımaktadır. Nitekim ancak bağımsız bir mahkemenin vereceği kararlarla, bireylerin temel hak ve özgürlüklerinin korunmasında başarı şansı söz konusudur.

Bu nedenle, öncelikle Türk Anayasa Mahkemesi'nin teşkilatı (2.Bölüm), daha sonra Anayasa Mahkemesi'nin üyelerinin seçimi ve statüleri (3.Bölüm) Makedonya, Almanya, Avusturya, Fransa, İtalya ve İspanya Anayasa Mahkemelerinin yapıları ile karşılaştırılarak açıklanacaktır.

## 2 Türk Anayasa Mahkemesi

### 2.1 Anayasa Mahkemesi Teşkilatı

30 Mart 2011 tarih ve 6216 sayılı Anayasa Mahkemesinin Kuruluşu ve Yargılama Usulleri Hakkında Kanun (Anayasa Mahkemesi Kanunu), Anayasa Mahkemesi teşkilatının Başkanlık, Genel Kurul, Bölümler, Komisyonlar, Genel Sekreterlik ve idari birimlerden oluştuğunu öngörmektedir (Anayasa Mahkemesi Kanunu md.20). Anayasa Mahkemesi işlevlerini belirli bit teşkilat çerçevesinde yerine getirmektedir. Türk yargı teşkilatında yer alan Yüksek Mahkemelerden Anayasa Mahkemesi, anayasa yargısını oluşturmaktadır. Yargılamanın doğası gereği, ilk derece ve bölge seviyesinde mahkeme bulunmamaktadır (Aksel, 2010).

12 Eylül 2010 Anayasa değişikliği öncesi Anayasa Mahkemesi'nin asıl üyelerinin oluşturduğu kurulun yerine getirdiği görevler, yapılan anayasa değişikliği sonrası büyük ölçüde Anayasa Mahkemesi Genel Kurulu'na

verilmiştir. Anayasa'nın 149. maddesi, Genel Kurul'un, Başkanın veya belirleyeceği Başkanvekilinin başkanlığında en az oniki üye ile toplanmasını ve kararların salt çoğunlukla verilmesini öngörmektedir (Anayasa Mahkemesi Kanunu md.21/1). Diğer bir ifadeyle, Anayasa Mahkemesi'nin yönetim ve temsilini Başkan yerine getirmektedir.

Anayasa Mahkemesi'nin, iptal ve itiraz davaları ile Yüce Divan sıfatıyla yürütülecek yargılamalara ve siyasi partilere ilişkin dava ve başvurulara bakmak esaslı görevlerindendir (Tanör ve Yüzbaşıoğlu, 2012). Anayasa Mahkemesi Genel Kurulu, bu görevlerinin yanı sıra, İçtüzüğü kabul etmek veya değiştirmek, Başkan ve Başkanvekilleri ile Uyuşmazlık Mahkemesi Başkanı ve Başkanvekilini seçmek, Bölümler arasındaki iş bölümünü yapıp meydana gelebilecek iş bölümü uyuşmazlıklarını kesin karara bağlamak, üyeler hakkındaki disiplin ve ceza soruşturmasını yapmak ve itirazları incelemekle görevlidir (Anayasa Mahkemesi Kanunu md.21/2).

1982 Anayasası ve Anayasa Mahkemesi Kanunu, Anayasa Mahkemesine yapılan bireysel başvuruları karara bağlamak üzere, bir başkanvekili başkanlığında yedişer üyesi olan iki bölüm öngörmektedir. Bölümler, bir başkanvekilinin başkanlığında dört üyenin katılımıyla toplanır. Bölümlerin oluşumu ve iş bölümü ile ilgili hususlar Anayasa Mahkemesi İçtüzüğü ile düzenlenir (Anayasa Mahkemesi Kanunu md.22). Anayasa Mahkemesi Kanunu'na dayanarak düzenlenmiş İçtüzük'ün 27. maddesi, Bölümlerde görev alacak Başkanvekilleri dışındaki üyelerin, geliş kaynakları ve Bölümler arasında dengeli dağılım esasları gözetilerek Başkan tarafından belirleneceğini ve ilgili üyenin talebi ya da Başkanvekillerinden birinin önerisi üzerine, Başkan tarafından üyelerin Bölüm değişikliklerine karar verilebileceğini düzenlemektedir (Ergül, 2012). Diğer bir ifadeyle Başkan iş yükünün Bölümler arasında dengeli bir şekilde dağıtılması için gerekli önlemleri alır.

Anayasa Mahkemesi Kanun'un 49. maddesinin 1. fıkrası, kabul edilebilirliğine karar verilen bireysel başvuruların esas incelemesinin Bölümler tarafından yapılacağını hükme bağlamıştır. İçtüzük'ün 28. maddesi de Bölümlerin görevlerini düzenlemektedir. Bölümler, Komisyonlar tarafından kabul edilebilir bulunan başvuruların esas incelemesini ve Komisyonlarca kabul edilebilirliği karara bağlanamamış başvuruların gerekli görüldüğü takdirde kabul edilebilirlik ve esas incelemesini birlikte yapmaktır.

Bölümler, kabul edilebilirliğe ilişkin bir engelin varlığını tespit etmeleri ya da bu durumun sonradan ortaya çıkması hâlinde, incelemenin her aşamasında başvuru hakkında kabul edilemezlik kararı verebilirler. Bölümlerden birinin görülmekte olan bir başvuruya ilişkin vereceği karar, Mahkemenin önceden vermiş olduğu bir kararla çelişecekse, ilgili Bölüm başvuruyu karara bağlamadan önce bu hususu Genel Kurul önüne götürebilir (Anayasa Mahkemesi Kanunu md.49/2-3).

Başkanvekilinin başkanlığında dört üyenin katılımı ile toplanan Bölümlere, Başkanvekilinin bulunmadığı durumlarda, en kıdemli üye başkanlık etmektedir (Anayasa Mahkemesi İçtüzük md.29). Bölümlerin çalışma usulü ise, İçtüzük'ün 30. maddesinde düzenlenmiştir. Bölüm toplantılarında, dava dosyası, gündem sırasına göre bölüm raportörü tarafından ayrıntılı biçimde anlatılır. İçtüzük'ün 72. maddesinin 1 ve 4. fıkralarına göre ise; Bölümler kararlarını salt çoğunlukla alırlar (Özbey, 2012).

Mahkemede, yargısal ve idari çalışmalara yardımcı olmak üzere yeteri kadar raportör görevlendirilir ya da atanır. Mahkemede raportör olabilmek için mesleklerinde en az beş yıl başarıyla çalışmış adli veya idari hâkim ya da savcı veya Sayıştay denetçisi, başdenetçisi ya da uzman denetçisi olmak; Yükseköğretim kurumlarının hukuk, iktisat veya siyasal bilimler dallarında doçent, yardımcı doçent ya da doktorasını tamamlamış araştırma görevlisi olmak; adaylık süresi hariç, en az beş yıl başarıyla çalışmış raportör yardımcısı olmak gerekir (Anayasa Mahkemesi İçtüzük md.24).

Raportörler ve görevlerini düzenleyen İçtüzük'ün 38. maddesi; bireysel başvuru raportörlerini, Komisyonlar ve Bölümler raportörleri olarak ikiye ayırır. Raportörler, Başkan tarafından kendilerine verilen dosyaların ilk ve esas inceleme raporlarını hazırlar ve toplantılara katılırlar. Ayrıca Kanun'da ve İçtüzük'te gösterilen bireysel başvuruya ilişkin görevleri yaparlar. Başkan tarafından gerektiğinde raportörlere tanık veya uzman dinleme ve benzeri görevler verilebilir (Anayasa Mahkemesi İçtüzük md.26). Bölümler ve Komisyonlar raportörlüklerinde görev yapmak üzere yeterli sayıda bireysel başvuru raportörü görevlendirilir.

Bölümler raportörlüğü, Komisyonlar tarafından kabul edilebilirliğine karar verilen başvuruları gruplandırarak veya tek tek incelemek ve esasına ilişkin karar taslaklarını hazırlamak ve Bölümlere sunmakla görevlidir. Bununla birlikte, Komisyonlar Başraportörünün uygun görmesi hâlinde kabul edilebilirliğe ilişkin karar taslaklarını hazırlayıp Bölümlere sunmaktadır. Bölümler raportörlüğü, kabul edilebilirliğin esasa bağlı olması ya da başvurunun niteliğinin gerektirmesi hâllerinde kabul edilebilirlik ve esasa dair karar taslaklarını birlikte hazırlayarak görüşülmek üzere Bölümlere sunmaktadır.

1982 Anayasası'nın 149. maddesi, Anayasa Mahkemesinin iki Bölüm ve Genel Kurul halinde çalıştığını; bireysel başvuruların kabul edilebilirlik incelemesi için ise Komisyonların kurulabileceğini düzenlemektedir.

Anayasa Mahkemesi Kanunu'nun 2. maddesinin g bendi ile İçtüzük'ün 3. maddesinin p bendi, bireysel başvuruların kabul edilebilirlik incelemesini yapmak üzere oluşturulan "Komisyonları" tanımlamaktadır. Bu komisyonlar, söz konusu Kanun'un "Teşkilat" başlıklı 20. maddesinde bahsi geçen komisyonlardır. "Bölümler ve Komisyonlar" başlıklı 22. maddesinin 1. fıkrası mahkemede, bireysel başvuruları karara bağlamak üzere bir başkanvekili başkanlığında yedişer üyesi olan iki bölüm bulunacağını ve bölümlerin, bir başkanvekilinin

başkanlığında dört üyenin katılımıyla toplanacağını öngörmüştür. Aynı maddenin 2. fıkrasında, Bölüm ve Komisyonların oluşumu ve iş bölümü ile ilgili hususların İçtüzük'le düzenleneceği belirtilmiştir.

Komisyonların oluşumunu düzenleyen İçtüzük'ün 32. maddesine göre; bireysel başvuruların kabul edilebilirlik incelemelerini yapmak üzere Bölümlere bağlı olarak görev yapan üçer Komisyon oluşturulur. Bölüm Başkanı, Komisyonlarda görev almaz. Komisyonlara kıdemli üye başkanlık eder. Komisyonların oluşturulması amacıyla Başkanvekili haricindeki Bölüm üyeleri kıdem sırasına göre listelenir. İlk ayki toplantılara listedeki sıralamaya göre en kıdemsiz üye katılmaz. Daha sonraki aylarda, kıdem sırasına göre toplantılara katılmayan en kıdemli üyeden başlamak suretiyle her üyenin dönüşümlü olarak görev yapması sağlanır (Anayasa Mahkemesi İçtüzük md.32/2).

İçtüzük'ün 33. maddesinin ilk iki fıkrası, Komisyonlar raportörlerince hazırlanan kabul edilebilirlik karar taslaklarının ve kabul edilemezlik karar taslak ya da listelerinin, Komisyonlarca karara bağlanacağını düzenlemiştir. Komisyonlar oybirliği ile karar alır; ancak oybirliği sağlanamadığında konu, oybirliği sağlanamadığı belirtilmek suretiyle Bölüme havale edilir. Komisyonlar, önlerindeki bir başvurunun anayasanın uygulanması ve yorumlanması veya temel hakların kapsam ve sınırlarının belirlenmesi açısından önem taşıyıp taşımadığının, başvurucunun önemli bir zarara uğrayıp uğramadığının tespiti ve başvurunun çözümünün bir ilke kararını gerektirmesi veya alınacak kararın Mahkeme tarafından verilmiş başka bir karar ile çelişebilecek nitelikte olması hâllerinde kabul edilebilirlik hususunu karara bağlamadan başvuruyu ilgili Bölüme gönderirler (İçtüzük md.72).

İçtüzük'ün 34. maddesi; bireysel başvuruların daha hızlı bir biçimde sonuçlandırılması amacıyla başraportör gözetiminde yeterli sayıda raportör, raportör yardımcısı ve personelden oluşan Komisyonlar raportörlüğü biriminin oluşturulmasını öngörmüştür (Doğru, 2012). Bireysel başvuruların kabul edilebilirliğinin maddi şartlarını inceleyen Komisyon raportörleri, kabul edilebilirlik kriterlerini karşılayan başvurulara ilişkin kabul edilebilirlik karar taslaklarını, bu nitelikleri karşılamayan başvurulara ilişkin ise kabul edilemezlik karar taslaklarını ya da listelerini hazırlayıp Komisyonlara sunmaktadır.

## 2.2 Anayasa Mahkemesi Üyelerinin Seçimi

Anayasa Mahkemesinin kuruluşu 1982 Anayasası'nın 146. maddesinde düzenlenmiştir. Anayasa'nın 146. maddesi, 12 Eylül 2010 tarihli halkoylamasıyla onaylanan 5982 sayılı Anayasa Değişikliği Kanunu'yla büyük ölçüde değiştirilmiştir. İlgili maddenin yeni şekline göre, Anayasa Mahkemesi üye sayısı onbirden onyediye çıkarılmış; yedek üyelik de kaldırılmıştır.

1982 Anayasası'nın 146. maddesinin 2 ve 3. fıkraları, Anayasa Mahkemesi üye seçme yetkisi TBMM ve Cumhurbaşkanına vermiştir. Söz konusu fıkralar uyarınca; "Türkiye Büyük Millet Meclisi; iki üyeyi Sayıştay Genel Kurulunun kendi başkan ve üyeleri arasından, her boş yer için gösterecekleri üçer aday içinden, bir üyeyi ise baro başkanlarının serbest avukatlar arasından gösterecekleri üç aday içinden yapacağı gizli oylamayla seçer. Türkiye Büyük Millet Meclisinde yapılacak bu seçimde, her boş üyelik için ilk oylamada üye tam sayısının üçte iki ve ikinci oylamada üye tam sayısının salt çoğunluğu aranır. İkinci oylamada salt çoğunluk sağlanamazsa, bu oylamada en çok oy alan iki aday için üçüncü oylama yapılır; üçüncü oylamada en fazla oy alan aday üye seçilmiş olur.

Cumhurbaşkanı; üç üyeyi Yargıtay, iki üyeyi Danıştay, bir üyeyi Askerî Yargıtay, bir üyeyi Askerî Yüksek İdare Mahkemesi genel kurullarınca kendi başkan ve üyeleri arasından her boş yer için gösterecekleri üçer aday içinden; en az ikisi hukukçu olmak üzere üç üyeyi Yükseköğretim Kurulunun kendi üyesi olmayan yükseköğretim kurumlarının hukuk, iktisat ve siyasal bilimler dallarında görev yapan öğretim üyeleri arasından göstereceği üçer aday içinden; dört üyeyi üst kademe yöneticileri, serbest avukatlar, birinci sınıf hâkim ve savcılar ile en az beş yıl raportörlük yapmış Anayasa Mahkemesi raportörleri arasından seçer."

Buna göre, Anayasa Mahkemesi'nin üyelerinin üçü TBMM, ondördü Cumhurbaşkanı tarafından seçilmektedir. Ancak TBMM'nin doğrudan üye seçme yetkisi yoktur. TBMM iki üyeyi kendisine Sayıştay tarafından gösterilecek üçer aday arasından, bir üyeyi de baro başkanlarının göstereceği üç aday arasından seçecektir.

Cumhurbaşkanı ise seçeceği ondört üyeden ancak dördünü doğrudan doğruya kendi seçebilmektedir. Geri kalan on üyeyi ise Yargıtay, Danıştay, Askeri Yargıtay, Askeri Yüksek İdare Mahkemesi, Sayıştay ve Yüksek Öğretim Kurulu tarafından kendisine gösterilen üçer aday arasından seçebilmektedir (1982 Anayasası md.146/4). Burada aday gösterme yetkisinin çok önemli bir yetki olduğu görülmektedir.

Anayasa Mahkemesinin Kuruluşu ve Yargılama Usulleri Hakkında Kanun'un "Üyelerin Seçimi" başlıklı 7. maddesi de Anayasa Mahkemesi üyeliğini Anayasa'nın 146. maddesine uygun olarak daha detaylı bir şekilde düzenlemiştir (Anayasa Mahkemesi Kanunu md.7).

## 2.3 Anayasa Mahkemesi Üyelerinin Görev Süresi ve Teminatı

Mahkemenin ve yargıçların bağımsızlığı için Anayasa Mahkemesi üyelerini belirleme usulü kadar, üye olma koşulları ve statü kuralları da önem taşımaktadır.

1982 Anayasası'nın 146. maddesinin 5. fıkrası, Anayasa Mahkemesine üye seçilebilmek için, kırkbeş yaşın doldurulmuş olması kaydıyla; yükseköğretim kurumları öğretim üyelerinin profesör veya doçent unvanını kazanmış, avukatların en az yirmi yıl fiilen avukatlık yapmış, üst kademe yöneticilerinin yükseköğrenim görmüş

ve en az yirmi yıl kamu hizmetinde fiilen çalışmış, birinci sınıf hâkim ve savcıların adaylık dâhil en az yirmi yıl çalışmış olması şart koşmaktadır.

Anayasa Mahkemesi Kanunu da, Anayasa Mahkemesinin üyelerinin seçilme yeterliğini ayrıca düzenlemiştir. Mahkeme üyeliğine seçilebilmek için:

"a)Yargıtay, Danıştay, Askerî Yargıtay, Askerî Yüksek İdare Mahkemesi veya Sayıştay'da başkan ya da üye olmak.

b) Mahkemede asgarî beş yıldır raportör olarak görev yapıyor olmak.

c) Kırkbeş yaşını doldurmuş, yükseköğrenim görmüş olması ve hâkimlik mesleğine alınmaya engel bir hâlinin bulunmaması" kaydını getirmektedir. Bununla birlikte, "Yükseköğretim kurumlarının hukuk, iktisat veya siyasal bilimler dallarında profesör veya doçent unvanını kazanmış olmak; en az yirmi yıl fiilen serbest avukatlık yapmış olmak; en az yirmi yıl kamu hizmetinde fiilen çalışmış üst kademe yöneticileri arasından seçilecek üye için Yükseköğretim Kurulu Başkan veya üyesi ya da bir yükseköğretim kurumunun rektör veya dekanı ya da müsteşar, müsteşar yardımcısı, büyükelçi veya vali olmak; birinci sınıf hâkim ve savcılar için adaylık dâhil en az yirmi yıl çalışmış olmak." gerekmektedir (Anayasa Mahkemesi Kanunu md.6).

1982 Anayasası'nın 147. maddesi Anayasa Mahkemesi üyelerinin görev sürelerini düzenlemiştir. 2010 Anayasa değişikliği öncesi Anayasa Mahkemesi üyeleri için görev süresi öngörülmemişti. Anayasa'nın yeni metni ise, üyelerin oniki yıl için seçileceğini düzenlemiştir. Bir kimse iki defa Anayasa Mahkemesi üyesi seçilemez. Anayasa Mahkemesi üyeleri altmışbeş yaşını doldurunca emekliye ayrılırlar. Anayasa'nın bu hükmüne paralel olarak Anayasa Mahkemesi Kanunu'nun 10. maddesi de, Mahkeme'ye üyelik süresini 12 yıl olarak belirlemiştir. Yine aynı hükme göre; bir kimse iki defa üye seçilemeyecektir. Söz konusu Kanun, Anayasa Mahkemesi üyeliğini de teminat altına almıştır. Buna göre; Anayasa Mahkemesi başkanı ve üyeler azlolunamaz; kendileri istemedikçe görev süreleri dolmadan veya altmışbeş yaşından önce emekliye sevk edilemezler. Başkan ve üyelerin görevleri yalnızca Anayasada ve bu Kanunda öngörülen hâllerde sona erer.

1982 Anayasası'nın 146. maddesinin 6. fıkrası uyarınca; Anayasa Mahkemesi üyeleri arasından gizli oyla ve üye tam sayısının salt çoğunluğu ile dört yıl için bir Başkan ve iki başkanvekili seçilir. Süresi bitenler yeniden seçilebilirler.

Anayasa Mahkemesi üyeleri aslî görevleri dışında resmi veya özel hiçbir görev alamazlar (Anayasa md.146/son). Böylelikle, anayasa yargıcının tüm zamanı görevine özgülenerek tam zamanlı çalışması istenmektedir. Zorunlu emeklilik yaşından önce görev süresi dolan üyelerin başka bir görevde çalışmaları ve özlük işleri kanunla düzenlenir. Anayasa Mahkemesi üyelerinin özlük hakları, Anayasa Mahkemesi Kanunu ile Anayasa İçtüzük'ünde düzenlenmiştir (Tanör ve Yüzbaşıoğlu, 2012).

1982 Anayasası'nın 147. maddesinin 2. fıkrasına göre; Anayasa Mahkemesi üyeliği, bir üyenin hâkimlik mesleğinden çıkarılmayı gerektiren bir suçtan dolayı hüküm giymesi halinde kendiliğinden sona erer. Hâkimin görevini sağlık problemleri nedeniyle yerine getiremeyeceğinin kesin olarak anlaşılması halinde de, Anayasa Mahkemesi üye tamsayısının salt çoğunluğunun kararı ile üyeliği sona erer.

Anayasa Mahkemesi Kanunu'nun 11. maddesi de üyeliğin boşalması ve sona ermesi hallerini Anayasa'nın ilgili hükmüne göre daha detaylı düzenlemiştir. Buna göre;

"(1) Başkan, bir üyenin görev süresinin dolacağı tarihten iki ay önce, bunun dışında bir boşalma olduğu takdirde ise derhâl, keyfiyeti üyeyi seçmeye ve aday göstermeye yetkili olanlara yazıyla bildirir ve bu tarihten itibaren iki ay içinde 7nci maddedeki usule göre boşalan üyelik kaynağından seçim yapılır.

(2) Başkan ve üyeler, yazılı olarak emekliliklerini isteyebilecekleri gibi, müddet ve kabule bağlı olmaksızın görevlerinden çekilebilirler; seçildikleri tarihten itibaren oniki yılın sonunda görevleri sona erer ve her hâlûkârda altmışbeş yaşını doldurunca emekliye ayrılırlar.

(3) Başkanlık ve üyelik; 24.2.1983 tarihli ve 2802 sayılı Hâkimler ve Savcılar Kanununa göre hâkimlik ve savcılık mesleğinden çıkarılmayı gerektiren bir suçtan dolayı kesin hüküm giyilmesi veya Türk vatandaşlığının kaybedilmesi hâlinde kendiliğinden; görevin sağlık bakımından yerine getirilemeyeceğinin sağlık kurulu raporuyla kesin olarak anlaşılması hâlinde Mahkeme üye tam sayısının salt çoğunluğunun kararıyla ya da 19 uncu maddeye göre Genel Kurulun kararıyla üyelikten çekilmeye davet edilme cezası verilen üyenin kendiliğinden çekilmesi veya istifa etmiş sayılması hâllerinde sona erer.

(4) Askerî Yargıtay ve Askerî Yüksek İdare Mahkemesi tarafından gösterilecek adaylar arasından seçilen üyenin, ordu mensubu olmaktan doğan emeklilikle ilgili bütün hakları saklıdır."

## 3  Yabancı Anayasa Mahkemeleri

Karşılaştırma hukukta, Anayasa Mahkemelerinde bireysel başvuruları inceleyen birimlerin adı, "daire, komisyon, kurul veya komite" olarak değişmektedir. Bununla birlikte Anayasa Mahkemelerinin işleyişine, hukuki hizmet birimleri yardımcı olur. Hukuki birimlerin başlıca görevleri, inceleme, araştırma ve anayasa yargıçlarının karar oluşturmalarında onlara gerekli hazırlıkları yapmaktır. Bunlar İtalya ve İspanya'da olduğu gibi "inceleme asistanları" adını almakta veya Almanya, Avusturya ve Türkiye'de olduğu gibi "raportör" şeklinde istihdam edilmektedir (Kaboğlu, 2007).

### 3.1 Makedonya Anayasa Mahkemesi

Makedonya Anayasası'nın IV. Bölümü "Anayasa Mahkemesi" başlığını taşımaktadır. Makedonya Anayasa Mahkemesi'nin üyelerinin seçimine ilişkin düzenleme, Parlamento'nun fonksiyonlarını düzenleyen maddeler arasında da yer almaktadır. Makedonya Anayasası'nın 68. maddesi, Anayasa Mahkemesinin üyelerini Parlamentonun seçeceğini düzenlemektedir. Ancak Anayasa Mahkemesi'nin üyelerine ilişkin asıl düzenleme, Anayasa'nın 109. maddesidir. Söz konusu madde uyarınca; Anayasa Mahkemesi dokuz üyeden oluşur. Parlamento, üye tamsayısının çoğunluyla Anayasa Mahkemesinin üyelerini seçer (Makedonya Anayasası md.109).

Makedonya Anayasa Mahkemesi'nin üyeleri, Parlamento (5 aday), Cumhurbaşkanı (iki aday önerir) ve Yargıtay (iki aday önerir) tarafından seçilmektedir. Görüldüğü gibi, Parlamento'nun Anayasa Mahkemesi'nin üyelerinin seçimindeki rolü açısından, Parlamento'nun münhasır bir yetkisi olan devletler grubuna girdiği söylenebilir (Makedonya Anayasası md.84/4 ve md.105/4). Parlamento, Anayasa Mahkemesi'nin üyelerinin üç tanesini, toplam Temsilci sayısının çoğunluğuyla seçer. Bu çoğunluğun içerisinde, Makedonya nüfusu içerisinde çoğunlukta olmayan toplumlara ait olan Temsilcilerin üye tamsayısının çoğunluğu gerekir. Hâkimlerin görev süresi yeniden seçilme hakkı olmaksızın dokuz yıldır. Ayrıca Anayasa Mahkemesinin üyeleri hukuk mesleğinin seçkin üyeleri arasından seçilir (Shasivari, 2013).

Bununla birlikte, bir anayasal koşul olarak karşılaşılan "seçkin üye" terimi muğlâk ve belirsizdir ve açıklanması gerekmektedir. Örneğin seçkin nitelikli üyeden kastedilen, Anayasa Mahkemesinin en az on yıllık ilgili mesleki deneyime sahip en yüksek ahlaki karakterdeki dokuz yargıçtan oluşacağını öngören Kosova Anayasasındaki gibi midir? Yoksa hukuk alanında birkaç yıldan daha fazla mesleki deneyim Makedonya Anayasa Mahkemesi üyeliği için gerekli olan "seçkin üye" nitelemesi için yeterli midir? Anayasa Mahkemesinin yargıcı, sıradan bir hukukçu veya herhangi bir başarılı "resmi görevli" değildir; çünkü onlar genellikle mahkemenin itibarı için hayatidirler. Anayasa Mahkemesi yargıçları hem yüksek kültürü ve mesleki bilgisi, hem de insanlık onuru ve halk nazarında ahlaki desteği olan bir hukukçu olmalıdır. Saygı duyulan, dinleyen ve takdir edilen biri olmalıdır. Zira yalnızca bu yargıç, anayasaya uygunluğun değerlendirilmesi ve korunması için gerekli olan standartları sağlayabilir (Shasivari, 2013).

Makedonya Anayasası'nın 111. maddesi, Anayasa Mahkemesi üyeliğinin, başka bir kamu görevine, mesleğin icrasına veya bir siyasi partiye üyeliğe uygun olmadığını öngörmektedir. Anayasa Mahkemesinin üyelerine dokunulmazlık verilmiştir. Bu dokunulmazlıklara Anayasa Mahkemesi karar verir. Anayasa Mahkemesinin üyeleri Silahlı Kuvvetler'de görevlere çağrılamazlar. Anayasa Mahkemesinin bir üyesinin görevi, görevli istifa ettiğinde sona erer. Anayasa Mahkemesinin bir üyesi, eğer ceza gerektiren bir suç için, minimum altı aylık bir koşulsuz hapse mahkûm edilirse veya görevini Anayasa Mahkemesi tarafından belirlendiği şekilde yerine getirme kabiliyetini kalıcı şekilde kaybederse görevinden alınacaktır.

### 3.2 Alman Anayasa Mahkemesi

Federal Alman Anayasa Mahkemesi, sekizer yargıçlı iki daireden oluşmuştur. Mahkeme'de toplam 16 üyenin görev yapmaktadır. Bu sayıya Mahkeme Başkanı ve yardımcısı da dâhildir. Başkan birinci dairenin başkanı, başkan yardımcısı ile ikinci daire başkanı olarak görev yapmaktadır. Yargıçların yarısı Federal Meclis, yarısı Federal Konsey tarafından seçilir. Böylece her iki Meclis, her bir dairenin yargıçlarının yarısını seçmiş olur (Tunç, 1997). .Federal Anayasa Mahkemesi, Federal yargıçlar ve diğer üyelerden oluşur. Federal Anayasa Mahkemesi üyelerinin yarısı Federal Meclis, diğer yarısı da Federal Konsey tarafından seçilir (Federal Alman Anayasası md.94).

Alman Anayasa Mahkemesi, iki Daire'den oluşmaktadır. Almanya uygulamasında Komisyonların, bireysel başvurunun kabulüne oybirliğiyle karar verememesi halinde dosya, Daireye gönderilmektedir. Ayrıca Daireler, ülke açısından genel öneme sahip dosyalara da doğrudan bakmaktadırlar. Dairedeki görüşmeler sırasında, gerek görülürse duruşma yapılabilmektedir. Daireler arasında çıkabilecek ihtilaf ve içtihat uyuşmazlıklarını gidermek üzere Genel Kurul görevlidir (Kılınç, 2008).

Alman Anayasa Mahkemesi Kanunu'nun 15/a maddesine göre, senatolar bir iş yılı içinde birden fazla komisyonu görevlendirmektedir. Her komisyon üç hâkimden oluşmakta ve üç yılda bir değişmek zorundadır. Daire, bir iş yılının başlangıcından önce bu yıl süresince, bireysel başvuruların raportörler arasında dağılımı, komisyonların sayısı, kuruluşu ve üyelerin temsili konularında karar verir (Gören, 2008).

Federasyon ve eyaletlerde yargıçların hukuki statüsünü düzenleyen Alman Anayasası'nın 98. maddesine göre; Federal yargıçların hukuki statüsü özel bir federal yasayla düzenlenir. Yasakoyucu ise, yalnızca hukukçulardan oluşan bir mahkemeye karar vermiştir. Mahkeme ağırlıklı olarak federal mahkemelerden seçilen yargıçlardan oluşmaktadır. Yargıçlar, Alman Üniversitesinde hukuk öğretmek dışında, herhangi bir meslek icra edemez. Anayasa Mahkemesi yargıçlığına seçilebilmek için 40 yaşını doldurmuş olmak ve yargıçlık ehliyetine sahip olmak gerekmektedir. Üyeler, Federal Meclise, Federal Konseye, Federal Hükümete veya bir eyaletin buna benzer organlarına üye olmaz. Anayasa Mahkemesi üyeliğine seçilenlerin anılan organlarla ilişkisi kesilir (Kanadoğlu, 2004).

Federal Alman Anayasa Mahkemesi Kanunu uyarınca; Anayasa Mahkemesi yargıçları 12 yıl için seçilir ve ikinci kez seçilemezler. Görev süresinin kısalığından yakınanlar, daha uzun görev süresinin Mahkeme içtihadının sürekliliği için yararlı olacağını ileri sürmektedirler. Oysa 12 yıllık bu süre, görev süresi için sınır getirmeyen

ülkeler bir kenara bırakılırsa; Makedonya, İspanya, İtalya, Fransa gibi çoğu ülkedeki görev süresiyle kıyaslandığında fazladır. Anayasa yargıçlarının yaş sınırı ise, altmışsekizdir; bu yaşa gelen üye emekliye sevk edilir (Tunç, 1997).

Federal bir yargıcın görev sırasında veya dışında, Anayasanın temel ilkelerine veya bir eyaletin anayasal düzenine aykırı hareket etmesi halinde, Federal Meclisin başvurusu üzerine, Anayasa Mahkemesi üçte iki çoğunlukla onun başka bir göreve atanmasına veya emekliye sevkine karar verebilir. Kasıtlı bir ihlal halinde azle karar verilebilir. Eyaletler, eyaletlerdeki yargıçların atamalarını, eyalet adalet bakanının bir yargıçlar seçim komisyonu ile ortaklaşa kararlaştıracağını belirtebilir. Bir yargıç hakkında kamu davasının açılması konusunda verilecek karar Federal Anayasa Mahkemesine aittir.

Yargıçlar bağımsızdırlar ve ancak yasaya bağlıdırlar. Kesin ve asıl görevli olarak kadroya atanan yargıçlar görev sürelerinin sona ermeden ve arzularına aykırı olarak ancak mahkeme kararıyla ve ancak yasaların öngördüğü neden ve şekillerle azledilebilir veya sürekli veya geçici olarak işten el çektirilebilir, başka bir yere atanabilir veya emekliye ayrılabilirler. Yasa, yaşam boyu atanmış yargıçların emekliye ayrılacakları yaş sınırını tespit eder. Mahkemelerin kuruluş veya yargı çevresinin değiştirilmesi halinde, yargıçlar, maaşları kesintisiz verilmek koşuluyla, başka bir mahkemeye atanabilir veya görevden alınabilirler (Federal Alman Anayasası md.97).

### 3.3  Avusturya Anayasa Mahkemesi

Avusturya Anayasa Mahkemesi, Genel Kurul halinde karar vermektedir. Avusturya Anayasa Mahkemesi'nde de Alman Anayasa Mahkemesi örnek alınarak, dairelerin oluşturulması önerilmiş, fakat bu öneri Mahkemenin içtihadındaki tutarlılık ve homojenlik üzerinde olumsuz etkide bulunacağı endişesiyle kabul görmemiştir (Kucsko-Stadlmayer , 2001).

Avusturya Anayasa Mahkemesi, biri başkan ve başkan yardımcısı olmak üzere oniki üye ve altı yedek üyeden oluşur. Başkan, Başkanvekili, altı üye ve üç yedek üye Federal Hükümetin önerisiyle Federal Cumhurbaşkanı tarafından atanırlar. Bu üyeler ve yedekleri hâkimler, idare memurları ve hukuk profesörleri arasından seçilirler. Geriye kalan altı üye ve üç yedek üye ise, Milli Konseyin üç asil ve iki yedek üyelik için göstereceği adaylar arasından ve Federal Konseyin üç asil ve bir yedek üyelik için göstereceği adaylar arasından Federal Cumhurbaşkanı tarafından seçilir (Avusturya Anayasası md.147).

Üç asil ve iki yedek üye Federal Başkent Viyana'nın dışında ikamet etmelidir. Fiilen görevlerine devam etmekte olan ve asil ya da yedek üyeliğe seçilmiş idare memurları, maaşları kesilerek, tüm resmi görevlerinden muaf tutulurlar. Sadece idare memurları görev süreleri boyunca izinli sayılır. Anayasa yargıçlığı ek bir görev olarak yapıldığı için diğer mesleklerin yerine getirilmesi açısından herhangi bir sakınca doğurmaz. Bu nedenle çoğunlukla yargıçlar, profesörler önceki mesleklerini sürdürürler. Bu düzenleme hâkimlerin pratik deneyimlerinden de yararlanmak amacıyla getirilmiştir (Kanadoğlu, 2004). Anayasa Mahkemesinin Başkanı, Başkanvekili ve diğer asil ve yedek üyelerinin tamamı hukuk alanında eğitim görmüş ya da adli veya politik bilimler alanında öğrenim görmüş olmalıdır. Buna ilaveten anılan eğitim dallarından birinden mezuniyetin şart olduğu bir meslekte en az on yıl mesleki tecrübeye sahip olmalıdır.

Federal Hükümet veya Eyalet Hükümeti üyeleri, ayrıca Milli Konsey ve Federal Konsey veya diğer seçimle göreve getirilmiş meclis üyeleri; belirli bir yasama dönemi veya görev süresi için seçimle göreve getirilmiş bir meclise seçilmiş üyeler için, bu kısıtlama yasama dönemi sona erinceye, ya da görev süresi doluncaya kadar devam eder. Son olarak, bir siyasal partide çalışan ya da idarecilik yapan hiçbir kimse Anayasa Mahkemesine üye olamaz.

Yargıçlar için sınırlı bir görev süresi söz konusu değildir. Bir hâkimin yetmişinci yaşını doldurduğu yılın 31 Aralık tarihi, o hâkimin Anayasa Mahkemesindeki görevinden emeklilik tarihidir. Ayrıca Anayasa Mahkemesinin bir asil ya da yedek üyesi, geçerli bir mazeret olmaksızın, Anayasa Mahkemesinin herhangi bir oturumuna üst üste üç kez katılmazsa, Anayasa Mahkemesi, bu üyenin savunmasını aldıktan sonra bu keyfiyeti resmi olarak tespit edecektir. Bu keyfiyetin tespiti, asli ya da yedek üyelik statüsünün kaybını gerektirir. Bununla birlikte mesleki sırrın ifşası ya da bedeni veya akli arıza nedeniyle görevini sürdüremez hale gelen Mahkeme üyelerinin görevi de üçte iki çoğunluk oyu sona erebilmektedir (Kanadoğlu, 2004).

### 3.4  Fransız Anayasa Konseyi

Fransız Anayasa Konseyi dokuz üyeden oluşur. Yargıçların görev süreleri dokuz yıldır ve bu süre uzatılamaz. Üyelerin üçte biri her üç yılda bir yenilenir. Üyelerden üçü Cumhurbaşkanı, üçü Millet Meclisi Başkanı, üçü de Senato Başkanı tarafından atanır. Bu kişiler yetkilerini Parlamentonun her türlü etkisinden bağımsız olarak kendi takdirleri doğrultusunda kullanmak zorundadırlar. Atama yapan organların üzerinde, Parlamentonun herhangi bir etkisi olmadığından, Fransa'da Anayasa yargıçlarının seçim usulü, diğer ülkelerle karşılaştırıldığında otoriterdir.

Zira Avrupa modeli çerçevesinde, sadece Fransa'da üyelerin hepsi atama yoluyla belirlenir. Atamaların bu şekilde yapılması ise, seçimlerde kişisel ilişkileri ön plana çıkarmaktadır (Acquaviva, 2001).

Meclis Başkanlarınca yapılan atamalar sadece görüşünü almak maksadıyla ilgili Meclisteki daimi komiteye sunulur. Bahsi geçen dokuz üyeden başka, eski Cumhurbaşkanları da Anayasa Konseyi'nin kaydı hayat şartıyla doğal üyesidirler. Fransız Anayasa Konseyi Başkanı, Cumhurbaşkanı tarafından atanır. Eşitlik halinde, Başkanın oyunun bulunduğu tarafa üstünlük tanınır (Fransız Anayasası md.56).

Yargıçların görev süresi objektif bir yaş sınırına bağlı olmaksızın dokuz yıldır. Her üç yılda bir üyelerin üçte biri yenilenir. Atama yetkisi olan her bir organın, birer üye atama hakkı vardır. Yeniden seçilerek atanmak mümkün değildir. Üyelerin mesleki ya da hukuki açıdan uzman niteliğine sahip olmaları ya da uzun süreli mesleki deneyimlerinin olması gerekmez. Bu yönüyle Fransa, diğer birçok ülkeden farklılaşır. Ayrıca Fransız Anayasası'nın 57. maddesi; Anayasa Konseyi üyeliği görevinin, bakanlık ve Parlamento üyeliği görevleriyle bağdaşmadığını düzenlemektedir. Diğer bir ifadeyle, bağdaşmazlık rejimi kısmidir. Ancak organik bir kanunla, Anayasa Konseyi üyeliğiyle bağdaşmayan görevler tek tek sayılarak oldukça geniş tutulmuştur (Kaboğlu, 2007).

### 3.5 İspanya Anayasa Mahkemesi

İspanya Anayasa Mahkemesi, iki Daire halinde çalışmaktadır. Mahkeme, altışar üyeden oluşan ve her biri bağımsız yetkili iki Daire'den oluşmaktadır. İspanya Anayasa Mahkemesi Kanunu'nun 8. maddesi, Mahkeme'nin Komisyonlarını düzenlemektedir. Anayasa Mahkemesine bireysel başvuru yoluna benzeyen İspanya'daki "amparo" başvurusunun kabul edilebilirliğine ise, üçer hâkimden oluşan dört komisyon karar vermektedir (Miguel, 2001).

İspanya Anayasa Mahkemesi'ne üye seçme yetkisi, yasama, yürütme ve yargı organları arasında paylaştırılmıştır. Ancak ağırlık yine de yasama organı lehinedir. 12 üyeden sekizi yasama organı tarafından, ikisi hükümet, ikisi de yargı organı tarafından seçilmektedir (Gözler, 2010).

İspanya Anayasası'na göre; Anayasa Mahkemesi, Kral tarafından atanan on iki üyeden oluşur. Bunların dördünü üyelerinin beşte üç çoğunluğuyla Kongre, dördünü aynı çoğunlukla Senato aday gösterir. İki üye hükümet tarafından, diğer ikisi de Hâkimler Yüksek Kurulu tarafından aday gösterilir. Anayasa Mahkemesi üyeleri dokuz yıllık bir süre için atanırlar ve her üç yılda bir üçte biri yenilenir. Anayasa Mahkemesi üyeleri, tamamı en az on beş yıllık mesleki deneyime sahip Hâkimler, üniversite profesörleri, Savcılar, kamu görevlileri ve avukatlar arasından atanır.

İspanya Anayasası, Anayasa Mahkemesi üyeliği ile bağdaşmayan durumları da düzenlemiştir. Her tür temsil görevi, her türlü siyasi veya idari görev, bir siyasi partide veya sendikada yönetim rolü veya bunların hizmetinde herhangi bir istihdam, hâkim veya savcılık ve herhangi bir mesleki ya da ticari faaliyet yasak kapsamındadır. Ayrıca, yargı mensuplarının kısıtlılık halleri Anayasa Mahkemesi üyeleri için de geçerlidir. Anayasa Mahkemesi üyeleri, görevleri süresinde bağımsızdırlar ve azledilemezler (İspanya Anayasası md.159).

### 3.6 İtalya Anayasa Mahkemesi

İtalya Anayasa Mahkemesi, üçte biri Cumhurbaşkanı, üçte biri müşterek oturumla Parlamentonun (Millet Meclisi ve Senato) ve üçte biri de adli ve idari yüksek mahkemelerce aday gösterilen on beş yargıçtan oluşur. Mahkemenin üye seçimine yargı organı da katıldığı için diğer ülkelere nazaran daha karmaşıktır (Kaboğlu, 2007). Ancak yargıçları belirleme yetkisinin devletin üç ayrı organına bölünmüş olması, dengenin sağlanması açısından olumlu bir yöntemdir.

Anayasa Mahkemesi yargıçları, bu mahkemelerden emekli olanlar da dâhil olmak üzere, adli ve idari yüksek mahkemelerin yargıçlarından, üniversite hukuk profesörlerinden ve en az yirmi yıllık mesleki deneyimi olan avukatlardan seçilir. Anayasa Mahkemesi yargıçları, yemin ettikleri günden itibaren dokuz yıllığına atanırlar ve ikinci bir kez atanamazlar. Yaş sınırı olmadığı gibi parlamenterlerin sahip olduğu dokunulmazlık statüsünden yararlanırlar. Buna ilaveten Anayasa Mahkemesine üye seçilebilecek kişiler dar bir alanla sınırlanmıştır.

Anayasa Mahkemesi üyeleri arasından, kanunun belirttiği kurallar çerçevesinde bir Başkan seçer. Başkan üç yıl görevde kalır, her defasında hâkimlerin görev sürelerinin bitimi dikkate alınarak, yeniden seçilebilir (İtalya Anayasası md.135).

Anayasa Mahkemesi yargıçlığı Parlamento veya Bölge Meclisi üyeliğiyle, avukatlık mesleğinin icrasıyla ve kanunda gösterilen herhangi bir görevle birlikte yapılamaz. Yargıçlar gelir getirici bir faaliyette bulunamaz; siyasi partilere ise üye olabilirler. Anayasa Mahkemesi'ndeki görev sürelerinin bitiminde, anayasa yargıçları makamlarını ve yaptıkları işleri bırakırlar (Sır, 2011).

## 4  Sonuç

Millet adına yargılama fonksiyonunu yerine getiren yargı organının ve yargı erkini kullanan hâkimlerin bağımsızlığının bir hukuk devleti için vazgeçilmez önemi vardır. Nitekim hâkimlerin her türlü baskıdan ve etkiden uzak bir şekilde görevlerini yerine getirmeleri, insan hak ve özgürlüklerinin güvencesi olarak ortaya çıkmaktadır.

Adalet, insanların en önemli temel duygularından ve ortak değerlerinden birini oluşturur. Yargı da, her dönem, bu adalet duygusunun zedelenmesini engelleyen önemli güç olarak karşımıza çıkar. Yargı fonksiyonunun amacı; adaletin ve hukuk düzeninin gerçekleştirilmesi ve korunmasıdır. Adaletin sağlanması ve her şeyden önemlisi egemenliğin tek kaynağı olan halk adına yargılama işlevini yerine getiren bir organ olan yargının, yasama ve yürütme karşısında bağımsız olması gerekmektedir.

Yargı fonksiyonunu gerçekleştiren organların, bu fonksiyona yakışır özelliklere sahip olması gerektiğini ve hâkimlerin de diğer kamu görevlilerinden daha fazla güvencelere kavuşması gereğini vurgulamaktadır. Yargı bağımsızlığı hâkimlerin bağımsızlığını, yargılama bağımsızlığını ve hatta yargılamada taraflar arasındaki

bağımsızlığı da içermektedir. Adaletin asıl unsuru olan hukuk devleti ilkesi, hâkimlerin bağımsızlığının tam anlamıyla gerçekleşmesiyle olur. Nitekim yasama ve yürütmenin yargıya müdahale etmesinin kabul edilemeyişi, yargı bağımsızlığı, hâkim güvencesi, demokrasi, insan hakları ve özgürlüklerinin korunabilmesi açısından vazgeçilmezdir.

Yargı bağımsızlığının, yargının sahip olduğu görevleri yerine getirirken iktidara sahip olanlardan kaynaklanacak birtakım etkilerden uzak olması gerekmektedir. Bu da anayasal-demokratik bir hukuk devleti anlayışının en üstün yansıması olarak karşımıza çıkmaktadır. Bu durum ise, özgürlüğün en büyük güvencelerinden biridir. Unutulmamalıdır ki, sadece ayrı bir yargı kuvvetinin mevcudiyeti kuvvetler ayrılığı ilkesinin gerçekleşmesini sağlamayabilir. Kuvvetler ayrılığının gerekli işleyişinin sağlanabilmesi için, siyasi iktidarların yargıya müdahale etme imkânlarının giderilmeye çalışılması, yargının bağımsızlaştırılması ve yargı ile siyaset arasındaki çizginin daha ayırt edici bir biçimde sekilenmesi gerekmektedir.

Hâkimlerin bağımsızlığının, sadece hâkimlerin hüküm kurarken herhangi bir müdahaleden uzak olmalarını değil; aynı zamanda onların atanmaları, özlük hakları ve hatta çalışma koşullarını da kapsadığı kabul edilmektedir. Karşılaştırmalı anayasa hukukuna da baktığımız zaman, Anayasa Mahkemelerinin teşkilatı, üye seçim usulü ve üyelerinin statülerine ilişkin farklı düzenlemeler olduğu görülmektedir. Elbette demokratik ülkelerde benimsenen bu farklı sistemler, eleştiriye açıktır. Anayasa Mahkemesine üye seçme yetkisi, bazı ülkelerde doğrudan sadece yasama organına verilmişken; bazı ülkeler de ise, yasama ve yürütme organları arasında paylaştırılmıştır. Söz konusu yetkinin yasama, yürütme ve yargı organları arasında paylaştırıldığı ülkeler de yok değildir. Önemli olan ise, bu farklı yetki kuralları konulurken yargının, yürütme ve yasama organları karşısındaki bağımsızlığını her halükarda korumayı sağlayabilmektir.

# Birleşmiş Milletler Dünya Turizm Örgütü'nün Turizme Katkıları

# UN World Tourism Organization's Contributions to World Tourism

Prof. Dr. Faruk Andaç (Çağ University, Turkey)

## Abstract

According to the UN World Tourism Organization's (UNWTO) rules, this organization's aim is to promote tourism through economic development, international understanding, peace, security, basic human rights and freedom, and to show respect throughout the world without exception of race, gender or religion. The World Tourism Organization (UNWTO) was founded in 1924 under the United Nations and it has been continuing its activities in Madrid, Spain since 1970. The World Tourism Organization (UNWTO) takes all necessary measures with tourism in order to achieve its goals. The UNWTO pays strict attention to the interests of developing countries in the field of tourism. For this reason, the UNWTO has a close relationship in the tourism field with the United Nations' authorities and specialized institutions. It deals with the tourism problems of all countries and supports their contributions to tourism by international agreements. On the other hand, the UNWTO is cooperating with the United Nations Development Program and tries to contribute to the activities of this program. All countries are expected to be a member of the UNWTO and adopt its principles, because tourism will make it possible for them to increase National Income and Development. Macedonia hasn't applied to be a member of this organization yet, but it is important to start the attempts immediately.

## 1 Giriş

Dünya Turizm Örgütü, 1925 yılında kurulduğu günden günümüze kadar birçok ülke ile ilişkiler kurarak turizmin gelişmesine katkıda bulunmuş ve ilişki kurduğu ülkelerin ekonomilerinde büyük gelişmeler sağlamıştır. Dünya Turizm Örgütü tarafından Ekim-2013 ayında Gana'nın başkenti Acra'da turizm eğilimleri ve stratejilerini içeren Dünya Turizm Barometresi açıklandı (UNWTO Tourism Highlights). Yayınlanmış olan Turizm Barometresi içerisinde 2013 yılı Ocak-Ağustos dönemine ait uluslararası turist varışları ve turizm gelirlerinde meydana gelen gelişmeler ile ilgili istatistikler yer almaktadır. Dünya Turizm Örgütü Ekim Ayı İstatistiklerine göre, uluslararası seyahat eden kişi sayısı 2013 yılının ilk sekiz ayında geçen yılın aynı dönemine göre %5 artmış, 747 milyon kişi olmuştur. Geçen yılın aynı dönemi ile kıyaslandığında 38 milyon kişi artış göstermiştir (Tanıtma Genel Müdürlüğü).

## 2 Dünya Turizm Örgütü'nün (UNWTO) Amacı

Örgütün kuruluş amacı, "iktisadi gelişmeye, uluslararası anlayışa, barış, refah, insan temel hak ve hürriyetlerine, ırk, cinsiyet, dil ve din ayrımı yapılmaksızın evrensel saygı duyulmasına ve gözetilmesine katkıda bulunmak, turizmin teşvik ve geliştirilmesini sağlamaktır" (Dünya Turizm Örgütü (WTO) Tüzüğü Madde 3).

Örgüt, bu amaca ulaşmak için kalkınma yolundaki ülkelerin turizm alanındaki çıkarlarına özel bir dikkat göstermektedir.

Örgüt, turizm alanında gereğini yerine getirmek amacıyla, Birleşmiş Milletlerin yetkili organlarıyla ve ihtisas kuruluşlarıyla etkili bir şekilde işbirliği kurmakta ve sürdürmektedir. Örgüt, aynı zamanda Birleşmiş Milletler Kalkınma Programı (UNDP) kapsamı içerisinde, programın yürütülmesiyle yükümlü iştirakçi ve uygulayıcı bir kuruluştur. Bu nedenle UNDP ile sıkı işbirliği ilişkileri kurmaya ve anılan program faaliyetlerine katkıda bulunmaya gayret göstermektedir (Tüzük md.3 ).

## 3 Dünya Turizm Örgütü'nün Kurulması ve Gelişimi

Dünya Turizm Örgütü (WTO), 1925 yılında Milletler Cemiyeti (Birleşmiş Milletler) nezdinde ilk uluslararası turizm örgütü olarak Lahey (Hollanda)'de kurulan **Resmi Turizm Reklam Kuruluşları Uluslararası Birliği** adı altında kurulmuştur. İkinci Dünya Savaşı'ndan sonra **Resmi Turizm Kuruluşları Uluslararası Birliği** adı altında yeniden yapılandırılmış ve merkezi Cenevre (İsviçre)'ye taşınmıştır.

1969 yılında Birleşmiş Milletler Genel Kurulunda, Birliğin ismi **Dünya Turizm Örgütü** olarak değiştirilmiş ve 1970 tarihinde de Dünya Turizm Örgütü, İspanya'nın daveti üzerine Sekretaryasını Madrid'e taşımıştır. İlk Genel Kurul toplantısı 1975 yılında Madrid'de gerçekleştirilmiştir. 1976 yılında da Birleşmiş Milletler Kalkınma Programı (UNDP)'nın icracı bir ajansı haline gelmiştir. 23 Aralık 2003 tarihinde Örgütün Birleşmiş Milletlerle imzaladığı anlaşma gereğince Dünya Turizm Örgütü, Birleşmiş Milletler Teşkilatı'nın bir uzmanlık kuruluşu haline gelmiştir.

Örgüt´ün resmi dilleri Fransızca, İngilizce, İspanyolca ve Rusça´dır (Tüzük md.38).

Bugün WTO, Birleşmiş Milletlere bağlı, her ülke ilgili bakanlığının ve benzeri turizm örgütlerinin üyelikleriyle oluşan bir uzmanlık kuruluşudur. 27 Eylül l970 tarihinde Meksika'da tanzim edilmiş olan WTO Tüzüğü, ülkemizce Türkiye tarafından 26.06.1973 tarih ve 1768 sayılı yasa ile onaylanmış bulunmaktadır (Resmi Gazete).

WTO'nun bugün için bünyesinde, bağımsız devletlerden oluşan 156 asli üyesi, 2 gözlemci ülke, bağlı üye statüsünde 418 kuruluş ve şirket bulunmaktadır. Bunlar 7 bölgesel komisyona ayrılmışlardır. 1975 yılında WTO'ya asli üye kabul edilen Türkiye, Avrupa Komisyonu'nda yer almaktadır. Makedonya ise henüz üye olmamıştır. Son olarak 2013 yılında Trinidad, Amerika bölgesinden üye olmuştur.

Örgütün, Genel Kurul, Yürütme Konseyi ve Sekreterya şeklinde başlıca üç organı bulunmaktadır. Genel Kurul, örgütün en yüksek karar organıdır. Asli üyeleri temsil eden delegelerden oluşmaktadır. Genel Kurul, her iki yılda bir olağan toplantısını yapmaktadır. Genel Kurul'da Türkiye'yi T.C. Kültür ve Turizm Bakanlığı temsil etmektedir.

WTO, turizmin geliştirilmesi ve teşvik edilmesi temel amacı ile kurulmuştur. Ayrıca genel anlamda, ekonomik kalkınmayı ve uluslararası barış ve refaha katkıda bulunmayı, ırk, cins, dil ve din ayrımı yapmaksızın insan hak ve özgürlüklerine bağlı kalmayı, onlara saygı göstermeyi, kalkınmakta olan ülkelerin çıkarlarına turizm alanı ile sınırlı kalmak kaydı ile özen göstermeyi de amaçlamaktadır. Bu amaçlarla WTO, Birleşmiş Milletler ile işbirliği içindedir. Özellikle Birleşmiş Milletler Kalkınma Programı (UNDP)' nın ortağı ve yürütme organıdır.

WTO'nun Çalışma Komiteleri; Program ve Koordinasyon Tetkik Komitesi, Bütçe ve Mali Komite, Kolaylaştırma Komitesi, Çevre Komitesi, Turizm Güvenlik Komitesi, İstatistik Komitesi, Afiliye Üyeler Müracaat İnceleme Komitesi ve Statü Değişikliği Ad-hoc komitesi şeklinde belirlenmiştir.

WTO, dünyada turizm hareketlerinin uluslararası tek düzenleyicisi olup, Türkiye örgütün 1992-1995 yılları için 4 yıllık süreyle İcra Konseyi üyeliğine seçilmiştir (Andaç 2013).

## 4  Dünya Turizm Örgütü Tüzüğü'ne Göre Örgüt'e Üyelik Şartları

**Tüzüğe göre** Örgüt´ün Asli Üyelik, Ortak Üyelik ve Bağlı üyelik olmak üzere üç türlü üyeliği vardır.(Tüzük md.4).

**Asli Üyelik;** Bütün Bağımsız Devletler, Örgüt´ün Asli üyesi olabilirler. Tüzüğün kabulü tarihinde (1970), ulusal turizm kuruluşları ile Asli üye bulunan Devletler, Örgüt´ün Tüzüğünü ve üyeliğe ilişkin vecibeleri kabullendiklerini resmen beyan etmek suretiyle ve oylamaya lüzum kalmaksızın Örgüt´ün Asli Üyesi sayılmaktadırlar. Diğer Devletler ise, Asli Üyelerin üçte iki çoğunluğu ile Örgüt´e Asli Üye olabilirler (Tüzük md.5).

**Ortak Üyelik;** Dış ilişkilerinden sorumlu bulunmayan yani Özerk topluluklar, Örgütün Ortak Üyesi olabilirler. Tüzüğün kabulü tarihinde, ulusal turizm kuruluşları ile Asli üyesi olan dış ilişkilerinden sorumlu bulunmayan ülke veya ülke toplulukları, dış ilişkilerinin sorumluluğunu yüklenen bağımsız Devletin kabul etmesi kaydıyla, Örgüt´ün Ortak Üyesi sayılmaktadırlar. Sorumluluğu yüklenen Devlet, aynı zamanda bu ülkeler veya ülke topluluklarının, Örgüt´ün Tüzüğünü ve üyeliğe ilişkin vecibelerini kabullendiklerini, onlar adına beyanda bulunması gerekmektedir.

Diğer ülkeler veya ülke toplulukları, dış ilişkilerinin sorumluluğunu yüklenen Devlet tarafından adaylıkları önceden onaylandığı takdirde, Örgüt´e **Ortak üye** olabilirler. Sorumluluğu yüklenen Devlet, aynı zamanda, bu ülkeler veya ülke topluluklarının, Örgüt´ün Tüzüğünü ve üyeliğe ilişkin vecibeleri kabullendiklerini onlar adına beyanda bulunması gerekmektedir. Bu adaylıkların, Genel Kurul tarafından oylamada Asli üyelerin üçte iki çoğunluğuyla kabul edilmesi gerekir. Ancak, anılan üçte iki çoğunluğun, Örgüt´ün Asli üyelerinin çoğunluğunu kapsaması gerekir.

"Örgüt´ün Ortak üyelerinden biri dış ilişkilerinin yürütülmesinden sorumlu duruma geldiği zaman, Teşkilat´ın Tüzüğünü ve Asli üyeliğe ilişkin vecibeleri kabullendiğini resmi ve yazılı bir beyanla Genel Sekreter´e bildirmek suretiyle Teşkilat´ın Asli Üyesi olmağa hak kazanır" (Tüzük md.6).

**Bağlı Üyelik;** Turizmle uğraşan uluslararası kuruluşlar, faaliyetleri Örgüt´ün amaçlarıyla bağdaşan veya Örgüt´ün yetki alanına giren kurumlar, ticari kuruluşlar, Örgüt´ün Bağlı üyesi olabilirler. Bu tür kuruluşlar örgüte Bağlı Üye olabilmeleri için, Genel Sekreterliğe yazılı olarak başvuracaklar ve Genel Kurul tarafından, oylamada hazır bulunan ve oy veren Asli üyelerin üçte iki çoğunluğuyla kabul edilmesi şartıyla, Örgüt´ün Bağlı Üyesi olabileceklerdir. Bağlı üyeliğe adaylıklarının, adayın merkezinin hukuken bağlı bulunduğu Devlet tarafından desteklenmesi de gerekir. Bağlı Üyeler, Örgüt´ün faaliyetlerine tek tek veya Bağlı Üyeler Komitesi bünyesinde gruplaşmış olarak katılabilirler (Tüzük md.7).

Diğer taraftan Dünya Turizm Örgütü Tüzüğüne ilişik çıkarılmış 1970 tarihli Mali Yönetmeliğe göre örgütün Bütçesi, her ülkenin ekonomik kalkınma ve uluslararası turizme katkısı seviyesine uygun olarak, Kurul tarafından bir taksimat metodu uyarınca tayin ve tespit edilen ülkelerin katılma payları ve Örgüt´ün diğer gelirleri ile finanse edilmektedir (Yönet. md.3). Örneğin Türkiye'nin Yıllık aidat veya katkı payı: 173.130 Euro'dur (Dış İlişkiler Dairesi Başkanlığı).

Örgüt´ün masraflarını karşılamak üzere iki yıllık katılma payını ödemekte geciken Üyelere hizmet verilmemekte, Konsey ve Kurul´da da oy kullanma hakkından mahrum bırakılmaktadır. Bununla beraber, Konsey´in talebi üzerine, Kurul, ödemenin ifa edilmesinin üyenin elinde olmayan sebeplerden ileri geldiğine kani olursa, bu üyenin oy hakkını kullanmasına ve Örgüt´ün hizmetlerinden yararlanmasına izin verilebilmektedir (Yönet.13).

## 5   Dünya Turizm Örgütü ve Birleşmiş Milletler Kalkınma Programı (UNDP) İlişkisi

WTO, Birleşmiş Milletler ile işbirliği içindedir. Özellikle Birleşmiş Milletler Kalkınma Programı (UNDP)' nın ortağı ve yürütme organıdır.

Merkezi New York'ta bulunan Birleşmiş Milletler Kalkınma Programı (UNDP), üye ülkelerdeki gönüllü katılımcılardan oluşmaktadır. Kurumun 166 ülkede, yerel hükümetlerle birlikte çalışarak kalkınmaya destek olan ofisleri bulunmaktadır. UNDP aynı zamanda, uluslararası düzeyde yaptığı çalışmalar ile Binyıl Kalkınma Hedefleri 'ne ulaşmaları yolunda ülkelere yardımcı olmaktadır. UNDP, uzman görüşleri, eğitimler ve destek fonları sunarak özellikle az gelişmiş ülkelere destek olur. UNDP, Binyıl Kalkınma Hedefleri 'ne ulaşmak ve küresel kalkınmayı desteklemek için yoksulluğun azaltılması, demokratik yönetim, enerji ve çevre, sosyal kalkınma, kriz önleme ve atlatma konuları üzerinde çalışmaktadır.

UNDP, 177 ülkede, hükûmet ve toplumla beraber çalışarak, küresel ve ulusal kalkınmanın önünde duran sorunları çözmek için çalışmaktadır. Ulusal ve küresel desteği yanına alarak, ulusların öncelikli olan kalkınma problemleriyle ilgilenmektedir. UNDP, özellikle demokratik yönetim, çevre ve enerji, HIV/AIDS hastalığı, kriz önleme ve atlatma, yoksulluğun azaltılması gibi konularla da ilgilenmektedir. UNDP, kalkınma önceliklerini hayata geçirebilmek için, teknik yardım ve kapasite geliştirme stratejileri sağlayarak devlet, sivil toplum, akademisyenler ve uluslararası ortaklar ile beraber çalışmaktadır.

UNDP, devletle ve sivil toplum örgütleri ile bir araya gelerek birçok alanda çalışmalarda bulunmaktadır. Bu çalışmalarda özellikle, sivil katılım, herkes için adalete erişim, yerinden yönetim, ulusal insan hakları sistemini desteklemektedir. Yerel idareler, kamu kurumları ve sivil toplum örgütleri arasında bir bağ oluşturarak işbirliği oluşturmaya çalışmaktadır.

UNDP, su kıtlığı, iklim değişikliği, temiz ve ucuz enerji kaynaklarının eksikliği gibi çevresel sorunların çözümünde ülkelere destek olmaktadır. UNDP sivil toplum kuruluşları, kamu ve özel sektör ortakları ile beraber çalışarak çözüm önerileri sunmakta ve projeler uygulamaktadır. Yenilenebilir enerji, iklim değişikliği, toprak bozulması, su idaresi, koruma altına alınan alanlar ve sürdürülebilir kalkınma sorunlarına çözüm bulmak için üye ülkelerin uluslararası müzakerelerde yer almasına ve kendi politikalarını geliştirmesine yardımcı olmaktadır.

UNDP, ekonomik kaynaklara erişim, yoksullukla mücadelenin ülke politikaları arasında olması ve yoksulların sesini duyurması için ülkelere yöntem geliştirmeleri konusunda destek olmaktadır. Günlük 1 ABD doların altında yaşayan insanları temsil eden aşırı yoksullukla mücadele etmektedir. UNDP yardım programları ve bölgesel eşitsizliklerin azaltılması gibi alanlarda politika, öneriler ve uzmanlık hizmeti sunarak yoksulluğun azaltılmasına yardım etmektedir.

Birleşmiş Milletler Kalkınma Programı (UNDP), Dünya Turizm Örgütü(UNWTO) ile birlikte hareket etmekte olduğundan kalkınmakta olan ülkelerin turizm ile kalkınmasına da destek vermektedir.

Kalkınmakta olan ülkelerin kalkınmalarına destek veren Birleşmiş Milletler Kalkınma Programı (UNDP), Dünya Turizm Örgütü(UNWTO) ile birlikte ülke ekonomisine büyük katkıda bulunmaktadırlar.

Şöyle ki, Dünya Turizm Örgütü Ekim Ayı Barometresine Göre; Uluslararası seyahat eden kişi sayısı, 2013'ün ilk sekiz ayında geçen yılın aynı dönemine göre %5 artmış ve 747 milyon kişi olarak rekor bir rakama ulaşmıştır. Geçen yılın aynı dönemi ile kıyaslandığında, 38 milyonluk bir artış vardır.

Uluslararası ziyaretçi sayısı bakımından önemli büyüme kaydeden ülkelerden bazıları Gürcistan (%+26), Kazakistan (%+24), Tayland (%+21), Arnavutluk (%+19), Bosna Hersek (%+18), İzlanda (%+18) ile **Türkiye'dir** (%+11). Fransa (%+7), İspanya (%+4) ve İtalya (%+2) ise büyüme kaydetti.

Devam eden ekonomik zorluklara rağmen, seyahat eden kişi sayısı açısından Avrupa (%+5) büyümeye devam etti. Asya ve Pasifik'te (%+6), Kuzey ve Güney Amerika'da (%+3), Orta Doğu'da (%+7) ve Afrika'da (%+5) da artış görüldü.

Rapor, uluslararası turist varışlarında meydana gelen olumlu sonuçların, uluslararası turizm gelirlerine de yansıdığını gösteriyor. **Uluslararası turizm gelirleri sıralamasında ilk 25'e giren ülkelerin arasında Tayland (%+27) ve Çin (%+25) ve sonra %22'lik bir büyüme ile Türkiye gelmektedir.** Ülkemizi Japonya, Birleşik Krallık, Yunanistan, Hindistan, Malezya ve A.B.D takip ediyor.

Gelişmekte olan ülkeler, uluslararası turizm harcamalarında da başta gelmektedirler. Örneğin Hindistan hariç tüm BRIC(Brezilya, Rusya, Hindistan ve Çin) ülkelerinde Çin (%+31), Rusya Federasyonu (%+22), Brezilya (%+15) büyüme görülmüştür.

## 6 Sonuç

Kalkınmakta olan ülkelerin kalkınmalarına destek veren Birleşmiş Milletler Kalkınma Programı (UNDP), Dünya Turizm Örgütü(UNWTO) ile birlikte ülke ekonomisine büyük katkıda bulunmaktadırlar. Bu nedenle Dünya Turizm Örgütüne her ülkenin üye olması ve turizmin genel ilkelerini benimsemesi gerekir. Bunun sonucunda ülkenin turizm gelirleriyle ülke kalkınmasına katkıda bulunulmuş olacaktır. Zaten birçok ülkenin milli gelir artışında turizm gelirleri çok etkili olmaktadır. Makedonya henüz Dünya Turizm Örgütü'ne üye olamamıştır. Üye olması için gereken girişimleri derhal yapmasında büyük yarar vardır. Dünya Turizm Örgütü'ne üye olmamak büyük bir eksikliktir. Kalkınmakta olan Makedonya, Dünya Turizm Örgütü'ne üye olmakta gecikmemelidir.

# Öğrenen Turizm Bölgelerinin Şehir Pazarlamasına Etkisi Üzerine Kavramsal Bir Çalışma

# A Conceptual Study on the Effect of Learning Tourism Regions on City Marketing

Asst. Prof. Dr. Esra Ciğerci (Afyon Kocatepe University, Turkey)
Asst. Prof. Dr. Alparslan Özmen (Afyon Kocatepe University, Turkey)

## Abstract

The development of technology and transportation facilities allow people for weekend getaways. Nowadays, instead of waiting for longer holidays, people can experience different cultures and history, attend sport events, visit friends or do shopping in a different city during a short time length. This is a rapidly increasing trend in both Europe and the rest of the world which mobilized local officials; thus, city marketing, urban tourism and finally the most recent concept of learning regions all have gained importance. The purpose of this study is to examine the relationship among learning regions, urban tourism and regional economic development in the light of relevant literature. Today, countries, regions and cities are trying to unveil and share their unique local wealth in order to show up at the international arena. In this respect, through branding and marketing of a region (city, town) by restructuring it, regional development will have great benefits. This study will also provide guidelines for local authorities in particular.

## 1 Giriş

Günümüzde, küreselleşme, internet ve ulaşım teknolojilerindeki gelişme ile yer ve mesafe sorunlarının ortadan kalkmıştır. Buna rağmen, yenilenen ve sürdürülebilir bir ekonomik yaşamın odak noktasını halen bölge ya da yerellik kavramları oluşturmaktadır. Bölgelerin ölçekleri uluslara göre nispeten daha küçük olduğu için, problemlere çözüm üretmede ve planlarını koordine etmede daha esnek davranabilmektedirler (Agora XI, 2001:1). Ayrıca günümüzde, kalkınma stratejileri bölge ve yerellikler üzerinden yapılandırılmaya çalışılmakta ve bu durum da bölge ve yerele dair sosyal, kültürel ve ekonomik özelliklerin önemini arttırmıştır (Dulupçu ve Özgür, 2006:4). Bu gelişmelerin akabinde ise öğrenen bölge, öğrenen kent, sürdürülebilir kentleşme, marka kent gibi kavramlar önem kazanmıştır. Çünkü bölgesel ya da yerel kalkınma için yeniliklerin takibi ve yaşam boyu öğrenme felsefesinin etkin kullanımı gerekmektedir.

Yaşam boyu öğrenme, ülkelerin ekonomik ilerleme ve gelişimleri için, sosyal birliktelik, demokratik anlayış ve etkinlik için, kişisel gelişim ve hayatın her alanından tatmin için geliştirilmiş bir kavramdır (Aksoy, 2013:36).

Öğrenen bölge ise bir bölgenin kendi potansiyelini ve yeteneklerini geliştirerek hayat standartlarını ve yaşam kalitesini arttırmasıdır.

Öğrenen Bölge yaklaşımı, bilgi paylaşımı ve iletişimin artması, yaşam boyu öğrenme ve bölgesel gelişme/kalkınma gibi unsurların önem kazanması sonucu ortaya çıkmış bir kavramdır. Öğrenme süreci; bireysel öğrenmeden, bölgesel öğrenmeye giden ve bölgedeki sürekli gelişimi zorunlu kılan bir faaliyettir ve yalnızca bireysel öğrenmenin geliştirilmesi değil aynı zamanda bölgesel kalkınmanın sağlanması hedeflenir (European Commision, 2004, Emekli, 2008). Bölgesel kalkınmanın en önemli anahtarları ise şehirler ve şehir turizmidir. Dünya Turizm Örgütü'ne (World Tourism Organization – WTO) göre turizm, dünyanın en büyük endüstrisi olup, gelecekte de iş fırsatları yaratmaya devam edecek birkaç önemli sektörden birisidir. Bu nedenle turizm, bölgesel ve ulusal kalkınmanın önemli bir aracıdır. Bugün dahi birçok bölge, ülke ve şehir için gelir ve istihdam yaratan çok önemli bir kaynaktır (Erarslan vd., 2008:15).

Turizmin bu cazibesi pazarlama açısından da farkedilmiş ve son zamanlarda şehir pazarlaması, şehir markalaşması, marka kent gibi kavramlar ön plana çıkmıştır. Şehir pazarlaması şehrin müşterileri ve halkı açısından değer taşıyan, hedef kitle tarafından istekleri ve beklentileri karşılanacak derecede bir mekan oluşturmak olarak tanımlanabilir. Şehirlerin tanıtımlarında pazarlama etkin bir rol oynamaktadır. Şehirlerin bilinirliklerini arttırmak, tüketici ve turistleri kendilerine çekmek, iş adamlarını teşvik ederek yatırım oranlarını yükseltmek, içsel varlıkların pazarlamasını yaparak turizm gelirlerini arttırmak ve şehir sakinleri açısından şehirler arasında rekabet ortaya çıkarmak için pazarlama gereklidir. Öğrenen turizm bölgesi yaklaşımı ise bir şehrin etkin pazarlanması veya markalaşması için gerekli kaynaklara ulaşmayı mümkün kılmaktadır.

## 2 Öğrenen Bölge ve Öğrenen Turizm Bölgesi Kavramı

Bir kavram olarak öğrenen bölge; bir bölgenin potansiyelini, yeteneklerini ve ekonomisini geliştirmek için çaba harcamasıdır. Öğrenen bölge yaratma amacı, bölgenin ekonomik gelişimini mümkün olduğunca arttırarak bölge sakinlerine ve ziyaretçilere kaliteli bir yaşam standardı sunmaktır.

Öğrenme; bölge, kent ya da kasaba düzeyinde olabilir (Emekli, 2013:382). Bölgesel öğrenme girişimleri, sosyal ve ekonomik bakış açısıyla yaşam standartları ve hayat kalitesini arttırmak için yerel toplulukların (kişiler, gruplar, yerel yönetimler gibi) güçlendirilmesini içerir (Agora XI, 2001:2). Öğrenmenin oluşabilmesi ve yayılabilmesi için ise kuşkusuz bilginin etkin kullanımı, bilgi akışının yaygınlaştırılması ve yeniliklerin takibi oldukça önemlidir.

Bjørn Asheim'in tanıma göre de öğrenen bölge, örgütsel ve interaktif öğrenmenin kurumlara ve bölgelere uyarlanmasıdır ( Wolfe, 2002:8).

Öğrenen bölgeler, yeniliğin, ekonomik gelişmenin ve küreselleşmenin önemli bir aracı durumundadır (Florida, 1995:528). Öğrenen bölgeler; gerekli bilgilerin toplanmasını, toplanan bilginin ilgili kişi/kuruluşlara dağıtılmasını, öğrenmenin ortaya çıkması için uygun çevrenin oluşturulmasını ve küresel üretim sisteminde meydana gelen değişmeler karşısında öğrenme yetkinliğine bağlı olarak değişim ve uyum gösterebilmeyi gerektirir. Öğrenen bölge yaklaşımına göre bölgesel gelişme için iki temel özellik gerekmektedir:

1. Gelişme, öncelikle bireysel ve örgütsel düzeyde öğrenme ve bilgi paylaşımını gerektirir.

2. Bölgesel gelişme için ise katılımcı, etkileşimli ve yaşam boyu öğrenme felsefesine sahip bölgesel paydaşların işbirliği gereklidir.

Bir başka deyişle Önal vd.(2006) göre, bir öğrenen bölge /şehir/kasaba; geniş bir ilgi alanına sahip aktif katılım gösteren ortaklar aracılığıyla başarılı olabilecektir. Bu anlamda geniş ilgi alanına sahip olası aktif ortaklar şu şekilde sıralanabilir:

- Toplumsal örgütlerde ve ticari birliklerde üye olarak çalışan bireyler,
- Her düzeyde eğitim verebilecek olan kişi veya kurumlar,
- Her sektörde farklı büyüklükteki kurum, kuruluş ve organizasyonlarda çalışanlar,
- Anahtar konumundaki kurum ve kuruluşlar (yerel yönetimler, ticaret ve sanayi odaları, işletme örgütlenmeleri, bölgesel kalkınma ajansları, bölgesel örgütlenmeler vb. gibi).

Öğrenen; bir bölge, şehir, kasaba ya da kuruluş olabilir. Önemli olan nokta öğrenmenin etkin olabilmesi için çeşitli kişi ve kuruluşların işbirliği içinde hareket etmesidir. Tablo 1'de görüldüğü üzere öğrenen bölge süreci beraberinde büyük toplumsal değişimleri getirmektedir.

Örneğin, birbirine bağlı satıcı ve tedarikçilerden oluşan bir üretim altyapısı, nitelikli çalışanların bulunmasını/yetişmesini sağlayacak insan kaynağı altyapısı, yaşam boyu öğrenme felsefesi etrafında uyumlu çalışan ve kendilerini sürekli yenileyen takımlar, bilgi paylaşımını destekleyecek ve kolaylaştıracak fiziksel ve iletişim altyapısı, elektronik veri ve bilgi değişimi, küresel ekonomi ile bütünleşme ve öğrenen örgüt olabilmek için gerekli sermaye tahsisi ve endüstriyel yönetim sistemlerinin varlığı hem öğrenen örgütlerin oluşumunu hem de bilgiye dayalı ekonomiye geçişi hızlandırır (Florida,1995:534). Öğrenen bölgeler, bilgi yoğun ekonomik örgütlerin ihtiyaçlarının giderilmesini ve iyileştirilmesini sağlar, bir bölgede öğrenen örgütlerin yaygınlaşması ise öğrenen bölge oluşumunu hızlandırır.

Ancak, bir bölgenin başarılı bir bölgesel öğrenme süreci yaşayabilmesi için sadece firmalar arası işbirlikleri yeterli değildir. İşletmeler dışındaki diğer bölgesel unsurların da öğrenmeyi bir anahtar olarak kullanıp destekleyici faaliyetlerde bulunması gerekmektedir (Cooke vd., 1998:1565). Bölgelerin öğrenme kapasitelerini aşağıda sıralanan bölgesel unsurların kalitesi belirler (Albeni ve Karaöz, 2003:163,164):

- **Bilgi Altyapısı**: Üniversiteler, kütüphaneler, araştırma kuruluşları ve diğer bilgi veritabanları.
- **Üretim Altyapısı:** Tamamlayıcı, destekleyici (finansal kuruluşlar gibi), rakip firmalar, uzmanlaşmış firmalar, bu firmaların oluşturduğu şebekeler, kümelenmeler.
- **Kurumsal Altyapı:** a)Kamu kurum ve kuruluşları, sivil toplum kuruluşları, eğitim, adalet, güvenlik, fiziki altyapı, kamusal sağlık hizmetleri, b) Bölgenin gelenek ve alışkanlıklarına ilişkin sosyal yapısı.
- **Kamusal Politikalar:** Bölgesel ve ulusal kalkınma politikaları
- **Müşteri ve Talep Yapısı:** Üretim ve üretimde çeşitliliği teşvik edecek nitelikte müşteri portföyü.

Çeşitli altyapı gereksinimlerinin dışında, "Öğrenen Bölge" olmayı destekleyici ve teşvik edici bazı unsurlar vardır. Moles'e (2001) göre bu unsurlar şu şekilde sıralanmıştır;

- Turizm işletmeleri, bölgesel ve yerel otoriteler ile araştırma ve eğitim enstitülerinin yenilikçi işbirliklerine dahil edilerek rekabet edebilirliklerinin geliştirilmesi,
- Mevcut eğitim ve öğretim kurumları için yeni roller tanımlanması,
- İşletmeler ve Ar-Ge kuruluşlarının bölgesel/kentsel öğrenme/yenilik sistemleri içindeki diğer aktörlerle işbirliği yapmalarını kolaylaştıracak yapının kurulması,
- Eğitim ve öğretim kurumlarının yeni fikirlerin üretilmesi konusunda bir katalizör gibi çalışmasının sağlanması,
- Farklı aktörler arasında işbirliğinin sağlanması için gerekli altyapının oluşturulmasında çeşitli aracıların rol almasının sağlanması,

- Sosyal interaktif öğrenmenin arttırılması,
- Fikirlerin gerçeğe dönüştürülmesi için işletmecilik bilgisinin arttırılması,
- Yenilikçi süreçlerin hızlandırılması, bilginin paylaşılması, işletmelerin ve diğer aktörlerin öğrenme yeteneklerinin geliştirilmesi,
- Tamamlayıcı eğitim konseptleri ile eğitim ihtiyaçlarının öngörülerek giderilmesinin güvence altına alınması, faydalı ve etkili olacaktır.

|  | Kitlesel Üretim | Öğrenen Bölge |
|---|---|---|
| **Rekabetin Temeli** | Rekabetçi avantajlar;<br>• Doğal kaynaklar<br>• Fiziksel işgücü | Sürdürülebilir avantajlar;<br>• Bilginin yaratılması<br>• Sürekli gelişme |
| **Üretim sistemi** | Kitle üretimi:<br>• Değer kaynağı fiziksel işgücü<br>• Yenilik ve üretim süreçleri birbirinden ayrı | Bilgi temelli üretim:<br>• Sürekli yaratıcılık<br>• Bilgi değer kaynağı<br>• Yenilik ve üretim sentezi |
| **Üretim altyapısı** | • Mesafeli tedarikçi ilişkileri | • Firma ağları ve tedarikçi sistemleri yeniliğin kaynağı |

| **Fiziksel ve İletişim Altyapısı** | Ulusal fiziksel altyapı | Küresel fiziki ve iletişim altyapısı<br>• Elektronik veri değişimi |
| **Endüstriyel Yönetim Sistemi** | • İşbirlikçi olmayan ilişkiler<br>• Düzenleyici yapının yönetim ve kontrolü | • Karşılıklı bağımlı ilişkiler<br>• Ağ organizasyonu (network)<br>• Esnek düzenleyici yapı |

*Tablo 1. Kitle Üretiminden Öğrenen Bölgelere **Kaynak: Florida, 1995:533, Önal vd., 2006***

Öğrenen bölge/şehir sistemi belirli bir gelişme göstermesinin ardından; 1990'ların sonu 2000'lerin başlarından itibaren özellikle Avrupa Birliği bölgesinde turizm tabanlı bölgesel kalkınma aracı olarak "Öğrenen Turizm Bölgesi" kavramı ortaya çıkmıştır. Bu yaklaşımın, özellikle turizm açısından çekiciliğe sahip ülkeler açısından büyük önem taşıdığı düşünülmektedir. Bu bağlamda, Türkiye'nin de önemli turizm çekiciliklerine sahip olduğu ve bu sektörden önemli ekonomik katkılar sağlaması beklendiği düşünüldüğünde "Öğrenen Turizm Bölgesi" kavramının bir bölgesel kalkınma aracı olarak ele alınması ve irdelenmesi daha yerinde olacaktır. 2004 yılı sonunda Avrupa Birliği tarafından bu konuyla ilgili bir el kitabı yayınlanmıştır. AB turizm potansiyeli olan üye ülkelerdeki bölgeler için öğrenen turizm bölgesi yaklaşımını önermekte ve desteklemektedir. (Özsoy ve Çiftçi, 2008:18)

Dünya Turizm Örgütü'ne (World Tourism Organization – WTO) göre turizm, dünyanın en büyük endüstrisi olup, gelecekte de iş fırsatları yaratmaya devam edecek birkaç önemli sektörden birisidir. Bu nedenle turizm, bölgesel ve ulusal kalkınmanın önemli bir aracıdır. Bugün dahi birçok ülke ve bölge için gelir ve istihdam yaratan çok önemli bir kaynaktır (Erarslan vd., 2008:15).

## 3 Öğrenen Turizm Bölgeleri/Şehirleri Oluşturma Aşamaları

Öğrenen Turizm Bölgelerinin ve şehirlerin oluşturulmasında daha önce de belirttiğimiz üzere çeşitli katılımcıların ortaklığına ve işbirliğine ihtiyaç vardır. Özellikle öğrenen turizm bölgesi yaklaşımıyla şehir turizminin etkinliğinin arttırılması ve uzun vadeli farklılaştırılmış, dinamik bir imaj sağlanması sürecinde yer alan katılımcılar şunlardır (Özsoy ve Çiftçi, 2008):

- Bölgesel kalkınma organizasyonları (koordinasyon, sektörel departmanlar, kamu-özel işbirliği)
- Yerel/Bölgesel kamu kurumları
- Öğrenim merkezleri (özel ve kamuya ait eğitim ve araştırma kurumları)
- İş örgütleri (Kobiler, yatırımcılar, yöneticiler, çalışanlar)
- Yerel sosyal ortaklar (STK'lar, Sendikalar vb)
- Tüketiciler, yerleşik halk, gönüllüler
- Turizm tedarikçileri (konaklama sektörü, ikram hizmetleri sektörü, ulaşım sektörü, yapı sektörü, eğlence sektörü, turist rehberlik hizmetleri)
- Turizm sektöründe yer alan ticari aracılar (Tur operatörleri, Seyahat acenteleri)
- Sosyo-kültürel kuruluşlar (Kütüphane, müze, sanat ve müzik okulları, spor ve çevreyi destekleyici kuruluşlar vb.) (Thinesse-Demel,2010:441)

Bu gruplandırma yapılırken dikkate alınan temel olgu, toplumu oluşturan tüm yerel paydaşların yer aldığı "yaşam boyu öğrenme" anlayışını destekleyecek, katılımcı ve şeffaf bir bütünleşik ağ yapısı oluşturmaktır. Buna "açık koordinasyon" yöntemi denilmektedir. "Açık koordinasyon yöntemi" Avrupa birliği komisyonu tarafından, ilgili tüm tarafların politika belirleme ve uygulama sürecine geniş bir katılım göstermesini gerektiren bir süreçtir. Şeffaflık ve katılımın ana ilkeleri oluşturduğu bu felsefeye göre, Öğrenen Turizm Bölgesi kurulması sürecinin ulaşılabilir olması ve olabildiğince farklı tipte yerel aktörün katılımının sağlanması beklenir (Özsoy ve Çiftçi, 2008, European Commission, 2004).

2004 yılında Avrupa Birliği tarafından yayınlanan el kitabında öğrenen turizm bölgesi olabilmek için yapılması gerekenler başlangıç, koordinasyon ve kalkınma olarak üç aşamada belirtilmiştir. Bu aşamalar aşağıdaki gibi sıralanmaktadır:

| | |
|---|---|
| **Birinci Aşama: Başlangıç** | Kavram ve tanımları anlamak/açıklamak,<br>İhtiyaçlar ve imkanları belirlemek (durum analizi),<br>Resmi olmayan kabataslak bir profil çıkarmak,<br>Açıklayıcı materyaller hazırlamak,<br>Anahtar konumundaki ilgililerin listesini çıkarmak,<br>Çalışma semineri için çağrıda bulunmak. |

*Tablo.2 Öğrenen Turizm Bölgeleri/Şehirleri Oluşturma Aşamaları **Kaynak:** A Handbook of European Commission, 2014*

Öğrenen Turizm Bölgeleri yaklaşımında, yaşam boyu öğrenmenin desteklenmesi ve bilgiye dayalı sosyo-ekonomik yapılanma oluşumlarının gerçekleştirilebilmesi amacıyla sürekli eğitim uygulamaları yürütülmelidir. Kuruluşların ve bireylerin sahip oldukları özelliklerini ve yeteneklerini sürekli arttırması ve bilgilerinin kalitesini yükseltmesi dinamik küresel çevrede bir zorunluluk haline gelmiştir. Bu nedenle, ilgili tarafların öğrenme sürecine dahil olmaları için cesaretlendirilmeleri gereklidir. İşte bu noktada birden çok mecra (ör: network ağlar, uzaktan eğitim uygulamaları vb.) ile desteklenen hayat boyu öğrenme imkanları sunulmak zorundadır. Bunlar, öğrenen turizm şehirlerinin oluşturulması en önemli altyapı unsurlarındandır ve şehirlerin pazarlanmasında ve markalaşmasında etkisi büyüktür.

Öğrenen turizm şehirlerinin gelişmesi sonucunda ise yenilikçi toplumlar oluşur. Çünkü bireysel ve toplumsal öğrenme ile birlikte kültürler arası etkileşim ve öğrenme gerçekleşir. Bunun sonucunda ise ekonomik, sosyal ve çevresel ihtiyaçlarda ve beklentilerde değişmeler olabilir (Juceviciene,2010:420). Yaşam boyu öğrenmenin teşvik edilmesi ve ekonomik, sosyal beklentilerle tutarlı bir şekilde şehirlerdeki yaşam kalitesinin arttırılması ise ancak teknolojik altyapının geliştirilmesi ve öğrenmede etkili olacak çeşitli kişi ve kurumlar arası işbirliğinin arttırılması ile mümkün olabilecektir.

Bu unsurlar aynı zamanda sürdürülebilir kalkınma için de geçerlidir. Sürdürülebilir kalkınmanın üç boyutundan *ekonomik boyut*, kıt olan kaynakların kullanımıyla ilgilidir. *Sosyal boyut*, insan odaklıdır; sosyal ve kültürel sistemlerin devamlılığının sağlanmasında önemlidir. Toplumlararası eşitliğin sağlanması (yoksulluğun azaltılması), çoğulculuk, kültürel çeşitliliğin korunması sosyal boyutun önemli gerekleridir. Sürdürülebilir kalkınmanın *çevresel boyutu ise*, biyolojik ve fiziksel sistemlerin (ekosistemler) dengeli olmasını öngörür. Burada amaç ekosistemlerin değişen koşullara adapte olmasının sağlanmasıdır (Gürlük, 2010: 86–87).

Öğrenen Turizm Bölgesi oluşturma adımlarından yola çıkarak; şehir turizminin, yaşam boyu öğrenme anlayışı merkezli bir öğrenen turizm alanı haline getirilebilmesi için başarılması gereken temel adımlar ise şunlardır (Özsoy ve Çiftçi, 2008:45):

- Kent ve yakın çevredeki destinasyonların sahip olduğu; kültürel, doğal, tarihi, sanatsal varlıklara ilişkin bir envanterin oluşturulması,
- "Yaşam boyu öğrenme" felsefesini alan ve tüm toplumu kapsayan bir öğrenme döngüsünün oluşturulması, paydaşların ve rollerinin tespit edilmesi,

- Kavramsal bir çerçeve oluşturularak sürekli öğrenme programlarının içeriğinin ve çalışma takviminin belirlenmesi,
- Şehir turizmine ilişkin politikaların belirlenmesi, geliştirilmesi ve uygulanması sürecini kapsayan, şeffaf ve katılımcı bir planlama platformunun oluşturulması (yerel yönetim, yerel profesyonel iş çevreleri, stklar ),
- Şehir turizmi ve yerel ekonomi arasında bağlar kurulması,
- Yerel üreticilerin, perakendecilerin tedarik zincirine dahil edilmesi,
- Yerel çiftçiler ile ticari bağlar oluşturulması,
- Yerel işgücünün istihdamına öncelik verilmesi ve sürekli öğrenme uygulamalarının desteklenmesi,
- Turiste sunulan turlara, paketlere otantik yaşam unsurlarının eklenmesi,
- Turistlerin yerel ekonomiye olan katkısını arttıracak harcamaların teşvik edilmesi, çeşitlendirilmiş ürün ve faaliyetler geliştirilmesi,
- Bölgesel ve bölgelerarası işbirliği ağlarının, ortak temaların oluşturulması
- Bölge içinde, bölgelerarası ve bölge dışında gerçekleşen "en iyi uygulamaların" takip edilmesi, öğrenme sürecine konu edilmesi, ve kıyaslama (benchmarking) yoluyla yerele adapte edilmesi.

## 4 Öğrenen Turizm Bölgeleri Yaklaşımıyla Şehir Pazarlaması ve Markalaşması

Küreselleşen dünyada şehirler; değer, yetenek ve bilgi paylaşımı konusunda birbirleriyle rekabet içine girmişlerdir. Artık şehirlerde pazarlama konusunu ve araçlarını kullanarak kendi iç dinamiklerini ve varlıklarını tanıtabilir, yatırımcıları ve müşterileri kendilerine çekebilir. Bu bağlamda ürün ve hizmetlerde olduğu gibi insanların da mekanlara karşı bakış açısının değiştiği görülmüş ve şehir pazarlaması ortaya çıkmıştır (Kotler: 1999:160).

Bugünlerde ise şehir pazarlama ve şehir markalaşma kavramları birçok şehir yöneticisinin şehirlerini tanıtması ve pazarlaması anlamında önemli hale gelmiştir. Bunun sonucunda da şehirlerde bulunan birçok şehir varlığı ve bunun dışında şehirlerde düzenlenen etkinlikler, şehirlerarasındaki rekabetin boyutunu ortaya koymaktadır (Braun: 2008:2).

Şehirlerin ulusal ve uluslararası tanıtımlarında pazarlama önemli bir rol oynamaktadır. Şehirler pazarlama stratejilerini ortaya koyarak, pazarlama politikalarını oluşturmaya çalışmaktadırlar. Bunun sonucunda şehirlerin bilinirliliklerini artırmak, tüketicileri kendilerine çekmek, yatırım oranlarını yükseltmek ve içsel varlıklarının pazarlanmasını artırmak için şehir pazarlama stratejilerini ve araçlarını kullanmaya başlamışlardır. Hedef kitlenin ihtiyaçlarını karşılamak ve şehrin kalkınmasına katkıda bulunmak amacıyla yapılan stratejik planlama kararlarında şehir pazarlaması bu anlamda önemlidir.

Şehir pazarlaması şehirlerde ve şehirlerin yönetim ortamlarında meydana gelen bazı ekonomik, siyasi ve sosyal değişiklik durumlarında bir tepki ve çözüm olarak kullanılmaktadır. Son yıllarda şehirler, şehir pazarlama yöntemlerini kullanmaya başlamışlardır. Çünkü şehir içi yatırımları, turizm gelirleri ve şehir sakinleri açısından şehirlerarasında rekabet ortaya çıkmıştır. Bu yüzden şehirlerin yatırımcılar, iş adamları, şehir sakinleri ve ziyaretçilerin ilgisini çekmesi için daha fazla fırsat oluşturmaları gerekmektedir. Bunun için de birer öğrenen şehir olmaları gerekmektedir.

Çünkü şehir pazarlama; çalışanların, şehir sakinlerinin ve iş adamlarının yaşam koşullarından memnun oldukları ve tüketicilerin, turistlerin, yeni iş adamlarının ve yatırımcılarının beklentilerinin karşılandığı zaman başarılı olur. Bu bağlamda şehir pazarlaması ve markalaşma olarak algılanacak bu yöntem, hedef kitle tarafından istekleri ve beklentileri karşılanacak kalitede bir mekan oluşturmak hedeflenmektedir (Kavaratzis ve Ashwort, 2007:16; Deffner ve Liouris: 2005:2).

Ashwort ve Voogd (1990) "mekanların pazarlanmaları ve tanıtımları yeni bir olay değildir. Fakat yeni olan mekanları pazarlarken pazarlama yaklaşımlarını bilinçli uygulamaktır" demektedir. Yerleşim yerleri ve mekanlar, yatırımcılarının, tüketicilerinin ve toplumlarının refahı için birbirleriyle rekabet içerisindedirler. Bu durumda şehir yönetimleri rekabetçi olarak hem stratejik olabilmeli hem de pazar odaklı davranabilmelidir.

Şehir pazarlaması, bir şehri sadece ürün olarak satmak değil şehrin imajını da kapsar. Tüketiciler bu şehri amaçlanan bir pazar gibi göreceklerdir. Bu yüzden, şehir pazarlama; bir şehrin potansiyeli ile bu potansiyeli yerel halkın faydası için kullanımı arasında bir köprü gibi önemli bir rol oynar. (Deffner ve Liouris, 2005:2).

Şehir pazarlama; "müşteri odaklı paylaşım felsefesi tarafından desteklenen, şehrin müşterileri ve halkı açısından değer taşıyan, kentsel sunumu yaratmak, iletişim kurmak, dağıtım kanalları oluşturmak ve değişimi sağlamak için pazarlama araçlarının kullanımı ve koordine edilmesidir (AMA, 2014).

Tanımda da görüldüğü gibi faaliyetler, kurumlar ve süreç en açık olguları oluşturmaktadır. Bu faaliyetler kurumlar ve süreçler, pazarlama araştırmaları, pazar bölünmeleri, ürün geliştirme, satış ve tutundurma, pazarlama karması kurma ve markalaşma gibi pazarlama araçlarını kullanmak ve uygulamakla ilgilidir (Braun, 2008:43). Şehir pazarlama uzun dönemli bir süreçtir. Şehir pazarlama stratejileri, yerel halk ve özel sektör liderleri, siviller ve profesyoneller gibi yerel toplumun kilit üyelerinin aktif katılımlarını gerektirmektedir. Bu anlamda; öğrenen bölge/şehir yaklaşımının benimsenmesinin şehir pazarlamasını kolaylaştıracağı söylenebilir.

Stratejinin amaçları şehir imajını geliştirir ve kentsel gelişim yatırımlarının ve yaşanılan çevrenin hızla yükselebilmesini sağlar.

Mekanın ve yerleşim yerinin rekabetini geliştirmek için şehir ve bölgeler altı stratejiyi izleyebilirler (Deffner ve Liouris, 2005:4):

- Turistleri ziyaretçileri ve işletmeleri çekmek,
- Her bölgeden iş adamlarını çekmek,
- Sürdürülebilir ve kısmen mevcut olan işlere teşvik,
- Küçük işletmeleri desteklemek ve yenilerinin oluşmasına yardım etmek,
- Dış ihracatın ve yatırımların gelişmesini sağlamak,
- Nüfusun ve nüfus dağılımındaki değişikliklerin gelişmesini sağlamak

Şehir pazarlama fonksiyonları için önemli olan bütün insanlar ve organizasyonlardır. (Braun, 2008:51). Şehir pazarlama, kentteki herkesin kent için katkılarından oluşur. Bu oluşumda şirketler ve şehirlerin bütün kullanıcıları büyük rol oynarlar. Yerleşim yeri sakinleri şehrin imajının bulunduğu yeri anlamlandırırlar. Bu doğrultuda Braun müşterileri 4 genel kategori olarak ayırt etmiştir. Bunlar:

- Potansiyel yerliler ve sakinler,
- Potansiyel şirketler,
- Potansiyel ziyaretçiler,
- Potansiyel yatırımcılar

Şehir pazarlaması ile ilgili literatürde farklı kavramlar kullanılmaktadır. Place Marketing (Mekan Pazarlaması), City Marketing (Şehir/Kent Pazarlaması), Place Selling (Mekanın Satılması), Place Branding (Mekanın Markalaşması), City Branding (Şehirlerin/Kentlerin Markalaşması), Destinasyon Pazarlaması gibi.

Aslında şehir pazarlaması yeni bir düşünce değildir. 1850'lerde "Vahşi Batı"nın yeni sınır bölgesine göçmenleri çekmek için kentin/mekanın satılması olarak belirgin bir özellik gösteren bir düşüncedir. 1900'lerin başında ise turistleri çekmek için İngiliz ve Fransız sahil yerlerinin yoğun biçimde reklamının yapıldığı görülmektedir (John R. Gold, ve Stephen V. Ward, 1994).

Şehir pazarlaması ilk önceleri şehrin satılmasının teşvik edilmesi yani tanıtım için güçlü şekilde kentin reklamının yapıldığı eylemsel bir yaklaşımdır. Günümüzde ise şehir pazarlaması temel olarak ekonomik gelişime katkı sağlaması ve mekanların kalkınmasının en önemli özelliği durumundadır. Dolayısıyla şehirlerin kaynaklarını daha etkili kullanmak, yaşanabilir mekanlar yaratmak, çekici merkezler haline getirmek amacıyla pazarlama kullanılmaya başlanmıştır. Yani şehrin daha iyi satılabilir olması "şehre gelen ziyaretçi sayısını artırmak, yatırımları teşvik etmek ve şehirde oturanların sorunlarını daha çabuk çözümleyerek bir değer katmayı amaçlamaktadır (Deffner, Liouris, 2005. 1).

Roy Langer, şehir pazarlaması araştırmalarının şu nedenlerden dolayı risk altında olduğuna değinmiştir (Roy Langer, 2000,13):

- Küresel ekonomide politik ve teknolojik çevrelerde yaşanan hızlı değişimler,
- Kentsel gelişim ve bozulmanın kaçınılmaz süreci,
- Az sayıdaki kaynakları çekici hale getirme çabalarında rakiplerin sayısındaki artış,
- Şehirlerin yerel kaynaklarına güvenme zorunluluğunun giderek artması.

Bu nedenlere bağlı olarak gelişen rekabet koşullarında bir şehrin ya da bölgenin yerini güçlendirmesi için yapması gereken altı genel strateji üzerinde durulmaktadır. Bunlar (Kotler vd. 1993,231):

- Kendi iş hayatı için turist ve ziyaretçi çekmek,
- Başka yerlerden iş çekmek,
- Var olan iş hayatını korumak ve geliştirmek,
- Küçük iş yerlerini teşvik etmek ve yenilerinin kurulmasına yardım etmek,
- İş yerlerinin yurt dışına ihraç etmesini ve yatırımları büyütmek,
- Nüfusun artması ve kendi içinde dağılımı sağlamak,
- Öğrenme ve bilgi paylaşımını teşvik etmek.

Deffner ve Louris (2005:19); Günümüz koşullarında küresel rakiplerinden daha güçlü olmak için rekabetçi avantajlarını artırmak isteyen şehirlerin doğru hazırlanan ve uygulanan bir kentsel planlamaya ihtiyaçları olduğunu ileri sürmüşlerdir.

Şehir pazarlaması stratejik bir karardır ve yatırımların ekonomik canlanmayı harekete geçireceğini temel alarak, dış yatırımcılara ve turistlere, şehrin hayali ya da gerçek değerlerini tanıtmaktadır. Şehir pazarlamasında toplum gelişimi, ekonomik gelişim ve iş yaratma konularına ilişkin stratejileri belirleyecek onlara önderlik edecek potansiyel değişim temsilcilerinin belirlenmesi ve desteklenmesinin ciddi düşünülmesi gereken bir konu olduğu üzerinde durulmaktadır (Nel and Binns, 2002:188). Dolayısıyla şehir pazarlamasının uygulamaya konulmasında yöneticinin tüm kamuoyunun güven ve desteğini alması gerekmektedir.

Ayrıca şehirler günümüzde yalnızca işgücü, arazi, bina sağlayan ve iş yerlerine altyapı hizmeti sunan, yerleşimcilerine barınma olanağı sunan, sosyal bir ortam sağlayan yerler değildir (Bennett, Koudelova, 2001:205-220.). Bundan dolayıdır ki, ülkeler, şehirler ve küçük yerleşim yerleri bile kent planlamaları çerçevesinde şehir pazarlaması stratejisini uygulamaya koymaktadırlar. Dolayısıyla, şehirlerini çekici hale getirmek için pazarlamadaki bu değişimi görüp stratejilerini buna uygun yapan şehirlerin rekabet avantajı sağlayacağı görülmektedir.

Şehir pazarlaması, çoğunluk tarafından yalnızca şehir ürününü satmaya yönelik bir araçlar ve yöntemler bileşkesi olarak düşünülmektedir. Karmowska, şehir pazarlamasının bundan daha fazlası olduğuna dikkat çekerek, şehir pazarlamasının bir şehrin potansiyeli ile bu potansiyelin toplumun yararına kullanılması arasında bir köprü oluşturmasında önemli bir yeri olduğunu belirtmektedir (Karmowska, 2000).

Şehir pazarlaması Philip Kotler'e göre ise, şehir planlamasında altyapı, sağlık, güvenlik ve eğitim gibi temel hizmetlerde ve insanlarda çekim gücü yaratmada gelişmeyi içermelidir. Bu bağlamda Kotler, şehir pazarlamasını şehir planlaması içinde yer alan stratejik bir yöntem olarak tanımlamaktadır. Ancak kentsel planlama, fiziki mekanın tasarımından çok öte, geleceğe yönelik olarak oluşturulan bir kararlar ve sistemler bütünü olarak görülmektedir.

Şehir pazarlamasının ekonomik sonuçlarına değinen Goodall, turistik yerlerin herhangi bir ürün gibi şehir ürünleri olarak potansiyel müşterilere, ziyaretçilere satılmak zorunda olduğunu belirtmektedir. Goodall, turizm destinasyonları için şehir ürününün satışında başarılı olmanın ekonomik canlılık ve yerel ekonominin kalkınması için çok önemli olduğunu vurgulamaktadır (Goodall, 1990: 259).

Ayrıca şehir pazarlaması, yerel gelişimi destekleyen en uygun yaklaşım olarak görülmekte, şehirlerin rekabet gücünü artırmaktadır. Burada ele alınan ortak düşünce, şehir planlaması sayesinde sadece fiziksel alanı düzeltmek ve geliştirmek değil, aynı zamanda şehrin gelişiminin sosyal, ekonomik ve çevresel durumlar karşısında politikalar üreterek şehirlerin daha fazla satılabilir olmasını, şehre gelen ziyaretçilerin sayısının artmasını, yatırım isteklerini teşvik etmek ve şehir sakinlerinin sorunlarını anında çözümleyerek değer oluşturmaktır. Bu anlamda şehir pazarlamasının şehir planlamalarının içinde yer alması gerekliliği vurgulanmaktadır (Deffner ve Liouris, 2005).

Şehir pazarlamasıyla ilgili akademik çevrelerde iki farklı görüş vardır. Bunlardan birincisi, şehir pazarlamasının ekonomik gelişmeye ve rekabete fazla bir katkısı olamadığı yani yapılan harcamalar ve yatırımların kaynak israfından başka bir şey olmadığını iddia eden görüştür (Cheshire, Gordon, 1998). Diğeri ise yaygın olan görüş, şehir pazarlamasının bir kalkınma ve rekabet aracı olarak kullanılabileceğini anlatan görüştür (Deffner ve Liouris, 2005; Paddison, 1993; Asworth ve Voogd 1990). Pazarlama stratejilerin sonuçları her zaman başarılı olmayabilir. Bu durum şehir kalkınmasına olumlu bir katkı sağlamadığı gibi kaynak israfına neden olmaktadır (Deffnerr ve Liouris, 2005).

Başarılı bir şehir pazarlaması için yerine getirilmesi gereken koşullar, şehir pazarlamasının toplum tarafında benimsenmesi, vizyon, iş birliği, şehir imajı, liderlik ve stratejik analiz önemli başarı ölçütleridir (Metaxas, 2002). Şehrin rekabet pozisyonunun artması, yatırımları derinlemesine çekmesi, imajının yükselmesi ve kent kimliğinin kurulması gibi farklı amaçların birleşmesi ile şehir pazarlama oluşmaktadır (Inn, 2004:233). Kurumsal bir düzeyde stratejik bir araç olan şehir pazarlama, bir şehrin geleceğindeki vizyonu için bir görev olarak anlatılabilir. Bu görev problemlerle, amaçlarla, fırsatlarla ve pozisyonlarla ilgili güçlü bir bağlantı oluşturup bunlarla beraber idare edilmesi gereken bir süreçtir. Ayrıca markalaşmış kurumların değer yönüyle bakıldığında da şehir markalaşmasına önemli katkılar sağladığı görülmektedir.

Aaker (2007:25) markayı, "marka, bir veya bir grup satıcının malları veya hizmetlerini saptamaya ve bu malları ya da hizmetleri rakiplerinkinden farklılaştırmaya yarayan ayırt edici bir isim veya semboldür" şeklinde tanımlamaktadır. Günümüzde ürün ve işletmelerin yanında ülkeler, şehirler ve insanlarda markalaşmaktadır. Ayrıca markanın bileşenlerini marka ismi, semboller ve logolar, markayı çağrıştıran kimlik unsurları ve marka imajını tüketici belleğinde şekillendirecek olan unsurlar olarak açıklanabilir. Bu bağlamda markanın tanımına ve bileşenlerine baktığımızda marka hedef tüketicide olumlu bir algı yaratmak için ortaya konan somut ve soyut özelliklerin bütünüdür (Yükselen, Güler,2009:17). Son zamanlarda giderek önemli hale gelen şehir markalaşması, şehirlerin marka konusuna ilgisini artırmıştır. Bu durum şehirlerin marka bilinirliliğini artırmaktadır. Ortaya çıkan yeni ekonomik düzen, şehirler ve ülkelere, yatırımcılar, turistler, ziyaretçiler ve nitelikli iş gücü için rekabet etme ve ihraç ürünlerine bir değer kazandırma sağlamaktadır. Bu anlamda da bilinçli ve etkili bir markalamanın önemi büyüktür. Şehirler açısından markalamayı zorunluluk haline getiren koşullar şu şekilde ortaya konabilir (Hanna and Rowley, 2007:63):

1-Uluslararası medyanın artan gücü

2-Uluslararası seyahat maliyetinin düşmesi

3-Tüketicilerin harcama gücünün artması

4-Sunulan hizmetler açısından şehirlerarası benzerliklerin artması

5-Nitelikli insan kaynağı için artan rekabet

6-İnsanların farklı kültürlere olan ilgisinin artması

Porter, farklılaşmanın uzun dönemde rekabet avantajı elde etmede en önemli unsur olduğunu söylemiştir. Ancak küreselleşmeyle birlikte ülkeler ve şehirlerarası benzerliğin kültürel, sosyal, ekonomik ve siyasi etkileşimin etkisiyle artması farklılaşmayı zorlaştırmıştır. Özellikle fiziksel değerler ve hizmetler bağlamında somut değerler üzerindeki benzerlik daha fazladır. Bu bağlamda şehirler, daha kalıcı ve daha güçlü marka kimliğine sahip olabilmek için soyut değerler üzerinden farklılaşmaları gerekmektedir. Dolayısıyla, eşsiz bir marka kimliği yoluyla farklılaşarak rekabet avantajı sağlamak isteyen şehirler için bu zorunluluk halini almıştır. Marka kimliği sayesinde bir imaj oluşturma sürecin aktif ve önemli bir kısmıdır (Rainisto2003:47). Şehir marka kimliği, şehre karakterini veren ayırt edici özellikler bütünü olarak ifade edilmektedir. Şehir kimliğine, şehrin topografik, demografik, iklim ve yönetim özellikleri gibi sosyal ve mekânsal boyutları arasındaki etkileşim eşsiz bir karakter vermektedir. Şehir kimliği, şehir pazarlama planı içinde yer alan planlı eylemlerin bir sonucu olarak bir şehrin nasıl algılanmak istediği ve marka yöneticilerinin yaratmak ve sürdürmek istediği eşsiz marka çağrışımları seti olarak tanımlanabilir. Bu bağlamda bu çağrışımlar, şehrin nasıl anlamlandırıldığını ve şehrin müşterilerine ne tür vaatleri olduğunu içermektedir (Deffner ve Metaxas, 2005:5; Rainisto, 2003:73). Markalamanın temel amacı olumlu ve güçlü bir imaj oluşturmaktır. Şehirler isimlerini bir marka olarak ortaya koymasalar bile insanların düşüncelerinde olumlu ya da olumsuz bir imaja sahiptir. Dolayısıyla şehir için yeni bir imaj ortaya koymaktansa var olan olumlu imajı güçlendirmeye, olumsuz imajı ise olumlu olarak değiştirmeye çalışmak gerekmektedir (Asworth,1994:128).

## 5 Sonuç

Öğrenen Turizm Bölgesi yaklaşımıyla şehirlerin pazarlanması ve markalaşması için, öncelikle eğitim, ekonomik ve teknolojik altyapı ile beşeri sermayeye yatırım yapmak gerekmektedir. Eğitim altyapısının gelişmesi ile bireysel öğrenme teşvik edilmeli ve yaşam boyu öğrenme felsefesi yaygınlaştırılmalı, ekonomik ve teknolojik altyapılardaki gelişme ve insan kaynağının niteliğinin artırılması ile de bireysel öğrenme kurumlara, örgütlere, şehirlere ve bölgelere doğru genişletilmelidir.

Çünkü günümüzde bilgi ekonomisinin önemli aktörleri arasında yer alan şehirler; sakinleri için yüksek yaşam kalitesi sunan bir ortam yaratmayı ve bu ortamı dış dünyaya stratejik pazarlama yöntemlerini kullanarak sunmayı başarabildikleri takdirde (şehir turizmi) ülkelerinin-bölgelerinin gelişmesine katkı sağlayabileceklerdir. Bir başka deyişle, ülkeler ve bölgeler dünyanın her yerinden yeni ziyaretçiler ve sakinler çekmek için pazarlama çabalarına girişmek zorundadır. Bunun farkında olan pek çok şehir günümüzde, kaynaklarını daha etkili kullanmak, yaşanabilir mekanlar ortaya çıkarmak ve cazibe merkezi yaratmak amacıyla pazarlamayı kullanmaya başlamışlardır. Dolayısıyla şehir pazarlaması, şehirlerin küresel olarak rekabet edebilmesi, turistleri çekebilmesi, buna uygun kent yönetimi, şehir markası oluşturması gibi konular da zorunlu olarak kullanılabilir duruma gelmiştir. Şehirde birçok marka imajının bulunması, şehre büyük bir marka başarısı getirmektedir. Tüketicilerin belleğinde oluşan olumlu imajlar markalaşmayı olgunlaştıracaktır. İnsanların o şehirle ilgili inanç, fikir ve izlenimlerinin toplamı olarak görülen şehir imajı, insanların o şehirle ilgili çok olumlu bilginin ve görüşün ortaya konmasına ve markalaşmayı kabul etmesine neden olmaktadır.

Ancak şu da unutulmamalıdır ki "Marka Kent" olabilme yolunda bireysel hareket etmenin hiçbir anlamının olmadığıdır. Sanayici, tüccar, esnaf ya da diğer tüm vatandaşlar, özel sektör, kamu; yerel yönetimler STK'lar; hatta öğrenciler, işçiler ve ev hanımlarını içine alan "ortak bir inanç " ile hareket etme "öğrenen turizm bölgeleri yada öğrenen kentler yaklaşımı" ile mümkün olacaktır.

Sonuç olarak; öğrenen turizm bölgeleri yaklaşımı, şehir pazarlaması ve markalaşmasında etkin olarak kullanılabilecek bir yaklaşımdır. Bu çalışmayla, öğrenen turizm bölgesinin şehir pazarlaması ve markalaşmasına etkisi kavramsal bir boyutla incelenmesi amaçlanmıştır. Bundan sonraki yapılacak amprik çalışmalara yol göstermesi amaçlanmıştır.

# Turizm Gelirlerinin Ekonomik Büyüme Üzerine Etkileri: Panel Eşbütünleşme ve Nedensellik Analizi

# The Affects of Tourism Revenues on Economic Growth: A Panel Cointegration and Causality Analysis

Ahmet Kamacı (Artvin Çoruh University, Turkey)

Yener Oğan (Artvin Çoruh University, Turkey)

## Abstract

After the end of the Eastern Block, The Turkic republics tried to solve the problems with the help of Republic of Turkey which they felt near to them. With his international experiences Turkey became the leader of the Turkic republics. Tourism revenues which is in the current accounts of the balance of payments, contributes to the development of the country by encouring both the employment and the growth numbers. The main reason of this is that the revenues of the tourism is both the main source in the financement of the foreign deficit and the budget deficit. In this paper the revenues of tourism is analysed by cross country panel study for Azerbaijan, Kazakstan, Kyrgyzstan, Uzbekistan and Macedonia with Turkey (1995-2011). We acquired the data of this work from the web site of the IMF. Unit root test was made to testing stability of data which are taken. After that cointegration and causality tests were made to learn if a cointegral relationship was occurred between the revenues of tourism and economic growth or not. As a result of this study we done, the data level is not stable. Because of that reason, we took the difference of them. In the study, we have been identified causal relationship between the revenues of tourism and economic growth in Turkey and other countries and we have been identified causal relationship between economic growth and the revenues of tourism in Turkey and other countries.

## 1 Giriş

Turizm, kişilerin yaşadıkları yerler dışında gerçekleştirdikleri bir yıllık süreyi aşmayacak şekilde tatil, eğlence ve iş amacı ile yaptıkları seyahat ve konaklama faaliyetlerini kapsamaktadır (Gee, 1997: 138). 20. yüzyılın 2. yarısından itibaren hızla gelişen ve büyüyen turizm sektörü, birçok ülke için en önemli sektörlerden biri haline gelmiştir. Turizmin desteklenmesiyle de ülkelerdeki turizm gelirlerinin GSYİH içindeki payı artmıştır.

Turizm, ödemeler bilânçosunun cari işlemler hesabındaki uluslararası hizmetler kısmında yer alır ve milli geliri arttırarak ülkenin kalkınmasını sağlar. Turizm sektörünün milli gelire olan katkısının yanı sıra döviz gelirleri sağlayarak dış ödemeler dengesine olumlu katkı sağlayan ve istihdamı arttıran bir sektördür.

Turizm sektörü, bünyesinde pek çok istihdamı barındıran emek-yoğun bir sektördür. Bundan dolayı hizmet sektörünün büyük bir bölümünü kapsayarak ülkenin milli gelirini artırmada önemli bir rol üstlenmektedir. Aynı zamanda turizm, dünya ekonomisi ile uyum içerisinde olmayı gerektirir. Turizm gelirleri, ülkeye döviz kazancı getirirken sermaye mallarının ithalatı için finansman sağlamaktadır (Değer, 2006:7).

Turizm sektörü, döviz girdisini artırıcı ve istihdam sağlayıcı özellikleri ile ülke ekonomisine katkıda bulunan aynı zamanda uluslararası kültürel ve toplumsal iletişimini sağlayarak bütünleştirici özelliği sayesinde de dünya barışının korunmasında büyük payı olan bir sektördür. Turizm sektörü, Türkiye ekonomisinin de vazgeçilmez temel taşlarından birisi olarak karşımıza çıkmaktadır. Turizm gelirleri; dış ticaret açığına, enflasyona ve işsizliğe çare olarak hükümetlerin önem verdikleri bir sektördür (Çımat ve Bahar, 2003: 2). Turizm sektörü, eğitimli ve yetenekli işgücüne istihdam alanı sağlarken, yeterli düzeyde eğitimi olmayan insanlara da iş imkânları sunmaktadır (Çetinbaş ve Bektaş, 2008: 1).

Turizm sektörü, diğer sektörler ile yakın ilişki içerisinde olduğu için onları etkilemektedir. Turizm gelirleri diğer birçok mal ve hizmetlerin tüketimine ve ihracatına olanak sağlamaktadır. Ülkeye turist geldiğinde, yaptığı her harcama sadece turizm ile uğraşan kesime değil, diğer sektörlere de gelir sağlamaktadır (Kar vd., 2004: 90).

Turizm sektöründen ekonomiye maksimum olumlu katkı sağlamanın amacı, en iyi turizm ürünü paketini oluşturmak, satmak ve bu yolla sağlanan gelirleri azami hale getirmekle mümkün olabilir. Bu nedenle ürünü meydana getirecek farklı iktisadi birimlerin ve makro planlayıcıların kombine bir çalışma içinde olmaları ve ana ilkelerden ödün vermemeleri bir zorunluktur. Bu durum, en sade şekliyle, öncü yatırımları yapmak, üst yapıyı temin etmek, kontrol ve koordine etmek şeklinde özetlenebilir (Hepaktan, 2010:139).

Turizm gelirleri ile ekonomik büyüme arasındaki ilişki uzun yıllardır ele alınmaktadır. Gerek Türkiye'de gerekse diğer ülkelerde turizm sektörünün GSMH içindeki payı sürekli artmasına rağmen, turizm gelirleri ile ekonomik büyüme arasındaki ilişkide farklı sonuçlara rastlanmıştır. Bu nedenle bu çalışmada, Azerbaycan, Kazakistan, Kırgızistan, Makedonya, Özbekistan ve Türkiye için 1995-2011 yılları arasında turizm gelirlerinin büyüme üzerine etkisi panel veri analizi ile test edilmiştir.

| Yazar (lar) | Ülke (ler) | Yöntem | Değişkenler | Sonuç |
|---|---|---|---|---|
| Dritsakis (2004) | Yunanistan (1960:01-2000:04) | VAR modeli ve nedensellik testi | Reel GSMH, reel efektif döviz kuru ve turizm gelirleri | Turizm gelirleri ile ekonomik büyüme arasında güçlü bir nedensel ilişki vardır. |
| Uysal ve diğ. (2004) | Türkiye (1992-2003) | Nedensellik testi | Turizm gelirleri ve ekonomik büyüme | İki değişken arasında karşılıklı bir ilişki vardır. |
| Yıldırım ve Öcal (2004) | Türkiye (1962-2002) | VAR modeli | Turizm gelirleri ve ekonomik büyüme | Kısa dönemde iki değişken arasında bir ilişki yokken, uzun dönemde iki değişken arasında bir ilişki tespit edilmiştir. |
| Bahar (2006) | Türkiye (1963-2004) | VAR modeli | Turizm gelirleri ve GSMH | Turizm gelirlerinden ekonomik büyümeye doğru tek yönlü bir nedensel ilişki tespit edilmiştir. |
| Özdemir ve Öksüzler (2006) | Türkiye (1963-2003) | Nedensellik testi | Turizm gelirleri ve ekonomik büyüme | Hem kısa hem de uzun dönemde turizmden ekonomik büyümeye doğru tek yönlü bir ilişki tespit edilmiştir. |
| Yavuz (2006) | Türkiye (1992:Q1-2004:Q4) | Nedensellik testi | Turizm gelirleri ve ekonomik büyüme | Turizm gelirleri ile iktisadi büyüme arasında nedensellik ilişkisi tespit edilememiştir. |
| Figini ve Vici (2007) | 150 ülke (1980-2005) | Regresyon analizi | Turizm gelirleri ve ekonomik büyüme | Turizm gelirleri ile ekonomik büyüme arasında bir ilişki tespit edilememiştir. |
| Aslan (2008) | Türkiye (1992:1-2007-2) | Eşbütünleşme ve nedensellik testi | Uluslararası turizm gelirleri, GSMH, reel döviz kuru ve sermaye birikimi | Ekonomik büyüme ve turizm gelirleri arasında uzun dönemde dolaylı ilişkiler görülmüştür. |
| Çetintaş ve Bektaş (2008) | Türkiye (1964-2006) | Nedensellik testi ve ARDL yöntemi | Turizm gelirleri ve GSYİH | Kısa dönemli herhangi bir ilişki yokken, uzun dönemde turizm gelirlerinden ekonomik büyümeye doğru tek yönlü bir nedensel ilişki tespit edilmiştir. |
| Kızılgöl ve Erbaykal (2008) | Türkiye (1992:01-2006:02) | Toda-Yamamoto yöntemiyle nedensellik testi | Turizm gelirleri ve ekonomik büyüme | Ekonomik büyümeden turizm gelirlerine doğru tek yönlü bir nedensellik ilişkisi tespit edilmiştir. |
| Proença ve Soukiazis (2008) | 4 Avrupa ülkesi (1990-2004) | Panel veri analizi | Turizm gelirleri ve ekonomik büyüme | Turizm gelirlerindeki %1'lik artış bu 4 ülkedeki GSMH'yi %0,026 arttırmıştır. |
| Fayissa ve diğ. (2009) | 17 Latin Amerika ülkesi (1995-2007) | Panel veri analizi | Turizm gelirleri ve ekonomik büyüme | Uluslararası turist harcamalarındaki %10'luk artış, GSMH'de %0,4'lük bir artışa neden olmuştur. |
| Bahar ve Bozkurt (2010) | Gelişmekte olan 21 ülke (1998-2005) | İki aşamalı GMM-Sistem analizi ve panel veri analizi | Turizm/GSMH, toplam sermaye miktarı/GSMH ve tasarruf/GSMH | Turizm gelirlerindeki %1'lik artışın uzun dönemde büyüme üzerinde %2,825'lik bir artışa yol açtığı tespit edilmiştir. |
| Samimi ve diğ. (2011) | Gelişmekte olan ülkeler (1995-2009) | VAR modeli | Turizm gelirleri ve ekonomik büyüme | Ekonomik büyüme ve turizm gelirleri arasında çift yönlü bir nedensel ilişki tespit edilmiştir. |
| Kara ve diğ. (2012) | Türkiye (1992-2011) | VAR modeli ve nedensellik testi | Turizm gelirleri, ekonomik büyüme, cari işlemler dengesi ve döviz kuru | Büyümeden turizm gelirlerine doğru tek yönlü bir nedensel ilişki tespit edilmiştir. |
| Mello-Sampayo ve Sousa-Vale (2012) | Avrupa ülkeleri (1988-2010) | Panel eşbütünleşme testi | Turist başına turizm harcamaları ve ekonomik büyüme | Güney Avrupa ülkelerinden daha çok Kuzey Avrupa ülkelerinde, turizmdeki gelişme GSMH üzerinde önemli etkiye sahiptir. |
| Yamak ve diğ. (2012) | Türkiye (1968-2006) | Eşbütünleşme ve nedensellik testi | Turizm gelirleri ve ekonomik büyüme | Turist başına düşen reel turizm gelirleri ile reel GSMH, tarım, sanayi ve hizmet sektörleri arasında herhangi bir nedensel ilişki mevcut değildir. |
| Aktaş ve diğ. (2013) | 5 Avrupa ülkesi (1995-2011) | Eşbütünleşme testi | GSMH ve turizm gelirleri | Turizm gelirlerindeki artış, uzun dönemde GSMH üzerinde pozitif etki oluşturur. |
| Bozkurt ve Topçuoğlu (2013) | Türkiye (1970-2011) | Eşbütünleşme ve nedensellik testi | Turizm gelirleri ve ekonomik büyüme | Turizm gelirleri ile büyüme arasında çift yönlü bir nedensellik bulunmuştur. |
| Çağlayan ve diğ. (2013) | 135 ülke (1995-2008) | Panel nedensellik testi | Turizm gelirleri ve GSMH | Turizm gelirleri ile GSMH arasında Avrupa'da çift yönlü ilişki mevcuttur. |
| Çoban ve Özcan (2013) | Türkiye (1963-2010) | Eşbütünleşme ve nedensellik testi | Turizm gelirleri ve ekonomik büyüme | Turizm gelirleri ile büyüme arasında çift yönlü bir nedensellik bulunmuştur. |
| Hepaktan ve Çınar (2013) | Türkiye (1980-2008) | Nedensellik testi | Net turizm geliri, yabancı turist sayısı, ekonomik büyüme ve dış ödemeler bilânçosu | Türkiye'deki turizm sektörünün dış ticaret dengesi üzerinde bir etkisi varken, büyüme üzerine bir etki tespit edilememiştir. |

***Tablo 1.*** *Turizm Gelirleri-Ekonomik Büyüme İlişkisi Üzerine Literatür Özeti*

## 2   Literatür Özeti

Turizm gelirleri ile ekonomik büyüme ilişkisi turizm ve ekonomi sahasında uzun yıllardır incelenen konulardan biridir. Genel teori, turizm gelirlerinin ekonomik büyümeyi dolaylı da olsa arttıracağı yönündedir. Söz konusu ampirik çalışmaların birçoğu bu teoriyi doğrularken, bazıları da, anlamsız bir ilişki bulmuşlardır. Genel olarak literatür değerlendirildiğinde, turizm gelirleri ile ekonomik büyüme arasında, çalışmada ele alınan ülke, dönem ve yöntem bakımından farklılıklar vardır.

Turizm, günümüzde döviz girdisini artırıcı ve istihdam sağlayıcı özellikleriyle ulusal ekonomiye katkıda bulunan, uluslararası kültürel ve toplumsal iletişimi sağlayıcı ve bütünleştirici etkisiyle dünya barışının korunmasında büyük payı olan bir sektördür. Türkiye ekonomisinin de vazgeçilmez temel taşlarından birisi olan turizm, bugünkü dış ticaret açığına, enflasyona ve işsizliğe çare arayan hükümetlerin önemle üzerinde durduğu bir konudur (Hepaktan, 2010:139).

Bu çalışmada, Türkiye ile 5 ülke (Azerbaycan, Kazakistan, Kırgızistan, Makedonya ve Özbekistan) için turizm gelirleri ile ekonomik büyüme arasındaki ilişki incelenecektir. Bu açıdan çalışmaya temel teşkil edecek literatür araştırması da, konuyu daha çok Türkiye ve gelişmekte olan ülkeler özelinde ele alan çalışmalardan oluşturulmuştur (Tablo 1).

Tablo 1'de verilen literatür özetinden açıkça anlaşılacağı üzere çalışmaların büyük bir kısmı turizm gelirlerinin ekonomik büyümeyi arttırdığı sonucunu vermektedir. Bununla birlikte bazı çalışmalarda anlamsız ilişkiler de tespit edilmiştir.

## 3   Ekonometrik Yöntem ve Ampirik Bulgular

Bu çalışmada turizm gelirleri (TUGE) ile büyüme oranı (GDP) ilişkileri, Türkiye ile 5 ülke (Azerbaycan, Kazakistan, Kırgızistan, Makedonya ve Özbekistan) için Eşbütünleşme ve nedensellik analizleri kullanılarak irdelenecektir. Bu çerçevede söz konusu ülkelerin 1995-2011 arası dönemlere ait verileri, IMF'nin "imf.statistics" isimli veri tabanından alınmıştır. Çalışmaya bu 6 ülkeye ait verilerden hareketle değişkenler arası uzun dönem ilişkileri veren Eşbütünleşme testi ve daha sonra da Granger nedensellik testleri yapılmıştır.

Türkiye ile birlikte diğer 5 ülkenin turizm gelirleri ve ekonomik büyüme ilişkilerinin Eşbütünleşme ve nedensellik analizleri ile belirlenmesinden önce değişkenlerin durağanlığını belirlemek ve durağanlık içerip içermediğini tespit etmek amacıyla Levin, Lin ve Chu (LLC), Augmented Dickey-Fuller (ADF) ve Phillips-Perron (PP) testleri yapılmıştır. Verilerin durağanlığını göstermek için Tablo 2'de sabitli yapıda durağanlık sonuçları yer almaktadır.

Tablo 2'de maksimum optimal gecikme uzunluğu 1 olarak seçilmiştir. Olasılıklar, asimptotik normallik varsayımı altında hesaplanmıştır. Veri setinde söz konusu yıllara ait veriler tam olduğundan "Balanced Örnekleme" seçilmiştir. Tablo 2'deki bulgulara göre, turizm gelirleri ve büyüme verileri seviyesinde durağan değildir. Bu da serilerde durağanlık problemi olduğunu göstermektedir. Serileri durağan hale getirmek için 1. Farkları alınmıştır. 1. Farkında bütün seriler durağan hale gelmiştir. Seriler durağan hale geldikten sonra Pedroni Eşbütünleşme testi yapılmıştır.

*Tablo 3. Pedroni Eşbütünleşme Testi Sonuçları*

Değişkenler arası uzun dönemli ilişkinin varlığı Pedroni Eşbütünleşme testi ile ölçülmektedir. Pedroni Eşbütünleşme testi sonuçları Tablo 3'de verilmiştir. Tablo 3'de turizm gelirleri ile büyüme arasında Eşbütünleşme ilişkisi test edilmiştir. Pedroni Eşbütünleşme Test sonuçlarına göre, 7 testten 5'i %1 anlamlılık düzeyinde anlamlı olduğu görülmektedir. Test sonuçlarında panel istatistiklerin 3'ü %1 anlamlılık düzeyinde; grup istatistiklerinden ise 2'si%1 anlamlılık düzeyinde istatistiksel olarak anlamlıdır. Dolayısıyla seriler arasında uzun dönemli bir ilişki olduğu ve eşbütünleşik olduğu tespit edilmiştir.

Eşbütünleşme testinden sonra değişkenler arası ilişkinin olup olmadığını test etmek için ve eğer varsa bu ilişkinin yönünü belirlemek için Granger nedensellik testi uygulanır. Granger nedensellik testi değişkenler arasında ilişkinin olup olmadığını test etmek ve ilişki varsa bu ilişkinin yönünü belirlemek için kullanılır. Granger tarafından kurulan basit nedensellik modeli şöyledir:

$$Y_t = \sum_{j=1}^{m} C_i X_{t-j} + \sum_{j=1}^{m} d_j Y_{t-j} + \eta_t$$

Modele göre, X değişkeni Y değişkeninin nedeniyse, X'teki değişmeler Y'deki değişmelerden önce gelmektedir. Granger testiyle tahminden ziyade nedensellik çıkarsaması yapıldığı için değişkenler önceden durağanlaştırılmalıdır (Granger, 1969:431).

Granger nedenselliğinin geliştirilmiş hali Holtz-Eakin, Newey ve Rosen modelidir. Holtz-Eakin ve diğ. (1988) tarafından geliştirilen panel nedensellik modeli en küçük kareler yöntemine dayanır. Holtz-Eakin ve diğ., sabit etkilerden arındırmak için değişkenlerin farkını alarak Granger anlamında nedensellik testi için uyarlanmış ve değişkenlerin fark ya da seviyelerini içeren enstrüman değişken seti kullanılmasını önermiştir (Öztürk ve diğ., 2011:63).

Holtz-Eakin ve diğ. (1988) modeli aşağıdaki şekilde tanımlanmaktadır (Holtz-Eakin ve diğ., 1988:1373):

$$y_{it} = \propto_{0t} + \sum_{l=1}^{m} \alpha_{lt} y_{it-l} + \sum_{l=1}^{m} \delta_{lt} x_{it-l} + \psi_t f_i + u_{it}$$

Denklemde $f_i$ sabit etkileri, $u_{it}$ hata terimlerini göstermektedir. Bu tanımlamada hata terimi $u_{it}$ hata, denklemdeki $y_{it}$ ile korelasyonludur. Farkı alınmış model aşağıdaki şekilde gösterilmektedir (Holtz-Eakin ve diğ., 1988:1373):

$$y_{it} - y_{it-1} = a_t + \sum_{l=1}^{m} \alpha_t (y_{it-l} - y_{it-l-1}) + \sum_{l=1}^{m} \delta_l (x_{it-l} + x_{it-l}) + v_{it}$$

Denklemden görüldüğü üzere, hata terimleri ile bağımlı değişken arasında ilgileşim sorunu vardır. Bu nedenle Holtz-Eakin ve diğ. tarafından önerilen panel nedensellik sınaması iki aşamalı EKK yöntemine dayanmaktadır (Ağayev, 2010:173). Nedensellik ilişkisi için test edilmesi gereken hipotez:

$H_0 : \alpha_1 = \alpha_2 =, \dots, = \alpha_m = 0$

$H_0$ hipotezinin reddedilmesi durumunda değişkenler arasında Granger nedensellik ilişkisi tespit edilmektedir (Öztürk ve diğ., 2011:64).

| | Gecikme | Gözlem Sayısı | F-istatistiği | Olasılık |
|---|---|---|---|---|
| Turizm Gelirleri → Büyüme | 4 | 72 | 3.13618 | 0.0204 |
| Büyüme → Turizm Gelirleri | 4 | 72 | 3.08523 | 0.0220 |

*Tablo 4. Panel Nedensellik Testi Sonuçları*

Tablo 4'de yapılan Panel Granger nedensellik testi sonuçlarına göre, turizm gelirleri ile büyüme arasında çift yönlü bir nedensel ilişki tespit edilmiştir. Buna göre, turizm gelirleri büyümenin bir nedenidir ve büyüme de turizm gelirlerinin bir nedenidir.

Yapılan Panel Granger nedensellik analizi sonucuna göre; turizm gelirleri ile büyüme arasındaki çift yönlü nedensel bir ilişkinin, kısa dönemde bir etkisinin olmamasına karşın, uzun dönemde turizm gelirleri ile büyüme arasında çift yönlü olumlu etkide olduğu tespit edilmiştir.

## 4  Sonuç ve Değerlendirme

Ödemeler bilançosunda cari işlemler hesabının uluslararası hizmetler kapsamında yer alan turizm, milli geliri arttırarak ülkenin kalkınmasını sağlayan ve ülkeye döviz kazandıran bir sektördür. Turizm, emek yoğun bir sektör olduğundan ülkede istihdamı arttırıcı ve işsizliğe çare olarak düşünülebilecek bir sektördür.

Turizm sektöründen ekonomiye maksimum olumlu katkı sağlamanın amacı, en iyi turizm ürünü paketini oluşturmak, satmak ve bu yolla sağlanan gelirleri azami hale getirmekle mümkün olabilir. Bu nedenle ürünü meydana getirecek farklı iktisadi birimlerin ve makro planlayıcıların kombine bir çalışma içinde olmaları ve ana

ilkelerden ödün vermemeleri bir zorunluktur. Bu durum, en sade şekliyle, öncü yatırımları yapmak, üst yapıyı temin etmek, kontrol ve koordine etmek şeklinde özetlenebilir

Turizm gelirleri ile büyüme arasındaki ilişki özellikle 1980'den sonra oldukça fazla ele alınan konulardan biridir. Turizm gelirlerinin ekonomik büyüme üzerindeki etkisi ampirik çalışmalarla da test edilmiştir. Ele alınan çalışmalarda, turizm gelirlerinin büyümeyi etkilediği veya hiç etkilemediği sonuçları bulunmuştur. Ayrıca ekonomik büyümenin de turizm gelirlerini etkilediği veya hiç etkisi olmadığı sonuçları da tespit edilmiştir. Bu sonuçlarda, kullanılan zaman periyotlarındaki farklılık, ülkelerin gelişmişlik düzeyleri, turizm bölgelerinin bol olması veya olmaması, emek-sermaye yoğun olmaları ve ekonometrik yöntem farklılıklarından dolayı çeşitli sonuçlara ulaşılmıştır. Türkiye ve diğer 5 ülke için yapılan bu çalışmada, turizm gelirleri ile ekonomik büyüme ilişkisi test edilmiştir. Çalışmada serileri durağan hale getirmek için öncelikle Panel Birim Kök Testleri yapılmıştır. Daha sonra seriler arasında uzun dönemli ilişkinin var olup olmadığını belirlemek için Panel Eşbütünleşme ve daha sonra da Panel Nedensellik Testleri uygulanmıştır. Yapılan analizler sonucunda, uzun dönemde turizm gelirlerinden ekonomik büyümeye doğru çift yönlü bir nedensel ilişki tespit edilmiştir.

# Türk Hukukunda Kamulaştırmasız El Atma Sorunu Üzerine Bir İnceleme

# Treatise about Confiscation without Expropriation According to Turkish Law

Assoc. Prof. Dr. Mustafa Avcı (Anadolu University, Turkey)

## Abstract

In the Turkish law, the most characteristic example of *de facto* action is confiscation without expropriation. A certain case is defined as confiscation without expropriation when an immovable property belonging to someone was occupied by the Administration for being used in public service and the occupation is not based on an expropriation procedure established in accordance with the rules and principles specified in the legislation. In that vein, it has been accepted that *de facto* confiscation resulting from unlawful acts of the Administration does not differ from wrongful acts of private persons, and thus such administrative acts should be subject to ordinary jurisdiction just like in the case of damages arising from wrongful acts of private persons. However, confiscation without expropriation is not always of this nature. In certain cases, although a given immovable property is not exposed to a *de facto* confiscation without expropriation, it may have been specified as a green area on the zoning plan. In such a case, the owner's authorities deriving from property rights will be restricted. This situation may be considered a legal confiscation without expropriation. This study investigates the dualist structure resulting from the temporary Article 6 of the Law no. 2942 on Expropriation amended by Article 21 of the Law no. 6487 and the temporary Article 7 added to the Law of Expropriation by Article 22 of the same Law.

## 1 Giriş

Türk hukukunda fiilî yolun en karakteristik örneği, kamulaştırmasız el atmalardır. Kamulaştırmasız el atmadan söz edilebilmesi için, kişiye ait gayrimenkûle idare tarafından kamu hizmetinde kullanılmak amacıyla fiilen el atılmış olması ve bu el atmanın kanunda öngörülen usûl ve esaslara uyularak tesis edilmiş bir kamulaştırma işlemine dayanmadan gerçekleştirilmiş olması gerekmektedir. Bu biçimde, idarenin hukuk dışı eyleminden kaynaklanan fiilî kamulaştırmasız el atmaların, özel kişilerin haksız fiil oluşturan eylemlerinden hiçbir farkının bulunmadığı, bu sebeple bu çeşit eylemlerden doğan zararların da özel kişilerin haksız fiilinden doğan zararlarda olduğu gibi adlî yargıda dava konusu edilmesi gerektiği kabul edilmektedir. Ancak kamulaştırmasız el atmalar her zaman bu şekilde gerçekleşmemektedir. Gayrimenkûl üzerinde herhangi bir fiilî kamulaştırmasız el atma olmamasına karşın gayrimenkûl, imar plânında yeşil alan olarak ayrılmış olabilir. Bu gibi durumlarda gayrimenkûl malikinin mülkiyet hakkından doğan yetkileri sınırlanmış olmaktadır. Burada hukukî kamulaştırmasız el atmanın mevcut olduğu belirtilmektedir. Çalışmada 6487 sayılı Kanun'un 21.maddesiyle değiştirilen 2942 sayılı Kamulaştırma Kanunu'nun geçici 6. ve aynı Kanun'un 22.maddesiyle Kamulaştırma Kanunu'na eklenen geçici 7.maddeleriyle oluşan düalist yapı ile konuya ilişkin değişiklikler ve yenilikler incelenmektedir.

Türk hukukunda 4721 sayılı Türk Medenî Kanunu'nun 683 ve devamındaki maddelerde düzenlenmiş olan mülkiyet hakkı genel olarak; menkûl veya gayrimenkûl bir eşya üzerinde hak sahibine kullanma, yararlanma ve tasarruf yetkisi veren, hukuk düzeninin sınırları içinde kullanılabilen mutlak ve aynî bir hak olarak tanımlanmaktadır. Mülkiyet hakkı, menkûl ve gayrimenkûl mülkiyeti olarak ikiye ayrılmak suretiyle incelenmektedir. Kamulaştırma işlemi ve kamulaştırmasız el atma olgusu ise, ancak gayrimenkûl mülkiyeti üzerinde söz konusu olabilmekte ve gayrimenkûl malikinin gayrimenkûl üzerindeki mülkiyet hakkını ortadan kaldırmaktadır. Çalışmanın konusunu oluşturan kamulaştırmasız el atma ise, herhangi bir kamulaştırma işlemi olmaksızın gayrimenkûle idare tarafından fiilî veya hukukî olarak el koyulmasıdır. Çalışmada kamulaştırmasız el atma olgusu ile fiilî veya hukukî kamulaştırmasız el atma konusu yüksek yargı içtihâtları çerçevesinde incelendikten sonra, konuya ilişkin 2942 sayılı Kamulaştırma Kanunu'na 6487 sayılı Kanun'la getirilen yenilikler ve değişiklikler belirtilmektedir.

## 2 Tanım

Öncelikle kamulaştırmasız el atmanın, dolayısıyla kamulaştırma olarak da belirtildiğini ifade etmek gerekir. Kamulaştırmasız el atma, idarenin bir eylemi sırasında, özel ya da tüzel kişilerin sahip olduğu bir gayrimenkûlün zilyetliğine, hukuka aykırı bir şekilde el atması ve bu el atmanın kamu hizmetlerinin sürekliliği ilkesi uyarınca vazgeçilmez olması durumlarında söz konusu olmaktadır (Giritli/Bilgen/Akgüner/Berk, 2011, 925). İdare, Anayasa ve kanunlara uygun bir işlem oluşturmaksızın, bir kimsenin gayrimenkûl malına el atmakta ve onun üzerinde bir tesis ya da bina yapmakta yahut o gayrimenkûl malı bir hizmete özgüleyerek mal sahibinin gayrimenkûlü üzerinde dilediği gibi kullanma hakkına karşı herhangi bir girişimde bulunmaktadır. Bu

durumların hepsinde idare gayrimenkûl mala kamulaştırmasız el atmış kabul edilmektedir (Yüksel, 1). İdarenin başkasına ait bir gayrimenkûl üzerinde bu şekilde tesis veya bina yapmasıyla idare, o gayrimenkûle fiilen el atmış olmaktadır. Ancak kamulaştırmasız el atma her zaman bu şekilde oluşmamaktadır. Bazen gayrimenkûl üzerinde herhangi bir fiilî el atma olmamasına rağmen söz konusu gayrimenkûl imar plânında örneğin yeşil alan olarak özgülenmiş veya başka bir kamu hizmetine özgülenmiş olabilmektedir. Bu gibi durumların varlığında gayrimenkûl malikinin mülkiyet hakkından doğan yetkileri kısıtlanmış olmaktadır. Burada da hukukî kamulaştırmasız el atmanın söz konusu olduğu ifade edilmektedir (Yüksel, 1).

## 3 Hukukî Kamulaştırmasız El Atma

Genellikle hukukî kamulaştırmasız el atma uygulaması, imar plânı ile bir kişinin gayrimenkûlünün yol, park, okul veya yeşil alan, ibadet yeri gibi alanlara ayrılmış olması ya da kadastral bir parselde yapılan imar uygulaması sonucunda, uygulama alanında gayrimenkûlü olan kişilerden gayrimenkûllerin % 40'ını geçmemek üzere ve bedelsiz olarak düzenleme ortaklık payı (DOP) alınması olarak iki durumda karşımıza çıkmaktadır (Akar Pehlivan, 2013, 8). 3194 sayılı İmar Kanunu'nun 18.maddesinde yer alan düzenleme ortaklık payı alınması, Kamulaştırma Kanunu'nda düzenlenen usûle göre bir kamulaştırma işlemi yapılmaksızın, özel mülkiyette bulunan gayrimenkûllerin belli bir bölümüne İmar Kanunu'nda yer alan düzenlemeler çerçevesinde zorla el konmasıdır (Günday, 2011, 276). Kamulaştırma Kanunu'na göre kamulaştırma yapılmak suretiyle el atılan gayrimenkûlün bedelinin idare tarafından ödenmesi mecburî iken, İmar Kanunu'nda düzenlenmiş olan düzenleme ortaklık payı uygulaması yapılmak suretiyle el atılan gayrimenkûl için idarenin bir bedel ödeme zorunluluğu bulunmamaktadır (Günday, 2011, 276-277).

Danıştay'ın konuya yaklaşımına bakılacak olursa, Danıştay İdarî Dava Daireleri Kurulu iki kararında (Esas:2007/2255 ve Esas:2003/385)); "kamulaştırmanın yapılabilmesi için gayrimenkûl malikleri tarafından yapılan başvurunun reddine ilişkin işlemlerde hukuka uyarlık bulunmadığı öne sürülerek açılan iptal davalarında; mülkiyet hakkının kullanımının belirsizliğe itildiğinden ve kamu yararının gerekleri ile mülkiyet hakkı arasında gözetilmesi gereken adil dengenin bozulduğundan söz edebilmek için imar plânlarının onaylanmasından itibaren beş yıl geçmesinin gerektiği, imar plânlarında, kamunun kullanımı için ayrılan gayrimenkûllerin, uzun süre ilgili idarelerce kamulaştırılmaması nedeniyle gayrimenkûl maliklerinin mülkiyet hakkının belirsiz süre ile kısıtlandığı ve böylece kamu yararının gerekleri ile mülkiyet hakkı arasında gözetilmesi gereken adil dengenin bozulduğu" yönünde hüküm tesis etmiştir (Akar Pehlivan, 2013, 13). Danıştay 6.Dairesi de son zamanlarda vermiş olduğu bir kararında (Esas:2011/8152); "İmar plânında yol ve otopark olarak belirlenen ve beş yıllık imar programına alınmaması sonucu kamulaştırılmayan taşınmazın bedelinin, keşif ve bilirkişi incelemesi yaptırılarak belirlenmesi suretiyle ödenmesi gerektiğinden tazminat isteminin reddine ilişkin mahkeme kararında isabet bulunmadığına" hükmetmiştir.

Konuya ilişkin olarak Yargıtay Hukuk Genel Kurulu'da bir kararında (Esas:2010/5-662); "Belediyelerin imar plânının yürürlük tarihinden itibaren en geç üç ay içerisinde plânın tatbiki için beş yıllık imar programını hazırlamakla yükümlü oldukları, uzun yıllar programa alınmayan imar plânının fiilen hayata geçirilmemesi nedeniyle kamulaştırma ya da takas cihetine gitmeyen davalı idarece, pasif ve suskun kalınmak ve işlem tesis edilmemek suretiyle gayrimenkûle müdahâle edildiğinin kabulü gerektiği ve bu durumda idarelerin kamulaştırmasız el koyma hükümleri doğrultusunda sorumlu olduklarına" hükmetmiştir. Yargıtay Hukuku Genel Kurulu yukarıda belirtilen bu kararında, Anayasa Mahkemesi'nin (Esas:1999/33) İmar Kanunu'nun 13.maddesinin iptal gerekçesindeki "modern sosyal mülkiyet anlayışı" ve Avrupa İnsan Hakları Mahkemesi'nin Sporrong ve Lonnroth kararını değerlendirerek; "bir gayrimenkûle fiilen el atılması ile gayrimenkûlün hukuken kullanılmasına (imar hakkına) sınırlama getirilmesi arasında sonuç yönünden bir fark bulunmadığı ve her iki hâlde de kişinin mülkiyet hakkının sınırlandırılmış olacağını" belirtmiş, "gayrimenkûlün satılmasında ve kiralanmasında veya kullanılmasında veyahut yararlı değişiklikler yapılmasında sıkıntı çekilmesi saptaması ile hukukî el atmanın varlığı hâlinde de, gayrimenkûlün bedelinin idareden istenebileceği" sonucuna ulaşmıştır (Akar Pehlivan, 2013, 10). Yargıtay Hukuk Genel Kurulu'nun bu kararı, fiilen el atılmamış olsa bile gayrimenkûlü imar plânında kamu hizmetlerine özgülenmiş olan gayrimenkûl malikleri için olumlu bir gelişme olmuş ancak bu kararın uygulanması uzun süreli olmamıştır. Zira hukuk mahkemelerinde görülen bu davaların sayısı fazlalaşmış ve davalı idareler bu kez görev itirazında bulunmaya başlamıştır. Bunun üzerine Uyuşmazlık Mahkemesi ise; "gayrimenkûle hukukî el atmanın varlığı hâlinde kamulaştırmasız el atma davasının idarî yargıda görüleceğine" karar vermiştir (Esas:2011/238): "Olayda, imar plânının uygulaması sonucu, uyuşmazlığa konu parsellerin imar plânında park alanında kaldığı, uzun süredir park alanı olarak düzenleme yapılmadığı, kamulaştırılmadığı, gayrimenkûlde inşaat yapma olanağı bulunmadığı; kamulaştırmasız el atma nedeniyle gayrimenkûlün bedelinin ödenmesi gerektiğinin iddia edildiği; davanın konusunun, davalı idarece 3194 sayılı İmar Kanunu uyarınca kamu gücü kullanılarak tek yanlı irâde ile yapılan imar plânlarında yeşil alan olarak yer alan davacılara ait gayrimenkûlün bedelinin tazminine ilişkin bulunduğu anlaşılmış olup, belirtilen duruma göre, imar plânı ve buna dayalı imar uygulaması sonucunda uğranılan zararın tazminine yönelik bulunan davanın, 2577 sayılı İdarî Yargılama Usûlü Kanunu'nun 2/1-b maddesinde yer alan 'İdarî eylem ve işlemlerden dolayı kişisel hakları doğrudan muhtel olanlar tarafından açılan tam yargı davaları' kapsamında idarî yargı yerince

çözümlenmesi gerekmektedir". Uyuşmazlık Mahkemesi (2013/541 ve 2013/426); "3194 sayılı Kanun'un 10.maddesi amir hükmü uyarınca davalı idareler tarafından beş yıllık süre içinde kamulaştırma işlemi yapılarak hisse bedelinin ödenmesi gerekirken, süre geçmesine rağmen idare tarafından herhangi bir kamulaştırma işlemi yapılmayan ve imar plânından kaynaklanan tazminat davasının, idarî yargı yerinde çözümlenmesi gerektiğini" hükme bağlamıştır. Bu defa adlî yargıda görülen davalar, davalı idarelerin itirazları doğrultusunda Uyuşmazlık Mahkemesi'nin önüne gelmeye başlamış ve aynı davalar bu kez idare mahkemelerinde açılmak durumunda kalmıştır (Yüksel, 1).

Yukarıda örnekleri verilen Uyuşmazlık Mahkemesi'nin bu doğrultudaki kararlarından sonra bile uygulamada hukuk mahkemeleri yine hukukî kamulaştırmasız el atma davalarına bakmaya devam etmişlerdir. İdare mahkemelerinde açılan davalarda ise, idare mahkemelerinin görevsizlik kararları verdikleri de görülmektedir. Kısacası çoğu zaman uygulamadaki durumun Uyuşmazlık Mahkemesi'nin yukarıda örnekleri verilen kararlarının aksi doğrultuda bir seyir takip ettiği görülmektedir (Yüksel, 1). Ancak buna rağmen Uyuşmazlık Mahkemesi, hukukî kamulaştırmasız el atma nedeniyle açılan davaların idarî yargıda görüleceğine yönelik kararlar vermeye devam etmektedir (Yüksel, 1-2). Hukuk mahkemelerinde görülen davalarda ise, davalı idareler görev itirazında bulunmaktadırlar (Yüksel, 2). Uyuşmazlık Mahkemesi'nin bu konuya yönelik vermiş olduğu kararlarını basit bir görev ayrımına ilişkin kararlar biçiminde düşünmek doğru bir yaklaşım olmayacaktır. Zira görev nedeniyle reddedilen bu davalar için gayrimenkûl maliki karşı tarafın vekâlet ücretini ödemek ve en kötüsü de tekrar dava açmak zorunda kalabilecektir. Ayrıca, adlî yargıda dava değerinin dava açılırken tespit edilmesi mümkün olmuyorsa, bilirkişi incelemesi sonrasında tespit edilen miktara göre dava değerini ıslâhla arttırmak mümkündür (Yüksel, 2). İdarî yargıda ise durum biraz daha değişik niteliktedir. 30.04.2013 tarihine kadar idarî yargıda açılan tam yargı davalarında ıslâh kabul edilmemekteydi. Çeşitli sebeplerle ıslâh müessesesi idarî yargıda kabul görmediği için, dava açılırken zarar miktarının belirtilmesi gerekiyordu. Ancak zarar miktarının belirlenmesi her zaman kolay olmamaktadır. Çünkü idare mahkemeleri tarafından da genellikle zarar miktarı keşif ve bilirkişi incelemesi sonucunda gerçek anlamıyla ortaya çıkmakta ve belirli hâle gelmektedir (Yüksel, 2). Bu hâl, dava açılırken talep edilen miktardan daha fazla zarar olduğu bilirkişi incelemesiyle tespit edilse bile, idarî yargıda tam yargı davalarında ıslâh mümkün olmadığından dava açılırken talep edilen tazminat miktarı ile yetinmek durumunda kalınması anlamına geliyordu. Ancak 30.04.2013 tarihli Resmî Gazete'de yayınlanan 6459 sayılı İnsan Hakları ve İfade Özgürlüğü Bağlamında Bazı Kanunlarda Değişiklik Yapılmasına Dair Kanun'un 4.maddesiyle 06.01.1982 tarihli ve 2577 sayılı İdarî Yargılama Usûlü Kanunu'nun 16.maddesinin 4.fıkrasına şu cümle eklenmiştir: "Ancak, tam yargı davalarında dava dilekçesinde belirtilen miktar, süre veya diğer usûl kuralları gözetilmeksizin nihaî karar verilinceye kadar, harcı ödenmek suretiyle bir defaya mahsus olmak üzere artırılabilir ve miktarın artırılmasına ilişkin dilekçe otuz gün içinde cevap verilmek üzere karşı tarafa tebliğ edilir". Aynı Kanun'un geçici 7.maddesinde de "…eklenen hüküm, kanun yolu aşaması dâhil, yürürlük tarihinde derdest olan davalarda da uygulanır" düzenlemesi getirilmiştir (Kanun koyucu geçici madde düzenlemeleri ile idarî yargıda ıslâh kurumunun hâlen görülmekte olan derdest davalarda ve temyiz edilmek suretiyle hâli hazırda üst mahkemede görülmekte olan kanun yolu aşamasındaki davalarda da uygulanabileceğini düzenlemiştir). Bu düzenlemeler ile idarî yargıda açılan tam yargı davalarında kısmî ıslâh müessesesinin kabul edildiği görülmektedir. Bu kanunî gelişmelerin kamulaştırmasız el atma davalarının idarî yargıda görülmesinin sakıncalarını da biraz olsun azaltması nedeniyle olumlu olduğunu belirtmek yanlış olmasa gerektir (Yüksel, 2).

Yukarıda verilen Uyuşmazlık Mahkemesi'nin imar plânı uygulamaları neticesinde oluşan zararlar için açılacak tam yargı davalarının görüm yerinin idarî yargı olduğu yönünde konuya ilişkin birçok kararından sonra bile hukukî kamulaştırmasız el atmalar için hukuk mahkemelerinde dava açılmaya devam edildiği görülmektedir. Ancak 18.10.2010 tarihli ve 5999 sayılı Kanun'un 1.maddesi (Bu madde ile getirilen düzenlemelerin bazıları Anayasa Mahkemesi (Esas:2010/83) tarafından iptal edilmiştir) ve 24.05.2013 tarihli 6487 sayılı Kanun'un 21.maddesiyle değişik Kamulaştırma Kanunu'nun geçici 6.maddesine (6487 sayılı Kanun'la 2942 sayılı Kanun'un değiştirilen geçici 6.maddesinin bazı bölümlerinin iptali için de Anayasa Mahkemesi'ne başvuruda bulunulmuştur. Ancak Anayasa Mahkemesi henüz bu konudaki esasa ilişkin kararını vermemiştir. Konuya ilişkin olarak önlerine dava gelen ilk derece mahkemeleri ise, bu durumu bekletici mesele yapmaktadırlar) şu hüküm ilâve edilmiştir: "Uygulama imar plânlarında umumî hizmetlere ve resmî kurumlara ayrılmak suretiyle veya ilgili Kanunların uygulamasıyla tasarrufu kısıtlanan gayrimenkûller hakkında, 03.05.1985 tarihli ve 3194 sayılı İmar Kanunu'nda öngörülen idarî başvuru ve işlemler tamamlandıktan sonra idarî yargıda dava açılabilir. Bu madde hükümleri karara bağlanmamış veya kararı kesinleşmemiş tüm davalara uygulanır. Kararı kesinleşen davalara ise, bu maddenin yalnızca 8.fıkra hükümleri uygulanır". Böylece hukukî kamulaştırmasız el atma nedeniyle açılacak davaların idarî yargıda görüleceği konusu açıkça kanunla düzenlenmiş olmaktadır (Yüksel, 2). Anayasa Mahkemesi de konuya ilişkin bir kararında (Esas:2013/93) bu duruma karşı gelmeyip, şu açıklamaları yapmıştır: "İmar plânlarının düzenleyici işlem niteliği taşıdığı ve bu plânların hazırlanmasından başlayarak tüm evrelerinde meydana gelen her türlü uyuşmazlığın idarî yargı yerinde çözüme kavuşturulduğu görülmekte, imar plânları nedeniyle gayrimenkûlleri üzerindeki tasarruf yetkileri kısıtlanan maliklerin açmış oldukları iptal ve tam yargı davaları da idarî yargı yerlerince görülmektedir".

## 4 Fiilî Kamulaştırmasız El Atma

Diğer taraftan fiilî kamulaştırmasız el atma konusuna dönecek olursak, Türk hukukunda fiilî kamulaştırmasız el atmaların fiilî yolun en karakteristik misallerinden birisini oluşturduğu görülmektedir (Gözler, 2009, 991). Fiilî yol, idarenin, hukukî herhangi bir esasa dayanmaksızın, faaliyet alanına yabancı bir konuda eylemde bulunması olarak belirtilmektedir. "Fiilî yoldan söz edebilmek için, şu şartların gerçekleşmesi gerekir: 1- Ortada, idare tarafından gerçekleştirilen maddî bir icra, bir eylem olmalıdır. Bu eylem, yok hükmündeki bir idarî işlemin icrası şeklinde olabileceği gibi, hiçbir işleme dayanmayan bir icraî faaliyet şeklinde de ortaya çıkabilir. 2- Dayanılan işlem veya yapılan eylem, açık ve ağır bir hukuka aykırılığın sonucu olmalıdır. O kadar ki, yapılan eylem idarîlik vasfını kaybetmiştir ve artık idarenin sorumluluğu, idare hukuku esaslarına değil, özel hukuk hükümlerine tâbi olacaktır. 3- Nihayet, idarenin eylemi, mülkiyet hakkına ya da kamu özgürlüklerine bir tecavüz oluşturmalıdır" (Şahiniz, 2006, 38). Fiilî kamulaştırmasız el atma, idarenin, bir kişiye ait gayrimenkûlü bilerek veya bilmeyerek kamulaştırmaya ilişkin usûl ve kurallara uymaksızın ve bir bedel ödemeksizin işgal ederek kamu hizmetine özgülenmesi şeklinde tanımlanmaktadır (Arcak/Doğrusöz, 1992, 19). Kısacası fiilî kamulaştırmasız el atmadan bahsedebilmek için; öncelikle idarenin özel veya tüzel kişilerin gayrimenkûl mallarına kamulaştırma yapmaksızın el atması ya da gayrimenkûlün üzerine tesis gibi bir yapı inşa ederek bayındırlık hizmetini fiilen başlatması veya bir kamu hizmetine özgülenmesi gerekmektedir (Karahacıoğlu/Altın, 1995, 1vd). Kamulaştırmasız el atma, idare tarafından daha doğrusu kamulaştırma yetkisine sahip olan idare kuruluşları tarafından yapılabilir. "Lehine kamulaştırma yapılmış olan bir özel hukuk şirketi, kamulaştırılan gayrimenkûl malın dışında kalan kişilerin gayrimenkûl mallarına taşarak el atmışsa burada kamulaştırmasız el atma değil, men-î müdahâle davası söz konusu olabilir. Yargıtay 5. Hukuk Dairesi de bu hususu bir kararında (Esas Sayısı:16858) teyit etmiştir" (Karahacıoğlu/Altın, 1995, 1). Belirtmek gerekir ki, bir kamu tüzel kişisi bir başka kamu tüzel kişisinin malına ihtiyaç duyarsa Kamulaştırma Kanunu'nun 30.maddesinde belirtilen yöntemle bunu devralabilir. Kamulaştırma Kanunu'nun 30.maddesinde belirtilen yöntem kullanılmadan gayrimenkûle el atılması durumunda da yine kamulaştırmasız el atmanın söz konusu olduğu ifade edilmektedir (Gözler, 2009, 992). Uyuşmazlık Mahkemesi (Esas:1991/7) de böyle bir durumda doğan zararın tazmini için adlî yargıda tazminat davası açılabileceğine hükmetmiştir.

Fiilî yol ve dolayısıyla fiilî kamulaştırmasız el atmalardan doğan davalar (Akar, 2007, 1706-1879), adlî yargıda görülür (Gözler, 2009, 991; Şahiniz, 2006, 38; Gözübüyük/Tan, 2011, 1011). Anayasa Mahkemesi'ne göre de (Esas:2013/93), fiilî kamulaştırmasız el atmadan söz edilebilmesi için, kişiye ait gayrimenkûlün idarece (kamu hizmetinde kullanılmak amacıyla) işgal edilmiş olması ve bu işgalin Kanunda öngörülen usûl ve esaslara uyularak tesis edilmiş bir kamulaştırma işlemine dayanmadan gerçekleştirilmiş olması gerekmektedir. Bu şekilde, idarenin hukuk dışı eyleminden kaynaklanan fiilî el atmaların, özel kişilerin haksız fiil teşkil eden eylemlerinden hiçbir farkının bulunmadığı, bu nedenle bu çeşit eylemlerden doğan zararların da özel kişilerin haksız fiilînden doğan zararlarda olduğu gibi adlî yargıda dava konusu edilmesi gerektiği kabul edilmektedir. Dolayısıyla gayrimenkûle fiilen el atılması durumunda mahkemeler kamulaştırmasız el atmanın varlığını kabul ederek gayrimenkûl malikine gayrimenkûl bedeli ödenmesine karar vermektedirler. Yani kamulaştırmasız el atmada gayrimenkûl sahibi tazminat talep edebilir ve tazminat olarak hükmedilecek gayrimenkûl bedeli de, bir kamulaştırma bedeli değildir (6487 sayılı Kanun'la 2942 sayılı Kanun'un değiştirilen geçici 6.maddesinin bazı bölümlerinin iptali için de Anayasa Mahkemesi'ne başvuruda bulunulmuştur. Ancak Anayasa Mahkemesi henüz bu konudaki esasa ilişkin kararını vermemiştir. Konuya ilişkin olarak önlerine dava gelen ilk derece mahkemeleri ise, bu durumu bekletici mesele yapmaktadırlar). Ayrıca mahkemenin aynı zamanda gayrimenkûlün mülkiyetinin idare adına tescil veya terkinine de karar vermesi lazımdır (Böke, 2006, 19).

Kısacası; hem fiilî hem de hukukî nitelikteki kamulaştırmasız el atmalarda görevli mahkemeler konusunda hâli hazırda ikili bir yapının ortaya çıktığını belirtmek yanlış olmasa gerekir. Yukarıda da belirtilen Uyuşmazlık Mahkemesi kararlarına göre, imar plânı uygulamaları neticesinde oluşan zararlar için açılacak tam yargı davalarının görüm yeri idarî yargıdır yani imar plânında örneğin yeşil alan olarak bırakılan ancak fiilî el atmanın bulunmadığı durumlarda hukuk mahkemesinde değil idare mahkemesinde dava açılabilir. Dolayısıyla fiilî kamulaştırmasız el atma varsa hukuk mahkemelerinin, hukukî kamulaştırmasız el atma varsa idare mahkemelerinin görevli olduğu ifade edilebilir.

## 5 Kamulaştırma Kanunu'nun Getirdiği Yenilikler

Türk hukukunda kamulaştırmasız el atmalara maruz kalan gayrimenkûller ile ilgili olarak Yargıtay İçtihadı Birleştirme Büyük Genel Kurulu'nun çeşitli tarihlerde verdiği kararları bulunmaktadır. Yargıtay bu kararlarından birinde, kamulaştırmasız el atılan gayrimenkûlün sahibine tazminat ya da men-î müdahâle davalarına başvurmayı mümkün kılmıştır (Günday, 2011, 278). Yargıtay'ın bu kararından sonra 221 sayılı Kanun ile kamulaştırmasız el atmalar bir defa için hukuka uygun hâle getirilmiştir (Günday, 2011, 279). Ancak 221 sayılı Kanun geçici nitelikte olduğundan soruna kalıcı olarak bir çözüm getirememiştir. Daha sonra 2942 sayılı Kamulaştırma Kanunu'nun 38.maddesiyle getirilen düzenleme ise, idarenin kamulaştırmasız el atma yapması durumunda gayrimenkûl sahibinin hangi davaları hangi yargı kolunda açabileceğine ilişkin bir hüküm tesis etmemiş yalnızca

bu konuda açılacak davalar için yirmi yıllık bir zaman aşımı süresi öngörmüştür (Günday, 2011, 279). Bu düzenleme de Anayasa Mahkemesi (Esas:2002/112) tarafından iptal edilmiştir. Yargıtay İçtihadı Birleştirme Büyük Genel Kurulu ise bir kararında da (Esas:1958/17); "idarî makamların verdikleri kararlar sonucunda plân ve projelere uygun el atmadan doğan anlaşmazlıklarda idarî yargının, bunun dışındaki haksız el atmalardan doğan davalarda adlî yargının görevli olduğuna" hükmetmiştir. Son zamanlarda kabul edilen 6487 sayılı Kanun ile konuya ilişkin yeni düzenlemeler yapılmıştır. Belirtmek gerekir ki, 6487 sayılı Bazı Kanunlar ile 375 sayılı Kanun Hükmünde Kararnamede Değişiklik Yapılması Hakkında Kanun'un 21.maddesiyle 2942 sayılı Kamulaştırma Kanunu'nun geçici 6.maddesinde yapılan değişiklikler, hukukî kamulaştırmasız el atmalarda görevli yargı kolunun *idarî yargı* olduğunu belirlemekle sınırlı düzenlemeler de değildir. Ayrıca 6487 sayılı Kanun'un 22.maddesi ile Kamulaştırma Kanunu'na geçici 7.madde ilâve edilmiştir (2942 sayılı Kamulaştırma Kanunu, *Geçici Madde 7-(Ek:24.05.2013-6487/22 mad.)*: "Mülga 31.08.1956 tarihli ve 6830 sayılı İstimlâk Kanunu'nun 16 ve 17.maddeleri ile 2942 sayılı Kanun'un mülga 16 ve 17.maddeleri uyarınca mahkemelerce idare adına tescil kararı verilen kamulaştırmalarda tebligâtlar ve diğer kamulaştırma işlemleri tamamlanmış sayılır. Bu kamulaştırma işlemleri sebebiyle hiçbir hak ve alacak talebinde bulunulamaz; kamulaştırmaya veya bedeline karşı itiraz davaları açılamaz; açılmış ve süren davalar bu madde hükmü uygulanarak sonuçlandırılır"). 2942 sayılı Kamulaştırma Kanunu'nun geçici 6.maddesinin başlığı, "Kamulaştırmasız El Koyma Sebebiyle Tazmin" iken yeni düzenlemeyle "Kamulaştırmaksızın Kamu Hizmetine Ayrılan Taşınmazların Bedel Tespiti" hâline getirilmiştir. Kanunî değişikliğin getirdiği yenilikler kısaca şu şekilde özetlenebilir (Duran, 1-5): 09.10.1956 ile 04.11.1983 tarihleri arasında fiilî kamulaştırmasız el atma hâli varsa malikin doğrudan dava açma hakkı engellenmiş, uzlaşma dava şartı hâline getirilmiş böylece malik uzlaşma yoluna başvurmak zorunda bırakılmıştır. Uzlaşma hâlinde uzlaşılan bedel, bütçe imkânlarına göre belirsiz bir biçimde zamana yayılarak taksitle ödenebilecektir. Uzlaşma sağlanamazsa malikin üç ay içinde bedel tespit davası açması gerekecektir. Malikin dava açma hakkının kısa bir süreyle sınırlandırılmasının, yukarıda belirtilen Anayasa Mahkemesi'nin Kamulaştırma Kanunu'nun 38.maddesini iptal eden kararına aykırı olduğu ifade edilmektedir. "Ayrıca Anayasa Mahkemesi'nin bu iptal kararı ile Kamulaştırma Kanunu'nun 38.maddesi yürürlükten kalktığından, 04.11.1983 tarihinden sonra vuku bulan ve bulacak olan kamulaştırmasız el atmalar nedeniyle açılacak olan tazminat davaları için artık herhangi bir süre sınırlaması kalmamış iken, 09.10.1956 ve 04.11.1983 tarihleri arasında vuku bulan kamulaştırmasız el atmalar nedeniyle açılacak tazminat davaları için üç aylık bir süre getirilmiş olması eşitlik ilkesini de ihlâl etmektedir" (Günday, 2011, 281).

Getirilen yeni düzenlemeye göre, kamulaştırmasız el koyma sebebiyle sadece bedel tespit davası açılabilir. Yeni düzenleme tazminat, men-î müdâhâle ve istihkâk davası açabilme imkânını ortadan kaldırmıştır (Kaplan, 2012, 142vd). Bu düzenleme daha önce Anayasa Mahkemesi'nin konuya ilişkin verdiği iptal kararına (Esas:2010/83) da açıkça aykırıdır. Ayrıca fiilî kamulaştırmasız el atma nedenine dayalı tazminat davası eda davası iken, tespit davası olarak nitelenmiştir.

Yine son yapılan düzenlemeye göre, fiilî kamulaştırmasız el atma davaları ve ilâmın icrasına dair icra takiplerinde artık nispi değil maktu vekâlet ücretine hükmedilecektir. Ayrıca bu düzenlemeye göre, 09.10.1956 ile 04.11.1983 tarihleri arasında idarenin fiilî kamulaştırmasız el atması hâlinde mahkeme tarafından tespit edilen bedelin tahsili sebebiyle idarenin mal, hak ve alacakları haczedilemeyecektir.

2942 sayılı Kanun'un geçici 6.maddesinin 8.fıkrasına göre, kesinleşen mahkeme kararına istinaden yapılacak ödemeler taksitle yapılabilecektir. 04.11.1983 tarihi sonrası fiilî kamulaştırmasız el atmalarda da "taksitle ödeme, haciz yasağı, vekâlet ücretinin maktu olarak belirlenmesi" düzenlemesi getirilmiştir. Bu düzenlemenin devam eden yani kesinleşmeyen derdest davalarda da geçerli olacağı düzenlenmiştir (Duran, 1). Kısaca belirtmek gerekirse, Anayasa'nın mülkiyet hakkına ilişkin 35.maddesiyle çelişir nitelikteki bu düzenlemeler, kamulaştırmasız el atmalar sebebiyle oluşan hukuka aykırı hâller münasebetiyle mülkiyet hakları ihlâl edilen gayrimenkûl sahiplerinin zararlarını gidermeyi ve fiilî kamulaştırmasız el atma davaları nedeniyle oluşan tazminatları azaltmayı amaçlamaktadır (Günday, 2011, 281). Ayrıca yapılan bu düzenlemeler, mülkiyet hakkını düzenleyen Avrupa İnsan Hakları Sözleşmesi'nin 1 numaralı ek protokolünün 1.maddesine de aykırıdır. Nitekim Avrupa İnsan Hakları Mahkemesi bir kararında (Akıllı/Türkiye); "*her ne kadar bu gibi uygulamaların yürürlükte olan bir kanuna dayanılarak yapıldığı görülse de, kamu yararı ile kişisel hakların korunması arasında var olması gereken dengeyi sağlayabilecek herhangi bir işlemin başlatılmadığı görülmektedir. Bu gibi uygulamalar sadece keyfi olarak değerlendirilebilir*" biçimde hüküm tesis etmek suretiyle yürürlükteki kanunlarla hakkın özüne dokunulamayacağı yönündeki yaklaşımını kuvvetlendirmiştir (Tezcan, 7).

## 6 Sonuç

6487 sayılı Kanun'la 2942 sayılı Kamulaştırma Kanunu'nda kamulaştırmasız el atma konusunda yapılan düzenlemeler neticesinde hukukî kamulaştırmasız el atmalardan yani İmar Kanunu'nda yer alan düzenlemeler çerçevesinde yapılan kamulaştırmasız el atma uygulamalarından kaynaklanan uyuşmazlıklarda idarî yargının görevli ve yetkili olduğu açık bir şekilde ortaya konmuştur. Ancak yukarıda da belirtildiği üzere 6487 sayılı Kanun'la getirilen konuya ilişkin yeniliklerin Anayasa'nın 35.maddesinde düzenlenmiş olan mülkiyet hakkını ortadan kaldırdığı ve malikin sahip olduğu hakları, eski duruma göre daha da sınırladığı gerçeğini

değiştirmemektedir. Kamu yararının özel yarara göre üstün konumda olması nedeniyle zorunlu olarak idareye tanınan kamulaştırma yetkisinin kullanılmayarak idare tarafından gayrimenkûl üzerinde kamulaştırma yapmaksızın fiilî el atmaların yapılıyor olması açıkça hukuka aykırıdır ve kabul edilebilir bir şey değildir. Düzenleme ortaklık payı gibi İmar Kanunu'ndan kaynaklanan hukukî kamulaştırmasız el atmaların da aslında hukukî olduğunu söylemek çok doğru bir yaklaşım olmayacaktır. Dolayısıyla İmar Kanunu'nun idareye görev ve yetki veren bu konudaki düzenlemelerinin kaldırılması ve idarenin imar uygulamaları neticesinde ihtiyaç duyduğu özel mülkiyetteki gayrimenkûlleri de kamulaştırma yoluyla mülkiyetine geçirmesi hukuka uygun olacaktır. Kısacası, idarenin kesin olarak ve hiçbir şart altında gayrimenkûl üzerinde fiilî kamulaştırmasız el atma yapmaması gerekir. Ayrıca İmar Kanunu gibi kanunlarda yer alan ve idareye gayrimenkûl üzerinde kamulaştırma yapmaksızın el atma sonucunu doğuran düzenlemelerin de ortadan kaldırılması gerekmektedir. Son olarak belirtmek gerekir ki hâli hazırda, 6487 sayılı Kanun'la 2942 sayılı Kanun'un değiştirilen geçici 6.maddesinin bazı bölümlerinin iptali için de Anayasa Mahkemesi'ne başvuruda bulunulmuştur. Ancak Anayasa Mahkemesi henüz bu konudaki esasa ilişkin kararını vermemiştir. Konuya ilişkin olarak önlerine dava gelen ilk derece mahkemeleri ise, bu durumu bekletici mesele yapmaktadırlar.

# Sosyal İşletmeler ve Sosyal İşletmelerin Hukuki Yapısı

# Social Businesses and the Legal Structure of Social Businesses

Asst. Prof. Dr. Hülya Göktepe (Anadolu University, Turkey)

## Abstract

Social business, was first defined by Nobel Peace Prize laureate Prof. Muhammad Yunus and is described in his books. Social businesses are non-loss, non-dividend companies created to address and solve social or environmental problems. Microfinance is another form of social businesses. Like an NGO, social business has a social mission, but like a business, it generates its own revenues to cover its costs. In a social business, the investors/owners can gradually recoup the money invested, but cannot take any dividend beyond that point. The purpose of the investment is purely to achieve one or more social objectives through the operation of the company. No personal gain is desired by the investors. The company must cover all costs and be financially sustainable, while achieving the social objective in sectors such as healthcare, education, poverty, environment, housing, climate urgency etc. Legal structures available to all enterprises can be used by social businesses. These are: for-profit organizations, non-profit organizations (associations, foundations), charities, co-operatives. However, there are legal structures specifically designed of social businesses. These are: benefit corporation, flexible purpose corporation, low profit limited liability company (L3C), hybrids, community interest company (CIC).The purpose is this study is to contribute to the Turkish literature related to social businesses. In this study, definition of social business and microfinance will be given. The characteristics of social business will be indicated, social business examples will be presented and finally legal structures of social businesses will be analyzed. This study is descriptive study.

## 1 Giriş

Sosyal işletme yeni bir işletme türüdür. İlk olarak Nobel Barış Ödülü sahibi Prof. Muhammed Yunus tarafından tanımlanmıştır. Yunus, "Yoksulluğun olmadığı bir dünya yaratmak", "Sosyal İşletme ve kapitalizmin geleceği ve sosyal işletme kurmak, insanlığın en acil ihtiyaçlarını karşılayacak yeni bir kapitalizm türü" isimli kitaplarında sosyal işletmeyi anlatmıştır. Sosyal işletme kârı maksimize etme yerine insanlığın en acil ihtiyaçlarına hizmet eden bir işletme modelidir. Yunus sosyal işletmeyi, sosyal problemleri belirleyip çözmek için kurulan kâr payı dağıtmayan bir şirket olarak tanımlamaktadır. Sosyal bir işletme, amacı sosyal bir sorunu ortadan kaldırmak olan, şahıslardan bağımsız bir kuruluştur. İşletme kâr eder fakat bu kârı kimse almaz. İşletmenin faaliyetleri tamamen sosyal bir amaca yönelik olduğu için, kişisel kâr elde etme düşüncesi işletmeden tümüyle soyutlanmıştır. İşletme sahibi zaman içerisinde sadece yatırmış olduğu miktarı geri alabilir. Sosyal işletme kâr amacı güden işletmelerden veya hayırseverlerin bağışlarına bağlı olarak yaşayan ve kâr amacı gütmeyen kuruluşlardan oldukça farklıdır.

Sosyal işletme sosyal girişimcilik olarak da adlandırılmaktadır. Sosyal işletmecilik konusunda kitaplar yazılmıştır, bunlardan en bilineni David Bornstein'ın "How the change the World" adlı kitabıdır. Bu kitap 2005 yılında Hindistan'da 1,5 milyon adet satmıştır. Eser 2009 yılında Türkçeye çevrilerek basılıp yayınlanmıştır. Diğer kitaplardan bazıları şunlardır: Muhammed Yunus- Creating a World without Poverty, Dick Atkinson-Cities of Pride: Rebuilding Community, Refocusing Government, Asa Briggs-Michael Young: Social Entrepreneur, Peter Birinckerhoff-Mission Based Management: Leading Your Not- for Profit in the 21st Century, J.Geregory Dees-Enterprising nonprofits: A Toolkit for Social Entrepreneurs, Johanna Mair, Jeffrey Robinson, Kai Hockerts: Social Entrepreneurship, Alex Nicholls: Social Entrepreneurship: New Models of Sustainable Social Change. Kitaplar dışında yazılmış pek çok makale vardır. Türkiye'de bu alandaki ilk yayın Hülya Denizalp tarafından yazılan ve 2007 yılında basılan Toplumsal Dönüşüm İçin Sosyal Girişimcilik Rehberi olmuştur. 2009 yılında Sosyal Girişimcilik Rehberi genişletilerek 2. Baskısı yapılmıştır. Burcu Kümbül Güler'in Sosyal Girişimcilik adlı kitabı 2010 yılında basılmıştır. Ayrıca üniversitelerde Sosyal Girişimcilik temalı kongreler yapılmakta ve bu konudaki Türkçe yayınlara katkılar olmaktadır. Bu çalışmanın amacı da Türkçe kaynaklara bir katkıda bulunmaktır.

## 2 Sosyal İşletmenin Özellikleri ve Sosyal İşletme Örnekleri

Sosyal işletme zarar etmeyen, temettü dağıtmayan ve tamamıyla sosyal bir hedefi gerçekleştirmeye ithaf olunmuş bir işletmedir. Sosyal işletme kâr arayışı içerisindeki dünyanın dışındadır. Hedefi, mal ve hizmet satışı da dahil olmak üzere işletme yöntemlerini kullanarak sosyal bir sorunu çözmektir.

İki çeşit sosyal işletmeden söz edilmektedir. Bunlardan biri, zarar etmeyen, temettü dağıtmayan, sosyal bir sorunu çözmeye vakfedilmiş ve kârlarının tümünü işletmeyi genişletmeye ve iyileştirmeye yatıran yatırımcıların mülkiyetinde bulunan işletme türüdür. Bunlara I. Tip Sosyal İşletmeler denilmektedir. Bu işletmeler sosyal amaçlarla ilgili işlere odaklanmışlardır. Örneğin, üretilen ürünler fakirlerin faydalanması içindir.

İkinci bir tür, yoksul insanların doğrudan veya önceden belirlenmiş bir sosyal amaca yönelik bir vakfın vasıtasıyla sahip oldukları, kâr elde eden bir şirkettir. Bunlara ise II. Tip Sosyal İşletmeler denilmektedir. Bu işletmeler yoksullar veya dezavantajlı kişilere aittir ve elde edilen kâr ya doğrudan kâr payı olarak alınır ya da bazı dolaylı faydalar sağlanır. Örneğin, ürün yoksullar tarafından üretilir ve uluslararası pazarlara ihraç edilir, bu arada elde edilen kârlardan çalışanlar faydalanır. Hem mevduat sahipleri hem de müşterileri olan yoksulların sahibi bulundukları Grameen Bank bu türden bir işletmeye örnektir.

Kâr amacı olmayan bir kuruluşun aksine, sosyal bir işletmenin yatırımcıları ve sahipleri vardır. Ancak I. Tip sosyal işletmede yatırımcılar ve malikler herhangi bir kâr, temettü veya başka türden bir parasal fayda sağlamazlar. Sosyal bir işletmenin yatırımcıları, kendilerinin tanımlayacakları bir zaman dilimi içerisinde ilk yatırdıkları tutarı geri alabilirler. Bu, bir veya iki yıl gibi kısa bir süre yahut 50 yıl veya daha da uzun bir süre olabilir. Ancak, yatırımcılara giden paranın ilk yatırım tutarını aşması, işletmenin sosyal işletme niteliğini yitirmesine neden olur.

Prof. Muhammed Yunus ve Grameen Yaratıcı Laboratuvarının kurucularından biri olan Hans Reitz tarafından sosyal bir işletme için geliştirilen yedi ilke vardır. Bu yedi ilke şunlardır:

1. Çalışma hedefi, kârı azami kılmak değil, yoksulluğu veya (eğitim, sağlık, teknoolojiye ulaşma ve çevre gibi) insanları ve toplumu tehdit eden bir veya birden fazla sorunu yenmektir.

2. İşletme finansal ve ekonomik sürdürülebilirliğe ulaşacaktır.

3. Yatırımcılar sadece yatırdıkları tutarı geri alacaklardır. Başlangıç yatırımının ötesinde bir temettü ödenmeyecektir.

4. Yatırım tutarı geri ödendikten sonra geriye kalan kâr, yatırım ve iyileştirme harcamalarını karşılamak üzere, işletmede bırakılır.

5. İşletme, çevre bilinçli olacaktır.

6. İşgücü, piyasada geçerli ücreti alacak, çalışma koşulları standardın üzerinde olacaktır.

7. Bütün bunlar zevkle yapılacaktır.

Bu yedi ilke sosyal işletmenin çekirdeğini oluşturur. Sosyal işletme, tarım, hayvancılık, balıkçılık, yenilenebilir enerji, bilişim teknolojisi, eğitim, sağlık, el yapımı dokuma, istihdam hizmetleri ve benzer alanlarla ilgili olabilir.

Mikrofinansman yoksulluğu ortadan kaldırabilecek sosyal işletmelerin bir diğer şeklidir. Yoksul ve düşük gelir düzeyindeki kişi, aile ve mikro işletmelere sağlanan finansman hizmetleri olarak tanımlanmaktadır (Ozan Dündar, 2007). Yoksul insanlara mikrokrediler sağlayarak onların, iş kurmak suretiyle kendi kendilerini istihdam etmeleri sağlanmaktadır. Bu, her seferinde bir kişi için, yoksulluğu ortadan kaldırmanın bir şeklidir.

Sosyal işletme, vakıf, dernek, sivil toplum kuruluşları gibi kâr amacı gütmeyen kuruluşlarla karıştırılmaktadır. Bir vakıf, bağışları sayesinde sosyal yarar sağlamayı amaçlayan bir veya birden çok hibe sahibinin paralarını dağıtmak üzere kurulmaktadır. Vakıf sosyal bir işletme değildir, finansal açıdan kendi kendine yeterli değildir, normal olarak işletme faaliyetleri yoluyla herhangi bir gelir yaratmaz ve bir sosyal işletmede olduğu gibi bir sahibi yoktur. Birçok ülkenin yasalarına göre, vakıflar ve kâr etmeyen kuruluşlar, devletin koymuş olduğu ilkeler çerçevesinde yönetim kurulları tarafından yönetilirler. Bir vakıf geleneksel bir sivil toplum örgütüne bağışta bulunduğu zaman, bu para hayırseverlik porgramlarının kurulmasında veya desteklenmesinde kullanılır ve o topluma birtakım faydalar sağlayacağı ümit edilir. Ancak, her durumda para kısa zamanda harcanır ve sivil toplum örgütü çalışmalarını sürdürebilmek için çoğu kez yeni bir bağış için başvuruda bulunur.

İlk sosyal işletmeler Prof.Muhammed Yunus tarafından kurulmuş olan Grameen işletmeleri ile dünyaca ünlü çok uluslu şirketlerin ortak girişimi olarak kurulan işletmelerdir. İlk sosyal işletme 2005 yılında kurulan Grameen Danone adlı şirkettir. Grameen Danone Bangladeşli çocuklar arasında kötü beslenmeyi azatmak amacıyla Fransız süt ürünleri şirketi Danone ile Grameen işletmelerinin ortak girişimi olarak kurulmuştur. Grameen Danone, çocuklar için leziz bir yoğurt üretmekte ve bunu yoksullar için uygun fiyattan pazarlamaktadır. Söz konusu yoğurt, çocukların normal diyetlerinde eksik olan demir, çinko, iyot ve benzeri besleyicilerle güçlendirilmiştir. Bir çocuk sekiz ile dokuz ay boyunca haftada iki fincan yoğurt yediğinde gerekli olan bütün mikro-besleyicileri almakta, sağlıklı ve neşeli bir çocuğa dönüşmektedir. Grameen Danone bir model rolü oynamış ve dünya çapında dikkat çekmiştir.

Başka bir sosyal işletme, Arsenik bulaşmasının büyük sorun arz ettiği Bangladeş köylerine emniyetli içme suyu götürmek amacıyla Fransa'nın büyük su şirketlerinden Veolia ile Grameen işletmelerinin ortak olarak kurduğu Grameen Veolia Su Şirketi (Grameen Veolia Water Company) adlı işletmedir. Arsenik bulaşmış suyu içmek yerine, köylüler çok düşük fiyatla şirketten su satın almaktadırlar.

Bir diğer büyük kuruluş olan Alman BASF, Bangladeş'te kimyasal işleme tabi tutulmuş cibinlikleri Bangladeş'te üretmek üzere, Grameen ile bir ortak girişim antlaşması imzalamıştır. Bu cibinlikler yatakların

üzerlerine serildiklerinde; uyumakta olanlara, sıtma gibi sivirisineklerin taşıdıkları hastalıklardan koruma sağlamaktadır. BASF Grameen ortak girişimi bu cibinlikleri mümkün olan en ucuz maliyetle üretip satarak, yoksulların yararlanmalarını sağlamayı amaçlamaktadır.

Intel Corporation ile Grameen işletmelerinin ortak girişimi olan Grameen Intel, bilgi ve iletişim teknolojisi kullanarak, örneğin gelişmekte olan dünyanın, hekimlerin ve hemşirelerin az, tıbbi kliniklerin kıt olduğu kırsal alanlarındaki köylere sağlık hizmetleri götürerek yoksulların sorunlarını çözümlemeyi hedeflemektedir. Burada amaç en gelişmiş sağlık kavramlarını yoksul köylülerin erişimine getirecek yeni teknolojiler yaratmak ve ardından bu hayati hizmetleri ekonomik açıdan en sürdürülebilir şekilde nihai kullanıcılara ulaştıracak küçük girişimciler kadrosu oluşturmaktır.

Adidas ile Grameen işletmelerinin ortak girişimi, en düşük gelirli kişiler için makul fiyatlı ayakkabılar üretmeyi amaçlamaktadır. Grameen Adidas'ın hedefi, çocuk veya yetişkin olsun, hiç kimsenin ayakkabısız kalmamasını sağlamaktır. Burada temel amaç, kırsal bölgelerdeki insanların, özellikle de çocukların yalınayak yürümekle geçebilecek parazitsel hastalıklardan zarar görmelerini önlemektir. Adidas, Grameen ile işbirliği içerisinde ve ekonomik bakımdan mümkün bir sosyal çalışma modeli kullanarak; bu yararları, gelişmekte olan dünyanın en yoksul insanlarına götürmek için çalışmaktadır.

Posta yoluyla satış konusunda dünya çapında bir önder olan Otto GmbH adlı bir diğer Alman şirketi, Güney Asya'dan gelişmiş ülkelere ihraç etmek üzere tekstil ve giyim üretmek konusunda heveslidir. Otto Grameen, Bangladeş'te kocasız, çocuklu bayanlar ve maluller dahil olmak üzere, çok kez ekonomik bakımdan sıra dışı muamelesi gören insanları istihdam etmek için özel gayret gösterecek olan bir fabrika kurmayı planlamaktadır. Fabrikanın sağladığı kâr, çalışanların, çocuklarının ve çevredeki yoksulların yaşam kalitesini iyileştirmek amacıyla kullanılacaktır.

## 3  Sosyal İşletmelerin Hukuki Yapıları

Bütün teşebbüsler için kullanılan mevcut yasal yapılar sosyal işletmeler tarafından kullanılabilir. Bunlar; kâr amacı güden organizasyonlar, dernekler, vakıflar gibi kâr amacı gütmeyen organizasyonlar, hayır kurumları, kooperatiflerdir. Ancak özellikle sosyal işletmeler için kullanılan hukuki yapılar da mevcuttur. Bunlar: fayda şirketi, esnek amaçlı şirket, düşük kârlı sınırlı sorumlu şirket (L3C), karma (melez) şirketler, toplum çıkarlı şirkettir (CIC).

### 3.1  Sosyal İşletmeler için Kullanılan Mevcut Hukuki Yapılar

Sosyal işletme için en iyi seçenek geleneksel kâr amaçlı şirket yapısı altında organize etmektir. Böylece işletmenin temelinde yatan sosyal amaç gözden uzak tutulmaksızın, sıradan bir kâr amaçlı şirket geliştirilirken kullanılan işletme ilkelerinin birçoğu kullanılır. Grameen Grubunun tüm sosyal işletmelerinde kâr amaçlı kuruluşların hukuki çerçevesi kullanılmıştır. Kâr amaçlı bir şirketin sermaye bulma konusunda seçenekleri vardır. Kişilerden, şirketlerden ve yatırım fonlarından sermaye talep edebilir; mülkiyet hisselerini satışa sunabilir; bankalardan veya kredi kurumlarından kredi alabilir. Kâr amaçlı şirketler yarattıkları sermaye fazlası üzerinden vergi ödemek zorundadırlar. Ayrıca, kâr amaçlı şirketlere yapılan yatırımlar, hayır kurumlarının ve diğer bazı kâr amacı gütmeyen kuruluşlara bağışların aksine, vergi makamlarından rüçhanlı muamele görmezler. Bu nedenle, kâr amaçlı bir şirket şeklinde örgütlenmiş bir sosyal işletme, vergi indiriminden yararlanamadığı için, finansal açıdan başka herhangi bir kâr amaçlı şirket kadar randımanlı olmak zorundadır.

Sosyal işletme olarak kurulan kâr amaçlı şirketlerin olumsuz yanları da vardır. Sosyal bir işletmenin yöneticileri hakkında, şirket kaynaklarının bir bölümünü sosyal açıdan yararlı amaçlara -örneğin, sosyal bakımdan sosyal gruplardan gelen elamanlara piyasa ücretlerinin üzerinde ücretler sağlamak veya yoksul kişilere indirimli fiyatlarla mal ve hizmet sunmak gibi-tahsis etmekten dava açılabilir. Bu riskin, sermaye sahiplerinin baştan, yatırımlarının sermaye kazançlarının üzerinde bir kâr etme haklarından feragat ettiklerine ilişkin bir bildirim imzalamak suretiyle asgariye indirilmesi mümkündür. Yatırımcılar şirketin bir sosyal işletme olduğunu bildiklerine ve yatırımlarının üzerinde bir kâr payı olmayacaklarına ilişkin bir beyan imzalasalar bile, yine de gelecekte fikir değiştirmelerinin ve şirketin kâr amaçlı bir şirket haline dönüşmesinin kapısı her zaman açık kalacaktır. Hissedarların finansal sıkıntı içinde bulundukları bir ekonomik durgunluk döneminde veya şirketin cazip kârlar elde ettikleri bir piyasa patlaması sırasında bunu tasavvur etmek kolaydır. Yatırımcıların, sosyal işletme yapısını geleneksel kâr maksimizasyonu yapısı lehine terk etmeye karar vermesi riski, kâr maksimizasyonu hedefleyen şirketler için tasarlanmış hukuki yapıyı kullanmanın potansiyel bir dezavantajını oluşturmaktadır.

Sosyal bir işletme kâr amacı gütmeyen bir organizasyon olarak da kurulabilir, örneğin, vakıf, dernek, sivil toplum kuruluşu olarak yapılandırılabilir. Kâr amacı gütmeyen kuruluşlar için alınan bağışlar ve hediyelere karşılık avantajlı vergi kolaylıkları söz konusu olabilir. Bu nedenle vakıflar gibi kâr amacı gütmeyen kuruluşlar, kâr amaçlı kuruluşlara yatırım yapmaktansa, kâr amacı gütmeyen başka kuruluşlara bağışta bulunmayı tercih ederler. Ancak sosyal işletmeler için kâr amacı gütmeyen yapıyı kullanmanın da ciddi kısıtları vardır. Bunlardan en önemlisi kâr amacı gütmeyen işletmelerin tabi tutuldukları sıkı vergi incelemeleridir. Ayrıca, bazı ülkelerde, kâr amacı gütmeyen bir işletmenin kâr amaçlı faaliyetlerinin vergiye tabi olması bu işletme yapısının özel vergi

avantajlarını yok etmektedir. Ayrıca sosyal bir işletmenin herşeyden önce bir işletme olması gerekir. Buna karşılık kâr amacı gütmeyen bir kuruluş, bir işletme olarak tasarlanmamıştır. Kâr amacı gütmeyen bir kuruluş herhangi bir kimsenin mülkiyetinde değildir, hisse senedi ihraç edemez. Sosyal bir işletmenin bir veya birden fazla sahibi vardır, hisse senedi ihraç edebilir. Mülkiyet bir sosyal işletmenin özelliklerinden biridir. İşletme sahipleri şirketle bizzat ilgilenir, yaptıklarından ve elde ettikleri sonuçlardan gurur duyarlar. Bu şirketler aile mirasının bir parçası haline gelecek, kişiler ve aileleri, mirası yaratmak ve korumaktan zevk alacaklardır. Oysa kâr amacı gütmeyen bir kuruluşta kişi, yönetim kurulu üyesi olarak ya da bir çalışan olarak şirketin işlevlerinde yer alabilir. Hizmet dönemi sona erdiğinde, artık kuruluşun bir parçası değildir. Misyona güç ve kalıcılık sağlayan bir miras kavramı söz konusu değildir.

Sosyal işletmeler, kâr amacı gütmeyen kuruluşlara bağlı olarak kâr amaçlı bir şirket şeklinde de kurulabilir. Kâr amacı gütmeyen kuruluşların, mal ve hizmet pazarlayan ve bu suretle kâr amacı gütmeyen ana şirketin faaliyetlerini destekleyen kâr amaçlı yan kuruluşlar kurmaları olağandışı değildir. Kâr amacı gütmeyen kuruluşlar kâr amaçlı kuruluşlarla onlara sosyal misyonlarını gerçekleştirmede kullanabilecekleri geliri sağlayacak ortaklıklar meydana getirirler. Bir vakıf sosyal bir işletme kurmak amacıyla yatırım sermayesi sağladığında, işletme bir yandan sosyal faydalar sağlarken, diğer taraftan varlığını sürdürecek geliri yaratabilir. Zaman içerisinde başlangıç yatırımını geri ödeyeceği için, bu parayı bir diğer değerli amaca yönelik olarak kullanabilir. Bir alışveriş merkezine sahip olan ve onu işleten hayırseverlik bazında hizmet veren bir hastane bu tür bir ilişkiye örnektir. Benzer şekilde kâr amacı gütmeyen dernek ve sivil toplum kuruluşları da, sosyal bir işletmeye sahip olabilir.

Kooperatifler yaptıkları işler nedeniyle sosyal işletme değillerdir. Bir kooperatifin sosyal bir işletme olabilmesi için kooperatif sahiplerinin yoksul insanlardan oluşması gerekir. Böylece kooperatif tarafından yaratılan gelir, yoksullara yardım etmek ve onların yoksulluktan kurtulmalarını sağlamak için ayrılır. Aksi takdirde kooperatifler kâr amaçlı kuruluşlardır.

### 3.2 Özellikle Sosyal İşletmeler için Kullanılan Hukuki Yapılar

Son yıllarda hem kâr amaçlı işletme yapısından hem de kâr amacı gütmeyen organizasyonlardan farklılık gösteren yeni hukuki yapılar ortaya çıkmaktadır.

**Toplum çıkarlı şirket (community interest company-CIC):** Bu şirket türü 2005 yılından beri İngiltere'de var olan ve İngiliz hükümetinin "sosyal kurumlar" olarak adlandırdığı işletmeler için yeni bir hukuki araçtır. İngiltere yetkili makamlarına göre, "CIC'ler çevre iyileştirmesi, toplu taşıma, adil ticaret vb. gibi amaçlar peşinde koşan örgütler olacaktır. Sosyal kurumlar, dezavantajlı alanları yeniden canlandırma, yerel toplulukları güçlendirme ve yerel düzeyde yeni ve yenilikçi hizmetler sunma konusunda artan bir rol oynamaktadırlar."

Bir CIC bazı bakımlardan geleneksel bir hayırseverlik kurumuna benzer. Geleneksel bir hayırseverlik kurumunda olduğu gibi, sahiplerini ve hissedarlarını zenginleştirmek yerine, topluma yarar sağlama taahhüdü altındadır. Hükümetin bir düzenleyici kurumu önerilen her CIC'yi incelemekle ve Kamu Yararı Testi olarak adlandırılan bir testi geçmesini sağlamakla yükümlüdür. Bu, düzenleyici kurumun, CIC'nin amaçlarının makul bir kişi tarafından geniş toplum yararına olduğunun kabul edilmesi anlamına gelir. Aynı zamanda, (birilerinin, özel olarak tanımlanmış, şirketin kurucusunun yakınları gibi içeriden bir gruba "sosyal yararlar" sağlamak üzere kurulmuş kâr amaçlı bir kuruluşu, bir CIC olarak nitelendirmeye kalkışmaları önlemek için) CIC'nin sağladığı yararların küçük veya seçilmiş bir grupla sınırlandırılması gerekir. Bir CIC'nin başarması gereken Kamu Yararı Testi İngiltere'de bir hayırseverlik kurumunun uygunluk göstermesi gereken kurallardan daha az katıdır. Bununla birlikte bir CIC, bir hayırseverlik kurumunun yararlandığı vergi avantajlarından faydalanmaz. Bir CIC herhangi bir normal şirket gibi gelirleri üzerinden vergi öder. Ayrıca, bir CIC tarafından tutulan ve yaratılan varlıklar, harcamalar sonrası kalan gelir fazlası bir varlık kilidine tabidir. Bu, bir CIC'nin varlıklarının sadece toplum yararına kullanılmalarını sağlayan yasal bir koşuldur. Örneğin, varlıklar doğrudan doğruya topluma yarar sağlamak, CIC'nin çalışmalarını genişletmek veya CIC'nin faaliyetlerini korumak veya devam ettirmek için alınan bir kredinin teminatı olarak kullanılabilir. Kâr amaçlı bir şirkette olduğu gibi, bir CIC'nin de bir veya birden fazla sahibi vardır. Bir hayırseverlik kurumu bir CIC'ye sahip olabilir; bir şahıs, grup veya başka bir şirket de sahip olabilir. Ancak bir siyasi partinin bir CIC'ye sahip olmasına izin verilmez. Bir CIC yatırımcılardan kaynak talep edebilir ve hatta sermaye hisseleri ihraç edebilir. Bu bakımdan sosyal işletmeye benzer. Ancak bir sosyal işletmeden farklı olarak, bir CIC pay sahiplerine temettü ödeyebilirse de (bu varlık kilidi kuralının istisnasıdır), bu temettüler yasa ile sınırlandırılmıştır. Halen, hisse başına azami temettü oranı İngiltere Merkez Bankası'nın temel kredi faiz oranının yüzde 5 üzerindedir ve herhangi bir yılda açıklanan toplam temettü şirket paylarının yüzde 35'i ile sınırlıdır. Buradan, bir CIC'nin, sosyal sorunları çözmeye çalışırken karşılaştığı sınırlamalar ve aleyhte durumlarla birlikte, sadece kâr amaçlı bir şirketin özel bir hali olduğu sonucu çıkarılabilir. İngiliz hükümeti bunu şu şekilde açıklamaktadır: "Bir CIC'nin finansman bulmak için gereksinim duyduğu esneklik ile anlamlı bir varlık kilidi arasında bir denge kurulabileceğini düşünüyoruz. Her ne kadar, yatırımcılar mütevazi bir getiri sağlama imkânına sahip iseler de, CIC'nin ana yararlanıcısının geniş toplum olması adına, bu getiri sınırlandırılacaktır.

Prof. Muhammed Yunus'a göre bir CIC sınırlı kâr amaçlı bir şirkettir ve bu haliyle sosyal işletme olmak için gereken niteliklere sahip değildir. Ancak sahipleri ve hissedarları açık olarak yatırdıkları tutarın ötesinde temettü kabulünden veya başka herhangi bir kâr dağıtımından kaçınırlarsa, bir CIC sosyal bir işletmeye dönüşebilir.

Bir başka işletme yapısı L3C olarak adlandırılan, düşük kârlı sınırlı sorumlu şirkettir. **Düşük kârlı sınırlı sorumlu şirket ya da L3C**, sosyal bir amaç peşinde koşan kâr amaçlı bir şirkettir. ABD'de Illinois, Louisiana, Maina, Michigan, North Carolina, Utah, Vermont ve Wyoming eyaletlerinde tanınmıştır. Bu eyaletlerin herhangi birinde oluşturulan L3C diğer eyaletlerde işletilebilir. L3C yasası birçok eyalette de beklemededir. 17 Ekim 2012 tarihi itibariyle 666 teşebbüs L3C olarak kurulmuştur. Vermont 2008 yılında yasayı kabul eden ilk eyalettir. L3C eyalet yasasına göre, bir şirket hayırsever amaçlar için kuruluyorsa L3C olarak oluşturulabilir.

L3C geleneksel sermayeyi vakıflardan gelen hayırsever sermaye ile bir araya getirmek isteyen şirketler için idealdir. L3C, misyon odaklı şirketler için sınırlı sorumlu şirketin yeni bir türüdür. Sınırlı sorumlu şirketle aynı sorumluluk korumasını ve vergilendirmeyi sunmaktadır. Fakat öncelikle hayırsever amaçlar için kurulur kâr amacı ikinci derecededir. Geleneksel kâr amacı olmayan şirketlerin tersine, sahiplerine kârlarını dağıtabilir. L3C hem geleneksel yatırımı hem de program ilişkili yatırım (PRI) olarak adlandırılan çok spesifik hayırsever para tipini çekmek için oluşturulmuştur. PRI, vakıfların hayırsever amaçları ile uyumlu işleri yapmak için vakıflardan kâr amaçlı şirketlere-özsermaye veya borç şeklinde-verilen sermayedir.

Diğer şirketler gibi, bir L3C'nin şahısları, hayırseverlik kurumlarını ve kâr amaçlı şirketleri içerebilecek bir veya birden fazla sahibi vardır. Bir CIC'de olduğu gibi, bir L3C yarattığı fazla üzerinden temettü ödeyebilir. Bu temettülerin düşük olması beklenir zira L3C'leri kuran kanunlar, "şirketin spesifik amacının gelir üretmek veya mülkiyetin değer kazanımı olmamasını" öngörmektedir. Ancak, CIC'lerde olduğu gibi, kârların miktarını kısıtlayan yazılı ilkeler ve bir CIC'nin kârları üzerinden "aşırı" temettü ödeyip ödemediği konusunda hüküm veren bir düzenleyici makam yoktur. Diğer limited şirketlerde olduğu gibi, L3C'ler ABD federal gelir vergisi yasası açısından "transit" statüsüne sahiptirler. Diğer bir ifade ile kurumun kendisi hiç gelir vergisi ödemez. Yerine, tüm gelir, gider, kazanç öğeleri sahiplik hisseleri oranında üyelere yani sahiplere geçer.

L3C'nin kurulması organizasyon sözleşmesi ile olur. Tipik bir L3C sözleşmesi aşağıdaki amaçları içermelidir: 1. Ulusal Gelir Yasasının 170'nci bölümüne göre L3C hayırsever ya da eğitim amaçlarıyla kurulmalıdır. 2. Gelir kazanma ya da mülkiyetin elde edilmesi şirketin önemli amacı değildir. 3. L3C'nin siyası ya da yasal amaçları olmamalıdır. Eğer amaçlar değiştiriliyorsa, sözleşme de değiştirilmelidir. L3C'nin ortakları işletme borçları, kararlar ve faaliyetler için sınırlı kişisel sorumluluğa sahiptir.

L3C yapısının bir avantajı, kuruluş amacının-"yardım veya eğitim amaçlarına" adanma- ve "siyası ve hukuki amaçların" reddi olması, ABD Gelir Yasasının program bağlantılı yatırımları (PRI'ler) tanımlayan kurallarının bir aynası olarak tasarlanmış olmasıdır. L3C'nin hukuki ve finansal yapısı, vakıf türünden bir kuruluşun sosyal amaçlı bir kuruluşa yatırım yapmasını ve yatırdığı meblağı geriye almasını, bu arada, isterse, daha fazla gelir sağlamaktan vazgeçmesini mümkün kılar. Ancak L3C ile sosyal işletme arasındaki büyük fark CIC ile aynıdır. Sahiplere yarar sağlamak için kâr yaratmak ve o kârlardan temettü ödemek L3C'lerin gündeminin bir parçası iken, sosyal işletme kavramının özellikle dışında tutulmuştur.

**Esnek amaçlı şirket,** 2011 yılının ekim ayında ABD'de Kaliforniya eyaleti tarafından kabul edilen kâr amaçlı şirketin yeni bir türüdür. Esnek amaçlı şirket sosyal/çevre bilinçli şirketler için en fazla esneklik yaratan bir şirket türüdür. Özel amaçlar ile kâr amacını birlikte takip etmek isteyen şirketler için oluşturulmuştur. Yapı şirketin özel amacını kâr amacını ilave edebilmesine izin verir. Örneğin, esnek amaçlı şirket bir kamu parkı inşa etme özel amacını sahip olarak kâr amacını daha geliştiriyor olabilir.

Esnek amaçlı şirket düzenlemesi bir veya daha fazla sosyal amaç için veya şirketin amaçlarına özel amaçları eklemek için, şirketlerin esnek amaçlı şirket olarak oluşturulmasına veya şirket ya da diğer tüzel kişilerin esnek amaçlı şirkete dönüştürülmesine izin verir. Esnek amaçlı şirketin yöneticileri şirketi bütün amaçları (bunlara özel amaçlarda dahildir) için yönetmelidir. Şirket ve pay sahiplerinin kazançlarının neler olduğunun belirlenmesinde, geleneksel pay sahibinin yararlarına ilave olarak özel amaç veya amaçlar da düşünülmelidir. Tanımlanan sınırlar içerisinde bu şirket türü, müdürler ve yöneticilerin bir veya daha fazla özel amacı teşvik etmesine izin verir. Şirket sözleşmesinde açık bir şekilde belirlenen bu amaçların ekonomik maliyeti de vardır. Yeterli hesap verebilirlik ve şeffaflık vardır. Diğer taraftan bu amaçları düşünen yönetici ve müdürlerin kararları ve faaliyetleri, parayı boşa harcama ve görev ihlali iddialarına karşı korunmaktadır. Esnek amaçlı şirket diğer şirketlerle aynı kurallara tabidir. Şirket sözleşmesinde açık bir şekilde belirlenen özel amaçlar, sözleşmede aksi belirtilmemişse pay sahiplerinin en az 2/3 oyu ile değiştirilebilir veya sonlandırılabilir. Yeni kuruluşlar esnek amaçlı şirket şeklinde kurulabileceği gibi kâr amaçlı şirketler esnek amaçlı şirkete dönüşebilir. Fakat esnek amaçlı şirket olmak için işletme tarafından alınacak kararın en az 2/3 oy çoğunluğu ile alınması gerekmektedir. Esnek amaçlı şirketin başka bir tür şirkete dönüşümü kararı da aynı oy çoğunluğunu gerektirir.

Esnek amaçlı şirketlerin kamuya duyurulacak şekilde bir yıllık rapor hazırlaması gerekmektedir. Bu raporda, özel amaç, özel amaca ulaşmak için belirlenen yıllık hedefler, özel amaçlı başarısını ölçmek için kullanılan ölçümler; başarılan ya da eksik kalan hedefler; özel amaçlar için harcanan para bulunmalıdır. Fakat bağımsız üçüncü kişi standartlarına karşı herhangi bir ölçüm gerekmez. Yıllık rapor pay sahipleri toplantısı yapılmadan en

az 15 gün önce pay sahiplerine gönderilmelidir. Eğer şirket önceki mali yıl için yıllık raporu pay sahiplerine mali yılın bitiminden sonraki 120 gün içinde göndermezse, herhangi bir pay sahibi yıllık raporu isteyebilir. Şirket bu durumda talepten itibaren 30 gün içinde pay sahiplerine yıllık raporu göndermelidir.

**Fayda şirketi (benefit corporation)** kâr amaçlı şirketin yeni bir türüdür. Mevcut olarak ABD'nin California, Hawaii, Illinois, Maryland, Massachusetts, Louisiana, New Jersey, New York, Pennsylvania, South Carolina, Vermont ve Virginia eyaletlerinde tanınmıştır. Fayda şirketinde şirket amaçlarından birinin bir kamu yararı olarak tanınması gerekmektedir. Şirketin özellikleri ve şartları eyaletler arasında önemli farklılıklar göstermesine rağmen uygulamada birkaç ortak yaklaşım ve kavram vardır.

Fayda şirketi topluma daha fazla şeffaflık sağlarken ölçülebilir olumlu etki yaratmak isteyen şirketler için idealdir. Fayda şirketi kamu yararını şirket amaçları ile yaratan yeni bir şirket türüdür ve tüm sosyal ve çevre performansı hakkında şeffaftır. Toplum ve çevre üzerinde olumlu etki ile tanımlanan genel kamu amaçları için işletilmelidir. Her fayda şirketinin üçüncü kişi değerlendirme aracı olarak bağımsız kullanılan bir değerlendirme yayınlaması gerekmektedir. Olumlu etki yaratmak için, fayda şirketi sadece şirket pay sahiplerinin değerini arttırmaz aynı zamanda toplum, çevre, çalışanlar ve arz edenler içinde işletilir. Yapı yüksek düzeyde şeffaflık ve hesap verebilirlik ister. Her mali yılın sonundan itibaren 120 gün içinde, fayda şirketi bir fayda raporu yayınlamak zorundadır. Bu fayda raporunda sosyal ve çevre üzerinde ilgili yıl içinde nasıl bir performans gösterildiği belirtilmektedir.

Tipik bir kâr amaçlı şirketin genellikle pay sahipliği değerini arttırmak için işletilmesi gerekirken, bir fayda şirketi aynı zamanda topluma ve çevreye olumlu etkisi olan kamu yararı için işletilmelidir. En faydalı şirket statüsüne göre bu etki tanımlanan üçüncü kişi standartlarına göre ölçülmelidir. Kamu yararına ek olarak, bir fayda şirketinin bir yada daha fazla özel kamu yararı tanımasına izin verilmelidir. Genellikle, fayda şirketi aşağıdaki yedi amaçtan bir veya daha fazlasını kabul edebilir: 1. Düşük gelirli birey ya da topluluklara faydalı ürün yada hizmetleri sağlamak, 2. İş yaratmanın ötesinde ekonomik fırsatı teşvik etmek, 3. Çevreyi korumak, 4. İnsan sağlığını iyileştirmek, 5. Sanat, bilim veya bilgiyi teşvik etmek, 6. Kamu yararlı varlıklara sermaye akışını arttırmak, 7. Toplum ve çevre için diğer özel faydaları sağlamak.

Bütün fayda şirketi tüzükleri fayda şirketinin yıllık fayda raporu hazırlamasını gerektirmektedir. Bu yıllık rapor her mali yılın sonundan itibaren 120 gün içinde şirketin pay sahiplerine gönderilmelidir (aynı zamanda diğer yıllık raporda pay sahiplerine gönderilir). Yıllık raporun değerlendirilmesi pay sahiplerine, raporun kapsadığı yol boyunca faydalı şirketin sosyal ve çevre performansını değerlendirmesini sağlar. Değerlendirme fayda şirketi tarafından seçilen üçüncü kişi standartlarına göre hazırlanmalıdır.

Fayda şirketi tipik bir kâr amaçlı şirkettir. Şirket türü bu tip organizasyonlar için mevcut olan hukuki varlık şeklidir. Bazı fayda şirketi tüzükleri, fayda şirketlerinin yönetim kuruluna bir fayda müdürü seçmelerini zorunlu kılmaktadır. Fayda yönetim kurulu üyesi gereken bütün eyaletler, bu kişinin bağımsız olmasını belirlemiştir. Bağımsızlık eyaletlerin fayda şirketi tüzüklerinde tanımlanmıştır ve her bir fayda şirketi bu kişiler için ek özellikler belirleyebilir. Fayda yönetim kurulu üyesi genellikle yönetim kurulundaki diğer yöneticilerden ek güç ve görevlere sahiptir, şirketin yıllık fayda raporunun hazırlanmasıyla ilgili belli güç ve görevleri vardır.

Fayda şirketi bir şirket türü olduğundan, yöneticileri ve çalışanları genellikle şirketlerin yöneticisi ve çalışanlarıyla aynı çeşit kişisel sorumluluğa tabidir. Çoğu eyalet fayda şirketi yönetici ve çalışanlarına sorumluluktan koruma sağlar. Sonuç olarak genellikle fayda şirketi yönetici ve çalışanlarının pay sahipliği değerini arttırmak pahasına kamu yararı amacını izledikleri için sorumluluğu yoktur. Fakat bu korumanın kapsamı eyaletten eyalete farklılık gösterir. Bütün mevcut fayda şirketi tüzükleri şirketin bir yıllık fayda raporu hazırlamasını ve mali yılı takip eden 120 gün içinde pay sahiplerine göndermesini zorunlu kılmaktadır. Aynı zamanda diğer yıllık raporlarda gönderilmelidir.

Fayda şirketinin sosyal ve çevre performansını ölçmek için kullandığı üçüncü kişi standartları ile ilgili tüzük şartları eyaletten eyalete farklılık göstermektedir. Üçüncü kişi standardı, fayda şirketinden bağımsız bir organizasyon veya kişi tarafından geliştirilmelidir. Genellikle üçüncü kişi, fayda şirketiyle veya bağlı ortaklıklarıyla maddi ilişkisi olmayan bir kişidir. (ya doğrudan ya sahibi yada tüzelkişinin yöneticisi ile maddi ilişki). Kişi fayda şirketinin çalışanıysa, şirketin çalışanı ile akraba ise, şirketin sermayesinin en az yüzde 5 ine sahipse maddi ilişki vardır. Ek olarak, üçüncü kişi standartları belli şeffaflık şartlarını sağlamalıdır.

Fayda şirketinin diğer kâr amaçlı şirketlerle karşılaştırıldığında finanslama ve fonlama açısından hem olumlu hem olumsuz yanları bulunmaktadır. Potansiyel avantajlara fayda şirketinin takip ettiği toplum yararına ilgisi olan yeni yatırımcı gruplarını çekebilmesi ve fon araştırması yapan diğer şirketlerden fayda şirketinin farklılaştırması dahildir. Diğer taraftan şirket mülkiyetini alan ya da alması beklenen yatırımcılar, şirket kararlarında pay sahipliği değerinden ziyade diğer faktörlerin dikkate alınması nedeniyle fayda şirketinin yatırımlarından memnun olmayabilirler. Teşebbüse katkıda bulunan yatırımcı ve destekçilerin tipleri ve bu yatırımcı ve destekçilerin motivasyonu, en uygun şirket şekline karar verirken düşünülmelidir ve önemlidir.

**Karma şirketler:** Yaklaşık 20 yıldır, sosyal teşebbüsler amaçlarına ulaşmak için hem kâr amaçlı hem de kâr amacı olmayan vergi istisnasına sahip kuruluşları kombine eden daha karmaşık bir kuruluş yapısını kabul etmeye başladılar. Örneğin, hayır kuruluşu kâr amaçlı bir alt kuruluş oluşturabilir veya hayır amaçları ile uyumlu kâr

amaçlı kuruluşta mülkiyet hakkını alabilir. Ya da kâr amaçlı şirket bağlı şirket kuruluşu olarak özel bir vakıf oluşturabilir. Aşağıda tanımlanan iki karma yapı vardır.

Hayır kuruluşlarına bağlı kâr amaçlı şirketler: Sosyal teşebbüsler hayır kuruluşu olarak oluşturulmayı seçebilir ve daha esneklik yaratmak için kâr amaçlı bir şirket kurabilir. Örneğin, hayır kuruluşu belli faaliyetler için finansman alternatiflerindeki çeşitlemeyi keşfetmeyi, çalışanları çekmek için sermaye tazminatı sağlamayı istiyor olabilir. Fakat hayır kuruluşunun bu finansal faaliyetleri takip etmesine ve vergi muafiyeti statüsünün devam etmesine izin verilmez. Hayır kuruluşu bu alanlarda finansal olarak daha fazla büyümek için bağlı şirket kurabilir. Bağlı şirketin faaliyetlerinin doğasına bağlı olarak, bir sınırlı sorumlu şirket oluşturulabilir. Hayır kuruluşu bağlı şirkette kendi hisse paylarına sahiptir ya da üyelik çıkarlarını elinde tutar. Böylece diğer yatırımcılardan fonları arttırabilir.

Kâr amaçlı şirketin kâr amacı olmayan kuruluşu: sosyal teşebbüsler için diğer bir seçenek kâr amaçlı şirket oluşturulması ve hayır amaçlarını takip etmek için kâr amacı olmayan bir vakfın kurulmasıdır. Bunlar, kâr amaçlı şirketin herhangi bir tipi olarak kurulmasına rağmen yaygın olarak şirket vakıfları olarak adlandırılır. Özel vakıf vergiden düşülebilir bağışlar alabilir fakat hayır kurumunun aksine, çeşitlendirilmiş bağışlayıcı temeline sahip olması gerekmez. Tipik olarak kâr amaçlı şirketle ilgili onun sahipleri ve onun çalışanları tarafından fonlanır. Hayır kurumunun aksine, özel vakıf, özellikle kâr amaçlı şirketle işlemlerle ilgili kısıtlayıcı kurallara konu olmasına rağmen kâr amaçlı şirketin sponsorları tarafından kontrol edilebilir. Bu yapı hayır amaçlarını takip etmede kâr amaçlı şirket tarafından sıklıkla kullanılır.

### 3.3 Sosyal İşletmelerde Hukuki Yapıya Karar Verirken Kullanılan Ölçütler

Sosyal işletmelerde farklı hukuki yapılar kullanılabilir. Burada iki temel prensip vardır. Bir organizasyonu sosyal işletme yapan hukuki yapısı değildir onun faaliyetleridir. Kısa dönem ve gelecekteki finansman olanakları ve sağlanacak gelir fırsatları seçilecek yapıda önemli bir etkiye sahiptir.

Sosyal işletme için hukuki yapıya karar verirken ele alınacak ölçütler şöyle sıralanabilir: 1. Kişisel sorumluluk, 2. Sahiplik, 3. Kısa ve uzun dönem finansman, 4. Yönetim, 5. Kâr dağıtımı

Tek kişi işletmesi ya da tüzel kişiliği olmayan ortaklıklar, hukuki faaliyetlerden ve herhangi bir borçtan doğrudan sorumludur. Eğer organizasyon zarar ederse, kredi kurumlarına ödenecek parayı bulma kişilerin sorumluluğundadır. Teşebbüsün ortaklar /üyelerden ayrı bir hukuki yapıya sahip olması, teşebbüs tarafından sebep olunan finansal zararlar ya da teşebbüsün finansal kayıplara tabi olması durumunda ortakları/üyeleri kişisel sorumluluktan kurtaracaktır. Fakat yönetim ve ortakların ihmal ve kasten bir hareketi varsa bu korumayı kaybedebilir. Genellikle uzun dönem işletilme niyetinde olan sosyal işletme ortaklarına/üyelerine sınırlı sorumluluğu veren hukuki yapıyı kullanacaktır.

Eğer kontrol ve mülkiyet kurucular için önemliyse paylı bir şirket, kâr amacı olmayan bir kuruluştan daha uygun olabilir. Daha fazla paya sahip olmak daha fazla oy ve teşebbüsün yönetim stratejisi ve işletilmesi üzerinde daha fazla etkiye sahip olmak demektir.

Yasal yapı erişebilecek finansman tipini belirleyecektir. Örneğin, bir sınırlı sorumlu şirket paylarını satabilir ve böylece yatırım alır. Kısa dönemde fonların alınmasına izin veren yapının seçilmesi daha sonra istenilen ölçekte yatırımın yapılmasını önler. Bu yüzden işletme ilk olarak uzun dönemli fonlara ulaşabilecek şekilde kurulmalı ve buna ulaşabilecek bir yasal yapı seçilmelidir.

Bütün hukuki yapılarda, hukuki yapıya bağlı olarak yöneticiler, yönetim kurulu, mütevelli heyeti bulunur. Bu yöneticiler veya yönetim kurulu organizasyonun stratejisini oluşturacak, stratejinin dağıtıldığından emin olacak, organizasyonun yasal yükümlülükleri karşıladığından emin olup kanun içerisinde işletecektir. Daha çok sayıda yönetim kurulu üyesi yönetimin bakış düzeyini geliştirir ve şeffaflığı temin eder. Aynı zamanda hibe edilen paranın birden daha fazla kişi tarafından görülmesini temin eder. Fakat daha fazla yönetim kurulu üyesinin daha zor ve organizasyonun karar almasında daha fazla zaman harcadığı akılda tutulmalıdır. Görüş açısındaki çeşitliliği sağlama açısından doğru dengenin kurulması için çalışılmalıdır.

Sosyal işletmeler kâr sağlamalıdır. Kârın nasıl kullanılacağı yasal yapı tarafından belirlenir. Eğer dış yatırımcılar varsa, dağıtılan kâr miktarının sınırlandırılması konusunda anlaşma yapsalar bile, kendilerine kâr dağıtılmasını bekleyecektir.

### 3.4 Sosyal İşletme için Türkiye'de Kullanılabilecek Hukuki Yapılar

Sosyal işletme için Türkiye'de kullanılabilecek mevcut hukuki yapılar, kâr amacı güden ve kâr amacı gütmeyen kuruluşlardan oluşabilir. Kâr amacı gütmeyen kuruluşlar, vakıflar, dernekler ve sivil toplum kuruluşlarından oluşmaktadır. Kâr amacı güden kuruluşlar ise adi şirketler, kollektif, komandit, anonim, limited şirketler, kooperatifler gibi ticari şirketlerden oluşmaktadır. Şirket kurucusu için hangi yapının daha uygun olduğunun belirlenmesinde ortak ve üyelerin sorumluluğu, vergiler, kuruluşun yönetimi, kuruluşun sahipliği, kâr dağıtımı, kuruluşun finansman kaynakları önem arzedecektir. Türkiye'de mevcut şirket yapıları dışında yeni bir şirket türü oluşturmak mümkün değildir. Fakat bir vakıf veya dernek bir ticari şirkete sahip olabilir ya da bir kâr amaçlı şirket bir vakıf veya dernek kurabilir. Sosyal işletme için öngörülen sosyal amaçlara bu şekilde ulaşmak da mümkün olabilir.

## 4 Türkiye'de Mikro Finansman

Türkiye'de 27 Mart 2014 tarihli Türk-iş Haber Bültenine göre Mart 2014 itibariyle dört kişilik ailenin açlık sınırı 1.149, 02, yoksulluk sınırı ise 3.742,73 TL'dir. Türkiye İstatistik Kurumu verilerine göre, 2012 yılında yoksul sayısı 22 307 000, yoksulluk oranı % 30,3, yoksulluk açığı 31,1 olarak belirlenmiştir. Yoksulluk açığının 100'e yaklaşması, yoksulluğun derecesinin çok fazla olduğunu, küçülmesi ise yoksulluk risk derecelerinin daha az olduğunu ifade etmektedir. 2009 yılı itibariyle yoksul fert sayısı 10.669 000 dur. Türkiye'de nüfusun %50'si yoksulluk sınırının altında yaşamaktadır. Yoksulluk riskiyle karşı karşıya olan grupların başında kadınlar ve işsiz gençler gelir ki, mikro kredi uygulamasında hedef kitleyi bu gruplar oluşturmaktadır. Mikro kredi uygulaması yoksullukla mücadelede çözüm yollarından biri olarak görülmektedir. Türkiye'de mikro kredi uygulamaları Kadın Emeğini Değerlendirme Vakfı (KEDEV) tarafından başlatılmıştır. 1995-1997 yılları arasında İstanbul'un dar gelirli bölgelerinde 100 kadına iş yapmaları için küçük miktarlarda krediler verilmiş, bu kredilerde geri dönüş oranı %98 oranında olmuştur. 1999 depremi nedeniyle öncelikler değişmiş fon arayışları ertelenmiştir. 2002 yılında mikro kredi projesi için gereken fonun bulunmasıyla KEDV, Maya Mikro Ekonomik Destek İşletmesini kurarak mikro kredi programını başlatmıştır. Türkiye'de 2003 yılında AKP Diyarbakır Milletvekili Prof. Dr. Aziz Akgül tarafından gündeme getirilen mikro kredi projesi Dünya Bankası'nın 500 milyon USD kredi vermesi ve Başbakanlığın ek olarak 130 milyon USD bütçe ayırmasıyla hayata geçirilmiştir. Prof. Dr. Aziz Akgül'ün başkanlığını yaptığı İsrafı Önleme Vakfı, Diyarbakır Valiliği ve Grameen Trust (Prof. Dr. Muhammed Yunus başkanlığındaki mikro finans kuruluşu) işbirliğiyle 11 Haziran 2003 tarihinde Diyarbakır'da proje uygulanmaya başlanmıştır.

Başlangıçta sadece mikrokredi olarak sunulan mikrofinans, yoksulların kredi dışında, tasarruf, sigorta gibi diğer finansal hizmetlere de ihtiyacının olduğunun anlaşılmasıyla genişlemiştir. Mikrofinans, yoksul kişilere, mevduat, borçlanma, ödeme hizmetleri, tüketici kredileri, para transferleri ve sigorta gibi finansal hizmetlerin sağlanması anlamına gelmektedir ve mikrokrediden daha geniş bir kavramdır. Mikrofinans, finansal kuruluşlardan herhangi bir hizmet alamamış düşük gelirli veya yoksulluk sınırında bulunan insanlar ile mikro veya küçük ölçekli girişimcilere yönelik küçük miktarlı kredi, tasarruf, ödeme hizmetleri, para transferleri ve sigorta gibi ürün ve hizmetlerin sürdürülebilir şekilde sunulmasına dayanan bir finansman stratejisi olarak tanımlanmaktadır. (Ateş, Öğütoğulları, Türkiye'de Yoksullukla Mücadelede Mikrokredi Uygulamaları, s.1) Mikrofinans kuruluşu ise yoksulları hedef alan finansal hizmetleri sunan organizasyondur. Türkiye'de mikrofinans ve mikro kredi faaliyetlerinin gerçekleştirilmesinin imkân veren mevcut yasal yapının içerisinde, bankalar, vakıflar, dernekler, kooperatifler, il özel idareleri, sivil toplum kuruluşları bulunmaktadır.

5302 sayılı ve 22 Şubat 2005 tarihli İl Özel İdaresi Kanununun (Resmi Gazete Tarih: 4/3/2005 Sayı: 25745, Tertip: 5 Cilt: 44) il özel idaresinin görev ve sorumluluklarına ilişkin 6. Maddesinin a bendine göre "yoksullara mikro kredi verilmesi" konusu il özel idaresinin görev ve sorumlulukları arasında yer almaktadır.

Türkiye'de mikrokredi ve mikrofinansmanın uygulanması ile ilgili bir kanun teklifi hazırlanmıştır. "Mikro Finansman Kuruluşları Hakkında Kanun Teklifi" 23 Mart 2005 tarihinde TBMM'ye sunulmuş, çeşitli komisyonlarda görüşülmüş fakat sonuçlandırılmamıştır. Bu kanun teklifinin amacı, ihtiyaç sahibi mikro girişimcilere finansman sağlamak üzere faaliyette bulunacak mikro finans kuruluşlarının kuruluş, yönetim, çalışma, tasfiye ve denetlenmelerine ilişkin esasları düzenlemektir. Kanun Tasarısı ile mikro finans kuruluşları mevduat kabul eden ve mevduat kabul etmeyen mikro finans kuruluşları olarak ikiye ayrılmaktadır. Mevduat kabul eden mikro finans kuruluşu: bu Kanuna göre, mevduat kabul eden mikro finans kuruluşu adı altında kurulan ve mikro girişimciler ile mevduat kabul etmeyen mikro finans kuruluşlarına nakdi finansman sağlamak üzere faaliyet gösteren kuruluşları, mevduat kabul etmeyen mikro finans kuruluşu: bu Kanuna göre, sivil toplum kuruluşları tarafından kurulacak işletmeler de dahil olmak üzere, mevduat kabul etmeyen mikro finans kuruluşu adı altında kurulan ve mikro girişimcilere mevduat kabul etmeden finansman sağlamak üzere faaliyet gösteren kuruluşları ifade etmektedir. Mevduat kabul eden mikro finans kuruluşlarının anonim şirket şeklinde, mevduat kabul etmeyen mikro finans kuruluşlarının anonim ve limited şirket şeklinde kurulması ve iki tür kuruluşun da Bankacılık Düzenleme ve Denetim Kurulunun izniyle kurulması düzenlenmiştir. Kuruluş ve faaliyetleri BDDK'nın iznine tabidir.

# Türk Hukukunda Bankacılık Zimmeti Suçu

# Crime of Banking Embezzlement in Turkish Law

Asst. Prof. Dr. Nazmiye Özenbaş (Anadolu University, Turkey)

## Abstract

White-collar crime, which is perhaps the most important of types of crime in terms of havoc and committed by the superior contrary to common belief, has much more influence than conventional crime. This crimes, are committed by well-respected professionals in their business. Besides, this study explain one of the this type of crime, crime of banking embezzlement. Because of the vital importance of banking to countries' economy and the detrimental effects of the fraudulent actions of bankers to the well being of a bank and its systemic effect to the other banks in the market, regulators impose criminal sanctions. In Turkey, a special embezzlement offence that can be conducted by bankers is regulated under article 160 of the Banking Law No.5411. This article aims to analyze this controversial criminal offence within Banking Law No.5411 and Turkish Criminal Law No.5237. In this respect, the study includes general information about embezzlement, elements of the offence, special circumstances that affects the nature of the offence, specific forms of the offence and prosecution methods. It should be noted that, the elements and structure of bank embezzlement which is expected in the first paragraph of Article 160 is very similar to the embezzlement which is provided for in the Penal Code. However, the structure of which is conditional embezzlement expected in the third paragraph of that Article is very different from embezzlement provided in the Criminal Code. In the study also, recommendations are presented regarding the upon completion of the crime and trial precondition.

## 1 Giriş

Bankacılık sektörünün gerek ülkemiz ekonomisinde, gerekse dünya ekonomisinde çok önemli bir yeri bulunmaktadır. Bankacılık sektöründe yaşanan olumsuzluklar ülke ekonomisini, finansal piyasaları etkilediği kadar tasarruflarını bankalarda değerlendiren tasarruf sahiplerini de olumsuz şekilde etkilemektedir. Bu durum ise bankacılık sektöründe gerçekleşen zararların nihai mağdurunun, tasarruflarını bankalarda tutan kişilerin de ötesinde, ülkede yaşayan tüm vergi mükellefleri olduğu gerçeğini ortaya koymaktadır (Erişen, 2011).

Bankacılık zimmeti suçu ekonomik suçlardandır. Ekonomik suç kavramı gelişen ekonomik ilişkiler neticesinde ortaya çıkmış olan, ekonomik düzenin korunması ve geliştirilmesi amacına hizmet eden; sadece bir suçu ifade etmekten ziyade ekonomik düzene ilişkin olan suçları ifade eden genel bir kavramdır. Bir suçun ekonomik suç olup olmadığını tespit edebilmek için suçun kim tarafından işlenmiş olduğu, hangi hukuki yararı ihlal ettiği veya kovuşturma usulü ölçütleri kullanılmaktadır (Cin Şensoy, 2004).

Ekonomik suçlarda fail genel olarak eğitimli bir kişidir ve mesleki bilgisini kullanarak bu suçları işlemektedir (İnceoğlu, 2006). Bu suçların soruşturulması ve kovuşturulması için özel ve teknik bilgi gereklidir. Ekonomik suçlar genel olarak tüm kamusal yaşama etki eden ve dolayısıyla hukuki değer olarak, bireysel değerlerden ziyade kamusal değerleri koruma altına alan suçlardır (Mahmutoğlu, 2003).

Bankacılık zimmeti suçu mesleki bilgiyle işlenebilen, failin belirli niteliklerinin olmasının arandığı, soruşturulması ve kovuşturulması özel usullere tabi olan ve işlenmesi halinde finansal piyasalara duyulan güveni sarsan bir suçtur. Bu durumda bankacılık zimmeti suçunun ekonomik suçlar grubu arasında yer aldığı söylenebilir (İnceoğlu, 2006).

Bankaların ekonomik sistemdeki yeri ve genel olarak ülke ekonomisi için taşıdığı önem birlikte değerlendirildiğinde, bankacılık sektörünün korunması zorunluluğu ortaya çıkar. Doğal olarak devletin böylesine hassas bir alanı sadece özel hukuka ya da idare hukukuna ait kurallarla düzene koyması ve bu disiplinlerin öngördüğü yaptırımlarla karşılaması yeterli olmamakta, bu nedenle ceza hukuku araçlarından da istifade etmek mecburiyetinde kalınmaktadır (Mahmutoğlu, 2003).

Devlet çeşitli yollarla bankacılık sektörü üzerinde müdahalelerde bulunmaktadır. Ancak bunlardan belki de en önemlisi Bankacılık Kanunu'nda düzenlenen suçlar ve bunların karşılığında öngörülen yaptırımlardır. 5411 sayılı Kanun ile finansal piyasalarda güven ve istikrarın sağlanması, kredi sisteminin etkin bir şekilde çalışması ve tasarruf sahiplerinin hak ve menfaatlerinin korunması amaçlanmıştır. Bu bağlamda, Bankacılık Kanunu'nun "Yaptırımlar, Soruşturma ve Kovuşturma Hükümleri" başlığını taşıyan 14. kısmının "Suçlar" başlığını taşıyan 2. bölümünde, 150-162. maddeleri arasında bankacılık faaliyetlerine ilişkin çeşitli adli suçlar düzenlenmiştir. Kanundaki suçlar düzenleme sırasına göre şunlardır: İzinsiz Faaliyette Bulunmak (m.150), Mevduat ve Katılım Fonu Sahiplerinin Haklarını Engellemek (m.151), Düzeltici, İyileştirici ve Kısıtlayıcı Önlemleri Almamak (m.152), Yetkili Merciler İle Denetim Görevlilerince İstenen Bilgi ve Belgeleri Vermemek ve Görevlerini Yapmalarını Engellemek (m.153), Belgelerin Saklanması Yükümlülüğüne Aykırı Davranmak (m.154), Gerçeğe Aykırı Beyanda Bulunmak (m.155), İşlemlerin Kayıt Dışı Bırakılması ve Gerçeğe Aykırı Muhasebeleştirilmesi

(m.156), Sistemi Engelleme, Bozma, Verileri Yok Etme veya Değiştirme (m.157), İtibarın Zedelenmesi (m.158), Sırların Açıklanması (m.159) ve Zimmet (m.160).

5237 sayılı Türk Ceza Kanunu içerisinde de bankacılık suçlarına (bankacılık sırrının ifşası veya yetkisiz birine aktarılması (m. 239), banka veya kredi kartlarının kötüye kullanılması suçu (m. 245) gibi) yer verilmiştir. Ceza Kanunu'nda bazı suçların ise bankalara karşı veya bankaların araç olarak kullanılması suretiyle işlenmesi de cezayı artıran bir sebep olarak düzenlenmiştir. Bunun yanında başka bazı kanunlarda da bankacılık suçları düzenlenmiştir (Banka Kartları ve Kredi Kartları Kanunu m. 36-41 gibi).

Türk Ceza Kanunu'nda genel olarak zimmet suçuna yer verilmiştir. Ancak Bankacılık Kanunu'nda özel olarak sadece bankacılık faaliyetleri kapsamında işlenebilecek bir zimmet suçuna yer verilmiştir. Bankacılık Kanunu'nda yer alan zimmet ile genel zimmet suçunun ortak ve ayrılan yönleri bulunmaktadır.

## 2　Türk Ceza Kanunu'nda Yer Alan Zimmet Suçu

Yukarıda da ifade edildiği üzere Türk Ceza Kanunu (TCK) içerisinde "Millete ve Devlete Karşı Suçlar ve Son Hükümler" başlıklı dördüncü kısımda "Kamu İdaresinin Güvenilirliğine ve İşleyişine Karşı Suçlar" başlıklı birinci bölümde 247-249. maddelerde zimmet suçu düzenlenmiştir.

TCK m. 247 uyarınca; "Görevi nedeniyle zilyetliği kendisine devredilmiş olan veya koruma ve gözetimiyle yükümlü olduğu malı kendisinin veya başkasının zimmetine geçiren kamu görevlisi, beş yıldan on iki yıla kadar hapis cezası ile cezalandırılır."

Türk Ceza Kanunu'na göre zimmet suçu bir özgü suç olup, bu suç ancak kamu görevlisi niteliğine sahip kişiler veya özel kanunlarda kamu görevlisi gibi cezalandırılacağı belirtilen kişiler tarafından işlenebilir. Kamu görevlisi kamusal bir görevi icra eden kimsedir. Kamu görevi ise, kamu hukuku ve emredici düzenlemeler tarafından düzenlenen ve kamu idaresinin iradesinin oluşturulması ve yansıtılması veya kamu idaresinin iradesinin emredici yetkilerle veya tasdik etme yetkisiyle gerçekleştirdiği idarî faaliyettir (Okuyucu Ergün, 2008). Kamu görevlisi olmayan bir kimse ise failin kamu görevlisi olduğunu bilerek suça iştirak etmesi halinde ancak azmettiren veya yardım eden (TCK m.40) sıfatıyla sorumlu tutulabilir.

TCK'da düzenlenen zimmet suçunun ancak kamu görevlisi sıfatına sahip kişiler tarafından işlenebilmesi bu suçu, herkes tarafından işlenebilen bir suç olan güveni kötüye kullanmadan ayırmaktadır. Zira her iki suçun unsurları çok büyük ölçüde benzerdir (Güngör, 2009).

Bu suç kamu idaresinin güvenilirliğine ve işleyişine karşı suçlar arasında yer almaktadır. TCK'da suçlar korunan hukuki yarar ölçütüne göre sınıflandırılmış olduklarından bu suçla korunan hukuki yararın kamu idaresinin güvenilirliği ve işleyişi olduğu söylenebilir. Ceza hukukunda kamu idaresi devletin yasama, yürütme ve yargı fonksiyonları kapsamında yürüttüğü tüm faaliyeti kapsayacak şekilde geniş anlaşılmaktadır (Benussi, 2001). Ayrıca zimmet suçu ile malvarlığının korunma malvarlığı da bu suçla korunan hukuki yararlardandır (Antolisei, 2000).

Zimmet suçu, taşınır veya taşınmaz mallar üzerinde işlenebilir. Malın mülkiyetinin devlete, herhangi bir kamu kurumuna ya da herhangi bir kişiye ait olması arasında fark bulunmamaktadır (Aslan, 2013). Para "mal" kavramına dahildir. Ayrıca TCK m.198 uyarınca devlet tarafından ihraç edilip de hamiline yazılı bonolar, hisse senetleri, tahviller ve kuponlar, yetkili kurumlar tarafından çıkarılmış olup da kanunen tedavül eden senetler, tahviller ve evrak ile millî ziynet altınları, para hükmünde olduğundan zimmet suçuna konu olabilirler (Tezcan, Önok, Erdem, 2013).

Zimmet suçunun söz konusu olabilmesi için, failin suçun maddî konusunu oluşturan malın zilyetliğine veya koruma ve gözetimi yükümlülüğüne görevi nedeniyle sahip olması gerekir. Bu şart, suçun ön şartı niteliğindedir. Ceza hukukunda zilyetlik kavramı hem doğrudan zilyetliği hem de dolaylı zilyetliği kapsar (Nuvolone, 1942). Dolaylı zilyetliğin söz konusu olduğu hallerde kamu görevlisi, aslında malı fiziken elinde bulundurmamakta, ancak görevi gereği söz konusu malın fiili tasarrufunu idare etmektedir (Benussi, 2001). Görevi nedeniyle değil de kamu görevlisine duyulan kişisel güven nedeniyle zilyetliği devredilmiş olan mallar üzerinde zimmet suçu işlenemez; çünkü burada kamu idaresine duyulan güven değil, kamu görevlisine duyulan kişisel güven söz konusudur (Toroslu, 2013; Erman, Özek, 1992).

Kamu görevlisinden beklenen, görevi dolayısıyla zilyetliği kendisine devredilmiş olan veya koruma ve gözetimiyle yükümlü olduğu mallar üzerinde yalnızca görevinin gerektirdiği şekilde tasarrufta bulunmasıdır. Dolayısıyla, kamu görevlisinin bu mallar üzerinde görevinin gerekleriyle bağdaşmayan bir surette tasarrufta bulunması, bu malları kendisinin ya da başkasının zimmetine geçirmesi suç olarak tanımlanmıştır. Zimmete geçirme ifadesinden suç konusu mal üzerinde malik gibi tasarrufta bulunmak anlaşılmalıdır. Bu bağlamda, suç konusu malın sahiplenilmesi, özgülendiği amaç dışında kullanılması, tüketilmesi şeklinde suç işlenebileceği gibi; suç konusu malın bir başkasına satılması yahut verilmesi şeklinde de işlenebilir (Donay, 2007a). Suç, icrai veya ihmali bir hareketle işlenebilir (Manzini, 1982). Kamu idaresi adına aldığı malı idareye vermemek ihmali bir davranış iken, görevi nedeniyle zilyedi olduğu parayı kendisi için harcamak icraî bir davranıştır (Segreto, De Luca, 1999).

Zimmet, kasten işlenebilen bir suç olup olası kastla işlenebilip işlenemeyeceği öğretilde tartışmalıdır (bkz. Donay, 1968; Tezcan, Erdem, Önok, 2013, Özgenç, 2009). Kural olarak 5237 sayılı TCK bakımından kasten işlenebilen tüm suçlar hem doğrudan hem de olası kastla işlenebileceğinden zimmet suçu da olası kastla işlenebilir. Ancak zimmet suçunun oluşabilmesi için failin temellük veya faydalanma kastıyla hareket etmesinin gerektiği görüşüyle özel kastın aranması gerektiğini savunan yazarlar da bulunmaktadır (Artuk, Gökcen, Yenidünya, 2005).

Zimmet suçu, kural olarak, zimmete geçirme fiili gerçekleştiği anda tamamlanır; dolayısıyla bir ani suçtur (Fiandaca, Musco, 2012). Zimmet suçunun tamamlanması bakımından, zimmete geçirme fiilinin malvarlığına ilişkin bir zararın ortaya çıkmasına neden olup olmamasının önemi yoktur (Toroslu, 2013).

5237 sayılı TCK'nın 247. maddesinin 2. fıkrası uyarınca, suçun zimmetin açığa çıkmamasını sağlamaya yönelik hileli davranışlarla işlenmesi halinde ceza artırılır.

5237 sayılı TCK'nın 247. maddesinin 3. fıkrası uyarınca "Zimmet suçunun, malın geçici bir süre kullanıldıktan sonra iade edilmek üzere işlenmesi halinde verilecek ceza yarı oranına kadar indirilebilir". Bu duruma kullanma zimmeti adı verilir. Kullanma zimmetinin daha az cezalandırılmasının nedeni, burada failin tehlikeliliğinin ve zararın daha az olmasıdır (Segreto, De Luca, 1999).

TCK m.248 uyarınca, " (1) Soruşturma başlamadan önce, zimmete geçirilen malın aynen iade edilmesi veya uğranılan zararın tamamen tazmin edilmesi hâlinde, verilecek cezanın üçte ikisi indirilir. (2) Kovuşturma başlamadan önce, gönüllü olarak, zimmete geçirilen malın aynen iade edilmesi veya uğranılan zararın tamamen tazmin edilmesi hâlinde, verilecek cezanın yarısı indirilir. Etkin pişmanlığın hükümden önce gerçekleşmesi hâlinde, verilecek cezanın üçte biri indirilir."

TCK m.249 uyarınca "Zimmet suçunun konusunu oluşturan malın değerinin azlığı nedeniyle, verilecek ceza üçte birden yarıya kadar indirilir." Madde gerekçesinde belirtildiği üzere suç konusu malın değerinin az olması durumunda da zimmet suçu oluşur. Ancak, bu durumlarda zimmet suçundan dolayı verilecek cezada belli bir oranda indirim öngörülmüş; madde metninde de bu indirimin oranı belirlenmiştir.

## 3  Bankacılık Zimmeti Suçu

### 3.1 Genel olarak

Zimmet suçu sadece TCK'da değil Bankacılık Kanunu'nda (Kabul tarihi: 19.10.2005, R.G. 01.11.2005-sy. 25893) da düzenlenmiştir.

5237 sayılı TCK'da düzenlenen zimmet suçunun yalnızca kamu görevlileri tarafından veya özel kanunlarında kamu görevlisi gibi cezalandırılacağı öngörülen kimseler tarafından işlenmesi mümkündür. Özel hukuk tüzel kişisi olan bankaların yürüttüğü faaliyeti kamusal faaliyet olarak nitelemek mümkün değildir. Dolayısıyla kamu görevlisi sıfatları bulunmayan ve özel hukuk tüzel kişisi olan bankaların personelinin genel ceza kanunundaki zimmet suçundan cezalandırılması mümkün değildir. Bankacılık faaliyetinin teknik niteliği ile banka varlık ve paraları üzerinde zimmet suçunun yaygın olarak işlenebildiği dikkate alındığında; faillerin zimmet fiili yerine başka suçlardan cezalandırılmaları da söz konusu olabilecektir. Ancak bu durum banka malvarlığı değerlerinin ve bankalara duyulması zorunlu güvenin korunması açısından yeterli olmadığından, bankacılık sektöründe zimmet suçu özel olarak düzenlenmiştir (Gülşen, 2011).

Bankacılık kanununda yer alan zimmet suçu, TCK'da düzenlenen zimmet suçuna göre özel hüküm niteliğindedir.

5411 sayılı Kanunun 160.maddesine göre; " Görevi nedeniyle zilyetliği kendisine devredilmiş olan veya koruma ve gözetimiyle yükümlü olduğu para veya para yerine geçen evrak veya senetleri veya diğer malları kendisinin ya da başkasının zimmetine geçiren banka Yönetim Kurulu başkan ve üyeleri ile diğer mensupları altı yıldan on iki yıla kadar hapis ve beş bin güne kadar adli para cezası ile cezalandırılacakları gibi bankanın uğradığı zararı tazmine mahkum edilirler.

Suçun zimmetin açığa çıkmamasını sağlamaya yönelik olarak hileli davranışlarla işlenmesi halinde faile on iki yıldan az olmamak üzere hapis ve yirmi bin güne kadar adli para cezası verilir; ancak adli para cezasının miktarı bankanın uğradığı zararın 3 katından az olamaz. Ayrıca meydana gelen zararın re'sen ödettirilmesine hükmolunur.

Faaliyet izni kaldırılan ya da Fona devredilen bir bankanın hukuken veya fiilen yönetim ve denetimini elinde bulundurmuş olan gerçek kişi ortaklarının kredi kuruluşunun kaynaklarını, kredi kuruluşunun emin bir şekilde çalışmasını tehlikeye düşürecek şekilde doğrudan veya dolaylı olarak kendilerinin veya başkalarının menfaatlerine kullandırmak suretiyle kredi kuruluşunu her ne suretle olursa olsun zarara uğratmaları zimmet olarak kabul edilir. Bu fiilleri işleyenler hakkında on yıldan yirmi yıla kadar hapis ve yirmi bin güne kadar adli para cezasına hükmolunur; ancak adli para cezasının miktarı bankanın uğradığı zararın üç katından az olamaz. Ayrıca meydana gelen zararın müteselsilen ödettirilmesine karar verilir.

Soruşturma başlamadan önce zimmete geçirilen para veya para yerine geçen evrak veya senetlerin veya diğer malların aynen iade edilmesi veya uğranılan zararın tamamen tazmin edilmesi halinde verilecek cezanın üçte ikisi indirilir.

Kovuşturma başlamadan önce gönüllü olarak zimmete geçirilen para veya para yerine geçen evrak veya diğer malların aynen iade edilmesi veya uğranılan zararın tamamen tazmin edilmesi halinde verilecek cezanın yarısı indirilir."

Yukarıda yer alan maddede iki farklı suç tipi öngörülmektedir. Bu suç tiplerinden birincisi maddede yer alan suçlardan birincisi ilk fıkrada düzenlenen " Bankacılık kanununda düzenlenen bankacılık zimmeti " olarak adlandırılabilecek zimmet suçu, diğeri ise; maddenin 3. fıkrasında yer alan ve "zimmet benzeri suç" olarak tanımlanan suçtur.

Çalışmamızın konusunu birinci fıkrada yer alan zimmet suçu teşkil edecektir.

### 3.2 Suçun hukuki konusu

Suçun hukukî konusu, suç tarafından doğrudan ihlâl edilen hukukî varlık veya menfaattir (Toroslu, 1970).

Bankacılık zimmeti suçunun koruduğu hukuki değer konusunda öğretide görüş birliği mevcut değildir.

Öğretideki bir görüşe göre, bu suçla asıl olarak korunan hukuksal değer bankanın mülkiyet hakkıdır. Buna göre bankacılık faaliyetinin ülke ekonomisi bakımından büyük önem taşıması bankacılığın temelinde özel mülkiyet hakkının bulunduğu gerçeğini değiştirmeyecektir. Bu suçun kamu bankası personeli tarafından işlenmesi durumunda, mülkiyete ek olarak kamu görevlisine duyulan güvenin de suçun koruduğu hukuki değerler arasında yer alacağı ifade edilmiştir (Sözüer, 2005).

Bir diğer görüşe göre ise, Bankacılık Kanunu'nda yer alan zimmet suçu birden fazla hukuki değeri korumaktadır Bunlardan biri bankacılık sistemine duyulan güven ve istikrar, diğeri ise bankanın mülkiyet hakkıdır (İnceoğlu, 2006; Gökcan, 2008; Alıcı, 2007).

Öğretideki diğer bir görüş ise söz konusu madde ile korunmak istenenin genel olarak ekonomik düzen olduğunu ifade etmektedir. Yazara göre bu tür suçlar esas itibarıyla ülke ekonomisini tahrip etmektedir. Bu nedenle de, söz konusu suçla malvarlığı ve güven ilişkisinin korunması da düşünülmüştür ancak, asıl korunmak istenen hukuki değer ülkenin ekonomik düzenidir (Mahmutoğlu, 2003).

Bu suçla korunan hukuki yararın sadece halkın bankaya karşı duyduğu güven duygusu olduğu da savunulmuştur (Haznedar, 2007).

Bankacılık Kanunu da 160. maddesinin 1. ve 3. fıkralarına bakıldığında "bankanın uğradığı zarar"dan bahsetmektedir. Ayrıca 162. maddesinin son fıkrasında, ilgililere (bankaya) şikâyet hakkı tanınmaktadır. Böylece söz konusu suçun hukukî konusunun bankanın malvarlığına ilişkin menfaati olduğu söylenebilir.

### 3.3 Suçun faili

5411 sayılı Bankacılık Kanununun 160.maddesinin 1.fıkrasında düzenlenen zimmet suçu ancak yasada belirtilen nitelikleri haiz olan kimseler tarafından yani "Banka yönetim kurulu başkan ve üyeleri ile diğer mensupları" tarafından işlenebilen bir suç olduğundan bir "özgü suç"tur. Maddede belirtilen "banka mensupları" ibaresi bankada çalıştırılan herkesi kapsayan bir ifadedir (İnceoğlu, 2006; Okuyucu Ergün, 2008). Önemli olan söz konusu kimselerin suçun maddî konusunu oluşturan malın zilyetliğine görevleri gereği sahip olmalarıdır. Gerek kamu bankaları gerekse özel bankaların mensupları bu suçun faili olabilirler. Yargıtay da bu yönde karar vermiştir (7.C.D., 25.01.2010, 2006/6147, 2010/769).

Bankaların güvenlik görevlilerinin suçun faili olup olamayacağı konusu öğretide tartışılmaktadır (bkz. Gürses, 2009; Okuyucu Ergün, 2008). Kanaatimizce, söz konusu zimmet suçu bankacılık kanununda yer alması ve bankacılık faaliyeti ile ilgili olması nedeni ile güvenlik görevlileri tarafından işlenemeyecek niteliktedir.

### 3.4 Suçun Mağduru

Bankacılık zimmeti suçunun mağdurunun olup olmadığı veya var ise kimin mağdur olduğu hususu tartışmalıdır. Bu tartışmanın nedeni tüzel kişilerin mağdur olup olamayacağına dair öğretide yer alan görüş ayrılığıdır. Kanaatimizce bankacılık zimmeti suçunun mağduru banka tüzel kişiliğidir (Aynı yönde bkz. Güngör, 2009; Gürses, 2009). Banka tüzel kişiliğinin suçun mağduru değil suçtan zarar gören olduğu da ifade edilmiştir (Özgenç, 2009). Bankanın bir anonim şirket olarak ayrı bir kişiliği olduğuna göre, banka ortağı olan kişiler, bu suçun mağduru olarak kabul edilemezler. Bankacılık Kanunu md. 160/3'te düzenlenen suçun failinin, bankanın ortağı olan gerçek kişiler olması da bunu desteklemektedir. Zira bir suçta failin ve mağdurun aynı kişi olması düşünülemez (Güngör, 2009).

### 3.5 Suçun maddi konusu

Bir suçun maddi konusu, suç olarak kabul edilen hareketin üzerinde gerçekleştiği kişi ya da şeydir. 5411 sayılı Bankacılık Kanunu'nda ise zimmet suçunun maddi konusu suçun basit ve nitelikli hali için (m.160/1-2) "para, para yerine geçen evrak veya senetler ile diğer mallar" olarak tespit edilmiştir.

Öğretide para, para yerine geçen evrak veya senetler veya diğer mallar şeklindeki ifadenin gereksiz olduğu, tüm bunlar için "mal" kavramının kullanılmasının yeterli olacağı, çünkü para, para yerine geçecek evrak ve senetlerin de mal kavramına dahil olduğu ifade edilmiştir (Okuyucu Ergün, 2008).

Maddede sözü geçen para kavramı, ulusal ve uluslararası mübadele aracını ifade eder ve hem kağıt hem de madeni paraları kapsamaktadır. Ayrıca milli paraların yanında yabancı devlet paraları da buna dahildir. Ancak tedavülden kaldırılan paralar, para hükmünde değildir (Gülşen, 2011). (Öğretide tedavülde olmayan paraların da maddi konuya dahil olduğu da ileri sürülmüştür (Gürses, 2009)).

Bankacılık zimmeti suçunun diğer bir maddi konusunu " para yerine geçen evrak veya senet" oluşturmaktadır. 5237 sayılı TCK'nun 198. maddesi gereğince "Devlet tarafından ihraç edilip de hamiline yazılı bonolar, hisse senetleri, tahviller ve kuponlar, yetkili kurumlar tarafından çıkarılmış olup da kanunen tedavül eden senetler, tahviller ile milli ziynet altınları para hükmündedir". Senet ise; bir kimsenin oluşturduğu ve kendi aleyhinde delil teşkil eden yazılı belgedir (Kuru vd. 2002). Para yerine geçen evrak veya senedin suçun maddi konusunu oluşturabilmesi için suç tarihinde mutlaka ekonomik bir değer taşımaları gerektiği kabul edilmektedir (Artuk vd., 2013).

Suçun maddi konusunu oluşturan unsurlardan birisi de, " diğer mallardır." Kanun koyucu para ve para yerine geçen evrak ve senet niteliğinde olmayan ancak banka için ekonomik değer ifade edebilen her türlü malı suçun konusunun kapsamına alınmıştır. Bu bağlamda, bankacılık faaliyeti ile ilgili olup maddi bir değer ifade eden ve banka personeline görevi nedeniyle zilyetliği devredilebilen her türlü mal zimmet suçunun konusunu oluşturabilir (Gürses, 2009).

İnceleme konusu suçun maddî konusunu oluşturacak mal, bankaya ya da kişilere ait olabilir (Antolisei, 2000). Gerçekten, 4389 sayılı Bankalar Kanununda bu suçun maddi konusunu oluşturan malın bankaya ait olması aranırken, 5411 sayılı Bankacılık Kanununda bu şarta yer verilmemiştir.

### 3.6 Suçun maddi unsuru

Söz konusu madde gereğince; bankacılık zimmeti suçunun gerçekleşebilmesi için maddenin 1.fıkrasında düzenlenen "...para, para yerine geçen evrak veya senetlerin veyahut diğer malların zilyetliğinin suçun failine görevi nedeniyle devredilmesi" veya "para, para yerine geçen evrak veya senetlerin veya diğer malların failin koruma ve gözetimi altında olması" koşullarının gerçekleşmesi gerekmektedir. Bu, suçun önşartıdır. Suçun önşartları suçun kanuni tanımında bulunmakla beraber suç unsurlarından farklı olan, bu unsurlara dahil edilemeyen ve hareketin yapılmasından önce varlığı aranan, bulunmaması durumunda suçun oluşmasını engelleyen hallerdir (Centel vd, 2008).

Zilyetlik, en basit tanımı ile bir nesne üzerindeki fiili hâkimiyettir. Zilyetliğin iki unsurunun bulunduğu belirtilmektedir. Bunlar "fiili hakimiyet" ve "zilyetlik iradesi"dir. Fiili hakimiyet, bir eşyadan doğrudan doğruya yararlanabilecek, onun üzerinde etki meydana getirebilecek durumda olmak demektir. Zilyetlik için kişide mal üzerinde zilyet olma iradesinin de bulunması gerekir. Banka mensubunun görevi nedeniyle malın zilyetliğini devralma yetkisi kanundan, banka içi mevzuattan ve uygulamadan kaynaklanabilir.

Kişinin malın zilyetliğine sahip olup olmadığına veya malı korumak ve gözetmekle yükümlü olup olmadığına, o kişinin bankadaki unvanına, konumuna, görev alanına bakılarak karar verilir (Güngör, 2009).

Malın zilyetliğinin veya malla ilgili koruma ve gözetim yükümlülüğünün tek bir banka mensubuna ait olması gerekli değildir. Birden fazla banka mensubu da aynı malın zilyetliğine veya o malı koruma ve gözetme yükümlülüğüne ortaklaşa sahip olabilirler (Güngör, 2009).

Zilyetlik kavramı bankacılık zimmeti bakımından hem fiilen tasarruf edebilme yetkisini hem de hukuken tasarruf edebilme yetkisini kapsar (Okuyucu Ergün, 2008).

Zilyetliğin devri ise; bir kimsenin önceki zilyedin rızası ile zilyet kılınmasıdır. Zilyetliğin devri, devre yetkili kişinin serbest iradesi ile gerçekleşmelidir.

Zilyetlik, kişiye, görevini yerine getirmesi için tanınmış, mal üzerinde başkasının gözetimi ve denetimi olmaksızın bağımsız olarak tasarruf edebilme yetkisi sağlar. Dolayısıyla, başkasının doğrudan gözetimi altında çalışması nedeniyle mal üzerinde herhangi bir yetkisi bulunmayan banka mensubunun zilyetliğinden söz edilemez.

Failin, malın zilyetliğine görevi nedeniyle sahip olması gerekir. Dolayısıyla, zilyetlik ile görevi arasında bir bağ bulunmalıdır. Görevi nedeniyle zilyedi olmadığı bir şeyi mal edinen banka mensubu zimmet suçundan değil, koşulları varsa güveni kötüye kullanma ya da dolandırıcılık gibi başka suçlardan sorumlu olacaktır.

Bankacılık zimmeti suçunun maddi unsurunu oluşturan hareket, zilyetliğinde veya koruma veya gözetimi altında bulunan suça konu malın failin kendisinin veya başkasının zimmete geçirilmesidir. Zimmete geçirmekten ne anlaşılması gerektiği konusunda yasa metninde açık bir düzenleme yer almamaktadır.

Zimmete geçirme, öğretide, banka mensubunun görevi dolayısıyla zilyetliği kendisine devredilmiş olan veya koruma ve gözetimi ile yükümlü olduğu para veya mal üzerinde tahsis edildiği gaye dışında kendisi veya başkası

için malik gibi tasarrufta bulunması şeklinde tanımlanmıştır (Erman, Özek, 1992). Fail burada zilyetliği fiilen mülkiyete dönüştürmektedir (Antolisei, 2000).

Üzerinde malik gibi tasarrufta bulunulan suça konu para veya malın karşılığının/teminatının bulunduğu veya diğer bir anlatımla zimmet fiili ile oluşan zararın sonradan giderimi olanağının suçun işlendiği sırada dahi mevcut olduğu durumlarda dahi bankacılık zimmeti suçu oluşacaktır (Toroslu, 2013). Ancak Yargıtay bu durumda suçun oluşmayacağına karar vermiştir (31.05.2005 tarih, 2004/11-158E.,2005/58K.).

Kullanma zimmetine ilişkin bir hükme 5411 sayılı Bankacılık Kanununda yer verilmemiştir. Bu nedenle kullanma zimmeti nedeni ile failin cezalandırılması mümkün değildir. Somut olayın özelliğine göre, failin ya hiç cezalandırılmaması veya şartları varsa bankacılık zimmeti suçundan cezalandırılması gerekir (Anka Yargıtay aksi yönde karar vermiştir: YCGK, 27.01.2009, 7/1519). Öğretide kullanma bankacılık suçu şeklinde bir kullanma zimmeti suçunun da mümkün olduğu görüşü de bulunmaktadır (Yiğit, 2006).

Bankacılık zimmeti de ani bir suçtur. Zimmete geçirme fiilinin gerçekleştiği anda ve yerde tamamlanır. Söz konusu suçun tamamlanması bakımından bir zararın ortaya çıkıp çıkmaması önemli olmadığı gibi, failin beklediği yararı ya da başka bir yararı elde edip etmemesi de önemli değildir (aksi yönde görüş için bkz. Gülşen, 2011).

Aksi yönde bir kabul, hesap/kasa kapatma tarihinden önce yerine koyma şartıyla, banka mensuplarına bankaya ait misli malları şahsî amaçları doğrultusunda kullanma hakkı tanımak anlamına gelecektir. Böylece, örneğin bankanın parasını hesap/kasa kapatma tarihine göre kısa süreli repo yaptıktan sonra hesap/kasa kapatma tarihinden önce yerine koyan ve repodan elde ettiği miktarı mal edinen banka mensubu, zimmet suçundan sorumlu tutulamayacaktır. İkinci bölümden farklı olarak burada banka mensubunun kullanma zimmetinden değil, bankacılık zimmetinden sorumlu tutulmasının nedeni, Bankacılık Kanununda kullanma zimmetinin öngörülmemiş olmasıdır. Eğer bu yönde bir hüküm bulunsa idi banka mensubunun kullanma zimmetinden sorumlu tutulması söz konusu olabilirdi (Okuyucu Ergün, 2008).

### 3.7 Suçun manevi unsuru

Bankacılık zimmeti, TCK'da düzenlenen zimmet suçu gibi, sadece kastla işlenebilir. Kanunda bankacılık zimmeti bakımından özel kast aranmadığından (bu suçta özel kastın aranması gerektiği yöndeki görüş için bkz. Mahmutoğlu, 2003; Erişen 2011) , buradaki kast genel kasttır. Kasta ilişkin genel kurallar gereğince, buradaki kast doğrudan kast olabileceği gibi, dolaylı kast şeklinde de olabilir (Artuk vd. 2005). Taksirli fiiller ancak kanunda açıkça düzenlendikleri takdirde cezalandırılır. Kanunda suçun taksirli olduğuna dair bir açıklık bulunmadığına göre suçun taksirli şeklinin cezalandırılması mümkün değildir.

Failin malı zilyetliğine geçirme anı ile zimmete geçirme anı birbirinden farklı ise; suçun oluşumu için zimmete geçirme anında kasıtlı hareket etmesi yeterlidir.

5237 sayılı TCK'nın 5. maddesi uyarınca, "Bu kanunun genel hükümleri, özel ceza kanunları ve ceza içeren kanunlardaki suçlar hakkında da uygulanır." Bu nedenle TCK'nın hataya ilişkin hükümleri, bankacılık zimmeti bakımından da uygulanabilir.

### 3.8 Suçun özel görünüş biçimleri

*Teşebbüs*, TCK' nın 35.maddesinde düzenlenmiştir. Buna göre, " Kişi işlemeyi kastettiği bir suçu elverişli hareketlerle doğrudan doğruya icraya başlayıp da elinde olmayan nedenlerle tamamlayamaz ise...cezalandırılır". Bu bakımdan değerlendirildiğinde bankacılık zimmeti suçu teşebbüse elverişli bir suçtur. Ancak teşebbüsün cezalandırılması yönünden Bankacılık Kanununun 160.maddesinin 1.fıkrasında düzenlenen zimmet suçu, suça konu mal üzerinde failin malik gibi tasarrufta bulunmaya yönelik hareketlerinin gerçekleşmesi ile tamamlanır. Failin icra hareketlerine başlamasına rağmen hareketleri tamamlayamadığı durumda fail 1. fıkrada tanımlanan bankacılık zimmeti suçuna teşebbüsten cezalandırılabilecektir.

Zimmet suçunu işlemeye karar veren banka personeli, icra hareketlerine başladıktan sonra gönüllü olarak suçu işlemekten vazgeçer veya kendi çabalarıyla suçun tamamlanmasını veya neticenin gerçekleşmesini önlerse, teşebbüsten ceza verilmez (TCK m.36). Ancak tamam olan kısım bir suç oluşturuyorsa o suçun cezası verilir. Burada önemli olan failin gönüllü olarak hareket etmesidir.

*İştirak* bakımından konuyu değerlendirdiğimizde ise öncelikle inceleme konumuzu teşkil eden suçun bir özgü suç olduğunu tekrar vurgulamak gerekmektedir. Özgü suçlarda ancak belli niteliği haiz olan ve özel faillik niteliğini taşıyan kimseler suçun faili olabilir. Kanunda belirtilen nitelikleri taşımayan kimseler ise; 5237 sayılı TCK'nun 40.maddesinin 2.fıkrası gereğince ancak " azmettiren " veya " yardım eden " olarak sorumlu tutulabilir (Okuyucu Ergün, 2008; İnceoğlu, 2006). Bankacılık zimmeti suçunda banka mensuplarının suç faili olması, suça konu mal veya paranın zilyetliğinin görevleri nedeniyle kendilerine devredilmiş veya bu kimselerin mal veya paraları koruma yükümlülüğünün bulunmasından kaynaklanmaktadır. Bu nedenle suçun asıl faili sadece banka yönetim kurulu başkan ve üyeleri ile diğer mensupları olabilir (Gülşen, 2011).

Bankacılık Kanunu'nun 161. maddesi, *fikri içtimayı* Bankacılık Kanunu'nda düzenlenen suçlar bakımından özel olarak düzenlenmiştir. Söz konusu madde şöyledir; "Bu Kanuna göre suç teşkil eden hareket ve fiiller başka

kanunlara göre de cezayı gerektirdiği takdirde, failleri hakkında en ağır cezayı gerektiren kanun maddesi uygulanır. 6762 sayılı Türk Ticaret Kanununun sorumluluğu gerektiren hükümleri saklıdır."

161. madde, yapılan ihlaller bakımından Bankacılık Kanunu ile diğer kanunlar arasındaki ilişkiyi düzenlemektedir. İşlenen bir fiille Bankacılık Kanunu'nun birden fazla hükmünün ihlal edilmesi durumunda, TCK'nın 44. maddesi uygulanmalıdır (Donay, 2007b).

### 3.9 Suça ve cezaya etki eden nedenler

5411 sayılı Kanunun 160.maddesinin 2.fıkrasına göre; "Suçun zimmetin açığa çıkmamasını sağlamaya yönelik hileli davranışlarla işlenmesi halinde faile on iki yıldan az olmamak üzere hapis ve yirmibin güne kadar adli para cezası verilir ancak adli para cezasının miktarı bankanın uğradığı zararın 3 katından az olamaz. Ayrıca meydana gelen zararın ödenmemesi halinde ise; Mahkeme'ce re'sen ödettirilmesine hükmolunur."

Bu hüküm TCK'nın 247.maddesinin 2.fıkrasında yer alan ve zimmet suçuna ilişkin olarak getirilen ağırlaştırıcı nedenlere dair düzenleme ile aynıdır.

Bu nitelikli halin tespiti için her şeyden önce somut olayda "hileli bir davranış"ın bulunup bulunmadığı araştırılmalıdır. Bunun ardından ise bu hileli davranışın suçun açığa çıkarılmasını engellemek amacıyla kullanılıp kullanılmadığının tespiti gerekir. Somut olayda bu iki durumun varlığı ve hilenin zimmetin açığa çıkmamasını sağlamaya elverişli olması halinde, zimmet suçu daha ağır bir ceza ile cezalandırılacaktır.

Yargıtay uygulamasında, bir fiilin hileli bankacılık zimmeti olup olmadığı, 5237 sayılı TCK'da düzenlenen zimmet suçunda olduğu gibi, "zimmetin normal denetim ve bankada mevcut kayıt ve belgelerin karşılaştırılması ve kontrolü sonucu tespit edilip edilemeyeceği, suçun banka dışı araştırmayı gerektirecek derecede bankayı aldatıcı ve fiilin açığa çıkmasını engelleyecek her türlü hileli faaliyette bulunmak suretiyle işlenip işlenmediği" ölçütlerine göre belirlenmektedir (7. CD, T. 12.12.2001, E. 2001/13607, K. 2001/19489).

Bu ağırlaştırıcı nedenin gerçekleşebilmesi için zimmete geçirmenin hileli davranışlarla işlenmesi gerekir (Toroslu, 2013). Malın zimmete geçirilmesinden sonra suçun ortaya çıkmasını önlemek için hileli davranışların işlenmesi halinde söz konusu fıkra hükmü uygulanmaz (Güngör, 2009).

Failin zimmet yaptığı hesaba ilişkin banka nezdinde bulunan gerek yazılı gerekse sistemsel bilgileri değiştirmesi veya yok etmesi, çeşitli muhasebe hileleri kullanarak zimmet yaptığı paranın izini kaybettirmesi gibi durumlar ağırlaştırıcı nedenin uygulanabileceği hallere örnektir.

Bankacılık zimmeti suçunda cezayı hafifletici nedenler, 5411 sayılı Bankacılık Kanununun 160.maddesinin 4-6.fıkralarında düzenlenmiştir. Bunlardan 4 ve 5. fıkralarda öngörülen haller etkin pişmanlık hükümleridir.

Bankacılık Kanunun 160.maddesinin 4.fıkrasına göre, "Soruşturma başlamadan önce zimmete geçirilen para veya para yerine geçen evrak veya senetlerin veya diğer malların aynen iade edilmesi veya uğranılan zararın tamamen tazmin edilmesi halinde verilecek cezanın üçte ikisi indirilir." Aynı maddenin kovuşturma başlamadan önceki aşamada gerçekleşen iade veya tazmini düzenleyen 5.fıkrasına göre ise; "Kovuşturma başlamadan önce gönüllü olarak zimmete geçirilen para veya para yerine geçen evrak veya senetlerin veya diğer malların aynen iade edilmesi veya uğranılan zararın tamamen tazmin edilmesi halinde verilecek cezanın yarısı indirilir. Bu durumun hükümden önce gerçekleşmesi halinde verilecek cezanın üçte biri indirilir."

Maddede yasa koyucu tarafından bankacılık zimmeti suçundan doğan zararın tazmininin veya malın iadesinin gerçekleştiği aşamaya göre farklı indirim oranları öngörülmüştür. Birinci halde bu iadenin soruşturma başlamadan önce gerçekleşmesi aranmaktadır. Ceza Muhakemesi Kanununa göre, soruşturma suç şüphesinin öğrenilmesinden iddianamenin kabul edilmesine kadar geçen evreyi kapsar (CMK md. 2/1-e). İkinci halde ise iadenin kovuşturma başlamadan önce yapılması gerekir. Yine aynı Kanuna göre, iddianamenin kabulüyle başlayıp, hükmün kesinleşmesine kadar geçen evre kovuşturma evresidir. Dolayısıyla bu halde malın en geç iddiname kabul edilene kadar iade edilmesi gerekir. Son halde ise, failin zimmetine geçirdiği malı kovuşturma evresi içinde, yani en geç hüküm verilene kadar iade etmesi gerekir. Söz konusu indirim nedeninin uygulanabilmesi için suça konu malın fail tarafından rızaya dayalı şekilde fiilen ve tam olarak iade edilmiş olması veya zararın tamamen tazmin edilmiş olması zorunludur.

5411 sayılı Kanunun 160.maddesinin 6.fıkrası, "suça konu malın değer azlığını" bir indirim nedeni olarak düzenlemektedir. Bankacılık Kanununun 160. maddesinin 6. fıkrası uyarınca "Zimmet suçunun konusunu oluşturan para veya para yerine geçen evrak veya senetlerin veya diğer malların değerinin azlığı nedeniyle, verilecek ceza üçte birden yarıya kadar indirilir."

### 3.10 Suçun cezası

Bankacılık zimmeti suçunun basit halini (Bank. K.m.160/1) işleyen faillere "altı yıldan oniki yıla kadar hapis ve beşbin güne kadar adlî para cezası" verileceği gibi failler bankanın uğradığı zararı tazmine de mahkum edilir.

160. maddenin 1. fıkrasında "bankanın uğradığı zararı tazmine mahkûm edilir." hükmü yer almaktadır. 5271 sayılı CMK uyarınca, artık şahsî hak davalarının ceza mahkemelerinde görülmesi mümkün değildir. Ancak, Bankacılık Kanunu, CMK'ya göre sonraki özel kanun niteliğinde olduğundan Bankacılık Kanununda yer alan bu hükmün bir istisna teşkil ettiği kabul edilmelidir. Bilindiği gibi, özel hukuk davalarında hâkim, tarafların

istemleri ile bağlıdır. Bankacılık Kanununun 160. maddesinin 1. fıkrasında ise, tarafların istemde bulunması şartı belirtilmeksizin bankanın uğradığı zararın tazminine mahkûm edileceği öngörülmüştür.

Bankanın uğradığı zararın, malın zimmete geçirme fiilinin işlendiği tarihe göre belirlenmesi gerekir.

Bankacılık Kanununun 160. maddesinin 2. fıkrasında ise faile on iki yıldan az olmamak üzere hapis ve bankanın uğradığı zararın üç katından az olmamak şartıyla yirmi bin güne kadar adli para cezası verilecek; meydana gelen zararın ödenmemesi halinde mahkemece re'sen zararın ödettirilmesine hükmolunacaktır.

Bu fıkraya göre hapis cezasının alt sınırı 12 yıl olarak öngörülmüşken cezanın üst sınırı belirtilmemiştir. Bu durumda TCK'nın "Süreli Hapis Cezası" başlıklı 49. maddesine göre hapis cezasının üst sınırı 20 yıldan fazla olamayacaktır.

Bankacılık zimmeti suçu ile elde edilen mal veya değerin fail tarafından mağdur bankaya iade edilmesi veya zararın tazmin edilmesi durumunda davaya bakan Mahkeme'ce ayrıca müsadere kararı verilmesi mümkün değildir. Diğer bir ifade ile 5237 sayılı TCK'nın 55. maddesinin 1. fıkrasının burada uygulama alanı yoktur. Çünkü söz konusu fıkranın son cümlesi uyarınca, müsadere kararı verilebilmesi için maddî menfaatin suçun mağduruna iade edilememesi gerekir. Hâlbuki Bankacılık Kanununun değinilen hükümlerinde hem adli para cezası hem de bankanın uğradığı zararın giderilmesi öngörülmüştür. Bu nedenle, ayrıca müsadere kararı verilemez (Donay, 2007b).

### 3.11 Soruşturma usulü

Bankacılık zimmeti suçunun soruşturulması başvuru şartına tabi kılınmıştır. Bunu düzenleyen Bankacılık Kanununun 162. maddesine göre: "Bu kanunda belirtilen suçlara ilişkin soruşturma ve kovuşturma yapılması, Kurum veya Fon tarafından Cumhuriyet başsavcılığına yazılı başvuruda bulunulmasına bağlıdır. Bu başvuru muhakeme şartı niteliğindedir."

162. maddenin açık hükmü uyarınca, bankacılık zimmetinin soruşturulması ve kovuşturulması, BDDK veya TMSF tarafından Cumhuriyet başsavcılığına yazılı başvuruda bulunulmasına bağlıdır. 162. maddede söz konusu başvuru muhakeme şartı olarak nitelendirilmiştir. Bilindiği gibi, muhakeme şartı, bir suç haberi kendilerine ulaştığında suçları takiple görevli makamların kendiliklerinden harekete geçmeleri ve ceza muhakemesini başlatmaları kuralının istisnasıdır; bunlar, gerçekleşmedikleri sürece muhakemeyi başlatmak veya devam ettirmek ve sanığı cezalandırmak mümkün değildir (Toroslu, Feyzioğlu, 2013, Centel, Zafer, 2011). Bu bağlamda bankacılık zimmetinin soruşturulması ve kovuşturulması BDDK ya da TMSF tarafından Cumhuriyet başsavcılığına yazılı başvuru yapılmasına bağlıdır ve söz konusu şart gerçekleşmedikçe ceza muhakemesinin başlatılması mümkün değildir (Okuyucu Ergün, 2008).

Devletin, bazı suçlar bakımından, belirli makamları ile dava açılmasını zorunlu kılmayacak şekilde yaptığı şikâyet olarak tanımlanan kuruma ceza muhakemesi hukuku bakımından müracaat adı verilmektedir. Bankacılık Kanununun 162. maddesinde yer alan ve "Kurum veya Fon tarafından yapılacak yazılı başvuru" olarak ifade edilen kurum da müracaattır (Okuyucu Ergün, 2008). 162. madde kapsamında bir suç işlendiğini öğrenen TMSF veya BDDK, yazılı başvuruda bulunmak zorunda değildir; takdir yetkisini kullanarak savcılığa başvurmayabilir.

BDDK ve TMSF'nin yanında itibarın zedelenmesi, sırların açıklanması ve zimmet suçlarından dolayı ilgililerin 5271 sayılı Ceza Muhakemesi Kanunu uyarınca dava açma hakkı Bankacılık Kanununun 162. maddesinde saklı tutulmuştur. İlgililerin sahip olduğu bu hak esasen şikâyet niteliğindedir (Güngör, 2009).

Üzerinde durulması gereken bir başka husus ise BDDK ve TMSF'nin katılan sıfatını almaları hususudur. 5411 sayılı Bankacılık Kanununun 162.maddesinin 1.fıkrasında yer alan hüküm gereğince; zimmet suçu nedeni ile yapılacak soruşturma sonucunda açılacak kamu davalarında BDDK veya TMSF' başvuruda bulunmaları halinde başvuru tarihlerinde katılan sıfatını karara gerek olmaksızın kendiliğinden kazanacaklardır. Bu durumda anılan kurumların madde çerçevesindeki başvurularının varlığı yeterli olup davaya bakan hâkimin başvuruyu katılma şartlarının oluşup-oluşmadığı yönünden inceleme ve takdir hakkı bulunmamaktadır (Donay, 2007b).

## 4 Sonuç ve Değerlendirme

Bankacılık sistemi, ülke ekonomileri için çok önemli bir unsurdur. Bankacılık siteminin düzenlenmesi, denetlenmesi ve işleyişinin korunması ülkede var olan ekonomik düzenin sağlıklı olarak devam etmesi için zorunludur. Bu zorunluluk bankacılık sistemine çok sayıda devlet müdahalesini gerekli kılmış ve bu müdahaleler de bankacılık sistemini sadece özel hukuk kurallarının uygulandığı bir alan olmaktan çıkarıp kısmen kamu hukukunun faaliyet alanına sokmuştur.

Bu kapsamda düzenlenen bankacılık zimmeti suçu hukukumuzda ilk olarak 4389 sayılı Bankalar Kanunu'nda yer verilmiştir. Zimmet suçuna daha sonra 5411 sayılı Bankacılık Kanunu'nda da yer verilmiştir.

Bankacılık sisteminin işleyişinin devam etmesi, bu sisteme duyulan güvenin korunması ve sürdürülebilmesine bağlıdır. Zimmet suçu ile hem bankaların malvarlıkları ve buna bağlı olarak bankalara duyulan güvenin sürdürülebilmesi amaçlanmıştır.

Bankacılık Kanunu'nda düzenlenmiş olan zimmet suçu asıl olarak zimmete geçirmeyi suç saymaktadır (5411 sayılı Kanun. m160/1-2). Zimmete geçirme ise bir mal üzerinde malik gibi tasarrufta bulunma şeklinde ifade edilmektedir. Bu suç ani suçlardandır.

Bu suç sadece "banka yönetim kurulu başkanı, üyeleri ve diğer mensupları" tarafından işlenebilen bir özgü suçtur.

Suçun manevi unsuru ise kast olup, suç doğrudan veya muhtemel kastla işlenebilir. Failde genel kastın bulunması suçun manevi unsurunun oluşması için gerekli ve yeterlidir.

Son yıllarda ülkemizde ve dünyada bankacılık sektöründe ortaya çıkan sorunlar ve bu sorunların ülke ekonomilerine getirdiği ağır yük düşünüldüğünde, bankacılık zimmetine ilişkin ayrıntılı yasal düzenlemeler yapılması ve ağır yaptırımlar getirilmesi yerinde bir yaklaşım olmuştur.

# Türk Ticaret Kanunu'nda Birleşme, Bölünme ve Tür Değişikliğine İlişkin Düzenlemelerin Türkiye'deki İş Hayatına Etkileri

# The Effect of Regulations Related to the Modifications of Union, Division and Type Alteration in Turkish Commercial Law to Business Life

Dr. Semih Büyükipekçi (Selçuk University, Turkey)

Prof. Dr. Naim Ata Atabey (Selçuk University, Turkey)

## Abstract

Businesses nowadays need restructuring in which economy becomes global to create new values, to be efficient in world market and to reach strategic priorities in business life. Being restructured provides some advantages such as the increase of the company's value, reorganization of the structure and management of the company and the increase of competition advantage. The importance of union, division and type alteration has increased to advance competition strength of Turkish companies both in domestic market and foreign market. There were some insufficiencies in legal regulations of union, division and type alteration in Turkey for many years. In this context, the draft was completed in 2005, was passed in parliament in 2011 and with Law No: 6102 it came into force in July, 2012. The purpose of this chapter is by presenting the modifications of union, division and type alteration after Law No: 6102 Turkish Commercial Code, revealing the innovations brought in Commercial Life/ Business Life. With these legislative regulations made in Turkey the improvement of commercial relationships with Macedonia and Balkan States is expected.

## 1 Giriş

Şirketler kazanç sağlamayı hedef edinen mal ve kişi topluluklarıdır (Arslan ve Çelik, 2010). Küreselleşme ile birlikte artan rekabet, şirketlerin yaşam mücadelelerini gün geçtikçe zorlaştırıyor ve şirketler için ayakta kalabilmek, bir takım stratejik kararların doğru zamanda ve doğru biçimde uygulanabilmesine bağlı hale geliyor. Bu noktada da stratejik yönetim becerisi ön plana çıkıyor. Yeni ekonominin yöneticileri, ancak vizyonlarını geniş tutarak, modern yönetim yaklaşımını benimseyerek ve iş dünyasının sürekli yenilenen norm ve trendlerine uyum sağlayabilme yeteneklerini geliştirerek kendilerini küresel rekabet girdabından kurtarma şansına sahip olabilecekler. Böylesine zorlayıcı bir ortamın doğal sonucu olarak şirketler zaman içinde çeşitli ortaklıklar kurmak ve stratejik işbirlikleri yapmak zorunluluğu hissettiler (msxlabs.org,2011). Özellikle riskin azaltılması ve işletmenin büyümesi ile artan idari sorunların asgariye indirilmesi ve daha kolay çözülebilmesi amacı, girişimcilerin bunlar arasında ticaret ortaklığına yönelmelerine yol açmıştır (Farrar ve Hannigan, 1998). Genel olarak satın alma, birleşme ve işbirliği olarak tanımlanan işletme dışı büyüme stratejileri mevcut ürün ve pazar alanlarında uygulanabileceği gibi yeni ürün ve pazar alanlarında da uygulanma şansına sahiptir (Paslı, 2009). Ekonomik büyümelerini tamamlayan ve daha fazla büyüme ihtimali olmayan şirketlerde görüş ayrılıkları, alanda uzmanlaşamama, şirket içerisinde değişik konularda faaliyet gösterilmesinin getirdiği olumsuz sonuçlar gibi sıkıntıları beraberinde getirmiştir. Bu ve buna benzer sonuçlar şirketleri yeniden yapılandırmaya sevk etmiş ve bölünme gerçekleşmiştir.

Mevcut Türk Ticaret Kanunu 124. maddesinde, Eski Kanun'da da hükmedildiği gibi ticaret şirketlerini; kollektif, komandit, anonim, limited ve kooperatif şirketlerinden ibaret olduğunu belirtmiştir (Özmen, 2010). Kanunda ayrıca kolektif ve komandit şirketlerin şahıs; anonim, limited ve sermayesi paylara bölünmüş komandit şirketlerin ise sermaye şirketi olduğu belirtilerek şahıs ve sermaye şirketleri arasındaki fark açık bir şekilde ortaya konmuştur (Atlaş, 2011). Ayrıca Yeni Kanun ile birlikte ultra vires ilkesi terk edilmiştir. Eski Kanun'un 137. maddesi uyarınca ticaret şirketlerinin şirket sözleşmelerinde yer alan işletme konuları dışındaki alanlarda haklar edinmesine ve borçlar üstlenmesine zemin hazırlayan hukuki işlemleri, yok hükmündedir. Bu hukuki işlemler "ultra vires işlemler", yani şirketin işletme konusu dışında kalan işlemler olarak adlandırılmaktadır (Deloitte, 2007). Diğer bir ifade ile ticaret şirketlerinin hak ehliyetinin sınırını işletme konusu teşkil etmektedir. Türk hukukuna Türk Ticaret Kanunu ile giren ve ticaret şirketleri hukukuna hakim olan bu temel kural, Avrupa Birliği'nin, şirketlere ilişkin 1 no'lu Yönerge'sinde, üye ülkelerin ultra vires kuralını kanunlarından çıkarmalarını öngören düzenlemesine paralel olarak Mevcut Türk Ticaret Kanunu ile Kanun'dan çıkarılmıştır. Bu sayede bu değişiklikle, Yönerge'deki amaç doğrultusunda, üçüncü kişilerin korunması, şirketi temsile yetkili kişilerin, şirket adına yaptıkları işlemlerin şirketi bağlayacağına üçüncü kişilerin güvenmelerinin sağlanması yoluyla işlem ve pazar güvenliğini temin etme imkanı elde edilebilmiştir (Özkorkut, 2009). Bu düzenleme, işlem güvenliğinin tesis edilmesi açısından son derece olumlu bir adımdır.

Mevcut Türk Ticaret Kanunu'nda birleşme, bölünme ve tür değişikliğine ilişkin ayrıntılı düzenlemeye gidilmiştir. Bunlara ilişkin hükümler bütünüyle yeni bir düzenlemedir. Gerekçe'den anlaşıldığına göre bu düzenlemeye İsviçre'nin 2003 tarihli "Birleşme, Bölünme, Tür Değiştirme ve Mal Devrine İlişkin Federal Kanun" u kaynak olmuştur (Moroğlu, 2009).

## 2  Kavramsal Çerçeve

### 2.1  Birleşme

Ticari işletmelerin birleşmesi, çeşitli ticari işletmelerin tasfiye edilmeksizin bir işletme haline gelmesi ve birleşen işletme veya işletmelerin sahiplerine bu işletmeden pay verilmesidir (Ayhan, 2011). Mevcut Türk Ticaret Kanunu birleşmenin iki şekilde olacağını belirtmiştir. Bunlardan birincisi, bir şirketin diğerini devralması, ikincisi ise yeni bir şirket içinde bir araya gelmeleri şeklindedir (Arkan, 2009).

Devralma Yolu ile Birleşme: Bir şirketin diğer bir şirketi devralması yoluyla birleşme durumunda, devralınan şirketin tüzel kişiliğinin sona ermesine karşılık, devralan şirketin tüzel kişiliği devam etmektedir. Türk hukuku çerçevesinde ticaret ortaklıklarının devralma yolu ile birleşmesi, en az bir ortaklığın, ortaklarının başka bir ortaklığa alınması karşılığında malvarlığı veya işletmesini aktif ve pasifleriyle bir bütün olarak o ortaklığa devrederek tasfiyesiz dağılması olarak tanımlanıyor. Bu tür birleşmelerde bir şirket sona ererken diğer şirket varlığını sürdürüyor. Bu süreçte devralınan şirketin varlıkları ve borçları devralan şirkete geçiyor ve devralan şirket, devraldığı şirketin hisselerini; kendi hisse senetlerini, tahvillerini vererek veya nakden ödeme yaparak satın alıyor (Dinç, 2011).

Yeni Şirket Kurulması Yolu ile Birleşme: Yeni şirket kurulması yolu ile sağlanan birleşmelerde ise her iki şirketin tüzel kişiliği sona eriyor ve yeni bir tüzel kişilik oluşturuluyor. Türk hukuku çerçevesinde yeni ortaklık kurulması yoluyla birleşme, 'en az iki ortaklığın, ortaklarının yeni kurulan bir ortaklığa alınmaları karşılığında malvarlıkları veya işletmelerini aktif ve pasifleriyle birer bütün olarak bu ortaklığa devrederek tasfiyesiz dağılmaları sonucunda iki veya daha çok ortaklığın tek bir ortaklık durumuna gelmesi' olarak tanımlanıyor. Birleşen şirketlerin varlıklarının ve borçlarının tamamının yeni kurulan şirkete devredilmesi söz konusudur. Yine, birleşen şirketlerin ortaklarının hakları korunarak, ortağı oldukları şirketin hisselerine karşılık, yeni kurulan şirketin hisselerinden vermek veya başka bir menkul kıymet yahut nakit para ödemek de mümkün olmaktadır. Devralma yolu ile birleşme ve yeni bir şirket kurulması ile birleşmenin kuralları temel olarak aynı. Sonuçta birleşen şirketlerin varlık ve borçları aynı çatı altında toplanıyor (Dinç, 2011).

### 2.2  Bölünme

Ticari hayattaki gelişmelere paralel olarak son dönemde şirket bölünmeleri konusu önem kazanmıştır. Bölünme, çok büyüyen ve çekirdek işletme konusundan uzaklaşan şirketlerin ana konularına dönebilmelerine olanak sağlayan bir yol olarak ifade edilebilir. Bölünme kavram olarak, sermaye şirketlerinin ve kooperatiflerin malvarlıklarını tamamen veya kısmen kendilerinden ayırarak tasfiyesiz olarak ve kısmî küllî halefiyet yoluyla başka sermaye şirketlerine veya kooperatiflere devretmeleri ve bunun karşılığında bölünen şirketin ortaklarının devralan şirketlerde ortak konumunu kendiliğinden elde etmeleridir. Bir şirketin malvarlığı bölünmüş ve malvarlığının bir bölümü başka bir şirkete kanunen intikal ettiğinde, bölünen şirket ortaklarının payları, devredilen malvarlığının değeri kadar değer yitirir. Yitirilen değerin karşılanması için, devralan şirketin paylarını, bölünen şirketin ortakları kendiliğinden kazanır (ongoren.av.tr, 2012).

Tam bölünmede, şirketin tüm malvarlığı bölümlere ayrılır ve diğer şirketlere devrolunur. Bölünen şirketin ortakları, devralan şirketlerin paylarını ve haklarını iktisap ederler. Tam bölünüp devrolunan şirket sona erer ve unvanı ticaret sicilinden silinir. Kısmî bölünmede ise bir şirketin malvarlığının bir veya birden fazla bölümü diğer şirketlere devrolunur. Bölünen şirketin ortakları, devralan şirketlerin paylarını ve haklarını iktisap ederler veya bölünen şirket devredilen malvarlığı bölümlerinin karşılığında devralan şirketlerdeki payları ve hakları elde eder. Bölünen şirketlerin aynı neviden olması gerekmez. Anonim şirket, mevcut veya yeni kurulacak iki veya daha fazla anonim şirkete veya limitet şirkete bölünebilir.

### 2.3  Nevi Değiştirme (Tür Değiştirme)

Tür değiştirme ya da Eski TTK'ya göre şirketlerde nevi değiştirme, bir ticaret şirketinin tüzel kişiliğini korumak suretiyle bir takım yasal işlemlerden geçtikten sonra, yeni tip bir ticaret şirketine dönüşmesi şeklinde tanımlanabilir (Uslu, 2004). En geniş anlamda nevi değiştirme; bir işletmenin bir hukuki biçimden diğer bir hukuki biçime çevrilmesi, yani hukuki ve ekonomik ayniyet ve devamlılığını sürdürerek, başka tipte bir ticaret şirketi olarak başka ve şirket tipine uygun statü ve unvanla ortaya çıkmasıdır (huseyinust.com, 2011).

Ekonomik gelişmeye paralel olarak oluşan sermaye birikimini daha verimli ve kapsamlı ticari amaçlara yönlendirmeyi arzu eden ve bu hususta kararlı olan işletmeler, bu amaca uygun işletme nevine dönüşmek isterler. Günümüzde bu eğilimler, aşağıda sıralanan nedenler de dikkate alınarak şahıs şirketlerinin sermaye şirketine ve özellikle anonim şirket nevine dönüşümü biçiminde odaklanmıştır. Nevi değişikliğinin nedenlerini şu şekilde sıralayabiliriz (huseyinust.com, 2011).

- Şirketlerin sermaye yapısını değiştirmek,

- Şirketlerin sorumluluk yapısını değiştirmek,
- Örgüt biçimini değiştirmek, holdingleşme, halka açılmak gibi,
- Finansman olanaklarını artırmak ve çeşitlendirmek,
- Teşviklerden yararlanmak,
- Vergisel avantajlardan yararlanmak.

Ticaret şirketlerinin nevi değiştirmesinde, teorik açıdan iki sistem düşünülebilir. İlk olarak nevi değiştirilmek istenen şirketin feshedilip tasfiyeye tabi tutulması ve yeni kuruluş yolu ile yeni nevine çevrilmesidir. Bu sistemde birincisi nevi değiştirilen, ikincisi ise yeni nevideki şirkete ait olmak üzere iki hukuki kişilik vardır. Mal varlığı yeni nevideki şirkete intikal etmektedir. Burada bir "hukuki ayniyet" yoktur. Mal varlığı intikal ettiği için sadece kısmi bir "ekonomik ayniyet" vardır. Çünkü mal varlığı tasfiyeden sonra intikal etmektedir. Bu durumda, bir nevi değişikliğinden söz etmeye bile imkân yoktur. Söz konusu olan eski şirketin ve işletmenin fesih ve tasfiyesi ve artan mal varlığının yeni kurulan yeni tipteki şirkete intikalidir.

İkinci durum olan şekil değiştirici nevi değiştirme sisteminde; mevcut şirketin sözleşmesinde amaçlanan şekilde değişiklik yapılır, düşünülen yeni şirkete ait kuruluş işlemlerine uyulmak suretiyle nevi değişikliği gerçekleştirilir. Burada eski ve yeni şirket arasına hem hukuki hem de ekonomik ayniyet vardır. Yeni şirket eskisinin devamıdır. 6762 sayılı Eski Türk Ticaret Kanunu'nda tür değişikliği, nevi değiştirme başlığı altında 152. madde de yer almıştır. Ayrıca yine aynı Kanun'un 268. maddesinde kolektif şirketlerin, komandit şirketlere geçebileceği ve 553, 554 ve 555. maddelerde anonim şirketlerin limitet şirketlere nevi (tür) değişikliği yapabileceklerine ilişkin hükümler yer almaktadır. Mevcut Türk Ticaret Kanunu'nda da tür değiştirme süreci de birleşme ve bölünme gibi ayrıntılı düzenlemelere tabi tutulmuştur.

## 3 Araştırmanın Yöntem ve Bulguları

### 3.1 Araştırmanın Amacı ve Önemi

Bu çalışmada Türk Ticaret Kanunun da yer alan şirket birleşmeleri, bölünmeleri ve nevi değiştirmelerinin yeni Kanun ile ne derece değişikliğe uğradığının tespiti amaçlanmıştır. Ayrıca Kanun yürürlüğe girdikten sonra ticaret şirketlerinin bu değişikliklere ne derece tepki verdiği ölçülerek, değişikliklerin ticaret hayatındaki önemi tespit edilmeye çalışılmıştır.

### 3.2 Araştırmanın Kısıtları

Araştırmada kısıt olarak 6742 sayılı Eski Türk Ticaret Kanunu'nun 146 / 152 maddeleri ile 6102 sayılı Mevcut Türk Ticaret Kanunu 136/148, 159/179 ve 180/191 Maddeleri belirlenmiştir. Bu maddelerde şirket birleşmeleri bölünmeleri ve nevi değişiklikleri yer almaktadır. Ayrıca Konya Ticaret Odası yetkilileri ticaret şirketlerinin Kanun yürürlüğe girdikten sonra yapılan bu değişikliklere ne derece tepki verdiklerini ölçmek amacıyla nitel veri toplama tekniklerinden yarı yapılandırılmış görüşme yöntemi kullanılmıştır.

### 3.3 Araştırmanın Bulguları

Araştırma sonucunda yürürlükteki Mevcut 6102 sayılı Türk Ticaret Kanunu ile yürürlükten kalkan 6742 sayılı Türk Ticaret Kanunu karşılaştırılmış ve aşağıdaki bulgular elde edilmiştir. Ayrıca Konya Ticaret Odası ile yapılan görüşmede değişikliklere ilişkin veri tabanının olmadığı anlaşılmıştır. Türkiye Odalar ve Borsalar Birliğinin buna yönelik bir çalışmasının olmadığı anlaşılmıştır.

**Şirket Birleşmelerinde Eski ve Mevcut Türk Ticaret Kanunu'nun Karşılaştırılması**

Eski TTK şirket birleşmelerini ayrıntılı bir şekilde incelememiştir. 6762 sayılı Kanun birleşmeleri 146 ve 151. maddeleri arasında incelemiştir. Bu maddelerde, şirket birleşmelerinin tarifi, şartları hükümleri belirtilmiştir. Ayrıca aynı Kanun'un 451 ve 454. maddelerinde de anonim şirketlerin birleşmelerine ilişkin özel hükümlere yer verilmiştir (Dinç, 2011). Eski TTK hükümleri, ticaret şirketleri arasında gerçekleşecek olan gerek devralma yolu ile gerekse de yeni şirket kuruluşu yoluyla birleşmeler açısından müşterek geçerlilik şartlarını şu şekilde belirlemiştir.

- Birleşecek olan şirketler aynı türden olmalıdır,
- Devrolunan şirket, malvarlığının tümünü bünyesinde birleşilen şirkete devretmelidir.
- Devrolan şirket birleşme ile fesh olmalıdır.
- Devrolan şirket veya şirketlere ait malvarlığının devralan veya yeni kurulan şirkete intikali, külli halefiyet esasına göre gerçekleşmelidir.
- Birleşme dolayısıyla ortadan kalkan şirketin malvarlığının karşılığını, yeni şirketin payları oluşturmalıdır.

Birleşmeye, MTTK'nın 136. ila 148. maddelerinde yer verilmiş olup, Mevcut Kanun'da Eski'ye oranla daha ayrıntılı ve geniş kapsamlı olarak düzenlenmiştir (Dinç, 2011). Bu çerçevede, Eski TTK'da olduğu gibi, Mevcut TTK'da da birleşme "devralma şeklinde" ve "yeni kuruluş şeklinde" birleşme olmak üzere iki çeşit olarak ele alınmış olup, kabul eden şirket "devralan", katılan şirket ise "devrolunan" şeklinde ifade edilmiştir.

Eski TTK'da yer alan birleşmeye ilişkin temel ilkeler MTTK kapsamındaki düzenlemeler ile genel anlamda korunmuştur. Bu çerçevede, MTTK'da, birleşmenin temel unsurları olan külli halefiyet ilkesi, işletmeye ilişkin tüm iş ve işlemlerde devamlılık ilkesi, ortaklık haklarının devamlılığı, tasfiyesiz sona erme gibi ilkelerin

muhafaza edildiği görülmektedir. Ancak, Eski Kanun'dan farklı olarak tasfiyesiz sona ermenin istisnasını teşkil eden, MTTK'da bir ticari işletmenin bir ticaret şirketiyle (onun tarafından devralınması suretiyle) birleşmesi düzenlemesi kabul edilmiştir. Bu tür birleşmede, ticari işletmenin tüzel kişiliği bulunmadığından, sona erme söz konusu olmamakta, sadece ticari işletme aktif ve pasifiyle birlikte ticaret şirketi tarafından devralınmaktadır.

Eski TTK'da birleşme işleminin yapılması için şirket türlerinin aynı olması şartı yer almaktadır. Bu sebeple yürürlükte bulunan uygulamada, şirket türleri farklı olan şirketler birleşme işlemi yapmak istediklerinde, şirketlerden birisi öncelikle tür değiştirme yoluna gitmekte ve buna bağlı olarak da birleşme süreci bir hayli uzamaktadır. Oysa Mevcut TTK ile şirketlerin aynı türden olma şartı ortadan kalkmış bulunmaktadır. Buna göre sermaye şirketlerinin limited yahut anonim şirket olmasına bakılmaksızın birleşmelerinin önü açılmıştır. Böylece, getirilen düzenleme kapsamında, bugüne kadar aynı türden olmayan şirketlerin birleşmesinde başvurulan tür değiştirme yolu bertaraf edilerek daha pratik ve hızlı bir birleşme sürecinin yolu açılacaktır.

Bu çerçevede, Mevcut TTK'nın 137. maddesi, üç sınıf halinde kanunen izin verilen birleşmeleri düzenlemektedir (Dinç, 2011). Madde kapsamında, sermaye şirketlerinin, şahıs şirketlerinin ve kooperatiflerin hangi şirketlerle ve hangi şartlar altında birleşebilecekleri birinci, ikinci ve üçüncü fıkralarda ayrı ayrı belirtilmiştir. Buna göre,

- Sermaye şirketleri; sermaye şirketleriyle, kooperatiflerle ve devralan şirket olmaları şartıyla, kollektif ve komandit şirketlerle birleşebilirler.
- Şahıs şirketleri, devrolunan şirket olmaları şartıyla sermaye şirketleriyle ve devrolunan şirket olmaları şartıyla kooperatiflerle birleşebilirler.
- Kooperatifler, kooperatiflerle, sermaye şirketleriyle ve devralan şirket olmaları şartıyla şahıs şirketleriyle birleşebilirler.

Mevcut TTK'da birleşme müessesesine ilişkin hükümler, Eski TTK'ya göre çok daha geniş ve kapsamlı bir şekilde düzenlenmiştir. Şüphesiz ki bu ayrıntılı düzenlemelerin yapılmasında, ülkemizde yapılan şirket birleşmelerinin sayısında meydana gelen artış ve bu doğrultuda bazı hususların açıklığa kavuşturulması ihtiyacının doğması en önemli faktörlerden biridir. Bununla birlikte; şirket birleşmelerine ilişkin olarak, MTTK'nın hazırlanmasında AB, Alman ve İsviçre hukukundaki gelişmelerin de dikkate alınması suretiyle birleşme işlemlerinin kolaylaştırılması yönünde bir anlayış benimsenmiştir.

Bu anlayış doğrultusunda birçok yeni düzenleme MTTK'da yerini almıştır. Söz konusu yeni düzenlemeler, türler arası birleşme serbestisi, şahıs şirketlerinin birleşmesi, tasfiye halinde bir şirketin ve borca batık şirketin birleşmeye katılması, denkleştirme ödemesi, ayrılma akçesi, sermaye şirketlerinde kolaylaştırılmış birleşme gibi düzenlemelerdir. Dolayısıyla, MTTK ile getirilen düzenleme ve kolaylıklar sayesinde, ekonomik gelişmelere de bağlı olarak, ileriki dönemlerde yapılacak şirket birleşmelerinin sayısında ciddi bir artış meydana gelmesi kuvvetle muhtemeldir. Ancak yeni düzenlemelerin sağlıklı bir şekilde uygulanması ve Mevcut Kanun'la ilgili oluşacak tereddütlerin giderilmesi açısından ilgili Bakanlık tarafından, birleşme işlemlerine ilişkin bir uygulama tebliğinin çıkarılması gereklidir.

**Şirketlerde Bölünmeye İlişkin Yasal Düzenlemeler**

Bölünmeye ilişkin olarak, 6762 sayılı Eski Türk Ticaret Kanunu'nda şirketlerin yapılanmasına ilişkin olarak, sadece birleşme ve tür değiştirmeler düzenlenmekteydi. Bu düzenlemelerde şirketlerin bir anlamda tasfiyesi söz konusu olmaktaydı. Bölünmeye ilişkin herhangi bir düzenleme yoktu. Bölünmeye ilişkin hükümler Kurumlar Vergisi Kanunu (KVK) ve Vergi Usul Kanununa (VUK) göre yapılmaktaydı. Zaman içinde ortaya çıkan gereksinimlere birleşme ve tür değiştirme cevap veremez olmuş ve şirketlerin bölünmesi gündeme gelmiştir.

Şirketlerin bölünmesi, ilk olarak Türk Hukukuna, 2001 yılında 4684 sayılı Kanunla KVK'nunda değiştirilen 38 ve 39. maddeler ile girmiştir. Bu değişiklikle bölünmeye ilişkin vergisel ve mali sonuçlar düzenlenmiş fakat bölünmenin nasıl yapılacağına ilişkin bir hüküm yer almamaktaydı. Bu da hukuki anlamda boşluğu doldurmamıştı. Daha sonra Maliye Bakanlığı ile Gümrük ve Ticaret Bakanlığının birlikte çıkardığı ve 16.09.2003 tarihli Resmi Gazetede yayınlanan "Anonim ve Limitet Şirketlerin Kısmi Bölünme İşlemlerinin Usul ve Esaslarının Düzenlenmesi Hakkında Tebliğ" ile şirketin malvarlığını, ortaklarını ve alacaklılarını korur nitelikteki hükümler getirilmeye çalışılmıştır. Bu düzenleme ile sadece Anonim ve Limitet Şirketlerin kısmi bölünmesi işlemlerinin usul ve esasları düzenlenmiştir. 2003 yılında yayınlanan Tebliğ ile KVK'unda 2001 yılında 4684 sayılı Kanunla yapılan değişiklikle düzenlenen bölünme birbirinden oldukça farklıdır. Çünkü Tebliğ bölünmeyi daha daraltmıştır. Kanunda tüm Sermaye şirketlerine bölünme imkanı tanınmışken, Tebliğde sadece Anonim ve Limitet şirket bölünmesinden söz edilmektedir. Yine KVK'nda tam ve kısmi bölünmenin iki türlü olabileceği belirtilmişken, Tebliğde sadece kısmi bölünmeye imkân tanınmıştır. Bölünme müessesesinin esas itibariyle bir şirketler hukuku konusu olduğu ve Ticaret Kanununda düzenlenmesi gereği açıktır (Akça, 2010). Mevcut TTK, 82/891/AB sayılı Yönergesini ve İsviçre Birleşme Kanunu'nu model alarak, sermaye şirketlerinin ve kooperatiflerin tam ve kısmi bölünmelerini ayrıntılı bir şekilde hukukumuza getirmiştir. Böylece, Türk hukukunda hem kısmi hem de tam bölünmenin sermaye şirketleri ve kooperatifler açısından tam olarak uygulanmasının önü açılmıştır.

Bölünme, maddi hukuk yönünden ilk defa Mevcut Türk Ticaret Kanunu ile düzenlenmiştir. Kanun'un yürürlüğe girmesiyle bölünme konusundaki yasal boşluk doldurulmuştur. MTTK bölünmeyi 159 ile 179. maddeler arasında düzenlemektedir. Bu maddelerde ortaklık paylarının ve haklarının korunması, bölünme sözleşmesi, şirket alacaklarının durumu ve tescil gibi birçok önemli konu ele alınmaktadır. MTTK hem tam bölünme hem kısmi bölünmeyi düzenlemektedir. MTTK, bölünme işleminin çeşitli aşamalardan geçmesini öngörmektedir. Öncelikle bölünmenin türüne göre bölünme sözleşmesi veya bölünme raporu hazırlanmalıdır. Şirket alacaklarının hakları güvence altına alınmadan da bölünme kararı alınması mümkün olmamaktadır. Ayrıca bölünmeye katılan ortaklıkların yönetim organları bölünme hakkında rapor hazırlayacaktır.

### Şirketlerin Nevi Değişikliğinde Eski ve Mevcut Türk Ticaret Kanunu'nun Karşılaştırılması

Eski TTK'da tür değiştirme sadece 152. maddede ele alınmıştır. Eski Kanun'da tür değişikliğine ilişkin fazla ayrıntıya gidilmemiştir. Kanun'da şartlar yerine getirildikten sonra tür değişikliğinin olabileceğini belirtmektedir. Ayrıca Kanun'un 553, 554 ve 555. maddelerinde de sermaye şirketlerinin tür değişikliğine ilişkin hükümler vardır. Buna göre, anonim şirketin şartları yerine getirmek kaydı ile limited şirkete çevrilebileceği hükmedilmiştir. Fakat şirket ortaklarının itirazı şirketin tasfiye kararı almasına sebep verebilir.

Mevcut TTK ise tür değişikliğini daha ayrıntılı bir şekilde incelemiştir. Mevcut Kanun'un 180 ile 191. maddeleri arasında belirtilmiştir. Kanun'a göre, yeni türe dönüştürülen şirketin eskisinin devamı olacağı hükmedilmiştir. Mevcut TTK'da;

- Sermaye şirketleri, başka türde sermaye şirketine veya kooperatife dönüşebilir.
- Kollektif şirket, bir sermaye şirketine, kooperatife ve bir komandit şirkete dönüşebilir.
- Komandit şirket, bir sermaye şirketine, kooperatife ve kollektif şirkete dönüşebilir.
- Kooperatif ise bir sermaye şirketine dönüşebilir.

Yukarıdaki hükümlere göre, MTTK ile birlikte bir şahıs işletmesi, bir sermaye şirketiyle birleşebilmektedir. Fakat sermaye şirketinin, şahıs işletmesini devralması gerekmektedir. Ayrıca Kanun bir ticaret şirketinin, bir ticari işletmeye dönüştürülebilmesini de mümkün kılmıştır. Fakat bunun için söz konusu ticaret şirketinin paylarının tümü, ticaret işletmesini işletecek kişi veya kişiler tarafından devralınmalı ve ticaret işletmesi bu kişi ve kişiler adına ticaret siciline tescil ve ilan edilmelidir. Ticaret işletmesine dönüştürülen ticaret şirketi, bir kollektif veya komandit şirket ise anılan ticaret şirketinin borçlarından, ticari işletmeyi işletecek kişi ve kişiler ile ticaret şirketinin eski ortakları da Kanun'daki zamanaşımı süresince sınırsız sorumlu olurlar (vergikanunhaberleri.blogspot.com, 2012).

## 4 Sonuç

Mevcut TTK birleşme ve tür değişikliğine ilişkin ayrıntılı olarak düzenlemeye gitmiştir. Tür değişikliğinde ortakların şirket payları ve hakları korunacaktır. Şirket birleşmelerinde aynı neviden olma şartı kaldırılmıştır. Sermaye şirketleri diğer sermaye şirketleri, kooperatifler ve devralan şirket olma şartı ile kolektif ve komandit şirketlerle birleşebileceklerdir. Ayrıca şahıs şirketleri, diğer şahıs şirketleriyle, devrolunan şirket olma şartı ile sermaye şirketleriyle ve kooperatiflerle birleşebileceklerdir.

Ayrıca Yeni Kanun'da bölünme ilk kez düzenlenmiştir. Türk Ticaret Kanunu, Avrupa Birliği müktesebatına uyumu da dikkate alarak, bölünme müessesesini tüm yönleri ile düzenlemiştir. Tıpkı birleşme ve tür değişikliğinde olduğu gibi bölünmenin hangi usul ve esaslar ile yapılacağı, bölünme kavramı ve türleri belirtilmiş, bölünme işlemleri sırasında ortaklıkların izleyeceği prosedürler (bölünme planı/sözleşmesi gibi), bölünen ve devralan ortaklığın sorumlulukları düzenlenmiştir. Şirket bölünmelerinde şirketler fazla büyüdüklerinde ayrı ayrı şirket olabileceklerdir. Özellikle uygulamada yaşanan en büyük sorunların başında gelen, alacakların korunması, kamuya yapılacak izah ve çalışanlarının korunması gibi hayati öneme sahip konular cevap bulmuştur. Bölünmenin Mevcut Türk Ticaret Kanunu'nda yer almasıyla birlikte sermaye şirketlerinin yeniden yapılandırılmasında olumlu etkileri olacaktır. Muhasebe alanında bu konuda getirilen yenilikler ise birleşme, bölünme ve tür değiştirme işlemlerinin denetime tabi tutulması ve birleşme, bölünme bilançolarının hazırlanmasıdır.

Türkiye Odalar ve Borsalar Birliğinden alınan bilgilere göre Kanun yürürlüğe girdikten sonra Türkiye'de ki şirketlerin Kanun çerçevesinde değişikliğe gittiği anlaşılmıştır. Buda Kanun'un yapıcı yanının uygulamaya geçtiğini göstermektedir. Fakat değişikliklerin veri tabanında kayıt edilememesinden dolayı net bir veri alınamamıştır. Bu bağlamda değişikliklerin daha net verilerle gösterilebilmesi için ilgili ticaret odalarının veri tabanı oluşturması gerekmektedir.

Türk Ticaret Kanunu'nda yapılan düzenlemelerle birlikte Türk şirketlerinin dünya şirketleri ile entegrasyonunun artması beklenmektedir. Bu bağlamda şirket evliliklerinin artması daha güçlü ekonomilerin oluşmasına sebebiyet verecektir. Türk şirketlerinin Balkan devletlerinde yer alan şirketlerle olan birleşmeleri, gelecek ticari hayatın seyrinde önemli sonuçlar doğurabilir.

# Bölgesel Kalkınma Politikalarının Etkinliği: Türkiye Alt Bölgeler Bazında Bir Uygulama

# The Effectiveness of Regional Development Policies: An Application on Sub-Regions of Turkey

Assoc. Prof. Dr. Fehim Bakırcı (Atatürk University, Turkey)

Asst. Prof. Dr. Emine Demet Ekinci (Atatürk University, Turkey)

Ph.D. Candidate Tuba Şahinoğlu (Atatürk University, Turkey)

## Abstract

This study aims to determine the effectiveness on regional employment of regional development policies in Turkey. The study has included 12 regions according to NUTS-1 based on data for 2007-2012 periods. The effectiveness of regional development policies in these regions has been estimated by using Data Envelopment Analysis (DEA) method. Inputs in the DEA analysis include total public investment and breakdown of investment incentive certificates according to fixed investments (general investments). Outputs are regional employment data on agriculture, industry and service sector. According to results, efficiency measurement has displayed inequality among regions and years. However, the West Regions has generally been found to have higher efficiency. The results of Turkey have showed that the employment gap causing inefficiencies has been largely derived from employment in agriculture sector.

## 1 Giriş

Doğal ve toplumsal kaynakların mekân üzerinde dağılımı, mutlak anlamda eşitlik arz etmediğinden, gelişme de mutlak anlamda dengeli bir süreçten geçmemekte, başka bir deyişle, ekonomik ve sosyal gelişme; yeryüzünde zaman ve mekân bakımından farklılık göstermektedir (Dinçer vd., 2003). Söz konusu farklılık ise avantajlı mekânları ileriye taşırken, diğerlerini geride bırakmakta, böylece mekânsal eşitsizlik sorunun oluşmasına zemin hazırlamaktadır. Bu sorun ülkeler arasında gerçekleşebildiği gibi, bir ülkenin bölgeleri arasında da ortaya çıkabilmektedir. Günümüzde bölgesel gelişmişlik farkı ister gelişmiş ister gelişmekte olsun tüm ülkeleri kapsamakta, ülkeleri söz konusu problemin üstesinden gelmek için büyük bir çabaya yönlendirmektedir.

Bölgesel kalkınma olarak adlandırılabilen bu çabalar; "ülkenin bütününde yer alan bölgelerin çevre bölgeler ve dünya ile karşılıklı etkileşimi ile oluşan bölge vizyonunu dikkate alan, katılımcılık ve sürdürülebilirliği temel ilke edinen ve insan kaynaklarının geliştirilmesi yoluyla bölge refahının yükseltilmesini amaçlayan çalışmalar bütünü" şeklinde tanımlanmaktadır (DPT, 2003). Bölgesel kalkınma uzun ve meşakkatli bir süreci içermekte ve onun başarıya ulaşabilmesi için etkin politikalar ile desteklenmesi gerekmektedir.

Bu amaçla ülkeler, bölge bazında kalkınmalarını inşa etmek için "dünyadaki genel ekonomik ve sosyal dönüşümlere uyum sağlamak, ortaya çıkan olumsuz etkileri gidermek ve fırsatları değerlendirmek üzere ulusal ihtiyaçları doğrultusunda kendi bölgesel politikalarını belirlemektedirler" (Takım, 2010).

Bölgesel kalkınma politikalarının ortak amaçları arasında kalkınma sürecini tetikleyecek her türlü kaynağın bölgeler arasında daha adil dağılımını sağlamak, böylece ekonomik aktiviteleri dengelemek yer almaktadır. Bölgesel kalkınma politikalarının kullandığı bazı ortak araçlar mevcuttur. Bu araçlardan en yaygın kullanılanları; yatırım teşvikleri ve kamu yatırımlarıdır.

Yatırım teşvikleri hem gelişmiş hem de gelişmekte olan ülkeler tarafından bölgesel kalkınmanın gerçekleştirilmesi için en sık kullanılan araçlardır. Bölgesel düzeyde teşvikler genellikle özel sektörün daha fazla yatırım yapmasını teşvik etmek, yatırımları belirli bölgelere yönlendirmek ve bölgesel gelişmişlik farklılıklarını azaltmak için kullanılmaktadır (Yavan, 2012). Sektörlere ve yörelere göre farklılaştırılmış teşvik sistemi illerin gelişmişlik düzeylerine göre farklı oranlarda uygulanmaktadır (Keskin ve Sungur, 2010). Diğer bir politika aracı da kamu yatırımlarıdır. Kamu yatırımları tüm altyapı ve kamu hizmetleri yatırımlarını içermektedir. Bu araç bir bölgenin cazibesini arttırmak açısından büyük bir önem taşımakta, gelecekteki özel yatırımların bölgeye yönelmesini, böylece bölgesel kalkınmanın gerçekleşmesini sağlayabilmektedir.

Çalışmada bölgesel kalkınmanın sağlanabilmesi için en çok tercih edilen yatırım teşvikleri ve kamu yatırımları politika araçlarının etkinliğinin Türkiye bağlamında Veri Zarflama Analizi (VZA) yöntemiyle belirlenmesi amaçlanmaktadır. Tüm dünyada olduğu gibi Türkiye'de de bölgesel gelişmişlik farkı önemli bir sorun olarak ülke gündeminde yer almaktadır. Bu sorunu gidermek için Türkiye uzun yıllardan beri bölgesel kalkınma politikalarını takip etmekte ve söz konusu araçları sıklıkla kullanmaktadır. Ancak arzu edilen sonuç elde edilememekte ve bölgesel uçurum artmaktadır. Çalışmada girdi değişkeni olarak yatırım teşvik belgelerinin sabit yatırımlara göre bölgesel dağılımı ve toplam kamu yatırımları ele alınmaktadır. Çıktı değişkeni ise bölgelerin

sanayi, tarım ve hizmet sektörlerine ait istihdam verileridir. Çalışmanın periyodu olarak 2007-2012 yılları incelenmektedir.

## 2 Türkiye'deki Bölgesel Kalkınma Politikaları ve Uygulamaları

Türkiye bölgeler arası gelişmişlik farkının önemli boyutlara ulaştığı ülkeler arasında yer almaktadır. Söz konusu gelişmişlik farklılıklarının temelinde Türkiye'nin geniş yüzölçümüyle coğrafik koşullarda (iklim, toprak kalitesi, rakım vb.) bölgeler arası ciddi değişimlerin olması önemli bir yer tutmakta, bununla birlikte bölgelerin fiziki ve beşeri sermaye kıtlığı, altyapı yetersizliği, pazara ya da ara ürünlere uzaklığı gibi etkenler farklılığı daha da büyütmektedir. Tüm bu gelişmelerin sonucunda başta Marmara Bölgesi olmak üzere Batı bölgeleri (Ege, İç Anadolu ve Akdeniz Bölgesi) üretim, ticaret ve istihdam gibi ekonomik değişkenlerin merkezi konumuna geçerken, ülkenin doğusunda yer alan bölgeler geri kalmaktadır.

Osmanlı Devleti'nden beri devam eden bu gelişmişlik sorunu, hükümetlerin her zaman gündeminde yer almış ve müdahaleler ile azaltılmaya çalışılmıştır. Tarihsel perspektiften Türkiye Cumhuriyeti'nin uyguladığı bölgesel kalkınma politikaları iki dönem içerisinde değerlendirilebilmektedir. Birinci dönem; Cumhuriyet'in ilanından, hatta İzmir İktisat Kongresi'nden 1963'e kadar geçen süreyi kapsamaktadır. İkinci dönem ise 1963'ten günümüze kadar devam eden planlı dönemdir.

17 Şubat 1923'te İzmir İktisat Kongresi ile başlayan birinci dönem; genel iktisat politikaları açısından 1923-1950 yıllarını kapsayan Devletçilik dönemi ile 1950-1960 yılları arasında devam eden Liberal dönem olarak ikiye ayrılmaktadır. 1923-1950 yılları arasındaki dönemde demiryollarının millileştirilmesi ve Doğu Anadolu'ya doğru yayılması için büyük çaba harcanmış, 1933-1939 yılları arasında uygulanan sanayi planlarıyla da İktisadi Devlet Teşekkülleri'ne ait fabrikaların Batı Anadolu'dan başlayarak tüm yurda yayılmasına özen gösterilmiştir (Yardımcıoğlu vd., 2012). Bu çabalara rağmen devletçilik döneminde bölgesel kavramlara arzu edildiği derecede önem verilmediği, sonuçta ülkenin ekonomik gelişmesinin Batı bölgeleriyle sınırlandığı görülmektedir. Ancak söz konusu ilgisizlik, bölge ya da bölgesel planlamaya önem verilmemesinden değil, yeni kurulan bir ülkenin, ulusal düzeyde iktisat problemlerine öncelik vermesinden kaynaklanmıştır. Bu dönem için ülkenin ekonomik olarak toparlanmasına ve yeniden inşasına ağırlık verildiği belirtilebilir.

1950'de Demokrat Parti'nin iktidara gelmesiyle ülkede uygulanan politikalar değiştirilerek devletçi anlayıştan daha liberal eğilimlere geçiş olmuştur (Erkan, 2008). On yıl boyunca devam eden liberal politikalarda "her ile bir fabrika sloganı" ile yola çıkılmış (Dinler 2010), ancak arzu edilen sonuca ulaşılamamıştır. Hatta bölgeler arası eşitsizlik artarak özel sektör İstanbul ve İzmir'de toplanmaya devam etmiştir (Yardımcıoğlu vd., 2012).

İkinci dönem 1963 yılında Birinci Beş Yıllık Kalkınma Planı'nın uygulamaya geçilmesiyle başlamıştır. Planlı dönemle birlikte bölgesel planlama anlayışı bir öncelik haline gelmiş; sosyal, ekonomik vb. farklı boyutların bir araya geldiği çok yönlü planlar oluşturmak amaçlanmıştır. Günümüze kadar devam eden dönemde dokuz kalkınma planı tamamlanmıştır. Planların sekiz tanesi beş yıllık bir dönemi kapsarken, son plan yedi yıl olarak uygulanmıştır. Söz konusu dönemde Beş Yıllık Kalkınma Planlarının yanı sıra Entegre Bölgesel Kalkınma Planları, Kırsal Kalkınma Projeleri, Yatırım Teşvikleri, Kalkınmada Öncelikli Yöreler, Organize Sanayi Bölgeleri ve Küçük Sanayi Siteleri de bölgesel kalkınma için kullanılan önemli araçlar olmuştur (Keskin ve Sungur, 2010).

Türkiye'nin yaklaşık son elli yılını kapsayan planlı dönemin üç aşamadan geçtiğini söylemek mümkündür. İlk aşama 24 Ocak 1980'e kadar devam eden ithal ikameci politikalar ışığında geçmiştir. Bu dönemde bölgelerin planlı gelişmesine ilişkin olarak etkili bir program uygulanmamıştır. Bölgesel planlamaya yönelik olarak, daha çok kamu hizmet ve yatırımlarına ilişkin politika karar ve araçları tanımlanmış, bölgesel plan, merkezi planın "bütünlük ilkesi" gözetilerek, ulusal plan içerisinde düşünülmüştür (Kargı, 2009). Dönemin en önemli gelişmesi III. Beş Yıllık Kalkınma Planı ile "Kalkınmada Öncelikli Yöreler" uygulamasının Türkiye gündemine dâhil edilmiş olmasıdır.

Türkiye, ikinci aşamaya 24 Ocak kararları ile geçmiştir. 24 Ocak kararlarıyla bu tarihe kadar uygulanan ithal ikameci kalkınma politikaları terk edilerek ihracata yönelik bir kalkınma modeli benimsenmiştir. Böyle bir değişiklik bölgesel kalkınma politikalarına da yansımış ve daha liberal politikalara geçiş yapılmıştır. Ancak uygulanan politikaların sonucunda bölgeler arası dengesizlik artmış, 1980-2000 döneminde İstanbul hariç, hemen hemen tüm bölgelerin katma değerden aldıkları pay ya azalmış ya da sabit kalmıştır (Arslan ve Demirel, 2010, ).

Planlı dönem sürecinde Türkiye açısından önemli bir diğer gelişmede 1999 yılında Avrupa Birliği tarafından Türkiye'ye adaylık statüsünün verilmesi ile gerçekleşmiştir. Üçüncü aşamada Helsinki Zirvesi'nde verilen statü Türkiye'yi bölgesel politika uygulamaları açısından yeni bir döneme yönlendirmiştir. Türkiye bu dönemde Avrupa Birliği yasal çerçevesi ile uyumlu bölgesel politikalar geliştirmeye çalışmıştır. Örneğin; Avrupa Birliği ile ilişkiler doğrultusunda 2002 yılında bölge sınıflandırması yeniden yapılandırılmıştır. Yeniden sınıflandırmada AB Bölgesel İstatistik Sistemi'ne uygun karşılaştırılabilir istatistiki verilerin toplanarak söz konusu istatistiklere göre bölgelerin sosyo-ekonomik analizlerinin yapılması ve bölgesel politikaların çerçevesinin belirlenmesi amaçlanmıştır (Resmi Gazete, 2002). İstatistiki Bölge Birimleri Sınıflandırması (İBBS-NUTS)'a göre 81 il "Düzey 3" olarak isimlendirilmiştir. Daha sonra ekonomik, sosyal ve coğrafik benzerlik gösteren komşu iller

"Düzey 2" olarak 26 alt bölgeye ve "Düzey 2" bölgeleri de kendi içinde yeniden sınıflandırılarak "Düzey 1" (12 bölge) şeklinde ayrılmıştır. Ayrıca aynı dönemde Teknoloji Geliştirme Bölgeleri, Endüstri Bölgeleri ve Bölgesel Kalkınma Ajansları'nın kurulması için de önemli adımlar atılmıştır. 2006 yılında yürürlüğe geçen uygulama ile ilk bölgesel kalkınma ajansları İzmir ve Çukurova'da kurulmuştur. 2008 yılında sekiz yeni kalkınma ajansı İstanbul, Konya, Erzurum, Van, Gaziantep, Diyarbakır, Mardin ve Samsun illerinde faaliyetlerine başlamışlardır. Günümüzde ise bu sayı tüm alt bölgeleri kapsayacak şekilde 26'ya ulaşmıştır. Tablo 1.'de 1963-2013 yılları arasında uygulanan Kalkınma Planları özetlenmektedir.

| Dönemler | Bölgesel Kalkınma Politika Öneri ve Uygulamaları |
|---|---|
| **Birinci Beş Yıllık Kalkınma Planı (1963-1967)** | - Türkiye'de potansiyel gelişme bölgeleri, geri kalmış bölgeler ve büyük kent bölgeleri olmak üzere üç çeşit bölge olduğu görüşü benimsenmiştir. Geri kalmış bölgelerde yatırım yapacaklara yatırım indirimi ve gelir vergisinden indirim yapma imkânı sağlanmıştır.<br>- Ekonomik faaliyetlerin daha fazla yoğunlaşmasını engellemek için metropoliten şehirler çevresinde yeni çekim ve büyüme merkezleri yaratmak amaçlanmış. |
| **İkinci Beş Yıllık Kalkınma Planı (1968-1972)** | - Büyüme merkezleri (kalkınma kutupları) yaklaşımı önerilmiştir.<br>- DPT bünyesinde geri kalmış Doğu ve Güneydoğu Anadolu bölgelerinin sorunlarına çözüm üretmek üzere "Doğu Grubu" oluşturulmuştur.<br>- Organize Sanayi Bölgeleri ülke geneline yaygınlaştırılması düşüncesi şekillenmiştir. |
| **Üçüncü Beş Yıllık Kalkınma Planı (1973-1977)** | - Bir önceki plan çalışmaları ulusal bütünlük planına uygun olmadığı için bu planda ulusal ölçekteki yatırımlara ekonomik kriterlere göre yer belirlenmesi öngörülmüştür.<br>- Kalkınmada Öncelikli Yöreler (KÖY)'lerin belirlenmesinde sosyo-ekonomik gelişmişlik endeksi çalışmalarının temel alınması öngörülmüştür. |
| **Dördüncü Beş Yıllık Kalkınma Planı (1979-1983)** | - Aşağı Fırat projesinin (GAP projesi) bir bölgesel gelişme projesi olarak başlatılması öngörülmüştür.<br>- Sanayinin KÖY'lere desentralizasyonu amaçlanmıştır. Bu kapsamda KÖY'lere uygulanan teşviklerde yenilik yapılmış ve teşvikleri daha cazip hale getirmek için üç kanun çıkarılmıştır |
| **Beşinci Beş Yıllık Kalkınma Planı (1985-1989)** | - OSB ve KSS'nin yaygınlaştırılması amaçlanmıştır.<br>- 1989 yılında GAP idaresi kurulmuş ve GAP projesi hazırlanan master planla entegre bir bölgesel gelişme projesine dönüştürülerek uygulamaya başlanmıştır.<br>- Etki alanlarıyla 16 adet bölgesel gelişme merkezi belirlenmiştir. |
| **Altıncı Beş Yıllık Kalkınma Planı (1990-1994)** | - 16 bölgesel gelişme merkezi anlayışı terk edilerek bölge planlamasının KÖY'lere kaydırılması ilkesi benimsenmiştir.<br>- Göçlerin metropol alanlardan diğer alt merkezlere kaydırılması amaçlanmıştır.<br>- AB entegrasyon süreci sebebiyle ilk kez AB bölgesel politikalarına uyum amaçlanmıştır. |
| **Yedinci Beş Yıllık Kalkınma Planı (1996-2000)** | - Bölgesel dengelerin sağlanması ana başlığı altında; bölgesel gelişme, il planlama, metropoller şeklinde düzenlemelere yer verilmiştir.<br>- Bazı yöreler için 1994 'Acil Destek Programı' uygulanmıştır.<br>- DAP, DOKAP, Yeşilırmak havza gelişim projeler çalışmaları başlatılmıştır. |
| **Sekizinci Beş Yıllık Kalkınma Planı (2001-2005)** | - Bölgelerin temel sorunları ile potansiyellerinin belirlenmesine yönelik il ve bölge planı çalışmalarına devam edileceği belirtilmiştir.<br>- AB ile yürütülen ilişkiler doğrultusunda istatistiki bölge birimleri belirlenmiş, ön ulusal kalkınma planı hazırlanmış ve bölgesel kalkınma ajanslarının kurulmasına yönelik mevzuat çalışmaları başlatılmıştır. |
| **Dokuzuncu Kalkınma Planı (2007-2013)** | - Esnek, dinamik, katılımcı ve uygulanabilir nitelikte gelişme planları hazırlanması kararlaştırılmıştır.<br>- Büyüme ve çevrelerine hizmet verme potansiyeli yüksek cazibe merkezleri belirlenerek; öncelikle bu merkezlerin ulaşılabilirliğinin iyileştirilmesi, fiziki ve sosyal altyapısının güçlendirilmesi belirtilmiştir..<br>- Gelişme potansiyeli yüksek merkezlerde; etkin bir bölgesel ARGE altyapısı kurulmasına karar verilmiştir. |

**Tablo 1.** *Dönemler İtibariyle Önerilen Bölgesel Kalkınma Politikaları (1963-)* **Kaynak: *Özarslan ve Akpınar, 2005 ve DPT, Dokuzuncu Kalkınma Planı.***

Yukarıda hedefler açısından kısaca özetlenen Kalkınma Planları değerlendirildiğinde öncelikle bölgelerarası gelişmişlik farklarının somut verilerle belirlenmesi ve bu doğrultuda kaynak tahsisinin yapılmasının amaçlandığı gözlemlenmektedir. Geri kalmış yörelere, diğer yörelerden elde edilen bütçe gelirinin çok üzerinde harcama yapmak, planlı dönemin maliye politikalarının temel hedeflerindendir. Keza, tüm plan ve programlarda kamu yatırımlarının dağılımında, geri kalmış bölgelere öncelik verilmiştir. Kamu yatırım politikaları yanında, özel sektörü bu yörelere çekebilmek için yapılan devlet yardımları ve personel politikaları da, bölgelerarası dengesizliği gidermede kullanılan başlıca kamu araçları olmuştur (Dinçer vd., 2003).

III. Beş Yıllık Kalkınma Planı'ndan 2009 yılına kadar söz konusu kaynak tahsisini daha sağlıklı bir şekilde yapmak, ayrıca kalkınma planlarını destekleyen teşvik sistemlerini yönetmek amacıyla Kalkınmada Öncelikli Yöreler (KÖY) uygulamasına geçilmiştir. KÖY uygulamasında genel teşvik mevzuatı kapsamında geri kalmış yöreler için özel tedbirler alınmış, ülke genelinde uygulanan teşvik tedbirlerinin KÖY olarak belirlenen yörelerde (il ve ilçeler) daha yüksek oranlarda uygulanması sağlanmıştır. Bunula birlikte, KÖY politikaları kapsamında getirilen kamu destekleri sadece teşvik tedbirleri ile de sınırlandırılmamıştır. Uygulanan diğer destekler şu şekilde özetlenmektedir (Özarslan ve Akpınar, 2005):

- KÖY'lerde çalışanların ücretlerinin nispi olarak iyileştirilmesi,
- Tarımsal ve mesleki amaçlı kredi destekleri,
- Kamu ortaklığı fonundan yatırımlara sağlanan finansman desteği,
- DPT bütçesinden KÖY'lerdeki yerel idarelerce sürdürülen projelere sağlanan finansman imkânları.

1968 yılında yürürlüğe girdiğinde sadece 22 ili kapsayan KÖY uygulaması kısa sürede geniş bir alana yayılmış ve birçok ili kapsayan bir hal almıştır. KÖY'ler 2000 yılı genel nüfus sayım sonuçlarına göre ülke nüfusunun %36'sını ve toplam ülke yüzölçümünün %55,1'ini oluşturmuştur. Ancak KÖY uygulaması 16 Temmuz 2009'da yürürlüğe giren "Yeni Yatırım Teşvik Sistemi" ile son bulmuştur.

2009 yılında uygulamaya konulan "Yeni Yatırım Teşvik Sistemi" modeli AB'nin bölgesel politika mevzuatına uygun olarak, illerin özelliklerini ve potansiyellerini dikkate alan, bölge bazında kademelendirilmiş ve teşvik araçlarıyla desteklenen bir sistemi içermektedir. Aslında Türkiye 1913 yılında çıkarılan Teşvik-i Sanayi Kanunu'ndan itibaren, özellikle de 1968 yılından günümüze kadar düzenli olarak teşvik uygulamasına gitmiştir (Yavan, 2012). Ancak yeni teşvik sistemi eskiden uygulanan politikalara göre daha kapsamlı bir sistemi yansıtmaktadır.

Sonuç olarak Türkiye Cumhuriyeti döneminde, özellikle planlı kalkınma sürecine geçildikten sonraki dönemde bölgelerarası gelişmişlik farkını gidermek için önemli adımların atıldığı ve çeşitli politika uygulamalarına gidildiği belirtilebilir. Bunula birlikte günümüz Türkiye'sine bakıldığında bölgesel kalkınma politikalarının tam bir başarıya ulaşmadığı, gelişmiş yörelerin kalkınma yolunda atılımlarını genel olarak sürdürdüğü söylenebilir. Özellikle kamunun kaynak dağılımına doğrudan veya dolaylı yollarla yön vermeye çalışmasına (Dinçer vd., 2003) ve uygulanan bütün teşviklere rağmen, yerli ve yabancı yatırımcıların tercihlerinin Batı bölgelerinde yoğunlaştığı görülmektedir.

## 3 Bölgesel Kalkınma Politikalarının Etkinliğini Belirlemeye Yönelik Bir Uygulama

### 3.1 Çalışmanın Amacı, Kapsamı ve Değişkenleri

Çalışmanın amacı Türkiye'nin bölgesel kalkınmışlık farkını gidermek ya da daha düşük bir seviyeye çekmek için yoğun bir şekilde kullandığı kamu yatırımları ve bölgesel yatırım teşviklerinin amaç doğrultusundaki etkinliklerini belirmektedir. Çalışmanın zaman boyutu 2007-2012 yıllarını, mekân boyutu ise İBBS-Düzey 1'e göre 12 bölgeyi kapsamaktadır Çalışmada Veri Zarflama Analizi yöntem olarak seçilmiştir.

Veri Zarflama analizi bağlamında girdi değişkenleri yatırım teşvik belgelerinin bölgesel dağılımı (sabit yatırımlara ve genel teşvik uygulamalarına göre) ve kamu yatırım tahsislerinin bölgesel dağılımıyla temsil edilmektedir. Çıktı değişkenleri ise hizmet, sanayi ve tarım sektöründeki bölgesel istihdam düzeyidir. Çıktı değişkenlerinin yatırımların sektörel dağılımına ulaşmayı mümkün kılacağı varsayılmaktadır.

Girdi değişkenleri olarak kamu yatırımları ve teşviklerin ele alınmasının nedeni bu iki değişkenin gerek kamu gerekse özel yatırımları çekebilmek için devlet tarafından kullanılan iki önemli araç olmasıdır.

Kamu yatırımları; tüm fiziki ve sosyal altyapı hizmetleri ile diğer kamu hizmetlerine yönelik harcamaları içermektedir. Bu tarz yatırımlar bir bölgenin imajını yenileyerek o bölgenin cazibe merkezi olmasını sağlayabilmektedir, Diğer taraftan yatırım teşvikleri verildiği dönem boyunca bölgenin özel yatırım potansiyelini artırmakta, ayrıca gelecekte daha fazla özel yatırımın bölgeye yönelmesine sebep olabilmektedir.

Yatırım teşvik belgelerine ait veriler Ekonomi Bakanlığı resmi web sitesinden, kamu yatırım tahsisleri ise Kalkınma Bakanlığı sitesinden alınmıştır. Türkiye İstatistik Kurumu Bölgesel Göstergeler web sitesinden ise bölgelere ait sektörel istihdam verileri elde edilmiştir.

### 3.2 Çalışmanın Yöntemi: Veri Zarflama Analizi

Veri Zarflama Analizi (VZA), birden çok ve farklı ölçeklerle ölçülmüş ya da farklı ölçü birimlerine sahip girdi ve çıktıların karşılaştırma yapmayı zorlaştırdığı durumlarda, karar birimlerinin göreli performansını ölçmeyi amaçlayan doğrusal programlama tabanlı bir tekniktir.

VZA'nın temelinde benzer türden karar verici birim (KVB)'lerin üretim etkinliklerinin değerlendirilmesi yer alır. Analize konu olacak KVB'lerin belirli ortak özellikleri olması gerekmektedir. Tüm KVB'lerin aynı hedefe yönelik, benzer işlevler görmesi önemlidir. Öte yandan pazar şartlarının benzer olması ve gruptaki bütün birimlerin verimliliklerini niteliklendiren etmenlerin yoğunluk ve büyüklüklerindeki farklılıklar hariç, aynı olması şartları aranır (Kayalıdere ve Kargın, 2004).

Analize dâhil edilen KVB'lerin optimizasyonu için regresyon doğrusunu temel alan parametrik yöntemlerin aksine VZA, her bir KVB'ni Pareto etkinlik sınırına olan konumuna göre değerlendirir. Parametrik yöntemlerde her bir KVB'yi, basit regresyon denklemi temsil eder ve her bir KVB bu ortalama değere göre değerlendirilirken, VZA her bir bireysel gözlemi, bir diğerine göre değerlendirir. Parametrik yaklaşım hata teriminin dağılımı hakkında bir ön koşul gerektirir (örneğin, hata teriminin genellikle normal dağıldığı kabul edilir), ancak VZA herhangi bir fonksiyonel formu ön koşul olarak zorunlu kılmaz. VZA, tüm KVB'lerini ayrı ayrı değerlendirmeye alarak, etkinlik sınırının üzerinde veya altında aldığı konuma göre değerlendirme yapar (Charnes vd., 1997).

Kısaca VZA, benzer üretim sürecine sahip KVB'lerin etkinliklerini göreli olarak hesaplayabilmek amacıyla geliştirilmiş, nonparametrik bir ölçüm tekniğidir. Çok girdi ve çok çıktı kullanarak analiz yapabilen VZA, önceden belirlenmiş herhangi bir fonksiyonel ilişkiye bağlı olmaksızın, her bir KVB'nin etkinsizliğini miktar ve kaynağı itibariyle belirleyebilmekte ve bu yönüyle de iyileştirici politikaların üretilmesine yardımcı olmaktadır. Bu özelliklerinden dolayı pek çok mal ve hizmet üretim sahasında, yaygın bir kullanım alanına sahiptir (Bakırcı, 2006).

VZA'da, çoklu girdi ve çoklu çıktı değerleri, ağırlıklandırılmak suretiyle, doğrusal olarak bir araya getirilir. Böylece KVB'nin girdilerinin doğrusal ağırlıklı toplamını ortaya koyan ağırlıklı toplam girdi aşağıdaki gibi hesaplanır;

$$\text{Ağırlıklı Toplam Girdi} = \sum_{i=1}^{I} v_i x_i \tag{1}$$

Burada, $v_i$, birleştirme esnasında $x_i$ girdisi için belirlenen ağırlıktır. Benzer şekilde, KVB'nin ağırlıklı toplam çıktısı da, tüm çıktıların doğrusal ağırlıklı toplamları ile elde edilir.

$$\text{Ağırlıklı Toplam Çıktı} = \sum_{j=1}^{J} u_j y_j \tag{2}$$

Burada, $u_j$, $y_j$ çıktısı için belirlenen ağırlıktır. Ağırlıklı toplam girdi ve çıktılarla, girdileri çıktılara dönüştüren KVB'lerin etkinlikleri girdilerin çıktılara oranı şeklinde tanımlanır ve aşağıdaki gibi formüle edilir (Ramanathan, 2003).

$$\text{Etkinlik} = \text{Ağırlıklı Toplam Çıktı / Ağırlıklı Toplam Girdi} = \frac{\sum_{j=1}^{J} u_j y_j}{\sum_{i=1}^{I} v_i x_i} \tag{3}$$

Yöntem verilen formüllerden de görüleceği üzere birden fazla girdi ve çıktıyı bir araya getirebilme yeteneğine sahiptir. Bundan daha da önemlisi, bir araya getirdiği tüm bu girdi ve çıktı setlerindeki verilerin ölçü birimlerinin aynı olmasını da gerektirmez. Analize dâhil edilen girdi ve çıktıları ayrı ayrı ağırlıklandırması sayesinde birden fazla veriyi kullanabildiği gibi, değişik birimlerle ölçülmüş olan verileri de aynı formülde kullanabilme yeteneği vardır.

Son yıllarda gerek kamu gerek özel sektör tarafından yaygın olarak kullanılan VZA'nın tarihi, Edwardo Rhodes'un Cornegie Mellon Üniversitesi'ndeki "Şehir ve Kamu" konulu doktora tezi çalışmaları ile başlamıştır.

Literatürde çok yaygın kullanım alanı bulan iki VZA modeli bulunmaktadır. Her iki modelde hem girdiye yönelik ve hem de çıktıya yönelik olarak hesaplama yapılabilmektedir. VZA modellerinden Charnes, Cooper, Rhodes tarafından ortaya atılıp geliştirilen ve isimlerinin baş harfleriyle anılan CCR modeli, ölçeğe göre sabit getiri varsayımı altında toplam etkinliği ölçmektedir. Diğer bir VZA modeli olan ve Banker, Charnes, Cooper'ın çalışmaları ile ortaya konulan ve geliştirilen BCC modeli ise ölçeğe göre değişken getiri varsayımı altında benzer ölçekteki birimleri birbirleri arasında karşılaştırabilmektedir. Böylece BCC modeli, çoklu girdi çoklu çıktı durumunda KVB'nin ölçeğe göre değişken getiri varsayımı altında araştırmaya olanak tanımaktadır.

Girdiye ve çıktıya yönelik VZA modelleri, temelde birbirlerine çok benzemektedirler. Bununla birlikte girdiye yönelik VZA modelleri, belirli bir çıktı bileşimini en etkin şekilde üretebilmek amacıyla kullanılacak en uygun girdi bileşiminin nasıl olması gerektiğini araştırırken, çıktıya yönelik VZA modelleri, belirli bir girdi bileşimi ile en fazla ne kadar çıktı bileşimi elde edilebileceğini araştırmaktadır.

VZA ile etkinlik değerlendirmesi üç aşamalı bir süreçten oluşmaktadır (Golany ve Roll, 1989);

1. Analize girecek olan KVB'lerin tanımlanması ve seçilmesi,
2. Seçilmiş olan KVB'lerin göreli etkinliklerinin değerlendirilmesi için uygun girdi ve çıktı faktör değişkenlerinin belirlenmesi,
3. VZA modellerinin uygulanması ve sonuçların analiz edilmesi.

VZA'nın uygulanmasında çok önemli avantajları bulunmakla beraber, bazı zayıf yönleri de mevcuttur. Örneğin, VZA her bir birimin tüm girdi ve çıktıları için, herhangi bir kısıtlama olmaksızın en uygun ağırlığın belirlenmesine olanak sağlar. Bu durum VZA için avantaj sağlamakla birlikte, serbest olarak belirlenen bu ağırlıklar bazen gerçeği yansıtmaz.

Ekonomik teori ve metotlarla desteklenme, mutlak değil göreceli etkinlik üzerine odaklanma, çoklu girdi ve çıktıları eşgüdümlü olarak hesaplamaya dâhil edebilme ve en iyi örneği tanımlayarak hedef olarak belirleyebilme yeteneği (Kontodimopoulos vd., 2007) sayesinde yaygın olarak kullanılabilme olanağı bulan VZA, anakütle ortalaması yerine, en iyiye göre performans değerlendirmesi yapar. Her bir KVB için en iyi örnek tanımlanır ve bir sınır yapılandırılarak bu sınır doğrultusunda bulunulan koordinata göre etkinlik veya etkinsizlik kararı verilir (Mok vd., 2007). Belirli bir fonksiyonel yapının ve davranışsal önkoşulu gerektirmeyen VZA uygulamalarında, KVB'ler arasındaki teknolojik altyapı tümüyle belirsiz ve değişkenken, doğrusal bütünlük içindeki faaliyetlerin analiz yapısı doğaldır (Biesebroeck, 2007). VZA'nin bir başka avantajı da etkinsiz KVB'ler için, potansiyel gelişim noktalarını belirleyebilme özelliğidir ki; bu yöntem sayesinde, etkinlik sınırı ile zarf içine alınmış olan etkin olmayan KVB'lerle, sınır üzerinde yer alan KVB'ler arasında yapılan bir karşılaştırma yoluyla kaynak kullanımı ile girdi ve çıktıların her biri için etkinlik seviyesi belirlenebilir (Şevkli vd., 2007). Nihayet VZA'nın en önemli avantajlarından biri de az sayıda gözlem kümesiyle sonuca ulaşılabilmesidir (Pasiouras vd., 2008). Ayrıca girdiler ve çıktılar ölçü birimleri olarak bağımsızdırlar ve çok farklı ölçü birimleriyle ölçülmüş olabilen VZA uygulamalarında, bu ölçümleri aynı biçimde yapabilmek için çeşitli varsayımlar kullanmaya veya dönüşümler yapmaya gerek yoktur (Karacaer, 1998).

VZA ile ulaşılan sonuçlara göre, veri setindeki üretim birimleri arasında göreceli olarak etkinlik skoru 1.0 olarak belirlenen bir KVB'nin, etkinliğini daha fazla artıramayacağı şeklindeki algı son derece yanıltıcıdır (Artura, 2006). Ayrıca yöntemin, etkinlik sınırından, etkinsizlik olarak kabul edilen sapmalara neden olan deterministik yapısı eleştirildiği gibi; yöntem, verilerdeki ölçüm hatalarına ve modelleme hatalarına karşı hassastır (Hansson, 2007). Orijinal VZA modelinin, etkin KVB'ler arasında belirli bir sıralama yapma olanağı bulunmamaktadır (Zzdeh vd., 2008). Sadece ele alınan küme içerisinde bir sonuç sağlayan VZA uygulamaları sonucunda belirlenen etkin KVB ifadesi, mevcut veri setinde yer alanlar arasındaki etkin KVB şeklinde algılanmalıdır.

### 3.3  Çalışmanın Analiz ve Bulguları

Öncelikle şunu ifade etmek gerekir ki; bu çalışmada elde edilen etkinlik skorları mutlak etkinliği ifade etmemekte sadece nispi etkinliği temsil etmektedir. Yani kamu yatırım tahsislerinin ve uygulanan genel teşviklerin yıllara göre nispi olarak ne kadar etkin kullanılabildiğini yine yıllara göre en etkin kullanımlar referans alınmak suretiyle değerlendirilmektedir. Bu bağlamda etkinlik değerleri bölge bölge değerlendirildiğinde aşağıdaki gibi yorumlar yapmak mümkündür.

Çalışma sonuçları incelendiğinde TR1 İstanbul bölgesi için etkinliğin yıllar itibariyle oldukça yüksek olduğu gözlenmektedir. 2010-2012 döneminde tam etkinlik sağlanmışken 2007-2009 döneminde etkinlik ortalaması %88 civarındadır. 2007 yılında kamu yatırım tahsislerinin ve teşviklerinin istihdamda etkinliğin sağlanması için Tarım istihdamının %86,10, Sanayi istihdamının %9,90, Hizmet istihdamının da %11,50 artırılmış olması gerekmektedir. Bu yıl için bölgeye verilen genel teşviklerin söz konusu çıktı düzeyinden %13,24 fazla olduğu, yani çıktı düzeyi veri olarak kabul edildiğinde teşviklerin %13 fazla olduğu veya etkin kullanılamadığı söylenebilir. Benzer durumun 2007'den sonraki yıllarda da yaşandığı görülmektedir. 2008 yılında mevcut girdi düzeyinde girdilerin etkin olarak çıktıya dönüşebilmesi için Tarım istihdamının %76,62, Sanayi istihdamının %20,13, Hizmet istihdamının da %21,29 artırılmış olması gerekmektedir. 2009 yılında söz konusu sektörlerde sırasıyla %78,12, %13,53 ve %8,55 oranında bir artış yapılması öngörülmektedir. 2010, 2011 ve 2012 yıllarında ise çıktı etkinliği sağlanabilmiştir. TR1 İstanbul bölgesi için göze çarpan en önemli bulgu tarım sektöründe istihdamın büyük oranlarda artırılması teknik olarak gerekli görülmektedir. Aslında bu bölge daha çok sanayi ve hizmetler sektöründe gelişmiş olması nedeniyle teşviklerin tarım sektöründe istihdamı artırıcı bir etkisi olmadığı veya bu bölgede kullanılan teşviklerin tarım dışı alanlarda yoğunlaşması nedeniyle tarımda istihdamı artırmadığı sonucu reel bir sonuç olarak ortaya çıkmıştır.

TR2 Batı Marmara bölgesinde teşvik uygulamalarının 2007 yılında tam etkin olduğu, 2008 yılında %80 düzeyine gerilediğini, 2009 yılında ise yeniden tam etkin düzeye yükseldiğini görmekteyiz. Ancak 2010 yılından itibaren bu bölgede etkinlik her yıl giderek azalmakta ve %64'e kadar gerilemektedir. Batı Marmara bölgesinde genel olarak İstanbul bölgesinde olduğu gibi teşvikler tarım sektöründe istihdama fazla etki yapmamıştır. Bunun nedeni bu bölgenin de tarım sektöründen çok sanayi ve hizmet sektörünün ağırlıklı bir gelişme sürecine olmasından kaynaklanmaktadır. Ancak bölge için göze çarpan ikinci önemli husus; yatırım tahsislerinin ve teşviklerin etkinliği sağlayabilmesi için özellikle 2008, 2010, 2011 ve 2012 yıllarında sanayi sektöründe istihdamın giderek artan oranda artırılması gerekliliğidir. Hizmet sektöründe de benzer bir tablonun olduğu söylenebilir. (2008; Tarım %61,68, Sanayi %25,32, Hizmetler %36,85, 2010; Tarım %30,63, Sanayi %15,85, Hizmetler %35,95, 2011; Tarım %115,23, Sanayi %57,54, Hizmetler %85,01, 2012; Tarım %136,83, Sanayi %55,77, Hizmetler %63,05).

*Çıktılar doğrudan girdi düzeyini yansıtırlar ve analizler ölçeğe göre sabit getiri varsayımı altında yapılmıştır.

***Tablo 2.** Cari Girdi düzeyinde Çıktı Maksimizasyonu Yaklaşımı ve BCC Modeline göre Etkinlik Analiz Sonuçları*

TR3 Ege bölgesinde ortalama etkinlik %90'ın üzerindedir. Bu bölgede 2008 yılında tarım istihdamının %15'lik bir artışla etkinliği sağlayabileceği öngörülürken, diğer sektörlerdeki artış önerisi %5-7 aralığındadır. Ancak durum 2010 yılından sonra tersine dönerek, etkinliği sağlamak için istihdamın daha çok artırılacağı sektör hizmet sektörü ve ardından da sanayi sektörü olmuştur. Bu bölgede uygulanan teşviklerin 2010'dan sonra tarım istihdamında etkinlik sağlayacak düzeyde artış sağladığı söylenebilir. 2010-2012 döneminde hizmet ve sanayi sektöründe %27 ile %57 arasında yüksek düzeylerde istihdam artışlarının teşviklerin etkinliğini artırabileceği teknik olarak öngörülmektedir.

TR4 Doğu Marmara bölgesinde etkinliğin oldukça yüksek olduğu görülmektedir. Ancak etkinlik 2008 yılında %79'a, 2011 yılında ise %97'ye düşmektedir. Diğer yıllarda tam etkinlik durumu olduğu gözlenmektedir. 2008 yılı için tam etkinliği sağlamak için tarımda %47,16, sanayide %26,89, hizmetlerde ise %26,89'luk bir artış önerilirken, bu çıktı düzeyinde genel teşviklerin %13,90 oranında fazla olduğu görülmektedir. Etkinsizliğin %3 gibi düşük bir düzeyde olduğu 2011 yılında ise tam etkinlik için tarımda %2,59, sanayide %2,59, hizmetlerde ise %3,69 gibi küçük artışlar yapılması öngörülmektedir.

TR5 Batı Anadolu bölgesinde etkinlik 2011'e kadar tam iken, 2011'den sonra %8 oranında etkinsizlik vardır. Bu yıllarda etkinsizliği gidermek için tarım, sanayi ve hizmetlerde istihdamın %8 ile %14 arasında değişen oranlarda artırılması önerilmektedir. Ayrıca bu bölge için tarım istihdamından ziyade etkinlik için sanayi ve hizmetler istihdamının daha fazla artırılması öngörüsü bölgenin tipik ekonomik özelliklerini yansıtmaktadır.

TR6 Akdeniz bölgesinde etkinliğin başlangıçta 2007'den 2009'a kadar %86'lara kadar düştüğünü, takip eden yıllarda ise tam etkinlik düzeyine yükseldiğini görmekteyiz. 2007 yılında tarımda %27,58, sanayide %6,84, hizmetlerde ise %10,36 artış, 2008 yılında tarımda %31,23, sanayide %4,03, hizmetlerde ise %13,27 artış, 2009 yılında da tarımda %18,79, sanayide %16,14, hizmetlerde de %28,09 artış olması halinde tam etkinliğin sağlanabileceği öngörülmüştür. Bölge için önemli bir bulgu kamu yatırım tahsislerinin ve teşviklerin etkinliğinin sağlanabilmesi için daha çok hizmet ve sanayi sektöründe istihdam artışına ihtiyaç duymasıdır. Bu durum bölge özelliklerine uygun bir sonuçtur.

TR7 Orta Anadolu bölgesinde uygulanan teşvik ve yatırımların hemen hemen bütün yıllar için çıktı etkinliğinin sağlanabilmiştir. Sadece 2009 yılında %8'lik bir etkinsizlik söz konusudur ki bunun sebebi, sektörlerde ortalama %10 oranında düşük istihdamdır. Her üç sektörde de istihdam söz konusu oranlarda artırılırsa nispi etkinlik tam olarak sağlanacaktır.

TR8 Batı Karadeniz bölgesinde etkinlik dalgalı bir seyir izlemektedir. Yüksek olan etkinlik 2009'da %8 azalmış, 2010'da tekrar tam etkinlik düzeyine ulaşmıştır. 2011'den sonra ise tekrar %10 oranında azalmıştır. 2009'da tarımda %8,05, sanayide %18,32, hizmetlerde ise %8,60 oranında artışla etkinlik artırılabilir. 2011 ve 2012 yıllarında ise sırasıyla tarımda %21,23 ve %36,28, sanayide %11,08 ve %14,42, hizmetlerde ise %15,35 ve 10,39'luk bir artışla etkinliğe kavuşabilecektir.

TR9 Doğu Karadeniz bölgesinde etkinlik 2009'dan itibaren ciddi oranda düşerek %49'a kadar gerilemiştir. Bu etkinlik düşüşünün en büyük nedeni; girdilerin hizmet sektöründe yeterli istihdamı oluşturmamasıdır. İstihdam açığı 2009-2010 yıllarında maksimum %40'larda iken, 2011-2012 yıllarında %100'leri aşmıştır.

TRA Kuzeydoğu Anadolu bölgesinde etkinlik Doğu Karadeniz bölgesinde olduğu gibi 2009'dan itibaren düşmeye başlamıştır. Ancak 2011 itibariyle tam etkinlik sağlanmasa bile oran biraz toparlanarak %80'lere kadar yükselmiştir. Bu bölgede uygulanan teşvik ve yatırımların daha çok tarım ve hizmetler sektöründeki istihdam artışıyla daha etkin hale gelebileceği görülmektedir. Bu artışları oranı %100 ile %140 arasında oldukça yüksektir. Sanayi sektöründeki artışlar ise etkinliği artırmada çok etkili görünmemektedir.

TRB Ortadoğu Anadolu bölgesinde etkinlik %100'lerden 2011 ve 2012'de %65'e düşmüştür. Bu bölgede incelenen dönemin sonunda etkinliğin düşük olması tarım ve sanayide %50, hizmetlerde ise %100 civarında olan istihdam açığıdır. İstihdam bu sektörlerde bahsi geçen oranlarda artırılınca tam etkinlik sağlanabilecektir. Bu görüntünün Ortadoğu Anadolu bölgesinde uygulanan yatırım tahsis ve teşviklerinin etkinliği sağlamak için daha çok hizmetlerde istihdamı artırıcı etki yapması gerekli görülmektedir.

TRC Güneydoğu Anadolu bölgesinde uygulamaların 2010 yılından itibaren etkin sonuçlar doğurmadığı gözlenmektedir. 2010'da %92'ye düşen etkinlik 2011 ve 2012'de %50'lere düşmüştür. 2010 yılında etkinsizliği gidermek için bütün sektörlerde %8-14 arasında istihdam artışı öngörülürken, 2011 ve 2012 yıllarında hemen hemen bütün sektörlerde %100'ün üstünde istihdam artışı öngörülmektedir. Ancak bu sektörler arasında en yüksek artış öngörülen tarım sektörüdür. Bu bölgede yapılan yatırım ve teşviklerin istihdamı %100 daha fazla artırması beklenirken bu artış sağlanamadığı için uygulamalar etkin sonuçlar doğurmamıştır.

Sonuçlar Türkiye geneli için değerlendirilecek olursa, etkinlik yıllar itibariyle şöyle oluşmuştur; 2007 %92,88, 2008 %84,25, 2009 %96,85, 2010 %100,00, 2011 %79,59, 2012 %100,00. Yani Türkiye genelinde kamu yatırım tahsislerinin ve teşvik uygulamalarının etkinliği önce düşüş sonra da yükseliş seyri göstermektedir. Etkinsizlik yıllarından 2007'de tarımda %16,41, sanayide % 7,66, hizmetlerde de %8,79; 2008 yılında tarımda %27,50, sanayide %18,70, hizmetlerde %21,14; 2009 yılında tarımda %7,19, sanayide %9,34, hizmetlerde %3,25; 2011 yılında tarımda %25,65, sanayide %27,13, hizmetlerde ise %31,24 oranında istihdam artışı önerilmektedir. Bu rakamlar doğrultusunda şu söylenebilir ki; Türkiye'de söz konusu teşvik uygulamalarının daha etkin düzeye gelebilmesi için bütün sektörlerde ortalama %15 daha fazla istihdam sağlanması gerekmektedir. Eğer araştırmaya konu yıllarda istihdam bütün sektörlerde %15 daha fazla sağlanabilmiş olsaydı tam etkinlik sağlanabilecekti. Etkinsizliğe yol açan istihdam açığının en çok tarımda olduğu, bunu sırasıyla hizmetler ve sanayi istihdamının takip ettiği görülmektedir. Bu söylenenlerin tarım, sanayi ve hizmetler sektöründeki istihdamın tek çıktı olarak ele alındığı analizlerde de desteklendiği görülmektedir.

## 4 Sonuç

Günümüzde ister gelişmiş ister gelişmekte olsun tüm ülkelerin ortak sorunlarından biri bölgelerarası kalkınma farklılıklarıdır. Farlılıkların boyutu ülkeler arasında değişmekle birlikte söz konusu ülkeler bu soruna odaklanmakta ve geri kalmış bölgelerin kalkınmasını hedeflemektedirler. Hedef doğrultusunda ülkeler geri kalmış bölgelere daha fazla kamu yatırımlarını yönlendirmekte ve özel teşvikler ile bölgeye sektör temsilcilerini çekmeye çalışmaktadır.

Ülkemizde de tüm dünyada olduğu gibi bölgesel kalkınmışlık farkı sorunu derinden yaşanmakta, sorunun çözümü için dengeli bölgesel kalkınmayı gerçekleştirecek kamu yatırımları ve bölgesel teşvik uygulamaları düzenlenmektedir.

1960'lardan itibaren Planlı Kalkınma Dönemiyle birlikte daha sistematik bir şekilde uygulanmaya çalışılan bu politika araçları geri kalmış bölgelere öncelik verilmesini ve ilgili bölgelerin daha fazla ekonomik aktiviteyi kendilerine doğru çekebilmesini amaçlamaktadır. Ancak günümüz Türkiye'sine bakıldığında yaklaşık son elli yıldır uygulanan araçların bölgelerarası genel görüntüyü değiştiremediği ve bölgesel dengesizliğin şiddetini arttırdığı görülmektedir. Bu doğrultuda çalışmada kamu yatırımları ve bölgesel teşviklerin bölgesel kalkınma üzerindeki etkisini belirlemek amaçlanmıştır. Çalışmanın zaman boyutu 2007-2012 dönemini ve mekân boyutu ise İBBS-Düzey 1'e göre 12 bölgeyi kapsamaktadır.

Yöntem olarak Veri Zarflama Analizi kullanılmıştır. Analizde girdi değişkenleri toplam kamu yatırımları ve yatırım teşvik belgelerinin sabit yatırımlara göre bölgesel dağılımıdır. Çıktı değişkeni ise bölgelerin sanayi, tarım ve hizmet sektörlerine ait istihdam verileridir. Veri Zarflama Analiziyle kamu yatırımları ve teşvik uygulamalarının bölgelerin üç sektör temelinde istihdam üzerindeki etkinliği belirlenmiştir.

Çalışmanın sonuçlarına göre Türkiye geneli için etkinliğin yıllar itibariyle farklılık gösterdiği belirlenmiştir. Farklılık önce düşüş sonra yükseliş seyri halindedir. Etkinsizlik yıllarında (2007, 2008, 2009 ve 2011) tarımda sırasıyla %16,41, %27,50, %7,19 ve %25,65'lik; sanayide % 7,66, %18,70, %9,34 ve %27,13'lük; hizmetlerde de %8,79, %21,14, %3,25 ve %31,24'lük oranda istihdam artışı önerilmektedir. Başka bir ifadeyle Türkiye'de söz konusu teşvik uygulamalarının daha etkin düzeye gelebilmesi için bütün sektörlerde ortalama %15 daha fazla istihdam sağlanması gerekmektedir. Etkinsizliğe yol açan istihdam açığının en çok tarımda olduğu, bunu sırasıyla hizmetler ve sanayi istihdamının takip ettiği görülmektedir. Bu söylenenlerin tarım, sanayi ve hizmetler sektöründeki istihdamın tek çıktı olarak ele alındığı analizlerde de desteklendiği görülmektedir.

İBBS-Düzey 1'de 12 bölge verileri incelendiğinde sonuçların bölgeler ve yıllar arasında farklılık gösterdiği anlaşılmaktadır. TR1 İstanbul Bölgesi ve TR4 Doğu Marmara Bölgesi etkinliğin oldukça yüksek olduğu bölgelerdir. Örneğin İstanbul 2007-2009 döneminde ortalama %88'lik bir etkinlik yakalamışken 2010-2012 döneminde tam etkinliğe ulaşmıştır.

Batı Marmara Bölgesi'nde 2010 yılından itibaren etkinlik kaybı büyük oranda görülmüş ve %64'e kadar gerilemiştir. Bu bölgede teşvikler tarım sektörü istihdamı üzerinde fazla etki yaratmamıştır.

Batı Anadolu ve Akdeniz Bölgeleri'nin etkinliği yıllara göre farklılık göstermekle birlikte son yıllardaki etkinlik kaybının büyük ölçüde sanayi ve hizmet istihdamındaki yetersizlikten kaynaklandığı anlaşılmaktadır. Her iki bölgenin de tam etkinliği yakalaması için sanayi ve hizmet sektöründeki istihdamı artırmaları gerekmektedir.

TR9 Doğu Karadeniz ve TRA Kuzeydoğu Anadolu Bölgesi 2009 yılında itibaren ciddi etkinlik kaybına uğramışlardır. Hatta TR9'da %49'a kadar bir gerileme ortaya çıkmıştır. Bu bölge için özellikle hizmet sektörü istihdamının ciddi boyutta artırılması gerekmektedir. Kuzeydoğu Anadolu Bölgesi'nde ise tarım ve hizmet sektörleri ön plana çıkmaktadır.

TRB Ortadoğu Anadolu bölgesinde etkinlik %100'lerden 2011 ve 2012'de %65'e düşmüştür. Bu bölgede incelenen dönemin sonunda etkinliğin düşük olması tarım ve sanayide %50, hizmetlerde ise %100 civarında olan istihdam açığıdır. Benzer şekilde Güneydoğu Anadolu Bölgesi'nde de 2010'dan itibaren etkin sonuçlar görülmemiştir. Etkinlik için 2011 ve 2012 yıllarında hemen hemen bütün sektörlerde %100'ün üstünde istihdam artışı öngörülmektedir. Ancak bu sektörler arasında en yüksek artış öngörülen tarım sektörüdür.

Sonuç olarak Türkiye'de uygulanan teşvik ve kamu yatırımı araçlarının arzulanan sonucu gerçekleştiremediği ve Batı'da yer alan bölgelerin genellikle daha yüksek etkinliğe sahip olduğu görülmektedir. İstihdam temelli yapılan çalışmada son yıllarda doğu bölgelerinde etkinlik kaybının büyük ölçüde arttığı belirlenmiştir. Bu bölgelerde özellikle hizmet ve tarım istihdamının teşvik edilmesi bölgelerin etkinlik kaybının durdurulmasında önemli rol oynayacağı söylenebilir.

# Girdi-Çıktı Analizi Yaklaşımıyla Kırgızistan Ekonomisinin Analizi (2005-2010)

# Input-Output Analysis of the Kyrgyzstan Economy (2005-2010)

Dr. Aynura Turdalieva (Kyrgyzstan-Turkey Manas University, Kyrgyzstan)

## Abstract

Structural changes in economy become the important goal of economic development in the developing countries. During the ongoing globalization process, the successful execution of special analysis and approaches caused the growing interest in macroeconomic planning and development policies. In this context, input-output analysis is emerging as an alternative research method among the other economic planning methods. Given paper based on input-output analysis and used input-output tables prepared for the years 2005 and 2010 by The National Statistical Committee of Kyrgyz Republic. İntersectoral relations, forward and backward linkages, industrial structure dependency, production techniques, efficiency of input usage were calculated in this paper. The results are as follows: for five years economy has been functioning in poor conditions; together with the lack of interaction between sectors, economy is not integrated; there were external dependence in production structure. It is notable that for achieving economic growth, economy needed investments to stimulate the production capacity, which strengthening inter-sectoral relationship and stable macroeconomic planning.

## 1 Giriş

Ulusal ekonomi, ülke genelinde belli bir kalıba oturmuş üretim süreci ve gelişme süreci içerisinde oluşmuş, birbiriyle karşılıklı bağımlılık ilişkilerde bulunan ekonomik sektörlerin oluşturduğu bir bütün sistemidir. Küreselleşme koşullarında gelişmekte olan ülkeler ekonomilerinin kalkınması yönünde ekonomik yapı değişiminin gerçekleşmesi daha da hızlanmaktadır. Söz konusu değişmeler Kırgızistan ekonomisi için de önemli olmaktadır. Oldukça geniş kapsamlı olan ekonomik yapı kavramına bağlı olarak, yapısal değişimi açıklamaya yönelik farklı yaklaşımlarla yapılacak araştırmalar, ülkedeki ekonomik yapının farklı yönlerini yansıtabilmesi ve daha sağlıklı ekonomik plan ve politikaların belirlenmesi için daha da önemli olmaktadırlar. Bu durum ekonomik yapının incelenmesinin girdi - çıktı analizi yaklaşımıyla yapılmasının temel nedenini oluşturmaktadır.

Bu amaç doğrultusunda, 2005 ve 2010 yılları için Kırgızistan Cumhuriyeti Milli İstatistik Komitesi tarafından hazırlanan Girdi-Çıktı akım tabloları kullanılarak, ilgili dönemde, ekonomik üretim yapısındaki değişmenin, endüstriyel bağınlaşma, üretim tekniklerindeki değişme, aramalı kullanımındaki etkinlik ve toplam etkenlik katsayılarına göre incelenerek, ekonomideki yapısal değişim hakkında tarafları bilgilendirerek daha rasyonel plan ve politikaların hazırlanmasına katkıda bulunma hedeflenmektedir.

## 2 Girdi-Çıktı Analizi Yaklaşımıyla Ekonominin Üretim Yapısının İncelenmesi

Girdi-Çıktı modelleri kapsamında üretim yapılarının dönemlerarası karşılaştırılması genellikle endüstrilerarası bağınlaşma, üretim teknikleri, aragirdi kullanımları ve temel girdi kullanımları gibi konuları kapsar. (Aydoğuş, 2010, s.137).

Girdi-çıktı analizinde endüstrilerarası akım tablosunda yer alan III no'lu katma değer bölmesi kısmi çarpanların hesaplanmasına olanak verir. Buradan hesaplanacak olan kısmi çarpanlar yardımıyla, herhangi bir sektörün nihai talebindeki 1 TL'lik artışın o katma değer unsurunda yaratacağı gelir artışı bulunabilir. Bilindiği gibi ters matris $((I-A)^{-1})$, nihai talep vektörüyle $(S_k)$ çarpıldığında nihai talebin karşılanabilmesi için gerekli sektörel üretim gerekleri bulunabilir. Bu ilişki;

$$X_i = (I-A)^{-1}Y_k \qquad \text{(i=1,2,...) ve (k=1,2,....)} \qquad (1)$$

şeklinde belirtilebilir. Burada tüketim, yatırım, ihracat birer nihai talep unsuru olarak düşünüldüğünde, ters matrisin bu unsurlara ilişkin vektörlerle çarpılmasıyla; tüketim, yatırım ve ihracatı karşılayabilmek için gerekli sektörel üretim miktarları bulunabilir (Kepenek, 1985, s:37). Bu değerler III no'lu katmadeğer bölmesindeki kısmi çarpanlarla çarpıldığında bu kez ekonomide ilgili katma değer unsuruna yapılması gereken doğrudan ve dolaylı ödemeler bulunabilir (Bocutoğlu, 1985, s.88).

Girdi-çıktı tablolarında nihai talebi karşılamaya yönelik rakip ithalat endüstrilerarası akım tablosunda III. Bölmede katma değer unsurları arasında yer almaktadır. Rakip ithalatın sektörün toplam üretimi içerisindeki payı alınarak hesaplanan ithalat katsayısı ilgili üretim gereğiyle çarpıldığında nihai talep unsurlarının karşılanabilmesi için gerekli ithalat değerleri bulunabilir. Benzer şekilde nihai talepte 1 TL'lik artışın ithalata etkisi, ithalatla karşılanan kısmı elde edilebilir.

Bu durumda herhangi bir i.nci sektörün ithalat katsayısı;

$$m_i = (M_i / X_i) \tag{2}$$

şeklinde olacaktır. Buradan ihracat ve tüketim için gerekli ithalat miktarlarının bulunabilmesi için;

$$M_i = m_i (I - A)^{-1} C_k \quad (3) \qquad\qquad M_i = m_i (I - A)^{-1} E_k \tag{4}$$

işlemlerinin yapılması gerekmektedir (Korum, 1977, s.30).

Sektörler arasındaki mal ve hizmet akımları iki yönden incelenebilir. Bunlar sektörün kendisi de dahil üretimi için diğer sektörlerden aldığı ve aynı amaçla diğer sektörlere verdiğidir. Yani sektörün üretimi için diğer sektörlerden talep ettiği ara girdi kullanımları, diğeriyse diğer sektörlerin sektör malına olan, ara girdi talebidir. Bunların sektör üretimi içindeki payları geri ve ileri bağlantı katsayıları olarak adlandırılmaktadır (Korum, 1963, ss.119-136). Bu durumda ileri ($B_i$) ve geri ($B_g$) bağlantı katsayıları; sektörel üretim $X_j$ ; $U_j$ ara girdi kullanımı ve ara girdi talebi $W_i$ olmak üzere aşağıdaki gibi olmaktadır.

$$B_i = W_i / X_i \qquad\qquad B_g = U_j / X_j \tag{6}$$

Bu katsayıların ortak özelliği birim üretime doğrudan katkı düzeyini göstermeleridir. Herhangi bir sektörün geri bağlantı katsayısının yüksek olması, bu sektörün üretimindeki 1 birimlik artışın diğer sektörlerin üretimlerini de yüksek oranda (katsayı kadar) etkileyeceği anlamına gelmektedir. Bunun yanı sıra ileri bağlantı katsayısının yüksek olması sektör üretimindeki 1 birimlik artışın diğer sektörlere olan ara girdi arzını artırması ya da daha ucuz girdi sağlaması olarak yorumlanabilir (Öney, 1983, s.99). İleri bağlantı katsayılarının hesaplanmasında rakip ithalatın etkisini görebilmek açısından toplam üretim yerine toplam talep değeri kullanılabilmektedir (Korum, 1977,s.72).

Sektörlerarası ilişkilerin belirlenmesinde, doğrudan ve dolaylı etkilerin diğer sektörlere göre göreceli konumunu açıklayabilmek için ileri ve geri bağlantı endeksleri hesaplanmaktadır. Söz konusu endekslerin hesaplanmasında baz değer olarak ekonomi içerisinde göreceli olarak önemli paya sahip herhangi bir sektör veya sektörler seçilebileceği gibi tüm sektörlerin ortalaması da kullanılabilmektedir. Sektörün bağlantı etkisi ortalama etkiye oranlanarak endeks hesaplanmaktadır.

Herhangi bir i. sektörü için toplam ileri bağlantı endeksi ($RII_i$), $r_{ij}$ : ters matris satır elemanları olmak üzere aşağıdaki gibi hesaplanabilmektedir.

$$RII_i = \frac{\sum_j r_{ij}}{\left( \dfrac{\sum_i \sum_j r_{ij}}{N} \right)} \tag{5}$$

Benzer şekilde geri bağlantı endeksi ise,

$$RGI_j = \frac{\sum_i r_{ij}}{\left( \dfrac{\sum_j \sum_i r_{ij}}{N} \right)} \tag{6}$$

şeklinde heasplanabilmektedir (Aydoğuş, 1999, s.96).

Sektörlerarası ilişkilerin çözümlenmesinde, ileri ve geri bağlantı etkilerinin daha sağlıklı yorumlanabilmesinde, bu etkilerin ekonomiye ne ölçüde dengeli dağıldığının da incelenmesi gerekir. Bu dağılımın göstergesi olarak da, ileri ve geri bağlantı etkilerinin diğer sektörlere olan yayılma dereceleri hesaplanmaktadır. Toplam bağlantı endeksleri kullanılarak ileri ve geri dağılma ölçüleri hesaplanabilir. Söz konusu ölçüler aşağıdaki gibidir (Aydoğuş, 1999, s.97);

$$DF_i = \frac{\left\{ (1/N-1)\left[ \sum_j r_{ij} - (1/N)\sum_j r_{ij} \right]^2 \right\}^{1/2}}{(1/N)\sum_j r_{ij}} \quad (7) \qquad DB_j = \frac{\left\{ (1/N-1)\left[ \sum_i r_{ij} - (1/N)\sum_i r_{ij} \right]^2 \right\}^{1/2}}{(1/N)\sum_i r_{ij}} \quad (8)$$

Üretim yapısının önemli bir unsuru olarak endüstriyel bağınlaşma yapılarının karşılaştırılması sektörel bağlantı etkilerinin karşılaştırılmasına dayanır. Bu karşılaştırma doğrudan ve toplam ileri ve geri bağlantı etkilerine göre yapılabileceği gibi, sıkça kullanılan bir gösterge Santhanam ve Patil tarafından geliştirilen bağımlılık oranı katsayısıyla da yapılabilir. Herhangi bir "j" sektörünün bağımlılık oranı $b_j$,

$$b_j = \frac{\left[\frac{1}{2}\left(\sum_i x_{ij} + \sum_j x_{ij}\right)\right] / \sum_j x_{ij}}{x_j / \sum_j x_j} \qquad (9)$$

şeklinde tanımlanabilir. (9) no'lu denklemin paydasındaki terim, j sektörünün çıktısının ekonominin toplam çıktısına oranını, payındaki terim ise sektörün kullandığı toplam ara girdi ile sektörün ürettiği çıktıya olan toplam ara talebin ortalamasının sektörün çıktısına olan toplam aratalebe oranını göstermektedir (Aydoğuş, O. 2010, s. 138). Bu katsayı ne kadar büyükse ekonomi bu sektöre o kadar bağımlı demektir. Dönemsel karşılaştırmalarda sektörel bağımlılık katsayılarındaki artış ve azalışlara göre dönem içinde bağımlılığın değişimi incelenebilir.

Girdi-çıktı çözümlemesinde dar anlamda sektörel üretim tekniklerini, teknoloji (katsayı) matrisinin sütunları temsil eder. Ekonomide, r ve s gibi herhangi iki farklı dönemde veya ülkede "j" sektöründeki üretim teknikleri aşağıdaki katsayı aracılığıyla karşılaştırılabilir;

$$PT_j^{rs} = \frac{\sum_i \left| a_{ij}^r - a_{ij}^s \right|}{(1/2)\sum_i \left( a_{ij}^r + a_{ij}^s \right)} \qquad (10)$$

(10) no'lu denklemle tanımlanan söz konusu katsayı, iki dönemin veya ülkenin "j" sektörüne karşılık gelen girdi katsayıları arasındaki farkların mutlak değerlerinin toplamının, karşılıklı katsayılarının aritmetik ortalamalarının toplamına oranı $PT_j^{rs}$ şeklinde tanımlanmaktadır. $PT_j^{rs}$ katsayısı, saf bir katsayı olup 0 ile 2 arasında değerler alabilir (Aydoğuş, O. 2010, s.139). Dönemler arasında veya ülkelere göre, teknik katsayılarda değişim, farklılık yoksa yani üretim teknikleri aynıysa payda yer alan mutlak farklar sıfır olacağından katsayı 0'a eşit çıkacaktır. Bunun anlamı dönem içinde sektörde üretim teknolojisinde hiç farklılığın olmadığı veya her iki ülke üretim tekniğinin aynı, benzer olduğudur. Eğer teknik katsayılar iyice değiştiyse, payda da yer alan 1/2 katsayısı nedeniyle bölüm sonucu en fazla iki çıkacaktır. Bunun anlamı da, değişimin veya farklılığın çok fazla olduğudur. Bu yönüyle katsayı ne kadar 0'a yakın çıkarsa değişim, farklılık az, ne kadar 2'ye yakın çıkarsa değişim, farklılık o kadar fazla demektir. Genel olarak 0.80'nin üzerindeki oranlar farklılığın çok olduğu yönünde değerlendirilmektedirler.

Farklı dönemler arasında çeşitli aramalların kullanımındaki etkenlik dereceleri ise aşağıdaki gibi karşılaştırılabilir:

$$IU_i^{rs} = \frac{\sum_j a_{ij}^r x_j^s}{\sum_j a_{ij}^s X_j^s} \qquad (11)$$

(11) no'lu denklemdeki $IU_i^{rs}$ katsayısı r ve s dönemlerindeki veya ülkelerindeki *i.* malının aramal olarak kullanımındaki etkenliğin benzerlik derecesini, $X_j^s$ ise ikinci veya diğer ülke üretim vektörünü göstermektedir.

Katsayının payındaki terim r ülkesinde s ülkesinin üretim vektörünü gerçekleştirmek için ne kadar *i* malının aramal olarak kullanılması gerektiğini, paydadaki terim ise s ülkesinde aynı üretim vektörünü gerçekleştirebilmek için ne kadar *i* malının aramal olarak kullanılması gerektiğini göstermektedir (Aydoğuş, O. 2010, s.140). Burada doğal olarak bir oran söz konusudur. Oranın sonucu 1 ise bu dönem içerisinde veya ülkelerde sektörel bazda aramalı kullanımında farklılığın olmadığı aramalı kullanım etkenliğinin değişmediği, aynı olduğu anlamına gelmektedir. Katsayının 1'den küçük çıkması dönem içerisinde aramalı kullanımın azaldığı veya ülkede diğerine göre daha az kullanıldığı anlamına gelecek ve olumlu olarak sektörde diğer ülkeye göre aramalı kullanımında etkenliğin, verimliliğin arttığı anlamında yorumlanacaktır. Tam tersi olarak katsayının 1'den büyük çıkması diğer şartlar veriyken ilgili sektörde üretimde aragirdi kullanımının arttığı, daha çok olduğu dolayısıyla etkenliğin, verimliliğin azaldığı anlamına gelecektir.

## 3  Girdi-Çıktı Analizi Yaklaşımıyla Kırgızistan Ekonomisi

Kırgızistan'ın 2005 ve 2010 yılına ait ekonomik üretim yapılarının karşılaştırmalı olarak incelenmesi girdi-çıktı analizi yaklaşımıyla yapılmaktadır. Bunlar dışında gerek girdi-çıktı analizinin teorik varsayımlarından gerekse de tabloların hazırlanma yöntemlerinden kaynaklanabilecek sektör içerikleri, enflasyonun etkisi gibi sorunların olmadığı veya bunların tüm tablolarda da olması nedeniyle karşılaştırmaya dayalı sonuçları etkilemediği varsayılmıştır.

Kırgızistan ekonomisinin girdi-çıktı analiziyle incelenmesi Milli İstatistik Komitesi tarafından hazırlanan 2005 ve 2010 yılına ait girdi-çıktı tablosu kullanılarak yapılmıştır. Belirtmek gerekir ki, girdi-çıktı analiz çalışmaları 1994 yılında Milli İstatistik Komitesi tarafından başlatılmıştır ve endüstrilerarası akım tablosu ilk kez 1998 yılında yayınlanmıştır. Ardından da 2005 yılından itibaren 2007 yılı hariç, söz konusu tablolar her sene düzenli

olarak hazırlanmaktadır. 2010 yılı için hazırlanan girdi-çıktı tabloları 34 sektörden oluşmaktadır. Tüm hesaplamalarda temel fiyatlarla girdi-çıktı tablosu kullanılmıştır.

### 3.1 Kırgızistan Ekonomisinin Üretim Yapısı

Genel olarak ekonomik yapıyı görebilmek için endüstrilerarası akım tablosundaki bilgilerden yararlanılarak tüm sektörlerdeki nihai talebi karşılayabilmek için gerekli sektörel üretimler hesaplanıştır (Tablo 1).

| Sıra no | Sektörler | Üretim | | % pay | | İhracat | | % pay | |
|---|---|---|---|---|---|---|---|---|---|
| | | 2005 | 2010 | 2005 | 2010 | 2005 | 2010 | 2005 | 2010 |

***Tablo 1.*** *2005-2010 Döneminde Kırgız Ekonomisinin Üretim Yapısı (milyon som)* **Kaynak:** *K.C. Milli İstatistik Komitesi 2005 ve 2010 Yılı Girdi-Çıktı Sonuç Tabloları kullanılarak hesaplanmıştır.*

Sektörel üretimin oransal dağılımına bakıldığında, 2005 yılı % 31,39'luk payla 01-Tarım, avcılık ve ormancılık altsektörü dikkat çekmektedir. Bunu %11,70'lik payla perakende ticaret sektörü izlemektedir. 2010 yılında ise yine 01-Tarım, avcılık ve ormancılık alt sektörünün payı sektörel üretimin oransal dağılımında en yüksek olduğu, ama 2005'e göre daha az, %24,36 olduğu görülmektedir. İkinci sırada % 14, 08 pay ile 12-Maden (metal) sanayi sektörü yer almaktadır. Bunu %9, 0 payla 22-Perakende ticaret sektörü izlemektedir. Diğer sektörlerin payları her iki yılda %5, 0'ten küçük oranlarda kalmaktadır. 2005'e ait tablodaki ilk 9 sektör tarım ve tarıma dayalı sanayiler olarak düşünüldüğünde bunların toplam payı yaklaşık %40,79'a ulaşmaktadır. 10-20 numaralı sektörler imalat sektörleri olarak düşünüldüğünde bunların toplam üretim payları da yaklaşık %21, 59

civarında çıkmaktadır. 21-34 numaralı sektörler hizmet sektörü olarak ele alındığında toplam üretim payları % 37,62 olmaktadır. 2010 tablosunda tarım ve tarıma dayalı sanayilerin payı %32, imalat sektörlerinin payı %28,51, hizmet sektörünün payı %39,48 civarında çıkmaktadır. Dolayısıyla son 5 yıl içinde tarımda azalış, imalat ve hizmet sektöründe ise artış olduğu görülmektedir.

| Sıra no | Sektörler | İthalat | | % pay | | İhracatı karşılamak için gerekli üretim | | Sektörel üretimdeki % pay | |

**Tablo 2.** *2005-2010 Döneminde Kırgızistan Ekonomisinin Üretim Yapısı ve İhracatı karşılayabilmek için Gerekli Sektörel Üretimler **Kaynak:** K.C. Milli İstatistik Komitesi 2005 ve 2010 Yılı Girdi-Çıktı Sonuç Tabloları kullanılarak hesaplanmıştır.*

İhracat bakımından 2005'te %21,90'lık payla 12-Maden (metal) sanayi ilk sırayı almakta, bunu %14,66'lık payla 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi sanayisi izlemektedir. Bu sektörün ithalatı da %26,68'lik payla ilk sıradadır. Diğer sektörlerin payları ise %5'ten küçüktür. 2010'da ise %38,84'lük payla 1-Tarım, avcılık ve ormancılık sektörü ilk sırada yer almaktadır. İkinci sırada ise % 27,76'lık payla 12-Maden (metal) sanayi bulunmakta ve 2005'e mukayeseli olarak konumunu korumakla birlikte ihracat payının 2010 yılında arttığı görülmektedir. 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi sanayisinin payı ise 5 yıl içinde azalarak, 2010'da %9,50 olmuştur. Bu sektörün ithalatı da %29,65'lik payla ilk sıradadır.

İthalat bakımından ise, 2005'te 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi sektörünü %26,68, % 19,88'lik payla 14- Makine ve teçhizat üretimi ve %10,29'luk payla 6- Besin ve tütün ürünleri üretimi sektörleri izlemektedirler. 2010'da 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi sanayisi % 29,65, 1- Tarım, avcılık ve ormancılık% 21,57, 14- Makine ve teçhizat üretimi % 10,43 ve 6- Besin ve tütün ürünleri üretimi %10,01'lik payla dikkati çekmektedir. Buradan genel olarak ekonomide hakim sektörün tarım olduğunu, imalat sektörünün yetersiz kaldığını, talebin önemli bir kısmının ithalatla karşılandığını söylemek mümkündür. Örneğin, 2005 yılında 3-Kömür, petrol ve doğal gaz çıkarımı, 8- Kereste ve ahşap doğrama üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 13- Hazır (işlenmiş) maden mamulleri üretimi, 15- Diğer sanayi sektörleri ve ikincil işlemeler, 17- Gazlı (gaz tipi) yakıtların üretimi ve dağıtımı, 25- Taşıtlar (ulaştırma) ve yardımcı hizmetler, 2010'da ise, 3- Kömür, petrol ve doğal gaz çıkarımı, 4- Maden (metal) cevheri çıkarımı, 5- Diğer madencilik sanayi (türleri), 6- Besin ve tütün ürünleri üretimi, 8- Kereste ve ahşap doğrama üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 14- Makine ve teçhizat üretimi, 15- Diğer sanayi sektörleri ve ikincil işlemeler, 17- Gazlı (gaz tipi) yakıtların üretimi ve dağıtımı, 25- Taşıtlar (ulaştırma) ve yardımcı hizmetler sektörlerinde sektörel ithalat sektör üretiminden çok daha fazladır (Tablo 1 ve 2).

Nihai talep unsurları içerisinde yer alan ihracat vektörü ters matrisle çarpıldığında ihracatı karşılamak için gerekli sektörel üretim miktarları hesaplanabilir. Söz konusu hesaplamalar yapılarak ihracatı karşılamak için gerekli sektörel üretimler elde edilmiş ve bunların sektör üretimleri içerisindeki payları hesaplanmıştır. Elde edilen sonuçlar tablo 2'de verilmektedir. 2005 yılında 3-Kömür, petrol ve doğal gaz çıkarımı, 4-Maden (metal) cevheri çıkarımı, 5-Diğer madencilik sanayi (türleri), 8- Kereste ve ahşap doğrama üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 11- Diğer metal olmayan mineral üretimi, 13- Hazır (işlenmiş) maden mamulleri üretimi, 14- Makine ve teçhizat üretimi, 2010'da ise 1- Tarım, avcılık ve ormancılık, 4- Maden (metal) cevheri çıkarımı, 7- Tekstil ve konfeksiyon sanayi; deri ve deri ürünleri üretimi, 8- Kereste ve ahşap doğrama üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 13- Hazır (işlenmiş) maden mamulleri üretimi, 14- Makine ve teçhizat üretimi sektörlerinde ihracat için gerekli üretim sektör üretiminden büyük çıkmıştır. Dolayısıyla 5 yıl içinde 4- Maden (metal) cevheri çıkarımı, 8- Kereste ve ahşap doğrama üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 13- Hazır (işlenmiş) maden mamulleri üretimi, 14- Makine ve teçhizat üretimi sektörleri için söz konusu durum devam etmiştir.

Böyle bir durumun oluşmasının nedeni de ilgili sektörde talebin önemli bir kısmının ithalatla karşılanıyor olmasıdır. Bu da ekonomide genel olarak dışa bağımlılık sorununun bulunduğu izlemini desteklemektedir.

### 3.2 Kırgızistan'ın Toplam İleri ve Geri Bağlantı Etkileri

Toplam ileri ve geri bağlantı etkileri ekonomi sektörleri arasındaki karşılıklı bağımlılığı göstermektedir. Çalışmada söz konusu bağımlılık katsayılarının önemini açıklayabilmek için bağlantı endeksleri ve yayılma dereceleri hesaplanan sonuçlar tablo 3'te gösterilmiştir.

2005'te 34 sektör arasında 8 sektörün toplam ileri bağlantı etkileri ekonomiyi etkileme gücü yüksek olan sektörler arasında 9 sektör: 1- Tarım, avcılık ve ormancılık, 7- Tekstil ve konfeksiyon sanayi; deri ve deri ürünleri üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 12- Maden (metal) sanayi, 14- Makine ve teçhizat üretimi, 22- Perakende ticaret, 25- Taşıtlar (ulaştırma) ve yardımcı hizmetler, 27- Mali faaliyetler (aracılık, arbitraj) sektörleri olmuştur. Tablo 3'te görüldüğü gibi, 2005 yılında ekonomiyi en çok etkileme gücüne sahip sektörlerin etkileme gücü 2010'da azaldığı görülmektedir.

Geri bağlantı endeksleri bakımından, 2005'te ekonomiyi etkileme gücü yüksek olan sektörlerin arasında 4- Maden (metal) cevheri çıkarımı, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 11- Diğer metal olmayan mineral üretimi, 12- Maden (metal) sanayi, 13- Hazır (işlenmiş) maden mamulleri üretimi, 20- İnşaat, 27- Mali faaliyetler (aracılık, arbitraj) sektörleri bulunmaktadır. 2010 yılında ise, söz konusu sektörlerin ekonomiyi etkileme gücü azalarak, 7- Tekstil ve konfeksiyon sanayi; deri ve deri ürünleri üretimi, 8- Kereste ve ahşap doğrama üretimi, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 27- Mali faaliyetler (aracılık, arbitraj) sektörleri en çok etkileme gücüne sahip

sektörlerden olmuştur. 2005 yılında her hangi bir sektörün nihai talebinde gerçekleşecek 1 birimlik artışın ekonomi genelindeki toplam etkisi 89,6225 birim iken, 2010'da azalarak 88,4898 birim olmuştur (Tablo 3).

Sektörlerin birbirlerine göre göreceli olarak önemini ortaya koyabilmek için ileri ve geri bağlantı katsayılarının ortalamalarına göre bağlantı endeksleri hesaplanmıştır. Endekslerin yorumlanmasında, 1'den küçük endeks sayıları sektörün etkisinin; ortalamanın altında, 1'e eşit endeks sayıları, tam ortalamaya eşit ve 1'den büyük endeks sayıları ise ortalamanın üzerinde olduğu anlamına gelmektedir.

| Sıra no | Sektörler | Toplam İleri Bağlantı Etkileri | | Toplam Geri Bağlantı Etkileri | | İleri Bağlantı Endeksleri | | Geri Bağlantı Endeksleri | |

***Tablo 4.** Kırgızistan Ekonomisinde İleri ve Geri Bağlantı Yayılma Dereceleri **Kaynak:** K.C. Milli İstatistik Komitesi 2005 ve 2010 Yılı Girdi-Çıktı Sonuç Tabloları kullanılarak hesaplanmıştır.*

İleri bağlantı etkileri bakımından 2005 yılında 34 sektör içerisinden on iki tanesinin endeksi 1'den büyük çıkmıştır. Bunlar: 1- Tarım, avcılık ve ormancılık, 8- Kereste ve ahşap doğrama üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10-Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 11- Diğer metal olmayan mineral üretimi, 12- Maden (metal) sanayi, 13- Hazır (işlenmiş) maden mamulleri üretimi, 14- Makine ve teçhizat üretimi, 20- İnşaat, 22- Perakende ticaret, 27- Mali faaliyetler (aracılık, arbitraj), 28- Gayri menkul mallar ile işlemler; kira ve işletmelere hizmet sunma sektörleri olmaktadır. Bunlar içerisinde endeksi en büyük ilk beş sektör 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 14- Makine ve teçhizat üretimi, 1- Tarım, avcılık ve ormancılık, 22- Perakende ticaret, 27- Mali faaliyetler (aracılık, arbitraj) sektörleri olmaktadır. 2010'da ise, 1- Tarım, avcılık ve ormancılık, 6- Besin ve tütün ürünleri üretimi, 7- Tekstil ve konfeksiyon sanayi; deri ve deri ürünleri üretimi, 8- Kereste ve ahşap doğrama üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 12- Maden (metal) sanayi, 14- Makine ve teçhizat üretimi, 22- Perakende ticaret, 25- Taşıtlar (ulaştırma) ve yardımcı hizmetler, 27- Mali faaliyetler (aracılık, arbitraj) sektörlerin endeksleri 1'den büyük çıkmıştır. Bunlar içerisinde endeks en büyük olan sektörler ise, 11- Diğer metal olmayan mineral üretimi, 27- Mali faaliyetler (aracılık, arbitraj), 1- Tarım, avcılık ve ormancılık, 12- Maden (metal), 20-İnşaat sanayileri olmuştur. Dolayısıyla 5 yıl içinde ileri bağlantı endekslerinin azaldığı görülmektedir.

Geri bağlantı endeksler bakımından 4- Maden (metal) cevheri çıkarımı, 5- Diğer madencilik sanayi (türleri), 6- Besin ve tütün ürünleri üretimi, 7- Tekstil ve konfeksiyon sanayi; deri ve deri ürünleri üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 11- Diğer metal olmayan mineral üretimi, 12- Maden (metal) sanayi, 13- Hazır (işlenmiş) maden

mamulleri üretimi, 14- Makine ve teçhizat üretimi, 15- Diğer sanayi sektörleri ve ikincil işlemeler, 20-İnşaat, 25-Taşıtlar (ulaştırma) ve yardımcı hizmetler, 27- Mali faaliyetler (aracılık, arbitraj) sektörlerin endeksleri 2005 yılında 1'den büyük çıkmıştır. 2010'da ise, 1- Tarım, avcılık ve ormancılık, 4- Maden (metal) cevheri çıkarımı, 5- Diğer madencilik sanayi (türleri), 6- Besin ve tütün ürünleri üretimi, 7- Tekstil ve konfeksiyon sanayi; deri ve deri ürünleri üretimi, 8- Kereste ve ahşap doğrama üretimi, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 11-Diğer metal olmayan mineral üretimi, 15- Diğer sanayi sektörleri ve ikincil işlemeler, 20- İnşaat, 24- Otel ve restoranlar, 27- Mali faaliyetler (aracılık, arbitraj) sektörlerin endeksi 1'den büyük çıkmıştır. Dolayısıyla söz konusu sektörlerin etkisi ortalamanın üzerinde olmaktadır. 2010 yılında bağlantı endeksleri yükseldiği görülmektedir.

Burada elde edilen sonuçların yorumlanmasında, ekonomide ithalata olan bağımlılığın ve ithalatın ağırlığının özellikle dikkate alınması gerektiği belirtmelidir. Sektörlerin üretim paylarının çok düşük olması ve sektörel üretimlerde ihracatı karşılamak için gerekli üretimin sektör üretiminden çok büyük çıkması ihracat talebinin ithalatla karşılanabileceği düşüncesini akla getirmektedir. Dolayısıyla burada elde edilen sektörel ilişkilerin üretime dayalı olarak değil, tamamen talebe bağlı olarak ortaya çıktığı belirtilebilir.

Toplam ileri ve geri bağlantı etkilerinin daha sağlıklı değerlendirilebilmesi için bu katsayıların diğer sektörlere olan yayılma dereceleri hesaplanmıştır. Yayılma derecesi ne kadar küçük çıkarsa, yani sıfıra yakınsa, ilgili sektörün ekonomide o kadar çok sayıda sektörü etkilediği, sıfıra eşit çıkması durumunda ekonomideki tüm sektörleri etkilediği anlamına gelir (Tablo 4).

Hesaplanan sonuçlara bakıldığında 2005 ve 2010'da sektörlerin yayılma dereceleri sıfırdan büyük değerler aldığı, dolayısıyla ekonomiyi etkileme güçlerinin zayıf olduğu söylenebilir. Kırgızistan ekonomisinde sektörlerin ileri ve geri bağlantı etkilerinin büyüklüğü kadar yayılma derecesi dengeli değildir, yani sektörlerin etkileri ekonomi üzerinde dengeli bir şekilde dağılmamaktadır.

| Sıra no | Sektörler | Endüstriyel Bağınlaşma (b$_i$) | | Oran (b$_{10}$/b$_{05}$) | Üretim teknikleri |
|---|---|---|---|---|---|
| | | 2005 | 2010 | | |
| 1. | Tarım, avcılık ve ormancılık | 3,49 | 4,12 | 1,18 | 0.204 |
| 2. | Balık avlama ve yetiştirme | 115 480,25 | 63 426,75 | 0,55 | 0.145 |
| 3. | Kömür, petrol ve doğal gaz çıkarımı | 142,39 | 161,45 | 1,13 | 0.059 |

***Tablo 5.*** *Kırgızistan Ekonomisinde Endüstriyel Bağınlaşma ve Üretim Etkinliği* **Kaynak:** *K.C. Milli İstatistik Komitesi 2005 ve 2010 Yılı Girdi-Çıktı Sonuç Tabloları kullanılarak hesaplanmıştır.*

### 3.3 Kırgızistan Ekonomisinde Sektörel Bağımlılık Oranları ve Üretim Etkenliği

Kırgızistan ekonomisi için 2005 ve 2010 yılı girdi-çıktı tabloları kullanılarak sektörel bağımlılık oranları ve üretim etkenlik katsayıları hesaplanmıştır (Tablo 4). Söz konusu katsayı ne kadar çok küçük ve sıfıra yakın çıkarsa sektörün ekonomiye bağımlılığı o kadar az, katsayı ne kadar büyük çıkarsa sektörün ekonomiye bağımlılığı o kadar çok demektir. Dönem içinde sektörel bağımlılıktaki değişimi daha iyi görebilmek için 2010 yılı katsayısı 2005 yılı katsayısına oranlanmıştır (Tablo 5).

2005 yılında Kırgızistan için ekonomiye bağımlılığı en yüksek olan ilk beş sektör sırasıyla; 2-Balık avlama ve yetiştirme, 15-Diğer sanayi sektörleri ve ikincil işlemeler, 34-Kişisel hizmetler (sunumu), 4-Maden (metal) cevheri çıkarımı, 32-Çevre temizliğini koruma hizmetleri altsektörleri olmuş. Bağımlılığı en az olan beş sektör: 1- Tarım, avcılık ve ormancılık, 22-Perakende ticaret, 12-Maden (metal) sanayi, 6-Besin ve tütün ürünleri üretimi, 25-Taşıtlar (ulaştırma) ve yardımcı hizmetler alt sektörleri olmuş (Tablo 4).

2010 yılında ekonomiye bağımlılığı en yüksek olan ilk beş sektör sırasıyla; 2-Balık avlama ve yetiştirme, 29-Devlet yönetimi, 33-Dernek ve birlikler; dinlenme, kültür ve spor örgütlerinin faaliyetleri, 4-Maden (metal) cevheri çıkarımı, 5-Diğer madencilik sanayi (türleri) sektörleri olmuştur. Bağımlılığı en az olan beş sektör: 1-Tarım, avcılık ve ormancılık, 12-Maden (metal) sanayi, 22-Perakende ticaret, 6-Besin ve tütün ürünleri üretim, 25-Taşıtlar (ulaştırma) ve yardımcı hizmetler olmuştur.

Söz konusu oranlar incelendiğinde, 5 yıl içinde tarım sektöründe 2- Balık avlama ve yetiştirme altsektörü hariç bağımlılık arttığı görülmektedir. İmalat sektöründe yaklaşım tüm sektörlerde bağımlılık artmıştır. Hizmet sektörünün 5 altsektörlerinin bağımlılığın arttığı, diğer altsektörlerinin bağımlılıklarının azaldığı görülmektedir.

Dönemlerarası üretim tekniklerinin değişiminin karşılaştırılmasında üretim teknikleri katsayısı da kullanılmaktadır. Katsayı 0 ile 2 arasında değer alabilir. Üretim tekniklerinin tamamen aynı olması durumunda teknik katsayılar birbirine eşit olacağından oran sıfır çıkacaktır. Teknik katsayılar arasındaki farklılık arttıkça oran 2'ye yaklaşacaktır. Genel olarak 0,8 civarı ve altındaki oranlarda üretim tekniklerinin benzer olduğu düşünülmektedir. Elde edilen sonuçlar tablo 5'te gösterilmiştir.

34 tane ekonomik üretim sektörü içerisinden 33 tanesinin benzerlik katsayısı 0,8 civarı veya daha küçük çıkmıştır. Üretim tekniklerinin benzer olmadığı düşünülen sektör ise 17-Gazlı (gaz tipi) yakıtların üretimi ve dağıtımı olmuştur (Tablo 5). Buradan da 5 yıl içinde genel olarak benzer tekniklerle üretim yaptığı, teknolojik değişimin olmadığı belirtebilir.

### 3.4 Aramalı Kullanımı Etkenlik Derecelerinin Karşılaştırılması

Endüstrilerarası analizde ekonomik sektörler aramalı kullanımları bakımından da incelenebilirler. Bu inceleme aynı ekonomik sektörlerin farklı dönemlerde incelenmesi şeklinde olabileceği gibi, aynı dönemde farklı ülkelere ait tabloların incelenmesiyle de yapılabilir. Önce Kırgızistan ekonomisi 2010 yılı üretim vektörü 2010 yıla ait teknik katsayı matrisiyle çarpılarak, üretimi gerçekleştirebilmek için gerekli sektörel aramalı kullanımları hesaplanmıştır. Sonra 2010 yılı üretimi 2005 yılı teknoloji ile yapılsaydı aramalı kullanımı ne olurdu? sorusunun yanıtını verecek şekilde 2010 yılı üretim vektörü 2005 yılı teknik katsayı matrisiyle çarpılarak sektörel aramalı kullanımları hesaplanmıştır. Elde edilen aramalı kullanımları birbirine oranlanarak etkinlik dereceleri elde edilmiştir (Tablo 6).

Örneğin, 1-Tarım avcılık sektörü için hesaplanan oran 1,44 (237,177.2/165,186.8=1.44) çıkmıştır. Üretim 2010'da gerçekleştirildiğinde kullanılan aramalı miktarı 237,177.2 olmaktadır. Aynı üretim 2005'te gerçekleştirildiğinde kullanılan aragirdi miktarı 165,186.8 olmaktadır. Bu durumda 2005'te aynı üretimi daha az aragirdi kullanımıyla gerçekleştirmekte, dolayısıyla kaynaklar 2005 yılına göre daha etkin kullanmaktadır. Oran sonuçlarına göre, 1'den küçük sonuçlar 2010 yılı etkinliğinin 2005 yılına göre daha iyi olduğu, 1'den büyük sonuçlar ise, 2005 yılı etkinliğinin 2010 yılına göre daha iyi olduğu anlamına gelmektedir. Ekonomi genelinde yer alan 34 sektörden 18 tanesinde oran 1'den küçük çıkmıştır. Bu sektörler sırasıyla; 3-Kömür, petrol ve doğal gaz çıkarımı, 4-Maden (metal) cevheri çıkarımı, 5-Diğer madencilik sanayi (türleri), 9-Kağıt ve karton üretimi; yayın ve basım, 11-Diğer metal olmayan mineral üretimi, 13-Hazır (işlenmiş) maden mamulleri üretimi, 16-Elektrik enerjisi üretimi ve dağıtımı, 18-Buhar ve sıcak su sağlama (verme), 19-Suyun toplanması, temizlenmesi ve dağıtılması, 20-İnşaat, 23-Araba (otomobil) kullanma, teknik bakım ve onarım (tamir); bireysel ve evde kullanılan eşyaların tamiratı (onarımı), 25-Taşıtlar (ulaştırma) ve yardımcı hizmetler, 26-Posta ve iletişim (haberleşme), 27-Mali faaliyetler (aracılık, arbitraj), 28-Gayri menkul mallar ile işlemler; kira ve işletmelere hizmet sunma, 29-Devlet yönetimi, 32-Çevre temizliğini koruma hizmetleri, 33-Dernek ve birlikler; dinlenme, kültür ve spor örgütlerinin faaliyetleri şeklindedir.

Bu sektörlerde 2010 yılı üretiminin 2005'a göre daha verimli, aragirdi kullanımında daha etkin olduğu görülmektedir. Tabii bu sonuçlara ihtiyatla yaklaşmak gerekmektedir. Analiz tekniğinden ve fiyatlama sürecinden kaynaklanan olumsuzluklar bir yana bırakılırsa, Kırgızistan için oranın 1'den büyük çıkması, söz konusu sektörlerin kullandıkları teknolojilerinin gerilediği ve bunun sonucu da aragirdi kullanımının azaldığı yorumu yapılabilir. Bu yorumu ekonomik yapıyla ilgili incelenen benzer çalışmalarda belirtilen kapasite kullanım oranlarının düşmesi, verimlilik düşüşü ve maliyet artışları gibi sonuçları, burada elde edilen sonucu desteklemektedirler.

| Sıra no | Sektörler | Aragirdi Kullanımları ve Oranı | | |
|---|---|---|---|---|
| | | X 2010-10 | X 2005-10 | Oran (X₁₀/X₀₅) |
| 1. | Tarım, avcılık ve ormancılık | 237,177.2 | 165,186.8 | 1.44 |
| 2. | Balık avlama ve yetiştirme | 47.9 | 58.4 | 0.82 |
| 3. | Kömür, petrol ve doğal gaz çıkarımı | 9,488.5 | 37,316.5 | 0.25 |
| 4. | Maden (metal) cevheri çıkarımı | 448.3 | 444.9 | 1.01 |
| 5. | Diğer madencilik sanayi (türleri) | 1,007.0 | 5,069.4 | 0.20 |
| 6. | Besin ve tütün ürünleri üretimi | 54,325.4 | 47,602.4 | 1.14 |
| 7. | Tekstil ve konfeksiyon sanayi; deri ve deri ürünleri ür. | 47,924.0 | 23,363.8 | 2.05 |
| 8. | Kereste ve ahşap doğrama ür. | 10,084.3 | 4,680.3 | 2.15 |
| 9. | Kağıt ve karton üretimi; yayın ve basım | 9,808.2 | 12,162.1 | 0.81 |
| 10. | Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik ür. | 139,452.8 | 114,211.1 | 1.22 |
| 11. | Diğer metal olmayan mineral ür. | 12,407.2 | 26,243.1 | 0.47 |
| 12. | Maden (metal) sanayi | 89,217.9 | 63,944.4 | 1.40 |
| 13. | Hazır (işlenmiş) maden mamulleri üretimi | 9,577.0 | 10,433.9 | 0.92 |
| 14. | Makine ve teçhizat üretimi | 38,842.3 | 34,745.8 | 1.12 |
| 15. | Diğer sanayi sektörleri ve ikincil işlemeler | 2,827.3 | 1,707.5 | 1.66 |
| 16. | Elektrik enerjisi üretimi ve dağıtımı | 12,294.9 | 21,025.5 | 0.58 |
| 17. | Gazlı (gaz tipi) yakıtların üretimi ve dağıtımı | 9,843.8 | 9,082.9 | 1.08 |
| 18. | Buhar ve sıcak su sağlama (verme) | 2,698.6 | 3,608.3 | 0.75 |
| 19. | Suyun toplanması, temizlenmesi ve dağıtılması | 1,099.6 | 1,336.5 | 0.82 |
| 20. | İnşaat | 39,305.8 | 45,315.4 | 0.87 |
| 21. | Toptan ticaret | 19,894.9 | 12,278.7 | 1.62 |
| 22. | Perakende ticaret | 70,477.8 | 57,882.3 | 1.22 |
| 23. | Araba (otomobil) kullanma, teknik bakım ve onarım (tamir); bireysel ve evde kullanılan eşyaların tamiratı (onarımı) | 1,487.4 | 9,864.9 | 0.15 |
| 24. | Otel ve restoranlar | 9,979.1 | 8,536.8 | 1.17 |
| 25. | Taşıtlar (ulaştırma) ve yardımcı hizmetler | 44,615.4 | 47,998.5 | 0.93 |
| 26. | Posta ve iletişim (haberleşme) | 26,464.8 | 29,130.7 | 0.91 |
| 27. | Mali faaliyetler (aracılık, arbitraj) | 17,368.6 | 24,950.3 | 0.70 |
| 28. | Gayri menkul mallar ile işlemler; kira ve işletmelere hizmet sunma | 28,286.4 | 33,724.6 | 0.84 |
| 29. | Devlet yönetimi | 24,385.6 | 26,971.5 | 0.90 |
| 30. | Eğitim | 13,706.3 | 13,463.5 | 1.02 |
| 31. | Sağlık ve sosyal hizmetler | 8,661.7 | 8,529.7 | 1.02 |
| 32. | Çevre temizliğini koruma hizmetleri | 665.3 | 717.9 | 0.93 |
| 33. | Dernek ve birlikler; dinlenme, kültür ve spor örgütlerinin faaliyetleri | 6,278.2 | 6,942.7 | 0.90 |
| 34. | Kişisel hizmetler (sunumu) | 2,665.2 | 2,474.0 | 1.08 |

***Tablo 6.** Kırgızistan Ekonomisinde Aramal Kullanımında Toplam Etkenlik (2005-2010) **Kaynak:** K.C. Milli İstatistik Komitesi 2005 ve 2010 Yılı Girdi-Çıktı Sonuç Tabloları kullanılarak hesaplanmıştır.*

## 4 Sonuç

Kırgızistan ekonomisinin 2005-2010 yılları arasındaki analizi girdi-çıktı yaklaşımıyla yapılmıştır. Genel olarak üretim yapısı incelendiğinde, 2005 yılında sektörel üretimin %40,79 ve 2010'da %32 olan payla tarım ve tarıma dayalı sanayiler ekonomide hakim sektör konumundadır. İmalat sektörünün payı 2005 yılında % 21,59 iken, 2010'da %28,51 olmuştur. Hizmet sektörünün payı 5 yıl içinde % 37,62'den % 39,48'e çıkmıştır. Tüm sektörlerde ithalat payı yüksek çıkmaktadır, bazı sektörlerin sektörel ithalatı sektörel üretimden büyük değerler alabilmektedir. Dağılma öncesi ekonomide imalat sektörü önemli konumda iken, dağılma sonrası üretim epeyce düşmüş ve talebi karşılamaya dönük ithalat hızla artmıştır. Bu durum ekonominin dışa bağımlılığın göstergesi olmaktadır.

Toplam ileri ve geri bağlantı etkileri bakımından tarım, imalat ve hizmet sektörlerinin bazı altsektörleri önemli olduğu görülmüştür. 5 yıl içinde ekonomiyi etkileme gücü yüksek olan sektörlerin etkileme gücü azaldığı görülmektedir.

İleri ve geri bağlantı endeksleri bakımından incelendiğinde 5 yıl içinde 34 sektör içerisinden 12 altsektörün etkileri 1'den büyük çıkmıştır. Her iki yılda ileri bağlantı etkileri yüksek olan sektörler 1- Tarım, avcılık ve ormancılık, 8- Kereste ve ahşap doğrama üretimi, 9- Kağıt ve karton üretimi; yayın ve basım, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 12- Maden (metal) sanayi, 14- Makine ve teçhizat üretimi, 22- Perakende ticaret, 27- Mali faaliyetler (aracılık, arbitraj) olmuştur. Geri bağlantı etkileri bakımından her iki yılda 4- Maden (metal) cevheri çıkarımı, 5- Diğer madencilik sanayi (türleri), 6- Besin ve tütün ürünleri üretimi, 7- Tekstil ve konfeksiyon sanayi; deri ve deri ürünleri üretimi, 10- Kok kömürü üretimi; petrol damıtma (rafine); kimya sanayi; lastik ve plastik üretimi, 11- Diğer metal olmayan mineral üretimi, 15-

Diğer sanayi sektörleri ve ikincil işlemeler, 20- İnşaat, 27- Mali faaliyetler (aracılık, arbitraj) sektörlerin etkileri önemli olmuştur.

Yayılma dereceleri bakımından her iki yılda sektörlerin ileri ve geri bağlantı etkilerinin büyüklüğü kadar yayılma derecesi dengeli olmadığı, yani sektörlerin ekonomiyi daha az etkileme potansiyeline sahip olduğu sonucuna ulaşılmıştır.

Sektörel bağımlılık oranları incelendiğinde, 5 yıl içinde tarım sektöründe 2- Balık avlama ve yetiştirme altsektörü hariç bağımlılık arttığı görülmektedir. İmalat sektöründe yaklaşık tüm sektörlerde bağımlılık artmıştır. Hizmet sektörünün 5 altsektörlerinin bağımlılığın arttığı, diğer altsektörlerinin bağımlılıklarının azaldığı görülmektedir.

2005 ve 2010 yılları arasında sektörel üretim tekniklerinin benzerliği incelendiğinde, üretim tekniklerinde farklılık tespit edilmemiştir. Buradan da iki yıl içinde genel olarak benzer tekniklerle üretim yapıldığı belirtilebilir.

Aramal kullanımında etkenlik derecesinin karşılaştırılmasında 34 ekonomik sektör içerisinden 18 sektör oranı 1'den büyük çıkmıştır. Bu sektörlerde 2010 yılı üretiminin 2005'e göre daha verimli, aragirdi kullanımında daha etkin olduğu görülmektedir.

Genel olarak 5 yıl içinde ekonominin çalışma koşullarının iyileşmesi söz konusu değildir. Ekonominin kendi sektörleri arasında güçlü bir bağınlaşma ve etkileşme bulunmamakla birlikte ekonomi bir bütünlük içinde olan bir yapı olarak yapılanmamıştır. Ekonominin üretim yapısı talebe bağlı olarak dışa bağımlı bir şekilde kalıplaşması görülmektedir. Tabii bu tür olumsuzluklar ülkenin gelişmesi için ekonomik anlamda tehdit oluşturmaktadır. Dolayısıyla Kırgızistan ekonomisinde makroekonomik planlama oldukça önemli olduğu belirtmek gerekmektedir.

## Abstract

In most of the former Soviet economies with the start of transformation, revenue loss and lax payments discipline led to low revenue sharing, as well as inefficient tax collection and tax avoidance is common as a major problem has affected economies in transition. In this study, central and Eastern Europe and the former Soviet Union transition countries experienced in tax payments discipline and collection issues are dealt with and a socialist state transformation to a capitalist state in the transition to a market economy from a centrally planned economy with the sustainability of budgetary constraints between state and market are considered. At this point in particular; simple and flat rate tariff preferred in the tax system have considerably reduced the size of the informal economy in transition economies and also the balance has been achieved in fiscal discipline with performance-based budget preferred in the budget system. As a result, about 25 years of the transition-transformation process stages are evaluated in the context of tax system, budgetary and fiscal discipline.

## 1 Giriş

1985 yılında Komünist Partisi lideri olarak yönetimi devralan Mihail Gorbaçov, zaman içerisinde giderek radikal bir karaktere bürünen bir reform süreci uygulamıştır. "Perestroyka (yeniden yapılanma)" sloganı ile birlikte Gorbaçov, "glasnost (açıklık)", "demokratizatsiya (demokratikleşme)" hareketlerini teşvik ederek piyasa ekonomisine doğru bir hamle gerçekleştirmeye çalışmıştır. 19 Ağustos 1991'de, eski sistemin temel unsurlarının korunmasını isteyen güçler bir darbe girişiminde bulunarak geçici süre ile Gorbaçov'un liderlik görevinden uzaklaşmasına neden olmuştur. Darbe girişimi başarısızlık ile sonuçlansa da; hali hazırda baş döndürücü bir hızda olan reform hareketlerinin ivme kazanması Komünist Parti'nin iktidardan düşmesine yol açmış ve darbe girişimini engellemeye çalışan Boris Yeltsin'in yönetimdeki gücünü daha da pekiştirmiştir. Aralık 1991'de Belarus, Ukrayna ve Rusya başkanları Sovyetler Birliği'nin fesh edildiğini ve yerine Bağımsız Devletler Topluluğu'nun kurulduğunu bildirmişlerdir. Bağımsız Devletler Topluluğu, Sovyetler Birliği'nde yer almış olan 15 devletin 11'inin (Azerbaycan, Beyaz Rusya, Ermenistan, Kazakistan, Kırgızistan, Moldova, Özbekistan, Rusya Federasyonu, Tacikistan, Türkmenistan ve Ukrayna) katılımı ile kurulmuştur. 1993 yılında Gürcistan'ın da katılması ile topluluğun üye sayısı 12 olurken; 2005 yılında Türkmenistan'ın tam üyelikten çıkması, Ukrayna parlamentosunun anlaşmayı onaylamaması ve 2009 yılında Gürcistan'ın topluluktan ayrılması ile 9 üye ülkesi bulunmaktadır (Wikipedia, 2014).

Eski Sovyetler Birliği'nin bazı bölgeleri uzun yıllardır hedefleri olan ulusal bağımsızlıklarına yönelmişler diğer bazı bölgeler ise işbirliği ve yönetişimin yeni biçimlerini gerçekleştirmeye çalışmışlardır. 1990 yılındaki bağımsızlık oylamalarında Rusya % 75,4, Ukrayna % 83,5, Belarus % 83,3, Azerbaycan % 75,1, Kazakistan % 88,2, Kırgızistan % 92,9, Tacikistan % 94,4, Türkmenistan % 97,7 ve Özbekistan % 95,4 ile SSCB referandumunda ulusal bağımsızlığı ve dönüşümü desteklemişler; 1991 yılındaki alternatif halk oylamalarında ise bağımsız ülke oylamasında Litvanya % 90,5, Estonya % 77,8, Letonya % 73,7, Gürcistan % 98,9, Moldova ve Ermenistan ise % 99 ile egemen ülke yapısını seçerken aynı zamanda Litvanya % 84,5, Estonya % 82,9, Letonya % 87,6, Gürcistan % 90,5 ve Ermenistan % 95,5 oyla dönüşümü desteklemişlerdir (Debardelen, 1992a). Bu nedenle eski Sovyetler Birliği bölgesinin reformdan devrime doğru bir geçiş yaşadığı ifade edilebilmektedir. Ancak iç içe geçmiş politik, ekonomik ve sosyal krizler ve bunalımlar dönüşüm sürecinin sonucunu hem bölge katılımcılarının çabalarına hem de bölge gözlemcilerinin analizlerine bırakmıştır (Debardelen, 1992b).

Merkezi ve Doğu Avrupa'da ise 1989 yılından başlayarak Arnavutluk, Bulgaristan, Çekoslovakya, Macaristan, Polonya, Romanya ve Yugoslavya'yı kapsayan bölgede batılı olduklarını hatırlama ve hatırlatma arayışları komünist partilerin 1945 yılından beri hakim olan yönetimlerine son vermiş ve bu bölgede yeni gelecek arayışlarına yol açmıştır (Ost, 1992). Polonya'nın, diğer sosyalist ülkelerin de karşılaştığı modası geçmiş endüstri, tüketici memnuniyetsizliği, yüksek bütçe açıkları ve yetersiz/kalitesiz emek verimliliği vb. sorunlar neticesinde 1970'li yılların ortalarına doğru ekonomik bunalıma girmesi ile birlikte piyasa reformuna geçiş süreci diğer tüm merkezi ve Doğu Avrupa ülkelerinde 1989-1990 yıllarında başlayan dönüşümün belirleyici ve anahtar faktörü olmuştur. Polonya türü bir krizin meydana gelmemesi açısından otoriteler demokratik politika reformları uygulamaya çalışmışlardır. 1984 yılında Macaristan çok adaylı parlamenter seçimleri uygulayan ilk Doğu Avrupa ülkesi olmuştur. Macaristan'ın 1989 yılında sınırlarını açması ile birlikte Berlin Duvarı da yıkılmıştır. Çekoslovakya'da ise 1990 yılında parlamenter seçimler gerçekleştirilmiş ve "Yurttaş Forumu (Civic Forum)" koalisyonu mutlak bir zafer kazanmıştır. Bulgaristan'da 1990 seçimlerinden sonra Demokratik Güçler

Birliği-UDF anti-komünist bir oluşum olarak seçimi kazanmıştır. Bununla birlikte, 1991 yılından itibaren UDF ulusu yönetmek açısından temel sorumlulukları ele almış ve ülkenin sosyo-ekonomik yapıları ile kültürel normlarının dönüşümüne ilişkin başarılması güç çalışmalar gerçekleştirerek kriz zamanlarında ülkeyi yönetmenin ahlaki sorumluluğunu da üstlenmek zorunda kalmıştır. 1989 yılında belki de en çarpıcı dönüşüm Romanya'da yaşanmıştır. Nikolay Çavuşesku tarafından dikta yönetimi ile idare edilen totaliter bir rejime sahip Romanya'da Çavuşesku'nun keyfi ve kontrolsüz uygulamaları giderek artmış, tüm kasabaları ve kentsel bölgeleri yıkarak yukarıdan daha kolay kontrol edilebilen yaşam alanları oluşturmak için çaba harcamış, Romanya'nın Batı'ya olan tüm borçlarını ödemesi gerektiğine ilişkin karar alarak önemli ölçüde gıda ve yakıt ihracatını artırmış böylece, hali hazırda düşük olan tüketim düzeylerini keserek, kış mevsiminde Romanya halkını yakıtsız bırakmıştır. Aralık 1989'da yaşanan ayaklanmaya ordu da katılınca Çavuşesku yönetiminin sonu getirilmiştir. Mayıs 1990'da gerçekleştirilen parlamenter seçimlerden sonra bile Çavuşesku yönetiminin hızlı çöküşüne bağlı olarak ekonomi kötüleşmeye devam etmiş ve politika değişkenliği sürmüştür. Arnavutluk ise Romanya'nın komşusu olmasına rağmen değişmeden kalan ender Doğu Avrupa ülkelerinden birisidir. 1991 yılında gerçekleştirilen seçimlerden sonra bile komünistlerin seçimi kazanması büyük grevlere ve protestolara neden olmuş Komünistler komünist olmayan kabine ile birlikte hareket etmek zorunda kalmıştır. Ekonomik durgunluğun uzun yıllar sürdüğü Arnavutluk'ta, 1990-1991 yılları arasında yaşanan siyasi değişimler olağan bir süreç olarak değerlendirilmiştir. Bir Doğu Avrupa ülkesi olarak Yugoslavya ise 1989 yılına kadar bölgenin en kalabalık nüfusuna sahip ve en istikrarsız ülkesi olmasına karşın tartışmaların uzağında kalmış; ancak 1990'lı yıllar Yugoslavya açısından karışıklıkların ve iç savaşların yaşandığı yıllar olmuştur. Sovyetler Birliği dışında, Yugoslavya bölgenin etnik olarak belki de en karmaşık ülkesi konumundaydı. I. Dünya Savaşı'ndan sonra özellikle; Habsburg İmparatorluğu'nun Avusturya kısmından Slovenya ile bağımsız Sırbistan ve Karadağ, Macaristan kısmından öncelikle Hırvatistan, Avusturya-Macaristan'ın ortak idaresi tarafından Bosna-Hersek ve Osmanlı Devleti tarafından Makedonya ile I. Dünya Savaşı öncesi Bulgaristan'tan meydana gelen bir birlik olarak ortaya çıkmış ve şekillenmiştir. 1990 yılında, diğer Doğu Avrupa ülkelerinde de yaşanan derin ekonomik kriz, ülke içinden gelen milliyetçi baskılar ve hızlı demokratikleşme süreçleri karşısında, Yugoslavya'da serbestleşme hususunda anlaşma sağlanmış ve çok partili demokratik seçimlerin yalnızca Yugoslav yönetimi açısından değil 6 Cumhuriyetin hem başkanları hem de yerel parlamentoları açısından yapılması karara bağlanmıştır. Bu sonuç, 1990'lı yılların başlarında ülke genelinde olağanüstü gerilime ve önlenemez milliyetçi baskılara neden olmuş; bunun yanı sıra, hiçbir Cumhuriyetin etnik olarak homojen olmaması Yugoslavya'nın nihai çözülmesinden ve dağılmasından sonra bile milliyetçi gerilimlerin yıllar boyunca devam etmesine neden olmuştur (Ost, 1992).

## 2 Dönüşüm ve Kayıtdışı Ekonomi

Geçiş ekonomilerinde yaşanan dönüşüm deneyimleri politika reformu, serbestleşme, istikrarın sağlanması, vergi reformu, gümrük reformu, özelleştirme, kurumsal yeniden yapılanma, icra ve iflasa ilişkin reformlar ve bankacılık reformu vb. şeklinde çeşitli boyutlarda uygulandığı dönem ve sıralaması açısından büyük önem taşımaktadır. Merkezi ve Doğu Avrupa'nın geçiş ekonomilerinde gerçekleştirilmeye çalışılan reformların unsurları; ilk olarak sıkı maliye ve kredi politikalarının uygulandığı ve iç ve dış dengesizliklerin hedef alındığı makroekonomik istikrar reformu; ikinci olarak fiyat kontrollerinin kaldırıldığı, ticaretin serbestleştirildiği ve rekabetçi faktör piyasalarının meydana getirildiği fiyat ve piyasa reformu, üçüncü olarak özel sektörün geliştiği, mülkiyet haklarının tesis ettirildiği ve açıklık kazandığı, firmaların piyasaya giriş ve çıkışlarının kolaylaştırıldığı ve kurumsal yeniden yapılanmanın sağlandığı kurumsal reform ve yeniden yapılanma ile son olarak devletin rolünü yeniden tanımlayan yasal ve düzenleyici reformların gerçekleştirildiği, sosyal güvenlik programlarının düzenlendiği ve vergi idaresi, bütçe ve mali kontrol ile parasal kontrolü elinde bulunduran devlet kurumlarının reformunun ele alındığı kurumsal reform olmak üzere çeşitli hususlarda sayılabilmektedir (Summers, 1993). Tablo 1'de ele alınan reformların başlangıç zamanlaması ile özellikle serbestleşme, özelleştirme ve yeniden yapılanma gibi reformların kademeli olarak mı yoksa "büyük bir patlama (a big bang)" ile mi gerçekleştirildiği değerlendirmeye tabi tutulmaktadır. Tablo 1 çeşitli geçiş ekonomilerinin gerçekleştirdiği dönüşüm stratejilerindeki benzerlikleri ve farklılıkları göstermektedir. İlk olarak Macaristan ve Slovenya'nın kademeli bir strateji izlediği ifade edilebilmektedir. Bunun yanı sıra Slovenya'nın 1965, Macaristan'ın ise 1968 yılında olmak üzere eski Yugoslavya'ya dahil oldukları süreçte reformlara diğer ülkelerden daha erken başladıkları söylenebilmektedir. Geri kalan ülkelerde ise genel anlamda bir büyük patlama stratejisinin gerçekleştiği gözlemlenmektedir. Rusya deneyimi ise Bulgaristan, Romanya, Ukrayna ve eski Sovyetler Birliği'ne dahil diğer ülkelerdeki dönüşüme benzer hatta aynı derecede bir durumu göstermektedir. Buna göre, geçiş sürecine daha sonra başlayan ülkeler bu süreci uygulamada fazla başarı elde edememiştir (Roland, 2000).

Geçiş sürecinin belki de en önemli etkilerinden biri de IMF tarafından gerçekleştirilmiştir. IMF piyasa odaklı olduğu için, verimliliği artırmak ve ekonomik büyüme beklentilerini iyileştirmek açısından hızlı bir fiyat serbestisi sürecini desteklemiş, sübvansiyonların ortadan kaldırılmasını savunmuş, ticari engellerin azaltılmasını ve devlet varlıklarının özelleştirilmesini teşvik etmiştir. IMF tarafından desteklenen yapısal uyum programının temel amacı; "ekonomik büyümeyi teşvik etmek amacıyla orta vadede sürdürülebilir bir ödemeler dengesi

pozisyonu meydana getirilirken aynı zamanda hem makroekonomik hem de yapısal dengesizliklerin sistemli ve kurallı bir şekilde ayarlanmasının sağlanmasıdır" (Knell, 1996).

| | Bulgaristan | Çek Cumhuriyeti | Macaristan | Polonya | Romanya | Rusya Federasyonu | Slovak Cumhuriyeti | Slovenya | Ukrayna |

**Tablo 1.** *Geçiş Ekonomilerinde Yaşanan Reformların Zamanlaması ve Sıralaması* **Kaynak: (Roland, 2000)'deki** *tablodan yararlanılarak tarafımızdan oluşturulmuştur.*

Doğu Avrupa ve eski Sovyetler Birliği'nde gerçekleştirilen dönüşüm sürecinin ekonomik ve politik sonuçları ele alınarak değerlendirildiğinde genel anlamda başarılı sonuçlar elde edilmediğini ifade etmek mümkündür. Dönüşüm deneyimlerinin genellikle; üretimde önemli düşüşler veya yüksek ya da hiper enflasyonla, yüksek ve artan işsizlikle, büyük ödemeler bilançosu açıklarıyla ya da aşırı döviz sıkıntısıyla, kurumsal yeniden yapılanmanın ve özelleştirmenin yavaş temposuyla, özel sektör yatırımları ve doğrudan yabancı sermaye yatırımlarındaki yetersiz büyümeyle, ekonomiye ve politikaya ilişkin gelecek beklentilerinin belirsizliği ve belki de en önemlisi geleceğe ilişkin kötümser beklentiler ile sonuçlandığı belirtilebilmektedir. "Piyasa sosyalizmi" deneyimlerinin geçiş sürecinin içinde iken ekonomik planlamanın terk edilip yerine yetersiz bir piyasa sisteminin kurulmaya çalışılması nedeniyle beklenen başarıyı elde edemediği ifade edilebilmektedir. Çünkü kurulmaya çalışılan piyasa ekonomisi sisteminde; kısmi fiyat reformları, para ve sermaye piyasalarının ve uygun bir vergi sisteminin yokluğu ve özel mülkiyet haklarının ve girişimciliğin olmaması nedeniyle yalnızca emtia piyasalarını etkileyebilmiştir. Özellikle Doğu Avrupa'da yaşanan ekonomik dönüşüm genellikle "piyasaya sıçrama (leap to market)" olarak tanımlanabilmektedir. Bununla birlikte tam teşekküllü bir piyasa ekonomisine geçiş ve gerekli yeni kurumların inşa edilmesi bir anda gerçekleşmemiş; aksine reformlar kademeli olarak gerçekleştirilmiştir. Piyasa sosyalizmi çabalarının başarısızlığı; eksik rekabet, etkisiz merkezi planlama ve esnek bütçe kısıtlamasının eşzamanlı olarak ortaya çıkmasına dayandırılabilmektedir. Esnek bütçe kısıtı; işletmelerin çeşitli türlerdeki sübvansiyonlardan az ya da çok otomatik bir şekilde yararlandığı ve faaliyet kârının büyük ölçüde kamulaştırıldığı bir sistemi tanımlamaktadır. İşletmelerin nicel hedeflere ulaşması gerektiği ve tekelci güce sahip olarak fiyatları istedikleri şekilde belirleyebildikleri durumda bütçe kısıtının esnetilmesi önem kazanmaktadır. Esnek bütçe kısıtı altında herhangi bir firma likidite kısıtı ile karşı karşıya kaldığında yalnızca üretim kararlarında değişikliğe gitmemekte aynı zamanda likidite sorununun çözümü hususunda herhangi bir şey yapma teşvikinden de yoksun olarak bir mali kurtarma paketi öngörmektedir. Esnek bütçe kısıtının bir tür teşvik problemine karşılık geldiği ve geçmişte sosyalist ekonomilerde yer alan teşebbüslere yönelik olarak kullanıldığı bugün için ise geçiş ekonomileri, gelişmiş ve gelişme yolunda olan hemen hemen tüm piyasa ekonomilerinde tekel konumunda bulunan büyük çaptaki işletmelerin fiyatı alan konumdan fiyatı belirleyen konuma gelmeleri ile birlikte bütçe kısıtının esnekleşmesine neden olduğu ifade edilmektedir. Bir işletme ya da kurum, mali sıkıntıya düştüğünde "kurtarılmayı" beklerse esnek bütçe kısıtı gerekli hale gelmektedir. Özellikle 2007-2008 küresel finansal krizde bankaların ve şirketlerin kurtarılması "gelişmiş rekabetçi piyasa ekonomilerindeki" esnek bütçe kısıtlamasına örnek olarak verilebilmektedir (Nacar Karabacak, 2013). Örneğin geçiş sürecinde özellikle Macaristan'da nicel merkezi planlama yerleşmiş olduğu için daha ademi merkeziyetçi bir sistem rehber alınmış; ancak bu durum hem merkeze bilgi akış kalitesini azaltmış hem de merkezin gelecekteki performansa dayalı ödüllendirme ve ceza sistemini icra etmesi kabiliyetini sınırlandırmış ve aynı zamanda verimsiz sonuçlar alınmasına yol açmıştır. Macaristan'da ekonominin tatmin edici olmayan performansının net bir tanımlamasının yapılmasına karşın sorunları kökünden çözümleyebilecek şekilde ne esnek bütçe kısıtı verimliliği artırmak amacıyla işletmeleri zorlayacak şekilde katı hale getirilmiş ne de yerli üretim ile ithalat rekabeti meydana getirilmiştir. (Kızılyallı, 1994). Esnek veya katı bütçe kısıtının uygulanması arasındaki ayırt edici özellik geçiş

dönemi açısından önem taşımaktadır. Gerçekten de eğer esnek bütçe kısıtlaması belirli bir dinamik politika taahhüdü sonucunda ortaya çıkmışsa; bu takdirde kurumlar katı bütçe kısıtlarının güvenilirliğine ilişkin olarak taahhütte bulunmadıkça bütçe kısıtlarını sıkılaştırmaya yönelik kararların inandırıcılığı olmayacaktır. Geçiş ya da dönüşüm çerçevesinde konu şu şekilde açıklanabilmektedir: Mali disiplinin gevşetilmesini ve bütçe kısıtının esnetilmesini hükümetler açısından cazip hale getiren önemli etkiler bulunmaktadır. Geçiş döneminde daha sıkı ve katı bir mali disiplinin başlamasıyla birlikte, istisnai prosedürler bazı durumlarda takip edilmiş ve bu istisnai durumların pek çoğu ise iş sözleşmeleri ile ilgili gerçekleşmiştir. Geçiş ekonomilerinde esnek bütçe kısıtlamalarına ilişkin kalıntılar açıkça görülebilmektedir. Bununla birlikte, istisnai prosedürlerin sıklığı hükümetlerin sıkı mali disipline ilişkin olarak taahhüt etme ve güven verme kredibilitelerini önemli ölçüde azaltmaktadır (Roland, 2000).

Diğer yandan, kısmi fiyat reformları ile birlikte ortaya çıkan ve gelişen kayıtdışı sektör veya yeraltı ekonomisi ya da karaborsa faaliyetleri geçiş ekonomilerinin pek çoğunda baş göstermiştir. Geçiş ekonomilerinde hükümetlerin bu tür yasal olmayan kayıtdışı faaliyetlere müsamaha göstermesi gerektiği ve aynı zamanda kayıtdışı ekonomide yer alan katılımcılara suçlu muamelesi yapmaktan kaçınması gerektiği, çünkü kayıtdışı ekonominin ekonomik çöküş zamanlarında bir nevi hayatta kalma aracı olarak işlev gördüğü ve aynı zamanda yeraltı faaliyetlerinin kademeli olarak kayıtlı ekonomiye yansıdığı ifade edilmektedir. Kayıtdışı ekonominin tam teşekküllü bir fiyat reformu ile önlenebileceği durumlarda gerekli olmadığı ve yeraltı ekonomisinin zaman içinde kayıtlı ekonomiye yansıyacağı varsayımının eksik bir önerme olduğu, çünkü kayıtdışı faaliyetlerin meydana geldiği yerde hiçbir zaman ortadan kalkmadığı; tam aksine zaman içinde gelişip yayıldığı ve Türkiye ve Yunanistan örneklerinde de görüldüğü üzere zarar verici etik ve sosyal etkilerinin dışında kayıtdışı ekonominin vergisiz ve yasadışı faaliyetleri ile artan bir oranda mali, parasal ve ekonomik istikrarı da zayıflatmaya devam ettiği görülmektedir. Diğer yandan, katı bürokratik kurallar ve düzenlemelerin haksız yere küçük yatırımcıların ve işletmelerin ortaya çıkmasına ve büyümesine engel teşkil ettiği durumlarda kayıtdışı ekonominin gerekli olabileceği, çünkü küçük çaptaki kayıtdışı faaliyetlere karşı uygulanan katı düzenlemelerin kısa dönemde esnetilemeyeceği ve bu nedenle yasal olmayan faaliyetlere müsamaha gösterilmesi geçiş döneminde geçici bir önlem olarak değerlendirilebilmektedir. Benzer müsamahalı tutumun sosyalist ülkelerin gerçekleştirdiği reformlarda kısa-dönemden orta-döneme kadar uygulandığında aynı gerekçeler nedeniyle işe yarayabildiği, ancak uzun dönemde zıt politikaların uygulamaya konulması gerektiği ifade edilmektedir (Kızılyallı, 1994).

Merkezi planlamanın çöküşünden sonra belki de en önemli gelişme üretim ve istihdamda ciddi bir azalmaya neden olan ekonomik faaliyet düzeyindeki derin düşüşün yaşanması olmuştur. Bu noktada özellikle özel sektörün nispeten yüksek dinamiklerinin ve aynı zamanda GSYİH içindeki kayıtdışı ekonominin payındaki artışların da tamamıyla hesaba katılmadığı ifade edilmektedir. Bununla birlikte, üretim miktarının çöküşünü açıklamada bu faktörlerin rolü küçümsenmeyecek ölçüdedir. İlk olarak, dönüşüm sırasında yasadışı ve kayıtlı olmayan faaliyetlerde bir patlama meydana gelirken, geleneksel kayıtdışı ya da gölge ekonominin önemi, sınırları gittikçe genişleyen "yokluk ekonomisi (shortage economy)"nin ortadan kaldırılmasının ardından azaltılabilmiştir. İkinci olarak, özel faaliyetler iç ve dış ticarette oldukça artarken; genel anlamda en derin düşüşler inşaat sektöründe ve kamyon taşımacılığında meydana gelmiştir. Son olarak, merkezi ve Doğu Avrupa ekonomilerindeki özel sektörün geçiş sürecinde nispeten küçük bir paya sahip olması, en azından üretim miktarı düşüşünün en fazla olduğu dönüşüm sürecinin başlangıcında bu etmenden kaynaklanan toplam üretim miktarındaki düşüşün göz ardı edilmesine neden olmuştur (Laski, 1996).

Dünya Bankası İşletme Anketi gibi bazı mikro düzeydeki araştırmalara göre; Çevre ve Ekonomik Performans Araştırması ve Eurobarometer Anketi bireylere veya firmalara doğrudan kendilerinin ya da etraflarındaki kişilerin yahut firmaların kayıtdışı ekonomik faaliyetlerde bulunup bulunmadığını sormuştur. Katılımcıların özellikleri hakkında ayrıca bilgi içeren bu anket verileri yaygın olarak özellikle gelişmekte olan ülkeler ve geçiş ekonomilerinde kayıtdışılığın boyutlarını ve sonuçlarını ölçmek için kullanılmaktadır (Andrews, 2011).

Şekil 1'de yer alan kayıtdışı faaliyetlerin ülkelere göre düzeyi değerlendirildiğinde; kendi faaliyet sektöründeki şirketlerini gösteren firmalar ya yıllık satışların tamamını ya da yıllık satışlarının belirli bir yüzdesini vergi idarelerine bildirmediği ve vergi kaçırdıkları gözlemlenmektedir. Bunun yanı sıra firmaların payı göstermektedir ki, kendi faaliyet sektöründeki şirketlerini gösteren firmalar aynen tüm satışlarını bildirmeyen firmaların payındakine benzer şekilde vergi otoritelerine tüm çalışanlarını bildirmemişlerdir. Türkiye kayıtdışı faaliyetlerin düzeyinde % 63,05 oranı ile birinci sırayı alırken; Yunanistan % 53,19 ve Çek Cumhuriyeti % 51,05 oranları ile ikinci ve üçüncü sırayı almaktadırlar. Şekilde yer alan Çek Cumhuriyeti, Polonya, Rusya Federasyonu, Macaristan, Slovenya, Estonya ve Slovak Cumhuriyeti ise Doğu Avrupa ve eski Sovyetler Birliği ülkeleri olarak dikkat çekmektedir.

Geçiş ekonomileri açısından yaşanan bir diğer sorun ise, kanunların uygulanması ve hukuki yaptırımlar hususunda yaşanmakta ve bazı hükümetlerin hukuk kurallarının cebriliğini uygulamakta zayıf kaldıkları bazılarının ise bu sorunları yaşamadan hukuk kurallarını uygulayabildikleri görülmektedir. Kanunların uygulanması ve hukuki yaptırımların caydırıcı olabilmesi koordinasyon sorununun ortadan kaldırılmasına bağlıdır. Bu noktada ilk olarak, koordinasyona suçla mücadele teknolojileri ve hukuki yaptırımlar ile kamu yararını sağlamak açısından ihtiyaç duyulmaktadır. Bu tarzdaki bir koordinasyon sorunu genellikle vergi

tahsilatının etkinliği vasıtasıyla aşılabilmekte; ancak halihazırda kanunların uygulanmasının ve hukuki yaptırımların zayıf kaldığı ülkelerde vergi tahsilatının da içsel olarak zayıf kalması muhtemel görünmektedir. İkinci olarak, kanunlara uyum hususunda koordinasyon sorunu yaşanmaktadır. Kanunların uygulanışında vatandaşların kuvvetli bir uyum göstermesi etkili bir kontrol mekanizması sergilemekte; ancak kanunlara gösterilen zayıf uyum yaptırımların uygulanmasında yakalanma ve cezalandırılma beklentilerini de azalttığı için kayıtdışılığı da artırmaktadır (Roland, 2000). Şekil 2, çeşitli geçiş ekonomilerinde vergi idarelerinin vergi toplama kabiliyetlerindeki farklılaşmalara ilişkin olarak genel bir fikir vermektedir.

**Şekil 1.** *Kayıtdışı Faaliyetlerin Ülkelere Göre Düzeyi* **Kaynak:** *EBRD-World Bank, The Business Environment and Enterprise Performance Survey-BEEPS (1999, 2002, 2004 ve 2005) Araştırması'na dayanan OECD hesaplamalarından yararlanılmıştır.*

**Şekil 2.** *Geçiş Ekonomilerinde KDV'nin Düzeyi (AB Ortalamasına Kıyasla)* **Kaynak:** *(Roland, 2000).*

Şekil 2'de geçiş ekonomilerinde dolaylı vergiler içindeki en büyük paya sahip olan KDV ülkeler arasındaki oran farklılıklarını düzeltmek için % 20 oranına sabitlenmiş ve bu temelde KDV gelirleri GSYİH'nın yüzdesi olarak hesaplanmış ve AB ortalamasıyla karşılaştırmaya tabi tutulmuştur. Kırık çizilen hat AB ortalamasını temsil etmektedir. Geçiş süreci ile vergi toplama kabiliyeti arasında geçiş göstergesi açısından pozitif bir korelasyon bulunduğu görülmektedir. Ayrıca, yüksek vergi tahsilatına sahip ve düşük geçiş süreci geçiren Belarus ve Türkmenistan gibi ülkeler bulunmasına rağmen; geçiş sürecinde en ileri düzeyde olup düşük vergi toplama kabiliyeti bulunan hiçbir geçiş ekonomisi bulunmamaktadır. Bir ülkenin güçlü bir vergilendirme yetkisine sahip bulunması geçiş sürecinde başarılı olabilmesi açısından yeterli bir koşul olarak görülmemekte, ancak gerekli bir koşul olarak ifade edilmektedir (Roland, 2000).

## 3   Mali Disiplin, Vergi Sistemi ve Bütçe Sisteminde Performans

Klasik sosyalist bir ekonomide mali sistem ele alındığında; kapitalist ekonomideki mali sistemden iki şekilde farklılaştığı görülmektedir. Öncelikle, sosyalist bir ekonomide vergi sistemi zımni olarak ele alınmaktadır. Ayrıca söz konusu ekonomide sistemli bir kanunlaştırma mevcut değildir. İkinci olarak, firmalar açısından para ve kredi sistemi tamamıyla pasif konumdadır. Merkezi planlamanın yokluğunda, parasal sistemin kendisi firmaların kıt kaynaklara ulaşma ve elde etmeye çalışma kabiliyetini kontrol altına alamamaktadır. Devlet tüm endüstriyel ve tarımsal mülkiyeti elinde bulundurduğu için, üretim fazlaları devlet tarafından resmi vergi kanununa göre nispeten daha az başvurularak hem firmalardan hem de dolaylı olarak hane halklarından alınmaktadır. Örneğin, önceden mevcut bulunan fiyat kontrol sistemi, tüketicilerin alkollü içkiler, tütün mamulleri ve otomobil vb. lüks mallarının perakende maliyetini isteğe bağlı olarak daha yüksek tuttuğunda tüketim ve satış vergilerinin kanunlaştırıldığı bir sisteme ihtiyaç duyulmamaktadır. Bu tür malları üreten firmalar ise daha sonrasında devlete gelir olarak intikal edecek olan büyük nakit fazları ile çalışmaktadır. Bu noktada, eğer temel gıdalar gibi bazı malların fiyatları üretim maliyetlerinin altında belirlenmişse devlet aynı zamanda gelir de kaybedebilmektedir. Bu takdirde bu tür mallar üzerindeki zımni tüketim vergisinin oranı negatif olmaktadır. Benzer şekilde, tüm firmaların temel olarak hanehalkı gelirini kaynakta kestiği durumda bir gelir vergisi kanununa ihtiyaç duyulmamaktadır. Devlet sermaye stokunun sahibi olduğu sürece, firmaların nakit fazları elde etmesini garanti altına almak için devletin işçi ve yönetici maaşlarına sınırlandırma ve ayarlama getirmesi gerekmektedir. Aksi takdirde, yönetici ya da işçi konseyleri firmanın fiziki sermayesi üzerinde dolaylı şekilde hak iddia etmek suretiyle kendi ücretlerini belirleyebildikleri durumda firmanın sermaye birikimini ortadan kaldıracak biçimde kendilerine aşırı ücret ödeyeceklerdir. Gerekli ücret kontrolleri halihazırda mevcut bulunduğu için sosyalist bir ekonomide kişisel gelirin vergilendirildiği bir sistemin kurulması ve idame ettirilmesi gereksiz bir harcama olarak görülmektedir (McKinnon, 1993).

Geçiş sürecinde vergi kaçakçılığı nedeniyle karmaşık sonuçlar ortaya çıktığı için; vergiler istikrar programları içinde kullanılırken vergi reformları ise yapısal dönüşüm sürecinin bir parçası olarak uygulanmaktadır. Vergi sisteminin reformu yapısal dönüşümün bir parçası olduğu gibi aynı zamanda istikrar programı açısından da büyük önem arz etmektedir. Yeni vergi sisteminin bütçeye kaynak sağlaması, şeffaf olması, mümkün olduğunca basit olması ve girişimciliğin gelişmesini engelleyecek şekilde kurumlar ve bireyler üzerinde aşırı vergi yükü oluşturmaması gerekmektedir. Geçmişte, firmalar ödedikleri vergiler hususunda vergi otoriteleri ile pazarlık etmekte ve vergileri devlet yetkilileri ile müzakere için kullanmaktaydılar. Geçiş sürecinin başlangıcında ise firmaların bu tutumu bütünüyle vergi kaçakçılığı faaliyetlerine ve vergiden kaçınma davranışlarına dönüşmüştür. Geçiş süreci boyunca, öncelikli olarak kamu sektörü vergilendirme alanında ayrımcılığa uğramıştır. Örneğin, Polonya'da geçiş sürecinde aynı eski sistemde olduğu şekilde kamu teşebbüsleri gerçek karları ile ilişkili bulunmayan kar payları üzerinden yüksek vergilendirmeye maruz kalmışlardır. Yapısal dönüşüm süreci temelde genellikle artan oranlı bir gelir vergisini, kurum kazançları üzerinden alınan düz oranlı bir vergiyi, KDV'yi ve petrol ürünleri, alkollü içkiler ile tütün mamulleri üzerinden alınan çeşitli dolaylı vergileri kapsamaktadır. KDV'nin kamu açısından gelir vergilerine nazaran daha az hissedilmesi ve kaçırılmasının daha güç olması nedeniyle gelir ve kurumlar vergisi gibi dolaysız vergilerden elde edilen gelirleri etkileyen vergi kaçakçılığı ve kayıtdışı ekonomi faktörü, pek çok ülkenin neden KDV vb. dolaylı vergilere doğru hareket ettiklerine dair iyi bir açıklama sunabilmektedir. Çünkü yapısal dönüşüm süreci yalnızca geçiş ekonomilerinin vergisel düzenlemelerinin birbirine yakınlaştırılması amaçlı olarak ele alınmamakta aynı zamanda AB vergi uyumlaştırması sürecinin de önemli bir parçası olarak kabul edilmektedir (Lavigne, 1999).

Planlı ekonomi döneminden geriye önemli ölçüde istikrarsız politikalar kalmıştır. Sosyalist reformların karakteristik gevşek politika tedbirlerinin uygulamasına son verilmesi ile daha köklü bir ifade olan "toplum mühendisliği (social engineering)" yaklaşımları devlet politikalarının temeline oturtulmuştur. Bu şekilde, merkezi ve Doğu Avrupa ile eski Sovyetler Birliği'nin yeni demokrasilerine tedavi amaçlı sunulan dönüşüm ekonomisinin eşitlik ve adalet açısından önerilen düz oranlı vergiler, performans esaslı bütçe sistemleri ve mali disiplin hususları açısından mükemmel bir test zemini oluşturması hiç de şaşırtıcı bir sonuç değildir. Dönüşüm ekonomisi ise gerçekte OECD üyesi ülkelerin fiili politikaları yerine yaklaşımlarında ve seçeneklerinde daha radikal serbest pazar önerileri barındıran bir sistemdir (Csaba, 1995).

OECD üyesi ülkelerde gerçekleştirilen mali ayarlama çalışmaları; mali dengesizliklerin çözümünde politika hususlarının büyüklüğünün ve kompozisyonunun büyük öneme sahip olduğunu göstermiştir. Çoğu mali ayarlama çalışmaları bütçe açığını ve borç yükünü azaltmak açısından vergi artışlarına dayandırılsa da; mali dengesizlikleri ele alma hususunda başarılı olabilen uygulamalar vergi artışlarından daha ziyade cari harcamalardaki kesintilere dayandırılan politikalar olmuştur. Kemer sıkma politikası, masraflarda kısıntıya gidilmesi, personel sayısında daralmaya gidilmesi ve harcamalarda tasarrufa yönelinmesi vb. harcama esaslı politikaların kamu borç oranının azaltılmasında vergi artışlarından daha etkili olduğu ifade edilmektedir. Bu noktada mali ayarlamaların büyüklüğünden daha ziyade kompozisyonunun önemli olduğu çünkü transferler ile ücret ve maaşlarda kesintilere odaklanan mali ayarlamaların "birincil yapısal dengenin" sağlanmasında daha başarılı oldukları belirtilmektedir. Sıkı bir mali sistemin kurulması ve performansın desteklenmesi aynı zamanda beklenti, kredibilite ve refah etkileri meydana getirerek mali ayarlama çabalarına destek teşkil edebilmektedir. 1990'ların başlarında geçiş ekonomilerinde hakim olan yüksek enflasyon düzeylerinde, bütçe açıklarında büyük bir azalma sağlanması ve performansın gerçekleştirilmesi ile mali sistemin güvenilirliği desteklenerek hükümetin enflasyon vasıtasıyla borcunun değerini düşürmeye çalışacağı yolundaki kamuoyu beklentileri azaltılmıştır. Enflasyonun düşmesi ve temerrüt riskinin azalması faiz harcamalarını azaltarak bütçe açığının ayarlanmasına imkan sağlayacak nominal faiz oranı primlerinin düşmesine sebep olabilmektedir. Oldukça yüksek ve artan borç/GSYİH durumlarında mali konsolidasyon gerçekleştirildiğinde beklenti etkileri oldukça güçlü çıkmaktadır. Mali ayarlamalar aynı zamanda refah etkilerini teşvik ederek bir denge meydana getirmektedir. Devletin harcamaları artarken kamu harcamalarında bir kesintiye gidilmesi; özel servette ve dolayısıyla tüketimde genişlemeye yol açan gelecekteki harcama ve vergilerin önemli ölçüde düşeceği şeklindeki beklentileri de teşvik edebilmektedir (Purfield, 2003).

## 4 Sonuç

Geçiş ekonomilerinde merkezi planlama sonrasında yaşanan dönüşüm süreci hemen hemen her alanda etkisini göstermiştir. Hem eski SSCB ülkelerinde hem de merkezi ve Doğu Avrupa ülkelerinde 1989-1990 yıllarında başlayan dönüşüm piyasa ekonomisine geçişi hedeflemiştir. Geçiş ekonomilerinin sosyo-ekonomik yapıları ve yaşanan derin krizler ülkeleri başarılması güç çalışmalara itmiştir. Demokratikleşme çabaları ve çok partili sisteme geçiş kademeli olarak tüm geçiş ekonomilerinin yaşadığı önemli süreçler olmuştur. Geçiş ekonomilerinden bazıları ani sıçrama ile reformları gerçekleştirirken bazıları ise kademeli olarak reform süreçlerini zamana yaymıştır. Hemen hemen tüm geçiş ekonomileri demokratikleşme, durgunluk ve krizden çıkış ile istikrar için politika reformları gerçekleştirmiş ve bu politika reformları vergi, gümrük, özelleştirme, kurumsal yeniden yapılanma ve bankacılık reformu vb. olmak üzere sayısız alanda gerçekleştirilmeye çalışılmıştır. Ticaretin serbestleştirilmesi ve rekabetin getirilmesi ile piyasa ekonomisi sürecine girilmesi isteği, önceki dönemlerden kaynaklanan bütçe ve mali açıklar nedeniyle sıkı maliye ve kredi politikalarının uygulanmasını, yasal ve düzenleyici reformların gerçekleştirilmesini, sosyal güvenlik reformlarını, vergi, bütçe ve mali kontrol ile parasal kontrol mekanizmalarının reformlarını zorunlu hale getirmiştir. Dönüşüm sürecinin ekonomik, mali ve politik sonuçları değerlendirildiğinde genel anlamda üretim düşüşleri, yüksek enflasyon ve işsizliğin yaşandığı, ödemeler bilançosu açıkları ve döviz sıkıntısı meydana geldiği, kurumsal yeniden yapılanma ve özelleştirmenin kademeli olarak gerçekleşmesi nedeniyle kamuoyu beklentilerinin negatif sonuçlandığı ifade edilebilmektedir. Piyasa sosyalizminin başarısızlığı genel manada; eksik ve aksak rekabet, etkisiz ve verimsiz merkezi planlama ile esnek bütçe kısıtlamasının eşzamanlı olarak uygulanmasına bağlı olarak kronik hale gelmiştir. Küresel finansal krizde bile esnek bütçe kısıtı ortaya çıkmış ve gelişmiş rekabetçi piyasa ekonomilerinin geçiş ekonomileri ile benzer özellikler taşıyabileceğini göstermiştir.

Geçiş ekonomilerinde durağanlık ve kriz ile birlikte baş gösteren ve gittikçe yaygınlaşan yasal olmayan kayıtdışı faaliyetler ile kayıtdışı ekonomi hayatta kalabilme aracı olarak görülmüş ve yeraltı ekonomisi gittikçe derinleşmiştir. Geçiş ekonomilerinde kayıtdışı ekonominin büyümesi ekonomik, mali ve parasal istikrarı zayıflatmış ve hükümetlerin güvenilirliğini sarsmıştır. Geçiş ekonomilerinde kanunların uygulanması ve hukuki yaptırımlar konusunda yaşanan sorunlar ile bürokraside yaşanan koordinasyonsuzluk sonucunda hem vergi idaresinin tahsilat etkinliği hem de vatandaşların kanunlara ve vergilere uyumu azalmıştır. Yapısal dönüşüm sürecinin bir parçası olarak vergi reformları ve mali reformlar aynı zamanda istikrar programlarının da içinde yer almış, vergi sistemlerinin bütçeye kaynak sağlayacak biçimde şeffaf, basit ve düz oranlı olması hedeflenmiştir. Geçiş ekonomilerinde dönüşüm öncesi devletle mali alanlarda yapılan pazarlıklar neticesinde ortaya çıkan mali yozlaşmalar planlı ekonomiden piyasa ekonomisine geçiş yapmak suretiyle ortadan kaldırılmaya çalışılmıştır. Ancak bu dönüşüm süreci çeşitli sıkıntıları da beraberinde getirmiştir. Vergi kaçakçılığı ve vergiden kaçınma ile vergilendirmede adaletsizlik bu sürecin yansımaları olarak ortaya çıkmıştır. Yaşanan bu gelişmeler bütçeden beklenen gelirin elde edilememesi suretiyle bütçede kaynak eksikliği meydana getirmiş diğer bir deyişle uygun bir vergi sisteminin olmaması mali disiplini olumsuz etkilemiştir. Basit ve düz oranlı tarifelerin kullanımı ve dolayısıyla mali disiplinde dengenin sağlanması suretiyle dönüşüm sonrası başarılı bir ekonomik performansın gösterildiği ifade edilebilmektedir.

Ph. D. Candidate Necmi Ocak (Hitit University, Turkey)

## Abstract

This study basically examines the Soviet Regime's former hinterland transition economies. In a globalized world these countries face with some major problems with their cumbersome public sector. Many countries have initiated to privatize state-owned enterprises aim of which is to improve the standard of living their citizens and to achieve a higher growth rate. As known, privatization plays an important role in reducing the role of government in society. In this sense, this study will analyze the process of privatization in Transition Economies. The main methodological way of this study is based on a broad literature review. In this sense, some basic articles and data will be the main source of this paper. Our study consists of two parts; while the identification of privatizations will be pointed out in the first part of study, transition economics will be the main subject of the second part. It is concluded that privatizations in which transition economies do not have the same results in the process of planned economy which is based on commanded economy. It will also be discussed that the process of privatization differs from one country to another. In this regard, our study will argue that why some countries such as Hungary and Czech Republic which are members of Europe Union are easily and fast integrate to international system in the sense of privatization.

## 1 Giriş

Sovyetler Birliği'nin dağılması, daha sonra geçiş ekonomileri olarak tanımlanacak ülkeleri farklı arayışlara itmiştir. Merkezi planlama sisteminden piyasa ekonomisine dönüş bu dönemde başlamıştır. Küreselleşmenin her geçen gün arttığı bir dünyada bu ülkelerin hantallaşmış kamu sektörleri önemli bir sorun teşkil etmekteydi. Birçok ülke bütçe açıklarını kapatmak, vatandaşlarının hayat standardını artırmak ve daha yüksek büyüme hızlarına ulaşmak için kamu mülkiyetindeki teşebbüsleri özelleştirmeye başlamıştır. Özelleştirme, toplumda devletin rolünü azaltmada önemli bir yapı taşını oluşturmaktadır. Kumanda kontrol mekanizmasına dayalı merkezi planlı ekonomi sisteminden piyasa ekonomisine geçiş sürecinde, özelleştirme uygulamaları tüm geçiş ekonomisine sahip ülkelerde aynı sonucu vermemiştir.

Çalışmamızda ikincil veriler kullanılmak suretiyle bir literatür taraması gerçekleştirilmiştir. İlk olarak özelleştirmenin tanımı yapılmıştır. Daha sonra geçiş ekonomilerinde özelleştirme süreci ve nedenleri ele alınmıştır.

## 2 Özelleştirme Kavramı

The Economist'in vatandaş ile devlet arasındaki en büyük değişim olarak tanımladığı özelleştirme, 1980'li yıllarda gelişmiş ve gelişmekte olan büyük-küçük birçok ülkede hükümetler tarafından yaygın bir ideoloji olarak benimsenmiştir (Ramamurti, 1992:225). Özelleştirmenin ana felsefesi, devletin, asli görevleri olan adalet ve güvenliğin sağlanması için yapılacak harcamalar ile özel sektör tarafından yüklenilemeyecek altyapı yatırımlarına yönelmesi, ekonominin ise pazar mekanizmaları tarafından yönlendirilmesidir (öib.gov.tr).

Literatürde özelleştirmenin tanımlanmasıyla ilgili iki tür yaklaşım bulunmaktadır. Bunlardan ilki özelleştirmeyi dar anlamda tanımlamaktadır. Buna göre özelleştirme, kamunun öz kaynağı olan Kamu İktisadi Teşebbüsleri'nin (KİT) tamamının veya bir kısmının özel sektöre kiralanması veya satılmasıdır (Ramamurti, 1992:225).

Geniş anlamda özelleştirme sadece kamusal mal ve hizmetlerin satışından ibaret değildir. Aynı zamanda piyasada liberalleşmeyi sağlama, rekabeti oluşturma, piyasa mekanizmalarını çalıştırma, kamu kesiminin performansını arttırma gibi çabaları da içermektedir. Uygulamada geniş anlamda özelleştirme üç şekilde karşımıza çıkmaktadır. Birincisi, mülkiyeti kamuda kalmak üzere, bazı mal ve hizmetlerin üretiminin bazı aşamalarını özel kuruluşlara yaptırmaktır. Temizlik işlerinin özel kuruluşlara verilmesini buna örnek gösterebiliriz. İkincisi, kamunun ürettiği mal ve hizmetlere yapılan sübvansiyonların kaldırılarak, tüketicilerin mali potansiyeline göre bu hizmetlere katkıda bulunmasıdır. Üçüncüsü ise, kamunun tekel niteliğinde ürettiği mal ve hizmetlerin tekel niteliğinin kaldırılarak, özel kesimin faaliyet ve rekabetine açılması ve fiyat kontrollerinden vazgeçilerek fiyatların oluşumunu piyasa şartlarına bırakmaktır. Yani geniş anlamda özelleştirme, kamunun iktisadi faaliyetlerinin sınırlanması olarak tanımlanabilir (Sezgin, 2010: 156).

## 3   Geçiş Ekonomileri

Ekonomistler genellikle iki tip geçiş ekonomisi sınıflandırmasında bulunmaktadırlar. Birincisi, geleneksel geçiş ekonomileri, diğeri ise yeni geçiş ekonomileridir. Geleneksel geçiş ekonomileri tropikal Afrika ve Güney Asya tipi geçiş ekonomilerinden, yeni olanlar da Doğu ve Orta Avrupa, eski SSCB, bazı Latin Amerika ülkeleri ve Çin'den oluşmaktadır (Güler, 2012: 53). Bu çalışmada geçiş ekonomileri tanımlaması, eski Sovyetler Birliği içinde yer alan Merkez ve Doğu Avrupa ekonomileri ve Bağımsız Devletler Topluluğu'ndaki ülkeler için kullanılacaktır.

İkinci grupta yer alan yeni geçiş ekonomileri olarak adlandırılan bu ülkeler şunlardır (Ağcakaya, 2009: 2);

- Orta ve Doğu Avrupa Ülkeleri: Arnavutluk, Bulgaristan, Hırvatistan, Çek Cumhuriyeti, Makedonya, Macaristan, Romanya, Slovakya ve Slovenya.
- Baltık Cumhuriyetleri: Estonya, Letonya ve Litvanya.
- Türk Cumhuriyetleri ve Bağımsız Devletler Topluluğu: Azerbaycan, Beyaz Rusya, Ermenistan, Gürcistan, Kazakistan, Moldova, Özbekistan, Tacikistan, Türkmenistan ve Ukrayna.

Sosyalist sistem, kapitalist sistemin toplumda tüm bireylerin refahını ve iktisadi etkinlik ilkelerini tam sağlayamayacağı düşüncesinden hareketle belirli bir azınlığın refaha ulaşacağı ve ekonomide istikrarsızlık ve dalgalanmaların yaşanacağı tezini savunarak kapitalist sisteme tepki olarak ortaya çıkmıştır. Sosyalist sistem, üretim araçları mülkiyetinin kamuya ait olduğu, bu araçların insanların ihtiyaçlarını karşılamak üzere toplumu yöneten organ tarafından üretime tahsis edildiği iktisadi organizasyon olarak tanımlanabilir (Işık, 2013: 107).

Kornai (1990) ise, sosyalizmi ikiye ayırmaktadır. Bunlardan ilki klasik sosyalizmdir ki temsilcileri Lenin, Mao Zedong ve bunların öğretilerini takip eden diğer ülkelerdir. Diğeri ise reformcu sosyalizmdir. Yugoslavya'da Tito, Macaristan'da Kador, Çin'de Deng Xiaoping, SSCB'de Gorbaçov ve bunları takip eden diğer bazı ülkeler reformcu sosyalizm grubuna dahildir. İkinci grupta yer alan ülkeler siyasi alanda liberalleşme yönünde bazı adımlar atmıştır. Kamu mülkiyetlerinin kontrolünde kısmen adem-i merkeziyetçilik artmış ve özel sektöre biraz daha izin verilmiştir. Ancak şunu da eklemek gerekir ki (Rammamurti, 1992: 242), neredeyse bütün sosyalizm ülkeleri yüksek bütçe açıkları vermekteydi. Bu yüzden Macaristan, Polonya gibi dış borç seviyeleri yüksek olan ülkeler, dışarıdan gelen özelleştirme baskılarına karşı savunmasızdı.

Günümüzde özelleştirmeler, kumanda ekonomisinden piyasa ekonomisine geçiş sürecinin omurgası olarak kabul edilmektedir (Stan, 1995: 427). Sovyetler Birliği'nin dağılmasından sonraki geçiş sürecinde, geçiş ekonomilerinde sadece devlete ait birçok firma özelleştirmemiş aynı zamanda yasal ve kurumsal altyapının geliştirilmesine yönelik adımlar atılmıştır. Bu ülkeler sıfırdan başlayarak piyasa odaklı hukuki ve kurumsal sistemi kurmuşlardır (Estrin ve diğerleri, 2009: 700). Ancak bu ülkelerin hepsinde piyasa ekonomisine işlerlik kazandırma ve özelleştirme eylemini gerçekleştirme yönünde bir arzu söz konusu olsa da bu ülkelerin hepsi aynı başarıyı gösterememiştir. Çünkü bu ülkelerin başlangıç şartları bir birinden farklıdır. Dönüşüm sürecindeki ülkeleri genel olarak ele aldığımızda, Merkezi ve Doğu Avrupa ülkeleri ile Baltık Cumhuriyetleri'nin, Türk Cumhuriyetleri'nin uyguladıkları dönüşüm programından daha başarılı olduklarını söyleyebiliriz (Tandıroğlu, 2002: 204).

Tablo 1 geçiş ülkelerinin başlangıç koşullarını yansıtmaktadır. Görüldüğü üzere Doğu Avrupa Ülkeleri'nin merkezi planlamada kalma süresi 40 -50 yıl arasında değişirken, eski Sovyet Bloku ülkelerinde bu süre 70 yılın üzerine çıkmaktadır.

Ülkenin coğrafi konumu, yani, AB'ye yakınlığı, nüfus büyüklüğü, kişi başına GSMH ile ölçülen gelişmişlik düzeyi, doğal kaynak zenginliği, kültürel ve tarihsel geçmişi ile piyasa ekonomisi konusundaki tarihsel deneyim ve bilginin varlığı başlangıç koşullarını ifade etmektedir. Örneğin Merkez ve Doğu Avrupa ülkeleri, özellikle Macaristan, Polonya fiyat reformları konusunda uzun bir tarihsel deneyime sahiptir ve Polonya ile eski Yugoslavya'da tarım kesimi özel mülkiyetin yanı sıra kolektif mülkiyet ilişkilerini de içermiştir (Turan, 2006:11).

Geçiş sürecindeki ülkelerin sosyalist sistemi benimsedikleri dönemde genel olarak yaşadıkları sorunlar şunlardır (Tandıroğlu, 2002: 203):

- Ekonominin neredeyse tamamı kamulaştırılmış, özel mülkiyete çok sınırlı bir pay tanınmıştır.
- Üretim gerçekleştiren kamu kuruluşlarının büyük bir kısmı tekelleşmiş, fiyatlar ve yatırım kararları merkezi idare tarafından kontrol edilir hale gelmiş ve bunların sonucunda dışa kapalı rekabet olmayan yapılar ortaya çıkmıştır.
- Sosyal güvenlik alanında yapılan harcamalar ekonomik faaliyetlerin hacmi ile karşılaştırılamayacak ölçüde artmış, harcamalar toplumda ortaya çıkabilecek rahatsızlıkları gidermek amacıyla siyasi bir araç olarak kullanılmaya başlanmıştır.
- Tüm bu sorunların etkisiyle makro ekonomik dengeler bozulmuş, yüksek bütçe açıkları, kontrol edilemez hale gelen ücretler, para arzının sınırsız artışı ve yüksek enflasyon gibi ciddi sorunlarla karşılaşılmıştır.

Sovyet blokunun dağılmasıyla birlikte 1990'lı yılların başından itibaren Orta ve Doğu Avrupa ile eski Sovyetler Birliği ülkelerini etkisi altına alan politik ve ekonomik değişim sürecine girildi. Bu değişim ekonomi

literatüründe yukarıda da belirtildiği üzere geçiş ekonomileri olarak tanımlanmıştır. Üretim araçlarının mülkiyetinin devletin tekelinde olduğu ve üretim kararlarının merkezden alındığı planlamaya dayalı ekonomik sistemden, fiyatların piyasa güçleri tarafından benimsendiği serbest piyasa ekonomisine geçişi içeren bir dizi ekonomik ve sosyal reform çalışmaları başlatılmıştır (Turan, 2007:122).

| | Sanayinin GSMH İçindeki Payı 1990 | Enflasyon 1987-1990 | Merkezi Planlama Süresi[1] | Ulusal Gelir 1989[2] | EYK Ticareti 1990[3] | Doğal Kaynak Zenginliği |

[1] Geçiş döneminin başlangıcına kadar merkezi planlamanın uygulamada kaldığı süre.
[2] Satın alma gücü paritesine göre kişi başına dolar olarak.
[3] Karşılıklı Ekonomik Yardım Konseyi içerisindeki ticaretin GSMH'nin yüzdesi olarak payı.

***Tablo 1:*** *Geçiş Ekonomilerinde Başlangıç Koşulları, 2006* ***Kaynak:*** *Turan, 2006:11*

### 3.1 Geçiş Ekonomilerinde Özelleştirme Politikasının Nedenleri

Tarihsel olarak bakıldığında kamu iktisadi teşebbüsleri (KİT) hem sosyalist hem de kapitalist ülkelerde kamu mallarının daha iyi sunulması, "iyi işleyen" piyasaların yokluğunda ekonomik gelişmeye öncülük etmesi, tam istihdamı ve gelir dağılımında adaleti sağlaması için kurulmuştur. Fakat bu süreç içerisinde bir çok KİT'in performansı hayal kırıklığına neden olmuş ve 1980'li yıllarından itibaren özelleştirme mülkiyet haklarının korunması, iktisadi müşevviklerin sağlanması ve firmaların performanslarının artırılması için bir araç olarak savunulmaya başlanmıştır (Estrin ve diğerleri, 2007:7). Özelleştime ile birlikte firmaların faaliyet hedefleri yeniden tanımlanmaktadır. Devlet mülkiyetinde olan firmalar, genellikle birbiriyle çelişen birden çok hedeflerin peşinden koşarlar. Bunun aksine özelleştirilen firmalar daha çok kar maksimizasyonuna odaklanırlar (D'Souza, Megginson, Nash, 2007:159) . Marksizmin ilkelerinden kaynaklanan devlet mülkiyetinin imtiyazına dayalı planlı ekonomilerde firmaların verimsiz çalıştığı savulmaktadır. Bu yüzden piyasa ekonomisine geçiş ülkelerinde reformların asıl hedefi devlet işletmelerinin verimliliğini artırmak ve dünya piyasaları ile rekabet edebilmektir (Filatotchev ve diğerleri, 2003: 332).

Özelleştirme ile devlet, kamu işletmelerini finanse etmekten kurtulacak, dolayısıyla kamunun finansal kaynakları kullanmasının neden olduğu dışlama etkisi ortadan kalkacaktır. Ayrıca özelleştirme ile birlikte sermaye piyasasının gelişeceği ve sermayenin tabana yayılmasının sağlanacağı ve bu yolla gelir bölüşümündeki eşitsizliklerin giderileceği savunulmaktadır. Pay sahibi olan küçük tasarruf sahipleri işletmelerin verimliliğini denetleyebilecektir. İşletmelerin siyasi vesayetten kurtularak özerk bir yapıya kavuşmalarının özelleştirme ile mümkün olacağı ifade edilmektedir. Bütün bunların sonucu olarak, özelleştirmenin ekonomik etkinliği sağlayan ve arttıran bir politika aracı olduğu belirtilmektedir (Özuğurlu, 2005: 155). Hem gelişmiş ülkelerde (D'Souza, Megginson ve Nash, 2005) hem de gelişen ülkelerde (Boubakri, Cosset ve Guedhami, 2005) yapılan bilimsel araştırmalarda özelleştirme sonrası firmaların daha verimli ve karlı çalıştığını gösteren bulgular elde edilmiştir.

Kumanda- kontrol mekanizmasına dayalı planlı ekonomi sisteminde, üretim ve bölüşüm ile ilgili kararlar, piyasanın yaydığı sinyaller ihmal edilerek bir merkezi idare tarafından ayrı ayrı verilmektedir. Ne üretileceğine, ürünlerden hangilerinin işletmelere ara üretim malzemesi olarak verileceğine, hangi ürünlerin tüketicilere satılacağına ve bunların hangi fiyatlardan satılacağına doğrudan planlamacılar karar vermektedir. Bu nedenle de, üretime katılan faktörlerinin gerçek kıtlık değerlerine tekabül edecek bir gelire sahip olamadıkları ve daha da

önemlisi bu yüzden kumanda sisteminin fertleri adeta yoksulluğa mahkum ettiği söylenmektedir (Bağdadioğlu, 2009: 140). Bu eski sistem çöktüğü zaman demokrasi ve kapitalizm coşkusuyla beraber eski sosyalist ülkelerin insanlarına, daha az verimsiz "kumanda" ekonomisinden daha verimli piyasa ekonomisine geçiş sürecindeki değişiklileri anlatmak yeni sınıf siyasiler için zor olmamıştır (Mramor, 1996: 132).

### 3.2  Geçiş Ekonomilerinde Özelleştirme Süreci

Geçiş sürecindeki ülkeler arasında reformların uygulanmasında birbirinden farklı çeşitli sıkıntılar yaşanmakla birlikte, hem ekonomik yapı hem de tüketici ve üretici davranışları temel bir dönüşüm süreci yaşamıştır. Reformlarda önemli ilerlemeler sağlanmasına rağmen, geçiş süreci başlangıçta beklenenden çok daha güç ve sıkıntılı olmuştur. Geçiş sürecinde izlenen politikalar hiç bir zaman ideal olanı yakalayamamıştır. Piyasa uyumlu ekonomilerin isleyişi için gerekli kurumsal ve yasal altyapının olmayışı geçiş ekonomilerinin merkezi planlamaya dayalı ekonomik sistemden devraldığı en önemli olumsuzluklardan birisidir. Mülkiyet haklarının yeterince açık olmaması, özel teşebbüsün piyasaya giriş ve çıkışını düzenleyecek ticari yasaların yetersizliği, finansal piyasaların bulunmaması, etkin bir ticari bankacılık sisteminin kurulamaması, açık emek piyasası ve piyasa uyumlu bir vergi sisteminin oluşturulamaması gibi olumsuzluklar piyasa ekonomisinin etkin işlemesine engel olan ve tamamlanması gereken kurumsal altyapı yetersizlikleri olarak ortaya çıkmıştır (Turan, 2006:10).

Yaşanan bu sorunlardan dolayı dönüşümün tüm unsurlarının bir arada ve eş zamanlı gerçekleşmesi mümkün olmamıştır. Nitekim dönüşüm sürecinin söz konusu olduğu ülkelerde bazı sorunlar yaşansa da dönüşümün iki aşamalı gerçekleştiği görülmektedir. Birinci aşama, dış ticaretin ve piyasaların serbestleştirilmesi ile kamu iktisadi teşebbüslerinin özelleştirilerek devletin daha önce hakim olduğu ve elinde tuttuğu ekonomik alanlardan çekilmesidir. ikinci aşama ise hukuki ve kurumsal çerçevenin düzenlenmesi, etkin bir piyasa mekanizmasının oluşturulmasını sağlayacak özel ve kamu kurumlarının oluşturulmasıdır ( Altay, 2002: 69).

Şekil 1'de hedeflenen dönüşümün ilk aşamalarından olan özelleştirme programından elde edilen gelirlerin geçiş ekonomilerindeki GSMH içindeki oranları yer almaktadır. Görüldüğü üzere dönüşümün ilk yılları olan 1991-1995 yılları arasında elden edilen gelir % 3'lerin altındadır. Sonrasında istikrarlı bir atış söz konusudur. 2006-2010 yılları arasında özelleştirme gelirlerinin %15 seviyesine yükseldiği görülmektedir.

*Şekil 1. Özelleştirme Gelirlerinin GSMH İçindeki Payı(%) **Kaynak:** Crivelli, 2013:222*

Aşağıdaki tablo 2'de ise Türk Cumhuriyet'leri ve eski Sovyetler Cumhuriyeti'nde yer alan ülkelerde özel sektörün payı gösterilmektedir. Görüldüğü üzere Türkmenistan'da özel sektörün payı % 25'lere kadar düşmektedir.  Bu ülkeler içeresinde özel sektörün payı en yüksek olanlar % 75 ile Ermenistan ve Kırgızistan'dır. Toplam istihdam içeresinde özel sektörün payına baktığımızda, sırasıyla % 18,6 ve % 34,5 ile Beyaz Rusya ve Gürcistan en alt sırada yer almaktadır.

Kırgızistan bağımsızlığını kazandıktan sonra, yapısal koşullarının yetersizliğinden dolayı ekonomik ve mali sorunlara çözüm bulmak amacıyla uluslararası kuruluşlar nezdinde çalışmalarını başlatmıştır. Özellikle 2000'li yılların başından itibaren mali sistemin iyileştirilmesi ve bütçe politikasının etkinliğini sağlamada yeni yasal düzenlemelere gidilmiş ve tabloda görüldüğü üzere uygulama sonuçları etkisini göstermeye başlamıştır (Ağcakaya, 2009: 13).

Tablo 3'de, Merkezi ve Doğu Avrupa ülkeleri ile Baltık Cumhuriyetleri yer almaktadır. 1990 yılında bu ülkelerde  özel sektörün payı  % 10 - % 30 arasındayken, 2006 yılında %65-%80 arasında değişmektedir. Tablo 2'de yer alan ülkelerle karşılaştırıldığında, dönüşüm programlarının Merkezi ve Doğu Avrupa ülkeleri ile Baltık Cumhuriyetleri'nde daha başarılı olduğu daha net görülmektedir.

| Ülkeler | GSMH İçinde Özel Sektörün Payı (%) | Toplam İstihdam İçinde Özel Sektörün Payı (%) |
|---|---|---|
| Azerbaycan | 60 | 68 |
| Ermenistan | 75 | 76 |
| Beyaz Rusya | 25 | 18,6 |
| Gürcistan | 65 | 34.5 |
| Kazakistan | 65 | 75.5 |
| Kırgızistan | 75 | 80.3 |
| Rusya Federasyonu | 70 | Mevcut Değil |
| Tacikistan | 50 | 63 |
| Türkmenistan | 25 | Mevcut Değil |
| Ukrayna | 65 | Mevcut Değil |
| Özbekistan | 45 | Mevcut Değil |

**Tablo 2:** *Geçiş Ekonomilerinde GSMH İçinde Özel Sektörün Payı (%)* **Kaynak:** *(Estrin ve diğerleri,2009: 700)*

1980'li yıllardan itibaren dünya gündeminde yer alan özelleştirme uygulamalarının, özellikle gelişmekte olan ülkelere yabancı sermaye girişlerinde önemli rolü vardır. Uygulamaya konan finansal liberalleşme programı yabancı yatırımcıların ülkede özelleştirilen kuruluşları satın almalarını kolaylaştırmıştır. Özelleştirme ile yabancı yatırımcılar sabit bir yatırımı komple satın alabilecekleri gibi, o yatırıma ait menkul değerlere yatırım yaparak, o kuruma sermayedar olarak da ortak olabilirler. Böylelikle kurumların elde ettiği kazançtan paylarını alırlar (Kar ve Tatlısöz, 2008: 12). Geçiş ekonomilerinde genellik yabancı yatırım miktarı daha azdır. Bu ülkelerde yabancı yatırım miktarının az olmasının çeşitli sebepleri vardır. Ekonomik ve siyasi belirsizlikler, mülkiyet hakkının yeteri kadar korunamaması, altyapının yetersiz olması ve yabancı yatırımlara olan düşmanlık bu sebeplerden bazılarıdır (Maw, 2002: 279).

**Tablo 3:** *Geçiş Ekonomilerinde Doğrudan Yabancı Yatırım (Milyon$)* **Kaynak:** *EBRD, Transition Report, 2007*

Tablo 3'de Merkez ve Doğu Avrupa ile Bağımsız Devletler Topluluğu'nda yer alan geçiş ekonomilerine yapılan doğrudan yabancı sermaye miktarı bulunmaktadır. Bugün Avrupa Birliği içinde yer alan Çek Cumhuriyeti, Macaristan, Polonya, Romanya gibi ülkelerin 1989-2006 yılları arasında Bağımsız Devletler Topluluğu'ndaki ülkelere göre nispeten daha fazla yabancı yatırım çektiği görülmektedir. Avrupa Birliği'ne coğrafi yakınlık ve AB uyum sürecinde atılan adımların, büyümenin önemli bir faktörü olan yabancı sermayeye olumlu katkı yaptığını söyleyebiliriz.

Son yıllarda özelleştirme ve yolsuzluk birbiriyle bağlantılı hale gelmiştir. Kamu teşebbüslerinin, yolsuzlukların ve siyasi yozlaşmanın önemli bir kaynağı olduğuna şüphe yoktur. Çünkü kamu teşebbüsleri, zaman zaman siyasi partilerin faaliyetlerini finanse etmek ve belirli politik gruplara iş sağlamak için kullanılmaktadır. Suni tekellerin özelleştirilmesi bu tür yolsuzlukların azaltması için gereklidir. Ancak özelleştirmeyi kendi yararına kullanmak için, temel kararları alma merciinde olan takdir yetkisine sahip bazı bireyler (bakanlar, yüksek siyasi yetkililer) vasıtasıyla, Kit'lerin özelleştirme süreci yeni yolsuzluklar ortaya çıkarmıştır. Bu sorunlar, dünyanın tüm bölgelerinde görülmüş ve rapor edilmiştir. Ancak bu suiistimallere özellikle geçiş ekonomilerinde daha çok rastlanmıştır. Bu ülkelerde bazı bireyler bu yollarla oldukça zenginleşmiştir (Tanzi, 1998:563).

## 4  Sonuç

Sovyetler Birliği'nin yıkılmasıyla beraber bu bloğun içinde yer alan ve günümüzde geçiş ekonomisi olarak adlandırılan ülkeler, merkezi planlı ekonomi sisteminden serbest piyasa ekonomisine geçiş için çeşitli adımlar atmışlardır. Atılan adımlar içerisinde özelleştirmeler, kumanda ekonomisinden piyasa ekonomisine geçişin omurgasını oluşturmaktadır. Ancak özelleştirme uygulamaları, tüm geçiş ekonomisi ülkelerinde aynı sonucu vermemiş ve geçiş ülkelerinin kaydettikleri performans tüm ülkeler için aynı hız ve doğrultuda olmamıştır. Bugün Avrupa Birliği içinde yer alan Macaristan, Çek Cumhuriyeti, Polonya gibi Merkez ve Doğu Avrupa geçiş ülkelerinin Bağımsız Devletler Topluluğu'nda yer alan ülkelere göre uluslararası sisteme daha çabuk entegre olduğu ve bu ülkelerde özelleştirme uygulamalarının daha başarılı olduğu sonucuna varılmıştır. Bunun en önemli sebebi bu ülkelerin AB'ye yakınlığı ve reformlar konusunda uzun bir tarihsel deneyime sahip olmasıdır.

## Abstract

Nowadays, it is the main target of all countries to generate information and make a technological product by commercializing the information. However, the countries are limited to developed countries. They can invest more in R&D and transmit new technologies created by their strong economic structure and sufficient human capital, to production process. Conversely, other countries can achieve their technological development as adaptation of imported technology to local conditions. Moreover, regional development has gained a new meaning to obtain regional competitiveness; no longer has regional development referred more than a plane being only an implementation of central policies aimed to reduce disparities among regions. As a result of all changes, firms have tried to integrate with the world as well as build their presence in the regional basis. However, the firms don't have any qualification and resources to follow technological innovation continuously in the increasing global competition. For this reason, it is to emerge a requirement to build a partnership among the firms sharing same geographical space and industry. In this regard, by creating clusters at both national and regional level, policymakers aim to make their firms more competitive in the global race. In this study, it is discussed competitive, its effects on regional policy, and cluster policy as a regional policy tool. The main purpose of the study is to determine the effects of cluster in the context of competition and to provide a preliminary study on what might be done for successful policy application.

## 1 Giriş

Günümüz dünyası; bilimsel ve teknolojik ilerlemelerin daha önceki dönemlere nazaran görülmemiş boyutlara ulaştığı, küreselleşmenin tüm dünyayı kuşattığı yeni bir dünya düzeni ile tanımlanmaktadır. İçinde bulunduğumuz uluslararası sistemi özetleyen yenidünya düzeni; ekonomik boyutta gücünü bilimden, onun yarattığı teknolojiden ve küreselleşmeden alırken, devamlılığını; yani firmadan endüstriye, şehirden ülkeye aktör kim olursa olsun ayakta kalabilme gücünü, ise bu dinamiklere en hızlı şekilde ayak uydurabilmesinden ve rekabet gücünden almaktadır.

Yeni toplumun temelinde olan bilgi, teknolojinin gittikçe artan imkânlarıyla tüm yerküreye yayılmakta, çeşitlenmekte ve sonuç olarak çoğalmaktadır. Bu dönemde diğer üretim faktörlerinin göreceli olarak önemi azalırken, bilginin önemi hem kendi hem de etkilediği süreçler ile sürekli artmakta; üretim, teknolojide sağlanan gelişmeler sayesinde elde edilen verimlilik artışlarına dayanmaktadır. Bu nedenle günümüzde bilgi üretmek, üretilen bilgiyi ticarileştirerek teknolojik ürün haline getirmek ülkelerinin ana hedefi olmuştur. Ancak, bu hedefi başarı ile gerçekleştirebilen ülkeler maalesef gelişmiş ülkeler ile sınırlı kalmaktadır. Bu ülkeler daha fazla Ar-Ge yatırımı yapabilmekte, güçlü ekonomik yapıları ve yeterli beşeri sermayeleri ile oluşturdukları yeni teknolojileri üretim sürecine aktarabilmektedirler. Gelişmekte olan ülkeler ise teknolojik gelişmelerini ithal teknolojiyi yerel koşullara uyarlama çabalarının sonucunda elde edebilmektedirler. Bu durum ise her yeni teknolojik icatla gelişmiş ülkelerin rekabet gücünü artırmalarını ve yüksek katma değerler elde etmelerini sağlamaktadır.

Diğer taraftan küreselleşme ise özellikle Soğuk Savaş'ın sona ermesiyle ülkeler arasındaki ticari sınırları ortadan kaldırarak dünya ölçeğinde üretimi yaygınlaştırmıştır. Bu dönemde işletmelerin küreselleştiği, dünya çapında çok-uluslu işletmelerin yaygınlaştığı ve sayıca hızla çoğaldığı görülmektedir. Değişimin sonucunda eski ekonomik düzen değişmeye başlamış ve üretim gelişen ülkelerden değişimin hızını yakalayan belli bölgelere kaymıştır. Başta Asya ülkeleri olmak üzere birçok ülke ciddi yabancı sermaye yatırımlarını çekerek dünya üretiminde söz sahibi olmaya başlamıştır. Elbette gelişmiş ülkeler ellerinde tuttukları bilgi gücüyle kültürel ve bilimsel liderliğini devam ettirmekte ve dünyanın en büyük çok-uluslu şirketlerine ev sahipliği yapmaktadırlar. Ancak, gelişmekte olan ülkelerin hızlı gelişimi ile küresel pazarda oligopol olma özelliklerini kaybetmeye başlamışlardır. Ayrıca küresel piyasaların eklemlenme sürecindeki hızlı ilerleme ile beraber kentler, metropoller ve bölgeler diğer ülkelerin kent, metropol ve bölgeleriyle de rekabet eder hale gelmiştir. Bu durum ülke içerisindeki kaynakların yeniden dağıtılmasına dayalı bir gelişme anlayışını zorunlu kılmıştır (Akpınar ve Taşçı, 2011). Küresel dünyadaki gelişmelere bağlı olarak ulus devletlerin bünyelerinde de buna benzer gelişmelerin varlığı dikkat çekmeye başlamıştır. Özellikle bölgesel kalkınma konusu rekabet gücü elde etmek için yeni bir

anlam kazanmış, artık bölgesel gelişme yalnızca bölgeler arasındaki gelişmişlik farklarını azaltmaya yönelik merkezi politikaların uygulandığı bir düzlemden oldukça fazlasını ifade eder hale gelmiştir.

Sonuçta gerek teknolojinin, gerekse küreselleşmenin oluşturduğu baskı ile ülke ekonomileri ve bu ekonomileri oluşturan firma ya da bölgelerin varlıklarını sürdürebilmeleri, mümkün olduğunca en hızlı şekilde değişimi yakalamalarına, bilgi üretmelerine, bu bilgiyi üretime aktarabilmelerine ve kendilerine özgü farklılıkları yaratmalarına; kısaca rekabet edebilirliklerine bağlanır hale gelmiştir.

Giderek artan küresel rekabet ortamında firmalar teknolojik yenilikleri sürekli izleyebilme, ürün ve teknoloji geliştirmek için tüm kaynaklara sahip değildir. Coğrafi olarak ortak bir mekânı paylaşan ve aynı sanayi kolunda çalışan firmalar arasında işbirliği oluşturma ihtiyacı artmaktadır (Storper, 1995; Schmitzjnadvı, 1999'den aktaran Eser ve Köse, 2005). İşte bu noktada birçok ülkede politika yapıcılar, hem ulusal hem bölgesel seviyede kümelenmeler yaratmanın ve desteklemenin küresel yarışta rekabetçi olmak ve kazanan konumuna gelmek için temel bir seçenek olduğuna inanmaktadır (Keskin ve Demirgil, 2009). Şöyle ki; rekabetçi oluşum ve çatışmalar varlıklarını sürdürmeye devam ederken, aynı zamanda işbirliği ve yardımlaşma neredeyse bütün sektörlerde kabul gören bir anlayış biçimi haline gelmiştir. Birbirleriyle karşılıklı ilişki içerisinde olan endüstriler ve firmalar aynı coğrafik bölgede bir araya gelerek, birlikteliğin yarattığı sinerjik etkiden faydalanmaya çalışmaktadırlar (Eraslan vd., 2008).

Bu çalışmada rekabet, rekabetin bölgesel politikalara etkisi ve son dönemde en çok tartışılan bölgesel politika aracı olan kümelenme politikası ele alınmaktadır. İzleyen başlıklarda öncelikli olarak rekabet ve rekabet gücü kavramları ele alınarak rekabet edebilirlik için gerekli koşullar belirtilmektedir. Daha sonra kümelenme kavramı ve bölgesel kalkınma aracı olarak kümelenme politikası ele alınmaktadır. Bu doğrultuda, çalışmanın temel amacı rekabet bağlamında kümelenmenin etkilerini belirlemek ve başarılı politika uygulamaları için neler yapılabileceğine dair bir ön çalışma sunmaktır.

## 2　Rekabet, Rekabet Gücü ve Kazanımları

Türk Dil Kurumu'nun yaptığı tanımlamada rekabet günlük hayatta herhangi bir etkinlik alanında ayrı ayrı kişi ya da gruplar arasında sürdürülen üstün olma mücadelesidir. Bu tanım ışığında rekabet pozitif bir ayıklama aracı olarak görülebilir. Buna karşılık günlük hayatta çok sık kullandığımız ve belki de 21. yüzyılın en popüler kavramlarından olan rekabet ve onu oluşturan güçler; birçok bilimsel çalışmaya konu olmasına rağmen, üzerinde ortak bir karara varılmış genel bir tanımlamaya ve genel bir ölçüte sahip değildir. Bu durum; firma ya da ülke açısından rekabet kavramının siyasi, sosyal ve ekonomik olarak çok boyutlu olması, söz konusu boyutların gerek kendi içindeki, gerekse aralarındaki ilişkilere bağlı olarak dinamik bir yapı sergilemesine dayandırılmaktadır. Böylece vurgulanmak istenen boyuta bağlı olarak değişik rekabet ve rekabetçilik tanımlarının yapılması gerekliliği belirtilmektedir.

Rekabet, gerçekleştirenin kimliğine bağlı olarak üç farklı kategoriye ayrılmaktadır. Söz konusu kategoriler; (i) makro: ulusal ölçekte rekabet; (ii) mezo: bölgesel veya sektörel ölçekte rekabet; (iii) mikro: firma ölçeğinde rekabet.

### 2.1　Mikro Boyutta Rekabet Gücü

Mikro boyutta rekabet, firma ile ilgili olarak söz konusu firmanın belirli bir piyasada rekabet edebilmesi, piyasa payını artırabilmesi ya da ihracat yoluyla yeni pazarlara ulaşabilmesi şeklinde gözükmektedir. Dünya Ekonomik Formu (1989)'a göre firmalar arası rekabet gücü; girişimcilerin ürün ve hizmetleri tasarlama, üretme ve fiyatlandırma aşamalarında rakiplerinden daha fazla üstünlük kazanmalarıyla gerçekleşmektedir.

Firma açısından rekabet avantajı genel olarak maliyet ve farklılık olmak üzere iki temel boyutta ele alınmaktadır. Buna göre bir firma rakiplerinden daha düşük bir maliyetle üretimini gerçekleştiriyorsa maliyet, rakiplerinin sahip olmadığı farklılıklar yaratabiliyorsa farklılık avantajına sahiptir. Ancak, bu avantajları yaratmak firmalar açısından kolay olmamakta; birçok faktörün bir araya gelmesi ile oluşmaktadır. TÜSİAD (1991)'e göre bir firmanın rekabet gücünü sağlayan faktörler: işgücü maliyeti ve verimliliği, sermaye maliyeti, kalite, özellikler, benzersizlik, teknoloji, alt yapı, hammadde bulunabilirliği, yurtiçi rekabet ortamı, ülke imajı ve dış bağlantılardır. Bu faktörlerin bir kısmını firma kendi içyapısıyla yakalayabilirken, diğerlerini ise yer aldığı endüstriden ya da ülke ve ülkelerden temin edebilmektedir.

### 2.2　Mezo Boyutta Rekabet Gücü

Bu boyut hem sektör hem de bölge olarak ele alınabilmektedir. Sektörel açıdan rekabet ilgili sektörün diğer ülkelerin aynı sektörlerine göre daha yüksek gelir ve istihdam yaratma gücü olarak tanımlanabilir (Demir, 2002). Markusen (1987) endüstrinin rekabet gücünü üretim etkinliği endeksini baz alarak toplam faktör verimliliğinden hareketle tanımlarken, Bryan (1994) rekabet gücünü işgücü verimliliğinden hareketle tanımlamış ve rakipleriyle eşit ya da daha üstün verimlilik oranına sahip olan endüstrinin başarılı olarak nitelendiğini ifade etmiştir (Markusen, 1994 ve Bryan, 1994'ten aktaran Çivi vd., 2008).

Bölgesel boyutta ise rekabet alanla sınırlanarak, gerek ülke içinde, gerekse ülkeler arasındaki farklı bölgelerin mücadelesi vurgulanmaktadır. Bir bölgenin rekabet gücünü genel olarak yerel karşılaştırmalı üstünlükler ve

başlangıç avantajları belirlemektedir. Avrupa Komisyonu'na göre bölgesel rekabet gücünü; sektördeki istihdamın yoğunlaşması, dış göç ve yaşlı nüfusun fazlalığı, yatırımlar, bölgelere yapılan dolaysız yabancı sermaye yatırımları, bilgi ekonomisi varlıklarına yapılan yatırımlar/yenilikler, altyapı donanımı, eğitim düzeyi gibi faktörler belirlemektedir (Özer, 2008).

Bu faktörlerin firmaların rekabet gücü, dolayısıyla kentlerin gelişmesi üzerindeki etkisi ülke gelişme/sanayileşme stratejilerine, bölgesel gelişme politikalarına, piyasaların yapısı ve işleyişine, piyasa/firma dışındaki kurumların (devlet, yerel yönetimler, sivil toplum) rolüne göre değişme göstermektedir. Sanayi bölgelerinin ve kentsel ekonomilerin büyüme dinamiklerini belirleyen, gelişme süreçlerini yönlendiren bu çok yönlü ve dinamik ilişkiler kentler ve bölgelerarası gelişme farklılıklarını açıklayabilmekte, gerçekleşen yerel gelişme/sanayileşme süreçlerine göre kentsel gelişme ve sanayileşme desenleri farklılık göstermektedir (Eser ve Köse, 2005).

### 2.3 Makro Boyutta Rekabet Gücü: Ülke Açısından Rekabet Gücü

Ülke rekabeti aynı zamanda uluslararası rekabet olarak da tanımlanmakta ve ilgili ülkenin ekonomik refah ve yaşam standardını yükseltebilmesi için gerekli güç olarak nitelendirilmektedir. Ülkenin rekabet gücü Ar-Ge faaliyetlerinin gelişmişlik düzeyi ve verimliliği, çeşitli sektörlerin performansı, ülkenin dış ticaret fazlası, yüksek teknolojiyi yapısında barındıran mallar üretmesi, uzman ve yetişmiş iş gücünün bulunması gibi faktörlere de bağlıdır (Çivi vd., 2008). Ayrıca ülkeye gelen doğrudan yabancı sermayenin miktarı ve bu sermayenin sektörel dağılımının da rekabet gücü için önemli olduğu belirtilmektedir. Sonuçta bir ülkenin küresel piyasalarda rekabet edilebilirliğini artırması veya koruması mikro açıdan firma ve içinde bulunduğu endüstrinin, makro açıdan ise ülkenin rekabet edilebilirliğine bağlıdır.

Firma, sektör, bölge ya da ülke açısından farklılaştırılmaya çalışılan rekabet kavramı aslında bir bütünlüğü ifade etmektedir. Bu farklı boyutlar bir zincirin halkaları olarak birbirini tamamlamakta; firmanın rekabet gücündeki artış bağlı bulunduğu endüstrinin ve kuruluş yeri olarak seçtiği bölgenin rekabet gücünü etkilemekte, endüstrideki olumlu gelişmeler ve bölgesel kalkınma ise bütün olarak ait oldukları ülkenin uluslararası piyasadaki rekabet gücünü arttırmaktadır. Cho (1998) firmaların rekabet gücünü elde etmelerinin ülkenin rekabet gücünü kuvvetlendireceğini, ulusal rekabet gücünün kuvvetlenmesinin de dünyada sürekli artış gösteren ekonomik blokların rekabet gücüne etki edeceğini ve en sonunda da tüm dünyanın gelişimini gösteren küresel rekabet gücünü artıracağını ifade etmiştir (Cho, 1998'den aktaran Çivi vd., 2008). Bu sebeple yapılan tanımlarda vurgu farklı olmakla birlikte ortak nokta ülkenin refah düzeyini artırmak için gereken rekabet gücünü oluşturmanın yolunu belirlemektir.

## 3    Kümelenme ve Bölgesel Rekabet Politikası Aracı Olarak Kümelenme Politikası

Günümüzde artan rekabet olgusu değişen koşullara uyum yeteneği yüksek ve esnek yapılarıyla KOBİ'leri, yeni sanayi odaklarını, küçük ve orta boy kentleri ön plana çıkarmaktadır. Bu süreçle paralel olarak yerel kurumların, organizasyon yapılarının ve dayanışmanın önemi de artmaktadır (Keskin ve Demirgil, 2009). Özellikle bölge ve bölgesel rekabet gücü ilgili gelişmeler ışığında ana aktörlerden biri olarak kabul edilmektedir. Bu sebeple daha önce ülkelerin uyguladığı politikaların yeniden gözden geçirilmesi bir zorunluluk haline gelmektedir. Artık salt bir sanayileşme politikası ya da bir bölge/sektörün geliştirilmesi anlayışı terk edilmesi; bunun yerine yerel potansiyeli harekete geçiren, KOBİ'lere ve esnek üretim yapısına yer veren, değişik aktörleri bir araya toplayarak işbirliğini artıran, ulusal ve uluslararası düzeyde rekabeti şiddetlendiren, küresel piyasalarla bütünleşik bir bölgesel kalkınma anlayışına geçilmektedir. İşte bu noktada kümelenme politikası önemli bir bölgesel kalkınma politikası aracı olarak kabul edilmektedir.

Ulusal ve uluslararası rekabetçilik politikalarında önemli bir yaklaşım olarak kabul edilen kümelenme başta gelişmiş ülkeler olmak üzere dünya genelinde yaygın bir uygulama alanına sahiptir. Bununla birlikte üzerinde ortak uzlaşıya varılmış bir tanımı bulunmamakta, belirli bir ekonomik faaliyetle ve ülkenin ya da bölgenin kurumsal yapısı ile bağdaştırılan özel durumlar için değişik tanımlamaları yapılabilmektedir.

Bu tanımlamalardan biri Avrupa Komisyonu tarafından "Avrupa Birliği'nde Dünya Standartlarında Kümelere Doğru: Geniş Tabanlı İnovasyon Stratejisi'nin Uygulanması" adlı çalışmada yapılmıştır. Söz konusu çalışmada kümeler, birbirlerine yakın biçimde konumlanmış ve özel alanlarda uzmanlık, hizmet, kaynak, tedarikçi ve beceri geliştirecek kadar yeterli düzeye ulaşmış işletme, ilgili ekonomik aktörler ve kurumlar grubu olarak ifade edilmiştir (Beyaz Kitap, 2008).

Kümelenme kavramının yaratıcısı olarak kabul edilen Porter ise kümelenmeyi; "belirli bir alandaki birbiriyle rekabet eden fakat aynı zamanda işbirliği yapan karşılıklı ilişkili firmaların, uzmanlaşmış arz edicilerin, hizmet üreticilerinin, ilişkili endüstrilerdeki firmaların, ilişkili kurumların (örneğin üniversiteler, standart kuruluşlarının ve ticaret birliklerinin-derneklerinin) coğrafi yoğunlaşması" olarak tanımlamaktadır (Asheim, 2006'dan alıntılayan Keskin ve Dulupçu, 2010).

Türkiye'de kümelenme için önemli çalışmalar yapan Bulu (2009), kümelenmeyi; birbirlerine katma değer ekleyen üretim zinciri ile bağlı, karşılıklı bağımlı tedarikçileri de içeren, firmalar ve/veya işletmeler, bilgi üreten

kurumlar (üniversiteler, araştırma kurumları, mühendislik şirketleri), müşteriler, kümelenmeyi destekleyen ilgili kamu kurumları (KOSGEB gibi), sivil toplum kuruluşları ve yerel yönetimler tarafından oluşturulmuş ağ olarak tanımlamaktadır. Bulu (2009)'a göre parça, makine, hizmet gibi özelleşmiş girdi tedarikçileri, özelleşmiş altyapı sağlayıcıları kümelenmenin üyeleridir. Kümelenmeler, daha sonra dağıtım kanallarını ve müşterileri kapsayacak şekilde ilerler ve daha sonra da tamamlayıcı ürün üreticileri ile beceri, teknoloji ya da genel girdileri sağlayan endüstrilerdeki şirketlere doğru genişler. Son olarak birçok kümelenme, kamu kuruluşları ile üniversiteler, standart belirleyici kurumlar, sivil toplum kuruluşları, mesleki eğitim kurumları ve özelleşmiş eğitim ve öğretim, bilgi, araştırma ve teknik destek sağlayan ticari birlikler gibi diğer kurumları kapsarlar.

### 3.1 Kümelenmenin Ortak Karakteristikleri ve Başlıca Aktörleri

Kümelenme tanımların ortak özelliklerine bakılacak olursa genel olarak; belli bir coğrafik alanda yoğunlaşma, kümeyi oluşturan aktörlerin belirli bir ekonomik aktivitede uzmanlaşması, ekonomik aktörler arası işbirliği ve bu işbirliği içinde rekabet ile ağlar dikkati çekmektedir.

Kümelenme tanımlarında dikkati çeken önemli unsurlardan biri coğrafyadır. Coğrafya hem kümelenmenin konumu ile onun rekabet gücünü belirlemekte, hem de belirli bir alanda gerçekleşen yoğunlaşma ile ona güç sağlamaktadır. Öncelikle bir firmanın bulunduğu yer o firmanın rekabet gücünü etkileyen önemli unsurlardan biridir. Bulu (2009) küreselleşen rekabetin coğrafyayı önemsiz gibi gösterdiğini, ama yapılan çalışmaların tam tersini ortaya koyduğunu belirtmektedir. Kümelenme yaklaşımına göre rekabet gücü önemli derecede firmaların bulundukları yerle ve hatta alt birimlerinin bulundukları yerle ilgidir (Keskin ve Demirgil, 2009).

Diğer taraftan kümelenmeler fonksiyonel olarak ilişkili endüstrilerdir, yani özel bir alanda birbiriyle bağlantılı kurum ve firmaların coğrafik yoğunlaşmasıdır. Porter (1990)'a göre coğrafi yoğunlaşma, kümelenme tanımının önemli bir kısmını oluşturmaktadır (Porter, 1990'dan aktaran Keskin ve Demirgil, 2009). Coğrafik yoğunlaşma bir ili, il içerisindeki belli bir alanı, bir bölgeyi ya da bir ülkeyi temsil edebileceği gibi birden fazla komşu ülkenin bir araya gelerek oluşturduğu bir kümelenme bölgesini de temsil edebilir.

Coğrafik yoğunlaşma firmalar arasında ve diğer kurumlar arasında yakınlıklar oluşturarak çeşitli faydalar yaratabilmektedir. Firmalar bir arada bulunma, uzman işgücüne erişim, zımni ve somut bilgilerin değişimi avantajlarından ötürü birbirlerine yakın mesafede konumlanma eğilimindedirler. Yakınlık, sosyal yakınlığı (kişisel ve sosyal bağlar, değişik işletmelerde yöneticiler ve işçiler arasında etkileşimin çeşidi ve düzeyi), teknik yakınlığı (iki veya daha fazla işletmenin kullandıkları teknolojilerin ne düzeyde benzer ya da farklı olması), pazar yakınlığını (değişik işletmelerin benzer ya da birbirleriyle bağlantılı müşterilere sahip olup olmaması) ve ekonomik yakınlığı (alıcı-tedarikçi ilişkileri) kapsamaktadır (Beyaz Kitap, 2008).

Küme tanımlarının vurguladığı diğer bir unsur ise uzmanlaşmadır. Bir küme ve onun üyeleri yüksek oranda uzmanlaşmaktadır. Kümeler dâhilinde uzmanlaşma, bir endüstri içinde iş bölümüne gidilmesi gerçeğinin bir yansımasıdır. Bu yüzden, firmalar ana faaliyetleri üzerinde yoğunlaşmaktadırlar ve daha az rekabet gücüne sahip oldukları görevlere ilişkin sorumlulukları da diğer firmalara ve küme aktörlerine bırakmaktadırlar. Kümeler tek bir sektör dâhilinde uzmanlaşmış olabilirler; ancak, genellikle hâlihazırdaki sektör sınıflandırmalarının ötesinde bir yayılma gösterip, ilgili ve destekleyici sanayileri de kapsamaktadırlar (Beyaz Kitap, 2008).

Küme içerisinde meydana gelen yüksek derecede uzmanlaşma kümelerin değişik ekonomik aktörleri barındırması gerekliliğini ortaya çıkarmaktadır. Bir kümenin hangi aktörleri barındıracağı onun özelliklerine bağlı kalmakta ve farklılık göstermektedir.

Kümelenmenin temelinde sektöre odaklanmak bulunmakta ve her sektörün değer zinciri, yani ağların ihtiyaçları farklılık göstermektedir. Mesela tekstil sektörü için ihracat veya tanıtım, pazarlama için güçlü oyuncular gerekirken, nanoteknoloji kümesinde güçlü Ar-Ge oyuncuları mutlaka yer almalıdır (Yılmaz, 2008). Ancak, ağ yapılarının farklılık göstermesine rağmen her kümenin içerdiği genel aktörler; nihai ürün ve hizmet üreticilerini, bu ürünlerin ya da hizmetlerin gerçekleştirilmesi için gerekli girdileri sağlayan tedarikçilerini, kümenin ana üretiminin dışındaki diğer hizmetleri sağlayan finans ya da meslek kuruluşlarını, eğitim, bilgi, araştırma ve teknik destek sağlayıcı kamu ya da diğer araştırma enstitülerini, yerel ve merkezi hükümet desteğini ve nihayet tüketiciyi içermektedir.

Bir kümenin çekirdeğini öncelikli olarak nihai ürünü üreten firmalar oluşturmaktadır. Bu firmalar kümelenmenin üretim yapısını belirlemenin yanı sıra, diğer tedarikçiler ve kurumlar arası bağlantıların da başlangıcını oluşturmaktadırlar. Öncelikli olarak belli bölgeleri kuruluş yeri olarak seçen firmalar o bölgede coğrafik yoğunlaşmanın gerçekleşmesini sağlamaktadırlar. Bir kümenin oluşması için gerekli yoğunlaşmanın ya da yığının büyüklüğünü ortaya koyan herhangi bir yöntem bulunmamaktadır. Ancak, firma ölçeği büyüdükçe yığındaki firma sayısı azalabilir. Firma ölçekleri küçüldükçe ise yığındaki firma sayısı artabilir (innoCentric, 2011).

Söz konusu kümelerde sürükleyici sektör veya sektör grupları etrafında ileri-geri bağlantılar yoluyla çok hızlı bir endüstriyel yapılanma ve buna bağlı dinamik bir gelişme alanı ortaya çıkmaktadır (Akgüngör ve Falcıoğlu, 2005). Bir kümenin içerisinde uzmanlaşma, tamamlayıcı ve ilave kaynaklara talebi arttırmakta ve ayrıca küme içindeki aktörler arasındaki karşılıklı bağlılığı arttırarak kümeyi daha da güçlendirmekte (Beyaz Kitap, 2008) ve ayrıca işbirliğinin yanı sıra rekabeti de artırmaktadır. Şiddeti artan rekabet gerek nihai ürün ya da hizmet sunan

firmaların, gerekse tedarikçilerin sürekli olarak kendisini yenilemesine ve rakipleri karşısında kendisini farklılaştırmasına, böylece dinamik yapısının korumasına yardımcı olacaktır. Bunun sonucunda küme hem kendi kendini güçlendirecek iç dinamizmi yakalayacak hem de bulunduğu bölgenin rekabet gücünü artıracaktır.

Bir kümede ilgili ve destekleyici sektörlerin varlığına ek olarak yardımcı mesleki ve teknik kuruluşların olması da önemlidir. (Keskin ve Demirgil, 2009). Çünkü ana endüstriye destek verecek belli alanlarda uzmanlaşmış mühendislik şirketlerinin ya da diğer hizmetleri sunan kurumların varlığı, endüstrinin ihtiyaç duyduğu anda gerekli hizmetlerden kolayca faydalanabilmesini sağlar. Böylece hem işlem maliyetlerinde azalmanın gerçekleşmesini hem de zaman kaybını engelleyebilmektedir. Bu durum ise kümenin rekabet gücüne olumlu katkı sağlamaktadır.

Küme sektör merkezli bir konudur, ancak özünde inovasyonu sektör bazına indirgeyip, işleyişini mükemmelleştirmek yer almaktadır (Yılmaz, 2008). İnovasyon küme içerisindeki rekabetin derecesi arttıkça ve firmalar Ar-Ge harcamalarını arttırdıkça, daha hızlı gelişim gösterebilir. Rekabetin yanı sıra küme içerisinde yer alan araştırma kurumları da teknolojik gelişimin artmasında önemli görev almaktadırlar. Bu kurumların varlığı ve sektörle olan ilişkisi kümenin uluslararası rekabette gücünü artırmasında önemli rol almaktadır.

Rekabetçi ekonomik kümelenmelerin, iyi tanımlanmış coğrafik bir alanda kendiliğinden biçimlenen yığılmalar olduğu düşünülebilir. Fakat sektörel çerçevede rekabet avantajı elde edebilmeleri ve tam anlamıyla yoğunlaşmayı sağlayabilmeleri için bu kümelenmelerin oluşumunun hükümetler tarafından da desteklenmesine ihtiyaç olduğu bir gerçektir (Kuşat, 2010). Özellikle kümelenmenin ortak ve net bir vizyonun tanımlanması ve ortaya konmasında, ekonomik aktörler arasında etkin bağlantıların oluşturulmasında ve gerekli altyapı hizmetlerinin sağlanmasında hükümetin oynayacağı rol önemli olmaktadır. Ancak, merkezi hükümetle yerel yönetimin uyum içerisinde çalışması ve yerel şartlara göre kümelenme politikalarının yönlendirilmesi zorunlu gözükmektedir.

Yukarıda kısaca belirtilen ve üretim sürecini oluşturan aktörlerin (firmalar, tedarikçiler, diğer uzmanlaşmış işletme birlikleri, kamu ve özel Ar-Ge enstitüleri, üniversiteler, merkezi ve yerel yönetim) başarısını etkileyen son bir halka ise talep yapısını oluşturan tüketicidir. Öncelikli olarak tüketicinin kendi bölgesindeki potansiyel kümeleri tanımlaması veya belirlemesi gerekmektedir (Atik, 2008). Diğer taraftan tüketici olarak hem niteliksel hem de niceliksel olarak vereceği destekte önemlidir. Yerel talebin kümelenme rekabet gücünü etkileyen üç önemli özelliği bulunmaktadır. Bunlar; yerel talebin yapısı, yerel talebin büyüklüğü ve büyüme potansiyeli ile yerel tercihlerin ihracat pazarlarına yansıtılış mekanizmalarıdır (Keskin ve Demirgil, 2009).

Arz boyutunda ise dar tanımlanmış bir sektöre göre, çok daha fazla alanda faaliyet gösteren tüm bu oyuncular, bir kümelenmenin dört temel unsurunu oluşturmaktadır. Kümelenmenin başarılı işleyişi söz konusu dört unsurun her birinin kendi içindeki ve birbirleri arasındaki bağlantılarla doğrudan ilgilidir. Dört unsur aşağıda kısaca belirtilmektedir (Çağlar, 2006);

1. *Faktör-girdi durumu;* özelleşmiş girdiler, işgücü niteliği, sermaye, fiziki altyapı, bilgi altyapısı, bilim-teknoloji altyapısı, tedarikçiler, ara mallar, ham maddeler,
2. *Talep durumu;* sofistike ürünler ve çözümler talep eden müşteriler, tüketici haklarını koruyan düzenlemeler, başka yerlerdeki müşterilerin taleplerini önceden talep edebilen bir müşteri yapısı,
3. *Şirket Stratejileri ve Rekabet Şartları;* ilgili alanlarda yerel tedarikçilerin ve rakip şirketlerin etkin varlığı, birbirinden izole endüstriler yerine birbirleriyle güçlü bağlantıları olan şirketler,
4. *İlgili ve destekleyici endüstriler;* önemli ortak faaliyetleri, teknolojileri, dağıtım kanallarını, müşteri ilişkilerini kullanan endüstriler.

Sonuç olarak kümenin tüm bu aktörleri arasındaki koordinasyon büyük bir önem taşımaktadır. Eğer gerekli koordinasyon sağlanamaz ya da arada bağlantı kopuklukları oluşursa, kümenin performansını etkileyen ciddi problemler ortaya çıkabilmektedir. Bu noktada kümelenmenin başarısı ve başarılı bir koordinasyon oluşturması için vurgulanan son ortak nokta ağ kavramını ön plana çıkmaktadır. Altenburg ve Meyer-Stamer (1999)'a göre ağ yapısı sağlanamazsa, firmalar kümelenmenin potansiyel avantajlarından bazılarını almakta başarısız kalabilecektir.

### 3.2 Kümelemenin Getirdiği Önemli Faydalar

Coğrafi sınırlar dâhilinde değişik ağların mevcut olması, kümeleri coğrafi gruplaşmalardan ayırmaktadır. Ağ oluşturma; yerel tedarikçiler, müşteriler, rakipler, üniversiteler ve araştırma merkezleri arasındaki bağlantıları ve ortak çalışma ilişkilerini olanaklı kılmaktadır. Bu alanda güven tesis edildiğinde şirketler ve kurumlar arasındaki bilgi ve haber akışı artmaktadır (Beyaz Kitap, 2008)

Bir küme dâhilinde yer alan firmaların kümelenmeden kaynaklanan bazı avantajları elde etmesi beklenmektedir. Bu avantajlar doğrudan elde edilebileceği gibi dolaylı olarak ta ortaya çıkmaktadır. Sonuçta kümelenmiş firma ve sektörlerin verimliliği, genellikle kümelenmemiş olanlardan daha yüksek olabilmektedir. Bunun sebeplerini birkaç alt başlıkla belirtmek mümkündür (Malakauskaite ve Navickas, 2010'dan aktaran Kuşat, 2010):

- Münferit firmalara göre özel bilgilere ulaşmaları çok daha fazla ve kolaydır.
- Münferit firmalardan daha fazla kâr elde etmeye eğilimlidirler.

- Münferit firmalardan daha kolay ve uygun şartlarla kalifiye işgücüne ulaşabilir ve sahip olabilirler.
- Kamusal mal ve hizmetlere münferit firmalardan daha kolay ve daha az maliyetle ulaşabilirler.
- Münferit firmalara göre yeni pazarlara daha kolay girip daha hızlı adapte olabilirler.
- Kümelenmiş firmaların ürünleri aynı kalitede üretilmiş standart ürünlerdir. Bu durum kümelenme içerisinde tam rekabet şartlarını güçlendirerek fiyat artışlarına engel olur ve haksız rekabeti önleyerek verimliliği ve etkinliği artırır. Ama münferit firmalar bu standartların dışında kalacağından rekabetin dışına itilecek ve verimlilik elde etmeleri böyle bir yapıda zorlaşacaktır.
- Münferit firmalara kıyasla birbirleriyle daha sıkı bir diyalog içerisindedirler. Bu yapı tedarikçilerin asılsız bir şekilde fiyatları artırmalarına engel olur. Sonuçta hammadde kaynaklarında da kümelenmiş firmalar verimlilik elde etmiş ve bunu rekabet güçlerine ilave etmiş olurlar.

Kümelenmenin oluşturduğu öncelikli fayda yerelleşme ekonomilerinden kaynaklanmaktadır. "Bu kaynak, en yalın haliyle birbirine çok yakın kurulmuş firmaların maliyetlerinde meydana gelecek azalmayı ifade etmektedir. (Atik, 2008). Yerelleşme ekonomilerinin oluşturduğu avantajın altında yatan nedenler genel olarak üç kategoride sınıflandırılmaktadır: ölçek ekonomileri, yerel emek havuzu ve teknoloji transferi.

Bu sınıflandırma Marshall (1929)'un çalışmalarına kadar uzanmaktadır. Marshall, İktisadın İlkeleri adlı çalışmasında kümelenmelerden "endüstriyel yoğunlaşmalar" olarak bahsetmektedir. Marshall'ın endüstriyel yoğunlaşmalar ve endüstriyel bölgeler kavramı; küçük ve orta ölçekli firmaların yığılmış kümelenmelerini anlamak için dışsal ekonomilerin önemi üzerine kurulmuş ve ekonomik aktivite sürecinde aktörlerin yakın yerleşmesinden kaynaklanan dışsal ekonomilerin faydaları üzerine odaklanmıştır (Keskin ve Dulupçu, 2010). Firmalar fizikî olarak bir araya geldiğinde, bilgi, insan ve teknolojinin bir firmadan diğerine yayılması veya taşması sonucuyla karşılaşılmaktadır. Bu taşma, bölgede kurulu bulunan tüm firmalar açısından verimliliğin artması ve maliyetlerin düşmesi anlamına gelmektedir (Atik, 2008).

Öncelikle uzmanlaşma yoluyla, kümeler firmaların ölçek ekonomilerine ulaşmasını sağlayabilir. Örneğin, toplu girdi satın alma sözleşmeleri, ortak pazarlama faaliyetleri, uzmanlaşmış girişim sermayesine daha fazla erişim, uzmanlaşmış tedarikçilerin ve diğer uzmanlaşmış destek hizmetlerinin mevcudiyeti, küme kapsamındaki şirketlerin kendi işlerine daha fazla odaklanmalarına ve daha yüksek çıktı seviyelerine ulaşmalarına olanak tanıyan yaygın yan ürünlerdir. Kümeler özellikle KOBİ`lere, kendi başlarına elde edemeyecekleri kritik bir hacme ulaşma olanağı sağlayabilmektedir. Bir küme dâhilindeki KOBİ`ler tamamlayıcı becerileri ve kaynakları bir araya getirebilmekte ve böylece daha büyük veya daha karmaşık işleri yönetebilmektedirler (Beyaz Kitap, 2008).

Fizikî girdiler ve destek altyapısına erişimle birlikte bir diğer fayda, emek ve beşerî kaynaklara erişimin artmasıdır. Emek havuzu (labor pooling) olarak da adlandırılan bu durum, firmalar aynı türden meslek ve işçi için rekabet ettiğinde söz konusu olmaktadır. Bu işçiler değişik istihdam imkânlarıyla bölgeye çekilirken, firmalar da yararlanabilecekleri türden bir büyük ve uygun potansiyel işçi grubuna erişim kolaylığı elde etmiş olmaktadır. Emek havuzunun varlığı, teknik veya meslekî eğitim tesisleriyle bağlantılı hale getirildiği takdirde, genel işçi beceri düzeyini yükseltebilecek ve işçi-aramayla ilişkili maliyetleri aşağı çekebilecektir (Atik, 2008).

Ayrıca kümeler yenilikçiliğin gelişebileceği bir çevre ve platform sunabilmektedir. Şirketler ve kurumlar arasındaki çok taraflı ve yoğun etkileşim, teknolojik ve teknolojik olmayan yenilikçiliğin gerçekleşmesini sağlayan başlıca süreçtir. Bir küme dahilinde, sosyal ve gayrı resmi bağlantılar bilgi dolaşımını ve hem biçimsel, kodlanmış bilginin hem de gayrı resmi bilginin alışverişini olanaklı kılmaktadır. Böylece, kümeler şirket içi ve toplu öğrenme süreçlerinin yanı sıra bilgi akışını ve yayılmasını geliştirebilirler (Beyaz Kitap, 2008).

Yatay eksende dağınık biçimde bulunan yerel bilgi kümelenmeler yoluyla bir araya getirilerek girdi maliyetleri azaltılmakta, birbiri ile rekabet halinde olan ve benzer ürün üreten firmalar arasında asimetrik bilgi erişiminin neden olduğu sorunlar giderilmektedir. Düşey eksende ise tamamlayıcı ya da birbirine bağımlı firmalar arasında gelişen tedarik, hizmet ve müşteri ağları işbirliğine dayalı rekabeti geliştirmektedir. Böylece kümeler bir mıknatıs gibi diğer firmaları da kendi bünyesine çekerek yerel firmaların gereksinim duyduğu daha özel hizmet ve ürün üretilmesini sağlamaktadır (Akpınar ve Taşçı, 2011).

Sonuçta kümelenmenin oluşturduğu bu faydalar gün geçtikçe daha fazla ülkenin ilgisini çekmekte, ülkelerin kümelenmeyi önemli bir politika aracı olarak kabul etmesine neden olmaktadır.

### 3.3 Kümeleme Politikası için Gerekli Aşamalar

Kümelenme temelli bölgesel kalkınma stratejileri yaklaşık son 15-20 yıldan beri başta gelişmiş ülkeler olmak üzere dünya genelinde yaygın bir uygulama alanı bulmuştur. Aslında kümelenme bölgesel rekabet gücünün artırılmasına yönelik modellerden sadece bir tanesidir. Ancak, günümüzde bu modeller içerisinde en popüler politika aracı haline gelmiştir. Bu durumun temelinde kümelenmenin "gerek küçük, gerekse büyük firmalar ve bölgeler düzeyinde *rekabetçi* yapılar oluşturulmasını sağlayan ve çağdaş kavramları içeren bir yaklaşım olması noktasında yerel yönetimleri, kamu otoritelerini, özel kuruluşları, araştırma kurumlarını, sivil toplum kuruluşlarını ve toplumun diğer ilgili kesimlerinde yer alan oyuncuları bir araya getirmesi ve böylece planlamaları ve uygulamaları, merkeziyetçilikten çıkarıp yerel oyuncuların katılımı ile gerçekleştirilmesi" (Eraslan vd., 2008) yer almaktadır. Ayrıca yenilik yapabilme kapasitesini artırmaya çalışması; bu amaç için Ar-

Ge harcamalarını teşvik etmesi ve sürekli inovasyona vurgu yapması da kümelenme politikalarının üstünlüğünü artırmaktadır.

Kümelenme politikası hem makro hem de mikro bakış açısının ortak özelliklerini bir arada taşımaktadır. Bir kümelenme politikası (Beyaz Kitap, 2008);

- Şirketleri doğrudan değil, dolaylı olarak destekleyen faaliyetleri kapsar; örneğin yerel hizmet merkezlerinin kurulmasını, şirket içi ve şirketler arası işbirliğini ve ağ oluşumunun canlandırılması, yerel kalkınma ajansları ile yerel şirket birliklerine ve kurumlarına destek sağlar.
- Aktörler arasında işbirliğinin geliştirilmesini destekler ve gayrı resmi iş uygulamalarının karşılıklı değişimi ile norm ve kuralların oluşumunu (güven, bilgi paylaşımı, vb.) teşvik eder.
- Ortak faaliyetlere odaklanır. Örneğin; yerel marka yaratmaya, ortak tanıtım ve pazarlama stratejileri geliştirmeye, ticaret fuarlarına ortak katılım sağlamaya, ihracat bilgilerini düzenler.
- Eğitim, Bilgi ve İletişim Teknolojisi, araştırma ve geliştirme gibi alanlarda ortak kurumları teşvik eder.
- Girişimleri destekleyici firmalar, kalite merkezleri gibi altyapı ile ilgili ortak yapıları destekler.

Kümelenme politikalarının başarılı bir şekilde uygulanması zaman gerektirmektedir. Başarı için takip edilmesi gereken aşamalı bir süreç ve yerine getirilmesi gereken birçok koşul vardır. Bu koşulların bir kısmı kümelenmenin politikasının ön hazırlığını kapsarken, bir kısmı kümenin geliştirilmesini içermektedir. Son olarak oluşturulan kümelenmenin başarısının devamı için gerekli koşulların güncellenmesi de yine politikanın başarısı için gerekmektedir.

Kümelenme politikaları genellikle üç aşamadan oluşmaktadır (Sayın, 2008'den aktaran Kuşat, 2010):

1. Kümelenme analizi; var olan durumun saptanması,
2. Küme geliştirme; kümenin oluşumu ve rekabet gücünün geliştirilmesi,
3. Olgunlaşma; kümenin oluşumunu tamamladıktan sonra sürdürülebilir konuma gelme süreci.

Kümelenme politikasının ilk aşaması öncelikli olarak doğru sektörün doğru kümede belirlenmesini içermektedir. Kümelenme politikaları için uluslararası rekabet gücü elde edebilecek sektöre odaklanmak önemli bir başarı unsurudur. Bu sebeple doğru sektörü belirlemek önem arz etmektedir. Sektör belirlenirken, o sektörün geleceğe dair yaratacağı faydalar elbette büyük önem taşımaktadır. Günümüz politikaları genellikle kalkınmak için kilit sektöre vurgu yapmak yerine, gelecek için daha stratejik olacak sektörlere odaklanmak gerektiğini belirtmektedir. Bu doğrultuda "yüksek katma değer ve istihdam yaratan, dışsal ekonomiler yaratabilen, birden fazla sektöre taşan etkiler (spillovers) yaratabilecek yatırım projeleri öncelik almaktadır" (Eser ve Köse, 2005).

Diğer taraftan bir kümelenme politikasının başarıya ulaşması için bulunduğu bölgenin şartlarını da doğru tespit etmek gerekmektedir. Öncelikle bir bölgede kümelenme politikasının uygulanabileceği bir coğrafik yığının olması gerekli görülmektedir. Aksi takdirde sıfırdan bir küme oluşturmak hem aşırı maliyetli hem de riskli olabilir. Ayrıca kümelenme gelişim programlarının yerel ekonomiye ve sosyal gerçekliğe uygun olması sağlanmalıdır. Bunun için yerel kümelenmeler tüm boyutları ile dikkatli bir şekilde tanımlanmalı, nitelendirilmeli ve ihtiyaçların tanımı açık olmalıdır (Keskin ve Demirgil, 2009).

Bir kümelenme politikasının ön hazırlıkları tamamlandıktan sonra o kümelenmenin rekabet gücünü geliştirmek ve devamlılığını sağlamak için kümelenme dinamiklerinin geliştirilmesi gerekmektedir. Genellikle kümelenme dinamikleri olarak aktörler arası ağların oluşturulması ve güçlendirilmesi ile Ar-Ge faaliyetlerinin ve inovasyonun teşvik edilmesi, ayrıca girişimciliğin desteklenmesi vurgulanmaktadır.

Bir kümelenme yaklaşımı, sadece bir firma ya da bir endüstriye odaklanmaktan ziyade, o endüstriyi meydana getiren bütün aktörlere ve ilgili diğer endüstrilere, araştırma kurumlarına, diğer mesleki kuruluşlarına da odaklanmakta, bu aktörler arasında etkin işbirliğini oluşturma ve rekabeti geliştirmeyi amaçlamaktadır. Bu sebeple öncelikli olarak kümelenme içerisinde yer alacak aktörleri belirlemek ve kümelenmenin ağ yapısını oluşturmak gerekmektedir. Ağ içerisindeki aktörlerin karşılıklı güven inşa etmesi ve bilgi paylaşımını oluşturması inovasyonun arttırılabilmesi için büyük önem taşımaktadır. Bu sebeple kümelenme içerisinde oluşturulacak etkin ağ yapısı kümelenme için dinamik bir süreç yaratmakta ve özellikle kümelenme yaklaşımının temelini oluşturan inovasyonu desteklemektedir.

Bir kümelenme içindeki gerekli oyuncuları belirlemek için genellikle sektörel kümelenme analizine başvurulmaktadır. Sektörel kümelenme analizi, ilgili sektöre yönelik değer zincirinde yer alan tüm oyuncuları, oyuncuların rolleri ve ilişki ağını yorumlamaya yönelik olarak değerlendirme yapabilmek amacı ile geliştirilmiş bir yöntemdir. Bu çerçevede özellikle kümelenme geliştirilmesine yönelik olarak çalışmaya altlık oluşturacak yaklaşım, sektörün temel değer zinciri içerisinde yer alan unsurları ortaya çıkarmayı hedeflemektedir (Muğla Valiliği, 2010).

Benzer şekilde küme ağ haritası da bu aşamada kullanılan etkin araçlardan biridir. Bir küme ağ haritası ile firmalar ve destekleyici kuruluşlar arasındaki işbirliği nitelik ve nicelik açısından ölçümlenir. Küme ağ haritası hazırlanması iki konuda büyük fayda sağlar (innoCentric, 2011):

- Oyuncular arasındaki ilişkiler vasıtası ile değer zincirini oluşturulur ve değer zincirindeki zayıf/eksik oyuncular tespit edilir.
- Oyuncular arasındaki işbirliği nitelik ve nicelik açısından ölçümlenir.

Bir kümelenmede yer alacak oyuncuları belirlerken bazı unsurlara dikkat etmek gerekmektedir. Öncelikli olarak kümelenme belli bir coğrafik alanı, bölgeyi, kapsadığı için o bölgenin yerel karar alma kapasitesini de içermesi faydalı olmaktadır. Bu noktada özellikle yerel kalkınma ajanslarının da küme aktörlerinin belirlenmesi ve aralarındaki ilişkilerin oluşturulmasında yer alması gerekmektedir. Çağlar (2006)'nın da belirttiği gibi "kümelenme ve değer zinciri analizleri yerel kalkınma ajanslarının koordinatörlüğünde, ancak özel sektör ağırlıklı olarak yürütülmelidir". Benzer şekilde bir kümelenmenin temelini genel olarak "Küçük ve Orta Ölçekli İşletmeler (KOBİ)" oluşturmaktadır. Bu sebeple kümelenme politikalarını oluştururken, KOBİ'lere yönelik özel programların oluşturulması ve desteklenmesi gerekmektedir. Elbette "birçok kümeye, bir veya birkaç büyük firma egemendir. Bazı durumlarda büyük şirketlerin var olması, kümelenme sürecine güvenilirlik ve görünürlük getirerek, bir küme için önemli bir başarı faktörü olabilir. Bununla birlikte, herhangi bir küme büyük bir şirket tarafından yönlendirilse bile, KOBİ'ler kesinlikle her kümenin yapı unsurudur. Kümeler büyük şirketleri barındırabilirler ve onlar tarafından yönlendirilebilirler, fakat kümenin sürdürülebilirliği ve büyümesi için çok sayıda KOBİ'nin mevcut olması şarttır" (Beyaz Kitap, 2008). Bu sebeple KOBİ'lerin teşvik edilmesi ve yerel girişimciliğin desteklenmesi kümelenmenin kendi iç dinamizmini yaratmasında önemli olmaktadır.

Bir kümelenme politikasının oluşumunu başarılı bir şekilde tamamladıktan sonra o kümelenmenin başarısını sürdürülebilir kılmak amaçlanmaktadır. Bunun gerek yerel otoritenin, gerekse merkezi hükümetlerin göstereceği çaba önemlidir. Örneğin; bir kümelenme politikasının, genellikle bölgesel kalkınmanın sağlanması için bölgesel politika araçlarından birisi olduğuna ve sadece bölgesel politikalardan doğrudan etkilendiğine inanılmaktadır. Çünkü bölgesel sanayi yoğunlaşmalarından "değer yaratılması" ve bu değerlerin yerel dinamiklere ve iç potansiyele bağlı gelişim göstermesi beklenmektedir. Ancak, "kümelerin örtüşen kavramsal tanımları nedeniyle, çeşitli politika alanları olası "kümelenme" politikalarını etkilemektedir. Kümeler, başlıca beş politika alanının kesişim noktalarında bulunmaktadır: (i) bölgesel kalkınma politikaları, (ii) sanayi politikaları, (iii) bilim ve teknoloji politikaları, (iv) KOBİ gelişim politikaları, (v) dış ticaret politikaları. Ayrıca, tarım politikaları, çalışma politikaları, insan kaynakları ve eğitim politikaları (mesleki eğitim, üniversite düzeyleri, teknik ve iş) ile turizm politikaları da kümelenme ile belli seviyelerde ilişkili politika alanlarıdır" (Beyaz Kitap, 2008).

Sonuçta günümüzün en popüler kavramı olan kümelenme yeni bir olgu değildir. Firmalar her zaman bir arada yer almaya, ortak bir alanda ortak bir sinerji yaratmaya meyilli olmuşlardır. Ancak, bir kümelenmenin oluşması, özellikle ortak kültürün oluşturulması, aktörler arası güvenin sağlanabilmesi uzun yıllar alabilir. Bu sebeple başarılı bir kümelenmenin oluşması için kümelenmeye toplumun her kesiminden destek gelmesi ve bu desteğin devamlılık göstermesi büyük bir ehemmiyet taşımaktadır. Çünkü daha güçlü bir küme, daha fazla rekabet gücüne sahip endüstri ve bölgeler ve bu bölgeler de uluslararası pazarlarda daha güçlü bir ülkenin oluşması için ön koşuldur.

## 4 Sonuç ve Türkiye İçin Çıkarımlar

1980 sonrası dış piyasalara açılan Türkiye günümüzde büyüyen iç pazarı ve dinamik nüfusuyla hızlı bir ekonomik büyüme yaşamakta ve büyüme hızıyla tüm dünyanın dikkatini çekmektedir. Hatta BRIC (Brezilya, Rusya, Hindistan ve Çin) ülkelerinin ardından 21. yüzyılın en büyük ekonomileri arasında yer alma potansiyeli taşıdığı belirtilen "Gelecek 11 (Next 11, N-11)" ülkeleri arasında gösterilmektedir. Ancak, olumlu gelişmelere rağmen, Türk İmalat Sanayi'nin dünya ölçeğinde rekabet gücüne henüz sahip olmadığı; cari ihracatın yoğun ithal girdiyi içerdiği ve buna bağlı bir büyümenin ise dışa bağımlı süreci tetiklediği görülmektedir. Böyle bir yapılanmanın ise cari açık sorununu derinleştirmesi beklenirken, bu durumun ne kadar daha sürdürülebileceği şüphelidir. Söz konusu cari açık, uzun dönemde sürdürülmesi imkânsız bir problem olarak görülmekte ve en hızlı şekilde çözümler geliştirilmesi önerilmektedir. Özellikle çözüm için ülkenin kendi dinamiklerini aktifleştirmesi ve kendi girdi teminini sağlaması gerekliliği vurgulanmaktadır.

Diğer taraftan günümüzde Türk İmalat Sanayisi'nden bir yandan Avrupa Birliği gibi dünyanın en gelişmiş ekonomik sistemlerinin gerisinde kalmaması, diğer yandan Türkiye'nin potansiyel rakipleri olarak ele alınan BRIC ya da N-11 ülkeleri ile mücadele etmesi beklenmektedir. Ayrıca imalat sanayinin faktör kullanım yoğunlukları göz önüne alındığında Türkiye'nin yüksek farklılaştırılmış ve bilim bazlı sektörlerde rekabet gücünün düşük olduğu, ayrıca ölçek yoğun sektörlerde de yüksek bir rekabet gücüne sahip olmadığı görülmektedir. Türkiye'nin rekabet gücü yüksek sektörlerin temel olarak emek-yoğun sektörlerden meydana geldiği, hammadde yoğun sektörler kategorisinde ise az sayıdaki sektörde rekabet gücünün yüksek olduğu dikkat çekmektedir. Türkiye'nin hammadde-yoğun sektörlerden gıda ürünleri ve içecek, tütün ürünleri ve metalik olmayan diğer ürünlerde rekabet gücü yüksek saptanırken, emek-yoğun sektörlerden de giyim eşyası ve tekstil ürünlerinde rekabet gücü yüksek tespit edilmiştir (Eşiyok, 2008). Bu gerçeklilikler Türk İmalat Sanayi'nin mevcut rakipleri karşısında istenilen başarıyı yakalama şansını zor olduğunu göstermektedir. Özellikle Türkiye'nin rekabet gücüne sahip olduğu geleneksel endüstriler maalesef düşük bir teknoloji içeriğine sahip olmalarından ve kolayca taklit edilebilirliklerinden dolayı şiddetli rekabete maruz kalmaktadır. Bu durum Türkiye'yi düşük maliyetlerle üretim yapan ülkelerin artan rekabet baskısı ile karşı karşıya bırakmakta, hatta dış ticaret hadlerinde aleyhte gelişmelere neden olabilmektedir.

Türkiye'nin gerek imalat sanayinin rekabet gücünü arttırmak, gerekse cari açık sorununa kalıcı çözümler oluşturmak için gerekli politika ve stratejileri geliştirmesi ve uygulamaya koyması ehemmiyetlidir. Bu noktada tüm dünyada olduğu gibi Türkiye'de de kümelenme yaklaşımı önemli bir politika aracı olarak görülmeye başlanmıştır. Kümelenme politikası ile oluşacak kolektif birlikteliğin imalat sanayinin rekabetini arttırması ve aktörler arasında oluşturacağı işbirliği ile yerli üretime destek sağlaması beklenebilir.

Türkiye`de kümelenme araştırmalarının geçmişi Porter'in öncülüğünde 1999 yılında kurulan Orta Doğu Rekabet Stratejileri Merkezi ve CAT Platformu'na (ilerleyen yıllarda CAT Platformu, Uluslararası Rekabet Araştırmaları Kurumu (URAK) ismini alarak kurumsal bir yapıya dönüşmüştür) kadar uzanmaktadır. Söz konusu kurumlar ile Türkiye'de kümeleme çalışmaları için önemli adımlar atılmaya başlanmış ve bazı projeler (Adıyaman Kümelenme Projesi, hazır giyim; Şanlıurfa Kümelenme Projesi, hazır giyim; Moda ve Tekstil Kümelenme Projesi; Bartın Kümelenme Projesi, gemi sanayi; Çukurova Kümelenme Projesi) geliştirilmiştir (Beyaz Kitap, 2008).

Olumlu gelişmelere rağmen Türkiye'de kümelenme politikasının yeterli dikkati çektiğini söyleyebilmek mümkün değildir. Öncelikli olarak Türkiye'nin fırsatlarını, güçlü yönlerini ve zayıflıklarını belirlemesi, böylece mevcut potansiyelini harekete geçirmesi gerekmektedir. Türkiye'de mevcut durumun belirlenmesi için yapılmış bazı SWOT analizleri mevcuttur, ancak daha geniş kapsamlı ve süreklilik gösteren etkin analizlerin oluşturulması ön koşul olarak algılanmaktadır.

Söz konusu analizlerden biri, Avrupa Komisyonu ile alakalı olarak Beyaz Kitap (2008)'de yapılmıştır. Çalışmada Türkiye'nin güçlü yönleri olarak KOBİ'lerin varlığı, dinamik bir nüfusun ve geniş bir iç pazarın olması ön plana çıkarken, zayıf yönleri ise temelini kurumlar arası işbirliği yetersizliğinden (özel sektör, kamu sektörü ve üniversite arasındaki işbirliği) almaktadır.

Sonuç olarak hızlı bir değişim süreci geçiren ve dünya piyasalarında yer alma mücadelesi veren Türkiye'nin en kısa sürede rekabetçi bir yapıya ulaşması, uzun dönemde daha da şiddetlenecek uluslararası rekabetçi piyasalarda ayakta kalabilmesi gerekmektedir. Türkiye'nin bu mücadeleyi sağlayacak gerekli potansiyeli mevcuttur. Ancak, bu potansiyeli rekabet gücünü dikkate alarak ve kümeleme mantığına uygun olarak doğru yönlendirmelerle harekete geçirmesi gerekmektedir.

# Türkiye Gökçeada'da Yenilenebilir Enerji Kaynaklarının Potansiyeli

# Potential of Renewable Energy Sources in Gökçeada Turkey

Asst. Prof. Dr. Ümran Şengül (Çanakkale Onsekiz Mart University, Turkey)
Assoc. Prof. Dr. Sibel Tan (Çanakkale Onsekiz Mart University, Turkey)
Asst. Prof. Dr. Şermin Atak (Çanakkale Onsekiz Mart University, Turkey)
Asst. Prof. Dr. Ahmet Bilal Şengül (Çanakkale Onsekiz Mart University, Turkey)

## Abstract

Energy is the ability to do work and life is the source of life. In parallel to the increase of population increase in the production of goods and services are increasingly in demand for energy. Evaluation of all sources of energy that can be produced now it has become very necessary. Widely used in meeting the energy demand of fossil fuels (oil, gas, coal) are limited energy resources and emissions are more harmful emissions. Spread of harmful emissions lessened even the most important problems is that they will end done day. From this perspective, the assessment of renewable energy sources in the world is an important issue. Gökçeada, Turkey is the largest island and the hills and plains lined one after the other, with a rugged structure consists of volcanic mass. Gökçeada consists of 77% mountainous, 12 % hilly and 11% plains and in terms of wind energy, which is the region with the greatest potential in Turkey. However, in terms of Gökçeada development index the least developed regions in the sixth regions, which is located in class. From this perspective, in this study, which will provide an important contribution to the region development of renewable energy sources wind, solar, tidal and renewable, biofuels and Hydraulics energy potential and capacity were investigated. Based on the data obtained, recommendations are made to invest in the renewable energy sector.

## 1 Giriş

En basit tanımıyla enerji, iş yapabilme yeteneğidir ve hayatın yaşam kaynağıdır. Doğada enerji doğrudan; kömür, petrol, doğalgaz, uranyum, biyoyakıt, jeotermal, su, güneş, rüzgâr olarak adlandırılan "birincil enerji" kaynaklarından elde edilir. Bu enerji kaynaklarından, petrol, doğalgaz ve kömür fosil kaynaklıdır. Diğerleri ise yenilenebilir enerji kaynaklarıdır. Fosil ve yenilenebilir enerji kaynakları dönüştürülerek ikincil enerji kaynağı olan "elektrik" üretilir (Şeker,2010). Türkiye 2013 yılı (kesinleşmemiş) ürettiği 239,3 milyar kWh elektriğin %44'ünü doğal gazdan, %25,4'ünü kömürden, %24,7'sini hidroelektrikten, %3,1'ini rüzgardan, %0,5'ini jeotermalden ve %2,1'ini diğer enerji kaynaklarından elde etmiştir (Elektrik mühendisleri odası,2014).

Fosil yakıtların çevreye verdikleri zararların çok olması ve özellikle de bir gün tükenecek olmaları, insanları çevre dostu olan yenilenebilir enerji kaynaklarına yöneltmiştir. Yenilenebilir enerji kaynaklarının belirli bir ömrü yoktur, yani kaynağı herhangi bir maddeye bağlı olmayan enerji kaynaklarıdır ve büyük bir bölümü güneş enerjisinin forum değiştirmesi ile meydana gelmiştir (Durdyev,2010). Dünya'nın hem kendi etrafında hem de güneş etrafında dönmesi nedeniyle farklı yeryüzü olayları oluşur. Bu yeryüzü olaylarından biri rüzgardır. Rüzgardaki enerji rüzgar türbinleri yardımıyla değerlendirilebilir. Güneşin ısıtmasıyla okyanus ve akarsulardan su kütleleri buharlaşır. Bu su buharı, yağmur ya da kara dönüşüp tekrar ırmak ya da dere içlerine ulaştığı zaman, oluşan hidro enerji hidroelektrik santraller tarafından yakalanabilir. Tüm yenilenebilir enerji kaynakları, güneşten kaynaklanmaz. Okyanuslarda oluşan gelgit enerjisi, güneş ve ayın birbirlerini kütlesel olarak çekmelerinden kaynaklanır (Yılmaz, 2008).

Genel olarak, yenilenebilir enerji kaynağı; enerji kaynağından alınan enerjiye eşit oranda veya kaynağın tükenme hızından daha çabuk bir şekilde kendini yenileyebilmesi ile tanımlanır. Örneğin, güneşten elde edilen enerji ile çalışan bir teknoloji bu enerjiyi tüketir, fakat tüketilen enerji toplam güneş enerjisinin yanında çok küçük kalır. Bu sebeple, yenilenebilir enerjinin; tesisler, hayvanlar ve insanlar tarafından kalıcı olarak tüketilmesi mümkün değildir. Yenilenebilir enerji çeşitlerine bakıldığında; güneş enerjisi, rüzgar enerjisi, deniz dalga enerjisi, biyokütle enerjisi, jeotermal enerji, hidrolik (su) enerjisi ve hidrojen enerjisi sayılabilir (Şahin,2010).

Gökçeada, Marmara Bölgesinde Çanakkale iline bağlı Türkiye'nin en büyük adasıdır. Kıyılarının uzunluğu 92 km, yüzölçümü 279 km²'dir, nüfusu, 2013 yılına sonuçlarına göre 8288'dir, ancak yaz aylarında gelen ziyaretçilerle birlikte bu nüfusun 20.000'e ulaştığı tahmin edilmektedir. Çevresi 85,2 km olup, boy ve en olarak 29,6 x 9,2 km boyutlarındadır. Gelibolu Yarımadası'na 20 km, Limni'ye 19 km, Semadirek Adası'na 22 km uzaklıktadır. Ulaşım için en yakın yer olan, Gelibolu-Kabatepe Limanı'na 26 km uzaklıktadır. Coğrafi yapısı çevre adalardan oldukça farklıdır. Tek bir dağdan oluşan Semadirek ile tek bir ovadan oluşan Limni'ye karşın, tepelerin ve ovaların birbiri ardına sıralandığı bir yapısı vardır. Gökçeada genelde engebeli bir yapıya sahip ve volkanik kütlelerden oluşmuştur. Gökçeada'nın %77'si dağlık, %12'si engebeli ve %11'i de ovalık alandan oluşmuştur (gokceadarehberi,2014).

**Şekil 1.** *Gökçeada haritası* **Kaynak:** *(Gökçeada Rehberi,2014)*

Gökçeada'nın elektrik ihtiyacı, TEİAŞ'ın Kum Limanı trafo merkezi'nin Gökçeada fiderinden beslenen, TEDAŞ'ın 31,5 kV'luk orta gerilim hattıyla karşılanmaktadır. Gökçeada'nın kış ve yaz ayları için talep edilen elektrik yük değerleri aşağıda verilmiştir (Şekil 2,3) (Yılmaz,2008).

**Şekil 2.** *Kış ayları için talep edilen elektrik yük değerleri* **Kaynak:***(Yılmaz,2008)*

**Şekil 3.** *Yaz ayları için talep edilen elektrik yük değerleri* **Kaynak:***(Yılmaz,2008)*

Ada'nın en yüksek noktası Doruktepe'nin yüksekliği 673 metredir. Volkanik bir yapı hakim olmasından dolayı dev kazanları, sualtı mağaraları, lav kayaları ve ponza taşları Ada'da çokça bulunmaktadır. Ada'da 5 adet gölet bulunmakta olup su kaynakları açısından Ege'nin en zengin adasıdır. İklim, Akdeniz ve karasal iklim arasında sıkışmıştır. Kar ve don ender olarak görülür. Bahar ayları yağışın en çok olduğu aylardır. Ada rüzgarlara açık bir konumdadır ve genellikle Poyraz (kuzeydoğudan esen) ile Lodos (güneybatıdan esen) rüzgarları etkindir (gokceadarehberi,2014)

Gökçeada'da yenilenebilir enerji kaynakları açısından yapılan çalışmalar ise şöyledir; Güzel (2012), Gökçeada ve Bozcaada'da açık deniz rüzgar enerjisinin tahminini yaparak, açık deniz rüzgar türbinlerini kurmak için fizibilite çalışması yapmıştır. Çalışma sonucunda Bozcaada'nın Gökçeada'ya göre açık deniz rüzgar enerji türbinlerini yerleştirmede daha uygun bir bölge olduğunu tespit etmiştir. Yılmaz vd. (2010), Gökçeada'nın elektrik enerji talebini güneş ve rüzgar enerji sistemlerine maliyet analizi yaparak karşılaştırmışlardır. Çalışma

sonucunda, Gökçeada için rüzgar enerji sistemlerinin güneş enerji sistemlerine göre daha avantajlı olduğunu bulmuşlardır. Tavman (2011), Gökçeada'nın elektrik enerjisi ihtiyacının rüzgar enerjisi ile teminini incelemiştir. Bunun için bir firmanın rüzgar türbinlerini birbiri ile karşılaştırmıştır. Böylece, Gökçeada için, nominal gücü 600kW olan De Wing 48 tipi rüzgar türbininin en uygun türbin olabileceğini bulmuştur. Durdyev (2010), Gökçeada'da seçilmiş bir bölge için uygun rüzgar türbini seçimini yapmıştır. Şişbot vd.(2010), Gökçeada'da bir çiftlikte rüzgar türbininin optimal yerleşimi için çok amaçlı genetik algoritma kullanmışlardır. Çubukçu ve Çolak (2013), Gökçeada'da yerleşik ve şebekeden bağımsız 2kW anma gücündeki bir fotovoltaik güç sisteminin benzetim ve uygulamalı başarım analizini yapmışlardır.

Çalışmanın bundan sonraki bölümünde, yenilenebilir enerji türleri ve Gökçeada'da uygulanabilirliği bulunan yenilenebilir enerji türleri anlatılmıştır.

## 2 Yenilenebilir Enerji Çeşitleri ve Gökçeada'da Yenilenebilir Enerji Potansiyeli

### 2.1 Su Enerjisi

Sudan elektrik enerjisi üretmek için suyun akma hareketinden faydalanılır. Su, çevreye dost, temiz, yenilenebilir, yakıt gideri olmayan, uzun ömürlü ve dışa bağımlı olmayan bir yerli kaynaktır. Sudan elektrik üretimi için hidroelektrik santraller kurulur. Hidroelektrik santrallerini baraj tipi (depolamalı) ve nehir tipi (depolamasız) santraller olmak üzere ikiye ayırmak mümkündür. Depolamalı santrallerde elektrik üretimi, akarsuyun akım özellikleriyle olduğu kadar barajın su tutma kapasitesi ile de yakından ilişkilidir. Buna karşın depolamasız (Regülator) santrallerdeki üretim, büyük ölçüde akarsuyun doğal akım özelliklerine bağlıdır. Bu konudaki diğer bir sınıflandırma da santrallerin kurulu güç durumlarına göre yapılmaktadır. Bu sınıflandırmada santraller; mikro (1 KW-200 KW), mini (200 KW-1 MW), küçük (1 MW -10 MW), orta (10MW-50 MW) ve büyük (50 MW ve üzeri) olmak üzere beş grupta toplanır. Avrupa Birliği ve UNESCO tarafından çevre dostu oluşu nedeniyle desteklenen küçük ve orta ölçekli işletmeler olan nehir tipi hidroelektrik santraller özellikle kırsal kesimde istihdam olanakları yaratır ve o kırsal bölgenin kalkınması üzerine olumlu etkileri vardır (Şahin,2010). Gökçeada Türkiye'nin en büyük adası olmasının yanında tatlı su kaynakları bakımından da zengindir. İçerisinde 3 adet gölet, 1 adet tuz gölü ve 3 adet de yaz-kış aktif durumda olan akarsu bulunmaktadır. Bu durum ada içerisindeki ve çevresindeki biyolojik çeşitliliği olumlu yönde etkilemektedir (COMU,2014). Gökçeada barajı, Büyükdere çayı üzerinde, sulama, içme suyu temini amacı ile 1977-1983 yılları arasında inşa edilmiş bir barajdır. Baraj 700 hektarlık bir alana sulama hizmeti vermekte, yılda 1 hm³ içme-kullanma suyu sağlamaktadır (DSİ,2014).

Günümüz itibariyle Gökçeada'da elektrik üretim amaçlı HES ve Regülator bulunmamaktadır. Ancak Gökçeada'da 3 adet akarsu bulunmaktadır. Bu akarsular üzerinde regülatör diğer adıyla nehir tipi hidroelektrik santraller kurulması düşünülebilir. Bu tip santraller adanın istihdamının artmasında ve kalkınmasında önemli bir yer tutabilir.

### 2.2 Jeotermal Enerji

Jeotermal enerji, yer kabuğunun derinliklerindeki ısının yeraltı sularını ısıtması sonucunda ortaya çıkan suyun, kullanılması ile elde edilen enerji türüdür. Termik santrallerin aksine yanma sonucu buhar elde edilmeyip, doğal olarak var olduğundan elektrik enerjisi üretimi için temiz bir enerji kaynağıdır. Türkiye, Dünya'da jeotermal enerjisini elektrik üretimde doğrudan kullanan 7. ülkedir (Kahraman ve Kaya,2010). Jeotermal enerji, bu jeotermal kaynaklardan ve bunların oluşturduğu enerjiden doğrudan veya dolaylı yollardan faydalanmayı kapsamaktadır. Jeotermal enerji yeni, yenilenebilir, sürdürülebilir, tükenmez, ucuz, güvenilir, çevre dostu, yerli ve yeşil bir enerji türüdür (Şahin,2010). Literatür taraması ve günümüzde jeotermal kaynak çalışmalarına bakıldığında Gökçeada'da jeotermal kaynak olduğuna dair bir bilgiye ulaşılamamıştır.

### 2.3 Rüzgar Enerjisi

Rüzgar; dünyanın eğriliği, dönme eksenin eğimi, dünya yüzeyinin homojen olmayan yapısı nedeni ile yeryüzünün ısınması ve soğuması sonucu ortaya çıkan basınç farklılıkları ile oluşan hava hareketidir (Durdyev, 2010). Rüzgâr enerjisi, hava kütlelerinin farklı ısı alanları ile karşılaşmasından oluşur. Rüzgâr türbinleri bu rüzgâr enerjisini elektrik enerjisine çevirir. Rüzgâr enerjisi; çevreye zararlı gaz emisyonu yaymadığından, dışa bağımlılığı azalttığından, yerli ve her zaman kullanılabilen enerji türü olduğundan tercih edilmektedir. Ancak rüzgâr türbinlerinin büyük alan kaplaması, gürültü kirliliği oluşturması, yatırım ve bağlantı maliyetlerinin yüksek olması v.b. etkenler ise dezavantajlarıdır.

Enerji üretiminde rüzgarın kullanılması fosil kaynaklardan üretilen enerjinin fiyatına göre değişiklik göstermiştir. Örneğin 2. Dünya savaşından sonra petrol fiyatlarının düşmesiyle birlikte rüzgar türbinlerine olan ilgi azalmıştır. Ancak 1970'li yıllardaki petrol krizi sonucu rüzgar türbinine olan ilgi tekrar artmıştır. Rüzgar enerjisi sektörü dünya genelinde ulaştığı 440.000 çalışan sayısıyla birlikte önemli bir istihdam oluşturan sektör haline gelmiştir. (Durdyev, 2010)

Yenilenebilir enerjili sistemler; rüzgar çiftlikleri gibi MW mertebesinde 10'larca türbinden oluşabileceği gibi, kW mertebesinde ev kullanıcısına yönelik küçük rüzgar türbinlerinden de oluşabilir.

Gökçeada, Türkiye'nin rüzgar enerjisi bakımından en fazla potansiyele sahip olduğu tespit edilen bölgelerindendir. Adanın Aydıncık bölgesi rüzgar türbinleri için en uygun alan olup rüzgar türbinlerinin oluşturduğu dezavantajların görülmeyeceği bir alandır. Aydıncık mevkii, iskan alanından uzakta, herhangi bir faaliyet için kullanılmayan yarımada şeklindeki bir alandır. Rüzgarlara açık ve düzgün bir topografik yapıya sahip olan bir bölgedir. Yarımada biçimindeki Aydıncık'ın yüz ölçümü yaklaşık 8.000.000 m$^2$ büyüklüğünde olup mülkiyeti hazineye aittir. Aydıncık Rüzgar Ölçüm İstasyonu'nun deniz seviyesinden yüksekliği 25 metredir. Rüzgar hızını ölçen anemometreler 30 m boyundaki borulu kule üzerinde 10 m ve 30 m yüksekliktedir Tablo 1'de Gökçeada-Aydıncık bölgesindeki ortalama rüzgar hızları verilmiştir (Yılmaz,2008).

| Aralık | 10,748 |

***Tablo 1.*** *Gökçeada-Aydıncık ortalama rüzgar hızları (1994-2002 yılları arası, m/s)* ***Kaynak:****(Yılmaz,2008)*

Rüzgâr enerjisi dönüştürme sistemleri 50 W ile 2-3 MW (megawatt) arasında mekanik veya elektrik gücü sağlayabilmektedir. Rüzgârın hızı yükseklikle orantılı olarak, gücü ise rüzgâr hızının küpü ile orantılı olarak artmaktadır. Topoğrafik koşullara göre yerden 50 m yükseklikteki özgül güç, hız 3.5 m/s den küçük iken 50W/m$^2$ den az olabilmekte, hız 11.5m/s den büyük iken 1800W/m2 den çok olabilmektedir.

Rüzgar enerjisinin hızla gelişmekte ve artmakta olan bir kolu da Açık Deniz (Offshore) rüzgar enerjisidir. İlk açık deniz rüzgar türbinleri1991'de denenmiştir. Su kütlelerinin üzerinde rüzgardan elde edilecek enerjinin çok daha fazla olması ve bu potansiyelden yararlanılabilecek alanların enerji ihtiyacını katlarınca karşılayacak kadar geniş olmasından dolayı açık deniz rüzgar türbinleri daha çok tercih edilmektedir. Gökçeada'nın türbin yerleşimi için uygun alanları Bozcaada'ya göre çok kısıtlıdır. Temel sebepler ani derinlik artışı sonucu kurulum yapılabilecek derinlik alanlarının azlığı ve geniş askeri eğitim sahası ve limanlardır (Güzel, 2012). Ancak yine de açık deniz rüzgar türbinleri için yeni araştırmalar yapılarak elektrik enerjisi üretim potansiyeli incelenebilir.

### 2.4 Güneş Enerjisi

Güneş hem dünya için vazgeçilmez bir yaşam kaynağı hem de yenilenebilir enerji kaynaklarının temelini oluşturmaktadır. Güneş enerjisi, güneşten gelen ve yer yüzeyinde 0-1100 W/m$^2$ değerleri arasında değişen enerji içeren yenilenebilir bir enerji kaynağıdır (Çakır,2010). Güneş enerjisinden iki yöntemle elektrik üretilebilir. İlkinde; yarı iletken silikon atomlarının (Fotovoltaik piller-Güneş pilleri) son yörüngelerindeki kararsız atomlar, güneş enerjisi ile koparılarak elektrik üretilmesidir. İkincisinde ise, güneş enerjisinden doğrudan su ısıtılarak, kaynatılıp, buhar türbini ve jeneratörleri yardımıyla elektrik üretilir (Şeker,2010). Güneş pili modülleri uygulamaya bağlı olarak; akümülatörler, eviriciler, akü şarj denetim aygıtları ve çeşitli elektronik destek devreleri ile birlikte kullanılarak bir güneş pili sistemini (fotovoltaik sistem) oluştururlar. Bir fotovoltaik sistem, doğru akım (DC) ya da alternatif akım (AC) ile çalışan yükü beslemek amacıyla, güneş enerjisini elektrik enerjisine çevirir. Üretilen elektrik DC'dir. Buradan doğru akım ile çalışan bir yük beslenebilir. Güneş ışınımı sürekli ve kararlı olmadığı için, yükün beslenmesinde yetersiz kalındığı durumlar olabilir. Ayrıca üretilen enerjinin sistemin ihtiyacından fazla olduğu zamanlar da oluşabilmektedir. Bu ihtiyaç fazlası enerji akülere depolanarak, güneş ışınımının yetersiz olduğu zaman dilimleri için enerji sağlanabilir. Fotovoltaik sistemler, yerleşim merkezinden uzak noktalarda bulunan elektrik yüklerini beslemek üzere, yerel elektrik şebekesinden bağımsız olarak da inşa edilebilirler. Bununla birlikte yerel elektrik şebekesine yakın noktalarda bulunan fotovoltaik sistemler, şebekeye enerji aktarabilecek şekilde düzenlenebilirler (Yılmaz,2008).

Dünya ile güneşe yaklaşık olarak 150 milyon km uzaklıktadır. Dünya'nın hem kendi etrafında hem de güneş etrafında dönmesi nedeniyle güneşten gelen enerji hem günlük hem de yıllık olarak değişmektedir (Çelik, 2012). Gökçeada'nın aylık ortalama güneş ışınımı değerleri, Tablo 2'de gösterilmiştir (Yılmaz,2008).

Güneş enerjisi ile elektrik üretimi maliyetinin yüksek olması ve güneş panellerinin geniş yer kaplamasından dolayı hala gelişme aşamasındadır. Türkiye coğrafi konumu nedeniyle güneş enerji potansiyeli yüksek bir ülkedir. Türkiye'nin güneş enerji potansiyeli 380 milyar kWh/yıl'dır. Gökçeada'da güneş enerjisinden ev tipi su ısıtma amaçlı güneş panelleri kullanılmaktadır. Ayrıca sokak lambalarını aydınlatmak için sistemden bağımsız bir güneş enerji paneli kurulmuştur(Çubukçu vd.,2013).

|  | Günlük Işınım (kWh/m²/d) |
|---|---|
| Ocak | 1,960 |
| Şubat | 2,580 |

| Kasım | 2,090 |
| Aralık | 1,670 |

*Tablo 2. Ortalama Güneş Işınımı Verileri **Kaynak:**(Yılmaz,2008)*

### 2.5 Biyoyakıt Enerjisi

Biyoyakıt, canlı organizmalardan elde edilmiş her türlü yakıttır. Yani karada ve suda yetişen bitkiler, bitkisel ve hayvansal atıklar, besin endüstrisi ve orman ürünleri ile kentsel atıkları içeren tüm organik maddeler biyokütle olarak adlandırılır (Çelik, 2012). Biyoyakıtlar; biyodizel, biyoetanol, biyogaz ve biyokütle olarak sınıflandırılmaktadırlar. Bitkiler büyürken, fotosentez sırasında atmosferden aldıkları karbondioksitin ($CO_2$) karbonunu bünyelerinde biriktirip biokütleyi oluştururken oksijeni dışarıya vermektedirler. Bu bitkiler yakıldığında ise $CO_2$ yeniden atmosfere verilmektedir. Bu nedenle biyokütle yakılmasına "sürdürülebilir biyokütle enerjisi kullanımı" adı verilmektedir. Biyokütle enerji kapsamında; odun (enerji ormanları, ağaç artıkları), yağlı tohum bitkileri (ayçiçek, kolza, soya v.b), karbonhidrat bitkileri (patates, buğday, mısır, pancar, v.b) elyaf bitkileri (keten, kenaf, kenevir, sorgum, vb.), bitkisel artıklar (dal, sap, saman, kök, kabuk v.b), hayvansal atıklar ile şehirsel ve endüstriyel atıklar değerlendirilmektedir (Durdyev, 2010).

Biyokütle enerjisinden çok eski zamanlardan beri faydalanılmaktadır. İlk zamanlar ısı enerjisi elde etmek için biyokütle kullanılmaktaydı. Günümüzde ise bu kullanımın yanı sıra yeni geliştirilen yöntemlerle elektrik enerjisi de üretilmektedir. Geliştirilen bu yöntemler; doğrudan yakma, gazlaştırma, havasız (Anaerobik) çürütme, fermantasyon ve Piroliz'dir (Çelik, 2012). Bu yöntemlerden havasız çürütmede biyogaz elde edilir. Biyogazın bileşiminde, % 60-70 metan ($CH_4$), % 30-40 karbondioksit ($CO_2$), % 0- 2 hidrojen sülfür ($H_2S$) ile çok az miktarda azot ($N_2$) ve hidrojen ($H_2$) bulunmaktadır. Yenilenebilir enerji kaynağı olarak kabul edilen biyogaz enerjisi, genellikle çöp gazı olarak adlandırılmaktadır. Burada amaç çöp alanlarından çıkan metan gazının hem çevreye olan zararını azaltmak hem de bu gazdan elektrik üretmektir. Çöp içinde biriken metan gazı açılan kuyulardan borularla enerji üretim tesisine pompalanarak üretim gerçekleştirilir. Böylece metan gazı yakılarak elektrik enerjisine dönüştürülür (Durdyev, 2010).

Tablo 3'de Gökçeada'da ekimi yapılan ürünlerin üretim miktarları verilmiştir. Tablodan görüleceği üzere biyoyakıt enerjisinde kullanılabilecek yağlı tohumlar üretilmemektedir. Toplam elverişli tarım arazisi 33.500 da.'dır. Bu alan içinde aşağıda üretim miktarları verilen ürünler üretilmektedir. Gökçeada'nın orman ve fundalık arazisi 68.690 da. dır. Bu alanlar biyokütle enerjisi için değerlendirilebilir (enerji ormanları). Ayrıca adanın tüm atıkları da biyoyakıt enerjisi üretmek için kullanılanabilir. Ancak şu an adada atıklar düzensiz (vahşi) depolanmaktadır. Çöpten biyogaz yoluyla (Metan) elektrik üretimi için adanın ilk olarak düzenli depolama sahasına ihtiyacı vardır.

Gökçeada'nın hayvansal atık potansiyelini belirlemek için, Türkiye İstatistik Kurumu'nun 2006 yılı Agro-Waste projesi kapsamında her bir hayvan için belirlenen değerler (büyükbaş hayvan için 9,94 ton/yıl, küçükbaş hayvan için 0,82 ton/yıl, kümes hayvanları için 0,029 ton/yıl) üzerinden hesaplamalar yapılabilir. Bir ton atıktan çıkan biyogaz miktarı büyükbaş hayvan için 33 m³, küçükbaş için 58 m³, kümes hayvanları için 78 m³ olarak kabul edilerek ortaya çıkabilecek hayvansal atık miktarı hesaplanabilir (Altıkat ve Çelik, 2012).

| | ÜRÜN ADI | GÖKÇEADA | | |
|---|---|---|---|---|
| | | ALAN (da.) | ÜRETİM (Ton) | VERİM (Kg./da.) |

## 2.6 Dalga Enerjisi

Dalga; rüzgar, akışkan içerisindeki kütle hareketleri, deniz tabanı hareketleri, güneş ve ayın çekim kuvvetleri, insan faaliyetleri ve farklı özgül kütledeki akışkan hareketleri sonucunda oluşur. Bu etkenlerden en çok rüzgar dalga oluşturur. Rüzgar enerjisini su yüzeyine aktararak dalgalar oluşturur. Oluşan dalgalar bu enerjiyi kıyılara taşır (Önöz, 2013). Gerek dalga taşınırken gerekse kıyı yüzeyine çarptığında ortaya çıkan enerji dalga enerji sistemleri ile yakalanarak elektrik enerjisine çevrilebilir. Dalga enerji dönüşüm sistemleri kıyı tipi, yakın kıyı tipi ve açık deniz tipi olmak üzere üçe ayrılır. Türkiye kıyılarının 1/5'inden yararlanarak sağlanabilecek dalga enerjisi teknik potansiyeli 18,5 milyar kWh olarak tahmin edilmektedir. Ancak Türkiye'de düzenli ve bilimsel dalga ölçüm istasyonları ve bunların ölçülmüş verileri ya da ölçüm değerlendirme istasyonları bulunmamaktadır (Uygur vd., 2006). Türkiye'nin dalga enerjisi potansiyelini belirlemek amacıyla yapılan projede, tüm kıyıları temsil edecek şekilde 31 meteoroloji gözlem istasyonunun rüzgar verileri kullanılmıştır. Bu rüzgar verileri 1984-1998 yılı sonuna kadar olan 17 yıllık süreyi kapsamaktadır. Bu verilere göre ülkemizde dalga enerjisi açısından gerçek potansiyele sahip bölgemiz batı Karadeniz bölgesi başta olmak üzere kıyı alanlarıdır. Şekil 4'de yapılan ölçümlere göre dalgaların tahmini ortalama enerjileri verilmiştir (Önöz, 2013).

***Şekil 4.*** *Dalga tahminlerinin yapıldığı bölgelerin yıllık ortalama enerjileri (kWh/m.yıl)* ***Kaynak:*** *(Önöz,2013)*

Şekil 4'den görüleceği üzere Gökçeada çevresinde dalga enerjisi tahmini yapılmamıştır. Adanın rüzgar enerjisi bakımından en yoğun bölgelerden birisi olması düşüncesiyle dalga enerjisi bakımından da potansiyelinin olabileceği düşünülmektedir. Bunun için rüzgar verileri kullanılarak dalga enerjisi potansiyeli tespit edilebilir.

## 2.7 Hidrojen Enerjisi

Hidrojen enerjisi doğal bir yakıt değildir, birincil enerji kaynaklarından faydalanarak, su, fosil yakıtlar ve biyokütle gibi farklı hammaddelerden üretilen sentetik bir yakıttır (Şeker,2010). Hidrojenin yakıt olarak kullanıldığı enerji sistemlerinde, atmosfere atılan ürün sadece su ve/veya su buharı olmaktadır. Hidrojen petrol yakıtlarına göre %33 daha verimli bir yakıttır. Ancak maliyetinin yüksek olmasından dolayı henüz kullanımı yaygınlaşmamıştır. Günümüzde Dünya'da her yıl yaklaşık 50 milyon ton/500 milyar m$^3$ hidrojen kullanılmaktadır (Enerji,2013).

## 3   Sonuç ve Öneriler

Enerji en basit tanımıyla iş yapabilme yeteneğidir. Elektrik enerjisi enerjinin bir türüdür. Elektrik enerjisi yenilenebilir ve yenilenemez enerji kaynaklarından üretilir. Yenilenemeyen enerji kaynaklarının tükeniyor olması, çevreye verdikleri zararın giderek artması ve yeni enerji kaynaklarına yöneliş yenilenebilir enerji kaynaklarına olan ilginin artmasına neden olmuştur.

Her yatırımda olduğu gibi, yenilebilir enerji sistemlerinin kurulmasından önce de ekonomik değerlendirmelerin yapılması gerekir. Öncelikle, planlaması yapılacak bölgenin (kullanılması planlanan enerji tipine göre) güneş ışınımı ve rüzgar hızları gibi verilerinin ölçülmesi gerekir. Mevcut enerji kaynakları potansiyeline göre, kurulacak olan yenilenebilir enerji sisteminin birim enerji maliyetinin, yatırım maliyetinin ve sistemin ömür boyu maliyetinin tespit edilmesi gerekir. Bazı sistemlerin kurulum maliyeti daha pahalı olsa bile, ömür boyu maliyet kıyaslaması yapıldığı zaman daha ucuz olduğu görülebilmektedir. Sistemlerin ömür boyu maliyetinin hesaplanabilmesi için Net Şimdiki Maliyet yöntemi kullanılır. Net şimdiki maliyet yönteminde amaç, gelecekte oluşacak gelir ve giderlerin şimdiki zamana indirgenmesidir(Yılmaz,2008). Tablo 4'de bazı yenilenebilir enerji tesislerinin yatırım, işletim, finansman maliyetleri ve kurulacak tesisin kaplayacağı alan ve

istihdam sayıları verilmiştir. Şekil 5'de ise yenilenebilir enerji tesislerinin toplam maliyet değerleri verilmiştir(Önöz, 2013).

| Yenilenebilir enerji türleri | Sabit yatırım ve Kurulum maliyeti (cent/kWh) | İşletim ve bakım maliyeti | Tesis alanı (yer maliyeti) (km$^2$/1000MW) | Finansman Maliyeti (tesis yapım süresi-yıl) | İstihdam temini potansiyeli (KİŞİ/MW) |
|---|---|---|---|---|---|
| Regülatör | 0,677-1,104 | 0,5-2,0 | 33 | 1-3 | 0,56-0,92 |
| HES | 2,5152-4,0243 | 0,5-2,0 | 750 | 5-10 | 0,56-0,92 |
| RES | 2,1452-2,3684 | 0,0858-0,0947 | 100 | 0,5-1 | 0,25-,42 |
| JES | 0,1443-0,1689 | 0,0028-0,0033 | 18 | 1,5-2 | 0,10-0,33 |
| Biyoyakıt | 1500-3000$/KW | 4-9 | | 3-5 | 2,5 |

*Tablo 4. Bazı yenilenebilir enerji tesislerinin kurulum ve işletme değerleri*

*Şekil 5. Yenilenebilir enerji tesislerinin toplam yatırım maliyetleri **Kaynak:** (Önöz, 2013)*

Tablo 4 ve Şekil 5 incelendiğinde her bir yenilenebilir enerjinin başka bir açıdan diğerine üstünlük sağladığı görülmektedir. Gökçeada için yapılan çalışmalar incelendiğinde, yatırımın geri dönüşü açısından en uygun yenilenebilir enerji türünün rüzgar olduğu gözlemlenmektedir. Bu alanda da birçok çalışma mevcuttur. Ancak günümüz itibariyle Gökçeada'da rüzgar türbini bulunmamaktadır. Gökçeada için yenilenebilir enerji potansiyellerine bakıldığında, uygulanabilirliği açısından biyoyakıt enerjisi dikkati çekmektedir. Adada enerji tarlaları ya da ormanları oluşturularak biyoyakıt elde edilebilir. Ürün verimliliğine göre kurulacak biyoyakıt enerji santrali enerji üretmesinin yanında istihdamı arttırıcı rol oynayacağından değerlendirilmelidir.

Avrupa Birliği ve UNESCO tarafından çevre dostu oluşu nedeniyle desteklenen küçük ve orta ölçekli işletmeler olan nehir tipi hidroelektrik santraller özellikle kırsal kesimde istihdam olanakları yaratması ve o kırsal bölgenin kalkınması üzerine olumlu etkileri olmasından dolayı önemlidir. Günümüz itibariyle Gökçeada'da elektrik üretim amaçlı HES ve Regülator bulunmamaktadır. Ancak Gökçeada'da 3 adet akarsu bulunmaktadır. Bu akarsular üzerinde regülatör diğer adıyla nehir tipi hidroelektrik santraller kurulması düşünülebilir. Bu tip santraller kırsal kesimde istihdamı artırır ve kırsal kesimin kalkınmasında önemli bir yer tutar.

# Türkiye'deki Üretken Sektörlerin Göreli Önemi ve Emisyon Sorumluluğu: 2002-2011

# Emissions Responsibility and Relative Importance of the Productive Sectors in Turkey: 2002-2011

Asst. Prof. Dr. Celal Taşdoğan (Gazi University, Turkey)

Ph.D. Candidate Bilgen Taşdoğan (Ankara University, Turkey)

## Abstract

Turkey has realized high growth rates during the period of 2002-2011, except in 2008 and 2009 years. It is thought that the rapidly growing in the country may cause a lot of environmental damage, especially air pollution problems. In other words, the productive sectors have produced two outputs which are economic value added and air pollutants. This study used input output matrixes are to find out the strategically important sectors as it is known key sectors and weak sectors caused the environmental effects in the country. For this purpose, it has been tried to investigate air pollutant quantities which caused by the production process of the sectors in the period of 2002-2011 and performed the input-output tables for Turkey constructed in the World Input Output Database (WIOD) Project. These input-output tables include the emission satellite accounts, which are $CO_2$ emissions and other air pollutants, respectively $N_2O$, $CH_4$, $N_2O$, $NO_x$, $SO_x$, CO, NMVOC and $NH_3$ disaggregated for the 34 sectors. It is expected that the outcomes of the study may contribute to sustainable growth debates and environmental policy implementations in Turkey.

## 1 Giriş

Bir ülkenin ekonomik büyümesi ile emisyon miktarı arasında pozitif bir korelasyon olduğu görülmektedir (World Bank, 2007). Her ne kadar Türkiye karbon dioksit salınımı konusunda gelişmiş ülkelere göre alt sıralarda bulunsa dahi ülkenin özellikle 2002 yılından itibaren ortaya çıkan yüksek büyüme ile birlikte artan enerji kullanımı çevre sorunlarını da beraberinde getirmektedir. Bu çerçevede değerlendirildiğinde 2002-2011 döneminde 2008 ve 2009 yılı dışında genel olarak yüksek büyümenin olduğu görülmekte ve ortalama yaklaşık yüzde 5,4 büyüme oranına ulaşılmaktadır. Bununla birlikte söz konusu dönemde toplam sera gazı emisyon miktarının yüzde 41,6 arttığı görülmektedir (TÜİK,2012).

Dünya sera gazı salınımına neden olan ülkeler büyük ölçüde gelişmiş ülkeler olmakta ve karbon dioksit emisyonunun kaynağını da ağırlıklı olarak elektrik ve ısı üretimi, imalat sanayi, inşaat, tarım, taşımacılık ve diğer yakıt tüketimine neden olan faaliyetler oluşturmaktadır (World Bank, 2007: 6-8). 1992 yılında toplanan Birleşmiş Milletler Çevre ve Kalkınma Konferansı'nda (Rio Dünya Zirvesi) United Nations Framework Convention on Climate Change-Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi (BMİDÇS) imzaya açılmıştır. 1997 yılında ise Kyoto Protokolü ile gelişmiş ülkeler başta olmak üzere sera gazı salınımına neden olan gaz emisyonlarının 2008-2012 yılları arasında 1990 yılındaki salınıma kıyasla yaklaşık yüzde 5 azaltılması kararlaştırılmıştır. Söz konusu bu protokol ise 2005 yılında yürürlüğe girmiştir. Buna ek olarak taraflar arasındaki görüşmeler neticesinde sanayileşmiş ülkelerin 2012 yılından itibaren 2013-2020 yılları arasında sera gazı emisyon salınımlarını 1990 yılındaki değerlere kıyasla yüzde 18 azaltması hedefi öngörülmektedir (UNFCCC, 2014). Türkiye protokolü 5/2/2009 tarih ve 5836 sayılı kanunla 2009 yılında kabul etmiş fakat gelişmekte olan ülke olduğunu gerekçe göstererek emisyon salınımlarını azaltma konusunda maddi bir sorumluluk üstlenmemiştir. Gelinen noktada protokole taraf olan Türkiye'nin sera gazı salınımlarını azaltmak için maddi sorumluluğu olan gelişmiş ülkeler dışında kalan ve tarihsel sorumluluğu olan ülkeler ile aynı grupta yer alması gerekli düzenlemeleri yapmayacağı anlamına gelmemektedir. Dolayısıyla Türkiye'de yapılacak muhtemel düzenlemeler emisyon sorumluluğu olan sektörlerin ve sektörlerin neden olduğu emisyon miktarının tespit edilmesini gerektirmektedir.

Bu çalışmada 2002 Yılı Girdi Çıktı Tablosundan hareketle geliştirilen 2002-2011 dönemine ait ulusal girdi çıktı tabloları ve bu tablolara göre sektörlerin emisyon miktarlarının hesaplandığı çevresel uydu hesaplarından yararlanılmaktadır. Elde edilen verilere göre toplulaştırılan 34 sektöre ait ara girdi kullanımı üzerinden sektörlerin göreli önemi tespit edilmekte ve sektörler kilit, geri bağlantısı yüksek, ileri bağlantısı yüksek ve zayıf olmak üzere dört grubu göre sınıflandırılmaktadır. Söz konusu bu tanımlamalar Chenery-Watanebe ile Rasmussen yaklaşımları temelinde hesaplanan geri ve ileri bağlantı, toplam geri ve ileri bağlantı ve son olarak ta geri ve ileri bağlantı katsayıları endeksi sonuçları ile yapılmaktadır. Buna ek olarak sınıflandırmanın ardından sektörlerin çevresel uydu hesaplarına göre belirlenen emisyon sorumluluğundaki payları incelenmektedir.

Bu amaçla çalışmanın takip eden bölümünde ampirik metodoloji ve ilgili yazın taramasına yer verilmekte, bunun devamında ise iki aşamada elde edilen ampirik bulgular sunulmaktadır. Çalışmanın son kısmında ise elde edilen bulgular yardımıyla sonuç ve değerlendirme yapılmaktadır.

## 2 Metodoloji

Rasmussen (1956) ilk olarak Leontief Ters Matrisinin satır ve sütun elemanlarının toplamından hareketle toplam geri ve ileri bağlantı katsayılarını hesaplamıştır (Chenery and Watanabe, 1958: 498). Chenery-Watanabe (1958) ise Amerika, İtalya, Norveç ve Japonya için girdi çıktı analizi ile doğrudan ileri ve geri bağlantı katsayılarını incelemiştir. Bu çalışmalar ekonomideki sektörler arası bağımlılığı açıklayan geri ve ileri bağlantı katsayılarının hesaplandığı geleneksel yaklaşımlar olarak kabul edilmektedir. Hirschman (1958) ise geri ve ileri bağlantı endeks katsayıları kullanarak ortalamanın üstünde olan sektörleri kilit sektör olarak kabul etmekte ve kalkınma stratejisi açısından bu sektörlerin önemine dikkat çekmektedir. Bunun yanı sıra ortalamanın altında olan sektörler de zayıf sektörler olarak tanımlanmaktadır (Drejer, 2002: 4-8).

Bir sektörün diğer sektörlerden ve kendisinden talep ettiği ara girdi toplamının sektörün çıktısına oranı doğrudan geri bağlantı etkisi olarak tanımlanırken aynı sektörün çıktısının diğer sektörler tarafından doğrudan ara mal olarak kullanılan kısmının toplamının sektörün çıktısına oranı doğrudan ileri bağlantı etkisi olarak tanımlanmaktadır. Bir başka deyişle girdi çıktı matrisindeki her bir sektörün ara girdi kullanımının toplam çıktıya oranını temsil eden katsayı matrisinin sütun toplamı sektörün doğrudan geri bağlantı etkisini satır toplamı ise doğrudan ileri bağlantı etkisini vermektedir. Doğrudan etkilerin hesaplanmasına kullanılan bu yöntem Chenery-Watanabe (CW) Yaklaşımı olarak bilinmektedir. Benzer bir şekilde katsayı matrisi yerine Leontief Ters Matrisinin sütun toplamı ilgili sektörün toplam geri bağlantı etkisini verirken satır toplamı da toplam ileri bağlantı etkisini vermektedir. Bu yönteme de Rasmussen (R)Yaklaşımı denmektedir.

Buna göre doğrudan geri bağlantı etkisi (BL) ve doğrudan ileri bağlantı etkisi (FL) şu şekilde hesaplanmaktadır.

$$BL_j^{CW} = \sum_{i=1}^{N} \frac{X_{ij}}{X_i} = \sum_{i=1}^{N} a_{ij} \qquad\qquad 1.$$

$BL_j^{CW}$, j sektörünün sütun toplamını vermektedir. Burada $X_{ij}$, i sektörünün j sütunundaki ara girdi kullanımını; $X_i$, i sektörünün toplam çıktısını; $a_{ij}$, i sektörünün toplam çıktısı içinde j sütunundaki sektörlerin paylarını temsil etmektedir.

$$FL_i^{CW} = \sum_{i=1}^{N} \frac{X_{ij}}{X_j} = \sum_{i=1}^{N} b_{ij} \qquad\qquad 2.$$

$FL_i^{CW}$, i sektörünün satır toplamını vermektedir. Burada $X_{ij}$, i sektörünün j satırındaki diğer sektörlere verdiği çıktılarını; $X_i$, i sektörünün toplam çıktısını; $b_{ij}$, i sektörünün toplam çıktısı içinde j satırındaki sektörlerin paylarını temsil etmektedir.

Toplam geri bağlantı etkisi (TBL) ve toplam ileri bağlantı etkisi (TFL) ise şu şekilde hesaplanmaktadır.

$$TBL_j^R = \sum_{i=1}^{N} r_{ij} \qquad\qquad 3.$$

$TBL_j^R$, j sektörünün Leontief Ters Matrisindeki sütun toplamını vermekte ve $r_{ij}$, Leontief Ters Matrisinin sütun elamanlarını vermektedir.

$$TFL_i^R = \sum_{i=1}^{N} r_{ij} \qquad\qquad 4.$$

$TFL_i^R$, j sektörünün Leontief Ters Matrisindeki satır toplamını vermekte ve $r_{ij}$, Leontief Ters Matrisinin satır elamanlarını vermektedir.

Her bir sektör için elde edilen dolaysız ve toplam bağlantı etkilerinin toplam etkilerin ortalamasına oranlanması ile endeks değerleri elde edilmektedir. Bir başka deyişle bir sektörün dolaysız geri bağlantı etkisi tüm dolaysız geri bağlantı etkilerinin ortalamasına oranlandığında dolaysız geri bağlantı etkisi elde edilmektedir. Benzer şekilde dolaysız ileri bağlantı endeksi, toplam geri bağlantı endeksi ve toplam ileri bağlantı endeksi hesaplanabilmektedir.

Buna göre geri bağlantı endeksi (BLE) ve ileri bağlantı endeksi (FLE) şu şekilde hesaplanmaktadır.

$$BLE_j^{CW} = \frac{BL_j^{CW}}{\frac{1}{N}\sum_j^{CW} BL_j^{CW}} \qquad\qquad 5.$$

j sektörünün Chenery-Watanebe yaklaşımına göre hesaplanan geri bağlantı etkisinin tüm sektörlerin ortalama geri bağlantı etkisine oranını temsil etmektedir.

$$FLE_i^{CW} = \frac{FL_i^{CW}}{\frac{1}{N}\sum_i^{CW} FL_i^{CW}} \qquad\qquad 6.$$

i sektörünün Chenery-Watanebe yaklaşımına göre hesaplanan ileri bağlantı etkisinin tüm sektörlerin ortalama ileri bağlantı etkisine oranını temsil etmektedir.

$$TBLE_j^R = \frac{TBL_j^R}{\frac{1}{N}\sum_j^R TBL_j^R} \qquad\qquad 7.$$

j sektörünün Rasmussen yaklaşımına göre hesaplanan toplam geri bağlantı etkisinin tüm sektörlerin ortalama toplam geri bağlantı etkisine oranını temsil etmektedir.

$$TFLE_i^R = \frac{TFL_j^R}{\frac{1}{N}\Sigma_i^R TFL_i^R}$$
8.

i sektörünün Rasmussen yaklaşımına göre hesaplanan toplam ileri bağlantı etkisinin tüm sektörlerin ortalama toplam ileri bağlantı etkisine oranını temsil etmektedir.

Buradan elde edilen endeks değerlerinin birden büyük olması ilgili sektörün kilit sektör olduğunu birden küçük olması ise sektörün zayıf sektör olduğunu göstermektedir (Miller ve Blair, 2009: 556-560). Dolayısıyla endeks değerleri kullanılarak sektörlerin sınıflandırılması yapılabilmektedir.

## 3  Yazın Taraması

Girdi Çıktı Tablosu temelinde elde edilen sektörler arası bağlantı katsayıları yardımıyla farklı amaçlar için birçok çalışma yapılmıştır. Burada ileri ve geri bağlantı etkilerini kullanarak sektörlerin göreli önemini inceleyen ve üretici sektörlerin emisyon sorumluğunu hesaplayan çalışmalara yer verilmiştir.

Özdemir ve Yüksel (2006) enerji sektörü için ileri ve geri bağlantı etkilerini incelemiştir. Kula (2008) 2002 yılı girdi çıktı tablosunda yer alan tüm sektörler için bağlantı etkilerini ve bağlantı endeks değerlerini hesaplayarak sektörlerin göreli önemini incelemiştir. Han, Tosunoğlu ve Özsoy (2011) 2002 Girdi Çıktı Tablosu'nda yer alan imalat sanayi sektörleri için Chenery-Watanabe ve Rasmussen tarafından geliştirilen geri ve ileri bağlantı katsayıları ile kilit sektörlerin tespitini yapmıştır. Ayaş (2011) İmalat sanayi için Chenery-Watanabe, Rasmussen-Ghosh, Dietzenbacher yaklaşımları ile sektörler arası bağlantılar incelenmekte söz konusu yöntemlerin bulguları karşılaştırmalı olarak sunulmaktadır. Atan (2011) 2002 Girdi Çıktı Tablosu'ndan hareketle hem yurtiçi hem ithal ara girdiler açısından sektörlerarası bağlantıları inceleyerek kilit sektörlerin tespitini yapmıştır. Yılancı (2013) toplulaştırılmış 25 sektör için ileri ve geri bağlantı etkilerini incelemiştir.

Bunlara ek olarak ilgili yazında sektörlerin göreli önemi ve emisyon sorumluluğu ile ilgili çalışmalarda yaygınlaşmaktadır. Bu yazın ilk olarak Proops vd., (1993) tarafından Almanya ve İngiltere için karbondioksit salınımlarının azaltılması ile ilgili girdi çıktı analizinin kullanılmasıyla başlamıştır. Machado vd., (2001) Brezilya'nın dış ticaretini destekleyen sektörlerin yarattığı karbondioksit salınımını dikkate alarak sera gazı etkilerini açıklamaya çalışmışlardır. Benzer bir çalışma da Sanchez-Choliz ve Duarte (2004) tarafından İspanya'nın ithalat ve ihracatının yarattığı karbondioksit salınımı ile emisyon sorumluluğunun hesaplanmasıdır. Alcantara ve Padilla (2006) İspanya'nın kilit sektörlerini doğrudan ve toplam etkilerin hesaplanmasıyla tespit etmiş ve bu sektörlerde ortaya çıkan bir birimlik üretim artışının yarattığı karbondioksit salınımını hesaplamıştır. Türkiye için yapılan bir çalışmada ise Tunç, Türüt-Aşık ve Akbostancı (2006) girdi çıktı tablosunda yer alan sektörlerin enerji kullanımı ve emisyon sorumluluklarını incelemiştir. Elde edilen sonuçlara göre imalat sanayinin emisyon sorumluluğu ilk sırada yer alırken tarım ve hayvancılık sektörü son sırada yer almaktadır. Bu çalışmada ise bir taraftan geleneksel yaklaşımlarla sektörlerin göreli önemi incelenirken diğer taraftan ilgili yazından farklı olarak sektörlerin emisyon sorumluluğu sera gazı salınımına, asit miktarındaki artışa ve ozon tabakasına zarar veren gazlar olmak üzere sekiz farklı değişkenle incelenmektedir. Çalışma bu açıdan ilgili yazında büyük ölçüde karbondioksit değerleri üzerinden emisyon sorumluluğu hesaplayan çalışmalardan ayrışmaktadır.

## 4  Ampirik Uygulama

Çalışmada Türkiye'nin 2002 yılına ait Girdi Çıktı Tablosu'nda yer alan 59 sektör 2012 yılında tamamlanan WIOD projesindeki 34 sektöre göre toplulaştırılmış ve Tablo 1'de sektör tanımları verilmiştir. Söz konusu projede 2002 yılı Girdi Çıktı Tablosu temelinde 27 AB üyesi ülke ve 13 tane de önemli ülke için Dünya Girdi Çıktı Tablosu, Ülkelerin Ulusal Girdi Çıktı Tablosu hazırlanmıştır. Buna ek olarak Sosyal ve Ekonomik hesaplar, Çevresel Hesaplar uydu hesaplar olarak ilgili sektörler için hesaplanmıştır. Proje kapsamında hazırlanan tablolar 1995 yılından 2009 yılına kadar RAS yöntemi kullanılarak genişletilmiş ve bir zaman serisi elde edilmiştir. Bunun yanı sıra ülkelerin Ulusal Girdi Çıktı tabloları ise 1995-2011 yıllarını kapsayacak şekilde düzenlenmiştir. Söz konusu bu veri seti ile geniş bir ülke grubu arasındaki küresel ticaretin, sosyo-ekonomik gelişmenin ve çevresel etkilerin incelenmesi için uygun bir platform elde edilmiştir (Timmer, 2012: 3).

Bu çalışmanın ampirik analizinde kullanılan veri seti WIOD projesinde Türkiye için hazırlanan 2002-2011 yıllarını kapsayan ulusal girdi çıktı tabloları ile 2002-2009 yıllarını kapsayan çevresel uydu hesapları içerisindeki hava kirliliğine neden olan değişkenlerden elde edilmiştir. Çevresel uydu hesapları içerisinde yer alan ve hava kirliliğine neden olan değişkenler üç gruba ayrılmıştır. Bunlardan birincisi sera gazı emisyonlarını artırarak küresel ısınmaya neden olan Karbondioksit ($CO_2$), Metan Gazı ($CH_4$) ve Nitrus Oksit ($N_2O$) olarak sıralanmaktadır. İkincisi grupta asit miktarını artırma potansiyeline sahip olan Nitrojen Oksit ($NO_x$), Sülfür Oksit ($SO_x$) ve Amonyak ($NH_3$) yer almaktadır. Üçüncü grupta ise ozon tabakasına zarar verme potansiyeli olan

Karbon Monoksit (CO), Metan Dışındaki Uçucu Organik Bileşikler (NMVOC), Metan ($CH_4$) ve Nitrojen Oksit ($NO_x$) değişkenleri sıralanmaktadır (Genti, Arto ve Neuwahl, 2012: 68).

Çalışmanın ampirik uygulaması iki aşamadan oluşmaktadır. İlk aşamada 2002-2011 yıllarını kapsayan ulusal girdi çıktı tablolarından hareketle sektörler arasındaki ileri ve geri bağlantı katsayıları hesaplanarak Türkiye için kilit sektörler tespit edilmektedir. Söz konusu dönem için bağlantı katsayıları her bir yıl için ayrı ayrı hesaplandıktan sonra elde edilen değerlerin bir ortalaması değerlendirilmektedir. İkinci aşamada ise analize konu olan sektörlerin emisyon sorumluluğu 2002-2009 döneminin ortalaması dikkate alınarak hesaplanmaktadır.

| Kodlar | Sektörler |
|---|---|
| 1 | (1) Tarım, avcılık ve ilgili hizmet faaliyetleri; (2) Ormancılık, tomrukçuluk ve ilgili hizmet faaliyetleri; (3) Balıkçılık, balık üretme ve yetiştirme çiftliklerinin işletilmesi ve balıkçılıkla ilgili hizmetler |
| 2 | (4) Maden kömürü, linyit ve turba çıkarımı; (5) Tetkik ve arama hariç, ham petrol ve doğalgaz çıkarımı ve bunlarla ilgili hizmet faaliyetleri; (6) Uranyum ve toryum cevheri madenciliği; (7) Metal cevheri madenciliği; (8)Taşocakçılığı ve diğer madencilik |
| 3 | (9) Gıda ürünleri ve içecek imalatı; (10) Tütün ürünleri imalatı |
| 4 | (11)Tekstil ürünleri imalatı; (12) Giyim eşyası imalatı; kürkün işlenmesi ve boyanması |
| 5 | (13) Derinin tabaklanması, işlenmesi, bavul, el çantası, saraçlık, koşum takımı ve ayakkabı imalatı |
| 6 | (14) Ağaç ve mantar ürünleri imalatı (mobilya hariç); Hasır ve buna benzer, örülerek yapılan maddelerin imalatı |
| 7 | (15) Kağıt ve kağıt ürünleri imalatı; (16) Basım ve yayım; plak, kaset v.b. kayıtlı medyanın çoğaltılması |
| 8 | (17) Kok kömürü, rafine edilmiş petrol ürünleri ve nükleer yakıt imalatı |
| 9 | (18) Kimyasal madde ve ürünlerin imalatı |
| 10 | (19) Plastik ve kauçuk ürünleri imalatı |
| 11 | (20) Metalik olmayan diğer mineral ürünlerin imalatı |
| 12 | (21)Ana metal sanayi; (22) Makine ve teçhizatı hariç; Metal eşya sanayi |
| 13 | (23) B.y.s. makine ve teçhizat imalatı; (24) Büro, muhasebe ve bilgi işlem makineleri imalatı |
| 14 | (25) B.y.s. elektrikli makine ve cihazların imalatı; (26) Radyo, televizyon, haberleşme teçhizatı ve cihazları imalatı; (27) Tıbbi aletler; hassas ve optik aletler ile saat imalatı |
| 15 | (28) Motorlu kara taşıtı, römork ve yarı-römork imalatı; (29)Diğer ulaşım araçlarının imalatı |
| 16 | (30) Mobilya imalatı; (31) B.y.s. diğer imalat; Yeniden değerlendirme |
| 17 | (32) Elektrik, gaz, buhar ve sıcak su üretimi ve dağıtımı; (33)Suyun toplanması, arıtılması ve dağıtılması |
| 18 | (34) İnşaat |
| 19 | (35) Motorlu taşıtlar ve motosikletlerin satışı, bakımı ve onarımı; motorlu taşıt yakıtının perakende satışı |
| 20 | (36) Motorlu taşıtlar ve motosikletler dışında kalan toptan ticaret ve ticaret komisyonculuğu |
| 21 | (37) Motorlu taşıtlar ve motosikletler dışında kalan perakende ticaret, kişisel ve ev eşyalarının tamiri |
| 22 | (38) Oteller ve lokantalar |
| 23 | (39) Kara taşımacılığı ve boru hattıyla taşımacılık |
| 24 | (40) Su yolu taşımacılığı |
| 25 | (41) Havayolu taşımacılığı |
| 26 | (42) Destekleyici ve yardımcı ulaştırma faaliyetleri; seyahat acentelerinin faaliyetleri |
| 27 | (43) Posta ve telekomünikasyon |
| 28 | (44) Sigorta ve emeklilik fonları hariç, mali aracı kuruluşların faaliyetleri; (45) Zorunlu sosyal güvenlik hariç, sigorta ve emeklilik fonları ile ilgili faaliyetler; (46)Mali aracı kuruluşlara yardımcı faaliyetler |
| 29 | (47) Gayrimenkul faaliyetleri |
| 30 | (48) Operatörsüz makine teçhizat ile kişisel ev eşyalarının kiralanması; (49) Bilgisayar ve ilgili faaliyetler; (50)Araştırma ve geliştirme hizmetleri; (51) Diğer iş faaliyetleri |
| 31 | (52) Kamu yönetimi ve savunma, zorunlu sosyal güvenlik |
| 32 | (53) Eğitim hizmetleri |
| 33 | (54) Sağlık işleri ve sosyal hizmetler; (55) Kanalizasyon, çöp ve atıkların toplanması, hıfzısıhha ve benzeri hizmetler; (56) Başka yerde sınıflandırılmamış üye olunan kuruluşların faaliyetleri; (57) Eğlence, dinlenme, kültür ve sporla ilgili faaliyetler |
| 34 | (58) Diğer hizmet faaliyetleri; (59) Evlerde yaptırılan hizmet işleri |

***Tablo 1*** *2002 Yılı Girdi Çıktı Tablosuna Göre Sektörlerin Toplulaştırılması*

Tablo 1'de yer alan 34 sektörün girdi çıktı tablosundaki sütunları her bir sektörün diğer sektörlerden talep ettiği ara girdi miktarlarını temsil ederken satırları ilgili sektörün diğer sektörlere verdiği çıktı miktarlarını temsil

etmektedir. Chenery-Watanabe yaklaşımına göre her bir sektör için tablonun sütunlarında yer alan değerlerin toplam arza oranı dolaysız geri bağlantı etkilerini, satırlarda yer alan değerlerin toplam talebe oranı ise ilgili sektörün dolaysız ileri bağlantı etkilerini vermektedir. Rasmussen yaklaşımında ise girdi çıktı tablosunun Leontief Ters matrisi elde edilerek sütunda yer alan değerlerin toplamı ile sektörlerin toplam geri bağlantı (dolaylı ve dolaysız) etkileri, satır toplamları ile de sektörlerin toplam ileri bağlantı etkileri elde edilmektedir. Tablo 2'de her iki yönteme göre sektörlerin geri ve ileri bağlantı etkileri sunulmaktadır.

| Sektörler | Geri Bağlantı | | İleri Bağlantı | |
|---|---|---|---|---|
| | Chenery-Watanabe | Rasmussen | Chenery-Watanabe | Rasmussen |
| 1 | 0,287 | 1,457 | 0,494 | 2,199 |

| 33 | 0,416 | 1,683 | 0,083 | 1,089 |
| 34 | 0,409 | 1,666 | 0,313 | 1,387 |

*Tablo 2 Sektörlerin Geri ve İleri Bağlantı Etkileri*

Sektörlerin ileri ve geri bağlantı katsayılarının yüksek olması ilgili sektörlerin ekonomi için önem derecesinin yüksek olduğunu göstermektedir. Bir başka deyişle ileri bağlantı etkisi yüksek olan sektörlerin çıktı artışı sektörün çıktısını ara girdi olarak kullanan sektörlerin mevcut aktivitelerini genişletmesi veya yeni faaliyetleri uyarırken geri bağlantı etkisi yüksek olan sektördeki çıktı artışı, sektörün ara girdi talep ettiği yurtiçi sektörleri uyarıcı etkiye neden olmaktadır. Dolayısıyla bu sektörlerdeki büyüme diğer sektörleri de harekete geçirerek kıt olan sermaye daha etkin kullanılabilecektir. Hirschman (1958) tarafından öne sürülen bu düşünce ile birlikte sektörlerin yatırım önceliklerine göre dört grup oluşturulmuştur. Birincisi, hem geri hem de ileri bağlantı etkileri yüksek olan sektörler, ikincisi geri bağlantı etkisi yüksek ileri bağlantı etkisi düşük olanlar, üçüncüsü ileri bağlantı etkisi yüksek geri bağlantı etkisi düşük olanlar ve dördüncüsü hem geri hem de ileri bağlantı etkisi düşük olan sektörler (Aydoğuş, 2010: 133). Söz konusu bu sınıflandırma ileri ve geri bağlantı endeksleri yardımıyla hesaplanabilmektedir. Bir sektörün ileri ve geri bağlantı endeksine göre katsayıları 1'den büyük ise o sektör kilit sektör olarak tanımlanmaktadır (Temurshoev, 2004: 10). Bir başka deyişle sektörün ileri ve geri bağlantı katsayıları tüm sektörlerin ortalamasının üstünde ise sektör birinci grupta değerlendirilmekte ve kilit sektör olarak adlandırılmaktadır. Eğer bir sektörün ileri ve geri bağlantı endeks değerleri ortalamanın altında ise o sektör zayıf sektör olarak tanımlanmakta ve dördüncü grupta yer almaktadır. Bunun yanı sıra bir sektörün geri

bağlantı endeks değeri ortalamanın üstünde ise güçlü geri bağlantılı, ileri bağlantı endeks değeri ortalamanın üstünde ise güçlü ileri bağlantılı sektör olarak kabul edilmekte ve sırasıyla ikinci ve üçüncü grupta yer almaktadır (Kula, 2008: 14).

Tablo 3'te sektörlerin geri ve ileri bağlantı endeks değerleri hem Chenery-Watanebe hem de Rasmussen yaklaşımına göre değerlendirilmekte ve sektörlerin yer aldığı gruplar tespit edilmektedir. Buna göre kilit sektör olarak tanımlanan ve birinci grupta yer alan sektörler Chenery-Watanabe yaklaşımına göre sırasıyla şu şekildedir: (5) Derinin tabaklanması, işlenmesi, bavul, el çantası, saraçlık, koşum takımı ve ayakkabı imalatı; (6) Ağaç ve mantar ürünleri imalatı (mobilya hariç); Hasır ve buna benzer, örülerek yapılan maddelerin imalatı; (7) Kağıt ve kağıt ürünleri imalatı; Basım ve yayım; plak, kaset v.b. kayıtlı medyanın çoğaltılması; (9) Kimyasal madde ve ürünlerin imalatı; (10) Plastik ve kauçuk ürünleri imalatı; (11) Metalik olmayan diğer mineral ürünlerin imalatı; (12) Ana metal sanayi; Makine ve teçhizatı hariç; Metal eşya sanayi; (26) Destekleyici ve yardımcı ulaştırma faaliyetleri; seyahat acentelerinin faaliyetleri olmak üzere toplam sekiz sektördür.

| | Chenery-Watanabe Yaklaşımı | | | Rasmussen Yaklaşımı | | |

*Tablo 3* Sektörlerin Geri ve İleri Bağlantı Endeks Değerleri

İkinci grupta yer alan ve geri bağlantı etkisi yüksek olan sektörler: (3) Gıda ürünleri ve içecek imalatı; Tütün ürünleri imalatı; (4) Tekstil ürünleri imalatı; Giyim eşyası imalatı; kürkün işlenmesi ve boyanması; (13) B.y.s. makine ve teçhizat imalatı; Büro, muhasebe ve bilgi işlem makineleri imalatı; (14) B.y.s. elektrikli makine ve cihazların imalatı; Radyo, televizyon, haberleşme teçhizatı ve cihazları imalatı; Tıbbi aletler; hassas ve optik aletler ile saat imalatı; (15) Motorlu kara taşıtı, römork ve yarı-römork imalatı; Diğer ulaşım araçlarının imalatı; (16) Mobilya imalatı; B.y.s. diğer imalat; Yeniden değerlendirme; (18) İnşaat; (22) Oteller ve lokantalar; (25) Havayolu taşımacılığı olmak üzere toplam dokuz sektördür.

Üçüncü grupta yer alan ve ileri bağlantı etkisi yüksek olan sektörler: (1) Tarım, avcılık ve ilgili hizmet faaliyetleri; Ormancılık, tomrukçuluk ve ilgili hizmet faaliyetleri; Balıkçılık, balık üretme ve yetiştirme

çiftliklerinin işletilmesi ve balıkçılıkla ilgili hizmetler; (2) Maden kömürü, linyit ve turba çıkarımı; Tetkik ve arama hariç, ham petrol ve doğalgaz çıkarımı ve bunlarla ilgili hizmet faaliyetleri; Uranyum ve toryum cevheri madenciliği; Metal cevheri madenciliği; Taşocakçılığı ve diğer madencilik; (8) Kok kömürü, rafine edilmiş petrol ürünleri ve nükleer yakıt imalatı; (17) Elektrik, gaz, buhar ve sıcak su üretimi ve dağıtımı; Suyun toplanması, arıtılması ve dağıtılması; (19) Motorlu taşıtlar ve motosikletlerin satışı, bakımı ve onarımı; motorlu taşıt yakıtının perakende satışı; (20) Motorlu taşıtlar ve motosikletler dışında kalan toptan ticaret ve ticaret komisyonculuğu; (21) Motorlu taşıtlar ve motosikletler dışında kalan perakende ticaret, kişisel ve ev eşyalarının tamiri; (23) Kara taşımacılığı ve boru hattıyla taşımacılık; (24) Su yolu taşımacılığı; (28) Sigorta ve emeklilik fonları hariç, mali aracı kuruluşların faaliyetleri; Zorunlu sosyal güvenlik hariç, sigorta ve emeklilik fonları ile ilgili faaliyetler; Mali aracı kuruluşlara yardımcı faaliyetler (30) Operatörsüz makine teçhizat ile kişisel ev eşyalarının kiralanması; Bilgisayar ve ilgili faaliyetler; Araştırma ve geliştirme hizmetleri; Diğer iş faaliyetleri olarak on bir sektördür.

Dördüncü grupta yer alan ve zayıf sektör olarak tanımlanan sektörler: (27) Posta ve telekomünikasyon; (29) Gayrimenkul faaliyetleri; (31) Kamu yönetimi ve savunma, zorunlu sosyal güvenlik; (32) Eğitim hizmetleri; (33) Sağlık işleri ve sosyal hizmetler; Kanalizasyon, çöp ve atıkların toplanması, hıfzısıhha ve benzeri hizmetler; Başka yerde sınıflandırılmamış üye olunan kuruluşların faaliyetleri; Eğlence, dinlenme, kültür ve sporla ilgili faaliyetler; (34) Diğer hizmet faaliyetleri; Evlerde yaptırılan hizmet işleri olmak üzere altı sektördür.

Benzer bir şekilde Tablo 3'te yer alan Rasmussen yaklaşımına göre geri ve ileri bağlantı endeks katsayıları değerlendirildiğinde birinci grupta yer alan kilit sektörler: (4) Tekstil ürünleri imalatı; Giyim eşyası imalatı; kürkün işlenmesi ve boyanması; (7) Kağıt ve kağıt ürünleri imalatı; Basım ve yayım; plak, kaset v.b. kayıtlı medyanın çoğaltılması; (9) Kimyasal madde ve ürünlerin imalatı; (12) Ana metal sanayi; Makine ve teçhizatı hariç; Metal eşya sanayi; (17) Elektrik, gaz, buhar ve sıcak su üretimi ve dağıtımı; Suyun toplanması, arıtılması ve dağıtılması; (26) Destekleyici ve yardımcı ulaştırma faaliyetleri; seyahat acentelerinin faaliyetleri olmak üzere toplam altı sektördür.

Buna göre ikinci grupta yer alan ve geri bağlantı endeks değerleri yüksek olan sektörler: (3) Gıda ürünleri ve içecek imalatı; Tütün ürünleri imalatı; (5) Derinin tabaklanması, işlenmesi, bavul, el çantası, saraçlık, koşum takımı ve ayakkabı imalatı; (6) Ağaç ve mantar ürünleri imalatı (mobilya hariç); Hasır ve buna benzer, örülerek yapılan maddelerin imalatı; (10) Plastik ve kauçuk ürünleri imalatı; (11) Metalik olmayan diğer mineral ürünlerin imalatı; (13) B.y.s. makine ve teçhizat imalatı; Büro, muhasebe ve bilgi işlem makineleri imalatı; (14) B.y.s. elektrikli makine ve cihazların imalatı; Radyo, televizyon, haberleşme teçhizatı ve cihazları imalatı; Tıbbi aletler; hassas ve optik aletler ile saat imalatı; (16) Mobilya imalatı; B.y.s. diğer imalat; Yeniden değerlendirme; (18) İnşaat; (25) Havayolu taşımacılığı olmak üzere toplam on sektördür.

Üçüncü grupta yer alan ve ileri bağlantı endeks değerleri yüksek olan sektörler: (1) Tarım, avcılık ve ilgili hizmet faaliyetleri; Ormancılık, tomrukçuluk ve ilgili hizmet faaliyetleri; Balıkçılık, balık üretme ve yetiştirme çiftliklerinin işletilmesi ve balıkçılıkla ilgili hizmetler; (20) Motorlu taşıtlar ve motosikletler dışında kalan toptan ticaret ve ticaret komisyonculuğu; (21) Motorlu taşıtlar ve motosikletler dışında kalan perakende ticaret, kişisel ve ev eşyalarının tamiri; (23) Kara taşımacılığı ve boru hattıyla taşımacılık olmak üzere dört sektördür.

Son olarak dördüncü grupta yer alan zayıf sektör olarak tanımlanan sektörler: (2) Maden kömürü, linyit ve turba çıkarımı; Tetkik ve arama hariç, ham petrol ve doğalgaz çıkarımı ve bunlarla ilgili hizmet faaliyetleri; Uranyum ve toryum cevheri madenciliği; Metal cevheri madenciliği; Taşocakçılığı ve diğer madencilik; (8) Kok kömürü, rafine edilmiş petrol ürünleri ve nükleer yakıt imalatı; (15) Motorlu kara taşıtı, römork ve yarı-römork imalatı; Diğer ulaşım araçlarının imalatı; (19) Motorlu taşıtlar ve motosikletlerin satışı, bakımı ve onarımı; motorlu taşıt yakıtının perakende satışı; (24) Su yolu taşımacılığı; (27) Posta ve telekomünikasyon; (28) Sigorta ve emeklilik fonları hariç, mali aracı kuruluşların faaliyetleri; Zorunlu sosyal güvenlik hariç, sigorta ve emeklilik fonları ile ilgili faaliyetler; Mali aracı kuruluşlara yardımcı faaliyetler (29) Gayrimenkul faaliyetleri; (31) Kamu yönetimi ve savunma, zorunlu sosyal güvenlik; (32) Eğitim hizmetleri; (33) Sağlık işleri ve sosyal hizmetler; Kanalizasyon, çöp ve atıkların toplanması, hıfzısıhha ve benzeri hizmetler; Başka yerde sınıflandırılmamış üye olunan kuruluşların faaliyetleri; Eğlence, dinlenme, kültür ve sporla ilgili faaliyetler; (34) Diğer hizmet faaliyetleri; Evlerde yaptırılan hizmet işleri olmak üzere on iki sektördür.

Ampirik çalışmanın ikinci aşamasında kilit, geri, ileri ve zayıf olmak üzere dört gruba ayrılan sektörlerin emisyon sorumlulukları hesaplanmıştır.

Tablo 4'e bakıldığında emisyon sorumluluğu görece yüksek olan 16 sektör görülmektedir. Bu sektörlerden (1) Tarım, avcılık ve ilgili hizmet faaliyetleri; Ormancılık, tomrukçuluk ve ilgili hizmet faaliyetleri; Balıkçılık, balık üretme ve yetiştirme çiftliklerinin işletilmesi ve balıkçılıkla ilgili hizmetler sektörünün toplam emisyon çıktısı içindeki payları Karbondioksit ($CO_2$): 0,065; Metan Gazı ($CH_4$): 0,331; Nitrus Oksit ($N_2O$): 0,669; Nitrojen Oksit ($NO_x$): 0,497; Sülfür Oksit ($SO_x$): 0,552; Karbon Monoksit ($CO$): 0,073; Metan Dışındaki Uçucu Organik Bileşikler (NMVOC): 0,124 ve Amonyak ($NH_3$): 0,997 olarak hesaplanmıştır.

Bir diğer sektör (2) Maden kömürü, linyit ve turba çıkarımı; Tetkik ve arama hariç, ham petrol ve doğalgaz çıkarımı ve bunlarla ilgili hizmet faaliyetleri; Uranyum ve toryum cevheri madenciliği; Metal cevheri

madenciliği; Taşocakçılığı ve diğer madencilik için emisyon sorumluluğu oranları $CO_2$: 0,010, $CH_4$: 0,032 bulunmuştur. (3) Gıda ürünleri ve içecek imalatı; Tütün ürünleri imalatı sektörü payları $CO_2$: 0,025; $NO_x$: 0,015; NMVOC: 0,031'dir. (4) Tekstil ürünleri imalatı; Giyim eşyası imalatı; kürkün işlenmesi ve boyanması sektörü için $CO_2$: 0,033; $NO_x$: 0,021; CO: 0,023; NMVOC: 0,025'tir. (6) Ağaç ve mantar ürünleri imalatı (mobilya hariç); Hasır ve buna benzer, örülerek yapılan maddelerin imalatı sektörü için $CO_2$: 0,027'dir. (8) Kok kömürü, rafine edilmiş petrol ürünleri ve nükleer yakıt imalatı için $CO_2$: 0,027; $SO_x$: 0,017; CO: 0,182; NMVOC: 0,164'tür. (9) Kimyasal madde ve ürünlerin imalatı için $CO_2$: 0,048; $N_2O$: 0,137; $NO_x$: 0,017; $SO_x$: 0,019; CO: 0,014; NMVOC: 0,073'tür. (10) Plastik ve kauçuk ürünleri imalatı için $CO_2$: 0,023; $NO_x$: 0,013; $SO_x$: 0,010; CO: 0,013; NMVOC: 0,014'tür. (11) Metalik olmayan diğer mineral ürünlerin imalatı için $CO_2$: 0,134; $NO_x$: 0,031; $SO_x$: 0,017; CO: 0,018; NMVOC: 0,021'dir. (12) Ana metal sanayi; Makine ve teçhizatı hariç; Metal eşya sanayi için CO2: 0,042; NOx: 0,019; SOx: 0,023; CO: 0,055; NMVOC: 0,022'dir. (17) Elektrik, gaz, buhar ve sıcak su üretimi ve dağıtımı; Suyun toplanması, arıtılması ve dağıtılması sektörü için CO2: 0,314; N2O: 0,018; NOx: 0,108; SOx: 0,253; CO: 0,037; NMVOC: 0,014'tür. (18) İnşaat sektörü için CO2: 0,051; NOx: 0,052; SOx: 0,026; CO: 0,037; NMVOC: 0,146'dır. (23) Kara taşımacılığı ve boru hattıyla taşımacılık sektörü için CO2: 0,033; NOx: 0,087; NMVOC: 0,024'dür. (24) Su yolu taşımacılığı için CO2: 0,049; NOx: 0,037; CO: 0,374; NMVOC: 0,253'tür. (25) Havayolu taşımacılığı için CO2: 0,049; NOx: 0,030; CO: 0,044; NMVOC: 0,012'dir. (34) Diğer hizmet faaliyetleri; Evlerde yaptırılan hizmet işleri sektörü için CH4: 0,632; N2O: 0,126'dır.

| Sektörler | $CO_2$ | $CH_4$ | $N_2O$ | NOx | SOx | CO | NMVOC | $NH_3$ |

*Tablo 4 Sektörlerin Emisyon Sorumluluğu*

## 5 Sonuç

Ülkelerin büyüme süreci ile birlikte istenmeyen çıktı olarak tanımlanan çevresel çıktılar üretmesi kaçınılmaz gözükmektedir. 1992 yılında Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi ile başlayan 1997 yılındaki Kyoto Protokolünün 2005 yılında imzalanması ile devam eden atmosferdeki sera gazı salınımlarının azaltılması çalışmaları başta gelişmiş ülkeler olmak üzere gelişmekte olan ülkeleri de kapsayacak şekilde genişlemiştir. Söz konusu protokolün ilk aşamadaki hedefi 2008-2012 döneminde gerçekleştirilmeye çalışılırken ikinci aşama olarak kabul edilen 2013-2020 hedefleri ise ülkelerin salınımlarını azaltma taahhütlerinin artırılması

ile devam etmektedir. Bu süreç içerisinde Türkiye sera gazı salınımlarının azaltılması konusunda tarihsel sorumluluğu olan ülkeler grubunda yer almakta ve 2005 yılından itibaren çevre konusunda çalışmalara ağırlık vermektedir. Yapılan çalışmalardaki amaç iklim sistemi üzerindeki insan kaynaklı tehlikeli etkileri azaltmak, iklim değişikliği nedeniyle gıda üretiminin zarar görmesini engellemek ve sürdürülebilir bir ekonomik kalkınmaya zaman içerisinde ulaşmaktır.

Gelinen noktada Türkiye'nin emisyon salınımına neden olan üretici sektörlerinin tespit edilmesi ve buna göre yeni politikalar geliştirilmesi bir zorunluluk olarak görülmektedir. Dolayısıyla bu çalışmada ilk olarak Türkiye'deki 2002 Yılı Girdi Çıktı Matrisi temelinde 34 sektör olarak toplulaştırılmış sektörler dikkate alınarak ilgili sektörlerin göreli önemi kilit sektör, geri bağlantısı yüksek, ileri bağlantısı yüksek ve zayıf sektör olmak üzere dört gruba ayrıştırılarak tespit edilmiştir. Buna ek olarak WIOD projesi tarafından 2002-2009 dönemi çevresel uydu hesaplarından yararlanılmıştır. Söz konusu veriler yardımıyla 34 sektörün sera gazını artıran Karbondioksit ($CO_2$), Metan Gazı ($CH_4$) ve Nitrus Oksit ($N_2O$); asit miktarının artmasına neden olan Nitrojen Oksit ($NO_x$), Sülfür Oksit ($SO_x$) ve Amonyak ($NH_3$); ozon tabakasına zarar veren Karbon Monoksit (CO), Metan Dışındaki Uçucu Organik Bileşikler (NMVOC), Metan ($CH_4$) ve Nitrojen Oksit ($NO_x$) sorumlulukları hesaplanmıştır.

Elde edilen bulgulara göre incelenen 34 sektör içinde 16 sektörün emisyon sorumluluğu diğerlerine göre daha yüksek tespit edilmiştir. Bunlar; (1) Tarım, avcılık ve ilgili hizmet faaliyetleri; Ormancılık, tomrukçuluk ve ilgili hizmet faaliyetleri; Balıkçılık, balık üretme ve yetiştirme çiftliklerinin işletilmesi ve balıkçılıkla ilgili hizmetler olarak tanımlanan sektörün Rasmussen ve Chenery Watanebe yaklaşımlarına göre ileri bağlantı etkisinin yüksek olduğu görülmektedir. Bu sektör ayrıca sera gazı salınımı, asit miktarının artması ve ozon tabakasına zarar veren gazların salınımında diğer sektörlere kıyasla geniş bir sorumluluğa sahip olmaktadır. (2) Maden kömürü, linyit ve turba çıkarımı; Tetkik ve arama hariç, ham petrol ve doğalgaz çıkarımı ve bunlarla ilgili hizmet faaliyetleri; Uranyum ve toryum cevheri madenciliği; Metal cevheri madenciliği; Taşocakçılığı ve diğer madencilik olarak tanımlanan sektörün Rasmussen yaklaşımına göre zayıf, Chenery Watanabe yaklaşımına göre de ileri bağlantısı yüksek olduğu tespit edilmiştir. Bu sektörün emisyon sorumluluğuna bakıldığında ise yalnızca sera gazı salınımı açısından dikkat edilmesi gerektiği söylenebilir. (3) Gıda ürünleri ve içecek imalatı; Tütün ürünleri imalatı olarak tanımlanan sektörün her iki yaklaşıma göre de geri bağlantı etkisi yüksek iken sektörün sera gazı salınımından, asit miktarını artırmadan ve ozon tabakasına zarar veren gazlardan dolayı emisyon sorumluluğu bulunmaktadır. (4) Tekstil ürünleri imalatı; Giyim eşyası imalatı; kürkün işlenmesi ve boyanması olarak tanımlanan sektörün Chenery-Watanabe yaklaşımına göre geri bağlantı etkisi yüksek iken Rasmussen yaklaşımına göre kilit sektör olduğu görülmüştür. Bu sektöründe sera gazına, asitleşmeye ve ozon tabakasında zarara neden olan gazlardan dolayı emisyon sorumluluğu bulunmaktadır. (6) Ağaç ve mantar ürünleri imalatı (mobilya hariç); Hasır ve buna benzer, örülerek yapılan maddelerin imalatı olarak tanımlanan sektör Chenery-Watanabe yaklaşımına göre kilit sektör olurken Rasmussen yaklaşımında geri besleme etkisi yüksek sektör olarak gözükmektedir. Bunun yanı sıra sektörün sera gazı salınımı açısından sorumluluğu bulunmaktadır. (8) Kok kömürü, rafine edilmiş petrol ürünleri ve nükleer yakıt imalatı sektörü Chenery-Watanabe yaklaşımına göre ileri bağlantı etkisi yüksek Rasmussen yaklaşımına göre ise zayıf sektördür. Bu sektörün ise sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu bulunmaktadır. (9) Kimyasal madde ve ürünlerin imalatı sektörü her iki yaklaşıma göre de kilit sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu söylenebilir. (10) Plastik ve kauçuk ürünleri imalatı sektörü Chenery-Watanabe yaklaşımına göre kilit sektör iken Rasmussen yaklaşımına göre geri bağlantı etkisi yüksek sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu söylenebilir. (11) Metalik olmayan diğer mineral ürünlerin imalatı sektörü Chenery-Watanabe yaklaşımına göre kilit sektör iken Rasmussen yaklaşımına göre geri bağlantı etkisi yüksek sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu söylenebilir. (12) Ana metal sanayi; Makine ve teçhizatı hariç; Metal eşya sanayi sektörü her iki yaklaşıma göre de kilit sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu görülmektedir. (17) Elektrik, gaz, buhar ve sıcak su üretimi ve dağıtımı; Suyun toplanması, arıtılması ve dağıtılması sektörü Chenery-Watanabe yaklaşımına göre ileri bağlantı etkisi yüksek sektör iken Rasmussen yaklaşımına göre kilit sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu söylenebilir. (18) İnşaat sektörü her iki yaklaşıma göre de geri bağlantı etkisi yüksek sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu görülmektedir. (23) Kara taşımacılığı ve boru hattıyla taşımacılık sektörü her iki yaklaşıma göre de ileri bağlantı etkisi yüksek sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu görülmektedir. (24) Su yolu taşımacılığı sektörü Chenery-Watanabe yaklaşımına göre ileri bağlantı etkisi yüksek sektör iken Rasmussen yaklaşımına göre zayıf sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu söylenebilir. (25) Havayolu taşımacılığı sektörü her iki yaklaşıma göre de geri bağlantı etkisi yüksek sektördür. Sektörün sera gazı artırıcı, asitleştirme ve ozon tabakasına zarar veren gazlarla ilgili sorumluluğu olduğu görülmektedir. (34) Diğer hizmet faaliyetleri; Evlerde yaptırılan hizmet işleri sektörü her iki yaklaşıma göre de zayıf sektör olarak değerlendirilmekte ve sera gazı sorumluluğu bulunmaktadır.

# Çevresel Sürdürülebilirlik ve Tarım

# Environmental Sustainability and Agriculture

Prof. Dr. Faik Bilgili (Erciyes University, Turkey)

Ph.D. Candidate Hayriye Hilal Bağlıtaş (Erciyes University, Turkey)

## Abstract

In the environmental sustainability concept, this paper investigates the relationship between agricultural emission and per capita income. Additional variable is agriculture sector energy consumption. Our data is related to 1990-2010 period for 22 countries which are in the Eurasian region. Firstly, dynamic OLS and full modified OLS are applied to the data. The results show that Environmental Kuznet Curve (EKC) hypothesis is valid for agricultural emission and income. Moreover, there is a co-integration relationship between agricultural emission and both income and agricultural energy consumption. Secondly, dynamic panel GMM and dynamic OLS are applied to little modified data. Results again, imply that EKC is true for agriculture sector. Based on these results, political and intuitional regulations could be developed for environmental sustainability.

## 1 Giriş

'Sustain' kelimesi 'sürdürebilirlik-sustainability' kavramının kökenini oluşturmaktadır ve Latince sustenare kelimesinden türemiştir. Desteklemek anlamı taşıyan kelime, zaman içerisinde geçirdiği anlam değişimiyle birlikte 'maintain' yani 'sürdürülebilirlik' kelimesinin eş anlamlısı olarak kullanılmaktadır. Sürdürülebilirlik kavramı üç unsuru barındırmaktadır; sosyal, ekonomik ve çevresel sürdürülebilirlik. Sosyal sürdürülebilirlik, toplumun 'ahlaki sermaye'sinin, paylaşılan değerler ve eşitlik hakları ile birlikte toplumsal, dinsel ve kültürel etkileşimlerle sürdürülmesi ve yenilenmesidir (Goodland, 1995). Ekonomik sürdürülebilirlik ise, fiziki sermayenin (malzeme, enerji ve doğal kaynaklar) devamlılığıdır. Çevresel sürdürülebilirlik kavramının yeterli bir içerik kazanıp, daha kapsamlı bir ifade olabilmesi; sosyal ve ekonomik sürdürülebilirlikle birlikte gerçekleşmektedir. Arzulanan çevresel şartların sürdürülmesi sosyal işlevselliğin idamesinde doğrudan katkı sağlarken, ekonomik sürdürülebilirlik açısından ise doğal kaynak ve hizmet akışı bağlamında önem arz etmektedir. Bu iki unsur, kendi ömürlerini devam ettirebilme konusunda cari ve gelecek nesilleri dikkate aldıkları müddetçe bir şansa sahip olacaklardır. Başka bir deyişle, sosyal ve ekonomik sürdürülebilirlikle birlikte ekosistemin sağlığını bozmadan beşer ihtiyaçlarının karşılanması gerekmektedir.

Sanayi devriminden önceki dönemlerde, tarım sektörü, hayvancılık dahil olmak üzere temel geçim kaynağı durumundaydı. Ticaret ve zanaat ile uğraşan kesim bulunmakla birlikte, ağırlık tarım sektöründe idi. Ancak zamanla, sanayi devrimiyle başlayan sanayileşme hareketleri neticesinde, tarım sektörünün ağırlığı azalmaya başlamıştır. Tarım sektörünün, milli gelir ve istihdamdaki payının azalmasına rağmen, spesifik önemini devam etmektedir. Bunun en önemli sebebi, tarım sektörünün yaşamsal gıda üretimini gerçekleştirmesidir. Buna ek olarak, endüstriyel üretime hammadde sağlaması, geçim kaynağı olması vb. durumlar tarım sektörünün önemini korumasını sağlamaktadır. Toprak için önemli bir unsur olarak dinitrojenin ($N_2$) sabitlenmesi, bunun yanında su birikimi ve sel kontrolüne verdiği destek; tarım sektörünün ekosisteme olumlu katkıları arasındadır.

Olumlu katkılarının yanı sıra, tarım sektörünün ekosisteme zararlı yönleri de vardır. Tarım sektörünün temel olarak çevreye verdiği zarar; gübre ve tarımsal ilaç kullanımı, otlakların yakılması, toprağın fazla işlenmesi, fazla sulama ve hayvansal atıklardan kaynaklanabilmektedir. OECD'nin 2013 tarihli yakın zaman verilerine göre, dünya genelinde ki toprağın %40'ı, su kaynaklarının ise % 45'i tarım amaçlı kullanılmaktadır. Ayrıca Dünya Bankası'nın 2012 verileri, tarım sektörü emisyonunun küresel sera gazı yayılımındaki payını %15-35 olarak saptamıştır. Bu göstergeler bile tarım sektöründeki yanlış ve/veya fazla kullanımın sebep olabileceği zarar açısından bir fikir vermektedir. Tarım sektörünün çevreyle etkileşiminin çok yönlü olması ve ekosistem ile birebir bağlantılı olması zararın boyutunu daha da arttırmaktadır.

Tarım, sektörünün verdiği zarar, üç değer üzerinden açıklana bilinmektedir; hava kalitesi, su kalitesi ve toprak kalitesi. Sulama ile fazla azot ve fosfat emilimi olmakta ve aynı zamanda fazla işlenme nedeniyle toprakta oksijen aşınması yaşanmaktadır. Fakirleşen ekimlik alanlardan daha fazla verim elde etmek maksadıyla daha fazla suni ve fenni gübre kullanımı kısır bir döngü oluşturmaktadır. Fazla gübre kullanımı ekinlerin yanmasına; aşırı su kullanımı ise bitkilerin su ihtiyacını karşılamaktan öte suda boğulmalarına sebep olabilmektedir. Böcek ilacı gibi kimyasal ilaç kullanımı hem toprağa, hem suya hem de havaya karışarak kirliliğe yol açmaktadır. Tarıma uygun olmayan arazilerin kullanılması (otlaklar gibi), hayvancılık sektörünü olumsuz şekilde etkilemekte, buna ilaveten erozyona da sebep olabilmektedir. Tarım sektörünün faaliyetleri neticesinde sera gazı etkisi oluşturan karbondioksit, metan ve azot dioksit gazları salınımları yüksek oranda gerçekleşmektedir. Bu gazlar, küresel ısınmaya ve dolayısıyla iklim değişikliklerine yol açabilmekte; amonyağın havaya karışması ise asit yağmur ile sonuçlanabilmektedir.

Ülkelerin, üretim ve tüketim faaliyetlerinde çevreye karşı gösterdikleri hassasiyet, gelir seviyeleriyle bağlantılı olabilmektedir. Bu doğrultuda geliştirilen ilk hipotez, Çevresel Kuznet Eğrisi hipotezidir. 1955 yılında Simon Kuznet tarafından gelişme evreleri ile gelir eşitsizliği üzerine temellenen Kuznet Eğrisine benzer ilişki, gelir seviyesi ile çevresel kirlilik değerlerine uyarlanmasıyla Çevresel Kuznet Eğrisi (ÇKE) elde edilmiştir. Bu eğriye göre, ülkeler gelişmelerinin ilk aşamalarında, gelir seviyesi arttıkça çevresel kirlilik değerleri artmakta ve belirli bir gelir seviyesinde kirlilik değerleri azami değerine ulaşmaktadır. Bu noktadan sonra, gelir arttıkça kirlilik seviyesi azalmaktadır. Bunun anlamı; bireyler düşük gelire sahip oldukları zaman öncelikli olarak kendi ihtiyaçlarını karşılamayı düşünmektedirler. Yürüttükleri üretim ve tüketim faaliyetlerinin çevreye verdiği zararı pek önemsemezler. Ancak gelir seviyesi yükseldikçe, bireyler dış çevreye karşı daha duyarlı hale gelmektedir. Bu neticesinde gelir ile kirlilik değerleri arasında ters-U şeklinde bir ilişki oluşacaktır.

Çevresel Kuznet Eğrisi, farklı sektör/endüstrilerin çevresel kirlilik değerlerine uyarlanabilmektedir. Bu bağlamda, tarım sektörünün emisyon değerleri ile gelir seviyesi arasında ÇKE'nin ön gördüğü ters-U şeklinde bir ilişkinin varlığı test edilecektir. İlk bölümde ÇKE ile ilgili literatürdeki çalışmalara yer verilecek, tarım sektörü ile ilgili olanlar daha detaylı ele alınacaktır. İkinci bölümde, ekonometrik analizin metodolojisine verilecek, son iki bölümde ise tahmin ve sonuç yer alacaktır.

## 2   Literatür Çalışması

Çevresel Kuznet eğrisi ile ilgili çalışmalar, başlangıçta kirlilik ölçümlerinin genel seviyesi ile kişi başına gelir arasındaki ilişkiyi araştırmaya yönelikti. Fakat daha sonraki çalışmalarda, sektörel bazda veya dışa açıklık gibi daha alt kalemler itibariyle, emisyon ile kişi başı gelir arasındaki bağlantı araştırılmaya başlanmıştır. Çevre kirliliği konusunda, literatürde yer alan çalışmalar üç gruba ayıra bilinmektedir. Kuznet Eğrisi üzerinden, kişi başı gelir ile çevre kirliliği arasında ters-U şeklinde bir ilişkinin tespitine dair analizler, birinci gruptaki analizleri oluşturmaktadır. İkinci grupta ise, eş-bütünleşme ve Granger nedensellik testlerini kullanarak enerji tüketimi ile ekonomik büyüme arasındaki uzun dönem ilişkiyi araştıran çalışmalar yer almaktadır. Üçüncü grup ise, karbondioksit emisyonu, enerji tüketimi ve ekonomik büyüme arasındaki bağlantıyı dinamik açıdan inceleyen çalışmalardan meydana gelmektedir. Panel ve zaman serisi analizlerinin sonuçları, ele alınan veri seti ve tekniğe göre farklılık arz etmektedir (Altıntaş, 2013). Analiz sonuçlarına göre doğrusal, monotonik artan, ters-U biçimli, U biçimli, N-biçimli ve ters-N biçimli sonuçların yanında, değişkenler açısından istatistiksel olarak bir ilişkinin saptanamadığı durumlar vardır (Başar ve Temurlenk, 2007)

Çevresel Kuznet Eğrisi ile ilgili yapılan ilk çalışmalar arasında Grossman ve Kruger (1991, 93, 95) çalışmaları yer almaktadır. Grossman ve Krueger (1991), çalışmalarının sonucunda ÇKE'ni destekleyen doğrudan kanıt bulamamış olsa bile daha yüksek gelir seviyelerinde kirlilik değerlerinin düştüğü tespit edilmiştir. Grossman ve Krueger (1995) ise, ekonomik büyüme ile çevre kirliliği arasında doğrudan bir ilişki tespit edilememiştir. Tablo 1'de analizlerle ilgili detaylar verilmektedir. Çınar vd. (2012), gelişmiş ülkeler için ters-U, GOÜ'ler için U şeklinde; Shafik (1994), ters-U şeklinde ilişki saptamıştır. Erol vd.(2013), Arı ve Zeren (2011) ve Poudel vd.(2009), CO2 (Karbondioksit) ile gelir arasında ve Akbostanci vd.(2009)'de, SO2 (Azotdioksit) ve PM10 (bir takım partiküller) ile gelir arasında N şeklinde bir ilişki tespit edilmiştir. Başar ve Temurlenk (2007), CO2 ve fosil yakıt ile gelir arasında ters-N şeklinde bir ilişki tespit etmiştir. Omri (2013) çalışmasında, enerji tüketiminden CO2 emisyonuna doğru tek yönlü nedensellik; ekonomik büyüme ile emisyon arasında ise iki yönlü nedensellik saptanmıştır. Perman ve Stern (2003)'de tüm ülkeler açısından, uzun dönemde ÇKE'nin geçerli olduğu saptanmıştır. Jaunkby (2011), Narayan ve Narayan (2010), Atıcı ve Kurt (2007), Galeotti v.d.(2006)'da geleneksel ÇKE şekline yani ters-U'ya rastlanmamıştır.

Spesifik olarak tarım sektörünün çevre kirliliği üzerindeki etkisini araştıran ampirik uygulamalar literatür açısından yakın bir geçmişe sahiptir. Haulman (2012), 1970-2008 yıllarını kapsayan panel veri analizi, dört farklı emisyon değeri üzerinden gerçekleşmiştir. İlgili emisyon kalemleri; kişi başı karbondioksit, metan, azot oksit ve amonyaktır. Kişi başına gelirin kullanıldığı analizin sonucunda, gelirin sadece kübik halini içeren kısıtlı modelin emisyon verilerine daha iyi uyum sağladığı tespit edilmiştir. Karbondioksit dışındaki diğer değişkenler ile kişi başı emisyon ve gelir arasındaki ilişki istatistiki olarak anlamlı çıkmamıştır. ÇKE'nin şekli metan, kişi başı azot oksit, karbon dioksit, amonyak, kişi başı amonyak ve toplam tarım emisyonu için yarı-ters U şeklinde tespit edilmiştir. Sadece kişi başı azot oksit, katı bir şekilde ters-U şeklinde iken diğerlerinin eğri sonuna doğru artış göstermesi daha fazla veri olduğu takdirde N şeklini takip edeceğini ifade etmektedir. 2.000 dolarlık gelir için, aşağı yönlü dönemeç noktaları 9.500 ve 20.000 gelir seviyesi arasındadır. Uygulana bilindiğinde, eğrideki nihai yukarı yönlü dönüş 30.000 ile 40.000 dolar arasındadır.

Coderoni ve Esposti (2011), İtalya tarım sektörü için çevresel Kuznet Eğrisinin geçerli olup olmadığını araştırmıştır. Emisyon verileri; farklı oluşum kaynaklarından yararlanarak metan, nitroksit, karbondioksit ve flor gaz değerleri için ölçülmüştür. Bölgesel uzun dönem emisyon serileri yapılan analizde LSDV (En Küçük Kareler Kukla Değişken) ve GMM (Genelleştirilmiş Momentler Yöntemi) tahmin metotları olarak kullanılmıştır. 1951-2008/1980-2008 farklı dönem verileri üzerinden yapılan analizde tarımsal emisyon değerleri ile sektörün ekonomik büyümesi arasında ters-U şeklinde bir ilişki olduğuna dair ampirik bir kanıta rastlanmamıştır.

| Yazar | Yıllar | Veri seti | Metot | Sonuç |
|---|---|---|---|---|
| Erol vd. (2013) | 1995-2011/10 yükselen piyasa ülkesi | Kişi başı $CO_2$ emisyonu ile kişi başı gelir ve nüfus yoğunluğu | Panel, eş bütünleşme testi | Analiz konu ülkelerde gelir ile çevre kirliliği arasında N şeklinde bir ilişki olduğu saptanmıştır. |
| Omri (2013) | 1990-2011/14 Orta Doğu ve Kuzey Afrika ülkesi | Kişi başı $CO_2$ emisyonu ile enerji tüketimi ve ekonomik büyüme | Panel-Eşanlı denklem sistemi | Enerji tüketiminden, $CO_2$ emisyonuna doğru tek yönlü nedensellik, ekonomik büyüme ile emisyon arasında ise iki yönlü nedensellik saptanmıştır. |
| Çınar v.d. (2012) | 1985-2009, GÜ ve GOÜ'ler | $CO_2$ emisyonu ile imalat sanayi ihracat ve ithalat payları | Panel, yatay kesit | Gelişmiş ülkeler için ters-U, GOÜ'ler için ise U şeklindedir. |
| Arı ve Zeren (2011) | 2000-2005, Türkiye | $CO_2$ emisyonu ve gelir, nüfus yoğunluğu, enerji tüketimi | Panel, genelleştirilmiş EKK | $CO_2$ ile gelir arasında N şeklinde bir ilişki tespit edilmiştir. |
| Jaunkby (2011) | 1980-2005/36 yüksek gelire sahip ülke | Kişi başı emisyon ve gelir verisi | Panel birin kök ve eş-bütünleşme, hata düzeltim modeli | ÇKE için bir kanıt bulunamamış ancak zengin ülkelerde $CO_2$'nin zamanla istikrarlı bir seviyeye geldiği tespit edilmiştir |
| Narayan ve Narayan (2010) | 1980-2004/43 GOÜ'ler | $CO_2$ emisyonu ve gelir | Panel eş bütünleşme, panel uzun dönem tahmin tekniği | Ortadoğu ve Güney Asya ülkeleri için uzun dönem gelir esnekliği kısa dönemdekinden daha küçük olduğundan, $CO_2$ gelir artışı ile beraber düşmektedir. |
| Akbostancı vd. (2009) | 1968-2003/1992-2001, Türkiye | $SO_2$, $CO_2$, PM10 emisyonları ve gelir | Zaman serisi-Panel | $CO_2$-gelir monotonik artan, $SO_2$ ve PM10 ile gelir arasında N şeklinde ilişki. ÇKE hipotezi desteklenmemektedir |
| Poudel v.d. (2009) | 1980-2000 15 Latin Amerika ülkesi | $CO_2$ emisyonu ile kişi başı gelir, nüfus yoğunluğu, ormanlık alan | Semi parametrik panel model | Bölgede N şeklinde ÇKE eğrisi geçerlidir. |
| Atıcı ve Kurt (2007) | 1968-2000, Türkiye | $CO_2$ emisyonu ve kişi başına gelir, ihracat, ithalat | Zaman serisi | Veri yetersizliği sebebiyle ÇKE ilişkisi araştırılamamıştır |
| Başar ve Temurlenk (2007) | 1950-2000, Türkiye | Kişi başı toplam $CO_2$, fosil yakıt, katı yakıt ve fueloil emisyonu ve kişi başına gelir | Zaman serisi | Gelir ile kişi başı $CO_2$ ve fosil yakıt emisyonu arasında ters N biçimli ilişki, ÇKE geçerli değildir. |
| Galeotti v.d.(2006) | 1960-1998/OECD'ye olan ve olmayan ülkeler | $CO_2$ emsiyonu ve gelir | Panel | Ters-U şeklinde bir ilişki saptanmamıştır |
| Perman ve Stern (2003) | 1960-1990 74 ülke | Sülfür emisyonu ile kişi başı gelir | Panel, eş bütünleşme testi | Tüm ülkeler açısından ve uzun dönemde ÇKE geçerli iken, bireysel ülkeler için geçerli değildir |
| Grossman ve Krueger (1995) | 1979-1990/42 ülke ölçümü | Çeşitli hava ve su kalitesi verileri ile gelir | Panel | Ekonomik büyümenin kaçınılmaz bir şekilde çevreye zarar verdiğine dair kanıt bulunamamıştır. |
| Shafik (1994) | 1960-1990/149 ülke verisi | 6 adet doğal kaynak stoku göstergesi, 6 adet çevresel gösterge ile kişi başı gelir | Panel, OLS | $SO_2$, parçacıklara göre daha sonra ve daha yüksek zirve yaparak ters-U şeklini göstermektedir. |
| Grossman ve Krueger (1991) | 1977-1982-1988 yılları farklı ülke-şehirler | $SO_2$, asılı parçacıklar, karanlık madde ile kişi başı gelir | Yatay kesit | Sülfür ve $CO_2$ emisyonları düşük gelir seviyelerinde artmakta fakat daha yüksek gelir seviyelerinde ise düşmektedir. |

***Tablo 1.*** *Çevre Kirliliği-Gelir ile ilgili Literatür Sonuçları **Kaynak:** Yazar tarafından düzenlenmiştir.*

Anees ve Ahmed (2011), Pakistan için nedenselliğin araştırıldığı analizlerinde CO2 emisyonu, ekonomik büyüme, enerji tüketimi, uluslararası ticaret ve tarımın makineleşme oranını değişken olarak kullanmışlardır. Veriler yıllık olup 1971:2007 dönemi kapsamaktadır. Uygulanan analizler; VAR analizi, koentegrasyon testleri ve Hata Düzeltme Modeli, Granger Nedensellik, birim kök testleridir. Analiz sonucunda, GDP'nin emisyon ve enerji tüketimindeki uzun dönem değişmelerin büyük sebebi olduğu saptanmıştır. GDP ve emisyon arasındaki iki yönlü nedensel ilişki ve emisyondan enerji tüketimine doğru tek taraflı nedensellik; Pakistan hükümetinin çevresel bozulmayı kontrol etmek için enerji kaynaklarının etkin kullanımı teşvik etmeye yönelik politika uygulaması gerektiğini iddia etmektedir.

## 3 Metodoloji

Ekonometrik analizler veri seti çeşidine göre üçe ayrılmaktadır; zaman serisi, yatay kesit ve panel. Zaman serisi analizlerinde veri seti bir ya da daha fazla değişkenin zaman içerisindeki değişimiyle ilgili iken (milli gelir verileri gibi), yatay kesit verileri ise belirli bir zamandaki bir ya da daha fazla değişkenin farklı değerler için toplanan verileriyle ilgilidir (50 farklı şehir için suç oranları gibi). Panel verilerde ise zaman boyutu kadar uzay (mekan) boyutu da söz konusudur. Yatay kesit ile zaman kesiti verilerinin birleşimi olduğunu söylenebilir (Gujarati, 2009). Panel veri analizlerinin temel formülasyonu;

$$Y_{it} = \alpha + X'_{it}\beta + u_{it} \qquad\qquad i = 1, \dots N; \ t = 1, \dots, T \qquad\qquad 1$$

1 nolu denklemde i, hane halkları, bireyler, firmalar, ülkeler vb. ve t ise zamana karşılık gelmektedir. i, aynı zamanda yatay kesit; t ise, zaman serisi boyutuna karşılık gelmektedir. $\alpha$, sabit sayı; $\beta$, K*1 boyutunda parametre matrisidir. $X_{it}$ ise, K tane açıklayıcı değişkenle ilgili i. gözlemdir (Baltagi, 2005). $\alpha_i$, birey-spesifik etki iken $\alpha_t$, zaman-spesifik etki olmaktadır. Panel veri uygulamalarının çoğu, dağılımlar için tek taraflı hata bileşen modelini kullanmaktadır;

$$u_{it} = \mu_i + v_{it} \qquad\qquad 2$$

2 nolu denklemdeki $\mu_i$, 'gözlemlenemeyen' birey-spesifik etki ve $v_{it}$ ise, sapma dağılımıdır. Sapma dağılımı, bireyler ve zamana bağlı olarak değişmektedir ve regresyonda normal dağıldığı düşünülmektedir. $\mu_i$, zaman-sabittir ve regresyona dahil edilmeyen herhangi bir birey-spesifik etkiye karşılık gelmektedir (Baltagi, 2005). Panel veri uygulamaları sabit etki EKK kukla değişken, rastsal etki, havuzlu EKK ve gruplar arası sabit etki modeli olmak üzere dörde ayrılmaktadır.

Sabit etki EKK kukla değişken modelinde, $\mu_i$ sabit olduğu varsayılarak tahmin edilmektedir ve artıkların (sapmalar) dağılımı, bağımsız ve özdeş dağılımlı $v_{it}$ [$i.i.d.(0, \sigma_v^2)$] ile stokastiktir. $X_{it}$'nin, tüm i ve t'ler için $v_{it}$'den bağımsız olduğu varsayılmaktadır. Sabit etki modeli, N sayıda spesifik firmaya odaklandığımızda ve yorumumuz bu firma davranışlarıyla kısıtlı ise uygun bir spesifikasyon olmaktadır (Baltagi, 2005).

Rastsal etki modelinde, sabit etki modelindeki gibi çok fazla parametre olması ve serbestlik derecesinde kayıp yaşanmasından kaçınmak için $\mu_i$'nin tesadüfi olduğu varsayılmaktadır. Bu durumda, $\mu_i \sim [i.i.d.(0, \sigma_\mu^2)]$, $v_i \sim [i.i.d.(0, \sigma_v^2)]$'dır ve $\mu_i$, $v_i$'den bağımsızdır. Aynı zamanda, $X_{it}$'de tüm i ve t'ler için $\mu_i$ ve $v_i$'den bağımsızdır. Bu model, N tane birey rastgele bir şekilde büyük bir nüfustan seçiliyor ise uygun olmaktadır (Baltagi, 2005).

Havuzlu EKK'da tüm gözlemler yatay kesit ve zaman serisi boyutu göz ardı edilerek analiz edilmektedir. Sabit etki modelinin sınırlandırılmış şeklidir. Gruplar arası sabit etki modelinde ise gözlemler havuzlu veriye dönüştürülür, fakat her bir değişken ortalamadan sapmayı ifade etmektedir ve EKK regresyonu ortalama-düzeltilmiş değerler olarak tahmin edilmektedir (Gujarati, 2009).

Panel veri setinin kullanıldığı bu çalışmada, dinamik EKK ve tam uyarlanmış EKK tahmin metotları kullanılmaktadır. Bu analiz yöntemlerini genel hatları ile tanımlamak uygun olacaktır. Dinamik EKK sürecinde (DEKK), değişkenler arasındaki uzun dönem ilişkiyi tespit etmek maksadıyla tek eş-bütünleşme vektörü kullanılmaktadır. DEKK regresyonundaki gecikme ve ilerleme ifadeleri, stokastik hata terimlerini stokastik regresyondaki tüm geçmiş sapmalardan bağımsız kılma amacıyla kullanılmaktadır (Gutierrez, 2010). Stock ve Watson (1993) DEKK modeli;

$$Y_t = \beta_0 + \vec{\beta}X + \sum_{j=-q}^{p} \vec{d}_j \Delta X_{t-j} + u_t \qquad\qquad 3$$

3 nolu denklemde, $\vec{\beta}$; eş-bütünleşme vektörü yani uzun dönem kümülatif çarpanlardır yada X'teki bir değişmenin Y üzerindeki uzun dönem etkisi, p; gecikme uzunluğu ve q; ilerleme uzunluğudur. DEKK'daki gecikme ve ilerleme terimleri, stokastik hata terimlerini stokastik açıklayıcı değişkenlerdeki tüm geçmiş inovasyonlardan bağımsız kılma amacına sahiptir. Bu durumda, birim kök testleri, tahmin edilen EKK regresyonunun artıkları ile ilgili sahte regresyonu test etmek amacıyla gerçekleştirilmektedir. Eğer stokastik hata terimi birim-kök durağan değilse, sahte regresyona sebep olmaktadır (Gutierrez, 2010).

Tam Uyarlanmış EKK (Full modified OLS); optimal eş bütünleşme regresyonları sağlayan bu yöntem Phillips ve Hansen (1990) tarafından geliştirilmiştir. Seri bağımlılık etkisinin hesaplamak için en küçük kareler yönteminin uyarlanmış şeklidir ve bağımsız değişkenin içselliği eş-bütünleşik ilişkinin varlığı ile sonuçlanacaktır

(Phillips, 1993). Regresyon denkleminde ya içsel değişkenin hata terimi ile dışsal değişken bağlantılıdır ya da açıklayıcı değişken dışsal değildir. Bu denklemdeki, seri korelasyon sorununu ve içsel açıklayıcı değişken problemini düzeltmek için tam uyarlanmış EKK (TUEKK) kullanılmaktadır (Enders, 2010). İki değişkenli model üzerinden TUEKK gösterimi;

$$Y_t = \beta_0 + \beta X_t + u_{1t} \qquad\qquad 4$$

$$\Delta X_t = u_{2t} \qquad\qquad 5$$

4 nolu denklem eş-bütünleşme ilişkisini gösterirken, 5 nolu denklem ise stokastik trendi göstermektedir. $u_{1t}$ ve $u_{2t}$ her iki denklemdeki hata terimlerinin durağan olduğunu göstermek için kullanılmıştır. Bununla birlikte, hata terimleri seri korelasyonlu ve birbirleriyle bağlantılı olabilmektedirler. Bu yöntem, EKK tahmincisi ile başlamaktadır. İçselliği ve seri korelasyonu dikkate alarak düzeltmelere gitmektedir.

## 4   Tahmin

Veri setimiz 1990-2010 yıllarını ve OECD'ye üye 22 tane Avrasya coğrafyasındaki ülkeleri kapsamaktadır. Analizde kullanılan değişkenler: $CO_2$ eşdeğerliğinde toplam tarım emisyonu (agri), kişi başı gelir (pgdp) ve tarım sektörü enerji tüketimi (enr)'dir. Emisyon ve enerji tüketim rakamları OECD web sitesinden elde edilirken; kişi başı gelir rakamları Dünya Bankasının web sitesinden derlenmiştir. Logaritmik-doğrusal model;

$$lnagri_{i,t} = \alpha_1 pgdp_{i,t} + \alpha_2 pgdp_{i,t}^2 + \alpha_3 lnenr_{i,t} + \vartheta_{i,t} \qquad\qquad 6$$

Denklemdeki değişkenler sırasıyla kişi başı tarım emisyonunun ln'li değeri, kişi başı gelirin birinci ve ikinci derece değerleri ile tarım sektörü kişi başı enerji tüketiminin ln'li değerleridir.

| Homogeneous AR | lnagri | pgdp | pgdp$^2$ | lnenergy |

***Tablo 2.*** *1990-2010 dönemi Panel Veri Panel Birim Kök Testleri*

Tablo 2'deki birim kök testleri tüm değişkenlerin kendi düzeylerinde birim kök içerdiğini göstermektedir. İlk farkları alındığında ise Breitung t istatitiğine göre Δpgdp ve Δgdp$^2$ değişkenlerinin birim kökten arındırılamadığını gösterirken, IPS w-istatisiği ve ADF-Fisher Ki-kare istatistiğine göre değişkenler birim kökten kurtulmaktadır. Diğer tüm değişkenler, üç test istatistiğine göre ilk farkları alındıklarında I (1)'de durağanlaşmaktadır.

| Homojen AR | İstatistik | Olasılık (p) |
|---|---|---|
| DF rho (Kao, 1997) | -10,812 | 0,000 |
| DF *t* rho (Kao, 1997) | -3,361 | 0,000 |
| DF rho star (Kao, 1997) | -20,382 | 0,000 |
| DF *t* rho star (Kao, 1997) | -2,295 | 0,010 |
| ADF (Kao, 1997) | -1,884 | 0,029 |
| *t* rho NT (Pedroni, 1995) | -216,240 | 0,000 |
| TN1 rho (Pedroni, 1995) | -24,510 | 0,000 |
| TN2 rho (Pedroni, 1995) | -24,484 | 0,000 |

***Tablo 3.*** *1990-2010 dönemi Panel Veri Panel Eş-Bütünleşme Sonuçları*

Tablo 3, homojen (ortak AR) panel eş-bütünleşme sonuçlarını göstermektedir. Tüm Kao (1997) ve Pedroni (1995) test sonuçlarının hepsi % 5 seviyesinde istatistiksel olarak önemli bulunmuştur. Bu durumda değişkenler arasında eş-bütünleşik bir ilişki vardır denilebilir.

Tablo 4, 1990-2010 dönemi tarım sektörü emisyon değerleri ile kişi başı gelir ve enerji tüketimi arasında ki uzun dönem dinamikleri göstermektedir. Uzun dönem ve kısa dönem EKK ile uyarlanmış EKK tahminleri, homojen DEKK'ya benzerdir. DEKK uzun dönem tahminlerinden pgdp ve $pgdp^2$ serileri % 5, *lnenr* serisi ise % 1 düzeyinde anlamlı bulunmuştur.  Uzun dönem homojen DEKK tahminlerinde pgdp>0 ve $pgdp^2$<0 olması ÇKE eğrisinin ters-U şeklinde olması için gerekli koşulları sağladığını göstermektedir.

**Tablo 4.** *Uzun Dönem Panel Veri Çevre Kirliliği-Gelir İlişkisi 1990-2010*

Çevresel Kuznet Eğrisi bağlamında, kümülatif değerlerinin kullanıldığı tarım emisyonu ve tarım sektörü enerji tüketim verileri kişi başı verilere dönüştürülerek (sırasıyla pagri, penr) tekrar analize tabi tutuldu. Rakamların kişi başı verilere dönüştürülmesinde, Dünya Bankasının web sitesinden elde edilen nüfus verileri kullanılmıştır. Ufak bir modifikasyonun gerçekleştirildiği veri setiyle, dinamik sabit etkili Genelleştirilmiş Momentler Metodu (DGMM) ve DEKK ($u_i \sim N[(0, \sigma_v^2)]$) yöntemi, beraber kullanılarak aşağıda yer alan sonuçlara ulaşıldı;

Bağımlı Değişken: pagri
Metot: Panel Dinamik En Küçük Kareler (DOLS)
Panel yöntemi: Havuzlu tahmin

| Değişken | Katsayı | Std. hata | t-İstatistiği | Ols. (p) |
|---|---|---|---|---|
| pgdp | 0.015199 | 0.004073 | 3.731316 | 0.0002 |
| pgdp² | -1.75E-07 | 2.89E-08 | -6.041451 | 0.0000 |
| penr | 1977.828 | 242.4404 | 8.157997 | 0.0000 |
| pagri(-2) | 0.472806 | 0.064763 | 7.300591 | 0.0000 |

**Tablo 5.** *Panel Dinamik EKK sonuçları*

Tablo 5, uzun dönem emisyon rakamları ile gelir ve enerji tüketimi arasında ki ilişkiyi göstermektedir. Değişkenlerin katsayıları % 1 düzeyinde anlamlıdır. Pgdp>0 ve pgdp²<0 olduğundan, yukarıda elde edilen ÇKE ile ilgili sonuçları desteklemektedir. Bu durumda, tarımsal emisyon rakamları ile gelir arasında ÇKE'nin öngördüğü şekilde istatistiksel açıdan ters-U şeklinde bir ilişkinin varlığından söz edebilinmektedir. 0,0152 katsayısı, emisyonun gelir esnekliğidir. Gelirdeki bir birimlik artış, emisyon değerini 0,0152 birim arttırmaktadır. Kişi tarım emisyon rakamının gecikmeli değeri (pagri(-2), uzun dönem dengesinden sapmanın iki dönem öncesinde meydana geldiğini göstermektedir. Daha önceki analizde 0,82 düzeyinde olan R-kare rakamları, bu analiz sonucunda 0,99 olarak tespit edilmiştir. Bu sonuç, ikinci modelin açıklama gücünün daha iyi olduğunu göstermektedir.

## 5  Sonuç

Sürdürülebilirlik, yüzleşmemiz gereken bir kavram olarak karşımıza çıkmaktadır. Gelecek nesillere yaşanabilir bir ekosistem bırakma, bu kavramın içeriğini nasıl doldurduğumuza bağlı olarak şekillenecektir. Çevresel, sosyal ve ekonomik olmak üzere üç sacayağı üzerine kurulu 'sürdürülebilirlik' endişesi, üç unsurun beraber değerlendirildiği durumda yol haritasının çizilmesini sağlayacaktır. Bu çalışma da, Avrasya bölgesinde yer alan ülkeler için tarım sektörü emisyonu ile gelir arasında Çevresel Kuznet Eğrisi tespit edilmiştir. Analizin sonucu,

gelir artışıyla artan, maksimum olan ve daha sonra azalan bir eğriyi ifade etmektedir. Tarım sektöründe çalışan ekonomik birimler, düşük gelir seviyelerinde çevre kirliliğine dikkat etmeyeceklerdir. Gelir artışıyla beraber yükselen emisyon rakamları, maksimum seviyeye ulaştıktan sonra gelirle birlikte düşmeye başlayacaktır. Bu sonuç bize, tarım sektöründe emisyon salınımının azaltılması konusunda gelir artışının önemini göstermektedir. Analizimize konu olan Avrasya ülkelerinde, gelişmişlik seviyesi yükseldikçe bireylerin çevre bilince de gelişecektir. Ancak, tarım sektöründe emisyon rakamlarının azaltılması, sadece gelir seviyesinin yükseltilmesini değil; aynı zamanda başka ek önlemleri de gerektirmektedir. Bazı önlemler şu şekilde sıralanabilir; ormanlık, meralık vb. alanların tarımsal faaliyetler için kullanılmaması, ekilebilir arazilere ise mesken yapılmaması gerekir. Tarımsal araziler etkin kullanılmalı, kimyasal ilaç ve gübrelerin kontrollü bir şekilde kullanımı sağlanmalıdır. Aşırı kullanımlara çeşitli müeyyideler uygulanmalıdır.  Gıda israfının önlenip, yerel bazda Avrasya coğrafyasında ki, küresel bazda da yer küröde gıda dağılımında eşitliğin sağlanması fazla üretimi önleyecektir. Dolayısıyla, fazla üretim kaynaklı çevre kirliliği engellenebilecektir. Su israfının engellenmesi ise hem içilebilir yer altı su kaynakları için önem arz ederken, aynı zamanda ekinlerin zarar görmesini de engellemektir.

# Yenilenebilir Enerji Politikaları ve Enerji Arz Güvenliği

# Renewable Energy Policies and Energy Supply Security

Asst. Prof. Dr. Poyraz Gürson (Atılım University, Turkey)

Ph. D. Candidate Mustafa Kemal Topcu (Ankara Chamber of Industry, Turkey)

Prof. Dr. Halil İbrahim Ülker (Atılım University, Turkey)

Asst. Prof. Dr. Turan Erman Erkan (Atılım University, Turkey)

## Abstract

Energy is one of the fields that innovation is to be speeded up regarding requirements and geopolitical position of Turkey. However, as a result of natural consequence of unplanned and incorrect energy policies, dependency rate of consumed energy of Turkey has reached out a rate of 72 percent. Since need to energy is increasingly growing and a large part of consumed energy is imported, dependency seems to continue to increase. Toward this end, studies related to reducing foreign dependency on energy, the largest input of manufacturing industry in Turkey, are reviewed and discussed with a literature survey methodology. And policy recommendations concerning energy supply security are made. Renewable energy has been attached great importance worldwide as well as nationwide because of providing reliable energy regarding economy, policy, and environment. In order to meet the increasing electricity needs of Turkey as a developing country; the number of facilities on renewable energy are also growing. Domestic production of equipment for renewable energy producing and integrating those into conventional system is of high importance because of energy supply security and sustaining reserves as well as reducing foreign dependency.

## 1 Giriş

Türkiye'nin 2023 hedefleri doğrultusunda hazırlanan ve 2014-2018 dönemini kapsayan Onuncu Kalkınma Planı; yüksek ve istikrarlı ekonomik büyümenin yanı sıra uluslararası rekabet gücünü de kapsayacak şekilde tasarlanmıştır. Türkiye'nin uluslararası rekabet gücünü ve dünya ihracatından aldığı payı artırmak için imalat sanayisinde dönüşümü gerçekleştirerek yüksek katma değerli yapıya geçmek ve ileri teknoloji sektörlerinin payını artırmak hedefi sanayide yüksek katma değerli üretim yapısına geçişi ve yüksek rekabet gücünün sağlanması amacına yönelik "Orta ve Yüksek Teknolojili Ürünlerde Avrasya'nın Üretim Üssü Olmak" vizyonunu ön plana çıkarmıştır.

Bu kapsamda, ülkemizin jeopolitik konumu ve gereksinimleri doğrultusunda Ar-Ge ve yenilik faaliyetlerinde ivme kazanması gereken ihtiyaç-odaklı alanlar içerisinde enerji de belirlenmiştir (TÜBİTAK, 2010). Çünkü Türkiye yıllardır sürdürülen plansız ve yanlış enerji politikalarının kaçınılmaz sonucu olarak, tükettiği enerjide yüzde 72 oranında dışa bağımlı bir ülke konumuna gelmiştir. Dünya Ekonomik Forumu (WEF) tarafından her yıl yayınlanan Küresel Rekabetçilik Raporu'nda 2011-2012 yılında küresel rekabet edebilirlik endeksine göre 59. sırada yer alan Türkiye'nin enerji ithalatçısı olan konumu gün geçtikçe derinleşmektedir. Ekonomisi hızla büyümeye devam ettiği için gelecekte enerji ihtiyacının artacağı ve kullandığı enerjinin büyük bölümünü ithal ettiği gerçeğine göre dışa bağımlılığı da artmaya devam edecektir. Enerjiyi yoğun olarak tüketen Türkiye'nin yeterli doğal kaynaklara sahip olmadığı da bir gerçektir (Kayıkçı, 2011). Bu durum enerjide yüksek oranlı dışa bağımlılığın sürmesine yol açmakta, cari işlemler dengesi ve enerji arz güvenliği üzerinde baskı oluşturmaktadır.

Bu kapsamda uygulanacak olan yerli kaynaklara dayalı enerji üretim programı ile 2011 yılı sonunda birincil enerji üretiminde yüzde 28 olan yurtiçi ve yurtdışı petrol ve doğal gaz çıkarımları dâhil yerli kaynak payının 2018 sonunda yüzde 35'e yükseltilmesi hedeflenmektedir (Onuncu Kalkınma Planı, 2013). Bu çabalarla birlikte enerji arz güvenliği ihmal edilmemelidir.

Ancak, ulusal alan yazında enerji arz güvenliği çalışmaları konuyu ağırlıklı olarak uluslararası ilişkiler ve karşılıklılık çerçevesinde ele almaktadır. Örneğin Bayraç (2009) küresel enerji politikalarını petrol ve doğalgaz açısından incelerken, Özkan (2010a) konuya bölgesel açıdan yaklaşmakta ve hatta Özkan (2010b) Nabucco Projesine, Belet (2013) de Trans Anadolu Doğalgaz Boru Hattı Projesine indirgeyebilmektedir. Benzer şekilde Ayhan (2009) ve Kaysi (2011) enerji konusunda Türkiye AB ilişkilerini değerlendirmektedir.

Buradan hareketle geleceğe ışık tutacak ve yenilenebilir enerjinin konumunu netleştirecek bir çalışmaya ihtiyaç olduğu anlaşılmaktadır. Bu açıdan Çalışkan (2009) tarafından enerjide dışa bağımlılık konusunda bir çalışma yapılmış ve yenilenebilir enerji kullanımına ilişkin açıklamalarda bulunulmuştur. Ancak bu kapsamda enerji arz güvenliği dahil nasıl bir yol haritası izleneceği net olarak ortaya konmamıştır.

Bu çerçevede, bu çalışma ile enerji konusundaki çeşitlenme, yenilenebilir enerjinin kullanılmasına yönelik politikalar ve enerji arz güvenliği tekrar gündeme taşınarak bir yol haritası sunulması amaçlanmıştır. Bu maksatla enerji arz güvenliği üzerine yapılan çalışmalar incelendikten sonra, ilk olarak Türkiye'deki durum ele

alınmış, müteakiben küresel ölçekteki çalışmalara değinilmiştir. Çalışma sonucunda bazı önerilere yer verilmiştir.

## 2   Enerji Arz Güvenliği Üzerine Kavramsal Bir Tartışma

Enerji arz güvenliği bazen karşılaşılacak güçlükleri yok sayacak kadar sığ, bazen bağlamı daraltılamayacak kadar geniş ele alınmaktadır. Enerji arz güvenliği, "enerjinin üretimi, iletimi ve tüketimi faaliyetleri kapsamında, enerji arzı, nakli ve talebinin, yeterli miktarda ve kaliteli olarak, makul maliyet/fiyatlarla, kesintisiz ve çevreye duyarlı biçimde gerçekleştirilmesi" olarak tanımlanmaktadır (Erdal ve Karakaya, 2012).

Ancak enerji arz güvenliği herkes için aynı anlamı taşımamaktadır. Enerji ihraç eden ülkeler, rezervlerini artıracak yönde talebin artmasını bu kapsamda değerlendirirken, Rusya için stratejik kaynaklar üzerinde egemenlik kurmak ve dağıtım ağına hakim olmak anlamı taşımaktadır. Öte yandan gelişmekte olan ülkeler ise ödemeler dengesinin enerji fiyatlarından nasıl etkileneceğini düşünmektedir. Çin ve Hindistan gibi gelişen piyasalar ise küresel pazara adapte olmanın yollarını aramaktadır. AB ise doğal gaza olan bağımlılıktan nasıl kurtulacağını araştırmaktadır. Türkiye gibi transit ülkeler enerji nakil hatlarının güvenliği ön plana çıkmaktadır.

Yukarıda sıralanan sebepler 1973 dünyasının ürettiği enerji arz güvenliği anlayışının bir uzantısıdır. 1973 krizinin yarattığı bu anlayışa göre enerji arz güvenliği petrol üretiminde petrol ihraç eden ülkelerden kaynaklanacak sorunlara müsaade etmemek üzerine kuruludur (Yergin, 2006). Günümüz dünyasında bu anlayış yerini tüm arz zincir ve altyapısını kavrayacak şekilde genişletilmek durumundadır.

Örneğin, enerji arzını güvenlik ve çevre riski olarak ele alan Erdal ve Karakaya (2012) enerji arz güvenliğini belirleyen ekonomik, siyasi ve coğrafi faktörleri detaylı olarak tartışmış ve enerji arz güvenliğinin temel boyutları arasında ulaşılabilir olma, ekonomik olma, elde edilebilir ve kabul edilebilir olmayı saymıştır. Sovacool ve Mukherjee (2001) ise erişilebilirlik, maliyet, teknoloji geliştirme, sürdürülebilirlik ve regülasyonların meydana getirdiği beş faktörlü bir yapıdan bahsetmiştir.

Kapsamlı bu anlayış içerisinde, enerji arz güvenliğini sağlamada başarılı bir stratejinin temel hedefleri aşağıdaki şekilde listelenebilir (UN ESCAP, 2010).

- Enerji talebi ve arzı arasındaki açığı en aza indirmek,
- Enerji yoğunluğunu azaltarak enerji verimliliği ve tasarrufunu artırmak,
- Optimal enerji karışımını oluşturmak,
- Enerji arzını çeşitlendirmek,
- Enerji altyapısını geliştirmek için yatırım yapmak,
- Alternatif ve yenilenebilir enerji kaynaklarına yönelmek,
- Ar&Ge faaliyetleri ile yenilik ve rekabeti teşvik etmek,
- Enerji fiyat dalgalanmalarına karşı kırılganlığı azaltmak,
- Enerji sektöründe iyi yönetişimin sağlanması.

Enerjide arz güvenliğini artırmak için alınacak tedbirler arasında enerji kaynağı ve tedarikçilerin çeşitlendirilmesi, yerel kaynakların değerlendirilmesi, iç piyasanın tam serbestleştirilmesi, sınır ötesi yatırımların artırılması, enerji kaynağı depolama kapasitesinin geliştirilmesi, enerji tüketiminde tasarruf ve enerji verimliliğinin artırılması olarak sayılmaktadır (Erdal ve Karakaya, 2012).

**Şekil 1**- Türkiye'de Enerji Tüketimi

## 3   Türkiye'de Enerji Kullanımı

Hızla gelişen ve buna paralel olarak, enerji ve elektrik talebi de hızla artan Türkiye'nin, enerji ve elektrik talebinin, bilimsel olarak öngörülmesi ve gerek kaynak tedarikinin ve gerekse yatırım planlamalarının bu talep tahminlerine dayanılarak yapılması hayati öneme sahiptir. TEİAŞ (2013) tarafından 2012-2021 dönemi için hazırlanan kapasite projeksiyonuna göre ülkemizde elektrik enerjisi talebinde yılda yaklaşık %7,5 artış (düşük

senaryoda 6,5) öngörülmekte ve talebin önümüzdeki 10 yılda %75-93 artması öngörülmektedir. Nitekim enerji talebinin seyri yukarı yönelimli olduğu Şekil-1'de görülmektedir.

Hedef elektriğin yeterli, kaliteli, sürekli, düşük maliyetli ve çevreye uyumlu bir şekilde tüketicilerin kullanımına sunulmasıdır. Dünyada ve ülkemizde yaşanan ekonomik ve politik gelişmelerle doğrudan etkileşim içinde olan Türkiye elektrik piyasası; 2008 yılının son çeyreğinde daralan, ancak 2010 yılı ile toparlanmaya başlayan ve 2012 yılında da devam eden talep artışının gerektirdiği yatırım ihtiyacı ve bu ihtiyaçlar çerçevesinde geliştirilmekte olan mevzuat altyapısı, gelişen ticaret ortamı ve ihtiyaç duyulan yeni insan kaynağı profili ile son derece dinamik bir süreçten geçmektedir (TEİAŞ, 2013:30). Ülkemiz elektrik enerji piyasası, GSYİH'nın yaklaşık %3'ünü oluşturmaktadır. Yıllık ortalama % 6,3 - 8,4 oranında büyüyen talebi karşılamak için özel sektörün katılımının temin edilmesi, maliyeti azaltmak için rekabetin sağlanması gerekmektedir (Güner ve Albostan, 2007:47-49).

Bu bağlamda ekonomilerin enerji bağımlılığı nedeniyle enerji kaynaklarının ve alternatif enerjiye yönelik teknolojilerin stratejik önemi günden güne daha fazla hissedilmektedir. Enerjide dışa bağımlılığımızı azaltacak alternatif politikalar cari açık ve ekonomik büyüme üzerinde de olumlu etki yapacaktır. Bu kapsamda yenilenebilir enerji üretimindeki payının artırılması ayrı bir önem taşımaktadır (Orta Vadeli Program 2013-2015). Bununla birlikte, yenilenebilir enerji kaynaklarının elektrik üretimindeki payının %20'lerden 2035 yılında % 29'a çıkması beklenmektedir (Onuncu Kalkınma Planı, 2013).

| Kişi Başı Elektrik Enerjisi Tüketimi (kWh/kişi) | 2.517 | 3.231 | 3.351 | 4.241 |
| Doğal Gazın Elektrik Üretimindeki Payı (%) | 45,8 | 43,2 | 43,0 | 41,0 |
| Yenilenebilir Kaynakların Elektrik Üretimindeki Payı (%)* | 25,3 | 27,0 | 27,7 | 29,0 |
| Elektrik Kurulu Gücü (MW) | 40.565 | 57.058 | 58.500 | 78.000 |
| Enerji Yoğunluğu (TEP/1000 Dolar) | 0,288 | 0,276 | 0,272 | 0,243 |

*Avrupa Komisyonu yayınladığı 2005 Raporunda 2030 yılında Avrupa için yenilenebilir kaynakların elektrik üretimindeki payını %12,1 olarak rapor etmektedir.

*Tablo-2. Enerji Sektöründe Gelişmeler ve Hedefler*

Bu sebeplerle, ülkeler enerji yatırımlarına önem vermekte ve sahip oldukları doğal kaynakları (su, güneş, rüzgâr, termik vb.) etkin ve verimli kullanarak enerji ihtiyacını karşılamaya yönelik faaliyetlerde bulunmaktadır. Artan enerji talebine, yenilenebilir enerji kaynaklarının kullanımını artırarak cevap vermeye çalışmaktadır. 2015 yılında dünyanın en büyük ikinci enerji üretim kaynağı olacak olan yenilenebilir enerji kaynaklarının, 2035 yılında kömür ile birlikte dünyanın en temel elektrik kaynağı haline geleceği öngörülmektedir (İzmir Kalkınma Ajansı, 2013).

Yenilenebilir enerji kaynakları tüm ülkelerde olduğu gibi Türkiye için de ekonomik, politik ve çevre açısından güvenilir enerji sağlama özellikleri ile oldukça önemli bir yere sahiptir (Uysal, 2011). Türkiye yenilenebilir enerji kaynakları bakımından oldukça güçlü bir potansiyele sahiptir. Güneş, biyokütle, rüzgâr ve jeotermal enerji kaynakları açısından, Türkiye'nin farklı kesimlerinde farklı enerji türlerine uygun sistemlerin kurulması olanaklıdır. Örneğin, Koç (1998) çevre sorunlarına en iyi çözümlerden birisini sunan rüzgar enerjisini Ayvalık bölgesi için ele almış ve ekonomik ve sosyal katkılarına da değinmiştir.

Ancak, Türkiye'de, enerji yatırımlarına yönelik pek çok gelişme olmasına rağmen bugüne kadar teşvik mekanizmalarındaki yetersizlikler, mevzuat eksikleri, yetişmiş insan kaynağı eksikliği ve teknoloji üretme/geliştirme konusundaki yetersizlikler yenilenebilir enerji yatırımlarının önündeki başlıca sorunlar olarak durmaktadır (İzmir Kalkınma Ajansı, 2013). Örneğin, Türkiye'de rüzgar enerjisinin ne potansiyeli hesaplanmış ne de rüzgar atlasına dayalı kesin veriler ortaya konmuştur (Soydal, Mızrak ve Çetinkaya, 2012). Bu tarz alternatif enerji kaynaklarına yatırımlarda sadece enerji üretimi değil, bu enerjinin sağlandığı kaynakların yerli üretim olması hususu ve üretimin yurt içinden sağlanması kanalıyla yerli üreticinin de teşvik edilmesi gerekliliği ortaya çıkmaktadır (İzmir Kalkınma Ajansı, 2013).

## 4 Küresel Uygulamalar

Türkiye enerji güvenliğine ağırlıkla stratejik konumunun avantajını kullanma açısından yaklaşırken, diğer ülkeler sürdürülebilirlik, çevresel etkiler, çeşitlendirme, bağımlılığı azaltma gibi farklı yaklaşımlarla konuyu ele almaktadır. Türkiye açısından nitel çalışmalar ağırlık kazanırken yurtdışında metodoloji önerileri veya gelecek projeksiyonlarını içeren uzgörüler ya da konumlandırma içeren nicel çalışmalara rastlanılmaktadır.

Örneğin; Sovacool ve Mukherjee (2001) beş faktörlü ve 20 bileşenli bir tipoloji önerirken erişilebilirlik, maliyet, teknoloji geliştirme, sürdürülebilirlik ve regülasyonları ön plana çıkarmaktadır. Erişilebilir olması aslında doğrudan enerji arzı ile ilintilidir. Farklı enerji çeşitlerini ve teknolojilerini barındırarak ülkeleri

bağımlılıktan kurtarmaktadır. Benzer şekilde Yergin (2006) konuyu tartışırken enerji güvenliğinin petrol ve doğalgaza indirgenemeyeceğini savunmaktadır. Araştırmacı 2006 yılı içerisinde Rusya-Ukrayna arasında yaşanan gerginlik sonrasında Rusya'nın uyguladığı yaptırımı örnek göstererek bağımlılığın sakıncalarından bahsetmektedir. Avrupa Birliğinin (AB) bu anlaşmazlıktan kaynaklanan gaz kesintileri yaşaması AB'yi başka kaynaklara yöneltmiştir. Nitekim İran'ın nükleer programının etkileri de çeşitlendirme yönündeki çabaları artırmıştır. AB enerjiye ilişkin karar verme sistemini enerji arz güvenliği, çevre hedefleri ve rekabet stratejilerinden bağımsız işletmemektedir. Bu sebeple, AB alternatif kaynak arayışı kapsamında İran, Irak, Türkmenistan, Kazakistan, Azerbaycan ve Mısır'la bazı projeler geliştirmeye çalışmaktadır (Ayhan, 2009).

Enerji kaynaklarının çeşitlendirilmesinin sadece arz güvenliği açısından ele alınmasının yanı sıra, enerji sadece elektrik üretiminde kullanılan bir emtia olarak algılanmamalı, karbon emisyonunun azaltılması, çevreye verilen zararlardan korunulması ve sürdürülebilirlik için enerjinin verimli kullanılması da göz önünde tutulmalıdır (Hurlbutt, 2010).

Stern (2004) ise çoğu akademisyen ve uygulamacıların üzerinde pek durmadığı GSMH-enerji ilişkisine değinmiş ve bu ilişkiyi etkileyen faktörlerin; enerjinin ikame edilebilirliği, teknolojik değişme, enerji girdisinin kompozisyonundaki değişim ve çıktılardaki değişim olduğunu belirtmiştir. Aynı anlayışa sahip araştırmacılar Lund ve Mathiesen (2009), Danimarka için bir metodoloji üzerinde çalışmış ve 2030 ile 2050 yılları için Danimarka'nın enerji ihtiyaç haritasını çıkararak enerji girdi ve çıktı kompozisyonun nasıl olması gerektiğini araştırmıştır. Araştırmacılar somut hedef olarak enerji arz güvenliğinin sağlanması, CO2 salınımının şimdiki seviyesinin yarıya kadar indirilmesi ve istihdam yaratacak ve ihracatı artıracak bir pozisyona taşınması şeklinde belirlemiştir.

30 yıldır ulusal strateji çizmeye çalışan Malezya, stratejisini bugün arz, verimlilik ve çevre olarak belirlediği üç temel esas üzerine belirlemiştir (Hashim ve Ho, 2011). 2000 yılında yenilenebilir enerji kullanımını artırmaya yönelik politikalar uygulamaya başlayan Malezya için mevzuat düzenlemeleri, yenilenebilir enerji üretimi teşvikleri, insan kaynaklarının yetkinliği, AR-GE faaliyetleri ve eylem planı öncelikli konular olarak tespit edilmiştir.

## 5  Sonuç ve Öneriler

Enerji arz güvenliği üzerindeki tartışmalar giderek artacağa benzemektedir. Enerji arz güvenliği bazen karşılaşılacak güçlükleri yok sayacak kadar sığ, bazen bağlamı daraltılamayacak kadar geniş ele alınmaktadır. Enerji ihraç eden ülkeler, rezervlerini artıracak yönde talebin artmasını bu kapsamda değerlendirirken, Rusya için stratejik kaynaklar üzerinde egemenlik kurmak ve dağıtım ağına hakim olmak anlamı taşımaktadır. Öte yandan gelişmekte olan ülkeler ise ödemeler dengesinin enerji fiyatlarından nasıl etkileneceğini düşünmektedir. Çin ve Hindistan gibi gelişen piyasalar ise küresel pazara adapte olmanın yollarını aramaktadır. AB ise doğal gaza olan bağımlılıktan nasıl kurtulacağını araştırmaktadır. Türkiye gibi transit ülkeler enerji nakil hatlarının güvenliği ön plana çıkmaktadır. Öyle ki, ABD dahi kaynak bağımlılığını yok etmeyi başaramamaktadır (Yergin, 2006).

En geniş anlamda enerji arz güvenliği, petrol ihraç eden ülkelerden ihtiyaç sahibi ülkelere güvenli bir şekilde ulaştırılması üzerine kurulmuştur. Enerji güvenliğinin en temel unsuru enerjinin elde edilebilir olmasıdır. Elde edilebilirlik altyapı maliyetleri ile ülkelerdeki finansal ve politik istikrarsızlık gibi farklı unsurları barındırmaktadır. İkinci unsur ise ulaşılabilirliktir. Bu kapsamda enerji kaynaklarının farklılaştırılması, enerji üretim, iletim ve dağıtım ağının farklılaştırılması ve enerjinin depolanması gibi yöntemlere başvurulabilir (Jansen, van Arkel ve Boots, 2004:5; Elkind, 2010:119).

Enerji güvenliğinin bir diğer boyutu ise üretilebilir olmasına ilişkindir. Enerji fiyatlarının krizler ve spekülatif nedenlerle dalgalanması, ülkelerin ekonomik kayıplara, sosyal zararlara, hatta siyasî istikrarsızlığa maruz kalmasına neden olabilmektedir (Erdal ve Karakaya, 2012:113). Enerji güvenliğinin son boyutu da sürdürülebilir olmasıdır. Sürdürülebilirlik hem tedarikinde sürekliliği hem de çevre dahil gelecek nesillerin kaynağının bugünden tüketilmemesini içermektedir.

Daha güncel anlayış enerji kaynaklarının çeşitlendirilmesini salık vermektedir. Bununla birlikte, bu anlayışı daha ileri götürerek yeni teknolojiler geliştirmek üzerinde durmak gerekmektedir. Bu bağlamda yenilenebilir enerji konseptinden yararlanıldığı görülmektedir. Bu çalışmanın önemi de bu çerçevede ortaya çıkmaktadır. Enerji arz güvenliğine farklı bir bakış açısı getirerek, diğer çalışmalar gibi politik ve stratejik açıdan ele almayarak, daha çok ulaşılabilirlik ve sürdürülebilirlik bağlamında konu incelenmiştir.

İstikrarlı bir büyüme yakalayan Türkiye'nin enerji ihtiyacı giderek artmaktadır. Hâlihazırda enerji bağımlılık seviyesi %70'lerde olan Türkiye'nin bu şekilde idame ettirebilecek gücü kendinde bulabilmesi güçtür. Bu sebeple enerji talebini karşılayabilmek için enerji arz güvenliğini de sağlayabilmelidir. Tartışmaların ışığında jeostratejik konumunu değerlendirerek konvansiyonel anlamda kurulu dağıtım ağlarının düğüm noktası olarak kendini sağlam alabilmektedir. Zira mevcut sistemi kullanmak her zaman için daha az maliyetli olduğu için hem arz eden hem de talep eden açısından avantaj sağlamaktadır. Türkiye özellikle AB'nin kaynak çeşitlendirme çalışmalarına uzak kalmayarak edindiği yeri üstünlükleri marifetiyle daha da güçlendirebilir.

Bununla birlikte enerji arz güvenliği dışa bağımlılığı azaltarak, kaynak çeşitliliği artırılarak sağlanabilir. Örneğin, tek ülkeden petrol ve doğalgaz almak yerine farklı ülkelerden ihtiyacın karşılanması cihetine gidilebilir. Öte yandan, yenilenebilir enerjinin kullanımı artırılarak da enerji arz güvenliğinin sağlanması mümkündür. Örneğin, Afşin-Elbistan linyit yataklarının elektrik üretiminde değerlendirilmesi için Birleşik Arap Emirlikleri ile ikili işbirliği anlaşması imzalanması, Tuz Gölü Doğal Gaz Yeraltı Depolama Projesinin yapımına başlanması, Azerbaycan ile Trans-Anadolu Doğal Gaz Boru Hattı (TANAP) projesinin gerçekleştirilmesine yönelik hükümetler arası ikili anlaşma imzalanması Türkiye'nin bu yöndeki gayretleridir. Böylelikle Türkiye hem kendi doğal kaynaklarını değerlendirebilir, hem dışa bağımlılığını azaltabilir, hem ihracatın ithalatı karşılama oranını dengeleyebilir, hem de cari açıkta olumlu gelişmeler yaşanabilir.

Türkiye açısından kavramsal çalışmalara rastlanmakla birlikte metodoloji sunan, yol haritası öneren herhangi bir çalışmaya rastlanmamaktadır. Sadece resmi olarak yayımlanan bazı raporlarda yer alan öngörüler ışığında hareket edilmektedir. Hâlbuki enerji arz güvenliği tek başına ele alınacak bir konu değildir. Çevresel kaygılarla ve ekonomik hedeflerle de örtüşmektedir. Çünkü yenilenebilir enerji kaynaklarının kullanımı enerji arz güvenliğine hizmet ederken, inovasyon sonucunda sürdürülebilir ulusal rekabet avantajı sağlanmasına katkı sağlayarak istihdam, cari açık, büyüme gibi makro ekonomik değişkenleri de etkileyebilir.

Bu kapsamda yatırım yapılacak yenilenebilir enerji kaynaklarının hidrolik, biokütle, güneş, jeotermal, dalga ve rüzgar enerjisi gibi çok çeşitli olmasına özen gösterilebilir. Enerji kaynaklarının birbirini ikame edebilir şekilde kullanılması güvenlik boyutuna daha fazla hizmet edebilir. Diğer taraftan enerji talebini kontrol altına alabilmek enerji verimliliğini artırarak enerji arz güvenliğine katkı sağlayabilir. Türkiye özellikle doğalgaz açısından Rusya'ya aşırı bağımlı hale gelmiştir. Dış kaynakları çeşitlendirmek suretiyle üzerindeki baskıyı hafifletebilir.

Enerji arz güvenliği konusunda bu çalışma kapsamında ele alınan konular ulusal ve uluslararası alan yazında genel kabul görmüş ilkeler halini almıştır. Ancak Türkiye'nin metodoloji bağlamında çalışmalara ihtiyaç duyduğu ortadadır. Bu çerçevede akademisyen ve politika yapıcıların bir araya gelerek daha rasyonel, daha optimal sonuçlar doğuracak çalışmalar yapması öncelikli bir konudur. Çünkü yenilenebilir enerji kaynaklarının kullanımı aynı zamanda yüksek teknoloji üretimi ve akabinde ihracatı getirebilecek bir alandır. Sistematik ve planlı bir çalışmaya ülkeye bu yetenek kazandırılarak, enerji arz güvenliği sağlanmakla kalmaz, sürdürülebilirlik de kazandırılabilir.

# Роль и значение социального маркетинга в экономике страны

# The Role and Importance of Social Marketing in the Economy

Prof. Dr. Anara Kamalova (Academy of Management, Kyrgyzstan)

## Abstract

Today one of the most important problems of the Kyrgyz economy is the involvement of business to the social issues of society and social marketing. The main goal of social marketing is to raise the company's image, because it can promote a brand by solving social problems. Also compliance with the principles of social marketing in activity provides the conditions for the creation of a positive image of a company, political party or a public figure. Despite the fact that global social marketing is growing rapidly, unfortunately, in Kyrgyzstan, it has not yet received adequate development and only some businesses take responsibility for the performance of these functions and occasionally solve social issues. Analyzing the social marketing technologies in Kyrgyzstan, it should be noted that, their use is very unpopular. This is due to the lack of effective support from the government. In our opinion, it is necessary to provide tax breaks for companies that address social issues as well as provide moral and legal support to these enterprises.

В современных условиях развития экономики Кыргызской Республики одной из важных проблем является вовлечение бизнеса в решение социальных вопросов общества, то есть в социальный маркетинг.

Опыт работы большинства крупных корпораций мира показывает, что они постепенно приходят к решению глобальных проблем общества. Социальный маркетинг входит в стратегию развития всех известных компаний и становится атрибутом успешного бизнеса, когда уже недостаточно просто удовлетворять потребительский спрос.

Основная цель социального маркетинга – поднять имидж компании в глазах общественности, ведь раскрутить бренд можно путем решения социальных проблем. Поэтому рассмотрим развитие концепций маркетинга в целом и социально-этического маркетинга, в частности.

Начиная разговор о социальном маркетинге, следует обратиться к истории развития концепции маркетинга. Существует пять основных концепций маркетинга.

1. Концепция совершенствования производства (концепция производства) охватывает ранние периоды развития маркетинга (конец XIX века) и предусматривает решение производственных вопросов без учета спроса потребителей.

2. Концепция совершенствования товара (концепция товара) (примерно 1905-1933 гг.) предусматривает улучшение качества товара, его конкурентоспособность на рынке.

3. Концепция коммерческих усилий (концепция продаж) (1933-1950 гг.) возникла вследствие конкуренции и предшествовала традиционной концепции классического маркетинга. Цель концепции продаж – увеличение объемов сбыта, необходимых для получения прибыли. Однако агрессивный маркетинг больше ориентирован на временные успехи на рынке.

4. Концепция маркетинга (1950-1970) представляет собой сравнительно новый подход и отличается направленностью на предложение потребителю того, что ему надо, то есть удовлетворение потребностей потребителей выходит на первый план.

5. Концепция социально-этического маркетинга (с 1970 г.). В социально-этическом маркетинге упор делается на комплексную маркетинговую деятельность, направленную на удовлетворение потребностей целевого рынка и одновременно учитывающую социальные и этические потребности общества в целом.

Эти концепции рассматривают различные периоды в истории экономики и основные социальные, экономические и политические перемены за последние 150 лет. Общая тенденция развития – перенос акцента с производства и товара на коммерческие усилия, затем на потребителя и все большая ориентация на проблемы потребителя и общества (социальная этичность). Данная концепция требует сбалансированности трех факторов: интересов общества, продавцов и покупателей.

Основной инструментарий социально-этического маркетинга более широкий, чем классического маркетинга. Он включает: комплекс маркетинга, исследование потребителя, исследование социальных и экологических последствий от производства и потребления производимых товаров и услуг. Рассматриваемый подход к пониманию маркетинга позволил взглянуть на существующие социальные проблемы иначе. Он сделал равными всех участников одного общего рынка в той степени, в которой каждый из них может оказывать влияние на общественное развитие. В это же время ученые впервые предложили термин «социальный маркетинг». Ф. Котлер определяет целью социального маркетинга не производство товаров и услуг как таковых, а оказание влияния на общественное поведение, для того

чтобы сделать общество лучше, при этом не извлекая каких-либо выгод для себя или своей организации. Также ученый подчеркивает, что социальный маркетинг может проводиться кем угодно: отдельными лицами, неформальными группами или официальными организациями, причем как коммерческими, так и некоммерческими. Специалисты, занимающие данную должность в коммерческой организации, ответственны за корпоративную благотворительную деятельность, управление конфликтами в организации и т.п.

| Элемент сравнения | Классический маркетинг | Социальный маркетинг |
|---|---|---|
| *Отличительные черты* | | |
| Тип продукта | Товары и услуги | Желаемое поведение |
| Цель деятельности | Экономический эффект | Социальный эффект |
| Конкуренты | Организации, предлагающие сходные товары и услуги или удовлетворяющие сходные потребности | Организации и предприятия, НКО, государственные организации, нацеленные на решение подобной проблемы |
| Сложность воздействия | Варьирует от незначительной к средней | Высокая |
| *Сходные черты* | | |
| Основной принцип | Ориентация на потребителя | |
| Способ удовлетворения потребностей — рыночный обмен, использование теории обмена | Восприятие полученных выгод как равных или превышающих затраты | |
| Маркетинговое исследование | Применяется на протяжении всего проекта, жизненного цикла товара/услуги | |
| Сегментирование | Стратегии разрабатываются для определенной целевой аудитории с ее нуждами, поведением и имея определенные ресурсы для реализации | |
| Комплекс маркетинга | Используется полностью | |
| Результаты | Оцениваются и используются для усовершенствования деятельности (посредством поиска «совета», как сделать лучше в следующий раз) | |
| Техника воздействия на аудиторию | Принципы и механизмы воздействия применяются в обоих случаях и весьма сходны | |
| Окупаемость расходов | Нацеленность на получение дохода от вложений | |

***Таблица 1.*** *Сравнение социального и классического маркетинга*

Поэтому, по нашему мнению, утверждение того, что в общем смысле социальный маркетинг — это технология решения социальных проблем и тем самым поднятие имиджа компании в глазах общественности, охватывает основное содержание социального маркетинга в современных условиях. На данном этапе будет уместным привести сравнение социального и классического маркетинга (таблица 1).

Можно сказать, что с точки зрения организации, социальный маркетинг – это технология воздействия на целевую аудиторию с целью добровольного принятия (выбора) ею предлагаемого продукта или услуги. Здесь нельзя путать социальный маркетинг и благотворительность. Если мы говорим о социальном маркетинге, то он, как было сказано выше, направлен главным образом на поднятие имиджа компании и с этой целью на раскрутку бренда корпорации, а благотворительность может быть оказана и без маркетинговых усилий.

Существует также понятие «социально ответственный бизнес», и, по нашему мнению, практическим выражением его идеального типа является социальный маркетинг. К основным направлениям социального маркетинга можно отнести следующие:

• целенаправленное формирование системы методов улучшения контакта фирмы с целевыми аудиториями;

• использование всего набора средств маркетинговой коммуникации (реклама, стимулирование сбыта, выставки, ярмарки, пропаганда и т.д.);

• разработка и последовательная реализация стратегической имиджевой концепции, основанной на реальных, а не мнимых достижениях фирмы;

• предвидение информационных кризисных ситуаций;

• осознание всеми сотрудниками фирмы общественной миссии фирмы;

• следование общечеловеческим нравственным нормам.

Несмотря на то, что в мировом масштабе социальный маркетинг развивается быстрыми темпами, к сожалению, в Кыргызстане пока еще он не получил должного развития, лишь некоторые коммерческие структуры берут на себя ответственность за выполнение перечисленных функций и эпизодически решают социальные вопросы. К примеру, можно показать решение социальные вопросов такими компаниями и фирмами, как «Шоро», «Акун», сотовая связь «Билайн» и «Мегаком», ОАО «Оптима Банк». В своей политике ОАО «Оптима Банк» определил широкий спектр направлений деятельности в области благотворительности. На протяжении многих лет оказывается целевая помощь наиболее уязвимым слоям общества, инвалидам, ветеранам Великой Отечественной войны. Одним из направлений благотворительности ОАО «Оптима Банк» является финансирование проектов, ориентированных на поддержку сирот и детей из неблагополучных семей, и другие работы.

Однако, несмотря на вышесказанное, большинство бизнесменов, которые работают на таких крупных рынках, как «Дордой», «Кара-Суу» и др., даже не думают о развитии социального маркетинга в республике. На наш взгляд, необходимо пропагандировать идею социального маркетинга среди этих бизнесменов, вызывая патриотические и чисто человеческие чувства у них, доказывать, что игнорирование социальных проблем может послужить причиной провала их бизнеса.

Зачастую бизнесмены «зацикливаются» исключительно на поиске финансирования своей деятельности, забывая об основной цели своего функционирования в современных условиях развития рынка. К сожалению, немногие понимают, что маркетинговая деятельность может помочь им в сборе средств и привлечении ресурсов в их бизнес.

Анализируя технологии социального маркетинга в Кыргызстане, необходимо отметить, что, к сожалению, их использование весьма непопулярно. Это связано с отсутствием действенной поддержки со стороны государства, которая особенно важна в кыргызском обществе. На наш взгляд, необходимо предоставить налоговые льготы для компаний, которые решают социальные вопросы, а также обеспечить моральную и законодательную поддержку этих предприятий.

Помимо коммерческих организаций социальным маркетингом занимаются в Кыргызстане и НКО, и политические партии, и другие общественные организации. Однако практика показывает, что зачастую о своем электорате они вспоминают только тогда, когда это им выгодно, например, во время выборной компании или организации митингов, или других мероприятий. А некоторые НПО, изначально предназначенные для решения насущных социальных проблем, забывают об этом, вовлекаясь в политические игры.

С нашей точки зрения, именно некоммерческие организации (негосударственные, относящиеся к «третьему сектору» экономики, далее НКО) должны ставить перед собой цель – сделать общество лучше. Другими словами, микроцелью деятельности НКО должна быть максимизация социального эффекта.

| Показатель | 2005г. | 2008г. | 2010г. | 2012г. | 2012г. в % к 2005г. |
|---|---|---|---|---|---|
| Число дошкольных учреждений В том числе: | 665 | 474 | 503 | 691 | 148,6 |
| В сельской местности | 201 | 230 | 312 | 390 | 194,0 |
| В городской местности | 264 | 273 | 282 | 301 | 114,0 |
| Численность детей в дошкольных учреждениях, тыс. человек | 59,1 | 68 | 76 | 85,2 | 144,1 |
| Число мест в дошкольных учреждениях | 60,8 | 65,1 | 71,4 | 80,5 | 132,4 |

**Таблица 2.** *Состояние материально-технической базы дошкольных образовательных учреждений Кыргызской Республики*

Исследование поведения субъектов рынка, занимающихся социальным маркетингом, показало, что, продвигая себя, свою компанию или партию на рынок, некоторые из них организуют национальные игры с крупными призами, устраивают тои и другие угощения в течение предвыборного периода, тогда как эти средства можно было направить на решение первостепенных социальных проблем, таких как строительство или капитальный ремонт школ, детских садов, медицинских учреждений. А о состоянии материально-технической базы дошкольных образовательных учреждений свидетельствуют результаты проведенного нами анализа статистических данных (табл. 2).

Как видно, количество мест в дошкольных учреждениях очень низкое. Не говоря о сельской местности, в городах в одной группе воспитываются в среднем 60 детей, что намного превышает норму. Такая же ситуация во многих школах республики.

Наиболее актуален и вопрос функционирования медицинских учреждений, так как наблюдается сокращение из года в год количества лечебно-профилактических учреждений республики (табл. 3).

| Показатель | 2000г. | 2005г. | 2010г. | 2012г. | 2012г. в % к 2000г. |
|---|---|---|---|---|---|
| Больничные учреждения | 321 | 159 | 184 | 177 | 55,1 |
| Врачебные учреждения | 621 | 203 | 163 | 153 | 24,6 |
| Фельдшерско-акушерские пункты | 873 | 872 | 993 | 1003 | 114,9 |
| Станции скорой медицинской помощи | 125 | 96 | 108 | 122 | 97,6 |
| Группы семейных врачей | 800 | 670 | 592 | 689 | 86,1 |

***Таблица 3.*** *Анализ развития медицинских учреждений в Кыргызской Республике*

В то же время в Кыргызстане прослеживается увеличение количества мечетей. По данным Нацстаткома республики, если в 1990 г. на территории Кыргызстана всего их насчитывалось 26 единиц, то на конец 2012 г. – уже свыше 2000. С одной стороны, отрадно, что почти каждый населенный пункт имеет свою мечеть (и не одну), и можно на месте совершать религиозные обряды, никуда не выезжая. С другой стороны, многие из них не действуют, неухожены, построены без учета численности верующих в данной местности.

Анализируя данное явление с позиций социального маркетинга, можно проследить следующую тенденцию: для того чтобы сделать благородное дело, бизнесмены, члены партии, общественные деятели, самоутверждаясь, добиваясь известности, узнаваемости, строят мечети. Мы не против таких действий, однако, когда в сельской местности наблюдается нехватка школ, дошкольных учреждений, а мечети стоят без дела, то вызывает огромное желание предложить состоятельным гражданам нашей республики, беспокоящимся о своем имидже, создать условия для детей нашей страны, обеспечить им хорошее образование и воспитание в новых, построенных на эти средства школьных и дошкольных учреждениях. По законам шариата они, во-первых, получили бы одинаковый "сооп", так как строительство школ, дошкольных учреждений и больниц оценивается равноценно.

Анализируя намерения людей, желающих самоутвердиться, мы пришли к выводу о необходимости в подобных действиях правильно выстраивать маркетинговую коммуникационную политику с точки зрения перспективы. Например, построив новую школу, человек прорекламирует себя не только на сегодняшний день, но и на далекую перспективу, так как останется в памяти не одного поколения детей.

Для оптимального использования возможностей социального маркетинга необходимо создать коммуникационную модель социально-этического маркетинга, опираясь на следующие основные принципы ее формирования:

• создание гармоничной атмосферы в отношениях с деловыми партнерами, достигаемой путем безусловного следования нормам взаимовыгодности, взаимопонимания, ответственности;

• формирование возможно более полного объема информационной базы для принятия решений;

• мотивация работников в соответствии с маркетинговой концепцией и принципом персональной эффективности каждого исполнителя;

• учет психологического климата.

Таким образом, коммуникационная модель социально-этического маркетинга предполагает рассмотрение маркетинговых коммуникаций как целостной системы рыночного взаимодействия с партнерами, включающей в качестве основных элементов информацию о движении товаров, изменениях в рыночной конъюнктуре, запросах и поведении потребителей, обмене технологиями, знаниями, опытом. Кроме того, социальные технологии, следующие нормам социально-этического маркетинга, должны стремиться к тому, чтобы компания занималась общественно значимыми проблемами (спонсорство, благотворительность, участие в жизни местного сообщества), учитывала государственные интересы, участвовала в решении социальных проблем. Подобная деятельность должна сопровождаться комплексом проводимых акций.

Участие в некоммерческих, но социально значимых проектах должно быть частью стратегических и текущих планов деятельности компании. Реальное участие организации в решении общественных проблем, просчитанное на перспективу, является основой имиджевой стратегии компании.

Многообразие проблем, которые приходится решать социальным маркетологам, требует формирования любой влиятельной организацией, будь то корпорация, политическая партия, финансовая или властная структура, профессиональной службы по связям с общественностью. Наличие такой службы не исключает сотрудничества с коммуникационными агентствами и частнопрактикующими консультантами в области связей с общественностью. Преимущества собственной службы по связям с общественностью заключаются в следующем:

• штатные сотрудники отдела – часть команды, исповедующей «фирменный стиль»;

• постоянные сотрудники самостоятельно работают со СМИ;

• им легче заниматься внутренним маркетингом, формированием неформальной коммуникационной структуры коллектива;

• возможно решение большого количества оперативных и долгосрочных задач с персональной ответственностью, легко достижима взаимозаменяемость сотрудников.

Соблюдение принципов социального маркетинга в своей деятельности обеспечивает условия для создания положительного имиджа компании, партии или общественного деятеля. Впоследствии наступление американского кризиса снизили многие показатели финансово-экономического состояния ряда стран мира. Масштабность финансового кризиса в определенной степени объясняется также следствием несбалансированных цен на энергоносители, неэффективности мировой финансово-кредитной системы, финансовых и фондовых рынков. В результате в штатах возникли проблемы платежного баланса, вырос внешний долг, нарушилось равновесие между выпуском денежной массы и ВВП и потреблением товаров, сократился, финансовые ресурсы и отмечена милитаризация экономики.

В 2010-2011 гг. по сравнению с 2007-2008 гг. состояние мировой экономики имеет тенденции снижения. Это произошло даже во многих странах мира, особенно в государствах с очень высоким уровнем развития индустриально-промышленных групп, где ранее ежегодно обеспечивалось устойчивый экономический рост. По этой же группе стран заметно снизился уровень ВВП на душу населения. Несмотря на это, данный показатель этой группы по сравнению с остальными группами (второй, третьей и четвертой групп) оказались значительно выше. Указанные группы стран по сравнению с первой группой в значительной степени ощущали влияние мирового финансового кризиса. В настоящее время, как и многие страны мира, из них отдельные страны Евросоюза, особенно Содружество независимых государств (далее СНГ), в том числе Кыргызская Республика (далее КР) также в определенной степени ощущала влияние финансового кризиса. Действительно мировой финансовый кризис стал глобальным кризисом. Поэтому в июне 2009 г. ООН приняла важное заявление о мировом финансовом кризисе и его влияние на развитие мировой экономики.

# Мировой финансовый кризис и его влияния на состояние экономики Кыргызстана

# World Financial Crisis and its Affects on the Kyrgyz Economy

Prof. Dr. Omurbek Karatalov (Kyrgyz-Russian Slavic University, Kyrgyzstan)

## Abstract

This paper has been investigated the main reasons world financial and economic crisis and defined the bases of split of the world financial environment. The paper offers ways of overcoming on financial and economic crisis in conditions of Kyrgyzstan within development of Eurasian economy. The new economic model of development of the country is developed. Priorities and strategy of development of the country on the near-term outlook for recovery from the crisis, improvement and preservation of stability of a macroeconomic situation, ensuring stability of a banking system, improvement of food, energy, industrial and ecological security are defined. Measures for demand stimulation are provided: reorientation to sectors with fast return; formation of the competitive environment for the purpose of the monopolism prevention, rendering financial support to subjects of small and average business.

## 1   Введение

Финансовый кризис произошел в 2007 г. в США, который в 2008 г. перерос до мирового финансового кризиса. Впоследствии наступление американского кризиса снизили многие показатели финансово-экономического состояния ряда стран мира. Масштабность финансового кризиса в определенной степени объясняется также следствием несбалансированных цен на энергоносители, неэффективности мировой финансово-кредитной системы, финансовых и фондовых рынков. В результате в штатах возникли проблемы платежного баланса, вырос внешний долг, нарушилось равновесие между выпуском денежной массы и ВВП и потреблением товаров, сократился, финансовые ресурсы и отмечена милитаризация экономики.

В 2010-2011 гг. по сравнению с 2007-2008 гг. состояние мировой экономики имеет тенденции снижения. Это произошло даже во многих странах мира, особенно в государствах с очень высоким уровнем развития индустриально-промышленных групп, где ранее ежегодно обеспечивалось устойчивый экономический рост. По этой же группе стран заметно снизился уровень ВВП на душу населения. Несмотря на это, данный показатель этой группы по сравнению с остальными группами (второй, третьей и четвертой групп) оказались значительно выше. Указанные группы стран по сравнению с первой группой в значительной степени ощущали влияние мирового финансового кризиса. В настоящее время, как и многие страны мира, из них отдельные страны Евросоюза, особенно Содружество независимых государств (далее СНГ), в том числе Кыргызская Республика (далее КР) также в определенной степени ощущала влияние финансового кризиса. Действительно мировой финансовый кризис стал глобальным кризисом. Поэтому в июне 2009 г. ООН приняла важное заявление о мировом финансовом кризисе и его влияние на развитие мировой экономики.

## 2   Причины появление мирового кризиса

Принятие такого решение связано с тем, что необходимо было проанализировать последствия финансового кризиса, чтобы защищать интересы развивающихся стран и стран переходной экономики. В условиях кризиса, у отдельных стран недостаточно выросли объемы отечественного товара производства, и они их пополняли путем ежегодного наращивания импорта товаров. Для решения этих диспропорций, многие страны, не имея собственных финансовых ресурсов, начали искать свободные денежные средства на финансовых рынках мира, путем внешних и внутренних заимствований. Отдельные государства мира попытались провести рыночное и государственное регулирование экономики и финансов. Многие рыночные структуры: банковская сфера, финансовые компании и фондовые рынки не смогли гибко перестроить свои механизмы совместно с потребителями рынков. В этих вопросах следует, заметит «особую роль» МФВ, ВБ, других финансовых институтов и рынков, а также «роль» управления экономикой США.

В этой связи в Докладе Комиссии под руководством Нобелевского лауреата Дж. Стиглица на тему «О реформе Международной валютно-финансовой системы: уроки глобального кризиса», указано, что: «Не следует забывать и о чувстве моральной вины: развивающиеся страны стали невинной жертвой ошибочного управления экономикой США. Существует и еще один аспект моральной ответственности США и других промышленно развитых стран перед развивающимися странами: они навязали

неопытным развивающимися странам политику либерализации без *соответствующих защитных механизмов*» (Стиглиц Дж.Ю., 2012).

Тем более при осуществлении экономической политики государства, особенно крупные индустриально – промышленные страны, включая штаты, и частные предприниматели этой страны, допустили просчеты, которые впоследствии отрицательно повиляли на ключевые показатели, характеризующие уровня социально-экономического развития. Поэтому в заключительной комментарии Доклада Комиссии было подчеркнуто, что «…кризис – творение человеческих рук: он стал результатом ошибок частного сектора и неправильной, обреченной на неудачу политики государства» (Стиглиц Дж.Ю., 2012).

Следовательно, ошибочная разная экономическая политика, проводимая, в различных странах мира в течение ¼ века способствовала, быстро распространится кризису на мировом масштабе, в рамках неолиберализма или рыночного фундаментализма. На этой основе было выработано предложение, что рынок может способствовать осуществлению саморегулированию, и нет необходимости заниматься государственном регулировании. Поэтому «Идеи и идеология ключевых аспектов того, что было принято по – разному называть – неолиберализм, рыночной фундаментализм или доктрины Вашингтонского консенсуса, ныне признаны, по меньшей мере, сомнительными» (Стиглиц Дж.Ю., 2012).

В рамках сомнительных направлений, многие страны мира, в даже в развитых и развивающихся странах была замечена рецессия и депрессия. «Нынешняя Великая Рецессия 2008 года – наиболее глубокий из многочисленных кризисов, поражавших планету. Но попытки предотвратить именно этот кризис окончились, полной неудачей…Глобализация обещала большую экономическую стабильность, но привела к большей нестабильности» (Стиглиц Дж.Ю., 2012).

Поэтому для преодоления финансового кризиса, особенно в управлении глобальных проблем мировой экономики необходимо предоставить ООН соответствующие функции в разрешении и согласовании узловых финансовых и экономических вопросов. Члены Комиссии ООН подчеркивали, что «Настоящий глобальный кризис предоставляет возможность укрепить ООН и усилить её роль в управлении мировой экономикой». Далее они акцентировали «…особое внимание при этом было уделено анализу последствий, как кризиса, так и антикризисных политических действий, направленных кроме прочего и на предотвращение рецидивов этих последствий для наименее развитых стран, стран с переходной экономикой и для беднейших слоев населения во всех странах» (Стиглиц Дж.Ю., 2012).

Следовательно, были множество взаимосвязанных причин для появления масштабного кризиса.

## 2.1 Кризис модели финансовой системы

Действительно, если глубже проанализировать сегодняшний кризис – это не просто кризис, а кризис модели финансово-экономической системы, которая была рекомендована МФИ, в рамках предложенной и одобренной американской верхушкой. В этой модели не предусмотрены выделение крупных финансовых ресурсов для поддержки развивающихся стран и стран переходной экономики. Поэтому для нормального существования этих группы стран, необходимо тщательно разобраться действующей модели финансово-экономической системы и принципиально менять социальную структуру, и одновременно основательно раскрыть недостатки механизмов и инструментов, и капитально реформировать действующей экономической модели, для выхода из кризиса. Для этого необходимо изучить, как воздействовал кризис на американскую экономику, стран Евросоюза и стран переходной экономики, и выработать новую экономическую модель. Хотя американская экономика напичкана долгами и диспропорциями. Для выхода из кризиса США пытается импортировать дешевые энергоресурсы из стран арабского мира и тем самым превращается в экспортера энергии и штаты, пытается развивать геополитику нефти. Соответственно американцы становятся энергоизбыточной страной.

Впоследствии раскол мировой финансовой системы приведет значительным проблемам, и возможно, ослаблению или распаду американской экономической модели. Оно было отмечено рядом различных причин, связанных с разрушением экономики этой страны, и в том числе, отказ от эмиссии, сделанный одновременно и Европейским Центробанком, и Федеральной резервной системой штатов. Здесь следует подчеркнуть, что руководители указанных структур прозрачно объяснили, в чём связана их причина – а это недостаточная эффективности проводимой ими политики. Здесь необходимо подчеркнуть, что впервые в истории ФРС США был проведен ее аудит. После того, как было решено раздать $800 млрд. для спасения банков, ФРС за год с небольшим напечатала еще $16 трлн. и выдала своим банкам. А это свидетельствуют, что пузырь ничем не обеспеченных долларов распечатан и роздан, и возможно, не избежать от краха мировой валютно-финансовой системы. Впоследствии может произойти проблемы международной торговли, но и передел собственности. Потому что доллары (а к ним связаны и другие мировые валюты) оказываются пустой бумагой. На их основе распределена крупнейшая собственность в мире, но если отданные за собственность доллары окажутся ничего не стоящими, и за это кто, же несет ответственность (Соколов К., 2012).

Эксперты отмечают, что в России порядка 90% собственности является иностранной. Это означает, что значительные финансовые ресурсы России распроданы за пустую бумагу. То же самое касается других

стран мира. Придет время, когда нужно будет решать вопрос нового устройства мира. Многие сейчас заняты проблемами прагматичного спасения своего бизнеса, своего состояния, но когда поймут бессмысленность всего этого, что новый мир начнут строить практически с чистого листа в интересах небольшой группы людей, то соотношение сил на мировой арене резко изменится.

Кроме того, даже было отмечено, что банкиры уже не могут самостоятельно решить проблему финансовых рисков, связанных с кризисами. Поэтому на этот счет вытекает принимать решения на политическом уровне. В то же время следует понять, что спасти финансовых перекупщиков: значительное количество банковских учреждений и других финансовых рынков, не имеет смысла, когда мировой финансовый кризис пока стал неуправляемым.

По данным интернет ресурсов крупнейшие банки США начали подготовку к возможному дефолту. Один из банков стал помещать в банкоматы на 20–30% больше долларов на случай ажиотажного спроса на наличные средства. Два других – запустили антикризисные программы, подобные тем, что действовали в 2011 г. Финансовые организации также рассматривают возможность введения свободных овердрафтов (учитывая вероятность риска, временно израсходовать значительные средства, независимо есть ли они на счету у финансовых рынков) для лиц, которые зависят от социальных выплат со стороны государственной службы.

### 2.2 Кризис и действия финансово-экономической службы

Вся служба данной системы, начиная от банкиров, олигархов до чиновников, связанные с МВФ и ФРС отошли в сторону, или, они занимаются своими проблемами, в рамках раздела мира на финансовые рынки. Хотя, допущение кризиса США в своей стране в 2007 г., при попустительстве МВФ, ВБ и других МФИ, прежде всего, произошло по вине государственных структур Америки, а также ФРС и других финансово-экономических подразделений указанной страны. Поэтому ООН, как мировое объединенное сообщество, отвечающее и координирующее за экономическое развитие всех государств – как члены ООН, должны потребовать от этих финансовых организаций, возмещение нанесенного ущерба.

К решению этой проблемы, ООН необходимо принимать объективную резолюцию. Виновные международные структуры и страны на основе резолюции ООН должны перечислять определенные средства на специальный счет ООН, часть этих средств, примерно 50% должны оставаться в распоряжение объединенных наций, а остальная доля следует передаваться странам переходной экономики и беднейшим странам мира в качестве возмещение нанесенного ущерба. Такое положение должно быть определено в Уставе ООН. Данная международная организация государств, была создана, в целях поддержания и укрепления мира, безопасности и развития сотрудничества между государствами. Хотя, роль этой организации, утверждают в российском МИД, расшатана. Это выражается, в частности, в том, что те же США и страны НАТО все чаще склонны слишком вольно трактовать резолюции Совбеза ООН, порой и вовсе выходя за их рамки. Поэтому в миссиях ООН, в том числе в Совете безопасности в установленном порядке должны быть предусмотрены обеспечение необходимое экономическое развитие всех государств – членов данной организации.

В то же время эксперты и аналитики финансово-экономической службы пытаются убеждать, о том, что сами по себе государства, даже США, в одиночку не играют ведущей роли в мировых процессах. Здесь, в условиях кризиса самыми главными игроками стали мировая финансовая олигархия и крупные транснациональные корпорации. И сними, тоже следует считаться, чем действовать в одиночку, без достаточного эффекта. Поэтому США, увидев, что Европа поэтапно создает региональное цивилизованное общество, с учетом индекса развития человеческого потенциала, и американцы начали работу по созданию своего экономического общего пространства с Мексикой и Канадой.

Необходимо отметить, что для выхода из кризиса инфраструктуры США постоянно усовершенствовалась. Для этого к современному кризису наличие предлагаемого проекта преднамеренно осуществлялись. Поэтому, чтобы как-то отвлечь или ослабить внимание и уровень напряженности психологического состояния граждан Америки мировые кризисы шли в связке с локальными конфликтами или войнами на территории других стран, согласии Конгресса США. Для Америки война, местного значения, считалась традиционным маневром разрешения финансово-экономических проблем кризиса и одновременно, обогащался военно-промышленный комплекс и его олигархи и их окружения. В конечном счете, основной целью локальных войн становился глобальный передел энергетических ресурсов мира и концентрации рычагов управления в пользу США.

Действительно выработанные некоторые направления США в отношении отдельных арабских стран, свидетельствуют о том, что поэтапно прибрав к рукам многих стран Ближнего Востока, американцы хотят осуществлять жесткий контроль над всеми регионами. И тем самым ослабить финансово-экономическое состояние Евросоюза, а также стран СНГ, в том числе особенно финансовых ресурсов России, формируемые в основном в рамках энергетического сектора страны. С учетом этих негативных явлений американцы хотят укрепить свое финансовое состояние.

### 2.3 Кризис в Евросоюзе

В борьбе финансовым кризисом, возможно, помогут крупный банковский союз и финансовый надзор. Кроме того, потребуется реформирования управления в еврозоне и Евросоюзе. Для этого, необходимо рефинансирование долга, которое уже привело ЕС к долговой катастрофе. В качестве гарантов и спонсоров вовлекаются те страны, которые находились не в самом плохом состоянии. Естественно, шансов возврата долга становится все меньше, ставки по этим бумагам резко вырастут. Нынешний кризис быстро распространился в Греции, Италии, Португалии, Кипра и др. Продолжается старая политика, которая уже привела Евросоюз к экономической катастрофе.

Поэтому современные защитники ЕС пытаются, сегодня выстроить всю систему вокруг самых слабых стран этого объединения, оставляя сильным право, за всех платить, пока есть финансовые ресурсы. Для создания условий по выходу из кризиса Европейский фонд финансовой стабильности (ЕФФС) перечислил Греции очередной транш финансовой помощи в размере 4,2 млрд. евро с погашением в 2043 г. Данная страна, находился в эпицентре кризиса в еврозоне. В целом она выполняет программу восстановления экономики, в обмен на которую европейский валютный союз и МВФ предоставляют Греции кредиты во избежание ее дефолта.

## 3 Меры, принимаемые странами СНГ по преодолению кризиса в рамках ШОС

На основе некоторого опыта Евросоюза и в условиях финансового кризиса отдельные государства СНГ, в рамках ШОС пытаются находить и использовать эффективные меры по преодолению затяжного кризиса. Для этого в сентябре 2013 г. в Бишкеке состоялось заседание Совета глав государств-членов ШОС. На Совете рассмотрены вопросы, о продолжение сотрудничестве в деле дальнейшей модернизации национальных экономик, тесного инвестиционного партнерства, взаимодействия в области транспортных перевозок и коммуникаций, инновационных технологий, агропромышленного комплекса, и продолжения работы по созданию специального Фонда развития и Банка развития ШОС (Заседание ШОС, 2013).

Предлагаются создание более эффективных финансово-экономических сообществ в рамках ШОС, Евроазиатского союза, совместно с постсоветским пространством, а также с участием Китая, Индии, Ираном, Пакистаном и другими. Изучается иметь новую международную модель: безопасности, взаимных отношений и национальной экономики. Кроме того, иметь общую расчетную валюту и в результате мир будет более безопасным и процветающим. В этом ключе есть свежая идея предложенная Президентом России Путиным В. В., который предлагал создать нового Евразийского союза, с учетом национальных особенностей, и иметь общее направление для сохранения и развития каждого члена союза: цивилизованное образовательное, научно-техническое, инновационное, политическое, экономическое, социальное, культурное наследие и обеспечить их постоянное развитие.

Следовательно, сегодня в рамках СНГ идет формирование региональных цивилизованных новых образований. Развивается страны таможенного союза, и в перспективе, он будет, еще расширится. Для дальнейшего совершенствование системы коллективной безопасности в рамках ОДКБ, в конце мая 2013 г. по инициативе президента Кыргызстана было рассмотрено предложение о создании единой железнодорожной линии Россия – Казахстан – Кыргызстан – Таджикистан и было поручено государственным органам соответствующих стран рассмотреть необходимость реализации данного проекта. Кстати членами ОДКБ являются Республика Армения, Республика Беларусь, Республика Казахстан, Кыргызская Республика, Российская Федерация, Республика Таджикистан (Политика, 2013).

С учетом опыта развития СНГ, ШОС, ОДКБ, ТС дальнейшее формирование получить намечаемое создание единое экономическое пространство в рамках Евроазиатского сотрудничества. Тем более в статье Президента России «Россия и меняющийся мир» изложен проект новой концепции - внешней политики РФ, которая вырабатывается в условиях крайне нестабильного мира. В то время США, все активнее вмешиваются во внутреннюю политику других стран, что еще свидетельствуют миром, управляют транснациональные корпорации и мировая финансовая олигархия.

Поэтому учитывая кризисное состояние многих стран СНГ, осуществляется модернизации национальных экономик – членов ШОС, где значительную роль сыграло Правительство РФ, которое эффективно и динамично занимается увеличением собственные золотые стандарты. По сообщению РИА Новости (Bloomberg) по итогам прошедшего десятилетия Банк России стал крупнейшим в мире официальным покупателем золота. По данным МВФ резервы России за указанный период обогатились на 570 т. Китай остался на втором плане, который активно наращивал золотые запасы. По данным Центрального Банка (ЦБ), на начала 2013 г. в международных резервах России было 30,8 миллиона тройских унций, примерно 958 т золота. Десять лет назад этот показатель равнялся 12,5 миллиона тройских унций (около 389 т).

Если глубже посмотреть ЦБ запасы золота начали активно пополняться в 2007 г. Тогда они выросли до 450 т и с того момента спада не было не зафиксировано. При этом в течение последних 12 лет стоимость

золота неуклонно растет. Апогей пришелся на сентябрь 2011 г. — тогда цена составила 1920,3 доллара за унцию. Сейчас золото торгуется по 1657,3 доллара. В формате развивающиеся страны, Россия стала лидером по скупке драгоценного металла. В то же время, экономика развитых стран направлена на продажу золота. Как уточняет Bloomberg, за десять лет больше всего продали золота Швейцария, Франция, Нидерланды и Португалия. Скупку Банком России агентство связывает с проводимой Президентом РФ «политикой ресурсного национализма» (Алпаткин А., 2013).

В результате принятия антикризисных мер наблюдается, некоторые тенденции роста важных показателей по многим государствам СНГ и по отдельным странам мира и это характеризуются следующими данными (табл. 1).

| Показатель | 2008 г. | 2009 г. | 2010 г. | 2011 г. | 2011 г. к 2008 г., % |
|---|---|---|---|---|---|
| *Страны СНГ*: | | | | | |
| Азербайджан | 5527 | 4950 | 5843 | 6912 | 125,1 |
| Армения | 3606 | 2666 | 2878 | 3138 | 87,0 |
| Беларусь | 6338 | 5157 | 5789 | 5165 | 81,5 |
| Казахстан | 8514 | 7165 | 9070 | 11259 | 132,2 |
| Кыргызстан | 967 | 872 | 880 | 1074 | 111,1 |
| Молдова | 1696 | 1525 | 1628 | 1968 | 116,0 |
| Россия | 11720 | 8600 | 10280 | 13011 | 111,0 |
| Таджикистан | 708 | 667 | 744 | 847 | 120,0 |
| Узбекистан | 1048 | 1182 | 1387 | 1545 | 147,4 |
| Украина | 3906 | 2555 | 2986 | 3630 | 92,9 |
| В целом по СНГ | 7973 | 5947 | 7097 | 8785 | 110,0 |
| *Другие страны мира:* | | | | | |
| Бельгия | 47756 | 44090 | 43379 | 46878 | 98,2 |
| Германия | 44334 | 40393 | 40198 | 43742 | 98,7 |
| Индия | 1081 | 1068 | 1342 | 1389 | 128,5 |
| Италия | 38883 | 35251 | 34154 | 36267 | 93,3 |
| Канада | 45172 | 39719 | 46283 | 50436 | 111,7 |
| Китай | 3404 | 3739 | 4421 | 5414 | 159,0 |
| Великобритания | 43298 | 35287 | 36371 | 38592 | 89,1 |

| Япония | 37976 | 39476 | 43015 | 45920 | 120,9 |

**Таблица 1.** *ВВП на душу населения в отдельных государствах мира (в текущих ценах, в долларах США)*

В составе СНГ значительные объемы ВВП на душу населения (в долларах США) имеют Россия, Казахстан и Азербайджан и в этих странах в 2008-2011 гг. рост указанного показателя соответственно составили: 111,0; 132,2 и 125,1%. За эти годы снижены темпы роста по данному показателю в республиках: Беларусь, Армения и Украина. По сравнению со среднего показателя объемы ВВП на душу населения по СНГ значительно отстали республики: Армения, Кыргызстан, Молдова, Таджикистан, Узбекистан и Украина.

Среди других стран мира самые низкие показатели ВВП на душу населения получены в Индии и Китая. В 2008 и 2011 гг. не обеспечивали роста ВВП на душу населения Италия, Франция, Великобритания, Бельгия и Германия. За эти годы высокие темпы роста добились Китай, Индия, Япония и Канада. Самые низкие темпы обеспечены в США и Швеция. Объемы ВВП на душу населения свыше 50 тыс. долл. США обеспечивали Канада и Швеция. По данному показателю ежегодно динамичный рост получает Япония.

Итак, группа другие страны мира, особенно высокоразвитые, ежегодно увеличивают высокие показатели ВВП на душу населения. Самое главное это связано, с тем, что среди высокоразвитых стран мира, многие из них имеют точные первостепенные узловые задачи, и на этой основе, они добиваются увеличению значительных объемов по данному показателю. К их числу можно отнести Швецию, Канаду, Норвегию, Ирландию, Швейцарию, Данию и др. В этих странах указанный показатель превышает свыше 50 тыс. долларов США.

В результате в указанных странах динамично растут доходы консолидированных бюджетов в отношении к ВВП. Причем во многих развитых стран мира доля доходов в отношении к ВВП составили в пределах 40-50%. Эти показатели в странах СНГ варьируются в интервале от 22 до 32%.

## 4   Влияние кризиса на экономику Кыргызстана и принимаемые меры

И их последствия характеризуются следующим образом (табл. 2). Данные таблицы свидетельствуют о том, что в Кыргызстане доля доходов консолидированных бюджетов заметно ниже по сравнению с Казахстаном и примерно одинаково с Таджикистаном. Поэтому и в Кыргызстане и в Таджикистане против других государств получен самый низкий показатель ВВП на душу населения. В остальных государствах СНГ (кроме Армении и России, а в Беларусь – не считая 2008 и 2009 гг.) обеспечен почти одинаковой уровень данного показателя. В России указанный показатель по сравнению с другими странами СНГ, самый стабильный и сравнительно высокий. В Армении за изучаемый период сохранился низкий, но стабильный показатель - доля доходов консолидированных бюджетов среди стран СНГ. Однако в этой стране ВВП на душу населения за сопоставимый период составил в пределах 2,7 – 3,6 тыс. долларов США.

Следовательно, в Кыргызстане имеются неиспользованные резервы по обеспечению роста ВВП на душу населения и доходов консолидированных бюджетов. И в этих условиях необходимо выработать новой модели экономического развития стран в рамках реформы международной валютно-финансовой системы, что способствует преодолению кризиса на основе дальнейшего развития реального сектора экономики Кыргызстана и улучшения его инфраструктуры. В связи с этим «Должна быть выработана государственная программа реализации конкретных инновационных решений как механизм воплощения в жизнь замыслов, заложенных в национальных концепциях и стратегиях развития» (Путь к инновационной экономике, 2013).

| Показатель | 2008 г. | 2009 г. | 2010 г. | 2011 г. | 2011 г. к |
|---|---|---|---|---|---|
| Азербайджан | 26,8 | 29 | 26,9 | 31,4 | 4,6 |
| Армения | 22 | 22 | 22,3 | 22,2 | 0,2 |
| Беларусь | 50,6 | 45,7 | 29,6 | 31,2 | 19,4 |
| Казахстан | 25,1 | 28,7 | 30,1 | 32 | 6,9 |
| Кыргызстан | 24,2 | 27,5 | 26 | 28,3 | 4,1 |
| Молдова | 40,6 | 38,9 | 38,3 | 36,7 | 3,9 |
| Россия | 38,8 | 35 | 35,5 | 38,2 | -0,6 |
| Таджикистан | 30,2 | 26,9 | 28,4 | 28,3 | 1,9 |
| Украина | 31,4 | 29,9 | 29,1 | 30,3 | 1,1 |

***Таблица 2.*** *Доходы консолидированных бюджетов государств СНГ (в процентах к ВВП)*

Учитывая некоторые предложения направленные на улучшение инновационных решений подготовленных бизнес – сообществом, результатами научных исследований, а также государственными структурами и они все еще являются недостаточными, для преодоления кризиса. Поэтому «…основные условия для формирования инновационной экономики в Кыргызстане …к сожалению, не очень утешительным в смысле сегодняшней готовности страны к инновационным решениям» (Койчуев Т., 2013).

Действительно основными задачами антикризисного плана на ближайшую перспективу является сохранение стабильности макроэкономической ситуации, обеспечение устойчивости банковской системы, улучшение продовольственной, энергетической, промышленной и экологической безопасности, обеспечение экономического роста через поддержку покупательной способности населения и создание благоприятной предпринимательской, инвестиционной и интеграционной среды.

Кыргызстан, как и другие страны СНГ, «пожинал горькие плоды» предыдущих региональных и мировых финансово-экономических кризисов (2008-2010 гг.). Действительно, в КР недостаточно выросли важные финансово-экономические показатели реального сектора экономики, внешнеторговой инфраструктуры и социальной сферы страны. В структуре импорта товаров ежегодно увеличивалась доля продовольствия и энергоносителей. Мало росла среднегодовая численность работников, занятых в экономике и их среднемесячная начисленная заработная плата. Недостаточно снижается численность малоимущих слоев населения. Увеличилось число официально зарегистрированных безработных, усилилась международная миграция трудоспособного населения. Произошла утечка квалифицированных специалистов, работающих в опытно-конструкторских и научных учреждениях. Уход высококвалифицированных инженерно-технических работников, первоклассных менеджеров промышленного производства отрицательно повлиял на деятельность крупных промышленных предприятий. В 1996-2011 гг. общее количество выбывшего трудоспособного населения составило свыше 510 тыс. чел.

Хотя за этот период сравнительно увеличилось производство ВВП. В то же время в его структуре заметно снизилась доля товаров, однако возросла доля услуг. Наблюдалось увеличение суммы чистых налогов на продукты, что связано с ежегодным увеличением импортируемых товаров, что свидетельствует недостаточного роста производства отечественных товаров.

Впоследствии кризисы в определенной степени повиляли на результаты финансово-экономических показателей Кыргызстана. Вследствие кризиса отдельные коммерческие банки оказались несостоятельными и обанкротились, многие местные фирмы также не выдержали конкуренции, повысился уровень инфляции, возрос внешний долг. Если в 2000 г. каждый 8 сом произведенной продукции или оказанной услуги облагался налогом, то начиная с 2005 г. по 2011 г. этот показатель снизился с 6 до 5 сом. Впоследствии вырос налоговая задолженность, наблюдалось увеличение объемов скрытой и не наблюдаемой экономики почти во всех сферах, даже включая отдельных объектов оборонного ведомства. Не застрахован от проклятия коррупции и военный сектор (Воспитание добропорядочности, 2010). Естественно, они замедляют скорость оборота денег, и снижаются эффективность денег. Впоследствии отмечается постоянный рост степени коэффициента монетизации ВВП по денежному агрегату М2, что заметно снизила скорость обращения денег в экономике. И наоборот увеличилась сумма наличных денег вне банков и их скорость и возросла сумма не оплаченных налогов.

За сопоставимый период из-за ослабления уровня экспортного потенциала КР коэффициент покрытия импорта экспортом снизился с 91 до 53, или отрицательного сальдо торгового баланса за сопоставимый период увеличилось с 49 млн. долл. США до 2015 млн. долл., или свыше 40 раз. Впоследствии образовался дефицит госбюджета, и этот уровень заметно вырос в 2009-2011 гг. Уровень дефицита госбюджета повысился с 3 млрд. сом до 13,5 млрд. сом или свыше 4 раз, к ВВП он соответственно составил 1,5% и 4,9%. Допущено несвоевременное обслуживание графика ГВД в республике. Тем более объемы государственных внешних заимствований в 2000-2011 гг. вырос свыше 2 раз и за это время на душу населения он увеличился с 285 до 509 долл. США.

В то же время, по данным НСК КР и Государственной налоговой службы Кыргызстана в экономической системе страны отдельные сферы реального сектора и других сфер экономики действуют в условиях скрытой и неформальной экономики. Из всей численности занятого населения примерно 70% занято вне формального сектора. По данным Минэкономики КР в Кыргызстане около 3,0 тыс. субъектов предпринимательства, из них только свыше 550 предприятий платят налоги.

Преодоления финансово-экономического кризиса обеспечивается дальнейшим развитием реального сектора экономики. Для КР остается большой проблемой наращивание экспортной поставки товаров. Поскольку Кыргызстан не имеет прямого выхода к морским путям. КР могла бы поставлять в больших количествах экологически чистую продукцию сельского и лесного хозяйства, а также питьевую воду и другие готовые товары, включая энергоресурсов на взаимовыгодной основе странам ближнего и дальнего зарубежья.

Развитие интеграционного процесса в рамках Евразии способствует смягчению глобального финансово-экономического кризиса и обеспечивает дальнейшее устойчивое продвижения антикризисных мер на основе субрегионального сотрудничества, где активно участвуют международные финансовые институты и многие государства региона. Как известно, что в июне 2009 г. главами государств–членов ШОС на саммите в Екатеринбурге принята декларация по предотвращению последствий финансового кризиса. Создан таможенный союз (ТС) России, Казахстана и Белоруссии. Это позволит сохранить рабочие места, открыть новые рынки для предпринимателей.

Хотя юридические и физические лица полностью не разделяют по вопросам вступления КР в ТС. В то же время Евразийская экономическая комиссия (ЕЭК) по данному вопросу приняла решение без учета интересов КР. Тем более вопрос вступление Кыргызстана на любой экономический союз должен оцениваться и приниматься на взаимовыгодных финансово-экономических условиях и действие ЕЭК оценивается как знак неуважения суверенитета страны.

Поэтому Кыргызстан должен вступит в ТС на выгодных ему условиях. Вступление КР в данный союз должно соответствовать национальным интересам страны. Здесь необходимо предусмотреть возможности таможенного регулирования, упрощения таможенных процедур, сокращение количества документов, нужных для подачи и регистрации таможенных деклараций. Кроме того, чтобы декларации представлять письменном виде или на электронных носителях, чтобы финансовые и статистические отчеты соответствовали требованиям Международного стандарта финансовой отчетности (МСФО).

С учетом ожидаемого создание ТС будет развиваться формирование ЕЭП в целях улучшения многовекторности взаимных отношений России, Беларуси и Казахстана. В скором времени в состав ТС возможно, войдут Кыргызстан и Таджикистан, чтобы общими усилиями укреплять экономическое сотрудничество и ускорить процесс выхода из финансового кризиса.

Необходимо предусмотреть меры по стимулированию спроса: переориентация на секторы с быстрой отдачей; формирование конкурентной среды с целью предупреждения монополизма; оказание финансовой помощи субъектам малого и среднего бизнеса; финансирование социальных гарантий по выплате единых ежемесячных пособий с учетом роста цен на потребительские товары и энергоносители; размещение государственного заказа на отечественных предприятиях; строительство социального жилья с использованием бюджетных средств и др.

## 5  Заключение

В целях эффективного преодоления финансово-экономического кризиса считаю необходимым осуществлять следующие приоритетные задачи.

1.  Установлено, что допущение кризиса США произошло при попустительстве МВФ, ВБ и других МФИ, и по вине государственных структур Америки, а также ФРС и других финансово-экономических подразделений указанной страны. ООН, как мировое объединенное сообщество, отвечающее и координирующее за экономическое развитие всех государств – как члены ООН, должны потребовать от указанных финансовых организаций, возмещение нанесенного ущерба. На основе резолюции ООН, виновные стороны должны перечислять определенные средства на специальный счет ООН. Доля этих средств, примерно 50% должны оставаться в распоряжение объединенных наций, а остальная сумма следует передаваться странам переходной экономики и беднейшим государствам мира в качестве возмещение нанесенного ущерба;

2.  По инициативе России намечено создать более эффективных финансово-экономических сообществ в рамках ШОС, Евроазиатского союза, совместно с постсоветским пространством, а также с участием Китая, Индии, Ираном, Пакистаном и другими и иметь общую расчетную валюту. На основе опыта развития СНГ, ШОС, ОДКБ, ТС дальнейшее формирование получить намечаемое создание единое экономическое пространство (ЕЭП) в рамках Евроазиатского сотрудничества. Намечается создание специального Фонда развития и Банка развития ШОС;

3.  Выработать новой модели экономического развития страны в рамках реформы кредитно-финансовой системы, что способствует преодолению финансово-экономического кризиса, и на этой основе добиться дальнейшего развития ключевых отраслей реального сектора экономики Кыргызстана;

4.  Предусмотреть в приоритетах и стратегии развития страны важные задачи для выхода из кризиса, улучшения и сохранения стабильности макроэкономической ситуации, обеспечив устойчивости финансово-банковской системы, путем улучшение продовольственной, энергетической, промышленной и экологической безопасности;

5.  Принимать обоснованное решение по развитию и укреплению международную экономическую связь и интеграционные процессы с Россией, Казахстаном, Турцией, Юго-Восточной Азией, Японией и со странами ЕЭП;

6.  Динамично развивать стратегические отрасли: гидроэлектроэнергетику, горнодобывающей и обрабатывающей промышленности, добычу топливно-энергетического сырья, круглогодичный туризм, текстильное и швейное производство, производство строительных материалов, а также местную промышленность;

7.  Развивать взаимовыгодное финансово-экономическое сотрудничество со странами ближнего и дальнего зарубежья, в том числе арабскими странами: Кувейтом, Ираном, ОАЭ, Саудовской Аравией, а также с Великобританией, Германией, Японией, Южной Кореи и другими государствами. И на этой основе целесообразно создание СП по глубокой переработке сырья сельского хозяйства и секторов промышленности и на этой основе выпустить готовых продуктов, товаров и энергетических ресурсов;

8.  Предусмотреть меры по стимулированию спроса: переориентация на секторы с быстрой отдачей; формирование конкурентной среды с целью предупреждения монополизма; оказание финансовой помощи субъектам малого и среднего бизнеса; финансирование социальных гарантий по выплате единых ежемесячных пособий, с учетом роста цен на потребительские товары и энергоносители;

9.  Обеспечить эффективное использование деньги вне банков и деньги товаропроизводителей, которые должны участвовать в развитие расширенного воспроизводства, и для отраслей экономики, и для банков, особенно в условиях кризиса, и они должны способствовать увеличению финансовых ресурсов и для товаропроизводителей, и для финансово-кредитных учреждений;

10. Осуществлять на безналичной основе все денежные операции по купли-продажи и оказанные услуги через коммерческие банки, а также во всех торговых и сервисных точках посредством POS терминалов, что учитывают и защищают интересы, покупателей, продавцов и налоговой службы. Самое главное обеспечение взаимных расчетов на этой основе, способствуют резкому сокращению суммы движения наличных денег вне банков и объема «теневой» экономики и увеличению налоговых доходов госбюджета страны;

11. Привести правильное сочетание интересов между производителями и финансово-кредитными учреждениями при приеме депозитов и в установлении реальных процентных ставок на депозитные и кредитные ресурсы, и в определении тарифных ставок налогообложения;

12. Осуществлять снижение процентных ставок по кредитам коммерческих банков, как в национальной, так и в иностранной валюте и конкретно еще раз уточнить полномочия НБКР в отношении коммерческих банков и НФКУ;

13. Обеспечить увеличение объема золотовалютного резерва НБКР, и определить рациональное сочетание в структуре объявленного уставного капитала между местными и создаваемыми иностранными АКБ;

# Цепочка добавленной стоимости для фруктов
# Fruit Value Chain

Assoc. Prof. Dr. Akylbek Umetaliev (Kyrgyz State Technical University, Kyrgyzstan)

## Abstract

This paper examines to get a clear picture about the status quo of fruit distribution, to identify current drawbacks, also to develop and to implement an end-to-end distribution system, covering the total value chain from the local farmer in the countryside, through regional consolidation points, through consolidation centers in the oblast up to the export preparation and processing. The study encompasses a conceptual framework for stepwise restructuring and transition to an efficient and responsive fruit value chain, tasks and milestones for implementation, accordingly apply following methods: interviews, document analysis, business process modeling techniques, all classical methods weak points analysis, requirement documentation techniques, workshops, network optimization models, facility locations models, transport optimization models, information flow optimization models and use-value analysis.

## 1 Введение

Как отмечено в Национальной стратегии устойчивого развития Кыргызской Республики на период 2013-2017 годы, за все время независимости Кыргызстана не была создана система поддержки, управления разработками и коммерциализации инноваций, включая ее институциональные и инфраструктурные элементы. Соответственно, страна занимает по рейтингу вовлеченности в мировую торговлю 111 место, по индексу конкурентоспособности экономики 126 место и по рейтингу «Ведение бизнеса - 2012» 70 место. Главной проблемой развития малого и среднего бизнеса является его низкая конкурентоспособность, так как внедрение инноваций в бизнесе остается критичным. Резкий скачок роста экономики вызывает «волны инноваций» цикла Кондратьева – Шумпетера при наличии высокотехнологичных отраслей промышленности с образованными и опытными специалистами, которыми наша страна не обладает. Очевидно, что нужно сосредоточиться на секторы сельского хозяйства (27 % ВВП), торговли и услуг (50 % ВВП). Сектор производства и экспорта фруктов, особенно сушеных фруктов, показали позитивные сдвиги. Постоянное и регулярное участие экспонентов Кыргызской Республики на ярмарке «Зеленая неделя» (Grüne Woche)" в Берлине находит большой резонанс и признание ее продукции. Спрос со стороны Германии и других европейских стран (например, Нидерланды) гораздо выше, чем предложения экспортеров фруктов сельских регионов. Контекст показывает большой потенциал для устойчивого развития сельского хозяйства и торговли. Данное исследование на основе «семь правил логистики» и добавленной логистической цепочки от производителя до потребителя позволяет поддерживать фермеров в увеличении экспортного потенциала выращенных фруктов.

## 2 Характеристика сушеных фруктов на основе «семь правил» логистики

Логистика решает задачу доставки материальных потоков в виде товаров и услуг от производителя до потребителя эффективно и экономично только при соблюдении «семь правил» логистики.

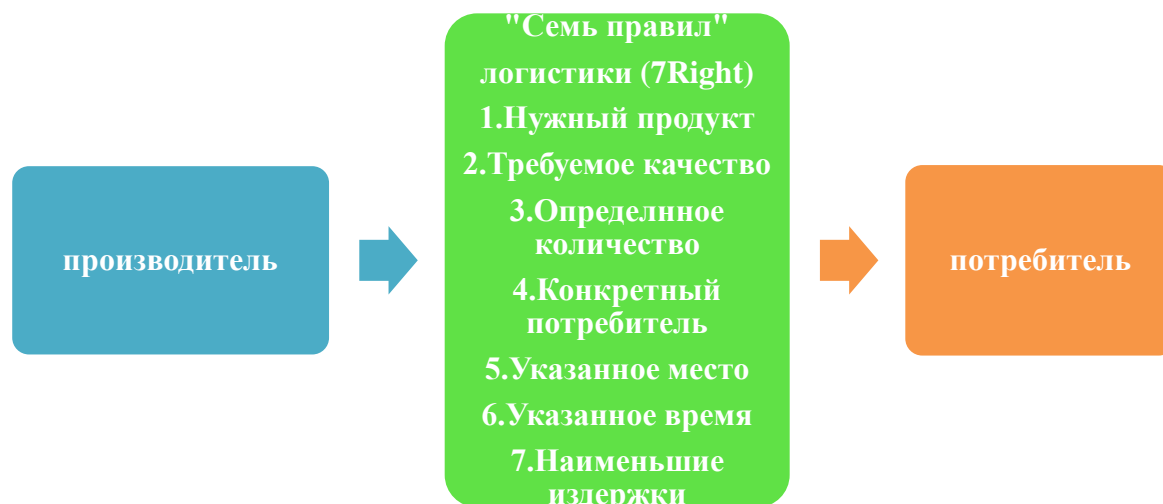
**производитель** → "Семь правил" логистики (7Right) 1.Нужный продукт 2.Требуемое качество 3.Определнное количество 4.Конкретный потребитель 5.Указанное место 6.Указанное время 7.Наименьшие издержки → **потребитель**


**Рисунок 1.** *Движение материального потока*

Первое правило логистики гласит: нужный продукт или услуга. Это означает, что продукт имеет стабильный долгосрочный спрос на рынке, как полезный, ценный и нужный продукт. Граждане любой страны, говоря о здоровом образе жизни и здоровом питании, всегда рассматривают такую важную составляющую рациона как фрукты и ягоды. Но не всегда имеется возможность включать различные виды этих полезных продуктов в ежедневное меню. В данном случае полноценной заменой для свежих фруктов и ягод становятся их сухие эквиваленты или сухофрукты, которые по своим полезным и питательным свойствам не уступают свежим. Сухофрукты можно использовать как ингредиенты и составляющие различных блюд и десертов, так и в качестве готового продукта. Сухофрукты относятся к категории концентрированных сладких продуктов. Однако в них совсем не тот сахар, а фруктоза и глюкоза, являющиеся полезными углеводами, не повышающими уровень инсулина в крови. Сухофрукты калорийны и способствуют нормализации процессов обмена веществ в организме. Сухофрукты – абсолютно натуральный продукт, в котором нет красителей, стабилизаторов, эмульгаторов, нитритов и искусственных добавок. Фактически это те же фрукты, только без воды. Конечно, в процессе сушки часть витаминов неизбежно теряется. В то время как ценные микроэлементы, такие как кальций, железо, натрий и магний, а также клетчатка и пектин, сохраняются в полном объеме. Перечисленные факторы доказывают первое правило логистики – нужный продукт.

Второе правило логистики устанавливает требования к качеству продукта, образующие барьер при торговле сельскохозяйственной продукцией и он являются одной из решающих для развивающихся стран. Санитарные и фитосанитарные требования создают начальный барьер. Жизненно важным также является защита производственного потенциала сельского хозяйства от экзотических вредных организмов и болезней. Проект технического регламента о безопасности свежих фруктов и овощей предусматривает обязательные требования, обеспечивающие безопасность и защиту жизни, здоровье граждан, предупреждение действий, вводящих в заблуждение потребителей. Проект технического регламента о безопасности свежих фруктов и овощей разработан в целях реализации Закона Кыргызской Республики «Об основах технического регулирования в Кыргызской Республики» и на основании постановления Правительства Кыргызской Республики «О программе разработки технических регламентов на 2006-2010 годы» от 14 августа 2009 № 533. Основой для разработки данного проекта технического регламента явились Закон Кыргызской Республики «Требования к безопасности пищевых продуктов и процессов производства, перевозки, хранения, реализации и утилизации». Также международные, национальные стандарты на свежие фрукты и овощи, технологические документы на эту продукцию, санитарные нормы и правила, устанавливающие требования гигиенической безопасности пищевых продуктов и продовольственного сырья, питьевой воды. К объектам технического регулирования, в отношении которых применяют настоящий технический регламент, относят перечень из 15 групп различных видов овощей и фруктов. Настоящий технический регламент устанавливает:

- обязательные требования к свежим фруктам и овощам, обеспечивающие их качество и пищевую безопасность;
- правила идентификации для целей настоящего технического регламента;
- обязательные требования к процессам производства, хранения, реализации и утилизации продукции;
- обязательные требования к упаковке и маркировке продукции;
- правила и формы оценки соответствия продукции положениям настоящего технического регламента.

Всем участникам логистической цепочки сухофруктов «производитель – посредник – потребитель» в данном техническом регламенте предоставлены необходимые инструменты для выполнения полного цикла процесса от производства до потребления сухофруктов, в том числе экспорта.

Третье правило требует определить количество продукта, четвертое – идентифицировать конкретного потребителя, пятое – выяснить место доставки, шестое – уточнить время и седьмое – снизить все издержки. В соответствии с указанными правилами предусматривается выяснение количества необходимого продукта и конкретных потребителей, применяя спрос-предложение, анализ рынка и ключевых участников. Также выбрать оптимальные способы и сроки доставки продукта с наименьшими издержками.

## 3 Характеристика ключевых игроков на рынке сухофруктов

Фермеры. Владеют земельными наделами, разводят на них садоводство и выращивают различные виды фруктов. Самым массовым видом из них является свежий и сушеный абрикос. Его продают на рынке конечным потребителям, так и посредникам. Некоторые фермеры сами отправляют свежий и сушеный абрикос на экспорт по созданным уже каналам сбыта.

Торговцы. Покупают свежие и сушеные фрукты у фермеров и перепродают их на розничном и крупном рынках. Они являются главными двигателями начальной ступени канала, которые обеспечивают консолидацию товарных потоков вокруг основных рынков, куда приезжают оптовики, экспортеры или переработчики сухофруктов.

Оптовые покупатели. Индивидуальные предприниматели и частные фирмы, выкупающие сухофрукты от торговцев. Далее они консолидируют весь объем сухофруктов по цвету, сорту, размеру и качеству плодов. Основными их покупателями являются экспортеры. Данные группы предпринимателей также являются поставщиками сырья для переработчиков сухофруктов.

Переработчики сухофруктов. С 2002 года на рынке появились частные фирмы, занимающиеся сушкой фруктов и перерабатывающие сухофрукты на специальном оборудовании с акцентом на потребителя, включая чистоту, гигиену и привлекательную упаковку. Они также закупают сухофрукты от фермеров, торговцев, оптовиков и складов по консолидации сухофруктов. Покупателями их продукции или услуг являются экспортеры. Часто они сами выступают в роли экспортеров.

Розничные торговцы. В эту группу входят индивидуальные частные предприниматели и физические лица, имеющие свои торговые точки и продающие товары на местном рынке для удовлетворения потребностей внутреннего рынка. Их количество стабильно. Они обеспечивают высокий уровень сбыта и диктуют цену на внутреннем рынке.

Экспортеры. Малые и средние частные фирмы, имеющие каналы сбыта и маркетинговые контакты на рынках экспорта. Количество экспортеров стабильно. Они обеспечивают высокий уровень сбыта и диктуют цену на внутреннем рынке. Согласно, статистических данных Кыргызской Республики объем экспорта в 2005 году составил 126 тонн. Со значительной долей уверенности можно говорить о большом количестве мелких экспортеров в основном из Узбекистана, Таджикистана и Кыргызстана, везущих малыми объемами продукцию, минуя таможню. В результате основная часть экспортируемой продукции оказывается не зафиксированной, и как следствие нет данных объема экспорта за последующие годы. Вполне возможно, что часть кыргызских сухофруктов вывозится на рынок таджикскими и узбекскими трейлерами.

Рынок сухофруктов динамично и стремительно развивается. Увеличение количества производителей, расширение ассортиментных позиций за счет создания оригинальных видов продукции, появление большого количества фасованных видов готовых к употреблению сухих фруктов, ягод и фруктово-ореховых смесей, разработка новых торговых марок – основные тенденции развития рынка сухофруктов в РФ на ближайшее время. Статистические данные по потреблению сухофруктов в РФ в 2008 и 2009 годах:

- изюм – 66 000т (2008г.) и 69 000т (2009г.);
- курага – 40 000т (2008г.) и 49 000т (2009г.);
- чернослив – 5 000т (2008г.) и 16 000т (2009г.).

В силу географического расположения сухофрукты в России практически не производятся (за исключением компотных смесей, в основном из яблок и груш). В связи с климатическими условиями основные виды фруктов (используемых для производства сухофруктов) культивируются в южных регионах – Краснодарский край и Закавказье, где широко распространено разведение винограда. Однако урожай практически полностью используется для производства соков, вин и коньяков. В настоящее время лидером рынка сухофруктов России является изюм. Он составляет больше 54-55% от всего объема представленных сухофруктов. Далее идут курага – около 24% и чернослив – 10.2%. Фруктово-ореховые смеси занимают около 5% предложения, опережая компотные смеси с их 4-процентной долей на рынке. Характерно, что на изюм перерабатывается около 30% мирового урожая винограда. На казахстанский и российский рынки изюм поставляются в основном из Ирана, стран Ближнего Востока, Афганистана и даже США. Рынок сухофруктов Казахстана представлен в основном изюмом и курагой, а также различными смесями фруктов, используемыми для приготовления компотов. Объем потребления сухофруктов в Республике Казахстан составляет:

- компотные смеси – 1600т;
- курага и изюм – 1000т.

Приведенные данные являются результатом оценок и расчетов, с использованием данных официальной статистики. Наиболее распространенной нормой потребления сухофруктов в мире является 3-4 кг в год. Потребление сухофруктов на 1 жителя Казахстана в год составляет 0.171 кг. По характеру потребления сухофрукты можно подразделить на две группы: в качестве витаминной продукции и ритуальных продуктов. В последние годы наблюдается процесс увеличения потребления сухофруктов в Казахстане, что связано с действием нескольких факторов:

- возрастание внимания к здоровью;
- возможность для значительной части населения компенсировать недостаток средств на приобретение соков компотами из сухофруктов;
- более широкое распространение религиозных, народных празднований и событий (характерно для стран Центральной Азии).

Как в Казахстане, так и в России имеются сырьевые возможности только лишь для производства компотных смесей: из яблок, груш, сливы. Для производства изюма, кураги и кишмиша сырьевая база в этих странах отсутствует. Мировой рынок сушеных фруктов, как и любой, конечно же, ориентируется на требования потребителей не только в плане качества, но и привлекательности внешнего товарного вида. Однако даже упрощенная упаковка встречается не столь уж часто. Значительная часть, примерно более 35%, представлена на рынках сухофруктов СНГ в весовом виде, в пластиковый контейнер же упаковывают сухофрукты не более 10.2% производителей. Эксперты говорят о том, что большое количество производителей на рынках стран СНГ еще работают старыми методами, торгуя и предлагая оптовикам товар вразвес, из-за чего, по сути, качественная, чистая и отборная продукция теряет свою привлекательность в глазах потребителей. В противовес этому импортируемые сухофрукты из Турции, Франции, частично США упакованы в контейнеры, что уже само по себе удобно и соответствует санитарным требованиям. В целом же, согласно прогнозам экспертов, до 2011 года мировой рынок сухофруктов и снеков ожидает стабильный рост. Снеки – это натуральные высушенные продукты, полностью готовые к употреблению. В России, где этот рынок за счет снеков может получить большее развитие, к 2010-2011 годам его емкость в стоимостном выражении, возможно, достигнет 2,3 млрд. долларов США. Ожидается, что рост продаж этой продукции в стоимостном выражении будет происходить более высокими темпами. Но наиболее высокие темпы роста будут наблюдаться именно в сегменте фруктовых снеков – средний показатель прироста составит 7% в натуральном выражении. Кыргызстан среди поставщиков и продавцов упоминается очень редко. Благодаря партнерам из Германии проводится целенаправленная работа по выводу товаров фермеров на экспорт. Фермеры из Кыргызской Республики постоянные экспоненты ежегодной выставки товаров сельского хозяйства «Зеленая неделя» в Берлине. На первом этапе продвигается на экспорт сухофрукты, орехи и мед. На рынке возможны несколько групп потребителей, приобретающих различное количество продукта:

- Индивидуальные потребители, приобретающие сушеную продукцию к праздникам, ритуальным событиям, реже – для повседневного питания. Индивидуальные потребители могут использовать сухофрукты также для изготовления компотов.
- Организации-потребители, к которым относятся:

    (а) государственные организации (школы, дошкольные учреждения, больницы, воинские части), приобретающие данный товар в значительных объемах, в основном по тендерам;

    (в) производственные предприятия, приобретающие большие по объемам партии для дальнейшего его использования в производственных целях, например, кондитерские фабрики, цеха, молокозаводы, изготовители каш быстрого приготовления, мюсли и другие.

## 4 Рекомендуемые каналы транспортировки

Транспортная система в Кыргызской Республике недостаточно развита из-за высоких относительных издержек и отсутствия современных видов транспорта и их сервиса, но постепенно развивается конкуренция, позволяющая местному транспорту обеспечить экспортные перевозки. Выбор транспорта влияет на качество доставки переработанной продукции до места назначения, поэтому наряду с другими факторами необходимо учитывать дальность расстояния перевозок до ряда регионов Российской Федерации и Республики Казахстан, далее в Германию. Автотранспорт более выгоден для перемещения продукции в более близкие регионы. Он быстрее и более гибкий. Кроме того, всегда можно найти товар для обратного пути из Российской Федерации, Казахстана и Германии. Однако надо помнить, что услуги могут быть предоставлены только теми автотранспортными предприятиями и частными лицами, которые имеют лицензию на международные автотранспортные перевозки. Железнодорожные перевозки приемлемы в дальние регионы России, Германии и Казахстана, когда доставка на автомобильном транспорте обходится слишком дорого. Для обеспечения неизменности тарифа на перевозку товаров в определенном периоде необходимо заключить четкий контракт, который уточнит все права и ответственности отправителя, перевозчика и получателя товара. Интегральный способ отбора перевозчика по критериям специализации, опыта и профессионализма позволит минимизировать риски в процессе транспортировки товаров.

## 5 Цепочка добавленной стоимости для сухофруктов

Цепочка добавленной стоимости для сухофруктов от производителя до потребителя включает несколько автономных звеньев, выполняющие логистические операции с конкретными издержками и добавленной стоимостью, обеспечивая исполнителей всех логистических операций работой и адекватным доходом. Самое важное преимущество цепочки добавленной стоимости для сухофруктов заключается в том, что вся добавленная стоимость продукта принадлежит экспортерам и вовлеченные в этот процесс все трудовые ресурсы также относится к экспортеру.

*Рисунок 2. Цепочка логистических операций*

Издержки и цена растут по восходящей линии от первой логистической операции до завершающей, добавляя каждой логистической операции часть общих издержек и цен.

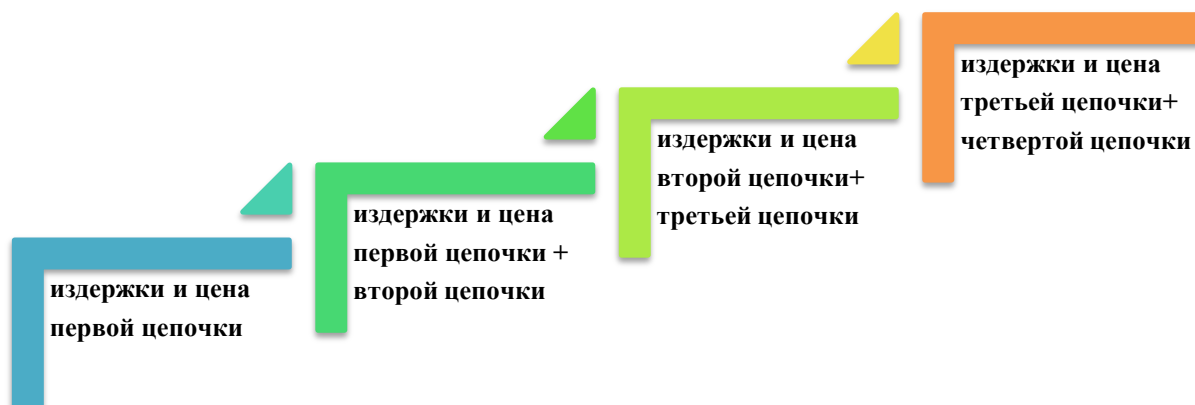

*Рисунок 3. Цепочка добавленной стоимости*

*Рисунок 4. Звенья логистического центра*

Для эффективного функционирования логистической цепочки добавленной стоимости сухофруктов необходимо спланировать и спроектировать следующие виды деятельности:

- Изучение географической характеристики рынка и логистические особенности продукта, их влияние на выбор транспорта и каналов распределения
- Определение объема и доли продаж на потребительском рынке «от бизнеса к потребителю» (B2C – business to customer) и индустриальном рынке «от бизнеса к бизнесу» (B2B – business to business).
- Выбор структуры каналов продаж и дистрибуции
- Выбор транспортных маршрутов, транспортных операторов и логистических провайдеров 3 и 4 уровня

- Размещение логистических операций и товарных запасов
- Внедрение логистических информационных систем для всех звеньев логистической цепи
- Адаптация условий поставок в международных коммерческих сделках

Для выполнения вышеуказанного плана действий нужно создать новую или реорганизовать существующую инфраструктуры бизнеса, интегрированная как единый процесс или как единая сквозная система для продвижения товаров и услуг от производителя до потребителя. Предлагаю разработать и внедрить логистические центры, охватывающие общую цепочку создания стоимости от местного производителя-фермера в сельской местности путем первичной переработки, консолидации фруктов с использованием мобильных складов для хранения запасов, перевозки, экспорта, дистрибуции и через оптовых, розничных торговцев до конечного потребителя.

Логистические центры необходимо создавать в приграничных таможенных постах, в пригородных зонах, в крупных рынках, около крупных производителей товаров и услуг. Они могут объединять множество логистических операций (перевозка, сортировка, упаковка, контроль качества и безопасности, таможенная очистка, прием заказов, доставка) в единую логистическую функцию или в единый логистический процесс перемещения товаров и услуг от производителя к потребителю. Также данная задача выполнима только на базе применения информационных технологий для всего процесса, чтобы обеспечить равновесие во всех звеньях логистической цепи и минимизацию издержек.

## 6 Результаты

Проведенное исследование на базе принципов логистики позволили выработать план действий в сегменте рынка сухофруктов. Последовательно и взаимосвязано нужно идентифицировать товар, производителей и потребителей, создать логистические центры для единого процесса движения товара на рынке. Выполнение предложенного плана действий обеспечит следующие результаты:

Рост объема экспорта сухофруктов, обеспечивающий увеличение валютных поступлений в страну и снижающий большой отрицательный внешнеторговый баланс страны

Обеспечение стандартов качества сухофруктов для преодоления барьера при их реализации на внутреннем и внешнем рынках

Усиление конкурентоспособности сельскохозяйственных товаров, в том числе сухофруктов на рынке спроса, что приведет к росту валового дохода фермеров и валового внутреннего продукта страны

Существенный и непосредственный вклад для снижения уровня бедности населения, особенно в сельской местности

# ТНК как высшая форма хозяйствования современной экономической системы

# Multinational Corporation as the Highest Form of Managing in Modern Economic System

Assoc. Prof. Dr. Turusbek Asanov (Kyrgyzstan-Turkey Manas University, Kyrgyzstan)

Dr. Marat Kudaikulov (Kyrgyz-Russian Slavic University, Kyrgyzstan

## Abstract

Relevance of this subject of research is concluded that the current state of developed economies represents an example of that multinational corporations are the highest form of managing of capitalist economic system. The notable separation of the countries of economic vanguard from other countries (group of the high-growth countries, the socialist countries, the countries) happened to a transitional economy on the basis of multinational corporation development. The economic aspect of this influence is accurately traced in effective instruments of industrial, scientific and technical, social and economic development. Evolutionary changes of the relations of property, the competition, strengthening of regularity of national economies in capitalist economic system are inseparably linked now with multinational corporation. Even in stronger, in the economic plan, the countries consider multinational corporation not only through a prism of economic influence, but also political domination. This moment is telling argument of finding of multinational corporation in the center of serious discussions concerning their role, positive or negative, in the international division of labor, in processes of movement of the capitals and globalization of world economy. It follows from this that the state economic policy in the Kyrgyz Republic which basis are processes of formation and development of the market relations, has to provide active use of the developed economic forms (in this case multinational corporation) more progressive system of the economic relations, i.e. modern capitalism. In this research attempt of theoretical justification of mutually beneficial cooperation of the Kyrgyz Republic with multinational corporation which will act as an interaction basis with multinational corporations present at the Kyrgyz Republic ("Kumtor Opereyting Company", Gazprom, Reemstma, Coca-Cola, etc.) is carried out.

## 1 Введение

Современное состояние развитых экономик представляет пример того, что ТНК являются высшей формой хозяйствования капиталистической экономической системы. Ощутимый отрыв стран экономического авангарда от других стран (группа быстроразвивающихся стран, социалистические страны, страны с переходной экономикой) произошел именно на базе развития ТНК. Экономический аспект данного влияния четко прослеживается в эффективных инструментах промышленного, научно-технического, социально-экономического развития. Эволюционные изменения отношений собственности, конкуренции, усиление планомерности национальных экономик в капиталистической экономической системе в настоящее время неразрывно связаны с ТНК.

Сотня крупнейших (по объему зарубежных активов) ТНК в своих зарубежных филиалах владеют активами приближающуюся 2,0 трлн долл., что позволяет контролировать примерно 20 % совокупных мировых зарубежных активов. Наиболее часто странами базирования для крупнейших ТНК являются развитые страны. Это – Европейский союз, США и Япония, где базируются 87 из первой сотни крупнейших ТНК, что составляет 88% зарубежной массы активов данных компаний. В последние десятилетия ТНК развивающихся стран в основном базируются в Китае, Республике Корея, Гонконге, Мексике, Бразилии, ЮАР. Сотня крупнейших ТНК осуществляет зарубежные продажи на сумму превышающую 2 трлн долл., что позволяет числу занятых за пределами страны базирования приблизиться к 6 млн человек.

Экономика развитых стран движется к цели всеобщего благосостояния. При этом высокий уровень развития обеспечивается современными корпорациями. Они занимаются реально национальным производством, приобрели интернациональный характер. Общественный характер капитализма при господстве корпораций достиг наивысшего уровня. Крупные корпорации подчиняют своему влиянию не только все общество, но и все государство. Современные крупные корпорации являются оплотом стабилизации капитализма, выступают как движущая сила развития.

## 2 Исследуемые вопросы:

1) Сущность и значение ТНК в современном социально-экономическом развитии мировой экономики;
2) Обоснование взаимовыгодного сотрудничества трансформационных экономик с ТНК;

3) Экономическая суть теории «зеркального поведения» в отношениях трансформационных экономик с ТНК;

4) Анализ производственно-хозяйственной деятельности «Centerra Gold Inc.» в Кыргызской Республике.

## 3    Методология:

В исследовании использовались методы анализа и синтеза; метод экспертных оценок; метод трендового анализа; метод факторного анализа.

Огромные экономические достижения в развитых капиталистических странах и их новые характеристики, вызванные функционированием корпораций, не означают, что изменились природа и цель капиталистического производства. Целью общественного производства при капитализме не является повышения благосостояние всего общества.

Растущие материальные условия большинства населения обеспечиваются благодаря реализации мотивов развития капитала. Высокая концентрация и централизация капитала не может происходить без расширенного воспроизводства рабочей силы.

Все богатство современного мира создается увеличивающейся армией трудящихся, которые обладают высочайшей квалификацией. Хотя богатство сосредотачивается в руках небольшой части общества, тем не менее, непосредственные производители тоже получают развитие. Здесь имеет место диалектическое единство того, что воспроизводство капитала это не простое возрастание стоимости, а расширенное воспроизводство капитала и рабочей силы. «Накопление капитала есть увеличение пролетариата» [К. Маркс, 1973] – такова одна из важнейших констатаций К. Маркса.

Масштабы и успехи деятельности корпораций в национальных экономиках, а также в других странах, привели к выводам о якобы возникшем обществе всеобщего благосостояния. Однако, беспристрастный подход к анализу корпоративного этапа развития капитализма показывает то, что ТНК подготавливают все материальные условия перехода к более высокой ступени развития цивилизации. Дж. Гэлбрейт в своих трудах убедительно рассуждал о том, что в составе развитой капиталистической экономике находится две системы: а) «рыночная система», которая охватывает преимущественно мелкие хозяйства; б) «планирующая система», которая состоит из корпораций, которые тесно взаимодействуют с государством [Дж. Гелбрейт, 1967].

Будущая общественно-экономическая формация должна базироваться на высших достижениях опыта и капитализма и социализма. В рамках теории переходной развивающейся экономики доказывается, что отказ от достижений предыдущей системы экономических отношений ведет к кризисным явлениям в экономике.

Характерной чертой процесса эволюционного развития корпораций является участия в них государственного капитала. Данные ЮНКТАД за 2010 г. показывают наличие в мировой экономике около 650 государственных ТНК, которые обладают 8500 филиалами. Из 100 крупнейших ТНК мира 19 являются государственными, а в первой сотне ТНК развивающихся стран по собственности и управлению государственными являются 28 ТНК. В странах с переходной экономикой и в развивающихся странах более половины ТНК являются государственными. Такие европейские страны как Дания, Италия, Франция, Финляндия и Швеция явно выделяются в Европе по наличию государственных ТНК. Необходимо отметить, что если рассматривать все госкомпании, то их доля будет значительна. Например, во Франции количество госкомпаний со значимой деловой активностью приближается к 1000, а Китайской Народной Республике госкомпаний более 150 тысяч.

Кроме того, что в группе развитых стран по степени государственного участия в ТНК особо лидируют Франция и Италия более или менее ясно. Но наличие в США (по мнению многих – центр частнособственнического капитализма) ТНК со значительной долей государственного капитала («Дженерал моторс») вызывает много вопросов. Ответом на это служит процесс объективного естественного развития рыночной экономики, который ведет проявлению корпорациями элементов общественно-государственного характера, что в свою очередь подтверждается наличием ТНК со значительной государственной долей в высокоразвитых странах – Швеция, Норвегия, Япония, Германия.

Необходимо отметить, что наиболее быстроразвивающиеся экономики, и страны с трансформационной переходной экономикой находятся в русле этой центральной линии мирового экономического процесса развития. Такова объективная реальность – подъем и развитие национальных экономик, которые стремятся сократить отставание от стран экономического авангарда, осуществляется более эффективно через развитие государственных корпораций. Пример Китайской Народной Республики подтверждает верность выбранного направления – две крупнейшие государственные его корпорации (CINICGroup и China Ocean Shiping Comp.) не исчерпывают число таких государственных ТНК. Понимание того, что

именно через развитие и взаимодействие с ТНК будет определяться будущее наиболее устойчиво развивающихся экономик должно являться базовой основой государственной экономической политики.

«Таким образом, даже то, что корпорации крупномасштабного производства приобретают статус экономических организаций всего общества, создает прямую заинтересованность государства в успехах их деятельности, обусловливает необходимость всячески способствовать этому. Когда же государство внедряется в корпорации со своим капиталом и со своим управлением, то оно «влезает» в рыночную экономику самым непосредственным образом и становится одним из функционирующих субъектов производственно-хозяйственной деятельности. Это выводит государство на высший уровень заинтересованности и участия в экономической жизни общества» (Кумсков В.И., 2012).

Процессы либерализации инвестиционных, внешнеэкономических процедур, приводит к росту экономической активности ТНК. Часто ТНК используют преимущества по расширению рынков для процесса оптимизации своей экономической деятельности, что позволяет добиваться роста эффективности производства через использование эффекта масштаба. Совокупный экономический выигрыш, достигаемый ТНК через активную интеграцию в международном производстве, в целом позволяет повышать показатели собственной конкурентоспособности. Это ведет к увеличению экономической концентрации, а также к усилению ТНК в рамках международного экономического взаимодействия.

Согласно теории международной конкуренции огромна роль процессов укрупнения, которые обусловлены показателями рыночной концентрации. Постоянные процессы слияний на уровне национальной экономики постепенно затухают и им на смену приходят волны слияний и поглощений регионального и международного характера. Именно здесь значительную роль играют крупные операции, осуществляемые ТНК. В итоге можно наблюдать технологическую конкуренцию, которая является основой процесса развития и позволяет определять перспективы существования ТНК.

Даже в более сильных, в экономическом плане, странах рассматривают ТНК не только через призму экономического влияния, но и политического доминирования. Этот момент является веским аргументом нахождения ТНК в центре серьезных дискуссий относительно их роли – положительной или отрицательной – в международном разделении труда, в процессах движения капиталов и глобализации мировой экономики.

В соответствии с теорией переходной развивающейся экономики страны, широко использующие развитые экономические формы капитализма и социализма, реально достигают высокой экономической эффективности. Примером служит Китайская Народная Республика. Безуспешность переходных процессов в странах СНГ, на наш взгляд, связано с недостаточным использованием высших достижений капитализма и социализма.

Из этого следует, что государственная экономическая политика в Кыргызской Республике, основой которой являются процессы становления и развития рыночных отношений, должна предусматривать активное использование развитых экономических форм (в данном случае ТНК).

В данном исследовании проведено теоретического обоснование взаимовыгодного сотрудничества Кыргызской Республики с ТНК, которое выступит основой взаимодействия как с присутствующими компаниями («Centerra Gold Inc.» *(«Кумтор Оперейтинг Компани»)*, Газпром, Реемстма-Кыргызстан, Кока-Кола Ботлерс и др.), так и с теми компаниями, которые придут в будущем.

Споры вокруг золотодобывающей компании «Центерра» продолжаются в течении длительного периода. Общественность и часть парламента (Жогорку Кенеш) отрицательно восприняли продажу ОАО «Кыргызгаз» российскому «Газпрому». Бурные протесты в стенах парламента вызваны подписанием меморандума между Правительством Кыргызской Республики и «Роснефтью» по продаже 51 % доли ОАО «Международного аэропорта «Манас».

Все эти события объединены тем, что в центре внимания находятся ТНК, а принимающей страной является Кыргызстан. Отрицательное отношение к рассматриваемой проблеме, на наш взгляд, связано с отсутствием государственной программы взаимодействия Кыргызской Республики с ТНК. Таким образом, актуальной задачей экономического развития для стран с переходной экономикой является теоретическое обоснование данной программы.

Закономерностью взаимодействия ТНК с принимающими странами является «зеркальное поведение», суть которого заключается в следующем: 1) ТНК, работающие в развитых экономиках, работают прозрачно и честно, т. к. с ними взаимодействуют на этой же основе (прозрачность и честность) представители страны базирования или принимающей страны; 2) ТНК, работающие в развивающихся странах, где взаимодействуют с коррумпированными чиновниками, проявляют себя соответственно (осуществляется представителями уполномоченных лиц).

ТНК, которые отказываются соблюдать нормы «зеркального поведения», не попадают на национальные рынки. Примером тому могут служить не состоявшиеся взаимодействия с ТНК, которые были

предприняты в начальный период перехода Кыргызской Республики к рыночным отношениям: а) производство южнокорейских автомобилей в г. Токмок; б) шелковое производство в г. Ош.

С учетом этого, необходимо понимать, что переговорный процесс уже обусловлен «зеркальным поведением». Прозрачный переговорный процесс будет учитывать взаимовыгодный баланс интересов принимающей страны и ТНК. Коррумпированный переговорный процесс, в первую очередь будет учитывать интерес уполномоченных лиц, что, как правило, наносит ущерб национальным интересам.

Закрепилась характеристика ТНК как агрессивной разрушительной силы, как «хищника», оставляющего после себя проблемы широкого спектра – экологические, моральные, политические и др. Данная характеристика основана на том, что многие развивающие страны были представлены в переговорном процессе коррумпированными уполномоченными лицами, что побудило ТНК к действиям в рамках «зеркального поведения», которое всего лишь, отражает преступный умысел представителей принимающей страны.

Предлагаем рассмотреть деятельность ТНК «Centerra Gold Inc.» на золоторудном месторождении Кумтор в Кыргызской Республике. Всего платежи ТНК «Centerra Gold Inc.» на территории Кыргызской Республики за 1994-2013 гг. составили $ 2424 млн (табл. 1).

| Основные показатели | Сумма ($ млн) |
|---|---|
| Налоговые и таможенные и другие обязательные платежи | 707,3 |
| Платежи в социальный фонд | 112,9 |
| Взнос в фонд развития Иссык-Кульской области | 35,5 |
| Оплата за лицензии и разрешения | 2,6 |
| Экологические платежи | 4,1 |
| Выплаты в пользу ОАО «Кыргызалтын» | 11,7 |
| Дивиденды | 65,4 |
| Выручка от реализации акций «Centerra Gold Inc.» | 86 |
| Закупки поставка и услуги, продукты питания | 639,6 |
| Чистая заработная плата сотрудников | 448 |
| Поддержка образования, стипендии и обучение | 9,1 |
| Спонсорская помощь и проекты устойчивого развития | 51,9 |
| Платежи за электроэнергию | 130,6 |
| Обслуживание дорог вне рудника | 37,5 |
| Другие платежи | 81,8 |
| Всего | 2 424 |

**Таблица 1.** *Платежи ТНК «Centerra Gold Inc.» на территории Кыргызской Республики за 1994-2013 гг.* **Источник:** *сайт «Centerra Gold Inc.»*

Доля налогов от Кумтора в доходах государственного бюджета в Кыргызской Республике в 2013 г. составило 6,83 %. Социально-экономическая значимость «Centerra Gold Inc.» для экономики Кыргызской Республики ощутима, т. к. объем продукции на золоторудном месторождении Кумтор за 2013 г. составляет 7,7 % от ВВП страны. Кроме того налоговые и обязательные отчисления за 2013 г. равны 1,47 % от ВВП, что составляет $ 107,83 млн. (см. табл. 2).

| Основные показатели | Сумма ($ млн) | Доля в ВВП и (%) |
|---|---|---|
| Реализовано золота | 566,08 | 7,7 |
| Налоговые и обязательные отчисления в т. ч.: | 107,83 | 1,47 |
| налог на валовый доход | 73,59 | 1,0 |
| взнос в фонд развития Иссык-Кульской области | 7,84 | 0,11 |
| экологический платеж | 0,31 | 0,004 |
| платеж в социальный фонд | 20,61 | 0,28 |
| подоходный налог с сотрудников | 4,36 | 0,06 |
| таможенные платежи | 1,12 | 0,02 |

**Таблица 2.** *Участие ТНК «Centerra Gold Inc.» в социально-экономическом развитии Кыргызской Республики в 2013 г.* **Источник:** *сайт «Centerra Gold Inc.»*

Необходимо отметить реализацию социальных проектов в Иссык-Кульском регионе:

- строительство автодороги в Джети-Огузском районе на сумму $ 10 млн;

- программа микрокредитования для развития регионов и повышения благосостояния сельского населения по ставке 10% годовых на сумму более $ 16 млн.

## 4 Выводы:

На основе вышеизложенного материала можно сделать следующие выводы:

1. ТНК – есть высшая форма обобществления производства, которая является базовым элементом экономического прогресса в современной мировой экономике. Это происходит за счет эволюционного развития процессов конкуренции, что выразилось в ведущей роли технологической конкуренции, которая является движущей силой экономического прогресса. Процессы модернизации, столь необходимые для экономики Кыргызской Республики, возможны только через привлечение новых технологий, обладателями которых являются ведущие ТНК.

2. ТНК обеспечивает планомерность экономического развития, которая ведет к наивысшей эффективности производства. Концентрация и централизация капитала в ТНК, позволяет решать дорогостоящие и социально-значимые задачи научно-технического развития вне зависимости от национальных границ и функционирующих экономических систем. Внутренняя сущность ТНК настроена на удовлетворение максимального объема потребностей населения в планетарном масштабе, через предложение все более высококачественной продукции. Кроме того, ТНК играет ведущую роль в создании высокого стабильного дохода и занятости.

3. Для эффективного экономического развития необходима государственная стратегия взаимовыгодного сотрудничества Кыргызской Республики с ТНК. Квинтэссенция данной стратегии заключается в преодолении негативного отношения к ТНК у абсолютного большинства граждан страны. Этому способствует понимание и адекватное использование теории «зеркального поведения». Суть предложенной нами теории «зеркального поведения» состоит в симметричном поведении договаривающихся сторон – при одном из участников договорного процесса склонного к коррупционному поведению, второй участник автоматически действует по аналогии. Природе ТНК присуще прозрачное, не коррумпированное поведение, что является экономически выгодной стратегией, способствующей долгосрочным инвестиционным проектам, что доказывается столетней историей функционирования ТНК в развитых странах. Первым важным элементом в эффективном использовании теории «зеркального поведения» является подготовка специализированных представителей принимающих стран, участвующих в непосредственном процессе переговоров с ТНК. Вторым важным элементом является транспарентность непосредственного процесса переговоров с ТНК.

# Мотивация труда в системе здравоохранения
# Motivation of Labor in the Health System

Assoc. Prof. Dr. Damira Japarova (Kyrgyzstan-Turkey Manas University, Kyrgyzstan)

## Abstract

With the increase of salaries of medical workers in Kyrgyzstan their income increased. But the desire to earn additional income from patients not disappeared. As practice shows, giving money to the hands of health care workers is widespread in health system of Kyrgyzstan. It is not only drops the image of doctors, but also causes serious damage to the family budget of citizens who are in a hospital bed, or at the reception of doctor's. The main reason for the existence of informal payments in health care is considered a relatively low level of wages. If in the real sector the financial stimulation carried out by the expense of encouraging profit in medicine only source of stimulation is wage fund. The stimulating part should be increased at the expense of main part of wages. İnasmuch as there is no profit in medicine as a source of encouragement it is used the funds received from paid services. The basis for motivation of labor in medicine is to avoid time-based wage system and to introduction of piecework forms in different versions. Criterion for evaluating health care workers is the health of the patient after treatment.

Медицинские кадры и, прежде всего, врачи являются с главным ресурсом лечебно-профилактических учреждений, именно они обеспечивают результативность их деятельности. Однако, это возможно лишь в условиях научно обоснованной системы мотивации их труда, которая в Кыргызстане имеет довольно низкий уровень развития. В связи с этим, изучение мотивационных предпочтений, и выявление мотивирующих и факторов, исследование условий труда врачей, а также поиск методов мотивационного воздействия в системе оплаты труда, является актуальным, в изучении вопросов совершенствования медицинской помощи населению.

Заработная плата работников социальной сферы в Кыргызстане, в том числе медиков, низкая. Однако в ее в динамике, за последние семь лет, имеются положительные сдвиги. Заработная плата врачей стационаров выросла с 3 035 сомов в 2007 году до 11 915 сомов (в 2013 году), то есть почти в 3,9 раза. Зарплата врачей первичной медико-санитарной помощи повысилась с 3 331 сома в 2007 году до 11 307 сомов в 2013-м, или в 3,4 раза. В организациях здравоохранения за 2013 год из республиканского бюджета на заработную плату и отчисления в Социальный фонд было предусмотрено 5,6 млрд. сомов. (По данным Министерства здравоохранения КР)

С повышением заработной платы медицинских работников в Кыргызстане, их доходы увеличились. Однако желание получать дополнительные доходы от пациентов не исчезло. Как показывает практика, оплата медицинской помощи, производимая неформально, в руки медицинским работникам, получила широкое распространение в здравоохранении Кыргызстана. Это не только роняет имидж врачей, но и наносит серьезный урон семейному бюджету граждан, оказавшихся на больничной койке или на приеме у врача.

Главной причиной существования неформальных платежей в здравоохранении рассматривается относительно низкий уровень заработной платы.

В сфере медицинских услуг в государственных лечебных учреждениях нет полноценных экономических отношений. Это привело к тому, что управление отечественным здравоохранением строилось и продолжает осуществляться преимущественно на административных методах. Финансирование отрасли и работа лечебно-профилактических учреждений осуществляется на основе нормативов, устанавливаемых и спускаемых до каждого медицинского учреждения органами государственного управления. В таких условиях нет оценки результатов труда, мотивации и экономических стимулов

Здравоохранение работает согласно повременной системе, имеющей ряд существенных недостатков. Оплата труда работникам большинства медицинских учреждений основана на Единой тарифной сетке с учетом всех доплат. Она является фиксированной, не зависит ни от объема, ни от качества выполненных работ. При повременной системе оплаты труда медицинским работникам должна быть выплачена заработная плата, даже если работник не выполнил объем работ.

Представим себе такую ситуацию. Два врача с одинаковым стажем и квалификацией принимают пациентов в соседних кабинетах. Один, высококвалифицированный врач, на прием к которому всегда записывается 30-40 человек каждый день. А другой не очень горит на работе, у него на приеме бывает 10-15 пациентов в день. Согласно Единой тарификационной системе оба получают одинаковую зарплату. И рано или поздно первый может сказать: зачем мне нужно перенапрягаться на работе, ведь на зарплате это никак не отражается! То есть пропадает одна из важнейших функций системы оплаты труда –

стимулирующая; у работодателя нет возможности ни поощрить отличившегося работника, ни наказать провинившегося.

Соответственно, падает и качество оказания медицинской помощи, так как у работника пропадает желание прилагать больше усилий к лечебному процессу. Кроме того заработная плата врачей в Кыргызстане не мотивирует выпускников вузов идти работать по профессии, так как врач получает 6 тысяч сомов, а медсестра – 4 тысячи сомов. Выше названная сумма 11 915 сомов, это средняя заработная плата врача, включающая доплаты за выслугу лет, коэффициенты, и т.д. Если соотнести эту сумму с учетом ежемесячных расходов на квартплату, школу, детский сад и так далее, то, понятно, что ее не хватает. Поэтому вполне естественно, что каждый врач будет стремиться туда, где его оценят, и обеспечат достойную плату за труд.

Таким образом,отсутствие грамотной системы оплаты труда порождает проблемы кадрового характера. Возникает ситуация, когда молодой специалист, решая в какое учреждение идти, претендуя на достойную заработную плату, делает выбор в пользу негосударственных учреждений. При повременной оплате труда, при начислении заработной платы учитываются стаж работы, но не профессионализм и не желание использовать новые технологии в работе.

Принятое положение о депозите врача-педиатра не помогает исправить положение с нехваткой врачей. (Зарплаты медиков отпугивают кадры 2014) К примеру, дополнительная выплата врачам в размере 1тыс. сомов от мэрии города Бишкек, должна была помочь доукомплектовать первичное звено врачами и медсестрами, и служить стимулом к повышению доступности и качества медицинской помощи и улучшении показателей здоровья населения. В реальной ситуации руководство лечебно-профилактических учреждений не может оказать никакого влияния на размер данной выплаты, то есть она оказывается фиксированной, не отражает качество работы, что лишает эту выплату ее главной функции как стимула.

В системе здравоохранения Кыргызстана отсутствуют механизмы экономического стимулирования работников здравоохранения за достижение наилучших показателей в обеспечении населения медицинской помощью надлежащего качества, не определены показатели результативности. Отрицательное влияние на кадровую ситуацию в здравоохранении оказывают не только материальные и социальные факторы, но и условия труда. В медицинских учреждениях, прежде всего в сельской местности, где годами не было ремонта, имеется нехватка лекарств, необходимой медицинской аппаратуры, нередко присутствует атмосфера бесперспективности и даже безнадежности.

Низкий уровень оплаты труда, нерешенность жилищных проблем порождают социальную незащищенность значительной части медицинских работников, что, несомненно, отрицательно сказывается на доступности и качестве медицинского обслуживания населения, особенно в сельской местности.

В последнее время, резко возросло число врачей и медсестер, эмигрирующих в ближнее и дальнее зарубежье. В основном уезжают в Россию и Казахстан. Одной из главных причин аналитики называют низкую заработную плату. Выезжают медицинские работники со стажем более 10–15 лет, так как там наиболее востребованы специалисты с дипломом советского образца до 1992 года. Следует отметить, что во времена Союза Кыргызский государственный медицинский институт ценился очень высоко и входил в десятку сильнейших вузов.

Специалиста нужно учить семь лет, его обучение обойдется государству в крупную сумму. После окончания учебы молодой врач должен работать, набираться опыта на протяжении нескольких лет. Россия из Кыргызстана получает готового специалиста, который прекрасно говорит по-русски и имеет за плечами богатый опыт. Получается, что экономический эффект от использования таких специалистов колоссальный.

Резкое увеличение числа мигрантов среди отечественных медиков также объясняется, увеличением уровня заработной платы в Российской Федерации. Проблема стоит остро не только с внешней миграцией, но и с внутренней. В следствии чего в отдаленных районах наблюдается нехватка, или вовсе отсутствие медицинских работников с высшим медицинским образованием. Катастрофически низкий уровень обеспеченности врачебными кадрами отмечается в Чон-Алайском, Алайском, Чаткальском, Сузакском, Аксуйском районах, где в среднем 8–9 работников на 10 тысяч жителей, а по республике этот показатель составляет 25.

Большое значение в работе врачей имеет повышение их квалификации. В медицине недостаточно иметь высшее образование, знания необходимо всегда обновлять. Это представляет определенные трудности, так как сейчас средства на повышение квалификации не выделяются, и за любое обучение врач должен платить из собственного кармана. Особенно обременительно это для врачей из регионов.

Все это означает, что требуются дальнейшие улучшения действующей системы оценки и оплаты труда медицинских работников, обеспечение четкой и непосредственной зависимости получаемой ими

заработной платы и механизма поощрения от степени сложности выполняемой работы и качества оказываемой медицинской помощи.

В настоящее время в Кыргызстане заработная плата врачей состоит из гарантированной и дополнительной заработной платы. Ее выплата осуществляется за счет единственного источника – фонда оплаты труда. И премирование работников здравоохранения производится за счет экономии фонда оплаты труда. Кроме того размер премии работника не должен превышать базовый оклад. Премирование работников производится только по итогам деятельности за квартал и при наличии экономии по фонду оплаты труда, также по согласованию с органами управления.

В свою очередь консолидированный фонд оплаты труда организаций здравоохранения, может формироваться за счет:

- средств государственного бюджета;

- средства обязательного медицинского страхования;

и других средств, не противоречащих законодательно - нормативным актам Кыргызской Республики (за исключением средств от сооплаты населением за медикаменты и питание).

Из консолидированного фонда оплаты труда производятся выплаты гарантированной и дополнительной заработной платы работникам и другие выплаты, установленные законодательством Кыргызской Республики.

Гарантированная заработная плата включает:

- базовый оклад;
- надбавки и доплаты за:
- ученую степень;
- почетное звание;
- квалификационную категорию;
- руководство структурным подразделением;
- выслугу лет;
- работу в сельской местности;
- работу в условиях высокогорья и отдаленных зонах КР;
- работу в особых условиях;
- стаж работы в условиях высокогорья, прочие индивидуальные выплаты в пользу работников организации здравоохранения:
- доплату за работу в ночное время и праздничные дни;
- выплату по начисленным отпускным;
- выплату по листам временной нетрудоспособности;
- выплату единовременного пособия (компенсации) при увольнении (сокращении) работника;

Размер фонда дополнительной заработной платы определяется за вычетом из консолидированного фонда оплаты труда сумм гарантированной заработной платы и индивидуальных выплат (Положение об оплате труда работников здравоохранения Кыргызской Республики).

Итак, при повременной оплате труда, при начислении заработной платы учитываются стаж работы, но никак не профессионализм. Не учитывается желание использовать новые технологии в работе. В системе оплаты труда необходимо создать устойчивые материальные стимулы, способствующие постоянному стремлению каждого медицинского работника к повышению своего профессионального уровня и способностей.

В целях дальнейшего совершенствования системы оплаты труда и материального стимулирования медицинских работников необходимо усиление зависимости размеров оплаты их труда от степени сложности и напряженности выполняемой работы, качества оказываемой медицинской помощи, а также создания стимулов для непрерывного повышения профессионального уровня и квалификации медицинских работников. Необходимо внедрение усовершенствованной системы оплаты труда медицинских работников, дифференцированной в зависимости от объема, степени сложности и качества оказываемой медицинской помощи, с учетом специализации лечебных учреждений и квалификационной категории работников.

При существующей тарифной системе оплаты труда, дополнительная заработная плата зависит от гарантированной, так как это сумма соответствует фонду оплаты труда за вычетом гарантированной. Согласно такому порядку начисления дополнительной заработной платы для стимулирования работника надо лишить части дополнительной заработной платы другого работника, так как других источников стимулирования нет. Кроме того следует учесть, что фонд оплаты труда в стационарах определяется на основе затрат прошлого года за «пролеченный случай», что не всегда соответствует «пролеченности» больного.

Это связано с тем, что лечение больных осуществляется путем использования твердых нормативов, где из нескольких альтернатив закладываются минимальные затраты лечения больного. Отсюда возникает вопрос: где реальный источник и условия материального стимулирования хорошей работы врача. В производстве фонд материального поощрения формируется за счет прибыли. Поскольку в медицине нет прибыли, в качестве источника поощрения, может быть, использовать часть специальных средств, образованных за счет платных услуг? Следует отметить, что в поликлиниках для этой цели используют специальные средства, однако прейскуранты давно устарели.

В любой управленческой деятельности по улучшению производственного процесса, используется мотивация, представляющая систему внешних условий, раскрывающих внутреннюю энергию и активность людей на работе. Все факторы мотивации можно разделить на материальные (экономические) и нематериальные (внеэкономические) условия работы. Мотивация людей только при помощи заработной платы недостаточна. Помимо системы материального стимулирования должна быть разработана система нематериальной мотивации, ориентированная на удовлетворение их внутренних потребностей, ожиданий и интересов (Самоукина Н.В. 2011).

Однако не всегда можно прописать результаты работы в контракте, поэтому существует проблема с заключением стимулирующего контракта с работником в случае, если усилия не наблюдаемы. Кроме того, возникают сложности при наличии внешних факторов, которые в свою очередь влияют на усилия. В частности, измерить результат работы врачей достаточно сложно. Так если, в медицинском учреждении работают очень хорошие специалисты, и, соответственно, может поступать большое количество сложных пациентов, то в данном случае высокая смертность не обязательно будет свидетельствовать о низком качестве лечения. Следует также учитывать, что на хорошее лечение оказывают влияние такие факторы, как качественная медицинская техника, с которой работает врач, наличие необходимых препаратов и т.д.

Эффективность учреждения зависит и от профессионального роста сотрудников, приобретения ими обновленных знаний и навыков. Необходимо непрерывно развивать персонал. Повышение квалификации делает сотрудников учреждения конкурентоспособными на рынке труда. Отсутствие системы регулярного повышения квалификации и обучения сотрудников приводит к моральному устареванию и износу рабочей силы. Повышение квалификации – это обучение сотрудника с целью углубления и усовершенствования уже имеющихся у него профессиональных знаний, необходимых для определенного вида деятельности (Зайцева Т.В. 2008)

Следует учесть, что мотивация для представителей разных профессий не одинакова. Она будет отличаться даже внутри одного медицинского учреждения.Так, например, мотивация медицинских сестер и санитарок достаточно проста. Она построена на четких стандартах и системе обратной связи, неотделимой от награды. Их интересует уровень зарплаты, коллектив, отношение руководства, обратная связь в работе. Все эти условия должны быть конкурентоспособными, чтобы сотрудники ощущали стабильность и знали, правильно ли они делают свое дело. Другое дело – мотивация врача. Она – одна из наиболее сложных среди всех профессий. Врачи, состоявшиеся как профессионалы, являются высокообразованными, самодостаточными личностями, которые обзавелись качествами не только специалистов, но и предпринимателей.

Основой мотивации труда в медицине должно быть сочетание повременной системы оплаты труда ее сдельной формы в различных модификациях. Критерием оценки труда медицинского работника является здоровье пациента после лечения. В целях дальнейшего совершенствования системы оплаты труда и материального стимулирования медицинских работников необходимо усиление зависимости размеров оплаты их труда от степени сложности и напряженности выполняемой работы, качества оказываемой медицинской помощи, а также создания стимулов для непрерывного повышения профессионального уровня и квалификации медицинских работников.

Кроме этого, при разработке новых систем оплаты труда медицинских работников необходимо усилить материальное стимулирование врачей, в зависимости от уровня их индивидуального вклада, выполнения работы в тяжелых, особо тяжелых и опасных для здоровья условиях труда, а также овладения современными методами диагностики и лечения социально значимых заболеваний с использованием современного медицинского оборудования.

Сдельная оплата рассчитывается на основе количества оказанных медицинских услуг и затрат времени на их выполнение. В зависимости от способа организации труда сдельная оплата труда бывает индивидуальной и коллективной. Индивидуальная оплата возможна на работах, где труд каждого работника подлежит точному учету. Вознаграждение зависит от количества услуг и сдельной расценки на единицу услуги. Если оказываемая услуга, в частности, медицинская, состоит из нескольких видов, оплачивается каждый вид услуги по установленной для нее расценке.

При коллективной сдельной оплате труда вознаграждение каждого работника зависит от результатов работы коллектива. При этом распределение коллективного заработка между отдельными работниками производится с учетом личного вклада каждого в общие результаты труда коллектива, чаще всего с

помощью коэффициента трудового участия (КТУ). Данный коэффициент в Кыргызстане требует своего совершенствования, он должен дифференцировать оплату труда врачей в зависимости от реального качества работы. Итак, введение сдельной оплаты труда в учреждениях здравоохранения преследует цель усиления заинтересованности работников в росте производительности труда и повышении качества медицинских услуг. Используя сдельную оплату труда, организация могла бы привлечь молодых специалистов к работе.

Сдельная форма оплаты труда предусматривает награждение отличившихся работников вне системы оплаты труда. В лечебном учреждении должно быть разработано и утверждено положение о премировании, содержащее в себе конкретные условия и показатели, при которых возможно премирование и медицинских работников. В положении о премировании учреждения здравоохранения должны быть предусмотрены показатели премирования как по структурным подразделениям, так и по отдельны должностям, исходя из утвержденных показателей деятельности работников этих должностей.

Премирование работников здравоохранения, прежде всего должно быть направлено на повышение материальной заинтересованности работников в оказании качественной медицинской помощи населению, в достижении наилучших результатов труда. Премия не всегда носит регулярный характер, а выплачивается по мере достижения каких-либо конкретных результатов труда. Премии должны выплачиваются за счет премиального фонда, входящего в состав фонда заработной платы, который создается в учреждении за счет средств различных источников финансирования (платная медицинская деятельность, средстваОМС, бюджетные средства и др.). (Чернышев В.М. Дифференцированная оплата труда в здравоохранении.) В Кыргызстане необходимо легализировать платные медицинские услуги и средства поступившие за счет платных услуг использовать в качестве источника дифференциации оплаты труда медицинских работников.

В лечебном учреждении должно быть разработано и утверждено положение о премировании, содержащее в себе конкретные условия и показатели премирования и медицинских работников.

Выводы:

- В сфере медицинских услуг в государственных лечебных учреждениях нет полноценных экономических отношений и управление здравоохранением осуществляется на административных методах.
- Здравоохранение работает согласно повременной системе, где оплата труда не зависит от объема и качества выполненных работ.
- Современная система оплаты труда порождает проблемы кадрового характера: специалисты делают выбор в пользу негосударственных учреждений.
- Возросло число врачей и медсестер, эмигрирующих в ближнее и дальнее зарубежье.
- В системе оплаты труда необходимо создать материальные стимулы, для повышения профессионального уровня.
- В Кыргызстане заработная плата врачей состоит из гарантированной и дополнительной заработной платы. Ее выплата осуществляется за счет единственного источника – фонда оплаты труда.
- Премирование работников здравоохранения производится за счет экономии фонда оплаты труда.
- В качестве источников мотивации предлагается использовать легализированные платные услуги.
- Основой мотивации труда в медицине должно быть сочетание повременной системы оплаты труда с ее сдельной формой в различных модификациях.
- Сдельная оплата рассчитывается на основе количества оказанных медицинских услуг и затрат времени на их выполнение.
- Сдельная форма оплаты труда предусматривает награждение отличившихся работников вне системы оплаты труда.
- В лечебном учреждении должно быть разработано положение о премировании, содержащее в себе условия и показатели премирования и медицинских работников.
